Re: Petition of The Pittsburgh Water and Sewer Authority for Approval of its Lead Service Line Replacement Program; Docket No. P-2024-3046468

Dear Secretary Homsher:

Pursuant to the Pennsylvania Public Utility Commission's Order entered July 24, 2025, in the above-referenced proceeding, enclosed for filing please find The Pittsburgh Water and Sewer Authority's ("Pittsburgh Water") amended Long-Term Infrastructure Improvement Plan, Lead Service Line Replacement Plan and pro forma tariff supplement.

Copies to be served in accordance with the attached Certificate of Service.

Sincerely,

Sarah C. Stoner

LIST OF CHANGES

PART VI: LEAD SERVICE LINE REMEDIATION (PAGE NOS. 63-70)

Text added and modified regarding Lead Service Line Remediation as approved or directed at Docket Nos. P-2024-3046468 and P-2024-3046465.

PART VI: LEAD SERVICE LINE REMEDIATION (PAGE NO. 69A)

New page 69A contains overflow text and new provisions on Service Line Demarcation.

Pro Forma

PART VI: LEAD SERVICE LINE REMEDIATION

1. Definitions: For purposes of Part VI (Lead Service Line Remediation),the following definitions apply:
   a. **Authority Facility:** A water distribution main or a public lead service line owned by the Authority and connected to a private lead service line.
   b. **CLRAC:** The Community Lead Response Advisory Committee established pursuant to PWSA's first jurisdictional base rate case docketed at R-2018-3002645 *et al.*
   c. **Customer Lead Service Line**: (1) A Lead Service Line extending from the Curb Stop to the meter or one foot inside a building foundation, whichever is farther; or (2) a non-residential Lead Service Line extending from the Authority Facility to the meter or one foot inside a building foundation, whichever is farther.
   d. **Independent Legal Restrictions:** Commission Rules or orders which otherwise prevent termination of water service at a property including but not limited to winter moratorium, medical certifications, or Commission directed moratoriums or suspensions.
   e. **Lead Service Line**: Any service line made of lead, or galvanized iron or galvanized steel that is or formerly was downstream of lead.
   f. **Partial Lead Service Line Replacement**: The replacement of a Customer Lead Service Line without the simultaneous replacement of a connected Public Lead Service Line. **(C)**
   g. **Public Lead Service Line**: A Lead Service Line owned by the Authority from the distribution facilities of the Authority which connects to the customer service line at the hypothetical or actual line or the actual property line, including the Curb Stop and/or control valve and valve box.
   h. **Residence**: A residential property with no more than four (4) dwelling units or a dual use property (commercial & residential) with no more than four (4) dwelling units with service lines 1-inch in diameter or less, for which the PWSA has maintenance responsibility for the water service line from the water main to and including the curb stop. The term also includes a single-family residence that is served by a lead service line greater than 1-inch diameter. **(C)**

(C)= Change

PROPOSED

2. Lead Service Line Replacement Plan: (C)

a. Notwithstanding Part III, Section B.1 of this Tariff, the Authority will replace Customer Lead Service Lines pursuant to its Lead Service Line Replacement Plan (as approved at Docket Nos. P-2024-3046468 and P-2024-3046465, hereinafter "LSLR Plan"), subject to a cap of 4,000 Customer Lead Service Line replacements per year. The Authority may modify its annual cap for Customer Lead Service Line replacements by the number of emergency repairs and/or reimbursements and decrease its annual cap by the same for the following year. The costs incurred by the Authority to undertake remediation efforts pursuant to its LSLR Plan shall be recoverable in the Authority's Distribution System Improvement Charge and in base rates, as applicable. (C)

b. PWSA's LSLR Plan applies to any Lead Service Line (1) serving any Residence and non-residential properties where specified; (2) of which PWSA is aware; (3) the replacement of which is operationally feasible; and (4) the Property Owner authorizes the replacement or replaces the line in accordance with PWSA policy or, PWSA is otherwise authorized to replace the line in accordance with this Tariff. (C)

(C)= Change

Pro Forma

3. Replacement of Customer Lead Service Lines:

a. PWSA will offer to replace customer Lead Service Lines at no direct cost to the Property Owner: (i) at any residential or non-residential property where PWSA replaces an Authority Facility connected to a Customer Lead Service Line pursuant to its Small Diameter Water Main Replacement Program; (ii) at any residence whre PWSA replaces an Authority Facility connected to a Customer Lead Service Line; (iii) at any Residence with a private-side only Lead Service Line located within a work order area of a neighborhood-based Lead Service Line replacement program where Lead Service Line replacements are performed; and (iv) when PWSA's operations crew replaces an Authority Facility regardless of material, in emergencies including line breaks, leaks or other unplanned emergency replacements. **(C)**

(C)= Change **(C)**

Pro Forma

4. Reimbursement Program

a. For ad hoc replacements initiated by Property Owners at their Residence, if the Customer Lead Service Line is connected to a Public Lead Service Line, PWSA will replace the Public Lead Service Line when a customer elects to replace the Customer Lead Service Line. A Property Owner that elects to replace their Customer Lead Service Line must replace the Customer Lead Service Line concurrent with the Authority replacing the Public Lead Service Line. A Property Owner shall provide the Authority at least 90 days' notice prior to replacing their Customer Lead Service Line. For ad hoc replacements, PWSA will reimburse the Residential customer for all or a portion of the cost of the Customer Lead Service Line replacement based on the customer's income. The income-based reimbursement of the cost to replace Customer Lead Service Lines is tiered as follows: **(C)** **(C)** **(C)**

   i. Full cost reimbursement for households with income levels below 300 percent of the federal poverty level (FPL), as adjusted annually;
   ii. 75 percent of the cost for households with income levels between 301 and 400 percent of the federal poverty level, as adjusted annually;
   iii. 50 percent of the cost for households with income level between 401 and 500 percent of FPL, as adjusted annually;
   iv. For all other households, a $1,000 stipend towards the replacement cost of Customer Lead Service Line replacement.

b. Reimbursements will be issued in the form of a check issued to later than 45 days after the request is approved. **(C)**

(C)= Change

Proposed

6. Replacement of Authority Facility - Customer Lead Service Line Replacement – Termination of Service: **(C)**

a. Except as set forth below, if after being notified of the Authority's offer to replace at no cost a property owner's Customer Lead Service Line the property owner has not provided an executed property owner agreement authorizing the replacement of the customer service line or where the legal owner can not be identified or located, PWSA will not reconnect the Customer Lead Service Line to the Authority's Service Line and will initiate termination of water service at that location following the procedures and providing the notices set forth in accordance with this Tariff and the LSLR Plan. PWSA will proceed with termination of water service to a location irrespective of whether Independent Legal Restrictions would otherwise delay or prohibit termination. **(C)**

b. At any time prior to completing termination, or, within five days after termination, the property owner executes the property owner agreement, or if after the termination, the property owner submits proof in the form of a plumbing inspection report from the Allegheny County Health Department that the lead customer service line has been replaced, water service will be restored to the property provided that service will not be restored until either both the Public Lead Service Line and the Customer Lead Service Line have been replaced or an alternative, non-lead temporary bypass is installed. The property owner will have five days from termination to provide the executed agreement, or ten days from termination if the replacement was made pursuant to PWSA's emergency replacement procedures, and coordinate with PWSA to schedule the replacement as necessary. If the aforementioned steps are not completed within that timeframe, PWSA will terminate service again on the fifth day (or tenth day in the case of emergency replacements) without re-initiating termination notices and procedures.

(C)= Change

PROPOSED

c. Neither a customer nor a property owner may install a Partial Lead Service Line Replacement. A Partial Lead Service Line Replacement will result in termination of service until the Authority can replace the Public Lead Service Line. **(C)**

6. Customer Lead Service Line on Multiple Properties:

When, pursuant to the LSLR Plan, PWSA is replacing a Customer Lead Service Line at no direct cost to the property owner, and the Customer Lead Service Line crosses one (or more than one) property to access another, PWSA will: **(C)**

a. Attempt to obtain approval from all property owners to allow the work necessary to replace the Customer Lead Service Line; and

b. Evaluate solutions available to install conforming service lines.

If PWSA is unable to obtain the neighboring property owner or owners' consent, and there is no other viable and economic solution (to be determined in PWSA's sole discretion) such as installing conforming service lines, PWSA will commence procedures to terminate service to the neighboring property owner or owners' property pursuant to this Tariff and the LSLR Plan. **(C)**

PWSA will complete or suspend the termination of the neighboring property owner's water service as set forth in section 5 above. **(C)**

(C)= Change

Pro Forma

7. Non-Owner Occupied Properties:

The Authority may utilize Step In Rights to replace a Customer Lead Service Line when: **(C)**

a. PWSA has offered pursuant to this Tariff to replace at no direct cost to the property owner a Customer Lead Service Line;

b. The property is occupied, but not occupied by the legal owner of the property (i.e., the customer is not the property owner); and **(C)**

c. The Authority has made attempts to obtain authorization for the Customer Lead Service Line replacement pursuant to this Tariff and the LSLR Plan and (i) the legal owner can not be identified; (ii) the legal owner can not be located; or (iii) PWSA has notified the legal owner but the owner has not responded to the offer to replace the Customer Lead Service Line. **(C)**

The Authority may use Step In Rights to replace a Customer Lead Service Line when the customer or occupant of the property provides a medical certification signed by a licensed physician, nurse practitioner or physician's assistant to the Authority by fax, email or mail (providing contact information). **(C)**

The Authority may use Step In Rights to replace a Customer Lead Service Line when the customer provides a Protection from Abuse Order or other court order with clear evidence of domestic violence. **(C)**

In the instances described above, and when, in the sole discretion of the Authority, replacing the Customer Lead Service Line and preventing the termination of water service would be reasonable and in the public interest, PWSA may proceed to make the replacement without obtaining authorization from the property owner. **(C)**

(C)= Change

PROPOSED

The Authority may decline to use Step In Rights and replace the Customer Lead Service Line where in the Authority's reasonable judgement, replacement would place its workers or utility property at a safety risk or in any other instance in which, in its sole discretion, it would not be reasonable or in the public interest to perform the replacement. **(C)**

Limitation of Liability. In any such instance of a Step In Rights replacement, the Authority, including but not limited to employees, agents, board members and executives, are released and held harmless from any and all claims, causes of action, damages or losses, of any nature, whatsoever with respect to the work performed by PWSA or its contractors, and shall not be otherwise liable for any claim asserted by any person, including the property owner, as a result of the Customer Lead Service Line replacement except to the extent otherwise authorized by this Tariff. **(C)**

8. Property Owner Agreement: Except in the case of non-owner occupied properties at which the Authority has exercised "stand in the shoes" rights, the Authority shall enter into an agreement with a Property Owner for replacement of a Customer Lead Service Line that allows PWSA employees and contractors to gain access to their private property in order to replace their Customer Lead Service Line prior to the initiation of any work by the Authority to replace the Customer Lead Service Line. The agreement shall be in a form provided by the Authority and shall include provisions that require the Property Owner(s) to release and hold harmless the Authority from any and all claims, causes of action, damages or losses, of any nature, whatsoever with respect to the work performed by PWSA or its contractors.

9. Service Line Demarcation: If a shutoff valve is not located within 12 inches of the structure wall of the property, the Authority may install a shutoff valve during the lead service line replacement to serve as a point of demarcation between the property's service line and the property's interior water distribution piping. **(C)**

   The Authority shall perfect its ownership of the portion of the service line located within the then-existing right-of-way in conformance with this Tariff to ensure that the Authority can obtain necessary permits during the planning phase of a lead service line replacement project. **(C)**

(C)= Change

PROPOSED

10. Limitation of Liability: The Authority's liability relating to Lead Service Line remediation efforts is limited as set forth in Part III, Section I of this Tariff.

11. Warranty on Workmanship: The Authority will provide, at a minimum, a two-year warranty on workmanship and materials for a Customer Lead Service Line it replaces and restoration of surfaces. The warranty period shall commence on the day the Customer Lead Service Line is replaced. The maximum coverages under the warranty shall be to repair or replace the Customer Lead Service Line replacement, and restoration of surfaces identified in subsection 12 below to the condition that existed prior to the replacement of the Customer Lead Service Line, as reasonably practicable. **(C)** **(C)**

    The Authority will not be liable for any damages beyond the maximum coverage of the two-year warranty as described in this warranty section. **(C)**

    If a repair is required and qualifies under the warranty, the customer or property owner consents and grants license to the Authority and/or its contractor(s) to access the property and complete the repair as necessary. **(C)**

12. Restoration: PWSA will restore roadways and public sidewalks, backfill any trenches excavated as part of the replacement process (including Step In Rights Replacements) and will fill and seal any wall or floor penetrations in the private home. No other restoration will be conducted for Customer Lead Service Line replacements. PWSA will not replace any landscaping, interior finishes, paving, seeding, or walkways. All restoration costs shall be borne by the Property Owner.

13. Ownership and Responsibility for Replacement Line: After a Customer Lead Service Line is replaced by the Authority, the Customer shall own the Customer Service Line and shall have full responsibility for the repair, replacement and maintenance of the new Customer Service Line.

14. Post-Replacement Measures: The Authority will implement post-Customer Lead Service Line replacement measures, including distribution of water filters and filter cartridges, in accordance with its LSLR Plan. **(C)**

(C)= Change

1 INTRODUCTION

1.1 Regulatory Background

1.1.1 Overview

On December 21, 2017, Pennsylvania Governor Wolf signed Act 65 of 2017 (Act 65) into law amending the Pennsylvania (PA or Pa) Public Utility Code which, among other things, added a new Chapter 32 (Sections 3201 – 3209) addressing the Public Utility Commission's (Commission) jurisdiction over the provision of utility water, wastewater, and stormwater service by entities created by Pennsylvania cities of the second class under the Municipality Authorities Act. As the City of Pittsburgh (City) is the only city of the second class in the Commonwealth, the Commission now has jurisdiction over the Pittsburgh Water and Sewer Authority (Authority). The Authority is the first municipal authority to be regulated by the Commission. Act 65 directed the Authority to file a long-term infrastructure improvement plan (LTIIP) with its Compliance Plan. 66 Pa. C.S. § 3204(a). Pursuant to 66 Pa. C. S 1352(a) of the Public Utility Code, a Commission approved LTIIP is necessary to permit water and wastewater utilities to establish a distribution system improvement charge ("DSIC") to recover reasonable and prudent costs incurred to repair, improve, or replace certain eligible distribution property that is part of the utility's distribution system.

On September 28, 2018, PWSA filed its combined LTIIP along with its proposed Compliance Plan.[1] PWSA's LTIIP was included in the litigation of Stage 1 of PWSA's Compliance Plan and the Commission approved a Partial Settlement of Stage 1 issues which included amendments to the initially filed LTIIP on March 26, 2020.[2] As directed by the Commission, the Authority filed an Amended LTIIP on April 27, 2020 which the Commission ultimately approved by Orders entered on August 27, 2020 at Docket Nos. P-2018-3005037 (water) and P-2018-3005039 (wastewater).

PWSA did not include a request for approval of a DSIC in its initial rate case filed in July 2018 prior to the filing of its LTIIP but did seek approval for a DSIC in its second rate case filed on March 6, 2020. The Commission approved a full settlement of the second rate case by order entered December 3, 2020 and, with its tariffs effective January 14, 2021, PWSA began assessing a 5% DSIC to water and wastewater customers. Subsequently, PWSA has filed all required DSIC and LTIIP reports.

On February 25, 2022, PWSA filed its first required Annual Asset Optimization Plan (AAOP) for its water and wastewater operations pursuant to 52 Pa. Code § 121.6. By Secretarial Letters dated May 27, 2022, the Commission rejected PWSA's AAOP based, *inter alia*, on its conclusions that there was an extreme variance in actual versus proposed LTIIP expenditures and changes in DSIC-eligible property replacement

---

1 In its Final Implementation Order, the Commission accorded PWSA the discretion to file a unified LTIIP so long as it segregated discrete services and operations as they exist at the time of the filing. *Implementation of Chapter 32 of the Public Utility Code Regarding Pittsburgh Water and Sewer Authority*, Docket Nos. M-2018-2640802 (water) and M-2018-2640803 (wastewater), Final Implementation Order entered March 15, 2018 at 43 ("*Final Implementation Order*").

2 *Implementation of Chapter 32 of the Public Utility Code Regarding Pittsburgh Water and Sewer Authority – Stage 1*, Docket Nos. M-2018-2640802 (water) and M-2018-2640803 (wastewater), Opinion and Order entered March 26, 2020 ("*March 2020 Stage 1 Order*")

making it impossible for staff to determine the efficacy of PWSA's LTIIP.[3] Thus, PWSA was directed to either file a petition for modification of its LTIIP or file a new LTIIP that supersedes and replaces the remaining term of the existing LTIIP.

In response, PWSA has elected to file this second combined LTIIP to cover the period of time from January 1, 2023 through December 31, 2027 to supersede the currently approved LTIIPs. PWSA's LTIIP, documents a multiyear investment program which is limited to the eligible projects which may be funded through revenue collected from customers through the DISC. Note that PWSA has other capital investment needs for the water supply system and wastewater collection system that are not LTIIP eligible.

LTIIP requirements are identified in 52 Pa Code §121.3 as follows:

1. Identification of types and age of eligible property owned and operated by the utility;
2. An initial schedule for planned repair and replacement of eligible property;
3. A general description of location of eligible property;
4. A reasonable estimate of quantity of eligible property to be improved or repaired;
5. Projected annual expenditures and means to finance the expenditures;
6. A description of the manner by which infrastructure replacements will be accelerated and how repair, improvement or replacement will ensure and maintain adequate, efficient, safe, reliable and reasonable service to customers;
7. A workforce management and training program designed to ensure that the utility will have access to a qualified workforce to perform work in a cost-effective, safe and reliable manner; and
8. A description of the utility's outreach and coordination activities with other utilities, Department of Transportation and local governments regarding the planned maintenance/construction projects and roadways that may be impacted by the LTIIP.

To the extent Item #5 contemplates identification of the specific financing source to be used for specific expenditures, PWSA has not included such level of detail here because PWSA will utilize funds available from a number of available funding resources based on which one provides the most value for ratepayers. These funding sources include ratepayer revenue received through base rates and the Commission-approved DSIC, revenue bonds, a capital line of credit, pay-as-you-go (PAYGO) funding, and PennVest low interest loans and grants. The timing of funding sources beyond ratepayer revenue, such as revenue bonds and PennVest loans and grants is unknown and, therefore, PWSA relies on flexibility to determine the best funding source to use for a particular expenditure when it is incurred.

LTIIP "Eligible property" is defined in the code as property that is part of a distribution system and eligible for repair, improvement and replacement as defined in 66 PA C.S. § 1351, as follows:

---

[3] *See* Secretarial Letters dated May 27, 2022 at Docket Nos. M-2022-3031146 (water) and M-2022-3031147 (wastewater).

"(3) For water utilities, eligible property shall include:

(i) Utility service lines, meters and hydrants installed as in-kind replacements for customers.

(ii) Mains and valves installed as replacements for existing facilities that have worn out, are in deteriorated condition or are required to be upgraded to meet under 52 PA Code Ch. 65 (relating to water service).

(iii) Main extensions installed to eliminate dead ends and to implement solutions to regional water supply problems that present a significant health and safety concern for customers currently receiving service from the water utility.

(iv) Main cleaning and relining projects.

(v) Unreimbursed costs related to highway relocation projects where a water utility must relocate its facilities.

(vi) Other related capitalized costs."

And,

"(4) For wastewater utilities, eligible property shall include:

(i) Collection sewers, collecting mains and service laterals, including sewer taps, curb stops and lateral cleanouts installed as in-kind replacements for customers.

(ii) Collection mains and valves for gravity and pressure systems and related facilities such as manholes, grinder pumps, air and vacuum release chambers, cleanouts, main line flow meters, valve vaults and lift stations installed as replacements or upgrades for existing facilities that have worn out, are in deteriorated condition or are required to be upgraded by law, regulation or order.

(iii) Collection main extensions installed to implement solutions to wastewater problems that present a significant health and safety concern for customers currently receiving service from the wastewater utility.

(iv) Collection main rehabilitation including inflow and infiltration projects.

(v) Unreimbursed costs related to highway relocation projects where a wastewater utility must relocate its facilities.

(vi) Other related capitalized costs."

In general, "vertical" assets such as treatment plants, storage facilities, pump stations, etc. are not considered eligible property under the DSIC program. For the purposes of this LTIIP, the term "sewers" refers to the sewers under the responsibility of the Authority which include separate sanitary sewers and "combined sewers" which convey sanitary sewage and precipitation diverted to the sewer system.

1.1.2 PUC LTIIP Requirements

Further guidance regarding PWSA's LTIIP was provided by the PUC in its initial implementation orders when PWSA first became subjected to the Commission's jurisdiction. Specifically, in its Tentative

Implementation Order,[4] the Commission requested that PWSA provide the following information in its LTIIP:

- Details on how the Authority intends to replace or upgrade targeted eligible property, how aging infrastructure replacement will be accelerated, and how that activity will improve reliability and safety;
- Any metrics that the Authority uses to trace and evaluate the effectiveness of infrastructure improvements, e.g., lost or unaccounted for water, main breaks, or non-revenue water;
- Detail on how the programs and property eligible for LTIIP consideration were determined and targeted, e.g., a risk-based approach, age, material type, lost or unaccounted for water, non-revenue water, regulatory directive, or audit findings.
- A schedule for eligible property repair and replacement by class and category for each year the LTIIP will remain in effect;
- A projection of annual capital expenses to ensure that the LTIIP is cost-effective;
- A description of its workforce management and training program; and,
- A description of any outreach and coordination with other utilities, Pennsylvania Department of Transportation (PennDOT), and local governments on planned maintenance or construction projects.

In addition to the LTIIP, the TIO states that the Commission will request that the Authority provide it with an Annual Asset Optimization Plan (AAOP) which will include expenditure information for completed LTIIP work for the reporting year and the projected year. Pursuant to PUC Regulations, PWSA's AAOP will be filed annually with the Commission 60 days after the 12 months of its LTIIP has expired.

This combined LTIIP reflects asset and project data for water system distribution services and sewer services separately. For the purpose of this LTIIP, the two major categories of infrastructure projects addressed are Water and Sewer.

1.2 Pittsburgh Water and Sewer Authority History and System Overview

The Authority was formed by the City to oversee a significant capital improvement program focused on the City of Pittsburgh water treatment and distribution systems to meet various requirements mandated by Federal and State regulations pertaining to safe drinking water. The Authority was formed under the provisions of the Pennsylvania Municipality Authorities Act, 53 Pa. C.S.A. §5601 et. seq. The Authority's Articles of Incorporation were originally filed on February 17, 1984, with the Department of State of the Commonwealth of Pennsylvania. Pursuant to a Lease and Management Agreement dated March 29, 1984, between the Authority and the City, the water and sewer system was leased to the

[4] *Implementation of Chapter 32 of the Public Utility Code Regarding Pittsburgh Water and Sewer Authority*, Docket Nos. M-2018-2640802 (water) and M-2018-2640803 (wastewater), Tentative Implementation Order entered January 18, 2018 at 19-22 ("*TIO*").

Authority. Under the Lease and Management Agreement, the Authority was authorized to operate and maintain the water and sewer systems, construct all necessary improvements, establish and collect rates and charges for its service, and finance its operations and improvements through revenue collections and sale of bonds and notes payable solely from the Authority's revenues. The Authority appointed and designated the City as the Authority's agent to manage, operate, and maintain the water and sewer systems for the term of the lease, subject to the general supervision, direction, and the control of the Authority. The City provided the services necessary to operate the water and sewer systems to the Authority with the Authority reimbursing the City for all expenses actually incurred and expended by the City.

The Capital Lease Agreement and Cooperation Agreement, each between the Authority and City, as authorized in Resolution No. 47 of 1995, terminated the aforementioned Lease and Management Agreement. The Cooperation Agreement provided that the City render certain services to the Authority as set forth in the agreement and provided the basis of payment for such services to be rendered by the City. As of January 1, 1995, all positions in the City Water Department and certain positions in the Water and Sewer Division of the Department of Engineering and Construction were eliminated from the City's budget and similar positions were created and filled by the Authority. The Authority absorbed the existing City water department staff at that time and became the sole operator of the sewer system in 1999.

In 2008, tan Amendment to the Articles of Incorporation was filed as adopted by the City and the Authority, which extended its term of existence to 2045 in order to ensure that its term covers the duration of certain bond obligations. Again, in 2020, an amendment to the Article of Incorporation was filed with the Department of State which, as adopted by the City and the Authority, further extended its term of existence to March 19, 2070.

Under the terms of the Capital Lease Agreement, the Authority will own the water and sewer systems on September 1, 2025 upon payment of $1.00. In the future, the Authority plans to negotiate a Memorandum of Agreement (MOA) for management of stormwater system assets in the City.

1.2.1 Water System Overview

The Authority, through its water supply and distribution system, provides water service to more than 300,000 people throughout the City and surrounding areas (see Figure 1-1: Water System Overview in Appendix A), which is estimated to swell to over 500,000 persons including the business workforce during working hours. The system consists of a 100 million gallons per day (MGD) rapid sand type water treatment plant, one 20.8 MGD microfiltration water treatment plant, approximately 962 miles of mains, 26,388 valves (isolation and hydrant), and 7,539 fire hydrants (not including private hydrants), one raw water pump station located along the Allegheny River, two finished water pump stations, eight distribution pump stations, three covered finished water reservoirs, one uncovered source water reservoir, and ten distribution storage tanks/reservoirs. The total storage capacity of the reservoirs and the tanks is approximately 455 million gallons when fully operational. The useable storage capacity within the reservoir and tank system provides adequate volume and pressure and is sufficient to provide storage equivalent to approximately two days of normal water usage, at 65 to about 70 mgd. The average and maximum day filtered water production is shown in Table 1-1.

Table 1-1: Average and Maximum -Filter Water Production (Million Gallons per Day)		
Year	**Average**	**Maximum**
2018	70.4	91.2
2019	70.4	86.2
2020	66.7	81.3
2021	67.2	83.8

Source: PWSA Environmental Compliance Department

The sole source of water for the water system is the Allegheny River. The Pennsylvania Department of Environmental Resources, now the Department of Environmental Protection (PADEP), issued a 50-year Water Allocation Permit to the Authority in March 1989, which allows for water withdrawal of up to 100 MGD from the river. The PADEP has advised the Authority that the permitted allocation would be re-evaluated in the future if the Authority's demand increases as a result of growth within the City or through the sale of water to surrounding municipalities.

The Authority's water system currently has over 80,000 service line connections from residential, commercial, industrial, and public customers for potable water and water for fire protection within the geographic boundaries of the City.

In addition to providing water to the City of Pittsburgh, the Authority also owns and operates the water system for the City of Millvale and provides bulk water to the towns of Reserve and Fox Chapel. In addition, through interconnections with other systems, the Authority provides water for supply and/or emergency use to several adjacent municipalities: Blawnox, portions of the Pennsylvania American Water Company (PAWC) system, and intermittent provisions to a number of other neighboring communities.

The PAWC supplies water to approximately 27,000 customers in the southern and western sections of the City (the Authority provides sewer conveyance to these customers).

Two additional small areas, one in the eastern part and the other in the western end of the City, are served by the Wilkinsburg-Penn Joint Water Authority and the West View Water Authority, respectively. In each of these areas, the distribution system elements (waterlines, valves, hydrants, etc.) are owned and maintained by the respective independent water purveyor.

In April 2016, the Authority received an Administrative Order from PADEP for violations under the Pennsylvania Safe Drinking Water Act and regulations related to a modification of corrosion control treatment chemical in 2014. The Authority reinstituted the original corrosion control chemical in early 2016 and is fully cooperating with PADEP and the components of the Order. The Authority began a corrosion control study in 2017 to further improve lead and copper corrosion control, which ultimately became a regulatory mandate documented in a November 2017 Amended Consent Order (ACO). The study recommended an Orthophosphate treatment system which was installed and became operational in April 2019. The lead abatement issue is discussed in more detail in Section 2 of this LTIIP.

1.2.2 Sewer System Overview

The Authority's sewer collection system is comprised of a network of approximately 1,237 miles of sanitary, storm, overflow, and combined sewers (see Figure 1-2: Sewer System Overview in Appendix A).

The system includes 29,797 manholes (which includes flow dividers and diversion chambers), 24,896 inlets (which includes catch basins and storm inlets), 35 solely owned combined sewer overflow (CSO) outfalls, 203 storm sewer outfalls, four wastewater pump stations, and ancillary facilities. Approximately 72% of the sewer system is combined sewers, designed so that during wet weather events, a portion of the collected stormwater and diluted wastewater that exceeds the Allegheny County Sanitary Authority (ALCOSAN) conveyance and treatment capacity is discharged into natural watercourses through 100 active CSO diversion chambers. Approximately 23% of the sewer system consists of separate sewers that are dedicated separate sanitary and storm sewer pipelines. The Authority's combined sewer system conveys wastewater collected from 24 neighboring suburban municipalities and sewage generated within the City boundaries to the ALCOSAN interceptors. These conveyance pipes are located along the rivers and tributaries which deliver the flow to ALCOSAN's wastewater treatment facility (WWTF) for treatment prior to discharge into the Ohio River. The ALCOSAN WWTF is operating under the National Pollutant Discharge Elimination System (NPDES) under Permit No. 0025984. In total, the ALCOSAN WWTF receives wastewater flows from 83 municipalities and authorities.

The 24 neighboring municipalities' sewer system connections were established pursuant to agreements with the City to convey their wastewater to the ALCOSAN WWTF. Many of these municipal agreements date back to the early 20th Century and do not provide for cost sharing of sewer system maintenance and reconstruction. Neither the City of Pittsburgh nor the PWSA have imposed any of these agreements' conditions relative to payments for sewer system maintenance, reconstruction, or repair.

The sewer system has adequate capacity to convey dry weather wastewater flows; however, during wet weather events, the PWSA sewerage conveyance system often exceeds its capacity and the capacity of the ALCOSAN conveyance system, which results in overflows, bypassing, and flooding.

In 1994, the United States Environmental Protection Agency (USEPA) adopted regulations regarding overflows from combined sewer outfalls during events that result in the discharge of untreated sanitary sewage into receiving waters. The USEPA regulations require owners of any sewer system having CSOs to acquire NPDES discharge permits for each overflow site. In January 1997, the owners of these systems were required to implement the USEPA's "Nine Minimum Control Measures" (NMCs). The NMCs define the basic steps for maintaining the combined sewer system in proper operational order and identifying potential areas requiring updates and repairs.

During dry weather conditions, the ALCOSAN interceptor system is designed to convey all wastewater flows from the City and surrounding municipalities to the ALCOSAN WWTF. ALCOSAN's interceptor system includes shallow-cut pipes, deep tunnels, and diversion structures. During wet weather conditions, the flow diversion structures, which are maintained by ALCOSAN, the Authority, and other municipalities, limit or "regulate" the amount of combined sewage that enters trunk sewers and ALCOSAN's interceptor system. In addition, there are regulator points in the sanitary sewer system that relieve or overflow untreated sewage (Sanitary Sewer Overflows or SSOs) to the nearest water body.

Administrative Consent Orders (ACOs) and Consent Order and Agreements (COAs) were issued in early 2004 to the City of Pittsburgh and the other 82 communities tributary to ALCOSAN. The Orders directed compliance with the Pennsylvania Clean Streams Law of 1937 and the Federal Clean Water Act, to eliminate SSOs, and fulfill the Pennsylvania and USEPA CSO Policy obligations. The ACOs were issued to separate sewer communities by the Allegheny County Health Department (ACHD) and the COAs were

issued to combined sewer communities by the PADEP. The initial COA among the Authority, the City of Pittsburgh, PADEP, and the ACHD was entered into on January 29, 2004, and later amended in July 2007. The original Orders required communities to complete the following activities:

- Assess and map the sewer collection system
- Clean and televise the sewer collection system
- Make critical repairs
- Conduct flow monitoring
- Develop a long-term wet weather control plan in conjunction with ALCOSAN

The 2004 Consent Order has expired but the PWSA began negotiations in 2021 for a new Consent Decree with the PADEP, the USEPA and the U.S. Department of Justice (DOJ) to require the PWSA to continue to address these issues. Negotiations are underway and will continue in 2023.

The Authority recognizes the importance of and continues to embrace partnerships with neighboring municipalities and other key stakeholders to strategically address reduction of CSO, SSO, surface flooding, and basement sewage backups. Since CSO and SSO are hydraulically connected across the regional service area and storm inflows to the combined system are influenced beyond the City boundaries, partnerships with ALCOSAN during the implementation of their wet weather improvements program, with the connected municipalities, and with organizations such as the Watersheds of South Pittsburgh, will continue to create opportunities for significant source reduction and leverage capital investments to implement multi-problem focused solutions.

The majority of the Authority's sewers are combined. By virtue of these combined sewers and the broader mission of stormwater management within the Authority's service area, the Authority has been engaged in stormwater management since its formation in 1984. Historically, stormwater management services have been shared with the City of Pittsburgh because of the interconnected network of separate stormwater conveyances, combined sewers, street-related infrastructure like curbs and gutters, inlets, and natural channels.

Effective January 22, 2022, the Commission approved imposition of a new Stormwater fee to customers to recover some of the costs associated with stormwater management.[5] As a newly introduced fee, the fee was not designed to fully recover all costs related to stormwater. Rather, the rates for wastewater conveyance and the DSIC are designed to recover a significantly greater amount of the costs of stormwater. Despite all of this, drainage and infrastructure problems are numerous, with surface flooding and sewer system basement backups the most visible and vexing issues. The Authority is developing a plan to address these most significant stormwater issues, focused on these primary goals:

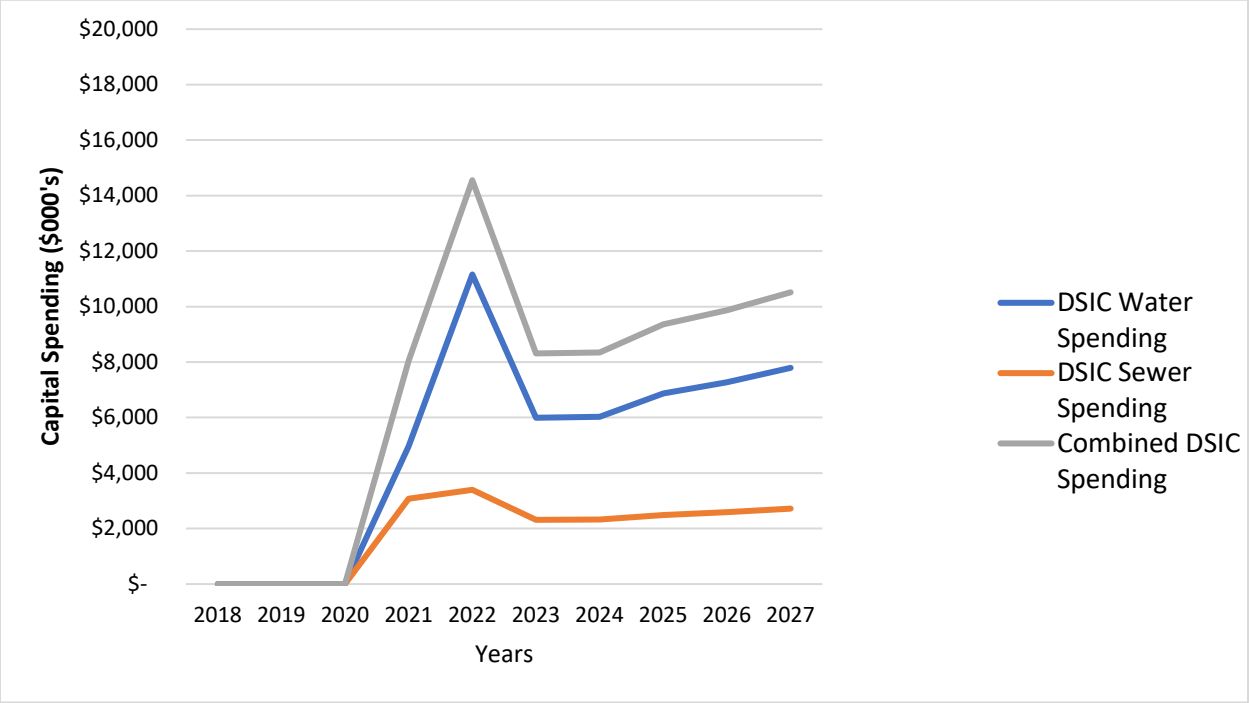
1. Evaluate, design, build and maintain projects that keep as much stormwater out of the sewer system as possible, so the existing infrastructure can carry flows most effectively and reduce sewer system basement backups and surface flooding.

[5] The Stormwater fee was approved as part of PWSA's rate case at Docket No. R-2021-3024779.

2. Review and modify existing local regulations and ordinances to establish development controls and mechanisms for dealing with these stormwater related problems.

1.3 The 2023-2027 Capital Improvement Plan

The Authority's overall 5-year Capital Improvement Plan (CIP) from 2023-2027 includes significant investments in the water, sewer, and stormwater systems to address aging infrastructure, improvements necessary to meet regulatory requirements, and improve infrastructure reliability and performance. These improvements go well beyond the defined "LTIIP" eligible project types defined earlier, but include essential water system improvements that mitigate primary risks of water system failure.



Water system renewal priorities within the CIP include improvements to the Aspinwall Water Treatment Plant, replacement or rehabilitation of the two major finished water pumping stations, upgrades of storage facilities; replacement of critical water transmission mains; continuation of the lead service line replacement program; and continuation of the small, intermediate, and large diameter water main replacement programs with an overall 5-year budget of approximately $1.2 billion.

The wastewater system renewal priorities include relocation of sewers under structures to reduce failure (including consequential damages), risk of service disruption and improve performance; projects to remove stormwater inflows and groundwater infiltration from the existing sanitary sewer system; and general sewer rehabilitation of the sewer system to improve the structural condition of the assets. The 5-year budget for these areas is approximately $210 million.

The CIP also includes stormwater system priorities as well. The highlights include stormwater projects such as the 4-Mile Run Stormwater Infrastructure Improvements Project; separated stormwater sewer upgrades including water quality management systems to reduce siltation and errant sewer connections; and stormwater water detention projects to help mitigate peak stormwater flow impacts on the combined sewer systems, to reduce CSO and SSO's. These stormwater impacts primarily include basement sewage backups and localized street flooding. Approximately $134 million has been allocated to address priority issues.

Figure 1-3 shows the historical levels of capital spending, dating back to 2021 for all projects and for eligible properties only, not including stormwater projects.

Figure 1-3 PWSA Capital Spending History for Eligible Property

1.4 Origination of this LTIIP

This LTIIP is organized to address two of the three categories of services and infrastructure systems provided and maintained by the Authority: water and sewers (sanitary and combined). The third category of service is stormwater, which will be addressed in a subsequent LTIIP if and when necessary. Items 1-6 of the LTIIP requirements in PA Code Chapter 121 §121.3 identified above are described for each category, followed by separate sections on cost-effectiveness and evaluation metrics, workforce management, training, and outreach activities.

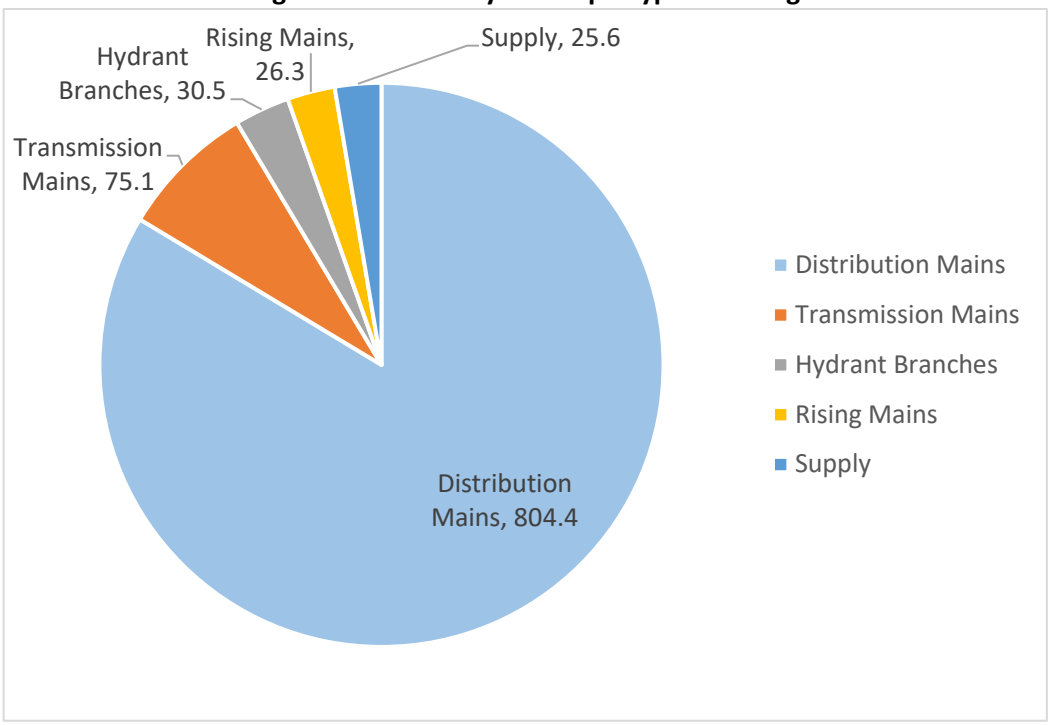
Water and sewer system maps and other over-size figures referred to in this LTIIP are located in Appendix A and are noted as such in the text. Other figures are embedded in the text. In addition, the capital projects tables containing project descriptions, schedules, costs, and other information and other oversize tables are similarly noted and are located in Appendix B. Smaller tables are embedded in the text.

The Lead Service Line Replacement (LSLR) program is a significant part of the capital improvements being undertaken by the Authority over the next several years. This program is described in section 2.2 of this LTIIP.

2 WATER SYSTEM

2.1 General Description of Eligible Water System Property

The eligible property associated with the Authority's water supply and distribution system consists of approximately 962 miles of mains, 26,388 valves (isolation and hydrant), and 7,539 fire hydrants. According to past reports, the water pipes average more than 80 years old, with more than 40% installed prior to 1920, and 67% built prior to 1970. Upgrades to the water system have been primarily through the small diameter main replacement program (SDWMRP), which commenced in 2019. In addition, PWSA has entered into an aggressive lead service line replacement (LSLR) program.



The Authority's Geographic Information System (GIS) database is being updated constantly, and not all eligible property is currently updated in the system. The data input into GIS is an on-going effort, and statistics change with the on-going system updates, reorganization of data, and updates to the features within the system. The Authority's objective is to ultimately expand the GIS to support a mobile workforce digital monitoring and reporting system. As one of the key systems for managing and tracking data within the Authority's water and sewer systems, the GIS will be the repository of critical data that can be used to manage day-to-day operations as well as a valuable tool for analyzing future capital improvement needs. In addition, a digital communication and work order tracking system, supplied by a third party vendor, known as SpryMobile has been implemented to serve all field operations (maintenance, repairs and upgrades) and ultimately all construction monitoring and systemwide facilities' data updates.

To round out PWSA's suite of management information systems improvements for depicting and tracking the water and sewer systems, a Digital Document Management system (Docuware) has been implemented as of 2020. This tool functions as a fully indexed and researchable archive of all PWSA system schematics, both historical and present. Along with GIS and SpryMobile, the Docuware system serves to provide PWSA engineering and operations staff with the most accurate and useful system records for planning system improvements, repairs, and long-term maintenance. Along with this tool PWSA has invested in a new records management team which works to maintain the physical and digital archive and streamline PWSA's general records management practices.

With these significant investments, PWSA has made considerable progress in improving its information management policies and strategies, and work will consolidate these improvements as a part of the LTIIP.

Figure 2-1, on the following page, shows the length of water lines identified by service type and diameters, a total length of 962 miles, of which almost 788 miles is constructed of small diameter pipes (defined as 12-inch diameter and smaller). Small diameter water main construction materials are primarily cast iron and ductile iron pipe. Large diameter water main materials of construction include cast iron, riveted steel, wrought iron, ductile iron, and small quantities of High-Density Polyethylene (HDPE) and Pre-stressed Concrete Cylinder Pipe (PCCP).

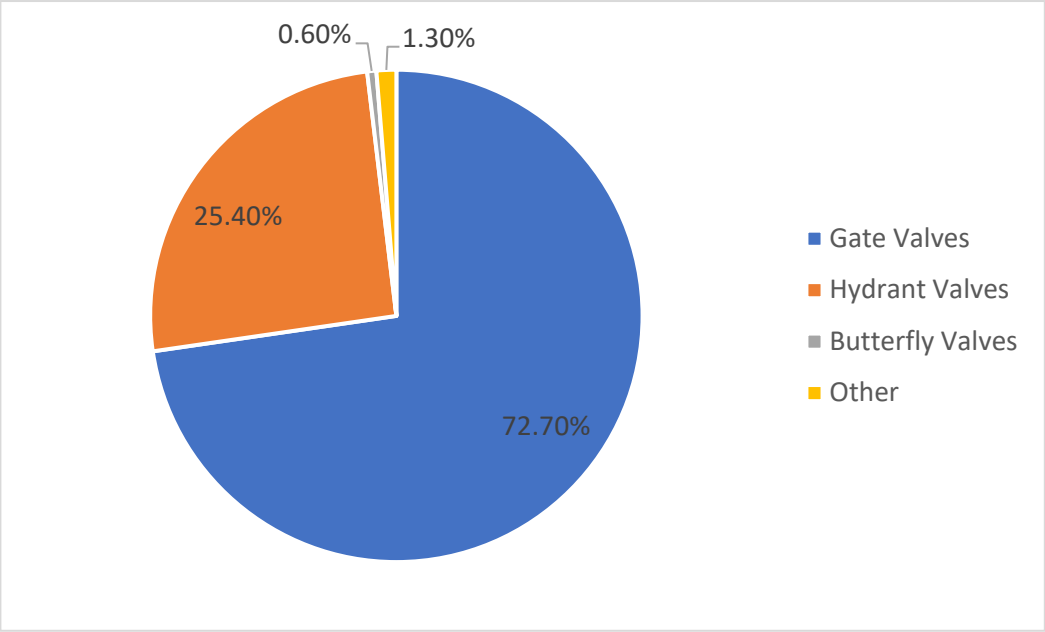
Figure 2-1: Water System Pipe Type and Length

Source: PWSA GIS Database September 2022

A project to review record info and populate water main material and installation date attribute information associated with each water main was started in 2021 and is nearly completed.

PWSA repaired 651 leaks in 2020, 603 leaks in 2021, and 440 in 2022 through September 22, 2022, and commonly occur within the small diameter water distribution pipes. Pipe breaks have recently been analyzed for the root cause, which appears to be caused primarily by one of three causes: (1) pipe metallic joint caulking materials used as a replacement for lead when scarcity occurred during the 1930's and 1940's, (2) use of steel slag materials for pipe bedding and general trench fill materials, and (3) general age and condition. The predominate mode of pipe failure has been shown to be related to corrosion of the external pipe surface as a result of the slag fill materials, which encourage cast iron, steel and ductile iron pipe pitting. The only successful methods of small diameter pipe restoration appear to be replacement, given their age and condition. The largest diameter pipe can often be structurally lined to restore the capacity and structural integrity of these key water transmission pipes.

Annual water loss statistics have consistently shown an elevated water loss rate, more than 50% of the produced water. This metric confirms the overall poor condition of the PWSA water mains. As mandated by the PUC Compliance Plan, PWSA has embarked on a continuous program of water leak detection. This program attempts to preempt resultant major water main breaks by identifying leak locations for immediate repair before a break occurs. Also, in accordance with the water main conditions exposed during the leak detection, specific water main replacement projects are identified and prioritized.



Water valve sizes range from 4 inches to 96 inches and include those shown in Table 2-1.

Table 2-1: Number of Water System Isolation Valves by Size				
Size	**Estimated Quantity**		**Size**	**Estimated Quantity**
4”	491		30”	147
6”	7,828		36”	100
8”	6,477		42”	18
10”	301		42 ½"	6
12”	2,681		48”	61
14”	8		50”	4
15”	27		50 ¼"	2
16”	584		60”	10
18”	2		72”	3
20”	323		96”	1
24”	178		TOTAL	19,252

Source: PWSA GIS Database September 2022

Figure 2-2 identifies the types of valves in the system and their relative proportions.

Figure 2-2: Water Valves by Type

Source: PWSA GIS Database September 2022

Dividing pressure valves (currently closed) account for 475 of the valves shown in Figure 2-3. The “Other” valve category shown in the figure includes ball, cone, air control, check, pressure regulating, and vacuum release valves. Hydrant valves are typically gate valves.

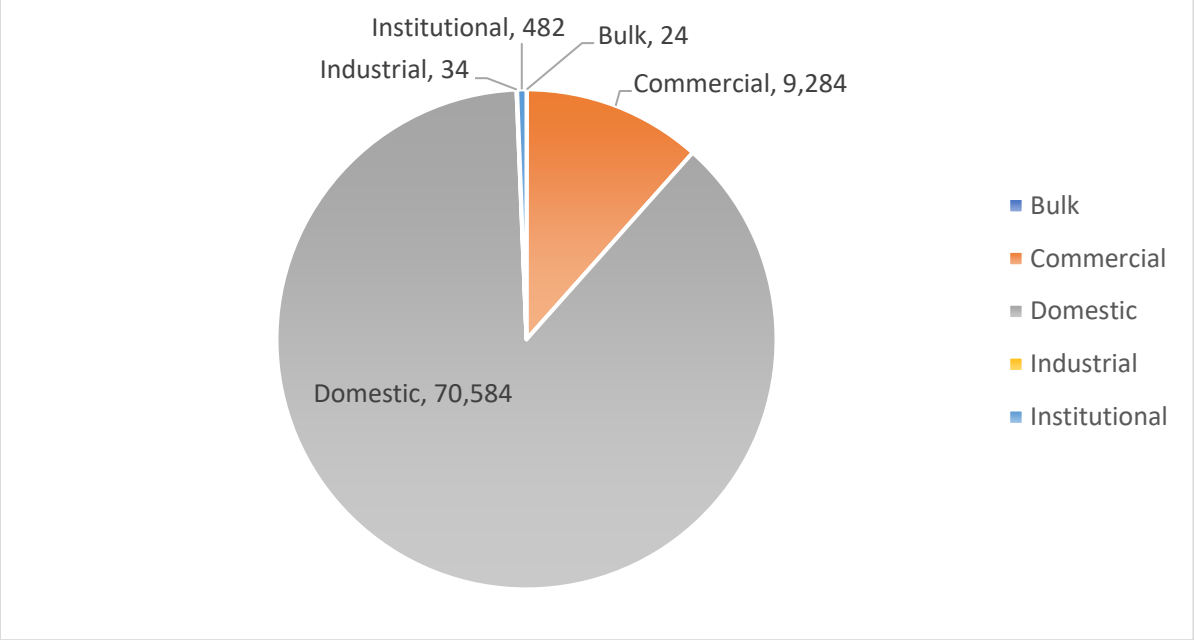
The most recent systemwide valve assessment project was performed in 2010.

PWSA’s water system was believed to have over 400 water “washout” locations by which the water system can be drained for maintenance and repair. All of these locations were evaluated for potential connections that may be connected directly or indirectly to adjacent sewers or drains, which no longer

comply with the design requirements. PWSA completed this evaluation prior to the September 1, 2020, Consent Order and Agreement (COA) deadline and determined that 141 of these "washout" connections did not exist or were previously removed; leaving 279 "washout" connections that are connected to a point of potential contamination. Based on the PADEP's November 2017 COA mandate, PWSA has embarked on a plan that will eliminate these washout locations by the end of 2031. PWSA has already disconnected 10 washout locations and has another 25 planned within the next year.

The Authority's GIS database is currently being reviewed to: a) confirm locations where meters are installed; b) identify locations where meters should be added; and, c) confirm locations where a meter is legitimately absent (e.g., flat rate customer or no water service). The total meter tally is currently over 80,000 based upon the information in Figure 2-3.

Figure 2-3: Number and Type of Meter Connections



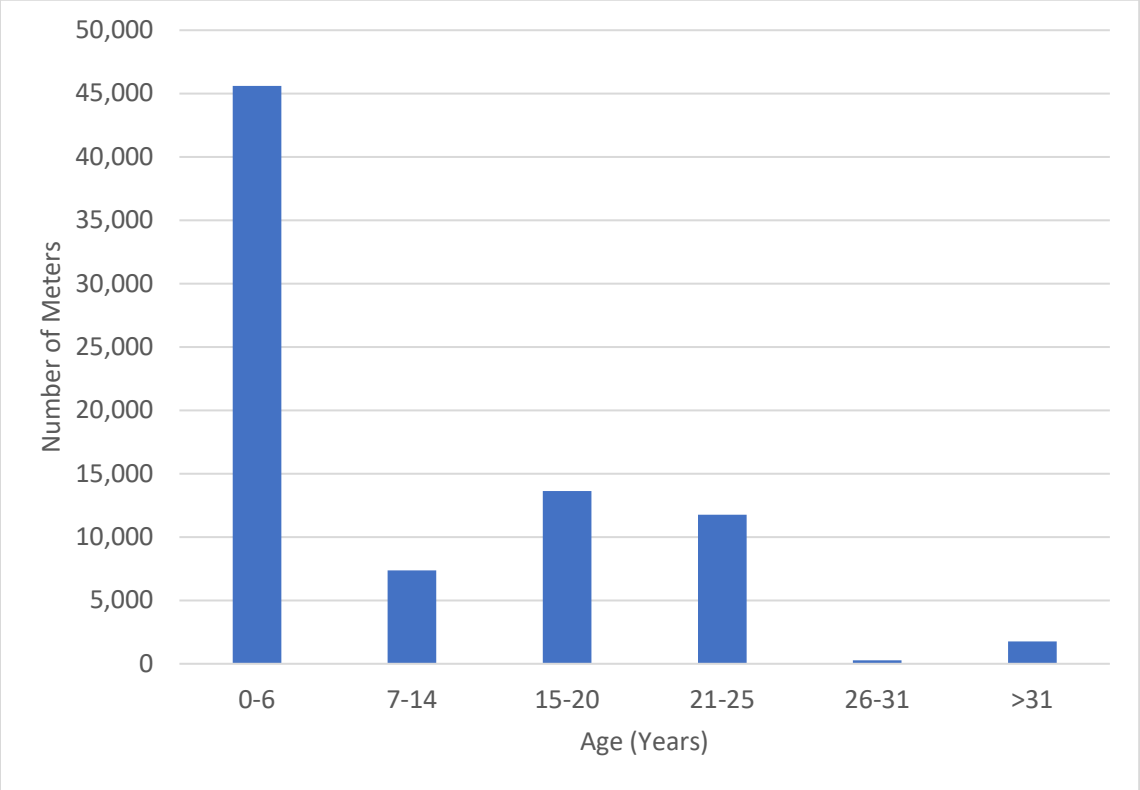


Figure 2-4, on the following page, shows the number of meters by approximate age.

Figure 2-4: Number of Meters by Approximate Age

There are approximately 7,539 public fire hydrants in the system.

2.2 Lead Service Line Replacement Program

During the June 30 and December 31, 2016, and December 31, 2017 rounds of compliance sampling of water in the Authority's distribution system, the lead action level of 15 ppb as enumerated in 25 Pa. Code § 109.1101 was exceeded. The Authority's Lead Service Line Replacement (LSLR) Program was developed to address the requirements of the aforementioned code, an April 25, 2016 Pennsylvania Department of Environment (PADEP) Administrative Order, and a November 17, 2017 PADEP COA. The Authority was also directed to optimize corrosion control measures in the system to mitigate the release of lead in drinking water.

The LSLR Program has undergone significant review by the Commission as part of the compliance plan process and is set forth in Appendix C of PWSA's current LTIIP. The initial version of Appendix C was revised with the filing of PWSA's Amended LTIIP on April 27, 2020 pursuant to the Commission's March 26, 2020 Final Order addressing Stage 1 Compliance Plan issues. Following the March 26, 2020 Final Order, the Commission continued to review PWSA's proposed LSLR Program and directed additional revisions in its February 2, 2021 Order regarding the Stage 1 Compliance Plan issues. Accordingly, on April 1, 2021, PWSA filed an updated amended Appendix C pursuant to the directives of the February 2, 2021 Order. Subsequently, PWSA established a Lead Service Line Replacement Program Plan pursuant to the PUC's LSLR regulations. Revised Appendix C contains the current Lead Service Line Replacement Program Plan that was revised August 25, 2025, and filed pursuant to the PUC's July 24, 2025 Order in PWSA's LSLR Program proceeding at Docket No. P-2024-3046468.

Part VI of PWSA's Water Tariff incorporates PWSA's Lead Service Line Remediation program. These tariff provisions have been revised consistent with the PUC's July 24, 2025 Order at Docket No. P-2024-3046468. Appendix C included herein has also been updated to be consistent with the PUC's July 24, 2025 Order at Docket No. P-2024-3046468.

2.2.1 Lead Service Line Replacement Program Plan

PWSA's current goal is to complete the replacement of all residential lead service lines in its system by the end of 2027 and to remove and replace all lead service lines, whether PWSA-owned or customer-owned, within its water distribution system as required by the PUC's regulations at 52 Pa. Code § 65.53, the applicable Environmental Protection Agency regulations, and in accordance with the Lead Service Line Replacement Program Plan ("LSLR") approved at Docket Number P-2024-3046468. As discussed further herein, PWSA will use funding from the Commission approved Distribution System Infrastructure Improvement Charge ("DSIC") to recover the costs of replacing lead service lines. Lead service lines not replaced using DSIC funds will be funded by revenue bonds or external funding, such as PENNVEST low-interest loans and grants.

PWSA has maintained a comprehensive lead section of its website since 2018. The website (https://www.pgh2o.com/your-water/lead-information) includes the following:

- A GIS-based webmap showing project locations and service line materials for all customer locations in our water service area. Customers can search on any address in our water system and learn what information we have regarding their service line materials. The information on the webmap is updated on a monthly basis with information PWSA is developing concerning the service line material inventory.
- General information about the use of orthophosphate for corrosion control at PWSA.
- Information about lead in general and specifically lead service lines, including Frequently Asked Questions.
- Links to PWSA's customer request lead sampling program to order a test kit and how to get a free filter if your lead results are elevated (> 10.0 ppb).
- Sample results from PWSA Customer Request Program and LCR Compliance Testing Program. These results are updated every six months for the customer request program, and within 60 days of the completion of each compliance sampling event.
- Details and descriptions of the PWSA Line Replacement Reimbursement Program that provides an income-based reimbursement for customers electing to proactively replace their own private LSL.
- Information and resources on health risks associated with lead and lead service lines.
- Meeting minutes of the CLRAC, which meets quarterly.

2.2.2 Inventory of Lead Service Lines

A comprehensive discussion of PWSA's service line inventory is discussed in Section 2 of PWSA's LSLR Program Plan. As discussed therein, PWSA started developing a service line inventory in 2016. Its inventory efforts have evolved and continue to evolve since then to conform to changing regulations, guidance and developing technology. PWSA submitted an updated service line inventory to PADEP on October 16, 2024 pursuant to the requirements of 40 C.F.R. § 141.80.

2.2.3 Corrosion Control Program

In April 2016, the Authority initiated a Corrosion Control Study to determine the optimum corrosion control treatment strategy for reducing lead release due to corrosion of lead service lines and building plumbing. The study's goal was to identify an effective, immediate and minimal cost approach to achieve compliance with the lead action level. The approach was assessed to ensure that it did not otherwise adversely impact water quality in the distribution system. The study tested two corrosion inhibitors: orthophosphate and silicate. Each has advantages and disadvantages for water quality management, risks to sustained performance and cost-effectiveness. After study, orthophosphate was determined to be the best solution for the Authority.

The Authority completed the design of the appropriate corrosion control chemical feed storage and feed facilities for the water system, obtained all necessary permits and completed construction of the facilities in early 2019. Orthophosphate feed commenced in about one third of the water system in early April 2019, and in the entire water system by the end of April 2019.

Since the time of initial orthophosphate feed, the Authority has continued LCR Compliance Sampling in accordance with the schedule established by PADEP. The following are the results, presented in Table 2-2, of the completed sampling events.

Table 2-2: LCR Compliance Sampling

Event	Dates	90th Percentile Lead Level (ppb)
2019b	July – December, 2019	10.0
2020a	January to June, 2020	5.1
2021	July to December, 2021	7.052
2022a	January to June, 2022	4.4
2022b	July to December, 2022	5.0
2023a	January to June, 2023	3.35
2023b	July to December, 2023	3.58

The Authority continues to monitor the application of orthophosphate across the distribution system and evaluate its effectiveness. The Authority is also closely monitoring the upcoming requirements of the LCRR to determine potential impacts on the corrosion control program.

Finally, the Authority continues to provide the Commission, and the CLRAC with quarterly updates regarding the progress of PWSA's orthophosphate program and the results of the lead level testing.

2.3 Water System Replacement and Prioritization Approach

The Authority is working to accelerate the replacement of small diameter water mains. In both 2018 and 2019, the Authority committed to replacing two miles of small diameter main per year. With approximately 788 miles of small diameter main in the system, this equated to 0.2% of the system per year. In the previous LTIIP, the Authority targeted to annually replace 1% of the system by 2024.

In addition to continuing to accelerate the replacement of small diameter water mains, PWSA has established a goal of replacing all remaining residential lead service lines by 2027. This is to be accomplished using a combination of Small Diameter Water Main Replacement (SDWMR) and Lead Service Line Replacement (LSLR) projects. In cases where service lines are replaced as part of a LSLR

project, the water main would typically need to be replaced later as part of a completely separate project. However, this is not the preferred approach for several reasons: Tapping new service lines into older, brittle water mains can be difficult, and completing two separate projects is not as cost effective and is more disruptive to our customers.

The Authority anticipates that it will replace 56.7 miles of water mains by the end of 2026. The Authority uses a GIS based web application that allows it to select which water mains to replace.

The developed web application prioritizes mains to be replaced utilizing three criteria: the potential number of lead service lines, low fire flow areas, and frequency of main breaks. It scores pipes on a formula that is based on these criteria, and projects are selected based on the scores.

Additionally, an annual contract for the urgent replacement of water mains, valued at approximately $8-$10 million a year is also part of the Program. The purpose of the Water Relay Program is to replace small areas, typically a block or less, where a water main replacement is needed urgently due to a failure to a pipeline with a highly compromised condition.

2.3.1 Small Diameter Water Main Replacement Program

The current SDWMR Program consists of the projects identified in Table 2-3, Table 2-4, and Table 2-5.

Table 2-3: Location and Quantities for 2021 SDWMR Program		
Neighborhood	Length (mi)	Estimated Qty. of Water Service Lines
2021 SDWMR - Contract B		
Central Lawrenceville	1.2	233
Central Oakland	1.4	235
Highland Park	1.5	167
Contract Total	4.1	635
2022 SDWMR - Contract C		
Point Breeze	0.6	76
Shadyside/Squirrel Hill	0.9	91
Hazelwood	0.9	92
Contract Total	2.4	259
Total	6.5	894

Table 2-4: Location and Quantities for 2022 SDWMR Program		
Neighborhood	Length (mi)	Estimated Qty. Of Water Service Lines
2021 SDWMR - Contract A		
Marshall-Shadeland	2.2	283
Spring Garden	1.3	169
North Side	0.2	23
Contract Total	4.4	475
2022 SDWMR - Contract A		
Brighton Heights	2.1	282
Squirrel Hill	1.8	315
Contract Total	3.8	597
2022 SDWMR - Contract B		
Elliott	1.4	276
Millvale	1.4	244
Stanton Heights	0.4	78
Point Breeze	1.3	118
Contract Total	4.5	716
Total	12.0	1,788

Table 2-5: Location and Quantities for 2023 SDWMR Program		
Neighborhood	Length (mi)	Estimated Qty. of Water Service Lines
Squirrel Hill	4.0	568
Point Breeze	0.6	106
Bloomfield	1.3	365
Total	5.9	1,039

2.3.2 Small Diameter Water Main Replacement Prioritization Program

As noted above, PWSA has developed a GIS based web application to assist in prioritizing mains to select for replacement. Previously, PWSA utilized a combination of factors, including six "Likelihood of Failure" criteria (pipe diameter, fire flow data, pipe break history, working pressure, frequency of potential lead service lines, and pipe age) and three "Consequences of Failure" criteria (water main location, traffic functional classification, and presence of critical facilities) to rank projects. This method was largely a manual process, whereby projects were identified and then scored by PWSA staff by entering scores into an Excel spreadsheet using the established criteria. This process was labor intensive and still involved subjective judgements in the scoring process. It was useful for scoring projects previously identified by staff, but could not practically be used to identify new projects.

Therefore, a GIS based web application was developed to score projects based on the same nine criteria. This was a step forward, but the way that it was implemented still required manual data entry to score pre-identified projects. Ultimately, staff needed a way to score pipe segments system-wide to select projects from the beginning rather than scoring predefined projects. The challenge was that the data was not entered into PWSA's GIS database in a way that could be reliably linked to individual pipe segments.

In 2022, primarily through the efforts of PWSA's GIS Department, data was compiled and associated with pipe segments to begin to develop a system-wide scoring system. This scoring system includes three criteria, which are further described in Table 2-6: Lead and Unknown Service Lines per Mile, Water Main Break Frequency, and Low Flow Fire Areas. All three of the criteria are linked to each pipe segment.

While this system does not include as many criteria as the previous scoring system, there was a consensus that these three criteria were both critical and were able to be linked to the pipe segments in a usable way. For example, while pipe diameter, pipe break history, working pressure, and pipe age can all be used as predictor of the likelihood of a potential break, the single greatest factor in predicting future main breaks is the history of past breaks on that same segment.

Table 2-6: Current Criteria for Prioritization of Small Diameter Water Main Replacement		
Criteria	**Source**	**Weighting**
Lead and Unknown Service Lines per Mile	Historical service line records and verified data from recent service line replacement projects.	20%
Water Main Break Frequency	Internal reporting on water main repairs completed by PWSA Operations and Urgent Contracts. Existing water main break data was associated with the correct pipe segment in preparation of the GIS web application.	40%
Low Fire Flow Areas	Water Distribution System Master Plan, completed February 2020. Low flow areas were identified using a hydraulic model of the water distribution system.	40%

The three criteria are then entered into a formula that weights each criterion, and a score is assigned to each pipe segment. To better visualize the data, the pipe segments were then grouped into 50 miles tiers and displayed with varying line weights and colors within the GIS web application.

The ranked pipe segments are then reviewed by PWSA staff, and projects are selected using engineering judgement. This included taking other factors into consideration and grouping water main segments into contiguous groups for added constructability.

2.3.3 Annual Valve Replacement Program

The Authority maintains an annual contract to replace broken or inoperable valves. This contract does not include the replacement of valves though watermain replacement projects.

Valves 4 to 10 inches in diameter that are found to be inoperable are typically replaced by Authority maintenance personnel when encountered during routine operations. Valves 12 inches in diameter and larger are replaced under an annual contractor replacement contract.

To improve the efficiency of water operations staff managing the day-to-day maintenance of the system, as well as addressing emergent needs during water main breaks, the Authority has implemented an interim computerized work order maintenance system to track valve status and closures. As valve management is a long-term program, as an initial step, and as part of the valve survey, a valve database is being developed to document the location, size, type, and operating condition of the valve in the system.

The valve location will be linked to geographic coordinates (GPS) and linked to the water GIS. The goal of the program is to have all valves in the system linked to the GIS and valve database so that field crews can have real-time access to this information. Field crews will be able to quickly identify inoperable valves, normally closed valves (boundary valves, for example) and valves that may be closed for routine maintenance or system operations. As the valve database is expanded, it will also facilitate rapid system analysis to identify which valves will need to be closed to isolate a main for repairs. In addition, the valve database will improve tracking of closed valves to ensure that all valves closed during a main repair are returned to open status.

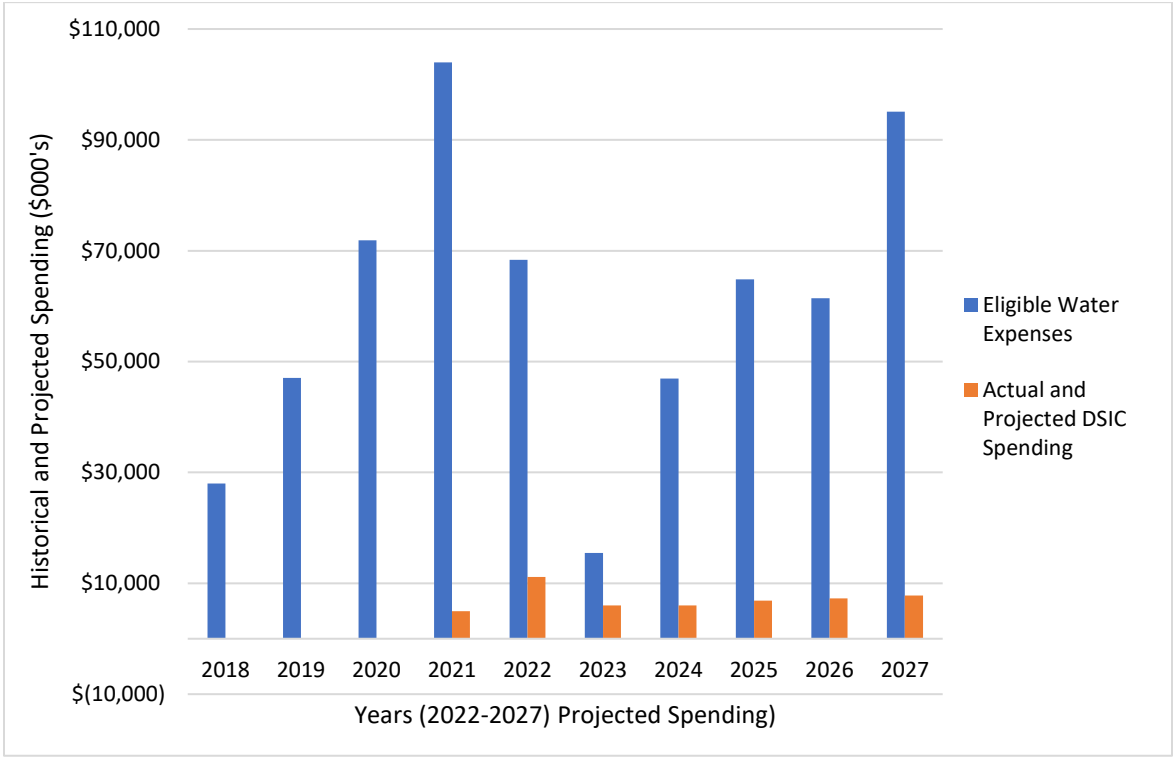
2.4 Eligible Water System Property to be Improved

Table 2-7 describes the 4 project categories which comprise the eligible water system projects of this LTIIP as discussed above. These projects conform to the definition of "eligible property" described in section 1.1.1.

Table 2-7: Water System Eligible Properties to be Improved	
Project Category	**Project Descriptions**
Urgent and Priority Lead Service Line Replacement	Replacement of lead service lines, both public and private. Due to exceedance of the action levels from compliance tests for lead and copper, the Pennsylvania Department of Environmental Protection required the authority to perform additional distribution system water quality monitoring, optimization of corrosion control treatment, source water monitoring/treatment, public education, and lead service line replacement.
Small Diameter Water Main Replacement	Strategic replacement of water mains (including lead service lines) to improve system reliability as well as improve water pressure, maintain water quality, and minimize disturbance to the community. By maintaining a proactive approach to asset management, efforts can be directed towards remedying assets before failure, thus saving in overall replacement cost. Additionally, projects will be coordinated with other utilities to minimize disturbance to the community and street surface restoration costs. Water quality and available hydrant flows will also improve by removing tuberculated mains.
Water Relay	Replacement of existing water mains, valves, fittings, service connections and hydrants due to emergency situations
Valve Replacement	Replacement of defective or non-operational valves on transmission and distribution mains throughout the water distribution system, excluding valves replaced during relays. Includes locating, assessing and documenting the operability, raising to grade and/or cleaning existing buried or obstructed valves. Increasing the number of operable valves in the system will reduce the number of customers that may be impacted and the number of valves that would need to be closed during emergency conditions.

2.5 Initial Planned Repair and Replacement Schedule and Projected Annual Expenditures

Table 2-8: Water System Eligible Properties Project Schedules and Costs in Appendix B identifies the costs associated with the projects for each year of the project schedule (2023-2027), organized into the following major project categories:



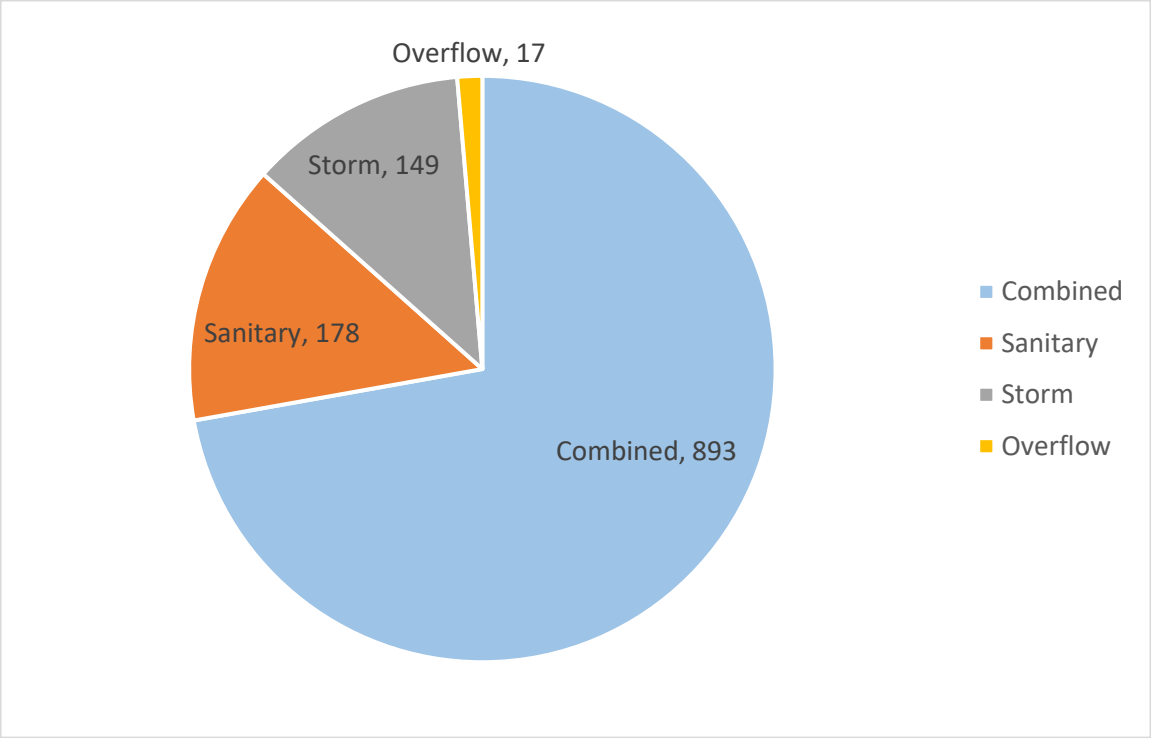
- Urgent and Priority Lead Service Line Replacement
- Small Diameter Main Replacement
- Water Relay Replacement
- Valve Replacement

2.6 Acceleration of Water Projects

For the past 30 years, PWSA has run an engineering and construction department comprised of employees and contracted professionals. The PWSA engineering and construction department will continue to work as a unit in terms of controlling and monitoring all aspects of the capital program. The increase in the volume of capital project delivery planned for the next 5 years demands an ever-increasing level of management excellence to achieve the efficiencies necessary to meet the challenge of adhering to project budgets and schedules.

Figure 2-5 presents actual and projected spending on eligible water system projects for the period 2018-2027. This figure shows a significant increase in capital spending for DSIC-eligible water improvements and rehabilitation over the historical rate. At current rates, the DSIC charge provides enough funding to replace an additional mile of small water main per year. This funding and the number of miles replaced is expected to grow in the future as base rate Tariff increases are approved by the PUC, thereby increasing the amount of revenue received through the DSIC.

Figure 2-5: Historical and Projected Spending on Eligible Water System Projects

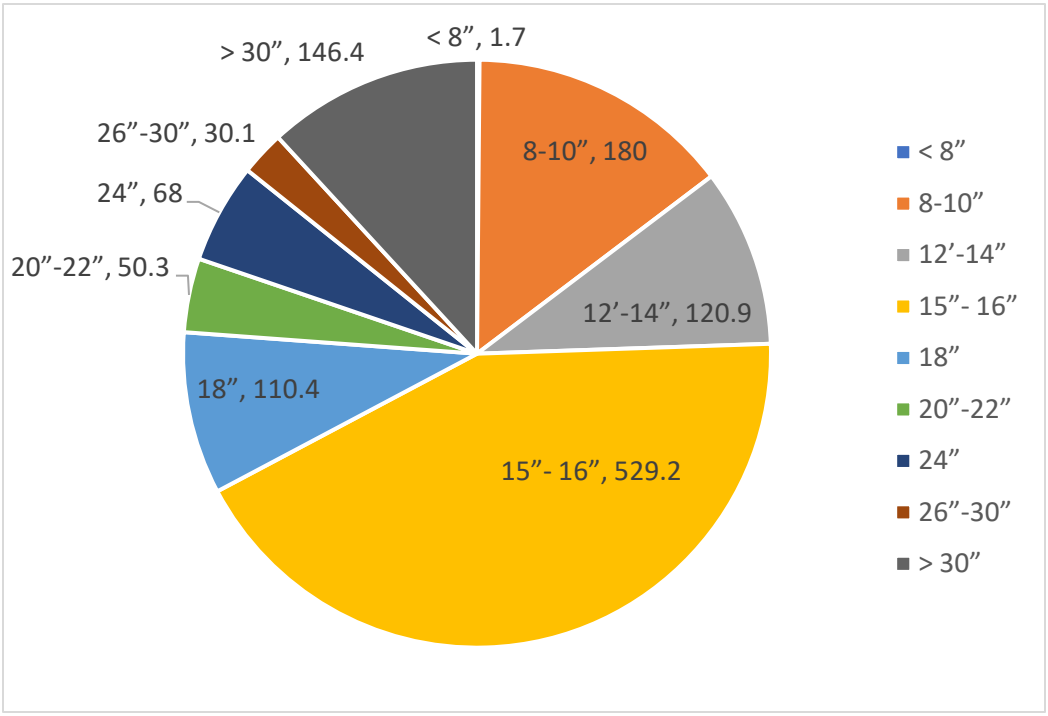


3 SEWER SYSTEM

3.1 General Description of Eligible Sewer Property

The eligible property associated with the Authority's sewer system consists of approximately 1,237 miles of sewer comprising separate sanitary and combined sanitary and storm, overflows, and sanitary force mains as shown in Figure 3-1. Approximately three-quarters of the Authority's sewers are combined (pipes that carry both sanitary and storm flows).

Figure 3-1: Sewer System Pipe Type and Length (Miles)



Source: PWSA GIS Database September 2022

The eligible property within the system includes lift stations (also referred to as pump stations). The Authority operates and maintains four sanitary sewer lift stations: Browns Hill Road Pump Station, Evergreen Road Pump Station, Mifflin Road Pump Station, and Rodgers Street Pump Station. The Browns Hill Road Pump Station has two constant speed pumps/motors each rated at 250 gallons per minute (gpm) at 55 feet total dynamic head (TDH). The Evergreen Road Pump Station has two constant speed pumps/motors each rated at 150 gpm at 55 feet TDH. Mifflin Road Pump Station has two constant speed pumps/motors each rated at 500 gpm at 88 feet TDH. The Rodgers Street Pump Station has two constant speed pumps/motors each rated at 1,000 gpm at 95 feet TDH.

Sewer pipe sizes range from less than 8-inch diameter to greater than 30-inch diameter (up to 120-inch diameter), as shown in Figure 3-2, which includes the lengths of storm sewers because separate sizes for sanitary, combined, and storm are not presently available.

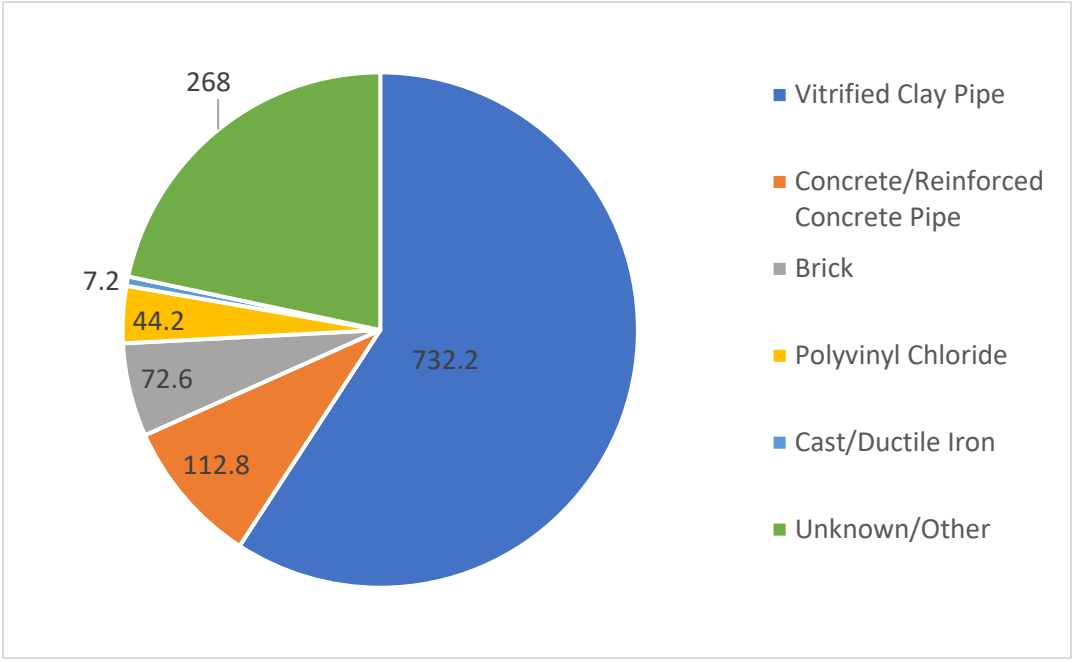


Figure 3-2: Sewer Length (Miles) by Diameter

Source: PWSA GIS Database September 2022

As would be expected of an older sewer system, a majority of the sewers are composed of Vitrified Clay Pipe (VCP), as shown in Figure 3-3.

Figure 3-3: Sewer Length (Miles) by Material of Construction

Source: PWSA GIS Database September 2022

The sewer system contains approximately 29,797 manholes, including 100 CSO diversion chambers. Manhole types include standard, equalization chamber, and flow dividers. The total does not include 46 manholes with sewer use defined in the GIS system as "undefined"; these "undefined manholes" could be private manholes since no record drawings have been located to date to confirm ownership. This total also does not include 321 lampholes. The system also contains 35 CSO.

As noted above, the Authority's GIS database is being updated constantly, and not all eligible property is currently "logged" into the system. The data upload to the GIS system is an on-going effort, and the statistics reported above may change as a result of ongoing system data review and "clean-ups".

3.2 Eligible Sewer System Property to be Improved

Recognizing the need for continual renewal of the Authority's sewer collection and conveyance system to maintain quality and reliable service to its customers, the Authority has established two annual rehabilitation and pipe reconstruction project types to accelerate the renewal of its system: Small Diameter Sewer Rehabilitation and Sewer Reconstruction. The Small Diameter Sewer Rehabilitation projects utilize cost effective trenchless technologies to restore the structural integrity, reduce root intrusion, and reduce infiltration and inflow on mains less than 36-inch in diameter.

Little sewer system investment other than annual repair construction contracts and a few miles of sewer separation has been made to the PWSA sewer system in the past 20 years. To accelerate the sewer system CIP investments, the Authority initiated the aforementioned sewer renewal contracts in 2018. Sites are selected based on the asset's physical condition, location, and/or regulatory compliance obligations.

Table 3-1: Selected Sewer System Eligible Property Locations for Rehabilitation or Replacement

Neighborhood	Length (LF)	New Manholes Installed	Excavated Point Repairs
2022 Small Diameter Sewer Rehabilitation			
Contract 1 – West End	22,500	14	13
Contract 2 – Overbrook	21,000	2	21
Indefinite Quantity, Indefinite Delivery	9,300	N/A	N/A
Total	52,800	16	34
2023 Small Diameter Sewer Rehabilitation (Proposed)			
Contract 1 – Knoxville	N/A[1]	125	30
Contract 2 – Homewood	41,000	37	17
Contract 3 – Carrick	33,000	13	43
Indefinite Quantity, Indefinite Delivery	13,500	N/A	N/A
Total	87,500	175	90
2022 Sewer Reconstruction			
Fuchsia Way	1,000[2]	4	N/A

[1]Future SDSR project in 2024 will be issued to rehabilitate the sewer mains in this neighborhood
[2]Project also includes the replacement of 700 linear feet of water main and lead service lines

These and the additional projects projected to be implemented throughout the 5-year duration of this LTIIP are identified and described in Table 3-2 below.

Table 3-2: Sewer System Eligible Properties to be Improved	
Project Category	**Project Descriptions**
Small Diameter Sewer Rehabilitation	Proactive, trenchless rehabilitation of less than 36-inch diameter sewer mains to restore structural integrity, reduce root intrusion, and reduce infiltration and inflow, includes cleaning, pre and post construction CCTV inspections, and if necessary, excavated point repairs and manhole rehabilitation. Provides PWSA a means to address inflow and infiltration and several moderate/major structural defects in a pipe segment prior to complete failure. This trenchless pipe renewal method eliminates disruptive digging and restoration and is cost effective.
Sewer Reconstruction	Reconstruction of existing sewers, manholes, catch basins, and inlets due to emergency situations or pipe failures.

3.3 Future Sewer Prioritization Approach

In order to cost-effectively prioritize future sanitary sewer rehabilitation, the Authority will employ a risk-based approach to prioritize the neighborhoods and/or pipe segments that are included in the annual projects, where risk is defined as:

$$Risk = Likelihood\ of\ Failure \times Consequence\ of\ Failture \times Redundancy$$

To accomplish this cost-effective prioritization, the Authority has retained a consultant to develop the methodology and integrate best practices for Assessment Management for the sewer system. This analysis will assign a risk score to each pipe segment within its system when complete. Additionally, to reduce the impact to customers and save on mobilization and demobilization costs, projects will be formed by grouping prioritized assets by geographic proximity and similar risk rankings.

3.3.1 Likelihood of Failure

The likelihood of failure component represents the probability that the asset will fail based on the asset's physical condition. This score will be determined by reviewing internal, closed-circuit television (CCTV) inspections coded using the National Association of Sewer Service Companies (NASSCO) Pipeline Assessment Certification Program (PACP), which is an industry standard for performing condition assessments. Table 3-3 lists and describes the condi7tion scoring for sewers in the wastewater collection system.

Table 3-3: Likelihood of Failure Scoring		
PACP Grade	Description	General Guidelines for Timing of Pipe Failure
1	Minor Defects	Failure unlikely in the foreseeable future
2	Defects that have not begun to deteriorate	Failure unlikely for 20 years
3	Moderate defects that will continue to deteriorate	May fail in 10 to 20 years
4	Defects that will become a grade 5 in the foreseeable future	Likely to fail in 5 to 10 years
5	Defects requiring immediate action	Has failed, or will fail in less than 5 years

For assets without existing inspection data, desktop assessments using operations and maintenance history (if available), material, and date of construction will be used until condition assessment data is available. Collapses or other significant defects that cannot be rehabilitated using trenchless technology on critical pipe segments (e.g., deformation) will be repaired or replaced using open-cut methods as soon as possible using the Authority's annual urgent or reconstruction contracts. These segments will be assigned a condition score of 6.

3.3.2 Consequence of Failure

The consequence of failure (CoF) score represents the direct and indirect impact to the customers and environment if the asset fails; it will utilize the following "Triple Bottom Line" criteria:

- Financial impact resulting from the need to conduct an urgent repair: this accounts for the relative cost to repair failures (i.e. depth, pipe size, and accessibility) and any fines or other regulatory costs incurred due to a failure.
- Societal impact resulting from the loss of service of the asset: this takes in account the number of customers affected by the failure, the type of customers affected (i.e. hospitals, schools, etc.), and the location of the asset.
- Environmental impact resulting from any discharges: this accounts for the relative impact to the surrounding environment if a failure leads to a discharge.

An overall consequence of failure score will be calculated (see Table 3-4) as a weighted average of all the individual consequence of failure factors and the maximum score will be 6. The weighting factors will be 0.25 for each financial and social criterium and 0.50 for environmental criteria. Proposed weightings and ranges presented may be adjusted as the systemwide analysis is performed.

Table 3-4: Consequence of Failure Scoring			
CoF Factor	Description	CoF Score	Triple Bottom Line Criteria
Diameter	Less than 10"	1	Financial, Social
	≥ 10" < 15"	2	
	≥ 15" < 24"	3	

Table 3-4: Consequence of Failure Scoring			
CoF Factor	Description	CoF Score	Triple Bottom Line Criteria
	≥ 24" < 36"	4	
	≥ 36" < 60"	5	
	≥ 60"	6	
Depth	Less than 6'	1	Financial, Social
	≥ 6' < 10'	2	
	≥ 10' < 14'	3	
	≥ 14' < 18'	4	
	≥ 18' < 24'	5	
	>24'	6	
Location	Unpaved Road	1	Financial, Social
	Minor Local Road	2	
	Major Local Road	3	
	Collector Road	4	
	Arterial/Building/Pool	5	
	Highway/Waterway/Railroad	6	
Distance from Environmentally Sensitive Features	150 LF or more	1	Environmental
	100 - 150 LF	2	
	75 - 100 LF	3	
	50 - 75 LF	4	
	25 - 50 LF	5	
	Less than 25 LF	6	
Distance Between Downstream Pipe to a Service Lateral for Customer with High Importance	20,000 LF or more	1	Social
	15,000 – 20,000 LF	2	
	10,000 – 15,000 LF	3	
	5,000- 10,000 LF	4	
	1,000 – 5,000 LF	5	
	Less than 1,000 LF	6	
Accessibility of Pipe	On Right-of-Way - No Traffic Control	1	Financial
	On Right-of-Way - Traffic Control	2	
	On Public Land with Vehicle Access	3	
	On Public Land without Vehicle Access	4	
	On Private Lands with Vehicle Access	5	
	On Private Land without Vehicle Access	6	

3.3.3 Redundancy

The availability of redundant assets mitigates the consequences of asset failure and overall risk. Redundancy scores will range from 0.1 for complete redundancy to 1 for no redundancy. In general, the redundancy factor for most of the wastewater collection system will be 1 because gravity sewer systems do not typically have redundancy in their design. However, for specific assets known to have alternate flow paths where diversion can occur with no system impacts, redundancy will be factored into the risk calculation.

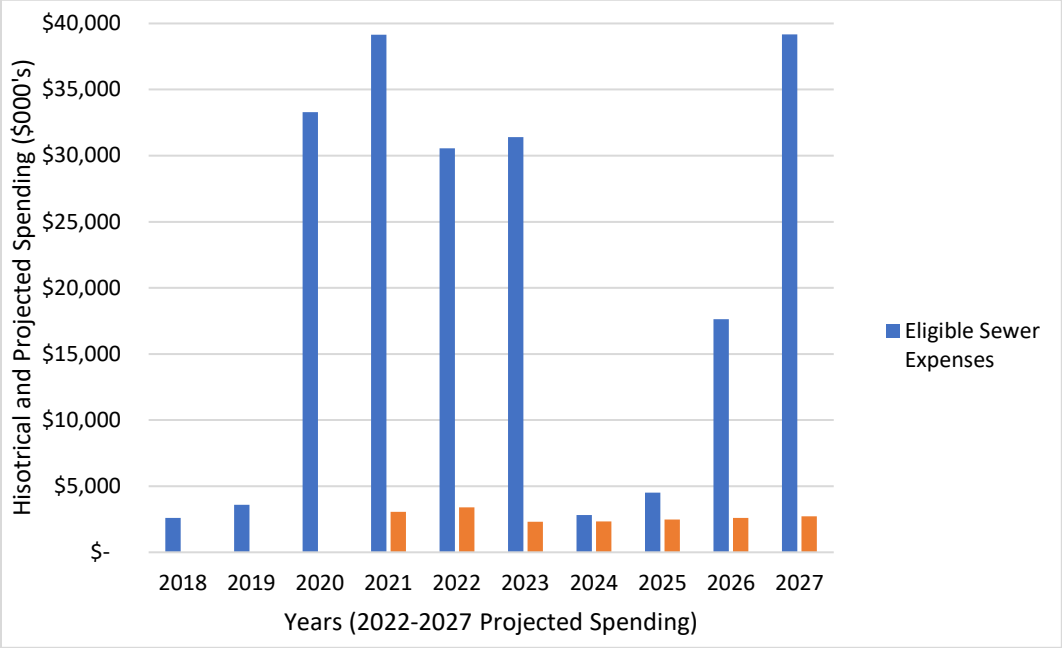
In summary, the proposed risk scoring methodology is summarized in Table 3-5.

Table 3-5: Risk Scoring Methodology

Criteria	Scale (Best Case → Most Risk)
Likelihood of Failure	1 (almost new) to 6 (failed)
Consequence of Failure	1 (least critical) to 6 (most critical)
Redundancy	0.1 (complete redundancy) to 1 (no redundancy)
Risk	1 (least risk) to 36 (highest level of risk)

3.4 Initial Planned Repair and Replacement Schedule and Projected Annual Expenditures

Table 3-6: Sewer System Eligible Properties Project Schedules and Costs in Appendix B identifies the costs associated with the projects for each year of the project schedule (2023-2027), organized into the following major project categories:



- Small-Diameter Sewer Rehabilitation
- Sewer Reconstruction (Annual Indefinite Delivery Indefinite Quantity (IDIQ) Contract)

3.5 Acceleration of Sewer Projects

Figure 3-4 shows past and projected spending on eligible sewer system projects for the period 2018 through 2027. The value for 2015 reflects projects which were funded through a combined capital and operations budget, which accounts for its disproportion to years prior and after.

This figure shows a significant increase in capital spending for DSIC-eligible sewer improvements and rehabilitation over the historical rate. At current rates, the DSIC charge provides enough funding to rehabilitate an additional two and a half miles of small diameter main per year. This funding and the number of miles rehabilitated is expected to grow in the future as base rate Tariff increases are approved by the PUC which will also increase the amount of revenue received through the DSIC.

Figure 3-4: Historical and Projected Spending Eligible Sewer System Projects

4 SUMMARY OF PAST AND PROJECTED CAPITAL SPENDING

Table 4-1 shows the past and projected spending for water, and sewer projects, all previously described in this LTIIP. The projected spending (2023 – 2027) for all eligible property types is approximately $313.6 million.

Table 4-1: Historical (2018-2021) and Projected (2022-2027) Capital Spending (in Thousands of Dollars)

Fiscal Year	Total Capital Spending	Water Projects	Sewer Projects	Total Eligible	DSIC Spent Water	DSIC Spend Sewer	Total DSIC Spent
2018	$67,717	$28,002	$2,599	$30,601	N/A	N/A	N/A
2019	$106,998	$47,071	$3,586	$50,657	N/A	N/A	N/A
2020	$122,108	$71,887	$33,283	$105,160	N/A	N/A	N/A
2021	$130,732	$103,975	$39,142	$143,117	$4,970	$3,071	$8,041
2022	$180,858	$68,374	$37,143	$105,517	$11,158	$3,397	$14,555
2023	$266,173	$15,461	$5,229	$20,690	$5,993	$2,317	$8,310
2024	$277,247	$47,895	$5,031	$52,926	$6,023	$2,328	$8,351
2025	$319,830	$64,820	$5,137	$69,957	$6,866	$2,491	$9,357
2026	$360,232	$61,452	$5,327	$66,779	$7,278	$2,591	$9,869
2027	$375,213	$97,021	$6,256	$103,277	$7,788	$2,722	$10,510

[1]Number of Eligible Projects reduced in 2023.

[2]2022-2027 DSIC spend is projected.

5 COST EFFECTIVENESS AND EVALUATION METRICS

The increase in the volume of capital project delivery planned for the next 5 years demands an ever-increasing level of management excellence to achieve the efficiencies necessary to meet the challenge of adhering to project budgets and schedules. The Authority has for the past 30 years run an engineering and construction department comprised of Authority employees and contracted professionals. The Authority staff and its outside consultants and contractors will continue to work seamlessly as a unit in terms of controlling and monitoring all aspects of the capital program. Impediments to the attainment of the aggressive construction program proposed must be identified in advance and when barriers to the efficient attainment of pre-established budget and schedule goals are identified, they must be resolved quickly and consistently. This approach will ensure the success of the program, measured in large part by cost savings.

The rehabilitation and replacement of water mains, for example, will undoubtedly result in a reduction in non-revenue water losses and future main breaks. However, there is a need for a comprehensive and systematic approach to the delivery of the accelerated capital improvements program. The Authority has implemented (and is continuously improving) a number of tools which will ensure the cost-effective and efficient planning, design, procurement, construction, and close-out of projects. These tools include the e-Builder project management information system, the Project Management Policies and Standard Operating Procedure (PMP-SOP), and contractor procurement process. All three tools are described in more detail below. In addition, cost-effectiveness will be ensured by the selection of the appropriate construction techniques (such as trenchless construction) during the planning stages of a project.

5.1 e-Builder (EB) Project Management Information System

e-Builder (EB) is a robust, web-based project management information system. It allows, through specifically defined permissions, both internal and external project managers to manage their project budgets, schedules, change orders, contractor/vendor invoice payments, and other critical project related activities in one centralized location. In addition, this system allows the Authority to better manage the interactions and integral project finances for multiple, related projects at a program level.

e-Builder was initiated by the Authority in July 2015. e-Builder has allowed the establishment of customized processes that best fit day-to-day project management activities or align with best industry practice workflows. The e-Builder system allows Authority personnel at all levels to access data and tangible project status reports for the project. Dashboards have been developed for internal and external project participants, allowing the e-Builder users the ability to manage, monitor and quickly identify:

- Bottlenecks within the processes
- Staffing needs
- Capital and operations expenditures
- Change orders
- Schedule adherence and deviations throughout the project cycle

- Establish monthly Engineering and Financial benchmarks and metrics to help measure how the Authority is performing

The e-Builder system has helped move the Authority from a manual paper-based management system to an electronic, collaborative, web-based system that captures critical project related data and information in one centralized repository. The Authority has designed their system to allow access by contractors and consultants who use e-Builder for a number of critical project processes, such as to process payments electronically, process change orders to contracts, upload 30%-60%-90% and final design documents, house daily site reports and construction photos/videos, initiate Consultant On-Call Task Orders and Amendments under specific projects, Senior Group Managers to review monthly Project Audits submitted by Project Managers, and other project related activities. e-Builder provides a vehicle for continuous communication between primary project participants.

The Authority will continue the development and refinement of its e-Builder system to accommodate the expansion of the capital improvement program.

5.2 Project Management Policies and Standard Operating Procedure (PMP-SOP)

A Project Management Policies and Standard Operating Procedure (PMP-SOP) was finalized to facilitate the incorporation of best industry practices to optimize project planning and delivery at the Authority. Standard processes and procedures supported e-Builder represent many of the documented primary tools outlined in this document. The PMP is a “living and breathing” document and is being updated on a continual basis to encourage uniformity in staff practices, record retention, and contracting practices.

The PMP-SOP describes the processes, activities, and procedures that the Authority’s project management and administrative staff will use to organize to manage the increased workload outlined in the CIP and to efficiently and effectively maintain its water and sewer utility systems. The PMP-SOP is contained in Appendix D of this LTIIP.

Development and use of standard processes and procedures by Authority staff assures the consistency, quality, and timeliness of actions taken by project personnel in the delivery of critical capital projects. Improved interfaces between Authority personnel and external resources improves the ability to deliver projects on time and within budget, while working to meet or exceed pre-established project performance goals.

The PMP-SOP provides a living template to successfully and sustainably manage and deliver the Authority’s CIP projects. It is designed to provide a blueprint to track project activities and program progress against compliance obligations and other benchmarks, thus giving the Authority an accurate "finger on the pulse" for each project, and in aggregate, for each program. Its implementation outlines the processes to encourage timely and appropriate corrective action. It will also help the Engineering and Construction Department improve consistency and quality in many areas, such as data management, contract language, policies and procedures, standardized forms and formats, interpretation, design standards, analysis, problem resolution, change management, construction management, documentation, and more, all of which lead to better performance and productivity.

The PMP-SOP establishes the framework for a high-level overview of the processes inherent in the successful development, planning, design, and construction of a project. In addition, it includes core functional procedures to be performed on a routine basis. Procedures were developed by interviewing

Authority staff and consultants with specific hands on per topic covered, and the development of workflows to optimize the steps associated with specific processes.

The PMP-SOP includes a number of tools, forms, and references to further support project activities. These tools provide the Authority with guidance, information, and supplemental materials for better comprehension and for use in conjunction with the procedures. These PMP-SOP materials are intended to keep the processes and procedures as concise as practical and limit the need to revise procedures when the tools and forms are revised.

5.3 Cost-effective Design, Project Management and Construction

5.3.1 Design and Constructability Reviews

In general, a majority of the Authority's construction projects are designed by contracted professional engineering consulting firms. Therefore, the Authority employs a robust review process that includes input from the Authority's engineering department and operations staff as well as independent third-party reviewers.

The design Scope of Work (SOW) generally requires the consultant to undertake an initial study or evaluation phase to document the detailed design in a Technical Design Memorandum (TM), or Basis of Design Report (BODR), depending on the complexity of the project. These documents are reviewed by the Authority and an independent third-party reviewer (typically a third-party engineering consulting firm). Following acceptance of the TM or BODR, the consultant will be notified to advance (or modify) the detailed design.

Independent reviews of the detailed design are typically performed following the completion of the 30%, 60% and 90% design phases. These technical reviews are completed prior to the issuance of final Contract Documents by the Authority. Constructability reviews, including a detailed evaluation of the cost estimate, are performed at a minimum at the 60% and 90% phases, and at 30% for more complex projects. Submittals include contract drawings developed at the appropriate level of detail, draft specifications incorporating the Authority's standard specifications, updated construction cost (to a level of refinement in accordance with the Association for the Advancement of Cost Engineering (AACE)), an update on the required permits for the project, and an update on the comments and actions from the previous reviews.

The overall design review process is designed to ensure that the project meets the Authority's goals and objectives, the implementation schedule is being maintained and the budget is being monitored to ensure it is within available project funding. The review process also includes stakeholder input and interaction, again depending on the type of project and potential impact on the community, other utilities, or concerned citizen groups.

As part of the Authority's design review, appropriately selected subject material experts (SME's) are included in the process to incorporate lessons learned from similar projects. Reviews are performed with the focus on potential areas of contract claims, design recommendations to improve the overall construction process, and avoidance of potential conflicts within the documents.

In addition to these design reviews, the Authority also has an internal post-construction review process that obtains feedback on recently completed construction projects to solicit lessons learned or

construction techniques that can be utilized on future contracts to save money or avoid costly construction claims.

5.3.1.1 PWSA Project Audits

As the Authority continues to accelerate the CIP, staff are encouraged to identify potential obstacles and challenges in advance and mitigation actions before issues are encountered and cause project delays. By conducting internal project audits with project managers with specific "look ahead" and "cost to complete" reviews, the Authority will be alerted quickly and will be able to take action. The project audits are intended (for internal purposes only) to review significant project milestones, final deliverables, and current project status. A workflow process has been developed in e-Builder called "PWSA Project Audit Process (PPA)", which will house all the talking points and discussions that take place during the project audit meeting. This information will then be summarized in a report used to brief the Director of Engineering and Construction.

This process provides Project Managers a chance to report to management the project status or phase, percent completion, accomplished task for that month, any upcoming change order or project schedule delays, identify upcoming Procurement Services (e.g., Professional Services or Contractor Services), Consultant or Contractor performance issues, current project budget and expenditures, or any other project related information they would like to document within the monthly project audit.

PPA's, initiated by Project Controls Team, on the 1st of every month (unless the 1st lands on a weekend or holiday which will be moved to the next business day) and the Project Manager has 2-weeks (15th of every month) to complete their PPA and 1 week for Senior Group Managers to review the PPA. The Project Manager has the option to request an "Audit" on their project which would entail a schedule meeting with the following internal PWSA personnel staff;

- Director of Engineering and Construction
- Deputy of Engineering and Construction
- Program Senior Manager
- Finance CIP Manager
- Project Controls Team
- Construction Senior Group Manager (if necessary)

Project Managers will express any issues or concerns with management and Project Controls Team will document any highlights or items that need addressed within the PPA. Senior Group Managers also have the ability to audit the Project or Project Manager after reviewing the PPA if necessary. PPA reporting is also available for management to review and determine if they would like to audit the project or project manager based on the PPA information on the report.

To date, a number of valuable "Lessons Learned" have been identified and shared with staff to provide the basis for improved the performance of future projects. The Authority will build upon the aforementioned "lessons learned" which will result in the development of:

- Strategies which will increase the successful outcomes of future projects

- Project success criteria which will include schedule, budget, and customer and stakeholder satisfaction metrics
- Change management success criteria which will include metrics associated with staff involvement, public interaction, and change transition

5.3.2 Consultant Performance Evaluations

In addition to Project Audits, the Authority has implemented "Consultant Performance Evaluations" (CPE) to provide feedback, both positive and constructive, to all consultants. At a minimum, the project manager is required to complete this process yearly, but it is automatically initiated by a change in the project phase or can be initiated manually if documentation of performance (positive or negative) is required. The consultant is evaluated (1-Unacceptable through 5-Exceed Expectations) on the following categories: Quality of Work, Management, Resource Utilization, Time/Schedule, Cooperation-/Coordination, and Diversity Participation/Inclusion. This information is then briefed by the Director of Engineering and issued to the consultant's client service manager for their review, comment/and or rebuttal.

5.4 Contract Bidding Procedures

As a Municipal Authority, the Authority is required to publicly bid construction contracts and the purchase of goods in accordance with Chapter 56, PL 287. The Authority has a long history of successfully bidding such services. Generally, large improvement projects such as pump stations or storage facility upgrades would be bid as one construction project with multiple contracts. The Authority is required to follow the Separations Act 53 P.S. 1003 and 71 C.S.A. 1618 which requires the use of a separate contract for plumbing, heating & ventilating, and electrical work. In addition, the Authority has updated its Supplier Diversity Program and Policies in 2021. The Supplier Diversity Program specifics are available on the Authority's website. Potential vendors and contractors are encouraged to review the Supplier Diversity Program information that defines the participation goals for the engagement of currently certified minority, women, small businesses, veteran business contractors, including service-disabled veterans, disability-owned, and LGBTQ business contracts. The bidders are required to submit certifications with the contract documents. For linear projects such as water main replacements and sewer rehabilitation contracts, the projects are organized into large enough contracts that provide economic incentive for contractors to bid.

The Authority has pre-qualified several engineering firms to provide expedited design phase services. These firms are selected based on the anticipated scopes of work and the firm's qualifications to complete the work, including availability and experience of the staff, proximity of the staff to the City, and other parameters. Firms are selected to perform expedited designs of water main and sewer line rehabilitation and/or replacement, green stormwater infrastructure projects, and other infrastructure improvements. As a project scope of work is developed, a request for proposal (RFP) is prepared by the Authority and issued to several (pre-qualified) on-call consultants. The RFP includes the detailed scope of work, contracting requirements, project delivery schedules and deliverables. For larger projects, separate RFPs are developed, and the engineering services are publicly advertised, and a selection is made based on proposals submitted.

6 WORKFORCE MANAGEMENT AND TRAINING PROGRAM

The Commission requires a utility to have a workforce management and training program adequate to ensure that the utility has access to a qualified workforce to perform work in a cost-effective, safe, and reliable manner. The PWSA announced a Comprehensive Training & Development Policy, addressing annual employee training requirements in March 2022. This addendum provides details of extensive workforce management and training programs for all PWSA employees. Further training and development specific to individualized PWSA roles are described below.

In recognition of the expanding needs of the Authority in a Human Resources system, the PWSA selected, through open procurement, and implemented a single HRIS application. The selected Ceridian Dayforce provides Payroll & Tax, Benefits, Human Resources, Talent Management, Workforce Management, Document Management and Analytics. By using the SaaS business model, Dayforce effectively eliminated costly hardware, customization, and maintenance expenses-thus reducing the total cost of ownership. Key advantages include Single application, Compliance Automation, Speed, Accuracy, Self- Service and Configurability.

6.1 Current and Proposed Workforce

6.1.1 Workforce Development

The challenges presented by an expanded infrastructure improvement program described in Section 4 of this LTIIP are not insurmountable. The existing workforce at the Authority provides a solid foundation upon which to build the staff and skills it needs to become a high-performing organization.

The current full-time workforce of the Authority is presented in Table 6-1. The Authority's headcount has grown substantially in recent years with the addition of over 135 employees since 2016. An accurate projected 2023 headcount cannot be given at this time because the Authority is in the process of creating the 2023 Operating Budget. However, the headcount expansion is projected to continue in order to support the Capital Improvement Plan and PUC mandated compliance activities, which includes eligible property infrastructure improvements.

Table 6-1: Current Workforce

Department	Current	2022 Budget
Executive Office	5	7
Customer Service	71	80
Management Information Systems	21	24
Finance	17	20
Human Resources	9	12
Legal	3	7
Warehouse	5	5
Public Affairs	9	10
Water Quality (Lab)	15	18
Water Treatment Plant	48	60
Water Operations	117	130
Sewer Operations	19	23
Engineering & Construction	35	46

Table 6-1: Current Workforce		
Department	**Current**	**2022 Budget**
Environmental Compliance	6	6
Safety and Security	4	6
Total	384	454

Staff will be supplemented by contracted personnel as needed. However, PWSA is not able to present an estimate of the exact number of contractors or staff that may needed in 2023 as that figure is dependent on budgeting and both the progress of building an internal workforce and the final determination of actual needs and scope of the projects associated with the CIP. The objectives, commitments, outreach activities, and measures of success discussed below will enable PWSA to build a workforce to meet the needs of increased capital spending, as well as increased responsibilities to address PUC compliance requirements.

Success in hiring new permanent employees will depend upon the attainment of three major objectives:

- Increasing our hiring effectiveness
- Ability to continue to attract staff domiciled in Allegheny County or as outlined in the PWSA domicile policy or any union agreement
- Enhancing workforce engagement and performance

Developing a strong workforce to meet the demands of planning, designing, and overseeing the construction of new and rehabilitated infrastructure and other capital improvement programs will rely upon identifying and hiring qualified applicants. To that end, the Authority is committed to:

- Reviewing and improving job postings and position descriptions. These activities will address the rapid expansion of staff, as well as modified and new job functions.
- PWSA's HR Department has been successful in hiring most of the required staff resources needed by the end of 2021. The Coronavirus continues to delay many projects, so the need for all these staff will depend upon the implementation delays of the Capital projects, and operations improvements currently being implemented.
- PWSA has increased its compensation for many positions based upon the current salaries for similar positions in the region. The shortage of Water Treatment Operators and other key tradesmen appears to be an impediment to our expansion (and retention) of these staff positions. PWSA entered into a professional services agreement in February 2022 to assist the Authority with the development of a comprehensive classification and compensation study. The goal of the services provided shall be to evaluate the union and non-union positions within the Authority and create compensation analysis, pay grades, and recommended changes based on local, national and industry comparatives.

The Authority has extended its outreach to industry publications, community partnerships, and other venues to reach prospective talent. We are specifically pursuing an effort to diversify our workforce to the greatest extent possible. Some of its recent and upcoming partnerships include:

- The Homewood YMCA Workforce Development Office
- Energy Innovation Center (EIC)
- Community College of Allegheny County (CCAC)
- Imani Christian Academy/Pittsburgh Public Schools (PPS)
- Manchester-Bidwell Lab Training Partnership
- Landforce Pittsburgh

The Authority will use measures of success to determine the effectiveness of its hiring program. Although the HR department is still developing and refining its metrics, some of the upcoming metrics would be as follows:

- Hiring response time: our goal will be that the average time to fill existing positions is less than three months from the date of the vacancy.
- Position vacancy rate: our goal will be an average vacancy rate of less than 8%
- Achieve a workforce diversity which emulates the Allegheny County Region and the City of Pittsburgh to the greatest extent possible.
- Creating a talent pipeline that results in a large number of applicants that want to work at the PWSA.

In terms of the goal to enhance workforce engagement and performance, the Authority understands that increasing the efficiency and effectiveness of the organization requires engaged, developed, and high-performing employees. Growing and retaining the existing workforce will require the Authority to:

- Work cooperatively with unions to find and act on opportunities to increase workforce performance and effectiveness. PWSA continues to work with local Union leadership to assist PWSA with specific training required for our utility workers, equipment operators, electricians, plumbers, and utility workers.
- Complete a training program roadmap and inventory of the training requirements for all positions at the Authority. The Authority's training for all staff has increased and includes required trainings such as Environmental Compliance & Ethics, Harassment, and Diversity, Equity, and Inclusion, and also assists the staff to acquire certifications and licenses for their specialized capabilities (e.g., Water Treatment Operators, Distribution System Operators, etc.). This information can be obtained from the PWSA's Comprehensive Training & Development Policy which was developed and implemented March 2022. Additionally, this training is tracked through the PWSA's Learning Management System, an integrated part of the Ceridian Dayforce system.
- Dedicate additional resources to training and development, as well as health, safety, and risk management. PWSA hired a permanent Senior Manager, Safety and Security who provides Safety Training and working with the Operation and Water Production Teams on a weekly basis. In addition, Safety and Security has been developed as its own

separate department, currently with a staff that consists of a Workplace Safety Manager and an Emergency Planning and Water Production Safety Manager. Establish and track productivity goals for work groups, where applicable. PWSA has implemented performance metrics for the organization, which are being reported to the PUC on a quarterly basis.

- Develop a program to recognize high-performing employees. In 2019 PWSA implemented a quarterly recognition of staff whose work performance showed efforts above and beyond. As of October 2022 more, than 94 staff at all levels from all Departments have been so recognized.

Four measures of success will be used to determine effectiveness of its workforce engagement program:

- Training hours per year: with a goal of 20 hours per year per employee.
- Safety compliance: our goal will be to maintain a worker's compensation experience modification rate of less than 1.0
- OSHA compliance: meet OSHA requirements
- Staff engagement survey: once a year

The Authority will use a combination of internal and external resources to address the critical staffing needs associated with the infrastructure improvement program. The Authority will utilize Program Management support to execute the program with design and construction management services primarily provided by consultants. Based upon all of the above programs and plans, the Authority believes it will be successful in cost-effectively increasing staffing levels to successfully manage the projects identified in the CIP.

6.1.2 Overcoming Workforce Challenges

In order for PWSA to implement the wide variety of improvements discussed in this LTIIP, PWSA must continue to restructure its resources, increase the number and expertise of staff, and increase the number of available private consultants and contractors. PWSA has addressed its previous workforce challenges by stabilizing its Executive, Senior and Middle management, and leadership positions with experienced professionals, while continuing to operate in a union environment that limits workforce flexibility, review and revise residency requirements, operate on limited availability of experienced water utility professional issues, and managing an aging workforce. PWSA has addressed these workforce challenges by focusing on its workforce objectives, adhering to its workforce commitments, extending its outreach activities, and evaluating its measures of success, as described in detail in Section 6.1.1. PWSA is committed to continuing these practices. PWSA's success in overcoming its workforce challenges is demonstrated as follows:

- Operations Leadership has been reorganized to further strengthen our culture of high performance, excellence, measurement, and accountability. The new senior management team is inculcating the staff with current water utility practices which is improving staff safety, productivity, and workforce job satisfaction. The new and more defined structure will also enable Operations to better strategize around our goals, and to develop, empower and equip them for success.

- Operations is realigning its resources to ensure that the key program metrics are being met, such as meter installation rates. A number of plumbers have been assigned to these tasks and have increased the meter install rate from about 350 to 1000 per month. In addition, PWSA's meter installers do building reconnaissance to verify the plumbing system construction materials and existence of backflow preventers which facilitate the lead service line and water service backflow programs.

- PWSA developed a new department focused on Environmental Compliance and hiring staff that specialize and focus in that area to oversee our compliance with Administrative Agreements or other regulatory entities.

- Operations continues to hire Utility Workers to the extent that they are available. Plumbers, electricians, and other trades candidates have become limited because of the general economy. Consultants operate under On Call Services Agreements which permits a streamlined process of engagement for specific projects. These more than 20 selected consultants have ONCALL Services Agreements in several categories: Water, Wastewater, Stormwater, Water Treatment, among others.

The Authority continues to increase its staff and consultant resources to increase the rate of project implementation, at all levels and departments. The Authority is confident that the proposed schedules can be met, and possibly improved upon, dependent upon the ability of its Management Team to effectively add the additional resources. PWSA anticipates that its restructured Executive and Senior Management Teams has the basic resources to implement the entire program, though we continue to add "ramp up" capacity as Authority takes on responsibilities for stormwater management and major systemwide upgrades. The Authority is extremely sensitive to the need for its capacity increase to be sustainable, and is developing internal infrastructure and related systems, policies, and procedures to continue project execution and delivery, including the hiring of more than 100 staff since 2023. The Authority continues to be deliberately cautious with the rate of personnel increase to ensure the sustainability and optimize performance of its organization.

PWSA continues to update its project schedules based upon the availability and capability of its workforce, and the commitments of its Consultants and Contractors. All schedules will account for the larger issues related to other mandates from Federal and State regulators, which could pre-empt some of PWSA's commitments to the PUC.

6.2 Training Programs

6.2.1 e-Builder Training

The Authority's Program Management Team with support of Authority Project Controls personnel have conducted e-Builder training for Authority personnel and others on the myriad elements of the system. The personnel trained and to be trained, and the topics of training, are shown in Table 6-2 (located in Appendix B). The Team provides one-on-one and group training and distributes reference materials to each participant. In addition to this formal training, "e-Builder Hot Topic Meetings" are held monthly. Typical topics include:

- Common issues of frequent occurrence that need to be addressed with project managers and others

- Feedback from project managers regarding any e-Builder issues
- Notification or updates related to existing internal processes or procedures
- Refresher training on any e-Builder modules requested by Project or Program Manager or repeating issues identified by the Project Controls Team
- Reinforcing rules to Project Managers and others responsible actors within established EB workflows
- Introducing newly purchased e-Builder modules
- Notification on any e-Builder system updates or changes made by e-Builder
- Updates on Authority policies or procedures (i.e., Finance, Fleet, Procurement, and Executive Departments)
- Presenting Engineering and Finance Benchmarks and Metrics

6.2.2 Management Training and Development

As the Authority continues transformational change and growth to accomplish our strategic initiatives, a specific management development program was implemented to deliver the foundational skills and knowledge necessary to ensure managers are equipped to handle operational problems, build and maintain a high-performing, culturally inclusive workforce, and deliver on organizational commitments, all while we simultaneously adapt to new technologies to manage sophisticated, complex, and more dynamic businesses.

6.2.3 Annual Policy Acknowledgement

In compliance with security and information standards, the PWSA employees and embedded consultants participate in an Annual Policy Sign-Off. While this list does not encompass all PWSA policies and procedures, employees are informed of standards, updates, and accessibility of other documents for accountability.

6.2.4 Other Training

Other training programs are conducted by in-house and contracted personnel on such topics as hydraulic modeling, low impact development (LID), sustainability, and safety. Authority engineering staff are certified Sustainability Professionals (SPs) through the Institute for Sustainable Infrastructure training on the Envision rating system. Training programs associated with Health & Safety are described in Section 6.4 of this LTIIP.

6.3 Talent Acquisition Management

To meet the increasing staffing needs of the Authority, the Human Resources Department hired a Talent Acquisition Specialist in 2021. The newly added talent acquisition component of the Human Resources department extends far beyond recruiting and is the entire process of hiring individuals with the skills and abilities required for a role, including attracting talent, interviewing, negotiating the offer process, and managing the onboarding process. This function aims to fill vacant job requisitions with the most qualified candidate while implementing the best practices to ensure fairness and promote diversity.

In the summer of 2021, the Authority moved away from a paper application process. Talent Acquisition built and launched an online application and review process within the Ceridian Dayforce E-Recruitment module. Table 6-2 highlights the achievements from this change.

Table 6-2: Talent Acquisition	
Reporting Period Q3 2021 to Q2 2022	**Percent Increase**
Number of Applications	53%
Number of Applications per Position	46%
Self-Identified Diversity	134%

6.4 Construction Management and Inspection

The Authority utilizes subcontracted construction inspectors to provide numerous services during the installation of water mains, service lines, sewer lines, and manholes in the collection system. The Authority maintains three inspectors on staff, is seeking additional inspection staff, and also utilizes qualified consultants to provide construction inspection services. These inspectors perform a wide range of services including the following tasks, as well as any other work that may be necessary to complete the construction activities.

- Monitor the installation of the water and sewer lines and appurtenances to confirm that they are properly bedded and installed in accordance with the Authority's specifications and/or Contract Documents
- Observe, perform testing to ensure that the new utilities meet specified performance requirements
- Monitor the pipe backfill for proper compaction in accordance with Authority's specifications and/or local municipal, county or PennDOT requirements
- Confirm that all materials such as pipe, fittings, hydrants, valves, service connections, backfill materials, etc. being used in the project meet the Authority's specifications
- Record the quantities of pipe and other materials installed
- Document the quantities of pipe and other materials, labor, equipment, etc., for accurate billing and payments
- Document all locations of pipe, valves, service connections, laterals, etc., for accurate mapping and record keeping
- Interact with City residents to coordinate water service line or sewer lateral installations, lessen the impact of the project and answer or address issues that may arise during the project
- Communicate with local businesses that may be impacted by the construction activities to ensure that service disruptions can be minimized to the greatest extent possible and service outages are minimized and do not disrupt business

- Coordinate contractors with school districts, various City agencies, and emergency services so that bus routes, trash pick-up, mail delivery, and emergency response are minimally impacted
- Monitor temporary restoration activities during construction to ensure that roads are restored to approved vehicular travel conditions and sidewalk areas are clear for pedestrians
- Monitor the final restoration required in projects to ensure that they are done in compliance with City of Pittsburgh, Allegheny County and/or PennDOT specifications
- Observe contractor's implementation of contractor safety plans and advise contractor of any observed conditions of imminent risks to public health or safety. Inspectors are authorized to advise supervisors of unsafe conditions and can shut down a project until an imminent danger situation is addressed.

6.5 Safety

In August 2020, the Authority hired an internal Health & Safety Manager to manage and enhance the existing Health and Safety program. This individual is a Certified Safety Professional (CSP) and has continued to build out the PWSA Safety Department by hiring a Workplace Safety Manager in January of 2022 to oversee field services and contractor safety. In March of 2022, PWSA hired an Emergency Planning and Water Production Safety Manager (CSP) to oversee health & safety at the Treatment Plant and water production facilities. PWSA plans to hire an additional person in 2023 to specifically oversee contractor safety as well.

A strategic plan was developed to properly maintain the existing Health and Safety program initiatives by setting annual goals and metrics, ensuring existing written programs are routinely reviewed and updated, completing routine inspections, meeting staff training requirements and overseeing a certified safety committee. New initiatives were also added to enhance the program.

PWSA has improved on training initiatives by integrating safety training into the online Learning Management System (LMS). Enhancements were made to the new employee safety orientation process and additional specialized trainings were recently provided to staff including PA One Call, Defensive Driving, Competent Persons for Excavations and First Aid, CPR Training. PWSA also recently completed OSHA 10-Hour Construction training for the Engineering and Construction department as well as Operations managers. Safety has also continued to provide Safety Culture training to PWSA managers.

PWSA has implemented new safety programs to address the COVID-19 Pandemic, Fire Prevention and Hot Work program and a Safety Incentive program to enhance reporting, awareness and participation. The Safety incentive program includes a near miss reporting component as well as a daily stretching program to assist in reducing the number or strain and lifting injuries. The program also includes safe driving incentives and incentives for operations managers who meet certain requirements.

PWSA continues to maintain a “Certified” Safety Committee through the Pennsylvania Department of Labor. The committee consists of 20 members who represent various locations and departments in an effort to drive safety from “bottom-to-top.” Safety manages the committee to ensure certification

requirements are met such as meeting monthly, completing inspections and taking action to address safety concerns.

PWSA has implemented a basic Contractor Safety program that requires all contractors to submit Health & Safety Plans for the projects they are awarded. These plans are reviewed by safety and follow-up inspections are being completed to verify that contractors are abiding by their plans.

PWSA continues to maintain and update both the existing Emergency Action Plan and the Emergency Response Plan to address emergency preparedness, continuity and recovery activities. PWSA recently implemented the use of an Incident Command System (ICS) for larger scale emergencies and assigned roles and responsibilities to key personnel throughout the organization. A written Physical and Cyber Security Plan has also been established.

7 OUTREACH AND COORDINATION ACTIVITIES

7.1 Construction Coordination

The Authority has developed a coordination team with the City and its other utility members. In addition, PWSA is developing a robust GIS based data layer to communicate its plans to other utilities. At present, the critical coordination appears to be with the City, specifically the annual paving plans, and the local Gas Companies' piping improvements. Significant improvement is expected with the coordination between the PWSA and the City as a result of the City's hiring of a new Chief Engineer, and additional engineering staff, which has delayed coordination in the past. Additionally, PWSA has assigned specific utility coordination duties to a primary, internal utility coordination staff member within the Engineering Department.

Additionally, as previously indicated in this report, the Authority is always updating its GIS to add water and sewer system data, evaluate and edit existing data, and refine its data retrieval processes in order to make the system more comprehensive, dependable, and easy to use. Annually, water and sewer system capital projects including replacements, rehabilitations, and repairs are selected and vetted to the Authority's engineering department before being prioritized for the coming budget year. As part of this process, the Authority solicits information from PennDOT, Allegheny County, homeowner's associations and other utilities as to their intentions to undertake paving and other public works projects during the budget year. The Authority attends monthly utility coordination meetings with the City's Department of Mobility and Infrastructure (DOMI) and other local utilities and coordinates construction and repair efforts when possible to avoid conflicts where overlapping work is identified. Additionally, PWSA will utilize resources, including the Pennsylvania 811 Coordination web service application, to identify opportunities for collaboration between projects and to meet the need for increased coordination with local utilities and local, state, county and city government agencies.

Whenever and wherever the Authority decides to undertake a pipe or manhole refurbishment project on a road pre-scheduled for paving, the project is coordinated with the State, County, City or appropriate municipality. The Authority works closely with the government agency to ensure that the design, permitting and construction of the Authority's infrastructure project will be completed in time to allow for the road to be paved.

In some cases, the government agencies will agree to postpone paving of its roads to match the Authority's completion of construction date, even if it extends into the subsequent year. Typically, where the Authority undertakes a project where paving has been pre-planned by the involved government agency, the Authority and its rate payers will benefit financially through the avoidance of road surface restoration.

The Authority will continue the proactive means to identify opportunities to coordinate pipe replacement and road paving.

7.2 Lead Service Line Replacement Program Outreach

In full support of the COA, the Authority has built a program to support its customers through the lead service replacement process. These outreach and communication efforts encourage property owners to participate in the current no-cost private lead service replacements offered in contract work areas. The

Authority is committed to these outreach efforts as a way of encouraging private line replacements and to reduce the number of partial (public-only) lead service line replacements.

The Authority's outreach and communications programs involve written communications with property owners and residents about the LSLR program and includes a letter describing the process, several information sheets and an agreement necessary for the Authority's contractors to perform the work. In addition to this initial information package, the Authority follows up with door hangers, service line work notices, 48-hour notices, post-replacement service line flushing instructions, test kit instructions and door-to-door canvassing of unresponsive customers. In addition to the written communications, the Authority also has a fully staffed Lead Help Desk team at the Authority's office. The Lead Help Desk team is responsible for the communication with the property owner and resident for the lead service line replacement program. Their primary goals are to inform property owners and residents about the program and reduce the number of service terminations by encouraging eligible property owners to agree to private lead line replacements. Not only does the Lead Help Desk team respond to questions via their dedicated email and hotline, they also proactively call property owners in the work order areas to follow-up on unsigned property owner agreement forms and to schedule pre-construction coordination meetings.

The Authority also employs Field Liaisons who are responsible for coordinating lead service line replacement work between the Authority's contractors, property owners and often tenants. Field Liaisons contact each property owner to help them understand the replacement process and potential impacts of the work, and to encourage private property owners who have not responded to communications from the Authority's Lead Help Desk. Their presence on-site also helps assure that the Authority's contractor's meet all quality assurance and regulatory requirements such as providing NSF-approved filters and lead water test kits.

Other LSLR outreach includes presentations at community meetings within the work areas, advertisements in neighborhood publications, press releases (and resulting press coverage) of work areas, social media posts, collaboratively working with City Councilors regarding work done in their district, construction signage detailing the work and weekly updates concerning streets where work is occurring.

7.3 Other Capital Improvement Construction Outreach

As the Authority grows its capital improvement program, there is a greater need to work closely with stakeholders throughout the community to prepare them for water, sewer, and green stormwater infrastructure projects impacting their communities. The Authority has created a comprehensive capital improvement outreach protocol to connect project managers and the Authority's public affairs team in the early stages of a project to ensure that the Authority clearly communicates the benefits, impacts, and expectations of construction work. Public Affairs team members attend many of the engineering progress meetings to ensure they are in the loop as projects progress so that the public has the most pertinent, time-sensitive information on projects that will impact where they live or work.

The protocol sets timelines and expectations for communications on projects, from the 30% design phase until completion. Public Affairs has committed to providing direct contacts for customers when they have issues or concerns on a project and will work directly with project managers to resolve issues. Project managers and members of the Authority's Public Affairs team are expected to use an approved

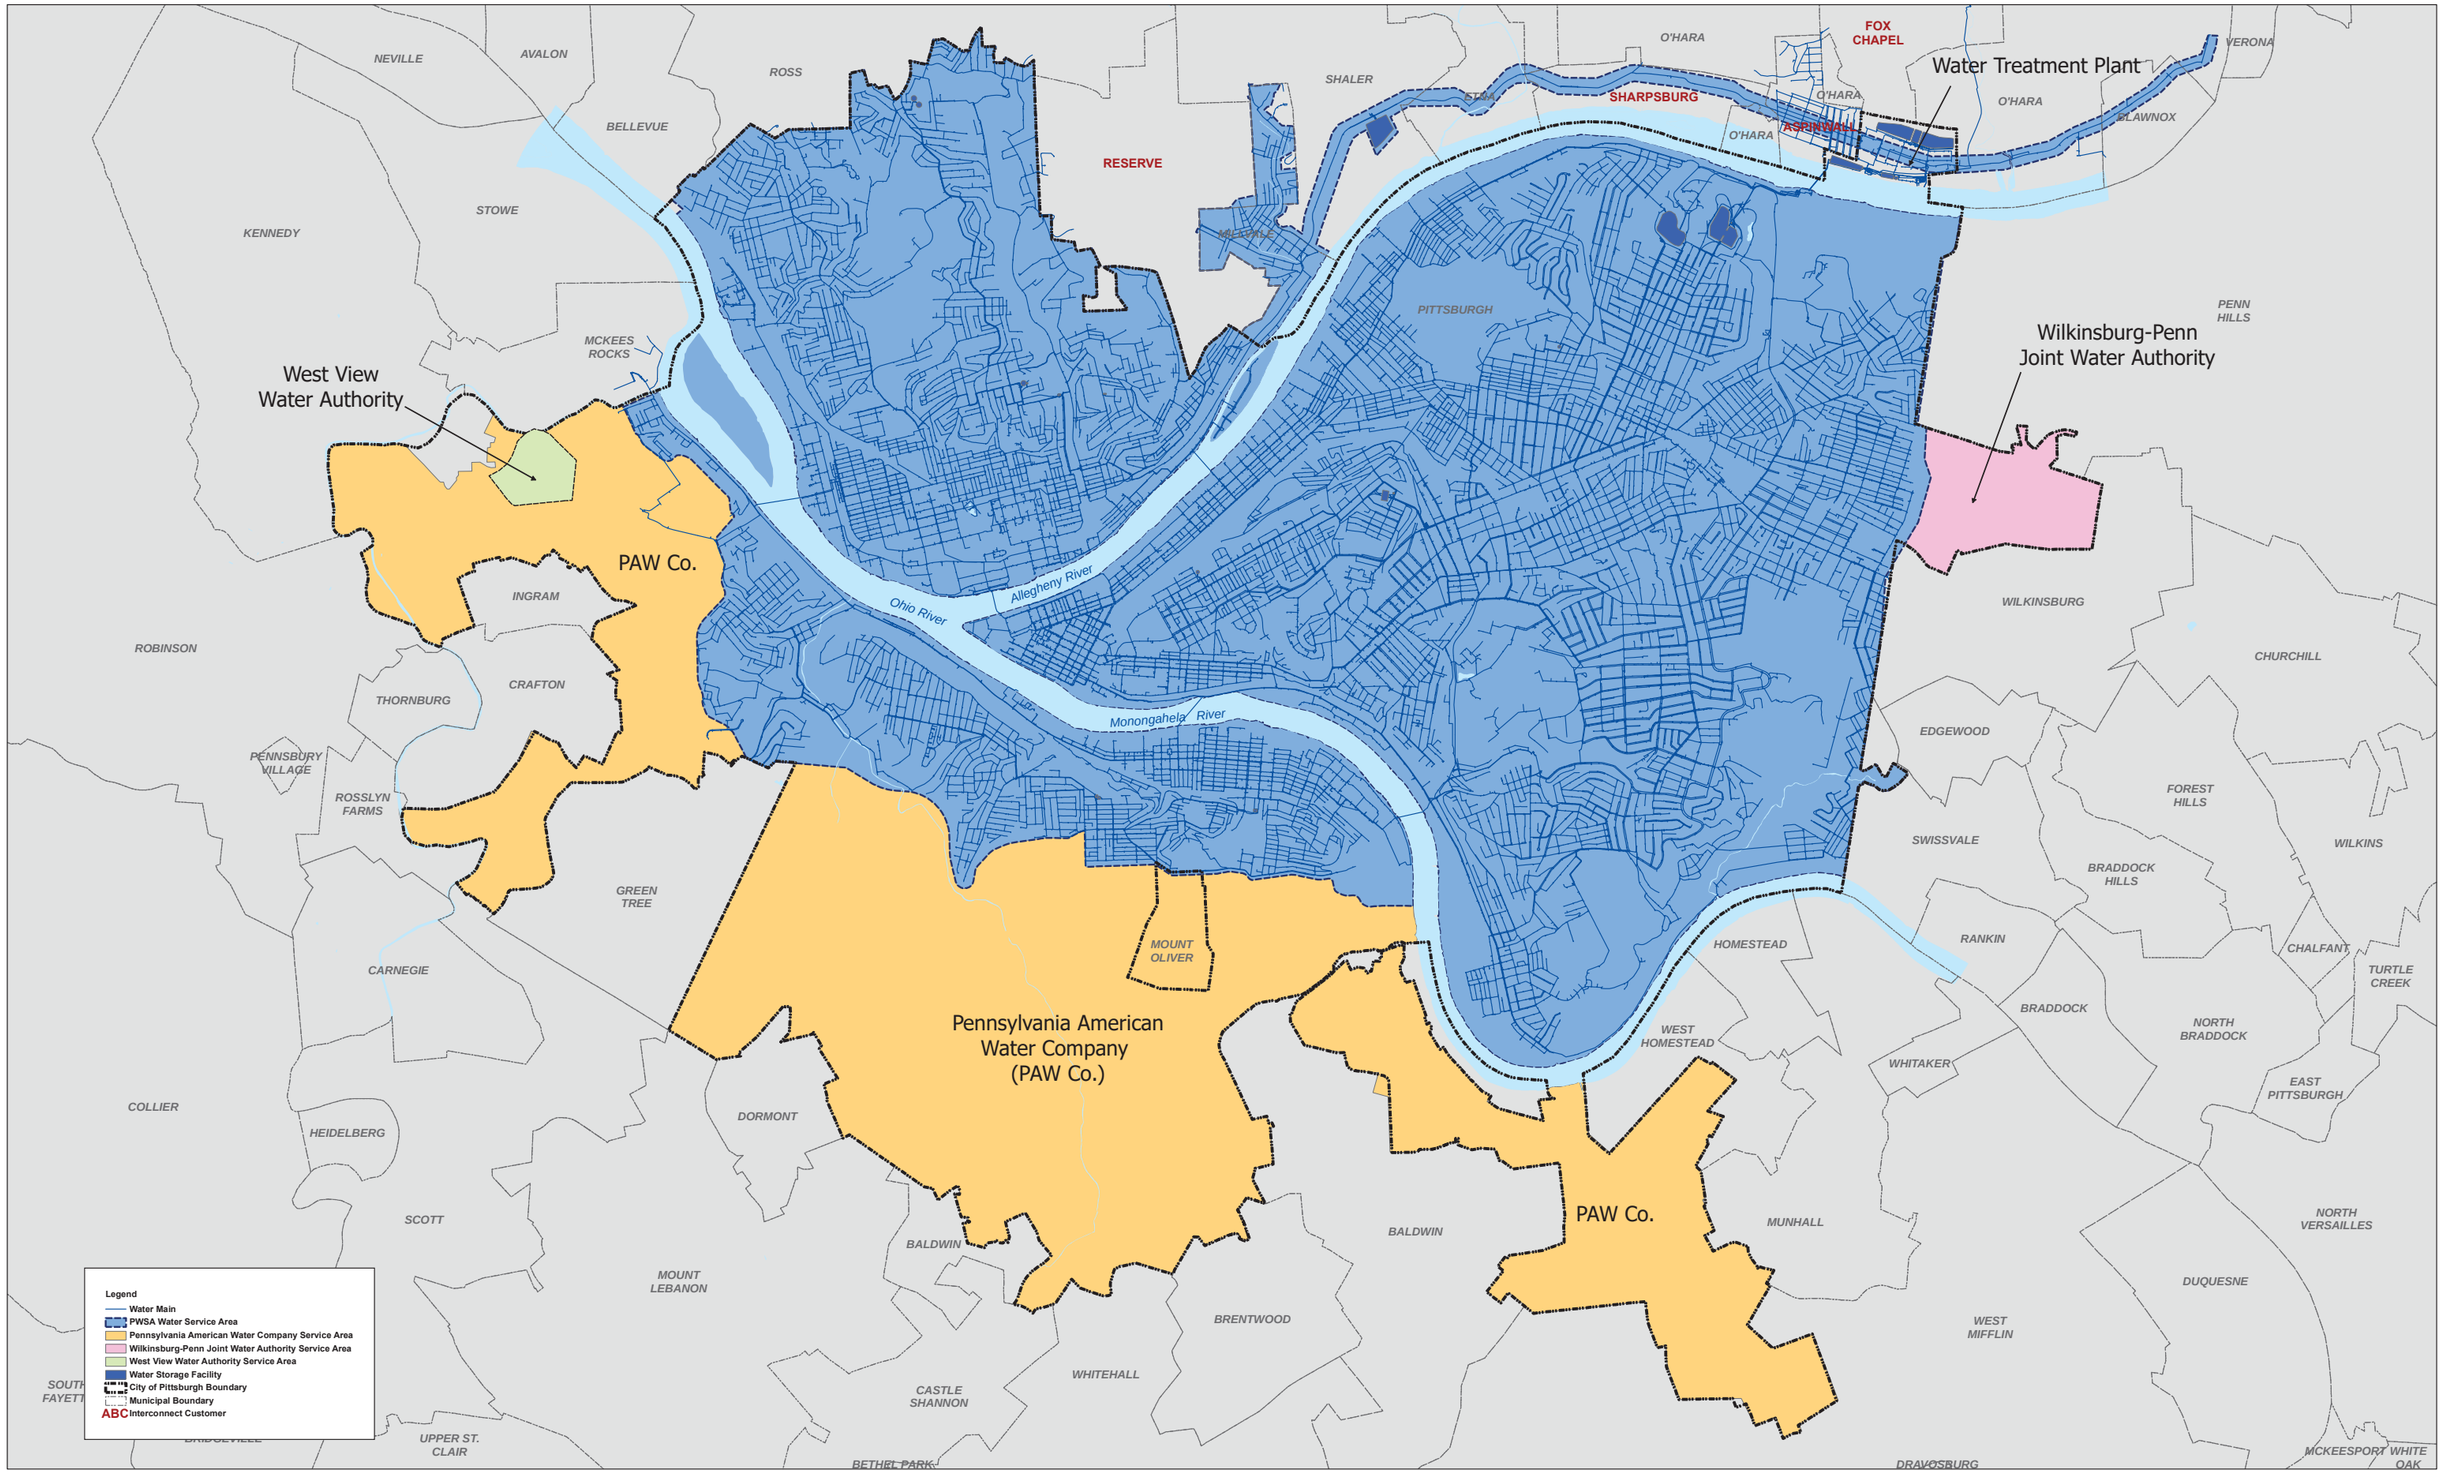
set of communications templates, such as letters and informational handouts, to properly relay project details to residents, business owners, and other community leaders who represent those affected by the work. The information is also disseminated to stakeholders in the form of releases to media and government officials and emails to residents who may have concerns about construction impacts.

PWSA's website, which was updated to be more user-friendly and function for customers in late 2019, houses a project page for most PWSA capital projects in design or construction. Residents can check an interactive map of their neighborhood to see which projects are upcoming and easily access contact information for project managers and members of the Public Affairs team.

PWSA hosts and participates in meetings and events throughout the city to share information on our programs and projects. Our staff attended 61 meetings in 2018, 83 meetings in 2019, and 41 meetings in 2020, 44 in 2021, and 37 meetings to-date in 2022. PWSA's outreach team has hosted and attended virtual construction outreach meetings since 2020 to ensure the safety of staff and community members. Going forward, it is anticipated that many meetings will return to in-person attendance.

7.4 Industry Relations Outreach

Throughout 2022, PWSA industry relations focused on enhancing the relationship with developer and contractor customers through increased outreach and technological improvements. PWSA Public Affairs established a point of contact for any development questions or commercial customer issues. Potential applicants now have the flexibility to select an available pre-development meeting time slot that fits their schedule through an improved scheduling process. At this meeting, the property owner, their consultants, and contractors meet with PWSA staff to ensure that the project complies with water and sewer regulations. To provide an equal level of service to each customer, the information provided at meetings has been standardized while maintaining the flexibility required for each unique project. We have held 107 pre-development meetings in 2021 and 105 to date in 2022.



As a companion document to pre-development meetings, the Developer's Manual aims to simplify the development process for our customers and staff. The Developer's Manual continues to be updated annually to align with recent improvements and changes to processes impacting our customers. We hold an open Developer's Roundtable Event each spring with developer's, owners, and consultants to discuss changes to the manual and receive feedback on proposed revisions.

In 2022, PWSA introduced a new online permitting portal where customers can submit permit applications and make credit card payments directly to us. The tool offers new resources such as automated email notifications, chat discussions, digital permits, and 24/7 access to an applicant's user dashboard. The permit applications available include dye testing, hydrant flow tests, hydrant meters, tap terminations, residential tap permits, development permits, and DOMI Utility Verification letters. The cross-departmental team from customer service, engineering, operations, and public affairs have modernized the customer experience through increased staffing, standardized regulations, simplified applications, updated permit checklists, and open lines of communication.

PWSA also ramped up efforts to reach industry partners including contractors, third party engineers, plumbers, and non-profits. We attended events to promote our upcoming work contracts to organizations such as the Engineering Society of Western Pennsylvania, Southwestern Pennsylvania Engineering Outreach, Society of Military Engineers, Government Agency Procurement Office, MWDBE

Governmental Committee, Building Owners and Manager Association, and more. PWSA also attended open houses, office openings, and industry award ceremonies to meet and network with new talent and potential partners. A PWSA Public Affairs team member was also selected to serve as a board member for the ACE Mentor Program of America Western PA affiliate. The program promotes careers in architecture, construction, and engineering to high school students and is supported by the largest industry partners in Western Pennsylvania.

Section 1 – Introduction and Background

1.1 Introduction

This Lead Service Line Replacement (LSLR) Program Plan (Plan) presents the Community Lead Response approach the Pittsburgh Water and Sewer Authority (d/b/a Pittsburgh Water) has been taking to replacing Lead Service Lines (LSLs) in the water system since work began in 2017. The plan has been prepared in accordance with the requirements of Title 52 of the Pennsylvania Code and specifically Chapter 65.56 – LSLR Plan Requirements.[1] Specifically, this Plan addresses the following elements as required by the Pennsylvania Public Utility Commission's (PUC) regulations:

- Service line inventory (52 Pa. Code § 65.56(a))
- Planning and replacements (52 Pa. Code § 65.56(b))
- Communication, outreach and education (52 Pa. Code § 65.56(c))

This Plan has also been prepared in accordance with the requirements of the United States Environmental Protection Agency's (EPA) Lead and Copper Rule Revisions (LCRR), which were enacted in December 2021 with a compliance date of October 16, 2024[2][3]

1.2 Background

Pittsburgh Water formed its LSLR Program to address the requirements of a Consent Order and Agreement (COA) with the Pennsylvania (PA) Department of Environmental Protection (DEP) as it related to lead action level exceedances during the June 2016 and December 31, 2016 rounds of compliance sampling. Because of these exceedances, per the requirements of the PA Code, Pittsburgh Water was required to replace 7 percent of their LSLs per year until compliance with the Lead & Copper Rule Action Limit for two consecutive 6-month monitoring periods was met and maintained.

Pittsburgh Water owns residential water service lines less than 1-inch in diameter from the water main to the curb stop, while the property owner owns the line from the curb stop to the water meter. Under the PA Municipality Authorities Act,[3] Pittsburgh Water was prohibited from spending public funds on private property, so the initial approach to LSLR by Pittsburgh Water was to replace only the public portion of the service line and offer to replace the private portion at the property owner's expense.

In early 2017 Pittsburgh Water issued three construction contracts to replace the public portions of lead service lines. As part of the construction process, Pittsburgh Water asked the property owners to collect a post-construction water sample. Some initial results of this sampling indicated lead levels in the hundreds to over 1,000 parts per billion, underscoring the known hazards of partial lead line replacements.

---

1 52 Pa. Code § 65.56.

2 40 C.F.R. § 141.80.

After receipt of the initial results, Pittsburgh Water stopped the 2017 LSLR program and petitioned the PA legislature to revise the Municipality Authorities Act to allow Pittsburgh Water to do full-service line replacements within the water system using public funds. This legislation was enacted in late 2017. Pittsburgh Water restarted their 2017 LSLR Program in early 2018 with the existing three construction contracts and awarded five additional construction contracts for full lead line replacements in 2018.

LSLR work has continued since 2018 as described in this document, with a Pittsburgh Water goal of replacing all residential lead service lines, initially by 2027. EPA's Lead and Copper Rule Improvements (LCRI) currently mandate that all lead service lines be replaced by December 31, 2037.[4] Pittsburgh Water will replace all remaining lead service lines by December 31, 2037.

1.3 The Pennsylvania Public Utility Commission and Community Lead Response Advisory Committee

As a result of the passage of Act 65 of 2017, Pittsburgh Water came under PUC jurisdiction in April 2018.[5] As of that time, Pittsburgh Water's rate and service are now regulated by the PUC. The Authority's existing LSLR program has been reviewed and approved by the PUC through its recent rate proceedings, Long-Term Infrastructure Improvement Plan (LTIIP), and Stage 1 Compliance Plan proceeding.[6] Through these proceedings, Pittsburgh Water has formed its Community Lead Response Advisory Committee (CLRAC), which is a group of stakeholders that meet regularly to help Pittsburgh Water develop and successfully implement its LSLR program.

P-2018-3005037 and P-2018-3005039.

Section 2 - Service Line Inventory Overview

2.1 Introduction

Pittsburgh Water started developing a service line inventory as a result of the lead action level exceedance in 2016. The inventory efforts have evolved over the past 8 years and continue to evolve as regulations, guidance, and technology changes.

Pittsburgh Water first published the results of the service line inventory status on a public facing website in 2018 and has since updated and maintained that information. The public webmap is updated monthly with any new information developed as a result of our LSLR programs, inventory efforts or other water system maintenance that identifies service line materials.[7]

This section of Pittsburgh Water's LSLR Plan meets the applicable requirements of Section 65.56(a). The discussion below describes Pittsburgh Water's past and current efforts to develop a service line inventory for its service territory. The current service line inventory complies with the EPA regulations at 40 CFR 141.1-143.20, both in terms of substance and in timing and direction.[8] The assumptions in Pittsburgh Water's service line inventory are also reflected in the discussion below.[9] Pittsburgh Water will provide annual updates to its service line inventory as part of its annual LSLR program report.[10]

If Pittsburgh Water were to acquire a water distribution system in the future, it would update its service line inventory in accordance with 52 Pa. Code § 65.56(a)(2) at the time of completing the acquisition. Moreover, based upon the results of the updated inventory, Pittsburgh Water may seek Commission approval to revise its LSLR Plan to increase the annual cap on LSLRs if necessary.

2.2 Inventory Development

Pittsburgh Water completed a multi-year project in 2022 to prepare and update an inventory of service line materials. Started in response to a lead action level exceedance in the drinking water system in 2016, the inventory project evolved as the work continued. The inventory project initially focused on residential public side service lines, as these are the portion owned by Pittsburgh Water (all service lines, in their entirety, were private until the early 1980's when the utility accepted ownership for the portion of the service line from water main to curb stop for residential customers) and expanded to include residential and non-residential public and private side service lines.

The service line inventory was required by Paragraph 3.c.iii and iv of the November 17, 2017 COA between Pittsburgh Water and the PADEP, which reads as follows:

> iii. On or before December 31, 2020, Pittsburgh Water shall provide a supplemental materials evaluation to the Department for all residential structures (single family and multifamily) connected to the system for which Pittsburgh Water has not been able to confirm the

absence of lead service lines, based on the sources of information listed in 25 Pa. Code §§ 109.1103(g)(1)(ii) and (iii), the results of Pittsburgh Water's inspection of service lines (including curb box inspections, if technically feasible, and other field studies, if technically feasible), or both. Pittsburgh Water shall also identify the ownership of all portions of each line.

iv. On or before December 31, 2022, Pittsburgh Water shall provide a supplemental materials evaluation to the Department for all structures connected to the system, based on the sources of information listed in 25 Pa. Code § 109.1103(g)(1)(ii) and (iii) and any updated information Pittsburgh Water has developed from other sources.

2.3 2020 and 2022 Inventory Approach and Submittals

As the inventory project proceeded, Pittsburgh Water developed a better understanding of the information, methods and issues related to completing this important effort. Like many large water utilities across Pennsylvania and the United States, service line installation data was not collected and/or maintained throughout the decades that the water system operated.

While the COA anticipated that the Curb Box Inspections (CBIs) would be the primary field study technique used to complete the inventory, after the 2018 CBI program was completed, Pittsburgh Water determined that this method alone would not complete the inventory with the necessary information at the accuracy needed for service line material determinations. In a letter to PADEP dated July 31, 2019, Pittsburgh Water proposed revisions to the inventory approach, which PADEP approved in a letter dated June 26, 2020. Activities conducted and assumptions made to complete the inventory are described as follows – some of the activities produced information specific to either the public or private side, while others provided information for both sides of the service line.

2.3.1 *Historical Records – Public and Private Side*

Historically, the water system was operated by the City of Pittsburgh (City), and the City did not own any portion of the water service lines. At that time the City was only responsible for tapping the water main and recording the materials used (the public side record) in a Drill Sheet/Record. A Service Inspection Record was also prepared (but not at every location where a Drill Record exists) related to the portion of the service line between the curb stop and the service location (the private side record). Since the City did not own the service lines, however, these records were not always updated as maintenance was conducted over the years. The City (and ultimately Pittsburgh Water) took responsibility for the portion of residential service lines from the main to the curb stop in 1980 (the public side), while the remainder of the service line (the private side) as well as the entirety of the non-residential service lines continue to be owned by the property owner.

A January 2018 Pittsburgh Water inventory submittal included information extracted from the historical Drill Records, which included almost 130,000 paper service record folders (with 1 to 10 pages in each) and about 3,000 microfiche records. In 2017 all the paper records were scanned, a database was created with the results, and the original inventory results were prepared and presented to PADEP. Later in 2018

the results of this initial inventory were published on a searchable web map on Pittsburgh Water's website.

2.3.2 Machine Learning Predictive Modeling – Public and Private Side

Pittsburgh Water engaged the University of Pittsburgh (Pitt) to prepare a machine-learning predictive model to assist in determining where lead service lines exist across the Pittsburgh Water water service area. The objective of the model was to assist in the inventory efforts and to be a tool related to prioritizing areas for future LSLR programs. After completion of the model, Pitt recommended that results not be used for inventory purposes since too few predicted probabilities were precise enough for this purpose.

2.3.3 Curb Box Inspections – Public and Private Side

Knowing that many of the historical Drill Records may not be accurate due to undocumented maintenance conducted over the decades since they were installed, in 2017 Pittsburgh Water piloted a CBI Program, completing a CBI at about 5,200 locations. With the CBI, service line material is determined by locating and cleaning the curb box and inserting a small camera down the box to determine material type. The camera is typically inserted the full depth of the curb box so that the curb stop and connecting service lines (public side and private side) are visible. A lead line is identified as having an indicative bulb-type "wipe joint" - this wipe joint is the method in which the lead line was attached to the valve. Non-lead lines are typically identified by the fittings observed in the curb box.

After the 2017 pilot program, the intent (as described in the COA) was to conduct a CBI at all residential service locations that did not have a non-lead historical record for the public side (about 45,000 locations) and use the results to prepare the supplemental material evaluation as described in the COA. In 2018 the CBI program was implemented full scale, with about 15,000 locations inspected (with the intent to do another 15,000 per year for 2019 and 2020).

Where the CBI indicates lead, the result was demonstrated to be extremely accurate based on confirmation when the location is excavated, and the actual service line material is verified. In instances where a non-lead CBI result is identified, Pittsburgh Water could not determine with certainty that the entire service line is not lead. This is because in some instances the curb stop and a small portion of the service line necessary to complete the reconnection to the existing service line (called a tail piece) may have been replaced, leaving the balance of the lead line, so the CBI inspection method cannot confirm if other portions of the service line may still be lead material.

The CBI itself may also not be successful for the following reasons:

- Inability to locate curb box
- Curb box damaged or misaligned such that equipment cannot access the curb stop and,
- Line degraded or photos not clear and cannot determine material type

Results from the 2018 CBI program indicate that there is no usable data for about 75 percent of the locations inspected, either because the curb box could not be found, it was not accessible due to

concrete over the top or other concerns, or the photo was not clear enough to identify the service line material. Of the remaining 25 percent, verification indicates that service lines identified as lead can be reasonably relied upon, whereas those identified as non-lead are not reliable (for example, more than one third of service lines excavated for a LSLR program with a CBI result of non-lead were verified to be lead). As such, Pittsburgh Water decided to suspend the planned CBI work in 2019 and reassess locations where CBI information could be most valuable to the inventory efforts going forward.

A 2020 CBI program was completed between May and October 2020, when an additional 4,635 locations were inspected (of which 484 could not be located or were not accessible). The 2020 program focused on locations where the Pitt model predicted lead but the Pittsburgh Water historical Drill Record was non-lead, or locations where the Pitt model predicted non-lead and no historical Drill Record exists.

2.3.4 Verification Excavations/LSLR – Public and Private Side

Pittsburgh Water's first LSLR program was developed in 2017. Most of the LSLR work conducted since then has consisted of residential, neighborhood-based programs, along with water main replacements, emergency replacements by operations, customer-initiated replacements, and others. In planning the work areas, Pittsburgh Water identified residential service lines with either a lead historical Drill Record, or no Drill Record. The LSLR program then planned to excavate the curb stop at all these locations within the work area (called a verification). Pittsburgh Water's contractors are required to excavate a minimum of 24-inches on either side of the curb stop to ensure any curb stop replacements with a tail piece are identified. If lead is found on the public side it is replaced, and any private lead or Galvanized Requiring Replacement (GRR) service lines are replaced if the public side is replaced, and the property owner agrees to replacement. This policy was revised in 2020 and all lead identified during the verification (public or private) is replaced (with property owner consent for private LSLs).

As part of the Small Diameter Water Main Replacement (SDWMR) projects, all public-side service lines are replaced, therefore the verification excavation occurs at all service line locations regardless of customer type or historic record.

For all Pittsburgh Water LSLR work since June 2018, Pittsburgh Water's Construction Inspectors use an ArcGIS Collector, or more recently, Field Maps Application (App) in the field to record the material types on either side of the excavated curb stop and take a photo of the excavation. This information is used to update the service line inventory.

For locations where Pittsburgh Water Operations staff replace a service line, a similar application was created within the Sprypoint work order system used by Pittsburgh Water to record material types for both the public and private side service lines (both pre- and post-replacement). This information is used to update the service line inventory.

2.3.5 Records Update – Mostly Public Side – Limited Private Side

While the initial inventory efforts focused on historical Drill Records, Pittsburgh Water undertook a larger effort to update its Geographical Information System (GIS) with other sources of service line material information uncovered through a construction document review being instituted at Pittsburgh

Water. These historical records consist mostly of water main replacement projects conducted over the past 50 years, developer submittals, and county build-date data. Each record is reviewed to confirm that enough information is present to indicate a new service line was installed in its entirety (water main replacement projects earlier than the 1970s typically did not replace the entire public side from the main to the curb stop), and the inventory updated.

2.3.6 Meter Replacements – Private Side Only

In November 2018, Pittsburgh Water commenced a project to replace about 50,000 residential water service meters (out of a total of about 71,000 residential service locations). Presently, about one half of these meters have been replaced, with the remaining to be replaced at a rate of about 8,000 per year starting in 2024.

As part of this work, a tablet application was developed within the Sprypoint work order system to record data. The Sprypoint meter replacement application requires the Pittsburgh Water plumber replacing the meter to identify the service line material at the meter, as well as the household plumbing material immediately adjacent to the meter. A photograph of the meter and connecting piping is taken for record, and the information is used to update the private side service line inventory.

2.3.7 *ACHD Inspection Records – Private Side Only*

In 2018, Allegheny County Health Department (ACHD) instituted a moratorium on repairs to private side lead service lines, requiring those service lines to be replaced instead of repaired. Around this same time, they implemented a tablet application used by their plumbing inspectors to prepare inspection reports associated with their work. Pittsburgh Water worked with ACHD to get automated e-mails containing any plumbing inspection report associated with a private service line. This information is used to update the private side service line inventory.

2.4 LCRR and PADEP Inventory Guidance

The EPA published the LCRR in December 2021, which focuses on addressing lead contamination in drinking water. One of the requirements set forth in the LCRR is to prepare and maintain an inventory of service line materials that is to be submitted to the PADEP by October 16, 2024.[11] In preparation for this deadline, the PADEP has provided a Service Line Inventory Training Course Workbook[12] that provides guidance on accepted methods for classifying a service line as non-lead.

As part of the inventory, one of the requirements is to identify all service lines regardless of ownership status. For each jointly owned service line, the materials need to be identified for both the public and private portions of the service line. Each service line, or each portion of joint service lines, must be categorized as either Lead, GRR, Non-Lead, or Lead Status Unknown. Systems with unknown service line materials are treated as lead lines until either they are determined to be non-lead, or they are replaced.

---

11 *See* 40 C.F.R. §§ 141.80, 141.84(a).

12 *Available at* https://www.dep.pa.gov/Business/Water/BureauSafeDrinkingWater/DrinkingWatermgmt/Regulations/Pages/Lead-and-Copper-Rule.aspx.

After the initial submission, the inventory will need to be updated at least annually as materials are identified and/or lead service lines are replaced, until no lead service lines are left in the system.

The PADEP's Inventory Guidance requires that there is "sufficient evidence" in order to classify a service line as non-lead using one of three options to classify the service lines as non-lead: the "stand alone" records method, a combination of two (or more) other methods, or a "stand-alone" field method. Each of these three options is addressed below.

2.4.1 "Stand-Alone" Records Method Option

A record indicating the installation or replacement of a service line with a date after January 6, 1991, which is the effective date of the PA Lead Ban, is sufficient evidence to classify the service line as non-lead.

2.4.2 Combination of Two (or more) Other Methods

If the system records predate the PA Lead Ban, two other investigation techniques must be used in order to classify the service line as non-lead. These techniques include records review, modeling/statistical analysis, or field verification. Field verification can consist of a visual inspection at an existing access point, such as where the service line enters the basement at the meter, or a mechanical excavation to expose the service line in the ground.

For example, a private-side historical record from 1968 indicating that the service line is copper would not be enough evidence to classify the service line as non-lead, so a second verification method is expected. Having a meter inspection that states the service line entering the building is copper would then be sufficient evidence to classify the service line as non-lead and the inventory would be completed for the private portion of the service line at that location.

2.4.3 "Stand-Alone" Field Method Option

If there is no historical record for a location, then a mechanical excavation in at least three locations over the length of the service line would be required to classify the material. One excavation should be somewhere between the curb stop to the building, a minimum of 18-inches from the curb stop. The second excavation should be between the curb stop and the water main, a minimum of 18-inches from the curb stop. The third excavation can either be inside the home where the service line enters the building, or it should be at a second excavation point in the longer section of the service line that is at least halfway between the first point and the building or water main.

2.5 October 2024 Inventory Submittal

In accordance with the LCRR, Pittsburgh Water submitted an updated service line inventory to PADEP on October 16, 2024.[13] The following efforts were undertaken by Pittsburgh Water to update the prior service line inventory to meet the PADEP requirements.

[13] *See* 40 C.F.R. § 141.80.

2.5.1 Machine Learning Predictive Model

Pittsburgh Water contracted with Blue Conduit to develop a predictive model that analyzes and evaluates available data and predicts the materials of water service lines in a manner that complies with LCRR and PADEP requirements. The service line material inventory that Blue Conduit produced displayed the presence of known materials and predicted likely locations of lead, GRR, and the remaining service line materials used in the Pittsburgh Water's water service area. A probability was calculated of having a lead service line at locations with unknown materials on the public side of the service line, the private side, and the joint probability through an iterative process. As Pittsburgh Water verified service lines through regular operations during the model development, the data was integrated to update the predictive model and refine the predictions.

Blue Conduit provided guidance to Pittsburgh Water to evaluate the model results and made recommendations for classifying unknown service line materials. They also prepared a comprehensive statistical analysis report that was provided to PADEP. For many of the service lines, Pittsburgh Water already had one verification method, and only needed the second method to classify the service as non-lead per the inventory requirements. The model results served as the second verification method, which ultimately reduced the number of mechanical excavations required for inventory determination.

2.5.2 Internal Service Line Inspection

Pittsburgh Water is using three methods to determine the internal service line materials: Customer-Reported, Pittsburgh Water Operations and Pittsburgh Water Inspections. Each is discussed as follows:

Customer Reported

In late 2023 Pittsburgh Water sent post cards or an e-mail to about 20,000 locations within Pittsburgh Water's water service area asking customers to self-report internal service line materials where that data point did not exist and it was needed to meet the PADEP inventory requirements. The materials provided to the customer included directions on how to determine the service line materials, as well as an application (Survey123) to use to take a photo and report the results.

Pittsburgh Water Operations

Upon completion of the inventory, Pittsburgh Water identified about 6,500 locations where the internal material was the last bit of information needed to complete the inventory. Pittsburgh Water Operations crews are evaluating these locations for planned water meter replacements, and prioritizing these replacements to keep ahead of neighborhoods where LSLR is planned. Other locations where a meter replacement is not planned will be visited while the Pittsburgh Water plumbers are in the same neighborhood. The goal is to visit all these locations by early 2026. During the meter replacements, Pittsburgh Water plumbers record the service line materials in their work order system. This data will be used to update the internal service line material category in the inventory.

2.5.3 Continued Service Line Verifications

As part of ongoing operations and planned construction projects, Pittsburgh Water continues to update the service line inventory. As described herein, Pittsburgh Water uses a variety of methods to capture data related to service line materials when they are exposed or observed during construction. The observations can be during a project where the verification is planned, or another infrastructure project (such as a sewer repair) where the service line is exposed and can be identified. This data is reviewed and used to update the service line inventory on Pittsburgh Water's GIS system on a monthly basis at a minimum.

2.5.4 Service Line Replacements

As service lines are replaced by Pittsburgh Water, Pittsburgh Water contractors and private plumbers, Pittsburgh Water will use data recorded as part of the work to update the GIS on a monthly basis at a minimum. The data collected includes Pittsburgh Water Operations work orders, ArcGIS Field Maps Data for Pittsburgh Water Construction Contracts and ACHD Inspection Reports for work completed on private service lines by licensed plumbers.

Prior to the October 16, 2024 deadline, Pittsburgh Water compiled all service line inventory data and provided the information to the PADEP using the template or Excel spreadsheet required for their needs.

2.6 Current Inventory

Based on the methods and data sources described herein, an updated service line material count was prepared with the inventory submitted to PADEP in October 2024. This estimate will be updated annually when the updated inventory is submitted to PADEP each year.

Table 1: Service Line Material Inventory (as of October 2024)

Material	Public Side	Private Side
Non-Lead	54,390	48,694
Lead	9,509	16,965
Galvanized Iron	2	5,391
Unknown	16,941	9,792
Total	80,842	80,842

While the above numbers are based on the inventory with the described information sources, Pittsburgh Water has excavated service line materials at over 20,000 locations in the water system and found the historical records to be very inaccurate. Using statistics based on records verses actual materials, a statistical analysis completed during the 2020 Inventory Submittal estimated how many of the lead and unknown records would be found to be lead. Based on this analysis, and the work completed since that date, Pittsburgh Water estimates that there are around 4,500 public and 7,900 private lead service lines remaining in Pittsburgh Water's water system. The service line material inventory provided in Appendix A is also available in an electronic spreadsheet format upon request.

Since the service line material inventory was submitted to PA DEP in October 2024, Pittsburgh Water took the following actions:

Customer Notification

Pittsburgh Water notified all customers (persons served by the water system at the service connection) with a lead, GRR, or unknown public or private service line within 30 days of the completion of the lead service line inventory, and annually thereafter. The notice will also be provided to new customers at the time of service initiation.

The notice included a statement that the service line is lead, GRR or unknown material but may be lead, explained the health effects of lead (meeting the requirements of 40 CFR 141.85(a)(1)(ii)), steps that can be taken to reduce exposure to lead in drinking water, described Pittsburgh Water programs to replace LSLs, and included a statement that Pittsburgh Water is required to replace any public LSL when the property owner provides notification that they are replacing a private service line. The statement was sent via U.S. Mail.

Inventory Updates

Pittsburgh Water updates the inventory presented in our public facing web map on a monthly basis using data collected since the last monthly update. In addition, per the LCRR, an updated inventory will be submitted to the PA DEP annually on the anniversary date of the initial submittal in 2024.[14]

[14] *See* 40 C.F.R. § 141.90(e).

Section 3 – Program Plan

3.1 Introduction

This section of Pittsburgh Water's Plan addresses Pittsburgh Water's compliance with Section 65.56(b) of the PUC's regulations regarding planning and replacements.[15]

Since the original 2016 lead action level exceedance, Pittsburgh Water has had several programs to replace LSLs. Note that Pittsburgh Water treats all private galvanized iron service lines the same as lead and will refer to these (defined as GRR) as lead throughout this document. Each current or future program is described in more detail later in this document: a summary of the programs completed to-date is as follows.

Program	Implementation Period	Description
Emergency/Public LSLR	2016 to current	Replacement of a public service line by Pittsburgh Water's Operations crews (typically) on an emergency basis due to a leak or water main break. This also include public LSLR during a customer-initiated private service line replacement.
Urgent LSLR	Late 2018 to current	Replacement of a corresponding private LSL where an Emergency LSLR was conducted.
Neighborhood LSLR	2017 to current	Neighborhood-based LSLR program that replace public and private LSLs.
CEP Program	2018 – 2021	Community Environmental Project (CEP) – A provision of the COA that allowed Pittsburgh Water to develop a low-income program to assist property owners with LSLR – administered by Dollar Energy Fund.
SDWMR Program	2020 – current	Small Diameter Water Main Replacement Program – Replaces water mains up to 16-inches in diameter including all public side service lines and private LSLs.
Line Replacement Reimbursement Program	2020 – current	Line Replacement Reimbursement Program – Income-based reimbursement program that allows a water customer that is not part of a Pittsburgh Water Construction Program to replace a private LSL and apply for reimbursement for some or all of the costs depending on the customer's income level. Pittsburgh Water Operations will replace the public side at the same time if it is determined to be lead.
2022 Priority LSLR	2022	Replaced LSLs at day care facilities and locations with elevated lead in drinking water after the use of orthophosphate started for corrosion control treatment.

Since the start of the LSLR work in 2016 until March 31, 2025, 12,581 public and 9,249 private LSLs have been replaced within Pittsburgh Water's water service area. In addition, during this same time period

[15] 52 Pa. Code § 65.56(b).

over 16,000 public and over 17,250 private service lines have been verified to not be lead during LSLR activities.

3.2 Prioritization Plan

3.2.1 *Introduction*

This section of the Plan addresses Pittsburgh Water's prioritization criteria for LSLRs as required by Section 65.56(b)(3), as well as processes to address emergency repairs and replacements which reveal LSLs per Section 65.56(b)(4).

Pittsburgh Water presently conducts LSLRs in a variety of situations and scenarios, although the work is conducted primarily through Neighborhood LSLR contracts. Other mechanisms and contracts used to replace LSLs include:

- Water Main Replacements – When replacing water mains Pittsburgh Water will replace all public side service lines and any private LSLs encountered during the work.
- Emergency Replacements – Typically conducted by Pittsburgh Water Operations Department on public side service lines.
- Urgent Replacements – Primarily private side LSLR conducted at Emergency Replacement locations.
- Day Care Facilities – Pittsburgh Water embarked on a project in 2022 to replace lead service lines at known day care facilities.
- Exceedance locations – As part of the same 2022 contract that focused on day care facilities, Pittsburgh Water replaced LSLs at any location that had a lead level of 5 parts per billion (ppb) or greater since the use of orthophosphate started. Presently, as budget allows, Pittsburgh Water will replace LSLs at locations where water test results are 15 ppb or greater.

For Neighborhood LSLR projects Pittsburgh Water uses a prioritization model developed in-house with the assistance of the CLRAC that determines the order in which the projects will be completed. For Water Main Replacement projects this same model is used as one of the criteria in determining the work locations (others include frequency of breaks, fire flow and size of the main).

3.2.2 Pittsburgh Water Prioritization Model Inputs

Pittsburgh Water's prioritization model is used and updated at the start of each LSLR program using the latest data available from the sources described below. The model uses a combination of health-based and demographic factors to rank each of the neighborhoods (on a census tract basis) in Pittsburgh Water's water service area. Each of these factors is described below.

Population Sensitive to Elevated Lead Level

The first factor considers the population most sensitive to elevated lead levels in drinking water. This includes children under 6 years of age and women of childbearing age. The data is obtained from the US Census. Overall weighting of this factor is 40%.

Blood Lead Levels

ACHD collects blood lead levels from all children under 2 years of age. Pittsburgh Water obtains this data from ACHD and evaluates it on the same census tract basis as the population data. Overall weighting of this factor is 40%.

Income Levels

The third factor is the income level of the neighborhood. The data is also obtained from the US Census. Overall weighting of this factor is 10%.

Number of Lead and Unknown Service Lines

The fourth and final factor is the number of lead and unknown service lines in the neighborhood, including both public and private side service line materials. This data is obtained from the Pittsburgh Water service line inventory. Overall weighting of this factor is 10%.

3.2.3 Model Output and Neighborhood Ranking

The above-described data is used to evaluate all neighborhoods in Pittsburgh Water's water service area each time the model is run. Neighborhoods are ranked from 1 to 5, with 5 being the highest priority areas. Once the model output is received, the neighborhoods are further evaluated by determining which are within an Environmental Justice area as determined by the PADEP's September 2023 Environmental Justice Policy.[16]

Once the neighborhoods within an Environmental Justice area are identified, the Priority 3-5 neighborhoods are then ranked in order by the mean income level of the neighborhood, from lowest to highest. The project budget is evaluated to determine how many neighborhoods can be completed with the available funding, and the appropriate neighborhoods are selected.

Once the neighborhood list is established, other considerations are taken into account, including locations where a water main replacement project is planned as well as overall number of replacements within the neighborhood to determine if disruption levels are appropriate in one or multiple replacement years.

3.3 Plan for Private Side

This section of Pittsburgh Water's Plan discusses Pittsburgh Water's processes and procedures based on acceptance of a LSLR per Section 65.56(b)(5), including the process for working with the customer or property owner to obtain consent for a LSLR, coordination throughout the LSLR process, and LSLR completion. It also addresses industry-accepted practices that Pittsburgh Water uses to replace LSLs (Section 65.56(b)(8)) and the procedure when the customer or property owner refuses the LSLR (Section 65.56(b)(10)).

[16] *Available* at https://www.dep.pa.gov/PublicParticipation/OfficeofEnvironmentalJustice/Pages/Policy-Revision.aspx.

3.3.1 Private Side Replacement Evolution

Pittsburgh Water was initially restricted to only being able to replace public service lines, creating a partial service line replacement wherever the private service line was also lead. Once the PA Municipal Authorities Act was revised in late 2017, the Pittsburgh Water Board of Directors approved a policy that stated that whenever Pittsburgh Water replaced a public service line it would offer to replace a corresponding private lead service line at no cost to the customer. These policies and procedures have since evolved as follows:

Date	Replacement Procedure
2017	Public LSLR Only
January 2018	First version of official Pittsburgh Water Policy that offers to replace private LSL when replacing a public service line. If the offer was refused or the property owner unresponsive, continue with public-only LSLR. If only the private side was lead, no replacement would occur. Offer to replace private side LSLs where a public was replaced after 2016 to eliminate any partial service lines already conducted since 2016.
2019 LSLR Program	Same as 2018 Policy other than if the property owner who refused the private side replacement did not live at the property or the property owner was nonresponsive to the offer, no work would occur at the property (i.e., no public or private LSLR) – other than water main replacement projects where all public service lines were replaced.
After 2019 LSLR Program	Same as 2019 LSLR Program other than private-only LSLs were replaced when encountered in a LSLR Program area.
April 2021	If a property owner refused replacement of a private LSL or was nonresponsive to the offer to replace, water service is terminated after proper notification – no partial service line replacements allowed.

3.3.2 Access Agreement

While Pittsburgh Water policy provides the ability to replace private service lines, it does not give Pittsburgh Water the right to work on private property without approval of the property owner. For this reason, each location within a planned work area is mailed an Informational Packet a minimum of 45 days prior to a LSLR project starting in a work area. The Informational Packet includes a letter from the Pittsburgh Water Chief Executive Officer (CEO), an access agreement that needs to be signed and returned by the property owner, and several information sheets describing the program. The document includes information about potential construction impacts and the limits of restoration that Pittsburgh Water will perform.

Section 5 of this LSLR Plan describes the Access Agreement outreach and termination process communication in more detail.

3.4 Logistics and Procedures

3.4.1 Data Management

ArcGIS Field Maps

Pittsburgh Water uses an ArcGIS Field Maps Application database to capture many details of the LSLR process, from GIS-generated location details, details concerning the agreements and pre-construction coordination meetings, to specific details of the construction process captured by the Construction Inspector. During the construction process, the Construction Inspector documents the following critical information related to the LSLR process:

Date of Material Verification	Private Replaced Material
Public Side Material	Private Replaced Diameter
Private Side Material	Private Replacement Method
Public Replaced Material	Lead Status (left in the ground or removed)
Public Replaced Diameter	Private Side Completion Date
Public Replacement Method	Water Pitcher Delivery Location
Lead Status (left in the ground or removed)	Number of Pitchers
Public Side Completion Date	Number of Filters

Other data is collected related to components of the work that is critical to the former or future inventory or compliance information. Finally, a series of photographs of the work are taken by the Construction Inspector using the app to document the work. The verification and replacement data then gets imported into the internal Pittsburgh Water GIS application.

Leadline Software

As the LSLR program kicked off in 2018, Pittsburgh Water developed a database management program called Leadline Software. A local software consultant, Koryak, developed the software and continues to maintain and upgrade the software as needed. Leadline aggregates data from many different sources including the Pittsburgh Water GIS, historical drill record databases, sampling results databases and others to have all the data together in one location.

Leadline is used to maintain the communication record with the customer. When Lead Help makes or receives a phone call, the customer location is brought up in Leadline, and the following is available during the phone conversation:

Pittsburgh Water Location ID	Work Order Number for locations in a work area
Customer Type	Service and Mailing address
Contact Information	Service Line Materials including all data collected from the inventory process described in Section 2
Replaced Materials (if applicable)	Past Complaints
Any lead sampling results collected since 2016	Appointments

In addition, call notes from each interaction are available for viewing in the software.

The Lead Help staff use Leadline to schedule coordination appointments and log complaints. Finally, Action Items are created by the software for items such as when follow up test kits are required, when termination notices need to be mailed and other time-sensitive items related to the LSLR program.

Leadline is also used as a database management tool for other LSLR related data used in reporting project status to Pittsburgh Water Management, PADEP, and others as needed. The software also reads the GIS data entered by the Field Liaisons and Construction Inspectors and automatically generates weekly quality assurance reports to ensure accuracy and completeness of data collected and techniques followed in the field, as well as data added by users in the office.

3.4.2 Construction Procedures

The first step to completing a lead service line replacement starts with locating and verifying the service line. The contractor performs a verification of the public and private side service line materials, typically at the curb stop. If excavation is made at the curb stop, at least 24-inches of the service lines on both sides of the curb stop must be exposed and wiped clean so that the material can be properly identified.

If the full 24-inches of the service line cannot be exposed at the curb stop, an additional excavation is made to expose the service line at an alternate location. For the public side, the service line must be exposed at an alternate location between the curb stop and the existing water main. For the private side, the second verification should be about halfway between the curb stop and the structure. In the event that lead or GRR is found on any section of the service line, a water pitcher and filter is provided to the customer at the time of the verification. Outside the typical 24-inch verification of the private service line, there are instances where an additional verification of the private portion of the service line is needed in order to complete the service line inventory at a given location. When this is the case, the contractor will schedule a time with the Property Owner to enter the building and identify the service line material entering the structure. If the material is unable to be identified inside the structure, the second verification will be an excavation halfway between the curb stop and structure, as mentioned above.

Starting with the 2024B Neighborhoods LSLR program (commencing Spring 2025), Pittsburgh Water is trialing a newer technology as part of our Neighborhood LSLR process to determine service line materials by removing the water meter and inserting a probe inside the service line. The system used Electrical Resistance Technology (ERT) to determine the service line materials and was approved by the PADEP for use in the summer of 2024. If this program is successful, it will allow verification without excavation for many of the location, saving time, money and disruption to the Pittsburgh Water customers, as many of the locations where excavations occur are found to not be lead. Pittsburgh Water estimates that excavation can be avoided at 40 to 60% of the remaining locations.

Upon completion of the verification, the customer is informed of the service line materials. If lead or GRR is found on the private side of the service line, an agreement that authorizes the private side of the service line to be replaced needs to be signed and returned by the Property Owner, and a pre-construction coordination meeting will be held with the Property Owner or Representative, the

Contractor, and a Pittsburgh Water representative. Once the signed agreement is returned and a coordination meeting is held, the private replacement can proceed. If lead is found on the public side of the service line only, an agreement and coordination meeting with the Property Owner/Representative is not required. Pittsburgh Water reserves the right, at its discretion, to refuse to replace a customer-side LSL where the conditions on the property may threaten the health or safety of Pittsburgh Water's employees or contractors.

When replacing either side of the service line, utilizing a trenchless method is the preferred approach for replacement to minimize impact to private property. The first trenchless method the contractor typically uses to replace the service line is by pulling the new service line right behind the old service line on the existing route. If the line is unable to be pulled, then the next trenchless replacement method typically used is moling, where a pneumatically driven machine forces its way through the soil along the desired path for the new pipe. Once the mole completes the path, the new service line pipe can be pulled through the long horizontal hole. Finally, although not used by Pittsburgh Water contractors to-date, another trenchless method used for replacing service lines is directional drilling. If none of the above trenchless methods can be performed, then contractor will open cut and replace the service line in the trench.

As described above, Pittsburgh Water collects data on the public and private side replacement method. Statistics for 2023B and 2024A LSLR projects at the time of this report show the following:

Replacement Method	Public Side	Private Side
Pulling	55%	57%
Moling	29%	39%
Open Cut	16%	4%

When the service line is pulled, the lead pipe is completely removed and properly disposed of by either recycling the material at an approved recycling facility or disposing it as hazardous waste.[17] Pittsburgh Water requires contractors to identify the location where they will recycle or dispose of lead pipe as part of the construction submittal process and collects waste disposal receipts from contractors to document the proper disposal. Any revenue associated with the recycling efforts of the contractors is returned to the contractor. Any lead removed by Pittsburgh Water Operations crews as part of emergency work is recycled, and revenue received from the scrap metal recycling is deposited in Pittsburgh Water's general fund with the revenue recorded under the "Miscellaneous Revenue" general ledger account.

When moling or directional drilling is used, the lead pipe is typically abandoned in place and the ends are sealed before backfilling. Open trench methods can include removal of the lead pipe if excavated in the same location, or abandonment in place if the new service line is relocated.

[17] *See* 52 Pa. Code § 65.56(b)(7) (regarding the entity's lead recycling and disposal efforts).

Pittsburgh Water collects data on the public and private side replacement method, and in late 2023 started collecting data on if the lead pipe remained in place or was removed. Statistics for the LSLR projects described above show the following:

Status of Lead Pipe	Public Side	Private Side
Lead Left in Ground	34%	42%
Lead Removed	66%	58%

The numbers above generally mimic the replacement method. Pulling the old service line out and the new one in behind it is the most efficient trenchless method employed by most Pittsburgh Water contractors and used in about 80% of public and private replacements. The divergence occurs if pulling is not effective.

For public side replacements, open cut is generally used if pulling is not effective, as moling requires other utilities in the path to be exposed before the mole can be deployed – in doing so the open cut is available for installation. For the private side, however, Pittsburgh Water strongly recommends that our contractors attempt a second trenchless method if the pulling is not effective, to limit disturbance to private property. As shown by the data above, moling is in most cases effective, allowing the work to proceed with little to no disturbance to private property, which both lowers the overall cost of the work and has been a key part in Pittsburgh Water's communication with our customers to gain acceptance of the work and increase the return rate of our access agreements. With this method, however, the lead pipe often cannot be removed.

During a public service line replacement, the contractor installs a new corporation stop in the water main, via wet tapping, a minimum of 18-inches away from the existing service line location. The curb stop and curb box is replaced during a public service line replacement or if both the public and private sides of the service line are replaced. For a private service line replacement, the contractor is required to have a licensed plumber on site when work is being conducted, as required by the ACHD Plumbing Code. The contractor will also install a thermal expansion tank, a backflow prevention assembly, and a pressure reducing valve whenever a private side service line is replaced, also per the ACHD Plumbing Code.

After the service line is reconnected, the water service is turned on at the shut corporation stop at the water main and the length of the entire length of the replaced service line is flushed in accordance with AWWA-810-17 standards, and the service line replacement is complete.

If the service line needs terminated for any reason, the contractor will disconnect the existing private-side service line from the curb stop. If the public side of the service line needs to be replaced, the contractor will do so as described above. A 12-inch copper tailpiece is connected to the private side of the new curb stop and the open end of the tailpiece is capped before the site is backfilled. The disconnected private side service line is abandoned in-place.

After the replacement is complete, Pittsburgh Water will restore roadways and public sidewalks, backfill any trenches excavated as part of the replacement process and will fill and seal any wall or floor penetrations in the private home. No other restoration will be conducted for the private side replacement. Pittsburgh Water will not replace any landscaping, interior finishes, paving, seeding, or walkways. All restoration costs shall be borne by the homeowner.

3.4.3 Coordination with Paving and Other On-going Utility Work

Representatives from Pittsburgh Water, Peoples Gas, and the City of Pittsburgh's Department of Mobility and Infrastructure (DOMI) have quarterly meetings to discuss current and future projects to identify areas of overlap. During this planning phase, Pittsburgh Water's GIS group maps out the current and planned projects for all Pittsburgh Water utilities (water, stormwater and sewer) prior to meeting in order to clearly determine where potential areas of overlap may occur.

This is helpful to sequence the corresponding utility's construction schedule so that work can proceed without delays. This also eliminates duplicate restoration work that would be required of overlapping areas, and it opens the possibility of entering into a cost-share agreement regarding street or sidewalk restoration where overlaps occur.

Projects might be delayed or moved up due to unforeseen circumstances, and so there are instances where overlapping work is not able to be identified prior to the start of construction. This can typically occur with smaller utilities and are not as common in Pittsburgh. When on-going work from other utilities is discovered during the construction sequence, meetings are set up as needed to discuss conflicts that might occur with the overlapping work areas and to determine restoration limits associated with the work.

Annually, DOMI notifies the utility companies in Pittsburgh of what streets are scheduled to be paved for the year. This notification is typically sent by April 1st. When Pittsburgh Water becomes aware of the planned paving work, we work to coordinate with DOMI to either hold off on paving until our work can be completed, or we will expedite our work in these paving areas when possible. Pittsburgh Water is proactive about having these conversations with other utilities and entities in order to complete the work as efficiently as possible.

3.4.4 Plumbing Permits and Inspections

Before a private side service line is replaced, the Contractor is responsible for obtaining an ACHD Plumbing Permit prior to starting any work. A licensed Plumber, in accordance with ACHD requirements, is required to be on site when a private service line replacement is occurring, and the internal plumbing improvements are completed by the licensed Plumber. Upon completion of the private service line replacement, the Contractor then coordinates with an ACHD Inspector to schedule and coordinate an in-home inspection. The ACHD Permit Number and Inspection Date are entered into the Lead ArcGIS Field Maps Application for tracking purposes, as all ACHD permits must be closed, and inspections must be completed before the LSLR project can be closed out.

3.4.5 Replacement Risk Mitigation Measures

Since the start of Pittsburgh Water formal LSLR program in 2018, Pittsburgh Water has conducted post-replacement activities to mitigate any potential short-term impacts of the construction work. These mitigation measures have recently been amended to comply with the PADEP's recent publication entitled "*Risk Mitigation Measures for Water Systems Conducting Lead Service Line Replacement.*"[18] The Post-Replacement Activities conducted by Pittsburgh Water include the steps below.

Lead Help Desk

As described in more detail in Section 5 of this document, Pittsburgh Water operates a Lead Help Desk as part of our Customer Service Department. The Lead Help Desk is a resource available to our customers for issues and questions related to all aspects of our lead mitigation programs, including LSLR. Related to Post-Replacement Measures, the Lead Help Desk is available to answer questions from customer regarding items like post-replacement household flushing, the proper use of pitchers and filters provided to customers and to report the results of any elevated post-construction lead levels ensuring the customers are aware of the continued mitigations measures they should take in the event of an elevated lead level in drinking water after construction. In addition, the Lead Help Desk can communicate with customers where English is not their first language using a translation service to assist in the communications.

Pre-Replacement Mitigation Measures

Customer Communication and Education

At several points in the LSLR process Pittsburgh Water provides the Property Owner and Resident (if different) with written communication detailing the LSLR process, the risks associated with the work and the actions that need to be taken after replacement to protect the drinking water quality of those consuming it. Once construction starts, a series of door hangers is used to communicate with the customer. Finally, part of Pittsburgh Water LSLR procedures include a meeting with the property owner where the LSLR is to occur prior to the work. These communications procedures are described in detail in Section 5.

Water Pitcher and Filter

As previously described, a verification excavation is typically the first step in the LSLR process. If either lead or GRR is identified during this verification or if Pittsburgh Water has been inside the residence and observed lead or GRR before the verification occurs, the customer is left a point-of-use filtering water pitcher. The filtering water pitcher meets NSF/ANSI 42 and 53 certifications for lead removal and provide for a minimum of 6-months of filtration capacity. The filtering water pitcher is provided to each unit in the building where the verification excavation took place, and it includes instructions on how to use the filter and cartridge(s). Specifications used by Pittsburgh Water for the filtering water pitcher are as follows:

[18] *Available at* https://www.dep.pa.gov/Business/Water/BureauSafeDrinkingWater/DrinkingWatermgmt/Regulations/Pages/Lead-and-Copper-Rule.aspx.

Furnish and deliver new 10-cup minimum Water Pitchers and corresponding filter cartridges NSF/ANSI 42 and 53 certified to remove lead to Pittsburgh Water's Warehouse located at 202 26th Street, Pittsburgh, PA 15222. A filtering pitcher and a six month supply of filters is considered a 'pitcher-filter kit'. The filter cartridges shall be capable of treating a minimum of 20 gallons per month, for a total 6-month treatment capacity of 120 gallons. The quantity of pitchers and filter cartridges for the deliveries will be specified by Pittsburgh Water, at varying time intervals throughout the duration of the project. Delivery must be within 10 business days after receipt of order.

Pittsburgh Water plumbers also leave a filtering water pitcher when replacing a water meter and observe lead or galvanized iron on either side of the meter.

Post-Construction Mitigation Measures

Customer Communication

Once the service line work is complete, the Construction Inspector posts the *Water Service Line Replacement Work Completed* door hanger described above, along with another copy of the *Flushing Instructions* door hanger if lead or GRR was replaced, at the residence. If the Property Owner is available, the CI will ask them to watch a Pittsburgh Water-produced video outlining the flushing procedures.

Post-Construction Sampling

Pittsburgh Water recently revised its Post-Construction sampling procedures. Previously a 1-liter first-draw sample bottle was left at the time of construction and customers were asked to collect a sample within 72-hours of the replacement for analysis of lead. Based on the requirements contained in the PADEP's "*Risk Mitigation Measures for Water Systems Conducting Lead Service Line Replacement,*" this process has been revised to mailing bottles to the customer three to six months after the completion of construction and providing 1-liter bottles for the collection of both first draw and 5th liter tap samples. The customer is instructed to collect the samples after a minimum of a 6-hour stagnation period. The test kit includes written instructions for collection of the samples, a link to a video that describes the sampling process, and a chain of custody where the customer and address information are pre-populated to reduce errors in the process.

Once the results are available from the laboratory, they are mailed to the customer within 30 days of Pittsburgh Water receiving the results. If the results exceed 15 ppb, the customer is informed as soon as practical after Pittsburgh Water knows of the result, but no later than 3 calendar days after Pittsburgh Water is aware of the results. The communication consists of the Lead Help Desk calling the customer to inform them of the results (results are also mailed to the customer), as well as measures they can take to reduce their exposure to lead in drinking water (including the continued use of the filtering water pitcher). The customer is provided with a new filtering water pitcher (with another 6-months of filtering capacity) and another sample kit is provided about 3 months after the initial post-construction sample kit was provided. If that test result exceeds 10 ppb, Pittsburgh Water will assist the property owner in determining why elevated lead levels remain.

If the result is 50 ppb or higher, in addition to the action taken in the preceding paragraph, Pittsburgh Water will offer to deliver a case of bottled water per day until a meter drop and flush is completed by Pittsburgh Water. The water will be retested about 2 weeks after the meter drop and flush to determine the effectiveness of the flushing procedure.

3.5 Plan to Replace Remaining Lead Service Lines

Pittsburgh Water has a goal to replace all remaining residential lead service lines in the system by the end of 2027. As efforts continue to refine the service line material inventory, and to understand where the remaining lead is located, that goal is being evaluated.

Notwithstanding Pittsburgh Water's goal for replacing residential lead services lines in its system by the end of 2027, Pittsburgh Water plans to replace all lead service lines, whether Pittsburgh Water-owned or customer-owned, within its water distribution system as required by the PUC's regulations at 52 Pa. Code § 65.53.

3.5.1 LSLR Programs

Pittsburgh Water will continue to use a variety of Programs to complete the LSLR work, with the primary programs being the Neighborhood LSLR Projects, the SDWMR Projects and Emergency/Urgent LSLR. Each is described below.

Neighborhood LSLR

As previously described, Pittsburgh Water conducted Neighborhood LSLR projects in 2017, 2018, 2019, 2022, 2023 and is planning for 2024. Since 2019, these projects have been funded by PENNVEST or by American Recovery Plan Act funds, and the magnitude of each has typically been dictated by the availability of this outside funding. This approach for the Neighborhood LSLR program will continue in the future.

In the Lead Infrastructure Plan prepared in 2020, Pittsburgh Water envisioned completing most of the remaining LSLR through the SDWMR Program, with the potential need for a Neighborhood LSLR project to finish the work in 2025 or 2026. With the availability of the funding described above, however, the efforts have shifted back to completing most of this work via a Neighborhood LSLR program to expedite the work.

Once a draft budget is established for a Neighborhood LSLR project, the Prioritization Model described above is updated with the latest data sources and neighborhoods are selected until the budget is reached. During Neighborhood LSLR work all residential locations within the identified work order area (the Prioritization Model is based on census tract areas, so the work order area and neighborhood boundaries do not always align) where the public *or* private service line material inventory is "lead," "GRR" or "Unknown" are identified.

When the draft locations within the work order area are identified, a field review is then completed. The field review evaluates all locations within the geographic work order boundary and completes the following:

- Identifies any proposed work location that is a currently a vacant lot for removal from the work;
- Identifies any proposed work location that is a structure condemned by the City of Pittsburgh or Borough of Millvale for removal from the work;
- Identifies any proposed work location that is not a residential structure of four units or less for removal from the work;
- Identifies any residential building that is not part of the inventory (and/or does not have a Pittsburgh Water - water account) for further review by the GIS team and potential inclusion in the work; and
- Identifies any non-residential customer account that has four units or less of residential occupancy for inclusion in the work.

Once the field review is complete, the final work locations within each work order area is finalized, the GIS data is merged with Pittsburgh Water customer data, and a mail merge list is created. The work order area is also established within the ArcGIS Field Maps application previously described. Actual design plans of the work are not developed, rather Contract Documents including technical specifications and project details are created and these, along with the location data in ArcGIS, are used for construction.

While this process is being completed, Pittsburgh Water enters into a number of contracts to allow the work to be completed. Most significant of these is a contract to provide Construction Management and Construction Inspection services, as well as the actual Construction Contract. These contracts are publicly bid as required by Pennsylvania law and any funding requirements are incorporated into the contracts. Any contract with a value of over $1,000,000 is approved by the Pittsburgh Water Board of Directors, while those of lesser value follow the Pittsburgh Water Delegation of Authority Policy for approval. Other agreements entered into include those for printing services, provision of Pitcher Filters and Lead Test Kits, Software Maintenance and consultants to supplement Pittsburgh Water staff as needed.

SDWMR Contracts

Pittsburgh Water has an aggressive program to replace small diameter (16-inches or less) water mains throughout the water distribution system. Since 2019/2020, Pittsburgh Water has completed annual SDWMR projects replacing between 6 and 15 miles of water main. The projects are described in Pittsburgh Water's Capital Improvement Plan (CIP) and typically a combination of PENNVEST and rate payer funding is used to complete the work.

Planning and prioritization for SDWMR projects is based on water main replacement prioritization as well as the Lead Prioritization Model. Water main replacement prioritization includes the following factors:

- Prioritization replacement of 4-inch water mains
- Water Mains that are undersized with respect to required fire-flow needs
- Water Mains with a history of breaks

Once the priority main segments are identified, Pittsburgh Water engineering staff refine the limits of each segment and pass the project areas to an engineering consultant to proceed to the design stage. Full design plans, technical specifications and contract documents are then prepared for permitting and bidding.

For SDWMR projects, all public service lines are replaced, and any private lead service lines are scheduled for replacement with property owner approval. Agreements are mailed to all locations served by the water mains to be replaced, and the same procedures described under the Neighborhood LSLR process are followed.

Emergency LSLR/Urgent LSLR

When there is a water main break or leak in a public side service line, Pittsburgh Water Operations crews respond to conduct a repair. If a public lead service line is involved in the break/leak, it will be replaced in its entirety (whereas a non-lead public service line may be repaired), and the private side material will be identified. If lead is present on the private side, two actions will be taken:

1. The lead private side service line will be bypassed with a temporary service, if possible, to restore water service to the customer as soon as the public side work is complete. In some situations, a temporary service cannot be established because there is no outdoor hose bib to connect the service line to, the customer is not present to allow access to the interior for a connection or due to weather conditions. In these situations, the customer is left without water until a permanent private service line can be installed.
2. The Lead Help Desk is notified of the presence of a private lead service line and of the ability to install a temporary service. The Lead Help Desk will immediately attempt contact with the customer and schedule a coordination appointment as soon as possible – the same day if temporary service could not be established and the customer is available.

Since 2018 Pittsburgh Water has had an Urgent LSLR Contract in place to then take over the private side replacement process. The Urgent LSLR contractor will attend the coordination meeting once it is scheduled and proceed with the replacement of the private lead service line. In the event that temporary service cannot be established, or weather conditions are averse to temporary service, the Urgent LSLR contract includes an item for the contractor to mobilize within 4 hours to get the water service restored to the customer as soon as possible. In addition, in certain situations the Urgent LSLR contractor may be engaged to replace both public and private service lines. This same scenario will be followed if another utility working in the street damages a lead service line.

Other Pittsburgh Water Projects

While most of the planned LSLR happens within the three situations described above, during the completion of other Pittsburgh Water infrastructure projects lead lines are encountered and replaced. Since most of the other Pittsburgh Water infrastructure is located below water mains and services, often these stormwater or sewer projects include plans to proactively replace the lead service lines at the same time to both prevent an emergency situation due to damage to a lead service line, and to save on future surface restoration costs with the LSLR work is combined

with other Pittsburgh Water infrastructure work. The work area development and agreement process for these projects is identical to the process described above.

Customer-Initiated LSLR/Line Replacement Reimbursement Program

Since late 2020, Pittsburgh Water has had a Lead Replacement Reimbursement Program, which provides an income-based reimbursement program for our water customers to replace their own private lead service lines, which is where most of the customer-initiated LSLRs start. The Pittsburgh Water Cares Team provides intake services for the Line Replacement Reimbursement Program, where income levels are reviewed (either the property owner or their tenant's income level can be used to determine the reimbursement amount), and an eligibility letter is issued. The reimbursement levels for the program are as follows:

Income Level (% of Federal Poverty Level)	**Amount of Reimbursement (of eligible costs)**
<300%	100%
301-400%	75%
401-500%	50%
>500%	$1,000

Once the eligibility letter is issued the customer is instructed to engage a plumber to review the work and provide Pittsburgh Water with an estimate of the replacement cost. Pittsburgh Water reviews the estimate, and if in line with other work, approves the amount. The customer is then authorized to have the work completed, and once done, provide Pittsburgh Water with a copy of the final invoice from the plumber as well as the final inspection report from ACHD Plumbing Department.

Certain plumbers, listed on Pittsburgh Water's website, have also agreed to Pittsburgh Water conditions where a deposit will not be charged to the customer beyond the customer's anticipated contribution, and the check issued by Pittsburgh Water for the final invoice amount will be made out to both the customer and plumber.

Pittsburgh Water instructs all plumbers, regardless of if they are participating in the reimbursement program, and ACHD Plumbing Department to provide Pittsburgh Water Dispatch with a two-week notification of private side service line work, so if a public lead service line is identified Pittsburgh Water will replace it on the same day the plumber is installing the new private side.

Non-Residential LSLs

Presently Pittsburgh Water is replacing non-residential LSLs as follows:

- When the non-residential customer account location includes a residential component (i.e. apartment above a storefront)
- As part of our 2022 Priority LSLR Program that focused on day care facilities
- Any non-residential location within a project area that is replacing water mains

- In emergency situations

Pittsburgh Water's intent is to turn our focus to non-residential locations once the residential LSLs are completed. While a specific construction program has not been developed for this purpose yet, we envision that this will consist of one-off contracts associated with sections of the water service area until all are complete. Pittsburgh Water plans to replace all non-residential lead service lines within its water distribution system as required by the PUC's regulations at 52 Pa. Code § 65.53.

Section 4 – Costs and Funding Strategy

This Section of Pittsburgh Water's Plan describes Pittsburgh Water's costs and funding strategy related to LSLRs, in compliance with Section 65.56(b) of the PUC's regulations.

If Pittsburgh Water were to acquire a water distribution system in the future, it would update its LSLR Plan in accordance with 52 Pa. Code § 65.56(b)(9) at the time of completing the acquisition, including that Pittsburgh Water may seek Commission approval to revise its LSLR Plan to increase the annual cap on LSLRs if necessary.

4.1 Costs

Pittsburgh Water has been completing LSLRs using outside contractors since 2017 and tracking the costs of each program. Our funding strategy has been to maximize the amount of funding we receive through PENNVEST or other programs for both Neighborhood LSLR and SDWMR. Since the beginning of the program through March 2024, Pittsburgh Water committed or spent over $198 million, with almost $76 million in grants, $69 million in low-interest loans (paid back with rate-payer dollars) and $55 million in direct rate payer dollars.

Costs for completing the remainder of the LSLR work is summarized from the CIP. The following amounts are budgeted in Pittsburgh Water's CIP:

Program	FY 2024	FY 2025	FY 2026	FY 2027	Total Cost
Neighborhood Lead Service Line Replacement	**$ 11,425,056**	**45,219,382**	**122,612,321**	**-**	**$ 179,256,759**
PENNVEST	5,648,072	36,860,137	117,225,846	-	159,734,055
Debt (Revenue Bonds)	2,143,687	8,359,245	5,386,475	-	15,889,407
American Rescue Plan Act	3,633,297	-	-	-	3,633,297
Small Diameter Water Main Replacement*	**$ 23,318,761**	**34,114,408**	**124,402,025**	**150,721,183**	**$ 332,556,377**
PENNVEST	16,726,471	19,353,986	81,275,648	88,492,612	205,848,717
Debt (Revenue Bonds)	6,592,290	14,760,422	43,126,377	62,228,571	126,707,660
Urgent Lead Service Line Replacement	**$ 1,847,292**	**1,940,880**	**2,032,021**	**2,134,967**	**$ 7,955,160**
Debt (Revenue Bonds)	866,267	1,191,730	1,346,759	1,413,679	4,818,435
DSIC - Water	981,025	749,150	685,262	721,288	3,136,725
Private Line Replacement Reimbursement Program	**$ 1,000,000**	**1,000,000**	**1,000,000**	**1,000,000**	**$ 4,000,000**
Debt (Revenue Bonds)	1,000,000	1,000,000	1,000,000	1,000,000	4,000,000

*Typically about 10% of the project is lead related.

Pittsburgh Water estimates that it can replace up to approximately 2,000 Authority-owned lead service lines and 3,100 customer-owned lead service lines on an annual basis. This projection was determined by estimating the total number of lead services lines to be about 5,860 public residential lead service lines and 9,100 private residential lead service lines. Pittsburgh Water will review this annual projection and adjust it as necessary. The annual cap for customer-owned lead service line replacements is 4,000.

4.2 Funding Strategy

PENNVEST, Debt (Revenue Bonds), DSIC – Water, and American Rescue Plan Act funding will be used to finance all LSLR work within the CIP. Pittsburgh Water will continue to pursue additional grants and low-interest loans from external sources. If awarded, these grants and low-interest loans will substitute more expensive financing options, such as Debt (Revenue Bonds). The chart below depicts the anticipated sources of financing per Pittsburgh Water's CIP.

Funding Sources	FY 2024	FY 2025	FY 2026	FY 2027	Total Cost	% of Total Cost
PENNVEST	$ 22,374,543	56,214,123	198,501,494	88,492,612	$ 365,582,772	70%
Debt (Revenue Bonds)	10,602,244	25,311,397	50,859,611	64,642,250	151,415,502	29%
American Rescue Plan Act	3,633,297	-	-	-	3,633,297	1%
DSIC - Water	981,025	749,150	685,262	721,288	3,136,725	1%
Total Cost	**$ 37,591,109**	**82,274,670**	**250,046,367**	**153,856,150**	**$ 523,768,296**	

Section 5 - Communication Strategy and Public Outreach Strategy

5.1 Introduction

This Section of Pittsburgh Water's Plan describes Pittsburgh Water's communications, outreach and education efforts related to LSLRs, in compliance with Section 65.56(c) of the PUC's regulations. As discussed below, Pittsburgh Water's approach is consistent with the EPA's LCRR requirements on public education (40 CFR 141.85).

Pittsburgh Water uses a multi-faceted approach to communicate details about our lead programs overall and specifically to residents and property owners that are part of a LSLR project. The approach starts with our Lead Help Desk – Pittsburgh Water customer service representatives dedicated to Pittsburgh Water lead programs. We also have Field Liaisons – these are Pittsburgh Water employees that accompany our Construction Contractors to meet each property owner to start the LSLR process, help resolve complaints from residents and property owners about our LSLR program, conduct outreach and conduct other activities to strengthen our communications with our residents and property owners. Finally, our Public Affairs group conducts robust outreach during our construction projects to educate our residents and property owners and increase awareness of our work.

5.2 Communication and Outreach Personnel

Communication and outreach is conducted by a variety of Pittsburgh Water and contracted consultant personnel before, during and after completion of a LSLR. Each group of personnel is described as follows.

5.2.1 *Pittsburgh Water Lead Help Desk*

Pittsburgh Water formed the Lead Help Desk in 2018 when starting private side replacements. The Lead Help Desk team, part of Pittsburgh Water's Customer Service Department, presently consists of the following personnel:

- Lead Help Manager
- Lead Help Coordinator
- Lead Program Customer Assistance – three staff
- Lead Help Field Liaison – two staff

The Lead Help Desk is responsible for managing the customer interaction process from the time that the Informational Packets (described below) are mailed until the completion of the LSLR work and follow-up activities.

Lead Help Desk Staff

Some of the activities of the Lead Help Desk staff include:

- Answering resident and property owner phone calls related to the Pittsburgh Water lead program, including LSLR
- Placing phone calls to property owners to request return of the access agreement
- Scheduling the pre-coordination meetings
- Coordinating and communicating urgent LSLR replacement requirements with Pittsburgh Water Operations, Lead Team Engineering and Pittsburgh Water GIS
- Coordinating the Line Replacement Reimbursement Program
- Coordinating public replacements at owner-initiated private side replacement locations
- Receiving and following up on resident and property owner complaints related to LSLR
- Placing notification calls upon receipt of a lead action level exceedance water test result
- Managing inventory of pitchers and filters and ordering delivery to one-off locations

Field Liaison Staff

The Field Liaison position was also created by Pittsburgh Water in 2018 when the private side replacement work started. This position acts as a direct conduit between our residents and property owners and contractors doing the LSLR work. The primary responsibility of the Pittsburgh Water Field Liaisons is to attend a Construction Coordination meeting with the property owner and contractor that is the start of the LSLR process at any given LSLR location. During this meeting, hosted by the Field Liaison, the contractor will view the customer location and describe the work to be done and any expected and potential impacts to the property. The Field Liaison will discuss any responsibility the property owner has for restoration, based on the anticipated impacts. During the coordination, construction safety of the location will be evaluated, and any items the property owner needs to correct to allow the work to proceed are identified. The Field Liaisons also discuss the need for the resident or property owner to conduct household flushing after verification and after replacement and show the property owner a Pittsburgh Water-produced video on the flushing process. Notes are collected during the coordination and loaded into the Field Maps App for viewing by the construction team.

Field Liaisons also assist in reviewing and resolving customer complaints, canvassing for access agreements when property owners are unresponsive to other Pittsburgh Water outreach, and reviewing work order locations prior to Packet mailing to review proposed locations.

5.2.2 Pittsburgh Water Public Affairs

Pittsburgh Water Public Affairs group is responsible for both general and project specific outreach and communications for LSLR projects. Some of the activities they coordinate and complete include:

- Coordination of and attendance at community meetings where Pittsburgh Water project are ongoing
- Liaising with City Council offices and other City officials about upcoming and ongoing projects
- Development and maintenance of project-specific pages on the Pittsburgh Water website[19]

[19] https://www.pgh2o.com/projects-maintenance/search-all-projects?f%5B0%5D=project_status_block%3A4

- Issuance of Press Releases

5.2.3 Construction Personnel

Although not part of the formal communication team, Construction Inspectors working on the LSLR projects also communicate with the residents and property owners during the work. Most notably the Construction Inspectors are responsible for distributing the pitchers after a verification (or replacement if both happen on the same day), distributing a series of door hangers (described below) and providing information to the customer upon completion of a LSLR including leaving door hangers describing the new materials and flushing instructions, and asking if the customer wants to view the Pittsburgh Water flushing video.

5.3 Project Related Communication

Project communication included written materials, delivered by mail and in-person, and verbal communication, again provided via phone call/message or in-person. The communication starts with an Informational Packet mailed a minimum of 45 days prior to a LSLR project starting in a work area. Per Section 65.56(c)(1) of the PUC's regulations, copies of all printed and broadcast material to be distributed under Pittsburgh Water's LSLR program are attached to this Plan as Appendices B-E. This section also describes Pittsburgh Water's website that provides information on LSLRs, including information on upcoming replacements, reimbursement information, mapping showing LSL locations, and information and resources on health risks and efforts to replace LSLs, consistent with Section 65.56(c)(2) of the PUC's regulations.

5.3.1 Initial Informational Packet

The Informational Packet includes:

- A cover letter from the Pittsburgh Water CEO introducing the program and presenting the offer
- An access agreement that needs to be signed and returned by the property owner, the access agreement includes flushing instructions and water sample test instructions
- Three information sheets describing the program
    - The Shared Responsibility of Lead Service Line Replacement that describes the Property Owner and Pittsburgh Water responsibilities during the LSLR process,
    - Frequently Asked Questions about Lead in Drinking Water
    - Termination Risks and Resources for Tenants

A copy of the Informational Packet is included in Appendix B.

All documents described above include a statement in six different languages (Spanish, Ukrainian, Russian, Swahili, Arabic, Dari and Pashto) stating "If you need help translating this document, please contact our Customer Service team at 412.255.8987 and you will be connected with a translation service," and the cover letter also includes the statement "This report includes important information about your drinking water" in these same languages. Finally, information described in the PA DEP Document Titled "*Risk Mitigation Measures for Water Systems Conducting Lead Service Line Replacement*" are included in the cover letter and/or access agreement, including the mandatory health effects language established by the EPA under 40 CFR 141.85(a)(1).

5.3.2 Access Agreement Outreach

General Outreach

Outreach for the Informational Packet and Access Agreement starts with a robocall that is placed to all locations receiving an Informational Packet (and where Pittsburgh Water has a phone number on record) two to five days before the packet is mailed, and outreach continues until an accepted agreement is received. Pittsburgh Water found that the pre-mailing outreach is helpful in alerting property owners to the mailing and helping to ensure that it was not disregarded as "junk mail".

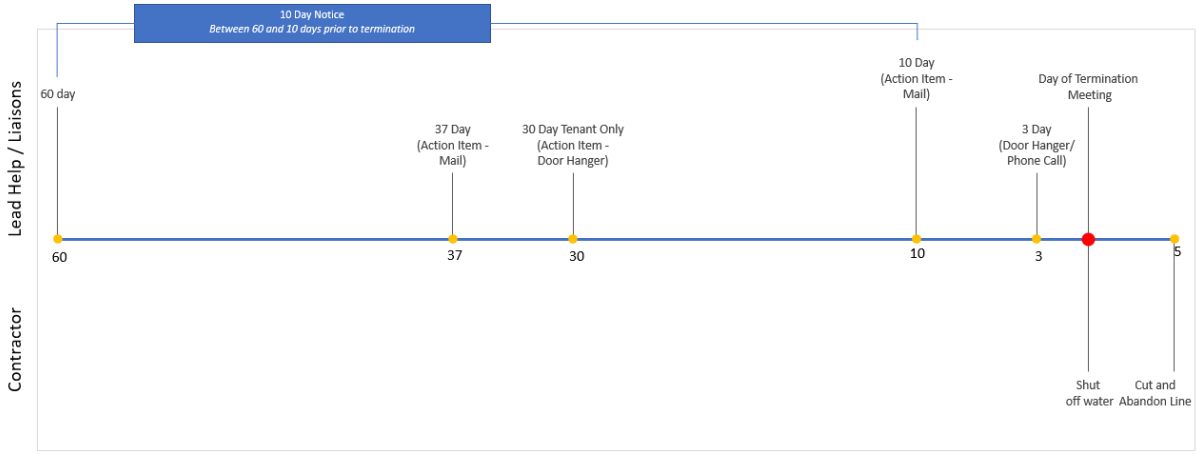
From there, the Access Agreement Outreach includes the following:

- Robocalls placed 1 to 2 times per month to all locations that have been unresponsive to other outreach efforts until the agreement is received, the private side service line verified to be non-lead (meeting the PA DEP inventory guidance requirements), or the service has been terminated in accordance with the procedures described in Section 3.
- A minimum of one direct phone call from the Pittsburgh Water Lead Help Desk – typically multiple calls are placed until an agreement is received, or the private side service line is verified to be non-lead
- Direct contact with the location via a door hanger requesting contact with the Pittsburgh Water Lead Help Desk or canvassing by a construction inspector or Pittsburgh Water employee
- Community meetings organized to provide information and answer questions

Opt-Out Outreach

The access agreement has a section that allows the property owner to decline the private LSLR, requiring the property owner to sign and give a reason why they have opted out of the work. When an Opt-out agreement is received by Lead Help, the agreement status is logged as "Declined." In these situations, the following is conducted:

- If the reason given for the declined status is that the property owner already replaced their private service line, the location is monitored to determine what materials are verified during the construction process. If non-lead is verified on the private side, no further action is taken. If lead is verified, the property owner is contacted by Lead Help, informed of the materials found, and asked to sign an agreement allowing the private LSLR to occur. If the property owner still refuses, the termination process will be implemented.
- For any other reason listed, Lead Help will reach out to the property owner to discuss the reason why they declined and describe the program and in more detail to attempt to convince the property owner to allow the replacement. Further outreach is conducted if the private side material is verified to be lead and the agreement has not been received, ultimately resulting in the termination process being implemented if the agreement cannot be received.



Termination Process Outreach

Based on a PUC order, Pittsburgh Water policy is to not conduct a partial service line replacement and shall terminate service to any property owner that does not provide Pittsburgh Water written approval to replace a private lead service line. The termination process, however, requires a series of notifications be made to the property owner and/or tenant prior to the actual termination. These include:

- Pittsburgh Water will send a written notice at least 37 days in advance of potential terminations. The notice will be mailed to the Service Address, and if different, the Mailing Address Pittsburgh Water has on file for the property owner.
- For locations where the mailing address is different from the service address, a notice will also be posted (by door-hanger) a minimum of 30 days in advance of potential terminations.
- Once a private service line has been verified to be lead and Pittsburgh Water still does not have an agreement a 10-day notice of termination (termination cannot occur for at least 10 days but must happen within 60 days) will be mailed to the service address and property owner (if different).
- Three days prior to the water being shut, a Field Liaison will visit the site, attempt contact with the resident and leave a termination notice (on door or with occupant as applicable). If the resident has been threatening to workers, this step will be conducted via phone calls. If the mailing address for the owner is different from the service address, Pittsburgh Water will also attempt to call the property owner.
- On the day of the water shut the Field Liaison will visit the site and attempt contact with the resident. If resident has been threatening to workers, this step will not be followed. On this day, the curb stop will be shut, but the water service line will remain connected.

The property owner will then have 5 days to provide an agreement and schedule a coordination. If those steps are not completed in that timeframe Pittsburgh Water will physically disconnect the private side service line and the property owner will be responsible for replacing the private side service line in the future before water will be restored to the property. The customer is eligible and informed about Pittsburgh Water's Line Replacement Reimbursement Program if they chose to apply for an income-based reimbursement of the costs to do the work themselves. The figure below shows the timeline of this process, and actions taken by Pittsburgh Water and our contractors.

Water shuts will not occur on a Friday, a weekend day or a PUC, Pittsburgh Water or bank holiday.

Stand-in-the-Shoes Rights

Pittsburgh Water may stand in the shoes of the property owner to replace a Customer Lead Service Line when:

- Pittsburgh Water has offered to replace at no direct cost to the property owner a Customer Lead Service Line;
- The property is occupied, but not occupied by the legal owner of the property; and
- Pittsburgh Water has made attempts to obtain authorization for the Customer Lead Service Line replacement and the legal owner can not be identified, the legal owner can not be located. or the legal owner has never responded.

Pittsburgh Water may use Stand-in-the-Shoes Rights to replace a Customer Lead Service Line when the customer or occupant of the property provides a medical certification signed by a licensed physician, nurse practitioner or physician's assistant to the Authority by fax, email or mail (providing the contact information).

Pittsburgh Water may use Stand-in-the-Shoes Rights to replace a Customer Lead Service Line when the customer provides a Protection From Abuse (PFA) order or other court order with clear evidence of domestic violence.

In the instances described above, and when, in the sole discretion of the Pittsburgh Water, replacing the Customer Lead Service Line and preventing the termination of water service would be reasonable and in the public interest, Pittsburgh Water may proceed to make the replacement without obtaining authorization from the property owner.

5.4 Other Communication Materials

Pittsburgh Water uses a variety of other written and video communication materials to pass information about the LSLR program to our customers. These include a series of door hangers used during the construction process, Pittsburgh Water-produced videos as well as the Pittsburgh Water Lead website.

5.4.1 Door Hangers

Once construction starts, a series of door hangers is used to communicate with the customer, as follows:

- *Work to Occur on Your Water Service Line* – This hanger is posted at all work locations prior to the contractor mobilizing to the area and requests that the Pittsburgh Water Lead Help Desk be contacted to start the replacement process.
- *48 Hour Notice* – this hanger is placed to inform customers that work is beginning, and used specifically at locations where a public-only replacement is occurring so the customer knows their water will be shut. Locations that include private replacement are scheduled directly with the customer.
- *Water Service Line Inspection Results* – the first step in the LSLR process is to conduct a verification excavation at the curb stop exposing 24-inches on either side of the curb stop to identify the public and private side service line material. This door hanger reports the results of this inspection to the property owner. If lead or GRR are one of the materials identified, then this hanger is also accompanied by a *Flushing Instructions* Door hanger to provide the recipient with another reminder to flush the household plumbing after the verification work.
- *Water Service Line Replacement Work Completed* – this hanger is used after the replacement work is completed and describes the materials used for the replacement work. If lead or GRR was one of the materials replaced, then this hanger is also accompanied by a *Flushing Instructions* Door hanger to provide the recipient with another reminder to flush the household plumbing after the replacement work.

Copies of these door hangers are provided in Appendix C.

5.4.2 Pittsburgh Water-Produced Videos

Pittsburgh Water produced two videos related to the LSLR program in 2018. The first is hosted on our website here https://www.pgh2o.com/projects-maintenance/lead-line-replacement-programs and describes the overall LSLR process for our customers. The second video https://www.pgh2o.com/your-water/lead-information/flushing-reduce-lead is also hosted on our website but used in customer homes by our Field Liaisons and Construction Inspectors (shown on tablets they use in the field) explains the process to complete household flushing in detail.

In addition, the vendor Pittsburgh Water uses to conduct our lead testing program has a link to a video on how to conduct water sampling for 1st and 5th Liter sample collection in the information distributed with the sample kits.

5.4.3 Lead Information on Pittsburgh Water Website

Pittsburgh Water provides information on our Lead Programs on its website https://www.pgh2o.com/your-water/lead-information . The website includes the following:

- A GIS-based webmap showing project locations and service line materials for all customer locations in our water service area. Customers can search on any address in our water system and learn what information we have regarding their service line materials. The information on

the webmap is updated on a monthly basis with information Pittsburgh Water is developing concerning the service line material inventory. The webmap also shows our active, planned and completed LSLR areas.

- General information about the use of orthophosphate for corrosion control at Pittsburgh Water.
- Information about lead in general and specifically lead service lines, including Frequently Asked Questions.
- Links to Pittsburgh Water's customer request lead sampling program to order a test kit and how to get a free filter if your lead results are elevated (> 10.0 ppb).
- Sample results from Pittsburgh Water Customer Request Program and LCR Compliance Testing Program. These results are updated every six months for the customer request program, and within 60 days of the completion of each compliance sampling event.
- Details and descriptions of the Pittsburgh Water Line Replacement Reimbursement Program that provides an income-based reimbursement for customers electing to proactively replace their own private LSL.
- Information and resources on health risks associated with lead and lead service lines.
- Meeting minutes of the CLRAC, which meets quarterly.
- Press releases and other notable news events.

The Pittsburgh Water website has a "Translate" button on the top of the page allowing users to translate the information provided into any one of 10 different languages, including English, Chinese (simplified), Spanish, Korean, Portuguese, Russian, French, German, Hebrew, and Japanese.

5.4.4 Lead Sampling-Related Correspondence

The lead sampling program includes a number of written communication documents provided to our customers. Sampling instructions and a Chain of Custody are provided with the sample kit, and once the analysis is complete the customer is provided with a letter informing them of the results and, if appropriate, next steps. Copies of these documents are included in Appendix D.

5.4.5 Line Replacement Reimbursement Program Correspondence

Pittsburgh Water has several communication documents related to the Line Replacement Reimbursement Program, including the following:

- Income Verification Letter – after a customer completes the income verification process with the Pittsburgh Water Cares team, a letter is mailed to the customer to let them know the income level and reimbursement percentage they are eligible for. The letter also outlines the next steps in the replacement program.
- If a review of the customer location determines that they do not have a lead service line based on the Pittsburgh Water service line material inventory, a letter is mailed to the customer indicating this finding.
- If the customer's income is greater than 500% of the federal poverty level, a letter is sent to the customer indicating that they are eligible for a $1,000 stipend and outlining the steps necessary for the reimbursement to be issued.

- If the customer location is in an active work order area of a Pittsburgh Water construction contract, phone call is placed to the customer indicating that the service line will be replaced as part of that process.
- If, after review of the information provided by the customer, the customer is not in Pittsburgh Water's water system or otherwise not eligible for reimbursement, a letter will be sent to that effect.
- The second step in the process is the customer submitting an estimate from a plumber for the work. After review (and potential discussions with the plumber to clarify any concerns), the customer will be issued an Estimate Approval Letter.

Copies of all Reimbursement Program correspondence is included in Appendix E.
