Reading, PA 19605-2469

Attention Ms. Joanna M. Savage
Director, Rates and Regulatory Affairs – PA

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to electric plant in service. The results of our study as of December 31, 2024 are presented in the attached report. The results of our study as of December 31, 2023 are presented in our report titled "2023 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of December 31, 2023". The same methods, procedures and estimates are used in both studies.

The attached report sets forth a description of the methods and procedures upon which the studies were based, the estimates of survivor curves and the calculated annual depreciation rates as of December 31, 2024.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

PART I. INTRODUCTION

PENNSYLVANIA ELECTRIC COMPANY
DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study conducted for Pennsylvania Electric Company ("Penelec") to determine the annual depreciation accrual rates and amounts for ratemaking purposes applicable to the original cost of electric plant as of December 31, 2024.

The depreciation accrual rates and amounts presented herein are based on estimated survivor curves and on methods and procedures set forth in previous orders approved by the Pennsylvania Public Utility Commission. The estimated survivor curves presented herein were based on the results of a service life study incorporating statistical analyses of data through 2023.

BASIS OF STUDY

Depreciation and Amortization

Depreciation, as defined in the Uniform System of Accounts, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of electric plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

The calculation of annual and accrued depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. These subjects are discussed in the sections which follow.

For most plant accounts, depreciation accruals and accrued depreciation were calculated using the straight line method, the remaining life basis, and the equal life group (ELG) procedure for all vintages. The calculations were based on the attained ages and estimated service life characteristics for each depreciable group of electric property. For certain general plant accounts, the amortization amounts, annual and accrued, were based on the age of the vintage and the selected amortization period.

Survivor curves were used to reflect the expected dispersion of retirements, thus providing a consistent method of estimating service lives and depreciation for mass property. Iowa type curves were used to depict the estimated survivor curves. For life span groups, the estimate of life characteristics is consistent because the calculated lives of the units within a group are obtained by employing a single probable retirement date for the entire group.

Service Life Estimates

The method of estimating service life consisted of compiling the service life history of the plant accounts, subaccounts or depreciable groups, reducing this history to trends through the use of acceptable actuarial techniques, and forecasting the trend of survivors for each depreciable group on the basis of interpretations of past trends and consideration of Company plans for the future. The combination of the historical trend and the estimated future trend yielded a complete pattern of life characteristics from which the average service life was derived.

The Company's service life estimates used in the depreciation calculation incorporated historical data compiled through 2023 from the property records of the Company. Such data included plant additions, retirements, transfers and other activity. Generally, retirement data for the years 1939 through 2023 were used in the actuarial life table computations which were the primary statistical support of the service life estimates.

A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirement was obtained through field trips conducted during the course of the service life study. Discussions with operating and management personnel also provided information regarding plans for the future which was incorporated in the interpretation and extrapolation of the statistical analyses.

AMORTIZATION OF NET SALVAGE

Inasmuch as this report relates primarily to Pennsylvania rate regulation practices, under which experienced costs of negative net salvage are amortized after

their occurrence, no adjustments for expected salvage were made to either the annual depreciation accrual or the calculated accrued depreciation for the individual accounts. The annual provision for recovering negative net salvage is based on the amortization of net salvage over a five-year period, as established by the Commission.

PART II. ESTIMATION OF SURVIVOR CURVES

PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below and the development of net salvage is discussed in later sections of this report.

SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

Iowa Type Curves

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

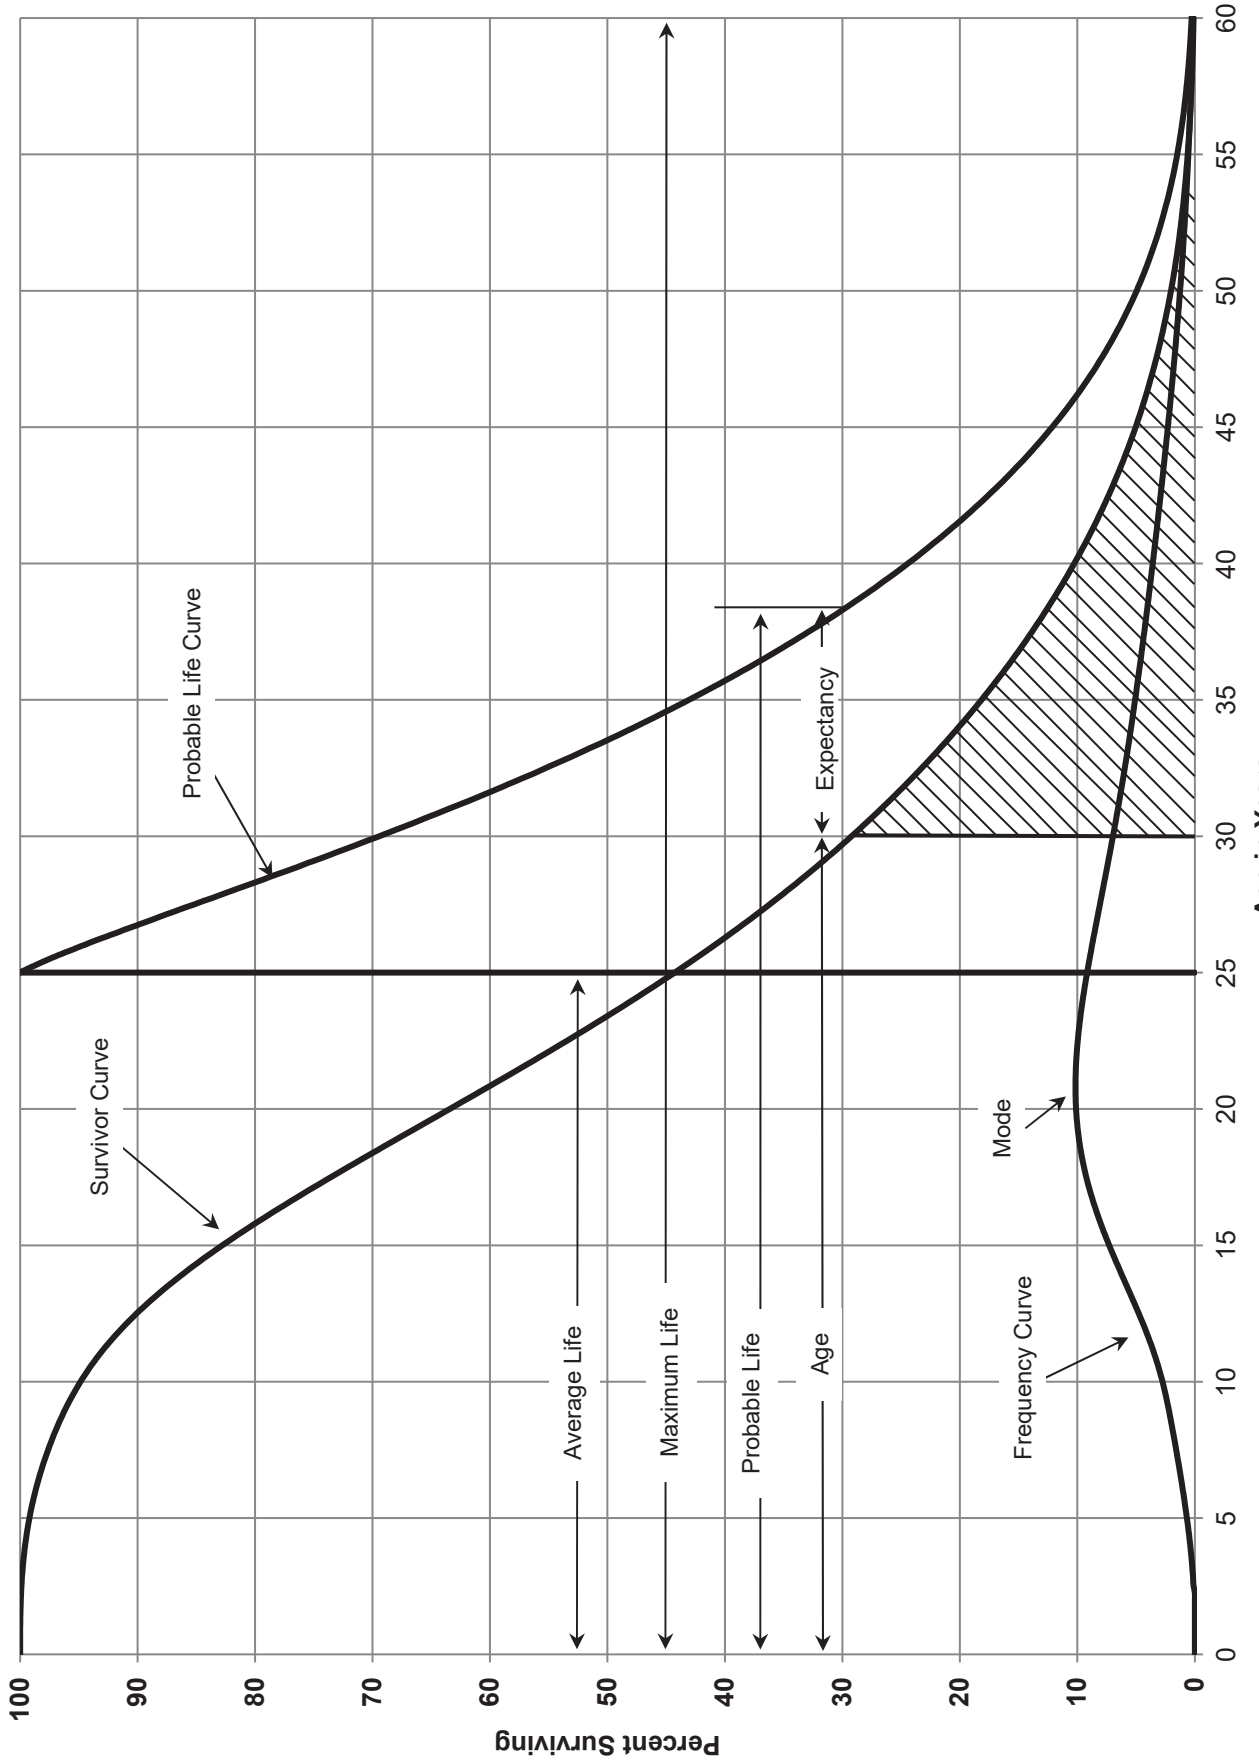

FIGURE 1. TYPICAL SURVIVOR CURVE AND DERIVED CURVES

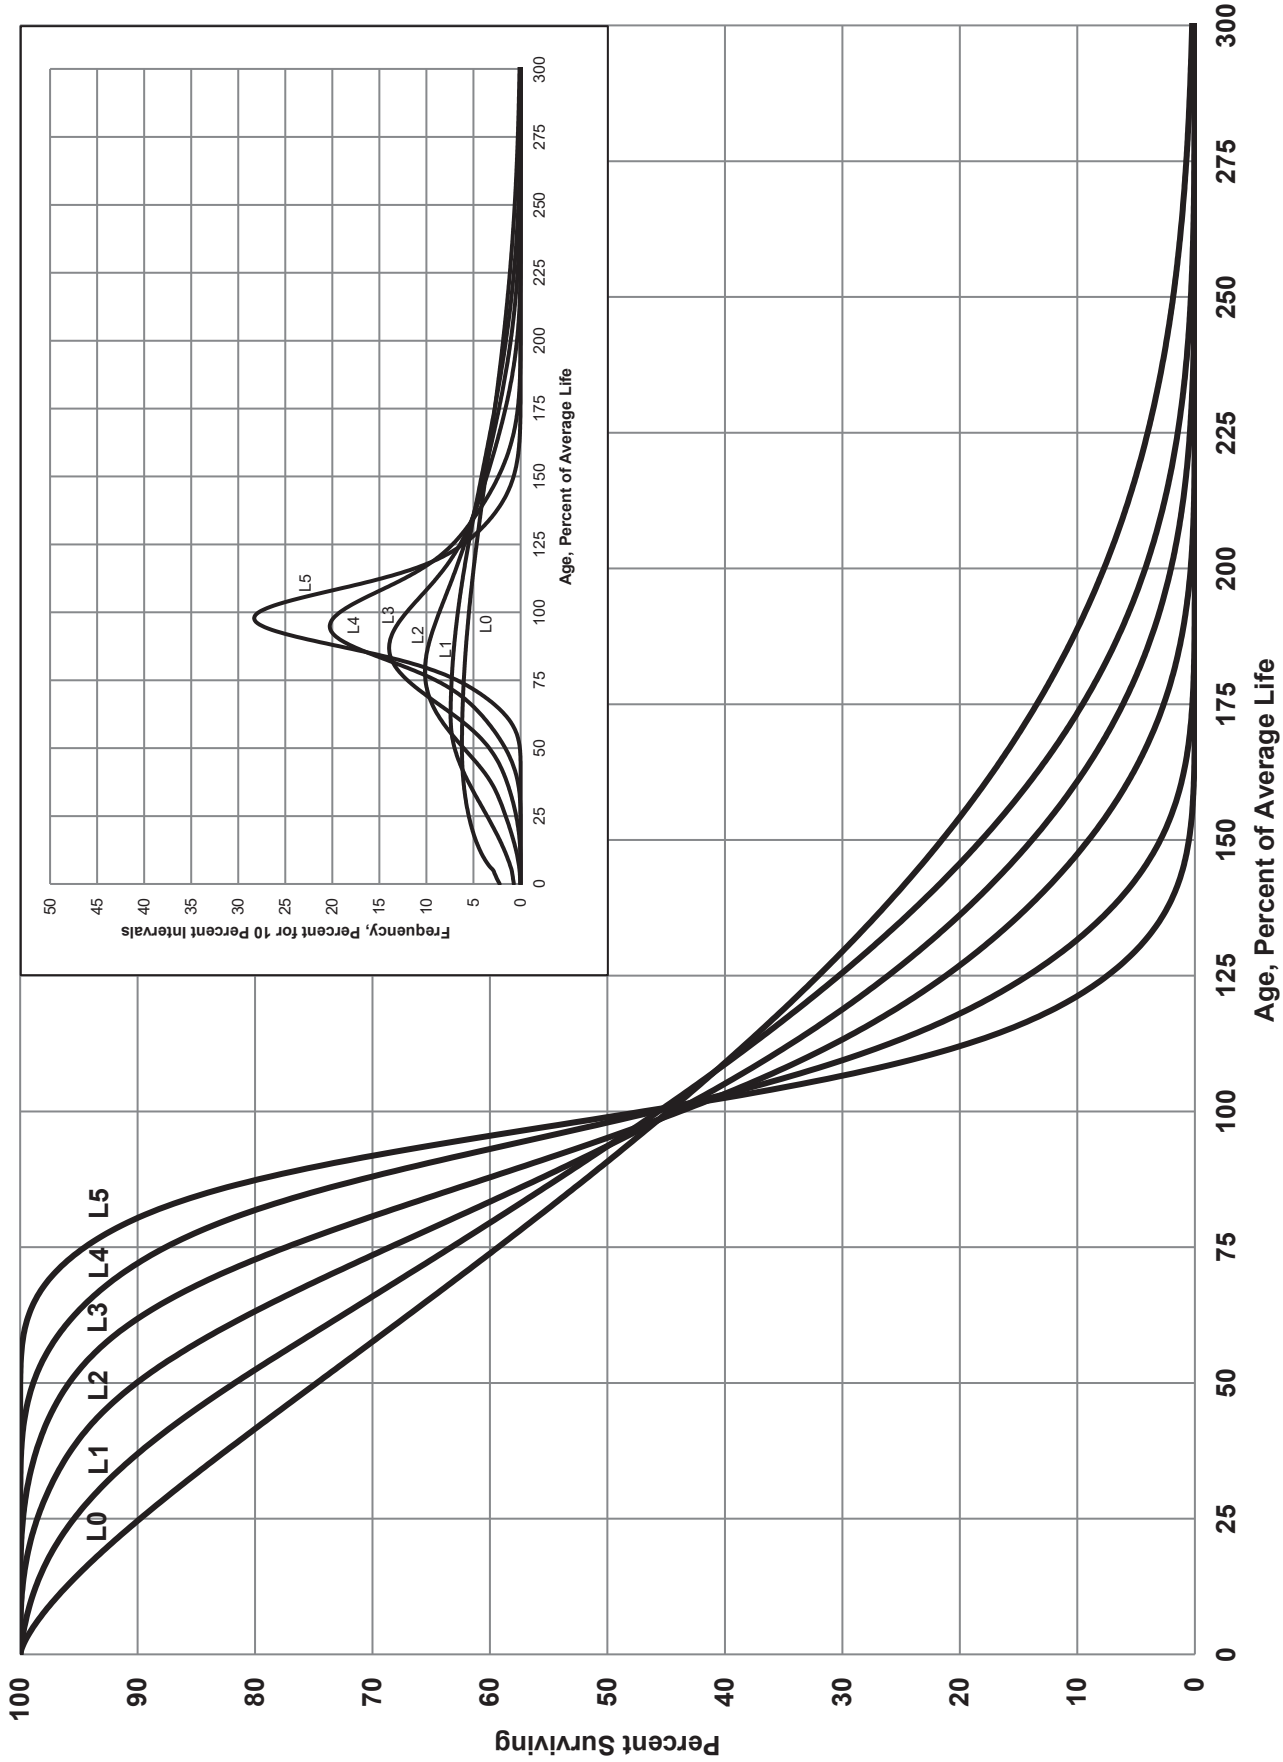

FIGURE 2. LEFT MODAL OR "L" IOWA TYPE SURVIVOR CURVES

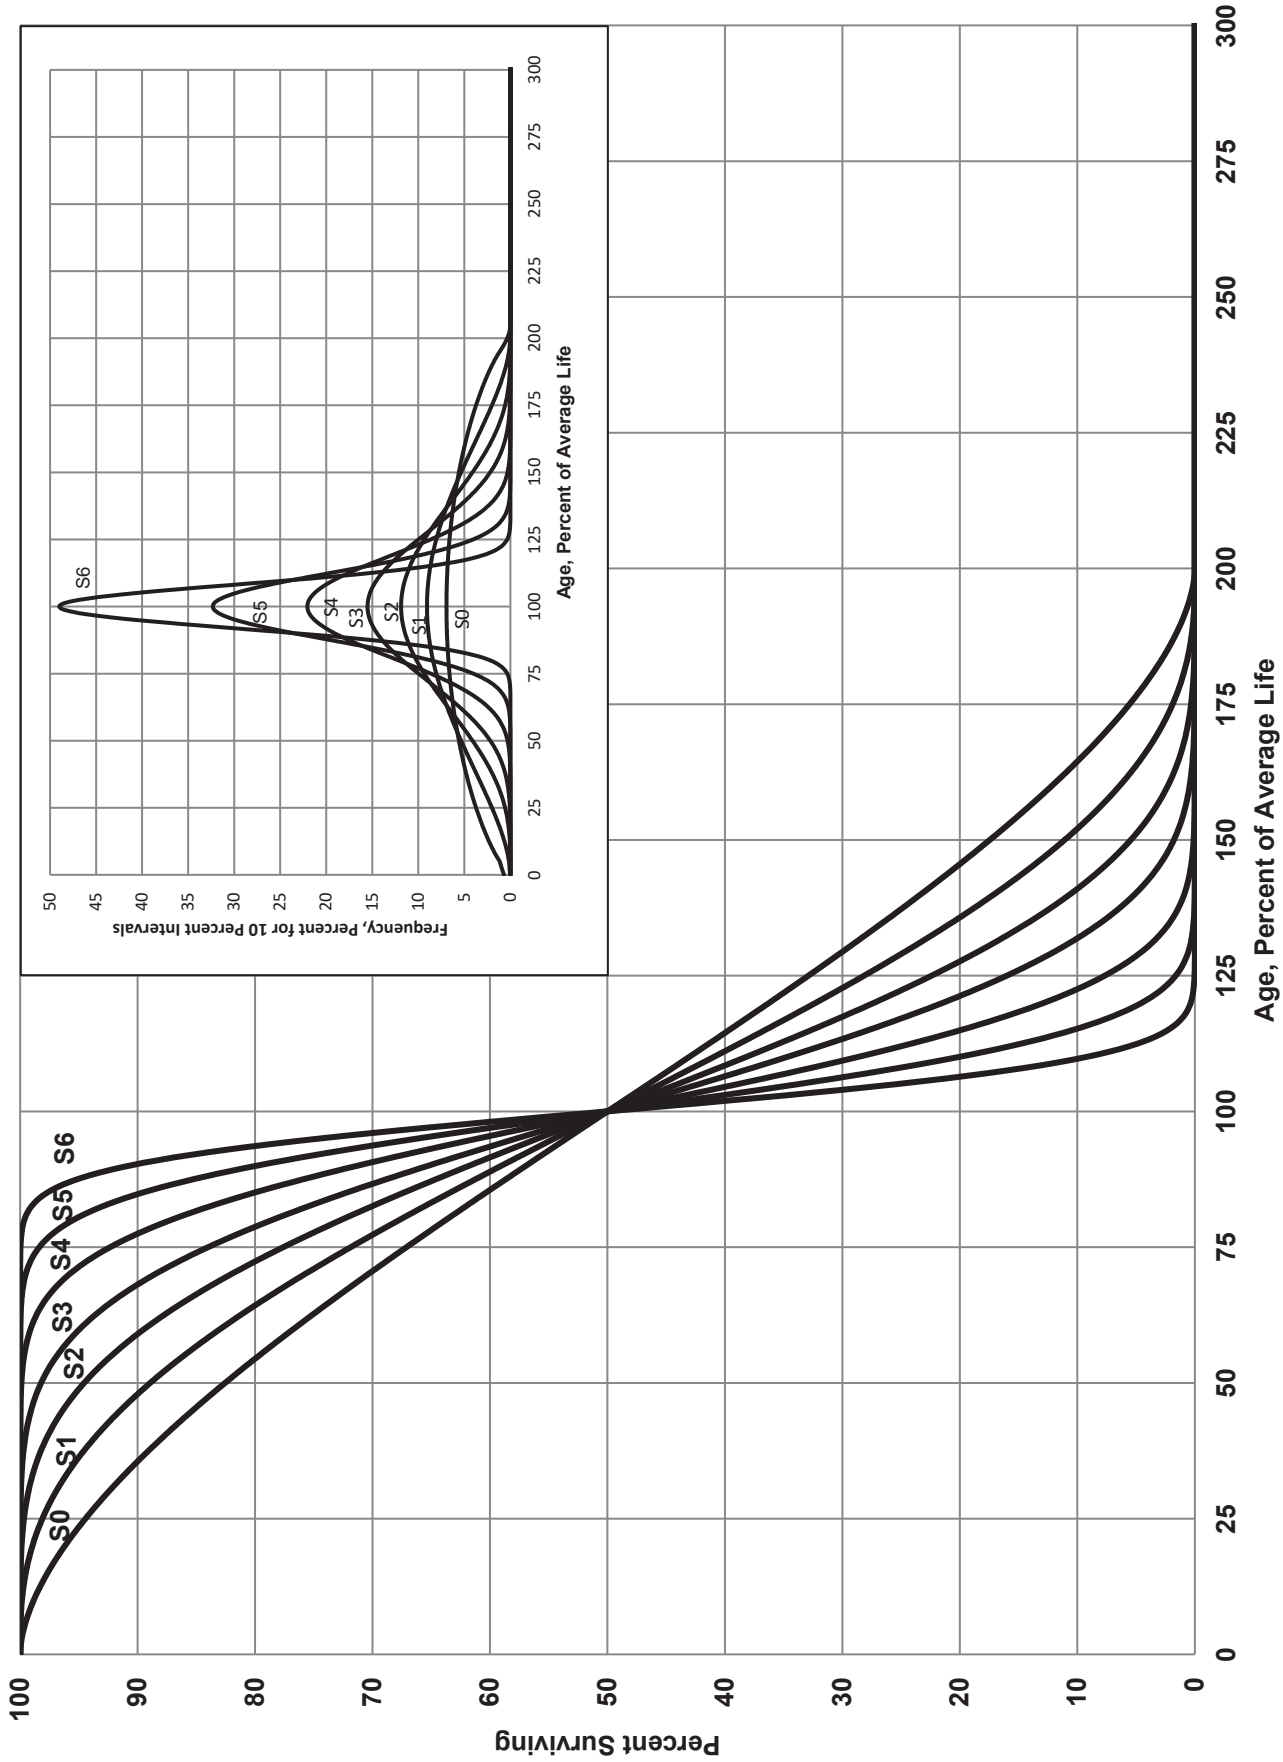

FIGURE 3. SYMMETRICAL OR "S" IOWA TYPE SURVIVOR CURVES

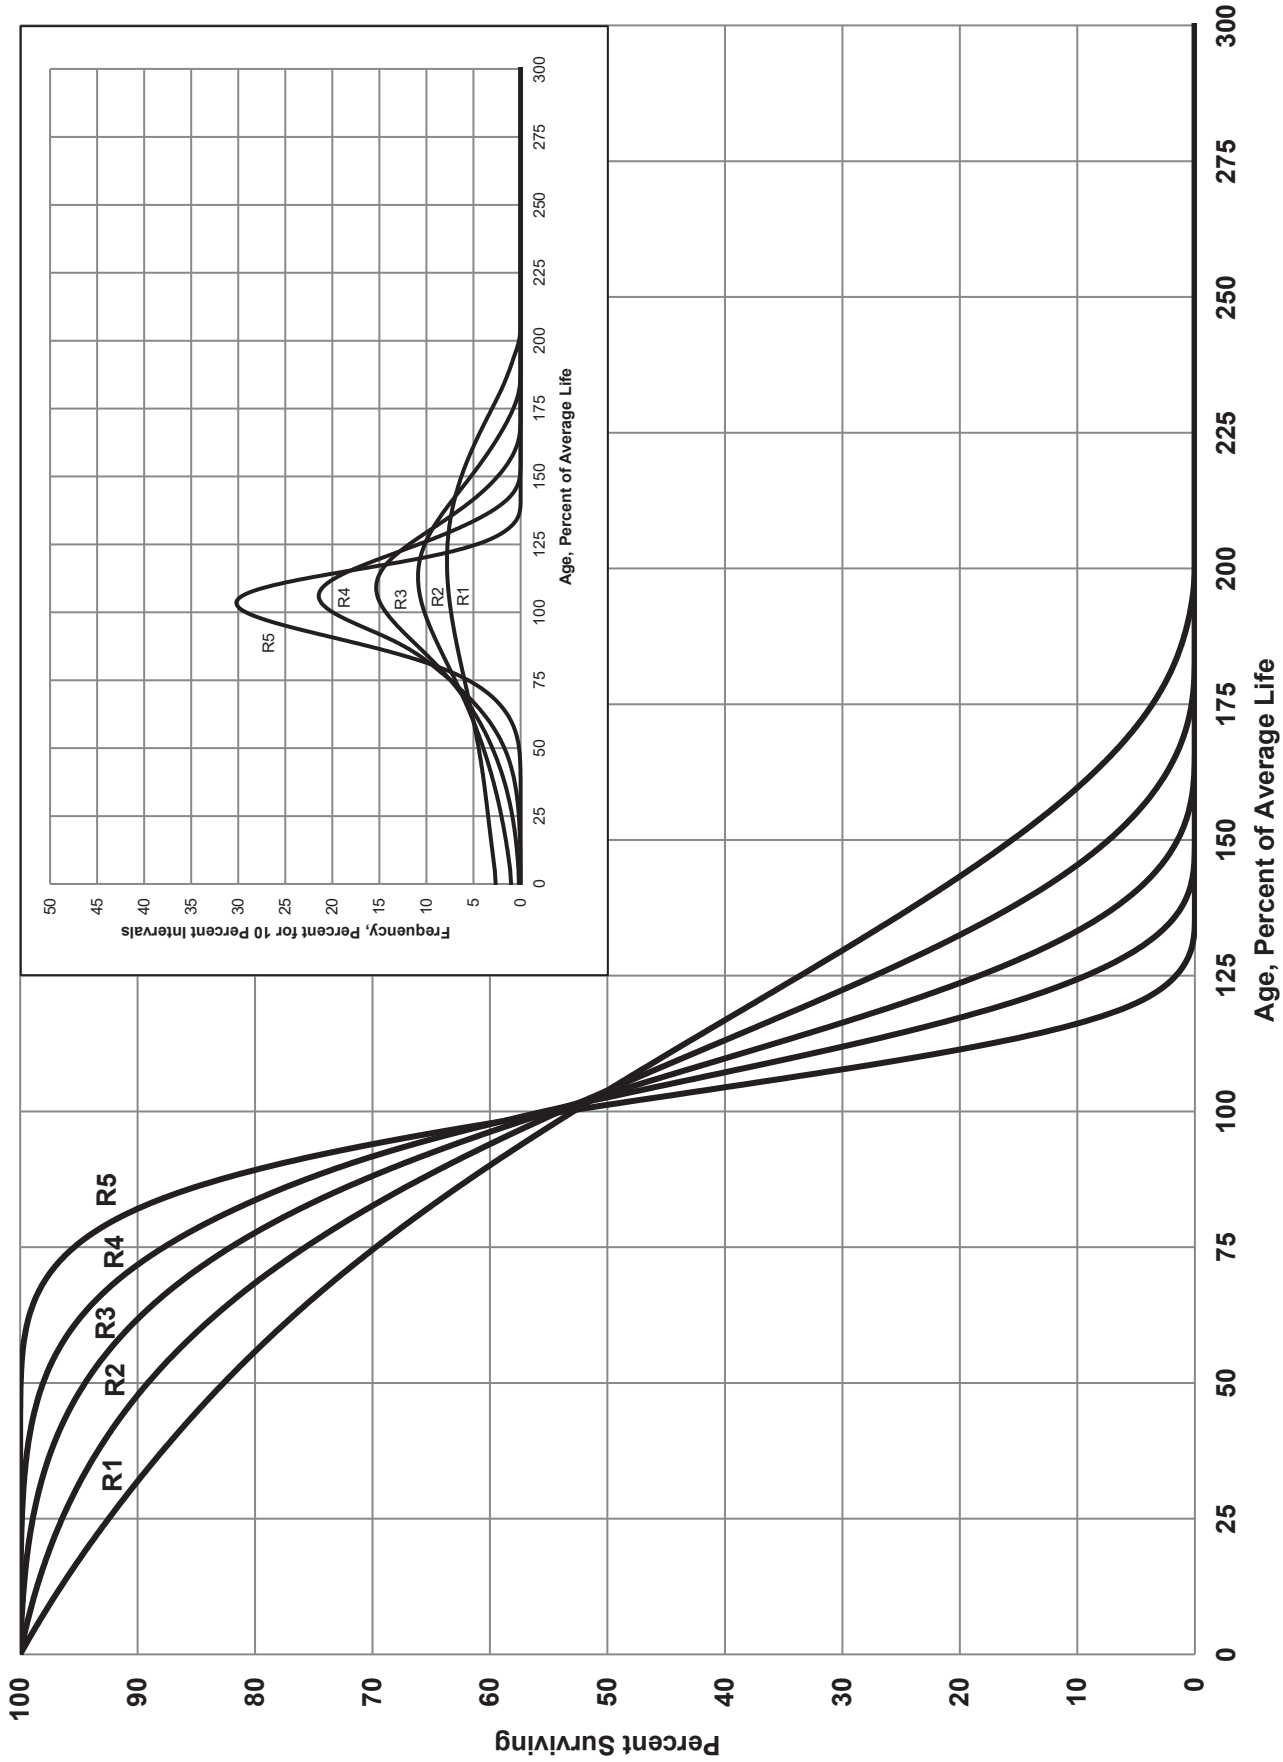

FIGURE 4. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES

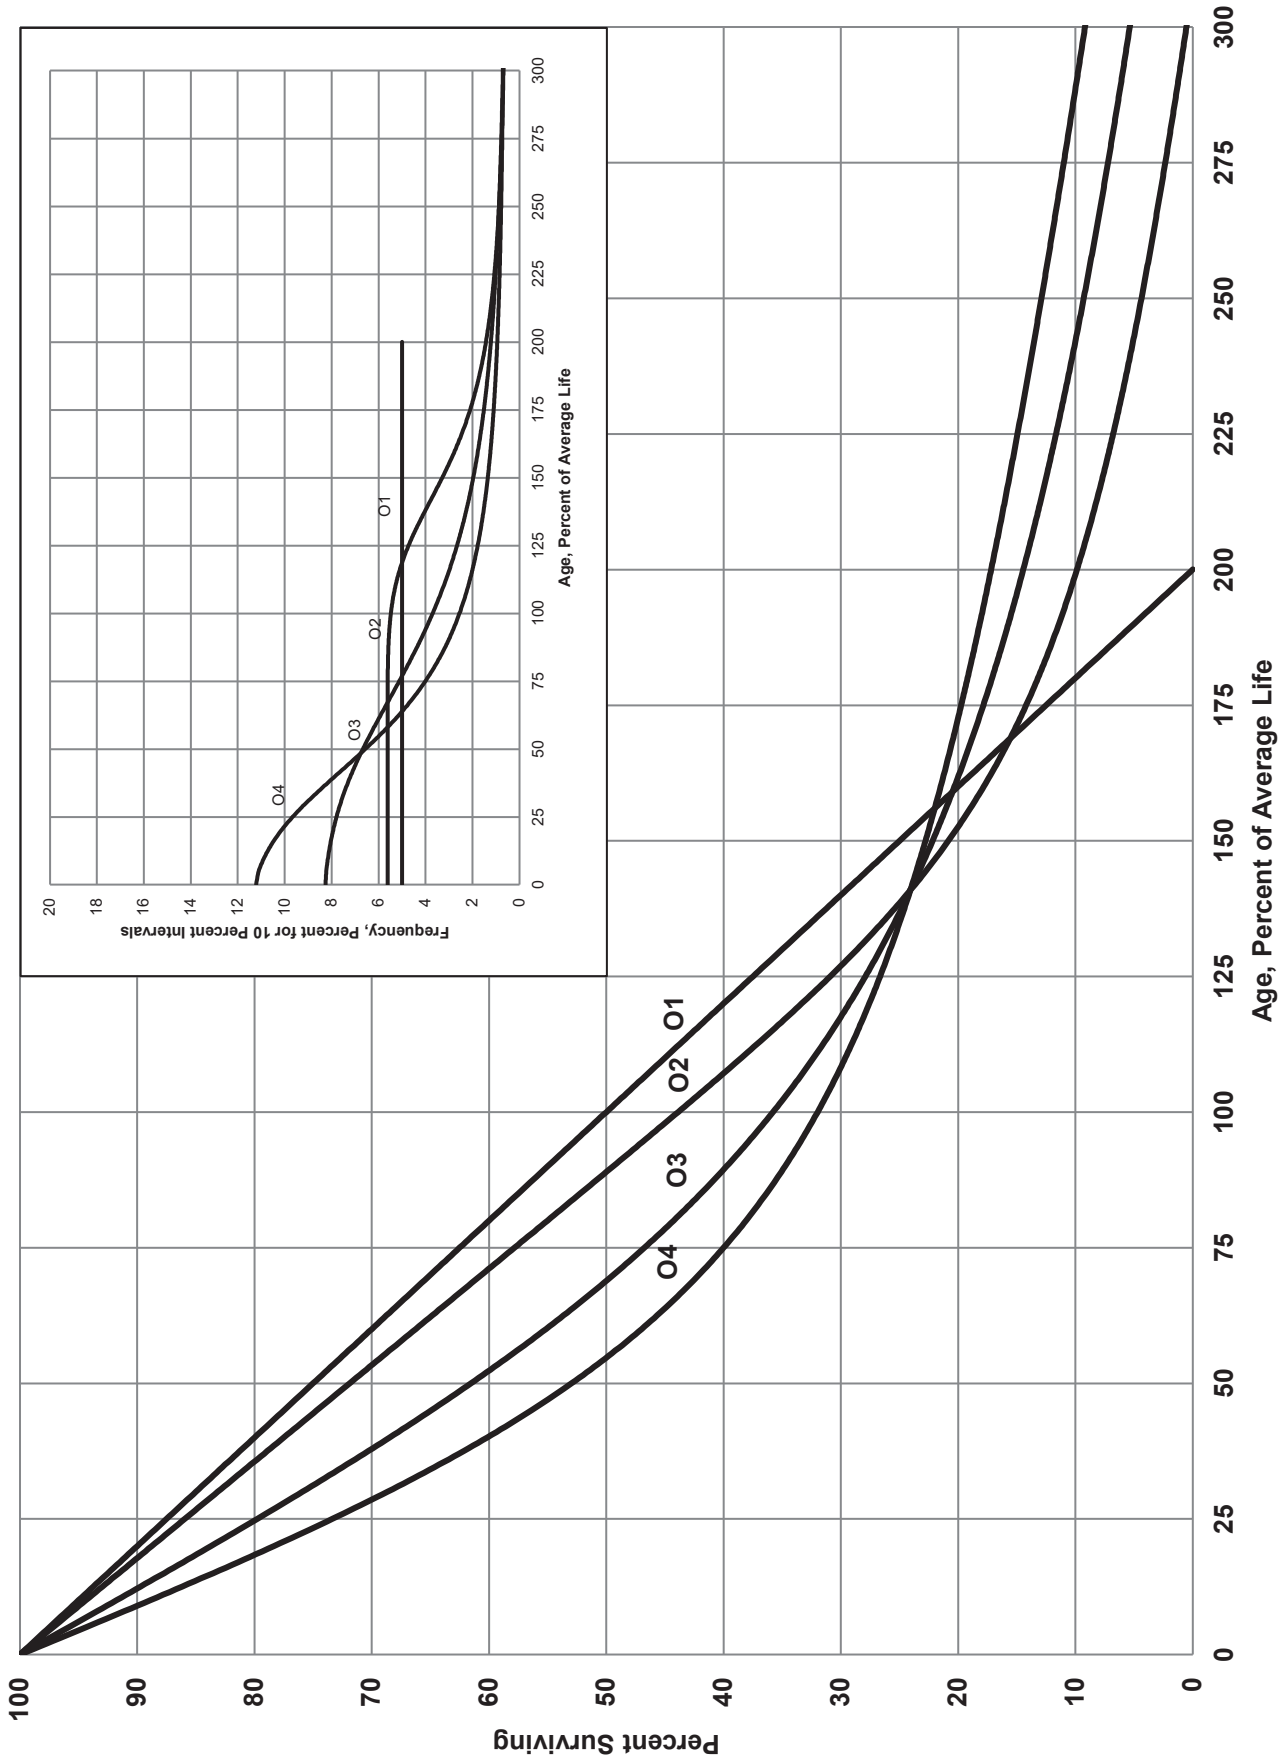

FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."[1] In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

Retirement Rate Method of Analysis

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"[2] "Engineering Valuation and Depreciation,"[3] and "Depreciation Systems."[4]

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

Schedules of Annual Transactions in Plant Records

The property group used to illustrate the retirement rate method is observed for the experience band 2014-2023 for which there were placements during the years 2009-2023. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, $10,000 of the dollars invested in 2009 were retired in 2014. The $10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of $143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2014 retirements of 2009 installations and ending with the 2023 retirements of the 2018 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.

[a] Transfer Affecting Exposures at Beginning of Year
[b] Transfer Affecting Exposures at End of Year
[c] Sale with Continued Use
Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

Schedule of Plant Exposed to Retirement

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2014 through 2023 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2019 are calculated in the following manner:

Exposures at age 0	= amount of addition	= $750,000
Exposures at age ½	= $750,000 - $ 8,000	= $742,000
Exposures at age 1½	= $742,000 - $18,000	= $724,000
Exposures at age 2½	= $724,000 - $20,000 - $19,000	= $685,000
Exposures at age 3½	= $685,000 - $22,000	= $663,000

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT
JANUARY 1 OF EACH YEAR 2014-2023
SUMMARIZED BY AGE INTERVAL

Experience Band 2014-2023

Placement Band 2009-2023

Year Placed	Exposures, Thousands of Dollars Annual Survivors at the Beginning of the Year 2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Total at Beginning of Age Interval	Age Interval

Total	1,975	2,382	2,824	3,318	3,872	4,494	5,247	6,017	6,852	7,799	44,780	

[a]Additions during the year

For the entire experience band 2014-2023, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.

Original Life Table

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

Percent surviving at age 4½	=	88.15				
Exposures at age 4½	=	3,789,000				
Retirements from age 4½ to 5½	=	143,000				
Retirement Ratio	=	143,000	÷	3,789,000	=	0.0377
Survivor Ratio	=	1.000	-	0.0377	=	0.9623
Percent surviving at age 5½	=	(88.15)	x	(0.9623)	=	84.83

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE
CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2014-2023 Placement Band 2009-2023

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
Column 3 from Schedule 1, Column 12, Retirements for Each Year.
Column 4 = Column 3 Divided by Column 2.
Column 5 = 1.0000 Minus Column 4.
Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

Smoothing the Original Survivor Curve

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

PART III. SERVICE LIFE CONSIDERATIONS

PART III. SERVICE LIFE CONSIDERATIONS

Field Trips

In order to be familiar with the operation of the Company and observe representative portions of the plant, a field trip was conducted for the study. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during the field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

During the period of years our firm has conducted depreciation studies for the Company, the field trips have resulted in numerous reviews of the Company's operating areas. The following is a list of the locations visited during the most recent trip.

November 7, 2023

Altoona Service Center
12th Avenue Substation
Westfall Substation
31st Street and New Mill Run Road Substation
Summit Substation
Ebensburg Substation

Judgment.

The survivor curve estimates were based on informed judgment which considered a number of factors. The primary factors were retirement rate analyses of historical service life data; current Company policies and outlook as determined during the discussions with management personnel; and the survivor curve estimates from previous depreciation studies for Pennsylvania Electric Company and other electric companies.

The statistical analyses resulted in good to excellent indications of the survivor patterns experienced for many of the major accounts. The plant accounts or

subaccounts for which the statistical analyses were significant factors in the judgments of the survivor curves are as follows:

Account Number	Title
Distribution Plant	
362.00	Station Equipment
364.00	Poles, Towers and Fixtures
367.00	Underground Conductors and Devices
368.00	Line Transformers
371.00	Installations on Customer Premises - Dusk to Dawn Lights
373.00	Street Lighting and Signal Systems
General Plant	
390.10	Structure and Improvements
390.20	Structures and Improvements - Clearing and Grading
392.30	Transportation Equipment - Heavy Trucks
392.40	Transportation Equipment - Pole Trailers
396.00	Power Operated Equipment

Account 367.00, Underground Conductors and Devices, is used to illustrate the manner in which the study was conducted for the groups in the preceding list. It is a significant account and serves as a typical illustration. Aged plant accounting data have been compiled for the years 1939 through 2023. These data were coded by type of transaction, year in which the transaction took place, and year in which the plant was placed in service. The data were analyzed by the retirement rate method to obtain an indication of the experienced service life characteristics.

The estimated Iowa 44-R2.5 survivor curve is based on the experience band 19396-2023. The estimated survivor curve is an excellent fit of the observed data, has an average service life which is the same as the previous estimate for this account, and is within the typical range of lives used by the electric utility industry.

For Account 368, Line Transformers, the estimate of survivor characteristics is based on the 1919-2023 and 1994-2023 experience bands. Most retirements have been due to the conversion to pad mount from pole mount and failure. Typical service lives for line transformers range from 35 to 50 years. Currently there are more pole mounted transformers but there is a trend toward pad mounted. The continual upgrade of load and capacity will create replacements. During the past 10 to 15 years, Penelec has installed more pad mounted transformers due to requirements in new construction. The Iowa 44-R1 survivor curve reflects the outlook of management, is within the range of estimates used by other utilities and is a reasonable interpretation of a significant portion of the survivor curve through age 70.

The estimate for Account 362, Station Equipment, 62-R1.5, is based on management's expectation of a longer life for transformers which represents a significant portion of this account. Most of the existing transformers are not loaded as high as in the past so a longer life is expected. There are no plans to change out large transformers or circuit breakers until they reach failure levels. Management's expectation of retirements to be low for the next five years is reflected in the 62-year average service life.

The life span technique was used for large office buildings and service centers in Account 390.1, Structures and Improvements. For these large structures in Account 390.1, a life span was estimated for each structure based on its type of construction, use, age, condition and management's plans within the foreseeable future. In Account 390.1, Structures and Improvements - Buildings - Major, an interim survivor curve was

estimated for each location, since interim retirements are normal for such structures and, in fact, have been experienced.

Generally, the survivor curve estimates for the remainder of the accounts were based on engineering judgment, considering the nature of the plant and equipment, review of available historical retirement data and a general knowledge of the service lives for similar equipment in other electric companies.

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

Group Depreciation Procedures

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally, the items within a group do not have identical service lives but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group.

In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

In the equal life group procedure, the property group is subdivided according to service life. That is, each equal life group includes that portion of the property which experiences the life of that specific group. The relative size of each equal life group is determined from the property's life dispersion curve. This procedure eliminates the need to base depreciation on average lives, inasmuch as each group is equivalent to a unit having a single life. The full costs of short-lived units are accrued during their lives, leaving no deferral of accruals required to be added to the annual costs associated with long-lived units. The calculated depreciation for the property group is the summation of the calculated depreciation based on the service life of each equal life group.

Remaining Life Annual Accruals

For the purpose of calculating remaining life accrual rates as of December 31, 2024, the estimated book depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation for the vintages calculated by the equal life group procedure follow. The detailed calculations are set forth in the Results of Study section of the report.

Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future whole life depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account, based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{Average\ Remaining\ Life\ Expectancy}{Average\ Service\ Life}.$$

Equal Life Group Procedure

In the equal life group procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the composite remaining life for the surviving original cost of that vintage. The composite remaining life is derived by compositing the individual equal life group remaining lives in accordance with the following equation:

$$\text{Composite Remaining Life} = \frac{\left(\frac{\text{Book Cost}}{\text{Life}} \times \text{Remaining Life}\right)}{\frac{\text{Book Cost}}{\text{Life}}}$$

The book costs and lives of the several equal life groups which are summed in the foregoing equation are defined by the estimated future survivor curve.

Inasmuch as book cost divided by life equals the whole life annual accrual, the foregoing equation reduces to the following form:

$$\text{Composite Remaining LIfe} = \frac{\sum \text{Whole Life Future Accruals}}{\sum \text{Whole Life Annual Accruals}}$$

or

$$\text{Composite Remaining Life} = \frac{\sum \text{Book Cost} - \text{Calc. Reserve}}{\sum \text{Whole Life Annual Accrual}}.$$

The annual accrual rate for each account is equal to the sum of the remaining life annual accruals for all vintages divided by the account's total original cost. The account's "composite remaining life" is calculated by dividing the sum of the future book accruals for all vintages by the sum of the remaining life annual accruals for all vintages.

The calculated accrued depreciation in the equal life group procedure also represents that portion of depreciable cost which will not be allocated to expense through future accruals. However, the calculation is based at the equal life group level rather than the vintage group level, and does not require the use of averages. The equal life group accrued depreciation ratio is calculated as follows:

$$Ratio = \frac{Remaining\ Life}{Average\ Service\ Life}.$$

Inasmuch as service life minus remaining life equals age, when averages are not employed, the foregoing equation reduces to:

$$Ratio = \frac{Age}{Service\ Life}.$$

The table on the following page illustrates the procedure for calculating straight line equal life group accrued depreciation, using an Iowa 13-L3 survivor curve and a December 31, 2024 calculation date.

In the table, each equal life group is defined by the age interval shown in columns 1 and 2, which identify the ages at which the first and last retirement of each group occur. The group's designated life, shown in column 3, is the midpoint of the interval. In the calculation, the equal life groups of each vintage are arranged such that the midpoint of each one-year age interval coincides with the calculation date, e.g., December 31 in this case. This enables the calculation of annual accruals which are centered on, or as of, the same date as the calculation of accrued depreciation.

The retirement during each age interval, shown in column 4, is the size of each equal life group. It is derived from the Iowa 13-L3 survivor curve and is the difference between the percents surviving (not shown) at the beginning and end of the age interval.

TOTAL			100.00000						

Each equal life group's whole life annual accrual, shown in column 5, equals the group's size (column 4) divided by its life (column 3), except that for the first age interval, the annual accrual is set equal to the group's size.

Columns 6 through 10 show the derivation of the whole life annual factor and accrued factor for each vintage based on the data developed in the first five columns. The year installed is shown in column 6. For all vintages other than the first year (2024), the summation of annual accruals for each year installed, shown in column 7, is calculated by adding one-half of the group annual accrual (column 5) for that vintage's current age interval plus the group annual accruals for all succeeding age intervals. For

example, the figure 8.70582436455 for 2023 equals one-half of 0.10114600000 plus all of the succeeding figures in column 5. Only one half of the annual accrual for the vintage's current age interval group is included in the summation because the equal life group for that interval expires at the midpoint of the current year.

The summation of annual accruals (column 7) for installations during 2024 is calculated on the basis of an in-service date at the midpoint of the year, i.e., June 30. Inasmuch as the overall calculation is centered on December 31, 2024, the first figure in column 7, for vintage 2024, equals the group annual accrual for 2024 plus one-half of the group annual accruals for each of the subsequent years.

The average percent surviving, derived from the Iowa 13-L3 survivor curve, is shown in column 8 for each age interval. The annual factor, shown in column 9, is the result of dividing the summation of annual accruals (column 7) by the average percent surviving (column 8).

The accrued depreciation factor, shown in column 10, equals the annual factor multiplied by the age of the group as of December 31, 2024.

CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization, as defined in the Uniform System of Accounts, is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on

judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization periods and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is appropriate for certain General Plant accounts that represent numerous units of property, but a very small portion of depreciable electric plant in service. The accounts and their amortization periods are as follows:

Account		Amortization Period, Years
391.00	Office Furniture and Equipment	
	Furniture	20
	Office Machines	10
	Data Processing - Smart Meters	5
	Personal Computers	5
393.00	Stores Equipment	25
394.00	Tools, Shop and Garage Equipment	25
395.00	Laboratory Equipment	20
397.00	Communication Equipment	15
398.00	Miscellaneous Equipment	20

For the purpose of calculating annual amortization amounts as of December 31, 2024, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve is allocated among vintages with an age less than the amortization period in proportion to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the future

amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

AMORTIZATION OF NET SALVAGE

Experienced and estimated net salvage is incorporated in the results of the study, as it was reported on the Company's books and records for the period January 1, 2020 through December 31, 2024. Results of the calculations are shown in Table 4.

Net salvage experienced during the five-year period is presented in this manner to determine the amount of negative net salvage to be amortized for book purposes. In developing the amount to be amortized, the data for the accounts which experienced positive net salvage have been netted with those for accounts which experienced negative net salvage.

In order to be consistent with this manner of recognizing salvage, no adjustments for net salvage were made to the annual accruals and accrued depreciation calculated for each individual account. There were no exclusions from the 2020 through 2024 net salvage accrual.

PART V. RESULTS OF STUDY

PART V. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages V-4 through V-8 summarize the results of the depreciation study as of December 31, 2024. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of December 31, 2024, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book depreciation reserve to December 31, 2024. Table 3 sets forth the calculation of the depreciation accruals for the twelve months ended December 31, 2024. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2020 through 2024.

DESCRIPTION OF DETAILED TABULATIONS

Supporting statistical data for the estimates of average service lives and survivor curves, the annual depreciation calculations, and gross salvage and cost of removal for the years 2020-2024 are presented in three sections.

The section beginning on page VI-2 sets forth, for each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. A cumulative summary, by year installed, for electric plant and the supporting data for the original cost depreciation calculations are presented in the section beginning on page VII-3. The tabulations of experienced and estimated net salvage by

year by account for the five-year period, 2020-2024, are presented in the section beginning on page VIII-2

In the first section, the survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the type curve designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. In cases where only a segment of the estimated curve is used in the depreciation calculation, the numeral used for identification purposes is not a designation of the average life of the group. The titles of the charts indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which the retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The tables of the calculated annual depreciation related to original cost are presented in the second section and indicate the estimated average survivor curves used in the calculations. The tables set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life expectancy and the calculated annual accrual.

Detailed tabulations setting forth the cost of removal and gross salvage amounts, by plant account for each year, are presented beginning on page VIII-2. The total gross salvage and removal costs, by year, were used to calculate the five-year net salvage amortization presented in Table 4 on page V-8.

Attention Ms. Joanna M. Savage
Director, Rates and Regulatory Affairs – PA

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to the electric plant of Pennsylvania Electric Company ("Penelec"). The results of our study as of December 31, 2025, are presented in the attached detailed report.

The results of our study as of December 31, 2024, as well as a discussion of the methods and procedures used in the calculations and the support for the service life estimates, are included in our report titled "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of December 31, 2024." The same methods, procedures and estimates were used in both studies.

The results of our study as of December 31, 2025, are summarized on pages I-3 through I-7 of the attached report.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages I-3 through I-7 summarize the results of the depreciation study as of December 31, 2025. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of December 31, 2025, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book depreciation reserve to December 31, 2025. Table 3 sets forth the calculations of the depreciation accruals for the twelve months ended December 31, 2025. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2021 through 2025.

DESCRIPTION OF DETAILED TABULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-7. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2021 through 2025, beginning on pages III-2 through III-6.

Attention Ms. Joanna M. Savage
Director, Rates and Regulatory Affairs – PA

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to electric plant of Pennsylvania Power Company ("Penn Power"). The results of our study as of December 31, 2023, are presented in the attached detailed report.

The results of our study as of December 31, 2024, as well as a discussion of the methods and procedures used in the calculations and the support for the service life estimates, are included in our report titled "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of December 31, 2024." The same methods, procedures and estimates were used in both studies.

The results of our study as of December 31, 2023, are summarized on pages I-3 through I-5 of the attached report.

Respectfully submitted,

PART I. RESULTS OF STUDY

PENNSYLVANIA POWER COMPANY
DEPRECIATION STUDY

PART I. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

The results of the depreciation study are summarized in Table 1, which sets forth the calculated annual depreciation related to Electric Plant in Service as of December 31, 2023. Table 2 presents the experienced gross salvage and cost of removal associated with regular retirements during the five-year period, 2019-2023 and the annual amortization of net salvage.

DETAILED TABULATIONS OF DEPRECIATION CALCULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on II-7. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2019 through 2023, beginning on beginning on III-2 through III-4.

Attention Ms. Joanna M. Savage
Director, Rates and Regulatory Affairs – PA

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to electric plant in service. The results of our study as of December 31, 2024 are presented in the attached report. The results of our study as of December 31, 2023 are presented in our report titled "2023 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of December 31, 2023". The same methods, procedures and estimates are used in both studies.

The attached report sets forth a description of the methods and procedures upon which the studies were based, the estimates of survivor curves and the calculated annual depreciation rates as of December 31, 2024.

Respectfully submitted,

GANNETT FLEMING VALUATION

PART I. INTRODUCTION

PENNSYLVANIA POWER COMPANY
DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study conducted for Pennsylvania Power Company("Penn Power") to determine the annual depreciation accrual rates and amounts for ratemaking purposes applicable to the original cost of electric plant as of December 31, 2024.

The depreciation accrual rates and amounts presented herein are based on estimated survivor curves and on methods and procedures set forth in previous orders approved by the Pennsylvania Public Utility Commission. The estimated survivor curves presented herein were based on the results of a service life study incorporating statistical analyses of data through 2023.

BASIS OF STUDY

Depreciation and Amortization

Depreciation, as defined in the Uniform System of Accounts, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of electric plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs over a period of time by allocating annual amounts to expense. Each annual

amount of such depreciation expense is part of that year's total cost of providing utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

The calculation of annual and accrued depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. These subjects are discussed in the sections which follow.

For most plant accounts, depreciation accruals and accrued depreciation were calculated using the straight line method, the remaining life basis, and the equal life group (ELG) procedure for all vintages. The calculations were based on the attained ages and estimated service life characteristics for each depreciable group of electric property. For certain general plant accounts, the amortization amounts, annual and accrued, were based on the age of the vintage and the selected amortization period.

Survivor curves were used to reflect the expected dispersion of retirements, thus providing a consistent method of estimating service lives and depreciation for mass property. Iowa type curves were used to depict the estimated survivor curves. For life span groups, the estimate of life characteristics is consistent because the calculated lives of the units within a group are obtained by employing a single probable retirement date for the entire group.

Service Life Estimates

The method of estimating service life consisted of compiling the service life history of the plant accounts, subaccounts or depreciable groups, reducing this history to trends through the use of acceptable actuarial techniques, and forecasting the trend of survivors for each depreciable group on the basis of interpretations of past trends and consideration of Company plans for the future. The combination of the historical trend and the estimated future trend yielded a complete pattern of life characteristics from which the average service life was derived.

The Company's service life estimates used in the depreciation calculation incorporated historical data compiled through 2023 from the property records of the Company. Such data included plant additions, retirements, transfers and other activity. Generally, retirement data for the years 1943 through 2023 were used in the actuarial life table computations which were the primary statistical support of the service life estimates.

A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirement was obtained through field trips conducted during the course of the service life study. Discussions with operating and management personnel also provided information regarding plans for the future which was incorporated in the interpretation and extrapolation of the statistical analyses.

AMORTIZATION OF NET SALVAGE

Inasmuch as this report relates primarily to Pennsylvania rate regulation practices, under which experienced costs of negative net salvage are amortized after their occurrence, no adjustments for expected salvage were made to either the annual

depreciation accrual or the calculated accrued depreciation for the individual accounts. The annual provision for recovering negative net salvage is based on the amortization of net salvage over a five-year period, as established by the Commission.

PART II. ESTIMATION OF SURVIVOR CURVES

PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below and the development of net salvage is discussed in later sections of this report.

SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

Iowa Type Curves

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

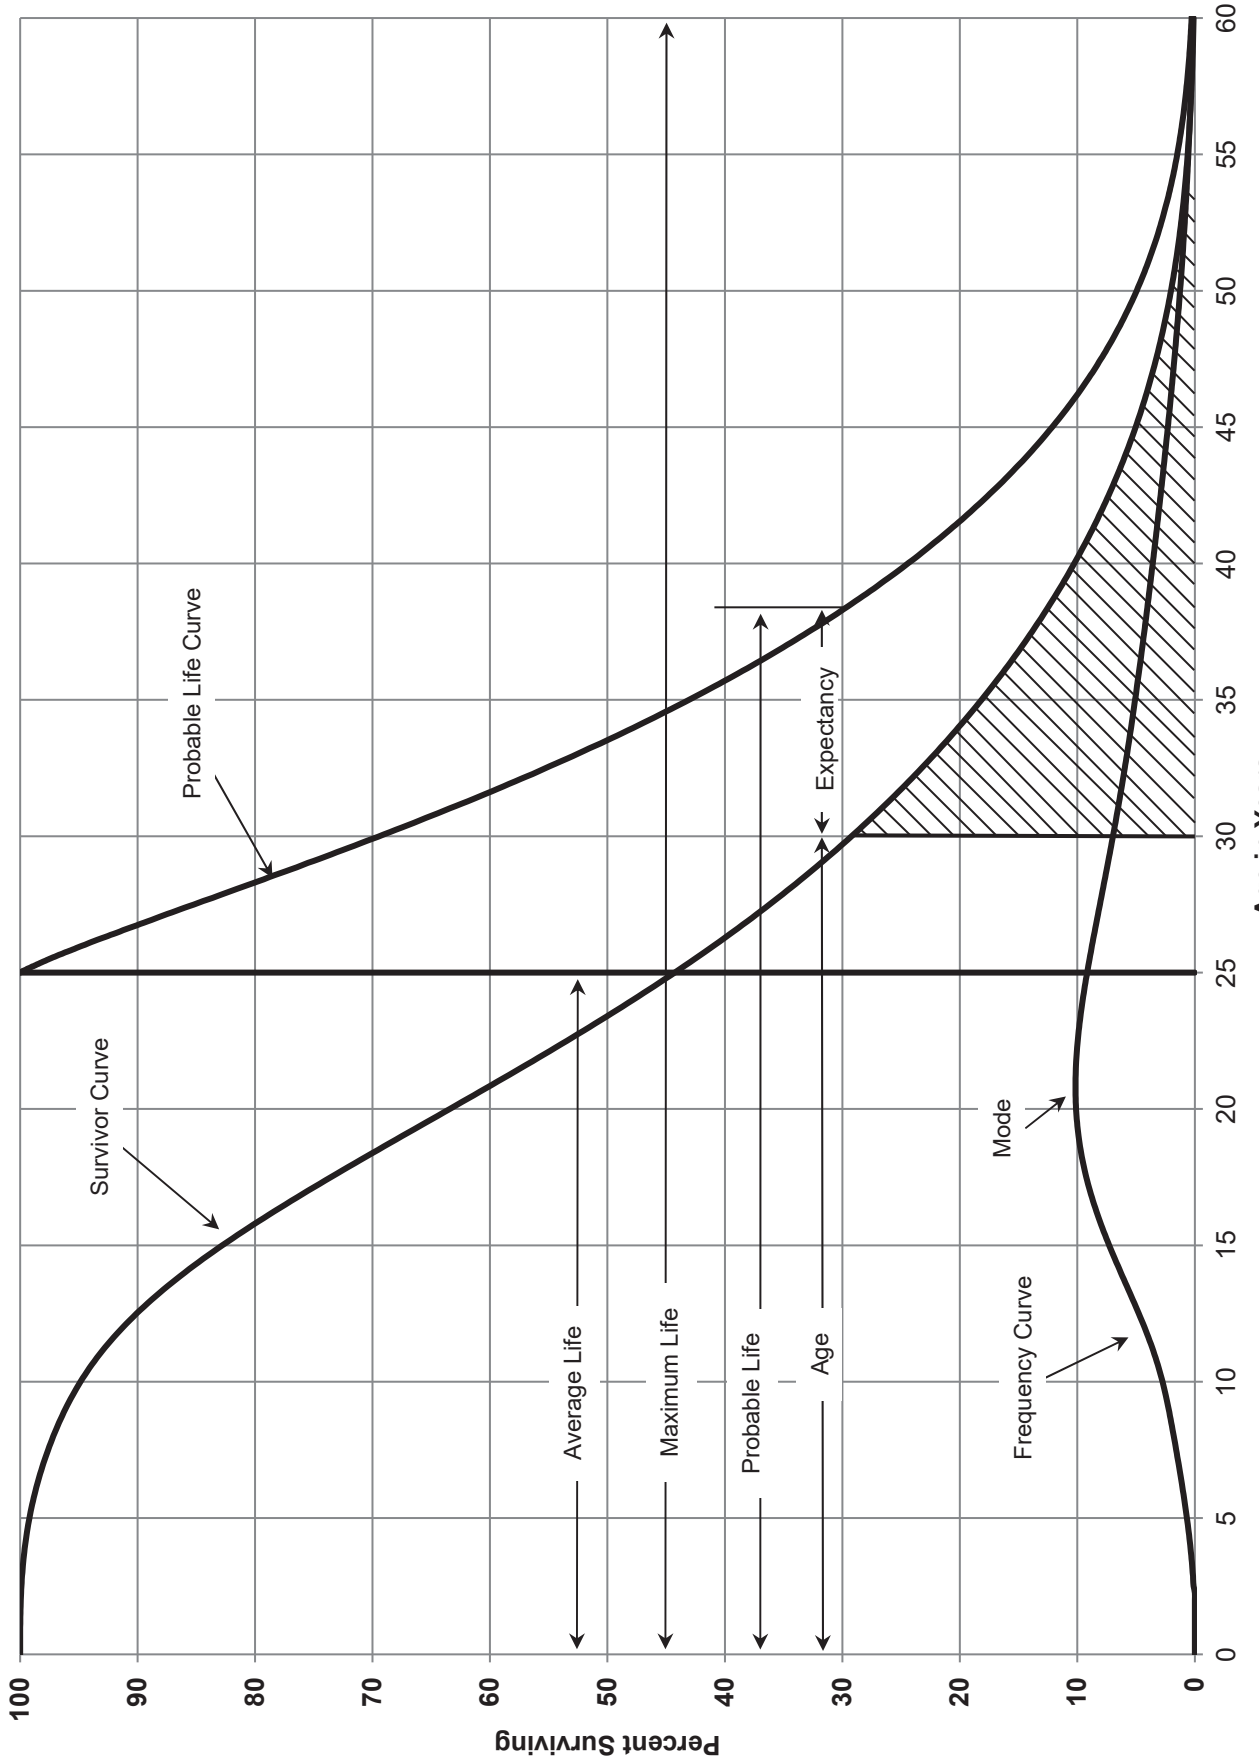

FIGURE 1. TYPICAL SURVIVOR CURVE AND DERIVED CURVES

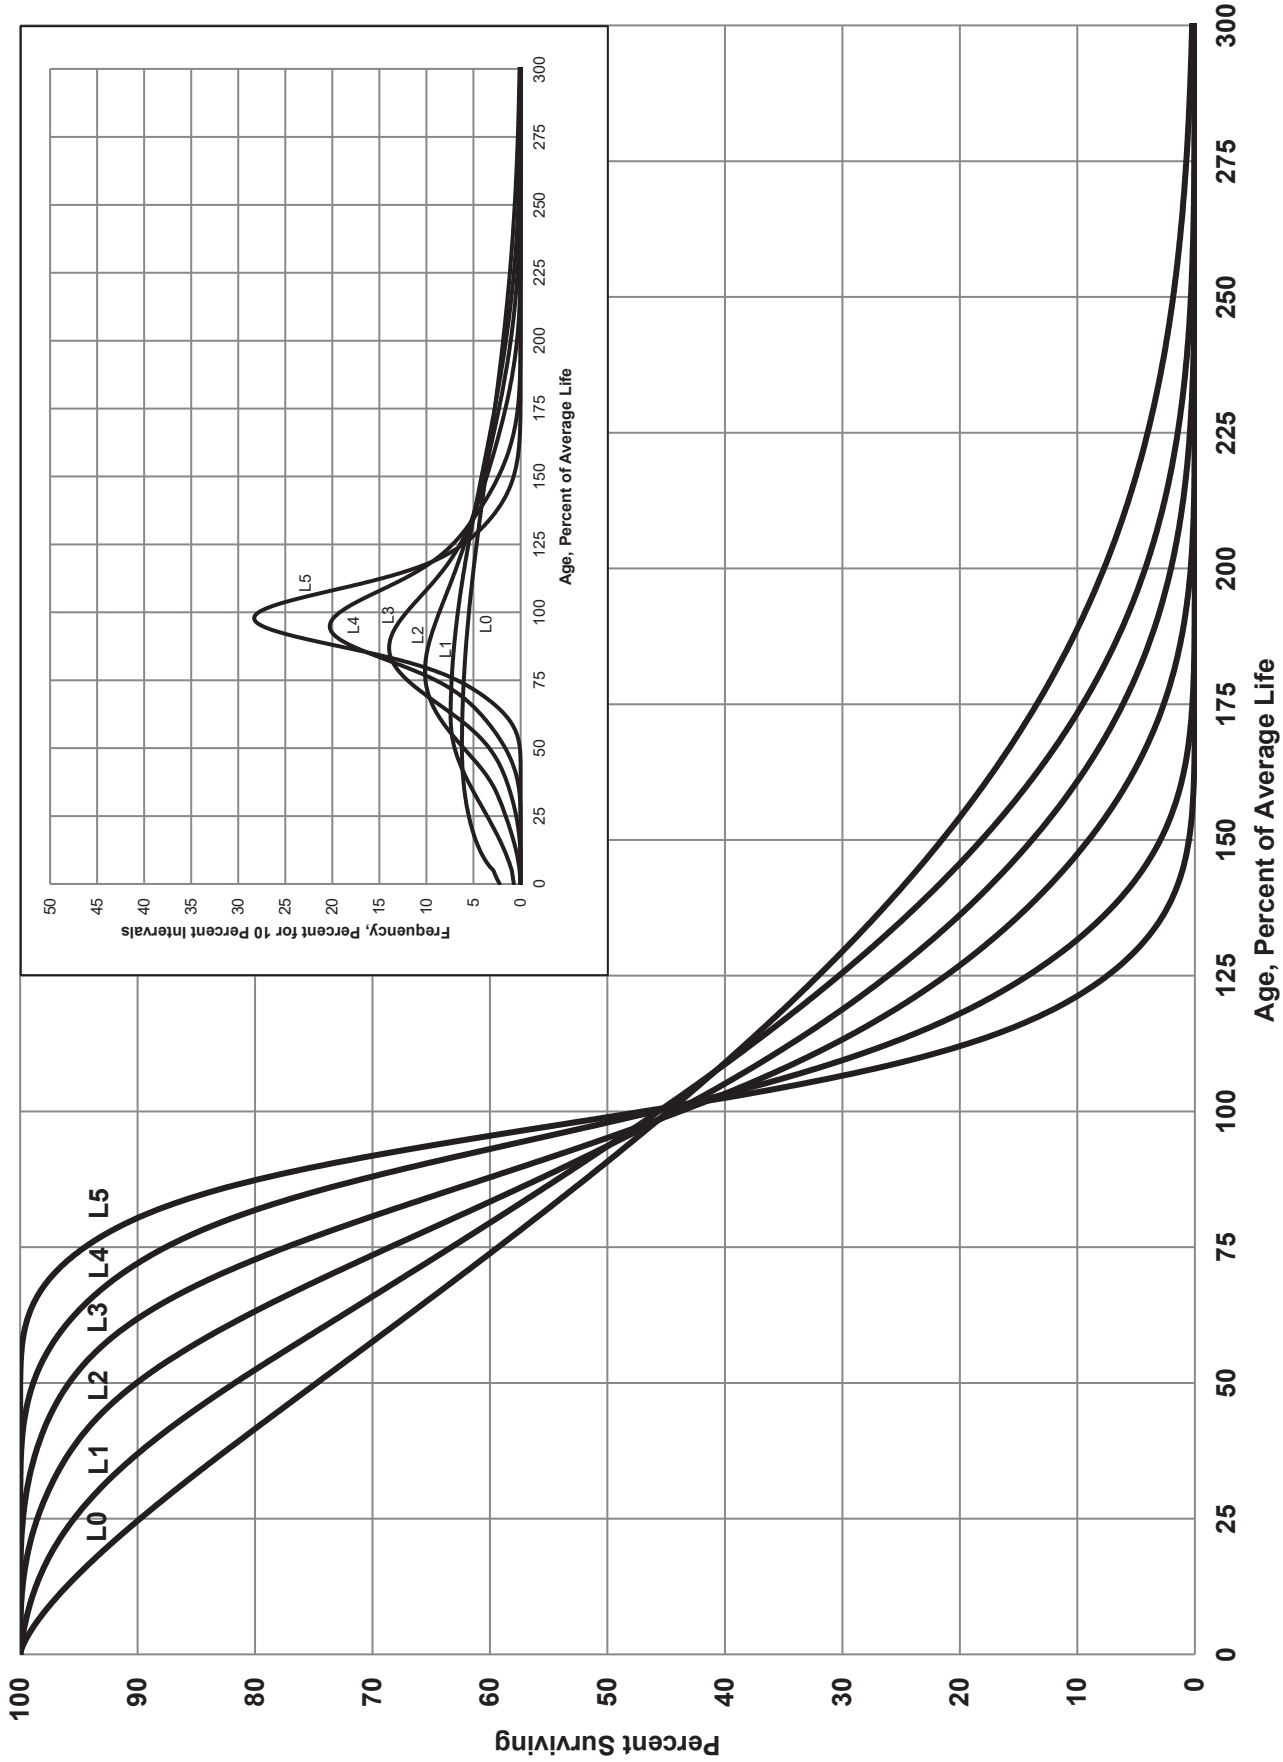

FIGURE 2. LEFT MODAL OR "L" IOWA TYPE SURVIVOR CURVES

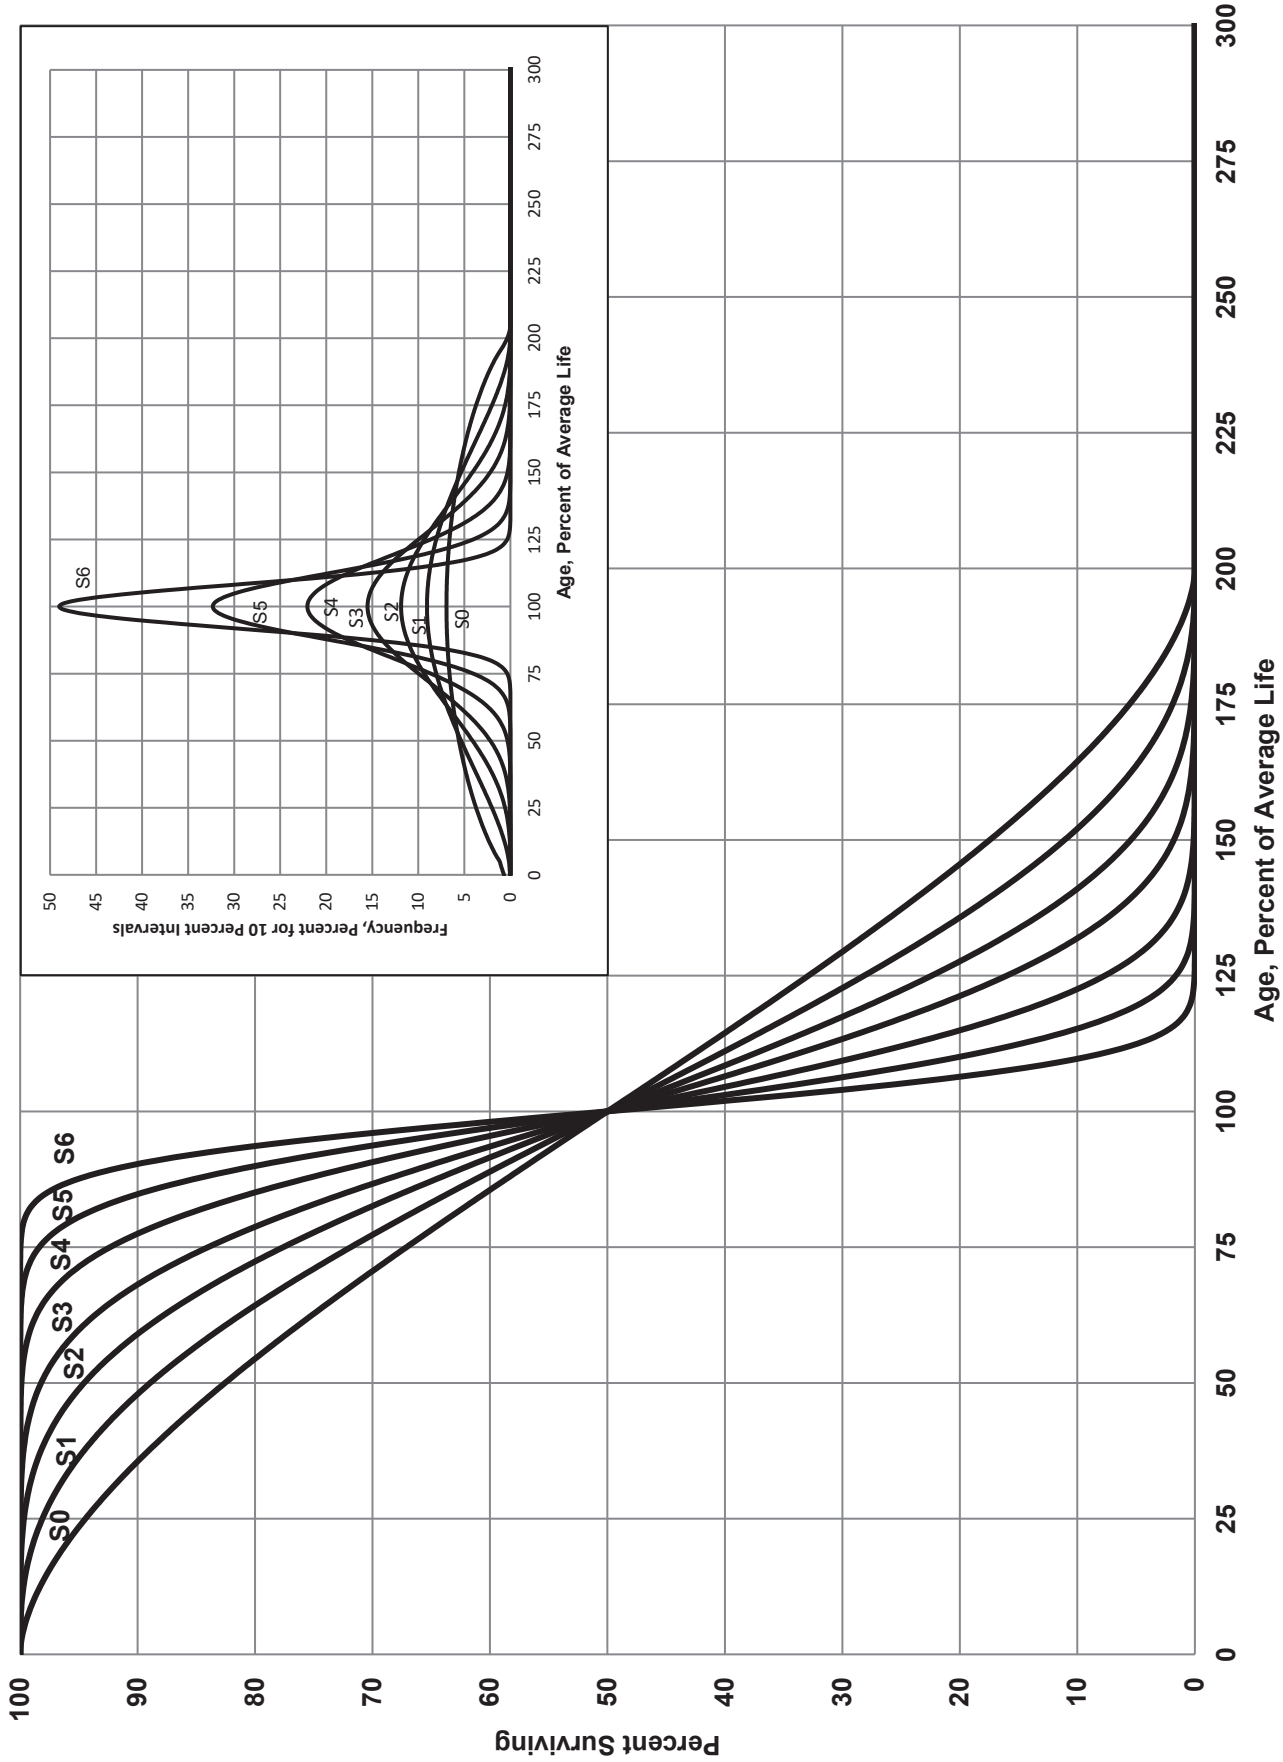

FIGURE 3. SYMMETRICAL OR "S" IOWA TYPE SURVIVOR CURVES

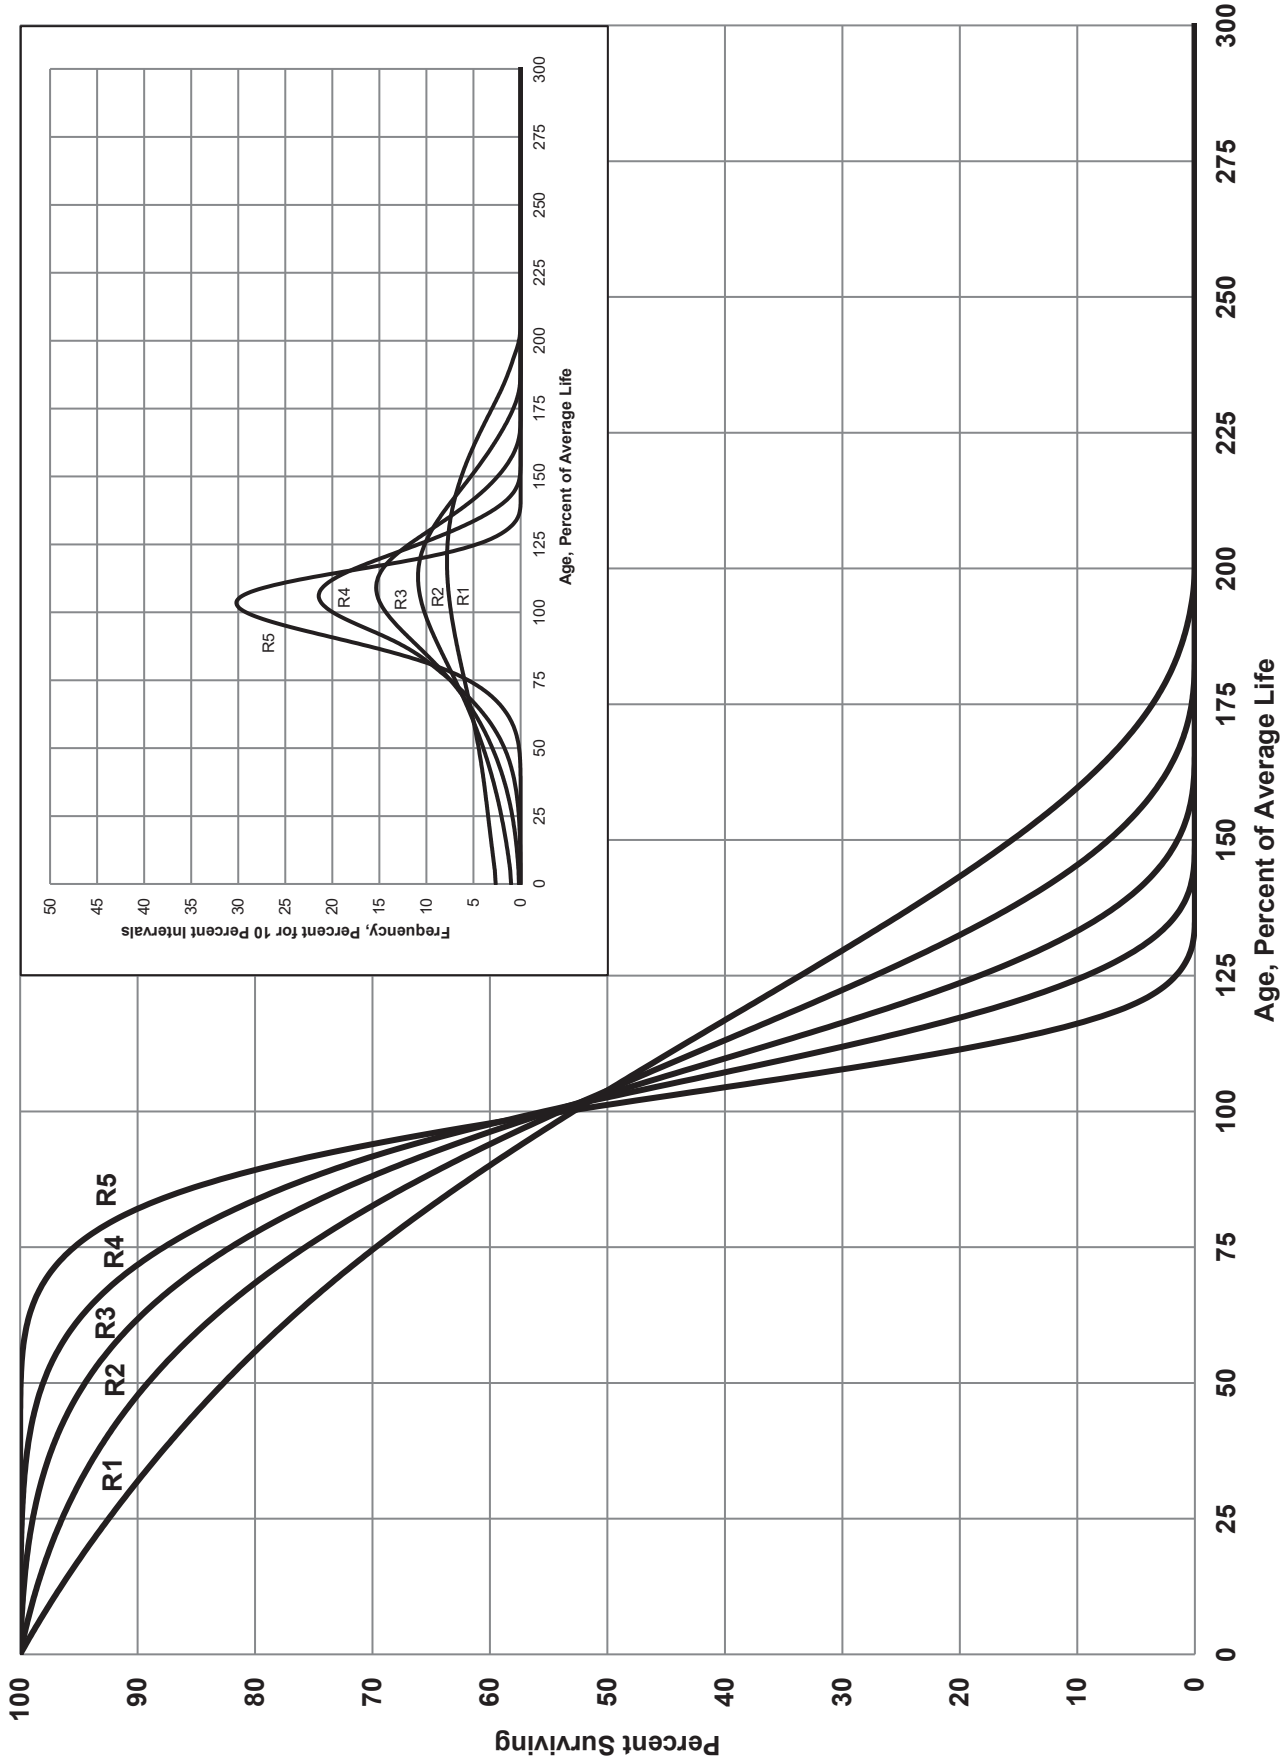

FIGURE 4. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES

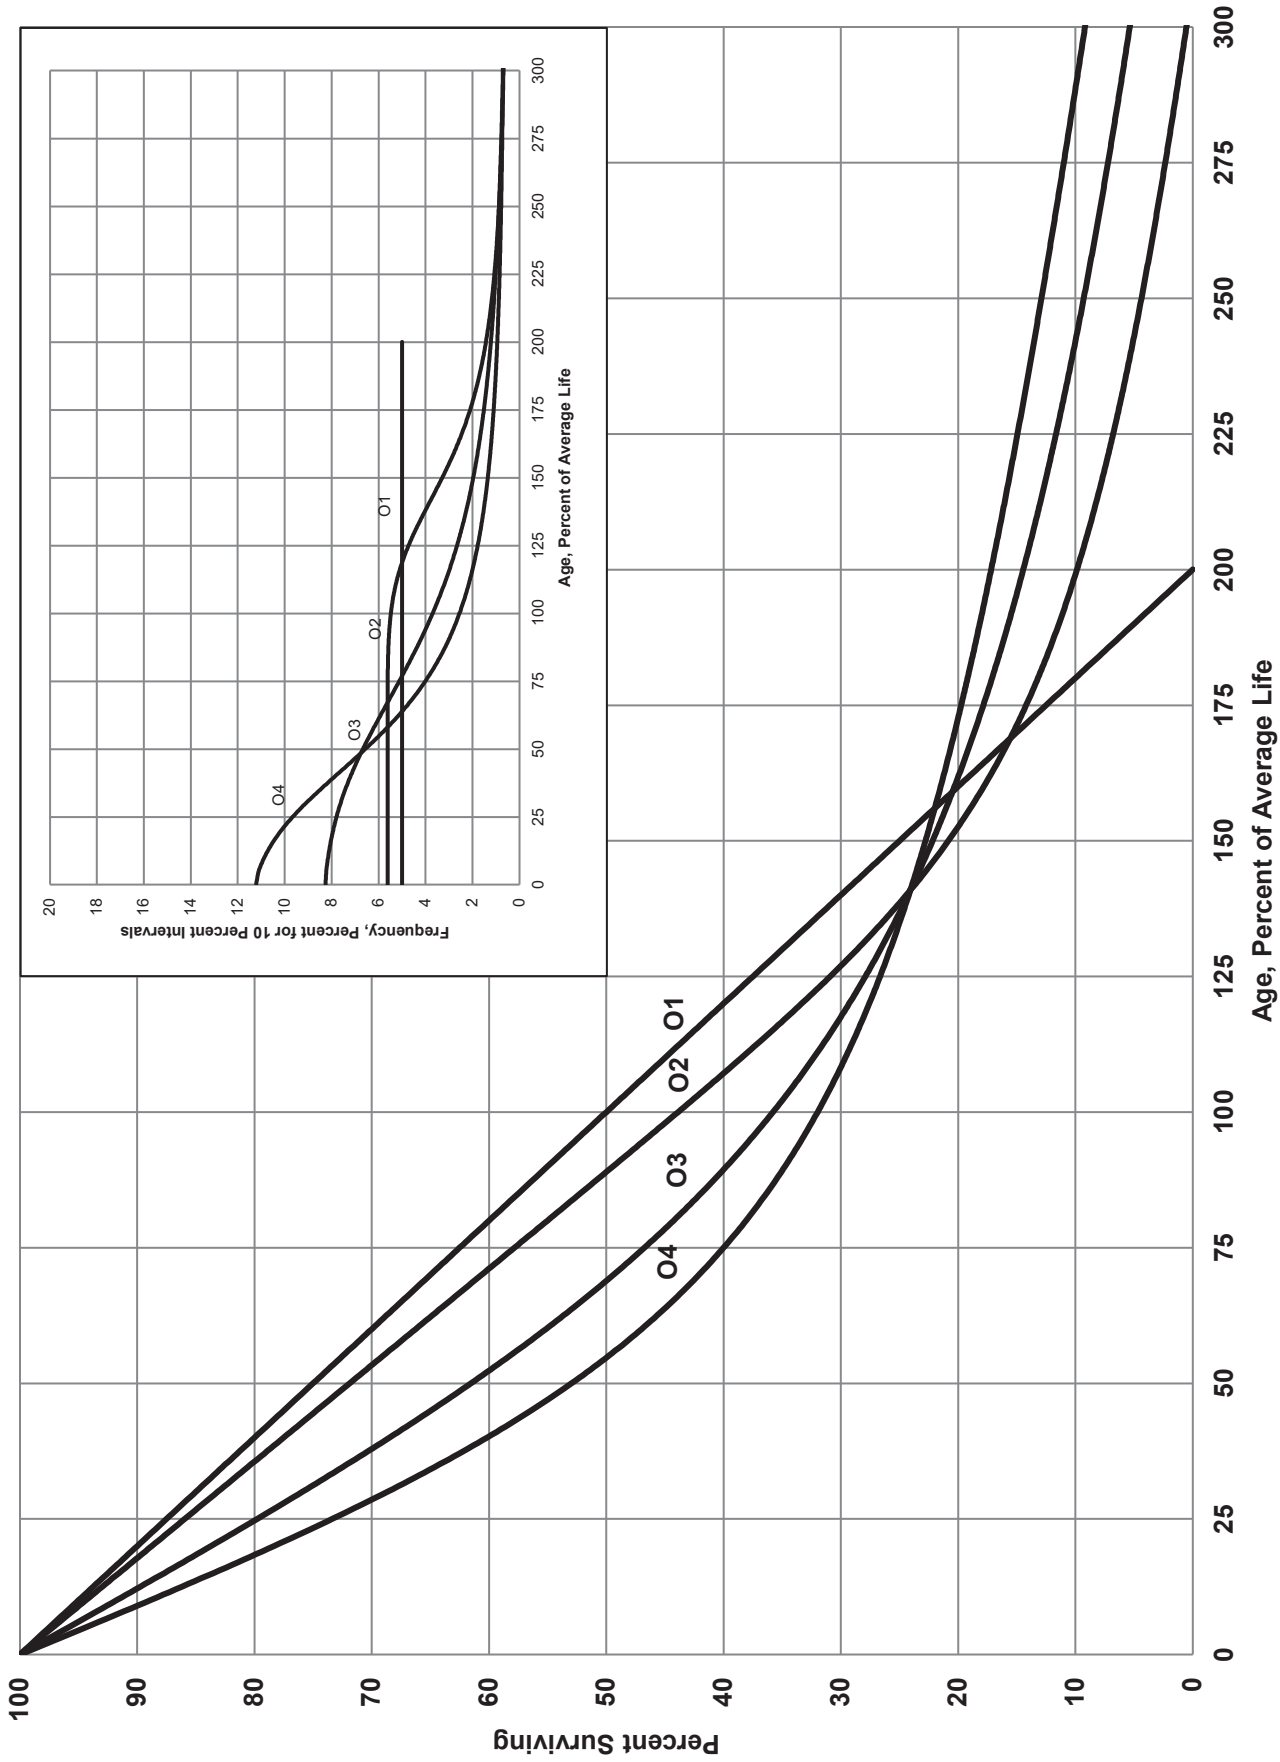

FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."[1] In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

Retirement Rate Method of Analysis

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"[2] "Engineering Valuation and Depreciation,"[3] and "Depreciation Systems."[4]

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

Schedules of Annual Transactions in Plant Records

The property group used to illustrate the retirement rate method is observed for the experience band 2014-2023 for which there were placements during the years 2009-2023. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, $10,000 of the dollars invested in 2009 were retired in 2014. The $10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of $143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2014 retirements of 2009 installations and ending with the 2023 retirements of the 2018 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.

SCHEDULE 1. RETIREMENTS FOR EACH YEAR 2014-2023
SUMMARIZED BY AGE INTERVAL

Experience Band 2014-2023 Placement Band 2009-2023

Year Placed	Retirements, Thousands of Dollars During Year										Total During Age Interval	Age Interval
	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023

[a] Transfer Affecting Exposures at Beginning of Year
[b] Transfer Affecting Exposures at End of Year
[c] Sale with Continued Use
Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

Schedule of Plant Exposed to Retirement

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2014 through 2023 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2019 are calculated in the following manner:

Exposures at age 0	= amount of addition	= $750,000
Exposures at age ½	= $750,000 - $ 8,000	= $742,000
Exposures at age 1½	= $742,000 - $18,000	= $724,000
Exposures at age 2½	= $724,000 - $20,000 - $19,000	= $685,000
Exposures at age 3½	= $685,000 - $22,000	= $663,000

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT
JANUARY 1 OF EACH YEAR 2014-2023
SUMMARIZED BY AGE INTERVAL

Experience Band 2014-2023

Placement Band 2009-2023

Year Placed	Exposures, Thousands of Dollars — Annual Survivors at the Beginning of the Year										Total at Beginning of Age Interval	Age Interval
	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
2009	255	245	234	222	209	195	239	216	192	167	167	13½-14½
2010	279	268	256	243	228	212	194	174	153	131	323	12½-13½
2011	307	296	284	271	257	241	224	205	184	162	531	11½-12½
2012	338	330	321	311	300	289	276	262	242	226	823	10½-11½
2013	376	367	357	346	334	321	307	297	280	261	1,097	9½-10½
2014	420[a]	416	407	397	386	374	361	347	332	316	1,503	8½-9½
2015		460[a]	455	444	432	419	405	390	374	356	1,952	7½-8½
2016			510[a]	504	492	479	464	448	431	412	2,463	6½-7½
2017				580[a]	574	561	546	530	501	482	3,057	5½-6½
2018					660[a]	653	639	623	628	609	3,789	4½-5½
2019						750[a]	742	724	685	663	4,332	3½-4½
2020							850[a]	841	821	799	4,955	2½-3½
2021								960[a]	949	926	5,719	1½-2½
2022									1,080[a]	1,069	6,579	½-1½
2023										1,220[a]	7,490	0-½
Total	1,975	2,382	2,824	3,318	3,872	4,494	5,247	6,017	6,852	7,799	44,780	

[a]Additions during the year

For the entire experience band 2014-2023, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.

Original Life Table

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

Percent surviving at age 4½	=	88.15				
Exposures at age 4½	=	3,789,000				
Retirements from age 4½ to 5½	=	143,000				
Retirement Ratio	=	143,000	÷	3,789,000	=	0.0377
Survivor Ratio	=	1.000	-	0.0377	=	0.9623
Percent surviving at age 5½	=	(88.15)	x	(0.9623)	=	84.83

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE
CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2014-2023 Placement Band 2009-2023

(Exposure and Retirement Amounts are in Thousands of Dollars)

Age at Beginning of Interval	Exposures at Beginning of Age Interval	Retirements During Age Interval	Retirement Ratio	Survivor Ratio	Percent Surviving at Beginning of Age Interval
(1)	(2)	(3)	(4)	(5)	(6)
0.0	7,490	80	0.0107	0.9893	100.00
0.5	6,579	153	0.0233	0.9767	98.93
1.5	5,719	151	0.0264	0.9736	96.62
2.5	4,955	150	0.0303	0.9697	94.07
3.5	4,332	146	0.0337	0.9663	91.22
4.5	3,789	143	0.0377	0.9623	88.15
5.5	3,057	131	0.0429	0.9571	84.83
6.5	2,463	124	0.0503	0.9497	81.19
7.5	1,952	113	0.0579	0.9421	77.11
8.5	1,503	105	0.0699	0.9301	72.65
9.5	1,097	93	0.0848	0.9152	67.57
10.5	823	83	0.1009	0.8991	61.84
11.5	531	64	0.1205	0.8795	55.60
12.5	323	44	0.1362	0.8638	48.90
13.5	167	26	0.1557	0.8443	42.24
					35.66
Total	44,780	1,606			

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
Column 3 from Schedule 1, Column 12, Retirements for Each Year.
Column 4 = Column 3 Divided by Column 2.
Column 5 = 1.0000 Minus Column 4.
Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

Smoothing the Original Survivor Curve

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

PART III. SERVICE LIFE CONSIDERATIONS

PART III. SERVICE LIFE CONSIDERATIONS

Field Trips

In order to be familiar with the operation of the Company and observe representative portions of the plant, a field trip was conducted for the study. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during the field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

During the period of years our firm has conducted depreciation studies for the Company, the field trips have resulted in numerous reviews of the Company's operating areas. The following is a list of the locations visited during the most recent trip.

November 7, 2023
- Cedar Street Service Center
- Cedar Street Substation
- West Pittsburgh Substation
- Johnson Bronze Substation
- Locust Substation
- West Washington Substation

Judgment.

The survivor curve estimates were based on informed judgment which considered a number of factors. The primary factors were retirement rate analyses of historical service life data; current Company policies and outlook as determined during the discussions with management personnel; and the survivor curve estimates from previous depreciation studies for Pennsylvania Power Company and other electric companies.

The statistical analyses resulted in good to excellent indications of the survivor patterns experienced for most of the major accounts. The plant accounts or

subaccounts for which the statistical analyses were significant factors in the judgments of the survivor curves are as follows:

Account Number	Title
Distribution Plant	
362.00	Station Equipment
362.10	Station Equipment – Subtransmission
364.00	Poles, Towers and Fixtures
364.10	Towers and Fixtures – Subtransmission
364.20	Poles and Fixtures – Subtransmission
365.00	Overhead Conductors and Devices
365.01	Overhead Conductors and Devices – Subtransmission
367.00	Underground Conductors and Devices
367.10	Underground Conductors and Devices – Subtransmission
368.00	Line Transformers
370.10	Meters – Smart Grid
373.10	Street Lighting and Signal Systems
373.20	Street Lighting and Signal Systems - ESIP
General Plant	
390.10	Structures and Improvements - Major
390.20	Structures and Improvements – Cleaning and Grading
392.00	Transportation Equipment
396.00	Power Operated Equipment

Account 368.00, Line Transformers, is used to illustrate the manner in which the study was conducted for the groups in the preceding list. It is a significant account and serves as a typical illustration. Aged plant accounting data have been compiled for the years 1943 through 2023. These data were coded by type of transaction, year in which the transaction took place, and year in which the plant was placed in service. The data were analyzed by the retirement rate method to obtain an indication of the experienced service life characteristics.

The estimated Iowa 43-R1.5 survivor curve is based on the experience band, 1943 through 2023. The estimated survivor curve is an excellent fit of the observed

data, has an average service life very similar to the previous estimate for this account, and is within the typical range of lives used by other electric utilities.

For the combined analysis of Account 364.00, Poles, Towers and Fixtures, and Account 364.2, Poles, Towers and Fixtures – Subtransmission, the estimate of survivor characteristics is based on the 1943-202314 and 1990-2023 experience bands. Most retirements have been due to upgrades to larger poles and wear and tear. Typical service lives for poles and fixtures range from 45 to 60 years. Most of the poles included in this account are wood poles which are subject to decay and ground rot. The continued pole treatment and lack of growth have minimized the retirement levels in the past. The Iowa 65-R1.5 survivor curve reflects the outlook of management, is above the upper end of the range of estimates used by other utilities but is a reasonable interpretation of a significant portion of the survivor curve through age 79.

The estimate of the combined analysis for Account 365.00, Overhead Conductors and Devices, and Account 365.01, Overhead Conductors and Devices – Subtransmission, is a 65-R1, based on management's expectation of a longer life for overhead conductor primarily due to past historical indications and lack of load growth. Most of the remaining overhead conductor included in this account is aluminum with limited forces of retirement. Management's expectation of retirements to be low in the next few years is reflected in the 65-year average service life.

Generally, the survivor curve estimates for the remainder of the accounts were based on engineering judgment, considering the nature of the plant and equipment, review of available historical retirement data and a general knowledge of the service lives for similar equipment in other electric companies.

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

Group Depreciation Procedures

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally, the items within a group do not have identical service lives, but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group.

In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

In the equal life group procedure, the property group is subdivided according to service life. That is, each equal life group includes that portion of the property which experiences the life of that specific group. The relative size of each equal life group is determined from the property's life dispersion curve. This procedure eliminates the need to base depreciation on average lives, inasmuch as each group is equivalent to a unit having a single life. The full costs of short-lived units are accrued during their lives, leaving no deferral of accruals required to be added to the annual costs associated with long-lived units. The calculated depreciation for the property group is the summation of the calculated depreciation based on the service life of each equal life group.

Remaining Life Annual Accruals

For the purpose of calculating remaining life accrual rates as of December 31, 2024, the estimated book depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation for the vintages calculated by the equal life group procedure follow. The detailed calculations are set forth in the Results of Study section of the report.

Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future whole life depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account, based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{Average\ Remaining\ Life\ Expectancy}{Average\ Service\ Life}.$$

Equal Life Group Procedure

In the equal life group procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the composite remaining life for the surviving original cost of that vintage. The composite remaining life is derived by compositing the individual equal life group remaining lives in accordance with the following equation:

$$\text{Composite Remaining Life} = \frac{\left(\frac{\text{Book Cost}}{\text{Life}} \times \text{Remaining Life}\right)}{\frac{\text{Book Cost}}{\text{Life}}}$$

The book costs and lives of the several equal life groups which are summed in the foregoing equation are defined by the estimated future survivor curve.

Inasmuch as book cost divided by life equals the whole life annual accrual, the foregoing equation reduces to the following form:

$$\text{Composite Remaining LIfe} = \frac{\sum \text{Whole Life Future Accruals}}{\sum \text{Whole Life Annual Accruals}}$$

or

$$\text{Composite Remaining Life} = \frac{\sum \text{Book Cost} - \text{Calc. Reserve}}{\sum \text{Whole Life Annual Accrual}}.$$

The annual accrual rate for each account is equal to the sum of the remaining life annual accruals for all vintages divided by the account's total original cost. The account's "composite remaining life" is calculated by dividing the sum of the future book accruals for all vintages by the sum of the remaining life annual accruals for all vintages.

The calculated accrued depreciation in the equal life group procedure also represents that portion of depreciable cost which will not be allocated to expense through future accruals. However, the calculation is based at the equal life group level rather than the vintage group level, and does not require the use of averages. The equal life group accrued depreciation ratio is calculated as follows:

$$Ratio = \frac{Remaining\ Life}{Average\ Service\ Life}.$$

Inasmuch as service life minus remaining life equals age, when averages are not employed, the foregoing equation reduces to:

$$Ratio = \frac{Age}{Service\ Life}.$$

The table on the following page illustrates the procedure for calculating straight line equal life group accrued depreciation, using an Iowa 10-L2 survivor curve and a December 31, 2024 calculation date.

In the table, each equal life group is defined by the age interval shown in columns 1 and 2, which identify the ages at which the first and last retirement of each group occur. The group's designated life, shown in column 3, is the midpoint of the interval. In the calculation, the equal life groups of each vintage are arranged such that the midpoint of each one-year age interval coincides with the calculation date, e.g., December 31 in this case. This enables the calculation of annual accruals which are centered on, or as of, the same date as the calculation of accrued depreciation.

The retirement during each age interval, shown in column 4, is the size of each equal life group. It is derived from the Iowa 10-L2 survivor curve and is the difference between the percents surviving (not shown) at the beginning and end of the age interval.

TOTAL			100.00000						

Each equal life group's whole life annual accrual, shown in column 5, equals the group's size (column 4) divided by its life (column 3), except that for the first age interval, the annual accrual is set equal to the group's size.

Columns 6 through 10 show the derivation of the whole life annual factor and accrued factor for each vintage based on the data developed in the first five columns. The year installed is shown in column 6. For all vintages other than the first year (2024), the summation of annual accruals for each year installed, shown in column 7, is calculated by adding one-half of the group annual accrual (column 5) for that vintage's current age interval plus the group annual accruals for all succeeding age intervals. For

example, the figure 12.27230136472 for 2023 equals one-half of 0.45339333333 plus all of the succeeding figures in column 5. Only one half of the annual accrual for the vintage's current age interval group is included in the summation because the equal life group for that interval expires at the midpoint of the current year.

The summation of annual accruals (column 7) for installations during 2024 is calculated on the basis of an in-service date at the midpoint of the year, i.e., June 30. Inasmuch as the overall calculation is centered on December 31, 2024, the first figure in column 7, for vintage 2024, equals the group annual accrual for 2024 plus one-half of the group annual accruals for each of the subsequent years.

The average percent surviving, derived from the Iowa 10-L2 survivor curve, is shown in column 8 for each age interval. The annual factor, shown in column 9, is the result of dividing the summation of annual accruals (column 7) by the average percent surviving (column 8).

The accrued depreciation factor, shown in column 10, equals the annual factor multiplied by the age of the group as of December 31, 2024.

CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization, as defined in the Uniform System of Accounts, is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization periods and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is appropriate for certain General Plant accounts that represent numerous units of property, but a very small portion of depreciable electric plant in service. The accounts and their amortization periods are as follows:

	Account	Amortization Period, Years
391.00	Office Furniture and Equipment	
	Furniture and Equipment	20
	Data Processing Equipment	5
	Data Processing Equipment - Smart Grid	5
393.00	Stores Equipment	30
394.00	Tools, Shop and Garage Equipment	25
395.00	Laboratory Equipment	20
397.00	Communication Equipment	15
398.00	Miscellaneous Equipment	20

For the purpose of calculating annual amortization amounts as of December 31, 2024, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve is allocated among vintages with an age less than the amortization period in proportion to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization

period. The annual amortization amount is determined by dividing the future amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

AMORTIZATION OF NET SALVAGE

Experienced and estimated net salvage is incorporated in the results of the study, as it was reported on the Company's books and records for the period January 1, 2020 through December 31, 2024. Results of the calculations are shown in Table 4.

Net salvage experienced during the five-year period is presented in this manner to determine the amount of negative net salvage to be amortized for book purposes. In developing the amount to be amortized, the data for the accounts which experienced positive net salvage have been netted with those for accounts which experienced negative net salvage.

In order to be consistent with this manner of recognizing salvage, no adjustments for net salvage were made to the annual accruals and accrued depreciation calculated for each individual account. There were no exclusions from the 202012 through 2024 net salvage accrual.

PART V. RESULTS OF STUDY

PART V. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages V-4 through V-9 summarize the results of the depreciation study as of December 31, 2024. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of December 31, 2024, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book depreciation reserve to December 31, 2024. Table 3 sets forth the calculation of the depreciation accruals for the twelve months ended December 31, 2024. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2020 through 2024.

DESCRIPTION OF DETAILED TABULATIONS

Supporting statistical data for the estimates of average service lives and survivor curves, the annual depreciation calculations, and gross salvage and cost of removal for the years 2020-2024 are presented in three sections.

The section beginning on page VI-2 sets forth, for each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. A cumulative summary, by year installed, for electric plant and the supporting data for the original cost depreciation calculations are presented in the section beginning on page VII-3. The tabulations of experienced and estimated net salvage by

year by account for the five-year period, 2020-2024, are presented in the section beginning on page VIII-2.

In the first section, the survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the type curve designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. In cases where only a segment of the estimated curve is used in the depreciation calculation, the numeral used for identification purposes is not a designation of the average life of the group. The titles of the charts indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which the retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The tables of the calculated annual depreciation related to original cost are presented in the second section and indicate the estimated average survivor curves used in the calculations. The tables set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life expectancy and the calculated annual accrual.

Detailed tabulations setting forth the cost of removal and gross salvage amounts, by plant account for each year, are presented beginning on page VIII-2. The total gross salvage and removal costs, by year, were used to calculate the five-year net salvage amortization presented in Table 4 on page V-9.

Attention Ms. Joanna M. Savage
Director, Rates and Regulatory Affairs – PA

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to the electric plant of Pennsylvania Power Company ("Penn Power"). The results of our study as of December 31, 2025, are presented in the attached detailed report.

The results of our study as of December 31, 2024, as well as a discussion of the methods and procedures used in the calculations and the support for the service life estimates, are included in our report titled "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of December 31, 2024." The same methods, procedures and estimates were used in both studies.

The results of our study as of December 31, 2025, are summarized on pages I-3 through I-8 of the attached report.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

PENNSYLVANIA POWER COMPANY
DEPRECIATION STUDY

PART I. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages I-3 through I-8 summarize the results of the depreciation study as of December 31, 2025. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of December 31, 2025, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book depreciation reserve to December 31, 2025. Table 3 sets forth the calculations of the depreciation accruals for the twelve months ended December 31, 2025. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2021 through 2025.

DESCRIPTION OF DETAILED TABULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-7. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2021 through 2025, beginning on pages III-2 through III-4.

PENNSYLVANIA POWER COMPANY

Reading, PA 19605-2459

Attention Ms. Joanna M. Savage
Director, Rates and Regulatory Affairs – PA

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to electric plant of West Penn Power Company("West Penn"). The results of our study as of December 31, 2023, are presented in the attached detailed report.

The results of our study as of December 31, 2024, as well as a discussion of the methods and procedures used in the calculations and the support for the service life estimates, are included in our report titled "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of December 31, 2024." The same methods, procedures and estimates were used in both studies.

The results of our study as of December 31, 2023, are summarized on pages I-3 through I-5 of the attached report.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

PART I. RESULTS OF STUDY

WEST PENN POWER COMPANY
DEPRECIATION STUDY

PART I. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

The results of the depreciation study are summarized in Table 1, which sets forth the calculated annual depreciation related to Electric Plant in Service as of December 31, 2023. Table 2 presents the experienced gross salvage and cost of removal associated with regular retirements during the five-year period, 2019-2023 and the annual amortization of net salvage.

DETAILED TABULATIONS OF DEPRECIATION CALCULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on II-7. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2019 through 2023, beginning on beginning on III-2 through III-4.

WEST PENN POWER COMPANY

Attention Ms. Joanna M. Savage
Director, Rates and Regulatory Affairs – PA

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to electric plant in service. The results of our study as of December 31, 2024 are presented in the attached report. The results of our study as of December 31, 2023 are presented in our report titled "2023 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of December 31, 2023". The same methods, procedures and estimates are used in both studies.

The attached report sets forth a description of the methods and procedures upon which the studies were based, the estimates of survivor curves and the calculated annual depreciation rates as of December 31, 2024.

Respectfully submitted,

GANNETT FLEMING VALUATION

WEST PENN POWER COMPANY
DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study conducted for West Penn Power Company("West Penn") to determine the annual depreciation accrual rates and amounts for ratemaking purposes applicable to the original cost of electric plant as of December 31, 2024.

The depreciation accrual rates and amounts presented herein are based on estimated survivor curves and on methods and procedures set forth in previous orders approved by the Pennsylvania Public Utility Commission. The estimated survivor curves presented herein were based on the results of a service life study incorporating statistical analyses of data through 2023.

BASIS OF STUDY

Depreciation and Amortization

Depreciation, as defined in the Uniform System of Accounts, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of electric plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs over a period of time by allocating annual amounts to expense. Each annual

amount of such depreciation expense is part of that year's total cost of providing utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

The calculation of annual and accrued depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. These subjects are discussed in the sections which follow.

For most plant accounts, depreciation accruals and accrued depreciation were calculated using the straight line method, the remaining life basis, and the equal life group (ELG) procedure for all vintages. The calculations were based on the attained ages and estimated service life characteristics for each depreciable group of electric property. For certain general plant accounts, the amortization amounts, annual and accrued, were based on the age of the vintage and the selected amortization period.

Survivor curves were used to reflect the expected dispersion of retirements, thus providing a consistent method of estimating service lives and depreciation for mass property. Iowa type curves were used to depict the estimated survivor curves. For life span groups, the estimate of life characteristics is consistent because the calculated lives of the units within a group are obtained by employing a single probable retirement date for the entire group.

Service Life Estimates

The method of estimating service life consisted of compiling the service life history of the plant accounts, subaccounts or depreciable groups, reducing this history to trends through the use of acceptable actuarial techniques, and forecasting the trend of survivors for each depreciable group on the basis of interpretations of past trends and consideration of Company plans for the future. The combination of the historical trend and the estimated future trend yielded a complete pattern of life characteristics from which the average service life was derived.

The Company's service life estimates used in the depreciation calculation incorporated historical data compiled through 2023 from the property records of the Company. Such data included plant additions, retirements, transfers and other activity. Generally, retirement data for the years 1955 through 2023 were used in the actuarial life table computations which were the primary statistical support of the service life estimates.

A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirement was obtained through field trips conducted during the course of the service life study. Discussions with operating and management personnel also provided information regarding plans for the future which was incorporated in the interpretation and extrapolation of the statistical analyses.

AMORTIZATION OF NET SALVAGE

Inasmuch as this report relates primarily to Pennsylvania rate regulation practices, under which experienced costs of negative net salvage are amortized after their occurrence, no adjustments for expected salvage were made to either the annual

depreciation accrual or the calculated accrued depreciation for the individual accounts. The annual provision for recovering negative net salvage is based on the amortization of net salvage over a five-year period, as established by the Commission.

PART II. ESTIMATION OF SURVIVOR CURVES

PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below and the development of net salvage is discussed in later sections of this report.

SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

Iowa Type Curves

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

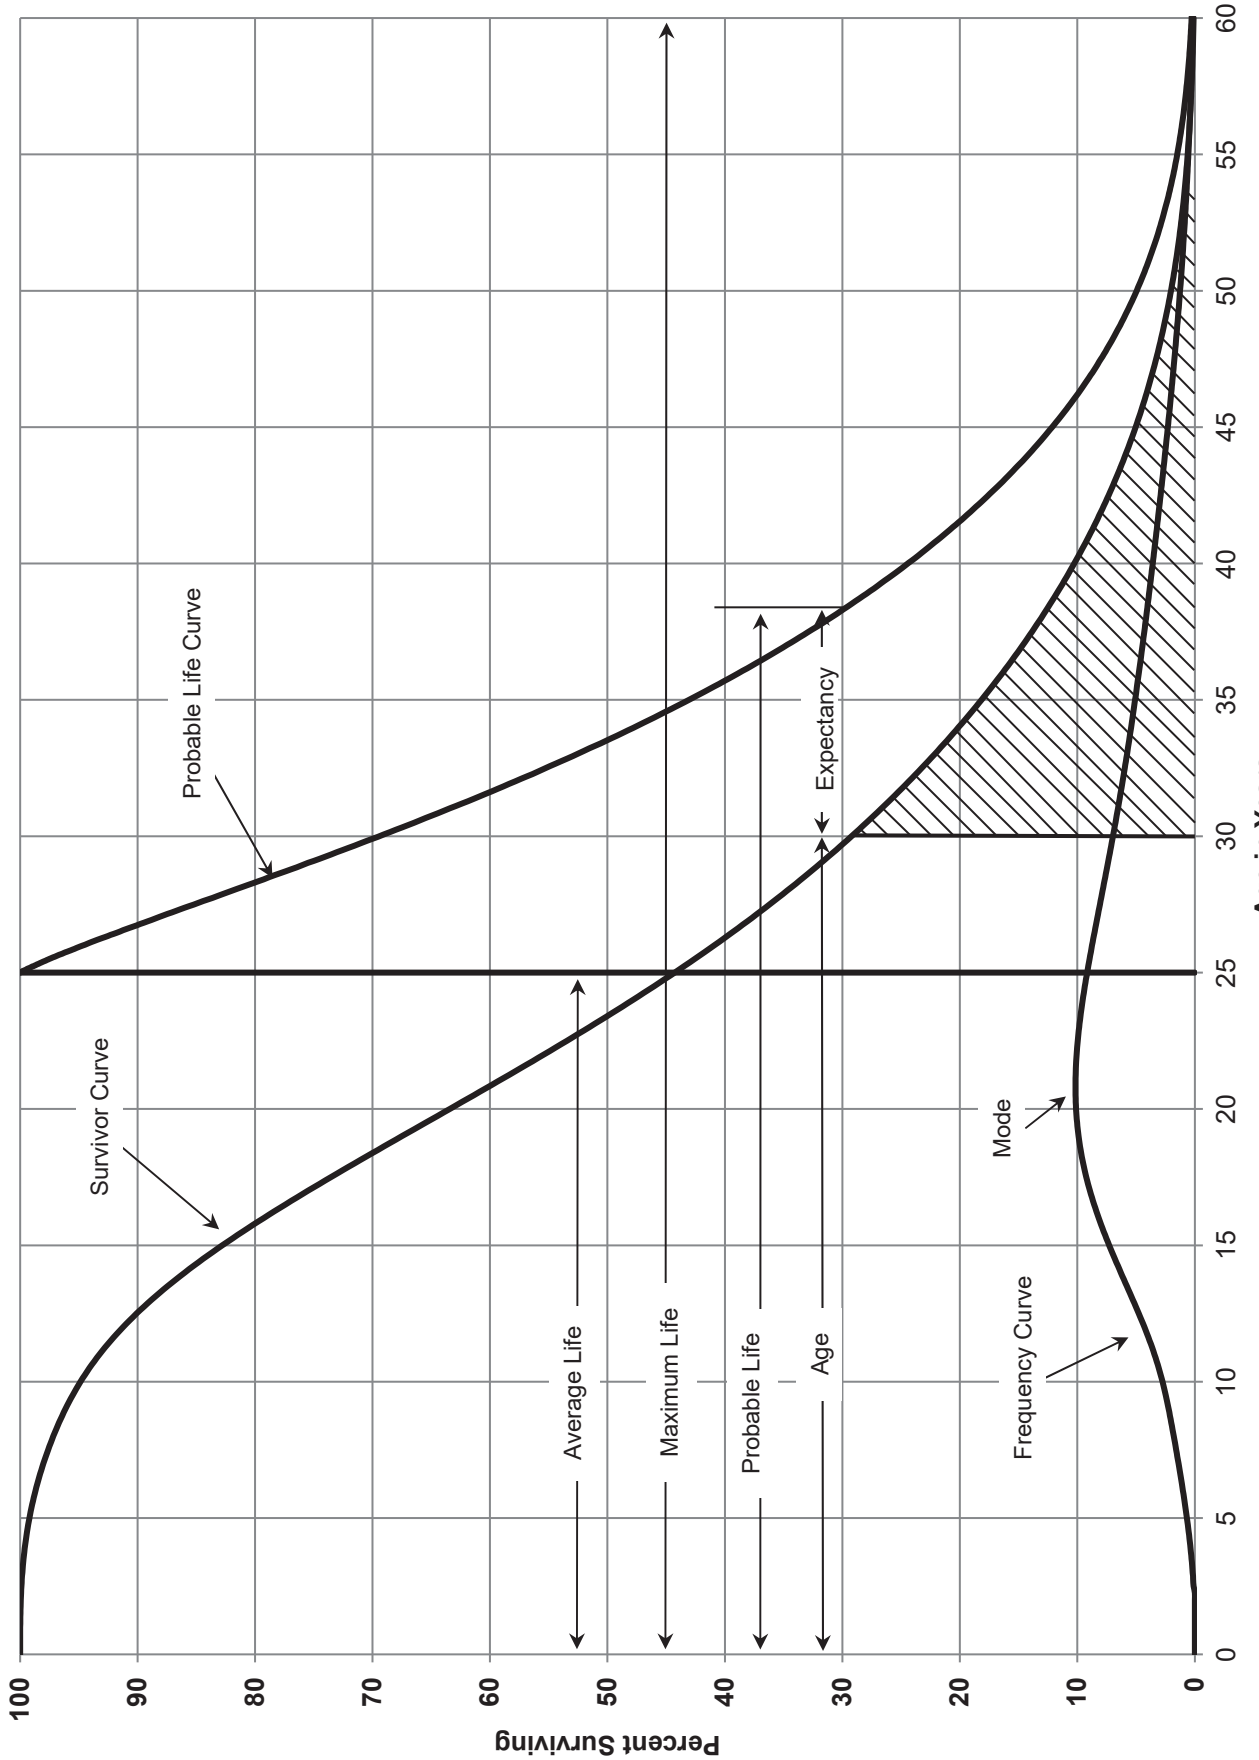

FIGURE 1. TYPICAL SURVIVOR CURVE AND DERIVED CURVES

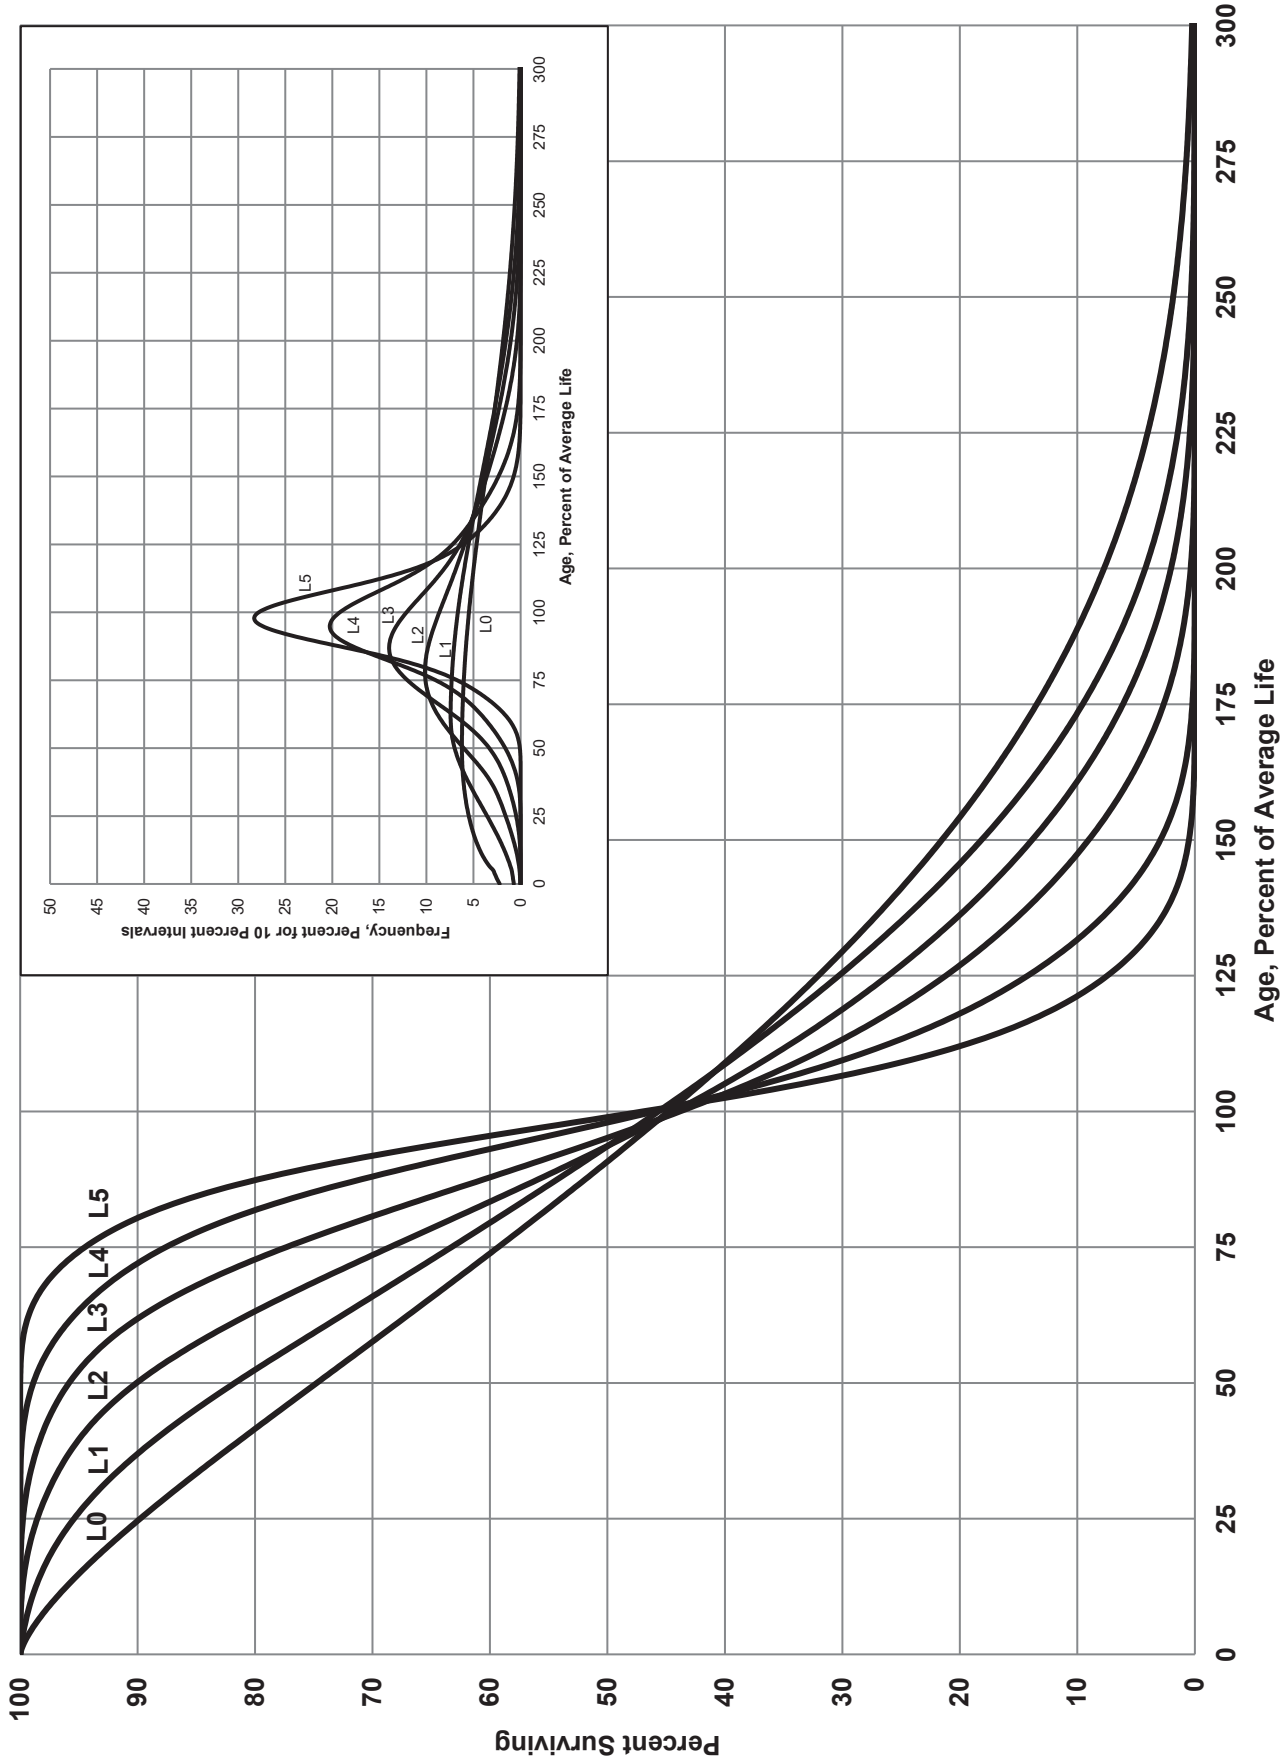

FIGURE 2. LEFT MODAL OR "L" IOWA TYPE SURVIVOR CURVES

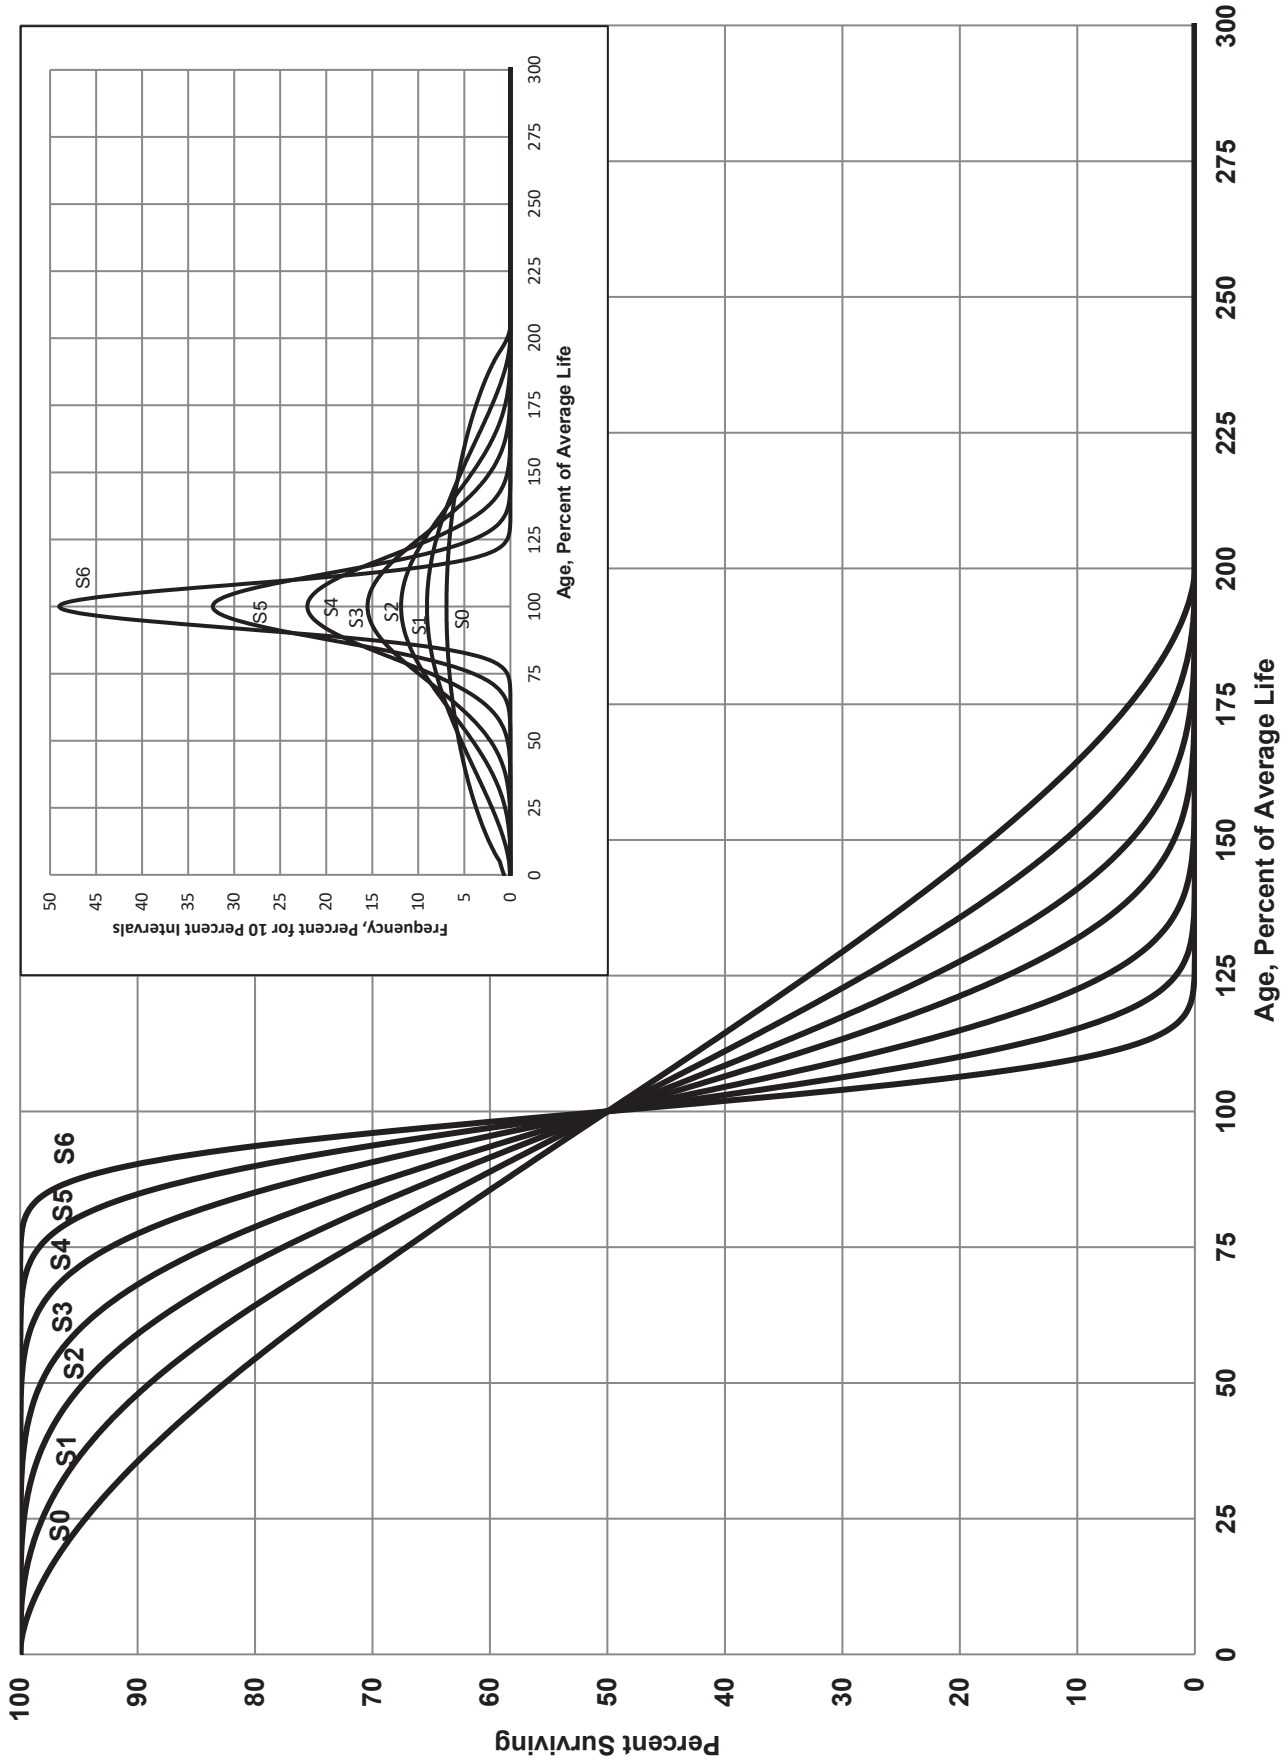

FIGURE 3. SYMMETRICAL OR "S" IOWA TYPE SURVIVOR CURVES

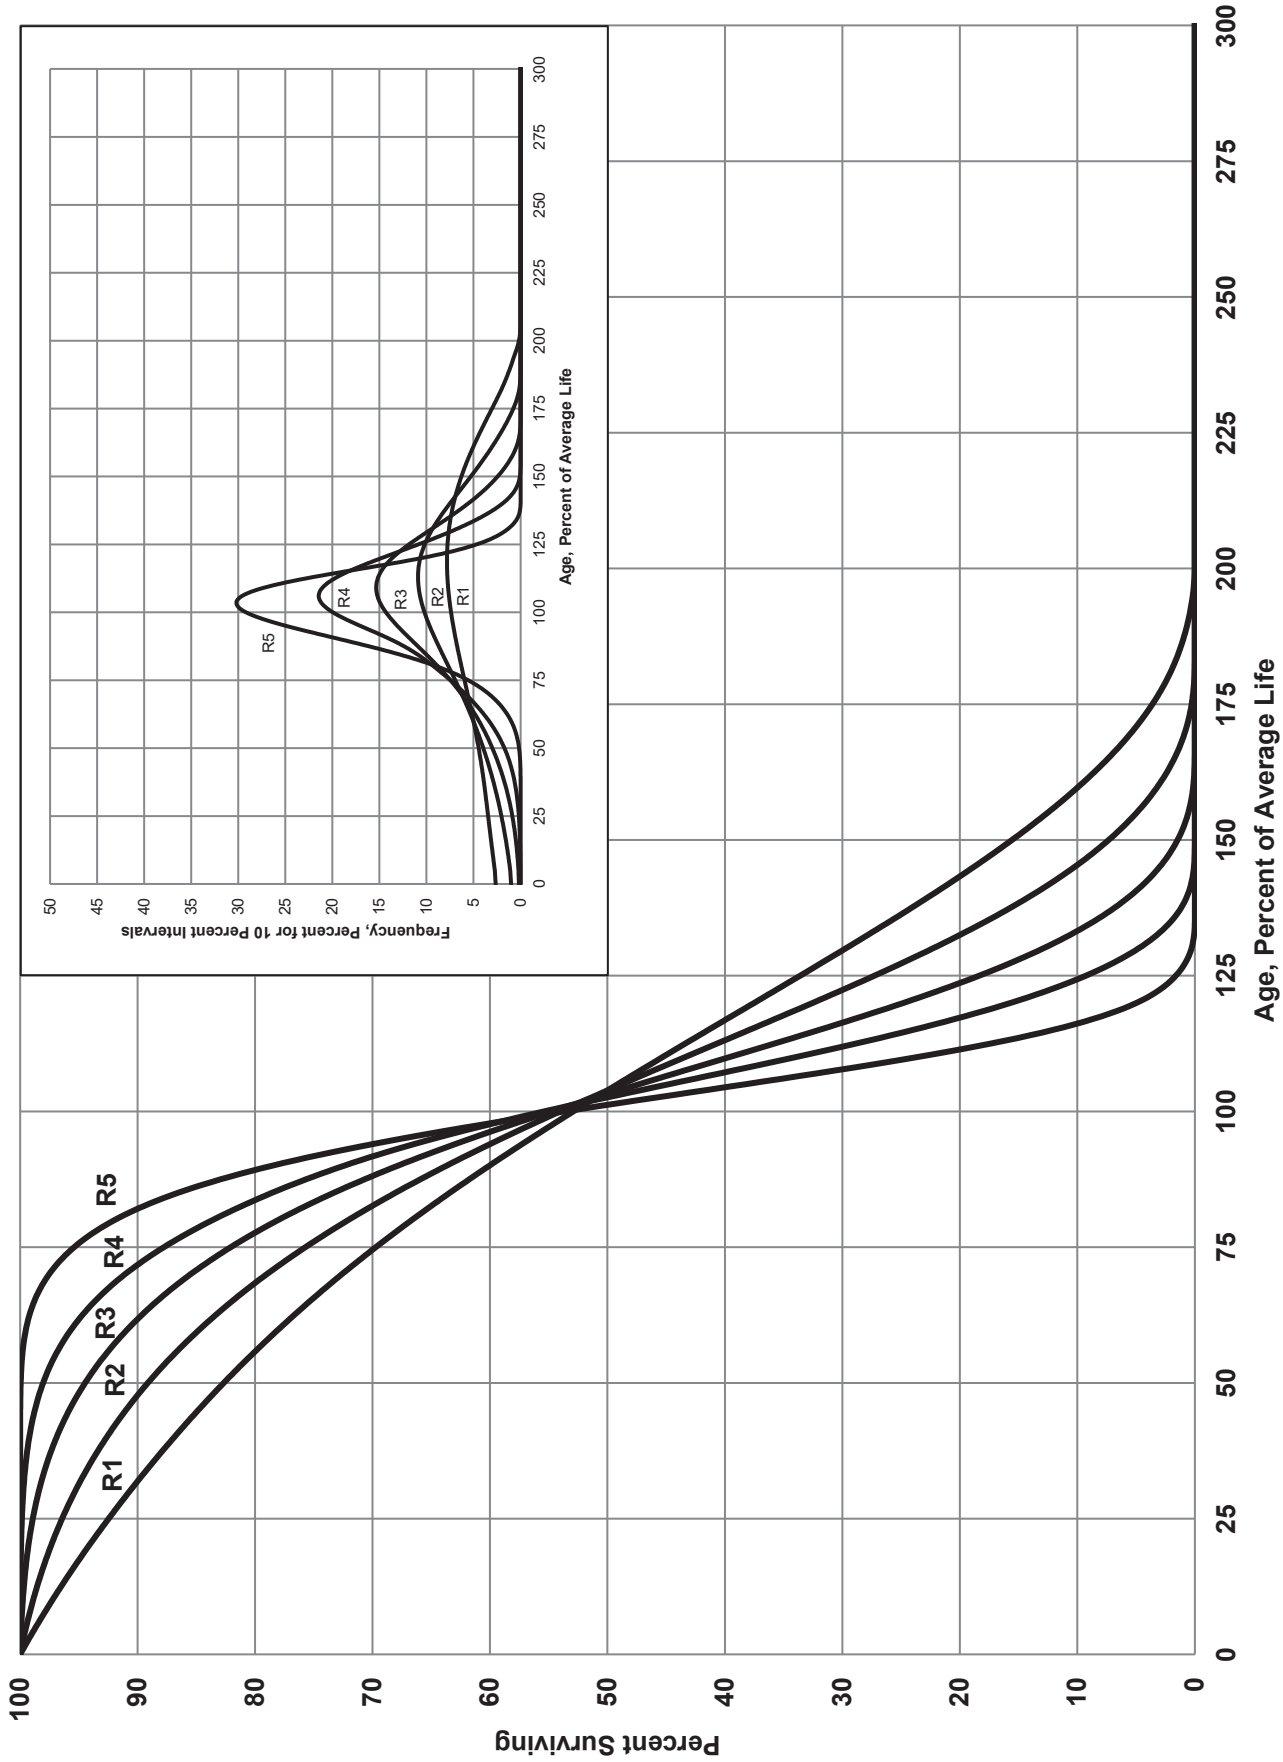

FIGURE 4. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES

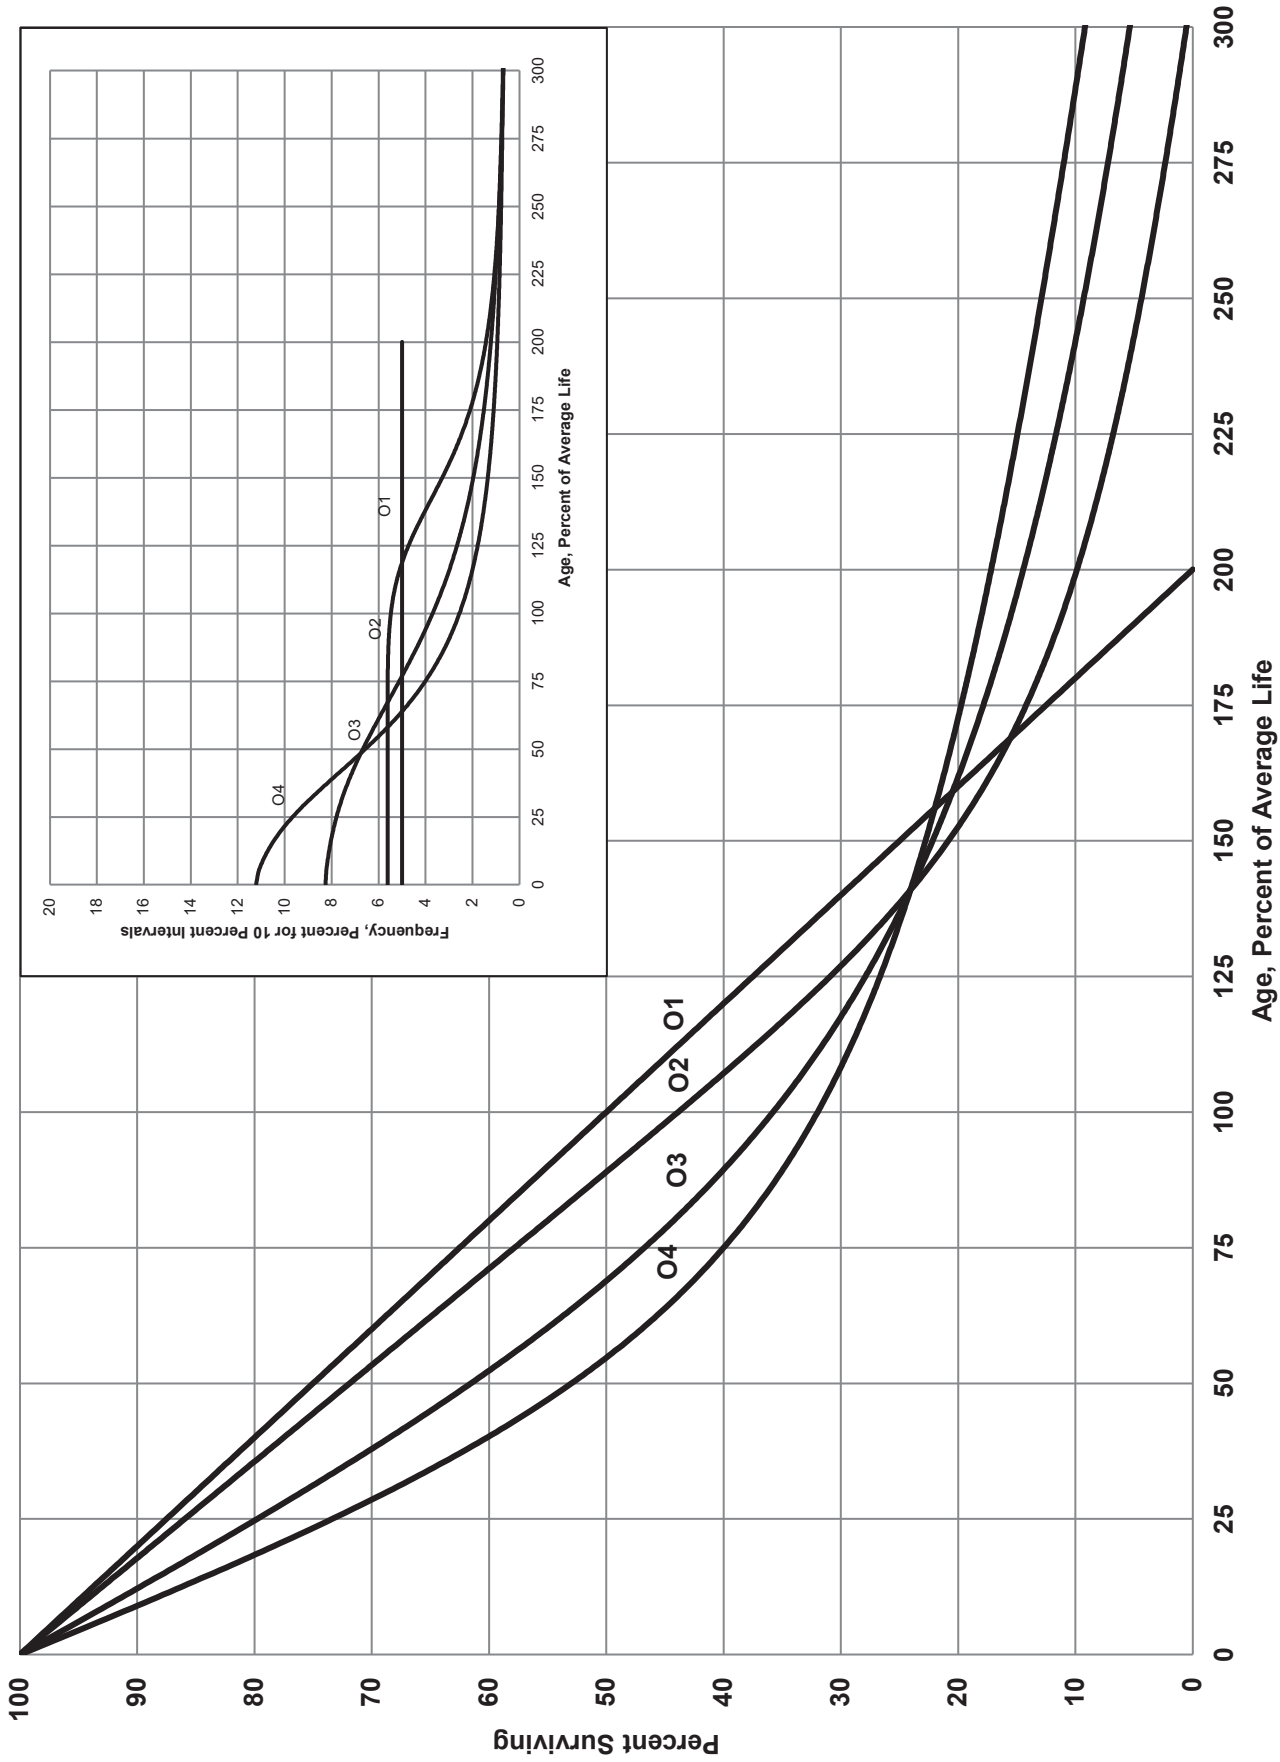

FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."[1] In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

Retirement Rate Method of Analysis

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"[2] "Engineering Valuation and Depreciation,"[3] and "Depreciation Systems."[4]

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

Schedules of Annual Transactions in Plant Records

The property group used to illustrate the retirement rate method is observed for the experience band 2014-2023 for which there were placements during the years 2009-2023. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, $10,000 of the dollars invested in 2009 were retired in 2014. The $10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of $143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2014 retirements of 2009 installations and ending with the 2023 retirements of the 2018 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.

[a] Transfer Affecting Exposures at Beginning of Year
[b] Transfer Affecting Exposures at End of Year
[c] Sale with Continued Use
Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

Schedule of Plant Exposed to Retirement

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2014 through 2023 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2019 are calculated in the following manner:

Exposures at age 0	= amount of addition	= $750,000
Exposures at age ½	= $750,000 - $ 8,000	= $742,000
Exposures at age 1½	= $742,000 - $18,000	= $724,000
Exposures at age 2½	= $724,000 - $20,000 - $19,000	= $685,000
Exposures at age 3½	= $685,000 - $22,000	= $663,000

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT
JANUARY 1 OF EACH YEAR 2014-2023
SUMMARIZED BY AGE INTERVAL

Experience Band 2014-2023

Placement Band 2009-2023

Year Placed	Exposures, Thousands of Dollars Annual Survivors at the Beginning of the Year 2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Total at Beginning of Age Interval	Age Interval

Total	1,975	2,382	2,824	3,318	3,872	4,494	5,247	6,017	6,852	7,799	44,780	

[a]Additions during the year

For the entire experience band 2014-2023, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.

Original Life Table

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

Percent surviving at age 4½	=	88.15				
Exposures at age 4½	=	3,789,000				
Retirements from age 4½ to 5½	=	143,000				
Retirement Ratio	=	143,000	÷	3,789,000	=	0.0377
Survivor Ratio	=	1.000	-	0.0377	=	0.9623
Percent surviving at age 5½	=	(88.15)	x	(0.9623)	=	84.83

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE
CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2014-2023 Placement Band 2009-2023

(Exposure and Retirement Amounts are in Thousands of Dollars)

Age at Beginning of Interval	Exposures at Beginning of Age Interval	Retirements During Age Interval	Retirement Ratio	Survivor Ratio	Percent Surviving at Beginning of Age Interval

13.5	167	26	0.1557	0.8443	42.24
					35.66
Total	44,780	1,606			

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
Column 3 from Schedule 1, Column 12, Retirements for Each Year.
Column 4 = Column 3 Divided by Column 2.
Column 5 = 1.0000 Minus Column 4.
Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

Smoothing the Original Survivor Curve

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

PART III. SERVICE LIFE CONSIDERATIONS

PART III. SERVICE LIFE CONSIDERATIONS

Field Trips

In order to be familiar with the operation of the Company and observe representative portions of the plant, a field trip was conducted for the study. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during the field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

During the period of years our firm has conducted depreciation studies for the Company, the field trips have resulted in numerous reviews of the Company's operating areas. The following is a list of the locations visited during the most recent trip.

November 8, 2023

- Youngwood Substation
- Greensburg Substation
- Eastgate Substation
- Hempfield Substation
- Sewickley Substation
- Jeannette Service Center

Judgment

The survivor curve estimates were based on informed judgment which considered a number of factors. The primary factors were retirement rate analyses of historical service life data; current Company policies and outlook as determined during the discussions with management personnel; and the survivor curve estimates from previous depreciation studies for West Penn Power Company and other electric companies.

The statistical analyses resulted in good to excellent indications of the survivor patterns experienced for most of the major accounts. The plant accounts or subaccounts for which the statistical analyses were significant factors in the judgments of the survivor curves are as follows:

Account Number	Title
Distribution Plant	
362.10	Station Equipment
362.15	Station Equipment - Subtransmission
362.40	Station Equipment - SCADA
364.00	Poles, Towers and Fixtures
364.55	Poles and Fixtures - Subtransmission
366.00	Underground Conduit
366.50	Underground Conduit - Subtransmission
367.00	Underground Conductors and Devices
367.50	Underground Conductors and Devices - Subtransmission
368.00	Line Transformers
369.00	Services
371.00	Installations on Customers' Premises
372.00	Leased Property
373.10	Street Lighting and Signal Systems
General Plant	
390.10	Structures and Improvements
392.10	Transportation Equipment - Autos
392.20	Transportation Equipment - Light Trucks
392.30	Transportation Equipment - Medium and Heavy Trucks
392.40	Transportation Equipment – Trailers
396.00	Power Operated Equipment

The combined analysis of Account 364.00, Poles, Towers and Fixtures, and Account 364.50, Poles, Towers and Fixtures – Subtransmission, is used to illustrate the manner in which the study was conducted for the groups in the preceding list. It is a significant account and serves as a typical illustration. Aged plant accounting data have been compiled for the years 1960 through 2023. These data were coded by type of

transaction, year in which the transaction took place, and year in which the plant was placed in service. The data were analyzed by the retirement rate method to obtain an indication of the experienced service life characteristics.

The estimated Iowa 70-R2 survivor curve is based on the experience band, 1960 through 2023. The estimated survivor curve is an excellent fit of the observed data, has an average service life which is longer than the previous estimates for this account, and is above the upper end of the typical range of lives used by the electric utility industry.

For Account 368.00, Line Transformers, the estimate of survivor characteristics is based on the 1955-2023 and 1999-2023 experience bands. Most retirements have been due to wear and tear or load requirements. Typical service lives for line transformers range from 35 to 50 years. The Iowa 48-R1.5 survivor curve reflects the outlook of management, is at the upper end of the range of estimates used by other utilities and is a reasonable interpretation of a significant portion of the survivor curve through age 79.

The life span technique also was used for large office buildings and service centers in Account 390.1, Structures and Improvements. For these large structures in Account 390.1, a life span was estimated for each structure based on its type of construction, use, age, condition and management's plans within the foreseeable future. In Account 390.1, Structures and Improvements, an interim survivor curve was estimated for each location, since interim retirements are normal for such structures and, in fact, have been experienced.

Generally, the survivor curve estimates for the remainder of the accounts were based on engineering judgment, considering the nature of the plant and equipment, review of available historical retirement data and a general knowledge of the service lives for similar equipment in other electric companies.

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

Group Depreciation Procedures

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally, the items within a group do not have identical service lives, but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group.

In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

In the equal life group procedure, the property group is subdivided according to service life. That is, each equal life group includes that portion of the property which experiences the life of that specific group. The relative size of each equal life group is determined from the property's life dispersion curve. This procedure eliminates the need to base depreciation on average lives, inasmuch as each group is equivalent to a unit having a single life. The full costs of short-lived units are accrued during their lives, leaving no deferral of accruals required to be added to the annual costs associated with long-lived units. The calculated depreciation for the property group is the summation of the calculated depreciation based on the service life of each equal life group.

Remaining Life Annual Accruals

For the purpose of calculating remaining life accrual rates as of December 31, 2024, the estimated book depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation for the vintages calculated by the equal life group procedure follow. The detailed calculations are set forth in the Results of Study section of the report.

Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future whole life depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account, based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{Average\ Remaining\ Life\ Expectancy}{Average\ Service\ Life}.$$

Equal Life Group Procedure

In the equal life group procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the composite remaining life for the surviving original cost of that vintage. The composite remaining life is derived by compositing the individual equal life group remaining lives in accordance with the following equation:

$$\text{Composite Remaining Life} = \frac{\left(\frac{\text{Book Cost}}{\text{Life}} \times \text{Remaining Life}\right)}{\frac{\text{Book Cost}}{\text{Life}}}$$

The book costs and lives of the several equal life groups which are summed in the foregoing equation are defined by the estimated future survivor curve.

Inasmuch as book cost divided by life equals the whole life annual accrual, the foregoing equation reduces to the following form:

$$\text{Composite Remaining LIfe} = \frac{\sum \text{Whole Life Future Accruals}}{\sum \text{Whole Life Annual Accruals}}$$

or

$$\text{Composite Remaining Life} = \frac{\sum \text{Book Cost} - \text{Calc. Reserve}}{\sum \text{Whole Life Annual Accrual}}.$$

The annual accrual rate for each account is equal to the sum of the remaining life annual accruals for all vintages divided by the account's total original cost. The account's "composite remaining life" is calculated by dividing the sum of the future book accruals for all vintages by the sum of the remaining life annual accruals for all vintages.

The calculated accrued depreciation in the equal life group procedure also represents that portion of depreciable cost which will not be allocated to expense through future accruals. However, the calculation is based at the equal life group level rather than the vintage group level, and does not require the use of averages. The equal life group accrued depreciation ratio is calculated as follows:

$$Ratio = \frac{Remaining\ Life}{Average\ Service\ Life}.$$

Inasmuch as service life minus remaining life equals age, when averages are not employed, the foregoing equation reduces to:

$$Ratio = \frac{Age}{Service\ Life}.$$

The table on the following page illustrates the procedure for calculating straight line equal life group accrued depreciation, using an Iowa 12-S1 survivor curve and a December 31, 2024 calculation date.

In the table, each equal life group is defined by the age interval shown in columns 1 and 2, which identify the ages at which the first and last retirement of each group occur. The group's designated life, shown in column 3, is the midpoint of the interval. In the calculation, the equal life groups of each vintage are arranged such that the midpoint of each one-year age interval coincides with the calculation date, e.g., December 31 in this case. This enables the calculation of annual accruals which are centered on, or as of, the same date as the calculation of accrued depreciation.

The retirement during each age interval, shown in column 4, is the size of each equal life group. It is derived from the Iowa 12-S1 survivor curve and is the difference between the percents surviving (not shown) at the beginning and end of the age interval.

TOTAL			100.00000						

Each equal life group's whole life annual accrual, shown in column 5, equals the group's size (column 4) divided by its life (column 3), except that for the first age interval, the annual accrual is set equal to the group's size.

Columns 6 through 10 show the derivation of the whole life annual factor and accrued factor for each vintage based on the data developed in the first five columns. The year installed is shown in column 6. For all vintages other than the first year (2024), the summation of annual accruals for each year installed, shown in column 7, is calculated by adding one-half of the group annual accrual (column 5) for that vintage's current age interval plus the group annual accruals for all succeeding age intervals. For

example, the figure 10.29531297736 for 2023 equals one-half of 0.36284000000 plus all of the succeeding figures in column 5. Only one half of the annual accrual for the vintage's current age interval group is included in the summation because the equal life group for that interval expires at the midpoint of the current year.

The summation of annual accruals (column 7) for installations during 2024 is calculated on the basis of an in-service date at the midpoint of the year, i.e., June 30. Inasmuch as the overall calculation is centered on December 31, 2024, the first figure in column 7, for vintage 2024, equals the group annual accrual for 2024 plus one-half of the group annual accruals for each of the subsequent years.

The average percent surviving, derived from the Iowa 12-S1 survivor curve, is shown in column 8 for each age interval. The annual factor, shown in column 9, is the result of dividing the summation of annual accruals (column 7) by the average percent surviving (column 8).

The accrued depreciation factor, shown in column 10, equals the annual factor multiplied by the age of the group as of December 31, 2024.

CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization, as defined in the Uniform System of Accounts, is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on

judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization periods and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is appropriate for certain General Plant accounts that represent numerous units of property, but a very small portion of depreciable electric plant in service. The accounts and their amortization periods are as follows:

Account		Amortization Period, Years
391.00	Office Furniture and Equipment	
	Furniture	16
	Information Systems	7
	Data Handling Equipment	16
	Computers	5
	Smart Meter Hardware	5
393.00	Stores Equipment	25
394.00	Tools, Shop and Garage Equipment	15
395.00	Laboratory Equipment	23
397.00	Communication Equipment	12
398.00	Miscellaneous Equipment	14

For the purpose of calculating annual amortization amounts as of December 31, 2024, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve is allocated among vintages with an age less than the amortization period in proportion to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the future

amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

AMORTIZATION OF NET SALVAGE

Experienced and estimated net salvage is incorporated in the results of the study, as it was reported on the Company's books and records for the period January 1, 2020 through December 31, 2024. Results of the calculations are shown in Table 4.

Net salvage experienced during the five-year period is presented in this manner to determine the amount of negative net salvage to be amortized for book purposes. In developing the amount to be amortized, the data for the accounts which experienced positive net salvage have been netted with those for accounts which experienced negative net salvage.

In order to be consistent with this manner of recognizing salvage, no adjustments for net salvage were made to the annual accruals and accrued depreciation calculated for each individual account. There were no exclusions from the 2020 through 2024 net salvage accrual.

PART V. RESULTS OF STUDY

PART V. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages V-4 through V-10 summarize the results of the depreciation study as of December 31, 2024. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of December 31, 2024, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book depreciation reserve to December 31, 2024. Table 3 sets forth the calculation of the depreciation accruals for the twelve months ended December 31, 2024. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2020 through 2024.

DESCRIPTION OF DETAILED TABULATIONS

Supporting statistical data for the estimates of average service lives and survivor curves, the annual depreciation calculations, and gross salvage and cost of removal for the years 2020-2024 are presented in three sections.

The section beginning on page VI-2 sets forth, for each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. A cumulative summary, by year installed, for electric plant and the supporting data for the original cost depreciation calculations are presented in the section beginning on page VII-3. The tabulations of experienced and estimated net salvage by

year by account for the five-year period, 2020-2024, are presented in the section beginning on page VIII-2.

In the first section, the survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the type curve designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. In cases where only a segment of the estimated curve is used in the depreciation calculation, the numeral used for identification purposes is not a designation of the average life of the group. The titles of the charts indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which the retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The tables of the calculated annual depreciation related to original cost are presented in the second section and indicate the estimated average survivor curves used in the calculations. The tables set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life expectancy and the calculated annual accrual.

Detailed tabulations setting forth the cost of removal and gross salvage amounts, by plant account for each year, are presented beginning on page VIII-2. The total gross salvage and removal costs, by year, were used to calculate the five-year net salvage amortization presented in Table 4 on page V-10.

Reading, PA 19605-2459

Attention Ms. Joanna M. Savage
Director, Rates and Regulatory Affairs – PA

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to the electric plant of West Penn Power Company("West Penn"). The results of our study as of December 31, 2025, are presented in the attached detailed report.

The results of our study as of December 31, 2024, as well as a discussion of the methods and procedures used in the calculations and the support for the service life estimates, are included in our report titled "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of December 31, 2024." The same methods, procedures and estimates were used in both studies.

The results of our study as of December 31, 2025, are summarized on pages I-3 through I-7 of the attached report.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

WEST PENN POWER COMPANY
DEPRECIATION STUDY

PART I. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages I-3 through I-9 summarize the results of the depreciation study as of December 31, 2025. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of December 31, 2025, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book reserve to December 31, 2025. Table 3 sets forth the calculations of the depreciation accruals for the twelve months ended December 31, 2025. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2021 through 2025.

DESCRIPTION OF DETAILED TABULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-7. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2021 through 2025, beginning on pages III-2 through III-4.

VI. CONCLUSION 24

REBUTTAL TESTIMONY
OF
JOANNE M. SAVAGE

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Joanne M. Savage and my business address is 2800 Pottsville Pike, Reading, Pennsylvania 19605.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed written direct testimony and exhibits, FE PA Statement No. 1 and FE PA Exhibit Nos. JMS-1 through JMS-4, on April 2, 2024, on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to respond to certain portions of the following direct testimony submitted by the Pennsylvania Public Utility Commission's ("PUC" or the "Commission") Bureau of Investigation and Enforcement ("I&E") and the Office of the Consumer Advocate ("OCA"), as well as the testimony elicited at Public Input Hearings regarding the Company's proposed base rate increase. I also introduce the other witnesses for the Company in this proceeding who will provide rebuttal testimony. In particular, I address the following topics:

1) Why the approval of the proposed distribution rate increase is necessary;
2) Why the use of the 8 percent current customer deposit rate to calculate the interest on the customer refunds as I&E Witness Wilson recommended is not appropriate;
3) Why this is the appropriate time and place to address the effects of the Verizon complaint; and

4) Why it is premature to have consolidation savings to return to customers.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, FE PA Exhibit No. JMS-5 was prepared by me or under my supervision.

Q. Who are the other witnesses for the Company sponsoring rebuttal testimony?

A. The following witnesses are also presenting rebuttal testimony on behalf of the Company:

Witness	Statement No.	Topic(s)
Wade Smith	2-R	DEI and ESG Costs, and Economic and Workforce Development Costs
Patricia Larkin	3-R	Revenue Requirements and Ratemaking Adjustments
Tracy Ashton	4-R	Pension and OPEB
Gregory J. Gawlik	5-R	Tax Topics
Mark S. Kehl	6-R	Streetlighting and Reconnection Fees
Tim Lyons	7-R	Cost of Service Studies / Revenue Allocation
Mark Jones	8-R	Customer Topics
John J. Spanos	9-R	Depreciation Rates
Dylan D'Ascendis	10-R	Cost of Common Equity
Bill Wang	11-R	Capitalization Ratios
John Hawkins	12-R	Operational Topics
April Marx	13-R	Incentive Compensation and Payroll Adjustments
Jason De Stigter	14-R	Vegetation Management

II. REBUTTAL REGARDING THE OVERALL NEED FOR THE RATE INREASE

Q. Please summarize the Company's requested revenue requirement in this case.

A. The Company's April 2, 2024 filing requested an increase on its distribution base rates of approximately $502 million to be effective January 1, 2025, based upon the use of a fully projected future test year ending December 1, 2025 ("FPFTY"). FE PA estimates that the impact of the proposed base rate increase for a residential customer using 1,000 kilowatt hours ("kWh") per month would be 9.2% increase in the Met-Ed Rate District, 9.8%

increase in the Penelec Rate District, 11.8% increase in the Penn Power Rate District, and 10.6% increase in the West Penn Rate District.

Q. When was FE PA's last distribution rate increase?

A. This is the Company's first base distribution rate case and first base distribution rate increase since 2017, which was when the most recent base rate increases for Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company (collectively, the "Predecessor Companies") were approved.[1]

Q. Do other parties suggest that FE PA's request for rate relief in this proceeding is unreasonable or unnecessary?

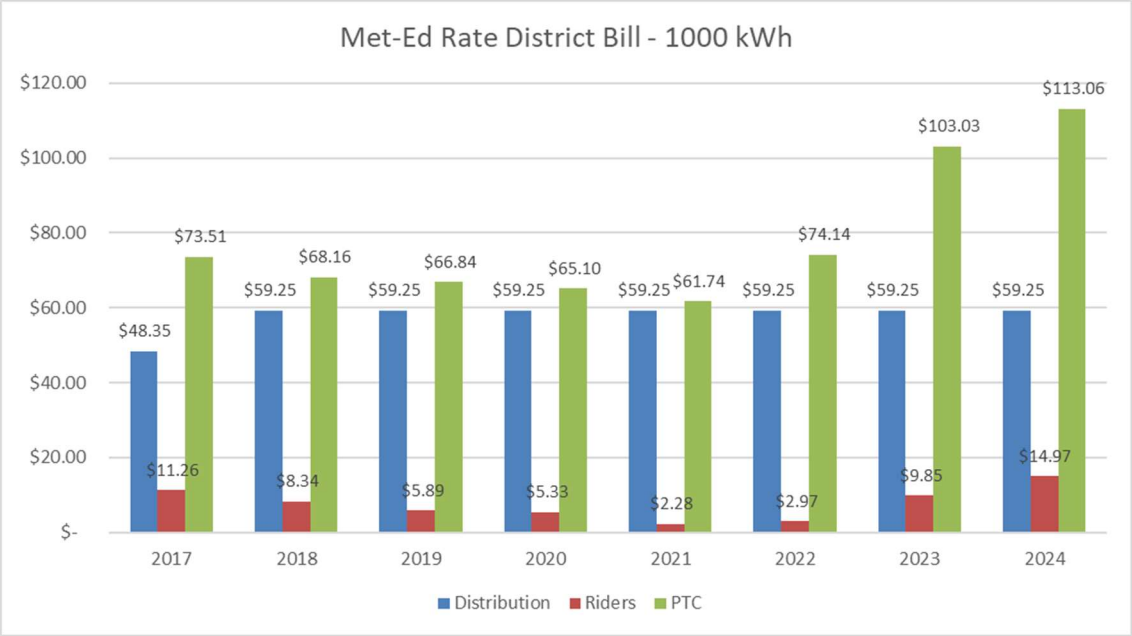
A. Yes. Both I&E and OCA set forth revenue requirement positions that are substantially less than the revenue requirement increase sought by FE PA.[2] In addition, at the various public input hearings held in this matter, members of the public testified regarding the electric bill increases that they have experienced over the past several years and also testified that FE PA did not need to obtain rate relief.[3]

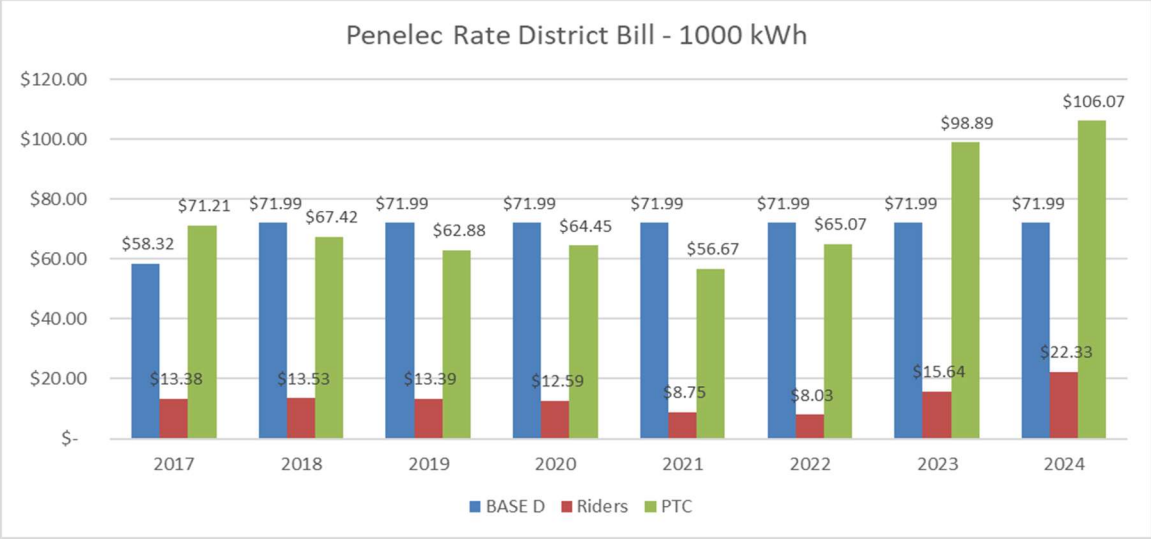
Q. How does FE PA respond to comments from customers about bill increases over the past few years?

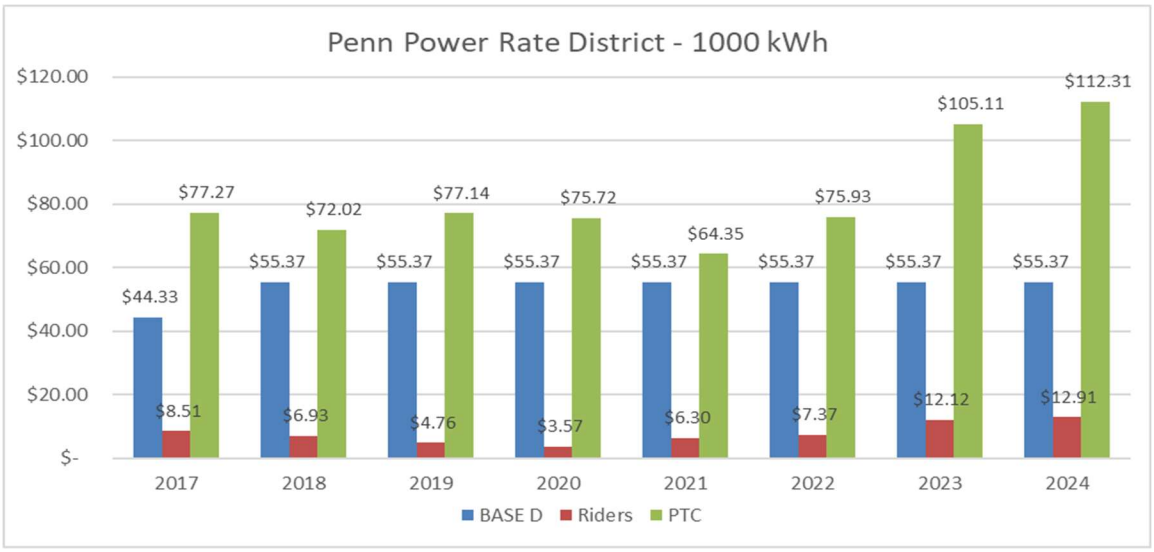
A. It is important to note that the Company's base distribution rates have not been the cause of any increases experienced by customers over the past several years. Indeed, the Company's base rates that were set in 2017 have not changed since this time and will not

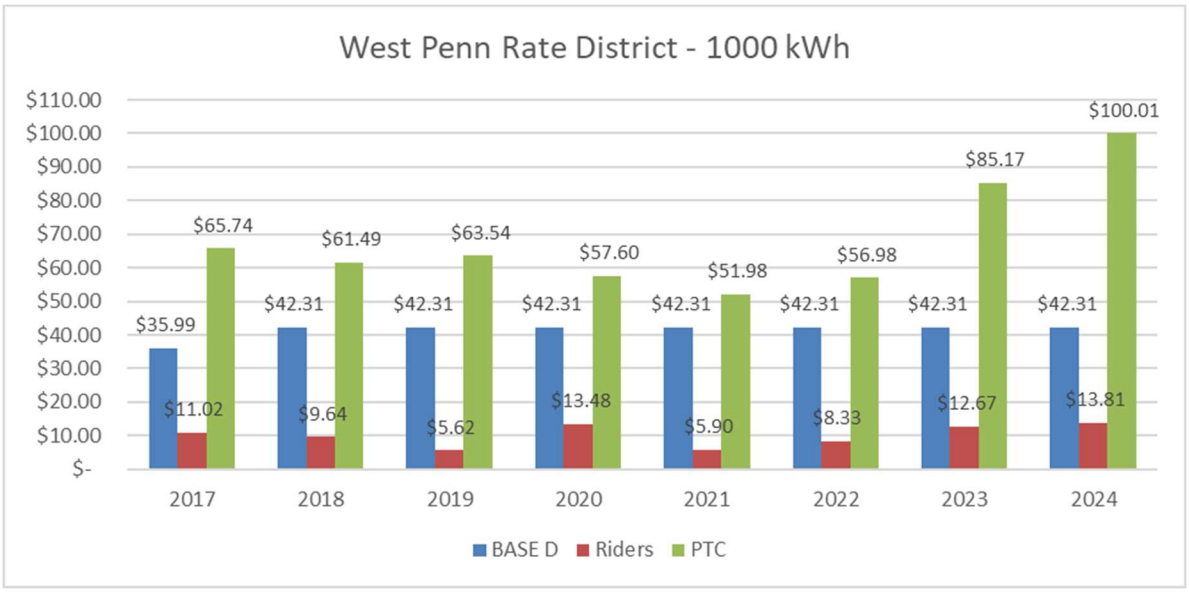
[1] As explained in my Direct Testimony (FE PA St. No. 1), the Predecessor Companies merged into FE PA pursuant to the Commission's Order at Docket Nos. A-2023-3038771, et al. (the "PA Consolidation").
[2] I&E St. No. 1 at pp. 5-10; OCA St. No. 1 at pp. 5-6.
[3] As of the date of service of my rebuttal testimony, the transcripts of the public input hearings are not yet available. FE PA reserves the right to respond to specific testimony elicited at the public input hearings as a part of its surrebuttal testimony.

change until the effective date of base rates set in this case. The charts below provide an overview of the Predecessor Companies' January estimated residential customer bill using 1000 kWh. The information shows that each bill after January 27, 2017, has the same monthly charge for distribution. The increases that the customers have been experiencing since the last base rate case effective on January 27, 2017, are related to riders and the Price To Compare ("PTC") Rider rates, which fluctuate every month as shown below.









As can be seen by these charts, while customers may have experienced bill changes since the time of the last base distribution rate case, much of this fluctuation is related to the Company's PTC, which is associated with the generation portion of the bill. The PTC Rider is a pass-through for the Company and is dependent on market conditions. Currently, the PTC Rider changes on a semiannual basis each June 1 and December 1. Changes to the PTC Rider are independent of this base distribution rate case. In addition, fluctuations in a customer's usage, such as seasonal heating or cooling load, will affect a customer's

total bill, but the distribution base rates have not changed over this time period. Based on a review of the 2023 median usage of residential customers for the Met-Ed Rate District, customers' usage during the month of August is 384 kWh higher than the month of May, as shown in the total below.

Date	Met-Ed Rate District kWh
Jan-23	1,172
Feb-23	1,019
Mar-23	965
Apr-23	820
May-23	685
Jun-23	717
Jul-23	969
Aug-23	1,069
Sep-23	1,008
Oct-23	721
Nov-23	718
Dec-23	946

Q. What is FE PA's response to public input hearing testimony that suggests rate relief is not necessary or that the Company's rate increase should be rejected?

A. While it is not likely for customers to welcome a rate increase, the Company's proposed base rate increase is necessary, among other reasons, to support necessary system investments to maintain and improve service reliability. In addition, the Company's proposed enhanced vegetation management program will benefit customers over time as explained in the testimony of Company witness Hawkins (FE PA Statement No. 12-R).

Q. Could you please summarize the overall positions of other parties regarding the Company's revenue requirement proposal?

A. Several of the other parties to this case have recommended that the Commission adopt an extensive number of adjustments that will reduce the Company's requested revenue requirement increase,[4] while other parties argue that the Commission should either reject the requested revenue requirement increase[5] or closely examine it.[6] In this testimony, I will mostly focus on the direct testimony of OCA witness Mr. Dante Mugrace and I&E witnesses Ms. Christine Wilson and Ms. Vanessa Okum, while other witnesses for the Company will be providing rebuttal testimony on their specific areas of expertise.

Q. What is I&E's overall position with respect to FE PA's requested revenue requirement increase?

A. I&E witness Okum recommends a total revenue requirement increase for FE PA of $165.225 million.[7] This recommendation reflects a $16.815 million increase for the Met-Ed Rate District, a $38.455 million increase for the Penelec Rate District, a $18.934 million increase for the Penn Power Rate District, and a $91.021 million increase for the West Penn Rate District.[8]

[4] *See, e.g.*, I&E St. No. 1 at pp. 5-10; OCA St. 1 at pp. 5-6.
[5] CAUSE-PA St. No. 1 at pp. 6-7.
[6] *See* Walmart St. No. 1 at p. 12 (recommending the Commission closely examine the Company's requested return on equity ("ROE")).
[7] I&E St. 1 at pp. 9-10.
[8] I&E St. 1 at p. 10 (referencing table).

Q. What is OCA's overall position with respect to FE PA's requested revenue requirement increase?

A. OCA witness Mugrace recommends a total revenue requirement increase for FE PA of $16.910 million.[9] This recommendation reflects a $4.912 million increase for the Met-Ed Rate District, a $4.461 million increase for the Penelec Rate District, a $1.838 million increase for the Penn Power Rate District, and a $5.699 million increase for the West Penn Rate District.[10]

Q. Does FE PA agree with I&E witness Okum's recommendation to reduce the total revenue requirement for all of FE PA's Rate Districts from approximately $502 million to approximately $165 million, inclusive of each of I&E's adjustments?

A. No.

Q. Does FE PA agree with OCA witness Mugrace's recommendation to reduce the total revenue requirement for all of FE PA's Rate Districts from approximately $502 million to approximately $17 million, inclusive of each of the OCA's proposed adjustments?

A. No.

Q. Please explain why FE PA disagrees with the overall positions of I&E and OCA with respect to its requested revenue requirement for the FPFTY.

A. Both I&E and OCA fail to consider the effects that their recommended revenue requirements would have on the overall health of FE PA. As stated in my direct testimony,

[9] OCA St. No. 1 at p. 5.
[10] OCA St. No. 1 at p. 5.

FE PA's Predecessor Companies' last base rate case was eight years ago. This rate case was based upon, and reflective of, projected operating conditions for the year ended December 31, 2017. To say that FE PA operates under substantially different conditions than the Predecessor Companies did in 2017 is an understatement. Among others, since the rates established in the Predecessor Companies' last base rate case became effective, these conditions include:

- The Company had invested approximately $900 million in electric distribution infrastructure and made significant strides to modernize and automate the distribution system.
- Legally-mandated programs such as net metering continue to grow significantly; as of 2017, the Predecessor Companies processed 1,102 applications per year compared to 4,552 net metering applications that were processed in 2023.
- The Company completed a full transformation of its customer service area of the business to continue to enhance the service provided to the customers and at the same time to cope with the continue changes in technology.
- Significant shifts in the economy since the Predecessor Companies' last base rate in 2017 have led to increases in inflation and interest rates, forcing the Company to seek rate relief.

In the face of these changes, the Commission must grant the Company's proposed request for FE PA to continue to enhance safety and reliability and at the same time provide an affordable product today and in the future. The $502 million proposed request will permit FE PA to continue investing in reliability capital expenditures as well as storm-related capital repairs, among other as mentioned in the direct testimony of FE PA witness Smith.[11] In addition, the proposed request will allow FE PA to increase staffing levels to cope with the unexpected demand of net metering applications that are being processed by the Rate Districts. Without the base rate case, FE PA cannot continue to upgrade aging

[11] FE PA St. No. 2 at p. 12.

infrastructure, such as those included in the Commission-approved Long Term Infrastructure Improvement Plans. As further discussed by Company witness Hawkins, the Company needs the proposed rate increase to focus on reliability and infrastructure of the service territory. In addition, as discussed by Company witnesses Hawkins and De Stigter, it is critical to grant the requested an increase in order to support the need for additional vegetation management. Company Witness D'Ascendis expresses the importance for the requested ROE of 11.3%. In sum, the revenue requirements proposed by I&E and OCA would substantially jeopardize the Company's ability to operate and achieve these improvements and, therefore, should be rejected.

Q. Are there other reasons why OCA witness Mugrace's proposed revenue requirement increase should be rejected by the Commission?

A. Yes. There are two additional reasons. First, OCA witness Mugrace's testimony and exhibits contain several mathematical and accounting errors. Once those errors are corrected, OCA's proposed revenue requirement increase grows substantially from the one proposed by Mr. Mugrace. Second, OCA witness Mugrace's revenue requirement increases proposed for each FE PA Rate District do not actually reflect cost causation and, instead, essentially treat FE PA's Rate Districts as having been consolidated and unified. I will walk through each of these fundamental flaws with OCA witness Mugrace's revenue requirement proposals.

Q. How did FE PA determine that these errors had been made?

A. The Company was able to determine the above-identified errors made by OCA witness Mugrace by closely examining the Exhibits to his Direct Testimony as well as the associated workpapers that were supplied by OCA in response to FE PA to OCA-I-001.

Q. What are the errors that were committed by OCA witness Mugrace?

A. There are a number of them, with both positive and negative impacts to FE PA's revenue requirement. Below, I provide a table that shows in each column (a) the applicable Exhibit where the error is located, (b) a description of error, and (c) its impact (in $ thousands) to OCA's proposed revenue requirement. I note that the revenue requirement impact reflected in the last column of the table reflects the use of OCA's proposed capital structure and ROE, which are both opposed by other FE PA witnesses. The point of this table is not to indicate FE PA's agreement with any of OCA's proposals; rather, it is to show what OCA's Exhibits, once corrected, actually support a proposed revenue requirement increase that is different from the one recommended by OCA witness Mugrace.

TABLE 1 ($ in Thousands)

Exhibit	Description	Rate Base Impact	Expense Impact	Rev. Req. Impact
DM-4	OCA Present Rates column, line 26 excludes deferred income taxes from net operating income		$4,625	$6,839
DM-4	OCA Present Rates column, line 12 adds additional uncollectibles as a hard coded number; however, these costs are added in calculation of the rate increase		(186)	(200)
DM-7	Misclassified expenses; formula errors, and hardcoded numbers in columns G and H	$950		89
DM-9	OCA proposed ADIT adjustment should be an increase to ADIT and taxed only at federal rate	(30,252)		(2,840)
DM-13	OCA proposed FE PA incentive compensation adjustments should be multiplied by an O&M allocator similar to the O&M payroll adjustment shown on DM-13, col. E, line 11 to reflect the expense amount in the income statement		2,359	2,536
DM-13	OCA proposed vacancy rate adjustment excludes FE PA's payroll adjustment and incentive compensation, as adjusted by OCA		(298)	(320)

Exhibit	Description	Rate Base Impact	Expense Impact	Rev. Req. Impact
DM-13	OCA proposed vacancy rate adjustment, as revised should be multiplied by an O&M allocator similar to the O&M payroll adjustment shown on DM-13, col. E, line 11 to reflect the expense amount in the income statement		3,706	3,984
DM-13	OCA proposed Service Company STIP adjustment should be multiplied by an O&M allocator similar to the Service Company O&M payroll adjustment shown on DM-13, col. E, line 24 to reflect the expense amount in the income statement		2,696	2,898
DM-13	OCA proposed Service Company LTIP adjustment should be multiplied by an O&M allocator similar to the Service Company O&M payroll adjustment shown on DM-13, col. E, line 24 to reflect the expense amount in the income statement		4,904	5,272
DM-16	OCA column, line 10 double counts the payroll adjustment		(58)	(62)
DM-16	Exhibit does not reflect OCA witness Alexander's total disallowance of EV program		(67)	(72)
DM-18	OCA proposed pension adjustment should eliminate the per budget pension amounts similar to the calculation of the PURTA tax adjustment on DM-21, which is necessary to have the test year reflect the intended amount		23,902	25,693
DM-18	OCA proposed OPEB adjustment should eliminate the per budget OPEB amounts similar to the calculation of the PURTA tax adjustment on DM-21, as it is necessary to have the test year reflect the intended amount		3,182	3,420
DM-18	OCA proposed Economic Development adjustment only includes West Penn amounts		(53)	(57)
DM-18	OCA proposed Workforce Development adjustment only includes West Penn amounts		(6,103)	(6,561)
DM-21	Adjust payroll tax as a result of revising payroll adjustments		(16)	(17)

Exhibit	Description	Rate Base Impact	Expense Impact	Rev. Req. Impact
DM-22	Exhibit does not include OCA witness Garrett's proposed depreciation adjustment in current state income tax		(5,000)	(7,393)
DM-22	Exhibit does not include OCA witness Garrett's proposed depreciation adjustment in current federal income tax		(12,091)	(17,880)
DM-23	Exhibit does not include depreciation adjustments in deferred federal income tax		13,161	19,463
	TOTAL ADJUSTMENTS	$(29,301)	$34,666	$34,793

As shown above, correcting several of the errors committed by OCA witness Mugrace would result in decreases to the revenue requirement, while correcting others represent increases to revenue requirement.

Q. What is the total impact to OCA's proposed revenue requirement increase if OCA witness Mugrace's errors are corrected?

A. OCA witness Mugrace recommended a revenue requirement increase of $16.911 million on a total FE PA basis. The impact of correcting the errors set forth above would further increase OCA's recommendation to $51.704 million. Additionally, Company witness Spanos (FE PA Statement No. 9-R) explains an error with the depreciation reserve calculation used by OCA witness Garrett in the determination of depreciation rates. Mr. Spanos indicates that OCA witness Garrett's depreciation expense, using the appropriate depreciation reserve, would increase by $14.029 million. This depreciation expense adjustment, and the associated adjustments to the depreciation reserve, accumulated deferred income taxes, current income tax expense and deferred tax expense, results in an additional revenue requirement increase of $15.391 million, or $67.095 million in total.

Q. Please explain what you meant by stating that OCA's revenue requirement proposals for each Rate District do not reflect cost causation.

A. OCA witness Mugrace does not actually attempt to develop a revenue requirement for each of the Rate Districts. Rather, he simply created a consolidated and unified FE PA revenue requirement proposal and then split it up amongst each of the Rate Districts on the same percentage basis as each Rate District's share of the total FE PA revenue requirement increase proposed by the Company. Additionally, Mr. Mugrace developed a total FE PA weighted-average gross revenue conversion factor based on each Rate District's individual gross revenue conversion factors in the same manner.

Q. How were you able to determine this is what OCA witness Mugrace did?

A. He admitted as much in his response to FE PA to OCA-I-001, where he stated that "Mr. Mugrace calculated the Company's overall revenue requirement on a combined basis and did not prepare documents for each of the Company's rate districts." A copy of this discovery response is attached to my rebuttal testimony as FE PA Exhibit JMS-5. In addition, Exhibit DM-1 shows how he arrived at his percentages for each Rate District, which aligns with the process I described.

Q. Is this a proper method to determine each Rate District's revenue requirement in this matter?

A. No, it is not.

Q. Why not?

A. FE PA developed a separate revenue requirement for each Rate District as a part of its initial filing, which reflects that the base rates set in this case are specific to each Rate

District and not FE PA as a whole. Indeed, each of the rate base schedules provided by FE PA includes support details for each Rate District. Importantly, this detail was required to be provided as a part of the PA Consolidation Settlement, which both precluded the unification of base distribution rates in this case and required the filing of separate cost of service models and revenue requirements for each of its Rate Districts. In essence, while there is a "FE PA total" revenue requirement proposed by the Company, that "FE PA total" revenue requirement is the sum of separately developed revenue requirements for each Rate District that reflect the separate costs of service in each Rate District.

On the other hand, Mr. Mugrace makes no attempt to develop separate revenue requirements that reflect the costs of service in each Rate District. He instead starts with the FE PA total revenue requirement proposed by the Company, makes blanket adjustments to various line items of rate base, revenues and expenses to arrive at OCA's proposed FE PA total revenue requirement (without any consideration to how each Rate District may have contributed to each of those line items), and then attempts to allocate the total revenue requirement to each Rate District using a non-cost causative percentage.

III. REFUNDS TO CUSTOMERS

Q. Do any of the other parties address the Company's proposed refunds to customers?

A. Yes. I&E witness Wilson addresses the refunds to FE PA's customers that were proposed in my Direct Testimony (FE PA St. No. 1).

Q. Please summarize I&E witness Wilson's testimony regarding FE PA's refunds proposal.

A. I&E witness Wilson does not oppose the provision of refunds to customers for the reasons set forth in my Direct Testimony. However, she argues that the Company should be

required to compute compound interest at 8 percent consistent with the rate used in calculating customer deposits.[12]

Q. Do you agree with I&E witness Wilson's recommendation to change the interest rate on the proposed customer refunds to 8 percent as published by the Department of Revenue on December 23, 2023?

A. No, I do not agree. I am advised by counsel that Section 1312(a) of the Public Utility Code states that "in any proceeding involving rates," Commission-ordered refunds for overcollections shall be computed "with interest at the legal rate from the date of each such excessive payment." Critically, when the term "legal rate of interest" is used in a statute, the General Assembly has clarified that the interest rate to be applied is "six per cent per annum." 41 P.S. § 202. Therefore, counsel advises me that I&E witness Wilson's position conflicts with these statutes.

Additionally, I&E witness Wilson's position fails to reflect how the Company's refund period extends back to 2007, while the proposed interest rate by Ms. Wilson was in effect only two times in the past 18 years, during which the most predominant interest rate has been 3 percent. As shown in the table below, the average interest rate for the past 18 years is 4.6 percent.

[12] I&E St. No. 4 at p. 58.

Year	Percentage
2007	8%
2008	7%
2009	5%
2010	4%
2011	3%
2012	3%
2013	3%
2014	3%
2015	3%
2016	3%
2017	4%
2018	4%
2019	6%
2020	5%
2021	3%
2022	3%
2023	7%
2024	8%
Average	4.6%

Thus, even if it were appropriate to apply the interest rate published by the Pennsylvania Department of Revenue, as advocated by I&E witness Wilson, the application of an interest rate of 6 percent would be higher than the average of the interest rate published by the Pennsylvania Department of Revenue over the course of the refund period. For these reasons, I recommend that the Commission reject I&E witness Wilson's proposal.

Q. Does I&E witness Wilson make any other recommendations with respect to the Company's refunds proposal?

A. Yes. In response to FE PA's plan to submit an informational filing to the Commission reporting the actual refunds distributed to customers no more than 30 days after the completion of the refund distribution, I&E witness Wilson recommends that the

Commission require the Company to send the report "directly to the parties in the instant proceeding" as well.[13]

Q. Do you agree with this recommendation?

A. Yes. The Company agrees to submit the filing at this docket and supply the same filing to all parties in this proceeding within the prescribed 30-day period.

IV. IMPACT OF VERIZON COMPLAINT ON RATE CASE

Q. Do any of the other parties address FE PA's proposals regarding the impacts of the Commission's Order entered December 3, 2020 in Docket No. C-2020-3019347 ("Verizon Complaint")?

A. Yes. Both I&E witness Kubas and OCA witness Mugrace address the Company's proposals regarding the impacts of the Verizon Complaint.

Q. What is I&E witness Kubas's position regarding the impacts of the Verizon Complaint that are reflected in the Company's revenue requirement?

A. I&E Witness Kubas recommends that "all claims for the Verizon Complaint, both the amortization and expense and rate base amounts . . . be rejected in their entirety."[14]

Mr. Kubas asserts that "[t]his is the first time the Company is requesting deferral of this expense, some of which is prior to the FPFTY, and thus a prior period adjustment."[15] He also claims that "utilities are not permitted to recover revenues anticipated but not received," that ratemaking components change after the cases, and that "carving out this revenue as one past ratemaking component constitutes single issue ratemaking for which a

[13] I&E St. No. 4 at pp. 59-60.
[14] I&E St. No. 3 at p. 9.
[15] I&E St. No. 3 at p. 9.

prospective claim should not be permitted."[16] Further, Mr. Kubas contends that the Commission "did not include any deferral or recovery recommendation" in its December 18, 2020 Opinion and Order in the Verizon Complaint proceeding.[17]

Q. Do you agree with Mr. Kubas's recommendation?

A. I do not. Each of the reasons proffered by Mr. Kubas is flawed. First, Mr. Kubas erroneously claims that that "[t]his is the first time the Company is requesting deferral of this expense, some of which is prior to the FPFTY, and thus a prior period adjustment."[18] It is indisputable that the Company requested deferral of these expenses in the Verizon Complaint proceeding. In fact, Section G of the Commission's December 18, 2020 Opinion and Order is titled, "FirstEnergy's Deferral Proposal." The Commission ultimately rejected the Company's deferral proposal, reasoning as follows:

> In the Recommended Decision, the ALJ determined that FirstEnergy should have been charging Verizon the new telecom rate and that the Companies are free to make the argument that they should be permitted to record as a regulatory asset the difference in revenues produced from the existing rates and the new rates and recover the difference in their next base rate cases. We find no error in the ALJ's statement that FirstEnergy's base rate arguments can be deferred to the Companies' next base rate proceedings where the issues can be fully vetted. Moreover, it is not clear from the evidence of record whether our decision in this Opinion and Order would necessarily trigger a base rate proceeding or a rate increase for any of the Companies. Thus, we shall not prejudge this issue in this proceeding. Accordingly, we shall deny FirstEnergy Exception No. 15.[19]

[16] I&E St. No. 3 at pp. 9-10.
[17] I&E St. No. 3 at p. 10.
[18] I&E St. No. 3 at p. 9.
[19] *Verizon Pa. LLC & Verizon North LLC v. Metro. Edison Co., Pa. Elec. Co., & Pa. Power Co.*, Docket No. C-2020-3019347, at 75 (Order entered Dec. 18, 2020).

On appeal, the Commonwealth Court upheld the Commission's determination and declared that "the PUC specifically preserved FirstEnergy's right to seek base rate increases to offset its pole attachment reductions in its next base rate proceeding."[20] Thus, not only did the Company propose the deferred recovery of these expenses in the Verizon Complaint proceeding, but the Commission and Commonwealth Court specifically stated that these issues could be addressed in this base rate case.

Second, I am advised by counsel that there is a well-established exception to the general prohibition against single-issue ratemaking for unanticipated expenses that are extraordinary and nonrecurring. The refunds and lost revenues that result from the Commission's December 18, 2020 Opinion and Order necessarily reduce the revenues that offset, on a dollar-for-dollar basis, the Company's operating expenses and, consequently, increase the Company's operating expenses. Also, this increase in expenses is unanticipated because the Commission had not reverse preempted the Federal Communications Commission's ("FCC") jurisdiction over pole attachments at the time of the Company's last base rate case. Moreover, the Commission's grant of refunds and lower rates to Verizon was based on the "new telecom rate," a rate that the FCC has not awarded to any incumbent local exchange carrier ("ILEC") in a complaint proceeding despite many attempts by ILECs to obtain it. Further, the expenses are extraordinary given the amounts involved, as shown in FE PA HIGHLY CONFIDENTIAL Exhibit JMS-4. Also, the expenses are nonrecurring because: (1) the refund would be made once; and (2) the lower rates would remain in place under the pole attachment agreements. Thus, the

[20] *Verizon Pa. LLC v. Pa. PUC*, 303 A.3d 219 (Pa. Cmwlth. 2023) (citing *Columbia Gas of Pa., Inc. v. Pa. PUC*, 613 A.2d 74, 76 (Pa. Cmwlth. 1992), *aff'd*, 636 A.2d 627 (Pa. 1994)).

Company maintains that the increase in expenses stemming from the refunds and lost revenues qualifies for deferred recovery.

Third, when there is a change in Commission directives between base rate cases, utilities have been permitted to recover the increased expenses resulting from that change.[21] Here, the Commission reverse preempted jurisdiction over pole attachments and awarded Verizon the "new telecom rate," which the Commission had not previously awarded, nor has the FCC ever awarded in a pole attachment rate complaint proceeding.

Fourth, although the Commission "did not include any deferral or recovery recommendation" in its December 18, 2020 Opinion and Order, Mr. Kubas overlooks how both the Commission and the Commonwealth Court stated that the Company's deferral proposal could be appropriately addressed in this base rate proceeding.

Q. Could you please explain OCA witness Mugrace's position on the Company's proposed recovery of the refunds and lost revenues associated with the Commission's decision in the Verizon Complaint proceeding?

A. Mr. Mugrace alleges that "these costs are speculative in nature, and not fully yet known and measurable," because "the case was appealed by FirstEnergy to the PA Supreme Court," and "the disposition of that matter is currently pending."[22] Therefore, Mr. Mugrace recommends that the Commission disallow these costs for ratemaking purposes.[23]

[21] *See, e.g.*, *Columbia Gas of Pa., Inc. v. Pa. PUC*, 613 A.2d 74, 78-80 (Pa. Cmwlth. 1992) (permitting recovery of certain expenses incurred between rate cases due to a change in PUC directives regarding customer payment plans).
[22] OCA St. No. 1 at p. 77.
[23] OCA St. No. 1 at p. 77.

Q. Do you agree with Mr. Mugrace's position?

A. No. Although the case is on appeal to the Pennsylvania Supreme Court, I am advised by counsel that the Commission's December 18, 2020 Opinion and Order was not stayed pending appeal. Therefore, as it currently stands, the Commission's December 18, 2020 Opinion and Order is still effective.

Q. Do you have any final thoughts on why the Commission should reject the recommendations of OCA and I&E and grant deferred recovery of the refunds and lost revenues associated with the Verizon Complaint?

A. Yes. ILECs, in particular, have different relationships with the electric utility and use the electric utility's facilities differently than non-ILEC attachers, and their rates should reflect that. The rental revenues received by attachers go to pay for the portion of the electric utility's pole plant utilized by the attachers, and in so doing, reduce the cost to electric customers for the use of the electric utility's facilities. If the Company were denied the deferred recovery of the refunds and lost revenues related to the retrospective and prospective cancelation of the negotiated rates with ILEC attachers, the Commission would, in essence, be encouraging electric utilities to capitulate to the rate demands of pole attachers and not dispute whether they are eligible to receive a lower pole attachment rate under the Commission's regulations to the detriment of electric customers. Electric utilities would not be willing to risk disputing the pole attachers' demands for lower rates if they could be left without a way to recover any refunds or lost revenues if and when the Commission ultimately finds that the pole attachers should be awarded a lower rate and a refund (plus interest) based on that lower rate.

V. CONSOLIDATION SAVINGS

Q. Do any of the other parties testify regarding the PA Consolidation?

A. Yes. Specific to my Rebuttal Testimony, OCA witness Mugrace mentions that FE PA did not include any merger related savings to offset the proposed revenue requirement.[24]

Q. Why did the Company not include any merger-related savings in its 2024 base rate case?

A. OCA witness Mugrace fails to consider that the PA Consolidation was effective on January 1, 2024, a mere six months ago. Therefore, many of the benefits have yet to be realized, much less quantified. Thus, the Company was unable, in this base rate case, to include actual savings that should be passed on to customers. Nevertheless, the Company will continue to monitor savings consistent with the PA Consolidation Settlement Agreement and provide incremental and cumulative data quantifying those savings in future base rate cases.

Q. Does OCA witness Mr. Mugrace make any recommendations regarding PA Consolidation savings?

A. Yes. He recommends that the Company be required to provide any potential and preliminary merger related costs savings, along with a detailed breakdown of such costs in the Company's rebuttal testimony.[25]

[24] OCA St. No. 1 at pp. 32-33.
[25] OCA St. No. 1 at p. 33.

Q. Does FE PA agree with this recommendation?

A. No. Again, the amount of savings that could be realized since January 1, 2024, which is when the merger was in effect, is not material enough to create an impact within the current base rate case. As required by the PA Consolidation Settlement Agreement reached amongst the parties (and signed by OCA itself), FE PA will incorporate the actual savings realized in future base rate cases and provide the recommended detailed breakdown within those cases.

VI. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes.

Pa. P.U.C. v. FirstEnergy Pennsylvania Electric Company
Docket Nos. R-2024-3047068, *et al*.
Interrogatories of FirstEnergy Pennsylvania Electric Company
Set I to OCA

OCA-I-1:

Please reference OCA Statement No. 1. Please provide all supporting Documentation in Its native format, including Workpapers and Workbooks in electronic format with formulas intact that Mr. Mugrace used, relied upon, or referenced in developing OCA Statement No. 1 and its associated exhibits. Please provide the requested Documentation on an individual rate district basis for Penn Power, Met-Ed, Penelec, and West Penn, respectively and as available, as well as a consolidated basis across FE PA's rate districts.

Response Date: July 8, 2024

Responding Witness: Dante Mugrace

Response:

Please see the attached CONFIDENTIAL electronic workbook that supports Mr. Mugrace's revenue requirement recommendation. Mr. Mugrace calculated the Company's overall revenue requirement on a combined basis and did not prepare documents for each of the Company's rate districts.

REBUTTAL TESTIMONY
OF
WADE SMITH

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Wade Smith. My business address is 76 South Main Street, Akron, Ohio 44308.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed written direct testimony FE PA Statement No. 2 on April 2, 2024, on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to respond to certain portions of the direct testimony of Dante Mugrace (OCA Statement No. 1), submitted on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). Specifically, I respond to Mr. Mugrace's adjustments and arguments related to FE PA's proposal to recover costs associated with diversity, equity and inclusion ("DEI") initiatives and environmental, social and governance ("ESG") costs in base rates, as well as Mr. Mugrace's assertions regarding the inclusion of costs associated with economic development and workforce development in base rates.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. No.

II. REBUTTAL REGARDING COSTS RELATED TO DEI AND ESG

Q. What is OCA's position with respect to the inclusion of DEI costs in base rates?

A. OCA witness Mugrace proposes to disallow two-thirds of the DEI costs the Company requested to include in base rates.[1] OCA witness Mugrace states that he is "following the OCA's policy lead that it has supported the Commission's Diversity Policy Statement" and argues that DEI costs "mostly benefit the Company."[2] He further asserts that he "does not see a nexus between DEI costs and customer oriented costs/ratepayer benefits" and that DEI costs "are generally geared toward corporate branding and morale boosting within the organization."[3] He lastly asserts that "[c]orporations should have been incorporating these initiatives in the past without carving out specific tasks and additional costs and asking customers to shoulder the costs."[4]

Q. Do you agree with OCA witness Mugrace's statements regarding DEI costs?

A No. I disagree with the recommendation to disallow 67% of DEI costs.

Q. Please explain why you disagree.

A. Mr. Mugrace's suggestion that only one third of the DEI costs should be included does not follow the Pennsylvania Public Utility Commission's ("PUC" or the "Commission") Diversity Policy Statement, 52 Pa. Code 52 Pa. Code §§ 69.801—69.80, and is an arbitrary number. While he asserts that he is "following OCA's policy lead" regarding the Commission's Diversity Policy Statement, he provides no explanation of what OCA policy he is following nor any explanation as to how disallowing DEI costs are consistent with

[1] OCA St. No. 1 at p. 66.
[2] OCA St. No. 1 at p. 66.
[3] OCA St. No. 1 at pp. 66-67.
[4] OCA St. No. 1 at p. 67.

the PUC's Diversity Policy Statement. Moreover, this position ignores the fact that the PUC recently issued specific regulations that require utilities to report on how they are achieving the specific recommendations set forth in the Diversity Policy Statement.[5] Failure to file adequate reports regarding the efforts implemented to achieve the recommendations in the Diversity Policy Statement can result in the utility being subject to civil penalties.[6] These regulations demonstrate the importance of the Diversity Policy Statement and suggest that the PUC believes DEI initiatives provide benefits to customers.

In addition, and contrary to his testimony, Mr. Mugrace cites precisely how DEI initiatives benefit customers. He references FE PA Response to OCA Interrogatory Set XIV, No. 16, which sets forth how these initiatives benefit customers, but does not actually dispute or attempt to rebut any of these benefits. He does not acknowledge that these initiatives support the communities where FE PA serves by embodying a workforce that is reflective of the communities it serves and also help strengthen the economy in FE PA's footprint while improving its ability to adapt and respond to our customers' changing expectations. Rather, he makes the blanket assertion that these initiatives solely benefit the Company.

Moreover, he ignores the fact that under the supplier diversity program, FirstEnergy Corp. ("FirstEnergy") has encouraged its larger suppliers to contract with small diverse businesses, especially when fulfilling our work requirements. Sourcing local talent and suppliers familiar with local demographics and geography allows the Company to innovate and address concerns at a quicker pace than could be achieved otherwise, while also supporting the local economies in which the Company serves.

[5] *See* 52 Pa. Code §§ 51.11-51.13.
[6] 52 Pa. Code § 51.11.

In sum, Mr. Mugrace attempts to take a myopic view of an issue that in fact directly benefits FE PA's ratepayers in a number of ways, and which have specifically encouraged and prioritized by the Commission. FE PA should be permitted to recover the costs of these initiatives and OCA's proposed disallowance should be rejected.

Q. What is OCA's position with respect to the inclusion of ESG costs in base rates?

A. OCA witness Mugrace proposes to disallow all ESG costs claimed by the Company because they are not a function of customer oriented or ratepayer benefits but instead are related to benefits to the Company.[7]

Q. Do you agree with Dante Mugrace's statements regarding ESG costs?

A. No. I disagree with the recommendation to disallow all ESG costs.

Q. Please explain why.

A. Costs associated with ESG directly benefit the Pennsylvania customers and FE PA should be permitted to recover these costs. FirstEnergy's dedication to ESG is a responsible business strategy and guides its commitment to serve its six million customers every day with safety, sustainability, affordability, and community vitality in mind. Notably, members of the investing community may specifically invest in companies that follow positive ESG values and principles, or they may have ESG guidelines and/or requirements that must be satisfied by a prospective investment. If FirstEnergy did not implement ESG initiatives, it would not be an applicable or attractive investment to this segment of the investing community. Conversely, ensuring that FirstEnergy exhibits a dedication to these values means that FirstEnergy has broader access to capital to support FE PA and its

[7] OCA St. No. 1 at p. 67.

affiliated operating companies. Access to a larger pool of investors functions to decrease the cost of capital for FirstEnergy and likewise FE PA, thus resulting in lower rates paid by its customers.

In addition to these benefits related to attracting capital, the ESG initiatives are customer-oriented initiatives that benefit customers from an affordability perspective and by investing money in the communities where our customers live, work, and raise their families. FirstEnergy strives to protect the environment by minimizing its impact, improving the sustainability of its operations, executing its climate strategy, and finding opportunities to enhance the ecosystems within its footprint. Examples of sustainable initiatives include the integrated vegetation management best practices along transmission corridors which help reduce costs and provide more reliable service to our customers while enhancing the biodiversity of those corridors. These initiatives also include both conservation and pollination work which not only support healthy ecosystems but also supports the communities of FE PA customers and the Commonwealth public at large. FE PA is also focused on meeting the needs of its diverse customer base and providing equitable solutions for everyone it serves. This includes payment assistance and emergency support programs to help customers budget monthly payments, pay winter heating bills, catch up on past-due payments, and avoid service disconnections. Additionally, FE PA offers energy efficiency programs designed to help income-qualified residential customers reduce energy usage and offset the costs of energy improvements. FE PA believes it is important to support long-term vitality and economic health through development initiatives that create jobs, support local suppliers, and attract new businesses throughout the service area, as well as provide support through FirstEnergy Foundation

grants, Corporate Giving, and employees dedicating volunteer time to the communities. OCA witness Mugrace's arguments that such initiatives, which are a core aspect of the Company's ESG initiatives, do not benefit ratepayers contradicts the positions taken by OCA witnesses Colton and Alexander with respect to the benefits of affordability, payment assistance, and conservation initiatives.

These ESG initiatives are also aimed at enabling our customers to thrive in an electrified future. With an ESG focused responsible business approach, FirstEnergy continues to fulfil its mission statement by making its customers' lives better and its communities stronger.

III. REBUTTAL REGARDING ECONOMIC DEVELOPMENT AND WORKFORCE DEVELOPMENT COSTS

Q. What is OCA's position with respect to the inclusion of economic development costs in FE PA's base rates?

A. OCA witness Mugrace recommends that the economic development costs included in FE PA's base rates be disallowed in their entirety.[8] He claims that "[t]hese costs should be borne by local, municipal and state organizations or the Company itself" and that he does not "see the nexus between these costs and the provision of safe and reliable service to customers."[9]

[8] OCA St. No. 1 at p. 67.
[9] OCA St. No. 1 at pp. 67-68.

Q. Do you agree with OCA witness Mugrace's recommendation to disallow economic development costs?

A No. I disagree with the recommendation to disallow all costs associated with economic development.

Q. Why do you disagree?

A. The goal of FirstEnergy's economic development program is to strengthen the economic base of our service area and encourage investment in our footprint. This helps bring jobs and capital investment to our local communities. It also supports Pennsylvania's economy and tax base. Programs and services utilized by the economic development team provide support to local economic development partners and aid in both the attraction of new business and retention of existing employers, who in turn often provide more direct and indirect job opportunities and add to the quality of life in the communities where they live, work, and play. For instance, many of the organizations supported with these resources make skills training and education programs available to their local residents, which in turn provide new opportunities within the communities. These actions have the possibility to increase electricity sales and system usage, which would permit FE PA to spread fixed costs more broadly and reduce customer bills over time, all else being equal. On this point. OCA witness Mugrace's opposition to economic development efforts that improve the affordability of electric service for customers appears to be at odds with the testimony of OCA witnesses Alexander and Colton. The team works closely to foster partnerships with state, regional, and local economic development organizations to support economic development for our customers and all of Pennsylvania.

Q. What is OCA's position with respect to the inclusion of workforce development costs in base rates?

A. OCA witness Mugrace recommends that these costs be disallowed. He raises arguments similar to those that he raised with respect to economic development costs and believes customers do not benefit because these costs do not benefit safety and reliability or service performance metrics.[10]

Q. Do you agree with OCA witness Mugrace's statements regarding workforce development costs?

A No. I disagree with the recommendation to disallow all costs associated with workforce development.

Q. Please explain why.

A. Mr. Mugrace's statements that workforce development costs are related to all workforce employees including federal, state, local, and municipal workforces is incorrect. The costs included in this filing are all internal training costs specific to the training of FE PA employees. The vast majority of these costs are for the training of primarily bargaining unit employees in the operation of systems and equipment used by those employees. This training is specifically designed to provide the critical safety training and knowledge needed for these employees to provide safe and reliable service to Pennsylvania customers.

IV. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes.

REBUTTAL TESTIMONY
OF
PATRICIA M. LARKIN

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Patricia M. Larkin, and my business address is 2800 Pottsville Pike, Reading, Pennsylvania 19605.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed written direct testimony, FE PA Statement No. 3 and FE PA Exhibit Nos. PML-1 through PML-6, on April 2, 2024 on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony provides updates to certain components of the Company's filing, based on the information provided during the discovery phase of this proceeding. In addition, my testimony identifies in summary fashion the adjustments to rate base and O&M proposed by the Bureau of Investigation and Enforcement ("I&E") and the Office of the Consumer Advocate ("OCA") and identifies the Company witness(es) that are responsible for responding to those adjustments. Finally, my testimony responds to specific portions of the following direct testimony submitted by I&E" and the OCA: I&E Statement No. 1, the direct testimony of Vanessa Okum; I&E Statement No. 4, the direct testimony of Christine Wilson; and OCA Statement No. 1, the direct testimony of Dante Mugrace.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, FE PA Exhibit Nos. PML-7 and PML-8 were prepared by me or under my direct supervision. FE PA Exhibit No. PML-7 sets forth the final statement of FE PA's claims reflecting revisions, updates and corrections to as-filed rate base and operating income claims that were identified during the discovery process. FE PA Exhibit No. PML-8 provides the relevant discovery responses referenced in my testimony.

Q. How is the remainder of your testimony structured?

A. Each section of my testimony that discusses revenue requirement related adjustments will be in the same order in which the adjustment is included in FE PA Exhibit No. PML-7.

II. UPDATES AND CORRECTIONS TO THE COMPANY'S CLAIM

Q. Since the filing of your direct testimony, has the Company identified any rate base components of its filing that should be updated?

A. Yes, the Company has identified parts of its initial filing that require revisions. These include the following updates: 1) inspection and maintenance plan ("I&M Plan")plant in service and depreciation reserve related to the switch to a two-year inspection and maintenance cycle as discussed by Company Mr. John Hawkins (FE PA Statement No. 12-R); and 2) Accumulated Deferred Income Taxes as discussed by Company witness Mr. Greg Gawlik (FE PA Statement No. 5-R).

Q. Please summarize the Company's updates to rate base.

A. Company witnesses Mr. Hawkins and Mr. Gawlik collectively recommend an increase to FE PA's rate base of $6.625 million, which has been reflected in FE PA Exhibit No. PML-7. The table below summarizes the page number and adjustment number where the update

is reflected; the witness supporting the update; and the amount by Rate District and total FE PA:

Page	Adj.	Description	FE PA Witness	Met-Ed	Penelec	Penn Power	West Penn	FE PA
				$ in thousands				
6-11	RB-1	I&M Plant in Service	Hawkins	($4,651)	($1,861)	($515)	($4,880)	(11,908)
12-17	RB-2	I&M Depreciation Reserve	Hawkins	53	18	6	45	122
23	RB-8	ADIT	Gawlik	1,008	10,664	296	6,443	18,410
		Total Rate Base Adjustment		**($3,589)**	**$8,821**	**($214)**	**$1,607**	**$6,625**

Q. Since the filing of your direct testimony, has the Company identified any revenue components of its filing that should be updated?

A. Yes, the Company similarly identified the following revenue requirement items that require revision for the fully projected future test year ("FPFTY") ending December 31, 2025: 1) West Penn revenue as discussed by Company witness Kehl (FE PA Statement No. 6-R); 2) I&M Plan expense related to the switch to two-year cycle for overhead lines and transformers as discussed by Company witness Mr. Hawkins (FE PA Statement No. 12-R); 3) increase payroll tax expense, which I will discuss later in my testimony; and 4) increase federal deferred income tax expense as discussed by Company witness Mr. Gawlik (FE PA Statement No. 5-R).

Q. Please summarize the Company's updates to the income statement.

A. Company witnesses Messrs. Kehl, Hawkins, Gawlik and I collectively recommend a decrease to FE PA's pro forma adjusted operating income before income tax at present rates of $4.895 million, which has been reflected in FE PA Exhibit No. PML-7. The table

below summarizes the page number and adjustment number where the update is reflected; the witness supporting the update; and the amount by Rate District and total FE PA:

Page	Adj.	Description	FE PA Witness	Met-Ed	Penelec	Penn Power	West Penn	FE PA
				$ in thousands				
35	IS-2	West Penn Revenue	Kehl	$0	$0	$0	($97)	($97)
		Total Operating Revenue Adjustment		**$0**	**$0**	**$0**	**($97)**	**($97)**
40	IS-5	I&M Expense	Hawkins	($1,699)	($1,286)	($261)	($1,219)	($4,466)
59	IS-11	Payroll Tax Expense	Larkin	10	16	5	29	59
62	IS-13	Provision for Deferred Income Taxes	Gawlik	504	5,332	148	3,221	9,205
		Total Operating Expense Adjustment		**($1,185)**	**$4,061**	**($109)**	**$2,031**	**$4,799**
		Total Adjustment to Operating Income Before Income Taxes at Present Rates		**$1,185**	**($4,061)**	**$109**	**($2,127)**	**($4,895)**

Q. Does the Company propose to update its requested revenue requirement for the FPFTY in order to take into account the above-identified corrections and updates?

A. Yes. As explained above, FE PA Exhibit No. PML-7 sets forth the final statement of FE PA's claims reflecting revisions, updates and corrections to their as-filed rate base and operating income claims that were identified during the discovery process. The above identified changes result in an overall increase of $9.315 million, bringing FE PA's combined revenue requirement to $511.805 million. However, FE PA is not seeking to recover more than the $502.490 million initially requested.

Q. Does the Company intend to recover the additional revenue requirement?

A. No. As explained above, FE PA is not seeking to recover more than $502.490 million. However, the adjustments included in FE PA Exhibit No. PML-7 demonstrate the

Company's projections were reasonable and conservative. As such, any adjustments proposed by the parties should be applied to the greater amount because it is the revenue requirement supported by the evidence in the case.

III. REBUTTAL – RATE BASE PROPOSED BY THE OCA AND I&E

A. SUMMARY

Q. Please summarize I&E's adjustments to rate base.

A. I&E witnesses Ms. Okum (I&E Statement No. 1), Mr. Kubas (I&E Statement No. 3), and Ms. Wilson (I&E Statement No. 4) collectively recommend a decrease to FE PA's rate base of $222.284 million, as summarized on the following table:

I&E Sponsor	Description	Met-Ed	Penelec	Penn Power	West Penn	FE PA	Responsive FE PA Witness
		$ in Thousands					
	FE PA Rate Base As Filed	**$2,157,612**	**$2,269,068**	**$644,947**	**$2,094,172**	**$7,165,798**	
	Adjustments to Rate Base						
Okum	Capitalized Payroll	($1,385)	($1,501)	($324)	($1,003)	($4,213)	Marx
Okum	Capitalized Benefits	(596)	(360)	(121)	(153)	(1,230)	Marx
Okum	Capitalized Payroll Tax	2,362	2,530	858	2,330	8,080	Larkin/Marx
Okum	Cash Working Capital	(1,180)	(1,329)	288	336	(1,885)	Lyons
Wilson	Unamortized Storm Reserve	(66,565)	(30,186)	(13,721)	(28,483)	(138,955)	Larkin
Wilson	Unamortized Extraordinary Storm Deferrals	(22,381)	(5,451)	(13,300)	(15,597)	(56,729)	Larkin
Wilson	Unamortized COVID-19 Deferral	(4,216)	(7,036)	(2,387)	(6,616)	(20,255)	Larkin
Kubas	Unamortized Verizon Complaint	CONFIDENTIAL INFORMATION REDACTED					Larkin
Wilson	Capitalized Pension/OPEB	7,844	(6,057)	4,345	4,030	10,162	Ashton
	Total Adjustment to Rate Base	**($93,435)**	**($58,499)**	**($25,194)**	**($45,156)**	**($222,284)**	
	I&E Recommended Rate Base	**$2,064,177**	**$2,210,569**	**$619,753**	**$2,049,016**	**$6,943,514**	
Note: Differences due to rounding							

Q. Does FE PA agree with I&E's adjustments to rate base?

A. No, FE PA does not agree with I&E's adjustments to rate base. The appropriate Company witness who will be responding to the specific adjustments is included in the table above. The Company's final revenue requirement set forth in FE PA Exhibit PML-7 reflects rejection of these adjustments.

Q. Please summarize OCA's adjustments to rate base.

A. OCA witness Mr. Mugrace (OCA Statement No. 1) recommends a decrease to FE PA's rate base of $264.574 million, as summarized below:

OCA Sponsor	Description	FE PA	FE PA Witness
		$ in Thousands	
	FE PA Rate Base As Filed	**$7,165,798**	
	Adjustments to Rate Base		
Mugrace	Plant in Service	($9,742)	Hawkins
Mugrace	Accumulated Depreciation	62,674	Hawkins/Spanos
Mugrace	Cash Working Capital	(12,501)	Lyons
Mugrace	Unamortized Storm Reserve	(138,955)	Larkin
Mugrace	Unamortized Extraordinary Storm Deferrals	(56,729)	Larkin
Mugrace	Unamortized COVID-19 Deferral	(20,255)	Larkin
Mugrace	Unamortized Verizon Complaint	CONFIDENTIAL INFORMATION REDA	Larkin
Mugrace	Accumulated Deferred Income Taxes	17,090	Gawlik
Mugrace	Capitalized Pension/OPEB	10,162	Ashton
Mugrace	CTA Differential	(99,057)	Hawkins/Gawlik
	Total Adjustment to Rate Base	**($264,573)**	
	OCA Recommended Rate Base	**$6,901,225**	
Note: Differences due to rounding			

Q. Does FE PA agree with OCA's adjustments to rate base?

A. No, FE PA does not agree with OCA's adjustments to rate base. The appropriate Company witness who will be responding to the specific adjustments is included in the table above. The Company's final revenue requirement set forth in FE PA Exhibit PML-7 reflects rejection of these adjustments.

B. CAPITALIZED PAYROLL TAX CORRECTION

Q. Please provide an overview of the other parties' adjustments to rate base related to capitalized payroll tax.

A. I&E witness Ms. Okum recommends a net increase to plant in service of $8.080 million related to capitalized payroll tax.[1] This net increase is comprised of a decrease based on FE PA's historic vacancy rates of $0.323 million and an increase resulting from FE PA's error in calculating its payroll tax expense adjustment of $8.403 million.[2]

Q. Which Company witness will address the adjustment to rate base related capitalized payroll tax proposed by I&E witness Ms. Okum?

A. FE PA witness Ms. Marx (FE PA Statement No. 13-R) discusses the adjustment to rate base related to the historic vacancy rates for capitalized payroll tax and I will address Ms. Okum's correction to capitalized payroll tax.

Q. Does the Company agree with the correction of capitalized payroll tax as described by I&E witness Ms. Okum?

A. No, Ms. Okum's correction to capitalized payroll tax assumes the entirety of FE PA's payroll tax calculation is incorrect. As I will explain in the description of my payroll tax expense adjustment later in my testimony, only the adjustment to payroll tax expense as it relates to FE PA's payroll adjustment was incorrect. Further, FE PA did not adjust rate base for the capitalized portion of the payroll tax adjustment in its initial filing. Therefore,

[1] I&E St. No. 1 at p. 21.
[2] I&E St. No. 1 at p. 19.

Ms. Okum's correction to capitalized payroll tax is unnecessary. FE PA Exhibit No. PML-7 reflects rejection of this adjustment.

C. STORM RESERVE BALANCE AND EXTRAORDINARY STORM DEFERRAL

Q. Please provide an overview of the other parties' adjustments to the storm reserve and extraordinary storm deferral balances included in rate base.

A. Both I&E witness Ms. Wilson (I&E Statement No. 4 at 40 and 42) and OCA witness Mr. Mugrace (OCA Statement No. 1 at 15 and 18) propose to eliminate the storm reserve balance and the extraordinary storm deferral from rate base, equal to the amounts included in FE PA's initial filing of $138.955 million and $56.729 million, respectively (FE PA Exhibit No. PML-1, page 20 of 63).

I&E witness Ms. Wilson goes on to propose to disallow all storm reserve claims in this proceeding.[3] While her blanket disallowance of the storm reserve is the basis of her adjustment, Ms. Wilson's concerns related to granting dollar for dollar recovery of the storm reserve note that "[e]arning a return on any unamortized balances is also inappropriate."[4] Ms. Wilson also recommends disallowance of any rate base treatment for the unamortized extraordinary storm deferral balance because "this would be inappropriate for an O&M-related expense."[5]

OCA witness Mr. Mugrace recommends disallowance of the storm reserve balance and the extraordinary storm damage deferral in rate base because they "are considered

[3] I&E St. No. 4 at p. 40.
[4] I&E St. No. 4 at p. 39.
[5] I&E St. No. 4 at p. 43.

operating expenses and not capital investments."[6] He continues that the Company "should only be authorized to recover actual and known operating expenses associated with its repairs of the storm-related damages allowed by the Pennsylvania Public Utility Commission ("Commission") in any petition to record costs as a regulatory asset."[7]

Q. Does the Company have any concerns regarding OCA witness Mr. Mugrace's descriptions of the storm reserve balance and extraordinary storm deferral amounts in rate base as discussed in his direct testimony?

A. Yes. There is a disconnect between Mr. Mugrace's testimony and exhibits that must be clarified. Specifically, OCA witness Mr. Mugrace presents testimony that discusses disallowing the storm reserve balance of $208.432 million[8] and the extraordinary storm deferral of $85.094 million.[9] However, the testimony ignores the reduction to each balance related to the amount of FE PA's proposed amortization expense occurring in 2025. On the other hand, OCA Exhibit No. DM-10 reflects the correct amounts claimed by FE PA, albeit disallowing $138.955 million and $56.729 million related to the storm reserve balance and extraordinary storm deferral, respectively. The disconnect between Mr. Mugrace's testimony and exhibits must be recognized to avoid confusion regarding his presentation of proposed adjustments.

[6] OCA St. No. 1 at pp. 17-18.
[7] OCA St. No. 1 at pp. 17-18.
[8] OCA St. No. 1 at p. 15.
[9] OCA St. No. 1 at p. 18.

Q. Does the Company agree with the other parties' positions regarding rate base treatment of the unamortized storm reserve balance and the unamortized extraordinary storm damage deferral balance?

A. I am advised by counsel that the question of whether or not the Commission will permit a utility to earn interest or a return on the unamortized balance for amortized expenses is discretionary in nature. Here, FE PA believes that it is appropriate for the Commission to exercise this discretion and permit FE PA to include these unamortized balances of amortized expenses in rate base. As such, the Company's final revenue requirement, set forth in FE PA Exhibit PML-7, reflects rejection of both adjustments.

Q. Please explain why.

A. FE PA witness Mr. Hawkins explains why the Company's proposal to continue its historic use of the storm reserve account and extraordinary storm deferral balance is necessary and appropriate (FE PA Statement No. 12-R), and the adverse impact to FE PA's operations that would result if it was not permitted to continue to recover these costs in this manner.

Moreover, the relative impact of instead fully expensing the Company's storm reserve and extraordinary storm deferral balance in the FPFTY would be an increase of $188.3 million to FE PA's revenue requirement. This impact is substantial and demonstrates that amortization as well as the Company's proposal to rate base the subject unamortized balances is warranted in this situation.

D. COVID-19 DEFERRAL

Q. Please provide an overview of the other parties' adjustments to the COVID-19 deferral balance included in rate base.

A. Both I&E witness Ms. Wilson[10] and OCA witness Mr. Mugrace[11] propose to eliminate the COVID-19 deferral balance from rate base, equal to the amount included in FE PA's initial filing of $20.255 million.[12] Ms. Wilson recommends disallowance of any rate base treatment for the unamortized COVID-19 deferral balance because "this would be inappropriate for an O&M-related expense."[13] Mr. Mugrace recommends disallowance of rate base treatment because "[t]hese costs are extraordinary, temporary in nature and will not remain permanently on the Company's balance sheet, as with other expenditures that are used in the normal daily operations of the utility.[14]

Q. Does the Company have any concerns regarding OCA witness Mr. Mugrace's description of the COVID-19 deferral amounts in rate base as discussed in his direct testimony?

A. Yes. There is a disconnect between Mr. Mugrace's testimony and exhibits that must be clarified. Specifically, OCA witness Mugrace presents testimony that discusses disallowing the COVID-19 deferral of $30.383 million.[15] However, the testimony ignores the reduction to the balance related to the amount of FE PA's proposed amortization expense occurring in 2025. On the other hand, OCA Exhibit No. DM- 10 reflects the

[14] OCA St, No. 1 at p. 23.
[15] OCA St. No. 1 at p. 23.

correct amount claimed by FE PA, albeit disallowing $20.255 million. The disconnect between Mr. Mugrace's testimony and exhibits must be recognized to avoid confusion regarding his presentation of proposed adjustments.

Q. Does the Company agree with this proposed adjustment to eliminate the unamortized balance applicable to the COVID-19 deferrals from rate base?

A. No, the Rate Districts were following the Commission directive to keep all customers' electricity flowing during the pandemic and incurred costs in doing so. Deferral and subsequent amortization of those expenditures delay the Company's recovery of actual cash outlays for significant intervals. During the deferral and amortization of those costs, the Rate Districts have made investments which they will not recover fully until the completion of the amortization period. That investment – like any investment – carries a cost, namely, the time value of money which, for a utility is its weighted average cost of capital represented by its allowed rate of return. This concept is well established and, in fact, is embodied in the cash working capital allowance which is also included in rate base and earns a return to reflect the investment made in operating and maintenance expenses between the time service is provided and service costs are recovered in billed revenue. FE PA's claims to include the unamortized COVID-19 balance in rate base and recover a return on those amounts reflecting the time-value cost it is incurring is no different. Absent recognition of that time-value cost, the amount recovered, while nominally the same as the costs incurred, is, in real dollars of present value, far less than the Rate Districts expended. The Company's final revenue requirement set forth in FE PA Exhibit PML-7 reflects rejection of this adjustment.

E. UNAMORTIZED VERIZON COMPLAINT BALANCE

Q. Please provide an overview of the other parties' adjustments to the unamortized Verizon complaint balance included in rate base.

A. Both I&E witness Ms. Kubas[16] and OCA witness Mr. Mugrace[17] propose to eliminate the unamortized Verizon complaint balance from rate base, equal to the amount included in FE PA's initial filing of [CONFIDENTIAL INFORMATION REDACTED][18]

Q. What is the Company's position with respect to OCA's and I&E's adjustments related to the costs associated with the Verizon complaint?

A. FE PA witness Savage (FE PA Statement No. 1-R) explains that the Company opposes the recommendations of OCA and I&E. She also discusses why the Verizon complaint amortization and, therefore the associated adjustment to the inclusion of the unamortized Verizon complaint balance in rate base is reasonable and appropriate. The Company's final revenue requirement set forth in FE PA Exhibit PML-7 reflects rejection of the adjustments proposed by OCA and I&E.

IV. REBUTTAL – STATEMENT OF OPERATING INCOME

A. SUMMARY

Q. Please summarize I&E's adjustments to the income statement.

A. I&E witnesses Ms. Okum (I&E Statement No. 1), Mr. Kubas (I&E Statement No. 3), and Ms. Wilson (I&E Statement No. 4) collectively recommend a decrease to FE PA's operating expense of $219.090 million, as summarized below:

I&E Sponsor	Description	Met-Ed	Penelec	Penn Power	West Penn	FE PA	FE PA Witness
		$ in thousands					
Okum	Payroll Expense	($1,124)	($1,304)	($177)	($738)	(3,343)	Marx
Okum	Service Company Incentive Compensation	(6,865)	(8,216)	(2,043)	(7,318)	(24,443)	Marx

Q. Does FE PA agree with I&E's adjustments to operating expense?

A. No, FE PA does not agree with I&E's adjustments to operating expense. The appropriate Company witness who will be responding to the specific adjustments is included in the table above. The Company's final revenue requirement set forth in FE PA Exhibit PML-7 reflects rejection of these adjustments.

Q. Please summarize OCA's adjustments to the income statement.

A. OCA witness Mr. Mugrace (OCA Statement No. 1) recommends a decrease to FE PA's operating expense of $301.781 million, as summarized below:

OCA Sponsor	Description	FE PA	FE PA Witness
		$ in thousands	
Mugrace	Payroll Expense	($10,375)	Marx
Mugrace	Service Company Incentive Compensation	($13,374)	Marx
Mugrace	Storm Expense in Base Rates	(1,101)	Hawkins

Mugrace	Payroll Tax Expense	(94)	Marx
Mugrace	PURTA Adjustment	(5)	Gawlik
	OCA Total Operating Expense Adjustment	**($297,630)**	
Note: Differences due to rounding			

Q. Does FE PA agree with OCA's adjustments to operating expense?

A. No, FE PA does not agree with adjustments to operating expense. The appropriate Company witness who will be responding to the specific adjustments is included in the

table above. The Company's final revenue requirement set forth in FE PA Exhibit PML-7 reflects rejection of these adjustments.

B. RATE CASE EXPENSE

Q. Please provide an overview of the other parties' adjustments to claimed rate case expense.

A. Both Ms. Wilson (I&E Statement No. 4) and Mr. Mugrace (OCA Statement No. 1) recommend longer rate case expense normalization periods as compared to the 3-year normalization period used by FE PA. Their recommendations are based on their review of FE PA's Rate Districts past rate filing history over a period of time. Ms. Wilson's analysis was limited to the Rate Districts' three most recent base rate case filings, where all of FE PA's Rate Districts filed base rate cases together, resulting in a recommended 59-month normalization period.[19] Mr. Mugrace's analysis was based on FE PA's Rate Districts six most recent base rate case filings, which resulted in a 5.3 year normalization period.[20] Additionally, they point out that rate case expenses are normalized, not amortized.

Q. Does the Company have any concerns regarding the development of the rate case expense normalization period recommended by Mr. Mugrace?

A. Yes, Mr. Mugrace does not appear to have given appropriate consideration to the fact that during approximately 56% of the historic period he analyzed (1992 through 2010), the Rate Districts were under rate caps or rate freezes, which limited their ability to file base rate

[19] I&E St. No. 4 at pp. 10-11.
[20] OCA St. No. 1 at pp. 64-65.

cases. FE PA is not under a rate cap or rate freeze that would limit its ability to file base rate cases more frequently than occurred between 1992-2010.

Q. Does the Company agree with either I&E's or OCA's proposed adjustments to rate case expense?

A. No, FE PA maintains it anticipates filing rate cases every 3 years, as discussed in FE PA's response to I&E-RE-3. Given current and anticipated levels of investment in new plant and equipment, it is not realistic to expect FE PA to delay a subsequent rate case for as long as Ms. Wilson and Mr. Mugrace assume as the basis for their proposed normalization periods. Act 11 of Feb. 14, 2012, Pub. L. 72, No. 11 ("Act 11") amended the Public Utility Code and added Subch. B to 66 Pa.C.S. Ch. 13 to give all utilities the ability to file Long-Term Infrastructure Improvement Plans ("LTIIP") and to seek cost recovery through a Distribution System Improvement Charge ("DSIC"). However, cost recovery under the DSIC is capped at 5% of existing distribution revenue, which could be reached within 2-3 years. On March 12, 2020, the Commission granted Penn Power a waiver to temporarily increase its DSIC cap to 7.5% through the earlier of December 31, 2024 or the effective date of new base rates.[21] Penn Power reached the 5% cap with the DSIC rates effective April 1, 2020, and the 7.5% cap with the DSIC rates effective July 1, 2022. FE PA's Rate Districts, with the exception of Met-Ed, are currently at their respective DSIC caps. With FE PA's recent LTIIP III filing outlining an additional capital investment of $1.4 billion, it is reasonable to assume that, henceforth, FE PA will be filing a base rate case with

[21] *Petition of Pennsylvania Power Company for a Waiver of the Distribution System Improvement Charge Cap of 5% of Billed Distribution Rate Revenue and Approval to Increase the Maximum Allowable Distribution System Improvement Charge Cap to 11.81%*, Docket No. P-2019-3012628 (Order entered March 12, 2020).

increased frequency and that it is extremely unlikely it would stay out for either 59 months (Wilson) or 5.3 years (Mugrace).

Further, Ms. Wilson quotes the Commission's December 28, 2012 Order in PPL Electric Utilities' 2012 base rate case at Docket No. R-2012-2290597, which, in fact, supports a normalization period far shorter than the one she calculated purely on the basis of historical data.[22] In that Order, the Commission affirmed that "certain expenses may now be based upon future expectations" and the "normalization period for rate case expense is one of those expenses."[23] Notwithstanding that clear directive, both Ms. Wilson and Mr. Mugrace focused on the past and discounted evidence of the most likely future scenario, which is entirely inconsistent with the approach the Commission validated.

Q. Please respond to I&E witness Ms. Wilson's and OCA witness Mr. Mugrace's claims that the Company is proposing to amortize rate case expense over a three-year period.

A. I would like to clarify that FE PA is proposing to normalize rate case expenses over a three-year period. Upon review of my Direct Testimony, as well as FE PA Exhibit Nos. PML-1 through PML-3, I determined that I inadvertently used the terms normalization and amortization with equal frequency with respect to rate case expenses, as summarized below:

Statement/Exhibit	Normalization	Amortization
FE PA Statement No. 3	page 19 at 11	page 19 at 16
FE PA Exhibit PML-1	page 47 (description)	page 49 (description)
FE PA Exhibit PML-2	page 47 (description)	page 49 (description)
FE PA Exhibit PML-3	page 47 (description)	page 49 (description)

[22] I&E St. No. 4 at p. 12.
[23] *See PA PUC v. PPL Electric Utilities Corporation*, Docket No. R-2012-2290597 at 47-48 (Order Entered December 28, 2012).

To be clear, the Company is proposing to normalize rate case expense in this matter and not amortize it.

C. STORM RESERVE AND EXTRAORDINARY STORM DEFERRAL AMORTIZATION

Q. Please provide an overview of the other parties' adjustments to the Company's claim to recover the balance of the storm reserve and extraordinary storm damage deferral balance.

A. For starters, I&E witness Wilson states that the Commission should disallow all storm reserve expense claims and disallow this mechanism in the future. Alternatively, Ms. Wilson states that should the Commission allow the Company to recover its claim for storm reserve expenses, that it be required to amortize the amount over five years.[24] She proposed the same five-year amortization period for extraordinary storm deferral amortization.[25] OCA witness Mr. Mugrace provides that such costs should be amortized over 5.3 years and recommends disallowing 21.3% of the Company's storm reserve and extraordinary storm deferral claims.[26] He goes on to recommend that the Company's 2024 Storm Reserve balance of $18,944,000 be disallowed because "these costs are not known and measurable and do not represent actual costs that were incurred due to storm damages."[27] Finally, Mr. Mugrace recommends the disallowance of Penn Power Rate District's pending

[24] I&E St. No. 4 at p. 40.
[25] I&E St. No. 4 at p. 43.
[26] OCA St. No. 1 at pp. 72, 74.
[27] OCA St. No. 1 at p. 73.

extraordinary storm deferral petition at Docket No. P-2023-3044479 as it has not been ruled on.[28]

Q. Which Company witness will address the adjustments to the storm reserve amortization?

A. I will address the adjustment to the storm reserve amortization related to the Ms. Wilson's disallowance of storm reserve amortization, both parties' disallowances to the storm reserve and extraordinary storm damage deferral related to their proposed amortization periods, Mr. Mugrace's disallowance of the 2024 storm reserve activity, and Mr. Mugrace's disallowance of the extraordinary storm damage deferral related to Penn Power's outstanding petition. FE PA witness Hawkins (FE PA Statement No. 12-R) discusses the adjustment to the storm reserve balance and extraordinary storm damage deferral amortization related to the 21.3% disallowance. As Mr. Hawkins (FE PA Statement No. 12-R) and I explain, these adjustments should be rejected. The Company's final revenue requirement set forth in FE PA Exhibit PML-7 reflects rejection of the adjustments.

Q. Why is FE PA claiming amortization of the storm reserve balance in this proceeding?

A. As stated in response to I&E-RE-12, the Predecessor Companies established and maintained a Storm Reserve Account pursuant to the Joint Petition for Partial Settlement of Rate Investigation at Docket Nos. R-2014-2428745, *et al*. ("Joint Petition"). The Joint Petition specifically provides that "[e]xpenses related to storm damage, excluding those expenses related to damage from extraordinary storm events, will be recorded in the Storm

[28] OCA St. No. 1 at p. 74.

Reserve Account in order to eliminate any impact of such expenses on the Company's income statement . . .. Both revenues received and costs incurred by the [Predecessor Companies] in support of other regulated utilities, including other jurisdictional and non-jurisdictional affiliated companies, for assisting during storm events will be reflected in the reserve account."[29] The Company's claim to recover its costs for ongoing storm damage is consistent with the terms of the Joint Petition, which was signed and supported by both the OCA and] I&E.

Q. Does the Company agree with I&E witness Wilson's claim that the Company should be prohibited from recovering the amounts included in the storm reserve account in this proceeding?

A. No. As required pursuant to the Joint Petition, the Predecessor Companies recorded their storm damage related expenses in their Storm Reserve Accounts and did not seek to modify the amounts recovered in such in their 2016 base rate cases since the accounts were only in place for less than one year at that point and appeared to be working as intended in the Joint Petition. Therefore, since this is the first available opportunity since then to seek recovery for the Rate Districts' storm damage related expenses, the Company is requesting recovery of such in this instant case. The Company rejects a blanket statement requesting that such costs be disallowed as it is inconsistent with the Joint Petition.

[29] Pa. PUC v. Metropolitan Edison Company, et al., *Joint Petition for Partial Settlement of Rate Investigation*, Docket Nos. R-2014-2428745, et al., p. 8 (February 3, 2015).

Q. Does the Company agree with either I&E's or OCA's proposed storm reserve and extraordinary storm damage deferral amortization period?

A. No. Both I&E and OCA propose amortization periods that align with their proposed rate case filing frequency. However, as discussed above, FE PA maintains it anticipates filing rate cases every 3 years, as discussed in FE PA's response to I&E-RE-13. As I discussed with respect to the adjustment to the rate case expense normalization period, with FE PA's recent LTIIP III filing, it is reasonable to assume that, henceforth, FE PA will be filing a base rate case with increased frequency and that it is extremely unlikely it would stay out for either five years (Wilson) or 5.3 years (Mugrace).

Q. Does the Company agree with OCA witness Mugrace's claim that the Company's 2024 storm reserve activity be disallowed?

A. No. Mr. Mugrace claims these costs are not known and measurable and do not represent actual costs that were incurred due to storm damage.[30] However, FE PA response to OCA-XII-7 indicated the Future Test Year ("FTY") storm damage expenses are based on historic actual storm expenses. Further, the storm reserve activity for the first six months of 2024 is $17.6 million greater than the estimated total included in FE PA's initial filing. If there were no additional storms for the remainder of 2024, and the storm reserve balance decreased by $14.1 million as a result of applying the remaining six months of storm reserve revenues, the storm reserve balance would still exceed the estimated total activity for 2024 by $3.5 million. Once these facts are recognized, it becomes clear that Mr. Mugrace's argument attempts to ignores the fact that ratemaking is prospective in nature.

[30] OCA St. No. 1 at p. 73.

Here, the Company has demonstrated that its projections for the FTY are based on past experience. Moreover, the Company's projects are reasonable and conservative because actual experience thus far in 2024 in fact exceeds the Company's projections. As such, Mr. Mugrace's claims regarding storm damage expense should be rejected.

Q. Does the Company agree with OCA witness Mugrace's claim that Penn Power Rate District's pending extraordinary storm damage be disallowed?

A. No. Mr. Mugrace's adjustment was premised on the idea that the Commission had not approved the deferral petition. On July 11, 2024, the Commission approved the Penn Power Rate District's outstanding extraordinary storm deferral petition, making this adjustment unnecessary.

D. COVID-19 AMORTIZATION

Q. Please provide an overview of the other parties' adjustments to the Company's claim to recover extraordinary, non-recurring incremental COVID-19 related costs.

A. I&E witness Ms. Wilson proposed a five-year amortization period for COVID-19 deferral amortization and disallows the recovery of late payment charges waivers and forgone reconnection fees.[31] OCA witness Mr. Mugrace provides that such costs should be amortized over 5.3 years.[32]

[31] I&E St. No. 4 at p. 47.
[32] OCA St. No. 1 at p. 75.

Q. Does the Company agree with the other parties' proposed adjustments to its COVID-19 related deferred costs?

A. No. While FE PA followed the three-year recovery period set by the Commission for other utilities, FE PA maintains it anticipates filing rate cases every 3 years, as discussed in FE PA's response to I&E-RE-17. As I discussed with respect to the adjustment to the rate case expense normalization period, with FE PA's recent LTIIP III filing, it is reasonable to assume that, henceforth, FE PA will be filing a base rate case with increased frequency and that it is extremely unlikely it would stay out for either five years (Wilson) or 5.3 years (Mugrace). Moreover, Ms. Wilson's arguments that recovery of amounts related to waived late payment charges and reconnection fees should also be rejected, because the Company incurred these incremental costs as a result of the COVID-19 pandemic and the Commission's directives imposed during the pandemic.

Q. Why is the Company seeking to recover incremental costs incurred due to the COVID-19 pandemic, which include costs related to waived late payment charges and reconnection fees, in this case?

A. The Commission's May 13, 2020 Secretarial Letter regarding COVID-19 Cost Tracking and Creation of Regulatory Asset at Docket No. M-2020-3019775 ("Secretarial Letter"), directed the utilities to track extraordinary, non-recurring incremental COVID-19 related expenses. By claiming these extraordinary, non-recurring expenses in this base rate case, the Company is seeking to recover these costs at the earliest possible opportunity after the costs were incurred.

The arguments by I&E that the Company is not permitted to seek recovery of incremental costs that were tracked consistent with the Secretarial is incorrect. The Secretarial Letter explains that:

> The Commission will consider in future proceedings whether each utility's request for recovery of any regulatory asset or exogenous event recovery related to the *Emergency Order*[] is just and reasonable pursuant to 66 Pa. C.S. §§ 1301, 1308 (as applicable), and applicable Chapter 30 plans. The Commission will also consider during those proceedings other issues, such as the appropriate period of recovery for the approved amount of the regulatory asset or exogenous event treatment, any amount of carrying costs thereon, and other related matters…[33]

In this letter, the Commission instructed utilities to track "prudently incurred incremental extraordinary, nonrecurring expenses related to COVID-19" (Secretarial Letter at 1) so as to "claim the deferred expenses at their first available opportunity."[34] Accordingly, I&E's recommendation if adopted would be inconsistent to the public policy directives of the Commission.

Furthermore, I&E's proposal to disallow these costs misses a fundamental point: the Company incurred specific costs that it would not otherwise have incurred as a result of the extraordinary and non-recurring event of the COVID-19 pandemic. These costs were not incurred as a result of inaccurate projections that the Company could seek recovery of at an earlier time. Rather, the pandemic and the resultant restrictions are an extraordinary and non-recurrent event caused by forces outside FE PA's control.

[33] Secretarial Letter at 3.
[34] Secretarial Letter at 3.

Q. Do you have any further response to I&E's argument that these costs should be disallowed because they constitute "lost revenues"?

A. This argument also misses the point. First, the Secretarial Letter directed utilities to track incremental COVID-19 costs. That directive did not limit the costs to be tracked by utilities to specific categories.

Second, regarding the argument that it is not appropriate for ratepayers to pay for "lost revenues" associated with COVID-19, outside of the pandemic and in the normal course of business, the Company charges late fees in order to recover the cost of carrying customer balances for an extended period of time. Because of the emergency orders and directives associated with the pandemic, FE PA's predecessors were precluded from charging late fees. The Company did not "voluntarily" stop charging late fees. This preclusion resulted in higher unrecovered costs than would have been incurred under normal circumstances. The same reasoning holds true with respect to reconnection fees waived due to the pandemic.

Q. Is there anything else you would like to address?

A. Yes, I&E Witness Wilson's COVID-19 adjustment calculation contains an inconsistency in units.[35] While the Company's total COVID-19 deferral claim shown at the top of the calculation is shown in dollars, the late payment charge waiver and reconnection charge waiver amounts are shown in thousands of dollars. The amounts shown on the source document, FE PA Exhibit No. PML-1, p. 57, Adj. IS-10, Supporting Schedule 1 are in thousands of dollars.

[35] I&E St. No. 4 at p. 48.

E. CORRECTION TO PAYROLL TAX ADJUSTMENT

Q. Please describe the issue related to payroll tax in FE PA's initial filing.

A. On FE PA Exhibit No. PML-1, Adjustment IS-11, Supporting Schedule 1, FE PA used payroll tax of $6.429 million to calculate its effective payroll tax rate which, in turn, is used to calculate the additional payroll tax associated with the O&M portion of the payroll expense adjustment. This amount represents the payroll tax after the settlement of payroll tax dollars to capital and other O&M accounts. However, FE PA should have used the total payroll tax expense, prior to the settlement process, of $19.628 million in its calculation of effective payroll tax rates.

Q. What is the impact of this correction on payroll tax expense?

A. In FE PA Response to OCA Interrogatory Set IV, No. 45, I indicated the payroll tax adjustment should have been $97,000, which was calculated as O&M payroll adjustment amount of $1.262 million (FE PA Exhibit No. PML-1, Adjustment IS-4, Supporting Schedule 1, line 17) times the payroll tax rate of 7.65%. However, it is appropriate to use each Rate District's effective tax rates based on total payroll tax to determine the adjustment, consistent with the initial filing. This calculation results in a payroll tax expense adjustment of $89,200 for FE PA in total, as shown on FE PA Exhibit No. PML-7, Adjustment IS-11, Supporting Schedule, or an additional payroll tax expense of $59,400.

Q. Are the Rate Districts' effective payroll tax rates based on total payroll tax in line with the actual payroll tax rates of 7.65%?

A. Yes. As shown on FE PA Exhibit No. PML-7, Adjustment IS-11, Supporting Schedule 1, line 3, the Rate Districts' effective payroll tax rates based on total payroll tax range from

7.03% to 7.09%. This range makes sense as the Social Security tax portion of payroll tax has a wage base limit, which would reduce the Rate Districts' effective payroll tax rates.

F. PAYROLL TAX EXPENSE CORRECTION

Q. Please provide an overview of the other parties' adjustments to operating expense related to payroll tax.

A. I&E witness Ms. Okum recommends a net increase to payroll tax expense of $6.3 million related to capitalized payroll tax.[36] This net increase is comprised of a decrease based on FE PA's historic vacancy rates of $0.255 million and an increase resulting from FE PA's error in calculating its payroll tax expense adjustment of $6.555 million.[37]

Q. Which Company witness will address the adjustment to payroll tax expense proposed by I&E witness Ms. Okum?

A. FE PA witness Ms. Marx (FE PA Statement No. 13-R) discusses the adjustment to operating expense related to the historic vacancy rates for payroll tax expense, and I will address Ms. Okum's correction to payroll tax expense.

Q. Does the Company agree with the correction of payroll tax expense as described by I&E witness Ms. Okum?

A. No, Ms. Okum's correction to payroll tax expense assumes the entirety of FE PA's payroll tax calculation is incorrect. As explained in the description of the payroll tax expense adjustment of $59,400 above, only the payroll tax expense as it relates to FE PA's payroll

[36] I&E St. No. 1 at p. 21.
[37] I&E St. No. 1 at p. 19.

adjustment was incorrect. Therefore, Ms. Okum's correction to payroll tax of $6.3 million is overstated. FE PA Exhibit No. PML-7 reflects rejection of this adjustment.

V. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes.

FirstEnergy Pennsylvania Electric Company
FPFTY ending December 31, 2025

Adjustment RB-1 - Plant in Service

To adjust plant in service to (1) eliminate asset retirement costs in accordance with 18 CFR Chapter 1 § 35.18 Asset retirement obligations; (2) eliminate an allocated portion of plant that supports Penelec Rate District's New York jurisdiction; (3) include plant associated with West Penn Rate District's acquisition of the electric distribution system of LIDA; and (4) include plant associated with the two-year cycle of inspection and maintenance of overhead lines and transformers supported by FE PA witness Smith. FE PA witness Lyons is responsible for the allocation factor used in part (2) of the adjustment.

Adjustment RB-2 - Depreciation Reserve

To adjust depreciation reserve to (1) eliminate asset retirement costs in accordance with 18 CFR Chapter 1 § 35.18 Asset retirement obligations; (2) eliminate an allocated portion of plant that supports Penelec Rate District's New York jurisdiction; (3) include plant associated with West Penn Rate District's acquisition of the electric distribution system of LIDA; and (4) include plant associated with the two-year cycle of inspection and maintenance of overhead lines and transformers supported by FE PA witness Smith. FE PA witness Lyons is responsible for the allocation factor used in part (2) of the adjustment.

Adjustment RB-8 - Accumulated Deferred Income Taxes ("ADIT")

To adjust property-related ADIT (excluding the impact of SFAS 109 deferrals) to (1) eliminate excludable items (capital lease vehicles); (2) include an offset for net operating loss carryforwards as required by IRS normalization rules; (3) include an offset for the corporate alternative minimum tax credit; and (4) eliminate an allocated portion of ADIT related to Penelec Rate District's New York jurisdiction. FE PA witness Gawlik supports the calculation of ADIT. FE PA witness Lyons is responsible for the allocation factor used in part (5) of the adjustment.

Adjustment RB-9 - Capitalized Pension and OPEB

To (1) eliminate the timing differences between the recognition of pension and OPEB expense and rate base under the immediate and delayed recognition methodologies for the portion of costs capitalized from 2011-2017, as supported by FE PA witness Ashton; and (2) eliminate an allocated portion related to Penelec Rate District's New York jurisdiction. FE PA witness Lyons is responsible for the allocation factor used in part (2) of the adjustment.

Adjustment IS-2 - Base Operating Revenues

To adjust base operating revenues to: (1) eliminate revenues attributable to unbilled revenue and the Penelec Rate District's NY jurisdictional revenue; (2) annualize changes in number of customers; (3) normalize the sales and revenue effects of energy efficiency measures implemented or to be implemented under FE PA and its Rate Districts' Energy Efficiency and Conservation Phase IV Plan and to reflect the impact of behind-the-meter generation; and (4) include revenue associated with the acquisition of LIDA in the West Penn Rate District. FE PA witness Kehl is responsible for parts (2) through (4) of the adjustment.

Adjustment IS-6 - Supporting Schedule 2 - Expense Associated with Serving New Customers

To determine the cost associated with serving the additional customers reflected in Adjustment IS-2. The ratio of non-payroll customer account expense to total revenue is applied to the additional revenue from increased customers to estimate this cost. The Commission previously recognized and approved this adjustment. The adjustment to base operating revenue for changes in number of customers is supported by FE PA witness Kehl.

FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY
2024 BASE RATE CASE FILING
DOCKET NO. R-2024-3047068

OFFICE OF CONSUMER ADVOCATE Set IV, No. 12

"Refer to Statement No. 2 page 15. What information did the Company review and rely upon to transition its distribution overhead circuit and overhead transformer inspection and maintenance cycles from five years to two years? What is the revenue requirement impact using the Company's proposed expenses on this transition adjustment?"

RESPONSE:

52 Pa. Code § 57.198(n)(4) requires "Distribution lines shall be inspected by ground patrol a minimum of once every 1-2 years." 52 Pa. Code § 57.198(n)(6) requires "Overhead distribution transformers shall be visually inspected as part of the distribution line inspection every 1-2 years." However, the Predecessor Companies were granted a waiver by the Commission in 2009 to continue with the then current program, which included five-year inspection cycles for overhead circuits and overhead transformers. On December 28, 2023, the Commission's Bureau of Technical Utility Services revoked that waiver and required the Company to implement a one-year to two-year inspection cycle length for distribution overhead circuits and distribution overhead transformers.

The impact of the directed change is $6.0M of O&M costs in 2025.

SUPPLEMENTAL RESPONSE:

In responding to discovery requests, it has come to the Company's attention that the $6.0M figure shown in FE PA Exhibit PML-1 page 40 of 63 was shown as an adjustment but it should have been the *total cost* of the overhead circuit and overhead transformer inspection and maintenance programs in 2025. As provided in FE PA Response to OCA Interrogatory Set IV, No. 32, the total O&M expense would have been $4.5M if the Company stayed on the five-year inspection cycle. The incremental expense of transitioning to a two-year inspection cycle is $1.5M, for a total estimated cost of $6.0M in 2025 for both the overhead circuits and overhead transformers programs.

FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY
2024 BASE RATE CASE FILING
DOCKET NO. R-2024-3047068

OFFICE OF CONSUMER ADVOCATE Set IV, No. 45

"Please provide a breakdown related to the associated payroll tax expense and tax rates for each of the payroll taxes totaling $6,429,000 shown on FE PA PML-1 page 58 and 59 of 63."

RESPONSE:

The $6.429 million of payroll taxes shown on FE PA Exhibit PML-1, pages 58 and 59 are the payroll taxes remaining after the settlement of payroll to various O&M accounts and capital. The per budget payroll tax rate of 7.65%, which consisted of the Social Security tax rate of 6.2% and the Medicare tax rate of 1.45%, is used to calculate the total payroll tax in the budget of $19.628 million.

The amount of the adjustment shown on FE PA Exhibit PML-1, page 59, line 8 should have been $97,000, which is calculated as the O&M payroll adjustment of $1.232 million, as shown on FE PA Exhibit PML-1, page 38, line 17 times the payroll tax rate of 7.65%. FE PA will update this calculation in rebuttal.

DOCKET NO. R-2024-3047068

BUREAU OF INVESTIGATION AND ENFORCEMENT RE, No. 3

"Reference FE PA Exhibit No. PML-1, Adjustment IS-8, Supporting Schedule 2 concerning rate case expense. Provide the following:

A. Supporting documentation in the form of invoices or contracts.

B. Justification for the Company's claimed three-year amortization period.

C. Indicate whether amounts from previous rate cases are being claimed in the FPFTY in either rate base or expense claims.

D. Indicate any amounts related to the current rate case that have already been spent and in which year those expenses are being claimed."

RESPONSE:

A. See FE PA Response to I&E Interrogatory RE, No. 3, HIGHLY CONFIDENTIAL Attachment A. FE PA will supplement this response with the engagement letter with Post & Schell, P.C. as soon as practicable.

B. FE PA anticipates filing rate cases on a regular basis going forward and selected the three-year amortization period to line up with that expected frequency of rate case filings.

C. Amounts from previous rates case are not being claimed in the FPFTY in either rate base or expense claims.

D. FE PA incurred rate case expense of $613,000 through April 30, 2024. One-third of the estimated total expense is being claimed in the FPFTY ending December 31, 2025.

DOCKET NO. R-2024-3047068

BUREAU OF INVESTIGATION AND ENFORCEMENT RE, No. 12

"Reference FE PA Statement No. 3, p. 24 concerning the storm reserve account. State whether the Joint Petition for Partial Settlement of Rate Investigation at Docket Nos. R-2014-2428745, et al. guaranteed subsequent recovery of historic amounts associated with the reserve account."

RESPONSE:

The Joint Petition for Partial Settlement of Rate Investigation at Docket Nos. R-2014-2428745, *et al*. ("Joint Petition") provides that the Predecessor Companies will establish and maintain a Storm Reserve Account on the Company's balance sheet. "Expenses related to storm damage, excluding those expenses related to damage from extraordinary storm events, will be recorded in the Storm Reserve Account in order to eliminate any impact of such expenses on the Company's income statement. Expenses related to damage from extraordinary storm events will be accounted for separately in accordance with the current practice of petitioning the Commission for approval to defer such expenses. Both revenues received and costs incurred by the Company in support of other regulated utilities, including other jurisdictional and non-jurisdictional affiliated companies, for assisting during storm events will be reflected in the reserve account."[1] In accordance with the Joint Petition, the Predecessor Companies recorded their storm damage related expenses in their Storm Reserve Accounts. The Predecessor Companies did not seek to modify the amounts recovered in the storm reserve account in their 2016 base rate cases as the storm reserve accounts were in place for less than one year and appeared to be working as the parties intended in the Joint Petition. Therefore, since this is the Rate Districts' first available opportunity since then to seek recovery for the Rate Districts' storm damage related expenses, FE PA is requesting recovery of such in this instant case.

[1] *See* Pa. PUC v. Metropolitan Edison Company, et al., *Joint Petition for Partial Settlement of Rate Investigation,* Docket Nos. R-2014-2428745, et al., p. 8 (February 3, 2015).

FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY
2024 BASE RATE CASE FILING
DOCKET NO. R-2024-3047068

BUREAU OF INVESTIGATION AND ENFORCEMENT RE, No. 13

"Reference FE PA Exhibit PML-1, p. 20, Adjustments RB-5 and IS-10 concerning unamortized storm reserve deferrals:

A. Explain precisely where the Company received permission from the Commission for rate base treatment of unamortized storm reserve balances for 2023 and 2024 activity.

B. Explain the basis for a three-year recovery period.

C. Provide a full accounting of storm costs by rate district by year as claimed in the reserve account since the reserve account's inception in the 2016 case by rate district. In the response show the additions by storm, reduction by base rate share, and provide an accounting of any revenues received for assistance services provided to other companies, affiliated or otherwise, and whether those revenues are used to reduce storm reserve claims.

D. Explain how assistance for and from other affiliated and nonaffiliated regulated utilities is handled, meaning, are costs associated with helping other companies with storm restoration charged to First Energy rate districts' ratepayers, and are costs associated with other companies helping First Energy rate districts to perform restoration work included for ratemaking.

E. Explain how the Company ensures that salaries, wages, and benefits are not double counted in the storm reserve and routine salaries, wages, and benefits claims.

F. Provide a breakdown similar to the response to Part C above that breaks down costs between labor related employee costs and all other costs."

RESPONSE:

A. The Joint Petition for Partial Settlement of Rate Investigation at Docket Nos. R-2014-2428745, *et al*. ("Joint Petition") provides that the Predecessor Companies will establish and maintain a Storm Reserve Account on the Company's balance sheet. "Expenses related to storm damage, excluding those expenses related to damage from extraordinary storm events, will be recorded in the Storm Reserve Account in order to eliminate any impact of such expenses on the Company's income statement. Expenses related to damage from extraordinary storm events will be accounted for separately in accordance with the current

practice of petitioning the Commission for approval to defer such expenses. Both revenues received and costs incurred by the Company in support of other regulated utilities, including other jurisdictional and non-jurisdictional affiliated companies, for assisting during storm events will be reflected in the reserve account."[1] In accordance with the Joint Petition, the Predecessor Companies recorded their storm damage related expenses in their Storm Reserve Accounts. The Predecessor Companies did not seek to modify the amounts recovered in the storm reserve account in their 2016 base rate cases as the storm reserve accounts were in place for less than one year and appeared to be working as the parties intended in the Joint Petition. Therefore, since this is the Rate Districts' first available opportunity since then to seek recovery for the Rate Districts' storm damage related expenses, FE PA is requesting recovery of such in this instant case. However, the ratemaking treatment of the unamortized storm reserve account balances has not yet been addressed by the Commission. FE PA is requesting the authority for rate base treatment of unamortized storm reserve accounts in this instant case. The inclusion of storm reserve accounts in rate base is necessary to earn a return on prior storm expense actually paid for by FE PA.

B. FE PA anticipates filing rate cases on a regular basis going forward and selected the three-year amortization period to line up with that expected frequency of rate case filings.

C. See FE PA Response to I&E Interrogatory RE, No. 13, Attachment A for an accounting of the storm reserve beginning January 1, 2017.

D. Per the Joint Petition, "[b]oth revenues received and costs incurred by the Company in support of other regulated utilities, including other jurisdictional and non-jurisdictional affiliated companies, for assisting during storm events will be reflected in the reserve account."[2]

E. The FPFTY assumes a forecasted level of labor and associated benefits included in the storm expenses, thereby lowering the amount of non-storm O&M and eliminating the potential double counting labor.

F. See FE PA Response to I&E Interrogatory RE, No. 13, Attachment B for the breakdown of annual storm costs between labor and all other costs.

[1] *See* Pa. PUC v. Metropolitan Edison Company, et al., *Joint Petition for Partial Settlement of Rate Investigation,* Docket Nos. R-2014-2428745, et al., p. 8 (February 3, 2015).

FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY
2024 BASE RATE CASE FILING
DOCKET NO. R-2024-3047068

OFFICE OF CONSUMER ADVOCATE Set XII, No. 7

"Refer to OCA Set IV-19. How did the Company develop and calculate its proposed Storm Deferred balance of $18,944,000 for 2024?"

RESPONSE:

The balance is a net of annual revenues that are recovered in base rates with the expense forecasted in Storms for each Rate District. O&M Storm forecasts are based on historical averages for outyear planning purposes. The difference between $18,944,000 and $20,124,434 shown in the schedule is due to Penn Power Rate District being forecasted below the historical average. FE PA's forecasted storm expense is approximately 98% of the 3-year average.

Rate District	Storm Forecast
Met-Ed	$ 23,814,724
Penelec	$ 10,420,830
Penn Power	$ 3,153,966
West Penn	$ 10,958,914
3-year Average	**$ 48,348,434**

Revenues	**$ (28,224,000)**

Net	**$ 20,124,434**

FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY
2024 BASE RATE CASE FILING
DOCKET NO. R-2024-3047068

BUREAU OF INVESTIGATION AND ENFORCEMENT RE, No. 17

"Reference FE Volume II, FE PA Exhibit PML-1, p. 57 concerning COVID-19 expenses:

A. Explain why it is appropriate to include late payment charge waivers in the calculations.

B. Explain why it is appropriate to include reconnect charge waivers in the calculations.

C. Explain why a three-year recovery period is appropriate, as claimed in FE PA Statement No. 3, p. 27, simply because it mirrors a time period granted for other utilities.

D. Identify any amount of unamortized COVID-19 expense reflected in the Company's rate base claim."

RESPONSE:

A., B. The Commission's Emergency Order prohibited utilities from terminating service and requested that utilities service be restored to customers whose service had previously been terminated.[1] Recognizing that complying with its Emergency Order would increase uncollectible expenses for utilities, the Commission, by Secretarial Letter, authorized utilities to create a regulatory asset for "any incremental uncollectible expenses incurred above those embedded in rates since the issuance of the Emergency Order."[2] Utilities were directed that they must claim their deferred expenses "at their first available opportunity."[3] In order to comply with the Emergency Order, FE PA waived late payment charges and reconnect charges for protected customers and recorded a regulatory asset for these uncollectible expenses. As this is FE PA's first available opportunity since the Emergency Order and subsequent Secretarial Letter to seek recovery for the deferred COVID-19 costs, it is appropriate to include both the late payment charge and reconnect charge waivers in its COVID-19 expenses at FE Volume II, FE PA Exhibit PML-1, pg. 57.

C. FE PA followed the three-year precedent for COVID-19 recovery set by the Commission in other utilities' rate cases.[4] Additionally, FE PA anticipates filing rate cases on a regular basis

REBUTTAL TESTIMONY
OF
TRACY M. ASHTON

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Tracy M. Ashton, and my business address is 76 South Main Street, Akron, Ohio 44308.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed written direct testimony and FE PA Exhibits TMA-1, TMA-2, and TMA-3 on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. Please summarize your rebuttal testimony.

A. In my rebuttal testimony, I will address the recommendations set forth by the Pennsylvania Public Utility Commission's ("Commission") Bureau of Investigation and Enforcement ("I&E") witness Christine Wilson (I&E Statement No. 4) and Office of Consumer Advocate ("OCA") witness Dante Mugrace (OCA Statement No. 1) regarding FE PA's proposed pension and other post-employment benefits ("OPEB") adjustments; provide updates to filing requirements IV-A and IV-B; and address I&E witness Joseph Kubas's (I&E Statement No. 3) recommendations regarding FE PA's electric plant in service updates.

Q. Are you sponsoring any exhibits to accompany your rebuttal testimony?

A. Yes. I am sponsoring FE PA Exhibits TMA-4 and TMA-5.

II. PENSION AND OPEB ADJUSTMENTS

Q. Please briefly describe the pension and OPEB adjustments proposed by FE PA.

A. As explained in my Direct Testimony (FE PA Statement No. 4), FE PA has proposed a change to the method by which it recovers pension and OPEB costs. Currently, FE PA recovers pension costs utilizing a 10-year historical average of cash contributions and the service cost component of OPEB from ratepayers. FE PA is proposing to change the recovery of both pension and OPEB costs to the delayed recognition method, which removes the current period pension and OPEB mark-to-market adjustments recognized by FE PA and includes, for ratemaking purposes, a recalculated amount of pension and OPEB expenses determined by amortizing the net accumulated actuarial loss over future periods. The adoption of the delayed recognition method will also result in a need to adjust rate base for the timing differences of the immediate recognition and delayed recognition methods.

Also, FE PA has proposed to implement a mechanism to defer the annual difference between: (1) the annual pension and OPEB expense, calculated using the delayed recognition method for ratemaking purposes; and (2) the approved pension and OPEB expense for rate treatment in future base rate cases.

Q. Did any of the intervening parties offer testimony or recommendations regarding FE PA's proposed pension and OPEB adjustments?

A. Yes, I&E witness Christine Wilson and OCA witness Dante Mugrace offered testimony on this matter.

Q. What is I&E witness Ms. Wilson's recommendation regarding the change to the recovery method for pension and OPEB costs proposed by FE PA?

A. Ms. Wilson disagrees with the change to the delayed recognition method, alleging that "[t]he switch in methods overly complicates the determination of proper allowances for ratemaking and makes resulting future claim determinations subject to manipulation..."[1] Ms. Wilson proposes that FE PA recover pension costs using a 5-year historical average of cash contributions, with the reduction in years based upon the assumption that FE PA will file for recovery of costs more frequently than every 10 years. Ms. Wilson also asserts that FE PA should continue recovering OPEB service costs. [2]

Q. What is your response to I&E witness Wilson's recommendation regarding pension cost recovery?

A. Accounting for pension and OPEB costs are based upon well-established accounting principles, and while these can be complex, a recovery mechanism should not be adopted solely on a perception that it is "more simplistic," as suggested by Ms. Wilson.[3] Instead, the recovery mechanism should be based upon the expense the Company incurs to provide these benefits to its employees. Furthermore, the current cash contribution methodology can also be complex. In fact, determining the required contributions for pension plan funding is a complex process, being dependent upon an actuarial valuation. Also, the required contributions are determined for all of FirstEnergy, including its subsidiaries, because FirstEnergy maintains one plan for the benefit of all its employees. Contributions may also be made voluntarily at any time and by any participating subsidiary. In addition,

[1] I&E St. No. 4 at p. 18.
[2] I&E St. No. 4 at p. 18.
[3] I&E St. No. 4 at p. 19.

pension funding legislation has been significantly changed over the past 15 years, introducing additional volatility into the calculation of funding requirements. The Pension Protection Act of 2006 ("PPA") overhauled funding rules effective during 2008 and was the first change to funding rules in over 30 years. Subsequent to the PPA, there have been 5 additional relief measures to date, which primarily include temporary or extended relief from interest rate requirements. The result of these relief measures has allowed plan sponsors to defer cash contributions, all but eliminating any purported simplicity in determining funding requirements. Despite the changes to funding legislation that have occurred over time, FE PA continues to offer its employees pension benefits and incur the costs associated with those benefits.

Q. Do you have any additional concerns with I&E witness Wilson's recommendation for recovery of pension expense?

A. Yes. The intent of utilizing the delayed recognition method is to recognize and recover the cost of the plan in the current period. Cash contributions into the pension plan are used to fund shortfalls over the life of the plan and are not representative of the current period costs. The use of historical cash contributions for ratemaking purposes creates inequity between customers as those contributions mitigate future funding shortfalls and are not representative of current period costs of providing the pension benefits to employees. While Ms. Wilson disagrees with utilizing an accrual-based method for ratemaking, the accrual method is a proper representation of costs incurred to provide current benefits to FE PA employees. FirstEnergy's GAAP accounting method utilizes the immediate recognition method for net actuarial gains and losses. FirstEnergy is unable to revert back to delayed recognition as an accounting method for its GAAP books, since the immediate

recognition is a preferred method of accounting under GAAP. However, for ratemaking purposes, there is no requirement that ratemaking treatment must follow GAAP accounting. Further, the delayed recognition method is preferable for ratemaking purposes, as it amortizes actuarial gains and losses over time.

I&E witness Ms. Wilson also recommends the use of a five-year historical average to calculate pension expense.[4] If adopted, the use of a 5-year historical average would result in over $633 million of contributions from 2014-2018 being excluded from future recovery under the currently authorized method.[5] If the use of a historical average of cash contributions is to be adopted, it should instead be based upon the use of a 10-year historical period that would align with the method authorized previously.

Q. What is I&E witness Wilson's recommendation regarding OPEB expense recovery?

A. Ms. Wilson recommends that FE PA continue recovering only OPEB service costs.[6]

Q. What is your response to Ms. Wilson's recommendation?

A. I disagree. Ms. Wilson makes no argument in support of this position, other than noting that FE PA has not made any cash payments into the OPEB plans from 2014-2023.[7] However, funding of OPEB plans is not governed by federal laws as pension plans are, and contributions to OPEB plans are not required. The OPEB benefits provided to employees are paid out of the trust assets supporting the obligations, or from Company cash. The annual OPEB service costs represent the present value of benefits earned by employees during the current period based upon salary growth levels. However, changes in interest

[4] I&E St. No. 4 at pp. 21-22.
[5] I&E St. No. 4 at 21.
[6] I&E St. No. 4 at 23.
[7] I&E St. No. 4 at 24.

rates and inflation over time have resulted in the recovery of service costs alone being insufficient to pay OPEB benefits. The additional financing costs, gains and losses on the OPEB plan, as well as offsetting returns on the trust assets should all be considered in addition to service costs as total costs required to support the OPEB plans and reflected in customer rates.

Q. What is I&E witness Wilson's recommendation regarding the rate base adjustment proposed by FE PA to account for timing differences between immediate and delayed recognition?

A. Ms. Wilson recommends a disallowance of the capitalized pension and OPEB claim, which would eliminate a total capitalized pension and OPEB reduction of ($10,162,000).[8]

Q. Do you agree with I&E witness Wilson's recommendation?

A. Ms. Wilson's recommendation to disallow the capitalized pension and OPEB adjustment should only be accepted if the delayed recognition method is not approved in this case. The adjustment would eliminate the timing differences between the recognition of pension and OPEB costs in rate base and the recognition of those costs on the income statement and, therefore, should be reflected in rates.

Q. What is I&E witness Wilson's recommendation to FE PA's proposed mechanism to normalize pension and OPEB expense ("PON mechanism")?

A. Ms. Wilson recommends that the Commission deny the PON mechanism, asserting that it would provide guaranteed retroactive recovery of any variances in routine operating

[8] I&E St. No. 4 at p. 25.

expenses and lessen the regulatory scrutiny of evaluating the prudence of related costs.[9] Ms. Wilson also doubts that the Company would propose such a mechanism "if the Company thought future over/under-recoveries would continue to net out in ratepayers' favor year after year."[10]

Q. What is your response to I&E witness Wilson's recommendation regarding the PON mechanism?

A. The suggestion that the Company is capable of forecasting future activity with respect to macroeconomic factors, including interest rates, market performance of plan assets, and employee mortality rates that impact pension and OPEB expense, is false. The Company has proposed the PON mechanism to moderate impacts to its income statement from these items that are outside of the Company's control. Additionally, the Commission would retain full authority to determine the prudency of any future pension and OPEB expenses and make a determination on the recovery of costs deferred under the PON mechanism. The PON mechanism would benefit customers in the event rates were set too high in comparison to future annual expense, by crediting customers for 100% of the decrease.

Q. What is OCA witness Mr. Mugrace's recommendation regarding the change to the recovery method for pension and OPEB costs proposed by FE PA?

A. Mr. Mugrace recommends taking the actual pension and OPEB expenses (credits) for the years 2021 through 2025 and normalizing the costs over a five-year period. Mr. Mugrace describes this as a reasonable approach to calculate costs prospectively and highlights the variance in costs (credits) over the 5-year period.

[9] I&E St. No. 4 at p. 29.
[10] I&E St. No. 4 at p. 30.

Q. What is your response to OCA witness Mugrace's recommendation?

A. Mr. Mugrace does not provide a compelling argument why a historical average of costs under the delayed recognition methodology is appropriate, nor a basis for the use of a 5-year historical period in his calculation. OCA witness Mugrace has noted that the value of pension and OPEB expense (credits) calculated under the delayed recognition over the 5-year historical period can vary significantly.[11] This highlights the volatility in pension and OPEB costs that I have described in my testimony and further supports the proposed need for the PON mechanism. The interest rates and asset returns are key factors driving the change in the annual pension and OPEB expense under the delayed recognition method Mugrace points out, both of which will be neutralized for ratepayers with the adoption of the PON. The purpose of the PON is to ensure customers benefit if the level of expense approved in rates is too high and the Company recovers its cost, in part, if the expense approved in rates is too low. Adopting the delayed recognition method for the recovery of pension and OPEB expenses, coupled with the use of the PON mechanism, mitigates the risk that rates set may not be representative of future costs or credits.

III. UPDATE OF VI-A AND VI-B FOR ACTUALS

Q. Please describe FE PA Exhibit No. TMA-4.

A. FE PA Exhibit No. TMA-4 is being submitted in accordance with 52 Pa. Code § 53.56(b) to provide actual balance sheet data for the quarter ended March 31, 2024, in lieu of the projected data used in base rate filing requirement VI-A. FE PA Exhibit No. TMA-4 consists of its Balance Sheet for the quarter ended March 31, 2024.

[11] OCA St. No. 1 at pp. 61, 63.

Q. Please describe FE PA Exhibit No. TMA-5.

A. FE PA Exhibit No. TMA-5 is also being submitted in accordance with 52 Pa. Code § 53.56(b) and contains actual operating income data for the quarter ended March 31, 2024, in lieu of the projected data used in base rate filing requirement VI-B. FE PA Exhibit No. TMA-5 consists of its Income Statement for the quarter ended March 31, 2024.

Q. Does the data presented in FE PA Exhibits TMA-4 and TMA- 5 show that actual experience is tracking the budget projections used in the Company's filing requirements?

A. Yes. The data in FE PA Exhibits TMA-4 and TMA-5 show that FE PA's actual experience is tracking the budget projections used to develop their claimed rate bases and statements of operating income for the future test year and the fully projected future test year ending December 31, 2024, and December 31, 2025, respectively.

IV. ELECTRIC PLANT IN-SERVICE UPDATES

Q. Please describe I&E witness Joseph Kubas's proposal regarding FE PA's estimated future test year ("FTY") and fully projected future test year ("FPFTY") plant additions, retirements and transfers.

A. Mr. Kubas recommends that FE PA provide I&E and OCA updates of base rate filing requirement V-A-3, to include actual plant additions, retirements and transfers for the FTY and FPFTY no later than April 1, 2025, and April 1, 2026, respectively.[12]

[12] I&E St. No. 3 at pp. 3-5.

Q. Do you agree with Mr. Kubas' recommendations?

A. The reports Mr. Kubas requests are comparable to those that the Rate Districts agreed to provide in the Joint Petitions for Partial Settlement of each of their respective 2016 base rate cases. Accordingly, FE PA has no objections to providing the reports Mr. Kubas requests.

V. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes.

REBUTTAL TESTIMONY
OF
GREGORY J. GAWLIK

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Gregory J. Gawlik. My business address is 76 South Main Street, Akron, Ohio 44308.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed written direct testimony, and FE PA Exhibits GJG-1 and GJG-2, on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company").

Q. What is the purpose of your rebuttal testimony?
