Re: Petition of Pennsylvania-American Water Company for Approval of a Lead Service Line Replacement Program, Related Tariff Changes, and Modification of Long-Term Infrastructure Improvement Plan

Docket No. P-2024-3050263

Dear Secretary Homsher:

In response to the Pennsylvania Public Utility Commission's Order entered August 14, 2025, Ordering Paragraph 5, Pennsylvania-American Water Company is submitting the following documents:

1. Water Long-Term Infrastructure Improvement Plan II for the Period January 1, 2022 through December 31, 2026 dated September 1, 2021 (Revised October 20, 2021) (Second Revised July 22, 2024)
    - *Filed July 22, 2024 at Docket Number P-2021-3028300*

2. Revised Lead Service Line Replacement Plan
    - *Filed March 31, 2025 at Docket Number P-2024-3050263 – Joint Petition for Approval of Settlement of All Issus – Exhibit D*

3. Pro Forma Tariff Supplement
    - *Filed March 31, 2025 at Docket Number P-2024-3050263 – Joint Petition for Approval of Settlement of All Issus – Exhibit E*
    - *Note: Updates to the following pages made in red font: Page 1 – the addition of Greene County; Page 2 includes the full Commission Docket Number*

As also directed in Ordering Paragraph 5, the Company is serving the above-referenced documents on the Bureau of Technical Utility Services and all active parties in this proceeding.

Re: Petition of Pennsylvania-American Water Company for Approval of a Lead Service Line Replacement Program, Related Tariff Changes, and Modification of Long-Term Infrastructure Improvement Plan; Docket No. P-2024-3050263

Should you have any questions concerning this filing, please contact me.

Sincerely,

Erin K. Fure

DOCUMENT SEPARATOR

1. Water Long-Term Infrastructure Improvement Plan II for the Period January 1, 2022 through December 31, 2026 dated September 1, 2021 (Revised October 20, 2021) (Second Revised July 22, 2024)
    - *Filed July 22, 2024 at Docket Number P-2021-3028300*

Pennsylvania-American Water Company's

Water Long-Term Infrastructure Improvement Plan II

For the Period

January 1, 2022 through December 31, 2026
September 1, 2021
(Revised October 20, 2021)
(Second Revised July 22, 2024)

TABLE OF CONTENTS

		Page
Introduction	. . . . .	1
Section 1	Identification of Types and Age of Eligible Property Owned and Operated by the Utility for Which it is Seeking DSIC Recovery	12
Section 2	An Initial Schedule for Planned Repair and Replacement of Eligible Property	25
Section 3	A General Description of Location of Eligible Property	31
Section 4	A Reasonable Estimate of Quantity of Eligible Property to be Improved or Repaired	32
Section 5	Projected Annual Expenditures and Means to Finance the Expenditures . .	33
Section 6	A Description of the Manner in Which Infrastructure Replacement will be Accelerated and How Repair, Improvement or Replacement will Ensure and Maintain Adequate, Efficient, Safe, Reliable and Reasonable Service to Customers	35
Section 7	A Workforce Management and Training Program Designed to Ensure that the Utility will Have Access to a Qualified Workforce to Perform Work in a Cost-Effective, Safe and Reliable Manner	36
Section 8	A Description of a Utility's Outreach and Coordination Activities with Other Utilities, Department of Transportation and Local Governments Regarding the Planned Maintenance/Construction Projects and Roadways that May Be Impacted by the LTIIP	37

Appendices

Appendix A - Tariff Water-PA P.U.C. No. 5, Rule 4.9.1

Appendix B - Projected Annual Expenditures for DSIC-eligible properties 2022-2026 and Projected Quantities of Mains, Services, and Meters Replaced 2022-2026

INTRODUCTION

Pursuant to 66 Pa. C.S. §§1350 – 1360, 52 Pa. Code §§ 121.1-121.8, and the Pennsylvania Public Utility Commission's Supplemental Implementation Order for the Implementation of Act 11 of 2012, Docket No. M-2012-2293611 (Order entered September 21, 2016) Pennsylvania-American Water Company ("Company" or "PAWC") submitted its second Water Long-Term Infrastructure Improvement Plan ("Water LTIIP II") for the calendar years 2022-2026 on September 1, 2021 (Docket No. P-2021-3028300). On September 30, 2021, the Office of Consumer Advocate submitted comments in response to PAWC's proposed Water LTIIP II. On October 20, 2021, the Company filed revisions to Water LTIIP II. On December 16, 2021, the Commission entered an Opinion and Order approving PAWC's Revised Water LTIIP II.

During the timeframe of the Water LTIIP II, the anticipated DSIC spend profile increased for several reasons. The first is that expenses have increased due to inflation, supply chain disruptions, and restoration requirements. As an example of this increase, Table 1A shows the annual percent increase in ductile iron pipe price between 2020 and 2024. The historic annual increase of approximately 4.5% jumped and led to an increase of approximately 80% over the last 3 years. Another factor is that PAWC increased the level of investment to benefit the long-term health of the distribution networks. A Nessi Curve is presented in figures 9 and 10 of the approved Water LTIIP II and shows the theoretical need to increase replacement rates up to 140 miles per year by 2026 or approximately 1.4%. The increased investment allowed PAWC to average close to a 1% replacement rate over 2023 and 2024, we plan to maintain this replacement rate throughout the remainder of the LTIIP period.

Table 1A – Annual increases in DI pipe costs

	2020	2021	2022	2023	2024
Percent Increase over Previous Year	5%	3.86%	20-25%	50%	6%

PAWC plans to maintain DSIC spend profile in 2025 and 2026 that is flat in comparison to 2024 with spending roughly 50% above the LTIIP projections.

Based on the foregoing, and in accordance with PAWC's response to the 2023 AAOP data request TUS-2-M-1, PAWC submits its Second Water LTIIP II which revises Section 5 and includes PAWC's Lead Service Line Replacement Program in Appendix B in accordance with 52 Pa. Code. § 65.54(b).

PAWC, a wholly owned subsidiary American Water Works Company, Inc, ("AW"), is a Pennsylvania public utility that provides water and wastewater services to residents in Pennsylvania. As of May 31, 2021, PAWC provided water service to approximately 674,783 customers, or a population of approximately 2.3 million people. The composition of PAWC's water customer base its approximately 92% residential, 7% commercial, and 1% industrial/other. PAWC's water service territory is shown on Figure 1.

PAWC owns and operates 91 water and wastewater systems across Pennsylvania within over 409 communities in 37 counties. The water distribution system includes 39,500 hydrants, 191,600 valves and 674,000 customer meters and approximately 10,200 miles of pipe as shown on Table 1.

Figure 1 – PAWC Water Service Territory as of May 31, 2021

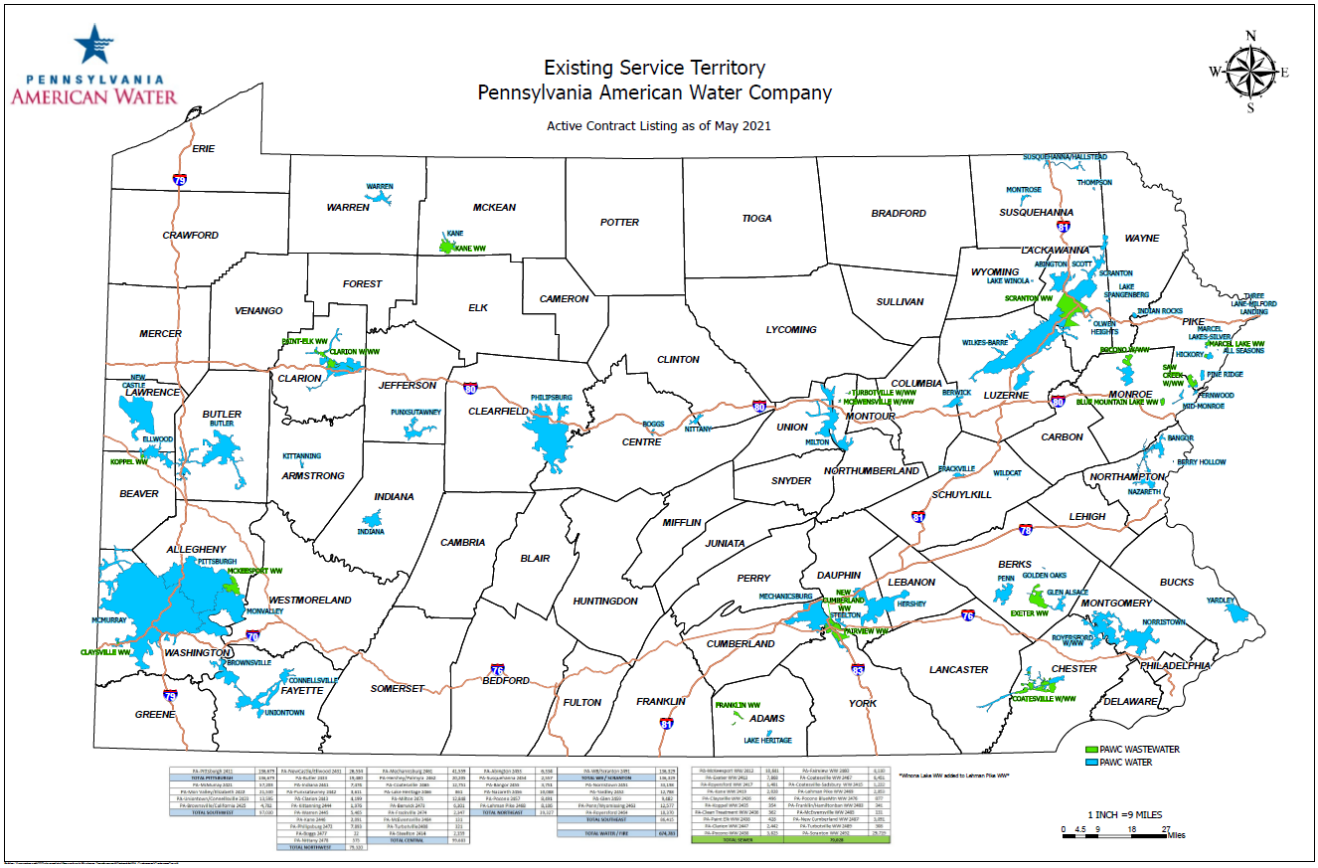

Table 1 - Water District, Areas Served, Customer Connections and Miles of Main

Water District	Areas Served	Number of Customer Connections as of EOY 2020	Miles of Main EOY 2020
Pittsburgh	The City of Pittsburgh [29th, 30th, 31st and 32nd wards and portions of the 16th, 18th, 19th, 20th and 28th wards], the Boroughs of Baldwin, Bethel Park, Brentwood, Bridgeville, Carnegie, Castle Shannon, Crafton, Dormont, Dravosburg, Green Tree, Heidelberg, Homestead, Ingram, Jefferson, Mount Oliver, Oakdale, Munhall, Pleasant Hills, Rosslyn Farms, Thornburg, West Homestead, West Mifflin, Whitaker and Whitehall and the Townships of Baldwin, Collier, Mt. Lebanon, Scott, South Fayette, South Park, Union and	136,223	1,551

	Upper St. Clair and portions of Cecil, Peters, Robinson and Nottingham Townships.		
McMurray	The City of Washington; the Boroughs of Burgettstown, Canonsburg, East Washington, Frankfort Springs, Houston, McDonald, Midway and West Middletown; the Townships of Amwell, Buffalo, Canton, Chartiers, Cross Creek, Hopewell, Independence, Jefferson, Mount Pleasant, North Franklin, North Strabane, and South Strabane; and portions of the Townships of Cecil, North Fayette, Nottingham, Fallowfield, Hanover (Washington County), Hanover (Beaver County), Peters, Robinson, Smith, Somerset, South Fayette, South Franklin, Borough of Claysville, and the Townships of Donegal and East Finley.	56,975	1,154
Elizabeth (MonValley)	The Cities of Clairton and Monongahela; the Boroughs of Elizabeth, Glassport, Jefferson, Liberty, Lincoln, New Eagle, and West Elizabeth; and the Townships of Carroll, Elizabeth, and Forward.	21,510	379
Uniontown/Connellsville	The City of Uniontown; and portions of Dunbar, Menallen, North Union, South Union and German Townships. The City of Connellsville; South Connellsville Borough; Connellsville Township and a portion of Bullskin Township.	13,567	231
Brownsville	The Boroughs of Brownsville, West Brownsville, California, Coal Center, and the Townships of Brownsville, Luzerne, Jefferson, and Redstone and East Pike Run.	4,714	111
New Castle/Ellwood	Lawrence County The City of New Castle and the Boroughs of New Beaver and South New Castle and the Townships of Hickory, Neshannock, Shenango, Taylor and Union; and portions of the Townships of Mahoning and North Beaver County The Boroughs of Ellwood City, Koppel and portions of the Borough of Big Beaver and the Townships of Franklin and portions of the Township of North Sewickley Lawrence County The Boroughs of Ellport and Ellwood City and portions of the Townships of Perry and Wayne.	26,355	526

Butler	The City of Butler; the Boroughs of East Butler; Connoquenessing, and Saxonburg; and portions of Butler, Center, Connoquenessing, Donegal, Forward, Franklin, Oakland, Jackson, Jefferson, Lancaster, Penn, Clinton and Summit Townships.	19,423	327
Indiana	The Borough of Indiana; and portions of White Township.	7,480	119
Punxsatawney	The Boroughs of Punxsutawney and Big Run, and portions of Bell, Gaskill, Young and McCalmont Townships.	3,614	86
Clarion	The Boroughs of Clarion, Shippensville, Sligo and Strattanville, the Township of Clarion and portions of Elk, Limestone, Knox, Monroe, Paint, Piney and Farmington Townships.	4,233	127
Kittanning	The Boroughs of Kittanning and Applewold, and portions of Manor and Rayburn Townships.	1,963	21
Warren	The City of Warren and portions of the Townships of Conewango, Meade, Glade and Pleasant.	5,444	88
Kane	The Borough of Kane and a portion of Wetmore Township.	2,077	42
Philipsburg	The Boroughs of Philipsburg, South Philipsburg, Wallaceton, Chester Hill, and Osceola Mills; and portions of Rush, Morris, Decatur, Graham, Walker, Bradford, and Boggs Townships.	7,848	299
Mechanicsburg	The Boroughs of Camp Hill, Lemoyne, New Cumberland, Shiremanstown, West Fairview and Wormleysburg; the Townships of East Pennsboro, Hampden, Lower Allen and portions of the Townships of Silver Spring, Fairview, Newberry and Upper Allen.	41,484	535
Hershey/Palmyra	The Borough of Palmyra and portions of the Townships of Annville, North and South Annville, North and South Londonderry, all in Lebanon County. In Dauphin County, portions of the Townships of South Hanover, West Hanover, Londonderry, Conewago and Derry.	20,142	318

Lake Heritage	A private community of Lake Heritage, which includes portions of the Townships of Mt. Joy, Mt. Pleasant and Straban in Adams County.	860	13
Steelton	Borough of Steelton and portions of Swatara Township.	2,354	28
Milton	Boroughs of Lewisburg, Milton, Northumberland and Watsontown; and in all of East and West Chillisquaque, Kelly, Buffalo, East Buffalo, Turbot, White Deer, Point, and Delaware Townships; and portions of Upper Augusta and Gregg Townships.	12,809	238
Berwick	Berwick, Nescopeck, and Briar Creek Boroughs and Briar Creek and Salem Townships.	6,303	82
Frackville (Incl. Wildcat)	The Borough of Frackville and portions of West Mahonay, Mahonay, New Castle, Butler, and Walker Townships.	2,341	27
McEwensville	Borough of McEwensville.	131	3
Turbotville	Borough of Turbotville and portions of Lewis Township.	322	5
Boggs	Boggs Township, Centre County.	22	4
Nittany	Portions of Walker and Porter Townships, Centre County.	572	15
Abington	The Boroughs of Clarks Summit, Clarks Green and Dalton; and portions of Abington, South Abington and Glenburn, Waverly and Overfield Townships.	6,288	136
Susquehanna	The Boroughs of Susquehanna, Lanesboro, Hallstead, Great Bend, Montrose and Thompson; and portions of Harmony, Oakland, Great Bend and Bridgewater Townships.	2,536	62
Bangor	The Boroughs of Bangor and Roseto and portions of Washington, Plainfield, Lower Mount Bethel, and Upper Mount Bethel Townships.	3,747	57
Nazareth	The Boroughs of Nazareth, Wind Gap, Pen Argyl, Stockertown, Tatamy, Belfast, and portions of the adjacent Townships of Ross, Bushkill, Plainfield, Forks, Upper and Lower Nazareth, and parts of Palmer.	10,060	154

Pocono	Pocono Country Place, Pocono Farms East, Pocono Farms, Stillwater Lake Estates, Lexington Woods, the Village of Tobyhanna and Mt. Pocono Borough.	8,453	156
Lehman Pike	Pike County - portions of Delaware, Lehman and Westfall Townships. Monroe County- Middle Smithfield Township, a portion of Stroud and Smithfield Townships. All Seasons, Birch Acres, Blue Mountain Lakes, Country Club of the Poconos, Fernwood, Marcel Lakes, Milford Landing, Mt. Top Estates, Pine Ridge, Saw Creek Estates, Wild Acres Developments.	7,961	173
Wilkes Barre/Scranton	The Cities of Carbondale and Scranton. The Boroughs of Archbald, Blakely, Dickson City, Dunmore, Jermyn, Jessup, Mayfield, Moosic, Old Forge, Olyphant, Taylor, Throop, and Vandling. The Townships of Carbondale, North Abington, South Abington, and Scott. A portion of the Township of Roaring Brook. The Villages of Richmondale (Fell Twp.) and Simpson (Fell Twp.) The Cities of Nanticoke, Pittston and Wilkes Barre. The Boroughs of Ashley, Avoca, Courtdale, Dallas, Dupont, Duryea, Edwardsville, Exeter, Forty Fort, Hughestown, Kingston, Laflin, Larksville, Laurel Run, Luzerne, Plymouth Pringle, Shickshinny, Sugar Notch, Swoyersville, Warrior Run, West Pittston, West Wyoming, Wyoming, and Yatesville. The Townships of Fairview, Hanover, Hunlock, Jenkins, Kingston, Newport, Pittston, Plains, Plymouth, Rice, Wilkes Barre, Wright, and portions of the Townships of Conyngham, Jackson, Jefferson, Salem and Union. The Borough of Forest City. The Village of Browndale (Clinton Twp.).	136,219	1766
Norristown	The Boroughs of Norristown and Bridgeport, part of the Townships of Whitpain, West Norriton, Worcester, Plymouth, Lower Providence, East Norriton, East Pikeland, Upper Merion, Perkiomen and Whitemarsh.	33,149	383
Yardley	The Borough of Yardley and adjacent territory in Lower Makefield and Falls Townships.	12,764	191

Glen Alsace (incl. Golden Oaks)	Berks County - the Borough of St. Lawrence. The Townships of Amity, Exeter and Ruscombmanor.	9,462	143
Penn/Wyomissing	Berks County - the Boroughs of Sinking Spring and Wyomissing Hills. The Townships of Spring, Lower Heidelberg, South Heidelberg and Cumru.	12,502	161
Royersford	Montgomery County - the Borough of Royersford. The Townships of Upper Providence and Limerick and a portion of the Township of Lower Pottsgrove. Chester County - the Borough of Spring City. The Townships of East Vincent, West Vincent, East Pikeland and Schuylkill.	18,218	279
Coatesville (includes Valley Township Water System's 22 mi of main/1,671 customers)	The City of Coatesville. The Boroughs of Parkesburg, Atglen and South Coatesville and portions of the Townships of Sadsbury, Caln, East Fallowfield, Valley, West Sadsbury and West Caln. The Borough of Quarryville and the Townships of Bart, Colerain, Eden and Sadsbury.	14,341	220
TOTAL		**674,466**	**10,213**

Note: The tentative acquisition of Valley Township Water System by PAWC is anticipated to add approximately 1,671 customers and 21.84 miles of water main in November 2021.

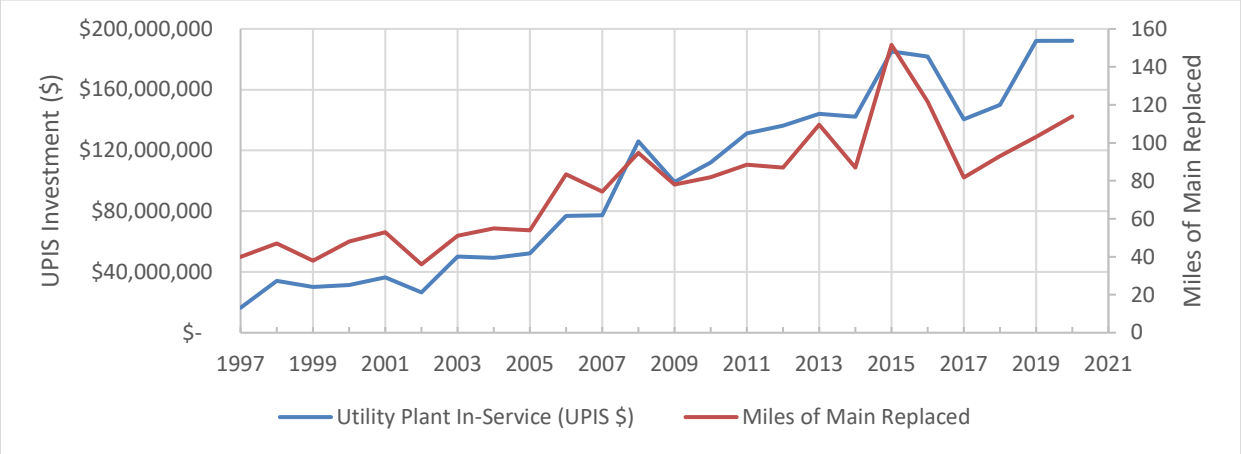
The condition of the water systems varies, depending on age, material, local conditions and quality of initial design or installation. Some systems require significant capital investment to maintain adequate, efficient, safe, reliable and reasonable service for existing customers. While some systems contain newer infrastructure and thereby require less investment, making capital infrastructure investment at the right time will maintain desired service levels and avoid replacements while repairs are still cost-effective. As the water system begins to reach the end of its useful life, factors such as increased main break frequencies, water quality degradation, loss of hydraulic capacity or pressure, and facility failures can occur which will diminish customer service quality and satisfaction, reliability, and can impact safety and regulatory compliance. As indicated in the Company's Water LTIIP I, age is not the only criteria. In many cases, very old pit-cast, cast

iron pipe is still in good condition and reliable; while newer spun cast pipe, sees a higher main break rate.

By Order entered August 26, 1996, the Commission permitted PAWC to establish its water DSIC program in order to accelerate the rehabilitation or replacement of aging infrastructure and improve customer service. *Petition of Pennsylvania-American Water Company for Approval to Implement a Tariff Supplement Establishing a Distribution System Improvement Charge*, Docket No. P-00961031. The Commission's authority to authorize the implementation of DSIC was confirmed by the General Assembly when it enacted into law Section 1307(g) of the Pennsylvania Public Utility Code under the Act of December 18, 1996, P.L. 1061, No. 156, § 1. PAWC implemented its DSIC program, effective January 1, 1997, with a cap of 5.0% of billed revenues. By Order entered August 14, 2007, the Commission permitted PAWC to increase its DSIC cap to 7.5% of billed revenues. *Petition of Pennsylvania-American Water Company for Approval to Implement a Tariff Supplement to Tariff Water-Pa P.U.C. No. 4 Revising Distribution System Improvement Charge*, Docket No. P-00062241.

As previously ordered by the Commission, PAWC has focused on smaller diameter mains and increased main replacement in the Pittsburgh district. Water LTIIP II continues to follow the guidance and requirements of the Commission. As shown on Figure 2 below, capital investment levels and the miles of pipe replaced has steadily increased over the past 20 years. The increase in footage replaced is consistent, though somewhat short of the NESSIE Model presented later in this plan.

Figure 2 – Historical Main Replacement (1997 – 2021)

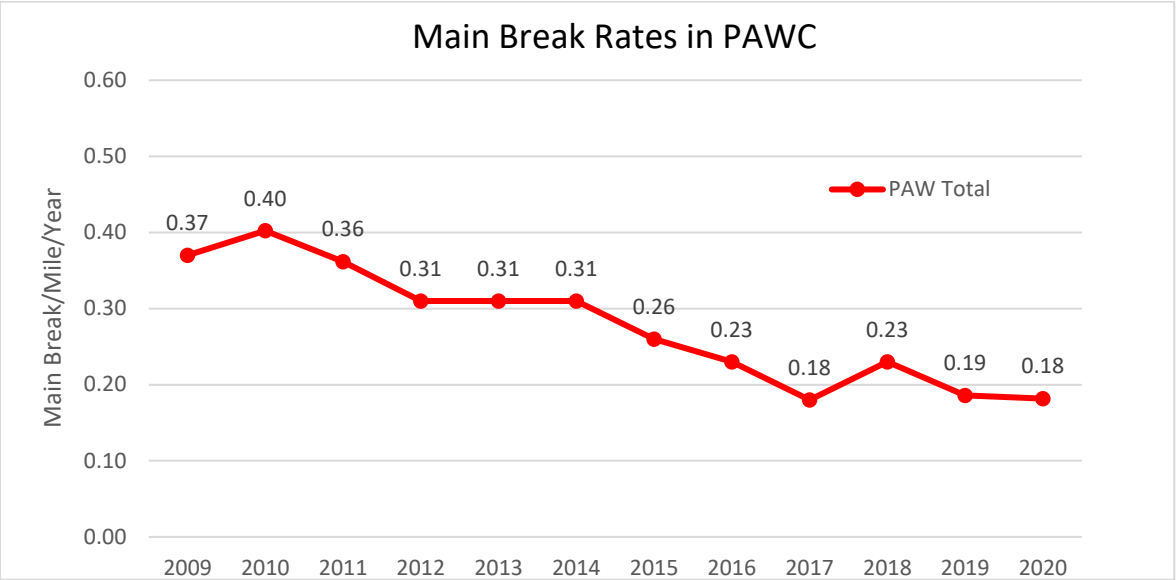


Because yearly capital investment fluctuations occur due to other non-DSIC related needs and Utility Plant In-Service spend (UPIS $) are reflective of expenditures recognized when the property is placed in service, and not always on a calendar year basis, a rolling 4-year average, as shown on Figure 2, is utilized to demonstrate the steady acceleration of capital investment from approximately $20 Million in 1997, to the current DSIC investment level of over $160 Million based on a rolling 4-year average. This is an eight-fold increase over a 20-year timeframe.

While the overall impact has been positive, it is important to note the changes relative of the UPIS and Miles of Main lines. This issue is also notable in the Figure 2 with the divergence of Miles of Main Replaced against the UPIS line. The cost per foot or per mile has escalated significantly. This cost escalation, in part, has been noted in the news with the significant recent escalation in cost of material. However, that is only a portion of the issue. Many municipalities have begun requiring full curb-to-curb replacement of asphalt; where historically, the Company has been able to restore the trench area with perhaps a two-foot area on each side of the trench. The curb-to-curb requirement results in more cost to repave and restore than the pipe installation cost.

Still, notably over the 2009-2020 timeframe, the total system-wide main break frequency, expressed in main breaks per mile of main per year, has decreased by roughly 50% as shown on Figure 3 below. While a great improvement, the average is still well above the national average break rate of 0.14 breaks/mile/year (Utah State Study 2018 Steven Folkman). Therefore, the continued efforts to replace pipe is important to continue lowering the break rate.

Figure 3 – Historical Main Breaks Per Mile Per Year (2009 - 2020)



Building on this progress, the Water LTIIP II will establish how PAWC plans to continue to maintain a previously accelerated rate of infrastructure replacement to rehabilitate, improve, and replace aging infrastructure. Discussed in Water LTIIP II are the types and age of property eligible for water DSIC recovery; schedule for its planned rehabilitation and replacement; location of eligible property; reasonable estimate of the quantity of infrastructure to be improved; projected annual expenditures and measures to ensure cost effectiveness; manner in which replacement of aging infrastructure will maintain safe and reliable service; workforce management and training program; and description of outreach to other utilities, PennDOT, and other governmental agencies to coordinate work and minimize disruptions to customers.

Section 1 – Identification of Types and Age of Eligible Property Owned and Operated by the Utility for Which it is Seeking DSIC Recovery

An inventory of all eligible property, as defined in 66 Pa. C.S. § 1351 - (4), is provided in this section. PAWC has developed and is applying MapCall as the work order management system and Geographic Information Systems (GIS) as the spatial component and record of issues related to specific mains as part of its Enterprise Asset Management (EAM) Program. Water assets, such as mains, valves, hydrants, meter pits, curb stops, and customer premises are spatially located and attributed with information about the asset. GIS and MapCall data are linked and updated continuously to include system changes, such as replacement of pipes or expansion of the water system.

GIS and MapCall workorder data are used to assist in identifying types and age of eligible assets. Records of main breaks by location and type of pipe are used to identify specific mains and areas of main that are less reliable.

Water DSIC-eligible property consists of the following categories, with recoverable costs incurred to rehabilitate, or replace eligible property completed and placed in service as noted below:

- Mains and Valves
- Services
- Meters
- Fire Hydrants
- Main cleaning and relining
- Unreimbursed highway relocation costs
- Main Extensions to eliminate dead ends

- Main Extensions to solve regional water supply problems that have documented significant health and safety concerns

The following tables and figures summarize eligible property for each water district:

Table 2 – Pipe Material Type by District

Table 3 – Finished Water Main / Pipe Diameter by District

Table 4 – Number of Customer Meters by District

Table 5 – Hydrants and Valves by District

Figure 4 – Pipe Material as a Percentage of Total Length

Figure 5 – Pipe Size as a Percentage of Total Length

Figure 6 – Pipe Material Type by Percentage

Over 59% of the distribution system piping is comprised of ductile iron ("DI") pipe. Cast iron ("CI") pipe accounts for approx. 28.8% by length, and the remainder of the system consists of other material types such as galvanized/steel, plastic, transite ("TR"), and concrete.

Over the last 10 years, the accelerated main replacement program has changed both the size and material composition of the distribution systems. The amount of small diameter mains has decreased from 35% to 7.7%, and the percentage of DI pipe has increased from 40.6% to 59.4%. Correspondingly over the same timeframe, the amount of CI pipe has decreased from 42.6% to 28.8% along with a five-fold decrease in the amount of galvanized pipe.

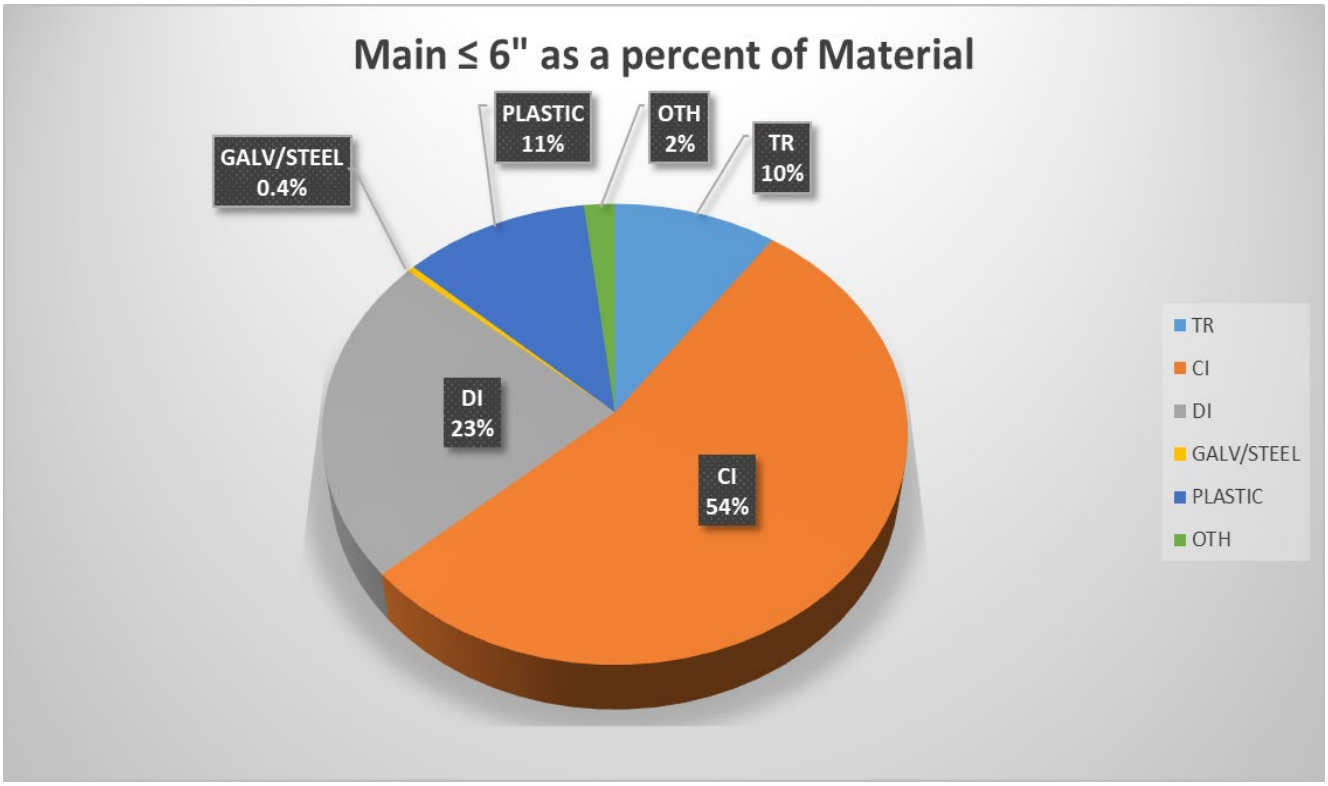
The findings of this analysis are as follows:

Small diameter mains (≤ 6" diameter) continue to have the greatest number of breaks per mile. These are primarily service line leaks. In both districts, the main break frequency rate of galvanized pipe (2" and under) is at least 5-10 times greater than any other pipe. The greatest number of breaks (at least 72%) occur on cast iron pipe, with at least 70% of those breaks occurring on pipe diameters ≤ 6". In the Wilkes Barre/Scranton district, over 60% of the cast iron main breaks occur on 4" and 6" diameter CI mains. The 2" and under size range in the Wilkes Barre/Scranton district exhibits the highest main break frequency rate compared to all other sizes of pipe. In the Pittsburgh district, over 70% of the cast iron main breaks occur on ≤ 2" and 6" diameter CI mains. While the magnitude of breaks or break frequencies will vary between various districts, this trend of a greater number of main breaks on small diameter mains is generally found across the PAWC's water distribution systems. Over the past 20 years, focused replacement efforts have been undertaken to replace the small diameter CI and galvanized mains resulting in a reduction in the number of main breaks and a reduction in the statewide main break frequency rate. The current percent of material which is ≤ 6" in diameter in the PAWC's water system is shown in Figure 8. While it may not seem like much, the 54% of small diameter cast iron main constitutes

over 1,400 miles of pipe. Even if that were the only pipe the Company replaced, it would still take years to replace.

Figure 8 - Breakdown of Small Diameter Mains



PAWC will continue to focus on the replacement of small diameter mains (≤ 6" diameter) of various pipe material/age cohorts associated with CI, galvanized, steel, TR, and plastic which have the most number of breaks and the highest break frequency rates. Segments of pipe to be replaced will be selected based on their performance characteristics, namely main break frequency rates, and expected level of service unless there are other overriding factors such as structural, water quality, or hydraulic capacity concerns. The physical attributes of the pipe (such as material type, size, year of installation) do not directly determine the replacement timing for the asset but are used as an indicator to facilitate analysis of pipe areas. Additionally, the Company will be evaluating areas of main and not merely individual streets. Historically, there have been times where a main on a street was replaced only to come back in subsequent years to replace similar

aged pipe on neighboring streets. This practice caused greater disruption to the customers and greater damage to streets due to heavy construction traffic year by year. By also factoring in where it makes sense to replace all the pipe in a neighborhood, the Company saves mobilization cost and improves customer experience. The following have proven to be the material and vintages with the highest break rates:

Galvanized and unprotected steel pipes (all vintages)
CI pipe – unlined centrifugally CI pipe with lead/leadite joints
"Early years" DI pipe (vintage 1960s)
TR pipe (vintage late 1950s thru 1960s)
Thin walled plastic pipe (vintage 1970s)

Water quality and hydraulic capacity concerns are typically isolated to small, localized portions of the distribution system. Once the issue is investigated, if an operational measure is unable to remedy the concern, then a pipe replacement or rehabilitation option is explored. In some areas, the problem could be more widespread and caused by multiple segments of low performance pipe and the remedy could take several years to implement fully.

By Order entered October 13, 2019, the Commission permitted PAWC to establish its customer-owned lead service line replacement program. *Petition of Pennsylvania-American Water Company for Approval of Tariff Changes and Accounting and Rate Treatment Related Replacement of Lead Customer-Owned Service Pipes,* Docket No. P-2017-2606100. The COVID-19 pandemic impacted PAWC's LSL Replacement Plan activities for the 2020 calendar year and only a minimal number of lead service lines were replaced.

PAWC estimates that over 18,000 customer-side lead service lines exist across the state and is planning to replace them over the coming years in accordance with the PAWC Commission approved tariff. See Appendix A for Tariff Water-PA P.U.C. No. 5, Rule 4.9.1.

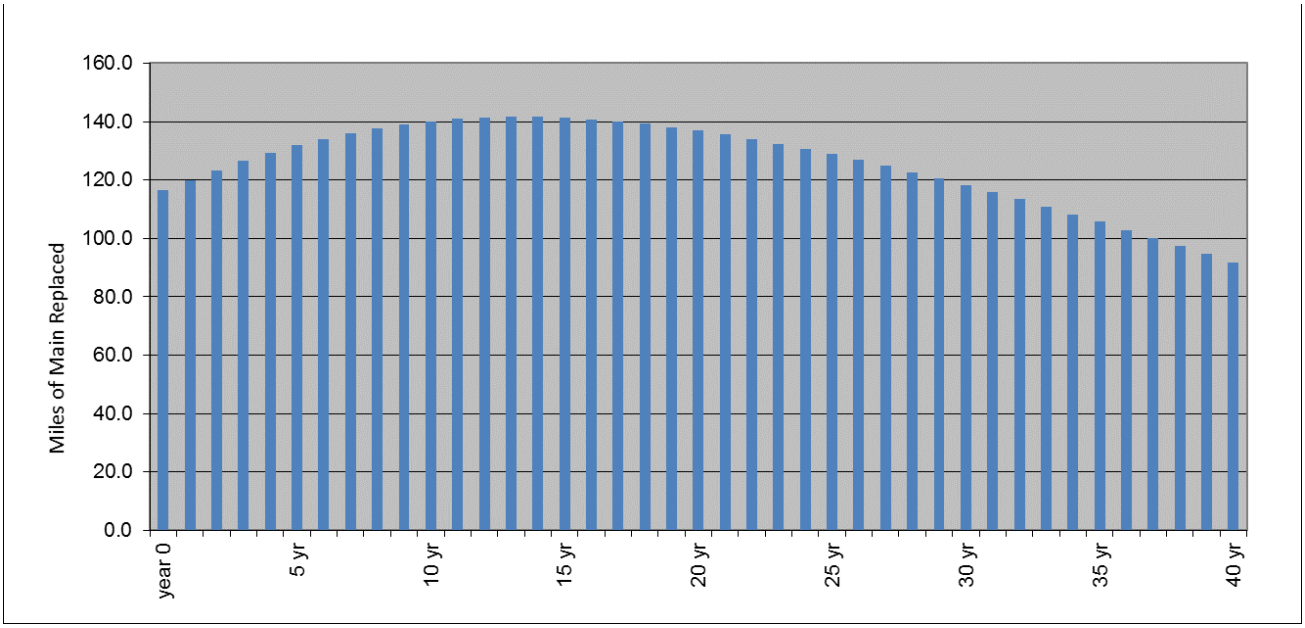
Water LTIIP II will be monitored and evaluated on a regular basis and any updates to the plan will be reported to the Commission when the Company files its Annual Asset Optimization Plan.

Section 2 – An Initial Schedule for Planned Repair and Replacement of Eligible Property

In Water LTIIP I, NESSIE curve analysis was conducted to forecast the expected replacement needs for water pipelines across the PAWC system. This Australian-based model provides a forecast of the amount of infrastructure that will need to be replaced each year over a future time period. The estimated capital investment level associated with the recommended replacement amount is quantified in terms of current value dollars. It relies on a bell curve of expected life age from classes of pipes (by age, diameter, and material). This may be based on actual experience with some pipe and projections on other pipes that have yet to experience substantial failure.

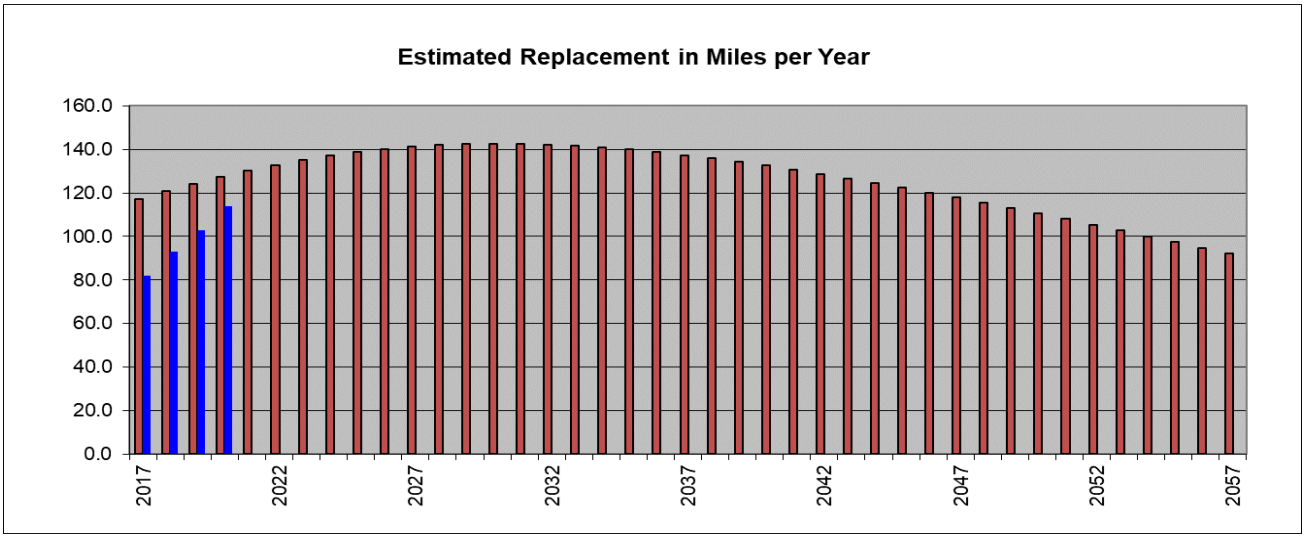
Figure 9 shows the results of the 40-year projection. The results appear to suggest that the planned level of main replacement and DSIC investment over the next 5 years is close to the projections suggested by the model. It also suggests there will be a need to increase the level of main replacement and spending over the next 25 years to meet the increasing number of pipes approaching the end of their life.

Figure 9 – Estimated Replacement in Miles Per Year
Note: Year 0 is 2017



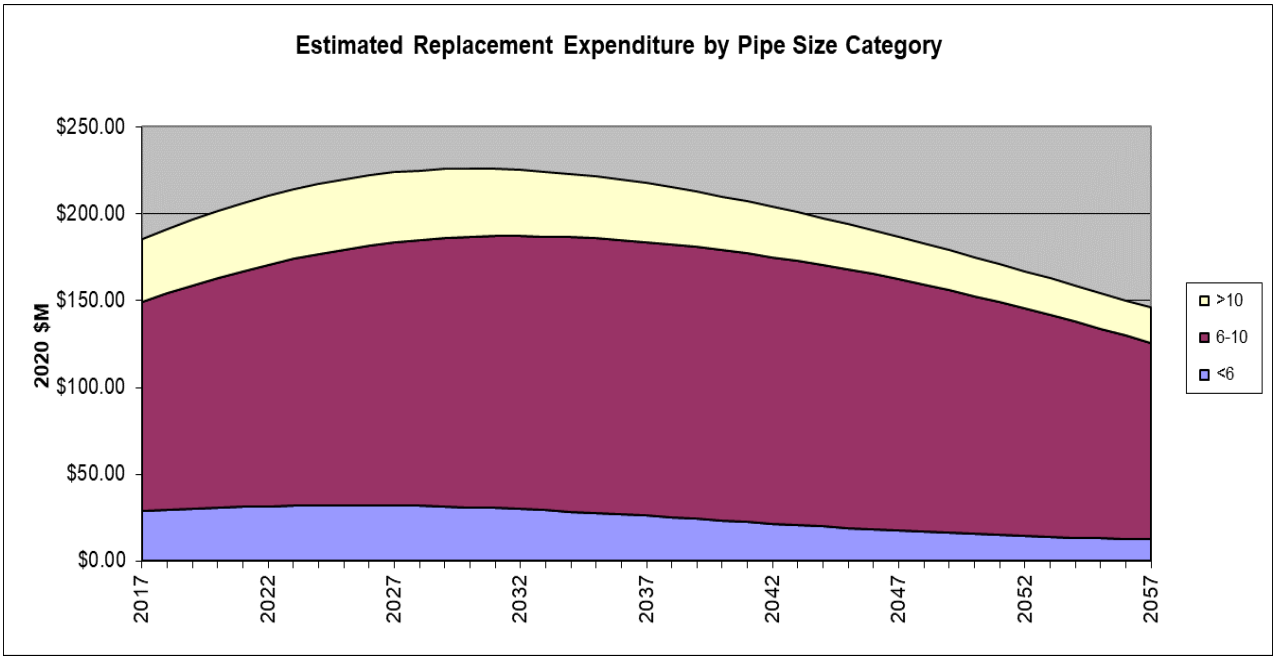
However, due to a variety of factors, the miles of pipe replaced did not keep up with the pace recommended by the model. These factors vary from very severe winter with higher than average main breaks to an increase in municipalities requiring curb-to-curb resurfacing for the restoration. The actuals miles installed compared to the model are shown in Figure 10 below:

Figure 10 - Miles of Main Installed vs the Recommended Volume of the Nessie Model



The model had indicated a need to increase the miles of pipe replaced in order to keep up with the aging infrastructure. While the program has continued to lower the number of main breaks, it is important to adjust the model to account for the lower replacement rates. Taking the cost of main installation into account, with the prioritization as outlined previously, and the miles per year, the expenditure average per year increases. Figure 11 below illustrates the need for additional investment and is aligned with the recommended miles per year.

Figure 11 - Investment Recommended by Size



Current Practice – Bottom Up Assessment

Another important component in the planning process is a more in-depth micro-level or bottom up analysis which is conducted to define local district needs. A detailed project list for the upcoming year is compiled by District Field Operations and Engineering. A primary focus of main replacement over the last few years has been the replacement or rehabilitation of small diameter

mains (6 inches and under) that have reached or are nearing the end of their useful life and larger diameter mains that are experiencing performance related issues.

The composite detailed project list is reviewed by the engineering planning group. Engineering evaluations are conducted as needed to confirm pipe size and material type, scope of the project, replacement vs. rehabilitation options, and synergies with other capital projects, etc. Project scope and costs are either confirmed or adjusted as necessary. Group meetings are then held with district personnel to review the prioritized project list and make final adjustments to scope, cost, or priority as necessary.

As shown on Figure 10, the factors used to evaluate pipeline projects include physical characteristics, performance issues/service levels, impact/consequences of failure, and cost/ease of addressing.

Physical Characteristics - Material - Size - Existing Diameter - Decade Installed	Performance Issues/Service Levels - Break Frequency - Complaint Frequency (Pressure & Water Quality) - Hydraulic Adequacy - Fire Flow Adequacy
Cost/Ease of Addressing - Repairing requirements - Traffic control - Coordinate w/other utilities & municipalities - Bundling of projects	Impact/Consequence of Failure - Number of Customers Affected - High Criticality Customer Impact (Schools, Hospitals, etc.) - Damage Claims - Difficulty of Repair/Restoration & Expense - Flooding, traffic disruption, other utilities

The prioritization process is also supported with a software, Innovyze. The data from the field is input into the Innovyze software along with data from the GIS system. Innovyze works by evaluating all pipes categorized for replacement based on a combination of frequency and severity of performance issues, which determines their risk level. For high risk pipes, where the performance of the pipe is poor, renewal would be considered a higher priority to mitigate the risk

and improve performance. Additionally, so the program is not merely reactive, the software evaluates the probability of main failure to add to the prioritization process thereby helping to avoid main breaks not just react to them. The software also incorporates the criticality of individual mains e.g., those serving medical facilities.

This performance-based management approach allows for proactive planning. For example, pipelines serving critical community services, such as hospitals and other critical care facilities, can be proactively assessed and managed to minimize potential service disruptions. Likewise, water main construction work can be coordinated with other roadwork such as road restoration, detours, and other utility work. Improvement projects can be better scheduled by area to achieve unit cost savings rather than reactive projects scattered across a system. From an overall perspective, if specific vintages of pipe (not necessarily the oldest pipe) are being replaced at a high rate due to break frequency, a proactive decision can be made to replace similar vintage of pipes exposed to similar operating conditions before such mains stop providing an acceptable level of service, generate a high volume of emergency repair work, cause significant traffic disruption, and potentially disrupt local businesses. Sufficient data about poor performing pipes, notably main breaks is important. Pipe failures can be caused by systematic factors such as soil conditions, pressure levels, or environmental conditions; or localized factors, such as pipe manufacture defects, construction damage, stray currents, and poor bedding.

In optimizing a capital improvement program, the element of risk has been recognized as a key factor in prioritizing main replacement. A common definition of risk used here is the product of the likelihood of failure ("LoF") and the consequence of the failure ("CoF"). The CoF of pipe can vary due to differences in the cost of repair, potential damage caused by the break to other infrastructure and private property, interruptions to traffic and commerce, and adverse public reaction.

Risk assessment models have multiple factors to consider. One of the key problems with a risk assessment model for large transmission mains is assigning a probability of failure with any degree of confidence which requires detailed condition assessment using inspection technologies. For most small pipes, there is sufficient history to determine an appropriate level of probability of failure.

In risk management practice, utilities measure the LoF in terms of pipeline's performance as it is related to failure modes of the pipeline. The prioritization rating criteria to determine the LoF includes factors such as pipe material, diameter, pipe age, pipe length, and pipe break data. A rating is assigned to the pipeline according to the rating criteria to indicate its LoF.

For CoF, factors related to customer impact, cost of repair and damage to other property are generally considered. These factors are impacted by pipe size, service interruption time, pipe alignment, physical location, land use, and public image, etc. For each factor considered either in estimating LoF or CoF, there is a rating value and correspondingly relative weight to calculate the risk. In determining the CoF, factors that can mitigate the CoF should be considered. For example, the availability of a redundant pipeline parallel to the critical line can reduce the CoF to a certain degree.

In the decision-making process, all the pipes are categorized based on their risk level. For high risk pipes, if the performance of the pipe is poor, then renewal must be considered to mitigate the risk and to improve the pipe performance.

For low risk pipes, the pipes with poor performance should be renewed; otherwise, the low risk pipe could change to high-risk pipe due to rise of customer complaints or risk of damage to others' property. For those pipes with fair performance, there is no urgency in renewal; they should be maintained and monitored. For low risk pipes with good performance, no action is required; maintenance and monitor should be conducted.

The schedule will follow a combination of the risk/needs assessment model together with the recommendations from the NESSIE Model. The planned investment by year is presented elsewhere in the Water LTIIP II.

Section 3 – A General Description of Location of Eligible Property

A description of the PAWC water system is provided in Section 1 with DSIC-eligible property outlined in Tables 2 through 5. This section will focus on the location of those DSIC-eligible categories that have the largest annual capital spend - namely mains and services.

As previously stated, main replacement activity will focus on small diameter mains (≤6" diameter) of various pipe material/age cohorts which have the greatest number of breaks and highest break frequency rate. The cohorts that have exhibited diminished performance are:

Galvanized and unprotected steel pipes (all vintages)
Cast Iron pipe-unlined centrifugally cast-iron pipe with lead/leadite joints
"Early years" ductile iron pipe (vintage 1960s)
Transite pipe (vintage late 1950s through 1960s)
Thin wall plastic pipe (vintage 1970s)

The selection of individual pipe segments for replacement will be based on their performance characteristics, namely main break frequency rates, and expected level of service unless there are other overriding factors such as structural, water quality, or hydraulic capacity issues.

Service replacement will be coordinated with the main replacement activity. Selected districts which were identified in Section 1 that exhibit high service leak rates will continue to be targeted. In addition, the Company anticipates fully implementing the customer-side lead service replacement program as described above. Targeted locations are still under development.

Meter replacement activity is typically driven by routine compliance change-out cycles. However, the length of service has historically been set at twenty years for the Company. With

newer AMI technology able to improve customer experience, the Company believes it is in the customer's best interest to slightly accelerate the adaptation of AMI technology. In many cases, this will not require the replacement of the entire meter but rather only the replacement of the end point transmitter to enable the AMI reading where the current AMR transmitter may not be powerful enough.

Valve and hydrant replacements are site specific and necessitated by operability and capacity issues unless the valve and hydrants are replaced along with a main replacement project. Projects that have addressed water quality or health and safety concerns have been location specific but over the past years have been less prevalent. Finally, projects that result in unreimbursed highway relocation costs are usually dictated by a third party such as PennDOT, with locations varying depending on the specific highway project.

The location of main and service replacement activity planned for the 2022-2026 timeframe is shown in Appendix B. Compliance meter change-out by location is also shown.

Section 4 – A Reasonable Estimate of Quantity of Eligible Property to be Improved or Repaired

The estimated quantities of property to be improved, miles of main, and number of services and meters are listed in Appendix B. To compile these estimates, the best available information was used regarding the infrastructure needs for each water district. Actual quantities and scheduling may change depending on the outcome of micro-level analysis or other planning studies at a district level, as described in Section 2 of Water LTIIP II.

It is important to note that the cost to install main has increased over the past few years beyond what can be readily attributed to normal inflation. Increasingly, municipalities are passing ordinances requiring full width street pavement replacement beyond the trench width that was

historically allowed. In some cases, this results in restoration costs that equal or even exceed the actual main replacement costs.

Section 5 – Projected Annual Expenditures and Means to Finance the Expenditures

The revised projected annual expenditures for 2022-2026 are shown in Appendix B. Figure 12 depicts the level of investment for maintaining the previously accelerated rate of infrastructure replacement based on a 4-year rolling average. These estimates are based on the quantities shown in Appendix B and recent, competitively-bid prices in Pennsylvania.

Figure 12 – Projected and Actual Annual and Rolling 4-year Average DSIC-eligible Expenditures (2022 – 2026)

Year	LTIIP Projected Annual Expenditures	Projected Rolling 4 Year Average Expenditures	Actual and Revised LTIIP Projected Annual Expenditures*	Actual Rolling 4 Year Average Expenditures
2012	$136.31	$119.74	$136.31	$119.74
2013	$144.09	$130.94	$144.09	$130.94
2014	$142.29	$138.49	$142.29	$138.49
2015	$185.11	$151.95	$185.11	$151.95
2016	$181.78	$163.32	$181.78	$163.32
2017	$139.75	$162.23	$140.57	$162.44
2018	$148.03	$163.67	$149.94	$164.35
2019	$186.05	$163.90	$192.15	$166.11
2020	$180.99	$163.71	$192.19	$168.71
2021	$141.19	$164.07	$139.05	$168.33
2022	$188.27	$174.12	$232.64	$189.01
2023	$187.85	$174.57	$307.57	$217.86
2024	$181.87	$174.79	**$279.75**	$239.75
2025	$188.11	$186.52	**$300.58**	$280.13
2026	$190.22	$187.01	**$265.54**	$288.36

*Revised LTIIP projections for years 2024, 2025, and 2026 are shown in **BOLD**.

In general, a 2% inflation rate has been added to determine yearly costs estimates. Starting with the pandemic in 2020 and associated supply chain disruptions, the cost of DI pipe increased close to 80% and unit costs for pipe replacement increased over 42% between 2020 and 2023. We

expect that short term inflation will be reduced and less volatile through 2026 barring another disruptive event.

Increases in the estimated to actual costs are also due to other reasons. One of these is the additional restoration requirements, including full road resurfacing or sidewalk/ramp rehabilitation to meet new standards. Another is that larger investment projects have been spread across the five-year plan to levelize the investment profile. Some quantities may change depending on the results of engineering studies and water system evaluation studies. Cost may vary depending on the replacement/rehabilitation method selected during the final design. Certain assumptions were made about eligible properties to estimate these expenditures. While the Company has competitive bid pricing for pipe replacement work, pricing will vary with the pipe's diameter and depth, type of material excavated, and other unique site conditions. Therefore, unit costs for average depth, diameter, and typical site conditions were assumed to generate project costs. Annual expenditures may be subject to periodic fluctuation due to the timing of larger non-DSIC related projects or other external factors unforeseeable at this time.

For all projects, a prudent and cost-effective method will be selected. Value engineering and constructability reviews are conducted on larger scale projects to optimize design and installation, which typically results in the most cost-effective approach. In addition, PAWC uses competitive bidding to ensure capital projects are completed in a cost-effective manner. Projects are bundled together during bidding to achieve economies of scale, improve workforce efficiency and contractor deployment. Inspection work is performed with either Company personnel or engineering consultants to ensure work is performed in accordance with Company plans and specifications and conducted in a safe and cost-effective manner. Contractors undergo a pre-qualification process and must meet established safety standards monitored by ISNET, a third-party entity which monitors safety performance. Company crews will also perform distribution

work associated with mains, services, meters, hydrants, and valves depending on workforce availability.

Materials are procured through the Company's Supply Chain Department, which competitively bids materials used for this type of work. The vendors providing the best overall value to the Company are chosen. As pipe is a commodity, having multiple vendors helps protect against catastrophic failure on the part of a single supplier. Scrapped material is disposed of at local junkyards and salvage value is obtained by the Company.

Section 6 - A Description of the Manner in Which Infrastructure Replacement will be Accelerated and How Repair, Improvement or Replacement will Ensure and Maintain Adequate, Efficient, Safe, Reliable and Reasonable Service to Customers

As previously shown on Figure 2 of Water LTIIP II, PAWC has accelerated DSIC eligible investment over the last 15 years from approximately $30 Million in 2001 to $160 Million annually, based on a rolling 4-year average through the approved Water LTIIP II. The needs of the water systems require further increase in planned investment.

The focus of the main replacement program has been the replacement of small diameter water mains (≤ 6" diameter) which exhibit the most number of breaks and have the greatest break frequency rates. Selected pipe cohorts which exhibit diminished performance, together with pipes having structural, water quality, or hydraulic capacity issues are targeted for replacement. Maintaining this accelerated rate of infrastructure replacement will enable the Company to continue providing its customers with safe and reliable service.

Section 7 – A Workforce Management and Training Program Designed to Ensure that the Utility will Have Access to a Qualified Workforce to Perform Work in a Cost-Effective, Safe and Reliable Manner

To ensure system reliability and public safety, all water DSIC eligible projects will be constructed by qualified contractors or Company personnel. PAWC uses competitive bidding and maintains a pre-qualification process to ensure all contractors are qualified to perform work in a cost-effective, safe and reliable manner. PAWC utilizes the ISNET prequalification, screening and management service. This process helps PAWC certify and centralize contractor data, perform pre-project screening, and contractor pre-qualification. It also allows PAWC to manage its risk and contractors' performance more effectively. During the pre-qualification screening process, contractors and subcontractors are required to submit pertinent documentation, such as:

- Safety: Company policy, designated safety inspector, OSHA lost workdays and recordable incidents, OSHA violations
- Worker's Compensation Experience Ratings (Experience Modifier)
- Staffing information
- Annual value of work and percentage of work relevant to bid project
- Work experience schedule
- Bonding capacity
- Liability insurance coverage
- References

PAWC's safety policies and procedures are overseen by the Director of Operational Risk Management ("ORM"). The ORM Department tracks safety performance, administers safety programs and training sessions in support of the Company's health and safety manual, conducts internal inspections/safety audits, and emergency response and preparedness. Safety training is mandatory and related to specific tasks (i.e., terrain, structures, weather, etc.). The ORM staff conducts internal investigations/safety audits on distribution crews, job sites, and locations to evaluate compliance and identify any safety issues. Investigations classify safety issues as either critical or minor. Critical violations must be corrected immediately, and minor violations must be corrected before the next investigation. The Company distributes a daily email titled "Safety Talk" as a tool to maintain and emphasize the importance of safety throughout the organization. These emails contain weekly injury reports, general safety topics, department specific safety alerts, weather and current events related safety topics, and home safety tips.

All construction projects performed by independent contractors are properly inspected. PAWC employees are actively engaged in the direct supervision of project inspections. The project close-out process includes a punch-list to ensure all work is completed according to contract documents.

Section 8 – A Description of a Utility's Outreach and Coordination Activities with Other Utilities, Department of Transportation and Local Governments Regarding the Planned Maintenance/Construction Projects and Roadways that May Be Impacted by the LTIIP

The replacement of aging infrastructure proposed in Water LTIIP II will lead to disruptions as work is performed in the rights-of-way of the roadways and streets across the PAWC service area. Local municipalities and other utilities/agencies may be planning paving projects or underground infrastructure replacement projects located in the same right-of-way as PAWC's infrastructure. PAWC recognizes that coordination with other utilities minimizes disruption and ensures that infrastructure replacement is efficient and cost effective. Therefore, PAWC takes the following steps to reach out to customers about disturbances, and coordinate with other utilities, PennDOT, and other governmental agencies located within the PAWC service area:

- Utilize Pennsylvania's one-call system for "design notifications." "Design Notifications" are used during the initial design of a project to have other utilities physically mark on site the location of their buried utilities. This allows for accurate coordination of the design by avoiding conflicts with other buried utilities during construction.
- Maintain open communication with local municipalities to stay informed about planned utility and paving projects.
- Maintain communication with PennDOT Utility Administrators and review the "letting" schedule.
- Maintain communication/working relationships with other utilities operating within PAWC's service area with regard to coordinating work activity.
- Where applicable and cost-effective, use trenchless technologies to minimize roadway disturbance.
- Prior to working within a community, issue door-to-door notifications, press releases, and/or informational letters to notify those customers/community associations affected by the work.

To minimize street restoration costs, PAWC works closely with PennDOT, other governmental agencies, and utilities to align its Water LTIIP II work with construction that those entities are planning. When appropriate, we alter construction timeframes to allow the coordination of street openings with these other entities.

APPENDIX A

RULES AND REGULATIONS

4. Service Pipes (cont'd)

4.9.1 Replacement of Lead Service Pipes

4.9.1.1

Notwithstanding Rules 2.11, 2.12, 2.14 and 4.9, the Company shall, provided that the customer consents, replace lead Service Pipes pursuant to Parts 1 and 2 of its lead Service Pipe replacement plan (Replacement Plan), subject to the budgeted allotment of $6.0 million per year for all lead Service Line replacements under its Replacement Plan. Pursuant to its Replacement Plan – Part 1, the Company will replace lead Service Pipes it encounters when replacing its mains and/or Service Lines up to 1,800 lead Service Pipe replacements per year within a maximum amount of approximately $6.0 million per year. Pursuant to its Replacement Plan – Part 2, the Company will replace a lead Service Pipe at a Customer's request subject to the following conditions: (1) verification that the Customer has a lead Service Pipe; (2) the time when the replacement occurs will be determined by the Company based on factors determined by the Company including, without limitation, the number of customer requests for Service Pipe replacements in Company-designated geographic areas; (3) the annual cap of 1,800 lead Service Pipe; and (4) availability of funds not used for Part 1 replacements under the Company's budgeted allotment of $6.0 million per year. Lead Service Pipe replacements performed pursuant to Replacement Plan – Part 1 will have priority on the use of funds under the annual budget allotment and, therefore, in any year, funds will be used for lead Service Pipe replacements under Replacement Plan – Part 2 only to the extent that funds are available within the budget allotment and are not allocated to Part 1 replacements planned for that year. Portions of the annual budget allotment of $6.0 million that are not expended on lead Service Pipe replacements under Part 1 or Part 2 of the Replacement Plan in a year will roll-over to the next subsequent year, but use of the roll-over funds will still be subject to the requirement that priority be given to Part 1 replacements. If the Company does not use the excess budgetary allotment in the subsequent year, the excess budgetary allotment will not carry forward into the following year, i.e. excess budgetary allotments will not carryforward on a cumulative basis, subject to the cap on the number of lead Service Pipe replacements per year. The Company may, but shall not be required, to petition the Commission for approval to modify its annual budget allotment of $6.0 million if the Company, in its sole discretion, determines that its annual budget allotment no longer meets the future needs of administering both Parts of the Replacement Plan. However, no change may be made without prior Commission approval. Costs the Company incurs to replace lead Service Pipes under the Company's Replacement Plan shall be subject to the accounting and rate treatment approved by the Order of the Pennsylvania Public Utility Commission (Commission) entered October 3, 2019 and Settlement at Docket No. P-2017-2606100 (Approval Order). After a lead Service Pipe is replaced by the Company, the Customer shall own the Service Pipe and shall have full responsibility for the repair, replacement and maintenance of the new Service Pipe, which, upon installation, shall thereafter be subject to the terms of Rules 2.12, 2.14 and 4.9.

4.9.1.2

The Customer shall enter into an Agreement for Replacement of Lead Service Pipe, in a form provided by the Company, prior to the initiation of any work by the Company to replace a Customer's Service Pipe. The Company will provide a two-year warranty on workmanship and materials for any Customer lead Service Pipes it replaces.

RULES AND REGULATIONS

4. Service Pipes (cont'd)

4.9.1.3

The Company will verify whether the property for which a Replacement Plan - Part 2 replacement was requested has a lead Service Pipe, and if so, will test water from the tap of the dwelling within four weeks after receiving such a request from a Customer or property owner, as applicable. The Company will notify the Customer occupying such property within three days of obtaining the test results.

4.9.1.4

The Company will provide a 10-cup filtered water container to low-income residential Customers who request (or if the Customer occupies a rental property, the property-owner has made, or has authorized the Customer to make, such request) that the Company replace their LSPs under Part 2 of the Company's Replacement Plan, provided that:

1. The Customer's household income is at or below 150% of the Federal Poverty Income Guidelines as determined by the Dollar Energy Fund, which the Company will engage to make this determination based on information available to, or obtained by, Dollar Energy Fund in the same manner Dollar Energy Fund determines a residential Customer's low-income status for other low-income programs of the Company;
2. The Company has verified that the Customer has a lead Service Pipe; and
3. The Company's testing of water from the Customer's tap shows that the water has a lead level above the action level established by the Pennsylvania Department of Environmental Protection under the Environmental Protection Agency's Lead and Copper Rule.

4.9.1.5

If the Company, at the request of a Customer or property-owner (as applicable), visits a Customer's site and determines that the Service Pipe has been replaced at or within one-year of the date the Company commenced a project to replace lead Service Pipes and the Customer or property-owner (as applicable) provides the Company with a paid invoice, a certification from a certified plumber, and other documentation determined by the Company to be appropriate to verify the replacement, the Company will reimburse the Customer's or property-owner's (as applicable) reasonable costs up to an amount not to exceed 125% of the costs the Company would have incurred to perform the replacement of a similarly-sized Service Pipe in the project area. A lead Service Pipe project will commence on the date the Company begins physical main replacement work in the project area that includes the Customer's site or when the Company deploys a contractor crew to the geographic area of a Replacement Plan – Part 2 project to perform grouped work activity, whichever is sooner.

APPENDIX B

The Company has previously included its lead service line replacement activities in its Water LTIIP II. The Company is filing a petition with the Commission seeking approval of its Lead Service Line Replacement ("LSLR") Program in accordance with 52 Pa. Code §§ 65.51 *et seq.* Pursuant to 52 Pa. Code § 65.54, an entity that has a Commission-approved LTIIP shall include with its LSLR program petition a modified LTIIP containing an LSLR plan as a separate and distinct component of the entity's LTIIP. Appendix B conforms with the requirement of 52 Pa. Code § 65.54.

Projected Annual Expenditures for DSIC-eligible properties 2022-2026

Capital Investment		2022	2023	2024	2025	2026
1. Main Replacement	Millions	**$92.60**	**$98.67**	**$94.35**	**$96.36**	**$98.41**
Pittsburgh	Millions	$30.63	$32.64	$31.21	$31.87	$32.55
WB/Scranton	Millions	$16.41	$17.48	$16.72	$17.07	$17.44
Elizabeth	Millions	$4.22	$4.50	$4.30	$4.40	$4.49

2. Revised Lead Service Line Replacement Plan
    - *Filed March 31, 2025 at Docket Number P-2024-3050263 – Joint Petition for Approval of Settlement of All Issus – Exhibit D*

PENNSYLVANIA AMERICAN WATER

Lead Service Line Replacement Plan

Pursuant to Act 120 of 2018

July 22, 2024

WE KEEP LIFE FLOWING®

I. Introduction

Pennsylvania-American Water Company ("Pennsylvania-American Water", "PAWC" or the "Company") submits this plan for the lead service line replacement ("LSLR") pursuant to recently enacted 52 Pa. Code §§ 65.51, *et seq*. ("LSLR Plan" or the "Plan").

II. Background

Act 120 of 2018 ("Act 120") was signed into law by Governor Wolf on October 24, 2018, and became effective 60 days thereafter. Act 120 amended Section 1311(b) of the Pennsylvania Public Utility Code (the "Code"), 66 Pa. C.S. § 1311(b), to authorize water and wastewater public utilities to recover a return on and a return of the costs they incur to replace customer-owned lead water service lines ("LSLs") and customer-owned damaged wastewater laterals subject to specified conditions. This document is intended to only address LSLR and does not address wastewater laterals.

Pursuant to Act 120, the Pennsylvania Public Utility Commission ("PUC" or "Commission") promulgated regulations at 52 Pa. Code §§ 65.51, *et seq*. ("LSLR Regulations"), which became effective on July 23, 2022. The purpose of the LSLR Regulations is to establish the time, manner, form and content of filings for Commission approval of LSLRs. 52 Pa. Code § 65.51.

III. Statutory Consideration for Plan

66 Pa. C.S. § 1311(b) states: "a public utility providing water or wastewater service must obtain prior approval from the commission for the replacement of a customer-owned lead water service line…by filing a new tariff or supplement to existing tariffs under section 1308." Section 1311(b)(vii) requires the Commission to establish (by regulation or order) standards, processes and procedures to ensure work performed by a public utility or its contractor to replace a customer-owned LSL is accompanied by a warranty of a term the Commission determines appropriate, and that the public utility and its contractor have access to the affected customer's property during the warranty's term, as well as provide for reimbursement to a customer who has replaced the customer's LSL within one year of commencement of a project in accordance with a Commission-approved tariff.

52 Pa. Code § 65.54 requires public water utilities with a Commission-approved Long-Term Infrastructure Improvement Plan ("LTIIP") to file a LSLR program petition which includes a modified LTIIP containing its LSLR plan as a separate and distinct component of the water utility's LTIIP.

52 Pa. Code § 65.55 requires a utility's LSLR program to include a LSLR plan.

The requirements for a LSLR plan are found under **52 Pa. Code § 65.56**:

1. **Service Line Inventory** *(See Section IV of the Plan for details)*

52 Pa. Code § 65.56(a)(1): Public water utilities shall submit to the Commission a service line inventory that complies with the Unites States Environmental Protection Agency ("EPA") regulation at 40 CFR 141.1-143.20 as enforced by the Department of Environmental Protection ("DEP").

52 Pa. Code § 65.56(a)(2): Public water utilities acquiring a water distribution system shall provide to the Commission a service line inventory for the acquired system upon completion of the acquisition or as part of its service line inventory, whichever is later. A public water utility may rely on a previously completed service line inventory for an acquired system if the entity updates the service line inventory.

52 Pa. Code § 65.56(a)(3): A service line inventory must comply with the timing and direction of the EPA regulations at 40 CFR 141.1-143.20 as enforced by DEP.

52 Pa. Code § 65.56(a)(4): Public water utilities shall identify assumptions in the service line inventory to the Commission.

52 Pa. Code § 65.56(a)(5): Until the service line inventory is complete, the utility shall provide detailed information regarding the progress of its service line inventory as part of its annual LSLR program report.

52 Pa. Code § 65.56(a)(6): After a service line inventory is complete, it must be incorporated into the utility's next LSLR plan update.

2. Planning and Replacements *(See Section V of the Plan for details)*

52 Pa. Code § 65.56(b): The planning and replacement section of a LSLR plan must include:

(1) The utility's projected annual investment in LSLRs with an explanation of the utility's anticipated sources of financing.
(2) The utility's projected number of LSLRs per calendar year with an explanation of how the entity's projection was determined and a statement that this number is consistent with the utility's annual cap on LSLRs.
(3) The prioritization criteria considered by the utility when developing its LSLR schedule.
(4) An explanation of the utility's processes and procedures to address emergency repairs or replacements which reveal LSLs.
(5) The utility's processes and procedures to obtain acceptance of a LSLR prior to LSLR project commencement if the customer is the property owner, and the utility's processes and procedures to obtain acceptance prior to LSLR project commencement if the customer is not the property owner.
(6) The utility's process and procedures based on acceptance of a LSLR including (a) a consent agreement form by which the customer or property owner will authorize the LSLR, (b) a brief description of the utility's process for LSLRs under normal conditions and under atypical conditions, (c) an explanation of the utility's process for coordination with the customer or property owner and the information the utility will provide to the customer and property owner throughout the LSLR process, and (d) the utility's process for addressing LSLR completion or closeout, or both, with the customer and property owner.
(7) The utility's lead/material recycling and disposal efforts, including a description of what the utility will do with the proceeds from recycling and disposal efforts.

(8) The industry-accepted practices that the utility plans to use to replace utility-owned and customer-owned LSLs.

(9) A detailed explanation of how the utility's acquisition of water distribution systems will be integrated into the entity's efforts to complete LSLRs throughout its water distribution systems.

(10) The procedure for documenting refusal of, or failure to accept, the offer by the utility to replace a LSLS, including the utility's duty to (a) provide the customer or property owner with a complete disclosure of the known health hazards from the continued use of a LSLS, (b) inform the customer or property owner that refusal or failure to accept will require replacement of the customer-owned LSL, at the customer or property owner's expense, within one year from the LSLR project commencement for the customer or property owner to be eligible for reimbursement, and (c) communicate to the customer and property owner that failure to allow the utility to complete the LSLR or to replace the customer-owned LSL concurrent with the utility replacing the utility-owned LSL will lead to termination of water service under the provisions of the utility's tariff.

3. **Communications, Outreach, and Education.** *(See Section VI of the Plan for details)*

52 Pa. Code § 65.56(c): The utility shall demonstrate compliance with the EPA regulations at 40 CFR 141.85. The utility's LSLR plan must include copies of all printed and broadcast material to be distributed under its LSLR program. A Class A public utility shall develop a LSLR section of its website within twelve months of Commission approval of its LSLR program. The website must contain at a minimum:

(1) an online tool describing the replacement schedule by geographic location, at least 6 months into the future,

(2) information regarding the reimbursement requirements and a secure online tool that provides customers or property owners the ability to determine whether the customer or property owner may be eligible for reimbursement;

(3) information that provides the ability to determine whether a property may have a LSL, delineating the known or reasonably anticipated material types for the utility-owned and customer-owned portions of the service line and a method to request assistance to determine if a service line is a LSL; and

(4) information and resources relating to health risks associated with lead and LSLs, the status of current efforts to replace LSLs, and community meetings and advisory committees hosted by the utility.

52 Pa. Code § 65.57 requires the utility to update its LSLR plan for Commission review at least once every five years.

IV. Service Line Inventory

52 Pa. Code § 65.56(a): Public water utilities shall submit to the Commission a service line inventory that complies with the EPA regulations at 40 CFR 141.1-143.20 as enforced by the DEP. A service line inventory must comply with the timing and direction of the EPA regulations at 40 CFR 141.1-143.20 as enforced by DEP. Public water utilities shall identify assumptions in the service line inventory to the Commission. Until the service line inventory is complete, the utility shall provide detailed information regarding the progress of its service line inventory as

part of its annual LSLR program report. After a service line inventory is complete, it must be incorporated into the utility's next LSLR plan update.

Assumptions in the Service Line Inventory

In compiling its service line inventory, the Company relies on information obtained from its onsite contractor during customer-side service line inspections, information provided by customers regarding their customer-side service line information, information obtained from Company review of tap slips, water main replacement records, development construction records, and municipal/local system records. The Company also obtains service line material information on all inside meter replacements that occur. In the case of an outside meter replacement, the Company requests to gain access to the customer's premise in order to determine the service line material information.

The Company also reviews the age of homes obtained from parcel records in compiling its service line inventory. The Company uses the assumption that any construction that occurred after January 1991 will not contain lead due to The Plumbing System Lead Ban and Notification Act, 35 P.S. §§ 723.1 *et seq*., ("PA Lead Ban") becoming effective on January 6, 1991.

The Company assumes that if the Company-side of a line is lead, it is more likely than not that the customer-side of a line is or was lead or galvanized.

Additionally, the Company assumes that galvanized lines are downstream of lead lines.

Service Line Inventory

PAWC's service line inventory as of July 2024 is attached to the LSLR Plan as Appendix 1.

The Company has not completed its service line inventory. Until the Company completes its service line inventory, it will provide detailed information regarding the progress of its service line inventory as part of its annual LSLR Program report. The Company will incorporate the updated service line inventory into its next LSLR Plan update.

The Company's service line inventory completed to date complies with the EPA regulations at 40 CFR 141.1-143.20 as enforced by the DEP with a deadline for submission of October 16, 2024.

PAWC plans to continue to identify material types on both the company and customer-owned sides of the service lines through reviewing existing records, mechanical excavation, and visual inspection. Once enough information is obtained through these methods, the Company will utilize statistical analysis to confirm known material and identify unknown material. Pennsylvania American Water will continue to update the inventory and notify Lead, Galvanized Requiring Replacement and Unknown customers annually to comply with current EPA and DEP regulations.

Due to the DEP's verification methods, many of the service lines in PAWC's service line inventory are listed as "unknown." In order to categorize a pipe material as "non-lead", the DEP requires sufficient evidence to demonstrate this designation. The DEP issued the following guidance attached as Appendix 2. Records indicating a company service line was installed or replaced after January 6, 1991 or a record of a local ordinance or plumbing code prohibiting lead service line installation along with water system records indicating service line installation/replacement occurred after the

effective date of the ordinance are both sufficient stand-alone methods to verify a pipe is non-lead. It must be noted that the installation date must also be known on the customer service line to verify the entire service line as non-lead. In all other circumstances, historical records must also be verified using one of the following investigation techniques: (1) field verification (visual inspection, CCTV, mechanical excavation), (2) water quality sampling (targeted, flushed or sequential if the system does not have corrosion control treatment), or (3) modeling/statistical analysis. The requirement of a secondary verification for historical records that do not meet stand-alone verification criteria leads to many lines being listed as "unknown" despite historical records identifying the material used in these lines. Until the secondary verification can occur, these lines cannot be listed as "non-lead" and must be listed as "unknown."

Acquired Systems

Upon acquiring a water distribution system, the Company shall provide to the Commission a service line inventory for the acquired system upon completion of the acquisition or as part of its service line inventory, whichever is later.

V. Planning and Replacements

52 Pa. Code § 65.56(b): The planning and replacement section of a LSLR plan must include:

(1) The utility's projected annual investment in LSLRs with an explanation of the utility's anticipated sources of financing.

(2) The utility's projected number of LSLRs per calendar year with an explanation of how the entity's projection was determined and a statement that this number is consistent with the utility's annual cap on LSLRs.

(3) The prioritization criteria considered by the utility when developing its LSLR schedule.

(4) An explanation of the utility's processes and procedures to address emergency repairs or replacements which reveal LSLs.

(5) The utility's processes and procedures to obtain acceptance of a LSLR prior to LSLR project commencement if the customer is the property owner, and the utility's processes and procedures to obtain acceptance prior to LSLR project commencement if the customer is not the property owner.

(6) The utility's process and procedures based on acceptance of a LSLR including (a) a consent agreement form by which the customer or property owner will authorize the LSLR, (b) a brief description of the utility's process for LSLRs under normal conditions and under atypical conditions, (c) an explanation of the utility's process for coordination with the customer or property owner and the information the utility will provide to the customer and property owner throughout the LSLR process, and (d) the utility's process for addressing LSLR completion or closeout, or both, with the customer and property owner.

(7) The utility's lead/material recycling and disposal efforts, including a description of what the utility will do with the proceeds from recycling and disposal efforts.

(8) The industry-accepted practices that the utility plans to use to replace utility-owned and customer-owned LSLs.

(9) A detailed explanation of how the utility's acquisition of water distribution systems will be integrated into the entity's efforts to complete LSLRs throughout its water distribution systems.

(10) The procedure for documenting refusal of, or failure to accept, the offer by the utility to replace a LSLS, including the utility's duty to (a) provide the customer or property owner with a complete disclosure of the known health hazards from the continued use of a LSLS, (b) inform the customer or property owner that refusal or failure to accept will require replacement of the customer-owned LSL, at the customer or property owner's expense, within one year from the LSLR project commencement for the customer or property owner to be eligible for reimbursement, and (c) communicate to the customer and property owner that failure to allow the utility to complete the LSLR or to replace the customer-owned LSL concurrent with the utility replacing the utility-owned LSL will lead to termination of water service under the provisions of the utility's tariff.

Projected Annual Investment and Anticipated Sources of Financing

To estimate the total cost to perform full LSLRs, the Company must first identify the estimated number of lead service lines, both Company and customer-owned, throughout its system.

Based on an on-going comprehensive review of our water service records, PAWC currently estimates that the Company has approximately 12,000 Company-owned lead and galvanized service lines requiring replacement[1].

The Company's service records do not consistently identify the material of the customer-owned service line, as this level of detail was not historically relevant and thus, not captured or maintained. Consequently, the Company does not have an exact count of customer-owned LSLs to be replaced under the Company's proposal. Nevertheless, the expectation is that there is likely lead on the customer side where we find lead on the Company side. The Company also expects to encounter galvanized service lines on both the Company side and customer side for those areas that have historically had lead goosenecks. Based on PAWC's evaluation of our service records, the Company estimates that there are approximately 34,500 customer-owned LSLs, including galvanized service lines requiring replacement.

Pennsylvania-American Water prepares and updates a six-year capital investment plan each year. The Company also based its projection on the timeline set forth in the EPA's proposed Lead and Copper Rule Improvements ("LCRI"), which would require achieving 100% LSLR within 10 years of its adoption, which, at this time, is anticipated to be 2027. From this planning, and in consideration of replacing LSLs over a 13-year window ending in 2037, Pennsylvania-American Water currently estimates it will replace a quantity range of LSLs starting in 2025 and continuing until 2037, of 3,000 to 3,600.

The average estimated cost for a customer-side LSLR is $8,580 (based on estimated averages) and for a Company-side LSLR the average estimated cost is $5,950 (based on estimated averages).

[1] The Company's effective Water Tariff defines "lead service pipe" as any service pipe constructed with lead or galvanized pipe located downstream from a service pipe constructed with lead. To the extent the Company's LSLRP includes references to "lead service lines", this term includes service lines constructed with lead or galvanized pipe downstream from a service line constructed with lead.

The estimates are in 2025 dollars (rounded to the nearest $10) and do not account for cost inflation of either materials, labor or other related items such as permitting, planning, etc.

In addition, the average cost of replacement could increase or decrease as work continues. Factors impacting cost include, but are not limited to: (1) whether work is completed as a part of a main replacement program, in a targeted area, or as a one-off replacement; (2) local ordinances, codes, and requirements; (3) changes in laws, standards, and best practices; (4) local competitive market prices; (5) differences in construction methods and equipment in different areas; (6) property site conditions; (7) scope of work and building conditions for work, if any, performed through building foundation walls and within buildings; (8) any factors impacting material and labor costs such as inflation, strikes, and events affecting the supply chain; and (9) improvements in technology.

The Company has already incurred approximately $9.28 million to replace over 1,019 customer-owned LSLs from 2020 through February of 2024. Going forward, PAWC estimates that the total cost to replace 46,500 Company and Customer side LSLs is approximately $414.8M assuming an annual cost escalation of 2%.[2] Of that amount, approximately $334.6M is attributable to customer-owned LSLs.[3] As noted above, these amounts do include moderate inflation of 2% of the cost of materials and labor and may also vary based on the actual number of LSLs identified throughout this process as well as, among other factors, the manner in which replacement is achieved. For example, replacement of customer-owned LSLs in coordination with a main replacement project or as part of a larger service line replacement project is more efficient (and less costly on a per unit basis) than if the Company is replacing a single customer-owned LSL.

As Pennsylvania-American Water further identifies and inventories service line material, it is anticipated that the number of LSLs originally identified will change.

Based on the foregoing background, the Company's projected annual investment is $28.3 million (in 2025 dollars).

PAWC will initially fund its LSLRs with short-term debt and will later replace it with a combination of long-term debt and equity capital. PAWC also continuously monitors the availability of grants and low interest loans for which it may be eligible and seeks such funding to reduce the total cost of LSL replacement. Grant money will not impact rates or DSIC. Therefore, will not be counted against annual allowance quantities or dollars. The units will be tracked for reporting purposes but not be held against the annual total allowed.

The Company has the opportunity to seek PENNVEST funding as a source of low interest government loans. PENNVEST is the state financing agency to administer and finance the Clean Water State Revolving Fund, the Drinking Water State Revolving Fund and federal funds sent to the state for water/wastewater infrastructure improvement projects. The Company plans to submit applications to PENNVEST for LSL replacement projects as it has "completed" inventories and knows where the services requiring replacement are located.

The Company will also pursue additional opportunities for which it may be or may become eligible to aid in lowering the total cost of implementing the Plan.

[2] This assumes 10,000 Company-owned LSLs at a unit cost of $8,600 and 17,000 customer-owned LSLs at a unit cost of $7,500.

[3] This assumes 17,000 customer-owned LSLs at a unit cost of $7,500.

Projected Number of LSLRs Per Calendar Year

The Company plans to replace an average range of 2,800 to 4,300 LSLs per calendar year. This projection is based off the Company's expectation that it will annually replace between 2,100 and 3,200 customer-side LSLs and between 700 and 1,100 Company-side LSLs. The Company arrived at this projected figure by reviewing the number of known lead services within each area and estimating 2% of unknown company services and 5% of unknown customer services will be lead or galvanized based on the age of the home and location. The Company also based its projection on the timeline set forth in the EPA's proposed LCRI, which would require achieving 100% LSLR within 10 years of its adoption, which, at this time, is anticipated to be 2027. The projected number of LSLRs per calendar year is consistent with the Company's annual cap of 3,200 on customer-side LSLRs.

Prioritization Criteria Considered When Developing LSLR Schedule

The LSLR Plan prioritizes replacement in conjunction with main replacement, rehabilitation, and relocation projects using the Company's prioritization model. Leaking or damaged service lines will be replaced in line with traditional leak repair activity. LSLs on mains that are not at the end of their useful life and not scheduled for replacement will be replaced at the most efficient time, taking into consideration allocation of resources, minimization of mobilization costs, and limiting community disturbance. Customer requested LSLs will be confirmed and replaced as either part of a main replacement project or during the normal course of work. When applicable, the Company will consider special circumstances in the prioritization and scheduling of LSL replacements, such as a U.S. Department of Housing and Urban Development (HUD) lead remediation program.

Pennsylvania-American Water has created and implemented a Geographic Information System ("GIS") based prioritization model for identifying pipeline replacement and rehabilitation (or renewal) investment needs. The model prioritizes pipeline renewal needs through identification of service risks associated with pipe failure, fire-flow, and water quality risks. Pennsylvania-American Water plans for these pipe renewals on a continuing basis. Pennsylvania-American Water also plans for and completes unscheduled main replacements related to pipes that may not initially be planned for replacement but fail during the year requiring replacement to continue to serve customers. Pennsylvania-American Water also relocates pipe when the pipes are affected by projects planned by governmental and other entities.

In the event a Company-owned service line is leaking or damaged, the Company will replace both the Company-owned service line and the customer-owned service line if it is an LSL.[4] In the event the Company is informed of a leaking or damaged customer-owned LSL, it will work with the customer to develop an appropriate path forward. In most instances, this will likely result in a one-off replacement.

There are many distribution system pipes that are not at the end of their useful life and are not presently contemplated to be replaced within the next ten years. There are also many situations where the Company main is structurally sound, yet the service lines may have reached the end of their useful life or are at risk of leakage or failure due to age or other circumstances. The Company

[4] As noted above, replacement of the customer-owned LSL is subject to customer authorization. If a customer refuses to allow Pennsylvania-American Water to replace the customer-owned portion of the service line, the refusal will be documented.

has prioritized LSL replacements without main replacement when municipalities request PAWC to review and replace its infrastructure to accommodate a municipal paving project. This is an opportune time to complete service line replacements (including customer side where lead or galvanized) and is consistent with the goals of the Company to renew aging infrastructure, reduce leakage and prevent road surface issues related to failed underground utility pipes. The Company also collaborates with the affected communities to address road/resurfacing issues. These targeted areas will be prioritized along with mains that have lead goosenecks scheduled for replacements in those areas that have a higher concentration of LSLs as compared to other areas of the PAWC systems. PAWC is planning to complete LSLRs on these mains (without replacing the mains themselves), including the Company-owned portion of the service line and the customer-owned portion of the service line.[5]

There may be instances where the Company cannot coordinate its efforts with road projects. In that case, the Company still plans to perform customer owned LSLR activity as a programmed and planned activity to achieve as many economies of scale as possible in completing LSL replacements. It will begin by targeting communities where there are known clusters of customer-owned LSLs, and then shift to combining work in neighboring communities if appropriate to do so. Nevertheless, as the Company nears the end of the replacement period, there may be situations where a single customer-owned LSL may need to be replaced. In that case, the Company will endeavor to complete the LSL replacement as efficiently as possible.

Processes and Procedures to Address Emergency Repairs or Replacements Which Reveal LSLs

As noted in the section above, the Company will complete LSLRs for leaking or damaged service lines that result in an immediate disruption of service to the customer. In the event a Company-owned service line is leaking or damaged, the Company will replace both the Company-owned service line and the customer-owned service line if it is a LSL and the customer agrees to the replacement. In the event the Company is informed of a leaking or damaged customer-owned LSL, it will work with the customer to develop an appropriate path forward, which will likely result in a one-off replacement.

Process and Procedures to Obtain Acceptance of an LSLR Prior to Project Commencement

The Company's processes and procedures to obtain acceptance of a LSLR prior to LSLR project commencement are the same whether the customer is the property owner or whether the customer is not the property owner.

The first step in the process is the Company will notify the customer or property owner of the material in its service line, the health effects of lead exposure, and ways to reduce lead in drinking water. The Company will then provide to the customer or property owner a consent agreement ("consent agreement"), a two-year warranty of the work, and contact information for a Company representative or a representative from the Company's contractor. A copy of the consent agreement is provided in Appendix 3. If the customer or property owner signs the consent agreement, the Company will schedule a replacement and a contractor will work with the customer or property owner to replace the LSL.

[5] Again, replacement of the customer-owned LSL is subject to customer authorization. If a customer refuses to allow Pennsylvania-American Water to replace the customer-owned portion of the service line, the refusal will be documented.

If the customer or property owner refuses to sign the consent agreement, the Company will provide the consent agreement, warranty, and contact information to the customer or property owner a second time. The first two attempts to contact the customer or property-owner are in-person attempts. A third attempt to reach the customer or property-owner is made through phone or email contact.

If the customer or property owner is non-responsive despite the Company's efforts, a fourth and final attempt at contact is made when the Company sends the customer or property owner a certified letter with a deadline by which to contact the Company. This letter will indicate to the customer or property owner that failure to respond to, or failure to accept the Company's offer to replace the LSL will result in termination. If the customer or property owner does not contact the Company by the deadline indicated in the certified letter, the Company will add the customer or property owner to a list of non-responsive customers/property owners. The Company will also proceed with termination procedures as outlined in its tariff.

The Company will utilize Step In Rights, pursuant to Section 4.9.1.9 of its tariff, to avoid termination of service when a property owner, who is not the customer, is nonresponsive to the Company's offer to replace a LSL. The Company will use Step In Rights in the following circumstances: (1) when the customer or occupant of the property provides a medical certification signed by a licensed physician, nurse practitioner, or physician's assistant to the Company by fax, email or mail (providing the contact information) and (2) when the Customer provides to the Company a Final Protection from Abuse (PFA) Order. The Company will exercise step in rights to avoid the termination of water service to the customer or occupier of the property in the situations listed above except where in the Company's reasonable judgement would place its workers or utility property at a safety risk and in such instance, the Company may use Step In Rights at its discretion. The Company may also use Step In Rights in the following circumstances: (1) The Company has attempted to contact the property owner with an offer to replace the LSL in accordance with the LSLR Plan, (2) the customer or occupier of the property is not the property owner or the property is vacant and unoccupied, and (3) the Company has attempted to get authorization from the property owner to replace the LSL and (i) the property owner cannot be identified, or (ii) the property owner has not responded to the Company's offer to replace the LSL. When Step In Rights are used by the Company, after the replacement is complete, the Company will restore roadways and public sidewalks, backfill any trenches excavated as part of the replacement process and will fill and seal any wall or floor penetrations in the private home ("Company Restoration Work"). No other restoration will be conducted for the private side replacement. The Company will not replace any landscaping, interior finishes, paving, seeding, or walkways ("Private Side Restoration Work"), and all restoration costs for such Private Side Restoration Work shall be borne by the property owner. When the Company exercises Step In Rights, the Company's liability shall be limited in the amount, as specified in its tariff, for any action brought against the Company, its officers, directors, employees and agents for damages arising from any and all liability , including liability to third parties and the property owner, for personal injury, including death, property damage, or other actions, damages, fines, penalties, claims, demands, judgements, losses, costs, expenses, suits and other actions (including reasonable attorney's fees), for personal injury, including death, property damage or other injury, to the extent caused by or arising out of the work performed by the Company of its agents in replacing the LSL and/or the Company Restoration Work that the Company is responsible for under its tariff.

Processes and Procedures Based on Acceptance of an LSLR

As described in prior sections, LSLR is prioritized and coordinated with main replacement projects, to the extent possible. Until the service line inventory is finalized, service material may be discovered as part of a main replacement project or during normal service replacements.

When the Company is performing a main replacement project, once the main replacement is completed, the service line work begins by uncovering the curb stop and identifying the service line material. The Company-side service line replacement is installed first from the new main to the curb stop. If the customer or property-owner's service line is lead or galvanized, the Company or its contractor attempts to contact the customer or property-owner and provide them with the consent agreement (*See* Appendix 3)., lead and galvanized information packet, and a water pitcher.

As outlined in the previous section, four attempts are made to contact the customer or property-owner. When the customer or property-owner accepts the replacement, the Company or its contractor replaces the service and provides the customer or property-owner with flushing instructions. The contractor coordinates the replacement with the property owner, tenant (if applicable), plumber, health department (if required), and the Company. See Section VI and Appendix 3 for information provided to the customer or property-owner throughout the LSLR process. Once all of the services in a main replacement project's area have been replaced, the Company will shut down the old main and switch service to the new main.

Pennsylvania-American Water recommends that immediately after the service line is replaced that the house outside hose bibb first be flushed for 30 minutes, immediately followed by a whole house flush for 30 minutes. *See* Appendix 3 for the flushing instructions PAWC provides to customers and property owners. The whole house flush includes the removal of all faucet aerators and flushing of all operating faucets in the house together for 30 minutes. In instances of lower pressure, the Company may recommend the whole house flush be modified to a first-floor flush. The purpose of the flushing is to flush high velocity water through the pipes to remove particles that may exist in the remaining home plumbing.

Pennsylvania-American Water follows EPA's Lead and Copper Rule Revisions Risk Mitigation Measures, enforced by PA DEP, for all lead and galvanized service replacements including disturbances on service lines characterized as "lead", "galvanized requiring replacement" or "unknown". A water pitcher is provided to the customer with information about the water pitcher and the three-to-six-month sampling process in (*See* Appendix 3). After a full LSLR, the Company will send a sample offer to the customer as shown on the "3-Month Sampling Offer Postcard" found in Appendix 3.

If the customer chooses to participate in the sampling, the American Water Works Service Company certified laboratory in Bellville, Illinois (the "Lab") will send a sample kit including 2 one-liter bottles, and 3 one-liter sample bags. The customer will follow the sample instructions found on the "LSLR Sampling Instructions" in Appendix 3, and send the 2 one-liter sample bottles back to the Lab using the prepaid label.

The Lab analyzes the 1st and 5th liter samples and provides results to PAWC's Water Quality department. If the results are under the EPA action level, the water quality department sends a letter with the results, health effects language, required definitions, and steps to reduce potential exposure, to the customer as shown on "Water Sample Results Letter" in Appendix 3. If the sample

results are over the EPA action, the Lab will notify DEP and the water quality department within 1 - hour of receiving the results. The Water Quality department will contact the customer within 3 days of receiving the results as required by DEP in the "Risk Mitigation Measures for Water Systems Conducting Lead Service Line Replacement Fact Sheet", attached in Appendix 3, and PAWC will work with the customer to flush and resample.

During the course of normal service work, the Company may encounter lead or galvanized services on either or both the customer and the Company's side. If both the Company-side and Customer-side service material is identified as lead or galvanized during an emergency, the Company or its contractor attempts to make immediate contact with the customer or property-owner and will inform the customer or property-owner in these attempted communications that failure to respond or consent to a customer-side lead service line replacement will result in termination of service. If the Company is unable to make contact with the customer or property-owner, the Company replaces the company-side service and will either exercise Step In Rights consistent with its tariff or terminate the customer-side service until such time as the customer or property-owner consents to replacement of the customer-side service. The Company will leave a doorhanger at the premise that informs the customer or property owner of the work performed, the reasons why service was terminated, and steps needed to restore service. The customer or property-owner is provided a water pitcher and information about the health effects of lead by either (1) handing the information directly to the customer or property owner or (2) leaving it at the residence. The Company attempts to obtain a signed agreement for the customer-side replacement as soon as possible. The Company strives to replace both sides of the service on the same day. If the Company-side LSL is discovered in the absence of an emergency and the customer material is identified as lead or galvanized, PAWC will coordinate the replacement with the customer or property owner. The customer or property-owner will be provided with the agreement, the lead/galvanized information packet, and a water pitcher prior to the replacement. After the customer or property-owner's service is replaced, the Company will provide flushing instructions.

During the course of normal service work, if a lead or galvanized line is discovered on the Company-side only, the customer or property owner will be provided with a water pitcher, the lead/galvanized information packet, and flushing instructions prior to the completion of the Company-side replacement, if possible. The Company will replace its LSL.

If a customer with a lead or galvanized service has a leak or requests a replacement sooner than the Company has planned, the Company will work with the customer to obtain a signed consent agreement for the replacement. Upon receiving the signed consent agreement, the Company's contractor will coordinate the replacement of the customer-side service with the customer. The contractor will provide the customer with a water pitcher, the lead/galvanized information packet, and flushing instructions prior to the completion of the customer-side service replacement. The Company's contractor will replace the LSL.

In all cases, once a LSL is replaced, the Company updates its service line inventory.

The Company will also provide the customer or property owner with correspondence following the completion of the customer-side LSLR to inform the customer or property owner that the LSLR is complete and provide the start and end date of the two-year limited warranty.

Lead/Material Recycling and Disposal Efforts

The Company does not excavate or remove existing LSLs, rather the Company abandons lead material in-place and installs a new service line. The disposal of the material is at the contractor's discretion. The Company does not receive any proceeds from the disposal of lead material.

Industry-accepted Practices Used to Replace LSLs

The Company employs the industry-accepted practices to replace Company-owned and customer-owned LSLs outlined in the ANSI/AWWA C810-17 standards. The Company will follow its tariff regarding Company and Customer-side lead service replacements. Where applicable, the Company and its contractors will follow local plumbing and health department codes during the replacement of Customer-side services. In accordance with the Commission's regulations to prevent partial service replacements, the Company will implement a termination process for customers who are non-responsive or refuse the Company's offer.

Explanation of How Acquired Water Distribution Systems Will Be Integrated Into Company's Efforts to Complete LSLRs

Upon the acquisition by the Company of a water distribution system, the Company will integrate the acquired system into its efforts to complete LSLRs. To ensure this is achieved, the Company requests the acquired system to provide service line information, including the status of their service line inventory and their Lead Service Replacement Plan, if available. The Company will review and integrate the acquired systems data into PAWC's existing databases.

If the service line inventory was submitted prior to acquisition close, the Company will review the inventory and prioritize any lead or galvanized service replacements identified with main replacement projects or as a service line replacement project.

If service line inventory is not complete, the Company will evaluate service material during meter change outs, if applicable. The new customer base will also have the option to participate in the online customer survey. The goal of these efforts will be to bring the system into compliance with LSLR regulations.

Procedure for Documenting Refusal of, or Failure to Accept, an Offer to Replace a LSL

The Company will attempt to contact the customer or property-owner in person (two attempts) and by phone or email (one attempt) to offer to replace a LSL. If a customer or property owner refuses or is non-responsive to the Company's offers to replace a customer-side LSL, they will receive a certified letter that renews the Company's offer to replace the LSL, and also includes information regarding the health effects of lead exposure, steps to reduce lead, and a deadline to respond to the Company. A copy of the certified letter is included in Appendix 3. The certified letter will additionally advise the customer or property owner that failure to allow the Company to complete the LSLR or to replace the customer-owned LSL concurrent with the Company replacing the Company-owned LSL will lead to termination of water service under the Company's tariff. The certified letter also informs the customer or property owner that, in order to be eligible for reimbursement, they must complete the LSLR within one year of the Company commencing its project. If the customer or property owner does not respond, they will be added to a non-responsive customer/property owner list and the Company will begin the termination process in conformance with its tariff.

The Company provides the customer or property owner with a complete disclosure of the known health hazards from continued use of a LSL. A copy of the disclosure provided by the Company is attached to Appendix 3.

The Company informs the customer or property owner that refusal or failure to accept an offer to replace a LSL will require replacement of the customer-owned LSL, at the customer or property owner's expense, within one year from LSLR projected commencement for the customer or property owner to be eligible for reimbursement. This information is provided to the customer or property owner through the Company's website, tariff, and is included in the certified letter (*See* Appendix 3). The Company makes reasonable best efforts to assist customers and/or property owners through the reimbursement process and, to the extent possible, makes determinations in favor of the customer/property owner where the customer/property owner has provided reasonable evidence of a LSLR to the Company.

VI. Communications, Outreach, and Education

52 Pa. Code § 65.56(c): The utility shall demonstrate compliance with the EPA regulations at 40 CFR 141.85. The utility's LSLR plan must include copies of all printed and broadcast material to be distributed under its LSLR program. A Class A public utility shall develop a LSLR section of its website within twelve months of Commission approval of its LSLR program.

Pennsylvania-American Water's Communication, Outreach, and Education Plan

Pennsylvania-American Water has a comprehensive plan for communicating with customers regarding lead and drinking water. Copies of all printed and broadcast materials distributed under PAWC's LSLR Program are attached as Appendix 3.

Pennsylvania-American Water has created a webpage on its customer website, https://www.amwater.com/paaw/ in the Water Quality tab, discussing lead and drinking water. The site includes links to resources such as frequently asked questions, pipe material information, and pitcher filter FAQs. Topics accessible through links on the webpage include water treatment and

corrosion control; results from lead sampling; assessing exposure to lead; minimizing exposure to lead; home treatment for lead; and testing water for lead. Additional information from outside sources is also included on the webpage. The webpage link is: https://www.amwater.com/paaw/water-quality/Lead-and-Drinking-Water/

Additionally, the Company's website has an online tool describing the replacement schedule by geographic location, at least six months into the future. The online tool is accessible under our Lead Service Line Replacement Site on our Lead and Drinking Water/Lead Service Line Replacement Program webpage at: https://storymaps.arcgis.com/stories/620f62324ded477db7b863026f46d666

The Company's website also provides information regarding its reimbursement requirements as well as secure online tools that provide customers or property owners the ability to determine reimbursement eligibility. The reimbursement information is found at under the Lead Service Line Replacement Site on our Lead and Drinking Water/Lead Service Line Replacement Program webpage : https://forms.office.com/pages/responsepage.aspx?id=-Yw3NcDa8EWExxv7mCB7WX-Ald9edYVAhL9IxvVo5QdUNTUwR1dWOEJNMzJZWVRHNUwzQVhUUVZRVi4u&origin=lprLink

The Company's website contains an interactive map that provides the ability to determine whether a property may have a LSL, delineating the known or reasonably anticipated material types for the Company-owned and customer-owned portions of the service line. A customer can request assistance through the map's customer survey or by calling the Company's toll-free customer service number. The map is accessible at:

https://paaw.maps.arcgis.com/apps/webappviewer/index.html?id=f8933d006e16455f938e62d60f5e955e

The Company also provides on its website information and resources relating to health risks associated with lead and LSLs, the status of current efforts to replace LSLs, and community meetings and advisory committees hosted by the Company. This information is found at the following link: https://www.amwater.com/paaw/water-quality/Lead-and-Drinking-Water/lead-service-line-replacement-program

Pennsylvania-American Water communicates the availability of its lead webpage and additional resources through a vigorous outreach plan to notify all customers. The Company shares these resources with customers through the following methods:

- Statewide press releases
- The webpage is featured on the Company's homepage in the rotating banner
- Regular bill inserts in all customer bills (*See* Appendix 3)
- Share engaging content for the Company's social media platforms
- Digital education campaigns that include engaging social media posts with the call to action to encourage customers to view the map and resources recently created.
- Multiple informative videos posted on social media and website and will support digital education campaign
- E-newsletter(s) sent to elected officials in the communities served by Pennsylvania American Water.
- Stakeholder website dedicated to requesting support from our local municipality leaders and elected officials.

- Annual notification to customers served by an unknown, lead, or galvanized requiring replacement service line as required by EPA Lead and Copper Rule Revisions.

Pennsylvania-American Water's comprehensive communication plan for informing customers about project work and about lead and drinking water also informs customers about lead service lines, and steps for identifying and replacing lead services lines in conjunction with Pennsylvania-American Water work. In conjunction with scheduled utility work, Pennsylvania-American Water mails or otherwise delivers to affected customers a communication that describes service lines and service line replacements. This communication also advises customers that PAWC will contact them to discuss replacing their service line if it is discovered that their service line is a lead service line. Pennsylvania-American Water also provides to customers information which describes utility owned and customer owned service lines, along with steps of service line material investigation, further communications, an overview of the LSL replacement program, frequently asked questions with answers, and further information about lead and drinking water.

EXHIBIT A

PENNSYLVANIA AMERICAN WATER

Lead Service Line Replacement Plan

Pursuant to Act 120 of 2018

July 22, 2024

I. Introduction

Pennsylvania-American Water Company ("Pennsylvania-American Water", "PAWC" or the "Company") submits this plan for the lead service line replacement ("LSLR") pursuant to recently enacted 52 Pa. Code §§ 65.51, *et seq*. ("LSLR Plan" or the "Plan").

II. Background

Act 120 of 2018 ("Act 120") was signed into law by Governor Wolf on October 24, 2018, and became effective 60 days thereafter. Act 120 amended Section 1311(b) of the Pennsylvania Public Utility Code (the "Code"), 66 Pa. C.S. § 1311(b), to authorize water and wastewater public utilities to recover a return on and a return of the costs they incur to replace customer-owned lead water service lines ("LSLs") and customer-owned damaged wastewater laterals subject to specified conditions. This document is intended to only address LSLR and does not address wastewater laterals.

Pursuant to Act 120, the Pennsylvania Public Utility Commission ("PUC" or "Commission") promulgated regulations at 52 Pa. Code §§ 65.51, *et seq*. ("LSLR Regulations"), which became effective on July 23, 2022. The purpose of the LSLR Regulations is to establish the time, manner, form and content of filings for Commission approval of LSLRs. 52 Pa. Code § 65.51.

III. Statutory Consideration for Plan

66 Pa. C.S. § 1311(b) states: "a public utility providing water or wastewater service must obtain prior approval from the commission for the replacement of a customer-owned lead water service line…by filing a new tariff or supplement to existing tariffs under section 1308." Section 1311(b)(vii) requires the Commission to establish (by regulation or order) standards, processes and procedures to ensure work performed by a public utility or its contractor to replace a customer-owned LSL is accompanied by a warranty of a term the Commission determines appropriate, and that the public utility and its contractor have access to the affected customer's property during the warranty's term, as well as provide for reimbursement to a customer who has replaced the customer's LSL within one year of commencement of a project in accordance with a Commission-approved tariff.

52 Pa. Code § 65.54 requires public water utilities with a Commission-approved Long-Term Infrastructure Improvement Plan ("LTIIP") to file a LSLR program petition which includes a modified LTIIP containing its LSLR plan as a separate and distinct component of the water utility's LTIIP.

52 Pa. Code § 65.55 requires a utility's LSLR program to include a LSLR plan.

The requirements for a LSLR plan are found under **52 Pa. Code § 65.56**:

1. **Service Line Inventory** *(See Section IV of the Plan for details)*

52 Pa. Code § 65.56(a)(1): Public water utilities shall submit to the Commission a service line inventory that complies with the Unites States Environmental Protection Agency ("EPA") regulation at 40 CFR 141.1-143.20 as enforced by the Department of Environmental Protection ("DEP").

52 Pa. Code § 65.56(a)(2): Public water utilities acquiring a water distribution system shall provide to the Commission a service line inventory for the acquired system upon completion of the acquisition or as part of its service line inventory, whichever is later. A public water utility may rely on a previously completed service line inventory for an acquired system if the entity updates the service line inventory.

52 Pa. Code § 65.56(a)(3): A service line inventory must comply with the timing and direction of the EPA regulations at 40 CFR 141.1-143.20 as enforced by DEP.

52 Pa. Code § 65.56(a)(4): Public water utilities shall identify assumptions in the service line inventory to the Commission.

52 Pa. Code § 65.56(a)(5): Until the service line inventory is complete, the utility shall provide detailed information regarding the progress of its service line inventory as part of its annual LSLR program report.

52 Pa. Code § 65.56(a)(6): After a service line inventory is complete, it must be incorporated into the utility's next LSLR plan update.

2. Planning and Replacements *(See Section V of the Plan for details)*

52 Pa. Code § 65.56(b): The planning and replacement section of a LSLR plan must include:

(1) The utility's projected annual investment in LSLRs with an explanation of the utility's anticipated sources of financing.
(2) The utility's projected number of LSLRs per calendar year with an explanation of how the entity's projection was determined and a statement that this number is consistent with the utility's annual cap on LSLRs.
(3) The prioritization criteria considered by the utility when developing its LSLR schedule.
(4) An explanation of the utility's processes and procedures to address emergency repairs or replacements which reveal LSLs.
(5) The utility's processes and procedures to obtain acceptance of a LSLR prior to LSLR project commencement if the customer is the property owner, and the utility's processes and procedures to obtain acceptance prior to LSLR project commencement if the customer is not the property owner.
(6) The utility's process and procedures based on acceptance of a LSLR including (a) a consent agreement form by which the customer or property owner will authorize the LSLR, (b) a brief description of the utility's process for LSLRs under normal conditions and under atypical conditions, (c) an explanation of the utility's process for coordination with the customer or property owner and the information the utility will provide to the customer and property owner throughout the LSLR process, and (d) the utility's process for addressing LSLR completion or closeout, or both, with the customer and property owner.
(7) The utility's lead/material recycling and disposal efforts, including a description of what the utility will do with the proceeds from recycling and disposal efforts.

(8) The industry-accepted practices that the utility plans to use to replace utility-owned and customer-owned LSLs.

(9) A detailed explanation of how the utility's acquisition of water distribution systems will be integrated into the entity's efforts to complete LSLRs throughout its water distribution systems.

(10) The procedure for documenting refusal of, or failure to accept, the offer by the utility to replace a LSLS, including the utility's duty to (a) provide the customer or property owner with a complete disclosure of the known health hazards from the continued use of a LSLS, (b) inform the customer or property owner that refusal or failure to accept will require replacement of the customer-owned LSL, at the customer or property owner's expense, within one year from the LSLR project commencement for the customer or property owner to be eligible for reimbursement, and (c) communicate to the customer and property owner that failure to allow the utility to complete the LSLR or to replace the customer-owned LSL concurrent with the utility replacing the utility-owned LSL will lead to termination of water service under the provisions of the utility's tariff.

3. **Communications, Outreach, and Education.** *(See Section VI of the Plan for details)*

52 Pa. Code § 65.56(c): The utility shall demonstrate compliance with the EPA regulations at 40 CFR 141.85. The utility's LSLR plan must include copies of all printed and broadcast material to be distributed under its LSLR program. A Class A public utility shall develop a LSLR section of its website within twelve months of Commission approval of its LSLR program. The website must contain at a minimum:

(1) an online tool describing the replacement schedule by geographic location, at least 6 months into the future,

(2) information regarding the reimbursement requirements and a secure online tool that provides customers or property owners the ability to determine whether the customer or property owner may be eligible for reimbursement;

(3) information that provides the ability to determine whether a property may have a LSL, delineating the known or reasonably anticipated material types for the utility-owned and customer-owned portions of the service line and a method to request assistance to determine if a service line is a LSL; and

(4) information and resources relating to health risks associated with lead and LSLs, the status of current efforts to replace LSLs, and community meetings and advisory committees hosted by the utility.

52 Pa. Code § 65.57 requires the utility to update its LSLR plan for Commission review at least once every five years.

IV. Service Line Inventory

52 Pa. Code § 65.56(a): Public water utilities shall submit to the Commission a service line inventory that complies with the EPA regulations at 40 CFR 141.1-143.20 as enforced by the DEP. A service line inventory must comply with the timing and direction of the EPA regulations at 40 CFR 141.1-143.20 as enforced by DEP. Public water utilities shall identify assumptions in the service line inventory to the Commission. Until the service line inventory is complete, the utility shall provide detailed information regarding the progress of its service line inventory as

part of its annual LSLR program report. After a service line inventory is complete, it must be incorporated into the utility's next LSLR plan update.

Assumptions in the Service Line Inventory

In compiling its service line inventory, the Company relies on information obtained from its onsite contractor during customer-side service line inspections, information provided by customers regarding their customer-side service line information, information obtained from Company review of tap slips, water main replacement records, development construction records, and municipal/local system records. The Company also obtains service line material information on all inside meter replacements that occur. In the case of an outside meter replacement, the Company requests to gain access to the customer's premise in order to determine the service line material information.

The Company also reviews the age of homes obtained from parcel records in compiling its service line inventory. The Company uses the assumption that any construction that occurred after January 1991 will not contain lead due to The Plumbing System Lead Ban and Notification Act, 35 P.S. §§ 723.1 *et seq*., ("PA Lead Ban") becoming effective on January 6, 1991.

The Company assumes that if the Company-side of a line is lead, it is more likely than not that the customer-side of a line is or was lead or galvanized.

Additionally, the Company assumes that galvanized lines are downstream of lead lines.

Service Line Inventory

PAWC's service line inventory as of July 2024 is attached to the LSLR Plan as Appendix 1.

The Company has not completed its service line inventory. Until the Company completes its service line inventory, it will provide detailed information regarding the progress of its service line inventory as part of its annual LSLR Program report. The Company will incorporate the updated service line inventory into its next LSLR Plan update.

The Company's service line inventory completed to date complies with the EPA regulations at 40 CFR 141.1-143.20 as enforced by the DEP with a deadline for submission of October 16, 2024.

PAWC plans to continue to identify material types on both the company and customer-owned sides of the service lines through reviewing existing records, mechanical excavation, and visual inspection. Once enough information is obtained through these methods, the Company will utilize statistical analysis to confirm known material and identify unknown material. Pennsylvania American Water will continue to update the inventory and notify Lead, Galvanized Requiring Replacement and Unknown customers annually to comply with current EPA and DEP regulations.

Due to the DEP's verification methods, many of the service lines in PAWC's service line inventory are listed as "unknown." In order to categorize a pipe material as "non-lead", the DEP requires sufficient evidence to demonstrate this designation. The DEP issued the following guidance attached as Appendix 2. Records indicating a company service line was installed or replaced after January 6, 1991 or a record of a local ordinance or plumbing code prohibiting lead service line installation along with water system records indicating service line installation/replacement occurred after the

effective date of the ordinance are both sufficient stand-alone methods to verify a pipe is non-lead. It must be noted that the installation date must also be known on the customer service line to verify the entire service line as non-lead. In all other circumstances, historical records must also be verified using one of the following investigation techniques: (1) field verification (visual inspection, CCTV, mechanical excavation), (2) water quality sampling (targeted, flushed or sequential if the system does not have corrosion control treatment), or (3) modeling/statistical analysis. The requirement of a secondary verification for historical records that do not meet stand-alone verification criteria leads to many lines being listed as "unknown" despite historical records identifying the material used in these lines. Until the secondary verification can occur, these lines cannot be listed as "non-lead" and must be listed as "unknown."

Acquired Systems

Upon acquiring a water distribution system, the Company shall provide to the Commission a service line inventory for the acquired system upon completion of the acquisition or as part of its service line inventory, whichever is later.

V. Planning and Replacements

52 Pa. Code § 65.56(b): The planning and replacement section of a LSLR plan must include:

(1) The utility's projected annual investment in LSLRs with an explanation of the utility's anticipated sources of financing.

(2) The utility's projected number of LSLRs per calendar year with an explanation of how the entity's projection was determined and a statement that this number is consistent with the utility's annual cap on LSLRs.

(3) The prioritization criteria considered by the utility when developing its LSLR schedule.

(4) An explanation of the utility's processes and procedures to address emergency repairs or replacements which reveal LSLs.

(5) The utility's processes and procedures to obtain acceptance of a LSLR prior to LSLR project commencement if the customer is the property owner, and the utility's processes and procedures to obtain acceptance prior to LSLR project commencement if the customer is not the property owner.

(6) The utility's process and procedures based on acceptance of a LSLR including (a) a consent agreement form by which the customer or property owner will authorize the LSLR, (b) a brief description of the utility's process for LSLRs under normal conditions and under atypical conditions, (c) an explanation of the utility's process for coordination with the customer or property owner and the information the utility will provide to the customer and property owner throughout the LSLR process, and (d) the utility's process for addressing LSLR completion or closeout, or both, with the customer and property owner.

(7) The utility's lead/material recycling and disposal efforts, including a description of what the utility will do with the proceeds from recycling and disposal efforts.

(8) The industry-accepted practices that the utility plans to use to replace utility-owned and customer-owned LSLs.

(9) A detailed explanation of how the utility's acquisition of water distribution systems will be integrated into the entity's efforts to complete LSLRs throughout its water distribution systems.

(10) The procedure for documenting refusal of, or failure to accept, the offer by the utility to replace a LSLS, including the utility's duty to (a) provide the customer or property owner with a complete disclosure of the known health hazards from the continued use of a LSLS, (b) inform the customer or property owner that refusal or failure to accept will require replacement of the customer-owned LSL, at the customer or property owner's expense, within one year from the LSLR project commencement for the customer or property owner to be eligible for reimbursement, and (c) communicate to the customer and property owner that failure to allow the utility to complete the LSLR or to replace the customer-owned LSL concurrent with the utility replacing the utility-owned LSL will lead to termination of water service under the provisions of the utility's tariff.

Projected Annual Investment and Anticipated Sources of Financing

To estimate the total cost to perform full LSLRs, the Company must first identify the estimated number of lead service lines, both Company and customer-owned, throughout its system.

Based on an on-going comprehensive review of our water service records, PAWC currently estimates that the Company has approximately 12,000 Company-owned lead and galvanized service lines requiring replacement[1].

The Company's service records do not consistently identify the material of the customer-owned service line, as this level of detail was not historically relevant and thus, not captured or maintained. Consequently, the Company does not have an exact count of customer-owned LSLs to be replaced under the Company's proposal. Nevertheless, the expectation is that there is likely lead on the customer side where we find lead on the Company side. The Company also expects to encounter galvanized service lines on both the Company side and customer side for those areas that have historically had lead goosenecks. Based on PAWC's evaluation of our service records, the Company estimates that there are approximately 34,500 customer-owned LSLs, including galvanized service lines requiring replacement.

Pennsylvania-American Water prepares and updates a six-year capital investment plan each year. The Company also based its projection on the timeline set forth in the EPA's proposed Lead and Copper Rule Improvements ("LCRI"), which would require achieving 100% LSLR within 10 years of its adoption, which, at this time, is anticipated to be 2027. From this planning, and in consideration of replacing LSLs over a 13-year window ending in 2037, Pennsylvania-American Water currently estimates it will replace a quantity range of LSLs starting in 2025 and continuing until 2037, of 3,000 to 3,600.

The average estimated cost for a customer-side LSLR is $8,580 (based on estimated averages) and for a Company-side LSLR the average estimated cost is $5,950 (based on estimated averages).

[1] The Company's effective Water Tariff defines "lead service pipe" as any service pipe constructed with lead or galvanized pipe located downstream from a service pipe constructed with lead. To the extent the Company's LSLRP includes references to "lead service lines", this term includes service lines constructed with lead or galvanized pipe downstream from a service line constructed with lead.

The estimates are in 2025 dollars (rounded to the nearest $10) and do not account for cost inflation of either materials, labor or other related items such as permitting, planning, etc.

In addition, the average cost of replacement could increase or decrease as work continues. Factors impacting cost include, but are not limited to: (1) whether work is completed as a part of a main replacement program, in a targeted area, or as a one-off replacement; (2) local ordinances, codes, and requirements; (3) changes in laws, standards, and best practices; (4) local competitive market prices; (5) differences in construction methods and equipment in different areas; (6) property site conditions; (7) scope of work and building conditions for work, if any, performed through building foundation walls and within buildings; (8) any factors impacting material and labor costs such as inflation, strikes, and events affecting the supply chain; and (9) improvements in technology.

The Company has already incurred approximately $9.28 million to replace over 1,019 customer-owned LSLs from 2020 through February of 2024. Going forward, PAWC estimates that the total cost to replace 46,500 Company and Customer side LSLs is approximately $414.8M assuming an annual cost escalation of 2%.[2] Of that amount, approximately $334.6M is attributable to customer-owned LSLs.[3] As noted above, these amounts do include moderate inflation of 2% of the cost of materials and labor and may also vary based on the actual number of LSLs identified throughout this process as well as, among other factors, the manner in which replacement is achieved. For example, replacement of customer-owned LSLs in coordination with a main replacement project or as part of a larger service line replacement project is more efficient (and less costly on a per unit basis) than if the Company is replacing a single customer-owned LSL.

As Pennsylvania-American Water further identifies and inventories service line material, it is anticipated that the number of LSLs originally identified will change.

Based on the foregoing background, the Company's projected annual investment is $28.3 million (in 2025 dollars).

PAWC will initially fund its LSLRs with short-term debt and will later replace it with a combination of long-term debt and equity capital. PAWC also continuously monitors the availability of grants and low interest loans for which it may be eligible and seeks such funding to reduce the total cost of LSL replacement. Grant money will not impact rates or DSIC. Therefore, will not be counted against annual allowance quantities or dollars. The units will be tracked for reporting purposes but not be held against the annual total allowed.

The Company has the opportunity to seek PENNVEST funding as a source of low interest government loans. PENNVEST is the state financing agency to administer and finance the Clean Water State Revolving Fund, the Drinking Water State Revolving Fund and federal funds sent to the state for water/wastewater infrastructure improvement projects. The Company plans to submit applications to PENNVEST for LSL replacement projects as it has "completed" inventories and knows where the services requiring replacement are located.

The Company will also pursue additional opportunities for which it may be or may become eligible to aid in lowering the total cost of implementing the Plan.

[2] This assumes 10,000 Company-owned LSLs at a unit cost of $8,600 and 17,000 customer-owned LSLs at a unit cost of $7,500.

[3] This assumes 17,000 customer-owned LSLs at a unit cost of $7,500.

Projected Number of LSLRs Per Calendar Year

The Company plans to replace an average range of 2,800 to 4,300 LSLs per calendar year. This projection is based off the Company's expectation that it will annually replace between 2,100 and 3,200 customer-side LSLs and between 700 and 1,100 Company-side LSLs. The Company arrived at this projected figure by reviewing the number of known lead services within each area and estimating 2% of unknown company services and 5% of unknown customer services will be lead or galvanized based on the age of the home and location. The Company also based its projection on the timeline set forth in the EPA's proposed LCRI, which would require achieving 100% LSLR within 10 years of its adoption, which, at this time, is anticipated to be 2027. The projected number of LSLRs per calendar year is consistent with the Company's annual cap of 3,200 on customer-side LSLRs.

Prioritization Criteria Considered When Developing LSLR Schedule

The LSLR Plan prioritizes replacement in conjunction with main replacement, rehabilitation, and relocation projects using the Company's prioritization model. Leaking or damaged service lines will be replaced in line with traditional leak repair activity. LSLs on mains that are not at the end of their useful life and not scheduled for replacement will be replaced at the most efficient time, taking into consideration allocation of resources, minimization of mobilization costs, and limiting community disturbance. Customer requested LSLs will be confirmed and replaced as either part of a main replacement project or during the normal course of work. When applicable, the Company will consider special circumstances in the prioritization and scheduling of LSL replacements, such as a U.S. Department of Housing and Urban Development (HUD) lead remediation program.

Pennsylvania-American Water has created and implemented a Geographic Information System ("GIS") based prioritization model for identifying pipeline replacement and rehabilitation (or renewal) investment needs. The model prioritizes pipeline renewal needs through identification of service risks associated with pipe failure, fire-flow, and water quality risks. Pennsylvania-American Water plans for these pipe renewals on a continuing basis. Pennsylvania-American Water also plans for and completes unscheduled main replacements related to pipes that may not initially be planned for replacement but fail during the year requiring replacement to continue to serve customers. Pennsylvania-American Water also relocates pipe when the pipes are affected by projects planned by governmental and other entities.

In the event a Company-owned service line is leaking or damaged, the Company will replace both the Company-owned service line and the customer-owned service line if it is an LSL.[4] In the event the Company is informed of a leaking or damaged customer-owned LSL, it will work with the customer to develop an appropriate path forward. In most instances, this will likely result in a one-off replacement.

There are many distribution system pipes that are not at the end of their useful life and are not presently contemplated to be replaced within the next ten years. There are also many situations where the Company main is structurally sound, yet the service lines may have reached the end of their useful life or are at risk of leakage or failure due to age or other circumstances. The Company

[4] As noted above, replacement of the customer-owned LSL is subject to customer authorization. If a customer refuses to allow Pennsylvania-American Water to replace the customer-owned portion of the service line, the refusal will be documented.

has prioritized LSL replacements without main replacement when municipalities request PAWC to review and replace its infrastructure to accommodate a municipal paving project. This is an opportune time to complete service line replacements (including customer side where lead or galvanized) and is consistent with the goals of the Company to renew aging infrastructure, reduce leakage and prevent road surface issues related to failed underground utility pipes. The Company also collaborates with the affected communities to address road/resurfacing issues. These targeted areas will be prioritized along with mains that have lead goosenecks scheduled for replacements in those areas that have a higher concentration of LSLs as compared to other areas of the PAWC systems. PAWC is planning to complete LSLRs on these mains (without replacing the mains themselves), including the Company-owned portion of the service line and the customer-owned portion of the service line.[5]

There may be instances where the Company cannot coordinate its efforts with road projects. In that case, the Company still plans to perform customer owned LSLR activity as a programmed and planned activity to achieve as many economies of scale as possible in completing LSL replacements. It will begin by targeting communities where there are known clusters of customer-owned LSLs, and then shift to combining work in neighboring communities if appropriate to do so. Nevertheless, as the Company nears the end of the replacement period, there may be situations where a single customer-owned LSL may need to be replaced. In that case, the Company will endeavor to complete the LSL replacement as efficiently as possible.

Processes and Procedures to Address Emergency Repairs or Replacements Which Reveal LSLs

As noted in the section above, the Company will complete LSLRs for leaking or damaged service lines that result in an immediate disruption of service to the customer. In the event a Company-owned service line is leaking or damaged, the Company will replace both the Company-owned service line and the customer-owned service line if it is a LSL and the customer agrees to the replacement. In the event the Company is informed of a leaking or damaged customer-owned LSL, it will work with the customer to develop an appropriate path forward, which will likely result in a one-off replacement.

Process and Procedures to Obtain Acceptance of an LSLR Prior to Project Commencement

The Company's processes and procedures to obtain acceptance of a LSLR prior to LSLR project commencement are the same whether the customer is the property owner or whether the customer is not the property owner.

The first step in the process is the Company will notify the customer or property owner of the material in its service line, the health effects of lead exposure, and ways to reduce lead in drinking water. The Company will then provide to the customer or property owner a consent agreement ("consent agreement"), a two-year warranty of the work, and contact information for a Company representative or a representative from the Company's contractor. A copy of the consent agreement is provided in Appendix 3. If the customer or property owner signs the consent agreement, the Company will schedule a replacement and a contractor will work with the customer or property owner to replace the LSL.

[5] Again, replacement of the customer-owned LSL is subject to customer authorization. If a customer refuses to allow Pennsylvania-American Water to replace the customer-owned portion of the service line, the refusal will be documented.

If the customer or property owner refuses to sign the consent agreement, the Company will provide the consent agreement, warranty, and contact information to the customer or property owner a second time. The first two attempts to contact the customer or property-owner are in-person attempts. A third attempt to reach the customer or property-owner is made through phone or email contact.

If the customer or property owner is non-responsive despite the Company's efforts, a fourth and final attempt at contact is made when the Company sends the customer or property owner a certified letter with a deadline by which to contact the Company. This letter will indicate to the customer or property owner that failure to respond to, or failure to accept the Company's offer to replace the LSL will result in termination. If the customer or property owner does not contact the Company by the deadline indicated in the certified letter, the Company will add the customer or property owner to a list of non-responsive customers/property owners. The Company will also proceed with termination procedures as outlined in its tariff.

Processes and Procedures Based on Acceptance of an LSLR

As described in prior sections, LSLR is prioritized and coordinated with main replacement projects, to the extent possible. Until the service line inventory is finalized, service material may be discovered as part of a main replacement project or during normal service replacements.

When the Company is performing a main replacement project, once the main replacement is completed, the service line work begins by uncovering the curb stop and identifying the service line material. The Company-side service line replacement is installed first from the new main to the curb stop. If the customer or property-owner's service line is lead or galvanized, the Company or its contractor attempts to contact the customer or property-owner and provide them with the consent agreement (*See* Appendix 3)., lead and galvanized information packet, and a water pitcher.

As outlined in the previous section, four attempts are made to contact the customer or property-owner. When the customer or property-owner accepts the replacement, the Company or its contractor replaces the service and provides the customer or property-owner with flushing instructions. The contractor coordinates the replacement with the property owner, tenant (if applicable), plumber, health department (if required), and the Company. See Section VI and Appendix 3 for information provided to the customer or property-owner throughout the LSLR process. Once all of the services in a main replacement project's area have been replaced, the Company will shut down the old main and switch service to the new main.

Pennsylvania-American Water recommends that immediately after the service line is replaced that the house outside hose bibb first be flushed for 30 minutes, immediately followed by a whole house flush for 30 minutes. *See* Appendix 3 for the flushing instructions PAWC provides to customers and property owners. The whole house flush includes the removal of all faucet aerators and flushing of all operating faucets in the house together for 30 minutes. In instances of lower pressure, the Company may recommend the whole house flush be modified to a first-floor flush. The purpose of the flushing is to flush high velocity water through the pipes to remove particles that may exist in the remaining home plumbing.

Pennsylvania-American Water follows EPA's Lead and Copper Rule Revisions Risk Mitigation Measures, enforced by PA DEP, for all lead and galvanized service replacements including

disturbances on service lines characterized as "lead", "galvanized requiring replacement" or "unknown". A water pitcher is provided to the customer with information about the water pitcher and the three-to-six-month sampling process in (*See* Appendix 3). After a full LSLR, the Company will send a sample offer to the customer as shown on the "3-Month Sampling Offer Postcard" found in Appendix 3.

If the customer chooses to participate in the sampling, the American Water Works Service Company certified laboratory in Bellville, Illinois (the "Lab") will send a sample kit including 2 one-liter bottles, and 3 one-liter sample bags. The customer will follow the sample instructions found on the "LSLR Sampling Instructions" in Appendix 3, and send the 2 one-liter sample bottles back to the Lab using the prepaid label.

The Lab analyzes the 1st and 5th liter samples and provides results to PAWC's Water Quality department. If the results are under the EPA action level, the water quality department sends a letter with the results, health effects language, required definitions, and steps to reduce potential exposure, to the customer as shown on "Water Sample Results Letter" in Appendix 3. If the sample results are over the EPA action, the Lab will notify DEP and the water quality department within 1 - hour of receiving the results. The Water Quality department will contact the customer within 3 days of receiving the results as required by DEP in the "Risk Mitigation Measures for Water Systems Conducting Lead Service Line Replacement Fact Sheet", attached in Appendix 3, and PAWC will work with the customer to flush and resample.

During the course of normal service work, the Company may encounter lead or galvanized services on either or both the customer and the Company's side. If both the Company-side and Customer-side service material is identified as lead or galvanized during an emergency, the Company or its contractor attempts to make immediate contact with the customer or property-owner. If the Company is unable to make contact with the customer or property-owner, the Company replaces the company-side service and installs a dielectric coupling to immediately address the emergency situation. The customer or property-owner is provided a water pitcher and information about the health effects of lead by either (1) handing the information directly to the customer or property owner or (2) leaving it at the residence. The Company attempts to obtain a signed agreement for the customer-side replacement as soon as possible. The Company strives to replace both sides of the service on the same day. If the Company-side LSL is discovered in the absence of an emergency and the customer material is identified as lead or galvanized, PAWC will coordinate the replacement with the customer or property owner. The customer or property-owner will be provided with the agreement, the lead/galvanized information packet, and a water pitcher prior to the replacement. After the customer or property-owner's service is replaced, the Company will provide flushing instructions.

During the course of normal service work, if a lead or galvanized line is discovered on the Company-side only, the customer or property owner will be provided with a water pitcher, the lead/galvanized information packet, and flushing instructions prior to the completion of the Company-side replacement, if possible. The Company will replace its LSL.

If a customer with a lead or galvanized service has a leak or requests a replacement sooner than the Company has planned, the Company will work with the customer to obtain a signed consent agreement for the replacement. Upon receiving the signed consent agreement, the Company's contractor will coordinate the replacement of the customer-side service with the customer. The contractor will provide the customer with a water pitcher, the lead/galvanized information packet,

and flushing instructions prior to the completion of the customer-side service replacement. The Company's contractor will replace the LSL.

In all cases, once a LSL is replaced, the Company updates its service line inventory.

Lead/Material Recycling and Disposal Efforts

The Company does not excavate or remove existing LSLs, rather the Company abandons lead material in-place and installs a new service line. The disposal of the material is at the contractor's discretion. The Company does not receive any proceeds from the disposal of lead material.

Industry-accepted Practices Used to Replace LSLs

The Company employs the industry-accepted practices to replace Company-owned and customer-owned LSLs outlined in the ANSI/AWWA C810-17 standards. The Company will follow its tariff regarding Company and Customer-side lead service replacements. Where applicable, the Company and its contractors will follow local plumbing and health department codes during the replacement of Customer-side services. In accordance with the Commission's regulations to prevent partial service replacements, the Company will implement a termination process for customers who are non-responsive or refuse the Company's offer.

Explanation of How Acquired Water Distribution Systems Will Be Integrated Into Company's Efforts to Complete LSLRs

Upon the acquisition by the Company of a water distribution system, the Company will integrate the acquired system into its efforts to complete LSLRs. To ensure this is achieved, the Company requests the acquired system to provide service line information, including the status of their service line inventory and their Lead Service Replacement Plan, if available. The Company will review and integrate the acquired systems data into PAWC's existing databases.

If the service line inventory was submitted prior to acquisition close, the Company will review the inventory and prioritize any lead or galvanized service replacements identified with main replacement projects or as a service line replacement project.

If service line inventory is not complete, the Company will evaluate service material during meter change outs, if applicable. The new customer base will also have the option to participate in the online customer survey. The goal of these efforts will be to bring the system into compliance with LSLR regulations.

Procedure for Documenting Refusal of, or Failure to Accept, an Offer to Replace a LSL

The Company will attempt to contact the customer or property-owner in person (two attempts) and by phone or email (one attempt) to offer to replace a LSL. If a customer or property owner refuses or is non-responsive to the Company's offers to replace a customer-side LSL, they will receive a certified letter that renews the Company's offer to replace the LSL, and also includes information regarding the health effects of lead exposure, steps to reduce lead, and a deadline to respond to the Company. A copy of the certified letter is included in Appendix 3. The certified letter will additionally advise the customer or property owner that failure to allow the Company to complete the LSLR or to replace the customer-owned LSL concurrent with the Company replacing the Company-owned LSL

will lead to termination of water service under the Company's tariff. The certified letter also informs the customer or property owner that, in order to be eligible for reimbursement, they must complete the LSLR within one year of the Company commencing its project. If the customer or property owner does not respond, they will be added to a non-responsive customer/property owner list and the Company will begin the termination process in conformance with its tariff

The Company provides the customer or property owner with a complete disclosure of the known health hazards from continued use of a LSL. A copy of the disclosure provided by the Company is attached to Appendix 3.

The Company informs the customer or property owner that refusal or failure to accept an offer to replace a LSL will require replacement of the customer-owned LSL, at the customer or property owner's expense, within one year from LSLR projected commencement for the customer or property owner to be eligible for reimbursement. This information is provided to the customer or property owner through the Company's website, tariff, and is included in the certified letter (*See* Appendix 3).

VI. Communications, Outreach, and Education

52 Pa. Code § 65.56(c): The utility shall demonstrate compliance with the EPA regulations at 40 CFR 141.85. The utility's LSLR plan must include copies of all printed and broadcast material to be distributed under its LSLR program. A Class A public utility shall develop a LSLR section of its website within twelve months of Commission approval of its LSLR program.

Pennsylvania-American Water's Communication, Outreach, and Education Plan

Pennsylvania-American Water has a comprehensive plan for communicating with customers regarding lead and drinking water. Copies of all printed and broadcast materials distributed under PAWC's LSLR Program are attached as Appendix 3.

Pennsylvania-American Water has created a webpage on its customer website, https://www.amwater.com/paaw/ in the Water Quality tab, discussing lead and drinking water. The site includes links to resources such as frequently asked questions, pipe material information, and pitcher filter FAQs. Topics accessible through links on the webpage include water treatment and corrosion control; results from lead sampling; assessing exposure to lead; minimizing exposure to lead; home treatment for lead; and testing water for lead. Additional information from outside sources is also included on the webpage. The webpage link is: https://www.amwater.com/paaw/water-quality/Lead-and-Drinking-Water/

Additionally, the Company's website has an online tool describing the replacement schedule by geographic location, at least six months into the future. The online tool is accessible under our Lead Service Line Replacement Site on our Lead and Drinking Water/Lead Service Line Replacement Program webpage at: https://storymaps.arcgis.com/stories/620f62324ded477db7b863026f46d666

The Company's website also provides information regarding its reimbursement requirements as well as secure online tools that provide customers or property owners the ability to determine reimbursement eligibility. The reimbursement information is found at under the Lead Service Line Replacement Site on our Lead and Drinking Water/Lead Service Line Replacement Program webpage : https://forms.office.com/pages/responsepage.aspx?id=-Yw3NcDa8EWExxv7mCB7WX-Ald9edYVAhL9IxvVo5QdUNTUwR1dWOEJNMzJZWVRHNUwzQVhUUVZRVi4u&origin=lprLink

The Company's website contains an interactive map that provides the ability to determine whether a property may have a LSL, delineating the known or reasonably anticipated material types for the Company-owned and customer-owned portions of the service line. A customer can request assistance through the map's customer survey or by calling the Company's toll-free customer service number. The map is accessible at:

https://paaw.maps.arcgis.com/apps/webappviewer/index.html?id=f8933d006e16455f938e62d60f5e955e

The Company also provides on its website information and resources relating to health risks associated with lead and LSLs, the status of current efforts to replace LSLs, and community meetings and advisory committees hosted by the Company. This information is found at the following link: https://www.amwater.com/paaw/water-quality/Lead-and-Drinking-Water/lead-service-line-replacement-program

Pennsylvania-American Water communicates the availability of its lead webpage and additional resources through a vigorous outreach plan to notify all customers. The Company shares these resources with customers through the following methods:

- Statewide press releases
- The webpage is featured on the Company's homepage in the rotating banner
- Regular bill inserts in all customer bills (*See* Appendix 3)
- Share engaging content for the Company's social media platforms
- Digital education campaigns that include engaging social media posts with the call to action to encourage customers to view the map and resources recently created.
- Multiple informative videos posted on social media and website and will support digital education campaign
- E-newsletter(s) sent to elected officials in the communities served by Pennsylvania American Water.
- Stakeholder website dedicated to requesting support from our local municipality leaders and elected officials.
- Annual notification to customers served by an unknown, lead, or galvanized requiring replacement service line as required by EPA Lead and Copper Rule Revisions.

Pennsylvania-American Water's comprehensive communication plan for informing customers about project work and about lead and drinking water also informs customers about lead service lines, and steps for identifying and replacing lead services lines in conjunction with Pennsylvania-American Water work. In conjunction with scheduled utility work, Pennsylvania-American Water mails or otherwise delivers to affected customers a communication that describes service lines and service line replacements. This communication also advises customers that PAWC will contact them to discuss replacing their service line if it is discovered that their service line is a lead service

line. Pennsylvania-American Water also provides to customers information which describes utility owned and customer owned service lines, along with steps of service line material investigation, further communications, an overview of the LSL replacement program, frequently asked questions with answers, and further information about lead and drinking water.

APPENDIX 1
