IX. CONCLUSION 60

REBUTTAL TESTIMONY
OF
MARK A. JONES

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Mark A. Jones. My business address is 76 South Main Street, Akron, Ohio 44308.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. I submitted FE PA Statement No. 8, my written direct testimony, and FE PA Exhibit MAJ-1, on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to respond to the portions of the direct testimonies of: (1) Dante Mugrace, which was submitted on behalf of the Office of Consumer Advocate ("OCA")[1]; (2) Roger Colton, which was submitted on behalf of the OCA[2]; (3) Barbara Alexander, which was submitted on behalf of the OCA[3]; (4) Harry S. Geller, which was submitted on behalf of the Coalition for Affordable Utility Services ("CAUSE-PA")[4]; (5) Lisa Perry, which was submitted on behalf of Walmart ("Walmart")[5]; (6) Christine Wilson, which was submitted on behalf of the Bureau of Investigation and Enforcement ("I&E")[6];

[1] OCA St. No. 1.
[2] OCA St. No. 5.
[3] OCA St. No. 6.
[4] CAUSE-PA St. No. 1.
[5] Walmart St. No. 1.
[6] I&E St. No. 4.

and (7) James Crist, which was submitted on behalf of The Pennsylvania State University ("Penn State" or "PSU").[7]

Q. Are you sponsoring any exhibits to accompany your rebuttal testimony?

A. Yes. I am sponsoring the following exhibits: FE PA Exhibit Nos. MAJ-2 through MAJ-5.

Q. Were these exhibits prepared by you or under your direction?

A. Yes.

Q. Could you please summarize your rebuttal testimony?

A. I will respond to comments made by OCA Witness Colton and CAUSE-PA Witness Geller regarding low-income and Care Center low-income processes. Further, I will discuss comments made by OCA Witnesses Alexander, Colton, Mugrace, and CAUSE-PA Witness Geller about Chapter 14 of the Public Utility Code. Moreover, I will address comments made by OCA Witness Alexander and CAUSE-PA Witness Geller about the Remote Disconnection Settlement.[8] I will also address comments made by OCA Witness Alexander concerning non-basic on-bill charges, bill presentment of Price to Compare ("PTC") related to electric generation supplier ("EGS") charges, customer interactions and Care Center training, and FE PA Consolidation.[9] In addition, I will discuss comments made regarding the electric vehicle ("EV") pilot by OCA Witnesses Alexander and Mugrace, CAUSE-PA Witness Geller, I&E Witness Wilson, and Walmart Witness Perry. Finally, I

A-2023-3038771, et al. (Order entered December 7, 2023).

will respond to Penn State Witness Crist's comments about the Care Center transfer of service process.

Q. What are your overall observations regarding recommendations that would require an amendment to the Company's Universal Service Energy Conservation Plan ("USECP"), particularly those made by CAUSE-PA Witness Geller?[10]

A. As an initial matter, I do not believe it is appropriate to propose recommendations in this base rate case that would require modifications to the Company's Pennsylvania Public Utility Commission ("Commission")-approved USECP. I am advised by counsel that the Commission has previously rejected recommendations to revise low-income and USECP programs in base rate cases, on the grounds that such proposals should be addressed in USECP proceedings.[11] Indeed, in UGI Utilities, Inc. - Electric Division's ("UGI Electric") 2023 base rate case at Docket Nos. R-2022-3037368, *et al.*, Commission Coleman declared the following in his Statement on the Commission's Order approving the Settlement:

> If parties continue to use base rate cases to address matters that are more appropriately reviewed within a USECP proceeding, and if those cases result in agreements that are contrary to Commission policy and contrary to the public interest, then those parties risk the rejection of their agreements. I also strongly encourage Commission bureaus to utilize the expertise of the Commission's Bureau of Consumer Services in reviewing any universal service matters, as appropriate.

Therefore, I believe recommendations that would affect or modify the USECP should be reserved for USECP proceedings and not raised in this base rate case.

II. LOW-INCOME PROGRAMS

Q. An overarching theme throughout the other parties' testimonies and the underlying basis for many of their recommendations is the notion that FE PA is not enrolling a sufficient number of customers in its Pennsylvania Customer Assistance Program ("PCAP"), which is FE PA's low-income assistance program.[12] Please respond.

A. FE PA's available assistance programs have historically been considered successful and only continue to improve. In fact, the Company has seen an increase in enrollments in PCAP from 2020 to 2023. In that same time period, PCAP provided an average of $78 million in total annual benefits to help lower the energy burden of low-income customers. The Company has also implemented a new customer facing tool to make the application for PCAP and the Low-Income Usage Reduction Program ("LIURP") more accessible. The Company has also proposed the Energy Assistance Outreach Team ("EAOT") to improve customer education and work to remove any barriers customers are facing when attempting to apply for assistance programs.

A. Collections Activity

Q. OCA Witness Colton expresses a concern as to what information FE PA provides to low-income customers prior to disconnection of service and further questions whether FE PA is effectively communicating appropriate information regarding PCAP to low-

[12] OCA St. No. 5 at pp. 12-13; CAUSE-PA St. No. 1 at p. 52.

income customers facing termination.[13] What processes does FE PA have in place today to assist low-income customers prior to disconnection?

A. Prior to disconnecting service, the Company makes several attempts to contact the customers who have been notified of service termination, including customers identified as low-income customers. Customers facing termination of service are first given a 10-day notice, which is then followed up with phone calls. The purpose of these calls is to inform the customer of all available assistance programs they may qualify for and how to contact those programs. If the Company is unsuccessful at contacting the customer, a 3-day shutoff notice is then delivered to the customer in writing. This shutoff notice also contains information regarding available assistance programs. Information on these assistance programs is also delivered to customers with an email address on file via the digital noticing process.

Q. CAUSE-PA Witness Geller also recommends that FE PA be required to undertake a review of all customer notices and communications concerning medical certificates and to revise language related to medical certificate requirements throughout these notices and other communications as part of a compliance filing at this docket, to be filed no later than 3 months from the Commission's Final Order.[14] Do you agree with his recommendation?

A. No. Mr. Geller misinterprets the Company's notices and communications as being solely focused on postponing terminations of service while the medical certificates are effective. Through its notices and communications, FE PA communicates to customers that the

[13] OCA St. No. 5 at p. 40.
[14] CAUSE-PA St. No. 1 at p. 62.

Company will not terminate services if a medical certificate is provided. No payment or equitable arrangement to pay the customer's bill is required to stop the termination during the length of the certification. However, long-term, if customers want to avoid having their service shut off, they do need to make some equitable arrangement to pay the current bills, or else they could have their service terminated after the medical certificate expires. This is the reason why the Company's notices and communications are framed in that manner. Thus, I believe the Company's notices and communications correctly and accurately relay information relating to medical certificates to customers.

Q. OCA Witness Colton claims that although "FirstEnergy states that it provides an 'assistance package' at each address, it does not appear to specifically promote enrollment in CAP." He then recommends that FE PA "adopt a procedure under which it will provide a stand-alone Plain English notice to customers found to be without heating services at the time of the Company's Cold Weather Survey of the customer's right to enter into CAP and an explanation of CAP's arrearage forgiveness benefits."[15] Do you agree with his position and recommendation?

A. No. As part of its Cold Weather Survey process, FE PA provides an assistance packet that includes pertinent PCAP application information to customers. This packet of information specifically advises that the customer may be eligible to reconnect service without payment, advises how to apply for PCAP and other programs, and explains that debt forgiveness is one of the benefits of participating in PCAP.

[15] OCA St. No. 5 at pp. 49-50.

Q. CAUSE-PA Witness Geller avers that FE PA appears to be terminating confirmed low-income customers for nonpayment during the winter moratorium period and recommends that FE PA be required to immediately revise its policies and procedures so that all customers with income at or below 250% Federal Poverty Level ("FPL") receive protection from termination for nonpayment during the winter moratorium as required by law.[16] Is this accurate?

A. No. Although FE PA Response to CAUSE-PA Interrogatory Set I, No. 16, Attachment C included low-income customers disconnected for non-payment during the months December, January, February and March, this is merely the result of a timing issue. In every one of the disclosed disconnections that occurred during the winter moratorium period listed in the exhibit referenced by CAUSE-PA Witness Geller, the Company was made aware of the low-income status **after** the disconnect occurred. None of the accounts were identified as low-income at the time the disconnect took place. Had those customers been identified as low-income prior to the disconnect, they would have been protected by the winter moratorium. Accordingly, I believe that FE PA's policies and procedures regarding winter moratorium terminations comply with all applicable laws and regulations.

B. Confirmed Low-Income

Q. OCA Witness Colton and CAUSE-PA Witness Geller state that FE PA fails to comply with the Commission's regulations regarding the identification of "confirmed low-income" customers and recommend that FE PA adopt a broader definition of confirmed low-income customers to be set forth in the Company's tariff.[17] Can you

[16] CAUSE-PA St. No. 1 at pp. 64-66.
[17] OCA St. No. 5, pp. 35-36, 66; CAUSE-PA St. No. 1, pp. 33-34, 69-70.

first summarize the Company's processes for designating customers as confirmed low-income for these purposes?

A. Confirmed low-income designations are added to customer accounts to identify moratorium termination protections when a customer is enrolled in PCAP, has received LIHEAP, or when a customer has provided income information via the financial summary process**.** As for cash deposits, FE PA considers customers confirmed low-income when the customer is enrolled in PCAP or has received LIHEAP. Customers who are considered confirmed low-income are not assessed deposits. Those with paid deposits will have deposits automatically refunded to the account when they become confirmed low-income.

Q. Do you agree that the Company's existing processes fail to comply with the Commission's regulations?

A. No. Although I am not a lawyer, I believe that the Company is in compliance with the applicable Commission regulations. Counsel advises me that these compliance issues will be addressed in the Company's briefs.

Q. OCA Witness Colton argues that "FirstEnergy should not," without the customer's informed consent, "require a customer known to be a Confirmed Low-Income customer to pay off arrears through a payment arrangement in which arrears would be subject to forgiveness under the Company's Customer Assistance Program ('CAP')."[18] Please respond.

A. FE PA customers with arrears are provided with all options available to the customer when the customer contacts the Company. This information includes the process for enrolling

[18] OCA St. No. 5 at pp. 42-43.

in CAP and how to apply for hardship funds. If the customer chooses not to take advantage of any of these options, the payment arrangement is in the best interest of the customer to avoid service termination. FE PA does not negotiate or set up any payment agreements, including payment arrangements that would pay off arrears, without speaking to the customer and obtaining the customer's consent.

Q. Could you please summarize OCA Witness Colton's recommendation that FE PA communicate PCAP information to confirmed low-income customers negotiating a deferred payment arrangement ("DPA") as well as customers from whom the Company receives information placing them in an income tier of 0% to 150% of the FPL?[19]

A. Mr. Colton recommends, "before FirstEnergy enters into a payment arrangement with a customer which the Company either: (1) knows to be a confirmed low-income customer; or (2) has generated information through the payment arrangement process documenting that the customer is in the Income Tier at or below 150% FPL, it should be required to provide the customer a stand-alone Plain English notice to that customer of the customer's right to enter into CAP and an explanation of the advantages of CAP's arrearage forgiveness benefits." He further recommends that FE PA "develop this Plain English notice in collaboration with its [Universal Service Advisory Committee ("USAC")]."[20]

Q. Do you agree with this recommendation?

A. No, I do not believe this recommendation is necessary. When a low-income customer calls FE PA today, FE PA's customer service representatives verbally provide the customer with

[19] *Id.* at p. 41-46.
[20] *Id.* at p. 46.

all options for assistance programs, including PCAP, as well as the option for a DPA. Therefore, when the customer is not currently enrolled in PCAP, the customer would be provided with the necessary information to apply for the program. Thus, the addition of a Plain English notice would be duplicative and unnecessary.

Q. OCA Witness Colton also recommends that, "when Confirmed Low-Income customers accrue an unpaid balance of $300, and at each $300 of incremental arrears thereafter," FE PA should be required to "provide a stand-alone written Plain English notice informing those customers of their right to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions)."[21] Do you agree?

A. No. I do not agree with this recommendation. FE PA already conducts outreach to customers with arrears. Customers are provided with their options when they call the Company's care center. Outreach is also done with bill inserts, email, and outbound calling campaigns.

Q. OCA Witness Colton and CAUSE-PA Witness Geller both contend that FE PA is not following the Commission's regulations for the assessment or the release of deposits on confirmed low-income customers.[22] Please respond.

A. I disagree. As explained earlier in my rebuttal testimony, FE PA considers customers confirmed low-income for the purpose of deposit assessment when the customer is enrolled in CAP or has received LIHEAP. Customers considered confirmed low-income are not

[21] *Id.* at p. 52.
[22] OCA St. No. 5, pp. 62-67; CAUSE-PA St. No. 1, pp. 67-68, 81-82.

assessed deposits, and those with paid deposits when they become confirmed low-income will have deposits automatically refunded to the account.

Q. CAUSE-PA Witness Geller recommends that FE PA develop scripting and checklists for customer service representatives ("CSRs") to assist in screening customers for eligibility in universal service programs.[23] Please respond.

A. FE PA already has scripts built into its Customer Relationship Management ("CRM") system that the CSRs follow when a customer states they are having difficulty paying their bill. If the customer consents, the CSR performs a financial summary and advises them of any programs they may be eligible for based on the information provided by the customer. Therefore, I do not believe this recommendation is necessary.

Q. OCA Witness Colton recommends the use of speech analytics technology to identify customers who may be low-income.[24] Do you agree with this recommendation?

A. No, I do not agree with using speech analytics technology to identify customers who may be low-income. Although the Company does utilize speech analytics, the technology is still a work in progress and is not a platform that should be used for items other than trends and ad hoc requests at this time. In addition, the customer has a right not to disclose their income and has a right not to enroll in low-income programs. With this being the case, FE PA would not want to designate an account as low-income unless the customer consents to share that information with the Company.

[23] CAUSE-PA St. No. 1 at p. 56.
[24] OCA St. No. 5 at pp. 56-61.

C. Energy Assistance Outreach Team ("EAOT")

Q. CAUSE-PA Witness Geller contends that FE PA's EAOT proposal "does not provide adequate specificity to ensure that the initiative, if approved, would meaningfully increase enrollment and participation in FE PA's universal service programs" and that the proposal should include "quantifiable and measurable goals."[25] Please respond.

A. I agree that measurable goals are important and do need to be developed. However, it is critical to also consider the nature of the expected work and understand that numerical metrics may not fully capture the impact of the team. Outreach efforts include engaging with community partners and customers to determine the barriers preventing access to energy assistance. Quantifying how well a customer understood from an interaction or quantifying the impact of attending a community event presents challenges since data collection in these types of events are not always available. It is important to look at the impact of the work as well. Instead of relying only on numerical targets, FE PA will prioritize the feedback of the customer and community partners to evaluate the effectiveness of the team. FE PA will also look at the expansion of outreach opportunities, improving accessibility, and customer engagement as means of assessing the effectiveness of the team.

Q. OCA Witness Colton argues that the upward adjustments in expenses for the EAOT should be denied.[26] Mr. Colton further recommends that the EAOT be "funded by shareholders in fulfillments of the agreements reached in the FirstEnergy merger

[25] CAUSE-PA St. No. 1 at pp. 52-54.
[26] OCA St. No. 5 at pp. 88-92.

proceeding," based on provisions in that settlement regarding recruitment to its Universal Service Advisory Committee ("USAC"), outreach to LIHEAP recipients, and sharing information on "new outreach activities and efforts by FE PA" with the USAC." Do you agree?

A. No, I do not agree that the EAOT should be funded by shareholders. FE PA proposed the EAOT as a dedicated resource to help FE PA customers gain knowledge of available programs, gain access to programs, and remove potential barriers to enrollment. The EAOT will also work closely with community partners to improve enrollment numbers. The EAOT was proposed in addition to and independent of any outreach provisions contemplated within the PA Consolidation Settlement Agreement,[27] and is modeled after similar programs that were conceptualized and began being developed across FirstEnergy's broader footprint before the PA Consolidation Settlement Agreement was even reached.

Q. CAUSE-PA Witness Geller also recommends that FE PA develop an implementation plan with "quantifiable goals," including (at a minimum) a commitment to achieve at least 10% annual increase in CAP enrollment rates, "file its implementation plan no later than 6 months from the final order in this proceeding," and report annually thereafter on its progress in achieving the benchmarks established in the implementation plan.[28] Please respond.

A. I disagree with Mr. Geller's recommendations. I provided details about the EAOT, including its objectives, budget, and implementation, in my direct testimony. Therefore,

[27] PA Consolidation Settlement at pp. 9-18.
[28] CAUSE-PA St. No. 1 at pp. 54-55.

an "implementation plan" would likely be duplicative with the information already provided in this proceeding. Also, the EAOT supplements the Company's existing energy assistance programs by providing a dedicated resource for customers. People interested in obtaining more information about the Company's implementation of those programs can review the USECP. As for annual reporting, I explained in my direct testimony that FE PA intends to measure the impact of the EAOT by monitoring the number of customers enrolled in the Company's assistance programs and comparing it to historical numbers. Such monitoring can be achieved through the existing Universal Service Reporting Requirements. Thus, annual reports for the EAOT specifically would be duplicative and unnecessary. In addition, a 10% increase in PCAP enrollments is not the correct target. Setting a goal of this nature depends on variables that are out of the Company's control, such as how much money is provided by the state or federal government in a given year and what is allowable in the USECP, among others. It is also unclear how Mr. Geller determined that a 10% increase in PCAP enrollments is a reasonable or achievable goal. That being said, the Company does plan to conduct targeted outreach to improve program enrollment. Any outreach activities the EAOT conducts will be tracked and reviewed by FE PA for potential impact, and FE PA will take the appropriate actions as necessary.

Q. CAUSE-PA Witness Geller recommends that "regardless of whether or not Energy Assistance Outreach Team ('EAOT') is approved," the Company be required to "implement regular income screening for all new and moving customers, so that low-income customers are routinely identified, encouraged, and assisted to enroll in available assistance programs before debts accrue."[29] Do you agree with this recommendation?

A. No. FE PA provides information about the customer's rights and responsibilities to all customers at the time of the move-in. The rights and responsibilities are included with the first bill and include information on available assistance programs, medical certificates, winter termination procedures, and several other collections related items. Further, the Company conducts outreach to customers to specifically encourage enrollment in energy assistance programs.

D. <u>USECP Programs</u>

Q. CAUSE-PA Witness Geller recommends that FE PA be required to leverage LIHEAP data from the Department of Human Service ("DHS") to meaningfully improve enrollment and retention in PCAP.[30] CAUSE-PA Witness Geller further recommends that FE PA develop a "process for utilizing shared LIHEAP data to process PCAP enrollments, without further application or paperwork," and that after

[29] CAUSE-PA St. No. 1, pp. 55-56.
[30] *Id.* at 56.

obtaining input from the USAC "FE PA should be required to file an amended [Universal Service and Energy Conservation Plan ('USECP')]."[31] Please respond.

A. Mr. Geller's recommendations are unnecessary. FE PA met with the USAC on June 20, 2024, to share tentative implementation plans for the LIHEAP data share. As part of the PA Consolidation Settlement Agreement, FE PA has committed to utilizing LIHEAP data received from DHS for purposes of automatically recertifying PCAP customers. To that end, FE PA is currently working with its information technology department to use the data received through the process to complete an automatic recertification and conduct outreach to non-participants to encourage enrollment. Further, per the Commission's Order for the 2023 Review of All Jurisdictional Fixed Utilities' Universal Service Programs at Docket No. M-2023-3038944, utilities are required to file a letter by July 31, 2024, explaining how LIHEAP data sharing will be executed. Utilities are required to incorporate the process in their next filed USECPs.

Q. CAUSE-PA Witness Geller argues that, "FE PA should explore how to improve solicitation of donations through e-billing – including round-up and add-a-buck program."[32] He also recommends that FE PA "consider a plan to solicit voluntary contributions from the larger commercial and industrial entities within its service territory, which do not currently contribute any funds to support universal service programs through rates" and "FE PA be required to consult" with its USAC and "develop a plan to increase voluntary contributions to its Hardship Fund grant, with

[31] *Id.* at pp. 57-58.
[32] *Id.* at p. 43.

a report being provided to the Commission within 6 months of a final order in this proceeding."[33] Do you agree with these recommendations?

A. No. FE PA already solicits contributions to its Hardship Fund. Specifically, every November, FE PA includes an insert in the monthly bill to residential customers to encouraging customers to donate to Dollar Energy Fund ("DEF") either directly or by adding a monthly donation to the bill. E-bill customers receive an email notification when the bill is ready, advising them that bill inserts are available online for review. FE PA also meets quarterly with the USAC to discuss the universal service programs and outreach materials, and routinely takes feedback on ways to improve its programs. The Company is open to feedback and suggestions from USAC about developing a plan that would increase the amount of contributions from both residential and commercial customers.

Q. CAUSE-PA witness Geller recommends that FE PA be required to modify eligibility criteria for the hardship fund program, such as (1) adopting explicit exemptions to its upfront payment requirements, (2) amending seasonal parameters to allow customers off or in threat of termination year round they may qualify for a grant whether they are on PCAP or not, (3) increasing the maximum grant amount to $600, (4) eliminating up-front payment requirements, and (5) increasing funding for the program.[34] With these changes, Mr. Gellers states that FE PA should, in turn, work

[33] *Id.*
[34] *Id.* at pp. 43-44.

with DEF to "update its customer facing materials to reflect this changed policy without delay."[35] Please respond.

A. The eligibility requirements are defined in the USECP. To change the requirements, an amendment to the USECP would be required. As explained above, I do not think it is appropriate for modifications to the Company's USECP to be made as part of this proceeding. However, if changes to the USECP were made and approved, the outreach materials and internal training would be updated. The Company also meets quarterly with the USAC to discuss universal service programs and outreach materials. In addition, the Company observes that its up-front payment requirements were recently modified as part of its 2024-2028 USECP proceeding. Specifically, upfront payment may not exceed three PCAP amounts or $150 ($100 if over the age of 62), whichever is less. Again, the proper place to review and evaluate any potential changes to the up-front payment requirements is the USECP proceeding.

Further, customers with service off may apply for a hardship fund grant throughout the year until funds have been exhausted and the program is closed. Termination notices are not issued to known low-income customers from December through January. Customers with the threat of termination may apply for a grant in the months of February through November or until the program status becomes service-off only or the fund is closed due to exhausted funds. The Company would be open to permitting a hardship fund application for customers with a valid termination notice in December and January. Customers determined to be low-income would be referred to PCAP. If the applicant is not able to enroll on PCAP, the Company could consider a hardship fund grant.

[35] *Id.* at p. 43.

Moreover, the Company disagrees with Mr. Geller's proposed increases in funding and the maximum grant amount. Those issues should be addressed in the USECP proceeding. Also, under the PA Consolidation Settlement Agreement, the Company agreed to make contributions of $150,000 annually to the Hardship Fund of FE PA, incremental to the current "matching contribution," for 2024-2026. The Company also agreed to make contributions of $100,000 annually to the Hardship Fund of FE PA, incremental to the current "matching contribution," for 2027-2028. Any unspent funding from the annual contributions will be rolled over to be used for Hardship funding for the subsequent program year. Also, an increase in the maximum grant amount to $600 would reduce the number of people who could obtain hardship grants.

Q. CAUSE-PA Witness Geller also contends that the average hardship fund grant is out of line with the average arrearage level carried by low-income customers.[36] Please respond.

A. Mr. Geller's concern is misplaced. The majority of Hardship Fund grants are based on the amount needed to stop termination and may not include the full arrearage amount. Therefore, although there is a difference between the average Hardship Fund grant and the average arrearage level, I do not believe that such difference justifies increasing the maximum Hardship Fund grant.

Q. CAUSE-PA Witness Geller further expresses a concern about how FE PA: (1) projects zero dollars in ratepayer or employee contributions to its Hardship Fund in 2024, 2025, and 2026 – punctuating a long trend of declining donations; and (2) FE

[36] *Id.* at p. 38.

PA's Hardship Fund has experienced many periods where grant funding was either fully depleted or otherwise unavailable in each service territory.[37] Please respond.

A. I do not believe Mr. Geller's concern is justified. As mentioned above, FE PA encourages customers to donate to DEF either directly or by adding a monthly donation to the bill. FE PA did not include estimated ratepayer/employee contributions for 2024-2026. A revised Table 11: FE PA Hardship Funding (2022-2026) has been updated to include projected dollars for ratepayer and employee contributions for 2024-2026. As shown below, FE PA does not project zero dollars in ratepayer or employee contributions for 2024-2026 and will have Hardship Fund grant funding available for eligible customers.

Table 11 Revised

HF Funding	Utility Match Contributions	Ratepayer/Employee Contributions	PA Consolidation	Total
2022	$327,378	$350,544	$-	$677,922
2023	$325,185	$351,941	$-	$677,126
2024	$335,000	$362,850	$150,000	$847,850
2025	$335,000	$362,850	$150,000	$847,850
2026	$335,000	$362,850	$150,000	$847,850

Q. Does CAUSE-PA Witness Geller have other concerns related to FE PA's USECP Programs?

A. Yes. Mr. Geller alleges that "FE PA does not have a formal policy or procedure for monitoring DEF's administration of its programs" and claims that "FE PA's failure to assess administration of its universal service programs on a regular and systematic basis is a deficiency in oversight."[38] Mr. Geller claims that, "[w]ithout regular assessment to

[37] *Id.* at pp. 37-41.
[38] *Id.* at p. 59.

ensure sound administration of FE PA's programs, it is impossible to accurately assess whether FE PA's programs are being administered in a manner that is compliant with program rules and parameters developed and intended by FE PA, required by Commission order, and that allows low income customers to enroll in assistance without facing unnecessarily restrictive barriers."[39] Further, Mr. Geller recommends FE PA be forced to "implement systematic and regular processes for monitoring and oversight of DEF's administration of its universal service programs" and that these procedures be "implemented within 6 months of the final order in this proceeding" and that "[a]uditing reports . . . be reviewed every 6 months to ensure that DEF is administering FE PA's universal service programs in compliance with Commission order and directive."[40]

Q. Do you agree with Mr. Geller's position and recommendations?

A. No. FE PA completes annual audits of the PCAP program as defined in the USECP. The Company also participates in the Commission's Bureau of Audits periodic Universal Service Cost Rider audit that evaluates the accuracy of subsidy calculations based on household and income documents received during the application intake process. The Company does not have an audit process defined in the USECP for the Hardship Fund program administration. However, to the extent such an audit process should be instituted, that process should be developed within the Company's USECP proceeding.

Q. CAUSE-PA Witness Geller asserts that, "DEF may be imposing requirements related to income verification which are not contemplated or discussed in FE PA's USECP, but which nevertheless impact household eligibility" and is "concerned that DEF's

[39] *Id.*
[40] *Id.* at p. 60.

policies and procedures for verifying income eligibility for FE PA's programs is improperly restricting enrollment in these programs."[41] Please respond.

A. It is not clear from Mr. Geller's direct testimony which requirements are concerning to him, given that the USECP does not specifically list the income documentation that would be acceptable to determine household eligibility. However, the Company meets quarterly with the USAC to discuss universal service programs, and this is an item that could be reviewed in that setting to clarify and resolve. DEF does maintain a list of acceptable documents that is quite extensive. Each item listed below can be submitted on forms to demonstrate proof of income. I note, however, that this is not an exhaustive list and that DEF may accept other acceptable forms of income documentation.

- Black Lung Benefits
- Cash Assistance -*Public Assistance*
- Child/Spousal Support
- Foster Care/Adoption
- Investment Income
- Long Term or Short-Term Disability
- Retirement Income
- Other Income Form
- Rental Income
- Royalties
- Salary & Wages
- Self-Employment
- Social Security

[41] *Id.* at pp. 58-59.

- Stipend
- Unemployment Compensation
- Utility Checks – Reimbursement for Utilities
- Veterans Benefits
- Workman's Compensation
- Zero Income

Q. CAUSE-PA Witness Geller argues that FE PA's CAP ability to mitigate the unaffordability concern is "limited by several factors," such as: (1) the large number of eligible customers who are not enrolled in CAP; and (2) if the Percentage of Income Plan ("PIP") CAP is not implemented by the effective date of rates established in this proceeding.[42] Please respond.

A. The USECP 2024-2028 was approved subject to modifications outlined in the Commission's Order dated March 14, 2024.[43] However, a Petition for Reconsideration was filed to evaluate the maximum subsidy component of the plan. On July 11, 2024, the Commission granted, in part, and denied, in part, the Petition for Reconsideration filed by CAUSE-PA. This delay impacted the time to begin implementing changes to the PCAP program; however, the Company is proceeding with the necessary technical changes to begin implementing part of the USECP changes in September 2024 and the full transition of participants to the revised PCAP program in December 2024. This implementation is on track to be completed prior to the proposed rate increase's effective date.

[42] *Id.* at pp. 22-25.
[43] *Joint Universal Service and Energy Conservation Plan of Metropolitan Edison Company, Pennsylvania Electric Company Pennsylvania Power Company, and West Penn Power Company for 2024-2028*; Docket Nos. M-2022-3036532, et al. (Order entered March 14, 2024).

Q. CAUSE-PA Witness Geller further recommends that "FE PA implement all approved changes to FE PA's PCAP that are not impacted by the narrow review" of the maximum CAP credit limits in relation to the PIP design.[44] Please respond.

A. The monthly CAP credit is dependent on the maximum subsidy limits and is part of the monthly billing process. On July 11, 2024, the Commission granted, in part, and denied, in part, the Petition for Reconsideration filed by CAUSE-PA on March 29, 2024. This unknown delayed implementing the full changes to the PCAP program; however, the Company is proceeding with the following changes to be implemented in September 2024, and the remaining technical changes to transition participants to the revised PCAP program will be implemented in December 2024. The changes outlined below were not impacted by the Petition for Reconsideration.

- Allow customers to defer balances again if their original enrollment was $300 or less;
- Eliminate removal of customers from the program when ineligible for a monthly CAP credit or forgiveness credit;
- Extend the number of years a customer can be on the program before needing to recertify income eligibility;
- Refund security deposits to participants at enrollment;
- Create a paper PCAP application to distribute in addition to application available on the website;

[44] CAUSE-PA St. No. 1 at p. 35.

- Revise language on the recertification letter. May provide 30 days or 12 months of income documentation, whichever is more beneficial and representative of their true annual income;
- Develop instructions explaining how customers can use the text-to-recertify process and how they can opt out of it; and
- Work with USAC to develop a plan on the transition to the new PCAP PIP model that includes detailed plans to conduct education, outreach, and training.

The Company continues to conduct outreach to customers to encourage applications for energy assistance programs, including PCAP. With the implementation of the EAOT, the Company hopes to learn about the community's needs and to improve outreach.

Q. CAUSE-PA Witness Geller recommends that, "[a]s of the effective date of rates," FE PA "review and adjust PCAP rates based on the new applicable residential rates to ensure all PCAP customers are receiving the most advantageous CAP rate available."[45] Mr. Geller also argues that, "the timing of this recalculation" for PIP CAP customers "is uncertain, and [he is] concerned it may not fully account for any increase in rates in the first month following implementation of a rate increase."[46] Please respond.

A. As noted above, on July 11, 2024, the Commission granted, in part, and denied, in part, the Petition for Reconsideration filed by CAUSE-PA. This delayed implementing some of the changes to the PCAP program, which were impacted by the Commission's decision regarding the subsidy credit limits. However, since receiving the recent Order, the

[45] *Id.* at p. 34.
[46] *Id.*

Company is implementing changes from its USECP starting in September 2024 and anticipates completing the full transition of participants to the revised PCAP program in December 2024 prior to the proposed rate increase effective date. An amended USECP 2024-2028 will be filed with the Commission per the July 11, 2024 Order.

Q. CAUSE-PA Witness Geller recommends that FE PA adjust its maximum CAP credit limits in two stages as it relates to FE PA's current PCAP design.[47] Could you please explain those two stages of the adjustment proposed by Mr. Geller?

A. To address existing unaffordability within FE PA's PCAP program, Mr. Geller contends that FE PA should adjust its current CAP credit limits to an amount necessary to ensure that at least 95% of its PCAP participants in each rate district through the prior program year would have received adequate credits necessary to ensure their bills would not exceed applicable energy burden standards.[48] Moreover, he asserts that FE PA should further adjust CAP credit limits by a percentage equal to any approved rate increase in this proceeding.[49]

Q. Do you agree with his proposal?

A. No. Per the Commission's July 11, 2024 Order on CAUSE-PA's Petition for Reconsideration, the subsidy limits will reflect the modifications set forth in the Order issued on March 14, 2024. FE PA will file an amended USECP plan as required, which includes a process to exempt customers from the subsidy limits. Moreover, to implement Mr. Geller's proposal, FE PA would require a Commission-approved amendment to its

[47] CAUSE-PA St. No. 1 at p. 35.
[48] *Id.*
[49] *Id.*

USECP. Also, retroactively changing the CAP credit limits would be complex and may require a significant IT effort for a one-time transaction. Lastly, upon implementation of the USECP 2024-2028, participants will have balances set aside for forgiveness credits as part of the conversion process to the new program. This will reset the amount due under the new PCAP program guidelines.

Q. OCA Witness Colton and CAUSE-PA Witness Geller assert that the proposed rates will have a negative impact on energy affordability and the ability of low-income customers to pay their bills.[50] How does FE PA respond to these concerns about affordability?

A. FE PA has proposed the EAOT which will be a dedicated resource to assist low-income customers with education around Universal Services Programs and to increase enrollment numbers within these programs. The EAOT will also conduct research to find and target specific low-income customer groups to ensure those with the biggest need get the information and programs that will benefit them most. Also, in its USECP proceeding, FE PA has proposed changes to the USECP that are designed to improve the affordability of bills for low-income customers. PCAP is designed to help establish an affordable bill level for each CAP customer independent of rate increases or usage fluctuations.

Q. OCA Witness Colton also states that "nonpayment service disconnections have a rate impact on remaining customers" because "[n]ot only is there an out-of-pocket cost associated with the process of disconnection, but there is the likelihood of lost future revenue as well" and that "each day that a low-income customer remains off-system

[50] OCA St. No. 5, pp. 4-10, 24; CAUSE-PA St. No. 1, pp. 27, 30.

prior to the reconnection represents a lost sale (and thus lost revenue)."[51] Please respond.

A. Mr. Colton fails to recognize the "rate impact on remaining customers" from the increased arrearages if the Company does not disconnect service. Although the customer may not be using electricity while they are disconnected, they also are not increasing their unpaid arrearages, the costs of which would be passed on to other ratepayers through uncollectible expenses. The Company tries to work with customers to get them payment arrangements or enroll in PCAP, but Mr. Colton's claim that it is in the Company's and ratepayers' best interests not to disconnect customers so that more charges can accrue should be rejected.

Q. OCA Witness Colton avers that, "[u]sing the Company's projections of average annual CAP participation for the year ending December 31, 2025, the Universal Service Rider should be modified to include the following base CAP participation: (1) Met-Ed: 14,539; (2) Penelec: 20,083; (3) Penn Power: 4,001; and (4) West Penn Power: 16,762."[52] Does FE PA agree?

A. No, FE PA does not agree with changing the base CAP participation numbers at this time. During the COVID-19 pandemic, the recertification process was paused. FE PA continues to recertify CAP customers who have not recertified in several years. Also, although FE PA proposed the EAOT to help increase enrollment, the projected year end numbers are the most accurate projections at this time.

Q. CAUSE-PA Witness Mr. Geller also recommends that the Commission continue requiring FE PA to carryover any unspent WARM (FE PA's Low Income Usage

[51] OCA St. No. 5 at p. 29.
[52] OCA St. No. 5 at p. 94.

Reduction Program) funds from a previous year and add it to the budget for the following year.[53] Does FE PA carry over funds from one year to the next?

A. Yes. FE PA has been carrying over unspent funds since 2017 and has no plans to stop the process. If there is any carryover, we increase our budget for the following year.

Q. CAUSE-PA Witness Geller claims that FE PA's LIURP is not performing adequately to achieve the goals and objectives of the program because FE PA's LIURP is simultaneously underfunded and undersubscribed.[54] Please respond.

A. Although the performance of LIURP has been slow to recover since COVID-19, FE PA's scheduled contractor work goals and spending are trending in the right direction. Because of this trend, FE PA has significantly increased the budgets in the 2024-2028 USECP to allow more work to be completed. In fact, FE PA is committed to completing 25,700 jobs within the 2024-2028 plan years. Therefore, I believe that the Company's LIURP will perform well over the course of the 2024-2028 USECP.

Q. CAUSE-PA Witness Geller recommends that the Commission require FE PA to improve efforts to proactively coordinate delivery of services with other local, state, and federal efficiency, weatherization, and home repair programs to remediate health, safety and other home repair issues that prevent the installation of

[53] CAUSE-PA St. No. 1 at p. 50.
[54] *Id.* at pp. 46-49.

comprehensive efficiency measures that cannot be resolved through FE PA's health and safety budget alone.[55] Do you agree?

A. No. FE PA effectively coordinates the delivery of services with other local, state, and federal programs. In particular, FE PA waives minimum usage requirements for all coordinated jobs. LIURP Weatherization Service Providers also are expected to coordinate with all available programs to resolve barriers to weatherization, and many of the Company's Weatherization Service Providers also provide services for other programs, such as the Weatherization Assistance Program, the whole-home repairs program, and Act 129 Energy Efficiency & Conservation ("EE&C") programs. FE PA further encourages contractors to document jobs when they are coordinated with other programs and note the estimated amount of funds contributed.

E. Customer Charges and Reconnection Fees

Q. CAUSE-PA Witness Geller also claims that the proposed increases in the fixed customer charges would "undermine the ability of consumers to control costs through energy efficiency, conservation, and consumption reduction" and would "undermine the regulatory goals for LIURP" and recommends that the Commission reject increases in fixed charges.[56] Relatedly, OCA Witness Colton contends that FE PA's proposed customer charges would "impose particular harms on low-income customers" by reducing the bill impact of customers' efforts to reduce consumption,

[55] *Id.* at pp. 49-51.
[56] CAUSE-PA St. No. 1 at pp. 28-30.

and further claims that FE PA's proposed customer charges "impede using low-income energy efficiency to reduce overall bill increases."[57] Please respond.

A. In FE PA Statement No. 7-R, Witness Lyons addresses issues related to the Company's proposed increase in the fixed customer charges. Further, regardless of any alleged impact to customers' ability to reduce their electric service bills through conservation, FE PA's LIURP will still provide many options to customers that will help reduce their usage and, by extension, their bills.

Q. CAUSE-PA Witness Geller does not support FE PA's proposal to reduce its reconnection fee to $15 and recommends that the "Commission require FE PA to waive reconnection fees for all confirmed low-income customers."[58] Please respond.

A. In FE PA Statement No. 6-R, Witness Kehl specifically addresses reconnection fees. However, I note that although Mr. Geller expresses his opposition to the Company's proposal to reduce the reconnection fee to $15 based on the impact to low-income customers, he only recommends that the Company waive the reconnection fees for all confirmed low-income customers. He fails to explain why non-low-income customers should continue to pay the higher reconnection fees currently in place for the rate districts (*i.e.*, $36 in Met-Ed Rate District, $32 in Penelec Rate District, and $30 in both West Penn and Penn Power Rate Districts) or why the Company's proposed reconnection fee of $15 is not the right amount for the residential customer base generally. It appears that Mr. Geller wants the non-low-income residential customers to keep paying higher reconnection fees to make up for the lost fees associated with his proposal to waive reconnection fees for

[57] OCA St. No. 5 at pp. 70-80.
[58] CAUSE-PA St. No. 1 at pp. 69-70.

confirmed low-income customers. I do not believe that position is reasonable or appropriate.

I also do not believe that waiving reconnection fees would have the greatest impact on confirmed low-income customers' ability to get service restored. The most effective way to help control customer arrears and keep cost of service restoration manageable is to enroll the customers in assistance programs and help customers apply for available hardship funds prior to disconnection. Facilitating these efforts is one of the reasons why the Company proposed the EAOT in this proceeding.

III. PENNSYLVANIA CONSOLIDATION SETTLEMENT

Q. OCA Witness Alexander avers that FE PA has failed to identify and discuss their compliance with the PA Consolidation Settlement and that, "[t]he absence of identification of these commitments and testimony concerning the status of compliance suggests a lack of attention and consideration for these requirements…"[59] Do you agree?

A. No. FE PA remains committed to fulfilling its obligations outlined in the PA Consolidation Settlement and compliance with those terms is set forth throughout the body of my rebuttal testimony as well as the rebuttal testimony of FE PA Witness Savage.[60]

[59] OCA St. No. 6 at p. 21.
[60] FE PA St. No. 1-R.

Q. OCA Witness Alexander avers that FE PA has not met the conditions agreed to in the 2016 Base Rate Case regarding performing a root cause analysis on customer complaints.[61] Do you agree with her claim?

A. No. As an initial matter, OCA Witness Alexander has erroneously referred to the 2016 base rate case as the origin of the settlement term regarding root cause. I believe the settlement provision to which she is referencing appears in the PA Consolidation Settlement, which states, in pertinent part:

> FE PA shall conduct a monthly review of customer disputes, complaints, and the Commission's Bureau of Consumer Services [("BCS")] compliance findings to identify and respond to root cause(s) based on patterns and practices reflected in these indicia of customer dissatisfaction to ensure high level performance for its customers. The review will identify trends and areas for performance improvement and will be reported out to management. The monthly reports and management response will be shared at each quarterly meeting with the [Universal Service Advisory Committee] ("USAC").[62]

FE PA has complied and continues to comply with this settlement provision. Specifically, the Customer Services Compliance team performs individual complaint investigations as well as a monthly review of root cause trends and addresses any internal issues related to the investigation findings. While the Company does not have a formal process to determine the root cause of *every* customer dispute beyond BCS complaints, if an upward trend in a certain type of complaint is observed, that complaint and the circumstances surrounding the complaint are analyzed to identify the root cause including any gaps or failures on the part of the Company. Those trends are then reported to management. Mitigation efforts are put into place to prevent the complaint from becoming

[61] OCA St. No. 6 at p. 31.

[62] PA Consolidation Settlement at p. 16, Docket Nos. A-2023-3038771, *et al*.

a chronic issue. Mitigation efforts can include coaching and/or review and reevaluation of FE PA's processes and procedures to ensure no changes are necessary.

Furthermore, in compliance with the PA Consolidation Settlement Agreement term outlined above, the Customer Services Compliance team has provided the USAC, Bureau of Consumer Services ("BCS"), and OCA presentations on trending complaints, disputes and infractions at two separate USAC meetings. At those meetings, none of the parties indicated that the Company had failed to comply with the PA Consolidation Settlement Agreement. The slides presented at these meetings can be found in FE PA Exhibits MAJ-2 and MAJ-3.

In reference to conducting an analysis of "verified complaints" as reported by the BCS, the Company does not receive individual complaint data from BCS for those deemed by them to be verified complaints and so this analysis is not something that FE PA is able to perform.

IV. REMOTE DISCONNECTION SETTLEMENT

Q. OCA Witness Alexander contends that FE PA has not fully met the requirements of the Remote Disconnect Settlement and that additional discussions should be required as a condition of this base rate case.[63] Has FE PA fully complied with the existing settlement?

A. Yes. FE PA has fully complied with the Remote Disconnect Settlement. Upon execution of the July 2023 Remote Disconnect Settlement FE PA has fulfilled all items with the associated dates, including, but not limited to, the following:

[63] OCA St. No. 6 at pp. 22-23.

- As of 9/21/2023, the Company completed a review of standardized scripting, policies, and procedures for field representatives and Care Center agents to ensure they communicate all information prescribed in 52 Pa. Code § 56.97.
- As of 9/14/2023, FE PA trained field representatives to inquire prior to termination of service if the customer or adult occupant has been granted a Protection From Abuse ("PFA") or has a medical condition or serious illness that would be adversely affected by service termination and, if the customer answers in the affirmative, to suspend service termination for a minimum of 3 business days.
- As of 9/18/2023, FE PA began requiring that field representatives carry physical copies of the Commission's standard medical certificate form and provide a customer with the form upon request.
- As of 9/15/2023, the Company created and deployed post-termination notices to include all information in English and Spanish.
- As of 9/18/2023, FE PA added additional scripting to the PA Negotiator Tool for Care Center agents to inform customers that a medical certificate is available on the Commission's website and provide the link to the form.
- As of 9/18/2023, FE PA offered Extended Care Center hours to process reconnections for non-payment between 8 a.m. and 10 p.m., Monday through Friday for customers who have satisfied their requirements.
- As of 9/18/2023, the Company updated termination notices and bill messages to communicate the remote disconnect process.

- FE PA completed an analysis to propose a new reconnection fee based on actual costs of performing remote terminations and reconnections and was included in this rate case filed on April 2, 2024.
- FE PA scheduled and held two separate collaborative sessions with stakeholders to provide updates related to commitments from the Remote Disconnect Settlement and to solicit feedback related to FE PA processes, procedures and notices. The collaborative sessions were held on January 30, 2024, and April 18, 2024.

V. CUSTOMER INTERACTIONS AND CARE CENTER

Q. CAUSE-PA Witness Geller also recommends that "FE PA be directed to undertake a full review of the policies, procedures, and attendant training materials, to ensure that FE PA's field representatives are provided with clear and robust directions for how to communicate with" Limited English Proficient ("LEP") customers.[64] He further recommends that "[t]hese revisions should be filed with the Commission as a compliance filing to which parties can respond at this docket no later than 3 months from the final order in this proceeding."[65] Please respond.

A. While there is currently no formal training for field representatives, FE PA's field representatives effectively communicate with LEP customers provides customers through available translation resources. Also, the Company provides multiple opportunities to communicate with the Company through telephonic interpreter services at any time while the care center is open. Customers can utilize this service to communicate with FE PA about any issue, including termination or restoration of services. In addition, all FE PA

[64] CAUSE-PA St. No. 1 at pp. 62-64.
[65] *Id.* at p. 64.

notices do contain a least some Spanish interpretation to assist customers in getting additional assistance and the post-termination notice is fully translated in Spanish.

Q. OCA Witness Alexander argues that the training of the care center contractors is not realistic or sufficient, given the volume of the training materials. In addition, OCA Witness Alexander claims that the enhancements FE PA is focusing on are not impactful to live agent interactions and that the Company should have different live agent expectations.[66] Do you agree?

A. No. Training for the enhancements is built into the curriculum for customer service representatives and readily available to customer service representatives, both full time employees ("FTE") and contractors, in help tools. Additionally, training is tracked to ensure every customer service representative has taken the appropriate training and acknowledges the enhancements. New hires go through the extensive training material which is a combination of classroom setting book teaching, shadowing, hands on application and resource guiding. Our training department tracks the success of each customer service representative prior to them being able to take live phone calls. Once the customer service representative can take live calls, their leadership team, in addition to the quality service team, monitor recorded phone calls. In addition to the built-in resource libraries, customer service representatives can reach out to a supervisor for help. Regarding any concerns surrounding remote work, only contractors and full-time employees who have completed training and have proven to be proficient in their skillset are permitted to work remotely. This is reviewed on a monthly basis.

[66] OCA St. No. 6 at pp. 18, 25.

Q. OCA Witness Alexander also questions whether FE PA has "complied with its prior commitment on its call center performance based on" the allegedly "more realistic and reasonable internal calculations" she presents in her direct testimony.[67] Please respond.

A. FE PA has complied with all prior commitments on its call center performance by answering at least 80% of customer calls to live agents within thirty seconds. As a result, FE PA disagrees with OCA Witness Alexander's questions related to compliance with prior commitments.

Q. OCA Witness Alexander recommends that FE PA "be required to maintain its call answering performance results as reflected in its most recent 2024 information as a condition of any rate increase."[68] Do you agree with this recommendation?

A. No, FE PA does not agree with this recommendation. The Company continues to meet the performance requirements set by the Commission and complies with all prior commitments from prior regulatory proceedings. Additional performance and reporting requirements over these commitments are duplicative and unnecessarily burdensome.

Q. OCA Witness Alexander further recommends that the Company "document routine audits of its call centers generally and temporary contractors specifically to document

[67] OCA St. No. 6 at p. 28.
[68] *Id.*

sufficient and realistic training prior to handling Pennsylvania customer calls."[69] Please respond.

A. FE PA disagrees with this recommendation. The Company's call center training program produces agents capable of answering questions from customers when they call. Agents are trained on how to resolve customer issues effectively and efficiently. Completion of the agent training program is marked by the successful completion of a knowledge assessment. Once the knowledge assessment is passed, agent calls are monitored, reviewed and scored. The scores and calls are reviewed with agents to reinforce positive performance and identify opportunities for improvement and growth.

Q. PSU Witness Crist recommends alerting customers when there is a request to start, stop or transfer service to a specific property to prevent unauthorized account transfers.[70] Do you agree with the recommendation?

A. No. FE PA cannot legally deny a customer in good standing the ability to transfer service into their name. The original customer or new customer is alerted by receiving a final or initial bill. If fraudulent activity takes place, the transaction is reviewed and adjusted based on the outcome of the review.

[69] *Id.*
[70] PSU St. No. 1 at p. 9.

VI. CHAPTER 14 COLLECTIONS

Q. OCA Witness Alexander, OCA Witness Colton and CAUSE-PA Witness Geller oppose FE PA's inclusion of a calculation of the uncollectible expense impact of Chapter 14 in its uncollectible expense claim.[71] Please respond.

A. As stated in my testimony, Chapter 14 of the Public Utility Code, which governs utilities' collections procedures for residential customers is scheduled to sunset in December of 2024. As a result, several changes to the collection procedures outlined in Chapter 14 have been proposed by the legislature. In my testimony, the test year for these potential changes is in the future, 2025. As the future test year is ending December 25, 2025, FE PA is obligated to consider the potential impact of proposed legislative changes to Chapter 14, if accepted, based upon the forecast for the future. The exhibit, FE PA Exhibit MAJ-1, which accompanied my direct testimony, demonstrates the anticipated effects that the potential Chapter 14 revisions would have on uncollectible expenses, based on projected risks and previous historical collections data. If the proposed changes to Chapter 14 of the Public Utility Code are not adopted by the General Assembly, the Company will update its uncollectible expense projections for 2025 accordingly.

Furthermore, in response to OCA Witness Colton's testimony, it should be noted that the Company does have historical data and experience with understanding how changes to collections practices, such as those proposed changes to Chapter 14 of the Public Utility Code, may affect uncollectible expense.

Also, in response to OCA Witness Colton's testimony concerning FE PA's response to OCA-II-39, the Company does not have readily available historical data and

[71] OCA St. No. 6 at p. 34; OCA St No. 5 at pp. 81-82, 84-85; CAUSE-PA St No. 1 at pp. 31-32.

experience with understanding how a focused team, such as the proposed EAOT and their related goals/targets, would potentially reduce uncollectible expense. Both topics contain speculative language around what could happen in the future, and any type of forward-looking predictions will depend greatly on future events, decisions, and legislative orders. The distinction between these two topics is that the Company can compile a historical data-based forecast for uncollectible expense impact related to proposed changes to collections practices governed by Chapter 14 of the Public Utility Code.

Q. OCA Witness Mugrace relatedly proposes an adjustment to the uncollectible expense calculations as a result of potential changes related to Chapter 14.[72] Do you agree?

A. No. As explained above, if Chapter 14 is not reauthorized, FE PA maintains that the uncollectible expense would be reduced by the $15,901,580 that is recommended in OCA Exhibit DM-15. Therefore, Mr. Mugrace's adjustment should be denied.

VII. EV PILOT

Q. OCA Witness Alexander contends that the program elements of the Electric Vehicle ("EV") Pilot do not fall under the "proper role" of electric utilities.[73] Do you agree with her assessments?

A. No.

Q. Why not?

A. With the exception of the program elements that are designed to educate customers, the EV Pilot addresses EV charging and EV charging infrastructure, which impact FE PA's

[72] OCA St. No. 1 at p. 52.
[73] OCA St. No. 6 at pp. 10-11.

core operations and are not tied to the vehicles themselves or vehicle ownership. Each program element can directly benefit utility operations and customers in the following ways:

The education and advisory programs can help customers optimize the electrification of their vehicle fleets and charging needs. This can help to streamline the connection process by providing resources to the customer to help them understand the proper scope before involvement of design engineering, thereby reducing connection lead times and costs associated with utility construction.

The grant assistance program can bring in state and federal funding. One of the uses for this funding is to help pay for the utility make-ready work of the projects that they fund. Funding used in this manner can offset any capital that would otherwise enter rate base and be recovered through base rates.

Both the residential and commercial rebate programs help to ensure that charging equipment is properly and safely installed by licensed professionals. Furthermore, the load growth that would result from these rebate programs would result in future revenue requirements being spread over larger energy and demand resulting in lower demand and energy rates for customers in the future.

Q. Is there precedent in the Commonwealth for the existence of these programs?

A. Yes.

Q. Please elaborate.

A. On December 20, 2018, the PUC approved a pilot program submitted by Duquesne Light Company ("Duquesne Light") that will encourage the deployment of EV charging stations, EV registration incentives, consumer education and development of fast charging stations

to be used by Duquesne Light and the Port Authority of Allegheny County for electric bus evaluation.[74] On December 16, 2021, the Commission approved a pilot program submitted by Duquesne Light that includes programs for public, workplaces, multi-unit dwellings, fleet and transit system charging, along with specific outreach to low-income communities and providers who serve those communities.[75] The fleet portion of the pilot will support the installation of infrastructure with participation capped at 10 new customers per year. The transit portion of the pilot will support the Pittsburgh Regional Transit's efforts to electrify its bus fleet by installing infrastructure and providing rebates for DC fast charging stations.[76] Furthermore, beginning October 16, 2023, PECO's Public Benefit Program was made available to incentivize electric vehicle charging projects for a broader range of public purposes and charging technologies. Both Level 2 and direct current fast chargers ("DCFC") chargers are eligible, and projects can receive rebates for 50% of the total eligible project costs up to $60,000.

Q. What other reasons do you have for why FE PA should implement the EV Pilot?

A. The EV Pilot was developed with the mindset of bringing value to customers in ways that are linked to the responsibilities of an electric distribution company. The EV Pilot focuses on electric infrastructure, educational resources that can help the customer best understand their power needs, and services that will help the customer optimize their sites and how they interface with FE PA throughout their connection process. Furthermore, the existence of federal funding should not preclude FE PA from implementing the EV Pilot, because

[74] *PUC, et al. v. Duquesne Light Company*, Docket No. R-2018-3000124 (Order entered December 20, 2018).
[75] *PUC, et al. v. Duquesne Light Company*, Docket No. R-2021-3024750 (Order entered December 16, 2021).
[76] https://www.puc.pa.gov/press-release/2021/puc-approves-settlement-for-substantially-smaller-than-requested-increase-in-duquesne-light-customer-rates.

good policy and programs should be pursued wherever appropriate, rather than limited to a single avenue. Moreover, existing federal funding is not guaranteed to continue during the life of the EV Pilot nor is it guaranteed that current federal funding will get allocated to customers within FE PA. FE PA Exhibit MAJ-4 details the distribution of funds of large federal programs to the Commonwealth and FE PA relative to the total distributions across the country. For these reasons, it is important for FE PA to implement the EV Pilot.

Q. CAUSE-PA Witness Geller, OCA Witness Alexander, and I&E Witness Wilson also claim that program elements of the EV Pilot will harm low-income customers because they will pay for programs that they are unable to utilize or benefit from.[77] Do you agree with their arguments?

A. No.

Q. Why not?

A. EVs are becoming more affordable, and as such they are quickly becoming an option that can offer substantial savings for low-income customers for the following reasons:

(1) The national average price of gas vehicles is about $10,000 less than the national EV average price. However, the federal and Pennsylvania rebates available for EVs total $9,500, bringing the purchase price for EVs to parity with their gas-powered counterparts. By the end of 2024, it is expected that the average price of new EVs will be in alignment with the average overall new vehicle price, prior to any applicable federal rebates.

[77] CAUSE-PA St. No. 1 at pp. 74-82; OCA St. No. 6 at p. 1; I&E St. No. 4 at pp. 54-55.

(2) As the used EV market matures, EVs will become more accessible to low-income customers who cannot afford new vehicles, and over half of used EVs are eligible for the $4,000 Clean Vehicle Tax Credit.

(3) On average, EVs save drivers $14,500 in fuel costs alone over 15 years.

(4) EVs generally require less maintenance than conventional vehicles. This is due to there being fewer fluids – like oil and transmission fluid – to change, far fewer moving parts, and less wear on braking systems due to EVs' regenerative breaking capabilities. EVs only require minimal scheduled maintenance to their electrical systems, which may include the battery, electric motor, and electronics.

(5) As described by FE PA Witness Larkin, the structure for recovering the EV Pilot budget is designed to distribute costs within the customer class that benefits from the program elements, and therefore most of the EV Pilot expenses are recovered through commercial tariffs.

In addition, affordable Level 1 charging is available for low-income customers. The U.S. Department of Transportation has estimated that the average cost to install a Level 1 EV charger at $700 and a Level 2 EV charger at $680. The EV Pilot aims to assist with barriers to entry for home charging with the home charging rebates.

Furthermore, the commercial and public charging rebates will assist low-income and rural areas that need assistance to improve EV charging infrastructure. This will allow customers to adopt EVs who are deterred by the lack of public infrastructure in those communities. Those areas can also benefit from public charging, as it encourages travelers to stop and charge their EVs there, which can result in increased traffic and revenue to local businesses while drivers wait for their cars to charge.

Lastly, FE PA will allocate 35% of its approved marketing dollars and promotional efforts directly to Environmental Justice Area ("EJA") communities, as defined by the Pennsylvania Department of Environmental Protection, by zip code, service address, and county, through digital and traditional outreach channels. Thus, the Company's EV Pilot is designed to help address the apparent barriers to low-income customers adopting EVs.

Q. CAUSE-PA Witness Geller suggests that low-income customers be excluded from paying for the costs of the EV Pilot.[78] Do you agree with his recommendation?

A. No.

Q. Why not?

A. As described by FE PA Witness Larkin (FE PA Statement No. 3), the EV Pilot will be collected as a distribution charge through tariff rates, and adjustments are not made to tariff rates for any individual program. Also, customers do not have to directly benefit from every expense incurred by the Company for such expense to be prudent and reasonable and, therefore, recoverable in distribution rates. Lastly, the expected increase to the monthly bill of a customer using 1,000 kWh is 11 cents, so any alleged subsidy is very small.

Q. What additional benefits does the EV Pilot offer FE PA's customers?

A. The FE PA EV Pilot will provide additional benefits, such as health benefits from improved air quality and climate benefits from lower greenhouse gas ("GHG") emissions to low-income and rural communities.

[78] *Id.*

Tailpipe emissions from internal combustion engine vehicles cause air pollution, which leads to adverse health impacts compared to EVs with zero tailpipe emissions. According to the American Lung Association, transitioning to a nationwide electric transportation system by 2050 would save about 6,300 lives every year and avoid 93,000 asthma attacks and 416,000 lost workdays annually. Additionally, EVs have regenerative braking, which produces less brake dust pollution. These health benefits are critical for EJA and low-income communities as they are often overburdened by pollution.

Also, EVs mitigate GHG emissions that contribute to climate change and can impact rural areas increasing the frequency and severity of wildfires, storms, flooding, increased heat, and droughts. The transportation sector is responsible for 29 percent of all U.S. GHG emissions, more than any other U.S. sector, and approximately 60 percent of these emissions come from passenger vehicles.

Q. In their direct testimonies, OCA Witness Alexander and Walmart Witness Perry indicate that FE PA does not offer EV charging rate tariffs.[79] Relatedly, Mr. Perry recommends that the Commission require the Company to develop a new EV rate for public-facing EV chargers and to seek Commission approval of such rate within six months of the Commission's Order in this proceeding.[80] Does FE PA plan on offering EV charging rate tariffs at this time?

A. No.

[79] OCA St. No. 6 at p. 11; Walmart St. No. 1 at p. 6.
[80] Walmart St. No. 1 at p. 6.

Q. Why not?

A. The existing Time-Of-Use ("TOU") rate for residential customers is already well designed to accommodate EV charging needs. It leverages the statewide deployment of smart meters, allowing customers to efficiently manage their energy usage without incurring additional costs associated with sub-meters. This approach also avoids the limitations and expenses related to using charger data for measuring EV usage, which often includes vendor costs and equipment restrictions. Therefore, the current structure provides a cost-effective and streamlined solution for residential EV owners.

Also, for commercial customers, FE PA is currently awaiting a final Commission Order in the Electric Utility Rate Design for Electric Vehicle Charging, Docket No. M-2023-3040755, that addresses EV charging tariffs. This decision will provide clarity and direction on how EV charging will be managed and billed for commercial entities.

Q. You mention TOU rates for residential customers. What efforts will FE PA undertake to enroll customers with EVs in TOU rates?

A. The EV Pilot's education campaign will focus in part on increasing the adoption of TOU rates among customers. By raising awareness about the benefits and efficiency of TOU rates, FE PA aims to encourage more residential customers to take advantage of this cost-effective and environmentally friendly option for managing their energy consumption, especially for EV charging. Through current efforts across FE PA service territory, as of May 2024, there are 1,204 customers enrolled in the residential TOU program.

Q. How will enrolling customers with EVs in TOU rates benefit the electric grid?

A. Most home Level 2 chargers operate at up to 30 Amps, delivering 7.2 kilowatts ("kW") of power providing approximately 25 miles of range per hour of charging.[81] With enough off-peak hours available, EV charging can be scheduled exclusively during these periods. This strategy avoids contributing an additional 7 kW per EV to the peak demand, ensuring a more balanced and efficient use of the electrical grid.

Q. In their direct testimonies, OCA Witness Alexander and I&E Witness Wilson argue that the expenses and the success of the EV Pilot should be tracked and monitored.[82] Does FE PA plan on tracking expenses and metrics related to the EV Pilot?

A. Yes.

Q. How does FE PA plan on tracking expenses and metrics related to the EV Pilot?

A. FE PA plans to track metrics within each component of the programs. The EV education platform will track the number of visits to the site and time spent on the site. It will also track the number of times program materials are downloaded and the number of customers that enroll in other EV Pilot program elements that learned of those program elements from the EV education platform. The grant assistance component will be tracked by the grant applications submitted, number of grants awarded, and total funding dollars provided. The fleet advisory program will be tracked by the number of applications submitted, number of assessment reports completed, and number of resulting utility infrastructure projects. The dealership toolkit program will be tracked by the number of participating dealerships and number of customers utilizing the services. The rebate program will track the number of

[81] https://afdc.energy.gov/fuels/electricity-stations.
[82] OCA St. No. 6 at p. 17; I&E St. No. 4 at p. 56.

installations, rebates processed, and total amount of funds being dispersed for new charging installations.

Q. Does FE PA intend to file this information with the Commission?

A. Yes. FE PA intends to file a report with the Commission by the end of the second quarter of the following year, showcasing the previous year's results.

Q. In her direct testimony, OCA Witness Alexander states that FE PA's EV Pilot is potentially in conflict with Pennsylvania Act 129 of 2008's ("Act 129") EE&C provisions, which are designed to help consumers lower their electric consumption.[83] Do you agree?

A. No.

Q. Why not?

A. I am advised by counsel that the General Assembly enacted Act 129 to address several issues tied to electric consumption and peak demand, including the promotion of energy efficiency and conservation within the Commonwealth by requiring the largest EDCs operating in Pennsylvania to file EE&C Plans and meet mandatory targets for reducing electric consumption and peak demand. FirstEnergy's EV Pilot program aligns with the goals and objectives set forth in Act 129 by promoting energy efficiency, reducing greenhouse gas emissions, and enhancing overall energy sustainability. Indeed, consumer education related to transitioning to EVs can result in significant reductions in air pollution and carbon emissions, which support the goals set forth in Chapter 28 of the Public Utility Code. The EV Pilot also helps support the Pennsylvania Department of Environmental

[83] OCA St. No. 6 at pp. 11-12.

Protection's ("DEP") Pennsylvania Climate Action Plan ("PA CAP"), which outlines a pathway to reaching the Commonwealth's GHG reduction goals: 26 percent by 2025 and 80 percent by 2050 from 2005 levels.

Furthermore, the EV Pilot does not conflict with the Company's Commission-approved EE&C Plan, nor does it impede the Company's ability to achieve its required targets to reduce electric consumption or peak demand. In fact, OCA Witness Alexander presents no calculation of the estimated increase of electric consumption or peak demand from the EV Pilot. Meanwhile, the Company has calculated the estimated increase in electric usage from the EVs that would be purchased pursuant to the EV Pilot. Specifically, FE PA Exhibit MAJ-5 details the forecasted electric consumption increase from the EV Pilot. Also, the EV Pilot could inform potential EV-specific programs or measures to be offered under the Phase V EE&C Plan, such as more efficient Level 2 EV chargers. Finally, the Statewide Evaluator's Phase V Potential Studies will evaluate the electric consumption and peak demand reduction savings potential in FE PA's service territory, upon which the Commission will base the required targets for Phase V.

VIII. CUSTOMER BILLS

A. Bill Presentation

Q. OCA Witness Alexander's testimony expresses concern that FE PA's bill presentation complicates customer education regarding EGS charges compared PTC. OCA Witness Alexander recommends that FE PA add a calculation that demonstrates the

PTC charge dollar amounts as compares to EGS's rates and charges.[84] Do you believe these issues are appropriately addressed in a base rate case?

A No. The comments related to EGS charges are more appropriately addressed in a different proceeding, such as a default service proceeding. Moreover, no EGSs are party to this base rate case, and any proposed changes to FE PA's bill presentation would have a direct impact on the EGSs and their customers. For example, OCA Witness Alexander believes that FE PA should interpret the customer's contract with the supplier to make a value comparison between the discrete monthly cost of the supplier charge for generation versus the Company's PTC.[85] However, EGSs could argue that such an analysis fails to reflect any value the customer derives from the EGS contract with respect to off-bill rebates, premium products, services, or other benefits that a customer may be receiving. Furthermore, EGSs may view an attempt by an electric distribution company ("EDC") to interpret the contract as interference by the EDC. Notwithstanding, to the extent that OCA's proposal is evaluated as part of this proceeding, FE PA maintains that its current bill presentation complies with the requirements prescribed in 52 Pa. Code § 54.4. If the Commission were to consider changes to the bill presentation requirements, it should do so through a rulemaking proceeding or in the Company's next default service proceeding where all interested parties are part of the proceeding.

[84] OCA St. No. 6, pp. 35-37.
[85] *Id.*

Q. OCA Witness Alexander argues that FE PA should complete analysis of the bill impacts or collection costs associated with EGS bills compared to default service bills.[86] Do you agree?

A. No. OCA Witness Alexander's concern is that because EGSs have a guaranteed recovery of their receivable minus a discount rate, EGSs could use the Purchase of Receivables ("POR") program to enter into riskier contracts with customers. However, Ms. Alexander overlooks how the FE PA Supplier Tariff employs a "clawback" provision. The clawback was designed to collect a portion of uncollectible accounts expense from EGSs, specifically, those EGSs whose practices were driving significantly higher write-offs as a product of the types of offers they make to customers. Clawback charges are returned to customers as described in the FE PA Retail Tariff. The clawback was approved in the Default Service Plan ("DSP-VI") proceeding by the Commission on August 4, 2022.[87] To the extent that Ms. Alexander believes changes to the clawback provision should be made, such issues would be more appropriately addressed in the next DSP proceeding.

Q. OCA Witness Alexander states that as part of that analysis, FE PA should utilize the "newly instituted compilation and summary of EGS customer complaints" to "inform the Company about the costs associated with the [Purchase of Receivables program ('POR')]," which "may lead to a consideration to increase the discount charged to

[86] *Id.* at pp. 36-37.

[87] *Joint Petition of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company for Approval of Their Default Service Programs* Docket Nos. P-2021-3030012, P-2021-3030013, P-2021-3030014, and P-2021-3030021(Order Issued on August 4, 2022).

EGSs who bill rates and charges in excess of the PTC."[88] Do you agree with her claim?

A. No. As stated previously, FE PA utilizes the clawback mechanism in its Supplier Tariff to address these concerns. The Company considers the clawback mechanism to be a more effective and objective method of calculating and addressing the concerns identified by OCA Witness Alexander.

B. <u>Non-Basic On-Bill Charges</u>

Q. OCA Witness Alexander expresses concerns about the disclosures on the customer bill with non-basic charges, claiming, for example, "non-basic charges are not labeled as such or differentiated from regulated distribution charges," the non-basic charges are not separated out from the total due, and "[t]here is no information on the bill to explain that these are non-basic charges or that nonpayment of such charges will not be subject to disconnection."[89] Do you agree with her concerns?

A. No. My understanding is that FE PA complies with all applicable regulations and requirements regarding the provision of these non-basic services to customers, including the presentation of the charges on customers' bills and termination notices and in how the programs are marketed to customers.

Ms. Alexander points to OCA Exhibit BA-9 as alleged support for her claim that the Company's bills do not appropriately display the charges for non-basic services. However, I am advised by counsel that Section 54.4 of the Commission's regulations requires that: (1) "[c]harges for basic services must appear before charges for nonbasic

[88] OCA St. No. 6 at p. 37.
[89] OCA St. No. 6 at pp. 38-39.

services, and appear distinctly separate"; and (2) "[i]temization of nonbasic charges."[90] Moreover, the Commission's regulations state that the "label of either basic or nonbasic is not required to accompany the name of the charge on the bill."[91] Here, as shown in OCA Exhibit BA-9, the Company's charges for non-basic services, starting with "HomeServe USA Plan" and ending with "Surge Assist 6000 Max (800-505-7283)-Discount," are each listed after all the charges for basic services and are each distinctly separate from all other charges.

Q. OCA Witness Alexander points to a solicitation received by an OCA employee from his Met-Ed customer account as OCA Exhibit BA-10 and claims that this document contains language that conflicts with "statements made in data responses [she] ha[s] cited above concerning the lack of any contractual relationship between FirstEnergy and any entity that bills non-basic services on its customer bills."[92] Do you agree with this statement?

A. No. HomeServe provides the services on FE PA's behalf. In other words, these are FE PA's programs, and HomeServe simply operates the programs on FE PA's behalf as a contractor. As such, these are not HomeServe's charges for non-basic services on the FE PA bills. They are FE PA's charges for non-basic services on the bills. The situation is no different than FE PA contracting with conservation service providers ("CSPs") to operate the Company's EE&C programs. Thus, there is no inconsistency between the Company's discovery responses and OCA Exhibit BA-10.

[90] 52 Pa. Code § 54.4(b)(2), (b)(3)(xi).
[91] 52 Pa. Code § 54.4(b)(3).
[92] OCA St. No. 6 at p. 39.

Q. OCA Witness Alexander asserts that non-basic charges appear on customers' termination notices and that should not be allowed.[93] Please respond.

A. To clarify, the Company does not include unpaid non-basic service charges on its termination notices. FE PA investigated this claim and confirmed that such charges are not included in the past due amount shown on the termination notices. FE PA clarified this fact in discovery by supplementing its response to OCA Interrogatory Set IX, No. 21.

Q. OCA Witness Alexander recommends the Commission "investigate this program to ensure that there is no subsidy by regulated distribution customers for these programs and to require significant reforms in how these programs are presented to Pennsylvania customers on customer bills, in marketing materials, on the Company's web portal, and in termination notices."[94] Do you agree with this recommendation?

A. No. An investigation of the Company's programs is not warranted. As noted previously, my understanding is that FE PA complies with all applicable regulations and requirements regarding the provision of these non-basic services to customers, including the presentation of the charges on customers' bills and termination notices and in how the programs are marketed to customers.

In addition, FE PA's distribution customers do not subsidize these programs. All the costs associated with these programs are recorded below the line and, therefore, not passed on to the Company's customers. I further note that this same issue was investigated in *Interstate Gas Supply, Inc., et al. v. Metropolitan Edison Co., et al.*, Docket Nos. C-2019-3013805. That case is now on appeal before the Pennsylvania Supreme Court, and

[93] *Id.* at pp. 39-40.
[94] *Id.* at p. 40.

the OCA is a party to that appeal and was a party in the underlying litigation. Thus, the OCA should be aware that these costs are recorded below the line and, accordingly, that the programs are not subsidized by distribution customers.

Q. OCA Witness Alexander explains that "[t]his investigation should also review how FirstEnergy handles customer complaints about non-basic products appearing on their bill or the service they receive," as "FirstEnergy's customer bill does not include the necessary disclosures."[95] Do you agree with the recommendation?

A. No. Again, no investigation is warranted. Furthermore, FE PA handles customer complaints about the non-basic services, including the charges for those services, like any other customer complaint. It is also unclear what statute or regulation Ms. Alexander believes requires FE PA to include these alleged "necessary disclosures," such as a disclosure on its bills that service will not be terminated for failure to pay for non-basic services. I am advised by counsel that Section 56.83 of the Commission's regulations already states that the "[n]onpayment, in whole or in part, of nonbasic charges" is an unauthorized termination of service. Furthermore, as noted previously, the Company's bills are not required to label the charges as "basic" or "nonbasic,"[96] nor does FE PA include the unpaid non-basic service charges in the amount past due shown on its termination notices, nor does FE PA require customers to pay the unpaid non-basic service charges before restoring service. Customer service representatives also are trained to explain to customers that they do not need to pay for unpaid non-basic services in order to

[95] *Id.* at p. 41.
[96] 52 Pa. Code §§ 54.4, 56.13.

have electric service restored. Thus, I do not believe that a disclosure needs to be added to the Company's bills explaining that.

Q. OCA Witness Alexander claims that "FirstEnergy's web portal that promotes these programs does not disclose that these programs are 'non-basic' and not required to be purchased from FirstEnergy or describe how these charges relate to credit and collection actions for FirstEnergy's regulated services."[97] Please respond.

A. All of the Company's marketing materials for these programs contain the following disclosure: "You are not required to buy this optional product or service plan in order to receive the same quality service from your local electric utility company. Your decision to purchase or not purchase this optional product or service will not influence the delivery of retail electric service to you by the FirstEnergy Companies." The disclosure also is located online on the Company's connections page:

https://utilitysmarthome.com/FirstEnergy/movers

The Company will also place this disclosure on the Products webpages on its website. Therefore, I believe the Company's disclosures for these programs are sufficient.

Q. OCA Witness Alexander states that "[t]he use of FirstEnergy's regulated service customer lists and billing data to market these unregulated products and services raises additional customer privacy concerns," given that "[t]he intermingling of regulated and unregulated and non-basic services in FirstEnergy's marketing, billing, and customer education activities is a matter of significant concern in light of the obligation of Pennsylvania's EDCs to restructure their operations to eliminate

[97] *Id.* at pp. 40-41.

competitively available services and products from their regulated portfolio of services."[98] Do you agree with this statement?

A. No. Ms. Alexander's opposition to FE PA's billing of non-commodity products and services is nothing new. She opposed FE PA's practice of billing for its non-commodity products and services in her rebuttal testimony in *Interstate Gas Supply, Inc., et al. v. Metropolitan Edison Co., et al.*, Docket Nos. C-2019-3013805, raising concerns with, among other things, the Company using its customer interactions to market these programs. I am advised by counsel that the PUC ultimately rejected the OCA's argument that the Company's existing billing practice was unlawful, finding:

> We agree with the EDCs' position that the OCA's Exception goes beyond the issue presented to have the Commission deny a lawful billing practice. Since we conclude that the EDCs' practice of "on-bill billing" does not violate either Section 1502 or 2804(6) of the Code, the EDCs' practice of "on-bill billing" for the non-commodity goods and services they themselves provide is permissible.

Although that case is now on appeal to the Pennsylvania Supreme Court, counsel advises me that the only issue on appeal is whether the Company's prohibition of third parties, including EGSs, including their charges for non-commodity products and services on FE PA's electric bills violates Section 1502 or 2804(6) of the Public Utility Code. I am advised by counsel that the OCA did not appeal the PUC's denial of its arguments concerning the Company's billing for its own non-commodity products and services on its bills. Counsel advises me that the legal issues with OCA re-raising its arguments about the Company's existing bill practice, which the PUC declared was lawful, will be addressed in the Company's briefs.

[98] *Id.* at p. 9.

Further, I am advised by counsel that "restructuring" was solely focused on the restructuring of the market for electric generation supply service. It did not address public utilities' non-basic services, which have been around for decades, well before the passage of the Electricity Generation Customer Choice and Competition Act. Thus, counsel advises me that nothing prohibits the Company from using customer lists and billing data to market these services and programs.

IX. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes.

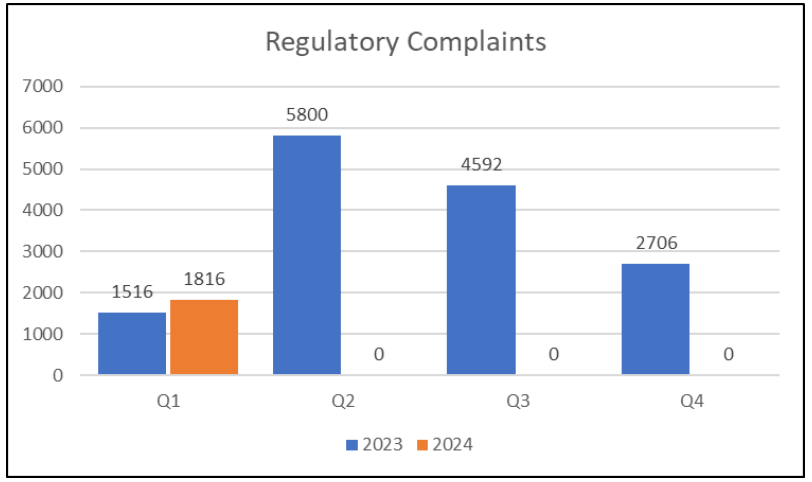
*2024 data is as of March month end



All regulatory complaints are analyzed by the Customer Services Compliance group to determine whether they are justified. A justified complaint is the result of the failure to comply with commission orders, regulations, reports, or company tariffs. It is typically the result of a gap in processes, technologies, or the actions of employees.

Justified: All regulatory complaints are analyzed by the Customer Services Compliance group to determine whether they are justified. A justified complaint is the result of the failure to comply with commission orders, regulations, reports, or company tariffs. It is typically the result of a gap in processes, technologies, or the actions of employees.

Customer Issues – Regulatory (continued)

BCS Infractions – Major Issues

2023 Infractions

Cite	Description	2023 Volume	Course of Action
56.191(c)(2)(iv)	The utility failed to properly amortize over 24 months reconnection amounts for a customer or applicant at or below 150% of poverty.	69	Coaching sent when applicable. Met with business to discuss infractions received. Business to investigate and determine next steps.
56.36(b)(1)	The denial letter contained both a request for additional information (lease, deed, or mortgage) and a demand for payment of a deposit.	41	Met with business to discuss infractions received. Business investigated and changed wording on denial letter.
56.151(2)	The company failed to investigate the customer's dispute using methods reasonable under the circumstances.	26	Coaching sent.
56.1	The company failed to meet its obligation of good faith, honesty and fair dealing in its performance and to manage customer accounts to prevent the accumulation of large, unmanageable arrearages.	22	Coaching sent.

2024 Infractions

Cite	Description	2024 Volume	Course of Action
56.191(c)(2)(iv)	The utility failed to properly amortize over 24 months reconnection amounts for a customer or applicant at or below 150% of poverty.	24	Coaching sent when applicable. Met with business to discuss infractions received. Business to investigate and determine next steps.
56.36(b)(1)	The denial letter contained both a request for additional information (lease, deed, or mortgage) and a demand for payment of a deposit.	12	Met with business to discuss infractions received. Business investigated and changed wording on denial letter.

Please note: The volume of confirmed infractions is less than 1% of complaints reviewed by BCS.

- The PA Bureau of Consumer Services (BCS) reviews informal case responses to determine if there has been a misapplication or infringement of a Commission regulation (infraction). If one is found, the BCS will issue a citation to the Company with corresponding interpretations.
- Customer Service Analytics reviews each citation for possible corrective action and provides additional detail to the BCS on cites requiring further consideration. Citations are typically received several months after the Compliance response to the initial complaint.
- Infractions are typically received months after the Company's initial complaint response. The Company started receiving infractions related to 2024 responses on March 1.

IV. CONCLUSION 48

REBUTTAL TESTIMONY
OF
JOHN J. SPANOS

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is John J. Spanos. My business address is 207 Senate Avenue, Camp Hill, Pennsylvania, 17011.

Q. Are you the same John Spanos that presented direct testimony in this proceeding?

A. Yes, I am the same John Spanos that presented testimony on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA," or the "Company") in this proceeding.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to the depreciation-related testimony of David J. Garrett on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). Mr. Garrett disagrees with my use of the Equal Life Group ("ELG") procedure to calculate annual depreciation accrual rates and depreciation expense in this case.[1] He proposes, instead, the continued use of the Average Life Group ("ALG") method even though ALG ceased to be the prevailing group depreciation procedure in Pennsylvania, with the approval of the Pennsylvania Public Utility Commission ("PUC" or the "Commission"), over three decades ago.[2] Additionally, although Mr. Garrett does not propose changing any of the service life estimates I employed in my Depreciation Study, he disagrees with the service life estimates I selected for four accounts (one each for the Met-Ed, Penelec, Penn Power, and West Penn Districts of the Company) and contends that, in each instance, using the

[1] OCA St. No. 3 at p. 3.
[2] *Id.*

largely formulaic approach he recommends would produce longer service lives. However, it is not clear if Mr. Garrett's approach would actually produce longer service lives in each instance, since he erroneously used the same survivor data for two different Districts and different property accounts, as evidenced by comparing Figures 4 and 7, at pages 17 and 23, respectively, of OCA St. No. 3.[3] My rebuttal testimony responds to these positions.

Q. Please provide a summary of the key elements of your rebuttal testimony.

A. My rebuttal testimony consists of Sections I through IV:

- Section I is the Introduction, of which this summary is a part.

  Section II responds to Mr. Garrett's arguments against using the ELG procedure in this case. Section II consists of subsections A. through D.

- Section II.A. explains that Mr. Garrett proposes to reduce the Company's combined-District depreciation expense by $62.6 million as of the end of the fully projected future test year ("FPFTY") because he disagrees with the use of the ELG procedure.[4] However, ELG, *not* ASL (which Mr. Garrett favors), is the group depreciation procedure most commonly used to calculate annual depreciation accrual rates and depreciation expense in Pennsylvania.[5] ELG became the prevailing Commission-approved procedure during the 1980s and, over the next approximately 40 years, has been adopted by most utilities in Pennsylvania to calculate annual depreciation. I also explain that the ELG procedure more precisely matches the recovery of the cost of an asset with the period during which it is actually providing service to customers. I also illustrate how the ELG procedure

[3] *Id.* at pp. 3, 16.
[4] *Id.* at p. 5.
[5] In Pennsylvania, the ALG procedure is more commonly identified as the Average Service Life ("ASL") procedure.

accomplishes that goal and demonstrates, with an illustrative computation, that the ASL procedure mismatches capital recovery and service life by understating depreciation expense in the early years of an asset class and overstating depreciation expense later in the life of that asset class. This is graphically depicted in Figures 1 and 2 in my testimony.

- Section II.B. discusses the growing number of regulatory authorities in federal, state, and Canadian provincial jurisdictions that are following Pennsylvania in recognizing that ELG more accurately and appropriately matches the annual depreciation expense borne by customers with the utility plant that is actually furnishing them service at any given point in time. Despite the broad acceptance of the ELG procedure for years in Pennsylvania, Mr. Garrett has not offered any valid basis for rejecting the long-standing Commission precedent affirming the superiority of ELG.
- Section II.C. explains that Mr. Garrett's proposal to reject prevailing precedent and use the ASL procedure narrowly focuses on depreciation expense in isolation without considering properly (if at all) the totality of components that underly revenue requirement and, specifically, the rate base component on which customers pay a return. Increases in depreciation expense today reduce future rate base (and the associated return component that customers pay). Properly aligning depreciation expense with an asset's actual service life is important in itself for a number of reasons (including intergenerational equity, as explained in Section II.D.). It also means that a short-term increase in depreciation expense will mitigate

and ultimately reduce the total revenue requirement in the future. This is shown graphically in Figure 3 in my testimony.

- Section II.D. explains that failing to accurately align depreciation expense with the actual service life of assets – the inevitable result of a group depreciation procedure such as ASL, which under-recovers the capital cost of shorter-lived units of property – means that future generation of customers will be bearing the cost of plant that is no longer furnishing them service and, in fact, may have been retired many years in the past. Additionally, in this section, I address Mr. Garrett's claim that ELG can produce an unjust outcome if depreciation rates are not adjusted annually. This argument underscores Mr. Garrett's unfamiliarity with the depreciation practices and conventions utilities used for ratemaking in this Commonwealth. Pennsylvania utilities are required to calculate and file updated deprecation rates annually.[6]
- Section III has a two-fold purpose:

  Section III.A. explains that Mr. Garrett's proposed adjustment to reduce the Company's annual depreciation accrual by $62.6 million is based on a major theoretical and computational error. Mr. Garrett erroneously assumes that the Company's FPFTY accrued depreciation was developed using depreciation rates that reflect the ASL procedure. They do not. Accrued deprecation as of the end of the FPFTY is based on ELG-derived depreciation rates. Consequently, if Mr. Garrett's proposal to reject PUC precedent and use the ASL procedure were

[6] Mr. Garrett's unfamiliarity with depreciation practices before the Commission is also evidenced by his erroneous assumption that the annual depreciation accrual rates for Pennsylvania utilities incorporate prospective cost of removal and salvage. OCA St. No. 3 at p. 3. Sixty-year old Pennsylvania appellate authority precludes Pennsylvania utilities from recovering prospective net salvage (cost of removal less salvage) in depreciation accruals or otherwise.

adopted, the depreciated original cost of the Company's utility plant is understated by $128 million, and Mr. Garrett's proposed adjustment to the combined-District annual accrual is overstated by $14 million. Additionally, a $128 million increase in rate base would materially increase the pre-tax return component of the Company's revenue requirement, which other OCA witnesses appear to have ignored.

- Second, I explain that the two decisions from other jurisdictions that Mr. Garrett discusses[7] do not support his position, as evidenced by language in those decisions themselves. ELG is not the prevailing group depreciation procedure in Kentucky – in fact, as the Kentucky Public Utility Commission ("Kentucky PUC") decision in Duke Energy Kentucky makes clear, no other Kentucky-based utility used ELG in the past. The Kentucky PUC decision has no application in a state such as Pennsylvania where ELG is the prevailing, long-standing and approved procedure. The Duke Energy Indiana decision is equally unpersuasive because, as the decision of the Indiana Utility Regulatory Commission ("Indiana URC") acknowledges, it had to depart from long-standing precedent because of a recently enacted change in applicable law and the imminent retirement of Duke Energy Indiana's coal-fired generating plants. Those contingencies do not exist in Pennsylvania.
- Section IV responds to Mr. Garrett's disagreement with the service lives I employed for four property accounts. As I previously noted, Mr. Garrett erroneously used survivor data for one District and account (West Penn Account 361) for a different account (Account 362) for a different District (Met-Ed).

[7] OCA St. No. 3 at pp. 8-10.

- In Section IV.A., I explain that Mr. Garrett's position is a misapplication of settled principles of service life estimation set forth in, among other sources, a leading authority on the process of service life estimation. Mr. Garrett uses essentially a mathematical process to try to fit survivor curves to the historical survivor data. Relying on a formulaic application of a mathematical process is contrary to the principles of life estimation that the National Association of Regulatory Utility Commissioners ("NARUC") has affirmed in its authoritative manual on depreciation practices, as I explain in detail in my testimony.
- In Section IV. B., I explain how the principles of life estimation articulated by NARUC were incorporated in my use of professional judgment informed by historical retirement rate analysis to select survivor curves that properly reflect the data most significant for service life estimation and properly consider the characteristics and use of the Company's property as well as technological developments and changes in industry practices.
- Section IV.C. explains why the estimated service lives I employed are more reasonable than those proposed by Mr. Garrett because his formulaic approach to mathematical curve-fitting gives undue weight to retirement data that have marginal, if any, relevance to the forces driving the retirement of the bulk of the Company's plant in the accounts Mr. Garrett examined.
- In Section IV. D., I examine the practical implications of the much longer service lives Mr. Garrett proposes for the four designated accounts. As I explain, and as Figures 6-8 in my testimony show, Mr. Garrett's proposed service lives would produce unreasonable – in fact, unattainably long – lives for assets in those

accounts. To illustrate, for the Penelec District's Account 365, Mr. Garrett's proposed service life would anticipate over half of the property in that class (Overhead Conductors and Devices) surviving beyond 69 years; a quarter would have to live beyond 100 years; and almost 10% would have to remain in service for between 130 and 140 years (see Figure 7 in my testimony).

A. <u>Equal Life Group Versus Average Life Group</u>

Q. What is the Equal Life Group procedure?

A. For the Equal Life Group procedure, a group of property (*e.g.*, a vintage within a property account) is subdivided into groups having equal service lives. The size of these "Equal Life Groups" is based on the estimated survivor characteristics of the account. Depreciation can then be calculated for each Equal Life Group based on the straight line method, meaning that an equal amount of the group's service value is recorded as depreciation expense in each year of service. The total depreciation for an account is then the summation of the calculated depreciation for each Equal Life Group. Based on the survivor curve estimate for an account, the ELG procedure mathematically estimates the life for each unit in the account, and then depreciates each unit over its expected life. The procedure is also known as the Unit Summation Procedure.

Q. How does the ELG procedure differ from the ASL procedure (also known as the ALG procedure)?

A. While the ELG procedure calculates depreciation for each Equal Life Group, the ASL (or ALG) procedure depreciates every asset within an account over the average life of the entire account. Using Equal Life Groups, rather than an average life, as the basis for depreciation provides a more precise calculation that better matches recovery with

consumption of assets by depreciating assets that have shorter lives than the average over their shorter lives (and the longer-lived assets over their longer lives) as opposed to depreciating all assets over the average life for the group.

Q. Is ELG supported by depreciation authorities?

A. Yes. ELG is discussed and supported in authoritative depreciation texts and academic literature. For example, Robley Winfrey, who developed the Iowa survivor curves at Iowa State University and is regarded as a pioneer of utility depreciation practices, referred to the ELG procedure as "the only mathematically correct procedure."[8]

Depreciation Systems by Frank K. Wolf and W. Chester Fitch also supports the appropriateness of the ELG procedure, stating: "Application of the Equal Life Group procedure is generally considered to better match the consumption of capital with service provided than does application of the average life procedure."[9]

Q. Please explain how depreciation is determined using the ELG procedure.

A. A simple two-unit example will demonstrate how the ELG procedure more appropriately matches cost recovery to consumption than the ASL procedure. In this example, each unit costs $1,000. Unit A will be in service for 5 years, and unit B will be in service for 15 years. There is no net salvage for these units.

For the ASL procedure, the average service life for the two units is 10 years ([5+15]/2), so the annual depreciation rate is 10% (1/10) throughout the lives of both units. For the first five years, the total annual depreciation amount is $200 ($2,000 x 10%). At

[8] Robley Winfrey, Depreciation of Group Properties, Bulletin 155 (Ames, IA: Iowa State University Press, 1942, reprinted 1969); p. 71.
[9] Frank K. Wolf and W. Chester Fitch, *Depreciation Systems* (Ames, IA: Iowa State University Press, 1994); p.75.

the end of year 5, the total annual accruals for the account are $1,000 ($200 x 5). Unit A is then retired, which results in a reduction in the accumulated depreciation of $1,000. At the start of year 6, Unit B remains in service with an accumulated depreciation balance of $0. At this point, one-third of Unit B's service life has expired, and its full original cost must still be recovered.

For the remaining 10 years, $100 ($1,000 x 10%) of annual expense is accumulated in depreciation, for a total of $1,000 when Unit B is retired. Thus, at the time of Unit B's retirement, the company will have fully recovered the total depreciable cost of both units. However, at the end of year five, only one unit remained in service with two-thirds of its life expectancy left but with 100% of that unit's original investment still to be recovered. As a result, the ASL procedure is ineffective in matching cost recovery to the actual consumption of the asset. This is a characteristic deficiency of the ASL procedure.

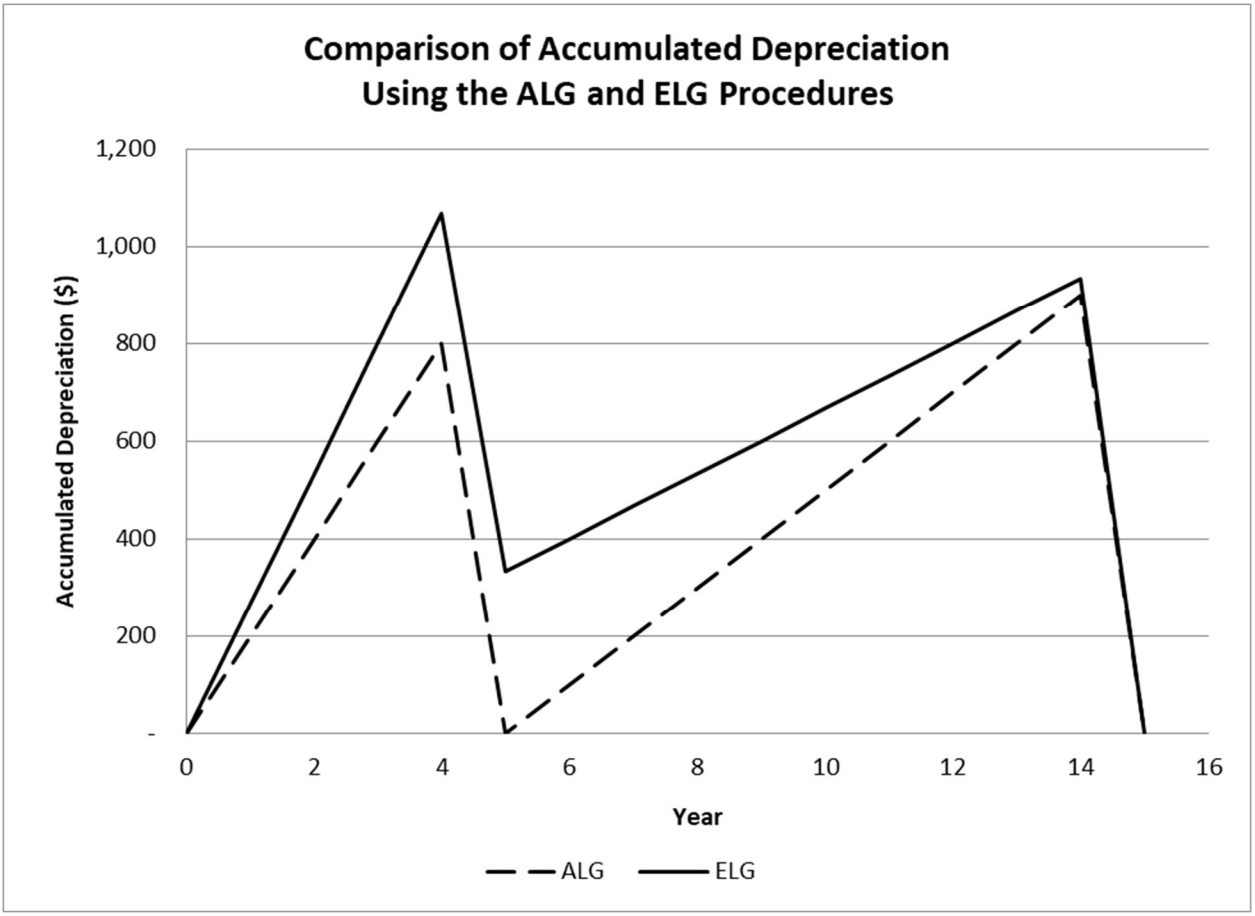
When depreciation is determined using the ELG procedure, the pattern of cost recovery better matches actual consumption. Using the same two-unit example, the annual depreciation expense under the ELG procedure is calculated by summing the annual expense for each Equal Life Group. In this case, there are two Equal Life Groups—one for Unit A, which has a life of 5 years, and one for Unit B, which has a life of 15 years. The annual depreciation rate for Unit A is 20% (1/5) and for Unit B is 6.67% (1/15). Thus, the annual accruals for years 1 through 5 will be $200 ($1,000 x 20%) for the first Equal Life Group (Unit A) summed with $66.67 ($1,000 x 6.67%) for the second (Unit B), or $266.67. At the end of year 5, when Unit A is retired, the total accruals would be $1,333.33 ($266.67 x 5). The retirement of Unit A results in a reduction of $1,000 in accumulated depreciation, and at the start of year 6, the $1,000 original cost of Unit B remains with

$333.33 in accumulated depreciation. Thus, with one-third of Unit B's life consumed, accumulated depreciation is exactly one-third of the original cost for this unit.

In years 6 through 15, the annual depreciation expense is $66.67 for a total of $666.67 over the 10-year period. After the retirement of Unit B, the accumulated depreciation is $0 ($1,000 of accruals less the $1,000 retirement of Unit B), and the full recovery of both units has been obtained.

As this example shows, the ELG procedure better matches the cost recovery of both units with their actual service lives. Figure 1 below provides a graph of the accumulated depreciation for both procedures. The end of year 5 provides the best illustration of the difference between the two procedures. Under the ELG procedure, Unit A is fully recovered when retired at the end of year 5; Unit B is one-third through its service life and has had one-third of its cost recovered. This contrasts with the ASL procedure, in which accumulated depreciation is $0 at the end of year 5, even though the only unit remaining in service has consumed one-third of its service life. Clearly, the ELG procedure provides a better match regarding the consumption of the service value for the two units. Additionally, rate base under the ELG procedure at the end of year 5 is $667 (=$1,000-$333) versus $1,000 (=$1,000 - $0) under the ASL procedure.

Figure 1. Comparison of Accumulated Depreciation Using the ALG and ELG Procedures



Q. You have provided a simple two-unit example demonstrating how ELG works. Do the same principles apply to larger property groups with many units?

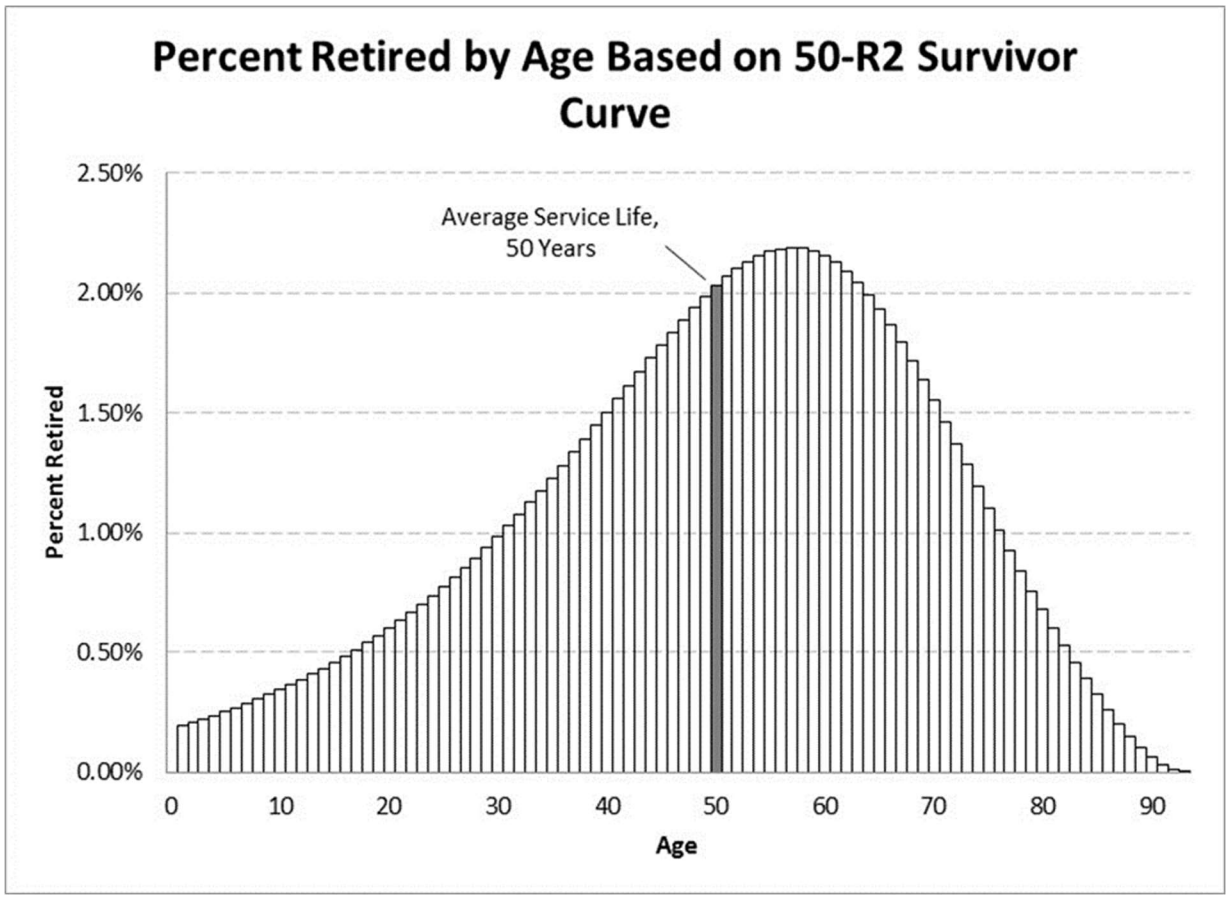
A. Yes. The same principles apply when the ELG procedure is applied to a large group of property with many units, as is typical of utility property. The survivor curve estimated for each property account can be used to divide an account into equal life groups. The survivor curve allows for the calculation of the percentage of the property account that is in each group, which allows for the calculation of ELG annual depreciation accruals for

the entire property group. Under the ASL procedure, the depreciation expense for all property in the account is calculated based on the average service life for the entire group.

The ELG procedure recognizes the reality of dispersion. Specifically, it recognizes that in actual utility operations, only a very small percentage of the account will be retired at the average service life. Figure 2 below is a chart of the frequency curve for the 50-R2 survivor curve, which will be used to illustrate a frequency curve. The frequency curve shows the percentage of property in this account that will be retired at each age, based on the estimated survivor curve. This percentage is also the size of each Equal Life Group.

The shaded bar in Figure 2 represents the percentage of property that will have a life of 50 years. In other words, this shows the percentage of property that is expected to be in service for the average service life. Only 2.07% of the assets will be in service for exactly 50 years. In contrast, 97.93% of the assets will have a service life different than 50 years.

Figure 2. Percent Retired by Age based on 50-R2 Survivor Curve



The ELG procedure recognizes this dispersion and allocates costs for each Equal Life Group over the expected life for that group. The service lives indicated by the 50-R2 survivor curves ranges from 1 year to 93 years. As a result, the ELG procedure allocates cost in a manner that approximates the result of each asset being depreciated over its actual life. Conversely, the ASL procedure depreciates every unit of property within an account over the same life, that is, the average life. As Figure 2 shows, this average life will be incorrect most of the time – in this example, the average life will be the wrong life for 97.93% of the assets.

Just as in the case for the two-unit example provided above, the ELG procedure better matches capital recovery with the actual lives forecast by the estimated survivor

curve. Consequently, rate base will be higher when the ALG procedure is utilized because of the poor matching of recovery to utilization of the assets.

B. Pennsylvania Precedent

Q. Is the ELG procedure supported by other depreciation authorities?

A. Yes. The ELG procedure is discussed and supported in authoritative depreciation texts and academic literature. As noted previously, Robley Winfrey, who developed the Iowa survivor curves that are universally used in estimating service lives based on historical retirement data, referred to the ELG procedure as "the only mathematically correct procedure."[10]

Q. Are other commissions starting to implement the ELG procedure given the current regulatory environment?

A. Yes. The ELG procedure is being utilized for utility assets by the Texas Railroad Commission. It is also used in jurisdictions in Canada. The Federal Communications Commission first adopted the ELG procedure in the 1980s in the context of rapid technological change in the telecommunications industry at that time.[11]

[10] Robley Winfrey; p. 71.

[11] National Association of Regulatory Utility Commissioners, *Public Utility Depreciation Practices*, 1996, pages 172 through 175 for a discussion of the use of the ELG procedure in the telecommunications industry.

The ELG procedure has also been adopted recently in Colorado in response to significant technological and regulatory changes facing the gas industry.[12] New York is also considering the ELG procedure for similar reasons in an active case in New York.[13]

Q. Has the ELG procedure been previously adopted in Pennsylvania?

A. Yes. The ELG procedure has been the predominant method used in Pennsylvania for many years. Most Pennsylvania gas, electric, and water utilities have used the ELG procedure since the 1980s.

Q. Since the ELG procedure is the predominant and longstanding practice in Pennsylvania, has Mr. Garrett provided evidence for why the company should be consistent with this practice?

A. No. Mr. Garrett has provided very little evidence to support why the ALG procedure is more appropriate than the ELG procedure. He appears to disagree with the ELG procedure simply because it can produce higher depreciation rates in early years to match mortality characteristics, but he provides no evidence for why lower depreciation rates up to the average life are more appropriate. As will be discussed later in this testimony, the ELG procedure is a more precise calculation and fair to all generations of customers.

[12] *In the Matter of Advice Letter No. 993- Gas of Public Service Company of Colorado to Revise its Colorado P.U.C. No. 8 -- Gas Tariff to Increase Jurisdictional Base Rate Revenues, Implement New Base Rates for all Gas Rate Schedules, and Make Other Proposed Tariff Changes to Become Effective February 24, 2022,* 2022 COLO. C. Depreciation and Rate Base

Q. How does Mr. Garrett discuss the impact of the ELG procedure on customer rates?

A. Mr. Garrett posits that the result of the ELG procedure is "an accelerated form of cost recovery that benefits the Company at the expense of current customers," which he argues is not in the best interest of ratepayers.[14] However, this position not only ignores the impact of depreciation expense on rate base, but also fails to recognize that any benefit to current customers resulting from the use of ASL depreciation rates will put additional burden on future customers disproportionately.

Q. Please explain this concept further.

A. Depreciation impacts customer rates in two ways. Depreciation expense is a direct component of the revenue requirement; however, accumulated depreciation is also a *reduction* to rate base.[15] A higher level of accumulated depreciation results in a lower rate base, a lower return on rate base, and, therefore, lower customer rates when compared to a lower level of accumulated depreciation.

The implication of Mr. Garrett's testimony is that a utility has an incentive for higher depreciation because it results in higher customer rates, and thus more cash flow for the Company. In the long term, however, his description of the rate impact is fundamentally incorrect. Higher depreciation expense will, over time, result in higher accumulated depreciation. Because average depreciation rates for a utility are typically in the 2% to 3% range and the return on rate base is higher (typically 7% to 8% or more), higher depreciation expense tends to produce lower customer rates over time. Mr. Garrett's

[14] OCA St. No. 3 at p. 3.

[15] Accumulated depreciation is the depreciation expense recorded to date, less recorded retirements and cost of removal, plus recorded gross salvage.

suggestion that a utility has an incentive to "overcharge" for depreciation expense is simply incorrect.

The longstanding use of ELG depreciation rates for Pennsylvania utilities has resulted in a lower rate base than if the ASL procedure had been used. Customers today pay lower customer rates than if the ASL procedure had been used during the years since the ELG procedure's adoption. As a result, it has been in customers' interest not only to use the ELG procedure, but also to use it consistently.

Over time, the ASL procedure will result in higher customer rates than the ELG procedure. It is correct to assume that if the Company were to switch to the ELG procedure from the ASL procedure, there would be a *short*-term increase to current customers. However, this is not because the ASL procedure is in customers' best interest in the long term, but only because past and current customers have benefitted from the lower ASL depreciation rates. Given the current environment of advanced technological asset base, now is the appropriate time to better match utilization to asset recovery.

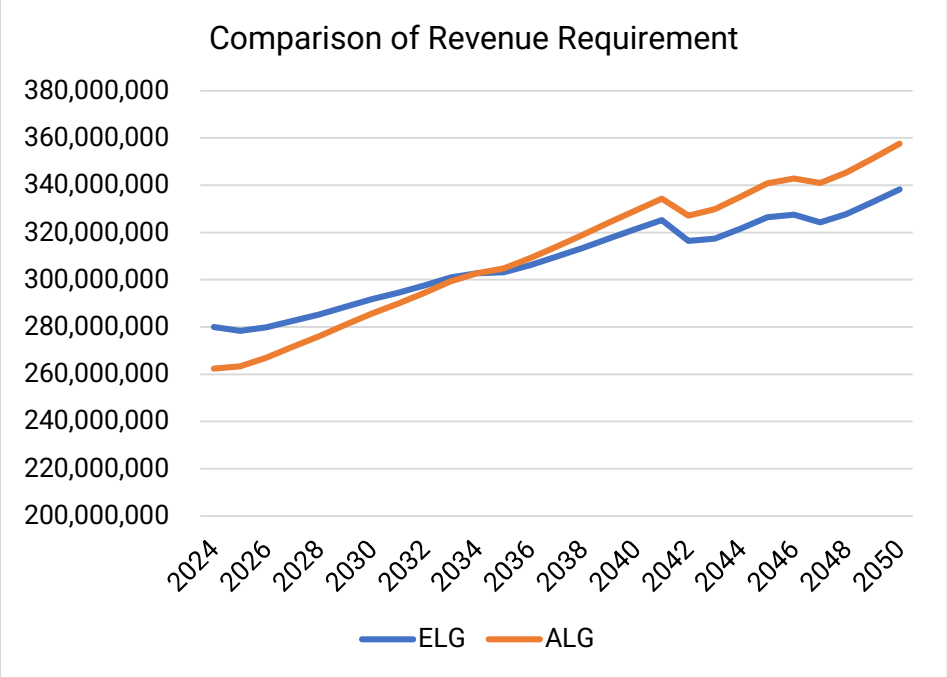
Therefore, Mr. Garrett's proposal to maintain the ASL procedure is not the long-term interest of lower customer rates. This just creates additional challenges for capital improvements. The continual costs of a higher rate base will be paid for by future customers who will have to continue to pay higher overall customer rates.

Q. Can you illustrate this concept?

A. Yes, this concept is illustrated in FE PA Exhibit No. JJS-17, which forecasts plant and reserve balances for FE PA – Met-Ed through 2050 under two scenarios: one utilizing the ALG procedure and the other utilizing the ELG procedure. Figure 3 below shows a high-level estimate of the Met-Ed's revenue requirement for the period 2024 through 2050 under

each of these scenarios. This demonstrates that while the ELG procedure leads to higher depreciation expenses in the short term, it results in lower revenue requirements over the long term. The ELG procedure is more beneficial to customers as it provides more stable and lower rates over time.

Figure 3. Comparison of Revenue Requirement



D. Intergenerational Equity

Q. Please explain the concept of "intergenerational equity."

A. Intergenerational equity is a ratemaking principle which provides that the customers who benefit from the use of an asset (*e.g.*, from electric utility property used to provide electric service) should be the same customers who pay for the cost of that asset – no more, no less. There are two related concepts when considering intergenerational equity as it pertains to depreciation. The first is the inequity that results when customers pay for assets from which they receive no service. For example, if an asset is retired before becoming fully

depreciated, then customers subsequent to the retirement will have to pay for an asset from which they are not receiving service. This is less equitable, as one generation of customers bears the cost of an asset from which they receive no service. Depreciation rates should be designed to avoid such an outcome. In real-world operations, circumstances can change such that assets are retired earlier than expected. However, this situation is different than designing depreciation rates to include intergenerational inequity, which should be avoided.

The second concept is related to the distribution of depreciation charges over the life of an asset. For example, if depreciation expense is higher in the earlier years of an asset's life and lower in later years (or vice versa), this also is less equitable because one generation of customers pays a higher share than the next. In my professional opinion, the first concept related to intergenerational equity can be more detrimental to customers than the second. That is, there is greater inequity resulting from a customer paying for an asset from which they received no service than the inequity resulting from one generation paying a somewhat different share of the same asset than another generation.

Q. How does the Equal Life Group procedure calculate depreciation expense?

A. The ELG procedure calculates depreciation expense for assets with like lives within a depreciable group in accordance with the Iowa Survivor Curve proposed for the account and summing that depreciation expense for each similar life group of assets to develop an annual depreciation accrual rate applicable to the depreciable group. This procedure is designed to more appropriately match the recovery of the assets' costs to the period of time over which they are providing service to ratepayers.

Q. How does the Average Life Group procedure calculate depreciation expense?

A. The ALG procedure calculates depreciation expense by applying the same average service life from the proposed Iowa Survivor Curve to all assets within a depreciable group rather than grouping assets within a depreciable group by like lives. The ALG procedure operates with the assumption that some of the assets within a depreciable group will retire prior to the average service life applied to the depreciable group and other assets will survive longer than the average service life applied to the depreciable group. Further, the ALG procedure assumes the over-recovery of the assets surviving longer than the average service life will offset the amount of the under-recovery of the assets retiring prior to reaching the average service life of the depreciable group.

Q. Does the use of the ELG procedure versus the ALG procedure or vice versa impact the total amount of asset cost to be recovered?

A. No. Both procedures are designed to recover the total service value of an asset over the asset's service life.

Q. Has Mr. Garrett claimed that the ALG procedure produces significantly fairer and more reasonable rates?

A. Yes.[16] Basically, his testimony implies that the use of the ELG procedure leads to intergenerational inequity, incorrectly assuming that the ELG procedure does not recover the same amount of expense over the life of each asset class as the ALG procedure. The ELG procedure, however, more precisely and accurately matches asset utilization to asset

[16] OCA St. No. 3 at p. 3.

recovery overall, is fairer to all generations of customers, and is consistent with Pennsylvania practice.

Q. Why does Mr. Garrett make that claim?

A. Given the precise nature of the calculation process utilized in the ELG procedure, the level of depreciation expense associated with assets that are younger than the proposed average service life is higher than depreciation expense using the ALG procedure. Conversely, as the assets mature and the lives grow longer, the level of depreciation expense associated with assets that are older than the proposed average service life is lower than depreciation expense using the ALG procedure. Those making this claim focus on the higher level of depreciation expense calculated for younger assets while disregarding the associated lower level of depreciation expense calculated for older, more mature assets within the depreciable group. Those making this claim misrepresent this more accurate allocation of depreciation expense as intergenerational inequity.

Q. Does the use of the ELG procedure produce intergenerational inequity?

A. No, quite the opposite. The very nature of the ELG procedure more precisely calculates depreciation expense for assets with like lives within a depreciable group and sums that expense to develop an annual depreciation accrual rate applicable to the depreciable group. As a result, it more appropriately matches the recovery of the asset's cost to the period of time over which it is providing service to ratepayers.

In contrast, there is a stronger argument that the ALG procedure results in intergenerational inequity. Because depreciation expense on shorter-lived assets occurs over the average service life, recovery for these assets is deferred. The ELG procedure

produces a more equitable recovery by recovering these costs over the actual, shorter, service lives.

Q. Does the use of the ELG procedure require the calculation of annual depreciation rates to be updated more frequently than the ALG procedure to prevent intergenerational inequity?

A. No. Regardless of the procedure selected, the calculation of depreciation expense and annual depreciation accrual rates should be updated regularly to prevent intergenerational inequity.

Q. How frequently does Pennsylvania regulation require the calculation of depreciation rates?

A. Pennsylvania regulation requires utilities operating within the commonwealth to calculate and file updated depreciation rates annually.[17] This annual requirement alleviates concern for the development of generational inequity.[18]

II. RATE BASE FOR FORECASTED TEST YEAR

A. Errors in Mr. Garrett's Calculations

Q. If the ALG procedure were to be adopted in this case, are Mr. Garrett's stated rates correct?

A. No. Mr. Garrett's proposed ALG rates for the future test year ("FTY") and FPFTY are incorrect because he is using depreciation reserve balances that are based on projected ELG accruals.

[17] *See* 52 Pa. Code §§ 73.3, 73.4.
[18] 36 Pa.B 7558.

Q. What is the appropriate process for calculating the proposed depreciation expense and annual depreciation accrual rates during a rate case in Pennsylvania?

A. Pennsylvania provides for the calculation of proposed depreciation expense and annual depreciation accrual rates as of the end of the FPFTY. In the instant case, the FPFTY date is December 31, 2025.

Q. Please explain how the FPFTY levels of plant and accumulated depreciation (or "reserve") are developed?

A. The process begins with the calculation of depreciation expense and annual deprecation accrual rates as of a historical test year ("HTY"), which is completed using historical, or actual, levels of plant and reserve. In this case, the HTY date is December 31, 2023. Once depreciation expense and annual depreciation accrual rates are calculated as of the HTY date, they are utilized along with projected levels of plant activity to develop the plant values and bring forward the reserve to a FTY date at which the levels of depreciation expense and annual depreciation accrual rates are calculated again. In this case, the FTY date is December 31, 2024. The final step to calculate the proposed depreciation expense and annual depreciation accrual rates is to utilize the FTY depreciation expense and annual depreciation accrual rates along with projected levels of plant activity to develop the plant values and bring forward the reserve to a FPFTY date where the proposed levels of depreciation expense and annual depreciation rates are calculated. In this case, the FPFTY date is December 31, 2025.

Q. Is it important to maintain a consistent process and consistent procedures during the process described above?

A. Yes, it is. Maintaining a consistent process and procedures eliminates the possibility of increasing or decreasing swings in the levels of depreciation expense and annual depreciation accrual rates, which would result from what Mr. Garrett is proposing.

Q. Has Mr. Garrett followed the above-described Pennsylvania process when calculating his proposed levels of depreciation expense and annual depreciation accrual rates?

A. No.

Q. Please describe how Mr. Garrett has deviated from the Pennsylvania process described above.

A. Mr. Garrett has completely skipped portions of the process fast forwarding to the FPFTY and applies his proposed ALG alternative procedure to calculate depreciation expense and annual depreciation accrual rates as of December 31, 2025. This is evident in Mr. Garrett's schedules as his book reserve amounts are the same as the those prepared in the depreciation studies where the ELG procedure was utilized to determine the forecasted book reserve.

Q. Why are Mr. Garrett's proposals not appropriate?

A. There are two primary reasons why Mr. Garrett's proposals are not appropriate. First, Mr. Garrett's proposals fail to adhere to the established process in Pennsylvania for calculating proposed depreciation expense and annual depreciation accrual rates within a rate case. Second, Mr. Garrett's workpapers do not appear to display proper calculations of the forecasting of the book reserve. He recommends use of the ALG procedure but utilizes the

forecasted book reserve based on the ELG procedure. Then he switches to his proposal to calculate depreciation expense and annual depreciation accrual rates as of the FPFTY date using the ALG procedure. This is a contradiction in appropriate forecasting models and creates higher book reserve in order to lower depreciation expense as of the FPFTY. If Mr. Garrett had followed the standards properly, he would have forecasted the book reserve for the FTY and FPFTY using his recommended ALG procedure. This, in turn, would lower the book reserve as of each test year, resulting in higher depreciation expense than what he has proposed in his testimony. Consequently, Mr. Garrett's statement that the difference between the two procedures is $62.6 million is inaccurate based on the improper methodology for forecasted test years.

Q. What is the correct level of the book depreciation reserve as of December 31, 2025, for each rate district using the Average Life Group procedure as proposed by Mr. Garrett?

A. The attached exhibit, FE PA Exhibit No. JJS-18, sets forth the proper development of the book reserve for each rate district as of December 31, 2025, using the ALG procedure. This is a total reduction in book depreciation reserve of $128,153,902 as compared to what Mr. Garrett has presented. This means that the total rate base for the four rate districts should be increased by $128,153,902 for developing depreciation rates and expense as of December 31, 2025.

Q. Does this mean that Mr. Garrett's position on depreciation expense and rates are incorrectly calculated?

A. Yes. When properly developing rate base for each of the rate districts, Mr. Garrett should present a total increase in his position of $14,029,382 in depreciation expense.

B. ELG in Other Jurisdictions

Q. Has Mr. Garrett provided decisions regarding ELG procedure from other jurisdictions to support his proposed use of the ALG procedure?

A. Yes. Mr. Garrett cites decisions from Indiana and Kentucky to support his proposal to use the ALG procedure in this case.

Q. Was the Indiana decision referenced in Mr. Garrett's direct testimony based on a "change in landscape" and a "higher than average investment cycle"?

A. Yes. I have provided an excerpt from the Indiana decision referenced by Mr. Garrett below, which references both "a changed landscape" and "a higher than average investment cycle" as the bases of the Indiana utility regulatory commission's decision.

> While we have determined in the past that the ELG methodology was appropriate and acknowledge the weight given to precedent in many prior decisions, we always evaluate each case as it comes before us and do not need to approve the same methodology based on prior decisions, especially in light of a changed landscape. The use of ELG in a higher than average investment cycle has the effect of unnecessarily increasing the near term depreciation expense as compared to the use of ALG.[19]

Q. Does "a changed landscape" exist for FE PA?

A. No. FE PA is operating within the same "landscape" that has existed for its most recent rate cases.

[19] *Petition of Duke Energy Indiana, LLC,* 2020 IND. PUC LEXIS 158, **258-259, Cause No. 45253, p. 90 (Order approved June 29, 2020).

Q. Is FE PA experiencing "a higher than average investment cycle"?

A. No. The company's current investment levels are associated with improving its infrastructure and maintaining the safety and reliability of the electric system. Those levels of investment will continue into the foreseeable future.

Q. Does FE PA have generation assets that are required to be retired sooner than planned, which is a major asset investment?

A. No. There are no generation assets included in the FE PA asset mix nor are there any decommissioning costs associated with the retirement of these generation assets which change the entire asset investment basis.

Q. Given that neither "a changed landscape" nor "a higher than average investment cycle" exist in this case, is it reasonable to implement the most appropriate and accurate depreciation procedure?

A. Yes. The ELG procedure is the most precise depreciation procedure and properly reflects recovery of each asset class with utilization of the assets. There should be anticipated higher annual depreciation expense when the total investment increases as rate base grows.

III. MASS PROPERTY SERVICE LIVES

Q. Did Mr. Garrett propose any changes to any of the service lives for mass property proposed by FE PA?

A. No. Mr. Garrett did not propose any changes to any of the service life estimates recommended by FE PA in this case. However, he did make suggested adjustments to the service lives of four accounts studied in this case that need to be addressed in this testimony.

Q. Please summarize the adjustments suggested by Mr. Garrett for mass property service lives.

A. Mr. Garrett has suggested adjustments to the survivor curve estimates for four distribution plant accounts. This is unusual since he suggests one for each of the four rate districts. These are summarized in the table below.

Table 1: Summary of Estimates for Select Distribution Plant Accounts

Account	Current Estimate	FE PA Proposed	OCA Suggested
West Penn Account 361, Structures and Improvements	75-R3	70-R3	78-R3
Met-Ed Account 362, Station Equipment	60-R2	60-R2	78-R3[20]
Penelec Account 365, Overhead Conductors and Devices	60-R0.5	60-R0.5	69-R0.5
Penn Power Account 366, Underground Conduit	65-R2.5	70-R2.5	77-R2.5

As shown in Table 1, for three of the four accounts listed above, I have proposed an increase or no change to the average service life from the currently approved estimate. Mr. Garrett's recommendations are to increase the service lives even further. While one of Mr. Garrett's suggested adjustments is relatively minor, the other accounts have a significant increase when compared to the current estimate. For example, he proposes a 12-year increase in average service life for Penn Power Account 366, Underground Conduit.

For many of these accounts, the suggestions made by Mr. Garrett are not reasonable because they are premised on a flawed approach to developing service life estimates, which

[20] Mr. Garrett appears to have confused Met-Ed Account 362 with West Penn Account 361 in his testimony. Figure 4 (page 17) from his testimony is labeled as the former (Met-Ed 362) but is actually the latter (West Penn 361), so it is unclear if 78-R3 is his intended recommendation for Met-Ed Account 362.

is based primarily on mathematical curve fitting. This approach does not give the appropriate consideration to the mortality characteristics of the assets studied nor to other factors that should be considered.

A. The Estimation of Service Lives Is Not a Purely Mathematical Exercise and Must Incorporate Informed Judgment

Q. Has Mr. Garrett used the same approach to estimating service lives as you used in the depreciation study?

A. No. While both Mr. Garrett and I have used Iowa type survivor curves to calculate depreciation expense and used the retirement rate method to analyze historical data, Mr. Garrett's overall approach differs from mine. His approach also differs from the correct and proper approach to estimating service lives that is set forth in depreciation textbooks, such as *Public Utility Depreciation Practices*, which was published by NARUC. Specifically, Mr. Garrett's testimony suggests that estimating service lives is primarily a mathematical exercise in which little more than computations of historical accounting data will result in reasonable estimates. This overall approach is incorrect. Depreciation, and particularly estimating service lives, is a forecast of the future rather than a calculation of what has happened in the past.

Q. Please explain in more detail how Mr. Garrett's approach is inconsistent with the proper manner in which service life estimates should be determined.

A. Mr. Garrett states in his testimony:

> Mathematical fitting promotes objective, unbiased results. While mathematical curve-fitting is important, it may not always yield the optimum result. Simply determining which Iowa curve best fits an [original life table ("OLT")] curve ignores professional judgment that may be needed for specific situations. For example, if there is insufficient historical data in a particular account and the OLT curve derived from that data is relatively

> short and flat, the mathematically "best" curve may be one with a very long average life. However, when there is sufficient data available, mathematical curve fitting can be used as part of an objective service life analysis.[21]

Mr. Garrett's testimony gives the impression that mathematical results should generally be accepted, and that an instance in which the proper service life estimate is not a "best" mathematical fit would be a relatively unusual exception (such as insufficient data). His reasoning for reliance on mathematical results is that doing so promotes "objectivity." While one may desire objective results, so as to remove uncertainty and presumably make the job of estimating service lives easier, the objectivity sought by Mr. Garrett is neither realistic nor desirable in the development of a true forecast of the future. Further, authorities on the topic of depreciation, such as NARUC, are clear that estimating service lives must include a subjective component.

Q. Does NARUC explain the importance of a subjective component to estimating service lives?

A. Yes. NARUC explains that there must be a subjective component to estimating service lives. Chapter XIII of *Public Utility Depreciation Practices*, entitled "actuarial life analyses," discusses and emphasizes the subjective nature of the process of estimating service lives. NARUC starts this chapter by explaining that the analysis of historical data is only one part of the process of estimating service lives: "actuarial analysis objectively measures how the company has retired its investment. The analyst must then judge whether this historical view depicts the future life of the property in service. The analyst takes into

[21] OCA St. No. 3 at p. 15.

consideration various factors, such as changes in technology, services provided, or capital budgets."[22]

NARUC further explains that the process of estimating service lives must go beyond any objective measurement of the past. In describing the determination of a survivor curve estimate (referred to as the "projection life" in this passage), NARUC states:

> The projection life is a projection, or forecast, of the future of the property. Historical indications may be useful in estimating a projection life curve. Certainly the observations based on the property's history are a starting point. Trends in life or retirement dispersion can often be expected to continue. Likewise, unless there is some reason to expect otherwise, stability in life or retirement dispersion can be expected to continue, at least in the near term.
>
> Depreciation analysts should avoid becoming ensnared in the mechanics of the historical life study and relying solely on mathematical solutions. The reason for making an historical life analysis is to develop a sufficient understanding of history in order to evaluate whether it is a reasonable predictor of the future. The importance of being aware of circumstances having direct bearing on the reason for making an historical life analysis cannot be understated. These circumstances, when factored into the analysis, determine the application and limitations of an historical life analysis.[23]

Thus, NARUC strongly advises against the approach used by Mr. Garrett, stating clearly that "relying solely on mathematical solutions" should be avoided. NARUC further elaborates on the need for a subjective component to forecasting service lives:

> A depreciation study is commonly described as having three periods of analysis: the past, present, and future. The past and present can usually be analyzed with great accuracy using many currently available analytical tools. The future still must be predicted and must largely include some subjective analysis. *Informed judgment* is a term used to define the subjective portion of the depreciation study process. It is based on a combination of general experience, knowledge of the properties and a physical inspection, information gathered throughout the industry, and other factors which assist the analyst in making a knowledgeable estimate.

[22] National Association of Regulatory Utility Commissioners, *Public Utility Depreciation Practices*, 1996, p. 111.
[23] *Id.* at p. 126 (emphasis added).

> The use of informed judgment can be a major factor in forecasting. A logical process of examining and prioritizing the usefulness of information must be employed, since there are many sources of data that must be considered and weighed by importance. For example, the following forces of retirement need to be considered: do the past and current service life dispersions represent the future? Will scrap prices rise or fall? What will be the impact of future technological obsolescence? Will the company be in existence in the future? The analyst must rank the factors and decide the relative weight to apply to each. The final estimate might not resemble any one of the specific factors; however, the result would be a decision based upon a combination of the components.[24]

Q. Have you incorporated the various factors discussed by NARUC into your estimates?

A. Yes. For each depreciation study, I conducted site visits and discussions with company personnel to familiarize myself with the company's assets. I have also performed previous depreciation studies for the company and have incorporated information obtained from those studies as well. In addition, throughout my career, I have performed hundreds of depreciation studies for numerous utilities. The information obtained from this experience has also been incorporated into my recommendations.

Q. Has Mr. Garrett incorporated these factors into his recommendations?

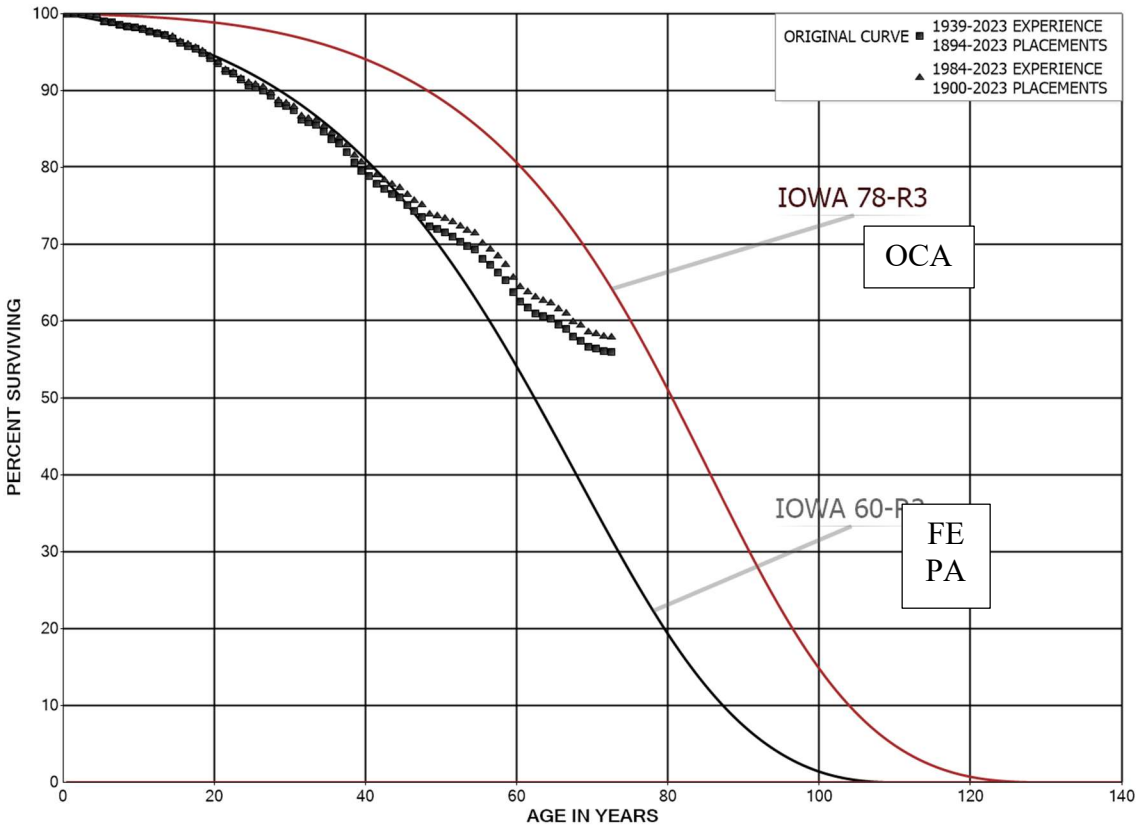
A. No, at least not to the degree necessary to develop a reasonable forecast. The only evidence Mr. Garrett provides that his estimates are better than those proposed in each depreciation study is a comparison of the sum of squared difference ("SSD") values for each. He offers no critical judgment in support of his curve selections.

For Met-Ed Account 362, he claims that "[p]rofessional judgment is also used to ensure that the selected Iowa curve is not unreasonable based on industry norms."[25] However, if his intended recommendation for this account is a 78-R3 curve, this estimate

[24] *Id.* at p. 128 (emphasis added).
[25] OCA St. No. 3 at p. 18.

is neither a good mathematical fit nor a reasonable judgment based on industry standards for these assets. As shown below in Figure 4, the 78-R3 curve predicts that more than half of the investment in the account will survive beyond 78 years, about 15% will survive beyond age 100, and some assets will last over 120 years. This is not a reasonable expectation for the assets in Account 362. This would not be reasonable for assets in Account 361 that Mr. Garrett has confused his analysis with, either.

Figure 4: Comparison of Estimates for Met-Ed Account 362, Station Equipment



Again, estimating service lives is not, and should not be, a purely mathematical exercise and must incorporate some degree of subjectivity. Mr. Garrett's process for estimating service lives, as described in his testimony, does not follow the proper approach of

incorporating informed judgment. His estimates support that he did not properly consider all the relevant factors needed to develop reasonable service life estimates.

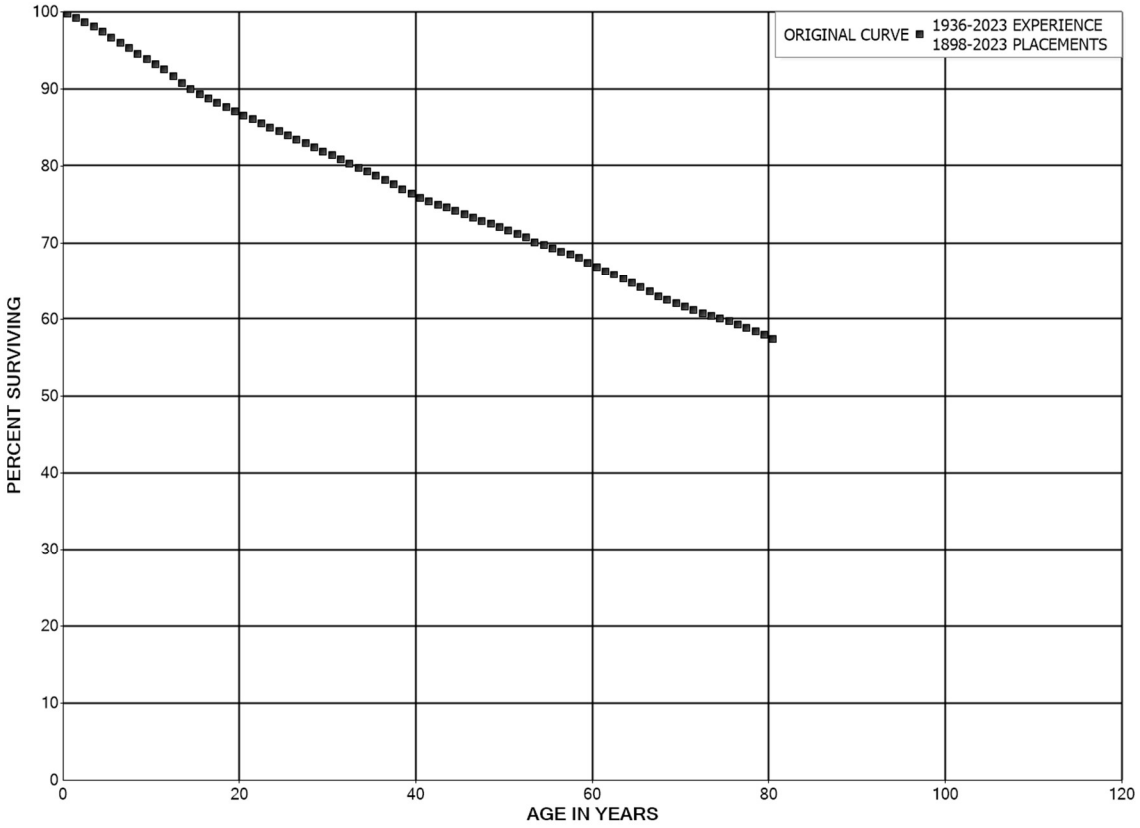
B. The Curve Fitting Process Must Also Incorporate Informed Judgment

Q. Please briefly describe the curve fitting process used in a depreciation study.

A. As described in both Mr. Garrett's testimony and in the depreciation study provided with my direct testimony, the method of statistical life analysis used is referred to as the retirement rate method. The retirement rate method is used when aged data are available (*i.e.*, the vintage year of historical transactions are known, which means that the age of each transaction can be determined). The retirement rate method develops an original life table or a series of original life tables for each depreciable group.[26] An OLT presents calculations, based on the historical data, of the percentage of plant that has survived to a given age. The OLT can also be shown graphically with age in the x-axis and the percent surviving in the y-axis. An example of an original life table graph for the full experience and placement bands for Penelec Account 365, Overhead Conductors and Devices, is provided in Figure 5 below. The life table is presented on pages VI-21 through VI-23 of the depreciation study (FE PA Exhibit No. JJS-5).

[26] Original life tables may also be referred to as "observed life tables" or the shorthand "life tables."

Figure 5: Graph of Original Life Table for Penelec Account 365, Overhead Conductors and Devices



For the curve fitting process, the analyst can fit or match standard Iowa survivor curves to the data from an original life table. This can be performed either visually or mathematically. For visual curve matching, Iowa curves are graphed on the same graph as the OLT. For mathematical curve matching, the mathematical deviation from a given Iowa curve to the OLT is calculated for each data point. The lower the difference between a given survivor curve, the better the mathematical fit.

Q. Are there advantages and disadvantages to both visual and mathematical curve matching?

A. Yes. Visual curve matching offers a number of advantages over mathematical curve matching. Different ranges of data points can be given more or less emphasis depending on the characteristics of the account. It is easier to identify irregularities in the data when performing visual curve matching. Visual curve matching also allows the analyst to view the full Iowa survivor curve to assess whether the full life cycle forecast by the curve is reasonable for the property studied.

Many years ago, a disadvantage of visual curve matching was that it was cumbersome due to the need to manually overlay standard curves on plots of original life tables. However, since the advent of computers with sophisticated graphical capabilities, visual curve matching has become easier and more efficient. As a result, in recent decades, visual curve matching has become the more prominent method used by depreciation analysts.

Mr. Garrett discusses advantages of mathematical curve matching in his testimony, including his opinion that it promotes "objective, unbiased results."[27] While it is true that mathematical curve matching provides a numerical value on which the "fit" of a curve can be assessed, Mr. Garrett does not discuss that focusing on mathematical curve matching can introduce biases. One of the disadvantages of mathematical curve matching is that it treats every data point within a range of fit equally. Different data points are typically based on different levels of data and different ages (*e.g.*, older data points are often based on much smaller levels of investment than earlier data points). There is not a good way to

[27] OCA St. No. 3 at p. 15.

de-emphasize data irregularities when performing mathematical curve matching, other than to exclude older data points entirely.

Mathematical curve matching can also introduce biases due to the nature of the calculations. Mathematical fitting indicators are typically calculated by squaring the differences between the OLT points and a given Iowa curve. As a result, the mathematical curve fitting routine will amplify larger differences between the Iowa curve and OLT. Because data irregularities are often common towards the end of the curve when smaller amounts of data are available, the real-world result is that mathematical curve matching will amplify less meaningful deviations towards the end or "tail" of the curve. That is, differences in curve fitting indicators are often the result of data irregularities and do not provide as meaningful an indication of the historical life indications. For this reason, if proper care is not taken when interpreting the results, mathematical curve fitting can mislead the analyst into selecting a curve that is not representative of the predominant mortality characteristics of the depreciable group studied.

Q. Given all of the considerations discussed above, how do you approach the curve fitting process?

A. I believe that both mathematical and visual curve fitting should be used. Using both approaches enhances the information available to the analyst and aids in developing the most reasonable forecast. Importantly, the analyst should also understand the advantages and disadvantages of both approaches so as to not be misled by the results.

Q. Does the use of judgment also apply to the analysis of the historical data curve matching process?

A. Yes. There are many reasons why informed judgment must also be applied to the mathematical processes of analyzing historical data, including the availability and limitations of the historical data; interpretation of trends in the data; interpretation of data irregularities; selection of data points to include or emphasize in mathematical or visual curve matching; and determination of whether the curve fitting results are reasonable for the types of assets studied. The need for judgment when evaluating the statistical analysis is also explained by NARUC. For example, when discussing a stub (or incomplete) survivor curve, NARUC states:

> The longer the stub, the more reliable the resulting curve fit and extension. As a result, the analyst may be forced to choose between a more reliable longer stub, which by necessity reflects older data, and a less reliable shorter stub, which reflects more recent vintages and, therefore, is more likely to reflect the future.[28]

NARUC also presents a discussion of "Data Irregularities," which are explained as follows:

> Property that exhibits homogeneous life characteristics produces smooth survivor curves. Many of a utility's property accounts, however, have experienced change in the forces of retirement due to, for example, changes in a utility's services or capital budgets. These accounts may exhibit a number of data irregularities. For example, the survivor curves may look like stair steps as the different changes take effect. Extended leveling-off periods may result from delayed booking of retirements during an accounting system conversion. Irregularities at the older ages of the survivor curve often result from inadequate exposures.[29]

NARUC explains certain types of occurrences in more detail, such as "Bimodality" (or "the presence of two peaks on the retirement frequency curve").[30] Also discussed is the use of a "T-Cut" (or "truncation cut"), in which data points from an observed life table are

[28] National Association of Regulatory Utility Commissioners, *Public Utility Depreciation Practices*, 1996, p. 120.
[29] *Id.* at p. 122.
[30] *Id.*

excluded from mathematical curve fitting (for visual curve fitting, data points can be ignored in a similar manner).[31] NARUC's explanation again illustrates the importance of judgment: "Careful selection of a T-Cut can greatly enhance the reliability of the resulting analysis. Conversely, since the use of a T-Cut involves truncating the observed data, careless selection can impair the reliability of subsequent work."[32]

Read in its entirety, this section of *Public Utility Depreciation Practices* should make clear the need for judgment with regard to numerous decisions when performing the statistical analysis. Judgment must be exercised throughout the process in order to determine the most appropriate and reasonable estimate.

C. FE PA's Estimates Are More Reasonable Than Those Suggested by the OCA

Q. Are there any differences in the mathematical curve fitting performed by Mr. Garrett and by you?

A. Yes. While we both generally use a sum of squared difference approach to calculate mathematical fitting indicators, there is one distinction that I believe adds value to my approach. Based on his testimony, Mr. Garrett simply sums the squares of difference to arrive at the numbers he cites in his testimony.[33] This approach, however, does not normalize the fitting indicators to the number of data points included. My mathematical results incorporate this normalization aspect to develop a figure referred to as the residual measure. Similar to Mr. Garrett's fitting indicator, the smaller the residual measure, the better the mathematical fit.

Based on Exhibits DJG-9 through -12, Mr. Garrett's SSD calculations also are using a 1% of exposures threshold to perform additional mathematical curve fitting. I also will often analyze this threshold for mathematical curve matching, but that does not mean that it should be used systematically on every account. While Mr. Garrett claims to not rely on mathematical results in choosing his curves, his only real justification for selecting different curves than FE PA is that he chooses a curve with a lower SSD relating to the OLT for each account. When reading Mr. Garrett's account by account description, it appears that mathematical curve fitting was the only factor upon which he based his estimates.

Q. Are there additional problems with Mr. Garrett's approach to curve fitting?

A. Yes. I do not agree that one should have a strict rule as to when to exclude or de-emphasize data points from curve fitting. Instead, each account should be reviewed on a case-by-case basis.

Q. How does one determine which data points should be excluded or given less emphasis in the analysis?

A. Informed judgment is required to make such a determination, but several factors should be considered. One factor is the dollar level of exposures for later ages. Later ages are normally given less weight in the analysis when there are far fewer exposures available than for earlier parts of the curve. Often, once exposures reach 1% or less of the exposures at age 0, the data becomes less reliable than data from earlier ages. However, this is not always the case. Cutting every OLT curve at 1% of exposures and choosing the best mathematical fit to those data points is not always an appropriate way to conduct life

analysis. The 1% cutoff is a general guideline that can be explored and analyzed by the analyst when deciding where to make a T-Cut of the OLT curve.

Another factor to consider is the ages where the percent surviving ranges from 80% to 20%. These data points are considered to provide the most significant retirement activity and be the most representative of the survivor characteristics for a life table. This is because the middle portion of the curve is where the majority of retirements occur. There are relatively few retirements at the "head" of the curve, and relatively few retirements at the "tail." In the development of survivor curves for Bulletin 125 of the Iowa Engineering Experiment Station, Robley Winfrey (who, as previously noted, developed the Iowa Survivor curves) provides analysis showing that when performing curve fitting, the emphasis should be placed not on the first 20% of the curve or the last 20%, but rather on the information in the middle years. Mr. Winfrey's analysis is based on the probable error involved in fitting a smooth survivor curve to an observed life table with varying percentages surviving. He concludes:

> When survivor curves are to be classified according to the 18 types and the probable average life to be determined, it is recommended that more weight be given to the middle portion of the survivor curve, say that between 80 and 20 percent surviving, then to the forepart or extreme lower end of the curve. The inner section is the result of greater numbers of retirements and also it covers the period most likely the normal operation of the property.[34]

In summary, there are many factors to be considered and these should be reviewed based on the specifics of each account. Additionally, visual curve matching can allow one to give more or less consideration to some ranges of data points, even if these points are not excluded from the analysis.

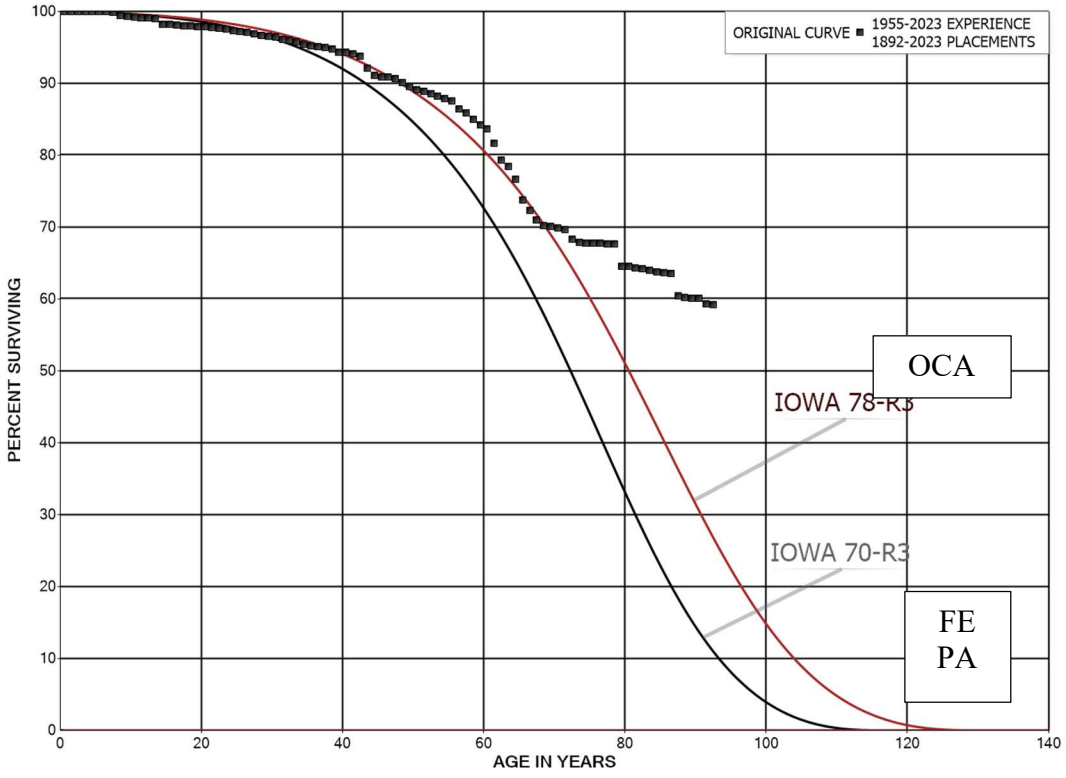
D. Comparison of Estimates

1. West Penn Account 361 – Structures and Improvements

Q. What service life estimate did each of the parties propose for West Penn Account 361, structures and improvements?

A. FE PA proposes to decrease the service life for West Penn Account 361, Structures and Improvements, from the currently approved 75-R3 to a 70-R3 survivor curve in the depreciation study. Mr. Garrett estimates a longer service life and suggests the 78-R3 survivor curve.[35] Figure 6 provides a comparison of the survivor curve estimates and the OLT data points included in the deprecation study.

Figure 6: Comparison of Estimates for West Penn Account 361, Structures and Improvements



[35] OCA St. No. 3 at p. 22.

Q. Please explain why your estimate is more reasonable than that suggested by Mr. Garrett.

A. While the OCA estimate yields a mathematically better fit of the available OLT through age 70, this should not be the only consideration when selecting an estimate. In addition to the statistical analysis, there is a need to apply informed judgment that must consider the nature of the assets in the account as well as the life expectations of the assets based on Company plans. The early installations of structures in this account were brick or masonry structures for substations. There was fencing, foundation, and grading that are also major components of the assets in the account. However, the current asset mix and future plans for these assets are much different. Current substation structures are primarily prefabricated steel or modular structures which have a much shorter life cycle than the early installation structures. Fencing has requirements for safety and security which will require much sooner replacement practices. The foundation for substation assets will not be reused when new vintage assets are installed so the life of foundation is much closer to the life of the related equipment in the substation. Finally, the grading around the major equipment cannot be reused and due to regulations will need to be replaced when the asset is replaced in order to construct proper holding areas for the new generation of equipment. All of these factors are why the life of future substation structures and improvements will be shorter than the original installations. When properly determining life characteristics, it must be understood that the life estimate is a projection of the future, not a statistical matching of the past.

2. Met-Ed Account 362 – Station Equipment

Q. What did the parties propose for service life estimates for Met-Ed Account 362, station equipment?

A. For Met-Ed Account 362, station equipment, I propose to continue using the currently approved estimate, 60-R2. Mr. Garrett suggests increasing the average service life by eighteen years and suggests the 78-R3.[36] As previously mentioned, however, Mr. Garrett seems to have mistaken the OLT for this account with the OLT for West Penn Account 361.

Q. Please explain why your estimate is more reasonable than that proposed by Mr. Garrett.

A. Given the apparent mix-up of the OLT in Mr. Garrett's testimony, it is unclear if 78-R3 is his intended recommendation for Met-Ed Account 362. As shown in Figure 4 above, the 78-R3 estimate is not reasonable for the assets studied. The 60-R2 visually and mathematically fits the OLT well and is within the typical range of estimates used for the assets in the account. Given that most of Mr. Garret's supporting calculations appear to utilize an estimate comparable to the 60-R2 survivor curve, I will not address all the flaws of the 78-R3 survivor curve.

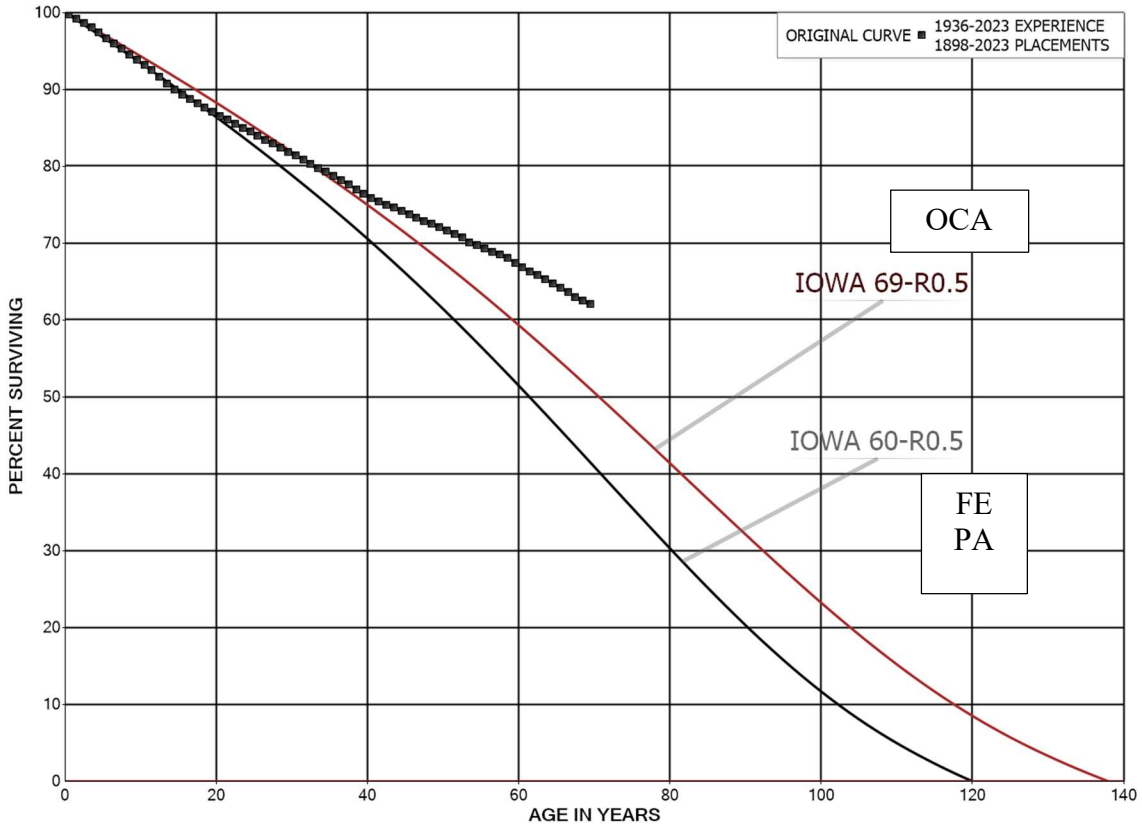
[36] *Id.* at p. 16.

3. Penelec Account 365 – Overhead Conductors and Devices

Q. What service lives did each of the parties estimate for Penelec Account 365, overhead conductors and devises?

A. For Penelec Account 365, Overhead Conductors and Devices, I propose to continue using the currently approved estimate of 60-R0.5. Mr. Garrett suggests that a significantly increased service life of 69-R0.5 is more appropriate.[37] Figure 7 shows a plot of each curve with the OLT.

Figure 7: Comparison of Estimates for Penelec Account 365, Overhead Conductors and Devices



[37] *Id.* at p. 19.

Q. Please explain some of the issues with Mr. Garrett's suggested estimate.

A. Again Mr. Garrett appears to rely solely on mathematical curve fitting as a basis for his estimate. A reasonable expectation for the assets in this account should not expect that half the account will survive beyond age 69, a quarter of the assets will live beyond age 100, and some of the assets will survive for 138 years. It should not be expected that overhead conductor and devices should remain in service and provide quality and reliable service for 140 years. However, Mr. Garrett's estimate suggests just that. There are many forces of retirement on distribution conductor and devices such as change in load, voltage, location of lines, type of conductor, and equipment upgrades that will occur much sooner than Mr. Garrett's estimate would allow. Once again, Mr. Garrett's estimate will not properly match utilization of the asset with recovery of the asset.

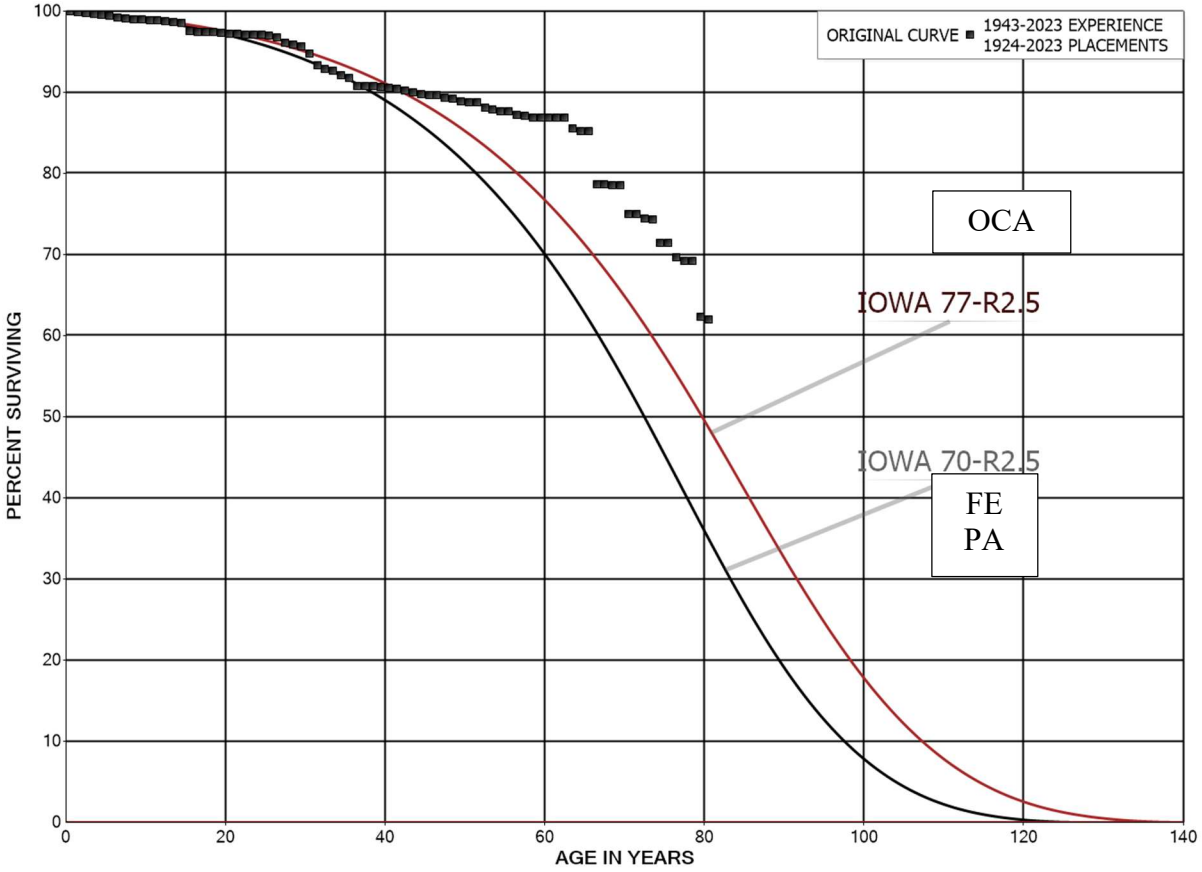
4. Penn Power Account 366 – Underground Conduit

Q. What service life estimates have the parties recommended for Penn Power Account 366, underground conduit?

A. For Penn Power Account 366, Underground Conduit, I propose increasing the currently approved estimate for this account, 65-R2.5, by 5 years and recommend the 70-R2.5 survivor curve. Mr. Garrett suggests further increasing the average service life to a 77-R2.5 survivor curve.[38] These curves are shown below in Figure 8.

[38] *Id.* at p. 20.

Figure 8: Comparison of Estimates for Penn Power Account 366, Underground Conduit



Q. Please explain the deficiencies in Mr. Garrett's estimate.

A. As with the other accounts, Mr. Garrett seemingly relies only on mathematical curve fitting for his estimate. This account only has a stub curve to 62 percent surviving so there is a lot of estimating of the remaining portion of the curve required. This account represents conduit for underground conductor so there is some correlation of the life characteristics of conduit to the associated conductor. What is known about conduit, however, is that age is a major component of retirement. Therefore, wear and tear and deterioration will increase retirement levels beyond the average service life. The expectation is the maximum life of the conduit should correlate to the maximum life of the associated underground

conductor, which is around 100 years. The levels of retirement from ages 40 to 60 were very low in the past but that is not expected to continue as conduit will not be expected to have bimodal life characteristics, so the steady levels of retirement through age 40 will continue in the future and the increasing higher levels of retirement after age 70 will continue. When considering these factors as well as understanding the future expectations of conduit for underground conductor, the 70-year average life and maximum life of 120 years is more reasonable an expectation than the 77-year average life and 135-year maximum life suggested by Mr. Garrett.

IV. CONCLUSION

Q. Is there anything in the testimony of the OCA witness that should influence the commission to accept his depreciation recommendations?

A. No. As this rebuttal testimony explains, FE PA's proposed depreciation rates were prepared in accordance with current practice before the Commission. OCA has incorrectly calculated depreciation rates for the forecasted test years, misrepresented all the components of the ELG procedure, presented circumstances in other jurisdictions that are not applicable, and has not properly addressed how depreciation affects customers. The Commission should approve the depreciation rates recommended in the Company's filing.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

REBUTTAL TESTIMONY
OF
DYLAN W. D'ASCENDIS

I. INTRODUCTION, PURPOSE AND SUMMARY

Q. Please state your name and business address.

A. My name is Dylan W. D'Ascendis. My business address is 3000 Atrium Way, Suite 200, Mount Laurel, NJ 08054.

Q. By whom are you employed and in what capacity?

A. I am a Partner at ScottMadden, Inc.

Q. On whose behalf are you testifying?

A. I am submitting this rebuttal testimony (referred to throughout as my "Rebuttal Testimony") before the Pennsylvania Public Utility Commission ("PA PUC" or the "Commission") on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. Are you the same Dylan W. D'Ascendis who provided Direct Testimony in this proceeding?

A. Yes, I am.

Q. What is the purpose of this Rebuttal Testimony?

A. The purpose of my Rebuttal Testimony is to address certain aspects of the direct testimonies of Mr. D. C. Patel, witness for the PA PUC's Bureau of Investigation and Enforcement ("I&E"); Dr. Marlon F. Griffing, witness for the Pennsylvania Office of Consumer Advocate ("OCA"); and Ms. Lisa V. Perry, witness for Walmart Inc.

("Walmart") (collectively referred to as the "Opposing Witnesses") as they pertain to the Company's allowed rate of return on common equity ("ROE").

Q. Please summarize your conclusions.

A. As shown in my Direct Testimony, using market data as of December 29, 2023, I calculated a range of reasonable ROEs attributable to FE PA between 10.01% and 13.07%. Given that data, I maintain my initial recommendation of 11.30% for the Company.

In view of current markets and the results of my ROE models, recommended ROEs of 9.91% and 9.38% (I&E and OCA, respectively) for FE PA are insufficient at this time.[1]

Q. Have you prepared exhibits in support of your Rebuttal Testimony?

A. Yes. I have prepared FE PA Exhibits DWD-1R through DWD-17R, which were prepared by me or under my direction.

Q. How is the remainder of your Rebuttal Testimony organized?

A. The remainder of my Rebuttal Testimony is organized as follows:

- Section II – Summarizes my updated analytical models;
- Section III – Discusses the relevance of historical authorized ROEs;
- Section IV – Contains my response to Mr. Patel;
- Section V – Contains my response to Dr. Griffing;
- Section VI – Contains my response to Ms. Perry; and
- Section VII – Summarizes my conclusions and recommendations.

[1] Ms. Perry does not provide an independent, market-based analysis of ROE for FE PA.

Q. Please summarize the key issues and recommendations offered by the Opposing Witnesses that you address in your Rebuttal Testimony.

A. My Rebuttal Testimony responds to substantive recommendations offered by the Opposing Witnesses in their direct testimonies. For example, I vigorously disagree with Mr. Patel's sole reliance on his discounted cash flow ("DCF") model results for his recommendation, and I disagree with Mr. Patel's and Dr. Griffing's applications of the capital asset pricing model ("CAPM"). These factors serve to understate Mr. Patel's and Dr. Griffing's ROE recommendations. My Rebuttal Testimony discusses these factors and others in detail. I will also address the Opposing Witnesses' unfounded critiques of my Direct Testimony.

II. UPDATED ANALYSIS

Q. Have you updated your analyses to reflect current market conditions?

A. Yes, I have. Given the passage of time since my Direct Testimony analyses (data as of December 29, 2023), I decided to update my analyses using data as of May 31, 2024.

Q. Have you updated your Utility Proxy Group?

A. Yes, I have. At the time of preparation of my Direct Testimony, my Utility Proxy Group was screened based on fiscal year 2022 financial data. Since that time, fiscal year 2023 financial data became available, and I have subsequently included PNM Resources, Inc. in my Utility Proxy Group, as they now pass my screening criteria.[2]

Q. Have you applied any of your ROE models differently in your updated analyses?

A. No, I have not.

[2] FE PA St. No. 10 at p. 13.

Q. What are the results of your updated analyses?

A. Using data available as of May 31, 2024, my updated results are presented in FE PA Exhibit DWD-1R and summarized in Table 1, below:

Table 1: Summary of Common Equity Cost Rate

Discounted Cash Flow Model	10.29%
Risk Premium Model	11.09%
Capital Asset Pricing Model	11.91%
Cost of Equity Models Applied to Comparable Risk, Non-Price Regulated Companies	12.50%
Indicated Range of Common Equity Cost Rates before Adjustments	10.29% - 12.50%
Credit Risk Adjustment	-0.08%
Flotation Cost Adjustment	0.21%
Indicated Range of Common Equity Cost Rates after Adjustment	10.42% - 12.63%
Recommended Cost of Common Equity	11.30%

Since my original recommended ROE of 11.30% is within my updated recommended range of ROEs applicable to FE PA, I will continue to recommend an 11.30% ROE for the Company.

Q. You maintain your recommendation of 11.30% in this proceeding but support a 10.80% ROE in FE PA's affiliate's Ohio proceeding as noted by Mr. Patel.[3] Why does the requested ROE in Ohio differ from your recommendation in Pennsylvania?

A. As discussed in the testimony of Company Witness Fanelli in Ohio proceeding, I also sponsored a recommended ROE of 11.30% in that proceeding. Though my testimony

[3] I&E Statement No. 2 at p. 50.

supported an ROE of 11.30%, FE PA's Ohio affiliates ultimately decided to propose "an ROE that is in the lower end of the range."[4]

III. RELEVANCE OF HISTORICAL AUTHORIZED RETURNS

Q. Your recommended ROE of 11.30% is above the average ROE approved for electric utilities over the past several years. Are historical ROEs a good measure of prospective ROEs?

A. No, they are not.

Q. Please summarize the Opposing Witnesses' review of authorized ROEs.

A. Mr. Patel compares my recommended ROE to the first quarter 2024 average electric utility ROE, based on a report from S&P Global, concluding that my recommended ROE is above the average.[5]

Dr. Griffing observes historical authorized ROEs between 2021-2023 to justify his recommended ROE.[6] He also notes that my recommended ROE falls outside the range of recent authorized ROEs for electric utilities,[7] and suggests that my CAPM and Risk Premium Model ("RPM") results are unreasonable as they also fall outside of the range of authorized ROEs.[8]

Ms. Perry compares my recommended ROE with ROEs authorized in Pennsylvania and nationwide.[9]

---

[5] I&E St. No. 2 at p. 49.
[6] OCA St. No. 2 at p. 40.
[7] *Id*. at p. 48.
[8] *Id.* at pp. 49, 50.
[9] Walmart St No. 1 at pp. 9-11.

Q. Please discuss the applicability of historically authorized ROEs for cost of capital purposes.

A. While authorized ROEs may be reasonable benchmarks of acceptable ROEs, they do not reflect the current cost of common equity. The reason why historical authorized returns do not reflect the investor-required return is because authorized ROEs are a lagging indicator of investor-required returns, i.e., authorized ROEs are based on market data presented in an evidentiary record, which spans a period before the decision, sometimes lasting over a year in some cases. Simply put, historical authorized returns do not completely reflect as to the investor-required return because the economic conditions in the past are not representative of economic conditions now.[10] Because of this, the Opposing Witnesses' simple comparisons of my recommended ROE to previously authorized ROEs are of little value.

A more useful way to use historical authorized ROEs for cost of capital purposes would be to determine whether a relationship between authorized ROEs (or equity risk premiums) and interest rates exists so one can determine an expectational ROE or equity risk premium given an interest rate. As discussed in my Direct Testimony, it is clear that an inverse relationship exists between equity risk premiums and interest rates (i.e., as interest rates move, equity risk premiums move in the opposite direction, but not to the extent of the interest rate move), which is confirmed in the work of Harris and Marston (2001) and Brigham, Dilip, Shome, and Vinson (1985).[11]

As shown on page 32 of FE PA Exhibit DWD-1R, using historical authorized ROEs and interest data in regression analyses produces statistically significant inverse

[10] Dr. Griffing also acknowledges this in his Direct Testimony. See OCA Statement No. 2 at p. 14.
[11] FE PA St No. 10 at pp. 29-30.

relationships between interest rates and equity risk premiums, which can be used to determine expectational investor-required returns. Given an expectational A2-rated Public Utility bond yield of 5.65%, an indicated equity risk premium of 4.83% is calculated using electric historical ROE data. Adding the expectational A2-rated public utility bond yield to that equity risk premium results in an indicated ROEs of 10.48%.

Q. Please summarize this section.

A. The Opposing Witnesses' simple comparisons of my recommended ROE and historically authorized ROEs are of little value because historical ROEs do not reflect current and expected capital market conditions. The only useful data that can be discerned by historically allowed ROEs would be the relationship between those ROEs and prevailing interest rates. For all of these reasons, the Commission should not rely on historically authorized ROEs in setting the ROE for FE PA in this proceeding and instead focus on the market analyses put forth by each expert in their respective testimonies.

IV. RESPONSE TO I&E WITNESS PATEL

Q. Please summarize Mr. Patel's recommendations.

A. Mr. Patel accepts the proposed debt cost rate of 4.56% for FE PA, as well as the proposed capital structure consisting of 46.19% debt and 53.81% equity. [12] Regarding the cost of common equity, Mr. Patel recommends a common equity cost rate of 9.91%, based on his DCF model.[13]

[12] I&E St. No. 2 at pp. 13-14.
[13] *Id*. at p. 27.

Q. What concerns do you have with Mr. Patel's conclusions and results?

A. I have concerns with: (1) his use of revenues to determine the comparability of a potential proxy company; (2) his exclusive reliance on the results of his DCF model for his recommendation; (3) his use and application of the CAPM; and (4) his failure to reflect flotation costs incurred by the Company in his recommended ROE.

A. PROXY GROUP

Q. Do you disagree with Mr. Patel's proxy group?

A. Yes, I disagree with Mr. Patel's use of revenues as a valid measure of comparability and recommend that the Commission instead use measures of earnings instead of revenues to determine comparability.

Q. What are your concerns with Mr. Patel's use of revenue, rather than net operating income ("NOI"), as a screening criterion?

A. Measures of income are far more likely to be considered by the financial community in making credit assessments and investment decisions than are measures of revenue. From the perspective of credit markets, measures of financial strength and liquidity are focused on cash from operations, which is directly derivative of earnings, as opposed to revenue. As part of its rating methodology, for example, Moody's Investor Service assigns a 40.00% weight to measures of financial strength and liquidity, of which 22.50% specifically relates to the ability to cover debt obligations with cash from operations.[14]

Just as rating agencies focus on measures of cash from operations, equity analysts rely on measures of income in assessing equity valuation levels; common measures of

[14] *See*, Moody's Investors Service, Rating Methodology, Regulated Electric and Gas Utilities, June 23, 2017, at 4.

relative value include the price-to-earnings ratio, and the ratio of Enterprise Value to earnings before interest, taxes, depreciation, and amortization. Revenue, however, may be several steps removed from the earnings and cash flows that form the basis of equity valuations. Focusing on revenue may mislead the analyst into assuming a given operating unit is the primary driver of expected growth when the majority of earnings and cash flows are derived from other business segments. Here, we are considering whether the underlying utility is the principal source of long-term growth, and as such, focusing on revenue may obscure important elements of the analysis.

Q. Have you reviewed the operating data for the companies in Mr. Patel's proxy group?

A. Yes, I have. As shown on Table 2, below, the percentages of NOI and assets attributable to regulated electric utility service is not substantial for the companies not included in my Utility Proxy Group.

Table 2: Percent of 2023 NOI and Assets Attributable to Regulated Electric Utility Operations of Mr. Patel's Proxy Group[15]

	Net Oper. Income	Total Assets
Ameren Corporation	**85.78%**	**80.97%**
American Electric Power Company Inc.	**90.89%**	**92.29%**
AVANGRID Inc.	54.38%	41.29%
CMS Energy	54.67%	57.76%
Consolidated Edison Inc.	52.27%	67.17%
Dominion Energy Inc.	79.56%	68.97%
Duke Energy Corporation	**83.31%**	**87.88%**
Entergy Corporation	**93.40%**	**93.75%**
Eversource Energy	65.34%	53.75%
Exelon Corporation	73.93%	87.41%
FirstEnergy Corp	91.29%	98.60%
IDACORP Inc.	**98.01%**	**97.33%**
Portland General Electric Company	**100.00%**	**100.00%**
PPL Corporation	89.72%	79.79%
Public Service Enterprise Group Inc.	43.78%	59.97%
Xcel Energy	**84.90%**	**12.43%**

Q. What would Mr. Patel's model results be if he excluded these less comparable companies in his analysis?

A. Eliminating the less comparable companies shown above would increase the DCF model results from 9.91% to 10.39% and increase his CAPM result from 11.29% to 11.30% as put forth in FE PA Exhibit DWD-2R and FE PA Exhibit DWD-3R.

B. EXCLUSIVE RELIANCE ON DCF MODEL RESULTS

Q. Do you have a general comment on Mr. Patel's indicated ROE before adjustment?

A. Yes, I do. Mr. Patel's indicated ROE of 9.91% for FE PA is inadequate because he places exclusive weight on his DCF model results.

[15] SEC form 10-K. Note that bolded companies are included in my Utility Proxy Group. EXC failed my proxy group screening criteria due to not having betas from *Value Line* and Bloomberg, FE failed due to speculation on its stock price following a bribery scandal in Ohio, and PPL failed due to not having a positive dividend per share growth rate from *Value Line*.

Q. What would Mr. Patel's indicated ROE be if he averaged his DCF model and CAPM results?

A. Averaging Mr. Patel's DCF result of 9.91% with his CAPM result of 11.29% results in an indicated ROE of 10.60%, which is below my recommended ROE, but within my recommended range of ROEs.

Q. Does Mr. Patel state reasons why he exclusively relies on his DCF model results?

A. Yes, he does. Despite conceding that four ROE models are commonly considered to estimate the ROE (the DCF, the CAPM, the RPM, and the Comparable Earnings Model ("CEM")),[16] he does not rely on the other models for various reasons.

Regarding the CAPM, Mr. Patel opines that the CAPM is far less responsive to changes in the industry. Mr. Patel also argues that: (1) the indicated ROE is only company-specific because of the use of the Beta coefficient ("beta"); (2) the model is historical in nature because beta is calculated using historical returns; and (3) empirical analysis by Fama and French show that the relationship between predicted return and actual return is poor.[17]

Mr. Patel excludes the RPM from his analysis because he claims that it is a simplified version of the CAPM**,** and subject to similar faults**,** in addition to not reflecting company-specific risks through the use of beta.[18]

[16] I&E St. No. 2 at pp. 15-17.
[17] *Id.* at pp. 19-21.
[18] *Id.* at p. 21.

Finally, Mr. Patel also omits a CEM analysis because the choice of comparable companies is highly subjective, and he does not believe that historical accounting returns are representative of future accounting returns.[19]

Q. Do you agree with Mr. Patel's reasons for omitting the CAPM, RPM, and CEM from his analysis?

A. No, I do not.

Q. Please respond to Mr. Patel's comments regarding the CAPM's responsiveness to changes in the industry.

A. Regarding Mr. Patel's claim that the CAPM is far less responsive to changes in the industry, I disagree and so does the Commission. In a recent Order concerning Aqua Pennsylvania, Inc. ("Aqua"), the Commission stated the following about the CAPM's ability to reflect changing market conditions better than the DCF:

> We are persuaded by the arguments of Aqua that the ALJ erred by concluding I&E used its DCF and CAPM results to determine Aqua's ROE. In this regard, we note that although I&E did use its CAPM as a comparison to its DCF result, it made no CAPM based adjustment to its final ROE recommendation. I&E M.B. at 47. As Aqua points out, infra, the U.S. economy is currently in a period of high inflation. To help control rising inflation, the Federal Open Market Committee has signaled that it is ending its policies designed to maintain low interest rates. Aqua Exc. at 9. *Because the DCF model does not directly account for interest rates, consequently, it is slow to respond to interest rate changes. However, I&E's CAPM model uses forecasted yields on ten-year Treasury bonds, and accordingly, its methodology captures forward looking changes in interest rates. (emphasis added)*[20]

[19] *Id.* at pp. 21-22.
[20] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 154-155 (Order entered May 16, 2022).

Clearly the Commission recognizes the importance of the CAPM and its ability to account for market changes such as those occurring currently.

Q. Do you agree with Mr. Patel's claim that a fault of the CAPM is that its inputs are easily manipulated?

A. No, I do not. All ROE models are only as good as their inputs, and all ROE models can be easily manipulated by changing those inputs. For example, the DCF model has a number of inputs and variations of inputs that can drastically alter results as shown on Table 3:

Table 3: Various Inputs to DCF Models

Input	Variations of Inputs
Cash Flow Stream	Constant-Growth, Blended Growth, Multi-Stage Growth
Dividend Yield	Spot Dividend Yield, average dividend yield
Adjusted Dividend Yield	No adjustment, ½ g adjustment, full g adjustment, projected dividend
Growth Rates	Historical v. Projected v. Sustainable
Growth Measure	EPS, DPS, Book Value Per Share
Sources of Growth Rates	Value Line, Zacks, Yahoo, MorningStar, etc.

Q. Do you agree that betas used in the CAPM analysis are historical in nature?

A. I do not agree that the adjusted betas used in Mr. Patel's and my CAPM analyses are historical in nature. While I agree that unadjusted or "raw" betas are historical in nature, the Blume adjustment recognizes that over time betas will regress to the market mean, or 1.0. This makes the betas used in Mr. Patel's and my CAPM analyses prospective in nature.

Q. Please expand on the expectational nature of adjusted betas.

A. Betas are measured using an Ordinary Least Squares ("OLS") regression, in which the dependent variable is the return of the subject security, and the independent variable is the return on the market as measured by a given index (*Value Line*, for example, uses the New

York Stock Exchange Index). Beta is represented by the slope term of the regression estimates. Intuitively, beta measures the change in the subject company's returns relative to the change in the market return.

The resulting beta is considered "raw" or unadjusted. Unadjusted betas are historical in nature, as they use historical market data. Blume studied the stability of beta over time and found that "[n]o economic variable including the beta coefficient is constant over time."[21] Consistent with that finding, Blume observed a tendency of raw betas to change gradually over time. Blume further stated:

> …there is obviously some tendency for the estimated values of the risk parameter [beta] to change gradually over time. This tendency is most pronounced in the lowest risk portfolios, for which the estimated risk in the second period is invariably higher than that estimated in the first period. There is some tendency for the high risk portfolios to have lower estimated risk coefficients in the second period than in those estimated in the first. Therefore, the estimated values of the risk coefficients in one period are biased assessments of the future values, and furthermore the values of the risk coefficients as measured by the estimates of β_1 tend to regress towards the means with this tendency stronger for the lower risk portfolios than the higher risk portfolios. (emphasis added)[22]

Blume proposed a correction for this tendency, also known as "regression bias," which is inherent in the calculation of all betas. He stated:

> In so far as the rate of regression towards the mean is stationary over time, one can in principle correct for this tendency in forming one's assessments.
>
> * * *
>
> For individual securities as well as portfolios of two or more securities, the assessments adjusted for the historical rate of regression are more accurate than the unadjusted or naïve assessments. Thus, an improvement in the accuracy of one's assessments of risk can be obtained by adjusting for the historical rate of regression even though the rate of regression over time is not strictly stationary.[23]

[21] Marshal E. Blume, "On the Assessment of Risk," *The Journal of Finance,* Vol. XXVI, No. 1, March 1971.
[22] *Id*.
[23] *Id*.

Based on Blume's results, the typical adjustment is calculated based upon an approximate of the following formula:

$$\beta_{adjusted} = 0.35 + .67x\beta_{raw\ (unadjusted)}$$

This adjustment transforms the historical unadjusted beta into an expectational value, consistent with the expectational nature of the cost of capital.

As noted by Morin[24]:

> Several authors have investigated the regression tendency of beta and generally reached similar conclusions [as Blume]. High-beta portfolios have tended to decline over time toward unity, while low-beta portfolios have tended to increase over time toward unity…He demonstrated that the Value Line adjustment procedure anticipated differences between past and future betas.[25]

Morin further notes:

> A comprehensive study of beta measurement methodology by Kryzanowski and Jalilvand (1983) concludes that raw unadjusted beta (OLS beta) is one of the poorest beta predictors, and is outperformed by the Blume-style Bayesian beta approach. Gombola and Kahl (1990) examine the time-series properties of utility betas and find strong support for the application of adjustment procedures such as the Value Line and Bloomberg procedures.
>
> ***
>
> Because of this observed regressive tendency, a company's raw unadjusted beta is not the appropriate measure of market risk to use. Current stock prices reflect expected risk, that is, expected beta, rather than historical risk or historical beta. Historical betas, whether raw or adjusted, are only surrogates for expected beta. The best of the two surrogates is adjusted beta.[26]

[24] Roger A. Morin has taught as the Distinguished Professor of Finance for Regulated Industry at the Center for the Study of Regulated Industry at Georgia State University, the Wharton School of Finance at the University of Pennsylvania, the Amos Tuck School of Business at Dartmouth College, Drexel University, and McGill University, among others. He has authored or co-authored articles published in academic journals on the subject of finance, including The Journal of Finance, The Journal of Business Administration, and International Management Review.
[25] Roger A. Morin, Modern Regulatory Finance, Public Utilities Reports, Inc., 2022, at p. 81. ("Morin").
[26] Morin at pp. 81-82.

Morin also provides economic and statistical justification for using adjusted betas to estimate the cost of equity for utilities. Relative to economic justification, he states:

> Adjusted betas compensate for the tendency of regulated utilities to be extra interest-sensitive relative to industrials.(footnote omitted) In the same way that bondholders get compensated for inflation through an inflation premium in the interest rate, utility shareholders receive compensation for inflation through an inflation premium in the allowed rate of return. Thus, utility company returns are sensitive to fluctuations in interest rates. Conventional betas do not capture this extra sensitivity to interest rates. This is because the market index typically used in estimating betas is a stock-only index, such as the S&P 500. A focus on stocks alone distorts the betas of regulated companies. The true risk of regulated utilities relative to other companies is understated because when interest rates change, the stocks of regulated companies react in the same way as bonds do. A nominal interest rate on the face value of a bond offers the same pattern of future cash flows as a nominal return applied on a book value rate base. Empirical studies of utility returns confirm that betas are higher when calculated in a way that captures interest rate sensitivity. *The use of adjusted betas compensates for the interest sensitivity of regulated companies.* (*italics added for emphasis)*[27]

Relative to statistical justification, Morin states:

> There is a statistical justification for the use of adjusted betas as well. High-estimated betas will tend to have positive error (overestimated) and low-estimated betas will tend to have negative error (underestimated). Therefore, it is necessary to squash the estimated betas in toward 1.00. One way to accomplish this is by measuring the extent to which estimated betas tend to regress toward the mean over time. As a result of this beta drift, several commercial beta producers adjust their forecasted betas toward 1.00 in an effort to improve their forecasts. This adjustment, which is commonly performed by investment services such as Value Line, and Bloomberg, uses the formula:
>
> $$\beta_{adjusted} = 1.0 + a(\beta_{raw} - 1.0) \quad (4-3)$$
>
> where "a" is an estimate of the extent to which estimated betas regress toward the mean based on past data. Value Line and Bloomberg betas are adjusted for their long-term tendency to regress toward 1.0 by giving approximately 66% weight to the measured beta and approximately 34%

[27] Morin at p. 82.

weight to the prior value of 1.0 for each stock, that is, a = 0.66 in the above equation:

$$\beta_{adjusted} = 1.0 + 0.66\ (\beta_{raw} - 1.0)$$

$$= 0.33 + 0.66\ \beta_{raw} \quad (4\text{-}4)\ [28]$$

Given the evidence presented above, adjusted betas are expectational in nature, and not historical.

Q. Do you agree with Fama and French's research on the CAPM as it pertains to the empirical finding that the Security Market Line is not as steep as it is predicted by beta?

A. I agree with the empirical findings of Fama and French regarding the difference between projected returns as estimated by the CAPM and actual returns. As will be discussed below, that is the reason why the Empirical CAPM ("ECAPM") should be used in conjunction with the traditional CAPM in ROE analyses. In view of the above, Mr. Patel's concerns regarding the CAPM should be dismissed by the Commission.

Q. Is your RPM analysis a simplified version of the CAPM and not company-specific?

A. No, it is not. My beta-derived equity risk premium RPM analysis applies beta to the indicated equity risk premium to create a proxy group-specific equity risk premium.[29]

In view of the above, my RPM analysis should be considered by the Commission in approving an ROE for the Company.

[28] Morin at pp. 82-83.
[29] FE PA Statement No. 10 at pp. 27-28, and FE PA Exhibit DWD-7.

Q. Is your CEM analysis consistent with Mr. Patel's description?

A. No, it is not. The selection criteria for my Non-Price Regulated Proxy Group is not subjective in nature, as it is based on ranges of two measures of risk: (1) the unadjusted beta of the Utility Proxy Group, which measures systematic, or market risk; and (2) the standard error of the regression, which gave rise to those betas, measuring non-systematic or diversifiable risk. Systematic plus non-systematic risk is one definition of total risk.[30] This is agreed upon by Mr. Patel, who states in his testimony: "two types of risk are associated with a stock: (1) firm-specific risk (unsystematic risk); and (2) market risk (systematic risk), which is measured by a firm's beta."[31]

Each company I selected for my Non-Price Regulated Proxy Group was required to have an unadjusted beta (a measure of systematic risk) and a standard error of the regression (a measure of unsystematic risk) within the ranges generated by my proxy group, as explained in pages 40 and 41 of my Direct Testimony and on FE PA Exhibit DWD-6.

Business and financial risks may vary between companies and proxy groups, but if the collective average betas and standard errors of the regression of the group are similar, then the total, or aggregate, non-diversifiable market risks and diversifiable risks are similar, as noted in "Comparable Earnings: New Life for an Old Precept" provided in FE PA Exhibit DWD-4R. Thus, because the non-price regulated companies are selected based on analyses of market data, they are comparable in total risk (even though individual risks may vary) to my Utility Proxy Group. This is demonstrated clearly on page 273 of Jack C. Francis' Investments: Analysis and Management (page 3 of FE PA Exhibit DWD-5R),

[30] Business risk plus financial risk is a second definition of total risk.
[31] I&E St. No. 2 at p. 16.

which shows that total risk can be "partitioned into its systematic and unsystematic components." Essentially, companies that have similar betas and standard errors of regression have similar total investment risk.

Lastly, I apply the DCF, CAPM, and RPM to my Non-Price Regulated Proxy Group, which is an apples-to-apples comparison of the investor-required return for non-regulated companies similar in total risk, which makes Mr. Patel's second concern regarding the CEM moot.

Q. Have you used other measures of total risk to compare your Utility Proxy Group and your Non-Price Regulated Proxy Group?

A. Yes. I have compared the average and median *Value Line* Safety Ranking.[32] As shown in Table 4, below, the Safety Rankings of the Utility Proxy Group and the Non-Price Regulated Proxy Group are comparable, indicating comparable total risk.

Table 4: *Value Line* Safety Rankings for the Utility Proxy Group and Non-Price Regulated Proxy Group

	Average	Median
Utility Proxy Group	2.20	2.00
Non-Price Regulated Proxy Group	1.76	2.00

[32] *Value Line* also ranks stocks for Safety by analyzing the total risk of a stock compared to the approximately 1,700 stocks in the *Value Line* universe. Each of the stocks tracked in the *Value Line Investment Survey* is ranked in relationship to each other, from 1 (the highest rank) to 5 (the lowest rank). Safety is a quality rank, not a performance rank, and stocks ranked 1 and 2 are most suitable for conservative investors; those ranked 4 and 5 will be more volatile. Volatility means prices can move dramatically and often unpredictably, either down or up. The major influences on a stock's Safety rank are the company's financial strength, as measured by balance sheet and financial ratios, and the stability of its price over the past five years.

Q. Mr. Patel curiously does not reveal any of the concerns regarding the DCF model in his direct testimony. Why is primary reliance on the DCF model generally problematic?

A. Traditional rate base / rate of return regulation, where a market-based common equity cost rate is applied to a book value rate base, presumes that the market-to-book ("M/B") ratios are at unity or 1.00. However, that is rarely the case. Morin states:

> The third and perhaps most important reason for caution and skepticism is that application of the DCF model produces estimates of common equity cost that are consistent with investors' expected return only when stock price and book value are reasonably similar, that is, when the M/B is close to unity. As shown below, application of the standard DCF model to utility stocks understates the investor's expected return when the M/B ratio of a given stock exceeds unity. This was particularly relevant in the capital market environment of the early 2020s when utility stocks are trading at M/B ratios well above unity and have been for nearly two decades. The converse is also true, that is, the DCF model overstates the investor's return when the stock's M/B ratio is less than unity. The reason for the distortion is that the DCF market return is applied to a book value rate base by the regulator, that is, a utility's earnings are limited to earnings on a book value rate base[33].

As Morin explains, DCF models assume an M/B ratio of 1.0 and therefore under- or over-states investors' required return when market value exceeds or is less than book value, respectively. It does so because equity investors evaluate and receive their returns on the market value of a utility's common equity, whereas regulators authorize returns on the book value of common equity. This means that the market-based DCF will produce the total annual dollar return expected by investors, only when market and book values of common equity are equal, a very rare and unlikely situation.

[33] Roger A. Morin, Modern Regulatory Finance, (Public Utilities Report, Inc. 2021), at pp. 481-482 ("Morin 2").

Q. Why do market and book values diverge?

A. Market values can diverge from book values for a myriad of reasons including, but not limited to, earnings per share ("EPS") and dividends per share ("DPS") expectations, merger / acquisition expectations, interest rates, etc. As noted by Phillips:

> Many question the assumption that market price should equal book value, believing that 'the earnings of utilities should be sufficiently high to achieve market-to-book ratios which are consistent with those prevailing for stocks of unregulated companies.[34]

In addition, Bonbright states:

> In the first place, commissions cannot forecast, except within wide limits, the effect their rate orders will have on the market prices of the stocks of the companies they regulate. In the second place, *whatever the initial market prices may be, they are sure to change not only with the changing prospects for earnings, but with the changing outlook of an inherently volatile stock market*. In short, market prices are beyond the control, though not beyond the influence of rate regulation. Moreover, even if a commission did possess the power of control, any attempt to exercise it ... would result in harmful, uneconomic shifts in public utility rate levels. (italics added)[35]

Q. Can the under- or over-statement of investors' required return by the DCF model be demonstrated mathematically?

A. Yes. FE PA Exhibit DWD-6R, page 1 demonstrates how Mr. Patel's market-based DCF cost rate, when applied to a book value substantially below market value, will understate investors' required return on market value. As shown, there is no realistic opportunity to earn the expected market-based rate of return on book value. Using Mr. Patel's DCF cost rate, for example, in Column [A], investors expect a 9.91% return on an average market price of $64.95 for Mr. Patel's proxy group. Column [B] shows that when Mr. Patel's

[34] Charles F. Phillips, The Regulation of Public Utilities, Public Utilities Reports, Inc., 1993, at p. 395.
[35] James C. Bonbright, Albert L. Danielsen and David R. Kamerschen, Principles of Public Utility Rates (Public Utilities Reports, Inc., 1988), at 334.

9.91% return rate is applied to a book value of $40.29,[36] the total annual return opportunity is $3.99. After subtracting dividends of $2.77, the investor only has the opportunity for $1.23 in market appreciation, or 1.89%. The magnitude of the understatement of investors' required return on market value using Mr. Patel's 9.91% cost rate is 3.76%, which is calculated by subtracting the market appreciation based on book value of 1.89% from Mr. Patel's expected growth rate of 5.65%.

Q. Is there another way to quantify the inaccuracy of the DCF model when M/B ratios are not at unity?

A. Yes. One can quantify the inaccuracy of the DCF model when M/B ratios are not at unity by estimating the implied DCF model results (based on a market-value capital structure) to reflect a book-value capital structure. This can be measured by first calculating the market value of each proxy company's capital structure, which consists of the market value of the company's common equity (shares outstanding multiplied by price), and the fair value of the company's long-term debt and preferred stock. All of these measures, except for price, are available in each company's SEC Form 10-K.

Second, one must de-leverage the implied cost of common equity based on the DCF. This is derived using the Modigliani / Miller equation[37] as illustrated in FE PA Exhibit DWD-7R and shown below:

$$ku = ke - (((ku - i)(1 - t)) D/E) - (ku - d) P/E$$

where:

ku = Unlevered (i.e., 100% equity) cost of common equity;

[36] Representing a market-to-book ratio of 161.21%.

[37] The Modigliani / Miller theorem is an influential element of economic theory and forms the basis for modern theory on capital structure. *See,* F. Modigliani and M. Miller, "The Cost of Capital, Corporation Finance and the Theory of Investment," *The American Economic Review*, Vol. 48, No. 3, (June 1958), at 261-297.

ke = Market determined cost of common equity;
i = Cost of debt;
t = Income tax rate;
D = Debt ratio;
E = Equity ratio;
d = Cost of preferred stock; and
P = Preferred equity ratio.

For example, using data specific to Mr. Patel's proxy group, the equation becomes:

ku =9.91% - (((ku – 4.38%)(1-21%)) 45.22%/54.51%) - (ku – 4.84%) 0.27%/54.51%

Solving for ku results in an unlevered cost of common equity of 7.71%. Next, one must re-lever those costs of common equity by relating them to the proxy group's average book capital structure as shown below:

$$ke = ku + (((ku - i)(1 - t))\ D/E) + (ku - d)\ P/E$$

Once again, using data specific to Mr. Patel's proxy group, the equation becomes:

ke=7.71% + (((7.71%-4.38%)(1-21%))56.73%/42.92%)+(7.71%-4.84%) 0.35%/42.92%

Solving for ke results in an 11.21% indicated cost of common equity relative to the book capital structure of the proxy group, which is an increase of 1.30% over Mr. Patel's indicated DCF result of 9.91%.

The leverage-adjusted DCF results are still not applicable to the Company, as they do not reflect its relative risk as measured by its difference in credit ratings, nor does it reflect flotation costs.

Q. Has this Commission recognized this tendency of the DCF model to mis-specify investors' required return when M/B ratios are not at unity?

A. Yes. This Commission recognized this tendency in its order of August 26, 2005 in The City of Lancaster – Sewer Fund, Docket Nos. R-00049862, et al., when it adopted the Administrative Law Judge's market-to-book adjustment of 65 basis points (0.65%)

because such an adjustment was "consistent with our recent orders in PAWC, Aqua, and PPL" and "as in PPL, we find that adjustment is necessary because the DCF method produces the investor required return based on the current market price, not the return on the book value capitalization. With the M/B adjustment, the equity return allowance is 10.75 percent." (emphasis added)

In 2007, the PA PUC again affirmed the tendency of the DCF model to mis-specify investors' required return in its Order of February 8, 2007 in *PPL Gas Utilities Corporation,* Docket No. R-00061398, et al., when it stated:

> The ALJ stated that the OTS and the OCA are correct that the Commission favors the DCF method to determine the cost of equity. However, the ALJ concluded, based on recent precedent, that the Commission consistently has adopted a leverage adjustment to compensate for the difference between market prices and book value (used in ratemaking). (*See, Aqua Pennsylvania*, 204, 234 (2004); *Pa. PUC v. PPL Electric Utilities Corp*., Docket No. R-00049255, at 70-71 (2004); *Pa. PUC v. Pennsylvania American Water Co.*, 2002 Pa. PUC LEXIS 1; *Pa. PUC v. Phila. Suburban Water Co*., 219 PUR4TH 272 (2002); *Pa. PUC v. Pennsylvania American Water Co*., 231 PUR4TH 277 (2004)). According to the ALJ, these cases are persuasive that a leverage adjustment should be employed with the DCF analysis. (R.D. at 62-63).

Q. Are you advocating a specific adjustment to the DCF results to correct for its mis-specification of the investor-required return?

A. No. The purpose of this discussion is to demonstrate that, like all cost of common equity models, the DCF has its limitations and that the use of multiple cost of common equity models in conjunction with informed expert judgment provides a more accurate and reliable picture of the investor-required ROE than does a narrow evaluation of the results of one model.

Q. What is your recommended approach to determining the ROE?

A. As discussed in my Direct Testimony,[38] the use of multiple models adds reliability to the estimation of the common equity cost rate, with the prudence of using multiple cost of common equity models supported in both the financial literature and regulatory precedent.

Q. Are there examples from the financial literature which support the use of multiple cost of common equity models in determining the investor-required return?

A. Yes. In one example, Morin states:

> Each methodology requires the exercise of considerable judgment on the reasonableness of the assumptions underlying the methodology and on the reasonableness of the proxies used to validate a theory. The inability of the DCF model to account for changes in relative market valuation, discussed below, is a vivid example of the potential shortcomings of the DCF model when applied to a given company. Similarly, the inability of the CAPM to account for variables that affect security returns other than beta tarnishes its use.
>
> **No one individual method provides the necessary level of precision for determining a fair return, but each method provides useful evidence to facilitate the exercise of an informed judgment**. Reliance on any single method or preset formula is inappropriate when dealing with investor expectations because of possible measurement difficulties and vagaries in individual companies' market data. (emphasis added)
>
> * * *
>
> There is ample academic support in the financial literature for the need to rely upon several financial models in arriving at a recommended common equity cost rate. Professor Eugene Brigham, a widely respected scholar and finance academician, asserts(footnote omitted):
>
> > *Three methods typically are used: (1) the Capital Asset Pricing Model (CAPM), (2) the discounted cash flow (DCF) method, and (3) the bond-yield-plus-risk-premium approach.* ***These methods are not mutually exclusive – no method dominates the others****, and all are subject to error when used in practice. Therefore, when faced with the task of estimating a company's cost of equity, we generally use all three methods*

[38] FE PA St. No. 10 at p. 17.

> *and then choose among them on the basis of our confidence in the data used for each in the specific case at hand. (italics in original) (emphasis added)*

Another prominent finance scholar, Professor Stewart Myers, in an early pioneering article on regulatory finance, stated[footnote omitted]:

> *Use more than one model when you can. Because estimating the opportunity cost of capital is difficult,* ***only a fool throws away useful information****. That means you should not use any one model or measure mechanically and exclusively. Beta is helpful as one tool in a kit, to be used in parallel with DCF models or other techniques for interpreting capital market data. (italics in original) (emphasis added)*

* * *

Reliance on multiple tests recognizes that no single methodology produces a precise definitive estimate of the cost of equity. As stated in Bonbright, Danielsen, and Kamerschen (1988), *'no single or group test or technique is conclusive.'* (italics in original)

* * *

While it is certainly appropriate to use the DCF methodology to estimate the cost of equity, there is no proof that the DCF produces a more accurate estimate of the cost of equity than other methodologies. Sole reliance on the DCF model ignores the capital market evidence and financial theory formalized in the CAPM and other risk premium methods. **The DCF model is one of many tools to be employed in conjunction with other methods to estimate the cost of equity.** It is not a superior methodology that supplants other financial theory and market evidence. The broad usage of the DCF methodology in regulatory proceedings in contrast to its virtual disappearance in academic textbooks does not make it superior to other methods. The same is true of the Risk Premium and CAPM methodologies. (emphasis added)[39]

Finally, Brigham and Gapenski note:

> In practical work, *it is often best to use all three methods* – CAPM, bond yield plus risk premium, and DCF – and then apply judgment when the methods produce different results. People experienced in estimating equity capital costs recognize that both careful analysis and some very fine judgments are required. It would be nice to pretend that these judgments are unnecessary and to specify an easy, precise way of determining the exact

[39] Morin 2, at 476-479.

> cost of equity capital. Unfortunately, this is not possible. Finance is in large part a matter of judgment, and we simply must face this fact. (italics in original)[40]

In the academic literature cited above, three methods are consistently mentioned: the DCF, CAPM, and the RPM, all of which I used in my analyses.

Q. Are there specific examples where the PA PUC has considered multiple cost of common equity models?

A. Yes. In Docket No. R-2013-2360798, concerning Columbia Water Company ("Columbia"), where I was Columbia's ROE witness, the Commission stated:

> Based on our review of the testimony, data, and cost models presented, we believe that the evidence in this case supports an ROE finding in the reasonable range of 9.25% to 10.25% using the DCF method as the foundation. The equity-heavy capital structure of Columba indicates that a slightly lower ROE is appropriate. However, the small size of the Company, its management effectiveness, and the results of other ROE models other than the DCF are all reasons to set a higher ROE. Therefore, within our indicated range of reasonableness, we conclude that an ROE of 9.75% is appropriate for our ratemaking determinations herein.

Also, in Docket No. R-2014-2402324 concerning Emporium Water Company ("Emporium"), where I was Emporium's ROE witness, the Commission stated the following:

> The ALJ recommended that the Commission adopt the Company's proposed return on common equity of 11.05%.[Footnote Omitted] R.D. at 11. The ALJ explained that the Company's position allows it to pay its debt service, which includes principal payments and interest, and provides a modest return on equity ($34,000). The ALJ states that I&E's and the OCA's positions fail to meet the standards set by the *Hope* and *Bluefield* by not even allowing the Company to pay their debt service, which may lead to possible default on the loans and the bankruptcy of the Company. R.D. at 35.

[40] Eugene F. Brigham and Louis C. Gapenski, Financial Management – Theory and Practice, 4th Ed. (The Dryden Press, 1985) at p. 256.

* * *

> As discussed, *supra*, the OCA recommends a return of 9.10% as the midpoint of its DCF and CE analyses; I&E recommends a return of 8.89% based on its DCF analyses; and the Company proposes a return of 10.3%, which utilizes its DCF, RP, and CAPM analyses to which the Company adds a size risk adjustment of 75 basis points. Based on our review of the testimony, data, and cost models presented, and considering our adoption of a 60% / 40% hypothetical capital structure, we believe that the range of returns provided in evidence supports an ROE finding of 10.0% for our ratemaking determinations herein.

In Docket Nos. R-2021-3027385 and R-2021-3027386 concerning Aqua, the Commission stated:

> Therefore, our methodology for determining Aqua's ROE shall utilize both I&E's DCF and CAPM methodologies. As noted above, the Commission recognizes the importance of informed judgment and information provided by other ROE models. In the *2012 PPL Order*, the Commission considered PPL's CAPM and RP methods, tempered by informed judgment, instead of DCF-only results. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation. Historically, we have relied primarily upon the DCF methodology in arriving at ROE determinations and have utilized the results of the CAPM as a check upon the reasonableness of the DCF derived equity return. As such, where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our equity return determination. In light of the above, we shall determine an appropriate ROE for Aqua using informed judgement based on I&E's DCF and CAPM methodologies.[41]

Lastly, in the more recent Docket Nos. R-2023-3040258 concerning Columbia, the Commission stated:

> In *Aqua 2022,* the Commission determined the ROE by using informed judgement based on I&E's DCF and CAPM methodologies. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation. We historically have primarily relied upon the DCF methodology in arriving at ROE determinations and utilized the results of the CAPM, as a check upon the reasonableness of the DCF derived equity return. As such, where evidence

[41] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 154-155 (Order entered May 16, 2022).

> based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our ROE determination. Considering the above, we shall determine an appropriate ROE for Columbia using informed judgement based on I&E's DCF and CAPM methodologies. Accordingly, we shall grant I&E's Exception No. 3, in part, and deny it, in part, and we shall deny the OCA's Exception No. 5 consistent with the forgoing discussion.[42]

In the Commission Orders cited above, there is clear language that the Commission considers multiple models in its determination of ROE. It is also my interpretation of these Orders that the Commission correctly observes capital market conditions and their effect on the model results in determining an ROE for utility companies. This, in addition to the academic literature cited above, shows that Mr. Patel's reasoning behind relying solely on the DCF for his recommended ROE is misplaced.

C. APPLICATION OF THE CAPM

Q. Please briefly summarize Mr. Patel's CAPM methodology and results.

A. Mr. Patel uses the average *Value Line Investors Service ("Value Line")* beta of his proxy groups, a projected 10-year Treasury yield for his risk-free rate, and the average of an expectational market returns and a historical 1923-2023 average market return to arrive at a CAPM result of 11.29%.[43]

Q. Do you have any concerns with Mr. Patel's application of the CAPM?

A. Yes, I do. While I agree with Mr. Patel's use of *Value Line* betas, projected interest rates, and projections of market returns, I have concerns regarding his selection of a risk-free

[42] *Pa. PUC v. Columbia Water Company.,* Docket No. R-2023-3040258, pp. 108 (Order entered January 18, 2024).
[43] I&E Statement No. 2 at pp. 32-34.

rate, his calculation of his expectational market return, and his failure to conduct an ECAPM.

Q. Is the use of 10-year Treasury bonds as a risk-free rate appropriate for cost of capital purposes?

A. No, it is not. As discussed below, the tenor of the risk-free rate used in the CAPM should match the life (or duration) of the underlying investment. As noted by Morningstar:

> The traditional thinking regarding the time horizon of the chosen Treasury security is that it should match the time horizon of whatever is being valued. When valuing a business that is being treated as a going concern, the appropriate Treasury yield should be that of a long-term Treasury bond. Note that the horizon is a function of the investment, not the investor. If an investor plans to hold stock in a company for only five years, the yield on a five-year Treasury note would not be appropriate since the company will continue to exist beyond those five years.[44]

Morin also confirms this when he states:

> [b]ecause common stock is a long-term investment and because the cash flows to investors in the form of dividends last indefinitely, the yield on very long-term government bonds, namely, the yield on 30-year Treasury bonds, is the best measure of the risk-free rate for use in the CAPM (footnote omitted)… The expected common stock return is based on long-term cash flows, regardless of an individual's holding time period.[45]

Pratt and Grabowski recommend a similar approach to selecting the risk-free rate: "In theory, when determining the risk-free rate and the matching ERP you should be matching the risk-free security and the ERP with the period in which the investment cash flows are expected."[46] As a practical matter, equity securities represent a perpetual claim on cash flows; 30-year Treasury bonds are the longest-maturity securities available to match that perpetual claim. The average life of FE PA's utility plant ranges from

[44] Morningstar, Inc., 2013 Ibbotson Stocks, Bonds, Bills and Inflation Valuation Yearbook, at 44.
[45] Morin, at 169.
[46] Shannon Pratt and Roger Grabowski, Cost of Capital: Applications and Examples, 3rd Ed. (Hoboken, NJ: John Wiley & Sons, Inc., 2008), at 92. "ERP" is the Equity Risk Premium.

approximately 36 to 37 years based on the composite depreciation rate of the components of its utility plant.[47] Thus, Mr. Patel's use of a medium-term Treasury bond does not match the life of the assets being valued. The use of a 30-year Treasury bond is the more appropriate risk-free rate.

Q. Mr. Patel claims that long-term government bonds are subject to the maturity risk.[48] Please comment.

A. He is mistaken. If a long-term Treasury note is held to maturity, there is no risk (the investor will get the stated coupon rate and principal at the end). Since the cost of equity is a long-term concept, the investment horizon of an individual investor is irrelevant.

Q. Please discuss Mr. Patel's projected risk-free rate.

A. Mr. Patel and I use the same publication for our forecasted interest rate data, *Blue Chip Financial Forecasts* ("*Blue Chip*"). Mr. Patel incorporate forecasts from the third quarter of 2024 out to the period 2025-2029, although forecasts are published by *Blue Chip* to the period 2030-2034. Mr. Patel states that the 2030-2034 projection is "unreliable" but does not present any evidence to support his claim.[49] Further, not incorporating the longest projection available is inconsistent with the application of the DCF model in which there is an assumption that the projected "g" is constant into perpetuity, creating a mismatch. It is also inconsistent with the Efficient Market Hypothesis ("EMH") on which the DCF is based.

[47] 1 / 2.75% = 36.36 (Pennsylvania Electric Company) and 1 / 2.68% = 37.31 (Pennsylvania Power Company and West Penn Power Company).
[48] I&E Statement No. 2 at p. 32.
[49] *Id.* at p. 42.

Q. What is the EMH?

A. According to Fama,[50] a market in which prices always "fully reflect" available information is called "efficient." There are three forms of the EMH, namely:

(1) The "weak" form asserts that all past market prices and data are fully reflected in securities prices. In other words, technical analysis cannot enable an investor to "outperform the market."

(2) The "semi-strong" form asserts that all publicly available information is fully reflected in securities prices. In other words, fundamental analysis cannot enable an investor to "outperform the market."

(3) The "strong" form asserts that all information, both public and private, is fully reflected in securities prices. In other words, even insider information cannot enable an investor to "outperform the market."

The "semi-strong" form is generally considered the most realistic because the illegal use of insider information can enable an investor to "beat the market" and earn excessive returns, thereby disproving the "strong" form. The semi-strong form of the EMH assumes that all information (including long-term forecasts of interest rates) is available to the investor, which means the 2030-2034 forecasted interest rate would be considered by investors when making investment decisions and, therefore, should be included in Mr. Patel's CAPM analysis.

[50] Eugene F. Fama. "Efficient Capital Markets: A Review of Theory and Empirical Work", *The Journal of Finance*, Vol. 25, No. 2. (May 1970), pp. 383-417.

Q. Is Mr. Patel's calculation of his *Value Line*-based market return consistent with other aspects of his ROE analysis?

A. No, it is not. Mr. Patel's estimate of the *Value Line* expected market return is based solely on the May 17, 2024 *Value Line Summary and Index* report. In his DCF analysis, he arrives at his final dividend yield by relying on an average of the spot dividend yield and the 52-week average dividend yield.[51] If Mr. Patel believes that the spot dividend yield should be averaged with the 52-week average dividend yield in his DCF analysis, he should calculate his *Value Line* expected market return in a consistent manner. As shown on FE PA Exhibit DWD-8R, page 2, doing so would result in an average *Value Line* expected market return of 12.82%, with an overall market return of 12.49%.

Q. Mr. Patel did not perform an ECAPM analysis. Please comment.

A. As discussed in my Direct Testimony,[52] although numerous tests of the CAPM have confirmed its validity, it has been determined that the empirical Security Market Line ("SML") described by the traditional CAPM is not as steeply sloped as the predicted SML. Tests of the CAPM have measured the extent to which security returns and betas are related as predicted by the CAPM, thus confirming its validity.[53] As such, Mr. Patel should have used the ECAPM in his CAPM analysis.

Q. Does Mr. Patel have concerns regarding the ECAPM?

A. Yes, he does. Specifically, Mr. Patel claims that the ECAPM "does not increase the validity of the result"[54] without providing evidence to that effect. Conversely, I have

[51] I&E St. No. 2 at pp. 28-29.
[52] FE PA St. No. 10 at p. 32.
[53] *Id.* at pp. 33-36.
[54] I&E St. No. 2 at p. 43.

provided substantial evidence that the ECAPM is a necessary adjustment to the CAPM in my Direct Testimony[55] and above. Mr. Patel's concerns should be dismissed.

Q. What would Mr. Patel's CAPM results indicate if corrected to reflect a fully forecasted 30-year treasury bond yield, a *Value Line* market return calculated in a manner consistent with his DCF, and the use of the ECAPM?

A. As shown in FE PA Exhibit DWD-8R, using a fully projected 30-year Treasury bond yield, a *Value Line* market return based on the average of the spot expected return and 52-week average expected return, and employing the ECAPM would result in an indicated ROE of 11.84%.

D. OTHER CONSIDERATIONS

Q. Does Mr. Patel consider a flotation cost adjustment?

A. No, he does not. Mr. Patel claims that "it is inappropriate to seek an increase to the cost of equity for FE PA to recognize the parent company's stock issuance flotation costs".[56] As discussed in my Direct Testimony, wholly owned subsidiaries such as FE PA receive capital from their parents, and provide returns on the capital that roll up to the parent, which is designated to attract and raise capital based on the returns of those subsidiaries.[57] As such, denying recovery of issuance costs would penalize the investors that fund the utility operations. As shown in FE PA Exhibit DWD-9R, because of flotation costs, an authorized return of 10.85% would be required to realize an ROE of 10.75% (i.e., a 10-basis point

[55] *See,* FE PA St. No. 10 at pp. 33-36.
[56] I&E St. No. 2 at p. 47.
[57] FE PA St. No. 10 at p. 7.

flotation cost adjustment). If flotation costs are not recovered, the growth rate falls and the ROE decreases to 10.65% (i.e., below the required return).[58]

Q. Have other regulatory commissions allowed flotation costs in the allowed ROE?

A. Yes, they have. For example, in Peoples Gas System, Inc.'s ("PGS") recent 2023 rate proceeding, the Florida Public Service Commission stated the following regarding my proposed flotation cost adjustment:

> In PGS's last rate case in 2008, we did not make a specific adjustment for flotation costs, but in our order we stated that we have traditionally recognized a reasonable adjustment for flotation costs in the determination of the investor required return...We find witness D'Ascendis's method to determine the flotation cost is credible and provided persuasive evidence for his recommendation to include a flotation cost of 9 basis points.[59]

Given the above, I recommend this Commission also correctly include flotation costs in the allowed ROE.

E. RESPONSE TO MR. PATEL'S CRITICISMS OF COMPANY TESTIMONY

Q. Does Mr. Patel have critiques of the analyses made in your Direct Testimony?

A. Yes. Mr. Patel has the following critiques of my analyses in my Direct Testimony: (1) that I have given weight to models other than the DCF in my determination of the ROE for the Company; (2) my discussion of business and financial risk; (3) my use of a 30-year Treasury bond; (4) the Market Risk Premium ("MRP") used in my CAPM; (5) my use of the ECAPM; and (6) my application of a flotation cost adjustment.

[58] FE PA Exhibit DWD-9R is provided for illustrative purposes only. Please note that I have not relied on the results of the analysis in determining my recommended ROE or range.

[59] *In re: Petition for rate increase by Peoples Gas System, Inc.*, Docket No. 20230023-GU, Order Granting in Part and Denying in Part Peoples Gas System, Inc.'s Petition for a Rate Increase, at 68 (December 27, 2023).

As I addressed critiques (1), (3), (5), and (6) in my response to Mr. Patel's analyses, I will not address them again here. I will address the remaining critiques in turn.

Q. Mr. Patel states that you did not compare FE PA's risks to those of the Utility Proxy Group.[60] Is that accurate?

A. No, it is not. As discussed on pages 43-46 of my Direct Testimony, I compared the size of FE PA to the Utility Proxy Group to compare FE PA's business risk due to its size to the Utility Proxy Group. While I ultimately concluded that the difference in size is not significant enough to include in the determination of my recommended ROE, I did perform the study, unlike Mr. Patel.

Further, I also compared the credit rating of FE PA to that of the Utility Proxy Group and determined that a downward adjustment of 0.08% was necessary to reflect the slightly less risky credit rating of FE PA compared to the Utility Proxy Group.[61]

Q. Mr. Patel believes that your calculated market returns and MRPs are too high. Please respond.

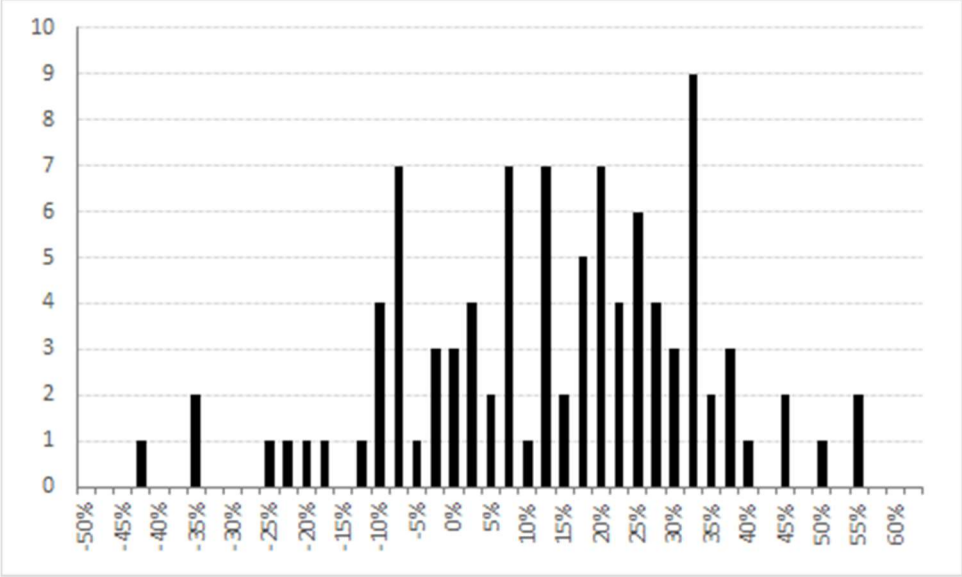
A. Even though Mr. Patel questions the reasonableness of my calculated market returns and MRPs, they are consistent with actual realized returns and MRPs, as shown on Table 5, below, and FE PA Exhibit DWD-10R.

[60] I&E St. No. 2 at p. 41.
[61] FE PA St. No. 10 at p. 47.

Table 5: Percentile Ranks of Calculated Market Returns and Risk Premiums[62]

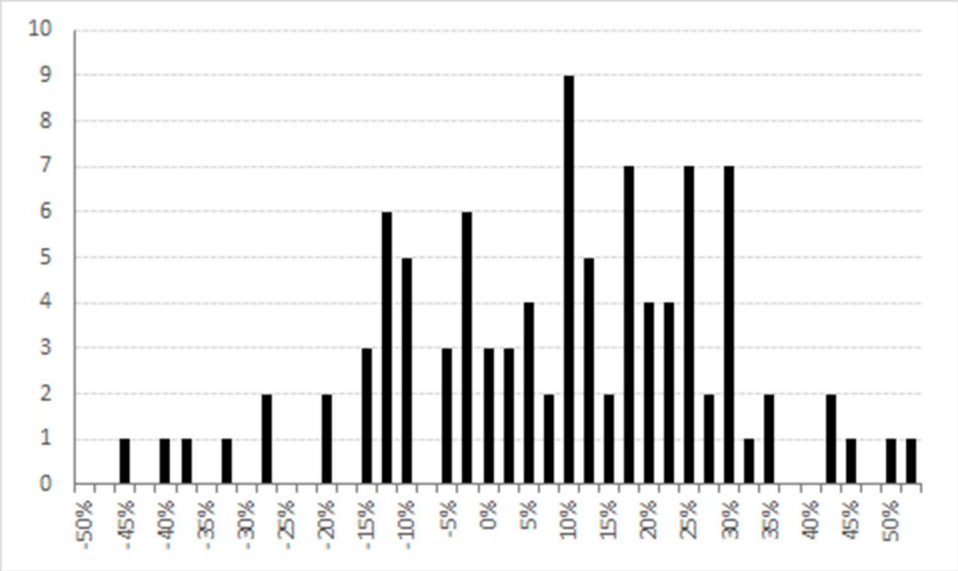
	D'Ascendis Testimony	%	Percentile Rank
Average Market Return	Direct	14.17%	49th
Average Market Return	Rebuttal	13.34%	48th
Average Market Risk Premium	Direct	10.02%	53rd
Average Market Risk Premium	Rebuttal	8.93%	50th

Chart 1: Frequency Distribution of Observed Market Returns, 1926 - 2023[63]



[62] FE PA Exhibit DWD-10R.
[63] FE PA Exhibit DWD-10R.

Chart 2: Frequency Distribution of Observed Market Risk Premiums, 1926 - 2023[64]



Given all of the above, my calculation of the market returns and MRPs are consistent with observed values. Thus, Mr. Patel's concern should be dismissed.

V. RESPONSE TO OCA WITNESS GRIFFING

Q. Please summarize Dr. Griffing's ROE recommendation.

A. Dr. Griffing applies single stage and multi-stage Discounted Cash Flow (DCF) models, and a Capital Asset Pricing Model (CAPM), to a proxy group of 15 electric utilities. The results of these models are summarized in Table 6, below.

Table 6: Summary of Dr. Griffing's ROE Results[65]

	Constant Growth DCF	Multistage DCF	CAPM
Mean	9.24%	8.84%	9.72%
Median	9.69%	9.21%	9.83%

[64] FE PA Exhibit DWD-10R.
[65] Exhibit MFG-20, Schedule 1.

Dr. Griffing derives his initial 9.48% recommended ROE by averaging the results of his single stage DCF model and his CAPM. Dr. Griffing eliminates his multistage DCF result because the result appears to be an outlier base on electric utility ROEs authorized over the 2021-2023 period.[66] Dr. Griffing recommends an additional 10 basis point downward adjustment based on reliability and service quality to arrive at a final ROE recommendation of 9.38%.[67]

Q. Please summarize the key areas in which you disagree with Dr. Griffing's analyses and recommendations.

A. The key areas in which Dr. Griffing and I disagree are: (1) his selection criteria for his proxy group; (2) his use of DPS growth rates in his DCF models; (3) the applicability of the multi-stage DCF model in his analysis; (4) his application of the CAPM; (5) his failure to reflect flotation costs incurred by the Company; and (6) his proposed capital structure. Since Dr. Griffing does not consider his multi-stage DCF in his recommended ROE, I will not address it in this Rebuttal Testimony. Subsequent to this testimony, if Dr. Griffing places weight on his multi-stage DCF, I will address it then.

A. APPLICATION OF CONSTANT GROWTH DISCOUNTED CASH FLOW MODEL

Q. Please summarize Dr. Griffing's constant growth DCF model analysis.

A. Dr. Griffing's constant growth DCF model relies on four-week average stock prices and the most recently available dividends from *Value Line* to calculate the dividend yield, which he then adjusts using a DPS growth rate from *Value Line*. That expected dividend

[66] OCA St. No. 2 at pp. 39-40.
[67] *Id.* at p. 43.

yield is then summed with the same DPS growth rate from *Value Line* to arrive at his constant growth DCF results.[68]

Q. Do you agree with Dr. Griffing's use of DPS growth rates in his constant growth DCF model?

A. No, I do not. Over the long run, there can be no growth in DPS without growth in EPS. Earnings expectations have a more significant, but not sole, influence on market prices than dividend expectations. Thus, the use of earnings growth rates in a DCF analysis provides a better match between investors' market appreciation expectations implicit in market prices and the growth rate component of the DCF. Consequently, earnings expectations have a significant influence on market prices which affect market price appreciation, and hence, the "growth" experienced by investors. This should be evident even to relatively unsophisticated investors just by listening to financial news reports on radio, TV, or reading newspapers. In fact, Morin states:

> Because of the dominance of institutional investors and their influence on individual investors, analysts' forecasts of long-run growth rates provide a sound basis for estimating required returns. Financial analysts exert a strong influence on the expectations of many investors who do not possess the resources to make their own forecasts, that is, they are a cause of g. The accuracy of these forecasts in the sense of whether they turn out to be correct is not at issue here, as long as they reflect widely held expectations. As long as the forecasts are typical and/or influential in that they are consistent with current stock price levels, they are relevant. The use of analysts' forecasts in the DCF model is sometimes denounced on the grounds that it is difficult to forecast earnings and dividends for only one year, let alone for longer time periods. This objection is unfounded, however, because it is present investor expectations that are being priced; it is the consensus forecast that is embedded in price and therefore in required return, and not the future as it will turn out to be.

* * *

[68] *Id.* at pp. 28-29.

> Published studies in the academic literature demonstrate that growth forecasts made by security analysts represent an appropriate source of DCF growth rates, are reasonable indicators of investor expectations and are more accurate than forecasts based on historical growth. These studies show that investors rely on analysts' forecasts to a greater extent than on historic data.[69]

However, while EPS is a significant factor influencing market prices, it is by no means the only factor that affects market prices, a fact recognized by Bonbright, who states:

> In the first place, commissions cannot forecast, except within wide limits, the effect their rate orders will have on the market prices of the stocks of the companies they regulate. In the second place, *whatever the initial market prices may be, they are sure to change not only with the changing prospects for earnings, but with the changing outlook of an inherently volatile stock market.* In short, market prices are beyond the control, though not beyond the influence of rate regulation. Moreover, even if a commission did possess the power of control, any attempt to exercise it ... would result in harmful, uneconomic shifts in public utility rate levels (emphasis added).[70]

In addition, studies performed by Cragg and Malkiel demonstrate that analysts' forecasts are superior to historical growth rate extrapolations. They state:

> Efficient market hypotheses suggest that valuation should reflect the information available to investors. Insofar as analysts' forecasts are more precise than other types we should therefore expect their differences from other measures to be reflected in the market. It is therefore noteworthy that our regression results do support the hypothesis that analysts' forecasts are needed even when calculated growth rates are available. As we noted when we described the data, security analysts do not use simple mechanical methods to obtain their evaluations of companies. The growth-rate figures we obtained were distilled from careful examination of all aspects of the companies' records, evaluation of contingencies to which they might be subject, and whatever information about their prospects the analysts could glean from the companies themselves of from other sources. It is therefore notable that the results of their efforts are found to be so much more relevant to the valuation than the various simpler and more "objective" alternatives that we tried.[71]

---

[69] Morin 2, at 371-373.

[70] James C. Bonbright, Albert L. Danielsen and David R. Kamerschen, Principles of Public Utility Rates (Public Utilities Reports, Inc., 1988), at 334.

[71] John G. Cragg and Burton G. Malkiel, Expectations and the Structure of Share Prices (University of Chicago Press, 1982) Chapter 4.

In addition, Vander Weide and Carleton conclude:

> . . . our studies affirm the superiority of analyst's forecasts over simple historical growth extrapolations in the stock price formation process. Indirectly, this finding lends support to the use of valuation models whose input includes expected growth rates.[72]

Burton G. Malkiel, the Chemical Bank Chairman's Professor of Economics at Princeton University and author of the widely read national bestseller book on investing entitled, A Random Walk Down Wall Street (2011), also expressed support for projected EPS growth rates in testimony before the Public Service Commission of South Carolina in November 2002. Malkiel affirmed his belief in the superiority of analysts' earnings forecasts when he testified:

> With all the publicity given to tainted analysts' forecasts and investigations instituted by the New York Attorney General, the National Association of Securities Dealers, and the Securities & Exchange Commission, I believe the upward bias that existed in the late 1990s has indeed diminished. In summary, I believe that current analysts' forecasts are more reliable than they were during the late 1990s. *Therefore, analysts' forecasts remain the proper tool to use in performing a Gordon Model DCF analysis.* (Rebuttal testimony, South Carolina Electric and Gas Co., pp. 16-17, Docket No. 2002-223-E) (italics added)

Q. In reviewing the financial literature, did you discover any publications that supported the use of projected DPS growth rates for use in a DCF model?

A. No, I did not.

Q. Likewise, are you aware of any sources of data which provide projected DPS growth rates to investors?

A. *Value Line* is the only source of which I am aware that publishes projected DPS growth rates. If investors indeed valued projected DPS growth rates, there would be a market for

[72] James H. Vander Weide and Willard T. Carleton, *Investor Growth Expectations: Analysts vs. History* (The Journal of Portfolio Management, Spring 1988) 78-82.

that data. As they are not relied on by investors to determine their required returns on investments, there is not. Conversely, projected EPS growth rates are widely available to investors through many sources.[73]

Q. Have you performed any analyses to determine which measures of growth are statistically related to the proxy companies' stock valuation levels?

A. Yes, I have. My analysis is based on the methodological approach used by Carleton and Vander Weide, who compared the predictive capability of historical growth estimates and analysts' forecasts on the valuation levels of 65 utility companies.[74] I structured the analysis to understand whether historical, or projected, earnings or dividend growth rates best explain utility stock valuations. In particular, my analysis examined the statistical relationship between the price-to-earnings ("P/E") ratios of the water, natural gas and electric utilities as classified by *Value Line*, and the projected EPS and DPS growth rates as reported by *Value Line*. To determine which, if any, of those growth rates are statistically related to utility stock valuations, I performed a series of regression analyses in which the projected growth rates were explanatory variables and the P/E ratio was the dependent variable. The results of those analyses are presented in FE PA Exhibit DWD-11R.

In that analysis, I performed three separate regressions with the P/E as the dependent variable, and the projected EPS and DPS growth rates as the independent

[73] For example, I use projected EPS growth rates from *Value Line*, Yahoo! Finance, and Zacks.
[74] James H. Vander Weide and Willard T. Carleton, *Investor Growth Expectations: Analysts vs History*, The Journal of Portfolio Management (Spring 1988).

variable. I then reviewed the T- and F-Statistics to determine whether the variables and equations were statistically significant.[75]

Q. What did those analyses reveal?

A. As shown in FE PA Exhibit DWD-11R, the only growth rate that was statistically significant and positively related to the P/E ratio was projected EPS. Because EPS growth is the only growth rate that is both statistically and positively related to utility valuation, projected earnings is the proper measure of growth in the constant growth DCF model.

Q. Has Dr. Griffing relied on EPS growth rates in his constant growth DCF in the past?

A. Yes, he has. As stated by Dr. Griffing, "In the constant-growth DCF mode, it is assumed that current EPS growth rates continue to infinity. I used, as is commonly done, forecasts of EPS growth rates for five years and assumed those growth rates will continue."[76] Dr. Griffing has not presented any evidence to support why this approach is no longer relevant.

Q. Do you have any suggested changes to Dr. Griffing's constant growth DCF analysis?

A. Yes, I do. As discussed above, I disagree with Dr. Griffing's reliance on DPS growth rates, especially in light of his past use of EPS growth rates from *Value Line*, Zacks, and Yahoo! Finance. As shown on FE PA Exhibit DWD-12R, updating his constant growth DCF analysis to rely on EPS growth rates results in mean and median estimates of 10.72% and 10.54%, respectively.

[75] In general, a T-Statistic of 2.00 or greater indicates that the variable is likely to be different than zero, or "statistically significant." The F-Statistic is used to determine whether the model as a whole has statistically significant predictive capability.

[76] Direct Testimony of Marlon F. Griffing, PH.D., on behalf of the North Dakota Public Service Commission Advocacy Staff, March 1, 2022, at 24.

B. APPLICATION OF THE CAPM

Q. Please summarize Dr. Griffing's Capital Asset Pricing Model.

A. Dr. Griffing develops his CAPM estimate using a 5.50% MRP estimate from Kroll, *Value Line* betas, and the 4.60% 4-week average 30-year Treasury Bond as the risk-free rate.[77] His average and median CAPM estimates are 9.72% and 9.83%, respectively.

Q. Do you agree with Dr. Griffing's application of the CAPM?

A. No, I do not. Dr. Griffing's CAPM analysis is flawed in at least three respects: (1) While Dr. Griffing agrees that the cost of capital is a prospective measure, he does not use projected interest rates in his CAPM analysis; (2) his choice of an MRP from Kroll is flawed; and (3) Dr. Griffing does not apply an Empirical CAPM (ECAPM) analysis.

Q. Do you agree with Dr. Griffing's use of current, and not projected, interest ratings in the CAPM analysis?

A. No, I do not. The use of expected interest rates is consistent with both the cost of capital and ratemaking. However, given that the current risk-free rate he uses in his CAPM is reasonably consistent with the projected risk-free rate used in my updated CAPM, to reduce the scope of this Rebuttal Testimony, I will not address Dr. Griffing's use of a current risk-free rate.

Q. What is your position on the Kroll MRP used by Dr. Griffing?

A. The determination of the MRP as calculated by Kroll is not transparent, especially in view of the historical MRP presented in the Stocks, Bonds, Bills, and Inflation ("SBBI") Yearbook 2023 ("SBBI–2023"), which is already well known by investors. The historical

[77] OCA St. No. 2 at pp. 35-37.

MRP (using the long-term arithmetic mean return on large company stocks less the long-term arithmetic income returns on long-term Government bonds) is a superior MRP measure compared to Kroll's simplistic and opaque MRP forecast because of the transparency of the historical data.

Q. Why is the Kroll MRP more opaque than other measures of the MRP?

A. The MRP is calculated by subtracting a risk-free rate from the investor-required return on the market. Typically, the return on the market uses observable market measures (e.g., historical average returns), but the Kroll MRP does not define how they calculate their expected return on the market. Similarly, the risk-free rate is typically also based on market measures (e.g., historical interest rates, forecasted interest rates), but Kroll does not explain how they derive their 3.5% normalized risk-free rate. Because Kroll does not reveal how they derive their estimates, we do not know if they are indeed based on market measures.

Q. Did you conduct a study to determine the forecast accuracy of the Kroll recommended market return relative to the SBBI-2023 historical market return?

A. Yes, I did. I have calculated the forecast bias[78] of the long-term historical average return, and the implied market returns from Kroll from 2008-2023.[79] For example, the long-term average market return from 1926-2008 was used to determine the forecasted return for 2009. The result of this analysis is shown in FE PA Exhibit DWD-13R and Table 7, below:

[78] Forecast bias can be described as a tendency to either over-forecast or under-forecast a given variable.
[79] 2008 was selected as the starting year as it is the first year Kroll published its recommended MRP and risk-free rate.

Table 7: Comparison of Forecast Bias for Various Measures 2009-2023

Year	Observed Market Return	Long-Term Average Return	Kroll Forecasted Market Return
2009	26.46%	11.67%	10.50%
2010	15.06%	11.85%	10.08%
2011	2.11%	11.88%	9.63%
2012	16.00%	11.77%	10.00%
2013	32.39%	11.82%	9.50%
2014	13.69%	12.05%	9.00%
2015	1.38%	12.07%	9.00%
2016	11.96%	11.95%	9.00%
2017	21.83%	11.95%	9.00%
2018	-4.38%	12.06%	8.50%
2019	31.49%	11.88%	9.00%
2020	18.40%	12.09%	8.00%
2021	28.71%	12.16%	8.00%
2022	-18.11%	12.33%	8.00%
2023	26.61%	12.02%	9.00%
Sum	223.60%	179.55%	136.21%
Forecast Bias[80]		80.30%	60.92%

As shown in Table 7, while both of these measures understate the actual return (both forecast bias values are under 100%), the Kroll forecasted market return significantly and consistently understates the actual return. The Kroll projected market return is a less accurate predictor of the actual return than the historical average return. This result is consistent with Campbell, who states that when returns are serially uncorrelated, the arithmetic average represents the best forecast of future returns in any randomly selected future year.[81]

[80] Calculated by dividing the sum of the forecast returns by the sum of the actual returns.
[81] John Y. Campbell, "Forecasting US Equity Returns in the 21st Century," Social Security Administration, July 2001.

Q. Has Dr. Griffing previously relied on another MRP in his CAPM calculations?

A. Yes, he has. Instead of the Kroll MRP, Dr. Griffing previously used a calculated market return estimate based on a constant growth DCF applied to the S&P 500, similar to one of my approaches.[82] Though I did not agree with his entire approach (such as his exclusion of non-dividend paying companies or companies with growth rates below 0% and above 20%), it was substantially more transparent than the Kroll MRP he applies in this proceeding.

Q. Have you calculated what Dr. Griffing's MRP would have been using his previous methodology?

A. Yes, I have. As shown on FE PA Exhibit DWD-14R, using data from *Value Line*, Dr. Griffing would have calculated an expected market return of 11.23%, which would have resulted in an MRP of 6.63%.

Q. Does Dr. Griffing perform an ECAPM in his analysis?

A. No. Dr. Griffing failed to consider the ECAPM despite the fact that numerous tests of the CAPM have confirmed the ECAPM's validity, as discussed above in response to Mr. Patel.

Q. Have you corrected Dr. Griffing's CAPM analyses?

A. Yes, I have. I corrected Dr. Griffing's CAPM analyses by using a transparent MRP based on his constant growth DCF and including an ECAPM. As shown in FE PA Exhibit DWD-15R, this results in an average and median CAPM result of 10.82% and 10.94%, respectively.

[82] Direct Testimony of Marlon F. Griffing, PH.D., on behalf of the North Dakota Public Service Commission Advocacy Staff, March 1, 2022, at 34-35.

C. OTHER CONSIDERATIONS

Q. Did Dr. Griffing apply a flotation cost adjustment to the results of his DCF analyses or his CAPM?

A. No, he did not. Dr. Griffing recognizes the existence of flotation costs on page 31 of his direct testimony but does not include a flotation cost adjustment because the Commission has not specifically accepted flotation costs in the past.

Q. Has Dr. Griffing applied flotation cost adjustments to his ROE models in the past?

A. Yes, he has. Dr. Griffing previously stated that "These [flotation] costs are the fees and expenses the company must pay as part of the issuance. The return on equity must be adjusted to recognize this difference, or a company will be denied the reasonable opportunity to earn its required rate of return."[83] In that proceeding, Dr. Griffing recommended a flotation cost adjustment of 0.034%.

Q. What would Dr. Griffing's results be if he included a flotation cost adjustment?

A. As shown in Table 8, below, applying a flotation cost adjustment of 0.21% to his as-filed results would produce a constant growth DCF result of 9.45% and a CAPM result of 9.93%, which would average 9.69%. Applying the same flotation cost adjustment to his corrected results, discussed previously, would produce a constant growth DCF result of 10.93% and CAPM result of 11.03%, which together average 10.98%.

Table 8: Dr. Griffing's ROE results with a flotation cost adjustment

	As-filed	Corrected
Constant Growth DCF – Mean	9.45%	10.93%
CAPM – Mean	9.93%	11.03%
Average	9.69%	10.98%

[83] Direct Testimony of Marlon F. Griffing, PH.D., on behalf of the North Dakota Public Service Commission Advocacy Staff, March 1, 2022, at 26 (emphasis added).

D. CAPITAL STRUCTURE

Q. Please summarize the components of the Company's recommended capital structure.

A. The Company's proposed capital structure includes 46.19% long-term debt, and 53.81% common equity.

Q. Please summarize Dr. Griffing's testimony as it relates to the Company's proposed capital structure.

A. Dr. Griffing recommends that the Commission authorize a hypothetical common equity ratio of 50.00%.[84] He determines his recommended hypothetical common equity ratio by first examining the eight-quarter average equity ratio of his proxy group, and ultimately arrives at his recommendation as it "was between the capital structures of the Comparison Group and FirstEnergy's requested capital structure."[85]

Q. What factors should typically be considered when determining whether to use an actual or hypothetical capital structure for ratemaking purposes?

A. The factors typically considered relative to the use of a regulated subsidiary's actual capital structure, or a hypothetical capital structure, are provided by David C. Parcell in The Cost of Capital – A Practitioner's Guide (CRRA Guide) prepared for the Society of Utility and Regulatory Financial Analysts (SURFA) and provided as the study guide to candidates for SURFA's Certified Rate of Return Certification Examination. The CRRA Guide notes that there are circumstances where a hypothetical capital structure is used in favor of an actual capital structure. They are:

[84] OCA St. No. 2 at p. 44.
[85] *Id*. At pp. 45-46.

(i) The utility's capital structure is deemed to be substantially different from the typical or "proper" capital structure; or

(ii) The utility's capital structure is funded as part of a diversified organization whose overall capital structure reflects its diversified nature rather than its utility operations only.[86]

Phillips echoes the CRRA Guide when he states:

> Debt ratios began to rise in the late 1960s and early 1970s, and the financial condition of the public utility sector began to deteriorate. It became the common practice to use actual or expected capitalizations; actual where a historic test year is used, expected when a projected or future test year is used.[83] (footnote omitted)

> The objective, in short, shifted from minimization of the short-term cost of capital to protection of a utility's ability "to raise capital at all times." This objective requires that a public utility make every effort to keep indebtedness at a prudent and conservative level."[84] (footnote omitted)

> A hypothetical capital structure is used only where a utility's actual capitalization is clearly out of line with those of other utilities in its industry or where a utility is diversified.[85] (footnote omitted) (italics added)[87]

As discussed in my Direct Testimony, the Company's requested equity ratio (which mirrors its actual equity ratio) is consistent with the capital structure ratios maintained by the Utility Proxy Group, as well as the equity ratios maintained by the operating subsidiaries of the Utility Proxy Group companies.[88] Finally, the above literature supports the Company's use of its actual capital structure. As such, the requested capital structure should be approved by the Commission.

[87] Charles F. Phillips, Jr., The Regulation of Public Utilities – Theory and Practice, 1993, Public Utility Reports, Inc., Arlington, VA, at 391.
[88] FE PA St. No. 10 at p. 15.

Q. Is the use of an operating utility's actual capital structure consistent with Federal Energy Regulatory Commission ("FERC") precedent?

A. Yes, it is. The use of an operating subsidiary's capital structure is consistent with the FERC precedent, under which they use the applicant's capital structure, where possible.[89] In particular, the FERC will use the utility operating company's capital structure if it meets three criteria: (1) it issues its own debt without guarantees; (2) it has its own bond rating; and (3) it has a capital structure within the range of capital structures approved by the commission.[90] FE PA meets all of these criteria and therefore the Commission should approve FE PA's request.

Q. Is the Company's proposed equity ratio of 53.81% appropriate for ratemaking purposes?

A. Yes, it is. The Company's proposed equity ratio of 53.81% is appropriate for ratemaking purposes in the current proceeding because it is well within industry norms, reflects the financing of their rate base, and is consistent with the FERC's precedent.

E. RESPONSE TO DR. GRIFFING'S CRITIQUE OF COMPANY ANALYSIS

Q. What are Dr. Griffing's concerns with your analyses?

A. Dr. Griffing does not agree with: (1) the results of my CAPM analysis; (2) my authorized return regression-derived RPM; (3) the results of my RPM analysis; and (4) my Non-Price Regulated Proxy Group. I have already addressed the superiority of using authorized returns in a regression over using them as a benchmark, as well as the applicability of my

[89] *See, Transcontinental Gas Pipe Line Corp,* 80 FERC ¶ 61,157, 61,657 (1997) ("Opinion No. 414").
[90] 148 FERC ¶ 61,049, Docket No. EL14-12-000, at 190.

Non-Price Regulated Proxy Group previously and will not repeat those discussions. I will address Dr. Griffing's other concern in turn, below.

Q. Please respond to Dr. Griffing's claim that your CAPM result is not a "reasonable" value.[91]

A. It is unclear exactly which aspects of my CAPM Dr. Griffing takes issue. The average beta and risk-free rates used in his analysis are comparable to the ones I apply in my updated analysis, with both of my values being slightly less than his. As discussed previously in response to Mr. Patel, the market returns and MRPs I use are consistent with actual realized market returns and MRPs. I have also previously discussed the issue with using historical authorized returns as benchmarks. As a result, Dr. Griffing's concerns should be dismissed.

Q. Please respond to Dr. Griffing's claim that your RPM result is also not a "reasonable" value.[92]

A. Dr. Griffing only discussed the authorized-return based equity risk premium ("ERP") used in my RPM analysis and fails to address the other two ERPs used in my RPM analysis. Had Dr. Griffing considered my overall average ERPs of 5.67% (direct) and 5.29% (rebuttal), he would have observed that they are both consistent with actual observed ERPs, as shown in Table 9 and Chart 3, below.

[91] OCA St. No. 2 at p. 49.
[92] *Id.* at p. 51.

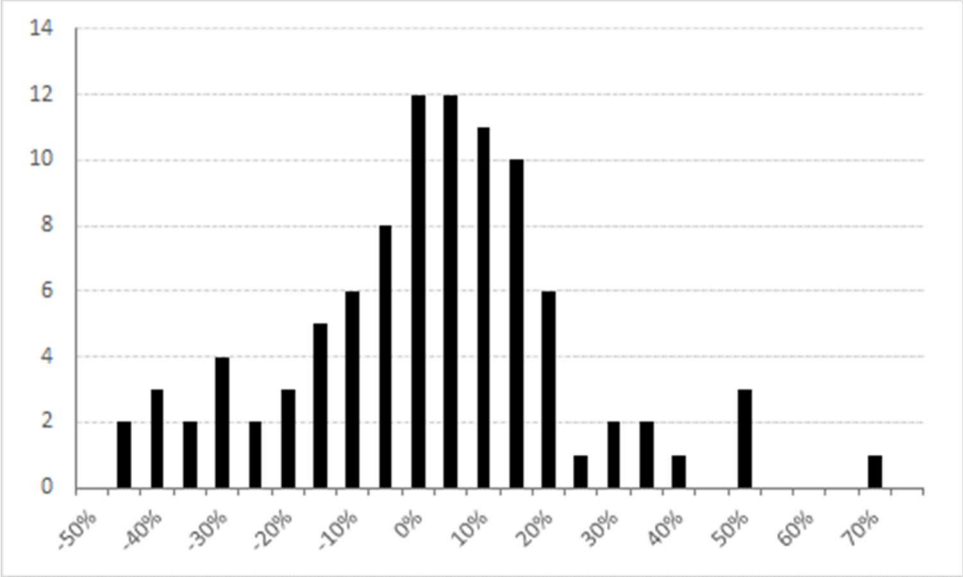
Chart 3: Frequency Distribution of Observed Equity Risk Premiums, 1926 - 2023[94]



VI. RESPONSE TO WALMART WITNESS PERRY

Q. Please summarize Ms. Perry's testimony regarding FE PA's ROE.

A. Ms. Perry opposes FE PA's proposed ROE based on her review of authorized ROEs nationwide and within Florida. She recommends the Commission "closely examine" FE PA's proposed ROE:

> [I]n light of: (a) The customer impact of the resulting revenue requirement increase; (b) The most recent ROE approved by this Commission in a fully litigated rate case and ROEs approved by other regulatory commissions nationwide, which do not support the Company's requested ROE; and (c) The use of an fully projected future test year ("FPFTY"), which reduces the

[93] FE PA Exhibit DWD-16R.
[94] FE PA Exhibit DWD-16R.

> risk due to regulatory lag based on the inclusion of the most current information in its rates when they will be in effect.[95]

However, Ms. Perry did not undertake an independent, market-based analysis of FE PA's ROE. As I discussed the relevance of part (b) previously in this testimony, I will not repeat that discussions here.

Q. Should the Commission consider FE PA's use of a FPFTY in setting the ROE?

A. The Commission should consider FE PA's test year and regulatory mechanisms relative to the proxy group used to derive its ROE.

Q. Does FE PA's utilization of a FPFTY affect its risk relative to your Utility Proxy Group?

A. No. As noted in my Direct Testimony, the *Hope* and *Bluefield* "Comparable Earnings" standard requires the allowed ROE to be commensurate with the returns on investments of similar risk. The cost of capital is a comparative exercise, so if the use of a FPFTY is common throughout the companies on which one bases their analyses, the comparative risk is zero; any effect of the perceived reduced risk of a FPFTY by investors would be reflected in the market data of the proxy group. To the extent the proxy companies utilize FPFTY only serve to make it more comparable to its peers and has no impact on comparative risk.

To that point, FE PA Exhibit DWD-17R provides a summary of the Utility Proxy Group operating companies that may utilize FPFTYs like FE PA. As FE PA Exhibit DWD-17R demonstrates, substantially all the proxy companies use a FTY or make known or measurable adjustments to their revenues and expenses.

[95] Walmart St. No 1 at p. 5.

VII. CONCLUSION

Q. What is your recommended ROE for FE PA?

A. Given the discussion above and the results from the analyses, I recommend that an ROE of 11.30% is appropriate at this time.

Q. In your opinion, is your proposed ROE of 11.30% fair and reasonable for FE PA and its customers?

A. Yes, it is.

Q. Does this conclude your Rebuttal Testimony?

A. Yes, it does.

Notes:

(1) Indicated dividend at 05/31/2024 divided by the average closing price of the last 60 trading days ending 05/31/2024 for each company.

(2) From pages 7 through 21 of this Exhibit

(3) Average of columns 2 through 4 excluding negative growth rates.

(4) This reflects a growth rate component equal to one-half the conclusion of growth rate (from column 5) x column 1 to reflect the periodic payment of dividends (Gordon Model) as opposed to the continuous payment. Thus, for Alliant Energy Corporation, 3.85% x (1+(1/2 x 6.30%)) = 3.97%.

(5) Column 5 + Column 6.

(6) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

BUSINESS: Alliant Energy Corporation is the parent company of Interstate Power and Light Company (IPL) and Wisconsin Power and Light Company (WPL). Together, the utility subsidiaries serve approximately one million electric and 425,000 natural gas customers in Wisconsin and Iowa. Electric revenue: residential, 36%; commercial, 25%; industrial, 29%; wholesale, 8%; other, 2%. Generating sources: coal, 32%; gas, 32%; wind, 16%; other, 1%; purchased, 19%. Fuel costs: 25% of revs. '22 reported deprec. rates: 2.9%-6.1%. Has 3,300 employees. Chairman, President & CEO: John O. Larsen. Inc.: Wisconsin. Address: 4902 N. Biltmore Lane, Madison, WI 53718-2148. Tel.: 608-458-3311. Internet: www.alliantenergy.com.

Alliant Energy posted fairly modest bottom-line growth last year. Indeed, on a GAAP basis, earnings rose just 2% to $2.78 a share in 2023, well below the 6% average annual gains that the Madison, Wisconsin-based electric and natural gas utility enjoyed over the past decade. Relatively mild weather across Alliant's two-state service area hurt heating and cooling demand. The modest earnings gain also reflected the further write down of tax assets on Alliant's balance sheet after Iowa's Department of Revenue reduced state levies on corporate income. That said, on a normalized basis, excluding the two aforementioned factors, EPS growth was approximately 5.5%, within the utility company's long-term target range.

We have profits rising roughly 8%, to $3.05 a share, in 2024. Underpinning our optimism is, in part, an expectation that Alliant will continue to exhibit good cost discipline. To that point, operating and maintenance expenses declined $30 million in 2023, helped by the retirement of the Lansing coal-fired power plant in northeast Iowa.

Leadership is budgeting more than $4 billion for renewable-energy and battery-storage projects between 2023 and 2027. Importantly, going green will greatly reduce the utility's reliance on fossil fuels, the price of which can fluctuate significantly. At the same time, Alliant stands to earn sizable tax credits, which it can monetize and use to further lower service costs.

Power demand may increase at a fairly modest clip over the next decade or two. A recent study ranked Wisconsin 39th among the 50 states for likely population growth between 2020 and 2040. Iowa, meanwhile, was just a bit better, at 28th. That said, word that Alliant has recently seen an uptick in economic development interest augurs well not only for commercial activity across the utility company's service area but also for the Midwest as a destination for job seekers.

Alliant shares remain an untimely selection for relative year-ahead price performance. Still, the utility company boasts both a fairly attractive dividend (current yield: 3.8%) and solid long-term total return potential.

2024					

BUSINESS: Ameren Corporation is a holding company formed through the merger of Union Electric and CIPSCO. Has 1.2 million electric and 127,000 gas customers in Missouri; 1.2 million electric and 813,000 gas customers in Illinois. Discontinued nonregulated power-generation operation in '13. Electric revenue breakdown: residential, 49%; commercial, 34%; industrial, 8%; other, 9%. Generating sources: coal, 73%; nuclear, 11%; hydro & other, 9%; purchased, 7%. Fuel costs: 25% of revenues. Has approximately 9,250 employees. Chairman: Warner L. Baxter. President & CEO: Martin J. Lyons, Jr. Inc.: Missouri. Address: One Ameren Plaza, 1901 Chouteau Ave., P.O. Box 66149, St. Louis, MO 63166-6149. Tel.: 314-621-3222. Internet: www.ameren.com.

Ameren has continued to perform consistently well over the past decade. Over the past 10 years, weather-normalized core earnings per share have risen at a compound annual growth rate of 7.8% while annual dividends paid per share have increased approximately 58%. The board of directors approved a quarterly dividend increase of 6.3%, representing more than a decade of consecutive hikes. Meanwhile, Ameren remains committed to its goals for increases to be in a range of 6%-8% annually (matching its target for earnings growth), with a payout ratio of 55%-65%.

Recent financial results and the 2024 outlook appear to be solid. Indeed, the company reported a 10% year over year rise in earnings per share in 2023, on a weather-normalized basis. The utility continues to benefit from increased infrastructure investments, higher electric service rates, lower tax expenses, and strong rate base growth. And, these catalysts will likely remain prevalent over the next few years. We expect 2024 earnings to come in at $4.60 a share, within management's EPS growth target of 6%-8%.

We are introducing our 2025 bottom-line estimate of $4.90 per share. Ameren will have a full year's effect of rate relief in Missouri and Illinois, and will continue to benefit from rate base growth and increased infrastructure investment over that interim. Too, the Inflation Reduction Act should continue to support the clean energy transition, reducing the costs of related infrastructure investments for customers over the long term. The utility expects to invest approximately $4.4 billion during 2024 in electric, natural gas, and transmission infrastructure compared to $3.5 billion last year. We also think the company will earn $5.75 per share by 2027-2029.

This stock is best suited for conservative income-oriented investors. Indeed, the dividend yield of this untimely but high-quality stock is about average for a utility, which is one of the highest dividend-paying industries in the market. What's more, capital appreciation potential for both the 18-month and 3- to 5-year time frames is solid compared to most of its peers.

2024					

BUSINESS: American Electric Power Company Inc. (AEP), through 10 operating utilities, serves 5.5 million customers in Arkansas, Kentucky, Indiana, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia, & West Virginia. Has a transmission subsidiary. Electric revenue breakdown: residential, 43%; commercial, 23%; industrial, 18%; wholesale, 10%; other, 6%. Sold commercial barge operation in '15. Generating sources not available. Fuel costs: 33% of revenues. '22 reported depreciation rates (utility): 2.6%-12.5%. Has approximately 16,700 employees. Interim Chief Executive Officer: Benjamin G.S. Fowke III. Incorporated: New York. Address: 1 Riverside Plaza, Columbus, Ohio 43215-2373. Telephone: 614-716-1000. Internet: www.aep.com.

We think American Electric Power will post strong earnings growth in 2024 and 2025. The company has a number of rate cases pending, and will likely continue to benefit from rate relief. AEP is also well positioned to take advantage of increased investment in its transmission business, and volume growth over that interim. Our 2024 bottom-line estimate, which is staying put at $5.60 per share, is right near the midpoint of AEP's targeted range of $5.53-$5.73, which management unveiled upon reporting fourth-quarter results in late February. We look for comparable growth, to $6.00, in 2025. The utility remains committed to its long-term growth rate target of 6%-7%.

The company was granted a partial rate increase in Kentucky, and is trying to reach settlements in its cases in Indiana & Michigan. In January, Kentucky Power received approval for a 5.66% residential rate increase. The utility was also granted an order for the securitization portion of its pending rate case. Meanwhile, Indiana & Michigan requested hikes in 2023, based on a 10.5% ROE. The utility expects rates to go into effect by this year.

A well-known billionaire investor activist is looking to shake things up at the utility company. In February, activist investor and founder of Icahn Capital L.P., Carl Icahn took a $120 million stake in American Electric Power. In turn, AEP recently entered into an agreement with Icahn Capital to appoint two new directors to its board. Hunter Gary, senior managing director, and Henry Linginfelter, former Vice President of Southern Company Gas have both joined the board effective immediately. The company also just replaced CEO Julie Sloat with interim chief executive Benjamin G.S. Fowke III until a permanent replacement is found.

These untimely shares are best suited for risk-averse, income-oriented investors. The dividend yield of this top-quality stock is above the high-paying industrywide average. Too, capital appreciation potential over both the 18-month and 3- to 5-year time frames is attractive compared to most of its peers. Indeed, we look for the stock to trade around $115-$145 by 2027-2029.

BUSINESS: Duke Energy Corporation is a holding company for utilities with 7.6 mill. elec. customers in NC, FL, IN, SC, OH, and KY, and 1.6 mill. gas customers in OH, KY, NC, SC, and TN. Owns independent power plants & has 25% stake in National Methanol in Saudi Arabia. Acq'd Progress Energy 7/12; Piedmont Natural Gas 10/16; discontinued most int'l ops. in '16. Elec. rev. breakdown: residential, 45%; commercial, 28%; industrial, 13%; other, 14%. Generating sources: gas, 32%; nuclear, 30%; coal, 18%; other, 1%; purchased, 19%. Fuel costs: 28% of revs. '22 reported deprec. rate: 3.6%. Has 27,600 employees. Chairman, President & CEO: Lynn J. Good. Inc.: DE. Address: 550 South Tryon St., Charlotte, NC 28202-1803. Tel.: 704-382-3853. Internet: www.duke-energy.com.

Duke Energy recently filed some rate cases. In Indiana, the utility filed for a hike of $492 million (16%) over 2026 for its investments in improving the electric grid. In North Carolina, Piedmont Gas is seeking recovery for its infrastructure investments to improve reliability, an overall 11.7% increase. And, Duke Energy Florida requested an increase of approximately $820 million between 2025-2027 to increase efficiency, reduce outages, and add 14 new solar sites.

We are sticking with our 2024 earnings-per-share estimate of $6.00. This is around the midpoint of the company's targeted range of $5.85-$6.10 per share. Management also reaffirmed its long-term profit growth target of 5%-7% annually through 2028. We think rate relief and growing power demand will produce a 8% rise in earnings this year, and a 6% increase in 2025. Duke Energy expects its power demand to grow by 1.5%-2% annually in the near-term and looks for a sharper rise of 2.5% a year over the next decade or so. The adoption of electric vehicles should make up about 40% of this increase. Meanwhile, the company's earnings over the next few years should benefit from the aforementioned pending rate cases and energy-efficiency programs.

Duke remains focused on improving the electricity grid and providing solar investments. The utility recently completed its Bad Creek upgrade, which added 320 MWh of energy to support electricity demand. The upgrades took four years to complete and the total capacity of the station is now 1,680 MWh, enough to power over a million homes. The company is looking to extend its license of the Bad Creek facility and potentially add a second powerhouse at the site.

This issue is tailor made for income-oriented accounts. Duke stock has an above-average dividend yield for a utility. And, the company has proven to be one of the better-managed and best-performing utilities in the industry. We also slightly increased our 3- to 5-year Target Price Range, and now look for these shares to trade around $110-$150 over that interim. At the current quotation, however, long-term capital appreciation potential is nothing to write home about.

BUSINESS: Edison International is a holding company for Southern California Edison Company (SoCal Edison), which supplies electricity to 5.28 mill. customers in a 50,000-sq.-mi. area in central, coastal, & southern CA (excl. Los Angeles & San Diego). Edison Energy is an energy svcs. co. Disc. Edison Mission Energy (independent power producer) in '12. Elec. rev. breakdown: residential, 40%; commercial, 43%; industrial, 3%; other, 14%. Generating sources: nuclear, 9%; gas, 5%; hydroelectric, 6%; purchased, 80%. Power costs: 34% of revs. '23 reported depr. rate: 4.1%. Employs 14,316. Board Chair: Peter J. Taylor. President & CEO: Pedro J. Pizzaro. Inc.: CA. Address: 2244 Walnut Grove Ave., P.O. Box 976, Rosemead, CA 91770. Tel.: 626-302-2222. Web: www.edison.com.

Edison International should see decent earnings gains in 2024. This year's weather comparisons are not particularly difficult. And, the utility ought to continue to prosper from the escalation mechanism set forth in the 2021 General Rate Case (GRC) decision that allows it to bill for certain types of expenses, alleviating regulatory lag to a large degree. Load growth in California is healthy, at about 3% due to trends in electrification for vehicles and heavy equipment. This leads to plenty of transmission and distribution work that pays off rapidly in terms of return on investment for regulated utilities in California. Fire mitigation work also keeps the rate base growing. Edison's current authorized return on equity (ROE) is 10.3%, which is fairly generous relative to the rates that peers have been receiving in other states. That said, the company may get a further lift next year in that regard.

Edison has a general rate case decision coming its way in 2025. State peer, PG&E, received favorable terms from the California Public Utilities Commission, with a recent boost to its authorized ROE to 10.7% without too much public backlash. There's a reasonable chance that Edison will get a lift in its investment returns, as well. As such, we're projecting a 6% gain in earning per share next year.

Wildfire headline risk comes with the territory here. In October, Orange County filed a lawsuit alleging EIX's equipment caused forest fires in 2020 and 2022. Dollar amounts sought weren't given. In February, the company agreed to pay an $80 million settlement to the federal government for forestland burned in the 2017 Thomson fire. In recent years, EIX has paid out billions of dollars in lawsuit settlements associated with the role its power lines played in 2017 and 2018 forest fires. Notably, management recently said the settlement payout process has nearly run its course. The company also believes it has reduced its risk of causing a blaze by 88% as a result of its ongoing mitigation work.

This neutrally ranked equity (Timeliness: 3, Average) doesn't stand out from the crowd at the recent quotation. On a total-return basis, EIX is right at the utility industry median.

BUSINESS: Entergy Corporation supplies electricity to 3 million customers through subsidiaries in Arkansas, Louisiana, Mississippi, Texas, and New Orleans (regulated separately from Louisiana). Distributes gas to 206,000 customers in Louisiana. Is selling its last nonutility nuclear unit (shut down 5/22). Electric revenue breakdown: residential, 37%; commercial, 24%; industrial, 27%; other, 12%. Generating sources: gas, 68%; nuclear, 22%; coal, 9%; hydro and solar, 1%. Fuel costs: 32% of revenues. '22 reported depreciation rate: 2.7%. Has 11,707 employees. Chairman & CEO: Leo P. Denault. Incorporated: Delaware. Address: 639 Loyola Avenue, P.O. Box 61000, New Orleans, Louisiana 70161. Telephone: 504-576-4000. Internet: www.entergy.com.

Entergy posted much stronger 2023 fourth-quarter earnings results than we expected. Though revenues fell slightly to $2.72 billion, based on lower fuel price surcharges, the company signed 61 new electric service contracts with large customers in 2023. Though fuel costs and purchased power expenses declined, operating margins fell a bit in the quarter as maintenance, depreciation, and interest costs rose. Still, the company benefited from a large tax gain during the quarter as well as from a regulatory reversal of liability related to Hurricane Isaac. Overall, these factors caused earnings to advance to $4.66 per share during the quarter.

The company will likely show decent operating advancement in the years ahead. Revenues ought to increase as Entergy benefits from growth in its residential business as people move into the coverage area. Significant expansion will probably occur in the industrial space, as manufacturing facilities move to the U.S. This will likely be headlined by a new Amazon Web Services building a large facility in Mississippi. Growth should also come from positive developments in rate cases, especially as Entergy gains from higher resilience spending in its New Orleans coverage area. Other rate decisions, such as one in Louisiana, should occur shortly. Additionally, we think that the company will continue to benefit from increased demand for green energy projects as Entergy plans to build out its solar capabilities. We think maintenance and depreciation expenses will rise as it builds out its power generation footprint. Interest expenses ought to remain stable in the short term as interest rates decline, offsetting a higher debt load. Still, we don't foresee any recurrence of the tax benefits. Thus, we have earnings per share slipping to $6.45 in 2024, but rising to $6.85 in 2025, and $8.05 per share by 2027-2029.

Shares of Entergy are neutrally ranked for Timeliness. The stock also offers about-average appreciation potential over the next three to five years, though the dividend is attractive here. The yield is above average for the industry, and we think the payout will continue to grow at a good clip.

BUSINESS: Evergy, Inc. was formed through the merger of Great Plains Energy and Westar Energy in June of 2018. Through its subsidiaries (now doing business under the Evergy name), provides electric service to 1.6 million customers in Kansas and Missouri, including the greater Kansas City area. Electric revenue breakdown: residential, 32%; commercial, 27%; industrial, 15%; wholesale, 13%; other, 13%. Generating sources: coal, 54%; nuclear, 17%; purchased, 29%. Fuel costs: 28% of revenues. '22 reported deprec. rate: 3%. Has 4,900 employees. Chairman: Mark A. Ruelle. President & CEO: David A. Campbell. COO: Kevin E. Bryant. Inc.: Missouri. Address: 1200 Main Street, Kansas City, Missouri 64105. Tel.: 816-556-2200. Internet: www.evergy.com.

Evergy's Missouri West subsidiary filed a general rate case. Indeed, the company's Missouri West utility requested an increase of $104 million (13.4%), excluding fuel. The utility is seeking to recover investments made in generation capacity and grid modernization. If approved, new rates will go into effect at the start of 2025. The company plans to continue filing rate cases in Kansas and Missouri every two years. Note, Evergy is not requesting rate changes in the Missouri Metro service area.

Evergy was scheduled to report its fourth-quarter results after this issue went to press. For the fourth quarter and full-year 2023, we are expecting the company to post earnings per share of $0.67 and $3.60, respectively, implying significant year-over-year improvement. The utility continues to benefit from rate relief and investment in its transmission system, and we think this will likely remain a driver to the bottom-line over the next few years. As a result, we are sticking with our 2024 profit estimate of $3.85 a share, which is within Evergy's long term share-earnings growth target of 4%-6%, based off original 2023 guidance of $3.65.

We are introducing our 2025 earnings per share estimate of $4.00. The company will likely benefit from the aforementioned Missouri West rate case, and other regulatory and legislative matters over that interim. Evergy should also take advantage of an improved operating environment and ongoing investments in its transmission infrastructure over the long-term, as well as modest growth in kilowatt-hour sales. Meanwhile, the interest rate environment will likely improve over the next few years, lowering borrowing costs. This is important as the company generally has low return rates on total capital and relies heavily on high debt levels. Accordingly, we think the company will earn $4.75 per share by 2027-2029.

Those seeking income should look here. This untimely stock has a dividend yield of 5.3%, which stands comfortably above the high-paying utility average. Too, 18-month and 3- to 5-year capital appreciation prospects remain attractive for a utility. We look for the stock to trade around $70-$95 by 2027-2029.

BUSINESS: IDACORP, Inc. is a holding company for Idaho Power Company, a regulated electric utility that serves 633,000 customers throughout a 24,000-square-mile area in southern Idaho and eastern Oregon (population: 1.4 million). Most of the company's revenues are derived from the Idaho portion of its service area. Revenue breakdown: residential, 39%; commercial, 21%; industrial, 14%; irrigation, 10%; other, 16%. Generating sources: hydro, 35%; coal, 13%; gas, 15%; purchased, 37%. Fuel costs: 40% of revenues. '23 reported depreciation rate: 3.1%. Has 2,112 employees. Chairman: Richard J. Dahl. President & CEO: Lisa Grow. Incorporated: Idaho. Address: 1221 W. Idaho St., Boise, Idaho 83702. Telephone: 208-388-2200. Internet: www.idacorpinc.com.

IDACORP's management has set its earnings target for 2024 in a range of $5.25 to $5.45 a share. The company extended its streak of 15 years when it comes to annual earnings growth in 2023, but not by a whole lot. Our 2024 estimate is being placed at $5.40, which assumes a 5% annual gain, which is in line with the company's in-house goal. Most utilities strive for something in the 4%-6% or 5%-7% spread. Digging deeper, our estimate assumes Idaho Power will use between $35 million and $60 million of additional tax credits available under its regulatory mechanism. A good portion of this figure is tied to battery storage projects approved by the Idaho Public Utilities Commission in the general rate case last December.

A rate case in Oregon is now on the table. IDACORP has filed with the Oregon Public Utilities Commission for a rate increase to go into effect in October of this year. The company is requesting an ROE of 10.4%, and a 7.8% rate of return with a capital structure comprised of 51% equity and 49% debt. Infrastructure investments have been made in this service area and the last general rate case was filed in 2011. Since then, there has been an 8% increase in the number of customers. We expect the parties to mutually agree on a pact that is fair to both IDA and its constituents.

Capital expenditures are expected to peak this year at above $900 million. New capacity resources are pushing the spending up, but management has cast a wide net ($20 million to $200 million), so the total could be somewhat lower. Still, the average over the next five years is apt to come in around the $800 million threshold. Distribution and transmission will be areas of heavy outlays, as will high voltage transmission, one of the driving forces behind IDA's heavier spending coming off an average of about $400 million in the previous five-year window.

These untimely shares lack real investment appeal at this juncture. Even with the quotation down 7% in value since our January review, capital appreciation potential three to five years out is below average. Yes, the yield is handsomely above the *Value Line* median, but does not stand out for a utility.

BUSINESS: NorthWestern Energy Group, Inc. supplies electricity & gas in the Upper Midwest and Northwest, serving 467,700 electric customers in Montana and South Dakota and 307,600 gas customers in Montana, South Dakota, and Nebraska. Electric revenue breakdown for 2023: residential, 44%; commercial, 50%; industrial, 4%; and other, 2%. Generating sources: coal, 18%; hydro, 37%; wind, 4%; natural gas, 12%; purchased power, 29%. Fuel costs: 30% of revenues. 2023 reported depreciation rate: 2.8%. Had 1,573 employees as of 12/31/23. Chair of the board of directors: Dana J. Dykhouse. President and CEO: Brian B. Bird. Incorporated: DE. Address: 3010 West 69th Street, Sioux Falls, SD 57108. Telephone: 605-978-2900. Internet: www.northwesternenergy.com.

NorthWestern Energy's profits should be on the rise this year from higher electric and natural gas delivery rates. In October, Montana regulators approved the settlement agreement the utility had negotiated with key members of the state's business community. The new prices lift annual electric and natural gas revenues by $67.4 million and $14.1 million, respectively. Those levels are based on an authorized return on equity (ROE) of 9.65% for electric and 9.55% for gas. The utility also received pricing mechanisms that allow for the expedient pass through of changes in both fuel/purchased power costs and property taxes. Those will reduce regulatory lag. In January, South Dakota officials came to terms with the company on electric rates that will raise annual revenue by $21.5 million based on a 6.81% rate of return. Management is targeting a range of $3.42 to $3.62 for 2024 earnings per share. The company raised the quarterly dividend to an annualized rate of $2.60 a share from $2.56.

Leadership affirmed its 4% to 6% annual earnings growth expectation. It provided an updated five-year capital investment plan that calls for average expenditures of $500 million per year from 2024 through 2028. The $2.5 billion total investment should grow the company's rate base (the dollar value of assets for which a utility is allowed to earn a regulated return on) by about 4% to 6% per annum. That, in turn, should translate to 4% to 6% yearly earnings-per-share gains. The fairly conservative plan assumes no equity needs are necessary unless there are opportunities to expand generation build beyond the $143 million budgeted for that category. We're projecting there will be some on both fronts. The plan also calls for $1.8 billion to be spent on the expansion and modernization of electric and gas transmission and distribution systems across its territories, with the remainder on infrastructure maintenance.

This equity is timely. Longer term, however, it doesn't really stand out relative to its peer group on an annual total-return basis. This is partially because it's growth prospects are about average and dividend hikes will likely remain limited until the payout ratio returns to the mid-60% area.

2024					

BUSINESS: OGE Energy Corp. is a holding company for Oklahoma Gas and Electric Company (OG&E), which supplies electricity to 879,000 customers in Oklahoma (84% of electric revenues) and western Arkansas (8%); wholesale is (8%). Owns 3% of Energy Transfer's limited partnership units. Electric revenue breakdown: residential, 44%; commercial, 25%; industrial, 11%; oilfield, 10%; other, 10%. Generating sources: gas, 25%; coal, 21%; wind, 6%; purchased, 48%. Fuel costs: 58% of revenues. '23 reported depreciation rate (utility): 2.6%. Has 2,200 employees. Chairman, President and Chief Executive Officer: Sean Trauschke. Incorporated: Oklahoma. Address: 321 North Harvey, P.O. Box 321, Oklahoma City, OK 73101-0321. Tel.: 405-553-3000. Internet: www.oge.com.

OGE Energy's utility subsidiary filed a general rate case in Oklahoma. Oklahoma Gas and Electric requested a hike of $332 million (13.8%), based on a return on equity of 10.5% and a common-equity ratio of 53.5%. If approved, new rates are expected to be implemented by July. In Arkansas, the utility reached a settlement for a 1.4% hike starting April 1st, under the state's formula rate plan. OGE also continues to make progress in replacing two aging power generation units at the Horseshoe Lake power plant. The units are the oldest in the utility's generation fleet, and have been in service for over 60 years. A hearing with the Oklahoma Corporation Commission is set to take place in October, and the company hopes to have its new units operational by late 2026.

We are maintaining our 2024 earnings estimate of $2.15 a share. The utility earned $2.07 a share last year, and the company's target for 2024 is $2.06-$2.18, representing 6% growth from original 2023 guidance. OGE is benefiting from customer growth, as well as its transformation to a fully focused electric utility. A partial year of rate relief in Oklahoma should also help boost the bottom line this year. OGE's long-term earnings growth rate target remains at 5%-7% annually.

Bottom-line growth ought to pick up over the next few years. The company's prospects as a pure-play electric utility will likely improve over that interim, as investments in infrastructure and the grid bear fruit. The Inflation Reduction Act should also provide assistance in the utility's transition to offering affordable, clean energy over that interim. Too, OGE is well positioned in 2025 and beyond to take advantage of a full-year's rate relief in Oklahoma and Arkansas. As a result, we are introducing our 2025 EPS estimate of $2.30. We also think OGE will earn $2.75 a share by 2027-2029.

Income-oriented investors should consider this stock. Indeed, these shares boast a dividend yield of about 5.0%. This stands comfortably above the utility average, which is one of the highest dividend-paying industries in the market. But, total return prospects are nothing to write home about over both the 18-month and 3- to 5-year time frames.

Zachary J. Hodgkinson *March 8, 2024*

BUSINESS: PNM Resources, Inc. is a holding company with two regulated electric utilities. Public Service Company of New Mexico (PNM) serves 548,000 customers in north central New Mexico, including Albuquerque and Santa Fe. Texas-New Mexico Power Company (TNMP) transmits and distributes power to 272,000 consumers in Texas. Electric revenue breakdown: residential, 32%; commercial, 28%; industrial, 7%; other, 33%. Generating sources not available. Fuel costs: 46% of revenues. '23 reported depreciation rates: 2.67%-7.64%. Has 1,600 employees. Chairman and CEO: Patricia K. Collawn. Incorporated: New Mexico. Address: 414 Silver Ave. SW, Albuquerque, New Mexico 87102-3289. Telephone: 505-241-2700. Internet: www.pnmresources.com.

PNM Resources' stock has been reeling after the company was left at the alter by its former merger partner. Investors may recall that PNM stockholders were to receive $50.30 per share in an all-cash deal from Northeast utility, Avangrid, Inc. (NYSE: AGR). At various stages of a lengthy courtship it looked as if the marriage would eventually be consummated despite regulators standing in the way. Ultimately, it was Avangrid's parent company, Iberdrola of Spain, who nixed the deal. The Spanish energy giant decided that buying the 18.4% minority stake in Avangrid itself for $34.25 a share is a better use of funds, as that deal is now on the table for AGR shareholders. Year to date, PNM stock is down 11%.

New Mexico regulators' early January rate decision didn't help matters. The New Mexico Public Regulation Commission ruled against the company on every front, making good on the state's reputation for being a difficult regulatory environment. Instead of the rise in its return on equity (ROE) that PNM was seeking, the company instead received a cut from 9.575% to 9.26%. Overall, $64 million in additional revenue was sought, much of that to recoup various investments made in the past to extend the lives of a coal-fired generating facility and a nuclear power plant. Regulators ruled that those investments were "imprudent" and disallowed them. The poor rate-base outcome and increased interest expense on an expanding debt load will likely weigh on this year's bottom line.

Even so, this equity may appeal to utility investors. The New Mexico operation is an average business of this sort, as it has reasonable long-term growth prospects, but is in a tough regulatory climate. Meanwhile, PNM's smaller, interstate long-range transmission & distribution (T&D) businesses, which serve around 300,000 consumers in Texas and New Mexico, are engines of growth for the company and suffer little regulatory lag. Beyond 2024, the recoupment of substantial T&D investments, via regulatory pricing mechanisms, can drive 5%-6% annual earnings and dividend gains. That should translate to worthwhile total return prospects out to late decade.

BUSINESS: Pinnacle West Capital Corporation is a holding company for Arizona Public Service Company (APS), which supplies electricity to 1.4 million customers in most of Arizona, except about half of the Phoenix metro area, the Tucson metro area, and Mohave County in northwestern Arizona. Discontinued SunCor real estate subsidiary in '10. Electric revenue breakdown: residential, 49%; commercial/industrial, 44%; other, 7%. Generating sources: gas, 25%; nuclear, 25%; coal, 18%; renewables, 2%; purchased, 30%. Fuel costs: 38% of revenues. '23 reported deprec. rate: 2.98%. Has 6,133 employees. Chairman, President & CEO: Jeffrey B. Guldner. Inc.: AZ. Address: 400 North Fifth St., P.O. Box 53999, Phoenix, AZ 85072-3999. Tel.: 602-250-1000. Internet: www.pinnaclewest.com.

In late February, Pinnacle West received a constructive general rate case (GRC) decision. Investors may recall that from early 2022, the utility had been operating under revised regulatory parameters that cut its authorized return on equity (ROE) from 10% to 8.7% (one of the lowest levels for a major market at that time). The change effectively reduced Pinnacle's annual earnings power by over $1.00 per share. A revamped state regulatory commission, which has some new members and a different chairperson (due to term limits), heeded the recommendation of a state administrative law judge who consulted on the case. The newly established ROE of 9.55% plus an additional fair value increment (FVI) of .25% passed by a 4-1 vote. According to Pinnacle's CEO, assuming certain criteria are met for the FVI to kick in, the company's effective ROE will be 9.85%. The net effect of the GRC lifts the company's earning power by $1.33 per share. We're raising our rating on the Arizona regulatory climate back to "average." The 2021 GRC decision landed it in the below-average camp.

We've raised our 2024 share-earnings estimate. It's only going up by a dime, but that's because we expected a favorable GRC outcome from PNW's perspective. Notably, the additional earnings power is substantial, though not readily apparent in our estimates because the company benefited by $0.48 a share last year from an extreme heat wave. Moreover, there are a number of factors this year that are likely to offset the additional revenue from the increased ROE. The utility had been tightening its belt on operating and maintenance expense and that's set to rise, as are depreciation/amortization and interest expense. On the positive side of the ledger, weather-normalized retail sales growth in Arizona comes to about $0.25 a share annually on average. Pinnacle has a premium service area in terms of growth from interstate migration and rising energy demand from a thriving economy. There's no lack of capital investment prospects to drive rate-base growth there.

Though untimely, we think long-term utility investors should keep this stock on their watch list and target a pullback as an entry point.

BUSINESS: Portland General Electric Company provides electricity to 934,000 customers in 51 cities in a 4,000-square-mile area of Oregon, including Portland and Salem (population: 1.9 million). The company is in the process of decommissioning the Trojan nuclear plant, which was closed in 1993. Electric revenue breakdown: residential, 52%; commercial, 33%; industrial, 15%; other, less than 1%. Generating sources: gas, 40%; wind, 7%; coal, 8%; hydro, 4%; purchased, 41%. Fuel costs: 40% of revenues. '23 reported depreciation rate: 3.4%. Has 2,842 full-time employees. Chair: James P. Torgerson. President and CEO: Maria M. Pope. Incorporated: Oregon. Address: 121 S.W. Salmon Street, Portland, OR 97204. Tel.: 503-464-8000. Internet: www.portlandgeneral.com.

Portland General Electric's per-share profits should bounce back this year and next. In 2023, the company suffered from weather that was exceedingly mild, resulting in less than 1% volume growth for a service area that is accustomed to 2% or better. On top of that, purchased-power costs were excessively high, as mild weather is not ideal for hydroelectric and wind power production in the Pacific Northwest. This resulted in a tight supply situation that drove up pricing. Management expects the utility will earn $2.98-$3.18 a share in 2024. To a large extent, the recovery is based on normalized weather conditions, as well as utility rate relief, to address last year's rise in costs and investments made in the electric grid. In 2025, a general rate case decision is due. Portland General is seeking $225 million in additional annual revenues for recoupment of investments made, plus timely recovery mechanisms via customer billing pass-throughs. The company appears to have a reasonably good partnership with the state of Oregon in terms of addressing the state's "green" energy commitments. We think that will translate to a constructive rate-case outcome.

Longer term, the utility's 5%-7% earnings and dividend growth targets seem achievable. Over time, Portland General's bottom line should be less volatile, as the company reduces its reliance on open market power purchases, which have a tendency to spike in price. The company has the green light from regulators to add at least 375-500 megawatts of nonemitting annual power generation in the intermediate term, plus significant battery storage capacity. Projects committed to appear to have solid partnerships in place with lengthy annual purchased-power agreements on portions of generating capacity the company does not directly own. There should be several years of 8%-plus rate base growth, as the general outline of the projects described above are replicated six-fold into the 2030s. On the demand front, 2% annual load growth is supported by a healthy high-tech industrial segment in Portland General's service area.

Though untimely, patient utility investors can do well here, as the stock offers good total return prospects.

Anthony J. Glennon *April 19, 2024*

BUSINESS: The Southern Company, through its subsidiaries, supplies electricity to 4.4 mill. customers in GA, AL, and MS. Also has a competitive generation business. Acq'd AGL Resources (renamed Southern Company Gas, 4.4 mill. customers in GA, NJ, IL, VA, & TN) 7/16. Sold Gulf Power 1/19. Electric revenue breakdown: residential, 43%; commercial, 35%; industrial, 21%; other, 1%. Generating sources: gas, 51%; coal, 19%; nuclear, 10%; other, 11%; purchased, 9%. Fuel costs: 26% of revenues. '23 reported deprec. rates (utility): 2.7%-3.4%. Has 27,300 employees. President and CEO: Chris Womack. Incorporated.: Delaware. Address: 30 Ivan Allen Jr. Blvd., N.W., Atlanta, Georgia 30308. Telephone: 404-506-0747. Internet: www.southerncompany.com.

Southern Company's Georgia Power subsidiary has completed its nuclear construction project. In late April, unit 4 entered commercial operation, and plant Vogtle became the largest generator of clean energy in the U.S. Units 3 and 4 will combine to produce enough electricity to power approximately 1 million homes for at least 60-80 years. The construction project faced significant delays and reached completion seven years later than Southern's initial forecast, while costing more than $20 billion over original budget estimates. We look for the Vogtle station to greatly improve earnings prospects moving forward, as the project will provide clean, reliable, cost-effective energy amid greater demand for energy and growing power volumes. The transition to cleaner energy should also begin to accelerate with earnings and dividend growth as units 3 and 4 start to pick up steam this year.

We look for full-year 2024 earnings of $4.00 a share. This is the midpoint of management's initial profit target range of $3.95-$4.05 per share, which was released in February. Too, Southern reaffirmed its long-term EPS growth estimate of 5%-7%. We expect even greater growth of 10% this year due to an almost full year of operations from Vogtle units 3 and 4, as well as rate relief and an improved macroeconomic environment. As a result, we project earnings of $4.30 per share on revenues of $28.3 billion for full-year 2025.

The board of directors recently raised the dividend. The increase was $0.02 a share, making the quarterly distribution $0.72 per share. The dividend has now been raised in 23 consecutive years, and the yield of 3.8% sits above the utility average.

This issue is best-suited to conservative, income-oriented accounts. Indeed, the consistently raised dividend remains Southern's most notable feature. These shares also hold a strong financial strength rating (A), and an Above Average (2) Safety rank. Plus, risks from the nuclear construction project have concluded and prospects ahead for the Vogtle station are bright. On the other hand, the current quotation is already trading on the low-end of our 3- to 5-year Target Price range, as long-term prospects are weak.

BUSINESS: Xcel Energy Inc. is the parent of Northern States Power Company (NSP), which supplies electricity to MN, WI, ND, SD & MI & gas to MN, WI, ND & MI; Public Service Company of Colorado (PSCo), which supplies electricity & gas to CO; & Southwestern Public Service Company (SPS), which supplies electricity to TX and NM. Customers: 3.8 mill. electric, 2.2 mill. gas. Electric revenues: resid'l, 31%; comm'l & ind'l, 50%; other, 19%. Purchases 34% of power, owns 66%. Total electric mix: wind, 29%; gas, 23%; coal, 13%, nuclear, 24%, solar/other, 11%. Fuel cost: 40% of revenues. '23 deprec. rate: 3.6%. Employs 11,311. Chrmn., President, and CEO: Robert Frenzel. Inc.: MN. Addr.: 414 Nicollet Mall, Minneapolis, MN 55401. Tel.: 612-330-5500. Int.: www.xcelenergy.com.

Xcel Energy stock is down sharply this year due to the company's role in the recent Texas Panhandle wildfires. There are multiple ongoing blazes in this region under various names with different levels of containment. The utility holding company disputes it's subsidiary acted negligently, but has acknowledged that its equipment had a part in igniting what's being called the Smokehouse Creek fire. That blaze has scorched more than one million acres, destroyed about 80 homes, and caused at least two deaths. Xcel does not believe that its equipment had a part in other contiguous wildfires, such as the Windy Deuce blaze. At one point, the equity was down nearly 25% in value on a year-to-date basis. As the fires have become contained and liabilities reasonably assessed Xcel shares have started to recover, but are still down 13% year to date. These drops are off of what were already discount levels late last year from the pressure higher interest rates unleashed on the rate-sensitive utility sector. We doubt that this unfortunate disaster will result in claims that exceed Xcel's $560 million of liability insurance.

Meanwhile, little has changed on the Marshall Wildfire litigation scene in Colorado. There, Xcel faces 14 complaints with 675 plaintiffs, which have been consolidated into a single case. There were two deaths and nearly 1,100 structures were either damaged or fully destroyed in the December, 2021 fire. The state of Colorado estimated the damages to be over $2 billion. Xcel has $560 million of liability coverage associated with that incident. The company expects to get a litigation calender some time this year with a trial most likely taking place in 2025. Management strongly disputes the findings of Colorado officials regarding Xcel's equipment being a source of ignition.

On an operating basis, this company has been a model of consistency few utilities can match. It almost always delivers solid annual earnings and dividend increases to shareholders. We think the valuation hit the company has taken recently is likely overdone. Although ranked to underperform over the near term, the shares offer significant recovery potential in the 18-month timeframe.

FirstEnergy Pennsylvania
Judgment of Equity Risk Premium for the
Utility Proxy Group

Line No.		Proxy Group of Fifteen Electric Utilities
1.	Calculated equity risk premium based on the total market using the beta approach (1)	6.58 %
2.	Mean equity risk premium based on a study using the holding period returns of public utilities with A2 rated bonds (2)	4.46
3.	Predicted Equity Risk Premium Based on Regression Analysis of 1,237 Fully-Litigated Electric Cases (3)	4.83
4.	Average equity risk premium	5.29 %

Notes: (1) From page 27 of this Exhibit.
(2) From page 31 of this Exhibit.
(3) From page 32 of this Exhibit.

FirstEnergy Pennsylvania
Derivation of Equity Risk Premium Based on the Total Market Approach
Using the Beta for the
Utility Proxy Group

Line No.	Equity Risk Premium Measure	Proxy Group of Fifteen Electric Utilities
1.	Kroll Equity Risk Premium (1)	5.96 %
2.	Regression on Kroll Risk Premium Data (2)	6.92
3.	Kroll Equity Risk Premium based on PRPM (3)	8.46
4.	Equity Risk Premium Based on Value Line Summary and Index (4)	6.91
5.	Equity Risk Premium Based on Value Line S&P 500 Companies (5)	8.64
6.	Equity Risk Premium Based on Bloomberg S&P 500 Companies (6)	11.29
7.	Conclusion of Equity Risk Premium	8.03 %
8.	Adjusted Beta (7)	0.82
9.	Forecasted Equity Risk Premium	6.58 %

Notes provided on page 28 of this Exhibit.

FirstEnergy Pennsylvania
Derivation of Equity Risk Premium Based on the Total Market Approach
Using the Beta for the
Utility Proxy Group

Notes:

(1) Based on the arithmetic mean historical monthly returns on large company common stocks from Kroll minus the arithmetic mean monthly yield of Moody's average Aaa and Aa2 corporate bonds from 1928-2023.

(2) This equity risk premium is based on a regression of the monthly equity risk premiums of large company common stocks relative to Moody's average Aaa and Aa rated corporate bond yields from 1928-2023 referenced in note 1 above.

(3) The Predictive Risk Premium Model (PRPM) is discussed in Mr. D'Ascendis' Direct Testimony. The PRPM risk premium is derived by applying the PRPM to the monthly risk premiums between Kroll large company common stock monthly returns and average Aaa and Aa corporate monthly bond yields, from January 1928 through May 2024.

(4) The equity risk premium based on the Value Line Summary and Index is derived by subtracting the average consensus forecast of Aaa corporate bonds of 5.14% (from page 22 of this Exhibit) from the projected 3-5 year total annual market return of 12.05% (described fully in note 1 on page 34 of this Exhibit).

(5) Using data from Value Line for the S&P 500, an expected total return of 13.78% was derived based upon expected dividend yields as a proxy for income returns and long-term earnings growth estimates as a proxy for capital appreciation. Subtracting the average consensus forecast of Aaa corporate bonds of 5.14% results in an expected equity risk premium of 8.64%.

(6) Using data from Bloomberg for the S&P 500, an expected total return of 16.43% was derived based upon expected dividend yields as a proxy for income returns and long-term earnings growth estimates as a proxy for capital appreciation. Subtracting the average consensus forecast of Aaa corporate bonds of 5.14% results in an expected equity risk premium of 11.29%.

(7) Average of mean and median beta from page 33 of this Exhibit.

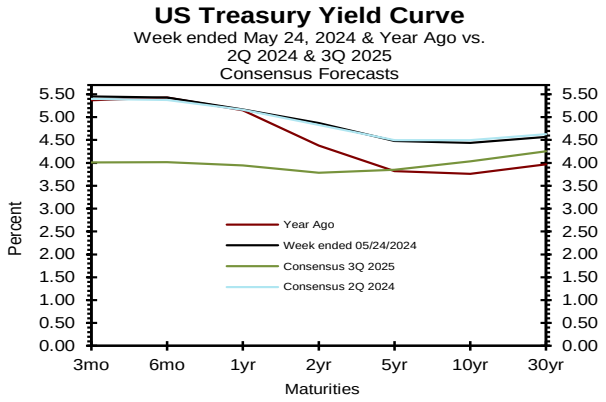
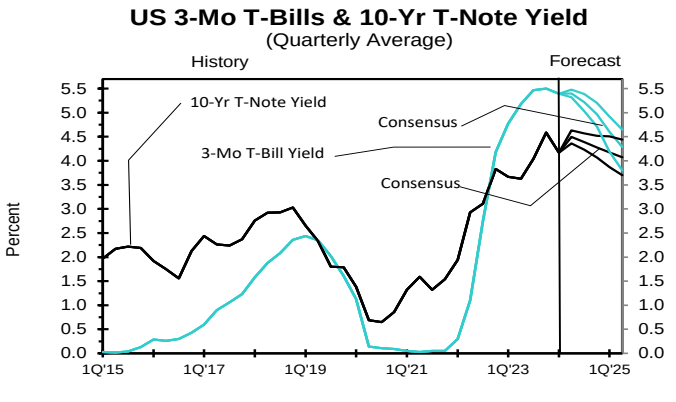
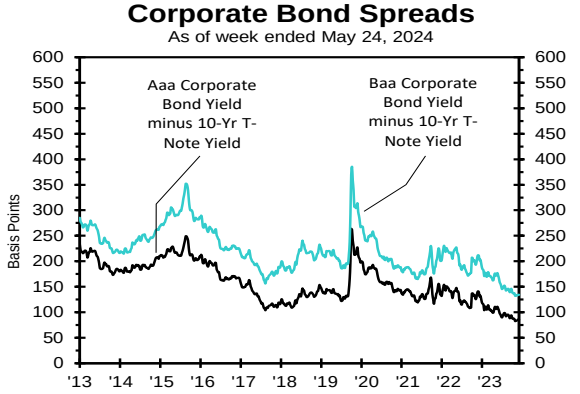
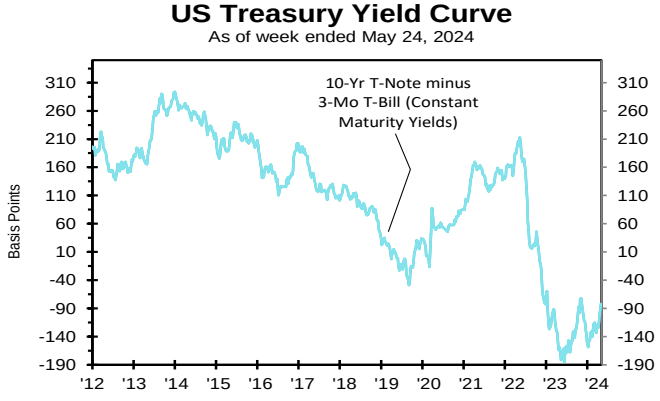
Forecasts for interest rates and the Federal Reserve's Advanced Foreign Economies Index represent averages for the quarter. Forecasts for Real GDP, GDP Price Index, CPI and PCE Price Index are seasonally adjusted annual rates of change (saar). Individual panel members' forecasts are on pages 4 through 9. Historical data: Treasury rates from the Federal Reserve Board's H.15; AAA-AA and A-BBB corporate bond yields from Bank of America-Merrill Lynch and are 15+ years, yield to maturity; State and local bond yields from Bank of America-Merrill Lynch, A-rated, yield to maturity; Mortgage rates from Freddie Mac, 30-year, fixed; SOFR from the New York Fed. All interest rate data are sourced from Haver Analytics. Historical data for Fed's Major Currency Index are from FRSR H.10. Historical data for Real GDP, GDP Price Index and PCE Price Index are from the Bureau of Economic Analysis (BEA). Consumer Price Index history is from the Department of Labor's Bureau of Labor Statistics (BLS).









Long-Range Survey:

The table below contains the results of our twice-annual long-range CONSENSUS survey. There are also Top 10 and Bottom 10 averages for each variable. Shown are consensus estimates for the years 2025 through 2030 and averages for the five-year periods 2026-2030 and 2031-2035. Apply these projections cautiously. Few if any economic, demographic and political forces can be evaluated accurately over such long time spans.

		Average For The Year						Five-Year Averages

FirstEnergy Pennsylvania
Derivation of Mean Equity Risk Premium Based Studies
Using Holding Period Returns and
Projected Market Appreciation of the S&P Utility Index

Line No.	Equity Risk Premium based on S&P Utility Index Holding Period Returns (1):	Implied Equity Risk Premium
1.	Historical Equity Risk Premium	4.02 %
2.	Regression of Historical Equity Risk Premium (2)	4.81
3.	Forecasted Equity Risk Premium Based on PRPM (3)	4.39
4.	Forecasted Equity Risk Premium based on Projected Total Return on the S&P Utilities Index (Value Line Data) (4)	3.75
5.	Forecasted Equity Risk Premium based on Projected Total Return on the S&P Utilities Index (Bloomberg Data) (5)	5.32
6.	Average Equity Risk Premium (6)	4.46 %

Notes:
(1) Based on S&P Public Utility Index monthly total returns and Moody's Public Utility Bond average monthly yields from 1928-2023. Holding period returns are calculated based upon income received (dividends and interest) plus the relative change in the market value of a security over a one-year holding period.
(2) This equity risk premium is based on a regression of the monthly equity risk premiums of the S&P Utility Index relative to Moody's A2 rated public utility bond yields from 1928 - 2023 referenced in note 1 above.
(3) The Predictive Risk Premium Model (PRPM) is applied to the risk premium of the monthly total returns of the S&P Utility Index and the monthly yields on Moody's A2 rated public utility bonds from January 1928 - May 2024.
(4) Using data from Value Line for the S&P Utilities Index, an expected return of 9.40% was derived based on expected dividend yields as a proxy for income returns and long-term growth estimates as a proxy for market appreciation. Subtracting the expected A2 rated public utility bond yield of 5.65%, calculated on line 3 of page 22 of this Exhibit results in an equity risk premium of 3.75%. (9.40% - 5.65% = 3.75%)
(5) Using data from Bloomberg Services for the S&P Utilities Index, an expected return of 10.97% was derived based on expected dividend yields as a proxy for income returns and long-term growth estimates as a proxy for market appreciation. Subtracting the expected A2 rated public utility bond yield of 5.65%, calculated on line 3 of page 22 of this Exhibit results in an equity risk premium of 5.32%. (10.97% - 5.65% = 5.32%)
(6) Average of lines 1 through 5.

FirstEnergy Pennsylvania
Notes to Accompany the Application of the CAPM and ECAPM

Notes:

(1) The market risk premium (MRP) is derived by using six different measures from three sources: Kroll, Value Line, and Bloomberg as illustrated below:

Historical Data MRP Estimates:

Measure 1: Kroll Arithmetic Mean MRP (1926-2023)

Arithmetic Mean Monthly Returns for Large Stocks 1926-2023:	12.16	%
Arithmetic Mean Income Returns on Long-Term Government Bonds:	4.99	
MRP based on Kroll Historical Data:	7.17	%

Measure 2: Application of a Regression Analysis to Kroll Historical Data
(1926-2023) 7.93 %

Measure 3: Application of the PRPM to Kroll Historical Data:
(January 1926 - May 2024) 9.44 %

Value Line MRP Estimates:

Measure 4: Value Line Projected MRP (Thirteen weeks ending May 31, 2024)

Total projected return on the market 3-5 years hence*:	12.05	%
Projected Risk-Free Rate (see note 2):	4.41	
MRP based on Value Line Summary & Index:	7.64	%

*Forcasted 3-5 year capital appreciation plus expected dividend yield

Measure 5: Value Line Projected Return on the Market based on the S&P 500

Total return on the Market based on the S&P 500:	13.78	%
Projected Risk-Free Rate (see note 2):	4.41	
MRP based on Value Line data	9.37	%

Measure 6: Bloomberg Projected MRP

Total return on the Market based on the S&P 500:	16.43	%
Projected Risk-Free Rate (see note 2):	4.41	
MRP based on Bloomberg data	12.02	%

Average of Value Line, Kroll, and Bloomberg MRP: 8.93 %

(2) For reasons explained in the direct testimony, the appropriate risk-free rate for cost of capital purposes is the average forecast of 30 year Treasury Bonds per the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts. (See pages 29 and 30 of this Exhibit). The projection of the risk-free rate is illustrated below:

Second Quarter 2024	4.60	%
Third Quarter 2024	4.50	
Fourth Quarter 2024	4.50	
First Quarter 2025	4.40	
Second Quarter 2025	4.30	
Third Quarter 2025	4.30	
2026-2030	4.30	
2031-2035	4.40	
	4.41	%

(3) Average of Column 6 and Column 7.

(4) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

FirstEnergy Pennsylvania
Basis of Selection of the Group of Non-Price Regulated Companies
Comparable in Total Risk to the Utility Proxy Group

The criteria for selection of the proxy group of non-price regulated companies comparable in total risk to the Utility Proxy Group was that the non-price regulated companies be domestic and reported in Value Line Investment Survey (Standard Edition).

The proxy group of non-price regulated companies was selected based on the unadjusted beta range of 0.71 - 0.97 and residual standard error of the regression range of 2.6200 - 3.1248 of the proxy group of fifteen electric utilities.

These ranges are based upon plus or minus two standard deviations of the unadjusted beta and standard error of the regression. Plus or minus three standard deviations captures 95.50% of the distribution of unadjusted betas and residual standard errors of the regression.

The standard deviation of the Utility Proxy Group's residual standard error of the regression is 0.1262. The standard deviation of the standard error of the regression is calculated as follows:

$$\text{Standard Deviation of the Std. Err. of the Regr.} = \frac{\text{Standard Error of the Regression}}{\sqrt{2N}}$$

where: N = number of observations. Since Value Line betas are derived from weekly price change observations over a period of five years, N = 259

$$\text{Thus,} \quad 0.1262 = \frac{2.8724}{\sqrt{518}} = \frac{2.8724}{22.7596}$$

Notes:

(1) Average of columns 2 through 4 excluding negative growth rates.

(2) The application of the DCF model to the domestic, non-price regulated comparable risk companies is identical to the application of the DCF to the Utility Proxy Groups. The dividend yield is derived by using the 60 day average price and the spot indicated dividend as of May 31, 2024. The dividend yield is then adjusted by 1/2 the average projected growth rate in EPS, which is calculated by averaging the 5 year projected growth in EPS provided by Value Line, www.zacks.com, and www.yahoo.com (excluding any negative growth rates) and then adding that growth rate to the adjusted dividend yield.

(3) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

FirstEnergy Pennsylvania
Indicated Common Equity Cost Rate
Through Use of a Risk Premium Model
Using an Adjusted Total Market Approach

Line No.		Proxy Group of Forty-Five Non-Price Regulated Companies
1.	Prospective Yield on Baa2 Rated Corporate Bonds (1)	6.01 %
2	Adjustment to Reflect Bond rating Difference of Non-Price Regulated Companies (2)	(0.22)
3	Adjusted Prospective Bond Yield	5.79
4.	Equity Risk Premium (3)	7.47
5.	Risk Premium Derived Common Equity Cost Rate	13.26 %

Notes: (1) Average forecast of Baa corporate bonds based upon the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts dated May 31, 2024 (see pages 29 and 30 of this Exhibit). The estimates are detailed below.

Second Quarter 2024	6.10 %
Third Quarter 2024	6.00
Fourth Quarter 2024	6.00
First Quarter 2025	5.90
Second Quarter 2025	5.90
Third Quarter 2025	5.90
2026-2030	6.10
2031-2035	6.20
Average	6.01 %

(2) The average yield spread of Baa2 rated corporate bonds over A2 corporate bonds for the three months ending May 2024. To reflect the A3 average rating of the Non-Price Regulated Proxy Group, the prosepctive yield on Baa corporate bonds must be adjusted by 2/3 of the spread between A2 and Baa2 corporate bond yields as shown below:

	A2 Corp. Bond Yield	Baa2 Corp. Bond Yield	Spread
May-24	5.62 %	5.95 %	0.33 %
Apr-24	5.67	6.00	0.33
Mar-24	5.42	5.75	0.33
		Average yield spread	0.33
		2/3 of spread	0.22

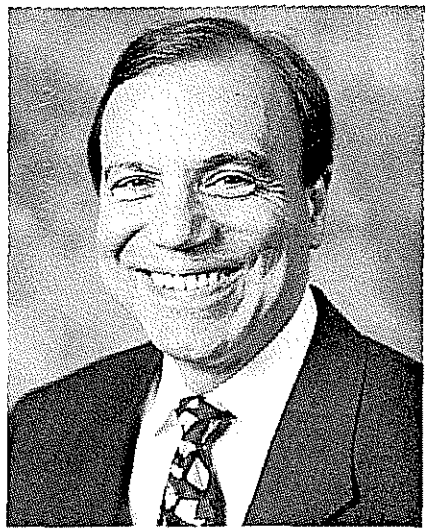
Comparable Earnings: New Life for an Old Precept

by
Frank J. Hanley
Pauline M. Ahern

Reprinted from the American Gas Association's *Financial Quarterly Review*
Summer 1994 edition, Arlington, Va.

Comparable Earnings: New Life for an Old Precept

Accelerating deregulation has greatly increased the investment risk of natural gas utilities. As a result, the authors believe it more appropriate than ever to employ the comparable earnings model. We believe our application of the model overcomes the greatest traditional objection to it — lack of comparability of the selected non-utility proxy firms. Our illustration focuses on a target gas pipeline company with a beta of 0.96 — almost equal to the market's beta of 1.00.



Frank J. Hanley is president of AUS Consultants — Utility Services Group. He has testified in several hundred rate proceedings on the subject of cost of capital before the Federal Energy Regulatory Commission and 27 state regulatory commissions. Before joining AUS in 1971, he was an assistant treasurer of a number of operating companies in the American Water Works System, as well as a financial planning officer with the Philadelphia National Bank. He is a Certified Rate of Return Analyst.

Pauline M. Ahern is a senior financial analyst with AUS Consultants — Utility Services Group. She has participated in many cost-of-capital studies. A former employee of the U.S. Department of the Treasury and the Federal Reserve Bank of Boston, she holds an MBA degree from Rutgers University and is a Certified Rate of Return Analyst.

Introduction

The comparable earnings model used to determine a common equity cost rate is deeply rooted in the standard of "corresponding risk" enunciated in the landmark *Bluefield* and *Hope* decisions of the U.S. Supreme Court.[1] With such solid grounding in the foundations of rate of return regulation, comparable earnings should be accepted as a principal model, along with the currently popular market-based models, provided that its most common criticism, non-comparability of the proxy companies, is overcome.

Our comparable earnings model overcomes the non-comparability issue of the non-utility firms selected as a proxy for the target utility, in this example, a gas pipeline company. We should note that in the absence of common stock prices for the target utility (as with a wholly-owned subsidiary), it is appropriate to use the average of a proxy group of similar risk gas pipeline companies whose common stocks are actively traded. As we will demonstrate, our selection process results in a group of domestic, non-utility firms that is comparable in total risk, the sum of business and financial risk, which reflects both non-diversifiable systematic, or market, risk as well as diversifiable unsystematic, or firm-specific, risk.

Embedded in the Landmark Decisions

As stated in *Bluefield* in 1922: "A public utility is entitled to such rates as will permit it to earn a return ... on investments in other business undertakings which are attended by corresponding risks and uncertainties ..."

In addition, the court stated in *Hope* in 1944: "By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks."

Thus, the "corresponding risk" precept of *Bluefield* and *Hope* predates the use of such market-based cost-of-equity models as the Discounted Cash Flow (DCF) and Capital Asset Pricing (CAPM), which were developed later and are currently popular in rate-base/rate-of-return regulation. Consequently, the comparable earnings model has a longer regulatory and judicial history. However, it has far greater relevance now than ever before in its history because significant deregulation has substantially increased natural gas utilities' investment risk to a level similar to that of non-utility firms. As a result, it is

Comparable Earnings *from page 4*

more important than ever to look to similar-risk non-utility firms for insight into common equity cost rate, especially in view of the deficiencies inherent in the currently popular market-based cost of common equity models, particularly the DCF model.

Despite the fact that the landmark decisions are still regarded as having set the standards for determining a fair rate of return, the comparable earnings model has experienced decreased usage by expert witnesses, as well as less regulatory acceptance over the years. We believe the decline in the popularity of the comparable earnings model, in large measure, is attributable to the difficulty of selecting non-utility proxy firms that regulators will accept as comparable to the target utility. Regulatory acceptance is difficult to gain when the selection process is arbitrary. Our application of the model is objective and consistent with fundamental financial tenets.

Principles of Comparable Earnings

Regulation is a substitute for the competition of the marketplace. Moreover, regulated public utilities compete in the capital markets with all firms, including unregulated non-utilities. The comparable earnings model is based upon the opportunity cost principle; i.e., that the true cost of an investment is the return that could have been earned on the next best available alternative investment of similar risk. Consequently, the comparable earnings model is consistent with regulatory and financial principles, as it is a surrogate for the competition of the marketplace, and investors seek the greatest available rate of return for bearing similar risk.

The selection of comparable firms is the most difficult step in applying the comparable earnings model, as noted by Phillips[2] as well as by Bonbright, Danielsen and Kamerschen.[3] The selection of non-utility proxy firms should result in a sufficiently broad-based group in order to minimize the effect of company-specific aberrations. However, if the selection process is arbitrary, it likely would result in a proxy group that is too broad-based, such as the Standard & Poor's 500 Composite Index or the Value Line Industrial Composite. The use of such groups would require subjective adjustments to the comparable earnings results to reflect risk differences between the group(s) and the target utility, a gas pipeline company in this example.

Authors' Selection Criteria

We base the selection of comparable non-utility firms on market-based, objective, quantitative measures of risk resulting from market prices that subsume investors' assessments of all elements of risk. Thus, our approach is based upon the principle of risk and return; namely, that firms of comparable risk should be expected to earn comparable returns. It is also consistent with the "corresponding risk" standard established in *Bluefield* and *Hope*. We measure total investment risk as the sum of non-diversifiable systematic and diversifiable unsystematic risk. We use the unadjusted beta as a measure of systematic risk and the standard error of the estimate (residual standard error) as a measure of unsystematic risk. Both the unadjusted beta and the residual standard error are derived from a regression of the target utility's security returns relative to the market's returns, which takes the general form:

$$r_{it} = a_i + b_i r_{mt} + e_{it}$$

where:

- r_{it} = tth observation of the ith utility's rate of return
- r_{mt} = tth observation of the market's rate of return
- e_{it} = tth random error term
- a_i = constant least-squares regression coefficient
- b_i = least-squares regression slope coefficient, the unadjusted beta.

As shown by Francis,[4] the total variation or risk of a firm's return, Var (r_i), comes from two sources:

Var (r_i) = total risk of ith asset
= var$(a_i + b_i r_m + e)$
substituting $(a_i + b_i r_m + e)$ for r_i
= var$(b_i r_m)$ + var (e) since var$(a_i) = 0$
= b_i^2 var(r_m) + var (e) since var$(b_i r_m) = b_i^2$ var(r_m)
= systematic + unsystematic risk

Francis[5] also notes: "The term $\sigma^2(r_i|r_m)$ is called the *residual variance around the regression line* in statistical terms or *unsystematic risk* in capital market theory language. $\sigma^2 (r_i|r_m)$ = ... = var (e). The residual variance is the squared standard error in regression language, a measure of unsystematic risk." Application of these criteria results in a group of non-utility firms whose average total investment risk is indeed comparable to that of the target gas pipeline.

As a measure of systematic risk, we use the Value Line unadjusted beta. Beta measures the extent to which market-wide or macro-economic events affect a firm's stock price. We use the unadjusted beta of the target utility as a starting point because it results from the regression of the target utility's security returns relative to the market's returns. Thus, the resulting standard deviation of beta relates to the unadjusted beta. We use the standard deviation of the unadjusted beta to determine the range around it as the selection criterion based on systematic risk.

We use the residual standard error of the regression as a measure of unsystematic risk. The residual standard error reflects the extent to which events specific to the firm's operations affect a firm's stock price. Thus, it is a measure of diversifiable, unsystematic, firm-specific risk.

An Illustration of Authors' Approach

Step One: We begin our approach by establishing the selection criteria as a range of both unadjusted beta and residual standard error of the target gas

continued on page 6

Comparable Earnings *from page 5*

pipeline company.

As shown in table 1, our target gas pipeline company has a Value Line unadjusted beta of 0.90, whose standard deviation is 0.1250. The selection criterion range of unadjusted beta is the unadjusted beta plus (+) and minus (-) three of its standard deviations. By using three standard deviations, 99.73 percent of the comparable unadjusted betas is captured.

Three standard deviations of the target utility's unadjusted beta equals 0.38 (0.1250 x 3 = 0.3750, rounded to 0.38). Consequently, the range of unadjusted betas to be used as a selection criteria is 0.52 - 1.28 (0.52 = 0.90 - 0.38) and (1.28 = 0.90 + 0.38).

Likewise, the selection criterion range of residual standard error equals the residual standard error plus (+) and minus (-) three of its standard deviations. The standard deviation of the residual standard error is defined as: $\sigma/\sqrt{2N}$.

As also shown in table 1, the target gas pipeline company has a residual standard error of 3.7867. According to the above formula, the standard deviation of the residual standard error would be 0.1664 (0.1664 = 3.7867/ $\sqrt{2(259)}$ = 3.7867/22.7596, where 259 = N, the number of weekly price change observations over a period of five years). Three standard deviations of the target utility's residual standard error would be 0.4992 (0.1664 x 3 = .4992). Consequently, the range of residual standard errors to be used as a selection criterion is 3.2875 - 4.2859 (3.2875 = 3.7867 - 0.4992) and (4.2859 = 3.7867 + 0.4992).

Step Two: The step one criteria are applied to Value Line's data base of nearly 4,000 firms for which Value Line derives unadjusted betas and residual standard errors on a weekly basis. All firms with unadjusted betas and residual standard errors within the criteria ranges are then selected.

Step Three: In the regulatory ratemaking environment, authorized common equity return rates are applied to a book-value rate base. Thus, the earnings rates on book common equity, or net worth, of competitive, non-utility firms are highly relevant provided those firms are indeed comparable in total risk to the target gas pipeline. The use of the return rates of other utilities has no relevance because their allowed, and hence subsequently achieved, earnings rates are dependent upon the regulatory

table 1

Summary of the Comparable Earnings Analysis for the Proxy Group of 248 Non-Utility Companies Comparable in Total Risk to the Target Gas Pipeline Company[1]

	1	2	3	4	5	6	7	8
			residual	rate of return on net worth				
	adj. beta	unadj. beta	standard error	3-year average[2]	4-year average[2]	5-year average[2]	5-year projected[3]	
average for the proxy group of 248 non-utility companies comparable in total risk to the target gas pipeline company	0.97	0.92	3.7705					
target gas pipeline company	0.96	0.90[4]	3.7867					
median				11.7%	12.0%	12.6%	15.5%	
average of the median historical returns					12.1%			
conclusion[5]								13.8%

[1]The criteria for selection of the non-utility group was that the non-utility companies be domestic and included in *Value Line Investment Survey*. The non-utility group was selected based on an unadjusted beta range of 0.52 to 1.28 and a residual standard error range of 3.2875 to 4.2859.
[2]Ending 1992.
[3]1996-1998/1997-1999.
[4]The average standard deviation of the target gas pipeline company's unadjusted beta is 0.1250.
[5]Equal weight given to both the average of the 3-, 4- and 5-year historical medians (12.1%) and 5-year projected median rate of return on net worth (15.5%). Thus, 13.8% = (12.1% + 15.5% / 2).

Value Line Investment Survey

Comparable Earnings *from page 6*

process. Consequently, we believe all utilities must be eliminated to avoid circularity. Moreover, we believe non-domestic firms must be eliminated because their reporting methods differ significantly from U.S. firms.

Step Four: We then eliminated those firms for which Value Line does not publish a "Ratings & Report" in *Value Line Investment Survey* so that the historical and projected returns on net worth[6] are from a consistent source. We use historical returns on net worth for the most recent five years, as well as those projected three to five years into the future. We believe it is logical to evaluate both historical and projected return rates because it is reasonable to assume that investors avail themselves of both when they are available from widely disseminated information services, such as Value Line Inc. The use of Value Line's return rates on net worth understates the common equity return rates for two reasons. First, preferred stock is included in net worth. Second, the net worth return rates are as of the end of each period. Thus, the use of average common equity return rates would yield higher results.

Step Five: Median returns based on the historical average three, four and five years ending 1992 and projected 1996-1998 or 1997-1999 rates of return on net worth are then determined as shown in columns 4 through 7 of table 1. The median is used due to the wide variations and skewness in rates of return on net worth for the non-utility firms as evidenced by the frequency distributions of those returns as shown in illustration 1.

However, we show the average unadjusted beta, 0.92, and residual standard error, 3.7705, for the proxy group in columns 2 and 3 of table 1 because their frequency distributions are not significantly skewed, as shown in illustration 2.

Step Six: Our conclusion of a com-

Comparable Earnings *from page 7*

parable earnings cost rate is based upon the mid-point of the average of the median three-, four- and five-year historical rates of return on net worth of 12.1 percent as shown in column 5 and the median projected 1996-1998/1997-1999 rate of return on net worth of 15.5 percent as shown in column 7 of table 1. As shown in column 8, it is 13.8 percent.

Summary

Our comparable earnings approach demonstrates that it is possible to select a proxy group of non-utility firms that is comparable in total risk to a target utility. In our example, the 13.8 percent comparable earnings cost rate is very conservative as it is an expected achieved rate on book common equity (a regulatory allowed rate should be greater) and because it is based on end-of-period net worth. A similar rate on average net worth would be about 20 to 40 basis points higher (i.e., 14.0 to 14.2 percent) and still understate the appropriate regulatory allowed rate of return on book common equity.

Our selection criteria are based upon measures of systematic and unsystematic risk, specifically unadjusted beta and residual standard error. They provide the basis for the objective selection of comparable non-utility firms. Our selection criteria rely on changes in market prices over approximately five years. We compare the aggregate total risk, or the sum of systematic and unsystematic risk, which reflects investors' aggregate assessment of both business and financial risk. Thus, no adjustments are necessary to the proxy group results to compensate for the differences in business risk and financial risk, such as accounting practices and debt/equity ratios. Moreover, it is inappropriate to attempt a comparison of the target utility with any individual firm, or subset of firms, in the proxy group because only the average firm of the group is relevant.

Because the comparable earnings model is firmly anchored in the "corresponding risk" precept established in the landmark court decisions, it is worthy of consideration as a principal model for use in estimating the cost rate of common equity capital of a regulated utility. Our approach to the comparable earnings model produces a proxy group that is indeed comparable in total risk because the selection process is objective and quantitative. It therefore overcomes criticism linked to arbitrary selection processes.

All cost-of-common-equity models, including the DCF and CAPM, are fraught with deficiencies, usually stemming from the many necessary but unrealistic assumptions that underlie them. The effects of the deficiencies of individual models can be mitigated by using more than one model when estimating a utility's common equity cost rate. Therefore, when the non-comparability issue is overcome, the comparable earnings model deserves to receive the same consideration as a primary model, as do the currently popular market-based models. ■

[6] Returns on net worth must be used when relying on Value Line data because returns on book common equity for non-utility firms are not available from Value Line.

Report Lists Pipeline, Storage Projects

More than $9 billion worth of projects to expand the nation's natural gas pipeline network are in various stages of development, according to an A.G.A. report. These projects involve nearly 8,000 miles of new pipelines and capacity additions to existing lines and represent 15.3 billion cubic feet (Bcf) per day of new pipeline capacity.

During 1993 and early 1994, construction on 3,100 miles of pipeline was completed or under way, at a cost of nearly $4 billion, says A.G.A. These projects are adding 5.4 Bcf in daily delivery capacity nationwide.

Among the projects completed in 1993 were Pacific Gas Transmission Co.'s 805 miles of looping that allows increased deliveries of Canadian gas to the West Coast; Northwest Pipeline Corp.'s addition of 433 million cubic feet of daily capacity for customers in the Pacific Northwest and Rocky Mountain areas; and the 156-mile Empire State Pipeline in New York.

In addition, major construction projects were started on the systems of Texas Eastern Transmission Corp. and Algonquin Gas Transmission Co. — both subsidiaries of Panhandle Eastern Corp. — and along Florida Gas Transmission Co.'s pipeline.

The report goes on to discuss another $5 billion in proposed projects, which, if completed, will add nearly 5,000 miles of pipeline and 9.8 Bcf per day in capacity, much of it serving Florida and West Coast markets.

A.G.A. also identifies 47 storage projects and says that if all of them are built, existing storage capacity will increase by more than 500 Bcf, or 15 percent.

Beta Measurements The beta coefficient is an *index of systematic risk.* Beta coefficients may be used for ranking the systematic risk of different assets. If the beta is larger than 1, $b > 1.0$, then the asset is more volatile than the market and is called an **aggressive asset.** If the beta is less than 1, $b < 1.0$, the asset is a **defensive asset;** its price fluctuations are less volatile than the market's. Figure 10-1 illustrates the characteristic lines for three different assets that have low, medium, and high levels of beta (or undiversifiable risk).

Figure 10-2 shows that IBM is a stock with an average amount of systematic risk. IBM's beta of 1.02 indicates that its return tends to increase 2 percent more than the return on the market average when the market is rising. When the market falls, IBM's return tends to fall 2 percent more than the market's. The characteristic line for IBM has an above average correlation coefficient of $\rho = .7495$, indicating that the returns on this security follow its particular characteristic line slightly more closely than those of the average stock.

Partitioning Risk Total risk can be measured by the variance of returns, denoted Var(r). This measure of *total risk is partitioned into its systematic and unsystematic components in Equation (10-8).*[7]

$$\begin{aligned} \text{Var}(r_i) &= \text{total risk of } i\text{th asset} \\ &= \text{Var}(a_i + b_i r_{m,t} + e_{i,t}) \\ &\quad \text{by substituting } (a_i + b_i r_{m,t} + e_{i,t}) \text{ for } r_{i,t} \\ &= 0 + \text{Var}(b_i r_{m,t}) + \text{Var}(e_{i,t}) \\ &\quad \text{since Var}(a_i) = 0 \end{aligned} \tag{10-8}$$

$$\begin{aligned} \text{Var}(r_i) &= b_i^2 \text{ Var}(r_m) + \text{Var}(e) \qquad \text{since Var}(b_i r_m) = b_i^2 \text{ Var}(r_m) \\ &= \text{systematic} + \text{unsystematic risk} \end{aligned} \tag{10-8a}$$

$$.01389 = .00780 + .00609 \qquad \text{for IBM}$$

The unsystematic risk measure Var(e) is called in regression language the *residual variance* or, synonymously, the *standard error squared.*

Undiversifiable Proportion The percentage of total risk that is systematic can be measured by the coefficient of determination ρ^2 (that is, the characteristic line's squared correlation coefficient).

[7]In this context, **partition** is a technical statistical term that means to divide the total variance into *mutually exclusive* and *exhaustive* pieces. This partition is only possible if the returns from the market are statistically independent from the residual error terms that occur simultaneously, $\text{Cov}(r_{m,t}, e_{i,t}) = 0$. The mathematics of regression analysis will orthogonalize the residuals and thus ensure that the needed statistical independence exists.

$$\frac{\text{Systematic risk}}{\text{Total risk}} = \frac{b_i^2 \operatorname{Var}(r_m)}{\operatorname{Var}(r_m)} = \rho^2 \tag{10-9}$$

$$\frac{.007802}{.01389} = \frac{(1.021)^2\,(.00749)}{.00749} = .5617 \times 100 = 56.17\% \quad \text{for IBM}$$

Diversifiable Proportion The percentage of unsystematic risk equals $(1.0 - \rho^2)$.

$$\frac{\text{Unsystematic risk}}{\text{Total risk}} = \frac{\operatorname{Var}(e)}{\operatorname{Var}(r_i)} = (1.0 - \rho^2)$$

$$\frac{.00609}{.01389} = (1.0 - .5617) = .438 \times 100 \tag{10-10}$$

$$= 43.8\% \text{ unsystematic} \quad \text{for IBM}$$

Studies of the characteristic lines of hundreds of stocks listed on the NYSE indicate that the average correlation coefficient is approximately $\rho = .5$.[8] This means that about $\rho^2 = 25$ percent of the total variability of return in most NYSE securities is explained by movements in the market.

	NYSE average	IBM
Systematic risk: ρ^2	.25	.5617
Unsystematic risk: $(1.0 - \rho^2)$	.75	.4383
Total risk: 100%	1.00	1.0000

As explained above, systematic changes are common to all stocks and are therefore undiversifiable.

A primary use of the characteristic line (or *market model,* or the *single-index model,* as it is also called) is to assess the risk characteristics of one asset.[9] The statistics in Table 10-2, for instance, indicate that IBM's common stock is slightly more risky than the average common stock in terms of total risk and

[8]The average ρ was found to be about .5, as reported in Marshall Blume, "On the Assessment of Risk," *Journal of Finance,* March 1971, p. 4. For similar estimates, see J. C. Francis, "Statistical Analysis of Risk Surrogates for NYSE Stocks," *Journal of Financial and Quantitative Analysis,* Dec. 1979.

[9]Professor Jensen reformulated the characteristic line in a risk-premium form. See M. C. Jensen, "The Performance of Mutual Funds in the Period 1945 through 1964," *Journal of Finance,* May 1968, pp. 389–416. See also M. C. Jensen, "Risk, the Pricing of Capital Assets, and the Evaluation of Investment Portfolios," *Journal of Business,* vol. XLII, 1969. Jensen interprets the alpha intercept term of the characteristic line, as he formulates it, as an investment performance measure. It has been suggested that Jensen's performance measure is biased. See Keith V. Smith and Dennis A. Tito, "Risk-Return Measures of Ex-Post Portfolio Performance," *Journal of Financial and Quantitative Analysis,* Dec. 1969, vol. IV, no. 4, p. 466.

systematic risk.[10] New risk measurements must be made periodically, however, because the risk and return of an asset may change with the passage of time.[11]

10-3 CAPITAL ASSET PRICING MODEL (CAPM)

An old axiom states "there is no such thing as a free lunch." This means that you cannot expect to get something for nothing—a rule that certainly applies to investment returns. Investors who want to earn high average rates of return must take high risks and endure the associated loss of sleep, the possibility of ulcers, and the chance of bankruptcy. The question to which we now turn is: Should investors worry about total risk, undiversifiable risk, diversifiable risk, or all three?

In Chapter 1 it was suggested that *investors should seek investments that have the maximum expected return in their risk class.* Their happiness from investing is presumed to be derived as indicated in the expected utility $E(U)$ function below.

$$E(U) = f[E(r), \sigma]$$

The investment preferences of wealth-seeking risk-averse investors represented by the function above cause them to maximize their expected utility (or, equivalently, happiness) by (1) maximizing their expected return in any given risk class, $\partial E(U)/\partial E(r) > 0$, or, conversely, (2) minimizing their total risk at any given rate of expected return, $\partial E(U)/\partial \sigma < 0$. However, in selecting individual assets, investors will not be particularly concerned with the asset's total risk σ. Figure 9-1 showed that the unsystematic portion of total risk can be easily diversified by holding a portfolio of different securities. But, systematic risk affects all stocks in the market because it is undiversifiable. Portfolio theory therefore suggests that only the undiversifiable (or systematic) risk is worth avoiding.[12]

[10]Statements about the relative degree of total risk are made in the context of a long-run horizon—that is, over at least one *complete business cycle*. Obviously, an accurate short-run forecast which says that some particular company will go bankrupt next quarter makes it more risky than IBM, although IBM may have had more historical variability of return.

[11]Empirical studies documenting the intertemporal instability of betas have been published. Marshall Blume, "Betas and Their Regression Tendencies," *Journal of Finance,* June 1975, pp. 785–795. See also J. C. Francis, "Statistical Analysis of Risk Coefficients for NYSE Stocks," *Journal of Financial and Quantitative Analysis,* Dec. 1979, vol. XIV, no. 5, pp. 981–997. An appendix at the end of this chapter reviews some evidence about shifting betas, standard deviations, and correlations.

[12]Both the systematic and unsystematic portions of total risk must be considered by **undiversified investors.** Entrepreneurs who have their entire net worth invested in one business, for example, can be bankrupted by a piece of bad luck that could be easily averaged away to zero in a diversified portfolio. Poorly diversified investors should not treat diversifiable risk lightly. Only well-diversified investors can afford to ignore diversifiable risk.

Where:
- Ku = Un-levered (i.e., 100% equity) cost of common equity
- Ke = Market determined cost of common equity
- i = Cost of debt
- t = Income tax rate
- D = Debt ratio
- E = Equity ratio
- d = Cost of preferred stock
- P = Preferred equity ratio

FirstEnergy Pennsylvania
Corrections to Mr. Patel's
CAPM with Forecasted Returns and Fully Projected Risk-Free Rate

Re		Required return on individual equity security
Rf		Risk-free rate
Rm		Required return on the market as a whole
Be		Beta on individual equity security

Re = Rf + Be (Rm - Rf)

Rf	=	4.27	(1)
Rm	=	12.49	(2)
Be	=	0.91	(3)
Re (CAPM)	=	11.75	%
Re (ECAPM)	=	11.93	%
Re (Average)	=	**11.84**	%

Notes:

(1) For reasons explained in Mr. D'Ascendis' Direct and Rebuttal Testimonies, the appropriate risk-free rate for cost of capital purposes is the average forecast of 30 year Treasury Bonds per the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts. The projection of the risk-free rate is illustrated below:

Third Quarter 2024	4.50
Fourth Quarter 2024	4.40
First Quarter 2025	4.30
Second Quarter 2025	4.20
Third Quarter 2025	4.20
2025-2029	4.10
2030-2034	4.20
	4.27

REBUTTAL TESTIMONY
OF
BILL WANG

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Weizhong (Bill) Wang. My business address is 76 South Main Street, Akron, Ohio 44308.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed written direct testimony and FE PA Exhibits BW-1, BW-2, and BW-3 on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. What is the purpose of your rebuttal testimony?

A The purpose of my rebuttal testimony is to respond to certain assertions and recommendations submitted by Dr. Marlon F. Griffing, witness for the Pennsylvania Office of Consumer Advocate ("OCA") regarding the use of FE PA's projected capital structure of 46.19% long-term debt and 53.81% equity at December 31, 2025 and why FE PA's projected capital structure is appropriate for purposes of setting rates in this proceeding.

II. CAPITAL STRUCTURE

Q. Does OCA witness Dr. Griffing support the use of FE PA's projected capital structure?

A. No. Dr. Griffing does not support the use of FE PA's projected capital structure.[1] Rather, he recommends that the Pennsylvania Public Utility Commission ("Commission") use a

[1] OCA St. No. 2 at p. 44.

hypothetical 50% debt and 50% equity capital structure for purposes of establishing FE PA's revenue requirement.[2]

Q. Do you agree with OCA witness Dr. Griffing's recommendation?

A No.

Q. What capital structure does Dr. Griffing propose to use in this case?

A. As noted above, Dr. Griffing proposes the use of 50% for common equity and 50% for long-term debt based on an average (i.e., the mean) of two years of data of 15 proxy companies.[3]

Q. Do you believe that the proxy group Dr. Griffing used for his analysis is appropriate for drawing comparisons to FE PA in this case?

A. No, I do not.

Q. Please explain why not.

A. Dr. Griffing uses a proxy group consisting of parent holding companies, not regulated subsidiary utility companies that are similar to FE PA. In other words, his selection of companies would be more appropriately used in an analysis relating to FirstEnergy Corp. ("FirstEnergy"), the parent company of FE PA. It is not appropriate to use this proxy group for purposes of determining an appropriate capital structure for FE PA.

[2] OCA St. No. 2 at p. 44.
[3] OCA St. No. 2 at p. 44-45.

Q. Why is basing capital structure on a proxy average of parent companies incorrect and not appropriate?

A. The capital structures of FirstEnergy and the other parent companies comprising his proxy group are not directly set by regulatory commissions. Typically, this means that parent companies maintain a higher debt ratio than their subsidiaries. Electric utility holding companies often have a broader strategic focus compared to their subsidiaries. By maintaining higher leverage at the holding company level, they have different flexibility to pursue growth opportunities, deploy capital efficiently, and create synergies across their subsidiaries. Therefore, comparing the debt ratio of FE PA, a subsidiary of FirstEnergy, to that of other parent companies is incorrect and unreasonable.

Q. What other basis does OCA offer to support its proposed use of a hypothetical 50/50 capital structure?

A. OCA believes that using a hypothetical 50/50 capital structure produces savings.[4]

Q. Do you agree with this reasoning for using a hypothetical capital structure?

A. No. OCA witness Dr. Griffing ignores the fact that the Company's actual capital structure helps to lower costs on future debt issued by FE PA.

Q. How does FE PA's suggested capital structure help lower costs on future debt issued by FE PA?

A. FE PA's approved regulatory capital structure plays a very important role in determining its cost of capital and associated interest costs on future long-term debt offerings. A lower approved debt ratio is a signal to investors that FE PA is in a stable position and is a less

[4] OCA St. No. 2 at p. 46.

risky investment. This can result in more favorable terms, including lower interest rates on newly issued long-term debt. A lower debt ratio can also improve FE PA's credit profile as rating agencies similarly view a lower debt ratio as a sign of a utility that has lower risk. This can improve credit ratings and potentially lower interest costs. The higher debt ratio proposed proposed by OCA would provide investors with the opposite signal, which would offset any alleged savings that would result from departing from the Company's actual capital structure.

Q. How do parent company debt ratios typically relate to their subsidiaries?

A. Again, parent company debt ratios are typically considerably higher than that of their regulated utility subsidiaries. To demonstrate this, the below chart illustrates the debt ratios of four utility holding parent companies – PPL Corporation ("PPL"), American Electric Power Corporation ("AEP"), Duke Energy Corporation ("Duke"), and Exelon Corporation ("Exelon") – using balance sheets from each company's 2023 Form 10-K, as well as the debt ratios of their regulated subsidiary utilities as of December 31, 2023. I note that two of these parent companies (AEP and Duke) were also chosen by Dr. Griffing for evaluation, but that he did not include PPL or Exelon, parent companies that have subsidiaries in Pennsylvania.

		Equity ($M)	Debt ($M)	Equity Ratio	Debt Ratio
Parent	**PPL Corporation**	**$ 13,933**	**$ 14,612**	**49%**	**51%**
Subsidiary	PPL Electric Utilities Corporation	$ 5,903	$ 4,567	56%	44%

Subsidiary	Kentucky Utilities Company	$ 4,152	$ 3,064	58%	42%
Parent	**American Electric Power Company**	**$ 25,247**	**$ 40,116**	**39%**	**61%**
Subsidiary	AEP Texas	$ 4,796	$ 5,890	45%	55%
Subsidiary	AEP Transmission	$ 6,333	$ 5,414	54%	46%
Subsidiary	Appalachian Power Company	$ 5,277	$ 5,588	49%	51%
Subsidiary	Indiana Michigan Power Company	$ 3,140	$ 3,499	47%	53%
Subsidiary	Ohio Power Company	$ 3,571	$ 3,367	51%	49%
Subsidiary	Public Service Company of Oklahoma	$ 2,571	$ 2,385	52%	48%
Subsidiary	Southwestern Electric Power Company	$ 3,770	$ 3,647	51%	49%
Parent	**Duke Energy Corporation**	**$ 50,187**	**$ 75,252**	**40%**	**60%**
Subsidiary	Duke Energy Carolinas	$ 16,907	$ 16,012	51%	49%
Subsidiary	Progress Energy	$ 22,860	$ 23,759	49%	51%
Subsidiary	Duke Energy Progress	$ 10,807	$ 11,714	48%	52%
Subsidiary	Duke Energy Florida	$ 10,043	$ 10,401	49%	51%
Subsidiary	Duke Energy Ohio	$ 5,100	$ 3,518	59%	41%
Subsidiary	Duke Energy Indiana	$ 5,013	$ 4,502	53%	47%
Subsidiary	Piedmont Natural Gas	$ 4,052	$ 3,668	52%	48%
Parent	**Exelon Corporation**	**$ 25,755**	**$ 41,485**	**38%**	**62%**
Subsidiary	Commonwealth Edison Company	$ 14,363	$ 11,691	55%	45%
Subsidiary	PECO Energy Company	$ 6,069	$ 5,318	53%	47%
Subsidiary	Baltimore Gas and Electric Company	$ 5,490	$ 4,602	54%	46%
Subsidiary	Pepco Holdings LLC	$ 11,782	$ 8,648	58%	42%
Subsidiary	Potomac Electric Power Company	$ 4,144	$ 4,096	50%	50%
Subsidiary	Delmarva Power & Light Company	$ 2,093	$ 2,080	50%	50%
Subsidiary	Atlantic City Electric Company	$ 1,812	$ 1,833	50%	50%

Q. Please summarize why FE PA's actual capital structure should be used in this case, while Dr. Griffing's proposed hypothetical capital structure should be rejected.

A. The purpose of this rate proceeding is to determine the appropriate rates for the regulated entity, FE PA. Those rates should be based on FE PA's rate base, revenues, and expenses, and should provide a fair rate of return that reflects the risk-return profile of FE PA, and not its parent, FirstEnergy. FirstEnergy is a non-regulated entity, and its assets, liabilities, revenues, and expenses are not being evaluated in this proceeding, nor is there any

assessment in this proceeding of FirstEnergy's unique risk-return profile, which is separate and distinct from that of FE PA.

Furthermore, it is my understanding the Commission has long-standing precedent rejecting the use of a hypothetical capital structure where it has not been shown that the utility's actual capital structure is outside the range of capital structures of proxy group companies.[5] Here, Dr. Griffing has only shown that FE PA's capital structure contains more equity than the "average" of the capital structures utilized in his proxy group. He has not shown that FE PA's capital structure is outside the range of capital structures in this group. It is also important to note that I&E witness Patel found that FirstEnergy's capital structure falls within the range of proxy group but agrees with the use of FE PA's projected capital structure for purposes of setting rates in this proceeding. Therefore, there is no reason to deviate from the Commission's long-standing precedent in this case.

III. CONCLUSION

Q. Does this complete your rebuttal testimony?

A. Yes, it does.

VII. CONCLUSION 56

REBUTTAL TESTIMONY
OF
JOHN HAWKINS

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is John Hawkins. My business address is 800 Cabin Hill Drive, Greensburg, PA 15601.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company ("FESC"), a subsidiary of FirstEnergy Corp. ("FirstEnergy" or "FE"), as the President, Pennsylvania Operations. In this capacity I report to FirstEnergy's President, FE Utilities, Wade Smith.

Q. What is your educational background and professional experience?

A. I have a Bachelor of Science degree in electrical engineering technology from Purdue University and a Master of Business Administration from the Kelley School of Business at Indiana University. I am also a licensed professional engineer in Ohio and Texas.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company"). FE PA consists of the Met-Ed, Penelec, Penn Power, West Penn, and Pennsylvania State University rate districts (each individually a "Rate District" and in any combination the "Rate Districts").[1]

[1] FE PA also has a sixth Rate District, the Waverly Rate District, which is not discussed directly in my testimony as it relates to FE PA's New York jurisdictional rates.

Q. Have you previously filed testimony in this proceeding?

A. No. On June 2, 2024, I became the President of Pennsylvania, reporting to Wade Smith. My responsibilities include being accountable for the safe and reliable delivery of electricity to customers, in compliance with regulatory requirements and with an eye toward sustainability and excellence. In addition, I'm responsible for the local and state external affairs, customer teams managing state-focused functions such as local economic development, and state-approved energy assistance outreach programs and energy efficiency implementation. Lastly, I am also responsible for the financial performance and regulatory strategy and outcomes within Pennsylvania. My rebuttal testimony will cover in greater detail certain specific areas that were originally discussed at a higher level by Wade Smith in his direct testimony (FE PA Statement No. 2) as well as additional areas as necessary to respond to the direct testimony of other parties in this case.

Q. What is the purpose of your direct testimony?

A. The purpose of my rebuttal testimony is to respond to portions of the direct testimonies of (1) Rao Konidena, which was submitted on behalf of the Office of Consumer Advocate ("OCA"), (2) Dante Mugrace, which was submitted on behalf of the OCA, (3) Christine Wilson, which was submitted on behalf of the Pennsylvania Public Utility Commission's ("PUC" or the "Commission") Bureau of Investigation and Enforcement ("I&E"), and (4) Daulph Kline, which was submitted on behalf of Local 777 of the International Brotherhood of Electrical Workers ("IBEW"). In particular, I address these witnesses' respective testimonies regarding: the Company's efforts to improve the reliability of its service and how those efforts are a driving force behind this base distribution rate case; FE PA's vegetation management (including the aspects of the Company's claim related to its

proposed enhanced vegetation management program); storm deferral accounting; FE PA's inspection and maintenance ("I&M") programs (including the Company's plan to transition its distribution overhead circuit and overhead transformer inspection and maintenance cycles from a five-year inspection cycle to a two-year cycle); FE PA's workforce development initiatives; adjustments related to Act 40; and the Company's management performance.

Q. Does your rebuttal testimony include any exhibits?

A. No.

II. REBUTTAL REGARDING RELIABILITY PERFORMANCE

Q. Do any of the other parties raise concerns regarding the reliability of FE PA's electric service?

A. Yes. OCA witness Konidena testifies regarding the Company's service reliability, relative to the Commission's reliability metrics (i.e., system average interruption frequency index ("SAIFI"), customer average interruption duration index ("CAIDI"), and system average interruption duration index ("SAIDI")), and the Company's historic performance relative to these metrics on a quarterly and annual basis.[2]

[2] *See* OCA St. No. 7 at pp. 8-18.

Q. Please summarize Mr. Konidena's concerns regarding the Company's reliability performance.

A. Mr. Konidena is concerned regarding the Company's reliability performance, benefits associated with Long Term Infrastructure Improvement Plan ("LTIIP") spend, costs associated with extraordinary storms, and repeat worst performing circuits ("WPCs").

Q. What recommendations regarding reliability performance does OCA witness Konidena make?

A. Aside from vegetation related issues discussed by Mr. Konidena and addressed later in this testimony, he proposes various options to address what he considers issues with FE PA's reliability performance. He recommends reducing the Company's storm reserve by an incorrectly calculated SAIFI deviation from benchmark, proposes the use of battery storage to address reliability concerns on FE PA's WPCs, and lastly states that implementing undergrounding solutions at various Company locations will reduce outages and improve reliability.

Q. Does the Company agree with these recommendations?

A. No.

Q. Why not?

A. While some of Mr. Konidena's suggestions make sense in theory, they are not practical given the nature in which he is proposing them. Moreover, there are specific reasons why Mr. Konidena's testimony regarding the Company's performance is incorrect or removed from necessary context and, therefore, should not be relied upon by the Commission to conclude the Company has a history of poor reliability that justifies downward adjustments

to its claims in this rate case, which would be counterproductive to the Company's efforts to improve reliability, in any event.

Q. Are there any problems with Mr. Konidena's characterization of SAIDI, SAIFI, and CAIDI as "benchmarks" and his reliance upon them?

A. Mr. Konidena asserts that a Company's three-year standard, incorrectly referred to as a benchmark, is calculated by taking the average of the previous three-year results.[3] This is untrue. The PUC set the Company's benchmarks for each of SAIDI, SAIFI, and CAIDI in 2005 to begin in 2006. These metrics do not change year to year and have remained the same since 2006. As set in 2005, they also were not based on a three-year average.

Q. Do you believe Mr. Konidena correctly explained how the rolling 12-month and 3-year average standards are established?[4]

A. No. Contrary to Mr. Konidena's explanation, the 12-month standard is set to be 120% of the established benchmark, whereas the 3-year average is set at 110% of the benchmark. Additionally, as described above, these numbers do not change and have remained the same since set in 2005.

Q. Do you agree with the assertion that SAIFI values have "barely improved or gotten worse" over the 9-year period in which LTIIP has been in place?[5]

A. From 2016-2023, FE PA's SAIFI improved by 2%. While this is not a tremendous improvement, it is an improvement. LTIIP cannot be considered the sole means of reliability improvement for FE PA. As explained below, the Company's enhanced

[3] OCA St. No. 7 at p. 10.
[4] OCA St. No. 7 at p. 12.
[5] OCA St. No. 7 at p. 15.

vegetation management program is anticipated to drive significant reliability improvements going forward by permitting the Company to more proactively and aggressively target problematic vegetation and, in particular, off-corridor priority trees (also known as off-right-of-way, "off-ROW," or "OROW" trees).

Q. Have investments made through the LTIIP program been beneficial to Pennsylvania customers?

A. Yes. While the Company's reliability numbers have not improved apart from SAIFI during this period, it needs to be noted that FE PA has over 3,000 circuits in the state and the investments made have touched a relatively small number of those circuits through large scale reliability improvement projects in LTIIPs I and II. Additionally, other factors such as changing weather patterns, including storms increasing in frequency and duration each year, have played a significant role in performance. Nevertheless, and as noted above, over the duration of both LTIIP I[6] and II,[7] SAIFI has improved by 2%; over the duration of just LTIIP II, SAIFI has improved by 14%.

Q. Are there other reasons why OCA witness Konidena's attempt to characterize FE PA's reliability performance as poor should be rejected?

A. Yes. While FE PA acknowledges that there is room to improve its reliability performance, this is not an issue that is unique to FE PA. Reliability performance has generally degraded

[6] *Petition of FirstEnergy Companies for Approval to Establish and Implement a Distribution System Improvement Charge*, Docket Nos. P-2015-2508942, P-2015-2508936, P-2015-2508931, and P-2015-2508948 (Orders entered February 11, 2016) ("LTIIP I").

[7] *Petition of Metropolitan Edison Company, West Penn Power Company, Pennsylvania Electric Company, and Pennsylvania Power Company for Approval of its Long-Term Infrastructure Improvement Plan*, Docket Nos. P-2019-3012618, P-2019-3012617, P-2019-3012615, and P-2019-3012614 (Orders entered January 16, 2020) ("LTIIP II").

since 2015 for all EDCs in Pennsylvania.[8] Therefore, OCA's attempts to penalize or single out FE PA for this issue—and its efforts to oppose enhanced programs that would improve FE PA's reliability performance are counterproductive and should be rejected.

Q. Does Mr. Konidena accurately state in Table 6 of his direct testimony the KPIs for each of the rate districts?[9]

A. No, the table has incorrectly stated the values for the Penelec and Penn Power Rate Districts. The values for the Penelec Rate District should be threshold 213, target 157, and stretch 148. The values for the Penn Power Rate District should be 162 for threshold, 118 for target, and 113 for stretch.

Q. Do you agree with Mr. Konidena's claim, "that FirstEnergy's key performance indicators for 2024 assume that the Company's forecast for SAIDI benefits will be met through the last year of the LTIIP"?[10]

A. The estimated benefits for SAIDI improvement referenced in the LTIIP II were a point in time calculation to occur over the life of the LTIIP II program. We are unable to quantify how much of those values were achieved due to other factors. However, the FE PA Rate Districts' 2024 stretch goals were not established under the assumption that the Company would realize all the reliability benefits in the final year of the LTIIP program.

[8] 2022 Pennsylvania Electric Reliability Report (April 2024), at p. 102, available at https://www.puc.pa.gov/media/2898/electric-reliability-report_final.pdf.
[9] OCA St. No. 7 at p. 19.
[10] OCA St. No. 7 at 20.

Q. Do you agree with the computation of the SAIFI composite average of 21.3% used by Mr. Konidena in his analysis?[11]

A. No. Mr. Konidena offers no support for his adjustment, and it is my understanding such an approach has never been adopted in Pennsylvania. Furthermore, even if there were a basis for this adjustment, and there is not, his composite average is incorrect. His average is not a weighted average and merely averages the annual rate districts, not accurately accounting for the appropriate magnitude of certain Rate Districts' performance. Using a weighted average and the same data utilized by Mr. Konidena, a 9.5% SAIFI composite is what is actually supported by the evidence.

Q. Does Mr. Konidena accurately capture the WPCs that have appeared two or more out of five times in the Met-Ed Rate District?[12]

A. No, he incorrectly includes Ottsville Substation 00660-3 circuit and the Mountain Substation 00743-4 circuits that only appear on the 2023 reliability report.

Q. Do you agree that battery storage is a good solution to improving reliability on FirstEnergy's WPCs?

A. In theory, battery storage would improve reliability. FirstEnergy is investigating the implementation of battery energy storage systems ("BESS") at locations where feasible and practical, as proposed in its LTIIP III. It is most likely impractical to implement BESS on the scale that Mr. Konidena is proposing. Most BESS systems are not large enough to support entire circuits for a sustained amount of time. Each individual WPC would have to be reviewed and determinations made on the best solutions for improving reliability. It

[11] OCA St. No. 7 at p. 26.
[12] OCA St. No. 7 at p. 43.

is unlikely that a BESS solution would be the optimal solution for each WPC primarily based on cost.

Q. Is undergrounding of circuits the best approach to improving reliability performance?

A. While selective undergrounding does eliminate most of the exposure associated with overhead lines in terms of trees and weather, it does not eliminate all outages, as components of an underground system can fail just as components of an overhead system can fail. The downside of undergrounding is that when an outage occurs, they are typically longer in duration and more expensive than an overhead outage. There are many factors such as cost effectiveness, customer facility impact, terrain, etc., that should determine the approach on how the Company proceeds with improving reliability on any given circuit. From the Company's standpoint, selective undergrounding is viewed as one option that could be implemented and not as the one and only method to effectively improve reliability on a circuit.

Q. Did the PUC, as part of LTIIP II, order the Company to pursue selective undergrounding projects?

A. As part of its LTIIP I periodic review, the PUC did suggest the Company consider selective undergrounding.[13] FE PA addressed this suggestion as a part of LTIIP II, where it explained that selective undergrounding will be pursued where it supports effective infrastructure initiatives.[14] Ultimately, in its Order approving LTIIP II, the PUC

[13] *See, e.g.*, *Periodic Review of Metropolitan Edison Company's Long-Term Infrastructure Improvement Plan*, Docket No. M-2018-3000943, at p. 19 (Order entered September 20, 2018). The PUC addressed its periodic review of all of FE PA's predecessors' LTIIPs in this consolidated order.
[14] LTIIP II, Exhibit 1 at p. 15.

recognized that "selective undergrounding may be a part of an effective program to improve reliability" and only ordered FE PA to provide details regarding the costs and benefits of undergrounding in its subsequent Annual Asset Optimization Plans.[15] Contrary to OCA witness Konidena's assertions, the PUC did not order FE PA to broadly pursue undergrounding of its distribution facilities.

III. REBUTTAL REGARDING VEGETATION MANAGEMENT

Q. Do any of the parties to this proceeding address the Company's vegetation management expenses and/or FE PA's underlying practices related to this expense?

A. Yes. OCA witness Mr. Konidena (OCA Statement No. 7) raises a number of concerns related to the Company's historic vegetation management practices, as well as its proposed enhanced vegetation management program. Relatedly, OCA witness Mr. Mugrace (OCA Statement No. 1) recommends adjustments to the Company's vegetation management expenses claimed for the fully projected future test year ("FPFTY") ending December 31, 2025, that are based upon Mr. Konidena's testimony. I&E witness Ms. Wilson (I&E Statement No. 4) similarly recommends that the Company's vegetation management expenses claimed for the FPFTY be adjusted.

Q. What is the Company's response to these witnesses?

A. I respond to each of these witnesses in greater detail below. However, as a general matter, each of the witnesses that oppose the Company's vegetation management expense claimed for the FPFTY at the same time acknowledge that FE PA's reliability has historically been significantly impacted by vegetation-related outages. FE PA has specifically discussed the

[15] LTIIP II, at p. 16.

need to perform more extensive vegetation management to address its reliability and identified that in order to complete this additional and enhanced work it needs to deploy additional resources. While the Company has presented a "minimum regulatory budget" for vegetation management work that is representative of the minimum amounts needed to comply with its PUC-approved vegetation management plan, it is clear that this minimum regulatory budget will not allow the Company to deploy the additional resources required to address the needs increasingly facing the distribution system. The enhanced vegetation management program that serves as the basis for the Company's vegetation management expense claim in this case is being sought in recognition of the need to perform additional and enhanced vegetation management work to promote the safety and reliability of FE PA's distribution system.

Q. Is it understood and recognized by the Commission that vegetation management is a critical aspect of improving system reliability and safety for FE PA, as well as other electric utilities in Pennsylvania?

A. Yes. It is well understood that vegetation management, and in particular, the need to target additional OROW and overhanging limbs from canopy trees above the clearing zones within the right-of-way ("ROW"), is of critical importance to improving the reliability of service for **all** electric distribution companies ("EDCs") in Pennsylvania. The PUC's 2022 Pennsylvania Electric Reliability Report (released April 2024) specifically found that:

> As noted in last year's report,[] electric reliability and resilience[] appears to be most challenged during storm activity that brings down off-right-of-way (OROW) trees, and overhanging limbs from canopy trees above the clearing zones within the right-of-way (ROW) onto the distribution lines. Many of those trees and limbs are still standing dead vegetation from the ravages of the Emerald Ash Borer and other pests which have attacked the state woodlands. EDCs are continuing to struggle to achieve sustained

> benchmark performance. This is the direct result of vegetation management policies, programs, and storm activity. Storm activity acts upon the vulnerability of weakened trees in the overhanging canopy, and OROW. Since 2015 and continuing throughout 2022, vegetation is the number one cause of outages and lost customer-minutes in Pennsylvania. This issue has increased sharply and can be seen in the individual EDC performance details in Section 4 below and for all Pennsylvania EDCs in Section 5 below.[16]

Furthermore, the PUC recently initiated a collaborative working group to address electric service reliability issues, including issues related to vegetation management, and more specifically, the impacts of OROW trees on service reliability.[17] In fact, after evaluating the Company's current I&M Plan, in a Secretarial Letter dated December 28, 2023, the Commission's Bureau of Technical Utilities ("TUS") directed the Company to "consider re-evaluating and reviewing the effectiveness of the [current] Vegetation Management portion of its Plan and update its Plan accordingly to achieve an improvement in its performance."[18] Even before these actions, the PUC initiated a collaborative with EDCs to review and analyze vegetation management best practices, wherein the PUC stated it was "encouraged by the EDCs' zeal for improving reliability and recognize that proper vegetation management within transmission line rights-of-way is critical to ensuring that our electric grid operates in a safe and reliable manner" but also recognized "the concerns of those landowners alarmed by the EDCs' methods of clearing rights-of-way

[16] 2022 Pennsylvania Electric Reliability Report (April 2024), at p. iv, available at https://www.puc.pa.gov/media/2898/electric-reliability-report_final.pdf.

[17] Docket No. M-2021-3024513. The initial Secretarial Letter issued in this docket noted the prevalence of OROW as a major driver of lines hits for all Pennsylvania EDCs.

[18] *See Biennial Inspection, Maintenance, Repair and Replacement Plan (2025-2026) of West Penn Power Company,*; *Biennial Inspection, Maintenance, Repair and Replacement Plan (2025-2026) of Pennsylvania Power Company*; *Biennial Inspection, Maintenance, Repair and Replacement Plan (2025-2026) of Pennsylvania Electric Company*; *Biennial Inspection, Maintenance, Repair and Replacement Plan (2025-2026) of Metropolitan Edison Company*, Docket No. M-2009-2094773.

adjacent to their homes and businesses."[19] The PUC and its Staff have long emphasized the direct nexus between vegetation management and reliability and thus encourages all electric utilities to enhance their vegetation management programs in the manner specified by FE PA in this proceeding.

Q. Does vegetation management have benefits beyond system reliability?

A. Yes. In addition to impacting reliability metrics, vegetation management plays an important role in providing safe electric service. While the safety benefits derived from the enhanced program are difficult to quantify, they are profound and I am confident the enhanced program will reduce exposure. Established corridors, free of obstacles, will improve Company access to facilities, making it safer to maintain and repair assets. Well maintained corridors also reduce vegetation management crew injuries and allows for greater deployment and use of specialized equipment. Further, many of the Company's corridors are adjacent to roads, sidewalks, or personal property, and the removal of hazards will also improve the conditions of the surrounding area, making our overall communities safer. As such, the Company's enhanced vegetation management program not only serves to benefit system reliability, it also will serve the important purpose of improving the safety of FE PA's distribution system for its employees and the public.

Vegetation management is also uniquely positioned to reduce wildfires including the ignition, spread, flame lengths, and severity of wildfires. Although changing climate conditions are resulting in greater intensity and frequency of wildfire burned areas during the fire season and also introducing risk into areas not historically prone to such events,

[19] *Review of Vegetation Management Practices*, Docket No. M-2017-2622073, at p. 4 (Order entered Sept. 19, 2017).

effective vegetation management can help mitigate wildfire threats in several ways. Foremost, because the drier conditions are creating more vegetation fuel for wildfires, reduction of the volume of vegetation on- and off-corridor will have a direct and appreciable impact. The most effective way for electric utilities to reduce wildfire risks is to selectively control priority trees, incompatible vegetation, and brush throughout the corridor, because a corridor composed of grasses and shrubs creates a natural, defensible fire barrier, which in turn reduces fire intensity and spread. A well-maintained corridor can also act as a fire road, or emergency access route for fire responders. Further, reducing the volume of vegetation also reduces the likelihood of fire ignitions. Although vegetation management cannot stop the spread of wildfires, an effective program can decrease the impact they have, making our adjacent communities more resilient. The wildfire mitigation benefits of the Company's existing vegetation management program will also be supplemented under the enhanced vegetation management program.

Q. Are there other reasons presented as a part of the Company's rebuttal case that support the conclusion that the enhanced vegetation management program is just, reasonable and in the public interest?

A. Yes. FE PA retained an external consultant to analyze the concerns raised by I&E and OCA regarding the costs of the proposed enhanced vegetation management program: Jason De Stigter (FE PA Statement No. 13-R). Mr. Stigter provides a benefit cost analysis ("BCA") that provides further justification for the program. While the work contemplated by the enhanced vegetation management program is independently justified and should be approved on the basis that it is necessary to maintain and enhance the safety and reliability of its distribution system, Mr. De Stigter's testimony demonstrates that the enhanced

vegetation management program is also justified on a BCA basis. In this regard, the program will enhance reliability and safety, while also providing financial benefits to customers that outweigh the financial costs of the program.

A. REBUTTAL TO OCA WITNESSES KONIDENA AND MUGRACE REGARDING VEGETATION MANAGEMENT

Q. Please summarize the overall position of OCA witness Konidena as related to vegetation management.

A. OCA witness Konidena's primary claim is that FE PA's "reliability performance is worse than its peers, even after investments in the long term infrastructure improvement plans (LTIIP) and vegetation management program."[20] Based on this claim, he argues that the Company's proposed base rate increase "should not be approved in its entirety."[21] While OCA witness Konidena does not support the Company's enhanced vegetation management program, he does not dispute the need to meet FE PA's "minimum regulatory budget." Indeed, he notes that the Company should be allowed to recover "50% of its proposed $92,846,000 expense related to vegetation management", approximately 50% of its enhanced vegetation management program.[22] OCA witness Konidena argues, however, that FE PA should: (1) provide detailed annual reporting for the enhanced vegetation management program,[23] and that any increased vegetation management expense should only be authorized in conjunction with annual reporting on specific expenses[24]; (2) perform better, more prudent, and targeted vegetation management, including addressing off-

[20] OCA St. No. 7 at p. 4.
[21] OCA t. No. 7 at p. 4.
[22] OCA St. No. 7 at pp. 41, 42.
[23] OCA St. No. 7 at pp. 32, 41.
[24] OCA St. No. 4 at pp. 39, 41.

corridor trees[25]; (3) evaluate battery options and/or undergrounding for areas where priority trees are the source of worst-performing circuits[26]; (4) utilize a 1- to 2-year vegetation management cycle for the PUC to evaluate after the completion of 4 years[27]; and (5) reduce the proposed expense of the enhanced vegetation management program by 50% so that the program can be developed, and reliability metrics can be targeted and assessed in two to four years.[28]

Q. Does FE PA agree with OCA witness Konidena's concerns and recommendations?

A. Generally speaking, FE PA disagrees with Mr. Konidena's claims and opposes his recommendations. OCA witness Konidena's claims and recommendations regarding the Company's vegetation management programs, including the proposed enhanced vegetation management program, are inaccurate, impracticable, and contradictory.

Q. More specifically, what is FE PA's position with respect to OCA witness Konidena's claim that FE PA's historic vegetation management practices have been insufficient?

A. It appears that OCA witness Konidena assumes the Company is performing inefficient or unnecessary vegetation management work or is failing to comply with the PUC's regulations. That is not the case. FE PA's Biennial I&M Plan, as filed with the PUC, identifies the baseline vegetation management work that is being completed to meet the plan requirements. TUS Staff reviews the plan and either approves it or provides guidance before approving it. TUS approved the 2023-2024 Rate District plans and the revised and consolidated 2025-2026 FE PA Biennial I&M Plan, indicating that the FE PA's existing

[25] OCA St. No. 4 at pp. 35-36, 41.
[26] OCA St. No. 4 at pp. 41, 44-47, 47-50.
[27] OCA St. No. 4 at pp. 40, 41.
[28] OCA St. No. 4 at pp. 40-41, 42.

vegetation management plan "generally complies" with the Commission's regulations.[29] Had the vegetation management plan been imprudent or insufficient as Mr. Konidena asserts, TUS would not have approved the plan.

Moreover, FE PA's enhanced vegetation management program recognizes the fact that the type(s) and extent of vegetation management work required to enhance the safety and reliability of FE PA's system is not static. They change over time and have changed since the Company's last base rate case proceeding. Such changes include increasing frequency and duration of weather events, changing growth patterns both on- and off-corridor, and accelerated investments under the Company's LTIIP that have highlighted the need for improvements to vegetation management while improving other aspects of FE PA's system. The Company cannot proactively respond to these changes under the existing program and expenditure levels.

Q. Is the "minimum regulatory budget" applicable to the Company's vegetation management expense representative of its compliance with the Commission-approved 2025-2026 FE PA Biennial I&M Plan?

A. Yes, it is.

[29] In particular, TUS recommended that FE PA's predecessors accelerate the vegetation management cycle from a 4-8 year period to a 4-5 year period. *See, e.g.*, Biennial Inspection, Maintenance, Repair and Replacement Plan (2025-2026) of Metropolitan Edison Company, Docket No. M-2009-2094773 (Secretarial Letter dated Dec. 28, 2023). Similar Secretarial Letters containing this directive were issued for the other historic companies. In response, FE PA issued the revised and consolidated 2025-2026 FE PA Biennial I&M Plan, which included a 4-5 year cycle, that was approved by TUS. *Revised Biennial Inspection, Maintenance, Repair and Replacement Plan for FirstEnergy Pennsylvania Electric Company for the period of January 1, 2025 through December 31, 2026*, at Docket No. M-2009-2094773 (Secretarial Letter dated April 24, 2024).

Q. Has the Company quantified the costs to complete the work associated with the minimum regulatory budget and compared those costs to the incremental costs of the enhanced vegetation management program?

A. Yes. The vegetation management work to meet the regulatory minimum plan requirements were quantified by FE PA and are included in Table 1 below under the "Minimum Regulatory Required Budget" column for Year 1 of the program. This table also includes the Incremental Cost of the Enhanced Program, which is the piece at issue for OCA witness Konidena. The budget for the proposed enhanced vegetation management plan, as identified in OCA Set IV, No. 10 and included in Tables 1 and 2 below, indicates the funds necessary to complete all the identified work in the enhanced vegetation management plan over the 10-year plan.

Table 1

Rate District	Minimum Regulatory Required Budget	Incremental Cost of Enhanced Program	Enhanced Program Total Budget
Met-Ed	$25,830,000	$28,619,360	$54,449,360
Penelec	$34,260,000	$25,365,382	$59,625,382
Penn Power	$10,190,000	$10,437,209	$20,627,209
West Penn	$42,970,000	$28,424,516	$71,394,516
FE PA Total	**$113,250,000**	**$92,846,466**	**$206,096,466**

Table 2

Year of Program	Minimum Regulatory Required Budget	Incremental Cost of Enhanced Program	Enhanced Program Total Budget
Year 1	$113,250,000	$92,846,466	$206,096,466
Year 2	$116,647,500	$96,560,325	$213,207,825
Year 3	$120,146,925	$100,422,738	$220,569,663
Year 4	$123,751,333	$104,439,647	$228,190,980
Year 5	$127,463,873	$107,621,694	$235,085,567
Year 6	$131,287,789	$109,824,040	$241,111,829
Year 7	$135,226,423	$114,217,002	$249,443,425
Year 8	$139,283,215	$118,785,682	$258,068,897
Year 9	$143,461,712	$71,250,139	$214,711,851
Year 10	$147,765,563	$74,100,145	$221,865,708

Q. Please respond to OCA witness Konidena's recommendation that the enhanced vegetation management program should utilize a 1-2 year clearance cycle but only receive 50% of the requested budget.

A. While OCA witness Konidena advances these two recommendations as a supposed cost savings for customers,[30] his proposal is contradictory and would not achieve this goal. In order to accelerate the amount of work expected to be performed under the enhanced vegetation management cycle that is proposed to occur on a 4- to 5-year vegetation management cycle to a 2-year vegetation management cycle, the vegetation management budget would need to be dramatically increased for those two years to account for the additional work. This is because reducing cycle duration only adjusts cycle length, it does not reduce the amount of field work that needs to be completed. So, Mr. Konidena is essentially arguing that FE PA should complete double the work in a half as long clearing

[30] OCA St. No. 7 at p. 40.

cycle, which will necessarily increase the costs incurred during that clearing cycle. Moreover, this argument by Mr. Konidena ignores the fact that the enhanced vegetation management program differs from the existing vegetation management program; its goals cannot be achieved by simply accelerating FE PA's clearance cycle. Rather, it allows for additional resources to be deployed during the clearing cycle to more proactively and aggressively target problematic vegetation that can impact the Company's facilities and service. Accelerating the clearance cycles but only providing FE PA with half the resources to perform this enhanced work would significantly frustrate these goals.

Q. Does OCA witness Konidena also take issue with how each of FE PA's Rate Districts will have their vegetation management programs funded under the enhanced program?

A. Yes. OCA witness Konidena testified that "there appears to be a misalignment between Rate Districts with historical worst reliability performance and future enhanced vegetation management program spending."[31]

Q. Are there any problems with this statement by OCA witness Konidena?

A. Yes. It demonstrates that he has not taken into account any information that is specific to the field conditions and risks that may be present in any of the Rate Districts and has simply assumed the needs of each Rate District can be handled in the same manner.

Q. Are the Rate Districts identical as OCA witness Konidena appears to assume?

A. No. The Rate Districts, as delineated today for budgetary and financial purposes, are not identical, and different field conditions require different types of vegetation management

[31] OCA St. No. 7 at p. 22.

work. For example, the rural field conditions in the Penelec Rate District and the West Penn Rate District require more specialized equipment to perform work on the more challenging terrain. These field conditions increase the costs and time it takes to control vegetation, both when establishing the minimum required clearances by performing on-corridor tree removals and brush control, and when targeting off-corridor priority trees and overhanging limbs.

In addition, FE PA assesses system risk when performing vegetation management work. Risk is measured as a factor of performance and exposure to customers impacted. However, the Company's vegetation management program is restricted by the resources available to carry out the necessary work; the resources are based upon base rates that were established based upon achieving the minimum regulatory requirements tied to the Company's I&M program. Consequently, the Company must first prioritize obtaining the necessary regulatorily required clearances by trimming, then the Company can apply any remaining funds to additional priority tree, on-corridor tree and brush removal, and overhanging limb control. For the last several years, while the Company has been able to meet those minimum regulatory requirements using the resources available to it, those resources have not been adequate to complete enhanced priority tree, on-corridor tree and brush removal, and overhanging limb removal necessary to improve the reliability of its system. The enhanced vegetation management program will increase FE PA's ability to deploy the necessary resources to achieve these goals.

Importantly, the enhanced plan includes an initial, comprehensive review of the system. With the information gained from this review the Company will complete a plan with a goal of performing as much of the enhanced plan work in conjunction with

scheduled maintenance, thereby avoiding inefficiencies that may occur from performing scheduled and enhanced work separately. Also, the Company will assess risks and benefits for vegetation management in areas of each of the Rate Districts that will have the greatest beneficial impact to system risk and target the appropriate work in those areas.

Q. In order to evaluate the efficacy of the enhanced vegetation management program, will FE PA track the costs of this program?

A. Yes. OCA witness Konidena's testimony that FE PA does not plan to track expenses related to the enhanced vegetation management program is simply false.[32] OCA witness Konidena either confuses or conflates FE PA's response to discovery questions[33] asking specifically whether storm damage expenses would be tracked by different categories (priority trees, on-corridor incompatible trees and brush, overhang, and widening). In response to those questions, the Company explained that priority tree and other costs are not tracked separately during storm restoration efforts, which is what the questions cited asked. However, the breakdown of storm response tracking versus maintenance expense tracking is a different matter. The Company does track vegetation maintenance expenses under its existing maintenance program and will specifically track expenses related to the enhanced vegetation management program.

[32] OCA St. No. 7 at p. 30.
[33] See OCA Statement No. 7 at 30 (citing FE PA Responses to OCA Interrogatory Set VI, No. 10(b), 11(e), 12(c), and 13(b)).

Q. Will customers have to wait for 10 years to experience the benefits of the program as OCA witness Mr. Konidena suggests?[34]

A. No. Contrary to his claims, incremental improvements will occur over time as threatening vegetation is removed. These incremental improvements will ultimately lead to the achievement of overall improvements to FE PA's reliability. The incremental nature of the benefits of the enhanced vegetation management program (in terms of financial impacts to customers) are further borne out by the testimony of FE PA witness Mr. De Stigter (FE PA Statement No. 13-R).

Q. What are the estimated overall reliability improvements that FE PA will achieve under the enhanced vegetation management program?

A. As explained in FE PA Response to OCA Interrogatory Set V, No. 46, "specific to the enhanced vegetation management program proposed, the Company estimates a cumulative improvement in reliability that results in a reduction of the average SAIDI by 10%, SAIFI by 6%, and CAIDI by 5% over the 10-year program, compared to recent historical results. These estimates were preliminary and FirstEnergy feels a range for improvement will be closer to 22 to 36% in SAIDI; 8 to 14% SAIFI; and a 15 to 25% CAIDI. And, importantly, these benefits are with respect to overall reliability metrics, not just specifically vegetation-based outages. FE PA is confident that the enhanced vegetation management program will deliver on reliability improvements while controlling the long-term program costs. Removing off-corridor priority trees that our trained professional arborists believe will impact the system before the next scheduled maintenance (leading cause of outages), removing additional overhang (second leading cause of outages), and removing trees and

[34] OCA St. No. 7 at 31.

controlling brush on the corridor will most certainly improve reliability, control long term costs and reduce exposures to workers and the public. Indeed, funding beyond the minimum regulatory requirements is necessary to increase the likelihood of future performance that meets or exceeds reliability benchmarks. Reducing the Company's claimed vegetation management expense as proposed by OCA and I&E will have the opposite effect.

Q. Does OCA witness Konidena take issue with the Company's plan to remove priority trees under the enhanced vegetation management program?

A. Yes. He asserts that FE PA "seems to have no defined, specific plan as to how the Company is going to more 'proactively' target priority trees."[35]

Q. Is OCA witness Konidena correct?

A. No. Removal of priority trees that are not immediate hazards are prioritized by their condition, with those in the worst condition removed first, and those that will have the highest impact to reliability and safety given the current level of funding. As priority trees continue to remain in the field, their condition becomes more hazardous over time, often due to adverse weather and other environmental factors. Additionally, due to damaging storms, insect infestations such as the Emerald Ash Borer, general decline, etc., there will always be more priority trees year over year. While priority trees continue to be a dynamic, growing population of work, the enhanced vegetation management plan will drive improved reliability and safety by facilitating FE PA's ability to perform proactive, targeted work beyond the regulatory minimum requirements.

[35] OCA St. No. 7 at pp. 34-35.

However, priority tree removal is ultimately planned based on current annual funding, which has been limited to achieve the minimum regulatory clearance requirements. This limited recovery doesn't allow for proper off-corridor priority tree work, which resultantly allows for non-immediate threat priority trees that cannot be removed under the current balancing of cost versus impact in a given year to remain in the field. In FE PA Response to OCA Interrogatory Set VI, No. 10, the Company explained in more detail how priority trees are identified and removed under the current vegetation management program: "[u]tility tree care professional work planners, reporting directly to the Company, are trained to identify and mark priority trees for removal. Currently, the Company removes priority trees that are identified in the field as an immediate threat to the Company's facilities, which may also pose a risk to public safety. The Company proposes to enhance the scope of work to include priority trees that are not classified as an immediate threat but that may still impact the distribution system prior to the next regularly scheduled maintenance, especially during major events." Importantly, while these trees may not be considered immediate hazards, they remain a risk to the Company's system and the longer they remain in the field the more that risk increases. The enhanced program will provide the Company the funding necessary to control this recognized threat and eliminate known risks to its system at an accelerated pace. No process changes are necessary under the enhanced vegetation management program other than to expand the scope of removal to target the removal of additional off-corridor priority trees and overhanging limbs.

Q. Does OCA witness Konidena raise further concerns regarding the impacts and costs of priority trees?

A. Yes. He also claims that the Company does not seek reimbursement for damages caused by off-corridor priority trees, which causes ratepayers to "foot[] the total bill for damages and the inconvenience of outages caused by priority trees."[36]

Q. Is that accurate?

A. No. OCA witness Konidena notes that FE PA was asked in discovery whether the Company seeks reimbursement from an owner or their insurance carrier for damages caused by off-corridor trees, but then ignores the context of the response. FE PA does analyze off-corridor tree failures that result in damage to Company facilities, among other types of claims, to determine if it is economical to pursue reimbursement. The Company noted that it is often not economical to seek damages in these situations. If the Company did pursue uneconomical claims, it could actually increase its non-rate case legal expense and result in a higher cost to customers if the Company were unsuccessful. In this regard, his "concern" is simply based on a mischaracterization of how the Company weighs the impacts of pursuing reimbursement and the impact upon customers and provides no basis for his other recommendations.

Q. Does Mr. Konidena raise any concerns with the Company's proposals regarding distribution clearing zones under the enhanced vegetation management program?

A. Yes. He asserts that overhanging limbs have been recognized as a contributor to outages since 2019, and that clearing overhanging limbs in Zones 2 and 3 should have occurred in

[36] OCA St. No. 7 at p. 35.

2019.[37] He cites, again without context, FE PA's Response to OCA Interrogatory Set X, No. 14 to support his assertion.

Q. Please clarify the Company's response regarding when overhanging vegetation was identified as an outage cause.

A. FE PA Response to OCA Interrogatory Set X, No. 14, related to when overhanging limbs in Zones 2 and 3 were identified to be an issue, explained that "[o]verhanging limbs are a recognized contributor to outages historically. In 2019, the Company started tracking outage causes in more detail, including whether the outage was caused by a tree limb from an off-ROW tree." However, in reviewing this discovery response, the Company identified an error. Overhanging limbs are a recognized contributor to outages historically. In 2014, not 2019 as previously stated, the Company started tracking outage cause in more detail, including whether the outage was caused by a tree limb from an off-ROW tree. Additionally, in 2019, the Company began capturing additional details from a sampling of outage incidents, such as tree species and dimensions, distance off corridor, cause of failure, and vegetation health. Prior to 2014, vegetation caused outages were not parsed out by specific type, so it was unclear what percentage of vegetation caused outages were related to overhanging limbs as compared to off-corridor trees.

Q. Why has the Company not performed the additional work to clear overhanging limbs from Zones 2 and 3 since 2019?

A. The Company initially focused on the removal of Zone 1 overhanging vegetation, which would have had the highest impact on reliability for customers. Removal of Zone 2 and 3

[37] OCA St. No. 7 at p. 37.

overhanging limbs would have required significant additional resources that have not yet been available. The Company has focused on maintaining clearance around the wires to meet minimum regulatory requirements, which has been achieved. However, it is clear that additional resources are required to complete the removal of overhang in Zones 2 and 3 and improve reliability.

Q. Please respond to OCA witness Konidena's recommendation that detailed annual reporting for the enhanced vegetation management program should be required.

A. While the Company understands witness Konidena's desire for additional detailed annual reporting "to provide expense details and reliability improvements as part of its existing annual reliability report",[38] additional detailed reporting requirements were not contemplated as part of the proposed vegetation management spend and will require additional time and resources to complete annually.

OCA witness Konidena expands upon his proposed annual reporting requirements to require detailed reporting on each worst performing circuit for each element of the enhanced program.[39] This level of detail would be burdensome to collate and provide as the information comes from disparate systems and would be extremely time consuming to manually update. Similarly, the proposal that the Company should track whether each off-corridor priority tree received property owner permission to remove, whether overhang was removed in specific zones, whether widening was conducted, and the specific expense for each would take countless hours and resources from both field and office staff that otherwise could be used for more value-added work.

[38] OCA St. No. 7 at p. 41.
[39] OCA St. No. 7 at p. 32.

Finally, as a point of clarification, OCA witness Konidena mentions that the reporting should note whether a low growing plant was added on-corridor.[40] FE PA does not plant vegetation on the corridor during vegetation management maintenance activities. By removing incompatible trees and brush as further described in the enhanced vegetation program, and as explained in FE PA witness Smith's direct testimony, the program helps to "create and sustain a compatible, stable, and low growing plant community on the corridor, which will then compete with other plant species to limit the growth of additional incompatible tree species over time."[41]

Nevertheless, FE PA is willing to commit to providing annual reports that include data regarding cost, mileage, volume of work, type of work, reliability impact, and updated outage information, if it is granted its request to recover the costs of the enhanced vegetation management program in base rates is approved.

Q. Are there any further specific reasons why OCA witness Konidena's recommendation to identify remedial actions taken during storms and extraordinary storms as a part of his recommended annual reporting should be rejected?

A. As previously mentioned, it is difficult to quantify the removal of off-corridor priority trees and other types of vegetation during a storm, as the priority must be to restore customers as efficiently and safely as possible. So, if any additional reporting requirement is instituted with respect to vegetation management, such requirement should exclude detailed vegetation management reporting during and post-storm. To require otherwise would only serve to delay restoration to customers and negatively impact CAIDI.

[40] OCA St. No. 7 at p. 32.
[41] FE PA St. No. 2 at p. 20.

Q. Are there further reasons why OCA witness Konidena's inaccurate claims regarding the Company's vegetation management performance should be rejected?

A. Yes. OCA witness Konidena opines that based on the number of extraordinary storm damage petitions, FE PA's vegetation management and maintenance is lacking.[42]

Contrary to Mr. Konidena's claim, these items are not inherently related. Indeed, if the frequency of the Company's storm deferral petitions were related to the frequency of outages based upon vegetation management, there would be a correlation between the frequency of the storm deferral petitions and SAIFI. However, as Mr. Konidena has acknowledged, the Company's SAIFI performance has been trending positively, i.e., interruptions are less frequent.

Furthermore, this storm damage expense actually demonstrates the need for additional recovery for the enhanced vegetation management program so investments can be made to improve system reliability. FE PA is currently operating under a vegetation management program that is compliant with the Commission's regulations; however, it is clear that the existing program is not enough to address the issues now facing FE PA's system.

Moreover, contrary to OCA witness Konidena's claim, storm-related damage is not unique to FE PA. Rather, this is a wide-ranging issue applicable to Pennsylvania electric utilities generally. As the PUC concluded in its 2022 Pennsylvania Electric Reliability Report, Pennsylvania electric utilities "experienced 42 reportable outage events...in 2022" and "had 63 [reportable outage events] in 2021, which was the highest number reported to

[42] OCA St. No. 7 at p. 52.

the Commission since 1994."[43] In response to this trend, TUS specifically noted that it "expects all EDCs to review their vegetation management programs as vegetation issues are the number one cause of service outages for EDCs."[44] Contrary to OCA witness Konidena's critiques, FE PA's enhanced vegetation management program responds directly to a statewide issue of importance.

Furthermore, if Mr. Konidena's claim has any credibility, the implementation of a similar enhanced vegetation management program in West Virginia highlights why his concerns about storm costs actually justify FE PA's enhanced vegetation management program. As a case study, FE PA's affiliate has performed similar work to the FE PA enhanced vegetation management plan in West Virginia. As a result of this work, West Virginia is the only area of the service company where storm costs have been reduced over time. FE PA's affiliate, despite increasingly severe and damaging weather events, has realized improved reliability and reduced storm impact, which is a direct result of targeting additional off-corridor priority trees, removing overhang, removing on-corridor trees, and controlling incompatible vegetation on the system.

Q. Do you agree with OCA witness Konidena's characterization of how FE PA has addressed priority trees since the LTIIP was first established in 2016?

A. No. As explained in the Company's response to FE PA Response to OCA Interrogatory Set VI, No. 10, per 66 Pa.C.S. § 1351, only "eligible property" owned or operated by the utility shall be set forth in a LTIIP. As priority trees are off-corridor trees owned by

[43] 2022 Pennsylvania Electric Reliability Report (April 2024), at p. 103, available at https://www.puc.pa.gov/media/2898/electric-reliability-report_final.pdf.
[44] 2022 Pennsylvania Electric Reliability Report (April 2024), at p. 104, available at https://www.puc.pa.gov/media/2898/electric-reliability-report_final.pdf.

landowners, not the Company, they are not eligible property, as defined by statute. LTIIP projects requiring incidental vegetation management work may capture the costs of the vegetation management work, but priority tree removals were not included in LTIIP I or II as distinct projects as the statute prohibits this. Mr. Konidena's problem appears to be with the statute that enables a utility to file an LTIIP.

Q. Can you speak to witness Konidena's concern that FE PA "is estimating only a 3 percent reduction in storm damage expenses" under its enhanced vegetation management program?[45]

A. As explained in FE PA Response to OCA Interrogatory Set VI, No. 10, the "Company anticipates that the proposed Vegetation Management Program will reduce future storm expenses an estimated $2 to $3 million per year, starting in year 5. The expected percentage reduction in total storm damage expenses will vary by year, but is estimated at a 3 percent reduction in Year 5 if the entire enhanced budget is approved." This is further clarified in FE PA Response to OCA Interrogatory Set X, No. 11, where the Company indicates that the "benefits will be incrementally realized as work is performed, but it is estimated, at the conclusion of the first cycle, that projected storm expenses will be reduced by approximately 3%, assuming similar weather patterns."

FE PA's conservative storm cost reduction projection is supported by the results obtained by FE PA's West Virginia affiliate, while OCA witness Konidena has presented no evidence to refute the Company's projection. Additionally, witness Konidena asserts that the Company does not plan to evaluate expenses related to storm damages until 2029.[46]

[45] OCA St. No. 7 at p. 53.
[46] OCA St. No. 7 at p. 54.

The Company explained in discovery that FE PA will evaluate why storm expenses were not being reduced if in fact the storm expenses fail to go down by Year 5. This does not mean that the Company will only review storm expenses in 2029 as OCA witness Konidena asserts. In fact, in the same discovery response OCA witness Konidena cites to form his opinion the Company explains that "[s]torm expenses decrease when the volume of vegetation is reduced."[47] Using this rationale, the Company explains that the reduction in vegetation is estimated to reduce expenses related to storm damage over time. As the enhanced program is estimated to take 10 years to complete and the most efficient use of resources is to perform the additional enhanced maintenance at the time of a circuit's normal maintenance, storm damage expenses are estimated to go down on circuits that have already had enhanced vegetation management completed. Moreover, due to the fact that storm damage expenses are dependent on the frequency and duration of storms in relation to the circuits where enhanced vegetation management work is performed, the Company's proposal to evaluate the program in Year 5 aligns with how it adjusts its storm reserve account (i.e., by using an average of five years of actuals as explained by FE PA witness Larkin in her direct testimony, FE PA Statement No. 3).

Q. Does another OCA witness make specific recommendations based upon the testimony of Mr. Konidena, that you will address?

A. Yes. OCA witness Mr. Mugrace adopts or relies upon several recommendations made by OCA witness Mr. Konidena to support his recommended adjustments to the Company's revenue requirement.

[47] FE PA Response to OCA Interrogatory Set X, No. 11.

Q. What is OCA witness Mugrace's position regarding the Company's vegetation management expense?

A. OCA witness Mugrace does not dispute the need to meet the minimum regulatory budget. Witness Mugrace references witness Konidena's testimony to recommend however, that FE PA should only be allowed to recover 50% of the proposed Incremental Cost of the Enhanced Program as identified in Table 1 and 2 above.[48] He bases this recommendation on his opinion that the "Company's current level of spending in this area has had little effect as to improving its reliability numbers or decreasing the frequency of outages and characterizes the Company's proposed enhanced vegetation management program as speculative.[49]

Q. Do you agree with witness Mugrace's recommendation?

A. No. OCA witness Mugrace's testimony and recommendations regarding vegetation management expense should be rejected for the same reasons explained above with respect to OCA witness Konidena. In addition, Mr. Mugrace's claim that the proposed enhanced vegetation management program is "speculative" should rejected. It is clear that additional resources under the enhanced vegetation management program will permit the Company to complete proactive and targeted additional vegetation management work compared to the work it can complete under current conditions. As explained above, and in the rebuttal testimony of FE PA witness Mr. De Stigter (FE PA Statement No. 13-R), the benefits of the enhanced vegetation management program to reliability, safety and customers are clear.

[48] OCA St. No. 1 at p. 47.
[49] OCA St. No. 1 at p. 48.

Q. Do OCA witnesses Mugrace and Konidena also claim the Company should be required to study other solutions to improve system reliability other than increased vegetation management work?

A. Yes. They recommend FE PA be required to analyze certain battery storage and undergrounding solutions.[50]

Q. Has the Company studied other solutions to improve reliability performance, other than simply increasing the vegetation management budget?

A. Yes. Both OCA witnesses failed to mention FE PA Response to OCA Interrogatory Set X, No. 1, related to the use of these technologies. As explained in great detail in the response, though the Company is not utilizing the specific tool (Overstory) referenced in the question, the Company has been investigating similar and emerging technology for years to identify the best opportunities to improve system performance and reliability while reducing costs. In fact, the Company initiated development of the Advanced Vegetation Analytics Tool ("AVAT") in 2021 to utilize technology to identify and quantify vegetation system conditions and focus on the risk and probability of tree-caused outages. The last three years of the project has included integration with numerous data sets, high resolution

[50] OCA St. No. 1 at p. 48; OCA St. No. 7 at pp. 26, 44-50.

imagery, and an extensive pilot was completed in 2023. It is a patent mischaracterization to claim the Company has failed to provide any new or innovative plans.

Q. Is the PUC aware of the Company's planned program improvements related to vegetation management?

A. Yes. In the Biennial I&M Plan Secretarial letter dated April 24, 2024, TUS stated:

> FE PA has adopted a four to five year vegetation management cycle, rather than its previous four to eight year cycle. FE PA also indicated that is exploring emerging technologies that may suggest effective vegetation management strategies for circuit and cycle work models through remote sensing and analytics, which could allow for future adjustments to the vegetation management plan by utilizing reliability metrics and circuit system condition to determine appropriate clearance cycle length. TUS Staff finds that FE PA's Revised I&M Plan generally complies with Section 57.198(n)(1).

Additionally, in its Order disposing of the Formal Complaint filed by I&E against West Penn Power Company,[51] the West Penn Rate District agreed to maintain detailed records of rework locations, to review existing vegetation management standards and clearance specifications, revise the Distribution Vegetation Management Standards in certain key areas, maintain vegetation management records, perform inspections of maintenance work, and perform quality control inspections among other requirements. As a part of the resolution of this case, the West Penn Rate District agreed to implement a work management software solution tool to enable the Company's employees and contractors to manage, document, track, inspect, and report on vegetation management work. This tool was developed and is being tested in the field to ensure it meets the

[51] *Pa. PUC, Bureau of Investigation and Enforcement v. West Penn Power Company*, Docket No. C-2021-3024913 (Order entered March 10, 2022).

expectations of the requirements identified by the PUC, the needs of the Company, and creates efficiencies for the vegetation management employees and contractors.

Finally, as previously mentioned, the PUC's 2022 Pennsylvania Electric Reliability Report directed EDCs to review their vegetation management programs to ensure that resources are efficiently and effectively directed at the main cause of outages, i.e., vegetation.

B. REBUTTAL TO I&E WITNESS WILSON REGARDING VEGETATION MANAGEMENT

Q. Could you please summarize I&E witness Wilson's position regarding FE PA's claimed vegetation management expense for the FPFTY?

A. I&E witness Wilson argues that FE PA's total allowance should be reduced to $113,250,000, "based on the minimum regulatory required budget as provided by the Company" as "doubling the Company's budget for vegetation management is imprudent and should not be allowed".[52]

Q. Do you agree with the overall position of I&E witness Wilson?

A. No. Witness Wilson indicated her opinion was that "the Company has not demonstrated that its minimum regulatory required budget could not focus on areas that would allow for the most efficient use of resources while addressing the most critical areas."[53] However, as explained in the Company's direct testimony of Wade Smith, vegetation is a key driver of outages, predominately off-corridor trees, which require an increase in investment levels to address.[54]

[52] I&E St. No. 4 at pp. 50, 51.
[53] *See* I&E St. No. 4 at p. 50.
[54] FE PA St. No. 2 at p. 19.

Additionally, FE PA has explained why the enhanced vegetation management program is necessary in response to the recommendations of OCA witnesses, above. In summary, the minimum regulatory required budget funds a program that achieves the minimum regulatory requirements. Additional resources are required to target the most critical areas, i.e., off-corridor priority trees (the cause of most tree-related service interruptions) and overhanging vegetation. The Company has demonstrated that it cannot presently achieve this work at existing resource levels and, therefore, it is unreasonable to suggest as I&E does that reducing the Company's ability to recover costs to a level meeting the minimum regulatory budget will lead to improved performance.

Q. Did I&E witness Wilson provide any data to substantiate her opinion?

A. Witness Wilson references data provided in FE PA Response to OCA Interrogatory Set III, No. 20, which identified the SAIDI and CAIDI outage data by cause and year for each Rate District. As previously identified, the data indicates that the main driver of the tree-related service interruptions is off-corridor priority trees.[55]

Q. Does this data actually support her recommendation?

A. No. Contrary to the opinion drawn by I&E witness Wilson, this data indicates that the minimum regulatory required budget is insufficient to target removal of these off-corridor priority trees beyond minimum regulatory requirements.

Previous performance is only indicative of future performance if the Company is limited to the same levels of resources moving forward. Increasing the Company's ability to recover the costs of deploying additional resources above minimum regulatory

[55] FE PA St. No. 2 at p. 9.

requirements will allow FE PA to proactively control vegetation and target the most critical areas.

IV. REBUTTAL REGARDING I&M ADJUSTMENTS

Q. Before addressing any adjustments to the Company's claims for capital costs and operations & maintenance ("O&M") expense related to its I&M Plan, do you have any updates or corrects to these costs?

A. Yes. The Company has updates to both the capital and O&M costs associated with I&M.

Q. Please explain the corrections that need to be made regarding I&M O&M costs.

A. As provided in FE PA Response to OCA Interrogatory Set IV, No. 12 Supplemental, the Company identified an error in FE PA Exhibit PML-1 page 40 that the $6.0M in O&M of the overhead circuit and overhead transformer I&M programs was shown as an adjustment when that figure is the total O&M cost of those programs. The O&M adjustment should have been $1.5M for a total estimated cost of $6.0M in 2025 for both the overhead circuit and overhead transformer programs. This correction is reflected in FE PA Exhibit PML-7, which is the Company's rebuttal accounting exhibit sponsored by FE PA witness Trish Larkin. Additionally, FE PA Statement No. 2, page 18, lines 3 – 5, need to be corrected. Mr. Smith's testimony incorrectly stated that this change to the I&M cycles will result in an increase of $6.5M when this should have stated that this change will result in an increase of $1.5M over the current five-year I&M cycle, for a total program cost of $6.0M for 2025.

Q. Please explain the corrections for the I&M capital costs.

A. The Company identified an error in FE PA Exhibit PML-1 page 6 that the $12.0M in capital for the overhead circuit and overhead transformer I&M programs was shown as an

adjustment when that figure is the total capital cost of those programs. The capital adjustment should have been $0.1M for a total estimated cost of $12.0M in 2025 for both the overhead circuit and overhead transformer programs. This correction is also reflected in FE PA Exhibit PML-7.

Q. Do any of the other parties' witnesses propose an adjustment to the Company's costs for I&M?

A. Yes. OCA witness Mr. Mugrace claims that the Company included costs from the second year of the I&M Program (i.e., 2026 costs) in its claim for the FPFTY (i.e., 2025).[56]

Q. Is OCA witness Mugrace correct that capital costs associated with the I&M Program for 2026 are included in this filing?

A. No. In FE PA Response to OCA Interrogatory Set IV, No. 13, the Company responded to the question which incorrectly assumed the capital costs for the first year of the program (2025) would be the same as the second year (2026). As stated in that response, this is an incorrect assumption and the estimated costs for 2026, $29.603M were provided. That figure, however, is not included in this filing as it is beyond the test year.

Q. Do you agree with OCA witness Mugrace's recommendation that expenses for these I&M programs be amortized over 5.3 years as opposed to the Company's 3-year proposal?

A. No. The only basis offered by Mr. Mugrace is his assertion that it is appropriate to amortize the I&M Program expense components over 5.3 years to align this amortization period

[56] *See* OCA St. No. 1 at pp. 9 and 49.

with his recommended "rate case amortization period."[57] FE PA witness Ms. Larkin (FE PA Statement No. 3-R) explains why OCA's recommendations regarding rate case expense should be rejected and, for those same reasons, OCA's proposed change to the amortization period for I&M expenses should also be rejected.

IV. Storm Reserve and Extraordinary Storm Costs

Q. Could you please summarize the overall position of OCA and I&E related to the Company's storm reserve?

A. Yes. OCA witness Mugrace recommends that the Company's proposals with respect to the storm reserve and extraordinary storm costs should be disallowed. First, he recommends that these costs should only be accounted for as expenses and amortized over the same period as rate case expense.[58] He also recommends that 21.3% of the storm reserve be disallowed based on OCA witness Konidena's evaluation of FE PA's SAIFI metrics.[59] I&E similarly opposes the Company's proposals regarding the storm reserve and the recovery of extraordinary storm costs.[60]

Q. Does Mr. Konidena raise other concerns regarding the Company's extraordinary storm damage expense deferrals?

A. Yes, he does. He claims that if FE PA "had taken proactive steps in the removal of priority trees since the LTIIP was first established in 2016, the extraordinary storm damage expense deferral amounts would have been reduced."[61] OCA witness Konidena's claims regarding

[57] OCA St. No. 1 at p. 10.
[58] OCA St. No. 7 at pp. 15-20.
[59] OCA St. No. 7 at pp. 15-20.
[60] I&E St. No. 4 at pp. 34-44.
[61] OCA St. No. 7 at p. 52.

the steps taken by the Company with respect to the removal of priority trees is addressed above. Below, I address his specific claims storm damage deferrals.

Q. Does the Company agree with the other parties' claims regarding its continued use of storm reserve accounts?

A. No.

Q. Why does the Company need these storm reserve accounts?

A. Due to the volatility of storms, a storm reserve account provides a means to recover those expenses while allowing the utility to earn an allowable rate of return and would otherwise be a burden to the Company and ratepayers if costs were not able to have reserve accounting treatment and reconciled via an amortization. Because of the volatility of storms year over year, storm reserve accounting is a reasonable means to ensure we recover prudently incurred storm-related expenses. Furthermore, unlike another Pennsylvania EDC, FE PA does not have a rider mechanism that permits it to automatically recover the storm costs it incurs, which are not otherwise recovered in base rates. To the extent that FE PA is not permitted to continue the use of its storm reserve account in the manner previously approved, FE PA would alternatively request that it be permitted to implement a rider mechanism that permits it to automatically recover the storm costs it incurs which are otherwise not recovered in base rates.

Q. When did the Company receive approval to establish and maintain a storm reserve account?

A. In the 2014 base rate case, Joint Petition for Partial Settlement of Rate Investigation,[62] term and condition 5 directed that a "Storm Reserve Account will be established and maintained on the Company's balance sheet beginning on the date the Settlement Rates become effective." Further, these expenses were to be recorded in the Storm Reserve Account to eliminate any impact on the Company's income statement. Similarly, in the 2016 base rate case, Joint Petition for Partial Settlement of Rate Investigation,[63] term and condition 16 directed that the "Company will continue to maintain its Storm Reserve Account on the Company's balance sheet, which began on May 3, 2015, per the settlement approved by the Commission..." Importantly, the reserve mechanism was adopted after the Company had initially proposed to implement a storm cost rider mechanism, which was opposed by the parties.

Q. Does having a storm reserve mean there is no incentive for the Company to control storm costs, as OCA witness Mugrace states?[64]

A. No. All expenditures deferred in the storm reserve account are subject to review for reasonableness in a rate case when the Company seeks to claim them. Importantly, OCA has not conducted a reasonableness review of these costs but instead has generally opposed the Company's ability to fully recover the costs.

[62] Met-Ed Rate District Docket Nos. R-2014-2428745 and M-2013-2341990, Penelec Rate District Docket Nos. R-2014-2428743 and M-2013-2341994, Penn Power Rate District Docket Nos. R-2014-2428744 and M-2013-2341993, and West Penn Rate District Docket Nos. R-2014-2428742 and M-2013-2341991.

[64] OCA St. No. 1 at 21.

V. Workforce Development and Training

Q. Do any of the other parties comment upon FE PA's workforce development and training in their direct testimony?

A. Yes. OCA witness Mr. Mugrace (OCA Statement No. 1) and IBEW 777 witness Kline (IBEW Statement No. 1) both do. FE PA witness Wade Smith addresses OCA's claims regarding the recovery of Workforce Development costs in his rebuttal testimony (FE PA Statement No. 2-R). I will response to IBEW 777 witness Kline.

Q. Please summarize IBEW witness Kline's testimony regarding FE PA's Workforce Development efforts.

A. Mr. Kline acknowledges that labor, which makes up 66% of the Company's O&M expenditures, is due to labor, and that those costs will continue to increase. Mr. Kline also acknowledges the need to fully fund those costs so the Met-Ed Rate District can continue to proactively groom and train workers to replace those lost through attrition. The Met-Ed Rate District specifically, as well as FE PA as a whole, faces challenges in obtaining qualified resources in advance of planned retirements. New employees require a substantial amount of time and money to train so that those new employees become qualified and capable of replacing the more seasoned employees.

Q. Do you agree with Mr. Kline's statements on behalf of IBEW regarding training requirements for contractors?

A. Mr. Kline's statement that the Company imposes less stringent training and certification requirements for contractors than it does for internal employees, specifically the requirement for the Edison Electric Institute ("EEI") certification for layout, mapping,

design specialists, and relay technicians, is technically correct but misses a critical point.[65] Specifically, the training and certification requirements for FE PA employees under the collective bargaining agreement ("CBA") are part of the negotiated contract and agreed to by the IBEW. The Company does not specify the types of education, training, or certification needed by contractors. Contractors are hired to perform a specific job to the Company's specifications; how those companies achieve those final results is up to those companies to decide, including the training and certifications of their employees.

Q. What is your response to IBEW witness Kline's statement that contractors maintain full-time employees and office space within FE PA buildings?

A. As stated by Mr. Kline, some contractors do maintain office space and employees within FE PA buildings. These employees and spaces are part of contractual agreements with those specific contractors that work on multiple projects or long-term projects within the FE PA footprint. This agreement provides a cost-saving benefit to ratepayers by providing onsite office space and access to job sites thus reducing travel time from their own offices. These spaces within FE PA buildings are used by contractors for work on FE PA projects and not the contractor's own business purposes. I do not believe this is the appropriate time and format to raise this issue during a rate case and, even if it were appropriate, this testimony provides no basis for any adjustment to the Company's revenue requirement.

[65] IBEW St. No. 1 at p. 8.

Q. Do you agree with IBEW witness Kline's further recommendation that the PUC require the Met-Ed Rate District to file an Annual Workforce Planning Report with the PUC?[66]

A. No. Met-Ed and the other FE PA Rate Districts provide staffing updates to the Commission on a quarterly basis in the Company's Quarterly Reliability Reports. These staffing updates include distribution line workers, substation workers, and transmission line workers. These quarterly updates provide the actual number of hires, internal transfers, attrition, and the expected number of hires for the year. The Company has employees dedicated to monitoring FE PA's, (including Met-Ed) workforce, attrition, and hiring needs, and addressing the challenges to meeting its hiring needs. In addition, this very topic is routinely reviewed by the Commission through its routine management audits and efficiency investigations. The Company does not believe the extra time and resources spent on additional annual reporting to the Commission will benefit the ratepayers or have a meaningful impact on the Company's hiring plans.

Q. Is Mr. Kline correct that "some departments have not received safety training in years"[67]?

A. This is not an accurate statement. FE PA identifies Safety as one of its five core values, which also include Integrity, Performance Excellence, Stewardship, and Diversity, Equity, and Inclusion. Safety means we keep ourselves and others safe, and includes the following four pieces: 1) We collaboratively work together to identify, control and reduce exposure for self and others, 2) We recognize others for their effort to control exposure for self and

[66] IBEW St. No. 1 at p. 14.
[67] IBEW St. No. 1 at p. 17.

others, 3) We courageously coach each other to ensure exposures are controlled for self and others, and 4) We consistently follow our safety rules, procedures and programs to keep us safe. The Company has annual safety training requirements that all employees must meet. These requirements vary by position. For example, a lineman is required to receive and successfully complete more safety training than an office employee. The completion of all required safety training is tracked by the FE PA Workforce Development department. The Company utilizes various means to conduct training, including in person training and online training. The standardized approach of online training helps ensure consistency across the entire FE PA footprint.

Q. Would you like to address Mr. Kline's recommendations for screening project bids from contractors?[68]

A. Yes. The Company does have a screening process when bidding contractor projects. The Company currently meets two of the three criteria described by Mr. Kline. First, all onsite contractors must have a valid Certificate of Insurance with standard coverage requirements. Some work types have more stringent coverage than others. These requirements are outlined in the specific contract or bid and is verified by the Insurance Risk group within the FE PA Supply Chain department before any purchase order is approved. Second, FE PA's safety requirements are included in every contract and bid and all contractors are expected to meet those safety requirements. However, how individual companies meet those minimum safety requirements may vary from the methods used by FE PA. The Company does not verify individual contractor companies' participation in apprenticeship and training programs. As I previously stated, contractor companies are hired to produce

[68] IBEW St. No. 1 at p. 9.

a finished project. How those companies develop that end product, the education requirements, and training requirements they impose on their own employees is not dictated by FE PA and I do not recommend this be included in project bid requirements.

Q. Would you like to address Witness Kline's assertions that the IBEW 777 supports the increased use of internal labor over contractors for vegetation management work, I&M for the overhead circuit and overhead transformer programs as they transition to a two-year cycle, and well as other work sited throughout their testimony?

A. Yes. The Company also supports the use of internal labor over contractor when possible and feasible. The Company performs an analysis when determining if internal labor or contractor labor is more cost effective and beneficial for the ratepayers. This analysis must consider a number of factors such as seasonality of the work, such as with vegetation management, collective bargaining agreements, availability of internal labor, duration of projects, and specialized skills or equipment needed. Additionally, as provided in FE PA Response to IBEW Interrogatory Set I, No. 38, the Company plans to increase or hold current levels of most positions covered by the CBA within the Met-Ed Rate District. The Company has also implemented the Journey Line Worker initiative specifically to increase the number of qualified line workers across FE PA and the broader FirstEnergy footprint.

VI. REBUTTAL REGARDING ACT 40 OF 2016

Q. Do any other parties make recommendations related to the requirements of Pennsylvania Act 40 of 2016 ("PA Act 40" or "Act 40")?

A. Yes. OCA witness Mr. Mugrace addresses the requirements of Act 40. Although witness Mugrace accepts the Company's satisfaction of Act 40's requirement that 50% of the

hypothetical Consolidated Tax Adjustment ("CTA") is being used to support reliability or infrastructure related to the rate-base eligible capital investment, he argues that the Company has not demonstrated the remaining 50% is being used for "general corporate purposes." OCA Statement No. 1 at 82-83. Mr. Mugrace offers his own definition of "general corporate purposes" and ultimately argues that FE PA has not identified how this amount will be used to benefit ratepayers and further insinuates, without any evidence, that FE PA will use this hypothetical amount to benefit its shareholders. OCA Statement No. 1 at 82.[69] He therefore recommends that this hypothetical amount should be used as a source of non-investor supplied capital and reduces FE PA's rate base balance by this amount. OCA Statement No. 1 at 83.

Q. Does the Company agree with Mr. Mugrace's recommendation?

A. No, it does not.

Q. Why not?

A. Initially, I note that FE PA witness Gawlik identifies flaws related to Mr. Mugrace's calculation in his rebuttal testimony (FE PA Statement No. 5-R). Moreover, the Commission and the courts have repeatedly rejected Mr. Mugrace's recommendations related to Act 40.

[69] I note that Mr. Mugrace mistakenly refers to PECO in his direct testimony when making this claim.

Q. Mr. Hawkins, to be clear, is the Company using 50% of the hypothetical amount calculated pursuant to Act 40 by FE PA witness Mr. Gawlik for general corporate purposes?

A. Yes, it is. Even under Mr. Mugrace's limited definition of general corporate purposes, he recognizes that this term could broadly refer to any law expenditures by the public utility. FE PA plans to make a variety of expenditures that fulfill its general purpose as a public utility in the FPFTY.

Q. Can you provide any specific examples of projects that this amount will be used to support?

A. While it is not practice to trace a hypothetical amount to specific projects, 50% of the Act 40 amount calculated by Mr. Gawlik will be used to support meter related work, streetlighting restorations, underground locating, maintenance of substations, maintenance of lines, and outage management, among other projects and work that fulfill FE PA's purpose to provide safe and reliable electric service to its customers.

VI. REBUTTAL REGARDING MANAGEMENT PERFORMANCE

Q. Do any of the other parties make recommendations regarding FE PA's Return n Equity ("ROE") related to the quality or reliability of the service it provides?

A. Yes. OCA witness Dr. Griffing recommended that the PUC reduce the Company's awarded ROE by 10 basis points in light of "poor reliability and service quality performances." OCA St. No. 2 at 43. He relies on the testimony of OCA witness Alexander (OCA Statement No. 6) and the testimony of OCA witness Konidena (OCA Statement No. 7) to conclude that FE PA's service reliability is poor.

Q. Does FE PA agree that a downward adjustment to ROE related to service reliability and quality is warranted?

A. No. I have addressed OCA witness Konidena's testimony regarding the reliability of the Company's service, above. Importantly, the reliability issues identified by Mr. Konidena are substantially driven by vegetation-related outages that impact FE PA's system. The Company has set forth a plan to improve reliability and substantially decrease vegetation-related outages going forward. However, what Mr. Konidena ignores is that the Company has complied with its PUC-approved vegetation management plants historically. Where FE PA has met regulatory requirements, it should not be penalized in its requested ROE. FE PA witness Jones (FE PA Statement No. 8-R) addresses the alleged service quality issues advanced by Ms. Alexander. Having rebutted each of OCA's witnesses relied upon by Dr. Griffing, there is no basis for his proposed reduction to ROE.

Q. Are there other reasons why the reduction to ROE related to service reliability and quality is not warranted?

A. There are two. First, it ignores that there are areas where the Company has hperformed well. Second, it ignores the fact that the Company did not request a management performance adder to ROE in this case.

Q. Where has FE PA performed well in regards to the service it provides?

A. FirstEnergy is regularly recognized in the areas of storm recovery, Diversity, Equity, and Inclusion (DEI), Environmental, Social, and Governance (ESG) areas, and customer experience.

Related to storm recovery, the Edison Electric Institute (EEI) has recognized FirstEnergy for the 19th consecutive year for our storm response efforts through the Emergency Recovery Award. The award commends employees' outstanding response in restoring power to hundreds of thousands of customers in Ohio, Pennsylvania, West Virginia, Maryland and New Jersey following Winter Storms Finn and Gerri in January 2024. EEI presents awards twice annually to member companies for extraordinary power restoration efforts or assistance to other electric companies after service disruptions caused by weather conditions and other natural events. The winners were chosen by a panel of judges following an international nomination process. On January 9, crews from across FirstEnergy bore the brunt of Winter Storm Finn, which brought strong winds, heavy rain, ice, and snow. The tree- and flood-related damage was widespread, consisting of hundreds of broken poles and crossarms, downed power lines, and fallen trees and debris blocking road access. By January 11, employees had restored power to 97% of the 373,000 customers who had lost power due to Winter Storm Finn. That restoration effort was quickly followed by response to Winter Storm Gerri, which began impacting FirstEnergy's service territory on January 12 with severe winds, rain and heavy, wet snow, affecting 192,000 customers. Following the company's Emergency Response Plan, thousands of FirstEnergy line workers, hazard responders, forestry crews, contractors, and safety and support personnel collectively worked more than 422,000 man-hours during the two storms, replacing 927 poles, 625 transformers and about 72 miles of wire.

Relative to FirstEnergy's DEI efforts, the Company has been recognized as a Best Employer for Diversity by *Forbes*; as a Top Utility, Top Company for Philanthropy, Top Company for ESG, and Top Company for Board of Directors List for *DiversityInc*; and by

various gender, disability, veteran, supplier, race/ethnicity organizations for our strong diversity programs and emphasis. Thus far in 2024, FirstEnergy was named Akron Urban League's Employer of the Month for employees' commitment to living out the company's core values of Performance Excellence and Diversity, Equity, and Inclusion within the local communities we serve – and our efforts to foster a welcoming, stimulating and rewarding work culture. FirstEnergy was also named, for the second year in a row, a Top 50 Diversity Employer by *Minority Engineer* magazine. The rankings are determined based on a survey of randomly selected Minority Engineer readers who were asked to name the employers where they would most like to work or that they believe provide a positive working environment for members of minority groups. *Newsweek* also named FirstEnergy as One of America's Greatest Workplaces in 2024 on three separate lists, citing efforts to promote diversity and mental wellbeing. FirstEnergy received the maximum score of five stars on both the America's Greatest Workplaces for Diversity 2024 and America's Greatest Workplaces for Mental Wellbeing 2024 rankings. FirstEnergy has been named to the inaugural 2023-24 list of Best Companies to Work For in the Utility Industry by *U.S. News & World Report*. The recognition reflects FirstEnergy's commitment to its team members through quality pay and benefits, career opportunities, professional development and more. For the utility industry, FirstEnergy ranked sixth out of the 18 companies included. Our ongoing commitment to DEI remains essential to our forward-looking and future-building strategy, and we continue to earn local and national recognition for our efforts.

ESG is another area in which FirstEnergy is being recognized. In 2022, FirstEnergy's vegetation management program was recognized by the ROW Stewardship

Council as a fully accredited ROW Utility Steward. As of January 2024, FirstEnergy is one of only ten electric companies in the country to be recognized as a fully-accredited ROW Steward for our Integrated Vegetation Management (IVM) practices. This accreditation program establishes responsible standards of excellence for ROW management and independently evaluates utilities' IVM practices according to more than 200 verifiers. The program promotes the application of IVM and best management practices to utility vegetation managers to maintain power system reliability and address ecological concerns. As the largest electric utility to be recognized, this accreditation highlights the diverse and innovative team required to execute a successful IVM program of our scale and standards, improving habitats and providing ecological benefits for pollinators and other wildlife as a result. FirstEnergy has also been a Tree Line USA award recipient since 1998. This National Arbor Day Foundation program, in collaboration with state foresters, recognizes best practices in public and private utility arboriculture, demonstrating how trees and utilities can co-exist for the benefit of communities and citizens. FirstEnergy has also been recognized by the U.S. Fish and Wildlife Service with a Certificate of Inclusion for enrollment in the Nationwide Candidate Conservation Agreement with Assurances (CCAA) for Monarch Butterfly Partner on Energy and Transportation Lands. The work to create the CCAA was led by the Rights-of-Way as Habitat Working Group at the University of Illinois-Chicago, along with more than 40 organizations across the country including FirstEnergy, to create a national, multi-sector collaborative effort to develop a voluntary conservation agreement to provide habitat for the monarch butterfly. The monarch butterfly has experienced drastic population losses, primarily driven by habitat loss throughout the monarch butterfly's migratory range, and loss of its obligate host plant,

milkweed. If the agreement had not been developed and the monarch butterfly became a Federal threatened or endangered species, utilities would incur additional regulatory requirements to protect the species and could expect regulatory uncertainty, additional permitting or minimization requirements, and potential project delays. In terms of ESG rating scores, FirstEnergy has been actively engaging with rating organizations to continue to improve transparency and disclosures to improve ESG ratings. FirstEnergy has improved ESG scoring on MSCI, S&P Global Ratings, CPA-Zicklin, and Sustainalytics since 2020.

The J.D. Power Institute has issued several awards specific to FE PA related to customer experience. In recent years, West Penn Power received the Customer Champion award from Cogent Syndicated Customer Utility Champion (Residential) in 2019, in 2021, Penn Power received the top award from JD Power Residential (East Midsize), and in 2023, Penn Power received the Customer Champion award from Cogent Syndicated Customer Utility Champion (Residential). Per J.D. Power's website, "J.D. Power Awards provide highest performing companies within our benchmarking studies the chance to let consumers know that they put their customers first. As the trusted symbol of the Voice of the Customer, our awards help companies increase consumer consideration and ensure that highest performing brands stand out in the crowd." While FirstEnergy does not subscribe to J.D. Power, the Company has received several awards.

Q. Why should the PUC recognize that FE PA did not request a management performance adder to ROE in this proceeding when evaluating OCA's adjustment?

A. The purpose of this base rate proceeding is to obtain the rate relief necessary to continue to provide safe and reliable service, and for the Company to enhance the service provided

relative to historic levels. OCA's adjustment appears to assume that FE PA is making no efforts to enhance the level of service provided to its customers over historical levels. This is not the case; rather, the Company has proposed a number of initiatives to prospectively enhance the level of service provided to its customers and has done so without seeking an ROE adder for historic management performance. Under such circumstances, OCA's downward adjustment to ROE is unnecessary and unreasonable, and could ultimately discourage a utility from continuously striving to improve its service for its customers.

VII. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes.

FE PA Statement No. 13-R

IV. CONCLUSION 12

REBUTTAL TESTIMONY
OF
APRIL MARX

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is April L. Marx. My business address is 76 S. Main Street, Akron, Ohio 44308.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company ("FESC"), a subsidiary of FirstEnergy Corp. ("FirstEnergy"), as the Director of Total Rewards. I am responsible for Executive Compensation and Retirement Programs, Employee Compensation, Payroll and Time, and Benefits. In addition, I oversee the Human Resources ("HR") Technology group. Effective August 1, 2024, I will be the acting Chief Human Resources Officer.

Q. What is your educational background and professional experience?

A. I have a bachelor's degree in business economics from the College of Wooster and a Master of Business Administration from the University of Phoenix. I joined FirstEnergy in June 2005 as an Assistant Business Analyst. After a series of promotions, I was named Supervisor of FirstEnergy Utilities Long-Term Planning. In 2013, I led a Financial Transformation project and was subsequently named the Director of Work Management and Performance Improvement. In 2016, I was named Director of Strategy and in 2018, was named Director of Strategy and Corporate Responsibility. In August 2022, I was named Assistant Controller, FirstEnergy Utilities. I became the Director of Total Rewards in January 2023 and in April 2024 expanded my responsibility to include Director of HR Technology on an interim basis.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to respond to certain portions of the following direct testimony submitted by the Pennsylvania Public Utility Commission's ("PUC" or the "Commission") Bureau of Investigation and Enforcement ("I&E") and the Pennsylvania Office of Consumer Advocate ("OCA"): I&E Statement No. 1, the direct testimony of Vanessa Okum; and OCA Statement No. 1, the direct testimony of Dante Mugrace. Specifically, I respond to adjustments advance by I&E witness Okum and OCA witness Mugrace related to (1) vacancy/headcount as applied to FE PA's payroll expense claim and related claims, and (2) FE PA's claims to recover costs associated with incentive compensation programs.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. No.

II. REBUTTAL REGARDING VACANCY RATE ADJUSTMENTS TO PAYROLL EXPENSE AND PAYROLL EXPENSE RELATED CLAIMS

Q. Do any of the other parties recommend an adjustment to FE PA's claimed payroll expense?

A. Yes. I&E witness Okum recommends a reduction to FE PA's capitalized payroll and payroll expense claims based on a vacancy rate she calculated for each of FE PA's Rate

Districts.[1] I&E witness Okum bases her proposed vacancy rates upon the actual vacancy rate experience by each of the Rate Districts in fiscal year ended December 31, 2023, which is the historic test year ("HTY") in this case.[2] Ms. Okum then uses this same vacancy rate to propose adjustments to the capitalized and expensed portions of employee benefits[3] and payroll taxes.[4]

OCA witness Mugrace similarly recommends reductions to various categories of payroll expenses based upon a vacancy rate adjustment.[5] Mr. Mugrace bases his vacancy rate adjustment upon the average of actual vacancy rates experienced by FE PA from 2019-2023 (discounting 2022 as an anomaly).[6] Mr. Mugrace then makes derivative adjustments to the Company's payroll taxes claim.[7]

Q. Does FE PA agree with the adjustments proposed by I&E and OCA with respect to a vacancy rate?

A. No.

Q. Please explain why not.

A. It is not appropriate to single out one historical component of labor and apply a reduction to other costs. Although there may be a vacancy rate, which is expected and normal in day-to-day operations, it is not appropriate to isolate the historical performance of one component of labor costs. When there is a lower headcount than planned, the portfolio of

[1] I&E St. No. 1 at pp. 12-13.
[2] I&E St. No. 1 at p. 14.
[3] I&E St. No. 1 at pp. 17-18.
[4] I&E St. No. 1 at pp. 21-22.
[5] OCA St. No. 1 at pp. 37-38, 43, 51, 54, 59.
[6] OCA St. No. 1 at pp. 37-38.
[7] OCA St. No. 1 at p. 78.

customer focused and reliability work is still completed with existing employees on overtime, or FE PA retains contractors to complete the work. Furthermore, with respect to the derivative adjustments to payroll taxes, applying a headcount factor to labor costs does not take into consideration the actual cost of the employee in terms of salary which is the foundation for payroll taxes. In summary, applying the vacancy rate adjustments proposed by I&E and OCA will negatively impact FE PA's ability to obtain the necessary resources to complete the portfolio of required work utilizing projected employee headcount. In turn, this will result in FE PA incurring additional costs related to overtime and contractors, employee retention (related to recruiting and hiring new employees to fill positions where existing employees depart due to burnout) than can be recovered through base rates.

III. REBUTTAL REGARDING INCENTIVE COMPENSATION PROGRAMS

Q. Do any of the other parties propose adjustments to the Company's claim to recover costs related to incentive compensation plans?

A. Yes. I&E witness Okum recommends that the Commission disallow recovery of certain expenses related to stock-based incentive compensation paid to FESC employees under the Short-Term Incentive Compensation ("STIP") and Long-Term Incentive Compensation ("LTIP") programs, which would reduce the Company's expenses claimed by $24,443,237.[8] OCA witness Mugrace proposes adjustments to several aspects of the Company's incentive compensation programs, which taken together would decrease the Company's proposed costs by $4,744,138 (related to STIP) and $8,629,446 (related to LTIP).[9]

[8] I&E St. No. 1 at p. 24.
[9] OCA St. No. 1 at pp. 41-42.

Q. Do you agree with either of the adjustments proposed by I&E or OCA?

A. No. First, there is a major flaw in Mr. Okum's recommendation that the STIP program is not a stock-based incentive program, so the entire basis for his recommendation as to STIP is unfounded. Further, as a general matter, I initially note that both OCA and I&E attempt to evaluate these incentive compensation programs in isolation. These attempts to single out and disallow aspects of overall compensation plan costs should be rejected because they disregard the fact that FE PA is entitled to recover in rates all costs reasonably necessary to provide electric service. To serve its customers, FE PA must be able to recruit and retain qualified employees, managers, executives and directors. Its ability to do so is directly related to its ability to provide reasonable and competitive compensation to qualified individuals. Relatedly, attempts to further isolate specific aspects of incentive compensation programs are contrary to how the PUC evaluates these programs as a whole. The other parties' attempts to disallow certain aspects of overall compensation would harm the Company's ability to recruit qualified individuals, and would fail to provide just and reasonable rates, as I explain below.

Q. Please explain why you disagree with I&E witness Okum's recommendation to disallow all costs related to the STIP.

A. All compensation expenses are a normal and reasonable cost of doing business, whether they are fixed or variable, and utilities should be allowed to recover reasonable costs associated with these expenses. FESC employees provide valuable support to FE PA's operations and customers. This support includes but is not limited to the following departments customer, engineering, distribution system operations, forestry, and health and safety. Furthermore, the use of an operating earnings per share ("EPS") metric as one of

the key performance indicators ("KPIs") for measuring STIP performance does not warrant disallowance of any portion of the STIP expense. The FE PA's financial and operational KPIs are intertwined and cannot be viewed as mutually exclusive. Strong financial performance provides the financial resources for operational success. For instance, strengthening FE PA's balance sheet leads to higher credit ratings and lower cost of capital, which supports investments that drive continued and enhanced operational reliability. Strong financial performance also delivers an internal source of capital and reduces the need to seek financing, which can help control the frequency of requested base rate increases. Accordingly, both the financial and operational metrics under the STIP provide a benefit to customers as well as shareholders. Similarly, the Company's KPI oriented around vigilance regarding operations and maintenance expense levels incentivizes employees to prudently incur expense and operate in as efficient a manner as possible – also to the benefit of our ratepayers.

Q. Is the use of Operating EPS as a KPI for determining compensation unique to the STIP?

A. No. Based on benchmarking, the STIP is aligned with our peer companies' market practices. According to a 2021 WorldatWork Incentive Pay Practices Survey for Publicly Traded Companies, eighty-nine percent of participants reported that their organizations offer an annual incentive program with performance metrics designed to reward the accomplishment of specific results similar to the Company's STIP. The fact that this type of compensation is common amongst our peers further demonstrates that if FE PA is prohibited from recovering the costs of offering this type of compensation, it will either:

(1) result in a competitive disadvantage in the labor market; or (2) necessitate increases to base salaries to remain competitive as explained below.

Q. If all or a portion of STIP expense is disallowed in this proceeding, what would be the effect on the competitiveness of the FE PA's total compensation package?

A. The effect would be that the compensation offered would no longer be competitive with the external market, significantly impacting the Company's ability to attract and maintain a qualified and talented workforce. As a result, to attract and retain qualified and talented employees, the Company would need to increase base salaries, which would otherwise increase fixed payroll costs. It is FE PA's strong belief, which is consistent with the determinations and practices of others in the utility industry and, in fact, industry generally, that a variable incentive component of overall compensation, such as the STIP, should be maintained instead of simply increasing base salaries. Incentive programs offering a variable component provide the additional benefit of motivating employees to achieve superior operational and financial performance. In this way, maintaining a variable component of overall compensation benefits customers.

Q. Please explain why you disagree with I&E witness Okum's recommendation to disallow all costs associated with the LTIP.

A. All compensation expenses are a normal and reasonable cost of doing business, whether they are fixed or variable, and utilities should be allowed to recover reasonable costs associated with these expenses. The use of financially-related KPIs does not warrant the disallowance of the LTIP expense. Similar to the STIP, the KPIs used for determining LTIP compensation provide benefits to customers and shareholders. The level of payout is dependent on the successful achievement of the KPIs over a three-year period, fostering

an environment of superior customer service and successful business operations, which again go hand in hand. This three-year period also offers incentives for affected employees to stay with the Company given the vesting period, which benefiting both the Company and its customers by maintaining stability and allowing for retention of knowledge base and critical skillsets. A compensation package that benefits both customers and shareholders ensures superior customer service, investment into FE PA, successful business operations, improved reliability, and continued employment in the Commonwealth.

Q. Is the structure for LTIP compensation unusual as compared to similarly situated companies?

A. No, it is not unusual. According to Farient Advisors, the LTIP is consistent with similarly-situated organizations. FE PA's LTIP is 100% at-risk, which is considered a good governance practice, while our peers tend to use a combination of time-based awards (approximately 30%) and performance-based awards (approximately 70%) in their long-term incentive programs. According to the 2021 WorldatWork Incentive Pay Practices Survey for Publicly Traded Companies, 94 percent of participants reported that their organizations offer a long-term incentive program, which is based on performance for a period longer than one fiscal year. Most companies (92%) grant long-term incentives on an annual basis, and a majority of companies (66%) vest long-term incentives over three years. According to Farient Advisor's review in July 2023, FirstEnergy's programs, as a whole, place less emphasis on Relative TSR (35% vs 50% median weighting for our utility peers) and a greater focus on long-term earnings (65% vs 40% median weighting for our

utility peers) compared to our utility peers. However, both Relative TSR and long-term earnings are still the most prevalent long-term KPIs among our utility peers.

Q. If 100% of LTIP expense is disallowed by the PUC, what would be the effect?

A. The LTIP is an integral part of FE PA's total compensation package. If certain of the Company's management-level employees and executives do not receive LTIP compensation, FE PA would no longer offer a competitive compensation package and could not attract and retain these employees. As a result, the Company would be required to increase base salaries for these employees. As previously explained, a variable component of overall compensation should be maintained instead of simply increasing base salaries. Incentive compensation programs create incentives that motivate employees to achieve stronger financial and operational performance, which ultimately benefits customers.

Q. Why do you disagree with OCA witness Mugrace's recommendations with respect to STIP and LTIP costs?

A. I disagree with his proposals for the same reasons I disagree with I&E's witness. As stated above, STIP and LTIP are critical to ensuring the Company attracts new strong talent and retains current employees. Furthermore, STIP and LTIP goals are aligned to external benchmarking and the organization's core values, and focused on operational, customer and financial performance. If the incentive programs would be disallowed, employee base pay would be increased to maintain competitiveness. This would remove the variable component of pay that is aligned with the Company's value of performance excellence.

Q. Have FE PA's Rate Districts or the "Predecessor Companies" recently had their incentive compensations reviewed by the PUC?

A. Yes. Most recently, the PUC reviewed both the STIP and the LTIP as a part of a management audit.[10] Therein, the PUC recognized that the STIP and the LTIP "make up the variable incentive components of overall compensation" and that FE PA's "corporate compensation strategy adheres to a pay-for-performance philosophy, which includes components of both base pay and incentives, to reward individual, business unit, and corporate results."[11] And, importantly, the operations and safety performance-based metrics included in the STIP and LTIP were adopted in response to recommendations advanced by the PUC. Clearly, the PUC has determined these programs are a key part of FE PA's overall compensation strategy, and recognized that this compensation strategy is performance based, with operational and safety targets that benefit customers.[12]

Q. Has the Commission ruled on incentive compensation programs in other public utilities' claims?

A. Yes. I am aware that the PUC has rejected proposed adjustments to other public utilities' claims for incentive compensation, in the past. In PPL Electric Utilities Corp.'s ("PPL Electric") 2012 base rate proceeding, witnesses on behalf of I&E and the OCA recommended disallowance of half of PPL Electric's performance compensation expense

[10] *FirstEnergy Pennsylvania Companies Management and Operations Audit*, Docket No. D-2020-3023106 (issued June 16, 2022) ("2022 Management Audit Report").
[11] 2022 Management Audit Report, at p. 146.
[12] *FirstEnergy Pennsylvania Companies Management and Operations Audit*, Docket No. D-2013-2365991 (issued Feb. 12, 2015).

claim, thereby requiring shareholders to share equally in the cost of its performance compensation plan. The Commission rejected that proposal.[13]

After its decision in PPL Electric's 2012 base rate proceeding, the Commission again reiterated that incentive compensation programs must be evaluated "as a whole" as a part of total compensation to determine if there are benefits to customers.[14] Where the program contains both financial and operating metrics and goals, viewed as a whole, the utility is permitted to recover its costs. The PUC has consistently applied this reasoning with respect to utilities in Pennsylvania.

Here, the STIP and LTIP both have performance-based metrics. Thus, as a whole, the plans include appropriate factors demonstrating that the costs of these plans are recoverable in rates.

Q. Is there any merit to I&E's and OCA's arguments that the costs associated with the STIP and LTIP are not related to or benefitting the provision of safe and reliable electric service?

A. No. I am advised by counsel that a utility is not required to demonstrate that these programs benefit customers. Rather, they must show that an expense is reasonable, prudently incurred, and not excessive in amount. Even assuming that a benefits showing must be made, the STIP and LTIP programs are designed to support FE PA's core values, operational, customer and financial performance. All areas of the STIP and LTIP programs are related to safe and reliable electric service. As explained above, the financial goals

[13] *Pa. PUC v. PPL Electric Utilities Corp.*, Docket No. R-2012-2290597, at p. 26 (Final Order entered December 28, 2012) (internal citations omitted).

[14] *Pa. PUC, et al v. Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc.*, Docket Nos. R-2021-3027385, R-2021-3027386, et al., at pp. 100-101 (Order entered May 16, 2022); *Pa. PUC, et al. v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058, at pp. 73-74 (Order entered Oct. 25, 2018).

demonstrate achieving strong financial performance which provides the financial resources for operational success. For example, strengthening the FE PA's balance sheets leads to higher credit ratings and lower cost of capital, which supports investment that drives continued operational reliability. Strong financial performance also delivers an internal source of capital which supports our ability to fund our investment strategy focused on safe and reliable electric service.

IV. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes.

III. RESULTS OVERVIEW 15

IV. CONCLUSIONS & RECOMENDATIONS 16

REBUTTAL TESTIMONY
OF
JASON DE STIGTER

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is Jason D. De Stigter. My business address is 9400 Ward Parkway, Kansas City, Missouri 64114. I am employed by 1898 & Co. as the Director of Utility Investment Planning in our Utility Consulting Practice.

Q. By whom are you employed and in what capacity?

A. I am employed by 1898 & Co. as a Director, and I lead the Utility Investment Planning team as part of our Energy and Utility Consulting Practice. 1898 & Co. was established as the consulting and technology consulting division of Burns & McDonnell Engineering Company, Inc. ("Burns & McDonnell") in 2019. 1898 & Co. is an international network of over 500 consulting professionals serving the Manufacturing & Industrial, Oil & Gas, Power Generation, Transmission & Distribution, Transportation, and Water industries. Burns & McDonnell has been in business since 1898, serving multiple industries, including the electric power industry. Burns & McDonnell is a family of companies made up of more than 15,000 engineers, architects, construction professionals, scientists, consultants, and entrepreneurs with more than 40 offices throughout the world.

Q. What is your educational background and professional experience?

A. I received a Bachelor of Science degree in Engineering and a Bachelor's in Business Administration from Dordt College, now called Dordt University. I am a registered Professional Engineer in the State of Kansas.

I am a professional engineer with 16 years of experience providing consulting services to electric utilities. Through my work at 1898 & Co. and Burns & McDonnell, I have extensive experience in asset management, capital planning and optimization, risk and resilience assessments and analysis, asset failure analysis, and business case development for utility clients. I have been involved in numerous studies modeling risk for utility industry clients. These studies have included risk and economic analysis engagements for several multi-billion-dollar capital projects and large utility systems. In my role as a Director, I have worked on and overseen risk and resilience analysis consulting studies on a variety of electric power transmission and distribution assets, including developing complex and innovative risk and resilience analysis models. My primary responsibilities are business development and project delivery within the Utility Consulting Practice with a focus on developing risk and resilience-based business cases for large capital projects/programs.

Prior to joining 1898 & Co. and Burns & McDonnell, I served as a Principal Consultant at Black & Veatch inside their Asset Management Practice, and, in that capacity, also performed risk and resilience studies. My full resume is included in Appendix A.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. What is the purpose of your rebuttal testimony?

A. FE PA engaged 1898 & Co. to perform a benefit cost analysis ("BCA") for the proposed enhanced vegetation management program, as found in the Direct Testimony of Wade

Smith (FE PA Statement No. 2) and as further detailed in the rebuttal testimony of John Hawkins (FE PA Statement No. 12-R). This BCA is presented in order to rebut claims that the Company's enhanced vegetation management program is not justified, which were advanced by the Pennsylvania Public Utility Commission's ("PUC" or the "Commission") Bureau of Investigation and Enforcement ("I&E") in the direct testimony of Christine Wilson (I&E Statement No. 4), and the Office of Consumer Advocate ("OCA") in the direct testimonies of Dante Mugrace (OCA Statement No. 1) and Rao Konidena (OCA Statement No. 7). Specifically, my testimony discusses the introduction, approach, and conclusions of our BCA on FE PA's enhanced vegetation management program.

Q. Company witnesses Smith and Hawkins both describe the benefits of the enhanced vegetation management program is to improve reliability and safety. How does the BCA fit into this framework?

A. FE PA witnesses Smith (FE PA Statement No. 2) and Hawkins (FE PA Statement No. 12-R) have correctly described the main benefits of the enhanced vegetation management program are to improve reliability for customers and enhance safety. The BCA offers an alternative lens in which to evaluate the reliability benefits that can be obtained from the enhanced vegetation management program from a basis where the benefits and costs are in the same denomination, dollars. Specifically, the BCA monetizes the reliability (i.e., system average interruption duration index ("SAIDI") / system average interruption frequency index ("SAIFI")) improvement benefit stream of the enhanced vegetation management program using the Department of Energy ("DOE") Interrupted Cost Estimator ("ICE") Calculator while also including the avoided truck-roll costs. Whereas FE PA

witness Hawkins (FE PA Statement No. 12-R) describes the safety and reliability benefits of the program, which provide a primary and independent justification for the enhancements proposed by FE PA, my testimony describes the ***monetized*** reliability benefits of the program that can reasonably be anticipated to occur if it is authorized.

Q. Have you prepared any exhibits to accompany your testimony?

A. No.

II. APPROACH OVERVIEW

Q. Please provide an overview of the benefit-cost analysis approach employed by 1898 & Co.

A. 1898 & Co. employed a customer-centric, data-driven, and discounted cash flow based methodology to perform a benefit-cost analysis for the Company's enhanced vegetation management program. Benefits are estimated from a customer perspective and shown in terms of the (1) avoided customer outages due to vegetation, calculated as customer minutes interrupted ("CMI"), (2) monetization of the avoided vegetation CMI utilizing the DOE ICE Calculator, and (3) avoided reactive costs in terms of avoided truck rolls.

The approach utilized historical outage records from the Company Outage Management System ("OMS") and recalculates each vegetation outage assuming the Enhanced Vegetation Management investment were originally in place. The approach fundamentally assumes future outages will be similar to historical outages. On average, this assumption is appropriate for performing the benefits assessment for the program. However, if future weather events increase in severity and frequency, as many expect, this assumption is conservative. The methodology evaluates a range of scenarios for the

decrease in vegetation outages to understand the level of expected vegetation outage reduction needed to provide monetary benefits in excess of monetary cost.

Using each outage's recalculated customers interrupted ("CI") and CMI, the DOE ICE Calculator monetizes the mitigated outages by considering the types of customers impacted, count of customers impacted, and outage duration. It should be noted that CI and CMI are the numerator in the SAIFI and SAIDI calculations, respectively. Additionally, the avoided cost of crew deployments (which are a component of a utility's claims to recover storm damage costs in base rates) is included as a benefit to the utility for outages that are completely mitigated by investment.

The lifecycle present value ("PV") of monetized avoided customer outages and truck-roll costs is calculated by adjusting for inflation and discount rate over the lifecycle of the investment. This produces a lifecycle PV of benefits that can be directly compared to the cost of the investment through the BCR.

$$BCR = \frac{Benefit\ (Present\ Value\ \$)}{Cost\ (Present\ Value\ \$)}$$

Q. You mentioned that the quantified benefits methodology employed a discounted cash flow methodology, what assumptions are used in the calculation?

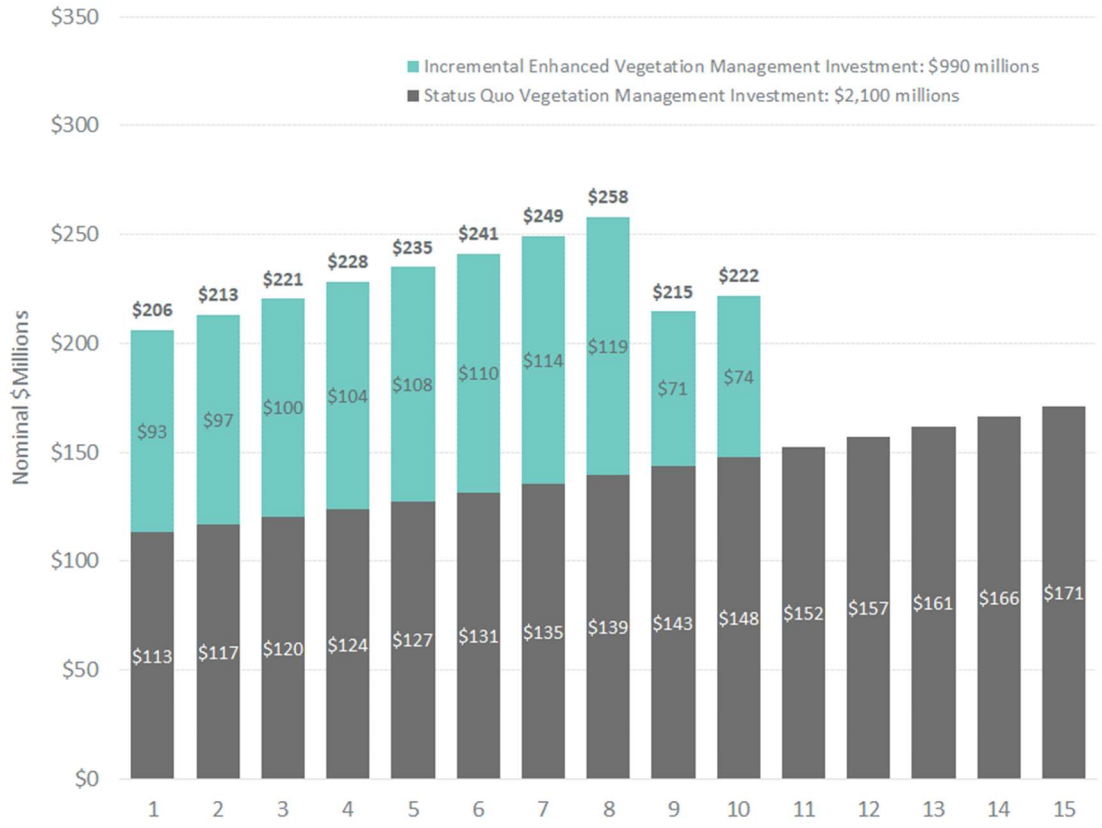
A. The discounted cash flow calculations were done over a 15-year time horizon. The evaluation assumed 3.0 percent for escalation and 7.0 percent for the discount rate.

Q. Why was a 15-year time horizon used when the Enhanced Vegetation Management Program is a 10-year program?

A. The evaluation assumes vegetation management investment levels will revert back to historical levels after the program is complete. The evaluation conservatively assumes that

the decrease in vegetation outages from the enhanced vegetation management program will be maintained as long as the status quo investment level is maintained for a period of 5 years. Figure 1 shows the forecasted overall investment level in vegetation management assumed within the evaluation. These values were provided by the Company.

Figure 1: Vegetation Management Program Investment Level Forecast



Q. Why was it necessary to perform a scenario analysis to understand the benefit cost of the enhanced vegetation management investment?

A. 1898 & Co. employed a scenario analysis given that several drivers of the program are currently not known. First, the specific types of vegetation management activity will be determined following field inspection. Second, the proposed program is a change in the Company's vegetation management approach. The current vegetation management

program generally utilizes a more reactive prioritizing of historical areas of high vegetation outages. The enhanced vegetation management program will generally be more proactive deploying proven solutions over two five-year trim cycles. This shift in approaches makes it challenging to understand the relationship between reactive investment and vegetation outage decrease versus proactive investment and vegetation outage decrease. Because of this lack of information, scenario analysis is appropriate to provide guidance in understanding whether the level of benefits needed to provide customer value are in the reasonable range. Third, the precise decrease in vegetation outages is challenging to estimate. In these cases, a scenario evaluation is appropriate.

Q. What scenarios were included in the evaluation?

A. The following scenarios with the respect to the historical improvement in vegetation outages were evaluated: 5%, 10%, 15%, 20%, 25%, 30%, 35%, 40%, 45%, and 50%. This range of scenarios was selected based on 1898 & Co.'s experience with vegetation management programs and the type of improvements that have materialized. The low range was provided to show the sensitivity of improvement to customer benefits.

Q. How were avoided customer outage and avoided reactive costs evaluated over the 15-year time horizon?

A. The evaluation assumes that the full benefits of avoided vegetation outages occur after the program is complete. This means that year 10 through year 15 of the time horizon get the full percentage decrease in vegetation outage for each scenario. For years 1 through 9, the evaluation included a ratio of the percentage of the program completed each year. Figure 2 shows this benefit profile.

Figure 2: Benefits Profile

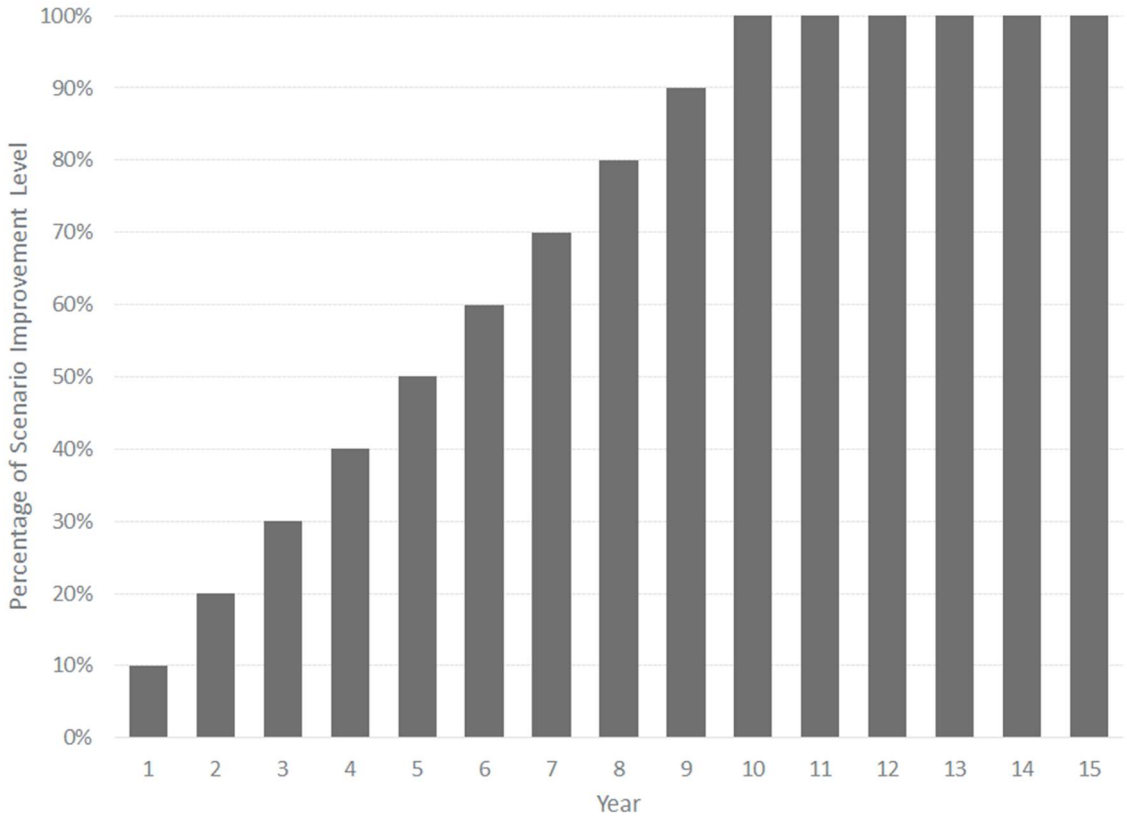


Figure 3 shows the annual percentage improvement in system vegetation outages for the 20% scenario utilizing the profile from Figure 2. Assuming the benefits of the enhanced vegetation management program are only maintained for 5 years following the completion of the program is a conservative assumption. It is likely that some level of improvement will persist following the 15-year time horizon.

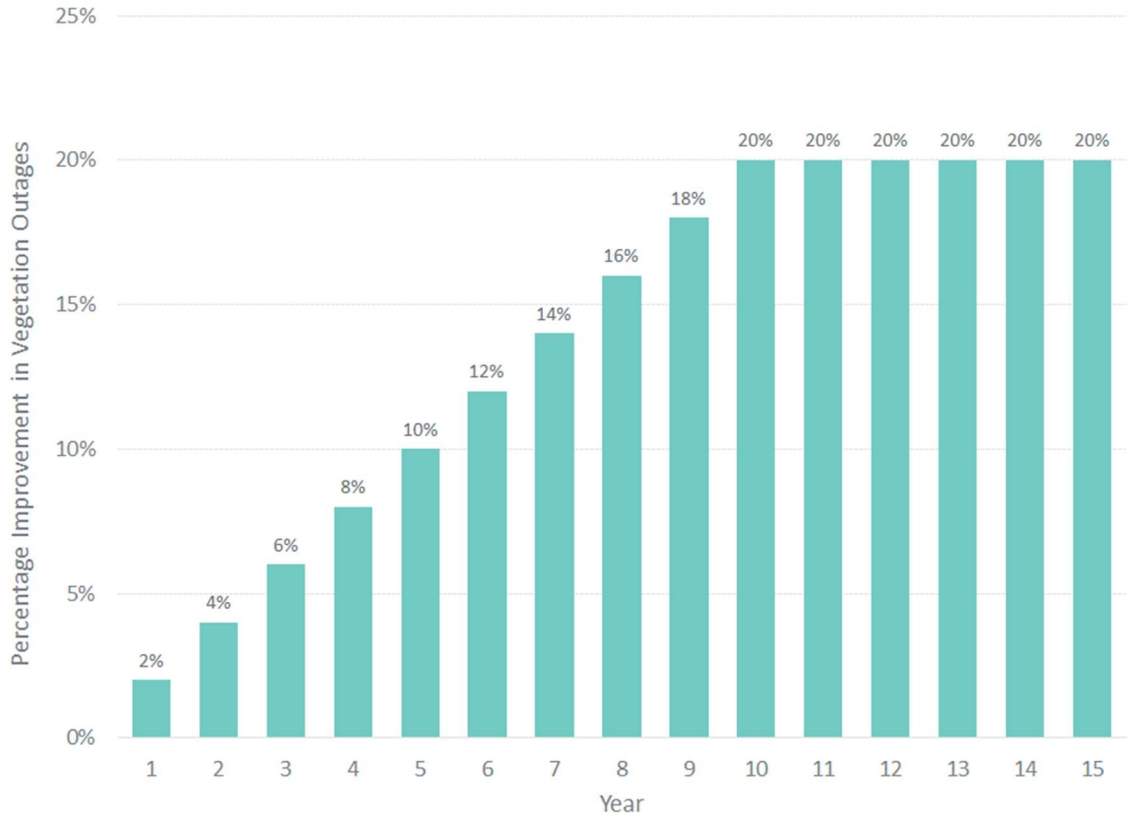
Figure 3: Annual Improvement in System Vegetation Outages: 20% Scenario



Q. What outage records did the Company provide 1898 & Co.?

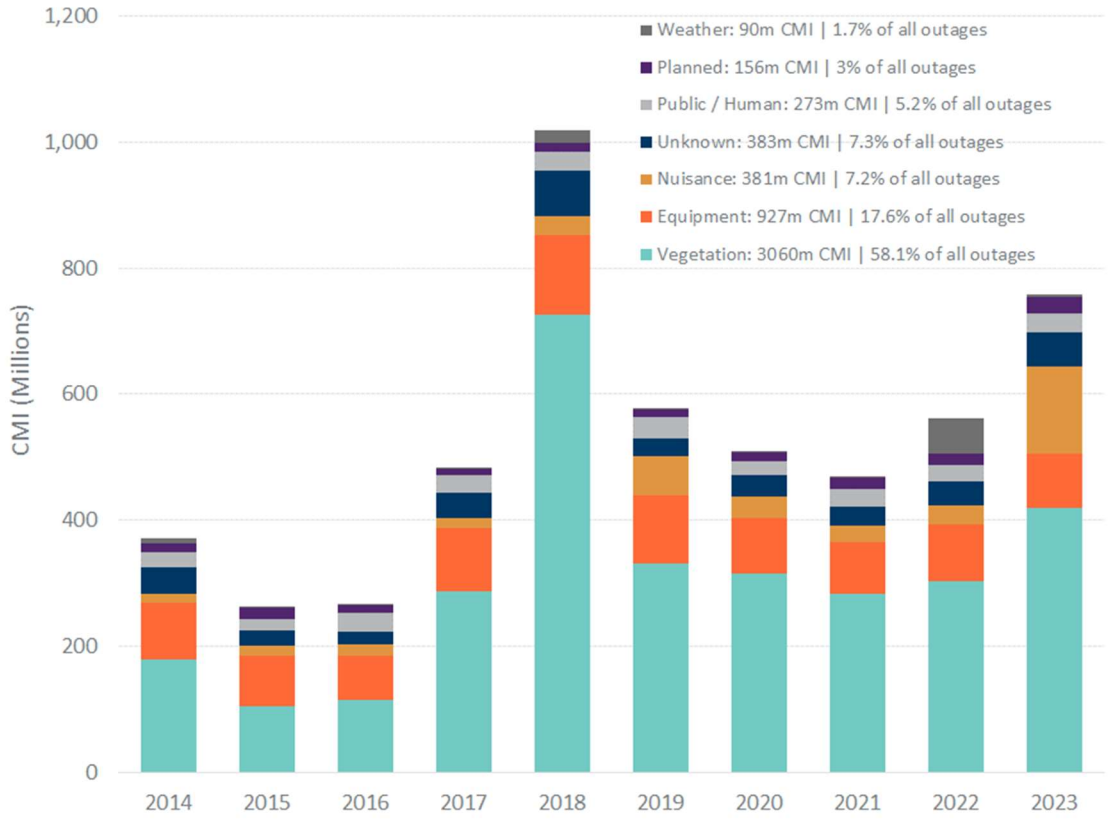
A. The Company provided 1898 & Co. with extracts from the OMS. The OMS includes detailed outage information by cause code for each protection device (breaker, recloser, fuse, etc.) over the last 10 years. The data includes outage causes, durations, CI, CMI, dates, and locations for approximately 284,267 outage events.

Q. What does the outage data show?

A. The outage data shows the significant impact of vegetation outages on the Company's customers. Figure 4 shows the annual CMI by major cause code. As the figure shows, vegetation cause code outages make up approximately 58 percent of all customer minutes interrupted. Of the approximately 284,267 outage events, 169,423 or 59.6 percentage of

these outage events are classified as vegetation outages. As noted above, 1898 & Co. recalculated the CI and CMI for each of these 169,423 vegetation outage events over the last 10 years for each scenario evaluated. With approximately 58 percent of outage causes linked to vegetation, any meaningful effort to improve reliability for FE PA customers requires a significant investment in vegetation management.

Figure 4: Historical Outage Summary

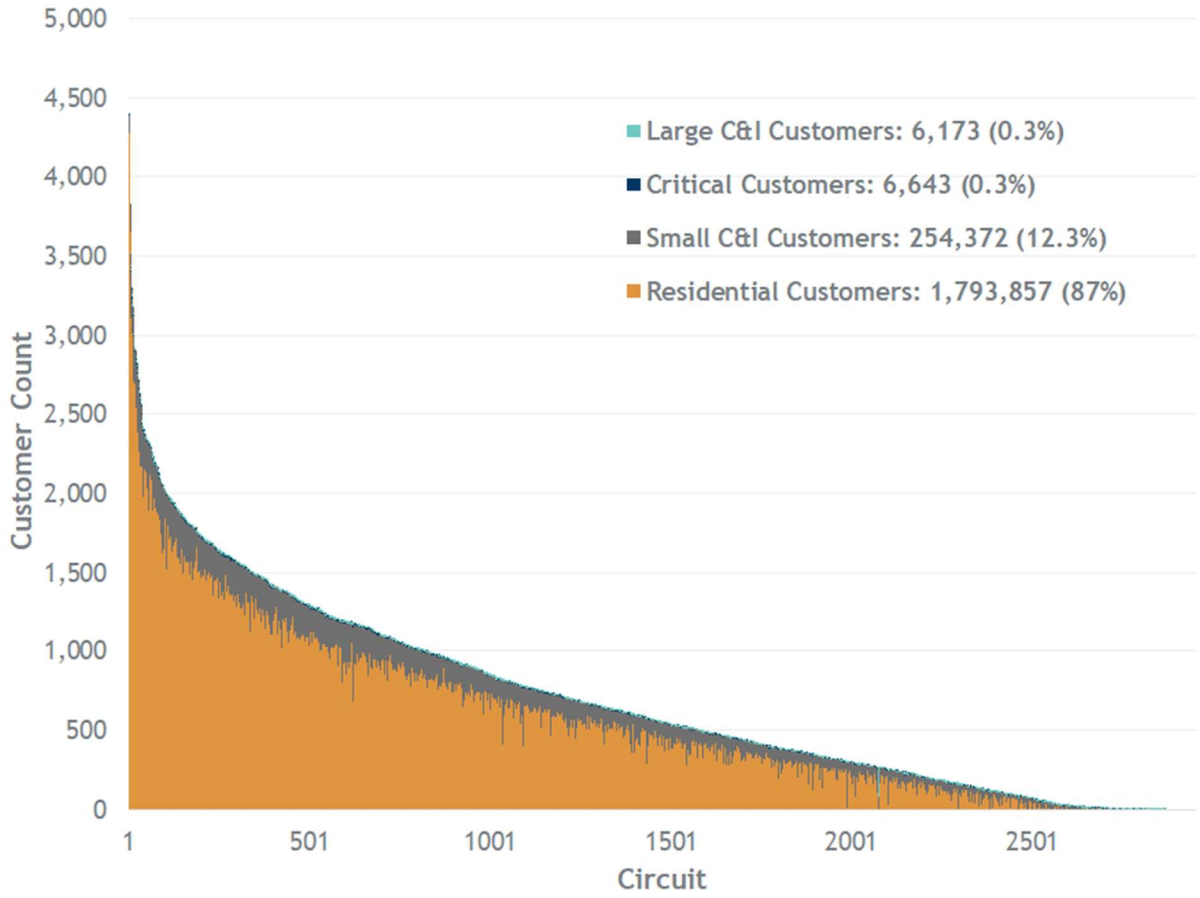


Q. How was FE PA's customer data incorporated into the evaluation?

A. FE PA serves a mix of residential, commercial and industrial customers. 1898 & Co. mapped customer counts and types to each of the protection devices on the distribution system. This was done for approximately 199,000 protection zones on the FE PA distribution system. A summary of this evaluation is shown for each circuit in Figure 5.

The figure shows that approximately 87 percent of all customers are residential, with 12.3 percent small commercial & industrial ("C&I") customers, 0.3 percent are large C&I customers, and 0.3 percent are critical customers. FE PA also provided 1898 & Co. with a list of critical customers on the system.

Figure 5: Customer Count and Type by Circuit



Q. Why were avoided customer outages monetized?

A. Outages were monetized by calculating the impact of the avoided vegetation CMI utilizing the DOE ICE Calculator, and the avoided costs of truck rolls. While outages (and preventing and managing outages) are primarily matters of safety, monetization of outages can allow for the evaluation of reliability benefits and the costs of investments to improve reliability to be in the same denomination or basis, dollars. This provides an improved

"apples to apples" comparison of benefits and costs and enables the calculation of a benefit cost ratio to simply understand the justification of investments, particularly where certain stakeholders in the regulatory process have challenged the benefits of costs of programs designed to enhance reliability. If a benefit to cost ratio is greater than equal to 1, the investment provides benefits in excess of costs.

Q. What approach was used to monetize outages?

A. To monetize the cost of an outage, the benefits approach utilizes the DOE ICE Calculator. The DOE ICE Calculator is a widely used electric reliability planning tool developed by Freeman, Sullivan & Co. and Lawrence Berkeley National Laboratory. This tool is designed for electric reliability planners at utilities, government organizations, or other entities interested in interruption costs and/or the benefits associated with reliability improvements in the United States. The DOE ICE Calculator was funded by the Office of Electricity Delivery and Energy Reliability at the DOE.

The calculator includes the estimated average interruption costs for residential, small C&I, and large C&I customers for a range of durations. The average interruption cost by category captures the full spectrum of end users (some with no impact and others with substantial impact) with one representative value per customer category that is appropriate for system wide business case development. 1898 & Co. used the DOE ICE Calculator values for the Commonwealth of Pennsylvania.

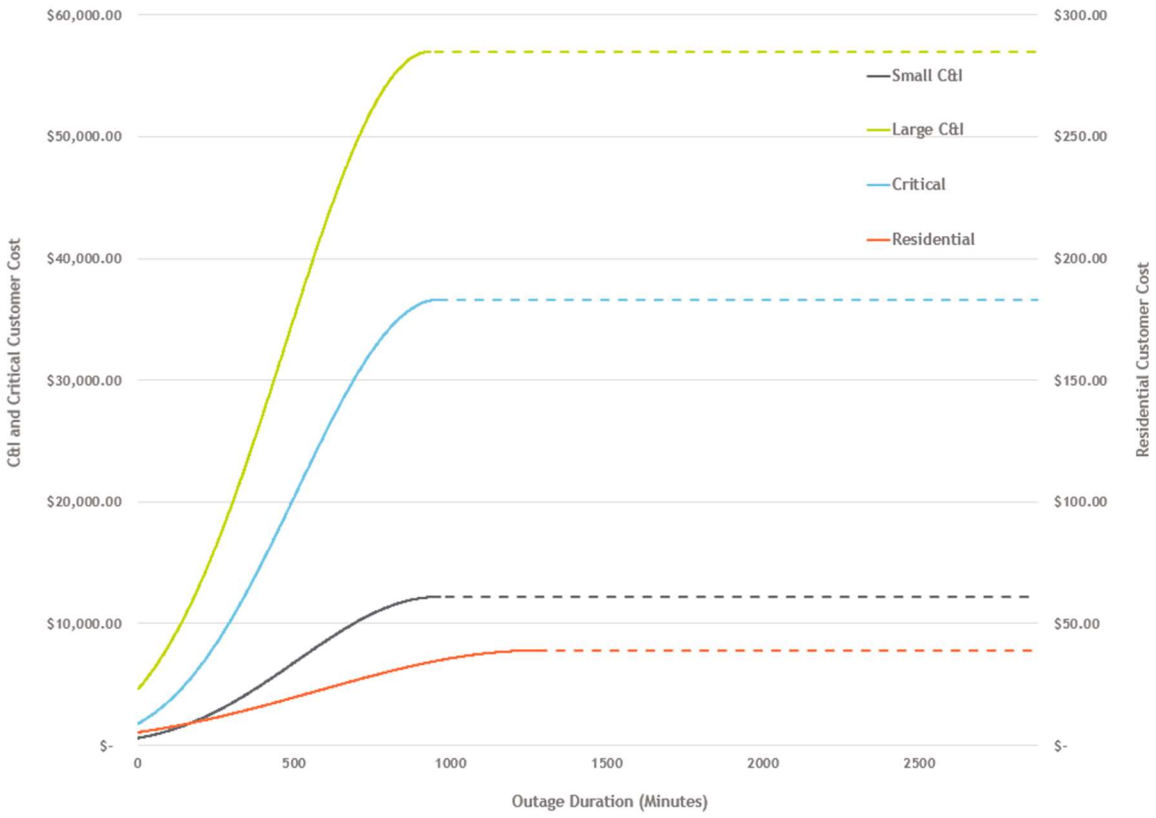
The value of interruption costs within the calculator are based on customer surveys from 15 research efforts conducted by 10 utility companies, resulting in 34 different data sets and totaling over 105,000 observations from 1989 to 2012. The data sets included over

44,000 Medium to Large C&I customers, 27,000 small C&I customers, and 34,000 residential customers.

The developers of the ICE calculator have also noted significant advancements in the societal use of technology. With most of the surveys being completed before these advancements, the developers of the ICE Calculator consider the current cost of interruptions for residential customers to be conservative. The developers of the calculator have received additional funding to update the surveys to reflect these key changes, especially the value of residential interruptions in a post-pandemic society.

The calculator includes the estimated interruption costs for residential, small C&I, and large C&I customers for a range of durations. 1898 & Co. also included a value for critical customers that is 3 times greater than the value for small C&I. The 3x multiplier is based on the 95th percentile of survey results above the mean value. Figure 6 shows the cost of interruptions for each class of Pennsylvania customers according to the DOE ICE Calculator including the adjustment for critical customers.

Figure 6: DOE ICE Calculator Monetized Cost of Outage Summary



Q. What is the PV of the enhanced vegetation management incremental investment from Figure 1.

A. As Figure 1 shows, the enhanced vegetation management investment is approximately $990 million over the 10-year period in nominal terms, also known as the dollars of that day. In PV terms using the discount rated noted above, this cost is approximately $716 million.

III. RESULTS OVERVIEW

Q. What are the results of the enhanced vegetation management scenario benefit-cost analysis?

A. Table 1 shows the results of the BCA for each percentage improvement in vegetation outages scenario. As the table shows, a 25 percent improvement in vegetation outages is equivalent to a 10.1 percent improvement in CMI. Any improvement to vegetation outages above 25 percent would provide additional benefits for customers. At a 50 percent improvement, or 20.1 percent improvement in whole system CMI, the BCR is nearly 2.2.

Table 1 Enhanced Vegetation Management BCA Scenario Results

Vegetation CMI Improvement Scenario	PV of Enhanced Vegetation Management Investment (Millions)	PV of Avoided Vegetation Outages: $CMI + Avoided Truck rolls (Millions)	Benefit Cost Ratio	Improvement in 15-year System wide CMI
5%	$716.0	$157.1	0.22	2.0%
10%	$716.0	$314.1	0.44	4.0%
15%	$716.0	$471.2	0.66	6.0%
20%	$716.0	$628.2	0.88	8.0%
25%	$716.0	$785.3	1.10	10.1%
30%	$716.0	$942.3	1.32	12.1%
35%	$716.0	$1,099.4	1.54	14.1%
40%	$716.0	$1,256.4	1.75	16.1%
45%	$716.0	$1,413.5	1.97	18.1%
50%	$716.0	$1,570.5	2.19	20.1%

Q. How does the improvement in 15-year CMI compare to the expectations for system reliability improvement as outlined by FE PA witness Hawkins?

A. Company witness Hawkins (FE PA Statement No. 12-R) explains that FE PA originally estimated the expected improvement in overall system reliability of the enhanced vegetation management program at 10 percent. This overall improvement in system

reliability aligns with the 25 percent vegetation CMI improvement scenario from Table 1. That scenario shows a 15-year system wide CMI improvement of 10.1 percent and a BCR of 1.1. In other words, this expectation of reliability improvement is expected to produce customer benefits in excess of cost.

IV. CONCLUSIONS & RECOMENDATIONS

Q. What conclusions can be drawn from this BCA?

A. There are significant, independent justifications for the enhanced vegetation management program as explained by other FE PA witnesses. However, the BCA provides evidence in support of the following conclusions:

- A 25 percent decrease in vegetation outages, or 10.1 percent improvement in system wide CMI improvement, provides quantified benefits in excess of costs for customers.
- The benefit cost analysis is conservative. First, the 15-year time horizon for improved reliability improvement is low. It is likely that some level of improvements will persist beyond this time horizon. Second, the DOE ICE Calculator is conservative with regard to the value for residential customers, as the underlying data acquisition pre-dated significant advancements in societal use of in-home electronic devices and other technologies and trends toward work-from-home arrangements. Based on this, the needed improvement in vegetation outages to provide direct benefits in excess of costs is lower than the 25 percent threshold described above.

Q. What is your recommendation for the enhanced vegetation management program?

A. I recommend that the Commission approve in full and without delay the enhanced vegetation management program. As shown in the evaluation, vegetation outages are the main cause code for outages that impact FE PA's customers. Further, customers' trends toward improved reliability, even hyper-reliability, due to significant changes to how customers use electricity in recent years show further importance to decrease outages for customers.

The monetization of these two realities (high vegetation outages and customer demands for fewer outages) that are part of my BCA clearly shows that customer benefits are in excess of cost for reasonable improvements in vegetation outages, even when utilizing a number of conservative assumptions and inputs. Based on this, and in addition to the reasons set forth in the testimonies of FE PA witnesses Smith (FE PA Statement No. 2) and Hawkins (FE PA Statement No. 12-R), the Commission should approve FE PA's proposals regarding its enhanced vegetation management program.

Q. Does this conclude your rebuttal testimony?

A. Yes.

1898 & Co.

Jason De Stigter, PE

Director - Utility Investment Planning

Jason leads the Utility Investment Planning business line at 1898 & Co., part of Burns & McDonnell. In this role, Jason is responsible for business development, marketing, staff training and development, solution and product development, and overall project delivery within the business line. The Utility Investment Planning business line supports electric utilities in developing long-term investment plans and portfolios to meet one or all of the following objectives: 1) aging infrastructure, 2) reliability, 3) resilience or system hardening, and 4) electrification. The business line owns solutions and tools around each of offerings to produce data-driven decisions. Jason is the main architect and solution developer of the data-driven analytic solutions for each of the four offerings.

Jason has 16 years of extensive experience in performing business case evaluation on a variety of project types helping utility clients with difficult investment decisions. Jason also has a deep financial and economic analysis background and specializes in business case evaluation and risk assessment and management for utility client. Jason has extensive experience modeling risk for utility industry clients. His modeling experience includes developing complex and innovative risk analysis models using industry leading risk analysis software tools employing Monte Carlo simulation and Optimization algorithms. His experience includes performing risk and economic analysis engagements for several multi-billion-dollar capital projects and large utility systems for aging infrastructure, system resilience, reliability and distribution automation, and electrification. Jason also serves as expert witness for many of these engagements supporting the full regulatory process.

PROJECT EXPERIENCE

System Resiliency Plan (SRP) Benefit Cost Analysis and Plan Development / Oncor

Texas / 2024-Current

Project director and Witness for performing a cost benefit evaluation of resiliency investments for Oncor's System Resiliency Plan (SRP) for $3.4 billion of distribution investment over the 2025 to 2027 time horizon. The project utilized 1898 & Co.'s Integrated Resilience & Risk Investment Model to develop and prioritize projects on a cost benefit perspective. The model employed data-driven analyses and robust algorithms to calculate the resilience benefit of over 175,000 potential resilience investments in terms of the range of reduced restoration costs and customer minutes interrupted (CMI). The modeling included building the relationships between NOAA weather data, historical OMS records, and GIS infrastructure data to understand the relationship between various weather events (thunderstorms, ice storms, blizzards, heat events, etc.) the number of customers impacted and the infrastructure vulnerability. The model then utilized this relationship to forecast future events and estimate the life-cycle impacts of not investing in the distribution system and with investments. 1898 & Co. evaluated hardening investments, modernization, inspections, and vegetation management. The results of the project included a substation level benefit cost results for all 850+ substations on Oncor's system. The 1898 & Co. resilience benefit assessment report and Jason written testimony were included in the filing. Jason is supporting the regulatory process to include responding to data requests and interrogatories.

10 Year Storm Resiliency Plan / Entergy Louisiana

Louisiana / 2022-Current

Project director for developing and providing justification for Entergy Louisiana's 2024-2033 10-year Storm Resiliency Plan for its transmission and distribution system to mitigate the impact of major events. The project utilized 1898 & Co.'s Storm Resilience Model to develop and prioritize projects on a cost benefit perspective. The model employed data-driven analyses and robust algorithms to calculate the resilience benefit of over 150,000 storm hardening projects in terms of the range of reduced restoration costs and customer minutes interrupted (CMI). The Storm Resilience Model organized the system into 50 mile by 50 mile system sections and models 49 storm events against each section and estimates which parts of the system will fail in each storm event. The model evaluates each project before and after hardening for both an overhead hardening and underground conversion. The model further utilizes Stochastic Model to simulate storm events and calculate resilience benefits. Finally, the model performs budget optimization to identify ideal investment levels and prioritize projects. The 1898 & Co. resilience benefit assessment report and Jason written testimony were included in the filing. Jason is supporting the regulatory process to include responding to data requests and interrogatories.

Resiliency Multi-Year Plan / Baltimore Gas & Electric

Maryland/ 2022-2023

Project director for developing distribution resiliency portfolio of overhead hardening and underground conversions for Baltimore Gas & Electric. Jason led the effort to identify and justify investments for the 2024 through 2026 time horizon. The project utilized 1898 & Co.'s Resilience Investment Model to develop and prioritize projects on a cost benefit perspective. The model employed data-driven analyses and robust algorithms to calculate the resilience benefit hardening projects and alternatives in terms of the range of reduced restoration costs and customer minutes interrupted (CMI). The output of the analysis included three years of specific distribution investments in overhead hardening and underground conversions and the benefits for those projects. 1898 & Co. provided a technical report that was included as an exhibit to BGE's witness. 1898 & Co supported the discovery process, provided rebuttal testimony, and testified on the stand in August 2023. The case was decided in December 2024. The resilience investment will be evaluated separate from the MYP.

Transmission Distribution Storage System Investment Charge Plan Development/ Southern Indiana Gas and Electric

Indiana / 2021-Current

Project director for developing the portfolio of investment projects for a Southern Indiana Gas and Electric, a CenterPoint company. Jason is leading the effort to identify and justify investments in transmission, substation, and distribution systems over the next 5 years. The evaluation leveraged 1898 & Co.'s AssetLens Analytics Engine, an asset investment planning tool to evaluate the life-cycle benefits of replacing Transmission and Distribution (T&D) infrastructure and deploying smart devices across the distribution system. The analysis leveraged utility datasets (GIS, OMS, distribution circuit models, asset management systems, condition records, customer counts and profiles) inside the engine's aging infrastructure and reliability analytics. The project included data cleansing, organizing, linking, and transformation and configuration of the holistic risk framework across poles, conductor spans, line transformers, breakers, power transformers, relays, and other assets classes. Jason submitted direct and rebuttal testimony, supported the discovery process. He was waived from oral testimony. Southern Indiana Gas & Electric got their full TDSIC plan approved.

Distribution Automation Plan Development / Confidential Client

Midwest / 2022-Current

Project director for developing and providing justification for a distribution automation circuit configuration investment portfolio for a Midwest Investor-Owned Utility. The evaluation utilized 1898 & Co.'s reliability and distribution automation analytics model inside our

AssetLens Analytics Engine, an asset investment planning tool to evaluate the life-cycle benefits of replacing Transmission and Distribution (T&D) infrastructure and deploying smart devices across the distribution system. The analytics model estimates the expected benefit of deploying distribution automation to every circuits factoring in scheme effectiveness due to tie-line constraints and conductor capacity. The business case monetized the outage improvement and estimated the project cost to include new reclosers, associated communications upgrades, new tie lines, and conductor upgrades. Jason will serve as the expert witness and sponsor the technical report. The case is expected to be filed in May 2023.

Grid Investment Plan Benefits Assessment / Confidential IOU

Midwest / 2022 - 2023

Project director for development of the benefits assessment for a $2.6 billion grid investment plan. The plan includes investments in distribution circuit upgrades, distribution automation, substation rebuilds, capacity rebuilds, and low voltage conversions to improve reliability and resilience, manage long-term costs, modernize for the future, and decrease risk. The engagement include mapping investments to the underlying asset infrastructure, calculating the benefits using the AssetLens Analytics Engine analytics models, and developing the business case for over 6,000 different investment activities across 6 programs. The analysis and results are formalized within a technical report that will be submitted within the public record.

Grid Enhancement Investment Plan Benefits Assessment / Oklahoma Gas & Electric

Oklahoma / 2021-2022

Project director for development of the benefits assessment for OG&E's 2020 and 2021 Grid Enhancement Plan. The plan includes investments in distribution circuit upgrades, distribution automation, and substation rebuilds totaling nearly $250 million. Jason organized the business case framework including the linkage of investments to benefits approaches and calculating the life-cycle benefits in terms of decreased customer outages and avoided restoration costs. Jason also served as the expert witness for the benefits assessment and has provided direct testimony sponsoring the technical report, supported interrogatories and data requests, and provided rebuttal testimony. OG&E settled the case in June 2022.

2022-2031 Storm Protection Plan Resilience Assessment / Tampa Electric Company

Florida / 2021-2022

Project director for supporting the development of TEC's 2022-2031 10-year Storm Protection Plans for its transmission and distribution system in accordance with Florida Statute 366.96. This project is an update to the original 2020-2029 10-Yr Storm Protection Plan. The project utilized 1898 & Co.'s Storm Resilience Model to develop and prioritize projects on a cost benefit perspective. The model employed data-driven analyses and robust algorithms to calculate the resilience benefit of over 20,000 storm hardening projects in terms of the range of reduced restoration costs and customer minutes interrupted (CMI). The Storm Resilience Model models nearly 100 storm events and estimates which parts of the system will fail in each storm event. The model evaluates each project before and after hardening. The model further utilizes Stochastic Model to simulate storm events and calculate resilience benefits. Finally, the model performs budget optimization to identify ideal investment levels and prioritize projects. The 1898 & Co. resilience benefit assessment report and Jason written testimony were included in the filing. Jason supported the regulatory process to include responding to data requests and interrogatories. Jason testified in hearings in Tallahassee in early August 2022. The commission approved nearly all of TEC investment plan.

Long-term Portfolio Development / Public Service New Mexico

New Mexico / 2021-Current

Project director for developing the portfolio of investment projects for Public Service New Mexico (PNM). Jason led the effort to identify and justify investments in PNM's transmission, substation, and distribution systems over the next 20 years. The evaluation leveraged 1898 & Co.'s AssetLens Analytics Engine, an asset investment planning tool to evaluate the life-cycle benefits of replacing Transmission and Distribution (T&D) infrastructure and deploying smart devices across the distribution system. The analysis leveraged PNM datasets (GIS, OMS, distribution circuit models, asset management systems, condition records, customer counts and profiles) inside the engine's aging infrastructure and reliability analytics. The project included data cleansing, organizing, linking, and transformation and configuration of the holistic risk framework across poles, conductor spans, line transformers, breakers, power transformers, relays, and other assets classes. The evaluation organized all PNM's assets into over 20,000 projects. The risk framework allowed for the calculation of benefit in financial terms across each of the 20,000 projects from, specifically the mitigated reactive and restoration costs and the monetization of customer outages. Finally, the project included budget optimization to identify the point of diminishing returns to provide valuable management insights into the level of needed investment in the system over the next 20 years. The overall investment level is confidential. PNM is currently executing the projects that resulted from the evaluation and moving their overall investment levels to manage system risk.

2020-2029 Storm Protection Plan Resilience Assessment / Tampa Electric Company

Florida / 2019-2020

Project director for supporting the development of TEC's 2020-2029 10-year Storm Protection Plans for its transmission and distribution system

in accordance with Florida Statute 366.96. The projects utilized 1898 & Co.'s Storm Resilience Model to develop and prioritize projects on a cost benefit perspective. The model employed data-driven analyses and robust algorithms to calculate the resilience benefit of over 20,000 storm hardening projects in terms of the range of reduced restoration costs and customer minutes interrupted (CMI). The Storm Resilience Model models nearly 100 storm events and estimates which parts of the system will fail in each storm event. The model evaluates each project before and after hardening. The model further utilizes Stochastic Model to simulate storm events and calculate resilience benefits. Finally, the model performs budget optimization to identify ideal investment levels and prioritize projects. Tampa Electric Company $1.5 billion 10-year plan was approved in September 2020. The 1898 & Co. resilience benefit assessment report and Jason written testimony were included in the filing. Jason supported the regulatory process to include responding to data requests and interrogatories. He also provided rebuttal testimony. Tampa Electric settled with the interveners.

Grid Investment Business Case / Confidential IOU

Southeast / 2021

Project director for development of a business case for all grid investment planned projects over the next 10 years. Business case evaluated both mitigated life-cycle reactive and restoration costs and monetization of customer outages. Investments included traditional rebuilds for reliability and resilience purposes, distribution automation, communications, and deployment of new technologies. The business case was used for internal executive management approvals.

Distribution Investment Plan Development with AssetLens / Evergy

Missouri and Kansas / 2019-Current

Project director for configuration and implementation of AssetLens for Evergy's distribution system across multiple states and jurisdictions. AssetLens is an asset investment planning software developed by 1898 & Co. to 1) automate project identification in T&D systems using typical utility data set and 2) provide business justification for all projects in life-cycle NPV benefit terms. The software ingests a range of datasets to include GIS, OMS, distribution circuit models, asset management systems, condition records, customer counts and profiles and performs the necessary cleansing, transformation, and linking. Jason led the effort to configure the risk framework analytics that estimate the risk adjusted life-cycle costs and customer impact for all T&D asset classes including poles, pole tops, primary conductor spans, primary underground sections, secondary cable, line transformers, manholes, conduit, splices in manholes, network assets and more. The analytics employ a risk-based methodology across a range of failure types (various probabilities and consequences) to calculate the annual risk costs for a Status Quo and Investment scenario. Life-cycle risk costs include a range of reactive and restoration costs and the monetization of customer outages. The evaluation organized assets into over 100,000 potential projects and scheduled investments to maximize benefit given budget, schedule, and other technical constraints. The overall investment level is confidential. AssetLens visualizes the project plan geospatially providing specific assets for replacement with the business case results for each project. Evergy's distribution engineering teams has been using AssetLens to develop work orders and executive the project plan. It was also used to support their regulatory filing to the Missouri commission.

Distribution Automation Plan Development / Confidential IOU

Central Midwest / 2021-Current

Project director for development of a distribution automation investment plan for the next 5 years. The project involved using GIS and outage records to circuits that would provide the most benefit from the deployment of reclosers. The effort included estimating the number of devices for each circuit and placement of devices for the first few years of the plan. The business case results include the estimated decrease in customer outages and monetization of the outages for an investment business case. The utility is currently developing work orders for 2022 projects.

Overhead and Underground Business Case Development / Confidential IOU

Upper Midwest / 2021-Current

Project director for development of a business case comparing overhead rebuilds to a new modern standards or undergrounding. The business case was performed from a life-cycle cost perspective and impact to customers over a range of events to include extreme weather. The business case evaluated a range of areas of the system to include urban, rural, and suburban. The result of the evaluation may be used for responding to regulators requests.

Long-term Investment Plan Development / Confidential IOU

Midwest / 2021

Project director for identification and justification of distribution circuit and substation investments for a long-term investment plan. The evaluation utilized the AssetLens Analytics Engine to evaluate a range of investment options across the grid, establish 'ideal' investment levels, and provide direction to the 'ideal' split of investment across the system. The utility utilized the study to help develop their long-term investment plan for executive management approval and regulatory strategy.

Distribution Automation Business Case Pilot / Confidential IOU

Midwest / 2021

Project director for a pilot study on distribution automation project identification and justification. The evaluation performed 8760 modeling to understand system overloading constraints to performing automated

load transfer schemes. The constraints analysis was utilized in the business case assessment to understand the percentage of time the scheme could operate and provide benefits to customers and if there was a business case to make other grid investments to unlock potential overloading constraints.

Distribution Reliability Investment Plan Development with AssetLens / Confidential IOU

Midwest / 2020-Current

Project director for development of a 10-year distribution investment plan focused on improving overall system reliability and delivery of AssetLens. The data and analytics-based planning approach included the cleansing, organizing, transformation, and linking of GIS, OMS, distribution circuit models, customer data, and condition information. The planning analytics included evaluation of the benefits and costs of rebuilding each protection zone, over 40,000, across they system. Benefit profiles included the mitigated reactive and restoration costs and decreased customer outages monetized using the DOE ICE Calculator. The project also included budget optimization to identify the long-term need for investment. The overall investment level is confidential. The client's distribution engineering team is currently utilizing the AssetLens solution to build work orders from the projects identified. The client is also moving toward the more 'ideal' long-term investment levels to manage system risk.

Long Term Electric Transmission and Distribution Capital Plan / Indianapolis Power & Light

Indiana / 2017-2019

Project manager for developing IPL's asset risk model. The asset risk model includes transmission circuit, substation, and distribution circuit assets. The asset risk model was used to identify and prioritize asset replacements for nearly $750 million of the $1.2 billion filing. Jason developed an innovative approach for modeling distribution circuit risk down to the span level. For the risk model, Jason developed an integrated and holistic probability and consequence of failure framework to evaluate any asset consistently. The approach has allowed IPL to prioritize investment across transmission and distribution and substations and circuits. The analysis included using Burns & McDonnell's proprietary capital optimization algorithm to group assets into projects and prioritize projects to maximize risk reduction benefit. Burns & McDonnell prepared two reports that are part of IPL's public record filing. Jason also provided written (direct and rebuttal) and oral testimony. The entire plan (100%) was approved in February of 2020.

Grid Modernization Engineering Study / Entergy

Louisiana/Mississippi/Arkansas/Texas / 2016–2019

Entergy is embarking on a new approach to electric distribution planning, design and engineering to meet the future needs of its customers. The new approach includes developing modernize electric distribution equipment, engineering and design, and construction standards to drive value throughout the supply chain from material purchasing, inventory, system design, and construction. Additionally, the grid modernization approach leverages a modern holistic distribution asset and capital planning process with associated tools (DNV GL's Synergy) to facilitate efficient and robust performance and risk assessment of Entergy's electric distribution system. The approach identifies the portfolio of issues facing a family or cluster of distribution feeders and then develops the ideal portfolio of projects to address to improve feeder performance, cost, and risk.

Project manager for the business case evaluation and capital project prioritization aspects of Grid Modernization Engineering Study for Entergy. For the portfolio of projects, Jason developed a robust business case methodology that calculates risk reduction benefits, reliability improvement, and operational efficiency (i.e. fewer truck rolls) to justify each capital investment.

Entergy intends to use the results of the engineering study to propose a list of grid modernization project to consider for regulatory approval and funding. Additionally, these projects and the holistic planning approach will be the first step in an evolutionary change to build Entergy's grid of the future, ready for the next generation of consumers and system performance.

69 kV Wood Pole Replacement Program Evaluation / Salt River Project (SRP)

Phoenix, Arizona / 2017–2018

Project manager for evaluation of the 'ideal' level of 69 kV wood pole replacement SRP should execute each year. The effort includes development of an asset risk model, including risk framework, and various replacement strategies that maximize risk reduction while also maintaining overall budget levels. The final outcome will include the risk mitigated for the whole portfolio over 30 years for a range of budget levels to identify an 'ideal' overall investment rate.

PRIOR EXPERIENCE

Capital and Operations & Maintenance (O&M) Budget Prioritization / Tulsa Metropolitan Utility Authority (TMUA) Utility Enterprise Initiative

Tulsa, Oklahoma / 2013-2016

Project manager for the Capital Prioritization and Optimization task of TMUA's Asset Management implementation initiative, Utility Enterprise Initiative. He used a 'Project Prioritization and Optimization' solution for several water and wastewater projects as part annual cycle phased approach (executed three of four phases). Jason was responsible for leading workshops with engineering and maintenance staff, developing business case approaches for each water/wastewater project, performing Monte Carlo and optimization simulations, and developing

strategies for the Utility's capital improvement plan (CIP) during a period of tight budget constraints to minimize rate increases. TMUA was working toward codifying the process and tool into their own annual budget and rates process. As such, Jason was responsible for developing users guide documentation and holding training on the process and tool for TMUA.

2017 Executive Asset Management Plan Alternatives Evaluation / Washington Suburban Sanitation Commission (WSSC)

Laurel, Maryland / 2015

Project manager for alternatives evaluation to support WSSC in the development of their 2017 Enterprise Asset Management Plan Business Case. Effort included developing forecasted 30-year capital plans optimizing on level of service, risk and cost. WSSC utilized the results of the evaluation to develop long term forecasts of capital improvements for communication to decision make Capital Prioritization Pilot Project / Salt River Project (SRP)

Project Prioritization / Salt River Project

Arizona / 2013-2014

Subject matter expert for this pilot study for SRP to prioritize and optimize several electrical generation, transmission and distribution planned investments. Allowed SRP management the opportunity to further develop and improve upon their current budget processes and to consider adopting the solution enterprise-wide. Jason's responsibilities included developing business case approaches for several of the pilot study projects and supporting workshops.

Long Term Electric Transmission and Distribution Capital Plan / Duke Energy

Indiana / 2014-2015

Subject matter expert and manager for development of a risk-based electric T&D capital plan that included Duke's long-term electric transmission and distribution (T&D) investments. This work provided evidence of how Duke's investments in its system provided risk reduction benefits and focused spending on high risk assets. As a capital prioritization and risk subject matter expert, he also developed capital plan profiles and resulting risk reduction solutions which were key to showing the value of the 7-year capital plan.

Long Term Electric Transmission and Distribution Capital Plan / Northern Indiana Public Service Company (NIPSCO)

Indiana / 2013-2014

Subject matter expert for development of a long-term $1 billion plus capital plan for NIPSCO's electric T&D infrastructure. A system risk model was developed to analyze and score asset risk across the T&D system for NIPSCO. The model highlighted the risk reduction benefits achieved through NIPSCO's long-term asset replacement program, which is focused on addressing high-risk assets that are nearing the end of their useful life.

Capital Prioritization System Master Plan / Hetch Hetchy Water and Power

California / 2009, 2011, 2012

Primary consultant for this system master plan, developing the analysis and prioritization of recommended capital and O&M projects for the Hetch Hetchy power, transmission and civil asset system. The process utilized a risk-based approach to economically schedule investments to maximize risk reduction given a certain budget constraint. The Hetch Hetchy Reservoir system lies within the scenic Yosemite National Park and provides electricity and water storage for the San Francisco Public Utility Commission.

Capital Project Prioritization with Risk Assessment / Colorado Springs Utilities

Colorado Springs, Colorado / 2008

Primary analyst on an innovative capital project prioritization process for Colorado Springs Utilities' Raw Water System. The engagement applied the Strategic Value Creation process to quantify the physical and financial parameters of capital and O&M projects identified for the utility's raw water system. A wide variety of projects and risk were then prioritized to develop the system capital improvement plan while considering utility risk tolerance, budget constraints and other planning criteria. Monte Carlo simulations were used to quantify the physical and financial parameters of each individual project, and the projects are evaluated and ranked using a consistent and transparent approach.

Jason was responsible for performing the Monte Carlo analysis, understanding the risks of each CAPITAL and O&M project, and prioritizing the projects to reduce the overall risk to the client.

Alaska Liquefied Natural Gas (AKLNG) Economic and Risk Analysis / State of Alaska Departments of Natural Resources and Revenue

Alaska / 2013-2016

Project manager responsible for economic and risk analysis for the AKLNG project on behalf of the State. In this role, Jason developed analysis to explore various project questions and negotiating position to better understand the perspective of each project sponsor and the best position for the State. He routinely developed materials to present to the commissioners of the departments or Natural Resources and Revenue, the State of Alaska legislature, negotiating teams, and the governor's office. On a few occasions, Jason has testified to the state of Alaska legislature of the economics and risks associated with the AKLNG project.

Deep Tunnel Sewerage System (DTSS) Phase 2 Resiliency Assessment / Singapore Public Utilities Board (PUB)

Singapore / 2014-2015

Subject matter expert for an alternative's resiliency assessment of several deep tunnel sewerage systems alternatives for Singapore PUB. In his role for this engagement, Jason created an innovated approach to evaluating the resiliency of several tunneling alternatives including total risk weighted level of service and cost over the asset's life cycle. The assessment identified several key risks impacting each alternative then quantifying the likelihood and the level of service and cost impacts of each risk. Employing Monte Carlo simulation, the risk cost and discount to level of service scores were calculated to develop a range of potential benefit cost ratios for each alternative. Singapore PUB utilized the process and results to identify a preferred alternative and move forward with key design decisions.

Kirkwood Penstock Risk Evaluation / Hetch Hetchy Water and Power

California / 2014

Project manager for a risk assessment of HHWP's critical Kirkwood Penstock which over 80% of San Francisco Bay's water supply moves through. The risk assessment following guidelines set out by the United States Bureau of Reclamation including a failure modes and effects analysis applying a qualitative scoring-based approach to evaluate the likelihood and consequence of failure for each failure mode. HHWP utilized the results of the evaluation to prioritize investment needs to ensure reliability of this critical asset.

Business Case Evaluation and Risk Analysis / Hampton Roads Sanitation District (HRSD, Wastewater Utility)

Virginia / 2011-2012

Business case evaluation and lead risk consultant for this long-term evaluation of the business case and associated risk of alternative wastewater system master plans. Working with Hampton Roads' senior management team, Jason evaluated the economics and risk of alternative strategic long-term wastewater system expansion plans related to biosolids management, which involved hundreds of millions of dollars in capital and O&M expenditures. This developed a long-term strategy that is now being used to optimize short- and long-term implementation plans for HRSD's wastewater system.

Conveyance Alternative Risk Assessment / Metropolitan Water District

California / 2010

Primary consultant for this engagement which analyzed several water conveyance options for the California State Department of Water Resources. This analysis was focused on capital cost and schedule risk of different multi-billion-dollar canal and tunnel conveyance alternatives. Jason was the risk specialist for the Environmental team for the risk assessment workshop. Utility decision-makers utilized the results to more fully understand the risk inherent in each alternative to decide on a preferred alternative.

Integrated Water Power Plant Economic and Regulatory Assessment / Public Authority for Electricity and Water of Oman

Oman, Middle East / 2009-2010

Primary analyst for the economic and regulatory (tariff) modeling of a new, highly efficient integrated water & power plant. Jason's responsibilities included performing economic and tariff modeling of several different desalination and power plant alternatives and presenting final results to the Chairman of the Public Authority for Electricity and Water of Oman.

AGIA Economic and Risk Modeling / State of Alaska Department of Natural Resources (DNR)

Alaska / 2009-2010

Primary analyst for this economic and risk modeling assignment for the State of Alaska DNR. Analysis included modeling and evaluation of different natural gas pipeline project risk factors, as well as risk mitigation measures the state has within its control. The results of the analysis assisted the State of Alaska in negotiations with other pipeline stakeholders.

Black & Veatch's Energy Market Perspective Emissions Modeling

Overland Park, Kansas / 2012-2013

As part of Black & Veatch's annual release of its Energy Market Perspective, Jason developed a fundamental economic model to calculate emissions prices based on the EPA's Cross State Air Pollution Rule.

Commercial Modeling and Analysis / Alaska Gasline Development Corporation (AGDC)

Anchorage, Alaska / 2010-2011

Lead consultant for ongoing commercial and tariff modeling for AGDC's analysis of in-state pipeline alternatives. This modeling included sensitivity and scenario analysis, midstream tariff modeling, and stakeholder cash flow analysis.

Black & Veatch's Energy Market Perspective

Overland Park, Kansas / 2009-2011

The Energy Market Perspective developed by Black & Veatch uses an integrated market modeling approach to develop price forecasts for energy and natural gas prices. The modeling team, which included Jason, developed forecasts for CO2 taxes, energy demand and peak demand, generation retirements, generation expansion, renewables buildout and transmission expansion. Using these forecasts, the integrated market

model used an interactive process of a production cost model for electric prices and a fundamental market model for natural gas prices.

Jason's principal responsibilities included developing forecasts, running and understanding the production cost model for a large region in the United States, and drawing conclusions for the region. The main forecasts Jason developed included energy and peak demand, generation retirements, generation expansion, and transmission expansion. Furthermore, Jason was responsible for developing the final report for the regional perspective.

Alaska Gasline Inducement Act (AGIA) Net Present Value (NPV) and Risk Analysis / State of Alaska Departments of Natural Resources and Revenue

Alaska / 2007-2008

In 2007, the state of Alaska passed the Alaska Gasline Inducement Act (AGIA). This act created a framework for the State to issue a license to build a 1,400 mile pipeline to transport natural gas from the North Slope of Alaska to either the North American market or elsewhere.

Uncertainty for a project of this size (over $30 billion) is understandably significant. In order to quantify this significant uncertainty, risk analysis was performed explicitly with the NPV model to evaluate the level of project risk to the various stakeholders due to various assumptions such as commodity prices, capital cost escalation, project schedule uncertainty, and reserve risk.

Jason performed economic, risk and financial analysis for several different stakeholders for the proposed projects and several sensitivities and alternative scenarios. Jason's main responsibilities included model development/creation, Monte Carlo risk modeling, and understanding risk for each stakeholder. He also performed financial analysis, data validation, and report and presentation support.

Socioeconomic Analysis, Riverbend Unit 3 and Fermi Unit 3 Nuclear Licensing Project / Entergy and Detroit Edison

Louisiana and Michigan / 2007-2008

Senior analyst served as an economist for a detailed socioeconomic analysis associated with the construction and operating license application (COLA) process for Entergy and Detroit Edison. He was responsible for developing population distributions; population projections; demographic characteristics to include age, sex, race and income; transient population distributions; and community characteristics for the surrounding area. Jason was also responsible for writing and reviewing significant portions of the COLA

Market and Economic Analysis / Termobarranquilla

Colombia, South America / 2007-2008

As a senior analyst, Jason provided market analysis, economic analysis and a discounted cash flow model to evaluate the worth of the Termobarranquilla power plant after an energy market restructuring in Colombia. He was responsible for developing an energy market model, economic dispatch model, discounted cash flow model and writing the report.

Taylor Energy Center Need for Power Application / Various Clients

Florida / 2006

Jason performed production costing, economic analysis and other support to facilitate the completion and filing of the Taylor Energy Center (TEC) Need for Power Application (NFP). The NFP provided a determination of the most cost-effective capacity addition to satisfy forecasted capacity requirements for the four separate utilities participating in the project while maintaining consistency with the Florida Public Service Commission statutory requirements. The analysis considered self-build and purchase-power alternatives.

Portfolio of Wind Farms and Coal Fired Plants / Sembcorp Industries Pte Ltd.

China / 2011

Lead consultant to Sembcorp Industries Pte (buy-side), in support of their potential acquisition of an equity position in a Chinese investment company (confidential). This engagement required due diligence site visits and technical and commercial review of a wind portfolio and coal fired generation plant in Shanxi Province, Hebei Province, and Inner Mongolia Autonomous.

Water and Wastewater Utility Independent Engineer's Report / Confidential Client

2011

Primary consultant assisted and prepared an independent engineer's report for a confidential client seeking to divest its portfolio of water and wastewater utilities. The report provided an overview of the systems, the major sources of supplies, rates, and environmental and regulatory issues. Major facilities were evaluated to document the condition of specific utilities. A final report was prepared and delivered to the client for use in its divestment proceedings.

Combined Cycle Due Diligence / Confidential Client

California / 2011

Jason was involved with the technical due diligence of 1,000 megawatt (MW) combined-cycle power plant in the state of California. Jason was responsible for reviewing maintenance and performance reports on plant equipment and safety along with O&M and energy management

agreements. Jason also developed the corresponding report sections that summarized the results of the analysis.

Engineer's Report / Philadelphia Gas Works (PGW)

Philadelphia, Pennsylvania / 2010-2011

Lead consultant on the engineer's reports developed for PGW's last two revenue bond issues for $165 million and $150 million, respectively. Proceeds from the bond issues funded needed capital improvements to PGW's distribution system and LNG facilities. The engineer's report summarized the findings of a study of PGW's facilities, management, operations, gas supply, rates and marketing, and customer service, and assessed the financial feasibility of the bond issue.

E.ON US Portfolio Due Diligence, Various Coal, Gas and Hydroelectric Power Plants / E.ON

Kentucky, United States / 2010

Jason performed technical due diligence for the potential sales of approximately 9,500 MW coal, gas and hydroelectric generating assets in the state of Kentucky. Jason was responsible for reviewing maintenance and performance reports on plant equipment and safety along with O&M and energy management agreements. Jason also developed the corresponding report sections that summarized the results of the analysis.

Technical Due Diligence / Con Edison Development, Inc.

2007

Jason performed a technical due diligence assessment of certain power generation facilities in the northeast United States. He was responsible for developing power plant performance sections of the assessment and reviewing O&M, power purchase, maintenance, gas supply, oil supply, electrical interconnection and water supply agreements.

FE PA Statement No. 8-SR

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY

DOCKET NO. R-2024-3047068

Surrebuttal Testimony of Mark Jones

List of Topics Addressed

Access to FE PA's Statement of Reasons

TABLE OF CONTENTS

I. INTRODUCTION AND PURPOSE 1

II. ACCESS TO FE PA'S STATEMENT OF REASONS 2

III. CONCLUSION 3

SURREBUTTAL TESTIMONY
OF
MARK JONES

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is Mark A. Jones. My business address is 76 South Main Street, Akron, Ohio 44308.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. I submitted written direct testimony (FE PA Statement No. 8), rebuttal testimony (FE PA Statement No. 8-R), and FE PA Exhibits MAJ-1 through MAJ-5 on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. Please summarize your surrebuttal testimony?

A. In my surrebuttal testimony, I will address testimony provided by customer, David Badger, on July 10, 2024, at the 1 p.m. in-person public input hearing at the Butler County Community College. Specifically, I will address Mr. Badger's concerns regarding access to the Statement of Reasons.

Q. Are you sponsoring any exhibits to accompany your surrebuttal testimony?

A. No.

II. ACCESS TO FE PA'S STATEMENT OF REASONS

Q. On July 10, 2024, during the 1:00 p.m. public input hearing at the Butler County Community College, Mr. David Badger expressed concerns about his inability to obtain a copy of the Statement of Reasons as indicated in his local newspaper.[1] How do you respond?

A. The Company appreciates Mr. Badger's feedback regarding his experience in attempting to obtain a Statement of Reasons for the proposed rate increase. Following Mr. Badger's testimony, FE PA completed a thorough review of his interactions with the Company, and several opportunities for improvement were identified. Specifically, while talking points for discussing the base rate case was provided to employees who interact with our customers when the filing occurred, FE PA found that the instructions for providing the Statement of Reasons were inadvertently omitted. Once this was determined, FE PA sent a follow-up communication to employees that included a copy of the Statement of Reasons and instructions for emailing or mailing to customers when requested.

Although the information the customer requested was available on the Company's website in the Volume I Base Rate Case Filing link on the Pennsylvania Tariffs page and on the Commission's online docket for this proceeding, FE PA recognizes that the Statement of Reasons could have been more easily accessible to customers, including Mr. Badger. To improve the customer experience, the Statement of Reasons has been added as a separate link on the Company's website, and that update has been provided to employees. With this change, customers will be able to easily locate the Statement of Reasons on FE PA's website and obtain a copy by clicking on the link. Moreover, upon customer request,

[1] Tr. at 284-290 (Mr. Badger's testimony).

FE PA's customer service representatives will email or mail a copy of the Statement of Reasons directly to the customer.

Lastly, FE PA is committed to improving its call handling procedures for unresolved matters and ensuring that a member of the leadership team is promptly alerted to provide support for resolution. Moreover, internal stakeholders will be convening to explore opportunities for enhancing communication and will work on developing improved communication plans for future filings.

III. CONCLUSION

Q. Does this conclude your surrebuttal testimony?

A. Yes.

SURREBUTTAL TESTIMONY
OF
JOHN HAWKINS

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is John Hawkins. My business address is 800 Cabin Hill Drive, Greensburg, Pennsylvania 15601.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed written rebuttal testimony on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. Please summarize your surrebuttal testimony.

A. In my surrebuttal testimony, I will address portions of rebuttal testimony of (1) Daulph Kline, which was submitted on behalf of Local 777 of the International Brotherhood of Electrical Workers ("IBEW"), and (2) David Cornell and Jessica Smith, who testified at the public input hearing held in East Stroudsburg on the evening of June 25, 2024 and Matthew Griffith, who testified at the afternoon telephonic hearing on July 16, 2024.

Q. Are you sponsoring any exhibits to accompany your surrebuttal testimony?

A. No.

II. SURREBUTTAL REGARDING CONTRACTOR UTILIZATION

Q. Does IBEW witness Mr. Kline present any further testimony regarding the Company's use of contractor labor in his rebuttal testimony?

A. Yes. Mr. Kline continues to assert that the Company over-relies upon the use of contractors in the Met-Ed Rate District.[1] He reiterates points addressed in his direct testimony and presents three new exhibits that he asserts show work is being sourced to external contractors in the Met-Ed Rate District to the detriment of customers.[2]

Q. How do you respond to Mr. Kline's assertions that FE PA's customers in the Met-Ed Rate District are harmed by its overreliance on contractor labor?

A. As stated in my rebuttal testimony on page 48, Met-Ed, as well as FE PA, supports the use of internal labor over contractor labor when possible and feasible. I disagree that Met-Ed has an overreliance on contractor labor. IBEW witness Kline provides three exhibits to support his assertions, one of which is not appropriately included as part of this proceeding. Exhibit A is a list of transmission projects to be completed in the Met-Ed Rate District service territory. These projects are transmission projects to be completed by Mid-Atlantic Interstate Transmission, LLC ("MAIT") and are not distribution projects. While some Met-Ed Rate District resources may be used for portions of certain listed projects, the labor costs are assigned to MAIT, not FE PA or the Met-Ed Rate District. Therefore, the projects listed in Exhibit A have no bearing on and are not relevant to this distribution base rate proceeding.

[1] IBEW St. No. 1-R at pp. 7-9.
[2] IBEW St. No. 1-R at pp. 7-9.

Exhibits B and C list projects planned for under FE PA's second Long Term Infrastructure Improvement Plan ("LTIIP"), as well as additional incremental capital investment projects underway for the Company in 2024. The work listed in these exhibits are focused on defined-term, accelerated projects which require significant resources to complete over a defined time period. FE PA sets its internal, long-term workforce counts at an appropriate level to handle day-to-day normal operations. Retirements and attrition are considered when setting internal, long-term hiring and staffing goals. To this end, the Company strives to hire qualified workers, such as through the Journey Line Work initiative, or hire lesser qualified line workers through our apprenticeship program early enough to provide proper training before more advanced workers exit the company. However, the Company must be mindful about increasing internal, long-term employee counts solely for short-term, incremental, or emergency storm restoration work. Hiring long-term labor for programs such as LTIIP and other discrete investment initiatives would result in more employees than required for day-to-day operations once those programs end, or when their scale is adjusted. Similarly, hiring long-term labor for storm restoration work would again result in more employes than required for normal operations. Such over-hiring would negatively impact ratepayers. The Company's current hiring strategy balances the need to attract, train and retain a qualified internal labor force over the long-term, with the need to utilize external contractor resources for short-term work.

Additionally, IBEW witness Kline has not provided information to support the assertion of cost savings on these projects by using internal labor over contractor labor. While it is generally true that an internal full-time employee costs less overall than a typical contractor, the equation is not that simple. For example, there are times when contract

labor is more efficient, effective, or has more specialized equipment or skills to perform certain types of work than would be available using internal labor. One such example is undergrounding work that is normally performed by contractors with specialized equipment which FE PA does not maintain. Furthermore, unanticipated work, changes in project timeline(s), and geographic location challenges may mean that contract labor is the most appropriate option to ensure all work is completed efficiently, timely and at a reasonable cost.

Finally, nearly all projects listed in Exhibits B and C have been competitively bid to provide a benefit to customers. Competitive bidding can ensure that the Company does not overpay for work, as it allows for a comparison of rates ahead of time. This process ensures transparency and fairness in the bid process, ensures the Company is able to select the lowest responsive and responsible bidder, and reduces costs overall.

III. SURREBUTTAL REGARDING RELIABILITY CONCERNS RAISED AT PUBLIC INPUT HEARINGS

Q. Did any members of the public raise concerns regarding the reliability of their electric service during the public input hearings held in this matter?

A. Yes. In particular, testimony regarding reliability was provided by Mr. David Cornell and Ms. Jessica Smith during the public input hearing in East Stroudsburg on June 25, 2024, at 6:00 PM, and by Mr. Griffith at the telephonic public input hearing held on July 16, 2024, at 1:00 p.m.

Q. Please describe the concerns raised by Mr. Cornell and Ms. Smith during their testimony.

A. Both Mr. Cornell and Ms. Smith raised concerns about outages they have experienced.[3] Both Mr. Cornell and Ms. Smith are neighbors that are served by the 00610-3 circuit and have experienced multiple outages over the last five years. I would like to acknowledge the hardships caused by these outages and reassure those customers that the Company is working to improve reliability on that circuit and many others across the Company's territory. To help address outage issues on this circuit, in 2020, the Company installed two Supervisory Control and Data Acquisition ("SCADA") line reclosers, which provide remote sectionalizing and tie capabilities. Also, in 2022, the Company installed a new SCADA station recloser which provides remote control and monitoring of the recloser at the substation. The Company also plans to create a circuit tie between the 00610-3 and 00620-3 circuits in 2025 as part of its LTIIP III program,[4] which would allow a backup source of power in the event of an outage on either one of those circuits. In addition, the 00610-3 circuit is due to receive vegetation maintenance in 2025, which includes trimming limbs, treating for vegetation growth, and removing priority trees that are an imminent threat. Further, if the enhanced vegetation program proposed in this case is approved, the Company will not only conduct the maintenance required to meet the minimum requirements of its Inspection and Maintenance Plan, but would also be able to target additional on-corridor trees and brush, overhang, and off-corridor priority trees that are not an immediate threat but would lead to long-term reliability improvements. Off-corridor

[3] Tr. at 79-92 (Mr. Cornell's testimony), and 93-101 (Ms. Smith's testimony).
[4] *Petition of FirstEnergy Pennsylvania Electric Company for Approval of its Long-Term Infrastructure Improvement Plan*; Docket No. P-2024-3050269 (filed July 23, 2024).

trees and limbs have been the initiating cause of 16% of the outage minutes experienced by these customers since 2019. The Company's enhanced vegetation management program is expected to reduce the likelihood of tree-related outages and lead to quicker and safer restoration in the event of an outage.

Q. Please describe the concerns raised by Mr. Griffith during his testimony.

A. Mr. Griffith raised several concerns regarding the frequency and duration of outages he has experienced in recent years.[5] Specifically, Mr. Griffin stated that "I know there are areas where the lines go through trees. And I don't believe that the trees are maintained and cut back away from the power lines often enough to prevent this kind of outage."[6]

Q. Please respond to the concerns raised by Mr. Griffith.

A. Upon investigation of Mr. Griffith's concerns, there have been two longer duration outages this year caused by vegetation. Implementation of the enhanced vegetation management program is intended to address exactly these types of situations through the removal of overhanging vegetation and on- and off-corridor trees that can result in outages for customers.[7]

Q. Do you have any further comments regarding the testimony given during public input hearings regarding the reliability of FE PA's service?

A. Yes. While the examples I provided above address only the specific locations described by witnesses at the public input hearings, the Company continuously evaluates its reliability on both a system and circuit basis and works to implement projects and/or

[5] Tr. at 476-479.
[6] Tr. at 479.
[7] FE PA St. No. 2, at pp. 19-21; FE PA St. No. 12-R at pp. 24-25, 27-28, 31.

maintenance aimed at improving reliability for customers. The proposed enhanced vegetation management program will also more generally improve FE PA's ability to access and inspect the lines and improve reliability and safety on the distribution corridors for all employees and contractors over the length of the ten-year program while providing ecological and long-term cost benefits. The Company's proposed LTIIP III represents a $1.42 billion investment to accelerate distribution infrastructure improvements and enhance service reliability. LTIIP projects are designed to reduce the frequency of service interruptions and shorten the duration of outages when they do occur, which was successfully evidenced by the 14% improvement to System Average Interruption Frequency Index ("SAIFI") over the duration of the LTIIP II period from 2019 to 2023. These proposed programs, in addition to the remaining LTIIP II projects to be completed in 2024, the Company's baseline capital projects,[8] and other measures and improvements are all designed to improve reliability for the more than two million customers across FE PA.

IV. CONCLUSION

Q. Does this conclude your surrebuttal testimony?

A. Yes.

III. CONCLUSION 3

SURREBUTTAL TESTIMONY
OF
APRIL MARX

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is April L. Marx. My business address is 76 S. Main Street, Akron, Ohio 44308.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I submitted FE PA Statement No. 13-R, which was my written rebuttal testimony on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. Please summarize your surrebuttal testimony?

A. In my surrebuttal testimony, I will address the rebuttal testimony submitted by Vanessa Okum on behalf of the Bureau of Investigation and Enforcement ("I&E") concerning the Company's incentive compensation.

Q. Are you sponsoring any exhibits to accompany your surrebuttal testimony?

A. No.

II. INCENTIVE COMPENSATION

Q. In her rebuttal testimony, I&E witness Okum disagrees with OCA witness Mugrace's recommendation to disallow 30% of Short-Term Incentive Compensation ("STIP"), arguing that the entirety of STIP should be disallowed because "financial metrics are the primary driver of STIP compensation."[1] Do you agree with I&E witness Okum?

A. No. As explained in my rebuttal testimony, the key performance indicators ("KPIs") for measuring STIP performance are based on both financial and operational metrics. I&E witness Okum incorrectly focuses on the financial metrics, concluding that "STIP awards are entirely contingent upon achieving a predetermined level of earnings per share."[2] That is not accurate. Although the Company's earnings per share achievement will determine the amount to which the pool is funded, the actual STIP award amounts granted to employees, if any, are still dependent on the operational metric KPIs. This is reflected in I&E Exhibit No. 1, Schedule 5 (CONFIDENTIAL), which states that "[a]ward amounts will be calculated based on the final KPI results, as certified by the Board" and that "[i]f Operating [earnings per share] EPS achievement, is at or above target, funding will be applied first based on overall 2024 KPI performance up to 200%, followed by any individual modifiers, as applicable." Thus, the Company's incentive compensation structure for STIP unquestionably considers both financial and operational metrics, and I&E witness Okum's recommendation should be denied.

FEDERAL ENERGY REGULATORY COMMISSION
WASHINGTON, D.C. 20426

In Reply Refer To:
Office of Enforcement
Docket No. FA19-1-000
February 4, 2022

Jason Lisowski
Vice President, Controller and Chief Accounting Officer
FirstEnergy Corporation
76 South Main Street
Akron, OH 44308

Dear Mr. Lisowski:

1. The Division of Audits and Accounting (DAA) within the Office of Enforcement (OE) of the Federal Energy Regulatory Commission (Commission) has completed an audit of FirstEnergy Corporation and its subsidiaries (collectively, FirstEnergy). The audit covered the period January 1, 2015 to September 30, 2021.

2. The audit evaluated FirstEnergy's compliance with: (1) cross-subsidization restrictions on affiliate transactions under 18 C.F.R. Part 35; (2) service company accounting, recordkeeping, and FERC Form No. 60 reporting requirements under 18 C.F.R. Parts 366, 367, and 369; (3) accounting and reporting requirements prescribed for public utilities pertaining to transactions with affiliated companies under 18 C.F.R. Parts 101 and 141; and (4) preservation of records requirements for holding companies and service companies under 18 C.F.R. Part 368. The enclosed audit report contains seven findings of noncompliance and 38 recommendations that require FirstEnergy and its subsidiaries to take corrective action.

3. On January 24, 2022, FirstEnergy notified DAA that it largely accepts the findings and recommendations. FirstEnergy also proposed that Finding No. 1, Allocation of Overhead Costs to CWIP, and its associated Recommendation Nos. 1, and 7 through 11 be revised consistent with FirstEnergy's response to the audit report. A verbatim copy of FirstEnergy's response is included as Section V to the accompanying audit report. I hereby approve the uncontested findings and recommendations.

4. FirstEnergy should submit its implementation plan to comply with the uncontested recommendations within 30 days of issuance of this letter order. FirstEnergy should make quarterly submissions to DAA describing the progress made to comply with the

uncontested recommendations, including the completion date for each corrective action. As directed by the audit report, these submissions should be made no later than 30 days after the end of each calendar quarter, beginning with the first quarter after this audit report is issued, and continuing until all the corrective actions are completed.

5. Pursuant to Part 41 of the Commission's regulations, this serves as notice that within 30 days of the issuance of this order, FirstEnergy may notify the Commission in writing as to whether it requests Commission review of Finding No. 1 and its associated Recommendation Nos. 1, and 7 through 11 by means of a shortened procedure or, if FirstEnergy contends that there are material facts in dispute which require cross-examination, a trial-type hearing. 18 C.F.R. § 41.2 (2021). If FirstEnergy does not timely respond to this order, it will be deemed to acquiesce in the finding and recommendations.

6. The Commission delegated authority to act on this matter to the Director of OE under 18 C.F.R. § 375.311. This letter order constitutes final agency action with respect to all uncontested findings and recommendations. FirstEnergy may file a request for rehearing of this letter order with the Commission within 30 days of the date of this order under 18 C.F.R. § 385.713. This letter order does not constitute final agency action with respect to Finding No. 1 and its associated Recommendation Nos. 1, and 7 through 11 so long as FirstEnergy timely responds to this letter order as set forth in Paragraph 5 above.

7. This letter order is without prejudice to the Commission's right to require hereafter any adjustments it may consider proper from additional information that may come to its attention. In addition, any instance of non-compliance not addressed herein or that may occur in the future may also be subject to investigation and appropriate remedies.

8. I appreciate the courtesies extended to the auditors. If you have any questions, please contact Mr. Gerald Williams, Director and Chief Accountant, Division of Audits and Accounting at (202) 502-8277.

Sincerely,

JANEL BURDICK Digitally signed by JANEL BURDICK Date: 2022.02.01 14:54:26 -05'00'

I. Executive Summary

A. Overview

The Division of Audits and Accounting (DAA) within the Office of Enforcement of the Federal Energy Regulatory Commission (Commission) has completed an audit of FirstEnergy Corporation (FirstEnergy) and its subsidiaries. The audit evaluated FirstEnergy's and its subsidiaries' compliance with: (1) cross-subsidization restrictions on affiliate transactions under 18 C.F.R. Part 35; (2) service company accounting, recordkeeping, and FERC Form No. 60 reporting requirements under 18 C.F.R. Parts 366, 367, and 369; (3) accounting and reporting requirements prescribed for public utilities pertaining to transactions with affiliated companies under 18 C.F.R. Parts 101 and 141; and (4) preservation of records requirements for holding companies and service companies under 18 C.F.R. Part 368. The audit covered the period January 1, 2015 to September 30, 2021.

B. FirstEnergy Corporation and its Subsidiaries

FirstEnergy, headquartered in Akron, OH, was incorporated under Ohio law in 1996 as a public utility holding company. FirstEnergy and its subsidiaries are engaged in the generation, transmission, distribution, and sale of energy in the Midwest and Mid-Atlantic regions. FirstEnergy has 63 subsidiaries that it owns directly or indirectly, which include ten wholly owned franchised public utilities (FPU)[1] and three transmission-lines-only public utilities.[2]

FirstEnergy FPUs and Transmission-Lines-Only Companies

During the audit period, FirstEnergy's FPUs provided distribution and wholesale transmission services and made wholesale sales of power for resale under Commission

[1] FirstEnergy's FPU subsidiaries are: The Cleveland Electric Illuminating Company, Jersey Central Power and Light Company (JCP&L), Metropolitan Edison Company, Monongahela Power Company, Ohio Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, The Potomac Edison Company, The Toledo Edison Company, and West Penn Power Company.

[2] FirstEnergy's transmission-lines-only subsidiaries are: American Transmission Systems, Incorporated (ATSI), Mid-Atlantic Interstate Transmission, LLC (MAIT), and Trans-Allegheny Interstate Line Company (TrAILCo) (collectively, Transmission Companies).

market-based rate tariffs.[3] Three of the FPUs – Monongahela Power Company, The Potomac Edison Company, and West Penn Power Company – recovered their wholesale transmission service costs pursuant to stated, cost-based wholesale transmission Open Access Transmission Tariff (OATT) rates as transmission owner members of the PJM Interconnection, L.L.C. (PJM).[4] Effective January 1, 2021, these companies implemented a forward-looking formula rate, which was accepted by the Commission, subject to refund, pending further hearing and settlement procedures.[5] JCP&L began recovering its wholesale transmission service costs pursuant to a formula rate tariff in PJM that became effective January 1, 2020,[6] and the remaining six FPUs either did not have transmission assets, or transferred their transmission assets to affiliates, during the audit period.

The Transmission Companies are transmission owner members of PJM. The companies recover their transmission service costs pursuant to their respective individual

wholesale transmission formula rate mechanisms found in the PJM OATT.[7] The FPUs and Transmission Companies collectively serve approximately 6 million customers and have over 24,000 miles of transmission lines and over 272,000 miles of distribution lines.

FirstEnergy Special Purpose Entities

During the audit period, FirstEnergy had two special purpose entity subsidiaries – FirstEnergy Service Company (FESC) and Allegheny Energy Service Corporation. FESC was FirstEnergy's centralized service company. It provided administrative, management, support, and external affairs services during the audit period, including political and regulatory advocacy services on behalf of FirstEnergy and its subsidiaries under a shared services agreement. Allegheny Energy Service Corporation owned aircraft and leased them to FESC.

Competitive Power Generation Entities

FirstEnergy owned FirstEnergy Solutions Corp. (FES) and FirstEnergy Nuclear Operating Company (FENOC), which provided energy related products and services. FES, through its subsidiaries, and FENOC owned and operated two coal-fired generating plants, a dual fuel gas/oil plant, a petroleum coke-fired plant, and three nuclear power plants.[8] On March 31, 2018, FES and FENOC, together with FES's subsidiaries, filed voluntary petitions for bankruptcy protection under Chapter 11 of the U.S. Bankruptcy Code in connection with the implementation of a proposed plan of reorganization.[9] Under the reorganization plan ultimately approved by the bankruptcy court, upon emergence from bankruptcy, a new privately-held holding company, Energy Harbor was formed and became the parent of the companies. Energy Harbor is neither a subsidiary

[8] FES and its wholly owned subsidiaries – FirstEnergy Generation, LLC, and FirstEnergy Nuclear Generation, LLC – had market-based rate tariffs on file with the Commission.

[9] Due to the bankruptcy proceeding, which was ongoing during this audit, and FirstEnergy's representation that FES and FENOC ceased to be under its control upon completion of the reorganization, there were limited audit procedures performed that were directed at FES's and FENOC's operations.

nor an affiliate of FirstEnergy. The market-based rate tariffs previously held by FES and its subsidiaries were succeeded by market-based rate tariffs of Energy Harbor's subsidiaries – Energy Harbor LLC, Energy Harbor Generation LLC, and Energy Harbor Nuclear Generation LLC.[10]

C. Summary of Compliance Findings

Audit staff's compliance findings are summarized below. Details of these findings are in Section IV. Audit staff found the following seven areas of noncompliance:

- *Allocation of Overhead Costs to CWIP* – FirstEnergy's subsidiaries capitalized overhead costs to Account 107, Construction Work in Progress-Electric, using an allocation method that was not based on actual time employees were engaged in construction activities based on timecard reports or on a representative time study. This may have led to FirstEnergy's subsidiaries capitalizing costs to Account 107 that did not have a definite relationship to construction. As a result, the companies may have overstated construction costs recorded in Account 107 and electric plant in service, as well as accumulated depreciation, depreciation expenses, and accumulated deferred income tax (ADIT) balances, and understated operating expenses. Moreover, accumulated overstatement of electric plant in service and the related depreciation due to this accounting practice during and prior to the audit period may have resulted in the FirstEnergy subsidiaries with wholesale transmission formula rate service cost recovery mechanisms, overstating their respective wholesale annual transmission revenue requirements and overcharging wholesale transmission customers.

- *Accounting for Vegetation Management Costs* – The FirstEnergy FPUs improperly accounted for maintenance expenses incurred to remove vegetation surrounding in service distribution powerlines. Specifically, the FPUs inappropriately capitalized the cost to electric plant in service. This accounting practice caused the companies to overstate electric plant in service, accumulated depreciation, ADIT,

[10] *See Energy Harbor LLC*, Docket Nos. ER20-1436-000, ER20-1437-000, and ER20-1438-000 (May 21, 2020) (delegated order on succession and related tariff changes); *see also* Energy Harbor LLC, FERC FPA Electric Tariff and Market-Based Rate Power Sales Tariff; Energy Harbor Generation LLC, FERC FPA Electric Tariff and Market-Based Power Sales Tariff; Energy Harbor Nuclear Generation LLC, FERC FPA Electric Tariff and Market-Based Rate Power Sales Tariff.

depreciation expenses, and other account balances, and understate operating expenses incurred.

- *Accounting for Amortization of Regulatory Assets* – FirstEnergy's subsidiaries deferred certain maintenance expenses, associated with costs incurred to remove vegetation in transmission corridors, and recorded the deferred expenses as regulatory assets in Account 182.3, Other Regulatory Assets, for Commission accounting and reporting purposes. Certain subsidiaries then improperly amortized $3.8 million of the deferred costs as expenses in subsequent periods without obtaining Commission approval to recover these regulatory assets in rates. Moreover, two of the Transmission Companies, ATSI and TrAILCo, included these expenses representing amortization of the regulatory assets in their annual transmission revenue requirements calculated pursuant to their wholesale transmission formula rates without the required Commission approval to recover such regulatory assets. Also, certain FirstEnergy subsidiaries recovered overstated depreciation expense through transmission formula rates.

  As a result of the above deficiencies, the Transmission Companies inappropriately included approximately $2.7 million of regulatory asset amortization and depreciation expense in their annual transmission revenue requirements and overbilled their wholesale transmission customers by this amount.

- *Accounting for Lobbying Costs, Donations, and Costs that Lacked Proper Supporting Documentation* – FESC improperly accounted for and improperly reported lobbying expenses, donations, and other costs that lacked proper supporting documentation or were misclassified (unsupported costs). Moreover, FESC allocated and charged the improperly accounted for lobbying, donation, and unsupported costs to FirstEnergy and its subsidiaries. This led the FirstEnergy subsidiaries to improperly account for and report the lobbying expenses, donations, and unsupported costs in their respective books and records, and FERC Form No. 1. The errors resulted in the Transmission Companies including the lobbying expenses, donations, and unsupported costs in their annual wholesale transmission revenue requirements and billing rates, and overbilling wholesale transmission customers.

- *Allowance for Funds Used During Construction* – FirstEnergy's FPUs improperly included undistributed subsidiary earnings and accumulated other comprehensive income in equity balances used for the purpose of computing AFUDC rates. As a

result, the companies over-accrued AFUDC during the audit period, which led them to overstate CWIP and plant-in-service balances.

- *Service Company Billing Procedures* – Billing information that FESC provided to FirstEnergy's subsidiaries pertaining to charges for services provided to them was insufficient. Specifically, FESC did not provide detailed information to reflect the services provided and showing the charges classified as direct costs, indirect costs, or compensation for use of capital, with the details of service company accounts by service provided, as required. As a result, the FirstEnergy subsidiaries misclassified costs charged by FESC.

- *Accounting for Fuel – Coal Supply and Other Consulting Services* – The FirstEnergy FPU, Monongahela Power Company, improperly accounted for fixed monthly consultation fees paid in Account 501, Fuel, as a component cost of coal used in operations without first being accounted for as inventoried fuel stock in Account 151, as required. The accounting led to costs being included in fuel used in operations that may not have been directly assignable and likewise not properly allocable to the cost of coal purchased and used. As a result, Monongahela Power Company may have overcharged wholesale customers, through operation of the fuel cost adjustment formula in its tariff, for the cost of fuel included as a component cost of generating electricity.

D. List of Recommendations

Audit staff's recommendations to remedy the audit findings are listed below. Details are in Section IV. Audit staff recommends that FirstEnergy:

Allocation of Overhead Costs to CWIP

1. Retain an independent third-party entity, subject to approval by DAA, to conduct a representative labor time study for allocation of overhead costs incurred in 2021 to CWIP, and to assist with the development of procedures FirstEnergy subsidiaries shall use to periodically determine the allocation of overhead labor and labor-related costs capitalized by each FirstEnergy subsidiary into the cost of construction after 2021. The independent consultant should have expertise and experience independently performing time studies used in the determination of overhead capitalization rates of U.S. based utilities subject to the accounting requirements prescribed for public utilities and licensees or for natural gas companies under 18 C.F.R. Part 101 or Part 201, respectively. The time study should involve a representative sample of study participants (employees) that provides for extrapolation of the study results to the full population of FirstEnergy employees, and should include processes for application of the study results from

the audit period to the issue date of this audit report, and processes for applying the capitalization rate(s) the study finds for 2021 back to the period January 1, 2015 through December 31, 2020, either with no change to the capitalization rates found in the study or with such modifications to the capitalization rate(s) the independent consultant finds reasonable and supported by evidence. The independent consultant should use its expertise and all relevant information available to it to make recommendations as to what the capitalization rate(s) should be for prior years for each FirstEnergy subsidiary, should set forth the basis for its recommendations, and provide both the recommendations and the basis therefore to FirstEnergy and DAA. If there is no recommendation by the independent consultant for any year or other period between January 1, 2015 and December 31, 2020 for any specific capitalizable cost center, then FirstEnergy should base its capitalization rate and the amount to be capitalized for such year or period on the rates and costs of such specific cost centers for which FirstEnergy can provide to DAA reasonable evidence as to the time employees in such cost centers spent having a definite relation to construction, and exclude from consideration those cost centers for which FirstEnergy cannot provide such evidence, per, for example, 18 C.F.R. Part 101, General Instruction No. 2 and § 41.8.

The progress of the study should be reported within 120 days and the time study results provided to DAA for review and consideration within 180 days of the date of issuance of this audit report, and the developed allocation procedures should be submitted when complete, but no later than 60 days after completion of DAA's review of the labor time study. At a minimum, the developed allocation procedures should provide a method for overhead cost allocation and capitalization to construction based on actual timecard distributions or where this procedure is impractical, based on periodic time studies.

2. Revise written policies, practices, procedures, and controls governing the methods used to account for, track, report, and review overhead labor and related costs, and all other costs allocated to construction projects to be consistent with Commission accounting requirements. In addition, adopt procedures to retain formal documentation supporting the amount of overhead costs allocated to electric plant accounts.

3. Revise accounting processes and procedures to account for and report capitalized A&G amounts recorded in Accounts 920, Administrative and General Salaries, and 921, Office Supplies and Expenses, using Account 922, Administrative Expenses Transferred – Credit, consistent with Commission regulations.

4. Train relevant staff on the revised overhead allocation, control, and A&G accounting procedures and documentation, and provide periodic training in this area, as needed.

5. Train staff on the time reporting guidelines and establish a periodic training program in this area.

6. Within 30 days of the completion of Recommendation No. 1, submit an estimate to DAA, including the calculations and determinative components, of overhead costs that would have been allocated to CWIP from 2015 through the present consistent with the requirements of Electric Plant Instruction No. 4 and General Instruction No. 9. The estimate should be based on a recalculation of 2015's and subsequent years' overhead costs allocated to construction with labor and related costs removed from the cost of plant that were not associated with construction activities based on the methodology developed in response to Recommendation No. 1.

7. With the response to Recommendation No. 6, submit proposed accounting entries to DAA that remove the overhead costs that were allocated to CWIP and electric plant in service from 2015 through the present that exceed the amount of costs that would have been allocated to the accounts based on the methodology developed in response to Recommendation No. 1. Also, provide proposed accounting entries to remove associated amounts from other accounts and balances affected by the inappropriately allocated cost such as the accumulated depreciation and ADIT accounts, and AFUDC balances capitalized into CWIP and electric plant in service. If the adjusting entries result in a significant impact to income for the current year, FirstEnergy subsidiaries may account for the transaction as a correction of a prior period error in Account 439, Adjustments to Retained Earnings. Such adjustments to retained earnings with the proposed accounting entries should be submitted to DAA.

8. Revise account balances for FirstEnergy subsidiaries' utility plant, accumulated depreciation, ADIT, and other account balances impacted by the inappropriate allocation of unsupported overhead costs after receiving DAA's approval of proposed accounting entries submitted per Recommendation No. 7, and restate and footnote the balances reported in the next-filed FERC Form No. 1 reports of the FirstEnergy subsidiaries for both the current and comparative years presented in each subsidiary's next-filed report, as necessary to reflect and disclose the revisions.

9. Submit a refund analysis to DAA that explains and details the following: (1) calculation of refunds that result from correcting the overstatement of

transmission plant due to the improperly capitalized labor costs, as determined by the labor time study, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale transmission customers to receive refunds; and (5) period(s) refunds will be made.

10. File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

11. Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

Accounting for Vegetation Management Costs

12. Revise accounting policies and procedures for vegetation management activities in distribution corridors to be consistent with Commission accounting requirements.

13. Train relevant staff on the revised vegetation management accounting policy and procedures and provide periodic training.

14. Submit proposed accounting entries and supporting documentation to DAA that reflect the correction of the FirstEnergy FPU's CWIP, electric plant in service, accumulated depreciation, ADIT, and other accounts impacted by the capitalization of vegetation management expenses for the period from October 1, 2021 through the present within 60 days of issuance of this audit report.

15. Revise the FirstEnergy FPUs' CWIP, electric plant in service, accumulated depreciation, ADIT, and other accounts impacted by over-accrual of AFUDC after receiving DAA's approval of the proposed accounting entries per Recommendation No. 14 and restate and footnote the FERC Form No. 1 reports for current and comparative years as necessary.

Accounting for Amortization of Regulatory Assets

16. Revise policies, practices, and procedures to amortize or write off the regulatory assets consistent with Commission accounting requirements.

17. Train relevant staff on the revised methods, and provide periodic training in this area, as needed.

18. Submit a refund analysis, within 60 days of issuance of this audit report, to DAA for review that explains and details the following: (1) calculation of refunds that result from the correction of ATSI's and TrAILCo's improper and unauthorized,

respective, depreciation and amortization of plant and regulatory assets to the depreciation expense account and inclusion of the expenses in service rate determinations, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale transmission customers to receive refunds; and (5) period(s) refunds will be made.

19. File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

20. Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

Accounting for Lobbying Expenses, Donations, and Unsupported Costs

21. Critically review and strengthen internal controls in FirstEnergy and its subsidiaries. Establish and implement procedures governing methods to be used to appropriately identify, account for, track, report, and review all lobbying costs, donations, and any unsupported expenses, including, but not limited to, expenses of external lobbyists, monies paid to external corporate entities to be used for lobbying, and other external lobbying costs and internal lobbying costs, including employee lobbying time and other internal lobbying costs.

22. Train relevant staff on the internal control enhancements and procedures established, including internal controls over vendor creation in the accounts payable system, payments, accounting, and reporting violations; and provide periodic training in this area, as needed.

23. Perform an analysis of costs that FirstEnergy and its subsidiaries incurred associated with internal and external lobbying activities, including payments of FirstEnergy funds to outside entities for purposes of those entities using those funds for lobbying, and provide support to identify lobbying-related expenses improperly charged to utility operating accounts, for the audit period and, with respect to the specific issues discussed in this finding, for the entire period affected by or relevant to each such specific issue. Within 60 days of the issuance of this audit report and on a rolling basis within 60 days of conclusion of each internal or external investigation discussed in the finding or any new internal or external investigation arising directly from Ohio House Bill 6 (HB 6) or lobbying activities occurring prior to 2021, provide the results of the investigation, proposed correcting journal entries, and FirstEnergy's analysis of the findings from each investigation and the related impact on prior and future accounting and rate development to audit staff.

24. Submit a refund analysis, within 60 days of issuance of this audit report and on a rolling basis within 60 days of conclusion of each investigation discussed in the finding or any new investigation arising directly from HB 6 or lobbying activities occurring prior to 2021, for DAA's review, that explains and details the following: (1) calculation of refunds resulting from correcting the improper accounting for external lobbying costs, donations, and unsupported costs in utility operating and plant accounts; and internal lobbying costs as identified pursuant to the analysis performed in response to Recommendation No. 23, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale transmission customers to receive refunds; and (5) period(s) refunds will be made.

25. File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

26. Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

Allowance for Funds Used During Construction

27. Revise and implement the FPUs' processes and procedures to calculate their respective AFUDC rates consistent with EPI No. 3(A)(17) and other applicable Commission requirements. Revisions should include processes to prevent the inclusion of balances in Accounts 216.1 and 219 in the AFUDC rate calculations.

28. Train relevant staff on the revised AFUDC calculation method, and provide periodic training, as needed.

Service Company Billing Procedures

29. Revise FESC policies, procedures, and accounting systems so as to provide sufficient billing information to FirstEnergy's subsidiaries in accordance with the Commission's regulations.

30. Train relevant staff on the revised policies, procedures, and accounting systems and provide periodic training in this area, as needed.

Accounting for Fuel – Coal Supply and Other Consulting Services

31. Revise accounting policies and procedures for cost of fuel by the FPUs to ensure compliance with the Commission's accounting regulations.

32. Train relevant staff on the revised policies and procedures and provide periodic training.

33. Perform an analysis of all monthly payments made to consultants, including BCG Resources, LLC, that were included in the cost of fuel used in operations during the audit period and submit the analysis to DAA with supporting documents within 60 days of issuance of this audit report. Based on the analysis, submit proposed adjusting accounting entries to record the consultation costs in the appropriate accounts for DAA's review and approval.

34. Revise the FirstEnergy FPUs' fuel inventory and other account balances impacted by the improper accounting after receiving DAA's approval of the proposed accounting entries per Recommendation No. 33 and restate and footnote the FERC Form No. 1 reports for current and comparative years as necessary.

35. Review collections received, including but not limited to uplift payments, during the audit period based, in part, on the cost of fuel and submit an analysis to DAA for review of retail and wholesale overcollections due to improper recording of costs in Account 501.

36. Submit a refund analysis if there were overcollections from wholesale customers, within 60 days of issuance of this audit report, for DAA's review, that explains and details the following: (1) calculation of refunds resulting from the improper accounting for fuel costs, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale customers to receive refunds; and (5) period(s) refunds will be made.

37. File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

38. Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

E. Implementation of Recommendations

Audit staff further recommends that FirstEnergy submit the following:

- A plan for implementing the audit recommendations within 30 days after the audit report is issued;

- Quarterly reports describing progress in completing each corrective action recommended. Quarterly nonpublic submissions should be made no later than 30 days after the end of each calendar quarter, beginning with the first quarter after

the audit report is issued, and continuing until all recommended corrective actions are completed; and

- Copies of any written policies and procedures developed in response to the recommendations. These documents should be submitted in the first quarterly filing after development of a written policy or procedures.

II. Background

A. FirstEnergy Service Company

FESC is a centralized service company that provides certain accounting, administrative, management, utility operation, and other services to FirstEnergy and its subsidiary companies, including through June 2020 to FirstEnergy's former subsidiaries FES and FENOC, which ceased to be FirstEnergy's subsidiaries after emerging from bankruptcy in February 2020. FESC recovers its cost of providing services through monthly billings to associate companies. The associate companies are either directly assigned or allocated a portion of the costs. Direct assignment takes place when a service provided by FESC benefits a specific company. When the cost of a service provided by FESC benefits multiple companies, the costs are billed to the benefiting companies using an allocation method intended to consider cost causation. Shared service agreements between FESC and the associate companies describe the services provided and the cost allocation methodologies.

B. Service Company Accounting System

FESC's accounting system primarily consists of an SAP SE (SAP) general ledger system and related modules. It is a system with several modules that process transactions for accounting, cost allocation, and financial reporting. Additionally, FESC uses other business systems that interface with the SAP system, including, for example, PowerPlan, which processes fixed assets and taxes. FESC maintains the accounting records for the FPUs and Transmission Companies, as well as for FirstEnergy's other subsidiaries, in its integrated SAP general ledger system. Transactions recorded in the system are designated with individual company codes.

FESC uses its own internal account numbers to account for revenue and expenses, and it converts the balances in those general ledger accounts to the Commission's prescribed accounts for public utilities and service companies for regulatory reporting purposes. The SAP general ledger balance sheet account numbers used by FESC are the same as those provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, 18 C.F.R. Part 101, and Uniform System of Accounts for Centralized Service Companies, 18 C.F.R. Part 367 (collectively, USofA).

C. Cost Accumulation and Allocation

FESC's cost accumulation and allocation procedures are performed within its SAP system. Costs are accumulated using several cost collectors in addition to the internal account numbers. The cost collectors are accounting devices used to plan and track detailed costs of different categories or types of work. Cost collectors used by FESC are

cost centers, work breakdown structure elements (WBS), and internal orders. The cost centers collect routine costs for employees providing services for particular functions. Internal orders are used to collect costs for projects of a certain dollar amount that are not capital investments. The internal orders are company specific and are numbered by the SAP system sequentially. WBS are used for projects exceeding certain dollar amounts or durations that involve capital investments.

Cost collectors accumulate costs from payroll and employee time sheets, expense reports, overhead distributions, vendor invoices, journal entries, allocations, etc. for later billing to the associate company (or companies) benefiting from the work performed. The SAP system records the entity providing a service and the corresponding entity or entities benefiting from the service based on whether the service cost is directly charged or, alternatively, allocated pursuant to allocation rates input into the system. FESC has 18 allocators, as reported in its FERC Form No. 60, Annual Report of Centralized Service Companies, that result in distribution percentages for charging the cost of specific activities performed to associate companies that benefit. Approximately 65 percent of the total costs incurred by FESC during the audit period were indirect costs assigned to associate companies using the allocators.

D. Department of Justice Complaint and Subsequent Investigations

On July 17, 2020, the U.S. Department of Justice (DOJ) filed a criminal complaint in the U.S. District Court for the Southern District of Ohio alleging that then-Speaker of the State of Ohio House of Representatives, four other individuals, and a 501(c)(4) nonprofit entity named Generation Now, organized under the laws of the State of Delaware, engaged in conducting the affairs of an enterprise through a pattern of racketeering activity in violation of federal law, and committed multiple acts of bribery chargeable under Ohio law.[11] The complaint alleged that the defendants facilitated and participated in actions to funnel almost $61 million received from an Ohio public utility, referred to as Company A in the complaint, and its affiliates through the nonprofit entity to various Ohio political figures to support election of the lead defendant as Speaker of the House, then secure the passage of Ohio Bill 6, which, among other things, would provide over a billion dollars in subsidies, to be paid for by Ohio ratepayers, to the Ohio-based coal-fired and nuclear power plants owned by Company A's affiliates, and then defeat a ballot initiative effort calling for the repeal of the Ohio Bill 6 legislation.

[11] *United States v. Larry Householder*, *et al*., Case No. 1:20-MJ-00526 (S.D. Ohio), Complaint (July 17, 2020).

On July 21, 2020, FirstEnergy disclosed in a public statement that it had received subpoenas from the DOJ in connection with the investigation surrounding Ohio House Bill 6.[12] In October 2020, two of the five individual defendants named in the DOJ complaint entered guilty pleas.[13] On October 29, 2020, FirstEnergy issued a press release, which stated that the Independent Review Committee of the Board of Directors of FirstEnergy had terminated FirstEnergy's Chief Executive Officer, effective immediately, and had also terminated FirstEnergy's Senior Vice President of Product Development, Marketing, and Branding and its Senior Vice President of External Affairs, also effective immediately.[14]

The DOJ complaint and audit staff's discussions on internal controls during onsite interviews of FESC employees raised audit staff's concerns about the existence of significant shortcomings in FirstEnergy and its subsidiary companies' controls over financial reporting, including controls over accounting for the costs of civic, political, and related activities, such as lobbying activities, performed by and on behalf of FirstEnergy and its subsidiaries. Moreover, these controls may have been circumvented in ways designed to conceal the nature and purpose of expenditures made and, as a result, that led to the improper inclusion of lobbying and other nonutility costs in wholesale rate determinations.

---

[12] *See* [An Act that] Creates Ohio Clean Air Program, 2019 Am. Sub. HB 6 ("HB 6"), *repealed in part by* [An Act to] Revise electric utility service law; repeal portions of HB 6, 2021 Am. Sub. HB 128 ("HB 128"). HB 6 passed the Ohio House on May 29, 2019. The bill passed the Ohio Senate and was signed into law by the Governor of Ohio in July 2019, with an effective date of October 22, 2019. A referendum effort to repeal HB 6 in its entirety was waged from July 24, 2019 to the Act's effective date in October 2019, but was not successful. However, in March 2021, HB 128 was signed into law, which repealed the provisions of HB 6 that provided approximately $1 billion to two Ohio nuclear plants, and repealed certain other provisions, but left in place assistance provided to coal-fired generation plants. *See also* "FirstEnergy Corp. Statement on HB 6 Investigation," FirstEnergy Newsroom, at https://www.firstenergycorp.com/content/fecorp/newsroom/news_articles/firstenergy-corp--statement-on-hb-6-investigation.html.

[14] *See* "FirstEnergy Announces Leadership Transition," FirstEnergy Newsroom, at https://www.firstenergycorp.com/content/fecorp/newsroom/news_articles/firstenergy-announces-leadership-transition.html.

Following the filing of the DOJ complaint, the U.S. Securities and Exchange Commission, the U.S. Internal Revenue Service, the Public Utilities Commission of Ohio, the Ohio Attorney General, and the Commission commenced investigations of FirstEnergy's operations.[15] In addition, FirstEnergy initiated its own internal investigation to be overseen by the Independent Review Committee of FirstEnergy's Board of Directors. As of the date of this report, these investigations have either not been completed, or the findings of these investigations were not available to audit staff during performance of this audit.

On November 12, 2020, FirstEnergy informed audit staff that, as part of its internal investigation, it had determined that responses provided to audit staff's data requests relating to lobbying activities were incomplete and omitted several payments. FirstEnergy proposed to provide several supplemental updates to its lobbying-related data responses over the next several months. Included in FirstEnergy's supplemental data responses and its further responses to audit staff's follow up data requests were the following:

a) *Payments to certain corporate entities, including U.S. Internal Revenue Code Section 501(c)(4) entities*:

FirstEnergy identified eight lobbying payments, made between March 2017 and October 2019, amounting to a total of $26.5 million, paid to Generation Now ($1 million) and Partners for Progress, Inc. ($25 million), which were U.S. Internal Revenue Code Section 501(c)(4) entities, and to Hardworking Ohioans, Inc. ($0.5 million), a for-profit corporation. Audit staff determined that the payments to Generation Now and Hardworking Ohioans, Inc. were allocated to the ten FPUs of FirstEnergy and improperly accounted for as General and Administrative expenses ($0.65 million) and costs of electric plant in service ($0.85 million). Those expenses were then used to develop service rates charged. The $25 million paid to Partners for Progress, Inc. was allocated to FirstEnergy Corporation.

In a supplemental data request response, FirstEnergy produced a schedule of lobbying payments, prepared by Energy Harbor, which identified additional lobbying payments made between October 2018 and October 2019, totaling around $43.1 million that were paid to Generation Now. Those

[15] On February 18, 2021, FirstEnergy disclosed in its 2020 SEC Form 10-K, under Item 1A, Risk Factors, Risks Associated with the Ongoing Investigations, that staff of the Commission's Division of Investigations in its Office of Enforcement had initiated an investigation.

payments were made by FESC on behalf of FES under a service agreement.[16] FirstEnergy also disclosed payments to two additional entities – 614 Solutions LLC and The Oxley Group – totaling $1 million and around $0.3 million, respectively. FirstEnergy represented to audit staff that these additional payments totaling $44.4 million were made with funds provided to FESC by FES and that the payments had no impact on the operations of the FPUs and Transmission Companies.

In summary, the total payments to 501(c)(4) entities and Hardworking Ohioans, Inc. and others disclosed by FirstEnergy, including those made by FES, amounted to approximately $70.9 million. Audit staff notes that FirstEnergy did not disclose that these payments were made until after the DOJ investigation was made public. At which point, FirstEnergy informed audit staff that it would supplement its prior data request responses to correct inaccurate information previously provided regarding its and its subsidiaries' lobbying activities and costs incurred.

According to FirstEnergy, out of the $70.9 million of payments, $44.4 million was recorded in the accounts of FES and $25 million was recorded in FirstEnergy's own books.[17] Out of the $1.5 million that FirstEnergy identified as being charged to the FPUs and the Transmission Companies, $0.65 million were recorded as General and Administrative expenses, while around $0.85 million were ultimately recorded as the cost of electric plant in service.

---

[16] The payments totaling around $43.1 million were made prior to FES's emergence from bankruptcy and becoming an Energy Harbor subsidiary.

[17] Audit staff evaluated FESC's accounts and other records and determined that the payments FESC made were charged to FES and to FirstEnergy. Audit staff's evaluation did not include the accounts and records of FirstEnergy, which does not allocate costs to its Commission-jurisdictional subsidiaries, and did not include the accounts and records of FES and FENOC, which were under independent management and bankruptcy court supervision, and also did not allocate costs to FirstEnergy's FPUs and Transmission Companies. Audit staff did obtain information pertaining to FirstEnergy and FES, however, confirming their receipt of the $25 million and $44.4 million charges, respectively.

b) *Payments made to Sustainability Funding Alliance of Ohio, Inc. and IEU-Ohio Administration Company, LLC – entities associated with an appointed Ohio government official*:

On November 19, 2020, FirstEnergy disclosed, in its SEC Form 10-Q filing for the quarter ended September 30, 2020, that a payment of approximately $4 million had been made in early 2019, in connection with the termination of a purported consulting agreement that had been in place since 2013. The counterparty to the consulting agreement, Sustainability Funding Alliance of Ohio, Inc., was associated with a person who was later appointed to be the Chairman of the Public Utility Commission of Ohio (PUCO) in February 2019. This person was identified as Public Official B in a FirstEnergy deferred prosecution agreement with the United States Attorney's Office for the Southern District of Ohio wherein the person was determined by the DOJ to have operated in an official capacity as the PUCO Chairman to assist with the passage of legislation and regulatory orders that benefited FirstEnergy in return for monetary payments.[18]

Audit staff followed up on the SEC Form 10-Q disclosure. In response, FirstEnergy identified approximately $13.8 million, including the approximately $4 million disclosed in its SEC Form 10-Q, paid between 2013 and 2018 to Sustainability Funding Alliance of Ohio, Inc. FirstEnergy's FPUs and Transmission Companies were allocated $11.9 million of the costs which were accounted for as General and Administrative expenses initially and then a $6.7 million portion was capitalized as electric plant in service and the balance of $5.2 million continued to be accounted for as General and Administrative expenses. FirstEnergy's improper capitalization of General and Administrative expenses is discussed in Finding No. 1, Allocation of Overhead Costs to CWIP, in Section IV of this report.

FirstEnergy disclosed to audit staff additional payments to Sustainability Funding Alliance of Ohio, Inc., established under a different vendor number in FirstEnergy's Accounts Payable system, and IEU-Ohio Administration Company, LLC, another entity associated with the former PUCO Chairman. Those payments, made from 2010 to 2015, in $1 million annual installments to Sustainability Funding Alliance of Ohio, Inc. and $0.5 million annual installments to IEU-Ohio Administration Company, LLC, totaled $9 million. In summary, the two entities received around $22.8 million

[18] *United States v. FirstEnergy Corp.*, Case No. 1:21-CR-00086-TSB (S.D. Ohio), Deferred Prosecution Agreement (filed Jul. 22, 2021). The deferred prosecution agreement notes that Public Official B resigned from the PUCO in November 2020.

in payments and $20.9 million of this amount was charged to certain FirstEnergy FPUs and Transmission Companies. Some of the costs were used in customer rate development for those regulated entities and a portion was recovered from customers. However, FirstEnergy acknowledged that certain transactions were either improperly classified, misallocated to certain of the FPUs and Transmission Companies, or lacked proper supporting documentation and resulted in amounts collected from customers.

FirstEnergy represented to audit staff that it will make refunds of around $185,000 to retail and transmission customers and has already made the related accounting entries to correct charges of $6.7 million allocated to electric plant in service of the FPUs and Transmission Companies and to prevent those expenses from impacting future rates.

c) *Payments to sixteen entities associated with an individual under investigation by FirstEnergy*:

In coordination with its filing of SEC Form 10-K for 2020, FirstEnergy revealed to audit staff in February 2021 that it was investigating payments totaling around $28.8 million made between 2003 and 2020 to sixteen entities associated with an individual identified by FirstEnergy. FirstEnergy's FPUs were allocated around $19.7 million of these payments, the Transmission Companies $1.1 million, FES $2.2 million, and $5.8 million was allocated to FirstEnergy and its nonregulated subsidiaries.

The FPUs and Transmission Companies included $1.4 million of the cost in electric plant in service balances, including capital lease balances, and $19.4 million in Operating Expense balances that were used in the development of customer rates charged. FirstEnergy acknowledged that certain transactions were either improperly classified, misallocated to certain of the FPUs and Transmission Companies, or lacked proper supporting documentation and resulted in amounts collected from customers. FirstEnergy committed to remove the cost from electric plant in service balances and provide an estimated $9.6 million in customer refunds.

d) *Deferred Prosecution Agreement*

On July 20, 2021, FirstEnergy and the United States Attorney's Office for the Southern District of Ohio entered into a deferred prosecution agreement

(DPA).[19] As set forth in the DPA, FirstEnergy acknowledged that it, "through the acts of its officers, employees, and agents conspired with public officials and other individuals and entities to pay millions of dollars to and for the benefit of public officials in exchange for specific official action for FirstEnergy's benefit."[20] Per the DPA, among other things, FirstEnergy agreed to pay a penalty of $230 million, accept a single charge of conspiracy to commit honest services wire fraud, and undertake substantial compliance-related and other obligations going forward.

In addition, FirstEnergy committed to address any deficiencies in its internal controls, which includes its policies, and procedures.[21] Specifically, FirstEnergy committed to "ensure that it has a system of financial and accounting procedures, including a system of internal controls, reasonably designed to ensure the maintenance of fair and accurate books, records, and accounts."[22] Pursuant to the DPA, this system "should be designed to provide reasonable assurances that [FirstEnergy's] transactions are recorded as necessary to permit preparation of financial statements in conformity with generally accepted accounting principles or any other criteria applicable to such statements, and to maintain accountability for assets."[23] Such system should also provide reasonable assurances that FirstEnergy's transactions are recorded as necessary to permit preparation of financial statements for Commission reporting purposes in conformity with the definitions, instructions, and accounts of the Uniform System of Accounts and FERC Form Nos. 1 and 3-Q, and to maintain accountability for assets.[24]

---

[23] *Id*.

[24] *Id*.

III. Introduction

A. Objectives

The audit evaluated FirstEnergy's and its subsidiaries' compliance with cross-subsidization restrictions on affiliate transactions; service company and public utility accounting, recordkeeping, and reporting requirements pertaining to transactions with associate companies; and preservation of records requirements for holding companies and service companies. The audit covered the period January 1, 2015 to September 30, 2021.

B. Scope and Methodology

Audit staff observed during the audit planning that FirstEnergy and several affiliated companies were operating in a financially stressed environment. Significant impairment losses were recognized under Generally Accepted Accounting Principles and the ability of certain affiliated generation companies to operate as a going concern became questionable. Audit staff also observed media reports on major efforts by FirstEnergy to lobby at the federal and state level to gain support for its failing nuclear and coal generating plants. This financially stressed operating environment combined with audit staff's discovery of deficient internal controls led to increased testing by audit staff.

Audit staff performed the following actions to facilitate the testing and evaluation of FirstEnergy's and its subsidiaries' compliance with the Commission's requirements relevant to the audit objectives:

- *Review of Public Information* – Reviewed publicly available information before commencing the audit. The review provided information on FirstEnergy's operations and finances, reorganization, significant contracts, and other key regulatory and business activities. Examples of materials reviewed include FirstEnergy's annual reports and SEC Forms 10-K and 10-Q, FERC Form Nos. 1 and 60 of the FirstEnergy subsidiaries, prior Commission audit reports, company-related websites, and other relevant regulatory and media sources.

- *Audit Criteria* – Identified audit criteria including the Commission's rules, regulations, and other requirements necessary to evaluating compliance with the audit objectives.

- *Data Requests* – Issued data requests to collect audit evidence and information. The information related to internal policies; service company and operating company operations, procedures, and controls; business practices; risk

management; corporate structure; contractual agreements; financial accounting, cost allocation and reporting activities; corporate compliance; regulatory filings; and other pertinent information, including internal and external audit reports, Board of Directors and Audit Committee meeting minutes, corporate compliance program procedures, and other items not publicly available. The evidence and information were used to test and evaluate compliance with Commission requirements relevant to audit objectives.

- *Teleconferences* – Held multiple teleconferences with FirstEnergy and FESC staff to discuss audit objectives, testing, data request responses, technical and administrative matters, and compliance concerns.

- *Site Visits* – Participated in three site visits to FirstEnergy's headquarters in Akron, OH to discuss and observe controls and procedures related to audit objectives. The visits enabled audit staff to:

  - Discuss FirstEnergy's and its subsidiaries' organizational and corporate structures, departmental functions, and employee responsibilities, and meet with key company officials;

  - Learn about FirstEnergy's and its subsidiaries' cost allocation and capitalization program, processes and operations, in particular the cost of departments, activities, functions, and systems attributed to plant construction;

  - Interview executives, managers, and staff responsible for accounting, financial reporting, corporate compliance, and utility operations, including construction operations;

  - Review Board of Directors and Audit Committee meeting minutes and internal and external audit reports;

  - Discuss the management and operation of the corporate compliance program; and

  - Discuss and observe accounting and reporting procedures, processes, and controls relevant to audit objectives.

- *Internal Commission Collaboration* – Conferred with other Commission staff on compliance issues to ensure audit findings were consistent with Commission precedent and policy.

Accounting, Recordkeeping, and Financial Reporting

To evaluate FirstEnergy's and its subsidiaries' compliance with accounting, recordkeeping, and financial reporting requirements of the FERC Form Nos. 1 and 60, audit staff reviewed the following:

- *Application of USofA* – Analyzed the companies' interpretations and applications of select accounts for consistency with Commission accounting instructions. For example, reviewed balances in regulatory asset and liability accounts to assess whether the companies had the proper regulatory basis to record each item in these accounts and amortized these costs to the proper expense accounts and accounting periods as required. Analyzed costs recorded in operating accounts that have historically been found during Commission audits to be misclassified, such as lobbying expenses. Also, sampled 900 series accounts to determine whether the companies recorded salaries, office supplies, outside services, and other administrative and general expenses in a manner consistent with Commission accounting instructions.

- *Associate Company Transactions* – Reviewed corporate and associate company transactions to assess whether FirstEnergy's subsidiaries recorded revenues and costs for goods and services received and provided at the appropriate price and in the correct accounts, taking into consideration cross-subsidization restrictions and the nature of the transactions. As part of this review, audit staff evaluated policies, procedures, and practices relating to the sale of non-power goods and services to understand (1) the types of services provided by and between FirstEnergy subsidiaries, (2) the contract terms for the pricing of the non-power goods and services provided, and (3) invoice, work order, and other price and cost support documentation. Further, audit staff interviewed FESC accounting staff; reviewed transactions reported in FERC Form Nos. 1 and 60; tested a sample of FESC charges for non-power goods and services; and assessed billings by and between associate companies to verify proper classification of the amounts and compliance with the "at cost" standard.[25]

- *Reconciliation of Reported Information* – Reconciled a sample of information reported in the FERC Form No. 1 at page 429 to information reported in

[25] 18 C.F.R. § 35.44(b)(3) (2021) provides that a franchised public utility that has captive customers, or that owns or provides transmission service over jurisdictional transmission facilities, may only purchase or receive non-power goods and services from a centralized service company at cost.

FESC's FERC Form No. 60 to determine whether information was reported accurately and consistently. Also, evaluated compliance with the USofA for the information under review, including related guidance, accounting releases, and Commission orders.

- *Reporting Processes and Procedures* – Evaluated the FERC Form Nos. 1 and 60 reporting processes and procedures to determine whether there was accurate, complete and timely reporting consistent with Commission reporting requirements and the instructions of the forms.

- *Annual FERC Filings* – Reviewed the FERC Form Nos. 1 and 60, including related notes to the financial statements, to identify major accounting matters. Highlighted significant notes to understand financial statement and cost allocation implications and identified underlying accounting entries for these matters.

- *Variance Analysis* – Performed variance analyses of a sample of balance sheet and income statement accounts reported in 2013-2017 FERC Form No. 60 filings. Analyzed unusual variances to understand their basis and identify potential accounting and reporting concerns.

- *Audit Sampling* – Evaluated various account balances that were reported as associate company transaction charges for compliance with relevant accounting and cost charging requirements.

- *Accounting Processes and Procedures* – Reviewed FirstEnergy's subsidiaries' accounting and financial reporting processes, procedures, and internal controls for compliance with the Commission's regulations. Specifically, reviewed reporting controls, procedures, and practices to test the accuracy and completeness of the reported account data, and interviewed employees that worked directly on daily reporting and with management responsibility for ensuring that costs were charged in accordance with the requirements of the USofA under 18 C.F.R. Parts 101 and 367.

- *Capitalization of Administrative and General Costs* – Evaluated the methods used to allocate overhead labor and labor-related costs to the cost of construction projects. Audit procedures were performed to determine whether the overhead costs charged to Account 107, Construction Work in Progress, had a definite relation to construction. The audit procedures included, among other things, interviews of a randomized sample of FirstEnergy's and its subsidiaries' employees whose labor costs were allocated to construction projects during the audit period and a review of a sample of timesheets

associated with the employees. Audit staff covered the following topics during its interviews: (i) responsibilities and day-to-day duties of each employee; (ii) associate companies that FESC's employees performed work on behalf of; (iii) the organizational structure and function of employees' business units; (iv) work performed by employees related to construction, and the estimated amount of time spent on construction-related activities; (v) availability of documentation to support time spent engaged on construction-related activities, such as calendar appointments or work products; (vi) policies, processes, and procedures related to the submission and approval of employees' timesheets, including the specific code(s) each employee used to charge time and any guidance received on how to charge time; (vii) employee awareness of methods used to allocate a portion of labor costs to construction projects; and (viii) internal communications about decisions on the allocation methods used to charge overhead costs to construction projects.

- *Capital Project Life Cycle* – Reviewed accounting and cost tracking procedures used during capital projects' life cycles. This included an assessment of procurement methods, cost allocator selections, confirmation of billings to companies, and accounting system work orders generated.

- *Allowance for Funds Used During Construction* (*AFUDC*) – Reviewed the procedures that FirstEnergy's subsidiaries followed to calculate individual components of the AFUDC rates reported in their FERC Form No. 1 filings, including balances and cost rates for short-term debt, long-term debt, common stock, preferred stock, and CWIP. Verified the actual values of balances and cost rates for short-term debt, long-term debt, common stock, preferred stock, and CWIP to determine whether the AFUDC rates calculated were consistent with Commission accounting requirements. Identified major projects placed in service during the audit period and analyzed whether AFUDC accrual ceased when the projects were placed in service.

- *External Accountants' Working Papers* – Reviewed FirstEnergy's external accountants' working papers to better understand certain accounting practices, and to identify accounting practice changes and material or unusual transactions.

- *Chart of Accounts* – Reviewed each of FirstEnergy's subsidiaries' chart of accounts to determine whether the conversion from internal accounts to the Commission's USofA resulted in proper mapping of costs to specific balance sheet and income statement accounts.

- *Cost Allocation* – Reviewed cost allocation methods and tested supporting details by recalculating a sample of allocation percentages used. Also, analyzed a sample of billings from FESC to associate companies and related accounting to test compliance with established cost allocation methods reported in FESC's FERC Form No. 60 filings.

- *Preservation of Records* – Reviewed the retention schedules that were included in the record retention program. Interviewed employees responsible for record retention to understand processes, procedures, and controls for administration and maintenance of records. Sampled selected records to ascertain whether their retention period aligned with the Commission's preservation of records regulations, and whether any records prematurely destroyed or lost were reported to the Commission.

IV. Findings and Recommendations

1. Allocation of Overhead Costs to CWIP

FirstEnergy's subsidiaries capitalized overhead costs to Account 107, Construction Work in Progress-Electric, using an allocation method that was not based on actual time employees were engaged in construction activities based on timecard reports or on a representative time study. This may have led to FirstEnergy's subsidiaries capitalizing costs to Account 107 that did not have a definite relationship to construction. As a result, the companies may have overstated construction costs recorded in Account 107 and electric plant in service, as well as accumulated depreciation, depreciation expenses, and ADIT balances, and understated operating expenses. Moreover, accumulated overstatement of electric plant in service and the related depreciation due to this accounting practice during and prior to the audit period may have resulted in the FirstEnergy subsidiaries, with wholesale transmission formula rate service cost recovery mechanisms, overstating their respective wholesale annual transmission revenue requirements and overcharging wholesale transmission customers.[26]

Pertinent Guidance

- 18 C.F.R. Part 101, General Instruction No. 2, Records, states in part:

  A. Each utility shall keep its books of account, and all other books, records, and memoranda which support the entries in such books of account so as to be able to furnish readily full information as to any item included in any account. Each entry shall be supported by such detailed information as will permit ready identification, analysis, and verification of all facts relevant thereto.

  B. The books and records referred to herein include not only accounting records in a limited technical sense, but all other records, such as minute books, stock books, reports, correspondence, memoranda, etc., which

[26] The FirstEnergy subsidiaries with wholesale transmission formula rate mechanisms during the audit period were: The Cleveland Electric Illuminating Company, Metropolitan Edison Company, Ohio Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, The Toledo Edison Company, ATSI, MAIT, TrAILCo, and JCP&L. During the audit period, JCP&L transferred from a stated rate to a wholesale transmission formula rate mechanism effective January 1, 2020. *See Jersey Central Power & Light Co.*, 169 FERC ¶ 61,205 (2019).

may be useful in developing the history of or facts regarding any transaction.

C. No utility shall destroy any such books or records unless the destruction thereof is permitted by rules and regulations of the Commission.

- 18 C.F.R. Part 101, General Instruction No. 9, Distribution of Pay and Expenses of Employees, states:

  The charges to electric plant, operating expense and other accounts for services and expenses of employees engaged in activities chargeable to various accounts, such as construction, maintenance, and operations, shall be based upon the actual time engaged in the respective classes of work, or in case that method is impracticable, upon the basis of a study of the time actually engaged during a representative period.

- 18 C.F.R. Part 101, Electric Plant Instruction No. 4, Overhead Construction Costs, states in part:

  B. As far as practicable, the determination of payroll charges includible in construction overheads shall be based on timecard distributions thereof. Where this procedure is impractical, special studies shall be made periodically of the time of supervisory employees devoted to construction activities to the end that only such overhead costs as have a definite relation to construction shall be capitalized. The addition to direct construction costs of arbitrary percentages or amounts to cover assumed overhead costs is not permitted.

- 18 C.F.R. Part 101, Account 922, Administrative Expenses Transferred – Credit, states:

  This account shall be credited with administrative expenses recorded in accounts 920 and 921 which are transferred to construction costs or to nonutility accounts. (See electric plant instruction 4.)

Background

FESC employed shared services personnel that performed legal, finance, accounting, information technology, human resources, utility and non-utility operations, and other functions on behalf of FirstEnergy and its subsidiaries. Pursuant to multiple service agreements by and between FESC and the companies, labor and related costs of FESC employees were directly charged by FESC to the specific company that benefitted from a service provided, or when multiple companies benefited from a service provided, FESC charged the cost of the service to the multiple benefitting companies using a cost allocation procedure. Audit staff evaluated the FirstEnergy subsidiaries' accounting for administrative and general (A&G) expenses directly incurred by the companies and those incurred on their behalf for services provided and charged by FESC through direct and allocated charges. The evaluation included an assessment of labor, related A&G, and other costs that were accounted for as capitalized overhead construction cost on the FirstEnergy subsidiaries' books. Labor, related A&G, and other costs capitalized included employees' base salaries, overtime wages, pension and other benefit expense, payroll taxes, annual incentive plan payments, employee expenses, materials and supplies, outside contractor costs, advertising expenses, donations, dues and subscription costs, lease/rental payments, and insurance expenses.[27]

During the evaluation, audit staff: (1) analyzed methods used by the companies to determine the pool of capitalizable costs, which included overhead labor and related A&G costs that were directly incurred by the FirstEnergy subsidiaries and those charged to the companies by FESC; (2) examined the development and application of overhead capitalization rates used to allocate costs in the overhead cost pool to construction projects; (3) assessed the accounting used to charge costs in the overhead cost pool to construction projects; and (4) interviewed FESC staff and an employee of FES, who transferred from FESC, about labor and related A&G costs included in the overhead cost pool. Audit staff discovered that many employees were not aware of FirstEnergy's corporate time reporting guidelines or were coached when hired but did not receive formal training on time reporting.

Audit staff found that all A&G costs incurred by FESC that were not directly charged to specific FirstEnergy subsidiaries were included in the overhead cost pool. These residual expense amounts, i.e., indirect costs, were charged to the FirstEnergy subsidiaries based on various cost allocation methodologies that were applied to each FESC business department. The FirstEnergy subsidiaries then applied calculated capitalization rates to the allocated cost and accounted for a portion of the cost as CWIP in Account 107. Additionally, the FirstEnergy subsidiaries applied the calculated

[27] FirstEnergy subsidiaries' A&G capitalization included other costs such as lobbying expenses and donations which were improperly classified as A&G expenses.

capitalization rates to their directly incurred A&G expenses and similarly accounted for a portion of the cost as construction related in Account 107.

To assess the applicability, relevance and accuracy of the capitalization rates used to determine cost capitalized to the FirstEnergy subsidiaries' construction operations, audit staff evaluated the nature of the operations of the respective FESC business departments and interviewed a sample of employees in the departments to determine whether a nexus existed between activities performed by the employees and the FirstEnergy subsidiaries' construction operations. There were 90 FESC business departments that were represented as performing activities that supported the FirstEnergy subsidiaries' construction operations. These 90 business departments had a total of 553 employees. Audit staff interviewed a randomly selected, statistically representative sample of 80 employees, plus 11 additional employees, selected based on Audit staff's judgment, for a total of 91 interviews of employees that worked in the departments that had cost capitalized to construction projects. The selection resulted in a representative sample of employees from 56 of the 90 business departments.

Audit staff found that most of the employees interviewed performed work in business departments that did not support the capitalization rates used to charge labor and related cost to the FirstEnergy subsidiaries' construction operations. Instead, these business departments and the employees working therein performed activities that supported transmission, generation and/or distribution operations, as applicable, on FirstEnergy's existing in-service infrastructure or provided less construction support than represented by the capitalization rate applied. First, there were employees with labor and related costs capitalized to CWIP who did not support construction operation, and instead only supported the existing in-service infrastructure doing work such as information technology and physical security, analyzing plant operations, internal controls and risk assessment, and customer service.

Second, there were employees that spent less of their time supporting the FirstEnergy subsidiaries' construction operations than represented by the capitalization rates used to charge their time to the performance of construction related activities. For example, audit staff found that some employees spent five percent or less of their time performing work that supported the FirstEnergy subsidiaries' construction operations, but had more than 90 percent of their labor and related costs capitalized as a cost of construction. Consequently, the calculated capitalization rates applied to the A&G cost allocated to and directly incurred by the FirstEnergy subsidiaries were not determined with consideration of whether the activities of the employees involved or supported construction operations. As such, the capitalization rates used were not applicable or relevant to the FirstEnergy subsidiaries' construction operations.

Although the interviews revealed that the employees in the FESC business departments either: (1) spent no time supporting the FirstEnergy subsidiaries' construction operations; or (2) spent a lower percentage of their time supporting construction operations than represented by the capitalization rates, audit staff found that these employees had a significant portion of their labor and related costs charged to CWIP in Account 107. However, in accordance with the accounting requirements of Electric Plant Instruction No. 4, Overhead Construction Costs, and General Instruction No. 9, Distribution of Pay and Expenses of Employees, labor costs capitalized to plant must have a definite relation to construction, and must be based on time card distributions or be allocated based on a study of the time actually engaged in construction related activities during a representative period. FirstEnergy acknowledged that there was not a representative labor-time study performed. Further, some interviewed employees admitted to not receiving formal training on time reporting, thus there was a lack of awareness about the time reporting guidelines. Consequently, since the labor and related costs charged to construction were neither based on the time that employees actually engaged in construction activities nor on a representative time study of such engagement, the charged costs did not have a definite relation to construction.

Upon finding that the method used to determine overhead labor and related A&G costs capitalizable to construction was not consistent with Commission accounting requirements, audit procedures were performed to evaluate the accuracy of the capitalization rates used and to develop an estimate of the amount of costs appropriately capitalizable to construction. Audit staff found that the FirstEnergy companies historically developed overhead capitalization rate formulas that were used to determine the amount of A&G costs charged to construction projects. The overhead capitalization rate formula used by FirstEnergy's FPUs during the audit period was comprised of a ratio of total direct internal labor costs charged to FPU capital projects over total direct and indirect internal labor costs incurred by the FPUs. The formula used by FirstEnergy's Transmission Companies in 2016 and subsequent years was comprised of a ratio of total direct internal labor costs plus construction contractors' labor costs charged to the Transmission Companies capital projects over total direct and indirect internal labor costs plus construction contractors' labor costs incurred by the Transmission Companies. In 2015, the Transmission Companies' capitalization rate formula excluded construction contractors' labor costs from the ratio.

The capitalization practices resulted in the Transmission Companies using a capitalization rate of 56.7 percent in 2015 and 92 percent in 2016 and subsequent years, and the FPUs using a 56.7 percent capitalization rate in 2015 and subsequent years.[28]

[28] The FPUs also capitalized a portion of customer service costs using varying capitalization rates for several business departments.

From 2015 through 2019, the First Energy subsidiaries capitalized $575.5 million of overhead labor and related A&G costs to construction projects.[29] This total includes $26.2 million of customer service costs that were capitalized. However, the customer service activities of which the costs were borne generally involved employee interaction with the public and customers with regard to the operation of FirstEnergy's existing in-service infrastructure. FirstEnergy acknowledged that it did not have evidence to support the customer service capitalization rates that were used. Consequently, the customer service activities lacked a definite relation to construction and thus the associated costs were not appropriately capitalizable as a cost of construction.[30]

Based on an evaluation of the nature of the work performed by the FESC employees and a former FES employee interviewed that had overhead labor and related A&G costs charged to construction, audit staff developed an estimate of the average percentage of time employees throughout the corporation spent engaged in activities that supported construction operations. Audit staff estimated, based on the sampling and interviews it conducted, that the average of all administrative and general employees' time spent performing activities that supported construction operations was significantly below the A&G capitalization rates used by FirstEnergy's subsidiaries.[31]

During discussions with FESC employees with oversight responsibility for capitalization of A&G costs, the employees stated a belief that FESC's primary activities involved support of the FirstEnergy subsidiaries' construction operations. This belief, while not supported by the actual activities performed by a majority of FESC's staff who primarily supported operation of FirstEnergy's existing in service infrastructure, may have been factored into decisions that resulted in the use of inaccurate capitalization rates, which led to inappropriate A&G costs capitalized to CWIP in Account 107 and eventually plant in service. Moreover, audit staff discovered that FirstEnergy implemented an annual procedure to review the accuracy of the capitalization rates used and the company found on several occasions that the rates used could have been lower. Despite the findings of these reviews, FirstEnergy decided against lowering the capitalization rates or adjusting plant balances in response to the results of the reviews due, FirstEnergy asserts, to a lack of materiality.

---

[29] The FirstEnergy subsidiaries continued the capitalization practices in 2020 and 2021 adding additional amounts of A&G expenses to capital construction projects.

[30] *See* 18 C.F.R. Part 101, Electric Plant Instruction No. 4 (2021).

[31] This average was derived from a random sample taken from all administrative and general employees, including those who spent no time, as well as those who spent some time, performing construction related activities.

The FirstEnergy subsidiaries' improper capitalization practices impacted plant balances in Account 107 and electric plant in service, as well as accumulated depreciation, depreciation expenses, and ADIT balances, and understated certain operating expenses. Amounts recorded in these accounts were included in the determination of service rates of FirstEnergy subsidiaries with wholesale transmission formula rates. The accumulated impact of excess A&G capitalized during the audit period and prior years on electric plant in service that was included in rate determinations and resulting excess depreciation expense may have led the companies to overcharge wholesale transmission customers subject to the rates.

Finally, audit staff found that FirstEnergy's subsidiaries did not use Account 922, Administrative Expenses Transferred – Credit, as required, after 2015. The Commission's regulations require administrative expenses recorded in Accounts 920, Administrative and General Salaries, and 921, Office Supplies and Expenses, that are transferred to construction costs or to nonutility accounts be credited to Account 922. The companies' improper accounting impacted the uniformity and comparability of their capitalization activities to those reported by other utilities.

Recommendations

DAA recommends that FirstEnergy:

1. Retain an independent third-party entity, subject to approval by DAA, to conduct a representative labor time study for allocation of overhead costs incurred in 2021 to CWIP, and to assist with the development of procedures FirstEnergy subsidiaries shall use to periodically determine the allocation of overhead labor and labor-related costs capitalized by each FirstEnergy subsidiary into the cost of construction after 2021. The independent consultant should have expertise and experience independently performing time studies used in the determination of overhead capitalization rates of U.S. based utilities subject to the accounting requirements prescribed for public utilities and licensees or for natural gas companies under 18 C.F.R. Part 101 or Part 201, respectively. The time study should involve a representative sample of study participants (employees) that provides for extrapolation of the study results to the full population of FirstEnergy employees, and should include processes for application of the study results from the audit period to the issue date of this audit report, and processes for applying the capitalization rate(s) the study finds for 2021 back to the period January 1, 2015 through December 31, 2020, either with no change to the capitalization rates found in the study or with such modifications to the capitalization rate(s) the independent consultant finds reasonable and supported by evidence. The independent consultant should use its expertise and all relevant information available to it to make recommendations as to what the capitalization rate(s)

should be for prior years for each FirstEnergy subsidiary, should set forth the basis for its recommendations, and provide both the recommendations and the basis therefore to FirstEnergy and DAA. If there is no recommendation by the independent consultant for any year or other period between January 1, 2015 and December 31, 2020 for any specific capitalizable cost center, then FirstEnergy should base its capitalization rate and the amount to be capitalized for such year or period on the rates and costs of such specific cost centers for which FirstEnergy can provide to DAA reasonable evidence as to the time employees in such cost centers spent having a definite relation to construction, and exclude from consideration those cost centers for which FirstEnergy cannot provide such evidence, per, for example, 18 C.F.R. Part 101, General Instruction No. 2 and § 41.8.

The progress of the study should be reported within 120 days and the time study results provided to DAA for review and consideration within 180 days of the date of issuance of this audit report, and the developed allocation procedures should be submitted when complete, but no later than 60 days after completion of DAA's review of the labor time study. At a minimum, the developed allocation procedures should provide a method for overhead cost allocation and capitalization to construction based on actual timecard distributions or where this procedure is impractical, based on periodic time studies.

2. Revise written policies, practices, procedures, and controls governing the methods used to account for, track, report, and review overhead labor and related costs, and all other costs allocated to construction projects to be consistent with Commission accounting requirements. In addition, adopt procedures to retain formal documentation supporting the amount of overhead costs allocated to electric plant accounts.

3. Revise accounting processes and procedures to account for and report capitalized A&G amounts recorded in Accounts 920 and 921 using Account 922 consistent with Commission regulations.

4. Train relevant staff on the revised overhead allocation, control, and A&G accounting procedures and documentation, and provide periodic training in this area, as needed.

5. Train staff on the time reporting guidelines and establish a periodic training program in this area.

6. Within 30 days of the completion of Recommendation No. 1, submit an estimate to DAA, including the calculations and determinative components, of overhead

costs that would have been allocated to CWIP from 2015 through the present consistent with the requirements of Electric Plant Instruction No. 4 and General Instruction No. 9. The estimate should be based on a recalculation of 2015's and subsequent years' overhead costs allocated to construction with labor and related costs removed from the cost of plant that were not associated with construction activities based on the methodology developed in response to Recommendation No. 1.

7. With the response to Recommendation No. 6, submit proposed accounting entries to DAA that remove the overhead costs that were allocated to CWIP and electric plant in service from 2015 through the present that exceed the amount of costs that would have been allocated to the accounts based on the methodology developed in response to Recommendation No. 1. Also, provide proposed accounting entries to remove associated amounts from other accounts and balances affected by the inappropriately allocated cost such as the accumulated depreciation and ADIT accounts, and AFUDC balances capitalized into CWIP and electric plant in service. If the adjusting entries result in a significant impact to income for the current year, FirstEnergy subsidiaries may account for the transaction as a correction of a prior period error in Account 439, Adjustments to Retained Earnings. Such adjustments to retained earnings with the proposed accounting entries should be submitted to DAA.

8. Revise account balances for FirstEnergy subsidiaries' utility plant, accumulated depreciation, ADIT, and other account balances impacted by the inappropriate allocation of unsupported overhead costs after receiving DAA's approval of the proposed accounting entries submitted per Recommendation No. 7, and restate and footnote the balances reported in the next-filed FERC Form No. 1 reports of the FirstEnergy subsidiaries for both the current and comparative years presented in each subsidiary's next-filed report, as necessary to reflect and disclose the revisions.

9. Submit a refund analysis to DAA that explains and details the following: (1) calculation of refunds that result from correcting the overstatement of transmission plant due to the improperly capitalized labor costs, as determined by the labor time study, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale transmission customers to receive refunds; and (5) period(s) refunds will be made.

10. File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

11. Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

2. Accounting for Vegetation Management Costs

The FirstEnergy FPUs improperly accounted for maintenance expenses incurred to remove vegetation surrounding in service distribution powerlines. Specifically, the FPUs inappropriately capitalized the cost to electric plant in service. This accounting practice caused the companies to overstate electric plant in service, accumulated depreciation, ADIT, depreciation expenses, and other account balances, and understate operating expenses incurred.

Pertinent Guidance

- 18 C.F.R. Part 101, Account 593, Maintenance of Overhead Lines (Major Only), states in part:

> This account shall include the cost of labor, materials used and expenses incurred in the maintenance of overhead distribution line facilities, the book cost of which is includable in account 364, Poles, Towers and Fixtures, account 365, Overhead Conductors and Devices, and account 369, Services. . . .

Background

An audit report was issued on April 24, 2013, for an audit conducted of FirstEnergy subsidiary ATSI under Docket No. FA11-8-000 (the 2013 Audit).[32] During the 2013 Audit, ATSI's policy for accounting for vegetation management expenses for the clearing of transmission and distribution corridors was assessed and found to be inconsistent with Commission accounting requirements. As a result of that audit, ATSI revised its policy so as to cease capitalizing vegetation management costs and to instead

[32] *American Transmission Systems, Inc.,* Docket No. FA11-8-000 (Apr. 24, 2013) (delegated order).

account for the costs as maintenance expenses, consistent with Commission accounting requirements.

Audit staff evaluated ATSI's and the other FirstEnergy subsidiaries' policies for accounting for vegetation management expenses during the current audit and found that the FirstEnergy subsidiaries' policy for accounting for the vegetation management costs associated with the clearing of *transmission* corridors was consistent with Commission accounting requirements, but was not for the clearing of *distribution* corridors. Specifically, audit staff found that the FirstEnergy subsidiaries with distribution assets (i.e., the FPUs) capitalized maintenance costs incurred to remove vegetation surrounding in service distribution powerlines and were corrected and will be refunded to customers.

FirstEnergy acknowledged that, in response to the 2013 Audit of ATSI, the corporate-wide vegetation management accounting policy was changed for transmission corridors, but was not changed for distribution corridors. FirstEnergy reasoned that the results of the 2013 Audit were not applicable to vegetation management in distribution corridors because ATSI did not have distribution assets during the audit. However, although ATSI did not have distribution assets during the 2013 Audit (and had none during the current audit), the vegetation management accounting policy that was evaluated during the 2013 Audit applied to the clearing of transmission and *distribution* corridors. The 2013 Audit's report states that "ATSI provided audit staff with its vegetation management policy for accounting for the clearing of transmission and distribution corridors."[33] Consequently, the results of the audit were applicable to the vegetation management accounting policy for distribution, as well as transmission, corridors. Further, the same factors that make the vegetation management accounting policy applicable to transmission corridors logically also apply to distribution corridors. There is no reasonable basis to distinguish between transmission and distribution corridor vegetation management with respect to this subject.

In the 2013 Audit, it was determined that ATSI's capitalization of vegetation management expenses into in service plant was inappropriate because vegetation management activities performed after the initial clearing associated with construction of an asset do not result in a substantial addition to the corresponding in service transmission lines or system. The Commission has previously clarified that to qualify as a substantial addition, an item added to the cost of an in service asset must make the asset more useful, more efficient, of a greater durability, or of a greater capacity.[34] Vegetation

[33] *Id*. at 15.

[34] *See*, *e.g.*, *National Fuel Gas Supply Corp.*, Docket No. AC98-11-000, at 1 (Jun. 17, 1998) (delegated order) (must be "a substantial betterment" the purpose of which "is

management activities do not directly make distribution or transmission assets or systems more useful, more efficient, of a greater durability, or of a greater capacity. Consequently, vegetation management activities do not result in a substantial addition to in service distribution or transmission plant.

The FirstEnergy FPUs should have properly accounted for vegetation management activities performed in distribution corridors as maintenance expenses. Account 593, Maintenance of Overhead Lines (Major Only), provides for the accounting of costs to remove vegetation surrounding in service distribution powerlines. Since FirstEnergy only revised its vegetation management accounting policy for transmission corridors in response to the 2013 Audit, it continued improperly to account for vegetation management activities performed in distribution corridors, both prior to and during the current audit period. This led the FPUs to inflate distribution plant balances from 2013 through the audit period. This also impacted accumulated depreciation, ADIT, and other associated accounts, and resulted in the understatement of operating expenses prior to and during the audit period.

Consistency of accounting policies used for transmission and distribution plant is essential for accurate development of service rates, in particular where service rates are determined using a formula that includes a portion of certain costs in rate determinations based on a ratio of balances in accounts such as functional plant accounts. As such, FirstEnergy should be consistent in the determination and application of its accounting policy for vegetation management activities in distribution and transmission corridors.

Recommendations

DAA recommends that FirstEnergy:

12. Revise accounting policies and procedures for vegetation management activities in distribution corridors to be consistent with Commission accounting requirements.

13. Train relevant staff on the revised vegetation management accounting policy and procedures and provide periodic training.

14. Submit proposed accounting entries and supporting documentation to DAA that reflect the correction of the FirstEnergy FPU's CWIP, electric plant in service, accumulated depreciation, ADIT, and other accounts impacted by the capitalization of vegetation management expenses for the period from October 1, 2021 through the present within 60 days of issuance of this audit report.

---

to make property more useful, more efficient, of a greater durability, or of a greater capacity").

15. Revise the FirstEnergy FPUs' CWIP, electric plant in service, accumulated depreciation, ADIT, and other accounts impacted by over-accrual of AFUDC after receiving the DAA's approval of proposed accounting entries per Recommendation No. 14 and restate and footnote the FERC Form No. 1 reports for current and comparative years as necessary.

3. Accounting for Amortization of Regulatory Assets

FirstEnergy's subsidiaries deferred certain maintenance expenses, associated with costs incurred to remove vegetation in transmission corridors, and recorded the deferred expenses as regulatory assets in Account 182.3, Other Regulatory Assets, for Commission accounting and reporting purposes. Certain subsidiaries then improperly amortized $3.8 million of the deferred costs as expenses in subsequent periods without obtaining Commission approval to recover these regulatory assets in rates. Moreover, two of the Transmission Companies, ATSI and TrAILCo, included these expenses representing amortization of the regulatory assets in their annual transmission revenue requirements calculated pursuant to their wholesale transmission formula rates without the required Commission approval to recover such regulatory assets. Also, certain FirstEnergy subsidiaries recovered overstated depreciation expense through transmission formula rates.

As a result of the above deficiencies, the Transmission Companies inappropriately included approximately $2.7 million of regulatory asset amortization and depreciation expense in their annual transmission revenue requirements and overbilled their wholesale transmission customers by this amount.

Pertinent Guidance

- 18 C.F.R. Part 101, Account 182.3, Other Regulatory Assets, states in part:

> A. This account shall include the amounts of regulatory-created assets, not includible in other accounts, resulting from the ratemaking actions of regulatory agencies. (*See* Definition No. 30.)
>
> B. The amounts included in this account are to be established by those charges which would have been included in net income, or accumulated other comprehensive income, determinations in the current period under the general requirements of the Uniform System of Accounts but for it being probable that such items will be included in a different period(s) for purposes of developing rates that the utility is authorized to charge for its utility services. When specific identification of the particular source of a regulatory asset cannot be made, such as in plant phase-ins, rate moderation plans, or rate levelization plans, account 407.4, regulatory credits, shall be credited. The amounts recorded in this account are generally to be charged, concurrently with the recovery of the amounts in rates, to the same account that would

have been charged if included in income when incurred, except all regulatory assets established through the use of account 407.4 shall be charged to account 407.3, regulatory debits, concurrent with the recovery in rates.

C. If rate recovery of all or part of an amount included in this account is disallowed, the disallowed amount shall be charged to Account 426.5, Other Deductions, or Account 435, Extraordinary Deductions, in the year of the disallowance.

Background

Pursuant to the 2013 Audit of ATSI, FirstEnergy revised its corporate-wide accounting policy for vegetation management expenses at transmission corridors to cease capitalizing the cost. During the compliance phase of the ATSI audit, the company informed the Commission that it would account for the costs of vegetation management activities as maintenance expenses consistent with Commission accounting requirements.[35] During the current audit, audit staff found that ATSI and the other FirstEnergy subsidiaries, as directed by the 2013 Audit report, had ceased the practice of capitalizing in plant accounts the vegetation management-related maintenance expenses incurred in transmission corridors for Commission accounting and reporting purposes, but had begun deferring the costs as regulatory assets. These entities continued to account for and report the cost in plant accounts for other non-Commission related purposes. Certain FirstEnergy subsidiaries sought and received approval from the Commission to recover a portion of the deferred costs through service rates charged, and certain of them did not.[36]

In accordance with the instructions of Account 182.3, Other Regulatory Assets, expenses not includible in other accounts for recovery in current period, that probably

---

[35] The compliance phase of an audit commences after issuance of the audit report. During this phase, an audited entity submits information to audit staff that responds to the recommendations of the audit report that the entity will implement. This information includes discussion of activities that an audited entity has initiated as of the submittal or that it plans to initiate in a subsequent period to become compliant with Commission requirements and/or controls to help maintain compliance.

[36] *See Mid-Atlantic Interstate Transmission, LLC*, 158 FERC ¶ 62,185 (2017), *order on settlement*, 163 FERC ¶ 61,131 (2018) (MAIT received approval to include deferred vegetation management costs of $4.18 million in wholesale transmission formula rate determinations); *Jersey Central Power & Light Co.,* 158 FERC ¶ 62,186

will be recovered in subsequent rates resulting from the ratemaking actions of regulatory agencies, may be deferred and accounted for as regulatory assets. To establish a regulatory asset, it must be probable that the Commission will permit the company to recover these costs in future rates. Further, amounts accounted for as regulatory assets are generally required to be amortized concurrent with recovery of the deferred expenses in rates and amounts for which recovery is disallowed must be charged to nonoperating expense accounts. Audit staff found that certain FirstEnergy subsidiaries improperly amortized the regulatory assets to Account 407.3, Regulatory Debits, without concurrent recovery in rates, and others amortized the cost to Account 403, Depreciation Expenses, and included the costs in rates without regulatory approval.[37] However, when expenses deferred as regulatory assets are appropriately amortized consistent with the instructions of Account 182.3, the cost must be amortized pursuant to, and concurrent with, authorized recovery in rates, and recorded in the same account that would have been charged if the costs were included in deriving the operating income when incurred.

Account 571, Maintenance of Overhead Lines, provides for the recording of the costs of vegetation management-related maintenance activities performed at transmission corridors when incurred. As such, the costs should be amortized to Account 571 after the companies receive regulatory approval for recovery. However, since the companies did not have approval for recovery, amortization of the costs was inappropriate, and the companies' use of Accounts 403 and 407.3 to account for the amortization of the regulatory assets was incorrect. In addition, certain of the subsidiaries that continued to account for and report the vegetation maintenance cost in plant accounts for non-Commission related purposes erroneously recorded depreciation of the cost to Account 403. Balances recorded in Account 403 were used to populate the Transmission Companies' wholesale transmission formula rates. Consequently, plant and regulatory

(2017), *order on settlement,* 162 FERC ¶ 61,140 (2018) (JCP&L was denied recovery of deferred vegetation management costs in wholesale transmission formula rate determinations); *American Transmission Systems, Inc*., 171 FERC ¶ 61,273 (2020) (ATSI sought Commission approval to, among other things, recover regulatory assets related to deferred vegetation management costs. The Commission accepted the filing and set the matter for hearing and settlement judge procedures. The case is currently going through settlement procedures); *see Monongahela Power Co*., 173 FERC ¶ 61,290 (2020), *reh'g denied by operation of law*, 174 FERC ¶ 62,136 (2021) (The Potomac Edison Company and West Penn Power Company sought Commission approval to, among other things, recover regulatory assets related to deferred vegetation management costs. The Commission accepted the filing and set the matter for hearing and settlement judge procedures. The case is currently going through settlement procedures).

[37] The Potomac Edison Company and West Penn Power Company amortized the regulatory assets to Account 407.3, and the Transmission Companies amortized the regulatory assets to Account 403.

asset amounts improperly depreciated and amortized, respectively, to Account 403 were included in the Transmission Companies' wholesale transmission rates, which led to their customers being charged for unapproved amounts of approximately $2.7 million. If rate recovery is disallowed, regulatory assets should be charged to Account 426.5, Other Deductions, or Account 435, Extraordinary Deductions, in the year of the disallowance instead of annual amortization to other accounts.

Recommendations

DAA recommends that FirstEnergy:

16. Revise policies, practices, and procedures to amortize or write off the regulatory assets consistent with Commission accounting requirements.

17. Train relevant staff on the revised methods, and provide periodic training in this area, as needed.

18. Submit a refund analysis, within 60 days of issuance of this audit report, to DAA for review that explains and details the following: (1) calculation of refunds that result from the correction of ATSI's and TrAILCo's improper and unauthorized, respective, depreciation and amortization of plant and regulatory assets to the depreciation expense account and inclusion of the expenses in service rate determinations, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale transmission customers to receive refunds; and (5) period(s) refunds will be made.

19. File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

20. Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

4. Accounting for Lobbying Expenses, Donations, and Costs that Lacked Proper Supporting Documentation

FESC improperly accounted for and improperly reported lobbying expenses, donations, and other costs that lacked proper supporting documentation or were misclassified (unsupported costs). Moreover, FESC allocated and charged the improperly accounted for lobbying, donation, and unsupported costs to FirstEnergy and its subsidiaries. This led the FirstEnergy subsidiaries to improperly account for and report the lobbying expenses, donations, and unsupported costs in their respective books and records, and FERC Form No. 1. The errors resulted in the Transmission Companies including the lobbying expenses, donations, and unsupported costs in their annual wholesale transmission revenue requirements and billing rates, and overbilling wholesale transmission customers.

Pertinent Guidance

- 18 C.F.R. § 367.3, Records, states in part:

> (a) Each service company must keep its books of account, and all other books, records, and memoranda that support the entries in the books of account, so as to be able to furnish full information on any item included in any account. Each entry must be supported by sufficient detailed information that will permit ready identification, analysis, and verification of all facts relevant and related to the records.
>
> (b) The books and records referred to in this part include not only accounting records in a limited technical sense, but all other records, such as minutes books, stock books, reports, correspondence, and memoranda, that may be useful in developing the history of or facts regarding any transaction.

- 18 C.F.R. § 367.14, Transactions with associate companies, states:

> Each service company must keep its accounts and records so as to be able to furnish accurately and expeditiously statements of all transactions with associate companies. The statements may be required to show the general nature of the transactions, the amounts involved in the transactions and the amounts included in each account prescribed in this part with respect to such transactions. Transactions with associate companies must be recorded in the appropriate accounts for transactions of the same

nature. Nothing contained in this part, however, must be construed as restraining the service company from subdividing accounts for the purpose of recording separately transactions with associate companies.

- 18 C.F.R. § 367.4261, Account 426.1, Donations, states:

  This account shall include all payments or donations for charitable, social or community welfare purposes.

- 18 C.F.R. § 367.4264, Account 426.4, Expenditures for Certain Civic, Political and Related Activities, states in part:

  (a) This account must include expenditures for the purpose of influencing public opinion with respect to the election or appointment of public officials, referenda, legislation, or ordinances (either with respect to the possible adoption of new referenda, legislation or ordinances or repeal or modification of existing referenda, legislation or ordinances) or approval, modification, or revocation of franchises; or for the purpose of influencing the decisions of public officials.

- 18 C.F.R. Part 101, General Instructions, E states:

  All amounts included in the accounts prescribed herein for electric plant and operating expenses shall be just and reasonable and any payments or accruals by the utility in excess of just and reasonable charges shall be included in account 426.5, Other Deductions.

Background

In the fall of 2020, FirstEnergy acknowledged the existence of the DOJ initiated investigation into its activities.[38] The investigation assessed FirstEnergy's activities involving payment of over $61 million from FirstEnergy to 501(c)(4) entities and others, that allegedly were made to influence public opinion, state legislation, and a state ballot initiative using means employed by a 501(c)(4) entity and other individuals that the

[38] *See* FirstEnergy statement accessed Oct. 30, 2020, https://www.prnewswire.com/news-releases/firstenergy-corp-statement-on-hb-6-investigation-301097421.html.

federal government has alleged to be unlawful.[39] Audit staff interviews of FESC employees, reviews of internal emails and messages, and Attachment A – Statement of Facts included in DPA and agreed to by FirstEnergy indicate the existence of significant shortcomings in FirstEnergy and its subsidiaries' internal controls over financial reporting, including controls over accounting for expenses relating to civic, political, and related activities, such as lobbying activities performed by and on behalf of FirstEnergy and its subsidiaries. Even more concerning, several factual assertions agreed to by FirstEnergy in DPA and the remedies FirstEnergy agreed to undertake, point towards internal controls having been possibly obfuscated or circumvented to conceal or mislead as to the actual amounts, nature, and purpose of the lobbying expenditures made, and as a result, the improper inclusion of lobbying and other nonutility costs in wholesale transmission billing rates.

FESC performed lobbying activities during the audit period that it represented were intended to influence public opinion and federal and state legislatures. One of its lobbying initiatives involved garnering legislative support for FirstEnergy's former subsidiaries, FES and FENOC, which owned fossil fuel and nuclear power generation assets that operated in competitive markets. Audit staff evaluated costs incurred associated with this initiative and with others undertaken by FESC – i.e., costs which were associated with civic, political, and related activities incurred during the audit period. Audit staff reviewed and analyzed accounting detail records, invoices, engagement letters, press articles, advertisement contracts, and advertisements on social media platforms, and interviewed internal lobbyists, in order to understand the nature and extent of the lobbying activities.[40]

External Lobbyist Expenses

During its review, Audit staff discovered, based on responses provided to data requests, that FESC improperly recorded approximately $10.9 million of lobbying costs in utility operating expense accounts, rather than in Account 426.4, Expenditures for Certain Civic, Political and Related Activities, as required by the Commission's accounting regulations. Account 426.4 provides for the reporting of expenditures made

---

[39] *See* Affidavit in Support of Criminal Complaint, *United States v. Larry Householder, et al.,* Case No. 1:20-MJ-00526 (July 17, 2020) (Affidavit in Support of Criminal Complaint).

[40] Audit staff conducted this audit to test compliance with the Commission's accounting requirements in the areas within the audit's objectives and scope. This audit report does not incorporate, and has no bearing on, the DOJ investigation and criminal complaint proceeding, or other ongoing federal and state agency-directed investigations of FirstEnergy's or its affiliated companies' activities.

for the purpose of influencing public opinion, such as lobbying expenses. FESC incorrectly accounted for amounts paid to outside firms that lobbied on behalf of FirstEnergy and its subsidiaries in Account 923, Outside Services Employed, and Account 568, Maintenance Supervision and Engineering (Major Only), as follows:

Lobbying Expenses	2015	2016	2017	2018	Jan to June 2019	Total
Account No. 923	1,880,798	1,865,456	2,875,150	2,914,619	881,004	10,417,027
Account No. 568	-	181,477	304,000	-	-	485,477
Total Operating Accounts	1,880,798	2,046,933	3,179,150	2,914,619	881,004	10,902,504

Audit staff determined that, out of the approximately $10.9 million of lobbying expenses initially disclosed, about $760,000 was charged to the FPUs and the Transmission Companies. The FPUs and the Transmission Companies properly reclassified and accounted for $341,000 of these lobbying costs in Account 426.4, but the balance – approximately $419,000 – remained in the utility operating expense accounts. FirstEnergy represented that the improper accounting for these external lobbying expenses resulted in approximately $58,000 of overbillings to the Transmission Companies' wholesale transmission formula rate customers.

Following audit staff's initial review of FirstEnergy's responses described above, in July 2020 the DOJ filed the criminal complaint described in greater detail in Section II, which alleged that funds received from FirstEnergy had been used for lobbying purposes. FirstEnergy informed audit staff on November 12, 2020 that its own internal investigation determined that data request responses previously provided to audit staff regarding lobbying expenses were incomplete, and FirstEnergy provided several supplemental data response updates. These supplemental data responses and audit staff's analysis of them and of other publicly available information revealed that there were additional amounts of improperly reported lobbying expenses, donations, and other costs incurred by FirstEnergy and its current and former subsidiaries. In accordance with 18 C.F.R. Sections 367.3 and 367.14, each service company must maintain books of account, and all other books, records, and memoranda that support the entries in the books of account and keep its accounts and records so as to be able to furnish accurately and expeditiously statements of all transactions with associate companies. The statements may be required to show the general nature of the transactions, the amounts involved in the transactions and the amounts included in each account prescribed in this part with respect to such transactions. FirstEnergy represented to audit staff that several

payments identified in its supplemental data responses lacked sufficient supporting documentation, the background of which is provided in greater detail in Section II:

Payments to Section 501(c)(4) Entities and to Hardworking Ohioans, Inc.: FirstEnergy made payments of approximately $70.9 million to various 501(c)(4) entities and to Hardworking Ohioans, Inc. for lobbying or other nonoperating purposes, or that were not sufficiently supported. Of this total, $44.4 million was recorded in the accounts of FirstEnergy's former generation subsidiaries and $25 million was recorded in the accounts of FirstEnergy Corporation, which were not reviewed by the audit staff. Out of the $1.5 million that FirstEnergy identified as being charged to the FPUs and the Transmission Companies, $ 0.65 million was improperly recorded as General and Administrative costs, while around $0.85 million was improperly recorded as the cost of electric plant in service. FirstEnergy's improper capitalization of General and Administrative costs is discussed in Finding No. 1, Allocation of Overhead Costs to CWIP.

Payments to Sustainability Funding Alliance of Ohio, Inc. and IEU-Ohio Administration, LLC: From 2010 to early 2019, FirstEnergy made payments to Sustainability Funding Alliance of Ohio, Inc., and IEU-Ohio Administration Company, LLC, two small entities associated with a former Chairman of the PUCO, totaling $22.8 million.[41] FESC allocated around $11.9 million of the total payments to FirstEnergy's FPUs and Transmission Companies as General and Administrative costs, of which $6.7 million was recorded as electric plant in service and the balance of around $5.2 million as General and Administrative costs, which were used in customer rate development for certain of those regulated entities. An additional amount of $9 million, which was paid in part to Sustainability Funding Alliance of Ohio, Inc. under a different vendor number, and in part to IEU-Ohio Administration Company, LLC, was allocated to the FirstEnergy FPUs located in Ohio. FirstEnergy acknowledged that it did not have sufficient supporting documentation and detailed information, as required by 18 C.F.R Section 367.3, to support the total of around $22.8 million in payments made to Sustainability Funding Alliance of Ohio, Inc. and IEU-Ohio Administration Company, LLC, and the allocation of approximately $20.9 million of these amounts to the FPUs and Transmission Companies, and around $1.9 million to its former generation subsidiaries. FirstEnergy has estimated that around $185,000 in customer refunds are due, stemming

[41] As provided in the DPA between FirstEnergy and the United States Attorney's Office for the Southern District of Ohio, the former PUCO Chairman was identified as Public Official B in the DOJ's criminal complaint, wherein he was alleged by the DOJ to have operated in an official capacity as the PUCO Chairman to assist the passage of legislation and regulatory orders that benefited FirstEnergy in return for these monetary payments. *See United States v. FirstEnergy Corp.*, Case No. 1:21-CR-00086-TSB (S.D. Ohio), Deferred Prosecution Agreement (filed Jul. 22, 2021).

from the $20.9 million allocated to the FPUs and Transmission Companies. FirstEnergy identified certain of these transactions were either improperly classified, misallocated to certain of the FPUs and Transmission Companies, or lacked proper supporting documentation and resulted in amounts collected from customers. FirstEnergy represented that it would make the refunds and has already made the necessary accounting entries to correct this issue and prevent the expenses from impacting future rates.

Payments to Sixteen Entities Associated With One Person: In coordination with its filing of SEC Form 10-K for the year ended December 31, 2020, FirstEnergy revealed to audit staff in February 2021 that FirstEnergy was investigating payments totaling approximately $28.8 million made between 2003 and 2020 to sixteen entities associated with one individual. FESC allocated around $19.7 million of these payments to FirstEnergy's FPUs, $1.1 million to the Transmission Companies, $2.2 million to former generation subsidiaries, and $5.8 million to FirstEnergy and other nonregulated subsidiaries. FirstEnergy identified certain of these transactions were either improperly classified, misallocated to certain of the FPUs and Transmission Companies, or lacked proper supporting documentation and resulted in amounts collected from customers. FirstEnergy has estimated that around $9.6 million in customer refunds are due, stemming from the $20.8 million allocated to the FPUs and Transmission Companies. FirstEnergy represented that it would make the refunds and has already made the necessary accounting entries to correct this issue and prevent the expenses from impacting future rates.

As described above and in Section II, audit staff has confirmed with FirstEnergy the existence of several ongoing investigations by external entities into FirstEnergy's affairs. These include investigations by the SEC, the U.S. Internal Revenue Service, the PUCO, and the Ohio Attorney General. In addition, FirstEnergy continues to conduct internal investigations and examinations of various matters. FirstEnergy has committed that, in the event that final, conclusive results of one or more of the investigations calls into question the propriety of its past accounting and/or rate determination decisions and customer charges, it will provide notice to the Commission and initiate actions to attain compliance with Commission accounting requirements and make refunds to customers, as appropriate.

Internal Lobbyists' Expenses

Audit staff interviewed FESC employees who were classified as registered lobbyists in its Governmental Affairs Department that engaged in lobbying activities on behalf of FirstEnergy and its subsidiaries. Based on interviews pertaining to activities performed by the employees and reviews of their time cards and associated accounting for their labor, audit staff determined that FESC did not record the portion of the costs of

labor in its Governmental Affairs Department that was associated with the performance of lobbying activities in Account 426.4, as required by the Commission's accounting regulations. As a result, FESC charged the improperly accounted for costs to FirstEnergy and its subsidiaries. The costs were included in the Transmission Companies' annual wholesale transmission revenue requirements and charged to their customers.

Further, audit staff found that FESC lacked formal procedures and oversight controls to help ensure that lobbying costs were accounted for appropriately. FESC should have had adequate controls in place to prevent such accounting errors. Also, audit staff is concerned about FESC's lack of adherence to its prevailing internal controls and procedures.

Recommendations

DAA recommends that FirstEnergy:

21. Critically review and strengthen internal controls in FirstEnergy and its subsidiaries. Establish and implement procedures governing methods to be used to appropriately identify, account for, track, report, and review all lobbying costs, donations, and any unsupported expenses, including, but not limited to, expenses of external lobbyists, monies paid to external corporate entities to be used for lobbying, and other external lobbying costs and internal lobbying costs, including employee lobbying time and other internal lobbying costs.

22. Train relevant staff on the internal control enhancements and procedures established, including internal controls over vendor creation in the accounts payable system, payments, accounting, and reporting violations; and provide periodic training in this area, as needed.

23. Perform an analysis of costs that FirstEnergy and its subsidiaries incurred associated with internal and external lobbying activities, including payments of FirstEnergy funds to outside entities for purposes of those entities using those funds for lobbying, and provide support to identify lobbying-related expenses improperly charged to utility operating accounts, for the audit period and, with respect to the specific issues discussed in this finding, for the entire period affected by or relevant to each such specific issue. Within 60 days of the issuance of this audit report and on a rolling basis within 60 days of conclusion of each internal or external investigation discussed in the finding or any new internal or external investigation, provide the results of the investigation arising directly from HB 6 or lobbying activities occurring prior to 2021, proposed correcting journal entries,

and FirstEnergy's analysis of the findings from each investigation and the related impact on prior and future accounting and rate development to audit staff.

24. Submit a refund analysis, within 60 days of issuance of this audit report and on a rolling basis within 60 days of conclusion of each investigation discussed in the finding or any new investigation arising directly from HB 6 or lobbying activities occurring prior to 2021, for DAA's review, that explains and details the following: (1) calculation of refunds resulting from correcting the improper accounting for external lobbying costs, donations, and unsupported costs in utility operating and plant accounts; and lobbying costs as identified pursuant to the analysis performed in response to Recommendation No. 23, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale transmission customers to receive refunds; and (5) period(s) refunds will be made.

25. File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

26. Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

5. Allowance for Funds Used During Construction

FirstEnergy's FPUs improperly included undistributed subsidiary earnings and accumulated other comprehensive income in equity balances used for the purpose of computing AFUDC rates. As a result, the companies over-accrued AFUDC during the audit period, which led them to overstate CWIP and plant-in-service balances.

Pertinent Guidance

- 18 C.F.R. Part 101, Electric Plant Instruction No. 3(A)(17) states, in part:

> (a) The formula and elements for the computation of the allowance for funds used during construction shall be:
>
> $A_i = s(S/W) + d(D/D + P + C)(1 - S/W)$
> $A_e = [1 - S/W][p(P/D + P + C) + c(C/D + P + C)]$
>
> A_i = Gross allowance for borrowed funds used during construction rate.
> A_e = Allowance for other funds used during construction rate.
> S = Average short-term debt.
> S = Short-term debt interest rate.
> D = Long-term debt.
> D = Long-term debt interest rate.
> P = Preferred stock.
> P = Preferred stock cost rate.
> C = Common equity.
> C = Common equity cost rate.
> W = Average balance in construction work in progress plus nuclear fuel in process of refinement, conversion, enrichment and fabrication, less asset retirement costs (See General Instruction 25) related to plant under construction.
>
> (b) The rates shall be determined annually. The balances for long-term debt, preferred stock and common equity shall be the actual book balances as of the end of the prior year. The cost rates for long-term debt and preferred stock shall be the weighted average cost determined in the manner indicated in § 35.13 of the Commission's Regulations [u]nder the Federal Power Act. The cost rate for common equity shall be the rate granted common equity in the last rate proceeding before the ratemaking body having primary rate jurisdiction[]. If such cost rate is not available, the average rate actually earned during the preceding three years shall be used. The short-term debt balances and related cost and the average balance for construction work in progress plus nuclear fuel in process of refinement, conversion,

> enrichment, and fabrication shall be estimated for the current year with appropriate adjustments as actual data becomes available.[42]

- Order No. 469, states in relevant part:

> [I]t will continue to be the Commission's policy that the undistributed earnings of subsidiaries are to be excluded from the common stockholder's equity in determining rate of return.[43]

- Order No. 627, the order establishing Account 219, Accumulated Other Comprehensive Income, states in relevant part:

> 70. One commenter recommended that the Commission state it will not incorporate derivative instruments, hedging activities, and other comprehensive income into its ratemaking process for utilities, because the value of these instruments are certain to change over time and the Commission would set rates incorrectly.
>
> 71. As stated in the NOPR, the proposed rule was not intended to prescribe the ratemaking treatment for items of other comprehensive income or for derivative instruments and hedging activities. The adoption of any particular rate treatment for these amounts is beyond the scope of this rulemaking. *The Commission will decide the appropriate treatment for these*

Part 101, Electric Plant Instruction No. 3(17) (2021); see Amendments to Uniform System of Accounts for Public Utilities and Licensees and for Natural Gas Companies (Classes A, B, C and D) To Provide for the Determination of Rate for Computing the Allowance for Funds Used During Construction and Revisions of Certain Schedule Pages of FPC Reports, Order No. 561, 57 FPC 608 (Order No. 561), reh'g denied, Order No. 561-A, 59 FPC 1340 (1977) (Order No. 561-A), order on clarification, 2 FERC ¶ 61,050 (1978).

[43] Revisions in Uniform System of Accounts, and Annual Report Forms No. 1 and No. 2 to Adopt the Equity Method of Accounting for Long-Term Investments in Subsidiaries, Order No. 469, 49 FPC 326, at 327 (1973).

> *transactions on a case-by-case basis in individual rate proceedings.*[44]

Background

AFUDC represents the financing cost of construction and consists of two components: Allowance for Borrowed Funds (debt) and Allowance for Other Funds (equity). Electric Plant Instruction (EPI) No. 3(A)(17) provides a uniform formula for calculating a utility's maximum permitted AFUDC rates. Audit staff reviewed the FirstEnergy subsidiaries' processes and policies for computing their respective AFUDC rates and the application of such rates to the cost of their construction projects. Through its review, audit staff identified deficiencies in the FirstEnergy FPUs' method for calculating their respective AFUDC rates.

The FPUs improperly included balances recorded in Account 216.1, Undistributed Subsidiary Earnings, and Account 219, Accumulated Other Comprehensive Income, in deriving the equity component of the AFUDC rate calculation. The amounts in Account 216.1 represent retained earnings undistributed by the subsidiaries, and the amounts in the FPUs' Account 219 represent gains and losses which require appropriate rate treatment decision by the Commission on a case-by-case basis. Therefore, amounts in Accounts 216.1 and 219 were not available to the FPUs to be spent for any purposes, including to finance construction, and those amounts should not have been considered as funds available to the FPUs for construction in deriving the AFUDC rates.

As a result of improperly including amounts recorded in Accounts 216.1 and 219 in AFUDC rate calculations, the FPUs over-accrued AFUDC during the audit period. These amounts were capitalized as a component cost of construction and subsequently included in Account 106, Completed Construction not Classified-Electric, or Account 101, Electric Plant in Service.

Recommendations

DAA recommends that FirstEnergy:

27. Revise and implement the FPUs' processes and procedures to calculate their respective AFUDC rates consistent with EPI No. 3(A)(17) and other applicable Commission requirements. Revisions should include processes to prevent the inclusion of balances in Accounts 216.1 and 219 in the AFUDC rate calculations.

---

[44] Accounting and Reporting of Financial Instruments, Comprehensive Income, Derivatives and Hedging Activities, Order No. 627, 101 FERC ¶ 61,032, at PP 70-71 (2002) (emphasis added) (footnotes omitted).

28. Train relevant staff on the revised AFUDC calculation method, and provide periodic training, as needed.

6. Service Company Billing Procedures

Billing information that FESC provided to FirstEnergy's subsidiaries pertaining to charges for services provided to them was insufficient. Specifically, FESC did not provide detailed information to reflect the services provided and showing the charges classified as direct costs, indirect costs, or compensation for use of capital, with the details of service company accounts by service provided, as required. As a result, the FirstEnergy subsidiaries misclassified costs charged by FESC.

Pertinent Guidance

- 18 C.F.R. § 367.27, General Instruction No. 27, Billing Procedures, states:

> Charges for services to associate public-utility companies must be made monthly with sufficient information and in sufficient detail to permit such company, where applicable, to identify and classify the charge in terms of the system of accounts prescribed by the regulatory authorities to which it is subject. The information provided to associate public-utility companies must provide a summary of the accounts by service provided and showing the charges, classified as direct cost, indirect cost, and compensation for use of capital.

- 18 C.F.R. § 367.14, General Instruction No. 14, Transactions with Associated Companies, states:

> Each service company must keep its accounts and records so as to be able to furnish accurately and expeditiously statements of all transactions with associate companies. The statements may be required to show the general nature of the transactions, the amounts involved in the transactions and the amounts included in each account prescribed in this part with respect to such transactions. Transactions with associate companies must be recorded in the appropriate accounts for transactions of the same nature. Nothing contained in this part, however, must be construed as restraining the service company from subdividing accounts for the purpose of recording separately transactions with associate companies.

- 18 C.F.R. § 367.9260, Account 926, Employee Pensions and Benefits, state in part:

(a) This account must include pensions paid to, or on behalf of, retired employees, or accruals to provide for pensions, or payments for the purchase of annuities for this purpose, when the service company has definitely, by contract, committed itself to a pension plan under which the pension funds are irrevocably devoted to pension purposes, and payments for employee accident, sickness, hospital, and death benefits, or insurance related to this account. Include, also, expenses incurred in medical, educational or recreational activities for the benefit of employees, and administrative expenses in connection with employee pensions and benefits.

Background

FESC's method during the audit period to allocate and account for its costs of providing services to FirstEnergy and its subsidiaries consisted of multiple processes and procedures that were performed within its accounting systems. Audit staff observed the operation of the systems and evaluated information on costs output from the systems. Audit staff discovered that billing information FESC provided to FirstEnergy's subsidiaries pertaining to charges for services provided was insufficient. Specifically, FESC did not provide the detailed information required by the Commission's regulations to reflect the services it provided and showing service company accounts for the charges billed and classified as direct costs, indirect costs, or compensation for use of capital.

Audit staff found that, rather than provide detailed billing information as required, FESC provided certain aggregated cost information that made it difficult to discern the basis of costs charged. For example, FESC billing information pertaining to payroll taxes and employee benefit costs were combined with payroll costs in the accounting systems and billed to FirstEnergy's subsidiaries as an aggregated amount that was recorded in Account 923, Outside Services Employed. However, services provided by FESC on behalf of the FirstEnergy subsidiaries must be accounted for in the appropriate accounts for transactions of the same nature in accordance with the requirements of General Instruction No. 14, Transactions with Associated Companies. Account 926, Employee Pensions and Benefits, provides for the recording of expenses associated with employee benefits, and payroll taxes must be accounted for in the appropriate utility or nonutility account on a functional basis related to the labor provided. FESC's accounting and billing procedures resulted in the FirstEnergy subsidiaries not having the detailed information required to appropriately account for costs charged by FESC. As a result, the FirstEnergy subsidiaries misclassified some costs charged by FESC.

Recommendations

DAA recommends that FirstEnergy:

29. Revise FESC policies, procedures, and accounting systems so as to provide sufficient billing information to FirstEnergy's subsidiaries in accordance with the Commission's regulations.

30. Train relevant staff on the revised policies, procedures, and accounting systems and provide periodic training in this area, as needed.

7. Accounting for Fuel – Coal Supply and Other Consulting Services

The FirstEnergy FPU, Monongahela Power Company, improperly accounted for fixed monthly consultation fees paid in Account 501, Fuel, as a component cost of coal used in operations. The accounting led to costs being included in fuel used in operations that were not directly assignable and likewise not properly allocable to the cost of coal purchased and used. As a result, Monongahela Power Company may have overcharged wholesale customers, through operation of the fuel cost adjustment formula in its tariff, for the cost of fuel included as a component cost of generating electricity.

Pertinent Guidance

- 18 C.F.R. Part 101, Account 501, Fuel, states in part:

> A. This account shall include the cost of fuel used in the production of steam for the generation of electricity, including expenses in unloading fuel from the shipping media and handling thereof up to the point where the fuel enters the first boiler plant bunker, hopper, bucket, tank or holder of the boiler-house structure. Records shall be maintained to show the quantity, B.t.u. content and cost of each type of fuel used.
>
> B. The cost of fuel shall be charged initially to account 151, Fuel Stock (for Nonmajor utilities, appropriate fuel accounts carried under account 154, Plant Materials and Operating Supplies) and cleared to this account on the basis of the fuel used. Fuel handling expenses may be charged to this account as incurred or charged initially to account 152, Fuel Stock Expenses Undistributed (for Nonmajor utilities, an appropriate subaccount of account 154, Plant Materials and Operating Supplies). In the latter event, they shall be cleared to this account on the basis of the fuel used. Respective amounts of fuel stock and fuel stock expenses shall be readily available.

- 18 C.F.R. Part 101, Account 151, Fuel Stock, states:

> This account shall include the book cost of fuel on hand.
>
> Items
>
> 1. Invoice price of fuel less any cash or other discounts.

2. Freight, switching, demurrage and other transportation charges, not including, however, any charges for unloading from the shipping medium.

3. Excise taxes, purchasing agents' commissions, insurance and other expenses directly assignable to cost of fuel.

4. Operating, maintenance and depreciation expenses and ad valorem taxes on utility-owned transportation equipment used to transport fuel from the point of acquisition to the unloading point.

5. Lease or rental costs of transportation equipment used to transport fuel from the point of acquisition to the unloading point.

- Monongahela Power Company, FERC Electric Tariff, First Revised Volume No. 1, Part 6, Rate Schedule- Wholesale for Resale Power Service, states in part:

Fuel Adjustment

A fuel cost adjustment shall apply to all kilowatthours billed under this rate schedule. The adjustment shall be determined by the following formula to the nearest 0.001 cent per kilowatthour:

$$A = \left\{ \frac{Fm}{Sm} - \frac{Fb}{Sb} \right\} \times L \times \frac{1}{1-T}$$

A = Fuel Cost Adjustment in cents per Kilowatthour

Fm = Fuel Cost in the current period relating to:

(a) Fossil and nuclear fuel consumed in generation in wholly-owned and jointly-owned stations and identifiable fossil and nuclear fuel costs in energy purchased plus the net energy cost of energy purchased on an economic dispatch basis less;

(b) Fossil and nuclear fuel costs recovered through intersystem sales.

All fuel costs will be those charged to Account 501, cleared through Account 151, and Account 518 in the month preceding the billing Month.

Sm = All kilowatthour sales to regular Customers in the current period.

Fb and Sb = Fuel and kilowatthour sales in the base period as defined above. The factor $\frac{Fb}{Sb}$ = 1.70 cent per kilowatt-hour

L = Adjustment factor to recognize losses to service voltage where different than average losses in the delivery system. This factor is 0.97.

T = The gross receipts tax rate in effect during the billing Month, expressed as a decimal.

The amount of fuel adjustment shall not be subject to any discounts.

Background

During the audit period, FirstEnergy's FPU, Monongahela Power Company, generated electric power using its coal-fired Fort Martin and Harrison power stations that are located in West Virginia. The two power stations had a combined capacity of 3,082 MW and used around 7.8 million tons of coal annually. As relevant here, Monongahela Power Company made wholesale sales of electricity in the PJM market under a tariff established on September 17, 2010.[45] Service rates of wholesale customers that purchased electricity from Monongahela Power Company pursuant to the tariff included the cost of fuel used to generate the electricity. The cost of fuel was determined based on a formula in an adjustment clause of the tariff that provided for fuel costs charged to Account 501 that were cleared through Account 151, Fuel Stock, in the month preceding the billing month.

Consulting Agreement Statement of Work

On June 1, 2018, Monongahela Power Company entered into an agreement with BCG Resources, LLC (BCG), titled Statement of Work for Purchase of Professional and

[45] Monongahela Power Company, FERC Electric Tariff, First Revised Volume No. 1.

Consulting Services (Statement of Work), that provided for monthly payments to BCG of $625,000, amounting to $7.5 million in payments for the initial term of the then-one year agreement, which included provisions for automatic yearly renewals. The agreement was renewed in subsequent years. Monongahela Power Company paid a total of $18.75 million in consulting service fees under the Statement of Work, which was composed of thirty monthly payments of $625,000 made from June 2018 until the agreement with BCG was terminated in November 2020.

The Statement of Work required BCG to provide management and advisory services at the direction of Monongahela Power Company including fuel sourcing and supply, coal blending, inventory strategy and management, renewables, regulatory services related to fuel and ash requirements and economic development, and additional services not defined in the Statement of Work subject to agreement of both parties.

Accounting for management and advisory services

Audit staff observed that the monthly payments made to BCG were directly charged by Monongahela Power Company to Account 501 without first being accounted for as inventoried fuel stock in Account 151, as required.[46] Account 501 provides for the recording of the cost of fuel actually used in operations to generate electricity. The cost of fuel used in operations for a given month should consider the inventoried cost of the fuel used as consistent with the company's inventory valuation method, e.g., first-in first-out, last-in first-out, or weighted average cost. The cost of inventoried fuel stock recordable in Account 151 that is subsequently used in operations and recorded in Account 501 is determined, in part, based on the invoice price of fuel purchased less any discounts, plus other expenses directly assignable to the cost of fuel. Certain consultant fees paid to acquire fuel related advisory services may be includible as a component cost of inventoried fuel stock.[47]

Monongahela Power Company attributed 100 percent of the monthly BCG consultant fees paid to fuel used in operations recorded in Account 501 without first determining: (1) the portion of the fees allocable to fuel stock inventory, (2) the related amount of fuel in inventory actually used in operations during the period recorded in Account 151, and (3) the inventoried cost of the fuel used including the portion of consultant fees appropriately included therein. However, only a portion of the monthly consulting fee payments, directly assignable to the purchase cost of coal, should have been recorded in Account 151 and then transferred to Account 501 when the coal was

[46] See, 18 C.F.R. Part 101, Account 501, Paragraph B.

[47] Other services provided by consultants such lobbying services are generally prohibited from inclusion as a component cost of fuel.

actually burned as used in operations. As a result, Monongahela Power Company may have overcharged wholesale customers, including other FirstEnergy FPUs, due to its accounting practices and the associated operation of the fuel cost adjustment formula in its tariff, for the cost of fuel included as a component cost of generating electricity.

Recommendations

DAA recommends that FirstEnergy:

31. Revise accounting policies and procedures for cost of fuel by the FPUs to ensure compliance with the Commission's accounting regulations.

32. Train relevant staff on the revised policies and procedures and provide periodic training.

33. Perform an analysis of all monthly payments made to consultants, including BCG, that were included in the cost of fuel used in operations during the audit period and submit the analysis to DAA with supporting documents within 60 days of issuance of this audit report. Based on the analysis, submit proposed adjusting accounting entries to record the consultation costs in the appropriate accounts for DAA's review and approval.

34. Revise the FirstEnergy FPUs' fuel inventory and other account balances impacted by the improper accounting after receiving DAA's approval of the proposed accounting entries per Recommendation No. 33 and restate and footnote the FERC Form No. 1 reports for current and comparative years as necessary.

35. Review collections received, including but not limited to uplift payments, during the audit period based, in part, on the cost of fuel and submit an analysis to DAA for review of retail and wholesale overcollections due to improper recording of costs in Account 501.

36. Submit a refund analysis if there were overcollections from wholesale customers, within 60 days of issuance of this audit report, for DAA's review, that explains and details the following: (1) calculation of refunds resulting from the improper accounting for fuel costs, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale customers to receive refunds; and (5) period(s) refunds will be made.

37. File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

38. Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

Washington, DC 20426

Re: FirstEnergy Corp. Docket No. FA19-1-000

Dear Mr. Williams:

FirstEnergy Corp. and its subsidiaries ("FirstEnergy" or "the Company"), pursuant to Section 41.1(b) of the Commission's regulations in 18 C.F.R. Part 41, provides the following response to the Draft Audit Report of the Division of Audits and Accounting ("DAA") within the Federal Energy Regulatory Commission ("Commission" or "FERC")'s Office of Enforcement. Our response addresses the January 7, 2022 Draft Audit Report.

As discussed in Attachment A, FirstEnergy largely accepts the Findings and Recommendations in the Draft Audit Report. In many instances, DAA Staff's Recommendations have been implemented or are already underway. For the Recommendations that have not yet been implemented, we look forward to working cooperatively with DAA Staff during the compliance phase of the audit.

FirstEnergy is committed to fostering a strong culture of compliance, including ensuring compliance with the Commission's accounting regulations. We appreciate that the changes that have been implemented and will be implemented as part of this audit will help us achieve that goal. Our whole team would like to thank DAA Staff for their professionalism and courtesy throughout the audit.

Respectfully submitted,

/s/ Jason Lisowski

Jason Lisowski
FirstEnergy Corp., Vice President,
Controller & Chief Accounting Officer

Responses to Specific Findings and Recommendations

Finding 1: Allocation of Overhead Costs to CWIP

FirstEnergy respectfully submits that its approach to capitalizing and allocating overhead costs to CWIP is consistent with the Commission's regulations. Specifically, as the costs in question generally were for services and expenses of employees of FirstEnergy Service Company, FirstEnergy used an "appropriate allocation method" as provided in Section 367.11 of Part 367 (Uniform System of Accounts for Centralized Service Companies). An "appropriate allocation method" under this Section does not require the use of the timecard reports or time study described in Part 101, which DAA Staff incorrectly relies on exclusively and without regard to Part 367.

FirstEnergy respectfully submits that DAA Staff's position would read Section 367.11 out of the regulations, which would be contrary to the regulation, established cannons of statutory/regulatory interpretation, and principles of prior notice and due process with regard to the proper application and interpretation of the regulation. Prior notice and due process are of particular importance here because, in 2010, DAA Staff audited FirstEnergy, FirstEnergy Service Company, and associated companies and, in the course of that audit, DAA Staff audited the cost allocations and billing by FirstEnergy Service Company, including capitalization of A&G overheads costs to construction, as well as evaluated the accounting of those costs on the utilities' books under the Uniform System of Accounts requirements under 18 C.F.R. Part 101. See December 6, 2010, Final Audit Report, Docket No. FA10-2-000. Unlike the current audit, where DAA Staff does not address Part 367, the 2010 audit expressly considered both Part 367 and Part 101, and did not result in any findings that FirstEnergy's allocation method was inconsistent with Commission regulations or any recommendations that FirstEnergy alter its approach. As such, FirstEnergy relied reasonably on the outcome of this audit to continue its practice of applying an "appropriate methodology" as permitted in Section 367.11 of the Commission's regulations for allocating and capitalizing FirstEnergy Service Company overheads.

Also important here is that the State Commissions that regulate FirstEnergy's franchised public utility affiliates during state jurisdictional rate proceedings have had opportunity to review FirstEnergy's existing allocation and capitalization of FirstEnergy Service Company overhead costs to its franchised public utility affiliates and have issued rate orders without modifying those rates. As such, these costs have been included in retail rates pursuant to lawfully-issued State Commission orders.

Nonetheless, as noted below in the Company's response to Recommendation 1, FirstEnergy has retained, and DAA Staff have approved, a consultant – Black & Veatch Management Consulting, LLC ("B&V") – to conduct a representative time study for allocation of overhead costs incurred in 2021 to CWIP, and to assist with the development of procedures

FirstEnergy subsidiaries shall use to periodically determine the allocation of overhead labor and labor-related costs.

Although B&V will develop capitalization rates for the audit period, FirstEnergy respectfully submits that the proper course here is to apply the 2021 capitalization rate to 2022 and future years, subject to reasonable plans to update the 2021 capitalization rate periodically. Reasons for prospective application of the B&V study results are that a large amount of expense could be run through forward-looking formula rates, as well as the fact that, as noted above that, during state jurisdictional rate proceedings, State Commissions previously have had opportunity to examine the capitalization rates that were applied to distribution accounts and have issued rate orders without modifying those rates.

Recommendation 1: Retain an independent third-party entity, subject to approval by DAA, to conduct a representative labor time study for allocation of overhead costs incurred in 2021 to CWIP, and to assist with the development of procedures FirstEnergy subsidiaries shall use to periodically determine the allocation of overhead labor and labor related costs capitalized by each FirstEnergy subsidiary into the cost of construction after 2021. The independent consultant should have expertise and experience independently performing time studies used in the determination of overhead capitalization rates of U.S. based utilities subject to the accounting requirements prescribed for public utilities and licensees or for natural gas companies under 18 C.F.R. Part 101 or Part 201, respectively. The time study should involve a representative sample of study participants (employees) that provides for extrapolation of the study results to the full population of FirstEnergy employees, and should include processes for application of the study results from the audit period to the issue date of this audit report, and processes for applying the capitalization rate(s) the study finds for 2021 back to the period January 1, 2015 through December 31, 2020, either with no change to the capitalization rates found in the study or with such modifications to the capitalization rate(s) the independent consultant finds reasonable and supported by evidence. The independent consultant should use its expertise and all relevant information available to it to make recommendations as to what the capitalization rate(s) should be for prior years for each FirstEnergy subsidiary, should set forth the basis for its recommendations, and provide both the recommendations and the basis therefore to FirstEnergy and DAA. If there is no recommendation by the independent consultant for any year or other period between January 1, 2015 and December 31, 2020 for any specific capitalizable cost center, then FirstEnergy should base its capitalization rate and the amount to be capitalized for such year or period on the rates and costs of such specific cost centers for which FirstEnergy can provide to DAA reasonable evidence as to the time employees in such cost centers spent having a definite relation to construction, and exclude from consideration those cost centers for which FirstEnergy cannot provide such evidence, per, for example, 18 C.F.R. Part 101, General Instruction No. 2 and § 41.8.

The progress of the study should be reported within 120 days and the time study results provided to DAA for review and consideration within 180 days of the date of issuance of this audit report, and the developed allocation procedures should be submitted when complete, but no later than 60 days after completion of DAA's review of the labor time study. At a minimum, the developed allocation procedures should provide a method for overhead cost allocation and capitalization to construction based on actual timecard distributions or where this procedure is impractical, based on periodic time studies.

FirstEnergy Response: *FirstEnergy respectfully requests that changes to capitalization rates and revised procedures should be applied prospectively only. As noted above in the response to Finding 1, FirstEnergy has proposed, and DAA Staff have approved, FirstEnergy's retention of B&V to conduct a representative time study for allocation of overhead costs incurred in 2021 to CWIP, and to assist with the development of procedures FirstEnergy subsidiaries shall use to periodically determine the allocation of overhead labor and labor-related costs capitalized by each FirstEnergy subsidiary into the cost of construction after 2021. The determined 2021 capitalization rate will be applied to 2022 and future years, subject to reasonable plans to update the rate periodically.*

Although changes to capitalization rates and revised procedures should be prospective only, B&V has prepared a Statement of Work that includes processes for application of the study results from January 1, 2015 to date, and processes for applying capitalization rates that B&V finds reasonable and supported by the evidence for this period. FirstEnergy will submit the updated Statement of Work for DAA Staff review.

Recommendation 2: Revise written policies, practices, procedures, and controls governing the methods used to account for, track, report, and review overhead labor and related costs, and all other costs allocated to construction projects to be consistent with Commission accounting requirements. In addition, adopt procedures to retain formal documentation supporting the amount of overhead costs allocated to electric plant accounts.

FirstEnergy Response: *Accept. The Company will revise its policies, procedures, and controls accordingly.*

Recommendation 3: Revise accounting processes and procedures to account for and report capitalized A&G amounts recorded in Accounts 920, Administrative and General Salaries, and 921, Office Supplies and Expenses, using Account 922, Administrative Expenses Transferred – Credit, consistent with Commission regulations.

FirstEnergy Response: *Accept. The Company will make the recommended revisions.*

Recommendation 4: Train relevant staff on the revised overhead allocation, control, and A&G accounting procedures and documentation, and provide periodic training in this area, as needed.

FirstEnergy Response: *Accept. The Company will provide the training accordingly.*

Recommendation 5: Train staff on the time reporting guidelines and establish a periodic training program in this area.

FirstEnergy Response: *Accept. The Company will provide the training accordingly.*

Recommendation 6: Within 30 days of the completion of Recommendation No. 1, submit an estimate to DAA, including the calculations and determinative components, of overhead costs that would have been allocated to CWIP from 2015 through the present consistent with the requirements of Electric Plant Instruction No. 4 and General Instruction No. 9. The estimate should be based on a recalculation of 2015's and subsequent years' overhead costs allocated to construction with labor and related costs removed from the cost of plant that were not associated with construction activities based on the methodology developed in response to Recommendation No. 1.

FirstEnergy Response: *Accept. The Company will submit the results of the B&V study to DAA Staff.*

Recommendation 7: With the response to Recommendation No. 6, submit proposed accounting entries to DAA that remove the overhead costs that were allocated to CWIP and electric plant in service from 2015 through the present that exceed the amount of costs that would have been allocated to the accounts based on the methodology developed in response to Recommendation No. 1. Also, provide proposed accounting entries to remove associated amounts from other accounts and balances affected by the inappropriately allocated cost such as the accumulated depreciation and ADIT accounts, and AFUDC balances capitalized into CWIP and electric plant in service. If the adjusting entries result in a significant impact to income for the current year, FirstEnergy subsidiaries may account for the transaction as a correction of a prior period error in Account 439, Adjustments to Retained Earnings. Such adjustments to retained earnings with the proposed accounting entries should be submitted to DAA.

FirstEnergy Response: *Based on the relevant facts and circumstances, FirstEnergy respectfully requests that changes to capitalization rates and revised procedures should be applied prospectively only. As noted above in FirstEnergy's comments in response to Finding No. 1, only prospective application is warranted, as retroactive application could result in a large amount of expense being run through forward-looking formula rates. Prospective application is further warranted as, during state jurisdictional rate*

proceedings, State Commissions previously have had opportunity to examine the capitalization rates that were applied to distribution accounts and have issued rate orders without modifying those rates. As such, FirstEnergy respectfully requests that the language of Recommendation No. 7 be updated to reflect that FirstEnergy will ensure that its accounting entries, on a going forward basis, reflect the B&V study results.

Recommendation 8: Revise account balances for FirstEnergy subsidiaries' utility plant, accumulated depreciation, ADIT, and other account balances impacted by the inappropriate allocation of unsupported overhead costs after receiving DAA's approval of proposed accounting entries submitted per Recommendation No. 7, and restate and footnote the balances reported in the next-filed FERC Form No. 1 reports of the FirstEnergy subsidiaries for both the current and comparative years presented in each subsidiary's next-filed report, as necessary to reflect and disclose the revisions.

FirstEnergy Response: *Based on the relevant facts and circumstances, FirstEnergy respectfully requests that changes to capitalization rates and revised procedures should be applied prospectively only. Adoption of this course would leave all account balances intact, and thus require no further action with regard to FERC Form 1 reporting. As noted above in FirstEnergy's comments in response to Finding No. 1, only prospective application is warranted, as retroactive application could result in a large amount of expense being run through forward-looking formula rates. Prospective application is further warranted as, during state jurisdictional rate proceedings, State Commissions previously have had opportunity to examine the capitalization rates that were applied to distribution accounts and have issued rate orders without modifying those rates. As such, FirstEnergy respectfully requests that the language of Recommendation No. 8 be updated to reflect that no account balances will be revised.*

Recommendation 9: Submit a refund analysis to DAA that explains and details the following: (1) calculation of refunds that result from correcting the overstatement of transmission plant due to the improperly capitalized labor costs, as determined by the labor time study, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale transmission customers to receive refunds; and (5) period(s) refunds will be made.

FirstEnergy Response: *Based on the relevant facts and circumstances, FirstEnergy respectfully requests that changes to capitalization rates and revised procedures should be applied prospectively only. Adoption of this course would leave all account balances intact, and thus would not require a refund analysis. As noted above in FirstEnergy's comments in response to Finding No. 1, only prospective application is warranted, as retroactive application could result in a large amount of expense being run through forward-looking formula rates. Prospective application is further warranted as, during state jurisdictional rate proceedings, State Commissions previously have had opportunity to examine the capitalization rates that were applied to distribution accounts and have*

issued rate orders without modifying those rates. As such, FirstEnergy respectfully requests that the language of Recommendation No. 9 be updated consistent with this response.

Recommendation 10: File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

FirstEnergy Response: *Based on the relevant facts and circumstances, FirstEnergy respectfully requests that changes to capitalization rates and revised procedures should be applied prospectively only. Adoption of this course would leave all account balances intact, and thus would not require refunds or a refund report. As noted above in FirstEnergy's comments in response to Finding No. 1, only prospective application is warranted, as retroactive application could result in a large amount of expense being run through forward-looking formula rates. Prospective application is further warranted as, during state jurisdictional rate proceedings, State Commissions previously have had opportunity to examine the capitalization rates that were applied to distribution accounts and have issued rate orders without modifying those rates. As such, FirstEnergy respectfully requests that the language of Recommendation No. 10 be updated consistent with this response.*

Recommendation 11: Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

FirstEnergy Response: *Based on the relevant facts and circumstances, FirstEnergy respectfully requests that changes to capitalization rates and revised procedures should be applied prospectively only. Adoption of this course would leave all account balances intact, and thus would not require refunds or a refund report. As noted above in FirstEnergy's comments in response to Finding No. 1, only prospective application is warranted, as retroactive application could result in a large amount of expense being run through forward-looking formula rates. Prospective application is further warranted as, during state jurisdictional rate proceedings, State Commissions previously have had opportunity to examine the capitalization rates that were applied to distribution accounts and have issued rate orders without modifying those rates. As such, FirstEnergy respectfully requests that the language of Recommendation No. 11 be updated consistent with this response.*

Finding 2: Accounting of Vegetation Management Costs

FirstEnergy provides the following response to the four recommendations in the Draft Audit Report dealing with Accounting for Vegetation Management Costs:

Recommendation 12: Revise accounting policies and procedures for vegetation management activities in distribution corridors to be consistent with Commission accounting requirements.

FirstEnergy Response: *Accept. The Company has already remediated this Finding by revising its policies effective October 1, 2021.*

Although the policies have now been updated, it is the Company's position that the FPUs appropriately capitalized the cost to electric plant in service prior to this date, and therefore, there is no overstatement of electric plant in service, accumulated depreciation, ADIT, depreciation expenses, and other account balances, nor is there an understatement of operating expenses incurred.

Recommendation 13: Train relevant staff on the revised vegetation management accounting policy and procedures and provide periodic training.

FirstEnergy Response: *Accept. The Company will train our employees on the revised vegetation management accounting policy and procedures.*

Recommendation 14: Submit proposed accounting entries and supporting documentation to DAA that reflect the correction of the FirstEnergy FPU's CWIP, electric plant in service, accumulated depreciation, ADIT, and other accounts impacted by the capitalization of vegetation management expenses for the period from October 1, 2021 through the present within 60 days of issuance of this audit report.

FirstEnergy Response: *Accept. The Company will submit the requested accounting entries and supporting documentation reflecting the revised policy effective October 1, 2021. No corrections are necessary because the policy change was implemented by the Company as of October 1, 2021, and the Company did not have any further capitalization of vegetation management after this date. The requested accounting entries demonstrate that the capitalization of vegetation management expenses ceased on October 1, 2021, as proposed in Recommendation No. 12.*

Recommendation 15: Revise the FirstEnergy FPUs' CWIP, electric plant in service, accumulated depreciation, ADIT, and other accounts impacted by over-accrual of AFUDC after receiving DAA's approval of the proposed accounting entries per Recommendation No. 14 and restate and footnote the FERC Form No. 1 reports for current and comparative years as necessary.

FirstEnergy Response: *Accept. The Company has already completed the recommended policy and accounting changes as of October 1, 2021. Therefore, there is no additional information to provide. Since the changes are made prospectively from October 1, 2021, the Company disagrees with the Commission's recommendation to correct prior period balances and to restate prior Form 1s.*

January 24, 2022

Finding 3: Accounting for Amortization of Regulatory Assets

FirstEnergy provides the following response to the five recommendations in the Draft Audit Report dealing with Accounting for Amortization of Regulatory Assets:

Recommendation 16: Revise policies, practices, and procedures to amortize or write off the regulatory assets consistent with Commission accounting requirements.

FirstEnergy Response: *Accept. The Company will revise our policies, practices, and procedures consistent with Commission requirements.*

Recommendation 17: Train relevant staff on the revised methods, and provide periodic training in this area, as needed.

FirstEnergy Response: *Accept. The Company will train our employees on the revised method.*

Recommendation 18: Submit a refund analysis, within 60 days of issuance of this audit report, to DAA for review that explains and details the following: (1) calculation of refunds that result from the correction of ATSI's and TrAILCo's improper and unauthorized, respective, depreciation and amortization of plant and regulatory assets to the depreciation expense account and inclusion of the expenses in service rate determinations, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale transmission customers to receive refunds; and (5) period(s) refunds will be made.

FirstEnergy Response: *Accept. The Company will submit a refund analysis within 60 days from the issuance of the audit report, in accordance with the Commission's recommendation.*

Recommendation 19: File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

FirstEnergy Response: *Accept. The Company will file a refund report after receiving DAA's assessment of the refund analysis.*

Recommendation 20: Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

FirstEnergy Response: *Accept. Accounting recorded correcting entries in Q3 2021. For transmission rate purposes, these corrections will be handled through the standard formula rate true-up process. For each impacted transmission entity, the 2021 actual transmission revenue requirement, which will be developed in the May/June 2022, will include these adjustments and therefore will be a component of the overall true-up for calendar year 2021 rates. This true-up plus interest in accordance with 35.19a will be*

included in the next projected transmission revenue requirement. For TrAILCo, this refund will occur from June 1, 2022 through May 31, 2023. For the remaining impacted entities, the refund will occur over calendar year 2023.

Finding 4: Accounting for Lobbying Expenses, Donations, and Costs that Lacked Proper Supporting Documentation

FirstEnergy provides the following response to the six recommendations in the Draft Audit Report dealing with Accounting for Lobbying Expenses, Donations, and Costs that Lacked Proper Supporting Documentation:

Recommendation 21: Critically review and strengthen internal controls in FirstEnergy and its subsidiaries. Establish and implement procedures governing methods to be used to appropriately identify, account for, track, report, and review all lobbying costs, donations, and any unsupported expenses, including, but not limited to, expenses of external lobbyists, monies paid to external corporate entities to be used for lobbying, and other external lobbying costs and internal lobbying costs, including employee lobbying time and other internal lobbying costs.

FirstEnergy Response: *Accept. The Company will review and strengthen its internal controls in the Company and its subsidiaries accordingly.*

Recommendation 22: Train relevant staff on the internal control enhancements and procedures established, including internal controls over vendor creation in the accounts payable system, payments, accounting, and reporting violations; and provide periodic training in this area, as needed.

FirstEnergy Response: *Accept. The Company will provide the training accordingly.*

Recommendation 23: Perform an analysis of costs that FirstEnergy and its subsidiaries incurred associated with internal and external lobbying activities, including payments of FirstEnergy funds to outside entities for purposes of those entities using those funds for lobbying, and provide support to identify lobbying-related expenses improperly charged to utility operating accounts, for the audit period and, with respect to the specific issues discussed in this finding, for the entire period affected by or relevant to each such specific issue. Within 60 days of the issuance of this audit report and on a rolling basis within 60 days of conclusion of each internal or external investigation discussed in the finding or any new internal or external investigation arising directly from Ohio House Bill 6 (HB 6) or lobbying activities occurring prior to 2021, provide the results of the investigation, proposed correcting journal entries, and FirstEnergy's analysis of the findings from each investigation and the related impact on prior and future accounting and rate development to audit staff.

FirstEnergy Response: *The Company accepts this recommendation, subject to the points below.*

With respect to providing the results of future investigations, if any, into the requested lobbying-related expenses, FirstEnergy will provide responsive factual information but not information protected from disclosure by the attorney-client privilege and attorney work product doctrines or other relevant law.

Recommendation 24: Submit a refund analysis, within 60 days of issuance of this audit report and on a rolling basis within 60 days of conclusion of each investigation discussed in the finding or any new investigation arising directly from HB 6 or lobbying activities occurring prior to 2021, for DAA's review, that explains and details the following: (1) calculation of refunds resulting from correcting the improper accounting for external lobbying costs, donations, and unsupported costs in utility operating and plant accounts; and internal lobbying costs as identified pursuant to the analysis performed in response to Recommendation No. 23, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale transmission customers to receive refunds; and (5) period(s) refunds will be made.

FirstEnergy Response: *Accept. The Company will implement to the extent the results of Recommendation No. 23, if any, warrant a refund to customers.*

Recommendation 25: File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

FirstEnergy Response: *Accept. The Company has already started to implement the refunds, and, to the extent the results of the analysis, if any, warrant an additional refund to customers, the Company will implement that additional refund as well.*

Recommendation 26: Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

FirstEnergy Response: *Accept. The Transmission Companies have already started to implement the refunds, and, to the extent the results of the analysis, if any, warrant an additional refund to customers, the Transmission Companies will implement that additional refund as well.*

Finding 5: Accounting for Funds Used During Construction

FirstEnergy makes the following response to the two recommendations in the Draft Audit Report dealing with Accounting for Funds Used During Construction:

Recommendation 27: Revise and implement the FPUs' processes and procedures to calculate their respective AFUDC rates consistent with EPI No. 3(A)(17) and other

applicable Commission requirements. Revisions should include processes to prevent the inclusion of balances in Accounts 216.1 and 219 in the AFUDC rate calculations.

FirstEnergy Response: *Accept. The Company has already revised and implemented an AFUDC policy consistent with Commission requirements, including but not limited to, the exclusion of balances in Account 216.1 and 219 in the AFUDC rate calculations.*

Recommendation 28: Train relevant staff on the revised AFUDC calculation method, and provide periodic training, as needed.

FirstEnergy Response: *Accept. The Company will provide the training accordingly.*

Finding 6: Service Company Billing Procedures

FirstEnergy provides the following response to the two recommendations in the Draft Audit Report dealing with Service Company Billing Procedures:

Recommendation 29: Revise FESC policies, procedures, and accounting systems so as to provide sufficient billing information to FirstEnergy's subsidiaries in accordance with the Commission's regulations.

FirstEnergy Response: *Accept. The Company will revise its policies, procedures, and systems accordingly.*

Recommendation 30: Train relevant staff on the revised policies, procedures, and accounting systems and provide periodic training in this area, as needed.

FirstEnergy Response: *Accept. The Company will provide the training accordingly.*

Finding 7: Accounting for Fuel – Coal Supply and Other Consulting Services

FirstEnergy provides the following response to the eight recommendations in the Draft Audit Report dealing with Accounting for Fuel – Coal Supply and Other Consulting Services:

Recommendation 31: Revise accounting policies and procedures for cost of fuel by the FPUs to ensure compliance with the Commission's accounting regulations.

FirstEnergy Response: *Accept. The Company will revise the accounting policies and procedures accordingly.*

Recommendation 32: Train relevant staff on the revised policies and procedures and provide periodic training.

FirstEnergy Response: *Accept. The Company will train relevant staff on the revised policies and procedures and provide periodic training.*

Recommendation 33: Perform an analysis of all monthly payments made to consultants, including BCG Resources, LLC, that were included in the cost of fuel used in operations

during the audit period and submit the analysis to DAA with supporting documents within 60 days of issuance of this audit report. Based on the analysis, submit proposed adjusting accounting entries to record the consultation costs in the appropriate accounts for DAA's review and approval.

FirstEnergy Response: *Accept. The Company will perform an analysis of all monthly payments made to consultants by Monongahela Power Company as described in Recommendation No. 33. Based upon the fuel cycle, the Company's understanding is that any fuel at issue would have already been burned in close proximity to the timing of payments under the contract and therefore any accounting impact arising from this review is anticipated to be de minimis.*

Recommendation 34: Revise the FirstEnergy FPUs' fuel inventory and other account balances impacted by the improper accounting after receiving DAA's approval of the proposed accounting entries per Recommendation No. 33 and restate and footnote the FERC Form No. 1 reports for current and comparative years as necessary.

FirstEnergy Response: *Accept. The Company will revise the FirstEnergy FPUs' fuel inventory and other impacted account balances. Based on a preliminary review, changes to the accounting entries are anticipated to be de minimis; however, if appropriate, FirstEnergy will footnote the FERC Form No.1 for the current year. There is no need to restate prior balances and revise previously issued Form 1s.*

Recommendation 35: Review collections received, including but not limited to uplift payments, during the audit period based, in part, on the cost of fuel and submit an analysis to DAA for review of retail and wholesale overcollections due to improper recording of costs in Account 501.

FirstEnergy Response: *Accept. The Company will review collections received and will provide the necessary support regarding such collections as part of the compliance phase. Based on the Company's preliminary investigation, if any refund is due, such refund is anticipated to be de minimis.*

Recommendation 36: Submit a refund analysis if there were overcollections from wholesale customers, within 60 days of issuance of this audit report, for DAA's review, that explains and details the following: (1) calculation of refunds resulting from the improper accounting for fuel costs, plus interest; (2) determinative components of the refund; (3) refund method; (4) wholesale customers to receive refunds; and (5) period(s) refunds will be made.

FirstEnergy Response: *Accept. The Company will do a refund analysis to determine if there was any effect on wholesale rates. Based on the fuel cycle, the Company's understanding is that any of the fuel at issue would have already been burned and therefore, if any refund is due, it would be de minimis.*

Recommendation 37: File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

FirstEnergy Response: *Accept. If, after the analysis performed pursuant to Recommendation No. 36, a refund is indicated, the Company shall file a refund report with the Commission.*

Recommendation 38: Refund the amounts disclosed in the refund report to customers, with interest calculated in accordance with section 35.19a of the Commission's regulations.

FirstEnergy Response: *Accept. In the event a refund is indicated, the Company shall refund the amount in the refund report, with interest calculated in accordance with section 35.19a of the Commission's regulations.*

FA19-1-000 - FirstEnergy Corporation Final Audit Report.pdf.....1

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF OHIO
WESTERN DIVISION

UNITED STATES OF AMERICA, **Plaintiff,** **vs.** **FIRSTENERGY CORP.,** **Defendant.**	**CASE NO.** 1:21-cr-86 **JUDGE BLACK** **DEFERRED PROSECUTION AGREEMENT**

The United States Attorney's Office for the Southern District of Ohio ("USAO-SDOH" or "government") and the Defendant, FirstEnergy Corp., by its undersigned representative and counsel, pursuant to the authority granted by the Board of Directors, agree as follows:

1. **Criminal Information and Acceptance of Responsibility:** FirstEnergy Corp. acknowledges and agrees that the government will file the accompanying Information in the United States District Court for the Southern District of Ohio charging FirstEnergy Corp. with conspiracy to commit honest services wire fraud in violation of Title 18, United States Code, Sections 1343, 1346, 1349. FirstEnergy Corp. knowingly waives any right to indictment on this charge, as well as all rights to a speedy trial pursuant to the Sixth Amendment to the United States Constitution, Title 18, United States Code, Section 3161, and Federal Rule of Criminal Procedure 48(b), and agrees to the filing of a joint motion to toll Section 3161 upon the filing of this Agreement.

   FirstEnergy Corp. admits, accepts, and acknowledges that it is responsible under United States law for the acts of its current and former officers, employees, and agents. FirstEnergy Corp. admits, accepts, and acknowledges that it is responsible under United States law for the acts as charged in the Information and as set forth in the Statement of Facts, attached as Attachment A and incorporated by reference into this Agreement, and that the facts alleged in the Information and described in the Statement of Facts are true and accurate.

   Should the USAO-SDOH pursue the prosecution that is deferred by this Agreement, FirstEnergy Corp. agrees that it will neither contest the admissibility of nor contradict the Statement of Facts in any such proceeding, including any trial, guilty plea, or sentencing proceeding. Neither this Agreement nor the criminal Information is a final adjudication of the matters addressed in such documents.

2. **Elements of the Offense:** The elements of the offense set forth in the Information, to which the Defendant agrees are established by the Statement of Facts, attached as Attachment A, are as follows:

Count One, Conspiracy to Commit Honest Services Wire Fraud

A. That two or more persons conspired or agreed to devise a scheme:

1. to defraud the public of its right to the honest services of a public official through bribery or kickbacks;

2. that included a material misrepresentation or concealment of a material fact;

3. with the intent to defraud;

4. that used wire communications in interstate commerce in furtherance of the scheme;

B. That the Defendant knowingly and voluntarily joined the conspiracy to defraud;

C. That the Defendant intentionally participated in the conspiracy to defraud;

D. That some or all of the acts alleged in the Information occurred in the Southern District of Ohio, on or about the dates alleged in the Information.

3. **Term of the Agreement:** This Agreement shall have a term of three (3) years from the date on which the fully-executed Agreement is filed with the Court (the "Term"), except for specific provisions that specify a longer period as described below. FirstEnergy Corp. agrees, however, that in the event the government determines, in its sole discretion, that FirstEnergy Corp. has knowingly violated any provision of this Agreement or has failed to completely perform or fulfill each of its obligations under this Agreement, an extension or extensions of the Term may be imposed by the government, in its sole discretion, for up to a total additional time period of one year, without prejudice to the government's right to proceed as provided in the breach provisions of this Agreement below. Any extension of the Agreement extends all terms of this Agreement, including the terms of the reporting requirement in Attachment C, for an equivalent period. Conversely, in the event the government finds, in its sole discretion, that there exists a change in circumstances sufficient to eliminate the need for the reporting requirement in Attachment C, the Agreement may be terminated early. In such event, FirstEnergy Corp.'s cooperation obligations described below shall survive until the date upon which all such investigations and prosecutions are concluded, as determined by the USAO-SDOH.

4. **Relevant Considerations:** The government enters into this Agreement based on the individual facts and circumstances presented by this case, including, FirstEnergy Corp.'s acceptance of responsibility; early self-reporting in the investigation of the conduct of the company and its former officers, directors, employees, agents, lobbyists, and consultants, described more fully below; its implementation of remedial measures, described more fully below; the payment of a monetary penalty; and the collateral consequences of prosecution, among others.

5. **Defendant's Obligations:** Pursuant to this Agreement, FirstEnergy Corp. shall do the following:

A. **Cooperation.** To date, FirstEnergy Corp. has provided substantial cooperation, including: conducting a thorough internal investigation; proactively identifying issues and facts that would likely be of interest to the government; making regular factual presentations to the government; sharing information that would not have been otherwise available to the government; and making such material available to the government on an expedited basis.

This agreement is contingent upon FirstEnergy Corp.'s continued, full cooperation with the USAO-SDOH in all matters relating to the conduct described in this Agreement and other conduct under investigation by the government, until the later of the date the Term ends or the date upon which all investigations and prosecutions arising out of such conduct are concluded, as determined by the government.

FirstEnergy Corp. agrees that its cooperation shall include, but not be limited to, the following:

1) Continued full, complete, and truthful cooperation in any matter in which it is called upon to cooperate by a representative of the USAO-SDOH;

2) Timely disclosure of all factual information with respect to its activities, those of its subsidiaries and affiliates, and those of its present and former directors, officers, employees, agents, lobbyists and consultants, including any evidence or allegations and internal or external investigations, about which the government may inquire;

3) Disclosure of any information, items, records, databases, or data in FirstEnergy Corp.'s possession, custody, or control or in the possession or control of any subsidiary or affiliate, wherever located, requested by the government in connection with the investigation or prosecution relating to any current or former officers, directors, employees, agents, lobbyists, and consultants;

4) Use of good faith efforts to make available, at FirstEnergy Corp.'s cost, current and former officers, directors, employees, agents, lobbyists, and consultants, when requested by the government, to provide additional information and materials concerning any and all investigations; to testify, including providing sworn testimony before a grand jury or in a judicial proceeding; and to be interviewed by law enforcement authorities. Cooperation under this paragraph includes identification of witnesses who, to the knowledge of FirstEnergy Corp., may have material information regarding these matters;

5) Disclosure of information, materials, and testimony, at FirstEnergy Corp.'s cost, as necessary or as requested by the USAO-SDOH to

establish authenticity, or other basis for the admission into evidence in any criminal or judicial proceeding;

6) With respect to any information, testimony, documents, records or other tangible evidence provided to the government pursuant to this Agreement, FirstEnergy Corp. consents to any and all disclosures to other governmental authorities of such materials as the government, in its sole discretion, shall deem appropriate.

7) Promptly report any evidence or allegation of a violation of U.S. criminal law by FirstEnergy Corp. to the USAO-SDOH. On the date that the Term expires, FirstEnergy Corp., by its Chief Executive Officer and Chief Financial Officer, will certify to the government that FirstEnergy Corp. has met its disclosure obligations pursuant to this Agreement. Each certification will be deemed a material statement and representation by FirstEnergy Corp. to the executive branch of the United States for purposes of 18 U.S.C. § 1001.

FirstEnergy Corp.'s cooperation pursuant to this paragraph is subject to applicable law and regulations, as well as valid claims of attorney-client privilege, settlement privilege, or attorney work product doctrine; however, FirstEnergy Corp. must provide to the government a log of any information or cooperation that is not provided based on an assertion of law, regulation, privilege, or attorney work product, and FirstEnergy Corp. bears the burden of establishing the validity of any such assertion.

Failure to provide full, complete, and truthful cooperation as described above will constitute a violation of this Agreement. The parties agree that the USAO-SDOH, in its sole discretion, will determine if FirstEnergy Corp. has violated this Agreement by failing to provide full, complete, and truthful cooperation.

B. **Payment of a Monetary Penalty.** FirstEnergy Corp. agrees to pay a criminal monetary penalty totaling $230,000,000. This amount reflects 1) a discount for FirstEnergy Corp.'s substantial remediation, self-reporting, and cooperation as set forth in this Agreement; 2) the collateral consequences of imposition of a greater penalty; 3) and the difficulty of quantifying with precision the benefits resulting from some official action.

Within sixty (60) days of the filing of this Agreement, FirstEnergy Corp. shall pay $115,000,000 to the United States Treasury.

Within sixty (60) days of the filing of this Agreement, FirstEnergy Corp. shall pay $115,000,000 to the Ohio Development Service Agency's Percentage of Income Payment Plan Plus program for the benefit of Ohio electric-utility customers. If the Ohio Development Service Agency's Percentage of Income Payment Plan Plus program is unable or unwilling to accept the funds, FirstEnergy Corp. shall pay the

$115,000,000 to the United States Treasury after consultation with the USAO-SDOH.

Nothing in the Agreement shall be deemed an agreement regarding a maximum penalty that may be imposed in any future prosecution, and the government is not precluded from arguing in any future prosecution that the Court should impose a higher fine, disgorgement, or civil or criminal forfeiture, although the government agrees that under those circumstances, it will recommend to the Court that any amount paid under this Agreement should be offset against any fine imposed as part of a future judgment. FirstEnergy Corp. agrees that no tax deduction may be sought in connection with the payment of any part of the monetary penalty, and FirstEnergy Corp. may not seek to recover any portion of the monetary penalty from customers, directly or indirectly. Without the prior approval of the USAO-SDOH, FirstEnergy Corp. shall not seek or accept directly or indirectly reimbursement or indemnification from any source with regard to the monetary penalty amount or any other amount it pays pursuant to any other agreement entered into with an enforcement authority or regulator concerning the facts set forth in the Statement of Facts.

The USAO-SDOH agrees, except as provided in this Agreement, that it will not bring any criminal or civil case (except for tax cases, as to which the government does not make any agreement) against FirstEnergy Corp. or any of its present subsidiaries or affiliates relating to any of the conduct described in the attached Statement of Facts, or to conduct self-reported to the USAO-SDOH by FirstEnergy Corp. in the investigation. The government, however, may use any information related to the conduct described in the attached Statement of Facts against FirstEnergy Corp.: (a) in a prosecution for perjury or obstruction of justice; (b) in a prosecution for making a false statement; or (c) in a prosecution or other proceeding relating to a violation of any provision of Title 26 of the United States Code. This Agreement does not provide any protection against prosecution for any future conduct by FirstEnergy Corp. or any of its present or former parents or subsidiaries. In addition, this Agreement does not provide any protection against prosecution of any individuals, regardless of their affiliation with FirstEnergy Corp. or with any of its present or former parents or subsidiaries.

C. Forfeiture. The USAO-SDOH has determined that it could institute a criminal or civil forfeiture proceeding against the following funds that passed through accounts controlled by FirstEnergy Corp. (the "subject property"):

- Contents of PNC Bank, Account No. ending in 5348, in the name of Partners for Progress Inc. in the amount of $6,366,476.29; and

- Contents of PNC Bank, Account No. ending in 3639, in the name of Partners for Progress Inc. in the amount of $108,960.32.

FirstEnergy Corp. hereby acknowledges that the subject property constitutes or is derived from proceeds traceable to conspiracy to commit honest services wire fraud, in violation of Title 18, United States Code, Sections 1343, 1346, and 1349, as charged in the Information and set forth in the Statement of Facts; therefore, the subject property is forfeitable to the United States pursuant to Title 18, United States Code, Section 981. FirstEnergy Corp. hereby agrees to settle and does settle all civil and criminal forfeiture claims presently held by the USAO-SDOH against the subject property. FirstEnergy Corp. agrees that the subject property shall be forfeited to the United States pursuant to Title 18, United States Code, Section 981; releases all claims it may have to such property; waives any right to notice of forfeiture it may have under the law; and waives any right it may have to seek remission or mitigation of the forfeiture.

D. **Transparency in Corporate Contributions.** Within 30 days of the execution of this Agreement, FirstEnergy Corp. shall publish a list of (1) all payments, if any, made in 2021 to entities incorporated under 26 U.S.C. § 501(c)(4) ("501(c)(4)" entities) and (2) all payments, if any, made in 2021 to entities known by FirstEnergy Corp. to be operating for the benefit of a public official, either directly or indirectly. FirstEnergy Corp. shall update the list on a quarterly basis for the Term of this Agreement. The list shall include the following information: the entity's name and address, date of contribution, amount of contribution, and purpose of contribution. The list shall be labeled "Corporate Contributions" and accessible on FirstEnergy's webpage (www.firstenergycorp.com). The accessibility of the list is subject to the prior approval of undersigned government counsel.

E. **Issuance of Public Statement.** FirstEnergy Corp. shall publish a press release for broad public distribution and posting on FirstEnergy Corp.'s website, which includes the following statement:

> *Central to FirstEnergy's Corp.'s effort to influence the legislative process in Ohio was the use of 501(c)(4) corporate entities. FirstEnergy Corp. used the 501(c)(4) corporate form as a mechanism to conceal payments for the benefit of public officials and in return for official action. FirstEnergy Corp. used 501(c)(4) entities in this way because the law does not require disclosure of donors to a 501(c)(4) and there is no ceiling that limits the amount of expenditures that can be paid to a 501(c)(4) entity for the purpose of influencing the legislative process. This effort would not have been possible, both in the nature and volume of money provided, without the use of a 501(c)(4) entity.*

F. **Remediation, Corporate Compliance Program, and Reporting.** FirstEnergy Corp. represents that it has implemented and will continue to implement a compliance and ethics program designed, implemented, and enforced to prevent and detect violations of the U.S. laws throughout its operations, including those of its subsidiaries, affiliates, agents, and joint ventures, and those of its contractors and subcontractors whose responsibilities include accounting, financial reporting,

lobbying, government relations, consulting, and interactions with candidates for public office, public officials, and governmental agencies including, but not limited to, the minimum elements set forth in Attachment B.

FirstEnergy Corp. further represents that it has implemented four broad categories of remedial measures, including: (1) employment consequences for executives and employees who engaged in misconduct, (2) enhancements to Company's compliance program, (3) improvements to the Company's policies and procedures, and (4) monetary remediation to ratepayers. The specific changes implemented include, but are not limited to, the following:

- Establishing an Executive Director role for the Board of Directors, whichsupports the development of enhanced controls and governance policies and procedures;

- Hiring a new Chief Legal Officer, who oversees the Company's Legal and Internal Audit departments;

- Separating the Chief Legal Officer and Chief Ethics/Compliance Officer functions, and hiring a new Chief Ethics and Compliance Officer, who reports directly to the Audit Committee of the Board and administratively to the Chief Legal Officer;

- Working to establishing a culture of ethics, integrity, and accountability at every level of the organization;

- Creating a Compliance Oversight Subcommittee of the Audit Committeeto implement compliance recommendations received from outside counseland enhanced compliance trainings; and

- Reviewing and revising political activity and lobbying/consulting policies, including requiring robust disclosures about lobbying activities.

In order to address any deficiencies in its internal controls, policies, and procedures, FirstEnergy Corp. represents that it will continue to undertake in the future, in a manner consistent with all of its obligations under this Agreement, a review of its internal controls, policies, and procedures regarding compliance with U.S. law. Where necessary and appropriate, FirstEnergy Corp. agrees to adopt a new compliance program, or to modify its existing one, to ensure that it maintains a system of internal controls designed to effectively detect and deter violations of U.S. law. The compliance program will include, but not be limited to, the minimum elements set forth in Attachment B.

G. Public Statements by the Company. FirstEnergy Corp. agrees that if it or any of its affiliates or subsidiaries issues a press release or holds any press conference in

connection with this Agreement, FirstEnergy Corp. shall first consult the government to determine (1) whether the text of the release or proposed statements at the press conference are true and accurate with respect to matters relating to this Agreement; and (2) whether the government has any objection to the release on those grounds.

FirstEnergy Corp. expressly agrees that it shall not, through present or future attorneys, officers, directors, employees, agents or any other person authorized to speak for FirstEnergy Corp., make any public statement, in litigation or otherwise, contradicting the acceptance of responsibility by FirstEnergy Corp. set forth above or the facts described in the attached Statement of Facts. Any such contradictory statement shall, subject to cure rights described below, constitute a violation of this Agreement, and FirstEnergy Corp. thereafter shall be subject to prosecution as set forth below in paragraph 7.

The decision as to whether any public statement contradicting a fact contained in the Statement of Facts will be imputed to FirstEnergy Corp. for the purpose of determining whether it has violated this Agreement shall be at the sole discretion of the USAO-SDOH. If USAO-SDOH determines that a public statement contradicted in whole or in part a statement contained in the Statement of Facts, USAO-SDOH shall so notify FirstEnergy Corp., and FirstEnergy Corp. may avoid a breach of this Agreement by publicly repudiating such statement(s) within five (5) business after notification.

This Agreement does not prohibit FirstEnergy Corp. from raising defenses or asserting affirmative claims in civil litigation or regulatory proceedings relating to the matters set forth in the Statement of Facts, provided that such defenses and claims do not contradict in whole or in part, a statement contained in the Statement of Facts.

This Agreement does not apply to any statement made by any present or former officer, director, employee, or agent of FirstEnergy Corp. in the course of any criminal, regulatory, or civil case initiated against such individual, unless such individual is speaking on behalf of FirstEnergy Corp.

H. **Changes in Corporate Form.** Except as may otherwise be agreed by the USAO-SDOH and FirstEnergy Corp. in connection with a particular transaction, FirstEnergy Corp. agrees that in the event that, during the term of any of its obligations under this Agreement, it undertakes any change in corporate form, including applying for bankruptcy protection or if it sells, merges, or transfers business operations that are material to FirstEnergy Corp. as they exist as of the date of this Agreement, whether such transaction is structured as a sale, asset sale, merger, transfer, or other change in corporate form, it shall include in any contract for sale, merger, transfer, or other change in corporate form a provision binding the purchaser, or any successor in interest thereto, to the obligations described in this Agreement. The purchaser or successor in interest must also agree in writing that the USAO-SDOH's ability to determine there has been a breach under this

Agreement is applicable in full force to that entity. FirstEnergy Corp. agrees that the failure to include this Agreement's violation provisions in the transaction will make any such transaction null and void.

FirstEnergy Corp. shall provide notice to the USAO-SDOH at least sixty (60) days prior to the consummation of any such sale, merger, transfer, or other change in corporate form. The USAO-SDOH shall notify FirstEnergy Corp. at least fifteen (15) days prior to the consummation of such transaction (or series of transactions) if it determines that the transaction(s) will have the effect of circumventing or frustrating the enforcement purposes of this Agreement. If at any time during the Term FirstEnergy Corp. engages in a transaction(s) that has the effect of circumventing or frustrating the enforcement purposes of this Agreement, the USAO-SDOH may deem it a violation of this Agreement pursuant to the violation provisions of this Agreement. Nothing herein shall restrict FirstEnergy Corp. from indemnifying (or otherwise holding harmless) the purchaser or successor in interest for penalties or other costs arising from any conduct that may have occurred prior to the date of the transaction, so long as such indemnification does not have the effect of circumventing or frustrating the enforcement purposes of this Agreement, as determined by the USAO-SDOH.

6. **Obligations of the USAO (Deferred Prosecution):** In consideration of: (a) FirstEnergy Corp.'s past and future cooperation as described above; (b) FirstEnergy Corp.'s payment of a monetary penalty of $230,000,000; (c) FirstEnergy Corp.'s adoption and maintenance of remedial measures, and review and audit of such measures, including the compliance undertakings described in Attachment B; and (d) other obligations specified in this Agreement, the USAO-SDOH agrees to request that the United States District Court for the Southern District of Ohio defer proceedings on the charge in the Information pursuant to Title 18, United States Code, Section 3161(h)(2), for the Term of this Agreement.

The USAO-SDOH further agrees that if FirstEnergy Corp. fully complies with all of its obligations under this Agreement, the government will not continue the criminal prosecution against FirstEnergy Corp. described in Paragraph 1. Within thirty (30) days of the successful completion of the Term, FirstEnergy's obligations pursuant to paragraphs 5 (B), (C) (E) and (F) will end. FirstEnergy's remaining obligations under paragraph 5 will continue until the completion of any investigation, criminal prosecution, or civil proceeding brought by the USAO-SDOH related to any conduct set forth in the Statement of Facts. Within 30 days of the completion of any related investigation, criminal prosecution, and civil proceeding, the USAO-SDOH shall seek dismissal of the Information filed against FirstEnergy Corp., which will terminate the remainder of FirstEnergy Corp.'s obligations under this Agreement.

The USAO-SDOH further agrees, if requested to do so, to bring to the attention of governmental and other authorities the facts and circumstances relating to the nature of the conduct underlying this Agreement, and the nature and quality of FirstEnergy's cooperation and remediation. By agreeing to the provide this information, if requested to do so, the USAO-SDOH is not agreeing to advocate on behalf of the FirstEnergy Corp., but rather is agreeing to provide facts to be evaluated independently by other authorities.

7. **Violation of the Agreement:** If the USAO-SDOH determines that FirstEnergy Corp. (a) committed any crime under U.S. law during the Term of this Agreement; (b) at any time, provided in connection with this Agreement deliberately false, incomplete, or misleading information, including in connection with a disclosure of information about individual culpability – even if the USAO-SDOH becomes aware of such conduct after the Term of this Agreement; or (c) otherwise violated its obligations under this Agreement – even if the USAO-SDOH becomes aware of the violation after the Term of this Agreement, at the USAO-SDOH's discretion, FirstEnergy Corp. shall thereafter be subject to prosecution for any federal criminal violation of which the USAO-SDOH has knowledge, including the charges in the Information described in Paragraph 1. Any such prosecution may be premised on information provided by FirstEnergy Corp. prior or subsequent to the signing of this Agreement. In addition, the parties agree as follows:

A. **Determination of Violation.** The parties agree that the USAO-SDOH has the sole discretion to determine whether FirstEnergy Corp. has violated this Agreement.

B. **Statute of Limitations.** Any such prosecution that is not time-barred by the applicable statute of limitations on the date of the signing of this Agreement may be commenced against FirstEnergy Corp. notwithstanding the expiration of the statute of limitations between the signing of this Agreement and the expiration of the period described above in Paragraph 3 plus one year. Thus, by signing this Agreement, FirstEnergy Corp. agrees that the statute of limitations with respect to any such prosecution that is not time-barred on the date of the signing of this Agreement shall be tolled for the period described in Paragraph 3 plus one year.

In addition, FirstEnergy Corp. agrees that the statute of limitations as to any violation of U.S. law that occurs during the Term will be tolled from the date upon which the violation occurs until the earlier of the date upon which the government is made aware of the violation or the duration of the Term plus five years, and that this period shall be excluded from any calculation of time for purposes of the application of the statute of limitations.

C. **Written Notice.** In the event the government determines that FirstEnergy Corp. has breached this Agreement, the government agrees to provide FirstEnergy Corp. with written notice of such breach prior to instituting any prosecution resulting from such breach. Within thirty (30) days of receipt of such notice, FirstEnergy Corp. shall have the opportunity to respond to the government in writing to explain the nature and circumstances of such breach, as well as the actions FirstEnergy Corp. has taken to address and remediate the situation, which explanation the government shall consider in determining whether to pursue prosecution of FirstEnergy Corp.

D. **Admissibility of Statements.** In the event that the government determines that FirstEnergy Corp. has breached this Agreement: (1) all statements made by or on behalf of FirstEnergy Corp. or its affiliates or subsidiaries to the government or to the Court, including the attached Statement of Facts, and any testimony given before a grand jury, a court, or any tribunal, or at any legislative hearings, and any leads or evidence derived from such statements or testimony, shall be admissible in evidence in

any criminal proceeding brought by the government against FirstEnergy Corp. or its affiliates or subsidiaries; and (b) FirstEnergy Corp. or its affiliates or subsidiaries shall not assert any claim under the United States Constitution, Rule 11(f) of the Federal Rules of Criminal Procedure, Rule 410 of the Federal Rules of Evidence, or any other federal rule that any such statements or testimony made by or on behalf of FirstEnergy Corp. or its affiliates or subsidiaries prior or subsequent to this Agreement, or any leads or evidence derived therefrom, should be suppressed or are otherwise inadmissible. The decision whether conduct or statements of any current director, officer or employee, or any person acting on behalf of, or at the direction of, FirstEnergy Corp. or its affiliates or subsidiaries, will be imputed to FirstEnergy Corp. for the purpose of determining whether FirstEnergy Corp. has violated any provision of this Agreement shall be in the sole discretion of the government.

8. **Limitations of Agreement:** This agreement is binding upon FirstEnergy Corp. and the USAO-SDOH and does not bind (a) other components of the Department of Justice, (b) other federal agencies, (c) any state or local law enforcement or regulatory agency. However, the USAO-SDOH will bring the cooperation of FirstEnergy Corp. and its compliance with its obligations under this Agreement to the attention of any such authorities or agencies if requested to do so by FirstEnergy Corp.

9. **Notice:** Any notice to the government under this Agreement shall be given by personal delivery, overnight delivery by a recognized delivery service, addressed to the United States Attorney's Office for the Southern District of Ohio, 221 East Fourth Street, Suite 400, Cincinnati, OH 45213. Any notice to FirstEnergy Corp. shall be given by personal delivery, overnight delivery by a recognized delivery service, addressed to Chief Executive Officer, FirstEnergy Corp., 76 South Main Street, Akron, OH 44308, with Copy to the Chief Legal Officer, FirstEnergy Corp., 76 South Main Street, Akron, OH 44308.

10. **Entire Agreement:** This agreement, along with any attachment(s), is the complete agreement between the parties. It supersedes all other promises, representations, understandings, and agreements between the parties. No amendments, modifications, or additions to this Agreement shall be valid unless they are in writing and signed by the government, the attorneys for FirstEnergy Corp., and a duly authorized representative of FirstEnergy Corp.

CORPORATE OFFICER'S CERTIFICATE

I have read this Agreement and carefully reviewed every part of it with outside counsel for FirstEnergy Corp. I understand it, I voluntarily agree to it, on behalf of FirstEnergy Corp. Before signing this Agreement, I consulted outside counsel for FirstEnergy Corp. Counsel fully advised me of the rights of FirstEnergy Corp., of possible defenses, of the applicable Sentencing Guidelines' provisions, and of the consequences of entering into this Agreement.

I also carefully reviewed the terms of this Agreement with the FirstEnergy Corp. Board of Directors. I have advised and caused outside counsel for FirstEnergy Corp. to advise the Board of Directors fully of the rights of FirstEnergy Corp., of possible defenses, of the applicable Sentencing Guidelines' provisions, and of the consequences of entering into the Agreement. I acknowledge, on behalf of FirstEnergy Corp., that I am completely satisfied with the representation of counsel.

By signing below, I certify that no promises or inducements have been made other than those contained in this Agreement. Furthermore, no one has threatened or forced me, or any other person authorized this Agreement on behalf of FirstEnergy Corp., in any way to enter into this Agreement. I also certify that I am an officer of FirstEnergy Corp. and that I have been duly authorized by FirstEnergy Corp. to execute this Agreement on behalf.

Steven E. Strah, President & CEO
FIRSTENERGY CORP.

CERTIFICATE OF COUNSEL

We are counsel for FirstEnergy Corp. in the matter covered by this Agreement. In connection with such representation, we have examined carefully the relevant FirstEnergy Corp. records and have discussed the terms of this Agreement with Steven E. Strah, President & Chief Executive Officer, and the FirstEnergy Corp. Board of Directors. Based upon our review of the foregoing matters and discussions with FirstEnergy Corp. and its Board of Directors, we are of the opinion that the representative of FirstEnergy Corp. has been duly authorized to enter into this Agreement on behalf of FirstEnergy Corp. and that this Agreement has been duly and validly authorized, executed, and delivered on behalf of FirstEnergy Corp. and is a valid and binding obligation of FirstEnergy Corp.. Further, we have carefully reviewed the terms of this Agreement with the FirstEnergy Corp. Board of Directors and the Chief Executive Officer of FirstEnergy Corp. We have fully advised them of the rights of FirstEnergy Corp., of possible defenses, of the Sentencing Guidelines' provisions and of the consequences of entering into this Agreement. To our knowledge, the decision of FirstEnergy Corp. to enter into this Agreement, based on the authorization of its Board of Directors, is an informed and voluntary one.

ATTACHMENT A:
STATEMENT OF FACTS

The United States and FirstEnergy Corp. stipulate and agree that if this case proceeded to trial, the United States would prove the facts set forth below beyond a reasonable doubt. They further stipulate and agree that these are not all of the facts that the United States would prove if this case had proceeded to trial.

The following Statement of Facts is incorporated by reference as part of the Deferred Prosecution Agreement (the "Agreement") between the United States Attorney's Office for the Southern District of Ohio and FirstEnergy Corp. FirstEnergy Corp. hereby agrees and stipulates that the following information is true and accurate. FirstEnergy Corp. admits, accepts, and acknowledges that it is responsible for the acts of its current and former officers, directors, employees, and agents. FirstEnergy Corp. admits, accepts, and acknowledges that it is responsible for the conduct set forth below.

FirstEnergy Corp. is an Akron, Ohio–based public utility holding company. During the relevant period (2016 until in or about February 2020), FirstEnergy Corp. was the parent company to entities involved in energy generation, including the entity formerly known as FirstEnergy Solutions ("FES"). As of November 16, 2016, FES had a separate and independent Board of Directors from FirstEnergy Corp., and on March 31, 2018, FES filed for Chapter 11 bankruptcy protections. FirstEnergy Corp. also serves as the parent company for FirstEnergy Service Company ("FirstEnergy Service"), which provided financial and other corporate support services to FirstEnergy Corp. and its subsidiaries.

FirstEnergy Corp. and its subsidiaries are subject to civil enforcement by the Securities and Exchange Commission ("SEC"), and are regulated directly by the Federal Energy Regulatory Commission ("FERC"), which is an independent agency within the United States Department of Energy ("DOE"). FirstEnergy Corp.'s Ohio utility subsidiaries are regulated directly by the Public Utilities Commission of Ohio ("PUCO").

I. Relevant Entities and Individuals

Executive 1 served in senior executive positions for FirstEnergy Corp. and FirstEnergy Service from approximately 2015 to October 2020.

Executive 2 served in a senior executive position from approximately 2011 until October 2020.

Partners for Progress, Inc. was incorporated in Delaware on or about February 6, 2017, weeks after certain FirstEnergy Corp. senior executives traveled with Public Official A on the FirstEnergy Corp. jet to the presidential inauguration in January 2017. On or about February 8, 2017, Partners for Progress registered as a foreign nonprofit corporation in Ohio, specifically as a 501(c)(4) entity "to engage in activities consistent with those permitted of an organization exempt from tax under Section 501(c)(4) of the Internal Revenue Code.…"

Although Partners for Progress appeared to be an independent 501(c)(4) on paper, in reality, it was controlled in part by certain former FirstEnergy Corp. executives, who funded it and directed its payments to entities associated with public officials. For example, FirstEnergy Corp. executives directed the formation of Partners for Progress and decided to incorporate the entity in Delaware, rather than Ohio, because Delaware law made it more difficult for third parties to learn background information about the entity. Certain FirstEnergy Corp. executives were also involved in choosing the three directors of Partners for Progress, two of whom were FirstEnergy Corp. lobbyists. Before Partners for Progress was formally organized, Executive 2 directed that $5 million be designated for an unnamed 501(c)(4) in December 2016.

FirstEnergy Corp. exclusively funded Partners for Progress through payments from FirstEnergy Service, which totaled approximately $25 million between 2017 and 2019, approximately $15 million of which was paid to Generation Now. Certain former FirstEnergy

Corp. executives directed Partners for Progress to make payments in 2018, 2019, and 2020, including payments to Generation Now, which helped conceal FirstEnergy Corp. as the source of the payments from the public.

Public Official A represented the State of Ohio's 72 District in the Ohio House of Representatives since January 2017. Public Official A served as the Speaker of the Ohio House of Representatives from January 7, 2019 to July 30, 2020.

Between 2017 and March 2020, FirstEnergy Service paid more than $59 million ($16,904,330.86 attributed to FirstEnergy Corp. and $43,092,505 attributed to FES) to Generation Now – a purported 501(c)(4), which FirstEnergy Corp. knew was operated for the benefit of and controlled by Public Official A, upon its inception in early 2017. For example, on March 7, 2017, Individual A emailed wiring instructions for Generation Now to Executive 2, noting that "*[t]his is the organization that [Executive 1] and [Public Official A] discussed.*" In response, Executive 2 forwarded the email internally, and carbon copied Individual A, stating, "*Let's do $250,000 asap and we will do $1M by year-end 2017*." Similarly, on August 1, 2017, Executive 2 asked, "*Are we at $500k for the c(4) now?*" to which Individual A replied, "*Yes*."

Public Official B was the Chairman of the Public Utilities Commission of Ohio ("PUCO") from April 2019 until November 21, 2020, when he resigned. PUCO regulates FirstEnergy Corp.'s Ohio utility subsidiaries. Prior to serving as the Chairman of PUCO, Public Official B worked for a private law firm and served as the general counsel for an industrial group of energy users whose interests often conflicted with FirstEnergy Corp.'s interests. Public Official B also was the sole owner of Company 1 and Company 2, both of which entered a contract with FirstEnergy Corp. in 2010. Public Official B, through Company 1, also entered into a consulting services agreement with FirstEnergy Corp., through FirstEnergy Service, in 2013. Between 2010 and January 2, 2019,

FirstEnergy Corp. paid the Company 1 and Company 2 over $22 million, including $4,333,333, which was wired on or about January 2, 2019, through FirstEnergy Service to Company 1 for Public Official B's benefit.

II. Conduct

FirstEnergy Corp., through the acts of its officers, employees, and agents, conspired with public officials and other individuals and entities to pay millions of dollars to and for the benefit of public officials in exchange for specific official action for FirstEnergy Corp.'s benefit.

FirstEnergy Corp. paid millions of dollars to Public Official A through his 501(c)(4), Generation Now, in return for Public Official A pursuing nuclear legislation for FirstEnergy Corp.'s benefit in his capacity as a public official. Use of 501(c)(4) entities was central to the scheme because it allowed certain FirstEnergy Corp. executives and co-conspirators to conceal from the public the nature, source, and control of payments to and for the benefit of Public Official A.

FirstEnergy Corp. paid $4.3 million dollars to Public Official B through his consulting company in return for Public Official B performing official action in his capacity as PUCO Chairman to further FirstEnergy Corp.'s interests relating to passage of nuclear legislation and other specific FirstEnergy Corp. legislative and regulatory priorities, as requested and as opportunities arose.

Primary among FirstEnergy Corp.'s priorities was the passage of nuclear legislation. FirstEnergy Corp. sought official action from Public Official A and Public Official B in the form of helping draft nuclear legislation that would further the interests of FirstEnergy Corp. and FES and by pressuring and advising public officials to support nuclear legislation for FirstEnergy Corp.'s and FES's benefit. FirstEnergy Corp. prioritized nuclear legislation in part because of the

"decoupling" provision in House Bill 6 that was pursued by FirstEnergy Corp., along with FirstEnergy Corp.'s interest in bailing out the Ohio nuclear plants. The decoupling provision allowed FirstEnergy Corp.'s Ohio electric distribution subsidiaries to receive a fixed amount of distribution-related revenue from residential and commercial customers based on the 2018 collection period, which was a year of high electricity sales for FirstEnergy Corp. In addition, the decoupling provision enacted by House Bill 6 allowed FirstEnergy Corp. to continue to recover lost distribution revenue ("LDR") in a fixed amount based on its 2018 LDR recovery, despite the elimination of energy efficiency programs in House Bill 6. Decoupling therefore would guarantee FirstEnergy Corp.'s Ohio electric distribution subsidiaries a fixed amount of revenue by tying its distribution revenue to the 2018 level and continued collection of LDR.

FirstEnergy Corp. also relied on Public Official B to help FirstEnergy Corp. address its concern that the future earning power of its Ohio utility subsidiaries would be negatively impacted by the rate distribution case scheduled for 2024. The electric security plan ("ESP") that FirstEnergy Corp. and its relevant entities were operating under—ESP IV—was set to terminate in 2024, at which time FirstEnergy Corp. would be required to file a new rate case. FirstEnergy Corp. believed that the expiration of ESP IV and filing of the new rate case in 2024 would result in decreased revenue and negatively impact FirstEnergy Corp.'s financial outlook, and therefore, sought a "*fix for the Ohio hole*." In November 2019, under Public Official B's leadership, PUCO terminated the requirement of FirstEnergy Corp.'s Ohio electric distribution subsidiaries to file a new rate case in 2024.

A. Relevant Background

In 2016, FirstEnergy Corp. reported a bleak outlook with respect to its energy generation business. In its November 2016 Form 10-Q, FirstEnergy Corp. reported a weak energy market,

poor forecast demands, and hundreds of millions of dollars in losses, particularly from its nuclear energy affiliate, FES. FirstEnergy Corp. announced future options for its generation portfolio as follows: legislative and regulatory solutions for generation assets; asset sales and plant deactivations; restructuring debt; and/or seeking protection under U.S. bankruptcy laws for its affiliates involved in nuclear generation. FirstEnergy Corp. repeated these options in its 10-K filed on February 21, 2017 and reported a "*substantial uncertainty as to FES' ability to continue as a going concern and substantial risk that it may be necessary for FES, and possibly FENOC, to seek protection under U.S. bankruptcy laws, which would have a material adverse impact on FirstEnergy's and FES' business, financial condition, results of operations and cash flows*." FirstEnergy Corp. further noted that,

> *[b]ased upon continued depressed prices in the wholesale energy and capacity markets, weak demand for electricity and anemic demand forecasts, FES' cash flow from operations may be insufficient to repay its indebtedness or trade payables in the long- term. Although management is exploring capital and other cost reductions, asset sales, and other options to improve cash flow as well as continuing with legislative efforts to explore a regulatory type solution, the obligations and their impact to liquidity raise substantial doubt about FES' ability to meet its obligations as they come due over the next twelve months and, as such, its ability to continue as a going concern*.

During FirstEnergy Corp.'s fourth-quarter 2016 earnings conference call on February 22, 2017, Executive 1 focused on legislative and regulatory efforts:

> *In Ohio, we have had meaningful dialogue with our fellow utilities and with legislators on solutions that can help ensure Ohio's future energy security. Our top priority is the preservation of our two nuclear plants in the state and legislation for a zero emission nuclear program is expected to be introduced soon. The ZEN program is intended to give state lawmakers greater control and flexibility to preserve valuable nuclear generation. We believe this legislation would preserve not only zero emission assets but jobs, economic growth, fuel diversity, price stability, and reliability and grid security for the region.*

> *We are advocating for Ohio's support for its two nuclear plants, even though the likely outcome is that FirstEnergy won't be the long- term owner of these assets. We are optimistic, given these discussions we have had so far and we will keep you posted as this process unfolds*.

In 2017 and 2018, FirstEnergy Corp. attempted to seek relief for its nuclear power generation facilities through a federal solution for its energy generation business. To further a federal solution, certain FirstEnergy Corp. executives met with federal officials and hired consultants with close connections to federal officials to lobby and assist in securing official action to subsidize the nuclear and coal plants through DOE action and the FERC rulemaking process. FirstEnergy Service also approved a $5,000,000 wire to a 501(c)(4) entity connected to federal official(s), on or about May 1, 2017, shortly after hiring a consultant with close connections to those federal official(s).

By the fall of 2018, FirstEnergy Corp. believed the federal government may not take FirstEnergy Corp.'s requested action. Accordingly, while FirstEnergy Corp. continued conversations about a potential federal solution, they focused on a state solution to save the Ohio nuclear power plants.

B. Public Official A

The State Solution for the Nuclear Plants

At the same time FirstEnergy Corp. had been pursuing a federal solution for its Ohio nuclear power plants, FirstEnergy Corp. was pursing state legislation in Ohio to save the power plants through help from Public Official A, including the ZEN (Zero-Emissions Nuclear Resource Program) energy proposals outlined in House Bill 178, Senate Bill 128, and House Bill 381 in 2017, which failed to gain the support necessary for passage before Public Official A became Speaker in 2019. For example, on or about November 5, 2016, Executive 1 told Individual B,

"*Pass on to [Public Official A]. When we were talking on Weds I told him there was gonna be a sense of urgency but couldn't tell him all the details. If we don't move on some type of supplant in first half of 2017 it will be too late. These plants will be shut, sold, or bankrupt. I don't have any contact info for him*."

Central to FirstEnergy Corp.'s state solution strategy was payments for Public Official A's benefit to Generation Now, which was Public Official A's 501(c)(4), as Public Official A pursued the Ohio House Speakership. The FirstEnergy Corp. payments began in 2017, as Public Official A began executing his strategy to regain the Speakership. This was consistent with the strategy that Executive 2 had outlined in an internal presentation, explaining that 2017 political contributions are "*strictly money spent to influence issues of key importance to FirstEnergy in 2017, such as saving our baseload generation*" and that FirstEnergy Corp.'s "*preferred manner of giving is through section 501(c) groups, as these are considered 'dark money' because they are not required to disclose where the donations come from*." The presentation noted that *"the bulk of our contribution decisions are to c(4)s*."

In furtherance of its strategy, in 2017, FirstEnergy Corp., through FirstEnergy Service, wired $1,000,000 to Generation Now consisting of four quarterly payments for Public Official A's benefit, following Public Official A's trip to Washington D.C. with certain FirstEnergy Corp. executives for the inauguration. These payments were intended to contribute to Public Official A's power and visibility for the speakership and allowed him to support other candidates who would in turn support his speakership.

In return, FirstEnergy Corp. expected and intended that Public Official A and his team would further FirstEnergy Corp.'s efforts to save the power plants. Throughout 2017, FirstEnergy Corp. executives discussed with members of the Public Official A team ways in which Public

Official A could assist with FirstEnergy Corp.'s efforts to save the nuclear power plants.

FirstEnergy Corp. continued to contribute to Generation Now to assist Public Official A in winning the speakership but changed its method of payment in 2018. Rather than send the money directly from FirstEnergy Service to Generation Now, the FirstEnergy Corp. payments came from Partners for Progress, which had been fully funded by FirstEnergy Corp. On or about March 15, 2018 – two weeks before FirstEnergy Corp. subsidiaries filed for bankruptcy protection and FirstEnergy Corp. requested emergency action from the Department of Energy – FirstEnergy Corp. wired $300,000 from Partners for Progress to Generation Now for Public Official A's benefit. Four days before the payment, Executive 1 met with Public Official A to "*[d]iscuss Speaker race and votes needed*." Likewise, certain FirstEnergy Corp. executives wired $100,000 from Partners for Progress to Generation Now on or about May 4, 2018, four days before the Ohio primary election.

FirstEnergy Corp. also sent approximately $400,000 for Public Official A's benefit, at Public Official A's request, through another 501(c)(4) in late April 2018, which through a series of transactions ultimately paid approximately $400,000 for media benefiting Public Official A before the May 2018 primary.

FirstEnergy Corp. continued to fund Public Official A's campaign for Speaker leading up to the fall 2018 election. On August 5, 2018, Executive 1 asked Executive 2, "*[Is] [Public Official A] looking for more money*?" to which Executive 2 responded, "*You know the answer to the [Public Official A] question, but I don't know for how much he'll ask. I'll get a list from [Ohio Director of State Affairs] as to the House races he's most interested in winning and I'll have something for you as to what fepac is doing in those races. He'll want hard money first and then C(4) money for sure. I'll be back to you today*." Later that day, Executive 2 followed up and said, "*[Public Official A] wants to hear about us – status of company, what's important to us this year*

and next year. Money will come up – help with key races and C(4)." Following a meeting involving Executive 1 and Public Official A, on or about August 16, 2018, FirstEnergy Corp. wired $500,000 from Partners for Progress to Generation Now for Public Official A's benefit.

A few weeks later, on or about August 24, 2018, Executive 1 and Executive 2 arranged for Public Official A to attend a presidential roundtable, during which Public Official A would ask whether Federal Official 1 intended to fix FirstEnergy Corp.'s issues at the federal level. Public Official A told Ohio Director of State Affairs, "*I simply said [Federal Official 1], I'm [Public Official A] former Ohio Speaker and I was planning on discussing this in the Roundtable but the acoustics were horrible. He said yes they were – I couldn't really hear much of anything – I then stated that his support in replacing the CPP was beneficial to Ohio but we need more in order for our zero emissions nuclear plants and coal fired facilities to remain an important part of our overall energy solution. He then stated that he had put a plug in it and now plans to fix it*." Public Official A reported the same information to Executive 1, explaining that "*I opted to talk to him during the photo opt one on one*" and that "*He said they plan on fixing it*." The following exchange then occurred:

> Executive 1: "*Got it. Thanks for the help*!"
>
> Public Official A: "*Thank you for your help*."
>
> Executive 1: "*We are rooting for you and your team!*"
>
> Public Official A: "*I'm rooting for you as well . . . we are on the same team*"

In October 2018, FES paid Generation Now another $500,000 for Public Official A's benefit – $400,000 of which was hand-delivered to Public Official A during an in-person meeting on or about October 10, 2018. On October 2, 2018, about a week before the payment, Executive 2 told Executive 1, "*I know you know this, but this is where companies and people get in political*

trouble – everyone is in a rush and they all need a ton of hel$p. Let me gather everything. I'll bring it to you and you/we can decide." On October 10, 2018, the day of the meeting, Executive 1 texted Executive 2, "*FES meeting with Public Official A today. I told him to be nice but listen to us*." Executive 2 replied, "*He'll learn about the $400k at this mtg*." Executive 1 then responded, "*They better get it done quick or he won't be able to spend it*." Following the meeting, Public Official A thanked Executive 1 via text for the money from FES, stating, "*$400k… thank you*."

In addition to the $500,000 directly from FES to Generation Now in October 2018, FirstEnergy Corp. made a $500,000 electronic transfer of funds to Dark Money Group 1 for Public Official A's benefit on October 29, 2018, a few days before the November election. This funds transfer occurred after Public Official A traveled to Akron to meet with Executive 1 on October 23, 2018.

Following the October 23, 2018 meeting, FirstEnergy Corp., through Executive 1 and Executive 2, also persuaded other energy-interested companies to send payments to Dark Money Group 1 to support Public Official A. For example, following the meeting with Public Official A, Executive 2 texted Executive 1, "*I talked to [Company Executive C]. He's going to contribute $100k to our effort with [Dark Money Group 1]. As for your [ ] Friday morning message to [CEO of Company B]: . . . I met with [Public Official A] a few days ago. We believe in [Public Official A] and think he can and will be Ohio's next Speaker. That's important to all of us. He has a need for a final push. We've committed $700k to the effort and I'd like to ask for your help with $100k*." A few days later, on October 26, 2018, Executive 2 asked Executive 1 if he could call CEO of Company B "*on the [Public Official A] $100k matter*?" Executive 1 responded, "*I'm on it*." Executive 2 texted Executive 1 later the same day indicating that Company B is going to do "$100k." Executive 1 responded that "[*Company B Executive*]" should "*take credit with Public*

Official A too" and later that day indicated that "*the money has already been wired*." In total, following Public Official A's October 23, 2018 trip to Akron to meet with Executive 1, the following payments were made to Dark Money Group 1:

October 26, 2018	$100,000	wire	Company B
October 29, 2018	$500,000	EFT	FirstEnergy Service
October 29, 2018	$100,000	check	CEO of Company C

The day before the November 2018 general election, Executive 1 texted Public Official A, asking, "*24 hours left. How's it looking*?" Public Official A responded, "*I am encouraged by the House races. Unless this blue wave shows up in the some races – I think we look great*."

On November 7, 2018, the day after the election, Executive 1 texted Public Official A and asked, "*How did your candidates do*?" Public Official A responded that "*we were a net -4*." Public Official A told Executive 1 that "*I literally need 1 more vote for Speaker*." Executive 1 asked if Public Official A was "*counting [Representative 11] or not*?" and stated that, "*I'll make sure it happens*." Later that day, Public Official A asked Executive 1 "*if you would just ask [Individual C] to set up a meeting w me and engage in getting this Spkrs race worked out [sic] so the way we want it. That would be perfect. Need him to focus*." Executive 1 responded, "*On it*."

FirstEnergy Corp.'s plan to fund Public Official A-approved House races through payments to Generation Now to help get Public Official A elected Speaker in return for introducing nuclear legislation was successful. On January 7, 2019, the Ohio House of Representatives selected Public Official A as Speaker. The day of his election, Public Official A texted Executive 1: "*[t]hank you for everything it was historical*." In a separate text exchange that day, Individual C texted Executive 1, Executive 2, and two FE lobbyists, "*Congrats [Executive 1] and [Executive 2]. Big win in Ohio Speaker vote*," and then, "*2019 could be FE's year*." Executive 1 responded,

"*Hate to say this but we still need to get DOE help for plants so we can use Ohio to help the parent*."

Passage of House Bill 6

Following Public Official A's election as Speaker, FirstEnergy Corp. executives and representatives worked directly with Public Official A in drafting the nuclear legislation leading up to House Bill 6's introduction in the House. FirstEnergy Corp. sought the nuclear legislation both for the interests of its subsidiaries, including FES, and to further the interests of the FirstEnergy Corp. parent company.

From when House Bill 6 was introduced in April 2019 to October 2019, FirstEnergy Corp. worked directly with FES to support Public Official A through payments to Generation Now with the intent and for the purpose that, in return, Public Official A would take specific official action relating to the passage of House Bill 6 and the defeat of the ballot referendum initiative to overturn House Bill 6. FirstEnergy Corp. paid the money to Public Official A through Generation Now intending to influence and reward Public Official A in connection with passage of House Bill 6 and defeating the ballot referendum.

During that period, FES paid over $40 million through wire transfers to Generation Now for Public Official A's benefit, while FES was involved in bankruptcy proceedings. In addition, FirstEnergy Corp. paid over $13 million through wire transfers from Partners for Progress to Generation Now during this period.

Money paid from FirstEnergy Corp. to Generation Now in April 2019 through October 2019 was intended to benefit Public Official A; was intended to help Public Official A in his campaign to pressure and advise public officials to support passage of House Bill 6; and was intended to help Public Official A's efforts to defeat the ballot referendum, which included a plan

to pass alternate legislation if the proponents of the ballot referendum gained enough signatures to put the repeal of House Bill 6 on the ballot for a referendum. Certain FirstEnergy Corp. executives knew that the money paid to Generation Now was controlled by Public Official A and was for Public Official A's benefit to use as he directed. Public Official A and his team instructed how much money to pay into Generation Now to further their efforts to pass House Bill 6 and to defeat the ballot referendum. A purpose of the Generation Now ads was to provide legislators with the necessary cover to support House Bill 6.

For example, following opponent testimony in a House subcommittee that challenged House Bill 6 on April 23, 2019, Executive 2 told Executive 1, "*Today was opponent testimony. Went long. Expected stuff. Tell [Public Official A] to put his big boy pants on. Ha*." Later that day, Executive 1 forwarded Executive 2 the content of a message from Public Official A that read, "*I hope FES is ready for a fight because the first shot was fired at us tonight. Nobody screws with my members … my name ain't [Representative 10] or [Representative 1]. I asked [Individual D] to make ads this morning*." Executive 1 then texted Executive 2, "*FES Needs [sic] to pay for these ads*," explaining, "*they can spend some money on the real fight*." Executive 1 later texted Public Official A, "*I will be pushing FES to engage*," and then followed up, "*I'll talk to FES tomorrow about paying for [the ads.] What kind of budget*." Public Official A responded, "*I'll find out – I'd like to blister Columbus and eastern Ohio where the shale play is*."

The next day, Executive 1 texted Public Official A, "*Spoke to FES creditor rep. They will step in and help*." Public Official A responded that he is having breakfast with Individual A to discuss and will call Executive 1 after they meet. Public Official A responded to Executive 1, "*I may want to run things past [Individual A] to make sure [Individual D] doesn't overcharge. I'm cheap*." Executive 1 replied to Public Official A, "*OK. I would say you are a bargain – not cheap*."

On May 1, 2019, FES Executive A texted Executive 2, "*Can someone change the Generation Now website so it looks more like our positive commercial? Less conventional power plants, more blue skies, fields and some wind turbines*." Executive 2 responded, "*[FES Executive A] – don't disagree, but remember, you're just the bank for these spots. They're not yours if you know what I mean. You change them, and they're yours – along with the criticism and results*."

Specific official action by Public Official A relating to the passage of House Bill 6 included helping draft the nuclear bailout legislation at FirstEnergy Corp.'s and FES's direction and pressuring and advising other public officials to take official action to support the nuclear legislation. While House Bill 6 was pending, FirstEnergy Corp. sought from Public Official A specific official action in the form of pressuring and advising other officials to support the "decoupling" provision supported by FirstEnergy Corp. and to support an extension of the term of the nuclear subsidy duration to ten years.

For example, on April 15, 2019, three days after Public Official A introduced House Bill 6, Executive 2 emailed Executive 1 and several other FirstEnergy Corp. executives and employees about "*talking points*" for "*educating legislators*" relating to the "*decoupling language which we proposed be included in the recently-introduced Ohio Clean Energy Bill (House Bill 6)*." In the same email chain, Executive 2 made clear that the decoupling language in House Bill 6 was the result of coordination with the Speaker's office.

In a May 4, 2019 text message, Public Official A told Executive 1 he needed information about FirstEnergy Corp. "*[a]s I begin to enter into the 'all out war' part of the HB 6 debate*," so that Executive 1 could help Public Official A "*shap[e] an argument*" in gaining support for House Bill 6.

On June 27, 2019, while House Bill 6 was pending in the Senate, Public Official A texted Executive 1 that "*House / Senate negotiations are occurring."* Executive 1 responded, "*Negotiate hard. 10 years and decoupling back in*!" Public Official A then replied, "*10 years*?"; "*[FES Executive B] told me $148M for 6yrs was what was necessary*." Executive 1 then responded, "*I was told you knew about it. They fucked up. You'll be fighting this same issue in 5 years because they will not be able to take it public without more years*." Executive 1 later told Public Official A, "*You don't want to have to deal with this twice as Speaker*."

On July 13, 2019, Executive 1 texted Executive 2 and FES Executive A that he told Public Official A "*why 10 years is a must*" and Public Official A is "*on board with pushing HB6 to 10 if he can*."

On July 16, 2019, FES Executive A texted Executive 1 and Executive 2, "*Speaker is saying he needs at least a little help from Governor to get our years increased*." The next day, FES Executive A again texted Executive 1, "*House doesn't have quite enough votes*," to which Executive 1 responded, "*[Public Official A] is negotiating. I'm in the loop*." Later that day, Executive 1 texted Executive 2, "*Some big concessions by the speaker on the budget. Hopefully he did a little horse trading along the way*." That day, Executive 2 texted Executive 1 and FES Executive A, "*HB 6 passed Committee (with decoupling). 9-4 vote. No additional years for FES – 7 years*." HB 6 then went back to the House for a vote on the Senate's amendments to the bill, and Executive 2 texted Executive 1, "*Now I'm hearing the Speaker is scrambling for one vote*."

On July 17, 2019, FES Executive A pleaded to Executive 1 that, "*If we only end up w the 7 years I will do exactly as you say, which is say thank you and go back to my nose on the grindstone*," but, FES Executive A continued, "*[t]hat said, is there anything we can do to get another year or 2? If that is not feasible and all hope is lost, can we get a 2 or 3 year extension*

option at year 7? We could base it on some type of test of whether FERC has given subsidies etc." Executive 1 responded FES Executive A: "*[State Official 2], [Public Official B], [Company C Executive] and [Official Aide 1] are fighting to the end and we've been talking to them all day. Conference on budget is ongoing and Speakers [sic] delegation is gonna try to negotiate budget movement for tenure on HB6. Everything that can be done is being done. If we don't get it, we work to pass an addendum as soon as [Senator 3] is out*."

On July 23, 2019, the day that House Bill 6 was signed into law with the decoupling provision included, Executive 2 texted Executive 1 a screenshot showing House Bill 6 passing with 51-38 votes, and the following conversation occurred:

> Executive 2: *Boom! Congrats. This doesn't happen without ceo leadership.*
>
> Executive 2: [Image of House vote]
>
> Executive 1: *We made a bbiiiiiiiig bet and it paid off. Actually, 2 big bets. Congrats to you and the entire team! See if [name] has any Pappy and we'll all head to Columbus tonight.*
>
> Executive 2: *Huge bet and we played it all right on the budget and HB 6 – so we can go back for more!*
>
> Executive 2: *No party tonight. We are going to plan one with the Speaker later.*
>
> Executive 2: *You should call the Speaker today.*
>
> Executive 1: *Already texted him…*

Defeating the Ballot Referendum

FirstEnergy Corp. and FES agreed to pay millions of dollars to Public Official A through payments to Generation Now in return for and in connection with Public Official A's efforts to defeat the ballot referendum, which included specific official action by Public Official A. Specific official action agreed to included efforts by Public Official A to have House Bill 6 interpreted as a "tax" such that it could not be challenged through a ballot referendum under law; and, if the ballot initiative gained enough signatures to put the referendum of House Bill 6 on the ballot, to

advance alternate legislation by Public Official A, to include making clear that House Bill 6 was a tax and thus could not be challenged through a ballot referendum.

For example, on July 16, 2019, prior to passage of House Bill 6, Executive 2 texted Official Aide 1 that he "*[j]ust remembered some language added late to House version to help make it harder to challenge via referendum. Speaker worked with fes on it. Senate probably took it out and now folks want it back in*."

On July 24, 2019, FES Executive A texted to Executive 2: "*[Individual H], [FES Executive C] and myself are point on referendum. He has a mtg w [sic] Speaker on it tomorrow. I am talking to Speaker later today . . .*" Executive 2 later responded, "*I'm very concerned about the referendum*." FES Executive A replied, "*We are taking [Public Official A's] lead on fighting the referendum*." FES Executive A replied further, "*Am I supposed to go against what [Public Official A] is telling us to do*?" Two days later, Executive 2 texted FES Executive A, "*I had a good conversation with [Public Official A] today re: the referendum issue. I think you're in excellent hands. I know more about his personal involvement and engagement. We should all be following his lead. I know you/fes are and we will as well*."

On September 4, 2019, Executive 2 told Executive 1 he intended to take steps to convince another Ohio public official to publicly state that House Bill 6 was a tax because, under Ohio law, a tax would not be subject to a ballot referendum. In response, Executive 1 texted Executive 2, "*We should check with [Public Official A] to make sure he's on board with this before we step in. He seemed pretty confident in his referendum strategy and plans to pass it as a tax in a new bill if they get enough signatures. Just want to make sure he agrees*."

To further the scheme, FirstEnergy Corp. used Partners for Progress, a 501(c)(4) controlled

by and operating for the benefit of FirstEnergy Corp., to conceal payments to Public Official A. In October 2019, FirstEnergy Corp. paid $10 million (October 10, 2019) and $3 million (October 22, 2019) to Generation Now for Public Official A's benefit by first wiring the money through Partners for Progress rather than paying the money to Generation Now directly. FirstEnergy Corp. paid the $13 million at Public Official A's and FES's request, knowing and with the intent that the money was in return for Public Official A's efforts to defeat the ballot referendum and ensure House Bill 6 became law, to include specific official action for alternate legislation if the ballot referendum received enough signatures to get on the ballot.

For example, on October 9, 2019, Executive 1 texted FES Executive A, "*Just got word the $ is being wired today. $10M*." Executive 1 told Executive 2, "*I did speak with Public Official A and he says they need it and will spend it. Talked to him about future and he says the future is now. He understands it's not our issue and truly appreciates the support*." In exchange for Executive 1's agreement to wire the $10 million to Public Official A, FES Executive A promised Executive 1 that FES would pay additional funds in connection with the transfer of real estate to FirstEnergy Corp. after FES's bankruptcy.

On October 19, 2019, a few days before the ballot referendum's signatures were due, Executive 1 texted Executive 2 and FES Executive B, "*Just spoke to the big guy. He's got the 'tax' bill ready to go and believes he's got [Senator 3] on board*…." FES Executive B responded, "*That is good news. Having both [Public Official A and Senator 3] on board and ready is critical for us next week to be ready to deal with the outcome of the signatures and the court*." Executive 2 also texted Executive 1, "*I wish we had this state and federal team in place when we first started our generation push. Darn it.*"

On October 23, 2019, Executive 1 texted FES Executive A: "*You are a worrier but then*

it's a pretty big deal. For what it's worth [State Official 3] and [Public Official A] think it's game over. But that's private conversation unless they've told you the same thing. And [Public Official A] has a 'quick fix' anyway." Executive 1 went on, "*he and I have been chatting too. More about raising him $$$$.*"

Public Official A's Term Limit Ballot Initiative

In February 2020, Public Official A and his team approached FirstEnergy Corp. about funding a ballot initiative championed by Public Official A, which would change Ohio law to increase term limits for Ohio public officials. The term limit initiative would allow Public Official A to potentially remain in power as Speaker for up to sixteen additional years, which would give Public Official A additional time as Speaker to further FirstEnergy Corp.'s interests through official action.

For example, on February 28, 2020, Executive 1 and Individual B had the following conversation:

> Executive 1: . . . . *Talked to Speaker today. He's an expensive friend*
>
> Individual B: *I did not know what he wanted to talk to you about.*
>
> Executive 1: *His term limit initiative. 16 years lifetime max in legislature starting when it passes. No need to switch houses. But after 16 your [sic] done for good.*
>
> Individual B: *I think it's a great idea especially if he stays there*
>
> Executive 1: *He told me he'll retire from there but get [sic] a lot done in 16 more years.*
>
> Individual B: *Probably more than five previous Speakers combined*
>
> Individual B: *He will make Ohio great again*
>
> Executive 1: *Yep*

The next day, Executive 1 texted Public Official A, "*Work with [Individual A] on ballot initiative? You coming up for Home Opener*?" Public Official A responded, "*Yes. I haven't thought much about Opening Day yet*." Executive 1 later texted Public Official A, "*[Executive 2] is contacting [Individual A] to do 2 early next week*," to which Public Official A responded, "*Very much appreciated*." In text message exchanges the next day, Executive 2 stated, "*On Monday/Tuesday of next week, we are hoping to do a $2M contribution from our C(4) to Generation Now*"; and "*[w]e are going to make a significant contribution to Generation Now from Partners for Progress next Monday/Tuesday*." Executive 2 stated in a subsequent message that Public Official A's term limit initiative "*extends and stabilizes existing leadership – good for the home team*."

On March 2, 2020, FirstEnergy Corp. paid $2 million to Public Official A by wiring the money from FirstEnergy Corp.'s 501(c)(4), Partners for Progress, to Public Official A's 501(c)(4), Generation Now, to advance Public Official A's term limits initiative.

C. Public Official B

FirstEnergy Corp.'s Consulting Agreement with Public Official B

Prior to December 2018, FirstEnergy Corp. made payments to Public Official B pursuant to agreements with Public Official B through Company 1. The payments were made from FirstEnergy Service to Company 1's bank account, in part, for Public Official B's benefit.

A 2013 consulting agreement was subsequently amended in 2015. The 2015 amendment coincided with and was made in exchange for Public Official B's industrial group withdrawing its opposition to a 2014 PUCO Electric Security Plan settlement package involving FirstEnergy Corp.'s Ohio electric distribution subsidiaries. The amended agreement called for an increase in

Public Official B's retainer and supplemental payments through 2024. Although the amended agreement does not appear to have been executed, from 2015 through June 2018, FirstEnergy Corp. paid into the Company 1 account pursuant to the terms of the agreement with Public Official B. Invoices from Company 1 were structured to bypass FirstEnergy Corp.'s Level of Signature Authority levels for purposes of internal approval of the payments.

In January 2019, Public Official B received a payment of $4,333,333, which represented the remaining payment amounts designated in the amended consulting agreement from 2019 through 2024. FirstEnergy Corp. was under no legal obligation to make the payment at that time.

Public Official B as PUCO Chairman

FirstEnergy Corp. paid the entire $4,333,333 to Company 1 for Public Official B's benefit with the intent and for the purpose that, in return, Public Official B would perform official action in his capacity as PUCO Chairman to further FirstEnergy Corp.'s interests relating to passage of nuclear legislation and other specific FirstEnergy Corp. legislative and regulatory priorities, as requested and as opportunities arose.

In December 2018, Public Official B discussed the $4,333,333 payment with Executive 1 and Executive 2. For example, on December 17, 2018, Public Official B emailed Executive 2 and others the announcement stating that PUCO was seeking applications for a commissioner. The next day, on December 18, 2018, Executive 1 and Executive 2 met with Public Official B at Public Official B's condominium. During the meeting at Public Official B's condominium, Executive 1, Executive 2, and Public Official B discussed the remaining payments under the consulting agreement and Public Official B's candidacy for the open PUCO chair position.

The next day, Public Official B texted Executive 1 and Executive 2 detailing the remaining payments under his consulting agreement with FirstEnergy Corp. from 2019 to 2024. The

payments totaled $4,333,333. Public Official B added, "*Thanks for the visit. Good to see both of you*," to which Executive 2 responded immediately, " *Got it, [Public Official B]. Good to see you as well. Thanks for the hospitality. Cool condo*."

Later that day, Executive 1 texted Public Official B and Executive 2, "*We're gonna get this handled this year, paid in full, no discount. Don't forget about us or Hurricane [Executive 1] may show up on your doorstep! Of course, no guarantee he won't show up anyway*." Executive 1 then attached an image of a venomous snake protruding from a hurricane. Public Official B replied, "*Made me laugh – you guys are welcome anytime and any whereI [sic] can open the door. Let me know how you want me to structure the invoices. Thanks*." Public Official B then added, "*I think I said this last night but just in case – if asked by the administration to go for the Chair spot, I would say yes*."

After meeting with Public Official B in December 2018 to discuss the payout and Public Official B's candidacy for PUCO Chairman, certain FirstEnergy Corp. executives pushed to have Public Official B appointed as the PUCO Chairman. Under Ohio law, PUCO consists of five public utilities commissioners appointed by the governor with the advice and consent of the senate. The governor must designate one commissioner to be chairperson of PUCO, who serves at the governor's pleasure. PUCO commissioners are selected from a list of individuals submitted to the governor by the public utilities commission nominating council. FirstEnergy Corp. executives' efforts to have Public Official B appointed as PUCO Chairman included working directly to advance the appointment of Public Official B as PUCO Chairman so that Public Official B could further FirstEnergy Corp.'s interests in that role through official action. FirstEnergy Corp.'s plan was for Public Official B to be appointed to the open seat as PUCO Chair and another individual appointed to a second projected opening on PUCO.

On January 2, 2019, FirstEnergy Service wired the $4,333,333 to Public Official B's Company 1 bank account. That same day, Executive 2 texted Executive 1:

> *[Executive 1] - this text came to me this morning from [Public Official B]. His mtg with Gov.-elect is this Friday and I suspect, absent any problem, things will go down as we've discussed, with [Individual E] getting [PUCO Official 1]'s seat as soon as [PUCO Official 1] leaves. In any event, pls see [Public Official B]'s mssg re: meeting with us soon in Akron.*
>
> *[Executive 2], I would like to come to Akron on 1/10, 1 /11, 1/14 or 1/15 to get a better understanding of the "hole" (size, shape, life expectancy and so on). Also, I would like to discuss a couple concepts that I landed on after our recent meeting. If [Executive 1] is available to discuss concepts, that would be a plus. If none of the above days work, get me a couple that do, please.*

Executive 1 responded with a date and time for meeting Public Official B, then stated: "*So you're saying [Public Official B] as Chair and [Individual E] on later*?" Executive 2 replied, "*That's their plan, but nothing certain until [Public Official B]'s meeting. Four people in [State Official 1] world, you, [Public Official B] and I know about this*."

Later that day, Executive 2 and Executive 1 discussed the upcoming meeting between Executive 1, Executive 2, and Public Official B further. Executive 2 asked Executive 1, "*Is there anyone internally you'd like to include? I'll ask him about his location preference. My guess is that he's on point to figure out what we need and to report back as to how it should be/could be fixed*." Executive 1 replied, "*I think just you and me. Don't want too many on the inside right now. That's probably his preference also*." Executive 2 then forwarded a text from Public Official B: "*From [Public Official B]. Probably best if it is you and [Executive 1]. If more is required, I can follow up. I don't think that we will get into the weeds. That can come once we get comfortable with a conceptual framework*."

On January 14, 2019, Executive 2 texted Executive 1 about the "*Ohio hole*," "*extending*

our ESP," among other things. Executive 2 then texted Executive 1 about the timing of what would become House Bill 6: "*[Public Official B] was talking about the number of weeks needed for him to coalesce parties on the broad construct of an energy bill. Before introduction*." According to Executive 2, Public Official B estimated "*the 6 to 8 week time frame to pull together (not necessarily pass) the legislative component assumes that the new administration makes the appointment ASAP and runs from the date of the appointment*."

On January 18, 2019, Executive 1 texted Executive 2, "…*Once [Public Official B] is announced, we need him to help with [Individual E]. Sounds like he already did but will need more*." Executive 2 responded, "*[Individual F] told me that once [Public Official B] is in, [State Official 1] will lean on him on everything including who should be the next commissioner*."

On January 28, 2019, at the same time certain FirstEnergy Corp. executives were lobbying to have Public Official B appointed PUCO Chair, Executive 2 texted Executive 1 about a solution to the Ohio "hole" and an update on Public Official B's nomination: "*[Executive 1] – [Individual G] and I just finished a good meeting with [Public Official B] on the way to solve the 2024 issue. No one internal knows we met with him*." Executive 1 responded, "*Any word on his status*?" Executive 2's reply indicated he spoke with State Official 2 and, "*no decision but that he had a great conversation with Gov this morning*."

Days later, Executive 2 and Executive 1 became concerned that Public Official B would need to pull out of the PUCO selection process because a disclosure in connection with an FES bankruptcy filing indicated that Company 1 had received payments from FES. In response to the news, Executive 1 lamented in a text message to Executive 2 on January 31, 2019, "*Great. Now we have none on the list*." Executive 2 responded, "*This is awful*." Executive 1 then texted, "*Back to legislative fix for Ohio hole*."

Later that day, however, their concern dissipated as Public Official B cleared the selection process. Executive 2 texted Executive 1, "*Nominating Council has been delayed and is now in Executive Session.*" Executive 2 later texted Executive 1, "*That bullet grazed the temple*." Executive 1 responded, "*Forced [State Official 1]/[State Official 2] to perform battlefield triage. It's a rough game*." Minutes later, Executive 2 forwarded an email that read, "*[Public Official B] got the most votes*." Executive 1 texted Public Official B the next day, "*Most of the media coverage is very fair. There will be some shots take but that's inevitable. Hang in there til it's done and it will quiet quickly*."

The plan to get Public Official B appointed PUCO chairman was successful. On February 4, 2019, Public Official B's selection as the Chairman of PUCO was announced. That day Executive 1 texted Company C Executive, "*Now work on the [Public Official B]/[Individual E] parlay. Once [Public Official B] is in he'll help with [Individual E] and my Speaker friend will too*." The next day, Executive 1 texted Public Official B, "*Congratulations*!" Public Official B responded, "*Thanks, [Executive 1] – the last four days have been tuff*." Public Official B went on, "*Thanks goes to some great good friends*."

The day Public Official B's confirmation as PUCO became public, Company C Executive texted Executive 1: "*Let's try not to fuck this up*," while attaching an article announcing Public Official B was selected as the next PUCO Chair.

On or about February 13, 2019, Executive 2 told Public Official B, "*[Executive 1] is meeting with [Public Official A] today*" and asked him, "*Anything you think [Executive 1] should raise?"* Public Official B responded that "*We need coordination between executive and legislative branches to get sensible stuff over the goal line. Absent that, the current polarization will pull everything under*."

Official Action by Public Official B

After his appointment as PUCO Chairman, Public Official B performed official action, including acts related to House Bill 6 and the elimination of FirstEnergy Corp.'s requirement to file a new base rate case in 2024, furthering FirstEnergy Corp.'s specific legislative and regulatory interests at the direction of and in coordination with certain FirstEnergy Corp. executives, as FirstEnergy Corp. requested and as opportunities arose.

For example, with respect to House Bill 6, on June 28, 2019, Executive 2 texted Executive 1, "*Just heard from [Public Official B].. [sic] decoupling looks good*." Executive 2 explained to FES Executive A on July 10, 2019, that Public Official B told Executive 2 regarding the "*audit issue*": "*I am engaged and hope I can help*." Executive 2 went on, "*Having [Public Official B] engaged is key. He doesn't use the word lightly*."

On July 11, 2019, Executive 2 texted Executive 1: "*[Executive 1] – I had a long talk with [Public Official B] last night about audit language. He is mtg today with [Senator 4] and Senate Counsel. We have a good plan to help. Just wanted u to know your team is engaged and helping – and we will get it if we can keep fes from negotiating against themselves*."

On July 13, 2019, Executive 2 texted Executive 1 that he heard from Public Official B regarding "*the audit*" language, explaining, "*[Public Official B] thinks he has it nailed and the language works. Confidentially, [FES Executive B] agrees."*

On July 16, 2019, Executive 2 and Executive 1 texted relating to the status of House Bill 6 and the budget. The conversation went as follows:

> Executive 2: *Budget conferees are meeting now - so the budget looks to be good to go (or they wouldn't be meeting). Our SEET language is in the bill. Still awaiting word on HB6 but our intel is that [Official Aide 1], [State Official 2] and [Public Official B]*

> *are still trying to get fes some more years.*
>
> Executive 1: *Decoupling*?
>
> Executive 2: *Will be offered tomorrow by [Senator 5] with help from [Senator 6]. Stupid they're making her offer it, but we are convinced there's no monkey business. It's greased.*

About a week later, on July 23, 2019, House Bill 6 passed the legislature with the decoupling provision advocated by FirstEnergy Corp. That day, Executive 1 sent to Public Official B a photo-shopped image of Mount Rushmore with the face of Public Official B, alongside Executive 2, Ohio Director of State Affairs, and Company C Executive, imposed over the four presidential faces with the caption, "*HB 6 FUCK ANYBODY WHO AINT US*." Public Official B commented that his picture was smaller than the others and then responded, "*funny*."

In addition, at FirstEnergy Corp.'s request and direction, Public Official B performed official action to fix FirstEnergy Corp.'s "Ohio hole" through a PUCO opinion eliminating the requirement that FirstEnergy Corp.'s Ohio electric distribution subsidiaries file a new base rate case when ESP IV ended in 2024.

For example, on November 5, 2019, Executive 1 texted to Executive 2 an article published that day, in which Morgan Stanley projected low growth for FirstEnergy Corp. because of "*a rate case review in 2024*." In his note accompanying the article, Executive 1 told Executive 2, "*Here's the MS down grade due to the 'Ohio hole*.'"

On November 10, 2019, Executive 1 texted Company C Executive, "*And, the FE rescue project is not over. At EEI financial conference. Stock is gonna get hit with Ohio 2024. Need [Public Official B] to get rid of the 'Ohio 2024' hole*." A few days later, on November 15, 2019, Executive 2 texted Executive 1, "*I spoke with [Public Official B] today. Told me 2024 issue will be handled next Thursday (November 21)*." Executive 2 later texted, "*he's going to make the*

requirement to file go away, but I do not know specifically how he plans to do it."

On November 21, 2019, Executive 2 texted Executive 1, "*Today is our day for action on the 2024 issue*." Executive 1 suggested that Public Official B make a "*public statement*" about the ruling, to which Executive 2 responded, "*On it*." Later that day, PUCO issued a ruling that FirstEnergy Corp.'s Ohio electric distribution subsidiaries were no longer required to file a new rate distribution case in 2024. Executive 2 later texted Executive 1 the PUCO decision, which highlighted the following language from the Opinion and Order: "*we find that it is no longer necessary or appropriate for the Companies to be required to file a new distribution rate case at the conclusion of the Companies' current ESP*."

Pursuant to House Bill 6, part of FirstEnergy Corp.'s revenue would have been decoupled at least until its next base distribution rate case, which was scheduled for 2024. The November 21, 2019 decision by PUCO eliminated FirstEnergy Corp.'s Ohio electric distribution subsidiaries' requirement to file its new rate distribution case at the conclusion of ESP IV in 2024. The November 21, 2019 PUCO decision addressed the 2024 "Ohio hole" by extending the time before the FirstEnergy Ohio utility subsidiaries were required to file a base rate case.

On November 22, 2019, approximately a day after PUCO's rate case policy change benefitting the energy company, and the day after news of the decoupling rider application became public, Executive 1 thanked Public Official B via text message. Specifically, Executive 1 texted Public Official B an image showing FirstEnergy Corp.'s stock increase with a note that stated, "*Thank you*!!" Public Official B responded, "*Ha – as you know, what goes up may come down. [Name] helped. Thanks for the note. Spoke to [name]last night*." Executive 1 replied, "*Every little bit helps. Those guys are good but it wouldn't happen without you. My Mom taught me to say Thank you*," to which Public Official B replied, "*Thanks*."

On January 15, 2020, a few months later, it appeared that another commissioner would be appointed to PUCO in 2020. Public Official A texted Executive 1, "*Who do you like for this PUCO board appointment*." That evening, Executive 1 texted Public Official A's message to Executive 2: "*Who do you like for this PUCO board appointment*"; Executive 1 followed up, "*Got this from [Public Official A] a little while ago*." Executive 1 then texted, "*But I think [Public Official B] wants the incumbent D re-upped because he's very cooperative with [Public Official B]*." Executive 1 later told Executive 2, "*Tell [Public Official B] [Public Official A] asked me I [sic] my response was whoever [Public Official B] wants*."

Executive 1 then texted Public Official A back as follows: "*[PUCO Official 2] is the commissioner who's up this April. [Public Official B] likes [PUCO Official 2]. [Public Official B] has been outstanding. Approved our decoupling filing today and got a 5-0 vote including [PUCO Official 2], even though Staff bureaucrats wanted to modify HB 6 language*." Public Official A responded, "*Very good*." Public Official A then stated, "*I need to have my appointee to make recommendation for Gov. I will take care of it tomorrow*."

In a March 4, 2020 text message exchange about possible future favorable action by Public Official B, Executive 1 summarized official action already performed by Public Official B at the request of FirstEnergy and stated: "*He will get it done for us but cannot just jettison all process*." After describing certain acts taken by Public Official B, Executive 1 explained that there is "*a lot of talk going on in the halls of PUCO about does he work there or for us? He'll move it as fast as he can. Better come up with a short term work around*."

As set forth in the Corporate Officer's Certificate, I am duly authorized to execute this Agreement on behalf of FirstEnergy Corp. I have read the Statement of Facts and have carefully reviewed it with counsel for FirstEnergy Corp. and FirstEnergy Corp.'s Board of Directors. On behalf of FirstEnergy Corp., I acknowledge that the Statement of Facts is true and correct.

ATTACHMENT B:
CORPORATE COMPLIANCE PROGRAM

Recognizing the remedial measures undertaken by FirstEnergy Corp. set forth in the Deferred-Prosecution Agreement, FirstEnergy Corp. agrees to continue to conduct, in a manner consistent with all of its obligations under this Agreement, appropriate reviews of its existing internal controls, policies, and procedures and to address any deficiencies in its internal controls, compliance code, policies, and procedures regarding compliance with U.S. law.

Where necessary and appropriate, FirstEnergy Corp. agrees to modify its compliance program, including internal controls, compliance policies, and procedures to ensure that it maintains an effective system of internal accounting controls designed to ensure the making and keeping of fair and accurate books, records, and accounts, as well as policies and procedures designed to effectively detect and deter violations of U.S. law. At a minimum, this should include, but not be limited to, the following elements to the extent they are not already part of FirstEnergy Corp.'s existing internal controls, compliance code, policies, and procedures:

High-Level Commitment

1. FirstEnergy Corp. will ensure that its directors and senior management provide strong, explicit, and visible support and commitment to its corporate policy against violations of U.S. law and its compliance code.

Policies and Procedures

2. FirstEnergy Corp. will develop and promulgate a clearly articulated and visible corporate policy against violations of U.S. law, which policy shall be memorialized in a written compliance code.

3. FirstEnergy Corp. will develop and promulgate compliance policies and procedures designed to reduce the prospect of violations of U.S. law and FirstEnergy Corp.'s compliance code, and FirstEnergy Corp. will take appropriate measures to encourage and support the observance of ethics and compliance policies and procedures against violation of U.S. law by personnel at all levels of FirstEnergy Corp. These policies and procedures shall apply to all directors, officers, and employees and, where necessary and appropriate, outside parties including consultants and lobbyists acting on behalf of FirstEnergy Corp. FirstEnergy Corp. shall notify all employees that compliance with the policies and procedures is the duty of individuals at all levels of the company.

4. FirstEnergy Corp. will ensure that it has a system of financial and accounting procedures, including a system of internal controls, reasonably designed to ensure the maintenance of fair and accurate books, records, and accounts. This system should be designed to provide reasonable assurances that transactions are recorded as necessary to permit preparation of financial statements in conformity with generally accepted accounting principles or any other criteria applicable to such statements, and to maintain accountability for assets.

5. FirstEnergy Corp. will ensure that all contributions made to entities incorporated under 26 U.S.C. § 501(c)(4) ("501(c)(4)" entities) and all payments to entities operating for the benefit of a public official, either directly or indirectly, are reviewed and approved by a compliance officer trained to ensure such payments comport with company policy and U.S. law. In addition, the amount, beneficiary, and purpose of all such contributions and payments must be reported to the Board on a quarterly basis.

6. FirstEnergy Corp. will ensure that lobbying and consultant contracts are reviewed and approved by a compliance officer trained to evaluate whether the purpose of the contracts and payments made pursuant to the contracts comport with company policy and U.S. law.

7. FirstEnergy Corp. will ensure that its written compliance code prohibits billing and payment practices used to subvert internal controls.

Periodic Risk-Based Review

8. FirstEnergy Corp. will develop these compliance policies and procedures on the basis of a periodic risk assessment addressing the individual circumstances of FirstEnergy Corp. FirstEnergy Corp. shall review these policies and procedures no less than annually and update them as appropriate to ensure their continued effectiveness, taking into account relevant developments in the field and evolving international and industry standards.

Proper Oversight and Independence

9. FirstEnergy Corp. will assign responsibility to one or more senior corporate executives of FirstEnergy Corp. for the implementation and oversight of FirstEnergy Corp. compliance code, policies, and procedures. Such corporate official(s) shall have the authority to report directly to independent monitoring bodies, including internal audit, FirstEnergy Corp.'s Board of Directors, or any appropriate committee of the Board of Directors, and shall have an adequate level of autonomy from management as well as sufficient resources and authority to maintain such autonomy.

Training and Guidance

10. FirstEnergy Corp. will implement mechanisms designed to ensure that its compliance code, policies, and procedures are effectively communicated to all directors, officers, employees, and, where appropriate, agents and business partners including consultants and lobbyists. These mechanisms shall include: (a) periodic training for all directors and officers, all employees in positions of leadership or trust, positions that require such training (e.g., internal audit, sales, legal, compliance, finance, and government relations), and, where appropriate, agents and business partners including consultants and lobbyists; and (b) corresponding certifications by all such directors, officers, employees, agents, and business partners certifying compliance with the training requirements.

11. FirstEnergy Corp. will maintain, or where necessary establish, an effective

system for providing guidance and advice to directors, officers, employees, and, where necessary and appropriate, agents and business partners including consultants and lobbyists, on complying with FirstEnergy Corp.'s compliance code, policies, and procedures, including when they need advice on an urgent basis.

Internal Reporting and Investigation

12. FirstEnergy Corp. will maintain, or where necessary establish, an effective system for internal and, where possible, confidential reporting by, and protection of, directors, officers, employees, and, where appropriate, agents and business partners including consultants and lobbyists concerning violations of U.S. law or FirstEnergy Corp.'s compliance code, policies, and procedures.

13. FirstEnergy Corp. will maintain, or where necessary establish, an effective and reliable process with sufficient resources for responding to, investigating, and documenting allegations of violations of U.S. law or FirstEnergy Corp.'s compliance code, policies, and procedures.

Enforcement and Discipline

14. FirstEnergy Corp. will implement mechanisms designed to effectively enforce its compliance code, policies, and procedures, including appropriately incentivizing compliance and disciplining violations.

15. FirstEnergy Corp. will institute appropriate disciplinary procedures to address, among other things, violations of U.S. law and FirstEnergy Corp. compliance code, policies, and procedures by FirstEnergy Corp.'s directors, officers, and employees. Such procedures should be applied consistently and fairly, regardless of the position held by, or perceived importance of, the director, officer, or employee. FirstEnergy Corp. shall implement procedures to ensure that where misconduct is discovered, reasonable steps are taken to remedy the harm resulting from such misconduct, and to ensure that appropriate steps are taken to prevent further similar misconduct, including assessing the internal controls, compliance code, policies, and procedures and making modifications necessary to ensure the overall compliance program is effective.

Mergers and Acquisitions

16. FirstEnergy Corp. will develop and implement policies and procedures for mergers and acquisitions requiring that FirstEnergy Corp. conduct appropriate risk-based due diligence on potential new business entities.

17. FirstEnergy Corp. will ensure that FirstEnergy Corp. compliance code, policies, and procedures regarding U.S. law apply as quickly as is practicable to newly acquired businesses or entities merged with FirstEnergy Corp. and will promptly train the directors, officers, employees, agents, and business partners consistent with Paragraph 5 of the Deferred Prosecution Agreement on FirstEnergy Corp.'s compliance code, policies, and procedures.

Periodic Reviews and Testing

18. FirstEnergy Corp. will conduct periodic reviews and testing of its compliance code, policies, and procedures designed to evaluate and improve their effectiveness in preventing and detecting violations of U.S. law and FirstEnergy Corp.'s code, policies, and procedures, taking into account relevant developments in the field and evolving industry standards.

ATTACHMENT C:
REPORTING REQUIREMENTS

FirstEnergy Corp. agrees that it will report to the U.S. Attorney's Office for the Southern District of Ohio (the "government") periodically, at no less than twelve-month intervals during a three-year term, regarding remediation and implementation of the compliance program and internal controls, policies, and procedures described in Attachment B. During this three-year period, FirstEnergy Corp. shall: (1) conduct an initial review and submit an initial report, and (2) conduct and prepare at least two follow-up reviews and reports, as described below:

a. By no later than one year from the date this Agreement is executed, FirstEnergy Corp. shall submit to the government a written report setting forth a complete description of its remediation efforts to date, its proposals reasonably designed to improve its internal controls, policies, and procedures for ensuring compliance with U.S. law, and the proposed scope of the subsequent reviews. The report shall be transmitted to the following representatives of the government, unless other instructions are provided by the government:

Assistant U.S. Attorneys Emily N. Glatfelter and Matthew C. Singer
U.S. Attorney's Office for the Southern District of Ohio
221 East Fourth Street, Suite 400
Cincinnati, OH 45213

FirstEnergy Corp. may extend the time period for issuance of the report with prior written approval of the government.

b. FirstEnergy Corp. shall undertake at least two follow-up reviews and reports, incorporating the views of the government on its prior reviews and reports, to further monitor and assess whether its policies and procedures are reasonably designed to detect and prevent violations of U.S. law.

c. The first follow-up review and report shall be completed by no later than one year after the initial report is submitted to the government. The second follow-up review and report shall be completed and delivered to the government no later than thirty days before the end of the Term.

d. The reports will likely include proprietary, financial, confidential, and competitive business information. Moreover, public disclosure of the reports could discourage cooperation, impede pending or potential government investigations and thus undermine the objectives of the reporting requirement. For these reasons, among others, the reports and the contents thereof are intended to remain and shall remain non-public, except as otherwise agreed to by the parties in writing, or except to the extent that the government determines in its sole discretion that disclosure would be in furtherance of the government's discharge of its duties and responsibilities or is otherwise required by law.

e. FirstEnergy Corp. may extend the time period for submission of any of the follow-up reports with prior written approval of the government.

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF OHIO
WESTERN DIVISION

UNITED STATES OF AMERICA,	:	**CASE NO. 1:21-CR-00086**
Plaintiff,	:	**JUDGE BLACK**
v.	:	**STATUS REPORT**
FIRSTENERGY CORP.,	:	
Defendant.	:	

On July 22, 2021, the United States Attorney's Office for the Southern District of Ohio ("USAO-SDOH") charged FirstEnergy Corp. by Information with Conspiracy to Commit Honest Services Wire Fraud and entered a Deferred Prosecution Agreement ("DPA") with FirstEnergy Corp. (Doc. 1, 3.) The DPA included a provision under which FirstEnergy Corp. was required to perform certain obligations for three years. (Doc. 3, PageID 60, 67.)[1] The USAO-SDOH has determined that FirstEnergy Corp. has successfully completed those required obligations. For example, FirstEnergy Corp. has undertaken remedial measures and implemented a compliance and ethics program designed to detect and deter violations of U.S. law as required by the DPA. Consequently, FirstEnergy Corp.'s annual reporting obligations, as detailed in DPA Attachment C, and its obligations set forth in DPA paragraphs 5 (B), (C), (E), and (F), will end within 30 days of July 22, 2024. (*See id*.)

[1] "Within thirty (30) days of the successful completion of the Term, FirstEnergy's obligations pursuant to paragraphs 5 (B), (C) (E) and (F) will end. FirstEnergy's remaining obligations under paragraph 5 will continue until the completion of any investigation, criminal prosecution, or civil proceeding brought by the USAO-SDOH related to any conduct set forth in the Statement of Facts." (*Id*. at PageID 67.)

FirstEnergy Corp. will continue to be bound by the remaining provisions in the DPA. Those ongoing and continuing obligations consist of continuing cooperation until the completion of any investigation, criminal prosecution, or civil proceeding brought by the USAO-SDOH related to the conduct set forth in the DPA's Statement of Facts, under paragraph 5(A), and the obligations listed in 5(D) (Transparency in Corporate Contributions), 5(G) (Public Statements by the Company), and 5(H) (Changes in Corporate Form). (*Id*. at PageID 67.) The USAO-SDOH intends to file another status report to the Court regarding the continuing obligations in the DPA by February 1, 2025.

Respectfully submitted,

KENNETH L. PARKER
United States Attorney

Supplemental Testimony
of
Tracy Ashton

List of Topics Addressed

Customer Refunds

TABLE OF CONTENTS

I. INTRODUCTION AND PURPOSE.....**Error! Bookmark not defined.**

II. CONCLUSION.....**Error! Bookmark not defined.**

SUPPLEMENTAL TESTIMONY
OF
TRACY ASHTON

Q. Has FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company") proposed any customer refunds in this base rate case?

A. Yes. As explained in Ms. Joanne Savage's direct testimony, FE PA is proposing a customer refund of $13.6 million based on the Company's reviews of certain non-operating or non-recoverable costs, which identified certain costs that were misallocated to the predecessor companies of FE PA. The $13.6 million consists of approximately $10.5 million that accumulated since the time of the predecessor companies' prior distribution base rate cases in 2006, 2014, and 2016, plus compounded interest of approximately $3.0 million.

Q. How did the Company determine the amount of those customer refunds?

A. FirstEnergy Corp. ("FirstEnergy") has performed three separate accounting analyses and reviews to determine the completeness of customer refunds proposed in this case. The Company believes it has identified any costs that may have been inappropriately recovered from customers in all material respects.

First, as stated in my direct testimony, FE PA Statement No. 4 on page 37, following the investigation of Ohio House Bill 6 ("H.B. 6") activities, FirstEnergy's Board of Directors discovered and reported that certain costs either lacked proper documentation, were improperly classified, or were misallocated to FirstEnergy's distribution utilities, including to FE PA.

Second, in addition to, and separate from this, FirstEnergy reviewed certain non-operating or non-recoverable costs as a result of recommendations for improvement identified during the Federal Energy Regulatory Commission ("FERC") and state audits, as well as part of a proactive corporate effort to review additional categories of costs which were not identified through audits.

The costs reviewed included advertising, sponsorships, competitive services, and lobbying. The review covered the period of the FERC audit, which was 2015-2021, except for review of sport sponsorships, which extended back to 2013.

Finally, FirstEnergy retained Craig Energy & Financial Services ("CEFS") to review and confirm the results of the internal review described previously, as well as to recommend and review other potential areas of non-recoverable expenses for consideration. The President and Chief Executive Officer of CEFS, Bryan Craig, spent over 30 years at the FERC serving as the agency's Director, Division of Audits and Accounting and Chief Accountant.

Q. Do you have a copy of what has been pre-marked as FE PA Exhibit TMA-6?

A. Yes.

Q. What is this document?

A. This is a copy of the FERC audit report that I mentioned earlier.

Q. Is this a true and correct copy of that FERC audit report?

A. Yes.

Q. Do you have a copy of what has been pre-marked as FE PA Exhibit TMA-7 (CONFIDENTIAL)?

A. Yes.

Q. What is this document?

A. This is a copy of the CEFS report that I previously referenced.

Q. Is this a true and correct copy of that CEFS report?

A. Yes.

Q. Do you recall Judge Dunderdale's request for information and documentation about the penalties and payments related to the H.B. 6 investigation in Ohio during the Thursday, August 15 telephonic hearing?

A. Yes.

Q. What penalties were paid by FirstEnergy Corp. under the Deferred Prosecution Agreement entered into with the U.S. Department of Justice?

A. Under a Deferred Prosecution Agreement ("DPA") entered into with the U.S. Department of Justice, FirstEnergy Corp. paid a $230 million penalty.

Q. Do you have a copy of what has been pre-marked as FE PA Exhibit TMA-8?

A. Yes.

Q. What is this document?

A. This is a public copy of the Deferred Prosecution Agreement that I mentioned.

Q. Is this a true and correct copy of that Deferred Prosecution Agreement?

A. Yes.

Q. Do you have a copy of what has been pre-marked as FE PA Exhibit TMA-9?

A. Yes.

Q. What is this document?

A. This is a copy of the status report issued by the United States Attorney's Office on July 21, 2024, acknowledging that FirstEnergy has successfully completed certain obligations required by the Deferred Prosecution Agreement.

Q. Is this a true and correct copy of that status report?

A. Yes.

Q. Let's start with the $230 million penalty under the DPA. Did FE PA customers incur any costs associated with the $230 million monetary penalty required under the DPA?

A. No. The criminal monetary penalty was paid by FirstEnergy Corp., and not allocated to FE PA or any of FirstEnergy's subsidiaries.

Q. How are you certain these costs did not get recovered from FE PA customers?

A. The monetary penalty was recorded to general ledger account 426300 "Fines/Penalties" and Cost Center 700764 at FirstEnergy Corp. Also, this item was reviewed by CEFS, and CEFS concluded that the monetary penalty was recorded on FirstEnergy Corp.'s books and records.

Additionally, paragraph 5(B) of the Deferred Prosecution Agreement states that, "FirstEnergy Corp. agrees that no tax deduction may be sought in connection with the

payment of any part of the monetary penalty, and FirstEnergy Corp. may not seek to recover any portion of the monetary penalty from customers, directly or indirectly." The July 21, 2024 status report confirms that FirstEnergy completed certain obligations it was required to within the 3-year term of the DPA.

Q. Did FE PA incur any costs directly related to payments to public officials described within the Deferred Prosecution Agreement's ("DPA") Statement of Facts?

A. Yes. As stated in DPA's Statement of Facts, FirstEnergy Corp. made payments to public officials in return for official action, including Samuel Randazzo and Larry Householder. The $4.3 million payment made to Samuel Randazzo through Sustainability Funding Alliance was not at any time paid for nor allocated to FE PA or its predecessor companies. The payment was charged to cost collector 3002986 which settles solely to FirstEnergy's Ohio distribution utilities. However, FirstEnergy identified payments made to certain entities associated with Larry Householder that were allocated to FE PA's predecessor companies. These costs were provided to FE PA Witness Savage in order to calculate the impact to customers and were included in the proposed customer refund.

Q. Were any other costs identified in the DPA or internal review paid for by FE PA customers?

A. Yes, there were certain costs associated with individuals named in the DPA that either lacked proper documentation, were improperly classified, or misallocated to FirstEnergy's distribution utilities, including FE PA. Additionally, there were certain non-operating or non-recoverable costs identified through the analysis performed in support of the FERC audit recommendation around lobbying costs, and the internal regulatory and accounting review, that were recovered from FE PA ratepayers. These costs were provided to FE PA

Witness Savage in order to calculate the impact to customers and were included in the proposed customer refund.

Q. You mentioned earlier the FERC audit report. Can you expand further on the FERC audit's recommendation and the procedures performed by FirstEnergy?

A. The FERC Division of Audits and Accounting ("DAA") completed an audit of FirstEnergy for the period January 2015 to September 2021. In its February 4, 2022 audit report, DAA recommended FirstEnergy perform an analysis of costs that FirstEnergy and its subsidiaries incurred associated with internal and external lobbying activities, including payments of FirstEnergy funds to outside entities for purposes of those entities using those funds for lobbying, and provide support to identify lobbying-related expenses improperly charged to utility operating accounts for the audit period. DAA recommended FirstEnergy submit the results of the analysis, and issue refunds to its customers.

To comply with this recommendation, FirstEnergy engaged a third-party consultant to identify external vendors who may have engaged in lobbying activities on behalf of FirstEnergy and its subsidiaries during the audit period. FirstEnergy employees then reviewed the payments to these vendors to identify the nature of the services provided and identify lobbying costs that had been misclassified, misallocated, or that lacked sufficient supporting documentation. FirstEnergy also identified current and former employees who were registered lobbyists during the audit period, and analyzed how those current and former employees charged their time through procedures that included the review of accounting and payroll records, as well as interviews of current employees. FirstEnergy also reviewed various ancillary costs associated with the registered lobbyists, including but not limited to cost of office space and communication and IT equipment. In addition to

these procedures, FirstEnergy proactively initiated a regulatory and accounting review of non-operating and non-recoverable costs. FirstEnergy reviewed costs associated with advertising, sport and non-sport related sponsorships, and competitive products. The costs that were determined to be mischarged to operating or capital accounts were provided to FE PA Witness Savage in order to calculate the impact to customers and included in the proposed customer refund.

Q. How are you certain all costs have been identified for refund to FE PA customers?

A. FirstEnergy hired CEFS to conduct a separate review to confirm management's analysis of non-recoverable and non-operating expenses. This review evaluated FirstEnergy's internal regulatory and accounting review performed, which included lobbying and politically related expenses, sponsorships, advertising expenses and IT depreciation expenses. CEFS also identified potential high-risk areas for accounting misclassifications that could impact rates billed to regulated affiliate customers. CEFS concluded that, "in all material respects, the major, potentially high-risk, assessment coverage areas were identified and evaluated for compliance with the Uniform System of Accounts, associated ratemaking impacts, and potential refunds owed to the regulated transmission and distribution affiliates' customers."

Specific to the finding identified through the FERC audit described previously, "CEFS examined the process that FirstEnergy used to capture the transactions that it disclosed in the FERC Audit Report at pages 50 and 51 as being misclassified, misallocated, or transactions that lacked sufficient supporting documentation. CEFS also performed a transaction review to identify additional transactions of the nature described

herein. Based on the additional review, CEFS did not uncover any transactions beyond that which was discussed in the FERC Audit Report at pages 50 and 51."

Q. Does that conclude your testimony?

A. Yes.
