APPENDIX 2

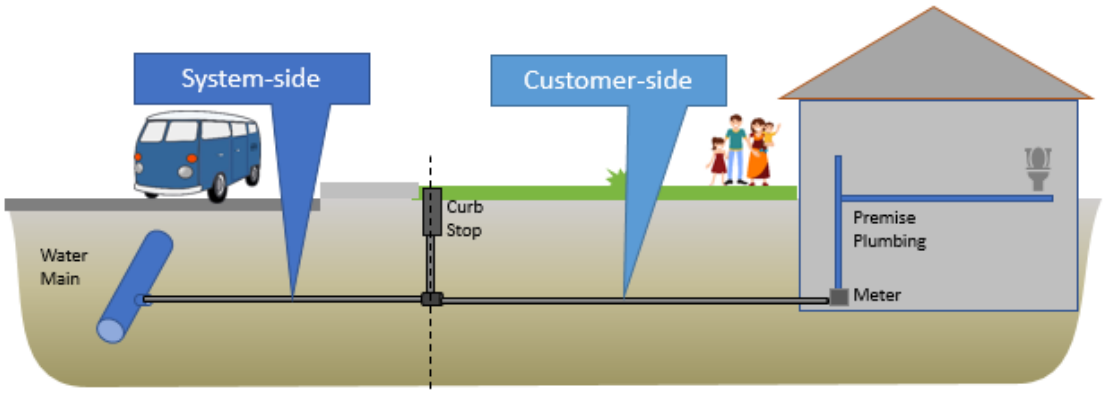
September 19, 2023

INITIAL SERVICE LINE INVENTORY

SUFFICIENT EVIDENCE FOR NON-LEAD – TRAINING AID

To categorize pipe material as non-lead (e.g. copper), the water system is expected to show sufficient evidence using the options described below.

Note: For systems that own a portion of the service line, such as shown below, the pipe material for both the customer and system portions must be identified. The complete service line, which combines both portions, is assigned a category of non-lead, lead, galvanized requiring replacement, or unknown.



"Stand-Alone" <u>Records</u> Method Options: The following options do not need to be combined with another method to verify a pipe is non-lead:

- Records indicating service line installation/replacement date after January 6, 1991 (the effective date of the PA Lead Ban)
  -OR-
- Record of a local ordinance or plumbing codes prohibiting lead service line installation and water system records indicating service line installation/replacement after the ordinance effective date.

Methods to Verify Historical Records: If the water system has records that do not meet either of the stand-alone criteria above (e.g. tap cards showing a 1974 installation date), the system is expected to verify these historical records using **<u>one</u>** of the following investigation techniques:

a) Field verification, including any of the following options:
   - Visual inspection at existing access point for each portion of the service line being verified (i.e. customer-owned portion and/or system-owned portion). This includes any access points in which the material type can clearly be determined, such as a meter pit, or the service line entry to the basement at the customer side.
   - CCTV inspection outside pipe – at curb box
   - Mechanical excavation along each portion of the service line being investigated (i.e. customer-owned portion and/or system-owned portion). Any new excavations that the water system plans as part of the service line inventory investigation should be <u>≥</u>18" from the curb stop.

b) Water quality sampling – targeted, flushed, or sequential (if the system **<u>does not</u> have corrosion control treatment**). Please review EPA Service Line Inventory Guidance pages 5-10 to 11 for information regarding sampling.

c) Modeling/Statistical analysis
   - A statistical analysis method includes the procedure established in the Michigan EGLE "Minimum Service Line Material Verification Requirements" document. A statistically sound subset of service lines can be field verified. This method should only be used for

a homogeneous area, such as a residential neighborhood in which the houses were built in the same time period.

d) Other method reviewed by DEP

Water systems without historical records of the pipe material: For a water system with joint ownership, the material of each portion of the service line is identified separately.

Customer-side (typically longer portion) material identification:

- Non-lead verification options include:
  a) **2 points of identification -** The system can combine any two of the following investigative techniques:
     - Visual observation of the pipe material entering the residence or observation in a meter pit
     - Excavation at 1 point (If not combined with another identification method, such as visual observation in the residence, excavation at 2 points is expected). Note: Any new excavations that the water system plans as part of the service line inventory investigation should be ≥18" from the curb stop.
  b) **Statistical analysis and/or modeling -** For statistical analysis, systems are expected to field investigate a single point at every location in a homogenous area (e.g. neighborhood) **and** field verify an additional point at a statistically representative percentage of the service lines in the same area.
  c) For systems without corrosion control treatment, combination of **water quality sampling** (targeted, flushed, or sequential) *and* **a field method from (a) above.** Please review EPA Service Line Inventory Guidance pages 5-10 to 11 for information regarding sampling.
  d) **Internal pipe CCTV inspection** if it is determined that the pipe material can be identified. Because of the disturbance to the internal pipe, systems should adhere to risk mitigation measures similar to the steps for lead service line replacement. Contact DEP for more information.

System-side (typically shorter portion) material identification:

- **Non-lead verification options include:**
  a) **Excavation at 1 point** (Note: Any new excavations that the water system plans as part of the service line inventory investigation should be ≥18" from the curb stop)
  ~~b)~~ **Statistical analysis and/or modeling -** For statistical analysis, systems are expected to field investigate a single point at every location in a homogenous area (e.g. neighborhood) **and** field verify an additional point, at a statistically representative percentage of the service lines in the same area.
  c) For systems without corrosion control treatment, combination of **water quality sampling** (targeted, flushed, or sequential) *and* **external pipe CCTV inspection** inside curb box. Please review EPA Service Line Inventory Guidance pages 5-10 to 11 for important information regarding sampling.
  d) **Internal pipe CCTV inspection** if it is determined that the pipe material can be identified. Because of the disturbance to the internal pipe, systems should adhere to risk mitigation measures similar to the steps for lead service line replacement. Contact DEP for more information.

Non-lead Service Line Verification Examples

Contents

Section 1: Systems with Corrosion Control Treatment 4
Example 1: Installation records for both sides 4
Example 2: Records for System-side only 5
Example 3: Tap cards and meter replacement records 6
Example 4: Tap cards and observation inside home 7
Example 5: Records of material observations during normal operations 8
Example 6: Service line material records for both sides, pre-'91 9
Example 7: Installation and observation records 10
Example 8: Installation and Meter pit observation records 11
Section 2. Systems *without* Corrosion Control Treatment 12
Example 9: Installation records for both sides 12
Example 10: Records for System-side only 13
Section 3. Examples with or without CCT 14
Example 11a: Curb stop replacement records 14
Example 11b: Curb stop replacement records with historical installation records 15
Example 12: System-side records showing connection to customer side 16

Section 1: Systems with Corrosion Control Treatment

Example 1: Installation records for both sides

	System Side	Customer Side
System has:	Records for an area (e.g., neighborhood) indicating the system-owned side service line (SL) was replaced with copper in 2004 in conjunction with a main replacement program.	Records indicate service line installed in 1975 (copper) when the homes were built in this neighborhood.
Additional Actions Expected:	Nothing	Verify records since pre-'91 install. Choose one of the following: a) Visual observation of the material entering the residence b) 1-point excavation >18" from curb stop for each SL c) External pipe CCTV inside curb box for each SL d) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a, b, or c above.

Example 2: Records for System-side only

	System Side	Customer Side
System has:	Tap Cards from 1950 showing copper for an area of the system (e.g., neighborhood)	Nothing
Additional Actions Expected:	Verify record since it is pre-'91. Choose one of the following: a) 1-point excavation >18" from curb stop for each SL b) External pipe CCTV inside curb box for each SL c) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a or b above.	Choose one of the following: a) 1-point excavation >18" from curb stop **and** visual observation of the material entering the residence for each SL b) 2-point excavation at each SL c) Statistical Analysis: *Example:* ○ Visual observation inside home prior to meter at *every* connection **combined with** a 1-point excavation >18" from the curb stop at a statistically representative percentage of the service lines for this area (e.g., neighborhood).

Example 3: Tap cards and meter replacement records

	System Side	Customer Side
System has:	Records from 1965 showing copper from main to curb stop (install records)	House built in 1965 but no records of SL material installed Records from meter replacements (in house) in 2017 showing connection to copper SL
Additional Actions Expected:	Verify record since it is pre '91. Choose one of the following: a) 1-point excavation >18" from curb stop for each SL b) External pipe CCTV inside curb box for each SL c) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a or b above.	Verify record of SL material. Choose one of the following: a) 1-point excavation >18" from curb stop for each SL b) External pipe CCTV inside curb box c) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a or b above.

Example 4: Tap cards and observation inside home

	System Side	Customer Side
System has:	Records from 1965 showing copper from main to curb stop (install records) for an area (e.g. neighborhood)	Visual observation in the house in addition to photos from customer surveys showing copper
Additional Actions Expected:	Verify record since it is pre '91. Choose one of the following: a) 1-point excavation >18" from curb stop for each SL b) External pipe CCTV inside curb box for each SL c) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a or b above.	Should have a second point of verification on customer side. Choose one of the following: a) 1-point excavation >18" from curb stop for each SL b) External pipe CCTV inside curb box c) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a or b above.

Example 5: Records of material observations during normal operations

	System Side	Customer Side
System has:	Record that neighborhood was constructed in 1965, no other data	Records from 2010 through 2021 of water system staff observations of copper SL material from various locations on customer side (e.g. along line in-yard and near curb-stop, but not necessarily ≥18" from the curb stop). These observations were made during normal operations and are not considered new investigations as part of the service line inventory.
Additional Actions Expected:	Choose one of the following: a) 1-point excavation >18" from curb stop at each SL b) Statistical Analysis - *Example:* ○ External pipe CCTV inside curb box at each SL **combined with** a 1-point excavation >18" from the curb stop at a statistically representative percentage of the service lines for this neighborhood.	Previous material observations along the customer side represent one point of verification and a second point is expected. Choose one of the following: a) Visual observation of the material entering the residence b) 1-point excavation at a location along the customer-side SL

Example 6: Service line material records for both sides, pre-'91

	System Side	Customer Side
System has:	Record of service line install in 1974 for a neighborhood (Copper)	Record of service line install in 1974 for a neighborhood (Copper)
Additional Actions Expected:	Verify record since it is pre '91. Choose one of the following: a) 1-point excavation >18" from curb stop for each SL b) External pipe CCTV inside curb box for each SL c) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a or b above.	Verify records since pre-'91 install. Choose one of the following: a) Visual observation of the material entering the residence b) 1-point excavation >18" from curb stop for each SL c) External pipe CCTV inside curb box for each SL d) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a, b or c above.

Example 7: Installation and observation records

	System Side	Customer Side
System has:	Record of service line install in 1974 for a neighborhood (Copper) Water system records from 1992 to present of observation of the SL material during normal operations, such as line repairs, curb stop repairs, and main break repairs in which the SL could be observed.	Record of service line install in 1974 for a neighborhood (Copper)
Additional Actions Expected:	Water system should evaluate if these recent visual observations are statistically representative verification points for the applicable neighborhood(s) (e.g., 20% of homes). • If yes, additional action not required. • If no, then system should obtain additional verification points via one of the following: a) 1-point excavation >18" from curb stop for each SL b) External pipe CCTV inside curb box c) Use statistical analysis and/or modeling: Field verify at a statistically representative percentage of SLs in this neighborhood. Field verification can include a or b above.	Verify records since pre-'91 install. Choose one of the following: a) Visual observation of the material entering the residence b) 1-point excavation >18" from curb stop for each SL c) External pipe CCTV inside curb box for each SL d) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a, b, or c above.

Example 8: Installation and Meter pit observation records

	System Side	Customer Side
System has:	Record of service line install in 1985 – Copper	Water system personnel visually observed copper SL in meter pit in 2020. Through customer outreach campaign, digital photo received from customer verifying copper entering the residence through foundation wall.
Additional Actions Expected:	Choose one of the following: a) 1-point excavation >18" from curb stop for each SL b) External pipe CCTV inside curb box for each SL c) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a or b above.	None

Section 2. Systems *without* Corrosion Control Treatment

Example 9: Installation records for both sides

	System Side	Customer Side
System has:	Records for an area (e.g., neighborhood) indicating the system-owned side service line (SL) was replaced with copper in 2004 in conjunction with a main replacement program.	Records indicate service line installed in 1975 (copper) when the homes were built in this neighborhood.
Additional Actions Expected:	Nothing	Verify records since pre-'91 install. Choose one of the following: a) Visual observation of the material entering the residence b) 1-point excavation >18" from curb stop for each SL c) External pipe CCTV inside curb box for each SL d) Perform in-home water quality sampling (targeted, flushed, or sequential) e) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a, b, c and above.

Example 10: Records for System-side only

	System Side	Customer Side
System has:	Tap Cards from 1950 showing copper for an area of the system (e.g., neighborhood)	Nothing
Additional Actions Expected:	Verify record since it is pre '91. Choose one of the following: a) 1-point excavation >18" from curb stop for each SL b) External pipe CCTV inside curb box for each SL c) Perform in-home water quality sampling (targeted, flushed, or sequential) d) Use statistical analysis and/or modeling: Field verify one point at a statistically representative percentage of the service lines for this area (e.g., neighborhood). Field verification can include a or b above.	Choose one of the following: a) 1-point excavation >18" from curb stop **and** visual observation of the material entering the residence for each SL b) 2-point excavation at each SL c) Visual observation inside home prior to meter at every connection and a model/statistical analysis d) Visual observation inside the home and in-home water sampling (targeted, flushed, or sequential)

Section 3. Examples with or without CCT

Example 11a: Curb stop replacement records

	System Side	Customer Side
System has:	No records of original installation Record of observation from curb stop replacement in 2016 showing connected to copper	No records of original installation Record of observation from curb stop replacement in 2016 showing connected to copper
Additional Actions Expected:	None (due to post '91, nature of curb stop replacement and the excavation involved)	Previous material observations at the curb stop represents one point and a second point is expected. Choose one of the following: a) Visual observation of the material entering the residence b) 1-point excavation at a location along the customer-side SL

Example 11b: Curb stop replacement records with historical installation records

	System Side	Customer Side
System has:	Installation records from 1975 showing copper Record of observation from curb stop replacement in 2016 showing connected to copper	Installation records from 1975 showing copper Record of observation from curb stop replacement in 2016 showing connected to copper
Additional Actions Expected:	None (due to post '91, nature of curb stop replacement and the excavation involved)	None (due to post '91, nature of curb stop replacement and the excavation involved)

Example 12: System-side records showing connection to customer side

	System Side	Customer Side
System has:	Records of system side service line replacement completed in 2001	Records from *system side* service line replacement (2001) showing what the line was connected to on customer side Building records show homes were built in the 1950s.
Additional Actions Expected:	None	Previous material observations at the curb stop represents one point and a second point is expected. Choose one of the following: a) Visual observation of the material entering the residence b) 1-point excavation at a location along the customer-side SL

LEAD WATER SERVICE LINE REPLACEMENT

PENNSYLVANIA AMERICAN WATER

The Customer elects for the Company to replace the Customer's lead water service line: ☐ CHECK HERE

The undersigned customer(s), whose name(s) appear in the signature block at the bottom of this page (the "Customer") grants to Pennsylvania-American Water Company (the "Company") and to its approved contractors and/or subcontractors a license to enter upon the Customer's property at the address shown below ("Property") for the purpose of connecting the Customer's residence to the Company water service line adjacent to the Property, at no cost to the Customer.

PROPERTY ADDRESS: _____City_____State_____Zip_____

The Customer represents that the Customer is/are the sole owner(s) of the Property at the address shown above and has/have sole authority to agree to this License.

The Company or its approved contractors and/or subcontractors will replace the Company service line from the water main to a Company meter or valve installation ("Installation") at the Customer's Property line at no cost to the customer. The Company will determine the location of the Installation. The Company's service line and the Installation will be owned and maintained by the Company.

The Company or its approved contractors and/or subcontractors will install a Customer connecting line and water meter pit, if applicable, from the Installation to the Customer's residence. The Customer connecting line is currently and will continue to be owned and maintained by the Customer. The new water meter pit, if applicable, will owned and maintained by the Customer.

CUSTOMER ACKNOWLEDGES THAT IF ANY UPGRADES TO THE CUSTOMER'S INTERNAL PLUMBING ARE REQUIRED, IT WILL BE AT THE SOLE COST OF THE CUSTOMER. THIS INCLUDES, BUT IS NOT LIMITED TO, ANY REQUIREMENT BY A GOVERNMENTAL ENTITY TO MEET APPLICABLE PLUMBING CODE(S).

Upon completion of the work necessary to effect the new connection, the Company will restore the Customer's Property as nearly as practicable to its former condition. The Company warrants the workmanship of its installation of the Customer service line and meter pit, if applicable, for a period of 24 months following the date set forth below, with the Company's liability limited to the cost of repairing or replacing the Customer service line and/or meter pit, if applicable.

THE CUSTOMER ACKNOWLEDGES THAT THE CUSTOMER HAS RECEIVED THE "IMPORTANT NOTICE ABOUT YOUR WATER SERVICE AND LEAD" AND "LEAD" INFORMATION SHEETS PROVIDED BY THE COMPANY. A LEAD SERVICE LINE IS EITHER A LEAD PIPE OR A GALVANIZED PIPE DOWNSTREAM FROM A LEAD PIPE.

IN CONSIDERATION FOR PERFORMING THE WORK TO INSTALL THE CUSTOMER SERVICE LINE AT THE COMPANY'S COST AND THE COMPANY'S AGREEMENT TO PROVIDE A 24-MONTH LIMITED WORKMANSHIP WARRANTY, THE CUSTOMER AGREES TO INDEMNIFY, RELEASE AND HOLD HARMLESS THE COMPANY AND ITS AFFILIATES AND AGENTS FROM AND AGAINST ALL CLAIMS, LIABILITY AND COSTS ("CLAIMS") RESULTING FROM ACTS AND OMISSIONS OF THE COMPANY AND/OR ITS APPROVED SUBCONTRACTORS IN INSTALLING THE CUSTOMER SERVICE LINE.

LEAD WATER SERVICE LINE REPLACEMENT

PENNSYLVANIA AMERICAN WATER

The Customer does NOT elect for the Company to replace Customer's lead water service line:

☐ CHECK HERE

Customer Acknowledgement

The undersigned customer(s), whose name(s) appear(s) in the signature block shown below (the "Customer"), who receives water service provided by the Company to the residence at the Property address listed below, acknowledges that the Customer has been informed by the Company that the Customer-owned water service line is made of lead or is a galvanized pipe downstream of a lead pipe. The Customer acknowledges that it elects not to permit the Company to replace the Customer-owned water service line. The Customer acknowledges that it has received and read the "Important Notice About Your Water Service and Lead," "Lead," and"Flushing After Partial Replacement" information sheets provided by the Company.

REEMPLAZO DE LA TUBERÍA DE PLOMO DEL SERVICIO DE AGUA

PENNSYLVANIA AMERICAN WATER

El Cliente acepta que la Compañía reemplace la tubería de plomo del servicio de agua del Cliente:

☐ MARQUE ESTA CASILLA

El/los cliente(s) que suscribe(n), cuyo(s) nombre(s) aparece(n) en la sección de firmas al final de esta página (el "Cliente") le otorga(n) a Pennsylvania-American Water (la "Compañía") y a sus contratistas y subcontratistas aprobados un permiso para ingresar a la propiedad del Cliente, en la dirección que figura a continuación (la "Propiedad"), con el fin de conectar la residencia del Cliente con la tubería de servicio de agua de la Compañía adyacente a la Propiedad, sin ningún costo para el Cliente.

DIRECCIÓN DE LA PROPIEDAD: _____

Ciudad_____Estado_____Código postal _____

El/los Cliente(s) declara(n) que es/son el/los único(s) propietario(s) de la Propiedad en la dirección indicada anteriormente y que tiene(n) plena autoridad para conceder este permiso.

La Compañía o sus contratistas y subcontratistas aprobados reemplazarán la tubería de servicio de la Compañía desde la tubería de agua principal hasta la instalación del medidor o la válvula de la Compañía (la "Instalación") en la tubería de la Propiedad del Cliente, sin ningún costo para el cliente. La Compañía determinará la ubicación de la Instalación. La tubería de servicio de la Compañía y la Instalación serán propiedad de la Compañía y serán mantenidas por esta.

La compañía o los contratistas y subcontratistas aprobados instalarán una tubería de conexión del cliente y un pozo para el medidor de agua, si corresponde, desde la instalación hasta la residencia del cliente. La tubería de conexión del cliente actualmente es propiedad de este, continuará siéndolo y realizará su mantenimiento. El nuevo pozo para el medidor de agua, si corresponde, será propiedad del cliente y este se encargará de su mantenimiento.

EL CLIENTE RECONOCE QUE SI SE REQUIERE CUALQUIER MEJORA EN LAS TUBERÍAS INTERNAS DEL CLIENTE, ESTAS SE REALIZARÁN POR CUENTA DEL CLIENTE. ESTO INCLUYE, A MERO TÍTULO ENUNCIATIVO, CUALQUIER REQUERIMIENTO DE UNA ENTIDAD GUBERNAMENTAL DE CUMPLIR CON LOS CÓDIGOS DE PLOMERÍA VIGENTES.

Una vez terminadas las tareas necesarias para la nueva conexión, la Compañía restablecerá la Propiedad del Cliente, en la medida de lo posible, a las condiciones en que se encontraba previamente. La compañía garantiza el trabajo de instalación de la tubería de servicio y del pozo para el medidor del cliente, si corresponde, por un período de 24 meses luego de la fecha que se indica a continuación, y la responsabilidad de la compañía se limita al costo de reparación o reemplazo de la tubería de servicio y/o el pozo del medidor del cliente, si corresponde.

EL CLIENTE RECONOCE QUE HA RECIBIDO EL "AVISO IMPORTANTE ACERCA DEL SERVICIO DE AGUA Y EL PLOMO" Y LAS HOJAS INFORMATIVAS SOBRE EL "PLOMO" PROPORCIONADAS POR LA COMPAÑÍA. UNA LÍNEA DE SERVICIO DE PLOMO SE CONSTRUYE CON PLOMO O UNA TUBERÍA GALVANIZADA QUE SALE DE UNA TUBERÍA CONSTRUIDA CON PLOMO.

COMO CONTRAPRESTACIÓN POR REALIZAR EL TRABAJO DE INSTALACIÓN DE LA TUBERÍA DE SERVICIO DEL CLIENTE (CUYOS GASTOS CORREN POR CUENTA DE LA COMPAÑÍA) Y EL COMPROMISO DE LA COMPAÑÍA DE PROPORCIONAR UNA GARANTÍA LIMITADA DE 24 MESES POR EL TRABAJO REALIZADO, EL CLIENTE ACEPTA MANTENER INDEMNE A LA COMPAÑÍA Y SUS ASOCIADOS Y AGENTES DE TODO RECLAMO, RESPONSABILIDAD Y COSTO ("RECLAMOS") QUE SURJAN DE LOS ACTOS U OMISIONES DE LA COMPAÑÍA Y DE SUS SUBCONTRATISTAS APROBADOS DURANTE LA INSTALACIÓN DE LA TUBERÍA DE SERVICIO DEL CLIENTE.

REDUCING YOUR POTENTIAL EXPOSURE TO LEAD AT HOME

PENNSYLVANIA AMERICAN WATER

WE KEEP LIFE FLOWING®

The most common source of lead in tap water is from the customer's plumbing and their service line.

Providing safe, reliable water service is our top priority. We test and monitor for a wide range of contaminants, including lead.

While these tests indicate that lead is not an issue in the treated water leaving our facilities, lead levels might be detected at some properties due to corrosion of:

- **Lead service line**[1] serving older homes and buildings
- **Lead solder** in household plumbing installed before state adoption of the Environmental Protection Agency (EPA) lead ban in January 1991
- **Some faucets** manufactured prior to 2014

It might also be detected if sediment or debris, possibly containing lead, is released from a lead service line during repair projects, or a partial replacement of the lead service line serving your home is performed.

WE'RE COMMITTED TO REPLACING LEAD[1] SERVICE LINES

Scan the QR code or visit **pennsylvaniaamwater.com/leadfacts** to learn how to identify your service line material. If your service line is made of lead, be sure to let us know.

STEPS YOU CAN TAKE TO REDUCE YOUR POTENTIAL EXPOSURE TO LEAD IN DRINKING WATER

You cannot see, smell or taste lead, and boiling water will not remove lead. Here are steps you can take to reduce your potential exposure if lead exists in your home plumbing.

1. **Flush your taps.** The longer the water lies dormant in your home's plumbing, the more lead it might contain. If the water in your faucet has gone unused for more than 6 hours, flush the tap with cold water for 30 seconds to 2 minutes before drinking or using it to cook. To conserve water, catch the running water and use it to water your plants.
2. **Use cold water for drinking and cooking.** Hot water has the potential to contain more lead than cold water. If hot water is needed for cooking, heat cold water on the stove or in the microwave.
3. **Routinely remove and clean all faucet aerators.**
4. **Check to see if your interior plumbing or faucets contain lead and replace any that do.** Look for the "Lead Free" label when replacing or installing plumbing fixtures.
5. **Follow manufacturer's instructions for replacing water filters** in household appliances, such as refrigerators and ice makers, as well as home water treatment units and pitchers. Look for NSF 53 certified filters.
6. **Flush after plumbing changes.** Changes to your service line, meter, or interior plumbing may result in sediment, possibly containing lead, in your water supply. Remove the aerator from each faucet and run the water for 3 to 5 minutes.

HEALTH EFFECTS OF LEAD

According to the U.S. Environmental Protection Agency, exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

[1] Galvanized lines that follow lead piping are also eligible for the replacement program.

PA.SLR.11 05-2024

FREQUENTLY ASKED Q AND A

IS LEAD IN WATER REGULATED?

Yes. The EPA's lead standard is an action level that requires treatment modifications if lead test results exceed 15 parts per billion (ppb) in more than 10 percent of first draw samples taken from household taps.

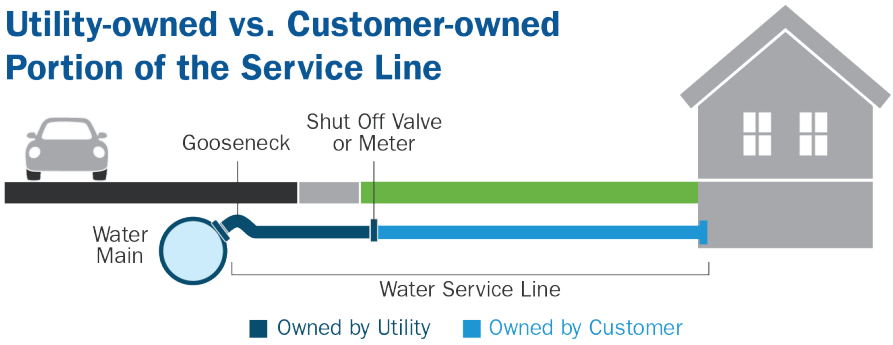
Pennsylvania American Water tests for lead in accordance with regulatory requirements. Results of these tests are included in your annual Water Quality Report, which is available online (scan QR code to the right). In addition, we take steps to reduce the potential of lead leaching from service lines and household plumbing into the water. We do this by managing the pH levels in the water leaving our treatment facilities and adding a corrosion inhibitor where needed.

DOES THAT MEAN I DO NOT HAVE LEAD IN MY WATER?

Not necessarily. You might have lead in your drinking water if your service line, household plumbing or fixtures contain lead. Lead test strips that test for the presence of lead in plumbing are available at hardware stores.

Homes built before 1930 are more likely to have lead plumbing systems. Lead pipes are dull grey color and scratch easily revealing a shiny surface. If your house was built before January 1991, you are more likely to have lead-soldered joints on copper piping. Lead solder is a silver or grey color. If you do, the chance of the lead leaching into your drinking water is greater when water has been standing in the pipes for many hours or overnight.

Utility-owned vs. Customer-owned Portion of the Service Line



Please note: This diagram is a generic representation. Variations may apply.

HOW CAN I TELL IF MY WATER CONTAINS LEAD?

You can have your water tested for lead. Since you cannot see, taste or smell lead dissolved in water, testing is the only sure way of knowing.

SHOULD I FLUSH MY FAUCETS EVERY MORNING BEFORE USING IT TO DRINK OR PREPARE FOOD?

Yes. See Reducing Your Potential Exposure on the opposite side.

To learn more about lead in drinking water, scan the QR code.

FOR MORE INFORMATION

Scan the QR code or visit:

WATER QUALITY REPORTS ONLINE

Scan the QR code to view a copy of your annual water quality report.

GETTING YOUR WATER TESTED FOR LEAD

Pennsylvania American Water does not provide testing for lead for individual customers who request it. Customers can choose to have their water tested at their cost at a certified laboratory.

PENNSYLVANIA AMERICAN WATER

WE KEEP LIFE FLOWING®

REDUCCIÓN DE LA POSIBLE EXPOSICIÓN AL PLOMO EN CASA

La fuente más común de plomo en el agua del grifo son las tuberías de la casa del cliente y su tubería de servicio.

Proporcionar un suministro de agua seguro y confiable es nuestra principal prioridad. Hacemos pruebas y controles para detectar una amplia variedad de contaminantes, incluido el plomo.

Si bien estas pruebas indican que el plomo no supone un problema en el agua tratada que sale de nuestras instalaciones, podrían detectarse niveles de plomo en algunos inmuebles debido a la corrosión de lo siguiente:

- **La tubería de servicio de plomo**[1] que distribuye el agua a casas y edificios más antiguos
- **La soldadura de plomo** en tuberías domésticas con soldadura de plomo instaladas antes de la adopción por el estado de la prohibición del plomo por parte de la Agencia de Protección del Medio Ambiente (EPA, por sus siglas en inglés) en enero de 1991
- **Algunos grifos** fabricados antes de 2014

NOS HEMOS COMPROMETIDO A REEMPLAZAR LAS TUBERÍAS DE SERVICIO DE PLOMO[1]

Escanee el código QR o visite **pennsylvaniaamwater.com/leadfacts** para obtener más información sobre cómo identificar el material de su tubería de servicio. Si su línea de servicio está hecha de plomo, asegúrese de informarnos.

También es posible detectar si se liberan sedimentos o residuos, que probablemente contengan plomo, de una tubería de servicio de plomo durante los proyectos de reparación, o si se realiza un reemplazo parcial de la tubería de servicio de plomo que abastece a su casa.

PASOS QUE USTED PUEDE TOMAR PARA REDUCIR LA POSIBLE EXPOSICIÓN AL PLOMO EN EL AGUA POTABLE

El plomo no se puede ver, oler o degustar, y hervir el agua no elimina el plomo. Estas son las medidas que usted puede tomar para reducir la posible exposición si hay presencia de plomo en las tuberías de su casa.

1. **Purgue sus grifos.** Cuanto más tiempo el agua permanezca estancada en las tuberías de su casa, más cantidad de plomo podría contener. Si el agua de su grifo no se ha utilizado durante más de seis horas, purgue los grifos con agua fría entre 30 segundos y 2 minutos antes de beber o usar el agua para cocinar. Para conservar el agua, recoja el agua que deje correr durante la purga y úsela para regar sus plantas.
2. **Use agua fría para beber y cocinar.** El agua caliente puede contener más plomo que el agua fría. Si necesita usar agua caliente para cocinar, caliente el agua fría en la estufa o en el microondas.
3. **Retire y limpie los aireadores de los grifos con frecuencia.**
4. **Revise si su tubería interna o grifos contienen plomo y remplace cualquiera que lo contenga.** Busque la etiqueta “Sin plomo” al reemplazar o instalar accesorios de plomería.
5. **Siga las instrucciones del fabricante para reemplazar los filtros de agua** en aparatos del hogar, como refrigeradores y máquinas de hielo, y en unidades de tratamiento de agua de la casa y jarras. Busque filtros con certificación NSF 53.
6. **Purgue después del cambio de tuberías.** Los cambios en la tubería de servicio, el medidor o las tuberías interiores pueden ocasionar que haya sedimentos, que pueden contener plomo, en su suministro de agua. Retire los aireadores de cada grifo y deje correr el agua de 3 a 5 minutos.

EFECTOS DEL PLOMO EN LA SALUD

De acuerdo con la Agencia de Protección Ambiental de EE. UU., la exposición al plomo a través del agua potable puede causar graves efectos sobre la salud de todos los grupos etarios. Tanto el coeficiente intelectual como la capacidad de atención en bebés y niños pueden verse afectados. La exposición al plomo puede causar nuevos problemas de aprendizaje y comportamiento o agravar los existentes. Los hijos de las mujeres expuestas al plomo antes o durante el embarazo pueden tener mayor riesgo de sufrir estos efectos adversos sobre la salud. Los adultos pueden aumentar su riesgo de sufrir una enfermedad cardíaca, presión arterial alta, problemas renales o del sistema nervioso.

[1] Las tuberías galvanizadas que llevan a tuberías hechas de plomo también son elegibles para el programa de reemplazo.

PA.SLR.11 05-2024

RESPUESTAS A LAS PREGUNTAS FRECUENTES

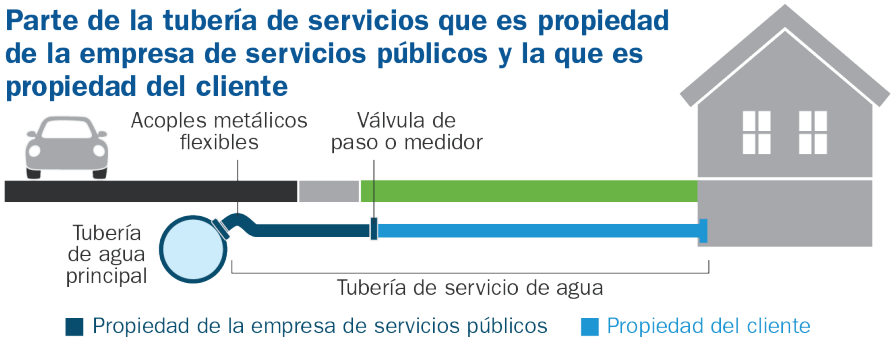
¿ESTÁ REGULADA LA CANTIDAD DE PLOMO EN EL AGUA?
Sí. La norma de la EPA con respecto al plomo es un nivel de operación (action level) que exige que se modifique el método de tratamiento del agua si los resultados de la prueba de plomo exceden 15 partes por cada mil millones (ppb) en más del 10 por ciento de las primeras muestras tomadas de los grifos en los hogares.

Pennsylvania American Water realiza pruebas de detección de plomo de acuerdo con los requisitos reglamentarios. Los resultados de estas pruebas están incluidos en su informe anual de calidad del agua, el cual está disponible en línea (escanee el código QR de la derecha). Además, tomamos medidas para reducir la posibilidad de que el plomo se filtre desde las tuberías de servicio y la tubería doméstica al agua. Para ello, controlamos los niveles de pH del agua que sale de nuestras instalaciones de tratamiento y añadimos un inhibidor de la corrosión cuando es necesario.

¿ESO SIGNIFICA QUE NO HAY PLOMO EN MI AGUA?
No necesariamente. Es posible que tenga plomo en su agua potable si sus tuberías de servicio, tuberías domésticas o accesorios contienen plomo. En algunas ferreterías venden tiras para la prueba de la presencia del plomo en las tuberías.

Las casas construidas antes de 1930 tienen más probabilidades de tener sistemas de tuberías de plomo. Las tuberías de plomo son de color gris mate y se pueden arañar fácilmente para revelar su superficie brillante. Si su casa fue construida antes de enero de 1991, es más probable que tenga juntas soldadas con plomo en las tuberías de cobre. La soldadura de plomo es de color plateado o gris. Si es así, tiene mayores probabilidades de filtración del plomo al agua potable cuando el agua ha permanecido en las tuberías durante muchas horas o durante la noche.

Parte de la tubería de servicios que es propiedad de la empresa de servicios públicos y la que es propiedad del cliente



Tenga en cuenta lo siguiente: este diagrama es una representación genérica. Pueden existir variantes.

¿CÓMO PUEDO SABER SI EL AGUA CONTIENE PLOMO?
Puede hacerle la prueba de detección de plomo al agua. Dado que el plomo disuelto en agua no se puede ver, degustar u oler, la prueba es la única forma segura de saber.

¿DEBO PURGAR MIS GRIFOS CADA MAÑANA ANTES DE USARLOS PARA BEBER O PARA PREPARAR ALIMENTOS?
Sí. Consulte “Reduzca la posible exposición” en el reverso.

Para obtener más información sobre el plomo en el agua potable, escanee el código QR.

PARA MÁS INFORMACIÓN

Escanee el código QR o visite:
pennsylvaniaamwater.com/leadfacts

Para obtener más información sobre las normas de agua potable: comuníquese con la línea de ayuda de la EPA al 1-800-426-4791

Para obtener más información sobre la reducción de la exposición al plomo en su casa o edificio y los efectos del plomo en la salud: visite la página web de la Agencia de Protección Ambiental (EPA) de EE. UU. en www.epa.gov/lead

INFORMES DE LA CALIDAD DEL AGUA EN LÍNEA

Escanee el código QR para ver una copia de su informe anual de calidad del agua.

REALICE LA PRUEBA DE DETECCIÓN DEL PLOMO AL AGUA

Pennsylvania American Water no proporciona pruebas de detección de plomo a los clientes individuales que lo soliciten. Los clientes pueden optar por analizar el agua en un laboratorio certificado, asumiendo los costos.

WE'VE PERFORMED WORK AT YOUR PROPERTY TODAY

Here's what we found:

- ☐ Portions of your service line are made of lead[1].
- ☐ Your service line material is unknown. Please help us identify the material of your customer-owned service line (see reverse side).

NOW IT'S TIME TO FLUSH YOUR HOUSEHOLD PLUMBING

- ☑ **Flush your home plumbing today.** Flushing of your household plumbing can remove any debris or pipe scale that may have broken loose while work was performed. Pipe scale may contain lead, so it is important to flush it out. Work completed on lead plumbing can potentially increase the exposure to lead through drinking water. Locate any faucet used for drinking or cooking, remove the aerator, and run the cold water for 5 minutes.[2] Do not flush faucets where aerators cannot be removed. If it is not possible to flush faucets used for drinking and cooking, flush tub or laundry tub faucets instead. Bypass home treatment units during flushing. To conserve water, catch the running water and use it to water your plants.
- ☑ **Clean faucet aerator screens and replace on faucet.**

STEPS YOU CAN TAKE TO REDUCE YOUR POTENTIAL EXPOSURE TO LEAD IN DRINKING WATER

You cannot see, smell or taste lead, and boiling water will not remove lead. Here are steps you can take to reduce your potential exposure if lead exists in your home plumbing.

1. **Replace any lead service lines.** If you have a lead service line, replace it. Visit pennsylvaniaamwater.com/leadfacts to learn more about our lead service line replacement program.
2. **Flush your taps.** The longer the water lies dormant in your home's plumbing, the more lead it might contain. If the water in your faucet has gone unused for more than 6 hours, flush the tap with cold water for 30 seconds to 2 minutes before drinking or using it to cook. To conserve water, catch the running water and use it to water your plants.
3. **Use cold water for drinking and cooking.** Hot water has the potential to contain more lead than cold water.
   If hot water is needed for cooking, heat cold water on the stove or in the microwave.
4. **Routinely remove and clean all faucet aerators.**
5. **Check to see if your interior plumbing or faucets contain lead and replace any that do.** Look for the "Lead Free" label when replacing or installing plumbing fixtures.
6. **Follow manufacturer's instructions for replacing water filters** in household appliances, such as refrigerators and ice makers, as well as home water treatment units and pitchers. Look for NSF 53 certified filters.
7. **Flush after plumbing changes.** Changes to your service line, meter, or interior plumbing may result in sediment, possibly containing lead, in your water supply. Remove the aerator from each faucet and run the water for 3 to 5 minutes.

HEALTH EFFECTS OF LEAD: According to the U.S. Environmental Protection Agency, exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

[1] Galvanized lines that follow lead piping are also eligible for the replacement program.
[2] Be sure to monitor all taps and drains to prevent overflows.

PENNSYLVANIA AMERICAN WATER

WE KEEP LIFE FLOWING®

REPORT YOUR WATER LINE MATERIAL

NEW

WATCH OUR VIDEO to learn more about our interactive map!

Pennsylvania American Water is committed to providing safe, reliable water service. As part of this commitment, we're replacing lead and certain galvanized service lines over the course of the next several years.

HELP US IDENTIFY YOUR SERVICE LINE MATERIAL IN 3 EASY STEPS

We are asking customers to self-identify and report the material of their customer-owned service line that brings water into their home or business. You can assess your service line material where it enters your home—typically in your basement, crawl space or garage—by following these three simple steps:

3 EASY STEPS

1. **SCAN THE QR CODE OR VISIT pennsylvaniaamwater.com/leadfacts**

   Search for your address. If the customer-owned service line material is labeled unknown or if it's identified incorrectly, help us to identify the material.

2. **FOLLOW** the instructions, answer a few questions and upload a photo of your service line material.
3. **CLICK "SUBMIT"**!

Please note: If your service line contains lead, it does not mean you cannot use water as you normally do. Pennsylvania American Water tests for lead in accordance with regulatory requirements and our water meets water quality regulations, including those related to lead. For steps you can take to reduce your potential exposure to lead, visit pennsylvania amwater.com/leadfacts.

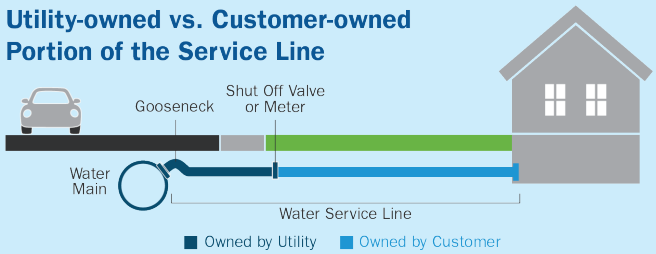
DID YOU KNOW...

The most common source of lead in tap water is from the customer's plumbing and their water service line. Homes built before 1930 are more likely to have lead plumbing systems. Additionally, homes built before January 1991 are more likely to have lead-soldered joints.

WHAT IS A WATER SERVICE LINE?

A water service line is a pipe that connects your house or building to the water main in the street. Typically, the utility owns the portion of the service line from the main in the street to the shut off valve (generally located near the curb). The property owner owns the service line from the shut off valve to the inside plumbing.

Utility-owned vs. Customer-owned Portion of the Service Line



Please note: This diagram is a generic representation. Variations may apply.

HEALTH EFFECTS OF LEAD

According to the U.S. Environmental Protection Agency, exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

WHY IS PENNSYLVANIA AMERICAN WATER UNDERTAKING THIS PROJECT?

The project is driven by EPA regulations that require water utilities to identify and publish service line information, which, for many utilities, will be the first step toward a proactive lead service line replacement program.

HOW IS SERVICE LINE DATA BEING GATHERED?

In addition to customers self identifying their service line material online, our consultant, TYLin | Greeley and Hansen Water Solutions, is available to answer questions and schedule an in-home inspection to verify your service line material, if needed. They can be reached at 215-553-9700.

TYLin | Greeley and Hansen Water Solutions will also be canvassing in neighborhoods to help collect service line inventory information. Their employees will be wearing logoed, high-visibility vests and carrying official photo ID badges. Please check for proper identification before allowing anyone into your home.

WHEN WILL MY LEAD SERVICE LINE BE REPLACED?

We are committed to complying with EPA regulatory requirements to replace all lead[1] service lines over the course of the next several years. Customers can still use their water as you normally would as the water we provide meets state and federal water quality standards, including those set for lead.

WHAT WILL BE REPLACED?

Our lead service line replacement program includes replacing lead portions of the water service line from the water main to a valve inside your house (limited up to 5 feet inside your house). If there is no existing valve, we will install one as needed.

[1]Galvanized lines that follow lead piping are also eligible for the replacement program.

WATCH THIS QUICK VIDEO on how you can easily identify your service line material here!

TYPES OF PIPE

Galvanized: A dull, silver-gray color. Use a magnet - strong magnets will typically cling to galvanized pipes.

Copper: The color of a copper penny.

Plastic: Usually white, rigid pipe that is jointed to water supply piping with a clamp. Note: It can be other colors, including blue and black.

Lead: A dull, silver-gray color that is easily scratched with a coin. Use a magnet - strong magnets will not cling to lead pipes.

Scan to learn more about our lead service line replacement program and answers to commonly asked questions.

PENNSYLVANIA AMERICAN WATER

WE KEEP LIFE FLOWING®

ABOUT LEAD

Pennsylvania American Water tests for lead in drinking water at our treatment facilities and at representative sites in the distribution system, and we comply with drinking water standards.

HEALTH EFFECTS OF LEAD

According to the U.S. Environmental Protection Agency, exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

5M

PA.SLR.5Meter 03-2024

METER REPLACEMENT PLANNED AT YOUR PROPERTY

Pennsylvania American Water is proud to be your local water company. To help ensure the accuracy of our water meters, comply with state regulations, and/or implement technological advances, we periodically change our meters. We're reaching out to you, because the meter serving your property will be changed within the next few years.

WHY ARE WE CONTACTING YOU NOW?

Before we perform this work, we'd like to identify the material of your water service line. The service line is the pipe that connects a home or business to the water main in the street. A portion of the service line serving your property is owned by Pennsylvania American Water; the other portion is owned by you the customer. Due to age or lack of records, however, the service line material is unknown but may be lead.

We're committed to replacing all lead[1] service lines. We encourage customers to visit **pennsylvaniaamwater.com/leadfacts.**

WHAT'S YOUR SERVICE LINE MADE OF?

Over the years, plumbers have used different service line materials, including copper, PVC, lead, galvanized steel, and others. One way to find out what your service line is made of is to contact a licensed plumber. You can also scan the QR code below for tips to identify your service line material. Additionally, if we find lead piping during our meter replacement project, we'll provide you with a pitcher filter for drinking water, six months of filter replacement cartridges, and information about and our lead service line replacement program. Learn more at **pennsylvaniaamwater.com/leadfacts**.

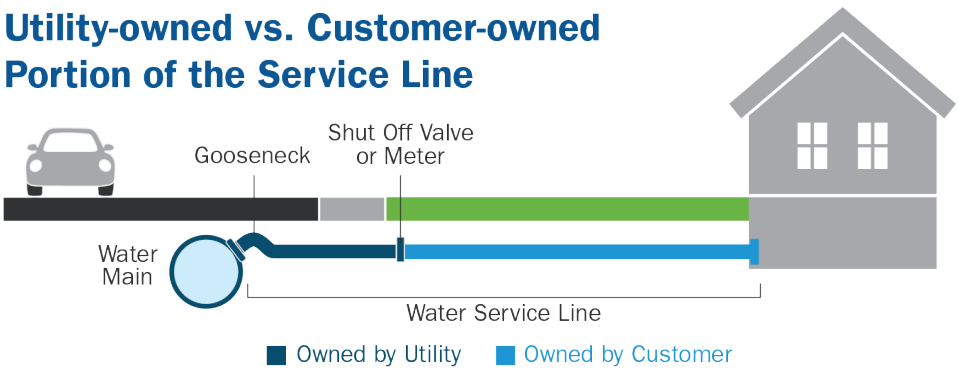
ABOUT SERVICE LINES

There are two components of a service line.

- **Utility-owned portion of the service line:** This is the portion of the service line that extends from the company's main in the street to the company shut off valve (generally located near the curb).
- **Customer-owned portion of the service line:** The property owner is responsible for this portion. It extends from the company shut off valve to the inside plumbing.

Scan here for tips on how to identify and report what your service line is made of.

Utility-owned vs. Customer-owned Portion of the Service Line



Please note: This diagram is a generic representation. Variations may apply.

[1] Galvanized lines that follow lead piping may also be eligible for the replacement program.

Sorry we missed you!

Date ____/____/____ **Time**____:____**a.m./p.m.**

We've been trying to reach you about your water service line.

Help us locate and identify your water service line material by contacting our contractor, TYLin | Greeley and Hansen Water Solutions, to schedule a visual inspection or by submitting an online survey. **If it's discovered that the portion of service line you own is made of lead, we'd like to work with you to replace it at no direct cost to you over the course of the next several years.**

There are two ways to help us identify your water service line material:

1 Call to schedule an appointment for a FREE inspection:

Contractor Information
4 x 1
Avery Template 5161
Label

2 Self identify and report your service line material online:

1. **SCAN THE QR CODE OR VISIT pennsylvaniaamwater.com/leadfacts**
   Click on the map. Search for your address. If the customer-owned service line material is labeled unknown or if it's identified incorrectly, help us to identify the material.
2. **FOLLOW** the instructions, answer a few questions and upload a photo of your service line material.
3. **CLICK "SUBMIT!"**

PENNSYLVANIA AMERICAN WATER

FREQUENTLY ASKED QUESTIONS

WHY SHOULD I PARTICIPATE IN THIS PROGRAM?
Your decision to replace an old lead service line is an important one. The U.S. Centers for Disease Control (CDC) and the U.S. Environmental Protection Agency (EPA) recommend replacing the entire lead service line rather than only replacing a portion of the line. Because replacing only a portion of the lead service line can potentially increase the exposure to lead through drinking water, all lead portions of the service line should be replaced.

WHAT IS INCLUDED IN THE REPLACEMENT?
This includes replacement of any lead portions of the water service line from the water main to a valve inside your house (limited up to 5 feet inside your house). If there is no existing valve, we will install one as needed.

MY HOUSEHOLD PLUMBING IS LEAD. WILL YOU REPLACE THAT AS WELL?
No, this project will only replace lead water service lines from the water main to the first valve within your household, up to 5 feet.

WILL YOU COVER ANY COSTS IF I REPLACE MY LEAD SERVICE LINE SOONER OR LATER THAN YOUR PLANNED PROJECT?
At this time, this program is only offered while we are upgrading our water infrastructure. If you decide to replace your service line prior to or after our planned project, we can not guarantee that we could cover the costs. Customers always have the option of replacing their portion of the service line through their own contractor at their own expense, not reimbursed by the company. In these cases, it's very important for the homeowner and/or their plumber to contact us ahead of time.

DO I NEED TO BE HOME?
You will need to be home for part of the work. To remove the entire lead service line, we will need to access your existing customer-owned service line as it enters your house. You also will need to be home to flush your plumbing after the work is completed.

WILL MY WATER SERVICE BE TURNED OFF DURING THIS WORK?
A short, temporary disruption in water service may occur as we transition from the old lead service line to the new service line. We will make every effort to minimize any disruption.

WHY DO I NEED TO FLUSH MY HOUSEHOLD PLUMBING AFTER THE SERVICE LINE IS REPLACED?
Replacing a lead service line has been shown to potentially cause temporary increases in lead levels. Flushing of your household plumbing can remove any debris or pipe scale that may have broken loose during construction. Pipe scale may contain lead, so it is important to flush it out.

IF I CHOOSE TO PARTICIPATE, WHEN CAN YOU SCHEDULE THIS WORK?
We need to perform this work as we are upgrading the water infrastructure in your area. We will contact you to schedule a time that works best.

CAN I USE A FILTER TO REMOVE LEAD INSTEAD OF REPLACING THE LEAD SERVICE LINE?
Using filters rated to remove lead can be effective if properly maintained. Removing the entire lead service line will remove a source of lead and help reduce your potential exposure to lead in drinking water. U.S. EPA recommends using a pitcher filter for drinking water for six months after a lead service line replacement to reduce the potential exposure to lead, which we supply to our customers at no cost prior to a lead service line replacement.

STEPS YOU CAN TAKE TO REDUCE YOUR POTENTIAL EXPOSURE TO LEAD IN DRINKING WATER

You cannot see, smell or taste lead, and boiling water will not remove lead. Here are steps you can take to reduce your potential exposure if lead exists in your home plumbing.

1. **Replace any lead service lines.** If you have a lead service line, replace it.
2. **Flush your taps.** The longer the water lies dormant in your home's plumbing, the more lead it might contain. If the water in your faucet has gone unused for more than 6 hours, flush the tap with cold water for 30 seconds to 2 minutes before drinking or using it to cook. To conserve water, catch the running water and use it to water your plants.
3. **Use cold water for drinking and cooking.** Hot water has the potential to contain more lead than cold water. If hot water is needed for cooking, heat cold water on the stove or in the microwave.
4. **Routinely remove and clean all faucet aerators.**
5. **Check to see if your interior plumbing or faucets contain lead and replace any that do.** Look for the "Lead Free" label when replacing or installing plumbing fixtures.
6. **Follow manufacturer's instructions for replacing water filters** in household appliances, such as refrigerators and ice makers, as well as home water treatment units and pitchers. Look for NSF 53 certified filters.
7. **Flush after plumbing changes.** Changes to your service line, meter, or interior plumbing may result in sediment, possibly containing lead, in your water supply. Remove the aerator from each faucet and run the water for 3 to 5 minutes.

IMPORTANT NOTICE ABOUT YOUR WATER SERVICE AND LEAD

ESTE INFORME CONTIENE INFORMACIÓN IMPORTANTE ACERCA DE SU AGUA POTABLE. HAGA QUE ALGUIEN LO TRADUZCA PARA USTED, O HABLE CON ALGUIEN QUE LO ENTIENDA.

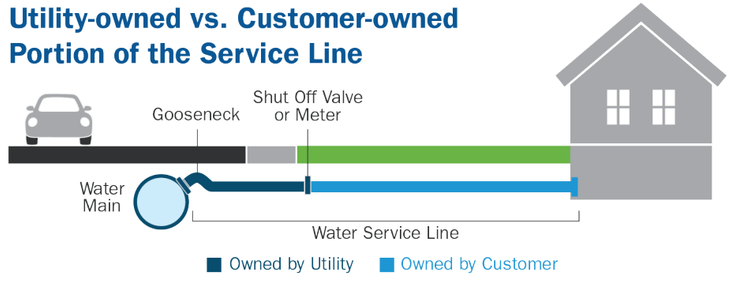
Pennsylvania American Water will be upgrading the water infrastructure in your area in the near future. While we're there, if the utility-owned or customer-owned portion of the service line (see diagram) is made of lead[1], we'll work with you to replace it. Best of all, we'll cover the costs to replace your lead service line.

REPLACING LEAD SERVICE LINES HELPS MANAGE THE RISK OF POTENTIAL EXPOSURE TO LEAD IN DRINKING WATER.

PENNSYLVANIA AMERICAN WATER

WE KEEP LIFE FLOWING®

Utility-owned vs. Customer-owned Portion of the Service Line



Please note: This diagram is a generic representation. Variations may apply.

INFRASTRUCTURE. ONE MORE WAY WE KEEP LIFE FLOWING.

CONTACT US

PLEASE REVIEW THE ENCLOSED INFORMATION and contact us as soon as possible, because we need your input on this important project impacting your water service.

CONTACT/PROJECT MANAGER

PHONE

EMAIL

PLEASE ALLOW US TO REPLACE YOUR SERVICE LINE AT THIS TIME IF IT'S MADE OF LEAD[1]

Here's what to expect...

CONTACT US

Please contact the project manager at the number provided on the front page. We would like to explain the process and answer your questions.

WE'LL CHECK YOUR LINE

With your permission, we will check if your service line is made of lead. We may need your signed approval.

This may involve us inspecting your service line where it enters your home and connects to your water meter.

WE'LL LET YOU KNOW IF YOUR LINE IS LEAD

We will inform you if lead pipe is found.

And, if it is, we'll need your approval to replace it. Replacing the entire lead portion of the service line at this time can help you better manage your risk of potential exposure to lead in drinking water.

AGREE TO HAVE YOUR LEAD SERVICE LINE REPLACED

First, we'll meet with you to discuss the project specifics and how to prepare the work area.

Then, before we can proceed, the property owner must sign and return an agreement to allow our contractor to work on the property.

WE'LL REPLACE THE LEAD SERVICE LINE

Our contractor will install the new water service line. This generally can be done in one day.

Typically, there is up to a 4 hour interruption of water service while we perform the work. You may want to store a few gallons of water for drinking in preparation.

Any needed lawn, driveway or sidewalk restoration work may take additional days, but there's no need for you to be home while we complete the restoration.

FLUSH YOUR PLUMBING

Your household plumbing will need to be flushed to remove debris and any pipe scale that may have come loose during construction.

This step should be completed BEFORE you consume tap water or use hot water. We'll also ask you to remove and clean all faucet aerators at this time.

We'll provide you with printed instructions for initial and ongoing maintenance flushing. Our contractor will coordinate with you to perform the initial flush.

It is very important to complete proper flushing following the replacement.

USE PITCHER FILTER/COLLECT A SAMPLE

Please continue to use the water pitcher filter we provided to you prior to the start of construction. The water pitcher is rated to remove lead and should be used for six months following the replacement of your lead service line.

Three months after the service line replacement, we'll send you a postcard with information on how to arrange to have your water tested for lead at no additional cost to you. Your test results will be provided once they are available.

[1]Galvanized lines that follow lead piping are also eligible for the replacement program.

LEARN MORE

- **ONLINE:** To learn more about lead, our lead service line replacement program or tips on what you can do to reduce the potential exposure to lead, scan the QR code or visit us online at **pennsylvaniaamwater.com/leadfacts**.
- **CONTACT US:** For questions about the service line replacement project in your area, contact the project manager provided on the front page. General questions about the program can be sent to leadfreepa@amwater.com.
- **FOR MORE INFORMATION ON DRINKING WATER IN GENERAL:** Call the USEPA's Safe Drinking Water Hotline at 1-800-426-4791.

To learn more about lead in drinking water, scan the QR code.

ABOUT LEAD

Pennsylvania American Water tests for lead in drinking water at our treatment facilities and at representative sites in the distribution system, and we comply with drinking water standards.

HEALTH EFFECTS OF LEAD

According to the U.S. Environmental Protection Agency, exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

Note: We are not selling any services in this program.

PREGUNTAS FRECUENTES

¿POR QUÉ DEBERÍA PARTICIPAR EN ESTE PROGRAMA? Su decisión de reemplazar la antigua tubería de servicio de plomo es una decisión importante. Los Centros para el Control de Enfermedades (CDC) de EE. UU. y la Agencia de Protección Ambiental (EPA) de EE. UU. recomiendan que se reemplace la tubería de servicio de plomo en su totalidad en lugar de reemplazar solo una parte de ella. Ya que el reemplazo de una sola parte de la tubería de servicio de plomo puede incrementar potencialmente la exposición al plomo a través del agua potable, debería reemplazarse toda la tubería de servicio.

¿QUÉ INCLUYE EL REEMPLAZO? Esto incluye el reemplazo de cualquier porción de la tubería de servicio desde la tubería de agua principal hasta una válvula dentro de su casa que esté fabricada con plomo (hasta 5 pies en el interior de su casa). Si no hay una válvula existente, instalaremos una según sea necesario.

TODAS LAS TUBERÍAS DOMÉSTICAS SON DE PLOMO. ¿TAMBIÉN LAS REEMPLAZARÁN? No, este proyecto solo reemplaza las tuberías de plomo del servicio de agua que van desde la tubería de agua principal hasta la primera válvula, hasta 5 pies en el interior de su casa.

¿USTEDES CUBRIRÁN ALGÚN COSTO SI REEMPLAZO MI TUBERÍA DE SERVICIO DE PLOMO ANTES O DESPUÉS DE LO PREVISTO EN SU PROYECTO? Por ahora, el programa solo se ofrece mientras se moderniza nuestra infraestructura del servicio de agua. Si decide reemplazar la tubería de servicio en una fecha anterior o posterior, no podemos garantizar que vayamos a cubrir los costos. Los clientes siempre tienen la opción de reemplazar su parte de la tubería de servicio a través de su propio contratista a su cargo, no reembolsado por la compañía. En estos casos, es muy importante que el propietario de la residencia y/o su plomero se comuniquen con nosotros con anticipación.

¿DEBO ESTAR EN CASA? Necesitará estar en su casa durante una parte del trabajo. Para retirar toda la tubería de servicio de plomo, necesitaremos acceder a la tubería existente que es de su propiedad en el lugar donde ingresa a su casa. También necesitará estar en su casa para purgar las tuberías una vez concluido el proyecto.

¿EL SERVICIO DE AGUA SE INTERRUMPIRÁ DURANTE ESTE TRABAJO? Es posible que se produzca una interrupción breve y temporal del servicio de agua durante el reemplazo de la antigua tubería de servicio de plomo por la nueva. Haremos todo lo posible por reducir al mínimo cualquier interrupción.

¿POR QUÉ DEBO PURGAR TODAS LAS TUBERÍAS DOMÉSTICAS DESPUÉS DEL REEMPLAZO DE LA TUBERÍA DE PLOMO? Se ha demostrado que la sustitución de una tubería de servicio de plomo puede provocar un aumento temporal de los niveles de plomo. Al purgar las tuberías domésticas, puede eliminar cualquier residuo que haya quedado durante la construcción. Los residuos de las tuberías pueden contener plomo; por lo tanto, es importante que las purgue.

SI DECIDO PARTICIPAR, ¿CUÁNDO SE PUEDE PROGRAMAR ESTE TRABAJO? Es necesario que realicemos este trabajo, ya que estamos mejorando la infraestructura de agua en su área. Nos comunicaremos con usted para programar un horario que le sea conveniente.

EN LUGAR DE REEMPLAZAR LA TUBERÍA DE PLOMO, ¿PUEDO UTILIZAR UN FILTRO PARA ELIMINAR EL PLOMO? El uso de filtros clasificados para eliminar el plomo puede ser eficaz si se mantiene adecuadamente. La eliminación de toda la tubería de servicio de plomo eliminará el origen del plomo y ayudará a reducir la posible exposición al plomo en el agua potable. La EPA de EE. UU. recomienda utilizar una jarra con filtro para el agua potable durante seis meses después del reemplazo de una tubería de servicio de plomo para reducir la posible exposición al plomo, que suministramos a nuestros clientes sin ningún costo antes de la sustitución de una tubería de servicio de plomo.

PASOS QUE USTED PUEDE TOMAR PARA REDUCIR LA POSIBLE EXPOSICIÓN AL PLOMO EN EL AGUA POTABLE

El plomo no se puede ver, oler o degustar, y hervir el agua no elimina el plomo. Estas son las medidas que usted puede tomar para reducir la posible exposición si hay presencia de plomo en las tuberías de su casa.

1. **Reemplace la tubería de servicio de plomo.** Si posee una tubería de servicio de plomo, reemplácela.
2. **Purgue sus grifos.** Cuanto más tiempo el agua permanezca estancada en las tuberías de su casa, más cantidad de plomo podría contener. Si el agua de su grifo no se ha utilizado durante más de seis horas, purgue los grifos con agua fría entre 30 segundos y 2 minutos antes de beber o usar el agua para cocinar. Para conservar el agua, recoja el agua que deje correr durante la purga y úsela para regar sus plantas.
3. **Use agua fría para beber y cocinar.** El agua caliente puede contener más plomo que el agua fría. Si necesita usar agua caliente para cocinar, caliente el agua fría en la estufa o en el microondas.
4. **Retire y limpie los aireadores de los grifos con frecuencia.**
5. **Revise si su tubería interna o grifos contienen plomo y remplace cualquiera que lo contenga.** Busque la etiqueta “Sin plomo” al reemplazar o instalar accesorios de plomería.
6. **Siga las instrucciones del fabricante para reemplazar los filtros de agua** en aparatos del hogar, como refrigeradores y máquinas de hielo, y en unidades de tratamiento de agua de la casa y jarras. Busque filtros con certificación NSF 53.
7. **Purgue después del cambio de tuberías.** Los cambios en la tubería de servicio, el medidor o las tuberías interiores pueden ocasionar que haya sedimentos, que pueden contener plomo, en su suministro de agua. Retire los aireadores de cada grifo y deje correr el agua de 3 a 5 minutos.

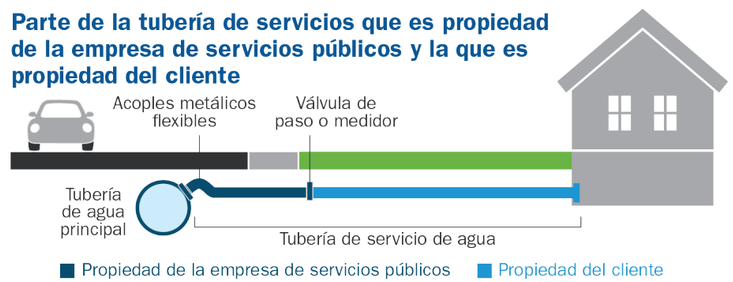
PA.SLR.1PF 06-2024

AVISO IMPORTANTE ACERCA DEL SERVICIO DE AGUA Y EL PLOMO

Pennsylvania American Water modernizará la infraestructura del servicio de agua en su área en un futuro cercano. Mientras hacemos esto, si la porción de tubería de servicio que es propiedad de la empresa de servicios públicos o propiedad del cliente (consulte el diagrama) está fabricada con plomo[1], nos gustaría colaborar con usted para reemplazarla. Y lo mejor de todo: cubriremos los costos para reemplazar su tubería de servicio de plomo.

REEMPLAZAR LAS TUBERÍAS DE SERVICIO DE PLOMO AYUDA A CONTROLAR EL RIESGO DE LA POSIBLE EXPOSICIÓN AL PLOMO EN EL AGUA POTABLE.

Parte de la tubería de servicios que es propiedad de la empresa de servicios públicos y la que es propiedad del cliente



Tenga en cuenta lo siguiente: este diagrama es una representación genérica. Pueden existir variantes.

[1] Las tuberías galvanizadas que llevan a tuberías hechas de plomo también son elegibles para el programa de reemplazo.

INFRAESTRUCTURA. UNA FORMA MÁS DE HACER QUE LA VIDA FLUYA.

PENNSYLVANIA AMERICAN WATER

WE KEEP LIFE FLOWING®

COMUNÍQUESE CON NOSOTROS

ANALICE LA INFORMACIÓN ADJUNTA y comuníquese con nosotros cuanto antes, ya que necesitamos su opinión en este importante proyecto que afecta su servicio de agua.

_____
CONTACTO/GERENTE DE PROYECTO

_____
TELÉFONO

_____
EMAIL

PERMÍTANOS REEMPLAZAR SU TUBERÍA DE SERVICIO EN ESTE MOMENTO SI ESTÁ FABRICADA CON PLOMO[1]

Puede esperar lo siguiente...

COMUNÍQUESE CON NOSOTROS

Comuníquese con el gerente de proyecto al número provisto en la portada. Nos gustaría explicarle el proceso y responder a sus preguntas.

REVISAREMOS SU TUBERÍA

Con su autorización, revisaremos si su tubería de servicio está fabricada con plomo. Puede que necesitemos su aprobación firmada.

Esto podría implicar la inspección del punto de entrada de la tubería de servicio a su casa y su conexión con el medidor de agua.

LE INFORMAREMOS SI LA TUBERÍA ES DE PLOMO

Le informaremos si encontramos una tubería de plomo.

De ser así, necesitaremos su aprobación para reemplazarla. Reemplazar toda la tubería de servicio que sea de plomo en este momento puede ayudarle a controlar mejor el riesgo de la posible exposición al plomo en el agua potable.

PERMÍTANOS REEMPLAZAR SU TUBERÍA DE SERVICIO DE PLOMO

Primero, nos reuniremos con usted para analizar los detalles del proyecto y cómo preparar el área de trabajo.

Luego, antes de poder comenzar, el propietario del edificio debe firmar y entregar un acuerdo que permita a nuestro contratista trabajar en la propiedad.

REEMPLAZAREMOS LA TUBERÍA DE SERVICIO DE PLOMO

Nuestro contratista instalará la nueva tubería de servicio de agua. Generalmente, esto se realiza en un día.

Por lo general, se produce una interrupción del servicio de agua de hasta 4 horas mientras realizamos el trabajo. Se recomienda que almacene algunos galones como prevención.

Cualquier trabajo de restauración necesario en el jardín, la entrada para automóviles o la acera puede requerir días adicionales, pero no es necesario que usted se encuentre en su casa mientras completamos la restauración.

PURGUE LAS TUBERÍAS

Será necesario que purgue las tuberías domésticas para eliminar cualquier residuo e impureza que se haya desprendido de las tuberías durante la construcción.

Este paso debe completarse ANTES de consumir agua del grifo o utilizar agua caliente. También le pediremos retirar y limpiar todos los aireadores de los grifos para ese momento.

Le ofreceremos instrucciones impresas de cómo purgar inicialmente las tuberías y como purgarlas periódicamente. El contratista coordinará con usted para llevar a cabo la purga inicial de las tuberías.

Es de suma importancia que realice una purga adecuada tras el trabajo de reemplazo.

UTILICE JARRAS CON FILTRO Y RECOJA UNA MUESTRA

Siga utilizando la jarra de agua con filtro que le proporcionamos antes del inicio de la construcción. La jarra de agua está diseñada para eliminar el plomo y se debe utilizar durante los seis meses siguientes a la sustitución de la tubería de servicio de plomo.

Tres meses después del reemplazo de la tubería de servicio, le enviaremos una tarjeta postal con información sobre cómo solicitar una prueba del agua para detectar la presencia de plomo sin ningún costo adicional. Los resultados de la prueba se le proporcionarán cuando estén disponibles.

[1] Las tuberías galvanizadas que llevan a tuberías hechas de plomo también son elegibles para el programa de reemplazo.

MÁS INFORMACIÓN

- **EN LÍNEA:** para conocer más sobre el plomo, nuestro programa de reemplazo de la tubería de servicio de plomo, o para obtener consejos sobre lo que puede hacer para reducir la posible exposición al plomo, escanee el código QR o visítenos en línea en **pennsylvaniaamwater.com/leadfacts**.
- **COMUNÍQUESE CON NOSOTROS:** si tiene dudas sobre el proyecto de reemplazo de la tubería de servicio en su área, comuníquese con el gerente del proyecto provisto en la portada. Las preguntas relacionadas con el programa se pueden enviar a leadfreepa@amwater.com.
- **PARA MÁS INFORMACIÓN SOBRE EL AGUA POTABLE EN GENERAL:** llame a la línea de ayuda de Agua Potable de la Agencia de Protección Ambiental (EPA, por sus siglas en inglés) de EE. UU. al 1-800-426-4791.

Para obtener más información sobre el plomo en el agua potable, escanee el código QR.

ACERCA DEL PLOMO

Pennsylvania American Water examina la presencia de plomo en el agua potable en nuestras instalaciones de tratamiento, y en sitios representativos del sistema de distribución, y cumplimos con los estándares de agua potable.

EFECTOS DEL PLOMO EN LA SALUD

De acuerdo con la Agencia de Protección Ambiental de EE. UU., la exposición al plomo a través del agua potable puede causar graves efectos sobre la salud de todos los grupos etarios. Tanto el coeficiente intelectual como la capacidad de atención en bebés y niños pueden verse afectados. La exposición al plomo puede causar nuevos problemas de aprendizaje y comportamiento o agravar los existentes. Los hijos de las mujeres expuestas al plomo antes o durante el embarazo pueden tener mayor riesgo de sufrir estos efectos adversos sobre la salud. Los adultos pueden aumentar su riesgo de sufrir una enfermedad cardíaca, presión arterial alta, problemas renales o del sistema nervioso.

Nota: no vendemos ningún servicio en este programa.

PENNSYLVANIA AMERICAN WATER

Dear Pennsylvania American Water Customer:

This packet includes critical information related to replacement of your service line. It is important that you read this information. One of the most important next steps you can take is to thoroughly flush your household plumbing and clean faucet aerators to remove any particles that may have come loose during replacement in case they contain lead. Instructions on how to properly flush your plumbing are enclosed. It is important to follow the instructions carefully, especially the length of time required for the flush – 30 minutes may seem like a long time, but that amount of time is based on industry standards such as those recommended by the American Water Works Association.

Replacement of a lead service line may result in a temporary increase in lead levels in drinking water. For that reason, Pennsylvania American Water has provided you with a filter for use at your home. It is important you use the filter, following the instructions provided by the manufacturer, before drinking, cooking, making baby formula, filling pet bowls, or using appliances such as ice makers and filtered water dispensers. The water filter provided is good for six months of typical water use. We will be contacting you in three months to sample the water at your home. Scan the QR code to learn more about pitcher filters. To order additional pitcher filters, view the question, “What do I do when the ‘replace filter’ light on my filter is lit? What if I am out of cartridges?” You can also visit **pennsylvaniaamwater.com/leadfacts** and select Pitcher Filter FAQs.

It is important that you use the filter as instructed. According to the U.S. EPA, exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

Providing safe, reliable water service is our top priority. Pennsylvania American Water regularly tests for lead at the end of its treatment process. Testing has shown that lead is not an issue in the water exiting our water treatment facilities. We also conduct tests in our distribution system in accordance with the EPA regulatory requirements. In addition, we take steps to reduce the potential of lead leaching from service lines and household plumbing into the water by managing the pH levels in the water leaving our treatment facilities and adding a corrosion inhibitor where needed. To learn more, visit us online at pennsylvaniaamwater.com/leadfacts.

If you have any questions about these materials, please contact us at leadfreePA@amwater.com.

Sincerely,
Pennsylvania American Water

WHAT TO DO AFTER YOUR LEAD SERVICE LINE HAS BEEN REPLACED

Today, we replaced all or a portion of the service line at your property because it contained lead or galvanized pipe.[1] Your household plumbing will need to be flushed to remove any sediment or debris like pipe scale that may have come loose during replacement. We will help you flush your plumbing.

Please follow these important instructions regarding immediate and maintenance flushing, as well as use of the pitcher filter we provided.

IMMEDIATE WHOLE HOUSE FLUSH

BEFORE you consume tap water or use hot water, flush your household plumbing. Consuming includes drinking, cooking, making baby formula, filling pet bowls or using appliances requiring water, such as icemakers and filtered water dispensers.

1. Find the closest **cold water** tap to where the water line comes into the home (such as an outside hose bib or laundry/utility sink). If using an outside faucet, please use a hose to safely direct water away from your home. **If applicable:** Remove the faucet aerator and bypass any home water treatment unit(s), per manufacturer's instructions.
2. Fully open the cold water tap and let the water run for **at least 30 minutes**.

Next, flush the remainder of your household plumbing as follows[2]:

3. Find all cold water faucets that will drain properly into a sink/basin, tub, shower or laundry tub, and remove any aerators and screens from the faucets that will be flushed. **If applicable:** Remove any filter devices.
4. Beginning in the lowest level of the home and working your way up, fully open the cold water taps throughout the home. Be sure to monitor all taps and drains to prevent overflows.
5. Let the water run for **at least 30 minutes** at the last tap you open on the top floor.
6. Turn off each tap starting with the taps on the top floor and work your way to the bottom floor. Clean and replace the aerators on faucets as you go.

USE THE PITCHER FILTER PROVIDED

Use the pitcher filter provided for all drinking water use, such as cooking, preparing food, making baby formula, making ice and filling pet bowls, for the next **6 months**. Replacing a lead service line has been shown to potentially cause temporary increases in lead levels. Using a pitcher filter designed to remove lead from drinking water can help reduce your overall exposure to lead. Please review the manufacturer's instructions on proper use of the filter and contact us if you need additional filter cartridges.

About 3 months after the service line replacement: We'll send you a postcard with information on how to arrange to have your water tested for lead at no additional cost to you. Your test results will be provided once they are available.

DAILY AND MONTHLY MAINTENANCE FOR 6 MONTHS

Other steps to help manage your potential exposure include:

- **DAILY (for 6 months):** Each morning or any time the water in the faucet has gone unused for more than 6 hours, flush your tap for **5 minutes** before using any water for drinking, cooking or making infant formula.
- **MONTHLY (for 6 months):** Remove and clean all faucet aerators. After 6 months, clean aerators twice a year.

If we had to excavate the road, yard, sidewalk or driveway: We will provide a temporary surface restoration and, weather permitting, complete the permanent restoration work in approximately 90 days to allow time for the soil to settle. **Note:** Permanent restoration work may be delayed during winter months (from mid-October through early April) depending on regulations related to paving. When this occurs, we will complete the restoration work as soon as possible in the spring.

[1] Galvanized lines that follow lead piping are also eligible for the replacement program.

[2] Source: American Water Works Association (AWWA)

Please note: Homeowners are responsible for their in-home plumbing. Plumbing fixtures like faucets, valves and solder can contain small amounts of lead. Flushing these types of fixtures can help reduce lead exposure. If you have concerns about the plumbing in your home, you will need to contact a licensed plumber.

PA.SLR.7PF 06-2024

7PF

¿QUÉ HACER DESPUÉS DE SUSTITUIR LA TUBERÍA DE SERVICIO DE PLOMO?

Hoy hemos sustituido toda o parte de la tubería de servicio de su propiedad porque contenía plomo o tuberías galvanizadas.[1] Será necesario purgar las tuberías de su casa para eliminar cualquier sedimento o escombro, como residuo de las tuberías que pueda haberse desprendido durante la sustitución. Ayudaremos a purgar sus tuberías.

Siga estas instrucciones esenciales relacionadas a la purga inmediata y de mantenimiento, así como al uso del jarra con filtro que le proporcionamos.

PURGA INMEDIATA DEL AGUA DE TODA LA CASA

ANTES de consumir agua del grifo o utilizar agua caliente, purgue las tuberías de su casa. El consumo incluye el agua para beber, cocinar, preparar fórmula para bebés, llenar los platos de agua para las mascotas o utilizar electrodomésticos que requieran agua, como las máquinas de hielo y los dispensadores de agua filtrada.

1. Localice el grifo de agua fría más cercano a la tubería por donde llega el agua a su casa (puede ser el grifo para la manguera afuera de su casa, o un lavabo). Si utiliza un grifo exterior, use una manguera para dirigir el agua en sentido opuesto a su casa. **Si corresponde:** retire el aireador del grifo y evite cualquier unidad de tratamiento de agua doméstica, según las instrucciones del fabricante.
2. Abra completamente el grifo de agua fría y deje que el agua corra por lo **menos 30 minutos.**

Después, purgue el resto de la plomería de su hogar de la siguiente forma:[2]

3. Localice todos los grifos de agua fría que puedan drenarse debidamente en un fregadero o lavamanos, bañera, ducha o lavadero, y retire los aireadores y rejillas de los grifos que vayan a ser purgados. **Si corresponde:** retire cualquier dispositivo de filtros.
4. Empezando en el piso más bajo en su casa y subiendo uno a uno, abra completamente los grifos de agua fría en toda la casa. Asegúrese de vigilar todos los grifos y desagües para evitar que el agua se desborde.
5. Deje que el agua corra por lo **menos 30 minutos** a partir del momento en que abrió el último grifo en el piso superior.
6. Cierre todos los grifos comenzando por los grifos de los pisos superiores y vaya bajando hasta la planta baja. Limpie y vuelva a colocar los aireadores de los grifos a medida que vaya bajando.

UTILIZAR LA JARRA CON FILTRO SUMINISTRADA

Utilice la jarra con filtro suministrada para todos los usos del agua potable, como cocinar, preparar alimentos, preparar fórmula para bebés, hacer hielo y llenar los platos de las mascotas, durante los próximos 6 meses. Se ha demostrado que la sustitución de una tubería de servicio de plomo puede provocar un aumento temporal de los niveles de plomo. Utilizar una jarra con filtro diseñada para eliminar el plomo del agua potable puede ayudar a reducir su exposición general al plomo. Revise las instrucciones del fabricante sobre el uso correcto del filtro y póngase en contacto con nosotros si necesita cartuchos de filtro adicionales.

Tres meses después de la sustitución de la tubería de servicio: enviaremos una tarjeta postal con información sobre cómo solicitar una prueba del agua para detectar la presencia de plomo sin ningún costo adicional. Los resultados de la prueba se le proporcionarán cuando estén disponibles.

MANTENIMIENTO DIARIO Y MENSUAL DURANTE SEIS MESES

Otros pasos para ayudar a controlar la posible exposición son:

- **DIARIAMENTE (durante seis meses):** todas las mañanas o cada vez que no se haya usado el agua del grifo durante más de seis horas, purgue el grifo durante 5 minutos antes de usar el agua para beber, cocinar o preparar fórmula para bebés.
- **MENSUALMENTE (durante seis meses):** retire y limpie todos los aireadores de los grifos. Pasados 6 meses, limpie los aireadores dos veces al año.

Si fuera necesario excavar la calle, el jardín, la acera, o la entrada para automóviles: haremos una restauración temporal de la superficie y, si las condiciones climáticas lo permiten, completaremos el trabajo de restauración permanente en aproximadamente 90 días, a fin de permitir que el suelo se asiente. Nota: la obra de restauración permanente podría retrasarse durante los meses de invierno (desde a mediados de octubre hasta principios de abril), dependiendo de las regulaciones relacionadas con la pavimentación. Si esto ocurre, completaremos el trabajo de restauración lo antes posible durante la primavera.

Para emergencias, estamos disponibles las 24 horas, los 7 días de la semana al 1-800-565-7292.

Línea de ayuda de Agua Potable Segura de la Agencia de Protección Ambiental de Estados Unidos (USEPA, por sus siglas en inglés): 1-800-426-4791

National Lead Information Center (Centro Nacional de Información acerca del Plomo): 1-800-424-LEAD

[1] Las tuberías galvanizadas que llevan a tuberías hechas de plomo también son elegibles para el programa de reemplazo.

[2] Fuente: Asociación Estadounidense de Obras Hidráulicas (American Water Works Association o AWWA)

Tenga en cuenta lo siguiente: los propietarios de la residencia son responsables por la tubería de sus hogares. Los accesorios de plomería por ejemplo los grifos, las válvulas y la soldadura pueden contener pequeñas cantidades de plomo. La purga de este tipo de accesorios puede ayudar a reducir la exposición al plomo. Si le preocupa la tubería de su casa, debe ponerse en contacto con un plomero autorizado.

PENNSYLVANIA AMERICAN WATER

WE KEEP LIFE FLOWING®

REPORT YOUR WATER LINE MATERIAL

NEW

WATCH OUR VIDEO to learn more about our interactive map!

Pennsylvania American Water is committed to providing safe, reliable water service. As part of this commitment, we're replacing lead and certain galvanized service lines over the course of the next several years.

HELP US IDENTIFY YOUR SERVICE LINE MATERIAL IN 3 EASY STEPS

We are asking customers to self-identify and report the material of their customer-owned service line that brings water into their home or business. You can assess your service line material where it enters your home—typically in your basement, crawl space or garage—by following these three simple steps:

3 EASY STEPS

1. **SCAN THE QR CODE OR VISIT pennsylvaniaamwater.com/leadfacts**
   Search for your address. If the customer-owned service line material is labeled unknown or if it's identified incorrectly, help us to identify the material.
2. **FOLLOW** the instructions, answer a few questions and upload a photo of your service line material.
3. **CLICK "SUBMIT"**!

Please note: If your service line contains lead, it does not mean you cannot use water as you normally do. Pennsylvania American Water tests for lead in accordance with regulatory requirements and our water meets water quality regulations, including those related to lead. For steps you can take to reduce your potential exposure to lead, visit pennsylvania amwater.com/leadfacts.

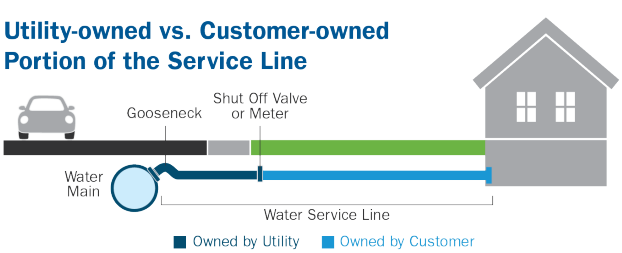
DID YOU KNOW...

The most common source of lead in tap water is from the customer's plumbing and their water service line. Homes built before 1930 are more likely to have lead plumbing systems. Additionally, homes built before January 1991 are more likely to have lead-soldered joints.

WHAT IS A WATER SERVICE LINE?

A water service line is a pipe that connects your house or building to the water main in the street. Typically, the utility owns the portion of the service line from the main in the street to the shut off valve (generally located near the curb). The property owner owns the service line from the shut off valve to the inside plumbing.

Utility-owned vs. Customer-owned Portion of the Service Line



Please note: This diagram is a generic representation. Variations may apply.

PA.SLR.5 06-2024

We're investing in your neighborhood.

WATER MAIN REPLACEMENT PROJECT TO START SOON

At Pennsylvania American Water, we're committed to providing our customers with safe, reliable water service. This requires investing in our treatment and distribution systems, and one of these projects is about to take place near you. The project involves replacing aging water main, as well as utility-owned service lines and fire hydrants along the pipeline route (see reverse for more information about service lines).

PROJECT OVERVIEW AND WHAT YOU CAN EXPECT

- **Perform test pits at the curb.** Before starting the main replacement, we may need to perform a test pit at the curb by unearthing your service line to identify or confirm its material.
- **Install, disinfect, test and place new main into service.** While we interconnect the new main to the distribution system, there may be a temporary service interruption. You may also experience a slight discoloration of water. If this happens, run the water until it is clear.
- **Replace utility-owned service lines and transfer customers to the new main.** Once the main is installed, we'll return to connect customers to the new main. This may involve replacing utility-owned service lines. If we're replacing the utility-owned service line at your property, typically there is a 30- to 60-minute interruption of service while the contractor connects the new service line. We'll attempt to notify you 24 hours in advance. We'll also notify you on the day the service line is replaced with instructions on how to flush your household plumbing prior to using water. It is important that you read and follow these instructions. If you're not home, we'll leave the instructions at your front door. You may want to consider storing a few gallons of water for drinking and cooking during the service line work.
- **We'll return to perform final paving and any restoration of concrete, driveway, grass and landscaping (see other side).**

Our crews will work as quickly as possible to shorten the length of these temporary inconveniences. We appreciate your patience and understanding during this project.

ABOUT THE PROJECT

Investment:	We're investing $XXX,XXX in your neighborhood.
What:	We're replacing XXX feet of aging pipe that was installed in the 19XXs with X-inch ductile iron main.
Where:	ABC Road (from CDF Street to HIJ Drive) and LMN Street (from CDF Street to HIJ Drive)
When:	Weather permitting, our contractor, ABC Contracting, will begin work on or about the week of Month X and be completed by the end of Month. Final street restoration will be will be completed in the spring/fall of 202X.
Work Hours:	X a.m. to X p.m., Monday through Friday. Work on weekends and evenings is not expected unless required to maintain the project schedule.
Project Contact:	Contact Name, Contact Title, XXX-XXX-XXXX

We're committed to replacing all lead[1] service lines.
We encourage customers to visit **pennsylvaniaamwater.com/leadfacts.**

WHAT'S YOUR SERVICE LINE MADE OF?

Over the years, plumbers have used different service line materials, including copper, PVC, lead, galvanized steel and others. Scan the QR code below for tips on how to identify and report your service line material. Additionally, if we find lead piping during our main replacement project, we'll contact you to discuss replacing your service line at no direct cost to you. Learn more at **pennsylvaniaamwater.com/leadfacts**.

Scan here for tips on how to identify and report what your service line is made of.

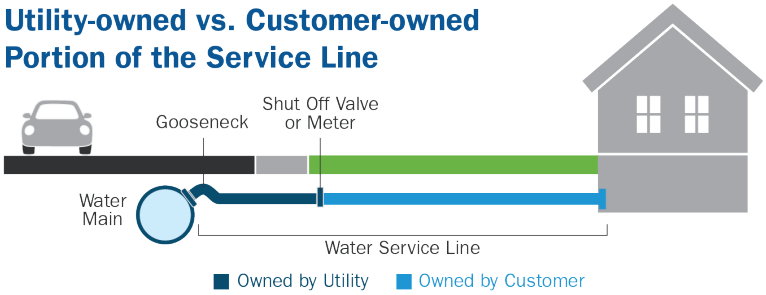
[1] Galvanized lines that follow lead piping may also be eligible for the replacement program.

ABOUT SERVICE LINES

There are two components of a service line.

- **Utility-owned portion of the service line:** This portion of the service line extends from the company's main in the street to the company shut off valve (generally located near the curb).
- **Customer-owned portion of the service line:** The property owner is responsible for this portion. It extends from the company shut off valve to the inside plumbing.

Utility-owned vs. Customer-owned Portion of the Service Line



Please note: This diagram is a generic representation. Variations may apply.

If we had to excavate the road, yard, sidewalk or driveway: We will provide a temporary surface restoration and, weather permitting, complete the permanent restoration work in approximately 90 days to allow time for the soil to settle. **Note:** Permanent restoration work may be delayed during winter months (from mid-October through early April) depending on regulations related to paving. When this occurs, we will complete the restoration work as soon as possible in the spring.

TRAFFIC FLOW AND ACCESSIBILITY

Sections of street where construction is taking place may be closed during work hours. All traffic control will be coordinated with local police or road authorities. Motorists should use caution, obey traffic signs and follow detour routes when driving in the area.

SITE MAINTENANCE

The project site will be maintained and cleaned each day before contractors have completed work.

NOISE

As with any construction project, some noise will be unavoidable with this project. We apologize for any inconvenience and appreciate your understanding and cooperation.

HOW SHOULD WE REACH YOU IN AN EMERGENCY?

Pennsylvania American Water uses a mass-notification system to keep customers informed about water-related emergencies and alerts. Log on to MyWater, our online self-service portal at **amwater.com/mywater** to make sure your contact information is up to date. While you're there, tell us how you prefer to receive our notifications: by phone, text and/or email.*

**Standard text, data and phone rates may apply.*

RIPPLE EFFECT: Investments Create Jobs

Infrastructure upgrades are important investments in public health and safety; they also help support the economic health of the communities we serve. Economic impact studies show that for every $1 million invested in water infrastructure, upwards of 15 jobs are generated throughout the economy.

It's been about three months since we replaced the water service line at your property.*

Now, we'd like to test your water at no additional cost.

We'll mail you a test kit with instructions on how to collect a sample, along with a prepaid label to send the sample back to our certified laboratory for lead testing. We will provide the results of the sample once they are available.

TO REQUEST A FREE LEAD TEST KIT

- **Online:** Scan the QR code or visit amwater.com/TestKitRequest
- **By Mail:** Please detach and complete the request form below, add postage and mail.

YOUR UNIQUE TEST KIT ID#: [Column A (WorkOrderID)]

*The U.S. Environmental Protection Agency requires us to offer to test your water for lead three to six months following a lead or galvanized service line replacement.

Han pasado unos tres meses desde que reemplazamos la línea de servicio de agua en su propiedad.*

Ahora nos gustaría analizar su agua sin costo adicional.

Le enviaremos por correo postal un kit de detección con instrucciones sobre cómo recoger una muestra, junto con una etiqueta prepagada para que envíe la muestra a nuestro laboratorio certificado para hacer la prueba de detección de plomo. Le entregaremos los resultados de la muestra cuando estén disponibles.

PARA SOLICITAR UN KIT GRATUITO DE DETECCIÓN DE PLOMO

- **En línea:** Escanee el código QR o visite amwater.com/TestKitRequest
- **Por correo postal:** Separe y llene el siguiente formulario de solicitud, cubra los gastos postales y envíelo por correo postal.

SU NÚMERO DE ID ÚNICO DE KIT DE DETECCIÓN: [Column A (WorkOrderID)]

*La Agencia de Protección Ambiental de EE. UU. nos exige que le ofrezcamos realizar una prueba de detección de plomo en el agua entre tres y seis meses después del reemplazo de una tubería de servicio de plomo o galvanizada.

04-2024

IT'S TIME TO TEST YOUR WATER FOR LEAD

WHAT'S INCLUDED IN YOUR KIT

1. Bottle #1 and Bottle #5. These are important! They are the water samples you will be sending back to us for analysis.
2. Water Collection Bags #2, #3 and #4. While these are needed for the process, you can reuse or discard them after sampling.
3. Sealable plastic bag
4. Prepaid shipping label
5. Box the kit came in (Be sure to save it, because this will be used to return the sample to us.)
6. Tape to reseal the box

IMPORTANT: This sampling process is easier to understand if you scan the QR code to WATCH THE VIDEO BEFORE YOU BEGIN!

If you have trouble scanning the QR code, visit: **www.amwater.com/watersample**

1 BEFORE YOU SAMPLE

IT'S IMPORTANT NOT TO USE ANY WATER IN THE DWELLING FOR AT LEAST 6 HOURS PRIOR TO TAKING THE WATER SAMPLE. Do not flush toilets and be sure to turn off any automatic ice cube makers during this period. Record the date and time water was last used in the dwelling in the form below.

2 CHOOSE YOUR FAUCET

Select a faucet where water is most frequently consumed. Typically this is the kitchen or a bathroom sink. Please do NOT remove the faucet aerator prior to taking the sample and do not sample a dripping faucet.

3 PREP TO COLLECT YOUR SAMPLE

- Set the sample containers (2 bottles and 3 water collection bags) on the countertop in order from 1 through 5 within arm's reach of the faucet.
- Uncap the bottles and **tear off the top of the collection bags at the perforation** and use tabs to open the top of the bags.

4 TAKE YOUR SAMPLE

IMPORTANT: Once you begin, keep the water running until you fill all five containers in order from #1 to #5. Try to lose as little water as possible while switching to the next container.

1. Position Bottle #1 under the faucet and gently turn on the **COLD** water. Fill bottle **above** the fill line and place it on the counter. Be careful not to touch the bottle to the faucet or to touch the inside of the bottle with your hands.
2. Fill collection bags #2, #3 and #4. Once filled, bags can be placed in the sink, allowing the water to go down the drain.
3. Fill Bottle #5 **above** the fill line and place it on the counter.
4. Turn off the water.
5. Tightly cap Bottle #1 and Bottle #5. Check to make sure they aren't leaking.
6. Place both bottles in the provided sealable plastic bag. Place it in the box and seal the bag.

NOTE: If you need to start over, no problem! Empty all containers and start over any time after the water has not been used in your dwelling for at least 6 hours.

5 COMPLETE THE FORM

- Fill out the Water Sample Collection Form in its entirety.
- Place this **entire page** in the box. Please do not cut out form.

6 TO HELP ENSURE ACCURATE RESULTS, MAIL US YOUR SAMPLE WITHIN TWO CALENDAR DAYS AFTER COLLECTING IT

- Close box and seal with provided tape.
- Peel and place the prepaid return shipping label so that it covers the label on the box.
- Mail the box back to us by placing it in your mailbox or taking it to your local post office.

We'll analyze your water sample and contact you with the results when they are available!

WATER SAMPLE COLLECTION FORM

Address where sample taken: [Insert Address] **Apartment # (if applicable):** _____

Sample taken from: ☐ Kitchen faucet ☐ Frequently used bathroom faucet

When the water was last used in the dwelling prior to taking the sample (this should be at least 6 hours prior to collecting your water sample): Date _____Time_____a.m./p.m. (circle one)

When the water sample was taken: Date _____Time_____a.m./p.m. (circle one)

Risk Mitigation Measures for Water Systems Conducting Lead Service Line Replacement

While working to complete service line improvements to your drinking water distribution system, it is important to note that the United States Environmental Protection Agency (EPA) has stated that lead service line replacements (LSLR) are associated with short-term elevated drinking water lead levels for some period of time after replacement. In accordance with 25 Pa. Code § 109.4(4), public water suppliers shall take whatever investigative or corrective action is necessary to assure that safe and potable water is continuously supplied to the users. Therefore, to comply with this regulation and address concerns associated with elevated lead levels, any water system that conducts LSLR, including galvanized requiring replacement service lines, or that removes a lead pigtail, gooseneck or connector, is expected to follow the risk mitigation measures outlined in this document for the associated customer(s). For additional information on completion of risk mitigation measures, water suppliers may reference the American Water Works Association (AWWA) Standard C810, *Replacement and Flushing of Lead Service Lines*.

The following three steps are to be completed in conjunction with replacement of each lead service line, galvanized requiring replacement service line, and the removal of lead pigtails, goosenecks or connectors.

1) Provide notice to the owner of the affected service line, or the owner's authorized agent, as well as non-owner resident(s) served by the affected service line **before** the affected service line is returned to service. The notice must meet the following requirements:

   a. Include the following mandatory health effects language established by the EPA under 40 CFR 141.85(a)(1).

      "Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems."

   b. Explain that consumers may experience a temporary increase of lead levels in their drinking water due to the replacement of their service line.

   c. Include information about removing and cleaning faucet aerators, flushing service lines and re-installing cleaned faucet aerators before the affected service line is returned to service.

   d. Include the following informational statement in Spanish regarding the importance of the notice.

      "ESTE INFORME CONTIENE INFORMACIÓN IMPORTANTE ACERCA DE SU AGUA POTABLE. HAGA QUE ALGUIEN LO TRADUZCA PARA USTED, O HABLE CON ALGUIEN QUE LO ENTIENDA."

   e. Contain information regarding the importance of the notice in the appropriate non-Spanish language(s) if either of the following criteria are met:

      i. A system serving at least 1,000 people has a non-English-speaking group other than Spanish that exceeds 10% of the community residents.

      ii. A system serving less than 1,000 people has a non-English-speaking group other than Spanish that exceeds 100 community residents.

f. In lieu of providing information in Spanish and other language(s) as specified in (d) and (e), the notice may contain a telephone number or address where persons served may contact the water system to obtain a translated copy of the notice or to request assistance.

g. In instances where multi-family dwellings are served by the lead service line to be replaced, the water system may elect to post the information required in (a)-(f) at a conspicuous location instead of providing individual notification to all residents.

A template that includes all of the language required for this notification can be found on DEP's eLibrary at www.depgreenport.state.pa.us/elibrary/ (select "Forms", then "Safe Drinking Water", then look for "Lead Service Line Replacement Information 3930-FM-BSDW0089"; or use the eLibrary "Search" tool to search by document name or number).

For more information on communicating with consumers on LSLR, please reference the following AWWA guide *Communicating About Lead Service Lines: A Guide for Water Systems Addressing Service Line Repair and Replacement*.

2) Provide the consumer(s) with the following before the affected service line is returned to service:

a. A pitcher filter or point-of-use device that is NSF/ANSI 53 certified to reduce lead in drinking water.

b. Six months of replacement cartridges.

c. Instructions for use of the filter and replacement cartridges.

d. If the affected service line serves more than one residence, such as a multi-unit building, or a non-residential unit, the water system shall provide the items listed in (a)-(c) to every residence in the building.

3) Offer to collect one set of follow-up **first draw and 5th liter** tap samples that must be taken between three months and six months after completion of the full LSLR.

a. If either of the follow up samples exceed 15 µg/L of lead, the water system shall provide the results of both samples to residents as soon as practicable but no later than three calendar days after becoming aware of the result(s).

b. If neither of the follow up samples exceeds 15 µg/L of lead, the water system shall provide the results of the sample(s) to residents within 30 days after receiving the results.

c. The following information must accompany the sample results provided to the applicable resident:

i. An explanation of the health effects of lead.

ii. A list of steps consumers can take to reduce exposure to lead in drinking water.

iii. Contact information for the water system.

iv. The maximum contaminant level goal and the action level for lead and the definitions for these two terms specified by the EPA in 40 CFR 141.153(c).

d. The follow up sample results and accompanying information must be delivered to persons served by the tap that was sampled through one of the following methods:

i. Electronically

ii. By mail

iii. By phone

iv. Hand delivery

v. Another method approved by the Pennsylvania Department of Environmental Protection

For more information, visit www.dep.pa.gov.

AMERICAN WATER

Water Sample Results Following a Lead Service Line Replacement

Water System Name: [Name of System]
Sample Location: [Street address]
Test Kit ID#: [MapCall WO#]

Dear Valued Customer,

Thank you for participating in our lead service line replacement program and for sending us your water sample kit. We tested both of your samples. The results for Bottle #1 and Bottle #5 are below. *Note: Bottle #1 contained the first liter of water dispensed from your tap, and Bottle #5 contained the fifth liter of water dispensed from your tap.*

BOTTLE #1 RESULTS

ONLY the statement checked below is applicable to your sample in BOTTLE #1:

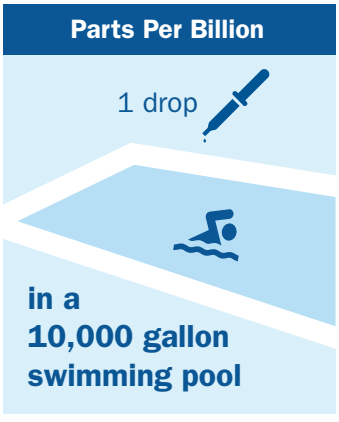
- ☐ Lead was **NOT DETECTED**.
- ☐ Lead was detected at [#]____ parts per billion (ppb). While detected, lead at this location **DOES NOT EXCEED** the lead action level of 15 parts per billion.
- ☐ Lead was detected at [#]____ parts per billion (ppb). This result **EXCEEDS** the lead action level of 15 parts per billion. We will contact you to discuss next steps.

BOTTLE #5 RESULTS

ONLY the statement checked below is applicable to your sample in BOTTLE #5:

- ☐ Lead was **NOT DETECTED**.
- ☐ Lead was detected at [#]____ parts per billion (ppb). While detected, lead at this location **DOES NOT EXCEED** the lead action level of 15 parts per billion.
- ☐ Lead was detected at [#]____ parts per billion (ppb). This result **EXCEEDS** the lead action level of 15 parts per billion. We will contact you to discuss next steps.

Regardless of your results, please review the section on steps you can take to reduce your potential exposure to lead in drinking water.



Definitions

- **Action Level (AL):** The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements, that a water system must follow. The lead action level is 15 parts per billion.
- **Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety. The MCLG for lead is zero.

FOR LAB USE ONLY: 12345678

HEALTH EFFECTS OF LEAD

According to the U.S. Environmental Protection Agency, exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

What are the other sources of lead in drinking water?
While we've replaced your lead service line, lead levels may still be detected due to the presence of:

- Lead or galvanized internal plumbing
- Lead solder in household plumbing installed before state adoption of the EPA lead ban in [Month XXXX]
- Some faucets manufactured prior to 2014

STEPS YOU CAN TAKE TO REDUCE YOUR POTENTIAL EXPOSURE TO LEAD IN DRINKING WATER

You cannot see, smell or taste lead, and boiling water will not remove lead. Here are steps you can take to reduce your potential exposure if lead exists in your home plumbing.

1. **Flush your taps.** The longer the water lies dormant in your home's plumbing, the more lead it might contain. If the water in your faucet has gone unused for more than 6 hours, flush the tap with cold water for 30 seconds to 2 minutes before drinking or using it to cook. To conserve water, catch the running water and use it to water your plants.
2. **Use cold water for drinking and cooking.** Hot water has the potential to contain more lead than cold water. If hot water is needed for cooking, heat cold water on the stove or in the microwave.
3. **Routinely remove and clean all faucet aerators.**
4. **Check to see if your interior plumbing or faucets contain lead and replace any that do.** Look for the "Lead Free" label when replacing or installing plumbing fixtures.
5. **Follow manufacturer's instructions for replacing water filters** in household appliances, such as refrigerators and ice makers, as well as home water treatment units and pitchers. Look for NSF 53 certified filters.
6. **Flush after plumbing changes.** Changes to your service line, meter, or interior plumbing may result in sediment, possibly containing lead, in your water supply. Remove the aerator from each faucet and run the water for 3 to 5 minutes.

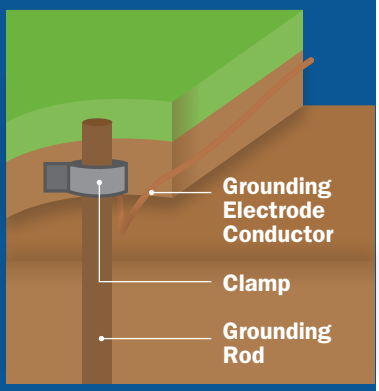
WE KEEP LIFE FLOWING®

LEAD SERVICE LINE REPLACEMENT & ELECTRICAL GROUNDING

CHECK YOUR PREMISE ELECTRICAL GROUNDING

Electrical grounding directs dangerous electrical charges away from the home and into the ground. Lightning strikes and static electricity charges are the two most common types of damaging electrical charges.



Historically, a home's metallic water service may have provided a safe ground for the electrical system as it's pipes typically extend at least 10 feet underground from the point where the pipes enter the home to the main water line.

ATTENTION CONTRACTORS

BEFORE RETIRING A LEAD WATER SERVICE LINE:

1. Have an electrician check the premise electrical grounding and bonding.
2. DO NOT connect copper pipe to lead through conductive fittings. Any remaining lead pipe can CORRODE due to galvanic corrosion if connected to other metal pipe and fittings.
3. Always use proper Personal Protective Equipment (PPE) to prevent shocks and other hazards.
4. Discuss any needed upgrades to grounding with the project manager.

Lead water service pipes may have been used as part of the premise's electrical grounding system. This is of special concern whenever a lead water service line will be replaced. You should have a professional electrician determine the location and adequacy of the premise electrical grounding system.

REMEMBER TO ALWAYS USE PROPER PPE

IF THE CUSTOMER CHOSE NOT TO HAVE THEIR LEAD SERVICE LINE REPLACED:

All LEAD water service line pipe should be removed if possible during water infrastructure improvement projects that include service line work.

If it is not possible to remove the entire lead service line pipe or if the plumbing inside the premise is lead, the plumbing contractor should avoid creating galvanic corrosion of lead materials, such as connecting copper pipe to lead pipe through conductive couplings.

If any portion of a lead service line will remain, the contractor should:

1. Use non-conductive pipe for drinking water applications, or
2. if copper is used for the new portion of the water service line, use a plastic spacer or dielectric union (couplings which join together pipes of different metals preventing electrolysis).

These options can lower the risk of lead corrosion, but may no longer make a reliable grounding option for the electrical system. In these cases, please have the electrician suggest an alternative means of grounding if needed.

The contractor should check the local codes and the premise's electrical grounding and bonding before retiring a lead water service pipe on public property, private property or both.

Please note that internal premise plumbing is not part of the utility's work. Customers may also want to consult a plumber to check their internal premise plumbing and fixtures.

QUESTIONS?

Name _____ Phone _____

LEAK ON CUSTOMER-OWNED SERVICE PIPE

Esto es un aviso importante sobre su servicio de agua. Consulte la traducción al español al dorso.

DATE

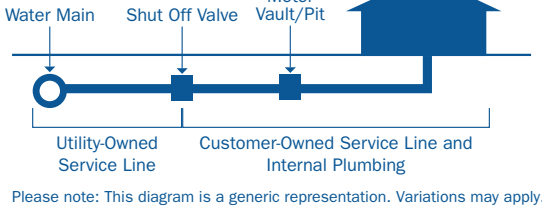
SERVICE ADDRESS

ACCOUNT #

While surveying our water system for potential leaks, we found the following:

1 **We detected a potential leak** and need access to the main shut off valve located inside the property to help verify the location of the leak. Please contact us at the number below to schedule an appointment.

2 **We detected a leak on the customer-owned service line.** Please follow the steps below and repair the leak within 10 days of this notice to avoid a potential interruption of water service.



Please note: This diagram is a generic representation. Variations may apply.

As stated in Section 4.9 of Pennsylvania American Water's tariff, the customer is responsible for the installation, repair, replacement, and maintenance of all service pipes from the curb valve to the property, and any metered water usage attributable to a leak in the customer-owned service pipe.

IF WE DETECTED A LEAK ON YOUR SERVICE LINE:

It is your responsibility to repair the leak to avoid a potential interruption of water service.

If your service line is made of lead[1], we may be able to help. Pennsylvania American Water has a Lead Service Line Replacement program and will replace customer-owned lead service lines at no direct cost to the customer. To see if you are eligible, **within two days of this notice**, follow the steps in the shaded box below to help identify your service line material.

STEPS TO IDENTIFY YOUR SERVICE LINE MATERIAL

1. Scan the QR code or visit pennsylvaniaamwater.com/leadfacts Search for your address. If the customer-owned service line material is labeled unknown or if it's identified incorrectly, help us to identify the material.
2. Follow the instructions, answer a few questions and upload a photo of your service line material.
3. Click "SUBMIT."

Depending on what you find, here's what you do next:

- **If your service line is made of lead or galvanized pipe, call us at the number below.** We may cover the cost of replacement through our lead service line replacement program.
- **If your service line is NOT made of lead or galvanized pipe, please arrange to repair your leak within 10 days of this notice.** Leaks must be repaired quickly to conserve water and maintain adequate pressure in the distribution system. If the leak is not repaired, we may need to disconnect your water service. Please call us at the number listed below once the repairs are made.

HAVE QUESTIONS? NEED MORE TIME?

If you have questions or need additional time to schedule the repair, please contact our local office at (_____) _____.

[1] Galvanized lines that follow lead piping are also eligible for the replacement program. 05-2024

PÉRDIDA EN LA TUBERÍA DE SERVICIO PROPIEDAD DEL CLIENTE

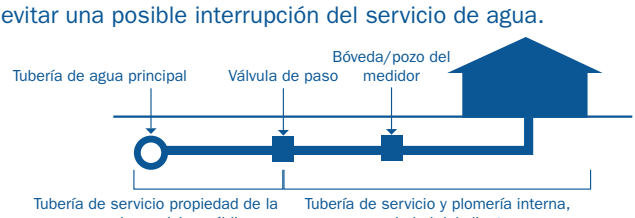
FECHA

DIRECCIÓN DE SERVICIO

NÚMERO DE CUENTA

Al inspeccionar nuestro sistema de agua para detectar posibles fugas, encontramos lo siguiente:

1. **Detectamos una posible fuga** y necesitamos acceso a la válvula de paso principal ubicada al interior de la propiedad para ayudar a localizar la fuga. Comuníquese con nosotros al número que se indica a continuación para programar una cita.
2. **Detectamos una fuga en la tubería de servicio propiedad del cliente.** Siga los pasos que se indican a continuación y repare la fuga en un plazo de 10 días a partir de la fecha de este aviso para evitar una posible interrupción del servicio de agua.



Tenga en cuenta lo siguiente: este diagrama es una representación genérica. Pueden existir variantes.

Conforme a lo establecido en la Sección 4.9 de las tarifas de Pennsylvania American Water, el cliente es responsable de la instalación, reparación, sustitución y mantenimiento de todas las tuberías de servicio desde la válvula situada en la acera hasta la propiedad, y cualquier uso de agua medido que sea consecuencia de una fuga en la tubería de servicio propiedad del cliente.

EN CASO DE QUE DETECTEMOS UNA FUGA EN SU TUBERÍA DE SERVICIO:

Es su responsabilidad reparar la fuga para evitar una posible interrupción del servicio de agua.

Si su tubería de servicio está hecha de plomo[1], tal vez podamos ayudarlo. Pennsylvania American Water cuenta con un programa de reemplazo de tuberías de servicio de plomo y reemplazaremos las tuberías de servicio de plomo propiedad del cliente, sin ningún costo directo para este. Para saber si cumple los requisitos, **en un plazo de 2 días a partir de la fecha en que reciba este aviso**, siga los pasos en el cuadro sombreado a continuación para ayudar a identificar el material de su línea de servicio.

PASOS PARA IDENTIFICAR EL MATERIAL DE SU TUBERÍA DE SERVICIO

1. Escanee el código QR o visite pennsylvaniaamwater.com/leadfacts y busque su dirección. Si el material de la tubería de servicio propiedad del cliente está etiquetado como desconocido o si está identificado de forma incorrecta, ayúdenos a identificar el material.
2. Siga las instrucciones, responda algunas preguntas y suba una foto del material de su tubería de servicio.
3. Haga clic en “SUBMIT” (ENVIAR).

Dependiendo de lo que encuentre, esto es lo que puede hacer después:

- **Si su tubería de servicio está hecha de plomo o es una tubería galvanizada, llámenos al número que se indica a continuación.** Tal vez podamos cubrir el costo de reemplazo a través de nuestro programa de reemplazo de tuberías de servicio de plomo.
- **Si su tubería de servicio NO está hecha de plomo ni es una tubería galvanizada, tome medidas para reparar su fuga en un plazo de 10 días a partir de este aviso.** Las fugas deben ser reparadas lo más rápido posible con el fin de conservar el suministro de agua y mantener una presión adecuada en el sistema de distribución. Si no se repara la fuga, es posible que tengamos que desconectar su servicio de agua. Una vez que se haya completado la reparación, comuníquese con nosotros al número que se indica a continuación.

¿TIENE ALGUNA PREGUNTA? ¿NECESITA MÁS TIEMPO?

Si tiene preguntas o necesita más tiempo para programar la reparación, comuníquese con su oficina local al (_____) _____.

[1] Las tuberías galvanizadas que llevan a tuberías hechas de plomo también son elegibles para el programa de reemplazo.

PENNSYLVANIA AMERICAN WATER

CERTIFIED LETTER NO. XXXX

DATE

CUSTOMER NAME
CUSTOMER ADDRESS
CITY, STATE ZIP CODE

Subject: Response Due by X/XX/XXXX
Customer Service Line Replacement

During a recent project, our crews determined the material of your customer-side water service line is either lead or galvanized. We are offering to replace your customer-side service line at no cost to you.

A packet of information, including an agreement for signature was recently left at your property. The agreement will require your signature to authorize our contractor to complete the service line replacement.

PLEASE BE AWARE that refusing the Company's offer to replace the customer-side service line or failing to respond to this letter by the date listed above, will result in **TERMINATION** of your water service in accordance with the Company's Water Tariff.

To avoid service termination, you must do the following:

1) Sign and return an agreement to allow Pennsylvania American Water to replace the lead service line at this property for free – and -

2) Call xxxxxx to schedule the replacement prior to the response due date listed above.

Please note, your property must comply with all safety and security standards for work to be performed.

If you **refuse or fail to respond** to the Company's offer to replace the customer-side water service line, you will be required to replace the customer-side water service line at your expense. In order to be eligible for reimbursement of your replacement costs, replacement of your customer-side water service line must occur within one year from the date the Company began its lead service line replacement project and you must meet all other eligibility requirements outlined in the Company's Water Tariff.

The U.S. Centers for Disease Control (CDC) and the U.S. Environmental Protection Agency recommend replacing the entire lead service line rather than only replacing a portion of the line. Because **replacing only a portion of the lead service line can potentially increase the exposure to lead through drinking water**, all lead portions of the service line should be replaced.

According to the U.S. Environmental Protection Agency, exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

To learn more about our lead replacement program use the QR code or contact the company directly using the information below.

Thank You,

IMPORTANT: 10 DAY SHUT OFF NOTICE – FAILURE TO RESPOND TO CUSTOMER SERVICE LINE REPLACEMENT REQUEST. During a recent project, our crews determined the material of your customer-side water service line is either lead or galvanized. Please read the information below and take the steps needed to avoid your water service from being shut off.

A packet of information, including an agreement for signature, and a certified letter were recently delivered to your property. **This notice is to inform you that we will be shutting off your water service to the above property on or after DATE because you refused or failed to accept the company's request to replace the lead or galvanized service line as offered in the certified letter.**

To avoid the shut off of your water, you must do the following:

1) Sign and return an agreement to allow Pennsylvania American Water to replace the lead service line at this property for free – and -
2) Call xxxxxx to schedule the replacement.

Please note, your property must comply with all safety and security standards for work to be performed. Otherwise, water service to the above address will be shut off on or after the shut off date listed above. You also may have to pay the following charges to have your water turned back on: Turn-On Charge $ 30.00.

If you have questions about this notice please contact the company via phone XXXXXXX or email at LeadFreePA@amwater.com. After you talk to with us, if you are not satisfied, you may file a complaint with the Pennsylvania Public Utility Commission by calling 1-800-692-7380 or by writing the Pennsylvania Public Utility Commission, Post Office Box 3265, Harrisburg, PA, 17105-3265. The Pennsylvania Public Utility Commission may delay the shut off if you file the complaint before the shut off date. **NOTE: This notice is valid for up to 60 days. If service is shut off, the property owner must complete a private lead service line replacement at their own expense and provide Pennsylvania American Water proof of the work prior to water service being turned back on.**

RULES AND REGULATIONS

4. Service Pipes (cont'd)

4.9.1 Replacement of Lead Service Pipes

4.9.1.1 **(C)**

Notwithstanding Rules 2.11, 2.12, 2.14 and 4.9, the Company shall, provided that the **property owner or** customer consents, replace Lead Service Pipes pursuant to **[language deleted]** of its Lead Service **Line** replacement plan (Replacement Plan), subject to a budgeted allotment of **$35.0** million per year for all lead Service **Pipe** replacements under its Replacement Plan. The Company will replace Lead Service Pipes it encounters when replacing its mains and/or Service Lines up to **3,200** Lead Service Pipe replacements per year within a maximum amount of approximately **$35.0** million per year. The Company will replace a Lead Service Pipe at a Customer's request subject to the following conditions: (1) verification that the Customer has a Lead Service Pipe; (2) the time when the replacement occurs will be determined by the Company based on factors determined by the Company including, without limitation, the number of customer requests for Lead Service Pipe replacements in Company-designated geographic areas; (3) the annual cap of **3,200** Lead Service Pipe replacements; and (4) availability of funds **[language deleted]** under the Company's budgeted allotment of **$35.0** million per year. Lead Service Pipe replacements performed **in conjunction with the Company's main and/or Service Line replacements [language deleted]** will have priority on the use of funds under the annual budget allotment and, therefore, in any year, funds will be used for Lead Service Pipe replacements **at a Customer or property owner's request [language deleted]** only to the extent that funds are available within the budget allotment and are not allocated to **[language deleted]** replacements planned **in conjunction with the Company's main and/or Service Line replacements** for that year. Portions of the annual budget allotment of **$35.0** million that are not expended on Lead Service Pipe replacements under **[language deleted]** of the Replacement Plan in a year will roll-over to the next subsequent year, but use of the roll-over funds will still be subject to the requirement that priority be given to **[language deleted]** replacements **made in conjunction with the Company's main and/or Service Line replacements**. If the Company does not use the excess budgetary allotment in the subsequent year, the excess budgetary allotment will not carry forward into the following year, i.e. excess budgetary allotments will not carryforward on a cumulative basis, subject to the cap on the number of Lead Service Pipe replacements per year. **To the extent the Company is able to secure grant funding for Lead Service Pipe replacements, those services shall not count toward the cap in either funding or quantity.** The Company may, but shall not be required, to petition the Commission for approval to modify its annual budget allotment of **$35.0** million if the Company, in its sole discretion, determines that its annual budget allotment no longer meets the future needs of administering **[language deleted]** the Replacement Plan. However, no change may be made without prior Commission approval. Costs the Company incurs to replace Lead Service Pipes under the Company's Replacement Plan shall be subject to the accounting and rate treatment approved by the Order of the Pennsylvania Public Utility Commission (Commission) entered October 3, 2019 and Settlement at Docket No. P-2017-2606100 (Approval Order). After a Lead Service Pipe is replaced by the Company, the Customer shall own the Service Pipe and shall have full responsibility for the repair, replacement and maintenance of the new Service Pipe, which, upon installation, shall thereafter be subject to the terms of Rules 2.12, 2.14 and 4.9.

4.9.1.2 **(C)**

The Customer shall enter into an Agreement for Replacement of Lead Service Pipe, in a form provided by the Company, prior to the initiation of any work by the Company to replace a Customer's Service Pipe. The Company will provide a two-year warranty on workmanship and materials for any Customer Lead Service Pipes it replaces. **The two-year warranty will also include any restoration of surfaces performed by the Company in conjunction with the Lead Service Pipe replacement**. **Restoration of surfaces refers to excavations that have been backfilled and grade that has been returned to level. The Company is not responsible for replacing sidewalks, stone or asphalt driveways, or landscaping outside of a right-of-way. The start date of the two-year warranty shall be when the Lead Service Pipe replacement is installed.**

The maximum coverage under the two-year warranty shall be limited to the actual cost of repairing the Lead Service Pipe and/or water meter pit, if applicable.

The Company shall not be liable for any damages not covered by the warranty or beyond the maximum coverage of the two-year warranty as described in Section 4.9.1.2.

If a repair is required and covered under the warranty, the customer or property-owner shall ensure that the Company and/or its contractor has access to the property to complete the repair.

(C) means Change

RULES AND REGULATIONS

4. Service Pipes (cont'd)

4.9.1.3 **(C)**

[language deleted] Neither a Customer nor a property-owner may install a partial Lead Service Pipe Replacement. A partial Lead Service Pipe Replacement will result in termination of service until such time as the Company can replace the lead Service Line.

The Company shall not connect an Applicant for water service to the Service Line at a property where a Customer or property owner previously refused or failed to accept the Company's offer of a Lead Service Pipe Replacement until the Applicant verifies the replacement of the Lead Service Pipe by providing a paid invoice from a licensed contractor where applicable or a verified statement from a licensed contractor attesting to the completion of the Lead Service Pipe Replacement.

4.9.1.4 **(C)**

The Company will provide a 10-cup filtered water container to **[language deleted]** Customers who **authorize** (or if the Customer occupies a rental property, the property-owner has **[language deleted]** authorized) **[language deleted]** the Company **to** replace their LSPs **[language deleted] as part of** the Company's Replacement Plan. **[language deleted]**.

4.9.1.5 **(C)**

If the Company, at the request of a Customer or property-owner (as applicable), visits a Customer's site and determines that the Service Pipe has been replaced at or within one-year of the date the Company commenced a project to replace Lead Service Pipes and the Customer or property-owner (as applicable) provides the Company with **(1)** a **detailed estimate or a verified statement from a licensed contractor attesting to the completion of the Lead Service Pipe Replacement and (2)** a paid invoice **[language deleted]** a certification from a certified plumber, and other documentation determined by the Company to be appropriate to verify the replacement, the Company will reimburse the Customer's or property-owner's (as applicable) reasonable costs up to an amount not to exceed 125% of the **average** costs the Company would have incurred to perform the replacement of a similarly-sized Service Pipe in the project area, **not to exceed actual cost**. A Lead Service Pipe project will commence on the date the Company begins physical main replacement work in the project area that includes the Customer's site or when the Company deploys a contractor crew to the geographic area of **[language deleted] service replacement projects** to perform grouped work activity, whichever is sooner. **Reimbursements will be provided to customers or property owners through check mailed to the customer or property owner within thirty days after the Company approves the request of the Customer or property owner for reimbursement. Customers or property owners that (1) do not provide the required documentation, (2) are outside of the Lead Service Pipe project area, or (3) seek reimbursement for a replacement that occurred more than one year before or after the Company commenced the Lead Service Pipe project will be ineligible for reimbursement.**

Notwithstanding the annual cap in Section 4.9.1.1, the Company shall provide reimbursement to an eligible Customer or property owner within thirty days after the Company approves the request for reimbursement. If the reimbursement would cause the Company to exceed its annual cap in Section 4.9.1.1, the Company must increase its annual cap by the amount of the reimbursement and decrease its next annual cap by this amount.

PENNSYLVANIA-AMERICAN WATER COMPANY

RULES AND REGULATIONS

4. Service Pipes (cont'd)

4.9.1.6

Where a Customer or property owner elects to replace the Lead Service Pipe, the Customer or property-owner shall replace the Lead Service Pipe concurrent with the Company replacing the lead Service Line, subject to the Customer or property owner providing the Company at least 90 days' notice prior to replacing the Lead Service Pipe.

4.9.1.7

Through the Replacement Plan, the Company will perfect any ownership discrepancies regarding the Service Line and the Service Pipe, so that the Customer will own the Service Pipe and the Company will own the Service Line. This will occur by the Customer and the Company executing a Lead Water Service Line Replacement consent agreement which establishes the Customer's and Company's respective ownership and responsibilities regarding the Service Pipe and Service Line.

4.9.1.8

If a shutoff valve is not located along a specific length of pipe within a structure, the Company may, at its discretion, install a shutoff valve to serve as a point of demarcation between the property's service line and the property's interior water distribution piping.

4.9.1.9

The Company may use Step-In Rights to allow the Company to perform a Lead Service Pipe Replacement in the following circumstances where a Customer or occupier of the premise is not the property owner:

a. The Company attempted to contact the property owner with an offer to replace the Lead Service Pipe in accordance with the Company's Replacement Plan.

b. The Customer or occupier of the premise is not the property owner.

c. The Company attempted to obtain authorization from the property owner to replace the Lead Service Pipe and the property owner (1) cannot be identified or (2) has failed to respond to the Company's offer to replace the Lead Service Pipe.

If the above circumstances are met, the Company may, at its discretion, replace the Lead Service Pipe in accordance with its Replacement Plan if such replacement would avoid the termination of water service to Customer(s) or occupier(s) of property without obtaining the consent of the property owner. When the Company exercises Step-In Rights, the Company, its officers, directors, employees and agents are released and held harmless from and against any and all liability, including liability to third parties and the property owner, for personal injury, including death, property damage, or other actions, damages, fines, penalties, claims, demands, judgments, losses, costs, expenses, suits and actions (including reasonable attorney's fees), for personal injury, including death, property damage, or other injury, to the extent caused by or arising out of the work performed by the Company or its agents in performing the Lead Service Pipe Replacement.

EXHIBIT C

RULES AND REGULATIONS

2. Definitions (cont'd)

2.12 Remote Meter Reading Device: A device which by electrical impulse or otherwise transmits readings from a meter, usually located within a residence, to a more accessible location outside of a residence.

2.13 Residential Applicant: A natural person at least 18 years of age not currently receiving service who applies for residential service provided by the Company or any adult occupant whose name appears on the mortgage, deed or lease of the property for which the residential utility service is requested. A Residential Applicant does not include a person who, within 30 days after service termination or discontinuance of service, seeks to have another service reconnected at the same location or transferred to another location within the Company's service territory.

2.14 Residential Customer: A natural person at least 18 years of age in whose name a residential service account is listed and who is primarily responsible for payment of bills rendered for the service or any adult occupant whose name appears on the mortgage, deed or lease of the property for which the residential utility service is requested. A Residential Customer includes a person who, within 30 days after service termination or discontinuance of service, seeks to have service reconnected at the same location or transferred to another location within the Company's service territory.

2.15 Service Line: The Company-owned piping and appurtenances which run between and are connected to the Company's main and its street service connection.

2.16 Service Pipe: That portion of a water line not owned by the Company which transmits water from the Company-owned water main to the Customer's premise. The water service pipe begins at the Company-owned street service connection and continues into the structure on the premise to be supplied.

2.16a Lead Service Pipe: Any Service Pipe constructed with lead or galvanized pipe located downstream from a Service Pipe constructed with lead. **(C)**

2.17 Single Premise: A single premise is herein construed to cover a structure used by one family or occupant or where used by more than one family or occupant not adaptable to subdivision.

2.18 Street Service Connection: A street service connection is hereby understood to include a connection to the main pipe to and including the control valve and control valve box, used to carry water from the main to the curb line. The control valve and box terminates the Company's responsibility for expense of the street service connection.

2.19 Temporary Service: A water service connection which, at the time of application, is anticipated to be in service for less than a 12-month period.

2.20 Unauthorized Use of Service: Unreasonable interference or diversion of service, including meter tampering (any act which affects the proper registration of service through a meter), by-passing unmetered service that flows through a device connected between a main or service line and customer-owned facilities, unauthorized service restoration, or the otherwise taking or receiving of water service without the knowledge or approval of the Company.

EXHIBIT D

Please find the following information submitted as supporting data in accordance with 52 Pa. Code §53.52(a):

1. **The specific reasons for each change.**

   The tariff changes being proposed in this filing are requested in order to comply with the Commission's regulations at 52 Pa. Code §§ 65.51 *et seq*. ("LSLR Regulations"). The Company is also proposing tariff changes to align with the lead service line ("LSL") replacement activities for which it seeks approval in this filing, and updating its lead service line replacement ("LSLR") activities from prior Commission-approved activities.

2. **The total number of customers served by the utility.**

   Pennsylvania-American Water Company served 783,381 customers as of June 30, 2024.

3. **A calculation of the number of customers, by tariff subdivision, whose bill will be affected by the change.**

   All customers that have the Distribution System Improvement Charge ("DSIC") applied to their bill will be affected by the change.

4. **The effect of the change on the utility's customers.**

   The tariff changes proposed will allow customers or property-owners with lead or galvanized service lines to have the Company replace customer-side lead or galvanized lead service lines at the Company's sole cost, and allow the Company to recover a return on and of those costs. Customers or property-owners who have replaced customer-side lead or galvanized service lines themselves are eligible for reimbursement of those costs, subject to certain conditions.

5. **The direct or indirect effect of the proposed change on the utility's revenue and expenses.**

   Pursuant to Act 120, the Company will record the original cost of customer-owned LSLRs in a separate account that is segregated from other service line accounts. The Company is entitled, pursuant to Act 120 of 2018 ("Act 120"), to record a return on and of its investment to replace customer-owned LSLRs in future base rate cases and through its DSIC.

6. **The effect of the change on the service rendered by the utility.**

   The changes will allow the Company to address LSLs within its system in an efficient manner to address the recognized health risks posed by lead in drinking water; otherwise, service will not change.

7. **A list factors considered by the utility in its determination to make the change. The list shall include a comprehensive statement about why these factors were chosen and the relative importance of each.**

   In making its proposed changes, the Company considered that pursuant to 52 Pa. Code § 65.53(a), a Class A public utility shall remove and replace all LSLs within or connected to its water distribution system within 25 years from the effective date of the LSLR Regulations. Pursuant to 52 Pa. Code § 65.61, the Company also must submit and file for Commission approval under 52 Pa. Code § 65.55(b) a LSLR Program within two years of the effective date of the LSLR Regulations. Pro forma tariff or tariff supplement requirements are enumerated in 52 Pa. Code § 65.58. The Company also considered these factors because they are regulatory requirements that the Company must meet.

   Additionally, the Company considered that lead can cause a variety of adverse health effects and that removal of LSLs from its system is in the public interest.

8. **Studies undertaken by the utility in order to draft its proposed change.**

   The Company did not undertake any study in order to draft its proposed changes.

9. **Customer polls taken and other documents which indicate customer acceptance and desire for the proposed change. If the poll or other documents reveal discernable public opposition, an explanation of why the change is in the public interest shall be provided.**

   The Company did not conduct any polls in connection with its proposed changes. The Company has been engaging in prior Commission-approved lead service line replacement activity in its service area and customers have actively participated in the Company's efforts to identify service line materials and have responded to the Company's offers to perform customer-side lead service line replacements or to provide reimbursement for costs the customer or property-owner incurred to perform their own customer-side lead service line replacement.

10. **Plans the utility has for introducing or implementing the changes with respect to its ratepayers.**

    The Company has included in its Lead Service Line Replacement Plan ("LSLR Plan") a section detailing its communications, outreach and customer education efforts. Copies of all printed and broadcast materials distributed under the Company's Lead Service Line Replacement Program ("LSLR Program") are attached to the LSLR Plan.

11. **FCC, FERC, or Commission orders or rulings applicable to the filing.**

    Commission rulings applicable to the filing are (1) the Final Rulemaking Order entered by the Commission on March 14, 2022 at Docket No. L-2020-3019521, which adopts the Commission's regulations concerning lead service line replacement, and (2) the Opinion and Order entered October 3, 2019 at Docket No. P-2017-2606100, approving the Company's prior LSLR Plan.

Appendix B - Projected Annual Expenditures for DSIC-eligible properties 2022-2026 and Projected Quantities of Mains, Services, and Meters Replaced 2022-2026

INTRODUCTION

Pursuant to 66 Pa. C.S. §§1350 – 1360, 52 Pa. Code §§ 121.1-121.8, and the Pennsylvania Public Utility Commission's Supplemental Implementation Order for the Implementation of Act 11 of 2012, Docket No. M-2012-2293611 (Order entered September 21, 2016) Pennsylvania-American Water Company ("Company" or "PAWC") submitted its second Water Long-Term Infrastructure Improvement Plan ("Water LTIIP II") for the calendar years 2022-2026 on September 1, 2021 (Docket No. P-2021-3028300). On September 30, 2021, the Office of Consumer Advocate submitted comments in response to PAWC's proposed Water LTIIP II. On October 20, 2021, the Company filed revisions to Water LTIIP II. On December 16, 2021, the Commission entered an Opinion and Order approving PAWC's Revised Water LTIIP II.

During the timeframe of the Water LTIIP II, the anticipated DSIC spend profile increased for several reasons. The first is that expenses have increased due to inflation, supply chain disruptions, and restoration requirements. As an example of this increase, Table 1A shows the annual percent increase in ductile iron pipe price between 2020 and 2024. The historic annual increase of approximately 4.5% jumped and led to an increase of approximately 80% over the last 3 years. Another factor is that PAWC increased the level of investment to benefit the long-term health of the distribution networks. A Nessi Curve is presented in figures 9 and 10 of the approved Water LTIIP II and shows the theoretical need to increase replacement rates up to 140 miles per year by 2026 or approximately 1.4%. The increased investment allowed PAWC to average close to a 1% replacement rate over 2023 and 2024, we plan to maintain this replacement rate throughout the remainder of the LTIIP period.

Table 1A – Annual increases in DI pipe costs

	2020	2021	2022	2023	2024
Percent Increase over Previous Year	5%	3.86%	20-25%	50%	6%

PAWC plans to maintain DSIC spend profile in 2025 and 2026 that is flat in comparison to 2024 with spending roughly 50% above the LTIIP projections.

Based on the foregoing, and in accordance with PAWC's response to the 2023 AAOP data request TUS-2-M-1, PAWC submits its Second Water LTIIP II which revises Section 5 and includes PAWC's Lead Service Line Replacement Program in Appendix B in accordance with 52 Pa. Code. § 65.54(b).

PAWC, a wholly owned subsidiary American Water Works Company, Inc, ("AW"), is a Pennsylvania public utility that provides water and wastewater services to residents in Pennsylvania. As of May 31, 2021, PAWC provided water service to approximately 674,783 customers, or a population of approximately 2.3 million people. The composition of PAWC's water customer base its approximately 92% residential, 7% commercial, and 1% industrial/other. PAWC's water service territory is shown on Figure 1.

PAWC owns and operates 91 water and wastewater systems across Pennsylvania within over 409 communities in 37 counties. The water distribution system includes 39,500 hydrants, 191,600 valves and 674,000 customer meters and approximately 10,200 miles of pipe as shown on Table 1.

Figure 1 – PAWC Water Service Territory as of May 31, 2021

All Seasons, Birch Acres, Blue Mountain Lakes, Country Club of the Poconos, Fernwood, Marcel Lakes, Milford Landing, Mt. Top Estates, Pine Ridge, Saw Creek Estates, Wild Acres Developments.	7,961	173
Wilkes Barre/Scranton	The Cities of Carbondale and Scranton. The Boroughs of Archbald, Blakely, Dickson City, Dunmore, Jermyn, Jessup, Mayfield, Moosic, Old Forge, Olyphant, Taylor, Throop, and Vandling. The Townships of Carbondale, North Abington, South Abington, and Scott. A portion of the Township of Roaring Brook. The Villages of Richmondale (Fell Twp.) and Simpson (Fell Twp.) The Cities of Nanticoke, Pittston and Wilkes Barre. The Boroughs of Ashley, Avoca, Courtdale, Dallas, Dupont, Duryea, Edwardsville, Exeter, Forty Fort, Hughestown, Kingston, Laflin, Larksville, Laurel Run, Luzerne, Plymouth Pringle, Shickshinny, Sugar Notch, Swoyersville, Warrior Run, West Pittston, West Wyoming, Wyoming, and Yatesville. The Townships of Fairview, Hanover, Hunlock, Jenkins, Kingston, Newport, Pittston, Plains, Plymouth, Rice, Wilkes Barre, Wright, and portions of the Townships of Conyngham, Jackson, Jefferson, Salem and Union. The Borough of Forest City. The Village of Browndale (Clinton Twp.).	136,219	1766
Norristown	The Boroughs of Norristown and Bridgeport, part of the Townships of Whitpain, West Norriton, Worcester, Plymouth, Lower Providence, East Norriton, East Pikeland, Upper Merion, Perkiomen and Whitemarsh.	33,149	383
Yardley	The Borough of Yardley and adjacent territory in Lower Makefield and Falls Townships.	12,764	191

Glen Alsace (incl. Golden Oaks)	Berks County - the Borough of St. Lawrence. The Townships of Amity, Exeter and Ruscombmanor.	9,462	143
Penn/Wyomissing	Berks County - the Boroughs of Sinking Spring and Wyomissing Hills. The Townships of Spring, Lower Heidelberg, South Heidelberg and Cumru.	12,502	161
Royersford	Montgomery County - the Borough of Royersford. The Townships of Upper Providence and Limerick and a portion of the Township of Lower Pottsgrove. Chester County - the Borough of Spring City. The Townships of East Vincent, West Vincent, East Pikeland and Schuylkill.	18,218	279
Coatesville (includes Valley Township Water System's 22 mi of main/1,671 customers)	The City of Coatesville. The Boroughs of Parkesburg, Atglen and South Coatesville and portions of the Townships of Sadsbury, Caln, East Fallowfield, Valley, West Sadsbury and West Caln. The Borough of Quarryville and the Townships of Bart, Colerain, Eden and Sadsbury.	14,341	220
TOTAL		**674,466**	**10,213**

Note: The tentative acquisition of Valley Township Water System by PAWC is anticipated to add approximately 1,671 customers and 21.84 miles of water main in November 2021.

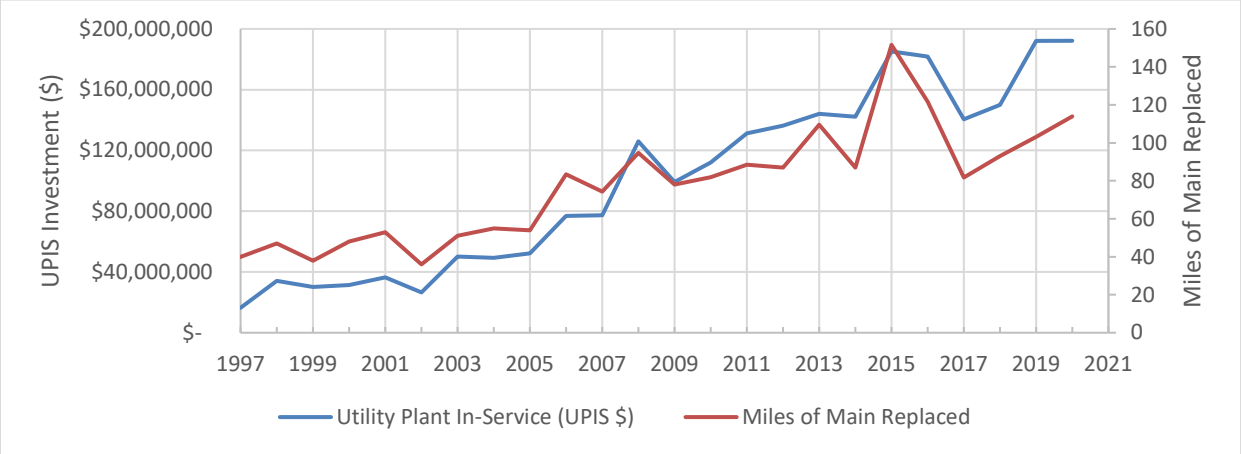
The condition of the water systems varies, depending on age, material, local conditions and quality of initial design or installation. Some systems require significant capital investment to maintain adequate, efficient, safe, reliable and reasonable service for existing customers. While some systems contain newer infrastructure and thereby require less investment, making capital infrastructure investment at the right time will maintain desired service levels and avoid replacements while repairs are still cost-effective. As the water system begins to reach the end of its useful life, factors such as increased main break frequencies, water quality degradation, loss of hydraulic capacity or pressure, and facility failures can occur which will diminish customer service quality and satisfaction, reliability, and can impact safety and regulatory compliance. As indicated in the Company's Water LTIIP I, age is not the only criteria. In many cases, very old pit-cast, cast

iron pipe is still in good condition and reliable; while newer spun cast pipe, sees a higher main break rate.

By Order entered August 26, 1996, the Commission permitted PAWC to establish its water DSIC program in order to accelerate the rehabilitation or replacement of aging infrastructure and improve customer service. *Petition of Pennsylvania-American Water Company for Approval to Implement a Tariff Supplement Establishing a Distribution System Improvement Charge*, Docket No. P-00961031. The Commission's authority to authorize the implementation of DSIC was confirmed by the General Assembly when it enacted into law Section 1307(g) of the Pennsylvania Public Utility Code under the Act of December 18, 1996, P.L. 1061, No. 156, § 1. PAWC implemented its DSIC program, effective January 1, 1997, with a cap of 5.0% of billed revenues. By Order entered August 14, 2007, the Commission permitted PAWC to increase its DSIC cap to 7.5% of billed revenues. *Petition of Pennsylvania-American Water Company for Approval to Implement a Tariff Supplement to Tariff Water-Pa P.U.C. No. 4 Revising Distribution System Improvement Charge*, Docket No. P-00062241.

As previously ordered by the Commission, PAWC has focused on smaller diameter mains and increased main replacement in the Pittsburgh district. Water LTIIP II continues to follow the guidance and requirements of the Commission. As shown on Figure 2 below, capital investment levels and the miles of pipe replaced has steadily increased over the past 20 years. The increase in footage replaced is consistent, though somewhat short of the NESSIE Model presented later in this plan.

Figure 2 – Historical Main Replacement (1997 – 2021)

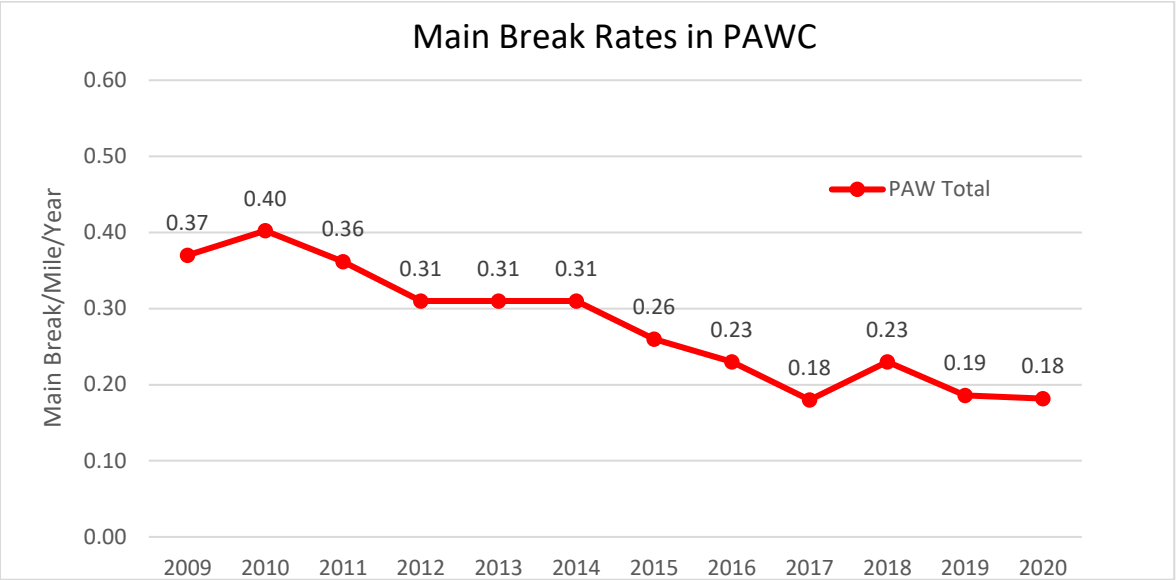


Because yearly capital investment fluctuations occur due to other non-DSIC related needs and Utility Plant In-Service spend (UPIS $) are reflective of expenditures recognized when the property is placed in service, and not always on a calendar year basis, a rolling 4-year average, as shown on Figure 2, is utilized to demonstrate the steady acceleration of capital investment from approximately $20 Million in 1997, to the current DSIC investment level of over $160 Million based on a rolling 4-year average. This is an eight-fold increase over a 20-year timeframe.

While the overall impact has been positive, it is important to note the changes relative of the UPIS and Miles of Main lines. This issue is also notable in the Figure 2 with the divergence of Miles of Main Replaced against the UPIS line. The cost per foot or per mile has escalated significantly. This cost escalation, in part, has been noted in the news with the significant recent escalation in cost of material. However, that is only a portion of the issue. Many municipalities have begun requiring full curb-to-curb replacement of asphalt; where historically, the Company has been able to restore the trench area with perhaps a two-foot area on each side of the trench. The curb-to-curb requirement results in more cost to repave and restore than the pipe installation cost.

Still, notably over the 2009-2020 timeframe, the total system-wide main break frequency, expressed in main breaks per mile of main per year, has decreased by roughly 50% as shown on Figure 3 below. While a great improvement, the average is still well above the national average break rate of 0.14 breaks/mile/year (Utah State Study 2018 Steven Folkman). Therefore, the continued efforts to replace pipe is important to continue lowering the break rate.

Figure 3 – Historical Main Breaks Per Mile Per Year (2009 - 2020)



Building on this progress, the Water LTIIP II will establish how PAWC plans to continue to maintain a previously accelerated rate of infrastructure replacement to rehabilitate, improve, and replace aging infrastructure. Discussed in Water LTIIP II are the types and age of property eligible for water DSIC recovery; schedule for its planned rehabilitation and replacement; location of eligible property; reasonable estimate of the quantity of infrastructure to be improved; projected annual expenditures and measures to ensure cost effectiveness; manner in which replacement of aging infrastructure will maintain safe and reliable service; workforce management and training program; and description of outreach to other utilities, PennDOT, and other governmental agencies to coordinate work and minimize disruptions to customers.

Section 1 – Identification of Types and Age of Eligible Property Owned and Operated by the Utility for Which it is Seeking DSIC Recovery

An inventory of all eligible property, as defined in 66 Pa. C.S. § 1351 - (4), is provided in this section. PAWC has developed and is applying MapCall as the work order management system and Geographic Information Systems (GIS) as the spatial component and record of issues related to specific mains as part of its Enterprise Asset Management (EAM) Program. Water assets, such as mains, valves, hydrants, meter pits, curb stops, and customer premises are spatially located and attributed with information about the asset. GIS and MapCall data are linked and updated continuously to include system changes, such as replacement of pipes or expansion of the water system.

GIS and MapCall workorder data are used to assist in identifying types and age of eligible assets. Records of main breaks by location and type of pipe are used to identify specific mains and areas of main that are less reliable.

Water DSIC-eligible property consists of the following categories, with recoverable costs incurred to rehabilitate, or replace eligible property completed and placed in service as noted below:

- Mains and Valves
- Services
- Meters
- Fire Hydrants
- Main cleaning and relining
- Unreimbursed highway relocation costs
- Main Extensions to eliminate dead ends

- Main Extensions to solve regional water supply problems that have documented significant health and safety concerns

The following tables and figures summarize eligible property for each water district:

Table 2 – Pipe Material Type by District

Figure 4 – Pipe Material as a Percentage of Total Length

Figure 5 – Pipe Size as a Percentage of Total Length

Figure 6 – Pipe Material Type by Percentage

Over 59% of the distribution system piping is comprised of ductile iron ("DI") pipe. Cast iron ("CI") pipe accounts for approx. 28.8% by length, and the remainder of the system consists of other material types such as galvanized/steel, plastic, transite ("TR"), and concrete.

Over the last 10 years, the accelerated main replacement program has changed both the size and material composition of the distribution systems. The amount of small diameter mains has decreased from 35% to 7.7%, and the percentage of DI pipe has increased from 40.6% to 59.4%. Correspondingly over the same timeframe, the amount of CI pipe has decreased from 42.6% to 28.8% along with a five-fold decrease in the amount of galvanized pipe.

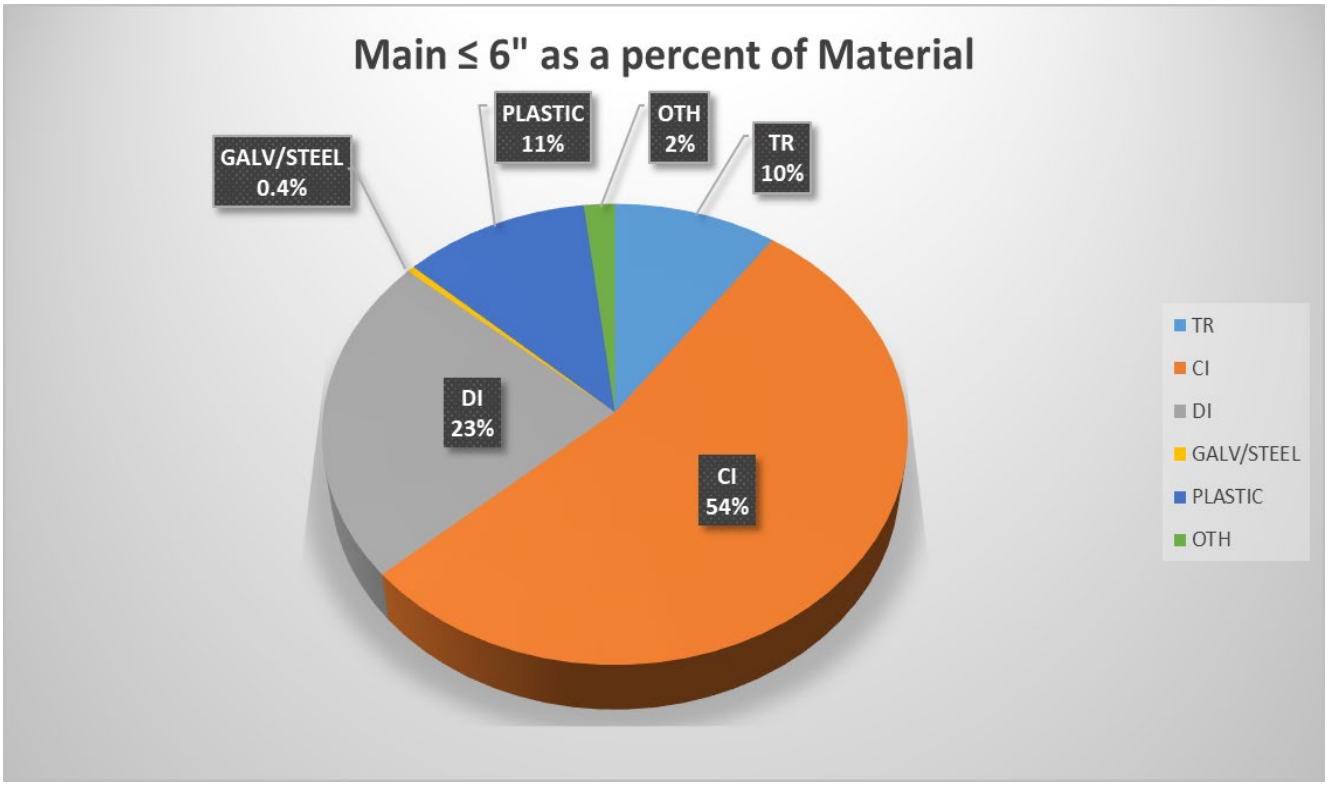
The findings of this analysis are as follows:

Small diameter mains (≤ 6" diameter) continue to have the greatest number of breaks per mile. These are primarily service line leaks. In both districts, the main break frequency rate of galvanized pipe (2" and under) is at least 5-10 times greater than any other pipe. The greatest number of breaks (at least 72%) occur on cast iron pipe, with at least 70% of those breaks occurring on pipe diameters ≤ 6". In the Wilkes Barre/Scranton district, over 60% of the cast iron main breaks occur on 4" and 6" diameter CI mains. The 2" and under size range in the Wilkes Barre/Scranton district exhibits the highest main break frequency rate compared to all other sizes of pipe. In the Pittsburgh district, over 70% of the cast iron main breaks occur on ≤ 2" and 6" diameter CI mains. While the magnitude of breaks or break frequencies will vary between various districts, this trend of a greater number of main breaks on small diameter mains is generally found across the PAWC's water distribution systems. Over the past 20 years, focused replacement efforts have been undertaken to replace the small diameter CI and galvanized mains resulting in a reduction in the number of main breaks and a reduction in the statewide main break frequency rate. The current percent of material which is ≤ 6" in diameter in the PAWC's water system is shown in Figure 8. While it may not seem like much, the 54% of small diameter cast iron main constitutes

over 1,400 miles of pipe. Even if that were the only pipe the Company replaced, it would still take years to replace.

Figure 8 - Breakdown of Small Diameter Mains



PAWC will continue to focus on the replacement of small diameter mains (≤ 6" diameter) of various pipe material/age cohorts associated with CI, galvanized, steel, TR, and plastic which have the most number of breaks and the highest break frequency rates. Segments of pipe to be replaced will be selected based on their performance characteristics, namely main break frequency rates, and expected level of service unless there are other overriding factors such as structural, water quality, or hydraulic capacity concerns. The physical attributes of the pipe (such as material type, size, year of installation) do not directly determine the replacement timing for the asset but are used as an indicator to facilitate analysis of pipe areas. Additionally, the Company will be evaluating areas of main and not merely individual streets. Historically, there have been times where a main on a street was replaced only to come back in subsequent years to replace similar

aged pipe on neighboring streets. This practice caused greater disruption to the customers and greater damage to streets due to heavy construction traffic year by year. By also factoring in where it makes sense to replace all the pipe in a neighborhood, the Company saves mobilization cost and improves customer experience. The following have proven to be the material and vintages with the highest break rates:

Galvanized and unprotected steel pipes (all vintages)
CI pipe – unlined centrifugally CI pipe with lead/leadite joints
"Early years" DI pipe (vintage 1960s)
TR pipe (vintage late 1950s thru 1960s)
Thin walled plastic pipe (vintage 1970s)

Water quality and hydraulic capacity concerns are typically isolated to small, localized portions of the distribution system. Once the issue is investigated, if an operational measure is unable to remedy the concern, then a pipe replacement or rehabilitation option is explored. In some areas, the problem could be more widespread and caused by multiple segments of low performance pipe and the remedy could take several years to implement fully.

By Order entered October 13, 2019, the Commission permitted PAWC to establish its customer-owned lead service line replacement program. *Petition of Pennsylvania-American Water Company for Approval of Tariff Changes and Accounting and Rate Treatment Related Replacement of Lead Customer-Owned Service Pipes,* Docket No. P-2017-2606100. The COVID-19 pandemic impacted PAWC's LSL Replacement Plan activities for the 2020 calendar year and only a minimal number of lead service lines were replaced.

PAWC estimates that over 18,000 customer-side lead service lines exist across the state and is planning to replace them over the coming years in accordance with the PAWC Commission approved tariff. See Appendix A for Tariff Water-PA P.U.C. No. 5, Rule 4.9.1.

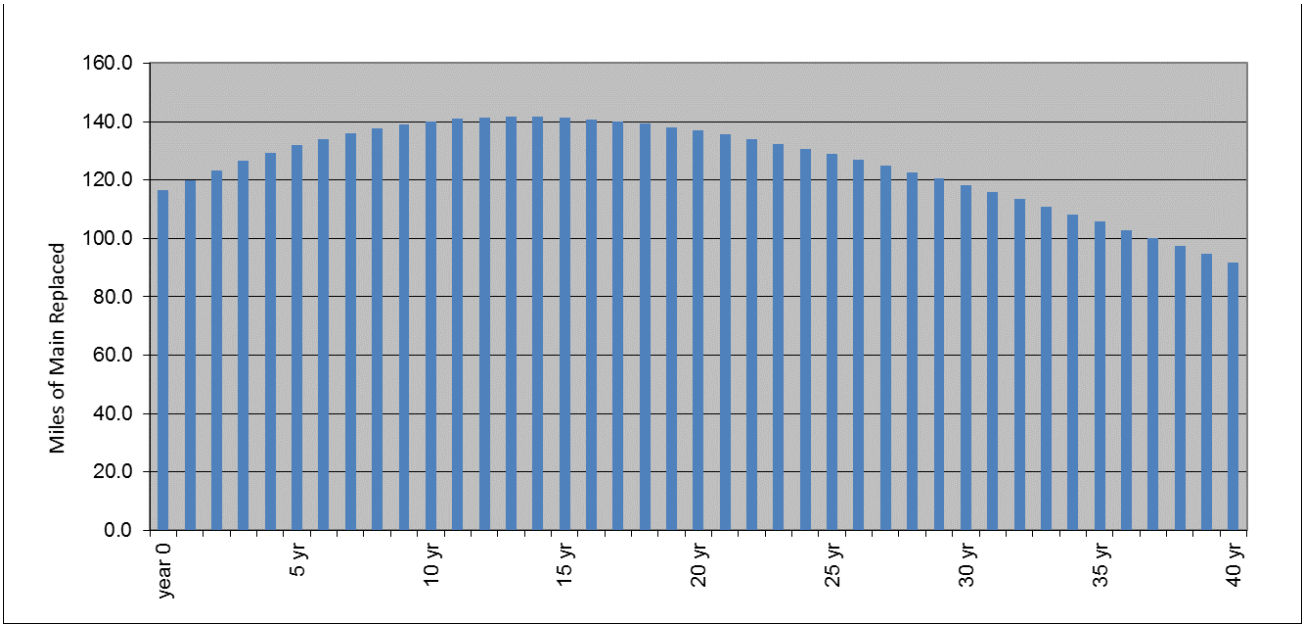
Water LTIIP II will be monitored and evaluated on a regular basis and any updates to the plan will be reported to the Commission when the Company files its Annual Asset Optimization Plan.

Section 2 – An Initial Schedule for Planned Repair and Replacement of Eligible Property

In Water LTIIP I, NESSIE curve analysis was conducted to forecast the expected replacement needs for water pipelines across the PAWC system. This Australian-based model provides a forecast of the amount of infrastructure that will need to be replaced each year over a future time period. The estimated capital investment level associated with the recommended replacement amount is quantified in terms of current value dollars. It relies on a bell curve of expected life age from classes of pipes (by age, diameter, and material). This may be based on actual experience with some pipe and projections on other pipes that have yet to experience substantial failure.

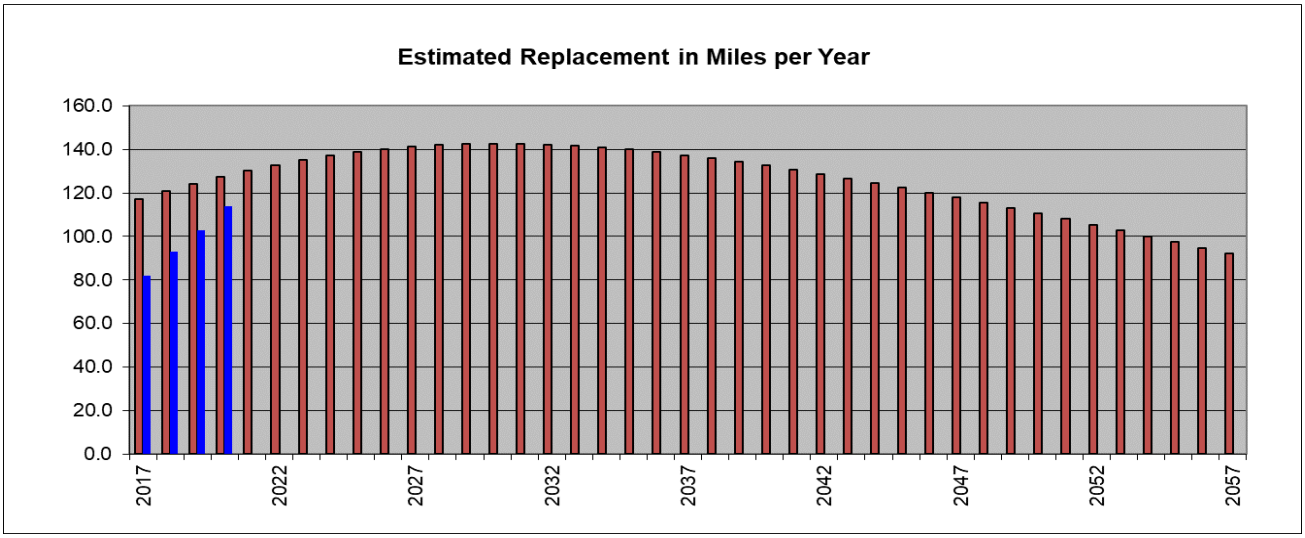
Figure 9 shows the results of the 40-year projection. The results appear to suggest that the planned level of main replacement and DSIC investment over the next 5 years is close to the projections suggested by the model. It also suggests there will be a need to increase the level of main replacement and spending over the next 25 years to meet the increasing number of pipes approaching the end of their life.

Figure 9 – Estimated Replacement in Miles Per Year
Note: Year 0 is 2017



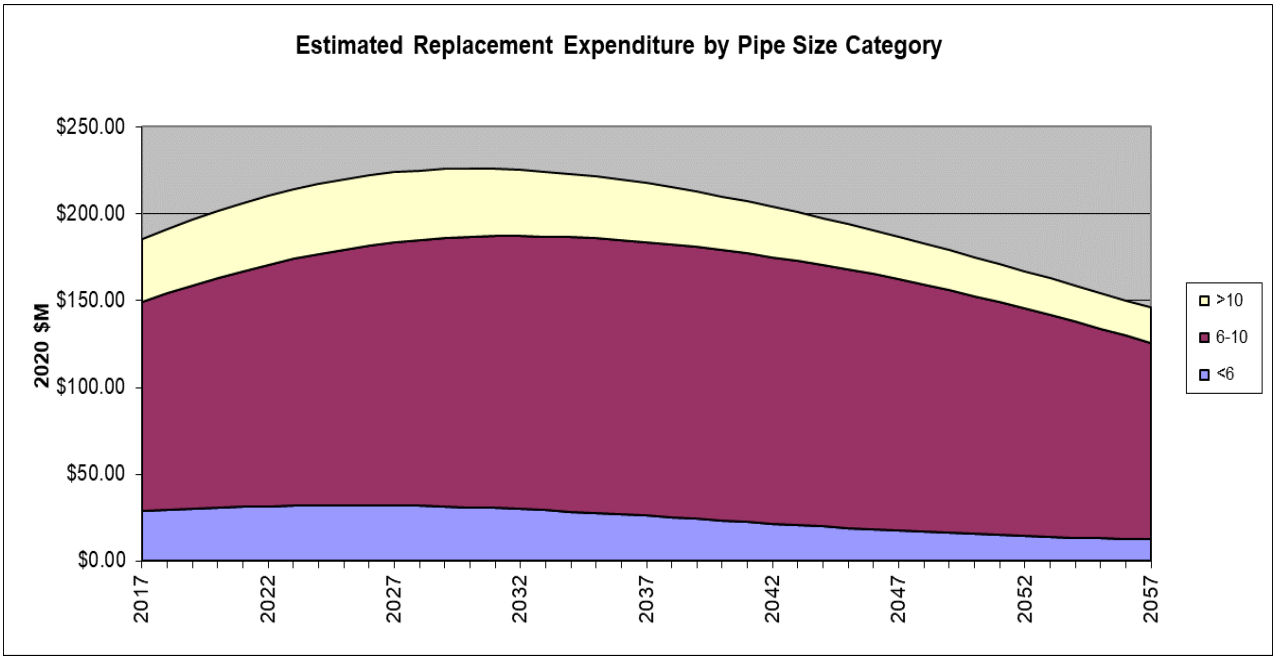
However, due to a variety of factors, the miles of pipe replaced did not keep up with the pace recommended by the model. These factors vary from very severe winter with higher than average main breaks to an increase in municipalities requiring curb-to-curb resurfacing for the restoration. The actuals miles installed compared to the model are shown in Figure 10 below:

Figure 10 - Miles of Main Installed vs the Recommended Volume of the Nessie Model



The model had indicated a need to increase the miles of pipe replaced in order to keep up with the aging infrastructure. While the program has continued to lower the number of main breaks, it is important to adjust the model to account for the lower replacement rates. Taking the cost of main installation into account, with the prioritization as outlined previously, and the miles per year, the expenditure average per year increases. Figure 11 below illustrates the need for additional investment and is aligned with the recommended miles per year.

Figure 11 - Investment Recommended by Size



Current Practice – Bottom Up Assessment

Another important component in the planning process is a more in-depth micro-level or bottom up analysis which is conducted to define local district needs. A detailed project list for the upcoming year is compiled by District Field Operations and Engineering. A primary focus of main replacement over the last few years has been the replacement or rehabilitation of small diameter

mains (6 inches and under) that have reached or are nearing the end of their useful life and larger diameter mains that are experiencing performance related issues.

The composite detailed project list is reviewed by the engineering planning group. Engineering evaluations are conducted as needed to confirm pipe size and material type, scope of the project, replacement vs. rehabilitation options, and synergies with other capital projects, etc. Project scope and costs are either confirmed or adjusted as necessary. Group meetings are then held with district personnel to review the prioritized project list and make final adjustments to scope, cost, or priority as necessary.

As shown on Figure 10, the factors used to evaluate pipeline projects include physical characteristics, performance issues/service levels, impact/consequences of failure, and cost/ease of addressing.

Physical Characteristics - Material - Size - Existing Diameter - Decade Installed	Performance Issues/Service Levels - Break Frequency - Complaint Frequency (Pressure & Water Quality) - Hydraulic Adequacy - Fire Flow Adequacy
Cost/Ease of Addressing - Repairing requirements - Traffic control - Coordinate w/other utilities & municipalities - Bundling of projects	Impact/Consequence of Failure - Number of Customers Affected - High Criticality Customer Impact (Schools, Hospitals, etc.) - Damage Claims - Difficulty of Repair/Restoration & Expense - Flooding, traffic disruption, other utilities

The prioritization process is also supported with a software, Innovyze. The data from the field is input into the Innovyze software along with data from the GIS system. Innovyze works by evaluating all pipes categorized for replacement based on a combination of frequency and severity of performance issues, which determines their risk level. For high risk pipes, where the performance of the pipe is poor, renewal would be considered a higher priority to mitigate the risk

and improve performance. Additionally, so the program is not merely reactive, the software evaluates the probability of main failure to add to the prioritization process thereby helping to avoid main breaks not just react to them. The software also incorporates the criticality of individual mains e.g., those serving medical facilities.

This performance-based management approach allows for proactive planning. For example, pipelines serving critical community services, such as hospitals and other critical care facilities, can be proactively assessed and managed to minimize potential service disruptions. Likewise, water main construction work can be coordinated with other roadwork such as road restoration, detours, and other utility work. Improvement projects can be better scheduled by area to achieve unit cost savings rather than reactive projects scattered across a system. From an overall perspective, if specific vintages of pipe (not necessarily the oldest pipe) are being replaced at a high rate due to break frequency, a proactive decision can be made to replace similar vintage of pipes exposed to similar operating conditions before such mains stop providing an acceptable level of service, generate a high volume of emergency repair work, cause significant traffic disruption, and potentially disrupt local businesses. Sufficient data about poor performing pipes, notably main breaks is important. Pipe failures can be caused by systematic factors such as soil conditions, pressure levels, or environmental conditions; or localized factors, such as pipe manufacture defects, construction damage, stray currents, and poor bedding.

In optimizing a capital improvement program, the element of risk has been recognized as a key factor in prioritizing main replacement. A common definition of risk used here is the product of the likelihood of failure ("LoF") and the consequence of the failure ("CoF"). The CoF of pipe can vary due to differences in the cost of repair, potential damage caused by the break to other infrastructure and private property, interruptions to traffic and commerce, and adverse public reaction.

Risk assessment models have multiple factors to consider. One of the key problems with a risk assessment model for large transmission mains is assigning a probability of failure with any degree of confidence which requires detailed condition assessment using inspection technologies. For most small pipes, there is sufficient history to determine an appropriate level of probability of failure.

In risk management practice, utilities measure the LoF in terms of pipeline's performance as it is related to failure modes of the pipeline. The prioritization rating criteria to determine the LoF includes factors such as pipe material, diameter, pipe age, pipe length, and pipe break data. A rating is assigned to the pipeline according to the rating criteria to indicate its LoF.

For CoF, factors related to customer impact, cost of repair and damage to other property are generally considered. These factors are impacted by pipe size, service interruption time, pipe alignment, physical location, land use, and public image, etc. For each factor considered either in estimating LoF or CoF, there is a rating value and correspondingly relative weight to calculate the risk. In determining the CoF, factors that can mitigate the CoF should be considered. For example, the availability of a redundant pipeline parallel to the critical line can reduce the CoF to a certain degree.

In the decision-making process, all the pipes are categorized based on their risk level. For high risk pipes, if the performance of the pipe is poor, then renewal must be considered to mitigate the risk and to improve the pipe performance.

For low risk pipes, the pipes with poor performance should be renewed; otherwise, the low risk pipe could change to high-risk pipe due to rise of customer complaints or risk of damage to others' property. For those pipes with fair performance, there is no urgency in renewal; they should be maintained and monitored. For low risk pipes with good performance, no action is required; maintenance and monitor should be conducted.

The schedule will follow a combination of the risk/needs assessment model together with the recommendations from the NESSIE Model. The planned investment by year is presented elsewhere in the Water LTIIP II.

Section 3 – A General Description of Location of Eligible Property

A description of the PAWC water system is provided in Section 1 with DSIC-eligible property outlined in Tables 2 through 5. This section will focus on the location of those DSIC-eligible categories that have the largest annual capital spend - namely mains and services.

As previously stated, main replacement activity will focus on small diameter mains (≤6" diameter) of various pipe material/age cohorts which have the greatest number of breaks and highest break frequency rate. The cohorts that have exhibited diminished performance are:

Galvanized and unprotected steel pipes (all vintages)
Cast Iron pipe-unlined centrifugally cast-iron pipe with lead/leadite joints
"Early years" ductile iron pipe (vintage 1960s)
Transite pipe (vintage late 1950s through 1960s)
Thin wall plastic pipe (vintage 1970s)

The selection of individual pipe segments for replacement will be based on their performance characteristics, namely main break frequency rates, and expected level of service unless there are other overriding factors such as structural, water quality, or hydraulic capacity issues.

Service replacement will be coordinated with the main replacement activity. Selected districts which were identified in Section 1 that exhibit high service leak rates will continue to be targeted. In addition, the Company anticipates fully implementing the customer-side lead service replacement program as described above. Targeted locations are still under development.

Meter replacement activity is typically driven by routine compliance change-out cycles. However, the length of service has historically been set at twenty years for the Company. With

newer AMI technology able to improve customer experience, the Company believes it is in the customer's best interest to slightly accelerate the adaptation of AMI technology. In many cases, this will not require the replacement of the entire meter but rather only the replacement of the end point transmitter to enable the AMI reading where the current AMR transmitter may not be powerful enough.

Valve and hydrant replacements are site specific and necessitated by operability and capacity issues unless the valve and hydrants are replaced along with a main replacement project. Projects that have addressed water quality or health and safety concerns have been location specific but over the past years have been less prevalent. Finally, projects that result in unreimbursed highway relocation costs are usually dictated by a third party such as PennDOT, with locations varying depending on the specific highway project.

The location of main and service replacement activity planned for the 2022-2026 timeframe is shown in Appendix B. Compliance meter change-out by location is also shown.

Section 4 – A Reasonable Estimate of Quantity of Eligible Property to be Improved or Repaired

The estimated quantities of property to be improved, miles of main, and number of services and meters are listed in Appendix B. To compile these estimates, the best available information was used regarding the infrastructure needs for each water district. Actual quantities and scheduling may change depending on the outcome of micro-level analysis or other planning studies at a district level, as described in Section 2 of Water LTIIP II.

It is important to note that the cost to install main has increased over the past few years beyond what can be readily attributed to normal inflation. Increasingly, municipalities are passing ordinances requiring full width street pavement replacement beyond the trench width that was

historically allowed. In some cases, this results in restoration costs that equal or even exceed the actual main replacement costs.

Section 5 – Projected Annual Expenditures and Means to Finance the Expenditures

The revised projected annual expenditures for 2022-2026 are shown in Appendix B. Figure 12 depicts the level of investment for maintaining the previously accelerated rate of infrastructure replacement based on a 4-year rolling average. These estimates are based on the quantities shown in Appendix B and recent, competitively-bid prices in Pennsylvania.

Figure 12 – Projected and Actual Annual and Rolling 4-year Average DSIC-eligible Expenditures (2022 – 2026)

Year	LTIIP Projected Annual Expenditures	Projected Rolling 4 Year Average Expenditures	Actual and Revised LTIIP Projected Annual Expenditures*	Actual Rolling 4 Year Average Expenditures
2012	$136.31	$119.74	$136.31	$119.74
2013	$144.09	$130.94	$144.09	$130.94
2014	$142.29	$138.49	$142.29	$138.49
2015	$185.11	$151.95	$185.11	$151.95
2016	$181.78	$163.32	$181.78	$163.32
2017	$139.75	$162.23	$140.57	$162.44
2018	$148.03	$163.67	$149.94	$164.35
2019	$186.05	$163.90	$192.15	$166.11
2020	$180.99	$163.71	$192.19	$168.71
2021	$141.19	$164.07	$139.05	$168.33
2022	$188.27	$174.12	$232.64	$189.01
2023	$187.85	$174.57	$307.57	$217.86
2024	$181.87	$174.79	**$279.75**	$239.75
2025	$188.11	$186.52	**$300.58**	$280.13
2026	$190.22	$187.01	**$265.54**	$288.36

*Revised LTIIP projections for years 2024, 2025, and 2026 are shown in **BOLD**.

In general, a 2% inflation rate has been added to determine yearly costs estimates. Starting with the pandemic in 2020 and associated supply chain disruptions, the cost of DI pipe increased close to 80% and unit costs for pipe replacement increased over 42% between 2020 and 2023. We

expect that short term inflation will be reduced and less volatile through 2026 barring another disruptive event.

Increases in the estimated to actual costs are also due to other reasons. One of these is the additional restoration requirements, including full road resurfacing or sidewalk/ramp rehabilitation to meet new standards. Another is that larger investment projects have been spread across the five-year plan to levelize the investment profile. Some quantities may change depending on the results of engineering studies and water system evaluation studies. Cost may vary depending on the replacement/rehabilitation method selected during the final design. Certain assumptions were made about eligible properties to estimate these expenditures. While the Company has competitive bid pricing for pipe replacement work, pricing will vary with the pipe's diameter and depth, type of material excavated, and other unique site conditions. Therefore, unit costs for average depth, diameter, and typical site conditions were assumed to generate project costs. Annual expenditures may be subject to periodic fluctuation due to the timing of larger non-DSIC related projects or other external factors unforeseeable at this time.

For all projects, a prudent and cost-effective method will be selected. Value engineering and constructability reviews are conducted on larger scale projects to optimize design and installation, which typically results in the most cost-effective approach. In addition, PAWC uses competitive bidding to ensure capital projects are completed in a cost-effective manner. Projects are bundled together during bidding to achieve economies of scale, improve workforce efficiency and contractor deployment. Inspection work is performed with either Company personnel or engineering consultants to ensure work is performed in accordance with Company plans and specifications and conducted in a safe and cost-effective manner. Contractors undergo a pre-qualification process and must meet established safety standards monitored by ISNET, a third-party entity which monitors safety performance. Company crews will also perform distribution

work associated with mains, services, meters, hydrants, and valves depending on workforce availability.

Materials are procured through the Company's Supply Chain Department, which competitively bids materials used for this type of work. The vendors providing the best overall value to the Company are chosen. As pipe is a commodity, having multiple vendors helps protect against catastrophic failure on the part of a single supplier. Scrapped material is disposed of at local junkyards and salvage value is obtained by the Company.

Section 6 - A Description of the Manner in Which Infrastructure Replacement will be Accelerated and How Repair, Improvement or Replacement will Ensure and Maintain Adequate, Efficient, Safe, Reliable and Reasonable Service to Customers

As previously shown on Figure 2 of Water LTIIP II, PAWC has accelerated DSIC eligible investment over the last 15 years from approximately $30 Million in 2001 to $160 Million annually, based on a rolling 4-year average through the approved Water LTIIP II. The needs of the water systems require further increase in planned investment.

The focus of the main replacement program has been the replacement of small diameter water mains (≤ 6" diameter) which exhibit the most number of breaks and have the greatest break frequency rates. Selected pipe cohorts which exhibit diminished performance, together with pipes having structural, water quality, or hydraulic capacity issues are targeted for replacement. Maintaining this accelerated rate of infrastructure replacement will enable the Company to continue providing its customers with safe and reliable service.

Section 7 – A Workforce Management and Training Program Designed to Ensure that the Utility will Have Access to a Qualified Workforce to Perform Work in a Cost-Effective, Safe and Reliable Manner

To ensure system reliability and public safety, all water DSIC eligible projects will be constructed by qualified contractors or Company personnel. PAWC uses competitive bidding and maintains a pre-qualification process to ensure all contractors are qualified to perform work in a cost-effective, safe and reliable manner. PAWC utilizes the ISNET prequalification, screening and management service. This process helps PAWC certify and centralize contractor data, perform pre-project screening, and contractor pre-qualification. It also allows PAWC to manage its risk and contractors' performance more effectively. During the pre-qualification screening process, contractors and subcontractors are required to submit pertinent documentation, such as:

- Safety: Company policy, designated safety inspector, OSHA lost workdays and recordable incidents, OSHA violations
- Worker's Compensation Experience Ratings (Experience Modifier)
- Staffing information
- Annual value of work and percentage of work relevant to bid project
- Work experience schedule
- Bonding capacity
- Liability insurance coverage
- References

PAWC's safety policies and procedures are overseen by the Director of Operational Risk Management ("ORM"). The ORM Department tracks safety performance, administers safety programs and training sessions in support of the Company's health and safety manual, conducts internal inspections/safety audits, and emergency response and preparedness. Safety training is mandatory and related to specific tasks (i.e., terrain, structures, weather, etc.). The ORM staff conducts internal investigations/safety audits on distribution crews, job sites, and locations to evaluate compliance and identify any safety issues. Investigations classify safety issues as either critical or minor. Critical violations must be corrected immediately, and minor violations must be corrected before the next investigation. The Company distributes a daily email titled "Safety Talk" as a tool to maintain and emphasize the importance of safety throughout the organization. These emails contain weekly injury reports, general safety topics, department specific safety alerts, weather and current events related safety topics, and home safety tips.

All construction projects performed by independent contractors are properly inspected. PAWC employees are actively engaged in the direct supervision of project inspections. The project close-out process includes a punch-list to ensure all work is completed according to contract documents.

Section 8 – A Description of a Utility's Outreach and Coordination Activities with Other Utilities, Department of Transportation and Local Governments Regarding the Planned Maintenance/Construction Projects and Roadways that May Be Impacted by the LTIIP

The replacement of aging infrastructure proposed in Water LTIIP II will lead to disruptions as work is performed in the rights-of-way of the roadways and streets across the PAWC service area. Local municipalities and other utilities/agencies may be planning paving projects or underground infrastructure replacement projects located in the same right-of-way as PAWC's infrastructure. PAWC recognizes that coordination with other utilities minimizes disruption and ensures that infrastructure replacement is efficient and cost effective. Therefore, PAWC takes the following steps to reach out to customers about disturbances, and coordinate with other utilities, PennDOT, and other governmental agencies located within the PAWC service area:

- Utilize Pennsylvania's one-call system for "design notifications." "Design Notifications" are used during the initial design of a project to have other utilities physically mark on site the location of their buried utilities. This allows for accurate coordination of the design by avoiding conflicts with other buried utilities during construction.
- Maintain open communication with local municipalities to stay informed about planned utility and paving projects.
- Maintain communication with PennDOT Utility Administrators and review the "letting" schedule.
- Maintain communication/working relationships with other utilities operating within PAWC's service area with regard to coordinating work activity.
- Where applicable and cost-effective, use trenchless technologies to minimize roadway disturbance.
- Prior to working within a community, issue door-to-door notifications, press releases, and/or informational letters to notify those customers/community associations affected by the work.

To minimize street restoration costs, PAWC works closely with PennDOT, other governmental agencies, and utilities to align its Water LTIIP II work with construction that those entities are planning. When appropriate, we alter construction timeframes to allow the coordination of street openings with these other entities.

APPENDIX A

RULES AND REGULATIONS

4. Service Pipes (cont'd)

4.9.1 Replacement of Lead Service Pipes

4.9.1.1

Notwithstanding Rules 2.11, 2.12, 2.14 and 4.9, the Company shall, provided that the customer consents, replace lead Service Pipes pursuant to Parts 1 and 2 of its lead Service Pipe replacement plan (Replacement Plan), subject to the budgeted allotment of $6.0 million per year for all lead Service Line replacements under its Replacement Plan. Pursuant to its Replacement Plan – Part 1, the Company will replace lead Service Pipes it encounters when replacing its mains and/or Service Lines up to 1,800 lead Service Pipe replacements per year within a maximum amount of approximately $6.0 million per year. Pursuant to its Replacement Plan – Part 2, the Company will replace a lead Service Pipe at a Customer's request subject to the following conditions: (1) verification that the Customer has a lead Service Pipe; (2) the time when the replacement occurs will be determined by the Company based on factors determined by the Company including, without limitation, the number of customer requests for Service Pipe replacements in Company-designated geographic areas; (3) the annual cap of 1,800 lead Service Pipe; and (4) availability of funds not used for Part 1 replacements under the Company's budgeted allotment of $6.0 million per year. Lead Service Pipe replacements performed pursuant to Replacement Plan – Part 1 will have priority on the use of funds under the annual budget allotment and, therefore, in any year, funds will be used for lead Service Pipe replacements under Replacement Plan – Part 2 only to the extent that funds are available within the budget allotment and are not allocated to Part 1 replacements planned for that year. Portions of the annual budget allotment of $6.0 million that are not expended on lead Service Pipe replacements under Part 1 or Part 2 of the Replacement Plan in a year will roll-over to the next subsequent year, but use of the roll-over funds will still be subject to the requirement that priority be given to Part 1 replacements. If the Company does not use the excess budgetary allotment in the subsequent year, the excess budgetary allotment will not carry forward into the following year, i.e. excess budgetary allotments will not carryforward on a cumulative basis, subject to the cap on the number of lead Service Pipe replacements per year. The Company may, but shall not be required, to petition the Commission for approval to modify its annual budget allotment of $6.0 million if the Company, in its sole discretion, determines that its annual budget allotment no longer meets the future needs of administering both Parts of the Replacement Plan. However, no change may be made without prior Commission approval. Costs the Company incurs to replace lead Service Pipes under the Company's Replacement Plan shall be subject to the accounting and rate treatment approved by the Order of the Pennsylvania Public Utility Commission (Commission) entered October 3, 2019 and Settlement at Docket No. P-2017-2606100 (Approval Order). After a lead Service Pipe is replaced by the Company, the Customer shall own the Service Pipe and shall have full responsibility for the repair, replacement and maintenance of the new Service Pipe, which, upon installation, shall thereafter be subject to the terms of Rules 2.12, 2.14 and 4.9.

4.9.1.2

The Customer shall enter into an Agreement for Replacement of Lead Service Pipe, in a form provided by the Company, prior to the initiation of any work by the Company to replace a Customer's Service Pipe. The Company will provide a two-year warranty on workmanship and materials for any Customer lead Service Pipes it replaces.

RULES AND REGULATIONS

4. Service Pipes (cont'd)

4.9.1.3

The Company will verify whether the property for which a Replacement Plan - Part 2 replacement was requested has a lead Service Pipe, and if so, will test water from the tap of the dwelling within four weeks after receiving such a request from a Customer or property owner, as applicable. The Company will notify the Customer occupying such property within three days of obtaining the test results.

4.9.1.4

The Company will provide a 10-cup filtered water container to low-income residential Customers who request (or if the Customer occupies a rental property, the property-owner has made, or has authorized the Customer to make, such request) that the Company replace their LSPs under Part 2 of the Company's Replacement Plan, provided that:

1. The Customer's household income is at or below 150% of the Federal Poverty Income Guidelines as determined by the Dollar Energy Fund, which the Company will engage to make this determination based on information available to, or obtained by, Dollar Energy Fund in the same manner Dollar Energy Fund determines a residential Customer's low-income status for other low-income programs of the Company;
2. The Company has verified that the Customer has a lead Service Pipe; and
3. The Company's testing of water from the Customer's tap shows that the water has a lead level above the action level established by the Pennsylvania Department of Environmental Protection under the Environmental Protection Agency's Lead and Copper Rule.

4.9.1.5

If the Company, at the request of a Customer or property-owner (as applicable), visits a Customer's site and determines that the Service Pipe has been replaced at or within one-year of the date the Company commenced a project to replace lead Service Pipes and the Customer or property-owner (as applicable) provides the Company with a paid invoice, a certification from a certified plumber, and other documentation determined by the Company to be appropriate to verify the replacement, the Company will reimburse the Customer's or property-owner's (as applicable) reasonable costs up to an amount not to exceed 125% of the costs the Company would have incurred to perform the replacement of a similarly-sized Service Pipe in the project area. A lead Service Pipe project will commence on the date the Company begins physical main replacement work in the project area that includes the Customer's site or when the Company deploys a contractor crew to the geographic area of a Replacement Plan – Part 2 project to perform grouped work activity, whichever is sooner.

APPENDIX B

The Company has previously included its lead service line replacement activities in its Water LTIIP II. The Company is filing a petition with the Commission seeking approval of its Lead Service Line Replacement ("LSLR") Program in accordance with 52 Pa. Code §§ 65.51 *et seq.* Pursuant to 52 Pa. Code § 65.54, an entity that has a Commission-approved LTIIP shall include with its LSLR program petition a modified LTIIP containing an LSLR plan as a separate and distinct component of the entity's LTIIP. Appendix B conforms with the requirement of 52 Pa. Code § 65.54.

Projected Annual Expenditures for DSIC-eligible properties 2022-2026

RULES AND REGULATIONS

4.9.1 Replacement of Lead Service Pipes

4.9.1.1 **(C)**

Notwithstanding Rules 2.11, 2.12, 2.14 and 4.9, the Company shall, provided that the **property owner or** customer consents, replace Lead Service Pipes pursuant to **[language deleted]** of its Lead Service **Line** replacement plan (Replacement Plan), subject to a budgeted allotment of **$35.0** million per year for all lead Service **Pipe** replacements under its Replacement Plan. The Company will replace Lead Service Pipes it encounters when replacing its mains and/or Service Lines up to **3,200** Lead Service Pipe replacements per year within a maximum amount of approximately **$35.0** million per year. The Company will replace a Lead Service Pipe at a Customer's request subject to the following conditions: (1) verification that the Customer has a Lead Service Pipe; (2) the time when the replacement occurs will be determined by the Company based on factors determined by the Company including, without limitation, the number of customer requests for Lead Service Pipe replacements in Company-designated geographic areas; (3) the annual cap of **3,200** Lead Service Pipe replacements; and (4) availability of funds **[language deleted]** under the Company's budgeted allotment of **$35.0** million per year. Lead Service Pipe replacements performed **in conjunction with the Company's main and/or Service Line replacements [language deleted]** will have priority on the use of funds under the annual budget allotment and, therefore, in any year, funds will be used for Lead Service Pipe replacements **at a Customer or property owner's request [language deleted]** only to the extent that funds are available within the budget allotment and are not allocated to **[language deleted]** replacements planned **in conjunction with the Company's main and/or Service Line replacements** for that year. Portions of the annual budget allotment of **$35.0** million that are not expended on Lead Service Pipe replacements under **[language deleted]** of the Replacement Plan in a year will roll-over to the next subsequent year, but use of the roll-over funds will still be subject to the requirement that priority be given to **[language deleted]** replacements **made in conjunction with the Company's main and/or Service Line replacements**. If the Company does not use the excess budgetary allotment in the subsequent year, the excess budgetary allotment will not carry forward into the following year, i.e. excess budgetary allotments will not carryforward on a cumulative basis, subject to the cap on the number of Lead Service Pipe replacements per year. **To the extent the Company is able to secure grant funding for Lead Service Pipe replacements, those services shall not count toward the cap in either funding or quantity.** The Company may, but shall not be required, to petition the Commission for approval to modify its annual budget allotment of **$35.0** million if the Company, in its sole discretion, determines that its annual budget allotment no longer meets the future needs of administering **[language deleted]** the Replacement Plan. However, no change may be made without prior Commission approval. After a Lead Service Pipe is replaced by the Company, the Customer shall own the Service Pipe and shall have full responsibility for the repair, replacement and maintenance of the new Service Pipe, which, upon installation, shall thereafter be subject to the terms of Rules 2.12, 2.14 and 4.9.

4.9.1.2 **(C)**

The Customer shall enter into an Agreement for Replacement of Lead Service Pipe, in a form provided by the Company, prior to the initiation of any work by the Company to replace a Customer's Service Pipe. The Company will provide a two-year warranty on workmanship and materials for any Customer Lead Service Pipes it replaces. **The two-year warranty will also include any restoration of surfaces performed by the Company in conjunction with the Lead Service Pipe replacement**. **Restoration of surfaces refers to excavations that have been backfilled and grade that has been returned to level. The Company is not responsible for replacing sidewalks, stone or asphalt driveways, or landscaping outside of a right-of-way. The start date of the two-year warranty shall be when the Lead Service Pipe replacement is placed into service and turned over to the customer or property-owner at the completion to the Lead Service Pipe replacement.**

The maximum coverage under the two-year warranty shall be limited to the actual cost of repairing the Lead Service Pipe and/or water meter pit, if applicable.

The Company shall not be liable for any damages not covered by the warranty or beyond the maximum coverage of the two-year warranty as described in Section 4.9.1.2.

If a repair is required and covered under the warranty, the customer or property-owner shall ensure that the Company and/or its contractor has access to the property to complete the repair.

(C) means Change

4.9.1.3 **(C)**

[language deleted] Neither a Customer nor a property-owner may install a partial Lead Service Pipe Replacement. A partial Lead Service Pipe Replacement will result in termination of service until such time as the Company can replace the lead Service Line.

The Company shall not connect an Applicant for water service to the Service Line at a property where a Customer or property owner previously refused or failed to accept the Company's offer of a Lead Service Pipe Replacement until the Applicant verifies the replacement of the Lead Service Pipe by providing a paid invoice from a licensed contractor where applicable or a verified statement from a licensed contractor attesting to the completion of the Lead Service Pipe Replacement.

4.9.1.4 **(C)**

The Company will provide a 10-cup filtered water container to **[language deleted]** Customers who **authorize** (or if the Customer occupies a rental property, the property-owner has **[language deleted]** authorized) **[language deleted]** the Company **to** replace their LSPs **[language deleted] as part of** the Company's Replacement Plan. **[language deleted]**.

4.9.1.5 **(C)**

If the Company, at the request of a Customer or property-owner (as applicable), visits a Customer's site and determines that the Service Pipe has been replaced at or within one-year of the date the Company commenced a project to replace Lead Service Pipes and the Customer or property-owner (as applicable) provides the Company with a detailed estimate and paid invoice from **a licensed contractor where applicable, verifying the replacement of the customer owned Lead Service Pipe, [language deleted]** the Company will reimburse the Customer's or property-owner's (as applicable) reasonable costs up to an amount not to exceed 125% of the **average** costs the Company would have incurred to perform the replacement of a similarly-sized Service Pipe in the project area, **not to exceed actual cost**. **Instead of a detailed estimate, a verified statement from the contractor attesting to completion of a Lead Service Pipe Replacement may be sufficient**. **A Lead Service Pipe project is a Company-scheduled Lead Service Pipe replacement activity either in conjunction with main replacements or as part of the Company's Replacement Plan.** A Lead Service Pipe project will commence on the date the Company begins physical main replacement work in the project area that includes the Customer's site or when the Company deploys a contractor crew to the geographic area of **[language deleted] service replacement projects** to perform grouped work activity, whichever is sooner. **A Lead Service Pipe project area is the area encompassing the Company's scheduled Lead Service Pipe Replacement activities, which includes the area within a 1-mile radius of a Lead Service Pipe project if served by the Company**. **Reimbursements will be provided to customers or property owners through check mailed to the customer or property owner within thirty days after the Company approves the request of the Customer or property owner for reimbursement. Customers or property owners that (1) do not provide the required documentation, (2) are outside of the Lead Service Pipe project area, or (3) seek reimbursement for a replacement that occurred more than one year before or after the Company commenced the Lead Service Pipe project will be ineligible for reimbursement.**

Notwithstanding the annual cap in Section 4.9.1.1, the Company shall provide reimbursement to an eligible Customer or property owner within thirty days after the Company approves the request for reimbursement. If the reimbursement would cause the Company to exceed its annual cap in Section 4.9.1.1, the Company must increase its annual cap by the amount of the reimbursement and decrease its next annual cap by this amount.

4. Service Pipes (cont'd)

4.9.1.6

Where a Customer or property owner elects to replace the Lead Service Pipe, the Customer or property-

owner shall replace the Lead Service Pipe concurrent with the Company replacing the lead Service Line, subject to the Customer or property owner providing the Company at least 90 days' notice prior to replacing the Lead Service Pipe.

4.9.1.7

Through the Replacement Plan, the Company will perfect any ownership discrepancies regarding the Service Line and the Service Pipe, so that the Customer will own the Service Pipe and the Company will own the Service Line. This will occur by the Customer and the Company executing a Lead Water Service Line Replacement consent agreement which establishes the Customer's and Company's respective ownership and responsibilities regarding the Service Pipe and Service Line.

4.9.1.8

If a shutoff valve is not located along a specific length of pipe within a structure, the Company may, at its discretion, install a shutoff valve to serve as a point of demarcation between the property's service line and the property's interior water distribution piping.

4.9.1.9

A. Step In Rights Defined. In reference to 52 Pa. Code § 65.58(c)(3), Step In Rights means the right of the Company to avoid termination of service when a property owner who is not the customer is nonresponsive to the Company's offer to replace a Lead Service Pipe which can no longer be used pursuant to Section 4.1.

The Company can utilize Step In Rights in the following circumstances:.

1. The Company has attempted to contact the property owner with an offer to replace the Lead Service Pipe in accordance with the Company's Replacement Plan.

2. The Customer or the occupier of the property is not the property owner or the property is vacant or unoccupied.

3. The Company has attempted to get authorization from the property owner to replace the Lead Service Pipe and (1) the property owner cannot be identified, or (2) the property owner has not responded to the Company's offer to replace the Lead Service Pipe.

B. Circumstances Where the Company Must Use Step-In Rights.

1. The Company shall use Step In Rights to replace a Lead Service Pipe when the Customer or occupant of the property provides a medical certification signed by a licensed physician, nurse practitioner or physician's assistant to the Company by fax, email or mail (providing the contact information).

2. The Company shall use Step In Rights to replace a Lead Service Pipe when the Customer provides to the Company a Final Protection From Abuse (PFA) order.

3. The Company shall use Step In Rights to avoid the termination of water service to the Customer or the occupier of the property in the situations listed above except where in the Company's reasonable judgement replacement would place its workers or utility property at a safety risk and in such instance, the Company may use Step In Rights at its discretion.

C. When Step In Rights are used by the Company, after the replacement is complete, the Company will restore roadways and public sidewalks, backfill any trenches excavated as part of the replacement process and will fill and seal any wall or floor penetrations in the private home ("Company Restoration Work"). No other restoration will be conducted for the private side replacement. The Company will not replace any landscaping, interior finishes, paving, seeding, or walkways ("Private Side Restoration Work"), and all restoration costs for such Private Side Restoration Work shall be borne by the property owner.

D. When the Company exercises Step In Rights, the Company's liability shall be limited to the amount in

Section 15 for any action brought against the Company, its officers, directors, employees and agents for damages arising from any and all liability, including liability to third parties and the property owner, for personal injury, including death, property damage, or other actions, damages, fines, penalties, claims, demands, judgments, losses, costs, expenses, suits and actions (including reasonable attorney's fees), for personal injury, including death, property damage or other injury, to the extent caused by or arising out of the work performed by the Company or its agents in replacing the Lead Service Pipe and/or the Company Restoration Work that the Company is responsible for under subsection 4.9.1.9 (C) above.
