WATER OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma future test year average daily consumption for each customer classification.

Customer Classification	Average Daily Consumption, 100 Gallons	Allocation Factor
(1)	(2)	(3)
Gravity		
Residential	29,543	0.1736
Commercial	22,648	0.1331
Industrial	6,131	0.0360
Private Fire Protection	30	0.0002
Public Fire Protection	46	0.0003
Repumped		
Residential	54,751	0.3216
Commercial	38,118	0.2240
Industrial	18,689	0.1098
Private Fire Protection	61	0.0004
Public Fire Protection	162	0.0010
Total	170,179	1.0000

FACTOR 2. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED IN THE REPUMPED SERVICE AREA.

Factors are based on the pro forma future test year average daily consumption for each customer classification in the repumped service area.

Customer Classification	Average Daily Consumption, 100 Gallons	Allocation Factor
(1)	(2)	(3)
Repumped		
Residential	54,751	0.4899
Commercial	38,118	0.3410
Industrial	18,689	0.1672
Private Fire Protection	61	0.0005
Public Fire Protection	162	0.0014
Total	111,781	1.0000

THE YORK WATER COMPANY
WATER OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the factors for average daily consumption (Factor 1) and the factors derived from maximum day extra capacity demand for each customer classification, as follows:

	Average Daily Consumption		Maximum Day Extra Capacity		
Customer Classification	Allocation Factor 1	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)=(2)x 0.6579	(4)	(5)=(4)x 0.3421	(6)=(3)+(5)
Gravity					
Residential	0.1736	0.1142	0.2528	0.0865	0.2007
Commercial	0.1331	0.0876	0.0775	0.0265	0.1141
Industrial	0.0360	0.0237	0.0175	0.0060	0.0297
Private Fire Protection	0.0002	0.0001			0.0001
Public Fire Protection	0.0003	0.0002			0.0002
Repumped					
Residential	0.3216	0.2115	0.4684	0.1603	0.3718
Commercial	0.2240	0.1474	0.1305	0.0446	0.1920
Industrial	0.1098	0.0722	0.0533	0.0182	0.0904
Private Fire Protection	0.0004	0.0003			0.0003
Public Fire Protection	0.0010	0.0007			0.0007
Total	1.0000	0.6579	1.0000	0.3421	1.0000

The derivation of the maximum day extra capacity factors in column 4 and the basis for the column 3 and column 5 weightings are presented on the following page.

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS, cont.

Customer Classification	Average Daily Consumption, 100 Gallons	Maximum Day Extra Capacity Factor*	Maximum Day Extra Capacity Rate of Flow, 100 Gallons Per Day	Service Area Factor	Allocation Factor
(1)	(2)	(3)	(4)=(2)x(3)	(5)	(6)
Gravity					
Residential	29,543	1.50	44,314.5	0.7268	0.2528
Commercial	22,648	0.60	13,588.8	0.2229	0.0775
Industrial	6,131	0.50	3,065.5	0.0503	0.0175
	58,322		60,968.8	1.0000	
Repumped					
Residential	54,751	1.50	82,126.5	0.7183	0.4684
Commercial	38,118	0.60	22,870.8	0.2000	0.1305
Industrial	18,689	0.50	9,344.5	0.0817	0.0533
	111,558		114,341.8	1.0000	
Total	169,880		175,310.6		1.0000

The weighting of the factors is based on the maximum day ratio of 1.52, based on a review of maximum day ratios experienced during the period 2000 through 2024. (See Schedule F).

	Maximum Day Ratio	Weight
Average Day	1.00	0.6579
Maximum Day Extra Capacity	0.52	0.3421
Total	1.52	1.0000

* Ratio of maximum day to average day minus 1.0.

THE YORK WATER COMPANY
WATER OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS FOR THE GRAVITY SERVICE AREA.

Factors are based on the weighting of the factors for average daily consumption, the factors derived from maximum day extra capacity demand and the fire protection demand for each customer classification, as follows:

	Average Daily Consumption			Maximum Day Extra Capacity		Fire Protection		
Customer Classification	100 Gals.	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)	(4)=(3)x 0.5380	(5)	(6)=(5)x 0.2798	(7)	(8)=(7)x 0.1822	(9)=(4) +(6)+(8)
Gravity								
Residential	29,543	0.5059	0.2722	0.7268	0.2033			0.4755
Commercial	22,648	0.3878	0.2086	0.2229	0.0624			0.2710
Industrial	6,131	0.1050	0.0565	0.0503	0.0141			0.0706
Private Fire	30	0.0005	0.0003			0.3940	0.0718	0.0721
Public Fire	46	0.0008	0.0004			0.6060	0.1104	0.1108
Total	58,398	1.0000	0.5380	1.0000	0.2798	1.0000	0.1822	1.0000

The basis for the weightings in columns 4, 6 and 8 are presented on the following page.

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS FOR THE GRAVITY SERVICE AREA, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are a review of the ratios of maximum day to average day during the years 1983-2024 (see Schedule F) and the average daily send-out during the test year of 22.4 mgd. The system demand for the fire protection is 12,300 gpm for 10 hours.

	Maximum Day Ratio	Rate of Flow, GPD	Weight
Average Day	1.00	21,800,000	0.5380
Maximum Day Extra Capacity	0.52	11,336,000	0.2798
	1.52	33,136,000	0.8178
Fire Protection		7,380,000	0.1822
Total		40,516,000	1.0000

* Ratio of maximum day to average day minus 1.0.

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS FOR THE REPUMPED SERVICE AREA.

Factors are based on the weighting of the factors for average daily consumption, the factors derived from maximum day extra capacity demand and the fire protection demand for each customer classification, as follows:

	Average Daily Consumption			Maximum Day Extra Capacity		Fire Protection		
Customer Classification	100 Gals.	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)	(4)=(3)x 0.5380	(5)	(6)=(5)x 0.2798	(7)	(8)=(7)x 0.1822	(9)=(4) +(6)+(8)

Industrial	255.5	0.1050	0.0396	0.0628	0.0199			0.0595
Private Fire	1.3	0.0005	0.0002			0.3940	0.1206	0.1208
Public Fire	1.9	0.0008	0.0003			0.6060	0.1856	0.1859
Total	2,433.4	1.0000	0.3771	1.0000	0.3167	1.0000	0.3062	1.0000

The maximum hour extra capacity factors in column 5 are determined as follows:

Customer Classification	Average Hourly Consumption 100 Gals	Maximum Hour Extra Capacity Factor	Rate, 100 gal/hr	Allocation Factor
(1)	(2)	(3)	(4)=(2)x(3)	(5)
Gravity				
Residential	1,231.0	3.50	4,308.5	0.6232
Commercial	943.7	2.30	2,170.5	0.3140
Industrial	255.5	1.70	434.4	0.0628
Total	2,430.2		6,913.4	1.0000

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 6. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are a review of the ratios of maximum hour to average hour during the years 1983-2024 (see Schedule F) and the average daily send-out during the test year of 22.4 mgd. The system demand for fire protection is 12,300 gpm.

	Ratio	Rate of Flow, (GPM)	Weight
Average Hour	1.00	15,139	0.3771
Maximum Hour Extra Capacity	0.84	12,717	0.3167
Subtotal	1.84	27,856	0.6938
Fire Protection		12,300	0.3062
Total		40,156	1.0000

The public and private fire protection allocation factors in column 7 on the previous page are based on relative potential demands (see Schedule G).

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 7. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS FOR THE REPUMPED SERVICE AREA.

Factors are based on the weighting of the average hourly consumption, the maximum hour extra capacity demand, and the fire protection demand for each customer classification.

	Average Hourly Consumption			Max Hour Extra Capacity		Fire Protection		
Customer Classification	100 Gals.	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)	(4)=(3)x 0.3771	(5)	(6)=(5)x 0.3167	(7)	(8)=(7)x 0.3062	(9)=(4) +(6)+(8)
Repumped								
Residential	2,281.3	0.4899	0.1847	0.6161	0.1952			0.3799

THE YORK WATER COMPANY
WATER OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 9. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES SERVING BOTH GRAVITY AND REPUMPED SERVICE AREAS, cont.

The weighting of the factors is based on the ratio of the capacity required for a 10-hour demand of fire flow, as related to total storage capacity.

Fire Protection Weight = $\frac{12{,}300 \text{ GPM X } 60 \text{ Min. X } 10 \text{ Hrs}}{58{,}902{,}000 \text{ Gallons Storage}}$ = 0.1253

General Service Weight = 1.0000 - 0.1253 = 0.8747

The weighting of the average hourly consumption and maximum hour extra demand for general service is based on the maximum hour ratio, as follows.

	Maximum Hour Ratio	Percent	Weight
Average Hour	1.00	54.35	0.4754
Extra Capacity Maximum Hour	0.84	45.65	0.3993
Total	1.84	100.00	0.8747

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 20. ALLOCATION OF METER READING COSTS.

Factors are based on the pro forma number of meter readings by customer classification, as follows:

Customer Classification	Pro Forma Number of Readings	Allocation Factor
(1)	(2)	(3)
Gravity		
Residential	252,700	0.2898
Commercial	30,437	0.0349
Industrial	1,775	0.0020
Repumped		
Residential	557,393	0.6394
Commercial	27,744	0.0318
Industrial	1,805	0.0021
Total	871,854	1.0000

FACTOR 21. ALLOCATION OF ADMINISTRATIVE AND GENERAL EXPENSES.

Factors are based on the allocation of all other operation and maintenance expenses excluding fuel, power purchased, and chemicals.

Customer Classification	Operation & Maintenance Expenses	Allocation Factor
(1)	(2)	(3)
Gravity		
Residential	$ 3,204,492	0.2041
Commercial	1,085,841	0.0692
Industrial	228,757	0.0146
Private Fire Protection	167,115	0.0106
Public Fire Protection	147,470	0.0094
Repumped		
Residential	7,172,737	0.4569
Commercial	1,893,984	0.1206
Industrial	746,795	0.0476
Private Fire Protection	342,467	0.0218
Public Fire Protection	709,170	0.0452
Total	$ 15,698,829	1.0000

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 22. ALLOCATION OF LABOR RELATED TAXES AND BENEFITS.

Factors are based on the allocation of operation and maintenance direct labor expense to customer classifications, as follows.

Customer Classification	Direct Labor Expense	Allocation Factor
(1)	(2)	(3)
Gravity		
Residential	$ 2,353,164	0.2125
Commercial	818,047	0.0739
Industrial	173,085	0.0156
Private Fire Protection	102,639	0.0093
Public Fire Protection	85,132	0.0077
Repumped		
Residential	5,114,235	0.4618
Commercial	1,332,129	0.1203
Industrial	517,505	0.0467
Private Fire Protection	193,175	0.0174
Public Fire Protection	385,268	0.0348
Total	$ 11,074,378	1.0000

FACTOR 23. ALLOCATION OF ORGANIZATION, FRANCHISES AND CONSENTS, AND OTHER RATE BASE ELEMENTS.

Factors are based on the allocation of the original cost less depreciation other than those items being allocated, as follows:

Customer Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Gravity		
Residential	$ 62,289,219	0.1309
Commercial	29,740,916	0.0625
Industrial	7,030,881	0.0148
Private Fire Protection	6,083,632	0.0128
Public Fire Protection	9,936,848	0.0209
Repumped		
Residential	178,294,004	0.3745
Commercial	77,838,333	0.1636
Industrial	33,831,335	0.0711
Private Fire Protection	18,108,227	0.0381
Public Fire Protection	52,723,530	0.1108
Total	$ 475,876,925	1.0000

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 24. ALLOCATION OF INCOME TAXES AND INCOME AVAILABLE FOR RETURN.

The factors are based on the allocation of the original cost measure of value rate base as shown on the following pages and summarized below:

Customer Classification	Original Cost Measure of Value	Allocation Factor
(1)	(2)	(3)
Gravity		
Residential	$ 58,720,972	0.1321
Commercial	27,919,811	0.0628
Industrial	6,592,219	0.0148
Private Fire Protection	5,695,825	0.0128
Public Fire Protection	9,270,772	0.0209
Repumped		
Residential	166,913,011	0.3753
Commercial	72,450,330	0.1630
Industrial	31,468,466	0.0708
Private Fire Protection	16,770,184	0.0377
Public Fire Protection	48,795,628	0.1098
Total	$ 444,597,217	1.0000

FACTOR 25. ALLOCATION OF REGULATORY COMMISSION EXPENSES, ASSESSMENTS AND OTHER WATER REVENUES.

The factors are based on the allocation of the total cost of service, excluding those items being allocated.

Customer Classification	Total Cost of Service	Allocation Factor
(1)	(2)	(3)
Gravity		
Residential	$ 14,043,569	0.1599
Commercial	5,823,235	0.0663
Industrial	1,323,098	0.0151
Private Fire Protection	980,422	0.0112
Public Fire Protection	1,382,498	0.0157
Repumped		
Residential	35,839,358	0.4082
Commercial	13,160,093	0.1499
Industrial	5,580,921	0.0636
Private Fire Protection	2,583,211	0.0294
Public Fire Protection	7,084,974	0.0807
Total	$ 87,801,379	1.0000

APPENDIX

RESPONSES TO RATE STRUCTURE AND COST OF SERVICE FILING REQUIREMENTS

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

a. A description of the allocation methods used. A comparison of the allocated cost of service by class with the present and proposed revenues. A cost of service schedule showing the Rate of Return produced by present and proposed rates by class of service.

RESPONSE

A description of the methods used for the cost of service study is provided on pages 2 through 5 of Exhibit No. FVIII and in Statement No. 108. A comparison of the allocated cost of service by class with the present and proposed revenues is provided on Schedule A of Exhibit No. FVIII. Schedules B and C showing the rate of return produced by present and proposed rates by customer classification are provided in Exhibit No. FVIII.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include thefollowing:

b. Indicate if the method used for establishing the allocation factors in the Cost of Service Study deviates from the previous study submitted in the last rate case. If yes, indicate which allocation factors were changed and discuss the reason for the changes.

RESPONSE

The methods used for establishing the allocation factors in the cost of service study have not deviated from the previous study submitted in the last case.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

c. Supply the average day, the maximum day and the maximum hour deliveries to the system adjusted for storage for the test year and two prior years. Also provide workpapers, analyses, comparative data or other documentation supporting the estimated maximum day and peak hour demands by customer class reflected in the Company's cost of service study.

RESPONSE

Refer to Schedule F of Exhibit No. FVIII for the average day maximum day and maximum hour system deliveries for the years 2000 through 2024. See ‘RS1-c Attachment’ which provides support for the customer class demand factors.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

d. Explain thoroughly the methodology employed if the Company distinguishes between transmission and distribution mains in its allocation of costs.

RESPONSE

For cost allocation purposes, mains that are 16-inch and larger are considered to be transmission mains and are allocated using Factors 3, 4 and 5, which are based on average and maximum day extra capacity demands plus the daily requirement for fire demand. Mains sized under 16-inch are considered distribution mains and are allocated using Factors 6 and 7, which are based on average and maximum hour extra capacity demands plus the hourly requirement for fire demands.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

e. Provide a detailed explanation of how storage is utilized to meet base, maximum day and maximum hour demands.

RESPONSE

Storage facilities have been considered to be adequate if the effective volume of the facility, or groups of facilities acting together, provided sufficient volume during peak hour demands and to meet equalization needs on the maximum day and provide a fire protection reserve.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

f. Provide workpapers, calculations and supporting documentation which develop the equivalent meters and equivalent service weights reflected in the Company's cost of service study.

RESPONSE

The 5/8-inch meter equivalent and 3/4-inch service equivalent were based on an analysis of actual costs by size for the last 20 years as shown on the attached schedules.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

g. Provide all workpapers and supporting documentation for the fire flow requirement and duration utilized in the cost of service study.

RESPONSE

The 12,300 gpm fire flow is based on the requirements recommended by the National Board of Fire Underwriters (now the American Insurance Association) for a population of 198,049 as follows:

a. For populations of 200,000 or less,

$$Q = 1020\sqrt{P}\left(1 - 0.01\sqrt{P}\right).$$

Where Q is the fire draft in gpm and P is the population in thousands.

b. For populations in excess of 200,000, Q = 12,000 gpm plus 2,000 to 8,000 gpm for a potential second fire.

The foregoing requirements were published in Volume I, "Water and Wastewater Engineering," by Fair, Geyer & Okon, published in 1966 by John Wiley & Sons, Inc. The 10-hour duration is based on the 1974 Insurance Services Office publication titled "Grading Schedule for Municipal Fire Protection".

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

h. Provide a breakdown of the number and size of private fire services according to the general water service class of customer.

RESPONSE

This information broken down by customer class is not readily available. See Exhibit No. FVIII-1, Schedule G for the system-wide number of private fire lines and hydrants.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

i. Provide a calculation of the Company's base cost of water per unit of consumption.

RESPONSE

The calculation of the base cost of water per hundred gallons is as follows:

	Gravity	Repumped
Base Cost of Water	$9,607,619	$26,623,159
Pro Forma Water Consumption (Hundred Gallons)	21,287,530	40,718,670
Base Cost per Hundred Gallons	$0.4513	$0.6538

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

j. Provide a detailed cost analysis that supports the Company's customer charges, by meter size, showing all direct and indirect costs included.

RESPONSE

Please refer to the ‘RS1-j Attachment’ for the detailed cost analysis that supports the Company’s customer charges. The attached also includes the cost of service by cost function.

Attention Mr. Matthew E. Poff
Chief Financial Officer

Pursuant to your request, we have conducted a wastewater operations cost of service allocation study based on proforma revenue requirements estimated for the test year ended February 28, 2027, and have prepared proposed rate schedules designed to produce the pro forma revenue requirements.

The attached report presents the results of the study, as well as supporting schedules which set forth the detailed cost allocation calculations. Schedule A presents a comparison of the cost of service by customer classification with the pro forma revenues produced by each classification under present and proposed rates.

Respectfully submitted,

WASTEWATER OPERATIONS

WASTEWATER COST OF SERVICE ALLOCATION STUDY
AS OF FEBRUARY 28, 2027
AND PROPOSED CUSTOMER RATES

PLAN OF REPORT

The reports set forth the results of the cost of service allocation study for the Wastewater Operations based on pro forma costs as of February 28, 2027, for The York Water Company. The introduction contains statements with respect to the basis of the study, the procedures employed, and a summary of the results of the study. Schedule A summarizes the cost allocation for the wastewater operations and total revenues under present and proposed rates. Cost of Service by Customer Classification presents detailed schedules of the allocation of costs to customer classifications, as well as the basis for the allocations. Schedule F, Comparisons of Present and Proposed Customer Rates, sets forth the proposed rate schedules for wastewater service.

BASIS OF STUDY

The method used for the allocation of wastewater cost of service incorporates the functional cost allocation methodology described in the text “Financing and Charges for Wastewater Systems,” Manual of Practice No. 27, published by the Water Environment

Federation. This method is recognized for allocating the cost of providing wastewater service to customer classifications in proportion to the classifications' use of the commodity, facilities, and services. It is generally accepted as a sound method for allocating the cost of wastewater service. Under the functional cost method, costs are assigned to cost components using predominant operational purposes as cost-causative factors.

Each element of the cost of service is allocated to customer classifications according to the functional categories. The cost functions are flow, infiltration and inflow (I&I), customer facilities and customer accounting. The functional costs are allocated to customer classifications based on the amount of flow contributed to the system, the amount of I&I allocated to each class, and the number and relative size of customers.

The results of the allocation of wastewater cost of service is summarized on Schedule A, column 4. The cost allocation results can be compared with revenues under present and proposed rates in columns 6 and 8 of Schedule A. The proposed increase and percentage increase in revenues are shown in columns 10 and 11.

The cost of service by customer classification is developed in Schedule D. The allocation factors referenced in column 2 are applied to the costs by account in column 3. The allocation factors are set forth in Schedule E.

The comparison of present and proposed wastewater rates by wastewater service areas are shown in Schedule F.

THE YORK WATER COMPANY
WASTEWATER OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS ASSOCIATED WITH WASTEWATER TREATMENT

Factors are based on the pro forma test year average daily consumption for each customer classification with adjustments. The detail regarding calculation of adjusted flows can be found on the following page.

Classification	Total Adjusted Average Daily Customer Flow 100 gallons (a)	I&I Gallons Per Day 100 gallons (b)	Total I&I And Average Flow	Allocation Factor
(1)	(2)	(3)	(4)=(2)+(3)	(7)
Residential	7,189	5,698	12,887	0.7405
Non-Residential	2,813	1,703	4,516	0.2595
Total	10,002	7,401	17,403	1.0000

(a) Customer Flow.
(b) Allocation based on Factor 1A for Residential, Non-Residential and Large Industrial.

FACTOR 1A. ALLOCATION OF INFILTRATION AND INFLOW BY CUSTOMER CLASS.

Factors are based on a 1/3-2/3 weighting of flow and number of customers, as follows:

Customer Classification	Total Adjusted Average Daily Flow 100 gallons	Average Daily Flow		Number of Service Equivalents	Number of Customers		Allocation Factor
		Factor	Weight		Factor	Weight	
(1)	(2)	(3)	(4)=(3) x 0.3333	(5)	(6)	(7)=(6) x 0.6667	(8)=(4)+(7)
Residential	7,189	0.7187	0.2395	91,653	0.7955	0.5304	0.7699
Non-Residential	2,813	0.2813	0.0938	23,558	0.2045	0.1363	0.2301
Total	10,002	1.0000	0.3333	115,211	1.0000	0.6667	1.0000

THE YORK WATER COMPANY
WASTEWATER OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH THE COLLECTION SYSTEM

Factors are based on peak daily flow for each customer classification.

Customer Classification	Ave. Flow Consumption, 100 gpd	Peak I&I Flow 100 gallons (a)	Total Peak I&I And Average	Allocation Factor
(1)	(2)	(3)	(4)=(2)+(3)	(5)
Residential	7,189	3,250	10,438	0.7339
Non-Residential	2,813	971	3,784	0.2661
Total	10,002	4,221	14,223	1.0000

(a) Allocation based on Factor 1A.

FACTOR 3. ALLOCATION OF CAPITAL COSTS ASSOCIATED WITH PROJECTED AVERAGE DAILY FLOW INCLUDING INFILTRATION AND INFLOW

Factors are based on the projected average daily consumption for each customer classification.

Classification	Total Average Daily Flow 100 gallons	Direct I&I Gallons Per Day 100 gallons (a)	Total Direct I&I And Average	Allocation Factor
(1)	(2)	(3)	(4)=(2)+(3)	(7)
Residential	7,189	5,698	12,887	0.7405
Non-Residential	2,813	1,703	4,516	0.2595
Bulk Customer	-	-	-	-
Total	10,002	7,401	17,403	1.0000

(a) Allocation based on Factor 1A.

FACTOR 3A. NOT USED IN THIS ALLOCATION

THE YORK WATER COMPANY
WASTEWATER OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH CUSTOMER FACILITIES.

Factors are based on the estimated relative cost of customer facilities, as follows:

Customer Classification	Number of Customers	Service Equiv. Ratio (a)	Service Equivalents	Allocation Factor
(1)	(2)	(3)	(2)X(3)=(4)	(5)
Residential	91,653	1.0	91,653	0.7955
Non-Residential	9,423	2.5	23,558	0.2045
Total	101,076		115,211	1.0000

(a) Based on ratio by class for Coatesville service area.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH BILLING AND COLLECTING.

Factors are based on the number of customers.

Customer Classification	Number of Customers	Allocation Factor
(1)	(2)	(3)
Residential	91,653	0.9068
Non-Residential	9,423	0.0932
Total	101,076	1.0000

THE YORK WATER COMPANY
WASTEWATER OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 6. ALLOCATION OF LABOR RELATED TAXES AND BENEFITS.

Factors are based on the allocation of direct labor expense.

Customer Classification	Direct Labor Expense	Allocation Factor
(1)	(2)	(3)
Residential	$ 2,414,414	0.7405
Non-Residential	846,215	0.2595
Total	$ 3,260,629	1.0000

FACTOR 7. ALLOCATION OF ORGANIZATION, FRANCHISES AND CONSENTS, MISCELLANEOUS INTANGIBLE PLANT AND OTHER RATE BASE ELEMENTS.

Factors are based on the allocation of the original cost less depreciation other than those items being allocated, as follows:

Customer Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Residential	$ 40,728,802	0.7431
Non-Residential	14,077,493	0.2569
Total	$ 54,806,295	1.0000

THE YORK WATER COMPANY
WASTEWATER OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 8. ALLOCATION OF INCOME TAXES AND INCOME AVAILABLE FOR RETURN.

Factors are based on the allocation of the original cost measure of value rate base as shown on the following pages and summarized below.

Customer Classification	Original Cost Measure of Value	Allocation Factor
(1)	(2)	(3)
Residential	$ 40,638,940	0.7431
Non-Residential	14,046,440	0.2569
Total	$ 54,685,380	1.0000

FACTOR 9. ALLOCATION OF REGULATORY COMMISSION EXPENSES, ASSESSMENTS WATER REVENUES FROM WATER RATES, AND OTHER WATER REVENUES.

The factors are based on the allocation of the total cost of service, excluding those items being allocated.

Customer Classification	Total Cost of Service	Allocation Factor
(1)	(2)	(3)
Residential	$ 9,176,598	0.7427
Non-Residential	3,178,684	0.2573
Total	$ 12,355,282	1.0000

THE YORK WATER COMPANY
WASTEWATER OPERATIONS
FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 10. ALLOCATION OF ADMINISTRATIVE AND GENERAL EXPENSES

Factors are based on the allocation of all other operation and maintenance expenses excluding purchased water, power, chemicals and waste disposal.

Customer Classification	Operation & Maintenance Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$ 3,242,032	0.7399
Non-Residential	1,139,483	0.2601
Total	$ 4,381,514	1.0000

FACTOR 11. ALLOCATION OF CASH WORKING CAPITAL

Factors are based on the allocation of operation and maintenance expenses including purchased water, power, chemicals and waste disposal.

Customer Classification	Operation & Maintenance Expenses	Allocation Factor
(1)	(2)	(3)
Residential	$ 4,408,259	0.7424
Commercial	1,529,599	0.2576
Total	$ 5,937,858	1.0000

APPENDIX

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

a. A description of the allocation methods used. A comparison of the allocated cost of service by class with the present and proposed revenues. A cost of service schedule showing the Rate of Return produced by present and proposed rates by class of service.

RESPONSE

A description of the methods used for the cost of service study is provided in Exhibit No. FVIII-WA and in Statement No. 108. A comparison of the allocated cost of service by class with the present and proposed revenues is provided on Schedule A of Exhibit No. FVIII-WA.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

b. Indicate if the method used for establishing the allocation factors in the Cost of Service Study deviates from the previous study submitted in the last rate case. If yes, indicate which allocation factors were changed and discuss the reason for the changes.

RESPONSE

The methods used for establishing the allocation factors in the cost of service study have not deviated from the previous study submitted in the last case.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

c. Supply the average day, the maximum day and the maximum hour deliveries to the system adjusted for storage for the test year and two prior years. Also provide workpapers, analyses, comparative data or other documentation supporting the estimated maximum day and peak hour demands by customer class reflected in the Company's cost of service study.

RESPONSE

Not applicable.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

d. Explain thoroughly the methodology employed if the Company distinguishes between transmission and distribution mains in its allocation of costs.

RESPONSE

Not applicable.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

e. Provide a detailed explanation of how storage is utilized to meet base, maximum day and maximum hour demands.

RESPONSE

There is no storage for this system.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

f. Provide workpapers, calculations and supporting documentation which develop the equivalent meters and equivalent service weights reflected in the Company's cost of service study.

RESPONSE

There are no meter or service equivalents calculated for this study.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

g. Provide all workpapers and supporting documentation for the fire flow requirement and duration utilized in the cost of service study.

RESPONSE

Because this is a wastewater operation, there is no fire flow requirements.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

h. Provide a breakdown of the number and size of private fire services according to the general water service class of customer.

RESPONSE

Not applicable.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

i. Provide a calculation of the Company's base cost of water per unit of consumption.

RESPONSE

The calculation of the average flow cost per hundred gallons is as follows:

Total Flow Cost	$7,046,982
Pro Forma Usage (Hundred Gallons) (Includes Estimated Unmetered)	3,650,660
Flow Cost per Hundred Gallons	$1.9303

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS1. Provide a complete (fully allocated) cost of service study if an interval of approximately three years has passed between a previous cost of service study and the historic test year date of the current filing. The cost of service study shall provide the necessary data to determine if the water rate structure is fair and equitable to all classifications of water users (including public and private fire protection customers) and reflects, as nearly as possible, the cost of providing the service. The study shall correspond to the test year proposed revenue requirements (future test year only, if used). Summaries of conclusions and all back-up calculations shall be made part of the submission of the cost of service study, and shall include the following:

j. Provide a detailed cost analysis that supports the Company's customer charges, by meter size, showing all direct and indirect costs included.

RESPONSE

Please refer to the 'RS1-j Attachment' for the detailed cost analysis that supports the Company's customer charges. The attached also includes the cost of service by cost function.

THE YORK WATER COMPANY

RESPONSES TO RATE STRUCTURE
AND COST OF SERVICE FILING REQUIREMENTS

RS2. Provide a listing of negotiated special rate contracts which includes a comparison of revenues under special rate contracts and under tariff rates. Provide the cost of service treatment of any deficiency in revenues resulting from the negotiated special rate contracts.

RESPONSE

There are no negotiated special rate contracts that are not under a tariff rate.

Statement No. 107

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

RE: THE YORK WATER COMPANY
DOCKET NOS. R-2025- 3053442 AND R-2025-3053573

DIRECT TESTIMONY OF GREGORY R. HERBERT

Line No.

Q. Please state your name and business address.

A. My name is Gregory R. Herbert. My business address is 300 Sterling Parkway, Suite 200, Mechanicsburg, Pennsylvania (formerly 207 Senate Avenue, Camp Hill, Pennsylvania).

Q. By whom are you employed?

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC.

Q. Please describe your position with Gannett Fleming Valuation and Rate Consultants, LLC, and briefly state your general duties and responsibilities.

A. My title is Assistant Project Manager, Rate Studies. My duties and responsibilities include the preparation of accounting and financial data for revenue requirement and cash working capital requests, the allocation of cost of service to customer classifications, and the design of customer rates in support of public utility rate filings.

Q. Have you presented testimony in rate proceedings before a regulatory agency?

A. Yes. I have testified before the Pennsylvania Public Utility Commission ("Commission"), the Virginia State Corporation Commission, the New Jersey

Board of Public Utilities, the North Carolina Utilities Commission, and the Illinois Commerce Commission concerning revenue requirements, cost of service allocation, and rate design. A list of cases in which I have testified or assisted former Gannett Fleming staff is attached to my testimony.

Q. What is your educational background?

A. I have a Bachelor of Science in Economics from the Pennsylvania State University, University Park, Pennsylvania.

Q. Would you please describe your professional affiliations?

A. I am a member of the National Association of Water Companies and the Pennsylvania Municipal Authorities Association.

Q. Briefly describe your work experience.

A. I joined the Gannett Fleming Valuation and Rate Consultants, LLC in May 2017 as a Rate Analyst. In December 2023, I was promoted to my current position as Assistant Project Manager, Rate Studies, where I assist utilities with the preparation of accounting and financial data regarding revenues under present and proposed rates, including pro forma adjustments to the historic test year, Future Test Year, and Fully Projected Future Test Year revenues, and the design of customer rates. I also develop pro forma revenue requirements and conduct cost allocations by customer class, capital recovery fee, lead-lag, and depreciation studies for investor-owned and municipal-owned utilities. Prior to my employment at Gannett Fleming, I was a Senior Analyst, in the Performance Reporting Group of Cambridge Associates, LLC, where I oversaw the financial preparation of monthly and

annual performance and benchmarking reports for public and private endowment clients.

Q. What is the purpose of your testimony in this proceeding?

A. The purpose of my testimony is to explain The York Water Company's ("York Water" or the "Company") cost of service allocation studies and proposed rate designs set forth in Exhibit No. FVIII and Exhibit No. FVIII-WA.

WATER COST OF SERVICE ALLOCATION STUDY

Q. Please describe Exhibit No. FVIII.

A. Exhibit No. FVIII, titled "Cost of Service Allocation Study as of February 28, 2027 and Proposed Customer Rates," is the report on the water cost of service study prepared for York Water. It sets forth the results of the study based on the estimated conditions during the twelve months ended February 28, 2027.

The information in the exhibit includes a description of the methods used in the study, the allocation of cost of service, and the factors on which the allocations were based.

Q. Do you have any comments regarding the water cost of service included in your study?

A. Yes. The Company decided to not include a portion of the revenue requirement associated with York Water's wastewater operations with its total water operations revenue requirement within the water cost of service study, as authorized by amendments to the Public Utility Code made by Act 11 of 2012. Using the revenue requirement developed by the Company, as described by Mr. Poff, I prepared the cost of service study set forth in Exhibit

No. FVIII. The cost of service study allocates among the water customer classes the entire revenue requirement of the Company's water operations, which I will refer to, collectively, as the cost of service or total revenue requirement.

Q. What was the purpose of the water cost of service allocation study?

A. The purpose of the study was to allocate the total cost of service to the several customer classifications. The study provides a basis for determining the extent to which the revenues to be derived from each customer classification are aligned with the cost of serving that classification.

Q. What method of water cost allocation was used in the study?

A. The base-extra capacity method, as described in the 2017 and prior editions of the Water Rates Manual published by the American Water Works Association, was used to allocate the costs.

Q. Why did you use that method?

A. The base-extra capacity method is a recognized method which allocates the cost of providing water service to customer classifications in proportion to the classification's use of commodity, facilities, and services. It is generally accepted as a sound method for cost allocation and has been accepted by this Commission, including in the Commission's Final Order in Aqua Pennsylvania, Inc.'s 2021 base rate case, which was entered on May 16, 2022, at Docket Nos. R-2021-3027385, *et al*.

Q. Is this method described in Exhibit No. FVIII?

A. Yes. It is described on pages 3 and 4 of the exhibit.

Q. Please outline the procedure which you followed in the cost allocation study.

A. The allocation of costs to customer classifications is presented in Schedule D, pages 10 through 13 of Exhibit No. FVIII. The items of cost, which include operating expenses, depreciation expenses, taxes and income available for return, are identified in column 1 of Schedule D. The cost of each item, shown in column 3, is allocated to the several customer classifications based on the allocation factor referenced in column 2. The development of the allocation factors is presented in Schedule E.

Referring to some of the larger cost items, purchased electric power and treatment chemicals were allocated to customer classifications on the basis of average daily consumption because they tend to vary with the amount of water consumed. Pumping and water treatment costs were allocated partly on the basis of average consumption and partly on the basis of maximum day extra demand (i.e., the difference between maximum day and average day demand), inasmuch as the function of the associated facilities is generally to meet maximum day requirements. Transmission mains and maximum day booster pumping stations are allocated on the basis of average consumption, maximum day extra demand, and fire protection demands. Costs associated with distribution mains and storage facilities were allocated partly on the basis of average consumption, partly on the basis of maximum hour extra demand, and partly on the demand for fire protection service because these facilities are designed to meet maximum hour and fire demand requirements. Fire demand costs were allocated

between public and private fire service in proportion to the relative potential demands on the system by hydrants and fire services for each classification. The basis for the allocation of fire demand costs between public and private fire service is presented in Schedule G in Exhibit No. FVIII.

Costs associated with meters and services were allocated in proportion to the original cost of the meters and services serving each classification. Capital and maintenance costs associated with fire hydrants were allocated between the gravity and repumped service areas on the basis of the number of hydrants owned and maintained by the Company in each area. Costs for meter reading, billing, and customer accounting and collecting were allocated on the number of meters and number of bills for each classification. Administrative and general costs were allocated on the basis of the allocated direct costs excluding those costs requiring little administrative and general expense.

Annual depreciation accruals were allocated on the basis of the function of the facilities represented by the depreciation expense for each depreciable plant account. Certain taxes and return were allocated based on the results of allocating the original cost measure of value.

Q. What were the sources of the total cost of service data set forth in the third column of Schedule D?

A. The operating expenses, taxes, and income available for return were based on data prepared by York Water for submission to the Commission in support of the Company's Supplement No. 165 to Tariff Water-Pa. P.U.C. No.14.

The total operating expense in the amount of $31,966,547 presented in Schedule D of Exhibit No. FVIII is the pro forma amount shown in Exhibit No. FIII-2 of the supporting data filed with the tariff.

The depreciation expense of $15,433,375 by plant account, shown on Schedule D of Exhibit No. FVIII, was developed from the detail presented in Exhibit No. FVI, supplemented by additional account detail obtained from the Company's books and records. The total amount also is the pro forma amount shown in Exhibit No. FV-1 of the supporting data filed with the tariff.

The taxes and income available for return, shown Schedule D of Exhibit No. FVIII, comport with the data shown for the same items in Exhibit No. FV-1 of the supporting data filed with the tariff.

The original cost less depreciation data shown in Schedule E of Exhibit No. FVIII were calculated from data presented in Exhibit No. FVI, supplemented by some additional detail.

Q. Refer to Schedule E of Exhibit No. FVIII and explain how you determined the maximum day and maximum hour factors entered in column 3.

A. The maximum day and maximum hour factors were based on relative customer classification demands estimated for the system. The estimates are unchanged from past studies and are supported by results of field studies conducted by our firm in the Company's service area, as well as studies for other Pennsylvania water utilities.

Q. Please explain the allocation of public fire costs.

A. Pursuant to Section 1328 of the Public Utility Code, public fire hydrant rates are limited to 25% of the public fire cost of service. Consequently, the remaining 75% has become the permanent responsibility of the other customer classifications. These unrecovered costs have been reallocated to the other classes on Schedule D, using 5/8-inch meter equivalents.

Q. Why did you use 5/8-inch meter equivalents to reallocate the unrecovered public fire costs?

A. Section 1328 states that the unrecovered portion of the public fire cost of service shall be assessed to all customers of the public utility and included in the public utility's fixed or service charge or minimum bill. Allocating these costs based on 5/8-inch meter equivalents is consistent with the customer charge cost recovery and also recognizes that customers with larger-sized meters tend to have higher property values.

DESIGN OF WATER RATES

Q. Are you responsible for the design of the rate structure proposed by York Water in Tariff Water-Pa. P.U.C. No. 14, Supplement No. 165?

A. Yes.

Q. Is the proposed rate structure presented in Exhibit No. FVIII?

A. Yes. A comparison of the present and proposed base rates is presented in Schedule H of Exhibit No. FVIII.

Q. What are the appropriate factors to be considered in the design of the rate structure?

A. In preparing a rate structure, one should consider the allocated costs of service, the impact of radical changes from the present rate structure, the

understandability and ease of application of the rate structure, community and social influences, and the value of service. General guidelines should be obtained from management to determine the extent to which each of these criteria is to be incorporated in the rate structure to be designed, inasmuch as the pricing of a commodity or service ultimately should be a function of management.

Q. Were guidelines provided to you by management?

A. Yes, after discussing the results of the cost of service allocation study with management, they provided me with the following guidelines:

1. Increase public fire hydrant rates, if necessary, to recover 25% of the cost of service, in accordance with Section 1328 of Public Utility Code; and
2. Increase all remaining customer charges and consumption charges to move revenues by classification toward the indicated cost of service and so that total revenues recover the total cost of service.

Q. Do the proposed rate schedules of Tariff Water-Pa. P.U.C. No. 14, Supplement No. 165 comply with the guidelines?

A. Yes, as shown on Schedule A of Exhibit No. FVIII, the revenues under proposed rates in column 6 result in revenues that are closely aligned with the allocated cost of service shown in column 2.

Q. Were public fire hydrant rates increased?

A. Yes. The existing public fire hydrant rates were increased to recover approximately 25% of the cost of service in the gravity service area and 25% in the repumped service area.

Q. How does the proposed rate design take into account some of the other factors that you noted above?

A. The proposed rate design produces a revenue distribution that is closely aligned with cost of service for all classes and also recovers the total cost of service.

Q. Are the proposed customer charges supported by an analysis of customer costs?

A. Yes. Refer to the schedules provided in the Appendix of Exhibit No. FVIII. The schedules show the unit costs per month for a 5/8-inch meter totaling $30.76, with direct costs totaling $24.85, which equals the proposed 5/8-inch customer charge of $24.85 per month.

WASTEWATER COST OF SERVICE ALLOCATION STUDY

Q. Please describe Exhibit No. FVIII-WA.

A. Exhibit No. FVIII-WA, titled "Cost of Service Allocation Study as of February 28, 2027, and Proposed Customer Rates," is the report on the wastewater cost of service study prepared for York Water. It sets forth the results of the study based on the estimated conditions during the twelve months ended February 28, 2027.

The information in the exhibit includes a description of the methods used in the study, the allocation of cost of service, and the factors on which the allocations were based.

Q. Do you have any comments regarding the wastewater cost of service included in your study?

A. Yes. The wastewater cost of service I prepared for purposes of this case does not include a credit from York Water's water operations, as authorized by amendments to the Public Utility Code made by Act 11 of 2012. Using the revenue requirement developed by the Company, as described by Mr. Poff, I prepared the cost of service study set forth in Exhibit No. FVIII-WA. The cost of service study allocates among the wastewater customer classes the entire revenue requirement of the Company's wastewater operations.

Q. What was the purpose of the wastewater cost of service allocation study?

A. The purpose of the study was to allocate the total cost of service to the residential and non-residential customer classifications. The study provides a basis for determining the extent to which the revenues to be derived from each customer classification are aligned with the cost of serving that classification.

Q. What method of cost allocation was used in the study?

A. I used the functional cost allocation methodology described in "Financing and Changes for Wastewater Systems", Manual of Practice No. 27, published by the Water Environment Federation ("Manual of Practice No. 27"). This method allocated the cost of providing wastewater service to customer classifications in proportion to each classifications' use of the service provider's facilities and services. Costs are assigned to cost components using predominant operational purposes as cost-causative factors. The functional cost method is generally accepted as a sound method for allocating the cost of wastewater service.

Q. What procedures did you use to apply the cost allocation methodology for wastewater operations?

A. Each element of the cost of service is allocated to customer classifications according to the functional categories of flow, infiltration and inflow ("I&I"), customer facilities, and customer accounting. The functional costs are allocated to customer classifications based on the amount of flow contributed to the system, the amount of I&I allocated to each class, and the number of customers.

Q. Have you summarized the results of your cost allocation study?

A. Yes. The results are summarized in columns 1, 2, 3, and 4 of Schedule A in Exhibit No. FVIII-WA. Column 2 sets forth the total allocated pro forma cost of service for each customer classification identified in column 1. Column 4 shows the revised total allocated pro forma cost of service for each customer classification identified in column 1. Column 5 presents each customer classification's cost responsibility as a percent of the total cost. The cost of service by class in column 2 was developed in Schedule D. The factors that allocate the functional costs to customer classes are presented in Schedule E. The factors that allocate the cost of service to the cost functions are shown in Schedule F of each study.

Q. Have you compared these cost responsibilities with the proportionate revenue under existing rates for each customer classification?

A. Yes. A comparison of the allocated cost responsibilities and the percentage revenue under existing rates can be made by comparing columns 5 and 7 of each Schedule in Exhibit No. FVIII-WA. The revenues in column 8 are

simply the revenues that would be required to move toward (or approximate) the cost of service in column 4, and the increase or decrease from present revenues is shown in column 10, with the percentage increase or decrease in column 11.

DESIGN OF WASTEWATER RATES

Q. Are you responsible for the design of the rate structure proposed by York Water in Tariff Wastewater-Pa. P.U.C. No. 1, Supplement No. 14?

A. Yes.

Q. Is the proposed rate structure presented in Exhibit No. FVIII-WA?

A. Yes. A comparison of the present and proposed base rates is presented in Schedule F of Exhibit No. FVIII-WA.

Q. What are the appropriate factors to be considered in the design of the rate structure?

A. In preparing a rate structure, one should consider the allocated costs of service, the impact of radical changes from the present rate structure, the understandability and ease of application of the rate structure, community and social influences, and the value of service. General guidelines should be obtained from management to determine the extent to which each of these criteria is to be incorporated in the rate structure to be designed, inasmuch as the pricing of a commodity or service ultimately should be a function of management.

Q. Were guidelines provided to you by management?

A. The guidelines were to consolidate rates across rate zones. The customer charges were consolidated for West Manheim, West Donegal, and York

Haven customers. Minimum Charge 2 and Minimum Charge – GHL were also consolidated under proposed rates. Flat Rates 2 through 4 were consolidated for the residential customers, and commercial flat rates were established for Flat Rates 2 and 3 where the Company serves these non-residential flat rate customers. Minimum Charge 1 was increased by twice the Minimum Charge 2 increase to move closer to a consolidated rate in future cases. Flat Rate 1 was increased by the same percentage as Flat Rate Charge 4 as a step towards consolidating the rate with Flat Rates 2 through 4 in future rate cases. The non-residential, Over 10,500 gallons – GHL, the West Donegal, and York Haven volumetric rates were consolidated to equal the third block rate for West Manheim customers. The Over 4,000 Gallons – Rate 1 rate was increased about double the Over 4,000 Gallons – Rate 2 rate increase as a step towards consolidating these rates in future rate cases.

Q. Do the proposed rate schedules of Tariff Wastewater-Pa. P.U.C. No. 1, Supplement No. 26 comply with the guidelines?

A. Yes, as shown on Schedule A of Exhibit No. FVIII-WA, the revenues under proposed rates in column 8 result in revenues moving toward the allocated cost of service shown in column 4.

Q. Does this conclude your direct testimony?

A. Yes, it does.

REBUTTAL TESTIMONY OF JOSEPH T. HAND

ON BEHALF OF

THE YORK WATER COMPANY

Dated: September 19, 2025

I. INTRODUCTION

Q. State your name and business address.

A. Joseph T. Hand. My business address is: 130 East Market Street, York, Pennsylvania.

Q. By whom are you employed?

A. I am employed by The York Water Company ("York Water" or the "Company").

Q. State your present position with the Company.

A. I am President and Chief Executive Officer.

Q. Are you the same Joseph T. Hand that served direct testimony in this proceeding?

A. Yes.

Q. Please describe the purpose of your rebuttal testimony.

A. The purpose of my testimony is to respond to testimony of the Office of Consumer Advocate ("OCA") witness Dante Mugrace and the Bureau of Investigation and Enforcement ("I&E") witness Ethan Cline regarding acquisition adjustments and the testimony of OCA witnesses David J. Garrett and Barbara Alexander and I&E witness Drew Breuning regarding management effectiveness. I then respond to the supplemental direct testimony of OCA witness LeeAnn Wise (OCA St. 6) regarding testimony provided by members of the public at the public input hearings held in this case.

Q. Are you sponsoring any exhibits with your testimony?

A. Yes, attached to my rebuttal testimony are the following exhibits:

- York Water Exhibit JTH-1R – York Water's Specifications for Residential Meter Pit for 5/8" x 3/4" & 3/4" Meters.
- York Water Exhibit JTH-2R – Example of an Improperly Installed Flared, Copper Fitting.
- York Water Exhibit JTH-3R – 2024 Consumer Confidence Report for the Amblebrook Water System.
- York Water Exhibit JTH-4R – Statement of Commissioner John F. Coleman, Jr. at Docket No. A-2023-3040190.
- York Water Exhibit JTH-5R – Statement of Vice Chair Kimberly Barrow at Docket No. A-2023-3041284.

II. ACQUISITION ADJUSTMENTS

Q. Please describe the OCA's proposed adjustments to acquisitions adjustments.

A. OCA recommends the disallowance of the Company's proposed utility acquisition adjustments included in rate base and amortization of utility plant acquisition adjustments included in operating expenses. This was based on the advice of counsel that some or all of the proposed acquisitions do not meet the requirements under the statute.

Q. Do you agree with the proposed reduction to rate base and amortization expense?

A. No. Mr. Mugrace presents no evidence in support of the OCA's claim that "some or all of the proposed acquisitions do not meet the requirements under the statute," nor does he even specify which acquisition adjustments are being opposed by the OCA. (OCA St. No. 1, pp. 34, 48.) The Company asked for clarification in discovery, and Mr. Mugrace reiterated that the OCA would address the issue in its briefs on the grounds that the Company "is seemingly seeking a legal conclusion from Mr. Mugrace." (York Water Exhibit JTH-1R [OCA Answer to YWC to OCA-II-7].) Although I am advised by counsel that the ultimate

question of compliance with the requirements of Section 1327(a) of the Public Utility Code is a legal question, the OCA must, at the very least, identify which adjustments it is opposing, and there must be facts in evidence to establish or oppose the Company's proposed adjustments. This point is critical because the statutory requirements under Section 1327(a) tie directly to factual questions, such as whether the "public utility acquired the property from another public utility, a municipal corporation or a person which had 3,300 or fewer customer connections or which was nonviable in the absence of the acquisition" and whether "the public utility, municipal corporation or person whose property is being acquired is in agreement with the acquisition and the negotiations which led to the acquisition were conducted at arm's length." Without clarity from the OCA or any evidence presented in their direct case to support their opposition to York Water's adjustments, the Company is denied its opportunity to present evidence in rebuttal.

Notwithstanding, I would first note that the utility acquisition adjustments for the water systems of Margaretta Mobile Home Park, Westwood Mobile Home Park, Lincoln Estates Mobile Home Park, and The Meadows and the wastewater system of Felton Borough were specifically established in the Commission's Orders approving the 2018 Rate Case Settlement, the 2022 Rate Case Settlement, or both.[1] When the Company pointed out the Commission's prior approval of the adjustments in discovery,[2] Mr. Mugrace responded that "Mr. Mugrace and/or the OCA will address the same in surrebuttal." (York Water Exhibit JTH-1R [OCA Answer to YWC to OCA-II-7].)

[1] *See Pa. PUC v. The York Water Co.*, Docket Nos. R-2022-3031340, et al., pp. 12, 14 (Recommended Decision dated Dec. 10, 2018), *adopted*, Docket Nos. R-2022-3031340, et al. (Order entered Jan. 17, 2019); *Pa. PUC v. The York Water Co.*, Docket Nos. R-2022-3031340, et al., pp. 11-12 (Recommended Decision dated Dec. 6, 2022), *adopted*, Docket Nos. R-2022-3031340, et al. (Order entered Jan. 12, 2023).

[2] York Water notes that the reference in the discovery request to 2019 Rate Case Settlement should be 2018 Rate Case Settlement. The Commission's Order approving the 2018 Rate Case Settlement was issued on January 17, 2019.

Additionally, concerning the water system of Scott Water Company and the wastewater system of York Haven Borough, the Company has identified its compliance with all statutory requirements in York Water Statement No. 1. For example, with regard to Scott Water Company, I explained the following issues with the water system that York Water corrected after the acquisition:

> The Company acquired Scott's water distribution system but none of its wells, well houses, water treatment building, water tank, or associated equipment. York Water abandoned the existing well, lessening the drain on the aquifer. York Water interconnected Scott's distribution system with the Company's existing and recently acquired LIDA system, providing the residents of Scott with a more reliable and plentiful supply of water. Of particular concern to [Department of Environmental Protection ("DEP")] and Scott was a recent report from U.S. Environmental Protection Agency ("EPA") and the Letterkenny Army Depot, which described per- and polyfluoroalkyl substances ("PFAS") migration from the military installation down hydraulic gradient in the direction of the Scott Water System. Disconnecting the system from its groundwater source and connecting it to York Water's surface water source eliminated the risk of PFAS contamination and/or necessary remediation. In addition, York Water improved the system by installing meters and an automated meter reading system so customers would pay for their own usage.

(York Water St. No. 1, pp. 28-29.)

Likewise, for York Haven Borough, I identified the following problems that York Water is working to remedy since its acquisition of the wastewater system:

> The Company acquired York Haven's wastewater collection and treatment system, including all the physical plant, property, and equipment. Prior to acquiring the system, York Water was aware that the primary treatment for the sanitary discharge was gaseous chlorine. Even prior to closing, and prior to Commission certification, the Company designed and applied to the DEP for a permit to replace the less stable and more dangerous gaseous chlorine with a tablet. Within 60 days of closing, less than two reporting months to the DEP, the Company installed the new system. Also, because the Company installed improved SCADA programming, the Company determined that the effluent would not maintain proper dissolved oxygen ("DO"). To improve discharge

> DO and overall operating performance, the weirs need to be replaced, the pump rail systems needed to be replaced to allow for proper maintenance, and one of two blowers must be replaced. Equally important is the installation of a grinder pump on one of the influent lines to eliminate clogging, the evaluation and correct sizing for capacitors, and the installation of emergency power generation. The Company is working to remedy these issues.

(York Water St. No. 1, p. 41.) For these and the other reasons set forth in my direct testimony, York Water's proposed acquisition adjustments should be approved by the Commission.

A. NEGATIVE ACQUISITION ADJUSTMENTS

1. Letterkenny Industrial Development Authority and Franklin County General Authority ("LIDA/FCGA") Wastewater Acquisition Adjustment

Q. Please describe the I&E's proposed adjustments to the Company's wastewater rate base and amortization expense with regards to the LIDA/FCGA negative acquisition adjustment.

A. I&E witness Cline recommends the negative acquisition adjustment for LIDA/FCGA be removed from rate base and that the negative acquisition adjustment be amortized over a 10-year period as a reduction to operating expenses, on the alleged basis that the "substantial public interest" criteria set forth in Section 1327(e) of the Code have not been met. Mr. Cline states that the Order regarding the acquisition does not demonstrate a matter of substantial public interest, nor is there any indication of outstanding Department of Environmental Protection ("DEP") compliance or operational issues.

Q. Do you agree with the proposed reduction to rate base and amortization expense?

A. No. The Company believes this negative acquisition adjustment meets the criteria in Section 1327(e) of the Code.

The series of repairs made after the Company acquired the system demonstrates that there were operational issues the Company is working to rectify. This is similar to the series of repairs made to the water system after the Company acquired it. I&E did not propose the acquisition adjustment for the water system be removed from rate base and the negative acquisition adjustment be amortized over a 10-year period as a reduction to operating expenses. Due to their similarities, the Company believes both acquisition adjustments should be treated the same. The Company recommends that the Commission determine its acquisition of this small wastewater system with limited financial resources and technical expertise was considered a matter of substantial public interest.

III. MANAGEMENT PERFORMANCE

Q. Both the OCA and I&E have proposed to remove the recommended addition of 25 basis points to the Company's cost of equity for exemplary management performance. Please respond to this proposal.

A. The Company does not agree with the removal of the addition to the Company's cost of equity for exemplary management performance. As discussed in my direct testimony, the Company's management has provided exemplary performance in various manners. I will reiterate and highlight some additional examples.

1. Troubled Water and Wastewater Systems

I&E witness Breuning notes that in the most recently litigated Aqua Pennsylvania, Inc. ("Aqua") base rate case, the Commission awarded Aqua an addition of 25 basis points for its management performance efforts, partly due to its help to troubled water and wastewater systems. York Water has a similar track record.

In the last five years, York Water has acquired many community water and wastewater systems previously owned and operated by entities within the public and private (private investor owned or homeowners' associations) sectors. Several of these acquisitions are reflected in amortizations presented in this case. These systems were small and exhibited problems that would have qualified them as troubled water and wastewater systems. Upon acquiring these systems, the Company made immediate improvements in quality, supply, and customer service. At the same time, existing customers have received the benefits of improved efficiency and the spreading of fixed costs over a larger customer base. The regionalization of water and wastewater systems will allow for consistent, reliable service, which, in turn, improves the economics and quality of life of the regions the Company serves.

The Company's efforts in these areas have been applauded and encouraged by the Commission. For example, Commissioner John F. Coleman issued a Statement in the Pine Run Application proceeding at Docket No. A-2023-3040190, in which he thanked the Company for acquiring and remediating small water systems, like Pine Run:

> The Commission previously approved York's acquisition of the Brookhaven Mobile Home Park at its February 22, 2024 Public Meeting. Like Pine Run, Brookhaven's sole source of water was contaminated and out of compliance with state regulations. The York Water Company has provided service to its customers and the public since 1816 and is the longest continually operating private water utility in the United States. I thank them for their willingness to continue to invest in small water systems, especially the willingness to invest the capital necessary to remediate these troubled systems.

(York Water Exhibit JTH-4R, pp. 1-2.)

Similarly, Vice Chair Kimberly Barrow issued a Statement in the Brookhaven Application case at Docket No. A-2023-3041284. She commended the Company's efforts

as a responsible water and wastewater provider with the acquisition of the Brookhaven Mobile Home Park, whose residents were served by a contaminated water supply and whose current operator was subject to a Consent Order and Agreement:

> Commission staff have verified with the Pennsylvania Department of Environmental Protection (DEP) that Brookhaven is currently subject to a Consent Order and Agreement (COA) for failure to meet the primary maximum contaminant level for tetrachloroethylene (PCE).
>
> I want to commend York Water for addressing this public health issue and agreeing to connect the Brookhaven consumers to its system.

(York Water Exhibit JTH-5R, p. 1.) In her oral comments at the public meeting on February 22, 2024, Vice Chair Barrow also thanked York Water for "stepping up for addressing this public health issue." (49:30) https://www.youtube.com/watch?v=Qu2u1iKN19k

The Company intends to build on its recognized successes and continue acquiring systems within its existing service area as well as adjacent areas, so that it can provide solutions to the long-term water supply and wastewater treatment requirements for an even larger portion of Pennsylvania.

York Water has also assisted its neighboring water and wastewater providers in their times of need. The New Oxford Municipal Authority ("NOMA") serves approximately 1,600 water customers in and around New Oxford Borough and Oxford Township in Adams County, PA. In 2010, NOMA's sole water source was the South Branch Conewago Creek. Recognizing their vulnerability and understanding the DEP's emphasis to have multiple sources, NOMA reached out to York Water to establish an Emergency Interconnect Agreement with York Water. In 2011, York Water established a single point, finished water connection with NOMA based upon the operating requirements

as established by NOMA and located within York Water's existing water territory. Between 2011 and 2015, the interconnect was tested often, and an open line of communication existed between NOMA's and York Water's operating departments. On Monday morning, June 8, 2015, a fire at a chemical plant and the potential runoff from the water used to control the chemical fire threatened NOMA's drinking water source. Just three hours after a request was made, the interconnect was in service and supplying water to NOMA's residential and commercial customers. From June 8, 2015, through August 27, 2015, York Water provided over 52,300,000 gallons of water to NOMA. The interconnect was the only source of water available to NOMA.

On the evening of July 5, 2019, during a severe thunderstorm, the Red Lion Water Treatment Plant experienced a direct lightning strike. The lightning strike damaged some of the electronic controls at their plant, and they were unable to process water for their customers. On the morning of July 6, 2019, Dallastown Borough, being one of Red Lion Municipal Authority's ("RLMA") customers, reached out to York Water for assistance with their water supply. York Water immediately mobilized staff; and responded by setting up an emergency hydrant-to-hydrant interconnect including over 600 feet of 5-inch fire hose and a diesel-powered potable water pump. At the Dallastown Fire Company, York Water also provided a 6,000-gallon potable water tanker and our emergency spigot style dispensing system. The Dallastown customers were able to fill their own containers with water as needed. During this same time, the Company reached out to the RLMA and offered the services of its senior electronics technician. The technician was able to assist the RLMA staff with trouble shooting and repairing the damage, allowing for a reboot of their SCADA system to get the plant back in-service.

2. Customer-Owned Lead Service Lines

York Water has been a leader in the industry on the effort to proactively address lead customer owned service lines. The Company worked with the Commission to institute a program to replace lead customer-owned service lines to help customers address this issue sooner than other water utilities in Pennsylvania who followed the model set by the Company or waited until the adoption of Act 120 of 2018, P.L. 738, No. 120 and the issuance of the Commission's final regulations promulgated pursuant to Section 1311(b)(2) of the Public Utility Code, 66 Pa. C.S. § 1311(b)(2).

3. Customer Service

The Company has provided its customers with a high level of customer service. The Company has achieved significant compliance with all existing Federal and State drinking water standards in its water systems in Pennsylvania by providing filtration for all surface water sources and disinfection for all ground water sources as well as maintaining and safely operating all wastewater systems. The Company designs and upgrades its distribution systems so its customers receive their water reliably. The Company can demonstrate its high level of customer service through its recent residential consumer complaint rate and justified residential consumer complaint rate that are lower than its larger peers and the industry average as well as customer surveys that uniformly rate the Company's quality and service as excellent. Mr. Garrett points to perceived deficiencies in the Company's customer service in the testimony of OCA witness Barbara R. Alexander as a basis for not awarding the additional return on equity. I refer you to the testimony of Suzanne M. Becker in York Water Statement No. 6-R for additional information rebutting

Ms. Alexander's claims and recommendations. Later in my testimony, I address claims regarding the Company's customer service that were made at the public input hearings.

4. Low-Income Customer Assistance

Since 2005, York Water has provided assistance to its low-income residential water and wastewater customers. In its last base rate case, the Company voluntarily asked to expand its low-income assistance program. Based on the success of the expansion, the Company voluntarily asked, as part of this proceeding, for an additional amount of funds to be used in assistance to its low-income residential customers.

Q. Please address I&E's and OCA's contention that York Water should not be rewarded for performing duties that they believe are already required as a public utility.

A. Essentially, I&E and OCA assert that York Water should not be recognized for the initiatives described in direct testimony, including infrastructure improvement, because they are either funded by customers or required by the Public Utility Code. From my perspective, this is not a valid reason to reject the Company's proposal in this case. I am advised by counsel that nothing in Section 523 of the Public Utility Code specifies that the public utility's management effectiveness and operating efficiency must be superior to other utilities in every aspect of performance for the utility to qualify for an adder to its return on equity.

In addition, counsel advises me that in PPL Electric Utilities Corporation's ("PPL Electric") 2012 base rate case, the OCA also argued that "all regulated utilities are required to provide safe, adequate, reasonable and efficient service as a matter of law" and "a utility must be doing more than providing efficient and reasonable service in order to receive

more than the indicated rate of return."[3] Similarly, in UGI Utilities, Inc. – Electric Division's ("UGI Electric") 2018 base rate case, I&E contended that "no utility should reap additional rewards for programs funded by customers or for meeting the Company's statutory obligation to provide safe and reliable service."[4] (*See* UGI Order, p. 111.) The Commission rejected I&E's and the OCA's position in both of those rate cases and awarded return on equity adders for management performance.[5] The Commission should do the same in this case.

IV. PUBLIC INPUT HEARING TESTIMONY

Q. On page 2 of her supplemental testimony, Ms. Wise describes the concerns raised at the public input hearings "highlighted persistent and widespread consumer concerns regarding the proposed rate increase." Would you agree with her characterization of the testimony presented?

A. No. Although I recognize that customers raised concerns about customer service, quality of service, and the proposed rate increase, I respectfully disagree that there are "persistent and widespread" concerns. I attended all the public input hearings, and 39 of the 46 unique individuals who testified are residents of the Amblebrook community, which is a new construction, 55+ residential development in Gettysburg, Pennsylvania, noting that one of the individuals, Mr. Michael D'Angelo, testified both in person and telephonically. The Company respectfully disagrees with these individuals' testimony about those issues, as

[3] *Pa. PUC v. PPL Elec. Utils. Corp.*, Docket Nos. R-2012-2290597, et al., p. 95 (Order entered Dec. 28, 2012) ("*PPL 2012 Order*").

[4] *Pa. PUC v. UGI Utils., Inc. – Elec. Div.*, Docket Nos. R-2017-2640058, et al., p. 111 (Order entered Oct. 25, 2018) ("*UGI Electric 2018 Order*").

[5] *See PPL 2012 Order*, pp. 98-99; *UGI Electric 2018 Order*, pp. 114-15.

described later in my testimony. However, it is clear that most of the concerns expressed at the public input hearings are localized to this one particular residential development. To further dissect the limited nature of the concerns raised during the public input hearings, only 36 residential households offered testimony, of which 30 households are located in the Amblebrook Community. Immediately following the close of the evening, in-person public input hearing, Company representatives spoke with two of the individuals who testified, Mr. John McLaughlin and Ms. Lauren Hill, and determined that neither Mr. McLaughlin nor Ms. Hill is a York Water customer; they are customers of Glen Rock Water and Sewer Authority. That leaves only five residential non-Amblebrook customers of York Water who testified at the public input hearings. There were no small business, public fire, or industrial customers providing testimony. Therefore, I disagree that there are "persistent and widespread consumer concerns" with the Company's customer service, quality of service, or the proposed rate increase.

Q. Please summarize the testimony that Ms. Wise addresses regarding impact on bill affordability and on residents with fixed incomes.

A. Ms. Wise claims 39 distinct customers testified that York Water's proposed rate increase would hurt affordability. (OCA Exhibit LMW-2S, p. 2.) She further claims that 28 distinct customers testified that unaffordability would impact them due to their fixed incomes, such as testimony from Mr. D'Angelo claiming that the increase is "highly unreasonable" and that it "far exceeds the current rate of inflation as well as the national average rate of water and wastewater increases over a five-year period." (OCA Exhibit LMW-2S, pp. 3-4). She also points to the testimony of Ms. Hill, who stated that she cannot shop around for water.

(OCA Exhibit LMW-2S, p. 3, citing Tr. 132). Further, she contends that at least 17 distinct customers testified that inflation would make York Water's proposed rate increase more unaffordable. (OCA Exhibit LMW-2S, p. 5.)

Q. Do you have a response to this testimony?

A. York Water understands customers' concerns about the affordability of its water and wastewater service. For that reason, the Company strives to be efficient in its capital investments and operating expenses, as it knows the impact of those costs on the rates that it ultimately charges to customers. As a result, the Company has among the most affordable rates of the Class A water utilities in Pennsylvania, particularly for its Gravity System customers located in the City of York, many of whom are financially challenged to pay their utility bills. However, as demonstrated through the Company's rate case filing, its current water and wastewater rates do not provide York Water with a fair opportunity to earn a just and reasonable return of and on its investments to provide safe, reliable, adequate, and reasonable water and wastewater service.

To help mitigate the impact of that increase on financially challenged customers, York Water has proposed 50% increase in the annual budget available for its Low Income Customer Assistance Program, going from $40,000 annually to $60,000 annually. Also, pursuant to the Commission-approved Settlement in its 2022 Rate Case, York Water has proposed a pilot low-income bill discount program that would be available to residential water and wastewater service customers. Under that proposal, up to 200 low-income customers would not be billed the fixed residential customer charge, which would save those customers at least $200 each year. The low-income customers can reduce the

consumption-based portion of their bill through conservation, so this program's focus is on the fixed charge, which should do well to address concerns about low-income customers on fixed incomes.

York Water also takes other steps to assist low-income and payment troubled customers. The Company does not require a deposit as a condition of service, nor does the Company propose implementing such a policy at this time. York Water also adheres to the applicable rules and regulations governing termination of service. Further, the Company will negotiate second or subsequent payment agreements in good faith to help low-income customers pay down their balances in arrears.

In addition, I observe that 33 of the "thirty-nine distinct consumers"[6] and 28 of the "[a]t least twenty-eight distinct consumers" referenced by Ms. Wise are residents of the Amblebrook community. The existing water and wastewater rates are below the Company's cost of service, as established by Mr. Herbert's testimony (York Water St. No. 107) and, therefore, needed to be increased.

Moreover, these customers appear to be under the impression that if York Water were to set their rates solely based on the cost to serve their water and wastewater systems, their rates would be lower. The opposite is true. If the Straban Township water and wastewater rates were solely based on the capital costs and O&M expenditures tied to the Amblebrook water and wastewater systems, the customers' rates would be higher than the ones proposed by York Water in this proceeding.

[6] York Water also notes that two of those individuals, Mr. McLaughlin and Ms. Hill, are customers of Glen Rock Water and Sewer Authority, not York Water. Therefore, I do not believe their testimony should be considered by the Commission in this proceeding.

Also, several of the Amblebrook residents expressed concerns about how the proposed rate increases may affect their Homeowner Association ("HOA") fees. (Tr. 66, 81-82, 117, 120, 169-70, 222-23, 235-36.) The HOA at Amblebrook is responsible for several shared facilities, including two swimming pools, a community center, racket courts, trails, fitness center and other community amenities. The following brochure identifies several of these amenities: https://online.fliphtml5.com/fkvke/vwyy/.

The current HOA fee is $350 per month, an increase of $35 from the previously-effective fee. In his testimony, Mr. Schilze testified that the HOA Fee when he moved to Amblebrook in June of 2021 was $190 per month. (Tr. 235.) At its current rate of $350, this represents an 84% increase in a comparable time period since York Water's last rate filing. Although York Water cannot speak to specifics about the HOA's finances, it is clear that the HOA's monthly fee is driven by more costs than simply the Company's water and wastewater rates charged to the shared community facilities.

Further, to the extent that any of the customers residing in Amblebrook are low-income or payment troubled, I would encourage them to contact York Water to see if they qualify for assistance under its low-income program.

Q. Do you have any further observations?

A. I note that Mr. Merkle testified that he and his neighbors are on a fixed income, that he is retired, and that almost half of Adams County is below the poverty rate. (Tr. 190.) However, according to the United States Census Bureau, the most recently available data

indicates the poverty rate for Adams County is 6.6% compared to a poverty rate of all Pennsylvania of 11.6%.[7]

Q. Ms. Wise also notes testimony of certain individuals that their rates or lower in New York and "other states and localities." (OCA Exhibit LMW-2S, p. 2.) Please respond to these claims.

A. I do not believe that comparisons to the rates charged by unidentified water and wastewater service providers in other states are appropriate. The focus in this proceeding is on whether York Water's existing rates provide the Company with a fair opportunity to earn a just and reasonable return of and on its investments to provide water and wastewater service. As demonstrated by the Company's filing, the existing rates do not provide that fair opportunity and, therefore, must be increased to the levels proposed by York Water to do so. In fact, as noted in the Company's direct testimony, York Water's water rates are among the lowest of the Class A water utilities operating in Pennsylvania.

Furthermore, there could be many factors affecting the rates charged by those utilities or municipal corporations, and without further details identifying the actual service entities involved, it is impossible to compare the rates directly or discern why they may be lower (or appear to be lower) than York Water's water and wastewater rates. For example, a pervasive issue in the water and wastewater industry is the underinvestment in infrastructure that is necessary to provide safe and reliable water and wastewater service. This has led many service providers to have lower rates but not enough revenue to make those investments in their systems. Also, municipal corporations may not change their

[7] https://data.census.gov/profile/Adams_County,_Pennsylvania?g=050XX00US42001

water or wastewater rates but instead increase local taxes to garner the revenue necessary to pay for the investments in their water and wastewater systems. Therefore, I do not believe it is appropriate to compare York Water's rates to these unidentified service providers in other jurisdictions. To the extent there may be any relevant comparison, it is to the other water and wastewater utilities operating in Pennsylvania.

On that point, Mr. Merkle, who testified at the public input hearing, claimed that when he lived in Downingtown, Pennsylvania, his water bill from Aqua Pennsylvania, Inc. ("Aqua") was "a third of what it is right here." (Tr. 189.) Although I cannot speak to how much water usage Mr. Merkle consumed or when he lived at that address, Aqua's current rates charged to customers in Downingtown are not equal to one-third of York Water's rates. For example, assuming a customer were to use 3,800 gallons of water per month, the monthly water charges under York Water's current and Aqua's current Downingtown rates would be approximately $55.00 and $73.26, respectively.

Q. Please summarize the testimony Ms. Wise identifies from Ms. Crider. (OCA Exhibit LMW-2S, p. 2).

A. Ms. Wise points to Ms. Crider's statement that she is "living paycheck to paycheck" and that all her bills have increased, including non-utility bills. (Tr. 138.) Ms. Crider also describes there having been a rate increase just two years ago. (Tr. 139.) Ms. Crider also says that she is only using 1,500 gallons a month but will be subject to a minimum of 3,000 gallons a month. (Tr. 139.)

Q. Do you have a response to this testimony?

A. I previously addressed claims about bill affordability, so I will not repeat that testimony here. However, I would like to note a couple additional points. First, York Water's last rate increase was proposed in 2022 and became effective in 2023. As such, there would be three years between when the Company's base rates were last increased and when they would be increased through this proceeding. Second, Ms. Crider is a resident of West York Borough. Ms. Crider's most recent water bill showed usage of 2,700 for the month and a charge for water of $35.00. Customers in West York Borough are assessed a flat wastewater charge of $60 per month for every Equivalent Dwelling Unit ("EDU"), which is defined as 350 gallons per day for a single-family unit in the relevant portion of the Company's wastewater tariff. Although the Company is proposing to increase the charge per EDU in this case, York Water is not proposing to adjust the definition of EDU that would apply in this circumstance. As for water service charges, Ms. Crider would be billed in accordance with the fixed and consumption charges for residential customers. There is no minimum of 3,000 gallons per month for those water charges.

Q. Do you have any response to the testimony of Mr. O'Connor about bill affordability (Tr. 117-23)?

A. Yes. In his testimony, Mr. O'Connor claims that his "water sewer bill of 170 or more dollars a month will be higher than all of [his] other bills – taxes, phone, internet, HOA fees, medical insurance and food." (Tr. 120.) While the Company does not have access to Mr. O'Connor's other utility, personal, and homeowner expenses, the HOA fee of $350 per month is 200% of the combined estimate for water and sewer service. Mr. O'Connor under

cross examination acknowledged that the cost of water service is "a penny a gallon," so "it's not that expensive." (Tr. 123.)

Q. Ms. Wise also discusses concerns expressed about having a rate increase following the Company's rate case in 2022. (OCA Exhibit LMW-2S, p. 4.) Could you respond to these concerns?

A. As noted above, the Company's last base rate case was filed in 2022, and the rates approved by the Commission became effective in 2023. York Water is judicious and efficient in its capital investments and operating expenses and only files base rate cases when it is financially necessary to do so. The Company filed this base rate case because its existing rates no longer provide a fair opportunity to earn a just and reasonable return of and on its investments to provide water and wastewater service. However, the Company recognizes customers' concerns about affordability and the proximity between rate cases, which is why York Water continues to offer assistance to low-income and payment troubled customers and has proposed the low-income bill discount pilot program and the additional funding for its low-income program that I discussed previously.

Moreover, of the "twenty-five distinct consumers" noted by Ms. Wise raising this concern, 23 are residents of Amblebrook. As I explained earlier in my testimony, these customers' rates are below the Company's cost of service and need to be increased.

Lastly, regarding the "Water and Finance Management Report's statistics" and the "additional report by the Water and Health Advisory Council," I am advised by counsel that those materials are hearsay, have not been admitted into the record, and should not be relied upon for any findings of fact in this proceeding. Further, as I noted previously, I do

not believe it is appropriate to compare the Company's water and wastewater rates to utilities operating in other jurisdictions.

Q. Ms. Wise also discusses concerns expressed about inflation and the impact of inflation on customers. (OCA Exhibit LMW-2S, p. 5.) Could you respond to these concerns?

A. York Water recognizes the impact that inflation can have on individuals' finances, which again is why the Company has proposed certain initiatives to help mitigate the impact of its proposed rate increases on low-income and payment troubled customers. However, the Company is not immune to inflationary pressures either, as Mr. D'Angelo correctly observed at the public input hearing. (Tr. 72.) The costs to provide safe, adequate, and reliable water and wastewater service to customers continue to rise, which is a predominant reason why the Company filed this base rate case. Also, I note that of the "[a]t least seventeen distinct consumers" referenced by Ms. Wise who "testified that inflation would make York Water's proposed rate increase more unaffordable," 15 of them are Amblebrook residents.

Q. Ms. Wise also discusses concerns expressed about problematic water fittings. (OCA Exhibit LMW-2S, pp. 5-6.) Could you please summarize those concerns?

A. Ms. Wise references the testimony of three customers in the Amblebrook community, who, according to Ms. Wise, stated that "York Water required them to use problematic water fittings, which caused leaks and caused them to pay for water loss due to the leak for both their water and sewer bills." (OCA Exhibit LMW-2S, p. 5.) As alleged support, Ms. Wise notes the testimony of Ms. Weinberg, who claimed, among other things, "that her plumbers

informed her that 'York is requiring that they use a type of fitting that doesn't hold, and that it's going to happen again.'" (OCA Exhibit LMW-2S, p. 5) (quoting Tr. 185.)

Q. Do you agree with their characterizations?

A. No. To clarify, the issues described by these customers were caused by the residential developer and the homebuilders of Amblebrook, not York Water. As shown in York Water Exhibit JTH-1R, York Water's installation specifications require the installation of copper service lines on both the Company and customer sides of the service, connected with a flared fitting as opposed to a push-on fitting. The Company requires a flared fitting because it is a more secure fitting when compared to push-on fittings. Also, while many public water suppliers may allow the use of plastic or high-density polyethylene, or non-metallic tubing for customer service lines, based on the Company's extensive experience with water supply lines, cooper service lines with properly installed flared fittings will last for approximately 75 years.

There have been a number of instances where the developer or homebuilder has not been following the Company's installation specifications. Instead, the developer has failed to install copper service lines correctly, creating a defective installation of the flared fittings. Those failures have led to leaks experienced by the customers, either on the customer-owned or Company-owned side of the service. York Water Exhibit JTH-2R provides further details about the result of a defective flared connection.

York Water has made repairs to its facilities even when caused by the builder and then sought reimbursement from the builder responsible. Specifically, in reviewing records for home sales, York Water identified one particular builder, Dan Ryan Builders, was

responsible for many of the leaks and improper installation. York Water's employees and contractors made the repairs on the Company side of the service. So as not to burden the Company's customers with this unnecessary expense, York Water pursued reimbursement for these costs from the builder. Following several meetings with Dan Ryan Builders and demonstration that the builder was responsible for the numerous leaks, York Water invoiced and subsequently received reimbursement of nearly $30,000 from the builder to offset the expense incurred for repairing the services for 11 properties.

Furthermore, when leaks occur on the customer-owned side of the water facilities, they are the responsibility of the customer, not the Company. Ms. Weinberg testified that within four months of moving in, they were notified of a water leak and that it would be the homeowner's responsibility to repair. (Tr. 184.) Such notification was possible because through its use of automated meter reading technology, the Company can identify anomalies in monthly customer water usage patterns. York Water commends Ms. Weinberg for contacting her builder who, according to her testimony, paid the expense as the defective installation was under warranty. (Tr. 184-85.) The reason why is that the Company must strictly adhere to its Commission-approved tariff and must bill customers based on their usage or otherwise in accordance with the tariff's terms. Therefore, York Water cannot waive charges when the usage flows through the meter due to a leak that is the customer's responsibility. Thus, if a leak occurs for a customer in the Amblebrook development, York Water encourages the customer to contact the developer or builder, like Ms. Weinberg did, about any necessary repairs as soon as practicable.

Q. Do you have any further comment on testimony related to these issues?

A. Yes. York Water disputes Mr. Schilze's testimony in which he claims that he had a leak on the customer side of the service and that "Brian Plumbing, who fixed it, says it's because of a fitting that York Water requires." (Tr. 263.) Mr. Brice is correct that York Water's installation specifications require a flared, copper fitting. However, it is not the quality of the fitting that led to a leak, but rather, improper and faulty installation of the customer service line by the developer or homebuilder. York Water also disagrees with Mr. Brice's testimony that York Water has "dismissed" his concern about repairing a leak on the customer's side of the service. (Tr. 264.) As defined in the Company tariff, the customer is responsible for the customer side of the service. York Water absolutely agrees with and supports Mr. Brice addressing a leak on the customer's side of the service under warranty with his builder, similar to Ms. Weinberg. Should a leak on the customer's side of the service result in a high water bill, York Water suggests that cost, too, should be recovered from Mr. Brice's builder if the customer side of the service was improperly installed and resulted in the leak.

Q. Ms. Wise also discusses concerns expressed about infrastructure improvements and transparency. Could you please summarize these concerns?

A. Ms. Wise asserts that "[a]t least thirty-two distinct consumers testified that they want more and clearer information about infrastructure improvements, and greater transparency from York Water about where their rates are going and why York Water has proposed such high rates." (OCA Exhibit LMW-2S, p. 6.) She also points to the testimony of Mr. Gouch, who "expressed interest in 'a two or three paragraph high level explanation of why . . . rates

need to be increased[.]'" (OCA Exhibit LMW-2S, p. 6) (quoting Tr. 251-52.) Further, Ms. Wise notes that Mr. Andrews said that it is important to know more about the infrastructure being installed and its associated costs. (OCA Exhibit LMW-2S, pp. 6-7.) She also observes similar testimony by Mr. Willingham. (OCA Exhibit LMW-2S, p. 7.)

Q. What is your response?

A. York Water is transparent about its investments and strives to inform and educate its customers about its operations and rates. As such, the Company has complied with all the customer notices required to be sent customers as part of this base rate case filing and provided all the information and materials required under the Commission's regulations governing the content of base rate case filings.

That includes a Statement of Reasons for the 2025 Rate Increase Request, which was included in the base rate case filing and is a two-page document outlining the proposed water and wastewater increases and the reasons for them. In addition to the Company's base rate case filing, consisting of approximately 3,900 pages, York Water has answered nearly 450 discovery requests from the other parties regarding its proposed water and wastewater rate increases.

Furthermore, the Company provided detailed notices of its base rate case filing to its customers, which, among other things, described the proposed rate increases and directed customers to the Commission's website or to the Company's website. I note further that the Company's website has a dedicated page for this base rate case, which contains links to: (1) York Water's Press Release; (2) Statement of Reasons for the 2025 Rate Increase Request, which is accessible from the Company's website; (3) the Proposed

Water Tariff Supplement; (3) the Proposed Wastewater Tariff Supplement; (4) the Commission's online docket for this rate case; and (5) the Public Input Hearing Notices.

Finally, I note that of those "[a]t least thirty-two distinct consumers,"[8] 28 of them are residents of Amblebrook. Information about the Company's initial capital requirements for the Amblebrook water and wastewater systems were provided in York Water's Application proceedings at Docket No. A-2019-3014024 and Docket No. A-2019-3014022, where the Commission approved the Company's expansion of its water and wastewater service territories, respectively.

Q. Do you have any additional examples of York Water's transparency regarding its infrastructure and operations?

A. As further demonstration of the Company's interest in and attention to its customers' concerns, following adjournment of the public input hearing, I spoke with Mr. D'Angelo and Mr. Madalis who had just appeared in person and testified. I offered to provide tours of the Company's water and wastewater assets to our Amblebrook customers to allow them to see the quality, operational efficiency and technology components of the water and wastewater systems. I offered an opportunity for our Amblebrook customers to meet the York Water employees who are serving their utility needs. Members of my leadership and operations team and I have arranged two tours for the Amblebrook residents on September 24, 2025. I understand there has been positive interest and response to the invitation, and I look forward to meeting with these customers.

[8] York Water observes that the testimony cited by Ms. Wise when making this statement relates to 31, not 32, individuals' testimony.

Q. Ms. Wise also discusses concerns expressed about customer service. Could you respond to these concerns?

A. The Company values its customers and takes pride in the customer service it provides to them. This strong commitment to customer service, along with the Company's performance in that area, is demonstrated by Ms. Becker's rebuttal testimony (York Water St. No. 6-R.) Of the 16 customers referenced by Ms. Wise, 15 of them are residents of Amblebrook, and contrary to the testimony of Mr. Hudson from Amblebrook, public input is not an "afterthought." The impact on customers was a key consideration in the timing and amount of the Company's proposed increases in water and wastewater rates, and York Water greatly appreciates the feedback that customers have provided throughout the course of this proceeding, including at the four public input hearings that were held. In fact, I believe that the Company's efforts to publicize the public input hearings through its website, newspaper notices, and social media outlets helped drive attendance. As for Mr. Kirsch's testimony that, as Ms. Wise puts it, "did not see mention of the rate request in his records," he was referencing a bill he received from York Water for his bill due in August 2025. However, the bill insert would have appeared in the bill due in June 2025. Also, even assuming that Mr. Kirsch did not see the Company's notice of the proposed base rate increases in his bill, he still received some form of notice about the proposal, given that he was aware of the proposal and attended the public input hearing. Lastly, the Company provided detailed talking points about the rate case filing to its customer service representatives, so that they were equipped to answer questions from customers and direct them to additional information about the filing as necessary.

Q. Ms. Wise also discusses concerns expressed about water quality, such as hard water. (OCA Exhibit LMW-2S, pp. 7-8.) Could you respond to these concerns?

A. As an initial matter, I am advised by counsel that issues related to water quality are within the jurisdiction of DEP, whereas issues related to water service are within the Commission's jurisdiction. Nevertheless, York Water's water quality meets all applicable requirements and regulations prescribed by DEP.

Further, I note that 27 of the "[a]t least thirty distinct consumers"[9] that purportedly raised water quality issues are residents of Amblebrook. The water system serving the Amblebrook residents was constructed as a satellite system, and its source of supply consists of groundwater wells. These wells are located within the Gettysburg Formation, which is a geologic feature that extends throughout Adams County, PA. Calcium, magnesium, and bicarbonate are the dominant constituents in the groundwater, each of which is contributing to water hardness. The presence of limestone and dolomite bedrock, which naturally release calcium and magnesium, which also contribute to water hardness throughout Adams County. Moreover, there are no surface water supplies in Adams County, PA, meaning all public water supplies and those on individual wells draw from the groundwater. Unlike surface water, groundwater has more time to interact with mineral-rich rock layers, leading to increased hardness levels in the water.

Due to the hardness of the water in Adams County, the developer has offered buyers the option to pay for a whole-home water softener or partial water softening solutions as part of their new home construction packages. However, water hardness is not a measure

[9] York Water also notes that the testimony cited by Ms. Wise when making this statement relates to 29, not 30, individuals' testimony. Also, one of those individuals, Mr. McLaughlin, is a customer of Glen Rock Water and Sewer Authority, not York Water.

of quality; rather, it is a matter of aesthetic and customer preference. For customers moving from other areas to Amblebrook, they may be unaccustomed to water hardness, leading to the misperception that there are quality issues with the water.[10] Ultimately, York Water's water that is being delivered to the residents of Amblebrook meets or exceeds DEP's requirements for water quality. Attached to my testimony as York Water Exhibit JTH-3R is the 2024 Consumer Confidence Report ("CCR") for York Water's Amblebrook water system. This CCR is available on the Company's website and was mailed to each customer in Amblebrook during the second week of February 2025. As shown in the CCR, York Water meets or exceeds all Safe Drinking Water Act requirements for its Amblebrook water system and had no violations in 2024. In fact, Mr. Madalis noted in his testimony that they "get a report from York Water every year that shows – shows that they're meeting the standards in terms of bacteria and those sorts of things." (Tr. 69.)

Q. Do you have any further observations regarding the testimony about the quality of York Water's service?

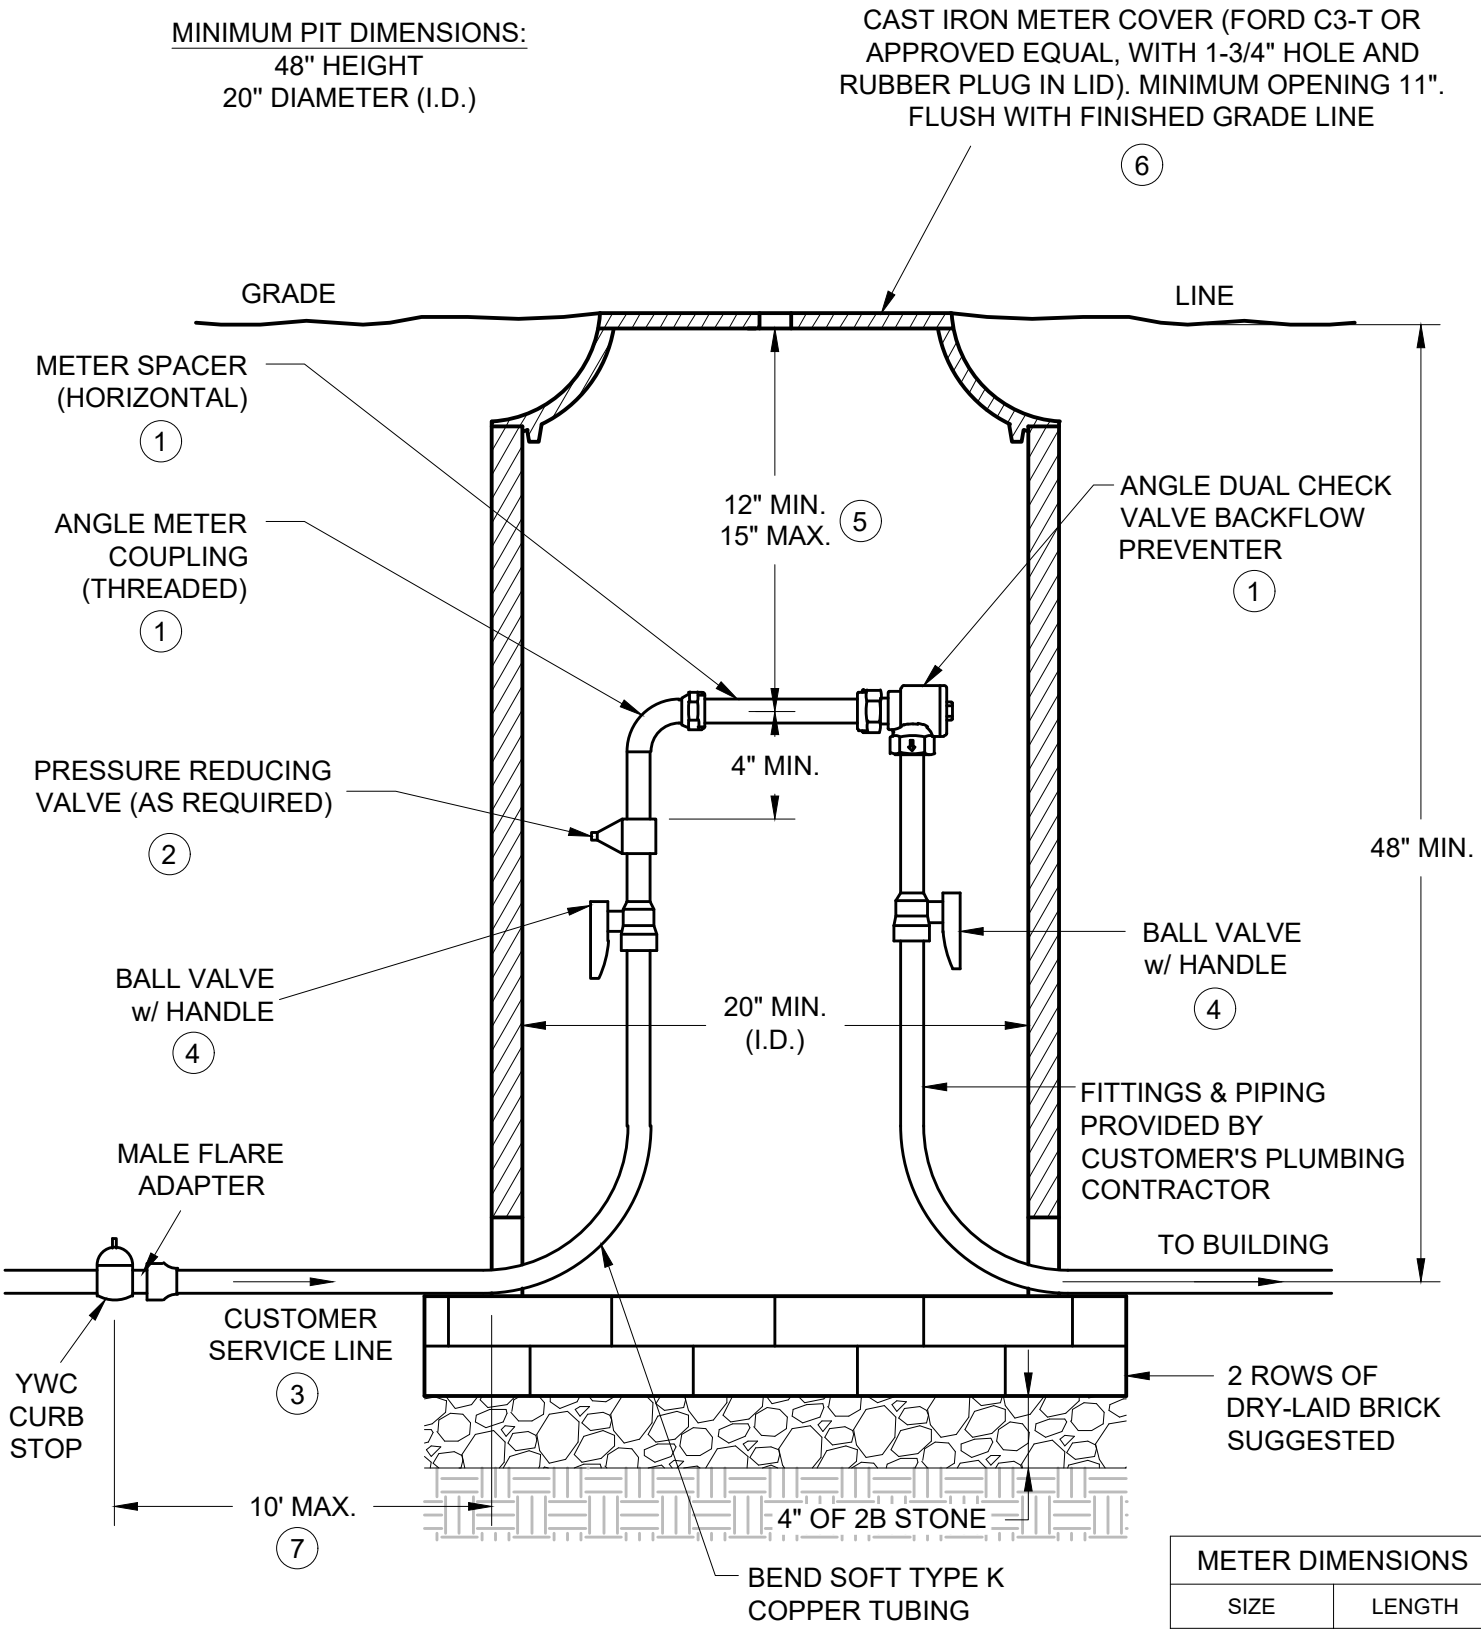
A. Yes. I note that none of the individuals who testified raised concerns about the quality of York Water's wastewater service. There were no concerns about odor emanating from wastewater treatment plants or blockages in the wastewater collection system resulting in backups or damage, and no concerns raised related to disruptions of wastewater service.

[10] According to Mr. Worrel's testimony, he previously lived in Littlestown, PA. (Tr. 219.) Littlestown Borough, Adams County, PA is served by a public water supplier with groundwater wells as the source of supply. Mr. Worrel acknowledges in his testimony that in Amblebrook, he has had to "do the water softener and things of that sort, **which is about normal**." (Tr. 219) (emphasis added). I observe that the Littlestown wells are within the same Gettysburg Formation as Amblebrook, so perhaps Mr. Worrel has experience with hard water, and it appears that his choice is to soften the water for personal preference. Also, in Mr. Merkle's testimony, he acknowledged that "hard water is not typically the responsibility of a water company" because "it doesn't affect health." (Tr. 188-89.)

Q. Does this conclude your rebuttal testimony?

A. Yes.

MINIMUM PIT DIMENSIONS:
48" HEIGHT
20" DIAMETER (I.D.)



METER DIMENSIONS	
SIZE	LENGTH
5/8"x3/4"	7-1/2"
3/4"	9"

The York Water Company

Title:
RESIDENTIAL METER PIT FOR 5/8"x3/4" & 3/4" METERS - DETAIL

Scale:	NOT TO SCALE	Drawn By:	L.BELAUS	Drawing No.	RP-2
Date:	11/21/2023	Checked By:	A.PROSSER	Sheet No.	1 OF 2

PRINTED: 11-21-2023 3:38:53 PM FILE LOCATION: W:\New Services\Service Line DETAILS\Residential\CAD\RP-2 (Residential Meter Pit for 5-8 x 3-4 & 3-4 Meters).dwg TAB: Detail

GENERAL NOTES:

1. METER SPACER, ANGLE COUPLING AND BACKFLOW PREVENTER PROVIDED BY THE YORK WATER COMPANY. PLUMBING CONTRACTOR TO PICK UP THESE ITEMS AT THE YORK WATER COMPANY'S DISTRIBUTION CENTER LOCATED AT **1801 MT ROSE AVE, YORK, PA 17403**. THE REQUIRED METER SPACER LENGTH FOR A 5/8"x3/4" METER ASSEMBLY IS 7-1/2". THE REQUIRED METER SPACER LENGTH FOR A 3/4" METER ASSEMBLY IS 9". PLEASE VERIFY THE REQUIRED METER SIZE BEFORE PICK UP.

2. A PRESSURE REDUCING VALVE (PRV) IS REQUIRED BEFORE THE METER IF THE PRESSURE IS GREATER THAN 110 PSI. A PRV IS RECOMMENDED TO BE INSTALLED BEFORE THE METER IF THE PRESSURE EXCEEDS 80 PSI. THE PRV SHALL BE FURNISHED AND INSTALLED BY THE CUSTOMER.

3. REFERENCE THE YORK WATER COMPANY CUSTOMER SERVICE LINE REQUIREMENTS **(TARIFF RULE 3.4)**.

4. FULL SHUT-OFF VALVES (BALL VALVES) SHALL BE INSTALLED BEFORE AND AFTER ALL EQUIPMENT. BOTH SHUT OFF VALVES MUST BE LOCATED WITHIN 12" OF THE SERVICE LINE. **(BOCA CODE P1506.1.2 & P1506.1.3)**

5. THE METER/BACKFLOW ASSEMBLY MUST BE **12" MINIMUM** AND **15" MAXIMUM** FROM METER PIT LID TO ALLOW FOR SERVICE/CHANGE OF WATER METER. (NOTE: BE AWARE THAT THE LID ASSEMBLY INCREASES THE DISTANCE FROM THE TOP OF THE CYLINDER TO THE METER. THE RING FOR THE LID IS NOT FLAT).

6. METER COVER MUST BE A FORD #C3-T OR APPROVED EQUAL. IF THIS TYPE OF COVER IS NOT USED, A 1-3/4" HOLE MUST BE DRILLED IN COVER FOR INSTALLATION OF REMOTE METER READ EQUIPMENT. RUBBER PLUG FOR HOLE MUST BE PROVIDED BY CONTRACTOR.

7. METER PIT MUST BE WITHIN 10' OF THE YORK WATER COMPANY'S CURB STOP.

8. SharkBite® OR SIMILAR "PUSH-FIT" FITTINGS ARE NOT PERMITTED BEFORE THE METER. ONLY SOLDERED, THREADED, AND "PRESS-TO-CONNECT" (SUCH AS ProPress®) FITTINGS ARE ACCEPTABLE.

9. A SUPPLEMENTAL AGREEMENT AND COVENANT MUST BE SIGN WHEN STATIC PRESSURE AT THE MAIN IS DETERMINED BY YORK WATER COMPANY TO BE LESS THAN 30 PSI.

10. FOR IN BUILDING INSTALLATIONS THE SERVICE LINES MUST BE SUPPORTED USING THREADED PIPE SUPPORTS FROM THE FLOOR OR WALL. NO OTHER PIPE SUPPORTS SHALL BE ACCEPTED.

SPECIAL NOTES:

A. ANY CHANGES TO THESE REQUIREMENTS MUST BE APPROVED BY THE YORK WATER COMPANY.

The York Water Company
130 EAST MARKET STREET, YORK, PA 17401 (717) 845-3601

York Water Exhibit JTH-2R

Example of an Improperly Installed Flared, Copper Fitting

This is an example of an actual, improperly installed flared fitting that was installed in the Amblebrook by one of the community's builders. Disregard the pinched copper which was caused when a York Water crew isolated the service to repair a leak on the Company's side of the service and remove the failed service line. With the improper flare, a gap is created between the fitting and the copper service line. Under pressure, a small leak is formed, which expands with time. The water leaking into the soil mixes with the minerals in the soil and causes corrosion. The chunk of copper that is missing from the fitting is the result of corrosion. As the gap/corrosion expands, the amount of water lost increases as well.

The York Water Company
2024 Amblebrook Water System

Public Water System I.D. 7010066

This report is to inform you about the fine quality water and services The York Water Company delivers to you every day.

Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and to protect our water resources. We are committed to ensuring the quality of your water.

['Este informe contiene información muy importante acerca de su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.]

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in untreated source water include:

- **Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- **Inorganic contaminants**, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
- **Radioactive contaminants**, which can be naturally-occurring or be the result of oil and gas production and mining activities.

Your water source is three groundwater wells located inside the physical boundaries of the Amblebrook Community. The water from these wells is disinfected as the only form of treatment.

We are pleased to report that our drinking water is safe and meets Federal and State requirements. Those items that were detected during our testing process are detailed on the following pages. If you have any questions about this Water Quality Report, please contact York Water at 717-845-3601, or email customer.service@yorkwater.com.

We want our valued customers to be informed about their water utility. If you have any other questions concerning the Company and its operations, please contact JT Hand, President and CEO, at 717-845-3601 or email customer.service@yorkwater.com.

Immuno-Compromised Persons

Some people may be more vulnerable to contaminants in drinking water than the general population such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. Environmental Protection Agency/Centers for Disease Control and Prevention guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.

Monitoring Your Water

We constantly monitor for contaminants in your drinking water according to federal and state laws. The following tables show the results of our monitoring for the period of January 1 to December 31, 2024. The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data is from prior years in accordance with the Safe Drinking Water Act. The date has been noted on the sampling results table.

Information about Lead:

Lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The York Water Company is responsible for providing high quality drinking water and removing lead pipes but, cannot control the variety of materials used in plumbing components in your home. You share the responsibility for protecting yourself and your family from the lead in your home plumbing. You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Before drinking tap water, flush your pipes for several minutes by running your tap, taking a shower, doing laundry or a load of dishes. You can also use a filter certified by an American National Standards Institute accredited certifier to reduce lead in drinking water. If you are concerned about lead in your water and wish to have your water tested, contact The York Water Company at 717-845-3601. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at http://www.epa.gov/safewater/lead.

Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

The York Water Company prepared a service line inventory that includes the type of material contained in each service line in our distribution system. This inventory can be accessed online at www.yorkwater.com/service-line-material-map or by contacting our office at 717-845-3601.

Definitions

To help you better understand the terms used in this report, we've provided the definitions here:

Action Level (AL)

The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL)

The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG)

The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL)

The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG)

The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Minimum Residual Disinfectant Level (MinRDL)

The minimum level of residual disinfectant required at the entry point to the distribution system.

Treatment Technique (TT)

A required process intended to reduce the level of a contaminant in drinking water.

Mrem/year = millirems per year

(a measure of radiation absorbed by the body)

pCi/L = picocuries per liter

(a measure of radioactivity)

ppb = parts per billion

or micrograms per liter (µg/L)

ppm = parts per million

or milligrams per liter (mg/L)

ppq = parts per quadrillion

or picograms per liter (pg/L)

ppt = parts per trillion

or nanograms per liter (ng/L)

Detected Samples Results (cont.)

LEAD AND COPPER MEASURED AT THE CUSTOMERS TAP

(Below results are from 2022 sampling. Next scheduled sampling: 2025)

Contaminant	Units	EPA's Action Level for Sampling of Customer Homes	Maximum Contaminant Level Goal (MCLG)	Results	Range of Detection	Number of Sites Above the EPA Action Level	Compliance Achieved (Yes/No)	Source
Lead	ppb	90% of all homes tested must be below 15 ppb	0	90% of all homes tested measured below 0 ppb	0.00 - 0.00	0 out of 5	Yes	Corrosion of household plumbing
Copper	ppm	90% of all homes tested must be below 1.3 ppm	1.3	90% of all homes tested measured below 0.095 ppm	0.20 - 0.115	0 out of 5	Yes	Corrosion of household plumbing

Note: You can minimize your exposure to lead and copper by following the 6-3-3 rule. If your water has not been used for six hours, flush your tap for 3 minutes, about 3 gallons of water, before consuming.

ENTRY POINT DISINFECTANT RESIDUAL

Contaminant	Units	Minimum Disinfectant Residual	Lowest Level Detected	Range of Detections	Sample Date	Compliance Achieved (Yes/No)	Source
Free Chlorine	ppm	0.40	1.1	1.1 - 2.53	Jan - Dec 2024	Yes	Water additive used to control microbes

MICROBIOLOGICAL CONTAMINANTS

Microbial (related to Assessments/Corrective Actions regarding TC positive results and E. coli)

Contaminant	Treatment Technique	Maximum Contaminant Level Goal (MCLG)	Assessments/ Corrective Actions	Compliance Achieved (Yes/No)	Source
Total Coliform Bacteria	Any system that has failed to complete all the required assessments or correct all identified sanitary defects is in violation of the treatment technique requirement	N/A	0 – None Needed	Yes	Naturally present in the environment
E. coli	Any system that has failed to complete all the required assessments or correct all identified sanitary defects is in violation of the treatment technique requirement	N/A	0 – None Needed	Yes	Human and animal fecal waste

Microbial (related to E. coli)

Contaminant	Maximum Contaminant Level (MCL)	Maximum Contaminant Level Goal (MCLG)	Assessments/ Corrective Actions	Compliance Achieved (Yes/No)	Source
E. coli	Routine and repeat samples are total coliform-positive and either is E. coli-positive or system fails to take repeat samples following E. coli-positive routine sample or system fails to analyze total coliform-positive repeat sample for E. coli	0	0	Yes	Human and animal fecal waste

Violations

York Water had no violations in 2024.

PENNSYLVANIA PUBLIC UTILITY COMMISSION
Harrisburg, Pennsylvania 17120

Application of The York Water Company for approval of the right to: (1) acquire certain water system assets from Pine Run Management, LLC; and (2) begin to offer, render, furnish or supply water service to the public in an additional portion of Hamilton Township, Adams County, Pennsylvania

Public Meeting held May 23, 2024
3040190-TUS
Docket No. A-2023-3040190

STATEMENT OF COMMISSIONER JOHN F. COLEMAN, JR.

Before the Pennsylvania Public Utility Commission (Commission or PUC) for consideration and disposition is the Application of The York Water Company (York Water or Company) for approval of the right to: (1) acquire certain water system assets from Pine Run Management, LLC (Pine Run); and (2) begin to offer, render, furnish or supply water service to the public in an additional portion of Hamilton Township, Adams County, Pennsylvania (Application). I support the approval of this Application.

The Application addresses the need for an alternative water source to a community currently served by contaminated wells. The Pine Run Retirement Community requested public water service from York Water on behalf of its residents because of an exceedance of the maximum contaminant level (MCL) for Gross Alpha from the ground water wells in the Pine Run system. Gross Alpha in drinking water refers to radiation introduced into water from naturally occurring substances such as radium, uranium, and radon found in rock and soils. DEP determined that this situation meets the definition of significant deficiency, as defined in 25 Pa. Code § 109.1. Pine Run is a small water system presently serving less than 100 customers. York entered into an agreement to acquire the system for $22,000 prior to the filing of the Application. The Application is uncontested and there are no other active parties to this proceeding.

It is a common occurrence for the Commission to consider applications to acquire small water and wastewater systems pursuant to Chapter 11 of the Public Utility Code. Many of these acquisitions involve systems with ongoing environmental compliance, financial or operational viability issues. The Commission has a long-standing policy encouraging the consolidation of water and wastewater systems to foster the safe, reliable, and affordable provision of service to Pennsylvania's citizens. This is the second such Application the Commission has addressed by the York Water Company this year. The Commission previously approved York's acquisition of the Brookhaven Mobile Home Park at its February 22, 2024 Public Meeting. Like Pine Run, Brookhaven's sole source of water was contaminated and out of compliance with state regulations. The York Water Company has provided service to its customers and the public since 1816 and is the longest continually operating private water utility in the United States. I

thank them for their willingness to continue to invest in small water systems, especially the willingness to invest the capital necessary to remediate these troubled systems.

We have undertaken a review of the procedural regulations that apply to the issuance of certificates of public convenience for the acquisition of small water and wastewater systems. This is not a trivial or highly technical concern of importance only to regulators. Rather, the Commission's certification approval process features heavily in the health of our citizens and our environment, and in the reasonable economic development of the Commonwealth. Pursuant to a Motion of Commissioner Ralph Yanora adopted by the Commission, we initiated an advanced notice of proposed rulemaking proceeding in 2020 to consider amendments to Section 3.501 (relating to water and wastewater utility proceedings). At that time, the Commission acknowledged that:

> In light of increasing environmental requirements and emerging contaminants like lead, PFOA, PFOS, the Commission recognizes that we need to do more to encourage water and wastewater system consolidation and regionalization.
>
> In light of the policy goals, the documentation requirements under Section 3.501 for certificated applicants in good standing may be too extensive and have the undesired effect of acting as an impediment to water and wastewater system consolidation and regionalization.[1]

The Commission later adopted a Notice of Proposed Rulemaking and requested comments on amendments to Section 3.501. The Commission expressly acknowledged that the intent of the amendments was, in part, to streamline requirements for established applicants to "decrease the time required to review applications."[2] The Commission has received and reviewed comments filed in response to this NOPR. The Commission, as steward of the regulatory approval process, can provide clear regulatory guidance to all stakeholders. The completion of reasonable amendments to 52 Pa. Code Section 3.501 would work to achieve this goal. Doing so is necessary and proper, and in the public interest. The Commission's regulation delivery date is fast approaching, and I look forward to reviewing our Law Bureau's recommendations in the final rulemaking order. Having that guidance at hand may have provided for a less burdensome process here.[3]

Finally, it should be remembered that Section 3.501 is a procedural regulation. It does not establish substantive rights or obligations for any entity. Section 1.2(a) of our regulations provide that the procedural regulations of Chapters 1, 3 and 5 are to be liberally construed to ensure the "just, speedy and inexpensive determination of every action or proceeding" undertaken pursuant to these chapters. Section 1.2(c) therefore permits the Commission to waive a requirement of 3.501 when "necessary or appropriate." In my view, when an application such as this presents an urgent matter, I remind public utilities that they may petition for necessary

---

COMMISSIONER

PENNSYLVANIA PUBLIC UTILITY COMMISSION
Harrisburg, Pennsylvania 17120

York Water Company – Water

Public Meeting of February 22, 2024
3041284-TUS
Docket No. A-2023-3041284

STATEMENT OF VICE CHAIR KIMBERLY BARROW

Before us for consideration is the Application of the York Water Company (York Water) to acquire the water distribution facilities of Brookhaven Mobile Home Park (Brookhaven). According to York Water, the primary purpose of this Application is to "enable York Water to connect Brookhaven Mobile Home Park residents to a healthy, compliant source of domestic water, where the current owner/operator has requested service from York Water in order to resolve an outstanding Order from the Pennsylvania Department of Environmental Protection."[1]

Commission staff have verified with the Pennsylvania Department of Environmental Protection (DEP) that Brookhaven is currently subject to a Consent Order and Agreement (COA) for failure to meet the primary maximum contaminant level for tetrachloroethylene (PCE).[2] The COA mandates, among other corrective actions, that Brookhaven provide public notice of the PCE exceedance to all Brookhaven consumers in accordance with 25 Pa. Code § 109.409(b)(3). This notice is required every three months so long as the exceedance exists.

Additionally, it is significant to note here that, per the Asset Purchase Agreement (APA), York Water will not, nor is it obligated to, begin providing water service to Brookhaven consumers until the closing of this transaction because the APA is conditioned on the construction of the water main to connect Brookhaven to York Water's existing water distribution system. At that time, the existing water system will be decommissioned. The Commission's approval of the Application today means that York Water will not provide water to Brookhaven consumers until the existing water system is replaced with York Water's sources.

I want to commend York Water for addressing this public health issue and agreeing to connect the Brookhaven consumers to its system. While I acknowledge York Water's commitment in the Application to connect the customers within 30 days of approval of this Application, I urge York Water to connect Brookhaven to its system sooner than 30 days, if technically possible.

February 22, 2024
Date

Kimberly Barrow, Vice Chair

[1] York Water App. at 4. Brookhaven is owned and operated by ATG Properties, LLC (ATG). ATG does not hold a certificate of public convenience from the Commission to provide water service and does not separately charge for water service.

CORRECTED REBUTTAL TESTIMONY OF MATTHEW E. POFF

ON BEHALF OF

THE YORK WATER COMPANY

Dated: September 25, 2025

I. INTRODUCTION

Q. State your name and business address.

A. Matthew E. Poff. My business address is: 130 East Market Street, York, Pennsylvania.

Q. By whom are you employed?

A. I am employed by The York Water Company ("York Water" or the "Company").

Q. State your present position with the Company.

A. I am Chief Financial Officer and Treasurer.

Q. Are you the same Matthew E. Poff that served direct testimony in this proceeding?

A. Yes.

Q. Please describe the purpose of your rebuttal testimony.

A. The purpose of my testimony is to respond to testimony of the Bureau of Investigation & Enforcement ("I&E") witness Christopher Keller, the Office of Consumer Advocate ("OCA") witnesses Dante Mugrace and Barbara Alexander, and the Office of Small Business Advocate ("OSBA") witness Jason Hails regarding the following issues:

- Normalization Adjustments
- Payroll, Payroll Taxes, Employee Benefits, and Workers' Compensation Expense
- Long Term Incentive Compensation
- Operating and Maintenance Expenses

- Flotation Costs
- Income Taxes
- Interest Synchronization
- Rate Base

Q. Does the Company agree with any adjustments proposed by these witnesses?

A. Yes, in part. The Company has carefully re-evaluated its case after reviewing the testimony submitted by the parties. The Company agrees with OCA witness Mugrace's and I&E witness Keller's adjustment to record a payroll vacancy adjustment of unfilled positions and the related adjustment for payroll taxes and employee benefits. The Company also agrees with OCA witness Mugrace's adjustment to directors' fees. As a result of those accepted adjustments, York Water's proposed increase in water operating revenues is $19,786,146 and its proposed increase in wastewater operating revenues is $3,857,507.

I note, however, that the Company does not agree with many of the adjustments proposed by the parties because they would disallow recovery of legitimate costs that are reasonable and necessary for York Water to provide service to customers.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, I am sponsoring York Water Exhibit MEP-1R through MEP-4R.

II. PROPOSED EXPENSE ADJUSTMENTS

A. Normalization Adjustments

Q. Please describe the approach used by OCA witness Mugrace to develop proposed adjustments to operating expenses in the FPFTY period.

A. Mr. Mugrace says that he reviewed three-years of actual operating expenses for the periods ending December 31, 2022, 2023 and 2024. According to Mr. Mugrace, he evaluated any adjustments that appeared to be unusual or have large variations during this three-year period. These variations and adjustments were compared to the Company's FPFTY period operating expenses. He then set a baseline variance of 15% or greater to determine the normalization adjustments across the Company's operating expenses.

Q. Do you agree with this approach?

A. No. The use of a 15% threshold as a determinant of materiality, which may be a basic accounting principle, lacks regulatory precedent in Pennsylvania rate cases and does not automatically justify normalization or disallowance. Normalization adjustments may be appropriate in instances where a specific cost category occurs infrequently, such as rate case expense, or where costs are more difficult to predict, such as uncollectible accounts expense. However, for Mr. Mugrace to "normalize" accounts simply because the three-year average differs from the FPFTY actual expenses appears to be an excuse to reduce expenses and the overall revenue requirement. Operating expenses are influenced by various externalities such as inflation, regulatory compliance, and labor market conditions.

These factors generally experience an upward pressure on costs, and thus a simplistic three-year average is unfair and unsupported.

Furthermore, one of the causes of differences in expense charged to certain accounts is the need for maintenance. Maintenance needs change from year to year. Maintenance expense charged to a single account may show a 15% increase in the HTY, but this could be offset by 5% declines in three other maintenance accounts. As such, a 15% change may be entirely reasonable.

Another driver of cost variance is the acquisition of new systems and new customers. Since January 1, 2022, York Water has acquired nine water systems and six wastewater systems and added over 3,000 water customers and over 3,000 wastewater customers. These new customers and new systems have increased costs between January 1, 2022, and December 31, 2024. Depending upon when the acquisitions occurred, the Company may or may not have made a pro forma adjustment to certain expenses, but the acquisitions will cause increases to maintenance expenses, billing expenses, water and wastewater treatment expenses and other expenses. OCA witness Mugrace's "normalization" approach, which averages costs over those three years, fails to account for increased costs in calendar years 2023 and 2024 that are the result of serving more customers and operating and maintaining substantially more facilities.

As such, applying a rigid threshold may risk misclassifying legitimate cost increases as anomalies and dilute necessary cost escalations. The FPFTY is designed to reflect anticipated costs during the rate-effective period. Reliance on historical averages undermines the purpose of the FPFTY, which is forward-looking by design. Averaging past expenses often will mask legitimate spikes or declines that are expected to persist or

intensify in the FPFTY. The arbitrary nature of these "normalization" adjustments is similar to general inflationary increases which have been argued against in other rate cases and rejected in Commission decisions.

Q. Can you demonstrate several of the flaws in OCA's "normalization" adjustment approach?

A. Yes. Previously, I explained that the need for maintenance varies from year to year. Further, the expenses incurred for maintenance will increase as York Water's plant in service continues to grow. Recognizing this, York Water provided Exhibit HI-1 as part of its initial filing. That exhibit demonstrated that total maintenance expenses, as a percentage of plant in service, has remained consistent between 2023 and 2024. Yet, on an individual basis, some maintenance subaccounts show large changes in expense of 15% or more. OCA proposes to "normalize" more than half of the Company's maintenance expenses, which is completely unreasonable given the Company's plant in service amount for the FPFTY is approximately $82 million greater than the HTY end balance. Since the end of 2023 to the end of the FPFTY, the Company will have added approximately $174.3 million in plant in service, which is a nearly 32% increase in plant over a little more than three years. Also, maintenance expense continues to increase yearly as prices from outside service vendors increase.

I further observe that for the following accounts, which represent the large majority of the "normalization" adjustment amounts proposed by OCA, the three years used as a base for OCA's adjustment shows a continuing increase in costs year over year, consistent

with the explanation of increased vendor costs and increased plant that must be maintained, as listed below and taken from Exhibit HIII-1:

- Source of Supply: Maintenance - Outside Services - Reservoirs
- Source of Supply: Maintenance - Outside Services - Equipment
- Water Treatment: Operations - Testing Services
- Water Treatment: Maintenance - Outside Services - Structures
- Water Treatment: Maintenance - Outside Services - Equipment
- Transmission and Distribution: Maintenance - Outside Services - Structures
- Transmission and Distribution: Maintenance - Outside Services - Equipment
- Transmission and Distribution: Maintenance - Outside Services - Distribution Mains

Q. Are there other criticisms of Mr. Mugrace's approach?

A. Yes, his adjustments are selective. For example, Fuel for Source of Supply expense averaged $90,424 over three years, substantially more than the $25,184 incurred in the HTY, but Mr. Mugrace did not normalize this account. I am not proposing a "normalization" adjustment to this account, but it does demonstrate his selectivity.

Q. Can you provide further information about the increases in several of the claimed expenses that Mr. Mugrace proposes to "normalize"?

A. Yes. As previously discussed, the Company has acquired nine water systems and six wastewater systems since January 1, 2022. The assets acquired with these systems have recurring maintenance costs that the Company is incurring in the HTY and are considered permanent in nature. For example, as part of the acquisition of the Letterkenny Industrial Development Authority and Franklin County General Authority, the Company acquired a

reservoir that holds up to 330 million gallons of water. The source of supply outside services for reservoirs includes the ongoing maintenance costs for this additional reservoir and related dam and spillway, but the OCA adjustment removes those costs.

In addition, as part of the acquisition of the water systems of Country View Manor, Conewago Industrial Park, and Houston Run Community, the Company acquired wells as the source of supply for these systems. The Company also has brought additional wells online for the growing Amblebrook community. The source of supply outside services for equipment includes the ongoing maintenance costs for these wells and the related generators, but the OCA adjustment removes those costs.

Moreover, each of these four acquisitions also included a water treatment plant to serve the acquired customers. The water treatment outside services for the structures and equipment includes the ongoing maintenance costs for the water treatment plants, but the OCA adjustment removes these costs.

Additionally, since January 1, 2022, the Company acquired or installed approximately 100 additional miles of water main. The Company is also experiencing higher contractor costs for main repairs, hydro excavation, and paving. The T&D materials and supplies and outside services for mains includes the ongoing maintenance costs for the additional water main and higher contractor costs, but the OCA adjustment removes these costs.

The Company also has acquired six wastewater systems since January 1, 2022. All six of these systems have collection systems, pumping stations, and wastewater treatment plants, resulting in recurring maintenance costs that the Company is incurring in the HTY and are considered permanent in nature. The wastewater treatment testing, wastewater

treatment equipment, materials and supplies and outside services, wastewater collection system outside services maintenance, and the wastewater pumping equipment outside services maintenance include these ongoing maintenance costs for the additional wastewater systems, but the OCA adjustment removes these costs.

Another example is the OCA adjustment for workers' compensation insurance expense. The adjustment proposed by the Company is mathematically derived by applying known insurance cost factors to payroll. The three years used in the OCA adjustment show a clear upward trend in each of the three years due to increases in wages and headcount. The OCA adjustment reflects a reduction in workers' compensation insurance expense which is not reflective of actual circumstances.

Another example is the OCA's adjustment to Water Treatment Operations – Office Expense. OCA proposes a $12,128 adjustment to this expense, based upon a three-year average. OCA ignores, however, that the Company reflected a $9,957 increase to this expense to reflect gas service rates effective January 1, 2025, applied to a two-year average of usage. (Exhibit HIII-2-18.) This is a known and measurable change to expense that should not be eliminated by using a three-year average of expense.

Q. Please describe the approach used by OSBA witness Hails to derive adjustments to operating expenses in the FPFTY period.

A. Mr. Hails states that he developed inflation statistics from 2023 through 2026 and factored in customer growth. He applied this inflationary factor starting with the 2023 base year to calculate expected operating expenses for the FPFTY. The expected amount was compared

to the Company's claim in the base rate case filing, and the resulting difference was used to reduce the revenue requirement.

Q. Do you agree with this approach?

A. No. This approach is flawed in its use of a general inflation factor, which has been denied by the Commission. Also, Mr. Hails erred by applying the general inflation factor to a base year of 2023, rather than using the HTY of December 31, 2024. Furthermore, Mr. Hails states in discovery that "every individual line item will scale at a different rate based on many factors." (York Water Exhibit MEP-2R [OSBA Answer to YWC to OSBA-II-6].) Mr. Hails goes on to admit that he "did not conduct a granular assessment of each expense line item" and, instead, applied an average inflation escalator to all expense categories because he "expect[s] that increases in customers will yield overall lower rates per customer over time based on scale efficiencies." (York Water Exhibit MEP-2R [OSBA Answer to YWC to OSBA-II-6].) However, a base rate case is precisely when expense items should be assessed at a granular level. Mr. Hails's failure to do so leads him to arbitrarily adjust many expense claims downward that are well-supported by the record, such as payroll expense, purchased power, insurance, bank fees, and enterprise resource planning software.

Furthermore, the fact that expenses overall grew more than inflation, even after accounting for customer growth, does not prove that the expenses were unreasonable. This approach does not consider that costs may grow at a rate that exceeds general inflation even when adjusted for customer growth. Indeed, maintenance costs are more closely related to the amount of utility plant in service, which as I identified previously has grown at a pace

that exceeds inflation, thereby resulting in growth of maintenance costs exceeding inflation. The previous discussion around acquisitions further shows that cost increases for maintenance and operations are more attributable to the scope, age, and condition of the assets acquired and not to the number of customers acquired.

This approach by Mr. Hails also included depreciation expense in operating expenses when applying his inflation factor. Depreciation expense increases are not tied to a general inflation factor but instead are more directly tied to plant additions. Plant additions grow at a rate exceeding inflation over the past several years for several reasons, including the large number of recent system acquisitions that I identified previously and the replacement of aged infrastructure. Indeed, a majority of water and wastewater utility infrastructure is long-lived. Main replacements are substantially more expensive than mains that were installed 50-100 years ago. As a result, the depreciation expense recorded on a new main installed in the last several years will be substantially more than the depreciation expense that was recorded in 2023 on a main that may have been installed in 1925 or 1975.

Q. What portion of Mr. Hails calculated $5,875,744 adjustment is attributed to depreciation expense?

A. The Company's per books depreciation expense for water and wastewater in 2023 was $11,815,072. The pro forma FPFTY depreciation expense for water is $15,433,375 and for wastewater is $1,736,140. Thus, depreciation expense increases alone are equivalent to $5,354,443, or 91.1% of Mr. Hails's $5,875,744 adjustment. Yet, Mr. Hails's escalator only assumed approximately $1.2 million for "additional depreciation expense incurred by

York to account for increased capital investments." (York Water Exhibit MEP-3R [OSBA Answer to YWC to OSBA-II-4].)

Q. Are there other flaws to OSBA's approach?

A. Yes. OSBA's approach of comparing actual expenses incurred during calendar year 2023 to pro forma expenses for the 12 months ending February 28, 2027, ignores the long-accepted ratemaking process in Pennsylvania that annualizes expenses to the test year end. For example, actual labor expenses in 2023 reflect only part year contractual wage increases. The appropriate ratemaking process would annualize wage increases granted in 2026 when setting the FPFTY expense amount. OSBA's approach also fails to account for the fact that the FPFTY ends 14 months after the end of the FTY.

Another example of how OSBA's approach fails to recognize pro forma adjustments to expenses is rate case expense. In 2023, the Company incurred only $82,687 in rate case expense at the conclusion of its 2022 rate case. In this case, the Company reflects $236,188 to normalize over four years the projected cost of this rate proceeding.

Yet another example of how OSBA's approach is flawed is electric expense. The Company has only very limited control over electric expense, as rates are outside of the Company's control, and the Company already controls its usage, subject to the need to provide safe and adequate supplies of water and wastewater treatment. In 2023, the Company's electric expense for source of supply was $653,504 (pumping and water treatment) and its electric expense for transmission and distribution (primarily pumping) was $476,212. In 2024, those expenses increased substantially to $790,156 for source of supply and $559,160 for transmission and distribution, an increase of $219,600 or 19.4%

in a single year. Electric rates are increasing at an even greater rate. Based upon actual generation and transmission rates and distribution rates effective January 1, 2025, the Company projects FPFTY expenses of $1,150,568 for source of supply electric expense and $952,234 for transmission and distribution electric (York Water Ex. HIII-2-9), or an increase of $753,486. This is a nearly 36% increase in expense, that is already being experienced. Thus, electric expense increases for water service alone represent nearly $1 million of Mr. Hails calculated adjustment of $5,876,744.

Another example of the error in Mr. Hails approach is enterprise resource planning software. As noted by Ms. Becker in her rebuttal testimony (York Water St. No. 8-R), the Company is replacing its business software system, which will provide the Company with increased capabilities to serve customers. The licensing fee for the new system is approximately $641,000 higher than licensing fees paid in 2024, as shown on Exhibit HIII-2-38. An inflation factor adjustment cannot capture this new expense.

B. <u>Payroll, Employee Benefits, and Payroll Taxes</u>

Q. Please describe the proposed adjustment to the Company's payroll concerning an employee vacancy adjustment.

A. I&E and OCA has proposed an employee vacancy adjustment on the basis that utilities, like most companies, experience ongoing attrition and replacement of employee positions, and it is appropriate to exclude the vacant positions. OCA calculated a vacancy rate of 3.13% and I&E calculated a vacancy rate of 3.1% using a weighted average of the Company's recent vacancy rate. The vacancy rate was applied to the total salaries and wages amount to determine the vacancy allowance.

Q. Do you agree with proposed adjustment?

A. The Company agrees that an employee vacancy allowance should be added to this claim. Therefore, York Water concurs with I&E's proposed adjustment to apply the historical vacancy allowance rate to the salaries and wages expense claim. Although OCA witness Mugrace used a similar methodology, he calculated a slightly smaller adjustment because he used only the water salaries and wages claim and not the total Company salaries and wages claim. In accepting I&E's proposed adjustment, I have reduced the Company's payroll expense by $371,031. Due to the small amount that would potentially be allocated to wastewater operations, the Company accepts I&E's proposal to only adjust water operations for the vacancy allowance.

Q. Did OCA and I&E propose related adjustments to payroll taxes?

A. Yes. Both OCA and I&E proposed adjustments to payroll taxes to correspond with the decrease in payroll expenses from the vacancy allowance.

Q. Do you agree with the proposed adjustment?

A. The Company agrees that a corresponding decrease in payroll taxes should be made to correspond with the decrease in payroll expense from the employee vacancy allowance. Since the Company accepts the employee vacancy allowance proposed by I&E, the Company similarly accepts the payroll tax adjustment proposed by I&E. Thus, I have reduced the Company's payroll tax expense by $27,827. Due to the small amount that

would potentially be allocated to wastewater operations, the Company accepts I&E's proposal to only adjust water operations for the decrease in payroll taxes.

Q. Did OCA and I&E propose related adjustments to employee benefits?

A. I&E and OCA proposed adjustments to employee benefits to correspond with the decrease in employee count from the vacancy allowance. The I&E adjustment was based on applying the vacancy allowance to the Company's claim for employee benefits, including 401k matching, health insurance, and workers' compensation. The OCA adjustment was based on applying the vacancy allowance to the Company's claim for employee benefits, including 401k matching, health insurance, and other employee benefits.

Q. Do you agree with the proposed adjustment?

A. The Company agrees that certain employee benefits will decrease with a decrease in employee count from the vacancy allowance. Since the Company accepts the employee vacancy allowance proposed by I&E, the Company similarly accepts the 401k matching adjustment, the health insurance adjustment, and the workers' compensation adjustment proposed by I&E. Other employee benefits are not typically costs incurred on a per employee basis and so it is not impacted by employee vacancies. Therefore, I have reduced the Company's 401k matching expense by $19,665, the health insurance expense by $73,464, and the workers' compensation expense by $5,936. Due to the small amount that would potentially be allocated to wastewater operations, the Company accepts I&E's proposal to only adjust water operations for the decrease in employee benefits.

C. Long-Term Incentive Compensation

Q. Please describe OCA witness Mugrace's proposed adjustment to the Company's long-term incentive compensation.

A. Mr. Mugrace proposes to disallow all long-term incentive compensation from rates. As alleged support of his proposal, Mr. Mugrace argues that these costs are not customer-oriented in nature and that benefits ratepayers in the provision of safe and reliable utility services. In addition, Mr. Mugrace claims long-term incentive compensation benefits the Company and its shareholders in the areas of financial growth, and as such shareholders should solely bear this cost.

Q. Do you agree with the OCA's proposed reduction to long-term incentive compensation?

A. No. The Company's long-term incentive plan has been in place since July 1, 2016.

I am advised by counsel that the Commission has recently allowed recovery of stock-based incentive compensation in rates so long as the utility provides evidence linking the stock-based plan with benefits to customers and improved operational efficiency. The Company believes that its officers do consider its customers when evaluating the effects of its actions similar to its directors which under the Business Corporation Law of 1988 are allowed to consider the effects of any action on groups affected by the action, including the corporation's shareholders, members, employees, suppliers, customers, and creditors as well as the effects on communities in which offices or other establishments of the corporation are located.

The Company's long-term incentive plan has four equally weighted metrics to be met before a stock grant is awarded. Two of these are tied directly to customer performance: (1) maintaining a three-year average Commission justified complaint rate per 1,000 customers of less than the Pennsylvania water utility peer group average; and (2) maintaining customer rates that are less than the Pennsylvania water utility peer group average. Nevertheless, when asked in discovery about the Company's metrics for determining long-term incentive compensation, Mr. Mugrace stated that he still "believes that the Company's LTIP lacks customer-oriented ratepayer benefits" and that "[n]othing in response to Exhibit FIII-22 show[s] benefits related to customers in the areas of safety, reliability, adequacy, and satisfaction." (York Water Exhibit MEP-4R [OCA Answer to YWC to OCA-II-5].) No one can credibly claim, however, that customers do not benefit from a "safety, reliability, adequacy, and satisfaction" standpoint when York Water successfully maintains a lower justified complaint rate along with lower customer rates than its peer Pennsylvania water utilities.

Furthermore, although the other two metrics have a financial component, it is unreasonable to conclude that strong financial performance only benefits the shareholders and not the ratepayers. A strong financial profile allows the Company to attract the ongoing capital required to make the necessary upgrades and improvements to the system to ensure a safe, adequate, and reliable supply of drinking water and to maintain proper handling and disposal of wastewater. The Company's strong financial profile also allows it to maintain an A- rating with Standard & Poor's that allows it to attract debt financing at the lowest possible cost, which is passed along to the ratepayers. Acquisitions provide growth that

allows the Company to spread increased operating costs over a broader customer base that lowers rate increases to each customer.

For these reasons, the Company strongly disagrees with Mr. Mugrace's recommendation that the Commission reverse its well-established approach to long-term incentive compensation by disallowing York Water's claim.

D. Year-End Bonuses

Q. Please describe OCA witness Mugrace's proposed adjustment to the Company's year-end bonuses.

A. Mr. Mugrace proposes to disallow all year-end bonuses from rates. In apparent support of his proposal, Mr. Mugrace argues that these costs are not customer-oriented or related to benefiting ratepayers but rather are given with no criteria attached to receiving the bonus.

Q. Do you agree with the OCA's proposed reduction to year-end bonuses?

A. No. The Company has consistently provided year-end bonuses to employees for over 29 years as a part of the employees' overall compensation package. This bonus is not a discretionary windfall tied to financial performance but a consistent and expected part of employee compensation. Every employee of the Company from its most senior leader to its newest employee receives the same amount.

The Commission's mandate to set just and reasonable rates includes consideration of fair employee compensation. Bonuses that are modest and predictable fall well within this standard. The year-end bonus serves as a tangible acknowledgment of employee contributions throughout the year. In an industry where institutional knowledge and

operational continuity are critical, even modest financial incentives play a meaningful role in retaining skilled staff. The proposed adjustment may appear fiscally prudent but fails to account for downstream costs associated with recruitment and onboarding.

E. Customer Accounts Expense

Q. Please describe OCA witness Mugrace's proposed adjustment to the Company's customer survey costs.

A. Mr. Mugrace proposes to disallow the costs related to the Company's customer survey. This proposal is based on the testimony of OCA witness Barbara R. Alexander, who argues that these costs should not be recovered because it is unclear how customers benefit from the survey.

Q. Do you agree with the OCA's proposed disallowance of customer survey costs?

A. No. In a regulated monopoly environment, customer surveys are one of the few direct mechanisms for capturing customer sentiment, expectations, and service perceptions. These insights are essential for aligning utility operations with public interest. The commitment by the new Vice President of Customer Service to focus on the survey and determine potential actions is a clear indication that the survey results are being taken seriously and will inform future improvements. Strategic planning often requires time to translate feedback into actionable programs. The assertion that no action has yet been taken fails to account for the natural lag between data collection, analysis, leadership onboarding, and program development. The "used and useful" standard should not be interpreted so narrowly as to exclude foundational tools that support future service

enhancements. The survey is already "used" in the sense that it has informed leadership decisions and is guiding internal review. The Commission has consistently emphasized the importance of transparency, responsiveness, and customer input. Disallowing survey costs sends a counterproductive signal that customer feedback is not a worthwhile investment unless immediately acted upon.

There are other points to note. First, contrary to Ms. Alexander's testimony, the Company seeks to normalize, and not amortize, customer survey costs over five years. Second, the Commission has long recognized the Company's recovery of a normalized expense for customer survey costs in its base rates, with the Commission rejecting OCA's opposition to the recovery of these expenses as far back as York Water's 1990 Rate Case, when the Company first proposed and received Commission approval of normalized expense associated with its regularly-conducted customer surveys.[1] Third, the Company has commissioned customer surveys 9 times over the past 36 years and has gathered important information for improving service to customers. For example, through those surveys, the Company has learned that customers were seeking a more user-friendly website with the ability to get information or request certain services directly from the website and more convenient ways to make bill payments. In response, the Company upgraded its website with easy access to request to start or stop water or wastewater service, establish water or wastewater service through new construction, and request inspection of a new service line. The website also has prominent access for a customer to pay their bill including a quick payment or by signing into their customer portal.

[1] *See Pa. PUC v. The York Water Co.*, 1991 Pa. PUC LEXIS 132, at *64-66 (Order entered July 17, 1991).

F. Pension Administration

Q. Please describe OCA witness Mugrace's proposed adjustment to the Company's pension administration costs.

A. Mr. Mugrace proposes to disallow the adjustment related to the Company's pension administration costs. Mr. Mugrace argues that this specific inflation adjustment should not be considered with setting rates for service.

Q. Do you agree with the OCA's proposed disallowance of this pension administration adjustment?

A. No. The Company does not believe this adjustment should be considered a general inflation adjustment. Annual trustee and portfolio management fees are 0.25% of the qualified pension plan asset balances (the Company has two qualified pension plans). The purpose of a funded pension plan is to maintain assets to pay future pension benefits. The trustee invests the funds, and the return is reinvested in the plans. This reduces the Company's overall pension liability to its employees, to the benefit of customers. The Commission has consistently upheld the use of FPFTY data when supported by credible forecasting and documentation. In this case, the 5.0% expected long-term return on plan assets is based on historical market returns of similarly structured portfolios. This return is used by the Company's actuary in determining the proper reporting under accounting and Employee Retirement Income Security Act ("ERISA") rules, and it is included in the Company's audited financial statements. If the Company did not project, or realize, any return on its pension fund balances, the required contribution into the plan would increase.

As such, this well-supported projection should be included in the revenue requirement of this base rate case.

G. Bad Debt Expense

Q. OCA witness Mugrace has proposed an adjustment to bad debt expense to reflect the effects of their adjustments to the Company's revenue requirement. Do you agree with the proposed adjustment?

A. Although York Water disagrees with the amount of his proposed adjustment given its opposition to other adjustments he proposes to the Company's revenue requirement, the Company agrees that bad debt expense should be adjusted to reflect its adjustments made in its rebuttal testimony. This adjustment to bad debt expense is reflected in York Water Exhibit MEP-1R.

H. Allocation to Wastewater

Q. OCA witness Mugrace has proposed an adjustment to the allocation to wastewater to reflect the effects of his adjustments to the Company's operating expenses. Do you agree with the proposed adjustment?

A. York Water does not agree with the adjustment methodology proposed by OCA. Costs other than A&G expenses are allocated to wastewater and not all A&G expenses are allocated to wastewater. Because many of the adjustments have been rejected in rebuttal testimony, and other adjustments, such as the vacancy allowance and related payroll taxes and other employee benefits, are not specifically identifiable as potential allocable expenses, the Company has determined that any potential adjustment to the allocation to

wastewater is very small. For these reasons, the Company is not making an adjustment for allocation to wastewater in its rebuttal testimony.

I. A&G Expense Capitalized

Q. OCA witness Mugrace has proposed an adjustment to the A&G expense capitalized to reflect the effects of their adjustments to the Company's operating expenses. Do you agree with the proposed adjustment?

A. The Company does not agree with the adjustment methodology proposed by OCA. Costs other than A&G expenses are eligible to be capitalized and not all A&G expenses are eligible to be capitalized. Because many of the adjustments have been rejected in rebuttal testimony, and other adjustments, such as the vacancy allowance and related payroll taxes and other employee benefits, are not specifically identifiable as potential capitalizable expenses, the Company has determined that any potential adjustment to A&G expense capitalized is very small. Accordingly, the Company is not making an adjustment for allocation to wastewater in its rebuttal testimony.

J. Stock Awards

Q. Please describe OCA witness Mugrace's proposed adjustments to the Company's Board of Directors stock grants.

A. Mr. Mugrace proposes to disallow the recovery of Board of Directors stock awards. As purported support for his recommendation, Mr. Mugrace argues that ratepayers should not be burdened or required to pay for stock awards that do not provide customer-oriented benefits for ratemaking purposes.

Q. Do you agree with the OCA's proposed reduction to Board of Director compensation?

A. No. The same four metrics applicable to long-term incentive compensation for management apply to stock awards to directors. As previously noted in the discussion of long-term incentive compensation for management, two of the four metrics are focused on customers. Furthermore, as noted in the discussion of long-term incentive compensation, strong financial performance of the Company does benefit the ratepayers. Accordingly, the Commission should reject Mr. Mugrace's recommendation.

K. <u>Health Insurance</u>

Q. Please describe OCA witness Mugrace's proposed adjustment to the Company's health insurance costs.

A. Mr. Mugrace proposes to disallow the adjustment related to the Company's health insurance costs. Mr. Mugrace argues that this specific inflation adjustment should not be considered with setting rates for service.

Q. Do you agree with the OCA's proposed disallowance of this health insurance adjustment?

A. No. The Company does not believe this adjustment should be considered a general inflation adjustment. The Commission has consistently upheld the use of FPFTY data when supported by credible forecasting and documentation. In this case, the 8.325% medical inflation rate was derived in comparison to the medical inflation rate of 9.0% as determined by the health insurance actuary. The Company proposed a slightly lower rate,

expecting to trend better than the overall average. The proposed rate also is supported by recent history. In 2025, the Company incurred a rate increase of 8.4% and in 2024, the Company incurred a rate increase of 16.8%. As such, this well-supported projection should be included in the revenue requirement of this base rate case.

L. Contractual Services

Q. Please describe OCA witness Mugrace's proposed adjustment to the Company's contractual services costs.

A. Mr. Mugrace proposes to disallow the adjustment related to the Company's contractual services costs. Mr. Mugrace argues that this specific inflation adjustment should not be considered with setting rates for service.

Q. Do you agree with the OCA's proposed disallowance of this contractual services adjustment?

A. No. The Company does not believe this adjustment should be considered a general inflation adjustment. The Commission has consistently upheld the use of FPFTY data when supported by credible forecasting and documentation. In this case, the 5.0% increase was based on the most recent increases with an expectation that the Company's third-party financial partners would not reduce their fee increases through the end of the FPFTY. As such, this well-supported projection should be included in the revenue requirement of this base rate case.

M. General Insurance

Q. Please describe the proposed adjustment to the Company's general insurance costs.

A. Mr. Mugrace proposes to disallow the adjustment related to the Company's general insurance costs. Mr. Mugrace argues that this specific inflation adjustment should not be considered with setting rates for service.

Q. Do you agree with the OCA's proposed disallowance of this general insurance adjustment?

A. No. The Company does not believe this adjustment should be considered a general inflation adjustment. The Commission has consistently upheld the use of FPFTY data when supported by credible forecasting and documentation. In this case, the increases are largely based on actual increases received in the Company's last renewal with the expectation that the increases are unlikely to decrease through the end of the FPFTY. In some cases where an increase was not received in the most recent renewal, an increase was projected at conservative amounts that is less than actual increases received in the last renewal for the other lines of insurance that increased based on the expectation that insurance renewals are unlikely to remain flat for two consecutive renewal periods. As such, this well-supported projection should be included in the revenue requirement of this base rate case.

N. Flotation Costs

Q. Please describe I&E witness Keller's proposed flotation costs adjustment.

A. Mr. Keller has proposed that in lieu of adding 12 basis points to the Company's cost of equity to account for flotation costs, as recommended by York Water witness D'Ascendis, there should be a normalized expense allowance for flotation costs included in the Company's revenue requirement.

Q. Do you agree with I&E recommendation regarding flotation costs?

A. Not entirely. As detailed in the rebuttal testimony of Mr. D'Ascendis, the Company is rejecting the removal of the floatation costs from the Company's cost of equity. As such, this adjustment is not necessary. However, if the Commission does agree with the I&E in rejecting the Company's claim for inclusion of the floatation costs in its cost of equity, the Company would ask to recover floatation costs as a normalized expense as proposed by I&E.

N. Income Tax Expense

Q. Please describe I&E witness Keller's proposed adjustments to the Company's state income tax expense adjustment.

A. Mr. Keller has applied the impact of Pennsylvania House Bill 1342 signed into law as Act 53 on July 8, 2022, which will lower the current 7.99% corporate net income tax rate to 7.99% in 2026, 6.99% in 2027, and will continue to decrease the tax rate by 0.5% each year until 2031, when the tax rate will be 4.99%. Mr. Keller recommends a weighted

Pennsylvania income tax rate of 7.41% to reflect the Pennsylvania corporate income tax rate that will be in effect for the FPFTY.

Q. Do you agree with the I&E's proposed reduction to the Company's state income tax expense adjustment?

A. Not entirely. The Company's state income tax expense claim is based on the Pennsylvania corporate net income tax rate of 7.49% for 2026. The Company understands this rate does not factor in the decrease to 6.99% that will be in effect for the final two months of the FPFTY. However, the Company proposes to use the State Tax Adjustment Surcharge ("STAS") mechanism to account for that decrease as it will for all future decreases, not otherwise captured in a base rate case, through 2031. That will allow the Company to align the STAS with the change in rate when it is effective on January 1, 2027, rather than seek to make it effective on a pro rata basis on March 1, 2027, after the end of the FPFTY. This change to Mr. Keller's proposal does not impact the customer rates in total but makes the administration of the corporate net income tax rate changes easier to manage. The Pennsylvania corporate net income tax rate of 7.49% is included in the adjustment reflected in Exhibit MEP-1R.

Q. OCA witness Mugrace has proposed an adjustment to income tax expense to reflect the effects of his adjustments to the Company's revenue requirement. Do you agree with the proposed adjustment?

A. Although the Company disagrees with adjustments to the revenue requirement proposed by Mr. Mugrace, the Company agrees that income tax expense should be adjusted to reflect

the adjustments made in its rebuttal testimony. This adjustment is reflected in York Water Exhibit MEP-1R.

O. Interest Synchronization

Q. OCA witness Mugrace has proposed an adjustment to interest synchronization to reflect the effects of his adjustments to the Company's rate base. Do you agree with the proposed adjustment?

A. The Company agrees that interest synchronization should be adjusted to reflect the adjustments made in its rebuttal testimony. This adjustment is reflected in York Water Exhibit MEP-1R. I note that a substantial portion of OCA's interest synchronization adjustment is related to its proposed use of a hypothetical capital structure. The Company disagrees with the use of a hypothetical capital structure for the reasons set forth in Mr. D'Ascendis's rebuttal testimony and, thus, disagrees with OCA's change to interest expense related to that adjustment.

III. PROPOSED RATE BASE ADJUSTMENTS

A. Cash Working Capital

Q. Both the OCA and I&E propose to adjust cash working capital to reflect their operating income adjustments. Please respond to this adjustment.

A. For the operating income adjustments that the Commission does not adopt, the adjustments to cash working capital should also be rejected. The Company has restated cash working capital for the adjustments it has accepted, and these are reflected in York Water Exhibit MEP-1R.

B. Accumulated Depreciation and Accumulated Deferred Income Taxes

Q. OCA witness Mugrace proposes to adjust accumulated depreciation and accumulated deferred income taxes to reflect the depreciation adjustment proposed by OCA witness Garren. Please respond to these adjustments.

A. As detailed in the rebuttal testimony of Mr. Spanos, the Company opposes the OCA's adjustment to depreciation. As such, the Company rejects the adjustment to accumulated depreciation and accumulated deferred income taxes.

IV. SUMMARY OF REBUTTAL POSITION

Q. Have you prepared summary exhibits to reflect the Company's revised position in rebuttal?

A. Yes. The result is a base rate revenue increase of $23,643,653, which represents $19,786,146 for water and $3,857,507 for wastewater. The exhibits showing these calculations are attached as York Water Exhibit MEP-1R.

Q. Does this conclude your rebuttal testimony?

A. Yes.

THE YORK WATER COMPANY
REVENUE SUMMARY

	Total Company	Water	Wastewater
Present Rate Revenues	$ 76,975,844	$ 68,305,310	$ 8,670,534
Additional Revenue Requirement	$ 23,643,653	$ 19,786,146	$ 3,857,507

YWC-OSBA-II-6 Reference OSBA St. No. 1 at 6.

a) Does Mr. Hails agree that not all expense categories scale at the same rate based on the number of customers? If so, please identify all expense categories that Mr. Hails believes do not scale at the same rate based on the number of customers. If not, please explain in detail how Mr. Hails reached that conclusion.

b) Please provide all Documents, studies, and workpapers relied upon in responding to subpart (a), *supra.*

OSBA Response For a) and b):

The foundational principle of my approach, applying an overall escalator based on inflation and an adjustment based on depreciation, is intended to apply an average escalator to all expense categories. In application of this approach, and with diminishing returns, I did not conduct a granular assessment of each expense line item. In practice and mathematically,

every individual line item will scale at a different rate based on many factors.

Overall, I expect that increases in customers will yield overall lower rates per customer over time based on scale efficiencies. In pursuing a conservative approach to my recommendations, I did not apply a further scale efficiency reduction to the calculations. If applied, this would yield an offsetting reduction in the escalator from 4.2% to something lower.

YWC-OSBA-II-4 Reference OSBA St. No. 1 at 5-6.

a) For each expense claim that Mr. Hails proposes to adjust, please explain in detail how 4.2% is an accurate inflation escalator for those expenses.

b) Please provide all Documents, studies, and workpapers relied upon by Mr. Hails to derive the 4.2% escalator and to respond to subpart (a), *supra.*

OSBA Response For a) and b):

I propose a decrease in overall operating expenses based on the 4.2% annual escalator. As noted in my testimony, I selected an escalator higher than inflation to account for the required investments outlined by York. The 4.2% escalator applies an incremental 0.9% over the average inflation of 3.3%, resulting in incremental operating expenses that closely approximate the annual increases in depreciation and amortization expense which results from the substantial capital expenditures York is undertaking with system upgrades[2].

[2] OSBA Statement No. 1, Page 7, Lines 121 to 125.

I arrived at the incremental 0.9% by conducting scenario analysis in Exhibit JH-1, adjusting the escalator until I arrived at expense levels that reflected:

i. An overall reduction using the 3.3% escalator ($7,192,916); and
ii. An increment to the escalator that approximated the additional depreciation expense incurred by York to account for increased capital investments of $1.2 million. The scenario of 4.2% (a 0.9% increase over inflation) resulted in an overall expense reduction of $5,876,744.

The scenarios of escalators were conducted manually in Exhibit JH-1.

York Water Company, R-2025-3053442, R-2025-3053573

York Interrogatories to the Office of Consumer Advocate
Set II

5. Reference OCA St. 1 at 18, 44. Is it Mr. Mugrace's position that the Company's metrics for determining Long-Term Incentive Compensation ("LTIP") lacks a service-focused component? If so, please explain in detail why, identify which of the Company's components for determining LTIP compensation lacks any focus on service, and provide all Documents, studies, or workpapers relied upon by Mr. Mugrace is reaching that conclusion and in responding to this discovery request.

Response

Mr. Mugrace believes that the Company's LTIP lacks customer-oriented ratepayer benefits. As indicated in Company Exhibit FIII-22, these types of payments benefit the Company and its shareholders related to financial growth and aligning the interest of the participants in the Company. Nothing in response to Exhibit FIII-22 show benefits related to customers in the areas of safety, reliability, adequacy, and satisfaction. These types of incentives are clearly related to the retention of key employees which the Company should bear and be required to pay for.

REBUTTAL TESTIMONY OF SUZANNE M. BECKER

ON BEHALF OF

THE YORK WATER COMPANY

Dated: September 19, 2025

I. INTRODUCTION

Q. State your name and business address.

A. My name is Suzanne M. Becker. My business address is: 130 East Market Street, York, Pennsylvania.

Q. By whom are you employed?

A. I am employed by The York Water Company ("York Water" or the "Company").

Q. State your present position with the Company.

A. I am the Vice President of Customer Service.

Q. Did you previously submit direct testimony in this proceeding?

A. No.

Q. Could you please provide your educational background?

A. I earned a B.S. in Communications from Millersville University.

Q. Could you please describe your professional experience?

A. Before joining York Water in 2025, I was employed by Traditions Bank since 2010. I served as Executive Administrative Officer and Assistant Corporate Secretary. As a member of the Executive Management Team, I worked closely with the Chair and CEO and the Board of Directors and led the areas of marketing, community outreach, administration, and facilities. Prior to this role, I was the bank's Director of Marketing and

Communications. Since March of 2025, I have held my current position as Vice President of Customer Service for York Water.

Q. What are your responsibilities as Vice President of Customer Service for York Water?

A. My responsibilities include overseeing the Customer Service Department at York Water. This includes the call center, in-person customer service center, meter reading, and field customer notices (posting activity) and customer account management/collections within the Company. The Customer Service Department managers are also responsible for the Company's response to informal and formal complaints filed with the Pennsylvania Public Utility Commission ("Commission"), preparing and providing monthly and annual reporting to the Commission on matters related to the Company's call center metrics, collections activity, and low-income customer assistance programs. Along with the Company's Finance and Accounting Department, my Department administers the weekly mailing of water and wastewater invoices to ensure compliance with all applicable regulations.

Q. Please describe the purpose of your rebuttal testimony.

A. The purpose of my testimony is to respond to portions of the testimony of the Office of Consumer Advocate ("OCA") witness Barbara R. Alexander (OCA St. 5) regarding certain allegations and recommendations about the Company's customer service and low-income programs. Specifically, in the customer service section, I address the OCA allegations and recommendations concerning the Company's call center, York Water's customer

complaint data and procedures, the Company's bills, billing process, and termination notices, the Company's customer survey, and York Water's training of employees on customer service issues. I then respond to Ms. Alexander's allegations and recommendations regarding the Company's low-income programs and proposed low-income bill discount program.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, attached to my rebuttal testimony are the following exhibits:

- York Water Exhibit SMB-1R – Redesigned bill format;
- York Water Exhibit SMB-2R – Updated data on call center performance;
- York Water Exhibit SMB-3R – Call center performance on days where partial failover issue was experienced;
- York Water Exhibit SMB-4R (CONFIDENTIAL) – Informal complaint log for 2023;
- York Water Exhibit SMB-5R (CONFIDENTIAL) – Customer complaint/dispute log for 2024;
- York Water Exhibit SMB-6R (CONFIDENTIAL) – Customer complaint/dispute log for 2025;
- York Water Exhibit SMB-7R – OCA-XVII-12 Attachment 1.
- York Water Exhibit SMB-8R – OCA's answer to YWC to OCA-II-33;
- York Water Exhibit SMB-9R – OCA's answer to YWC to OCA-II-34;
- York Water Exhibit SMB-10R – York Water's answer to OCA-III-18;
- York Water Exhibit SMB-11R – York Water's answer to OCA-III-2; and
- York Water Exhibit SMB-12R – York Water's answer to OCA-XIX-5.

II. CUSTOMER SERVICE

Q. OCA witness Alexander raises several issues concerning the Company's customer service performance. (OCA St. 5, pp. 13-25.) Do you have any overall comments before responding to her allegations specifically?

A. Yes. I believe Ms. Alexander is not placing the Company's performance within the right context. York Water is not as large of a water and wastewater utility as, for example, Pennsylvania-American Water Company ("PAWC") or Aqua Pennsylvania, Inc. ("Aqua"). The Company also is not as large as the major electric distribution companies ("EDCs") and natural gas distribution companies ("NGDCs") operating in the Commonwealth. Moreover, Ms. Alexander's comments appear to ignore the fact that York Water's formal customer complaint rate is much lower than the larger utilities in the Commonwealth (across all utility sectors) and that the Company's customer satisfaction rate recently surveyed is approximately 85%.

These distinctions are materially important because it appears that Ms. Alexander is expecting York Water to have personnel and resources like a utility many times its size and employee complement. For example, when criticizing the Company's call center performance, Ms. Alexander exclusively compares York Water's performance to the call center performance of the major EDCs and NGDCs in Pennsylvania. (*See* OCA St. 5, p. 15.) She then recommends that York Water be held to a customer service performance metric that matches the major EDCs' and NGDCs' call center performance and that "[t]his improvement should be monitored for compliance as a condition of any rate increase, such as through requiring a report or filing to this docket every quarter to monitor the same." (*See id.*, pp. 2-3, 17.) Relatedly, she avers that the Company's call center performance since the 2022 Rate Case "be taken into account in establishing the reasonable rate of

return." (*Id.*, p. 2.) In discovery, Ms. Alexander noted that she "has proposed service quality performance standards" in "recent base rate cases for Aqua Pennsylvania, Pennsylvania American Water, and Pittsburgh Water." (*See* York Water Exhibit SMB-8R [OCA Answer to YWC to OCA-II-33].)

Although the Company could expand its customer service operations to match those larger entities, doing so would come at a substantial increase in York Water's expenses that would be passed onto the Company's ratepayers. Notably, while the OCA reflects an additional $40,000 in annual operation and maintenance ("O&M") expenses in the Company's revenue requirement to account for Ms. Alexander's recommended bill discount program,[1] the OCA does not account for any other incremental capital costs and expenses that York Water would incur if the Company were required to implement her various recommendations. In addition, York Water's customer service is among the best in the industry, which is no small feat given the Company's relative size to its counterparts in Pennsylvania. The Company has had only 3 justified formal customer complaints from 2020-2024, an average of 0.6 per year. Further, York Water only had 10 infractions by the Commission's Bureau of Consumer Service ("BCS") since 2023. Thus, the Company has provided and will continue to provide exceptional customer service to its ratepayers.

In today's landscape of increasing consolidation among national and multinational utility providers, having in-person customer service available within the local community is not only rare, it is a defining strength of the Company. This personal, face-to-face support sets York Water apart and ensures that the Company's customers receive clear assistance when they need it most. For example, in the City of York, confusion continues to grow for

[1] OCA St. No. 1, p. 22,

customers who receive water service from York Water and wastewater service from Pennsylvania-American Water Company ("PAWC"), especially following PAWC's wastewater rate increase that became effective earlier this summer. Despite the proactive efforts of York Water's Customer Service Department, including handouts, website notices, bill messaging, and direct outreach, the volume of customer inquiries received by York Water has surged. Particularly, York Water has absorbed a significant increase in calls, emails, voicemails, and walk-in visits to answer customers' questions about their PAWC wastewater charges, all while continuing to work with PAWC to address the customer inquiries collectively and help reduce customer confusion. The persistence of these types of issues underscores the critical value that is provided by York Water's local presence and dedication to serving its customers and community.

A. CALL CENTER PERFORMANCE

Q. OCA witness Alexander alleges that York Water's customer call center data shows results that "are not reasonable," pointing particularly to the Company's call abandonment rate. (OCA St. No. 5, pp. 13-17.) Please respond.

A. Ms. Alexander bases this conclusion on her comparison of York Water's call center performance data to the major EDCs' and NGDCs' call center data. Specifically, she states that the Company's "performance is significantly below what is reported by Pennsylvania gas and electric utilities, where the typical performance is to answer 80% of the calls within 30 seconds with an abandonment rate at or below 4%." (OCA St. No. 5, p. 15.)

As I noted previously, York Water and major EDCs and NGDCs are not comparable, nor do we strive to institutionalize our customer services. As such, the more appropriate comparison would be to evaluate York Water's call center performance as

compared to other public utilities in Pennsylvania that are comparably sized. No such analysis was presented by Ms. Alexander.

Further, the Company's performance in 2024 and 2025 (through May 2025) exceeded Ms. Alexander's recommended level of answering 80% of calls within 30 seconds. In fact, as seen in the table set forth on page 15 of her direct testimony, York Water answered 96.62% of calls within 30 seconds in 2024 and 96.35% of calls within 30 seconds in 2025 (through May 2025). The Company also drove down the average speed to answer from 5:50 minutes and 3:58 minutes in 2022 and 2023, respectively, to 0:06 and 0:08 minutes in 2024 and 2025 (through May 2025), respectively.

As such, the only proposed measure that the Company has not met over those time periods is Ms. Alexander's proposed abandonment rate metric of 4%. However, through further investigation of the Company's performance, York Water has concluded that the reported statistics in 2024 and 2025 do not provide a complete picture of its personnel's performance.

Q. What did the Company find through this further investigation into its call center data?

A. York Water determined that its data was impacted by power outages on certain days that distorted the Company's actual performance and call center data, particularly with regards to the number of inbound calls and call abandonment rate. Specifically, on the following dates in 2024 and 2025 — May 21, 2024; July 1, 2024; August 2, 2024; May 16, 2025, June 24, 2025; July 28, 2025; August 4, 2025; August 11, 2025; and September 2, 2025 — the Company's facility experienced power outages, some of which were noted in OCA-III-

1 Attachment 1 provided by York Water in discovery. York Water has concluded that these outages inadvertently triggered a "partial failover" of the Company's phone system instead of a "complete failover" as designed. Had the phone system had a complete failover, the phones would have continued to work in backup mode as designed. However, in investigating the outages on those dates further with the Company's telecommunications vendor, it was discovered that the partial failover resulted in calls not being routed correctly and instead having the calls repeatedly "bounced" around the system. This created a loop that prevented callers from reaching an agent or receiving a proper queue placement. It also tracked each "bounce" as a separate abandoned call.

This issue significantly distorted our call volume data by counting each "bounce" as an inbound call. For example, on July 1, 2024, 8,058 calls were logged between 8:00 – 9:00 a.m., whereas our normal daily call volume averages approximately 300 calls. In addition, 99.99% of the errant call data was logged as abandoned, which significantly and negatively affected the Company's call abandonment rate performance.

Q. Has the Company found any other time periods affected by this "partial failover" issue?

A. Yes. York Water has been working with its phone system vendor to diagnose the cause of the partial failover issue. Through that work, York Water has identified additional timeframes affected by this issue – April 6, 2023, April 10, 2023, and March 11, 2024.

Q. Has the Company recalculated its call center performance data by excluding those days when the "partial failover" issue distorted the data?

A. Yes. To provide a clearer picture of the Company's call center performance, York Water has recalculated its call center performance data by removing those days when the partial failover issue occurred. Attached as York Water Exhibit SMB-2R sets forth the recalculated data for 2022, 2023, 2024, and 2025 (through August). Additionally, attached as York Water Exhibit SMB-3R are copies of the call center statistics for the days being excluded from the recalculated data. In that exhibit, the Company has outlined the timeframes when the outages occurred. Collectively, these exhibits show the magnitude of the partial failover issue's effect on the Company's call center performance data.

Q. What observations do you have about the recalculated call center performance data?

A. As you can see in York Water Exhibit SMB-2R, the Company's number of inbound calls and the call abandonment rate were actually much lower.

To show this comparison, I have taken the table appearing on page 15 of OCA witness Alexander's direct testimony, inserted a column providing the number of inbound calls from OCA Exhibit BA-2, and inserted the recalculated data in parentheses next to the originally reported numbers. I also note that the 2025 data for the recalculations runs through August instead of May like the original figures for 2025:

Year	Inbound Calls	Percent Calls Answered in 30 Seconds	Abandonment Rate	Average Speed of Answer (minutes)
2022	62,996 (62,996)	22.25% (22.25%)	16.72% (16.72%)	5:50 (5:50)

2023	**63,558** **(57,771)**	45.45% (45.48%)	**17.29%** **(13.00%)**	3:58 (3:58)
2024	**75,315** **(58,501)**	96.62% (96.62%)	**27.66%** **(8.72%)**	0:06 (0:06)
2025	**32,399** **(39.734)**	96.35% (96.17%)	**55.56%** **(9.60%)**	0:08 (0:06)

As shown above, the Company's call center performance has greatly improved over the last three years. York Water has been reduced from 16.72% in 2022 to 9.60% in 2025 (through August). The Company also has seen a significant drop in the number of inbound calls from customers, going from 62,996 in 2022 down to 32,399 in 2025 (through August). Also, you can see how much of an impact the partial failover had on the call volume and call abandonment numbers. For example, in 2024, there were approximately 16,814 fewer inbound calls than originally reported. Given that those inbound calls also were counted toward the call abandonment rate, the issue drastically skewed the call abandonment rate as being 27.66%, when in actuality the Company's recalculation shows a call abandonment rate of 8.72%. Both the call abandonment rate in 2024 and 2025 of 8.72% and 9.60%, respectively, are much closer to Ms. Alexander's proposed target of 4.0% than the originally reported call abandonment rates for 2024 and 2025 of 27.66% and 55.56%, respectively.

Thus, the discovery of the partial failover issue and its impact on the call center performance data helps explain the apparent divergence between the Company's performance with respect to calls answered within 30 seconds and its call abandonment

rate. Indeed, as Ms. Alexander acknowledged in discovery, "Statistics on call abandonment are often inversely related to statistics measuring calls answered within 30 seconds," so "[f]or the most part, the companies answering a high percent of calls within 30 seconds have low call abandonment rates, and those answering a lower percent of calls within 30 seconds have higher call abandonment rates." (York Water Exhibit SMB-9R [OCA Answer to YWC to OCA-II-34].)

Q. Has York Water developed any solutions to address the partial failover issue?

A. Yes. On the reporting side, the Company has implemented additional monitoring protocols to prevent similar distortions of its call center performance data in the future. As for the partial failover issue itself, York Water has developed both short-term and long-term solutions. For the short-term solution, York Water moved the phone system to a more robust (server-grade) power source about 2 weeks ago. That power source should not trip during an outage, and thus far, the Company has not experienced a trip event. The Company hopes that this solution proves to be sufficient for the next handful of months. Long term, York Water has a new server grade power source for the phone system in its 2026 budget. Taken together, York Water expects these solutions to minimize the phone system downtime going forward and help resolve the partial failover issues.

Q. Despite the recalculated data showing significant improvements in the Company's call center performance, is York Water still taking steps to maintain and improve its call center performance?

A. Yes. York Water is taking additional steps to maintain and improve its call center performance, such as: (1) York Water has created a Customer Service performance dashboard enabling executive management to track a number of data points of performance; (2) the Company has created customer service representative ("CSR") performance metrics that will be a subject of quarterly training and review meetings; (3) the Company has implemented integration between departments to better manage customer communications going out from the Company that will result in large customer service response volume, so that York Water can help ensure appropriate response times; (4) the Customer Service Department has used overtime hours (funded by vacancies) to remain current with voicemails and emails when experiencing higher than normal call and email volumes; and (5) the Company is further enhancing the phone greeting message to make routing calls more efficient and to add an option for customers to be able to hold their place in queue and hang up/wait for a call-back, which should decrease any objections to waiting on hold. Additionally, York Water has created a "Clarity Campaign" for customers in the City of York to reinforce what services York Water provides and where the Company provides them to help reduce customer confusion.

Q. Ms. Alexander also asserts that "[t]he key variable in predicting reasonable versus unreasonable call center performance is the volume of calls and the number of available call center representatives on hand to answer the calls" and that "[p]erformance can be improved with better prediction of call volume and ensuring sufficiently trained personnel are available to respond to call volume at predicted high call volume days and times." (OCA St. No. 5, p. 16.) Please respond.

A. York Water agrees that it is important to have sufficiently trained personnel available at times of predicted high call volume. Therefore, the Company takes those factors into account when scheduling its customer service representatives. Also, in June 2024, York Water implemented an enhanced phone directory for customers calling in, which provides direct connections to specialized departments within the Company without waiting for a Customer Service Representative to answer and then transfer the customer. This change also incorporated a separate foreign language queue that allows customers to select Spanish in the phone system. If they do, the customers will be connected with a Spanish-speaking CSR rather than wait/transfer/wait again.

Additionally, York Water has most recently implemented enhanced Customer Service control over customer communications (previously issued from various parts of the Company), so that the Company can better phase such communications where appropriate and, consequently, better manage the volume of Customer Service contact/inquiry. Further, since the last rate case in 2022, York Water has also increased the Customer Service department from 14 employees to 20 employees, including the addition of a Customer Experience Manager, who is specifically responsible for monitoring, managing, and overseeing customer care and CSR performance.

York Water also anticipates a further reduction in call volume in the future after the Company implements its new bill design, currently planned for first issuance in November 2025 bill cycles. A copy of the redesigned bill format is attached as York Water Exhibit SMB-1R. As seen in that exhibit, the new bill format will provide additional information for customers about their accounts and will provide the billing information more clearly, including specific break-outs for payment agreement installment amounts and payment

agreement past due amounts. The Company believes that the redesigned bill format should lead to fewer customer questions about their bills, account balances, and payment agreements.

Lastly, with the data and analysis contained in the new Customer Service dashboard, Company management and its executive team will now be able to identify issues more effectively and efficiently in order to implement solutions going forward.

Q. What is your response to Ms. Alexander's claim that the Company's "inconsistent performance means that customers cannot rely on a reasonable call center performance to conduct their account specific transactions or concerns in a timely manner"? (OCA St. No. 5, p. 15.)

A. While York Water disagrees that its performance has been "inconsistent," I note that customers have many other options to choose from than via telephone to transact business and obtain answers to questions they may have. Many customers choose to communicate with York Water through email, with the number of incoming emails often rivaling the number of voicemails received in any given week. The Company's website also provides customers with the ability to: (1) pay bills; (2) review usage information; (3) send email comments or questions to the Customer Service Department through a form (separate from sending an email directly to customer service); (4) start and stop service; (5) sign up for service line protection plan coverage; (6) request response regarding payment assistance programs; (7) request new service; (8) request service line inspection; (9) request hydrant flow testing; (10) submit backflow test reports; (11) look at the system's current outage location(s). Furthermore, the website top banner and screen takeover messages are used

for system pressure or other alerts, boil water advisories ("BWAs"), and other significant items, like public hearing notices. Also, the Company's email and voicemails are checked continuously throughout the day for response during operating hours. The Customer Service Department monitors the volume of these inquiries to ensure timely response and contact.

Q. Please respond to Ms. Alexander's assertion that York Water does not have internal performance objectives for its call center and that the Company's plan to develop those objectives is "[s]imilar to many vague promises made in response to discovery in this proceeding." (OCA St. No. 5, p. 16.)

A. As an update, the Customer Service Department has developed performance objectives, which have been discussed since January 2025. Those performance objectives were specifically included in performance reviews to prepare for active implementation on October 1, 2025. York Water's Customer Experience Manager is the lead to track these metrics and train representatives individually to achieve those goals. Therefore, contrary to Ms. Alexander's claim, the development and implementation of those internal performance objectives was not a "vague promise" made by York Water.

In addition, it is important for York Water to inform the Commission and stakeholders that the Company is in the midst of a technology transition from Oracle to a new integrated business system that includes customer service components and capabilities that the current system lacks. The scope of the functionality of this new system will enable York Water's customer service team and other departments to extract vital business information, data, and performance statistics from the system in ways that are not possible

today. The work involved in building this system was initiated over two years ago and has entailed: (1) Company-wide scoping team to determine York Water's technology needs; (2) the issuance of a Request for Information ("RFI") and a Request for Proposal ("RFP"); (3) review and scoring of the proposals received in response to the RFP; and (4) extensive evaluation of candidate systems, including interviews and multi-day demonstrations, and reference investigations. Ultimately, contracts were executed in December 2024, and the active on-site work began in April 2025, with anticipated go-live in the late summer of 2026. The amount of scope and build work has been extensive and has taken 25-30 hours per week or more for some key personnel, two of whom are in the Customer Service Department. This new business system will enable our employees across the Company to provide more efficient and informed service to customers. It also will provide the customer service team with access to vital real-time information related to customer accounts and usage and will enable the Company to dispatch field response more efficiently and quickly.

Q. In light of her concerns about the call center's performance, Ms. Alexander recommends that "York Water be required to significantly improve its call center performance to meet the electric and natural gas utility standard performance results of answering 80% of the calls with 30 seconds and meeting an abandonment rate of 4% or less" and that "[t]his improvement . . . be monitored for compliance as a condition of any rate increase, such as through requiring a report or filing to this docket every quarter." (OCA St. No. 5, pp. 2-3, 17.) Do you agree?

A. No. As I have outlined above, holding York Water's call center performance to the same level of the major EDCs and NGDCs is not fair or reasonable. Also, as I explained

previously, the call abandonment rate data was distorted greatly by the partial failover issue. The Company's recalculated call center performance data shows that York Water's call abandonment rate is significantly better than originally reported and is much closer to the 4.0% targeted by Ms. Alexander, with a call abandonment rate of 8.72% in 2024 and 9.60% in 2025 (through August). Thus, there is no need to implement her recommendation for setting these call center performance standards or monitoring the Company's compliance with those standards.

Q. Ms. Alexander asserts that the Company "has not met the good faith obligation" of Paragraph 53 of the 2022 Rate Case Settlement, under which the Company would take such action as required to meet its 2020 call center performance annual results prior to filing its next base rate case or within two years, whichever was sooner, and that "York Water's failure to improve its call center performance" should be "taken into account in establishing the reasonable rate of return." (OCA St. 5, pp. 2, 9, 14-15, 17.) Please respond.

A. I disagree with Ms. Alexander's characterization. Since the last 2022 Rate Case, York Water took several steps to help improve its customer service, including the performance of its call center. York Water has conducted a comprehensive analysis of its customer base, conducted a customer satisfaction survey, analyzed customer income demographics in its service area, increased its CSR complement, and built a more robust management team in the Customer Service Department. The Company also improved its call center system to reduce customer steps to get to the right department or CSR, established performance metrics, created personnel positions to actively manage the customer experience and

performance metrics, developed a Dashboard for management, and have invested both significant capital and personnel time in technology to improve its customer service across the Company. Further, over that period of time, York Water experienced the retirement of its Vice President of Customer Service, who had been with the Company for over two decades, and had to a transition to a new Vice President of Operations, who manages field teams/meter shop/backflow project/LSLR. Additionally, since the last rate case in 2022, York Water has completed, implemented, and initiated a significant amount of improvements to its Customer Service capability and performance.

B. CUSTOMER COMPLAINTS

Q. Before addressing OCA witness Alexander's testimony on the subject, could you please provide an overview of the Company's processes for tracking and responding to customer complaints and disputes?

A. When a customer raises a concern or complaint, the concern is noted in the Company's database. The CSR either resolves the concern immediately or investigates the concern. When resolved, the CSR reenters the database to note the resolution. The database includes a list of common topics so that the Company can track trends and identify issues and opportunities for improvement. Anytime an informal or formal complaint is made, York Water conducts an investigation at the Customer Service management level, including the Company's Chief Administrative Officer ("CAO"), to determine whether the complaint is justified or not and whether improvements can be made regardless of whether the complaint is justified. As noted earlier, the Company's number of justified formal complaints are well below its industry peers.

Q. Based on the Commission's UCARE 2023 report, OCA witness Alexander alleges that there is a "pattern of increased complaints and [Payment Arrangement Requests ('PARs')]," which "shows that the Company's performance is not 'exceptional,' but deteriorating." (OCA St. 5, p. 19.) Do you agree?

A. Historic data is not an equal comparison because the Company's tracking is more comprehensive and inclusive than it was in prior years. York Water's rate of complaints remains well below its utility peers in the Commonwealth. Of informal complaints received, the BCS dismissed or closed without finding an infraction in approximately 97% of the cases since 2023. As for formal complaints, the most recent statistics available show that York Water's justified complaint rate is 6.7% compared to 18.5% for PAWC, 32.0% of Aqua Pennsylvania, Inc. ("Aqua"), and 10.8% of "All Other Class A Water Utilities."

In addition, there is an increase in payment agreement requests across the Company and other water utility companies in the Commonwealth. York Water believes that this increase is due to a number of factors, many of which are economic factors outside the Company's control, such as inflation and employment. Furthermore, York Water expects that other initiatives, such as its proposed increase in low-income program funding and its proposed pilot low-income discount program, will help customers better manage and pay their bills and either avoid the need for or help comply with their payment agreements.

Q. Ms. Alexander also contends that the Company failed to develop the database for customer complaints and disputes required under "Paragraph 54" of the 2022 Rate Case Settlement. (OCA St. 5, pp. 12, 19-20.) Relatedly, she recommends that York Water's alleged "failure to create complaint logs consistent with the 2022 Base Rate

Case Settlement . . . be taken into account in the setting of the Company's rate of return" and that the Company "immediately revise its complaint database and logs to conform to the specific requirements of Paragraph 54 of the 2022 Base Rate Case Settlement." (OCA St. 5, p. 3.) Please respond.

A. I do not agree with Ms. Alexander's characterizations of York Water's complaint database, logs, and compliance with Paragraph 54 of the 2022 Rate Case Settlement. As an initial matter, the provisions governing the creation of the complaint database are set forth in Paragraph 55 of the Settlement, not Paragraph 54. Moreover, Paragraph 55 of the Settlement stated:

> York Water will establish a database to document all customer disputes, and formal and informal complaints, as those terms are defined in 52 Pa. Code § 56.2, for both water and wastewater operations. The database shall include customer account information, address, date of dispute or complaint, the type of issues raised by the dispute or complaint, and the resolution of the dispute or complaint. The Company shall document its development of the database in a compliance filing within twelve (12) months of a final order in this proceeding. The Company agrees to make the complaint log available to parties as part of discovery in its next base rate case.

In discovery, York Water provided its logs of complaints/disputes that York Water created in a tracking system for customer complaints. Ms. Alexander, however, asserts that "[t]he complaint logs provided by York Water in discovery have the following column headings: 'case#,' 'customer name,' 'case open date,' 'case close date,' 'case information,' and 'violation/notes.'" (OCA St. 5, p. 19.) She goes on to claim that: (1) "[t]he database does not include the customer's address or the resolution of the complaint"; (2) "[t]he column labeled 'violation/notes' is empty for the vast majority of complaints"; (3) '[t]he 'case information' column includes some standard complaint categories (e.g., 'billing,' 'PAR') but most of the columns contain a label that does not relate to any complaint category, e.g.,

'DO NOT SELECT – 61 REJECTS'"; and (4) "the database is not useful to identify trends or analyze the root cause of similar complaints." (OCA St. 5, pp. 19-20.)

These claims are inaccurate, misleading, or both. Ms. Alexander apparently fails to recognize that York Water provided three complaint logs in discovery: (1) an informal complaint log covering the informal complaints submitted in 2023; (2) a customer complaint/dispute log for 2024; and (3) a customer complaint/dispute log for 2025. Copies of those logs are attached as York Water Exhibits SMB-4R through 6R (CONFIDENTIAL). However, when recounting the alleged deficiencies with the Company's logs, Ms. Alexander focuses exclusively on the 2023 informal complaint log.

It is a fundamental error for Ms. Alexander to base her claims about York Water's compliance with Paragraph 55 on the 2023 informal complaint log, because York Water had until January 12, 2024 to develop the database required by Paragraph 55 of the 2022 Rate Case Settlement (i.e., within 12 months of the Commission's Final Order entered January 12, 2023, in that proceeding). Therefore, the 2023 informal complaint log, which covers the January 1, 2023, to December 31, 2023 period, has no bearing on York Water's compliance with Paragraph 55 to develop a database by January 12, 2024.

Also, Ms. Alexander errs by imputing the alleged deficiencies with the 2023 informal complaint log (which did not need to comply with Paragraph 55) on the 2024 and 2025 customer complaint/dispute logs. For example, when Ms. Alexander states the column headings in the logs, Ms. Alexander solely provides the column headings for the 2023 informal complaint log and asserts that they were the same for all the logs. (OCA St. 5, p. 19.) In actuality, the customer complaint/dispute logs for 2024 and 2025 have the following headings: (1) customer; (2) account number; (3) service address; (4) start date;

(5) closed date; (6) resolution summary; (7) problem summary; (8) SR number; (9) status; and (10) incident type.

Furthermore, as seen in York Water Exhibits SMB-5R and SMB-6R (CONFIDENTIAL), all of the complaints/disputes listed in the 2024 and 2025 logs provide the customer's name, account number, and service address, start date, problem summary, SR number, status, and incident type. That fact directly contravenes Ms. Alexander's claim that the "database does not include the customer's address." (OCA St. 5, p. 19.) Additionally, although some of the complaints/disputes in the 2024 and 2025 logs do not have information in the "resolution summary" box, part of the reason is that some of those matters are still marked as open. Also, while York Water observes that the "violation/notes" column is empty for most of the entries in the 2023 informal complaint log, all of the complaints/disputes listed in the 2024 and 2025 logs have information provided in the "problem summary" column as noted previously.

In addition, when criticizing the informal complaint log's designations in the "case information" column, Ms. Alexander makes no mention and appears to have overlooked a companion document provided by York Water in discovery (OCA-XVII-12 Attachment 1). That document provides definitions of the complaint category designations in the 2023 informal complaint log, including the "DO NOT SELECT – 61 REJECTS" label she calls out specifically in her testimony. (OCA St. 5, p. 20.) A copy of that document is attached to my testimony as York Water Exhibit SMB-7R. As seen in that document, "DO NOT SELECT – 61 REJECTS" means a "[p]ayment arrangement request to stop the term notice." Also, as noted above, the 2024 and 2025 logs provide information about the issues raised in the complaints/disputes. Thus, even setting aside Ms. Alexander's misguided

focus on the 2023 informal complaint log, it is misleading for her to state that "the issue" raised in the complaint is not "identified in a manner that would allow any analysis" and that "the database is not useful to identify trends or analyze the root cause of similar complaints."

Lastly, I note that the creation and update of the Company's logs is a manual process, one which York Water has improved on over time. To the extent that there are any missing pieces of information for certain complaints in the logs, York Water is working to fill those gaps. However, it remains evident that York Water, at the very least, substantially complied with Paragraph 55 of the 2022 Rate Case Settlement and that Ms. Alexander's criticisms severely lack merit.

Q. Ms. Alexander asserts that the Company has not analyzed this complaint data or taken any action in response to this data. (OCA St. 5, p. 20.) Is that an accurate statement?

A. No. As an initial matter, Ms. Alexander cites the Company's "Response to OCA-III-23" as alleged support for this claim. However, that discovery request concerns the performance metrics for contractors. I believe the discovery response she meant to reference was York Water's answer to OCA Set III, No. 18.

In addition, Ms. Alexander erroneously asserts that the Company has not analyzed that data or taken any action in response. In fact, in the Company's answer to OCA Set III, No. 18, the Company was asked, "Has the Company conducted any analysis or root cause evaluation of "unjustified" complaints and 'verified infractions" since January 2022? If so, provide such documentation and results." I responded on behalf of York Water as follows:

> The Company does not perform an individual root cause analysis for each "unjustified complaint" or "verified infraction." The Company evaluates the allegations raised in the disputes and complaints on a case-by-case basis. Pursuant to Paragraph 55 of the 2022 Base Rate Case Settlement approved by the PUC, York Water maintains its database that documents all customer disputes, formal complaints, and informal complaints. **York Water reviews that database to identify any trends in the types of issues being raised in the disputes or complaints, so that the Company can take appropriate action if necessary.** However, the Company does not perform a formal root cause analysis.

(York Water Exhibit SMB-10R [Answer to OCA-III-18]) (emphasis added). Therefore, the Company does analyze the data by identifying trends and does take appropriate action if necessary. What the Company does not do is perform a root cause analysis for every "unjustified complaint" or "verified infraction." To the extent that Ms. Alexander believes a root cause analysis should be performed for each "unjustified complaint" or "verified infraction," that would be an exceedingly burdensome, expensive, and time-consuming task.

In addition, York Water's Customer Service team benefits from a uniquely organic and immediate approach. Because the Company is all located in one building and work side by side, not remotely, York Water can detect emerging trends in real time. York Water's team also communicates continually, allowing us to recognize and respond to issues quickly. What further distinguishes York Water is that its support does not stop within the Customer Service Department. York Water's water quality, operations, IT, and accounting departments are also locally based and highly accessible. This proximity fosters a dynamic environment where insights are shared fluidly, solutions are developed collaboratively, and customer issues are resolved efficiently. It is a model that not only enhances responsiveness but also reinforces the Company's commitment to being truly customer-focused, which is increasingly rare in today's decentralized service landscape.

Q. Ms. Alexander recommends that "York Water undertake a root cause analysis of the complaint data to determine underlying trends and possible internal actions to respond to this analysis." (OCA St. 5, pp. 3, 20.) Do you agree with that recommendation?

A. I do not believe it is necessary. York Water continuously works to identify and understand the cause(s) of complaint trends. When trends are discovered (like possible low pressure in an area of the system), the Company investigates potential causes for the trends and communicates their findings to the Customer Service team, so that the Company can take any necessary action to rectify them.

C. BILLS, BILLING SYSTEM, AND TERMINATION NOTICES

Q. Please respond to OCA witness Alexander's claim that the Company's "current bill does not include the required information to refer customers to the Public Utility Commission." (OCA St. 5, p. 21.)

A. As noted previously, the Company has redesigned its bill to include the Commission's contact information, and that redesigned bill is expected to be mailed to customers in November 2025. However, I would note that the relevant discovery response on this subject is York Water's answer to OCA Set III, No. 2, not OCA Set III, No. 5 as alleged by Ms. Alexander. A copy of the answer to OCA Set III, No. 2 is attached as York Water Exhibit SMB-11R [Answer to OCA-III-2].

Q. Ms. Alexander also asserts that customers enrolled in the Company's low-income programs "are not provided with information on their York Water bill that confirms

their enrollment or how that enrollment has impacted their monthly bill." (OCA St. 5, p. 21.) Please respond.

A. Although enrollment confirmation is not specifically called out on the bill, customers receiving CARES grants are notified by the Company's partner organizations that they have received approval of funds, and these funds appear as a Payment on their account. Customers receiving CAP payments sign an agreement with the Company and should expect to see the arrears forgiveness as Adjustments on their bill if they pay their bill on time. The Company's current system is limited and does not allow for further customization or line items.

Q. Ms. Alexander further claims that there is a "more recent experience" that "confirm[s] the inadequacy of the Company's billing system." (OCA St. 5, p. 21.) What does she allege occurred?

A. Ms. Alexander contends that "[w]hen asked whether the Company could include a notice on its customer bills about the upcoming public input hearings, York Water stated that it would require a six month period to include any new information on its customer bills." (OCA St. 5, p. 21.) "As a result," Ms. Alexander believes that "York Water is unable to include real time information or messages on its customer bills." (OCA St. 5, p. 21.)

Q. Is Ms. Alexander correct?

A. Absolutely not. First, the Company said it would take "more than 6 **weeks** of lead time," not the "six month[s]" Ms. Alexander alleges, to provide notice of the public input hearings

through its electronic billing system. (York Water Exhibit SMB-12R [Answer to OCA-XIX-5]) (emphasis added.)

Second, the Company did not say that it would take that period of time "to include any new information on its customer bills," as Ms. Alexander claims. (OCA St. 5, p. 21.) Rather, York Water's response was specific to providing notice to customers of the public input hearings. In full, the Company responded as follows:

> York Water cannot feasibly provide notice of the public input hearings through its electronic billing system because doing so would require more than 6 weeks of lead time, and the public input hearings are scheduled to be held on August 26-27, 2025. Moreover, only 20% of the Company's customers are registered to receive electronic invoices. Therefore, the Company is unable to distribute a notification to all its customers through the electronic billing system.

(York Water Exhibit SMB-12R [Answer to OCA-XIX-5].) For Ms. Alexander to take this specific response about incorporating a public input hearing notice in sufficient time before the public input hearings and then claim that the Company needs six months "to include any new information on its customer bills" is simply wrong.

Third, the time estimate was calculated based on the Company's 4-cycle billing system. York Water would have not been able to get these notices into the bill cycle for all customers before the (then scheduled) hearings later that month, thereby notifying some customers and not others through this means, as well as the 20% of customers who choose to receive their bills electronically.

Q. Please respond to Ms. Alexander's testimony that she reviewed the Company's "disclosures" of its "termination notices" and that "the Company 'is currently

evaluating these notices to provide clear and understandable communication while remaining compliant with current regulations.'" (OCA St. 5, p. 21.)

A. The Company strives for continuous improvement to all of its communications. However, I disagree with Ms. Alexander that there are "deficiencies" with the Company's termination notices. (OCA St. 4, pp. 21-22.) York Water maintains that it provides the required termination information and notices to its customers. The fact that the Company is evaluating these notices does not mean that the current notices are deficient, and Ms. Alexander fails to identify in her testimony what "deficiencies" there are with the current notices.

Q. Based on her allegations, Ms. Alexander recommends that York Water "be required to submit updated billing and termination notices that meet Chapter 56 requirements and use plain language, within 90 days of the final order, as a condition of any rate increase in this case." (OCA St. 5, pp. 3, 22.) Would you please respond?

A. The Company can agree with this recommendation. As noted previously, York Water has already redesigned its bill format and is prepared to roll it out with bills in November 2025. The Company already has provided the format of the redesigned bill as York Water Exhibit SMB-1R. Also, the Company continues to evaluate its termination notices for improvements and, if York Water determines that updates should be made, the Company could submit any revised versions of the termination notices within 90 days of the Commission's Final Order in this proceeding.

D. CUSTOMER SURVEY

Q. Regarding the Company's customer survey conducted in 2024, Ms. Alexander claims that "the Company has taken no action in response to the survey results" and that "[u]ntil York Water commits to using the results of this survey to improve its customer service," the Company should not be "permitted to recover the cost of this survey." (OCA St. 5, pp. 3, 21.) Please respond.

A. In addition to the reasons provided by York Water witness Poff for why the OCA's proposal should be rejected, I note that the Commission has consistently emphasized the importance of transparency, responsiveness, and customer input. Disallowing survey costs sends a counterproductive signal that customer feedback is not a worthwhile investment unless immediately acted upon. In a regulated monopoly environment, customer surveys are one of the few direct mechanisms for capturing customer sentiment, expectations, and service perceptions. These insights are essential for aligning utility operations with public interest. In fact, the survey has already informed leadership decisions and is guiding internal review. Some examples of how the results are being used today include:

- Regarding customer communication preferences, the surveys have confirmed that Facebook is the preferred social media platform of customers, which allows York Water to optimize its social media communications while still utilizing traditional communication, like newspaper, email, website and such must continue to be part of our public communication strategy.
- York Water has also used the results to justify investment in 'boosting' services for certain messaging or social media information where it is important to get information to customers and the community.

- The customer survey indicates that the Company's customers in manufactured homes have a higher dissatisfaction rate (15%) than other categories of residential customers across the customer base. As a result, York Water is working to better inform and educate its CSRs related to these communities.
- The results of the survey indicate that only 2.6% of respondents attributed their satisfaction to customer care/responsiveness, which helped form the foundation for the Company deciding to accelerate Customer Service program enhancements.

The above are just a few examples of how York Water has utilized and will continue to utilize the results of the customer survey to inform its service and operations.

Additionally, it should also be noted that strategic planning often requires time to translate feedback into actionable programs. The assertion that no action has yet been taken fails to account for the natural lag between data collection, analysis, leadership onboarding, and program development. The "used and useful" standard should not be interpreted so narrowly as to exclude foundational tools that support future service enhancements. My commitment as the new Vice President of Customer Service to focus on the survey and determine potential actions is a clear indication that the survey results are being taken seriously and will inform future improvements.

Finally, regarding the survey cost, in my prior marketing experience, I have employed firms to do at least three bank awareness surveys to a customer base 20% of the size of York Water, and these costs do not seem unreasonable to me considering the development of the questions and format, distribution of the surveys (including postage), collection of the results, and final data report to management.

E. TRAINING OF EMPLOYEES ON CUSTOMER SERVICE ISSUES

Q. OCA witness Alexander raises a series of allegations and recommendations related to the Company's training of customer service representatives. (OCA St. 5, pp. 23-25.) Before responding to them specifically, could you please provide details on the training that the Company's customer service representatives undergo?

A. York Water's CSRs receive training on a wide range of topics they will encounter when interacting with customers. The training lasts at least two full work weeks (*i.e.*, 80 hours of training) with an experienced CSR, before the new CSR is cleared to work on their own. The training follows a specific order in the Customer Service Representative Resource Manual and includes, but is not limited to: how to navigate the Oracle database, applications and forms, billing and payment agreements, creating work orders, proper collection procedures, Company assistance programs, online bill pay system, telephone system, department norms and expectations, Chapter 56 of the Commission's regulations, and how to respond to customer inquiries in person, via email, and over the phone.

Q. Would you please respond to Ms. Alexander's assertion that "[i]f the Chapter 56 options and requirements are not built into this software system, it is not possible to track compliance or document that the Company has offered these rights"? (OCA St. 5, p. 23)

A. It is unclear what "rights" are being specifically referenced by Ms. Alexander or what her understanding is of how the Company documents its compliance with Chapter 56 and its interactions with customers. Notwithstanding, for the customer rights related to payment arrangements, Protection from Abuse ("PFA") orders, and landlord/tenant situations, York Water's CSRs track and document their interactions as follows:

- Payment Arrangements: All payment arrangements are calculated and set up within the system and are clearly visible on each customer's account by the words "Open Agreement" in the payment arrangement field. Further, the associated payment agreement information contained in the database includes information such as the customer's income, expenses, terms, payment log, activity, correspondence notes, and the agreement itself.

- PFA Orders: If PFA documentation is submitted, the document is attached to the customer's account in the system, as well as stored in a folder on the computer servers. The customer account is also flagged as such for easy visibility.

- Landlord/Tenant Situations: If the property is considered a multi-unit property, it is identified as such in the Company's software system. This drives a specific type of collections process if delinquent. When posting the property, the field team attempts to obtain tenant information, and the tenant accounts are flagged in the system.

Q. Ms. Alexander also avers that "[t]here is no evidence that the current software system can accommodate anything other than preprogrammed payment terms, thus not enabling the required reform to take into account a customer's individual circumstances to negotiate payment plans." (OCA St. 5, p. 23.) Please respond.

A. Although the current software system is limited in this respect, it actually works to the customer's advantage. When taking a PAR application, the CSR takes the individual circumstances of household size and monthly income into consideration. This helps determine the monthly amount a customer is required to pay along with their current balance each month. To the extent Oracle was built with static coding of 60 months related to payment terms, the term is always in favor of the customer. However, I note that the variable term capability will exist in the new business system that will go live in 2026.

Q. Ms. Alexander further claims that the Company's "training materials concerning the obligation to attempt personal contact immediately prior to termination of service . . . do not address or instruct the field service technicians on how to handle personal

contact with the customer or responsible adult prior to termination of service and there is no ability to record the contact and results of the contact if it occurs." (OCA St. 5, pp. 23-24.) Please respond.

A. Field Customer Service Representatives ("FCSRs") are trained to knock on the door to notify a customer of an impending shut-off. If they are not home, the FCSR may note this on the work order. The notice is then posted on the door of the residence or business. York Water is unaware of any information or knowledge of a complaint or an issue that has arisen in the field while following this practice.

Q. Ms. Alexander also alleges that "[t]he only evidence that internal monitoring and compliance is being implemented is a checklist of dates for training but there is no information provided on any process or responsibility for internal monitoring and compliance oversight." (OCA St. 5, p. 24.) Please respond.

A. York Water's Customer Experience Manager monitors calls, reviews emails, and is beginning to conduct quarterly performance metric training for all CSRs. To the extent that she identifies issues, those issues will be addressed quickly and prior to the following quarterly meeting. Also, the checklist of foundational regular training is one dimension of the Company's training program. York Water conducts weekly meetings where new information, current issues, questions, and situational education are provided to the customer service employees. As the Vice President of Customer Service, I also monitor and maintain record of education, training and performance mentoring.

Q. Ms. Alexander further contends that the Company's compliance with the training materials portion of Paragraph 54 of the 2022 Rate Case Settlement has been "incomplete" and that the Company's alleged "incomplete compliance" should be considered in the determination of the reasonable rate of return." (OCA St. 5, pp. 3-4, 12, 25.) She further asserts that "York Water should be required to explain how the Chapter 56 rights that have been identified in its training materials are actually recorded and implemented in its software system." (OCA St. 5, pp. 4, 24.) Please respond.

A. York Water complied with Paragraph 54 of the 2022 Rate Case Settlement by updating training materials and filing them with the Commission. Nothing in Paragraph 54 of the 2022 Rate Case Settlement required York Water to demonstrate "how these training materials have impacted interactions with customers," as Ms. Alexander appears to suggest. (OCA St. 5, pp. 3-4.) Nor were the Company's IT systems required to be upgraded so that "Chapter 56 options and requirements" would be "built into this software system" as opposed to having the Company's training materials updated to provide that relevant training and instruction to its customer service representatives. (OCA St. 5, p. 23.) From my perspective, York Water properly updated its training materials as required under Paragraph 54 the 2022 Rate Case Settlement and that the Company's compliance with Paragraph 54 should be based on the actual language of that provision.

Q. What is your response to Ms. Alexander's recommendation that "York Water should be required to identify the program to ensure ongoing evaluation and auditing of the

call center transactions to ensure compliance with the plain words of the training materials and Chapter 56"? (OCA St. 5, pp. 4, 24-25.)

A. York Water's Customer Service Management monitors call center transactions and has implemented quarterly CSR training based upon call center findings and data and has instituted weekly Customer Service team meetings and trainings. Active management of the Company's Customer Service staff necessarily includes compliance with our Chapter 56 training materials.

III. LOW-INCOME PROGRAMS

Q. Before addressing OCA witness Alexander's allegations, could you please provide an overview of the Company's current low-income programs and its proposed low-income bill discount program?

A. York Water CAP (Customer Assistance Program) offers qualified customers a water usage audit and an on-site visit to verify the existence of a leak. If a leak is found, the Company may enlist a local plumber to make minor plumbing repairs at no cost to the customer in order to reduce excessive water usage. York Water also makes payments more affordable by offering a payment arrangement. In addition, CAP may provide forgiveness for past due amounts up to $120 after receipt of monthly payments.

The York Water CARES program is designed to help low-income customers, but it may be helpful to customers who have a short-term challenge and need assistance to pay their water or wastewater bill. CARES is only available one time per year for a customer who qualifies for the program. Funds are payable to customers through community agencies (Salvation Army and Community Progress Council). If the agency approves the

application, it may make a one-time contribution of up to $200 toward the customer's past due amount, as long as funds are available.

The proposed pilot low-income discount program, if approved, would be in addition to the current programs. Under that pilot program, up to 200 low-income customers would not be billed the fixed residential customer charge, which would save those customers at least $200 each year. Because the low-income customers can reduce the consumption-based portion of their bill through conservation, the focus of the pilot low-income bill discount program is on the fixed charge.

I note that Ms. Alexander provides a similar overview of the Company's CAP and CARES programs on pages 25-26 of her testimony. Although I generally agree with her description of the programs, she does make the following inaccurate statement: "[t]here does not seem to be a requirement that the customer document household income or meet a specific percentage of federal poverty guidelines." In fact, York Water or its partner nonprofit agencies ask each customer for their income level and household size to calculate the percentage of federal poverty level.

Q. OCA witness Alexander avers that "York Water has not conducted any analysis of the sufficiency" of the Company's low-income programs of their "impact on bill payment or bill affordability" and that "[w]hen asked to provide basic information on customer payments as a result of the receipt of the CARES grant, the Company was unable to do so." (OCA St. 5, p. 27.) Please respond.

A. To clarify, this is not a matter of York Water being unable to provide information about customer payments for CARES recipients. In fact, York Water provided balances and

assistance for all of its CARES customers in discovery, specifically in OCA-XVII-10, Attachments 1-6. Rather, the reporting is intentionally straightforward. The grant calculation is simple: the customer's original bill minus a one-time grant of up to $200 results in their adjusted balance. It is important to note that while these grants have provided critical, immediate relief to many customers facing shut-off, they are not designed to serve as long-term financial solutions. The presence or absence of this specific payment information does not reflect the overall sufficiency or impact of the program. Instead, the program's value lies in its ability to offer timely support during moments of acute need and cannot predict future financial hardship.

Q. Ms. Alexander also argues that York Water's "outreach effort" for its CARES and CAP programs "has a limited impact since the currently [sic] program does not allow all qualified customers to obtain assistance." (OCA St. 5, p. 10.) Please respond.

A. The Company recognizes that there is customer demand for its CARES and CAP programs, which is one of the reasons why the Company is proposing an increase in the available funding of its CARES program to $60,000. Further, as noted below, the Company's CAP program has a separate budget, and York Water does not turn away eligible customers when the budget is exhausted. However, I disagree that the Company's outreach impact is "limited," given the Company's track record of using up the available program funding. Further, while the OCA pushes for an increase in the available funding to $100,000, I do not believe that amount would "allow all qualified customers to obtain assistance" either and that the annual funding available for the programs needs to be balanced against the ultimate costs that are passed onto other ratepayers.

Q. Do you agree with Ms. Alexander that York Water complied "[i]n part" with the requirements of Paragraphs 51 and 52 of the 2022 Rate Case Settlement, which dealt with the Company analyzing and proposing a potential bill discount program in this rate case? (OCA St. 5, pp. 10-11, 27-28.)

A. No. The Company is in full compliance with the provisions of the 2022 Rate Case Settlement. As required, the Company conducted an analysis of the estimated costs, potentially eligible customers, and impact on noneligible customers, of a potential bill discount program. The Company met with the parties, including OCA, after this work was completed to review the Customer Income Survey and usage profile results. The Company also proposed a pilot low-income bill discount program in this base rate case filing based on that analysis.

Q. Concerning the Company's proposed pilot low-income bill discount program, Ms. Alexander says that "it is not clear how a new program that will cost $40,000 (or more if any increase in the customer charge is adopted) for 200 low income customers will leave any significant funding for CARES or CAP since those programs have incurred costs of $40,000 annually (and halted enrollment in mid-year) in light of the proposed total budget of $60,000." (OCA St. 5, pp. 29-30.) Please respond.

A. Ms. Alexander is not accurate in her calculations. The proposal in this rate case request is for an increase from $40,000 to $60,000 for the CARES program specifically and an additional $40,000 for the pilot low-income bill discount program. The CAP program is a

separate budget and is simply based on the previous year's spend as a budgeting tool; however, the Company does not turn away qualified CAP recipients when the budget is exhausted. Thus, the pilot program will have no impact on the funding available for CARES or CAP.

Q. Ms. Alexander claims that the CARES program's one-time assistance payment "does not respond to ongoing unaffordability of essential water and sewer services, particularly given the significant rate increase granted in the 2022 base rate case and the additional rate increase proposed in this proceeding." (OCA St. 5, p. 30.) Do you agree?

A. No. The CARES program has been in effect since March 1, 2019, beginning as a pilot program before becoming permanent on March 1, 2023, with an expansion in the amount available to low-income customers. The Company believes it has been an effective program and that there is a benefit to a customer receiving upfront assistance of $200, especially with regards to an arrearage they may be carrying, as opposed to receiving $200 that is spread out over several months. This program was designed to help customers avoid possible shut-off, whereas the bill discount program can help with ongoing affordability. Therefore, the programs can work hand-in-hand to help customers pay down their arrears and current monthly bills.

Q. Do you agree with Ms. Alexander that "the program rule that limits the one-time payment to $200" does not "have any relationship to the customer's arrears balance

or ability to make payments on that balance and ongoing water and wastewater bills"? (OCA St. 5, p. 30.)

A. I respectfully disagree. While Ms. Alexander may feel that a one-time payment seems limited in scope, York Water has found that it can have a meaningful impact in the short term, especially for customers facing immediate shut-off due to unpaid arrears. Preventing disconnection not only stabilizes the customer's situation but also helps avoid a cycle of non-payment that can quickly escalate. York Water also recognizes that there is no single solution that fits every circumstance, which is why the Company is proposing a range of assistance options that complement each other and are designed to assist a variety of payment troubled customers.

Q. Ms. Alexander also asserts that "[t]he lack of any information on how this new program would be implemented to qualified low income customers exacerbates [her] concern" about the proposed pilot low-income discount program. (OCA St. 5, p. 30.) Please respond.

A. If approved by the Commission, York Water will develop materials and take other steps necessary to implement the program. For example, the Company will develop and send marketing materials to low-income customers about the program's availability, including those customers who have participated in CAP and CARES. However, this is an active litigation, and given the pilot program's final scope could change as a result of this proceeding, the Company determined that it would be premature to spend significant time and expense on developing materials and taking other implementation steps for a pilot program that may not be approved in its proposed form or at all.

Q. Could you please summarize Ms. Alexander's recommendation regarding the pilot bill discount program?

A. Instead of the Company's proposal, Ms. Alexander recommends that York Water "implement a bill discount program based on the approach implemented by Community Utilities of Pennsylvania." (OCA St. 5, p. 31.) However, instead of the 35% monthly discount on the rate including both the metered consumption charge and the customer charge under the Community Utilities of Pennsylvania program, Ms. Alexander believes "[a] discount in the range of 25% to 30% would be reasonable based on the information available to [her] at this time." (OCA St. 5, p. 31.)

Additionally, Ms. Alexander recommends that "the Company conduct and submit the analysis required by Paragraph 51 of the 2022 Base Rate Case Settlement and submit a revised full bill discount program with application criteria, estimated enrollment, and estimated implementation and program costs to the parties to this proceeding within 90 days after the issuance of a final order." (OCA St. 5, pp. 31-32.) She states that "[t]his proposal should take into account the Company's analysis of the Census data and usage data previously presented to the OCA and reflected in the discovery response" that she references in her testimony. (OCA St. 5, p. 32.) She also claims that the "revised program should be implemented within six months of a final order in this proceeding." (OCA St. 5, p. 32.)

Furthermore, Ms. Alexander proposes that York Water's "proposed and final program be available for a monthly bill discount or credit during the entire calendar year billing cycle," alleging that this modification "will substantially increase the current

funding level and create a meaningful program that is more typical of investor-owned water utilities in Pennsylvania." (OCA St. 5, p. 32.) Also, Ms. Alexander recommends "a minimum funding level of $100,000 be included in this rate case." (OCA St. 5, p. 32.)

Moreover, Ms. Alexander proposes that the program "include the ongoing collection of key data to evaluate the impact of the final program, including bill payment, arrears, payment plans, collection activities, and input from participating customers about the program's impact on their bill payment ability." (OCA St. 5, p. 32.) She also mentions that "[k]ey metrics should include bill payment behavior, arrears, payment plans, collection activity, and participant feedback." (OCA St. 5, p. 5.) Sher further recommends that "[a] report on the implementation and results of the ongoing analysis of the new program should be submitted as part of the Company's next base rate case filing." (OCA St. 5, p. 32.)

Q. Do you agree with Ms. Alexander's proposal for York Water to submit a revised bill discount program that is based around the Community Utilities of Pennsylvania's bill discount program and her other program parameters and suggestions?

A. No, the Company does not agree with this proposal. The Company recommends the acceptance of its pilot bill discount program as presented in this base rate case. The Company considered the fact that customers already have the ability to change the consumption portion of their bill by modifying their usage. York Water also accounted for the fact that gravity rates are lower than repumped rates, so low-income customers paying gravity rates, such as those in the City of York, are essentially already receiving a bill discount compared to low-income customers paying repumped rates. Furthermore, the

Company's proposal is easier to implement in its billing system, which keeps administrative burden and costs lower.

In addition, the Company notes that Ms. Alexander does not propose a specific bill discount percentage and only claims that something in the range of 25-30% would be reasonable. Ms. Alexander also recommends a minimum funding level of $100,000, which apparently would be spread across CARES and the bill discount program. The Company has already met that recommendation with a recommendation of $60,000 for the CARES program and approximately $40,000 for the bill discount program. Also, the Company has already shown that the costs of a 30% discount program would have been approximately $104,000 in 2024 and $128,000 in 2025, and as Ms. Alexander herself notes, those estimates did not "include other qualified customers who were denied entry into these programs due to the funding limitation." (OCA St. 5, p. 31.) Thus, it is very likely that the OCA's proposed expense allowance would be insufficient to cover the actual expenses associated with its proposal.

Q. Ms. Alexander recommends that "York Water consider the use of shareholder charitable contributions to expand this program and/or target the current CARES program for customers with substantial arrears balances who enter the new discount program." (OCA St. 5, p. 32.) According to her, "the CARES program should be designed to supplement any bill discount program and should have reduced priority for York Water's limited low-income program funding and would be better implemented if funded using shareholder funds." (OCA St. 5, p. 5.) Please respond.

A. To sustain a meaningful and reliable program, York Water continues to support $60,000 funding base to increase the number of customers who can benefit from this program.

Q. Does this conclude your rebuttal testimony?

A. Yes.

GLOSSARY OF TERMS

Company Read – A method to read water meters using a radio frequency signal. The system improves reading efficiency and allows us to get a reading without entering your property.

Customer Charge – A monthly charge that covers our costs for meter reading, billing, equipment maintenance, and other expenses. This charge is the same every month no matter how much water you use.

Due Date – The due date on you bill applies only to this month's charges. You should pay any old balance immediately.

DSIC (Distribution System Improvement Charge) – A surcharge to pay back a loan to the municipality which was to extend water service to your area.

Employee Identification - For your protection, every York Water employee wears or carries photo identification. If someone comes to your door, ask for identification. If you are not sure of the person's identity, call us at 717-845-3601 for verification.

Estimated Bill – When we are unable to get an actual meter reading, we base your bill on your past water use. The next actual meter reading will correct any over or under estimate.

Late Charge – Industrial and Commercial Customers: We add a 1.5% late charge to the overdue amount if you do not pay your bill by the due date. Residential and Public Customers: We add a 1.5% late charge to the overdue amount if you do not pay our bill 30 days after the due date.

Rate Types – Gravity: Rates for water piped directly to you from the Company's reservoirs atop Grantley Hill. Repump: Rates for water taken from the gravity area and piped to pumps before coming to you. Residential, Commercial, Public, Industrial: Rates vary for different types of customers.

Questions

- You may visit our office to review our rate schedule, get an explanation of how to check your bill for accuracy, or question any of the charges on your bill.
- Please contact us with any question or complaint about the bill prior to the due date.

removed 4/3/23 and 4/10/23 from data due to power outage which skewed statistics

*Notes
January 2023 -- start of PA American taking over City of York sewer billing. Caused unusually high volume.
4.6.2023 -- system error; call volume skewed

*Notes
5.21.2024 -- system error; call volume skewed
7.1.2024- system error; call volume skewed; Service line survey emails were sent leading to increase calls
8.2.2024 -- phone system went down and only 2 callers able to receive calls; resolved by lunch same day
October - beginning of mailed service line material letters

*Notes
1.21.2025 Phone wait time was lessened from 10 minutes (issued in Q1 2024) to 8 minutes. Pre- Q1 of 2024, there was no max wait time
5.16.2025 Internet was out for roughly 3.5-4 hours; phones were down as well and later restored. Possible numbers skewed from this
6.24.2025 phone issues; reason for high inbound AND abandoned calls
7.28.2025 phones were down for some time; call log in July may be skewed
8.4.2025 internet issues; might result in phone issues in the log; 8.11.2025 issues again; 8.13.2025 service line survey emails were sent
9.2.2025 internet issues; phone results may occur

OCA-XVII-12 Attachment 1

- **61-PAR** – Payment arrangement request to stop the term notice.
- **APPLICANT/DEPOSITS** – Not disputing balance. Wants PAR to establish service in different name with current balance. Service is on.
- **APPLICANT/DEPOSITS - SERVICE IS OFF (#64)** - Not disputing balance. Wants PAR to establish service in different name with current balance. Service is off.
- **APPLICANT/DEPOSITS - SERVICE IS ON (#28)** – Not disputing balance. Wants PAR to establish service in different name with current balance. Service is on.
- **BILLING DISPUTE** – High bill dispute.
- **BILLING DISPUTE #18 SEWER** – High bill dispute for sewer.
- **BILLING DISPUTE (ACTUAL)** – Disputing accuracy of first bill.
- **CII - CHANGE IN INCOME PAR (#71)** – Change in income, requesting payment arrangement.
- **CII-CHANGE IN CIRCUMSTANCE PAR** – Change in circumstances, requesting payment arrangement.
- **COMMERCIAL PAR** – Payment arrangement request for commercial property.
- **DO NOT SELECT - 61 REJECTS** - Payment arrangement request to stop the term notice.
- **DO NOT SELECT -AUTOMATE CODE #61** – Payment arrangement request. Relief sought.
- **DO NOT SELECT -AUTOMATE CODE #73** – Payment arrangement request. Relief sought.
- **DO NOT SELECT -AUTOMATE CODE #80** – Payment arrangement request. Relief sought.
- **DO NOT SELECT-AUTOMATED CODE** – Payment arrangement request. Relief sought.
- **INCOME DECREASED** – Change in income.
- **Lancaster city- not YWC's complaint** – Complaint submitted to wrong utility. Removed from YWC complaint list.
- **OFF NOW ON** – Service was off. Payment made. Service was restored.
- **OFF NOW ON – 82 ORIGINAL CODE (#96)** – Service is off. No dispute. Payment arrangement needed to restore services.
- **OFF NOW ON - 77 ORIGINAL CODE 95** – Service was off. Payment made. Service was restored but additional payment due.
- **OFF-APPLICANT/DEPOSIT/SVC IS OFF** - Not disputing balance. Wants PAR to establish service in different name with current balance. Service is off.
- **OFF-SVC. IS OFF- DISPUTE (#76)** – Disputing charges. Wants adjusted balance due to water quality.
- **OFF-SVC. IS TERMINATED - DISPUTE #76** – Service terminated for nonpayment.
- **OFF-SVC. IS TERMINATED - DISPUTE #77** – Service was off. Discovered not a YWC customer. Removed from YWC complaint list.

- **OFF-SVC. IS TERMINATED/SUSPENDED** – Unhappy with timing to turn water on after move-in date.
- **ON PAR NEEDED PAWCSEWER** – Payment arrangement request. Challenged straight PAR. PAWC sewer.
- **ON PAR W/DISPUTE** – Customer disputing charges, needs payment arrangement
- **ON PAR W/DISPUTE PAWCSEWER** – Landlord has not made payments for water or PAWC sewer.
- **On - Par Needed (#61) – Wastewater** – Payment arrangement request for sewer.
- **PAR** – Payment arrangement request.
- **PAYMENT AGREEMENT REQUEST** – Payment arrangement request.
- **PEOPLE-DEL. SERVICE** – Scheduling delays, personnel, damages.
- **PEOPLE-DELIVERED SERV. (#58)** – Scheduling delays, personnel, damages.
- **PEOPLE-DELIVERED SERV.** – Scheduling delays, personnel, damages.
- **PFA - ON PAR NEEDED –** Protection from abuse customer. Relief sought. Payment arrangement to maintain service.
- **PFA CUSTOMER: ON PAR NEEDED #83 –** Protection from abuse customer. Relief sought. Payment arrangement to maintain service.
- **PFA Customer: Off - PAR Needed - #85** - Protection from abuse customer. Relief sought. PUC Payment arrangement to restore service.
- **PFA CUSTOMER-ON PAR–** Protection from abuse customer. Relief sought. Payment arrangement to maintain service.
- **RATE PROTEST-REFERRED TO SEC BUR.** – Rate disputes not handled at informal level.
- **SCIC PAR** – Significant Change in Circumstance.
- **SCIC #66** - Significant Change in Circumstance.
- **SEWER ON-PAR** – Payment arrangement request to keep sewer service on.
- **SEWER- BILLING DISPUTE** – High bill dispute for sewer.
- **SERVICE (CO FACILITIES) PAWCSEWER** – Service complaint in PAWC wastewater territory.
- **SERVICE (CO. FACILITIES)** – Service complaint re: water pressure.
- **SERVICE (CO. FACILITIES) (#48)** – Service complaint re: water pressure.
- **SERVICE FACILITIES** – Dispute placement of meter.
- **SERVICE FACILITIES #48** – Service complaint re: water pressure.
- **SGT SEWER - STRAIGHT OFF** – Not disputing balance. Wants PAR to restore service.
- **STRAIGHT OFF-SVC TERMINATED** – Not disputing balance. Wants PAR to restore service.
- **STRAIGHT OFF-SVC TERMINATED (#82)** – Not disputing balance. Wants PAR to restore service.

York Water Company, R-2025-3053442, R-2025-3053573

York Interrogatories to the Office of Consumer Advocate
Set II

33. OCA St. 5 at 15. Ms. Alexander states that the Company's "performance is significantly below what is reported by Pennsylvania gas and electric utilities, where the typical performance is to answer 80% of the calls within 30 seconds with an abandonment rate at or below 4%." Does Ms. Alexander have data on the "typical performance" of water or wastewater utilities in Pennsylvania regarding their percentage of calls answered within 30 seconds, their call abandonment rate, or both? If so:
    a. Please provide that data, including all Documents, studies, and workpapers relied upon by Ms. Alexander to derive that data.
    b. Please explain why Ms. Alexander used the gas and electric utilities for this comparison as opposed to the water or wastewater utilities.

Response

a. Ms. Alexander's statement relies on the published data by the Commission in the annual Customer Service Performance reports that does include information on the performance of Pennsylvania's electric and gas utilities but does not include information on call center performance by water and wastewater utilities.
b. See above for response to (a). Ms. Alexander has testified and evaluated the call center performance for Pennsylvania water and wastewater utilities in recent base rate cases for Aqua Pennsylvania, Pennsylvania American Water, and Pittsburgh Water. In each of her recommendations she has proposed service quality performance standards as a condition of any increase in base rates that reflect performance similar to those reported by the electric and gas utilities. Ms. Alexander attached a list of all her testimony and publications to her testimony as Exhibit BA-1, which may also be reviewed for further understanding.

York Interrogatories to the Office of Consumer Advocate
Set II

34. OCA St. 5 at 16. Ms. Alexander claims: "consistent abandonment rates (with best practice being lower) are critical for maintaining customer satisfaction, operational efficiency, agent morale, and business performance. Dramatic swings in abandonment rate usually signal that something's wrong in call forecasting, staffing, and/or system design, and need immediate attention. High abandonment rates mean that customers have not been able to reach a representative to conduct matters reflecting their monopoly utility service, including responding to a notice of termination, a billing error, or a service deficiency." Please provide all Documents, studies, and workpapers relied upon by Ms. Alexander in making these statements.

Response

Ms. Alexander's statements reflect her long standing and well documented expertise on evaluating and opining on utility call center performance results as reflected in her testimony listed in Exhibit BA-1. Furthermore, her statements reflect the Commission's requirement that electric and gas utilities provide call center performance data that requires both the percentage of calls answered within 30 seconds, the busy out rate, and the abandonment rate. As stated in the most recent report:

> In order to produce an accurate picture of telephone access, the companies must report three separate measures of telephone access: 1) average busy-out rate; 2) call abandonment rate; and 3) percent of calls answered within 30 seconds. Requiring three separate measures averts the possibility of masking telephone access problems by presenting only one or two parts of the total access picture. For example, a company could report that it answers every call in 30 seconds or less. If this were the only statistic available, one might conclude that access to the company is very good. However, if there are only a few trunk lines into this company's call distribution system, other callers attempting to contact the company will receive a busy signal once these trunks are at capacity. The callers that get through wait 30 seconds or less for someone to answer, but a large percentage of customers cannot get through to the company, calling into question the company's quality of performance in telephone access. Therefore, it is important to look at both percent of calls answered within 30 seconds and busy-out rates to get a clearer picture of telephone access to the EDC or NGDC.

The third measurement, call abandonment rate, indicates how many customers drop out of the queue of customers waiting to talk to a company representative. A high call abandonment rate is most likely an indication that the length of the wait to speak to a company representative is too long. Statistics on call abandonment are often inversely related to statistics measuring calls answered within 30 seconds. For the most part, the companies answering a high percent of calls within 30 seconds have low call abandonment rates, and those answering a lower percent of calls within 30 seconds have higher call abandonment rates. The 2021-2023 EDC figures presented later in this report conform to the inverse relationship. In addition, the 2021-2023 data reported by the NGDCs, for the most part, conforms to this relationship.

Office of Consumer Advocate
Interrogatories Set III

OFFICE OF CONSUMER ADVOCATE INTERROGATORY OCA SET III, NO. 18

Has the Company conducted any analysis or root cause evaluation of "unjustified" complaints and 'verified infractions" since January 2022? If so, provide such documentation and results.

RESPONDENT:

Suzanne M. Becker
VP of Customer Service

DATE:

July 2, 2025

RESPONSE:

The Company does not perform an individual root cause analysis for each "unjustified complaint" or "verified infraction." The Company evaluates the allegations raised in the disputes and complaints on a case-by-case basis. Pursuant to Paragraph 55 of the 2022 Base Rate Case Settlement approved by the PUC, York Water maintains its database that documents all customer disputes, formal complaints, and informal complaints. York Water reviews that database to identify any trends in the types of issues being raised in the disputes or complaints, so that the Company can take appropriate action if necessary. However, the Company does not perform a formal root cause analysis.

Office of Consumer Advocate
Interrogatories Set III

OFFICE OF CONSUMER ADVOCATE INTERROGATORY OCA SET III, NO. 2

Provide the internal training documents currently in effect by the Company to (1) respond to customer communications on high usage or leaks; (2) bill payment options; (3) negotiation of payment plans; (4) solicitation of household income information and qualifications for protections of domestic abuse policies; and (5) response to customers who dispute or complain about the utility's bills, customer service, reliability of service, and ability to access the customer call center.

RESPONDENT:

Suzanne M. Becker
VP of Customer Service

DATE:

July 2, 2025

RESPONSE:

See **OCA-III-2 Attachment 1** for a copy of the updated CSR Resource Manual that was filed with the PUC pursuant to the Settlement in the 2022 Rate Case.

Various pages throughout the CSR Resource Manual provide training on various ways to set up, find, adjust bill payment options (see, e.g. Section 6 of the manual). In addition, bill payment options are explained and visible in day-to-day operations. The Company website (https://www.yorkwater.com/customer-service/pay-my-bill/) and payment portal explain the options for payment (https://ipn.paymentus.com/cp/yrkw). Additionally, employees at the call center encounter walk-in payments via cash, check, and credit/debit cards.

See Sections 5 and 6 of the CSR Resource Manual for training information for payment plans.

See Section 9(f) of the CSR Resource Manual for training information on protection from abuse orders.

Pennsylvania Public Utility Commission
v.
The York Water Company
Docket Nos. R-2025-3053442(W) & R-2025-3053573(WW)

Office of Consumer Advocate
Interrogatories Set III

The Company website details the Customer Rights, which includes initiating a dispute. Additionally, employees know the phone number to advise customers where to file a complaint with the PUC. Invoices issued by the Company advise of the main office contact information and location to speak to someone directly about questions, complaints, and/or their bill. A redesigned invoice, which should be available by end of 2025, will also clearly list the PUC contact information for the customer.

Docket Nos. R-2025-3053442(W) & R-2025-3053573(WW)

Office of Consumer Advocate
Interrogatories Set XIX

OFFICE OF CONSUMER ADVOCATE INTERROGATORY OCA SET XIX, NO. 5

Please refer to Attorney Devin Ryan's email sent to the ALJs and Attorneys of Record on or about Tuesday, 7/29/25, at 11:28 a.m. with the subject line: "RE: Public Input Hearing notice draft - York Water Company Water Division and Wastewater Division Base Rate Cases, R-2025-3053442, R-2025-3053573." Please explain why the Company is unable to "use its electronic billing system to distribute the public input hearing notice at this time."

RESPONDENT:

Suzanne M. Becker
VP of Customer Service

DATE:

August 1, 2025

RESPONSE:

York Water cannot feasibly provide notice of the public input hearings through its electronic billing system because doing so would require more than 6 weeks of lead time, and the public input hearings are scheduled to be held on August 26-27, 2025. Moreover, only 20% of the Company's customers are registered to receive electronic invoices. Therefore, the Company is unable to distribute a notification to all its customers through the electronic billing system.

I. INTRODUCTION, PURPOSE AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dylan W. D'Ascendis. My business address is 1820 Chapel Ave., W., Suite 300, Cherry Hill, N.J. 08003.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Partner at ScottMadden, Inc.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING?

A. I am submitting this rebuttal testimony (referred to throughout as my "Rebuttal Testimony") before the Pennsylvania Public Utility Commission ("PA PUC" or the "Commission") on behalf of The York Water Company ("York Water" or the "Company").

Q. ARE YOU THE SAME DYLAN W. D'ASCENDIS WHO PROVIDED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes, I am.

Q. WHAT IS THE PURPOSE OF THIS REBUTTAL TESTIMONY?

A. The purpose of my Rebuttal Testimony is two-fold. First, I update the analyses in my Direct Testimony to reflect current data. Second, I address certain aspects of the direct testimonies of Mr. Drew Breuning, witness for the PA PUC's Bureau of Investigation and Enforcement ("I&E") and Mr. David J. Garrett, witness for the Pennsylvania Office of Consumer Advocate ("OCA") (collectively referred to as the "Opposing Witnesses") as they pertain to the Company's allowed capital structure and cost of capital, which the Company should have the opportunity to earn on its authorized jurisdictional rate base.

Q. PLEASE SUMMARIZE THE KEY ISSUES AND RECOMMENDATIONS OFFERED BY THE OPPOSING WITNESSES THAT YOU ADDRESS IN YOUR REBUTTAL TESTIMONY.

A. Due to the passage of time since my Direct Testimony analysis (which included data as of April 1, 2025), I have updated my analysis using data as of August 15, 2025. Based on these updated analyses, the reasonable range of ROEs attributable to the Company is from 9.76% to 12.01%. Given this range, my recommended ROE for the Company of 10.90% continues to be reasonable. Conversely, recommended ROEs of 9.42% (Mr. Breuning), and 8.90% (Mr. Garrett) are inadequate at this time.

My Rebuttal Testimony also responds to substantive recommendations offered by the Opposing Witnesses in their direct testimonies. Regarding Mr. Breuning's direct testimony, I vigorously disagree with his sole reliance on his Discounted Cash Flow ("DCF") model results for his recommendation ROE recommendation, as well as certain inputs to his Capital Asset Pricing Model ("CAPM"). I will also address why the Company's small size and management performance adjustments should continue to be considered by the Commission when determining their ROEs, in addition to a flotation cost adjustment.

Regarding Mr. Garrett's direct testimony, I will discuss my disagreement with several inputs Mr. Garrett uses in his analysis that serve to understate his recommended ROE. For example, I disagree with Mr. Garrett's use of the sustainable growth version of the DCF model and his application of the CAPM. Like Mr. Breuning, Mr. Garrett also failed to recognize the greater risk faced by York Water relative to the proxy group.

My Rebuttal Testimony discusses these factors and others in detail. My Rebuttal Testimony also addresses the unfounded critiques of my Direct Testimony.

Q. HAVE YOU PREPARED ANY SCHEDULES IN SUPPORT OF YOUR REBUTTAL TESTIMONY?

A. Yes. I have prepared Schedules DWD-1R through DWD-12R, which have been prepared by me or under my direct supervision.

Q. HOW IS THE REMAINDER OF YOUR REBUTTAL TESTIMONY ORGANIZED?

A. The remainder of my Rebuttal Testimony is organized as follows:

- Section II – Presents my updated analysis;
- Section III – Contains my response to Mr. Breuning;
- Section IV – Contains my response to Mr. Garrett; and
- Section VI – Summarizes my conclusions and recommendations.

II. UPDATED ANALYSIS

Q. HAVE YOU UPDATED YOUR COST OF COMMON EQUITY ANALYES?

A. Yes, I have. Due to the passage of time since my Direct Testimony analysis (which included data as of April 1, 2025), I have updated my analysis using data as of August 15, 2025.

Q. HAVE YOU APPLIED ANY OF YOUR ROE MODELS DIFFERENTLY IN YOUR UPDATED ANALYSES?

A. No, I have not.

Q. HAVE YOU UPDATED YOUR UTILITY PROXY GROUP IN YOUR UPDATED ANALYSES?

A. Yes, I have. My third selection criteria specifies that a company must not be party to a

major merger or acquisition activity.[1] On July 7, 2025, H20 America ("HTO", formerly known as SJW Group during the preparation of my Direct Testimony) announced the acquisition of approximately $540 million of water and wastewater assets from Quadvest.[2] As this represents a significant transaction, I have removed HTO from my Utility Proxy Group.

Without HTO, the Utility Proxy Group would only have five proxy companies. To ensure the Utility Proxy Group remains sufficiently robust, I have expanded my first selection criteria to also consider companies included in *Value Line's Small and Mid-Cap Edition*. As a result, I now include Global Water Resources, Inc. ("GWRS") in my Utility Proxy Group.

Q. PLEASE SUMMARIZE YOUR UPDATED COST OF COMMON EQUITY RESULTS BASED ON YOUR UPDATED ANALYSES.

A. Using data as of August 15, 2025, my updated results are presented in page 2 of Schedule DWD-1R, and in Table 1, below.

[1] D'Ascendis Direct Testimony, at 13.
[2] H2O America Press Release dated July 8, 2025.

Table 1: Summary of Updated Common Equity Rate

Discounted Cash Flow Model	9.24%
Risk Premium Model	10.75%
Capital Asset Pricing Model	10.18%
Cost of Equity Models Applied to Comparable Risk, Non-Price Regulated Companies	11.49%
Indicated Range of Common Equity Cost Rates Before Adjustments	9.24% - 11.49%
Business Risk Adjustment	0.15%
Flotation Cost Adjustment	0.12%
Performance Factor Adjustment	0.25%
Indicated Range of Common Equity Cost Rates After Adjustments	9.76% - 12.01%
Recommended Cost of Common Equity	10.90%

In view of the unadjusted and adjusted ranges of ROEs, I maintain my original recommendation of 10.90% for the Company.

III. RESPONSE TO I&E WITNESS BREUNING

Q. PLEASE SUMMARIZE MR. BREUNING'S RECOMMENDATIONS REGARDING THE OVERALL COST OF CAPITAL FOR THE COMPANY.

A. Mr. Breuning accepts York Water's requested capital structure and cost of long-term debt.[3] Regarding the appropriate ROE for the Company, Mr. Breuning recommends a 9.42% ROE based on his DCF results.[4]

Q. DO YOU HAVE ANY PRELIMINARY COMMENTS ON MR. BREUNING'S FINDINGS?

A. Yes, I do. While Mr. Breuning accepts York Water's requested capital structure, he notes

[3] Breuning Direct Testimony, at 12, 16.
[4] Breuning Direct Testimony, at 30.

that the "equity heavy capital structure must be recognized when considering York's financial risk profile as higher equity ratios generally correspond with lower financial risk."[5] As discussed in my Direct Testimony,[6] as well as in detail below in response to Mr. Garrett, the Company's requested capital structure is comparable to the Utility Proxy Group.

In addition, bond ratings represent the combined business and financial risk (total risk) of an entity, other than size.[7] As shown on page 14 of Schedule DWD-1R, York Water is not rated by Moody's but is rated A- by S&P, which is lower (i.e,, riskier) than the Utility Proxy Group average S&P rating of A. If anything, an upwards risk adjustment should be considered based on York Water's total risk compared to that of the Utility Proxy Group. As a result of the foregoing, Mr. Breuning's comment lacks merit.

Q. WHAT CONCERNS DO YOU HAVE WITH MR. BREUNING'S CONCLUSIONS AND RESULTS?

A. I have concerns with: (1) his exclusive reliance on the results of his DCF model for his recommendation; (2) his application of the CAPM; (3) his failure to reflect the unique business risk of the Company; (4) his failure to reflect flotation costs incurred by the Company; and (5) his failure to consider a performance factor adjustment.

[5] Breuning Direct Testimony, at 13.
[6] D'Ascendis Direct Testimony, at 16.
[7] *See*, D'Ascendis Direct Testimony at 11-2.

A. Exclusive Reliance on DCF Model Results

Q. DO YOU HAVE A GENERAL COMMENT ON MR. BREUNING'S INDICATED ROE BEFORE ADJUSTMENT?

A. Yes, I do. Mr. Breuning's indicated ROE of 9.42% for York Water is inadequate because he places exclusive weight on his DCF model results.

Q. WHAT WOULD MR. BREUNING'S INDICATED ROE BE IF HE AVERAGED HIS DCF MODEL AND CAPM RESULTS?

A. Averaging Mr. Breuning's DCF result of 9.42% with his CAPM result of 10.34% results in an indicated ROE of 9.88%, which is below my recommended ROE, but within my recommended range of ROEs. After adding adjustments for business risk, flotation costs, and performance factors, Mr. Breuning's indicated ROE would be 10.40%. Further, Mr. Breuning's CAPM result is an average of two calculations, one of which, as I explain later, relies upon an opaque market risk premium ("MRP") (Kroll) that produces a result that is over 170 basis points lower than Mr. Breuning's more traditionally calculated CAPM. [8]

Q. DOES MR. BREUNING EXPLAIN WHY HE EXCLUSIVELY RELIES ON HIS DCF MODEL RESULTS?

A. Yes, he does. Despite conceding that four ROE models are commonly considered to estimate the ROE (the DCF, the CAPM, the Risk Premium Model ("RPM"), and the Comparable Earnings Model ("CEM")),[9] he does not rely on the other models for various reasons.

[8] Performing the same calculation but eliminating Mr. Breuning's flawed CAPM based on the Kroll ERP, results in an ROE of 10.83%.

[9] Breuning Direct Testimony, at 17-19.

Regarding the CAPM, Mr. Breuning opines that the CAPM is far less responsive to changes in the industry. Mr. Breuning also argues that: (1) the indicated ROE is only company-specific because of the use of the Beta coefficient ("beta"); (2) the model is historical in nature because beta is calculated using historical returns; and (3) empirical analysis by Fama and French show that the relationship between predicted return and actual return is poor.[10]

Mr. Breuning excludes the RPM from his analysis because he claims that it is a simplified version of the CAPM**,** and subject to similar faults**,** in addition to not reflecting company-specific risks through the use of beta.[11]

Finally, Mr. Breuning omits a CEM analysis because the choice of comparable companies is highly subjective, and he does not believe that historical accounting returns are representative of future accounting returns.[12]

Q. DO YOU AGREE WITH MR. BREUNING'S REASONS FOR OMITTING THE CAPM, RPM, AND CEM FROM HIS ANALYSIS?

A. No, I do not.

Q. PLEASE RESPOND TO MR. BREUNING'S COMMENTS REGARDING THE CAPM'S RESPONSIVENESS TO CHANGES IN THE INDUSTRY.

A. Regarding Mr. Breuning's claim that the CAPM is far less responsive to changes in the industry, I disagree and so does the Commission. In a recent Order concerning Aqua Pennsylvania, Inc. ("Aqua"), the Commission stated the following about the CAPM's ability to reflect changing market conditions better than the DCF:

> We are persuaded by the arguments of Aqua that the ALJ erred by concluding I&E used its DCF and CAPM results to determine Aqua's ROE.

[10] Breuning Direct Testimony, at 21-23.
[11] Breuning Direct Testimony, at 23.
[12] Breuning Direct Testimony, at 24.

> In this regard, we note that although I&E did use its CAPM as a comparison to its DCF result, it made no CAPM based adjustment to its final ROE recommendation. I&E M.B. at 47. As Aqua points out, infra, the U.S. economy is currently in a period of high inflation. To help control rising inflation, the Federal Open Market Committee has signaled that it is ending its policies designed to maintain low interest rates. Aqua Exc. at 9. *Because the DCF model does not directly account for interest rates, consequently, it is slow to respond to interest rate changes. However, I&E's CAPM model uses forecasted yields on ten-year Treasury bonds, and accordingly, its methodology captures forward looking changes in interest rates.* [13]

Clearly, the Commission recognizes the importance of the CAPM and its ability to account for market changes such as those occurring currently.

Q. DO YOU AGREE WITH MR. BREUNING'S CLAIM THAT A FAULT OF THE CAPM IS THAT ITS INPUTS ARE EASILY MANIPULATED?

A. No, I do not. All ROE models are only as good as their inputs, and all ROE models can be easily manipulated by changing those inputs. For example, the DCF model has a number of inputs and variations of inputs that can drastically alter results as shown on Table 2:

Table 2: Various Inputs to DCF Models

Input	Variations of Inputs
Cash Flow Stream	Constant-Growth, Blended Growth, Multi-Stage Growth
Dividend Yield	Spot dividend yield, average dividend yield
Adjusted Dividend Yield	No adjustment, ½ g adjustment, full g adjustment, projected dividend
Growth Rates	Historical v. Projected v. Sustainable
Growth Measure	Earnings Per Share ("EPS"), Dividends Per Share ("DPS"), Book Value Per Share ("BVPS")
Sources of Growth Rates	*Value Line*, Zacks, Yahoo, MorningStar, etc.

[13] *Pa. PUC v. Aqua Pennsylvania, Inc.*, Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 154-155 (Order entered May 16, 2022) (emphasis added).

Q. DO YOU AGREE THAT BETAS USED IN THE CAPM ANALYSIS ARE HISTORICAL IN NATURE?

A. I do not agree that the adjusted betas used in Mr. Breuning's and my CAPM analyses are historical in nature. While I agree that unadjusted or "raw" betas are historical in nature, the Blume adjustment recognizes that over time betas will regress to the market mean, or 1.0. This makes the betas used in Mr. Breuning's and my CAPM analyses prospective in nature.

Q. PLEASE EXPAND ON THE EXPECTATIONAL NATURE OF ADJUSTED BETAS.

A. Betas are measured using an Ordinary Least Squares ("OLS") regression, in which the dependent variable is the return of the subject security, and the independent variable is the return on the market as measured by a given index (*Value Line*, for example, uses the New York Stock Exchange Index). Beta is represented by the slope term of the regression estimates. Intuitively, beta measures the change in the subject company's returns relative to the change in the market return.

The resulting beta is considered "raw" or unadjusted. Unadjusted betas are historical in nature, as they use historical market data. Blume studied the stability of beta over time and found that "[n]o economic variable including the beta coefficient is constant over time."[14] Consistent with that finding, Blume observed a tendency of raw betas to change gradually over time. Blume further stated:

> …there is obviously some tendency for the estimated values of the risk parameter [beta] to change gradually over time. This tendency is most pronounced in the lowest risk portfolios, for which the estimated risk in the second period is invariably higher than that estimated in the first period. There is some tendency for the high risk portfolios to have lower estimated

[14] Marshal E. Blume, "On the Assessment of Risk", *The Journal of Finance*, Vol. XXVI, No. 1, March 1971.

> risk coefficients in the second period than in those estimated in the first. Therefore, the estimated values of the risk coefficients in one period are biased assessments of the <u>future values</u>, and furthermore the values of the risk coefficients as measured by the estimates of β_1 tend to regress towards the means with this tendency stronger for the lower risk portfolios than the higher risk portfolios.[15]

Blume proposed a correction for this tendency, also known as "regression bias," which is inherent in the calculation of all betas. He stated:

> In so far as the rate of regression towards the mean is stationary over time, one can in principle correct for this tendency in forming one's assessments.
>
> * * *
>
> For individual securities as well as portfolios of two or more securities, the assessments adjusted for the historical rate of regression are more accurate than the unadjusted or naïve assessments. Thus, an improvement in the accuracy of one's assessments of risk can be obtained by adjusting for the historical rate of regression even though the rate of regression over time is not strictly stationary.[16]

Based on Blume's results, the typical adjustment is calculated based upon an approximate of the following formula:

$$\beta_{adjusted} = 0.35 + .67x\beta_{raw\ (unadjusted)}$$

This adjustment transforms the historical unadjusted beta into an expectational value, consistent with the expectational nature of the cost of capital.

As noted by Morin[17]:

> Several authors have investigated the regression tendency of beta and generally reached similar conclusions [as Blume]. High-beta portfolios have tended to decline over time toward unity, while low-beta portfolios have tended to increase over time toward unity…He demonstrated that the

17 Roger A. Morin has taught as the Distinguished Professor of Finance for Regulated Industry at the Center for the Study of Regulated Industry at Georgia State University, the Wharton School of Finance at the University of Pennsylvania, the Amos Tuck School of Business at Dartmouth College, Drexel University, and McGill University, among others. He has authored or co-authored articles published in academic journals on the subject of finance, including The Journal of Finance, The Journal of Business Administration, and International Management Review.

> Value Line adjustment procedure anticipated differences between past and future betas.[18]

Morin further notes:

> A comprehensive study of beta measurement methodology by Kryzanowski and Jalilvand (1983) concludes that raw unadjusted beta (OLS beta) is one of the poorest beta predictors, and is outperformed by the Blume-style Bayesian beta approach. Gombola and Kahl (1990) examine the time-series properties of utility betas and find strong support for the application of adjustment procedures such as the Value Line and Bloomberg procedures.
>
> ***
>
> Because of this observed regressive tendency, a company's raw unadjusted beta is not the appropriate measure of market risk to use. Current stock prices reflect expected risk, that is, expected beta, rather than historical risk or historical beta. Historical betas, whether raw or adjusted, are only surrogates for expected beta. The best of the two surrogates is adjusted beta.[19]

Morin also provides economic and statistical justification for using adjusted betas to estimate the cost of equity for utilities. Relative to economic justification, he states:

> Adjusted betas compensate for the tendency of regulated utilities to be extra interest-sensitive relative to industrials.(footnote omitted) In the same way that bondholders get compensated for inflation through an inflation premium in the interest rate, utility shareholders receive compensation for inflation through an inflation premium in the allowed rate of return. Thus, utility company returns are sensitive to fluctuations in interest rates. Conventional betas do not capture this extra sensitivity to interest rates. This is because the market index typically used in estimating betas is a stock-only index, such as the S&P 500. A focus on stocks alone distorts the betas of regulated companies. The true risk of regulated utilities relative to other companies is understated because when interest rates change, the stocks of regulated companies react in the same way as bonds do. A nominal interest rate on the face value of a bond offers the same pattern of future cash flows as a nominal return applied on a book value rate base. Empirical studies of utility returns confirm that betas are higher when calculated in a way that captures interest rate sensitivity. *The use of adjusted betas compensates for the interest sensitivity of regulated companies.* (*italics added for emphasis)*[20]

[18] Roger A. Morin, Modern Regulatory Finance, Public Utilities Reports, Inc., 2021, at 81. ("Morin").
[19] Morin at 81-82.
[20] Morin at 82.

Relative to statistical justification, Morin states:

> There is a statistical justification for the use of adjusted betas as well. High-estimated betas will tend to have positive error (overestimated) and low-estimated betas will tend to have negative error (underestimated). Therefore, it is necessary to squash the estimated betas in toward 1.00. One way to accomplish this is by measuring the extent to which estimated betas tend to regress toward the mean over time. As a result of this beta drift, several commercial beta producers adjust their forecasted betas toward 1.00 in an effort to improve their forecasts. This adjustment, which is commonly performed by investment services such as Value Line, and Bloomberg, uses the formula:
>
> $$\beta_{adjusted} = 1.0 + a(\beta_{raw} - 1.0) \quad (4-3)$$
>
> where "a" is an estimate of the extent to which estimated betas regress toward the mean based on past data. Value Line and Bloomberg betas are adjusted for their long-term tendency to regress toward 1.0 by giving approximately 66% weight to the measured beta and approximately 34% weight to the prior value of 1.0 for each stock, that is, a = 0.66 in the above equation:
>
> $$\beta_{\text{adjusted}} = 1.0 + 0.66\,(\beta_{\text{raw}} - 1.0)$$
>
> $$= 0.33 + 0.66\,\beta_{\text{raw}} \quad (4\text{-}4)$$ [21]
>
> Given the evidence presented above, adjusted betas are expectational in nature, not historical.

Q. DO YOU AGREE WITH FAMA AND FRENCH'S RESEARCH ON THE CAPM AS IT PERTAINS TO THE EMPIRICAL FINDING THAT THE SECURITY MARKET LINE IS NOT AS STEEP AS IT IS PREDICTED BY BETA?

A. I agree with the empirical findings of Fama and French regarding the difference between projected returns as estimated by the CAPM and actual returns. As will be discussed below, that is the reason why the Empirical CAPM ("ECAPM") should be used in

[21] Morin at 82-83.

conjunction with the traditional CAPM in ROE analyses. In view of the above, Mr. Breuning's concerns regarding the CAPM should be dismissed by the Commission.

Q. IS YOUR RPM ANALYSIS A SIMPLIFIED VERSION OF THE CAPM AND NOT COMPANY-SPECIFIC?

A. No, it is not. My beta-derived equity risk premium RPM analysis applies beta to the indicated equity risk premium to create a proxy group-specific equity risk premium.[22]

In view of the above, my RPM analysis should be considered by the Commission in approving an ROE for the Company.

Q. IS YOUR CEM ANALYSIS CONSISTENT WITH MR. BREUNING'S DESCRIPTION?

A. No, it is not. The selection criteria for my Non-Price Regulated Proxy Group is not subjective in nature, as it is based on ranges of two measures of risk: (1) the unadjusted beta of the Utility Proxy Group, which measures systematic, or market risk; and (2) the standard error of the regression, which gave rise to those betas, measuring non-systematic or diversifiable risk. Systematic plus non-systematic risk is one definition of total risk.[23] This is agreed upon by Mr. Breuning, who states in his testimony: "two types of risk are associated with a stock: (1) firm-specific risk (unsystematic risk); and (2) market risk (systematic risk), which is measured by a firm's beta."[24]

Each company I selected for my Non-Price Regulated Proxy Group was required to have an unadjusted beta (a measure of systematic risk) and a standard error of the regression (a measure of unsystematic risk) within the ranges generated by my proxy group, as explained in pages 37 and 38 of my Direct Testimony and on Schedule DWD-6.

---

22 D'Ascendis Direct Testimony at 28-29, and Schedule DWD-4.
23 Business risk plus financial risk is a second definition of total risk.
24 Breuning Direct Testimony, at 18.

Business and financial risks may vary between companies and proxy groups, but if the collective average betas and standard errors of the regression of the group are similar, then the total, or aggregate, non-diversifiable market risks and diversifiable risks are similar, as noted in "Comparable Earnings: New Life for an Old Precept" provided in Schedule DWD-2R. Thus, because the non-price regulated companies are selected based on analyses of market data, they are comparable in total risk (even though individual risks may vary) to my Utility Proxy Group. This is demonstrated clearly on page 273 of Jack C. Francis' Investments: Analysis and Management (page 3 of Schedule DWD-3R), which shows that total risk can be "partitioned into its systematic and unsystematic components." Essentially, companies that have similar betas and standard errors of regression have similar total investment risk.

Lastly, I apply the DCF, CAPM, and RPM to my Non-Price Regulated Proxy Group, which is an apples-to-apples comparison of the investor-required return for non-regulated companies similar in total risk, which makes Mr. Breuning's second concern regarding the CEM moot.

Q. HAVE YOU USED OTHER MEASURES OF TOTAL RISK TO COMPARE YOUR UTILITY PROXY GROUP AND YOUR NON-PRICE REGULATED PROXY GROUP?

A. Yes, I have. I compared the average and median *Value Line* Safety Ranking, the annualized volatility of stock returns, and the Coefficient of Variation ("CoV")[25] of net profit for the Utility Proxy Group and Non-Price Regulated Proxy Group, as shown on Table 3, below:

[25] The CoV, which is a measure of relative volatility, equals the standard deviation divided by the average.

Table 3: Comparison of Safety Rankings, CoV of Net Profit, and Annualized Volatility of Mr. D'Ascendis' Utility Proxy Groups and Non-Price Regulated Proxy Groups

Group	Average Safety Ranking	Median Safety Ranking	Median CoV Net Profit	Median Annualized Volatility
Utility Proxy Group	2.17	2.00	0.21	23.58%
Non-Price Regulated Proxy Group	2.29	2.00	0.20	25.42%

As shown, the Safety Rankings, annualized volatility of their stock returns, and CoV of net profit of the Utility Proxy Groups and the Non-Price Regulated Proxy Groups are comparable, indicating comparable total risk. This, in addition to all of the above, should lead the Commission to consider the results of my Non-Price Regulated Proxy Group as another measure of the Company's ROE in this proceeding.

Q. MR. BREUNING DOES NOT REVEAL ANY OF THE CONCERNS REGARDING THE DCF MODEL IN HIS DIRECT TESTIMONY. WHY IS PRIMARY RELIANCE ON THE DCF MODEL GENERALLY PROBLEMATIC?

A. Traditional rate base / rate of return regulation, where a market-based common equity cost rate is applied to a book value rate base, presumes that the market-to-book ("M/B") ratios are at unity or 1.00. However, that is rarely the case. Morin states:

> The third and perhaps most important reason for caution and skepticism is that application of the DCF model produces estimates of common equity cost that are consistent with investors' expected return only when stock price and book value are reasonably similar, that is, when the M/B is close to unity. As shown below, application of the standard DCF model to utility stocks understates the investor's expected return when the M/B ratio of a given stock exceeds unity. This was particularly relevant in the capital market environment of the early 2020s when utility stocks are trading at M/B ratios well above unity and have been for nearly two decades. The converse is also true, that is, the DCF model overstates the investor's return when the stock's M/B ratio is less than unity. The reason for the distortion is that the DCF market return is applied to a book value rate base by the

regulator, that is, a utility's earnings are limited to earnings on a book value rate base[26].

As Morin explains, DCF models assume an M/B ratio of 1.0 and therefore under- or over-states investors' required return when market value exceeds or is less than book value, respectively. It does so because equity investors evaluate and receive their returns on the market value of a utility's common equity, whereas regulators authorize returns on the book value of common equity. This means that the market-based DCF will produce the total annual dollar return expected by investors, only when market and book values of common equity are equal, a very rare and unlikely situation.

Q. WHY DO MARKET AND BOOK VALUES DIVERGE?

A. Market values can diverge from book values for a myriad of reasons including, but not limited to, EPS and DPS expectations, merger / acquisition expectations, interest rates, etc. As noted by Phillips:

> Many question the assumption that market price should equal book value, believing that 'the earnings of utilities should be sufficiently high to achieve market-to-book ratios which are consistent with those prevailing for stocks of unregulated companies.[27]

In addition, Bonbright states:

> In the first place, commissions cannot forecast, except within wide limits, the effect their rate orders will have on the market prices of the stocks of the companies they regulate. In the second place, *whatever the initial market prices may be, they are sure to change not only with the changing prospects for earnings, but with the changing outlook of an inherently volatile stock market*. In short, market prices are beyond the control, though not beyond the influence of rate regulation. Moreover, even if a commission did possess the power of control, any attempt to exercise it ... would result in harmful, uneconomic shifts in public utility rate levels.[28]

---

[26] Morin, at 481-482.
[27] Charles F. Phillips, The Regulation of Public Utilities, Public Utilities Reports, Inc., 1993, at p. 395.
[28] James C. Bonbright, Albert L. Danielsen and David R. Kamerschen, Principles of Public Utility Rates (Public Utilities Reports, Inc., 1988), at 334 (italics added).

Q. CAN THE UNDER- OR OVER-STATEMENT OF INVESTORS' REQUIRED RETURN BY THE DCF MODEL BE DEMONSTRATED MATHEMATICALLY?

A. Yes. Schedule DWD-4R, page 1, demonstrates how Mr. Breuning's market-based DCF cost rate, when applied to a book value substantially below market value, will understate investors' required return on market value. As shown, there is no realistic opportunity to earn the expected market-based rate of return on book value. Using Mr. Breuning's DCF cost rate, for example, in Column [A], investors expect a 9.42% return on an average market price of $67.05 for Mr. Breuning's proxy group. Column [B] shows that when Mr. Breuning's 9.42% return rate is applied to a book value of $ 31.84,[29] the total annual return opportunity is $3.00. After subtracting dividends of $1.96, the investor only has the opportunity for $1.04 in market appreciation, or 1.55%. The magnitude of the understatement of investors' required return on market value using Mr. Breuning's 9.42% cost rate is 4.95%, which is calculated by subtracting the market appreciation based on book value of 1.55% from Mr. Breuning's expected growth rate of 6.50%.

Q. IS THERE ANOTHER WAY TO QUANTIFY THE INACCURACY OF THE DCF MODEL WHEN M/B RATIOS ARE NOT AT UNITY?

A. Yes. One can quantify the inaccuracy of the DCF model when M/B ratios are not at unity by estimating the implied DCF model results (based on a market-value capital structure) to reflect a book-value capital structure. This can be measured by first calculating the market value of each proxy company's capital structure, which consists of the market value of the company's common equity (shares outstanding multiplied by price), and the fair value of

[29] Representing a market-to-book ratio of 210.59%.

the company's long-term debt and preferred stock. All of these measures, except for price, are available in each company's SEC Form 10-K.

Second, one must de-leverage the implied cost of common equity based on the DCF. This is derived using the Modigliani / Miller equation[30] as illustrated in Schedule DWD-5R and shown below:

$$ku = ke - (((ku - i)(1 - t))\ D/E) - (ku - d)\ P/E$$

where:

ku	=	Unlevered (i.e., 100% equity) cost of common equity;
ke	=	Market determined cost of common equity;
i	=	Cost of debt;
t	=	Income tax rate;
D	=	Debt ratio;
E	=	Equity ratio;
d	=	Cost of preferred stock; and
P	=	Preferred equity ratio.

For example, using data specific to Mr. Breuning's proxy group, the equation becomes:

$$ku = 9.42\% - (((ku - 4.29\%)(1-21\%))29.97\%/70.70\%)-(ku–6.85\%)\ 0.03\%/70.70\%$$

Solving for ku results in an unlevered cost of common equity of 8.15%. Next, one must re-lever those costs of common equity by relating them to the proxy group's average book capital structure as shown below:

$$ke = ku + (((ku – i)(1 – t))\ D/E) + (ku – d)\ P/E$$

Once again, using data specific to Mr. Breuning's proxy group, the equation becomes:

$$ke=8.15\%+(((8.15\%-4.29\%)(1-21\%))48.98\%/50.98\%)+(8.15\%-6.85\%)0.03\%/50.98\%$$

[30] The Modigliani / Miller theorem is an influential element of economic theory and forms the basis for modern theory on capital structure. *See*, F. Modigliani and M. Miller, "The Cost of Capital, Corporation Finance and the Theory of Investment", *The American Economic Review*, Vol. 48, No. 3, (June 1958), at 261-297.

Solving for ke results in an 11.09% indicated cost of common equity relative to the book capital structure of the proxy group, which is an increase of 1.67% over Mr. Breuning's indicated DCF result of 9.42%.

The leverage-adjusted DCF results are still not applicable to the Company, as it does not reflect its relative risk as measured by its difference in size, nor do the results reflect flotation costs or a performance factor adjustment.

Q. HAS THIS COMMISSION RECOGNIZED THIS TENDENCY OF THE DCF MODEL TO MIS-SPECIFY INVESTORS' REQUIRED RETURN WHEN M/B RATIOS ARE NOT AT UNITY?

A. Yes. This Commission recognized this tendency in its order of August 26, 2005 in The City of Lancaster – Sewer Fund, Docket Nos. R-00049862, et al., when it adopted the Administrative Law Judge's market-to-book adjustment of 65 basis points (0.65%) because such an adjustment was "consistent with our recent orders in PAWC, Aqua, and PPL" and "as in PPL, we find that adjustment is necessary because the DCF method produces the investor required return based on the current market price, not the return on the book value capitalization. With the M/B adjustment, the equity return allowance is 10.75 percent." (emphasis added)

In 2007, the PA PUC again affirmed the tendency of the DCF model to mis-specify investors' required return in its Order of February 8, 2007 in *PPL Gas Utilities Corporation*, Docket No. R-00061398, et al., when it stated:

> The ALJ stated that the OTS and the OCA are correct that the Commission favors the DCF method to determine the cost of equity. However, the ALJ concluded, based on recent precedent, that the Commission consistently has adopted a leverage adjustment to compensate for the difference between market prices and book value (used in ratemaking). (*See, Aqua Pennsylvania*, 204, 234 (2004); *Pa. PUC v. PPL Electric Utilities Corp.*, Docket No. R-00049255, at 70-71 (2004); *Pa. PUC v. Pennsylvania*

> *American Water Co.*, 2002 Pa. PUC LEXIS 1; *Pa. PUC v. Phila. Suburban Water Co.*, 219 PUR4TH 272 (2002); *Pa. PUC v. Pennsylvania American Water Co.*, 231 PUR4TH 277 (2004)). According to the ALJ, these cases are persuasive that a leverage adjustment should be employed with the DCF analysis. (R.D. at 62-63).

Q. ARE YOU ADVOCATING A SPECIFIC ADJUSTMENT TO THE DCF RESULTS TO CORRECT FOR ITS MIS-SPECIFICATION OF THE INVESTOR-REQUIRED RETURN?

A. No. The purpose of this discussion is to demonstrate that, like all cost of common equity models, the DCF has its limitations and that the use of multiple cost of common equity models in conjunction with informed expert judgment provides a more accurate and reliable picture of the investor-required ROE than does a narrow evaluation of the results of one model.

Q. WHAT IS YOUR RECOMMENDED APPROACH TO DETERMINING THE ROE?

A. As discussed in my Direct Testimony,[31] the use of multiple models adds reliability to the estimation of the common equity cost rate, with the prudence of using multiple cost of common equity models supported in both the financial literature and regulatory precedent.

Q. ARE THERE EXAMPLES FROM THE FINANCIAL LITERATURE WHICH SUPPORT THE USE OF MULTIPLE COST OF COMMON EQUITY MODELS IN DETERMINING THE INVESTOR-REQUIRED RETURN?

A. Yes. In one example, Morin states:

> Each methodology requires the exercise of considerable judgment on the reasonableness of the assumptions underlying the methodology and on the reasonableness of the proxies used to validate a theory. The inability of the DCF model to account for changes in relative market valuation, discussed below, is a vivid example of the potential shortcomings of the DCF model when applied to a given company. Similarly, the inability of the CAPM to

[31] D'Ascendis Direct Testimony, at 18.

account for variables that affect security returns other than beta tarnishes its use.

No one individual method provides the necessary level of precision for determining a fair return, but each method provides useful evidence to facilitate the exercise of an informed judgment. Reliance on any single method or preset formula is inappropriate when dealing with investor expectations because of possible measurement difficulties and vagaries in individual companies' market data. (emphasis added)

* * *

There is ample academic support in the financial literature for the need to rely upon several financial models in arriving at a recommended common equity cost rate. Professor Eugene Brigham, a widely respected scholar and finance academician, asserts(footnote omitted):

> *Three methods typically are used: (1) the Capital Asset Pricing Model (CAPM), (2) the discounted cash flow (DCF) method, and (3) the bond-yield-plus-risk-premium approach.* ***These methods are not mutually exclusive – no method dominates the others****, and all are subject to error when used in practice. Therefore, when faced with the task of estimating a company's cost of equity, we generally use all three methods and then choose among them on the basis of our confidence in the data used for each in the specific case at hand.* (italics in original) (emphasis added)

Another prominent finance scholar, Professor Stewart Myers, in an early pioneering article on regulatory finance, stated[footnote omitted]:

> *Use more than one model when you can. Because estimating the opportunity cost of capital is difficult,* ***only a fool throws away useful information****. That means you should not use any one model or measure mechanically and exclusively. Beta is helpful as one tool in a kit, to be used in parallel with DCF models or other techniques for interpreting capital market data.* (italics in original) (emphasis added)

* * *

Reliance on multiple tests recognizes that no single methodology produces a precise definitive estimate of the cost of equity. As stated in Bonbright, Danielsen, and Kamerschen (1988), *'no single or group test or technique is conclusive.'* (italics in original)

* * *

> **While it is certainly appropriate to use the DCF methodology to estimate the cost of equity, there is no proof that the DCF produces a more accurate estimate of the cost of equity than other methodologies.** Sole reliance on the DCF model ignores the capital market evidence and financial theory formalized in the CAPM and other risk premium methods. **The DCF model is one of many tools to be employed in conjunction with other methods to estimate the cost of equity.** It is not a superior methodology that supplants other financial theory and market evidence. The broad usage of the DCF methodology in regulatory proceedings in contrast to its virtual disappearance in academic textbooks does not make it superior to other methods. The same is true of the Risk Premium and CAPM methodologies.[32]

Finally, Brigham and Gapenski note:

> In practical work, *it is often best to use all three methods* – CAPM, bond yield plus risk premium, and DCF – and then apply judgment when the methods produce different results. People experienced in estimating equity capital costs recognize that both careful analysis and some very fine judgments are required. It would be nice to pretend that these judgments are unnecessary and to specify an easy, precise way of determining the exact cost of equity capital. Unfortunately, this is not possible. Finance is in large part a matter of judgment, and we simply must face this fact.[33]

In the academic literature cited above, three methods are consistently mentioned: the DCF, CAPM, and the RPM, all of which I used in my analyses.

Q. ARE THERE SPECIFIC EXAMPLES WHERE THE PA PUC HAS CONSIDERED MULTIPLE COST OF COMMON EQUITY MODELS?

A. Yes. In Docket No. R-2013-2360798, concerning Columbia Water Company ("Columbia"), where I was Columbia's ROE witness, the Commission stated:

> Based on our review of the testimony, data, and cost models presented, we believe that the evidence in this case supports an ROE finding in the reasonable range of 9.25% to 10.25% using the DCF method as the foundation. The equity-heavy capital structure of Columba indicates that a slightly lower ROE is appropriate. However, the small size of the Company, its management effectiveness, and the results of other ROE models other than the DCF are all reasons to set a higher ROE. Therefore,

[32] Morin, at 476-479 (emphasis added).

[33] Eugene F. Brigham and Louis C. Gapenski, Financial Management – Theory and Practice, 4th Ed. (The Dryden Press, 1985) at p. 256 (italics in original).

within our indicated range of reasonableness, we conclude that an ROE of 9.75% is appropriate for our ratemaking determinations herein.

Also, in Docket No. R-2014-2402324 concerning Emporium Water Company ("Emporium"), where I was Emporium's ROE witness, the Commission stated the following:

> The ALJ recommended that the Commission adopt the Company's proposed return on common equity of 11.05%.[Footnote Omitted] R.D. at 11. The ALJ explained that the Company's position allows it to pay its debt service, which includes principal payments and interest, and provides a modest return on equity ($34,000). The ALJ states that I&E's and the OCA's positions fail to meet the standards set by the *Hope* and *Bluefield* by not even allowing the Company to pay their debt service, which may lead to possible default on the loans and the bankruptcy of the Company. R.D. at 35.
>
> * * *
>
> As discussed, *supra*, the OCA recommends a return of 9.10% as the midpoint of its DCF and CE analyses; I&E recommends a return of 8.89% based on its DCF analyses; and the Company proposes a return of 10.3%, which utilizes its DCF, RP, and CAPM analyses to which the Company adds a size risk adjustment of 75 basis points. Based on our review of the testimony, data, and cost models presented, and considering our adoption of a 60% / 40% hypothetical capital structure, we believe that the range of returns provided in evidence supports an ROE finding of 10.0% for our ratemaking determinations herein.

In Docket Nos. R-2021-3027385 and R-2021-3027386 concerning Aqua, the Commission stated:

> Therefore, our methodology for determining Aqua's ROE shall utilize both I&E's DCF and CAPM methodologies. As noted above, the Commission recognizes the importance of informed judgment and information provided by other ROE models. In the *2012 PPL Order*, the Commission considered PPL's CAPM and RP methods, tempered by informed judgment, instead of DCF-only results. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation. Historically, we have relied primarily upon the DCF methodology in arriving at ROE determinations and have utilized the results of the CAPM as a check upon the reasonableness of the DCF derived equity return. As such, where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our equity return determination. In light of the above, we

> shall determine an appropriate ROE for Aqua using informed judgement based on I&E's DCF and CAPM methodologies.[34]

Lastly, in the more recent Docket Nos. R-2023-3040258 concerning Columbia, the Commission stated:

> In *Aqua 2022*, the Commission determined the ROE by using informed judgement based on I&E's DCF and CAPM methodologies. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation. We historically have primarily relied upon the DCF methodology in arriving at ROE determinations and utilized the results of the CAPM, as a check upon the reasonableness of the DCF derived equity return. As such, where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our ROE determination. Considering the above, we shall determine an appropriate ROE for Columbia using informed judgement based on I&E's DCF and CAPM methodologies. Accordingly, we shall grant I&E's Exception No. 3, in part, and deny it, in part, and we shall deny the OCA's Exception No. 5 consistent with the forgoing discussion.[35]

In the Commission Orders cited above, there is clear language that the Commission considers multiple models in its determination of ROE. It is also my interpretation of these Orders that the Commission correctly observes capital market conditions and their effect on the model results in determining an ROE for utility companies. This, in addition to the academic literature cited above, shows that Mr. Breuning's reasoning behind relying solely on the DCF for his recommended ROE is misplaced.

B. Application of the CAPM

Q. PLEASE BRIEFLY SUMMARIZE MR. BREUNING'S CAPM METHODOLOGY AND RESULTS.

A. Mr. Breuning produces two CAPM analyses, both of which rely on the average *Value Line* beta of his proxy groups. For the first CAPM analysis, he uses a projected 10-year Treasury yield for his risk-free rate and an average of an expectational market return and a historical 1923-2024 average market return to arrive at a CAPM result of 11.20%.[36] For his second CAPM analysis, he uses a historical 20-year Treasury yield and Kroll's recommended MRP.[37]

Q. DO YOU HAVE ANY CONCERNS WITH MR. BREUNING'S APPLICATION OF THE CAPM?

A. Yes, I do. While I agree with Mr. Breuning's use of *Value Line* betas, projected interest rates, and projections of market returns, I have concerns regarding his selection of a risk-free rate, his calculation of his expectational market return, his use of Kroll's MRP, and his failure to conduct an ECAPM.

Q. IS THE USE OF 10-YEAR OR 20-YEAR TREASURY BONDS AS A RISK-FREE RATE APPROPRIATE FOR COST OF CAPITAL PURPOSES?

A. No, it is not. As discussed below, the tenor of the risk-free rate used in the CAPM should match the life (or duration) of the underlying investment. As noted by Morningstar:

> The traditional thinking regarding the time horizon of the chosen Treasury security is that it should match the time horizon of whatever is being valued. When valuing a business that is being treated as a going concern, the appropriate Treasury yield should be that of a long-term Treasury bond. Note that the horizon is a function of the investment, not the investor. If an investor plans to hold stock in a company for only five years, the yield on a

[36] Breuning Direct Testimony, at 32-34.
[37] Breuning Direct Testimony, at 34-35.

> five-year Treasury note would not be appropriate since the company will continue to exist beyond those five years.[38]

Morin also confirms this when he states:

> [b]ecause common stock is a long-term investment and because the cash flows to investors in the form of dividends last indefinitely, the yield on very long-term government bonds, namely, the yield on 30-year Treasury bonds, is the best measure of the risk-free rate for use in the CAPM (footnote omitted)… The expected common stock return is based on long-term cash flows, regardless of an individual's holding time period.[39]

Pratt and Grabowski recommend a similar approach to selecting the risk-free rate: "In theory, when determining the risk-free rate and the matching ERP you should be matching the risk-free security and the ERP with the period in which the investment cash flows are expected."[40] As a practical matter, equity securities represent a perpetual claim on cash flows; 30-year Treasury bonds are the longest-maturity securities available to match that perpetual claim. The average life of York Water's utility plant ranges from approximately 38 years based on the composite depreciation rate of the components of its utility plant.[41] Thus, Mr. Breuning's use of a medium-term Treasury bond does not match the life of the assets being valued. The use of a 30-year Treasury bond is the more appropriate risk-free rate.

Q. MR. BREUNING CLAIMS THAT LONG-TERM GOVERNMENT BONDS ARE SUBJECT TO MATURITY RISK.[42] PLEASE COMMENT.

A. He is mistaken. If a long-term Treasury note is held to maturity, there is no risk (the investor will get the stated coupon rate and principal at the end). Since the cost of equity is a long-term concept, the investment horizon of an individual investor is irrelevant.

41 1 / 2.60% = 38.46
42 Breuning Direct Testimony, at 33.

Q. PLEASE DISCUSS MR. BREUNING'S PROJECTED RISK-FREE RATE.

A. Mr. Breuning and I use the same publication for our forecasted interest rate data, *Blue Chip Financial Forecasts* ("*Blue Chip*"). Mr. Breuning incorporates forecasts from the third quarter of 2025 out to the period 2027-2031, although forecasts are published by *Blue Chip* to the period 2032-2036. Mr. Breuning does not explain why he has omitted the 2032-2036 projection. Not incorporating the longest projection available is inconsistent with the application of the DCF model in which there is an assumption that the projected "g" is constant into perpetuity, creating a mismatch. It is also inconsistent with the Efficient Market Hypothesis ("EMH") on which the DCF is based.

Q. WHAT IS THE EMH?

A. According to Fama,[43] a market in which prices always "fully reflect" available information is called "efficient." There are three forms of the EMH, namely:

(1) The "weak" form asserts that all past market prices and data are fully reflected in securities prices. In other words, technical analysis cannot enable an investor to "outperform the market."

(2) The "semi-strong" form asserts that all publicly available information is fully reflected in securities prices. In other words, fundamental analysis cannot enable an investor to "outperform the market."

(3) The "strong" form asserts that all information, both public and private, is fully reflected in securities prices. In other words, even insider information cannot enable an investor to "outperform the market."

[43] Eugene F. Fama. "Efficient Capital Markets: A Review of Theory and Empirical Work", *The Journal of Finance*, Vol. 25, No. 2. (May 1970), pp. 383-417.

The "semi-strong" form is generally considered the most realistic because the illegal use of insider information can enable an investor to "beat the market" and earn excessive returns, thereby disproving the "strong" form. The semi-strong form of the EMH assumes that all information (including long-term forecasts of interest rates) are available to the investor, which means the 2030-2034 forecasted interest rate would be considered by investors when making investment decisions and, therefore, should be included in Mr. Breuning's CAPM analysis.

Q. IS MR. BREUNING'S USE OF THE CURRENT 20-YEAR U.S. TREASURY YIELD IN HIS SECOND CAPM APPROPRIATE?

A. No, it is not. However, given that the current 20-year Treasury bond-based risk-free rate Mr. Breuning uses is reasonably consistent with the projected 30-year Treasury-bond based risk-free rate used in my updated CAPM, to reduce the scope of this Rebuttal Testimony, I will not address Mr. Breuning's use of a current risk-free rate.

Q. IS MR. BREUNING'S CALCULATION OF HIS *VALUE LINE*-BASED MARKET RETURN CONSISTENT WITH OTHER ASPECTS OF HIS ROE ANALYSIS?

A. No, it is not. Mr. Breuning's estimate of the *Value Line* expected market return is based solely on the June 13, 2025 *Value Line Summary and Index* report. In his DCF analysis, he arrives at his final dividend yield by relying on an average of the spot dividend yield and the 52-week average dividend yield.[44] If Mr. Breuning believes that the spot dividend yield should be averaged with the 52-week average dividend yield in his DCF analysis, he should calculate his *Value Line* expected market return in a consistent manner. As shown

[44] Breuning Direct Testimony, at 29-30.

on Schedule DWD-6R, page 2, doing so would result in an average *Value Line* expected market return of 12.58%, with an overall market return of 12.44%.

Q. WHAT IS YOUR POSITION ON THE 5.50% MRP QUOTED BY KROLL?

A. A forecast is only as good as its inputs, and if the assumptions within those forecasts are, by their nature, unpredictable (e.g., productivity growth forecasts), they are of little value. In addition, the determination of the MRP as calculated by Kroll is not transparent, especially in view of the historical data presented in SBBI – 2023, or the composition of its supply side method, which are already well known by investors. Because of the transparency of the historical data and how to gather and use the components of the supply side model, both the historical MRP (using the long-term arithmetic mean return on large company stocks less the long-term arithmetic income returns on long-term Government bonds) and the supply side model are superior measures of the MRP, when compared to Kroll's simplistic and opaque MRP forecast.

Q. WHY IS THE KROLL MRP MORE OPAQUE THAN OTHER MEASURES OF THE MRP?

A. The MRP is calculated by subtracting a risk-free rate from the investor-required return on the market. Typically, the return on the market uses observable market measures (e.g. historical average returns), but the Kroll MRP does not define how they calculate their expected return on the market. Similarly, the risk-free rate is typically also based on market measures (e.g., historical interest rates, forecasted interest rates), but Kroll does not explain how they derive their 3.5% normalized risk-free rate. Because Kroll does not reveal how they derive their estimates, we do not know if they are indeed based on market measures.

Q. DID YOU CONDUCT A STUDY TO DETERMINE THE FORECAST ACCURACY OF THE KROLL RECOMMENDED MARKET RETURN RELATIVE TO THE HISTORICAL MARKET RETURNS AND THE IBBOTSON-CHEN STUDY?

A. Yes, I did. I have calculated the forecast bias[45] of the long-term historical average return and the implied market returns from Kroll from 2008-2024 to determine the most accurate measure of the following years' market return.[46] For example, the long-term average market return from 1926-2008 was used to determine the forecasted return for 2009. The result of this analysis is shown as Schedule DWD-7R and Table 4, below:

Table 4: Comparison of Forecast Bias for Various Measures 2009-2024

Year	Observed Market Return	Long-Term Average Return	Kroll Forecasted Market Return
2009	26.46%	11.67%	10.50%
2010	15.06%	11.85%	10.08%
2011	2.11%	11.88%	9.63%
2012	16.00%	11.77%	10.00%
2013	32.39%	11.82%	9.50%
2014	13.69%	12.05%	9.00%
2015	1.38%	12.07%	9.00%
2016	11.96%	11.95%	9.50%
2017	21.83%	11.95%	9.00%
2018	-4.38%	12.06%	8.50%
2019	31.49%	11.88%	9.00%
2020	18.40%	12.09%	8.70%
2021	28.71%	12.16%	8.00%
2022	-18.11%	12.33%	8.00%
2023	26.61%	12.02%	10.14
2024	25.62%	12.06%	10.03
Sum	249.22%	191.71%	148.63%
Forecast Bias[47]		76.93%	59.64%

[45] Forecast bias can be described as a tendency to either over-forecast or under-forecast a given variable.
[46] 2008 was selected as the starting year as it is the first year Kroll published its recommended MRP and risk-free rate.
[47] Calculated by dividing the sum of the forecast returns by the sum of the actual returns.

As shown in Table 4, while both measures understate actual performance (i.e., forecast bias measures are under 100.00%), the long-term arithmetic mean return is the more accurate predictor of the next years' return as compared to the Kroll projected market return. This result is consistent with economist John Y. Campbell, who states that when returns are serially uncorrelated, the arithmetic average represents the best forecast of future returns in any randomly selected future year.[48]

Q. MR. BREUNING DID NOT PERFORM AN ECAPM ANALYSIS. PLEASE COMMENT.

A. As discussed in my Direct Testimony,[49] although numerous tests of the CAPM have confirmed its validity, it has been determined that the empirical Security Market Line ("SML") described by the traditional CAPM is not as steeply sloped as the predicted SML. Tests of the CAPM have measured the extent to which security returns and betas are related as predicted by the CAPM, thus confirming its validity. As such, Mr. Breuning should have used the ECAPM in his CAPM analysis.

Q. IS THERE ADDITIONAL EVIDENCE THAT SUPPORTS THE VALIDITY OF THE ECAPM?

A. Yes, there is. The empirical issues with the CAPM have been present since the presentation of the model, as noted by Dianna R. Harrington in her text Modern Portfolio Theory & the Capital Asset Pricing Model:

> So far we have learned some very interesting things about the CAPM and reality. Some of the earliest work tested realized data (history) against data generated by simulated portfolios. Early studies by Douglas (1969) and Lintner (Douglas [1969]) showed discrepancies between what was expected on the basis of the CAPM and the actual relationships that were apparent in the capital markets. Theoretically, the minimal rate of return from the

[48] John Y. Campbell, "Forecasting US Equity Returns in the 21st Century," Social Security Administration, July 2001

[49] D'Ascendis Direct Testimony, at 31-32.

portfolios (the intercept) and the actual risk-free rate for the period should have been equal. They were not.

* * *

Another study, now more famous than Lintner's was done by Black, Jensen, and Scholes (1972). Lintner had used what is called a cross-sectional method (looking at a number of stock returns during one time period), whereas Black, Jensen, and Scholes used a time-series method (using returns for a number of stocks over several time periods). To make their test, Black, Jensen, and Scholes assumed that what had happened in the past was a good proxy for the investor expectations (a frequent assumption in CAPM tests). Using historical data, they generated estimates using what we call the market model:

$$R_{jt} = \alpha_j + \beta_j (R_{mt}) + \varepsilon_j$$

Where:
R = total returns
β = the slope of the line (the incremental return for risk)
α = the intercept or a constant (expected to be 0 over time and across all firms)
ε = an error term (expected to be random, without information)
m = the market proxy
j = the firm or portfolio
t = the time period

Instead of using single stocks, they formed portfolios in an effort to wash out one source of error; because betas of single firms are quite unstable.

On the basis of the CAPM, they expected to find

1. That the intercept was equal to the risk-free rate (their proxy was the Treasury bill rate)
2. That the capital market line had a positive slope and that riskier (higher beta) securities provided higher return

Instead they found

1. That the intercept was different from the risk-free rate
2. That high-risk securities earned less and low-risk securities earned more than predicted by the model
3. That the intercept seemed to depend on the beta of any asset: high-beta stocks had a different intercept than low-beta stocks

* * *

Fama and MacBeth (1974) criticized the Black, Jensen, and Scholes study (hereafter called BJS). In a reformulation of the study, they supported the first of the BJS findings. They found that the intercept exceeded the risk-

free proxy, but did not find the evidence to support the other BJS conclusions.[50]

Harrington discusses Black's potential solution to this phenomenon:

> Black's replacement for the risk-free asset was a portfolio that had no covariability with the market portfolio. Because the relevant risk in the CAPM is systematic risk, a risk-free asset would be the one with no volatility relative to the market – that is, a portfolio with a beta of zero. All investor-perceived levels of risk could be obtained from various linear combinations of Black's zero-beta portfolio and the market portfolio… Since R_z (the rate of return of the zero-beta asset) and R_m are uncorrelated (as R_f and R_m were assumed to be in the simple CAPM), the investor can choose from various combinations of R_z and R_m. On segment R_mY, R_z, is sold short and proceeds are invested in R_m. On segment R_zR_m, portions of the zero-beta portfolio are purchased. At R_m, the investor is fully invested in the market portfolio. The equilibrium CAPM was rewritten by Black as follows:
>
> $$E(R_i) = (1 - \beta_i) E(R_z) + \beta_i E(R_m)$$
>
> Where:
>
> E indicates expected,
> $E(R_z)$ is less than $E(R_m)$, and
> R_z holdings over the whole market must be in equilibrium. That is, the number of short sellers and lenders of securities must be equal.
>
> Black's adaptation is intriguing. The result of using this model is a capital market line that has a less steep slope and a higher intercept than those of the simple CAPM. If Black's model is more correct in its description of investor behavior in the marketplace, then the use of the simple model would produce equity return predictions that would be too low for sticks with betas greater than one and too high for stocks with betas of less than one.[51]

As such, while I still find the CAPM to be appropriate, if the I&E ROE Witness is of the opinion that the CAPM is not reliable,[52] then he should have applied an ECAPM analysis.

---

[51] Dianna R. Harrington, Modern Portfolio Theory & the Capital Asset Pricing Model – A User's Guide, Prentice-Hall, Inc. 1983, at 30-31.

[52] Breuning Direct Testimony at 22.

Q. HAVE OTHER JURISDICTIONS CONSIDERED THE ECAPM?

A. Yes, it has been accepted in Alaska, Minnesota, Mississippi, Nevada, New York, and Virginia.[53]

Q. DOES MR. BREUNING HAVE CONCERNS REGARDING THE ECAPM?

A. Yes, he does. Specifically, Mr. Breuning claims that the ECAPM "does not increase the validity of the result"[54] without providing evidence to that effect. Conversely, I have provided substantial evidence that the ECAPM is a necessary adjustment to the CAPM in my Direct Testimony[55] and above. Mr. Breuning's concerns should be dismissed.

Q. WHAT WOULD MR. BREUNING'S CAPM RESULTS INDICATE IF CORRECTED TO REFLECT A FULLY FORECASTED 30-YEAR TREASURY BOND YIELD, A *VALUE LINE* MARKET RETURN CALCULATED IN A MANNER CONSISTENT WITH HIS DCF, AND THE USE OF THE ECAPM?

A. As shown in Schedule DWD-6R, using a fully projected 30-year Treasury bond yield, a *Value Line* market return based on the average of the spot expected return and 52-week

---

53 The Regulatory Commission of Alaska, Docket P-97-7, Order Rejecting 1997, 1998, 1999 and 2000 Filed TAPS Rates; Setting Just and Reasonable Rates; Requiring Refunds and Filings; and Outlining Phase II Issues, November 27, 2002, at 146; Minnesota Public Utilities Commission, MPUC Docket No. G011/GR-15-736, In the Matter of the Application of Minnesota Energy Resources Corporation for Authority to Increase Rates for Natural Gas Service in Minnesota, Findings of Fact, Conclusions of Law, and Recommendation, August 19, 2016, at 29; Mississippi Public Service Commission, Docket No. 01-UN-0548, Notice of Intent of Mississippi Power Company to Change Rates for Electric Service in its Certificated Areas in the Twenty-Three Counties of Southeast Mississippi, Final Order, December 3, 2001, at 19; Public Utilities Commission of Nevada, Docket No. 20-02023, Application of Southwest Gas Corporation for authority to increase its retail natural gas utility service rates for Southern and Northern Nevada, Order, September 23, 2020, at 35; New York Public Service Commission, Case 16-G-0058, Proceeding on Motion of the Commission as to the Rates, Charges, Rules and Regulations of KeySpan Gas East Corporation d/b/a National Grid for Gas Service, Order Adopting Terms of Joint Proposal and Establishing Gas Rate Plans, December 16, 2016, at 32; In the Matter of Application of Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina, Docket No. E-22, Sub 562 Order Accepting Public Staff Stipulation in Part, Accepting CIGFUR Stipulation, Deciding Contested Issues, and Granting Partial Rate Increase, February 24, 2020, at 40.

54 Breuning Direct Testimony, at 40.

55 *See*, D'Ascendis Direct Testimony, at 31-33.

average expected return, and employing the ECAPM would result in an indicated ROE of 11.26%.

Q. WHAT WOULD BE MR. BREUNING'S INDICATED ROE BE IF HE AVERAGED HIS DCF MODEL RESULT WITH THE CORRECTED CAPM RESULT OF 11.26%?

A. It would be 10.34%, which is slightly below the midpoint of my updated range of ROEs attributable to my Utility Proxy Group. However, Mr. Breuning's corrected average indicated ROE does not reflect Company-specific factors, which will be discussed in the next section of my Rebuttal Testimony.

C. <u>Failure to Reflect the Company's Greater Relative Risk Due to its Small Size</u>

Q. DOES MR. BREUNING MAKE A SPECIFIC ADJUSTMENT TO REFLECT THE SMALLER SIZE OF THE COMPANY RELATIVE TO HIS PROXY GROUP?

A. No. As discussed in my Direct Testimony,[56] relative company size is a significant element of business risk for which investors expect to be compensated through greater returns. Smaller companies are simply less able to cope with significant events which affect sales, revenues and earnings. For example, smaller companies face more exposure to business cycles and economic conditions, both nationally and locally. Additionally, the loss of revenues from a few large customers would have a far greater effect on a small company than on a larger company with a more diverse customer base. Finally, smaller companies are generally less diverse in their operations and have less financial flexibility. Consistent with the financial principle of risk and return in my Direct Testimony,[57] such increased risk

[56] D'Ascendis Direct Testimony, at 40-43.
[57] D'Ascendis Direct Testimony, at 8.

due to small size must be taken into account in the allowed rate of return on common equity.

Q. DOES MR. BREUNING RELY ON STUDIES THAT SUPPORT THE SMALL SIZE PREMIUM?

A. Yes. In the Fama and French article cited by Mr. Breuning in his direct testimony,[58] the authors propose that their three-factor model include the "Small Minus Big" factor, which indicates that small capitalization firms are more risky than large capitalization firms,[59] confirming that size is a risk factor which must be taken into account in estimating the cost of common equity.

Q. MR. BREUNING ALSO CITES A STUDY BY DR. ANNIE WONG FOR THE PROPOSITION THAT THERE IS NO SIZE PREMIUM FOR UTILITIES.[60] DOES THIS STUDY ESTABLISH THAT CONTENTION?

A. No, it does not. In the Wong study, Dr. Wong attempted to relate a change in beta to the size effect. Dr. Wong's beta study is incorrect, as beta is a measure of market risk, whereas size is a company-specific, or diversifiable risk. While betas may contain some measure of diversifiable risk, betas have low explanatory power. As shown in Schedule DWD-8R, the R-Squared, which measures the variability of returns applicable to beta, is approximately 0.19 for Mr. Breuning's proxy group, which means approximately 81% of Mr. Breuning's proxy group's returns are unexplained by beta.

Q. IS THERE ALSO A PUBLISHED RESPONSE TO DR. WONG'S ARTICLE?

A. Yes, there is. In response to Professor Wong's article, *The Quarterly Review of Economics*

---

58 *See,* Breuning Direct Testimony, at 23.

59 Eugene F. Fama and Kenneth R. French, "The Capital Asset Pricing Model: Theory and Evidence", *Journal of Economic Perspectives*, Vol. 18, No. 3, Summer 2004, at 39.

60 Breuning Direct Testimony, at 45

and Finance published an article in 2003, authored by Thomas M. Zepp, which commented on the Wong article cited by Mr. Breuning. Relative to Dr. Wong's results, Dr. Zepp concluded in the Abstract on page 1 of his article: "Her weak results, however, do not rule out the possibility of a small firm effect for utilities."[61] Dr. Zepp also noted on page 582 that: "Two other studies discussed here support a conclusion that smaller water utility stocks are more risky than larger ones. To the extent that water utilities are representative of all utilities, there is support for smaller utilities being more risky than larger ones."[62]

Q. HAVE YOU PERFORMED STUDIES LINKING SIZE AND RISK FOR UTILITY COMPANIES?

A. Yes, I have performed two studies that link size and risk for utility companies. My first study included the universe of electric, gas, and water companies included in *Value Line* Standard Edition. For each of the utilities, the annualized volatility (a measure of risk)[63] was calculated, and each company was ranked by its current market capitalization (a measure of size) as reported by *Value Line.* Ranking the companies by size (largest to smallest) and risk (least risky to most risky), results in the scatterplot shown on Chart 1, below:

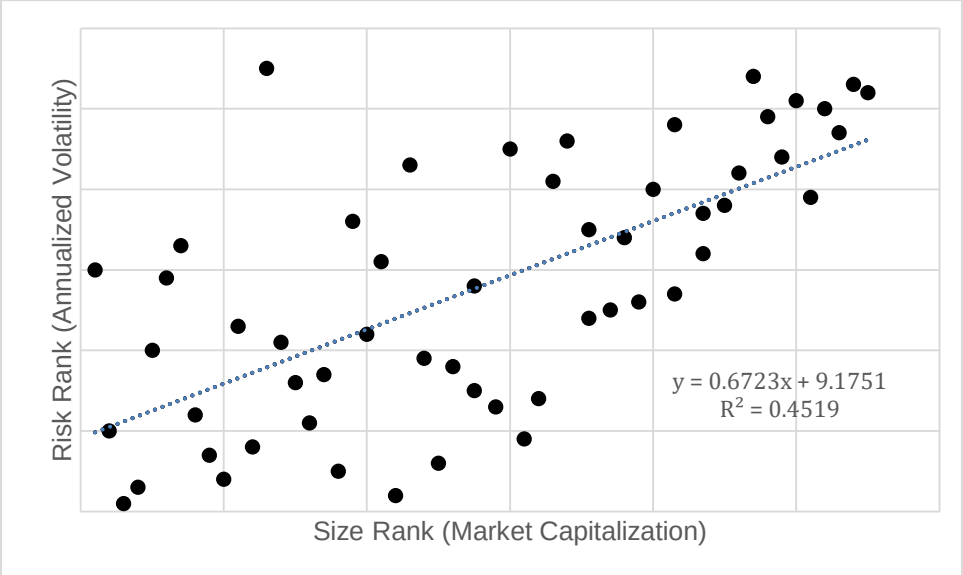
---

61 Thomas M. Zepp, "Utility Stocks and the Size Effect --- Revisited", *The Quarterly Review of Economics and Finance*, 43 (2003), at 578-582.

62 Thomas M. Zepp, "Utility Stocks and the Size Effect --- Revisited", *The Quarterly Review of Economics and Finance*, 43 (2003), at 578-583.

63 Annualized volatility equals the standard deviation of returns over the period multiplied by the square root of 252, or the approximate number of trading days in a year.

Chart 1: Relationship Between Size and Risk for the *Value Line* Universe of Utility Companies[64]



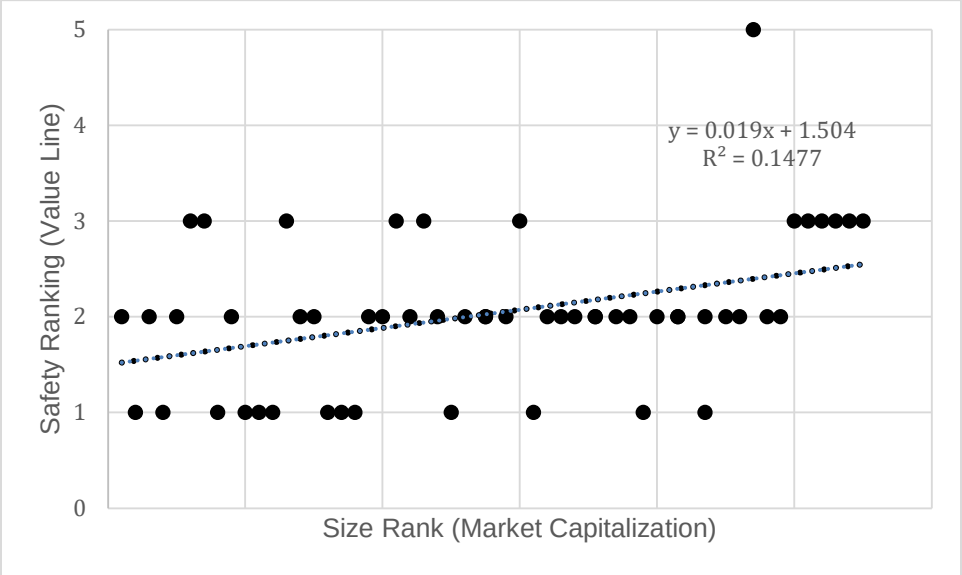
As shown in Chart 1 above, as company size decreases (increasing size rank), the annualized volatility increases, linking size and risk for utilities, which is significant at 95.0% confidence level.

The second study used the same universe of companies, but instead of annualized volatility, I used the *Value Line* Safety Ranking, which is another measure of total risk.[65] After ranking the companies by size and Safety Ranking, I made a scatterplot of those data, as shown on Chart 2, below:

64 Source: *Value Line*

65 *Value Line* also ranks stocks for Safety by analyzing the total risk of a stock compared to the approximately 1,700 stocks in the *Value Line* universe. Each of the stocks tracked in the *Value Line Investment Survey* is ranked in relationship to each other, from 1 (the highest rank) to 5 (the lowest rank). Safety is a quality rank, not a performance rank, and stocks ranked 1 and 2 are most suitable for conservative investors; those ranked 4 and 5 will be more volatile. Volatility means prices can move dramatically and often unpredictably, either down or up. The major influences on a stock's Safety rank are the company's financial strength, as measured by balance sheet and financial ratios, and the stability of its price over the past five years.

Chart 2: Relationship Between Size and Safety Ranking for the *Value Line* Universe of Utility Companies[66]



Similar to the first study, as company size decreases, Safety Ranking degrades, indicating a link between size and risk for utilities. This study is also significant at the 95% confidence level. Mr. Breuning's assertions that size and risk are not linked for utility companies should be dismissed by the Commission.

Q. MR. BREUNING POINTS TO THE COMMISSION'S DECISION AT DOCKET NO. 2019-3008212 WHEN NOTING THAT THE COMMISSION DID NOT MAKE AN EXPLICIT SIZE ADJUSTMENT.[67] PLEASE COMMENT.

A. While the Commission did not make an explicit size adjustment in that proceeding, it did acknowledge that size is a factor in assessing a company's ability to attract capital (i.e., the cost required by investors).[68] Specifically, the Commission adjusted the DCF result by one standard deviation of the mean and median to account for size. Applying that same

66 Source: *Value Line*.
67 *See*, Breuning Direct Testimony, at 45-46.
68 D'Ascendis Direct Testimony, at 50-51.

approach in my Direct Testimony resulted in a size premium of 2.69%, higher than my ultimate recommendation, making my proposed size adjustment conservative.[69]

Q. HAVE YOU CALCULATED THE STANDARD DEVIATION OF MR. BREUNING'S DCF RESULTS?

A. Yes, I have. As put forth in Schedule DWD-9R, using data from Mr. Breuning's Exhibits, I have calculated a 107-basis-point standard deviation for his DCF results. This indicated business risk adjustment is higher than my recommended business risk adjustments, suggesting that my adjustment should be considered conservative, and should continue to be considered by the Commission when determining the appropriate ROEs for the Company in this proceeding.

D. <u>Flotation Cost Adjustment</u>

Q. DOES MR. BREUNING CONSIDER A FLOTATION COST ADJUSTMENT?

A. No, he does not. While Mr. Breuning agrees that "flotation costs effectively reduce the amount of funds a company actually receives to finance its capital projects, and therefore should be recoverable",[70] he does not propose a flotation cost adjustment to the ROE and claims that flotation costs should be recovered as an operating expense. Denying recovery of issuance costs penalizes the investors that fund the utility operations. As shown in Schedule DWD-10R, because of flotation costs, an authorized return of 10.85% would be required to realize an ROE of 10.75% (<u>i.e.</u>, a 10-basis point flotation cost adjustment). If flotation costs are not recovered, the growth rate falls and the ROE decreases to 10.65% (<u>i.e.</u>, below the required return).[71]

---

69 D'Ascendis Direct Testimony, at 44.
70 Breuning Direct Testimony at 49.
71 Schedule DWD-10R is provided for illustrative purposes only. Please note that I have not relied on the results of the analysis in determining my recommended ROE or range.

Q. HAVE OTHER REGULATORY COMMISSIONS ALLOWED FLOTATION COSTS IN THE ALLOWED ROE?

A. Yes, they have. For example, in Peoples Gas System, Inc.'s ("PGS") recent 2023 rate proceeding, the Florida Public Service Commission stated the following regarding my proposed flotation cost adjustment:

> In PGS's last rate case in 2008, we did not make a specific adjustment for flotation costs, but in our order we stated that we have traditionally recognized a reasonable adjustment for flotation costs in the determination of the investor required return...We find witness D'Ascendis's method to determine the flotation cost is credible and provided persuasive evidence for his recommendation to include a flotation cost of 9 basis points.[72]

Given the above, I recommend this Commission also correctly include flotation costs in the allowed ROE.

E. <u>Performance Factor Adjustment</u>

Q. MR. BREUNING HAS NOT CONSIDERED A PERFORMANCE FACTOR ADJUSTMENT FOR THE COMPANY'S COST OF COMMON EQUITY. PLEASE COMMENT.

A. As discussed in my Direct Testimony,[73] the Company should be awarded a 25-basis point upward adjustment to their indicated ROE based on Code 66 Pa.C.S. § 523 regarding performance factor. York Water Witness J.T. Hand testified[74] regarding the management efficiency of the Company. Both I&E and OCA refuted the adjustment, based largely on their position that the Company was simply doing what it is required to do. Simply put, 66 Pa.C.S. § 523 exists to incentivize companies to "do their job" at a high level. The

Company in this case fulfills the requirement of the statute and should receive the benefit of doing so.

F. Response to Mr. Breuning's Criticisms of Company Testimony

Q. DOES MR. BREUNING HAVE CRITIQUES OF THE ANALYSES MADE IN YOUR DIRECT TESTIMONY?

A. Yes. Mr. Breuning has the following critiques of my analyses in my Direct Testimony: (1) the level of my recommendation in view of authorized returns and returns granted for the distribution system improvement charge ("DSIC"); (2) that I have given weight to models other than the DCF in my determination of the ROE for the Company; (3) that the predictive risk premium model ("PRPM") is not commonly used or accepted; (4) that I rely on the 30-year Treasury bond in my CAPM analysis; (5) my use of the ECAPM; (6) that my selection and use of a Non-Price Regulated Proxy Group similar in total risk to my Utility Proxy Group is "speculative and subjective";[75] (7) that the size adjustment I use is not applicable to utility companies; (8) that flotation costs should not be recovered through an adjustment to the ROE; and (9) that exemplary management performance is not a basis for awarding a higher ROE.

As I addressed critiques (2), (4), (5), and (7) through (9) in my response to Mr. Breuning's analyses, I will not address them again here. I will address the remaining critiques in turn.

[75] Breuning Direct Testimony, at 42.

Q. MR. BREUNING NOTES HE IS UNAWARE OF ANY AUTHORIZED WATER ROES IN THE LAST TWO YEARS ABOVE YOUR REQUESTED ROE OF 10.90%.[76] PLEASE COMMENT.

A. While authorized ROEs may be reasonable benchmarks of acceptable ROEs in static economic conditions, they can mis-specify the investor-required return in a dynamic economic environment, such as this one. The reason why historical authorized returns mis-specify the investor-required return in changing markets is because authorized ROEs are a lagging indicator of investor-required returns; i.e., authorized ROEs are based on market data presented in an evidentiary record, which spans a period before the decision, lasting over a year in some cases. Because markets are constantly changing, historical authorized returns do not completely reflect the investor required return because the economic conditions in the past are not representative of economic conditions now. That is, what investors require in the future may not correlate to what they required and/or received in the past. We must remember that projecting the investor required ROE is a forward-looking concept. Because this is the case, Mr. Breuning's observations regarding historically allowed ROEs are of little value.

Q. MR. BREUNING COMPARED YOUR RECOMMENDED ROE TO THE DSIC ROE OF 9.75%.[77] IS THAT COMPARISON APT?

A. No, for two reasons. First, the DSIC ROE represents an ROE for transmission and distribution investments (i.e., pipes), not for all utility investments. As York Water operates as a vertically-integrated water utility, its ROE has to reflect the risks of their entire operations, which would include purifying drinking water and treating wastewater.

[76] Breuning Direct Testimony, at 59-60.
[77] Breuning Direct Testimony, at 58-59.

Because of these additional operational risks, the DSIC ROE likely understates York Water's investor-required return. Second, the 9.75% DSIC return does not take into account size, flotation costs, or management efficiency. The standard deviation of the DCF model in the Bureau of Technical Utility Services Report indicates a potential size adjustment of 118 basis points, which would result in a size-adjusted ROE of 10.93%.[78]

Q. MR. BREUNING CITES A PAPER FROM THE AMERICAN ECONOMIC LIBERTIES PROJECT, WHICH CLAIMS AUTHORIZED ROES FOR UTILITIES ARE IRRATIONALLY HIGH.[79] PLEASE RESPOND.

A. The paper cited by Mr. Breuning is not a peer-reviewed academic article, but an opinion piece published by a lobbying group. As the analysis and conclusions put forth in this opinion piece have not been thoroughly vetted by the academic community, it should be given no weight by the Commission.

Q. MR. BREUNING SAYS THAT THE PRPM WAS PUBLISHED IN 2011.[80] DOES THAT MEAN THAT THE METHODOLOGY BEHIND THE PRPM WAS ALSO PUBLISHED IN 2011?

A. No. As discussed in my Direct Testimony,[81] the PRPM is based on the research of Robert F. Engle, dating back to the early 1980s. Dr. Engle discovered that the volatility of market prices, returns and risk premiums clusters over time, making prices, returns and risk premiums highly predictable. In 2003, he shared the Nobel Prize in Economics for this work, characterized as "methods of analyzing economic time series with time-varying

78 Docket No. M-2025-3055266, Bureau of Technical Utility Services Report on Quarterly Earnings on Jurisdictional Utilities for the Year Ended March 31, 2025, July 24, 2025.

80 Breuning Direct Testimony, at 38.
81 D'Ascendis Direct Testimony, at 26-27.

volatility ("ARCH").[82] Dr. Engle[83] noted that relative to volatility, "the standard tools have become the ARCH / GARCH[84] models." Hence, the methodology is not new.

In addition, the GARCH methodology has been well tested by academia, since Engle's, *et al*. research was originally published in 1982, over 40 years ago. I use the well-established GARCH methodology to estimate the PRPM model using a standard commercial and relatively inexpensive statistical package, Eviews,© to develop a means by which to estimate a predicted equity risk premium, and when added to a bond yield, results in a cost of common equity.

The PRPM is also in the public domain, having been published six times in academically peer-reviewed journals: Journal of Economics and Business (June 2011 and April 2015),[85] The Journal of Regulatory Economics (December 2011),[86] The Electricity Journal (May 2013 and March 2020),[87] and Energy Policy (April 2019).[88] Notably, none of these articles have been rebutted in the academic literature.

Finally, the PRPM was presented to a number of utility industry/regulatory/academic groups including the following: The Edison Electric Institute Cost of Capital Working Group; The NARUC Staff Subcommittee on Accounting and

Q. HAS THE PRPM BEEN IMPLICITLY ACCEPTED BY OTHER REGULATORY COMMISSIONS?

A. Yes. In Docket No. 2017-292-WS, the Public Service Commission of South Carolina ("PSC SC") accepted Carolina Water Services' entire requested ROE, which included the PRPM. The relevant portion states:

> The Commission finds Mr. D'Ascendis' arguments persuasive. He provided more indicia of market returns, by using more analytical methods and proxy group calculations. Mr. D'Ascendis' use of analysts' estimates for his DCF analysis is supported by consensus, as is his use of the arithmetic mean. The Commission also finds that Mr. D'Ascendis' non-price regulated proxy group more accurately reflects the total risk faced [by] price regulated utilities and CWS. Furthermore, there is no dispute that CWS is significantly smaller than its proxy group counterparts, and, therefore, it may present a higher risk. An appropriate ROE for CWS is 10.45% to 10.95%. The Company used an ROE of 10.5% in computing its Application, a return on the low end of Mr. D'Ascendis' range, and the Commission finds that ROE is supported by the evidence.[89]

In addition, in Docket No. W-354, Subs 363, 364 and 365, the State of North Carolina Utilities Commission ("NCUC") approved my RPM and CAPM analyses, which used PRPM analyses as presented in this proceeding. The relevant portion of the order states:

> In doing so the Commission finds that the DCF (8.81%), Risk Premium (10.00%) and CAPM (9.29%) model results provided by witness D'Ascendis, as updated to use current rates in D'Ascendis Late-Filed

[89] PSC SC Docket No. 2017-292-WS - Order No. 2018-345, at 14. (May 17, 2018)

Exhibit No. 1, as well as the risk premium (9.57%) analysis of witness Hinton, are credible, probative, and are entitled to substantial weight as set forth below.[90]

Q. MR. BREUNING POSITS THAT YOU USE PROPRIETARY SOFTWARE TO CONDUCT YOUR PRPM.[91] IS THAT CORRECT?

A. No. The GARCH methodology is available in various statistical packages such as EViews®, SAS, RATS, S-Plus and JMulti, which are not cost-prohibitive and provide instructions for using the various statistical methodologies in their software. I provided all parties in these proceedings the backup data to run their own GARCH models. While the software I used in this proceeding costs approximately $2,375 for a single user commercial license,[92] JMulti is a free downloadable software with GARCH estimation applications.

Q. MR. BREUNING CRITICIZES THE USE OF YOUR NON-PRICE REGULATED PROXY GROUPS BECAUSE THE RESULTS OF THE MODELS APPLIED TO THE GROUPS ARE NOT SIMILAR TO THE RESULTS OF THE SAME MODELS APPLIED TO YOUR UTILITY PROXY GROUPS.[93] PLEASE RESPOND.

A. The role of regulation when setting rates for a utility company is to simulate a competitive market and the returns that the regulator approves should be commensurate with the rates of return earned by firms with comparable risk. That being said, the ranges of the indicated ROEs produced by the common equity models applied to the Utility Proxy Group and Non-Price Regulated Proxy Group in my ROE update do mostly overlap as shown below:

90 NCUC Docket No. W-354, Sub 363, 364, 365, *Order Granting Partial Rate Increase and Requiring Customer Notice*, at PDF 72 (March 31, 2020).
91 Breuning Direct Testimony, at 38-39.
92 http://www.eviews.com/general/prices/prices.html
93 Breuning Direct Testimony, at 43.

Table 5: Comparison of Model Results Applied to Mr. D'Ascendis' Water and Non-Price Regulated Proxy Groups

	DCF	RPM	CAPM
D'Ascendis Proxy Group	8.76% - 11.75%	10.75%	9.91% - 10.66 %
Non-Price Regulated Proxy Group	6.48% - 21.85%	11.70%	10.21% - 12.16%

Given the indicated ranges of results of cost of common equity models applied to the Utility Proxy Group and Non-Price Regulated Proxy Group, the objective of the CEM, and the adherence to the regulatory compact, the results of market models applied to the Non-Price Regulated Proxy Group comparable in total risk to my Utility Proxy Group should be accepted by the Commission.

IV. RESPONSE TO OCA WITNESS GARRETT

Q. PLEASE PROVIDE A SUMMARY OF MR. GARRETT'S ANALYSES AND RECOMMENDATIONS REGARDING YORK WATER'S OVERALL COST OF CAPITAL.

A. Mr. Garrett applies two DCF models (analyst's growth and sustainable growth) and two CAPM analyses (traditional and Hamada), which produce a range of results from 6.70% to 9.20%. While he accepts the Company's proposed long-term debt cost rate, he rejects the Company's proposed capital structure in favor of a hypothetical capital structure consisting of 51.00% equity and 49.00% long-term debt.[94] If his proposed capital structure is accepted, Mr. Garrett recommends an 8.90% ROE which is the result of his traditional CAPM.[95] If the Commission accepts York Water's proposed capital structure, he recommends an 8.70% ROE based on his Hamada CAPM.[96]

[94] Garrett Direct Testimony, at 5.
[95] Garrett Direct Testimony, at 4.
[96] Garrett Direct Testimony, at 5.

Q. IN WHAT KEY AREAS ARE YOU CONCERNED WITH MR. GARRETT'S ANALYSES AND RECOMMENDATIONS?

A. There are several areas in which I have concerns with Mr. Garrett's analyses and conclusions, including: (1) his recommended capital structure; (2) his application of the DCF model; (3) his application of the CAPM; (4) his failure to reflect the unique business risk of the Company; (5) his failure to reflect flotation costs incurred by the Company; and (6) his failure to consider a performance factor adjustment.

A. <u>Capital Structure</u>

Q. PLEASE SUMMARIZE THE COMPONENTS OF THE COMPANY'S RECOMMENDED CAPITAL STRUCTURE.

A. The Company's proposed capital structure, which is based on its actual capital structure as of December 31, 2024, consists of 45.42% long-term debt, and 54.58% common equity.

Q. PLEASE SUMMARIZE MR. GARRETT'S TESTIMONY AS IT RELATES TO THE COMPANY'S PROPOSED CAPITAL STRUCTURE.

A. Mr. Garrett recommends that the Commission authorize a hypothetical common equity ratio of 51.00%, based on the *Value Line* equity ratio of his proxy group.[97] Additionally, he states that York Water has "less financial risk relative to the proxy group."[98] As discussed previously in response to Mr. Breuning, the Company's credit ratings do not support Mr. Garrett's assertion.

[97] Garrett Direct Testimony, at 4-5, Exhibit DJG-13.
[98] Garrett Direct Testimony, at 4-5.

Q. DOES MR. GARRETT'S RECOMMENDED HYPOTHETICAL CAPITAL STRUCTURE REFLECT THE COMPANY'S SPECIFIC OPERATING CONDITIONS?

A. No, it does not. Mr. Garrett's simple average *Value Line* equity ratios of his proxy group is self-explanatory but does not reflect any Company-specific risks. The Company's requested capital structure reflects how its jurisdictional rate base is financed, and because of this, it reflects the Company's operating risks.

Q. WHAT FACTORS SHOULD TYPICALLY BE CONSIDERED WHEN DETERMINING WHETHER TO USE AN ACTUAL OR HYPOTHETICAL CAPITAL STRUCTURE FOR RATEMAKING PURPOSES?

A. The factors typically considered relative to the use of a regulated subsidiary's actual capital structure, or a hypothetical capital structure, are provided by David C. Parcell in The Cost of Capital – A Practitioner's Guide (CRRA Guide) prepared for the Society of Utility and Regulatory Financial Analysts (SURFA) and provided as the study guide to candidates for SURFA's Certified Rate of Return Certification Examination. The CRRA Guide notes that there are circumstances where a hypothetical capital structure is used in favor of an actual capital structure. They are:

(i) The utility's capital structure is deemed to be substantially different from the typical or "proper" capital structure; or

(ii) The utility's capital structure is funded as part of a diversified organization whose overall capital structure reflects its diversified nature rather than its utility operations only.[99]

Phillips echoes the CRRA Guide when he states:

[99] David C. Parcell, The Cost of Capital – A Practitioner's Guide, Prepared for the Society of Utility and Regulatory Financial Analysts, 2010 Edition, p. 47.

> Debt ratios began to rise in the late 1960s and early 1970s, and the financial condition of the public utility sector began to deteriorate. It became the common practice to use actual or expected capitalizations; actual where a historic test year is used, expected when a projected or future test year is used.[83] (footnote omitted)
>
> The objective, in short, shifted from minimization of the short-term cost of capital to protection of a utility's ability "to raise capital at all times." This objective requires that a public utility make every effort to keep indebtedness at a prudent and conservative level."[84] (footnote omitted)
>
> A hypothetical capital structure is used only where a utility's actual capitalization is clearly out of line with those of other utilities in its industry or where a utility is diversified.[85] (footnote omitted) (italics added)[100]

As discussed in my Direct Testimony, the Company's requested equity ratio (which mirrors its actual equity ratio) is consistent with the range of current equity ratios maintained by my Utility Proxy Group. Further, the Company's proposed equity ratio is consistent with the projected equity ratios of the Utility Proxy Group as reported by *Value Line*.[101] Finally, the above literature supports the Company's use of its actual capital structure. As such, the requested capital structure should be approved by the Commission.

Q. IS THE COMPANY'S PROPOSED EQUITY RATIO OF 54.58% APPROPRIATE FOR RATEMAKING PURPOSES?

A. Yes, it is. The Company's proposed equity ratio of 54.58% is appropriate for ratemaking purposes in the current proceeding because it is well within industry norms and reflects the financing of its rate base.

101 D'Ascendis Direct Testimony, at 16, Schedule DWD-2.

B. Application of the DCF Model

Q. PLEASE BRIEFLY DESCRIBE MR. GARRETT'S CONSTANT GROWTH DCF ANALYSES AND RESULTS.

A. Mr. Garrett applied analyst's projected dividend growth and "sustainable" growth rates in the constant growth DCF Model, which produced a ROE estimates of 9.20% and 6.70%, respectively.[102] For the dividend yield component, Mr. Garrett relied on annualized dividend payments and 30-day average stock prices as of August 8, 2025.[103] To estimate expected growth, Mr. Garrett calculated his DCF results based on projected DPS growth rates from *Value Line*.[104] For his "sustainable" growth rate, Mr. Garrett looked to two measures: (1) nominal Gross Domestic Product ("GDP") and (2) real GDP.[105] Of those two measures, he chose the highest estimate, 3.70% for his analysis.[106]

Q. DO YOU HAVE ANY CONCERNS WITH MR. GARRETT'S APPLICATION OF THE DCF MODEL?

A. Yes, I do. I do not agree with Mr. Garrett's use of DPS growth rates in his DCF analysis nor do I agree with his use of so-called "sustainable" growth rates in his DCF analysis.

Q. ARE DIVIDEND GROWTH RATES APPROPRIATE INPUTS TO THE DCF MODEL?

A. No, they are not. First, earnings growth enables both dividend and book value growth. Under the strict assumptions of the constant growth DCF model, earnings, dividends, book value, and stock prices all grow at the same, constant rate in perpetuity.

102 Garrett Direct Testimony, at 27.
103 Exhibits DJG-3 and DJG-4.
104 Garrett Direct Testimony, at 27.
105 Exhibit DJG-5.
106 Garrett Direct Testimony, at 27.

Simply, earnings are the fundamental driver of both book value and dividend growth. As noted earlier, book value increases with the amount of earnings not distributed as dividends (that is, retained earnings), and the price at which new equity is issued is a function of the EPS and the then-current price-to-earnings ("P/E") ratio. Similarly, the ability to pay dividends depends fundamentally on expected earnings.[107] Because dividend policy contemplates additional factors, including the disproportionately negative effect on prices resulting from dividend cuts, as opposed to dividend increases, in the short-run dividend growth may be disconnected from earnings growth.[108] In the long run, however, dividends cannot be increased without earnings growth.

Because investors often assess stock values on the basis of P/E ratios, it is important to consider whether the growth rates used in the DCF model are related to those valuations. Therefore, relying on DPS as Mr. Garrett has done is wholly inappropriate.

Q. IN REVIEWING THE FINANCIAL LITERATURE, DID YOU DISCOVER ANY PUBLICATIONS THAT SUPPORTED THE USE OF PROJECTED DPS GROWTH RATES FOR USE IN A DCF MODEL?

A. No, I did not.

Q. LIKEWISE, ARE YOU AWARE OF ANY SOURCES OF DATA WHICH PROVIDE PROJECTED DPS GROWTH RATES TO INVESTORS?

A. *Value Line* is the only source of which I am aware of that publishes projected DPS growth rates. If investors indeed valued projected DPS growth rates there would be a market for that data. As they are not relied on by investors to determine their required returns on

[108] Servaes and Tufano, Corporate Dividend Policy: The Theory and Practice of Corporate Dividend and Share Repurchase Policy, Deutsche Bank, February 2006.

investments, there is no such market. Conversely, projected EPS growth rates are widely available to investors through many sources.[109]

Q. IS THE USE OF ANALYSTS' EARNINGS GROWTH PROJECTIONS IN THE DCF MODEL SUPPORTED BY FINANCIAL LITERATURE?

A. Yes, it is. Myron Gordon, the "father" of the standard regulatory version of the DCF model widely utilized throughout the United States in rate base/rate of return regulation, recognized the significance of analysts' forecasts of growth in EPS in a speech he gave in March 1990 before the Institute for Quantitative Research and Finance,[110] stating on page 12:

> We have seen that earnings and growth estimates by security analysts were found by Malkiel and Cragg to be superior to data obtained from financial statements for the explanation of variation in price among common stocks… estimates by security analysts available from sources such as IBES are far superior to the data available to Malkiel and Cragg.
>
> * * *
>
> Eq (7) is not as elegant as Eq (4), but it has a good deal more intuitive appeal. It says that investors buy earnings, but what they will pay for a dollar of earnings increases with the extent to which the earnings are reflected in the dividend or in appreciation through growth.

Professor Gordon recognized that the total return is largely affected by the terminal price, which is mostly affected by earnings (hence P/E multiples).

Studies performed by Cragg and Malkiel[111] demonstrate that analysts' forecasts are superior to historical growth rate extrapolations. While some question the accuracy of analysts' forecasts of EPS growth, the level of accuracy of those analysts' forecasts well after the fact does not really matter. What is important is that the forecasts reflect widely

---

109 For example, I use projected EPS growth rates from *Value Line*, S&P Capital IQ, and Zacks.

110 Myron J. Gordon, *The Pricing of Common Stock*, Presented before the Spring 1990 Seminar, March 27, 1990 of the Institute for Quantitative Research in Finance, Palm Beach, FL.

111 John G. Cragg and Burton G. Malkiel, Expectations and the Structure of Share Prices (University of Chicago Press, 1982) Chapter 4.

held expectations influencing investors at the time they make their pricing decisions, and hence, the market prices they pay.

In addition, Jeremy J. Siegel also supports the use of security analysts' EPS growth forecasts when he states:

> For the equity holder, the source of future cash flows is the earnings of firms.
>
> * * *
>
> Some people argue that shareholders most value stocks' cash dividends. But this is not necessarily true.
>
> * * *
>
> Since the price of a stock depends primarily on the present discounted value of all expected future dividends, it appears that dividend policy is crucial to determining the value of the stock. However, this is not generally true.
>
> * * *
>
> Since stock prices are the present value of future dividends, it would seem natural to assume that economic growth would be an important factor influencing future dividends and hence stock prices. However, this is not necessarily so. The determinants of stock prices are earnings and dividends on a *per-share* basis. Although economic growth may influence *aggregate* earnings and dividends favorably, economic growth does not necessarily increase the growth of per-share earnings of dividends. It is earnings per share (EPS) that is important to Wall Street because per-share data, not aggregate earnings or dividends, are the basis of investor returns. (italics in original)[112]

Q. WHAT IS YOUR CONCLUSION OF THE APPROPRIATE GROWTH RATE FOR USE IN THE DCF MODEL?

A. In view of the above, I recommend the Commission rely solely on projected EPS growth rates when determining the indicated ROE for York Water using the DCF model.

[112] Jeremy J. Siegel, Stocks for the Long Run – The Definitive Guide to Financial Market Returns and Long-Term Investment Strategies, McGraw-Hill 2002, pp. 90-94.

Q. WHAT ARE YOUR GENERAL CONCERNS WITH THE SUSTAINABLE GROWTH RATES ON WHICH MR. GARRETT'S DCF ANALYSIS RELIES?

A. First, Mr. Garrett assumed a single, perpetual growth rate of 3.70% for all his proxy companies.[113] By reference to the Congressional Budget Office's expected inflation rate of 2.10%, Mr. Garrett's method assumed his proxy companies all will grow at real rates of approximately 1.60%, in perpetuity.[114] It is unlikely an investor would be willing to assume the risks of equity ownership in exchange for expected growth only modestly greater than expected inflation. The risk simply is not worth the expected return.[115] In addition, as a practical matter, because they are generic in nature, his estimate fails to account for the risks and prospects faced by the proxy companies.

Q. WHAT OTHER CONCERNS DO YOU HAVE WITH THE 3.70% GROWTH RATE ASSUMED FOR ALL COMPANIES IN MR. GARRETT'S DCF ANALYSIS?

A. Mr. Garrett's 3.70% growth rate is not based on any measure of company-specific growth, or growth in the utility industry in general. Rather, his proxy group serves the sole purpose of calculating the dividend yield. Under the DCF model's strict assumptions, however, expected growth and dividend yields are inextricably related. Mr. Garrett's assumption that one growth rate applies to all companies, even though dividend yields vary across those companies, has no basis in theory or practice.

113 Garrett Direct Testimony, at 27.
114 Garrett Direct Testimony, at 27; 2.10% equals nominal GDP of 3.70% minus real GDP of 1.60%.
115 In the risk/return space, debt securities, with a higher yield and considerably less risk of capital loss (if held to maturity) may be the preferred alternative.

Q. IT IS MR. GARRETT'S OPINION THAT GROWTH IN A DCF MODEL IS LIMITED BY THE LONG-TERM GROWTH IN GDP.[116] WHY IS LONG-TERM GROWTH IN GDP NOT AN UPPER LIMIT FOR TERMINAL GROWTH AS MR. GARRETT CONTENDS?

A. First, GDP is not a market measure – rather it is a measure of the value of the total output of goods and services, excluding inflation, in an economy. While I understand that EPS growth is also not a market measure, it is well established in the financial literature that projected growth in EPS is the superior measure of dividend growth in a DCF model.[117] Furthermore, GDP is simply the sum of all private industry and government output in the United States, and its growth rate is simply an average of the value of those industries. To illustrate, DWD-11R presents the compound annual growth rate of the industries that comprise GDP from 1947 to 2024. Of the 15 industries represented, seven industries (including utilities) grew faster than the overall GDP, and eight industries grew slower than the overall GDP.[118] Given that utilities have grown faster than the overall GDP over the 1947-2024 time period, I disagree with Mr. Garrett's suggestion that "it is reasonable to conclude that the long-term growth of a domestic firm cannot outpace the growth rate of the aggregate economy in which it operates (as measured by U.S. GDP in this case)"[119]

118 Source: Bureau of Economic Analysis.

119 Garrett Direct Testimony, at 27..

Q. DID YOU CONDUCT ANOTHER ANALYSIS THAT CALCULATES THE AMOUNT OF TIME IT WOULD TAKE AN INDUSTRY TO OVERTAKE THE ENTIRE ECONOMY?

A. Yes. I examined the value added by industry from 1947 to 2024 in Schedule DWD-11R and used the compound annual growth rates for the highest growth rate industry (i.e., Educational Services, Healthcare, and Social Assistance at 8.55% per year) to see when that industry would comprise the entire economy. In the year 2300, or 276 years from the 1947 starting point, the industry would comprise over 50% of GDP, and in the year 7963, or 6,016 years after the 1947 starting point, the industry would comprise 100% of GDP.[120] Not only have individual companies or industries consistently grown at rates beyond GDP growth, but they have done so without overtaking the entire economy. While Mr. Garrett's argument may be technically correct, it is unrealistic at best.

Q. PLEASE RESPOND TO MR. GARRETT'S COMMENT REGARDING "STEADY-STATE" GROWTH RATES.

A. On page 24 of his direct testimony, Mr. Garrett states, "it is not necessary to use multi-stage DCF Models to analyze the cost of equity of regulated utility companies. This is because regulated utilities are already in their 'sustainable,' low growth stage." While I agree with Mr. Garrett's statement regarding regulated utilities being in the "mature" stage in the company/industry life cycle, I disagree with his conclusion regarding the long-term growth rates of regulated utilities.

[120] To put the amount of time that will take these two milestones to happen in perspective, approximately 300 years ago, in the year 1719, France and Spain were at war in New France (now Louisiana), and approximately 3,476 years ago, in the year 1457 BC, the first recorded battle in military history, the Battle of Megiddo, was waged between the Egyptians, led by Pharaoh Thutmose III against Kadesh, Canaanite, Mitanni, and Amurru forces. *See also* Zager and Evans, *In the Year 2525*, *on* 2525 (Exordium & Terminus) (RCA 1968).

As Mr. Garrett describes, the multi-stage DCF and its growth rates reflect the company/industry life cycle, which is typically described in three stages: (1) the growth stage, which is characterized by rapidly expanding sales, profits, and earnings. In the growth stage, dividend payout ratios are low in order to grow the firm; (2) the transition stage, which is characterized by slower growth in sales, profits, and earnings. In the transition stage, dividend payout ratios increase, as their need for exponential growth diminishes; and (3) the maturity (steady-state) stage, which is characterized by limited, slightly attractive investment opportunities, and steady earnings growth, dividend payout ratios, and returns on equity.

Since the utility industry is in the mature phase of the company life cycle, it is the company-specific projected EPS growth rate that is the appropriate measure of growth in a constant growth DCF model, not the projected GDP growth rate as Mr. Garrett asserts.

Q. ARE THERE EXAMPLES IN BASIC FINANCE TEXTS THAT SUPPORT YOUR POSITION?

A. Yes. For example, in Investments, life cycles and multi-stage growth models are discussed:

> As useful as the constant-growth DDM (dividend discount model) formula is, you need to remember that it is based on a simplifying assumption, namely, that the dividend growth rate will be constant forever. In fact, firms typically pass through life cycles with very different dividend profiles in different phases. In early years, there are ample opportunities for profitable reinvestment in the company. Payout ratios are low, and growth is correspondingly rapid. In later years, the firm matures, production capacity is sufficient to meet market demand, competitors enter the market, and attractive opportunities for reinvestment may become harder to find. In this mature phase, the firm may choose to increase the dividend payout ratio, rather than retain earnings. The dividend level increases, but thereafter it grows at a slower pace because the company has fewer growth opportunities.
>
> Table 18.2 illustrates this pattern. It gives Value Line's forecasts of return on assets, dividend payout ratio, and 3-year growth in earnings per share for a sample of the firms in the computer software industry versus those of east coast electric utilities…

> By in large, the software firms have attractive investment opportunities. The median return on assets of these firms is forecast to be 19.5%, and the firms have responded with high plowback ratios. Most of these firms pay no dividends at all. The high return on assets and high plowback result in rapid growth. The median growth rate of earnings per share in this group is projected at 17.6%.
>
> In contrast, the electric utilities are more representative of mature firms. Their median return on assets is lower, 6.5%; dividend payout is higher, 68%; and median growth is lower, 4.6%.
>
> * * *
>
> To value companies with temporarily high growth, analysts use a multistage version of the dividend discount model. Dividends in the early high-growth period are forecast and their combined present value is calculated. Then, once the firm is projected to settle down to a steady-growth phase, the constant-growth DDM is applied to value the remaining stream of dividends.[121]

The economics of the public utility business indicate that the industry is in the steady-state, or constant-growth stage of a multi-stage DCF, which would mean that the three- to five-year projected growth rates for each company would be the "steady-state" or terminal growth rate appropriate for the DCF model for utility companies, not the GDP growth rate, which is not a company-specific growth rate, nor is it an upward bound for growth, as discussed previously.

C. Application of the CAPM

Q. PLEASE SUMMARIZE MR. GARRETT'S CAPM ANALYSES AND RESULTS.

A. Mr. Garrett's primary CAPM estimate relied on a risk-free rate of 4.88%, an MRP of 5.10%, and betas as reported by *Value Line*. Those assumptions combined to produce an average CAPM estimate of 8.90%.[122] Mr. Garrett also conducts a Hamada CAPM using the same risk-free rate and MRP, but re-levers the *Value Line* beta to reflect the average equity ratio of his proxy group.[123]

---

121 Bodie, Kane, and Marcus, Investments, 7th Edition, McGraw-Hill Irwin, 2008, at 616-617.
122 Exhibit DJG-11.
123 Garrett Direct Testimony, at 63-66.

Q. DO YOU AGREE WITH MR. GARRETT'S APPLICATION OF THE CAPM?

A. No, I do not. My primary concerns are Mr. Garrett's selection of his MRP and that he does not employ the ECAPM. I generally do not agree with the use of current interest rates for cost of capital purposes, but the difference between measures of the risk-free rate is immaterial at this time. I also disagree with the applicability of his Hamada CAPM.

Q. HOW DID MR. GARRETT DERIVE HIS MRP ESTIMATE?

A. Mr. Garrett derived his MRP estimate based upon the following: (1) a survey of expected returns from IESE Business School (5.50%); (2) an expected return reported by Kroll (Duff & Phelps) (5.50%); (3) implied MRP from Damodaran (4.30%); and (4) an "Implied Equity Risk Premium" calculation (5. 00%).[124] Based on those results, Mr. Garrett concludes that 5.10%, the average of his range, is appropriate.

Q. WHAT IS YOUR POSITION ON THE 5.50% MRP QUOTED BY KROLL?

A. As discussed previously, the Kroll MRP is opaque as compared to Kroll's historical data, and less accurate, and as such should be afforded little weight.

Q. DO ANY OF THE SURVEYS CITED BY MR. GARRETT PROVIDE SUPPORT FOR YOUR APPROACH TO ESTIMATING THE CURRENT MRP?

A. Yes. As discussed in my Direct Testimony,[125] I calculated ex-ante MRPs in a similar manner to a study by Pablo Fernandez, et al (cited by Mr. Garrett), using the market capitalization-weighted constant growth DCF calculation on the individual companies in the S&P 500 Index.[126]

---

124 Garrett Direct Testimony, at 38; Exhibit DJG-10.

125 D'Ascendis Direct Testimony, at 35-36.

126 *See*, Pablo Fernandez, Eduardo de Apellaniz and Javier F. Acin, *Survey: Market Risk Premium and Risk-Free Rate used for 81 countries in 2020*, IESE Business School, March 25, 2020, at 10. Specifically, the study states:[t]he [implied equity premium] is the implicit [required equity premium] used in the valuation of a stock (or market index) that matches the current market price. The most widely used model to calculate the [implied equity premium] is the dividend discount model: the current price per share (P_0) is the present

Q. IS THERE ACADEMIC LITERATURE THAT SUPPORTS THE CONCLUSION THAT MRPS USING SURVEYS ARE NOT WIDELY USED BY PRACTITIONERS?

A. Yes. Damodaran, who was cited by Mr. Garrett throughout his testimony, states the following about the applicability of survey MRPs:

> While survey premiums have become more accessible, very few practitioners seem to be inclined to use the numbers from these surveys in computations and there are several reasons for this reluctance:
>
> 1. Survey risk premiums are responsive to recent stock prices movements, with survey numbers generally increasing after bullish periods and decreasing after market decline. Thus, the peaks in the SIA survey premium of individual investors occurred in the bull market of 1999, and the more moderate premiums of 2003 and 2004 occurred after the market collapse in 2000 and 2001.
> 2. Survey premiums are sensitive not only to whom the question is directed at but how the question is asked. For instance, individual investors seem to have higher (and more volatile) expected returns on equity than institutional investors and the survey numbers vary depending upon the framing of the question.[footnote omitted]. Kaustia, Lehtoranta and Puttonen (2011) surveyed 1,465 Finnish investment advisors and note that not only are male advisors more likely to provide an estimate but that their estimated premiums are roughly 2% lower than those obtained from female advisors, after controlling for experience, education and other factors.[footnote omitted]
> 3. Studies that have looked at the efficacy of survey premiums indicate that if they have any predictive power, it is in the wrong direction. Fisher and Statman (2000) document the negative relationship between investor sentiment (individual and institutional) and stock returns.[footnote omitted] In other words, investors becoming more optimistic (and demanding a larger premium) is more likely to be a precursor to poor (rather than good) market returns.
>
> As technology aids the process, the number and sophistication of surveys of both individual and institutional investors will also increase. However, it is

value of expected dividends discounted at the required rate of return (K_e). If d_1 is the dividend per share expected to be received in year 1, and g the expected long-term growth rate in dividends per share,
$P_0 = d_1 / (Ke - g)$, which implies:[implied equity premium] = $d_1/P_0 + g - R_f$

also likely that these survey premiums will be more reflective of the recent past rather than good forecasts of the future.[127]

Q. PLEASE NOW DESCRIBE THE METHOD BY WHICH MR. GARRETT CALCULATED HIS THIRD ESTIMATE, THE IMPLIED MRP.

A. As Mr. Garrett points out, his method developed the Internal Rate of Return that sets the current value of the market index equal to the projected value of cash flows associated with owning the market index.[128] Mr. Garrett observes that Damodaran "promotes the implied ERP method."[129] Although there are some differences, Mr. Garrett's approach is similar to the model Damodaran provides on his website.[130]

Mr. Garrett's method, which is a two-stage form of the DCF model, calculated the present value of cash flows over the five-year initial period, together with the terminal price (based on the Gordon Model [131]), to be received in the last (i.e., fifth) year. The model's principal inputs include the following assumptions:

- Over the coming five years, the S&P 500 Index (the "Index") will appreciate at a rate equal to the compound growth rate in "Operating Earnings" from 2014 through 2024;
- Cash flows associated with owning the Index will be equal to the historical average earnings, dividends, and buyback yields, applied to the projected Index value each year; and

127 Aswath Damodaran, Stern School of Business, *Equity Risk Determinants, Estimation and Implications – The 2025 Edition*, Updated March 5, 2025, at 30-31.
128 Garrett Direct Testimony, at 34-37.
129 Garrett Direct Testimony, at 37.
130 *See*, http://pages.stern.nyu.edu/~adamodar.
131 Exhibit DJG-9

- Beginning in the terminal year, the Index will appreciate, in perpetuity, at a rate equal to the 30-day average yield on 30-year Treasury securities, as of August 8, 2025.[132]

As discussed below, reasonable changes to those assumptions have a considerable effect on Mr. Garrett's calculated expected market return.

Q. DO YOU HAVE ANY OBSERVATIONS REGARDING MR. GARRETT'S ASSUMED FIRST-STAGE GROWTH RATE?

A. Yes. Mr. Garrett's 6.96% growth rate relates to growth in operating earnings, and does not reflect capital appreciation, growth in dividends, or buy-backs.[133] In addition, if Mr. Garrett's position is that historical growth rates are meant to reflect expected future growth, they should reflect year-to-year variation (i.e., uncertainty). That is best accomplished using the arithmetic mean. I therefore calculated the average growth (arithmetic mean) for the four metrics included in Mr. Garrett's exhibit as shown in page 2 of Schedule DWD-12R. The average growth rate, 9.04%, produced an estimated market return of 10.35%,[134] which is still well below historical experience.

Q. WHY DID THE MARKET RETURN INCREASE BY ONLY 46 BASIS POINTS (FROM 9.89% TO 10.35%) WHEN THE FIRST-STAGE GROWTH RATE INCREASED BY 208 BASIS POINTS (FROM 6.96% TO 9.04%)?

A. Because Mr. Garrett's model assumed the first stage lasts for five years (and the terminal stage is perpetual), the results are sensitive to changes in the assumed terminal growth rate. To put that effect in perspective, the terminal value (which is directly related to the terminal

---

132 Exhibits DJG-7 and DJG-9. The model also assumes that all payments are received at year-end, rather than during the year. That assumption also tends to under-state the implied MRP.

133 Exhibit DJG-9. Whereas the compound average growth rate in operating earnings was 6.96%, dividends and buybacks grew by 6.08% and 9.00%, respectively.

134 Schedule DWD-12R, page 2.

growth rate) represents 78.97% of the "Intrinsic Value" in Mr. Garrett's analysis.[135]

Q. HOW DID MR. GARRETT DEVELOP HIS ASSUMED TERMINAL GROWTH RATE?

A. The terminal growth rate represents investors' expectations of the rate at which the broad stock market will grow, in perpetuity, beginning in the terminal year. Mr. Garrett assumed terminal growth is best measured by the average yield on 30-year Treasury securities over the 30 days ended August 8, 2025. That is, Mr. Garrett assumed the average 30-year Treasury yield between June 27, 2025, and August 8, 2025, is the best measure of expected earnings growth beginning five years from now and extending indefinitely into the future.

Q. DO YOU AGREE WITH MR. GARRETT'S ASSUMPTION?

A. No, I do not. I recognize Mr. Garrett followed the approach described in Damodaran's method, which Damodaran refers to as a "default" assumption.[136] In terms of historical experience, over the long-term the broad economy has grown at a long-term compound average growth rate of approximately 6.11%.[137] Considered from another perspective, Kroll reports the long-term rate of capital appreciation on Large Company stocks to be 8.27%.[138] Mr. Garrett's model assumes, however, that the market index will grow by a rate about 190 basis points below that amount, 6.37%, over the coming four years.[139]

Mr. Garrett has not explained why growth beginning five years in the future, and extending in perpetuity, will be 60% of long-term historical growth.[140] From a somewhat

---

135 Schedule DWD-12R, page 2. Please note that regardless of the assumed first and terminal-stage growth rates, the terminal stage consistently represents approximately 79.00% of the Intrinsic Value.

136 *See*, http://pages.stern.nyu.edu/~adamodar.

137 Source: Bureau of Economic Analysis for the years 1929 to 2024. *See also*, https://www.bea.gov/data/gdp/gross-domestic-product.

138 SBBI-2023, 137.

139 Exhibit DJG-9. (8059/6295)^(1/4) - 1 = 6.37%.

140 Garrett assumed perpetual growth rate of 4.89% divided by large company capital appreciation of 8.27%. 4.89% / 8.27% = 59.12%.

different perspective, assuming long-term inflation will be approximately 2.00%[141] implies perpetual real growth will be approximately 2.83%.[142] Nowhere in his testimony has Mr. Garrett explained the fundamental, systemic changes that would so dramatically reduce long-term economic growth, or why they are best measured by the long-term Treasury yield over 30 days between June 27, 2025, and August 8, 2025.

Further, research by the Federal Reserve Bank of San Francisco calls into question the relationship between interest rates and macroeconomic growth. As the authors noted, "[o]ver the past three decades, it appears that private forecasters have incorporated essentially no link between potential growth and the natural rate of interest: The two data series have a zero correlation."[143]

Q. PLEASE BRIEFLY SUMMARIZE YOUR RESPONSE TO MR. GARRETT'S IMPLIED EQUITY RISK PREMIUM CALCULATION.

A. Mr. Garrett's calculation is based on a series of questionable assumptions, to which a small set of very reasonable adjustments produces a market return estimate more consistent with (yet still below) the historical experience he considers relevant. Although the revised results still produce ROE estimates far below any reasonable measure, they do point out the sensitive nature of Mr. Garrett's analyses, and the tenuous nature of the conclusions he draws from them.

---

141 For example, in line with the Federal Reserve's target average rate of inflation.

142 2.83% = [(1.0489/1.020)-1]. Please note that the long-term historical average rate of inflation, measured by the difference between real and nominal GDP growth, has been approximately 2.90%, which would also imply perpetual real growth of 1.93%. Similarly, the projected difference in nominal GDP and real GDP from the Congressional Budget Office as reported in Exhibit DJG-5 has been approximately 2.10%, which implies perpetual real growth of 2.73%.

143 FRBSF Economic Letter, *Does Slower Growth Imply Lower Interest Rates?*, November 10, 2014, at 3.

Q. DID YOU CONDUCT A STUDY TO DETERMINE THE FORECAST ACCURACY OF THE DAMODARAN AND THE FERNANDEZ SURVEY IMPLIED MARKET RETURNS RELATIVE TO THE HISTORICAL MARKET RETURNS?

A. Yes, I did. Similar to my analysis of the Kroll "recommended" market return, I have calculated the forecast bias of the long-term historical average return, the Ibbotson-Chen study, and the implied market returns from Damodaran and the Fernandez Survey from 2008-2024 to determine the most accurate measure of the following years' market return.[144] The result of this analysis is also shown on Schedule DWD-7R and presented in Table 6, below:

Table 6: Comparison of Forecast Bias for Various Measures 2009-2024

Year	Observed Market Return	Long-Term Average Return	Damodaran Forecasted Market Return	Fernandez Forecasted Market Return
2009	26.46%	11.67%	8.64%	10.75%
2010	15.06%	11.85%	8.20%	10.25%
2011	2.11%	11.88%	8.49%	9.32%
2012	16.00%	11.77%	7.89%	7.96%
2013	32.39%	11.82%	7.54%	8.10%
2014	13.69%	12.05%	8.00%	8.81%
2015	1.38%	12.07%	7.95%	7.90%
2016	11.96%	11.95%	8.39%	7.60%
2017	21.83%	11.95%	8.14%	8.20%

2023	26.61%	12.02%	9.82%	9.50%
2024	25.62%	12.16%	8.48%	9.60%
Sum	249.22%	191.71%	126.19%	137.59%
Forecast Bias[145]		76.93%	50.63%	55.21%

144 2008 was selected as the starting year as it is the first year Kroll published its recommended MRP and risk-free rate.

145 Calculated by dividing the sum of the forecast returns by the sum of the actual returns.

As shown in Table 6, again, the long-term arithmetic mean return is the most accurate predictor of the next years' return as compared to the other measures, and the Damodaran and Fernandez projected market returns are less accurate measures of the market return. I will also note that the Damodaran and Fernandez projected market returns are even more understated than the Kroll projected market returns.

Q. DID MR. GARRETT CONDUCT AN ECAPM ANALYSIS?

A. No, he did not. Mr. Garrett does not conduct an ECAPM analysis as he believes the use of *Value Line* adjusted betas sufficiently corrects for the idea that low-beta stocks are underestimated by the traditional CAPM.[146]

Q. WHAT IS YOUR RESPONSE TO MR. GARRETT'S CONCERN WITH THE USE OF ADJUSTED BETAS IN THE ECAPM STRUCTURE?

A. Numerous tests of the CAPM have confirmed the ECAPM's validity by showing that the empirical SML described by the traditional CAPM is not as steeply sloped as the predicted SML. While the results of these tests support the notion that betas are related to security returns, the empirical SML described by the CAPM formula is not as steeply sloped as the predicted SML,[147] as discussed on pages 37 through 39 of my Direct Testimony.

Mr. Garrett seems to believe that using adjusted betas in a CAPM analysis addresses the empirical issues (discussed above) with the CAPM. By increasing the expected returns for low beta stocks and decreasing the expected returns for high beta stocks, he concludes there is no need to use the ECAPM. To the contrary, using adjusted betas in a CAPM analysis is not equivalent to using the ECAPM, nor is it an unnecessary redundancy.

146 Garrett Direct Testimony, at 44.
147 Morin, at 175.

Betas are adjusted because of their general regression tendency to converge toward 1.0 over time, *i.e.*, over successive calculations of beta. As also noted above, numerous studies have determined that the SML described by the CAPM formula at any given moment in time is not as steeply sloped as the predicted SML. Morin states:

> Some have argued that the use of the ECAPM is inconsistent with the use of adjusted betas, such as those supplied by Value Line and Bloomberg. This is because the reason for using the ECAPM is to allow for the tendency of betas to regress toward the mean value of 1.00 over time, and, since Value Line betas are already adjusted for such trend [sic], an ECAPM analysis results in double-counting. This argument is erroneous. Fundamentally, the ECAPM is not an adjustment, increase or decrease, in beta. This is obvious from the fact that the expected return on high beta securities is actually lower than that produced by the CAPM estimate. The ECAPM is a formal recognition that the observed risk-return tradeoff is flatter than predicted by the CAPM based on myriad empirical evidence. The ECAPM and the use of adjusted betas comprised two separate features of asset pricing. Even if a company's beta is estimated accurately, the CAPM still understates the return for low-beta stocks. Even if the ECAPM is used, the return for low-beta securities is understated if the betas are understated. Referring back to Figure 6-1, the ECAPM is a return (vertical axis) adjustment and not a beta (horizontal axis) adjustment. Both adjustments are necessary.[148]

Moreover, the slope of the SML should not be confused with beta. As Brigham and Gapenski state:

> The slope of the SML reflects the degree of risk aversion in the economy – the greater the average investor's aversion to risk, then (1) the steeper is the slope of the line, (2) the greater is the risk premium for any risky asset, and (3) the higher is the required rate of return on risky assets.[12]
>
> [12]Students sometimes confuse beta with the slope of the SML. This is a mistake. As we saw earlier in connection with Figure 6-8, and as is developed further in Appendix 6A, beta does represent the slope of a line, but not the Security Market Line. This confusion arises partly because the SML equation is generally written, in this book and throughout the finance literature, as ki = RF + bi(kM – RF), and in this form bi looks like the slope coefficient and (kM – RF) the variable. It would perhaps be less confusing

[148] Morin, at 191.

> if the second term were written (kM – RF)bi, but this is not generally done.[149]

As noted in Appendix 6A of Brigham and Gapenski's textbook, beta, which accounts for regression bias, is not a return adjustment but rather is based on the slope of a different line.

Additionally, a 1980 study by Litzenberger, *et al.* found the CAPM underestimates the ROE for companies, such as public utilities, with betas less than 1.00.[150] In that study, the authors applied adjusted betas and still found the CAPM to underestimate the ROE for low-beta companies. Similarly, Brattle Group's Risk and Return for Regulated Industries supports the use of adjusted betas in the ECAPM:

> Note that the ECAPM and the Blume adjustment are attempting to correct for different empirical phenomena and therefore both may be applicable. It is not inconsistent to use both, as illustrated by the fact that the Litzenberger et.al (1980) study relied on Blume adjusted betas and estimated an alpha of 2% points in a short-term version of the ECAPM. This issue sometimes arises in regulatory proceedings.[151]

Hence, using adjusted betas does not address the previously discussed empirical issues with the CAPM. In view of the foregoing, my use of adjusted betas in both the traditional and empirical applications of the CAPM is neither incorrect nor inconsistent with the financial literature, nor is it an unnecessary redundancy.

Q. WHY IS MR. GARRETT'S HAMADA CAPM NOT APPLICABLE FOR THIS PROCEEDING?

A. As discussed previously, the Company's requested equity ratio is consistent with the range of equity ratios in place within both my updated proxy group and Mr. Garrett's proxy

---

group. Further, while Mr. Garrett claims that the Company "is much less risky relative to the proxy group due to the decreased amount of debt in its capital structure",[152] as discussed previously in my response to Mr. Breuning, the Company's credit rating is lower (i.e., riskier) than that of the proxy group, indicating a higher level of risk compared to the proxy group. As a result, there is no need for Mr. Garrett to adjust the *Value Line* betas in his CAPM for any difference in financial risk.

D. Adjustments to the Cost of Equity

Q. DOES MR. GARRETT CONSIDER A BUSINESS RISK ADJUSTMENT IN HIS RECOMMENDED ROE FOR YORK WATER?

A. No, he does not. Mr. Garrett argues that "[b]ecause investors eliminate firm-specific risk through diversification, they know they cannot expect a higher return for assuming the firm-specific risk in any one company."[153]

Q. DO YOU AGREE WITH MR. GARRETT'S OBSERVATIONS?

A. No, I do not. As discussed on pages 40-41 of my Direct Testimony, when determining an appropriate ROE, the relevant issue is where investors see the subject company in relation to other similarly situated utility companies. To the extent investors view a company as being exposed to higher risk, the required return will increase, and vice versa. York Water's smaller size relative to the Utility Proxy Group companies indicates greater relative business risk for the Company because, all else being equal, size has a material bearing on risk.

[152] Garrett Direct Testimony, at 41.
[153] Garrett Direct Testimony, at 15.

Q. DID MR. GARRETT ADDRESS THE ISSUE OF A SIZE PREMIUM IN HIS TESTIMONY?

A. Yes. Mr. Garrett lists several reasons for his decision to not include a size premium in his recommendation, including: (1) numerous studies show that "the performance of large-cap stocks was basically equal to that of small cap stocks,"[154] and (2) that the "discovery of the size effect phenomenon likely caused its own demise."[155]

Q. IS MR. GARRETT'S REVIEW OF THE SIZE PREMIUM CORRECT?

A. No, it is not. First, Mr. Garrett notes that after 1983, U.S. small-cap stocks underperformed large-cap stocks.[156] The issue with Mr. Garrett's position is that the size premium measures the increased risk associated with a company's smaller size; Mr. Garrett is only focused on returns. As I discussed in my Direct Testimony, smaller companies face increased business risk as they are less equipped to cope with significant events that affect sales, revenues, and earnings, as the loss of a few larger customers will have a greater effect on a smaller company than a larger company.[157]

This is further evident when we consider that increasing capital costs (i.e., risk) for one set of securities will put downward pressure on those securities as investors transition to securities with lower risk. Under this premise, the underperformance is directly tied to the increase in risk. As such, Mr. Garrett's premise that smaller companies' underperformance indicates a reduction of risk is in fact the opposite – underperformance indicates an increasing level of risk.

154 Garrett Direct Testimony, at 47.
155 Garrett Direct Testimony, at 47.
156 Garrett Direct Testimony, at 46.
157 D'Ascendis Direct Testimony, at 40-41.

Q. MR. GARRETT POINTS TO A PASSAGE PUBLISHED IN 2015 BY IBBOTSON[158] THAT STATES THAT THE SIZE PREMIUM NO LONGER EXISTS. WHAT IS YOUR RESPONSE?

A. Despite their findings, Kroll (which now owns Ibbotson) continues to publish data on their findings on the presence of a size premium in the market and has provided additional measures of size and relative risk premiums. In addition to market capitalization, Kroll includes book common equity, market value of invested capital, five-year average net income, five-year average earnings before interest, taxes, depreciation and amortization, total assets, total sales, and total employees as valid measures of size from which relative size premiums are derived. If Kroll found that the size premium ceased to exist, it would not publish that it did.

Q. DO YOU AGREE WITH MR. GARRETT THAT THE SIZE EFFECT NO LONGER EXISTS?

A. No, I do not. While the historical returns of large companies may have outperformed small utilities over the last several years, risk is measured by volatility, not returns. A study by Clifford Ang detailed the returns and volatility of returns of companies by size, showing while larger companies out-performed smaller companies, smaller companies exhibited more risk.[159] Reviewing data from the same source as the Ang study, I replicated the study through July 2025. Table 7 presents the largest monthly gain and loss for each value-weighted decile for the period 1981 through June 2025. As shown in Table 7, small capitalization stocks exhibit more volatility (i.e., risk) in their returns than larger capitalization stocks.

---

158 Garrett Direct Testimony, at 69.

159 Clifford S. Ang, "The Absence of a Size Effect Relevant to the cost of Equity", Business Valuation Review, Volume 37, No. 3, 2018.

Table 7: Size and Volatility of Returns[160]

Decile:	1	2	3	4	5	6	7	8	9	10
Largest Gain:	29.4%	25.3%	21.1%	20.0%	19.8%	16.9%	17.1%	14.5%	14.1%	13.4%
Largest Loss:	-28.8%	-30.2%	-28.8%	-29.7%	-27.8%	-26.3%	-26.0%	-23.9%	-22.5%	-19.8%

Further, SBBI-2023 shows that the total return of large-cap stocks over the 1926-2022 period has a standard deviation of 19.8%, compared to 31.2% for small-cap stocks, echoing the findings of Table 5.[161] The higher level of risk indicates a higher level of required return.

Q. WHAT ARE MR. GARRETT'S CONCERNS WITH YOUR FLOTATION COST ADJUSTMENT?

A. Mr. Garrett states that flotation costs should not have an increasing impact on York Water's return on equity because: (1) flotation costs are not actual "out-of-pocket" costs; (2) the market already accounts for flotation costs; and (3) the requested ROE is already too high and increasing it further would be inappropriate.[162]

Q. WHAT IS YOUR RESPONSE?

A. Flotation costs are reflected on the balance sheet under "paid in capital" and incurred over time. As a result, flotation costs remain part of a company's cost structure during the test year and beyond even if the costs were incurred prior to the test year.[163]

Mr. Garrett's observation that underwriter fees are not "out-of-pocket" expenses is a distinction without a meaningful difference.[164] Whether paid directly or indirectly through an underwriting discount, the cost results in net proceeds that are less than the

160 Deciles in ascending order with one (1) representing the smallest stocks by market capitalization. Source: http://mba.tuck.dartmouth.edu/pages/faculty/ken.french/data_library.html#BookEquity.
161 SBBI-2023, at 137. Note: Utility companies are included in this data set.

163 D'Ascendis Direct Testimony, at 45-46.
164 Garrett Direct Testimony, at 49-50.

gross proceeds. Mr. Garrett points out that under federal law, the underwriters' compensation must be disclosed in the offering prospectus.[165] I agree. In fact, those prospectuses are the source of the issuance costs included in Schedule DWD-9 to my Direct Testimony. Because those costs were incurred, the net proceeds to the issuing company were less than the gross proceeds. Whether the issuer wrote a check or received the proceeds at a discount does not matter. What does matter is that issuance costs are a permanent reduction to common equity, and absent a recovery of those costs, the issuing company will not be able to earn its required return.

Furthermore, as discussed in my response to Mr. Breuning, denying recovery of issuance costs would penalize the investors that fund the utility operations.

Q. DOES MR. GARRETT AGREE WITH YOUR PROPOSED PERFORMANCE FACTOR ADJUSTMENT?

A. No, he does not. As stated in my response to Mr. Breuning, the Company has fulfilled the requirements of 66 Pa.C.S. § 523 and should receive the benefit of doing so.

E. <u>Response to Mr. Garrett's Critiques of Company Testimony</u>

Q. DOES MR. GARRETT HAVE ANY CRITIQUES OF YOUR ANALYSES PRESENTED IN YOUR DIRECT TESTIMONY?

A. Yes, he does. Mr. Garrett's critiques of my Direct Testimony are: (1) my use of overstated DCF growth rates; (2) my use of an MRP he deems unreasonable for not being in line with his MRP estimates; (3) my use of the ECAPM; (4) my use of a non-regulated proxy group; and (5) my inclusion of adjustments for Company-specific factors.

I have already addressed critiques (1), (3), and (5) previously and will not address them again here. I will discuss Mr. Garrett's remaining arguments in turn.

[165] Garrett Direct Testimony, at 50.

Q. MR. GARRETT STATES THAT YOUR MRP IS UNREASONABLE IN VIEW OF HIS MEASURES OF MRP AS PRESENTED IN HIS CAPM ANALYSIS.[166] PLEASE RESPOND.

A. I have discussed the inapplicability of Mr. Garrett's MRP estimates for cost of capital purposes previously in this Rebuttal Testimony and will not repeat that discussion here. Since Mr. Garrett's MRP measures are not valid MRPs, as discussed in detail above, they cannot be valid comparators to my MRP estimates. Even though Mr. Garrett has presented no reliable evidence upon which to gauge the reasonableness of the MRP estimate, my updated MRP estimate of 8.58% is consistent with actual realized MRPs as discussed previously.

Q. PLEASE SUMMARIZE MR. GARRETT'S ARGUMENT AGAINST USING A NON-PRICE REGULATED PROXY GROUP SIMILAR IN TOTAL RISK TO YOUR UTILITY PROXY GROUP TO DETERMINE AN INDICATED ROE FOR YORK WATER IN THIS PROCEEDING.

A. Mr. Garrett opines that there is no marginal benefit for running a CAPM or DCF model on a group of non-regulated, non-utility companies. Additionally, Mr. Garrett believes that competitive firms typically have higher levels of risk than utilities.[167]

Q. DO YOU AGREE WITH MR. GARRETT'S REASONING?

A. No. Regarding Mr. Garrett's claim that there is no marginal benefit to running my non-price regulated analysis, this directly contradicts his own claim that, "[i]t is preferable to use multiple models because the results of any one model may contain a degree of imprecision."[168] Because regulation is a substitute for competition, the application of cost

166 Garrett Direct Testimony, at 40-41.
167 Garrett Direct Testimony, at 52.
168 Garrett Direct Testimony, at 10.

of common equity models to comparable risk, non-regulated companies produces a marginal benefit that cannot be replicated using utility companies.

Q. DOES MR. GARRETT DISCUSS RISK AND RELEVANCE OF RISK FOR COST OF CAPITAL PURPOSES IN HIS TESTIMONY?

A. Yes. In Section V of his direct testimony, Mr. Garrett discusses risk and return concepts in general. On page 16 of his direct testimony, Mr. Garrett states: "Market risk is the only type of risk that is rewarded by the market and is thus the primary type of risk the Commission should consider when determining the allowed return for the utilities it regulates."

Q. HOW DOES YOUR SELECTION CRITERIA FOR YOUR NON-PRICE REGULATED PROXY GROUP FIT INTO THE ABOVE DISCUSSION?

A. Following Mr. Garrett's logic, given that unadjusted betas are measures of market risk (the primary measure of risk according to Mr. Garrett), and one of my screening criteria was to generate companies with similar unadjusted betas as the Utility Proxy Group, my Non-Price Regulated Proxy Group, by his definition, would be comparable to the Utility Proxy Group.

Q. PLEASE SUMMARIZE YOUR DISCUSSION REGARDING THE USE OF NON-PRICE REGULATED PROXY GROUPS IN COST OF CAPITAL ANALYSES FOR REGULATED UTILITIES.

A. The use of Non-Price Regulated Proxy Groups in cost of capital analyses for regulated utility companies should be considered by regulatory commissions as another tool in the tool kit to determine the ROE for a utility, provided that the Non-Price Regulated Proxy Group is shown to be of comparable risk. The Non-Price Regulated Proxy Group used in my analyses was screened using measures of systematic and unsystematic risk, to show

similar total risk. Mr. Garrett's non-price regulated industry study was not screened for any risk aside from financial risk, which, as stated previously, is not a proxy for total risk. For these reasons, my Non-Price Regulated Proxy Group analyses should be considered by the Commission while Mr. Garrett's non-price regulated industry analyses should be rejected by the Commission.

V. CONCLUSION

Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY

A. Given the discussion above and my updated analysis, I continue to believe that my recommended ROE of 10.90% is reasonable for the Company at this time.

Q. IN YOUR OPINION, IS YOUR PROPOSED ROE OF 10.90% FAIR AND REASONABLE FOR YORK WATER AND ITS CUSTOMERS?

A. Yes, it is.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

NA= Not Available

Notes:

(1) Indicated dividend at 8/15/2025 divided by the average closing price of the last 60 trading days ending 8/15/2025 for each company.
(2) From pages 6 through 11 of this Schedule.
(3) Average of columns 2 through 4 excluding negative growth rates and extreme positive values.
(4) This reflects a growth rate component equal to one-half the conclusion of growth rate (from column 5) x column 1 to reflect the periodic payment of dividends (Gordon Model) as opposed to the continuous payment. Thus, for American States Water Company, 2.63% x (1+(1/2 x 6.12%)) = 2.71%.
(5) Column 5 + Column 6.
(6) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

BUSINESS: American States Water Co. operates as a holding company. Through its principal subsidiary, Golden State Water Co., it supplies water to 264,557 customers in 10 California counties. Service areas include the metropolitan areas of Los Angeles and Orange Counties. The company also provides electricity to 24,857 customers in Big Bear Lake and San Bernardino Cnty. Provides water & wastewater services to U.S. military bases through its ASUS subsidiary. Sold Chaparral City Wtr. of AZ. (6/11). Employs 846. BlackRock, Inc. owns 17.6% of out. shares; Vanguard, 12.0%; off. & dir., 0.8% (4/25 Proxy). Chair.: Anne M. Holloway. Pres. & CEO: Robert Sprowls. Inc: CA. Address: 630 East Foothill Blvd., San Dimas, CA 91773. Tel.: 909-394-3600. Int.: www.aswater.com.

American States Water is on track for a decent showing this year. In the first quarter, the water utility posted a hefty 13% year-over-year bottom-line advance. Most of this was due to the implementation of higher rates at its main Golden States Water utility. The comparison would have been even more positive if not for some unusual items that impacted profits. For all of 2025, we think share earnings can advance about 4%, to $3.30.

Earnings growth will probably be about the same in 2026. As a utility in California, Golden States applies for rate relief every three years. With a final decision made earlier this year, its rates are set for 2025-2027. The company could do well, assuming inflation stays under control. All told, next year we estimate earnings per share could rise 4%-5%, to $3.45.

The ASUS operation could prove to be a swing factor in American States' results. Management established this subsidiary years ago as an entry into operating water systems at certain United States military bases. The armed forces have decided that it would be more suitable to have private companies, such as ASUS, perform this vital function (typically on 50-year contracts). ASUS has been relatively successful at winning new bids. For 2025, leadership expects this contracted service entity contribution to share earnings to be $0.59-$0.63. As more facilities are privatized, ASUS could widen American States' margins, as returns in this segment are not capped by regulators.

Short- and intermediate-term investors can find more attractive alternative elsewhere. Since our last report three months ago, the price of AWR has risen 7.2%. Based on our Timeliness Ranking System, the stock is only expected to perform in line with the market averages in the year ahead. Prospects over the next 18-month period are even less appealing.

Conservative investors with a longer horizon may want to take a second look here, however. The equity's appreciation potential out to 2028-2030 is close to the *Value Line* median. On a risk-adjusted basis, this is a solid return for an equity that has a 1 (Highest) Safety rank, a .75 Beta coefficient, and scores a 95 (out of 100) for Price Stability.

James A. Flood *July 4, 2025*

BUSINESS: American Water Works Company, Inc. is the largest investor-owned water and wastewater utility in the U.S., providing services to approximately 14 million people in 24 states. Nonregulated business assists municipalities and military bases with the maintenance and upkeep as well. Regulated operations made up 92% of 2024 revenues. Pennslyvania (23%); New Jersey (21%); Missouri (14%); and Illinois (11%) are its largest markets. Has 6,700 employees. Vanguard owns 12.3% of outstanding shares; BlackRock, 10.1%; State St., 5.7%; officers & directors, less than 1.0% (3/25 Proxy). President & Chief Executive Officer: M. Susan Hardwick. Address: 1 Water Street, Camden, NJ 08102. Telephone: 856-346-8200. Internet: www.amwater.com.

American Water Works continues to maintain its generous dividend policy. In the second quarter, the water utility hiked its quarterly share-dividend payout from $0.765 to $0.8275, an 8.2% increase. Over the pull to 2028-2030, the annual distribution ought to grow by 7%-9%.

Our bottom-line estimates remain unchanged. We believe that the firm's share earnings will increase 6% and 8% in 2025 and 2026, respectively. Higher operating and interest costs ought to be more than offset by increased rates being allowed in several states. Also helping will be the expansion of American Water's regulatory assets, upon which it earns a return.

Capital expenditures will likely reach $3.3 billion this year. Management is spending huge sums to upgrade its pipeline and waste water facilities. Indeed, over the next five years, $17 billion-$18 billion is scheduled to be spent on modernization. Thanks to solid internal cash flow and an overall good regulatory climate, American Water's balance sheet should hold up relatively well.

An ongoing acquisition strategy will also help profitability. As of March 31st, the company had entered into 18 separate agreements to purchase water entities for $123 million this year. The water industry in the United States is very fragmented, as there are an overwhelming number of domestic water companies that are run by state and local authorities. Unlike electric utilities, there are very few public companies that issue stock. Excluding the smallest water districts, there are still over 50,000 water utilities in the country. Many are undercapitalized and inefficient due to their small scale. It has long been American Water's game plan to purchase these types of entities and integrate them into their existing operations. To date, the policy has proven very successful.

These shares may not interest short-term investors. The equity carries a 4 (Below Average) rank for year-ahead performance. Risk-averse long-term accounts that are willing to forego some potential capital appreciation in return for steady distribution growth and well-defined outcomes may find something to like here, however.

It was a tough start to the year for California Water Service Group. The company reported revenues of $204 million in the March period, or a 25% decline versus the previous-year tally, while earnings of $0.34 per share contracted significantly. Note that the first quarter of 2024 included gains from a delayed rate case. Operating expenses appear to be moving in the right direction, however, as water production costs edged lower of late. All in all, we are shaving $90 million and $0.15 from our current-year top- and bottom-line estimates, to $995 million and $2.85 per share, respectively.

Two acquisitions were recently announced. California Water has agreed to purchase water utility system assets of Casa Loma Water Company and Palm Mutual Water Company. The former provides water services to nearly 250 residential and commercial customers near CWT's Bakersfield operations, while the latter will add about 65 customers to the client roster. Indeed, management intends to significantly upgrade system infrastructures at both operations. Moreover, we think strategic acquisitions are likely to remain a staple in CWT's long-term growth plans.

We are maintaining our sanguine secular stance at this time. California Water's operations are relatively noncyclical and, with the support of further rate hike activity, an expanding customer base, and increased water consumption amidst a healthier economic backdrop, we think the company is well positioned for the long haul. To that end, we look for revenues and earnings to log high-single-digit advances over the next several years. Lastly, the company's aggressive capital investment strategy, of which a good amount of the funds can be recouped via future rate hikes, ought to support increased quality across all water infrastructure systems.

Conservative, long-term-minded investors are best suited here at this juncture. Total return potential out to late decade is well above the *Value Line* median. The stock also holds a favorable Safety rank (2), good score for Price Stability, and below-market Beta. On the other hand, CWT shares are untimely (4), and thus, probably won't appeal to subscribers with a six- to 12-month horizon.

BUSINESS: Essential Utilities, Inc. became the new name for Aqua America on Feb. 3, 2020, to reflect the acquisition of Peoples, a natural gas utility, which occurred in 3/20. In 2024, Aqua Amer. provided water and wastewater services in the states of PA, OH, TX, IL, NC, NJ, IN, VA, NS, WS. Acquired AquaSource, 7/13; N. Maine Util., 7/15; and others. Water respn. for 59% of revenues in 2024; residential, 32%; commercial, 9%; industrial, wastewater & other, 18%. Gas 40%; other, 1%. Employs 3,291. Off. & dir. own less than 1% of the common stock; BlackRock, 11.3%; Vanguard, 10.0%; Can. Pen. Plan 7.9% (3/25 proxy). Pres. & CEO: Christopher Franklin. Inc.: PA Addr.: 762 W Lancaster Ave., Bryn Mawr, PA 19010. Tel.: 610-525-1400. Int.: www.essential.co.

Essential Utilities started the year off strongly. March-period revenues of $784 million rose 28% year over year, handily topping consensus expectations. Meanwhile, earnings of $1.03 per share logged a slightly more-modest advance versus the previous-year tally. The good showing was largely driven by regulatory recoveries, strong natural gas segment volumes, and improving margins. Indeed, higher customer rates ought to keep the top line moving in the right direction this year. All told, we are lifting our 2025 revenue and earnings estimates by $105 million and $0.25 per share, to $2.475 billion and $2.50, respectively. For next year, we think top- and bottom-line advances are likely, however, growth may moderate a bit from 2025.

The company recently closed on an acquisition. Essential completed the purchase of water utility assets (about 1,000 customers) in the Village of Midvale, Ohio, for roughly $3 million. This comes on the heels of an $18 million acquisition of wastewater assets (nearly 2,300 customers) in Pennsylvania. Going forward, bolt-on acquisitions ought to be par for the course.

Aggressive infrastructure spending is on tap over the pull to late decade. Essential invested approximately $270 million in the first quarter on water and natural gas infrastructure upgrades. The full-year spending budget is likely to be around $1.5 billion and, over the next three to five years, the company is expected to invest almost $8.0 billion in total on system improvements and technology enhancements, including the removal of PFAS contaminations.

The above-average dividend yield is the main draw here. At recent levels, WTRG stock offers an annual return that markedly outpaces that of the *Value Line* median. Moreover, the company's track record of dividend increases ought to appeal to patient subscribers looking to generate current income.

The stock has been lowered one notch for Timeliness, to 4, and is now pegged to trail the broader market averages over the coming six to 12 months. Price upside over the 18-month window does not stand out, either.

Nicholas Patrikis *July 4, 2025*

INDUSTRY: Water Utility

BUSINESS: Global Water Resources, Inc. is a water resource management company that owns and operates 32 water, wastewater, and recycled water systems in strategically located communities, principally in metropolitan Phoenix and Tucson, Arizona. It seeks to deploy an integrated approach, referred to as "Total Water Management." Total Water Management is a comprehensive approach to water utility management that reduces demand on scarce non-renewable water sources and costly renewable water supplies, in a manner that ensures sustainability and greatly benefits communities both environmentally and economically. The company treats water to potable standards and also treats, cleans, and recycles wastewater for a variety of non-potable uses. Recycled water is created by taking wastewater and applying advanced tertiary treatment to create a high quality, non-potable water source. Recently, Global Water completed $32.2 million public offering of common stock. Has 122 employees. Chairman, C.E.O. & President: Ron L. Fleming Address: 21410 N. 19th Avenue #220, Phoenix, AZ 85027. Tel.: (480) 360-7775. Internet: www.gwresources.com. *E.B.*

BUSINESS: Middlesex Water Company engages in the ownership and operation of regulated water utility systems in New Jersey, Delaware, and Pennsylvania. It also operates water and wastewater systems under contract on behalf of municipal and private clients in NJ and DE. Its Middlesex System provides water services to 61,000 retail customers, primarily in Middlesex County, New Jersey. In 2024, the Middlesex System accounted for 67% of operating revenues. At 12/31/24, the company had 360 employees. Incorporated: NJ. President, CEO, and Chairman: Dennis W. Doll. Officers & directors own 1.3% of the com. stock; BlackRock Inst. Trust Co., 19.5% (4/25 proxy). Add.: 485 C Route 1 South, Suite 400, Iselin, NJ 08830. Tele.: 732-634-1500. Int.: www.middlesexwater.com.

Middlesex Water's first-quarter 2025 financial results were somewhat uninspiring. The domestic regulated water utility posted a modest year-over-year increase in revenues, to $44.3 million, and reported a notable earnings-per-share contraction, to $0.53. Both figures came in shy of consensus expectations, as challenging operating conditions and higher expenses (production costs and weather-related disruptions) during the period weighed on the performance. On the bright side, higher customer rates and supportive customer growth trends appear to be bearing fruit, suggesting that revenue and earnings improvements are possible in the coming quarters.

An acquisition was recently completed. As previously announced, Middlesex finalized the purchase of Ocean View's water utility assets for $4.6 million, which ought to further expand the company's residential customer roster. Going forward, we think additional bolt-on asset acquisitions are likely in the cards.

Modest top- and bottom-line growth this year is apt to be followed by strong advances in 2026. We now look for full-year 2025 revenues to clock in at $200 million (down $10 million from our previous call), while our earnings estimate is being scaled back $0.15, to $2.60 per share. Even so, this would represent mid-single-digit annual improvements, as stronger operating performances in the near term ought to be driven by the abovementioned purchase, as well as prospects for higher customer water usage and lower production costs. For next year, our model calls for top- and bottom-line increases of 10% and 13%, respectively.

Management is moving full steam ahead on infrastructure spending. During the March period, the company spent $19 million on upgrades and replacements across its water and wastewater systems. For the full year, leadership intends to splash almost $100 million, with similar annual spending budgets likely in store for 2026 and 2027.

Middlesex Water shares offer attractive risk-adjusted total return potential over the pull to late decade at the recent quotation. This is supported partly by an above-average dividend yield.

Nicholas Patrikis *July 4, 2025*

2.	Mean equity risk premium based on a study using the holding period returns of public utilities with A2 rated bonds (2)	4.92
3.	Average equity risk premium	4.89 %

Notes: (1) From page 17 of this Schedule.
(2) From page 20 of this Schedule.

The York Water Company
Derivation of Equity Risk Premium Based on the Total Market Approach
Using the Beta for the
Proxy Group of Six Water Companies

Line No.	Equity Risk Premium Measure	Proxy Group of Six Water Companies
1.	Kroll Equity Risk Premium (1)	6.10 %
2.	Regression on Kroll Risk Premium Data (2)	6.93
3.	Kroll Equity Risk Premium based on PRPM (3)	8.04
4	Equity Risk Premium Based on Value Line Summary and Index (4)	6.66
5.	Equity Risk Premium Based on Bloomberg, Value Line, and S&P Global Market Intelligence S&P 500 Companies (5)	10.85
6.	Conclusion of Equity Risk Premium	7.72 %
7.	Adjusted Beta (6)	0.63
8.	Forecasted Equity Risk Premium	4.86 %

Notes:

(1) Based on the arithmetic mean historical monthly returns on large company common stocks from Kroll Cost of Capital Navigator and Bloomberg Professional Services minus the arithmetic mean monthly yield of Moody's average Aaa and Aa2 corporate bonds from 1928-2024.

(2) This equity risk premium is based on a regression of the monthly equity risk premiums of large company common stocks relative to Moody's average Aaa and Aa2 rated corporate bond yields from 1928-2024 referenced in Note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the average consensus forecast of Aaa corporate bonds of 5.26% (from page 12 of this Schedule).

(3) The Predictive Risk Premium Model (PRPM) is discussed in the accompanying direct testimony. The Ibbotson equity risk premium based on the PRPM is derived by applying the PRPM to the monthly risk premiums between Ibbotson large company common stock monthly returns and average Aaa and Aa corporate monthly bond yields, from January 1928 through July 2025.

(4) The equity risk premium based on the Value Line Summary and Index is derived by subtracting the average consensus forecast of Aaa corporate bonds of 5.26% (from page 12 of this Schedule) from the projected 3-5 year total annual market return of 11.92% (described fully in note 1 on page 22 of this Schedule).

(5) Using data from Bloomberg Professional Services, Value Line, and S&P Capital IQ for the S&P 500, an expected total return of 16.11% was derived based upon expected dividend yields as a proxy for income returns and long-term earnings growth estimates as a proxy for capital appreciation. Subtracting the average consensus forecast of Aaa corporate bonds of 5.26% results in an expected equity risk premium of 10.85%.

(6) Average of mean and median beta from page 21 of this Schedule.

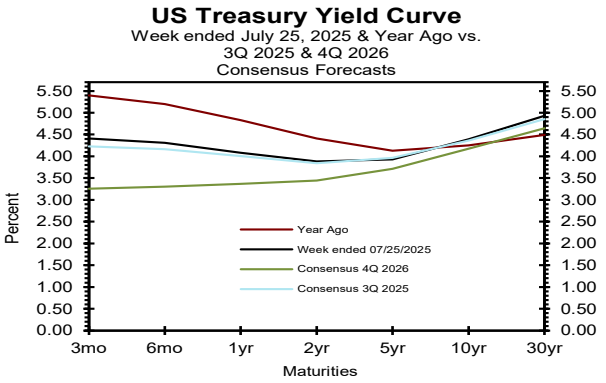
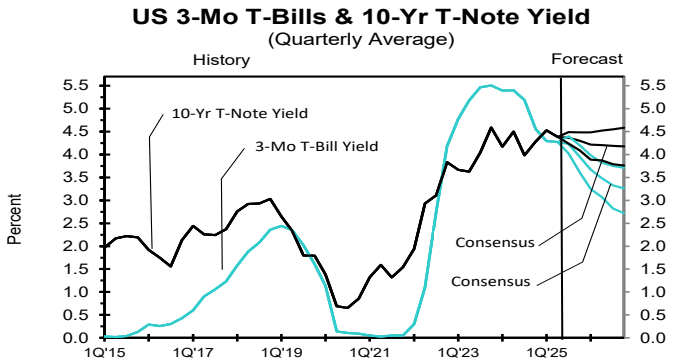
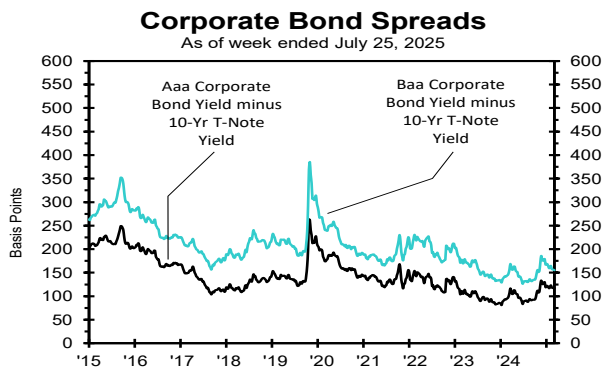
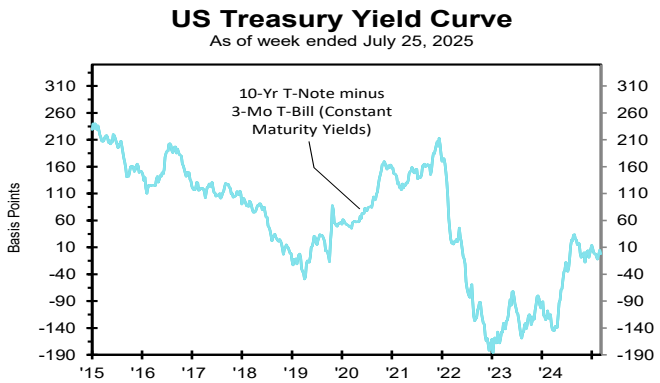
Forecasts for interest rates and the Federal Reserve's Advanced Foreign Economies Index represent averages for the quarter. Forecasts for Real GDP, GDP Price Index, CPI and PCE Price Index are seasonally adjusted annual rates of change (saar). Individual panel members' forecasts are on pages 4 through 9. Historical data: Treasury rates from the Federal Reserve Board's H.15; AAA-AA and A-BBB corporate bond yields from Bank of America-Merrill Lynch and are 15+ years, yield to maturity; State and local bond yields from Bank of America-Merrill Lynch, A-rated, yield to maturity; Mortgage rates from Freddie Mac, 30-year, fixed; SOFR from the New York Fed. . All interest rate data are sourced from Haver Analytics. Historical data for Fed's Major Currency Index are from FRSR H.10. Historical data for Real GDP, GDP Price Index and PCE Price Index are from the Bureau of Economic Analysis (BEA). Consumer Price Index history is from the Department of Labor's Bureau of Labor Statistics (BLS).









Long-Range Survey:

The table below contains results of our semi-annual long-range CONSENSUS survey. There are also Top 10 and Bottom 10 averages for each variable. Shown are estimates for the years 2026 through 2031 and averages for the five-year periods 2027-2031 and 2032-2036. Apply these projections cautiously. Few economic, demographic and political forces can be evaluated accurately over such long time spans.

		Average For The Year						Five-Year Averages

Projected Market Appreciation of the S&P Utility Index
Derivation of Mean Equity Risk Premium Based Studies
Using Holding Period Returns and
Projected Market Appreciation of the S&P Utility Index

Line No.		Implied Equity Risk Premium
1.	Historical Equity Risk Premium (1)	4.16 %
2.	Regression of Historical Equity Risk Premium (2)	4.80
3	Forecasted Equity Risk Premium Based on PRPM (3)	4.23
4.	Forecasted Equity Risk Premium based on Projected Total Return on the S&P Utilities Index (Bloomberg, Value Line, and S&P Capital IQ Data) (4)	6.49
5.	Average Equity Risk Premium (5)	4.92 %

Notes:
(1) Based on S&P Public Utility Index monthly total returns and Moody's Public Utility Bond average monthly yields from 1928-2024. Holding period returns are calculated based upon income received (dividends and interest) plus the relative change in the market value of a security over a one-year holding period.

(2) This equity risk premium is based on a regression of the monthly equity risk premiums of the S&P Utility Index relative to Moody's A2 rated public utility bond yields from 1928 - 2024 referenced in note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the prospective A2 rated public utility bond yield of 5.73% (from line 3, page 12 of this Schedule).

(3) The Predictive Risk Premium Model (PRPM) is applied to the risk premium of the monthly total returns of the S&P Utility Index and the monthly yields on Moody's A2 rated public utility bonds from January 1928 - July 2025.

(4) Using data from Bloomberg, Value Line, and S&P Capital IQ for the S&P Utilities Index, an expected return of 12.22% was derived based on expected dividend yields as a proxy for income returns and long-term growth estimates as a proxy for market appreciation. Subtracting the expected A2 rated public utility bond yield of 5.73%, calculated on line 3 of page 12 of this Schedule results in an equity risk premium of 6.49% (12.22% - 5.73% = 6.49%).

(5) Average of lines 1 through 4.

Notes on page 22 of this Schedule.

The York Water Company
Notes to Accompany the Application of the CAPM and ECAPM

Notes:

(1) The market risk premium (MRP) is derived by using five different measures from four sources: Kroll, Value Line, Bloomberg, and S&P Capital IQ as illustrated below:

Measure 1: Kroll Arithmetic Mean MRP (1926-2024)

Arithmetic Mean Monthly Returns for Large Stocks 1926-2024:	12.29	%
Arithmetic Mean Income Returns on Long-Term Government Bonds:	4.99	
MRP based on Kroll Historical Data:	7.31	%

Measure 2: Application of a Regression Analysis to Kroll Historical Data

(1926-2024)	7.85	%

Measure 3: Application of the PRPM to Kroll Historical Data

(January 1926 - July 2025)	8.98	%

Measure 4: Value Line Projected MRP (Thirteen weeks ending August 15, 2025)

Total projected return on the market 3-5 years hence*:	11.92	%
Risk-Free Rate (see note 2):	4.63	
MRP based on Value Line Summary & Index:	7.29	%

*Forecasted 3-5 year capital appreciation plus expected dividend yield

Measure 5: Bloomberg, Value Line, and S&P Capital IQ Projected Return on the Market based on the S&P 500

Total return on the Market based on the S&P 500:	16.11	%
Risk-Free Rate (see note 2):	4.63	
MRP based on Bloomberg, Value Line, and S&P Capital IQ data	11.48	%

Average of all MRP Measures:	8.58	%

(2) For reasons explained in the Direct Testimony, the appropriate risk-free rate for cost of capital purposes is the average forecast of 30 year Treasury Bonds per the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts (See pages 18 and 19 of this Schedule). The projection of the risk-free rate is illustrated below:

Third Quarter 2025	4.90	%
Fourth Quarter 2025	4.80	
First Quarter 2026	4.70	
Second Quarter 2026	4.70	
Third Quarter 2026	4.60	
Fourth Quarter 2026	4.60	
2027-2031	4.40	
2032-2036	4.30	
	4.63	%

(3) Average of Column 6 and Column 7.

(4) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

The York Water Company
Basis of Selection of the Group of Non-Price Regulated Companies
Comparable in Total Risk to the Proxy Group of Six Water Companies

The criteria for selection of the proxy group of non-price regulated companies comparable in total risk to the proxy group of six water companies was that the non-price regulated companies be domestic and reported in Value Line Investment Survey (Standard Edition).

The proxy group of non-price regulated companies was selected based on the unadjusted beta range of 0.52 - 0.88 and residual standard error of the regression range of 2.8337 - 3.3797 of the proxy group of six water companies.

These ranges are based upon plus or minus two standard deviations of the unadjusted beta and standard error of the regression. Plus or minus three standard deviations captures 95.50% of the distribution of unadjusted betas and residual standard errors of the regression.

The standard deviation of the Utility Proxy Group's residual standard error of the regression is 0.1365. The standard deviation of the standard error of the regression is calculated as follows:

$$\text{Standard Deviation of the Std. Err. of the Regr.} = \frac{\text{Standard Error of the Regression}}{\sqrt{2N}}$$

where: N = number of observations. Since Value Line betas are derived from weekly price change observations over a period of five years, N = 259

$$\text{Thus,} \quad 0.1365 = \frac{3.1067}{\sqrt{518}} = \frac{3.1067}{22.7596}$$

NA= Not Available
NMF=Not Meaningful Figure

Notes:

(1) Average of columns 2 through 4 excluding negative growth rates and extreme positive values.

(2) The application of the DCF model to the domestic, non-price regulated comparable risk companies is identical to the application of the DCF to the Utility Proxy Group. The dividend yield is derived by using the 60 day average price and the spot indicated dividend as of 8/15/2025. The dividend yield is then adjusted by 1/2 the average projected growth rate in EPS, which is calculated by averaging the 5 year projected growth in EPS provided by Value Line, www.zacks.com, and S&P Capital IQ (excluding any negative growth rates) and then adding that growth rate to the adjusted dividend yield.

(3) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

The York Water Company
Indicated Common Equity Cost Rate
Through Use of a Risk Premium Model
Using an Adjusted Total Market Approach

Line No.		Proxy Group of Forty-Two Non-Price Regulated Companies
1.	Prospective Yield on Baa2 Rated Corporate Bonds (1)	6.09 %
2.	Adjustment to Reflect Bond rating Difference of Non-Price Regulated Companies (2)	(0.10)
3.	Adjusted Bond Yield	5.99
4.	Equity Risk Premium (3)	5.71
5.	Risk Premium Derived Common Equity Cost Rate	11.70 %

Notes: (1) Average forecast of Baa corporate bonds based upon the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts dated June 2, 2025 and August 1, 2025 (see pages 18 and 19 of this Schedule). The estimates are detailed below.

Third Quarter 2025	6.20 %
Fourth Quarter 2025	6.10
First Quarter 2026	6.10
Second Quarter 2026	6.10
Third Quarter 2026	6.10
Fourth Quarter 2026	6.10
2027-2031	6.00
2032-2036	6.00
Average	6.09 %

(2) The average yield spread of Baa2 rated corporate bonds over A2 corporate bonds for the three months ending July 2025. To reflect the Baa1 average rating of the Non-Price Regulated Proxy Group comparable in total risk to the Proxy Group, the yield on Baa corporate bonds must be adjusted by 1/3 of the spread between A2 and Baa2 corporate bond yields as shown below:

	A2 Corp. Bond Yield	Baa2 Corp. Bond Yield	Spread
Jul-25	5.82 %	6.10 %	0.28 %
Jun-25	5.86	6.15	0.29
May-25	5.97	6.29	0.32
		Average yield spread	0.30
		1/3 of spread	0.10

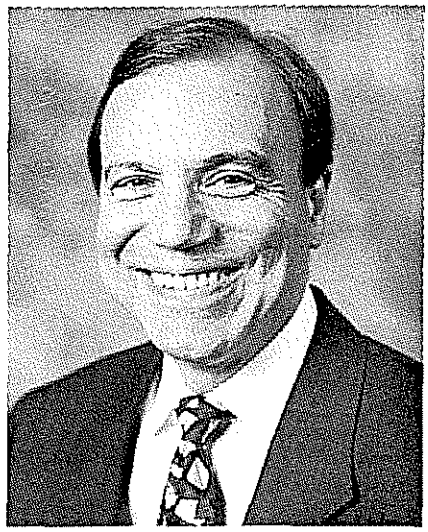
Summer 1994 edition, Arlington, Va.

Comparable Earnings: New Life for an Old Precept

Accelerating deregulation has greatly increased the investment risk of natural gas utilities. As a result, the authors believe it more appropriate than ever to employ the comparable earnings model. We believe our application of the model overcomes the greatest traditional objection to it — lack of comparability of the selected non-utility proxy firms. Our illustration focuses on a target gas pipeline company with a beta of 0.96 — almost equal to the market's beta of 1.00.



Frank J. Hanley is president of AUS Consultants — Utility Services Group. He has testified in several hundred rate proceedings on the subject of cost of capital before the Federal Energy Regulatory Commission and 27 state regulatory commissions. Before joining AUS in 1971, he was an assistant treasurer of a number of operating companies in the American Water Works System, as well as a financial planning officer with the Philadelphia National Bank. He is a Certified Rate of Return Analyst.

Pauline M. Ahern is a senior financial analyst with AUS Consultants — Utility Services Group. She has participated in many cost-of-capital studies. A former employee of the U.S. Department of the Treasury and the Federal Reserve Bank of Boston, she holds an MBA degree from Rutgers University and is a Certified Rate of Return Analyst.

Introduction

The comparable earnings model used to determine a common equity cost rate is deeply rooted in the standard of "corresponding risk" enunciated in the landmark *Bluefield* and *Hope* decisions of the U.S. Supreme Court.[1] With such solid grounding in the foundations of rate of return regulation, comparable earnings should be accepted as a principal model, along with the currently popular market-based models, provided that its most common criticism, non-comparability of the proxy companies, is overcome.

Our comparable earnings model overcomes the non-comparability issue of the non-utility firms selected as a proxy for the target utility, in this example, a gas pipeline company. We should note that in the absence of common stock prices for the target utility (as with a wholly-owned subsidiary), it is appropriate to use the average of a proxy group of similar risk gas pipeline companies whose common stocks are actively traded. As we will demonstrate, our selection process results in a group of domestic, non-utility firms that is comparable in total risk, the sum of business and financial risk, which reflects both non-diversifiable systematic, or market, risk as well as diversifiable unsystematic, or firm-specific, risk.

Embedded in the Landmark Decisions

As stated in *Bluefield* in 1922: "A public utility is entitled to such rates as will permit it to earn a return ... on investments in other business undertakings which are attended by corresponding risks and uncertainties ..."

In addition, the court stated in *Hope* in 1944: "By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks."

Thus, the "corresponding risk" precept of *Bluefield* and *Hope* predates the use of such market-based cost-of-equity models as the Discounted Cash Flow (DCF) and Capital Asset Pricing (CAPM), which were developed later and are currently popular in rate-base/rate-of-return regulation. Consequently, the comparable earnings model has a longer regulatory and judicial history. However, it has far greater relevance now than ever before in its history because significant deregulation has substantially increased natural gas utilities' investment risk to a level similar to that of non-utility firms. As a result, it is

Comparable Earnings *from page 4*

more important than ever to look to similar-risk non-utility firms for insight into common equity cost rate, especially in view of the deficiencies inherent in the currently popular market-based cost of common equity models, particularly the DCF model.

Despite the fact that the landmark decisions are still regarded as having set the standards for determining a fair rate of return, the comparable earnings model has experienced decreased usage by expert witnesses, as well as less regulatory acceptance over the years. We believe the decline in the popularity of the comparable earnings model, in large measure, is attributable to the difficulty of selecting non-utility proxy firms that regulators will accept as comparable to the target utility. Regulatory acceptance is difficult to gain when the selection process is arbitrary. Our application of the model is objective and consistent with fundamental financial tenets.

Principles of Comparable Earnings

Regulation is a substitute for the competition of the marketplace. Moreover, regulated public utilities compete in the capital markets with all firms, including unregulated non-utilities. The comparable earnings model is based upon the opportunity cost principle; i.e., that the true cost of an investment is the return that could have been earned on the next best available alternative investment of similar risk. Consequently, the comparable earnings model is consistent with regulatory and financial principles, as it is a surrogate for the competition of the marketplace, and investors seek the greatest available rate of return for bearing similar risk.

The selection of comparable firms is the most difficult step in applying the comparable earnings model, as noted by Phillips[2] as well as by Bonbright, Danielsen and Kamerschen.[3] The selection of non-utility proxy firms should result in a sufficiently broad-based group in order to minimize the effect of company-specific aberrations. However, if the selection process is arbitrary, it likely would result in a proxy group that is too broad-based, such as the Standard & Poor's 500 Composite Index or the Value Line Industrial Composite. The use of such groups would require subjective adjustments to the comparable earnings results to reflect risk differences between the group(s) and the target utility, a gas pipeline company in this example.

Authors' Selection Criteria

We base the selection of comparable non-utility firms on market-based, objective, quantitative measures of risk resulting from market prices that subsume investors' assessments of all elements of risk. Thus, our approach is based upon the principle of risk and return; namely, that firms of comparable risk should be expected to earn comparable returns. It is also consistent with the "corresponding risk" standard established in *Bluefield* and *Hope*. We measure total investment risk as the sum of non-diversifiable systematic and diversifiable unsystematic risk. We use the unadjusted beta as a measure of systematic risk and the standard error of the estimate (residual standard error) as a measure of unsystematic risk. Both the unadjusted beta and the residual standard error are derived from a regression of the target utility's security returns relative to the market's returns, which takes the general form:

$$r_{it} = a_i + b_i r_{mt} + e_{it}$$

where:

- r_{it} = tth observation of the ith utility's rate of return
- r_{mt} = tth observation of the market's rate of return
- e_{it} = tth random error term
- a_i = constant least-squares regression coefficient
- b_i = least-squares regression slope coefficient, the unadjusted beta.

As shown by Francis,[4] the total variation or risk of a firm's return, Var (r_i), comes from two sources:

Var (r_i) = total risk of ith asset
= var$(a_i + b_i r_m + e)$
substituting $(a_i + b_i r_m + e)$ for r_i
= var$(b_i r_m)$ + var (e) since var$(a_i) = 0$
= b_i^2 var(r_m) + var (e) since var$(b_i r_m) = b_i^2$ var(r_m)
= systematic + unsystematic risk

Francis[5] also notes: "The term $\sigma^2(r_i|r_m)$ is called the *residual variance around the regression line* in statistical terms or *unsystematic risk* in capital market theory language. $\sigma^2 (r_i|r_m)$ = ... = var (e). The residual variance is the squared standard error in regression language, a measure of unsystematic risk." Application of these criteria results in a group of non-utility firms whose average total investment risk is indeed comparable to that of the target gas pipeline.

As a measure of systematic risk, we use the Value Line unadjusted beta. Beta measures the extent to which market-wide or macro-economic events affect a firm's stock price. We use the unadjusted beta of the target utility as a starting point because it results from the regression of the target utility's security returns relative to the market's returns. Thus, the resulting standard deviation of beta relates to the unadjusted beta. We use the standard deviation of the unadjusted beta to determine the range around it as the selection criterion based on systematic risk.

We use the residual standard error of the regression as a measure of unsystematic risk. The residual standard error reflects the extent to which events specific to the firm's operations affect a firm's stock price. Thus, it is a measure of diversifiable, unsystematic, firm-specific risk.

An Illustration of Authors' Approach

Step One: We begin our approach by establishing the selection criteria as a range of both unadjusted beta and residual standard error of the target gas

continued on page 6

Comparable Earnings *from page 5*

pipeline company.

As shown in table 1, our target gas pipeline company has a Value Line unadjusted beta of 0.90, whose standard deviation is 0.1250. The selection criterion range of unadjusted beta is the unadjusted beta plus (+) and minus (-) three of its standard deviations. By using three standard deviations, 99.73 percent of the comparable unadjusted betas is captured.

Three standard deviations of the target utility's unadjusted beta equals 0.38 (0.1250 x 3 = 0.3750, rounded to 0.38). Consequently, the range of unadjusted betas to be used as a selection criteria is 0.52 - 1.28 (0.52 = 0.90 - 0.38) and (1.28 = 0.90 + 0.38).

Likewise, the selection criterion range of residual standard error equals the residual standard error plus (+) and minus (-) three of its standard deviations. The standard deviation of the residual standard error is defined as: $\sigma/\sqrt{2N}$.

As also shown in table 1, the target gas pipeline company has a residual standard error of 3.7867. According to the above formula, the standard deviation of the residual standard error would be 0.1664 (0.1664 = 3.7867/ $\sqrt{2(259)}$ = 3.7867/22.7596, where 259 = N, the number of weekly price change observations over a period of five years). Three standard deviations of the target utility's residual standard error would be 0.4992 (0.1664 x 3 = .4992). Consequently, the range of residual standard errors to be used as a selection criterion is 3.2875 - 4.2859 (3.2875 = 3.7867 - 0.4992) and (4.2859 = 3.7867 + 0.4992).

Step Two: The step one criteria are applied to Value Line's data base of nearly 4,000 firms for which Value Line derives unadjusted betas and residual standard errors on a weekly basis. All firms with unadjusted betas and residual standard errors within the criteria ranges are then selected.

Step Three: In the regulatory ratemaking environment, authorized common equity return rates are applied to a book-value rate base. Thus, the earnings rates on book common equity, or net worth, of competitive, non-utility firms are highly relevant provided those firms are indeed comparable in total risk to the target gas pipeline. The use of the return rates of other utilities has no relevance because their allowed, and hence subsequently achieved, earnings rates are dependent upon the regulatory

table 1

Summary of the Comparable Earnings Analysis for the Proxy Group of 248 Non-Utility Companies Comparable in Total Risk to the Target Gas Pipeline Company[1]

	1	2	3	4	5	6	7	8
			residual	rate of return on net worth				
	adj. beta	unadj. beta	standard error	3-year average[2]	4-year average[2]	5-year average[2]	5-year projected[3]	
average for the proxy group of 248 non-utility companies comparable in total risk to the target gas pipeline company	0.97	0.92	3.7705					
target gas pipeline company	0.96	0.90[4]	3.7867					
median				11.7%	12.0%	12.6%	15.5%	
average of the median historical returns					12.1%			
conclusion[5]								13.8%

[1]The criteria for selection of the non-utility group was that the non-utility companies be domestic and included in *Value Line Investment Survey*. The non-utility group was selected based on an unadjusted beta range of 0.52 to 1.28 and a residual standard error range of 3.2875 to 4.2859.
[2]Ending 1992.
[3]1996-1998/1997-1999.
[4]The average standard deviation of the target gas pipeline company's unadjusted beta is 0.1250.
[5]Equal weight given to both the average of the 3-, 4- and 5-year historical medians (12.1%) and 5-year projected median rate of return on net worth (15.5%). Thus, 13.8% = (12.1% + 15.5% / 2).

Value Line Investment Survey

Comparable Earnings *from page 6*

process. Consequently, we believe all utilities must be eliminated to avoid circularity. Moreover, we believe non-domestic firms must be eliminated because their reporting methods differ significantly from U.S. firms.

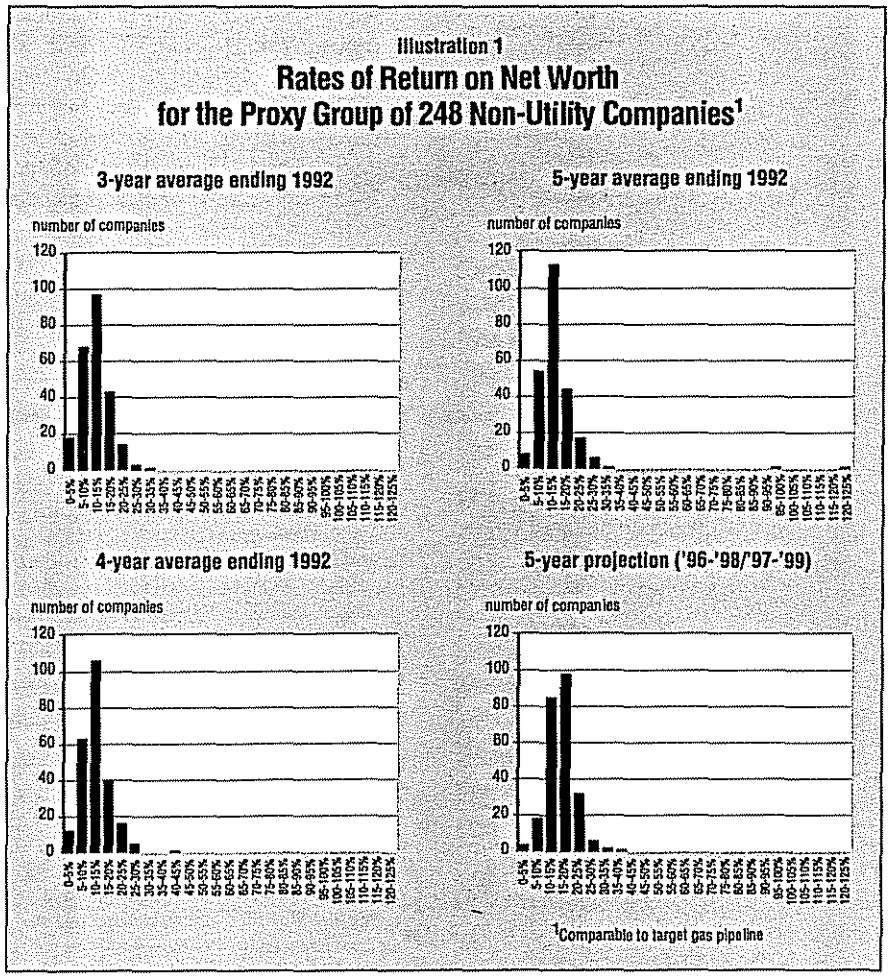
Step Four: We then eliminated those firms for which Value Line does not publish a "Ratings & Report" in *Value Line Investment Survey* so that the historical and projected returns on net worth[6] are from a consistent source. We use historical returns on net worth for the most recent five years, as well as those projected three to five years into the future. We believe it is logical to evaluate both historical and projected return rates because it is reasonable to assume that investors avail themselves of both when they are available from widely disseminated information services, such as Value Line Inc. The use of Value Line's return rates on net worth understates the common equity return rates for two reasons. First, preferred stock is included in net worth. Second, the net worth return rates are as of the end of each period. Thus, the use of average common equity return rates would yield higher results.

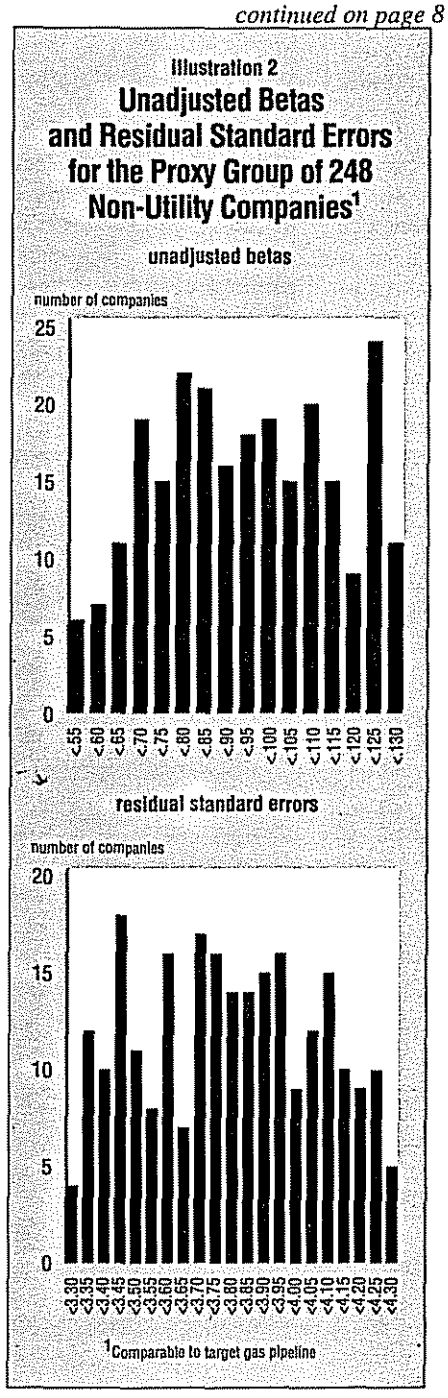
Step Five: Median returns based on the historical average three, four and five years ending 1992 and projected 1996-1998 or 1997-1999 rates of return on net worth are then determined as shown in columns 4 through 7 of table 1. The median is used due to the wide variations and skewness in rates of return on net worth for the non-utility firms as evidenced by the frequency distributions of those returns as shown in illustration 1.

However, we show the average unadjusted beta, 0.92, and residual standard error, 3.7705, for the proxy group in columns 2 and 3 of table 1 because their frequency distributions are not significantly skewed, as shown in illustration 2.

Step Six: Our conclusion of a com-

continued on page 8





Comparable Earnings *from page 7*

parable earnings cost rate is based upon the mid-point of the average of the median three-, four- and five-year historical rates of return on net worth of 12.1 percent as shown in column 5 and the median projected 1996-1998/1997-1999 rate of return on net worth of 15.5 percent as shown in column 7 of table 1. As shown in column 8, it is 13.8 percent.

Summary

Our comparable earnings approach demonstrates that it is possible to select a proxy group of non-utility firms that is comparable in total risk to a target utility. In our example, the 13.8 percent comparable earnings cost rate is very conservative as it is an expected achieved rate on book common equity (a regulatory allowed rate should be greater) and because it is based on end-of-period net worth. A similar rate on average net worth would be about 20 to 40 basis points higher (i.e., 14.0 to 14.2 percent) and still understate the appropriate regulatory allowed rate of return on book common equity.

Our selection criteria are based upon measures of systematic and unsystematic risk, specifically unadjusted beta and residual standard error. They provide the basis for the objective selection of comparable non-utility firms. Our selection criteria rely on changes in market prices over approximately five years. We compare the aggregate total risk, or the sum of systematic and unsystematic risk, which reflects investors' aggregate assessment of both business and financial risk. Thus, no adjustments are necessary to the proxy group results to compensate for the differences in business risk and financial risk, such as accounting practices and debt/equity ratios. Moreover, it is inappropriate to attempt a comparison of the target utility with any individual firm, or subset of firms, in the proxy group because only the average firm of the group is relevant.

Because the comparable earnings model is firmly anchored in the "corresponding risk" precept established in the landmark court decisions, it is worthy of consideration as a principal model for use in estimating the cost rate of common equity capital of a regulated utility. Our approach to the comparable earnings model produces a proxy group that is indeed comparable in total risk because the selection process is objective and quantitative. It therefore overcomes criticism linked to arbitrary selection processes.

All cost-of-common-equity models, including the DCF and CAPM, are fraught with deficiencies, usually stemming from the many necessary but unrealistic assumptions that underlie them. The effects of the deficiencies of individual models can be mitigated by using more than one model when estimating a utility's common equity cost rate. Therefore, when the non-comparability issue is overcome, the comparable earnings model deserves to receive the same consideration as a primary model, as do the currently popular market-based models. ■

[6] Returns on net worth must be used when relying on Value Line data because returns on book common equity for non-utility firms are not available from Value Line.

Report Lists Pipeline, Storage Projects

More than $9 billion worth of projects to expand the nation's natural gas pipeline network are in various stages of development, according to an A.G.A. report. These projects involve nearly 8,000 miles of new pipelines and capacity additions to existing lines and represent 15.3 billion cubic feet (Bcf) per day of new pipeline capacity.

During 1993 and early 1994, construction on 3,100 miles of pipeline was completed or under way, at a cost of nearly $4 billion, says A.G.A. These projects are adding 5.4 Bcf in daily delivery capacity nationwide.

Among the projects completed in 1993 were Pacific Gas Transmission Co.'s 805 miles of looping that allows increased deliveries of Canadian gas to the West Coast; Northwest Pipeline Corp.'s addition of 433 million cubic feet of daily capacity for customers in the Pacific Northwest and Rocky Mountain areas; and the 156-mile Empire State Pipeline in New York.

In addition, major construction projects were started on the systems of Texas Eastern Transmission Corp. and Algonquin Gas Transmission Co. — both subsidiaries of Panhandle Eastern Corp. — and along Florida Gas Transmission Co.'s pipeline.

The report goes on to discuss another $5 billion in proposed projects, which, if completed, will add nearly 5,000 miles of pipeline and 9.8 Bcf per day in capacity, much of it serving Florida and West Coast markets.

A.G.A. also identifies 47 storage projects and says that if all of them are built, existing storage capacity will increase by more than 500 Bcf, or 15 percent.

Beta Measurements The beta coefficient is an *index of systematic risk.* Beta coefficients may be used for ranking the systematic risk of different assets. If the beta is larger than 1, $b > 1.0$, then the asset is more volatile than the market and is called an **aggressive asset.** If the beta is less than 1, $b < 1.0$, the asset is a **defensive asset;** its price fluctuations are less volatile than the market's. Figure 10-1 illustrates the characteristic lines for three different assets that have low, medium, and high levels of beta (or undiversifiable risk).

Figure 10-2 shows that IBM is a stock with an average amount of systematic risk. IBM's beta of 1.02 indicates that its return tends to increase 2 percent more than the return on the market average when the market is rising. When the market falls, IBM's return tends to fall 2 percent more than the market's. The characteristic line for IBM has an above average correlation coefficient of $\rho = .7495$, indicating that the returns on this security follow its particular characteristic line slightly more closely than those of the average stock.

Partitioning Risk Total risk can be measured by the variance of returns, denoted Var(r). This measure of *total risk is partitioned into its systematic and unsystematic components in Equation (10-8).*[7]

$$\begin{aligned} \text{Var}(r_i) &= \text{total risk of } i\text{th asset} \\ &= \text{Var}(a_i + b_i r_{m,t} + e_{i,t}) \\ &\quad \text{by substituting } (a_i + b_i r_{m,t} + e_{i,t}) \text{ for } r_{i,t} \\ &= 0 + \text{Var}(b_i r_{m,t}) + \text{Var}(e_{i,t}) \\ &\quad \text{since Var}(a_i) = 0 \end{aligned} \tag{10-8}$$

$$\begin{aligned} \text{Var}(r_i) &= b_i^2 \text{ Var}(r_m) + \text{Var}(e) \qquad \text{since Var}(b_i r_m) = b_i^2 \text{ Var}(r_m) \\ &= \text{systematic} + \text{unsystematic risk} \end{aligned} \tag{10-8a}$$

$$.01389 = .00780 + .00609 \qquad \text{for IBM}$$

The unsystematic risk measure Var(e) is called in regression language the *residual variance* or, synonymously, the *standard error squared.*

Undiversifiable Proportion The percentage of total risk that is systematic can be measured by the coefficient of determination ρ^2 (that is, the characteristic line's squared correlation coefficient).

[7]In this context, **partition** is a technical statistical term that means to divide the total variance into *mutually exclusive* and *exhaustive* pieces. This partition is only possible if the returns from the market are statistically independent from the residual error terms that occur simultaneously, $\text{Cov}(r_{m,t}, e_{i,t}) = 0$. The mathematics of regression analysis will orthogonalize the residuals and thus ensure that the needed statistical independence exists.

The York Water Company
Corrections to Mr. Breuning's
CAPM with Forecasted Returns and Fully Projected Risk-Free Rate

Re	Required return on individual equity security
Rf	Risk-free rate
Rm	Required return on the market as a whole
Be	Beta on individual equity security

Re = Rf+Be(Rm-Rf)

Rf	=	4.56	(1)
Rm	=	12.44	(2)
Be	=	0.83	(3)
Re (CAPM)	=	11.10	%
Re (ECAPM)	=	11.43	%
Re (Average)	=	**11.26**	%

Notes:

(1) For reasons explained in Mr. D'Ascendis' Direct and Rebuttal Testimonies, the appropriate risk-free rate for cost of capital purposes is the average forecast of 30 year Treasury Bonds per the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts. The projection of the risk-free rate is illustrated below:

Second Quarter 2025	4.80
Third Quarter 2025	4.70
Fourth Quarter 2025	4.60
First Quarter 2026	4.60
Second Quarter 2026	4.60
Third Quarter 2026	4.50
2027-2031	4.40
2032-2036	4.30
	4.56

REBUTTAL TESTIMONY OF JOHN J. SPANOS
PRESIDENT
GANNETT FLEMING VALUATION AND RATE CONSULTANTS, LLC
ON BEHALF OF THE YORK WATER COMPANY

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is John J. Spanos. My business address is 300 Sterling Parkway, Suite 200, Mechanicsburg, Pennsylvania 17050 (formerly 207 Senate Avenue, Camp Hill, Pennsylvania 17011).

Q. ARE YOU THE SAME JOHN SPANOS THAT PRESENTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes, I am.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. In my rebuttal testimony, I respond to the depreciation-related testimony of James S. Garren on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"), including his proposal to use the Average Life Group ("ALG") procedure to calculate depreciation expense and depreciation annual accrual rates.

Q. ARE YOU SPONSORING ANY EXHIBITS AS PART OF YOUR REBUTTAL TESTIMONY?

A. Yes, I am sponsoring York Water Exhibits JJS-1R and JJS-2R.

Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.

A. OCA Witness Garren has proposed a reduction in depreciation expense of $1.13 million for Water Plant and $164,422 for Wastewater Plant (as of the fully projected future test year) based on an issue that the Pennsylvania Public Utility Commission ("Commission"

or "PUC") has already clearly addressed and decided consistently for 40 years. The issue relates to the depreciation procedure that The York Water Company ("York Water" or "Company") has been utilizing for developing depreciation rates and expense for many years. York Water's depreciation rates have consistently utilized the Equal Life Group ("ELG") procedure instead of the Average Life Group ("ALG") procedure. The Average Life Group procedure is most commonly identified in Pennsylvania as the Average Service Life ("ASL") procedure. The use of the ELG procedure was established with the PUC during the 1980s and has been used by most utilities in Pennsylvania to calculate depreciation expense and annual depreciation accrual rates since that time spanning a period of approximately 40 years.

In my testimony, I will address the following topics. First, I will address the ELG versus ALG calculations. Second, I will discuss the history of ELG and its precedent in Pennsylvania. Third, I will explain how ELG is more equitable for current and future customers. Fourth, I will address the errors in OCA Witness Garren's depreciation calculations related to his proposing an ALG procedure but using depreciation reserve balances that are based on historic and projected ELG accruals and the use of incorrect ALG remaining lives. Fifth, I will address the inconsistencies in OCA Witness Garren's depreciation proposals. And lastly, I will address the comments related to service life analysis that OCA Witness Garren discusses.

A. Equal Life Group vs. Average Life Group

Q. WHAT IS THE EQUAL LIFE GROUP PROCEDURE?

A. For the ELG, a group of property (e.g., a vintage within a property account) is subdivided into groups having equal service lives. The size of these "equal life groups" is based on

the estimated survivor characteristics of the account. Depreciation can then be calculated for each equal life group based on the straight line method, meaning that an equal amount of the group's service value is recorded as depreciation expense in each year of service. The total depreciation for an account is then the summation of the calculated depreciation for each equal life group. Based on the survivor curve estimate for an account, the ELG procedure mathematically estimates the life for each unit in the account, and then depreciates each unit over its expected life. The procedure is also known as the Unit Summation Procedure.

Q. HOW DOES THE ELG PROCEDURE DIFFER FROM THE AVERAGE SERVICE LIFE ("ASL," ALSO REFERRED TO AS "AVERAGE LIFE GROUP," OR "ALG") PROCEDURE?

While the ELG procedure calculates depreciation for each equal life group, the ASL (or ALG) procedure depreciates every asset within an account over the average life of the entire account. Using equal life groups, rather than an average life, as the basis for depreciation provides a more precise calculation that better matches recovery with consumption of assets by depreciating assets that have shorter lives than the average over their shorter lives (and the longer-lived assets over their longer lives) as opposed to depreciating all assets over the average life for the group.

Q. IS ELG SUPPORTED BY DEPRECIATION AUTHORITIES?

A. Yes. ELG is discussed and supported in authoritative depreciation texts and academic literature. For example, Robley Winfrey, who developed the Iowa survivor curves at Iowa

State University and is regarded as a pioneer of utility depreciation practices, referred to the ELG procedure as "the only mathematically correct procedure."[1]

Depreciation Systems by Wolf and Fitch, also supports the appropriateness of ELG stating, "Application of the equal life group procedure is generally considered to better match the consumption of capital with service provided than does application of the average life procedure."[2]

Q. PLEASE EXPLAIN HOW DEPRECIATION IS DETERMINED USING THE ELG PROCEDURE.

A. A simple two-unit example will demonstrate how the ELG procedure more appropriately matches cost recovery to consumption than the ASL procedure. In this example, each unit costs $1,000. Unit A will be in service for five years, and unit B will be in service for 15 years. There is no net salvage for these units.

For the ASL procedure, the average service life for the two units is 10 years ([5+15]/2), so the annual depreciation rate is 10% (1/10) throughout the lives of both units. For the first five years, the total annual depreciation amount is $200 ($2,000 x 10%). At the end of year five, the total annual accruals for the account are $1,000 ($200 x 5). Unit A is then retired, which results in a reduction in the accumulated depreciation of $1,000. At the start of year six, Unit B remains in service with an accumulated depreciation balance of $0. At this point, one-third of Unit B's service life has expired, and its full original cost must still be recovered.

[1] Robley Winfrey, Depreciation of Group Properties, Bulletin 155 (Ames, IA: Iowa State University Press, 1942, reprinted 1969); p. 71

[2] Frank K. Wolf and W. Chester Fitch, *Depreciation Systems* (Ames, IA: Iowa State University Press, 1994); p.75

For the remaining 10 years, $100 ($1,000 x 10%) of annual expense is accumulated in depreciation, for a total of $1,000 when Unit B is retired. Thus, at the time of Unit B's retirement, the Company will have fully recovered the total depreciable cost of both units. However, at the end of year five, only one unit remained in service with two-thirds of its life expectancy left but with 100% of that unit's original investment still to be recovered. As a result, the ASL procedure is ineffective in matching cost recovery to the actual consumption of the asset. This is a characteristic deficiency of the ASL procedure.

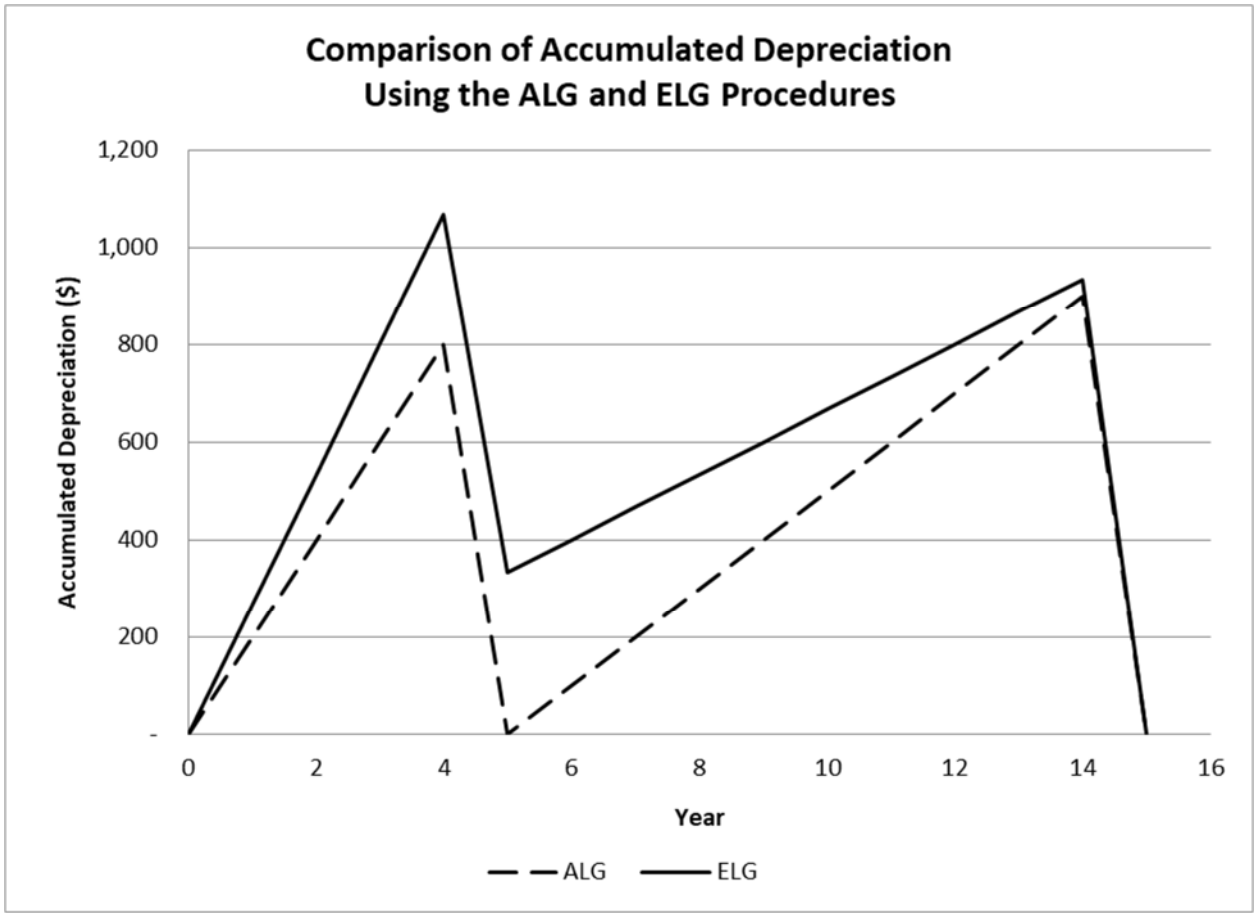
When depreciation is determined using the ELG procedure, the pattern of cost recovery better matches actual consumption. Using the same two-unit example, the annual depreciation expense under the ELG procedure is calculated by summing the annual expense for each equal life group. In this case, there are two equal life groups – one for Unit A, which has a life of five years, and one for Unit B, which has a life of 15 years. The annual depreciation rate for Unit A is 20% (1/5) and for Unit B is 6.67% (1/15). Thus, the annual accruals for years one through five will be $200 ($1,000 x 20%) for the first equal life group (Unit A) summed with $66.67 ($1,000 x 6.67%) for the second (Unit B), or $266.67. At the end of year five, when Unit A is retired, the total accruals would be $1,333.33 ($266.67 x 5). The retirement of Unit A results in a reduction of $1,000 in accumulated depreciation, and at the start of year six, the $1,000 original cost of Unit B remains with $333.33 in accumulated depreciation. Thus, with one-third of Unit B's life consumed, accumulated depreciation is exactly one-third of the original cost for this unit.

In the years six through 15, the annual depreciation expense is $66.67 for a total of $666.67 over the 10-year period. After the retirement of Unit B, the accumulated

depreciation is $0 ($1,000 of accruals less the $1,000 retirement of Unit B), and the full recovery of both units has been obtained.

As this example shows, the ELG procedure better matches the cost recovery of both units with their actual service lives. Figure 1, below, provides a graph of the accumulated depreciation for both procedures. The end of year five provides the best illustration of the difference between the two procedures. Under the ELG procedure, Unit A is fully recovered when retired at the end of year five; Unit B is one-third through its service life and has had one-third of its cost recovered. This contrasts with the ASL procedure, in which accumulated depreciation is $0 at the end of year five, even though the only unit remaining in service has consumed one-third of its service life. Clearly, the ELG procedure provides a better match regarding the consumption of the service value for the two units. Additionally, rate base under ELG at the end of year 5 is $667 (=$1,000-$333) versus $1,000 (=$1,000 - $0) under ASL.

Figure 1. Comparison of Accumulated Depreciation Using the ALG and ELG Procedures



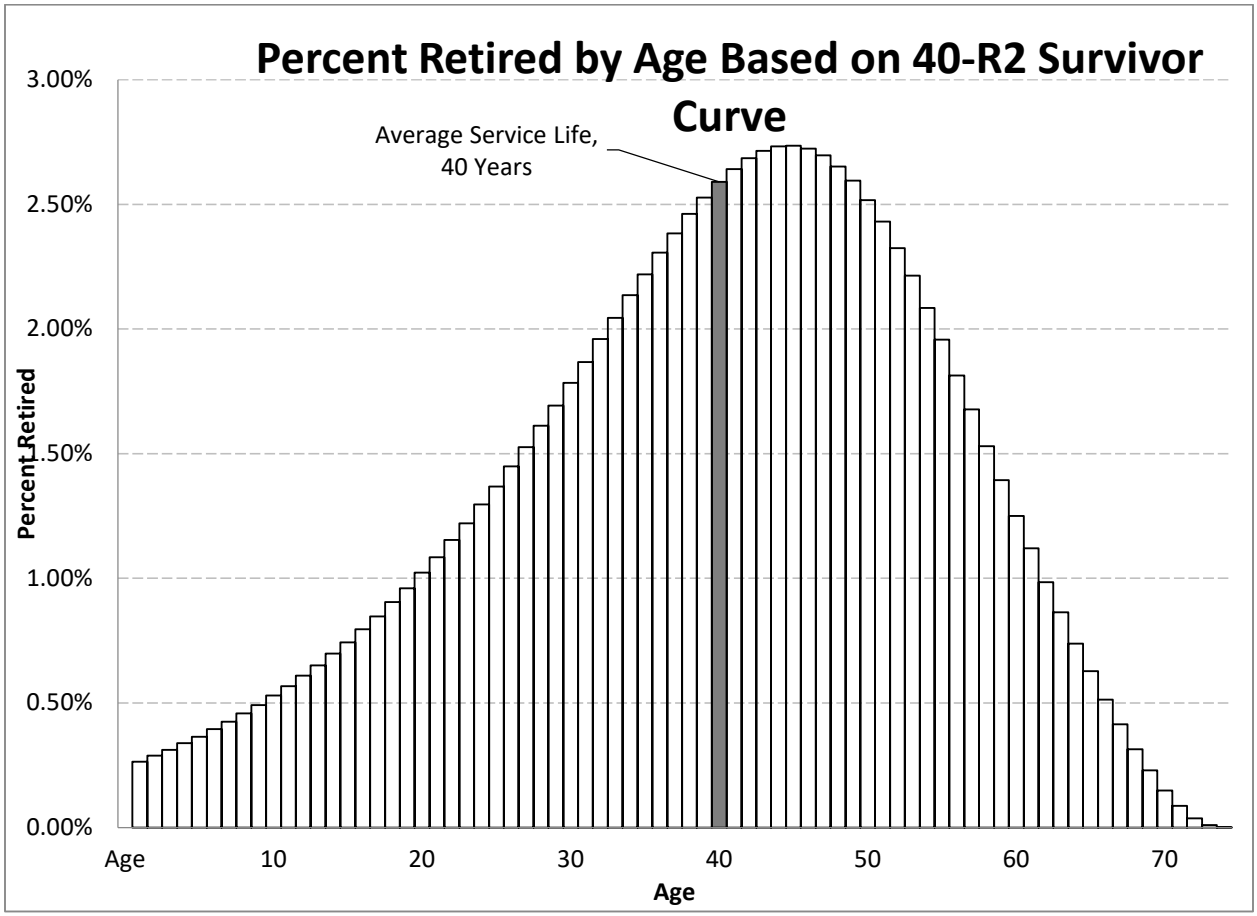
Q. YOU HAVE PROVIDED A SIMPLE TWO-UNIT EXAMPLE DEMONSTRATING HOW ELG WORKS. DO THE SAME PRINCIPLES APPLY TO LARGER PROPERTY GROUPS WITH MANY UNITS?

A. Yes. The same principles apply when the ELG procedure is applied to a large group of property with many units, as is typical of utility property. The survivor curve estimated for each property account can be used to divide an account into equal life groups. The survivor curve allows for the calculation of the percentage of the property account that is in each equal life group, which allows for the calculation of ELG annual depreciation accruals for the entire property group. Under the ASL procedure, the depreciation expense

for all property in the account is calculated based on the average service life for the entire group.

The ELG procedure recognizes the reality of dispersion. Specifically, it recognizes that in actual utility operations only a very small percentage of the account will be retired at the average service life. Figure 2, below, is a chart of the frequency curve for the 40-R2 survivor curve which will be used to illustrate a frequency curve. The frequency curve shows the percentage of property in this account that will be retired at each age, based on the estimated survivor curve. This percentage is also the size of each equal life group. The shaded bar in Figure 2 represents the percentage of property that will have a life of 40 years. In other words, this shows the percentage of property that is expected to be in service for the average service life. Only 2.59% of the assets will be in service for exactly 40 years. In contrast, a majority, 97.41%, of the assets will have a service life different than 40 years.

Figure 2. Percent Retired by Age Based on 40-R2 Survivor Curve



The ELG procedure recognizes this dispersion and allocates costs for each equal life group over the expected life for that group. The service lives indicated by the 40-R2 survivor curves ranges from 1 year to 74 years. As a result, the ELG procedure allocates cost in a manner that approximates the result of each asset being depreciated over its actual life. Conversely, the ASL procedure depreciates every unit of property within an account over the same life, that is, the average life. As Figure 2 shows, this average life will be incorrect most of the time – in this example, the average life will be the wrong life for 97.41% of the assets.

Just as in the case for the two-unit example provided above, the ELG procedure better matches capital recovery with the actual lives forecast by the estimated survivor curve. Consequently, rate base will be higher when the ALG procedure is utilized because of the poor matching of recovery to utilization of the assets.

B. Pennsylvania Precedent

Q. IS THE ELG PROCEDURE SUPPORTED BY OTHER DEPRECIATION AUTHORITIES?

A. Yes. ELG is discussed and supported in authoritative depreciation texts and academic literature. As noted previously, Robley Winfrey, who developed the Iowa survivor curves that are universally used in estimating service lives based on historical retirement data, referred to the ELG procedure as "the only mathematically correct procedure." [3]

Q. ARE OTHER COMMISSIONS STARTING TO IMPLEMENT THE ELG PROCEDURE GIVEN THE CURRENT REGULATORY ENVIRONMENT?

A. Yes. The ELG procedure is being utilized for utility assets by the Texas Railroad Commission. It is also used in jurisdictions in Canada. The Federal Communications Commission ("FCC") first adopted ELG in the 1980s in the context of rapid technological change in the telecommunications industry at that time.[4]

ELG has also been adopted recently in Colorado in response to significant technological and regulatory changes facing the gas industry.[5] New York is also considering ELG for similar reasons in an active case in New York.[6]

[3] Robley Winfrey, Depreciation of Group Properties, Bulletin 155, p. 71.
[4] *See, Id.*, pages 172 through 175 for a discussion of the use of the ELG procedure in the telecommunications industry.
[5] Decision No. C22-0642 in Proceeding No. 22AL-0046G p. 51, lines 161-163.
[6] New York State Department of Public Service Cases 24-E-0322 and 24-G-0323.

Q. HAS THE ELG PROCEDURE BEEN PREVIOUSLY ADOPTED IN PENNSYLVANIA?

A. Yes. ELG is the predominant method used in Pennsylvania and has been for many years. Most Pennsylvania gas, electric and water utilities have used the ELG procedure since the 1980s. ELG was adopted for York Water in the 1980s and has been used for depreciation since this approval. Generally, every five years beginning in the mid-1980s, the Company has filed a service life study report with the Commission for approval based on Commission regulations. In 2022, York Water submitted its most recent five-year service life study report for water assets (a service life study is not required for York Water's wastewater assets) to the Commission and all depreciation parameters and methods, including the use of the Equal Life Group procedure, were approved. In the prior rate case, Docket Nos. R-2022-3031340 (Water) and R-2022-3032806 (Wastewater), the ELG procedure was approved. Additionally, York Water submits annual depreciation reports to the Commission each year updating their depreciation accrual rates for book purposes as well as identifying the underlying depreciation parameters and calculation methods and procedures used to determine depreciation expense. Under Section 73.9(c) of the Commission's regulations, 52 Pa. Code § 73.9(c), once such depreciation reports are filed and accepted "[i]n subsequent ratemaking proceedings, the most recent annual depreciation report or service life study approved or deemed approved for accounting purposes only under this chapter, constitutes a rebuttable presumption as to the reasonableness of the accrued depreciation claimed for ratemaking purposes, and the burden of proving the unreasonableness of the accrued depreciation shall be on the challenging party."

Therefore, the book reserve on the Company books is only appropriate under the ELG procedure for forecasting the future test years.

Q. ARE THE COMPANY'S CURRENT DEPRECIATION RATES BASED ON THE ELG PROCEDURE?

A. Yes. The Company's most recent annual depreciation report for water was filed prior to June 30, 2025, and its most recent service life studies were filed in August 2022 for both water and wastewater. All past annual depreciation reports, service life studies and past rate cases have been approved for accounting purposes using the ELG procedure. The ELG procedure was also adopted in the Company's most recent rate case, at Docket Nos. R-2022-3031340 (Water) and R-2022-3032806 (Wastewater).

Q. SINCE THE USE OF ELG IS THE PREDOMINANT AND LONGSTANDING PRACTICE IN PENNSYLVANIA, HAS OCA WITNESS GARREN PROVIDED EVIDENCE FOR WHY THE COMPANY SHOULD DEVIATE FROM THIS PRACTICE?

A. No. OCA Witness Garren has provided very little evidence to support why the ALG method is more appropriate than ELG. None of OCA Witness Garren's arguments support overturning longstanding precedent despite having the burden of doing so under 52 Pa. Code § 73.9(c). In fact, OCA Witness Garren appears to agree the ELG procedure is superior to the ALG procedure when he states, "The ELG method potentially better reflects the actual retirement patterns of a group of assets with different vintages at specific point in time, but requires constant updating to remain accurate."[7] He appears to disagree with ELG simply because it can produce higher depreciation rates (relative to ALG) in early

[7] Garren, p. 23, lines 4-6

years to match mortality characteristics, but he provides no evidence for why lower depreciation rates resulting from the use of the average service life procedure are more appropriate. He also does not address the matching principle where asset recovery should match asset utilization where the ELG procedure clearly is superior.

He has provided minimal justification to support his claim that the Company's approved depreciation rates or calculation procedures, which are based on longstanding precedent, are unreasonable. Further, OCA Witness Garren ignores the issue of precedent for York Water, only arguing that his proposal should be adopted because "[t]he ALG procedure better fits the actual ongoing investment and retirement patterns of utility plant overall, and requires significantly less administrative upkeep by utilities and less oversight by the Commission."[8] which is a direct contradiction to OCA Witness Garren's statement referenced above from page 23, lines 4-6 of his Direct Testimony. OCA Witness Garren's only additional support for his ALG procedure proposal is "…owing to the magnitude of the change's effect on York Water's depreciation rates."[9]

However, as I will explain, OCA Witness Garren's proposal to change from using the ELG procedure to the ALG procedure will adversely impact the rates of future customers. Current customers benefit from the continued use of ELG, because rate base is lower now compared to if ALG had been used over the past 40 years. The more precise recovery through ELG benefits customers over time, because shorter-lived assets are correctly recovered over their useful lives, resulting in a lower rate base and lower return on rate base that exceeds the higher annual depreciation expense. Further, any benefit of

[8] Garren, p. 25, lines 2-4.
[9] Garren, p. 25, lines 7-8

switching from ELG to ALG as proposed by OCA Witness Garren, of lower short-term customer rates, is the result of the *change* in procedure, not from the procedure itself. Over time, the ALG depreciation rates will result in a higher rate base and higher overall cost to customers.

C. Depreciation and Rate Base

Q. DOES MR. GARREN DISCUSS THE IMPACT OF A CHANGE FROM ELG TO ALG ON CUSTOMER RATES?

A. No. OCA Witness Garren only posits that "using ELG as opposed to ALG is that depreciation rates are always going to be higher earlier on in the life cycle of a particular group of plant, and lower later in the life cycle of that plant."[10] However, as discussed above, not only does OCA Witness Garren ignore the impact of depreciation expense on rate base, but he fails to note that any benefit to current customers of his proposal to use ASL depreciation rates only results from the change from ELG to ALG – not from the overall use of the ALG procedure itself.

Q. PLEASE EXPLAIN THIS CONCEPT FURTHER.

A. Depreciation impacts customer rates in two ways. First, depreciation expense is a direct component of the revenue requirement; however, accumulated depreciation[11] is also a *reduction* to rate base. Second, a higher level of accumulated depreciation results in a lower rate base, a lower return on rate base and, therefore, lower customer rates when compared to a lower level of accumulated depreciation.

[10] Garren page 22, lines 3-5.

[11] Accumulated depreciation is the depreciation expense recorded to date, less recorded retirements and cost of removal, plus recorded gross salvage.

Therefore, higher depreciation expense will, over time, result in higher accumulated depreciation. Because average depreciation rates for a utility are typically in the 2% to 3% range and the return on rate base is higher (typically 7% to 8% or more), higher depreciation expense tends to produce lower customer rates over time.

The longstanding use of ELG depreciation rates for Pennsylvania utilities has resulted in a lower rate base than if ALG had been used. Customers today pay lower customer rates than if ALG had been used during the years since ELG's adoption. As a result, it has been in customers' interest, not only to use ELG, but also to use it consistently.

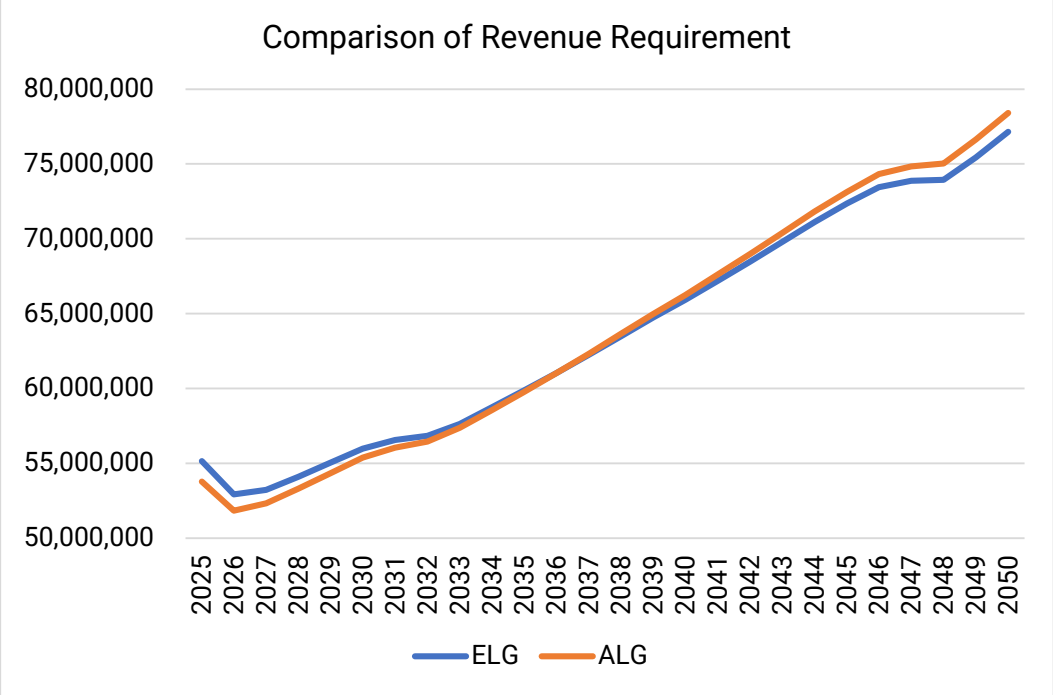
Over time, ALG will result in higher customer rates than ELG. It is correct to assume that if the Company were to switch from ELG to ALG there would be a *short*-term benefit to current customers. However, this is not because ALG is in customers' best interest in the long term, but only because current customers would benefit from both lower ALG depreciation rates and from the lower rate base that exists due to the longstanding use of ELG.

OCA Witness Garren's proposal is therefore not a recommendation that is in the long-term interest of lower customer rates. Instead, OCA Witness Garren's proposal provides a short-term subsidy only to current customers who benefit from ELG depreciation rates paid by a previous generation of customers. The costs of a higher rate base will be paid for by future customers who will have to pay higher overall customer rates. Adopting ALG would serve as an intergenerational subsidy to current customers at the expense of other generations of customers.

Q. CAN YOU ILLUSTRATE THIS CONCEPT?

A. Yes, this concept is illustrated in Exhibit JJS-1R, which forecasts plant and reserve balances for York Water through 2050 under two scenarios: one adopting the ALG procedure and the other maintaining the currently-approved ELG procedure. Figure 3 below shows a high-level estimate of the Company's revenue requirement for the period 2025 through 2050 under each of these scenarios. This demonstrates that while ELG leads to higher depreciation expenses in the short term, it results in lower revenue requirements over the long term. The ELG approach is arguably more beneficial to customers as it provides more stable and lower rates over time.

Figure 3. Comparison of Forecasted Revenue Requirement



D. Intergenerational Inequity

Q. PLEASE EXPLAIN THE CONCEPT OF "INTERGENERATIONAL EQUITY."

A. Intergenerational equity is a ratemaking principle in which customers receiving the benefit from the use of an asset (e.g., from water or wastewater utility property used to provide

water or wastewater service) by the same customers who pay for the cost of that asset – no more, no less. There are two related concepts when considering intergenerational equity as it pertains to depreciation. The first is the inequity that results when customers pay for assets from which they receive no service. For example, if an asset is retired before becoming fully depreciated, then customers subsequent to the retirement will have to pay for an asset from which they are not receiving service. This is less equitable, as one generation of customers bears the cost of an asset from which they receive no service. Depreciation rates should be designed to avoid such an outcome. In real-world operations, circumstances can change such that assets are retired earlier than expected. However, this situation is different than designing depreciation rates to include intergenerational inequity, which should be avoided.

The second concept is related to the distribution of depreciation charges over the life of an asset. For example, if depreciation expense is higher in the earlier years of an asset's life and lower in later years (or vice versa), this also is less equitable because one generation of customers pays a higher share than the next.

In my professional opinion, the first concept related to intergenerational equity can be more detrimental to customers than the second. That is, there is greater inequity resulting from a customer paying for an asset from which they received no service than the inequity resulting from one generation paying a somewhat different share of the same asset than another generation.

Q. HOW DOES THE EQUAL LIFE PROCEDURE CALCULATE DEPRECIATION EXPENSE?

A. The ELG procedure calculates depreciation expense for assets with like lives within a depreciable group in accordance with the Iowa Survivor Curve proposed for the account and summing that depreciation expense for each similar life group of assets to develop an annual depreciation accrual rate applicable to the depreciable group. This procedure is designed to more appropriately match the recovery of the assets' costs to the period of time over which they are providing service to rate payers.

Q. HOW DOES THE AVERAGE LIFE GROUP (ALG) PROCEDURE CALCULATE DEPRECIATION EXPENSE?

A. The ALG procedure calculates depreciation expense by applying the same average service life from the proposed Iowa Survivor Curve to all assets within a depreciable group rather than grouping assets within a depreciable group by like lives. The ALG procedure operates with the assumption that some of the assets within a depreciable group will retire prior the average service life applied to the depreciable group and other assets will survive longer than the average service life applied to the depreciable group. Continuing, the ALG procedures assumes the over-recovery of the assets surviving longer than the average service life will offset the amount of the under-recovery of the assets retiring prior to reaching the average service life of the depreciable group.

Q. DOES THE USE OF ELG VERSUS ALG OR VICE VERSA IMPACT THE TOTAL AMOUNT OF ASSET COST TO BE RECOVERED?

A. No. Both procedures are designed to recover the total service value of an asset over the asset's service life.

Q. WOULD CHANGING FROM THE USE OF ELG TO ALG CREATE INTERGENERATIONAL INEQUITY?

A. Yes.

Q. HOW WOULD CHANGING FROM THE USE OF ELG TO ALG CREATE INTERGENERATIONAL INEQUITY?

A. Changing to ALG from ELG after approximately 40 years of using the ELG procedure would create intergenerational inequity because future customers would be paying less than current and past customers of the recovery of the same assets from which they are receiving service. The ELG procedure more accurately aligns the recovery of the service cost of the assets by recovering more of the service cost of the assets earlier in the assets lives when the assets are providing a higher level of service. Therefore, the level of depreciation reserve, or service costs recovered to date, is greater as of the Fully Projected Future Test Year ("FPFTY") date than if the ALG procedure had been utilized over the past 40 years. This means that if the procedure is now changed to ALG and the future amount of service cost to be recovered equally each year over the remaining years of the asset's average service life would be less than if the ALG had been used for the previous 40 years. In short, future customers will be paying less for the same assets than current or past customers. The fact that generations of customers would be paying different amounts of recovery for the same assets is the very definition of intergenerational inequity.

Q. DOES THE CONTINUED USE OF THE ELG PROCEDURE PRODUCE INTERGENERATIONAL INEQUITY?

A. No, quite the opposite. The very nature of the ELG procedure more precisely calculates depreciation expense for assets with like lives within a depreciable group and sums that expense to develop an annual depreciation accrual rate applicable to the depreciable group.

As a result, it more appropriately matches the recovery of the asset's cost to the period of time over which it is providing service to rate payers.

In contrast, there is a stronger argument that the ALG procedure results in intergenerational inequity. Because depreciation expense on shorter-lived assets occurs over the average service life, recovery for these assets is deferred. ELG produces a more equitable recovery by recovering these costs over the actual, shorter, service lives.

Q. DOES THE USE OF THE ELG PROCEDURE REQUIRE THE CALCULATION OF ANNUAL DEPRECIATION RATES TO BE UPDATED MORE FREQUENTLY THAN THE ALG PROCEDURE TO PREVENT INTERGENERATIONAL INEQUITY?

A. No. While Mr. Garren may believe that "the requirements of Chapter 73 of the Commission['s] regulations would no longer be necessary for any utility no longer utilizing Equal Life Group procedure to calculate depreciation rates,"[12] the calculation of depreciation expense and annual depreciation accrual rates should be updated regularly to prevent intergenerational inequity, regardless of the procedure selected.

Q. HOW FREQUENTLY DOES PENNSYLVANIA REGULATION REQUIRE THE CALCULATION OF DEPRECIATION RATES?

A. Pennsylvania regulation requires utilities operating within the state to calculate and file updated depreciation rates annually. This annual requirement alleviates concern for the development of generational inequity.[13]

[12] York Water Exhibit JJS-2R [OCA Answer to YWC to OCA-II-21].
[13] Bulletin 155, p. 71.

Q. IS OCA WITNESS GARREN CORRECT THAT THE CONTINUED USE OF ELG "COMES AT AN IMMENSE ADMINISTRATIVE COST," AS ALLEGED ON PAGE 23 OF HIS DIRECT TESTIMONY?

A. No. As I noted above, regardless of the method utilized, the calculation of depreciation expense and annual depreciation accrual rates should be updated regularly to prevent intergenerational inequity. Also, Mr. Garren's claim appears to be based on a misunderstanding about the frequency by which utilities in Pennsylvania must file a new service life study under the Commission's regulations. In discovery, when asked if he performed any calculations about the alleged "immense administrative cost," he responded as follows:

> Mr. Garren has not performed any calculations of the administrative costs. Mr. Garren is relying on his knowledge of rate case costs in general to point out that there is a significant cost associated with making annual filings of depreciation rates, as well as with filing to adjust depreciation rates every three years. Mr. Garren would generally recommend that utilities file for new depreciation rates every five years, rather than every three years, for the purposes of keeping depreciation rates up to date. Over the course of fifteen years, two full rate cases can be avoided, which come at a significant cost to ratepayers.

(York Water Exhibit JSS-2R [OCA Answer to YWC to OCA-II-21].) However, regardless of whether a public utility in Pennsylvania uses the ELG or ALG procedure, Section 73.5(a) of the Commission's regulations requires public utilities to file a service life study report every five years and to file annual depreciation reports ever year. It is also unclear how any "rate cases" could "be avoided" through the filing of service life studies every three years, as asserted by Mr. Garren. The timing of a base rate case filing is not driven by the filing frequency of a service life study that must be submitted under the Commission's regulations.

II. RATE BASE FOR FORECASTED TEST YEAR

A. Errors in OCA Witness Garren's Calculations

Q. HAS OCA WITNESS GARREN CLEARLY EXPRESSED THE AMOUNT BY WHICH HIS PROPOSAL TO CHANGE FROM THE ELG PROCEDURE TO ALG PROCEDURE WOULD REDUCE ANNUAL DEPRECIATION EXPENSE?

A. No. First, OCA Witness Garren states "the Company has overstated its depreciation expense by $1.32 million for water and $210 thousand for wastewater.[14] Then, OCA Witness Garren presents a comparison table (Table JSG-1) displaying the difference between the "York Proposed Expense" and the "OCA Proposed Expense" as of the 2027 Study[15] displaying "OCA's Adjustment" to the Company's proposed Depreciation Expense as a $1.13 million reduction for water and a $164.4 thousand for wastewater.

Q. DOES OCA WITNESS GARREN EXPLAIN WHY THERE IS JUSTIFICATION TO REDUCE DEPRECIATION EXPENSE IN THIS CASE?

A. No. The Company has followed the approved depreciation practices for 40 years and has not changed any operational practices or created any changes in the life expectancy or created new recovery patterns that would dictate changes for matching asset utilization with asset recovery. Depreciation expense is not a tool to manipulate in a regulated environment.

Q. HOW ARE YOU GOING TO PROCEED GIVEN THE LEVEL OF UNCERTAINTY PRESENTED ABOVE RELATED TO OCA WITNESS

[14] Garren, p 5, lines 13-15.
[15] Garren, p. 6, lines 9-13

GARREN'S PROPOSED REDUCTION TO DEPRECIATION EXPENSE AS OF THE 2027 STUDY (OR FEBRUARY 28, 2027)?

A. The remainder of my testimony will be based on the understanding OCA Witness Garren's intention is to propose the $1.13 million reduction to depreciation expense for water and $164.4 thousand reduction for wastewater as of the 2027 Study presented in "Table JSG-1" on page 6 of OCA Witness Garren's testimony.

Q. IF THE ALG PROCEDURE WERE TO BE ADOPTED IN THIS CASE, ARE OCA WITNESS GARREN'S STATED RATES CORRECT?

A. No. OCA Witness Garren has only calculated proposed ALG rates for the FPFTY which are incorrect because he is using depreciation reserve balances that are based on projected ELG accruals.

Q. WHAT IS THE APPROPRIATE PROCESS FOR CALCULATING THE PROPOSED DEPRECIATION EXPENSE AND ANNUAL DEPRECIATION ACCRUAL RATES DURING A RATE CASE IN PENNSYLVANIA?

A. Pennsylvania provides for the calculation of proposed depreciation expense and annual depreciation accrual rates as of a FPFTY date. In the instant case, the FPFTY date is February 28, 2027.

Q. PLEASE EXPLAIN HOW THE FPFTY LEVELS OF PLANT AND ACCUMULATED DERPECIATION (OR "RESERVE") ARE DEVELOPED?

A. The process begins with the calculation of depreciation expense and annual deprecation accrual rates as of a Historical Test Year ("HTY") which is completed using historical, or actual, levels of Plant and Reserve. In the instant case, the HTY date is December 31, 2024. Once depreciation expense and annual depreciation accrual rates are calculated as

of the HTY date, they are utilized along with projected levels of plant activity to develop the plant values and bring forward the reserve to a FTY date at which the levels of depreciation expense and annual depreciation accrual rates are calculated again. In the instant case, the FTY date is December 31, 2025. The final step to calculate the proposed depreciation expense and annual depreciation accrual rates is to utilize the FTY depreciation expense and annual depreciation accrual rates along with projected levels of plant activity to develop the plant values and bring forward the reserve to a FPFTY date where the proposed levels of depreciation expense and annual depreciation rates are calculated. In the instant case, the FPFTY date is February 28, 2027.

Q. IS IT IMPORTANT TO MAINTAIN A CONSISTENT PROCESS AND CONSISTENT PROCEDURES DURING THE PROCESS DESCRIBED ABOVE?

A. Yes, it is. Maintaining a consistent process and procedures eliminates the possibility of increasing or decreasing swings in the levels of depreciation expense and annual depreciation accrual rates such as what OCA Witness Garren is proposing.

Q. HAS OCA WITNESS GARREN FOLLOWED THE ABOVE DESCRIBED PENNSYLVANIA PROCESS WHEN CALCULATING HIS PROPOSED LEVELS OF DEPRECIATION EXPENSE AND ANNUAL DEPRECIATION ACCRUAL RATES?

A. No.

Q. PLEASE DESCRIBE HOW OCA WITNESS GARREN HAS DEVIATED FROM THE PENNSYLVANIA PROCESS DESCRIBED ABOVE.

A. First, OCA Witness Garren calculated ALG remaining lives for some asset classes, not all, related to York Water's water and wastewater assets as of the HTY (December 31, 2024).

OCA Witness Garren did not calculate ALG remaining lives for any asset class that the life span technique was utilized. Therefore, he maintained ELG for all life span accounts. Then, Mr. Garren applies those calculated ALG remaining lives as of December 31, 2024, to York Water's water and wastewater plant remaining to be recovered as of February 28, 2027 (Future Accruals) to calculate his proposed water and wastewater ALG depreciation rates. OCA Witness Garren has **NOT** calculated depreciation expense and rates as of each test period, and he does **NOT** calculate or use the results of each test year calculation to develop the reserve for each subsequent depreciation calculation. He has completely ignored and skipped portions of the process calculating depreciation for each test period with reserve levels developed from the ELG procedure and applies his proposed ALG alternative procedure to calculate depreciation expense and annual depreciation accrual rates as of February 28, 2027.

Q. WHY ARE OCA WITNESS GARREN'S PROPOSALS NOT APPROPRIATE?

A. There are four primary reasons why OCA Witness Garren's proposals are not appropriate. First, OCA witness Garren's proposals are contradictory to the well- established precedent in Pennsylvania rate cases for the calculation of proposed depreciation expense and annual depreciation accrual rates. Second, OCA Witness Garren does not apply his proposed ALG procedure to all of York's water and wastewater asset classes. Therefore, based on this selective process, one might conclude Mr. Garren believes the ELG procedure is appropriate for some asset classes which is inconsistent with his testimony. Third, OCA Witness Garren is applying his ALG remaining lives calculated as of the HTY (December 31, 2024) to plant and reserve levels as of the FPFTY (February 28, 2027). This mismatch will not provide accurate depreciation rates. Fourth, OCA Witness Garren's proposal

creates inconsistency due to the level of reserve that has been developed in this rate case (and over the past 40 years) using the ELG procedure. OCA Witness Garren's proposal of calculating depreciation expense and annual depreciation accrual rates as of only the FPFTY test period date using the ALG procedure is a clear contradiction in appropriate forecasting models and deliberately reflects higher book reserves in order to artificially lower depreciation expense as of the FPFTY. If OCA Witness Garren followed the more appropriate approach, he would have forecasted the book reserve for the FTY and FPFTY using his recommended ALG procedure for **ALL** asset classes which will lower the book reserve as of each test year which would result in higher depreciation expense than he has proposed in his testimony. Consequently, OCA Witness Garren has erred in his statement that difference between the two procedures is $1.13 million for water and $164.4 thousand for wastewater as of February 28, 2027, because he has applied an inappropriate methodology for forecasted test years and utilizes past approved calculations to misrepresent the true procedural changes.

III. SERVICE LIFE ANALYSIS

Q. DID OCA WITNESS GARREN PROPOSE CHANGES TO ANY OF THE SERVICE LIVES FOR ANY ASSET CLASS PROPOSED BY THE YORK WATER COMPANY?

A. No. OCA Witness Garren inappropriately downplays the importance of service lives and survivor curve analysis on depreciation expense in order to emphasize a substantial change in depreciation procedure.

Q. DO THE SERVICE LIVES AND DEPRECIATION PROCEDURE TOGETHER AFFECT THE DEPRECIATION EXPENSE AND RATE?

A. Yes. The development of the remaining life depreciation rate is based on both the depreciation procedure and the survivor curve for the proper systematic and rational recovery. OCA Witness Garren fails to consider the life component development, which inaccurately represents the depreciation rate by maintaining the ELG developed book reserve by the life characteristics previously established.

IV. VARIOUS OTHER ISSUES THAT ARE NOT ACCURATE BASED ON GARREN TESTIMONY

Q. HAS OCA WITNESS GARREN PROPERLY ILLUSTRATED THE DEVELOPMENT OF DEPRECIATION RATES IN PENNSYLVANIA?

A. No. On page 10 of his testimony, OCA Witness Garren provides a formula for depreciation that includes a net salvage value. In Pennsylvania, there is no net salvage component in depreciation rates, which is just another example of OCA Witness Garren not considering all the factors in Pennsylvania for determining the most appropriate rate that considers proper recovery.

Q. HOW DO YORK WATER DEPRECIATION RATES COMPARE TO OTHER COMPANIES?

A. The composite rate for the water assets of York Water as proposed in the FPFTY, including the amortization of net salvage is 2.64 percent. This is at the lower end of the industry range for water companies across the United States regardless of the depreciation procedure. The most common range for water companies is 2.50 through 3.10 percent. The composite rate for the wastewater assets of York Water as proposed in the FPFTY, including the amortization of net salvage is 2.48 percent. This is also at the lower end of the industry range for wastewater companies across the United States regardless of the depreciation procedure. The most common range for wastewater companies is 2.35

through 3.00 percent. Therefore, OCA Witness Garren's claim the ELG is producing accelerated or high depreciation rates does not apply to York Water as compared to others.

Q. OCA WITNESS GARREN CLAIMS THAT ELG REQUIRES CONSTANT REVIEW. IS THIS CORRECT?

A. No. First, OCA Witness Garren claims that ELG will require constant review by the PUC and that ELG will cause overearning and excessive supervision. This is just not accurate. There is no additional requirements for developing depreciation rates using the ELG procedure as compared to ALG procedure, Second, there is no overearning as depreciation rates using the ELG procedure are the most accurate for matching asset recovery to asset utilization. Third, depreciation is continually monitored in Pennsylvania with the required annual updates and 5-year service life studies which shows stable rates for all companies whether ELG procedure is utilized or the ALG procedure. However, it is clear that based on the other rules for recovery such as expensing net salvage instead of accruing net salvage, the ALG procedure would create a deferral of recovery that would not benefit customers or the utility in the long run. Finally, on advice of counsel, PA does not generally allow single issue ratemaking, and so any difference between allowed depreciation in rates and actual booked depreciation each year is not separately examined to claim "overearning." PUC does require annual, and for many companies quarterly, earnings reports, and if utility appears to be overearning its return, then the PUC can bring them in for investigation.

V. <u>CONCLUSION REGARDING DEPRECIATION RECOMENDATIONS</u>

Q. IS THERE ANYTHING IN THE TESTIMONY OF OCA WITNESS GARREN THAT SHOULD INFLUENCE THE COMMISSION TO ACCEPT HIS

DEPRECIATION RECOMMENDATIONS?

A. No. As my rebuttal testimony explains, York Water's proposed depreciation rates were prepared in accordance with current precedent and practice before the Commission. OCA Witness Garren incorrectly and inconsistently calculated his proposed depreciation rates for the FPFTY only and inaccurately presented all the components of the ELG procedure. The Commission should approve the depreciation rates recommended in the Company's filing.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

York Water Company, R-2025-3053442, R-2025-3053573

York Interrogatories to the Office of Consumer Advocate
Set II

21. Reference OCA St. 3 at 23. Mr. Garren avers, "In order to ensure that the depreciation expense is accurate from year to year, remaining life calculations must be updated regularly, and companies must be obliged to submit regular depreciation studies. This requirement, which I understand Pennsylvania requires in PA Code Chapter 73, is necessary precisely because of the ongoing use of the ELG procedure, and comes at an immense administrative cost."
    a. Please provide all calculations performed by Mr. Garren on the alleged "immense administrative cost."
    b. Is Mr. Garren proposing that York Water be exempted from the referenced filing requirement under Chapter 73 of the Commission's regulations if the Commission approves his proposal to change from ELG method to the ALG method? If not, please explain in detail why.
    c. Please provide all Documents, studies, and workpapers relied upon by Mr. Garren in making this statement and in responding to subparts (a) and (b), *supra*.

Response

a. Mr. Garren has not performed any calculations of the administrative costs. Mr. Garren is relying on his knowledge of rate case costs in general to point out that there is a significant cost associated with making annual filings of depreciation rates, as well as with filing to adjust depreciation rates every three years. Mr. Garren would generally recommend that utilities file for new depreciation rates every five years, rather than every three years, for the purposes of keeping depreciation rates up to date. Over the course of fifteen years, two full rate cases can be avoided, which come at a significant cost to ratepayers.
b. Mr. Garren's assessment is that the requirements of Chapter 73 of the Commission regulations would no longer be necessary for any utility no longer utilizing Equal Life Group procedure to calculate depreciation rates. It is up to the Commission how it would like to handle such cases.
c. Mr. Garren relied on no documents in making these statements.

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

RE: THE YORK WATER COMPANY
DOCKET NOS. R-2025- 3053442 AND R-2025-3053573

DIRECT TESTIMONY OF GREGRY R. HERBERT

Line No.

Q. Please state your name and business address.

A. My name is Gregory R. Herbert. My business address is 300 Sterling Parkway, Suite 200, Mechanicsburg, Pennsylvania (formerly 207 Senate Avenue, Camp Hill, Pennsylvania.)

Q. By whom are you employed?

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC.

Q. Are you the same Gregory Herbert that submitted direct testimony and exhibits in this case?

A. Yes. I submitted Statement No. 107 and Exhibits No. FVIII and FVIII-WA.

Q. What is the subject of your rebuttal testimony?

A. On behalf of The York Water Company ("York Water" or the "Company"), I will address the cost of service and rate design issues raised in the direct testimonies of Office of Small Business Advocate ("OSBA") witness Roger Cathcart, Bureau of Investigation and Enforcement ("I&E") witness Ethan Cline, and Office of Consumer Advocate ("OCA") witness Jerome Mierzwa.

Direct Testimony of OSBA Witness Roger Cathcart

Q. Please address the testimony of Roger Cathcart regarding the water and wastewater revenue allocations and scale back of rates?

A. Mr. Cathcart recommends that the Pennsylvania Public Utility Commission ("Commission") adopt York Water's proposed revenue allocation for water service, as it aligns all rate classes with their respective cost-based revenue levels. However, Mr. Cathcart recommends the Commission accept OSBA's water service revenue increase which reduces York's water requested revenue requirement by $5.25 million. Mr. Cathcart also recommends the Commission to adopt OSBA's wastewater service increases, which reduces York Water's wastewater requested revenue requirement by $750,000. The reductions to water and wastewater revenue requirement recommendations are highlighted in the direct testimony of OSBA Witness Jason Hailis, Statement No. 1.

Q. Do you agree with Mr. Cathcart's recommendations?

A. Company Witness Poff will respond in detail with the reasons the Company disagrees with the reductions to water and wastewater revenue requirements. However, if the Commission approves a revenue increase for the Water Division that is lower than the Company requested, Mr. Cathcart and I agree with York Water's water scale back proposal, referenced on page 7 of OSBA Statement No. 2, as long as the scale back remains consistent with maintaining revenue-to-cost unity. As for the Wastewater Division, if the Commission approves a revenue increase that is lower than the Company requested, Mr. Cathcart and I agree that the Commission should maintain the unity of the wastewater class and proportionally scale back the class revenue requirements reflected in the as-filed cost of service study.

Direct Testimony of I&E Witness Ethan Cline

Q. Does Ethan Cline recommend a correction to the water cost of service study in his direct testimony?

A. Yes, Mr. Cline highlighted a mismatch between Exhibit No. FV-1 pro forma revenues under present rates and the water cost of service study's pro forma revenues under present rates. The cost of service study pro forma present rate revenues were understated by $489 compared to the revenues presented on Exhibit No. FV-1. The Company has one flat rate Commercial water customer that is charged $40.80 per month under present rates, and its billing determinants were inadvertently excluded from the bill analysis schedules. The monthly charges total $489 ($40.80 x 12 months) in annual revenue. The customer's proposed flat rate was set at $100.09 per month, which totals $1,201 in annual revenue under proposed rates. Included with my rebuttal testimony is a corrected water cost of service study in Excel format, titled "Exhibit No. FVIII-R.xlsx," that incorporates this customer into the water cost of service study and matches the pro forma revenues under present rates in Exhibit No. FV-1. Consequently, the additional revenue for the flat rate commercial customer overstates the revenues under proposed rates to the as-filed total cost of service by $856. The final rate design for the adopted rate increase at the conclusion of this case will include this flat rate Commercial water customer.

Q. Does Mr. Cline comment on the cost of service study's direct customer cost analysis?

A. Yes, Mr. Cline agrees with the Company's direct customer cost analysis and proposed customer charge. However, he recommends the customer charges should be included in any scale back of rates.

Q. Do you agree with Mr. Cline that the water customer charges should be included in the scale back of rates?

A. I agree that the customer charge should be reduced if the adopted rate increase necessitates reductions, results in no change, or only allows for minimal increases to the Company's volumetric rates. However, if the approved increase is sufficient to permit a modest reduction in volumetric rates while still enabling the scaled back revenues to be proportionally aligned with the cost of service by customer class—without requiring a decrease in customer charges—then I recommend the customer charges should remain unchanged.

Direct Testimony of OCA Witness Jerome D. Mierzwa

Q. Please address Mr. Mierzwa's water cost allocation and rate design issues.

A. Mr. Mierzwa criticizes my water cost of service allocation study, as he believes the system-wide and class extra capacity factors that the Company used are outdated and unreasonable. He modifies the extra capacity factors and submits an alternative cost of service study. He then recommends that the proposed revenue distribution in this case be based on his cost of service results. Also, he proposes to maintain the existing 5/8-inch customer charge at $17.25 per month, or if the Commission does not accept his recommendation to maintain the customer charge, he recommends the

customer charge be increased by a percentage no greater than the water increased assigned to the residential class.

Mr. Mierzwa also recommends that four service territories' increases in the wastewater operations be limited to 1.5 times the system average increase.

Q. Please explain the system-wide extra capacity factors you used in your study.

A. The Company used the maximum day ratio of 1.52 experienced during 2010. This is the highest ratio recorded on the system as well as the highest peak day usage on the system. Mr. Mierzwa proposes to use system maximum day data from the over the last ten years or the ratio of 1.43 (experienced in 2024). Mr. Mierzwa erroneously assumes that because the historic maximum peak used by the Company is older than the one that he proposes that it should not be used. In addition, Mr. Mierzwa proposes to use the system maximum hour data from 2016 or 2017 of 1.65. Again, he ignores the maximum hour ratio from 2006 of 1.84. A water system is designed to provide water during peak periods over many years, not just the peak period over the past 10 years. The historic peak should be used, not a more recent historic peak that is more limited in time.

Q. Does Mr. Mierzwa have a valid complaint about the Company's use of allegedly outdated data for the <u>class</u> extra capacity factors?

A. No, he does not. In York Water's 1992 rate case at Docket No. R-922168, the Office of Trial Staff ("OTS" now I&E), OCA, and the Company agreed to a Stipulation with respect to issues concerning rate structure. One of the terms

and conditions contained in the Stipulation required the Company to "complete a study to investigate the feasibility and cost of preparing a study of customer demands on the York Water system," within five months following the conclusion of the proceeding. The Commission adopted the Stipulation in its Order dated November 13, 1992.

Q. Did the Company comply with the Stipulation?

A. Yes. In April 1993, the Company submitted a feasibility study to conduct a customer class demand study complete with a plan to conduct such study as well as an estimate of the cost.

Q. Did the OCA or OTS (I&E) respond to the feasibility study?

A. No. The Company did not receive any response from either party.

Q. Did the Company submit any other feasibility study to conduct a customer class demand study?

A. Yes. In April 2007, the Company submitted another feasibility study for a customer class demand study pursuant to the Settlement Petition in the Company's 2006 rate case at Docket No. R-00061322. The Settlement Petition included a provision where the OCA, OTS (I&E), OSBA, and the Company agreed that York Water would submit a "feasibility study to estimate the cost of a customer demand study . . ."

Q. Did the Company receive any response from any party with respect to the second feasibility study submitted to conduct a customer class demand study?

A. No, the Company did not.

Q. Why did the Company not simply conduct the study anyway?

A. The Company did not consider it to be appropriate to spend significant costs on preparation for a customer class demand study and contract a third-party to perform the customer class demand study without the approval of the other parties with respect to the scope and cost of the study. To do so would have jeopardized the Company's ability to recover the cost of the study. Without any response from the parties, the Company could only assume that the parties were not interested in the Company conducting the study, that the parties did not consider that the cost was worthwhile, or that the extra capacity factors used by the Company were sufficient.

Q. So now the OCA and Mr. Mierzwa want to impose their own extra capacity factors and use their cost allocation study for rate design?

A. Yes. After ignoring or rejecting the Company's feasibility study to conduct an update of the demand study, using actual recordings of customer class demands, Mr. Mierzwa proposes to use an alternative method to determine the class demands without the use of actual recordings.

Q. What method did Mr. Mierzwa use?

A. The AWWA Manual M1 (Manual) offers an alternative approach for determining class extra capacity factors if a formal demand study is not available. This is not the preferred method for calculating extra capacity factors, but it is a method to use when no other data is available.

Q. But in York Water's case, the Company has actual measured data, correct?

A. Yes. The Company has data from a study conducted in the late 1970's, which has not been updated. However, as I explained earlier, the lack of more updated data is not the Company's fault.

Q. Please explain the AWWA alternative method.

A. The alternative method described in the Manual uses monthly billing data by class compared to overall system peaks.

Q. Has your firm conducted any demand studies recently for Pennsylvania water companies?

A. Yes. For a period of three years, 2013 – 2015, we conducted a comprehensive class demand study for Pennsylvania-American Water Company ("PAWC") covering the entire state including south central Pennsylvania and submitted the results in its 2017 rate case.

Q. How do the results of that study compare to the ratios you used for York Water?

A. See the table below that compares the recommended demand factors from OCA's direct testimony in the Company's prior rate case (2022), Docket No. R-2022-3031340; OCA's recommendations in this case; York Water's current demand factors; and those from the PAWC demand study. Although there are some differences, I believe the results of the PAWC study track much more closely with the ratios I used for York Water than Mr. Mierzwa's various ratios from his AWWA analyses.

Comparison of Customer Demand Factors								
Class	Maximum Day				Maximum Hour			
	OCA-2022	OCA - 2025	York Water	PAWC	OCA - 2022	OCA - 2025	York Water	PAWC
Residential	1.70	1.85	2.50	2.00	2.80	3.10	4.50	5.00

Commercial	1.50	1.65	1.60	2.10	2.50	2.70	3.30	4.60
Industrial	1.45	1.70	1.50	1.50	1.95	2.25	2.70	1.70

It is important to note that the customer demand factors recommended in this case by Mr. Mierzwa are each higher than the demand factors that OCA recommended in the Company's prior case, Docket No. R-2022-3031340. If the factors are truly the historic maximum day and maximum hour ratios, they should not change as much since the prior rate case three years ago. Finally, what really matters in cost allocation is the relationship of the factors among the classes rather than the actual factors themselves.

Q. What do you conclude with respect to Mr. Mierzwa's alternative method, his revised cost of service study, and proposed revenue distribution?

A. Mr. Mierzwa has not provided any credible evidence that his alternative method is superior to the Company's system-wide and class extra capacity factors.

Mr. Mierzwa's alternative method of extra capacity factors and associated cost of service study should be rejected. Further, his proposed revenue distribution should be rejected as well because he relies on his cost of service study for his revenue distribution.

Q. Please address the issues raised by Mr. Mierzwa concerning direct customer costs and the design of customer charges.

A. Mr. Mierzwa modifies my analysis of direct customer costs and recommends either no increase or a lower increase to the customer charges than the

Company's proposal. The Company proposed an increase to the 5/8-inch customer charge from $17.25 per month to $24.85 per month. Similar increases were proposed for the larger meter sizes.

Q. Please explain your analysis of customer costs.

A. On pages A-23 through A-31 of my Exhibit No. FVIII, I determined the customer costs for a 5/8-inch meter under the fully allocated basis at $35.49 per month (p. A-23) and under the direct cost analysis at $24.85 per month (p. A-23). The fully allocated method and the direct cost analysis support the Company's proposed 5/8-inch customer charge of $24.85 per month.

Q. Please explain the fully allocated method.

A. The fully allocated method determines the customer costs based on the direct costs associated with meters, service lines, customer billing, meter reading and accounting, plus an allocable portion of administrative and general (A&G) costs. This method is used in the AWWA Manual M1. It allocates a portion of A&G costs to the customer cost functions as well as a portion to the base, extra capacity and fire service functions. This makes sense because most A&G costs do not vary with the number of customers or with the amount of water consumed. A&G costs support the entire operation, both customer-related and usage-related.

Q. Why did you also provide a direct customer cost analysis?

A. I believe the Commission should consider the use of the fully allocated method to determine the appropriate level of customer charges. However, I understand recent Commission decisions support the use of direct customer costs only. If the Commission continues to rely solely on direct customer

costs, it is important that the proper level of direct costs is determined, which include certain A&G expenses that are directly related to customer costs.

Q. How did you determine the proper level of direct customer costs?

A. I followed the method used to determine the direct customer costs in the 2003 case involving Aqua Pennsylvania, Inc. ("Aqua") (formerly Pennsylvania Suburban Water Company), at Docket No. R-00038805, which was approved by the Commission. This direct customer cost methodology was reaffirmed by the Commission in a more recent Aqua rate case, at Docket Nos. R-2021-3027385, et al., where the Commission stated:

> Upon our consideration of the evidence and record herein, we conclude that the ALJ correctly recommended that, consistent with the *Aqua 2004 Order,* and subsequently affirmed in the *2012 PPL Order,* other customer-related costs are properly includable in a customer cost analysis. We find that the OCA proposed limitation of costs excludes customer costs that should be included in a customer charge and is unreasonably narrow.

Most recently, to the best of my knowledge, the Commission's order (page 241) in the most recent PAWC rate case, as Docket Nos. R-2023-3043189, et al., stated:

> With regard to the alternative proposal of the OCA, which relies on the OCA's assertion that PAWC's customer cost analysis is flawed because it includes costs that are not direct customer costs and do not change with the addition or subtraction of a customer, we find it to be without merit. Rather, we concur with the ALJs and Commission orders that have previously rejected such limitations on cost recovery through the fixed customer charge, as proposed by the OCA.

Therefore, I recommend that the Commission reject Mr. Mierzwa's proposal regarding the water customer charge.

Q. Who was the witness in the 2021 Aqua ("*Aqua*") case that developed the direct customer cost methodology?

A. Ms. Constance E. Heppenstall of Gannett Fleming, a former member of our firm, was the cost of service witness in that case. She prepared and sponsored Exhibit No. 5-A in that case, which determined the proper level of direct customer costs. Further noted, Ms. Heppenstall was Aqua's cost of service witness in the recent Aqua 2024 base rate case and prepared the direct customer cost analysis.

Q. What costs are included in the Company's direct cost analysis for York Water in this case?

A. Consistent with *Aqua,* I included the direct costs for meters, service lines, customer billing, meter reading and customer accounting including bad debt expense. I also included an allocable portion of transmission and distribution supervision, employee pensions, payroll taxes and benefits, office buildings, furniture and equipment, computers, and transportation equipment. All of these items are necessary to provide customer-related services and are directly related to customer costs.

Q. Do you agree that bad debt expense that was omitted in the direct cost analyses of Mr. Mierzwa is appropriate?

A. No. Mr. Mierzwa omitted all the bad debt expense, which is not correct.

Q. Please explain your position on bad debt expense as a direct customer cost.

A. The allocation of bad debt expense to customer classes was based on the level of write-offs of bad debt (Factor 30) and is a direct customer cost

because the level of bad debt write-offs is very similar to the number of customers (Factor 19) and varies with the number of customers, not usage. Excluding bad debt expense from customer charges results in 100% of this expense being recovered in usage charges, which is a total disconnect to how such costs are incurred. Including bad debt expense in usage charges would inappropriately allocate a large portion of this expense to non-residential classes with much higher consumption. Excluding any or all bad debt expense from direct customer costs should be rejected.

Q. What do you conclude with respect to fully allocated and direct customer costs?

A. The Company's analysis of fully allocated and direct customer costs is consistent with *Aqua* and properly reflects the appropriate level of customer costs for the purposes of designing customer charges. Consideration should be given both to the fully allocated method and the direct customer costs. Thus, my revised analysis still supports the proposed customer charge of $24.85 per month.

Q. Do you agree with Mr. Mierzwa's proposed scale back of water rates?

A. No. In as much as I disagree with Mr. Mierzwa's revenue distribution by class for water, I disagree with his recommended scale back.

Q. Does Mr. Mierzwa make any adjustments to the Wastewater Cost of Service Studies presented by the Company.

A. No, he does not. However, he recommends limiting rate increases to four service territories, which will lower the amount of wastewater revenue requirement recovered by the residential wastewater customers.

Q. Do you agree with Mr. Mierzwa's proposed wastewater rate design for the four service territories?

A. No, I do not. Mr. Mierzwa recommends that Monaghan Township, Shrewsbury and Springfield, Washington Township, and York Haven Borough/Newberry Township's increases should be limited to 1.5 times the overall average increase. Mr. Mierzwa references gradualism as the reason for limiting the increases to these service territories in his testimony. However, Mr. Mierzwa also states that typically an increase of 1.5 to 2.0 times the system average is considered consistent with the principle of gradualism. None of the four service areas Mr. Mierzwa wants to limit increases to exceed 2.0 times the system average increase, which he illustrates on Table 6 in his direct testimony. Furthermore, I believe the concept of gradualism needs to be practiced when shifting revenues by class towards cost of service. In the prior case, the Company utilized Act 11, which mitigated the increases for the wastewater system, and did not utilize Act 11 in this case partially due to the level of the requested increase to the water system. Also, several new wastewater service territories were added in this case which increased the non-residential customer base and shifted more costs to provide service toward the non-residential class. Under the proposed rate design, some of the non-residential rates experienced higher increases due to these changes from the prior rate case. Ultimately, the proposed revenues shift towards cost of service with an overall increase of 44.3% applied to the residential class and a 58.6% overall increase applied to the non-residential class. Under my proposed rate design, I could not justify increasing the non-residential rates

further without jeopardizing the concept of gradualism for the non-residential class. The Company's primary goal was consolidating its wastewater rates, so my objective was to consolidate rates while setting increases that would not exceed 2.0 times the system average increase. Therefore, I reject Mr. Mierzwa's recommendation to limit rate increases to the residential customers, which will shift revenue allocation towards the non-residential class.

Q. Do you agree with Mr. Mierzwa's proposed wastewater increases?

A. No. In as much as I disagree with Mr. Mierzwa's revenue distribution for wastewater, I disagree with his recommended scale back. I recommend that any wastewater scale back, if the Commission approves a revenue increase that is lower than the requested wastewater revenue increase, be proportionally scaled back to the class revenue requirements reflected in the as-filed cost of service study, which was also recommended by OSBA Witness Cathcart.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

THE YORK WATER COMPANY
WATER OPERATIONS
COMPARISON OF PRO FORMA COST OF SERVICE WITH REVENUES UNDER PRESENT AND PROPOSED RATES

WATER OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma future test year average daily consumption for each customer classification.

Customer Classification	Average Daily Consumption, 100 Gallons	Allocation Factor
(1)	(2)	(3)
Gravity		
Residential	29,543	0.1736
Commercial	22,648	0.1331
Industrial	6,131	0.0360
Private Fire Protection	30	0.0002
Public Fire Protection	46	0.0003
Repumped		
Residential	54,751	0.3216
Commercial	38,118	0.2240
Industrial	18,689	0.1098
Private Fire Protection	61	0.0004
Public Fire Protection	162	0.0010
Total	170,179	1.0000

FACTOR 2. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED IN THE REPUMPED SERVICE AREA.

Factors are based on the pro forma future test year average daily consumption for each customer classification in the repumped service area.

Customer Classification	Average Daily Consumption, 100 Gallons	Allocation Factor
(1)	(2)	(3)
Repumped		
Residential	54,751	0.4899
Commercial	38,118	0.3410
Industrial	18,689	0.1672
Private Fire Protection	61	0.0005
Public Fire Protection	162	0.0014
Total	111,781	1.0000

THE YORK WATER COMPANY
WATER OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the factors for average daily consumption (Factor 1) and the factors derived from maximum day extra capacity demand for each customer classification, as follows:

	Average Daily Consumption		Maximum Day Extra Capacity		
Customer Classification	Allocation Factor 1	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)=(2)x 0.6579	(4)	(5)=(4)x 0.3421	(6)=(3)+(5)
Gravity					
Residential	0.1736	0.1142	0.2528	0.0865	0.2007
Commercial	0.1331	0.0876	0.0775	0.0265	0.1141
Industrial	0.0360	0.0237	0.0175	0.0060	0.0297
Private Fire Protection	0.0002	0.0001			0.0001
Public Fire Protection	0.0003	0.0002			0.0002
Repumped					
Residential	0.3216	0.2115	0.4684	0.1603	0.3718
Commercial	0.2240	0.1474	0.1305	0.0446	0.1920
Industrial	0.1098	0.0722	0.0533	0.0182	0.0904
Private Fire Protection	0.0004	0.0003			0.0003
Public Fire Protection	0.0010	0.0007			0.0007
Total	1.0000	0.6579	1.0000	0.3421	1.0000

The derivation of the maximum day extra capacity factors in column 4 and the basis for the column 3 and column 5 weightings are presented on the following page.

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS, cont.

Customer Classification	Average Daily Consumption, 100 Gallons	Maximum Day Extra Capacity Factor*	Maximum Day Extra Capacity Rate of Flow, 100 Gallons Per Day	Service Area Factor	Allocation Factor
(1)	(2)	(3)	(4)=(2)x(3)	(5)	(6)
Gravity					
Residential	29,543	1.50	44,314.5	0.7268	0.2528
Commercial	22,648	0.60	13,588.8	0.2229	0.0775
Industrial	6,131	0.50	3,065.5	0.0503	0.0175
	58,322		60,968.8	1.0000	
Repumped					
Residential	54,751	1.50	82,126.5	0.7183	0.4684
Commercial	38,118	0.60	22,870.8	0.2000	0.1305
Industrial	18,689	0.50	9,344.5	0.0817	0.0533
	111,558		114,341.8	1.0000	
Total	169,880		175,310.6		1.0000

The weighting of the factors is based on the maximum day ratio of 1.52, based on a review of maximum day ratios experienced during the period 2000 through 2024. (See Schedule F).

	Maximum Day Ratio	Weight
Average Day	1.00	0.6579
Maximum Day Extra Capacity	0.52	0.3421
Total	1.52	1.0000

* Ratio of maximum day to average day minus 1.0.

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS FOR THE GRAVITY SERVICE AREA, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are a review of the ratios of maximum day to average day during the years 1983-2024 (see Schedule F) and the average daily send-out during the test year of 22.4 mgd. The system demand for the fire protection is 12,300 gpm for 10 hours.

	Maximum Day Ratio	Rate of Flow, GPD	Weight
Average Day	1.00	21,800,000	0.5380
Maximum Day Extra Capacity	0.52	11,336,000	0.2798
	1.52	33,136,000	0.8178
Fire Protection		7,380,000	0.1822
Total		40,516,000	1.0000

* Ratio of maximum day to average day minus 1.0.

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 6. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are a review of the ratios of maximum hour to average hour during the years 1983-2024 (see Schedule F) and the average daily send-out during the test year of 22.4 mgd. The system demand for fire protection is 12,300 gpm.

	Ratio	Rate of Flow, (GPM)	Weight
Average Hour	1.00	15,139	0.3771
Maximum Hour Extra Capacity	0.84	12,717	0.3167
Subtotal	1.84	27,856	0.6938
Fire Protection		12,300	0.3062
Total		40,156	1.0000

The public and private fire protection allocation factors in column 7 on the previous page are based on relative potential demands (see Schedule G).

THE YORK WATER COMPANY
WATER OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS FOR THE GRAVITY SERVICE AREA.

Factors are based on the weighting of the factors for average daily consumption, the factors derived from maximum day extra capacity demand and the fire protection demand for each customer classification, as follows:

	Average Daily Consumption			Maximum Day Extra Capacity		Fire Protection		
Customer Classification	100 Gals.	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor	Weighted Factor	Allocation Factor
(1)	(2)	(3)	(4)=(3)x 0.5380	(5)	(6)=(5)x 0.2798	(7)	(8)=(7)x 0.1822	(9)=(4) +(6)+(8)
Gravity								
Residential	29,543	0.5059	0.2722	0.7268	0.2033			0.4755
Commercial	22,648	0.3878	0.2086	0.2229	0.0624			0.2710
Industrial	6,131	0.1050	0.0565	0.0503	0.0141			0.0706

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 9. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES SERVING BOTH GRAVITY AND REPUMPED SERVICE AREAS, cont.

The weighting of the factors is based on the ratio of the capacity required for a 10-hour demand of fire flow, as related to total storage capacity.

Fire Protection Weight = $\frac{12{,}300 \text{ GPM X } 60 \text{ Min. X } 10 \text{ Hrs}}{58{,}902{,}000 \text{ Gallons Storage}}$ = 0.1253

General Service Weight = 1.0000 - 0.1253 = 0.8747

The weighting of the average hourly consumption and maximum hour extra demand for general service is based on the maximum hour ratio, as follows.

	Maximum Hour Ratio	Percent	Weight
Average Hour	1.00	54.35	0.4754
Extra Capacity Maximum Hour	0.84	45.65	0.3993
Total	1.84	100.00	0.8747

WATER OPERATIONS

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 12. ALLOCATION OF MAINTENANCE OF TRANSMISSION & DISTRIBUTION STRUCTURES.

Factors are based on the allocation of Account 304.2, Power and Pumping Structures rate base as follows:

Customer Classification	Account 304.2 Power & Pumping Structures	Allocation Factor
(1)	(2)	(3)
Gravity		
Residential	$2,240,312	0.1778
Commercial	$1,273,640	0.1011
Industrial	$331,526	0.0263
Private Fire Protection	$1,116	0.0001
Public Fire Protection	$2,232	0.0002
Repumped		
Residential	$4,765,463	0.3781
Commercial	$2,474,385	0.1963
Industrial	$1,160,608	0.0921
Private Fire Protection	$97,456	0.0077
Public Fire Protection	$255,932	0.0203
Total	$12,602,671	1.0000

FACTOR 13. ALLOCATION OF COSTS ASSOCIATED WITH FIRE HYDRANTS.

Fire hydrant costs are assigned directly to public fire protection, in each service area based on the number of hydrants.

Customer Classification	Number of Hydrants	Allocation Factor	Service Area Allocation Factors 26/27
(1)	(2)	(3)	(4)
Gravity			
Public Fire Protection	1,044	0.2237	1.0000
Repumped			
Public Fire Protection	3,621	0.7763	1.0000
Total	4,665	1.0000	

THE YORK WATER COMPANY

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 14. ALLOCATION OF COSTS ASSOCIATED WITH METERS.

Factors are based on the relative cost of meters by size and customer classification, as developed on the following page and summarized below.

Customer Classification	5/8" Dollar Equivalents	Allocation Factor	Service Area Allocation Factors 28/29 *
(1)	(2)	(3)	(4)
Gravity			
Residential	22,090	0.2373	0.6744
Commercial	9,141	0.0982	0.2790

REJOINDER TESTIMONY OF JOSEPH T. HAND

ON BEHALF OF

THE YORK WATER COMPANY

Dated: October 10, 2025

I. INTRODUCTION

Q. State your name and business address.

A. Joseph T. Hand. My business address is: 130 East Market Street, York, Pennsylvania.

Q. By whom are you employed?

A. I am employed by The York Water Company ("York Water" or the "Company").

Q. State your present position with the Company.

A. I am President and Chief Executive Officer.

Q. Are you the same Joseph T. Hand that submitted direct and rebuttal testimony in this proceeding?

A. Yes.

Q. Please describe the purpose of your rejoinder testimony.

A. The purpose of my testimony is to respond to portions of the surrebuttal testimony of Bureau of Investigation and Enforcement ("I&E") witness Drew Breuning (I&E St. No. 2-SR) regarding management performance.

Q. Are you sponsoring any exhibits with your testimony?

A. No.

Q. Do you have any initial observations?

A. Yes. My rejoinder testimony does not address every argument raised in the opposing parties' surrebuttal testimony regarding the subject matter of my rebuttal testimony. To the extent I do not address a particular claim in this rejoinder testimony, that should not be interpreted as my agreement with it.

II. MANAGEMENT PERFORMANCE

Q. Could you please respond to I&E witness Breuning's attempt to distinguish the Aqua Pennsylvania, Inc. ("Aqua") 2021 rate case, where the Commission awarded a return on equity ("ROE") adder for management performance?

A. Yes. Mr. Breuning tries to distinguish the Aqua case because "Aqua was required by the Commission to acquire those troubled systems," whereas York Water "voluntarily acquired the systems Mr. Hand mentions as an investment opportunity, which increases York's rate base." (I&E St. No. 2-SR at 25.)

Mr. Breuning's argument should be rejected. The standard should not be whether the utility was ordered by the Commission to acquire the troubled systems. The Company has established longstanding and mutually supportive relationships with many of the small public and private water and wastewater systems interspersed near the Company's certificated territories. Without imposing, the Company has made itself and its utility professionals available to assist with technical and/or operational issues. As a result of the Company's deserved reputation to assist communities in need, the Company has often been contacted by regulators to assess the possibility of acquisition.

The Company has intentionally and diligently acquired troubled systems as a responsible water and wastewater utility provider seeking to improve the circumstances of

the customers of those failing systems. The Company should not be prohibited from a management performance adder because it did not wait for the systems to continue to get worse until the Commission required the Company to acquire them. To the contrary, the fact that the Company voluntarily acquired them should be considered as even stronger support for the management performance adder.

Furthermore, I note that the Pennsylvania Department of Environmental Protection ("DEP") did reach out directly and ask the Company to engage in conversations with Mr. and Mrs. Scott, the owners of the Scott Water Company, because of the longstanding problems that existed with that system, sharing that *this is a troubled system and the owner has health problems*. I believe DEP reached out to York Water because of the Company's prior success in solving issues with troubled small water and wastewater systems.

Finally, several of the acquired troubled systems are not regulated by the Commission, and, as such, the Company could not be ordered to acquire them under Section 529 of the Public Utility Code. Acquiring troubled water and wastewater systems should be a factor in awarding the management performance adder, regardless of whether the acquisitions were required by the Commission.

Q. Does this conclude your rejoinder testimony?

A. Yes.

REJOINDER TESTIMONY OF MATTHEW E. POFF

ON BEHALF OF

THE YORK WATER COMPANY

Dated: October 10, 2025

I. INTRODUCTION

Q. State your name and business address.

A. Matthew E. Poff. My business address is: 130 East Market Street, York, Pennsylvania.

Q. By whom are you employed?

A. I am employed by The York Water Company ("York Water" or the "Company").

Q. State your present position with the Company.

A. I am Chief Financial Officer and Treasurer.

Q. Are you the same Matthew E. Poff that submitted direct and rebuttal testimony in this proceeding?

A. Yes.

Q. Please describe the purpose of your rejoinder testimony.

A. The purpose of my testimony is to respond to portions of the surrebuttal testimony of Office of Consumer Advocate ("OCA") witness Dante Mugrace (OCA St. 1SR) and Office of Small Business Advocate ("OSBA") witness Jason Hails (OSBA St. No. 1-SR).

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. No.

Q. Do you have any initial observations?

A. Yes. My rejoinder testimony does not address every argument raised in the opposing parties' surrebuttal testimony regarding the subject matter of my rebuttal testimony. To the extent I do not address a particular claim in this rejoinder testimony, that should not be interpreted as my agreement with it.

II. EXPENSE ADJUSTMENTS

Q. OCA witness Mugrace contends that "[t]he Company has not provided any information with respect to increased costs related to these acquisitions" of water and wastewater systems and that "the Company did not provide any specific rate making adjustments or identify any other specific adjustments related to these acquisitions." (OCA St. 1SR at 8.) Is that correct?

A. Absolutely not. First, I emphasize that the purpose of my testimony on this subject is to explain why costs can trend upward over a three-year period, which is not recognized by Mr. Mugrace's "normalization" adjustments. The Company does not track expenses by each acquired system, as they become part of the overall system. However, this does not alter the fact that as the Company acquires more facilities as a result of an acquisition, its total maintenance costs will rise. If an acquisition was completed during the three-year period used by Mr. Mugrace, but before the start of the Historic Test Year ending December 31, 2024 ("HTY") or early in the HTY, the increased costs are already included in the Company's ratemaking claim, and no further ratemaking adjustments are required to be made. I will also note that contrary to Mr. Mugrace's contention, York Water did make specific ratemaking adjustments as part of its claim when required. In fact, Exhibit No.

HIII-2-2W projects certain increased operating expenses for the York Haven Borough wastewater collection and treatment system, which was acquired on December 5, 2024.

Q. Mr. Mugrace also asserts that "[t]he Company has not identified whether any related savings have occurred nor been incorporated due to these changes in adding additional customers onto the system." (OCA St. 1SR at 8.) Please respond.

A. Similar to the previous response, if an acquisition was completed before the start of the HTY or early in the HTY, any savings are already included in the ratemaking claim, and no further rate making adjustments are required to be made.

Q. As alleged support for his opposition to the Company's claims for long-term incentive compensation, OCA witness Mugrace contends that the "Company has not provided any updated metrics to show that its long term incentive met the three-year average of Commission justified complaints per 1,000 customers nor provided maintaining customer rates that are less then [sic] the Pennsylvania water utility peer group average." (OCA St. 1SR at 10.) Do you agree?

A. No. The Company reported its rates in comparison to its water peers on Exhibit No. HXII-1, which shows that its rates are less than the Pennsylvania water utility peer group average. The Company also demonstrated that its justified complaints per 1,000 customers in comparison to its water peers for the last three years for which this metric has been reported on Exhibit No. HXII-2. This shows the Company met the three-year average metric.

Q. OSBA witness Hails contends that his methodology for adjusting the Company's expense claims "culiminat[es] with a test-year downward adjustment to the recommended reduction ($1.3 million), equivalent to York's test year depreciation expense." (OSBA St. No. 1-SR at 5.) Is he correct?

A. No. The Company's claim for Fully Projected Future Test Year ("FPFTY") depreciation expense is an increase of approximately $5.35 million over the HTY depreciation expense. The $1.3 million additional depreciation included in Mr. Hails calculations is clearly not equivalent to the Company's claim.

In addition, Mr. Hails misinterprets my testimony. Mr. Hails proposed a $5,875,744 total adjustment to expenses, inclusive of depreciation expense. However, the Company's increase in depreciation expense from 2023 to the end of the FPFTY is $5.35 million, or over 91% of his proposed adjustment.

Q. Does this conclude your rejoinder testimony?

A. Yes.

REJOINDER TESTIMONY OF SUZANNE M. BECKER

ON BEHALF OF

THE YORK WATER COMPANY

Dated: October 10, 2025

I. INTRODUCTION

Q. State your name and business address.

A. My name is Suzanne M. Becker. My business address is: 130 East Market Street, York, Pennsylvania.

Q. By whom are you employed?

A. I am employed by The York Water Company ("York Water" or the "Company").

Q. State your present position with the Company.

A. I am the Vice President of Customer Service.

Q. Are you the same Suzanne M. Becker that submitted rebuttal testimony in this proceeding?

A. Yes.

Q. Please describe the purpose of your rejoinder testimony.

A. The purpose of my testimony is to respond to certain portions of the surrebuttal testimony of Office of Consumer Advocate ("OCA") witness Barbara Alexander (OCA St. 5SR.)

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. No.

Q. Do you have any initial observations?

A. Yes. My rejoinder testimony does not address every argument raised in the opposing parties' surrebuttal testimony regarding the subject matter of my rebuttal testimony. To the extent I do not address a particular claim in this rejoinder testimony, that should not be interpreted as my agreement with it.

II. OVERALL RESPONSE

Q. Do you have any overall response to OCA witness Alexander's surrebuttal testimony?

A. Yes. After reviewing Ms. Alexander's surrebuttal testimony, I continue to maintain the positions set forth in my rebuttal testimony.

III. CUSTOMER COMPLAINTS

Q. OCA witness Alexander takes issue with the incident information being labeled as "COMMENT ONLY" in the complaint logs and suggests that they should have a different designation. (OCA St. 5SR at 11.) She further testifies that the "complaint logs do not use predetermined complaint categories that would allow an analysis of trends and identification of potential reforms or need for additional training." (OCA St. 5SR at 12.) Please respond.

A. To clarify, there are more categories than "COMMENT ONLY" used within the complaint logs. (*See* York Water Exhibits SMB-5R (CONFIDENTIAL) and SMB-6R (CONFIDENTIAL).) The complaint logs have categories that include bill dispute, dirty/rusty/cloudy water, high/low pressure, lead, leak at meter, no water, noise in line, other contaminates, taste and odor, air in service line, and high/low consumption. Further, the Company was not required to use specific categories under the 2022 Base Rate Case

Settlement, so York Water chose categories that were most relevant to the Company. Lastly, York Water instructs its customer service representatives to input detailed notes for the "COMMENT ONLY" category as well as every other category so that a reviewer can still determine the subject matter of each call.

Q. Does this conclude your rejoinder testimony?

A. Yes.

REJOINDER TESTIMONY

OF

DYLAN W. D'ASCENDIS

ON BEHALF OF

THE YORK WATER COMPANY

OCTOBER 10, 2025

TABLE OF CONTENTS

I. INTRODUCTION, PURPOSE AND SUMMARY 1

II. RESPONSE TO I&E ROE WITNESS BREUNING 4

III. CONCLUSION..... 11

I. INTRODUCTION, PURPOSE AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dylan W. D'Ascendis. My business address is 1820 Chapel Ave., W., Suite 300, Cherry Hill, N.J. 08003.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Partner at ScottMadden, Inc.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING?

A. I am submitting this rejoinder testimony (referred to throughout as my "Rejoinder Testimony") before the Pennsylvania Public Utility Commission ("PA PUC" or the "Commission") on behalf of The York Water Company ("York Water" or the "Company").

Q. ARE YOU THE SAME DYLAN W. D'ASCENDIS WHO PROVIDED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes, I am.

Q. WHAT IS THE PURPOSE OF THIS REJOINDER TESTIMONY?

A. The purpose of my Rejoinder Testimony is to address certain aspects of the surrebuttal testimonies of Mr. Drew Breuning, witness for the PA PUC's Bureau of Investigation and Enforcement ("I&E") and Mr. David J. Garrett, witness for the Pennsylvania Office of Consumer Advocate ("OCA") (collectively referred to as the "Opposing Witnesses") as they pertain to the Companies' allowed cost of capital, which the Companies should have the opportunity to earn on their authorized jurisdictional rate base.

Q. PLEASE SUMMARIZE THE KEY ISSUES AND RECOMMENDATIONS OFFERED BY THE OPPOSING WITNESSES THAT YOU ADDRESS IN YOUR REJOINDER TESTIMONY.

A. My Rejoinder Testimony responds to substantive recommendations offered by the Opposing Witnesses in their surrebuttal testimonies which are new relative to their direct testimonies.

Q. WHICH ARGUMENTS FROM THE OPPOSING WITNESSES ARE UNCHANGED FROM THEIR DIRECT TESTIMONIES?

A. Mr. Breuning's unchanged arguments are as follows:

- Continued reliance on 10-year Treasury bond yields as the risk-free rate in his capital asset pricing model ("CAPM") analysis (addressed at pages 27 through 30 of my Rebuttal Testimony);
- Continued reliance on the Kroll "recommended" market risk premium ("MRP") (addressed at pages 30 through 32 of my Rebuttal Testimony);
- Continued opposition (also Mr. Garrett's testimony) to the Empirical CAPM ("ECAPM") (addressed at pages 32 through 36 of my Rebuttal Testimony);
- Continued reliance on the Wong Study to refute my position that the size adjustment is not applicable to utilities (addressed in pages 37 through 41 of my Rebuttal Testimony). Mr. Breuning also did not provide any rebuttal to the low level of explanatory power (i.e., R-Squared) in Beta coefficients that would be used in Wong's size study;
- Continued denial that the Commission adjusted the authorized return on common equity ("ROE") upward by one standard deviation of the mean and

median discounted cash flow ("DCF") model result to account for Citizens' Electric Company of Lewisburg, PA's smaller relative size to the proxy group (addressed in pages 40 and 41 of my Rebuttal Testimony);

- Continued opposition to a performance factor adjustment to the ROE (also Mr. Garrett's testimony) (addressed in pages 42 and 43 of my Rebuttal Testimony and in York Water Witness J.T. Hand's Direct and Rebuttal Testimonies);and
- Continued opposition to the use of a non-price regulated proxy group (addressed in pages 14 and 15, pages 48 and 49, and pages 77 through 79 of my Rebuttal Testimony).

Mr. Garrett' unchanged arguments are as follows:

- Continued belief that the Commission should authorize a hypothetical capital structure (addressed at pages 50 through 52 of my Rebuttal Testimony);
- Continued reliance on "sustainable" growth rates in his DCF analysis (addressed at pages 57 through 61 of my Rebuttal Testimony);
- Continued reliance on dividends per share growth rates in his DCF analysis (addressed at pages 53 through 56 of my Rebuttal Testimony);
- Continued belief that my MRP is unreasonable in view of his measures of MRP (addressed at pages 30 through 32, pages 62 through 69, and pages 77 and 78 of my Rebuttal Testimony); and
- Continued opposition to my proposed size adjustment (addressed in pages 36 through 41 and pages 72 through 75 of my Rebuttal Testimony).

Q. WHAT ARGUMENTS WILL YOU RESPOND TO IN THE REMAINDER OF YOUR REJOINDER TESTIMONY?

A. After reviewing the Opposing Witnesses' direct and surrebuttal testimonies and my Rebuttal Testimony, I have determined that Mr. Garrett has not put forth any new arguments in his surrebuttal testimony that were not addressed in my Rebuttal Testimony. In the remainder of my Rejoinder Testimony, I will respond to certain arguments present in Mr. Breuning's surrebuttal testimony. While I support the Company's request for a performance factor adjustment, Company Witness J.T. Hand will respond to the Opposing Witnesses' arguments against the continued approval of such adjustments to their authorized ROEs.

II. <u>RESPONSE TO I&E ROE WITNESS BREUNING</u>

Q. PLEASE SUMMARIZE MR. BREUNING'S SUBSTANTIVE AND NEW ARGUMENTS PRESENTED IN HIS SURREBUTTAL TESTIMONIES.

A. Mr. Breuning discusses the following new arguments in his surrebuttal testimony: (1) his continued sole reliance on the DCF model for his recommended ROE, using the CAPM results as a comparison; (2) his opposition of the exclusion of H2O America ("HTO") in my updated Utility Proxy Group; (3) his assertion that the DCF does not misstate the investor-required return when market-to-book ("M/B") ratios are not at unity; (4) his contention that I misrepresent his testimony in regards to commonly presented ROE models; (5) his assertion that projections of interest rates should only be used during the period when rates are expected to be in effect; (6) his argument that Kroll is a trusted and publicly available source; (7) his position that the DCF model does not have subjective inputs; (8) his contention that the use of non-utility proxy groups violate the principles set

forth in *Hope* and *Bluefield*; and (9) his assertion that flotation costs should be recovered as an expense and not applied to the ROE.

Q. DOES MR. BREUNING GIVE THE RESULTS OF HIS CAPM ANY WEIGHT IN ARRIVING AT HIS RECOMMENDED ROE?

A. No, he does not. As discussed by Mr. Breuning, he relies exclusively on the DCF model results for his recommended ROE, using the CAPM as a comparison, to which he gives no weight.[1]

Q. PLEASE COMMENT ON THE WIDE RANGE BETWEEN MR. BREUNING'S DCF AND CAPM RESULTS.

A. While Mr. Breuning claims to have used his CAPM results as a comparison to his DCF results, any comparison appears to have had zero impact on his final recommendation. Considering that the results of his DCF (9.42%) and CAPM (10.34%) were separated by 92 basis points, it is readily apparent that the two values are quite dissimilar, and that the CAPM results did not confirm that the DCF model results produced a reasonable ROE. As a result, the results of both models should have been afforded weight in Mr. Breuning's final recommendation.

Q. DOES MR. BREUNING PROVIDE ANY ACADEMIC SUPPORT TO SUPPORT HIS BELIEF THAT THE DCF MODEL IS SUPERIOR TO THE CAPM, OR ANY OTHER EMPIRICAL MODELS, AND SHOULD BE USED EXCLUSIVELY?

A. No, Mr. Breuning does not provide any academic support that the DCF is a superior model to the CAPM and should be used exclusively. In fact, the DCF is the only model presented in this proceeding that has not won the Nobel Prize for Economics - both the CAPM and

[1] Breuning Direct Testimony, at 19, Breuning Surrebuttal Testimony, at 5.

the Predictive Risk Premium Model have. Further, all of the academic literature on the record in this proceeding discusses the merit of using multiple models, including the CAPM and Risk Premium Model, to determine the appropriate ROE.[2]

Q. HAS THE COMMISSION PREVIOUSLY CONSIDERED MULTIPLE MODELS IN DETERMINING AN AUTHORIZED ROE?

A. Yes, the Commission has correctly considered multiple models in their determination of the ROE in the past and should do so again in this case.[3]

Q. DO YOU AGREE WITH MR. BREUNING'S ASSERTION THAT HTO'S ACQUISITION OF THE QUADVEST SYSTEM ASSETS IS NOT SIGNIFICANT ENOUGH TO WARRANT THE REMOVAL OF THE COMPANY FROM YOUR UTILITY PROXY GROUP?[4]

A. No, I do not. First, Mr. Breuning incorrectly reports the asset base of HTO in his surrebuttal testimony, which he states is $6.4 billion of water utility assets.[5] As reported in the HTO SEC Form 10-Q for June 30, 2025, HTO's net plant is approximately $3.6 billion.[6] This is significantly less than Mr. Breuning's representation of HTO's asset base. Second, the $540 million acquisition of the Quadvest system represents about 15% of HTO's current net plant and approximately 33% of HTO's market capitalization of approximately $1.7 billion as of September 30, 2025.[7] Given the relative size of the transaction relative to HTO's net plant and market capitalization, the Quadvest acquisition represents a significant transaction for HTO, which warrants removal of the company from my Utility

Proxy Group until the acquisition and its related speculation are no longer reflected in market data.

Q. REGARDING THE MISSPECIFICATION OF THE INVESTOR REQUIRED RETURN WHEN M/B RATIOS ARE DIFFERENT THAN 1.0, MR. BREUNING STATES THAT INVESTORS SHOULD KNOW THAT RATES ARE SET ON BOOK VALUE, AND AS SUCH DCF COST RATES DO NOT MISSTATE THE ROE FOR COMPANIES WITH M/B RATIOS DIFFERENT THAN 1.0.[8] PLEASE COMMENT.

A. It is important to note that Mr. Breuning acknowledges that the results of the DCF model are set by market rates and that the ROE is set based on book value. My assertion is not that investors are unaware that rates are set at book value; it is that investors invest on market value and require market returns. Because market values and book values differ for utilities, the indicated ROE using the DCF (which uses market prices) will misstate the investor-required return, as discussed in my Rebuttal Testimony.[9]

Q. DO YOU AGREE WITH MR. BREUNING'S ASSERTION THAT YOU MISREPRESENT HIS DIRECT TESTIMONY REGARDING HIS RECOMMENDATION OF ROE MODELS?[10]

A. No, I do not. Mr. Breuning contends that in his direct testimony he merely states the DCF, CAPM, risk premium, and comparable earnings methods are commonly "presented" in front of the Commission, but not all are "considered" by the Commission. The Commission considers all evidence submitted in testimony in a rate case proceeding, and the argument

---

8 Breuning Surrebuttal Testimony, at 9.
9 D'Ascendis Rebuttal Testimony, at 16-21.
10 Breuning Surrebuttal Testimony, at 5.

put forth by Mr. Breuning is merely semantics. The fact that these models are commonly presented in utility rate proceedings reinforce that they are theoretically sound and provide regulatory commissions with insight into the investor required return. This is evident in the financial literature cited in my Rebuttal Testimony on pages 21 through 23. As discussed above, Mr. Breuning has not provided any financial literature supporting the sole reliance of the DCF model for investment decisions. In view of the above, I maintain my assertion from my Rebuttal Testimony that Mr. Breuning concedes that the four ROE models are commonly considered to estimate the ROE, but he only relies on the DCF model for various reasons.

Q. DO YOU AGREE WITH MR. BREUNING'S CONTENTION THAT THE TIME PERIOD REFLECTED IN A PROJECTED RISK-FREE RATE SHOULD INCLUDE THE PERIOD IN WHICH THE RATES WILL BE IN EFFECT?[11]

A. Mr. Breuning seems to misunderstand investors versus investments. Investors will enter and exit investments; however, investments are going concerns and are expected to be operating into perpetuity. Because of this, the inputs used for a cost of equity analysis should be using projections for the longest time frame available. Considering the source for 10-year projected Treasury bonds is a source that Mr. Breuning trusts (*i.e., BlueChip Financial Forecasts*), he should have used them in his CAPM analysis.

Q. DO YOU AGREE WITH MR. BREUNING'S ASSERTION THAT KROLL IS A TRUSTED AND PUBLICLY AVAILABLE SOURCE?[12]

A. No, I do not. Kroll is not a publicly available source, as it is subscription-based and not available unless a subscriber pays the applicable fees. While I do agree with Mr. Breuning

[11] Breuning Surrebuttal Testimony, at 12-13.
[12] Breuning Surrebuttal Testimony, at 14.

that Kroll's historical data is trusted by many financial professionals, I do not agree with his characterization that Kroll's "recommended MRP" is trustworthy or relied upon by investors. In my Rebuttal Testimony, I showed that Kroll's estimates of the market return understate the MRP by wide margins when compared to other measures.[13]

Q. DO YOU AGREE WITH MR. BREUNING'S ASSERTION THAT THE INPUTS TO THE CAPM ARE HIGHLY SUBJECTIVE, WHILE THE INPUTS TO THE DCF MODEL ARE NOT?[14]

A. No, I do not. As discussed in my Rebuttal Testimony,[15] all ROE models are only as good as their inputs, and all ROE models can be easily manipulated by changing those inputs. As is the case with the CAPM, the DCF model has a number of inputs and variations of inputs that can drastically alter results as shown on Table 1:

Table 1: Various Inputs to DCF Models

Input	**Variations of Inputs**
Cash Flow Stream	Constant-Growth, Blended Growth, Multi-Stage Growth
Dividend Yield	Spot dividend yield, average dividend yield
Adjusted Dividend Yield	No adjustment, ½ g adjustment, full g adjustment, projected dividend
Growth Rates	Historical v. Projected v. Sustainable
Growth Measure	Earnings Per Share ("EPS"), Dividends Per Share ("DPS"), Book Value Per Share ("BVPS")
Sources of Growth Rates	*Value Line*, Zacks, Yahoo, MorningStar, etc.

[14] Breuning Surrebuttal Testimony, at 14.
[15] D'Ascendis Rebuttal Testimony, at 9.

Q. IS IT YOUR OPINION THAT THE USE OF NON-UTILITY PROXY GROUPS VIOLATES THE PRINCIPLES SET FORTH IN *HOPE* AND *BLUEFIELD,* AS REPRESENTED IN MR. BREUNING'S SURREBUTTAL TESTIMONY?

A. No. As discussed in my Direct Testimony,[16] using comparable risk companies to determine a cost of capital for a utility company is consistent with the "corresponding risk" standard in *Hope* and *Bluefield*. Whether the company is regulated or not is not contemplated by the United States Supreme Court. While I do agree that the return in this case should not be based on companies that lack comparable risk, as discussed above and previously, I have shown that the companies that form my Non-Utility Proxy Group have comparable risk to the Utility Proxy Group and, in turn, York Water.[17]

Q. DO YOU AGREE WITH MR. BREUNING THAT FLOTATION COSTS SHOULD BE RECOVERED AS AN EXPENSE RATHER THAN AN ADJUSTMENT TO THE ROE?

A. No, I do not. The reason being is due to opportunity cost. When an entity issues equity or debt, the net proceeds of that capital is generally used to finance rate base, which is entitled to a return of (depreciation) and a return on (the weighted average cost of capital). Because the cost of issuing the capital would otherwise go to financing rate base, the costs of that capital would need to be recovered on an ongoing basis as described in my Direct Testimony at pages 44 and 45. The effect of not being able to recover flotation costs was illustrated in my Rebuttal Testimony at page 41 and in Schedule DWD-10R.

---

17 D'Ascendis Rebuttal Testimony, at 14-15, 48-49, and 77-79

III. CONCLUSION

Q. PLEASE SUMMARIZE YOUR REJOINDER TESTIMONY

A. Given the discussion above and the updated analysis provided in my Rebuttal Testimony, an ROE of 10.90% remains reasonable for York Water at this time.

Q. IN YOUR OPINION, IS YOUR PROPOSED ROE OF 10.90% FAIR AND REASONABLE FOR YORK WATER AND ITS CUSTOMERS?

A. Yes, it is.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY?

A. Yes, it does.

REJOINDER TESTIMONY OF JOHN J. SPANOS
PRESIDENT
GANNETT FLEMING VALUATION AND RATE CONSULTANTS, LLC
ON BEHALF OF THE YORK WATER COMPANY

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is John J. Spanos. My business address is 300 Sterling Parkway, Suite 200, Mechanicsburg, Pennsylvania 17050 (formerly 207 Senate Avenue, Camp Hill, Pennsylvania 17011).

Q. ARE YOU THE SAME JOHN SPANOS THAT PRESENTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes, I am.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. In my rejoinder testimony, I respond to the depreciation-related Surrebuttal Testimony of James S. Garren on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). including his continued proposal to change to the use the Average Life Group ("ALG") procedure to calculate depreciation expense and depreciation annual accrual rates, his position on intergenerational inequity and his misleading comparison of composite rates for other utilities.

Q. ARE YOU SPONSORING ANY EXHIBITS AS PART OF YOUR REBUTTAL TESTIMONY?

A. Yes, I am sponsoring York Water Exhibit JJS-1RJ.

Q. PLEASE SUMMARIZE YOUR REJOINDER TESTIMONY.

A. OCA witness Garren states in his surrebuttal testimony that he is addressing two related points that are interrelated, however, each point really has multiple facets that need to be addressed separately. The first point that I will address is intergenerational inequity. The second is how OCA witness Garren mischaracterizes the discussion related to the Equal Life Group ("ELG") procedure. The third issue relates to true comparisons of composite rates in the industry.

A. *Intergenerational Inequity*

Q. HAS OCA WITNESS GARREN PROPERLY REVISED THE ANALYSIS WHEN COMPARING FORECASTED REVENUE REQUIREMENTS?

A. No. First, OCA witness Garren has changed his growth rate to 6.2% based on the last 10 to 12 years of growth in the combined water and wastewater plant balances for York Water. However, the Lake Redman dam replacement project creates a major growth indicator but was a rare investment which should be an outlier for growth. Additionally, he does not consider that much of the growth, particularly in wastewater over the last few years, was due to acquisitions where the plant in service is not all new investment. Many of the assets are 20 to 30 years old, which is reflected in the depreciation calculations. Second, he also utilizes the rate base levels which have been based on the ELG procedure for 40 years, Consequently, he presents a scenario that develops expenses and the rate base that were determined historically using the ELG procedure. For many companies, capital investment and depreciation expense are linked together so some of the growth levels were due to the recovery patterns of the older assets.

Q. REGARDLESS OF THE GROWTH RATE, IS THERE STILL A CROSSOVER PERIOD BETWEEN THE ELG PROCEDURE FROM THE AVERAGE LIFE

GROUP ("ALG") PROCEDURE THAT AFFECTS INTERGENERATIONAL EQUITIES?

A. Yes. OCA witness Garren characterizes my testimony that I recommend the ELG procedure as a method to be utilized just to create an artificial benefit to customers. There is nothing artificial about the benefit. Over time, it is accurate that customers benefit from ELG procedure because the matching of asset utilization to asset recovery is more accurate with the ELG procedure than the ALG procedure. OCA witness Garren's changing of the growth rate, if calculated accurately, will reduce the impact between the two procedures, but that is because of the age of the growing investment due to acquisitions. The fact that ELG better matches the asset utilization to asset recovery and that the ALG procedure, which is based on average life recovery, is inherently a deferral calculation cannot be ignored. Additionally, both my growth rate example and OCA witness Garren's growth rate example indicate ELG has higher expense in early years, which matches the recovery of those assets that are replaced earlier in the life cycle. This leads to lower rate base which leads to overall less revenue requirements for all generations of customers. Given that both procedures will recover the full service value, there must be a crossover period. Although OCA witness Garren can attempt to extend that crossover period as long as he wishes, every year that rate base is lower using the ELG procedure there is a benefit in the long run for all generations of customers.

Q. WILL THERE BE GREATER INTERGENERATIONAL INEQUITY WITH THE ALG PROCEDURE THAN THE ELG PROCEDURE?

A. Yes. On page 8 of OCA witness Garren's surrebuttal testimony, he agrees with my statement that higher accumulated depreciation results in lower rate base, a lower return on

rate base and therefore lower customer rates, which is a by-product of the use of the ELG procedure. He attempts to side step the actual benefits to all generations of customers by focusing on today's customers. It is important to note that the proper depreciation expense is to systematically and rationally recover the capital investment over the time the asset renders service and that the customers who benefit from the asset pay their fair share. This is why you use the ELG procedure, so Mr. Garren's discussion related to pacing out payments of a loan are not valid when establishing a depreciation procedure.

B. <u>The ELG Procedure Related to Future Customers</u>

Q. DOES OCA WITNESS GARREN PROPERLY DISCUSS PLANT INVESTMENT FOR FUTURE CUSTOMERS?

A. No. OCA witness Garren appears to misunderstand the concept of future and fully projected future test years and how depreciation rates in the case are calculated. First, the purpose of the forecasted test years is to determine what the plant in service and resulting depreciation rates will be when the depreciation rates in this case go into effect. Additionally, the depreciation rates in this case based on the Company's depreciation studies are forecasted to incorporate not only the plant investment through the two test years but also the development of the accumulated depreciation. Therefore, rate base is calculated in the study with ELG rates. Additionally, current customers are not paying down the rate base balance without getting a benefit. The depreciation rates will go into effect based on the manner at which depreciation rates have been developed for the last 40 years. The depreciation rates from the fully projected future test year are established to match recovery going forward. This is the reason forecasted test years were established to reflect up to date rate base levels.

C. Composite Rate Comparison

Q. HAS OCA WITNESS GARREN CHALLENGED YOUR COMPARISON OF TYPICAL INDUSTRY COMPOSITE RATES?

A. Yes. His surrebuttal testimony regarding the composite rates within the industry is quite misleading and isolated in finding ways to misrepresent facts. First, he attempts to use one case he is aware of that supports my position that York Water has a composite rate that is on the low end of comparable water companies. He talks about a New Jersey American Water Company case that has a composite rate that is greater than York Water's composite rate that supports my position. However, he then tries to eliminate a major component of the composite rate by removing the net salvage component. It is completely unreasonable to take away the net salvage component in the overall composite rate. Net salvage/cost of removal is an important component of depreciation expense. Different states use different procedures to account for net salvage, but this does not mean you can compare results by excluding net salvage. Second, he does not discuss some of the historical regulatory events that caused New Jersey American Water Company to change their past recovery patterns to be lower than typically would be calculated.

Q. CAN YOU PRESENT A BETTER INDUSTRY COMPARISON THAT SUPPORTS THE FACTS THAT YORK WATER HAS A COMPOSITE RATE THAT IS LESS THAN MOST OTHER COMPANIES?

A. Yes. Please see York Water Exhibit JJS-1RJ that sets forth a comparison of composite rates of other water companies. As can be seen from the exhibit, almost all the other water companies have a higher composite rate than York Water regardless of the depreciation procedure that is being utilized. A similar situation occurs for the wastewater companies.

Consequently, OCA witness Garren has misrepresented that fact that York Water has a lower depreciation rate than most other comparable water companies.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY?

A. Yes, it does.

RE: THE YORK WATER COMPANY
DOCKET NOS. R-2025- 3053442 AND R-2025-3053573

REJOINDER TESTIMONY OF GREGORY R. HERBERT

Line No.

Q. Please state your name and business address.

A. My name is Gregory R. Herbert. My business address is 300 Sterling Parkway, Suite 200, Mechanicsburg, Pennsylvania (formerly 207 Senate Avenue, Camp Hill, Pennsylvania.)

Q. By whom are you employed?

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC.

Q. Are you the same Gregory Herbert that submitted direct and rebuttal testimony and exhibits in this case?

A. Yes. I submitted Statement No. 107, Exhibits No. FVIII and FVIII-WA and Statement No 107-R and Exhibit No. FVIII-R.

Q. What is the subject of your rejoinder testimony?

A. On behalf of The York Water Company ("York Water" or the "Company"), I will address the cost of service and rate design issues raised in the surrebuttal testimonies of Bureau of Investigation and Enforcement ("I&E") witness Ethan Cline, Office of Small Business Advocate ("OSBA") witness Roger Cathcart, and Office of Consumer Advocate ("OCA") witness Jerome Mierzwa.

Surrebuttal Testimony of I&E Witness Ethan Cline

Q. Does I&E witness Cline comment on the customer costs and customer charges?

A. Yes, Mr. Cline continues to agree with the Company's direct customer cost analysis and proposed customer charges. He also disagrees with Mr. Mierzwa's position regarding what costs should be included in the direct customer cost analysis and supports the Company's analysis. However, Mr. Cline disagrees with my position of the scale back of customer charges. He states that my position is overly vague and could lead to confusion of what a modest reduction in volumetric rates could be.

Q. What do you consider a modest reduction in volumetric rates in order for customer charges to be scaled back?

A. If volumetric rates were to decrease 10% or less in order to maintain the customer charges at the proposed levels, I propose not to scale back the customer charges in a scale back scenario. If the reduction to volumetric rates becomes greater than 10% in a scale back scenario in order to maintain the proposed customer charges, then I agree a scale back to the customer charges is warranted.

Q. Does Mr. Cline comment on the Company and OCA cost of service studies?

A. Yes, Mr. Cline comments that OCA witness Mierzwa disagreed with his scale back recommendation because it relied on the Company's cost of service study, which OCA opposed. Mr. Cline states the I&E does not oppose the Company's or OCA's cost of service studies and that the scale back of rates

should be proportional based on the cost of service study that is approved by the Commission. While I continue to support the Company's cost of service study, I agree that the scale back should be proportional to the cost of service study that is ultimately accepted by the Commission in this case.

Q. Please comment on the concerns Mr. Cline addresses related to West Donegal Township and Salisbury Township rates.

A. Mr. Cline supports adjusting the West Donegal Township and Salisbury Township rates so that they continue to move towards consolidation. The Company has no objection to adjusting these rates if the adjustment to these rates moves towards a consolidation of rates.

Surrebuttal Testimony of OSBA Witness Roger Cathcart

Q. Please address the surrebuttal testimony of OSBA witness Cathcart regarding demand determinants.

A. Mr. Cathcart acknowledges Mr. Mierzwa's contention in surrebuttal testimony that the demand determinants ratios used in the Company's cost of service study could be outdated. However, OSBA does not agree that the demand determinants for customer classes should be adjusted based solely on the peaks experienced during June 2024 to May 2025, as further analysis from an updated demand study would be beneficial. I agree with Mr. Cathcart that Mr. Mierzwa should select the highest maximum day and hour class ratios for the years studied in his customer class peaking factors analysis. The AWWA M1 Manual methodology suggests selecting the highest ratio of system maximum-day to system average-day demand, maximum-hour and maximum month demands over a representative number of recent years.

Therefore, I recommend selecting the highest maximum day and maximum hour usage peaks by customer class of either three years of data reviewed by Mr. Mierzwa (June 2022 to May 2023, June 2023 to May 2024, and June 2024 to May 2024) to determine the appropriate peaking factors for each class in the cost of service study instead of just utilizing the June 2024 to May 2025 maximum day and maximum hour peaking factors by class.

Q. Do you agree with Mr. Cathcart's recommendation for the Company to perform a customer class demand study and the timeframe to complete the customer class demand study?

A. No, I do not. A demand study is a significant time commitment for the Company to undertake and should only be performed with approval from the Commission. First, a feasibility study needs to be conducted to estimate the costs of the demand study and filed with the Commission. Then, the Company would receive approval from the Commission and interested parties to conduct a demand study. Further preparation for the demand study will then need to be completed by the Company, such as selecting its sample group of customers to monitor, the Company may have to install smart meters to compile hourly and daily reads, and ideally several years, as Mr. Cathcart suggests and the Company supports, of monitoring (hourly and daily reads) needs to be compiled from the sample set of customers to have sufficient data to perform the demand study. A mix of historic and future monitoring of these sampled customers' meter reads to be compiled would also be preferable to conduct the demand study. The timeline that Mr. Cathcart suggests to complete the demand study before final rate approval in

this case is not achievable. Further, I am advised by counsel that rates must become effective as of the end of the suspension period for rates, and cannot be delayed until completion of any authorized demand study. Therefore, I reject Mr. Cathcart's proposal, but I do not disagree with the idea that an updated demand study could benefit the Company's cost of service analysis in future rate cases.

Q. Does Mr. Cathcart discuss the wastewater cost of service?

A. Yes, Mr. Cathcart agrees with Mr. Mierzwa that rates should be set to fully recover costs for wastewater customers. However, he argues that cost of service criteria against other ratemaking principles must be balanced for considering reasonable rates. He states that Mr. Mierzwa's proposed redistribution of rates would lead to a disproportionately large increase in wastewater rates. Mr. Cathcart recommends any transition to the wastewater classes' shift in revenues take place over five years, moving non-residential customers one-fifth of the way to attaining the lower end of the range established by the zone of reasonableness.

Q. Do you agree with the five-year phase in that Mr. Cathcart recommends?

A. No, I do not. The five-year phase-in would establish rate adjustments that are outside the fully projected future test year of this case. Therefore, I reject this proposal by Mr. Cathcart. As I discussed in my rebuttal testimony, my proposed rate design establishes movement towards the consolidation of the various present wastewater rates, while considering the concept of gradualism in moving revenues by class to their respective cost allocations.

Rate consolidation for wastewater rates was a primary objective of the Company over greater shifts towards cost of service by class.

Surrebuttal Testimony of OCA Witness Jerome D. Mierzwa

Q. Mr. Mierzwa cites the AWWA M1 Manual, 7th Edition (pg. 373) that demand data "over a representative number of recent years" should be utilized, and Mr. Mierzwa assumes that 10 years meets this standard. Please comment.

A. Mr. Mierzwa continues to criticize my water cost of service allocation study, as he believes the system-wide and class extra capacity factors that the Company used are outdated and unreasonable. The section of the AWWA M1 Manual referenced is Appendix A, which is the section that describes the method of determining demand factors for a cost of service study if a formal demand study is not available. However, the Company does have a formal demand study to use for the water cost of service study. I did not have reason to change the current practice for the cost of service nor was there precedent the Company had to follow from its prior rate case rulings to alter the system-wide demand factors. Furthermore, the sentence referenced is included in the instructions on how to perform this alternative calculation for customer class peaking factors. These instructions cannot be construed to mean that only recent years' data should be used for the system wide maximum day and maximum hour demand factors. A water system is designed to supply water during peak periods over the life of the system.

The life of the system is certainly longer than the 10 years used by Mr. Mierzwa, and peak data outside those 10 years should not be ignored.

Q. Mr. Mierzwa further criticizes the class demand factors that were used in the Company's cost of service study. Please discuss.

A. On pages 2 through 6 of his surrebuttal testimony and shown on Schedule JDM-1SR, Mr. Mierzwa compares the Company's estimated maximum day demands of residential customers as compared to the 2024 maximum day and maximum hour volumes. He states that the demands for other customer classes would be less than the average day usage of these other customer classes, and the maximum hour demand of residential customers would exceed the actual total maximum hour demand experience on the entire water system of the Company.

Q. Is this a fair comparison?

A. No, for two reasons. One, the maximum day and maximum hour demand factors by class used in the cost of service study and demand study represent noncoincident demand factors. Therefore, the total flow using noncoincident demand factors, by definition, would be higher than the coincident maximum day and maximum hour system-wide flow. Two, Mr. Mierzwa is comparing the residential maximum day and maximum hour flows to the peak flow in 2024, which was not a historic peak for the Company's water system. He is comparing "apples and oranges." The historic peak used in allocating maximum day costs in the cost of service study is 1.52 (experienced in 2010). This peak multiplied by the Company's 2024 average daily sendout is 341,099 100 gallons, which is higher than the residential

projected maximum day usage of 282,108 100 gallons. In addition, the historic peak used in allocating maximum hour costs in the cost of service study is 1.84 (experienced in 2006). This peak multiplied by the Company's 2024 average daily sendout is 411,750 100 gallons, not the amount of 350,000 claimed by Mr. Mierzwa. I reiterate that the noncoincident demand factors used by the Company in the cost of service study are based on actual flow data and should be used in lieu of Mr. Mierzwa's calculations.

Q. Is it reasonable for the Company to deviate from its current demand factors sourced from its 1977 formal demand study given that the Company made efforts to conduct more recent demand studies?

A. No, I do not. Unless there is directive from the Commission to use other analyses to determine its demand factors or conduct an updated formal demand study, the Company does not find it reasonable to change from its current class demand factors that are based on actual flow data. It is no fault of the Company's to not have a current demand study, as it has submitted feasibility studies to conduct customer class demand studies as a result of prior rate cases and did not receive approval from the parties to proceed with conducting the study.

Q. Mr. Mierzwa also comments that the method he used for developing class extra capacity factors in the York Water proceeding was utilized by me in the Veolia Water Rhode Island, Inc. ("Veolia RI") ongoing rate proceeding. Please discuss.

A. This was the first time Gannett Fleming and I conducted the cost of service study for Veolia RI, and no formal demand study or class-specific demand

data was available. As a result, I had to rely on a less sophisticated approach rather than a demand study based on actual flow data to develop customer class peaking factors. Had a formal demand study been available, I would not have used the methodology Mr. Mierzwa applied in the York Water rate proceeding.

Q. Mr. Mierzwa continues to disagree with the Company's direct customer cost analysis for setting customer charges. Please comment.

A. In my rebuttal testimony, I highlight that items such as bad debt expense, office buildings, furniture and equipment, enterprise software are necessary to provide customer-related services and are directly related to customer costs. I also cite in my rebuttal testimony recent PUC rulings where the direct customer cost methodology is reaffirmed. Furthermore, I&E witness Kline supports my direct customer cost analysis based on prior Commission rulings and rejects Mr. Mierzwa's customer charge recommendation. For these reasons stated in my rebuttal testimony and surrebuttal testimony of I&E witness Kline, I respectfully disagree with Mr. Mierzwa's recommendation for setting customer charges.

Q. Mr. Mierzwa continues to propose changes to York Water's proposed wastewater revenue allocations due to the $1,275,000 over-recovery of the residential class. Please discuss.

A. Mr. Mierzwa suggests shifting $51,600 in revenue collected from four residential service territories to be recovered through non-residential rates if the Commission were to grant York Water 100% of its applied-for revenue requirement. If the Commission were to reduce the revenue requirement

increase for the Company by more than $51,600, he recommends the first $1,275,000, less $51,600 required to reduce the rates of the residential customer in the four service territories to 1.5 times the system average increase, be applied to proportionately reduce the rates of all residential customers. After further review of the proposed York Water wastewater rates, I do not see Mr. Mierzwa's recommendation to shift revenue allocations to mitigate the four service territories' increases to be unreasonable, as the non-residential class revenue requires a significant movement to reach its full cost allocation.

However, I believe the Company's proposed rate design is reasonable as well. As I previously stated in my rejoinder testimony, the proposed rate design establishes a move towards the consolidation of the various present wastewater rates, while gradually moving revenues by class to their respective cost allocations. Rate consolidation for wastewater rates was a primary objective of the Company over greater shifts towards cost of service by class. Additional shifts towards cost allocations by class can be achieved more easily with consolidated rates and would mitigate increases for the residential customers in subsequent rate cases.

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christopher Keller. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. SUMMARIZE YOUR EDUCATION AND EMPLOYMENT HISTORY.

A. An outline of my education and employment history is attached as Appendix A.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to review the base rate filing of The York

Water Company (York Water or Company), and make recommended adjustments to York Water's proposed operating and maintenance (O&M) expenses, taxes, and cash working capital (CWC) for the Company's water and wastewater operations for the fully projected future test year (FPFTY) ending February 28, 2027. I also present the overall I&E recommended revenue requirement based on my adjustments and the adjustments of the other I&E witnesses identified below.

Q. DOES YOUR DIRECT TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 1 contains schedules that support my direct testimony.

Q. PLEASE SUMMARIZE YOUR RECOMMENDED O&M ADJUSTMENTS.

A. The following table summarizes my recommended adjustments.

Water Operations:

	Company Claim	I&E Adjustment	I&E Recommended Allowance
O&M Expenses:			
Salaries and Wages Expense	$11,968,739	($371,031)	$11,597,708
Payroll Taxes	$895,196	($27,827)	$867,369
Employee Benefits – 401k Match	$633,620	($19,665)	$613,955
Employee Benefits – Health Insurance	$2,374,697	($73,464)	$2,301,233
Insurance – Workers Compensation	$197,136	($5,936)	$191,200
Flotation Costs	$0	$162,696	$187,140
Total O&M Expense Adjustments		($335,227)	
Taxes:			
State Income Tax Expense	$961,727	($385,632)	$576,105
Total Tax Adjustments		($385,632)	
Rate Base Adjustments:			
Cash Working Capital	$4,155,568	($74,724)	$4,080,844
Total Rate Base Adjustments		($74,724)	

Wastewater Operations:

	Company Claim	I&E Adjustment	I&E Recommended Allowance
Taxes:			
State Income Tax Expense	$76,365	($60,272)	$16,093
Total Tax Adjustments		($60,272)	

OVERALL I&E RECOMMENDED REVENUE REQUIREMENT

Q. WHAT TEST YEARS HAS YORK WATER USED IN THIS PROCEEDING?

A. York Water used the year ended December 31, 2024 as the historic test year (HTY), the year ending December 31, 2025 as the future test year (FTY), and the year ending February 28, 2027 as the FPFTY in this proceeding.

Q. SUMMARIZE THE COMPANY'S OVERALL CLAIMED REVENUE REQUIREMENT.

A. The Company's base rate case filing was submitted on May 30, 2025, requesting a total increase of $24,169,485 to claimed present rate revenues of $76,975,844 resulting in a total overall revenue requirement of $101,145,329. This represents a $20,311,978 requested increase to claimed water operations present rate revenues of $70,396,610 resulting in proposed revenues of $88,617,288 for water operations.[1]

Additionally, the total requested increase represents a $3,857,507 requested increase to claimed wastewater operations present rates revenues of $8,670,534 resulting in proposed revenues of $12,528,041 for wastewater operations.[2] It should be noted that the Company is not utilizing the Act 11 provision to allocate wastewater operation revenue requirements to water operations in determining the

[1] York Water Exhibit No. FV-1, p. 6.
[2] York Water Exhibit No. FV-1W, p. 6.

revenue requirement for water operations and wastewater operations in this proceeding.[3]

Q. WERE YOU ABLE TO REPLICATE THE COMPANY'S REQUESTED REVENUE REQUIREMENT TABLE FOR WATER OPERATIONS?

A. No. I was unable to replicate the Company's request, mainly due to the placement of York Water's late payment revenue for water operations on its schedules. The Company indicates that its requested revenue increase is $20,311,978 for water operations;[4] however, this total includes the anticipated growth in late charge revenue of $45,834 as a result of the higher billed amounts, and late payment revenue is not a distribution rate revenue source. For purposes of calculating the revenue requirement related to rate revenues, I&E's revenue requirement utilizes the pre-late charge revenue amount of $20,266,144 for water operations.

Q. WHAT IS I&E'S TOTAL RECOMMENDED REVENUE REQUIREMENT FOR WATER OPERATIONS?

A. I&E's total recommended revenue requirement for the Company's water operations is $83,212,001. This recommended revenue requirement represents an increase of $14,906,691 to the present rate revenues of $68,305,310. This total recommended allowance incorporates my adjustments made in this direct

[3] York Water Exhibit No. FII-2, p. 10.
[4] York Water Exhibit No. FII-2, p. 9.

testimony to O&M expenses and cash working capital and those recommended adjustments made in the direct testimony of I&E witness Drew Breuning.[5]

SALARIES AND WAGES EXPENSE – WATER OPERATIONS

Q. WHAT IS INCLUDED IN SALARIES AND WAGES EXPENSE?

A. The Company's salaries and wages expense claim includes amounts for regular, overtime, and double time wages, year-end bonuses, and incentive compensation.

[6] I&E Statement No. 2.
[7] I&E Statement No. 3.

Q. WHAT IS YORK WATER'S CLAIM FOR THE WATER OPERATIONS SALARIES AND WAGES EXPENSE?

A. The Company's claim for payroll expense is $11,968,739.[8]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's water operations claim for payroll expense is based on the pro forma payroll expense for union and non-union employees to reflect salaries and hourly rates effective February 28, 2027, applied to a two-year average of regular, overtime, and double time hours from the years ended December 31, 2023, and December 31, 2024, projected forward to the FTY, the projected FPFTY, and the pro forma FPFTY.[9]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM FOR SALARIES AND WAGES EXPENSE FOR WATER OPERATIONS?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR SALARIES AND WAGES EXPENSE FOR WATER OPERATIONS?

A. I recommend an allowance of $11,597,708 for salaries and wages expense, or a reduction of $371,031 ($11,968,739 - $11,597,708) to York Water's water

[8] York Water Exhibit No. FIII-2-40.
[9] York Water Exhibit Nos. HIII-2-4, FIII-2-1, FIII-2-15, FIII-2-25, and FIII-2-40.

operations claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation for salaries and wages expense is based on applying a vacancy adjustment as it is unreasonable to assume that the Company will maintain 100% full staffing based on its own historic vacancy records. Since there will always be search and placement time involved in filling vacancies, there will always be a certain level of vacancies on a day-to-day operating basis that should be reflected in the York Water's salaries and wages expense allowance. The adjustment for average historical vacancy levels is needed to reflect a more accurate employee complement in the FPFTY. My recommendation more accurately represents the salaries and wages expense level that will be in effect at the end of the FPFTY.

Q. EXPLAIN HOW YOU DETERMINED YOUR ADJUSTMENT.

A. I determined a historical three-year average vacancy rate and applied this to the Company's claim for salaries and wages expense for water operations.

Q. DID YORK WATER TAKE VACANCIES INTO CONSIDERATION WHEN DEVELOPING ITS CLAIM?

A. No. The Company states in response to I&E-RE-11-D that it did not incorporate a

vacancy reserve when developing its claim for salaries and wages expense.[10]

Q. WHAT VACANCY RATE DO YOU RECOMMEND?

A. I recommend a vacancy rate of 3.1%.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR SALARIES AND WAGES EXPENSE VACANCY ADJUSTMENT.

A. I reviewed York Water's response to I&E-RE-10-D, which requested the number of employees, number of vacancies, and vacancy rates for the twelve months ended (TME) December 31, 2022, December 31, 2023, and HTY 2024, FTY 2025, and FPFTY 2027.[11] The Company provided the vacancy rates for the TME December 31, 2022, December 31, 2023, and HTY 2024 of 2.5%, 3.1%, and 3.8%, respectively. This resulted in a three-year average vacancy rate of 3.1% [(2.5% + 3.1% + 3.8%) ÷ 2].

With this information, I applied my average vacancy rate of 3.1% to the Company's salaries and wages expense claim for water operations of $11,968,739 resulting in a downward adjustment of $371,031 ($11,968,739 x 3.1%) for a salaries and wages expense recommendation for water operations of $11,597,708 ($11,968,739 - $371,031).

[10] I&E Exhibit No. 1, Schedule 1.
[11] I&E Exhibit No. 1, Schedule 2.

PAYROLL TAX EXPENSE – WATER OPERATIONS

Q. WHAT IS INCLUDED IN PAYROLL TAXES?

A. Payroll taxes represent taxes imposed on employers and employees that are usually calculated as a percentage of the salaries paid to staff. Payroll taxes generally fall into two categories: (1) deductions from an employee's wages; and (2) taxes paid by the employer based on the employee's wages. York Water has made a claim in this filing for its employer share of those payroll taxes.

Q. WHAT IS THE COMPANY'S CLAIM FOR PAYROLL TAX EXPENSE FOR WATER OPERATIONS?

A. In its filing, York Water's claim for payroll tax expense for water operations is $895,196.[12]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. York Waters's claim for water operations consists of Social Security, federal unemployment tax (FUTA), and state unemployment tax (SUTA) less payroll taxes capitalized.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

[12] York Water Exhibit No. FIV-15, p. 4.

Q. WHAT IS YOUR RECOMMENDATION FOR PAYROLL TAX EXPENSE FOR WATER OPERATIONS?

A. I recommend an allowance of $867,369 for payroll taxes for water operations, or a reduction of $27,827 ($895,196 - $867,369) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommended adjustment is based on recognition of the payroll expense reduction from my vacancy adjustment; and, on the percentage of total payroll taxes to total payroll. My recommendation is calculated as follows:

FPFTY Payroll Tax Claim		$895,196
FPFTY Payroll Expense Claim	÷	$11,968,739
% Payroll Taxes to Payroll Expense Claim		7.5%
I&E Payroll Expense Adjustment from Above	x	$371,031
I&E Payroll Tax – Recommended Adjustment		$27,827

EMPLOYEE BENEFITS – 401k MATCH – WATER OPERATIONS

Q. WHAT IS INCLUDED IN THE COMPANY'S CLAIM FOR EMPLOYEE BENEFITS – 401k MATCH FOR WATER OPERATIONS?

A. Employee benefits – 401k match for water operations consists of a basic 401(k) plan for employees that are eligible for the Company's defined benefit pension plan and the enhanced 401(k) plan for employees that are not eligible for the

Company's defined benefit plan.[13]

Q. WHAT IS THE COMPANY'S CLAIM FOR THE WATER OPERATIONS EMPLOYEE BENEFITS – 401k MATCH?

A. The Company claim for employee benefits – 401k match is $633,620.[14]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's water operations claim for employee benefits – 401k match is based on the HTY amount with increases to reflect market adjustments, employees added during the FTY and FPFTY, and the annualization of matching contributions from the employees added during the FTY and FPFTY.[15]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR EMPLOYEE BENEFITS – 401k MATCH FOR WATER OPERATIONS?

A. I recommend an allowance of $613,955, or a reduction of $19,665 ($633,620 - $613,955) to the Company's FPFTY claim.

[13] York Water Statement No. 103, pp. 105-106.
[14] York Water Exhibit No. FIII-2, p. 21.
[15] York Water Exhibit Nos. FIII-2-41, FIII-2-42, and FIII-2-43.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommended adjustment is based on recognition of the payroll expense reduction from my vacancy adjustment; and, on the percentage of 401(k) match to total payroll. My recommendation is calculated as follows:

FPFTY 401(k) Match Claim		$633,620
FPFTY Payroll Expense Claim	÷	$11,968,739
% 401(k) Match to Payroll Expense Claim		5.3%
I&E Payroll Expense Adjustment from Above	x	$371,031
I&E 401(k) Match – Recommended Adjustment		$19,665

EMPLOYEE BENEFITS – HEALTH INSURANCE – WATER OPERATIONS

Q. WHAT IS INCLUDED IN THE COMPANY'S CLAIM FOR EMPLOYEE BENEFITS – HEALTH INSURANCE FOR WATER OPERATIONS?

A. Employee benefits – health insurance for water operations represents cost claims for the utility's employees, including health insurance, dental insurance, vision insurance, health savings account contributions, and group life insurance.[16]

Q. WHAT IS THE COMPANY'S CLAIM FOR THE WATER OPERATIONS EMPLOYEE BENEFITS – HEALTH INSURANCE?

A. The Company claim for employee benefits – health insurance is $2,374,697.[17]

[16] York Water Statement No. 103, pp. 88-89.
[17] York Water Exhibit No. FIII-2, p. 21.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's water operations claim for employee benefits – health insurance is based on the HTY amount with adjustments to reflect the number of employees in the FTY and FPFTY and the annualization of monthly premiums based on the actual monthly premiums effective during the FTY and FPFTY.[18]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR EMPLOYEE BENEFITS – HEALTH INSURANCE FOR WATER OPERATIONS?

A. I recommend an allowance of $2,301,233, or a reduction of $73,464 ($2,374,697 - $2,301,233) to the Company's FPFTY claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommended adjustment is based on recognition of the payroll expense reduction from my vacancy adjustment; and, on the percentage of health insurance to total payroll. My recommendation is calculated as follows:

FPFTY Health Insurance Claim		$2,374,697
FPFTY Payroll Expense Claim	÷	$11,968,739
% Health Insurance to Payroll Expense Claim		19.8%

[18] York Water Exhibit Nos. HIII-2-16, FIII-2-3, and FIII-2-27.

I&E Payroll Expense Adjustment from Above	x	$371,031
I&E Health Insurance – Recommended Adjustment		$73,464

INSURANCE – WORKERS COMPENSATION – WATER OPERATIONS

Q. WHAT IS INCLUDED IN THE COMPANY'S CLAIM FOR INSURANCE – WORKERS COMPENSATION FOR WATER OPERATIONS?

A. Workers compensation is mandated insurance that provides benefits and medical coverage for employees who become ill or are injured on the job.

Q. WHAT IS THE COMPANY'S CLAIM FOR THE WATER OPERATIONS INSURANCE – WORKERS COMPENSATION?

A. The Company claim for insurance – workers compensation is $197,136.[19]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's water operations claim for insurance – workers compensation is based on the HTY amount with adjustments to reflect projected payroll and the expected workers compensation insurance rates and an experience modification factor in the FTY and FPFTY.[20]

[19] York Water Exhibit No. FIII-2, p. 21.
[20] York Water Exhibit Nos. HIII-2-17, FIII-2-6, FIII-2-30, and FIII-2-45.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR INSURANCE – WORKERS COMPENSATION FOR WATER OPERATIONS?

A. I recommend an allowance of $191,200, or a reduction of $5,936 ($197,136 - $191,200) to the Company's FPFTY claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommended adjustment is based on recognition of the payroll expense reduction from my vacancy adjustment; and, on the percentage of workers compensation to total payroll. My recommendation is calculated as follows:

FPFTY Workers Compensation Claim		$197,136
FPFTY Payroll Expense Claim	÷	$11,968,739
% Workers Compensation to Payroll Expense Claim		1.6%
I&E Payroll Expense Adjustment from Above	x	$371,031
I&E Workers Compensation – Recommended Adjustment		$5,936

FLOTATION COSTS

Q. WHAT ARE FLOTATION COSTS?

A. Flotation costs are costs associated with the new issuances of securities such as bonds or stocks when raising capital. These costs typically include underwriting

fees, legal fees, auditing fees, administrative costs, accounting fees, and printing costs.

Q. WHAT IS THE COMPANY'S CLAIM FOR FLOTATION COSTS?

A. York Water witness Dylan W. D'Ascendis added 12 basis points to his cost of common equity.[21]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. Mr. D'Ascendis opines that the Company should be able to recover flotation costs in the form of raising the common equity cost rate, as these costs are a permanent loss of investment to the utility and cannot be recovered without an adjustment to the common equity cost rate.[22]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR FLOTATION COSTS?

A. I recommend a normalized expense allowance of $162,696 as opposed to adding 12 basis points to the Company's cost of equity as recommended by Mr. D'Ascendis based on the total flotation costs incurred by the Company over the

[21] York Water Statement No. 105, p. 4, lines 9-10.
[22] York Water Statement No. 105, pp. 45-56.

time elapsed from the first equity offering to the end of the HTY. I&E witness Drew Breuning explains why flotation costs should not be included in the Company's cost of equity.[23]

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. In the Company's response to I&E-RR-7-D,[24] York Water states that it anticipates that it may issue common stock in 2026. To determine my recommendation for flotation costs to be expensed, I relied on the prior dates of the Company's equity offerings, and the costs associated with each equity offering.[25] Based on this information, the Company has incurred $3,321,722 in flotation costs from the first equity offering on July 21, 2004 through the end of the HTY. The time from the first equity offering to the end of the HTY is 245 months. From this information, I determined the normalized monthly flotation costs of $13,558 ($3,321,722 ÷ 245 months), which results in my normalized annual expense recommendation for flotation costs of $162,696 ($13,558 x 12 months).

STATE INCOME TAX EXPENSE

Q. WHAT IS THE COMPANY'S CLAIM FOR STATE INCOME TAX EXPENSE?

A. The Company's claim for state income tax expense is $961,737 for the water

[23] I&E Statement No. 2.
[24] I&E Exhibit No. 1, Schedule 3.
[25] York Water Schedule DWD-9.

operations[26] and $76,365 for wastewater operations.[27]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's state income tax expense claim is based on the Pennsylvania corporate net income tax rate of 7.49% for 2026.[28]

Q. DO YOU AGREE WITH THE COMPANY'S USE OF THE STATE INCOME TAX RATE OF 7.49%?

A. No.

Q. WHAT STATE INCOME TAX RATE DO YOU RECOMMEND?

A. I recommend a state income tax rate of 7.41%.

Q. WHAT DO YOU RECOMMEND FOR STATE INCOME TAX EXPENSE?

A. I recommend an allowance of $576,105 or a reduction of $385,632 ($961,737 - $576,105) to the Company's claim for water operations. Additionally, I recommend an allowance of $16,093 or a reduction of $60,272 ($76,365 - $16,093) to the Company's claim for wastewater operations.

[26] York Water Exhibit No. FI-2, p. 12.
[27] York Water Exhibit No. FI-2W, p. 4.
[28] York Water Exhibit No. FIV-17-10 and York Water Exhibit No. FIV-17-10W.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. On July 8, 2022, Pennsylvania House Bill 1342 was signed into law as Act 53 of 2022. Act 53 will lower the current 7.99% corporate net income tax rate to 7.49% in 2026, 6.99% in 2027, and will continue to decrease the tax rate by 0.5% each year until 2031, when the tax rate will be 4.99%.[29] Therefore, I recommend a weighted Pennsylvania income tax rate of 7.41% to reflect the Pennsylvania corporate income tax rate that will be in effect for the FPFTY.

Q. IS YOUR RECOMMENDED STATE INCOME TAX ALLOWANCE A FINAL RECOMMENDATION?

A. No. All adjustments to York Water's claims for revenues, expenses, taxes, and rate base must be continually brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claim.

Q. HOW DID YOU CALCULATE THE RECOMMENDED STATE INCOME TAX RATE?

A. The weighted state income tax rate for the FPFTY was calculated as follows:

[29] I&E Exhibit No. 1, Schedule 4.

	State Income Tax Rate	Weight	Weighted State Income Tax Rate
March to December 2026	7.49%	0.83	6.22%
January and February 2027	6.99%	0.17	1.19%
Weighted Average State Income Tax Rate			7.41%

This change is reflected in my recommended revenue requirement in Table 1A for water operations and Table 1B for wastewater operations above[30] and incorporates the state income tax effect of my other recommended adjustments and those of I&E witnesses Drew Breuning[31] and Ethan Cline.[32]

Q. HOW DID YOU CALCULATE YOUR RECOMMENDED WEIGHTED STATE INCOME TAX RATE?

A. First, I calculated the weight by dividing each time period by twelve months, resulting in 0.83 (10 months ÷ 12 months), for the ten months of the FPFTY from March 2026 through December 2026, and 0.17 (2 months ÷ 12 months), for the two months of the FPFTY from January 2027 and February 2027. Next, I multiplied the applicable state tax income rate by the respective weight yielding the weighted state income tax rates: 6.22% (7.49%[33] x 0.83) for the ten months of the FPFTY from March 2026 through December 2026 and 1.19% (6.99%[34] x 0.17)

30 I&E Statement No. 1, pp. 6-7.
31 I&E Statement No. 2.
32 I&E Statement No. 3.
33 I&E Exhibit No. 1, Schedule 4.
34 I&E Exhibit No. 1, Schedule 4.

for the two months of the FPFTY from January 2027 and February 2027. This results in my recommended weighted average state income tax rate of 7.41% (6.22% + 1.19%).

CASH WORKING CAPITAL

Q. WHAT IS A CASH WORKING CAPITAL (CWC) ALLOWANCE FOR RATEMAKING PURPOSES?

A. CWC includes the amount of funds necessary to operate a utility during the interim between the rendition of service, including the payment of related expenses, and the utility's receipt of revenue in payment of services rendered.

Q. HOW DOES THE COMPANY CALCULATE ITS CWC CLAIM?

A. York Water calculates its CWC by using a lead/lag study. A lead/lag study measures the differences in time between: (1) the time services are rendered until payment of those services is received, and (2) the time between the point when a utility has incurred an expense and the actual payment of the expense. Stated differently, the lead/lag study measures how many days exist on average between the midpoint of the service period and the date the payment is made.

Q. DO YOU AGREE WITH THE COMPANY'S USE OF THE LEAD/LAG METHOD?

A. Yes.

Q. WHAT IS THE COMPANY'S CWC CLAIM?

A. The Company's claim for CWC for water operations is $4,155,568.[35]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. York Water's claim is based on a HTY lead/lag study, applying total revenues and total expenses for the FPFTY ending February 28, 2027.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND?

A. I recommend a total allowance of $4,080,844 or a decrease of $74,724 ($4,155,568 - $4,080,844) to the Company's claim.[36]

[35] York Water Exhibit FV-1, p. 3.
[36] I&E Exhibit No. 1, Schedule 5, p. 1.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on my adjustments to O&M expenses as discussed above.

Q. IS YOUR RECOMMENDED CWC ALLOWANCE A FINAL RECOMMENDATION?

A. No. All adjustments to York Water's claims for revenues, expenses, taxes, and rate base must be continually brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claim.

Q. WHAT O&M ADJUSTMENTS DID YOU INCORPORATE WHEN DETERMINING A RECOMMENDED CWC ALLOWANCE?

A. All O&M adjustments that are cash-based expense claims should be included when determining the Company's CWC requirement. Therefore, I have included cash-based O&M recommendations when computing the overall recommended CWC allowance.

Q. SUMMARIZE WHERE EACH OF THE RECOMMENDED O&M EXPENSE ADJUSTMENTS ARE REFLECTED IN THE CWC COMPUTATIONS.

A. Payroll - Expense Lag Days:

I recommended a reduction to salaries and wages expense of $371,031[37] which is reflected as a reduction to the Payroll Expense Lag Days calculation.[38]

Insurance Expenses – Expense Lag Days:

The following recommended adjustments are reflected in the Insurance Expenses - Expense Lag Days calculation: Employee Benefits – Health Insurance adjustment of $73,464 and Insurance – Workers Compensation adjustment of $5,936 as discussed above, producing a total decrease of $78,860[39] to the Insurance Expenses Lag Days calculation.[40]

Other Goods and Services – Expense Lag Days:

The following recommended adjustments are reflected in the Other Goods and Services - Expense Lag Days calculation: Employee Benefits – 401k Match downward adjustment of $19,665 and an upward adjustment for Flotation Costs of $162,696 as discussed above, producing a total increase of $143,031[41] to the Other

[37] I&E Statement No. 1, p. 2.

[39] I&E Statement No. 1, p. 2.
[40] I&E Exhibit No. 1, Schedule 5, p. 2.
[41] I&E Statement No. 1, p. 2.

Goods and Services Expense Lag Days calculation.[42]

Payroll Taxes - Expense Lag Days:

I recommended a reduction to payroll taxes of $27,827[43] which is reflected as a reduction to the Payroll Taxes Expense Lag Days calculation.[44]

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

[42] I&E Exhibit No. 1, Schedule 5, p. 2.
[43] I&E Statement No. 1, p. 2.
[44] I&E Exhibit No. 1, Schedule 5, p. 2.

Reference York Water Exhibit No. FIII-2-40 and York Water Statement No. 103, p. 102, line 9 through p. 103, line 10 concerning salaries and wages expense. State whether the Company incorporated a vacancy reserve when calculating its FPFTY claim of $11,968,739. If yes, provide a detailed calculation that reflects the vacancy reserve in the Company's labor expense FPFTY claim.

RESPONDENT:

M. E. Poff
CFO

DATE:

July 18, 2025

RESPONSE:

The Company did not incorporate a vacancy reserve in its FPFTY claim.

BUREAU OF INVESTIGATION AND ENFORCEMENT
INTERROGATORIES SET RE

BUREAU OF INVESTIGATION AND ENFORCEMENT INTERROGATORY I&E-RE-10-D

Reference York Water Exhibit No. FIII-2-40 and York Water Statement No. 103, p. 102, line 9 through p. 103, line 10 concerning salaries and wages expense. Provide the following:

A. Employee counts, total and broken down by union, non-union, etc. for TME December 31, 2022, December 31, 2023, HTY 2024, FTY ending December 31, 2025, and FPFTY ending February 28, 2027.

B. Similar breakdown of employee from Part A for the YTD beginning January 1, 2025.

C. Number of employee positions that have been eliminated, by month broken down by union, non-union, etc. since the commencement of the HTY and that are expected to be eliminated during the FTY and the FPFTY.

D. Vacancy rate and number of vacant positions, by month, by union, non-union, etc. for TME December 31, 2022, December 31, 2023, HTY 2024, FTY ending December 31, 2025, and FPFTY ending February 28, 2027.

RESPONDENT:

M. E. Poff
CFO

DATE:

July 18, 2025

RESPONSE:

A.-B. See **I&E-RE-10-D Attachment 1** for employee counts by month from December 31, 2021 through May 31, 2025. The FPFTY claim includes 146 full-time employees, but the Company did not determine into which month of the FTY and FPFTY the additional employees would be hired.

C. No employee positions have been eliminated since the commencement of the HTY, nor are any expected to be eliminated during the FTY and the FPFTY.

D. The Company does not track its vacancy rate or number of open positions monthly. The Company was able to determine the number of open positions at the end of each period and determine a vacancy rate as follows:

December 31, 2022 – 3 open positions created a vacancy rate of 2.5%.
December 31, 2023 – 4 open positions created a vacancy rate of 3.1%.
December 31, 2024 – 5 open positions created a vacancy rate of 3.8%.

The Company is not projecting vacant positions for the FTY or FPFTY.

INTERROGATORIES SET RR

BUREAU OF INVESTIGATION AND ENFORCEMENT INTERROGATORY I&E-RR-7-D

Reference York Statement No. 105, p. 45, lines 12-23. Identify when the Company predicts the next issuance of common stock will occur.

RESPONDENT:

M. E. Poff
CFO

DATE:

June 25, 2025

RESPONSE:

The Company is uncertain of the precise timing of its next issuance of common stock. At this time, York Water anticipates that it may issue common stock in 2026. However, the Company will continue to monitor its capital structure and market conditions to determine the best time to issue common stock.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christopher Keller. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME CHRISTOPHER KELLER WHO SUBMITTED THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 1 AND I&E EXHIBIT NO. 1?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of The York Water Company (York Water or Company) witness Matthew E. Poff.[1]

[1] York Water Statement No. 3-R.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 1-SR contains schedules that support my surrebuttal testimony. In this surrebuttal testimony, I will also make references to my direct testimony[2] and its accompanying exhibit.[3]

SUMMARY OF OVERALL REVENUE REQUIREMENT

Q. PLEASE SUMMARIZE THE COMPANY'S UPDATED OVERALL CLAIMED REVENUE REQUIREMENT.

A. In rebuttal testimony, the Company provided an update which presented a total increase of $23,745,770 to claimed present rate revenues of $76,975,844 resulting in a total overall revenue requirement of $100,721,614. This represents a $19,888,263 requested increase to claimed water operations present rate revenues of $68,305,310 resulting in proposed revenues of $88,193,573 for water operations. Additionally, the total requested increase represents a $3,857,507 requested increase to claimed wastewater operations present rates revenues of $8,670,534 resulting in proposed revenues of $12,528,041 for wastewater operations.[4]

The Company then filed corrected rebuttal testimony[5] on September 25, 2025 to reflect its updated claim for employee benefits – health insurance for

[2] I&E Statement No. 1.
[3] I&E Exhibit No. 1.
[4] York Water Exhibit MEP-1R, p. 1.
[5] York Water Statement No. 3-R (Corrected).

water operations in response to I&E-RE-35.[6] This update presented a total increase of $23,643,653 to claimed present rate revenues of $76,975,844 resulting in a total overall revenue requirement of $100,619,497. This represents a $19,786,146 requested increase to claimed water operations present rate revenues of $68,305,310 resulting in proposed revenues of $88,091,456 for water operations. Additionally, the total requested increase represents a $3,857,507 requested increase to claimed wastewater operations present rates revenues of $8,670,534 resulting in proposed revenues of $12,528,041 for wastewater operations.[7]

Q. WERE YOU ABLE TO REPLICATE THE COMPANY'S REQUESTED REVENUE REQUIREMENT TABLE FOR WATER OPERATIONS?

A. No. Similar to my direct testimony, I was unable to replicate the Company's request, which is likely due to the placement of York Water's late payment revenue for water operations on its schedules as there has been no indication the Company addressed my concern in my direct testimony.[8] The Company indicates that its updated requested revenue increase is $19,786,146 for water operations; however, this total may still include the anticipated growth in late charge revenue of $45,834[9] as a result of the higher billed amounts, and late payment revenue is not a distribution rate revenue source. For purposes of calculating the revenue

[6] I&E Exhibit No. 1-SR, Schedule 1.
[7] York Water Exhibit MEP-1R, p. 1 (Corrected).
[8] I&E Statement No. 1, p. 5, lines 4-13.
[9] York Water Exhibit No. FII-2, p. 9.

requirement related to rate revenues, I&E's revenue requirement utilizes the pre-late charge revenue amount of $19,740,312 for water operations.

Q. HAVE YOU FOUND ANY OTHER DISCREPANCIES IN THE COMPANY'S UPDATED OVERALL REVENUE REQUIREMENT POSITION?

A. Yes. I have calculated a minor discrepancy in the Company's interest expense claim based on the claimed rate base of $444,509,164[10] and claimed weighted cost of debt of 2.06%.[11]

Q. WHAT IS THE COMPANY'S UPDATED INTEREST EXPENSE CLAIM?

A. The Company decreased its claim of $9,167,897 from direct testimony[12] by $1,816[13] resulting in an updated claim of $9,166,081 ($9,167,897 - $1,816) in rebuttal testimony.

Q. WHAT DID YOU DETERMINE THE UPDATED INTEREST EXPENSE CLAIM SHOULD BE?

A. My calculation as shown below produces a corrected interest expense claim of $9,156,889 (Claimed Rate Base of $444,509,164 x Claimed Weighted Debt Cost of 2.06%). As this is computation is embedded in my revenue requirement

[10] York Water Exhibit MEP-1R (Corrected), p. 2.
[11] York Water Exhibit DWD-1R, p. 1
[12] York Water Exhibit FIV-17-10.
[13] York Water Exhibit MEP-1R (Corrected), p. 3.

calculation and I&E's recommendation for interest expense is iterative and changes based on my recommendation to cash working capital (which is a rate base item) as explained in the Cash Working Capital section below, I am not presenting a recommended dollar amount change to interest expense.[14] However, just focusing on the Company's claims in rebuttal testimony and not my or any parties' recommended adjustments to rate base or the weighted cost of debt, the corrected interest expense amount and related income tax expense adjustments would be as follows:

Company Rate Base Claim		$444,509,164
Multiplied by Weighted Debt Cost		2.06%
Company Interest Exp. Calculated by I&E	$	9,156,889
Company Interest Exp. Claimed in Rebuttal	$	9,166,081
Difference	$	(9,192)
State Income Tax Rate		7.49%
Difference in State Income Tax Expense	$	(688)
Federal Income Tax Rate		21%
Difference in Federal Income Tax Expense	$	(1,930)

Q. PLEASE SUMMARIZE YOUR ADJUSTMENTS AS CONTAINED IN THIS SURREBUTTAL TESTIMONY.

A. The following table summarizes my recommended adjustments to York Water's updated position.

[14] The interest expense allowance will depend on all adjustments to the Company's relevant claims which will be brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claims.

Water Operations:

	Company Claim	I&E Adjustment	I&E Recommended Allowance
O&M Expenses:			
Flotation Costs	$0	$162,696	$162,696
Total O&M Expense Adjustments		$162,696	
Rate Base Adjustments:			
Cash Working Capital	$4,067,516	$12,505	$4,080,021
Total Rate Base Adjustments		$12,505	

Q. WHAT IS I&E'S UPDATED TOTAL RECOMMENDED REVENUE REQUIREMENT FOR WATER OPERATIONS?

A. I&E's updated total recommended revenue requirement for the Company's water operations is $83,214,263. This recommended revenue requirement represents an increase of $14,908,953 to the present rate revenues of $68,305,310. This total recommended allowance incorporates my adjustments made in this surrebuttal testimony to O&M expenses and cash working capital and those recommended adjustments made in the surrebuttal testimony of I&E witness Drew Breuning.[15] The following table summarizes the I&E surrebuttal position.

[15] I&E Statement No. 2-SR.

Q. WHAT IS I&E'S UPDATED TOTAL RECOMMENDED REVENUE REQUIREMENT FOR WASTEWATER OPERATIONS?

A. I&E's updated total recommended revenue requirement for the Company's wastewater operations is $11,438,338. This recommended revenue requirement represents an increase of $2,767,804 to the present rate revenues of $8,670,534. This total recommended allowance incorporates my adjustments made in this surrebuttal testimony to O&M expenses and cash working capital and those recommended adjustments made in the surrebuttal testimony of I&E witnesses

Drew Breuning[16] and Ethan Cline.[17] The following table summarizes the I&E surrebuttal position:

SALARIES AND WAGES EXPENSE – WATER OPERATIONS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR SALARIES EXPENSE.

A. In direct testimony, I recommended an allowance of $11,597,708 for salaries and wages expense, or a reduction of $371,031 ($11,968,739 - $11,597,708) to York Water's water operations claim. My recommendation was based on an adjustment

[16] I&E Statement No. 2-SR.
[17] I&E Statement No. 3-SR.

for average historic vacancy levels in order to reflect a more accurate employee complement in the FPFTY.[18]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR SALARIES AND WAGES EXPENSE FOR WATER OPERATIONS?

A. Yes. Company witness Matthew E. Poff addressed my recommendation for salaries and wages expense for water operations. Mr. Poff states the Company agrees that an employee vacancy allowance should be included and accepts my downward adjustment of $371,031 for salaries and wages expense for water operations[19] which is reflected in York Water Exhibit MEP-1R.

PAYROLL TAX EXPENSE – WATER OPERATIONS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR PAYROLL TAX EXPENSE FOR WATER OPERATIONS.

A. In direct testimony, I recommended an allowance of $867,369 for payroll tax expense for water operations, or a reduction of $27,827 ($895,196 - $867,369) to the Company's claim. My recommendation was based on recognition of the payroll expense reduction from my vacancy adjustment and on the percentage of total payroll taxes to total payroll.[20]

[18] I&E Statement No. 1, pp. 7-10.
[19] York Water Statement 3-R, p. 13, lines 2-11.
[20] I&E Statement No. 1, pp. 11-12.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR PAYROLL TAX EXPENSE FOR WATER OPERATIONS?

A. Yes. Company witness Matthew E. Poff addressed my recommendation for salaries and wages expense for water operations. Mr. Poff states that since the Company accepts my employee vacancy allowance adjustment, the Company accepts my corresponding downward adjustment of $27,827 for payroll tax expense for water operations[21] which is reflected in York Water Exhibit MEP-1R.

EMPLOYEE BENEFITS – 401k MATCH – WATER OPERATIONS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR EMPLOYEE BENEFITS – 401k MATCH FOR WATER OPERATIONS.

A. In direct testimony, I recommended an allowance of $613,955, or a reduction of $19,665 ($633,620 - $613,955) to the Company's FPFTY claim. My recommendation was based on my employee vacancy adjustment as noted in the salaries and wages expense for water operations section above.[22]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR EMPLOYEE BENEFITS – 401k MATCH FOR WATER OPERATIONS?

A. Yes. Company witness Matthew E. Poff addressed my recommendation for employee benefits – 401k match for water operations. Mr. Poff states that

[21] York Water Statement 3-R, p. 13, line 17 through p. 14, line 2.
[22] I&E Statement No. 1, pp. 12-14.

although employee benefits, such as employee benefits – 401k match, is not impacted by employee vacancies, the Company agrees that certain benefits will decrease due to a vacancy adjustment, and therefore, the Company accepts my downward adjustment of $19,665 for 401k match expense for water operations[23] which is reflected in York Water Exhibit MEP-1R.

EMPLOYEE BENEFITS – HEALTH INSURANCE – WATER OPERATIONS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR EMPLOYEE BENEFITS – HEALTH INSURANCE FOR WATER OPERATIONS.

A. In direct testimony, I recommended an allowance of $2,301,233, or a reduction of $73,464 ($2,374,697 - $2,301,233) to the Company's FPFTY claim. My recommendation was based on my employee vacancy adjustment as noted in the salaries and wages expense for water operations section above.[24]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR EMPLOYEE BENEFITS – HEALTH INSURANCE FOR WATER OPERATIONS?

A. Yes. Company witness Matthew E. Poff addressed my recommendation for employee benefits – health insurance for water operations. Mr. Poff states that although employee benefits, such as employee benefits – health insurance, are not

[23] York Water Statement 3-R, p. 14, lines 12-22.
[24] I&E Statement No. 1, pp. 14-16.

impacted by employee vacancies, the Company agrees that certain benefits will decrease due to a vacancy adjustment, and therefore, the Company accepts my downward adjustment of $73,464 for health insurance expense for water operations.[25]

INSURANCE – WORKERS COMPENSATION – WATER OPERATIONS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR INSURANCE – WORKERS COMPENSATION FOR WATER OPERATIONS.

A. In direct testimony, I recommended an allowance of $191,200, or a reduction of $5,936 ($197,136 - $191,200) to the Company's FPFTY claim. My recommendation was based on my employee vacancy adjustment as noted in the salaries and wages expense for water operations section above.[26]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR INSURANCE – WORKERS COMPENSATION FOR WATER OPERATIONS?

A. Yes. Company witness Matthew E. Poff addressed my recommendation for insurance – workers compensation for water operations. Mr. Poff states that although employee benefits, such as insurance – workers compensation, is not impacted by employee vacancies, the Company agrees that certain benefits will

[25] York Water Statement 3-R, p. 14, lines 12-22.
[26] I&E Statement No. 1, pp. 16-17.

decrease due to a vacancy adjustment, and therefore, the Company accepts my downward adjustment of $5,936 for insurance – workers compensation for water operations[27] and is reflected in York Water Exhibit MEP-1R.

FLOTATION COSTS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR FLOTATION COSTS.

A. In direct testimony, I recommended a normalized expense allowance of $162,696 as opposed to adding 12 basis points to the Company's cost of equity as recommended based on the total flotation costs incurred by the Company over the time elapsed from the first equity offering to the end of the HTY.[28]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR FLOTATION COSTS?

A. Yes. Company witness Matthew E. Poff disagrees with my recommendation. Mr. Poff defers to Company witness Dylan W. D'Ascendis[29] to explain why the cost of equity should include 12 basis points in his cost of common equity to reflect flotation costs rather than my recommendation of a normalized expense for flotation costs. Alternatively, Mr. Poff states that if the Commission were to reject

[27] York Water Statement 3-R, p. 14, lines 12-22.
[28] I&E Statement No. 1, pp. 17-19.
[29] York Water Statement No. 105-R.

the 12 basis points for flotation costs in its cost of equity, the Company requests to recover flotation costs as a normalized expense based on my recommendation.[30]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR FLOTATION COSTS AS A RESULT OF MR. POFF'S REBUTTAL TESTIMONY?

A. No. I continue to recommend a normalized expense allowance of $162,696 as opposed to adding 12 basis points to the Company's cost of equity as recommended by Mr. D'Ascendis based on the total flotation costs incurred by the Company over the time elapsed from the first equity offering to the end of the HTY. I&E witness Drew Breuning[31] will address Mr. D'Ascendis' rebuttal testimony as to why flotation costs should not be included in the Company's cost of equity.

STATE INCOME TAX EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR STATE INCOME TAX EXPENSE.

A. In direct testimony, I recommended an allowance of $576,105, or a reduction of $385,632 ($961,737 - $576,105) to the Company's claim for water operations. Additionally, I recommended an allowance of $16,093, or a reduction of $60,272 ($76,365 - $16,093) to the Company's claim for wastewater operations. My

[30] York Water Statement No. 3-R, p. 26, lines 8-14.
[31] I&E Statement No. 2-SR.

recommendation was based on a weighted tax rate of 7.41% to reflect the Pennsylvania corporate income tax rate that will be in effect for the FPFTY.[32]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR STATE INCOME TAX EXPENSE?

A. Yes. Company witness Matthew E. Poff disagrees with my recommendation.

Q. SUMMARIZE MR. POFF'S RESPONSE.

A. Mr. Poff states the Company's state income tax expense claim is based on the Pennsylvania corporate net income tax rate of 7.49% for 2026 while recognizing this does not incorporate the decrease to 6.99% for the final two months of the FPFTY. He further states that the Company proposes to use the State Tax Adjustment Surcharge (STAS) mechanism to account for the decrease through 2031. Mr. Poff opines this will allow alignment of the STAS with the change after the end of the FPFTY.[33]

Q. DO YOU ACCEPT MR. POFF'S STATE INCOME TAX EXPENSE CLAIM?

A. Yes. I agree that utilizing the STAS to capture the future change to the corporate net income tax rate as suggested by the Company is a simplified approach to

[32] I&E Statement No. 1, pp. 19-23.
[33] York Water Statement No. 3-R, p. 27, lines 4-17.

changing tax rates that results in the same outcome,[34] and I also recognize that the difference between the Company's rebuttal position and my recommendation in direct testimony is immaterial.

Q. HOW HAS THIS CHANGE BEEN REFLECTED IN I&E'S OVERALL REVENUE REQUIREMENT RECOMMENDATION?

A. I have accepted the Company's state income tax rate claim to its base rate case position using the income tax rate of 7.49% that will go into effect in 2026. This change is reflected in my recommended revenue requirement in Table 1A for water operations and Table 1B for wastewater operations above[35] and incorporates the state income tax effect of my other recommended adjustments and those of I&E witness Drew Breuning.[36]

CASH WORKING CAPITAL

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR CASH WORKING CAPITAL (CWC).

A. In direct testimony, I recommended a total allowance of $4,080,844 or a decrease of $74,724 ($4,155,568 - $4,080,844) to the Company's claim. My recommendation was based on my adjustments to O&M expenses.[37]

[34] York Water Statement No. 3-R, p. 27, lines 9-15.
[35] I&E Statement No. 1-SR, pp. 6-8.
[36] I&E Statement No. 2-SR.
[37] I&E Statement No. 1, pp. 23-27.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR CASH WORKING CAPITAL?

A. Yes. Company witness Matthew E. Poff responded to my CWC recommendation. Mr. Poff states that any O&M adjustments that are not adopted by the Commission should also be rejected for CWC purposes.[38]

Q. DID THE COMPANY PROVIDE AN UPDATE TO CWC?

A. Yes. The Company's updated claim for CWC is $4,067,516.[39] Mr. Poff states that CWC has been adjusted to reflect adjustments for O&M expenses that were accepted by the Company.[40]

Q. DO YOU AGREE WITH THE COMPANY'S UPDATED CLAIM?

A. No.

Q. DO YOU HAVE AN UPDATE RELATED TO YOUR RECOMMENDED ADJUSTMENTS TO O&M EXPENSES?

A. Yes. All O&M expense adjustments that are cash-based expense claims are included when determining the Company's overall CWC requirement. Therefore, I have included cash-based O&M recommendations when computing the overall recommended CWC allowance.

[38] York Water Statement No. 3-R, p. 28, lines 18-23.
[39] York Water Exhibit MEP-1R, p. 4.
[40] York Water Statement No. 3-R, p. 28, lines 21-23.

Q. SUMMARIZE WHERE EACH OF THE RECOMMENDED O&M EXPENSE ADJUSTMENTS ARE REFLECTED IN THE CWC COMPUTATIONS.

A. Other Goods and Services – Expense Lag Days:

I recommended an upward adjustment for Flotation Costs of $162,696[41] which is reflected as an increase to the Other Goods and Services Expense Lag Days calculation.[42]

Summary of I&E-Updated Recommended CWC Allowance:

Q. BASED ON THE ABOVE SURREBUTTAL TESTIMONY, WHAT IS YOUR UPDATED RECOMMENDED ALLOWANCE FOR CWC?

A. Based on reflecting all of I&E's recommended adjustments as discussed above, my updated recommendation for CWC is an allowance of $4,080,021 or an increase of $12,505 ($4,080,021 - $4,067,516) to the Company's revised claim.[43]

Q. IS YOUR UPDATED RECOMMENDATION FOR CWC A FINAL RECOMMENDED ALLOWANCE?

A. No. Similar to what I stated in direct testimony, all adjustments to the Company's claims must be continually brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This

[41] I&E Statement No. 1-SR, p. 6.
[42] I&E Exhibit No. 1-SR, Schedule 2, p. 2.
[43] I&E Exhibit No. 1-SR, Schedule 2, p. 1.

process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claims.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

BUREAU OF INVESTIGATION AND ENFORCEMENT INTERROGATORY I&E-RE-35

Reference York Water Exhibit MEP-1R, pp. 2-3. State where the Company's Health insurance – vacancy allowance adjustment of ($73,464) in York Water Exhibit MEP-1R, p. 3 is reflected in York Water Exhibit MEP-1R, p. 2 as the total operating expenses adjustments shown in York Water Exhibit MEP-1R, p. 2 only appears to include payroll vacancy allowance of ($371,031), workers' compensation – vacancy allowance of ($5.936), and 401k match – vacancy adjustment of ($73,464) for a total of ($407,343).

RESPONDENT:

M. E. Poff
CFO

DATE:

September 24, 2025

RESPONSE:

The Company inadvertently failed to carry the health insurance – vacancy allowance to the total operating expenses adjustment. The revised Exhibit MEP-1R is included with the response to I&E-RE-34 to reflect this change. The Company will submit the revised Exhibit MEP-1R and a revised Statement No.3-R to correct this inadvertent error.

The Company will note that this adjustment was included in its recalculation of income taxes and cash working capital so there are no changes to adjustments other than operating expenses.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Drew Breuning. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. SUMMARIZE YOUR EDUCATION AND EMPLOYMENT HISTORY.

A. An outline of my education and employment history is attached as Appendix A.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to review the base rate filing of The York Water

Company (York or Company), water and wastewater operations, and make recommendations regarding the Company's rate of return, including capital structure, cost of long-term debt, the cost of equity, and the overall fair rate of return for the fully projected future test year (FPFTY) ending February 28, 2027.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 2 contains schedules that support my direct testimony.

BACKGROUND

Q. WHAT IS THE GENERAL DEFINITION OF RATE OF RETURN IN THE CONTEXT OF A BASE RATE CASE?

A. Rate of return is one of the components of the revenue requirement formula. Rate of return is the amount of revenue an investment generates in the form of net income. It is typically expressed as a percentage of the amount of an asset base at a particular point in time, which in base rate proceedings, is the projected rate base balance at the end of the test year.

Q. WHAT IS THE REVENUE REQUIREMENT FORMULA?

A. The revenue requirement formula used in base rate cases is as follows:

$$RR = E + D + T + (RB \times ROR)$$

Where:

RR = Revenue Requirement

E = Operating Expenses

D = Depreciation Expense

T = Taxes

RB = Rate Base

ROR = Overall Rate of Return

In the above formula, the rate of return is expressed as a percentage. The calculation of that percentage is independent of the determination of the appropriate rate base value for ratemaking purposes. As such, the appropriate total dollar return is dependent upon the proper computation of the rate of return and the proper valuation of the Company's rate base.

Q. WHAT CONSTITUTES A FAIR AND REASONABLE OVERALL RATE OF RETURN?

A. A fair and reasonable overall rate of return is one that will allow the utility an *opportunity* to recover those costs prudently incurred by all classes of capital used to finance the rate base during the prospective period in which its rates will be in effect. The Commission has the authority to determine the fair revenue requirement and rate of return, which the utility has the opportunity to earn, but not guaranteed to earn.

The *Bluefield Water Works & Improvements Co. v. Public Service Comm. of West Virginia,* 262 U.S. 679, 692-93 (1923), and the *FPC v. Hope Natural Gas Co.,* 320 U.S. 591, 603 (1944) cases set forth the principles that are generally

accepted by regulators throughout the country as the appropriate criteria for measuring a fair rate of return:

1. A utility is entitled to a return similar to that being earned by other enterprises with corresponding risks and uncertainties, but not as high as those earned by highly profitable or speculative ventures.
2. A utility is entitled to a return level reasonably sufficient to assure financial soundness.
3. A utility is entitled to a return sufficient to maintain and support its credit and raise necessary capital.
4. A fair return can change (increase or decrease) along with economic conditions and capital markets.

Q. EXPLAIN HOW THE OVERALL RATE OF RETURN IS TRADITIONALLY CALCULATED IN BASE RATE PROCEEDINGS.

A. In base rate proceedings, the overall rate of return is traditionally calculated using the weighted average cost of capital method. To calculate the weighted average cost of capital, a company's capital structure must first be determined by comparing the percentage of each capitalization component, which has financed rate base, to total capital. Next, the effective cost rate of each capital structure component must be determined. The historical component of the cost rate of debt can be computed accurately, and any future debt issuances are based on estimates. The cost rate of common equity is not fixed and is more difficult to measure.

Because of this difficulty, a proxy group is used as discussed later in this testimony. Next, each capital structure component percentage is multiplied by its corresponding effective cost rate to determine the weighted capital component cost rate. The table in the *"I&E Position"* section below demonstrates the interaction of each capital structure component and its corresponding effective cost rate. Finally, the sum of the weighted cost rates produces the overall rate of return. This overall rate of return is multiplied by the rate base to determine the return portion of a company's revenue requirement.

COMPANY'S RATE OF RETURN CLAIM

Q. WHO IS THE COMPANY'S RATE OF RETURN WITNESS?

A. York witness Dylan W. D'Ascendis is the primary witness addressing rate of return (York Statement No. 105). Mr. D'Ascendis provided analysis for the claimed capital structures, long-term debt, and cost of common equity for York. Additionally, York witness J.T. Hand (York Statement No. 1) provides testimony regarding the Company's "performance factor adjustment" claim.

Q. PLEASE SUMMARIZE THE COMPANY'S RATE OF RETURN CLAIM.

A. Mr. D'Ascendis recommends the following rate of return for the Company based on its FPFTY ending February 28, 2027:[1]

[1] York Exhibit DWD-1, p. 1.

Company Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost**
	The York Water Company		
Long-Term Debt	45.42%	4.54%	2.06%
Common Equity	54.58%	10.90%	5.95%
Total	100.00%		8.01%

I&E POSITION

Q. PLEASE SUMMARIZE YOUR RATE OF RETURN RECOMMENDATION.

A. Although Mr. D'Ascendis references both York's water and wastewater operations throughout his testimony, he provides a single consolidated rate of return recommendation for the Company. Therefore, my rate of return recommendation is also on a consolidated basis and is as follows:[2]

I&E Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost**
	The York Water Company		
Long-Term Debt	45.42%	4.54%	2.06%
Common Equity	54.58%	9.42%	5.14%
Total	100.00%		7.20%

[2] I&E Exhibit No. 2, Schedule 1.

PROXY GROUP

Q. WHAT IS A PROXY GROUP AS USED IN BASE RATE CASES?

A. A proxy group is a set of companies that have similar traits in comparison to the subject utility. This group of companies acts as a benchmark for determining the subject utility's rate of return in a base rate case.

Q. WHAT ARE THE REASONS FOR USING A PROXY GROUP?

A. A proxy group's cost of equity is used as a benchmark to satisfy the long-established guideline of utility regulation that seeks to provide the subject utility with the opportunity to earn a return similar to that of enterprises with corresponding risks and uncertainties.

A proxy group is typically utilized since the use of data exclusively from one company may be less reliable. The lower reliability occurs because the data for one company may be subject to events that can cause short-term anomalies in the marketplace. The rate of return on common equity for a single company could become distorted in these circumstances and would therefore not be representative of similarly situated companies. Therefore, a proxy group has the effect of smoothing out potential anomalies associated with a single company.

Q. DID YOU REQUIRE THAT THE COMPANIES IN YOUR PROXY GROUP EXCLUSIVELY PROVIDE WATER OR WASTEWATER SERVICE?

A. No. Few, if any, publicly held 'wastewater-only' companies exist because most

water companies have diversified their businesses to include wastewater operations. Accordingly, this type of criterion produces an insufficient sample of companies for my proxy group, adversely affecting the calculation of a fair rate of return for the subject utility. Further, Value Line does not offer a standalone wastewater utilities industry category as an option. Therefore, my proxy group began with a search of the regulated water utility companies.

Q. WHAT CRITERIA DID YOU USE IN SELECTING YOUR WATER INDUSTRY PROXY GROUP?

A. The criteria for my proxy group was designed to select companies that are representative of York. I applied the following criteria to Value Line's Water Utility company group:

1. Fifty percent or more of the company's revenues must be generated from the regulated water utility industry.
2. The company's stock must be publicly traded.
3. Investment information for the company must be available from more than one source, which includes Value Line.
4. The company must not be currently involved in an announced material merger or the target of an acquisition.
5. The company must have four consecutive years of historic earnings data.

Q. WHAT CRITERIA DID MR. D'ASCENDIS USE IN SELECTING HIS WATER PROXY GROUP COMPANIES?

A. Mr. D'Ascendis determined his proxy group of six water companies by using the following criteria:[3]

1. The company is included in the Water Utility Group of Value Line's Standard Edition.
2. The company has 60% or greater of 2024 total operating income or 60% or greater of 2024 total assets attributable to regulated water operations.
3. At the time of the preparation of Mr. D'Ascendis' testimony, the company must not have publicly announced it was involved in any major merger or acquisition activity.
4. The company has not cut or omitted their common dividends during the five years ending 2024 or through the time of the preparation of Mr. D'Ascendis' testimony.
5. The company must have Value Line and Bloomberg Professional Services (Bloomberg) adjusted betas.
6. The company must have a positive Value Line five-year dividends per share (DPS) growth rate projection.
7. The company must have Value Line, Zacks, or Yahoo! Finance consensus five-year earnings per share (EPS) growth rate projections.

[3] York Statement No. 105, p. 13, line 17 through p. 14, line 9.

Q. WHAT PROXY GROUP DID YOU USE IN YOUR ANALYSIS?

A. I include the following six companies in my proxy group:[4]

American Water Works	AWK
American States Water Co	AWR
California Water Service Group	CWT
Middlesex Water Co	MSEX
SJW Group	SJW
Essential Utilties	WTRG

It should be noted that as of May 6, 2025, during the course of this rate case proceeding, SJW Group rebranded and changed its name to H2O America. Due to the timing of this testimony and when the source documents were pulled, the Company may be referred to as either SJW Group or H2O America.

Q. WHAT PROXY GROUP DID MR. D'ASCENDIS USE IN HIS ANALYSIS?

A. Mr. D'Ascendis has included the following six companies in his Water Group:[5]

American Water Works	AWK
American States Water Co	AWR
California Water Service Group	CWT
Middlesex Water Co	MSEX
SJW Group	SJW
Essential Utilties	WTRG

[4] I&E Exhibit No. 2, Schedule 2.
[5] York Exhibit DWD-2, p. 2.

Q. DO YOU AGREE WITH MR. D'ASCENDIS' WATER PROXY GROUP?

A. Yes, Mr. D'Ascendis and I use the same six companies for our respective Proxy Groups.

CAPITAL STRUCTURE

Q. WHAT IS A CAPITAL STRUCTURE?

A. A capital structure represents how a firm has financed its rate base with different sources of funds. The primary funding sources are long-term debt and common equity. A capital structure may also include preferred stock and/or short-term debt.

Q. WHAT IS THE COMPANY'S CLAIMED CAPITAL STRUCTURE?

A. The Company's claimed capital structure is summarized in the table below:[6]

Type of Capital	Ratio
Long-Term Debt	45.42%
Common Equity	54.58%
Total	**100.00%**

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIMED CAPITAL STRUCTURE?

A. Mr. D'Ascendis states that the claimed capital structure is based on the Company's actual capital structure on December 31, 2024. Further, he claims the common

[6] York Statement No. 105, p. 15, lines 7-9 and York Exhibit DWD-1, p. 1.

equity ratio claimed by the Company is reasonable and consistent with the range of common equity ratios maintained by the companies that make up his proxy group.[7]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S CAPITAL STRUCTURE?

A. I recommend using the Company's claimed capital structure as presented in the table above.

Q. WHAT IS THE BASIS FOR YOUR CAPITAL STRUCTURE RECOMMENDATION?

A. A capital structure of 50% long-term debt and 50% common equity is optimal when trying to balance the financial integrity of a utility as well as trying to control costs to ratepayers, in this proceeding, I recommend using the Company's proposed capital structure of 45.42% debt and 54.58% equity as it falls within the range of my proxy group's 2024 (most recently available capital structures.

My proxy group's five-year average capital structures consist of long-term debt ratios ranging from 44.39% to 57.31% and equity ratios ranging from 42.69% to 55.61%, with an overall five-year average for my proxy group of 50.69% for long-term debt and 49.27% for common equity.[8]

[7] York Statement No. 105, p. 16, lines 12-14.
[8] I&E Exhibit No. 2, Schedule 2.

However, it is worth noting that the Company's equity ratio is well above the average and near the highest end of the proxy group's equity ratios. This equity heavy capital structure must be recognized when considering York's financial risk profile as higher equity ratios generally correspond with lower financial risk.

Q. WHAT IS THE COST SAVINGS TO RATEPAYERS IF THE COMPANY WERE TO EMPLOY A 50/50 CAPITAL STRUCTURE COMPARED TO THE COMPANY'S FILED CAPITAL STRUCTURE?

A. The examples below show the cost savings to ratepayers if the Company were to employ a 50% long-term debt and 50% common equity capital structure in its cost of capital while maintaining its claimed return on equity and rate base:

The York Water Company - Water Operations			
AS FILED CAPITAL STRUCTURE			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	45.42%	4.54%	2.06%
Common Equity	54.58%	10.90%	5.95%
Total	100.00%		8.01%
50/50 HYPOTHETICAL CAPITAL STRUCTURE			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	50.00%	4.54%	2.27%
Common Equity	50.00%	10.90%	5.45%
Total	100.00%		7.72%
Difference In The Overall Rate of Return (8.01% - 7.72% = 0.29%)			0.29%
Claimed Rate Base*			$444,597,217
Impact Prior to Gross Revenue Conversion Factor (.0029 x $444,597,217)			**$1,289,332**
Gross Revenue Conversion Factor**			1.39002887
Total Impact ($1,289,332 x 1.39002887)			**$1,792,209**

*York Exhibit FV-1, Page 3.
**I&E Exhibit No. 2, Schedule 13

The York Water Company - Wastewater Operations			
AS FILED CAPITAL STRUCTURE			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	45.42%	4.54%	2.06%
Common Equity	54.58%	10.90%	5.95%
Total	100.00%		8.01%
50/50 HYPOTHETICAL CAPITAL STRUCTURE			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	50.00%	4.54%	2.27%
Common Equity	50.00%	10.90%	5.45%
Total	100.00%		7.72%
Difference In The Overall Rate of Return (8.01% - 7.72% = 0.29%)			0.29%
Claimed Rate Base*			$54,685,380
Impact Prior to Gross Revenue Conversion Factor (.0029 x $54,685,380)			**$158,588**
Gross Revenue Conversion Factor**			1.37762391
Total Impact ($158,588 x 1.37762391)			**$218,475**

*York Exhibit FVIII-WA, Schedule B.
**I&E Exhibit No. 2, Schedule 13

In this example, if the Company were to employ a 50/50 capital structure, the cost savings to ratepayers would be $1,792,209 and $218,475 annually for water and wastewater customers, respectively. While I understand achieving and maintaining an exact 50/50 capital structure is not always feasible, this example demonstrates York's financial security as compared to its peers and show that Mr. D'Ascendis' "add-on" to his cost of equity calculations is unnecessary.

COST OF LONG-TERM DEBT

Q. WHAT IS THE COMPANY'S CLAIMED COST RATE OF LONG-TERM DEBT?

A. The Company's claimed long-term debt cost rate is 4.54%, which is based on the actual cost of long-term debt as of December 31, 2024.[9]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S COST RATE OF LONG-TERM DEBT?

A. I recommend using the Company's claimed long-term debt cost rate of 4.54%.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION TO USE THE COMPANY'S CLAIMED COST RATE OF LONG-TERM DEBT?

A. The Company's claimed long-term debt cost rate of 4.54% is within my proxy

[9] York Statement No. 105, p. 16, lines 20-23.

group's implied long-term debt cost range of 3.95% to 6.21%.[10] Additionally, Mergent Bond Record's A-Rated Public Utility Bond Yields have been fluctuating between 5.20% and 6.05%, with an average of 5.64% from June 2024 through May 2025.[11] Therefore, I believe the claimed cost of long-term debt is reasonable and appropriate in this proceeding.

COST OF COMMON EQUITY

Common Methods

Q. WHAT METHODS ARE COMMONLY PRESENTED BY UTILITIES IN DETERMINING THE COST OF COMMON EQUITY?

A. Four methods commonly presented to estimate the cost of common equity are the Discounted Cash Flow (DCF) Method, the Capital Asset Pricing Model (CAPM), the Risk Premium (RP) Method, and the Comparable Earnings (CE) Method.

Q. WHAT IS THE THEORETICAL BASIS FOR THE DCF METHOD?

A. The DCF method is the "dividend discount model" of financial theory, which maintains that the value (price) of any security or commodity is the discounted present value of all future cash flows. The DCF method assumes that investors evaluate stocks in the classical economic framework, which maintains that the

[10] I&E Exhibit No. 2, Schedule 3.
[11] I&E Exhibit No. 2, Schedule 4.

value of a financial asset is determined by its earning power, or its ability to generate future cash flows.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CAPM?

A. The CAPM describes the relationship of a stock's investment risk and its market rate of return. It identifies the rate of return investors expect so that it is comparable with returns of other stocks of similar risk. This method hypothesizes that the investor-required return on a company's stock is equal to the return on a "risk free" asset plus an equity premium reflecting the company's investment risk. In the CAPM, two types of risk are associated with a stock: (1) firm-specific risk (unsystematic risk); and (2) market risk (systematic risk), which is measured by a firm's beta. The CAPM allows for investors to receive a return only for bearing systematic risk. Unsystematic risk is assumed to be diversified away and, therefore, does not earn a return.

Q. WHAT IS THE THEORETICAL BASIS FOR THE RP METHOD?

A. The theoretical basis for the RP method is a simplified version of the CAPM. The RP method's theory is that common stock is riskier than debt, thus, investors require a higher expected return on stocks than bonds. In the RP approach, the cost of equity is made up of the cost of debt and a risk premium. While the CAPM uses the market risk premium, it also directly measures the systematic risk of a

company group through the use of beta. The RP method does not measure the specific risk of a company.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CE METHOD?

A. The CE method utilizes the concept of "opportunity cost." This means that investors will likely dedicate their capital to the investment offering the highest return with similar risk to alternative investments. Unlike the DCF, CAPM, and the RP methods, the CE method is not market-based and relies upon historic accounting data. The most problematic issue with the CE method is determining what constitutes comparable companies.

I&E Recommended Method To Employ

Q. WHAT METHOD DO YOU RECOMMEND USING TO DETERMINE AN APPROPRIATE COST OF COMMON EQUITY FOR YORK?

A. I recommend using the DCF method as the primary method to determine the cost of common equity. Additionally, I provide a CAPM analysis to be used as a comparison to, but not as a check of, the DCF results. The DCF method has the most wide-spread regulatory acceptance, and while the Commission has more recently based its ROE decisions on a combination of methods, I still recommend primary reliance on the DCF method due to the shortcomings associated with the CAPM method.

Q. PLEASE EXPLAIN WHY YOU CHOSE TO USE THE DCF AS THE PRIMARY METHOD IN YOUR ANALYSIS.

A. I have used the DCF as the primary method for several reasons. First, the DCF is appealing to investors as it is based upon the concept that the receipt of dividends in addition to the expected appreciation is the total return requirement determined by the market.[12] Second, the use of a growth rate and expected dividend yield are also strengths of the DCF, as this recognizes the time value of money and is forward-looking. Third, the use of the utility's own, or in this case, the proxy group's stock prices and growth rates directly in the calculation also causes the DCF to be industry and company specific. Finally, current inflationary and economic trends are most certainly reflected in a stock's price, which is used in determining the dividend yield, and by analysts who generate forecasted earnings growth rates. Therefore, the DCF contains the most up-to-date projected information of any model and is the superior method for determining the rate of return for the current economic market because it measures the cost of equity directly.

Q. PLEASE EXPLAIN WHY YOU CHOSE TO USE THE CAPM AS A COMPARISON IN YOUR ANALYSIS.

A. I have included a CAPM analysis only as a comparison and not as a basis for my

[12] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2020 Edition, p. 153.

recommendation because while both the CAPM and the DCF include inputs that allow the results to be specific to the utility industry, the CAPM is based on the performance of U.S. Treasury bonds and the performance of the market as measured through the S&P 500 and is company-specific only through the use of beta. Beta reflects a stock's volatility relative to the overall market, thereby incorporating an industry-specific aspect to the CAPM, but only as a measure of how reactive the industry is compared to the market as a whole. Although changes in the utility industry are more likely to be accurately reflected in the DCF, which uses the companies' actual prices, dividends, and growth rates, I have included the results of my CAPM analysis because changes in the market, whether as a whole or specific to the utility industry, affect the outcome of each method in different ways. Although I have provided the results of the CAPM as a comparison, it does have several disadvantages and should not be given comparable weight to the DCF method.

Q. EXPLAIN THE DISADVANTAGES OF THE CAPM.

A. The CAPM, and the RP method by virtue of its similarities to the CAPM, give results that indicate to an investor what the equity cost rate should be if current economic and regulatory conditions are the same as those present during the historical period in which the risk premiums were determined. This is because beta, which is the only company-specific variable in the CAPM model, measures the *historical* volatility of a stock compared to the *historical* overall market return.

Reliance on historical values is especially problematic now given the recent events that have impacted economic conditions. Although the CAPM and RP results can be useful to investors in making rational buy and sell decisions within their portfolios, the DCF method is the superior method for determining the rate of return for the current economic market and measuring the cost of equity directly. The CAPM, and similarly the RP method, are less reliable indicators because they measure the cost of equity indirectly and risk premiums vary depending on the debt and equity being compared. Additionally, regulators can never be certain that economic and regulatory conditions underlying the historical period during which the risk premiums were calculated are the same today or will be the same in the future.

Q. IS THERE ANY ACADEMIC EVIDENCE THAT QUESTIONS THE CREDIBILITY OF THE CAPM MODEL?

A. Yes. An article, "Market Place; A Study Shakes Confidence in the Volatile-Stock Theory," which appeared in the *New York Times* on February 18, 1992, summarized a CAPM study conducted by professors Eugene F. Fama and Kenneth R. French.[13] Their study examined the importance of beta, CAPM's risk factor, in explaining returns on common stock. In CAPM theory a stock with a higher beta should have a higher expected return. However, they found that the

[13] Berg, Eric N. "Market Place; A Study Shakes Confidence in the Volatile-Stock Theory" *The New York Times*, 18 Feb 1992: *nytimes.com* Web. 23 Mar 2016.

model did not do well in predicting actual returns and suggested the use of more elaborate multi-factor models.

A more recent article, "The Capital Asset Pricing Model: Theory and Evidence," which appeared in the *Journal of Economic Perspectives,* states that "the attraction of the CAPM is that it offers powerful and intuitively pleasing predictions about how to measure risk and the relation between expected return and risk. Unfortunately, the empirical record of the model is poor - poor enough to invalidate the way it is used in applications."[14] As a result, I conclude that the CAPM's relevance to the investment decision making process does not carry over into the regulatory rate setting process.

Q. PLEASE EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE RP METHOD FROM YOUR ANALYSIS.

A. The RP method is excluded because it is a simplified version of the CAPM and is subject to the same faults explained above. The RP method has a number of underlying assumptions and the most critical one, as well as the most disputed one, is the assumption that the equity risk premium is constant over the time.[15] More importantly, unlike the CAPM, the RP method does not recognize company-specific risk through beta.

[14] Fama, Eugene F. and French, Kenneth R., "The Capital Asset Pricing Model: Theory and Evidence." *Journal of Economic Perspectives* (2004): Volume 18, Number 3, pp. 25-46.

[15] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2020 Edition, pp. 167-168.

Q. EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE CE METHOD IN YOUR ANALYSIS.

A. The CE method is excluded because the choice of which companies are comparable is highly subjective, and it is debatable whether historic accounting values are representative of the future. Moreover, its historical usage in this regulatory forum has been minimal.

Q. HAVE YOU IDENTIFIED ANY SPECIFIC PROBLEMS WITH THE COMMISSION'S RECENT USE OF THE CAPM METHOD AS A FACTOR IN ESTABLISHING A RETURN ON EQUITY?

A. Yes. The Commission indicated in Aqua Pennsylvania, Inc.'s (Aqua) 2021 base rate case order that its method "for determining Aqua's ROE shall utilize both I&E's DCF and CAPM methodologies"[16] and that "I&E's DCF and CAPM produce a range of reasonableness for the ROE …",[17] which deviates from the historical Commission practice of primarily relying on the DCF. Additionally, the Commission's Columbia Water Company (Columbia Water) base rate case order relied on the results of I&E's DCF and CAPM analyses for determining Columbia Water's ROE.[18] Finally, in the most recent Pennsylvania-American Water

[16] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, p. 154 (Order Entered May 16, 2022).

[17] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, p. 178 (Order Entered May 16, 2022)..

[18] *Pa. PUC v. Columbia Water Company,* Docket No. R-2023-3040258, p. 105 (Order Entered January 18, 2024).

Company case, the Commission agreed with the ALJ's recommended ROE which was based on the average of I&E's DCF and CAPM analyses.[19]

In a report issued by Regulatory Research Associates, a group within S&P Global Market Intelligence,[20] Aqua's return on equity of 10.00% is stated as being above the national average for water utility base rate cases and above the Distribution System Improvement Charge (DSIC) authorized by the Commission of 9.80%[21] for water and wastewater utilities based on a period ended March 31, 2022. The above referenced report also states that the average return on equity for water utility base rate cases that have been completed during the first four months of 2022 was 9.63% and for the twelve months ended April 30, 2022 was 9.53% which were well below the 10.00% return on equity authorized by the Commission for Aqua. This demonstrates the unreasonable skewing of results associated with using the CAPM as a ceiling for determining a utility's return on equity.

In the Columbia Water order, the Commission noted that I&E's DCF and CAPM produced a range of reasonableness for the ROE from 7.84% to 11.09% and approved an ROE of 9.75% as reasonable and appropriate for that company,

---

[19] *Pa. PUC v. Pennsylvania-American Water Company,* Docket Nos. R-2023-30433189 & R-2023-3043190, p. 194 (Order Entered July 22, 2024).

[20] Regulatory Research Associates, "Commission authorizes management performance bonus for Aqua Pennsylvania," *S&P Global Market Intelligence*, May 16, 2022. CIQ Pro: RRA Regulatory Focus: Commission authorizes management performance bonus for Aqua Pennsylvania (spglobal.com) (Accessed January 23, 2024).

[21] PA Public Utility Commission, Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended March 31, 2022, approved at Public Meeting on August 4, 2022 at Docket No. M-2022-3032561.

which is based upon consideration of a variety of factors such as increasing inflation leading to increases in interest rates and capital costs.[22] I respectfully disagree with the Commission's basis (current inflation and interest rates) for determining Columbia Water's ROE of 9.75%. I have presented and discussed below the forecasted lower-level inflation rates, and the Federal Reserve's intention to cut interest rates in 2025-2026, which could impact inflation and debt costs during 2026, when the Companies' new rates will be in effect.

Additionally, as explained above, the CAPM should not be used as a primary method, and it should only be used as a comparison to, not as a check of, the DCF. Also, as demonstrated below, the use of the CAPM in this proceeding would result in a significant burden to ratepayers during a time of potentially increasing inflation. Therefore, I disagree with providing the CAPM comparable weight to the DCF method.

Q. PLEASE COMMENT ON CURRENT INFLATION AND INTEREST RATE CONCERNS.

A. First, while I cannot dispute the recent economic conditions with respect to increased interest rates and government bond yields, it is important to note that all companies, including regulated utilities, are impacted by high interest rates.

[22] *Pa. PUC v. Columbia Water Company,* Docket No. R-2023-3040258, pp.108-109 (Order Entered January 18, 2024).

With respect to inflation rates, per the most recent monthly Blue Chip Financial Forecasts,[23] the 2026 inflation rates by two measures are forecasted to be in the range of 2.2% to 2.8% as shown in the table below:

	Q3 2025	Q4 2025	Q1 2026	Q2 2026	Q3 2026	Q4 2026
Consumer Price Index	3.7%	3.2%	2.8%	2.5%	2.4%	2.4%
PCE Price Index	3.5%	3.0%	2.7%	2.4%	2.2%	2.2%

Potential future reductions in interest rates could have the effect of reducing debt cost rates in the capital costs in 2026, when the Companies' new rates will be in effect. Lastly, it is important to note that unlike unregulated companies, public utilities may file rate cases to address unforeseen or increased expenses, increases in the costs of borrowing, and equity and/or revenue shortfalls due to changes in market conditions.

SUMMARY OF THE COMPANY'S RESULTS

Q. WHAT ARE THE RESULTS OF THE COMPANY'S COST OF EQUITY ANALYSES?

A. Mr. D'Ascendis used the DCF, CAPM, and the RP methods in analyzing the Company's cost of equity. Additionally, Mr. D'Ascendis used the Predictive Risk Premium Method (PRPM) and the Empirical Capital Asset Pricing Model (ECAPM) in forming his recommendations under the RP and the CAPM methods,

[23] Blue Chip Financial Forecasts Vol. 44, No. 7, July 1, 2025.

respectively. Mr. D'Ascendis applied these methods using his proxy group of regulated water utilities and averaged the results of the methods for his non-price regulated proxy group. He then listed the results for each method for the regulated utility group and the average of the median and mean of the results of the methods for the non-price regulated group. Further, Mr. D'Ascendis recommended that the cost of equity be increased by 15 basis points for what he labels a "business risk adjustment due to the Company's small size. He also recommended that the cost of equity be increased by 12 basis points due to the Company incurring flotation costs when issuing common stock. Finally, Mr. D'Ascendis recommended that the cost of equity be increased by 25 basis points due to the Company's management performance. Ultimately, Mr. D'Ascendis opined that a cost of equity of 10.90% is warranted.[24]

I&E RECOMMENDATION

Q. WHAT IS YOUR RECOMMENDED COST OF COMMON EQUITY FOR YORK?

A. Based upon my analysis, I recommend a cost of common equity of 9.42%.[25]

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on the use of the DCF method. As explained above,

[24] York Statement No. 105, p. 2, line 19 through p. 5, line 2 and York Exhibit DWD-1, p. 2.
[25] I&E Exhibit No. 2, Schedule 1.

I used my CAPM result only to present to the Commission a comparison to and not as a check of my DCF results. My DCF analysis uses a spot dividend yield, a 52-week dividend yield, and five-year earnings growth forecasts.

Discounted Cash Flow

Q. PLEASE EXPLAIN YOUR DCF ANALYSIS.

A. My analysis employs the constant growth DCF model as portrayed in the following formula:

$$K = D_1/P_0 + g$$

Where:

K = Cost of equity

D_1 = Dividend expected during the year

P_0 = Current price of the stock

g = Expected growth rate

When a forecast of D_1 is not available, D_0 (the current dividend) must be adjusted by one half of the expected growth rate to account for changes in the dividend paid in period one. As forecasts for each company in my proxy group were available from Value Line, no dividends were adjusted for the purpose of my analysis.

Q. PLEASE EXPLAIN HOW YOU DEVELOPED THE DIVIDEND YIELDS USED IN YOUR DCF ANALYSIS.

A. A representative dividend yield must be calculated over a time frame that avoids

the problems of both short-term anomalies and stale data series. For my DCF analysis, the dividend yield calculation places equal emphasis on the most recent spot and the 52-week average dividend yields. The following table summarizes my dividend yield computations for the proxy group.[26]

Six-Company Proxy Group	Dividend Yield
Spot	2.94%
52-week Average	2.89%
Average	2.92%

Q. WHAT INFORMATION DID YOU RELY UPON TO DETERMINE YOUR EXPECTED GROWTH RATE?

A. I have used five-year projected growth rate estimates from Value Line, S&P, and Zacks.

Q. WHAT WERE THE RESULTS OF YOUR FORECASTED EARNINGS GROWTH RATES?

A. The expected average growth rates for my proxy group ranged from 5.04% to 9.03% with an overall average of 6.50%.[27]

[26] I&E Exhibit No. 2, Schedule 5.
[27] I&E Exhibit No. 2, Schedule 6.

Q. WHAT IS THE RESULT OF YOUR DCF ANALYSIS BASED ON YOUR RECOMMENDED DIVIDEND YIELD AND GROWTH RATE?

A. The results of my DCF analysis are calculated as follows:[28]

K	=	D_1/P_0	+	g
9.42%	=	2.92%	+	6.50%

Capital Asset Pricing Model

Q. PLEASE EXPLAIN YOUR CAPM ANALYSIS.

A. My analysis employs the traditional CAPM as portrayed in the following formula:

$$K = R_f + \beta(R_m - R_f)$$

Where:

K	=	Cost of equity
R_f	=	Risk-free rate of return
R_m	=	Expected rate of return on the overall stock market
β	=	Beta measures the systematic risk of an asset
$R_m - R_f$	=	Equity Risk Premium (ERP)

Q. WHAT IS BETA AS EMPLOYED IN YOUR CAPM ANALYSIS?

A. Beta is a measure of the systematic risk of a stock in relation to the rest of the

[28] I&E Exhibit No. 2, Schedule 7.

stock market. A stock's beta is estimated by calculating the linear regression of a stock's return against the return on the overall stock market. The beta of a stock with a price pattern identical to that of the overall stock market will equal one. A stock with a price movement that is greater than the overall stock market will have a beta that is greater than one and would be described as having more investment risk than the market. Conversely, a stock with a price movement that is less than the overall stock market will have a beta of less than one and would be described as having less investment risk than the market.

Q. HOW DID YOU DETERMINE BETA FOR YOUR CAPM ANALYSIS?

A. In estimating an equity cost rate for my proxy group of six water companies, I used the average of the betas for the companies as provided in the Value Line Investment Survey. The average beta for my proxy group is 0.83.[29]

Q. WHAT RISK-FREE RATE OF RETURN HAVE YOU USED FOR YOUR FORECASTED CAPM ANALYSIS?

A. I used the risk-free rate of return (R_f) from the projected yield on 10-year Treasury Notes. While the yield on the short-term T-Bill is a more theoretically correct parameter to represent a risk-free rate of return, it can be extremely volatile. The volatility of short-term T-Bills is directly influenced by Federal Reserve policy. At

[29] I&E Exhibit No. 2, Schedule 9.

the other extreme, the 30-year Treasury Bond exhibits more stability but is not risk-free. Long-term Treasury Bonds have substantial maturity risk associated with market risk and the risk of unexpected inflation. Long-term treasuries normally offer higher yields to compensate investors for these risks. As a result, I used the yield on the 10-year Treasury Note because it mitigates the shortcomings of the other two alternatives. Additionally, the Commission has recently recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return.[30]

The forecasted yield on the 10-year Treasury Note, as can be seen in Blue Chip Financial Forecasts, is expected to be between 4.20% and 4.30% from the third quarter of 2025 through the third quarter of 2026, and it is forecasted to be 4.00% from 2027-2031. For my forecasted CAPM analysis, I used 4.20%, which is the average of all the yield forecasts I observed.[31]

Q. HOW DID YOU DETERMINE THE RETURN ON THE OVERALL STOCK MARKET IN YOUR FORECASTED CAPM ANALYSIS?

A. To arrive at a representative expected return on the overall stock market, I observed Value Line's universe of stocks and the S&P 500. Value Line expects its

[30] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 99; *Pa. PUC v. Aqua Pennsylvania, Inc.*, Docket Nos. R-2021-3027385 & R-2021-3027386, p. 154 (Order Entered May 16, 2022); *Pa. PUC v. Columbia Water Company*, Docket No. R-2023-3040258 (Order Entered January 18, 2024). *See generally* Disposition of Cost of Common Equity, pp. 107-108; *Pa. PUC v. Pennsylvania-American Water Company*, Docket Nos. R-2023-3043189 & R-2023-3043190 (Order Entered July 22, 2024). *See generally* Disposition of Capital Asset Pricing Model (CAPM), pp. 171-172.

[31] I&E Exhibit No. 2, Schedule 10.

universe of approximately 1700 stocks to have an average yearly return of 12.97% over the next three to five years based on a forecasted dividend yield of 2.30% and a yearly index appreciation of 50%.[32] The S&P 500 Index has an average return of 12.29% over the past 99 years (1926-2024).[33] I have averaged these two figures which results in an estimated market return of 12.63%.[34]

Q. WHAT IS THE COST OF EQUITY RESULT FROM YOUR CAPM ANALYSIS?

A. The result of my analysis is as follows:[35]

K	=	R_f	+	$\beta(R_m - R_f)$
11.20%	=	4.20%	+	0.83 (12.63% - 4.20%)

Q. HAVE YOU PROVIDED AN ADDITIONAL CAPM ANALYSIS?

A. Yes. I have provided an additional CAPM analysis using Kroll's (formerly Duff & Phelps) recommended U.S. Equity Risk Premium (ERP) paired with the 20-year U.S. Treasury yield. Kroll is a trusted and publicly available source that bases their recommended ERP on current and forecasted economic and financial market conditions.

[32] I&E Exhibit No. 2, Schedule 8.
[33] I&E Exhibit No. 2, Schedule 11.
[34] I&E Exhibit No. 2, Schedule 8.
[35] I&E Exhibit No. 2, Schedule 12.

Q. WHAT IS KROLL'S CURRENT RECOMMENDED ERP?

A. As of June 11, 2025, Kroll recommends an ERP of 5.50%.

Q. WHAT IS THE CURRENT 20-YEAR U.S. TREASURY YIELD?

A. As of June 11, 2025, the 20-Year U.S. Treasury yield was 4.92%.

Q. WHAT IS THE COST OF EQUITY RESULT FROM YOUR CAPM ANALYSIS USING KROLL'S RECOMMENDED ERP AND THE 20-YEAR U.S. TREASURY YIELD?

A. The result of my analysis is as follows:[36]

K	=	R_f	+	$\beta(ERP)$
9.49%	=	4.92%	+	0.83 (5.50%)

Q. WHAT IS THE RESULT OF YOUR CAPM ANALYSIS BASED ON THE AVERAGE OF USING A FORECASTED OVERALL MARKET RETURN AND USING KROLL'S RECOMMENDED ERP AND 20-YEAR TREASURY YIELD?

A. The average of my CAPM analyses is 10.34% ((11.20% + 9.49%) ÷ 2).[37]

[36] I&E Exhibit No. 2, Schedule 12.
[37] I&E Exhibit No. 2, Schedule 12.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS REGARDING YOUR CAPM ANALYSIS?

A. Yes. As discussed earlier in my testimony, and as I&E has historically reasoned, my recommended cost of equity is based upon my DCF analysis. My CAPM analyses are only presented to the Commission as a comparison and not for recommendation purposes as the inputs are highly subjective, and other than beta, not company or industry specific.

Q. IS IT NECESSARY OR APPROPRIATE TO APPLY THE CAPM WITH SIMILAR WEIGHT TO THE DCF WHEN DETERMINING A SPECIFIC RETURN ON EQUITY DUE TO RECENT INFLATIONARY TRENDS?

A. No. My use of the DCF as a primary method in determining an appropriate return on equity sufficiently takes inflationary trends into consideration. As mentioned above, the DCF includes a spot stock price in the dividend yield calculation and analysts who generate forecasted earnings growth almost certainly take inflation into consideration as well, so it contains the most up-to-date projected information of any model. In other words, the inputs of the DCF capture all known economic factors, including inflation.

CRITIQUE OF MR. D'ASCENDIS' PROPOSED COST OF EQUITY

Q. DO YOU AGREE WITH MR. D'ASCENDIS' PROPOSED COST OF EQUITY?

A. No. I disagree with Mr. D'Ascendis' proposed cost of equity analysis for several reasons. First, I disagree with the weights given to the results of his DCF, CAPM, RP, PRPM, and ECAPM analyses in his recommendation. Second, I disagree with the use of a proxy group of companies he used in York's cost of equity calculation that are not regulated water utilities. Third, I disagree with his inclusion of a business risk adjustment, flotation cost adjustment, and performance factor adjustment. Finally, I disagree with Mr. D'Ascendis' reliance on the 30-year Treasury Bond for the risk-free rate used in his CAPM analysis.

Weights Given to the CAPM, RP, and CE Methods

Q. DO YOU AGREE WITH MR. D'ASCENDIS' RELIANCE ON THE CAPM AND RP MODELS?

A. No. While I am not opposed to providing the Commission the results of the CAPM for a point of comparison to the results of the DCF calculation, I am opposed to giving the CAPM and RP considerable weight. For the reasons discussed above, it is not appropriate to give the CAPM and RP models similar weight to the DCF as Mr. D'Ascendis has done in creating his recommended cost

of equity range.[38] As discussed above, the CAPM measures the cost of equity indirectly and can be manipulated by the time period chosen. Since the RP is a simplified version of the CAPM, it suffers these same flaws. Also, as discussed in more detail below, the results of the lesser-used ECAPM and PRPM models should also be rejected. I have not used the ECAPM because it only weights the results of the CAPM in order to flatten the Security Market Line, but it does not correct the previously discussed problems with the CAPM. I have not used Mr. D'Ascendis' Predicative Risk Premium Model, because it is not a widely accepted method and investors must have a statistical software package to use the PRPM.

Predictive Risk Premium Model

Q. WHAT IS THE PREDICTIVE RISK PREMIUM MODEL?

A. The PRPM is a method published in August 2011 by Pauline M. Ahern, Frank J. Hanley, and Richard A. Michelfelder in the article *New Approach to Estimating the Cost of Common Equity Capital for Public Utilities.*[39] Mr. D'Ascendis' PRPM requires Eviews© statistical software to compute.[40]

[38] York Statement No. 105, p. 4, line 2.
[39] Ahern, Pauline M., Hanley, Frank J., Michelfelder, Richard A. (December 2011, Volume 40, Issue 3). *New Approach to Estimating the Cost of Common Equity Capital for Public Utilities*. Journal of Regulatory Economics, pp. 261-278.
[40] York Statement No. 105, p. 26, lines 15-17.

Q. DO YOU AGREE WITH MR. D'ASCENDIS' USE OF THE PRPM?

A. No. Mr. D'Ascendis' PRPM is not a commonly used method and cannot be evaluated or recreated without the software. I am also unaware of any state that has accepted the use of the PRPM. Finally, the PRPM does not solve the problem of the RP method because it is still an indirect measure of the cost of equity, and the PRPM complicates the RP method with the introduction of a measurement that requires the use of specialized software.

Risk-Free Rate

Q. WHAT RISK-FREE RATE DID MR. D'ASCENDIS USE IN HIS RP AND CAPM MODELS?

A. Mr. D'Ascendis calculated his risk-free rate of 4.46% by using the 30-year Treasury Bonds.[41]

Q. DO YOU AGREE WITH MR. D'ASCENDIS' USE OF THE 30-YEAR TREASURY BOND TO DETERMINE THE RISK-FREE RATE?

A. No. As discussed above, long-term Treasury Bonds have substantial maturity risk associated with the market risk and the risk of unexpected inflation and normally offer higher yields to compensate investors for these risks. Using the 10-year Treasury Note is more appropriate to balance the short-term volatility risk and the

[41] York Statement No. 105, p. 34, lines 8-13.

long-term inflation risk. Further, as noted above, the Commission has recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return.

Empirical Capital Asset Pricing Model

Q. WHAT DOES MR. D'ASCENDIS CLAIM IS THE BASIS FOR HIS USE OF THE ECAPM?

A. Mr. D'Ascendis opined that the Security Market Line (SML) defined by the CAPM is not as steeply sloped as the predicted SML.[42] Mr. D'Ascendis used a formula to account for the systematic risk that is not accounted for with beta in the CAPM formula. This methodology, called ECAPM, uses a factor, alpha, to account for the additional systematic risk not captured by beta.

Q. DO YOU AGREE WITH MR. D'ASCENDIS' USE OF THE ECAPM?

A. No. The use of the ECAPM in estimating the cost of capital does not increase the validity of the result. Instead, it injects another measure of subjectivity to the CAPM in an attempt to make the Security Market Line more accurate. The ECAPM reduces the purpose of the beta, which is the only company-specific variable in the CAPM model. This additional layer of subjectivity provides an even stronger basis to rely on the DCF, as I have done, as the primary method to calculate a utility's cost of equity. Additionally, I am not aware of any instances

[42] York Statement No. 105, p. 31, line 22 through p. 32, line 1.

where a utility commission overseeing base rate proceedings explicitly relied on the ECAPM when determining an appropriate cost of equity for a regulated utility. In summary, the use of the ECAPM in estimating the cost of capital does not increase the validity of the result but merely adds another difficult to measure factor to the CAPM. The ECAPM attempts to correct the CAPM's inability to accurately predict the cost of capital but does so through an additional factor that corrects none of the underlying problems of the model.

Domestic Non-Price Regulated Companies

Q. DOES MR. D'ASCENDIS RELY ON ANY MARKET DATA INPUTS SPECIFIC TO COMPANIES THAT ARE NOT REGULATED UTILITIES?

A. Yes. Mr. D'Ascendis asserted that in the *Hope* and *Bluefield* cases, the U.S. Supreme Court did not specify that comparable risk companies had to be utilities. Consequently, he assembled a proxy group consisting of 36 non-price regulated firms which he asserts are comparable in terms of total risk to the Utility Proxy Group.[43] After forming his proxy group of 36 non-price regulated firms, Mr. D'Ascendis calculated common equity costs with data inputs specific to these companies using the DCF, RP, and CAPM methods.[44] The average of the mean and median results of these analyses of 11.51% was incorporated into Mr. D'Ascendis' final calculation of York's return on equity claim of 10.90%.[45]

[43] York Statement No. 105, p. 37, line 1 through p. 39, line 17.
[44] York Exhibit DWD-7, p. 1.
[45] York Exhibit DWD-1, p. 2.

Q. DO YOU AGREE WITH MR. D'ASCENDIS' APPROACH OF USING THE MARKET DATA OF NON-UTILITY COMPANIES TO CALCULATE YORK'S RETURN ON EQUITY?

A. No. The process of choosing a proxy group of non-utility companies similar in risk to York is highly speculative and subjective. In effect, Mr. D'Ascendis blends the CE approach into the DCF, RP, and CAPM models. As stated earlier, the Commission has ruled on the use of the CE approach, specifically, the use of non-utility companies in comparable groups, and stated:

> The use of nonregulated companies as a comparable group for regulated firms requires numerous unsupportable assumptions which results in a highly speculative finding.[46]

Additionally, in the 2018 UGI Utilities, Inc. – Electric Division base rate case, the Commission made the following comments regarding the CE method, specifically, the use of non-utility companies in comparable groups, and stated,[47]

> With respect to the CE method, as noted above, this cost of equity method utilizes data for non-regulated firms. Thus, by its very nature, determining which companies are comparable is entirely subjective. In addition, the record indicates that the companies UGI utilized in its CE group results in the selection of companies such as Coca-Cola Company, Kellogg Company, and Walmart Stores, Inc.….Each of these companies operate in industries that are very different from a utility company and have significantly more competition, which would require a higher return for the associated additional risk.

---

[46] *Pennsylvania Public Utility Commission v. Philadelphia Electric Co.* 33 PUR 4th 319, 341 (Pa PUC 1980).

[47] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order entered October 25, 2018), p. 105.

If the non-price regulated company proxy group is truly similar in total risk to York, I would expect to see similar results in the calculation of the DCF, RP, and CAPM between the Water Utility and Non-Price Regulated Company proxy groups used by Mr. D'Ascendis. However, all three Non-Price Regulated Company proxy groups' results were higher. This clearly demonstrates the Commission's ruling that "the use of non-regulated companies as a comparable group for regulated firms …. results in a highly speculative finding."

Business Risk Adjustment

Q. WHAT BUSINESS RISK ADJUSTMENT HAS MR. D'ASCENDIS PROPOSED?

A. Mr. D'Ascendis added 15 basis points to his cost of common equity because he opined that smaller companies are less able to cope with significant events affecting sales, revenues, or earnings. He further stated that the loss of revenue from a few larger customers would have a greater effect on a small company. Mr. D'Ascendis relied upon technical literature including Kroll's Cost of Capital Navigator – U.S. Guide to Cost of Capital, "Size as a Predictor of Equity Returns," a Fama and French study entitled "The Capital Asset Pricing Model: Theory & Evidence," and Professor Eugene Brigham's textbook entitled "Fundamentals of Finance Management." Mr. D'Ascendis quantified his size adjustment based on size premiums for portfolios of New York Stock Exchange, American Stock Exchange, and NASDAQ listed companies ranked by deciles for the 1926 to 2024

period. While Mr. D'Ascendis' proxy group companies fell in the 6th decile, he asserted that York fell in the 9th decile for size. He stated that while this indicates an upward equity risk premium adjustment of 73 basis points, he chose an upward adjustment of 15 basis points. Finally, Mr. D'Ascendis points to a 2019 Commission order where the Commission considered a size adjustment.[48]

Q. DO YOU AGREE WITH MR. D'ASCENDIS' BUSINESS RISK ADJUSTMENT?

A. No. Mr. D'Ascendis' proposed business risk adjustment is unnecessary because the technical literature he cited supporting investment adjustments related to the size of a company is not specific to the utility industry; therefore, it has no relevance in this proceeding. In addition, any expense impact resulting from the lesser buying power of a smaller utility is reflected in the revenue requirement and the dollar-for-dollar recovery that applies to expenses. To apply an additional size adjustment to a smaller regulated utility would only duplicate the burden to ratepayers. Finally, Mr. D'Ascendis also acknowledges that York neither gained nor lost any major account customers during the years 2022, 2023, and 2024.[49]

[48] York Water Statement No. 105, p. 40, ln. 16 through p. 44, ln. 23.
[49] I&E Exhibit No. 2, Schedule 15.

Q. IS THERE ACADEMIC EVIDENCE THAT SUPPORTS YOUR CONCLUSION THAT THE BUSINESS RISK ADJUSTMENT FOR SIZE IS NOT APPLICABLE TO UTILITY COMPANIES?

A. Yes. In the article "Utility Stocks and the Size Effect: An Empirical Analysis," Dr. Annie Wong concludes,

> The objective of this study is to examine if the size effect exists in the utility industry. After controlling for equity values, there is some weak evidence that firm size is a missing factor from the CAPM for the industrial but not for utility stocks. This implies that although the size phenomenon has been strongly documented for the industriales, the findings suggest that there is no need to adjust for the firm size in utility rate regulation.[50]

York has presented no evidence to support application of a non-utility study regarding a size adjustment for risk to a utility setting. Absent any credible article to refute Dr. Wong's findings, Mr. D'Ascendis' size adjustment to his cost of common equity results should be rejected. Furthermore, the Commission has rejected the application of a size adjustment to the cost of equity calculation.[51]

Q. DID THE COMMISSION AWARD A SIZE ADJUSTMENT IN THE REFERENCED COMMISSION ORDER FOR CITIZENS' ELECTRIC COMPANY?

A. No. The Commission did not, in fact, award an explicit 100-basis point size

[50] Dr. Annie Wong, "Utility Stocks and the Size Effect: An Empirical Analysis," *Journal of Midwest Finance Association* 1993, pp. 95-101.

[51] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 100.

adjustment as the Commission determined that there was not enough evidence as to whether size is specifically a risk for utilities:

> Consistent with the foregoing discussion, like the ALJs, we shall not specify an exact size adjustment. Instead, we shall adopt the ALJs' recommendation that Citizens' be awarded a DCF cost of common equity of 9.49%. In our view, this cost of equity is reasonable and strikes an appropriate balance by recognizing the general inverse relationship between a company's size and its risk, while acknowledging that there is not substantial evidence in the record to prove that an explicit size basis point adjustment is warranted in this case.[52]

Q. BASED ON THE COMPANY'S FILED RATE BASE AND CLAIMED CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 15 BASIS POINTS TO THE COST OF EQUITY?

A. The example below illustrates the impact of 15 additional basis points to the Company's cost of equity:

[52] *Pa. PUC v. Citizens Electric Company of Lewisburg, PA;* Docket No. R-2019-3008212 (Order Entered April 29, 2020). *See generally* Disposition of Cost of Common Equity, pp. 103-104.

The York Water Company - Water Operations	
Claimed Equity Percentage of Capital Structure	54.58%
Additional Basis Points to the Calculated Cost of Equity for a "Business Risk Adjustment"*	0.15%
Claimed Rate Base**	$444,597,217
Impact Prior to Gross Up (0.5458 x 0.0015 x $444,597,217)	$363,992
Gross Revenue Conversion Factor***	1.39002887
Total Impact ($363,992 x 1.39002887)	**$505,959**
*York Statement No. 105, Schedule DWD-1, Page 2. **York Exhibit FV-1, Page 3. ***I&E Exhibit No. 2, Schedule 13	

The York Water Company - Wastewater Operations	
Claimed Equity Percentage of Capital Structure	54.58%
Additional Basis Points to the Calculated Cost of Equity for a "Business Risk Adjustment"*	0.15%
Claimed Rate Base**	$54,685,380
Impact Prior to Gross Up (0.5458 x 0.0015 x $54,685,380)	$44,771
Gross Revenue Conversion Factor***	1.37762391
Total Impact ($44,771 x 1.37762391)	**$61,678**
*York Statement No. 105, Schedule DWD-1, Page 2. **York Exhibit FVIII-WA, Schedule B. ***I&E Exhibit No. 2, Schedule 13	

In this example, an addition of 15 basis points to the cost of equity would force ratepayers to fund unwarranted additional amounts of $505,959 and $61,678 annually for water and wastewater customers, respectively.

Q. HAS MR. D'ASCENDIS IDENTIFIED ANY SIGNIFICANT BUSINESS RISKS OTHER THAN SIZE THAT YORK FACES, BUT THE REST OF THE UTILITY PROXY GROUP DOES NOT?

A. No. Mr. D'Ascendis indicates the business risks that the Company faces are similar to the rest of his Utility Proxy Group, with the exception of its smaller size.[53]

Flotation Cost Adjustment

Q. WHAT IS A FLOTATION COST?

A. Flotation costs are the expenses incurred when a company issues securities such as stocks or bonds when raising capital. These expenses can include legal fees, underwriting fees, auditing fees, administrative costs, or any other necessary and justifiable cost in the issuance process.

[53] I&E Exhibit No. 2, Schedule 14.

Q. EXPLAIN THE FLOTATION COST ADJUSTMENT MR. D'ASCENDIS IS PROPOSING IN THIS PROCEEDING.

A. Mr. D'Ascendis added 12 basis points to his cost of common equity for a flotation cost adjustment. He opines that York should be able to recover flotation costs in the form of raising the common equity cost rate, as these costs are a permanent loss of investment to the utility and cannot be recovered without an adjustment to the common equity cost rate.[54]

Q. DO YOU AGREE WITH MR. D'ASCENDIS' FLOTATION COST ADJUSTMENT?

A. No. Although flotation costs effectively reduce the amount of funds a company actually receives to finance its capital projects, and therefore should be recoverable, they are operating expenses that should be recovered via normalization similar to the treatment of rate case expense, not factored in as an adjustment to the requested return on equity.

Q. ARE YOU RECOMMENDING A NORMALIZED FLOTATION COST EXPENSE IN THIS PROCEEDING?

A. Yes.

[54] York Statement No. 105, p. 44, ln. 17 through p. 47, ln. 4.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. As stated above, incurred flotation costs should be recovered as a normalized expense and not added to the cost of equity. Mr. Keller (I&E Statement No. 1) details the calculation which results in an increase to York's O&M expenses of $187,140 based on the schedule Mr. D'Ascendis provided outlining the dates of the Company's equity offerings with the associated total flotation costs to date.[55]

Q. BASED ON THE COMPANY'S FILED RATE BASE AND CLAIMED CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 12 BASIS POINTS TO THE COST OF EQUITY?

A. The example below illustrates the impact of 12 additional basis points to the Company's cost of equity:

[55] York Exhibit DWD-9.

The York Water Company - Water Operations	
Claimed Equity Percentage of Capital Structure	54.58%
Additional Basis Points to the Calculated Cost of Equity for a "Flotation Cost Adjustment"*	0.12%
Claimed Rate Base**	$444,597,217
Impact Prior to Gross Up (0.5458 x 0.0012 x $444,597,217)	$291,193
Gross Revenue Conversion Factor***	1.39002887
Total Impact ($291,193 x 1.39002887)	**$404,767**

*York Statement No. 105, Schedule DWD-1, Page 2.
**York Exhibit FV-1, Page 3.
***I&E Exhibit No. 2, Schedule 13

The York Water Company - Wastewater Operations	
Claimed Equity Percentage of Capital Structure	54.58%
Additional Basis Points to the Calculated Cost of Equity for a "Flotation Cost Adjustment"*	0.12%
Claimed Rate Base**	$54,685,380
Impact Prior to Gross Up (0.5458 x 0.0012 x $54,685,380)	$35,817
Gross Revenue Conversion Factor***	1.37762391
Total Impact ($35,817 x 1.37762391)	**$49,342**

*York Statement No. 105, Schedule DWD-1, Page 2.
**York Exhibit FVIII-WA, Schedule B.
***I&E Exhibit No. 2, Schedule 13

In this example, an addition of 12 basis points to the cost of equity would force ratepayers to fund unwarranted additional amounts of $404,767 and $49,342 annually for water and wastewater customers, respectively.

Performance Factor Adjustment

Q. WHAT PERFORMANCE FACTOR ADJUSTMENT HAS MR. D'ASCENDIS PROPOSED?

A. Mr. D'Ascendis explains that his 10.90% cost of equity recommendation includes 25 basis points in consideration of the Company's management performance.[56] He relies upon the direct testimony of Company witness Joseph T. Hand to support the claim for additional basis points.[57]

Q. SUMMARIZE MR. HAND'S TESTIMONY REGARDING THE COMPANY'S MANAGEMENT PERFORMANCE.

A. Mr. Hand claims York Water is committed to providing safe, dependable, and high-quality water and wastewater services that meets or exceeds customer expectations, as well as providing these services at a cost to customers that allows the Company to provide a reasonable rate of return on investment to its shareholders.[58] Throughout his testimony, he discusses the Company's various achievements and other efforts, such as the Company's Low Income Customer

[56] York Water Statement No. 105, p. 4, lines 10-13.
[57] York Water Statement No. 1.
[58] York Water Statement No. 1, p. 5, lines 6-9.

Assistance Program and recent acquisition activity. Ultimately, Mr. Hand concludes that York Water is superior in its overall effectiveness and provides exceptional service to its customers at an exceptional value, which should be recognized in the Company's return on equity.[59]

Q. DO YOU AGREE THAT THE COMPANY'S MANAGEMENT PERFORMANCE SHOULD BE CONSIDERED WHEN DETERMINING THE COMPANY'S RETURN ON EQUITY?

A. No. First, many of the topics presented by the Company fall within the categories of reliability, customer satisfaction, and safety that are required of every public utility company under 66 Pa C.S.A. §1501. Additionally, the Company passes capital expenditures to its ratepayers via base rates, or it can utilize a DSIC for capital expenditure recovery. Further, if the Company is effective at controlling operating and maintenance costs, those savings should flow through to ratepayers and/or investors. These savings would likely be offset by any consideration of additional basis points for management performance as ratepayers would have to fund the additional costs. This defeats the purpose of any cost cutting measures to benefit ratepayers.

[59] York Water Statement No. 1, p. 45, lines 16-18.

Q. ARE YOU AWARE OF ANY COMPANIES THAT HAVE RECENTLY RECEIVED ADDITIONAL BASIS POINTS IN RECOGNITION OF MANAGEMENT PERFORMANCE?

A. Yes. The Commission recently awarded Aqua Pennsylvania, Inc. (Aqua) an addition of 25 basis points for its management performance efforts.[60] However, it is important to recognize that this addition was based specifically on Aqua rescuing troubled water and wastewater systems at the Commission's request. The Commission stated:[61]

> We specifically recognize Aqua's efforts and willingness to quickly provide emergency aid to various water and wastewater systems that needed substantial improvement. Aqua has often provided this emergency aid on short notice and at the request of the Commission or other parties to protect the public from egregious health and safety threats and to protect the Commonwealth's drinking water resources from catastrophic damage.

Q. DOES THE COMMISSION'S PAST ISSUANCE OF ADDITIONAL EQUITY POINTS TO RECOGNIZE MANAGEMENT PERFORMANCE MEAN THAT THE COMPANY SHOULD ALSO RECEIVE AN ADJUSTED RETURN ON EQUITY IN THIS PROCEEDING?

A. No. The issuance of equity points to recognize management performance should be analyzed on a case-by-case basis. The situation in the Aqua proceeding as

[60] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 168-173 (Order Entered May 16, 2022).

[61] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 169 (Order Entered May 16, 2022).

discussed above was very specific to Aqua acquiring troubled water and wastewater systems and preventing health and safety concerns regarding drinking water.

Q. BASED ON THE COMPANY'S FILED RATE BASE AND CLAIMED CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 25 BASIS POINTS TO THE COST OF EQUITY?

A. The example below illustrates the impact of 25 additional basis points to the Company's cost of equity:

The York Water Company - Water Operations	
Claimed Equity Percentage of Capital Structure	54.58%
Additional Basis Points to the Calculated Cost of Equity for a "Performance Factor Adjustment"*	0.25%
Claimed Rate Base**	$444,597,217
Impact Prior to Gross Up (0.5458 x 0.0025 x $444,597,217)	$606,653
Gross Revenue Conversion Factor***	1.39002887
Total Impact ($606,653 x 1.39002887)	**$843,265**

*York Statement No. 105, Schedule DWD-1, Page 2.
**York Exhibit FV-1, Page 3.
***I&E Exhibit No. 2, Schedule 13

The York Water Company - Wastewater Operations	
Claimed Equity Percentage of Capital Structure	54.58%
Additional Basis Points to the Calculated Cost of Equity for a "Performance Factor Adjustment"*	0.25%
Claimed Rate Base**	$54,685,380
Impact Prior to Gross Up (0.5458 x 0.0025 x $54,685,380)	$74,618
Gross Revenue Conversion Factor***	1.37762391
Total Impact ($74,618 x 1.37762391)	**$102,796**

*York Statement No. 105, Schedule DWD-1, Page 2.
**York Exhibit FVIII-WA, Schedule B.
***I&E Exhibit No. 2, Schedule 13

In this example, an addition of 25 basis points to the cost of equity would force ratepayers to fund unwarranted additional amounts of $843,265 and $102,796 annually for water and wastewater customers, respectively.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED PERFORMANCE FACTOR ADJUSTMENT IN DETERMINING YORK'S RETURN ON EQUITY?

A. I am aware that under 66 Pa. C.S. § 523 the Commission has authority to *consider* a utility's performance, however, it is not mandatory that the Commission grant additional basis points to the ROE.[62] Ultimately, true strong management performance is earning a higher return through efficient use of resources and cost cutting measures. The greater net income resulting from cost savings and true efficiency in management and operations is available to be passed on to both ratepayers and shareholders. I do not believe that York, or any utility, should be gifted additional basis points for doing what they are required to do to provide adequate, efficient, safe, and reasonable service.[63] For these reasons, I recommend that any addition of basis points to the cost of equity for management performance be disallowed.

[62] 66 Pa. C.S. § 523(a).
[63] *See* 66 Pa. C.S. § 1501.

OVERALL RATE OF RETURN RECOMMENDATION

Q. WHAT IS THE COMPANY'S PROPOSED OVERALL RATE OF RETURN?

A. The Company's proposed overall rate of return is 8.01%.[64]

Q. WHAT IS I&E'S RECOMMENDED OVERALL RATE OF RETURN?

A. I recommend an overall rate of return for the Company of 7.20%.[65]

Q. DO YOU HAVE ANY FINAL COMMENTS REGARDING THE COMPANY'S PROPOSED COST OF EQUITY AND OVERALL RATE OF RETURN?

A. Yes. First, when asked, Mr. D'Ascendis indicated he was unaware if any water utilities throughout the United States were granted a Commission authorized return of 10.90% or higher cost of common equity in the past two years.[66]

Second, York's requested return on common equity is 115 basis points higher than the Commission's approved DSIC rate of 9.75%[67] for water and wastewater companies. My understanding is that the DSIC rate is designed to encourage its use and to incentivize accelerated pipeline replacement and

[64] York Statement No. 105, p. 3, line 1.
[65] I&E Exhibit No. 2, Schedule 1.
[66] I&E Exhibit No. 2, Schedule 16.
[67] PA Public Utility Commission, Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended June 17, 2025, p. 27, approved at Public Meeting on July 24, 2025 at Docket No. M-2025-3055266.

infrastructure upgrades to bring the existing aging infrastructure closer to meeting safety and reliability requirements in between base rate filings. Additionally, the DSIC rate establishes a benchmark above which a utility company is considered "overearning." To recommend a cost of equity that is above the DSIC rate in this base rate proceeding is inappropriate and not in the public interest.

Third, a very recent paper from the American Economic Liberties Project[68] written in January 2025 expresses many good points explaining how and why the returns on equity for investor-owned utilities are irrationally high. A few of the points this paper argues is that (1) over the past decade, utilities have been awarded ROEs that are roughly double what is "just and reasonable," (2) although regulated utilities enjoy lower risk than the market as a whole, authorized ROEs are notably higher than what is projected for the overall market, and (3) the author challenges the usefulness of the RP and CE methods used in calculating ROEs and notes that in 2022, the Federal Energy Regulatory Commission began to prohibit the use of these models.

Finally, while I am aware of the rising costs of capital due to current economic conditions, I believe it is important not to overburden ratepayers, especially considering York is requesting a record return on equity to apply to its equity heavy capital structure. Throughout my testimony, I provided the financial

[68] Mark Ellis, "Rate of Return Equals Cost of Capital: A Simple, Fair Formula to Stop Investor-Owned Utilities From Overcharging the Public," *American Economic Liberties Project,* January 2025.

impact each of Mr. D'Ascendis's adders to his calculated return on equity would have on ratepayers, which are summarized below:

	Water Operations	Wastewater Operations
15 Basis Point "Business Risk Adjustment"	$ 505,959	$ 61,678
12 Basis Point "Flotation Cost Adjustment"	$ 404,767	$ 49,342
25 Basis Point "Performance Factor Adjustment"	$ 843,265	$ 102,796
Total	$ 1,753,991	$ 213,816

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

BUREAU OF INVESTIGATION AND ENFORCEMENT INTERROGATORY
I&E-RR-12-D

Provide the calculations and supporting documentation for the gross revenue conversion factors (to include taxes, uncollectibles, etc.) for both water and wastewater operations.

RESPONDENT:

M. E. Poff
CFO

DATE:

July 18, 2025

RESPONSE:

For water operations, the gross revenue conversion factor consists of the following:

	100.00%
Late charges of 0.2262% calculated on Exhibit No. HII-2-16;	-0.2262%
Uncollectibles of 0.6601% calculated on Exhibit No. HIII-2-2;	-0.6601%
Assessments of 0.676148% presented on Exhibit No. HIV-15-4;	-0.676148%
Subtotal	98.437552%
State income taxes of 7.49% based on the current rate in effect for 2026 (98.437552% x 7.49%)	-7.3730%
Subtotal	91.064552%
Federal income tax of 21.0% based on the current rate in effect. (91.064552% x 21.0%)	-19.1236%
Conversion Factor	71.940952%

For wastewater operations, the gross revenue conversion factor consists of the following:

	100.00%
Assessments of 0.676148% presented on Exhibit No. HIV-15-4W;	-0.676148%
Subtotal	99.323852%
State income taxes of 7.49% based on the current rate in effect for 2026 (99.323852% x 7.49%)	-7.4394%

Subtotal	91.884452%
Federal income tax of 21.0% based on the current rate in effect.	
(91.884452% x 21.0%)	-19.2957%
Conversion Factor	72.588752%

BUREAU OF INVESTIGATION AND ENFORCEMENT INTERROGATORY I&E-RR-3-D

Reference York Statement No. 105, page 8, line 9 through page 10, line 21. Identify any business risks the Company faces that do not apply to the rest of the companies in the Proxy Group.

RESPONDENT:

D. W. D'Ascendis
ScottMadden, Inc.

DATE:

June 25, 2025

RESPONSE:

The cited portion above is a general statement regarding the business risks of water and wastewater companies. While York Water faces similar business risks to the Utility Proxy Group, it is not identical to the Utility Proxy Group due to its smaller relative size. Because of this, Mr. D'Ascendis made an upward adjustment to the indicated ROE range as described at pages 40 through 44 of York Statement No. 105.

BUREAU OF INVESTIGATION AND ENFORCEMENT INTERROGATORY I&E-RR-5-D

Reference York Water Statement No. 105, page 41, lines 2-4. Identify all major account customers lost and gained by year for the following years: 2022, 2023, and 2024.

RESPONDENT:

D. W. D'Ascendis
ScottMadden, Inc.

DATE:

June 25, 2025

RESPONSE:

The Company neither gained nor lost any major account customers during the years 2022, 2023, and 2024. Mr. D'Ascendis notes that the discussion on pages 40 through 42 of York Water Statement No. 105 is a general statement. Future conditions may be different than recent historical trends.

BUREAU OF INVESTIGATION AND ENFORCEMENT INTERROGATORY I&E-RR-9-D

Reference York Water Company Statement No. 105, p. 47, lines 20-21:

A. State whether Mr. D'Ascendis is aware of any regulated water utilities throughout the United States that have been granted a Commission authorized 10.90% or higher return on common equity in the past two years.

B. If the answer to Part A above is yes, state which company/companies have been authorized such a return on common equity and in what jurisdiction(s).

RESPONDENT:

D. W. D'Ascendis
ScottMadden, Inc.

DATE:

June 25, 2025

RESPONSE:

A. Mr. D'Ascendis has not conducted an exhaustive study of all Commission orders, but he is not aware of any instances in the past two years where any U.S. regulatory commission approved an ROE of 10.90% or higher in a base rate proceeding for a water utility.

B. Not applicable.

INTRODUCTION OF WITNESS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Drew Breuning. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME DREW BREUNING WHO IS RESPONSIBLE FOR THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 2 AND THE SCHEDULES IN I&E EXHIBIT NO. 2?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of York Water Company (York or Company) witnesses Dylan W. D'Ascendis (York Statement No. 105-R). I will also address the Company's performance factor adjustment claim discussed by York witness Joseph T. Hand (York Statement No. 1-R).

SUMMARY OF MR. D'ASCENDIS' REBUTTAL TESTIMONY

Q. SUMMARIZE MR. D'ASCENDIS' RESPONSE IN REBUTTAL TESTIMONY TO YOUR RATE OF RETURN RECOMMENDATIONS.

A. First, Mr. D'Ascendis provides an updated proxy group from what he employed in his direct testimony. Mr. D'Ascendis disputes my recommendations regarding an overall fair rate of return. He claims that I failed to consider the results of cost of equity models other than the Discounted Cash Flow (DCF) model. He criticizes my application of the Capital Asset Pricing Model (CAPM), claiming that I have incorrectly relied on the 10-year Treasury Bond for my risk-free rate and have not employed the Empirical CAPM (ECAPM). Mr. D'Ascendis also claims that I fail to account for York's size-specific risk and disagrees with my exclusion of his flotation cost and management performance adjustments to his proposed return on equity.[1] Finally, Mr. D'Ascendis takes issue with my dismissal of his Non-Price Regulated Proxy Group.[2]

UPDATED PROXY GROUP

Q. HAS MR. D'ASCENDIS CHANGED THE UTILITY PROXY GROUP FROM HIS DIRECT TESTIMONY?

A. Yes. Mr. D'Ascendis has removed H2O America (HTO, formerly known as SJW Group) from his Utility Proxy Group, citing their recent acquisition of

[1] York Statement No. 105-R, p. 6, lines 12-17.
[2] York Statement No. 105-R, p. 43, lines 12-13.

approximately $540 million of water and wastewater assets from Quadvest. He then adds Global Water Resources, Inc. (GWRS) to his Utility Proxy Group.[3]

Q. DO YOU AGREE WITH THE CHANGES MR. D'ASCENDIS MADE TO HIS UTILITY PROXY GROUP?

A. No. In my opinion, the acquisition of $540 million worth of Quadvest system assets into H2O America's current $6.4 billion of water utility assets is not significant enough to warrant the removal of a company from a proxy group. I do not believe this is a unique event as most larger water utilities, including a majority of the ones in our proxy groups, have been regularly acquiring smaller water and wastewater systems over the past few years. Additionally, Mr. D'Ascendis used Value Line's Small and Mid-Cap Edition to find his replacement company, and selected GWRS, which is significantly smaller than any other company in our previously agreed upon Utility Proxy Group. Finally, it is worth noting that despite this change, Mr. D'Ascendis does not change his recommended return on equity of 10.90%.[4]

[3] York Statement 105-R, p. 4, lines 1-10.
[4] York Statement 105-R, p. 5, lines 2-3.

DISCOUNTED CASH FLOW

Q. SUMMARIZE MR. D'ASCENDIS' REBUTTAL TESTIMONY REGARDING YOUR DCF ANALYSIS.

A. Mr. D'Ascendis opines that I have inappropriately relied solely on the DCF model for my cost of equity recommendation.[5] Next, he misrepresents my direct testimony by stating that I concede that different ROE models are commonly considered. Then, Mr. D'Ascendis argues that market-to-book (M/B) ratios over the past decade have increased significantly for the water industry and likely cause the DCF results to understate the investor-required return. He argues that the difference between the market value (on which investors evaluate and receive their returns), and the book value (on which regulators authorize returns), will cause the market-based results of the DCF, which are applied to the book value capital structure, to understate the cost of equity.[6] Then, Mr. D'Ascendis presents four cases where he claims the Commission has considered multiple cost of equity models.[7] Finally, although Mr. D'Ascendis is not advocating for a leverage adjustment to the results of the DCF, he claims he provided the discussion to demonstrate the model's limitations and support the use of multiple models.[8]

[5] York Statement No. 105-R, p. 7, lines 2-5.
[6] York Statement No. 105-R, p. 16-21.
[7] York Statement No. 105-R, p. 23-25.
[8] York Statement No. 105-R, p. 21, lines 6-13.

ALLEGED SOLE RELIANCE ON THE DCF

Q. PLEASE RESPOND TO MR. D'ASCENDIS' ASSERTION THAT YOU RELIED SOLELY ON THE DCF.

A. As stated in my direct testimony, while my recommendation was based on the results of my DCF analysis, I also employed the CAPM only as a comparison because the DCF method is the most reliable.[9] The DCF method has the most wide-spread regulatory acceptance, and while the Commission has more recently based its ROE decisions on a combination of methods, I still stand by the method of using the DCF with a CAPM comparison.

Q. DOES MR. D'ASCENDIS MISREPRESENT YOUR DIRECT TESTIMONY REGARDING YOUR RECOMMENDATION OF ROE MODELS?

A. Yes, he does. Mr. D'Ascendis claims that I concede in my direct testimony that four ROE models (the DCF, CAPM, RP, and CE methods) are commonly *considered* in the estimation of the ROE.[10] As stated in my direct testimony, these models are merely the most commonly *presented* methods, and not all of these methods are commonly considered by the Commission for ratemaking purposes. I then elaborated on the theoretical basis for each model, provided reasoning on why the RP and CE methods were excluded from my analysis, and stated that the CE method had minimal historical usage in regulatory matters. Additionally, I

[9] I&E Statement No. 2, p. 19-21.
[10] York Statement No. 105-R, p. 7, ln. 17-20.

listed the issues associated with the use of the CAPM, although I still provide its results as a comparison in accordance with the Commission's recent interest in its use.[11] I do not concede, as I cannot confirm that all four models listed in my direct testimony are commonly considered as part of the ratemaking process.

Q. WHICH CASES DOES MR. D'ASCENDIS MENTION WHERE HE CLAIMS THE COMMISSION HAS CONSIDERED MULTIPLE COST OF EQUITY MODELS?

A. Mr. D'Ascendis mentions the 2013 Columbia Water Company (Columbia Water),[12] the 2014 Emporium Water Company (Emporium),[13] the 2021 Aqua Pennsylvania, Inc., (Aqua),[14] and the 2023 Columbia Water[15] cases to suggest the Commission has considered multiple cost of common equity models.[16]

Q. WHAT COMMENTS DO YOU HAVE REGARDING THE CASES MR. D'ASCENDIS MENTIONS?

A. First, within the citation Mr. D'Ascendis presents regarding the 2013 Columbia Water case, the Commission specifically states that it used the DCF method as the foundation in determining the cost of equity.[17] Any adjustments to the cost of

[11] I&E Statement No. 2, p. 21-26.
[12] *Pa. PUC v. The Columbia Water Company*, Docket No. R-2013-2360798, Order Entered January 23, 2014.
[13] *Pa. PUC v. Emporium Water Company*, Docket No. R-2014-2402324, Order Entered January 28, 2015.
[14] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, Order entered May 16, 2022.
[15] *Pa. PUC v. Columbia Water Company.,* Docket No. R-2023-3040258, Order entered January 18, 2024.
[16] York Statement No. 105-R, p. 23-25.
[17] York Statement No. 105-R, p. 23, lines 28-31.

equity after the fact are at the Commission's discretion and independent of the result of any other cost of equity model. Regarding the Emporium case, the Commission simply summarized the recommendations presented by OCA, I&E, and Emporium; it did not specifically comment on which model(s) it relied on.[18] Regarding the Aqua case, as I stated in my direct testimony, Aqua's return on equity of 10.00% is above the national average for water utility base rate cases and above the Distribution System Improvement Charge (DSIC) authorized by the Commission of 9.65%[19] for water and wastewater utilities based on the year ended March 31, 2023, issued at the recent Public Meeting held July 13, 2023, which demonstrates the problem associated with using the CAPM as a ceiling for determining a utility's return on equity. Finally, regarding the 2023 Columbia Water Company (Columbia) case, the Commission made the following statements indicating they continue to employ the DCF as the primary method in determining an appropriate ROE while relying on the CAPM only minimally as a comparison:[20]

"We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation."

And:

---

[18] York Statement No. 105-R, p. 24, lines 6-24.

[19] PA Public Utility Commission, Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended March 31, 2023, p. 27, approved at Public Meeting on July 13, 2023 at Docket No. M-2023-3041106.

[20] *Pa. PUC v. Columbia Water Company,* Docket No. R-2023-3040258, Order entered January 18, 2024.

"As such, where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our ROE determination."

It is further important to recognize that the Commission used "informed judgement" based on I&E's DCF and CAPM methodologies while rejecting the methodologies presented by the company.

Additionally, using the high results of the CAPM in this proceeding would result in a significant burden to ratepayers in the aftermath of the recent high levels of inflation.[21] Finally, for the reasons listed above and in my direct testimony, I still stand by the use of the DCF as the primary method of determining the appropriate ROE and providing the CAPM only as a comparison.

MARKET-TO-BOOK RATIO

Q. WHAT DOES MR. D'ASCENDIS CLAIM REGARDING MARKET-TO-BOOK RATIOS IN THIS PROCEEDING?

A. He opines that an M/B ratio above 1.0 causes the market based DCF to understate the return required by investors.[22]

[21] I&E Statement No. 2, p. 26, ln. 15 through p. 27, ln. 10.
[22] York Statement No. 105-R, p. 16, ln. 9 through p. 17, ln. 9.

Q. DOES A MARKET-TO-BOOK RATIO ABOVE ONE (1.0) CAUSE THE DCF TO INCORRECTLY ESTIMATE THE INVESTOR-REQUIRED RETURN ON EQUITY?

A. No. Although there are often differences between the book value and market value, Mr. D'Ascendis' assertion that the difference causes the DCF to potentially undervalue the rate of return assumes that investors are unaware of the difference. The forecasted growth rates used in the DCF are determined by analysts based on current economic and industry conditions and what they expect the future could be for the stock. If a market-to-book ratio is above 1.0, no rational investor would invest in a utility stock that has been trading above book value for several years and be surprised that rates continue to be set based on the book value capital structure. A market-to-book ratio of above 1.0 for a company reflects its value in the market and implies that investors expect future cash flows to be more valuable than the historical accounting value of the company. Since the stock market is impacted by regulatory policies and economic and financial conditions, a market-to-book ratio could be less than 1.0 when the stock market is in a depression or a company is experiencing under-performance, so it is inappropriate to evaluate DCF results with the market-to-book ratio.

CAPITAL ASSET PRICING MODEL

Q. SUMMARIZE MR. D'ASCENDIS' RESPONSE TO YOUR CAPM ANALYSIS.

A. Mr. D'Ascendis disputes my use of the 10-year U.S. Treasury Note as a proxy to measure the risk-free rate in my CAPM analysis as well as the specific inputs I chose from Blue Chip forecasts. He also disagrees with my use of Kroll's MRP (identified as the Equity Risk Premium or ERP by Kroll and I&E) and my exclusion of the ECAPM method of computing the Company's return on equity.[23]

RISK-FREE RATE

Q. WHAT IS MR. D'ASCENDIS' RESPONSE TO YOUR USE OF THE YIELD ON THE 10-YEAR U.S. TREASURY NOTE?

A. Mr. D'Ascendis claims his use of the yield on a 30-year U.S. Treasury Bond is more appropriate than my use of the yield on a 10-year Treasury Note because it better reflects the life of the underlying investment. He also opines that long-term treasury notes are not subject to maturity risk as the cost of equity is a long-term concept, and the investment horizon of an individual investor is irrelevant. He also claims that not incorporating the longest projection available is inconsistent with the DCF assumption of a constant rate of dividend growth and the Efficient

[23] York Statement No. 105-R, p. 26, lines 10-15.

Market Hypothesis (EMH), which assumes that all available information is considered by investors.[24]

Q. IS THE LIFE OF THE INVESTMENT THE ONLY FACTOR THAT SHOULD BE CONSIDERED IN THE CHOICE OF A RISK-FREE RATE?

A. No. The risk-free rate is the return that can be earned without accepting any risk, and while the life of the investment can be considered in the choice of risk-free rates, the most important consideration is that the rate be as risk-free as possible. As explained in my direct testimony, I chose the 10-year Treasury Note as it mitigates the shortcomings of the short-term Treasury-Bill and the 30-year Treasury Bond.[25] Although long-term Treasury Bonds have less risk of being influenced by federal policies, they have substantial maturity risk associated with market risk. In addition, long-term Treasury Bonds bear the risk of unexpected inflation. As such, my choice of a 10-year Treasury Note is appropriate. Further, as also pointed out in my direct testimony, the Commission has agreed with I&E that the 10-year Treasury Note is the superior measure of the risk-free rate of return.[26]

[24] York Statement No. 105-R, p. 26-32.
[25] I&E Statement No. 2, p. 32-33.
[26] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 99.

Q. DO YOU AGREE WITH MR. D'ASCENDIS' ASSERTION THAT LONG-TERM TREASURY BONDS ARE NOT SUBJECT TO MATURITY RISK?

A. No. As discussed in my direct testimony, while long-term Treasury Bonds exhibit more stability, they are not risk-free. Long-term Treasury Bonds have substantial maturity risk associated with market risk and the risk of unexpected inflation and/or increasing interest rates resulting in reduced purchasing power of the initial investment. This is why long-term treasuries normally offer higher yields to compensate investors for these risks.[27]

Q. DOES THE PROJECTED RISK-FREE RATE NEED TO REPRESENT THE LONGEST TIME PERIOD AVAILABLE AS MR. D'ASCENDIS CLAIMS?

A. No. The time period reflected in a projected risk-free rate should include the period in which rates will be in effect, which is typically the FPFTY or the time determined by a company's rate case filing frequency. Since York is not setting rates to be applicable far into the future, using projections for ten or more years from now, as Mr. D'Ascendis suggests, is inappropriate.[28] The yield on the 10-year Treasury Note is expected to range between 4.20% and 4.40% from the second quarter of 2025 through the third quarter of 2026 and is forecasted to be 4.00% from 2027-2031. For my forecasted CAPM analysis, I calculated 4.20%,

[27] I&E Statement No. 2, p. 33, lines 2-8.
[28] York Statement No. 105-R, p. 28, lines 1-5.

which is the average of all the yields I observed.[29] In addition, the further out into the future one forecasts, the less reliable and more speculative the estimates become; therefore, to give more weight to less reliable estimates would not be prudent. My calculation provides a balance of shorter-term future estimates.

KROLL ERP

Q. SUMMARIZE MR. D'ASCENDIS' REBUTTAL TESTIMONY REGARDING YOUR USE OF THE KROLL ERP IN YOUR CAPM ANALYSIS.

A. Mr. D'Ascendis opines that the Kroll ERP contains unpredictable forecasts and is, therefore, of little value. He then contends that Kroll's ERP is a less effective method when compared to other methods, stating that Kroll is a "simplistic and opaque MRP forecast".[30]

Q. WHAT IS YOUR RESPONSE TO MR. D'ASCENDIS' REBUTTAL TESTIMONY CONCERNING THE KROLL ERP?

A. As discussed in my direct testimony, my recommendation is based on the DCF method as the primary method to determine the cost of common equity. I am providing the results of my CAPM analysis as a comparison to, and not as a check

[29] I&E Exhibit No. 2, Schedule 10.
[30] York Statement 105-R, p. 30, lines 3-13.

of, my DCF results.[31] My inclusion of the Kroll ERP in my CAPM analysis is to provide more information to the Commission as they have recently expressed increasing interest in the CAPM model. Kroll is a trusted and publicly available source that bases their recommended ERP on current and forecasted economic and financial conditions.[32]

Mr. D'Ascendis' opposition to my use of Kroll's ERP further demonstrates that the inputs to the CAPM are highly subjective and can lead to wildly different results. This is not the case for the DCF model.

EXCLUSION OF THE ECAPM

Q. PLEASE SUMMARIZE MR. D'ASCENDIS' RESPONSE TO YOUR EXCLUSION OF THE ECAPM IN YOUR ANALYSIS.

A. Mr. D'Ascendis asserts that the empirical Security Market Line (SML) described by the traditional CAPM is not as steeply sloped as the CAPM model predicts and that tests of the CAPM have measured the level of which security returns and betas are related as predicted by the CAPM.[33]

Q. WHY IS THE ECAPM EXCLUDED FROM YOUR ANALYSIS?

A. The ECAPM is a modified version of the CAPM which attempts to address the belief that the actual risk vs. return correlation is flatter than what is predicted by

[31] I&E Statement No. 2, p. 19, lines 13-21.
[32] I&E Statement No. 2, p. 34, lines 12-17.
[33] York Statement No. 105-R, p. 32-35.

the CAPM. The implication is that the CAPM underestimates returns with lower levels of risk and over-estimates the returns associated with higher levels of risk. The model entails assigning 25% weight to the market beta and 75% weight to the individual company or proxy group.[34]

Additionally, the use of the ECAPM in estimating the cost of capital does not increase the validity of the result but merely adds another measure of subjectivity to the CAPM, attempting to make the SML more accurate. The ECAPM reduces the purpose of the beta, which is the only company-specific variable in the CAPM model. This additional layer of subjectivity provides an even stronger basis to rely on the DCF as the primary method to calculate a utility's cost of equity.

Q. HAVE YOU CHANGED YOUR CAPM RETURN ON EQUITY RECOMMENDATION AS A RESULT OF MR. D'ASCENDIS' REBUTTAL TESTIMONY?

A. No. I continue to recommend using my CAPM result of 10.34%[35] only as a comparison to my DCF result of 9.42%.[36]

[34] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2020 Edition, p. 106.
[35] I&E Statement No. 2, p. 35, lines 13-17.
[36] I&E Exhibit No. 2, Schedule 7.

SIZE ADJUSTMENT

Q. SUMMARIZE YOUR DIRECT TESTIMONY REGARDING MR. D'ASCENDIS' CLAIM FOR AN ADJUSTMENT FOR THE COMPANY'S SMALL SIZE.

A. In direct testimony, I stated that Mr. D'Ascendis' 15-basis point adjustment is unnecessary because none of the technical literature cited in his direct testimony supporting an adjustment related to the size of a company is specific to the utility industry. Additionally, I presented an article by Dr. Annie Wong that demonstrated there is no need to make an adjustment for the size of a company in utility rate regulation. Finally, I indicated that the Commission has rejected the application of a size adjustment to the cost of equity calculation.[37]

Q. SUMMARIZE MR. D'ASCENDIS' RESPONSE IN REBUTTAL TESTIMONY REGARDING A SIZE RISK FACTOR ADJUSTMENT.

A. Mr. D'Ascendis opines that firms of smaller size are less able to cope with significant events impacting revenues, are less diverse in their operations, and have less financial flexibility. He supports these statements by pointing to a Fama and French study relating the size of a company to its return on equity. Mr. D'Ascendis also attempts to discredit a study performed by Dr. Wong, which I&E relied upon in rejection of his size adjustment, by citing a review of her study

[37] I&E Statement No. 2, p. 43-48.

authored by Thomas M. Zepp. Additionally, Mr. D'Ascendis provides two studies he conducted that he claims illustrate the relationship between size and risk for utility companies. Finally, Mr. D'Ascendis points to a 2019 Commission order where the Commission considered a size adjustment.[38]

Q. ARE MR. D'ASCENDIS' ASSERTIONS REGARDING FIRMS OF SMALLER SIZE RELEVANT TO THE REGULATED UTILITY INDUSTRY?

A. No. The study performed by Dr. Wong provides empirical evidence that refutes Mr. D'Ascendis' claim that I will further elaborate upon below.

Q. WHAT ARE YOUR OBSERVATIONS REGARDING THE FAMA AND FRENCH STUDY MR. D'ASCENDIS RELIES ON TO SUPPORT HIS CLAIM OF A SIZE ADJUSTMENT?

A. The Fama and French study is not specific to the utility industry. While I&E relied upon the Fama and French study in this proceeding, as Mr. D'Ascendis correctly points out, the purpose for which I&E cited the study was to demonstrate empirically the shortcomings of the CAPM. The Fama and French study is irrelevant toward the determination of the size risk factor because it is not specific to the utility industry.

[38] York Statement No. 105-R, p. 36-41.

Q. PLEASE COMMENT ON THE REVIEW OF DR. WONG'S STUDY PERFORMED BY DR. ZEPP.

A. The article Mr. D'Ascendis references from Dr. Zepp does not recreate Dr. Wong's study; it simply speculates on other possible reasons for her results and references the results of two other studies. The first study, completed by the California Public Utilities Commission Staff in 1991, is not included in the article, and, therefore, Dr. Zepp's opinions cannot be properly evaluated. Dr. Zepp also draws his conclusions about an entire industry based on the second study, which examines the effects of size on only four water utility companies. This article does not contain enough credible evidence to refute Dr. Wong's findings.

Q. HAS MR. D'ASCENDIS PERFORMED ANY STUDIES IN SUPPORT OF HIS REQUESTED SIZE ADJUSTMENT?

A. Yes, Mr. D'Ascendis conducts two studies regarding size and risk for utility companies, demonstrated by two scatterplots. He uses these studies in an attempt to justify his application of a 15 basis point size adjustment to the recommended cost of equity.[39]

[39] York Statement No. 105-R, p. 38-40.

Q. WHAT IS YOUR RESPONSE TO MR. D'ASCENDIS' SIZE ADJUSTMENT STUDIES?

A. Mr. D'Ascendis fails to provide any workpapers regarding the creation of his scatterplots, and provides very little underlying information regarding the calculations that were done in its formation. It also appears that his second chart, illustrating the relationship between size and *Value Line* Safety Ranking, contains an outlier that may significantly shift the trend line that Mr. D'Ascendis has calculated. For these reasons I continue to recommend that his size adjustment proposal be dismissed.

Q. HAVE YOU FOUND FURTHER EVIDENCE TO SUPPORT YOUR RECOMMENDATION REGARDING SIZE ADJUSTMENTS?

A. Yes. The difficulty in predicting the risk effect of a company's size is demonstrated in the variance from year to year of the measurement of difference between the annual returns on the large and small-capitalization stocks of the NYSE/AMEX/NASDAQ in the Ibbotson *Stocks, Bonds, Bills & Inflation: 2015 Yearbook.* As stated on page 100,

> While the largest stocks actually declined in 2001, the smallest stocks rose more than 30%. A more extreme case occurred in the depression-recovery year of 1933, when the difference between the first and 10th decile returns was far more substantial. The divergence in the performance of small- and large- cap stocks is evident. In 30 of the 89 years since 1926, the difference between the total returns of the largest stocks (decile 1) and the smallest stocks (decile 10) has been greater than 25 percentage points.

Page 109 states,

> In four of the last 10 years, large-capitalization stocks (deciles 1-2 of NYSE/AMEX/NASDAQ) have outperformed small-capitalization stocks (deciles 9-10). This has led some market observers to speculate that there is no size premium. But statistical evidence suggests that periods of underperformance should be expected.

Page 112 states,

> Because investors cannot predict when small-cap returns will be higher than large-cap returns, it has been argued that they do not expect higher rates of return for small stocks.

Q. WHAT IS YOUR RESPONSE TO MR. D'ASCENDIS' REBUTTAL TESTIMONY REGARDING THE REFERENCED COMMISSION ORDER FOR CITIZENS' ELECTRIC COMPANY?

A. Although the Commission in the Citizens' Electric Company proceeding agreed that there is an inverse relationship between size and risk, the Commission concluded that there is not substantial evidence that size is specifically a risk for utilities as follows,

> At the same time, however, we echo the ALJs that the Parties have presented offsetting arguments such that there is not substantial evidence to determine whether size is specifically a risk for utilities. As I&E and the OCA both noted, the technical literature presented by Citizens' is not specific to the utility industry and also may not definitively support a size adjustment. Additionally, as I&E observed, the empirical study undertaken by the Company's witness Mr. D'Ascendis illustrates the difficulty in predicting the risk effect of a company's size. More specifically, while Mr. D'Ascendis used market information from the NYSE, the AMEX, and the NASDAQ, we find that I&E offered evidence indicating that

> for certain periods, large-capitalization stocks have outperformed small-capitalization stocks such that there is not sufficient correlation to prove that size is a specific risk for utilities. I&E St. 2-SR at 23-24. Therefore, we are not persuaded by the Company's argument that the ALJs erred by not awarding Citizens' a greater size adjustment. For this reason, we decline to award an explicit 100-basis point size adjustment, as advocated by Citizens'.[40]

Finally, as stated in my direct testimony, the Commission has rejected the application of a size adjustment to the cost of equity calculation.[41] It is important to recognize that utilities, as regulated monopolies, have actions available, such as requests for emergency rate relief, to counter business impacts that would have more adverse results for smaller companies in the private sector. Accordingly, analyses conducted on private sector businesses do not directly translate to the regulated utility industry.

Q. HAS YOUR RECOMMENDATION REGARDING MR. D'ASCENDIS' SIZE ADJUSTMENT CHANGED SINCE YOUR DIRECT TESTIMONY?

A. No. I continue to recommend that any adjustments in consideration of the Company's size be disallowed.

[40] *Pa. PUC v. Citizens Electric Company of Lewisburg, PA;* Docket No. R-2019-3008212 (Order Entered April 29, 2020). *See generally* Disposition of Cost of Common Equity, pp. 103-104.

[41] I&E Statement No. 2, p. 45, lines 16-17.

FLOTATION COST

Q. SUMMARIZE MR. D'ASCENDIS' REBUTTAL TESTIMONY REGARDING HIS FLOTATION COST ADJUSTMENT TO THE MARKET DETERMINED COST OF EQUITY.

A. Mr. D'Ascendis disagrees with my recommendation that flotation costs should be recovered as an operating expense and opines that a flotation cost should instead be factored in as an adjustment to the allowed return on equity. Next, he states that "[d]enying recovery of issuance costs penalizes the investors that fund the utility operations."

Q. WHAT IS YOUR RESPONSE TO MR. D'ASCENDIS' REBUTTAL TESTIMONY REGARDING THE PROPOSED FLOTATION COST ADJUSTMENT?

A. In this proceeding, Mr. D'Ascendis is recommending a 0.12% (12 basis point) "flotation cost adjustment" as an adder to his range of common equity cost rates. As discussed in my direct testimony, the impact of a 12 basis point flotation cost adjustment would force ratepayers to fund unwarranted additional amounts of $404,767 and $49,342 annually for water and wastewater customers, respectively.[42] Especially because they are known and measurable at the time of issuance, flotation costs should be recovered via normalization similar to the

[42] I&E Statement No. 2, p. 50, ln. 8 through p. 52, ln. 3.

treatment of rate case expense, not factored in as an adjustment to the requested return on equity. This ensures the Company has the opportunity to cover all its prudent costs, without being overly burdensome to ratepayers.

PERFORMANCE FACTOR ADJUSTMENT

Q. SUMMARIZE MR. D'ASCENDIS' AND MR. HAND'S REBUTTAL TESTIMONY REGARDING A PERFORMANCE FACTOR ADJUSTMENT.

A. Mr. D'Ascendis simply states, "the Company should be awarded a 25-basis point upward adjustment to their indicated ROE based on Code 66 Pa.C.S. § 523 regarding performance factor."[43] He further states, "[s]imply put, 66 Pa.C.S. § 523 exists to incentivize companies to 'do their job' at a high level. The Company in this case fulfills the requirement of the statute and should receive the benefit of doing so."[44] He does not offer an explanation beyond what he argued in his direct testimony.

Mr. Hand provides specific examples that he opines is exemplary management performance such as York's work with troubled water and wastewater systems, the addressing of customer-owned lead service lines, demonstration of high levels of customer service, and assistance to low-income customers. He also points to the 2012 PPL Electric and the 2018 UGI Electric

[43] York Statement No. 105-R, p. 42, lines 18-20.
[44] York Statement No. 105-R, p. 42, ln. 22 through p. 43, ln. 2.

cases, in which the Commission awarded return on equity "adders" for management performance.[45]

Q. WHAT IS YOUR RESPONSE TO MR. D'ASCENDIS' AND MR. HAND'S REBUTTAL TESTIMONY REGARDING MANAGEMENT PERFORMANCE?

A. My position remains unchanged from the arguments made in my direct testimony. Awarding the Company management effectiveness points would add an increased cost to ratepayers for service. Any savings from effective operating and maintenance cost measures should flow through to ratepayers and investors. These claimed savings would likely be offset by the addition of basis points for management effectiveness, as ratepayers would have to fund the additional costs. This defeats the purpose of implementing cost saving measures to benefit ratepayers.

The purpose of base rate cases is to allow a utility to recover its costs and provide it the *opportunity* to earn a reasonable return on capital investments where additional basis points for management performance would not be necessary if management was as effective as they claim. Further, the issuance of equity points to recognize exemplary management performance must always be done on a case-by-case basis. Again, as discussed in my direct testimony, the situation in the

[45] York Statement No. 1-R, p. 6-12.

2021 Aqua case was very specific to that company rescuing troubled water and wastewater systems and preventing health and safety concerns regarding drinking water. [46] It is also worth noting that Aqua was required by the Commission to acquire those troubled systems. To my understanding, similar to many other larger water utilities, York voluntarily acquired the systems Mr. Hand mentions as an investment opportunity, which increases York's rate base and, accordingly, earns increased revenues through the return on those assets and the associated depreciation expense.

Finally, while I do not dispute the Company's remaining specific accomplishments identified by Mr. Hand, I must reiterate and emphasize my primary argument that for any company, true strong management performance is earning a higher return through its efficient use of resources and cost-cutting measures. The greater net income resulting from cost savings and true efficiency in management and operations is available to be passed on to shareholders.

Q. HAS YOUR RECOMMENDATION FOR THE COMPANY'S REQUESTED 25 ADDITIONAL BASIS POINTS FOR EXEMPLARY MANAGEMENT PERFORMANCE CHANGED?

A. No. I continue to recommend that any additional basis points for management performance be rejected for doing what all regulated utilities are required to do to

[46] I&E Statement No. 2, p. 54, ln. 1 through p. 55, ln. 3.

provide adequate, efficient, safe, and reasonable utility service under 66 Pa C.S.A. §1501.

NON-PRICE REGULATED PROXY GROUP

Q. WHAT WAS YOUR RECOMMENDATION IN DIRECT TESTIMONY CONCERNING MR. D'ASCENDIS' UTILIZATION OF A NON-REGULATED PROXY GROUP?

A. I recommended the Commission reject all analyses performed using the non-price regulated company proxy group as it is highly speculative and subjective. Mr. D'Ascendis' non-regulated proxy group in effect blends the CE approach into the DCF, RP, and CAPM models, and I cited that the Commission has ruled on the use of non-utility companies in comparable groups for the CE approach as being highly speculative.[47]

Q. SUMMARIZE MR. D'ASCENDIS' RESPONSE REGARDING YOUR DISAGREEMENT WITH HIS USE OF A NON-PRICE REGULATED PROXY GROUP.

A. In rebuttal testimony, Mr. D'Ascendis attempts to justify the use of the companies contained in his non-regulated proxy group based on the betas and standard errors

[47] I&E Statement No. 2, p. 41, ln. 9 through p. 43, ln. 7.

of the regression being like that of the companies in his water company proxy group and, therefore, opining they are similar to York.[48]

Q. HAS MR. D'ASCENDIS PROVEN THAT THE RISKS FACED BY HIS NON-PRICE REGULATED PROXY GROUP ARE SIMILAR TO THAT OF HIS WATER UTILITY GROUP?

A. No. The risks faced in each industry for the companies used in Mr. D'Ascendis' unregulated group differ from the risks faced by his water utility group. Specifically, the level of competition between non-price regulated companies and monopolies, which utilities largely are, is too difficult a factor to control. Although beta is an indicator of a company's investment risk in relation to the entire stock market, beta is not a quantification of the total investment risk of a given company. Mr. D'Ascendis' unregulated proxy group may have a beta comparable to that of his water group, but that does not mean the companies face sufficiently similar risks to be used as a substitute for an industry's market. Both beta and the standard error of regression are measures of the past performance of a stock and as such do not necessarily reflect where an industry is going or what risks it is expected to face.

[48] York Statement No. 105-R, p. 14, ln. 9 through p. 16, ln. 8.

Additionally, the Commission made the following comments in the 2018 UGI Electric case regarding the CE method, specifically, the use of non-utility companies in comparable groups, and stated,[49]

> With respect to the CE method, as noted above, this cost of equity method utilizes data for non-regulated firms. Thus, by its very nature, determining which companies are comparable is entirely subjective. In addition, the record indicates that the companies UGI utilized in its CE group results in the selection of companies such as Coca-Cola Company, Kellogg Company, and Walmart Stores, Inc.…Each of these companies operate in industries that are very different from a utility company and have significantly more competition, which would require a higher return for the associated additional risk.

Finally, I am advised by counsel that this premise defies the principle set forth in the *Hope* and *Bluefield cases*[50] that a utility is entitled to a return similar to that being earned by companies with similar risks and uncertainties, but not as high as those earned by highly profitable or speculative ventures.

OVERALL RATE OF RETURN

Q. HAS YOUR OVERALL RATE OF RETURN RECOMMENDATION CHANGED FROM YOUR DIRECT TESTIMONY?

A. No. I continue to support each recommendation made in I&E Statement No. 2.

---

[49] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order Entered October 25, 2018), p. 105. The Commission has also ruled "[t]he use of nonregulated companies as a comparable group for regulated firms requires numerous unsupportable assumptions which results in a highly speculative finding." *Pennsylvania Public Utility Commission v. Philadelphia Electric Co.* 33 PUR 4th 319, 341 (Pa PUC 1980).

[50] *See Bluefield Water Works & Improvements Co. v. Public Service Comm. of West Virginia,* 262 U.S. 679,692-93 (1923), and the *FPC v. Hope Natural Gas Co.,* 320 U.S. 591, 603 (1944).

Q. WHAT IS YOUR OVERALL RATE OF RETURN RECOMMENDATION?

A. I recommend the following rate of return for York:

Type of Capital	Ratio	Cost Rate	Weighted Cost Rate
Long-Term Debt	45.42%	4.54%	2.06%
Common Equity	54.58%	9.42%	5.14%
Total	100.00%		7.20%

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ethan H. Cline. My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission in the Bureau of Investigation and Enforcement (I&E) as a Fixed Utility Valuation Engineer.

Q. WHAT IS YOUR EDUCATION AND EMPLOYMENT EXPERIENCE?

A. An outline of my education and employment experience is attached as Appendix A.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for representing the public interest in rate and other proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires the balancing of the interests of ratepayers, the utility company, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my testimony is to evaluate the York Water Company's (York

Water or Company) request for an annual increase in operating revenue of $20,311,978 in water rates and $3,857,507 in wastewater rates in the Fully Projected Future Test Year (FPFTY) ending February 28, 2027 (York Water Ex. FII-2, p. 10). My testimony will address issues related to acquisition adjustments, the cost allocation and rate design of the water and wastewater operations of the Company.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 3 contains schedules relating to my testimony.

UNACCOUNTED-FOR WATER

Q. WHAT IS UNACCOUNTED-FOR WATER?

A. Unaccounted-for water is the difference between the total system output and the metered quantity of water billed plus an estimate for the amount used for fire service, testing, main flushing, and unmetered company use. A high level of unaccounted-for water can have the effect of increasing customer rates.

Q. HOW DOES UNACCOUNTED-FOR WATER INCREASE CUSTOMER RATES?

A. A water utility incurs a certain amount of costs to treat the water that it delivers to its customers through purchased power and chemicals expenses. When a water utility has a high level of unaccounted-for water, as York Water does, it must treat

an additional amount of water to meet the demands and pressure requirements of its customers. As a result, the utility will incur additional purchased power and chemicals expenses to treat the additional water. Those costs are then passed on to customers through higher rates.

Q. WHAT WAS YORK WATER'S UNACCOUNTED-FOR WATER LEVEL AS REPORTED IN 2022, 2023, AND 2024?

A. York Water provided its Annual Reports for 2022, 2023, and 2024 in response to OCA-IX-14.[1] Specifically, Section 500 of the Annual Reports provides the Company's unaccounted-for water level each year. The Company's unaccounted-for water was 17.9% in 2022, 19.1% in 2023, and 25.3% in 2024.

Q. IS YORK WATER'S ESTIMATED UNACCOUNTED-FOR WATER ACCEPTABLE?

A. No. The Commission's policy statement addressing unaccounted-for water states: "Levels of unaccounted-for water should be kept within reasonable amounts. Levels above 20% have been considered by the Commission to be excessive."[2] York Water's current estimated unaccounted-for water level of 25.3% exceeds the

[1] York Water Annual Report Section 500 provided in response to OCA-IX-14 attached as I&E Exhibit No. 3, Schedule 1.

[2] 52 Pa. Code §65.20.

20% threshold in the Commission's policy statement and is not a reasonable amount.

Q. ARE YOU RECOMMENDING AN ADJUSTMENT?

A. Not at this time. While the Company's unaccounted for water has been on an increasing trend recently and is above the Commission's acceptable level, I recognize that these levels could be caused by the addition of the more troubled systems discussed below. Therefore, while I am not recommending an adjustment in this proceeding, if the Company is unable to reverse its current unaccounted for water trend by its next base rate case, an adjustment will likely be necessary in the next base rate case.

PRESENT RATE REVENUE

Q. WHAT IS THE COMPANY'S CLAIMED PRESENT RATE REVENUE IN THE FPFTY FOR WATER OPERATIONS?

A. The Company's claimed present rate revenue in the FPFTY for Water Operations as shown on York Water Exhibit No. FV-1, p. 5 is $68,305,310. However, the revenue under present rates in the FPFTY as shown on the Company's Cost of Service Study (COSS) $66,652,317.[3]

[3] York Water Exhibit No. FVIII, Schedule B, p. 1.

Q. DID THE COMPANY ADDRESS THIS DISCREPENCY IN DISCOVERY?

A. Yes. In its response to OCA-VI-1, the Company indicated that the Other Revenues shown on the Water COSS were inadvertently included as negative numbers. The Company included an attachment that shows a corrected present rate revenue amount of $68,304,821[4], which is only $489 different from the present rate revenue amount shown on Exhibit No. FV-1.

Q. WHAT DO YOU RECOMMEND REGARDING THE PRESENT RATE REVENUE DISCREPENCY?

A. I recommend the Company include this correction to present rate revenue in the Water Operations COSS in its rebuttal testimony.

ACQUISITION ADJUSTMENT

Q. WHAT IS AN ACQUISITION ADJUSTMENT?

A. An acquisition adjustment is the ratemaking treatment that occurs in certain cases when there is a difference between the purchase price of the acquired system and the value of the depreciated original cost (net plant) on the books of the system being acquired. If the purchase price is greater than the value of the net plant, the utility records the value of the net plant acquired on its books and reflects the difference as a positive acquisition adjustment in rate base. The acquisition adjustment is

[4] York Water's response to OCA-VI-1 and OCA-VI-1 Attachment 3 are included as I&E Exhibit No. 3, Schedule 2.

amortized over a period of time, as an amortization expense, thus reducing the difference. If the purchase price is less than the value of the net plant, a negative acquisition adjustment may occur, and the acquisition adjustment is subtracted from rate base, and a negative amortization, or offset to expenses occurs.

Q. WHY DOES AN ACQUISITION ADJUSTMENT ONLY APPLY IN CERTAIN CASES?

A. An acquisition adjustment only applies in certain cases because of the requirement and limitations set forth in Section 1327 of the Pennsylvania Public Utility Code (Code).

<u>POSITIVE UTILITY PLANT ACQUISITION ADJUSTMENTS</u>

Q. WHAT REQUIREMENTS AND LIMITATIONS ARE SET FORTH IN THE CODE REGARDING POSITIVE ACQUISITION ADJUSTMENTS?

A. Subsection (a) of Section 1327 of the Code outlines nine criteria, all of which must be met by a utility in order to include acquisition adjustments in rate base when the acquisition cost is greater than the depreciated original cost. These criteria include:

(1) The property is used and useful in providing water or sewer service;

(2) the public utility acquired the property from another public utility, a municipal corporation or a person which had 3,300 or fewer customer connections or which was nonviable in the absence of the acquisition;

(3) the public utility, municipal corporation or person from which the property was acquired was not, at the time of acquisition, furnishing and maintaining adequate, efficient, safe and reasonable service and facilities, evidence of which shall include, but not be limited to, any one or more of the following:

(i) violation of statutory or regulatory requirements of the Department of Environmental Resources or the commission concerning the safety, adequacy, efficiency or reasonableness of service and facilities;

(ii) a finding by the commission of inadequate financial, managerial or technical ability of the small water or sewer utility;

(iii) a finding by the commission that there is a present deficiency concerning the availability of water, the palatability of water or the provision of water at adequate volume and pressure;

(iv) a finding by the commission that the small water or sewer utility, because of necessary improvements to its plant or distribution system, cannot reasonably be expected to furnish and maintain adequate service to its customers in the future at rates equal to or less than those of the acquiring public utility; or

(v) any other facts, as the commission may determine, that evidence the inability of the small water or sewer utility to furnish or maintain adequate, efficient, safe and reasonable service and facilities;

(4) reasonable and prudent investments will be made to assure that the customers served by the property will receive adequate, efficient, safe and reasonable service;

(5) the public utility, municipal corporation or person whose property is being acquired is in agreement with the acquisition and the negotiations which led to the acquisition were conducted at arm's length;

(6) The actual purchase price is reasonable;

(7) neither the acquiring nor the selling public utility, municipal corporation or person is an affiliated interest of the other;

(8) the rates charged by the acquiring public utility to its preacquisition customers will not increase unreasonably because of the acquisition; and

(9) the excess of the acquisition cost over the depreciated original cost will be added to the rate base to be amortized as an addition to expense over a reasonable period of time with corresponding reductions in the rate base.

Q. DOES YORK WATER HAVE ANY POSITIVE ACQUISITION ADJUSTMENT AMOUNTS IN THE CURRENT PROCEEDING REMAINING FROM PREVIOUS PROCEEDINGS?

A. Yes. The Company is claiming in its Water division an unamortized balance of $11,102 for the Margaretta Mobile Home Park, which was approved in the settlement of the base rate case at Docket No. R-2018-3000019.[5]

[5] York Water Exhibit No. FV-1-3.

Q. IS THE COMPANY CLAIMING ANY POSITIVE ACQUISITION ADJUSTMENTS FOR SYSTEMS ACQUIRED SINCE THE COMPANY'S LAST BASE RATE CASE?

A. Yes. The Company is claiming an acquisition adjustment subject to amortization for the Scott Water Company of $22,659 as of December 25, 2025. This is based on an acquisition cost of $31,803 less the depreciated original cost of $9,144. The Company is proposing to amortize the $22,659 over a period of ten years, which results in an unamortized balance as of February 28, 2027, of $20,015.[6]

Q. DO YOU OPPOSE YORK WATER'S POSITIVE ACQUISITION ADJUSTMENTS CLAIMED FOR THE WATER DIVISION IN THIS PROCEEDING?

A. No.

Q. DOES YORK WATER HAVE ANY POSITIVE ACQUISITION ADJUSTMENT AMOUNTS FOR THE WASTEWATER DIVISION IN THE CURRENT PROCEEDING REMAINING FROM PREVIOUS PROCEEDINGS?

A. Yes. The Company is claiming in its Wastewater division an unamortized balance of $88,442 for the Felton Borough Assets, which was approved in the settlement of the

[6] York Water Exhibit No. FV-1-9.

base rate case at Docket No. R-2022-3031340.[7]

Q. IS THE COMPANY CLAIMING ANY POSITIVE ACQUISITION ADJUSTMENTS FOR SYSTEMS ACQUIRED SINCE THE COMPANY'S LAST BASE RATE CASE?

A. Yes. The Company is claiming an acquisition adjustment subject to amortization for the York Haven Sewer Authority of $127,481 as of December 25, 2025. This is based on an acquisition cost of $408,576 less the depreciated original cost of $281,095. The Company is proposing to amortize the $127,481 over a period of ten years, which results in an unamortized balance as of February 28, 2027, of $112,608.[8]

Q. DO YOU OPPOSE YORK WATER'S POSITIVE ACQUISITION ADJUSTMENTS CLAIMED FOR THE WASTEWATER DIVISION IN THIS PROCEEDING?

A. No.

[7] York Water Exhibit No. FV-1-2W.
[8] York Water Exhibit No. FV-1-3W.

NEGATIVE ACQUISITION ADJUSTMENTS

Q. DOES THE CODE ADDRESS UTILITY PLANT ACQUISITION ADJUSTMENTS WHERE THE PURCHASE PRICE IS LESS THAN THE NET PLANT?

A. Yes. Subsection (e) of Section 1327 of the Code states the following regarding negative acquisition adjustments:

> **(e) Acquisition cost lower than depreciated original cost.--**If a public utility acquires property from another public utility, a municipal corporation or a person at a cost which is lower than the original cost of the property when first devoted to the public service less the applicable accrued depreciation and the property is used and useful in providing water or sewer service, that difference shall, absent matters of a substantial public interest, be amortized as an addition to income over a reasonable period of time or be passed through to the ratepayers by such other methodology as the commission may direct. Notice of the proposed treatment of an acquisition cost lower than depreciated original cost shall be given to the Director of Trial Staff and the Consumer Advocate.

Q. WHAT IS THE RATEMAKING TREATMENT FOR NEGATIVE ACQUISITION ADJUSTMENTS?

A. Negative acquisition adjustments are amortized as a reduction to operating expenses. As indicated above, the utility can forego this amortization to its income statement if the acquisition was a matter of "substantial public interest" as per Section 1327(e) of the Code.

Q. DOES THE COMPANY HAVE ANY NEGATIVE ACQUISITION AMORTIZATIONS REMAINING FROM PREVIOUS CASES?

A. Yes. The following table shows the negative acquisition amortization amounts as of December 31, 2025, and February 28, 2027, remaining from acquisitions in previous cases.[9]

Water System	Amortization Start Date	Negative Acquisition Adjustment As of 12/31/25	Negative Acquisition Adjustment As of 2/28/27
Westwood	March 1, 2019	($23,900)	($15,095)
Lincoln Estates	March 1, 2019	($24,442)	($15,437)
Meadows	March 1, 2019	($50,292)	($31,764)

Q. WHAT WATER SYSTEM ACQUISITIONS DID YORK WATER MAKE SINCE ITS LAST RATE CASE WHERE THE PURCHASE PRICE WAS LESS THAN THE NET PLANT?

A. York Water purchased the following systems since its last base rate case, none of which York proposes a negative acquisition adjustment to amortize the difference between acquisition cost and depreciated original cost as a reduction to operating expenses:

(1) Country View Manor.

[9] York Water Exhibit Nos. FV-1-6, FV-1-7, and FV-1-8.

(2) Letterkenny Industrial Development Authority and Franklin County General Authority (LIDA/FCGA).

(3) Albright Trailer Park (Albright).

(4) Conewago Industrial Park (CIP).

(5) Longstown Mobile Estates (Longstown).

(6) Houston Run Community Water System, LLC (Houston Run).

(7) Pine Run Retirement Community (Pine Run).

(8) Brookhaven Mobile Home Park of ATG Properties, LLC (Brookhaven).[10]

Q. DID YORK WATER INCLUDE A NEGATIVE ACQUISITION ADJUSTMENT FOR ANY OF THE ABOVE LISTED WATER SYSTEM PURCHASES?

A. No.

Q. WHY DID YORK WATER NOT REFLECT THE AMORTIZATIONS OF THESE NEGATIVE ACQUISITION ADJUSTMENTS AS A REDUCTION TO ITS WATER OPERATING EXPENSES?

A. York Water witness Hand claims that exclusion of these acquisitions is consistent with the exemptions listed in Section 1327(e) of the Code because there are "matters

[10] York Water Statement No. 1, pp. 17-45.

of substantial public interest" that exclude the negative acquisition adjustments from being recognized for ratemaking purposes.[11]

Q. ARE YOU RECOMMENDING A REDUCTION TO YORK WATER'S FPFTY WATER OPERATING EXPENSES ASSOCIATED WITH THE AMORTIZATION OF ANY OF THE NEGATIVE ACQUISITION ADJUSTMENTS THAT HAVE NOT BEEN RECOGNIZED FOR RATEMAKING PURPOSES IN YORK WATER'S CURRENT PROCEEDING?

A. No. Based upon my review, each of the water utilities acquired by the Company for a purchase price less than the depreciated original cost of the system either do constitute a matter of significant public interest or the resulting acquisition adjustment would be de minimis and therefore, not require an adjustment.

Q. WHAT WASTEWATER SYSTEM ACQUISITIONS DID YORK WATER MAKE SINCE ITS LAST RATE CASE WHERE THE PURCHASE PRICE WAS LESS THAN THE NET PLANT?

A. York Water purchased the following systems since its last base rate case, none of which York proposes a negative acquisition adjustment to amortize the difference

[11] York Water Statement No. 1, pp. 17-45.

between acquisition cost and depreciated original cost as a reduction to operating expenses:

(1) Country View Manor.

(2) Letterkenny Industrial Development Authority and Franklin County General Authority (LIDA/FCGA).

(3) SYC WWTP, L.P., and the Albright Trailer Park of R. T. Barclay, Inc. (SYC).

(4) Conewago Industrial Park (CIP).

(5) Memford Estates Sewerage Company, Inc., MESCO, Inc. (MESCO).

(6) York Haven Sewer Authority (York Haven).

Q. DID YORK WATER INCLUDE A NEGATIVE ACQUISITION ADJUSTMENT FOR ANY OF THE ABOVE LISTED WASTEWATER SYSTEM PURCHASES?

A. No.

Q. WHY DID YORK WATER NOT REFLECT THE AMORTIZATIONS OF THESE NEGATIVE ACQUISITION ADJUSTMENTS AS A REDUCTION TO ITS WASTEWATER OPERATING EXPENSES?

A. York Water witness Hand claims that exclusion of these acquisitions is consistent with the exemptions listed in Section 1327(e) of the Code because there are "matters

of substantial public interest" that exclude the negative acquisition adjustments from being recognized for ratemaking purposes.[12]

Q. DOES THE COMMISSION ORDER APPROVING THE ACQUISITION OF THE LIDA/FCGA WASTEWATER SYSTEM DEMONSTRATE THAT THE ACQUISITION JUSTIFIES THE SECTION 1327(e) EXEMPTION AS "A MATTER OF SUBSTANTIAL PUBLIC INTEREST?"

A. No. The Order regarding the acquisition of the LIDA/FCGA wastewater system does not demonstrate a matter of substantial public interest, nor is there any indication of outstanding DEP compliance or operational issues.[13]

Q. WHAT EVIDENCE DOES THE COMPANY PROVIDE TO SUPPORT ITS CLAIMS THAT THE LIDA/FCGA SYSTEM REPRESENTS A MATTER OF SUBSTANTIAL PUBLIC INTEREST?

A. To support its claim that the LIDA/FCGA wastewater system represents a substantial public interest and, therefore, do not require a negative acquisition, the Company stated that the owner "…did not wish to continue to provide wastewater service to its residents due to increasing costs and the challenges of meeting regulatory oversight and reporting requirements." The Company also listed a

[12] York Water Statement No. 1, pp. 19-42.
[13] Docket No. A-2015-2519403, Order entered June 16, 2022.

series of repairs made after it acquired the system.[14]

Q. ARE THE COMPANY'S STATEMENTS SUFFICIENT EVIDENCE TO SUPPORT ITS CLAIMS THAT THE LIDA/FCGA WASTEWATER SYSTEM REPRESENT A MATTER OF SUBSTANTIAL PUBLIC INTEREST?

A. No. While increasing costs and the challenges of meeting regulatory oversight and reporting requirements may serve as the reason for an owner to wish to sell its water or wastewater system, an owner no longer wishing to operate an otherwise adequate system does not constitute a matter of substantial public interest. The conclusion that these systems are providing adequate service is supported by the lack of outstanding DEP compliance or operational issues or any Commission findings regarding this system.

Q. WHAT DO YOU RECOMMEND REGARDING NEGATIVE ACQUISITION ADJUSTMENTS FOR THE LIDA/FCGA WASTEWATER SYSTEM?

A. Because there is no support to the Company's claim that this acquisition qualifies as a matter of substantial public interest, I recommend that the total $2,638,017 of wastewater negative acquisition adjustment, provided in the Company's response to

[14] York Statement No. 1, pp. 24-25.

OCA-IX-16, Attachment 16,[15] be amortized over a ten-year period, which results in a $263,802 reduction to York Water's FPFTY wastewater operating expenses.

ACQUISITION ADJUSTMENT IN RATE BASE – WASTEWATER DIVISION

Q. PLEASE SUMMARIZE YOUR RATE BASE RECOMMENDATION FOR THE WASTEWATER DIVISION.

A. I recommend the Company's proposed wastewater division rate base adjustment for Utility Plant Acquisition adjustment be reduced by $2,330,248 from the Company's claim of $201,051[16] to negative $2,129,197. My recommended $2,330,248 decrease was determined by reflecting a monthly amortization of $21,983 ($263,802 / 12) over the period from January 2026 through February 2027, as shown in the table below, which is the same methodology the Company used for its other amortization adjustments.

[15] York Water response to OCA-IX-16 and Attachment OCA-IX-16, attached as I&E Exhibit No. 3, Schedule 3.
[16] York Water Exhibit No. FV-1W, p. 3.

Acquisition Adjustment Subject to Amortization as of December 31, 2025:		($2,638,017)
Month	Amortization	Unamortized Balance
Jan-26	($21,983)	($2,616,034)
Feb-26	($21,983)	($2,594,050)
Mar-26	($21,983)	($2,572,067)
Apr-26	($21,983)	($2,550,083)
May-26	($21,983)	($2,528,100)
Jun-26	($21,983)	($2,506,116)
Jul-26	($21,983)	($2,484,133)
Aug-26	($21,983)	($2,462,149)
Sep-26	($21,983)	($2,440,166)
Oct-26	($21,983)	($2,418,182)
Nov-26	($21,983)	($2,396,199)
Dec-26	($21,983)	($2,374,215)
Jan-27	($21,983)	($2,352,232)
Feb-27	($21,983)	($2,330,248)

Q. WHAT IS YOUR TOTAL RATE BASE RECOMMENDATION FOR WASTEWATER OPERATIONS?

A. I recommend that Wastewater Operations rate base be reduced by $2,330,248 from $54,685,381 to $52,355,133, which is a result of my adjustment to the wastewater acquisition adjustment, discussed above.

CUSTOMER COST ANALYSIS

Q. WHAT IS A CUSTOMER COST ANALYSIS AND HOW IS IT USED?

A. A customer cost analysis is a part of a cost of service study that is used to

determine the appropriate fixed customer charges for the various classes and meter sizes. It includes customer costs only.

Q. WHY IS IT NECESSARY TO PERFORM A CUSTOMER COST ANALYSIS?

A. A fixed customer charge represents the revenue that the Company is guaranteed to receive each month, regardless of the level of usage. As acknowledged in the seventh edition of the American Water Works Association M1 Manual, there is a tradeoff between revenue stability from a high customer charge, and affordability and conservation from a low customer charge and higher usage rates.[17]

WATER OPERATIONS – CUSTOMER COSTS

Q. DID THE COMPANY PREPARE A CUSTOMER COST ANALYSIS TO SUPPORT INCREASING THE CUSTOMER CHARGES?

A. Yes. The Company provided two customer cost analyses for the FPFTY in York Water Exhibit FVIII, RS1-j Attachment. The results of the first cost analysis, shown on page 1 of 9 of the attachment, includes all costs being allocated to the customer cost function and results in a unit cost of $35.49 per month.

Additionally, the Company provided a second customer cost analysis that relies on the allocation of costs more directly applicable to customers. The result

[17] AWWA Manual of Water Supply Practices M1 Principles of Water Rates, Fees, Charges, Seventh Edition. pp. 154-155.

of the more direct customer cost analysis is $24.85 per month per customer in the FPFTY[18].

Q. WHICH CUSTOMER COST ANALYSIS DID YORK WATER USE TO DETERMINE ITS PROPOSED CUSTOMER CHARGES?

A. The proposed 5/8-inch customer charge is $24.85, which is equal to the monthly cost determined in the direct customer cost analysis[19].

Q. DO YOU AGREE THAT CUSTOMER CHARGES SHOULD BE DETERMINED BASED ON THE RESULTS OF THE DIRECT CUSTOMER COST ANALYSIS?

A. Yes. The Commission has traditionally relied on customer cost analyses based on direct cost allocations. Therefore, it is reasonable to continue to reject the "fully allocated" customer cost analysis provided by the Company and base the customer charges instead on the direct cost customer cost analysis provided by the Company.

[18] York Water Ex. FVIII, RS1-j, Attachment, p. 1 of 9.
[19] York Water Ex. FVIII, Schedule I.

WATER CUSTOMER CHARGES

Q. IS YORK WATER PROPOSING TO INCREASE ALL OF ITS CUSTOMER CHARGES?

A. Yes. The Company is proposing to increase the 5/8-inch customer charge from $17.25 per month to $24.85 per month, which is equal to an approximately 44.1% increase. The Company is also proposing to increase the customer charges for meter sizes larger than 5/8-inch by approximately the same percentage increase as the 5/8-inch meter as shown on York Water FVIII, Schedule I.

Q. WHAT IS THE BASIS FOR THE COMPANY'S PROPOSED $24.85 PER MONTH CUSTOMER CHARGE FOR A 5/8-INCH RESIDENTIAL CUSTOMER?

A. The basis for the $24.85 per month 5/8-inch customer charge is the Company's customer cost analysis, as described above.

Q. WHAT DO YOU RECOMMEND REGARDING THE COMPANY'S PROPOSED CUSTOMER CHARGE?

A. I agree with the Company's customer cost analysis and proposed customer charges; however, as I describe below, I recommend the proposed customer charges be included in any scale back of rates.

SCALE BACK OF RATES

Q. WHAT IS A SCALE BACK OF RATES?

A. If the Commission grants an increase less than the amount the Company requested, the Company's proposed rates would be reduced, or scaled back, to produce the revenue requirement allowed by the Commission.

Q. DID THE COMPANY INDICATE ITS PREFERRED SCALE BACK METHODOLOGY?

A. Yes. In its response to OCA-VI-3, the Company stated that "[w]ith the exception of Public Fire Protection and the fixed water customer charges, all classes' increases should be scaled-back proportionately to the originally proposed increases. In addition, any scale back for the customers in West Donegal Township and Salisbury Township would be to the agreed upon rates and not proportional to the originally proposed increase."[20]

Q. DO YOU AGREE WITH THE COMPANY'S SCALE BACK PROPOSAL?

A. Generally, yes. I agree that all classes' increases should be scaled back proportionately to the originally proposed increases, apart from the Public Fire Protection classes. However, as I describe below, I recommend that the customer charges be included in any scale back and that the West Donegal Township and

[20] York Water response to OCA-VI-3, attached as I&E Exhibit No. 3, Schedule 4.

Salisbury Township rates should be adjusted so that they continue to move towards consolidation.

Q. WHY DO YOU RECOMMEND THAT THE CUSTOMER CHARGES BE INCLUDED IN ANY SCALE BACK?

A. While the $24.85 per month 5/8th inch customer charge proposed by the Company is based upon the direct customer cost, any reduction in any of the ratemaking inputs by the Commission would reduce the inputs used in the customer cost analysis that was used to determine the $24.85 per month 5/8th inch customer charge. To be consistent, I also recommend the other larger meter sized customer charges be scaled back since the Company proposed that they be increased the same 44.1%.

Q. HAS THE COMMISSION SCALED BACK A COMPANY'S PROPOSED CUSTOMER CHARGE DESPITE APPROVING THE CUSTOMER COST ANALYSIS?

A. Yes. In the UGI Utilities, Inc. – Electric Division rate case at Docket No. R-2017-2640058, the Commission determined that despite the higher customer cost determination in the cost of service study, the customer charges should be reduced for all customers.[21] My recommendation is consistent with the Commission's decision in this Order.

[21] *Pa. PUC v. UGI Utilities, Inc. – Electric Division*, R-2017-2640058, p. 175 (Order Entered October 25, 2018).

Q. DO YOU HAVE ANY CONCERNS REGARDING THE COMPANY'S PROPOSAL TO SCALE BACK THE RATES OF WEST DONEGAL TOWNSHIP AND SALISBURY TOWNSHIP TO THE AGREED UPON RATES?

A. Yes. The Company did not provide any description of what represents the "agreed upon rates." Therefore, absent further information regarding the details of the "agreed upon rates," I recommend that the West Donegal Township and Salisbury Township rates be scaled back such that these customers are moved toward consolidation either in this case or in future cases.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

ETHAN H. CLINE

PROFESSIONAL EXPERIENCE AND EDUCATION

EXPERIENCE:

03/2009 - Present
Bureau of Investigation and Enforcement, Pennsylvania Public Utility Commission - Harrisburg, Pennsylvania

Fixed Utility Valuation Engineer – Assists in the performance of studies and analyses of the engineering-related areas including valuation, depreciation, cost of service, quality and reliability of service as they apply to fixed utilities. Assists in reviewing, comparing and performing analyses in specific areas of valuation engineering and rate structure including valuation concepts, original cost, rate base, fixed capital costs, inventory processing, excess capacity, cost of service, and rate design.

06/2008 – 09/2008
Akens Engineering, Inc. - Shiremanstown, Pennsylvania

Civil Engineer – Responsible, primarily, for assisting engineers and surveyors in the planning and design of residential development projects

10/2007 – 05/2008
J. Michael Brill and Associates - Mechanicsburg, Pennsylvania

Design Technician – Responsible, primarily, for assisting engineers in the permit application process for commercial development projects.

01/2006 – 10/2007
CABE Associates, Inc. - Dover, Delaware

Civil Engineer – Responsible, primarily, for assisting engineers in performing technical reviews of the sewer and sanitary sewer systems of Sussex County, Delaware residential development projects.

EDUCATION:

Pennsylvania State University, State College, Pennsylvania
Bachelor of Science; Major in Civil Engineering, 2005

- Attended NARUC Rate School, Clearwater, FL
- Attended Society of Depreciation Professionals Annual Conference and Training

TESTIMONY SUBMITTED:

I have testified and/or submitted testimony in the following proceedings:

1. Clean Treatment Sewage Company, Docket No. R-2009-2121928

Office of Consumer Advocate
Interrogatories Set VI

OFFICE OF CONSUMER ADVOCATE INTERROGATORY OCA SET VI, NO. 1

Please provide a copy of the following in Excel format with all formulas intact:

a. Exhibit No. FVIII, water of service study, including the development of all allocation factors. (Schedules A-J);

b. RS1-f Attachment; and

c. RS1-j Attachment.

RESPONDENT:

G. R. Herbert
Gannett Fleming

DATE:

June 27, 2025

RESPONSE:

a. – c. Please see **OCA-VI-1 Attachment 1** for the Excel version of Exhibit No. VIII which is the water cost of service study under proposed rates that includes Schedule A, Schedule C – K, RS1-f Attachment and RS1-j Attachment. See **OCA-VI-1 Attachment 2** for Schedule B of Exhibit No. VIII, which is the development of rate of return by customer classification under present rates. Schedule B was corrected in this attachment to reflect the proper other water revenues amounts as positive numbers in response to OCA-VI-21. **OCA-VI-1 Attachment 3** shows the corrected version of Schedule B in PDF format.

THE YORK WATER COMPANY

What is the Company's proposal with respect to the scale-back of rates in the event that the Commission authorizes an increase that is less than the requested increase?

RESPONDENT:

M. E. Poff
CFO

DATE:

June 27, 2025

RESPONSE:

With the exception of Public Fire Protection and the fixed water customer charges, all classes' increases should be scaled-back proportionately to the originally proposed increases. In addition, any scale back for the customers in West Donegal Township and Salisbury Township would be to the agreed upon rates and not proportional to the originally proposed increase.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ethan H. Cline. My business address is 400 North Street, Harrisburg, PA 17120.

Q. ARE YOU THE SAME ETHAN H. CLINE WHO SUBMITTED I&E STATEMENT NO. 3 AND I&E EXHIBIT NO. 3 ON AUGUST 22, 2025?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to address the rebuttal testimony of Joseph T. Hand, identified as the York Water Company (York Water or Company) Statement No. 1-R and Gregory R. Herbert, identified as York Water Statement No. 107-R, which were submitted on behalf of York Water, and witness Jerome D. Mierzwa, identified as Office of Consumer Advocate ("OCA") Statement No. 1-R, which was submitted on behalf of the Office of Consumer Advocate.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. No.

PRESENT RATE REVENUE

Q. WHAT DID YOU RECOMMEND REGARDING THE PRESENT RATE REVENUE DISCREPENCY YOU DESCRIBED IN I&E STATEMENT NO. 3?

A. I recommended the Company include the correction to the discrepancy in present rate revenue of $68,305,310 shown on York Water Exhibit No. FV-1, p. 5 and the $66,652,317 shown on the Company's original cost of service study (COSS) in the Water Operations COSS in its rebuttal testimony.[1]

Q. DID THE COMPANY ADDRESS THIS DISCREPENCY IN PRESENT RATE REVENUE FOR WATER OPERATIONS IN REBUTTAL?

A. Yes. York Water witness Herbert described the correction to the discrepancy in his rebuttal testimony.[2] I have no further comments on this issue.

[1] I&E Statement No. 3, pp. 4-5.
[2] York Water Statement No. 107-R, p. 3.

NEGATIVE ACQUISITION ADJUSTMENTS

Q. WHAT DID YOU RECOMMEND REGARDING NEGATIVE ACQUISITION ADJUSTMENTS FOR THE LETTERKENNY INDUSTRIAL DEVELOPMENT AUTHORITY AND FRANKLIN COUNTY GENERAL AUTHORITY (LIDA/FCGA) WASTEWATER SYSTEM?

A. I recommended that the total $2,638,017 of wastewater negative acquisition adjustment be amortized over a ten-year period, which results in a $263,802 reduction to York Water's FPFTY wastewater operating expenses.[3]

Q. WHAT WAS YOUR TOTAL RATE BASE RECOMMENDATION FOR WASTEWATER OPERATIONS?

A. I recommended that Wastewater Operations rate base be reduced by $2,330,248 from $54,685,381 to $52,355,133, which is a result of my adjustment to the wastewater acquisition adjustment.[4]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION REGARDING THE NEGATIVE ACQUISITION ADJUSTMENT FOR WASTEWATER OPERATIONS?

A. Yes. The Company did not agree with my recommendation regarding the negative

[3] I&E Statement No. 3, pp. 17-18.
[4] I&E Statement No. 3, pp. 18-19.

acquisition adjustment for wastewater operations. Specifically, the Company stated that it believed that the repairs it made after the acquisition of the LIDA/FCGA wastewater system represented a matter of substantial public interest due to the similarity of the repairs made to the LIDA/FCGA water system, which I accepted as a matter of substantial public interest.[5]

Q. DO YOU AGREE THAT THE REPAIRS MADE TO THE LIDA/FCGA WASTEWATER SYSTEM ARE SIMILAR TO THE REPAIRS MADE TO THE LIDA/FCGA WATER SYSTEM?

A. No. As I stated in my direct testimony, "[t]he conclusion that these systems are providing adequate service is supported by the lack of outstanding DEP compliance or operational issues or any Commission findings regarding this system."[6] The Company did not provide any additional evidence to support its claim that the LIDA/FCGA wastewater system represents a matter of substantial public interest. Despite the Company's claim that the issues for the LIDA/FCGA wastewater system are similar to those of the LIDA/FCGA water system,[7] the repairs and upgrades listed for the LIDA/FCGA wastewater system do not meet the standard of matters of a substantial public interest whereas the 100,000 gallon per day leak[8] for the water system does meet that standard.

---

5 York Water Statement No. 1-R, pp. 5-6.
6 I&E Statement No. 3, p. 17.
7 York Water Statement No. 1-R, pp. 5-6.
8 York Water Statement No. 1, p. 22.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. Because the Company has continued to fail to support its claim that the LIDA/FCGA wastewater system represents a matter of substantial public interest, I continue to recommend that the total $2,638,017 of wastewater negative acquisition adjustment be amortized over a ten-year period, which results in a $263,802 reduction to York Water's FPFTY wastewater operating expenses and that Wastewater Operations rate base be reduced by $2,330,248 from $54,685,381 to $52,355,133.

WATER OPERATIONS – CUSTOMER COSTS

Q. WHAT CUSTOMER COST ANALYSIS DID YORK WATER USE TO DETERMINE ITS PROPOSED CUSTOMER CHARGES?

A. The proposed 5/8-inch customer charge is $24.85, which is equal to the monthly cost determined in the direct customer cost analysis[9].

Q. DID YOU AGREE THAT CUSTOMER CHARGES SHOULD BE DETERMINED BASED ON THE RESULTS OF THE DIRECT CUSTOMER COST ANALYSIS?

A. Yes. The Commission has traditionally relied on customer cost analyses based on direct cost allocations. Therefore, it is reasonable to continue to reject the "fully allocated" customer cost analysis provided by the Company and base the customer

[9] York Water Ex. FVIII, Schedule I.

charges instead on the direct cost customer cost analysis provided by the Company.[10]

WATER CUSTOMER CHARGES

Q. WHAT DID YOU RECOMMEND REGARDING THE COMPANY'S PROPOSED CUSTOMER CHARGE?

A. I agreed with the Company's customer cost analysis and proposed customer charges; however, I recommended the proposed customer charges be included in any scale back of rates.

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATION REGARDING INCLUDING THE PROPOSED CUSTOMER CHARGES IN THE SCALE BACK OF RATES?

A. Yes. York Water witness Herbert agreed that the customer charge should be reduced if the adopted rate increase necessitates reductions, results in no change, or only allows for minimal increase to the Company's volumetric rates. He did, however, oppose including the customer charges in the scale back of rates if the approved increase is sufficient to permit a modest reduction in volumetric rates while still enabling the scaled back revenues to be proportionally aligned with the

[10] I&E Statement No. 3, p. 21.

cost of service by customer class without requiring a decrease in customer charges.[11]

Q. DO YOU AGREE WITH MR. HERBERT'S POSITION?

A. No. Mr. Herbert's position is overly vague and could lead to confusion as to what a "modest reduction in volumetric rates" could be. Therefore, I continue to recommend the more straightforward solution of simply including all customer charges in any scale back of rates.

Q. DID ANY OTHER PARTY ADDRESS YOUR RECOMMENDATION REGARDING THE CUSTOMER COST ANLAYSIS?

A. Yes. OCA witness Mierzwa also disagreed with my recommendation to include the customer charges in any scale back of rates. The basis for Mr. Mierzwa's opposition to my recommendation is due to his disagreement with the Company's customer cost analysis.[12]

Q. WHY DID MR. MIERZWA OPPOSE THE COMPANY'S CUSTOMER COST ANALYSIS?

A. Mr. Mierzwa believes that only those costs that change directly with the addition or subtraction of a customer should be included in a customer cost analysis.[13]

[11] York Water Statement No. 107-R, p. 4.
[12] OCA Statement No. 4R, pp. 6-7.
[13] OCA Statement No. 4R, p. 6.

Q. DO YOU AGREE WITH MR. MIERZWA'S POSITION REGARDING WHAT COSTS SHOULD BE INCLUDED IN THE CUSTOMER COST ANALYSIS?

A. No. While I&E has, in previous cases, offered and supported the same or similar positions regarding costs that are appropriately included in the customer cost analysis, the Commission ruled that the customer cost analysis should not be limited to costs that change with the increase or decrease of a single customer in the 2017 UGI Electric base rate case that I referenced in my direct testimony.[14] Unless and until the Commission provides different guidance than it did in that case, I will continue to recommend that the customer charges be included in the scale back of rates.

SCALE BACK OF RATES

Q. DID YOU AGREE WITH THE COMPANY'S SCALE BACK PROPOSAL?

A. Generally, yes. I agreed that all classes' increases should be scaled back proportionately to the originally proposed increases, apart from the Public Fire Protection classes. However, I recommended that the customer charges be included in any scale back and that the West Donegal Township and Salisbury Township rates should be adjusted so that they continue to move towards consolidation.

[14] I&E Statement No. 3, p. 24.

Q. DID THE COMPANY RESPOND TO YOUR SCALE BACK RECOMMENDATION?

A. No. I addressed the Company's response to my recommendation to include customer charges in the scale back, above. However, the Company did not address my concerns regarding the West Donegal Township and Salisbury Township rates. Therefore, I continue to recommend that the West Donegal Township and Salisbury Township rates be adjusted so that they continue to move towards consolidation.

Q. DID ANY OTHER PARTY ADDRESS YOUR SCALE BACK RECOMMENDATION?

A. Yes. OCA witness Mierzwa disagreed with my scale back recommendation because it relied on the Company's COSS, which the OCA opposed.[15]

Q. DO YOU HAVE ANY RECOMMENDATIONS REGARDING THE OCA'S PROPOSED COSS?

A. No. I&E neither supports nor opposes the OCA's proposed COSS. Therefore, my recommendation should state that any scale back of rates should be proportional based on the COSS ultimately approved by the Commission in this case.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Direct Testimony & Exhibits

of

JASON HAILS

on behalf of

Pennsylvania Office of Small Business Advocate

Topics:

Revenue Requirement

Date Served: August 22, 2025

Date Submitted for the Record: _____

DIRECT TESTIMONY OF JASON HAILS

Q. Please state your name and business address.

A. My name is Jason Hails, and My business address is 925 Wappoo Rd., Suite A, Charleston, South Carolina 29407.

Q. By whom are you employed and in what capacity?

A. I am the Co-Founder and a Member of Quantiv Advisory, LLC. Quantiv is a private consulting firm specializing in the provision of financial and operational analysis and regulatory expertise in the Energy and Utility sector.

Q. On whose behalf are you testifying in this hearing?

A. My testimony is sponsored by the Pennsylvania Office of Small Business Advocate ("OSBA").

Q. Please describe your professional experience and qualifications.

A. My education and employment background is attached as Exhibit JH-2.

Q. Have you previously testified before this Commission?

A. I have testified recently before the Commission in:

- Docket No. A-2023-3041695, the proposed Acquisition by Aqua of the wastewater system Assets of the Greenville Sanitary Authority.

- Dockets R-2024-3047822 and R-2024-3047824, Aqua's Base Rate Case Application for the fully projected future Test Year ending December 31, 2025.
- Docket R-2025-3053112, Philadelphia Gas Works' 2025 Base Rate Case Application.

Q. What is the Company's proposed rate increase in this proceeding?

A. The following is an overview of York's key requests with its application:

a) The Company proposes to increase its water rates for the following reasons: (1) to provide sufficient revenues to recover the cost of providing water service to its customers; (2) to allow the Company to properly discharge its public duties by continuing to furnish adequate, safe, and reliable service; (3) to maintain its facilities properly; and (4) to afford the opportunity to more nearly approach a fair and reasonable rate of return on the original cost measure of value of its used and useful property[1].

b) York proposes a total annual increase to its Present Rate Revenues from $79.1 million to $103.2 million, an increase of $24.2 million (approximately 30.6%). This increase is comprised of an annual increase to its Water Present Rate Revenues from $70.4 million to $90.7 million ($20.3 million, or approximately 28.9%) and an annual increase to its Wastewater Present Rate Revenues from $8.7 million to $12.5 million, ($3.9 million or approximately 44.5%)[2].

[1] York Water Statement No. 103 (Direct Testimony of Matthew E. Poff), Page 5, Lines 3-9.
[2] Exhibit No. FII-2W, Page 10 of 10.

c) For the York Wastewater division, York proposes a 31.5% increase in revenue to $20.2 million under proposed rates for metered sales with Commercial customers[3].

d) Additionally, for the York Wastewater division, York proposes a 30.3% increase in revenue to $1.0 million under proposed rates for metered sales with Commercial customers and a 75.6% increase to $$0.8 million for unmetered Commercial/ Industrial customers[4].

Q. What is the subject of your testimony?

A. I am evaluating elements of York's revenue requirement determination, including York's historical and forecast operating expenses.

Q. What are your overarching concerns with York's proposed revenue requirement?

A. My concern with York's proposed revenue requirement is concentrated around the excessive escalation in operating expenses over the last several years and the quantum of operating expenses requested for the twelve months ending February 28, 2027 (Fully Project Future Test Year, "FPFTY", "Test Year"). Based on my analysis, operating expenses as requested are unreasonable and should be lowered to minimize the requested revenue requirement and rate increase.

[3] Exhibit No. FII-2, Page 9 of 10.
[4] Exhibit No. FII-2W, Page 9 of 10.

Q. How is your analysis structured?

A. In order to make this determination about operating expenses, I conducted the following steps:

- Developed Exhibit JH-1, which is a comparative York income statement from 2019 to 2027 using York's Attachments in response to interrogatory OCA-II-22 for the years 2019 to 2024, and York Exhibits FI-2, FI-2W for 2025 and 2027 (twelve months ending February 28, 2027) to populate financial data in the same format as OCA-II-22 attachments.
- Developed inflation statistics from 2023 through 2026, using 2026 data as a proxy for the twelve months ended February 28, 2027.
- Acknowledging that York's customer based grows from 76,731 in 2022 to a forecast of 82,840 for the Test Year, an increase of 6,109 over the 5 years, one might expect that operating costs would naturally increase over that same timeframe to look after the larger customer base. I felt that assessing operating expenses without factoring for customer growth by itself would be unsuitable, therefore I focused on the metric of operating expense per customer. On that basis, given customer growth, the escalation of expenses is somewhat moderated on a percentage basis.
- With inflation and operating expense data, I calculated a recommended reduction in operating expenses for the Test Year by applying a more reasonable annual escalator to operating expenses from 2023, resulting in a more appropriately escalated level of Test Year operating expenses.

Q. What is the basis for your contention that operating expenses are excessive?

A. We compared annual increases in operating expenses with inflation since 2022 and found that operating expenses have increased far in excess of inflation over that time. As shown in Figure 1 below, incorporating data from Exhibit JH-1 (Lines 16 to 23), while historical and forecast inflation from 2023 to 2026 averages 3.3%[5], operating expenses and operating expenses per customer increase on average by 12.6% and 10.5%, respectively, for the 4 year period. The forecast inflation for 2025 and 2026 uses the upper end of the Federal Reserve's range for analysis, which varies for 2026 from 2.1 to 3.1%[6]. While there is an expectation that operating costs increase over time, the prior year increases that have been incurred by York and the further increase in operating costs requested for the Test Year will contribute to the $24.2 million or 30.6% proposed increase in revenue requirement. Operating expenses have increased from $35.6 million in 2022 to $57.1 million for the Test Year, an increase of $21.5 million or 61% in that timeframe[7].

[5] Historical Inflation Source: https://www.bls.gov/regions/mid-atlantic/news-release/consumerpriceindex_northeast.htm.
Forecast Inflation Source: https://www.federalreserve.gov/monetarypolicy/fomcprojtabl20250618.htm
[6] Please note that I am using the 2026 full year inflation forecast as a proxy for the twelve months ending February 28, 2027.
[7] Exhibit JH-1, Line 18.

Figure 1: Inflation v. Escalation in Operating Expenses

Year	Inflation Type	Inflation Percent	York Operating Expense Escalation	York Operating Expense Escalation in Excess of	York Operating Expense Escalation per Customer	York Operating Expense Escalation per Customer in
2023	Actual	3.5%	19.7%	16.2%	17.9%	14.4%
2024	Actual	3.4%	9.0%	5.6%	6.4%	3.0%
2025	Forecast	3.3%	12.2%	8.9%	10.1%	6.8%
2026	Forecast	3.1%	9.7%	6.6%	7.7%	4.6%
Average		3.3%	12.6%	9.3%	10.5%	7.2%

Q. How do you propose applying a reduction in operating expenses?

A. While applying an average inflationary escalator of 3.3% to York operating expenses starting in 2023 might be appropriate in a static growth environment, given customer growth and the costs of maintaining a larger customer base, a more reasonable escalator factors in higher numbers of customers. The escalator is therefore applied using the operating expense metric per customer, as shown in Figure 2, as follows:

1. Select a reasonable annual escalator to factor for inflation and required investments. For this analysis, the escalator is 4.2%.
2. Calculate the operating expense per customer for each year from 2023 to 2027 using the escalator (Figure 2, Line 3).
3. Apply the escalator to operating expense per customer metric for each year and recalculate the theoretical operating expense (Figure 2, Line 4).
4. Given that operating expenses will increase annually in excess of the inflationary escalator, recalculate the variance from prior year.
5. Apply the recalculated variance to each year, starting with 2023 actual operating

expenses (Figure 2, Line 5).

I selected an escalator higher than inflation to account for the required investments outlined by York. The 4.2% escalator applies an incremental 0.9% over the average inflation of 3.3%, resulting in incremental operating expenses that closely approximate the annual increases in depreciation and amortization expense which results from the substantial capital expenditures York is undertaking with system upgrades.

127

My analysis for escalation uses 2023 as the base year from which to apply the escalation methodology so as not to discount the highly inflationary environment of the 2021 to 2022. York incurred significant operating cost increases through this inflationary period, and the operating environment stabilized thereafter.

Q. What is the result of your analysis and what is your recommendation?

A. The resulting calculations yield a reduction in operating expenses for the Test Year of $5.9 million (Figure 2, Line 6). Acknowledging the inherent judgment and imprecision embedded within the approach, for the purposes of this testimony and for ease of computation, I am recommending that the Revenue Requirement for the Test Year be reduced by $6.0 million.

This reduction is built upon the 2023 base year for actual operating expenses, applying a more reasonable escalation to the 2023 levels based on customer growth and required investments. Using this approach to arrive at the $6.0 million reduction for the Test Year implies increases in operating expenses for 2024, 2025 and the twelve months ended February 28, 2027 of 6.7%, 6.3% and 6.1%, respectively, from the 2023 baseline.

Q. Does this conclude your direct testimony?

A. Yes.

EXHIBIT JH-2

RÉSUMÉ AND EXPERT TESTIMONY LIST

FOR

JASON HAILS

EXHIBIT JH-2

Jason Hails – CV

Jason Hails, MBA
Co-Founder and Director, Quantiv Advisory, LLC

Profile

Quantiv Advisory, LLC

- Jason is a Co-Founder and Director of Quantiv Advisory, LLC, a boutique Consulting firm, established in 2021, providing professional services to support our clients' growth, efficiency, and compliance mandates.
- Quantiv is focused primarily on strategy, financial and operational advisory services and business quantification to small, medium, and large enterprise and energy/utility companies and market participants.
- With offices in Charleston, SC, Nashville, TN, and the Toronto region, Quantiv serves clients across North America.

Executive Profile

- Prior to the establishment of Quantiv, Jason retired as a 13-year Partner with MNP LLP, located first in Calgary, AB and then for 10 years in the Greater Toronto Area. Led MNP's national Energy & Utilities practice for the duration of his tenure with the firm.
- Industry executive with 30+ years of progressively responsible experience and 26 years in the Energy, Utilities and Natural Resource sectors.
- For the last 23 years with professional service firms, led the development and execution of business unit and practice strategy; business development and sales; and led client engagements primarily in Consulting, Enterprise Risk and Transaction Services.
- In addition to Energy & Utility clients, worked extensively within other sectors, including all levels of Government, Mining, Oil & Gas, Pipelines, Software, Manufacturing, Transportation, Retail, Software/Digital and Not-for-Profit.
- Prior to MNP, worked in a Big-4 environment for 5 years, and previously with several Energy companies, including ENMAX Corporation (Alberta-based integrated utility) and Superior Propane.
- Government clients have included numerous Departments and Agencies at the Federal, Provincial/State and Municipal levels, over 40 Energy/Resource/Utility companies in Canada and the US and several dozen companies outside the Energy sector; all ranging in size from small Clean Technology startups to resource companies with $80 billion in Assets.
- In the Energy Sector, worked with electric/gas utilities and oil & gas companies, independent power producers, electricity system operators, intervenors, and energy regulators, providing analysis and advice to leverage growth opportunities, mitigate risk, and improve efficiency and effectiveness and enhance compliance.
    - Larger Energy and Utility sector clients have included Duke Energy, PG&E, Kinder Morgan, Enbridge Inc., Enbridge Gas, BC Hydro, Hydro One, Hydro Ottawa, ENMAX, EPCOR,

Manitoba Hydro, Fortis, SaskPower, Boralex, SNC-Lavalin T&D, Water Security Agency of Saskatchewan, City of Markham Water Department.

Employment History

Quantiv Advisory, LLC – Co-Founder and Director - 2021 to current
Nashville, TN and Charleston, SC

- Within a boutique Advisory firm environment with a small team, delivering internal audit, consulting, and financial analysis to support our clients' growth, efficiency, and compliance mandates.
- Applying specialty expertise in the Energy & Utilities sector with Expert Witness and Testimony services.

MNP LLP – Partner – 2008 to 2021
(Calgary, Alberta to 2011 and Toronto, Ontario from 2011 to 2021)

Leadership of MNP's Energy & Utilities niche in a cross-service line role, sourcing and delivering leveraged engagements across all lines of MNP business. Over the past 12+ years with MNP, Jason's work has been primarily comprised of:

- Consulting – Financial Advisory, Regulatory, Governance Technology Services, Capital Projects, Procurement and Operations Strategy.
- Enterprise Risk Services (ERS) – Enterprise Risk Management, Internal Audit, Internal Controls.
- Transaction Services – Financial and Commercial Due Diligence, Business Development, Valuations.

Jason led or assumed an otherwise significant role in over 300 engagements with MNP. Roles within these engagements included Business Development Lead, Engagement Partner, Quality Assurance Partner, or Subject Matter Expert.

KPMG – Senior Manager, Advisory Services – 2007 to 2008 – Calgary, Alberta

- Senior Manager primarily within Enterprise Risk group, focused in the Energy sector and specifically Energy & Resources sectors in Western Canada.

PwC – Director, Advisory Services – 2005 to 2007 – Calgary, Alberta

- Worked within PwC's Advisory group in Consulting and Deals, inclusive of Risk, Consulting and Corporate Finance.

Regulatory Experience

Regulatory Support

- Centra Gas Manitoba 2025/26 General Rate Application, Regulatory Advisor for the MPUB (in Process).
- Manitoba Hydro 2025/26, 2026/27 and 2027/28 General Rate Application, Regulatory Advisor for the MPUB (in Process).
- Manitoba Public Insurance, 2024/25 and 2025/26 General Rate Application, Regulatory Advisor for the MPUB (in Process).
- Engaged as a Board Financial Expert in the review of New Brunswick Power's 2025 and 2026 General Rate Application.
- Conducted numerous reviews and filed evidence for various cost of service and regulatory asset matters for ENMAX, EPCOR, Enbridge Gas, Gazifere and recently Liberty Gas New Brunswick (2023) as an Acknowledged Expert (detailed assessment of Inter-affiliate costs).
- Quality Review Partner for MNP's Macro Environmental Expert Report on behalf of the Manitoba Public Utility Board for the NFAT hearing in 2014 (Keeyask and Conawapa).

Testimony

- Pennsylvania Public Utility Commission, PGW 2025 Base Rate Case – R-2025-3053112, Expert Witness for the OSBA, 2024/25.
- Pennsylvania Public Utility Commission, Aqua Base Rate Case – R-2024-3047822, Expert Witness for the OSBA, 2024/25.
- Pennsylvania Public Utility Commission, Aqua Greenville – A-2023-3041695, Expert Witness for the OSBA, 2024.
- Nova Scotia Utility and Review Board, 2023 Eastward Energy General Rate Application, Financial Expert for the Board, 2023.
- Nova Scotia Utility and Review Board, Halifax-Dartmouth Bridge Commission Rate Hearing, Financial Expert for the Board, 2021.
- Régie de l'énergie (Quebec Energy Board), Cost Allocation, Expert Witness on behalf of Gazifere (Enbridge Inc.), 2016.

Re: Pennsylvania Public Utility Commission v. The York Water Company / Docket Nos. R-2025-3053442 (Water) / R-2025-3053573 (Wastewater)

Dear Judge Coogan and Judge Farren:

Enclosed please find the Direct Testimony and Exhibits of Roger Cathcart, labelled OSBA Statement No. 2, with Exhibit Q-1 W, Exhibit Q-1 WW, Exhibit RC-1, and Exhibit RC-2, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-referenced proceedings.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Steven C. Gray

Direct Testimony & Exhibits

of

ROGER CATHCART

on behalf of

Pennsylvania Office of Small Business Advocate

Topics:

Revenue Allocation
Scale Back of Rates

Date Served: August 22, 2025

Date Submitted for the Record: _____

Q. **Please state your name and business address.**

A. Roger Cathcart, and my business address is 925 Wappoo Rd., Suite A, Charleston, South Carolina 29407.

Q. By whom are you employed and in what capacity?

A. I am a Senior Regulatory Advisor of Quantiv Advisory, LLC and a Principal of Quantiv Regulatory Advisors LLC. Quantiv is a private consulting firm specializing in the provision of financial and operational analysis and regulatory expertise in the Energy and Utility sector.

Q. On whose behalf are you testifying in this hearing?

A. Our testimony is being sponsored by the Pennsylvania Office of Small Business Advocate ("OSBA").

Q. Please describe your professional experience and qualifications.

A. I am a Chartered Professional Accountant (CPA) and Chartered Business Valuator (CBV) and provide financial regulatory analysis and advice on rate regulation matters for over 29 years. My education and employment background is attached as Exhibit QA-4RC.

Q. Have you previously testified before this Commission?

A. Yes, I testified recently before the Commission in:

- Docket No. A-2023-3041695, the proposed Acquisition by Aqua of the wastewater system Assets of the Greenville Sanitary Authority.

- Dockets R-2024-3047822 and R-2024-3047824, Aqua's Base Rate Case Application for the fully projected future test year ending December 31, 2025.
- Docket R-2025-3053112, Philadelphia Gas Works' 2025 Base Rate Case Application. Docket No. R-2024-3047822/ R-2024-3047824, the 2025 Base Rate Case for Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc.

Q. What is the subject of your testimony?

A. I am reviewing the appropriateness of The York Water Company's (York) class revenue allocation proposals for water and wastewater services and supporting changes to these proposals where suitable.

Q. Do you have any preliminary comments?

A. Yes. I wish to note at the outset that the recommendations and schedules reflect York's full rate request in this proceeding. Any such reference is intended exclusively for comparative purposes and should not be construed as an endorsement by the OSBA for the Commission to approve York's request in its entirety or in part.

Q. **Please summarize your recommendations**.

A. Based on our examination of the Company's filings and discovery answers, we recommend that the ALJ and Commission:

- Adopt York's proposed revenue allocation for water service, as it aligns all rate classes with their respective cost-based revenue levels.
- Adopt the OSBA's recommended water service increases, which reduce York's

requested revenue requirement by $5.25 million, resulting in a total water revenue increase of $15.0 million (22.1%).

- Adopt the OSBA's recommended wastewater service increases, which reduce York's requested wastewater revenue requirement by $750,000, resulting in a total wastewater revenue increase of $3.2 million (37.5%).

Q. How does York propose to recover its requested increase in water revenues in this case?

A. We have attached Schedule Q-1W, shown below, which outlines the Company's proposed class revenue increases of 30.0% (Line 6). The proposed increases for each customer class (Lines 1-5) range from a low of 11.0% (Public Fire Protection) to 34.5% (Industrial).

Q. What rate structure guidelines did York rely on to arrive at the proposed revenue allocation for water service shown in Schedule Q-1W?

A. York's representative, Mr. Herbert of Gannet Fleming Valuation and Rate Consultants LLC states that the Company's proposed water rate structure should consider the allocated costs of service, the impact of radical changes from the present rate structure, the understandability and ease of application of the rate structure, community and social influences, and the value of service. Mr. Herbert noted that specific guidelines for the proposed rate structure were provided through consultation with Company Management:

1. Increase public fire hydrant rates, if necessary, to recover 25% of the cost of service, in accordance with Section 1328 of the Public Utility Code.
2. Increase all remaining customer charges and consumption charges to move revenues by classification toward the indicated cost of service and ensure total revenues

recover the total cost of service.

Q. Does Mr. Herbert indicate that the Company's proposed rate design for water service customers complies with the above guidelines?

A. Yes, he does.

Q. Have you evaluated whether York's proposed class revenue allocation effectively moves all rate classes closer to cost in terms of class cost-of-service?

A. Yes, we have examined changes in the levels of water revenue subsidies, by customer class, at present and Company proposed rates.

Q. Why is information about class subsidies relevant?

A. The findings of the Cost Allocation study show how well the costs assigned to each rate class are being recovered through the revenues from that class. This is measured by a revenue-to-cost coverage ratio (RCC). If a class does not pay the exact amount needed for the service, it is either: a) receiving a subsidy (paying less than required, RCC below 1.0); or b) providing a subsidy (paying more than required, RCC above 1.0). To determine if a class is moving towards a cost-of-service ratio of 1.0, one must evaluate whether the class's current subsidy is increasing or decreasing with the proposed rates. An increasing subsidy means the class is moving away from the cost of service, which is not desirable. Conversely, a decreasing subsidy indicates the class is approaching the cost of service. The most accurate way to measure progress towards a cost-of-service is by comparing class subsidies and related RCCs to current and proposed rates.

Q. Have you calculated the class subsidies and related RCCs associated with York's present and proposed water rates, using the Company's cost-of-service study for its water operations ("WCOSS")?

A. Yes, in Schedule Q-3W.

Q. Please discuss Schedule Q-3W and provide your interpretation of the results.

A. The subsidies set out on Page 1 of Schedule Q-3W are calculated by deducting the cost-of-service-based revenue requirement of each class from the total revenue contribution of that class at the current and proposed rates set by the Company. These calculations provide both a dollar and RCC measure of the discrepancy between the current actual water revenues for a particular class and the revenue levels that would need to be achieved to have equalized class rates of return (RCC of 1.0) based on both the current rates and the rates proposed by the Company.

Page 1 of Schedule Q-2W indicates all classes have moved to the full cost of service under the Company's proposed revenue allocation. The changes in the subsidy and RCC calculations proposed and based on the current approved rates are detailed on page 2 of Schedule Q-2W.

Q. Are you in agreement with the Company's proposed revenue allocation for water service?

A. Yes, since York's revenue allocation proposal has moved customer classes to their respective cost-based revenue levels. However we are not in agreement with the amount of Revenue

Requirement proposed to be recovered through the Water and Wastewater Cost of Service Studies.

Q. What is York's proposal with respect to the scale-back of rates in the event that the Commission authorizes an increase that is less than the requested increase?

A. As outlined in the response from CFO, Matthew E. Poff to an inquiry of The Office of Consumer Advocate.[1] Mr. Poff recommends:

> *With the exception of Public Fire Protection and fixed water customer charges, all customer classes' rate increases should be scaled back proportionately to the originally proposed increases. For customers in West Donegal Township and Salisbury Township, any scale-back would apply to the agreed-upon rates (per prior settlements or tariffs) rather than proportionally to the proposed increases. This ensures equitable adjustments while honoring specific commitments.*

Q. Do you take issue with York's proposed approach?

A: No, I do not, as long as York Water's scale-back proposal remains consistent with maintaining revenue-to-cost unity. I would recommend that updated schedules for the COSS and WCOSS be filed with all parties to demonstrate that outcome.

Q. Have you prepared a schedule with the OSBA's recommended revenue allocation?

[1] OFFICE OF CONSUMER ADVOCATE INTERROGATORY OCA SET VI, NO. 3

A. Yes. Schedule Q-3W reflects the OSBA's proposed allocation of revenue responsibility by customer class. The class increases in Columns 4 and 5 can be compared to York's plan, as indicated in Schedule Q-1W. The schedules in Q-3W provide the proposed OSBA adjustment to Revenue Requirement which totals $6 million of which $5.2 million is reflected in the Water Cost of Service Study and the remainder $750,000 allocated to the Wastewater Cost of Service Study. The rationale for the proposed revenue requirement reduction is set out in OSBA Statement 1. If the Commission decides to scale back the requested revenue requirement increase, it should be handled as described in our evidence.

Wastewater Service

Q. How does York propose to adjust its wastewater service revenues in this proceeding by customer class?

A. Schedule Q-1WW outlines the Company's proposed increases in wastewater revenues by customer class. York plans to increase its existing wastewater income by $3.96 million, or 46.3%.

Q. How do the Company's proposed wastewater increase breakdown?

A. Schedule Q-1WW displays York's anticipated wastewater increases. The projected increases ranges from 44.3% (Residential) to 58.6% (Non-Residential).

Q. Do you have any comments on York's decision not to seek an Act 11 subsidization of wastewater revenue requirement?

A. Act 11 permits a water utility to allocate a portion of its water revenue requirement to subsidize its wastewater operations, provided the wastewater rate base is less than 10% of the combined water and wastewater rate base. This provision aims to support smaller wastewater systems by allowing cross-subsidization from larger water operations, subject to PUC approval and demonstration that it benefits ratepayers overall.

The Company's wastewater cost of service study (Exhibit FVIII-WA) and water cost of service study (Exhibit FVIII) are developed independently, with no allocation of water revenues to offset wastewater costs. This approach avoids cross-subsidization, ensuring each service recovers its own costs.

I agree with this method, as it promotes transparency and aligns with cost causation principles. If the PUC approves a revenue requirement below the requested level, any updated cost of service allocations should be recalculated to maintain separation between water and wastewater, preventing any unintended Act 11 subsidy.

Q. What are the OSBA's recommendations for increasing wastewater revenue?

A. I propose a reduction in the revenue requirement consistent with the recommendation by Partner Jason Hails in OSBA Statement No. 1.

Per Line 5 of Schedule Q-1WW, York's proposed wastewater increase is $3.96 million (46.3%), which eliminates the Act 11 subsidy and aligns customer classes to unity from the prior rate case.

The OSBA's proposed rate increase reduces the wastewater revenue requirement by $750,000, as detailed in Schedule Q-2WW, resulting in a recommended increase of $3.21 million (37.5% overall).

Q. Do you have a recommendation for modifying your recommended allocation proposal in the event the Commission awards the Company a wastewater revenue requirement that is less than its requested revenue requirement of $12.5 million in this proceeding?

A. Yes. We recommend that the Commission direct the Company to maintain the unity of wastewater class and proportionally scale back the class revenue requirements.

Q. Does this conclude your testimony?

A. Yes.

Recommended Reduction OSBA Statement No. 1 $ 6 million
overall reduction for Water and Wastewater rate classes

The recommended overall reduction in revenue requirement of $6,000,000 has been apportioned between water and wastewater operations based on the relative percentage of the overall combined proposed base revenue. In the case of water operations, this represents 87.5% of the overall proposed base revenue, or $5,250,000 of the proposed reduction.[1]

[1] The proposed base revenue for water services ($87,744,856) represents approximately 87.5% of the total proposed base revenue ($100,272,823), calculated as $87,744,856 ÷ $100,272,823 × 100. The proposed base revenue for wastewater services ($12,527,967) represents the remaining 12.5%, calculated as $12,527,967 ÷ $100,272,823 × 100.

The recommended overall reduction in revenue requirement has been apportioned between water and wastewater operations based on the relative percentage of the overall combined proposed base revenue. In the case of wastewater operations, this represents 12.5% of the overall proposed base revenue.[1] Accordingly an allocation of $750,000 of the OSBA proposed Revenue Requirement reduction.

[1] The proposed base revenue for wastewater services ($12,527,967) represents approximately 12.5% of the total proposed base revenue ($100,272,823), calculated as $12,527,967 ÷ $100,272,823 × 100. The proposed base revenue for water services ($87,744,856) represents the remaining 87.5%, calculated as $87,744,856 ÷ $100,272,823 × 100.

FOR

ROGER CATHCART

EXHIBIT RC-1

Roger Cathcart – CV

Roger Cathcart, CPA, CA, CBV

Quantiv Senior Regulatory Advisor and President, Cathcart Advisors Inc.

Consulting Executive Profile

Mr. Cathcart is Senior Regulatory Advisor of Quantiv and the President of Cathcart Advisors Inc. He has been in public practice for 37 years, 10 of which were in Assurance and Accounting Services, and is a Chartered Public Accountant (CPA, CA) and Chartered Business Valuator (CBV).

For the last 27 years, applied accounting expertise in public utility rate regulation being engaged as a Senior Advisor to The Public Utilities Board of Manitoba. Working with an interdisciplinary team, Roger analyses complex financial filings and identifies issues. In his capacity, he is responsible for the interpretation of accounting standards, preparation of financial analysis, briefings and reports related to the Board's review of franchise applications, rate base, rate of return applications, cost of service applications and rate change applications for Manitoba Public Insurance, Centra Gas Manitoba Inc., Manitoba Hydro, and other utilities under the Board's jurisdiction.

In his roles as Accounting Advisor to the MPUB since 1997, has provided advice including interpretation of accounting standards and impact of alternative accounting approaches on rates, implementation of International Financial Reporting Standards (IFRS) for Rate Regulated entities. Accounting for asset disposals and impairments. Listed are the following Applications that Mr. Cathcart provided Accounting related analysis and advice.

Roger has advised the Board on Manitoba Hydro's Needs for and Alternatives to Proposed Development Plan which reviewed the financial impact of alternative developments scenarios of Manitoba Hydro's $16 billion development plan. Roger has advised on other energy matters such as DSM programs and rate design and cost of service in natural gas and electric utilities, the expansion of natural gas service into rural regions.

Roger also has extensive experience in the preparation of economic impact studies in a diverse range of industries. Working collaboratively with Econometric Research Limited (ERL) he was the project manager in the preparation of Economic Impact Studies for the 2015 Toronto World Expo, the Canadian Wheat Board, the National Screen Institute Canada, the University of Manitoba, Manitoba Lotteries Corporation and The City of Calgary 2017 World Expo.

SURREBUTTAL TESTIMONY OF JASON HAILS

Q. Please state your name and business address.

A. My name is Jason Hails, and My business address is 925 Wappoo Rd., Suite A, Charleston, South Carolina 29407.

Q. By whom are you employed and in what capacity?

A. I am the Co-Founder and a Member of Quantiv Advisory, LLC. Quantiv is a private consulting firm specializing in the provision of financial and operational analysis and regulatory expertise in the Energy and Utility sector.

Q. On whose behalf are you testifying in this hearing?

A. My testimony is sponsored by the Pennsylvania Office of Small Business Advocate ("OSBA").

Q. Are you the same Jason Hails who pre-filed testimony in this proceeding on behalf of the Pennsylvania Office of Small Business Advocate (OSBA)?

A. Yes.

Q. What is the purpose of your surrebuttal testimony?

A. I am responding to Mr. Poff's rebuttal testimony, labelled Statement No. 3-R.

Q. What are your comments with respect to Mr. Poff's rebuttal testimony regarding the use of a general inflation factor?

A. Mr. Poff notes that "This approach is flawed in its use of a general inflation factor, which has been denied by the Commission"[1].

The use of a general inflation factor is a common evaluation tool used to assess the escalation of operating costs. I used this approach to determine an appropriate adjustment to York's claimed expenses, which are a key driver for York's proposed large total annual increase to its Present Rate Revenues from $79.1 million to $103.2 million, an increase of $24.2 million (approximately 30.6%)[2].

In the interest of fairness, I applied inflation as an evaluation tool not with expenses overall, but on an 'operating cost per customer' basis. This approach acknowledges customer growth and the incremental expenses associated with a larger customer base. On this matter, Mr. Poff notes "the fact that expenses overall grew more than inflation, even after accounting for customer growth, does not prove that the expenses were unreasonable"[3]. I do not agree with Mr. Poff's statement.

Inflation is the rate at which the general level of prices for goods and services in an economy increases over time, and applying a localized inflation measure as a benchmark to compare

[1] York Water Statement No. 3-R, Rebuttal Testimony of Matthew E. Poff, Page 9, Lines 5-6.
[2] Exhibit No. FII-2W, Page 10 of 10.
[3] York Water Statement No. 3-R, Rebuttal Testimony of Matthew E. Poff, Page 9, Lines 19-20.

cost escalations is entirely appropriate, ensuring that rate increases tied to operating expenses are not excessive compared to general economic conditions.

While individual expense line items may grow slower or faster than inflation, in aggregate York is responsible for managing its operating expenses prudently and efficiently. As noted in my testimony, while historical and forecast inflation from 2023 to 2026 averages 3.3%[4], operating expenses and operating expenses per customer increase on average by 12.6% and 10.5%, respectively, for the 4 year period. York's requested increases by any standard are unreasonable compared to inflation, especially over a 4-year period where York has had and will have an ongoing opportunity to offset cost increases for customers with reduced costs. These facts are demonstrable evidence that York has not managed its operating expenses prudently and efficiently. The vast majority of York operating expenses are in the 'controllable category' and should in aggregate be controlled more effectively to moderate large increases in revenue requirement. For each expense line item that Mr. Poff refers to on pages 11 and 12 of his rebuttal (rate case, electric expenses, ERP), I expect that York would attenuate any significant increases over inflation by reducing controllable costs with other expense items, as these items are a small fraction of the overall requested increase, and in several cases one-time and non-recuring expenses. This attenuation was not apparent in York's application.

[4] Historical Inflation Source: https://www.bls.gov/regions/mid-atlantic/news-release/consumerpriceindex_northeast.htm.
Forecast Inflation Source: https://www.federalreserve.gov/monetarypolicy/fomcprojtabl20250618.htm

At the same time, customer service level demands are arguably no different for water and wastewater services year after year yet may be subject to increases in costs well above inflation for these essential services and public goods.

Q. What are your comments with respect to Mr. Poff's rebuttal testimony regarding the depreciation expense?

A. Mr. Poff notes that "This approach by Mr. Hails also included depreciation expense in operating expenses when applying his inflation factor. Depreciation expense increases are not tied to a general inflation factor but instead are more directly tied to plant additions"[5]. While I did include depreciation expense in the inflation analysis, I acknowledged Mr. Poff's observation by providing an allowance in the escalator roughly equivalent to the annual escalation in depreciation expense. As noted in my direct testimony, the 4.2% escalator I used "applies an incremental 0.9% over the average inflation of 3.3%, resulting in incremental operating expenses that closely approximate the annual increases in depreciation and amortization expense which results from the substantial capital expenditures York is undertaking with system upgrades".

Without this incremental allowance, on an operating expense per customer basis, as shown below in Figure 2 – Revised, the Test Year Reduction from Pro-Forma would be $7.2 million instead of the $6 million recommended in my direct testimony.

[5] York Water Statement No. 3-R, Rebuttal Testimony of Matthew E. Poff, Page 10, Lines 5-7.

Figure 2 – Revised

Figure 2 - Operating Expense Reduction Analysis - Revised for Surrebuttal												
$ unless otherwise noted		2023	2024			2025			Twelve Months Ended Feb 28 2027		
Ln	Escalator Used for Operating Expenses per Customer 3.3%	Actual	Actual	Variance from Prior $	Variance %	Pro-Forma Dec 31 2025*	Variance from Prior $	Variance %	Pro-Forma Feb 28 2027**	Variance from Prior $	Variance %
1	Number of Customers	**77,893**	**79,771**	1,878	2.4%	**81,352**	1,581	2.0%	**82,840**	1,488	1.8%
2	York Acutal and Forecast Operating Expenses	**42,582,231**	**46,394,331**	3,812,100	9.0%	**52,069,319**	5,674,988	12.2%	**57,112,509**	5,043,190	9.7%
3	Operating Expense per Customer - Revised Using the Escalator	**$479**	**$495**	$16	3.3%	**$511**	$16	3.3%	**$528**	$17	3.3%
4	Calculated Operating Expense and Variance with Per Cust. Escalator	**37,308,664**	**39,469,045**	2,160,382	5.8%	**41,579,584**	2,110,539	5.3%	**43,737,335**	2,157,751	5.2%
5	Operating Expenses Using Revised Variance Percents (from Ln 4) Starting with 2023 Actuals	**42,582,231**	**45,047,982**	2,465,751	5.8%	**47,456,845**	2,408,863	5.3%	**49,919,593**	2,462,748	5.2%
6	Test Year Reduction from Pro-Forma								**7,192,916**		

In addition, Mr. Poff misapplies his logic in his claim that the depreciation expense represents 91.1% of my $5.9 million calculated adjustment[6]. The incremental 0.9% in my escalator on a per customer basis is applied to my calculations on an annual basis from 2023 and is therefore embedded and escalated in each year's calculated operating expenses, culminating with a test-year downward adjustment to the recommended reduction ($1.3 million), equivalent to York's test year depreciation expense.

Q. Does this conclude your surrebuttal testimony?

A. Yes.

Re: Pennsylvania Public Utility Commission v. The York Water Company / Docket Nos. R-2025-3053442 (Water) / R-2025-3053573 (Wastewater)

Dear Judge Coogan and Judge Farren:

Enclosed please find the Surrebuttal Testimony of Roger Cathcart, labelled OSBA Statement No. 2-SR, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-referenced proceedings.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Steven C. Gray

SURREBUTTAL TESTIMONY

of

ROGER CATHCART

on behalf of

Pennsylvania Office of Small Business Advocate

Topics:

Cost of Service Study
Scale Back of Rates

Date Served: October 6, 2025

Date Submitted for the Record: _____

Q. **Please state your name and business address.**

A. My name is Roger Cathcart, and my business address is 925 Wappoo Rd., Suite A, Charleston, South Carolina 29407.

Q. By whom are you employed and in what capacity?

A. I am a Senior Regulatory Advisor of Quantiv Advisory, LLC and a Principal of Quantiv Regulatory Advisors LLC. Quantiv is a private consulting firm specializing in the provision of financial and operational analysis and regulatory expertise in the Energy and Utility sector.

Q. On whose behalf are you testifying in this hearing?

A. My testimony is being sponsored by the Pennsylvania Office of Small Business Advocate ("OSBA").

Q. Are you the same Roger Cathcart who pre-filed testimony in this proceeding on behalf of the Pennsylvania Office of Small Business Advocate (OSBA)?

A. Yes.

Q. What is the subject of your surrebuttal testimony?

A. I am responding to Mr. Mierzwa, the witness for OCA Cost of Service evidence and rebuttal to my evidence OSBA Statement No. 2.

Q. Do you have any preliminary comments?

A. Yes. Mr. Mierzwa proposed changes to the demand determinants used in York's water cost-of-service study (WCOSS), particularly the maximum day demand (MDD) and maximum hour demand (MHD) ratios relative to the average day demand (ADD). These ratios are essential for fairly allocating capacity costs among different customer types.

According to Mr. Mierzwa, the data that York is used for these determinants is old and needs to be updated. I suggest conducting a new demand study to ensure these factors are based on current usage patterns rather than outdated data.

Q. **Please explain the role of MDD and MHD in utility cost allocation.**

A. MDD indicates the highest single-day water usage, while MHD measures the peak hourly demand, both expressed as ratios of ADD, which represents the typical daily consumption. As noted by Mr. Mierzwa, using outdated determinants has led to the cost of service study potentially not accurately reflecting the true cost to serve.

Q. Why do you advocate for an updated demand study in this case?

A. An updated demand study is crucial to maintaining the integrity of the WCOSS and ensuring equitable revenue distribution. Without it, the MDD and MHD determinants risk becoming misaligned with actual conditions, which could lead to unfair rates for various classes of customers. Mr. Mierzwa's analysis suggests a misalignment.

However, I do not agree that the demand determinants should be adjusted based solely on the peaks experienced during the June 2024 to May 2025 period, as recommended by Mr. Mierzwa. I do not question the accuracy of his determination, but I believe it would benefit from further analysis and evaluation through an updated third-party demand study.

Q. Please elaborate on why you believe an updated demand study is appropriate?

A. The purpose is to observe changing usage patterns influenced by factors such as population growth, economic shifts, and climate variability. For York, which services a variety of customers across residential, commercial, and industrial sectors, recent developments, such as post-pandemic work habits or increased irrigation during drier summers, could impact MDD/MHD ratios. Without a recent thorough study that incorporates current metered data and end-use analyses, the MDD/MHD ratios might overstate past peaks, resulting in distorted allocations. I would expect the study to analyze the prior data and, if necessary, normalize it to account for any anomalies that may affect the results and are not representative of current and future conditions. Such a study could then be tested in a future rate proceeding.

Q. What is your specific recommendation?

A. I recommend that the Commission direct York to conduct and file an updated demand study within six months, incorporating recent metering data, load

profiles, and scenario modeling for MDD/MHD. This should precede final rate approvals to ensure the WCOSS accurately supports the proposed allocations.

Q. Do you have any comments on Mr. Mierzwa's rebuttal relate to your evidence on wastewater cost of service?

A. York has eliminated the Act 11 wastewater subsidy and has proposed increases in rates to wastewater Customers to accomplish this. Mr. Mierzwa notes that there is a current subsidy between the Residential and Non-Residential customers of $1,275,000. Mr. Mierzwa believes that rates should be set to achieve unity through either a hearing finding or by way of settlement.

Q. Do you agree that a goal would be to establish rates that fully recover costs to serve?

A. I agree with Mr. Mierzwa that rates should be set to fully recover costs for wastewater customers. The rates charged to a class of customers should generally reflect the cost of providing service to that class. However, one must balance the cost-of-service criteria against other ratemaking principles when approving just and reasonable rates. Mr. Mierzwa's proposed redistribution of rates between Residential and Non-Residential customers would lead to a disproportionately large increase in wastewater rates. Some consideration should be given to issues of rate stability and affordability, and gradualism in moving the rate classes to a range of acceptable RCC ratios.

Q. What do you mean about moving rates to an acceptable range of RCC ratios?

A. I recommend that any transition to the wastewater classes take place over five years, and that consideration be given to establishing a zone of reasonableness within which the RCCs fall between 110 and 90 to account for the imprecision in such cost-of-service determinations.

Q. Do you have a recommendation for modifying your recommended allocation proposal in the event the Commission awards the Company a wastewater revenue requirement that is less than its requested revenue requirement of $12.5 million in this proceeding?

A. Yes. We recommend that the Commission direct the Company to maintain the unity of wastewater classes overall and proportionally scale back the class revenue requirements, moving non-wastewater customers one-fifth of the way to attaining the lower end of the range established by the zone of reasonableness.

Q. Does this conclude your testimony?

A. Yes.

I. STATEMENT OF QUALIFICATIONS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dante Mugrace. My business address is 22 Brooks Avenue, Gaithersburg, MD 20877.

Q. WHAT IS YOUR PRESENT OCCUPATION?

A. I am a Senior Consultant with the Economic and Management Consulting Firm of PCMG and Associates, LLC. (PCMG). In my capacity as a Senior Consultant, I am responsible for evaluating and examining rate and rate related proceedings before various governmental entities, preparing expert testimony recommending revenue requirement, as well as offering opinions on economic policy and policy issues and methodologies used to set a value on a utility's rate base and cost of service components of revenue requirement.

Q. PLEASE SUMMARIZE YOUR PROFESSIONAL EXPERIENCE.

A. PCMG is an association of experts in utility regulation and policy, economics, accounting and finance. PCMG's members have over 75 years collective experience providing assistance to counsel and expert testimony regarding the regulation of electric, gas, water and wastewater utilities that operate under local, state and federal jurisdictions. PCMG focuses on areas regarding revenue requirement, cost of service, rate design, cost of capital and rate of return. Prior to my association with PCMG, I was employed as a Senior Consultant with the consulting firm of Snavely King Majoros and Associates (SKM) from 2013 to 2015, in the same capacity as PCMG. Prior to SKM I was employed by the New Jersey Board of Public Utilities (NJBPU) from 1983 to my retirement in 2011. During my tenure at the NJBPU, I held various Accounting, Rate Analyst, Supervisory and Management Positions. My last position was Bureau Chief of Rates in the Agency's Water Division (Bureau Chief of Rates). I held this position for nearly 10 years. My resume is attached as Appendix A.

Q. WHAT EXPERIENCE DO YOU HAVE IN THE AREA OF UTILITY RATE SETTING PROCEEDINGS AND OTHER UTILITY MATTERS?

A. In my capacity as Bureau Chief of Rates at NJBPU, I was responsible for overseeing the rate process regarding administrative, financial, and managerial functions of the Rates

Bureau. My primary duties were to ensure that the jurisdictional utilities had sufficient revenues to cover their operating expenses, the ability to earn a reasonable rate of return on plant investments, and to ensure that the provision of safe, adequate and proper service at reasonable rates was met. During my time at the NJBPU, I was involved in hundreds of rate and rate related proceedings. In my capacity as a Senior Consultant previously with SKM and now with PCMG, I have been and am currently involved in rate and rate related proceedings before the Commissions in the Commonwealths of Massachusetts and Pennsylvania, and the States of Arkansas, Geogia, Hawaii, Maine, Maryland, New Jersey, New York, North Dakota, Ohio and Wyoming. I was involved in the Generic Proceedings to Establish Parameters for the Next Generation Performance Based Rate Plans before the Alberta Utilities Commission. I was involved in transmission formula rate plans before the Federal Energy Regulatory Commission (FERC) regarding the PECO Energy Company on behalf of the Pennsylvania OCA and the Rockland Electric Company on behalf of the NJ Division of Rate Counsel.

Q. WHAT IS YOUR EDUCATIONAL BACKGROUND?

A. I hold a Master of Business Administration (MBA) degree with a concentration in Strategic Management from Pace University-Lubin School of Business in New York, New York. I hold a Master of Public Administration (MPA) degree from Kean University in Union, New Jersey. I hold a Bachelor of Science (BS) degree in Accounting from Saint Peter's University in Jersey City, New Jersey.

II. PURPOSE OF TESTIMONY

Q. ON WHOSE BEHALF ARE YOU TESTIFYING?

A. I am testifying on behalf of the Pennsylvania Office of Consumer Advocate (OCA).

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to calculate and to make a recommendation regarding the York Water Company's water distribution base rate case proceeding (York Water or Company) and York Water Company's –Wastewater base rate case proceeding (York

Wastewater or Company). My recommendation includes the setting of the Company's Water's and Wastewater's Rate Base Valuations, and Pro Forma Operating Incomes at Present Rates for the Fully Projected Future Test Year Period Ending February 28, 2027. (FPFTY 2027). On May 30, 2025, York Water filed a base rate case with the Pennsylvania Public Utility Commission (PAPUC or Commission) requesting an overall increase in rates for its water distribution service of approximately $20.3 million or 28.90% above current rate revenues of $68.305 million. YWC St. 103, Exhibit FII-2.[1] York Water – Wastewater Division filed a base rate case with the PAPUC requesting an overall increase in rates for its wastewater division of approximately $3.858 million or 44.5% above current rate revenue of $8,670,534. Company Exhibit FII-2W. The Company provides water distribution service to about 73,000 water customers within its service territory that extends across the counties and in portions of York, Adams, Frankin and Lancaster. For the York Water – wastewater division the Company provides service to about 7,300 wastewater customers in portions of the counties of Franklin and York. Included in my recommended position on Rate Base Valuation and Operating Income, I am also incorporating the recommendations of OCA witness Mr. James Garren with respect to depreciation issues, OCA witness Mr. David Garrett with respect to the overall rate of return, and any recommendations from OCA witness Ms. Barbara Alexander with respect to customer service issues.

III. REVENUE REQUIREMENT ISSUES – WATER DIVISION

A. SUMMARY

Q. WHAT REVENUE DEFICIENCIES OR ADJUSTMENTS ARE YOU RECOMMENDING?

A. Based upon the use of the Company's proposed fully projected future test year ending February 28, 2027, I have the following recommendations:

- My recommended Rate Base balance is $445,194,941 , which is $597,724 higher than the Company's proposed Rate Base balance of $444,597,217.

[1] Hereafter referred to as Company Exhibit FII-2.

- My overall Rate of Return based upon OCA witness Garrett's recommendation is 6.76%, which includes a Common Equity component of 8.90%.
- My recommended Operating Revenue at Present Rates is computed at $68,305,310, which is the same as the Company's Present Rate Revenue of $68,305,310[2]
- My recommended total Operating Expenses are $45,977,601 , which is $3,424,327 lower than the Company's proposed Operating Expenses of $49,401,928.
- My recommended Federal Income Tax expense is ($1,023,481), which is $3,641,875 lower than the Company's proposed Federal Income Taxes of $2,618,394.
- My recommended State Income Tax expense is $(442,376) , which is $1,404,1024 lower than the Company's Proposed State Income Tax of $961,726.
- Overall, I recommend a revenue requirement increase of $9,070,464 , which is $11,241,514 lower than the Company's proposed revenue requirement increase of $20,311,978.

III. REVENUE REQUIREMENT ISSUES – WASTEWATER DIVISION

A. SUMMARY

Q. WHAT REVENUE DEFICIENCIES OR ADJUSTMENTS ARE YOU RECOMMENDING?

A. Based upon the use of the Company's proposed fully projected future test year ending February 28, 2027, I have the following recommendations:

- My recommended Rate Base balance is $54,648,093, which is $37,288 lower than the Company's proposed Rate Base balance of $54,685,382.
- My overall Rate of Return based upon OCA witness Garrett's recommendation is 6.76%, which includes a Common Equity component of 8.90%.

[2] Any differences between Company Operating Revenues at Present Rates in its filing and my Exhibits are due to rounding.

- My recommended Operating Revenue at Present Rates is computed at $8,670,534, which is the same as the Company's Present Rate Revenue of $8,670.534.[3]
- My recommended total Operating Expenses are $7,339,526, which is $503,479 lower than the Company's proposed Operating Expenses of $7,843,005.
- My recommended Federal Income Tax is $(519,212), which is $718,456 lower than the Company's proposed Federal Income Taxes of $199,244.
- My recommended State Income Tax is (200,631), which is $276,997lower than the Company's Proposed State Income Tax of $76,366.
- Overall, I recommend a revenue requirement increase of $2,371,948 , which is $1,485,559 lower than the Company's proposed revenue requirement increase of $3,857,507.

Q. WHAT RATE BASE COMPONENTS ARE YOU ACCEPTING IN THIS PROCEEDING?

A. With respect to the York Water Division, I am recommending disallowance of the Company's balances related to Utility Plant Acquisition Adjustments and am accepting Materials and Supplies, , Customer Advances and Contributions in Aid of Construction, and the related taxes on those deposits, and Funds Supplied through Customer Advances which are shown on my Exhibit DM-3W. With respect to the York Water – Wastewater Division I am recommending disallowance of the Company's balances related to Utility Plant Acquisition Adjustments and am accepting Customer Advances and Contributions in Aid of Construction, and the related taxes on those deposits. These are shown on my Exhibit DM-3WW.

Q. WHAT HAS THE COMPANY STATED WERE THE REASONS FOR THIS INSTANT RATE PROCEEDING?

A. York Water stated that this instant rate proceeding is needed to recover $145 million of capital expenditures, which represents the total plant investment from the level claimed in

[3] Any differences between Company Operating Revenues at Present Rates in its filing and my Exhibits are due to rounding.

its last rate request in 2022 through the end of the FPFTY, February 28, 2027. Company witness Mr. Hand (York Water Company (YWC) St. 1) stated that York Water has projected $41.708 million during 2025 related to new or replacement facilities and $44.606 million in 2026 and through the end of the FPFTY in 2027. These facilities include (1) standpipe, booster station, and pumping equipment upgrades; (2) improvements to the Company's water treatment facilities; (3) replacement of relining of aging mains and; (4) the replacement of other facilities including the costs of new services, hydrants, and mains resulting from organic growth with York's Water service territory and upgrades to meter reading equipment and electronics. YWC St. 1 at 15. Regarding the requested increase for the Company's wastewater division, the Company stated that system improvements since the last rate request include construction and expansion of its wastewater treatment plants required to service the needs of growing communities that meet increasing stringent regulatory and discharge requirements. The Company stated that upgrades to wastewater treatment equipment and facilities were needed to maintain compliance with existing and proposed regulations and provide resiliency in operations. (Statement of Reasons[4]).

Q. WHAT IS YOUR RESPONSE?

A. In reviewing the filing, the discovery and testimonies in this instant rate proceeding, and the fact that the Company's last base rate filing was in 2022, I am accepting the Company's reasons and the need to adjust rates in this 2025 base rate case. Given that the plant additions included in this filing for York Water and York Wastewater are needed to provide safe and reliable service to customers, as well as the requirements from the Department of Environmental Protection I am recognizing the Company's 2025 rate filing as the need to update its revenue requirement.

[4] See "Statement of Reasons For the 2025 Rate Increase Request," https://www.yorkwater.com/wp-content/uploads/YWC_Statement-of-Reasons_2025.05.30.pdf (Accessed on Aug. 20, 2025)

YORK WATER COMPANY

B. RATE BASE (Measures of Value)

1. Water Plant in Service (WPIS)

Q. WHAT HAS THE COMPANY PROPOSED REGARDING ITS WATER PLANT IN SERVICE?

A. The Company has proposed a WPIS balance of $643,098,076 for the fully projected future test year ending February 28, 2027. YWC St. 106, Exhibit FVI-B, at I-5[5]. Included in that balance are plant additions that the Company expects to place in service during the FPFTY ending February 28, 2027.

Q. HOW DID THE COMPANY DEVELOP ITS PLANT ADDITIONS TO PRODUCE THE TOTAL PROPOSED PLANT ADDITIONS AS OF FEBRUARY 28, 2027?

A. Company witness Mr. Hand stated that for the Company to continue to provide its high-quality water service, it is necessary to invest in replacements, improvements and additions to the Company's facilities. York St. 1, at 14-15.

Q. WHAT TYPES OF PLANT INVESTMENTS ARE INCLUDED IN THE COMPANY'S PLANNED ADDITIONS IN 2025 AND 2026 THROUGH THE FPFTY FEBBRUARY 28, 2027?

A. As detailed in Company Exhibit FV-12, the Company provided a breakdown of its plant additions through December 31, 2025 of $41,708,860 and plant addition through February 28, 2027 of $44,606,360. In response to OCA Set 9-15, the Company stated that it did not project any changes in costs or completion dates for the projects or plant additions. The Company stated that no inflationary costs or contingencies were included to calculate the total plant additions or projects.

Q. HAS THE COMPANY RECEIVED OR APPLIED FOR DOLLARS RELATED TO THE INFRASTRUCTURE INVESTMENT AND JOBS ACT (IIJA) FUNDING PROGRAM OR ANY OTHER FEDERAL OR STATE FUNDING?

[5] Hereafter referred to as Company Exhibit FVI-B page I-5.

A. In response to OCA Set 9-13, the Company has not received or applied for dollars related to the IIJA Funding Program or any Federal Funding. No projects that were completed or that are currently in progress qualified for federal, state or other governmental funding.

Q. WHAT ADJUSTMENTS DO YOU HAVE WITH RESPECT TO THE COMPANY'S PROPOSED WPIS BALANCE OF $643,098,076?

A. I reviewed the response to OCA-Set-9-15 which referred me to the Company Exhibit FV-12-2 where I asked the Company to provide and identify all project additions in the FTY and in the FPFTY periods and the breakdown of these project additions. After review, I am accepting the Company's balance to the WPIS of $643,098,078. My recommendation is shown on my Exhibit DM-5W.

Q. WHAT TYPES OF MAJOR PROJECTS AND OTHER EXPENDITURES HAS THE COMPANY INCLUDED IN ITS FPFTY PERIOD?

A. According to the response to OCA-Set 9-15, and Company Exhibit FV-12-2, the Company included capital expenditures related to new structures and improvements, collection and impounding reservoirs, booster pumping equipment, distribution reservoirs and standpipes, T&D mains, service lines and other common and routine facilities. The Company has included costs related to its SCADA programming projects including hardware upgrades, programming (software) upgrades and SCADA for new facilities.

Q. DO YOU HAVE ANY OTHER CONCERNS REGARDING THE COMPANY'S PROJECTED TIMELINE OF THESE COSTS TO BE PLACED IN-SERVICETHROUGH THE FPFTY PERIOD?

A. Although I am not currently recommending an adjustment to these capital projects, the Company should provide an update as to whether these capital projects have been placed in service and provide a firm in-service date if these capital projects are expected to be in-service by the end of the FPFTY period 2027.

Q. WHAT IS YOUR TOTAL BALANCE TO THE COMPANY'S WPIS BALANCE?

A. My total balance is the same as the Company in the amount of $643,098,078 and is shown on my Exhibit DM-5W.

2. Accumulated Depreciation

Q. WHAT HAS THE COMPANY CALCULATED WITH RESPECT TO ITS ACCUMULATED DEPRECIATION?

A. The Company computed Accumulated Depreciation in the amount of $122,414,932 as shown on Company Exhibit FVI-B page I-5.

Q. WHAT IS YOUR RECOMMENDATION?

A. I do not have any adjustments or changes to the Company's Accumulated Depreciation balance, as I did not make any adjustments to the Company's WPIS balance. I am relying on OCA witness Mr. Garren's recommended Depreciation expenses and Depreciation rates which affect the Accumulated Depreciation balance. Using Mr. Garren's recommended Depreciation rates and his overall Depreciation expense, I am making the associated adjustment to the Accumulated Depreciation expense of $1,141,334. My total adjustment to the Company's Accumulated Depreciation including Mr. Garren's overall depreciation expense is $1,141,334 or a balance of $121,273,598. My recommendation is shown on my Exhibit DM-6W.

3. Cash Working Capital

Q. WHAT DID THE COMPANY PROPOSED RELATED TO ITS CASH WORKING CAPITAL (CWC)?

A. The Company has proposed a CWC balance of $4,155,568 as shown on Company Exhibit FV-8. The Company performed a lead/lag study as explained by Company witness Mr. Coppersmith. YWC St. 104 page 26.

Q. DO YOU HAVE ANY ADJUSTMENTS OR CHANGES IN THE METHODOLOGY USED BY THE COMPANY TO CALCULATE ITS CWC?

A. No. I am accepting the Company's CWC methodology. My adjustments relate to Operations and Maintenance (O&M) Expenses, and other adjustments used to develop the CWC balance.

Q. WHAT ARE YOUR ADJUSTMENTS WITH RESPECT TO THE COMPANY'S CWC BALANCE?

A. I am adjusting the Company's Cash Working Capital to incorporate the adjustments to my recommended O&M Expenses which flow through to the Cash Working Capital document to calculate my recommended Cash Working Capital. I utilized the Company's lead-lag study and the associated lead -lag days for payment of expenses and taxes as explained in Mr. Coppersmith's testimony. YWC St. 104 at 26. My recommended balance is $3,820,459 or a reduction of $335,110 and is shown on my Exhibit DM-8W.

4. <u>Accumulated Deferred Income Taxes (ADIT)</u>

Q. WHAT DID THE COMPANY PROPOSE WITH RESPECT TO ITS ACCUMULATED DEFERRED INCOME TAXES (ADIT)?

A. The Company proposed a balance in its ADIT in the amount of $38,864,100 as shown on Company Exhibit FV-1 and FV-1-1. $26,024,536 represents deferred income taxes related to accelerated depreciation and $12,839,564 is related to excess deferred federal income taxes related to accelerated depreciation. Company witness Mr. Matthew Poff stated this balance represents the projected unamortized balance of deferred income taxes related to accelerated depreciation deducted from the measure of value. YWC St. 103 at 167. Mr. Poff stated that the balance in the excess deferred income taxes related to accelerated depreciation as required under Treasury Regulation 1.167 (l)-1 of the Internal Revenue Code. Under the regulation, if a future period is used in determining the maximum amount of the reserve to be excluded from the rate base, the amount of the reserve is the amount of the reserve at the beginning of the period and at a pro rata portion of the projected decrease to the account during the period. YWC St. 103 at 171.

Q. WHAT ADJUSTMENTS DO YOU HAVE RELATED TO THE COMPANY'S ADIT BALANCE?

A. I do not have any adjustments with respect to the methodology the Company used to calculate the ADIT balance for the accelerated depreciation and for the excess deferred income taxes related to accelerated depreciation. My adjustments reflect Mr. Garren's recommended overall Depreciation Expense which flows into the ADIT balance.

Q. WHAT IS YOUR TOTAL ADJUSTMENT RELATED TO THE COMPANY'S ADIT BALANCE FOR ACCELERATED DEPRECIATION?

A. Using Mr. Garren's adjustment to Depreciation expense and the balance of the Accumulated Depreciation adjustment of $1,141,334 and multiplying the amount by the Company's federal income tax rate of 21%, I calculate an adjustment of $239,680 which is shown on my Exhibit DM-7W. With respect to the excess deferred Federal Income Tax (FIT) accelerated depreciation I am accepting this balance. My total recommended adjusted balance is $39,103,780. This is shown on my Exhibit DM-7W.

C. RATE OF RETURN - WATER AND WASTEWATER DIVISIONS

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS RATE OF RETURN FOR BOTH ITS WATER AND WASTEWATER DIVISIONS?

A. The Company has proposed an overall rate of return of 8.01%. YWC St. 105 at 3. This includes a long-term debt cost of 4.54% (weighted cost of 2.062%) and a common equity return of 10.90% (weighted return of 5.949%).

Q. WHAT HAS OCA WITNESS MR. GARRETT PROPOSED WITH RESPECT TO HIS RECOMMENDED OVERALL RATE OF RETURN?

A. Mr. Garrett has recommended an overall rate of return of 6.76% with a long-term debt cost of 4.54% (weighted cost of 2.2%) and a common equity component of 8.90% (weighted return of 4.5%) for both the Water and Wastewater Division. Mr. Garrett has recommended a capitalization ratio of 49% debt and 51% equity. This is shown on Mr. Garrett's Exhibit DJG-16.

Q. WHAT EFFECT DOES MR. GARRETT'S PROPOSED RETURN ON EQUITY HAVE ON THE COMPANY'S REVENUE REQUIREMENT?

A. The effect of Mr. Garrett's recommendation of the Water Company's return on equity from 10.90% to 8.90% along with a recommended weighted 2.2% cost rate and a weighted 4.5% equity rate results in a revenue requirement reduction of $7,762,208.[6] The effect of Mr. Garrett's recommendation of the Wastewater Company's rate of return on equity from

[6] Rate Base of $444,597,216 times the rate of return of 8.01% equals $35,651,984. Mr. Garrett's recommended rate of return of 6.76% with the Company's Rate Base of $444,597,217 equals $30,054,772 or a difference of $5,597,212. Multiplying this balance by the gross revenue factor of 1.386799 results in a balance of $7,762,208.

10.90% to 8.90% along with a recommended weighted 2.2% cost rate and a weighted 4.5% equity rate results in a revenue requirement reduction of $939,957.[7]

Q. WHAT ARE THE EFFECTS OF THE COMPANY'S CLAIMED CAPITAL STRUCURE WITH THE PROPOSED ADDERS TO THE COMPANY'S CLAIMED RETURN ON EQUITY FOR BUSINESS RISK, FLOTATION COSTS AND MANAGEMENT PERFORMANCE?

A. The effects of the Company's claimed capital structure with the proposed adders to the claimed return on equity for the business risk, flotation costs and management performance are as follows:

Water Company

Business Risk – 0.15%	$554,540[8]
Floatation Costs- 0.12%	$449,725[9]
Management Performance – 0.25%	$887,486[10]

Wastewater Company

Business Risk – 0.15%	$61,993[11]
Floatation Costs – 0.12%	$49,184[12]
Management Performance – 0.25%	$102,673[13]

[7] Rate Base of $54,685,381 times the rate of return of 8.01% equals $4,381,003. Mr. Garrett's recommended rate of return of 6.76% with the Company's Rate Base of $54,685,374 equals $3,698,700 or a difference of $682,303. Multiplying this balance by the gross revenue factor of 1.3776240 results in a balance of $939,957.
[8] Operating Income Difference of $399,781 multiplied by the gross revenue factor of 1.386799 equals $544,540.
[9] Operating Income Difference of $324,290 multiplied by the gross revenue factor of 1.386799 equals $449,725.
[10] Operating Income Difference of $639,953 multiplied by the gross revenue factor of 1.386799 equals $887,486.
[11] Operating Income Difference of $45,000 multiplied by the gross revenue factor of 1.377624 equals $61,993.
[12] Operating Income Difference of $35,702 multiplied by the gross revenue factor of 1.377624 equals $49,184.
[13] Operating Income Difference of $74,529 multiplied by the gross revenue factor of 1.377624 equals $102,672.

D. OPERATING INCOME

1. Operating Revenues

Q. WHAT HAS THE COMPANY PROPOSED AS ITS OPERATING REVENUE AT PRESENT RATES AND PROPOSED RATES?

A. As shown on YWC St. 103, Exhibit FII-2[14], the Company proposed total Operating Revenues at Present Rates of $68,305,310[15], and total Operating Revenues at Proposed Rates of $88,617,288. The difference represents the revenue increase of $20,311,978. The Company included adjustments of $318,106 to the Projected balance for the 12 months ending February 28, 2027, to annualize revenue adjustments under existing revenues. *Id*.

Q. DID THE COMPANY UPDATE ITS OPERATING REVENUE SUBSEQUENT TO THE INITIAL FILING?

A. No.

Q. DO YOU HAVE ANY ADJUSTMENTS TO THE COMPANY'S PRESENT RATE REVENUE?

A. After a review of the discovery in this matter, I do not have any adjustments to the Company's Present Rate Revenue. This is shown on my Exhibit DM-10W.

2. OPERATING EXPENSES (OPEX)

Q. HOW DID THE COMPANY DEVELOP ITS OPERATING EXPENSES PRESENTED FOR RECOVERY IN THIS RATE PROCEEDING?

A. According to Mr. Poff, the Company summarized adjustments to operating expenses for the twelve months ending December 31, 2025, and then annualized and normalized the effect of changes occurring during the twelve months ending December 31, 2025. The Company then summarized adjustments to operating expenses for the twelve months ending February 28, 2027, as well as reflecting changes to uncollectible accounts expense

[14] Hereafter referred to as Company Exhibit FII-2.
[15] The Company has included $2,091,789 of revenue representing Pro-forma DSIC and STAS revenues as shown on Company Exhibit FII-2 page 9 of 10.

due to an increase in operating revenues resulting from the proposed increase in rates. YWC St. 103 at 55.

Q. WHAT LEVEL OF OPERATING EXPENSES HAS THE COMPANY PROPOSED TO RECOVER IN THIS PROCEEDING UNDER ITS FPFTY TEST PERIOD?

A. As shown on Company Exhibit FI-2, the Company has proposed to recover $49,401,928 of Operating Expenses. This balance includes Depreciation Expense of $15,433,375 and Taxes Other than Income Taxes of $2,002,003. The Federal Tax Expense based upon the Company's proposed O&M Expense is $2,618,394 and the State Tax Expense is $961,726.

Q. HAS THE COMPANY INCLUDED SALARIES AND WAGES IN ITS OPERATING EXPENSES?

A. Yes. As shown on YWC St. 103, Exhibit FIII-2,[16] the Company included Salaries and Wages in each of the Company's five Operating Expense categories.

Q. WHAT IS THE TOTAL LEVEL OF SALARIES AND WAGES THAT THE COMPANY HAS PROPOSED TO RECOVER IN ITS FPFTY PERIOD?

A. The Company has proposed recovering $11,074,377 in Salary and Wages as shown on my Exhibit DM-22W. This balance was derived by calculating each of the Company's OPEX Salary and Wage balances and adjustments as shown on Company Exhibit FIII-2 at 16 - 22.

a. <u>Normalization Adjustments</u>

Q. HOW DID YOU APPROACH YOUR ADJUSTMENTS TO THE COMPANY'S OPERATING EXPENSES IN THE FPFTY PERIOD?

A. I reviewed the YWC St. 103, Exhibit HIII-1[17] which reflected the three-years of actual Operating Expenses for the periods ending December 31, 2022, 2023 and 2024, for each of the Company's Operating Expenses. I analyzed and reviewed each of the Company's wastewater expenses for the three years indicated above, noting and evaluating any adjustments that appear to be unusual or have large variations during the three year period. I compared these variations and adjustments to the Company's FPFTY period operating

[16] Hereafter referred to as Company Exhibit FIII-2.
[17] Hereafter referred to as Company Exhibit HIII-1.

expenses. I set a baseline variance of 15% or greater to determine my adjustments across the Company's total operating expense categories. My use of a 15% variance is based upon the basic accounting principle that a material variance of at least 15% is considered a major variance and requires an explanation as to the reasoning for the variance. Variances are useful to determine whether the expected or forecasted costs are in line with actual costs that have been incurred. I used a three-year normalization adjustment in areas where the Company incurred cost increases or decreases in what was projected or budgeted over that which were incurred in prior years and reviewed whether those cost increases or decreases were reasonable in nature. The use of a three-year normalization adjustment is a reasonable approach in developing cost adjustments, on a budgeted or projected basis. Operating costs incurred from prior years typically show a trend that can be used to set costs in the future. The more reliance on forecasted data the more subjectivity can be used to determine the estimates proposed in the FPFTY period ending February 28, 2027. There is a measure of interpretation when reviewing forecasted data and different levels of interpretation that can vary among the parties to the proceeding and ultimately determined and included by the Commission when setting rates for service. I will address these adjustments under each of my Operating Expenses categories set forth below.

b. Company Overall Salary & Wages (S&W) Increase

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS SALARY AND WAGES INCREASE?

A. The Company proposed a total S&W of $11,074,377. A breakdown of these categories of S&W are shown on my Exhibit DM-22 and on the Company's Exhibit FIII-2. The Company has included various categories of S&W pay related to Operations, Vacation, and Maintenance.

Q. HOW DID THE COMPANY DEVELOP ITS PROPOSED S&W INCREASE?

A. According to Company witness Mr. Poff, York Water projected a payroll expense for union and non-union employees for the future test year ending December 31, 2025, reflecting hourly and salary rates effective in 2025, annual cash and equity incentive awards effective in 2025 and projected new employees. The Company has included year-end bonuses of $55,143 in projected payroll. YWC St. 103 at 57. Mr. Poff projected the salary and wage

adjustment of $383,304 in 2025 which reflects annual and cash equity incentive awards, projected new employees and salary rate increases. *See* Company Exhibit FIII-2-1 (a). A portion of the projected payroll expense for certain specified supervisory and general office employees for the twelve months ending December 31, 2025, was capitalized and is reflected as a reduction in operating expenses. *See* Company Exhibit FIII-2-10.

Q. WHAT WERE THE COMPANY'S NEXT ADJUSTMENTS?

A. According to Company witness Mr. Poff, York Water then projected payroll expense for union and non-union employees for the FPFTY period reflecting pro-forma hourly and salary rates effective in 2026 and annual cash and equity incentive effective in 2026. The Company has included year-end bonuses in the amount of $53,250 in projected payroll. YWC St. 103 at 102. Mr. Poff projected the salary and wage adjustment of $297,234 in 2026 which reflects the annual and cash equity incentive awards and salary rate increases. Company Exhibit FIII-2-40. Mr. Poff stated that a portion of the pro-forma payroll expense for certain specified supervisory and general office employees for the twelve months ending February 28, 2027 was capitalized and is reflected as a reduction to operating expenses. YWC St. 103 at 103, Company Exhibit FIII-2-49.

Q. WHAT ADJUSTMENTS DO YOU HAVE WITH RESPECT TO THE COMPANY'S PROPOSED S&W BALANCE OF $11,968,739?

A. I am accepting the Company's balance of its overall Salary and Wage expenses. I am making adjustments related to the Company's Long Term Incentive Plan (LTIP) of $261,776 as shown in response to OCA Set 9-5 and 9-5, Bonuses in the amount of $55,143 shown in response to OCA Set 9-43, and implementing a vacancy rate ratio[18]. I will explain each of my adjustments below. I will now discuss the vacancy rate ratio adjustment.

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO THE COMPANY'S S&W INCREASE WITH RESPECT TO A VACANCY RATE RATIO?

A. (BEGIN CONFIDENTIAL) [redacted]

[18] York Water Response to OCA-IX-24.

[redacted] **(END CONFIDENTIAL)**

Q. WHY IS IT APPROPRIATE TO UTILIZE A VACANCY RATIO?

A. It is appropriate to use a vacancy ratio to normalize the level of employees going forward. In all organizations, there is always a level of vacancies that will not be filled at any given point of time. This is due to employees retiring, leaving the company, getting fired, laid off or the positions have been eliminated. A vacancy ratio provides for a normal level of employees employed at the Company at any given point in time. **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)** This is shown on my Exhibit DM-22W.

Q, PLEASE EXPLAIN YOUR ADJUSTMENT TO THE COMPANY'S LTIP?

A. In Company Exhibit FIII-22, the Company stated that its LTIP provides certain officers of the York Board of Directors and other key York employees with the opportunity to receive grants of incentive stock options, non-qualified stock options, unrestricted and restricted

stock, performance restricted stock units and stock appreciation rights related to York stock. The purpose of the plan is to give participants an ownership interest in York and to create an incentive for them to contribute to York's growth, benefitting York's stockholders, aligning the economic interest of the participants with those of York's stockholders. The LTIP is necessary to ensure that compensation practices of York are competitive in the industry and to enable York to continue to assist in the attraction and retention of key employees vital to York's success.

Q. WHAT IS YOUR RESPONSE?

A. I am recommending disallowance of the Company's LTIP of $261,776 for ratemaking purposes. I believe these costs are not customer-oriented in nature and that benefits ratepayers in the provision of safe and reliable utility services. As stated in Company Exhibit FIII-22, these types of payments benefit the Company and its shareholders in the areas of financial growth benefiting shareholders and aligning the interests of the participants with the Company. Therefore, the Company should bear these costs if the Company believes it provides shareholder benefits related to financial growth, and the retention of key employees.

Q. WHAT IS YOUR ADJUSTMENT RELATED TO THE COMPANY'S YEAR-END BONUSES?

A. I am recommending disallowance of the Company's year-end bonuses that is allocated to the Water Division of $54,239[19] ($55,143 minus $904 allocated to the Wastewater Division). As stated in response to OCA Set 9-29, the Company stated that no criteria is required for employees to receive these year-end bonuses. My recommendation is based upon the fact that these year-end bonuses are not customer–oriented or related to benefitting ratepayers but rather are given with no criteria attached to receiving the bonus. The Company should not have unfettered access to ratepayer money to spend at will. If the Company wants to provide employees with these year-end bonuses, then the Company should bear the costs and not pass them onto ratepayers.

[19] The $54,239 is calculated by using the ratio of the Company's LTIP total $266,136 and dividing that balance by the LTIP allocated to the Wastewater of $4,360 or 1.64%. This results in a balance of $904.

Q. WHAT IS THE TOTAL IMPACT OF YOUR ADJUSTMENTS TO THE COMPANY'S PROPOSED S&W LEVEL?

A. My adjustments reduce the Company's S&W level by $662,643; $346,628 related to the vacancy rate ratio; $261,776 related to the LTIP and; $54,239 related to the Year-End bonuses. These are shown on my Exhibit DM-22W and are carried over to my OPEX Exhibits DM-11W through Exhibit DM-15W.

d. Source of Supply Expenses

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS SOURCE OF SUPPLY EXPENSES?

A. As shown on Company Exhibit FIII-2 the Company proposed a balance to its Source of Supply Expenses of $2,467,892. This balance includes Salary and Wages of $767,365. Mr. Poff stated that York Water annualized and normalized the effect of changes occurring during the twelve months ending December 31, 2025, and summarize the adjustments to operating expenses for the twelve months ending February 28, 2027. YWC St. 103 at 55.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. As I explained previously with respect to my normalization of expenses (2022-2024) to the balance of expenses of 2025 and in the FPFTY period, I have included the effects of the normalization in my Exhibit DM-11W. My normalization adjustment is a reduction of $120,296 minus the LTIP of $18,139, the vacancy rate adjustment of $24,019 and bonuses of $3,758 or a net adjustment of $74,380. This breakdown is reflected on my Exhibit DM-11W.

e. Water Treatment Expenses

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS WATER TREATMENT EXPENSE?

A. As shown on Company Exhibit FIII-2 the Company proposed a balance to its Water Treatment Expenses of $4,964,737. This balance includes Salary and Wages of $1,858,555. Mr. Poff stated that York Water annualized and normalized the effect of changes occurring

during the twelve months ending December 31, 2025, and summarize the adjustments to operating expenses for the twelve months ending February 28, 2027. YWC St. 103 at 55.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. As I explained previously with respect to my normalization of expenses (2022-2024) to the balance of expenses of 2025 and in the FPFTY period, I have included the effects of the normalization in my Exhibit DM-12W. My normalization adjustment is a reduction of $200,397 minus the LTIP of $43,933, the vacancy rate adjustment of $58,173 and bonuses of $9,103 or a net adjustment of $89,188. This breakdown is reflected in my Exhibit DM-12W.

f. Transmission and Distribution Expense

Q. WHAT DID THE COMPANY PROPOSE WITH RESPECT TO ITS TRANSMISSION AND DISTRIBUTION EXPENSE?

A. The Company has proposed a balance of $9,485,772. This is shown on Company Exhibit FIII-2. This balance includes Salary and Wages of $4,033,452. Mr. Poff stated that York Water annualized and normalized the effect of changes occurring during the twelve months ending December 31, 2025, and summarize the adjustments to operating expenses for the twelve months ending February 28, 2027. YWC St. 103 at 55.

Q. ARE THERE ANY OTHER SPECIFIC ADJUSTMENTS YOU MADE TO THE COMPANY'S TRANSMISSION AND DISTRIBUTION EXPENSE?

A. Yes. Mr. Poff stated that York included $150,000 related to costs associated with identification of customer-owned service line materials in compliance with the Lead and Copper Rule Improvement (LCRI) promulgated by the U.S. Environmental Protection Agency (EPA). The Company must identify the materials of all customer-owned service lines to replace all lead service lines within ten years. YWC St. 103 at 116. The Company estimated that $150,000 per year over ten-years to identify all unknown customer-owned service lines. Company Exhibit FIII-2-50. The Company included $23,900 of annual costs for acoustic leak detection software. Company Exhibit FIII-2-52. The software allows the Company to more accurately identify the source of leaks in its distribution system. YWC St. 103 at 117.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am accepting the Company's adjustment with respect to the service line identification costs of $150,000. As explained in response to OCA Set 9-62, these costs are needed to comply with the EPA Lead and Copper Rule Improvements. I am also accepting the Company's adjustment with respect to costs associated with leak detection software of $23,900.[20] As I explained previously with respect to my normalization of expenses (2022-2024) to the balance of expenses of 2025 and in the FPFTY period, I have included the effects of the normalization in my Exhibit DM-13W. My normalization adjustment is a reduction of $868,769 minus the LTIP of $95,343, the vacancy rate adjustment of $126,247 and bonuses of $19,755 or a net adjustment of $627,424. This breakdown is shown on my Exhibit DM-13W.

g. <u>Customer Accounts Expense</u>

Q. WHAT HAS THE COMPANY PROPOSED RELATED TO ITS CUSTOMER ACCOUNTS EXPENSE?

A. As shown on Company Exhibit FI-2, the Company has proposed a balance of $2,669,105. This is shown on Company Exhibit FIII-2. This balance includes Salary and Wages of $1,303,281. Mr. Poff stated that York Water annualized and normalized the effect of changes occurring during the twelve months ending December 31, 2025, and summarize the adjustments to operating expenses for the twelve months ending February 28, 2027. YWC St. 103 at 55.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. In reviewing the expenses for the period 2022-2024 as depicted in Company Exhibit HIII-1, the majority of the expenses did not meet the 15% threshold that I used to normalize the expenses. In other expense categories, the prior expenses appeared to be on the decline which may have been due to reclassification or readjustment of prior expenses. The only adjustment that had a variance of over 15% was the Outside Services accounts of $280,434.

[20] York Water Response to OCA-IX-63.

In response to OCA Set 9-12, the Company stated that it had included $60,000 to reflect the customer assistance program.

Q. DO YOU HAVE ANY ADJUSTMENTS TO THE COMPANY'S CUSTOMER ASSISTANCE PROGRAM?

A. Yes. Based upon OCA Witness Ms. Alexander, she recommended increasing the $60,000 related to the customer assistance program to $100,000.

Q. WHAT OTHER ADJUSTMENTS DO YOU HAVE REGARDING THE COMPANY'S CUSTOMER ACCOUNTS?

A. Based upon Ms. Alexander's recommendation, I am disallowing the costs related to the Company's customer survey costs of $24,000.[21] The Company has proposed to recover these costs over a 5-year period or $4,800 annually.

Q. WHAT ARE YOUR TOTAL ADJUSTMENTS TO THE COMPANY'S CUSTOMER ACCOUNTS?

A. My total normalizing adjustments are the expense over three-years (2022-2024) results in a balance of $146,288 related to Outside Services. I've included the additional $40,000 of customer assistance programs and disallowed the annual amortization of $4,800 related to the customer survey. Incorporating these adjustments results in a difference of $38,946. Including my disallowance for the LTIP of $30,807, the vacancy rate of $40,793 and the Bonuses of $6,383, my total adjustment is $116,929. This is shown on my Exhibit DM-14W.

h. <u>Administrative & General Expense (A&G)</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO IT'S A&G EXPENSE?

A. The Company proposed a balance to its A&G Expenses of $12,242,194 as shown on Company Exhibit FI-2. This balance includes Salary and Wages of $3,111,724. Mr. Poff stated that York Water annualized and normalized the effect of changes occurring during

[21] York Water Response to OCA-VIII-1 & 3.

the twelve months ending December 31, 2025, and summarize the adjustments to operating expenses for the twelve months ending February 28, 2027. YWC St. 103 at 55.

Q. WHAT ADJUSTMENTS DO YOU HAVE WITH RESPECT TO YOUR NORMALIZATION METHODOLOGY?

A. I have three normalization adjustments. My first adjustment is related to the Company's proposed Insurance-Workers Compensation in the amount of $197,196. In response to OCA-Set 9-36, the Company stated that the 5.0% rating premium is set by the insurance carrier. Prior costs were $148,203 in 2023, $169,452 in 2024 and a projected balance of $175,559 in 2025. Company Exhibits HIII-1, FIII-1. A three-year normalization results in a balance of $164,405 or an adjustment of $32,791 (16.6% variance). My second adjustment is related to the Company's Injury and Damages in the amount of $108,234. Prior costs were $2,890 in 2022, $9,170 in 2023 and $208,234 in 2024 and 2025. Company Exhibits HIII-1, FIII-1). A three-year normalization results in a balance of $40,098 or an adjustment of $68,136 (62.9% variance). My third adjustment is related to the Company's Bank Fees in the amount of $164,535. Company Exhibit FIII-2. In response to OCA Set 9-38 the Company provided three-years' worth of bank fees. ($79,561 in 2022, $88,818 in 2023 and $91,614 in 2024). A three-year normalization results in a balance of $86,664 or an adjustment of $77,871 (47.3% variance). These are reflected on my Exhibit DM-15W.

Q. WHAT SPECIFIC ADJUSTMENTS HAS THE COMPANY INCLUDED IN IT'S A&G EXPENSE?

A. The Company included the following specific adjustments to its A&G Expenses:

1. Rate Case Expenses - $236,188[22]
2. Employee Benefits – 401K Matching - $203,890[23]
3. Employee Benefits – Pension Administration - $1,920[24]
4. Insurance – Workers Comp. - $4,061[25]

[22] Company Exhibit HIII-2-1.
[23] Co. Ex. FIII-2-43.
[24] Co. Ex. FIII-2-44.
[25] Co. Ex. FIII-2-45.

5. Bad Debt Expense - $2,068,[26] $133,785[27]
6. Allocation to Wastewater – $13,413[28]
7. Directors Fees - $10,711[29]
8. A&G Exp. Capitalized – $10,265[30]

I will address each of these adjustments below:

1. <u>Rate Case Expenses ($236,188)</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO RATE CASE EXPENSES?

A. The Company has proposed a total rate case expense of $944,750 amortized over a four-year period or $236,188 annually. YWC St. 3 at 24. This is shown on Company Exhibit HIII-2-1. Mr. Poff stated that the four-year period was based upon the approximate average elapsed time between the filing dates for the Company's last three rate cases. YWC St. 3 at 24.

Q. WHAT ADJUSTMENTS DO YOU HAVE REGARDING THE COMPANY'S RATE CASE EXPENSE RECOVERY?

A. In reviewing the response to OCA-Set 9-23, the Company provided the last five base rate case proceedings beginning in 2008 and ending in 2022. This instant rate proceeding (2025) calculates to a total of 6 proceedings. Normalizing the rate case expenses results in a 2.8 year period. In response to OCA Set 9-23 the Company has filed the following base rate case proceedings:

[26] Co. Ex. FIII-2-46.
[27] Co. Ex. FIII-2-55.
[28] Co. Ex. FIII-2-47.
[29] Co. Ex. FIII-2-48.
[30] Co. Ex. FIII-2-49.

Proceeding	Filing Date
R-2008-2023067	2008
R-2010-2157140	2010
R-2012-2336379	2012
R-2018-3000019	2018
R-2022-3031340	2022
R-2025-3053442	2025
Total Years	17 (2008-2025)
Number of Proceedings	6
Normalized Period	2.80 yrs.

Using the above data, normalizing these rate case filings based upon prior filings calculates to a normalization period of 2.80 years. The Commission routinely normalizes rate case expense, and it then looks to the historical filing frequency to determine the proper normalization period. Given the information provided by the Company, it appears that the 4 year normalization period benefits ratepayers than normalizing the prior rate case expenses over a 2.80 year period. Therefore, I am accepting the Company's 4 year normalization period. My adjustment is shown on my Exhibit DM-15W.

2. Employee Benefits – 401k Matching ($203,890)

Q. WHAT HAS THE COMPANY PROPOSED TO ITS EMPLOYEE BENEFITS 401K MATCHING?

A. The Company proposed to adjust its Employee Benefits – 401k Matching by $203,890 for the twelve ending December 31, 2026, and for the twelve months ending February 28, 2027. The total balance is $633,620 shown on Company Exhibit FIII-2. The Company stated that these adjustments are necessary to retain and recruit qualified employees in a competitive labor market. YWC St. 103 at 105. The Company matches the 401K plan to 100% of employee contributions up to a flat amount of $2,800. Company Exhibit FIII-2-41. In Exhibit FIII-2-42 the Company projects annual 401k matching and contributions for employees added during the FTY and FPFTY periods. YWC St. 103 at 106. In Exhibit FIII-2-43 the Company projects annual deferred compensation matching contributions for

employees currently participating and salaried employees to be added during the FTY and FPFTY periods. YWC St. 103 at 107. The breakdown of these 401k matching is as follows:

• Company Contribution annualize – FIII-2-41	$42,712
• Company Contribution -employees added – FIII-2-42	$66,095
• Company Contribution – Enhanced 401k deferred – FIII-2-43	$95,083
Total	$203,890

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I adjusted the Company's balance of $633,620 by my vacancy rate ratio of 3.13%, based upon my recommended level of employees expected in the FPFTY period. My reasoning for the vacancy rate ratio of 3.13% is shown under my Salary and Wages section b. My adjustment is shown on my Exhibit DM-15W.

3. Employee Benefits – Pension Administration ($1,920)

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS PENSION ADMINSTRATION COSTS?

A. The Company proposed adjusting its Pension Administration by $1,920 as shown on Company Exhibit FIII-2-44. Mr. Poff stated that this adjustment reflects changes in the trustee and portfolio management fees for the twelve months ending February 28, 2027, for the Company's qualified defined benefit pension plan. The Company pays for trustee and portfolio fees based upon the plan asset values. YWC St. 103 at 108.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. **(BEGIN CONFIDENTIAL)** [redacted] **(END CONFIDENTIAL)** This maintains the balance in the Pension Administration account without the inflation adjustment at the current rate. Also, inflation adjustments should not be considered with setting rates for service, as they are not known and measurable.

4. Insurance – Workers Compensation ($4,061)

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS INSURANCE – WORKERS COMPENSATION?

A. The Company proposed adjusting its Workers Compensation by $4,061 as shown on Company Exhibit FIII-2-45. The Company adjusted the balance based upon pro-forma payroll in effect on January 1, 2025. YWC St. 103 at 109. The Company made further adjustments based upon various premium rates through February 28, 2027, to derive an adjustment of $4,061. YWC St. 103 at 110. The Company proposed an FPFTY balance of $197,196.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I normalized the expenses as identified above under my normalization adjustments. This reduces the balance by $32,791 and sets the balance in the FPFTY period to $164,405. This is shown on my Exhibit DM-15W.

5. Bad Debt Expense ($2,068 and $133,785)

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS BAD DEBT EXPENSE?

A. The Company adjusted its Bad Debt Expense by $2,068 under existing rates and $133,785 under proposed rates (total adjustment of $135,853) as shown on Company Exhibit FIII-2. The Company applied a two-year average percent of uncollectible accounts actually written off less recoveries of 0.66% to pro-forma operating revenues under existing rates for the twelve months ending February 28, 2027, to develop the balance adjustment of $2,068. YWC St. 103 at 111, Company Exhibit FIII-2-46. The Company adjusted its Bad Debt Expense under Present Rates of $443,390 to $579,243 or a difference of $135,853, based upon pro-forma revenues under proposed rates and a two-year average ratio of net uncollectible accounts written off to total proposed operating revenues. This results in a balance adjustment of $2,068 under existing rates and $133,785 under Proposed Rates. YWC St. 103 at 117, Company Exhibit FIII-2-55.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am accepting the Company's two-year average of uncollectible accounts ratio of 0.66%. My adjustment reflects my recommended revenue requirement increase of $9,070,464 and my recommended Operating Income deficiency of $6,540,576 shown on my Exhibit DM-1W multiplied by the two year uncollectible accounts ratio of 0.66%. This produces an additional proforma bad debt expense of $43,822 over the Company's present uncollectible balance of $443,390 as shown on my Exhibit DM-15W (A&G Expenses)).

6. Allocation to Wastewater ($13,413)

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS ALLOCATION TO WASTEWATER?

A. Mr. Poff stated that in Exhibit FIII-2-47 an adjustment of ($13,413) was made to annualize the allocations to wastewater for the twelve months ending February 28, 2027, based upon the Company's current allocation methodology and pro-forma expense adjustments to the accounts that are allocated. YWC St. 103 at 111. This adjustment increases the allocation from ($862,142) to ($875,555). Company Exhibit FIII-2. These allocations reflect portions of indirect labor, fringe benefits and operating expenses and allocations to payroll taxes and fringe benefits on the direct labor recorded on the wastewater side of the business. YWC St. 103 at 111-112.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am accepting the Company's methodology related to the allocation of certain expenses to the Wastewater Division. However, my adjustment reflects the ratio to the Company's Administrative and General (A&G) Expenses of $12,242,194 to the allocated expense of ($875,555) resulting in a 7.15% ratio. Using my recommended A&G Expense balance of $12,144,334 (before the allocation to the Wastewater Division) and multiplying that balance by 7.15% this results in an adjustment of ($868,320), a difference of $7,235 from the Company's balance of ($875,555). This is shown on my Exhibit DM-15W.

7. Directors Fees ($10,711)

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ADJUSTMENTS TO DIRECTORS FEES?

A. The Company proposed to adjust Directors Fees by $10,711 as shown on Company Exhibit FIII-2 and FIII-2-48. Mr. Poff stated that this adjustment annualizes Directors Fees for the twelve months ending February 28, 2027 based upon the Company's current complement of directors, scheduled meetings and the projected 2026 fee increase. YWC St. 103 at 112. In response to OCA Set 9-10, the Company stated that it commissioned a study which showed that the average compensation of the York Water directors is significantly lower than the proxy group.[31]

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am recommending disallowance of the additional $10,711 in the FPFTY period. The Company has not fully explained the need for the additional increase but for the Company's response in OCA-Set 9-10 Attachment 1. The Company stated that the need to increase these fees was in order to attract and retain employees. I believe this additional cost should not be the burden of ratepayers to pay for. While I am accepting the balance of these Director Fees $650,316,[32] I am recommending disallowance of the additional costs of $10,711. The Company has already included $67,328 of additional Director Fees under existing rates. *See* Company Exhibit FIII-2 at 15. Adding an additional $10,711 under proposed rates appears to be excessive. I believe maintaining the current balance of Director Fees of $650,317 is sufficient given the size of the Company. If the Company believes that Director Fees are below the proxy, the Company should be responsible to fund the additional dollars and not burden the ratepayers for these additional costs. My Adjustment is shown on my Exhibit DM-15W.

[31] York Water Response to OCA-IX-10, Attachment 1.
[32] Company Exhibit FIII-2 at 22.

8. A&G Expense Capitalized ($10,265)

Q. WHAT HAS THE COMPANY PROPOSED TO IT'S A&G EXPENSE CAPITALIZED?

A. The Company proposed an adjustment of ($10,265) as shown on Company Exhibit FIII-2 and FIII-2-49. This adjusts the A&G expense capitalized for the twelve months ending February 28, 2027, in accordance with the Settlement Agreements under Docket No. R-870769 and R-963619 based upon the proforma indirect labor, employee benefits, property insurance, workers compensation insurance and pension expense and two-year capitalization ratios of various indirect labor and benefits. YWC St. 103 at 111-112.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. While I am accepting the Company's methodology used to calculate the A&G Expense capitalized, my adjustment reflects the ratio to the Company's A&G Expenses of $12,242,194 to the A&G Capitalized balance of ($689,840) resulting in a 5.55% ratio. Using my recommended A&G Expense balance of $12,144,334 (before the allocation to the Wastewater Division) and multiplying that balance by 5.55% results in an adjustment of ($674,011), a difference of $5,829 from the Company's balance of ($679,840). This is shown on my Exhibit DM-15W.

Q. WHAT OTHER ADJUSTMENTS DO YOU HAVE THAT HAVE NOT BEEN ADDRESSED ABOVE?

A. I have adjustments to the additional following expenses:

9. Stock Awards – CONFIDENTIAL

Q. WHAT HAS THE COMPANY PROPOSED RELATED TO STOCK AWARDS?

A. In Confidential response to OCA-Set-9-31, which refers to I&E RE-19 HIGHLY CONFIDENTIAL Attachment 1, the Company provided information related to the level of Stock Awards. The Company included **(BEGIN HIGHLY CONFIDENTIAL)** [redacted] **(END HIGHLY CONFIDENTIAL).**

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. While the Company has not indicated if these Stock Awards have been included in the revenue requirement calculation, I am recommending these costs be disallowed. The ratepayers should not be burdened or required to pay for Stock Awards that do not provide customer- oriented benefits for ratemaking purposes. These types of payments are designed to attract and retain key employees in the Company. I do not see a nexus between these types of payments and ratepayer benefits. If the Company believes these types of payments benefit ratepayers, the Company should bear the costs of providing these types of payments. My adjustment is shown on Exhibit DM-15W.

10. Employee Benefits – Health Insurance and Other Benefits

Q. WHAT HAS THE COMPANY PROPOSED REGARDING ITS EMPLOYEE BENEFITS – HEALTH INSURANCE?

A. As shown on Company Exhibit FIII-2 the Company proposed Employee Benefits – Health Insurance in the amount of $2,374,697. The Company stated that the medical rates include an inflation adjustment of 8.325%. The Company also included Other Employee Benefits of $226,490 as shown on Company Exhibit FIII-2.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am recommending disallowance of the inflation adjustment of 8.325%. Inflation adjustments should not be used to calculated expenses to set rates for service. Inflation adjustments are not known and measurable and do not provide a good index of cost increases. Inflation adjustments do not address any particular or individual expense category; it is simply a forecast of cost adjustments which may or may not be realized. In today's world inflation costs appear to be much lower, however, but while inflation can be used to develop economic data as in changes in broad baskets of consumer goods and services, utilizing inflation costs for ratemaking purposes is not reasonable. My adjustment to disallow the inflation costs is $2,374,697 times the 8.325% or $197,693. My next adjustment is to incorporate a vacancy rate adjustment of 3.13% in the same manner as I incorporated this adjustment for the level of employees expected to be employed at the Company. My adjustment reduces the Employee Benefits – Health Insurance by $68,140.

My total adjustment to the Company's Employee Benefits – Health Insurance is an overall reduction of $265,833 ($197,693 + $68,140). My balance is $2,108,864 and is shown on my Exhibit DM-15W.

With respect to the Other Employee Benefits of $226,490, I incorporated a vacancy rate adjustment of 3.13% to lower the balance by $7,089. This results in an adjusted balance of $219,864 and shown on my Exhibit DM-15W.

11. Remaining A&G Adjustments

Q. WHAT ARE YOUR REMAINING ADJUSTMENTS TO THE COMPANY'S A&G EXPENSES?

A. I have the following adjustments to the Company's A&G Expenses as depicted in Company Exhibit FIII-2:

- Contract Services – Tax - $21,100 – 5% increase ($1,055)
- Contract Services – Other Acct. - $49,476 – 5% increase ($2,474)
- Contract Services – Auditing - $260,558 – 5% increase ($12,408)
- Insurance – General Liability - $215,953 – 10% increase ($21,595)
- Insurance – General Liability D&O - $336,088 – 5% increase ($16,804)
- General Liability Excess - $276,532 – 5% increase ($13,827)
- Insurance – Other - $469,754 – various increases ($41,017)

In response to OCA Set 9-53, the Company stated that expenses related to Contract Services-Auditing, Tax and Other Accounting were increased by 5% based upon the increase from 2024 to 2025 for the audits and 2023 to 2024 for the tax return. With respect to the adjustments to General Liability, Liability D&O, Excess Liability the Company stated that these expenses are expected to increase by 10% and 5%, respectively. [33] I am recommending disallowing these percentage increases because these appear to be inflation-related adjustments and not tied to any certain increases. These are merely projections which may not be realized and are not known and measurable. With respect to Other Insurance of $469,754[34], the projected balances for these various insurance expenses

[33] York Water Response to OCA-IX-54.
[34] Company Exhibit FIII-2-29.

during the test year was calculated to be $428,737. These costs adjustments vary from a high of 23% to a low of 5%. These costs adjustments are based upon anticipated market increases. I believe these costs increases have not been fully supported by the Company and in fact merely predict costs that may or may not be realized. Therefore, I am disallowing these costs. My adjustments are shown on my Exhibit DM-15W.

Q. WHAT ARE YOUR TOTAL ADJUSTMENTS TO THE COMPANY'S A&G EXPENSES?

A. My total adjustment is a reduction of $968,516 shown on my Exhibit DM-15W.

i. Increased Costs Resulting from Load Growth

Q. WHAT HAS THE COMPANY INCLUDED WITH RESPECT TO INCREASED COSTS RESULTING FROM LOAD GROWTH?

A. The Company included $160,181 related to increases in load growth shown on Company Exhibit FIII-2 and Exhibit FIII-2-51. This is a $30,150 increase over current operations. This balance represents costs to service additional customers and collecting expenses, purchased power and chemicals resulting from annualization of the net increase in the number of customers served during the twelve months ending February 28, 2027. YWC St. 103 at 116. The Company utilized an 8.5% historical average for the two years ending December 31, 2024.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. Since I did not make adjustments to the Company's purchased power or chemical expenses, in the FPFTY period, I am accepting the Company's increase resulting from load growth in the amount of $160,180. My adjustment is shown on my Exhibit DM-16W.

j. Amortization of Utility Plant Acquisition Adjustments

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS AMORTIZATION OF UTILITY PLANT ACQUISITION ADJUSTMENTS?

A. The Company proposed a balance of ($23,331) as shown on Company Exhibit FIII-2.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am recommending disallowance of the Company's proposed amortizations. I have been advised by counsel that York Water is required to satisfy several statutory requirements before it is permitted to include these acquisition adjustments in its revenue requirement and counsel for the OCA in briefs will address these requirements and that some or all of the proposed acquisitions do not meet the requirements under the statute. My testimony should not be considered a comment on whether these acquisition adjustments are appropriate or justified as a matter of law, only that I am not making a recommendation with respect to the specific acquisition adjustments proposed by the Company at this time. My recommendation is shown on my Exhibit DM-17W.

3. DEPRECIATION EXPENSE

Q. WHAT DID THE COMPANY PROPOSE WITH RESPECT TO ITS DEPRECIATION EXPENSE?

A. The Company proposed a balance of $15,433,375 as shown on Company Exhibit FI-2.

Q. DID THE COMPANY HAVE DEPRECIATION STUDIES PERFORMED FOR USE IN THIS RATE PROCEEDING?

A. Yes. According to Company witness Mr. Spanos, the Company performed a depreciation study as of December 31, 2027. YWC St. 106 at 2.

Q. WHAT ARE YOUR RECOMMENDATIONS RELATED TO THE COMPANY'S DEPRECIATION EXPENSE?

A. I am relying on the recommendation of Mr. Garren in which he has recommended adjustments to the Company's depreciation rates and depreciation accruals (Exhibit JSG-1 Water).

Q. WHAT ARE YOUR ADJUSTMENTS TO THE COMPANY'S DEPRECIATION EXPENSE?

A. With respect to Mr. Garren's recommended overall depreciation adjustments I am including $1,141,334 as an adjustment to the Company's depreciation expenses of $15,433,375. This reduces the Company's Depreciation Expense by $1,141,334 and a balance of $14,292,040. This is shown on my Exhibit DM-18W.

Q. DO YOU HAVE ANY OTHER ADJUSTMENTS TO THE COMPANY'S DEPRECIATION EXPENSE?

A. No.

4. TAXES OTHER THAN INCOME

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO TAXES OTHER THAN INCOME TAXES?

A. The Company proposed total Taxes Other than Income in the amount of $2,002,003 as shown on Company Exhibit FI-2. These Taxes Other than Income are related to Public Utility Realty Tax of $387,834; Assessments of $579,720; Other of $4,383; State and Federal Payroll Taxes of $964,689 and Local Real Estate Taxes of $134,870. The Company offset this balance by ($69,493) related to Payroll Tax Capitalized.

Q. WHAT ARE YOUR ADJUSTMENTS AND YOUR RECOMMENDED LEVEL OF TAXES OTHER THAN INCOME TAXES?

A. I am accepting the Company's methodology in the calculation of its Taxes Other Than Income. I am making adjustments to the Company's Payroll Taxes that reflect my recommended S&W balance, which includes my adjustments to the Company's vacancy positions and my adjustments to the Company's Incentive Compensation. I removed costs associated with certain Incentive Compensation, which are reflected in the Company's payroll rates accordingly. My adjustment is a $31,418 reduction from the Company's proposed balance of $2,002,003. My recommended balance is $1,970,585 shown on my Exhibit DM-19W.

5. INCOME TAXES

Q. WHAT DID THE COMPANY CALCULATE WITH RESPECT TO ITS INCOME TAXES?

A. The Company proposed total Federal Income Taxes at Present Rates of ($1,275,023) and State Income Taxes of ($539,357) as shown on Company Exhibit FIV-17. The Company proposed total Federal Income Taxes at Proposed Rates of $2,618,394 and State Income Taxes at $961,727 as shown on Company Exhibit FIV-17.

Q. WHAT OTHER ADJUSTMENTS DID THE COMPANY MAKE TO COMPUTE ITS INCOME TAX EXPENSE?

A. According to the Company, the additional adjustments included synchronized interest expense based upon Company witness Mr. D'Ascendis' weighted cost of debt. The Company incorporated the effects of accelerated depreciation for both the calculation of State and Federal Income Taxes. The Company utilized a State Tax Rate of 7.49% and a Federal Tax Rate of 21.00%.[35] The Company adjusted its State and Federal Income Taxes by adjusting the pro forma taxable income as shown on Company Exhibit FIV-17-10.

Q. DO YOU HAVE ANY ADJUSTMENTS TO THE COMPANY'S METHODOLOGY WITH RESPECT TO THE CALCULATION OF THE COMPANY'S INCOME TAXES?

A. No. I am accepting the Company's methodology. My adjustments reflect the recommended changes of my Rate Base and Operating Income components.

Q. WHAT IS YOUR RECOMMENDED FEDERAL INCOME TAXES AND RECOMMENDED STATE INCOME TAXES?

A. My recommended Federal Income Taxes at present rate revenue is ($1,023,481). My recommended State Income Taxes at present rate revenue is ($442,376). This is shown on my Exhibit DM-20W. .

Q. WHAT IS YOUR ADJUSTMENT RELATED TO THE COMPANY'S INTEREST EXPENSE CALCULATION?

A. Using my recommended Rate Base Balance of $445,194,941 and using OCA Garrett's recommended weighted cost of debt of 2.2%, my recommended Interest Expense is $9,903,807. This is shown on my Exhibit DM-20W.

Q. WHAT IS YOUR TOTAL INCOME TAX EXPENSE?

A. My total Income Tax Expense is ($1,465,857), which is an adjustment of $348,522 from the Company's Income Tax Expense of ($1,814,379) which is shown on my Exhibit DM-20W. The additional Federal and State Income Tax adjustments based upon my

[35] Co. Ex. FIV-17-10.

recommended revenue requirement increase flows through the Revenue Requirement Summary and grossed up by the gross revenue factor of 1.3867990. Exhibit DM-1W.

YORK WASTEWATER COMPANY

B. RATE BASE (Measures of Value)

1. Wastewater Plant in Service (WWPIS)

Q. WHAT HAS THE COMPANY PROPOSED REGARDING ITS WASTEWATER PLANT IN SERVICE?

A. The Company has proposed a WWPIS balance of $75,477,763 for the FPFTY period.[36] Included in that balance are plant additions that the Company expects to place in service during FPFTY ending February 28, 2027.

Q. HOW DID THE COMPANY DEVELOP ITS PLANT ADDITIONS TO PRODUCE THE TOTAL PROPOSED PLANT ADDITIONS AS OF FEBRUARY 28, 2027?

A. Company witness Mr. Hand stated that for the Company to continue to provide its high-quality water service it is necessary to invest in replacements, improvements and additions to the Company's facilities. YWC St. 1 at 14-15.

Q. WHAT TYPES OF PLANT INVESTMENTS ARE INCLUDED IN THE COMPANY'S PLANNED ADDITIONS IN 2025 AND 2026 THROUGH THE FPFTY?

A. As detailed in Company Exhibit FV-12-2W, the Company provided a breakdown of its plant additions through December 31, 2025 of $6,581,359 and plant additions through February 28, 2027 of $6,418,667.[37] In response to OCA Set 10-13, the Company did not project any changes in costs or completion dates for the project and plant additions. The Company stated that no inflationary costs or contingencies were included to calculate the total plant additions or projects.

[36] Co. Ex. FVI-WB at I-3.
[37] Co. Ex. FV-12-5W.

Q. HAS THE COMPANY RECEIVED OR APPLIED FOR DOLLARS RELATED TO THE IIJA FUNDING PROGRAM OR ANY OTHER FEDERAL OR STATE FUNDING?

A. In response to OCA Set 10-11, the Company has not received or applied for dollars related to the IIJA Funding Program or any Federal Funding. No projects were completed or that are currently in progress qualified for federal, state or other governmental funding.

Q. WHAT ADJUSTMENTS DO YOU HAVE WITH RESPECT TO THE COMPANY'S PROPOSED WWPIS BALANCE OF $75,477,755?

A. I reviewed the response to OCA-Set-10-13 which referred me to the Company's Exhibits FV-12-2W and FV-12-5W, where I asked the Company to provide and identify all project additions and retirements in the FTY and in the FPFTY periods, respectively, and the breakdown of these project additions. After review, I am accepting the Company's balance to its WWPIS of $75,477,755. My recommendation is shown on my Exhibit DM-5WW.

Q. WHAT TYPES OF MAJOR PROJECTS AND OTHER EXPENDITURES HAS THE COMPANY INCLUDED IN ITS FPFTY PERIOD?

A. According to the response to the Company's Exhibit FV-12-5W, the Company included capital expenditures related to new structures and improvements to facilities, power generating equipment, collection sewers and rehabilitation, treatment and monitoring equipment and the replacement of mains.

Q. DO YOU HAVE ANY OTHER CONCERNS REGARDING THE COMPANY'S PROJECTED TIMELINE OF THESE COSTS TO BE PLACED IN-SERVICETHROUGH THE FPFTY PERIOD?

A. Although I am not recommending an adjustment to these capital projects or plant additions, the Company should provide an update as to whether these capital projects have been placed in service and provide a firm in-service date if these capital projects are expected to be in-service by the end of the FPFTY period.

Q. WHAT IS YOUR TOTAL BALANCE TO THE COMPANY'S WWPIS BALANCE?

A. My total balance is the same as the Company's $75,477,755 as shown on my Exhibit DM-5WW.

2. Accumulated Depreciation

Q. WHAT HAS THE COMPANY CALCULATED WITH RESPECT TO ITS ACCUMULATED DEPRECIATION?

A. The Company computed accumulated depreciation in the amount of $16,740,738 as shown on Company Exhibit FVI-WB page I-3.

Q. WHAT IS YOUR RECOMMENDATION?

A. I do not have any adjustments or changes to the Company's accumulated depreciation balance, as I did not make any adjustments to the Company's WWPIS balance. I am relying on the recommendation of OCA witness Mr. James Garren with respect to the development of the Company's depreciation expenses which affect the Accumulated Depreciation balance. Using Mr. Garren's depreciation rates, and his overall depreciation adjustments I am making the associated adjustment to the Accumulated Depreciation balance. Mr. Garren has recommended an adjustment to depreciation expense of $228,646. This reduces the balance to the Company's Accumulated Depreciation to $16,512,092. My recommendation is shown on my Exhibit DM-6WW.

3. Accumulated Deferred Income Taxes (ADIT)

Q. WHAT DID THE COMPANY PROPOSE WITH RESPECT TO ITS ACCUMULATED DEFERRED INCOME TAXES (ADIT)?

A. The Company proposed a balance in its ADIT in the amount of $342,097 as shown on Company Exhibit FV-1W and FV-1-1W. This balance represents deferred income taxes related to accelerated depreciation. The Company has not included deferred income taxes related to excess deferred income taxes. YWC St. 103W at 53. Mr. Poff stated that the adjustment to the deferred accelerated depreciation is required under Treasury Regulation 1.167 (l)-1 of the Internal Revenue Code. Under the regulation, if a future period is used in determining the maximum amount of the reserve to be excluded from the rate base, the amount of the reserve is the amount of the reserve at the beginning of the period and at a pro rata portion of the projected decrease to the account during the period. YWC St. 103W at 54.

Q. WHAT ADJUSTMENTS DO YOU HAVE RELATED TO THE COMPANY'S ADIT BALANCE?

A. I do not have any adjustments with respect to the methodology the Company used to calculate the ADIT balance for the accelerated depreciation. My adjustments reflect Mr. Garren's recommended depreciation expense which flows through the ADIT balance.

Q. WHAT IS YOUR TOTAL ADJUSTMENT RELATED TO THE COMPANY'S ADIT BALANCE FOR ACCELERATED DEPRECIATION?

A. Utilizing Mr. Garren's adjustment to depreciation expenses and the balance of the Accumulated Depreciation adjustment of $228,646, I multiplied that amount by the Company's federal income tax rate of 21%. This produces an adjustment of $48,016 and is shown on my Exhibit DM-7WW.

C. RATE OF RETURN

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS RATE OF RETURN?

A. As more fully addressed in my Section C page 11, the Company proposed an overall rate of return of 8.01%, which included a common equity return of 10.90%.

Q. WHAT HAS MR. GARRETT RECOMMENDED?

A. As more fully addressed in my Section C page 11, Mr. Garrett recommended an overall rate of return of 6.76% which included a common equity return of 8.90%.

D. OPERATING INCOME

1. <u>Operating Revenues</u> – Wastewater Division

Q. WHAT HAS THE COMPANY PROPOSED AS ITS OPERATING REVENUE AT PRESENT RATES AND PROPOSED RATES?

A. As shown on Company Exhibit FII-2W, the Company proposed total Operating Revenues at Present Rates of $8,670,534, and total Operating Revenues at Proposed Rates of $12,528,041. The difference represents the revenue increase of $3,857,507. The Company

included adjustments of $113,790[38] to the FPFTY balance to annualize and normalize revenue adjustments under existing revenues. YWC St. 103W at 6.

Q. DID THE COMPANY UPDATE ITS OPERATING REVENUE SUBSEQUENT TO THE INITIAL FILING?

A. No.

Q. DO YOU HAVE ANY ADJUSTMENTS TO THE COMPANY'S PRESENT RATE REVENUE?

A. After a review of discovery in this matter, I do not have any adjustments to the Company's Present Rate Revenue. This is shown on my Exhibit DM-9WW.

2. OPERATING EXPENSES (OPEX)

Q. HOW DID THE COMPANY DEVELOP ITS OPERATING EXPENSES PRESENTED FOR RECOVERY IN THIS RATE PROCEEDING?

A. According to Mr. Poff, the Company summarized adjustments to operating expenses for the twelve months ending December 31, 2024, and then annualized and normalized the effect of changes occurring during the twelve months ending December 31, 2025. YWC St. 103W at 20. The Company then summarized adjustments to operating expenses for the twelve months ending February 28, 2027, as well as reflecting changes to uncollectible accounts expense due to the increase in operating revenues resulting from the proposed increase in rates. YWC St. 103W at 520.

Q. WHAT LEVEL OF OPERATING EXPENSES HAS THE COMPANY PROPOSED TO RECOVER IN THIS PROCEEDING UNDER ITS FPFTY TEST PERIOD?

A. As shown on Company Exhibit FI-2W the Company has proposed recovering $7,843,005 of Operating Expenses. This balance includes Depreciation Expense of $1,736,140 and Taxes Other than Income Taxes of $141,517. The Federal Tax Expense based upon the Company's proposed O&M Expense is $199,244 and the State Tax Expense is $76,366.

[38] Co. Ex. FI1-2W.

Q. HAS THE COMPANY INCLUDED SALARIES AND WAGES IN ITS OPERATING EXPENSES?

A. Yes. As shown on Company Exhibit FIII-2W the Company included Salaries and Wages in two of the Company's four Operating Expense categories.

Q. WHAT IS THE TOTAL LEVEL OF SALARIES AND WAGES THAT THE COMPANY HAS PROPOSED TO REVENUE IN ITS FPFTY PERIOD?

A. The Company has proposed to recover $894,361 of Salary and Wages as shown on my Exhibit DM-20WW. This balance was derived by calculating each of the Company's OPEX Salary and Wage balances and adjustments as shown on Company Exhibit FIII-2W page 6 and 7.

a. <u>Normalization Adjustments</u>

Q. DID YOU APPROACH YOUR ADJUSTMENTS TO THE COMPANY'S OPERATING EXPENSES IN THE FPFTY PERIOD FOR ITS WASTEWATER DIVISION IN THE SAME MANNER AS DESCRIBED ABOVE FOR THE WATER DIVISION?

A. Yes.

b. <u>Company Overall Salary & Wages (S&W) Increase</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS SALARY AND WAGES INCREASE?

A. The Company proposed total S&W of $894,361. $882,003 was allocated to the Wastewater Treatment expenses and $12,358 was allocated to the Wastewater Collection expenses. A breakdown of these categories of S&W are shown on my Exhibit DM-20WW and on the Company's Exhibit FIII-2W. The Company has included various categories of S&W pay related to Operations, Vacation, and Maintenance.

Q. HOW DID THE COMPANY DEVELOP ITS PROPOSED S&W INCREASE?

A. According to Company witness Mr. Poff, York Wastewater projected payroll expense for union and non-union employees for the future test year ending December 31, 2025 reflecting hourly and salary rates effective in 2025, annual cash and equity incentive awards effective in 2025 for projected new employees. The Company has included year-

end bonuses in the projected payroll. YWC St. 3 at 26. The Company projected the salary and wage adjustment of $11,378 in 2025 which reflects annual and cash equity incentive awards, projected new employees and salary rate increases.[39] A portion of the projected payroll expense for certain specified supervisory and general office employees for the twelve months ending December 31, 2025 was capitalized and is reflected as a reduction in operating expenses.[40]

Q. WHAT WERE THE COMPANY'S NEXT ADJUSTMENTS?

A. According to Company witness Mr. Poff, York Wastewater then projected payroll expense for union and non-union employees for the fully projected fully test year period ending February 28, 2027, reflecting pro-forma hourly and salary rates effective in 2026 and annual cash and equity incentive effective in 2026. The Company has included year-end bonuses in the projected payroll.[41] Mr. Poff projected the salary and wage adjustment of $22,210, which reflects the annual and cash equity incentive awards and salary rate increases.[42] Mr. Poff stated that a portion of the pro-forma payroll expense for certain specified supervisory and general office employees for the twelve months ending February 28, 2027 was capitalized and is reflected as a reduction to operating expenses.[43]

Q. WHAT ADJUSTMENTS DO YOU HAVE WITH RESPECT TO THE COMPANY'S PROPOSED S&W BALANCE OF $894,361?

A. I am accepting the Company's balance of its overall Salary and Wage expenses. However, I am making adjustments to the Company's Long Term Incentive Plan (LTIP), of which $4,360 was allocated to the Wastewater Division.[44] I am making adjustments to the Company's year – end bonuses of $55,143 of which a portion is allocated to the Wastewater Division.[45,46]

[39] Co. Ex. FIII-2W.
[40] Id.
[41] York Water Response to OCA-X-27.
[42] Co. Ex. FIII-2W.
[43] Id.
[44] York Water Response to OCA-IX-5.
[45] York Water Response to OCA-IX-43.
[46] In response to OCA Set 10-20, the Company did not have any vacancies in the Wastewater Division in the past five years.

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO THE COMPANY'S LTIP?

A. In Company Exhibit FIII-22, the Company stated that its LTIP provides certain officers of the York Board of Directors and other key York employees with the opportunity to receive grants of incentive stock options, non-qualified stock options, unrestricted and restricted stock, performance restricted stock units and stock appreciation rights related to York stock. The purpose of the plan is to give participants an ownership interest in York and to create an incentive for them to contribute to York's growth, benefiting York's stockholders, aligning the economic interest of the participants with those of York's stockholders. The LTIP is necessary to ensure that compensation practices of York are competitive in the industry and to enable York to continue to assist in the attraction and retention of key employees vital to York's success.

Q. WHAT IS YOUR RESPONSE?

A. I am recommending disallowance of the Company's LTIP of $4,360 for ratemaking purposes. I believe these costs are not customer-oriented in nature and do not benefit ratepayers in the provision of safe and reliable utility services. These types of payments benefit the Company and its shareholders in the areas of financial growth, in the interests of shareholders, and aligning the interests of the participants with the Company. Therefore, the Company should bear these costs if the Company believes it is necessary to provide shareholder benefits related to financial growth to retain key employees.

Q. WHAT IS YOUR ADJUSTMENT RELATED TO THE COMPANY'S YEAR-END BONUSES?

A. I am recommending disallowance of the Company's year-end bonuses allocated to the Wastewater Division. As stated in response to OCA Set 10-29, the Company stated that no criteria is required for employees to receive these year-end bonuses. My recommendation is based upon the fact that these year-end bonuses are not customer – oriented and related to benefitting ratepayers but rather are given with no criteria attached to receiving the bonus. The Company should not have unfettered access to ratepayer money to spend at will. If the Company wants to provide employees with these year-end bonuses, then the Company should bear the costs and not pass them onto ratepayers. To allocate these year-end bonuses to the Wastewater Division, I utilized the ratio of the Company's LTIP total

of $266,136 and divided that by the allocation to the Wastewater Division of $4,360 or 1.64%. I then calculated the total year-end bonus balance of $55,143 and multiplied that amount by 1.64% to arrive at $904.[47]

Q. WHAT IS THE TOTAL IMPACT OF YOUR ADJUSTMENTS TO THE COMPANY'S PROPOSED S&W LEVEL?

A. My adjustments to reduce the Company's S&W level are a reduction of $4,360 related to the LTIP and a reduction of $904 related to the year-end bonuses or a total adjustment of $5,264. which is shown on my Exhibit DM-22W and is carried over to my OPEX Exhibits DM-11WW and Exhibit DM-12WW.

d. <u>Wastewater Treatment Expenses</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS WASTEWATER TREATMENT EXPENSE?

A. As shown on Company Exhibit FI-2W the Company proposed a balance to its Wastewater Treatment Expenses of $4,644,014. This balance includes Salary and Wages of $882,003. Mr. Poff stated that York Wastewater annualized and normalized the effect of changes occurring during the twelve months ending December 31, 2025, and to summarize the adjustments to operating expenses for the twelve months ending February 28, 2027. YWC St. 103W at 20.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. As I explained previously with respect to my normalization of expenses (2022-2024) to the balance of 2025, I have included the effects of the normalization in my Exhibit DM-10WW. My normalization adjustment is a reduction of $105,993. (Total adjustment of $111,185 minus the LTIP of $4,300 and the year-end bonuses of 892).

[47] In response to OCA Set 9-43 the Company has not provided a specific allocation between Water and Wastewater divisions. Therefore, my adjustments is an estimation based upon the information provided in discovery.

e. Wastewater Collection Expense

Q. WHAT DID THE COMPANY PROPOSE WITH RESPECT TO ITS WASTEWATER COLLECTION EXPENSE?

A. The Company has proposed a balance of $204,152. This is shown on Company Exhibit FIII-2W. This balance includes Salary and Wages of $12,358. Mr. Poff stated that York Wastewater annualized and normalized the effect of changes occurring during the twelve months ending December 31, 2025, and to summarize the adjustments to operating expenses for the twelve months ending February 28, 2027. YWC St. 103W at 20.

Q. ARE THERE ANY OTHER SPECIFIC ADJUSTMENTS YOU MADE TO THE COMPANY'S WASTEWATER AND COLLECTION EXPENSE?

A. I have two adjustments. My first adjustment is to disallow the allocated cost of the LTIP of $60 and the allocated cost of the year-end bonuses of $12 for a total disallowance of $72. My second adjustment is the normalization adjustments explained previously (2022-2024) to the balance of 2025. My normalization adjustment is a reduction of $79,081. (Total adjustment of $79,882 minus the LTIP of $60 and the year-end bonuses of $12). This is shown on my Exhibit DM-11WW.

f. Pumping Expenses

Q. WHAT HAS THE COMPANY PROPOSED REGARDING ITS PUMPING EXPENSES?

A. The Company proposed a balance of $246,007 which is shown on Company Exhibit FIII-2W. Mr. Poff stated that York Wastewater annualized and normalized the effect of changes occurring during the twelve months ending December 31, 2025, and to summarize the adjustments to operating expenses for the twelve months ending February 28, 2027. YWC St. 103W at 20. The Company did not allocate and Salaries and Wages to this operating expense account.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. My only adjustment is related to my normalization of expenses (2022-2024) to the balance of 2025, which I explained previously. This reduces the balance by $49,307 and is shown on my Exhibit DM-12WW.

f. <u>Administrative & General Expense (A&G)</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO IT'S A&G EXPENSE?

A. The Company proposed an allocated balance to its A&G Expenses of $843,684 as shown on Company Exhibit FIII-2W. Mr. Poff stated that York Wastewater has allocated a portion of Water operations based upon the Company's current allocation methodology and pro-forma adjustments to the accounts that are allocated. YWC St. 103W at 25. Various expenses that are for both water and wastewater portions of the business are recorded on the water side and at the end of the accounting period, a portion of those allocable costs is recorded as a reduction to the expense on the water side of the business and an addition to expense on the wastewater side of the business. YWC St. 103W at 25. Included in the A&G expense of $843,684 are capitalized costs of $31,871.[48]

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I utilized my adjustments to the Water Division's A&G Expenses and carried over this allocated balance to the Wastewater Division's A&G expense. This allocated amount represents payroll, fringe benefits and projected A&G expense from the Water Division.[49] I utilized the Company's 3.64% related to A&G capitalized costs. This results in my recommended balance of $836,713. ($868,320 allocation from Water and the capitalized costs of $31,607). This is shown on my Exhibit DM-13WW.

[48] Co. Ex. FIII-2W.
[49] Co. Exhibits FIII-2-30W and FIII-2W.

g. Amortization of Utility Plant Acquisition Adjustments

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS AMORTIZATION OF UTILITY PLANT ACQUISITION ADJUSTMENTS?

A. The Company proposed a balance of $27,489 as shown on Company Exhibit FIII-2W.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am recommending disallowance of the Company's proposed amortizations. I have been advised by counsel that York Water is required to satisfy several statutory requirements before it is permitted to include these acquisition adjustments in its revenue requirement and counsel for the OCA in briefs will address these requirements and that some or all of the proposed acquisitions do not meet the requirements under the statute. My testimony should not be considered a comment on whether these acquisition adjustments are appropriate or justified as a matter of law, only that I am not making a recommendation with respect to the specific acquisition adjustments proposed by the Company at this time.

3. DEPRECIATION EXPENSE

Q. WHAT DID THE COMPANY PROPOSE WITH RESPECT TO ITS DEPRECIATION EXPENSE?

A. The Company proposed a balance of $1,736,140 as shown on Company Exhibit FI-2W and Company Exhibit FVI-WB page I-3.

Q. DID THE COMPANY HAVE DEPRECIATION STUDIES PERFORMED FOR USE IN THIS RATE PROCEEDING?

A. Yes. According to Company witness Mr. Spanos,[50] the Company performed a depreciation study as of December 31, 2027.

Q. WHAT ARE YOUR RECOMMENDATIONS RELATED TO THE COMPANY'S DEPRECIATION EXPENSE?

A. I am relying on the recommendation of Mr. Garren in which he has recommended adjustments to the Company's depreciation rates and depreciation accruals (Exhibit JSG-1-Wastewater).

[50] YWC St. 106 at 2.

Q. WHAT ARE YOUR ADJUSTMENTS TO THE COMPANY'S DEPRECIATION EXPENSE?

A. Using Mr. Garren's recommended depreciation adjustment of $228,646, This reduces the balance to $1,507,494 This is shown on my Exhibit DM-15WW

.

4. TAXES OTHER THAN INCOME

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO TAXES OTHER THAN INCOME TAXES?

A. The Company proposed total Taxes Other than Income in the amount of $141,518 as shown on Company Exhibit FIV-15W. These Taxes Other than Income are related to Assessments of $84,551; Local Real Estate Taxes of $60,720 and; Payroll Taxes Capitalized of ($3753).

Q. WHAT ARE YOUR ADJUSTMENTS AND YOUR RECOMMENDED LEVEL OF TAXES OTHER THAN INCOME TAXES?

A. I am accepting the Company's methodology in the calculation of its Taxes Other Than Income. Since these costs are included in the allocation of costs in the A&G costs, and my adjustments are reflected in the A&G costs, I do not have any further adjustments. This is shown on my Exhibit DM-16WW.

5. INCOME TAXES

Q. WHAT DID THE COMPANY CALCULATE WITH RESPECT TO ITS INCOME TAXES?

A. The Company proposed total Federal Income Taxes at Present Rates of ($545,091) and State Income Taxes of ($210,608) as shown on Company Exhibit FIV-17W. The Company proposed total Federal Income Taxes at Proposed Rates of $199,244 and State Income Taxes at $76,366 as shown on Company Exhibit FIV-17W.

Q. WHAT OTHER ADJUSTMENTS DID THE COMPANY MAKE TO COMPUTE ITS INCOME TAX EXPENSE?

A. According to the Company, the additional adjustments included synchronized interest expense based upon Company witness Mr. D'Ascendis' weighted cost of debt. The Company incorporated the effects of accelerated depreciation for both the calculation of

State and Federal Income Taxes. The Company utilized a State Tax Rate of 7.49% and a Federal Tax Rate of 21.00%.[51] The Company adjusted its State and Federal Income Taxes by adjusting the pro forma taxable income as shown on Company Exhibit FIV-17-10W.

Q. DO YOU HAVE ANY ADJUSTMENTS TO THE COMPANY'S METHODOLOGY WITH RESPECT TO THE CALCULATION OF THE COMPANY'S INCOME TAXES?

A. No. I am accepting the Company's methodology. My adjustments reflect the recommended changes of my Rate Base and Operating Income components.

Q. WHAT IS YOUR RECOMMENDED FEDERAL INCOME TAXES AND RECOMMENDED STATE INCOME TAXES?

A. My recommended Federal Income Taxes at present rate revenue is ($519,212). My recommended State Income Taxes at present rate revenue is ($200,631).

Q. WHAT IS YOUR ADJUSTMENT RELATED TO THE COMPANY'S INTEREST EXPENSE CALCULATION?

A. Using my recommended Rate Base Balance of $54,648,093 and using OCA Garrett's recommended weighted cost of debt of 2.2%, my recommended Interest Expense is $1,215,701.

Q. WHAT IS YOUR TOTAL INCOME TAX EXPENSE?

A. My total Income Tax Expense is ($719,843) which is an adjustment of $35,856 from the Company's Income Tax Expense of $755,699 which is shown on my Exhibit DM-17WW. The additional Federal and State Income Tax adjustments based upon my recommended revenue requirement increase flows through the Revenue Requirement Summary and grossed up by the gross revenue factor of 1.3776240. Exhibit DM-1WW.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

[51] Company Exhibit FIV-17-10.

REVENUE REQUIREMENT SUMMARY

I. INTRODUCTION

Q. Please state your name and occupation.

A. My name is David J. Garrett. I am a consultant specializing in public utility regulation. I am the managing member of Resolve Utility Consulting PLLC.

Q. Please summarize your educational background and professional experience.

A. I received a B.B.A. with a major in Finance, an M.B.A., and a Juris Doctor from the University of Oklahoma. I worked in private legal practice for several years before accepting a position as assistant general counsel at the Oklahoma Corporation Commission in 2011. At the Oklahoma commission, I worked in the Office of General Counsel in regulatory proceedings. In 2012, I began working for the Public Utility Division as a regulatory analyst providing testimony in regulatory proceedings. After leaving the Oklahoma commission, I formed Resolve Utility Consulting PLLC, where I have represented various consumer groups and state agencies in utility regulatory proceedings, primarily in the areas of cost of capital and depreciation. I am a Certified Depreciation Professional with the Society of Depreciation Professionals. I am also a Certified Rate of Return Analyst with the Society of Utility and Regulatory Financial Analysts. A more complete description of my qualifications and regulatory experience is included in my curriculum vitae.[1]

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

[1] Exhibit DJG-1.

Q. Describe the purpose and scope of your testimony in this proceeding.

A. My testimony discusses my estimated cost of capital and proposed rate of return for York Water Company ("York Water" or the "Company"). I am responding to the direct testimony of Company witness Dylan D'Ascendis, who addresses these issues on behalf of York Water.

II. EXECUTIVE SUMMARY

Q. Describe York Water's position regarding the awarded rate of return in this case.

A. York Water proposes an awarded return on equity ("ROE") of 10.90%.[2] York Water also proposes a capital structure consisting of 45% debt and 55% equity.[3] Mr. D'Ascendis relies on the Discounted Cash Flow Model ("DCF Model"), the Capital Asset Pricing Model ("CAPM"), and other risk premium models as part of his recommendation. Mr. D'Ascendis applies these models to a proxy group of water utilities in addition to a separate group of non-utility companies. Mr. D'Ascendis also adds several upward adjustments to his modeling results, including a business risk adjustment, a flotation cost adjustment, and a management performance adjustment. The following chart shows the Company's proposed rate of return based on its proposed ROE and capital structure.[4]

---

[2] Direct Testimony of Dylan W. D'Ascendis, p. 4, Table 2.

[3] *Id* at p. 3, Table 1. The Company proposes a ratemaking capital structure consisting of 45.42% long-term debt, and 54.58% common equity. In my testimony, I refer to the rounded figures of 45% and 55%, respectively.

[4] *Id*.

Figure 1:
Company Proposed Rate of Return

Capital Component	Proposed Ratio	Cost Rate	Weighted Cost
Long-Term Debt	45.42%	4.54%	2.06%
Common Equity	54.58%	10.90%	5.95%
Total	100.0%		8.01%

Q. Please summarize your analyses and conclusions regarding York Water's cost of equity.

A. York Water has requested an excessive ROE in this case. Analysis of an appropriate awarded ROE for a utility should begin with a reasonable estimation of the utility's cost of equity. In estimating York Water's cost of equity, I performed a cost of equity analysis on a proxy group of utility companies with relatively similar risk profiles. Based on this proxy group, I evaluated the results of the two most widely used and widely accepted financial models for calculating cost of equity in utility rate proceedings: the CAPM and DCF Model. I conducted two variations of both the CAPM and DCF Model. The results are shown in the figure below.[5]

[5] *See also* Exhibit DJG-12.

Figure 2:
Cost of Equity Model Results

Model	Cost of Equity
CAPM (at Proxy Debt Ratio)	8.9%
Hamada CAPM (at Company-Proposed Debt Ratio)	8.7%
DCF Model (Analyst Growth)	9.2%
DCF Model (Sustainable Growth)	6.7%
Model Average	**8.4%**
Recommended ROE	**8.9%**

As shown in this figure, the results of my modeling range from 6.7% - 9.2%. Based on these results, I recommend an authorized ROE of 8.9% for the Company.

Q. Are you also recommending an adjustment to the Company's proposed ratemaking capital structure?

A. Yes. York Water's proposed debt ratio of 45% is notably lower than the average debt ratio of the proxy group, which is 49%.[6] This means that York Water has less financial risk relative to the proxy group. Thus, in order for the indicated cost of equity under the financial models to be accurate, we must adjust the result based on York Water's lower risk profile. My application of the Hamada model below supports the need to impute a capital structure for York Water that is equal to the proxy group average for

[6] Exhibit DJG-13.

ratemaking. That is, the Commission should authorize a ratemaking capital structure for York Water consisting of 49% debt, and 51% equity.

Q. Based on the results of your cost of equity analyses, what is your recommendation to the Commission for York Water's authorized rate of return.

A. I recommend the Commission adopt an authorized ROE of 8.9% and a ratemaking capital structure consisting of 49% debt and 51% equity. If the Commission does not adjust the Company's proposed ratemaking capital structure, then its indicated cost of equity under the CAPM is only 8.7%, not 8.9% (as shown in the figure above). My cost of equity modeling and recommended ROE do not include the various upward adjustments Mr. D'Ascendis applied to his modeling results, and as discussed in more detail in my testimony and, regarding the management performance adjustment, in the testimony of OCA witness Alexander, I recommend the Commission reject these upward adjustments. My recommendations are summarized in the following figure.[7]

Figure 3:
Primary Rate of Return Recommendation

Capital Component	Proposed Ratio	Cost Rate	Weighted Cost
Long-Term Debt	49.0%	4.54%	2.2%
Common Equity	51.0%	8.90%	4.5%
Total	100.0%		6.76%

[7] *See also* Exhibit DJG-16.

As shown in this figure, adopting my proposed ROE and capital structure (and adopting the Company's proposed cost of debt) would result in an authorized rate of return of 6.76%.

III. REGULATORY STANDARDS

Q. Discuss the legal standards governing the awarded rate of return on capital investments for regulated utilities.

A. In *Wilcox v. Consolidated Gas Co. of New York*,[8] the Supreme Court first addressed the meaning of a fair rate of return for public utilities. The Court found that "the amount of risk in the business is a most important factor" in determining the appropriate allowed rate of return.[9] Later, in two landmark cases, the Court set forth the standards by which utilities are allowed to earn a return on capital investments. In *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*,[10] the Court held:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public . . . but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and

[8] *Wilcox v. Consolidated Gas Co. of New York*, 212 U.S. 19 (1909).

[9] *Id*. at 48.

[10] *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*, 262 U.S. 679 (1923).

> enable it to raise the money necessary for the proper discharge of its public duties.[11]

In *Federal Power Commission v. Hope Natural Gas Company*,[12] the Court expanded on the guidelines set forth in *Bluefield* and stated:

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.[13]

The cost of capital models I have employed in this case are in accordance with the foregoing legal standards.

Q. Should the awarded rate of return be based on the Company's actual cost of capital?

A. Yes. The *Hope* Court makes it clear that the allowed return should be based on the actual cost of capital. Moreover, the awarded return must also be fair, just, and reasonable under the circumstances of each case. Under the rate base rate of return model, a utility should be allowed to recover all its reasonable expenses, its capital investments through depreciation, and a return on its capital investments sufficient to satisfy the required return of its investors. The "required return" from the investors' perspective is synonymous with the "cost of capital" from the utility's perspective.

---

[11] *Id.* at 692-93.

[12] *Federal Power Commission v. Hope Natural Gas Co*., 320 U.S. 591 (1944).

[13] *Id.* at 603 (emphasis added).

Scholars agree that the allowed rate of return should be based on the actual cost of capital:

> Since by definition the cost of capital of a regulated firm represents precisely the expected return that investors could anticipate from other investments while bearing no more or less risk, and since investors will not provide capital unless the investment is expected to yield its opportunity cost of capital, the correspondence of the definition of the cost of capital with the court's definition of legally required earnings appears clear.[14]

The models I have employed in this case closely estimate the Company's market-based cost of equity. If the Commission sets the awarded return based on my lower, and more reasonable, rate of return, it will comply with the U.S. Supreme Court's standards, allow the Company to maintain its financial integrity, and satisfy the claims of its investors. On the other hand, if the Commission sets the allowed rate of return *higher* than the true cost of capital, it arguably results in an inappropriate transfer of wealth from ratepayers to shareholders.

Q. What does this standard mean for determining the awarded return and the cost of capital?

A. It is important to understand that the *awarded* return and the *cost* of capital are different but related concepts. The two concepts are related in that the legal and technical standards encompassing this issue require that the awarded return reflects the true cost of capital. On the other hand, the two concepts are different in that the legal standards do not mandate that awarded returns exactly match the cost of capital. Awarded returns

[14] A. Lawrence Kolbe, James A. Read, Jr. & George R. Hall, *The Cost of Capital: Estimating the Rate of Return for Public Utilities*, p. 21 (The MIT Press 1984).

are set through the regulatory process and may be influenced by factors other than objective market drivers. The cost of capital, on the other hand, should be evaluated objectively and be closely tied to economic realities. In other words, the cost of capital is driven by stock prices, dividends, growth rates, and — most importantly — it is driven by risk. The cost of capital can be estimated by financial models used by firms, investors, and academics around the world for decades. The problem is, with respect to regulated utilities, there has been a trend in which awarded returns fail to closely track with actual market-based cost of capital as further discussed below. To the extent this occurs, the results are detrimental to ratepayers and the state's economy.

Q. Describe the economic impact that occurs when the awarded return strays too far from the U.S. Supreme Court's cost of equity standard.

A. When the awarded ROE is set far above the *cost* of equity, it runs the risk of violating the U.S. Supreme Court's standards that the awarded return should be *based on the cost of capital*. If the Commission were to adopt the Company's position in this case, it would be permitting an excess transfer of wealth from customers to Company shareholders. Moreover, establishing an awarded return that far exceeds the true cost of capital effectively prevents the awarded returns from changing along with economic conditions. This is especially true given the fact that regulators tend to be influenced by the awarded returns in other jurisdictions, regardless of the various unknown factors influencing those awarded returns. This is yet another reason why it is crucial for regulators to focus on the target utility's actual *cost* of equity, rather than awarded returns from other jurisdictions. Awarded returns may be influenced by settlements

and other political factors not based on true market conditions. In contrast, the market-based cost of equity as estimated through objective models is not influenced by these factors but is instead driven by market-based factors. If regulators rely too heavily on the awarded returns from other jurisdictions, it can create a cycle over time that bears little relation to the market-based cost of equity.

IV. GENERAL CONCEPTS AND METHODOLOGY

Q. Discuss your approach to estimating the cost of equity in this case.

A. While a competitive firm must estimate its own cost of capital to assess the profitability of competing capital projects, regulators determine a utility's cost of capital to establish a fair rate of return. The legal standards set forth above do not include specific guidelines regarding the models that must be used to estimate the cost of equity. Over the years, however, regulatory commissions have consistently relied on several models. The models I have employed in this case have been the two most widely used and accepted in regulatory proceedings for many years. These models are the DCF Model and the CAPM. The specific inputs and calculations for these models are described in more detail below.

Q. Please explain why multiple models are used to estimate the cost of equity.

A. The models used to estimate the cost of equity attempt to measure the return on equity required by investors by estimating several different inputs. It is preferable to use multiple models because the results of any one model may contain a degree of imprecision, especially depending on the reliability of the inputs used at the time of

conducting the model. By using multiple models, the analyst can compare the results of the models and look for outlying results and inconsistencies. Likewise, if multiple models produce a similar result, it may indicate a narrower range for the cost of equity estimate.

Q. Please discuss the benefits of choosing a proxy group of companies in conducting cost of capital analyses.

A. The cost of equity models in this case can be used to estimate the cost of capital of any individual, publicly-traded company. There are advantages, however, to conducting cost of capital analyses on a "proxy group" of companies that are comparable to the target company. First, it is better to assess the financial soundness of a utility by comparing it to a group of other financially sound utilities. Second, using a proxy group provides more reliability and confidence in the overall results because there is a larger sample size. Finally, the use of a proxy group is often a pure necessity when the target company is a subsidiary that is not publicly traded. This is because the financial models used to estimate the cost of equity require information from publicly-traded firms, such as stock prices and dividends.

Q. Describe the proxy group you selected in this case.

A. In this case, I chose to use the same utility proxy group consisting of six water companies that Mr. D'Ascendis used for his analyses, which he refers to as the "Utility Proxy Group."[15] Mr. D'Ascendis also conducted cost of equity analyses on a group

[15] Direct Testimony of Dylan W. D'Ascendis, p. 3, lines 12-16.

on non-utility companies. In my opinion, it is not necessary to perform cost of equity analyses on a proxy group beyond the utility proxy group, as discussed in more detail later in my testimony.

V. RISK AND RETURN CONCEPTS

Q. Please discuss the general relationship between risk and return.

A. As discussed above, risk is the most important factor for the Commission to consider when determining the allowed return. There is a direct relationship between risk and return: the more (or less) risk an investor assumes, the larger (or smaller) return the investor will demand. There are two primary types of risk: firm-specific risk and market risk. Firm-specific risk affects individual companies, while market risk affects all companies in the market to varying degrees.

Q. Discuss the differences between firm-specific risk and market risk.

A. Firm-specific risk affects individual companies, rather than the entire market. For example, a competitive firm might overestimate customer demand for a new product, resulting in reduced sales revenue. This is an example of a firm-specific risk called "project risk."[16] There are several other types of firm-specific risks, including: (1) "financial risk" — the risk that equity investors of leveraged firms face as residual claimants on earnings; (2) "default risk" — the risk that a firm will default on its debt securities; and (3) "business risk" — which encompasses all other operating and

[16] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset*, pp. 62-63 (3rd ed., John Wiley & Sons, Inc. 2012).

managerial factors that may result in investors realizing less than their expected return in that particular company.

While firm-specific risk affects individual companies, market risk affects all companies in the market to varying degrees. Examples of market risk include interest rate risk, inflation risk, and the risk of major socio-economic events. When there are changes in these risk factors, they affect all firms in the market to some extent.[17]

Analysis of the U.S. market in 2001 provides a good example for contrasting firm-specific risk and market risk. During that year, Enron Corp.'s stock fell from $80 per share and the company filed for bankruptcy at the end of the year. If an investor's portfolio had held only Enron stock at the beginning of 2001, this irrational investor would have lost the entire investment by the end of the year due to assuming the full exposure of Enron's firm-specific risk (in that case, imprudent management). On the other hand, a rational, diversified investor who invested the same amount of capital in a portfolio holding every stock in the S&P 500 would have had a much different result that year. The rational investor would have been relatively unaffected by the fall of Enron because her portfolio included 499 other stocks. Each of those stocks, however, would have been affected by various *market* risk factors that occurred that year, including the terrorist attacks on September 11th, which affected all stocks in the market. Thus, the rational investor would have incurred a relatively minor loss due to

[17] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments*, p. 149 (9th ed., McGraw-Hill/Irwin 2013).

market risk factors, while the irrational investor would have lost everything due to firm-specific risk factors.

Q. Can investors minimize firm-specific risk through portfolio diversification?

A. Yes. A fundamental concept in finance is that firm-specific risk can be minimized through diversification.[18] If someone irrationally invested all their funds in one firm (such as Enron), they would be exposed to all the firm-specific risk *and* the market risk inherent in that single firm. Rational investors, however, are risk-averse and seek to eliminate risk they can control. Investors can essentially eliminate firm-specific risk by adding more stocks to their portfolio through a process called "diversification."

There are two reasons why diversification eliminates firm-specific risk. First, each stock in a diversified portfolio represents a much smaller percentage of the overall portfolio than it would in a portfolio of just one or a few stocks. Thus, any firm-specific action that changes the stock price of one stock in the diversified portfolio will have only a small impact on the entire portfolio.[19]

The second reason why diversification eliminates firm-specific risk is that the effects of firm-specific actions on stock prices can be either positive or negative for each stock. Thus, in large, diversified portfolios, the net effect of these positive and negative firm-specific risk factors will be essentially zero and will not affect the value

---

[18] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, pp. 179-80 (3rd ed., South Western Cengage Learning 2010).

[19] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset*, p. 64 (3rd ed., John Wiley & Sons, Inc. 2012).

of the overall portfolio.[20] Firm-specific risk is also called "diversifiable risk" because it can be easily eliminated through diversification.

Q. Do investors expect an additional return for assuming firm-specific risks?

A. No. Because investors eliminate firm-specific risk through diversification, they know they cannot expect a higher return for assuming the firm-specific risk in any one company. Thus, the risks associated with an individual firm's operations are not rewarded by the market. In fact, firm-specific risk is also called "unrewarded" risk for this reason. Market risk, on the other hand, cannot be eliminated through diversification. Because market risk cannot be eliminated through diversification, investors expect a return for assuming this type of risk. Market risk is also called "systematic risk." Scholars recognize the fact that market risk, or "systematic risk," is the only type of risk for which investors expect a return for bearing:

> If investors can cheaply eliminate some risks through diversification, then we should not expect a security to earn higher returns for risks that can be eliminated through diversification. Investors can expect compensation *only* for bearing systematic risk (i.e., risk that cannot be diversified away).[21]

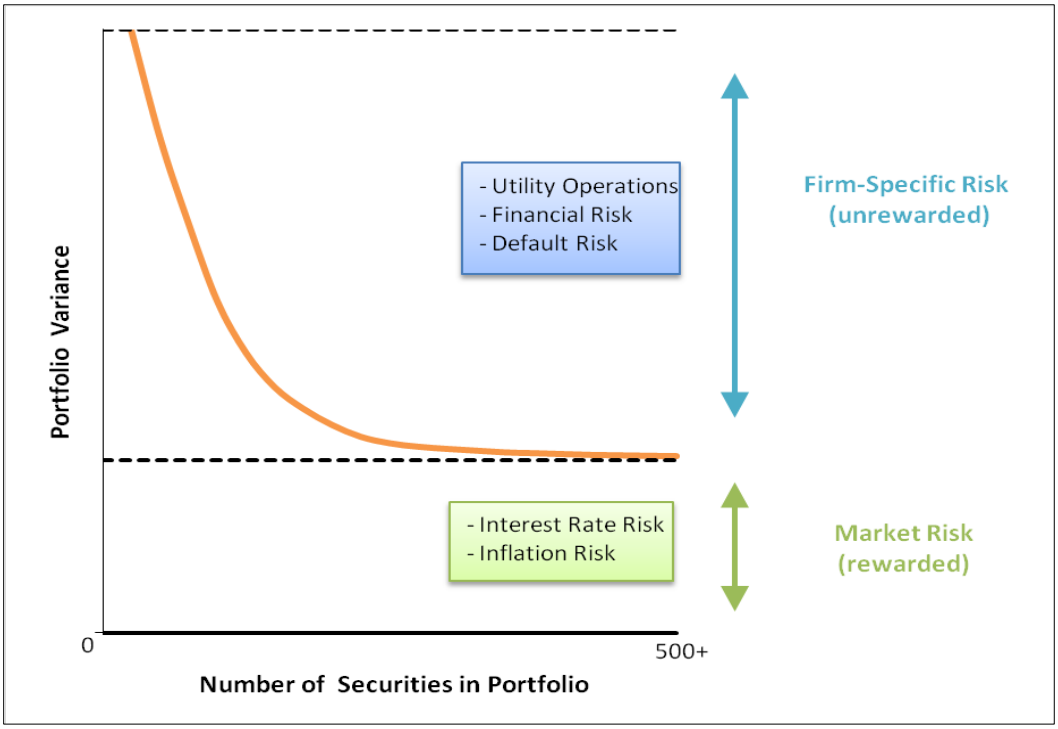
These important concepts are illustrated in the figure below. Some form of this figure is found in many financial textbooks.

---

[20] *Id*.

[21] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, p. 180 (3rd ed., South Western Cengage Learning 2010).

Figure 4:
Effects of Portfolio Diversification



This figure shows that as stocks are added to a portfolio, the amount of firm-specific risk is reduced until it is essentially eliminated. No matter how many stocks are added, however, there remains a certain level of fixed market risk. The level of market risk will vary from firm to firm. Market risk is the only type of risk that is rewarded by the market and is thus the primary type of risk the Commission should consider when determining the allowed return for the utilities it regulates.

Q. Describe how market risk is measured.

A. Investors who want to eliminate firm-specific risk must hold a fully diversified portfolio. To determine the amount of risk that a single stock adds to the overall market portfolio, investors measure the covariance between a single stock and the market

portfolio. The result of this calculation is called "beta."[22] Beta represents the relative sensitivity of a given security to the market as a whole. The market portfolio of all stocks has a beta equal to one. Stocks with betas greater than one are relatively more sensitive to market risk than the average stock. For example, if the market increases (decreases) by 1.0%, a stock with a beta of 1.5 will, on average, increase (decrease) by 1.5%. In contrast, stocks with betas of less than one are less sensitive to market risk, such that if the market increases (decreases) by 1.0%, a stock with a beta of 0.5 will, on average, only increase (decrease) by 0.5%. Thus, stocks with low betas are relatively insulated from market conditions. The beta term is used in the CAPM to estimate the cost of equity, which is discussed in more detail later.[23]

Q. Are public utilities characterized as defensive firms that have low betas, low market risk, and are relatively insulated from overall market conditions?

A. Yes. Although market risk affects all firms in the market, it affects different firms to varying degrees. Firms with high betas are affected more than firms with low betas, which is why firms with high betas are riskier. Stocks with betas greater than one are generally known as "cyclical stocks." Firms in cyclical industries are sensitive to recurring patterns of recession and recovery known as the "business cycle."[24] Thus, cyclical firms are exposed to a greater level of market risk. Securities with betas less

---

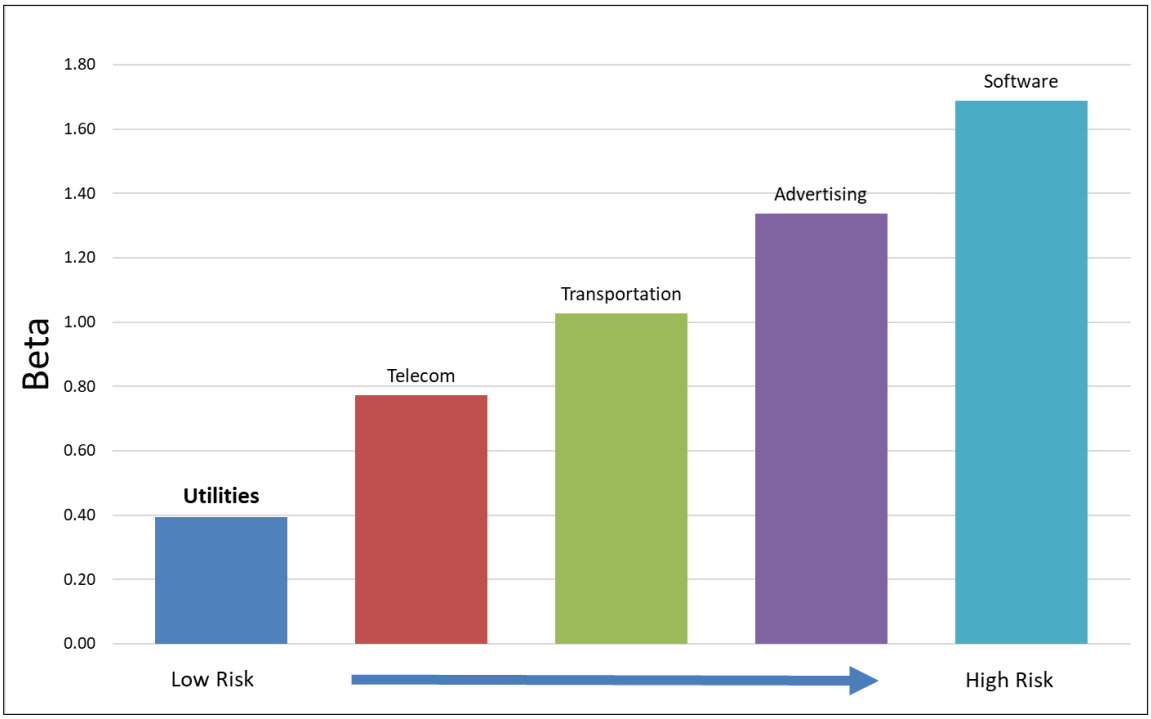
[22] *Id*. at 180-81.

[23] Though it will be discussed in more detail later, Exhibit DJG-9 shows that the average beta of the proxy group was less than 1.0. This confirms the well-known concept that utilities are relatively low-risk firms.

[24] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments*, p. 382 (9th ed., McGraw-Hill/Irwin 2013).

than one, on the other hand, are known as "defensive stocks." Companies in defensive industries, such as public utility companies, "will have low betas and performance that is comparatively unaffected by overall market conditions."[25] In fact, financial textbooks often use utility companies as prime examples of low-risk, defensive firms. The figure below compares the betas of several industries and illustrates that the utility industry is one of the least risky industries in the U.S. market.[26]

Figure 5:
Beta by Industry



[25] *Id*. at 383.

[26] *See* Betas by Sector (US) available at http://pages.stern.nyu.edu/~adamodar/ (2018). (After clicking the link, click "Data" then "Current Data" then "Risk / Discount Rate" from the drop down menu, then "Total Beta by Industry Sector"). The exact beta calculations are not as important as illustrating the well-known fact that utilities are very low-risk companies. The fact that the utility industry is one of the lowest risk industries in the country should not change from year to year.

The fact that utilities are defensive firms that are exposed to little market risk is beneficial to society. When the business cycle enters a recession, consumers can be assured that their utility companies will be able to maintain normal business operations and provide safe and reliable service under efficient management. Likewise, utility investors can be confident that utility stock prices will not widely fluctuate. So, while it is recognized and accepted that utilities are defensive firms that experience little market risk and are relatively insulated from market conditions, this fact should also be appropriately reflected in the Company's awarded return.

VI. DISCOUNTED CASH FLOW ANALYSIS

Q. Describe the DCF Model.

A. The DCF Model is based on a fundamental financial model called the "dividend discount model," which maintains that the value of a security is equal to the present value of the future cash flows it generates. Cash flows from common stock are paid to investors in the form of dividends. There are several variations of the DCF Model. These versions, along with other formulas and theories related to the DCF Model are discussed in more detail in Appendix A.

Q. Describe the inputs to the DCF Model.

A. There are three primary inputs in the DCF Model: (1) stock price; (2) dividend; and (3) the long-term growth rate. The stock prices and dividends are known inputs based on recorded data, while the growth rate projection must be estimated. I discuss each of these inputs separately below.

A. Stock Price

Q. How did you determine the stock price input of the DCF Model?

A. For the stock price (P_0), I used a 30-day average of stock prices for each company in the proxy group.[27] Analysts sometimes rely on average stock prices for longer periods (*e.g.*, 60, 90, or 180 days). According to the efficient market hypothesis, however, markets reflect all relevant information available at a particular time, and prices adjust instantaneously to the arrival of new information.[28] Past stock prices, in essence, reflect outdated information. The DCF Model used in utility rate cases is a derivation of the dividend discount model, which is used to determine the current value of an asset. Thus, according to the dividend discount model and the efficient market hypothesis, the value for the "P_0" term in the DCF Model should technically be the current stock price, rather than an average.

Q. Why did you use a 30-day average for the current stock price input?

A. Using a short-term average of stock prices for the current stock price input adheres to market efficiency principles while avoiding any irregularities that may arise from using a single current stock price. In the context of a utility rate proceeding, there is a significant length of time from when an application is filed, and testimony is due.

---

[27] Exhibit DJG-3.

[28] *See* Eugene F. Fama, *Efficient Capital Markets: A Review of Theory and Empirical Work*, Vol. 25, No. 2 The Journal of Finance 383 (1970); *see also* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 357 (3rd ed., South Western Cengage Learning 2010). The efficient market hypothesis was formally presented by Eugene Fama in 1970 and is a cornerstone of modern financial theory and practice.

Choosing a current stock price for one particular day could raise a separate issue concerning which day was chosen to be used in the analysis. In addition, a single stock price on a particular day may be unusually high or low. It is arguably ill-advised to use a single stock price in a model that is ultimately used to set rates for several years, especially if a stock is experiencing some volatility. Thus, it is preferable to use a short-term average of stock prices, which represents a good balance between adhering to well-established principles of market efficiency while avoiding any unnecessary contentions that may arise from using a single stock price on a given day. The stock prices I used in my DCF analysis are based on 30-day averages of adjusted closing stock prices for each company in the proxy group.[29]

B. Dividend

Q. Describe how you determined the dividend input of the DCF Model.

A. The dividend term in the DCF Model represents dividends per share (d_0). I used forward-looking annualized dividends published by Yahoo! Finance for the dividend input to my constant growth DCF Model.[30] Dividing these dividends by the stock prices for each proxy company results in the dividend yield for each company.[31]

---

[29] Exhibit DJG-3. Adjusted closing prices, rather than actual closing prices, are ideal for analyzing historical stock prices. The adjusted price provides an accurate representation of the firm's equity value beyond the mere market price because it accounts for stock splits and dividends.

[30] Exhibit DJG-4.

[31] *Id*.

Q. Are the stock price and dividend inputs for each proxy company a significant issue in this case?

A. No. Although my stock price and dividend inputs are more recent than those used by Mr. D'Ascendis, there is not a statistically significant difference between them because utility stock prices and dividends are generally quite stable. This is another reason that cost of capital models such as the CAPM and the DCF Model are well-suited to be conducted on utilities. The differences between my DCF Model and Mr. D'Ascendis's DCF Model are primarily driven by differences in our growth rate estimates, which are further discussed below.

C. Growth Rate

Q. Please summarize the growth rate input in the DCF Model.

A. The most critical input in the DCF Model is the growth rate. Unlike the stock price and dividend inputs, the growth rate input (g) must be estimated. As a result, the growth rate is often the most contentious issue related to DCF Model inputs in utility rate cases. The DCF Model used in this case is based on the sustainable growth valuation model. Under this model, a stock is valued by the present value of its future cash flows in the form of dividends. Before future cash flows are discounted by the cost of equity, however, they must be "grown" into the future by a sustainable growth rate. As stated above, one of the inherent assumptions of this model is that these cash flows in the form of dividends grow at a sustainable rate forever. For young, high-growth firms, estimating the growth rate to be used in the model can be especially difficult, and may require the use of multi-stage growth models. For mature, low-growth firms such as

utilities, however, estimating the sustainable growth rate is more transparent. The growth term of the DCF Model is one of the most important, yet least understood, aspects of cost of equity estimations in utility regulatory proceedings. Therefore, I will provide a more detailed explanation on the various determinants of growth below.

Q. Describe the various determinants of growth that can be considered for the growth rate input in the DCF Model.

A. Although the DCF Model directly considers the growth of dividends, there are a variety of growth determinants that should be considered when estimating growth rates. It should be noted that these various growth determinants are used primarily to determine the short-term growth rates in multi-stage DCF models. For utility companies, it is necessary to focus primarily on a long-term growth rate in dividends. This is also known as a "sustainable" growth rate, since this is the growth rate assumed for the company's dividends in perpetuity. That is not to say that these growth determinants cannot be considered when estimating sustainable growth; however, as discussed below, sustainable growth must be constrained much more than short-term growth for young firms with high growth opportunities. Additionally, I briefly discuss these growth determinants here because it may reveal some of the source of confusion in this area.

1. Historical Growth

Looking at a firm's actual historical experience may theoretically provide a good starting point for estimating short-term growth. However, past growth is not always a good indicator of future growth. Some metrics that might be considered here

are a historical growth in revenues, operating income, and net income. Since dividends are paid from earnings, estimating historical earnings growth may provide an indication of future earnings and dividend growth. In general, however, revenue growth tends to be more consistent and predictable than earnings growth because it is less likely to be influenced by accounting adjustments.[32]

2. Analyst Growth Rates

Analyst growth rates refer to short-term projections of earnings growth published by institutional research analysts such as Value Line and Bloomberg. Analyst growth rates, including the limitations with using them in the DCF Model to estimate utility cost of equity, are discussed in more detail below.

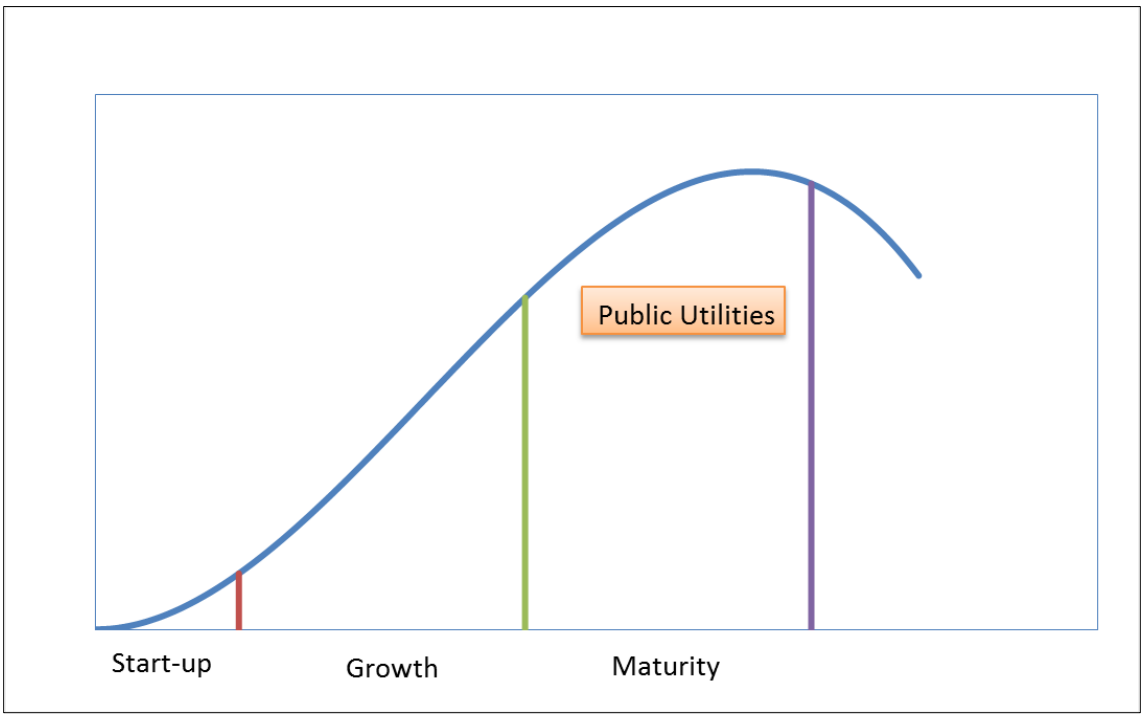
3. Sustainable Growth Rates

To make the DCF Model a viable, practical model, an infinite stream of future cash flows must be estimated and then discounted back to the present. Otherwise, each annual cash flow would have to be estimated separately. Some analysts use "multi-stage" DCF Models to estimate the value of high-growth firms through two or more stages of growth, with the final stage of growth being sustainable. However, it is not necessary to use multi-stage DCF Models to analyze the cost of equity of regulated utility companies. This is because regulated utilities are already in their "sustainable," low growth stage. Unlike most competitive firms, the growth of regulated utilities is

[32] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset*, p. 279 (3rd ed., John Wiley & Sons, Inc. 2012).

constrained by physical service territories and limited primarily by ratepayer and load growth within those territories. The figure below illustrates the well-known business/industry life-cycle pattern.

Figure 6:
Industry Life Cycle



In an industry's early stages, there are ample opportunities for growth and profitable reinvestment. In the maturity stage however, growth opportunities diminish, and firms choose to pay out a larger portion of their earnings in the form of dividends instead of reinvesting them in operations to pursue further growth opportunities. Once a firm is in the maturity stage, it is not necessary to consider higher short-term growth metrics in multi-stage DCF Models; rather, it is sufficient to analyze the cost of equity using a stable growth DCF Model with one sustainable growth rate.

Q. Should the annual sustainable growth rate used in the DCF Model exceed the annual growth rate of the aggregate economy?

A. No. A fundamental concept in finance is that no firm can grow forever at a rate higher than the growth rate of the economy in which it operates.[33] Thus, the sustainable growth rate used in the DCF Model should not exceed the aggregate economic growth rate. This is especially true when the DCF Model is conducted on public utilities because these firms have defined service territories. As stated by Dr. Damodaran: "[i]f a firm is a purely domestic company, either because of internal constraints . . . or external constraints (such as those imposed by a government), the growth rate in the domestic economy will be the limiting value."[34]

In fact, it is reasonable to assume that a regulated utility would grow at a rate that is less than the U.S. economic growth rate. Unlike competitive firms, which might increase their growth by launching a new product line, franchising, or expanding into new and developing markets, utility operating companies with defined service territories cannot do any of these things to grow. Gross Domestic Product ("GDP") is one of the most widely used measures of economic production and is used to measure aggregate economic growth. According to the Congressional Budget Office's 2022 Long-Term Budget Outlook, the long-term forecast for nominal U.S. GDP growth is 3.7%.[35]

---

[33] *See Id.* at p. 306.

[34] *Id.*

[35] Exhibit DJG-6; *see also* Congressional Budget Office, The 2022 Long-Term Budget Outlook, https://www.cbo.gov/system/files/2022-07/57971-LTBO.pdf.

Q. Please describe the growth rates you used in your DCF Models.

A. For my "sustainable growth" variation of the DCF Model, I used the projected long-term GDP growth rate of 3.7%. As discussed above, it is reasonable to conclude that the long-term growth of a domestic firm cannot outpace the growth rate of the aggregate economy in which it operates (as measured by U.S. GDP in this case). For the "analyst growth" variation of the DCF Model, I considered projected short-term dividend growth rate estimates published by Value Line.[36] I show this variation of the DCF Model because it is often presented in rate cases by ROE witnesses and considered by regulators when assessing the awarded ROE.

Q. What are the final results of your DCF Models?

A. For my DCF Models, I considered two variations: one using a sustainable growth rate and one using analysts' growth rates. The sustainable growth rate DCF Model produced a cost of equity indication of 6.7%. The analyst growth variation of the DCF produced a result of 9.2%.[37]

D. Response to Mr. D'Ascendis's DCF Model

Q. Please summarize the results of Mr. D'Ascendis's DCF analyses.

A. Mr. D'Ascendis's DCF Model produced a result of 9.82% for the utility proxy group.[38]

---

[36] Exhibit DJG-7.

[37] Exhibit DJG-7.

[38] Direct Testimony of Dylan W. D'Ascendis, p. 4, Table 2.

Q. Does the result of Mr. D'Ascendis's DCF Model indicate a reasonable cost of equity estimate for York Water?

A. No. Whether the sustainable GDP growth rate or projected dividend growth rates published by Value Line are considered, the highest DCF result I obtained was 7.5%. The primary reason Mr. D'Ascendis's DCF results are overstated is his use of unsustainably high growth rates for some proxy companies. For example, Mr. D'Ascendis incorporated an annual growth rate in earnings of 14% for Middlesex Water Company. This means Mr. D'Ascendis is suggesting the company's earnings will growth by 14% each year, every year, in perpetuity. This 14% growth estimate is from Zack's; however, it is a five-year growth estimate. Mr. D'Ascendis is suggesting that this five-year growth rate projection could continue in perpetuity. As a result, the cost of equity results indicated by Mr. D'Ascendis's DCF Model are unreasonably high in my opinion.

VII. CAPITAL ASSET PRICING MODEL ANALYSIS

Q. Describe the Capital Asset Pricing Model.

A. The CAPM is a market-based model founded on the principle that investors expect higher returns for incurring additional risk.[39] The CAPM estimates this expected return. The various assumptions, theories, and equations involved in the CAPM are discussed further in Appendix B. Using the CAPM to estimate the cost of equity of a

[39] William F. Sharpe, *A Simplified Model for Portfolio Analysis* 277-93 (Management Science IX 1963); *see also* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 208 (3rd ed., South Western Cengage Learning 2010).

regulated utility is consistent with the legal standards governing the fair rate of return. The U.S. Supreme Court has recognized that "the amount of *risk* in the business is a most important factor" in determining the allowed rate of return,[40] and that "the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding *risks*."[41] The CAPM is a useful model because it directly considers the amount of risk inherent in a business and directly measures the most important component of a fair rate of return analysis.

Q. Describe the inputs for the CAPM.

A. The basic CAPM equation requires only three inputs to estimate the cost of equity: (1) the risk-free rate; (2) the beta coefficient; and (3) the equity risk premium. Each input is discussed separately below.

A. The Risk-Free Rate

Q. Please explain the risk-free rate.

A. The first term in the CAPM is the risk-free rate (R_F). The risk-free rate is simply the level of return investors can achieve without assuming any risk. The risk-free rate represents the bare minimum return that any investor would require on a risky asset. Even though no investment is technically void of risk, investors often use U.S. Treasury securities to represent the risk-free rate because they accept that those securities essentially contain no default risk. The Treasury issues securities with different

[40] *Wilcox*, 212 U.S. at 48 (emphasis added).

[41] *Hope Natural Gas Co*., 320 U.S. at 603 (emphasis added).

maturities, including short-term Treasury Bills, intermediate-term Treasury Notes, and long-term Treasury Bonds.

Q. Is it preferable to use the yield on long-term Treasury bonds for the risk-free rate in the CAPM?

A. Yes. In valuing an asset, investors estimate cash flows over long periods of time. Common stock is viewed as a long-term investment, and the cash flows from dividends are assumed to last indefinitely. As a result, short-term Treasury bill yields are rarely used in the CAPM to represent the risk-free rate. Short-term rates are subject to greater volatility and thus can lead to unreliable estimates. Instead, long-term Treasury bonds are usually used to represent the risk-free rate in the CAPM. I considered a 30-day average of daily Treasury yield curve rates on 30-year Treasury bonds in my risk-free rate estimate, which resulted in a risk-free rate of 4.89%.[42]

B. The Beta Coefficient

Q. How is the beta coefficient used in this model?

A. As discussed above, beta represents the sensitivity of a given security to movements in the overall market. The CAPM states that in efficient capital markets, the expected risk premium on each investment is proportional to its beta. Recall that a security with a beta greater (less) than one is more (less) risky than the market portfolio. An index such as the S&P 500 Index is used as a proxy for the market portfolio. The historical betas for publicly traded firms are published by various institutional analysts. Beta

[42] Exhibit DJG-7.

may also be calculated through a linear regression analysis, which provides additional statistical information about the relationship between a single stock and the market portfolio. The market portfolio of all stocks has a beta equal to one. Stocks with betas greater than one are relatively more sensitive to market risk than the average stock. In contrast, stocks with betas of less than one are less sensitive to market risk.

Q. Describe the source for the betas you used in your CAPM analysis.

A. I used betas recently published by Value Line Investment Survey. The beta for each proxy company is less than 1.0, and the average beta for the proxy group is only 0.80.[43] This is an objective indicator that utility stocks are generally less risky than the market average. While there is evidence suggesting that betas published by sources such as Value Line may actually overestimate the risk of utilities (and thus overestimate the CAPM), I used the betas published by Value Line in the interest of minimizing controversy.[44]

C. The Equity Risk Premium

Q. Describe the equity risk premium.

A. The final term of the CAPM is the equity risk premium ("ERP"), which is the required return on the market portfolio less the risk-free rate ($R_M - R_F$). In other words, the ERP is the level of return investors expect above the risk-free rate in exchange for investing in risky securities. Many experts agree that "the single most important variable for

[43] Exhibit DJG-8.

[44] *See* Appendix B for a more detailed discussion of raw beta calculations and adjustments.

making investment decisions is the equity risk premium."[45] Likewise, the ERP is arguably the single most important factor in estimating the cost of capital. There are three basic methods that can be used to estimate the ERP: (1) calculating a historical average; (2) taking a survey of experts; and (3) calculating the implied ERP. I will discuss each method in turn, noting advantages and disadvantages of these methods.

1. Historical Average

Q. Describe the historical equity risk premium.

A. The historical ERP may be calculated by simply taking the difference between returns on stocks and returns on government bonds over a certain period of time. Many practitioners rely on the historical ERP as an estimate for the forward-looking ERP because it is easy to obtain. However, there are disadvantages to relying on the historical ERP.

Q. What are the limitations of relying solely on a historical average to estimate the current or forward-looking ERP?

A. As I mentioned, many investors use the historic ERP because it is convenient and easy to calculate. But what matters in the CAPM model is the current and forward-looking risk premium.[46] Some investors may think that a historic ERP provides some indication of what the prospective risk premium is; however, there is empirical

---

[45] Elroy Dimson, Paul Marsh & Mike Staunton, *Triumph of the Optimists: 101 Years of Global Investment Returns* 4 (Princeton University Press 2002).

[46] John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 330 (3rd ed., South Western Cengage Learning 2010).

evidence to suggest the prospective, forward-looking ERP is actually *lower* than the historical ERP. In a landmark publication on risk premiums around the world, *Triumph of the Optimists*, the authors suggest through extensive empirical research that the prospective ERP is lower than the historical ERP.[47] This is due in large part to what is known as "survivorship bias" or "success bias" — a tendency for failed companies to be excluded from historical indices.[48] From their extensive analysis, the authors make the following conclusion regarding the prospective ERP:

> The result is a forward-looking, geometric mean risk premium for the United States . . . of around 2½ to 4 percent and an arithmetic mean risk premium . . . that falls within a range from a little below 4 to a little above 5 percent.[49]

Indeed, these results are lower than many reported historical risk premiums. Other noted experts agree:

> The historical risk premium obtained by looking at U.S. data is biased upwards because of survivor bias. . . . The true premium, it is argued, is much lower. This view is backed up by a study of large equity markets over the twentieth century (*Triumph of the Optimists*), which concluded that the historical risk premium is closer to 4%.[50]

Regardless of the variations in historic ERP estimates, many leading scholars and practitioners agree that simply relying on a historic ERP to estimate the risk premium

[49] *Id*. at 194.

[50] Aswath Damodaran, *Equity Risk Premiums: Determinants, Estimation and Implications – The 2015 Edition* 17 (New York University 2015).

going forward is not ideal. Fortunately, "a naïve reliance on long-run historical averages is not the only approach for estimating the expected risk premium."[51]

Q. Did you rely on the historical ERP as part of your CAPM analysis in this case?

A. No. Due to the limitations of this approach, I primarily relied on the ERP reported in expert surveys and the implied ERP method discussed below.

2. Expert Surveys

Q. Describe the expert survey approach to estimating the ERP.

A. As its name implies, the expert survey approach to estimating the ERP involves conducting a survey of experts including professors, analysts, chief financial officers, and other executives around the country and asking them what they think the ERP is. The IESE Business School conducts such a survey each year, and the 2025 survey reported an average ERP of 5.5%.[52]

3. Implied Equity Risk Premium

Q. Describe the implied equity risk premium approach.

A. The third method of estimating the ERP is arguably the best. The implied ERP relies on the stable growth model proposed by Gordon, often called the "Gordon Growth Model," which is a basic stock valuation model widely used in finance for many

---

[51] John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 330 (3rd ed., South Western Cengage Learning 2010).

IESE Business School is the graduate business school of the University of Navarra. IESE offers Master of Business Administration (MBA), Executive MBA and Executive Education programs. IESE is consistently ranked among the leading business schools in the world.

years.[53] This model is a mathematical derivation of the DCF Model. In fact, the underlying concept in both models is the same: The current value of an asset is equal to the present value of its future cash flows. Instead of using this model to determine the discount rate of one company, we can use it to determine the discount rate for the entire market by substituting the inputs of the model. Specifically, instead of using the current stock price (P_0), we will use the current value of the S&P 500 (V_{500}). Instead of using the dividends of a single firm, we will consider the dividends paid by the entire market. Additionally, we should consider potential dividends. In other words, stock buybacks should be considered in addition to paid dividends, as stock buybacks represent another way for the firm to transfer free cash flow to shareholders. Focusing on dividends alone without considering stock buybacks could understate the cash flow component of the model, and ultimately understate the implied ERP. The market dividend yield plus the market buyback yield gives us the gross cash yield to use as our cash flow in the numerator of the discount model. This gross cash yield is increased each year over the next five years by the growth rate. These cash flows must be discounted to determine their present value. The discount rate in each denominator is the risk-free rate (R_F) plus the discount rate (K). Equation 1 below shows how the implied return is calculated. Since the current value of the S&P is known, we can solve for K: The implied market return.[54]

---

[53] Myron J. Gordon and Eli Shapiro, *Capital Equipment Analysis: The Required Rate of Profit* 102-110 (Management Science Vol. 3, No. 1 Oct. 1956).

[54] *See* Exhibit DJG-9 for detailed calculation.

Equation 1:
Implied Market Return

$$V_{500} = \frac{CY_1(1+g)^1}{(1+R_F+K)^1} + \frac{CY_2(1+g)^2}{(1+R_F+K)^2} + \cdots + \frac{CY_5(1+g)^5 + TV}{(1+R_F+K)^5}$$

where:
- V_{500} = *current value of index (S&P 500)*
- $CY_{1\text{-}5}$ = *average cash yield over last five years (includes dividends and buybacks)*
- g = *compound growth rate in earnings over last five years*
- R_F = *risk-free rate*
- K = *implied market return (this is what we are solving for)*
- TV = *terminal value* $= CY_5 (1+R_F) / K$

The discount rate is called the "implied" return because it is based on the current value of the index as well as the value of free cash flow to investors projected over the next five years. Thus, based on these inputs, the market is "implying" the expected return; or in other words, based on the current value of all stocks (the index price) and the projected value of future cash flows, the market is telling us the return expected by investors for investing in the market portfolio. After solving for the implied market return (K), we simply subtract the risk-free rate from it to arrive at the implied ERP as shown in Equation 2.

Equation 2:
Implied Equity Risk Premium

$$Implied\ Expected\ Market\ Return - R_F = Implied\ ERP$$

Q. Discuss the results of your implied ERP calculation.

A. After collecting data for the index value, operating earnings, dividends, and buybacks for the S&P 500 over the past six years, I calculated the dividend yield, buyback yield, and gross cash yield for each year. I also calculated the compound annual growth rate (g) from operating earnings. I used these inputs, along with the risk-free rate and

current value of the index to calculate a current expected return on the entire market of 9.9%. I subtracted the risk-free rate to arrive at the implied equity risk premium of 5.0%.[55] Dr. Damodaran, one of the world's leading experts on the ERP, promotes the implied ERP method discussed above. He calculates monthly and annual implied ERPs with this method and publishes his results. Dr. Damodaran's average ERP estimate for May 2023 using several implied ERP variations was 4.3%.[56] Kroll (formerly Duff & Phelps) recently published an estimated ERP of 5.5%.[57]

Q. What are the results of your final ERP estimate?

A. For the final ERP estimate I used in my CAPM analysis, I considered the results of the ERP surveys, the estimated ERP reported by Kroll, the estimated ERP calculated by Dr. Damodaran, and the implied ERP based on my calculations.[58] The results are presented in the following figure:

[55] *Id*.

[56] http://pages.stern.nyu.edu/~adamodar/.

[57] Kroll, Kroll Recommended U.S. Equity Risk Premium and Corresponding Risk-Free Rates to be Used in Computing Cost of Capital: January 2008 – Present (June 2023).

[58] *See also* Exhibit DJG-10.

Figure 7:
Equity Risk Premium Results

IESE Business School Survey	5.5%
Kroll (Duff & Phelps) Report	5.5%
Damodaran (average)	4.3%
Garrett	5.0%
Average	**5.1%**

I used the average ERP result of 5.1% in my CAPM.[59]

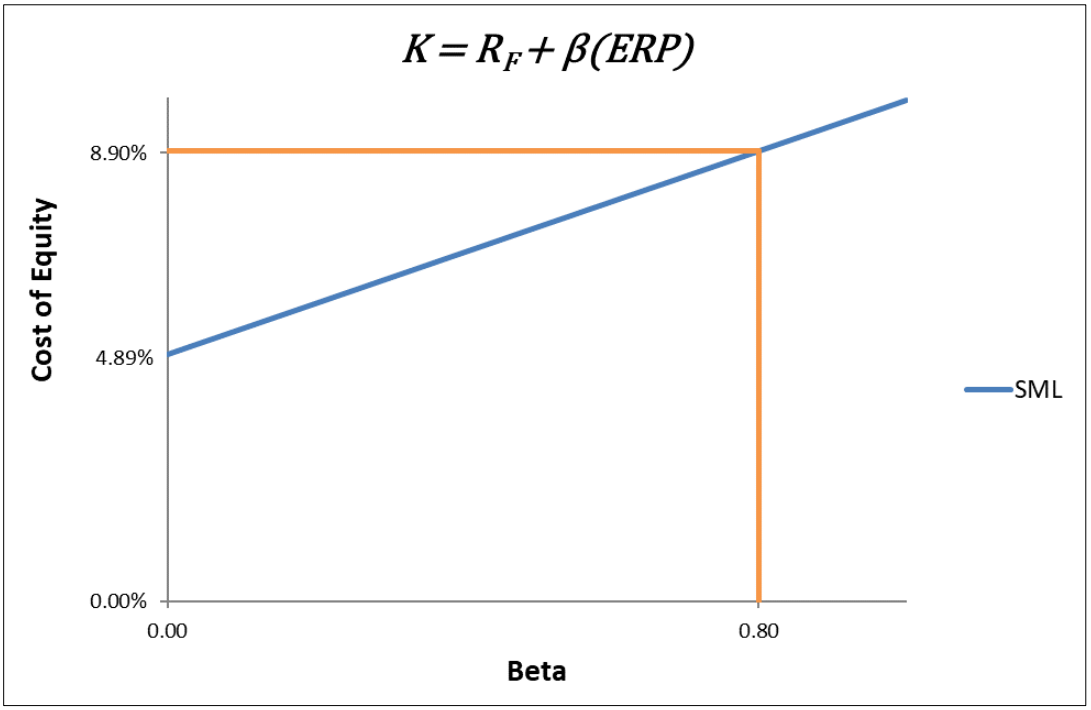
Q. Please explain the final results of your CAPM analysis.

A. Using the inputs for the risk-free rate, beta coefficient, and equity risk premium discussed above, I estimate that the Company's CAPM cost of equity is 8.9% (but only if imputing the average capital structure of the proxy group for York Water).[60] The CAPM can be displayed graphically through what is known as the Security Market Line ("SML"). The figure below shows the expected return (cost of equity) on the y-axis, and the average beta for the proxy group on the x-axis. The SML intercepts the y-axis at the level of the risk-free rate. The slope of the SML is the equity risk premium.

[59] Exhibit DJG-10.

[60] Exhibit DJG-11.

Figure 8:
CAPM Graph



The SML provides the rate of return that will compensate investors for the beta risk of that investment. Thus, at an average beta of 0.80 for the proxy group, the estimated CAPM cost of equity for the Company is 8.9%.

D. Response to Mr. D'Ascendis's CAPM Analysis

Q. Please summarize the results of Mr. D'Ascendis's CAPM analysis.

A. Mr. D'Ascendis's traditional CAPM produced a result of 10.43%.[61] Mr. D'Ascendis's ultimate CAPM cost of equity estimate of 10.74% is affected by his application of another variation of the CAPM called the "empirical" CAPM ("ECAPM").[62]

Q. Do you believe the result of Mr. D'Ascendis's CAPM indicates a reasonable cost of equity estimate for York Water?

A. No. The main problem with Mr. D'Ascendis's CAPM cost of equity result stems primarily from his estimate of the ERP. In my response to Mr. D'Ascendis's CAPM results, I also address his other risk premium model and his ECAPM analysis.

1. Equity Risk Premium

Q. Did Mr. D'Ascendis rely on a reasonable measure for the ERP?

A. No. Mr. D'Ascendis used an ERP of 8.41% in his CAPM,[63] which is significantly higher than the estimates reported in expert surveys and estimated by other analysts. As part of Mr. D'Ascendis's ERP analysis, he considered market data as old as 1926.[64] Treasury yields nearly a century old have no bearing on the current and forward-looking ERP, which is what matters when conducting an accurate CAPM analysis. The ERP is one of three inputs in the CAPM equation, and it is one of the most single

---

[61] Direct Testimony of Dylan W. D'Ascendis, Sch. DWD-5, p. 1.

[62] *Id*. *See also id*. at p. 4, Table 2.

[63] Direct Testimony of Dylan W. D'Ascendis, Sch. DWD-5, p. 1.

[64] *Id*. at p. 2.

important factors for estimating the cost of equity in this case. As discussed above, I used three widely accepted methods for estimating the ERP, including consulting expert surveys, calculating the implied ERP based on aggregate market data, and considering the ERPs published by reputable analysts. The average ERP produced from my various sources is only 5.1%.[65] This means that Mr. D'Ascendis's ERP estimate is significantly higher than the average ERP from these sources.

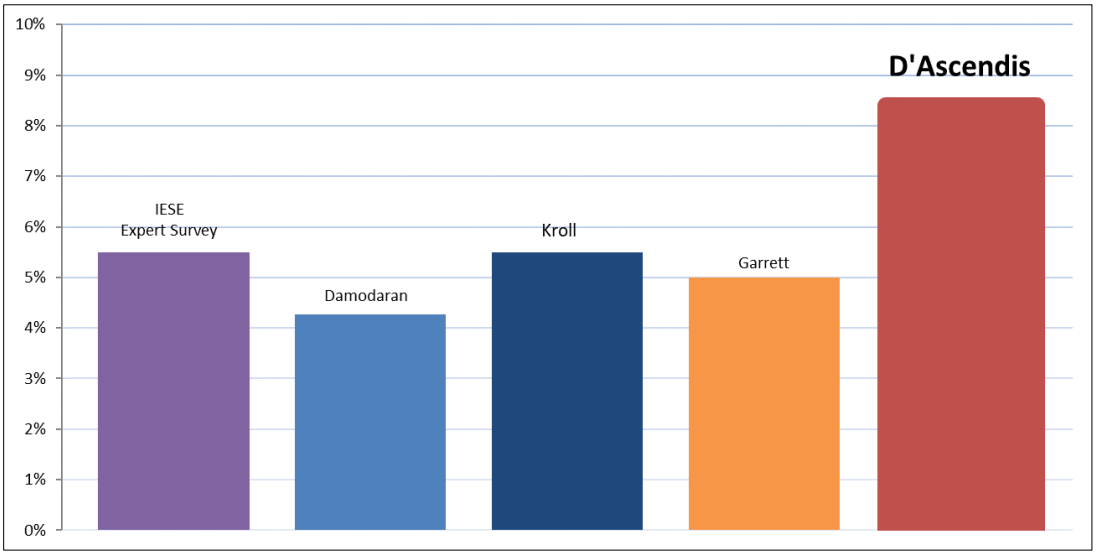
Q. Please discuss and illustrate how Mr. D'Ascendis's ERP compares with other estimates for the ERP.

A. As discussed above, the 2025 IESE Business School expert survey reports an average ERP of 5.5%. Similarly, Kroll recently estimated an ERP of 5.5%. The following figure illustrates that Mr. D'Ascendis's ERP estimate is far out of line with industry norms.[66]

[65] Exhibit DJG-10.

[66] The ERP estimated by Dr. Damodaran is the average of several ERP estimates under slightly differing assumptions.

Figure 9:
Equity Risk Premium Comparison



When compared with other independent sources for the ERP (as well as my estimate), which do not have a wide variance, Mr. D'Ascendis's ERP estimate is clearly not within the range of reasonableness. As a result, his CAPM cost of equity estimate is overstated and unreliable.

2. Other Risk Premium Analyses

Q. Please summarize the results of Mr. D'Ascendis's other risk premium analyses?

A. In addition to the CAPM, Mr. D'Ascendis conducted another type of risk premium analysis called the "Risk Premium Model" that produced a result of 10.70%.[67]

[67] Direct Testimony of Dylan W. D'Ascendis, p. 4, Table 2.

Q. Does the result of Mr. D'Ascendis's Risk Premium Model indicate a reasonable cost of equity estimate for York Water?

A. No. Mr. D'Ascendis's risk premium models rely in part on utility bond yields dating back to 1928.[68] However, data that old is of questionable relevance because cost of equity estimation is essentially a forward-looking process. Analysts can look to the recent past in order to arrive at reasonable forward-looking projections. For example, I use a recent 30-day average of stock prices and Treasury bond yields in my CAPM and DCF models. In contrast, it is unreasonable to consider data nearly 100 years old as having any meaningful impact on the current and forward-looking cost of equity for York Water.

This alternative risk premium analysis offered by Mr. D'Ascendis is completely unnecessary when we already have a real risk premium model to use: the CAPM. The CAPM itself is a "risk premium" model; it takes the bare minimum return any investor would require for assuming no risk (the risk-free rate), then adds a *premium* to compensate the investor for the extra risk he or she assumes by buying a stock rather than a riskless U.S. Treasury security. The CAPM has been utilized by companies around the world for decades for the same purpose we are using it in this case – to estimate cost of equity. Unlike the CAPM, which is found in almost every comprehensive financial textbook, the types of risk premium models used by Mr. D'Ascendis in this case are almost exclusively found in the texts and testimonies of

[68] *Id*. at p. 24, lines 3-15.

utility witnesses. The Commission should focus on the results of the CAPM rather than the risk premium analysis presented by Mr. D'Ascendis.

3. Empirical CAPM

Q. Please summarize Mr. D'Ascendis's Empirical CAPM ("ECAPM") analysis.

A. Mr. D'Ascendis offers another version of the CAPM called ECAPM. The premise of the ECAPM is that the standard CAPM underestimates the return required from low-beta securities, such as those of the proxy group. Mr. D'Ascendis's ECAPM produced an average result of 12.05%.[69]

Q. Do you agree with Mr. D'Ascendis's ECAPM results?

A. No. The premise of Mr. D'Ascendis's ECAPM is that the standard CAPM underestimates the return required from low-beta securities. There are several problems with this concept, however. First, the Value Line betas both Mr. D'Ascendis and I used in the real CAPM have already been adjusted upward to account for the theory that low-beta stocks might have a tendency to be underestimated. Second, there is empirical evidence suggesting that the type of beta-adjustment method used by Value Line actually overstates betas from consistently low-beta industries like utilities. According to this research, it is better to employ an adjustment method that adjusts raw betas toward an industry average, rather than the market average, which ultimately results in betas that are lower than those published in Value Line.[70] Finally (and most

[69] Direct Testimony of Dylan W. D'Ascendis, York Water Exhibit No. DWD-5.

[70] *See* Appendix B for further discussion on these theories.

pertinently), Mr. D'Ascendis's ECAPM still suffers from the same overestimated ERP input discussed above. Regardless of the differing theories regarding the mean reversion tendencies of low-beta securities, Mr. D'Ascendis's ECAPM should be disregarded for its ERP inputs alone which were based on old, out-of-date data resulting in unreasonable ERP significantly higher than that of other experts in the industry.

VIII. OTHER ISSUES

Q. Are there other issues raised by Mr. D'Ascendis in his testimony that you would like to respond to.

A. Yes. In his testimony, Mr. D'Ascendis suggests that several other factors should have increasing effects on the cost of equity estimate, including business risks due to the Company's relative size, flotation costs, and management performance. In addition, Mr. D'Ascendis conducts his modeling on a group of non-utility companies. I will address these issues below.

A. Business Risk Due to Size

Q. Please describe Mr. D'Ascendis's business risk adjustment.

A. Mr. D'Ascendis adds 0.15% to his cost of equity results as a "Business Risk Adjustment" to account for York Water's size.[71]

[71] Direct Testimony of Dylan W. D'Ascendis, p. 4, Table 2.

Q. Do you agree with Mr. D'Ascendis regarding the upward adjustment to the cost of equity modeling to account for the Company's size?

A. No. The "size effect" phenomenon arose from a 1981 study conducted by Banz, which found that "in the 1936 – 1975 period, the common stock of small firms had, on average, higher risk-adjusted returns than the common stock of large firms."[72] According to Ibbotson, Banz's size effect study was "[o]ne of the most remarkable discoveries of modern finance."[73] Perhaps there was some merit to this idea at the time, but the size effect phenomenon was short lived. Banz's 1981 publication generated much interest in the size effect and spurred the launch of significant new small cap investment funds. However, this "honeymoon period lasted for approximately two years. . . ." [74] After 1983, U.S. small-cap stocks actually underperformed relative to large cap stocks. In other words, the size effect essentially reversed. In *Triumph of the Optimists*, the authors conducted an extensive empirical study of the size effect phenomenon around the world. They found that after the size effect phenomenon was discovered in 1981, it disappeared within a few years:

[72] Rolf W. Banz, *The Relationship Between Return and Market Value of Common Stocks* 3-18 (Journal of Financial Economics 9 (1981)).

[73] 2015 Ibbotson Stocks, Bonds, Bills, and Inflation Classic Yearbook 99 (Morningstar 2015).

[74] Elroy Dimson, Paul Marsh & Mike Staunton, *Triumph of the Optimists: 101 Years of Global Investment Returns* 131 (Princeton University Press 2002).

> It is clear . . . that there was a global reversal of the size effect in virtually every country, with the size premium not just disappearing but going into reverse. Researchers around the world universally fell victim to Murphy's Law, with the very effect they were documenting – and inventing explanations for – promptly reversing itself shortly after their studies were published.[75]

In other words, the authors assert that the very discovery of the size effect phenomenon likely caused its own demise. The authors ultimately concluded that it is "inappropriate to use the term 'size effect' to imply that we should automatically expect there to be a small-cap premium," yet, this is exactly what utility witnesses often do in attempting to artificially inflate the cost of equity with a size premium. Other prominent sources have agreed that the size premium is a dead phenomenon. According to Ibbotson:

> The unpredictability of small-cap returns has given rise to another argument against the existence of a size premium: that markets have changed so that the size premium no longer exists. As evidence, one might observe the last 20 years of market data to see that the performance of large-cap stocks was basically equal to that of small cap stocks. In fact, large-cap stocks have outperformed small-cap stocks in five of the last 10 years.[76]

In addition to the studies discussed above, other scholars have concluded similar results. According to Kalesnik and Beck:

---

[75] *Id*. at 133.

[76] 2015 Ibbotson Stocks, Bonds, Bills, and Inflation Classic Yearbook 112 (Morningstar 2015).

> Today, more than 30 years after the initial publication of Banz's paper, the empirical evidence is extremely weak even before adjusting for possible biases. . . . The U.S. long-term size premium is driven by the extreme outliers, which occurred three-quarters of a century ago. . . . Finally, adjusting for biases . . . makes the size premium vanish. If the size premium were discovered today, rather than in the 1980s, it would be challenging to even publish a paper documenting that small stocks outperform large ones.[77]

For all of these reasons, the Commission should reject the arbitrary size premium proposed by Mr. D'Ascendis.

Q. Are there other practical reasons to consider when rejecting the concept of a size premium in this context?

A. Yes. Utility proxy groups are often comprised of holding companies, which are used to estimate the cost of equity of regulated utility operating subsidiaries. In that regard, it is unreasonable to assume that an operating subsidiary is automatically more risky due to the fact that it will inevitably be "smaller" than the holding companies used to estimate its cost of equity. In other words, a small company that is a subsidiary of a large company does not magically get a small cap premium. If it did, large companies would simply take every project, incorporate it, then make it a "small cap" company in order to generate an automatically higher return on that company. This arrangement is akin to arbitrage, and would simply not exist in a competitive market in terms of parent-subsidiary relationships. The positions taken by Mr. D'Ascendis and other utility ROE

[77] Vitali Kalesnik and Noah Beck, *Busting the Myth About Size* (Research Affiliates 2014), available at https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=&ved=2ahUKEwic84ykqNL_AhWmmWoFHbwzCpcQFnoECAsQAQ&url=https%3A%2F%2Fwww.researchaffiliates.com%2Fcontent%2Fdam%2Fra%2Fpublications%2Fpdf%2F284-busting-the-myth-about-size.pdf&usg=AOvVaw3Yw7SggIT0R8KvzGmYkuAp&opi=89978449 (emphasis added).

witnesses is there is an automatic additional return an operating utility should expect because it is inevitably smaller than the proxy group used to estimate its cost of equity. Not only is this view contrary to the numerous studies outlined above, debunking the size premium phenomenon, but it also contradicts a common sense view of the relationship between utility holding companies and their subsidiaries.

B. Flotation Cost Adjustment

Q. Please summarize the flotation cost adjustment applied by Mr. D'Ascendis.

A. "Flotation costs" generally refer to the underwriter's compensation for the services it provides in connection with the securities offering. Mr. D'Ascendis adds 0.12% to his cost of equity modeling results to account for flotation costs.[78] As part of his calculation, Mr. D'Ascendis considered equity issuances dating back to 2004.[79]

Q. Do you agree with Mr. D'Ascendis flotation cost adjustment?

A. No. Incorporating costs dating back to 2004 is clearly inappropriate in terms of setting rates for customers in this case. When companies issue equity securities, they typically hire at least one investment bank as an underwriter for the securities. In addition, Mr. D'Ascendis's flotation cost adjustment should be rejected for the following reasons.

1. Flotation costs are not actual "out-of-pocket" costs.

The Company has not experienced any out-of-pocket costs for flotation. Underwriters are not compensated in this fashion. Instead, underwriters are compensated through an

[78] Direct Testimony of Dylan W. D'Ascendis, p. 4, Table 2.

[79] *Id*. at Sch. DWD-9, p. 1.

"underwriting spread." An underwriting spread is the difference between the price at which the underwriter purchases the shares from the firm, and the price at which the underwriter sells the shares to investors.[80] Accordingly, the Company has not experienced any out-of-pocket flotation costs; and if it has incurred such costs during the test period, those costs should be included in the Company's expense schedules.

2. The market already accounts for flotation costs.

When an underwriter markets a firm's securities to investors, the investors are aware of the underwriter's fees. The investors know that a portion of the price they are paying for the shares does not go directly to the company, but instead goes to compensate the underwriter for its services. In fact, federal law requires that the underwriter's compensation be disclosed on the front page of the prospectus.[81] Thus, investors have already considered and accounted for flotation costs when making their decision to purchase shares at the quoted price.

As a result, there is no need for shareholders to receive additional compensation to account for costs they have already considered and agreed to. Similar compensation structures are in other kinds of business transactions. For example, a homeowner may hire a realtor and sell a home for $100,000. After the realtor takes a six percent commission, the seller nets $94,000. The buyer and seller agreed to the transaction

---

[80] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, p. 509 (3rd ed., South Western Cengage Learning 2010).

[81] *See* Regulation S-K, 17 C.F.R. § 229.501(b)(3) (requiring that the underwriter's discounts and commissions be disclosed on the outside cover page of the prospectus). A prospectus is a legal document that provides details about an investment offering.

notwithstanding the realtor's commission. Obviously, it would be unreasonable for the buyer or seller to demand additional funds from anyone after the deal is completed to reimburse them for the realtor's fees. Likewise, investors of competitive firms do not expect additional compensation for flotation costs. Thus, it would not be appropriate for a commission standing in the place of competition to reward a utility's investors with this additional compensation.

3. It is inappropriate to add any additional basis points to an awarded ROE proposal that is already far above the Company's cost of equity.

For the reasons discussed above, flotation costs should be disallowed from a technical standpoint; they should also be disallowed from a policy standpoint. The Company is asking this Commission to award it a cost of equity that is significantly higher than any reasonable estimate of its market-based cost of equity. Under these circumstances, it is especially inappropriate to suggest that flotation costs should be considered in any way to increase an already inflated ROE proposal.

C. Non-Regulated Cost of Equity Model

Q. Please describe Mr. D'Ascendis's cost of equity model conducted on non-price regulated companies.

In addition to conducting a cost of equity analysis on the utility proxy group, Mr. D'Ascendis also conducted a similar type of analysis on a group of twenty non-utility

companies.[82] The result of this modeling is 11.51%, which is the highest of Mr. D'Ascendis's modeling results.[83]

Q. Do the results of Mr. D'Ascendis's non-utility modeling indicate a reasonable cost of equity estimate for York Water?

No. Non-utility companies are relatively incomparable to York Water compared with the utility proxy group. Thus, the results obtained from these multiple analyses of these non-utility companies will be inferior to the results obtained from any model (conducted properly) on the utility proxy group. The risk profiles of competitive firms will tend to be higher than those of low-risk utilities; thus, their cost of equity estimates will generally be higher. In this case, Mr. D'Ascendis's non-utility model result was 11.59%, which is higher than both his base CAPM and DCF Model results when applied to the utility proxy group. However, even if Mr. D'Ascendis had selected a group of non-utility companies with the exact same betas as the utility proxy group, it would not resolve the most glaring problem with the model itself, which is the fact that the business operations of the non-utility group are absolutely less comparable to York Water than the utility proxy group. In other words, there is simply no marginal value added to the process of estimating utility cost of equity by using non-utility, non-regulated firms in a proxy group instead of firms with relatively similar risk profiles to the regulated utility being analyzed. Moreover, Mr. D'Ascendis again uses excessive risk premiums and unreasonable inputs leading to overstated model results. Using the

[82] See Direct Testimony of Dylan W. D'Ascendis, pp. 43-46.

[83] *Id*. at p. 4, Table 2.

same flawed approaches and unreasonable inputs in analyses of not one, but two proxy groups compounds the impact of those unsound choices.

D. Management Performance Premium

Q. Please summarize the management performance premium applied by Mr. D'Ascendis.

A. Mr. D'Ascendis applied an upward adjustment of 0.25% to his modeling results to account for management performance.[84]

Q. Do you agree that managerial performance should affect York Water's authorized ROE?

A. No. As discussed in my testimony, the primary driver of the cost of equity and required rate of return is how the market risk impacts individual firms. Managerial performance and the risk of imprudent management is related to firm-specific risks, which are not rewarded by the market because investors can eliminate such risk through diversification of the portfolio, and do not have a material effect on the cost of equity. As investors in competitive firms in the marketplace cannot expect an additional return on equity simply due to prudent managerial performance, the Company as a regulated firm should not receive any premium in addition to an authorized market-based ROE due to prudent managerial performance. OCA witness Alexander also discusses problems with the Company's management performance in her direct testimony and recommends that the requested premium be denied.

[84] Direct Testimony of Dylan W. D'Ascendis, p. 4, Table 2.

Q. Are you aware of regulators from other jurisdictions who have recognized the performance of utility management as having an increasing effect on authorized ROE?

A. No, I am not aware of a regulator from another jurisdiction who has specially recognized managerial performance as having an increasing effect on the authorized ROE.

IX. CAPITAL STRUCTURE

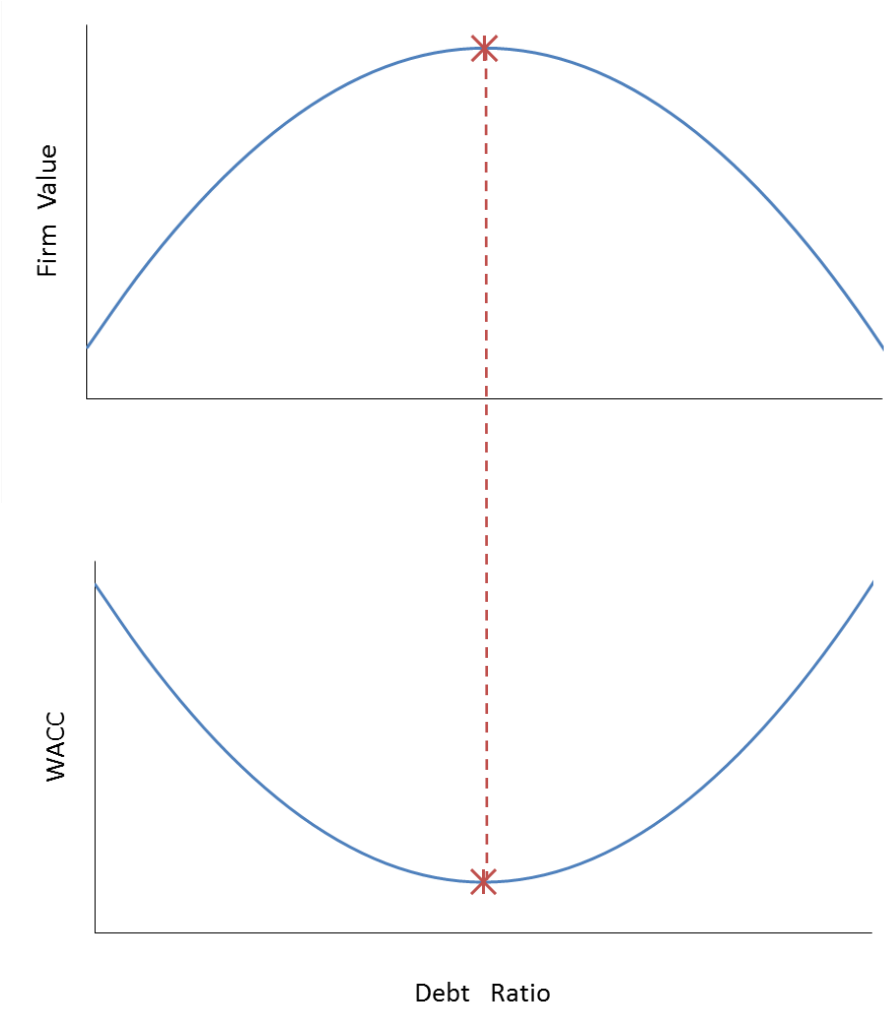
Q. Describe in general the concept of a company's capital structure.

A. "Capital structure" refers to the way a company finances its overall operations through external financing. The primary sources of long-term, external financing are debt capital and equity capital. Debt capital usually comes in the form of contractual bond issuances that require the firm to make payments, while equity capital represents an ownership interest in the form of stock. Because a firm cannot pay dividends on common stock until it satisfies its debt obligations to bondholders, stockholders are referred to as "residual claimants." The fact that stockholders have a lower priority to claims on company assets increases their risk and the required return relative to bondholders. Thus, equity capital has a higher cost than debt capital. Firms can reduce their weighted average cost of capital ("WACC") by recapitalizing and increasing their debt financing. In addition, because interest expense is deductible, increasing debt also adds value to the firm by reducing the firm's tax obligation.

Q. Is it true that, by increasing debt, competitive firms can add value and reduce their WACC?

A. Yes, it is. A competitive firm can add value by increasing debt. After a certain point, however, the marginal cost of additional debt outweighs its marginal benefit. This is because the more debt the firm uses, the higher interest expense it must pay, and the likelihood of loss increases. This also increases the risk of non-recovery for both bondholders and shareholders, causing both groups of investors to demand a greater return on their investment. Thus, if debt financing is too high, the firm's WACC will increase instead of decrease. The following figure illustrates these concepts.

Figure 10:
Optimal Debt Ratio



As shown in this figure, a competitive firm's value is maximized when the WACC is minimized. In both graphs, the debt ratio is shown on the x-axis. By increasing its debt ratio, a competitive firm can minimize its WACC and maximize its value. At a certain point, however, the benefits of increasing debt do not outweigh the costs of the

additional risks to both bondholders and shareholders, as each type of investor will demand higher returns for the additional risk they have assumed.[85]

Q. Does the rate base rate of return model effectively incentivize utilities to operate at the optimal capital structure?

A. No. While it is true that competitive firms maximize their value by minimizing their WACC, this is not the case for regulated utilities. Under the rate base, rate of return model, a higher WACC results in higher rates, all else held constant. The basic revenue requirement equation is as follows:

Equation 3:
Revenue Requirement for Regulated Utilities

$$RR = O + d + T + \boldsymbol{r}(A - D)$$

where:

RR	=	*revenue requirement*
O	=	*operating expenses*
d	=	*depreciation expense*
T	=	*corporate tax*
$\boldsymbol{r}$	=	***weighted average cost of capital (WACC)***
A	=	*plant investments*
D	=	*accumulated depreciation*

As shown in Equation 3, utilities can increase their revenue requirement by <u>increasing</u> their WACC, not by minimizing it. Thus, because there is no incentive for a regulated utility to minimize its WACC, a commission standing in the place of competition must ensure that the regulated utility is operating at the lowest reasonable WACC.

[85] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 440-41 (3rd ed., South Western Cengage Learning 2010).

Q. Can utilities generally afford to have higher debt levels than other industries?

A. Yes. Because regulated utilities have large amounts of fixed assets, stable earnings, and low risk relative to other industries, they can afford to have relatively higher debt ratios (or "leverage"). As aptly stated by Dr. Damodaran:

> Since financial leverage multiplies the underlying business risk, it stands to reason that firms that have high business risk should be reluctant to take on financial leverage. It also stands to reason that firms that operate in stable businesses should be much more willing to take on financial leverage. Utilities, for instance, have historically had high debt ratios but have not had high betas, mostly because their underlying businesses have been stable and fairly predictable.[86]

Note that the author explicitly contrasts utilities with firms that have high underlying business risk. Because utilities have low levels of risk and operate a stable business, they should generally operate with relatively high levels of debt to achieve their optimal capital structure.

Q. Describe the approach you used to assess the reasonableness of York Water's capital structure for ratemaking purposes?

A. To assess a reasonable capital structure for York Water, I examined the capital structures of the proxy group. The cost of equity indicated under the CAPM is inseparable from the proxy group capital structures. For comparative purposes, I also looked at debt ratios observed in other industries. I discuss each of these approaches in more detail below.

---

[86] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 196 (3rd ed., John Wiley & Sons, Inc. 2012).

A. Proxy and Industry Debt Ratios

Q. Please describe the debt ratio of the proxy group.

A. According to the debt ratios recently reported in Value Line for the utility proxy group (the same proxy group used by Mr. D'Ascendis), the average debt ratio of the proxy group is 49%.[87] This is notably higher than York Water's proposed debt ratio of only 45%.

Q. Why is it critical to consider the capital structures of the proxy group when assessing a fair capital structure for York Water?

A. The cost of equity of any particular company is necessarily connected with its capital structure. This is because there is a direct relationship between risk and return. That is, the higher (lower) risk, the higher (lower) expected return. All else held constant, companies with higher amounts of leverage have higher levels of financial risk. Since we are using a proxy group of companies to assess a fair cost of equity estimate for York Water, we must also factor in the capital structures of those companies into the analysis – failing to do so is an analytical error. Since York Water's debt ratio is lower than the proxy group average, it has less financial risk than the proxy group. This discrepancy in debt ratio must be accounted for. This issue will be discussed in more detail below in my Hamada model analysis.

[87] Exhibit DJG-14.

Q. Please describe the debt ratios recently observed in competitive U.S. industries.

A: There are nearly 2,000 companies in the U.S. with debt ratios higher than 50%.[88] The following figure shows a sample of these industries with debt ratios higher than 56%.

[88] Exhibit DJG-15.

Figure 11:
Competitive Industry Debt Ratios

Industry	# Firms	Debt Ratio
Financial Svcs. (Non-bank & Insurance)	166	92%
Hotel/Gaming	65	86%
Brokerage & Investment Banking	30	80%
Retail (Automotive)	29	80%
Hospitals/Healthcare Facilities	33	76%
Air Transport	24	76%
Bank (Money Center)	15	71%
Rubber& Tires	3	67%
Recreation	50	66%
Food Wholesalers	14	66%
Transportation	21	66%
Computers/Peripherals	35	65%
Cable TV	9	65%
Advertising	54	64%
Retail (Grocery and Food)	17	64%
Retail (Special Lines)	98	64%
Telecom (Wireless)	11	63%
Power	48	62%
R.E.I.T.	192	62%
Oil/Gas Distribution	24	62%
Transportation (Railroads)	4	62%
Telecom. Services	32	62%
Chemical (Diversified)	4	61%
Auto & Truck	34	61%
Aerospace/Defense	67	60%
Broadcasting	22	60%
Packaging & Container	22	60%
Apparel	37	59%
Beverage (Soft)	29	59%
Utility (General)	14	59%
Retail (Distributors)	66	58%
Farming/Agriculture	35	57%
Green & Renewable Energy	18	57%
Information Services	16	57%
Total / Average	**1,338**	**66%**

Many of the industries shown here, like public utilities, are generally well-established industries with large amounts of capital assets. The shareholders of these industries generally prefer these higher debt ratios to maximize their profits. There are several notable industries that are relatively comparable to public utilities. For example, the Cable TV, Telecom, Power, and Renewables industries have much higher debt ratios than the one proposed by York Water.

Q. Please summarize the results of your capital structure analyses and your recommendation regarding capital structure.

A. The results of my analyses are summarized in the following figure:

Figure 12:
Capital Structure Analysis – Summary of Results

Source	Debt Ratio
Cable TV	65%
Power	62%
Telecom Services	62%
Proxy Group of Utilities	**49%**
Company Proposal (total debt)	**45%**

As shown in this figure, York Water's proposed debt ratio is clearly too low (and its equity ratio is too high). This results in excessively high capital costs and utility rates. My analysis indicates that York Water's debt ratio for ratemaking should be 49%. When the authorized rate of return exceeds market-based cost of capital, it results in an excessive and unnecessary transfer of wealth from customers to shareholders. The

average debt ratio of the proxy group is 49%, and this should be the debt ratio used to set a fair rate of return in this case.

B. The Hamada Model: Capital Structure's Effect on ROE

Q. Have you considered the impact that your capital structure recommendation could have on the company's indicated cost of equity?

A. Yes. I assessed the impact of my capital structure proposal on the Company's cost of equity estimate by using the Hamada model.

Q. What is the premise of the Hamada model?

A. The Hamada formula can be used to analyze changes in a firm's cost of capital as it adds or reduces financial leverage, or debt, in its capital structure by starting with an "unlevered" beta and then "relevering" the beta at different debt ratios. As leverage increases, equity investors bear increasing amounts of risk, leading to higher betas. Before the effects of financial leverage can be accounted for, however, the effects of leverage must first be removed, which is accomplished through the Hamada formula. The Hamada formula for unlevering beta is stated as follows:[89]

[89] Damodaran *supra* n. 18, at 197. This formula was originally developed by Hamada in 1972.

Equation 4:
Hamada Formula

$$\beta_U = \frac{\beta_L}{\left[1 + (1 - T_c)\left(\frac{D}{E}\right)\right]}$$

where: β_U = *unlevered beta (or "asset" beta)*
β_L = *average levered beta of proxy group*
T_C = *corporate tax rate*
D = *book value of debt*
E = *book value of equity*

Using Equation 4, the beta for the firm can be unlevered, and then "relevered" based on various debt ratios (by rearranging this equation to solve for β_L).

Q. Please summarize the results of the Hamada formula based on your proposed capital structure for the company.

A. The average capital structure of the proxy group consists of 49% debt. Because York Water's debt ratio is so much lower than that of the proxy group, when we "relever" York Water relative to the proxy group, it results in a much lower ROE than if York Water had been operating with a capital structure equal to that of the proxy group. This makes sense because York Water is much less risky relative to the proxy group due to the decreased amount of debt in its capital structure. The results of my Hamada model are presented in the figure below.[90]

[90] Exhibit DJG-16.

Figure 13:
Hamada Model ROE

Unlevering Beta	
Proxy Debt Ratio	49%
Proxy Equity Ratio	51%
Proxy Debt / Equity Ratio	1.0
Tax Rate	21%
Equity Risk Premium	5.1%
Risk-free Rate	4.9%
Proxy Group Beta	0.80
Unlevered Beta	0.45

Relevered Betas and Cost of Equity Estimates

Debt Ratio	D/E Ratio	Levered Beta	Cost of Equity
0%	0.0	0.45	7.2%
20%	0.3	0.54	7.7%
30%	0.4	0.61	8.0%
40%	0.7	0.69	8.4%
45%	0.8	0.75	8.7%
49%	1.0	0.80	8.9%
60%	1.5	0.99	9.9%

According to the results of the Hamada model, if the Commission adopts my capital structure recommendation, York Water's indicated cost of equity estimate would be 8.9%. However, if the Commission accepts York Water's proposed capital structure, the Company's cost of equity estimate would be 8.7%.

Q. How do the results of the Hamada model inform your recommended ROE and capital structure to the Commission?

A. Although I am not recommending an authorized ROE that is equal to the results of the Hamada Model, this model nonetheless provides further indication that the Company's cost of equity is likely lower than my recommended ROE. Furthermore, regardless of differing opinions regarding the Company's cost of equity and reasonable ROE, it is clear that under the Company's proposed capital structure, its cost of equity is less than what it would be under a capital structure that is adjusted to the proxy group average for ratemaking purposes.

Q. Does this conclude your testimony?

A. Yes.

APPENDIX A:

DISCOUNTED CASH FLOW MODEL THEORY

The Discounted Cash Flow ("DCF") Model is based on a fundamental financial model called the "dividend discount model," which maintains that the value of a security is equal to the present value of the future cash flows it generates. Cash flows from common stock are paid to investors in the form of dividends. There are several variations of the DCF Model. In its most general form, the DCF Model is expressed as follows:[1]

Equation 1:
General Discounted Cash Flow Model

$$P_0 = \frac{D_1}{(1+k)} + \frac{D_2}{(1+k)^2} + \cdots + \frac{D_n}{(1+k)^n}$$

where: P_0 = *current stock price*
$D_1 \ldots D_n$ = *expected future dividends*
k = *discount rate / required return*

The General DCF Model would require an estimation of an infinite stream of dividends. Since this would be impractical, analysts use more feasible variations of the General DCF Model, which are discussed further below.

The DCF Models rely on the following four assumptions:

1. Investors evaluate common stocks in the classical valuation framework; that is, they trade securities rationally at prices reflecting their perceptions of value;
2. Investors discount the expected cash flows at the same rate (K) in every future period;

[1] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 410 (9th ed., McGraw-Hill/Irwin 2013).

3. The K obtained from the DCF equation corresponds to that specific stream of future cash flows alone; and

4. Dividends, rather than earnings, constitute the source of value.

The General DCF can be rearranged to make it more practical for estimating the cost of equity. Regulators typically rely on some variation of the Constant Growth DCF Model, which is expressed as follows:

Equation 2:
Constant Growth Discounted Cash Flow Model

$$K = \frac{D_1}{P_0} + g$$

where: K = *discount rate / required return on equity*
D_1 = *expected dividend per share one year from now*
P_0 = *current stock price*
g = *expected growth rate of future dividends*

Unlike the General DCF Model, the Constant Growth DCF Model solves directly for the required return (K). In addition, by assuming that dividends grow at a constant rate, the dividend stream from the General DCF Model may be essentially substituted with a term representing the expected constant growth rate of future dividends (g). The Constant Growth DCF Model may be considered in two parts. The first part is the dividend yield (D_1/P_0), and the second part is the growth rate (g). In other words, the required return in the DCF Model is equivalent to the dividend yield plus the growth rate.

In addition to the four assumptions listed above, the Constant Growth DCF Model relies on four additional assumptions as follows:[2]

[2] *Id.* at 254-56.

1. The discount rate (K) must exceed the growth rate (g);
2. The dividend growth rate (g) is constant in every year to infinity;
3. Investors require the same return (K) in every year; and
4. There is no external financing; that is, growth is provided only by the retention of earnings.

Because the growth rate in this model is assumed to be constant, it is important not to use growth rates that are unreasonably high. In fact, the constant growth rate estimate for a regulated utility with a defined service territory should not exceed the growth rate for the economy in which it operates.

APPENDIX B:

CAPITAL ASSET PRICING MODEL THEORY

The Capital Asset Pricing Model ("CAPM") is a market-based model founded on the principle that investors demand higher returns for incurring additional risk.[1] The CAPM estimates this required return. The CAPM relies on the following assumptions:

1. Investors are rational, risk-adverse, and strive to maximize profit and terminal wealth;
2. Investors make choices based on risk and return. Return is measured by the mean returns expected from a portfolio of assets; risk is measured by the variance of these portfolio returns;
3. Investors have homogenous expectations of risk and return;
4. Investors have identical time horizons;
5. Information is freely and simultaneously available to investors.
6. There is a risk-free asset, and investors can borrow and lend unlimited amounts at the risk-free rate;
7. There are no taxes, transaction costs, restrictions on selling short, or other market imperfections; and,
8. Total asset quality is fixed, and all assets are marketable and divisible.[2]

[1] William F. Sharpe, *A Simplified Model for Portfolio Analysis* 277-93 (Management Science IX 1963); *see also* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 208 (3rd ed., South Western Cengage Learning 2010).

[2] *Id*.

While some of these assumptions may appear to be restrictive, they do not outweigh the inherent value of the model. The CAPM has been widely used by firms, analysts, and regulators for decades to estimate the cost of equity capital.

The basic CAPM equation is expressed as follows:

Equation 1:
Capital Asset Pricing Model

$$K = R_F + \beta_i(R_M - R_F)$$

where: K = *required return*
R_F = *risk-free rate*
β = *beta coefficient of asset i*
R_M = *required return on the overall market*

There are essentially three terms within the CAPM equation that are required to calculate the required return (K): (1) the risk-free rate (R_F); (2) the beta coefficient (β); and (3) the equity risk premium ($R_M - R_F$), which is the required return on the overall market less the risk-free rate.

Raw Beta Calculations and Adjustments

A stock's beta equals the covariance of the asset's returns with the returns on a market portfolio, divided by the portfolio's variance, as expressed in the following formula:[3]

Equation 2:
Beta

$$\beta_i = \frac{\sigma_{im}}{\sigma_m^2}$$

where: β_i = *beta of asset i*
σ_{im} = *covariance of asset i returns with market portfolio returns*
σ^2_m = *variance of market portfolio*

[3] John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 180-81 (3rd ed., South Western Cengage Learning 2010).

Betas that are published by various research firms are typically calculated through a regression analysis that considers the movements in price of an individual stock and movements in the price of the overall market portfolio. The betas produced by this regression analysis are considered "raw" betas. There is empirical evidence that raw betas should be adjusted to account for beta's natural tendency to revert to an underlying mean.[4] Some analysts use an adjustment method proposed by Blume, which adjusts raw betas toward the market mean of one.[5] While the Blume adjustment method is popular due to its simplicity, it is arguably arbitrary, and some would say not useful at all. According to Dr. Damodaran: "While we agree with the notion that betas move toward 1.0 over time, the [Blume adjustment] strikes us as arbitrary and not particularly useful."[6] The Blume adjustment method is especially arbitrary when applied to industries with consistently low betas, such as the utility industry. For industries with consistently low betas, it is better to employ an adjustment method that adjusts raw betas toward an industry average, rather than the market average. Vasicek proposed such a method, which is preferable to the Blume adjustment method because it allows raw betas to be adjusted toward an industry average, and also accounts for the statistical accuracy of the raw beta calculation.[7] In other words, "[t]he Vasicek adjustment seeks to overcome one weakness of the Blume model by not applying the same adjustment to every security; rather, a security-specific adjustment is made depending on the

[4] *See* Michael J. Gombola and Douglas R. Kahl, *Time-Series Processes of Utility Betas: Implications for Forecasting Systematic Risk* 84-92 (Financial Management Autumn 1990).

[5] See Marshall Blume, *On the Assessment of Risk*, Vol. 26, No. 1, The Journal of Finance 1 (1971).

[6] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 187 (3rd ed., John Wiley & Sons, Inc. 2012).

[7] Oldrich A. Vasicek, *A Note on Using Cross-Sectional Information in Bayesian Estimation of Security Betas* 1233-1239 (Journal of Finance, Vol. 28, No. 5, December 1973).

statistical quality of the regression."[8] The Vasicek beta adjustment equation is expressed as follows:

Equation 3:
Vasicek Beta Adjustment

$$\beta_{i1} = \frac{\sigma^2_{\beta i0}}{\sigma^2_{\beta 0} + \sigma^2_{\beta_{i0}}}\beta_0 + \frac{\sigma^2_{\beta 0}}{\sigma^2_{\beta 0} + \sigma^2_{\beta_{i0}}}\beta_{i0}$$

where: β_{i1} = *Vasicek adjusted beta for security i*
β_{i0} = *historical beta for security i*
β_0 = *beta of industry or proxy group*
$\sigma^2_{\beta 0}$ = *variance of betas in the industry or proxy group*
$\sigma^2_{\beta i0}$ = *square of standard error of the historical beta for security i*

The Vasicek beta adjustment is an improvement on the Blume model because the Vasicek model does not apply the same adjustment to every security. A higher standard error produced by the regression analysis indicates a lower statistical significance of the beta estimate. Thus, a beta with a high standard error should receive a greater adjustment than a beta with a low standard error. As stated in Ibbotson:

> While the Vasicek formula looks intimidating, it is really quite simple. The adjusted beta for a company is a weighted average of the company's historical beta and the beta of the market, industry, or peer group. How much weight is given to the company and historical beta depends on the statistical significance of the company beta statistic. If a company beta has a low standard error, then it will have a higher weighting in the Vasicek formula. If a company beta has a high standard error, then it will have lower weighting in the Vasicek formula. An advantage of this adjustment methodology is that it does not force an adjustment to the market as a whole. Instead, the adjustment can be toward an industry or some other peer group. *This is most useful in looking at companies in industries that on average have high or low betas*.[9]

[8] 2012 Ibbotson Stocks, Bonds, Bills, and Inflation Valuation Yearbook 77-78 (Morningstar 2012).

[9] *Id*. at 78 (emphasis added).

Thus, the Vasicek adjustment method is statistically more accurate, and is the preferred method to use when analyzing companies in an industry that has inherently low betas, such as the utility industry. The Vasicek method was also confirmed by Gombola, who conducted a study specifically related to utility companies. Gombola concluded that "[t]he strong evidence of auto-regressive tendencies in *utility* betas lends support to the application of adjustment procedures such as the . . . adjustment procedure presented by Vasicek."[10] Gombola also concluded that adjusting raw betas toward the market mean of 1.0 is *too high*, and that "[i]nstead, they should be adjusted toward a value that is less than one."[11] In conducting the Vasicek adjustment on betas in previous cases, it reveals that utility betas are even lower than those published by Value Line.[12] Gombola's findings are particular important here, because his study was conducted specifically on utility companies. This evidence indicates that using Value Line's betas in a CAPM cost of equity estimate for a utility company may lead to overestimated results. Regardless, adjusting betas to a level that is *higher* than Value Line's betas is not reasonable, and it would produce CAPM cost of equity results that are too high.

EDUCATION

University of Oklahoma — Norman, OK
Master of Business Administration — 2014
Areas of Concentration: Finance, Energy

University of Oklahoma College of Law — Norman, OK
Juris Doctor — 2007
Member, American Indian Law Review

University of Oklahoma — Norman, OK
Bachelor of Business Administration — 2003
Major: Finance

PROFESSIONAL DESIGNATIONS

Society of Depreciation Professionals
Certified Depreciation Professional (CDP)

Society of Utility and Regulatory Financial Analysts
Certified Rate of Return Analyst (CRRA)

WORK EXPERIENCE

Resolve Utility Consulting PLLC — Oklahoma City, OK
Managing Member — 2016 – Present
Provide expert analysis and testimony specializing in depreciation and cost of capital issues for clients in utility regulatory proceedings.

Oklahoma Corporation Commission — Oklahoma City, OK
Public Utility Regulatory Analyst — 2012 – 2016
Assistant General Counsel — 2011 – 2012
Represented commission staff in utility regulatory proceedings and provided legal opinions to commissioners. Provided expert analysis and testimony in depreciation, cost of capital, incentive compensation, payroll and other issues.

Perebus Counsel, PLLC — Oklahoma City, OK
Managing Member — 2009 – 2011
Represented clients in the areas of family law, estate planning, debt negotiations, business organization, and utility regulation.

Moricoli & Schovanec, P.C. — Oklahoma City, OK
Associate Attorney — 2007 – 2009
Represented clients in the areas of contracts, oil and gas, business structures and estate administration.

TEACHING EXPERIENCE

University of Oklahoma — Norman, OK
Adjunct Instructor – "Conflict Resolution" — 2014 – 2021
Adjunct Instructor – "Ethics in Leadership"

Rose State College — Midwest City, OK
Adjunct Instructor – "Legal Research" — 2013 – 2015
Adjunct Instructor – "Oil & Gas Law"

PROFESSIONAL ASSOCIATIONS

Oklahoma Bar Association — 2007 – Present

Society of Depreciation Professionals — 2014 – Present
Board Member – President — 2017
Participate in management of operations, attend meetings, review performance, organize presentation agenda.

Society of Utility Regulatory Financial Analysts — 2014 – Present

JSG-1. Resume – James S. Garren

JSG-2. Calculation of depreciation rates and accruals.

JSG-3. Remaining life calculations

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME, POSITION AND BUSINESS ADDRESS.

A. My name is James S. Garren. I am a Consultant of the firm GDS Associates, Inc. ("GDS"). My business address is 1850 Parkway Place, Suite 800, Marietta, Georgia 30067.

Q. HAVE YOU PREPARED A SUMMARY OF YOUR QUALIFICATIONS AND EXPERIENCE?

A. Yes. Exhibit JSG-1 is a summary of my qualifications and experience.

Q. PLEASE DESCRIBE YOUR BACKGROUND IN UTILITY DEPRECIATION.

A. I have been working in the utility field since 2010, when I began working at the consulting firm of Snavely King Majoros & Associates, Inc. as an analyst. I began working primarily in the area of depreciation, assisting Michael J. Majoros in the preparation of depreciation testimony and exhibits. In 2014, I became the firm's primary expert on depreciation issues. Since that time, I have submitted testimony on dozens of depreciation rate cases all across the country, providing testimony on all issues related to depreciation, including service life analysis, net salvage analysis, reserve analysis, and many other issues. In 2015, I was recognized as a Certified Depreciation Professional by the Society of Depreciation Professionals.[1] In 2022, I joined GDS Associates, Inc. as a project manager, continuing my work as a depreciation expert.

[1] "The Society of Depreciation Professionals was organized in 1987 to recognize the professional field of depreciation analysis and individuals contributing to this field; to promote the professional development and professional ethics of practitioners in the field of depreciation analysis; to collect and exchange information about depreciation analysis; and to provide a national forum of programs and publications concerning depreciation." http://www.depr.org/?page=AboutUs. For certification, an applicant must have at least 5 years of full-time

Q. FOR WHOM ARE YOU APPEARING IN THIS PROCEEDING?

A. I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE OBJECTIVE OF YOUR TESTIMONY?

A. The York Water Company ("York" or "the Company") has filed Applications separately regarding its water and wastewater plant with the Pennsylvania Public Utility Commission who established Docket numbers R-2025-3053442 and R-2025-3053573. I was retained by OCA to provide expert witness testimony on the subject of depreciation.

II. SUMMARY

Q. CAN YOU SUMMARIZE THE CONCLUSIONS FROM YOUR TESTIMONY?

A. Based on my proposed depreciation parameters, depreciation accruals produce a depreciation expense of $14,303,040 million for York's water plant and $1,140,184 million for its wastewater plant. The Company proposes a depreciation expense of $13,389,453 million for water and $1,351,117 for wastewater. I therefore conclude that the Company has overstated its depreciation expense by $1.32 million for water and $210 thousand for wastewater. My conclusion is based on York's proposed parameters calculated on a February 28, 2027 plant balance. My proposed depreciation rates are lower than those used by Mr. Spanos because of one adjustment that I am proposing to the Company's remaining life procedure. My proposal is that York should move from the Equal Life Group ("ELG")

professional depreciation experience, at least 2 years of which must be in the area of depreciation administration. Among other requirements, the applicant must pass a two-part (Technical and Ethics) closed book examination which includes questions about, *inter alia,* Plant and Reserve Accounting, Life Analysis Concepts, Life Analysis Using Actuarial Models, Life Analysis Using Simulation Models, Salvage and Cost of Retiring Analysis, Technology Forecasting and Depreciation Calculations." http://www.depr.org/?page=Certification.

to the Average Life Group ("ALG") procedure. This set of adjustments accounts for the entirety of the difference between Mr. Spanos' proposal and my own for both Water and Wastewater.

At the request of OCA, I have also reviewed the acquisition adjustments proposed by York. The annual amortization of these total equal $(23,331). OCA has asked me to validate or propose adjustments to the derivation of these acquisition adjustments, and so I have undertaken a review of the original studies associated with each adjustment, as well as the formula underlying the amortization itself. I will address this below.

Table JSG-1
Summary of Depreciation Rates and Expenses
($) in millions
Based on February, 2027 Plant Balances

	York Proposed expense	OCA Proposed Expense	Adjustment
Wastewater			
Depreciable Plant	1,766,112	1,582,451	(183,660)
Customer Advances	1,470	1,129	(341)
CIAC	122,818	103,921	(18,897)
Amortization of Net Salvage	94,316	94,316	-
Total	1,736,140	1,571,718	(164,422)
Water			
Depreciable Plant	12,965,807	11,755,185	(1,210,622)
Customer Advances	118,351	118,352	1
CIAC	581,330	501,042	(80,288)
Amortization of Net Salvage	3,167,249	3,167,249	-
Total	15,433,375	14,303,040	(1,130,335)

Q. WHAT INFORMATION HAVE YOU REVIEWED IN PREPARATION FOR THIS TESTIMONY?

A. I reviewed York's Depreciation Studies for Water and Wastewater and then prepared data requests that OCA served on York. I reviewed York's responses to these data requests as well as the documents attached to York's filing. I also reviewed York's responses to data requests included in the data Mr. Spanos used to prepare his depreciation studies. Utilizing this data and applying my own analysis, I propose adjustments to the depreciation rates and accruals utilized for plant depreciation.

III. DEPRECIATION – GENERAL

Q. WHAT IS DEPRECIATION?

A. In 1958, the National Association of Regulatory Utility Commissioners ("NARUC") sanctioned the following definition of depreciation: "Depreciation," as applied to depreciable utility plant, means "the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of elements, inadequacy, obsolescence, changes in the art, changes in demand, and requirements of public authorities."[2]

Another commonly cited definition of depreciation is that of the American Institute of

[2] *Uniform System of Accounts for Class A and Class B Electric Utilities,* 1958, rev. 1962.

Certified Public Accountants[3]:

> Depreciation accounting is a system of accounting which aims to distribute the cost or other basic value of tangible capital assets, less salvage (if any) over the estimated useful life of the unit (which may be a group of assets) in a systematic and rational manner. It is a process of allocation, not of valuation. Depreciation for the year is the portion of the total charge under such a system that is allocated to the year. Although the allocation may properly take into account occurrences during the year, it is not intended to be a measurement of the effect of all such occurrences.

In short, depreciation is the process of recovering the initial investment in tangible capital assets in a systematic fashion over the useful service life of the plant, recognizing that utility plant is typically a group of investments.

Q. CAN DEPRECIATION BE CALCULATED WITH PRECISION?

A. No because it requires an estimation of the total and remaining service life of plant, but to ensure that the analysis is as accurate as is reasonably possible, it requires the knowledge and informed judgment of an expert trained in the field of utility depreciation. The judgment pertains to the estimation of the future surviving life of plant as indicated by past patterns of retirements, industry trends, and corporate investment plans.

One of the practical goals of performing a depreciation study is to reduce the negative impact of inevitable errors in the estimation of average service lives and retirement curves over the long run. One of the reasons for the rapid adoption of the remaining life method of depreciation is that it is self-correcting of the inevitable errors made in the process of

[3] American Institute of Certified Public Accountants, *Accounting Research and Terminology Bulletin #1.*

estimation. One of the dangers, then, of depreciation is in assuming a greater degree of precision in our estimates than is realistic, and using methodologies that might over or under collect depreciation to the point where reserves need to be re-balanced, even with the use of remaining life.

Q. WHAT ARE THE BASIC PARAMETERS USED TO DEVELOP A DEPRECIATION RATE?

A. At its simplest level, the only parameter that is absolutely required is an estimate of the service life of the asset being retired. The reciprocal of that number can be used as the depreciation rate (i.e., the number one divided by the estimated service life of the asset). Because most utility depreciation rates are applied to *groups* of assets with varying lives, however, virtually all utilities use "remaining life" depreciation. This "remaining life" procedure computes the depreciation rate by dividing the unrecovered net investment by the estimated remaining years of the asset's (or group of assets') service life. It is intended to ensure that any past under- or over-accruals of depreciation are recovered during the remaining life of the asset.

The remaining life procedure requires an estimate of the dispersion of retirements around an average service life. In the utility industry, this dispersion is usually described in terms of "Iowa Curves," so named because they were developed at Iowa State University. These curves describe how closely the retirements are grouped around the average service life and whether they tend to occur more rapidly before, after or coincident

with the average service life.[4] I discuss Iowa curves in more detail in a later section of this testimony.

Q. PLEASE ILLUSTRATE HOW THE PARAMETERS YOU HAVE JUST DESCRIBED ARE USED TO DEVELOP DEPRECIATON RATES.

A. Beginning with a simple example, assume a single asset with a 20-year life[5]. Its depreciation rate is the reciprocal of 20:

$$1/20 = 5\%$$

Now, let us assume that the asset is expected to have salvage value equivalent to 5 percent of its investment value.[6] The depreciation rate declines:

$$\frac{1-.05}{20} = \frac{.95}{20} = 4.75\%$$

This is called a "whole life" rate because it is based on the whole life of 20 years. To develop the remaining life rate, we must identify some additional items of data: the original cost of the asset, the depreciation reserve (the amount of depreciation that has already been recovered), and the remaining life of the asset.

In this illustration, let us assume that the asset originally cost $1 million and that past depreciation charges have recovered $400,000. This means that we have yet to recover $600,000 in original cost less 5 percent positive salvage, or $50,000. The total amount yet

[4] For a complete discussion of Iowa Curves, see Appendix A, part 3 of *Public Utility Depreciation Practices*, National Association of Regulatory Utility Commissioners, August 1996.

[5] This example is only to illustrate basic principles. As I explain in the next section, there are primarily *groups* of assets rather than a single asset, with each asset group assigned to an account. Thus, this example is not illustrative of how depreciation is actually calculated in current practice.

to be recovered is thus $550,000. Let us further assume that the asset is 10 years old, leaving 10 years of remaining life. In remaining life depreciation, the unrecovered amount is divided by the remaining life:

$$\frac{\$550{,}000}{10 \text{ years}} = \$55{,}000 \text{ required annual accrual}$$

The depreciation rate is then calculated by dividing the annual amount to be recovered by the gross investment, in this case:

$$\$55{,}000 / \$1{,}000{,}000 = 5.5\%$$

IV. PLANT SERVICE LIFE

Q. PLEASE DEFINE "AVERAGE SERVICE LIFE" AS IT IS USED IN UTILITY DEPRECIATION CALCULATIONS.

A. The "average service life" for a given account is a projection of the number of years that a new unit of plant can be expected to remain used and useful on average. This concept is useful because modern depreciation utilizes what we call "group depreciation." That is, rather than depreciate the value of an individual unit or units over the lifetime of those units, we depreciate the value of a collection of units all together. This group depreciation assumes that many units in each account will be retired at earlier ages, and thus have a shorter than average life, and many units will retire at later ages, and thus have a longer than average life. Average service life is used to calculate the average remaining life, which, in turn, is the denominator in the calculation of depreciation expense. Group depreciation is also why we do not study the lives of units in an account, but rather, the lives of dollars in these accounts.

Q. DOES THE LENGTH OF A UTILITY PLANT'S SERVICE LIFE AFFECT RATES?

A. Yes. As a general matter, shorter service life estimates for utility plant result in higher depreciation rates and expense for customers.

Q. PLEASE DESCRIBE THE PROPER WAY TO DETERMINE THE AVERAGE SERVICE LIFE COMPONENT OF DEPRECIATION RATES.

A. I have analyzed York's distribution accounts using an actuarial life analysis process called the Retirement Rate method. Actuarial methodologies were developed initially in the 17th and 18th centuries, primarily by life insurance companies that needed a mathematical means of estimating the mortality risk of individuals over a long period of time. This resulted in the development of "life tables" that show the mortality risk of a group of individuals with similar risk factors at each age.

The Retirement Rate method is an actuarial technique used to study plant lives, much like the actuarial techniques used in the insurance industry to study human lives. It requires a record of the dates of placement and retirement for each asset studied. Retirement data that contains this date of placement and retirement is referred to as "aged data" because it tells the analyst the age of the plant at the time it was retired. The Retirement Rate method is the most sophisticated of the statistical life analysis methods because it relies on the most refined level of data.

The Retirement Rate method uses (1) the aged retirement data as described in the previous paragraph and (2) total plant in service at a given age (referred to collectively as "exposures") from a company's records to construct an "observed" or "original life table"

("OLT"). I discuss the composition of an observed life table in detail below. Observed life tables are important because they result in data points showing the percentage of a given unit of plant that is expected to survive to a given age. The actuarial analysis smooths and extends the observed life table by pairing it with one of a family of 31 standardized survivor curves, which are the Iowa curves that I previously mentioned. The curve-fitting uses the least squared differences approach to find a best fit life for each curve. The "sum of least squared difference" is a common means of fitting curves (in this case the Iowa curves) to a set of data (in this case the observed life table data). The difference between each point of data and a point on a line is squared,[7] and the square of all those differences is summed to provide the total difference between the set of data and the line. The line that produces the least difference from the set of data is considered the "best fit." The purpose of squaring the difference is to ensure that negative differences contribute to the overall difference rather than canceling out positive differences.

Numerous iterative calculations are required for a Retirement Rate analysis. In the end, the analysis produces a life and Iowa curve best fit for a single average vintage.

Q. PLEASE FURTHER EXPLAIN IOWA CURVES.

A. An Iowa curve is a surrogate or standardized "observed life table" based on a specific pattern of retirements around an average service life. An "observed life table" is a table

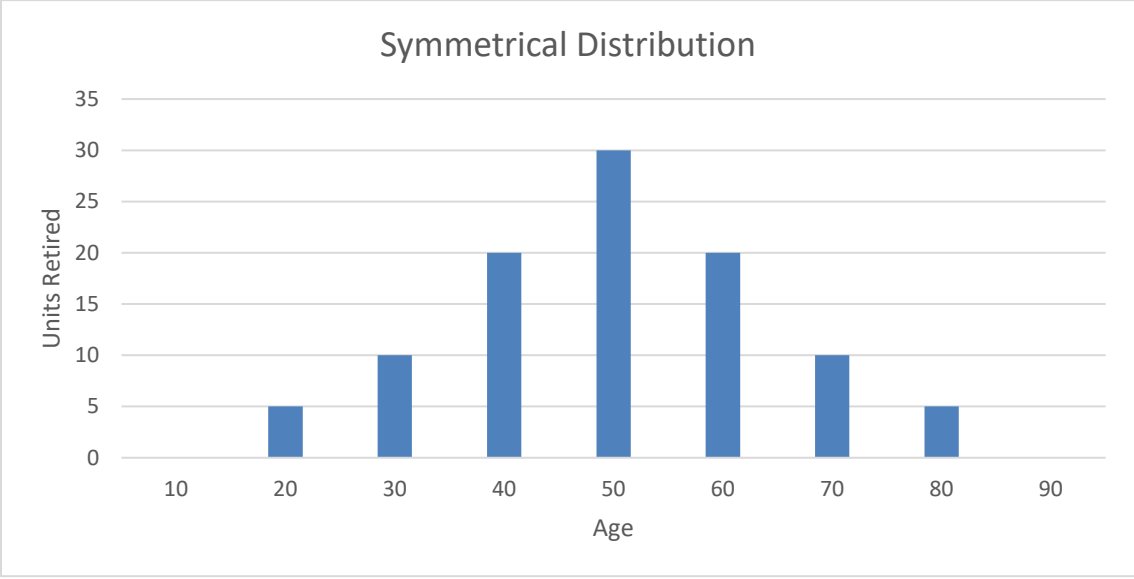
[7] "Square" in mathematics means you multiply a quantity by itself. This quantity can be a number, variable or even an algebraic expression. When you square a number, the answer will always be positive; thus, the product of a negative number multiplied by another negative number equals a positive number. Squaring is the same as raising to the power 2, and is denoted by a superscript 2; for instance, the square of 3 may be written as 3^2, which is the number 9.

listing the percent surviving (in other words, the "observed life") of a common class of assets, as of a particular calendar year. The Iowa curves are standardized observed life tables that provide a set of standard patterns of retirement dispersion. Retirement dispersion recognizes that accounts are comprised of individual assets or units having different lives. Each curve represents a probability distribution and has a series of attributes. The curves are helpful in a variety of ways, including:

- To make realistic forecasts of the remaining useful life of groups of assets.
- To assist in anticipating the potential failure and functional failure of assets.

For example, imagine an account that begins with a new addition of one hundred units. These units are unlikely to all retire at the same time. Rather, different units within the group will retire at different times. Represented graphically, the result might appear as follows:

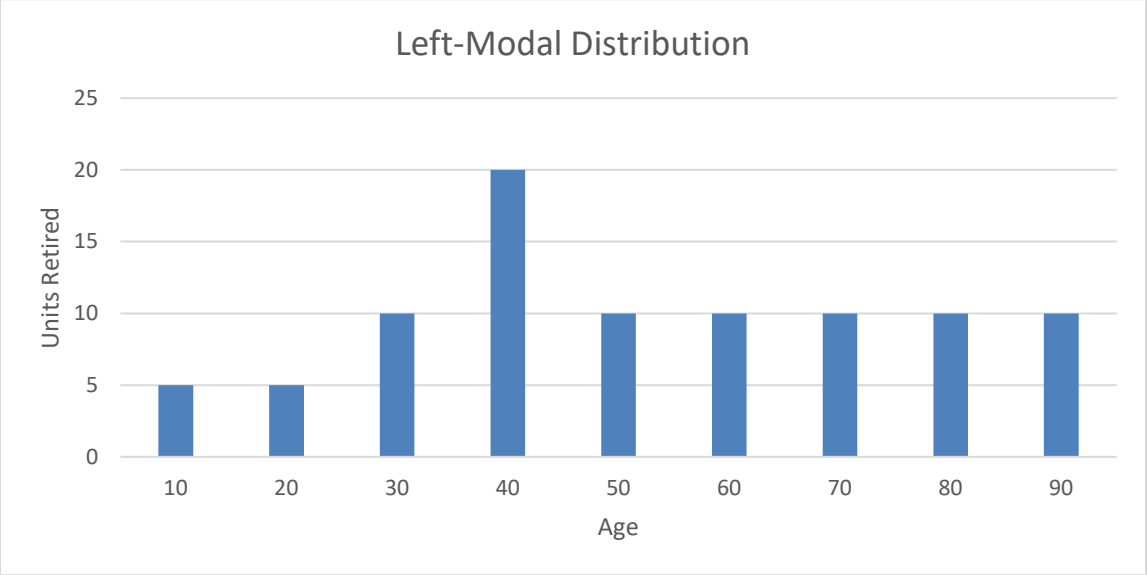
Graph JSG-1



In this example, the average service life would be fifty years, and the retirement dispersion curve would tell us how the retirements are arranged around the average service life. In this example the distribution of retirements around the average service life is symmetrical, with the "mode" – that is, the age with the highest number of retirements – being at the average service life. In this data, the retirements are also relatively tightly grouped around the average service life.

Iowa curves describe many different patterns of dispersions. Returning to our example, imagine a different pattern of retirements as follows:

Graph JSG-2



In this example, the average service life is still fifty, but the dispersion characteristics are very different. The mode (again, the highest number of retirements) is at age 40, which is an earlier age than the average, and overall, the distribution of retirements is more spread out than in the previous example. By using different types of

Iowa curves, an expert can capture these different retirement characteristics evident in retirement data.

One way that Iowa curves illustrate these different patterns is by their orientation as left-skewed ("L curves"), symmetrical ("S curves") or right-skewed curves ("R curves"). The letters describe the location of the "mode," as discussed above, relative to the average service life. Hence, in the first example, I would use an "S curve" because the number of retirements is relatively equal on both sides of the mode. In the second example, however, in which the mode falls before the average service life (that is, the mode falls at a younger age than the average service life), I would use an "L curve." If the mode were to fall after the average service life, then I would use an "R curve."[8]

In addition to the letter that describes the location of the mode (e.g., L curve), Iowa curves are numbered zero (0) through six (6). The numbering identifies the spread of the retirement dispersion. Lower numbers represent a wider retirement dispersion while higher numbers represent a narrower dispersion. Referring to the first example above, in which the retirements were more tightly grouped around the average service life, a higher number would be used, whereas in the second example, in which the retirements were more diffuse, a lower number would be used.

To combine these two concepts, an appropriate Iowa curve for the first example might be an S5, where the "S" indicates a symmetrical curve to either side of the mode and

[8] In addition to L, S and R curves, there is a set of Origin Modal, or "O curves," which are so called because the mode for these curves is at age one, or the "origin." Generally speaking, O-shaped Iowa curves are not appropriate for utility plant, although one of them in this particular instance is required.

the 5 indicates a relatively narrow dispersion of retirements. In contrast, for the second example, the data indicate a more likely curve of L2, with an "L" because the mode falls before the average service life and a "2" because there is a relatively wider retirement dispersion. This combination of one letter and one number defines a dispersion pattern. Adding an average service life to an Iowa curve (*e.g.*, 5-S0, where the "5" represents a five-year average service life) provides a survivor curve intended to depict a reasonable expectation of how a group of assets will survive, or conversely be retired, over the expected average service life.

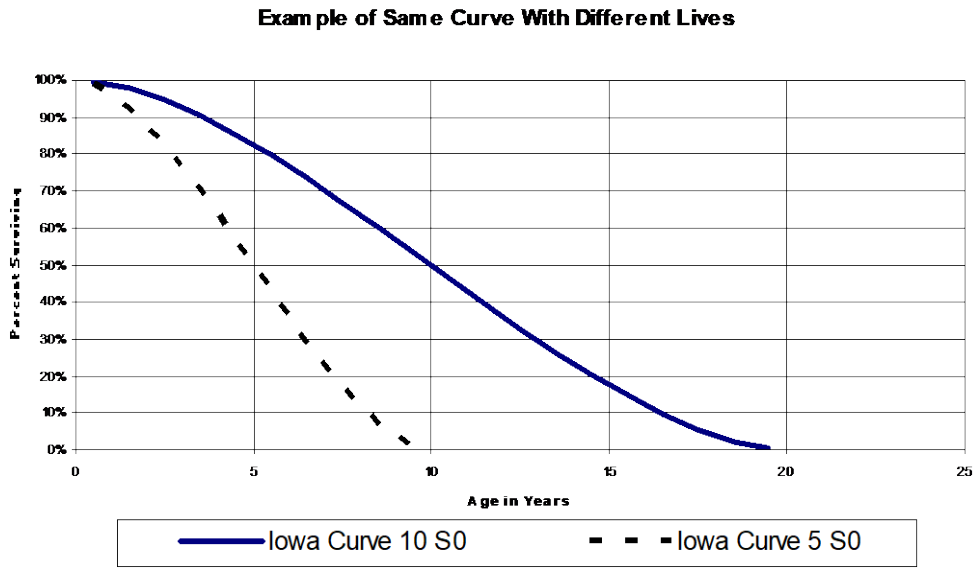
Table JSG-2 below compares curves with the same shape (S0) but different average service lives (5 and 10 years) to illustrate different iterations with the same curve. The percent surviving represents the amount of plant surviving at each age interval shown in the first column. The 5-S0 life and curve sums to the five-year average service life, while the 10-S0 life and curve sums to a ten-year average service life.

Table JSG-2
Sample Survivor Curves

Age	5-S0 Curve Percent Surviving	10-S0 Curve Percent Surviving
0.5	0.99	1.00
1.5	0.92	0.98
2.5	0.83	0.94
3.5	0.70	0.90
4.5	0.57	0.85
5.5	0.43	0.80
6.5	0.30	0.74
7.5	0.17	0.67
8.5	0.08	0.60
9.5	0.01	0.53
10.5		0.47
11.5		0.40
12.5		0.33
13.5		0.26
14.5		0.20
15.5		0.15
16.5		0.10
17.5		0.06
18.5		0.02
19.5		0.00
Total	**5.00**	**10.00**

These are called "curves" because, when plotted on charts with the x-axis representing "age" and the y-axis representing "percent surviving," they appear as shown below in Graph JSG-3:

Graph JSG-3



Q. HOW ARE IOWA CURVES USED IN SERVICE LIFE ANALYSIS?

A. The purpose of Iowa curves is to enable the calculation of an average remaining life. Remaining life calculations take the current age of each vintage within an account and then use the retirement rate projected by the appropriate Iowa curve to project the remaining life of each of these vintages of plant. Ultimately, depreciation accruals for plant investment are calculated from remaining lives, so it is important to select the correct average service life and the correct Iowa curve.

Q. IS IT NECESSARY TO FIT ALL OF THE AVAILABLE DATA POINTS TAKEN FROM THE OBSERVED LIFE TABLE?

A. No. In some cases, it is appropriate to disregard some or even many of the oldest aged data. This is because actuarial data that the company keeps often is tied to long-lived assets that represent so small a percentage of the total plant as to not be statistically significant or

represent accounting anomalies, such as retirements that were never recorded. This process is called a "T-cut." While there is no hard and fast rule for where a T-cut is required, it is generally appropriate to make a T-cut where the remaining retirement data diverges materially from the established pattern of retirements seen to that point.

The decision to make a T-cut, and at what point in the data set to make the cut, is one of the most important, yet most subjective, elements to an actuarial analysis. In most cases, making a "larger" T-cut (that is, one that results in fitting the curve to less of the actuarial data) will result in a shorter estimated average service life, because the data eliminated is for the longest-lived assets in the set of data. Therefore, as explained above, a larger T-cut and the resulting shorter estimated average service life will tend to increase customer rates.

Additionally, an inconclusive analysis may occur if a larger T-cut eliminates data points from an observed life table with a limited data set (that is, an account that has a short history of plant exposed to retirement). Typically, the portion of an Iowa curve between 85% surviving and 15% surviving most distinguishes one curve from another. Apart from O curves, Iowa curves follow a parabolic distribution of retirements. That is, as discussed above, they tend to have limited retirements at the beginnings and ends of their life. The portion of the curve between 85% and 15% of surviving plant is the most indicative of the appropriate curve shape because that portion of the curve is when the bulk of retirements in a given account happen, and where variation in the pattern of retirements tends to occur. If a T-cut eliminates a portion of the observed life table survivor data between 85% and 15% surviving, the matching of that data to an Iowa curve will be more likely to produce

ambiguous and misleading results. I believe that the full set of aged data should be generally used in the service life analysis unless specific circumstances warrant exclusion of the data.

V. COMPARISON OF THE ELG PROCEDURE AND ALG PROCEDURE

Q. WHAT ARE 'GROUP' PROCEDURES AS PERTAINING TO THE CALCULATION OF REMAINING LIVES?

A. Remaining life grouping procedures are the methods by which subsets of plant with similar life characteristics are bundled together for the purpose of determining the recovery period over which the remaining plant investment should be recovered. Different procedures group the plant differently, and so arrive at different recovery periods at any given point in time.

Q. WHAT IS THE DIFFERENCE BETWEEN THE ELG PROCEDURE AND ALG PROCEDURE FOR CALCULATING REMAINING LIVES?

A. The principle difference between the two procedures is that the ALG procedure assumes that all units within a particular group, typically a vintage, will share an average life.[9] The distribution of retirements is then determined using a weighting procedure across all of the vintages. The ELG procedure incorporates the Iowa curve distribution of retirements within each vintage. This allows the projected shortest-lived assets within each vintage to retire simultaneously across all vintages.

[9] A 'vintage' refers to all of the plant placed into service in a given year.

Q. WHAT IS THE EFFECT OF USING ALG VS. ELG REMAINING LIFE PROCEDURES?

A. The direct effect of using ELG as opposed to ALG is that depreciation rates are always going to be higher earlier on in the life cycle of a particular group of plant, and lower later in the life cycle of that plant. The following table has been excerpted from the National Association of Regulatory Utility Commissioners' Public Utility Depreciation Handbook, August 1996, page 178:

EFFECT OF DIFFERENT PROCEDURES ON DEPRECIATION RATES AND ACCRUALS

Activity Year	ELG		VG	
	Depreciation		Depreciation	
	Rate	Accruals	Rate	Accruals
1987	45.7%	$22,850	33.3%	$16,650
1988	33.4	40,040	25.9	31,080
1989	27.1	54,280	21.9	43,730
1990	21.1	35,940	21.4	36,360
1991	18.0	25,170	20.7	28,990
1992	15.8	17,350	19.7	21,620

The table above illustrates that variation over just a short period of activity years, the degree to which depreciation rates will be higher in earlier years and lower in later years. This variation will be greater for longer average service life plant, and the more newer plant investment is made.

Over the life of any given unit of plant, the net effect of the difference between the two procedures is zero. Both procedures recover the full amount of the investment over the service life of the investment. However, de facto, the use of ELG is a form of accelerated depreciation. The ELG method potentially better reflects the actual retirement patterns of a group of assets with different vintages at specific point in time, but requires constant updating to remain accurate.

Q. WHAT ARE THE ADVANTAGES AND DISADVANTAGES OF THE TWO PROCEDURES?

A. The first and arguably most significant disadvantage of the ELG procedure is the administrative burden it puts on the Commission. The fact that the ELG shifts a greater portion of the depreciation expense towards the beginning of the life of particular unit of plant, means that depreciation expense fluctuates substantially over the life of the plant.[10] In order to ensure that the depreciation expense is accurate from year to year, remaining life calculations must be updated regularly, and companies must be obliged to submit regular depreciation studies. This requirement, which I understand Pennsylvania requires in PA Code Chapter 73, is necessary precisely because of the ongoing use of the ELG procedure, and comes at an immense administrative cost.

The reason that it is necessary to closely monitor and update depreciation rates using ELG is that, should a company's remaining lives be left without being updated for

[10] Depreciation Manual, pg.63, "ELG may be expected to produce greater fluctuations in depreciation expense from year to year than the broad group procedure."

too long, then the 'accelerated' depreciation rates may not be accurately accounted-for at the time of the utility's next rate increase request, and ratepayers end up paying those accelerated depreciation rates or for return on an understated depreciation reserve when new rates are set, when ratepayers having already paid depreciation expense during a period when depreciation rates are higher under the ELG procedure.

In addition to these issues, there is an underlying reality about utility plant recovery costs, which is that due to inflation and the ever-growing infrastructure needs of running a water and wastewater utility, plant grows significantly each year. This means that a very substantial portion of any given utility's plant is perpetually stuck in the 'accelerated' portion of the recovery curve created by the use of ELG rates. The net effect of these factors is that the ELG remaining life procedure results in ratepayers paying more in depreciation expense in perpetuity, provided the utility's plant continues to grow at a consistent rate.

In contrast, ALG rates do not attempt to as closely mimic the actual retirement rate of individual vintages, but in so doing, this creates a smoother recovery of costs, which may, in the end, more closely map to the retirement rate of the utility's plant overall. Because the remaining life remains more constant over the life of each unit, there is no need to perform annual updates to the company's remaining lives, and utilities can wait intervals of five years or more between performing depreciation studies, which reduces costs to ratepayers over time.

Q. WHAT DO YOU RECOMMEND REGARDING YORK'S REMAINING LIFE PROCEDURES?

A. I recommend that York convert from the ELG procedure for calculating remaining lives to the ALG procedure. The ALG procedure better fits the actual ongoing investment and retirement patterns of utility plant overall, and requires significantly less administrative upkeep by utilities and less oversight by the Commission.

Q. IS THIS YOUR ONLY RECOMMENDATION IN THIS CASE?

A. Yes. As I said at the outset of my testimony, I am proposing the switch to ALG remaining life procedure as my primary proposal owing to the magnitude of the change's effect on York's depreciation rates. However, I have also reviewed a number of the acquisition adjustments that the company has asked for relating to acquired plant.

VI. ACQUISITION ADJUSTMENTS

Q. WHAT HAVE YOU REVIEWED REGARDING THE ACQUISITION ADJUSTMENTS?

A. The primary documents I have reviewed are the filed Exhibits HIII-2-22, 2-26, 2-32, and 2-33, which summarize the acquisition adjustments, and then I have reviewed all of the related responses to data requests propounded regarding the acquisition adjustments, but in particular the attachments in response to OCA DR IX-16, which contain the original cost studies for each acquired water system.

Q. DO YOU HAVE ANY OBJECTIONS TO THE ACQUISITION ADJUSTMENTS SHOWN IN THESE EXHIBITS, WITH REGARD TO THEIR ORIGINAL COST STUDIES?

A. No. My review of the adjustments focused in particular on the type of plant listed in the original cost study, and acquisition dates, and the reserve ratio for each of the acquisition adjustments. My review of these original cost studies suggests that they were depreciated in a reasonable manner considering the nature of the plant and system. Therefore, I am not proposing to remove or adjust any of the newly proposed acquisition adjustments at this time.

Q. IS IT YOUR TESTIMONY THAT THE PROPOSED ACQUISITION ADJUSTMENTS MEET ALL OF THE REQUIREMENTS OF SECTION 1327 OF THE PENNYSLVANIA PUBLIC UTILITY CODE FOR ALTERNATIVE RATEMAKING TREATMENT?

A. No. I have been informed by counsel that there are a number of criteria which York must meet in order to warrant alternative ratemaking treatment for these acquisitions (i.e., inclusion of the greater of the system's purchase price or depreciated original cost). My testimony is limited to reviewing the original cost studies to ensure accuracy and completeness and should not be considered a determination as to whether the acquisitions are appropriate as a matter of law.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes.

EDUCATION •

Marlboro College, Marlboro, Vermont, Bachelor of Arts Degree, Literature and Philosophy

PROFESSIONAL CERTIFICATIONS & MEMBERSHIP •

Depreciation Professional, by the Society of Depreciation Professionals

EXPERIENCE •

Mr. Garren provides expert witness testimony to clients, specializing in the area of depreciation. Mr. Garren also provides analytical support to GDS clients and principals including quantitative and qualitative analysis, preparation of client presentations, and case management. Mr. Garren works primarily in the areas of depreciation but has also prepared exhibits for use in the revenue requirement, cost-allocation, rate design, and rate of return aspects of regulatory proceedings. Mr. Garren has also assisted with the preparation of two valuation studies on municipal water companies.

Mr. Garren is a member of, and has been made a Certified Depreciation Professional, by the Society of Depreciation Professionals. In addition, Mr. Garren has attended the National Association of Regulated Utility Commissioners' Rate School.

Specific Prior Experience Includes:

Snavely, King, Majoros, and Associates, Inc., Millersville, MD
Consultant, 2010 – 2022

- Project manager in numerous utility rate cases at the Federal Energy Regulatory Commission as well as over a dozen state utility Commissions across the country, assisting in settlement negotiations as well as preparing testimony for hearing and assisting with the preparation for all stages of discovery and brief preparation.
- Participated in two municipal water utility valuation studies.
- Participated in the preparation of analysis, testimony and exhibits in numerous rate case subject areas including revenue requirement, rate of return, cost of service and rate design.

Binder and Binder, New York, NY
Legal writer and Non-Attorney Representative, 2007 – 2008

- Prepared client and ALJ correspondence, case memoranda, expert witness interrogatories, and arguments in favor of appeal.
- Represented clients at hearing, including preparation and presentation of arguments, cross-examination of expert medical witnesses, and preparation of clients for direct examination from ALJs.
- From July 2007, acted as legal writer on behalf of the company's President.

DIRECT TESTIMONY OF

JEROME D. MIERZWA

ON BEHALF OF THE

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

AUGUST 22, 2025

EXETER
ASSOCIATES, INC.
10480 Little Patuxent Parkway
Suite 300
Columbia, Maryland 21044

I. INTRODUCTION

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Jerome D. Mierzwa. I am a Principal and the President of Exeter Associates, Inc ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland 21044. Exeter specializes in providing public utility-related consulting services.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND EXPERIENCE.

A. I graduated from Canisius College in Buffalo, New York, in 1981 with a Bachelor of Science Degree in Marketing.[1] In 1985, I received a Master's Degree in Business Administration with a concentration in finance, also from Canisius College. In July 1986, I joined National Fuel Gas Distribution Corporation ("NFG Distribution") as a Management Trainee in the Research and Statistical Services Department ("RSS"). I was promoted to Supervisor RSS in January 1987. While employed with NFG Distribution, I conducted various financial and statistical analyses related to the Company's market research activity and state regulatory affairs. In April 1987, as part of a corporate reorganization, I was transferred to National Fuel Gas Supply Corporation's ("NFG Supply") rate department where my responsibilities included utility cost of service and rate design analysis, expense and revenue requirement forecasting and activities related to federal regulation. I was also responsible for preparing NFG Supply's Federal Energy Regulatory Commission ("FERC") Purchase Gas Adjustment ("PGA") filings and developing interstate pipeline and spot market supply gas price projections. These forecasts were utilized for internal planning

[1] Effective August 1, 2023, Canisius College became Canisius University.

purposes as well as in NFG Distribution's Section 1307(f) purchased gas cost proceedings.

In April 1990, I accepted a position as a Utility Analyst with Exeter. In December 1992, I was promoted to Senior Regulatory Analyst. Effective April 1, 1996, I became a Principal of Exeter. Since joining Exeter, I have specialized in utility class cost of service and rate design analysis, evaluating the gas purchasing practices and policies of natural gas utilities, sales and rate forecasting, performance-based incentive regulation, revenue requirement analysis, the unbundling of utility services, and the evaluation of customer choice natural gas transportation programs.

Q. HAVE YOU PREVIOUSLY TESTIFIED IN REGULATORY PROCEEDINGS ON UTILITY RATES?

A. Yes. I have provided testimony on approximately 500 occasions in proceedings before FERC, utility regulatory commissions in Arkansas, Connecticut, Delaware, Georgia, Illinois, Indiana, Louisiana, Maine, Maryland, Massachusetts, Montana, Nevada, New Hampshire, New Jersey, Ohio, Pennsylvania, Rhode Island, South Carolina, Texas, Utah, and Virginia, as well as before the Pennsylvania Public Utility Commission ("Commission").

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. On May 30, 2025, The York Water Company ("York" or "the Company") filed an application to increase rates for water utility service by $20.3 million, or 29.7%, and to increase rates for wastewater service by $3.9 million, or 46.2%. Exeter was retained by the Pennsylvania Office of Consumer Advocate ("OCA") to review and analyze the water and wastewater cost of service ("COS") studies and the rate design proposals included in York's application. My testimony addresses the Company's COS studies and rate design proposals.

Q. HAVE YOU PREPARED EXHIBITS TO ACCOMPANY YOUR TESTIMONY?

A. Yes, I have. Schedules JDM-1 through JDM-3 are attached to my testimony.

Q. PLEASE SUMMARIZE YOUR FINDINGS AND RECOMMENDATIONS.

- The systemwide and customer class specific base-extra capacity factors utilized in the Company's water COS study are out of date, unreasonable and should be modified;

- The water revenue increase authorized by the Commission in this proceeding should be distributed to the various customer classifications based on the results of the OCA's COS study;

- The monthly Residential customer charge for water service for a customer with a 5/8-inch meter should remain at $17.25. If the Commission does not accept my recommendation to maintain the current $17.25 Residential customer charge and determines that an increase is justified or warranted, I recommend that the customer charge be increased by a percentage no greater than the water increase assigned to the Residential class in this proceeding; and

- The rates York is proposing for Residential wastewater customers will recover revenues which are $1,275,000 in excess of the cost of serving the Residential class, and the rates York is proposing for Non-Residential wastewater customers will recover revenues which are $1,275,000 less than the cost of serving the Non-Residential class. There are four service territories in which York has proposed rates for Residential customers which provide for rate increases which are greater than 1.5 times the system average increase York has proposed for wastewater service. To provide for gradualism for these four service territories, I recommend that, to the extent that the Commission authorizes a total wastewater revenue requirement that is less than the revenue requirement requested by York, the rates for these four service territories first be proportionately reduced to provide for a 1.5 times system average increase for the average Residential customer. Based on York's filed revenue requirement, I estimate that this would reduce the revenues collected from these four service territories by $51,600. To the extent the Commission reduces the revenue requirement increase for York by more than $51,600, I recommend that the first $1,275,000 of that reduction, less the $51,600 required to reduce the rates of the Residential customers in the four service territories to 1.5 times the system average increase, be applied to proportionately reduce the rates of all Residential customers. To the extent that the reduction to York's requested revenue requirement increase is greater

than $1,275,000, I recommend that the reduction in excess of $1,275,000 be proportionately applied to reduce the proposed wastewater rates of both the Residential and Non-Residential classes.

Q. HOW IS THE REMAINDER OF YOUR TESTIMONY ORGANIZED?

A. The remainder of my testimony is divided into five additional sections. The second section of my testimony describes and evaluates the Company's water COS study. The third section presents my recommended distribution of the water revenue increase authorized by the Commission in this proceeding. The next section addresses York's proposed water service Residential customer charge. The final section of my testimony addresses York's wastewater COS study, revenue allocation, and rate design proposals.

II. WATER COST OF SERVICE STUDY

Q. WHAT IS THE OBJECTIVE OF A COST OF SERVICE STUDY?

A. A cost of service study is conducted to assist a utility or commission in determining the level of costs properly recoverable from each of the various classes of customers to which the utility provides service. Allocation of recoverable costs to each class of service is generally based on cost causation principles.

Q. WHAT ARE THE PRIMARY COST OF SERVICE STUDY METHODOLOGIES UTILIZED FOR WATER UTILITIES?

A. The two most commonly used and widely recognized methods of allocating costs to customer classes for water utilities are the base-extra capacity method and the commodity-demand method. Both of these methods are set forth in the American Water Works Association's ("AWWA") Manual, M1, *Principles of Water Rates, Fees, and Charges* ("AWWA Manual").

Q. WHAT METHODOLOGY HAS THE COMPANY UTILIZED FOR ITS WATER COST OF SERVICE STUDY?

A. York has utilized the base-extra capacity method in preparing its water cost of service study. Under the base-extra capacity method, investment and costs are first classified into four primary functional cost categories: base or average capacity, extra capacity, customer, and fire protection. Once investment and costs are classified to these functional categories, they are allocated to the various customer classes. York's water cost of service study and subsequently discussed wastewater cost of service study are sponsored by Gregory R. Herbert of Gannett Fleming Valuation and Rate Consultants, LLC.

Q. PLEASE DESCRIBE IN GREATER DETAIL THE FOUR PRIMARY FUNCTIONAL COST CATEGORIES AND HOW THEY ARE ALLOCATED TO THE VARIOUS CUSTOMER CLASSES UNDER THE BASE-EXTRA CAPACITY METHOD.

A. **Base or Average Costs** are costs that tend to vary with the quantity of water used, plus costs associated with supplying, treating, pumping, and distributing water to customers under average load conditions. Base costs were allocated to customer class on the basis of average daily usage in York's cost of service study.

Extra Capacity Costs are costs associated with meeting usage requirements in excess of base or average usage. This includes operating and capital costs for additional plant and system capacity beyond that required for average usage. Extra capacity costs in the Company's study have been subdivided into costs necessary to meet maximum day extra demand and maximum hour extra demand. These extra capacity costs were allocated to customer class on the basis of each class's maximum day and maximum

hour usage in excess of average usage. Extra capacity costs related to fire protection service are allocated directly to the fire protection classifications.

Customer Costs are costs associated with serving customers regardless of their usage or demand characteristics. Customer costs include the operating costs related to meters and services, meter reading costs, and billing and collection costs. Customer costs were allocated on the basis of capital cost of meters and services and the number of customer bills.

Fire Protection Costs are costs associated with providing the facilities to meet the potential peak demand of fire protection service. In the Company's study, fire protection costs have been subdivided into the costs associated with meeting Public Fire Protection and Private Fire Protection demands. The extra capacity costs assigned to fire protection were allocated to Public and Private Fire Protection on the basis of the total relative demands of hydrants and fire service lines. In accordance with 66 Pa. C.S. § 1328(b) of the Public Utility Code, public fire costs exceeding 25% of the public fire cost of service were reallocated to other customer classifications.

Q. WHAT CUSTOMER CLASSES HAS THE COMPANY IDENTIFIED IN ITS WATER COST OF SERVICE STUDY?

A. The Company has separately identified the cost of serving five customer classes in its study: Residential; Commercial; Industrial; Private Fire Protection; and Public Fire Protection. Within each of these classes a separate cost of service has been determined for the gravity and re-pumped service areas.

Q. DO YOU AGREE WITH THE FUNCTIONALIZATION AND ALLOCATION OF COSTS IN YORK'S WATER COST OF SERVICE STUDY?

A. I generally agree with York's use of the base-extra capacity methodology. However, I believe that modifications to the systemwide and customer class specific maximum day and maximum hour extra capacity factors utilized to allocate functionalized costs to the various customer classifications are necessary.

Q. PLEASE DESCRIBE IN GREATER DETAIL YORK'S ALLOCATION OF MAXIMUM DAY AND MAXIMUM HOUR EXTRA CAPACITY COSTS UNDER THE BASE-EXTRA CAPACITY METHOD TO THE VARIOUS CUSTOMER CLASSES.

A. Under the method set forth in the AWWA Manual, maximum day and maximum hour extra capacity costs are allocated to customer class based on the excess of each class's non-coincident maximum day and maximum hour demands over average day and average hour demands, respectively.

For example, in York's cost of service study, the average total daily demand of Residential customers in the gravity and re-pumped service areas is 8,429,400 gallons and the non-coincident maximum day demand of Residential customers is estimated to be 21,073,500 gallons (Exhibit No. FVIII, Schedule E, page 3).[2] Thus, the maximum day extra capacity demand of Residential customers is estimated to be 12,644,100 gallons (21,073,500 minus 8,429,400) and this serves as the basis to allocate maximum day extra capacity costs to Residential customers. The maximum day extra capacity factor, which I discuss later in my testimony, is the ratio obtained by dividing maximum

[2] Average demands of the various customer classes are based on actual meter readings and, therefore, known with relative certainty. Maximum day and maximum hour demands must be estimated because consumption meters are not read on a daily or hourly basis.

day extra capacity demands by average daily demands. In this instance, the maximum day extra capacity factor for Residential customers is 2.5 (21,073,500/8,429,400).

In the Company's water cost of service study, the total average hourly demand of Residential customers in the gravity and re-pumped service areas is 351,230 gallons, and the non-coincident maximum hour demand of Residential customers is estimated to be 1,580,540 gallons (Exhibit No. FVIII, Schedule E, pages 7 and 9). Thus, the maximum hour extra capacity demand of Residential customers is estimated to be 1,229,310 gallons (1,580,540 minus 351,230), and this serves as the basis for allocating maximum hour extra capacity costs to Residential customers. In this instance, the maximum hour extra capacity factor of Residential customers is 4.5 (1,580,540/351,230).

Q. THE BASE-EXTRA CAPACITY UTILIZES NON-COINCIDENT PEAK DEMANDS TO ALLOCATE EXTRA CAPACITY COSTS TO THE VARIOUS CUSTOMER CLASSES. IS THIS SIMPLY THE DEMANDS OF EACH CUSTOMER CLASSIFICATION AT THE TIME OF SYSTEM PEAK DAY AND PEAK HOUR DEMANDS?

A. No. Non-coincident peak demands represent the maximum demands of the individual customer classifications regardless of when those demands occur. Thus, the sum of each customer class's non-coincident demands will exceed the system coincident peak demand. The ratio obtained by dividing non-coincident demands by coincident demands is referred to as the system diversity ratio in the AWWA Manual.

Q. WHY ARE NON-COINCIDENT DEMANDS UTILIZED UNDER THE BASE-EXTRA CAPACITY METHOD?

A. The basis for using non-coincident maximum day and minimum hour demands is set forth in the AWWA Manual:

It is important that the reader understand the rationale of using the non-coincident demands in distributing the functionally allocated costs to each class. The rationale for supporting the use of non-coincident peaking factors is that the benefits of diversity in customer class consumption patterns should accrue to all classes in proportion to their use of the system, and not be allocated primarily to a particular class that happens to peak at a time different from other users of the system. The concept is illustrated through the following example: Assume that a utility was going to build a *separate system* (source of supply, treatment, pumping, transmission and distribution, etc.) for *each of the customer classes* served by the utility. These separate water systems would need to be sized to meet the base, maximum-day extra capacity, and maximum-hour extra capacity demands related to each class. The sum of those systems would compose the overall water system, and the costs associated with each of the individual systems would be allocable to each class (based on their respective non-coincidental demands that were the basis for sizing the individual components of the system).

Assume that a concept is developed that efficiencies, economies of scale, and reduction in the overall size of the "system" could be achieved if the system is an integrated, diversified system. With this concept in mind, recognizing the diversities of demands of the various classes and using the coincidental demands of all classes to size the plant, a smaller system could be built. Total fixed capital costs and most operation and maintenance expenses, except perhaps for power and chemical costs, would be reduced in sizing the overall system facilities on the basis of the coincidental demands of all the classes of customers.

The question at hand is, considering that there is a smaller, more efficient, and less costly system, how should the cost savings of that system be allocated among the individual customer classes? One appropriate manner to allocate these costs, and have each customer class share equitably in the overall cost savings, is to allocate the total new, smaller system costs on the basis of the non-coincidental

> demands of each customer class. In this manner, all classes share proportionately in the economies of scale and cost savings of this smaller, integrated, and diverse system.
>
> AWWA Manual, Appendix A, pages 374 - 375, 7th Edition (2017).

Q. HOW DID THE COMPANY DETERMINE THE MAXIMUM DAY AND MAXIMUM HOUR DEMANDS OF THE VARIOUS CUSTOMER CLASSES REFLECTED IN ITS COST OF SERVICE STUDY?

A. The maximum day and maximum hour demands reflected in the Company's water cost of service study were developed based on a combination of judgment, a customer demand study conducted on the York system during 1976 and 1977, and studies by other Pennsylvania water utilities.

Q. WHAT ARE YOUR CONCERNS WITH THE SYSTEMWIDE AND CUSTOMER CLASS SPECIFIC MAXIMUM DAY AND MAXIMUM HOUR DEMAND FACTORS USED IN THE COMPANY'S WATER COST OF SERVICE STUDY?

My concern with the systemwide and customer specific demand factors used by the Company is that they are outdated. The systemwide maximum day extra capacity factor used in York's cost of service study is 1.52 (Exhibit No. FVIII, Schedule E, page 5) and the systemwide maximum hour extra capacity factor used in York's cost of service study is 1.84 (Exhibit No. FVIII, Schedule E, page 8). As shown in Exhibit No. FVIII, Schedule F, the systemwide maximum day extra capacity factor used in York's cost of service study was last experienced in 2010, and the systemwide maximum day extra capacity factor was last experienced in 2006. The customer demand study conducted by York relied upon for the customer class specific demand factors is nearly 50 years old. Thus, changes in customer demands and/or mix are not reflected in the Company's

systemwide and customer specific demand factors. For example, Exhibit No. FVIII. RS1-c Attachment, page 9 of the Company's filing identified the Industrial customers included in the Company's 1976 – 1977 customer demand study. Of the 19 customer accounts identified there, York no longer provides water utility service to five of those locations. In the 1976 – 1977 customer demand study, of the 14 accounts still served by York, the average daily consumption of those customers was 1,649,989 gallons. The average daily consumption of those 14 customers during 2024 was only 339,924 gallons, a decline of 80%. Clearly, customer demands have changed significantly since the 1976 – 1977 demand study.

Q. WHAT DO YOU RECOMMEND WITH RESPECT TO THE SYSTEMWIDE AND CLASS SPECIFIC CUSTOMER DEMAND FACTORS WHICH SHOULD BE USED IN THE COMPANY'S COST OF SERVICE STUDY?

A. Based on the maximum day and maximum hour usage ratio to average day usage ratio recently experienced by York which are presented on Exhibit No. FVIII, Schedule F, I recommend that a systemwide maximum day demand factor of 1.43 be utilized in the Company's cost-of-service study, and that a maximum hour demand factor of 1.65 be utilized. Each of these factors reflect the highest systemwide factor experienced on the York Water System over the last 10 years.

For customer class specific maximum day and maximum hour demand factors, Appendix A of the AWWA Manual presents a procedure that can be used to develop customer demand factors from system demand data and customer billing records. I recommend that this procedure be used to develop customer demand factors. This will provide for the development of customer demand factors which are based on recent data and the current usage characteristics of York's customers.

Q. HAVE YOU DEVELOPED CUSTOMER CLASS SPECIFIC DEMAND FACTORS BASED ON THE PROCEDURES DESCRIBED IN THE AWWA MANUAL?

A. Yes. I have calculated customer demand factors using the procedures described in the AWWA Manual. These demand factors are developed on Schedule JDM-1. To develop these factors, I examined annual system demand and monthly customer billing records for the most recent three year period for which data was available provided by York, and developed customer demand factors for each of those years. I elected to utilize the demand factors calculated for the most recent annual period (June 2024 – May 2025) because the AWWA Manual prescribes that the year with the highest ratio of system maximum day to system average day demand for a representative number of recent years should be used in the analysis. I would note that, however, the resulting customer demand factors would not vary significantly if data from any of the past three years had been utilized.

Q. HOW DO THE CUSTOMER CLASS SPECIFIC DEMAND FACTORS WHICH YOU DEVELOPED BASED ON THE PROCEDURES RECOMMENDED IN THE AWWA MANUAL COMPARE TO THOSE USED BY THE COMPANY?

A. A comparison of the customer demand factors which I developed and those used by the Company is presented in Table 1.

Table 1 Comparison of Customer Extra Capacity Demand Factors				
	Maximum Day		Maximum Hour	
Class	OCA	Company	OCA	Company
Residential	1.85	2.50	3.10	4.50
Commercial	1.65	1.60	2.70	3.30
Industrial	1.70	1.50	2.25	2.70

Q. HAVE YOU PREPARED A WATER COST OF SERVICE STUDY THAT INCORPORATES YOUR RECOMMENDED DEMAND FACTORS?

A. Yes. Schedule JDM-2 presents a summary of a cost of service study incorporating my recommended systemwide and customer class specific demand factors.

Q. HOW DO THE RESULTS OF YOUR STUDY COMPARE WITH THE RESULTS OF THE COMPANY'S STUDY?

A. A comparison of the unitized rates of return[3] at present rates and the Company's proposed rates based on the Company's and my cost-of-service studies is presented in Table 2.

[3] The unitized rate of return is calculated by dividing the rate of return of a particular customer class by the Company's overall rate of return. A unitized rate of return of 1.0 would indicate that a customer class is contributing revenues equal to its cost of service. Unitized rates of return greater than 1.0 indicate that a customer class is contributing revenues in excess of its cost of service, while unitized rates of return less than 1.0 indicate that a customer class is contributing revenues insufficient to cover that class's cost of service.

Table 2 Unitized Rates of Return at Present and Proposed Rates				
Customer Class	**Present Rates**		**Proposed Rates**	
Gravity System	Company	OCA	Company	OCA
Residential	0.91	1.07	1.00	1.09
Commercial	1.05	0.90	1.00	0.90
Industrial	0.95	0.72	1.00	0.84
Private Fire	1.53	1.36	1.00	0.93
Public Fire	1.28	1.17	1.00	0.98
Repumped System				
Residential	0.87	1.01	1.00	1.09
Commercial	0.97	0.84	1.00	0.91
Industrial	0.99	0.78	1.00	0.86
Private Fire	1.66	1.44	1.00	0.91
Public Fire	1.24	1.12	1.00	0.98

As shown above in Table 2, at the revenue increase proposed by the Company for each class, my study indicates the Residential class would be paying more than its indicated cost of service, while the Commercial, Industrial, and Private Fire classes would be paying modestly less than their indicated cost of service. In contrast, under the OCA's proposed revenue distribution, discussed in the next section of my testimony, the revenue increase has been allocated so that the unitized rate of return for each class would be 1.00.

III. WATER REVENUE DISTRIBUTION

Q. PLEASE SUMMARIZE THE COMPANY'S PROPOSED DISTRIBUTION OF THE RATE INCREASE IT IS REQUESTING IN THIS PROCEEDING.

A. York's proposed distribution of the water revenue increase is presented in Table 3.

Table 3
Company Proposed Distribution of Water Revenue Increase

Class	Present Rates	Proposed Rates	Increase	Percent
Residential				
Gravity	$11,660,722	$14,733,192	$3,072,470	26.3%
Repumped	$30,262,755	$40,047,125	$9,784,370	32.3%
Total:	$41,923,477	$54,780,317	$12,856,840	30.7%
Commercial				
Gravity	$4,823,965	$6,108,079	$1,284,114	26.6%
Repumped	$10,424,286	$14,097,563	$3,673,277	35.2%
Total:	$15,248,251	$20,205,642	$4,957,391	32.5%
Industrial				
Gravity	$1,045,820	$1,370,304	$324,484	31.0%
Repumped	$4,218,893	$5,711,526	$1,492,633	35.4%
Total:	$5,264,713	$7,081,830	$1,817,117	34.5%
Private Fire				
Gravity	$851,176	$979,710	$128,534	15.1%
Repumped	$2,285,716	$2,582,189	$296,473	13.0%
Total:	$3,136,892	$3,561,899	$425,007	13.5%
Public Fire				
Gravity	$325,248	$345,287	$20,039	6.2%
Repumped	$1,579,987	$1,769,881	$189,894	12.0%

Q. WHAT ARE SOME OF THE PRINCIPLES OF A SOUND REVENUE DISTRIBUTION OR ALLOCATION?

A. A sound revenue distribution or allocation should:

- Utilize class cost-of-service study results as a guide;
- Provide stability and predictability of the rates themselves, with a minimum of unexpected changes that are seriously adverse to ratepayers or the utility (gradualism);
- Yield the total revenue requirement;
- Provide for simplicity, certainty, convenience of payment, understandability, public acceptability, and feasibility of application; and
- Reflect fairness in the apportionment of the total cost of service among the various customer classes.[4]

Q. HOW DID THE COMPANY DISTRIBUTE THE PROPOSED INCREASE TO THE VARIOUS CUSTOMER CLASSES?

A. York has proposed rates for each customer class equal to the indicated cost of service under its cost of service study.

Q. WHAT IS YOUR PROPOSAL WITH RESPECT TO THE DISTRIBUTION OF THE WATER REVENUE INCREASE AWARDED IN THIS PROCEEDING?

A. I recommend that the increase authorized in this proceeding be distributed based on the cost of service indicated by my study. A distribution based on the Company's requested increase and my cost of service study is presented in Table 4. To the extent the Commission awards York less than the amount of the water revenue increase requested, revenues for each class should be scaled back proportionately.

IV. RESIDENTIAL WATER CUSTOMER CHARGE

Q. WHAT IS YORK PROPOSING WITH RESPECT TO THE RESIDENTIAL CUSTOMER CHARGE FOR WATER CUSTOMERS?

A. York is proposing to increase the current customer charge for an average Residential customer with a 5/8-inch meter from $17.25 to $24.85, or by 44%. Similar percentage increases are proposed for customers with larger meters. The $24.85 is based on an analysis of what the Company claims are direct customer costs presented in RS1-j Attachment.

Q. WHAT COSTS HAS YORK INCLUDED IN ITS CALCULATION OF DIRECT CUSTOMER COSTS?

A. York has included operation and maintenance ("O&M") expenses, depreciation expense and the return and taxes associated with meters and services and related supplies, customer accounting O&M expenses, and bad debt expense in its calculation of direct customer costs. The Company has also included what it claims are directly related O&M costs such as pensions and benefits.

Q. IS YORK'S CALCULATION OF DIRECT CUSTOMER COSTS REASONABLE?

A. No. Only those costs that change directly with the addition or subtraction of a customer should be included in the calculation of a customer charge. York has included bad debt expense in its calculation which is not a direct customer cost, and office building and furniture and equipment related investment costs which are also not direct customer costs. Finally, York has included the investment costs associated with its Enterprise Software which do not change with the addition or subtraction of a customer[5].

[5] Per the response to OCA Set VII, No. 5, Enterprise Software is the software system which manages and integrates most accounting, billing, customer service, purchasing, human resource, and operational functions of the Company within a single system. The cost of this software does not change based on the number of customers served.

Q. WHAT IS YOUR RECOMMENDATION WITH RESPECT TO YORK'S MONTHLY RESIDENTIAL CUSTOMER CHARGES FOR WATER CUSTOMERS?

A. York claims that, based on the Company's requested increase, a cost-based customer charge for the average Residential customer would be $24.85. As discussed above, the Company's calculation improperly includes bad debt expense, office building and furniture and equipment related investment costs, and Enterprise Software investment costs, and the Company's calculation should be reduced accordingly. The Company has not provided sufficient explanation as to why these indirect customer costs should be included in the calculation of an appropriate customer charge. Finally, at the revenue increase authorized by the Commission in this proceeding, a cost-based charge would certainly be further reduced. For example, adjusting York's overall requested pre-tax rate of return of 8.82% to reflect the OCA's recommended pre-tax return of 8.44% would further reduce the calculated customer charge. A calculation adjusting the Company's calculated direct customer charge to remove the improperly included costs, eliminate bad debt expense, and to reflect the OCA's recommended rate of return is presented on Schedule JDM-3. As shown there, these adjustments reduce the calculated charge to $23.06. Other adjustments to York's revenue requirement claim are likely to further reduce the calculated customer charge. Therefore, I recommend that the existing $17.25 monthly charge for Residential customers with a 5/8-inch meter be maintained. If the Commission does not accept my recommendation to maintain the current $17.25 monthly customer charge and determines that an increase is justified or is warranted, I recommend that the charge be increased by a percentage no greater than the water revenue increase assigned to the Residential class in this proceeding.

V. WASTEWATER COST OF SERVICE STUDY, REVENUE ALLOCATION, AND RATE DESIGN

Q. WHAT METHODOLOGY DID THE COMPANY UTILIZE IN PREPARING ITS WASTEWATER COST OF SERVICE STUDY?

A. Mr. Herbert used the functional cost allocation methodology described in *Financing and Charges for Wastewater Systems; Manual of Practice No. 27* published by the Water Environment Federation ("Manual of Practice No. 27"). This method allocates the cost of providing wastewater service to customer classifications in proportion to each classification's use of the service provider's facilities and services. Costs are assigned to cost components using predominant operational purposes as cost-causative factors. The functional cost allocation method is generally accepted as a sound method for allocating the cost of wastewater service.

Q. PLEASE IDENTIFY THE CUSTOMER CLASSES INCLUDED IN YORK'S WASTEWATER STUDY.

A. York's wastewater cost of service study includes two customer classes: Residential and Non-Residential.

Q. ARE YOU RECOMMENDING ANY MODIFICATIONS OR ADJUSTMENTS TO THE WASTEWATER COST OF SERVICE STUDY PREPARED BY YORK?

A. No. I am not recommending any modifications or adjustments to the Company's wastewater study.

Q. PLEASE SUMMARIZE THE COMPANY'S PROPOSED DISTRIBUTION OF THE WASTEWATER RATE INCREASE IT IS REQUESTING IN THIS PROCEEDING?

A. York's proposed distribution of the wastewater revenue increase is presented in Table 5. Also presented in Table 5 is the cost of service for each customer class as determined by York's wastewater cost of service study.

Table 5
Company Proposed Distribution of Wastewater Revenue Increase

Class	Present Rates	Proposed Rates	Increase	Percent	Cost of Service
Residential	$7,320,069	$10,562,506	$3,242,437	44.3%	$9,287,637
Non-Residential	$1,224,418	$1,942,162	$717,744	58.6%	$3,217,105
Total:	$8,544,487	$12,504,668	$3,960,181	46.3%	$12,504,742

Q. YORK PROVIDES WASTEWATER SERVICE TO A NUMBER OF DIFFERENT SERVICE TERRITORIES AND LOCATIONS. ARE ALL OF THE RESIDENTIAL CUSTOMERS IN EACH OF THOSE SERVICE TERRITORIES CURRENTLY ASSESSED THE SAME RATES AND CHARGES FOR WASTEWATER SERVICE?

A. No. As indicated in Exhibit No. FVIII-WA, the Wastewater Operations Cost of Service Allocation Study, Schedule G, on a monthly basis, certain Residential customers are assessed a Minimum Charge which includes an allowance of up to 4,000 gallons of wastewater volumes at no additional charge. For these customers, wastewater volumes in excess of 4,000 gallons are assessed additional volumetric charges. York's tariff currently includes two different Minimum Charge billing arrangements – Rate 1 and Rate 2 which are dependent upon the customer's service location or territory. Under

these billing arrangements, a customer's wastewater volumes are based on metered water usage.

Certain Residential customers are assessed a monthly customer charge which does not include a minimum usage volume allowance, and all usage is subject to volume charges which vary based on a customer's total monthly wastewater volumes. Under these billing arrangements, a customer's wastewater volumes are also based on metered water usage.

Finally certain Residential York wastewater customers are not also York water customers and, therefore, their monthly water usage is unknown. These Residential customers are currently assessed an unmetered flat rate. There are currently four different flat rate charges for unmetered customers and the charges vary based on service location or territory.

Q. HAS YORK IDENTIFIED THE RATE INCREASES THAT WILL BE EXPERIENCED BY THE AVERAGE RESIDENTIAL WASTEWATER CUSTOMER IN EACH OF ITS SERVICE LOCATIONS OR TERRITORIES UNDER ITS PROPOSED RATES?

A. Yes. The rate increases that will be experienced by the average Residential wastewater customer are identified in Exhibit No. F(a)-4W and are summarized below in Table 6. Also identified in Table 6 is a ratio comparing the increases to be received by the Residential customers in each service territory or location to the overall system average increase to be received by all wastewater customers. A ratio of 0.5 indicates that the Residential customers in the service territory will receive an increase equal to 50% of the average increase, a ratio of 1.0 indicates that the Residential customers will receive an increase equal to the system average increase, and a ratio of 2.0 indicates the

Residential customers will receive an increase which is twice the system average increase. The system average wastewater increase proposed by York is 46.2%.

Table 6
Comparison of Residential Rate Increases by Service Territory

Service Territory	Proposed Increase	Ratio
Asbury Pointe Subdivision	7.7%	0.17
East Prospect Borough/Lower Windsor Area	37.4%	0.81
Felton Borough	7.7%	0.17
Jacobus Borough	36.9%	0.80
Letterkenny Township	7.7%	0.17
Monaghan Township	87.2%	1.89
Shrewsbury and Springfield	72.3%	1.56
Straban Township	36.6%	0.79
Washington Township	75.8%	1.64
West York Borough	56.0%	1.21
West Manheim Township	47.6%	1.03
West Donegal Township	60.0%	1.30
York Haven Borough/Newberry Township	87.2%	1.89

Q. ARE YOU PROPOSING ANY CHANGES TO YORK'S PROPOSED WASTEWATER REVENUE ALLOCATIONS AND RATES?

A. Yes. As previously identified, one of the principles of a sound revenue distribution allocation is to provide stability and predictability of the rates themselves, with a minimum of unexpected changes that are seriously adverse to ratepayers or the utility. This principle is often referred to as gradualism. While there is no hard and fast rule with respect to applying the principle of gradualism in developing a revenue distribution, typically an increase of 1.5 to 2.0 times the system average increase is considered consistent with the principle of gradualism. Given the significant 46.2% system average increase York is requesting in this proceeding for wastewater service, I recommend that 1.5 times system average increase serve as the gradualism benchmark

in this proceeding. As shown in Table 6, the rate increase proposed by York for Monaghan Township, Shrewsbury and Springfield, Washington Township, and York Haven Borough/Newberry Township exceed this benchmark.

As summarized in Table 5, for the Residential class, the rates proposed by York exceed the cost of service by approximately $1,275,000. For the Non-Residential class, the cost of service exceeds the rates proposed by York by $1,275,000. Therefore, to provide for gradualism for the four service territories with Residential customers receiving an increase greater than 1.5 times the system average increase, I recommend that, to the extent the Commission authorizes a total wastewater revenue requirement that is less than the revenue requirement requested by York, the rates for these four service territories first be proportionately reduced to provide for a 1.5 time system average increase for the average Residential customer. Based on York's filed revenue requirement, I estimate that this would reduce the revenues collected from these four service territories by $51,600. To the extent the Commission reduces the revenue requirement increase for by York by more than $51,600, I recommend that the first $1,275,000 of that reduction, less the $51,600 required to reduce the rates of the Residential customers in the four service territories to 1.5 times the system average increase, be applied to proportionately reduce the rates of all Residential customers. To the extent that the reduction to York's requested revenue requirement increase is greater than $1,275,000, I recommend that the reduction in excess of $1,275,000 be proportionately applied to reduce the proposed rates for both the Residential and Non-Residential classes.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does; however, I reserve the right to update this testimony as may be necessary.

DIRECT TESTIMONY

OF

BARBARA R. ALEXANDER

Barbara Alexander Consulting LLC

ON BEHALF OF THE

OFFICE OF CONSUMER ADVOCATE

August 22, 2025

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member of Barbara Alexander Consulting LLC. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Office of Consumer Advocate (OCA).

Q. PLEASE DESCRIBE YOUR BACKGROUND AND QUALIFICATIONS.

A. I have a 30-year experience as an expert in consumer protection, service quality, and low income programs for public utilities and the regulation of retail alternative energy suppliers in markets that have adopted restructuring for electric and/or natural gas supply service. I was the Director of the Consumer Assistance Division for the Maine Public Utilities Commission from 1986-1996 and have operated my own consulting practice for public advocates and consumers since that time. I have testified in over 30 U.S. and Canadian jurisdictions, including testimony before the Pennsylvania Public Utility Commission in many proceedings. I submitted Direct and Surrebuttal Testimony on behalf of the OCA in York Water's prior base rate case in 2022 (Docket No. R-2022-3031340). My C.V. attached to this testimony as Exhibit BA-1 lists all my publications and testimony associated with my consulting practice.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I am filing Testimony on behalf of the OCA to address issues relating to the adequacy and reasonableness of certain aspects of York Water Company's ("York Water") customer service performance, compliance with the Commission's consumer protection requirements, and its low income programs. My testimony addresses York Water's water and wastewater services. These issues are important by themselves, but particularly so in

this case given the magnitude of York Water's proposed rate increases for water and wastewater services as I summarize below.

Q. DO YOU HAVE ANY EXHIBITS ATTACHED TO YOUR TESTIMONY?

A. Yes. I include the following Exhibits:

- Exhibit BA-1: CV of Barbara R. Alexander
- Exhibit BA-2: York Water Response to OCA-III-1 (a)
- Exhibit BA-3: York Water's Report on Call Center Performance (January 13, 2025)
- Exhibit BA-4: York Water's Report on Updated Training Materials (January 13, 2025)
- Exhibit BA-5: York Water Response to OCA-XVII-1

Q. PLEASE SUMMARIZE YOUR FINDINGS AND RECOMMENDATIONS.

A. Based on my analysis, as described in my testimony, I have made the following recommendations, several of which reflect my evaluation of the Company's failure to comply with one or more commitments in the 2022 Base Rate Case Settlement:

- Customer Call Center Performance: I recommend that York Water's failure to improve its call center performance as required by the 2022 Base Rate Case Settlement[1] be taken into account in establishing the reasonable rate of return. The Company should not be rewarded for failing to meet its call center performance and other commitments in the Settlement. Second, I recommend that York Water be required to significantly improve its call center performance to meet the standard performance results of

[1] *Pa. PUC v. York Water Company, et al*, R-2022-3031340 (Order dated January 12, 2023) Order at 2-4 (*2022 Base Rate Case Settlement*).

answering 80% of the calls with 30 seconds and meeting an abandonment rate of 4% or less by the rate effective year. This improvement should be monitored for compliance as a condition of any rate increase, such as through requiring a report or filing to this docket every quarter to monitor the same.

- Complaint Tracking and Analysis: First, I recommend that York Water's failure to create complaint logs consistent with the 2022 Base Rate Case Settlement, and as required by the Settlement, should be taken into account in the setting of the Company's rate of return. Second, I recommend that York Water immediately revise its complaint database and logs to conform to the specific requirements of Paragraph 54 of the 2022 Base Rate Case Settlement. Finally, I recommend that York Water undertake a root cause analysis of the complaint data to determine underlying trends and possible internal actions to respond to this analysis.
- Bill and Termination Notice Disclosures: I recommend that York Water be required to submit updated and revised billing and termination disclosures that reflect Chapter 56 requirements and plain language presentation as a condition of any rate increase in this proceeding within 90 days after the issuance of a final order.
- Customer Survey Expense: Until York Water commits to using the results of this survey to improve its customer service, I do not believe that the Company should be permitted to recover the cost of this survey because it is unclear how customers benefit from the fact that the survey was conducted.
- Customer Training and Compliance: First, while the Company has made progress in including summaries of key Chapter 56 rights in its training materials, it is not clear how these training materials have impacted interactions with customers, in part due to the

nature of the rudimentary software used to capture such interactions and due to the lack of deliverables that were promised by and through the 2022 Base Rate Case Settlement and case. York Water's incomplete compliance with Paragraph 54 of the 2022 Base Rate Case Settlement should be considered in the determination of the reasonable rate of return. Second, York Water should be required to explain how the Chapter 56 rights that have been identified in its training materials are actually recorded and implemented in its software system. Finally, York Water should be required to identify the program to ensure ongoing evaluation and auditing of the call center transactions to ensure compliance with the plain words of the training materials and Chapter 56.

- Low Income Programs:

1) **Program Revision and Submission**

York should complete the analysis required by the previous settlement and submit a revised full bill discount program in accordance therewith —including application criteria, estimated enrollment, and projected implementation and program costs— within 90 days of the final order. The revised program should be implemented within six months of that order.

2) **Year-Round Availability and Initial Funding**

The revised program should offer a monthly bill discount or credit throughout the entire calendar year billing cycle. To support a more robust and meaningful program, reflective of practices among investor-owned water utilities in Pennsylvania, a minimum funding level of $100,000 should be included in this rate case to support initial design and customer enrollment.

3) **Ongoing Data Collection and Evaluation**

The program should also include mechanisms for continuous data collection to assess its impact. Key metrics should include bill payment behavior, arrears, payment plans, collection activity, and participant feedback. The results should be reported as part of the Company's next base rate case filing.

4) **Additional Funding Sources**

The Company should consider using shareholder charitable contributions to enhance the program and/or to support the existing hardship program, particularly for customers with significant arrears who enroll in the new discount initiative.

- In other words, I recommend that the Company 1) implement a percentage discount on qualifying customers' entire bill (i.e., both fixed and volumetric charges), 2) the CARES program should be designed to supplement any bill discount program and should have reduced priority for York Water's limited low-income program funding and would be better implemented if funded using shareholder funds, and 3) the Company should allow $100,000, at a minimum, to implement a monthly bill discount program.
- Proposal for Higher Rate of Return for Management Performance: My testimony supports the rejection of this proposal and the use of the lowest reasonable rate of return based on the Company's failure to implement certain provisions of the 2022 Base Rate Case Settlement and the lack of any exceptional customer service performance.

Q. PLEASE SUMMARIZE YORK WATER'S RATE INCREASE PROPOSALS FOR WATER AND WASTEWATER CUSTOMERS.

A. York serves approximately 73,100 water customers and 6,700 wastewater customers. The Company provides water service and wastewater service in parts of York, Adams, Franklin,

and Lancaster Counties, Pennsylvania. The Company proposes to increase water service rates to produce additional annual revenues of approximately $20.3 million. The Company additionally proposes increasing wastewater rates to produce additional annual revenues of approximately $3.8 million.

Under the Company's proposal, the monthly water bill for residential gravity customers using 4,383 gallons per month would increase from $47.78 to $58.26 per month, or by 21.9%. The water bill for residential repumped customers using 3,672 gallons per month would increase from $56.48 to $72.26 per month, or by 27.9%. This amount includes York's proposal to increase the 5/8-inch water customer charge for gravity and repumped customers from $17.25 to $24.85 per month, which is an increase of $7.60 or of 44.1%.

According to the customer notices included in York Water's filing, under the Company's proposal, the typical wastewater bill for residential customers using a range of 4,011 gallons per month to 4,800 gallons per month would experience a bill increase ranging from 7.7% to 87.2%. The actual bill increases customers would experience would depend on the service area in which the customer resides and the customer's usage.

Q. DOES YORK WATER SEEK A HIGHER RATE OF RETURN AS A REWARD FOR "EXEMPLARY PERFORMANCE?"

A. Yes. York Water witness D'Ascendis recommended a 0.25% increase to York Water's "indicated range of common equity cost rates" "based on guidance from Section 523 of the Pennsylvania Public Utility Code."[2]

[2] York Water Statement No. 105, page 4.

Q. DID YORK WATER PROPOSE ANY CUSTOMER SERVICE PERFORMANCE STANDARDS AS PART OF ITS BASE RATE CASE?

A. No. York Water did not propose any specific performance standards for customer service or service quality with its proposed rate increase. Nor did York Water link its argument to recognizing management performance by setting the rate of return to any specific customer service performance measurement.

Q. DID YORK WATER DESCRIBE OR DISCUSS ITS CUSTOMER SERVICE PERFORMANCE IN ITS BASE RATE FILING?

A. Yes. Mr. Hand's testimony referred to "exceptional service" in support of York Water's base rate filing.[3] Mr. Hand justified this description based in part on the call center performance, customer complaint rates published by the Commission's Bureau of Consumer Services as compared to other water utilities, the low rates charged by York Water compared to other water utilities, its implementation of low income bill payment assistance, and its acquisition of troubled water and wastewater utilities. In addition, Mr. Hand highlighted a Customer Attitude Survey that measures customer satisfaction and other metrics as the basis for the Company's customer service performance.[4]

Q. PLEASE DESCRIBE HOW YOUR TESTIMONY IS ORGANIZED.

A. My testimony will examine York Water's compliance with certain requirements included in the Company's 2022 Base Rate Case Settlement approved by the Commission. I will then review York Water's performance compared to other smaller Class A water utilities as published by the Commission in its UCARE 2023 annual report. Finally, I will

[3] York Water Statement No. 1, page 45: "York Water is superior in its overall effectiveness and provides exceptional service to its customers at exceptional value. The Commission should recognize such performance in arriving at the allowed rate of return on common equity."
[4] Ibid., page 6.

recommend specific conditions that should be included in any order to increase customer rates in this proceeding. My testimony supports the recommendation of OCA Witness David Garrett in rejecting the Company's proposal for any reward in the form of a higher rate of return. I also document the basis for supporting the lowest reasonable rate of return with respect to the Company's compliance with the 2022 Base Rate Case Settlement and ongoing customer service performance.

II. YORK WATER'S COMPLIANCE WITH THE 2022 BASE RATE CASE SETTLEMENT

Q. PLEASE IDENTIFY THE PROVISIONS OF THE 2022 BASE RATE CASE SETTLEMENT THAT YOU WILL ADDRESS IN YOUR TESTIMONY AND DOCUMENT YORK WATER'S COMPLIANCE.

A. I will examine York Water's compliance with the following provisions of the 2022 Base Rate Case Settlement:

> 50. The Company's proposed expansion of The York Water Cares Low Income Customer Assistance Program ("Cares Program") to $40,000 annually is approved. Within 30 days following the entry of a Commission Order approving this Settlement, York Water shall include information concerning the Cares Program and the arrears forgiveness program on its website. The Company will continue its current process of accepting required documentation for the Cares Program from customers via email and forwarding those documents to the social service agencies that administer the program.
>
> 51. The Company agrees to undertake an analysis to estimate the number of low income customers on its water and wastewater systems, as well as a usage profile of its known low-income customers to be presented as part of its next base rate case. The Company shall conduct an analysis of the estimated costs, potentially eligible customers, and impact on noneligible customers, of a potential bill discount program within 18 months of the issuance of a final order in this proceeding. The Company will meet with the parties within 30 days after the analysis is completed.
>
> 52. In its next base rate proceeding, the Company will propose a pilot low-income bill discount program for residential water and wastewater service.

53. The Company agrees to take such action as required to meet its 2020 call center performance annual results prior to filing its next base rate case or within two years, whichever is sooner. The Company will provide a report 30 days prior to filing its next base rate case or within two years, whichever is sooner, that will show each year's annual call center performance compared to the 2020 call center performance results.

54. The Company agrees to update its training materials, including information relevant to the Discontinuance of Leased Premises Act, obligations and policies governing Protection from Abuse Orders, the customer's rights to dispute York Water's response to questions and concerns, and the policies that will be implemented when personal contact is initiated immediately prior to termination of service, within two (2) years of the issuance of a final order in this proceeding. As part of its commitment to develop more detailed training materials for its customer call center and other staff, York Water will make explicit its commitment to developing payment arrangements based on the customer's individual circumstances. The Company will also develop a process for oversight and compliance monitoring. The Company will submit the updated training materials within two (2) years of a final order in this proceeding. The Company further agrees to document how its training is conducted and how ongoing compliance is audited.

55. York Water will establish a database to document all customer disputes, and formal and informal complaints, as those terms are defined in 52 Pa. Code § 56.2, for both water and wastewater operations. The database shall include customer account information, address, date of dispute or complaint, the type of issues raised by the dispute or complaint, and the resolution of the dispute or complaint. The Company shall document its development of the database in a compliance filing within twelve (12) months of a final order in this proceeding. The Company agrees to make the complaint log available to parties as part of discovery in its next base rate case.

56. York Water's water and wastewater tariffs shall be amended to include the essential consumer protections set forth in Chapter 56. York Water will submit tariff supplements containing those amendments within twelve (12) months of a final order in this proceeding.

57. York Water will continue not to include any City of York refuse charges on its bills for York Water water and wastewater service and will continue not to threaten termination of service for nonpayment of City of York refuse charges. Any charges collected for City of York refuse charges shall be remitted directly to the City of York without any impact on the amount due for York Water regulated services. York Water will disclose on its web portal and on its bills issued on behalf of the City of York that York Water will not threaten or undertake termination of water service for non-payment of City of York refuse charges.

Q. DID YORK WATER IDENTIFY AND DOCUMENT ITS COMPLIANCE WITH THESE PROVISIONS AS PART OF ITS RATE CASE FILING?

Q. Mr. Hand's Direct Testimony does not reference these specific commitments nor document how the Company has responded, if at all, to each one. He does, however, discuss some of these issues without any specific reference to the 2022 Base Rate Case Settlement language.

Q. PLEASE SUMMARIZE YORK WATER'S COMPLIANCE WITH SETTLEMENT PARAGRAPH 50 CONCERNING THE IMPLEMENTATION OF ITS CARES AND ARREARS FORGIVENESS PROGRAMS.

A. York Water has improved its outreach and communications to customers about these programs. However, due to the limited funding, the program only operates for 4-6 months each year. As a result, the outreach effort has a limited impact since the currently program does not allow all qualified customers to obtain assistance. I will discuss this commitment and the implementation of the current low income programs later in my testimony.

Q. PLEASE DESCRIBE YORK WATER'S COMPLIANCE WITH SETTLEMENT PARAGRAPH 51 CONCERNING THE DEVELOPMENT OF INFORMATION ON LOW INCOME CUSTOMERS AND INFORMATION ON A BILL DISCOUNT PROGRAM WITHIN 18 MONTHS.

A. I am informed by Counsel that York Water met with the OCA to discuss their use of Census data, ALICE data,[5] and customer usage data as required by the first sentence of

[5] ALICE footnote: ALICE is an acronym for Asset Limited, Income Constrained, Employed, and represents the growing number of families who are unable to afford the basics of housing, childcare, food, transportation, health care, and technology. *Please see* https://www.unitedforalice.org/methodology (Accessed on August 18, 2025). ALICE captures a broader spectrum of those in a population who may struggle to afford increases in utility service

this Paragraph. However, to my knowledge there was no presentation of an "analysis of the estimated costs, potentially eligible customers, and impact on noneligible customers, of a potential bill discount program within 18 months of the issuance of a final order in this proceeding." Nor did York Water include the required information on its low income customers in this base rate case filing. However, in response to discovery, York Water has gathered published U.S. Census data on the incidence of low income customers in its service territory.[6] Based on the U.S. Census definition of ALICE (Asset Limited, Income Constrained, Employed), York has estimated 22,912 individuals in its service territory who meet this definition. This material also includes usage data for its customers on payment plans. York Water has proposed an additional low income program in its filing for this base rate case proceeding that I will discuss below. However, the proposal for this new program is not based on nor tied to any analysis of costs and benefits of the data and report required in the 2022 Base Rate Case Settlement.

Q. HAS YORK WATER COMPLIED WITH SETTLEMENT PARAGRAPH 52 TO INCLUDE A PILOT LOW INCOME DISCOUNT PROGRAM IN THIS RATE CASE FILING?

A. York Water has proposed a pilot low income assistance program, and I will discuss this proposal in my testimony below.

Q. HAS YORK WATER COMPLIED WITH SETTLEMENT PARAGRAPH 53 TO MEET ITS 2020 CALL CENTER PERFORMANCE STANDARD?

A. No. I will discuss York Water performance in more detail below. York Water did file the requested Report with the Commission on January 13, 2025.

rates, as on paper, many of these families do not meet the criteria for federal poverty limits and guidelines.
[6] York Water Response to OCA-XVII-15, Attachment 1.

Q. HAS YORK WATER COMPLIED WITH SETTLEMENT PARAGRAPH 54 TO UPDATE ITS CUSTOMER REPRESENTATIVE TRAINING MATERIALS, DEVELOP ENHANCED PAYMENT ARRANGEMENT OPTIONS, AND ADOPT PROGRAMS TO ENSURE COMPLIANCE?

A. In part. The Company has added new materials that summarize the residential customer's rights with respect to payment plans, landlord/tenant situations, and implemented additional training programs. I will discuss York Water's updated training materials in more detail in my testimony below.

Q. HAS YORK WATER COMPLIED WITH SETTLEMENT PARAGRAPH 54 WITH RESPECT TO CREATING A DATABASE OF CUSTOMER COMPLAINTS?

A. In part. York Water has created a log of "disputes" handled by York Water and "informal complaints" filed by customers to BCS.[7] However, these logs to do not conform to the required information as set forth in 2022 Base Rate Case Settlement Paragraph 54. I will discuss this failure in more detail in my testimony below.

Q. HAS YORK WATER COMPLIED WITH SETTLEMENT PARAGRAPH 56 TO AMEND ITS TARIFFS TO REFLECT ESSENTIAL CHAPTER 56 PROVISIONS WITHIN 12 MONTHS?

A. Yes. Updated materials relating to Chapter 56 rights and remedies were added to the tariffs in early 2024.

Q. HAS YORK WATER COMPLIED WITH SETTLEMENT PARAGRAPH 57 WITH RESPECT TO BILLING AND COLLECTING THE CITY OF YORK'S REFUSE FEES?

[7] York Water Response to OCA-XI-5, Attachments 1, 2, and 3 (CONFIDENTIAL).

A. Yes. York Water no longer bills and collects the Refuse Fees for the City of York.

III. YORK WATER'S CUSTOMER SERVICE PEFORMANCE

Q. PLEASE DISCUSS THE PERFORMANCE OF YORK WATER'S CUSTOMER CALL CENTER.

A. The operation of its call center is crucial to the Company's ability to deliver a reasonable level of customer service and to offer the consumer protections and complaint handling requirements reflected in the Commission's regulations. York Water relies on its customer call center as the main method by which customers can communicate individually with York Water for any account specific questions and transactions, although there are some transactions that can be completed on its website. There is only one office, located in downtown York, where customers can conduct business in person.[8] Customers can pay bills via the U.S. Mail, the York Water online web portal, or via the interactive voice response system,[9] however, only 20% of its customers are enrolled in automatic bill pay.[10]

Q. PLEASE DISCUSS THE PERFORMANCE RESULTS OF THE YORK WATER CALL CENTER FOR PENNSYLVANIA CUSTOMERS.

A. Mr. Hand does not reference this settlement provision nor discuss the required Report in his Direct Testimony. I attach the monthly York Water customer call center data with York Water's calculations of the annual average results for 2022 through May 2025 as

[8] York Water identifies this as its only office on its web portal.
[9] I determined in York Water's 2022 base rate case that the Company does not charge additional fees to pay by credit/debit card or through the customer's bank account.
[10] York Water Response to OCA-XIX-5.

Exhibit BA-2.[11]

York Water's required Report on its call center performance pursuant to Paragraph 53 of the 2022 Base Rate Case Settlement was filed on January 13, 2025 and confirms my conclusions as presented here. I attach this Report as Exhibit BA-3. This Report and the additional material included in Exhibit BA-2 confirm the trend to answer the calls that make it into the queue to speak to a representative in a timely manner but to limit the queue itself which results in customers abandoning the call. Both measurements are crucial in meeting reasonable call center performance standards. The abandonment rate has increased since 2022. These results document that York Water is answering the phone promptly for fewer number of calls but experiencing a significant abandonment rate—calls that are put on hold or disconnected after a period of time. This is not an acceptable trade off. York Water has not met the good faith obligation of the 2022 Base Rate Case Settlement Paragraph 53 of the 2022 base rate case because the Company has experienced a significant deterioration in performance through the abandonment rate. The following is a summary of the key indicators as included in the Company's Report in BA-Exhibit 3:

										Time to Answer : Intervals				
	# Inbound Calls	# Answered	# Abandoned	# Redirected	# Disc	% Answered	% Abandoned	To Vmail Total	% To Vmail	Avg. Time to Answer	< 24 sec.	25-120 sec.	121-240 sec.	> 241 sec

I also include the results of the 2022 to 2025 (to date) as provided in discovery (Exhibit

[11] York Water Response to OCA-III-1(a).

BA-2):

Year	Percent Calls Answered in 30 Seconds[12]	Abandonment Rate	Average Speed of Answer (minutes)
2022	22.25%	16.72%	5:50
2023	45.45%	17.29%	3:58
2024	96.62%	27.66%	0:06
2025 (through May)	96.35%	55.56%	0:08

These results are not reasonable. Not only has the Company failed to meet the commitment in the 2022 Base Rate Case Settlement to improve its performance based on the 2020 results, but its performance is significantly below what is reported by Pennsylvania gas and electric utilities, where the typical performance is to answer 80% of the calls within 30 seconds with an abandonment rate at or below 4%.[13]

Furthermore, the annual average for the abandonment rate masks a dramatic swing in monthly call center performance as reflected in Exhibit BA-2. For example, in January-February 2024, the abandonment rate was less than 10% but then jumped to 37.93% in March, 56% in May, 62% in July followed by significant improvement (lower percentage) the rest of the calendar year. In May 2025, the abandonment rate was 55.56%. As a result, the inconsistent performance means that customers cannot rely on a reasonable call center performance to conduct their account specific transactions or concerns in a timely manner.

[12] The 2025 Report shows similar but slightly different calculations of the percentage of calls answered compared to the calculations provided in discovery. The trend and overall results are similar.

[13] The Commission publishes an annual report on service quality performance by Pennsylvania gas and electric utilities. The typical performance is to answer over 80% of calls within 30 seconds and experience an annual abandonment rate of 4% or less as reflected in the data for 2023. This data is not published for water utilities regulated by the Commission. See, https://www.puc.pa.gov/media/3062/2023-customer-service-performance-report_final.pdf

As discussed above, consistent abandonment rates (with best practice being lower) are critical for maintaining customer satisfaction, operational efficiency, agent morale, and business performance. Dramatic swings in abandonment rate usually signal that something's wrong in call forecasting, staffing, and/or system design, and need immediate attention. High abandonment rates mean that customers have not been able to reach a representative to conduct matters reflecting their monopoly utility service, including responding to a notice of termination, a billing error, or a service deficiency. That is why the Commission monitors abandonment rate as well as the percentage of calls answered for 30 seconds for all electric and natural gas utilities. The two criteria are crucial to measuring any call center performance.

The key variable in predicting reasonable versus unreasonable call center performance is the volume of calls and the number of available call center representatives on hand to answer the calls. Performance can be improved with better prediction of call volume and ensure sufficiently trained personnel are available to respond to call volume at predicted high call volume days and times.

Q. DOES YORK WATER HAVE INTERNAL PERFORMANCE OBJECTIVES FOR ITS CALL CENTER?

A. No. Similar to many vague promises made in response to discovery in this proceeding, York Water states that it "is in the process of developing a Customer Service Performance dashboard to set customer service performance objectives and measure progress toward those objectives in order to continuously improve service quality. This is a Customer Service departmental goal for 2025."[14]

[14] York Water Response to OCA-III-20.

Q. WHAT DO YOU RECOMMEND?

A. First, I recommend that York Water's failure to improve its call center performance as required by the 2022 Base Rate Case Settlement be taken into account in establishing the reasonable rate of return. The Company should not be rewarded for failing to meet its call center performance and other commitments in the Settlement. Second, I recommend that York Water be required to significantly improve its call center performance to meet the electric and natural gas utility standard performance results of answering 80% of the calls with 30 seconds and meeting an abandonment rate of 4% or less by the rate effective year. There is no reason that York should be held to a lower standard merely because of the kind of service it provides when that service is essential and its customers are captive. This improvement should be monitored for compliance as a condition of any rate increase, such as through requiring a report or filing to this docket every quarter.

Q. TURNING TO HOW YORK WATER HANDLES CUSTOMER COMPLAINTS, PLEASE DISCUSS THE REGULATORY BASIS FOR YOUR ANALYSIS.

A. Every Pennsylvania public utility is required to educate customers about how to register informal and formal complaints filed with the Commission because of a customer's dissatisfaction with the utility's response to billing and other customer service disputes.[15] Informal complaints are handled by the Commission's Bureau of Consumer Services (BCS) and formal complaints are addressed by the Commission's Office of

[15] York Water's Customer Rights and Responsibility Notice is available on its website and includes the required information about disputing bills or service:

> You have the right to question or dispute any billing or service action of the company. You should tell the company of the problem as soon as it occurs. This gives the company the opportunity to resolve the matter with you. If you do not contact the company first, the Commission may instruct you to do so before accepting an informal complaint from you. See, https://www.yorkwater.com/wp-content/uploads/knowyourrights.pdf

Administrative Law Judge. Utilities also receive "disputes" directly from customers and are obligated to investigate and respond to those issues or indications of dissatisfaction. Customer complaints typically form a hierarchy or pyramid from a large volume of disputes to a smaller group of informal complaints to the BCS and a relatively smaller number of formal complaints filed with the Commission. Tracking and evaluating disputes handled by the utility and informal or formal complaints handled by BCS are key to ensuring ongoing improvements in customer service because that evaluation is likely to spot the "red flag" that indicates a systemic issue or concern that requires management's attention and, in some cases, a change in policy or procedure. In addition, of course, this type of evaluation may also identify violations of the Commission's regulations. Public utilities are required to keep records of customer disputes.[16]

The Commission's Bureau of Consumer Services publishes a quarterly Consumer Activities and Report Evaluation for Pennsylvania electric, gas, telephone, and water utilities.[17] These reports typically include historical information to allow for a trend analysis.

Q. HOW DOES YORK WATER'S COMPLAINT AND COMPLIANCE DATA COMPARE TO OTHER CLASS A WATER UTILITIES?

[16] 52 Pa. Code **§ 56.432. Record maintenance.**
A public utility shall preserve for a minimum of 4 years written or recorded disputes and complaints, keep the records accessible within this Commonwealth at an office located in the territory served by it, and make the records available for examination by the Commission or its staff. Information to be maintained includes the following:
(1) The payment performance of each of its customers.
(2) The number of payment agreements made by the public utility company and a synopsis of the terms, conditions and standards upon which agreements were made.
(3) The number of service terminations and reconnections.
(4) Communications to or from individual customers regarding interruptions, discontinuances, terminations and reconnections of service, including the name and address of the customer, the date and character of the dispute or complaint and the adjustment or disposal made of the matter.

[17] http://www.puc.state.pa.us/filing_resources/consumer_activities_report_evaluation.aspx. This link provides access to the historical annual and quarterly reports.

A. Based on the Commission's UCARE 2023 report,[18] York Water's complaint rate per 1,000 customers has increased from 0.69 in 2021 to 1.58 in 2022 and 2.06 in 2023, a rate in excess of the average rate of 1.74 for "other Class A" water utilities, referring to water utilities other than the much larger Aqua and PAWC. York Water's 2023 Payment Arrangement Request (PAR) rate of 1.03 is in excess of the average of 0.84 rate for "other Class A" water utilities and shows a marked increase since 2021 and 2022. This pattern of increased complaints and PARs shows that the Company's performance is not "exceptional," but deteriorating.

Q. HOW DOES YORK WATER MONITOR AND RESPOND TO CUSTOMER COMPLAINT TRENDS AND THESE BCS REPORTS?

A. As a result of Paragraph 54 in the 2022 Base Rate Case Settlement, York Water was required to develop a log or database for informal customer complaints filed with BCS and internal customer disputes handled by York Water. This log or data base was required to include the "customer account information, address, date of dispute or complaint, the type of issues raised by the dispute or complaint, and the resolution of the dispute or complaint." The complaint logs provided by York Water in discovery have the following column headings: "case#," "customer name," "case open date," "case close date," "case information," and "violation/notes."[19] The database does not include the customer's address or the resolution of the complaint. The column labeled "violation/notes" is empty for the vast majority of complaints. The "case information" column includes some standard complaint categories (e.g., "billing," "PAR") but most of

[18] https://www.puc.pa.gov/media/3305/2023-ucare-final.pdf

[19] York Water Response to OCA-XI-5, Attachments 1-3. These complaint logs are labeled Confidential, but my testimony does not reflect the confidential customer information contained in these documents.

the columns contain a label that does not relate to any complaint category, e.g., "DO NOT SELECT - 61 REJECTS." Neither the issue nor resolution of the complaint are identified in a manner that would allow any analysis. As a result, the database is not useful to identify trends or analyze the root cause of similar complaints. York Water has not complied with the clear directions of 2022 Base Rate Case Settlement Paragraph 54 in the development of its complaint logs.

Q. HAS YORK WATER ANALYZED THIS COMPLAINT DATA OR TAKEN ANY ACTION IN RESPONSE TO THIS DATA?

A. No. York Water reviews complaints on a case by case basis and while the database is reviewed to identify new trends, there has not been any root cause analysis or action undertaken in response to this compilation of customer complaints.[20]

Q. WHAT IS YOUR RECOMMENDATION WITH RESPECT TO CUSTOMER COMPLAINT HANDLING IN THIS RATE CASE?

A. First, I recommend that York Water's failure to create complaint logs as required by the 2022 Base Rate Case Settlement should be taken into account in the setting of the Company's rate of return. Second, I recommend that York Water immediately revise its complaint database and logs to conform to the specific requirements of Paragraph 54 of the 2022 Base Rate Case Settlement. Finally, I recommend that York Water undertake a root cause analysis of the complaint data to determine underlying trends and possible internal actions to respond to this analysis.

Q. HAVE YOU REVIEWED YORK WATER'S CUSTOMER BILL FORMAT AND PRESENTATION OF REQUIRED INFORMATION?

[20] York Water Response to OCA-III-23.

A. Yes. The current bill does not include the required information to refer customers to the Public Utility Commission. The Company recognizes this defect and promises a redesigned invoice that will be available by the end of 2025 that will include the PUC contact information.[21] I also note that the bills issued to customers participating in the current low income programs do not identify the credit or arrears forgiveness but identify any credits as an "adjustment," or "you paid, thank you."[22] As a result, customers enrolled in these programs are not provided with information on their York Water bill that confirms their enrollment or how that enrollment has impacted their monthly bill.

Q. IS THERE A MORE RECENT EXPERIENCE TO CONFIRM THE INADEQUACY OF THE COMPANY'S BILLING SYSTEM?

A. Yes. When asked whether the Company could include a notice on its customer bills about the upcoming public input hearings, York Water stated that it would require a six month period to include any new information on its customer bills.[23] As a result, York Water is unable to include real time information or messages on its customer bills.

Q. DID YOU REVIEW THE DISCLOSURES OF YORK WATER'S TERMINATION NOTICES?

A. Yes. According to York Water, this notice is the same as that provided in discovery in the 2022 base rate case, and, similar to many other aspects of this proceeding, the Company "is currently evaluating these notices to provide clear and understandable communication while remaining compliant with current regulations.[24]

Q. IN LIGHT OF THESE DEFICIENCIES IN BILL AND TERMINATION NOTICE

[21] York Water Response to OCA-III-5.
[22] York Water Response to OCA-VIII-17.
[23] York Water Response to OCA-XIX-5.
[24] York Water Response to OCA-III-8.

DISCLOSURES, WHAT DO YOU RECOMMEND:

A. I recommend that York Water be required to submit updated billing and termination notices that meet Chapter 56 requirements and use plain language, within 90 days of the final order, as a condition for any rate increase in this case.

Q. MR. HAND ON BEHALF OF YORK WATER EXTOLS THE COMPANY'S CUSTOMER SURVEY RESULTS TO SUPPORT HIS CLAIM OF EXCEPTIONAL SERVICE.[25] DO YOU AGREE?

A. I do not. First, this survey is expensive. It was conducted in 2024 at a cost of $24,000, of which the Company seeks to amortize the cost over five years.[26] More importantly, the Company has taken no action in response to the survey results. In another vague promise of future action, the Company states that a new Vice President of Customer Service was employed in March 2025 and this individual will focus on the survey and determine potential actions.[27] I question the value of this expenditure due to the lack of any "used and useful" purpose. Until York Water commits to using the results of this survey to improve its customer service, I do not believe that the Company should be permitted to recover the cost of this survey because it is unclear how customers benefit from the fact that the survey was conducted. Merely recording a customer's general satisfaction with York Water, a monopoly provider of water and wastewater services to its customers, does not justify this expense at this time.

[25] York Water Statement No. 1, page 6: "Specifically, in 2024, the Company partnered with a professional survey company to conduct a customer satisfaction survey. 2024 was the appropriate year in which to conduct the survey to gather representational survey results. The survey revealed that 89% of those customers surveyed are satisfied York Water utility customers. 89% of those customers surveyed also stated that the Company's redesigned, customer-facing website (December 2023) – www.yorkwater.com – is easy to use. These findings, along with many other metrics in that survey, will help inform the Company's decision-making and business processes as York Water continues to focus on creating a positive customer experience."

[26] York Water Response to OCA-VIII-1.

[27] York Water Response to OCA-VIII-3.

Q. WHAT IS THE STATUS OF THE TRAINING OF CUSTOMER REPRESENTATIVES FOR PENNSYLVANIA-SPECIFIC REGULATIONS AND CUSTOMER PROTECTIONS?

A. York Water submitted its updated training materials to the Commission on January 13, 2025 as required by Paragraph 54 in the 2022 Base Rate Case Settlement. I recommend that this filing be included in the record for this proceeding and I attach this Report as Exhibit BA-4.[28] York Water's training materials have been updated in several areas, including more details on customer rights to various payment arrangements, education on certain rights associated with Protection from Abuse Orders, and protections associated with Landlord/Tenant laws and regulations. However, this document consists primarily of instructions on entering information into the customer software system with handwritten notes. In many cases, the updated training materials on key consumer rights do not appear to be capable of being implemented with entries and documentation in the software billing system. If the Chapter 56 options and requirements are not built into this software system, it is not possible to track compliance or document that the Company has offered these rights. Of more serious concern:

- There is no evidence that the current software system can accommodate anything other than preprogrammed payment terms, thus not enabling the required reform to take into account a customer's individual circumstances to negotiate payment plans.
- The training materials concerning the obligation to attempt personal contact immediately prior to termination of service repeat the correct rights and remedies of Chapter 56. However, these service training materials do not address or instruct the

[28] These same materials were provided in response to OCA-III-2, Attachment 1.

field service technicians on how to handle personal contact with the customer or responsible adult prior to the termination of service and there is no ability to record the contact and results of the contact if it occurs.

- The only evidence that internal monitoring and compliance is being implemented is a checklist of dates for training but there is no information provided on any process or responsibility for internal monitoring and compliance oversight.

As a result, York Water has made progress on updating its training materials, but still has not complied with several of the explicit requirements of Paragraph 54 of the 2022 Base Rate Case Settlement.

Q. WHAT IS YOUR RECOMMENDATION WITH REGARD TO YORK WATER'S INTERNAL TRAINING MATERIALS AND OVERSIGHT RESPONSIBILITIES TO ENSURE COMPLIANCE WITH CHAPTER 56?

A. First, while the Company has made progress in including summaries of key Chapter 56 rights in its training materials, it is not clear how these training materials have impacted interactions with customers, in part due to the nature of the rudimentary software used to capture such interactions and due to the lack of deliverables that were promised by and through the 2022 Base Rate Case Settlement and case. York Water's incomplete compliance with Paragraph 54 of the 2022 Base Rate Case Settlement should be considered in the determination of the reasonable rate of return. Second, York Water should be required to explain how the Chapter 56 rights that have been identified in its training materials are actually recorded and implemented in its software system. Finally, York Water should be required to identify the program to ensure ongoing evaluation and auditing of the call center transactions to ensure compliance with the plain words of the

training materials and Chapter 56.

Second, I have been informed by counsel that, in Pennsylvania, the quality of service a utility provides to its customers is inextricably linked with whether the rates a utility charges are just and reasonable and that the Commission may adjust components of a utility's claimed cost of service in accordance with findings regarding any inadequacies in the utility's service. I discuss this in greater detail later in my testimony.

IV. YORK WATER'S ASSISTANCE PROGRAMS FOR LOW INCOME CUSTOMERS NEED SIGNIFICANT REFORM

Q. PLEASE EXPLAIN YORK WATER'S LOW INCOME BILL PAYMENT ASSISTANCE PROGRAMS.

A. York Water has operated a CARES program that consists of a one-time bill credit of up to $200 for eligible low income customers since 2019.[29] Customers can apply orally or with a written application to York Water who then refers the customer to one of two social service agencies who then evaluate the customer's unpaid and current bill amounts and decides on a grant amount up to $200. There does not seem to be a requirement that the customer document household income or meet a specific percentage of federal poverty guidelines. The current budget for this program is $40,000 as York Water proposed in the 2022 base rate case. York Water also operates a small arrears forgiveness program that is designed to focus on plumbing inspections to reduce water usage called

[29] According to the Company, CARES is available to customers who meet all of these criteria:
- A residential customer of York Water Company
- Unable to pay your full York Water bill
- At risk of a water shut off due to non-payment. [https://www.yorkwater.com/customer-service/customer-assistance-programs/]

Customer Assistance Program (CAP). Both programs are identified on the York Water web portal.

Q. PLEASE EXPLAIN THE PARTICIPATION AND DISTRIBUTION OF FUNDS FOR BOTH PROGRAMS.

A. The CARES program only operates until the approved funding level is exhausted, which has occurred in the spring or early summer each year. Exhibit BA-5 demonstrates the Company's response in discovery (OCA XVII-1) demonstrating the same.

Q. BASED ON THIS INFORMATION, WHAT IS YOUR OPINION ABOUT THE DESIGN AND OPERATION OF THIS PROGRAM?

A. The CARES program is designed to provide a one-time benefit to customers with large arrears or overdue balances but is only available for part of the year due to the funding constraint. The CAP program is very small and has enrolled only 31 customers over a three year period. As a result, these programs are not designed to make the monthly bill affordable or prevent the accumulation of arrears after the application of the one-time benefit due to the program design for any significant number of customers. Second, the program is insufficient to meet the needs of qualified customers since the funding is exhausted quickly each year. For example, the IVR menu eliminates any mention of these programs when the funding is exhausted.[30] The website does describe the CARES and the arrears forgiveness program (CAP), but currently states:

UPDATE: Due to customer demand, effective March 13, 2025, applications for the 2025 York Water Cares (YWC) program have been paused. Please contact our Customer Service team at 717-845-3601 or customer.service@yorkwater.com to learn more and discuss other options that may be available to you.
https://www.yorkwater.com/customer-service/customer-assistance-programs/

[30] The IVR menu provided in York Water's Response to OCA-VIII-11 does not reference their low income programs.

Q. HAS YORK WATER EVALUATED THE IMPACT OF THIS PROGRAM?

A. No. York Water has not conducted any analysis of the sufficiency of this program or its impact on bill payment or bill affordability. While Mr. Hand states that their low income programs have prevented disconnection of service,[31] there is no evidence to support that assumption.[32] The Company cannot track customers in these programs in terms of disconnection of service, arrears balances, or success or failure of payment arrangements.[33] When asked to provide basic information on customer payments as a result of the receipt of the CARES grant, the Company was unable to do so.[34] As a result, the Company cannot evaluate the ability of this program to assist low income customers to maintain or retain essential water and wastewater service.

Q. PARAGRAPHS 51 AND 52 OF THE 2022 BASE RATE SETTLEMENT REQUIRED YORK WATER TO ANALYZE ESTIMATED COSTS, IMPACT ON ELIGIBLE CUSTOMERS AND IMPACT ON NONELIGIBLE CUSTOMERS OF A POTENTIAL BILL DISCOUNT PROGRAM AND PROPOSE A PILOT LOW INCOME BILL DISCOUNT PROGRAM FOR RESIDENTIAL WATER AND WASTEWATER CUSTOMERS. HAS YORK WATER COMPLIED WITH THESE REQUIREMENTS?

A. In part. In this filing York Water has proposed a new program for low income customers

[31] "The program has been a success in helping low-income customers pay their water and wastewater bills to avoid shut off, especially during and following the COVID-19 pandemic." York Water Statement No. 1, page 10, lines 20-22.

[32] York Water Response to OCA-VIII-9.

[33] York Water Responses to OCA-IV-5, IV-6, IV-9, IV-12. These data responses confirm the inability of its current billing and software systems to capture essential data to evaluate the impact of its current or any future low income program.

[34] OCA-XVII-6 sought information on customer payments as a result of obtaining the CARES grant and the Company's response was unable to do so, showing only the initial grant provided to the customers without any of the requested information on subsequent customer payments or impact on retaining service.

consisting of the forgiveness of the fixed monthly customer charge for up to 200 customers and proposed a $20,000 increase in low income funding for a total of $60,000. However, while the Company met with the OCA to discuss its estimates of the low income population with usage characteristics as called for in the first sentence of Paragraph 51, to the best of my knowledge the Company has not implemented the required analysis in accord with Paragraph 51 of the 2022 Base Rate Case Settlement to support a revised low income program. As a result, the Company has not provided the full analysis required to implement a program that would address the constant lack of sufficient funding in the past, how the proposed program would operate in coordination with the existing programs, what impact the proposed program will have on the affordability of water and wastewater service for participating customers, or the impact on noneligible customers.

Q. HOW DOES MR. HAND JUSTIFY THE PROPOSED PROGRAM DESIGN?

A. Mr. Hand's testimony states:

> Furthermore, under the Settlement approved in York Water's 2022 base rate case, the Company was required to propose a pilot low-income bill discount program for residential water and wastewater service in its next base rate proceeding. As such, York Water proposes that up to 200 low-income customers not be billed the fixed residential customer charge, which would save those customers at least $200 each year. The low-income customers can reduce the consumption-based portion of their bill through conservation, so the focus of the pilot low-income bill discount program is on the fixed charge. York Water Statement No. 1, page 11, lines 3-10.

Q. DID YOU EXPLORE THE BASIS FOR THE PROGRAM DESIGN?

A. Yes. According to Mr. Hand, the key factor in the program design is the ease of implementing this proposal in the billing system.[35] As a result, the program design does not take into account any analysis of affordability or impact on the low income

[35] York Water Response to OCA-VIII-11.

population served by York Water.

A. WHAT WILL THIS NEW PROPOSED PROGRAM COST?

A. The Company's Exhibit FII-2-40 estimates that if 200 customers enroll in the new pilot program, the resulting cost will equal the customer charge of $17.25 for 12 months or $41,400. However, the Company has proposed a 44% increase in this monthly charge and as a result, the projected cost of this proposal is significantly understated if any increase in the customer charge is implemented in this rate case.

Q. WILL THIS NEW PROGRAM OPERATE IN CONJUNCTION WITH THE CURRENT CARES AND CAP PROGRAMS?

A. Mr. Hand has not proposed any change to the current program and has confirmed that it will operate in addition to those programs.[36] However, it is not clear how a new program that will cost $40,000 (or more if any increase in the customer charge is adopted) for 200 low income customers will leave any significant funding for CARES or CAP since those programs have incurred costs of $40,000 annually (and halted enrollment in mid-year) in light of the proposed total budget of $60,000.

Q. ARE THE COMPANY'S CURRENT AND PROPOSED PROGRAMS A REASONABLE APPROACH TO ADDRESS THE NEEDS OF YORK'S LOW INCOME CUSTOMERS?

A. No. Since the Company has not designed this new program based on any analysis of affordability or impact on the customer's ability to pay and the funding level does not reflect any analysis of the indicia of low income customers generally, I cannot endorse this program as proposed. The Company committed to an analysis and program based on

[36] York Water Response to OCA-XVII-5.

that analysis in the last base rate case and has not implemented the same. As explained above, York should be required to comply with the last settlement in this case to arrive at an equitable new program for vulnerable consumers. The CARES program does assist low income customers who have a large unpaid bill. I do not object to a program that provides additional assistance to such customers. However, this type of program that provides a one-time payment does not respond to ongoing unaffordability of essential water and sewer services, particularly given the significant rate increase granted in the 2022 base rate case and the additional rate increase proposed in this proceeding. Nor does the program rule that limits the one-time payment to $200 have any relationship to the customer's arrears balance or ability to make payments on that balance and ongoing water and wastewater bills. In other words, the CARES program would be a useful supplement to an ongoing program to reduce monthly bills, but it is not a substitute for a program that has already been ordered in the last base rate case and addresses the continuing mismatch between income and payments for essential water and wastewater services. Programs that rely on "crisis" funding do not contribute to incentives to enable vulnerable customers to make regular affordable monthly payments. The addition of the proposed pilot is limited to 200 customers who, if enrolled at that level, would not allow any significant enrollment in CARES or CAP given the funding limit of $60,000. The lack of any information on how this new program would be implemented to qualified low income customers exacerbates my concern.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that York Water be required to implement a bill discount program based on the approach implemented by Community Utilities of Pennsylvania. That program

provides a 35% monthly discount on the rate including both the metered consumption charge and the customer charge.[37] For York Water, I recommend a discount be applied to the total bill of enrolled customers. The applications for participation in this program should be available on York Water's website. Customers who can provide evidence of participation in existing means-tested income programs, such as Low Income Heating Assistance, Low Income Water Assistance, Medicaid, Food Stamps (SNAP), or participation in the applicable electric and natural gas Customer Assistance Programs within the last year should be automatically enrolled.

Q. HAVE YOU ESTIMATED THE COSTS FOR THIS PROGRAM?

A. I have asked the Company to estimate the cost of a 30% bill discount for the customers enrolled in CARES and CAP in 2024 and 2025 to date. The Company estimates that a 30% discount for these customers for a full calendar year would cost approximately $104,519 in 2024 and would cost approximately $127,667 in 2025.[38] Of course, this estimate does not include other qualified customers who were denied entry into these programs due to the funding limitation. A program that provides a 25% discount would of course cost less and allow a more expanded enrollment. A discount in the range of 25% to 30% would be reasonable based on the information available to me at this time.

Q. DO YOU HAVE ADDITIONAL RECOMMENDATIONS?

A. Yes. My first recommendation is that the Company conduct and submit the analysis required by Paragraph 51 of the 2022 Base Rate Case Settlement and submit a revised full bill discount program with application criteria, estimated enrollment, and estimated

[37] Community Utilities of Pennsylvania low income programs: https://www.myutility.us/pennsylvania/news/detail?id=378055e5-8533-6283-8a44-ff0000903d3d&index=0

[38] York Water Response to OCA-XIX-1.

implementation and program costs to the parties to this proceeding within 90 days after the issuance of a final order. This proposal should take into account the Company's analysis of the Census data and usage data previously presented to the OCA and reflected in the discovery response I previously identified. A revised program should be implemented within six months of a final order in this proceeding. Second, I recommend that York's proposed and final program be available for a monthly bill discount or credit during the entire calendar year billing cycle. This recommendation will substantially increase the current funding level and create a meaningful program that is more typical of investor-owned water utilities in Pennsylvania. As an initial step towards the design and enrollment of a more substantial number of qualified customers, I recommend a minimum funding level of $100,000 be included in this rate case. Third, I recommend that the proposed program include the ongoing collection of key data to evaluate the impact of the final program, including bill payment, arrears, payment plans, collection activities, and input from participating customers about the program's impact on their bill payment ability. A report on the implementation and results of the ongoing analysis of the new program should be submitted as part of the Company's next base rate case filing. Finally, I also recommend that York Water consider the use of shareholder charitable contributions to expand this program and/or target the current CARES program for customers with substantial arrears balances who enter the new discount program.

V. YORK WATER'S CUSTOMER SERVICE PERFORMANCE IS DIRECTLY RELATED TO THIS RATE CASE AND THE RATE OF RETURN

Q. WHAT IS THE CONNECTION BETWEEN YOUR DISCUSSION OF SERVICE

QUALITY AND CUSTOMER SERVICE PERFORMANCE, AND THE RATE INCREASE PROPOSED BY YORK WATER?

Any public utility must justify its rates in part based on its ability to perform its essential quality of service and customer service functions at a reasonable performance level. It is appropriate to compare the performance of the utility seeking a significant rate increase to other Pennsylvania utilities. My analysis and findings should inform the Commission on the reasonableness of York Water's significant rate increase proposals. In other words, if York Water seeks a rate increase but there are deficiencies in its customer service performance, the Commission should order improvements in specific areas as a condition of any rate increase or consider reducing the rate increase until reforms have been adopted. This approach is mandated by the statutory guidelines governing public utility rate cases in which the Commission must evaluate the "efficiency, effectiveness, and adequacy of service."[39] I have been informed by counsel that, in Pennsylvania, the quality of service a utility provides to its customers is inextricably linked with whether the rates a utility charges are just and reasonable and that the Commission may adjust components of a utility's claimed cost of service in accordance with findings regarding any inadequacies in the utility's service.

Q. SHOULD YORK WATER'S SHAREHOLDERS BE REWARDED WITH A HIGHER RATE OF RETURN BASED ON MANAGEMENT PERFORMANCE?

A. No. My testimony supports the rejection of this proposal based on the Company's failure to implement certain provisions of the 2022 Base Rate Case Settlement and the lack of any exceptional customer service performance. My testimony also supports the use of the

[39] 66 Pa. C.S. § 523.

lowest rate of return within the range of reasonableness due to these failures.

Q. DOES THIS COMPLETE YOUR TESTIMONY AT THIS TIME?

A. Yes.

- Delaware Public Service Commission's Workshop on Standard Offer Service [August 2004]

Pennsylvania Public Utility Commission
v.
The York Water Company
Docket Nos. R-2025-3053442(W) & R-2025-3053573(WW)

Office of Consumer Advocate
Interrogatories Set III

OFFICE OF CONSUMER ADVOCATE INTERROGATORY OCA SET III, NO. 1

Provide the following monthly and annual average information in an Excel spreadsheet with any formulas intact for the calendar years 2022 through the most recent month for which data is available in 2025:

NOTE: Where available, distinguish customer class for results requested.

a. Call Center Performance: calls received; calls answered by a customer service representative; percentage of calls answered within 30 seconds by a customer service representative; average speed of answer for call answered by a customer service representative, busy out rate; abandonment rate.

b. Customer disputes: number received, and number answered; number of disputes answered in more than 30 days.

c. Billing: estimated bills; percentage of meters not read within 6 months and within 12 months; number and percentage of bills not rendered on time.

d. Outages: number of outages and customers affected not caused by scheduled maintenance.

e. Appointments for repair and installation of service: provide the monthly performance data showing the appointments scheduled, kept, and not made (missed).

f. Installation of service: number of new service installations and average days to install.

g. Customer Satisfaction: survey instruments and survey results.

RESPONDENT:

Suzanne M. Becker
VP of Customer Service

DATE:

July 2, 2025

Pennsylvania Public Utility Commission
v.
The York Water Company
Docket Nos. R-2025-3053442(W) & R-2025-3053573(WW)

Office of Consumer Advocate
Interrogatories Set III

RESPONSE:

a. See **OCA-III-1 Attachment 1**. The busy out rate is not included in this spreadsheet because customers do not experience a busy signal when all CSRs lines are occupied. Instead, a customer would hear the greeting and remain on hold until a CSR is available or be sent to voicemail. The only case a customer would experience a busy signal if the internet is down and our software does not track such instances if they were to occur.

Since 2022, York Water has consciously expanded its Customer Service team, and the Company has experienced significant change within its Customer Service Department.

York Water has increased the pay schedule for CSRs to better align with the labor market in the Company's region.

The phone system was reorganized to ensure customers are connecting to the intended representative. Customers call in and select the option that fits their need and are directed to a "best first contact."

York Water launched a new website in December 2023 which encourages more customer self-service on-line through electronic form submissions, easy connectivity for payments, availability of real-time system information, and substantially more customer-centric information and updates. This should reduce incoming calls or queries.

b. See **OCA-III-1 Attachment 2** for the number of disputes, which includes internal complaints, PUC informal complaints, and PUC formal complaints. There are a wide range of dispute categories. All disputes are answered within 30 days or less.

c. The Company does not have record of any instance where bills were not issued on time during the referenced time period. Should a meter reading not be possible, the bill is issued with an estimated reading. The Company's business system can create a list of estimated readings at a point in time but does not have the capability to pull historical data on this field, so the Company is unable to provide a chart of 6-month and 12-month estimated reads.

d. See **OCA-III-1 Attachment 3** for the number of Main Breaks by month since 2022. The Company did not start tracking the number of Service Line Leaks until mid-2024. Those numbers are also included on the chart. The Company does not calculate the number of customers affected by each of the interruptions.

e. York Water does not track the number of appointments made or kept. The meter shop does track daily activities by type, but that does not include appointments for distribution. See **OCA-III-1 Attachment 4** for a monthly list of the number of customers who missed scheduled meter appointments. The Company does not record canceled/rescheduled appointments, as it is a rarity. If an emergency situation comes up, another meterman is asked to pick up the appointment, even if it involves working OT.

f. See **OCA-III-1 Attachment 5**. The Company does not track the average days to install because each service is somewhat unique. The project can be delayed for a number of reasons: customer, permits from the municipality or state, and other unforeseen circumstances. Other times installations can happen very fast (like on main extensions). This time also varies depending on what is considered the starting point for the service installation process.

g. The York Water Company Customer Satisfaction Survey Report on Results, dated December 2024 by Probolsky Research, is included as **OCA-III-1 Attachment 6**.

   Of the 1,500 York Water customers surveyed, 89% are satisfied with services, 72% say their bill is appropriate for the quality of service they receive, and 89% find yorkwater.com easy to use.

OCA SET III NO. 1A - Call Center Statistics

	# Inbound Calls	# Answered	% of calls answered in 30 seconds	Avg. Speed of calls answered	% abandoned	
2022						
January	4,970	3,709	19.65%	5:00	14.89%

1.21.25 Phone transfer times to voicemail were lessened from 10 mins (issued in Q1 2024) to 8 mins. Pre Q1 of 2024 there was no max wait time

5.16.25 - Internet was out for roughly 3.5-4 hours; phones were down as well and later resolved. Numbers may be skewed due to that incident.

The York Water Company

Part 1 – Training Information

Introduction

In an effort to make our customer service experience consistent and ensure our team delivers the highest level of care, we have enhanced our comprehensive customer service training program. The program is designed to provide our team with essential skills and tools needed to consistently meet and exceed customer expectations.

As a new hire within the Customer Service Department, the following will occur within the first two weeks of hire:

- Orientation with Human Resources
- Training onsite with an experienced Customer Service Representative for two weeks as described in the attached program documents

If the new employes is a field technician in the Customer Service Department, a Field Customer Service Representative, they will also undergo field training after initial orientation is completed and will proceed to the field after approval by the Vice President of Customer Service.

Additionally in the first year of employment, a new hire is exposed to other departments through shadow days at those facilities. Those facilities include:

- Filter Plant located on Grantly Rd.
- Distribution Center
- Brillhart Pumping Station
- A wastewater treatment plant

Throughout the calendar year, all new hires will participate in the department meetings and training sessions on a variety of topics. The schedule of meetings and training will be at regular intervals on an as need basis. Each meeting will require a sign-in sheet to document attendance.

Two Week Training Module

This training covers the first two weeks (10 days) of employment for a new hire within the Customer Service Department.

Week 1: One-on-one with an experienced Customer Service Representative

Day 1 – Day 2: Review of training binder; Introduction to YWC organization; Introduction to systems such as Oracle, Paymentus, Neptune 360, Computer Drives, Email, TEAMs, etc.

Day 3 – Day 4: Show and explain how to: process applications, work orders, start and stop service requests, turn off and final work orders, etc. *Note: by end of Day 4 begin hearing calls taken by the trainer. This is where the call flow should be explained in detail*

Day 5: Continue hearing calls taken by the trainer. By the end of the day, have the trainee navigate YWC systems while trainer speaks to customer.
Run skill assessment and ask the trainee to locate where certain items are:

- Where is the account balance
- Where is a bill found
- Where do you process payments
- Where do you create work orders
- Where do you schedule a turn on appointment

Week 2: One-on-one with an experienced Customer Service Representative

Day 6: Review binder and past week's information. Continue the navigation of systems while trainer takes calls and this includes the processing of notes, work orders, payments, identification of complaints, etc.

Day 7: Review methods of communication and who/what/where to communicate. Review the website. Review Boil Water Advisory and Lead and Copper obligations. Introduction to other systems like GIS. Set up of trainee's workspace will begin on this day with efforts by the IT department.

Day 8: Restate the call flow process and role play to practice. Questions can be reviewed and asked. The Senior Customer Service Representative to observe completion of tasks on their own and sign off on checklist. *Note: by this day the trainee should be taking calls with customer. Assistance will be close by for review. *

Day 9: Trainee should be taking calls all day with supervision and observation by the experienced Customer Service Representative.

Day 10: Trainee should be taking calls all day with the trainer monitoring from afar via call monitoring technology.

Field Customer Service Representative Training

After completion of initial Customer Service Orientation, a Field Customer Service Representative will enter the field with another experienced field employee for training. Supervision makes the decision when to begin the field training for this category of employee. The field training typically takes two weeks (10 days) to complete.

When the employee enters the field for training, they will shadow an experienced field employee, and he/she will be exposed to additional duties. In training, the employee will be observing and then performing the below tasks under supervision of an experienced field employee:

- Company phone set up
- Company truck assigned and driven to service territories
- Company truck fuel code used
- Use of field technology such as applications and emails
- Use of equipment and tools such as meter reading receivers, curb box keys, hammers, metal detector, etc.
- Completion of work in the field to include turning services off, obtaining meter readings, shutting off for non-payment, restoring services, opening curb boxes, posting delinquent notices
- Completion of work orders for every assigned task
- Complete delinquency postings at addresses

When the experienced field employee is comfortable that the new employee is competent to complete the required duties set above, he/she will sign off the field checklist/training is complete.

Cross Department Shadow Days

In alignment with exposure to operations of the company, the below shadow days/field trips of facilities are arranged within the first year of employment. Note: Supervision makes the decision to add additional options if a need is seen.

- Filter Plant on Grantley Rd. tour: Team members will see the filtration and distribution of the water source through the tour led by Water Quality technicians
- Distribution Center shadow day: Team members will shadow other company employees handling different business needs; this department works closely with Customer Service and the exposure will connect different areas of the Company.
- Brillhart Pumping Station: Team members will shadow other company employees handling different business at a water pumping station; an understanding of the water flow chart includes our pumping stations.
- A wastewater treatment plant: Team members will shadow a wastewater treatment plant employee at a wastewater treatment plant; an understanding of the wastewater treatment process relates to the services provided by the Company; the tour may be at any plant in any of the 4 counties served

Schedule of Training Topics

The Customer Service Department a broad spectrum of issues from internal and external sources. The below schedule is a guide to ensure review of topics continue to take place. Note: the topics of the meetings are at the discretion of supervision.

Training Schedule

	Weekly	Bi-weekly	Monthly	Quarterly	Annually	Ad Hoc

Enroll in or Discontinue Automatic Payments

York Water's Timely Automatic Payment Program is called TAP. You can enroll in or discontinue your automatic payments with the forms below.

ENROLL IN TAP

Who can enroll in TAP?

All York Water customers can enroll in TAP. This includes York Water water and wastewater customers, Spring Garden Township wastewater customers, New Salem Borough wastewater customers, and City of York refuse customers.

When will automatic payments begin?

When you complete the TAP enrollment form, automatic payments may not begin right away. Check your next York Water bill. When you are enrolled in TAP, we will print a message on your bill to let you know that enrollment is complete and that we will deduct the amount due from your bank account on the due date.

What do I do if I have a question about my bill?

We will continue to send you a monthly billing statement. The statement will arrive well before the automatic payment is withdrawn from your account. If you have any questions about your billing statement, contact our Customer Service team right away so we can resolve your inquiry before the automatic payment date.

TAP Enrollment Forms

Complete a TAP enrollment form:

- Enroll in TAP for Water Service
- Enroll in TAP for Wastewater or Refuse Service

DISCONTINUE TAP

Who can discontinue TAP?

All York Water customers can discontinue TAP if they have enrolled in the program. This includes York Water wastewater customers, Spring Garden Township wastewater customers, New Salem Borough wastewater customers, and City of York refuse customers.

TAP Discontinuance Forms

Fill out a form below to discontinue your water, wastewater, or refuse bill automatic payments.

- Discontinue TAP for Water Service
- Discontinue TAP for Wastewater or Refuse Service

TIMELY AUTOMATIC PAYMENT "TAP" SYSTEM

With the "TAP" System, you will continue to receive a monthly water statement. A copy of your water bill will arrive before the payment is due. If you have any question, you will have sufficient time to contact us for clarification.

Simply fill out the section(s) that apply to you. We will print a message on your bill when you are enrolled. On the due date, we will deduct the amount due from your bank account. If you have any questions, please call our Customer Service Department at (717) 845-3601 or our Toll Free number 1-800-750-5561 weekdays from 8:30am to 5:00pm.

"That good York water"
SINCE 1816

The York Water Company

Water Service Line Protection Plan

Did you know that you are responsible for any maintenance on the water service line from The York Water Company's shut-off valve at the curb line into your house? Although infrequent, when there is a problem on your service line, it could cost over $2,000 to repair and may restrict access to the water for the days it takes for you to contact a plumber, schedule an appointment, and then have the repairs completed.

Over the years, our customers have asked The York Water Company to provide a voluntary program where The York Water Company would assist with those repairs. We offer this "peace of mind" program to our customers for a small monthly fee of $5, or, if you sign up for a full year, it is $55 (like receiving a month free!).

Benefits of the program:

- ✓ What is covered: Repair/replace the leaking or broken service line
  Repair/replace any driveway, sidewalk, or lawn areas that are disturbed during the repair
- ✓ Costs covered per year: up to $3,000
- ✓ 12 month guarantee on all work performed
- ✓ No deductibles
- ✓ No special numbers to call, just call into our office or 24-hour emergency number
- ✓ We partner with local plumbers who live in our area and can respond quickly to your needs

Monthly Fee: $5, or pay for the full year, upfront, and only pay $55 (a $5 savings!)

Again, this is a voluntary program. Not only does it cover all costs for a typical homeowner's service line repair or replacement, but it gives you peace of mind with one phone call to The York Water Company!

If you have additional questions, please contact Tyler Clemens at (717) 718-2979 or email tylerc@yorkwater.com.

The York Water Company

YES! Sign me up for The York Water Company Service Line Protection Plan!
Please read the Terms and Conditions for plan details.

Name_____ E-mail:_____ ☐ I prefer e-mail notifications
Customer Account Number (from your water bill if available) _____ Phone:_____
Service Address Street_____
City, State, ZIP_____
Billing Address (if different from service address) Street_____
City, State, ZIP_____

Select a Payment Method:

1. Send a check for $55 for 12 months, payable to "The York Water Company".
2. Automatically withdraw $5 each month. Send a check for first month's fee and we'll set up a monthly automatic withdrawal.
3. Automatically withdraw $55 once each year. Send a check for the first year's annual fee and we'll set up an annual automatic withdrawal.

*Once a payment has been set up, we will send a confirmation notice via email or letter, which will initiate the Protection Plan.

Signature for Automatic Withdrawal Payment_____ **Date**_____

Please send completed application to: The York Water Company Customer Service at 130 East Market Street, York, PA 17401.

PAYMENT AGREEMENTS

- When to set up a payment agreement:
  - Customer who has been issued a shut off notice
  - Customer who is past due and exhausted options such as an extension for a promise to pay
    - Past due balance can be less than $200.00
    - Remember this option helps a customer work on the past due and ease the shut off burden of one large lump sum and be able to pay overtime
  - Customer who has gone through a change in circumstance (loss of job, leak that has been repaired, additional household size)
  - Customer who has not been set up on a payment agreement in the past

- What happens once on a payment agreement:
  - If the monthly payment agreement is not paid by the due date, a shut off notice is generated and mailed to advise of the past due amount and the shut off date
    - This will happen each and every month
    - Terms are to pay each month the agreed payment agreement amount
      - Unlike a non-payment agreement customer where the notices are generated after 60 days past due, a payment agreement customer has shutoff notices sent each month when past due
  - Postings continue for these customers if not paid as well
  - Extensions, assistance options, etc. can still be eligible to customers
    - Look for correspondences on this via collections department

- Where do I find information on customers on payment agreements:
  - The payment agreement drive (J) lists all customers who received mailed notices
  - Oracle adjusts their status to show Payment Agreement when actively on one
  - Correspondences through collections department

J:\Rate Case\2022\Settlement\newratesheet2023

Sewer Rates for YWC Owned and Operated Wastewater systems SMARTSHEET

YWC is owner and operator

- Water & Sewer on **same bill** for homeowners who reside at the service location
- Water & Sewer are **separated** in Landlord/tenant situations where tenant is responsible for the water and the landlord is responsible for the sewer
- Water rates follow those specified in the approved tariff
- Only **wastewater** bills will be generated for the approx. 125 customers in Felton Borough
- Only **wastewater** bills will be generated for the approx. 150 customers in Letterkenny Township
- Only **wastewater** bills will be generated for the approx. 180 customers in Memphord Estates Sewer Company (MESCO)

West York Rates:

- **$60.00 per month for Residential customers**
- **$69.55 per month for Commercial & Industrial customers**
- **There are some properties in WY that are "not connected" and are not to be billed for sewer (Jack Longstreet)**

East Prospect Rates: (If water is turned off, wastewater charges need to continue billing)

- **$86.90 per month for the first 4,000 gallons of water used**
- **$86.90 per month + $7.565 for every 1,000 gallons used after the first 4,000 gallons**
- **Wastewater customers may be granted a 1 time a year pool credit (grandfathered in when system acquired by YWC)**
    - **This means if a customer state they filled their pool, you may credit them for wastewater charges as the water to fill the pool did not get processed by the wastewater plant**
    - **You will credit the customer based on average usage. Ex: The average water consumption is 5,000 gallons. The customer filled a pool, and the usage was 10,000 gallons. The credit for the associated wastewater charges would be for 5,000 gallons (10,000 – 5,000 = 5,000).**

Asbury Pointe Rates:

- **$86.90 per month flat rate**

Jacobus Rates: (If water is turned off, wastewater charges need to continue billing)

- $86.90 per month for the first 4,000 gallons of water used
- $86.90 per month + $7.565 for every 1,000 gallons used after the first 4,000 gallons

Felton Borough Rates:

- $86.90 per month flat rate

Letterkenny Township Rates:

- $86.90 per month flat rate per EDU

Amblebrook Gettysburg (Straban Twp) Rates: (If water is turned off, wastewater charges need to continue billing)

- $86.90 per month flat rate for the first 4,000 gallons of water used
- $86.90 per month + $7.565 for every 1,000 gallons used after the first 4,000 gallons

West Manheim Rates: (If water is turned off, wastewater charges need to continue billing)

- Base Rate : $57.85 per month
- If consumption occurs, the following amounts will be added in billing
  - Usage Rate: 0 – 3,500 gallons is $7.565 per 1,000 gallons per month
  - Usage Rate: 3,501 – 7,000 gallons is $10.789 per 1,000 gallons per month
  - Usage Rate: 7,001 and above is $13.487 per 1,000 gallons per month
- Wastewater customers may be granted a 1 time a year pool credit
  - This means if a customer state they filled their pool, you may credit them for wastewater charges as the water to fill the pool did not get processed by the wastewater plant
  - You will credit the customer based on average usage. Ex: The average water consumption is 5,000 gallons. The customer filled a pool, and the usage was 10,000 gallons. The credit for the associated wastewater charges would be for 5,000 gallons (10,000 – 5,000 = 5,000).
  - (note added 5.21.2024)

CountryView Manor MHP Rates:**Wastewater stays in the name of the tenants**(If water is turned off, wastewater charges need to continue billing)

- $40.00 for the first 3,000 gallons
- $40.00 per month + $5.00 per 1,000 gallons after the initial 3,000 gallons

LIDA Rates: (If water is turned off, wastewater charges need to continue billing)

- Commercial/Industrial
  - $111.85 for the first 10,500 gallons
  - Above + $15.44 per 1,000 gallons after the initial 10,500 gallons
- Residential
  - $40.00 for the first 4,000 gallons
  - $40.00 per month + $5.00 per 1,000 gallons after the initial 4,000 gallons

Albright Mobile Home Park/SYC: (If water is turned off, wastewater charges need to continue billing)

- Residential
  - $40.00 for the first 4,000 gallons
  - $40.00 per month + $5.00 per 1,000 gallons after the initial 4,000 gallons
- Commercial/Industrial
  - $111.85 for the first 10,500 gallons
  - Above + $15.44 per 1,000 gallons after the initial 10,500 gallons

West Donegal Township (CIP):

- Customers will be charged rate of $13.89 per 1,000 gallons and subject to a minimum of $58.33 per month

Memphord Estates Sewer Company (MESCO):

- Customers are charged flat fee $44.20 per month

Consumption Calls

A. **High Consumption:**
   a. Before you call:
      i. Look at the bill history to see if they used a similar amount around that time last year
      ii. Are there any notes about H/C?
      iii. Has their usage been increasing recently?

   b. Prompt:
      i. Hi this is (your name) from the YWC, is this (account holder's name)?
      ii. I am calling about the address _____
      iii. I am calling because we noticed your consumption this past month was significantly higher than normal.
      iv. Your average usage is ___ per month and this past month from _____ to ____ it was ___ gallons
      v. Are you aware of why it would be so high?

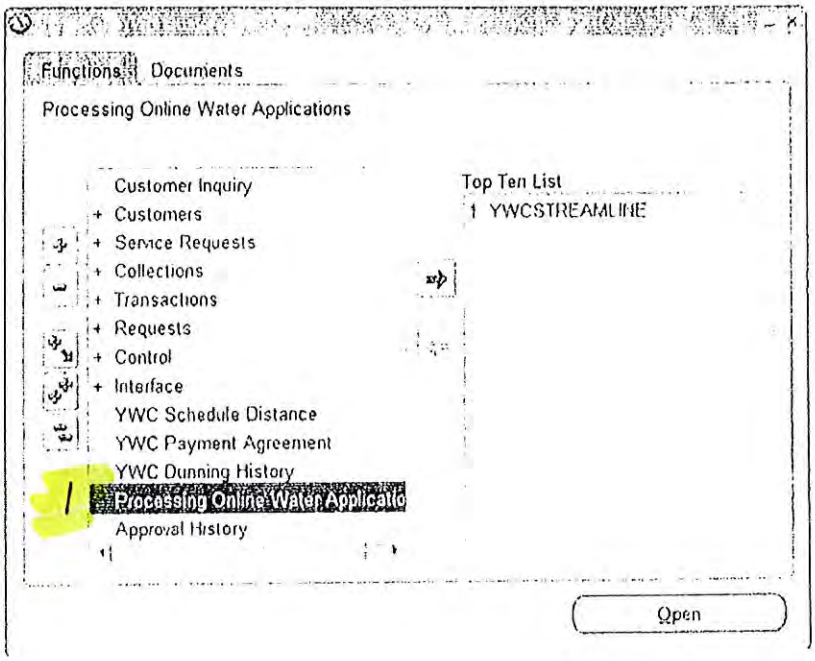
   c. If unaware:
      i. They can check their meter – explain to them how to look at the meter to tell if there is a leak/water running or not (**see following page for meter info**)
      ii. Toilets:
         1. 90% of high consumption is because of a leaky toilet. If they haven't checked their toilets explain this test to them:
            a. Tell them to place food dye in the tank of each toilet, wait 15-20 WITHOUT flushing. After that time, check the bowl of the toilet. If the bowl is turning the color of the food dye, then water is running in the toilet

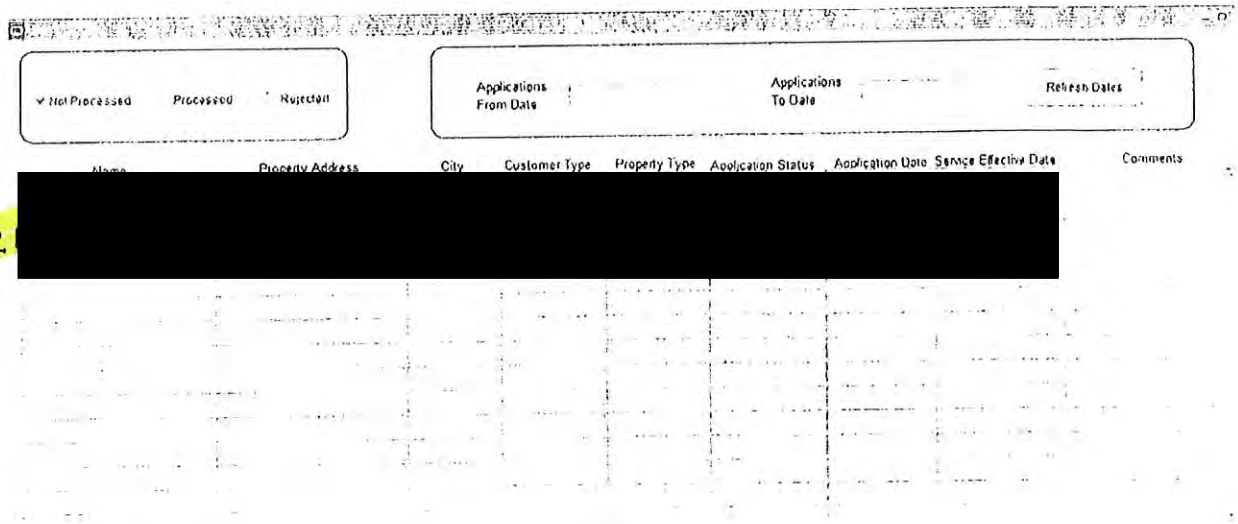
B. **No Consumption**
   a. Prompt
      i. Hi this is (your name) from the YWC, is this (account holder's name)?
      ii. I am calling about the address _____
      iii. I am calling because we noticed your consumption this past __ months have shown little or no consumption. I was checking to see if the property was vacant, or if our meter had stopped working.
   b. If vacant – okay, note this in service requests
   c. If not vacant – schedule an "investigate stopped meter" in service requests

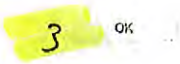
** YWC are not plumbers. If we send a meter reader to check for leaks, they will not make any repairs. This is a courtesy; we are not required to call or send someone out to check for leak. Try to avoid making these appointments (sometimes we will make them though – if scheduling an appointment, check with [redacted] first to see what day will work with Meter Reading's schedule)**

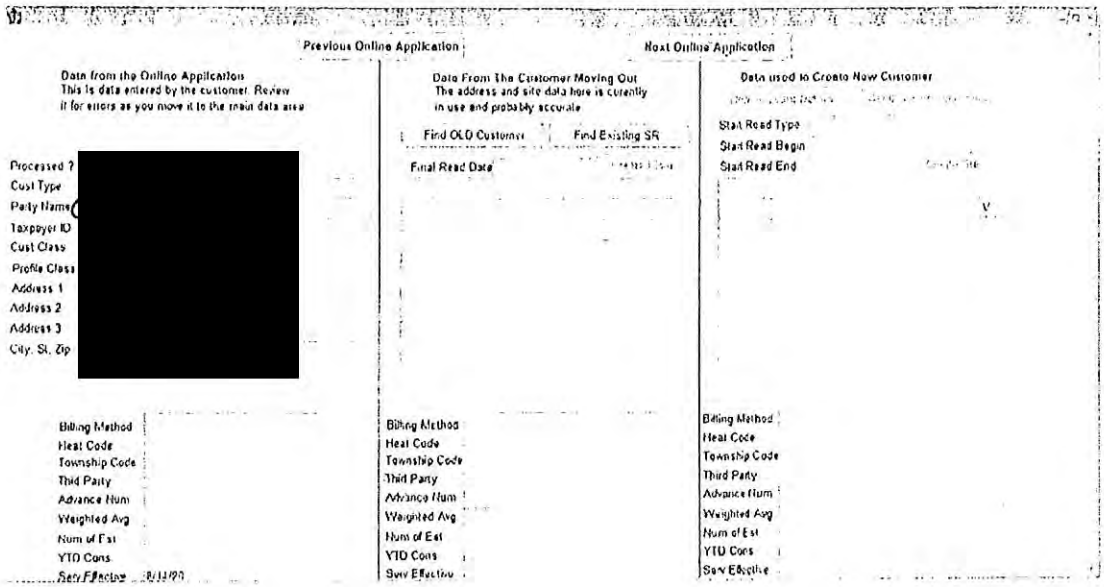
How To

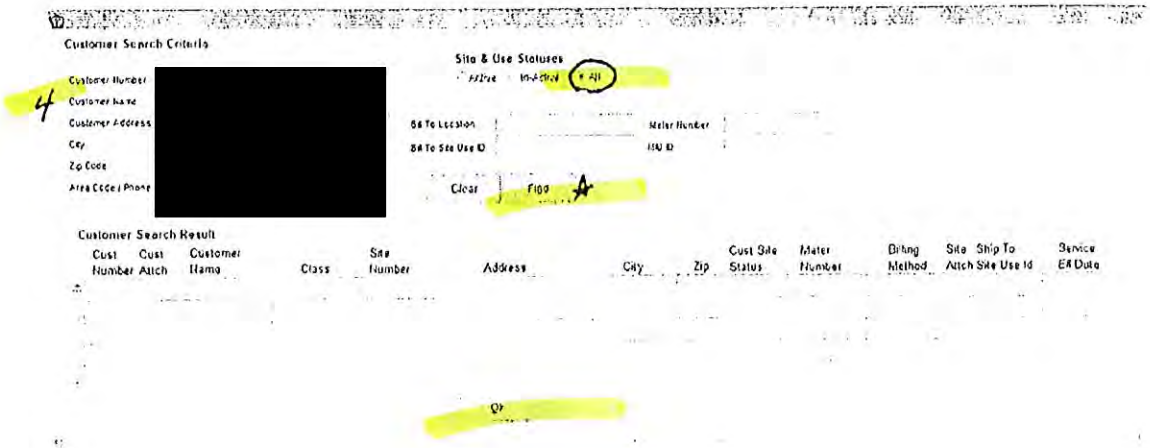
Online Applications : Steps





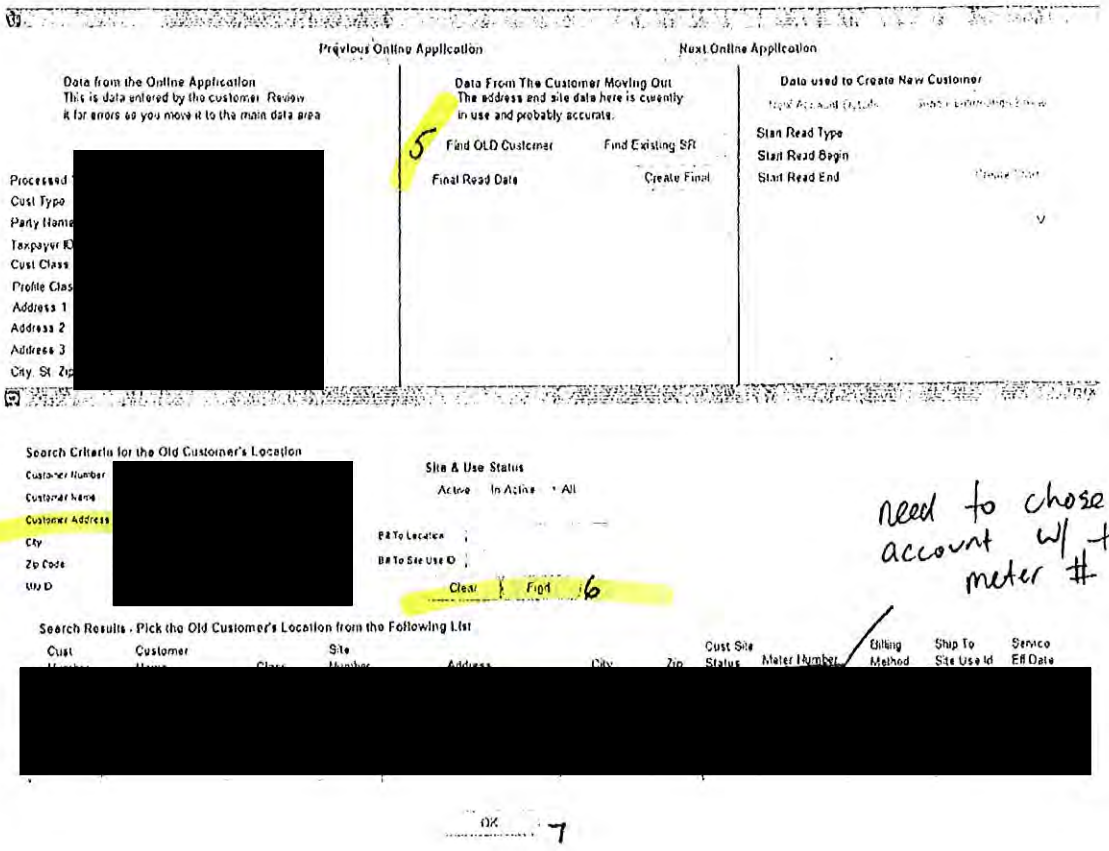




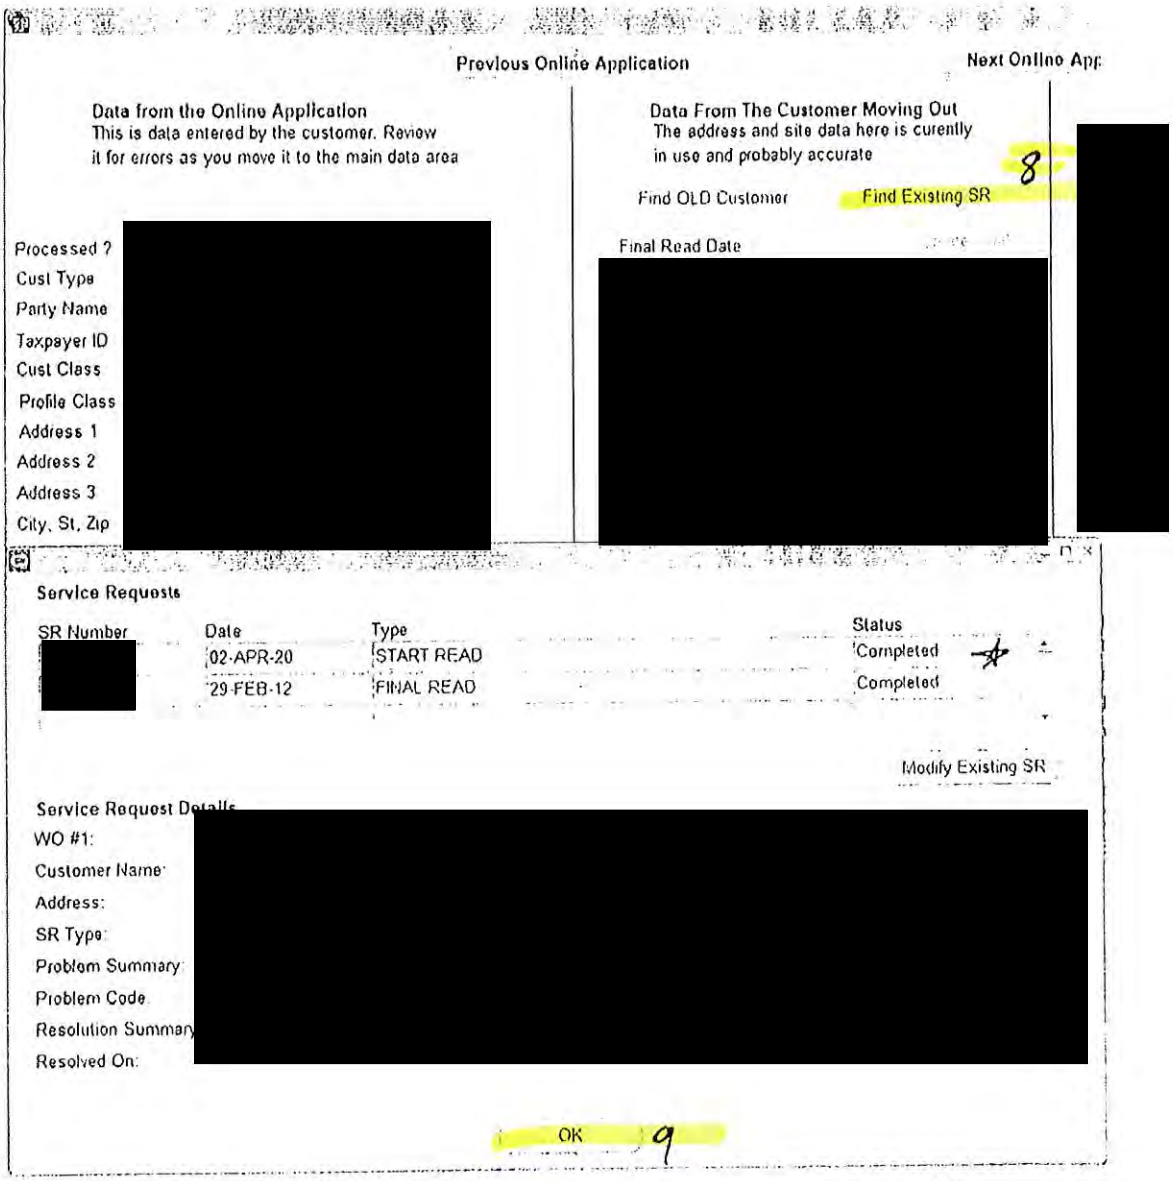


- Search name to see if current or previous customer

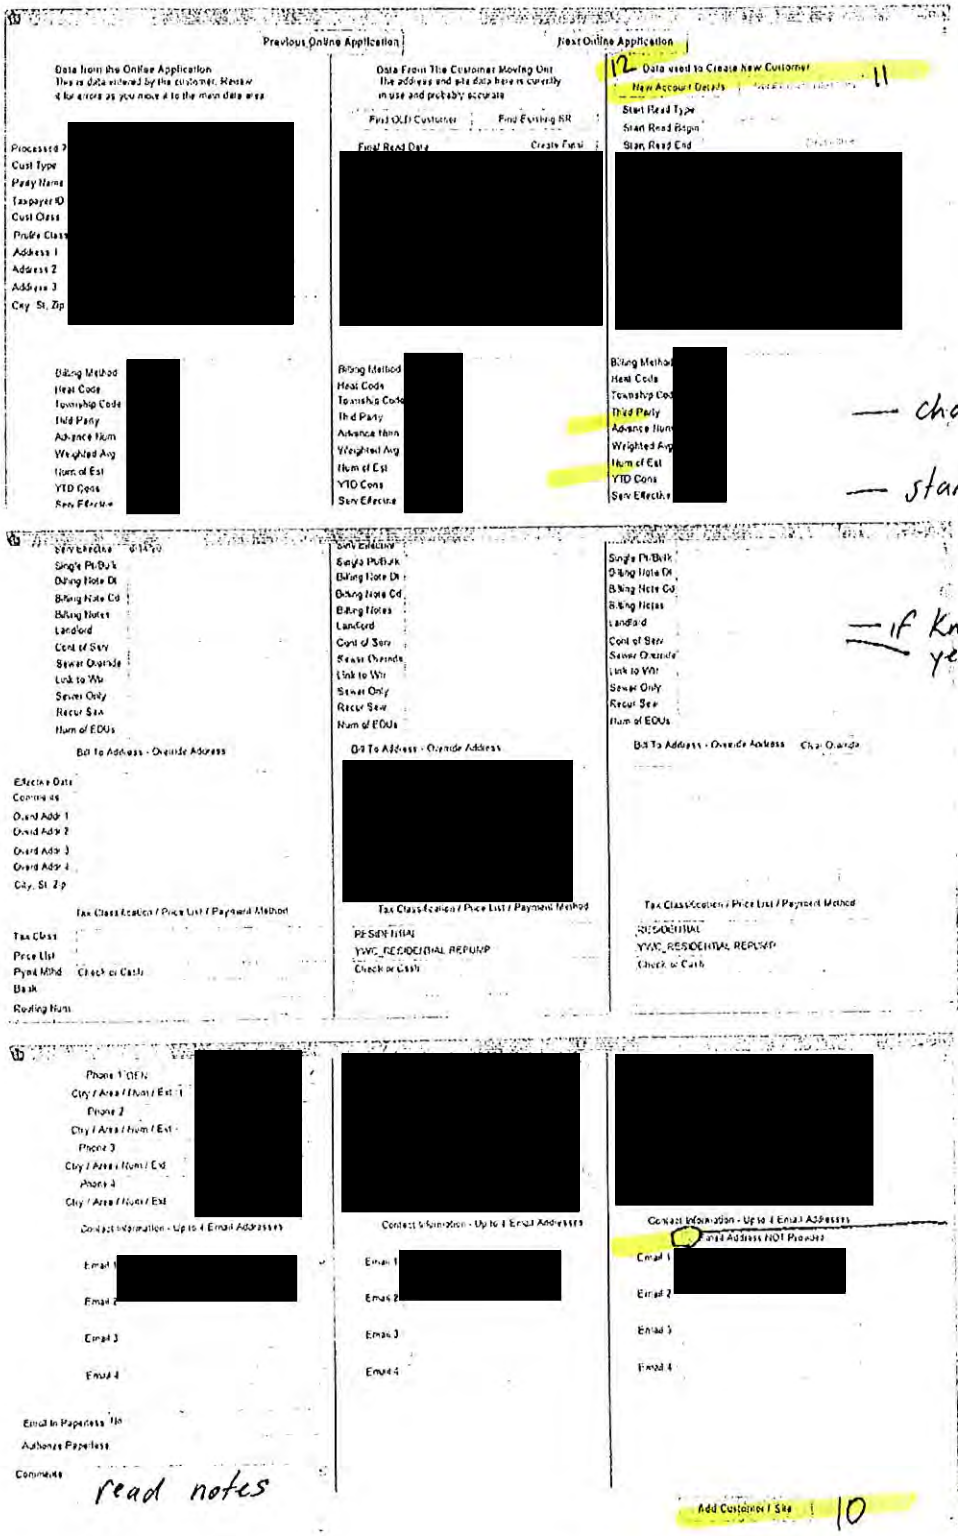
- if previous, check SSN to verify same person
  - if yes, check for "in collections" status



* they address on the app needs to match Oracle



- verify that the water is either on or off
- if scheduled to be turned off that day, call Meter Reader to see if it is off yet or not
  - ↳ if still on, they will get a final read only, and leave the water on



— change if "13"

— start date requested

— if known — must have if yes

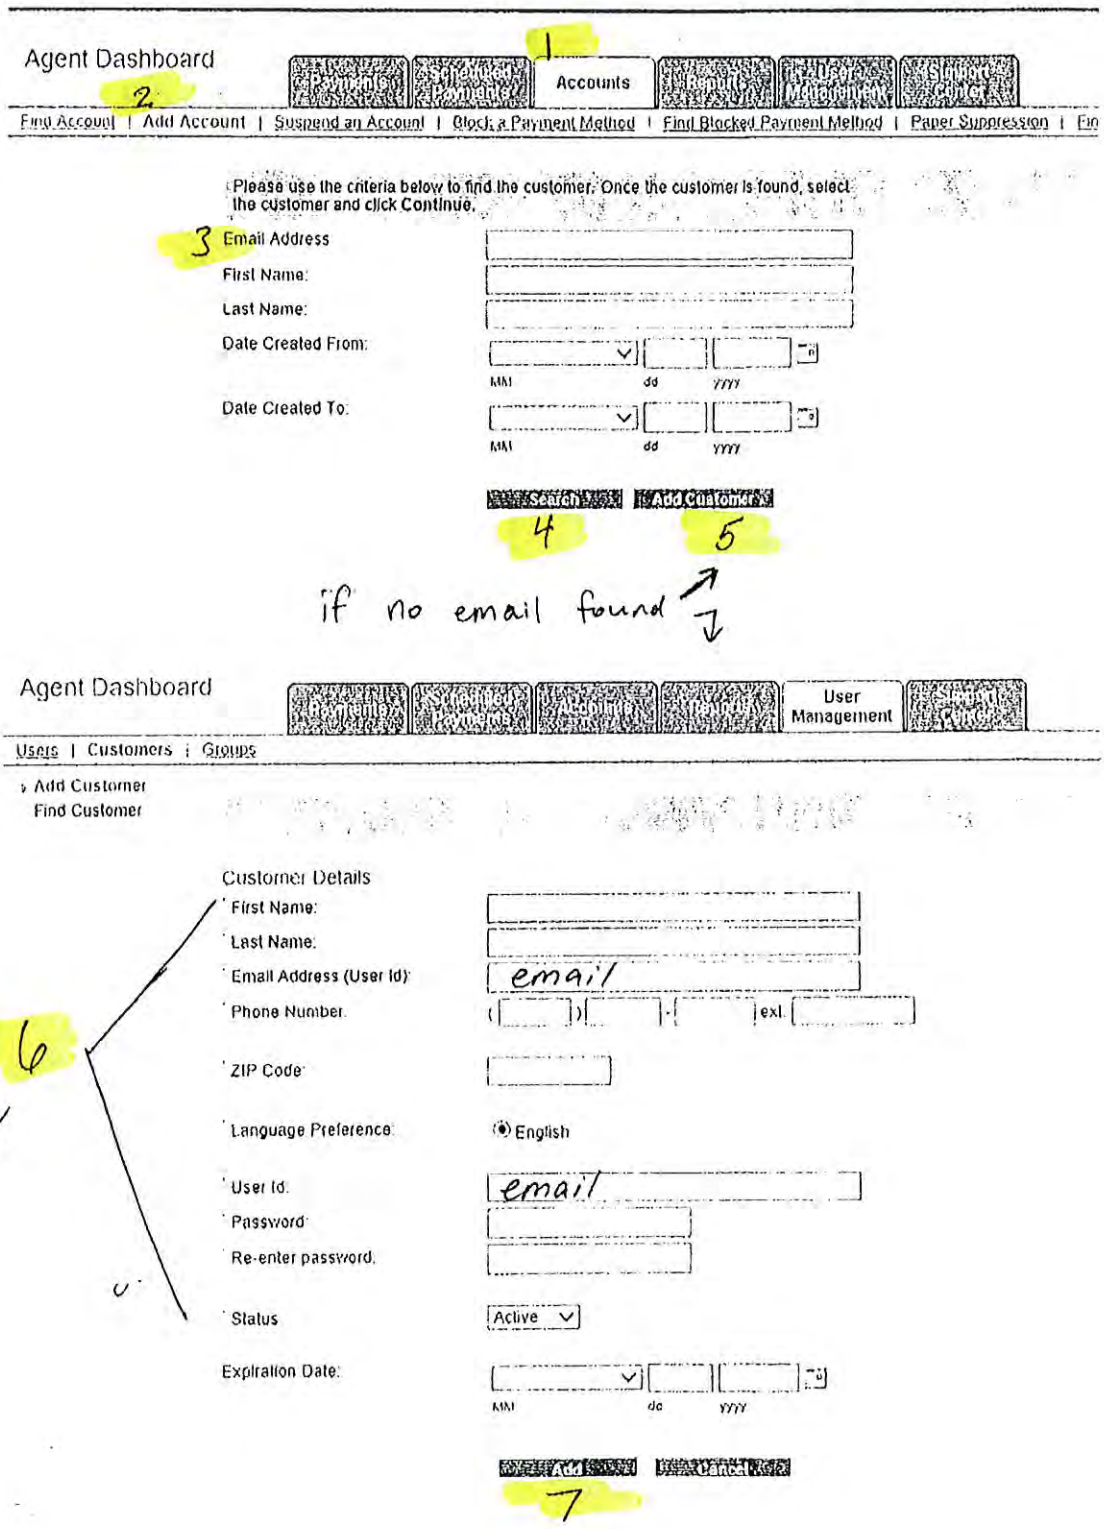
if blank: ✓

read notes

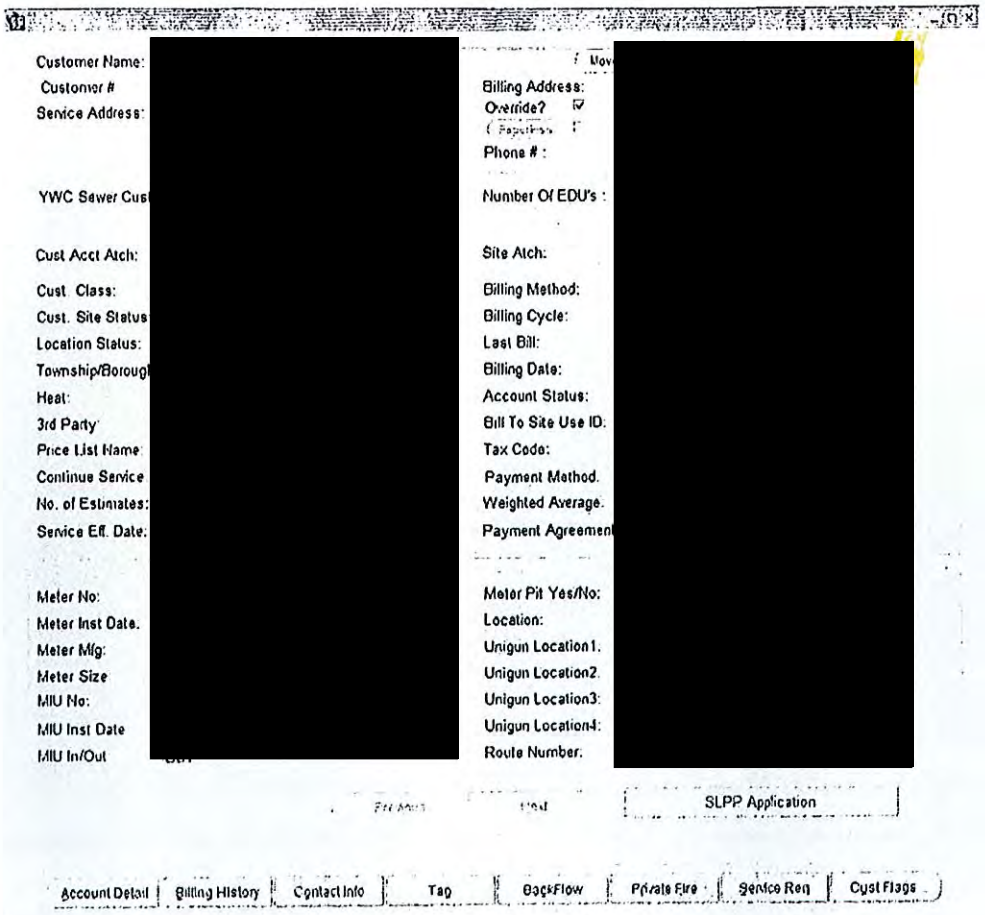
13 create start read & final read work orders

12: create sewer acct if applicable

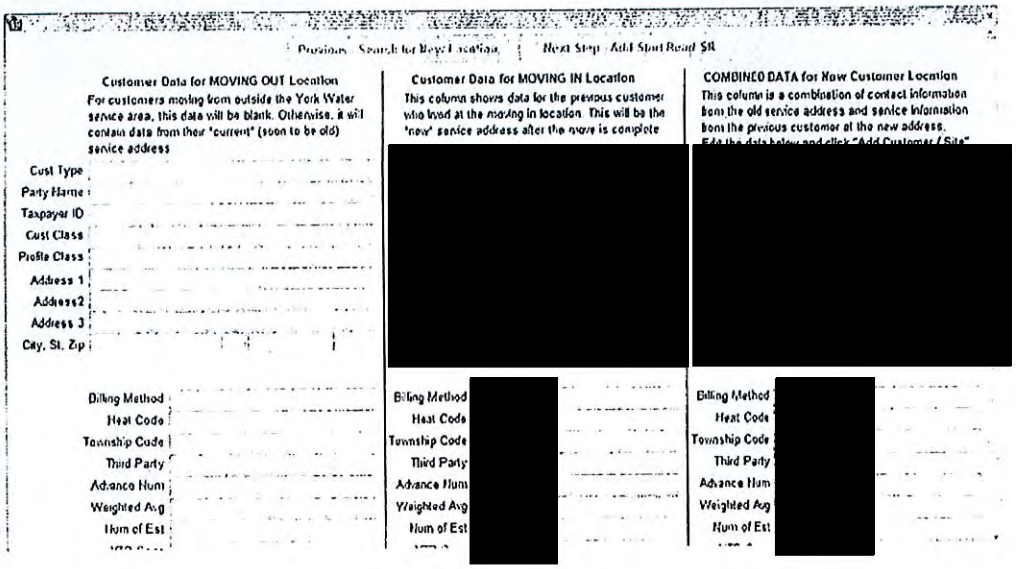
Add Customer in Paymentus

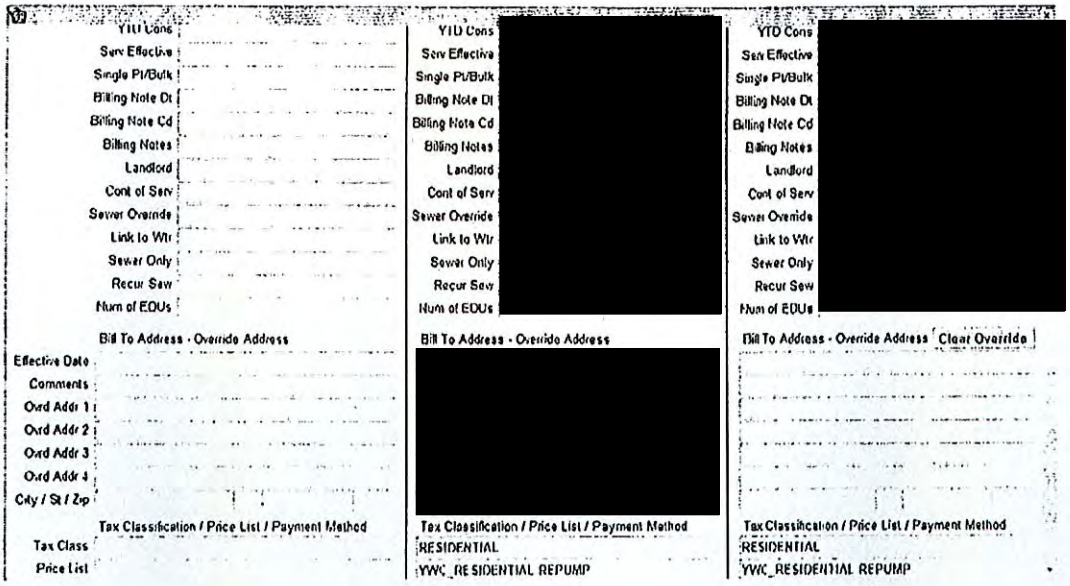


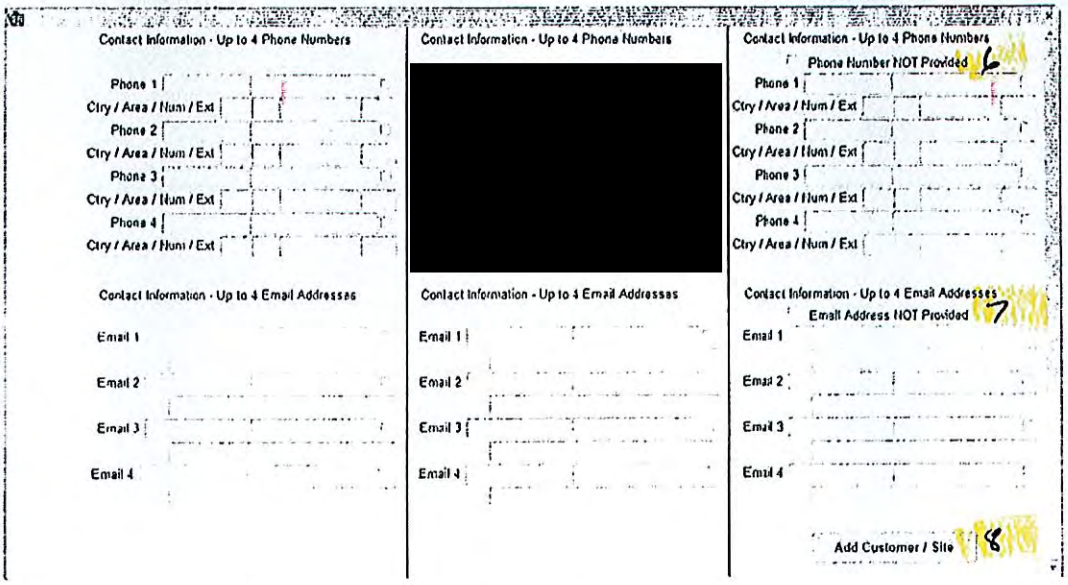
Creating an Account from a Paper Application



★ 1st: search for customer – may have old account ★

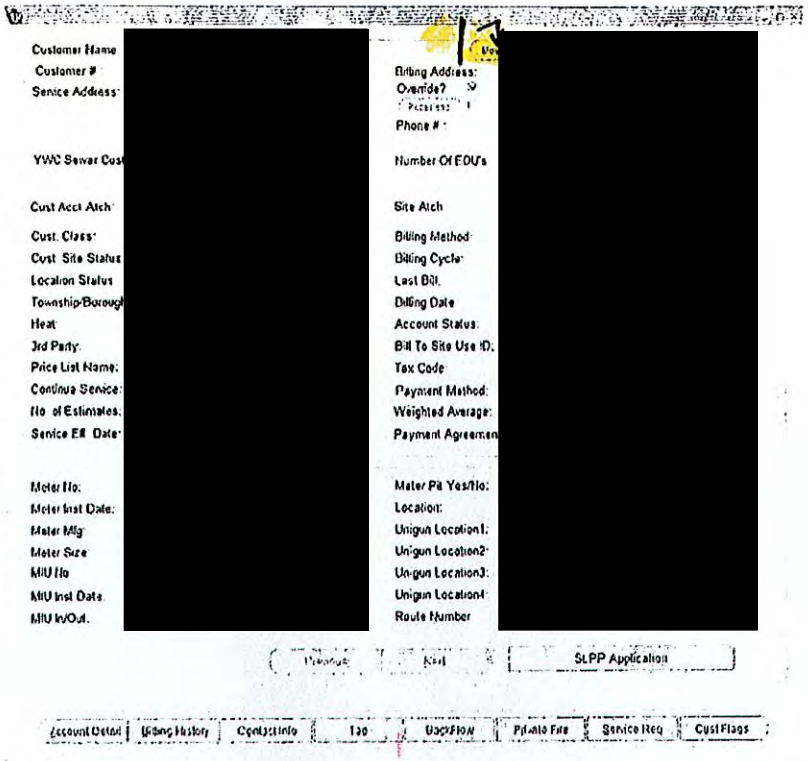


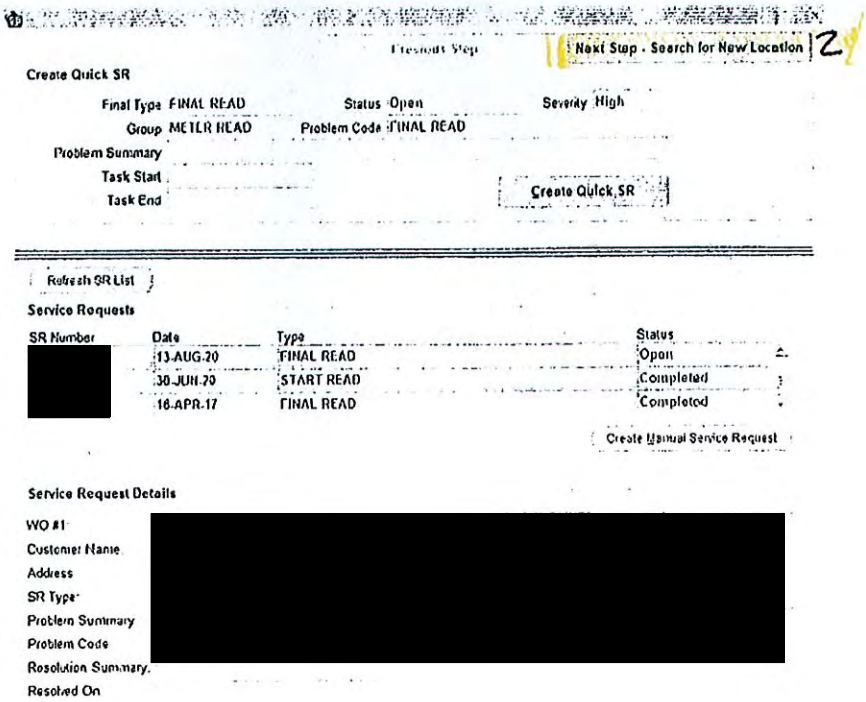


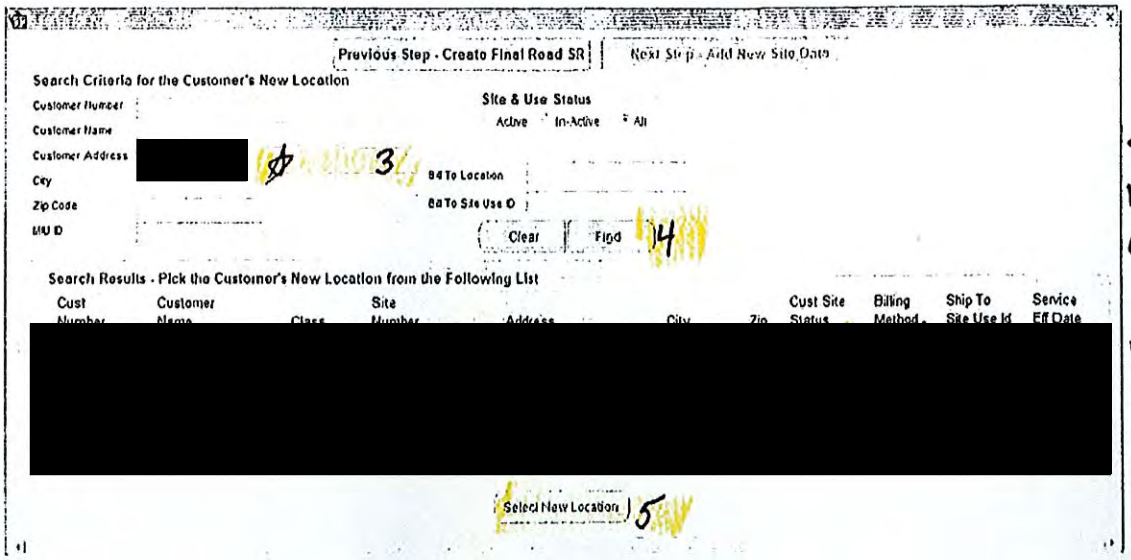


9: create start / final / turn-on work order(s) as needed

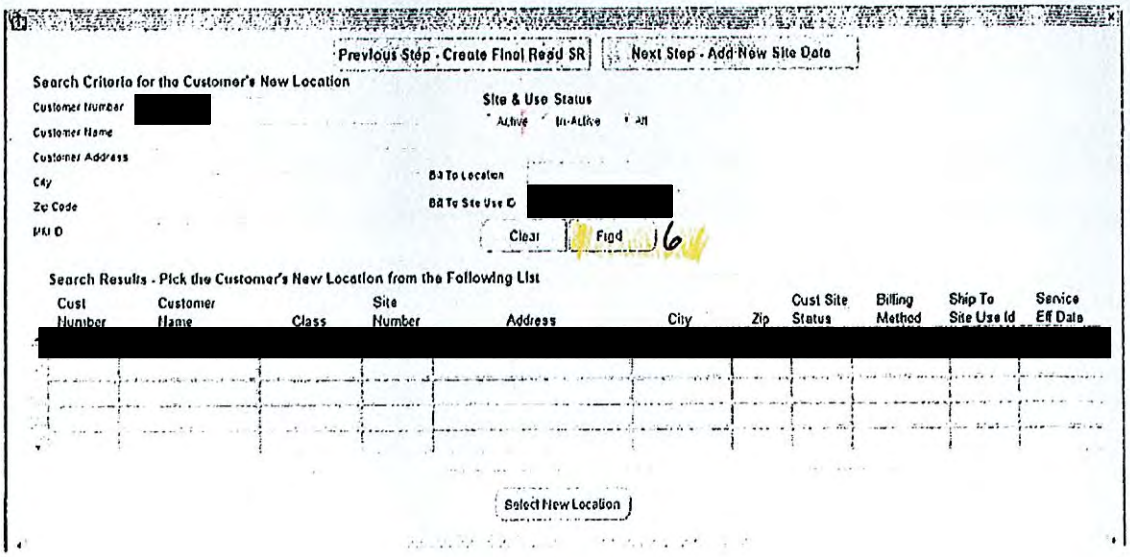
Moving Customer from One Address to Another







4 need metered account & verify addresses match 4

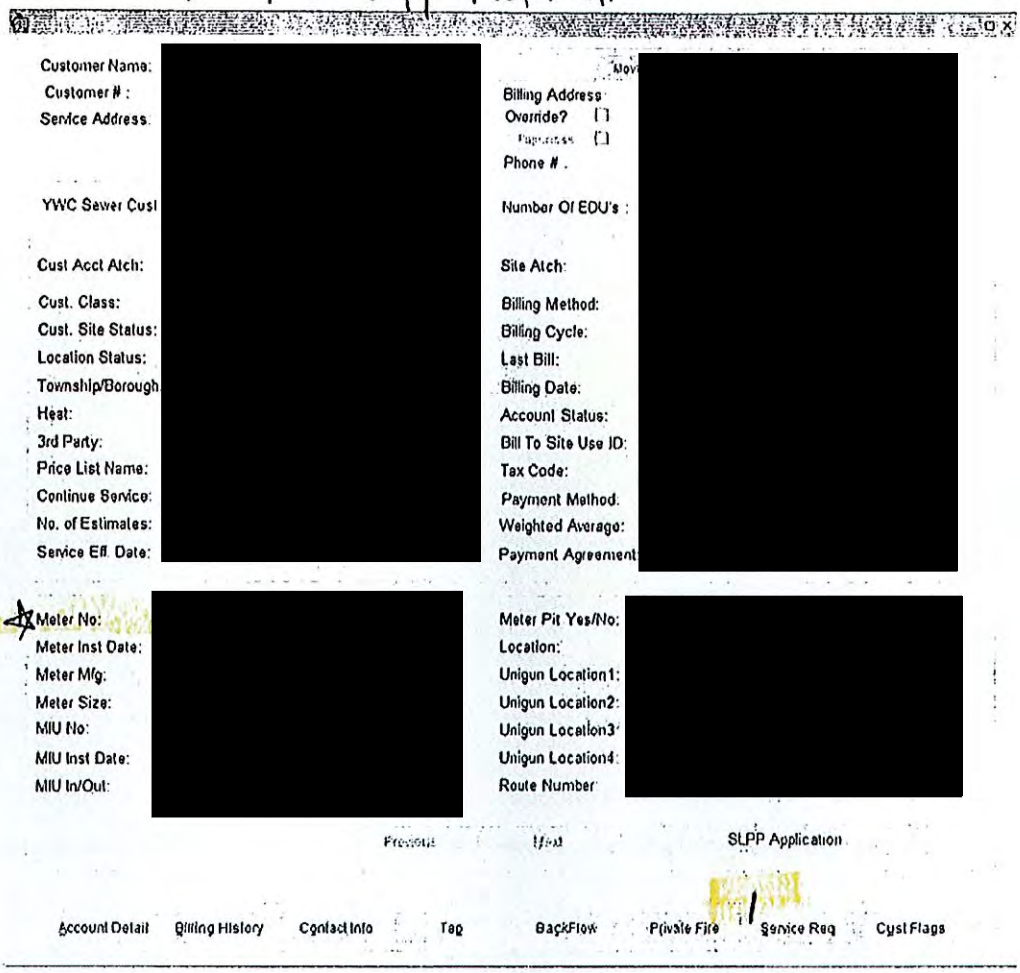


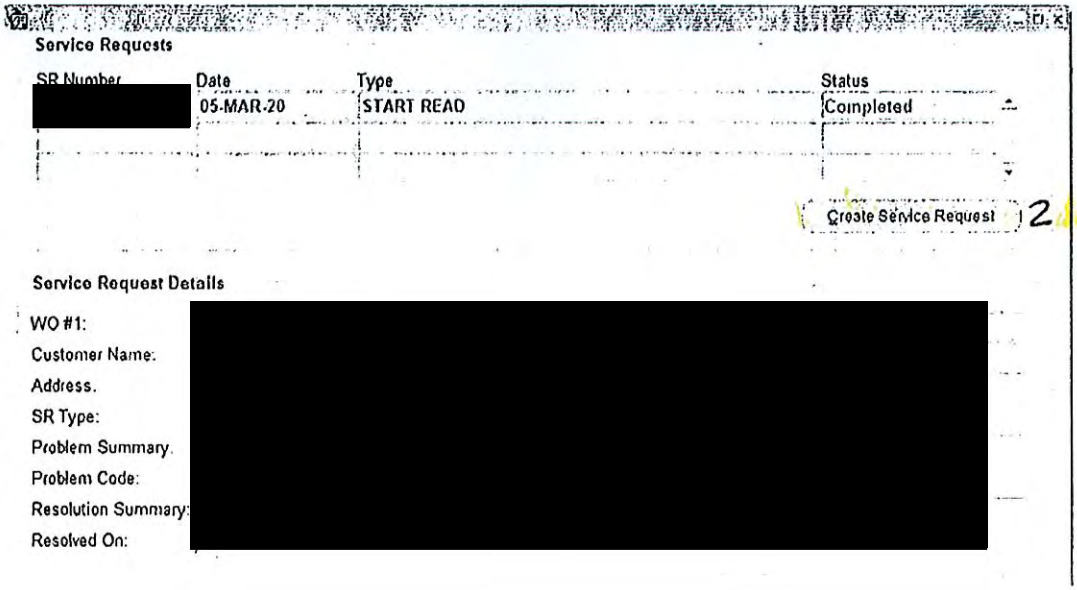
7: fill out like any other app

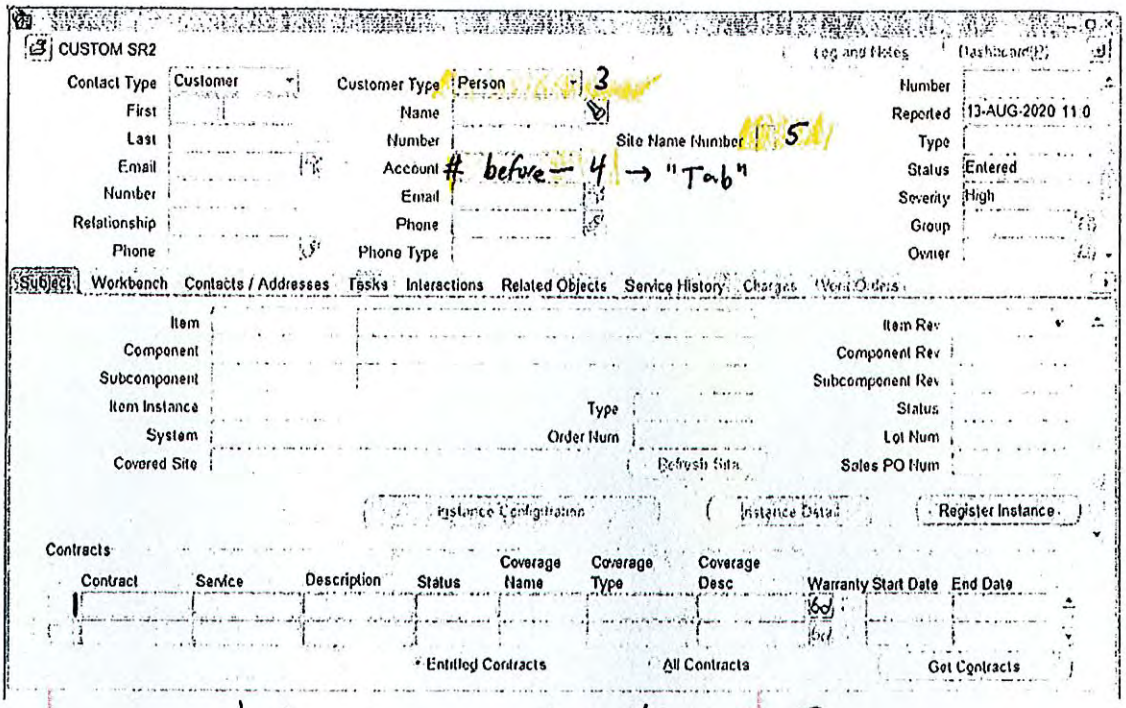
8: start / final / turn-on as needed

Creating a Work order

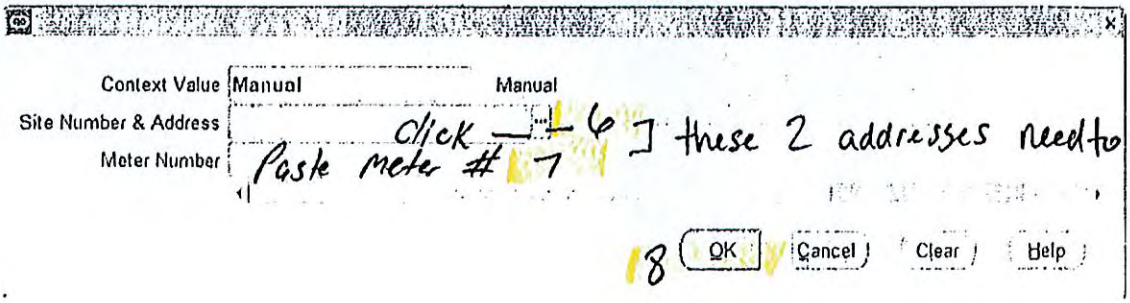
1st: copy Meter #

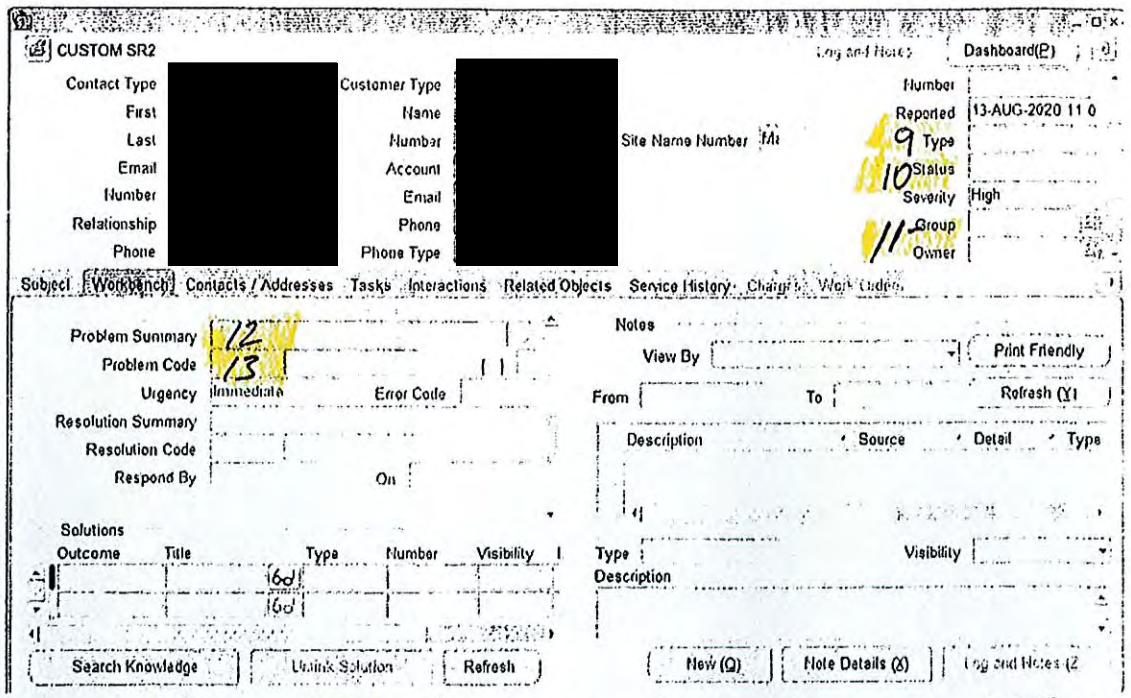




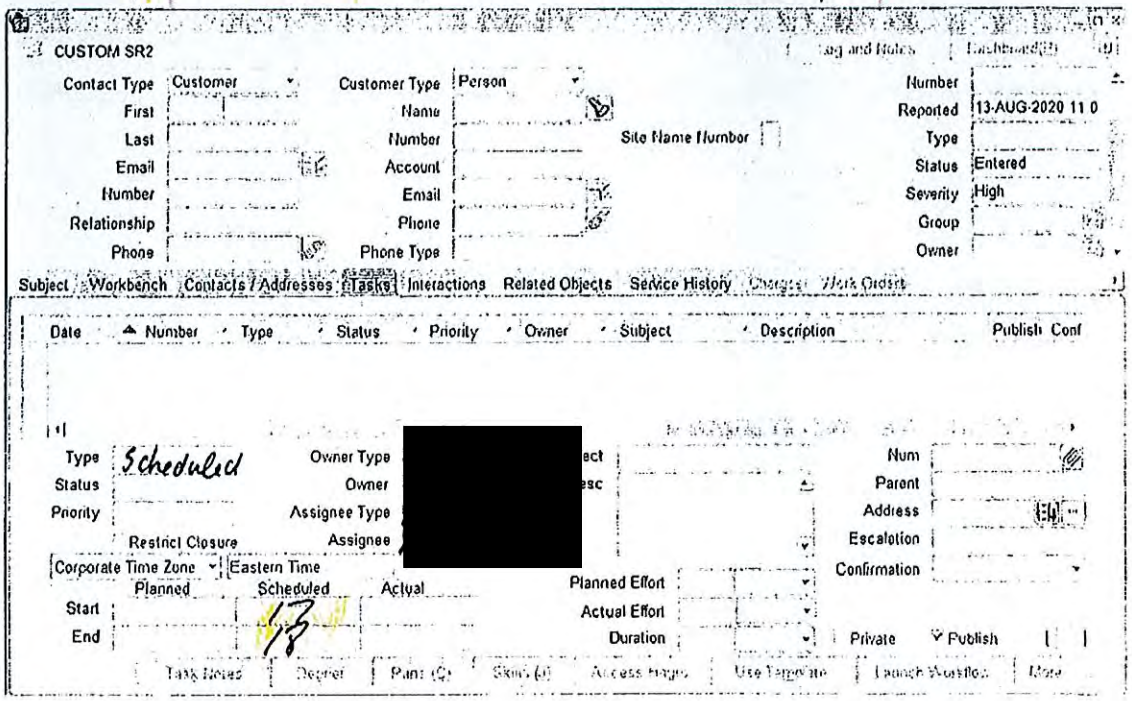


5: see below image for step 5-8 ↓





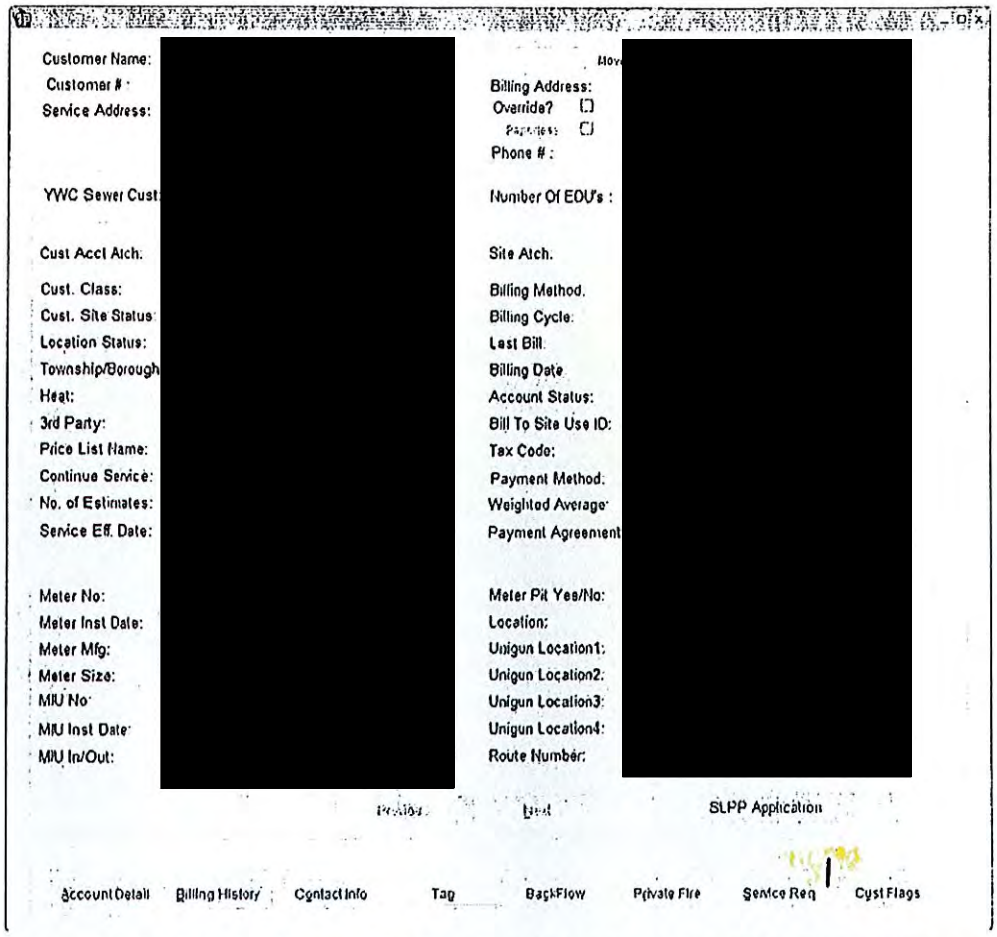
14: SAVE (automatically takes you to "Tasks")

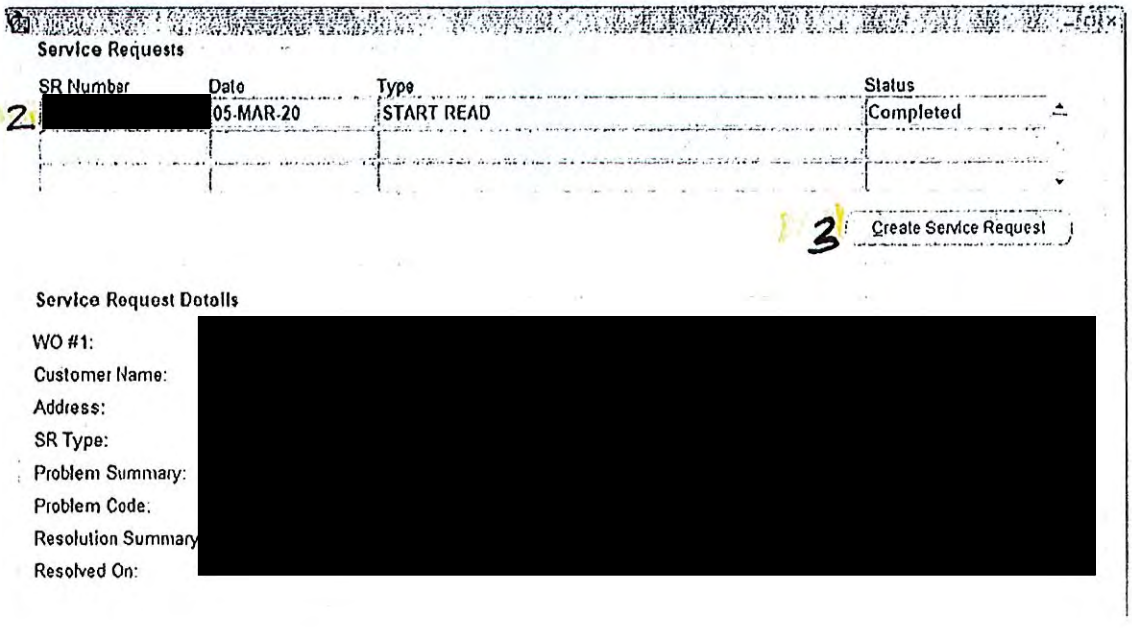


19: save & Exit

can check done correctly by clicking "service request" again

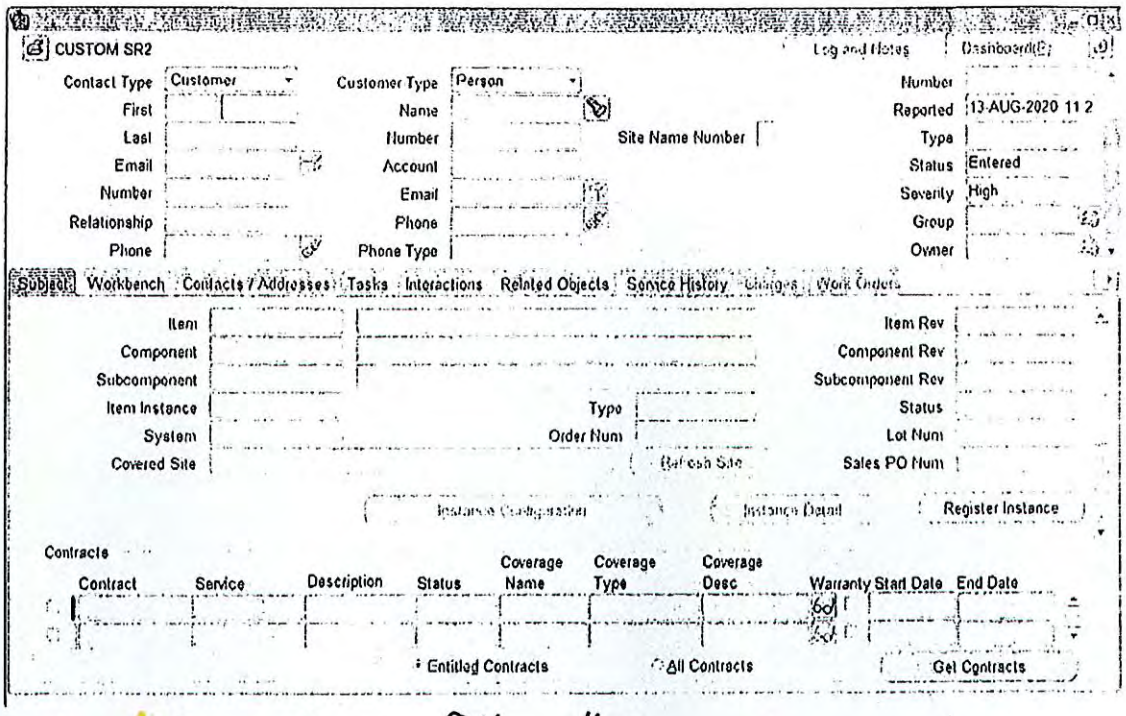
Editing a Work Order



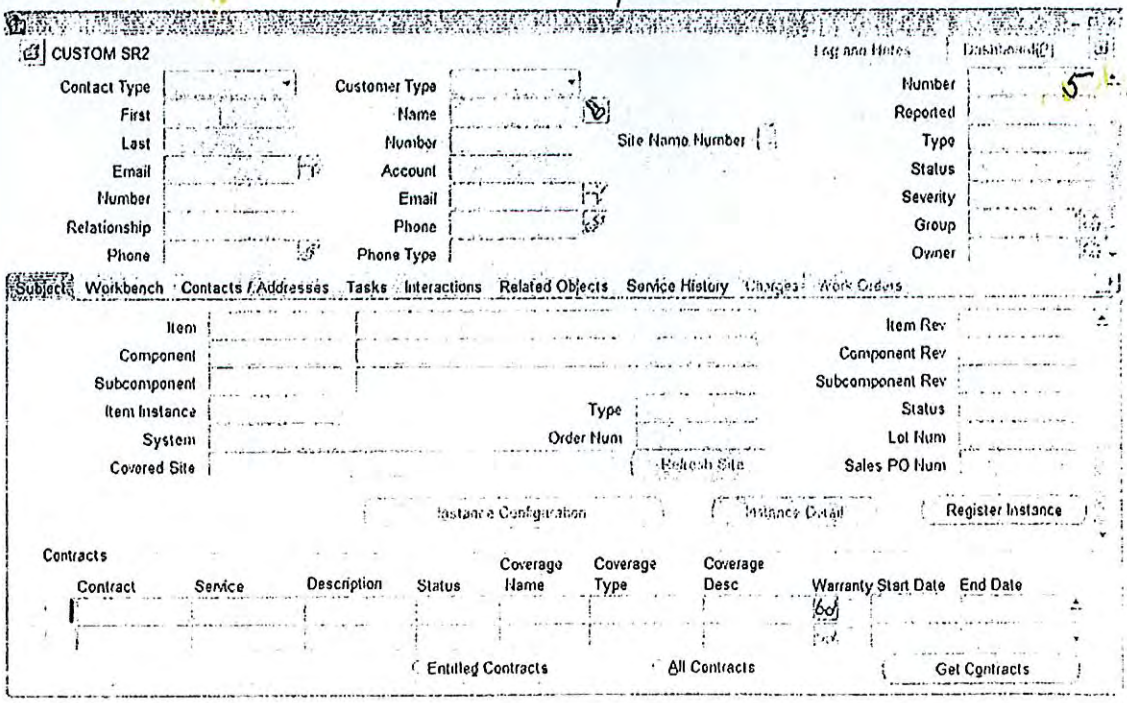


copy → 2

3



4: click F11 key



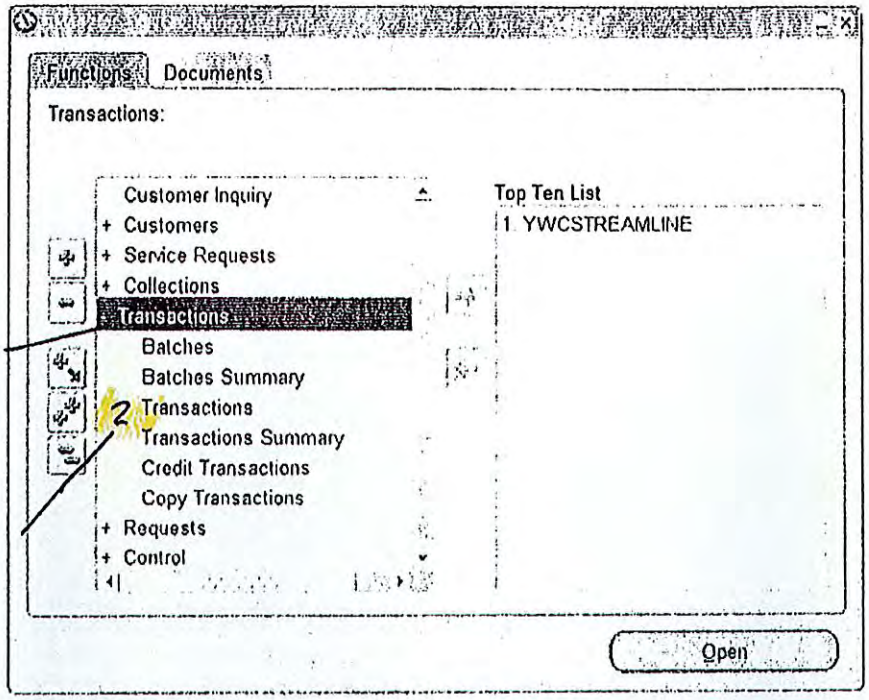
5: Paste #

6: hold Ctrl + F11 keys

7: add notes / make changes

8: save + exit

Debit / Credit / Balance Transfer

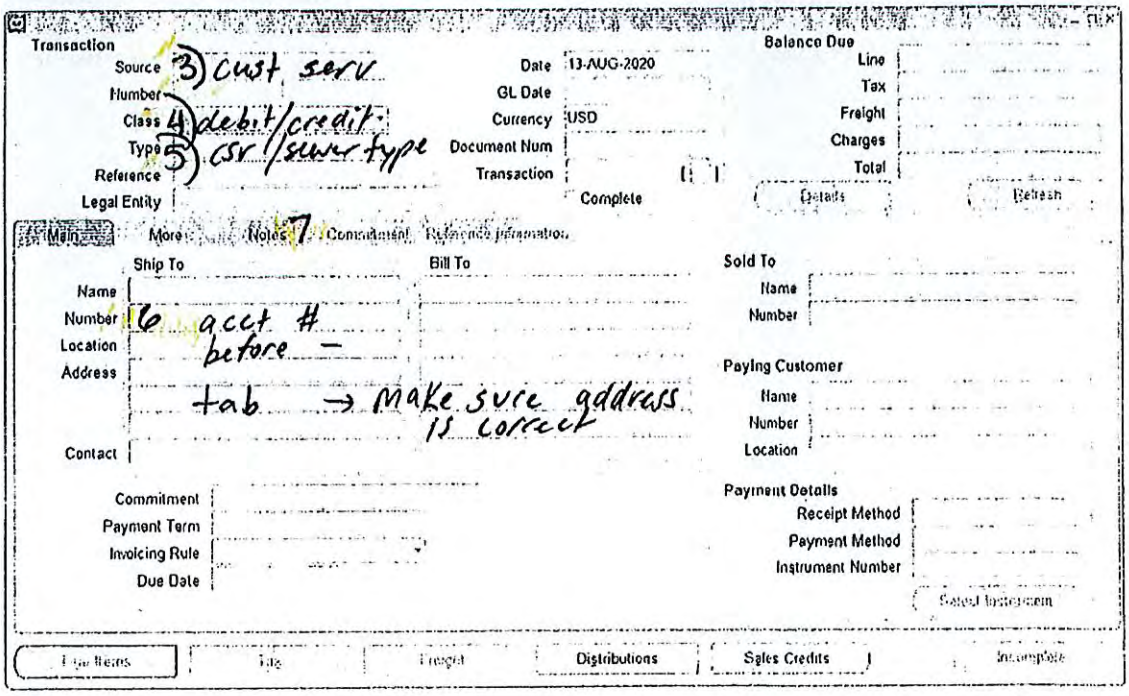


1) double click

2) open

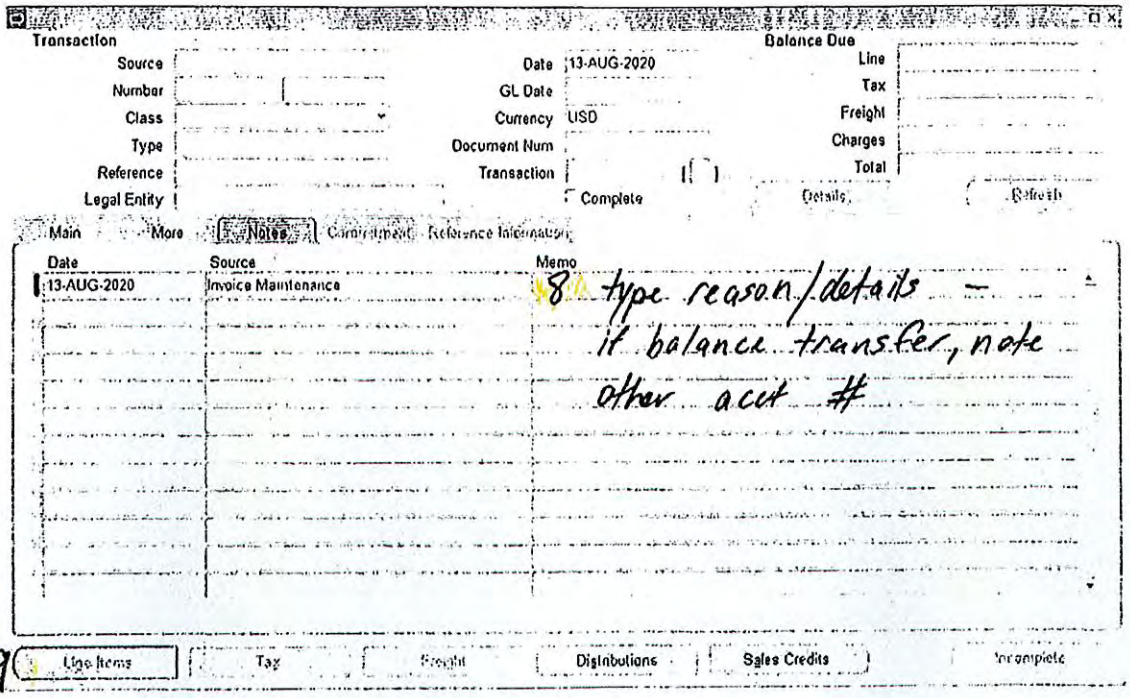
debit = adding amount to account

Credit = subtracting amount from account

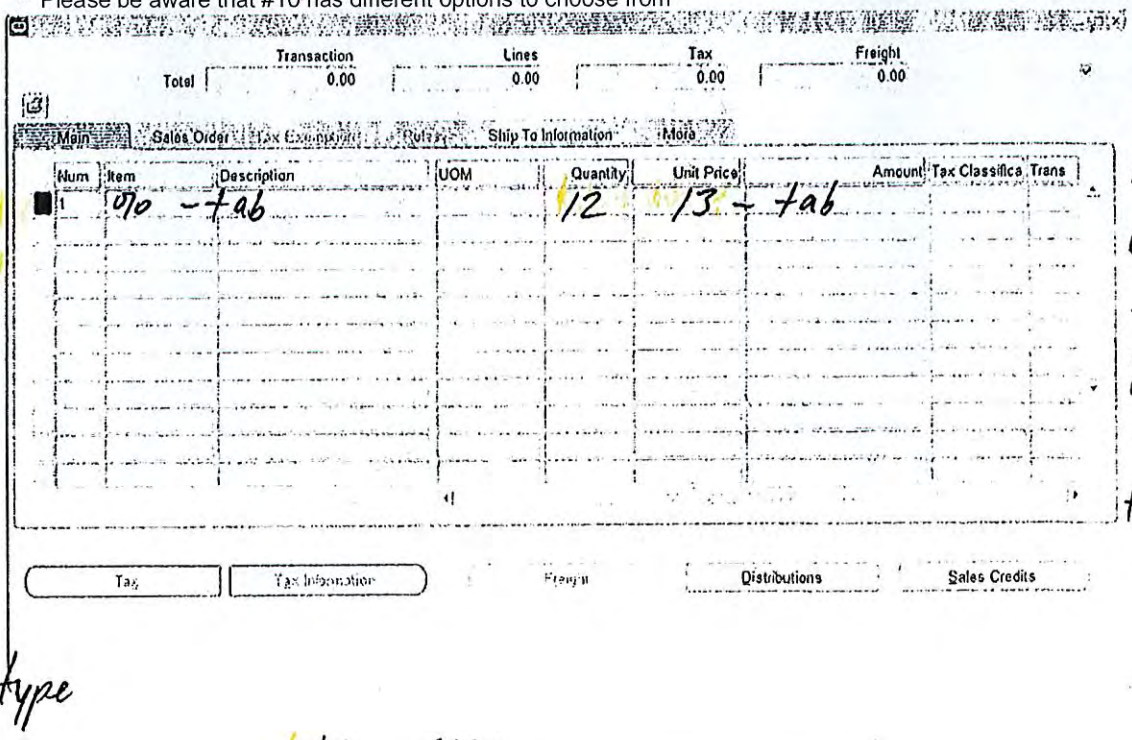


* if the customer has multiple accts, use the [...] beside the location box to choose the correct acct/address

** Please be aware that #5 has different options to choose from**



** Please be aware that #10 has different options to choose from**



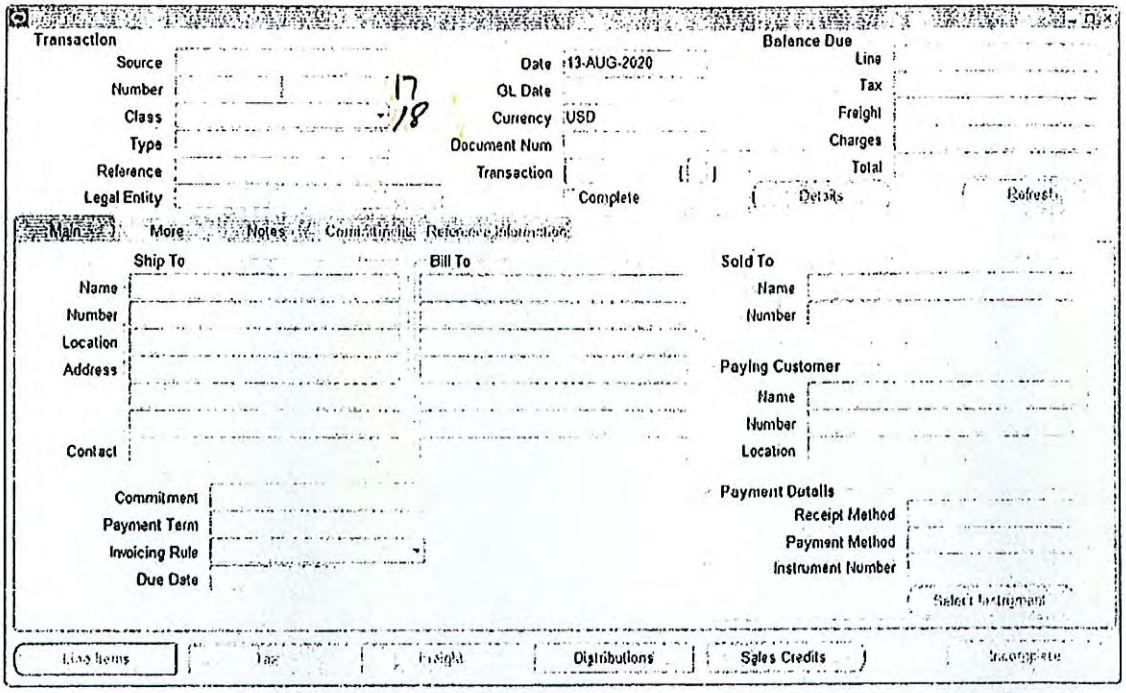
10 / 11 choose item # ↓ find correct debit/credit type

13: if it is a credit, a - must be in front of # to subtract

14: save

15: Tools → submit for approval

16: once approved (receive email) → next page



16: once approved (receive email) go back into transactions & press F11.

17: paste/insert debit/credit memo #

18: choose whether it was a credit or debit

19: ctrl + F11

20: complete

21: if credit, apply

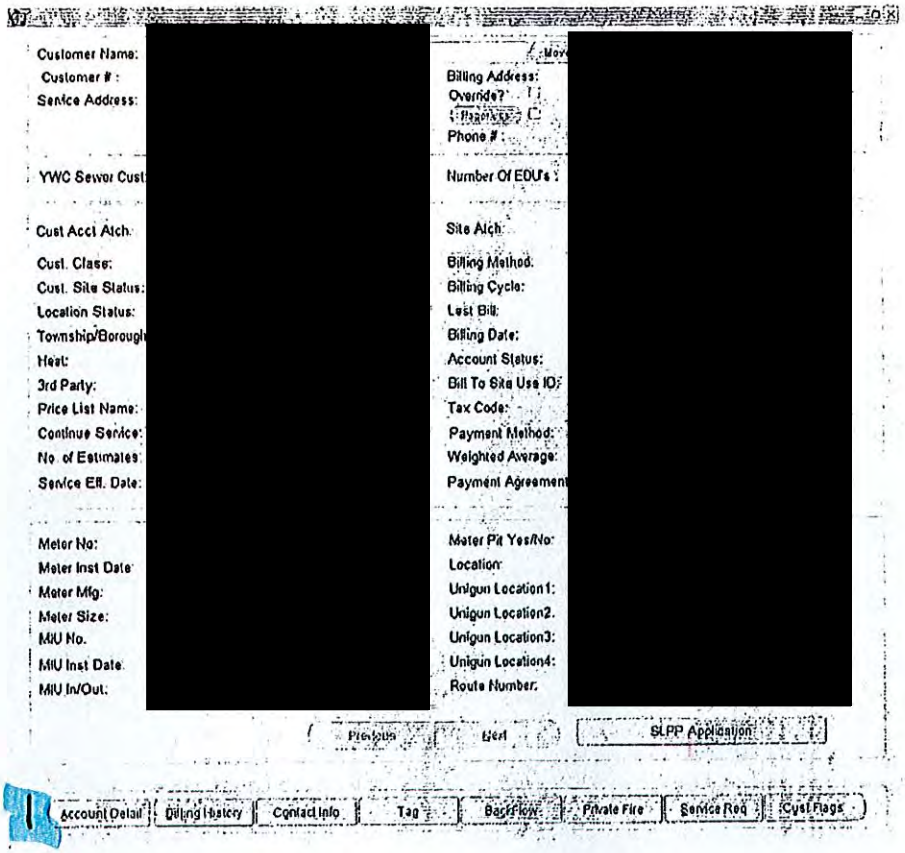
(you can verify that it was completed by going into account details)

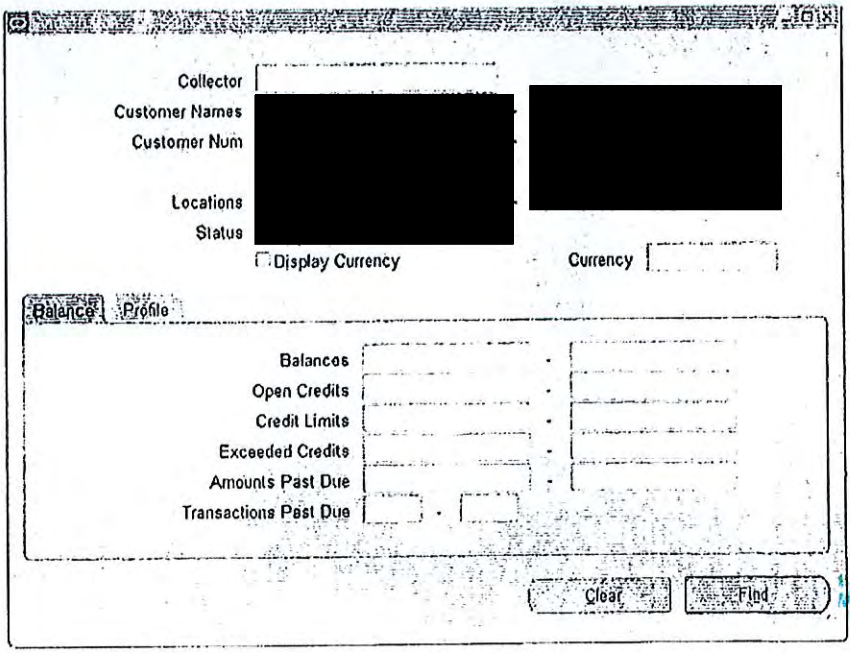
PROCEDURE TO APPLY CREDITS

When completing any type of credit (i.e. customer charge, balance transfer, water consumption), the amount of the credit needs to be applied to the open invoices (& debit memos). Complete the credit as you normally do. When it is completed go to the top of the screen and click **ACTIONS**, which will then show a drop-down box. Select **APPLICATIONS** from the choices offered. Now click **APPLY TO**. If more than one invoice comes up, you will need to scroll to the right to find the correct location to apply it to. (When doing balance transfers, you could have many invoices to close). Click on the oldest invoice first, and then continue down until the invoice totals match the credit amount. Click **SAVE**.

To verify that all invoices are closed, you must go out of the account details, and then going back in. Doing this will correct the aging amounts.

Promise to Pay / collection notices / med. certs





Promise to Pay:

- only gets 1 PP for every 10 day notice
- always check w/ [redacted] if we can do a PP before telling customer yes
- always check to see if the customer already has/had a PP for this notice

Subject: Your August York Water invoice is ready

Message:

This is an automated message. Please do not respond to the sending account listed above

Your account with The York Water Company has been marked for paperless billing. Your current bill is ready to review online. If you wish to pay by check, mail your payment to:

The York Water Company
130 East Market Street
York, PA 17401

Please remember to include all of the digits in your account number (see below) in the memo portion of the check.

If you have not already done so, we encourage you to sign up for our Timely Automatic Payment (TAP) program. It is the one method of paying your bill that is both FREE and Paperless. To sign up for TAP, go to https://www.yorkwater.com/automatic-payments

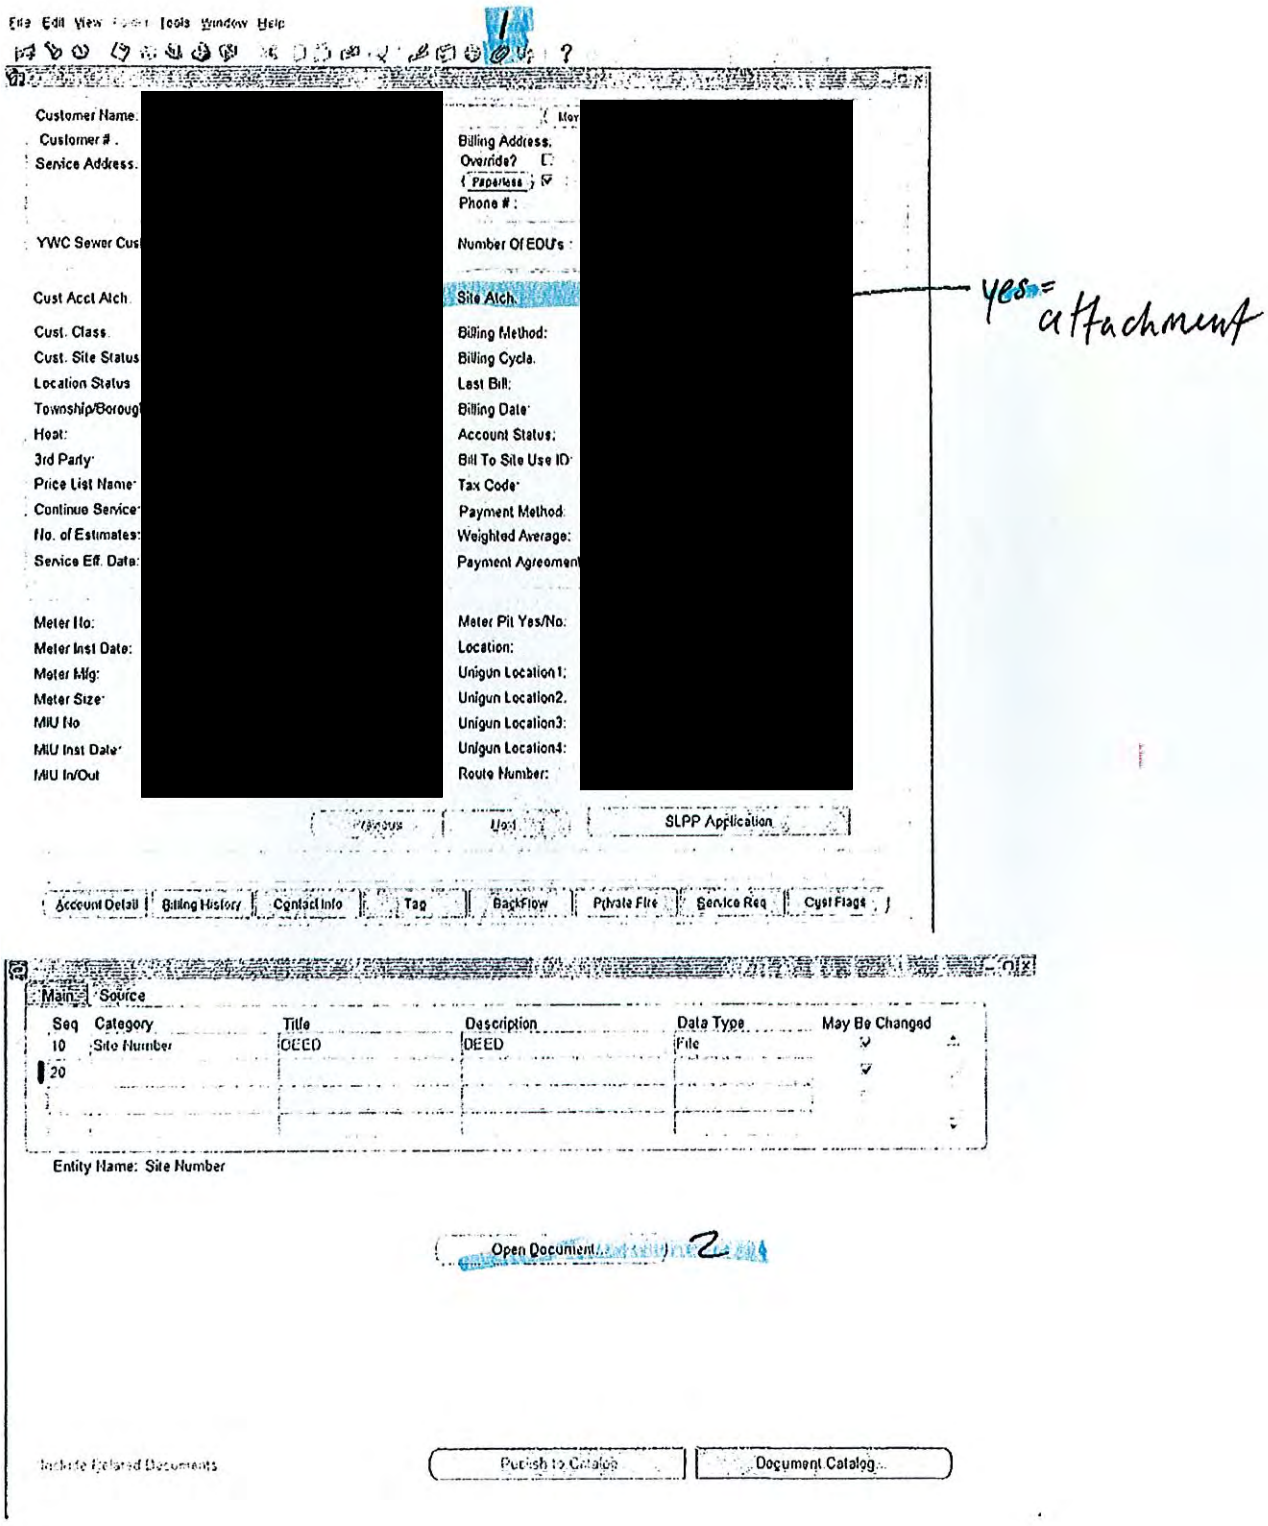
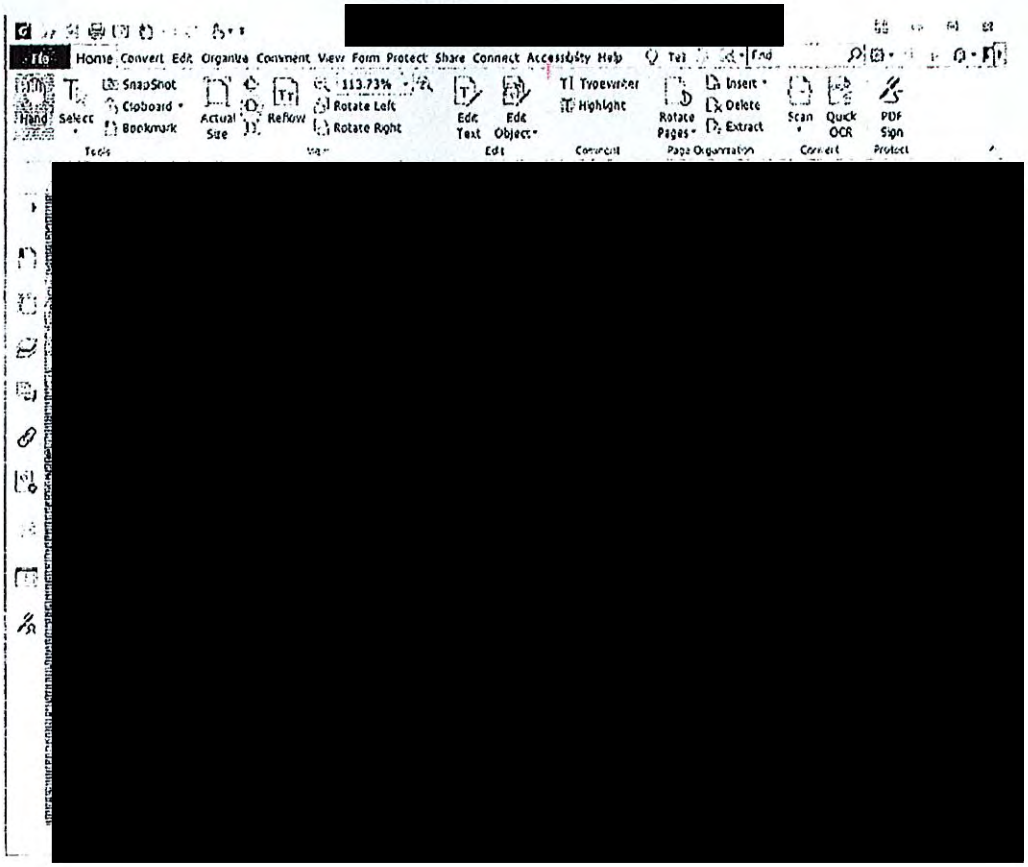
Verifying & opening Attachment



[redacted] 3

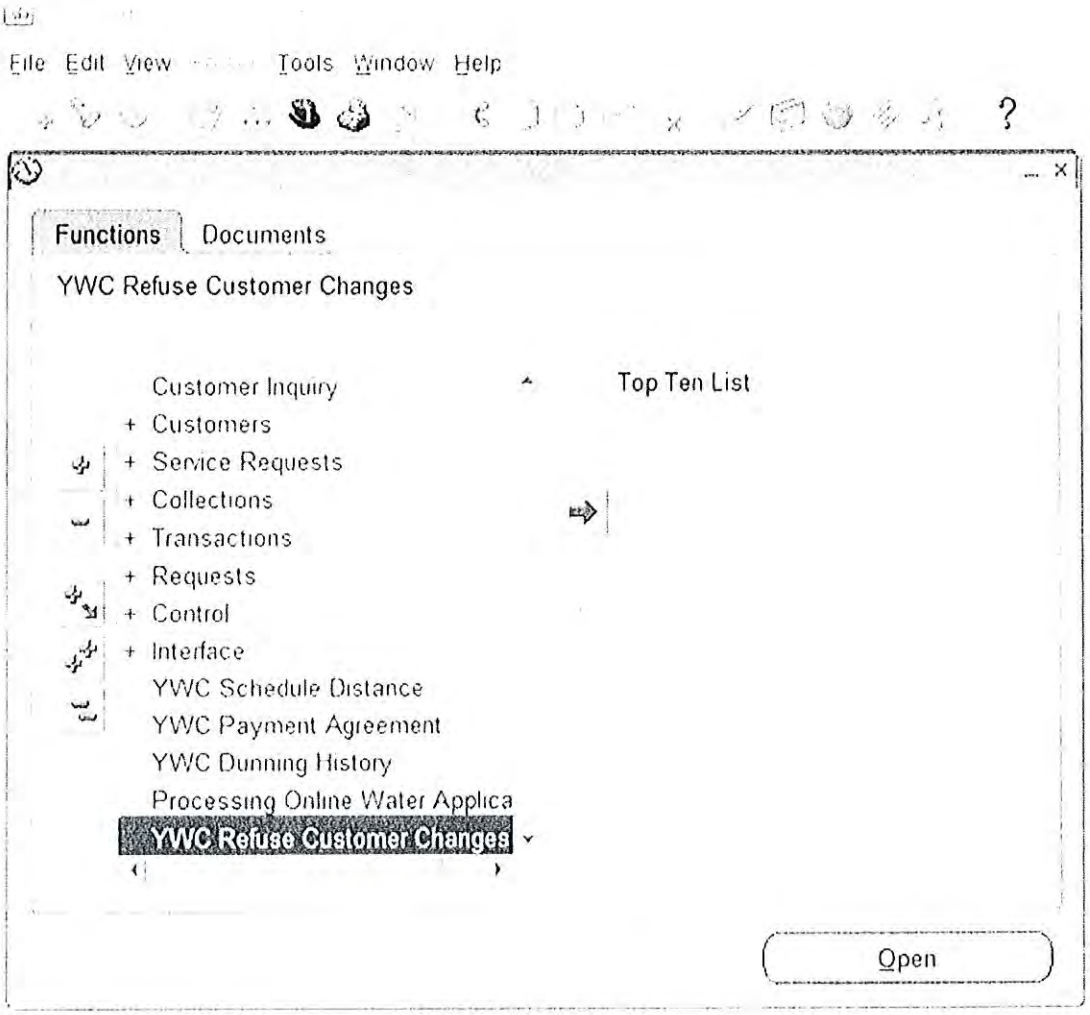


4

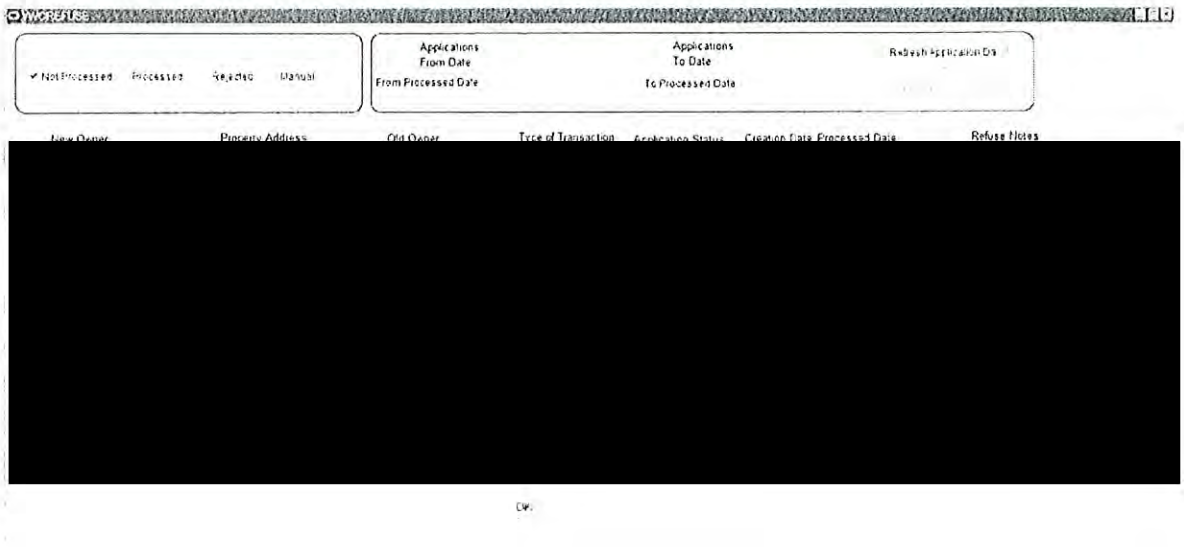
attachment opens

How To – City of York Refuse changes:

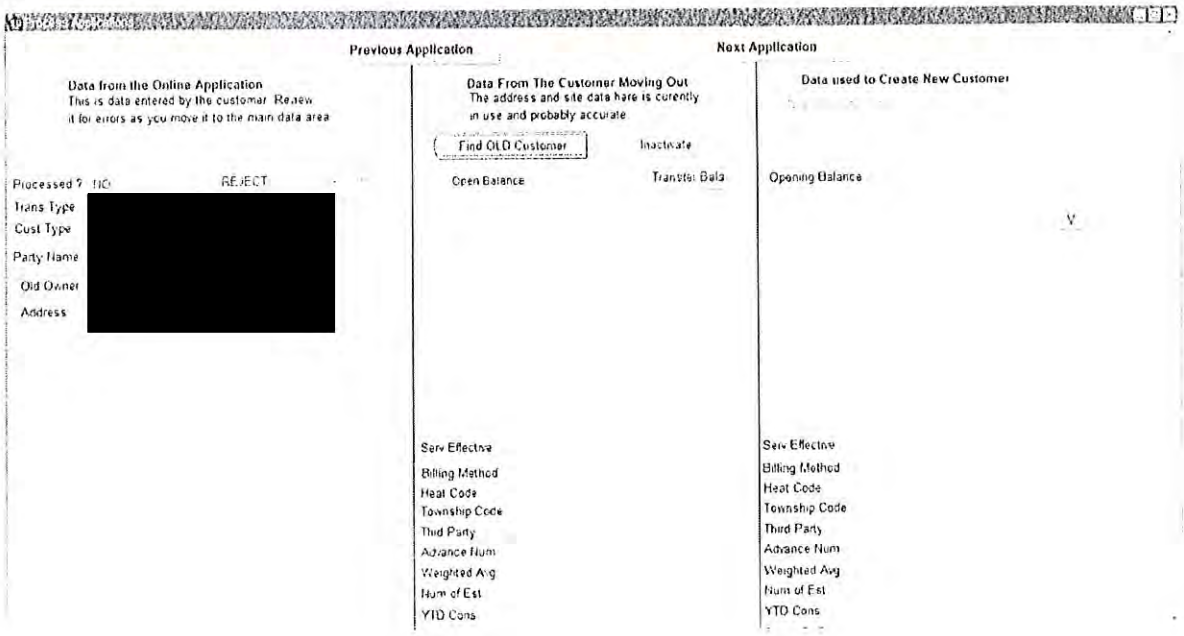
1. Enter sewer side of Oracle



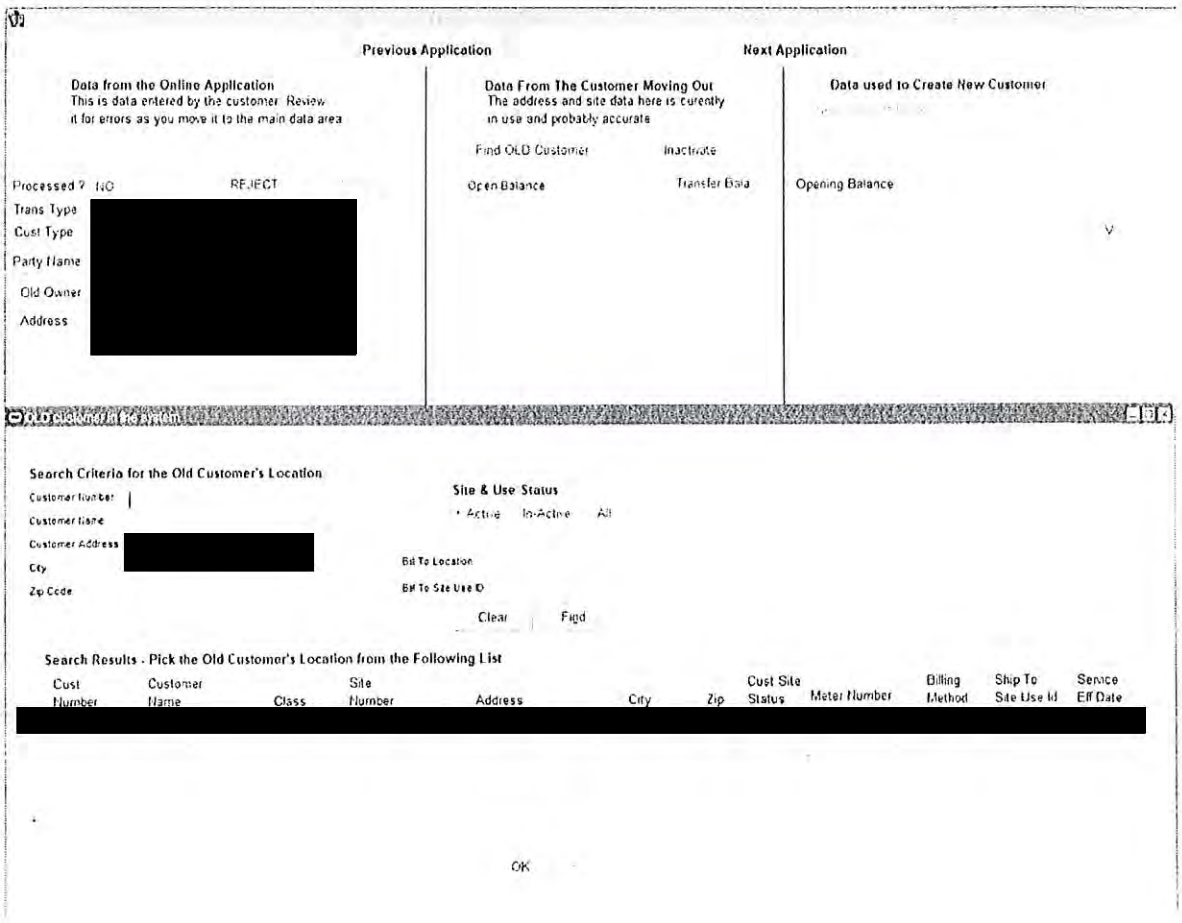
2. Open "YWC Refuse Customer Changes"



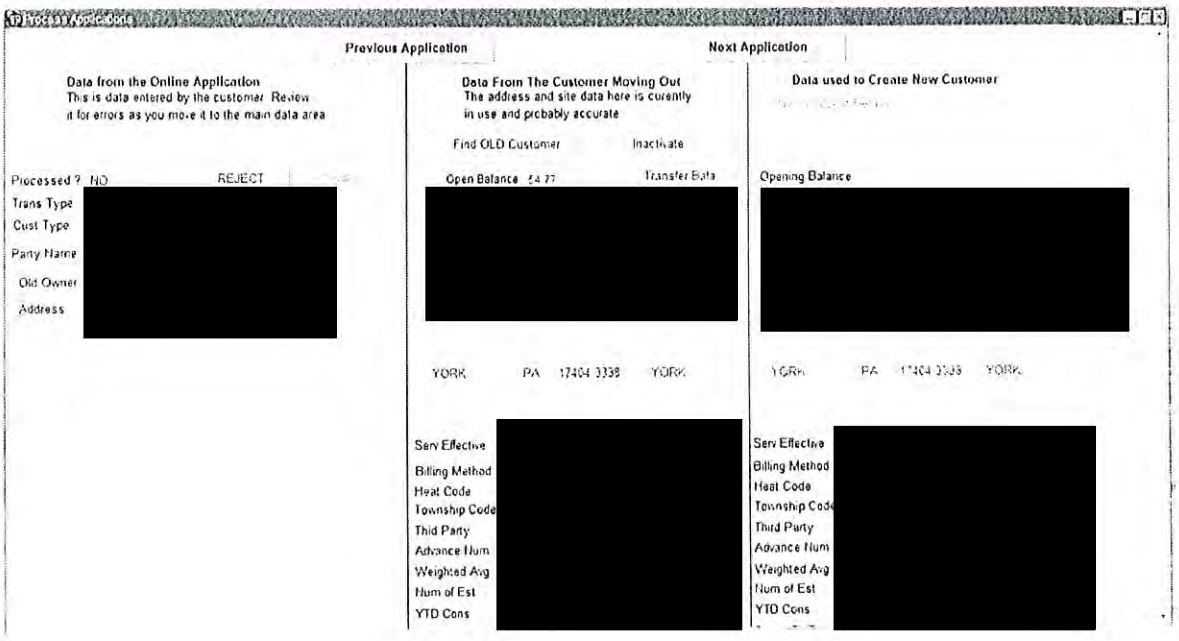
3. Select app with "New Owner & Transfer charges" (Type of Transaction) & open



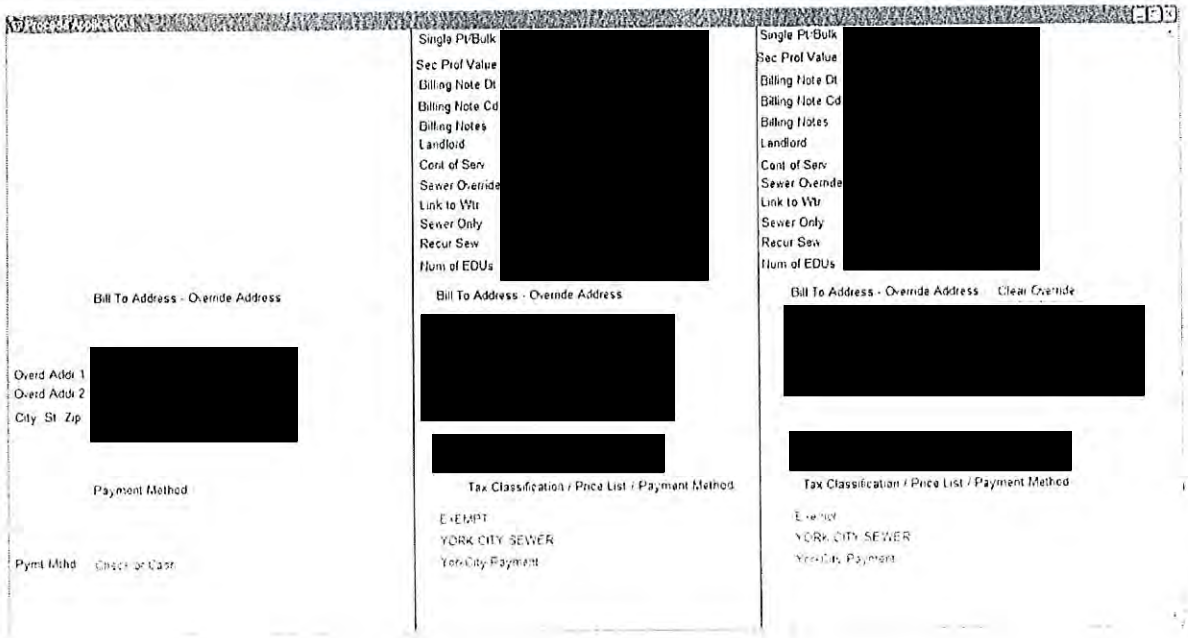
4. Find Old Customer



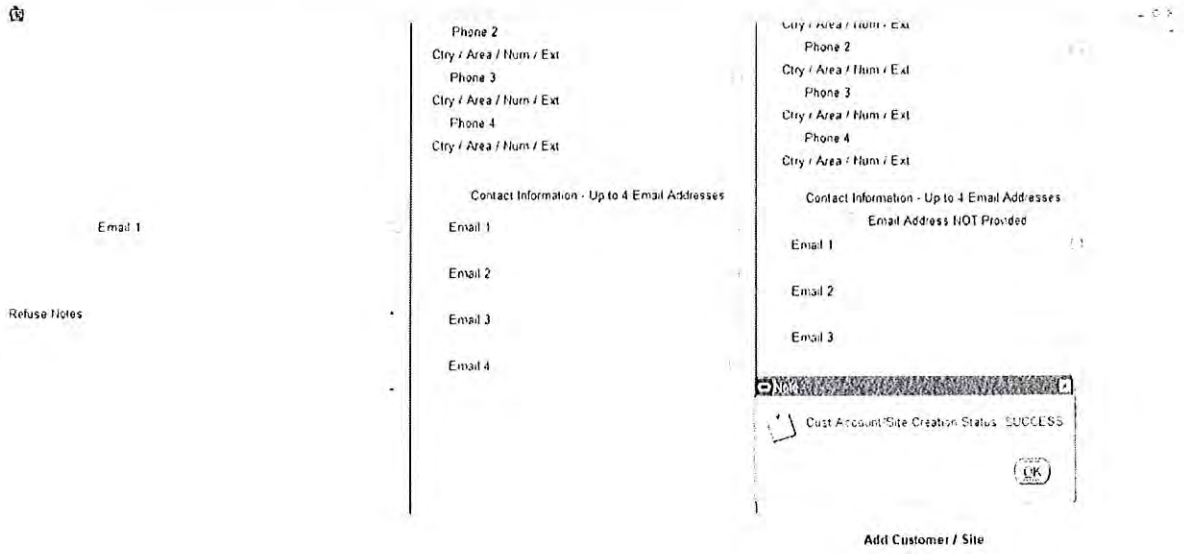
5. Old customer name should match in both spots – click "OK" if so



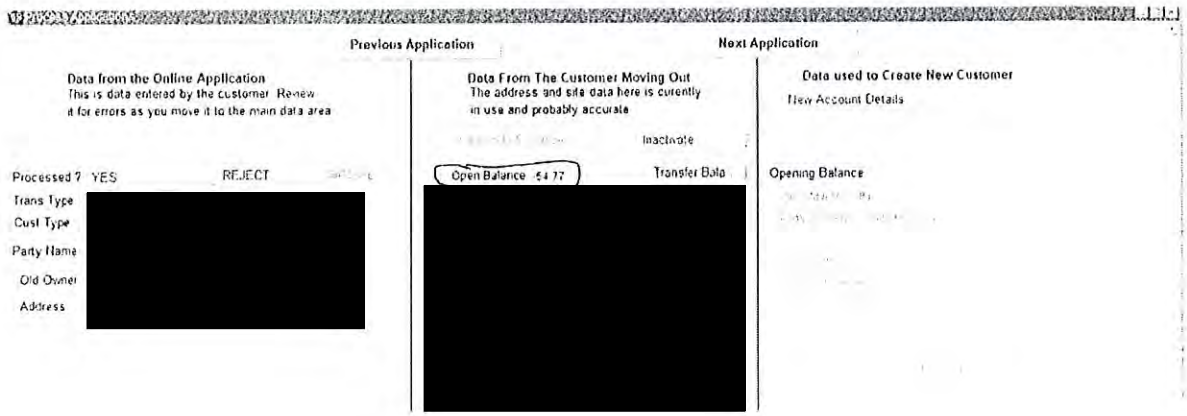
6. Input effective date



7. Update mailing address if needed



8. Add customer/site – Click OK & scroll to top of app. *Do not exit the screen/app*



9. If there is an open balance, click "Transfer Balance"
    a. If $0 or old customer has a credit, at this time, do not do anything with that – skip to Step 11

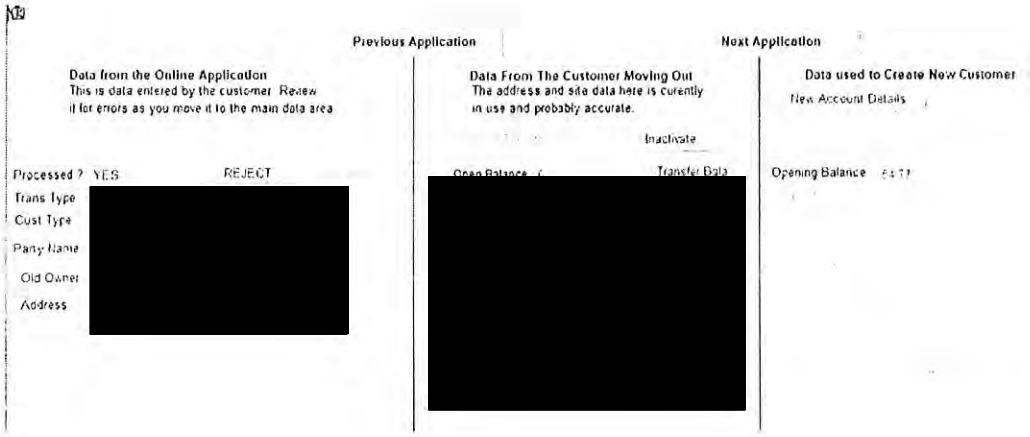
10. Confirmation that Credit Memo for Old Customer has been created & then confirmation that Debit Memo for New Customer has been created. Click OK for both. You will not need to "complete" the credit/debit, it will be done automatically. Credits do not need to be applied at this time.

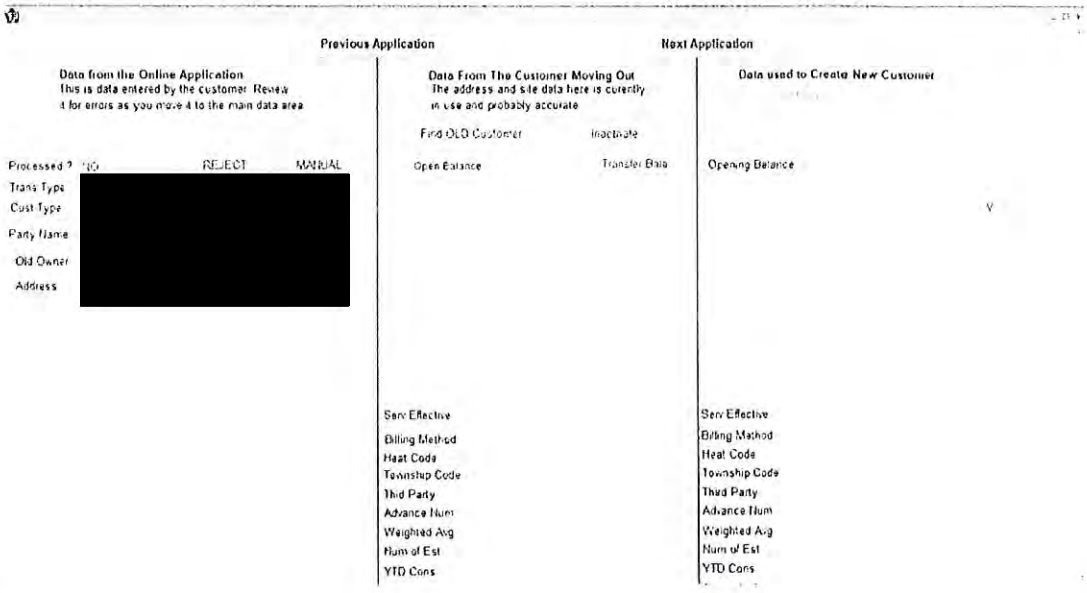


11. Inactivate old account/customer

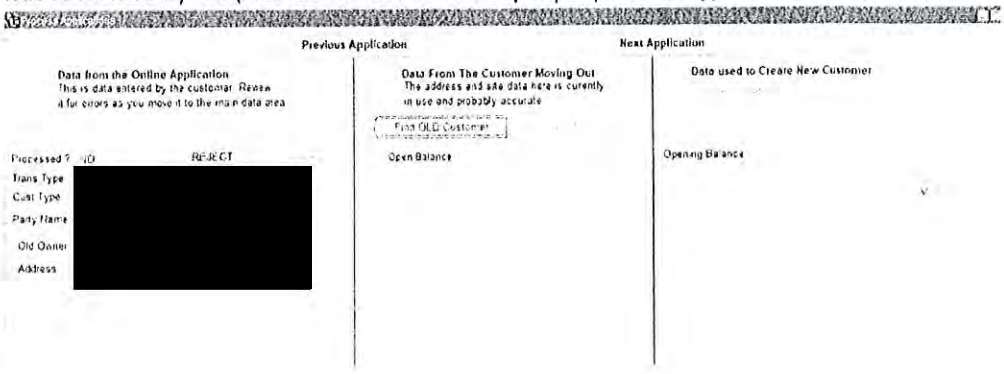
12. To confirm, you can search the address in Sewer Oracle. You should see the new customer as the only active account, and you can verify that the credit/debit were processed correctly.

** Type of Transactions: Refuse Classification Change, Other, and Mailing Address Update – These will need to be manually updated. They cannot be done through the application process. **

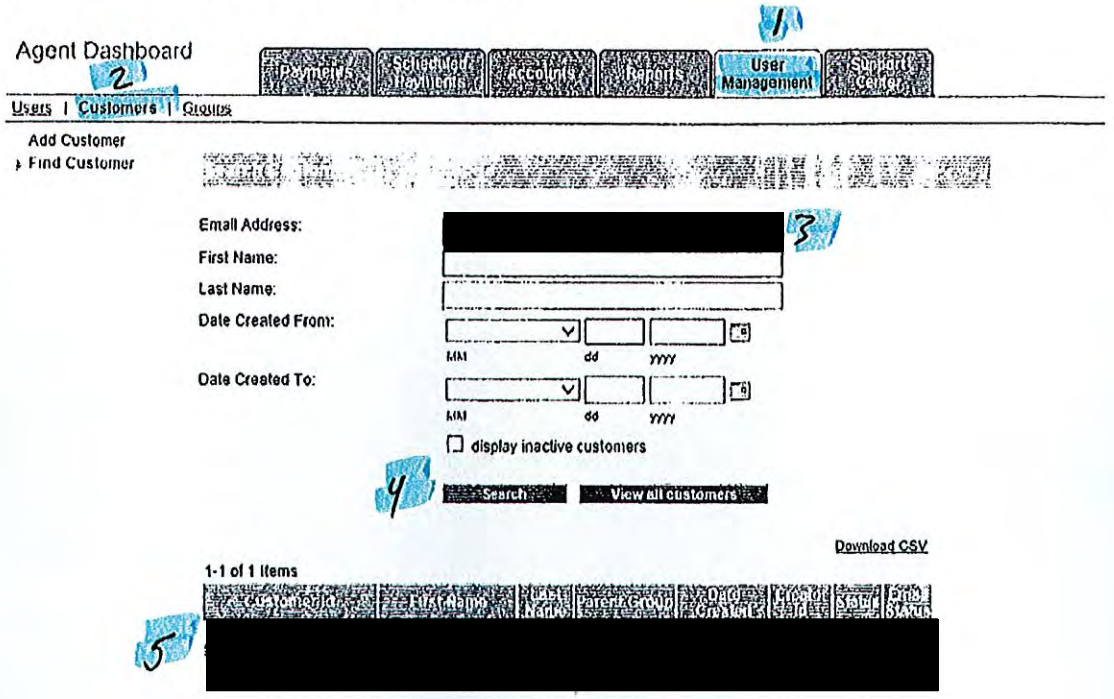
- **However***** once you complete these (through a mailing update on the back page, through a manual credit needed, through a change to the classification on the back page, etc.), you will need to do the following:
    - Select "Manual"; that is all that is needed. It is a way to track our efforts that are more manual versus processing in Oracle. It also clears out the line on the screen that houses all unprocessed requests.

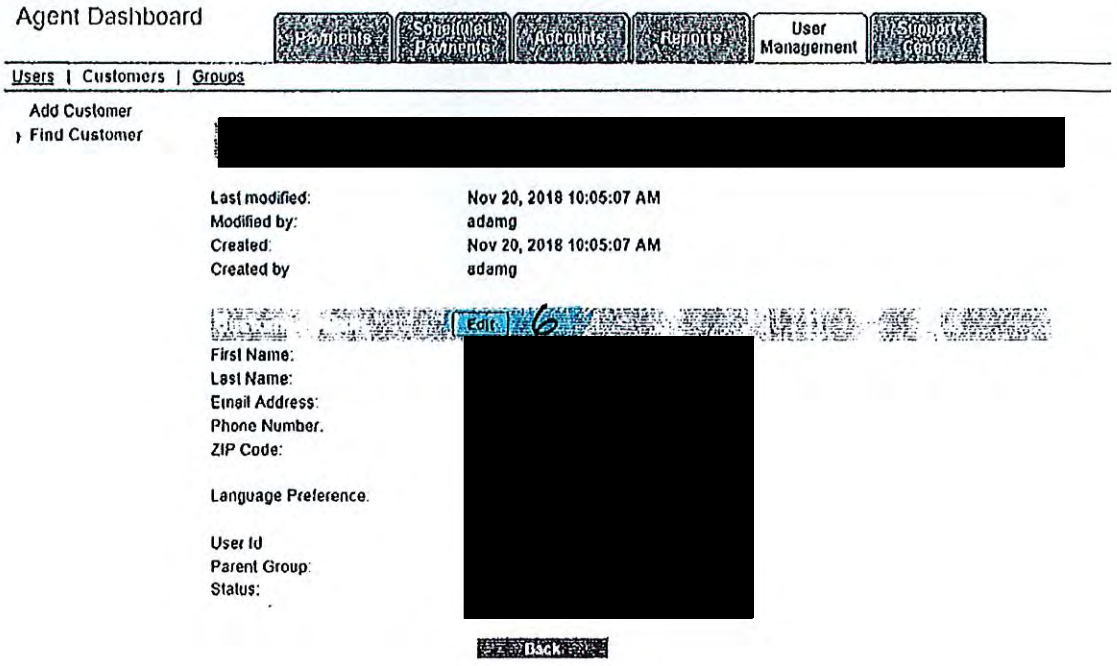


- The option "REJECT" is to be used only when there is a multiple request from [redacted] or a request that has already been updated. Again, it will clear it out of the processing form and show it was reviewed by us. (Address below for example purposes only)



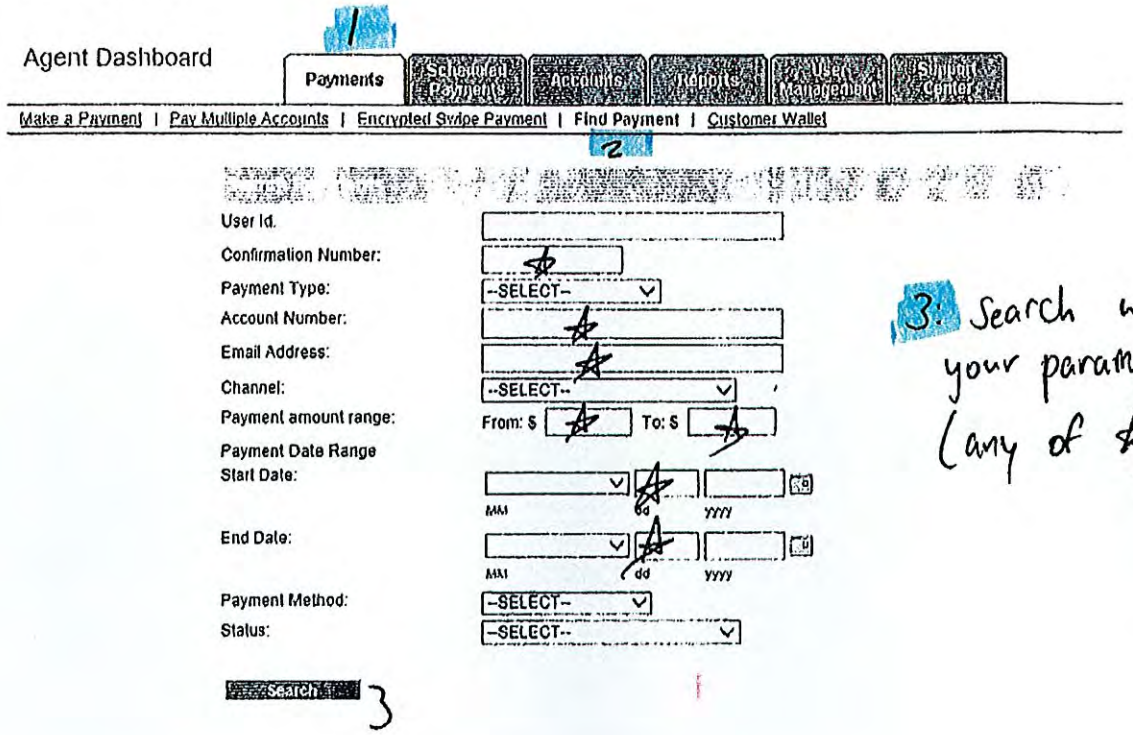
CHANGING PAYMENTUS ACCOUNT PASSWORD





7. update w/ temp. password & save

FINDING PAYMENT



- List of payments will come up after clicking "search"
- look for / find your payment

Wastewater/Sewer

Sanitary Sewer Emergency – Customer Service

Purpose:
This information will assist YCW representatives receiving a customer complaint related to a sewer problem or emergency. The following basic information and questions should be asked of the caller:

Customer Identification:
Name: Caller's Name (and Owner's/Landlord's, if renting)
Address: Number, street name and direction
Phone number(s): where they can be reached: Make sure to include area code.

Ask for a description of what they are observing or experiencing:
Briefly transcribe the nature of the problem.
Ask: -when they started to see the problem?
-where are they are seeing the problem (basement, 1st floor, 2nd floor, outside, in the street, from a neighbor's house?
Ask if they have had a Plumber or Drain Cleaning firm respond or work on the issue?
If **YES**: Obtain the Name of the firm, phone number, and when service was performed.
Follow-up: When did they do the work? Did they report back to the customer what they determined? (ie. Roots, grease, other debris)

If **NO**: Inform the customer that the owner is required to have a qualified Plumber or Drain Cleaning Service respond and service the blockage. The Plumber or Drain cleaning service needs to effectively attempt to restore service.
If the plumber/cleaning service is unable to restore service, the customer is to call back and report on the findings found by the plumber. If the cause of the blockage is in the main sewer, the YWC will respond to address the issue. Inform the Customer that a supervisor on duty will be notified ASAP and will follow-up on the call. The follow-up may include contacting the Plumber/Drain Cleaning firm to obtain additional information.

Notes:
If a customer is calling to report a problem observed at a neighbor's house they may be unwilling to give their name and identification. The address of the property that is the source of the problem should be obtained. The follow-up investigation will identify the nature and resolution to the complaint.

If the customer describes sewage in the basement – ask if the amount is increasing, decreasing or holding steady.

If the customer describes sewage in the street – ask if it coming from a Manhole or somewhere else.
Sometimes a customer may be complaining of odor without evidence of sewage. Collect the information and the YWC will follow-up during normal working hours.

March 1, 2017

Municipal Agreements

YWC Owns and Operates:

- East Prospect
- Asbury Pointe
- West York
- Jacobus
- Amblebrook
- Country View Water
- Felton Borough (wastewater only)
- Letterkenny Township (wastewater only)
- West Manheim Township
- LIDA
- Albright

Water & Sewer on **same bill** for homeowners who reside at the service location.

Water & Sewer are **separated** in Landlord/tenant situations where tenant is responsible for the water and the landlord is responsible for the sewer.

YWC Posts and Shuts off:

- Jackson Township
- Conewago Township
- Railroad Borough
- Springfield Township
    - Loganville Borough & Seven Valleys
- Springettsbury Township
- York Haven
- New Salem (soon)

- Abbottstown Borough
- Manchester Township
- West Manchester Township
- York Township
- Spring Grove Borough
- North Codorus Township
- Windsor Township
- Northeastern York County
- Eastern York County (Hellam)
- Shrewsbury Borough

YWC Billing Agent:

- Spring Garden Township
- York City Refuse
- York New Salem

SPRING GARDEN TOWNSHIP SEWER SMARTSHEET

Exhibit BA-4

Our main point of contact at Spring Garden TWP is:

Email [redacted]

Phone: (717)-848-2858

- York Water became the sewer billing agent effective the 4th qtr. 2015 for the period Oct. – Dec. 2015. Spring Garden Twp. bills quarterly for ***residential, commercial, and industrial customers***

- Spring Garden Township **rates** are as follows **(effective with April 2022 sewer billing dates)**:

Residential		
Connected	Treatment & Transportation	$164.45 per quarter
Not Connected	Maintenance (Reservation)	$98.67 per quarter

Commercial		
Connected	Commercial Treatment & Transportation	$230 per quarter plus $2.07 for each 1,000 gallons of sewage over 31,800 gallons per quarter
Not Connected	Commercial Maintenance (Not Connected)	$98.67 per quarter

Industrial		
Connected	Industrial Treatment & Transportation	$258.75 per quarter plus $2.18 for each 1,000 gallons of sewage over 31,800 gallons per quarter
Not Connected	Industrial Maintenance (Not Connected)	$98.67 per quarter

- Spring Garden Twp. customers will receive a **separate** bill for **refuse (trash)**.

- Spring Garden Twp. sewer accounts must **always** be in the ***deeded owners*** name because sewer is a lienable service.

- ***No name changes can be done without the approval from Spring Garden Twp***. The twp. will have customers fill out a change of address form which they will then review, approve, and notify YWC accordingly. *You will also will need to notify accounting of any name change done to an account*. When doing a name change or transfer of service, be sure to inactivate the old customer in Oracle.

- ***YWC is not authorized to take "Promise to Pays" from Spring Garden Twp. sewer customers.*** Do not confuse this with the water side. Although we can take promise to pays from Spring Garden Twp. customers on the water side, it is solely up to the twp. whether or not the customer is eligible for any type of extension on the sewer side.

    - **As of recently (2019), Spring Garden is not honoring or entering into any new payment agreements with Spring Garden sewer customers**

- ***Because we cannot take "Promise to Pays",*** make sure we are not coding any correspondence note with the response code of ***"Promise to Pay"***. By doing this, the account will automatically reject from the shut-off report and the customer may potentially not be posted when they need to be.

- ***Customers have 30 days to pay the bill and will receive a 10-business day grace period before posting fees and/ or late charges apply.*** Spring Garden Twp. customers who are late on their sewer bill will receive a ***one-time 10% charge*** on any late sewer payment.

- ***The shut-off process for Spring Garden Twp.*** customers will begin approximately ***15 days*** after the due date of the bill. Fees are added to the account for the postings performed.

- ***Payments made via Paymentus are issued a processing fee.*** The fee is $3.25 per $500.00 maximum payment via debit or credit card or e-check. A fee for reoccurring ACH/e-check has a fee of $0.75.

- ***When settlement companies call or email to request a pay- off amount, you will need to refer the settlement company to the contacts of Spring Garden.*** YWC is unaware of any potential lien fees or other associated fees that do not appear in our billing system. They in return, will probably ask YWC to provide them with screen shots of the account history, and add that amount to what they have on file. Pat will be responsible for providing the information to the settlement companies.

- ***Keep in mind that Spring Garden Twp. does bill for vacant lots***. You may refer to the twp. ordinance that states that any residential property *not* connected with/or using the sewer system, ***BUT*** which is available for connection and use will be billed for sewer.

- ***If we are instructed by Spring Garden Twp. to complete a debit memo***, and if the amount being debited is part of a past due bill, we need to make sure we are making the due dates of the debit memos to be due ***immediately***. That way, the customer will receive shut-off notices for the right amount.

- If you see an ***open work order for a meter exchan***ge while taking a payment or interacting with a customer for some other reason, remember to schedule the appointment during that interaction.

MEDICAL CERTIFICATES:

- ***Effective 6/29/16, the CSR responsible for emails/vmails will follow this procedure for SGT medical certificates:***
  - ✓ When emailing/vmailing use the medical certificate form on the server. This is a fillable form. Make sure you include the date and Spring Garden Township. Doing so will eliminate the need to pull up the account in Oracle when we receive it from a doctor's office.
  - ✓ Upon receipt of a med. cert. in MIXIE, view it, and if necessary, pull up the address in Oracle to verify if the property is in SGT.
  - ✓ Forward med. cert. to [redacted] for her records.
  - ✓ If the property is in SGT, forward the fax via email to Spring Garden.

  - SGT has adopted the same medical certificate procedure as York Water. SGT customers can submit one medical certificate that is good for 30 calendar days, and then 2 renewals **((for a total of 3))** before they will be required to make payment on the current bill.

  - If the customer wishes to submit ***more than 3***, they will then be obligated to pay on at least their ***current quarterly charges***, not the full account balance.

Meter Reading

METER READING

A. Areas of Service

   a. Cycles: 1, 4, 5, 8

      i. Cycle 1: **East** (Mt Zion Water District, East Prospect, , York TWP, Hellam, Red Lion, Dallastown, Felton (sewer only))

      ii. Cycle 4: **City** (East City & West City, West York, North York, Spring Garden)

      iii. Cycle 5: **West** (Carroll Valley, Gettysburg, Amblebrook, Scotts Water (acquiring soon – near Chambersburg, New Oxford, East Berlin, Abbottstown, West Manheim/Hanover, Spring Grove, Jackson TWP/Thomasville, West Manchester, Letterkenny TWP (sewer only)) & **South** (Spring Garden, York New Salem, Stoverstown/N Codorus, Seven Valleys, Springfield, Railroad, Shrewsbury, Codorus/Jefferson)

      iv. Cycle 8: **North** (Springettsbury, Manchester, East Manchester/Mount Wolf, York Haven, Conewago Dist #1 & Dist #2 (Bull Rd), Letterkenny Township (sewer only))

B. Meters

   a. Neptune ARB

   b. Neptune E-Coder (digital)

      i. Both get exchanged every 20 years

C. Meter Reading

   a. RF Device: Radio Frequency device at each property/for each meter

      i. RF device sends signal to reading software & gets read as driving by/close

   b. Fixed Collector: allows us to get a reading from the office instead of going out to the property

i. Sometimes it won't pick up, so in those instances, a YWC rep has to go to prop to get reading

Need help reading your meter?

STEP 1: FIND YOUR WATER METER

First, you must locate your water meter. It may be indoors or outdoors in a pit.

Indoor Meter

Most meters are located indoors. Find your indoor meter along a basement wall or wherever the water line enters the building.

Outdoor Meter

Some water meters are located outdoors. Find an outdoor meter inside a meter pit in the ground. You must lift the meter pit lid to view your meter.

STEP 2: IDENTIFY YOUR METER MODEL

Next, identify which type of meter you have. The York Water Company uses two types of meters. Look at the face of your meter and click on the type that you have from the meters below to learn more.

STEP 3: READ YOUR NEPTUNE ARB METER

How do I read my water meter?

To read your Neptune ARB meter, complete the following steps:

1. Look at the number display located on the face of the water meter. This is your water meter reading.
2. Adjust your reading: York Water bills in hundreds of gallons, so if your meter reads 3,487 gallons, we will bill for 3,400 gallons. We won't bill for those extra gallons on the meter until the reading surpasses 3,500 gallons.
3. Compare your adjusted meter reading to the one on your most recent water bill. Subtract the water usage on your bill from your adjusted water meter reading to calculate how many gallons of water your household has used since the last water meter reading of that bill.

How can I tell if there is a water leak in my home?

If you feel that your water bill is unusually high, your Neptune ARB meter may indicate that there is a leak somewhere in your home or business.

Most often, the cause of high-water usage is a leak in a toilet or a running toilet tank. These are not the only reasons there may be a leak. If you suspect another cause for a leak, it's a good idea to hire a professional plumber to help you.

Find the low flow dial on your water meter:

On the face of the Neptune ARB meter, there is a small red or black diamond or triangle. If that dial is spinning, water is moving through the meter at that exact moment. If no one in your home is using water, the low flow dial should be completely still. If it is moving, there is a leak somewhere in your home.

STEP 3: READ YOUR NEPTUNE E-CODER METER

How do I read my water meter?

To read your Neptune E-Coder meter, complete the following steps:

1. Your meter display needs light to activate it. If the LCD display is blank or looks dark, shine a flashlight on it. The light will activate the meter.
2. When you activate the meter, the LCD display will first show "8,8,8,8,8,8,8,8,8." The reading will appear within a few seconds.
3. When the reading appears, it will stay on the LCD display for 12 seconds. The reading will contain numbers with commas and a decimal point. It shows your meter reading in gallons.
4. Adjust your reading to hundreds of gallons. York Water bills in hundreds of gallons, so if your meter reads 3,487.20 gallons, we will bill for 3,400 gallons. We won't bill for those extra gallons on the meter until it surpasses 3,500 gallons.
5. Compare this reading to the one on your most recent water bill. Subtract the water usage on your bill from your current water meter reading to calculate how many gallons of water your household has used since the printing of that bill.

View printable instructions for reading your Neptune e-Coder meter. (This link will open in a new window.)

How can I tell if there is a water leak in my home?

If you feel that your water bill is unusually high, your Neptune e-Coder meter may indicate that there is a leak somewhere in your home or business.

Most often, the cause of high-water usage is a leak in a toilet or a running toilet tank. These are not the only reasons there may be a leak. If you suspect another cause for a leak, it's a good idea to hire a professional plumber to help you.

This is how your Neptune e-Coder meter may indicate a water leak:

1. Follow instructions 1-3 in the **How do I read my water meter?** section above.
2. After the initial water meter reading appears, the word ***RATE*** will appear at the top of the LCD display. The flow rate will appear for 4 seconds. The flow rate shows in gallons per minute.
3. Your meter automatically checks to see if water is flowing in your system every 15 minutes. The image of a dripping spigot is a the leak indicator for this meter model. If it appears, this indicates there may be a leak. You may also see these variations of the leak indicator:

   Flashing leak indicator: If the leak indicator is flashing, this means water has been used for at least fifty of the ninety-six 15-minute intervals during the previous 24 hours. This may indicate a leak in your system.

   Continuous leak indicator: If the leak indicators appears continuously, water has been used for all of the 15-minute intervals during the previous 24 hours. This may indicate a leak in your system.

THE YORK WATER COMPANY
CUSTOMER REQUEST FOR METER TEST

Service Address _____ Account No. _____

Name of Customer _____ Phone No. _____

I hereby request The York Water Company to test the accuracy of registration of the water meter at the above address. The required fee has been paid to the Company.

I have been notified of my right, personally or by a representative, to witness the testing of the meter and that I may require the seal of the meter to be broken in my presence or in that of my representative. I wish to exercise these rights:

(SEAL) YES _____ NO _____

(TEST) YES _____ NO _____

If the meter is found to be accurate within the limits specified by the Pennsylvania Public Utility Commission, the fee shall be retained by The York Water Company; but if not so found, the Company shall bear the cost and the fee paid by me shall be refunded. The Company shall notify me of the results of the test.

Delinquent Posting Process / Other Posting(s) Process

A customer who becomes delinquent on a bill that is 60 days past due will be issued a delinquent termination notice as a reminder to make a payment or call YWC to discuss other options. You may also use the posting guidelines below for a user without contract posting.

The posting process goes as follows:

Postings for a Multi-Unit property:

37 day termination notice mailed to landlord/owner on file

30 day termination notice for tenants posted physically to the service address

- There will be a tenant amount to pay buy a tenant
- There will be a landlord/owner amount to pay by the landlord/owner

3 day termination notice for tenants posted physically to the service address

Shut off posting – occurs on the date the shut off happens (blue paper)

Postings for Singe Unit property:

10 day termination notice mailed to customer

3 day termination notice physically posted to the service address

48 hour termination notice physically posted to the service address

Shut off posting – occurs on the date the shut off happens (blue paper)

For delinquent customers, they may be granted an extension. If a customer makes a Promise to Pay, where they promise to pay the amount delinquent at a later date, this will replace a 3 day termination notice. So if they do not follow through on their promise, the customer will be subject to a 48 hour termination notice posting.

Customers may be eligible for a payment agreement as well. Payment agreement customers follow the same posting requirements.

YWC addresses that are Shut Off will have to pay a $15.00 turn on fee.

PFA – meeting on 4.17.2024

- PFA – Protection from Abuse Order (info below is online at https://www.yorkwater.com/customer-service/customer-rights/#if-you-have-a-protection-from-abuse-order)

If You Have a Protection from Abuse Order

If you are a victim of abuse and have a Protection from Abuse (PFA) order issued by the courts, special procedures and protections exist for handling your concerns regarding your water or sewer service.

Some of these protections include:

- Your service cannot be turned off during the winter without approval from the PUC.
- Depending on your income, a special payment arrangement may be available.
- Your service cannot be terminated the day before a weekend or holiday.
- You may not be held responsible for a bill in someone else's name.
- You may not be required to pay a security deposit. If you are required to pay a security deposit, you may qualify to spread the amount due over three payments.

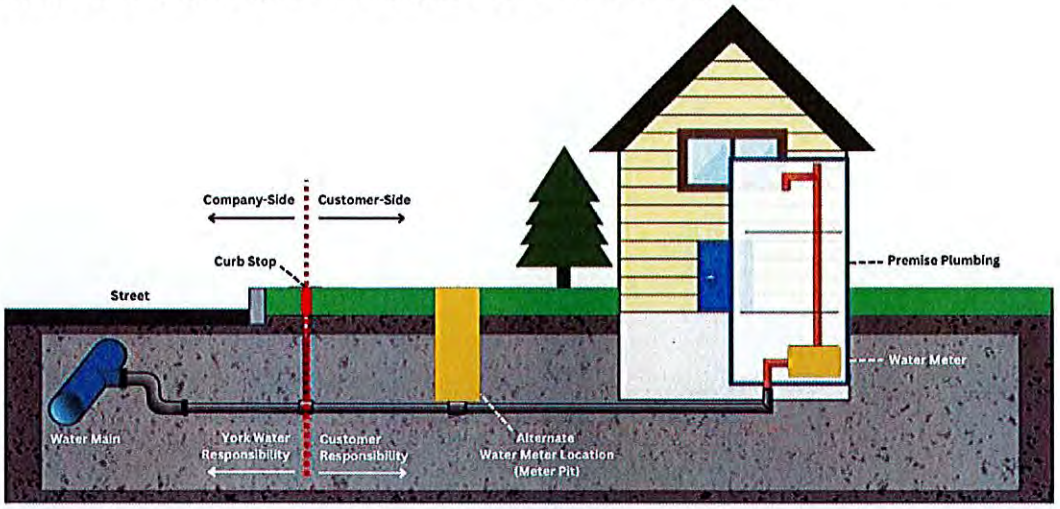
Call your water or sewer company to inform them about your PFA so these special procedures and protections can be provided. Your water or sewer company may require you to provide them with a copy of your PFA order.

- Steps by YWC CSRs
  - Ask for name of person who has the PFA and then name of the person who the PFA is against
  - Notes on the Customer Flag section is needed to be made with that information
  - Request the account holder to place a password on the account for extra security of their information
  - Enforce for a copy of the order is needed for our records– effective/active dates of the order will be noted
    - Forward to [redacted] (she will track/records like Med Certs)
      - CS drive has this folder with received PFAs (named: PFA)
    - *We are enforcing a copy is needed due to the next bullet point around no termination on active PFA accounts (emailed/scanned versions are acceptable)*
  - EXTRA YWC STEPS: we will not shut off the water to an active water account customer with an active PFA.

Miscellaneous

How to Check Your Water Service Line for Lead

The York Water Company's water mains are not made of lead, however, the water service line running from the water main to your home may be. We are asking for your help to identify the material of your customer-owned service line. If it is lead, York Water can schedule replacement of that service line at no cost to you.



Source: https://files.dep.state.pa.us/Water/BSDW/DrinkingWaterManagement/Regulations/LCRR_SLI_Workbook_2023_v4.pdf

Service Lines

York Water owns the service line segment from the water main to the curb stop and discontinued the use of lead on the company side prior to 1940. The service line from the curb stop into the home is the responsibility of the property owner and may be made of lead, copper, galvanized steel, or plastic pipe. Sample images of possible pipe materials can be found to the right.

You can determine the service line material by testing the service line pipe where it connects to the water meter in the basement or first floor of your home. It is a simple process. You will find all the information you need below. The entire process should only take 10 minutes of your time.

Steps to Check Your Service Line Material

Step 1: Gather a key or a coin and a strong refrigerator magnet. Then, find your water meter.
The meter is usually located in a basement or in a meter pit outside. Look at the pipe that connects to your meter from the curb or the outside wall.

Step 2: Carefully Scratch the pipe with the key or coin.
If the pipe is painted, gently scrape off the paint to expose the metal before you scratch it. Do not use a knife or sharp tool. Take care not to make a hole in the pipe. If the pipe scratches easily and turns a shiny silver color, the pipe may be lead or galvanized steel.

Step 3: Place the magnet on the pipe.
If the magnet sticks, the pipe is galvanized steel. If the **magnet does not stick**, the pipe is likely a lead pipe.

Step 4: Share your findings with York Water by completing the York Water Service Line Inventory Survey.
The York Water Service Line Inventory Survey can be found at yorkwater.com/service-line-inventory-project or by scanning the QR code.

Have questions or need support as you complete these steps? Our Customer Service team is here to help. They can be reached at 717-845-3601 or customer.service@yorkwater.com.

"That good York water"

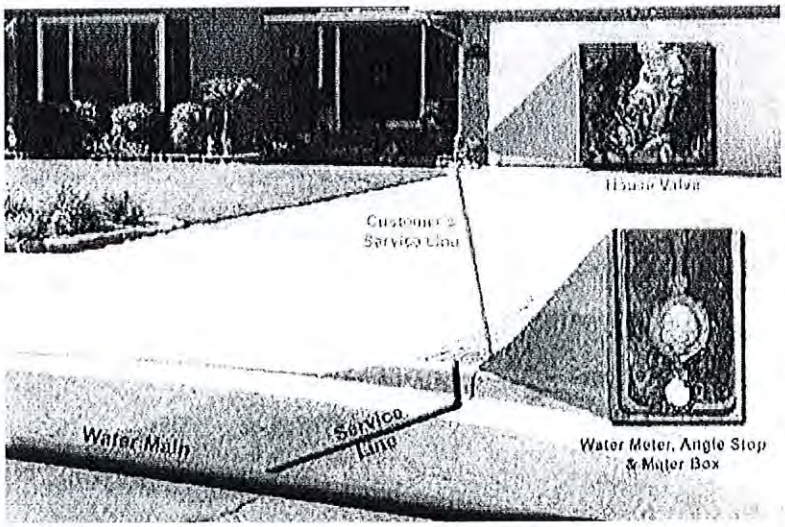
Frequently Asked Questions (FAQ) about Drinking Water Quality

Here is a list of FAQs that may enable you to resolve any questions or issues you may have quickly.

Please feel free to utilize this information, though we request that you be a customer of The York Water Company (*receive your water bills from us*) if calling us for assistance, please. Unfortunately, we cannot provide accurate information, nor can we help solve issues with another water supplier's water. Secondarily, The York Water Company's laboratory is not considered a commercial lab and therefore we cannot test another company's water for you. For those that are not YWC customers, we can provide a list of certified commercial laboratories that may be willing to, for a small fee, test or evaluate the water you have questions about.

When calling the YWC with a drinking water quality issue, we will typically ask for some information from you to begin:

- What is the address where the problem is occurring? (We'll need to confirm you are a YWC customer first)
- What is the condition of the water or the nature of the problem? We're looking for a brief description of what you've observed and what has prompted your call.
- When did you first notice the issue, and how long has it been going on?
- Do you experience the issue in both the cold water and hot water; or only one or the other?
- Does your home have any kind of water treatment device (filter, softener, UV, etc.)?
- Is the issue observed throughout the whole house or limited to a single tap? If the issue is only in some taps but not others, it is likely an internal problem in the home or apartment. The water comes into the home or apartment from the water main using a single pipe known as the service line. If the problem were with the water, the issue should be detected at all taps.



Please note, customers are responsible for protecting their water meter if the meter resides in a meter pit. Responsibilities are as follows:
Between the curb stop and the home = Customer.
Between the main and the curb stop = York Water Company.

*Lettering in blue is additional information that is not published on the website. It is for reference purposes for York Water Company employees to utilize when assisting customers regarding these topics

Each of the below headers in our list of Common Issues encountered has some details and descriptions that may prove helpful

Discolored Water

1) My water is milky or cloudy. What causes this? Is it safe to drink?
   Water appearing to be **Milky or Cloudy in appearance** is usually dissolved air in the water creating teeny-tiny bubbles. It is the most common and recurring complaint during the cold weather months, is temporary, and not harmful.
   How can the customer test this?
   Fill a glass with the milky, cloudy water and let it sit on the counter for 1 to 5 minutes. The water should appear to clear from the bottom up, eventually disappearing. This confirms the discoloration is just air. If any of the milky/cloudiness settles to the bottom, please feel free to call The York Water Company for additional troubleshooting help.
   "Milky" or "Cloudy" in Appearance – this cloudy appearance of the water can be very upsetting to some customers. It is important to understand that this is a temporary condition and is not harmful.
   Possible Causes of Air in the Water:
   a) Increasing temperature of the water – cold water getting warmer, typically
   b) Shutdowns or low water pressure in mains
   c) Fires or main breaks
   d) Overheating of the hot water system
2) Why does my water appear brown? Is there anything that can be done? Is it safe to drink?
   Brown-colored water, or particulates in the water, while scary, does occasionally happen. Our system has miles of pipe where rust and other particles settle to the bottom until the water flows fast enough to stir it up. Normal household use is not fast enough to stir up the water. If both hot and cold water are discolored at all taps throughout the home, it is often the settled bits being stirred up by a disturbance in our distribution system from events such as:
   - Main breaks
   - Flushing nearby
   - Hydrant testing
   - Fire-fighting activities
   - Etc.

   While the color is off-putting, the drinking water still meets safety standards and regulations and is drinkable. If we have received other calls in the same area, YWC can confirm that this is a general condition in the area.
   If the disturbance is ongoing, the likelihood is the water will continue to look unappealing for the duration. If the work is complete, running the cold water in your sink(s), or even better a bathtub, for a few minutes should flush out any particles that have entered your residence. If it doesn't clear up by the end of the day, please feel free to call us.
   If the discoloration is only in the hot water taps, more often than not the hot water heater or hot water piping is to blame. Check the hot water heater anode and dip tube, and consider draining and refilling the heater to observe and remove sediment build-up. A lot of information can be found online; it is recommended to flush your water heater at least

*Lettering in blue is additional information that is not published on the website. It is for reference purposes for York Water Company employees to utilize when assisting customers regarding these topics

once per year to prevent any potential sediment build-up. As this is an issue with the hot water heater, rather than the water supply, the manufacturer and a local plumber should be able to help you to solve this.

If plastic pieces are part of the "sediment" then there is a chance that the dip-tube may have cracked or broken (*the dip-tube is a plastic tube that carries the cold water coming into the water heater to the bottom of the tank where it can be heated. The hot water goes out of the top of the water heater*).

Dip Tube – Starting in about the year 2000, customers reported small white sediment clogging the aerator of the kitchen faucet. It also slows the flow from the showerhead and affects how fast the washing machine might fill. If the sediment is plastic it likely comes from the dip tube located in their hot water tank. This has not been much of a problem recently, though there are some occasional exceptions.

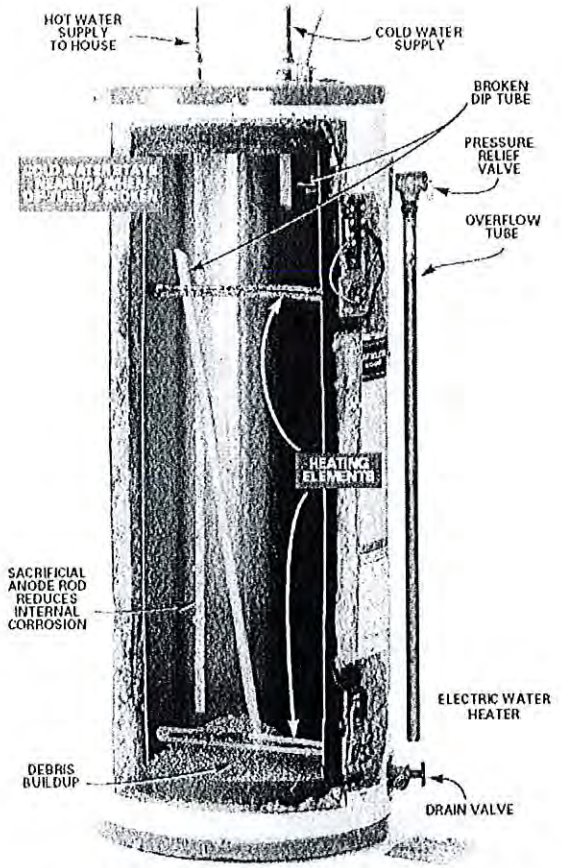


Image Source: https://www.familyhandyman.com/project/how-to-repair-or-replace-defective-water-heater-dip-tubes/

Tastes & Odors

The York Water Company takes great pride in providing high-quality water that tastes good and has no noticeable odor. On occasion, there may be scenarios that can occur in the piping or distribution system that may affect the customer's perception of the taste or odor.

Alternatively, certain conditions can occur in the source water for the treatment plant that can cause the same issues, namely by-products of algae growth in the river or lake from where the water is being drawn. Luckily, York Water has not had issues with odors on the South Branch of the Codorus Creek, likely due to a more environmentally conscious public combined with source water protection measures (for more information, please see our Source Water Protection page).

Some people are more sensitive to these changes than others. Typically, taste and odor concerns can be split into three categories.

*Lettering in blue is additional information that is not published on the website. It is for reference purposes for York Water Company employees to utilize when assisting customers regarding these topics

Chlorine, or "Swimming Pool" taste and odors occasionally happen, but that is not necessarily a bad thing. Almost all water treatment facilities, YWC included, use Chlorine in the form of a food-grade sodium hypochlorite (bleach) solution or Chlorine Gas, to properly disinfect the water during the treatment process. Our regulators at the Department of Environmental Protection (DEP) and the Environmental Protection Agency (EPA) require that we have some disinfectant remaining in the water as it reaches our customers' taps to ensure the water is safe from disease-causing bacteria and microorganisms. If your tap water has a bleach aroma, that is a very good sign that your water is safe to drink. If you prefer your water to have less of that aroma, you can boil it or run it through a carbon filter (most name-brand filter pitchers are carbon filters) and the aroma will be reduced.

Rotten/Sewer odors often come from the drains – there is an "S" or "P" trap under each sink, toilet, and shower drain that keeps water in it at all times to block sewer gases from coming back into the home (see image, below). All drains need to be flushed or refilled every so often or the water in the trap will evaporate, releasing the sewer aromas back into the home. Cleaning the traps can also help get rid of the odor as well, as there is the chance for items to get trapped, like food scraps that can ferment, causing odors (or, a dropped wedding ring or other jewelry, that can then be retrieved).

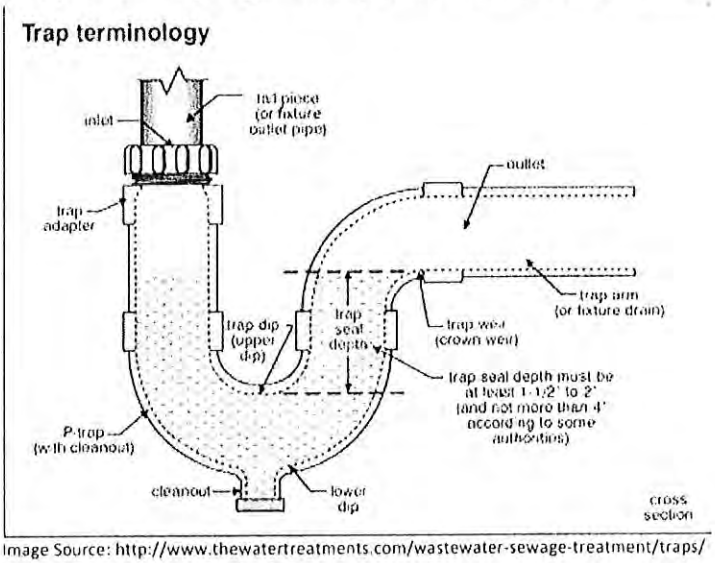

Image Source: http://www.thewatertreatments.com/wastewater-sewage-treatment/traps/

Other causes can include:

- Household or point-of-use filters need to be replaced – if they're used too long, material can get caught and cause bacteria to grow
- Sink aerators need to be cleaned – similar to the above, caught material can cause bacteria to grow, and they should be cleaned out regularly
- Cross-connections, such as a hose left in a pond can draw pond water back up, or plumbing could have potable water incorrectly connected to non-potable water
- Dead-ends in the plumbing, anywhere in the house (allows water to get stuck and become stagnant, losing its disinfection)

*Lettering in blue is additional information that is not published on the website. It is for reference purposes for York Water Company employees to utilize when assisting customers regarding these topics

Earthy/Musty taste and odor issues can stem from the same reasons as rotten/sewer-like issues, with the addition of a lake or creek having an algae bloom (rare for YWC), or a hot water issue, as mentioned above.

Scale, Soap-Scum and Spots on Glassware / Dishes

This is often blamed on hard water, which gets a 'bad rep.' Water hardness is mainly based on calcium and magnesium content (both of which are essential minerals). Soft water tends to have higher concentrations of sodium, rather than calcium and magnesium. Water that is too soft can be just as bad as water that is too hard. It is up to the customer to adjust the hardness, typically with a water softener, if they choose to do so. The hardness of the water in York Water's main system comes in at about 75 mg/L (PPM) as CaCO3 (Calcium carbonate), or about 4.5 grains, and is considered "moderately hard."

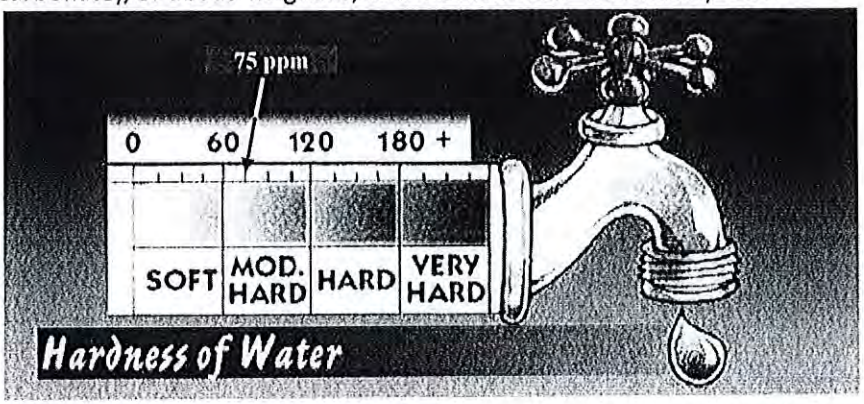

Image Source: https://semesters.in/what-is-hardness-of-water-and-problems-with-hard-water-notes-pdf-ppt/

Most spots or soap scum are caused by compounds from the soap being used that are insoluble in hard water. Certain brands of detergents are made to be used with hard water that will prevent build-up or spots. This is because the detergents are prepared by chemists to keep the components in the detergent in solution when mixed with water, and will thus limit or prevent any build-up or spots. When hard water is boiled, the scale or minerals are deposited, leaving the build-up, or scale, seen in coffee makers, tea kettles, hot water heaters, dishwashers, etc. Often, changing soaps and/or detergents, or a household water softener being out of salt can cause a scale or spots to appear. Citric Acid crystals can be found in a hardware-type store and can help remove some spots and mineral buildup.

Sickness or Skin Irritation

As we are not medical professionals, we strongly recommend a doctor be consulted immediately, and we do not take these concerns lightly. It is very important to document when the sickness or irritation began, what the symptoms are, and immediately determine the source of water. The following questions should be investigated to help both your doctor and other members of your residence/family narrow down the causes:

- Are you a York Water Company Customer?
- Have all members of the family or residence been affected?
- Have the affected individuals been out of town recently?

*Lettering in blue is additional information that is not published on the website. It is for reference purposes for York Water Company employees to utilize when assisting customers regarding these topics

- What indications do you have that the water is the cause of the sickness?
- Does the irritation occur only on the hot water line or is it both cold and hot? Are any of the affected individuals consuming water from the hot water tap?
- Are there other factors observed such as taste, odor, color, particles, cloudiness, etc.?
- Has your doctor suggested tap water as the likely cause?
- Do you have a well and public water in your home or apartment, and could they be connected – even accidentally?
- Do you have any filters, softeners, or other treatment devices connected to your water line(s)? Are they connected properly and operating and maintained correctly (backwashing, rinsing, replaced, checked by plumber/installer, etc.)?

Pink Residue

Not all mold is dark-colored – there is a mold that has a pinkish color that comes from airborne bacteria that grow on damp or wet surfaces, and is often seen on the bottom of shower curtains, shower or sink drains, or even a pet's water dish. There is no mold in your tap water, and the mold does not indicate a problem with the water supply, particularly as some customers have reported seeing this pink color in one bathroom but not another; natural lighting and air circulation can impact the presence and concentration. Cleaning products with bleach are typically recommended to remove the residue, or diluting 1oz bleach into a spray bottle of water to use while cleaning to sterilize the surface, causing the mold to not grow back as fast. Always use caution when cleaning pet water dishes with chemicals, and make sure you rinse well.

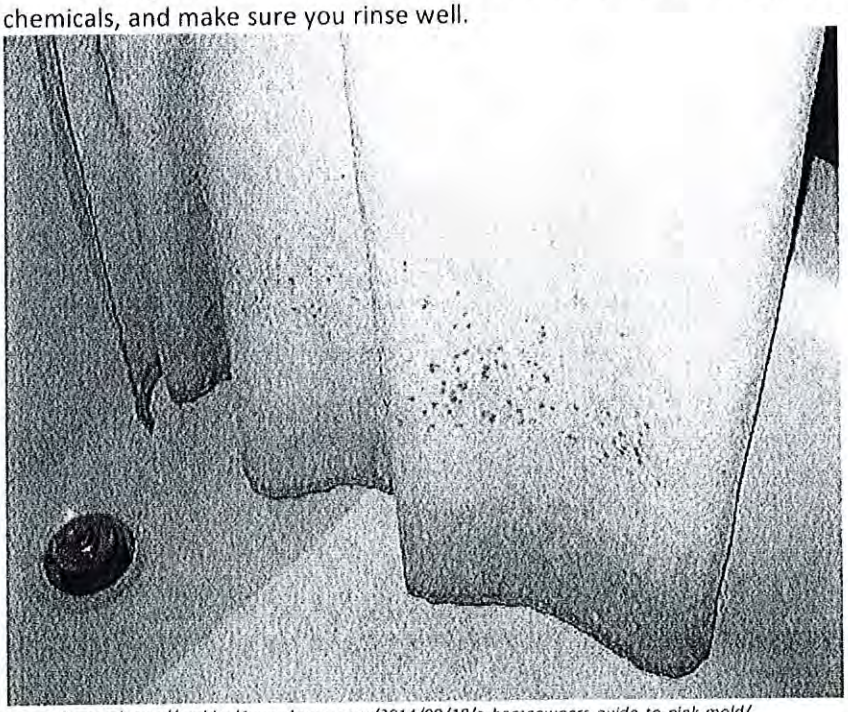

Image Source: https://moldaid1.wordpress.com/2014/09/18/a-homeowners-guide-to-pink-mold/

*Lettering in blue is additional information that is not published on the website. It is for reference purposes for York Water Company employees to utilize when assisting customers regarding these topics

Aquarium or Fish Problems

Owning and maintaining fish in aquariums is both rewarding and challenging. If you happen to be encountering problems with your aquarium, there are a number of factors to consider, including the water.

When encountering problems with your aquarium, water is one of the factors considered. YWC uses a method of disinfecting our water called chloramination. Chlorine is added during the treatment process, then a small amount of ammonia is added in a 5:1 ratio (Chlorine:Ammonia) to provide a longer-lasting chlorine residual so it is present throughout our distribution system. The bound ammonia can cause certain nitrite, nitrate, and ammonia analyzers and test kits (particularly if they are color-based, aka colorimetric) to give false results that are very high, as the compounds are all nitrogen-based. Free chlorine residual will be at or near zero in chloraminated water. Laboratory test methods (more expensive - $$ - $$$$) will yield accurate and reproducible results for each analyte. Some are available to the well-heeled hobbyist, or take a sample taken to a laboratory utilizing a method sanctioned by the most recent edition of Standard Methods for Examination of Water and Wastewater.

YWC is in compliance regarding nitrite, nitrate, and ammonia standards, regulations, and guidance; we monitor continuously, our operators are licensed, and we test regularly. We, and our families, live here and drink the water, too! Consider using a three-in-one (chlorine, chloramine, & ammonia) conditioner. The pH of the tap water should be in the range of 7.4 to 8.8, and we do not use extra phosphates or other corrosion inhibitors for our corrosion control. If issues continue, other items to check are:

- When did the fish begin to die?
- When was water last added to the aquarium?
- Were any new fish added?
- Have any new foods or plants been added?
- Were any sprays or cleansers used near the aquarium?
- Is the aquarium new or have new materials been used?
- Have there been any changes in temperature?
- Has the dissolved oxygen changed?
- Has the aquarium been overloaded or could the fish be over or under-fed
- Were any chemicals used to fight or prevent disease?

Some use sodium thiosulfate or "SeaChem Prime or Safe" to remove the chlorine and allow bio-filter(s) to use the extra ammonia). We form chloramines at ≈ 5:1 ratio; so, if the total chlorine residual is 2.0-mg/L there will be approximately 0.40-mg/L of ammonia added (divide total chlorine residual by 5 and that will be very close to the total ammonia in the tap water).

To learn more about what is in our tap water, please see our Water Quality Analysis and Water Quality Reports, updated annually.

A few other helpful websites are an outline of the EPA's regulations, API Fish Care (link brings you to Ammonia testing), and Monster Fish Keepers forums (link brings you to a chloramine post).

*Lettering in blue is additional information that is not published on the website. It is for reference purposes for York Water Company employees to utilize when assisting customers regarding these topics

If you are interested in having your water tested by an accredited laboratory, two local laboratories are:

- ALS (Analytical Laboratory Services) – drop-off for York is in Shiloh Village, or the actual lab is in Middletown. Call (717) 944-5541 to request instructions.
- LABS (Laboratory and Biological Services) – located in New Oxford, near Abbottstown. Call (717) 259-6550 to request instructions.

Freezing Pipes / No Water in Very Cold Conditions

Pipes that freeze most often are those exposed to severe cold:

- Outdoor hose bibs
- Swimming pool supply lines
- Water sprinkler lines
- Water supply pipes in unheated, interior areas, such as basements, crawl spaces, attics, garages
- Pipes that run against exterior walls with little to no insulation
- When exposed to drafts, breezes, or cold winds, especially on windy days

Preventative Steps in the Winter that can reduce freezing pipes are:

- Repair broken windows and place insulation in cracks & drafty areas
- Keep a space heater or move warm air over pipes in high-draft areas
- Open a spigot or faucet to keep water moving if the above isn't possible
- Keep the heat on when traveling
- Install pipe insulation
- Use pipe sleeves or UL-listed heat tape, heat cable, etc. on exposed water pipes. Even newspaper provides some degree of insulation and protection to exposed pipes

If pipes do freeze, the best course of action is for you to contact a local plumber to help you thaw it out and make the necessary repairs.

If the pipe has not burst, you can try to thaw it out with an electric heating pad, hair dryer, towel soaked with hot water, or space heater. Apply heat by slowly moving the heat source toward the coldest spot on the pipe. NEVER concentrate heat in one spot, as cracking ice can shatter a pipe. Turn the faucet on and let it run until the pipe is thawed, and water pressure returns to normal. DO NOT use a blow torch or other open-flame device, as there are fire and carbon monoxide exposure risks.

If a frozen pipe bursts and water floods the home, turn the water off at the shut-off valve before calling a licensed plumber for help, especially if you cannot find the broken pipe or it's inaccessible. Do not turn the water back on until the pipe has been repaired. Please call customer service if you need an emergency water shut-off.

Please Note, Customers are responsible for protecting their water meter if it resides in a meter pit. Insulate or heat-tape the pipes and/or meter. For meter pits, manufactured housing, and very cold, drafty basements, check the heat tape... make sure it is warm and plugged in.

*Lettering in blue is additional information that is not published on the website. It is for reference purposes for York Water Company employees to utilize when assisting customers regarding these topics

Water Pressure – Why is mine low?

Due to the nature of our service area, pressure delivered to our customers will vary. The water leaving our treatment plant is pushed out to the system solely through gravity. As the water gets further out in the distribution system, pressure decreases, so we have pumphouses and tanks set up to give the water an extra boost. Including the gravity pressure zone, there are 26 different pressure zones in our main system alone.

Regulations state normal operating pressure should be between 25 and 125 PSIG, or pounds per square inch gauge. Our company has a policy in place to ensure the static pressure at the mains remains between 30 and 110 PSI (The difference between PSIG and PSI: PSI is an absolute pressure unit, while PSIG is a gauge pressure unit; PSI can be used to measure gauge pressure, absolute pressure, or vacuum pressure. As we are not going below atmospheric pressure and are not in a 'closed system,' or vacuum, the terms are interchangeable). Locations near the far ends of one pressure zone may experience pressure that is on the lower end of that range. There are options available to modify the pressure experienced throughout the residence; however, as our obligation ends at the water main it is the customer's responsibility to manage the pressure beyond that. There may be times when a home is at a much higher or lower elevation from the main, or located several hundred feet from the main. In these cases, someone from the company should be (and most likely is) pointing these conditions out to the homeowner or builder so they can take corrective actions during early construction stages.

Occasionally, water pressure suffers in the event of main breaks, nearby flushing, or fire-fighting activities. These changes in pressure will be temporary, with the amount of time varying depending on what event is occurring.

When the static pressure at the main is outside the company goal of 30 and 110 psi, there are special arrangements the company uses as guidelines. If the pressure is:

- *Greater than 110 PSI* – pressure reducing valves are <u>required</u> to be installed on the inlet side of the meter
- *Between 80 and 110 PSI* – pressure reducing valves are <u>recommended, but not required</u>; installation is at the discretion of the customer
- *Between 35 and 80 PSI* – no special requirements needed, as this is normal
- *Between 30 and 35 PSI* – oversized internal piping, meter, and service lines are recommended
- *Under 30 PSI* – a supplemental service agreement is required

If you still require assistance after reviewing these topics, please do not hesitate to contact customer service, who will be happy to help you.

*Lettering in blue is additional information that is not published on the website. It is for reference purposes for York Water Company employees to utilize when assisting customers regarding these topics

Who to Call & When (Distribution, Maintenance & Grounds, Filter Plant)

Dispatch:	Emergencies; Same day reschedules or cancelations
Marisol -	Pressure ; No water; Fire Hydrants; Main Breaks; Turn On schedule after 330p; Taste & Odor; Flushing
Rachel -	Meter info; Meter sets; Meter schedule; Backflow; Same things as Marisol
Kelly -	Lead service lines; Service line leak (SLPP); Turn on schedule after 330p

Lower Shop:	AFTER 3PM
Daulton (Sup.)	Turn on schedule after 3p; Rescheduled/"no-show" turn on appointment; Flushing
Colton (Asst. Sup.)	; Emergency shutdowns; Main Breaks/Leaks; YWC Crews working; Pressure;
Tyler C.	Dirty Water

New Construction:	
Nick (Sup.)	Main replacement projects; Main extensions; Shutdowns
Kevin (Const. Coord.)	Contractors working: York Excavating Co., Kinsley, E&K Services, etc.
Elder (Const. Coord.)	

Wastewater:	
Vaugh (Sup.)	Leaks if wastewater system is Owner & Operated by YWC
Eric (Asst. Sup.)	If YWC only bills, they need to call their Municipality
Derek (Asst. Sup.)	

M&G:	
Jesse (Sup.)	YWC Properties; Tanks
Andy S (Asst. Sup.)	Cell phone companies will call about placing their satellites on YWC water tanks --
Josh (Asst. Sup.)	take their info and email to M&G

Filter Plant:	
Doug (Water Quality Manager)	Water Quality concerns
Katrina (Asst. Sup.)	
Jed (Asst. Sup.)	

Engineering:	
Kent (Engineering Manager)	New services/New connections to YWC; Splitting services;
Lynsey (Engineering Tech.)	Hydrant Flow Tests
Devon (Engineering Tech.)	

Operations Services:	
Joe (Supply Chain & Operations Manager)	Backflow; Meter pits; Meter installs
Jeff (Operations Services Coordinator)

Lower Shop Reminders

- Any email sent to Lower Shop should go to [redacted]
- Turn On Schedule
  - Appointments
    - Make sure to have the appointment, municipality, and appointment type to the schedule.
    - We do not give a call ahead for turn on appointments.
    - Rescheduled appointments for future appointments, should be emailed to the LS supervisors.
    - Canceled/Rescheduled appointments for the same day, call Dispatch.
  - If an appointment is scheduled after 2:30p, for that evening or the next day, please email information to LS supervisors.
  - After 3:00p: should be calling Lower Shop or Dispatch before scheduling an appointment for that evening or for the next day (unless next day 4-6p/6-8p).
    - If approved, note who approved the appointment in your email to us.
  - Friday after 3:30p: the next available appointment is Monday 4-6p/6-8p.
    - [redacted] do not have access to the LS printer to get the work order for the Saturday worker.
  - Appointments should not be scheduled/placed on turn on schedule until the customer has application submitted and in Oracle.
- Turn On appointments (and any appointment) that have a Meter Pit should not be scheduled for night (4-8p)
  - Confined Space - needs 2 people (only have 1 for night)
  - Roving Utilitymen do not have Neptune Belt Clip readers like Meter Readers do – they get their reads manually off the meter.
- Work Orders
  - Leave a Service Request as "Entered" until you have an appointment scheduled. If open, it will print without any appointment details.
    - All appointment info should be on the SR/WO
  - Updates: do not delete old information on the service requests in Oracle – only add new information.
- Lower Shop leaves at 3:30p
  - Calls after 3:30p should go to Dispatch, as we are most likely no longer in the office with access to schedules, WOs, etc.
- Service Line Protection Plan
  - Appointment is needed.
    - Can't diagnosis appropriately if the customer is not present.

- Listens on service line – needs to know if water is being used inside or not.

THE YORK WATER COMPANY
Policy

Approved by: William T. Morris	File: Service - Pressure
Date: July 2002	
Revision:	Page 1 of 1

SERVICE - PRESSURE CONSIDERATIONS

Due to the nature of our service area, pressure delivered to our customers will vary. In view of this situation, it is imperative that we determine the expected static pressure before we agree to provide service.

The Pennsylvania Safe Drinking Water Act Regulation (§109.607) and the PaPUC Regulations (§65.6) specify that normal operating pressure should be not less than 25 psig nor more than 125 psig, at the main, except that during periods of peak seasonal loads the pressure at the time of hourly maximum demand may be not less than 20 psig nor more than 150 psig.

It has been our Company's policy to make special arrangements when the static pressure at the main is 30 psi or less and 110 psi or more.

The guidelines are:

Greater than 110 psi - Pressure reducing valves are required to be installed on the inlet side of the meter.

Pressures 80 psi to 110 psi - Pressure reducing valves are recommended but not required. The installation is at the discretion of the customer.

Pressures 35 psi to 80 psi - Normal range, no special requirements needed.

Pressures 30 psi to 35 psi - Oversize internal piping, meter and service lines are recommended.

Pressure less than 30 psi - The attached Supplemental Service Agreement and Covenant is required before service can be provided.

Customer wants more pressure they can consider to purchase booster pump

Although our obligation for pressure ends at our water main, we should recognize that there may be times when a home is at a much higher or lower elevation than the main or is located several hundred feet from the main. In these cases, we should point out these conditions to the homeowner or builder so they can take corrective action during early construction stages.

SUPPLEMENTAL SERVICE
AGREEMENT AND COVENANT

THIS AGREEMENT made the _____ day of _____,A.D. 20___, between THE YORK WATER COMPANY, a corporation organized under the laws of the Commonwealth of Pennsylvania, having its principal office in the City of York, in the County of York and said Commonwealth, hereinafter called "Company," of the first part; and _____

_____

hereinafter called "Applicant," of the second part, WITNESSETH:

WHEREAS, Applicant is the owner of a tract of land in the _____, in said County of York and has requested Company to provide service for the Applicant's use.

NOW, THEREFORE, in consideration of the premises and the mutual covenants and agreements herein contained, it is specifically covenanted and agreed by and between and for the benefit of the parties hereto, their respective successors, executors, administrators and assigns, all of whom it is expressly agreed and bound hereby as follows, to wit:

It is hereby covenanted and agreed that The York Water Company, under the provisions of 52 Pa.Code §65.15 "Refusal to Serve Applicants" of Pa. P.U.C. Water Regulations and under the Rules and Regulations of said Water Company, may properly and does hereby decline to serve Applicant or Applicants for water service for _____
shown on said Plan _____

_____

_____

and that said The York Water Company shall have no obligation to serve any of said lot or lots unless the following conditions and requirements for adequate water service for domestic purposes only shall have been complied with for each such lot or lots for which application may be made in the future:

(A) A one (1) inch Company service line and a one (1) inch customer service line, which together will connect the respective home with the water main, and also a three-fourths (3/4) inch meter shall be installed, and minimum and block rates for water service shall be based on such meter size.

(B) Piping throughout the premises shall be properly sized so that excessive pressure losses are not created which would curtail the adequacy of service available to the customer.

(C) A pump and pressure tank arranged for automatic operation properly sized and designed to provide an adequate volume of water at an adequate pressure shall be installed and maintained in the basement of each home at the owner's, customer's, developer's or builder's expense. (The minimum size pump recommended would be one capable of delivering a flow of 15 gpm at a net head of 20 psi with a 20 gallon pressure tank.)

This covenant and agreement shall constitute a covenant running with the land and said agreement shall be acknowledged and recorded in the York County Court House.

IN WITNESS WHEREOF, the parties hereto have caused these presents to be duly executed under seal, in duplicate original, the day and year first above written.

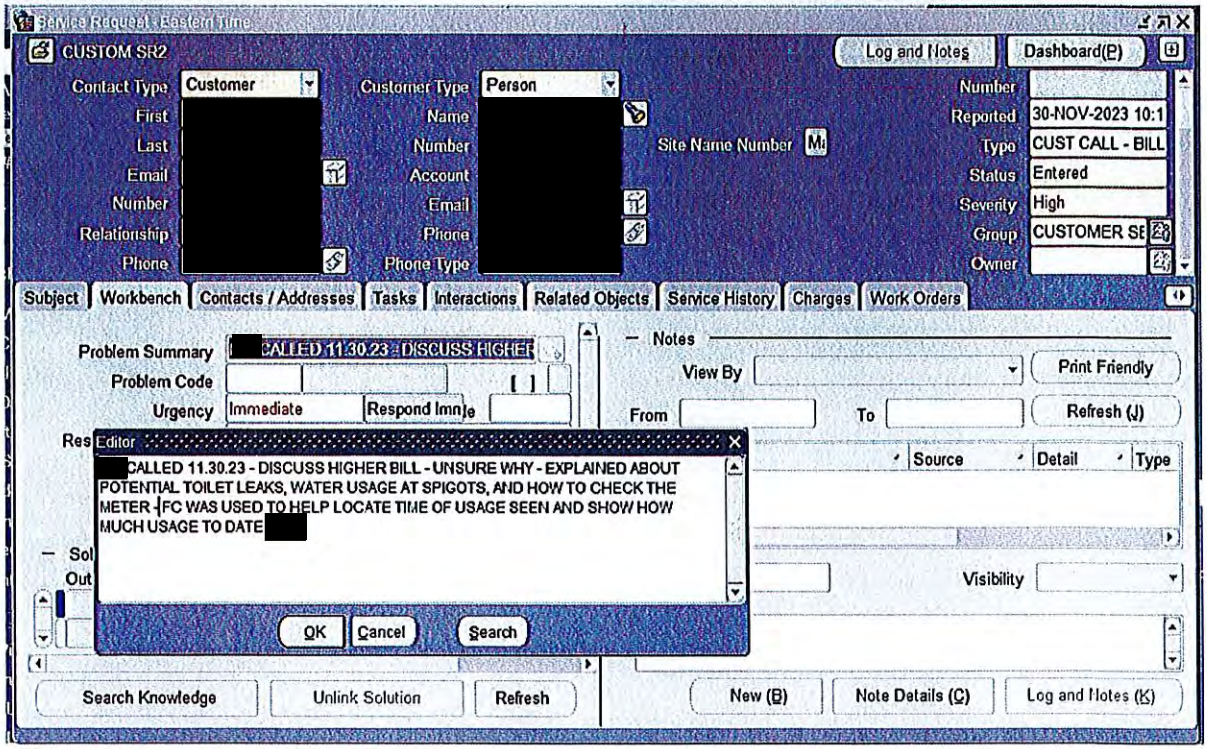
How To for New Customer Call Toggles

You will be using these CUST CALL options to document encounters with customers. We need to document customer encounters/disputes, provide resolutions to the issues, and then a date of the resolution. The new toggles (aka options to select) need to be used moving forward for tracking purposes. Refer to your other attachment on what toggle to use when.

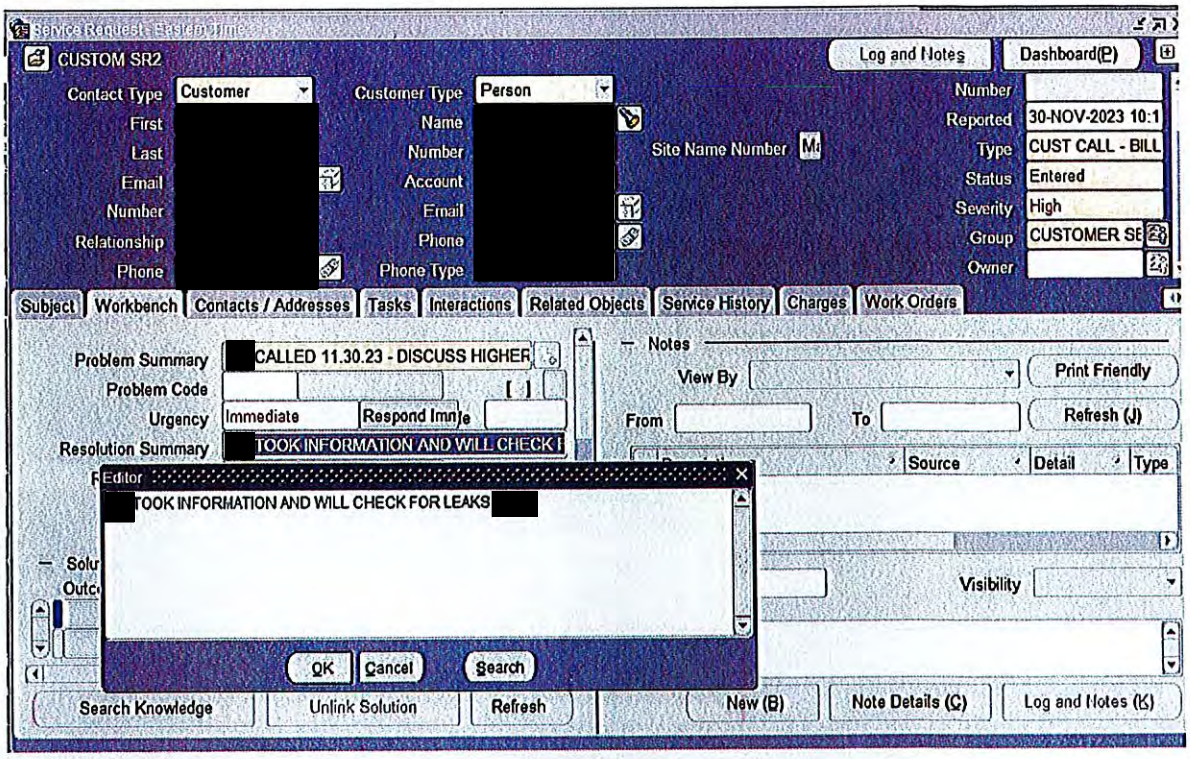
Entering in a Toggle Note with CUST CALL begins the same way you would create a work order. The new steps begin when you in the Workbench tab of the Service Request notes.

Example here is for CUST CALL – BILL DSIPUTE

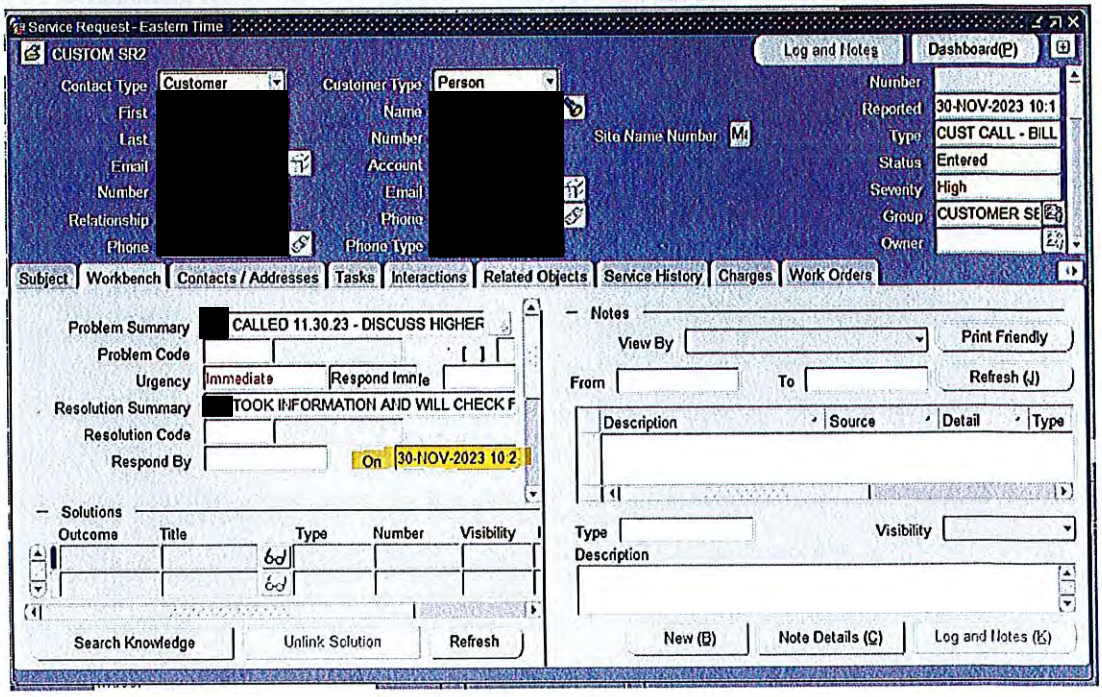
1. In the problem summary, you will explain the call similar to the past when a customer has a concern.
    a. [redacted]CALLED 11.30.23 - DISCUSS HIGHER BILL - UNSURE WHY - EXPLAINED ABOUT POTENTIAL TOILET LEAKS, WATER USAGE AT SPIGOTS, AND HOW TO CHECK THE METER - FC WAS USED TO HELP LOCATE TIME OF USAGE SEEN AND SHOW HOW MUCH USAGE TO DATE [redacted]



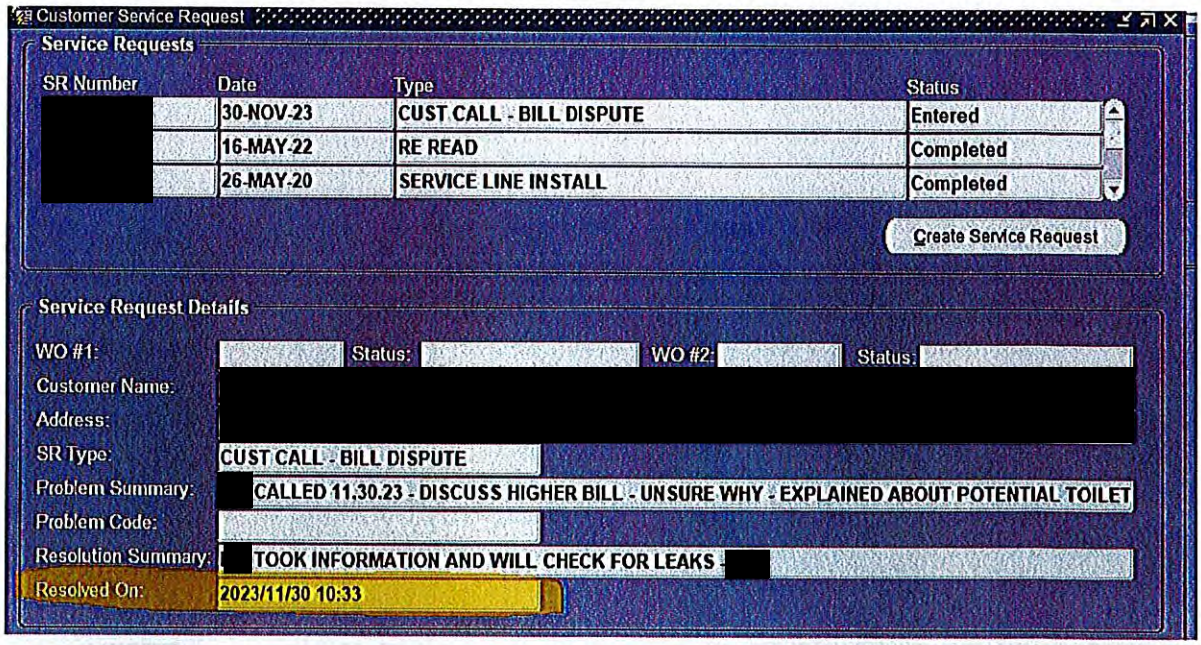
2. You will then note the resolution to the call in the Resolution Summary section
   a. [redacted]TOOK INFORMATION AND WILL CHECK FOR LEAKS[redacted]



3. You will then need to enter the Date it was resolved here **(this is crucial to enter)**



4. Save and Exit – results will be this now



Toggles (Options) in Oracle for work orders – entered notes for customer calls/interactions

CUST CALL – BILL DISPUTE	All disputes over the bill; Use when customer disagrees with their invoice; can include consumption billed for, total balance, etc.; offer details and resolution if achieved when explaining information (if a high consumption type call and a reread is asked for OR an appointment is approved to schedule → then you will use CUST CALL – CONSUMPTION HIGH/LOW
CUST CALL – COMMENT ONLY	Use for general/all other notes/comments for account
CUST CALL – DIRTY/RUSTY/CLOUDY	Use to document details from customer interactions on what customer experienced – resolution and suggestions can be noted
CUST CALL – FORMAL SEWER	Use ONLY by [redacted]
CUST CALL – FORMAL WATER	Use ONLY by [redacted]
CUST CALL – HIGH/LOW PRESSURE	Use when an appointment is needed to verify the pressure at the address
CUST CALL – INFORMAL SEWER	Use ONLY by [redacted] to track filed cases
CUST CALL – INFORMAL WATER	Use ONLY by [redacted] to track filed cases
CUST CALL – LEAD	Use when someone calls about possible lead lines (offer the tips on how to check their service line material), possible exposure – if unsure their service line material, you can schedule an appointment for this using a work order called Verify Service Line Material with the Lower Shop schedule.
CUST CALL – LEAK AT METER	Use when an appointment/work order needed to check if meter is leaking
CUST CALL – NO WATER	Use when an appointment is needed to verify why No Water throughout entire home (verify no other reason for this such as shut off, turn off, work in area, etc.)
CUST CALL – NOISE IN LINE	Use and document details from customer interactions on what customer experienced – resolution and suggestions can be noted
CUST CALL – OTHER CONTAMINATES	Use when asked about the water quality report, what YWC tests for, questions on PFAs, questions on Floride (website has tools to assist on these questions too)
CUST CALL – PAWC SEWER INQUIRY	Use to track all calls about PAWC – your note should state the following: "Call received xxx date & referred #s for PAWC – date of contact -- initials"
CUST CALL – TASTE AND ODOR	Use when customer has experienced taste/odor; list details experienced and relevant information; may be used if flushing is deemed appropriate by Filter Plant
CUST CALL – VERIFY READ & MIU	Use when getting another reading for customer; note reading/date when received back and usage that has occurred
CUST CALL – AIR IN SERVICE LINE	Use and document details from customer interactions around air in lines – resolution/suggestions can be noted
CUST CALL – CONSUMPTION HIGH/LOW	This is a result/follow up note from the CUST CALL – BILL DISPUTE option; Use when notating the readings obtained; use also when approved to schedule a High consumption appointment.

What to do When a Payment Agreement Customer Moves

First: Using this method is for those who have not had a Change in Circumstance or the PUC requiring a new agreement. If so, create a new PA and jump to step T (after writing down the Bill to Location ID from the old address)

A. Transfer the total balance from the OLD address to the NEW address (wait for the final bill to be in the system first)
B. Go to the OLD address, we need to gather information
C. Go into the Payment Agreement on the OLD address
D. Once in the Agreement, click the "View Activity" button

20-SEP-2016	Payment	$-79.36				$114.13	$193.49
08-OCT-2016	Invoice	$97.35				$114.13	$288.49
06-OCT-2016	Agreement Term - Ongoing Rmt (Beginning 06-NOV-2017)		02-NOV-2018	$97.35	$15.00	$112.35	$288.49
18-OCT-2016	Payment	$-114.13				$112.35	$171.36
06-NOV-2016	Invoice	$72.02				$112.35	$243.38
03-NOV-2016	Agreement Term - Ongoing Rmt (Beginning 06-NOV-2017)		30-NOV-2018	$72.02	$15.00	$87.02	$243.38

E. You'll need to write down the final payment agreement balance listed in the "Tot PA Amt" column. In the example above that number is $199.37. Not the Total Bal Number!!
F. Write down the Fixed amount, in this example it is $15.
G. Exit out of the "View Activity". Write down the Bill Location from the upper right corner and the "Type" and "Code" if they are not "1" & "Blank".
H. Now that you've gather all the information from the OLD address, you're ready to start working on the agreement on the NEW address.
I. Go to the NEW address front page. Click Payment Agreement.
J. Press the "NEW" button.
K. Because this is a continuation of a previous payment agreement, we don't necessarily need to enter all the information that we normally would for a new payment agreement (although it wouldn't hurt anything if you filled out every field on the form). The following includes the few fields that are absolutely necessary.
L. Enter the "Type" and "Code" the same as the previous address.
M. Change the Description and Agreement Notes to indicate that this agreement entry is just a continuation of the agreement made at the previous address. As shown below:

Type	Code	Description
1	Blank	First PA- CONTINUED from previous address

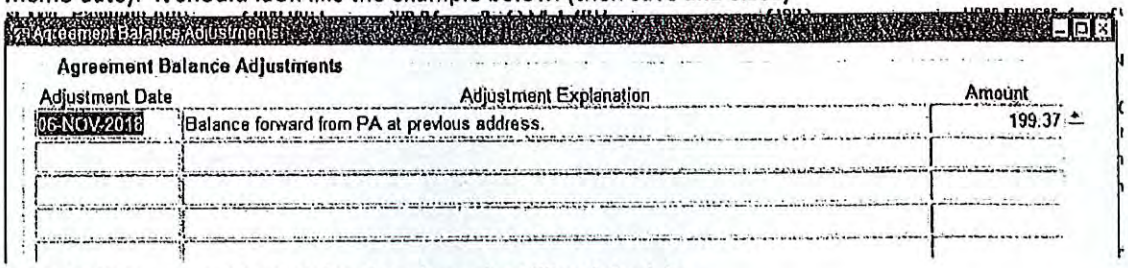
Agreement Notes	This PA is just a continuation of the agreement the customer entered while living at [redacted] The previous Bill Location ID was [redacted]

N. For the Initial Outstanding Charges and Initial Outstanding Months fields, I would either blank them out or use the values from the agreement at the previous address.

Initial Outstanding Charges | | Initial Outstanding Months | |

O. At this point it would be a good idea to click the "Save" button to save your work.

P. To carry forward the balance of the payment agreement from the previous address, click the "Agreement Adjustments" button. Use the amount from step E. Use a date that is at least one day after your balance transfer date (You can always look at the previous PA for the Credit memo date). It should look like the example below: (then save and close)



Q. Look up the customer's next due date from the Billing Schedule.

R. Now click the "Enter Payment Terms" button and add the terms. Most of the time you will NOT need to add a one-time payment. You can use the next due date and put in the ongoing terms with the same Fixed Amt written down from the previous address. **the date still has to be at least 2 weeks from when you enter it.

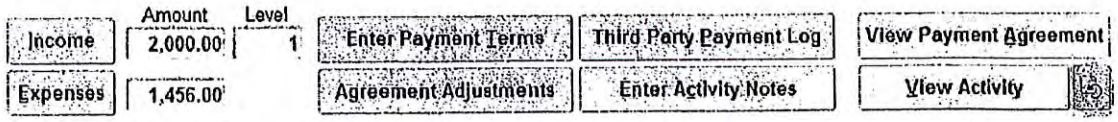
S. Close out of the Payment Terms and save your work.

T. Click on the "Edit Locations" button as show below:

U. As shown below the NEW address Bill Location ID will be in the "Current Bill Site" box. Enter the Bill Location ID from the OLD address in the "Previous Bill Site" box. Then click "Refresh Address" button to view the customer name and address connected to that Bill Location ID. If the name and address are the correct OLD address, click Save and Close.

V. The Agreement area should now have the Previous Location button enabled. You can now click the Previous and Next Location buttons to move between the two addresses. Also the "View Activity" button will now report on payment agreements from both locations.

W. Lastly click the refresh button



To the right of the "View Activity" button. To make sure the Agreement is updated.

The York Water Company

"That good York water"
SINCE 1816

York Water Cares (YWC)
Low Income Customer
Assistance Program

THE YORK WATER COMPANY

YORK WATER CARES (YWC)
LOW INCOME CUSTOMER
ASSISTANCE PROGRAM

Introduction

The York Water Company's York Water Cares (YWC) Low Income Customer Assistance Program ("Program") provides an alternative to traditional collection methods for low income payment troubled customers. The Program is designed to (1) make water service more affordable to low income customers; (2) reduce water usage; (3) provide a cost effective means of collections; and (4) reduce past due amounts.

Program Description

The Company's York Water Cares (YWC) Low Income Customer Assistance Program includes the following features:

- It will be targeted to low income payment troubled customers (150% of poverty level).
- It will include a water usage reduction component with plumbing repairs and the installation of water conservation devices.
- It will include a requirement of monthly payments of not less than $5 nor greater than $15 to reduce past due amounts.
- Customers will earn immediate forgiveness of past due amounts in an amount equal to the agreed upon monthly payment to reduce past due amounts. Total forgiveness of past due amounts will be limited to $120 for each participant.

Initially, the Company's Program will include approximately 30 low income, payment troubled customers. There will be no limit to the number of customers allowed to enroll in future years.

Payment Troubled Customers

The Company will identify those customers whose past due amounts have exceeded $100 or more for a period of five (5) successive months for potential inclusion in the Program.

Low Income Customers

The Company will determine which of the customers identified as payment troubled (past due amounts exceeding $100 or more for a period of five (5) successive months) are income Level 1 (150% of the federal poverty income guidelines) customers.

Customer Assistance Program Agreement

Customers determined by the company to be payment troubled, low income customers will be asked to sign a York Water Cares (YWC) Customer Assistance Program Agreement whereby they agree to (1) pay their current water bill; (2) make an additional payment applied to their past due amount; (3) receive an immediate forgiveness of past due amounts in an amount equal to the agreed upon monthly payment to reduce past due amounts. Total forgiveness of past due amounts will be limited to $120; (4) permit an in-home audit of plumbing and water fixtures and (5) permit a qualified plumber to make minor in-home plumbing repairs and install water conservation devices.

Water Usage Reduction

The Company will determine which of the customers identified as payment troubled and identified as low income would benefit from a water usage audit.

Water Usage Audit

The Company will perform an in-home water usage audit for those customers who the Company has determined may be using excessive amounts of water. The water usage audit will identify the need for minor plumbing repairs and water conservation devices.

Minor Plumbing Repairs and Water Conservation Devices

For those customers that were identified as needing minor plumbing repairs and water conservation devices, the Company will, at no cost to the customer, engage a plumbing contractor to make necessary repairs and install necessary water conservation devices.

Past Due Amount Forgiveness

Upon the receipt of a payment of a past due amount, the Company will immediately forgive an additional past due amount in an amount equal to the agreed upon monthly payment to reduce past due amounts. Total forgiveness of past due amounts will be limited to $120 for each participant.

Program Evaluation

The Company will conduct an evaluation of the on going costs and benefits of the Program, including an evaluation of customers continued participation in the Program.

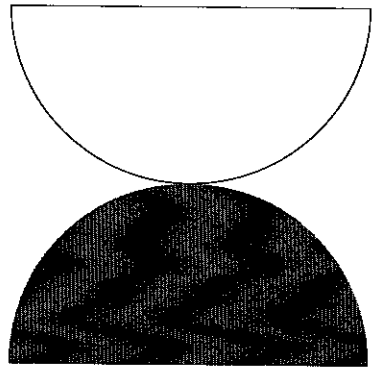
3.22.24 Team meeting Agenda

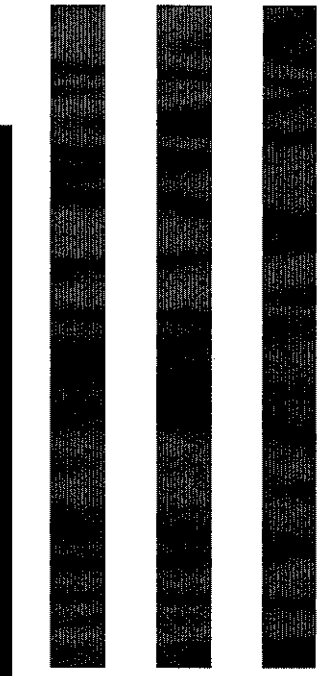


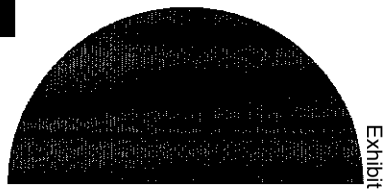
- [redacted]
- Quote
- Thank for survey responses
- Based on results and observations, there is room for change and growth. Over the next couple of months there will be incremental adjustments made. Some of the changes are in alignment with what is already being done (it will just be more defined) others will be new. All in all it is a part of growth

1st adjustment- Effortless Introduction

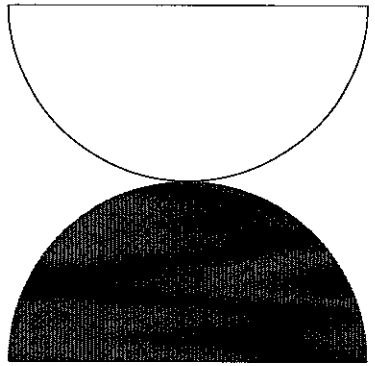
- Huddles- 15-20 min meetings to discuss different topics lead by peers and leadership.
- Future Huddle volunteers?

Change is inevitable in life. You can either resist it and potentially get run over by it, or you can choose to cooperate with it, adapt to it, and learn how to benefit from it. When you embrace change you will begin to see it as an opportunity for growth.





Effortless Introductions



An Effortless Introduction is part of a framework in customer service designed to simplify the customer journey, while also supporting the growth of the company. It includes:

	Examples:
• Greeting	• Good morning; Good afternoon; Hello
• Brand Company	• Thank you for calling York Water company
• Verify	• Who am I speaking with? Please confirm your address
• Ask	• I have your number as… and email as… is this correct?
	• We do not have an email on file, May I have your email address?

#DigitalDrive

Thank you

GAME– RESTORATION PAYMENT AGREEMENT TOPIC- DILMARIS

Question #1:

- True or False:
- A customer was shut off today. The customer has never had a payment agreement. The customer was shut off for $200.00. The customer calls and needs to have the services restored. The customer cannot pay $200.00 plus $15.00 turn on fee. A CSR says, "well sorry you were shut off today and the total amount to restore service is $215.00". True or False: the CSR said the correct information?
- Answer: False. They are eligible for a Restoration Payment Agreement.
- Question #2:
- From the previous example, what is the correct amount the customer would have to pay to enter into a Restoration Payment Agreement? They were shut off for $200.00 as a reminder.
- Answer: $200/24 (this is 1/24 of the shut off amount) plus the $15.00 turn on fee. So, $8.33 plus $15.00 = $23.33.
- Question #3:
- What is the number of payment agreements we are required to offer?
- Answer: PUC requires 2 Company Payment Agreements to be offered.
- Question #4:
- A customer has defaulted on Company Payment Agreement #1. A customer has also defaulted on Company Payment Agreement #2. They were also shut off today for $500.00. True or False: They are not eligible for a Restoration Payment Agreement.
- Answer: False. They can be offered a restoration payment agreement.
- Total Scores – who had the most right???
- Tie Breaker/Bonus Question (if needed – we can ask anyway):
- Question:
- Are we required to offer another payment agreement in this instance: a customer defaulted on Company Payment Agreement #1, they defaulted on Company Payment Agreement #2, and then they were set up on a Restoration Payment Agreement and then was shut off/defaulted on the restoration payment agreement. Are we required to offer another restoration payment agreement?
- Answer: No – we have offered the required 2 Company Payment agreements and a restoration payment agreement. This is 3 total. We have offered our required amount. Because the customer defaulted on all 3, another company payment agreement is not available.

POINTS TO REMEMBER

- As Per the PUC, we are required to offer 2 company payment arrangements.
- The restoration PAR is when someone was shut off. They are only then required to pay 1/24 of the shut off amount plus turn on fee.
- Restoration payment arrangements could be an option for customers when they are shut off (refer to scenarios/bonus question for different examples)

AS OF APRIL 1, 2024

As we look to standardize and ensure everyone is meeting the company standards as a CSR, we are implementing the following:

Customer Interactions-

Email day

Minimum completed emails= 25

Minimum calls per day

- **Below expectations= 39 and below**
- **Meets expectations= 40-50**
- **Exceeds expectations= 50 and above**

This is not meant as a hard stop at a specific number, but to ensure everyone is doing the minimum.

****These are not permanent expectations. They are on the lower end as an introduction to the idea of a "metric" which is a set of expectations. ****

THANK YOU

START SERVICE (update the automated response to customers as well?)

Welcome to The York Water Company,

We have approved your application for water service at SERVICE ADDRESS.

Your account number is **123456-789111** and we will start your billing effective **01/11/1111.**

Once you have received your first invoice, which will be mailed, you will be able to register online, to access your account!

The temporary password you will need to access your account for the first time is: **xxxxxxx.**

If you have selected paperless billing, thank you! We appreciate your partnership to reduce paper usage. As part of our quality control, the first invoice will be mailed to the mailing address provided on the application.

We offer several convenient options to pay as well as options to review your monthly water bill.

· Our payment portal Paymentus allows for easy scheduled payments, paperless options, access to all your prior invoices and FREE credit, debit, and e-checks payment options.

· Our Timely Automatic Payment system (TAP),available through The York Water Company, allows payment to be withdrawn from a checking or savings account you authorize on the date the bill is due.

Welcome to The York Water Company!

Please let us know if you have any questions! Contact details are: 717-845-3601 or customer.service@yorkwater.com.

Have a nice day,

Service Line Material

Hello XXXXX,

Per our conversation, we need your help to identify the material of your water service line. Please visit Service-Line-Survey to learn more and to submit your information.

If you have any questions, the York Water Company Customer Service team is available at customer.service@yorkwater.com or by calling 717-845-3601.

Thanks,

METER READINGS – Neptune E-Coder

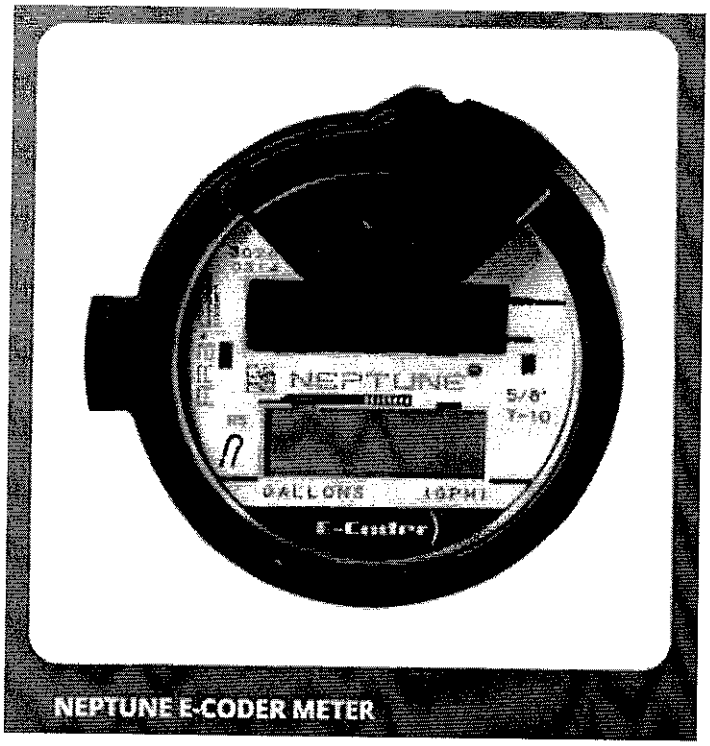
Hello xxxx,

If you could please respond to this email with a clear photo of the face of the meter we would appreciate it!

You have a Neptune E-Coder that looks like the photo listed below - you will need to place a flashlight directly on the black solar strip like the one you see here to "wake up" for a reading.

Once the second screen pops up and shows the reading you will be able to take a photo.

If you would like more information on how to read the meter visit our website.



Please let me know if you have any further questions!

Thank you,

** We need your help to identify the material of your water service line. Please visit Service-Line-Survey to learn more and to submit your information.

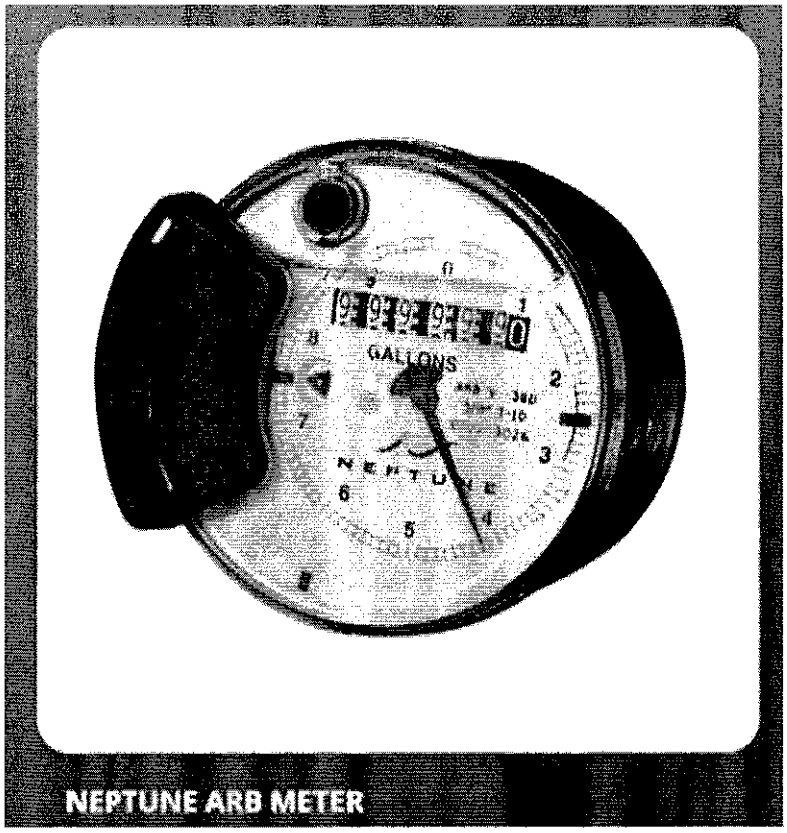
METER READINGS – Neptune ARB

Hello xxxx,

If you could please respond to this email with a clear photo of the face of the meter we would appreciate it!

You have a Neptune ARB that looks like the photo listed below.

If you would like more information on how to read the meter visit our website.



Please let me know if you have any further questions!

Thank you,

** We need your help to identify the material of your water service line. Please visit Service-Line-Survey to learn more and to submit your information.

METER EXCHANGE

Hello **xxxx**,

Please click the link to schedule your water meter exchange.

If you have any questions or have trouble with the online schedule, please contact us via phone at 717-845-3601 and select the meter exchange prompt.

Have a nice day,

SIGNATURE

** We need your help to identify the material of your water service line. Please visit Service-Line-Survey to learn more and to submit your information.

End of service

Hello **xxxxx**,

We have received your request to end the service at **PROPERTY ADDRESS**, on **1/11/1111**.

Your account has been noted and the final billing address has been updated.

Thank you!

Last Personal Contact Notes:

YWC immediately prior to termination:

- YWC right before a shut off will do the following
    - Knock on the premise door
        - If no one answers, post the address with the blue shut off notice indicating the shut off address, date, time, what needs to be done to restore services, and how to contact PUC.
        - If an answer, advise reason for shutting off water, see if a payment can be made to stop the shut off from happening or deliver notice with same details indicated above on the notice if no payment/means to prevent shut off occurs.
    - Return to shut off location at street/pit/curb, and shut off the services to the home.
    - Complete the work order and call flow to main office to advise water has been shut off to an address.

§ 56.94. Procedures immediately prior to termination.

Immediately preceding the termination of service, a public utility employee, who may be the public utility employee designated to perform the termination, shall attempt to make personal contact with a responsible adult occupant at the residence of the customer.

(1) *Termination prohibited in certain cases.* If evidence is presented which indicates that payment has been made, a serious illness or medical condition exists, or a dispute or complaint is properly pending or if the employee is authorized to receive payment and payment in full is tendered in any reasonable manner, then termination may not occur. However, if the disputing party does not pay all undisputed portions of the bill, termination may occur.

(2) *Methods of payment.* Payment in any reasonable manner includes payment by personal check unless the customer within the past year has tendered a check which has been returned for insufficient funds or for which payment has been stopped.

(3) *Dishonorable tender of payment after receiving termination notice*. After a public utility has provided a written termination notice under § 56.91 (relating to general notice provisions and contents of termination notice) and attempted contact as provided in § 56.93 (relating to personal contact), termination of service may proceed without additional notice when:

(i) A customer tenders payment which is subsequently dishonored under 13 Pa.C.S. § 3502 (relating to dishonor).

(ii) A customer tenders payment with an access device, as defined in 18 Pa.C.S. § 4106(d) (relating to access device fraud), which is unauthorized, revoked or canceled.

(iii) A customer tenders payment electronically that is subsequently dishonored, revoked, canceled or is otherwise not authorized and which has not been cured or otherwise paid in full within 3 business days of the public utility's dishonored payment notice to the customer under § 56.93(a).

§ 56.333. Personal contact.

(a) Except when authorized under § 56.311, § 56.312 or § 56.338 (relating to interruption of service; discontinuance of service; and exception for terminations based on occurrences harmful to person or property), a public utility may not interrupt, discontinue or terminate service without personally contacting the customer or a responsible adult occupant in person, by telephone or electronically with the customer's consent to provide notice of the proposed termination at least 3 days prior to the interruption, discontinuance or termination, in addition to providing other notice as specified by the properly filed tariff of the public utility or as required under this chapter or other Commission directive.

(b) For purposes of this section, "personal contact'' means:

(1) Contacting the customer or responsible adult occupant in person or by telephone. Phone contact shall be deemed complete upon attempted calls on 2 separate days to the residence between 8 a.m. and 9 p.m. if the calls were made at various times each day, with the various times of the day being daytime before 5 p.m. and evening after 5 p.m. and at least 2 hours apart. Calls made to contact telephone numbers provided by the customer shall be deemed to be calls to the residence.

(2) If contact is attempted in person by a home visit, only one attempt is required. The public utility shall conspicuously post a written termination notice at the residence if it is unsuccessful in attempting to personally contact a responsible adult occupant during the home visit.

(3) Contact by e-mail, text message or other electronic messaging format consistent with the Commission's privacy guidelines and approved by Commission order. The electronic notification option is voluntary and shall only be used if the customer has given prior consent approving the use of a specific electronic message format for the purpose of notification of a pending termination. Electronic contact shall be deemed complete if, after

attempted transmittal, no message is received indicating that the transmittal was undeliverable or otherwise not received. If the public utility receives notification that the transmittal was undeliverable or otherwise not received, the public utility shall attempt to contact the customer either in person or by telephone, consistent with the requirements of this section.

(4) Contacting another person whom the customer has designated to receive a copy of a notice of termination, other than a member or employee of the Commission.

(5) If the customer has not made the designation noted in paragraph (4), contacting a community interest group or other entity, including a local police department, which previously shall have agreed to receive a copy of the notice of termination and to attempt to contact the customer.

(6) If the public utility is not successful in establishing personal contact and the customer has not made the designation noted in paragraph (4) and if there is no community interest group or other entity which previously has agreed to receive a copy of the notice of termination, contacting the Commission in writing.

(c) The content of the 3-day personal contact notice must include the earliest date at which termination may occur and all of the following information:

(1) The date and grounds of the termination.

(2) What is needed to avoid the termination of service.

(3) How to contact the public utility and the Commission.

(4) The availability of the emergency medical procedures.

(d) The public utility shall ask if the customer or occupant has questions about the 10-day written notice the public utility previously sent.

THE YORK WATER COMPANY
10-DAY SHUTOFF NOTICE

[redacted]

Date: 07/29/2024
Account No.: [redacted]

YOUR BILL FOR $443.30 IS PAST DUE.
Because your bill was past due, we will shut off water to:
[redacted]
On or after 8:30 a.m. on 08/13/2024.

To Stop The Shut Off, You Must Do One (1) Of The Following At Once:

1. Pay the past due amount to **THE YORK WATER COMPANY.**
2. Call or email **The York Water Company Customer Service Department at (717) 845-3601, 1-800-750-5561** or email **customer.service@yorkwater.com.** Or, visit **130 East Market Street, York, PA** to let them know you made a payment, or to dispute the overdue bill.
3. Call if you or someone in your home has a serious illness or a medical condition. Read the Medical Emergency Notice below.

IF WE SHUT OFF YOUR WATER, YOU MAY HAVE TO PAY THE FOLLOWING CHARGES TO HAVE YOUR WATER TURNED BACK ON:

Past Due Amount	$443.30
Turn-on Charge	$15.00
Total Amount Due	$458.30

***MEDICAL EMERGENCY NOTICE**

If someone living in your home is seriously ill, we will not shut off water service during this illness if you do two (2) things:

1. Have a licensed doctor, physician's assistant or nurse practitioner certify in writing that the illness exists and that the person will be in danger if they do not have water service.

AND

2. Make arrangements to pay your overdue and current bills by calling or emailing The York Water Company at (717) 845-3601, Toll Free 1-800-750-5561 or customer.service@yorkwater.com

Do You Have Any Questions?

If you have any questions, need more information, contact us as soon as possible at 717-845-3601. If you are not satisfied after you talk to us, you may contact the Public Utility Commission by calling 1-800-692-7380 toll free, or by writing to P.O. Box 3265, Harrisburg, PA 17105-3265. The Public Utility Commission will delay the shut off if you file the complaint before the shut off date.

The York Water Company
Attn: Customer Service Dept.
130 E. Market Street York, PA 17401-1219
Phone: (717) 845-3601 or Toll Free 1-800-750-5561
Email: customer.service@yorkwater.com

3. Company reporting notes to customers
    a. Information to the Customer: If the customer does not agree with the contents of this report, he/she may file an informal complaint with the Pennsylvania Public Utility Commission within 10 days from the date this report was issued. Please note the customer has filed a case relating to the issue back in 2022 (refer to BCS case [redacted]. As per PA Code 56.162, an informal complaint may be filed orally or in writing and must include the following information: (1) The name and address of the complainant and, if different, the address at which service is provided, (2) The telephone number of the complainant, (3) The account number of the complainant, if applicable, (4) The name of the public utility, (5) A brief statement of the dispute, (6) Whether the dispute formerly has been the subject of a public utility company investigation and report. The complainant shall affirm having first contacted the public utility for the purpose of resolving the problem about which the complainant wishes to file a complaint. If the complainant has not contacted the public utility, the Commission shall direct the complainant to the public utility, (7) Whether the dispute formerly has been the subject of a Commission informal or formal complaint, (8) The date, if any, of proposed termination, and (9) The relief sought. If you file a complaint, no further collection actions will be taken until your complaint is resolved. Service will not be terminated pending completion of the dispute process, including informal and formal complaints, so long as there is compliance with all requirements of the Commission. You may file an informal complaint by telephoning the Commission at 1-800-692-7380 or writing to P.O. Box 3265, Harrisburg, PA 17105-3265. If the customer chooses, he/she may make a payment at the York Water Company located at 130 E Market St, York, PA 17401. The customer may also mail a payment to the address above or to the PO Box of PO BOX 3009, Lancaster, PA 17604-3009. The customer may call The York Water Company's Customer Service department as well to discuss the account using the number 717-845-3601.

The Utility Service Tenants Rights Act

Overview:

The Utility Service Tenants Rights Act (Act of Nov. 26, 1978, P.L. 1255, No. 299) aims to protect tenants from the loss of utility services when landlords fail to pay utility bills.

When an account of a landlord becomes past due, the termination process begins:

- The landlord/owner is mailed a 37 day termination notice
- The tenant is notified via a 30 day termination notice physically posted/delivered to tenants at the property about the delinquent amount
    - This termination notice will detail the amount a tenant can pay
    - This termination notice will detail the amount the owner should pay
- The tenant is notified via a 3 day termination notice physically posted/delivered to tenants at the property about the delinquent amount
    - This termination notice will detail the amount a tenant can pay
    - This termination notice will detail the amount the owner should pay
- If no payment is made, a shut off is performed and a final termination notice is left at the property with information on how to restore services.

Here's a summary of the key obligations and processes mandated by the Act for tenants and utilities:

1. Obligations of Utility Companies:

- Notice to Tenants: When a utility service (such as water, gas, or electricity) is scheduled for termination due to non-payment by a landlord, the utility company must provide written notice to the tenants at least 30 days before the termination.

- Restoration of Service: If the service has been terminated, tenants have the right to get the service restored by paying part of the overdue bill. Tenants can arrange to continue services through the payment of the current bill amount and/or providing proof of tenancy.

2. Rights of Tenants:

- Right to Avoid Termination: Tenants may prevent utility termination by paying the utility company directly. Tenants can deduct this amount from their rent.

- Right to Service Continuation: If the landlord is responsible for paying utilities but fails to do so, tenants can arrange with the utility company to continue services through the payment of the current bill amount. The application to begin services in their name may be offered if applicable.

3. Process for Tenants:

- Receiving a Notice: When tenants receive a 30-day notice, they can organize payment plans directly with the utility company.

- Payment Options: Tenants have the right to pay the portion of the bill that corresponds to their usage or household, which would prevent service termination.

- Security for Future Payments: If tenants take over paying utility bills, they are generally responsible only for future payments, not for previous debts incurred by the landlord.

4. Liability of Landlords:

- Deduction from Rent: Tenants who pay utility bills to avoid termination can deduct those payments from future rent.

- Failure to Notify: Landlords can be held responsible for any damages resulting from utility termination if they fail to ensure the continuation of service.

The Act empowers tenants with clear rights to ensure essential services are maintained, even if their landlord fails to pay.

Docket Nos. R-2025-3053442(W) & R-2025-3053573(WW)

Office of Consumer Advocate
Interrogatories Set XVII

OFFICE OF CONSUMER ADVOCATE INTERROGATORY OCA SET XVII, NO. 1

The response to OCA-VIII-7, attachment 1 has columns labeled Month (by year), "monthly enrollment," and "monthly $ of bill reduction."

a. Is this information for the CAP customers or CARES customers?

b. Provide the required information for both programs.

c. Is it correct that York Water halts enrollment when its budgeted amount for the program is exhausted?

d. Where is the column D that is identified in this attachment that is referenced in the Supplemental Response to OCA-IV-03?

RESPONDENT:

Suzanne M. Becker
VP of Customer Service

DATE:

August 4, 2025

RESPONSE:

A corrected version of OCA-VIII-7 Attachment 1 is attached as **OCA-XVII-1 Attachment 1**. The corrected version includes detailed information for both CAP and CARES.

a. Information on both CAP and CARES is provided in **OCA-XVII-1 Attachment 1** as follows:
   - Column B – CARES Monthly Enrollment
   - Column C - $ of CARES Grants distributed
   - Column D – CAP Monthly Enrollment
   - Column E – CAP: Monthly $ of Bill Reduction
   - Column F – Monthly $'s of CAP Plumbing Repairs

v.
The York Water Company
Docket Nos. R-2025-3053442(W) & R-2025-3053573(WW)

Office of Consumer Advocate
Interrogatories Set XVII

---

b. See answer to subpart (a).
c. It is correct that when the budgeted amount for the CARES program is exhausted, York Water halts enrollment. For CAP, however, enrollment continues to help with leaks as needed, regardless of the budgeted amount.
d. See Column D in **OCA-XVII-1 Attachment 1**.

SUPPLEMENTAL DIRECT TESTIMONY

OF

LeeAnn Wise

On behalf of the

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

Date Served: September 9, 2025

TABLE OF CONTENTS

Introduction……....1

Public Input Hearing Testimony……2

Conclusion and Recommendations……3

Introduction

Q. Please state your name and business address.

A. My name is LeeAnn Wise. My business address is 555 Walnut Street, Forum Place 5th Floor, Harrisburg, Pennsylvania 17101.

Q. By whom are you employed and in what capacity?

A. I am employed as a Senior Regulatory Analyst by the Pennsylvania Office of Consumer Advocate (OCA).

Q. What is the purpose of your testimony in this case?

A. To address customers' concerns from the Public Input Hearings regarding affordability, quality of service, and customer service.

Q. Did you submit direct testimony in this case?

A. No, I did not.

Q. Have you previously provided testimony before the Pennsylvania Public Utility Commission?

A. Yes, I have provided testimony in the following cases: Wellsboro Electric, Docket No. R-2025-3054392, Citizens' Electric, Docket No. R-2025-3054394, Valley Energy, Docket No. R-2025-3054393, and Pittsburgh Water, Docket No. R2025-3055010, R-2025-3055011, R-2025-3055012.

Q. What are your qualifications to provide this testimony in this case?

A. I have a Master's Degree in Business Administration from Shippensburg University and a Bachelor of Science degree in Professional Accountancy from the University of Pennsylvania. I have over fifteen years of experience in call center operations, with a strong background in managing teams, improving workflow, and delivering outstanding customer service. I have attached my Curriculum Vitae (CV) as Exhibit

LMW-1S. Additionally, I have received internal training while working for the Office of Consumer Advocate (OCA).

Public Input Hearing Testimony

Q. Have you prepared Exhibits to accompany your testimony?

A. Yes, Exhibit LMW-1S, which is my CV, and Exhibit LMW-2S: York Water Company PIH Summary.

Q. Please describe your Exhibit LMW-2S.

A. Exhibit LMW-2S contains a summary of customer testimony provided at the public input hearings held on this matter.

Q. In preparing Exhibit LMW-2S and your Supplemental Direct testimony, did you review the transcripts of the public input hearings?

A. Yes. The summary of testimony provided in Exhibit LMW-2S and below is based on my review of the transcripts.

Q. Please summarize your observations of consumer witness testimony provided at the Public Input Hearings.

A. Testimony of consumer witnesses presented during the public input hearings highlighted persistent and widespread consumer concerns regarding the proposed rate increase. The recurring issues were affordability of rates, the adequacy of customer service, transparency of company spending, and the overall quality of service provided by York Water Company. Exhibit LMW-2S, which is attached to my testimony, provides an issue-based summary of the consumer witnesses' testimonies. Consumers' concerns are not isolated; they are widespread and shared and experienced among numerous consumer witnesses.

Q. Please describe your observation of the major concerns expressed by consumers during the Public Input Hearings.

A. While the issues of concern for York Water's customers I noted in my review of the transcript are fully summarized in my Exhibit LMW-2S, I observed that affordability and quality of service were major concerns expressed during the public input hearings. Tr. 138-139, Tr 326.

Conclusion and Recommendations

Q. What do you recommend?

A. I recommend the Commission take into consideration the concerns of all consumers when making any final determination in this proceeding. Customers' concerns and interests must be heard and taken into consideration when determining the final rate increase and whether any findings, determinations, and prescriptions regarding the adequacy of York Water's service are necessary in this case.

Q. Does this complete your Supplemental Direct Testimony?

A. Yes.

Qualifications of

LeeAnn Wise

Education:

2008 Masters of Business Administration, Shippensburg University

1989 B.S. Professional Accountancy, Pennsylvania State University

Relevant Positions:

March 2025 Regulatory Analyst, Pennsylvania Office of Consumer Advocate

Role Description:

I am currently employed by the Pennsylvania Office of Attorney General, Office of Consumer Advocate (OCA) as a Regulatory Analyst. In this position, my responsibilities include reviewing utility company filings with the Pennsylvania Public Utility Commission (Commission) and analyzing the financial, economic, rate of return, and policy issues that are relevant to the filings. Additionally, I am tasked with preparing recommendations for the OCA's involvement in utility filings with the PA PUC, writing testimony and presenting oral testimony on behalf of the OCA. As part of my role, I also assist in the policy matters regarding low-income issues and customer service subjects.

Relevant Training: I have over fifteen years of experience overseeing and evaluating customer service operations of utility-affiliated and third-party call centers. This includes time at Comcast as Senior Finance Manager, where I provided oversight of performance metrics, evaluating disputes and time to resolve, call-handle times, average speed of answer, and ensuring customer interactions align to policy standards. My training includes a sound understanding of the best practices in customer service delivery, call tracking protocols, and the importance of consistent documentation to support customer communication and reliability.

Provided Case Testimony: Wellsboro Electric, Docket No. R-2025-3054392

Citizens' Electric, Docket No. R-2025-3054394

Valley Energy, Docket No. R-2025-3054393

Pittsburgh Water, Docket No. R-2025-3055010 (Water)

Pittsburgh Water, Docket No. R-2025-3055011(Wastewater)

Pittsburgh Water, Docket No. R-2025-3055012 (Stormwater)

OCA Summary of Public Input Testimony

1. Affordability 2
2. Impact on Residents with Fixed Incomes 3
3. Large Rate Increase Shortly After Another Large Rate Increase 4
4. Inflation 5
5. Problematic Water Fittings 5
6. Infrastructure Improvements & Customer Transparency 6
7. Customer Service 7
8. Water Quality 7

In the two in-person hearings and two telephonic hearings, a total of forty-eight unique consumers testified regarding the above issues. This Summary focuses on testimony pertinent to the OCA's overall recommendations set forth in the OCA's direct testimony or otherwise necessary for the Commission to consider during this proceeding.

1. Affordability

Approximately thirty-nine distinct consumers testified that York Water's proposed rate increase hurts affordability. Tr. 64, 71-72, 77, 80, 119, 125, 132, 138, 169, 174, 177, 180, 189, 195, 198-199, 209, 212, 219, 222, 225, 228, 231-232, 239, 249, 251, 256, 259, 262, 269, 271, 277, 280, 295, 318, 321, 324, 329, 335, 338.

Ms. Crider testified that she "cannot handle another rate increase for anything." Tr. 138. She is "living paycheck to paycheck," and her grocery, electric, and gas bills have all increased. *Id.* She continued that "so many Americans are that way right now, especially with just having a rate increase two years ago." Tr. 139. Living with the increase, she stated: "Is it going to be me paying for food on my table or is it going to be . . .this minimum of 3,000 gallons a month and I only use 1,500 gallons a month." *Id.* Under this strain, she asks the Commission to "try to keep that in mind when you're thinking about raising the rates." *Id.*

Many consumers asserted that the rate increases unreasonably exceed, even triple or quadruple, the rates that they paid in other states and localities. Tr. 67-68, 119, 177, 189-190, 196, 198-199, 209-210, 212, 219, 221, 225, 228, 235, 239, 259, 268, 271, 295, 321, 324. Mr. Fallon testified: "We, my wife and I, retired from New York, and many things are more expensive in New York, but the cost for water and sewer was a third—probably a quarter of what we pay here…" *Id.* Within these exceedingly high rates for all forms of service, consumers objected to expensive fixed charges, and to exceptionally high sewage costs. Tr. 83, 119-123, 134, 139, 169, 174, 190, 264, 282, 295, 329, 331 (fixed charges); Tr. 169, 174, 190, 280, 295, 329, 331, 335 (sewage costs).

2. Impact on Residents with Fixed Incomes

At least twenty-eight distinct consumers testified that unaffordability would impact them due to their fixed incomes. Tr. 64, 71-72, 77, 82, 120, 177, 184, 190, 194-195, 198-199, 209, 212, 222, 225, 231-232, 239, 249, 251, 256, 259, 262, 271, 318, 321, 324, 326, 329, 335.

As Mr. Tobiason stated, "it's highly unreasonable to expect people on fixed incomes to accept such an increase." Tr. 195. For York's customers on fixed incomes, as Ms. Gilman stated, "the type of rate increases that are being proposed are having a very profound impact on us." Tr. 231-32. Ms. Cook testified: "I am in my 70s, I'm retired, and my only means of support is Social Security. So, I really need to watch my pennies, so to speak." Tr. 326. She continued that "it would be a hardship to have that much of an increase at one time," especially for residents in the low-income area of York City. *Id.* Furthermore, Mr. D'Angelo stated, "the rate increase appears burdensome and unreasonable, especially for those of us living on a fixed income. The rate request increase far exceeds the current rate of inflation as well as the national average rate of water and wastewater increases 24% over a five-year period. Tr. 64.

Several consumers on fixed income testified specifically about reducing costs to improve their ability to afford their water and wastewater bills. Tr. 83, 119-123, 134, 139, 169, 174, 228, 282, 329. Mr. Hudson testified that seniors on fixed income "will face long-term impacts with increased utility costs. Examining my own billing I've included there is little to no impact I can make to reduce my costs." Tr. 82-83. Ms. Hill identified that "[f]rom a consumer standpoint, you can usually shop around for just about anything, but not with water." Tr. 132. Water is an essential service and, as Ms. Fiedelhotz puts it, "[w]e need water to live, and we don't have an alternative source of water." Tr. 215. When considering just and reasonable rates for York, Ms. Fiedelhotz

testified that the Commission should consider "a reasonable rate increase for people on fixed income." Tr. 215.

3. Large Rate Increase Shortly After Another Large Rate Increase

Approximately twenty-five distinct consumers testified that unaffordability would impact them even more forcefully because York Water has already received a large rate increase just a couple of years ago. Tr. 64, 71-72, 77, 84, 94, 121, 138, 184, 190, 195, 198-199, 209, 212, 221, 225, 232, 239, 249, 251, 256, 259, 262, 271, 280, 326. Mr. D'Angelo noted that, when he first moved into York's service territory in 2022, he knew the rate was going to be $62.50 "and within less than a year it was increased…to $86.90 per month," and is now facing a potential increase of up to $117 per month, "a nearly doubling of the rate in less than four years." Tr. 67-68.

Many York customers found the frequency and size of these rate increases to be atypical. Tr. 64, 83-85, 91, 119, 177, 180, 190, 194, 198-199, 213-214, 225, 228, 269, 280, 295, 318, 321, 324, 326, 329. Ms. Fiedelholtz contrasted the York Water increases with the Water and Finance Management Report's statistics, which described a national average increase for combined household sewer and water bills of twenty-four percent over five years. Tr. 213. She cited an additional report by the Water and Health Advisory Council which "found that water rates increased twenty-five percent and sewer rates increased twenty percent from 2017 to 2024." Tr. 214.

As Mr. Merkle testified, "[e]nacting increases like this every three or four years is a hardship on people." Tr. 190.

4. Inflation

At least seventeen distinct consumers testified that inflation would make York Water's proposed rate increase more unaffordable. Tr. 64, 71-72, 77, 82, 138, 184, 209, 212, 225, 228, 239, 249, 251, 256, 259, 262, 271. Mr. Hudson testified that, "[a]t a time when inflation and cost saving pressures are straining budgets, any increase in water bills could push vulnerable households into financial distress." Tr. 82.

Ms. Crider testified: "Our groceries have gone up, our electric is going up, our gas is going up." Tr. 138. She said that this forces households like hers, "living paycheck to paycheck," to make impossible choices such as between paying the water bill and putting food on the table. Tr. 138-139. Ms. Crider knows that she is not the only one in this situation in her area; instead, she asserted "that the medium class of people in our area cannot handle another rate increase for anything." Tr. 138. Mr. D'Angelo testified that—while he recognizes that "the costs [of utility service] are subject to inflation just as our of living" is— "[w]e love our community, but the cost of utilities has been mounting." Tr. 72.

5. Problematic Water Fittings

Three distinct customers testified that York Water required them to use problematic water fittings, which caused leaks and caused them to pay for water loss due to the leak for both their water and sewer bills. Tr. 184-185, 235, 263-264. According to Ms. Weinberg, four months after moving into York Water's service territory, York Water notified her "that there was a leak and that it was our responsibility, and they had to dig up our front lawn." Tr. 184. Ms. Weinberg testified that her plumbers informed her that "York is requiring that they use a type of fitting that doesn't hold, and that it's going to happen again." Tr. 185. She testified about "a number of – of homes

that have had the lawns dug up for this same reason, and the[plumbers] said it's going to continue to happen." *Id.*

Mr. Schulze clarified that he understands the issue to be the flare fitting, which he thinks "York Water needs to investigate further." Tr. 235. He expressed concern that a faulty flare fitting could cause flooding. *Id.* Mr. Brice also had a water leak and was told the issue is the "fitting that York Water requires. York Water claims that the fitting's not being installed correctly. I don't care about that. I want it fixed and not have to worry about it two years later. But when I bring that issue up with York Water, it's dismissed. Tr. 263-264. He is particularly concerned because, as he said, "[w]hen I asked [York Water] about who pays for the water that was lost during the leak, I have to pay it…when I point that out that my bill should be adjusted because that water's not going down the sewer, they claim we can't make adjustments because of the tariff." *Id.*

6. Infrastructure Improvements & Customer Transparency

At least thirty-two distinct consumers testified that they want more and clearer information about infrastructure improvements, and greater transparency from York Water about where their rates are going and why York Water has proposed such high rates. Tr. 66-67, 71-72, 77, 80, 92, 93, 181, 189, 203-204, 207, 209, 212, 219, 225, 233, 239, 249, 251-252, 256, 259, 262, 268, 271, 276, 280, 293, 318, 321, 324, 326, 329, 332. For example, Mr. Gouch expressed interest in "a two or three paragraph high level explanation of why ... rates need to be increased[.]" Tr. 251-252. He looked around the York Water website for a plain language explanation of which infrastructure improvements caused York Water's rate increases, and he did not see the kind of explanation he was looking for. *Id.*

In support of his wife's statement, Mr. Andrews emphasized: "It's important that we know more and more about the infrastructure and how it was supposed to be put in and how costs are

going to be distributed." Tr. 207. Mr. Willinghan explained that "it's putting a burden on residents that it's – it's extraordinarily too much. My hope would be that we would deny this request, or certainly to modify it to a much much lower amount than they're requesting." He asked, "why does it have to go up so much?" Tr. 269.

7. Customer Service

Sixteen distinct consumers testified about York Water's customer service. Tr. 66-67, 71-72, 77, 86, 91, 184, 209, 212, 225, 239, 249, 251, 256, 259, 262, 271. Mr. Hudson, from Amblebrook, testified that, to him, "most troubling is the sense that public input has been an afterthought rather than a central pillar of the decision-making process." Tr. 86. He asserts that "[c]ommunity forums and consultation periods must be robust, well publicized, and genuinely open to resident feedback." *Id.*

Mr. Kirsch called York Water for more information about the proposed rate increase, and "got only a direction to the website." Tr. 91. He testified that he did not see mention of the rate request in his records. *Id.* The rate increase "came as a shock" to him. Tr. 92.

8. Water Quality

At least thirty distinct consumers testified about the quality of their water. Tr. 66, 71-72, 77, 85, 125, 138-141, 169, 171, 174, 177, 180-181, 184, 188, 194, 198-199, 204, 207, 209, 212, 222, 225, 239, 249, 251, 256, 259, 262, 271, 276, 280.

Consumers expressed concern over the use of their water for consumption and bathing. Ms. Primrose found that her water was leaving a lot of stains, and stated "[s]o to me, it wasn't drinkable." Tr. 171. Mr. Tobiason testified that "[w]e tried to go with the water for a couple of months, but we were getting rashes on our skin and…the shower door was impossible to clean, et cetera." Tr. 195. Ms. Blaker testified that the unfiltered water in her home "has an odd taste to it,

almost a stale taste." Tr. 180. She also noted that using towels to dry her hands made her towels turn yellow over time. Tr. 181. Furthermore, Ms. Blaker stated that "it just seems odd that here you're asking for an increase" while "we're having an issue with the water." Tr. 181-82.

Several customers testified about damage to household appliances and fixtures. Tr. 85, 177, 184, 222, 277. For example, Ms. Weinberg testifies that within a month of moving into Amblebrook, her "dishwasher looked like it was about 20 years old." Tr. 184. She had to buy a water softening system due to the hard water. Tr. 184. Ms. D'Angelo testified that, if she had not installed water softeners, the water "would have destroyed, you know, our faucets, our countertops, and because the water was very hard." Tr. 177.

York Water's customers also testified about the cost of installing water softening equipment. Tr. 66, 85, 126, 271. Mr. Madalis emphasized the impact of hard water across the Amblebrook community. Tr. 66. According to Mr. Madalis, homes on the Amblebrook system must purchase water softening equipment to use the water for household purposes. *Id.* As Mr. Hudson stated, the water "requires treatment to protect homeowners, plumbing fixtures and appliances from damage caused by hard water." Tr. 85. He estimated that the systems cost approximately $3,000 to install, with an additional $500 per year in maintenance. Tr. 85. Ms. Foster testified that she pays $500 per year for her water softener, or, with York Water's rates, "four times the amount of what [she] was paying in Montgomery County [Maryland] for clean, drinkable water." Tr. 271.

REBUTTAL TESTIMONY OF

JEROME D. MIERZWA

ON BEHALF OF THE

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

SEPTEMBER 19, 2025

EXETER
ASSOCIATES, INC.
10480 Little Patuxent Parkway
Suite 300
Columbia, Maryland 21044

I. INTRODUCTION

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Jerome D. Mierzwa. I am a Principal and the President of Exeter Associates, Inc ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland 21044. Exeter specializes in providing public utility-related consulting services.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS YORK WATER COMPANY ("YORK" OR "COMPANY") RATE PROCEEDING?

A. Yes. My direct testimony was submitted as OCA Statement No. 4 on August 22, 2025.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to respond to certain aspects of the direct testimony of Office of Small Business Advocate ("OSBA") witness Roger Cathcart, and the direct testimony of Bureau of Investigation and Enforcement ("I&E") witness Esyan A. Sakaya.

II. OSBA WITNESS: ROGER CATHCART

Q. HOW DID MR. CATHCART EVALUATE THE WATER CLASS REVENUE ALLOCATIONS YORK IS PROPOSING IN THIS PROCEEDING?

A. Mr. Cathcart evaluated York's proposed water customer class revenue allocations by examining how effectively the proposed revenue allocations moved customer classes toward the cost of service as indicated by York's class cost of service study. That is, he evaluated whether the cost of service assigned to each customer class will be recovered through the revenues to be paid by each class. Mr. Cathcart claims that the most accurate way to measure progress towards the cost of service is by comparing class

subsidies and related revenue-to-cost coverage ratios ("RCC") at present and proposed rates. A RCC for a customer class is determined by dividing the revenues to be received from a customer class by the class cost of service. If the RCC of a class is below 1.0, that class is paying less than cost of service rates and receiving a subsidy. If the RCC of a class is above 1.0, that class is paying more than cost of service rates and is paying a subsidy. If the RCC of a class is 1.0, that class is paying cost of service rates and is neither paying nor receiving a subsidy. The RCCs for each customer class at present and proposed rates as determined by Mr. Cathcart are present on Schedule Q-2W, page 2, of his direct testimony. I agree with Mr. Cathcart that, if properly applied, RCCs can reasonably evaluate movement toward cost of service rates.

Q. DOES MR. CATHCART AGREE WITH THE WATER CUSTOMER CLASS REVENUE ALLOCATIONS PROPOSED BY YORK AT THE REVENUE REQUIREMENT REQUESTED BY YORK IN THIS PROCEEDING?

A. Yes. Based on York's water cost of service study, as shown on Schedule Q-2W page 6, of Mr. Cathcart's direct testimony, the RCC of each customer class has been moved to 1.0 under York's proposed rates. York is generally proposing that if the Commission authorizes an increase that is less than York's requested increase, each customer classes' rates should be proportionally scaled back and Mr. Cathcart agrees with this proposal.

Q. DO YOU AGREE WITH MR. CATHCART THAT YORK'S PROPOSED CUSTOMER CLASS REVENUE ALLOCATIONS ARE REASONABLE?

A. No. York's proposed revenue allocations claim to provide for the recovery of revenues from each customer class based on each class's cost of service. However, as explained in detail in my direct testimony, the system wide and customer class specific maximum

day and maximum hour demand factors utilized in the Company's water cost of service study are outdated. Therefore, the results of York's cost of service study are outdated and are not reflective of the current cost of serving York's various customer classes, and the results should not be utilized to determine revenue allocations in this proceeding.

Q. IN YOUR DIRECT TESTIMONY DID YOU REVISE THE COST OF SERVICED STUDY PRESENTED BY YORK TO REFLECT MORE RECENT SYSTEMWIDE AND CLASS SPECIFIC CUSTOMER DEMAND FACTORS?

A. Yes, I did. I revised the systemwide demand factors utilized in York's cost of service study to reflect the highest maximum day and maximum hour demand factors experienced by York during the last 10 years, and developed class specific customer demand factors utilizing the method presented in Appendix A of the American Water Works Association's ("AWWA") Manual, M1, *Principles of Water Rates, Fees, and Charges* ("AWWA Manual"). Table 2 in my direct testimony summarized the unitized rates of return at proposed rates under the Company's proposed rates and cost of service study, and the unitized rates of return at proposed rates under the Company's proposed rates and the OCA's cost of service study that I presented. The unitized rate of return, which is discussed and described in detail in my direct testimony, is similar to the RCC that Mr. Cathcart utilized to evaluate York's proposed revenue allocations. As shown in Table 2, there are significant differences in the unitized rates of return for each class under the two cost of service studies. Under the OCA's study the Residential class would be paying more than its indicated cost of service, while the Commercial, Industrial, and Private Fire classes would be paying less than their indicated cost of service.

Q. DID YOU PROPOSE A WATER REVENUE ALLOCATION IN YOUR DIRECT TESTIMONY BASED ON THE OCA'S COST OF SERVICE STUDY?

A. Yes. I presented a proposed revenue allocation under which the unitized rate of return for each customer class at proposed rates would be 1.0 in Table 4 of my direct testimony. That is, the proposed rates and revenue allocation for each class would recover the cost of service of each customer class under the OCA's cost of service study and there would be no subsidies. Under my recommendation, the RCC of each customer class would also be 1.0 and there would be no subsidies. Similar to what York has proposed, to the extent the Commission awards York an increase in rates that is less than the water revenue increase requested by York, I recommended that the rates for each class should be scaled back proportionately.

Q. DID MR. CATHCART AGREE WITH THE WASTEWATER REVENUE ALLOCATIONS PROPOSED BY YORK IN THIS PROCEEDING?

A. Yes. York serves two wastewater customer classes: (1) Residential and (2) Non-Residential. In the event that the Commission authorizes an increase that is less than the amount requested by York in this proceeding, Mr. Cathcart recommends a proportionate scale back of each class's revenue requirement.

Q. DO YOU AGREE WITH MR. CATHCART THAT YORK'S PROPOSED WASTEWATER REVENUE ALLOCATIONS FOR THE RESIDENTIAL AND NON-RESIDENTIAL CLASSES SHOULD BE ADOPTED IN THIS PROCEEDING?

A. No. As explained in my direct testimony and as shown in Table 5 of my direct testimony, for the Residential class, the rates proposed by York exceed the cost of service by approximately $1,275,000. For the Non-Residential class, the cost of service

exceeds the rates proposed by York by $1,275,000. For the Residential class, this represents a RCC of 1.14, and for the Non-Residential class this represents a RCC of 0.66. In evaluating York's proposed water revenue allocations, Mr. Cathcart believed it was important for a revenue allocation to move toward the cost of service for each customer class. However, for wastewater, Mr. Cathcart has not proposed to reflect additional movement towards cost of service rates from that proposed by York. I recommend that my proposed wastewater revenue distribution be adopted in this proceeding because it reflects additional movement toward cost of service rates for the Residential and Non-Residential classes. As also described in my direct testimony, my proposed revenue allocation also provides for gradualism for Monagham Township, Shrewsbury and Springfield, Washington Township, and Haven Borough/Newberry Township. For these four service territories I recommend an increase of 1.5 times the system average increase. As explained in my direct testimony, to provide for gradualism for the four service territories with Residential customers receiving an increase greater than 1.5 times the system average increase, I recommend that, to the extent the Commission authorizes a total wastewater revenue requirement that is less than the revenue requirement requested by York, the rates for these four service territories first be proportionately reduced to provide for a 1.5 times system average increase for the average Residential customer. Based on York's filed revenue requirement, I estimate that this would reduce the revenues collected from these four service territories by $51,600. To the extent the Commission reduces the revenue requirement increase for York by more than $51,600, I recommend that the first $1,275,000 of that reduction, less the $51,600 required to reduce the rates of the Residential customers in the four service territories to 1.5 times the system average increase, be applied to proportionately reduce the rates of all Residential customers. To

the extent that the reduction to York's requested revenue requirement increase is greater than $1,275,000, I recommend that the reduction in excess of $1,275,000 be proportionately applied to reduce the proposed rates for both the Residential and Non-Residential classes.

III. I&E WITNESS: ETHAN H. CLINE

Q. PLEASE EXPLAIN YORK'S PROPOSAL IN THIS PROCEEDING FOR MONTHLY WATER CUSTOMER CHARGES.

A. Based on an analysis of what the Company claims reflect direct customer costs presented in RS1-j Attachment, York is proposing to increase the current monthly customer charge for a Residential customer with a 5/8 meter from $17.25 to $24.85, or 44%. Similar percentage increases are proposed for customers with larger meters. If the Commission authorizes a revenue increase that is less than York's requested increase, the Company is proposing to exclude customer charges from any scale back of rates.

Q. WHAT IS MR. CLINE'S RECOMMENDATION REGARDING THE COMPANY'S PROPOSED WATER CUSTOMER CHARGES?

A. Mr. Cline agrees with the Company's customer cost analysis and proposed customer charges. However, Mr. Cline recommends that if York is awarded an increase that is less than its requested increase, customer charges be included in a proportionate scale back of rates.

Q. IS THE COMPANY'S WATER CUSTOMER COST ANALYSIS WHICH MR. CLINE AGREES WITH REASONABLE?

A. No. As explained in my direct testimony, only those costs that change directly with the addition or subtraction of a customer should be included in a customer cost analysis. York has included bad debt expense, office building and furniture and equipment

related investment costs, and investment costs associated with its Enterprise Software which are not direct customer costs because these costs do not change with the addition or subtraction of a customer. At the revenue increase authorized by the Commission in this proceeding, a cost-based charge would certainly be further reduced. Therefore, I recommend that the existing $17.25 monthly charge for Residential customers with a 5/8-inch meter be maintained. If the Commission does not accept my recommendation to maintain the current $17.25 monthly customer charge and determines that an increase is justified or is warranted, I recommend that the charge be increased by a percentage no greater than the water revenue increase assigned to the Residential class in this proceeding. I would note that the requested increase for this Residential class under the OCA cost of service study at York's requested increase is, as shown on Table 4 of my direct testimony, 26.6% which would increase the current $17.25 charge to $21.84. This charge should be further scaled back to proportionately reflect the actual percentage increase assigned to the Residential class.

Q. MR. CLINE IS GENERALLY RECOMMENDING A PROPORTIONATE SCALE BACK OF ALL WATER RATES IF THE COMMISSION AUTHORIZES AN INCREASE IN WATER RATES THAT IS LESS THAN THE INCREASE INITIALLY REQUESTED BY YORK IN THIS PROCEEDING. WHAT IS YOUR RESPONSE?

A. As previously explained in my response to Mr. Cathcart, the water rates proposed by York in this proceeding are based on a cost of service study that is outdated and not reflective of the current usage characteristics of York's customers. Therefore, the costs of service study submitted by York should not be used to determine class revenue allocations in this proceeding. The cost of service study presented by the OCA should be utilized to determine revenue allocations in this proceeding.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does at this time.

I. PURPOSE OF SURREBUTTAL TESTIMONY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dante Mugrace. My business address is 22 Brooks Avenue, Gaithersburg, MD 20877.

Q. HAVE YOUR PREVIOUSLY SUBMITTED TESTIMONY IN THIS DOCKET?

A. Yes. I submitted Direct Testimony on June 18, 2025, which was marked as OCA Statement 1. My qualifications and experience are attached to my Surrebuttal Testimony.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my Surrebuttal Testimony is to address the Rebuttal Testimony of Company Witnesses Mr. Hand and Mr. Poff. I am also making certain adjustments to proposals in my Direct Testimony and a revised calculation of the Company's revenue requirement that incorporates the effects of my adjustments. To the extent that I do not respond or address a particular issue or argument, I defer to my Direct Testimony on those issues.

Q. HAS THE COMPANY UPDATED ITS REVENUE REQUIREMENT FOR ITS WATER AND WASTEWATER DIVISIONS?

A. Yes. According to Company witness Mr. Poff, he has updated the Water Company's revenue requirement increase downward to $19,888,263[1] or a reduction of $423,715.[2] Mr. Poff did not update the Wastewater Company's revenue requirement in the as filed petition, and the Company has continued to propose an overall revenue requirement increase of $3,857,507.[3]

[1] YWC St. 3R at 2.
[2] *Id*. at Exh. MEP-1R.
[3] YWC St. 3R at 2, and Exh. MEP-1R.

Q. DOES YOUR SURREBUTTAL TESTIMONY RECOMMENDATION INCLUDE ANY ADJUSTMENTS TO MR. POFF'S UPDATED REVENUE REQUIREMENT?

A. Yes. I have accepted the Company's position on two of my normalization adjustments which I will explain in my surrebuttal. These adjustments are related to Fuel and Office Supplies Expenses.

Q. WHAT IS YOUR RECOMMENDATION WITH RESPECT TO THE COMPANY'S UPDATE REBUTTAL TESTIMONY AND UPDATED REVENUE REQUIREMENT?

A. With respect to the Company's Rebuttal Testimony, my recommended overall revenue requirement for the Water Division is $9,115,241. My recommended revenue requirement for the Wastewater Division is $2,459,887. Although the Company has updated its revenue requirement for its Water Division, I have not updated my Water revenue requirement schedules, accordingly. I am continuing to utilize the Company's as filed water revenue requirement exhibits to calculate my adjustments in my surrebuttal. The Company's adjustments to its updated water revenue requirement, are *di minimis*. ($423,715/$20,311,978 or 2.00%).

II. REVENUE REQUIREMENT RECOMMENDATIONS

Q. WHAT REVENUE DEFICIENCIES OR ADJUSTMENTS ARE YOU RECOMMENDING IN YOUR SURREBUTTAL?

A. Based upon the use of the Company's proposed fully projected future test year ending February 28, 2027, I have the following Surrebuttal recommendations:

WATER – (Based upon the Company's as-filed petition)

- My recommended Rate Base balance is $445,170,549, which is $573,332 higher than the Company's proposed Rate Base balance of $444,597,217.
- My overall Rate of Return based upon OCA witness Garrett's recommendation is 6.76%, which includes a Common Equity component of 8.90%.

- My recommended Operating Revenue at Present Rates is computed at $68,305,310, which is the same as the Company's Present Rate Revenue of $68,305,310.[4]
- My recommended, total Operating Expenses are $46,023,839, which is $3,378,089 lower than the Company's proposed Operating Expenses of $49,401,928.
- My recommended Federal Income Tax is ($1,032,359), which is $3,650,753 lower than the Company's proposed Federal Income Taxes of $2,618,394.
- My recommended State Income Tax is ($445,799), which is $1,407,525 lower than the Company's Proposed State Income Tax of $961,726.
- Overall, I recommend a revenue requirement increase of $9,115,241, which is $11,196,737 lower than the Company's as filed revenue requirement increase of $20,311,978.

WASTEWATER

- My recommended Rate Base balance is $54,685,799, which is $418 higher than the Company's proposed Rate Base balance of $54,685,381.
- My overall Rate of Return based upon OCA witness Garrett's recommendation is 6.76%, which includes a Common Equity component of 8.90%.
- My recommended Operating Revenue at Present Rates is computed at $8,670,534, which is the same as the Company's Present Rate Revenue of $8,670,534.[5]
- My recommended total Operating Expenses are $7,418,490, which is $424,515 lower than the Company's proposed Operating Expenses of $7,843,005.
- My recommended Federal Income Tax is ($522,238), which is $721,482 lower than the Company's proposed Federal Income Taxes of $199,244.
- My recommended State Income Tax is ($201,798), which is $278,164 lower than the Company's Proposed State Income Tax of $76,366.

[4] Any differences between Company Operating Revenues at Present Rates in its filing and my Exhibits are due to rounding.
[5] Any differences between Company Operating Revenues at Present Rates in its filing and my Exhibits are due to rounding.

- Overall, I recommend a revenue requirement increase of $2,459,887, which is $1,397,620 lower than the Company's proposed revenue requirement increase of $3,857,507.

YORK WATER COMPANY

A. RATE BASE (Measures of Value) Water and Wastewater

1. Accumulated Depreciation & Accumulated Deferred Income Taxes

Q. WHAT HAS THE COMPANY STATED WITH RESPECT TO YOUR ACCUMULATED DEPRECIATION?

A. Mr. Poff stated that the Company opposed the OCA's adjustment to accumulated depreciation and the Accumulated Deferred Income Taxes and referred to the rebuttal testimony of Company witness Mr. Spanos. I am deferring to Mr. Garren's surrebuttal testimony with respect to this issue.

2. Acquisition Adjustments – Water and Wastewater

Q. WHAT HAS THE COMPANY STATED WITH RESPECT TO YOUR ADJUSTMENTS TO THE WATER AND WASTEWATER'S ACQUISITION ADJUSTMENTS?

A. Company witness Mr. Hand stated that he did not agree with my proposed reduction to rate base and amortization expenses.[6] Mr. Hand stated that I presented no evidence in support of the claim that some or all of the proposed acquisitions do not meet the requirements under the statute nor do I specify which acquisition adjustments are being opposed by the OCA.[7] Mr. Hand stated that through discovery on my direct testimony I reiterated that the OCA would address the issue in its briefs on the grounds that the Company is seemingly seeking a legal conclusion from me.[8] Mr. Hand stated that the OCA must at the very least identify which adjustments it is opposing and there must be facts in evidence to establish or oppose the Company's proposed adjustments.[9]

[6] YWC St. 1R at 2.
[7] *Id*.
[8] *Id*.
[9] *Id*. at 3.

Q. WHAT IS YOUR RESPONSE?

A. As I previously stated in my direct testimony,[10] I have been advised by counsel that York Water and York Wastewater is required to satisfy several statutory requirements before it is permitted to include these acquisitions adjustments in its revenue requirement and counsel for the OCA will address these requirements and that some or all of the proposed acquisitions do not meet the requirements under the statute. I also reiterated this position in discovery from York Set II – question 7 in which I deferred to counsel for further discussions in this matter.

Q. DO YOU HAVE ANY UPDATES TO THE POSITION YOU ADOPTED IN YOUR DIRECT TESTIMONY REGARDING THE COMPANY'S PROPOSED ACQUISITION ADJUSTMENTS?

A. Yes, I previously recommended that all proposed acquisition adjustments be removed under Section 1327(a) and did not recommend an adjustment to negative acquisition adjustments under Section 1327(e).[11] Based on the advice of counsel, I am withdrawing my recommendation to disallow the acquisition adjustments under Section 1327(a) for York Water. For York Wastewater's proposed acquisition adjustments, based on the advice of counsel, I am withdrawing my recommendation to disallow the acquisition adjustments under Section 1327(a) for all systems except for the York Haven Borough Authority, and continue to recommend the disallowance of the proposed acquisition adjustment for the York Haven Borough Authority acquisition. Counsel for the OCA will support the recommendation to deny the proposed positive acquisition adjustment associated with the acquisition of York Haven Borough Authority in Briefs.

[10] *Please see* OCA St.1 at 34.
[11] I&E only contested one adjustment, and that was a negative acquisition adjustment.

3. Cash Working Capital - Water

Q. WHAT HAS MR. POFF STATED REGARDING YOUR ADJUSTMENTS TO THE COMPANY'S CASH WORKING CAPITAL (CWC)?

A. Mr. Poff did not agree with my adjustments to CWC.[12] Mr. Poff stated that the Commission should not adopt the CWC adjustments proposed by me. The Company has restated its CWC for adjustments it has accepted.[13]

Q. DO YOU HAVE ANY ADJUSTMENTS OR CHANGES IN THE METHODOLOGY USED BY THE COMPANY TO CALCULATE ITS CWC?

A. No. I am accepting the Company's CWC methodology. My adjustments relate to my adjustments with respect to O&M Expenses, and other adjustments used to develop the CWC balance.

B. OPERATION AND MAINTENANCE EXPENSES

a. Normalization Adjustments- Water and Wastewater

Q. WHAT HAS MR. POFF STATED REGARDING YOUR NORMALIZATION ADJUSTMENTS TO OPERATING EXPENSES?

A. Mr. Poff stated that he did not agree with my 15% threshold as a determinate for materiality with respect to my normalization approach.[14] He stated that this approach lacks regulatory precedent in Pennsylvania rate cases and does not automatically justify normalization or disallowance. He stated that normalization may be appropriate in instances where a specific cost category occurs infrequently, such as rate case expenses or where costs are more difficult to predict such as uncollectible accounts expense.[15] He stated that I simply normalized actual expenses simply because the three-year average differs from the FPFTY actual expenses appears to be an excuse to reduce expenses and the overall revenue requirement. Operating expenses are influenced by various externalities such as inflation, regulatory compliance and labor market conditions. These factors generally experience an upward pressure on costs and thus a simplistic three-year average is unfair and unsupported.[16]

[12] YWC St. 3R at 28.
[13] *Id*.
[14] *Id*. at 3.
[15] *Id*.
[16] *Id*. at 3-4.

Q. WHAT IS YOUR RESPONSE?

A. Given that the Company has not proposed any specific ratemaking adjustments in its filing, nor provided specific adjustments to its operating expenses, but rather adjusted nearly all of its operating and maintenance expenses, it is necessary to review all of the Company's expenses in order to determine changes and trends in these expense categories. In my opinion, normalization of expenses is an appropriate and sound ratemaking principle that has been used in rate case proceedings over the years. The main reason for normalizing costs is to prevent any over-recoveries of costs in the FPFTY period. Over-recoveries of costs come at the expense of ratepayers as rates have already been set by the Commission, and ratepayers may be harmed in being charged unreasonable rates. York Water/Wastewater has the opportunity to recover all of its prudent and known costs to provide safe and reliable utility service. There is no guarantee that all costs will be recovered due to uncertainties in projected operating activities and various external economic factors. Upward pressure on costs may or may not be realized by the Company and costs change over time but not proportionately and to allow 100% recovery of the Company's costs is unreasonable. My normalization adjustments include decreases and increases of costs over the three-year period. A negative adjustment reflects costs trending downward over time.

Q. WHAT ELSE DID MR. POFF STATE REGARDING YOUR NORMALIZATION ADJUSTMENTS?

A. Mr. Poff stated that one of the causes of differences in expenses charged is the need for maintenance expenses that change from year to year.[17] Mr. Poff stated that another driver of cost variances is the acquisition of new systems and new customers. Mr. Poff stated that since 2022, York Water has acquired nine water systems and six wastewater systems, and added over 3,000 water customers and over 3,000 wastewater customers. These acquisition costs will cause increases to maintenance expenses, billing expenses and water and wastewater treatment expenses and other expenses. Mr. Poff stated that my normalization approach fails to take into account for increase costs in calendar years 2023 and 2024 that

[17] *Id*. at 4.

are the result of serving more customers and operating and maintaining substantially more facilities.[18]

Q. WHAT IS YOUR RESPONSE?

A. The Company has not provided any information with respect to increased costs related to these acquisitions. As I stated previously, the Company did not provide any specific rate making adjustments or identify any other specific adjustments related to these acquisitions. Economies of scale and scope of operations can be incorporated with respect to changes to additional new services and associated operational savings which can occur due to these changes which may reduce the impact of service new customers. The Company has not identified whether any related savings have occurred nor been incorporated due to these changes in adding additional customers onto the system.

Q. WHAT HAS MR. POFF STATED WITH RESPECT TO ADJUSTMENTS HE CONSIDERED SELECTIVE?

A. Mr. Poff stated that I did not make adjustments to Fuel expense in the way I approached the normalizing other costs.[19]

Q. WHAT IS YOUR RESPONSE?

A. After a review of this account, I inadvertently overlooked this expense. Normalizing this account results in an increase of $50,720 or a balance of $90,424. This is shown on my Exhibit DM-SR-11W.

Q. WHAT DID MR. POFF STATE REGARDING YOUR ADJUSTMENT TO WATER-TREATMENT EXPENSES – OFFICE EXPENSE – GAS SERVICE?

A. Mr. Poff stated that gas service has increased in January 2025, which is a known and measurable expense, and the $12,128 adjustment ignores this.

Q. WHAT IS YOUR RESPONSE?

A. After review of the expense, I am accepting Mr. Poff's reasoning and eliminating the $12,128 adjustment. This is shown on my Exhibit DM-SR-12W.

[18] *Id*. at 4.
[19] *Id*. at 6.

b. Payroll, Employee Benefits and Payroll Taxes/Director's Fees Water

Q. WHAT HAS MR. POFF STATED WITH RESPECT TO YOUR ADJUSTMENTS TO PAYROLL, EMPLOYEE BENEFITS AND PAYROLL TAXES?

A. Mr. Poff stated that the Company agrees that an employee vacancy allowance should be added to this claim as testified to by I&E and OCA.[20] Mr. Poff stated that the Company agreed with I&E adjustments related to the vacancy allowance of $371,031, associated payroll taxes of $27,827, Workers Compensation of $5,936, 401K Employee Matching of $19,665, and Health Insurance of $73,464.[21] These adjustments reduce the balance by $497,923.[22]

Q. WHAT IS YOUR RESPONSE?

A. I am still recommending my adjustments to the Company's vacancy allowance of $346,628 and the related payroll taxes of $31,418, normalizing Workers' Compensation ($32,791), 401K Employee Matching of $19,832 and Health Insurance adjustment of $265,833. These adjustments are shown on my Exhibit DM-SR-15W and DM-SR-22W.

Q. WHAT HAS THE COMPANY STATED WITH RESPECT TO YOUR ADJUSTMENT TO DIRECTORS' FEES?

A. Mr. Poff agrees with my adjustment to Directors' Fee of $10,711.[23] My adjustment is shown on my Exhibit DM-SR-15W.

c. Long-Term Incentive (LTI) – Water and Wastewater

Q. WHAT HAS MR. POFF STATE WITH RESPECT TO YOUR DISALLOWANCE TO THE COMPANY'S LONG-TERM INCENTIVE COMPENSATION?

A. Mr. Poff stated that he did not agree with my adjustments as the Company's Long-Term incentive plan has been in place since July 1, 2016. Mr. Poff stated that he was advised by counsel that the Commission has recently allowed recovery of stock-based incentive compensation in rates so long as the utility provides evidence linking the stock-based plant

[20] *Id*. at 12.
[21] *Id*. at 13-14.
[22] *Id*. at YWC Exh. MEP-1R.
[23] YWC St. 3R at 2.

with benefits to customers and improved operational efficiency.[24] Mr. Poff stated that the Company's LTI has four equally weighted metrics to be met before a stock grant is awarded. Two of these are tied to customer performance: (1) maintaining a three-year average Commission justified complaint rate per 1,000 customers of less than the Pennsylvania water utility peer group average and: (2) maintaining customer rates that are less than the Pennsylvania water utility peer group average.[25] Mr. Poff stated that although the other two metrics have a financial component it is unreasonable to conclude that strong financial performance only benefits shareholders and not the ratepayers. The Company's strong financial profile also allows it to maintain an A-rating with Standard and Poor's that allow it to attract debt financing at the lowest possible cost, which is passed along to the ratepayers.[26]

Q. WHAT IS YOUR RESPONSE?

A. While I understand the importance of providing incentive compensation to employees, I believe that stock granted incentive compensation should be paid for by the Company. The Company has not provided any updated metrics to show that its long term incentive met the three-year average of Commission justified complaints rate per 1,000 customers nor provided maintaining customer rates that are less then the Pennsylvania water utility peer group average. The Company has the right and the opportunity to provide its employees with market-based compensation, but there is no assumption that all of these costs should be recovered in rates from ratepayers. The Company has the opportunity to recover these costs for ratemaking purposes, but there should be no guarantee that they will. I am not arguing for elimination of these costs, but that the costs related to long term incentive compensation should be a risk that the Company should take and bear. Further, with respect to the financial portion of the long term incentive, the Company should continually have the ability to provide safe, adequate and reliable utility service absent any incentive to employees to do so.

d. Year End Bonuses – Water and Wastewater

Q. WHAT HAS MR. POFF STATE REGARDING YOUR DISALLOWANCE TO YEAR END BONUSES?

A. Mr. Poff did not agree with my disallowance of Year End bonuses. Mr. Poff has stated that the Company has consistently provided year-end bonuses to employees for over 29 years as part of the employees' overall compensation package. The bonus is not a discretionary windfall tied to performance but a consistent and expected part of employee compensation.[27] Every employee of the Company from its most senior leaders to its newest employees receive the same amount. According to Mr. Poff, bonuses are modest and predictable and fall well within this standard and serve as tangible acknowledgements of employee contributions throughout the year.[28]

Q. WHAT IS YOUR RESPONSE?

A. As I stated previously under my Long Term Incentive section, the Company has the right and the opportunity to provide its employees with market-based compensation. The Company, however, should not have unfettered access to ratepayers' moneys when there is an absence of customer-oriented services tied to the bonuses. Again, I am not arguing with the elimination of these bonuses, only that the Company should bear the burden of providing these bonuses to its employees.

e. Customer Accounts Expense – Water

Q. WHAT HAS THE COMPANY STATED WITH RESPECT TO YOUR ADJUSTMENT TO THE CUSTOMER SURVEY COSTS?

A. Mr. Poff did not agree with the disallowance of the Company's customer survey costs of $24,000. Mr. Poff stated that in a regulatory environment, customer surveys are one of the few direct mechanisms for capturing customer sentiment, expectations and service perceptions.[29] These insights are essential for aligning utility operations with public interest. Strategic planning often requires time to translate feedback into actionable

[27] *Id*. at 17.
[28] *Id*.
[29] *Id*. at 18.

programs. Mr. Poff stated that the survey is already used in the sense that it has informed leadership decisions and is guiding internal review.[30]

Q. WHAT IS YOUR RESPONSE?

A. I am relying on OCA witness Ms. Alexander with respect to the recommendation on the Company's customer survey costs of $24,000. She has provided her recommendation in OCA St. 5SR. In her surrebuttal testimony, Ms. Alexander withdrew her recommended disallowance of these costs and, therefore, I am withdrawing the corresponding adjustment to the Company's revenue requirement. The recovery of the $24,000 is to be amortized over a five-year period or $4,800 annually. This is shown on my Exhibit DM-SR-14W.

f. Pension Administration - Water

Q. WHAT HAS THE COMPANY STATED REGARDING YOUR ADJUSTMENT TO THE PENSION ADMINISTRATION?

A. Mr. Poff did not agree with my disallowance of the Pension Administration costs of $1,920. He stated that this should not be considered as an inflation adjustment.[31] Mr. Poff stated that the annual trustee and portfolio management fees are 0.25% of the qualified pension plan asset balances. The pension plan is to maintain assets to pay for future pension benefits. The trustee invests the funds, and the return is reinvested in the plan reducing the overall pension liability to its employees. If the Company did not project or realize any return on its pension fund balances, the required contributions into the plan would increase.[32]

Q. WHAT IS YOUR RESPONSE?

A. After a review of the discovery and Mr. Poff's rebuttal testimony, I am accepting the $1,920 additional costs related to the Pension Administration costs. This appears to be an offset to future contributions to the pension plan which will likely reduce pension costs to employees and benefit ratepayers. This is shown on my Exhibit DM-SR-15W.

[30] *Id*. at 18-19.
[31] *Id*. at 20.
[32] *Id*.

g. Bad Debts Expense - Water

Q. WHAT HAS MR. POFF STATED REGADING YOUR ADJUSTMENT TO THE COMPANY'S BAD DEBT EXPENSE?

A. Mr. Poff stated that while he disagrees with my adjustment to Bad Debt Expense in relation to the proposed adjustments to my other adjustments in the revenue requirement, the Company agrees that the Bad Debt expense should be adjusted to reflect the adjustments made in the Company's rebuttal testimony.[33]

Q. WHAT IS YOUR RESPONSE?

A. My recommended Bad Debt expense is calculated using my recommended revenue requirement increase multiplied by the Company's average percentage of uncollectible accounts written off (0.66%). To the extent that I made adjustments in my surrebuttal testimony, my Bad Debt expense will adjust accordingly.

h. Allocation to Wastewater

Q. WHAT HAS THE COMPANY STATED REGARDING YOUR ADJUSTMENTS TO THE ALLOCATION TO WASTEWATER?

A. Mr. Poff stated that he did not agree with my adjustment methodology that allocates costs to the Company's wastewater division. Because many of the adjustments have been rejected in rebuttal testimony, and other adjustments, such as the vacancy allowance and related payroll taxes and other employee benefits, are not specifically identifiable as potential allocable expenses, the Company has determined that any potential adjustments to the allocation to wastewater are very small and the Company is not making an adjustment for the allocation to wastewater in its rebuttal.[34]

Q. WHAT IS YOUR RESPONSE?

A. I concur with Mr. Poff, in that any adjustments to the revenue requirement proposal appears to be very small and will not materially affect the overall calculation of the Company's revenue requirement adjustments. I however, do stand by my adjustments to my recommended allocation to the wastewater balance.

[33] *Id*. at 21.
[34] *Id*. at 21-22.

i. Administrative & General Expense (A&G) Capitalized

Q. WHAT HAS THE MR. POFF STATED WITH RESPECT TO YOUR ADJUSTMENTS TO THE A&G EXPENSE CAPITALIZED?

A. Mr. Poff did not agree with my adjustment methodology. Costs other than A&G expenses are eligible to be capitalized and not all A&G expenses are eligible to be capitalized.[35] Because many of the adjustments have been rejected in rebuttal testimony, and other adjustments such as the vacancy allowance, and related payroll taxes and other employee benefits, are not specifically identifiable as potential capitalized expenses, the Company has determined that any potential adjustment to A&G expense capitalized is very small and the Company is not making an adjustment for allocation to wastewater in its rebuttal.[36]

Q. WHAT IS YOUR RESPONSE?

A. I concur with Mr. Poff, in that any adjustments to the revenue requirement proposal appears to be very small and will not materially affect the overall calculation of the Company's revenue requirement adjustments. I do, however, stand by my adjustments to my recommended A&G Capitalized balance.

j. Stock Awards - Water

Q. WHAT HAS THE COMPANY STATED REGARDING YOUR ADJUSTMENT TO STOCK AWARDS?

A. The Company did not agree with my disallowance related to Stock Awards. Mr. Poff stated that the same four metrics applicable to long term incentive compensation for management apply to stock awards for directors. Mr. Poff stated that two of the four metrics are focused on customers and strong financial performance of the Company does benefit the ratepayers.[37]

Q. WHAT IS YOUR RESPONSE?

A. As I stated previously under my Long Term Incentive section, while I understand the importance of providing incentive compensation to employees, I believe that stock awards compensation should be paid for by the Company. The Company has the right and the opportunity to provide its employees with market-based compensation, but there is no

[35] *Id*. at 22.
[36] *Id*.
[37] *Id*. at 23.

assumption that all of these costs should be recovered in rates from ratepayers. The Company has the opportunity to recover these costs for ratemaking purposes, but there should be no guarantee that they will. I am not arguing for elimination of these costs but that the costs related to long term incentive should be a risk that the Company should take and bear. Further with respect to the financial portion of the long term incentive the Company should continually have the ability to provide safe, adequate and reliable utility service absent any incentive to employees to do so. The Company has not shown that without these stock awards it would deteriorate the Company's ability to provide safe and reliable service to its customers.

k. Health Insurance - Water

Q. WHAT HAS THE COMPANY STATED REGARDING YOUR ADJUSTMENTS TO HALTH INSURANCE?

A. Mr. Poff did not agree with my adjustments to Health Insurance costs. Mr. Poff stated that the 8.325% is not an inflation adjustment but rather a medical inflation rate determined by the health insurance actuary. The Company proposed a slightly lower rate (from 9.00% to 8.325%) expecting to trend better than the overall average.[38] In 2025, the Company incurred a rate increase of 8.4% and in 2024 the Company incurred a rate increase of 16.8%. As such, Mr. Poff testified that this projection should be included in the revenue requirement of this base rate case.[39]

Q. WHAT IS YOUR RESPONSE?

A. Even though the Company characterizes the 8.325% as a medical inflation adjustment and not a general inflation adjustment does not negate the fact that it is still an inflation adjustment. The Company should provide any updated documentation with respect to its Health Insurance costs. I am still recommending disallowance of the 8.325% medical inflation rate in my revenue requirement recommendation. This is shown on my Exhibit DM-SR-15W.

[38] *Id*. at 23-24.
[39] *Id*. at 24.

l. Contract Services - Water

Q. WHAT HAS THE COMPANY STATED REGARDING YOUR ADJUSTMENTS TO THE COMPANY'S PENSION ADMINSTRATION COSTS?

A. Mr. Poff did not agree with my adjustment related to Contractual Services. Mr. Poff stated that these increases should not be considered a general inflation adjustment. Mr. Poff stated that the Commission has consistently upheld the use of a FPFTY data when supported by credible forecasting and documentation.[40] Mr. Poff stated that a 5.0% increase was based upon the most recent increases with an expectation that the Company's third-party financial partners would not reduce their fee increases through the end of the FPFTY. As such Mr. Poff testified that this projection should be included in the revenue requirement of this base rate case.[41]

Q. WHAT IS YOUR RESPONSE?

A. I am continuing to recommend disallowance of these costs in the revenue requirement equation. I believe these costs adjustments are inflationary in nature, not tied to any specific increases and do not represent the true costs to be incurred by the Company. I still believe that these are merely forecasted projections that may or may not be realized when rates are set by the Commission in this case. My recommendation is shown on my Exhibit DM-SR-15W.

m. General Insurance - Water

Q. WHAT HAS THE COMPANY STATED WITH RESPECT TO YOUR ADJUSTMENTS TO GENERAL INSURANCE?

A. Mr. Poff did not agree with my disallowance of its adjustments to its General Insurance costs. Mr. Poff stated that these adjustments are not general inflation adjustments. Mr. Poff stated that the increases are largely based on actual increases received in the Company's last renewal with the expectation that the increases are unlikely to decrease through the end of the FPFTY.[42] In some cases where an increase was not received in the most recent renewal, an increase was projected at conservative amounts that is less than the actual

[40] *Id*.
[41] *Id*.
[42] *Id*.

increases received in the last renewal for the other lines of insurance that increased based on the expectation that insurance renewals are unlikely to remain flat for two consecutive renewal periods.[43]

Q. WHAT IS YOUR RESPONSE?

A. I am continuing to recommend disallowance of these costs in the revenue requirement equation. I believe these costs adjustments are inflationary in nature, not tied to any specific increases and do not represent the true costs to be incurred by the Company. I still believe that these are merely forecasted projections that may or may not be realized when rates are set by the Commission in this case. My recommendation is shown on my Exhibit DM-SR-15W.

n. Income Tax Expense – Water and Wastewater

Q. WHAT HAS THE COMPANY STATED REGARDING YOUR ADJUSTMENTS TO INCOME TAX EXPENSE?

A. Mr. Poff stated the Company disagrees with my adjustments to the revenue requirement proposed by me, the Company agrees that income tax expense should be adjusted to reflect the adjustments made in the Company's rebuttal testimony.[44]

Q. WHAT IS YOUR RESPONSE?

A. My adjustments to the Company's Income Tax Expense reflects the flow through of my other adjustments to develop my recommended overall revenue requirement increase.

o. Interest Synchronization – Water and Wastewater

Q. WHAT HAS THE COMPANY STATED REGARDING YOUR CALCULATION OF INTEREST SYNCHRONIZATION?

A. Mr. Poff agreed that interest synchronization should be adjusted to reflect the adjustments made in the Company's rebuttal testimony. Mr. Poff stated that my interest synchronization is related to the proposed hypothetical capital structure which the Company disagrees with.[45]

[43] *Id*.
[44] *Id*. at 27-28.
[45] *Id*. at 28.

Q. WHAT IS YOUR RESPONSE?

A. My recommended interest synchronization is based upon Mr. Garrett's overall rate of return which included a weighted cost of long term debt of 2.225% instead of the Company's proposed weighted cost of long term debt of 2.062%. Given that Mr. Garrett has recommended a long-term debt cost of 2.062%, it is prudent to calculate the interest synchronization based upon his adjustment. I am relying on OCA witness Mr. Garrett on any further adjustments to the Company's rate of return including his recommended weighted cost of debt.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

APPENDIX A - Resume of Dante Mugrace

DANTE MUGRACE

Education

Master Business Administration, MBA Strategic Management, Pace University, Lubin School of Business, New York, NY, 2010

Master Public Administration, MPA, Kean University, Union, NJ, 2001

Bachelor of Science, BS. Accounting, St. Peter's University, Jersey City, NJ, 1983

Position

Senior Consultant – PCMG and Associates	2014 – present
Senior Consultant – Snavely King Majoros and Associates	2013 – 2014
Independent Consultant	2012 – 2013
Bureau Chief/Administrative Analyst/Accountant – New Jersey Board of Public Utilities	1983 – 2011

Professional Experience

Mr. Mugrace has 35 years' experience in all aspects of regulatory accounting and policy including processing, analyzing and evaluating utility rate case petitions before Public Service Commissions. Mr. Mugrace examines and evaluates rate filings, contracts, agreements and rate matters regarding utility operations and provides recommendations as to best course of action. Additionally, Mr. Mugrace analyzes and reviews utility regulatory matters and sets forth recommendations for resolution of issues, calculates total revenue requirement needed to cover operating expenses and rate of return; researches and evaluates regulatory utility matters to assess impact on various classes of customers, regarding rates, service, compliance and cost of service provisions, as well as annual true-up and tracking mechanisms.

Prior to undertaking consulting assignments, Mr. Mugrace was the Bureau Chief Utility Rate Manager for the New Jersey Board of Public Utilities, in which role he managed and assigned tasks to a staff of 12 professionals and supervisory personal in the daily administrative, financial and managerial functions of the Division. Mr. Mugrace's primary duties were to determine whether the utility had sufficient revenues to cover its operating expenses and earn a return on its plant investment and to ensure that the utility provided safe, reliable and continuing utility service to its customers. Mr. Mugrace set rates and charges for utility companies, which had revenues of up to $500 million, and ensured that the revenue requirement provided for recovery of all operating expenses, return on investment and depreciation. Mr. Mugrace was also responsible for reviewing and verifying that the companies' property, plant and equipment (up to $2.5 billion) were used and useful in providing service to its customers. Mr. Mugrace coordinated and met with the New Jersey State Department of Environmental Protection to

determine whether water and wastewater utilities were complying with state regulations and were adhering to any regulatory agency directives or orders. Mr. Mugrace developed ways to minimize the rising costs of water utility services by investigating alternative rate structures, analyzing engineering mechanisms and techniques, looking into the feasibility of mergers and acquisitions within the water industry and reviewing financing, and rate alternatives to minimize the impact on ratepayers. Mr. Mugrace was responsible for ensuring that the rate-case process adhered the statutory timeframe for preparing, reviewing and recommending findings to the Board Commissioners on financial operations, costs, revenues and operating expenses, prior to the litigation proceedings. Mr. Mugrace also examined alternative rate recovery mechanisms and clauses, phase-ins of revenue requirements, deferral mechanisms and pass-through of rate charges. Mr. Mugrace assumed the role of Director during transition periods and Administrative changes. Finally, Mr. Mugrace conducted the recruitment and hiring of employees for placement within the Division and the Board.

SURREBUTTAL TESTIMONY

OF

DAVID J. GARRETT

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

October 6, 2025

I. INTRODUCTION

Q. State your name and occupation.

A. My name is David J. Garrett. I am a consultant specializing in public utility regulation. I am the managing member of Resolve Utility Consulting PLLC.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed direct testimony in OCA Statement 2 on August 22, 2025, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). A summary of my qualifications is included in my direct testimony.

Q. What is the purpose of your surrebuttal testimony?

A. My surrebuttal testimony responds to the rebuttal testimony of York Water Company ("York Water" or the "Company") witnesses Dylan D'Ascendis and Joseph T. Hand regarding cost of capital and rate of return issues.

Q. Did the Company's rebuttal testimony cause you to change any of your positions or recommendations discussed in your direct testimony?

A. No. Additionally, to the extent I did not specifically address a statement made in the company's rebuttal testimony filed in this case, it should not constitute my agreement with such testimony.

Q. Are you sponsoring any exhibits to your surrebuttal testimony?

A. No.

Q. Please summarize your surrebuttal testimony directed to the rebuttal testimony of Mr. D'Ascendis.

A. In my surrebuttal testimony to Mr. D'Ascendis, I will address the assertions made in his rebuttal testimony regarding his updated analysis, capital structure, the Discounted Cash Flow ("DCF" Model"), the Capital Asset Pricing Model ("CAPM"), and cost of equity adjustments.

II. Updated Analysis

Q. Please summarize the updated analysis presented by Mr. D'Ascendis in his rebuttal testimony.

A. Due to the passage of time between his direct and rebuttal testimony, Mr. D'Ascendis performed an updated cost of equity analysis for York Water.[1]

Q. Did the updated analysis performed by Mr. D'Ascendis cause him to change his recommended ROE of 10.9% for the Company?

A. No. Similarly, his updated analysis has not caused me to change my opinion regarding York Water's authorized ROE either.

III. Capital Structure

Q. Please summarize Mr. D'Ascendis's criticisms of your capital structure adjustment.

A. Mr. D'Ascendis disagrees with my recommendation to impute a capital structure for the Company that is equal to the proxy group average. Mr. D'Ascendis argues that no

[1] Rebuttal Testimony of Dylan W. D'Ascendis, p. 3.

adjustment to the Company's proposed capital structure is necessary because it is within "industry norms"[2] and "consistent with the range"[3] of the proxy group's capital structure.

Q. What is your response to Mr. D'Ascendis's rebuttal testimony on this issue?

A. I disagree with the argument that if a utility's proposed capital structure for ratemaking purposes is simply within the range of the proxy group's capital structures, then no adjustment is warranted. In this case, the range of debt ratios of the proxy group is 44% - 56%. York Water's proposed debt ratio of 45% barely falls within the lowest end of that range. This means that compared with the majority of the proxy group, York Water is choosing to finance its operations with a relatively higher amount of high-cost equity instead of low-cost debt. In addition, the Commission should keep in mind that it is not adjusting the Company's actual capital structure, but rather the capital structure that is used for ratemaking purposes to calculate the authorized rate of return to be applied to rate base. It is incumbent on the Commission that it authorize a fair rate of return. A key component of a fair rate of return is a fair ratemaking capital structure. Rather than assessing whether a utility's proposed capital structure barely falls within the lowest end of a range of debt ratios (and thus highest end of capital costs), the Company's ratemaking debt ratio should be set equal to the proxy group average.

---

[2] *Id*. at p. 52, line 22.

[3] *Id*. at line 14.

Q. Do your recommended adjustments to the York Water's ratemaking capital structure have any bearing on the Company's actual capital structure?

A. No. York Water's actual capital structure is properly under the discretion of Company management. In contrast, the "ratemaking" capital structure used to calculate the most appropriate and fair authorized rate of return is completely within the Commission's discretion. As with other costs in a rate proceeding, it is incumbent on the Commission to determine a fair cost of capital, which directly relates to the authorized rate of return. Indeed, the *Carnegie* case confirms this assertion:

> Rather, the actual capital structure is a matter within the discretion of corporate management; however, this does not preclude the commission from determining that a particular utility's capital structure is unreasonable and uneconomical when balancing the goals of safety, prudent management, and economy and utilize a hypothetical capital structure for rate-making purposes.[4]

In my testimony, I refer to the concept of a "hypothetical" capital structure as a "ratemaking" capital structure; these terms are synonymous in my view. The Commission must also account for the technical and mathematical realities of using a utility proxy group to estimate the applicant-utility's cost of equity. That is, if the applicant-utility has a lower debt ratio than the proxy group average, then technically, either its ratemaking capital structure or estimated cost of equity *must be* adjusted to account for the fact that it has less financial risk than the proxy group.

[4] Pa. P.U.C. v. Carnegie Natural Gas Company, 1980 WL 140939 (1980) ("Carnegie"), at 10.

IV. DCF Model

Q. Please summarize Mr. D'Ascendis's criticisms of your DCF Model.

A. Mr. D'Ascendis criticizes the sustainable growth variation of my DCF Model in that it applies a 3.7% long-term growth rate to each of the proxy companies. Mr. D'Ascendis also criticizes the analyst growth variation of my DCF Model because it relies on projected dividend growth rather than projected earnings growth.

Q. What is your response to Mr. D'Ascendis regarding his critique of the sustainable growth variation of your DCF Model.

A. The idea that a company cannot sustain earnings or dividend growth at a greater annual rate than the aggregate growth rate of the economy in which it operates (as measured by U.S. GDP), when viewed in perpetuity, is a reasonable assumption and should not be controversial, in my opinion. In addition, using GDP as the long term growth rate can theoretically mitigate some of the circular reference problems inherent in the application of the DCF Models for regulated utilities. However, with that being said, this variation of the DCF Model produced a result that is notably lower than the CAPM, and lower than what I believe is a reasonable estimate for York Water's cost of equity. For this reason, I did not equate my authorized ROE recommendation for York Water with the results of the sustainable growth variation of my DCF Model in this case.

Q. What is your response to Mr. D'Ascendis regarding his critique of the analyst growth variation of your DCF Model.

A. The DCF Model as it is applied in regulatory proceedings is derived from the Gordon Growth Model, which directly discounts dividends as the source of cash flow to investors

when estimating the value of publicly-traded assets. In other words, the "cash flow" in the discounted cash flow model is specifically dividends, not earnings. In that regard, it is quite reasonable to use dividend growth estimates for the growth rate input in the DCF Model. While I am not suggesting it is unreasonable to consider earnings growth as one of several potential growth rate indicators, the analyst should still ensure the annual growth rates are sustainable, particular if the growth rate is assumed to be perpetual (which it is, in the constant growth DCF Model). As discussed in my direct testimony, Mr. D'Ascendis relied on perpetual growth rates as high as 14% in his DCF Model, specifically for Middlesex Water Company. The analyst that published the 14% earnings growth rate (Zack's) is estimating that Middlesex might be able to grow its earnings by 14% each year over the next several years (i.e., a short-term growth rate). However, it is Mr. D'Ascendis who is amplifying that estimate to suggest to the Commission that Middlesex can grow its earnings by 14% each year in perpetuity. A perpetual growth rate that high is simply not sustainable.

V. CAPM Analysis

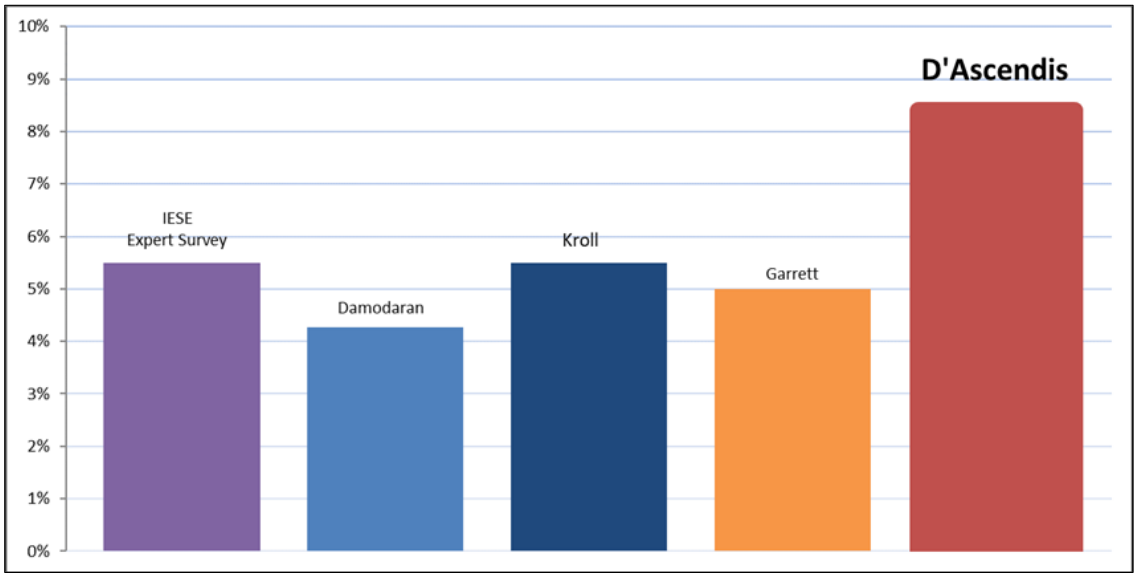
Q. Please summarize Mr. D'Ascendis's criticisms of your CAPM analysis.

A. The primary contentious issue under the CAPM is the equity risk premium ("ERP") (referred to as the "market risk premium" in Mr. D'Ascendis' testimony). Mr. D'Ascendis disagrees with the ERP of 5.1% that I used in my CAPM. He also disagrees with my rejection of his ECAPM analysis.

Q. Please briefly reiterate the sources you considered for the ERP estimate.

A. The ERP is an important figure for financial and market analysts in all industries, not just utility regulation. Thus, many analysts, managers, investors, and academics are constantly studying and are concerned with obtaining a reliable and accurate estimate of this important number, which can be used in a variety of financial analyses, including the CAPM. All else held constant, a higher ERP will result in a higher indicated higher cost of equity and apply upward pressure on the authorized ROE. I considered three reliable and objective sources to include in my overall ERP estimate, including the result of the IESE Business School survey of experts, the estimate published by Kroll (formerly Duff & Phelps), and the estimate published by one of the world's leading experts on the issue, Dr. Aswath Damodaran. I also conducted and presented my own ERP estimate, the result of which is similar to those from the other sources. The figure below contrasts the ERP estimates from these sources with the ERP estimated by Mr. D'Ascendis.

Figure 1:
Equity Risk Premium Comparison



When compared with other independent sources for the ERP (as well as my estimate), which do not have a wide variance, Mr. D'Ascendis' ERP estimate of 8.41% is clearly not within the range of reasonableness.[5]

Q. Are the ERP estimates from the IESE Business School survey of experts, Kroll, and Dr. Damodaran immune to any criticism?

A. No. The ERP cannot be directly measured; thus, it must be estimated, which can be done through a variety of different methods. Nonetheless, the end result will necessarily be an estimate. Thus, any estimate of the ERP can be criticized. In his rebuttal testimony, Mr.

[5] Mr. D'Ascendis does not use a straightforward approach to arrive at his ERP estimate. Had he done so, it would have led to lower, and more reasonable, results. See also Direct Testimony of David J. Garrett, pp. 38-47.

D'Ascendis offers various critiques of the ERP estimates from each of these sources. Ultimately, however, Mr. D'Ascendis is asking the Commission to accept his ERP estimate over the estimates published by these other sources. In my opinion, the ERP estimates provided by the survey of experts, Kroll, and Dr. Damodaran are more objective, reasonable, and unbiased than Mr. D'Ascendis' ERP estimate. Moreover, the ERP results from these sources do not have a wide variance, which provides further indication of a fairly tight, reasonable range for the ERP, from which Mr. D'Ascendis's ERP estimate clearly and significantly diverges.

Q. Please summarize Mr. D'Ascendis's rebuttal testimony regarding the ECAPM.

A. The premise of Mr. D'Ascendis's ECAPM is that the real CAPM underestimates the return required from low-beta securities. As discussed in my direct testimony, both Mr. D'Ascendis and I relied on betas published by Value Line. These betas are already adjusted to account for the concept that unadjusted, "raw" betas might be too low for low-beta stocks. Yet, Mr. D'Ascendis is essentially suggesting through his ECAPM that Value Line betas are incorrect and must be adjusted yet *again* to a higher level. This approach effectively results in a double counting of upward beta adjustments, which is a good strategy if the goal is to make the end result higher. The Commission should rely on Value Line's objective and unbiased beta estimates, rather than Mr. D'Ascendis's beta estimates.

VI. Cost of Equity Adjustments

Q. Please summarize Mr. D'Ascendis's rebuttal testimony regarding his various adjustments to his cost of equity models.

A. Mr. D'Ascendis maintains his position that there should be upward adjustments to the cost of equity model results to account for business risks and the size premium.

Q. What is your response to Mr. D'Ascendis's rebuttal testimony regarding these issues?

A. In his rebuttal testimony Mr. D'Ascendis asserts that "York Water's smaller size relative to the Utility Proxy Group companies indicates greater relative business risk for the Company because, all else being equal, size has a material bearing on risk."[6] First, as thoroughly discussed in my direct testimony, there have been numerous studies conducted over the past few decades that indicate there should be no size premium automatically applied to small cap stocks. Yet, in my experience, ROE witnesses representing utility companies routinely apply this upward adjustment to their cost of equity models, as Mr. D'Ascendis has done in this case. This appears to me to be an upwardly biased adjustment that is simply designed to produce a higher indicated cost of equity, rather than an unbiased approach seeking to accurately account for risk. Furthermore, even if a small size premium were consistently observable in the market, I do not believe that would automatically apply to regulated utilities. To say otherwise would ignore the reality that regulated utilities do not face the same downside bankruptcy risk that a purely competitive firm would face.

[6] Rebuttal Testimony of Dylan W. D'Ascendis, p. 72, lines 17-20.

Essentially, operating utilities are too important to fail. In the event a utility faced financial hardship, the regulatory environment (i.e. customers, taxpayers, etc.) could not afford to let the utility fail. Thus, even though York Water is smaller than the companies in the proxy group, that does not mean it is inexorably riskier. In fact, the opposite is likely true.

Q. Please summarize Mr. D'Ascendis's and Mr. Hand's rebuttal testimony regarding the management performance premium.

A. Mr. D'Ascendis asserts that "the Company has fulfilled the requirements of 66 Pa.C.S. § 523 and should receive the benefit of doing so."[7] Mr. Hand claims that the Company's activities with respect to acquiring troubled water and wastewater systems, customer-owned lead service lines, customer service, and low-income customer assistance warrant an upwards adjustment to York Water's requested ROE.[8]

Q. What is your response to these witnesses on this issue?

A. I disagree with both witnesses. I provided several arguments in my direct testimony why York Water is not entitled to a management performance premium. Essentially, York Water's authorized ROE should be based on its market-based cost of equity. The concept of the cost of equity, and the models used to estimate cost of equity, do not even contemplate the concept that prudent management performance would have an increasing effect on the cost of equity. In fact, in the competitive market environment, if good managerial performance were to have any impact of the cost of equity, it would be a

[7] Rebuttal Testimony of Dylan W. D'Ascendis, p. 76, lines 13-14.

[8] Rebuttal Testimony of Joseph T. Hand, pp. 6-12.

decreasing effect. This is because, all else held constant, good management reduces risk, and thus reduces the cost of equity. Furthermore, adding such a premium to the authorized ROE runs the risk of being at odds with *Hope* and *Bluefield* standards. These standards say that the authorized ROE should be commensurate with the risk of the utility. Premiums for good managerial performance do not comport with these standards because they are not driven by risk; and moreover, if they were tied to risk, it would result in an ROE discount, as discussed above. Furthermore, I am not aware of any utility in other jurisdictions in which I have testified which has received such a premium. Customers already compensate management, and they should not be forced to pay an additional premium to shareholders (beyond an above-market ROE) for managerial performance.

Q. Please summarize Mr. D'Ascendis's rebuttal testimony regarding flotation costs.

A. Mr. D'Ascendis continues to assert that a flotation cost adjustment should be applied to the cost of equity modeling results to increase the cost of equity indications.

Q. What is your response to Mr. D'Ascendis's rebuttal testimony on this issue?

A. As discussed in my direct testimony, Mr. D'Ascendis's flotation cost adjustment should be rejected for several reasons. First, similar to Mr. D'Ascendis's management performance premium, I am not aware of any commission who specifically authorizes flotation cost premiums. Second, as thoroughly described in my direct testimony, investors have already considered and accounted for flotation costs when making their decision to purchase shares

at the quoted price. Thus, investors are not penalized or denied recovery of flotation costs, as stated by Mr. D'Ascendis.[9]

Q. Does this conclude your surrebuttal testimony?

A. Yes.

ON BEHALF OF THE

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

OCTOBER 6, 2025

Q. PLEASE STATE YOUR NAME, POSITION AND BUSINESS ADDRESS.

A. My name is James S. Garren. I am a Project Manager of the firm GDS Associates, Inc. ("GDS"). My business address is 1850 Parkway Place, Suite 800, Marietta, GA 30067.

Q. HAVE YOU PREPARED A SUMMARY OF YOUR QUALIFICATIONS AND EXPERIENCE?

A. Yes. A summary of my qualifications and experience were described in and submitted with my direct testimony in Exhibit JSG-1.

Q. PLEASE DESCRIBE YOUR BACKGROUND IN UTILITY DEPRECIATION.

A. I have been working in the utility field since 2010, when I began working at the consulting firm of Snavely King Majoros & Associates, Inc. as an analyst. I began working primarily in the area of depreciation, assisting Michael J. Majoros in the preparation of depreciation testimony and exhibits. In 2014, I became the firm's primary expert on depreciation issues. Since that time, I have submitted testimony in dozens of depreciation rate cases across the U.S., providing testimony on issues related to depreciation, including service life analysis, net salvage analysis, reserve analysis, and many other issues. In 2015, I was recognized as a Certified Depreciation Professional by the Society of Depreciation Professionals.[1] In

[1] "The Society of Depreciation Professionals was organized in 1987 to recognize the professional field of depreciation analysis and individuals contributing to this field; to promote the professional development and professional ethics of practitioners in the field of depreciation analysis; to collect and exchange information about depreciation analysis; and to provide a national forum of programs and publications concerning depreciation." http://www.depr.org/?page=AboutUs. For certification, an applicant must have at least 5 years of full time professional depreciation experience, at least 2 years of which must be in the area of depreciation administration. Among other requirements, the applicant must pass a two part (Technical and Ethics) closed book examination which includes questions about, inter alia,

2022, I joined GDS Associates, Inc. as a project manager, continuing my work as a depreciation expert.

Q. FOR WHOM ARE YOU APPEARING IN THIS PROCEEDING?

A. I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE OBJECTIVE OF YOUR SURREBUTTAL TESTIMONY?

A. On September 19, 2025, York Water Company ("York") filed the rebuttal testimony of John J. Spanos, which discusses a number of issues related to depreciation. The purpose of this surrebuttal testimony is to address Mr. Spanos' rebuttal testimony to the extent that he raises issues that I believe were not already addressed by my previous direct testimony.

Q. WHAT ASSERTIONS BY MR. SPANOS DO YOU WISH TO ADDRESS IN YOUR TESTIMONY?

A. I would like to address two points. First, to address Mr. Spanos' point about intergenerational inequity. And second, the assertion that ELG benefits ratepayers because it results in ratepayers paying less in revenue requirement over time. These two points naturally are interrelated and they are addressed together.

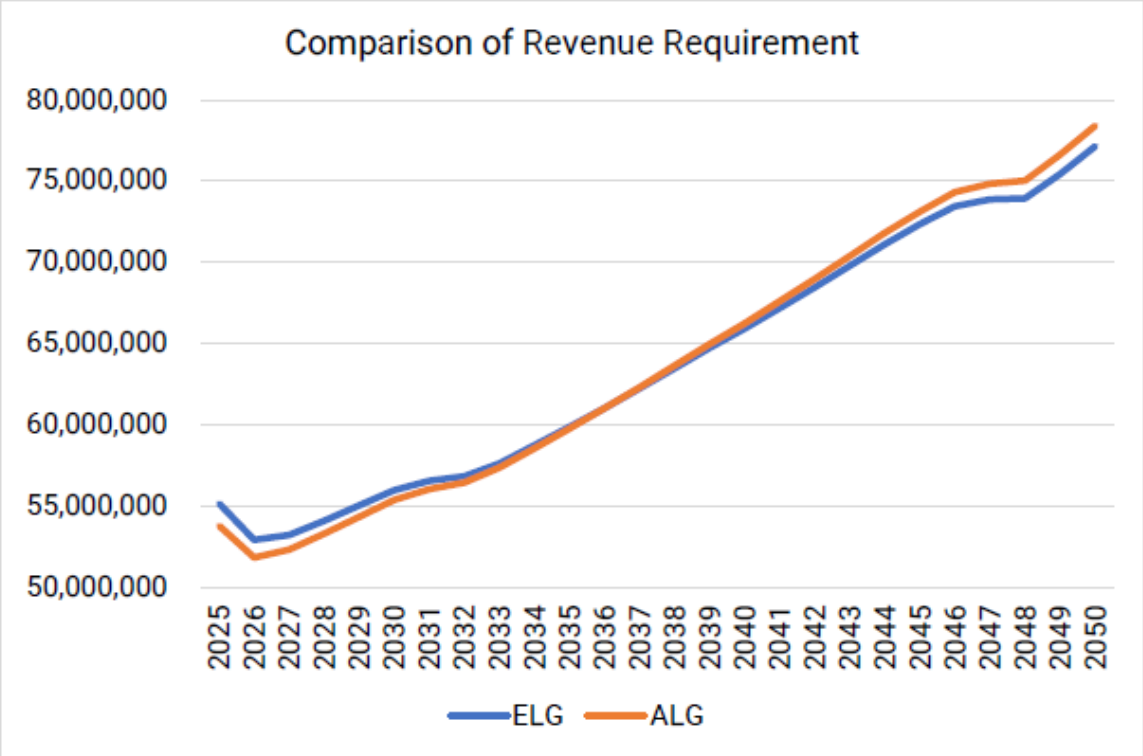
Q. WHY DOES MR. SPANOS ASSERT THAT THE USE OF ALG CREATES INTERGENERATION INEQUITY?

A. The following graph, taken from Mr. Spanos' rebuttal testimony[2] forms the basis for the discussion.

Plant and Reserve Accounting, Life Analysis Concepts, Life Analysis Using Actuarial Models, Life Analysis Using Simulation Models, Salvage and Cost of Retiring Analysis, Technology Forecasting and Depreciation Calculations." http://www.depr.org/?page=Certification

[2] York Exh. JJS-1R.

Figure 3. Comparison of Forecasted Revenue Requirement



What this graph shows is the difference in the overall revenue requirement when using the two different procedures. I have one significant issue with Mr. Spanos' graph, which is that it presupposes an averaged forecasted growth in plant of just over 2% per year.

Q. IS THIS A REALISTIC ESTIMATE OF ANNUAL GROWTH IN PLANT IN SERVICE OVER TIME?

A. No, this is not a realistic assessment of the company's average growth rate of plant. The below table shows the end of year plant in service for York Water Company per the company's SEC 10-K annual reports from 2010-2023.

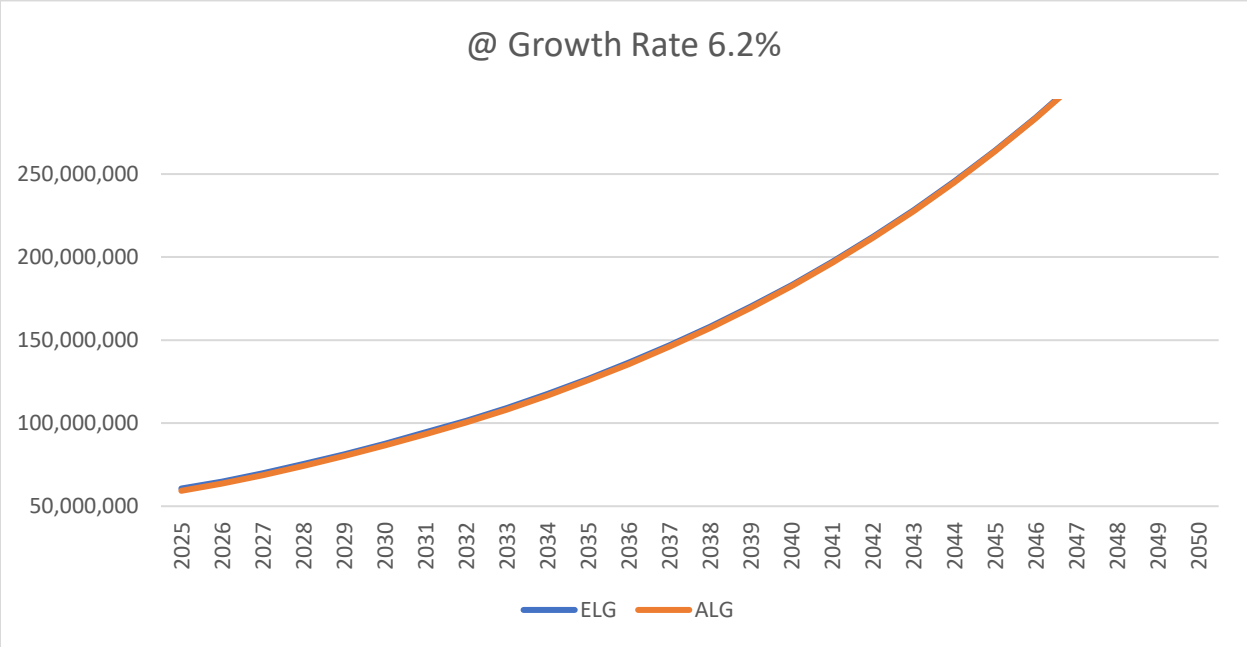
Table JSG-1 YWC Growth in Plant in Service

Year	Plant in Service ($thousands)	Growth ($)	Growth (%)
2023	544,283	37,110	7.3%
2022	507,173	46,608	10.1%
2021	460,565	49,033	11.9%
2020	411,532	18,566	4.7%
2019	392,966	16,933	4.5%
2018	376,033	22,516	6.4%
2017	353,517	17,454	5.2%
2016	336,063	11,505	3.5%
2015	324,558	12,800	4.1%
2014	311,758	13,215	4.4%
2013	298,543		
		Average	6.2%

This review of the company's historical plant growth shows that Mr. Spanos' Figure 3 shown above portrays an unrealistic rate of growth, resulting in an unrealistic depiction of the effect of ELG rates over time. According to York's 10-K plant in service for 2013-2023, the ten-year average of growth in total plant was 6.2%. In fact, in no single year did York's plant in service grow at as low a rate as Mr. Spanos' scenario supposes.

Q. CAN YOU DEMONSTRATE WHAT THE REVENUE REQUIREMENT PICTURE LOOKS LIKE UNDER A MORE REALISTIC SCENARIO?

Figure JSG-1



This graph depicts a more realistic flow of the way that ELG operates over time when taking into account the growth of plant. The only change made to the tables Mr. Spanos presented in JJS-1R is the rate of growth of plant. As we can see, when York's 10-year average growth rate of 6.2% is used, the visual difference between the two procedures all but disappears. This happens because the growth in plant over time overwhelms the reduction of rate base due to the growth of accumulated depreciation. In Mr. Spanos' scenario of just over 2% plant growth, the switchover to where the revenue requirement under ALG rates becomes higher than over ELG rates is in 2037. Under the 6.2% growth model, the switchover doesn't occur until 2044.

For Mr. Spanos' scenario, the total revenue requirement collected under ELG is $1,656.3 million, whereas the under ALG it is $1,658.5 million. In this scenario, the ALG procedure produces higher revenue requirement over the entire 25-year period by approximately $2.5 million. However, under the 10-year historical average 6.2% growth rate scenario, the total revenue requirement collected under ELG is $3,619.9 million, while under ALG it is $3,608.4 million. We see that over even a very long time horizon, ELG generates a higher total revenue requirement by $11.5 million overall.

Q. WHAT DOES THIS IMPLY REGARDING THE INTERGENERATIONAL EQUITY OF THE TWO REMAINING LIFE PROCEDURES?

Mr. Spanos' argument that the ALG method results in an intergenerational inequity simply doesn't withstand scrutiny when we apply more realistic estimates of plant growth. And, given the expectation that the ever-increasing need for replacement of aging water and wastewater infrastructure, the 6.2% growth rate may be too conservative. If we apply the most recent five-year average of growth in plant in service of 7.5%, what we see is that ALG procedure revenue requirements never catch up to the ELG procedure revenue requirement through 2050. That is, even by 2050, the ELG procedure still produces a higher revenue requirement annually.

In any realistic scenario of growth in plant in service, ELG procedure represents an acceleration of depreciation that ratepayers will not feel the benefit of for nearly two decades or more.

Q. CAN YOU ADDRESS THE SPECIFIC POINT THAT ELG RESULTS IN RATEPAYERS BEING CHARGED LESS IN REVENUE REQUIREMENT OVERALL USING THE ELG METHOD?

A. Yes. In addition to the points I raise above, which dispute the factual claim being made, I would also like to address this point in principle. Mr. Spanos states:

> *Depreciation impacts customer rates in two ways. First, depreciation expense is a direct component of the revenue requirement; however, accumulated depreciation is also a reduction to rate base. Second, a higher level of accumulated depreciation results in a lower rate base, a lower return on rate base and, therefore, lower customer rates when compared to a lower level of accumulated depreciation.*[3]

The secondary point here is that by increasing depreciation expense over time, rate base is decreased at an accelerated rate and this results in ratepayers paying less overall over time. This is true, but to say that this is a benefit to ratepayers represents an inversion of the standard financial logic. In reality, it is commonplace for consumers to want to space out payments on loans or costs over time, even if it results in a higher overall payment over time. Ratepayers, like utilities or investors, have their own time-value of money.

One of the primary considerations in such decisions is the various rates of return or interest that one can be expected to earn or be charged on their investment or loan over time. If we regard the assumed 8% rate of return as essentially an interest rate, and the repayment of the investment as repayment of a loan, it is at worst ambiguous whether spreading out those costs over time and paying 8% more per year is a harm or benefit to ratepayers. When measured against the average credit card interest rate in August 2025 of 21.16%, the 8% rate of return paid on rate base is relatively beneficial, meaning that

[3] York Water Statement 106R – Spanos Rebuttal Testimony, Page 14, lines 16-20.

given the choice between paying down rate base and paying down a credit card, it is significantly better to pay down a credit card and reduce the payments on paying down rate base to the extent possible.[4]

The veracity of Mr. Spanos' claim that it is clearly a benefit to ratepayers to pay down rate base as quickly as possible is, at best, ambiguous and we can plainly see that in reality, consumers choose to spread out the repayment of such costs routinely for a variety of rational reasons.

Q. YORK WITNESS HAND INDICATED THAT THIS RATE CASE WILL INCLUDE PLANT INVESTMENT ASSOCIATED WITH SERVING FUTURE CUSTOMERS.[5] HOW DOES THAT AFFECT INTERGENERATIONAL EQUITY FOR DEPRECIATION PURPOSES?

A. If plant investments are being made to serve future customers that are not currently receiving service, and current customers are paying depreciation rates based on the ELG procedure for that plant in service, then current customers are paying down the rate base balance for that plant to the benefit of future customers through "accelerated" depreciation rates.

Q. BASED ON YOUR REVIEW OF MR. SPANOS' REBUTTAL TESTIMONY, DO YOU BELIEVE THAT THE ELG METHOD IS MORE REASONABLE FOR YORK'S RATEPAYERS?

A. No. As I stated in my Direct Testimony, the procedure better fits the actual ongoing investment and retirement patterns of utility plant overall. As I described above, the use

[4]Board of Governors of the Federal Reserve System, "Consumer Credit – G19" current release, September 8, 2025: https://www.federalreserve.gov/releases/g19/current/
[5] York St. 1 at 15.

of the ELG procedure requires current customers to pay significantly higher depreciation rates at the time that plant is put into service for the potential benefit of a lower overall rate base balance in several decades' time, to the benefit of future – and not current – customers. Whether York has previously utilized the ELG procedure does not reflect on what is the most appropriate grouping procedure for current customers. For this reason, in addition to the reasons provided in my direct testimony, the ALG procedure produces more reasonable depreciation rates for current customers and for future customers over the next several decades, and should be adopted by the Commission in this proceeding.

Q. ARE MR. SPANOS' CLAIMS REGARDING THE "TYPICAL" RANGE OF COMPOSITE RATES FOR WATER COMPANIES SUPPORTED BY DATA?

A. No. Mr. Spanos does not provide any data that supports his claims regarding the typical range of composite rates for the industry. In fact, in response to OCA Set XIII-19, Mr. Spanos provided a set of industry statistics for water and wastewater which include service life and net salvage parameters for a variety of water companies. This data set does not include rates used. Moreover, the data set provided, from my prior experience reviewing Mr. Spanos' studies, is composed of service life and net salvage parameters that Mr. Spanos' company, Gannett Fleming, has proposed, rather than parameters that were finally accepted. It is not clear what the basis is for Mr. Spanos' range of typical rates, or whether he is considering rates that he and others in his company have proposed, or rates that have actually been accepted as part of rate cases.

Q. DO YOU HAVE ANY RECENT EXPERIENCES THAT CONTRADICTS MR.SPANOS' SUGGESTION THAT YORK'S COMPOSITE RATES ARE AT THE BOTTOM OF A REASONABLE RANGE OF RATES?

A. Yes. While I would emphasize that this is only a single data point, I was recently involved in a rate case where New Jersey American Water Company ("NJAWC") proposed a composite depreciation rate for its water plant of 2.58%.[6] While this is higher than the rate proposed by Mr. Spanos, it is important to keep in mind that unlike York Water company, NJAWC's proposed composite rate includes a normalization-based net salvage rate in the overall composite rate. Meaning that a more direct comparison would be the 2.06% composite rate based on recovery of plant only. This is significantly lower than the 2.48% composite rate proposed by Mr. Spanos in the present case.

Q. DOES MR. SPANOS' CRITICISM OF YOUR PROCESS FOR CALCULATING DEPRECIATION RATES ADDRESS THE PRIMARY ARGUMENT OF YOUR TESTIMONY?

A. No. Mr. Spanos notes that my calculation of depreciation rates incorporates reserves calculated on a ELG basis rather than an ALG basis. I do not dispute the argument, but it doesn't address the purpose of my testimony, which is that the ELG method represents a harmful form of accelerated depreciation that does not benefit ratepayers or the Commission. Regardless of my rate calculation, the result of this case, whether in compliance a stipulation or an Order, the company will need to recalculate all elements of the revenue requirement in compliance. Mr. Spanos' criticism is simply not germane to the purpose of my direct testimony.

SURREBUTTAL TESTIMONY OF

JEROME D. MIERZWA

ON BEHALF OF THE

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

OCTOBER 6, 2025

EXETER
ASSOCIATES, INC.
10480 Little Patuxent Parkway, Suite 300
Columbia, Maryland 21044

I. INTRODUCTION

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Jerome D. Mierzwa. I am a Principal at and the President of Exeter Associates, Inc ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland 21044. Exeter specializes in providing public utility-related consulting services.

Q. ARE YOU THE SAME JEROME D. MIERZWA THAT FILED DIRECT TESTIMONY IN THIS PROCEEDING ON AUGUST 22, 2025, AND REBUTTAL TESTIMONY ON SEPTEMBER 19, 2025?

A. Yes. I am.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to certain aspects of the rebuttal testimony of Gregory R. Herbert filed on behalf of the York Water Company ("York" or "Company").

II. YORK WITNESS: GREGORY R. HERBERT

Q. IN YOUR DIRECT TESTIMONY YOU FOUND THAT THE SYSTEM-WIDE AND CLASS EXTRA CAPACITY DEMAND FACTORS, OR RATIOS, USED BY THE COMPANY IN ITS COST OF SERVICE STUDY ("COSS") TO BE OUTDATED. WHAT WAS MR. HERBERT'S RESPONSE TO YOUR CLAIMS CONCERNING THE SYSTEM-WIDE CAPACITY FACTORS?

A. In its COSS, the Company used the system-wide maximum day ratio of 1.52 experienced in 2010, and a system-wide maximum hour ratio of 1.84 experienced in 2006. In my direct testimony I recommend use of the system-wide maximum day ratio

of 1.43 which was reflective of the actual maximum day demands experienced by York over the last 10 years, and a system-wide maximum hour ratio of 1.65 which was also reflective of the actual maximum hour demands experienced by York over the last 10 years. Mr. Herbert claims a water system is designed to provide water during peak periods over many years, not just over the past 10 years. Therefore, he recommends that the historic peak ratios should be used, not more recent peak ratios.

Q. WHAT IS YOUR RESPONSE TO MR. HERBERT'S CLAIM CONCERNING THE USE OF SYSTEM-WIDE MAXIMUM DAY AND MAXIUMUM HOUR RATIOS?

A. With respect to developing demand ratios or factors to be used in a COSS, the American Water Works Association ("AWWA") M1 Manual indicates that demand data "over a representative number of recent years" should be utilized.[1] I believe that 10 years meets the standard identified in the AWWA M1 Manual, and the up to nearly 20 years relied upon by York does not. Demands experienced 20 years ago are not representative of current customer demands. I further note that a system-wide maximum day ratio of 1.43 which I am recommending be utilized in York's water COSS occurred in 2024, and a system-wide maximum hour rate of 1.65 which I am recommending occurred in 2017.

Q. IN YOUR DIRECT TESTIMONY YOU FOUND THAT THE CLASS EXTRA CAPACITY RATIOS USED IN THE COMPANY'S COSS WERE DETERMINED BY A 1976-1977 CUSTOMER DEMAND STUDY AND THAT THESE FACTORS WERE ALSO UNREASONABLE BECAUSE THEY WERE OUTDATED. DID MR. HERBERT FIND YOUR CONCERN TO BE VALID?

[1] AWWA M1 Manual, 7th Edition, page 373.

A. No. Mr. Herbert claims my concern is not valid. Mr. Herbert contends that the Stipulation approved by the Commission in the Company's 1992 rate case at Docket No. R-922168 required the Company to "complete a study to investigate the feasibility of preparing a study of customer demands on the York Water System."[2] He claims that the Company submitted the feasibility study in April 1993, but neither the OCA nor Bureau of Investigational Enforcement ("I&E") provided any response to the feasibility study. He also claims that the Company submitted another feasibility study for a customer class demand study in April 2007, pursuant to the Settlement Petition adopted in the Company's 2006 base rate case at Docket No. R-00061322. He claims that again, the Company received no response to the feasibility study and, therefore, the Company contends that it was not appropriate to spend significant costs on a customer class demand study for which it may not have been able to recover the costs. He, therefore, implies that it is not the fault of the Company that they only have customer demand data from the 1970s upon which to base class extra capacity demand factors.

Q. WHAT IS YOUR RESPONSE TO WITNESS HERBERT'S CLAIMS?

A. Mr. Herbert's claims are not relevant to this proceeding. They do not change the fact that the Company's class maximum day and maximum hour demand extra capacity factors are out of date and unreasonable. Had the customer demand studies described in Docket Nos. R-922168 and R-00061322 been performed, the results of those studies would also likely now be outdated.

Q. WERE YOU THE OCA'S COST ALLOCATION AND RATE DESIGN WITNESS IN THE COMPANY'S MOST RECENT PRIOR RATE CASE IN DOCKET NO. R-2022-3031340, AND DID YOU PRESENT AN

[2] York Statement No. 107-R, page 5, lines 14-19.

ANALYSIS OF CLASS DEMAND FACTORS SIMILAR TO THE ANALYSIS PRESENTED IN THIS PROCEEDING?

A. Yes.

Q. WHAT OBSERVATIONS DOES MR. HERBERT OFFER CONCERNING YOUR ANALYSES OF CLASS DEMAND FACTORS PRESENTED IN YORK'S PRIOR CASE AND IN THIS CASE?

A. On page 8 of his rebuttal testimony, Mr. Herbert provides a comparison of the results of each analysis and notes that in this case the class demand factors I have recommended in this case are each higher than the class demand factors I presented in the prior case. He claims that if the historic class maximum day and maximum hour ratio I have proposed were reasonable, they should not change as much from the prior rate case.

Q. WHAT IS YOUR RESPONSE TO MR. HERBERT'S OBSERVATIONS CONCERNING THE TWO ANALYSES?

A. Contrary to Mr. Herbert's claims, the class maximum day and maximum hour ratios have not changed significantly since the prior case. For example as shown in the comparison presented on page 8 of Mr. Herbert's rebuttal testimony, the difference in the maximum day ratio of the Residential class is 0.15, or 8%. The difference in the maximum hour ratio of the Residential class is 0.30, or 10%. I would not consider these changes to be significant.

Q. MR. HERBERT CLAIMS THAT YOU HAVE FAILED TO PROVIDE CREDIBLE EVIDENCE THAT YOUR ALTERNATIVE METHOD OF DETERMINING CUSTOMER CLASS DEMANDS IS SUPERIOR TO THE COMPANY'S. IN RESPONSE TO HIS TESTIMONY, HAVE YOU CONDUCTED ANY FURTHER ANALYSIS OF THE DEMANDS OF

YORK'S VARIOUS CUSTOMER CLASSES AND THE CLASS DEMAND FACTORS PRESENTED BY MR. HERBERT?

A. Yes. The maximum day extra capacity factor used by the Company for the Residential class is 2.5 (Exhibit No. FVIII, p. 16). That is, the demands of Residential customers on a maximum day are expected to be 2.5 times the demands experienced on an average day. To assess the reasonableness of the Company's estimate, I compared total projected system demands using the Company's estimated maximum day demands of Residential customers with actual system maximum day demands. This comparison is presented on Schedule JDM-1SR. This comparison revealed that based on the maximum day demands assigned to the Residential class of 2.5, the maximum day demands of the other customer classes (Commercial and Industrial) would be less than the average day usage of these other customer classes. I believe it is very unlikely that the demands of these other customer classes on a maximum day would be less than the average day demands of these other classes.

I performed a similar comparison of the maximum hour demands assigned to each class and the maximum hour demands experienced on the York system. This comparison revealed that based on the maximum hour demands assigned to the Residential class of 4.5 (Exhibit No. FV111, page 26), the maximum hour demand of Residential customers would exceed the actual total maximum hour demand experienced on the total York water system. This comparison is also presented on Schedule JDM-1SR. It is simply impossible for the maximum hour demands of one customer class served by York to exceed the maximum hour demands of all customer classes served by York.

Based on these comparisons, clearly the maximum day and maximum hour extra capacity demand factors used by the Company for the Residential class are

unreasonable. These comparisons also indicate that Mr. Herbert has failed to conduct any specific analysis of the reasonableness of the demand factors presented in his COSS. The AWWA M1 Manual approach I have utilized is superior because it is based on the recent actual consumption of York's customers over the last 10 years, not data from the 1970s.

Q. DO YOU HAVE ANY OTHER COMMENTS IN RESPONSE TO THE CRITICISMS EXPRESSED BY MR. HERBERT CONCERNING YOUR METHOD OF DEVELOPING CLASS EXTRA CAPACITY FACTORS?

A. Yes. The method I used to develop class extra capacity factors is the method described and presented in Appendix A of the AWWA M1 Manual. In Rhode Island Public Utilities Commission Docket No. 25-30-WW, Mr. Herbert is the cost allocation and rate design company witness for Veolia Water Rhode Island, Inc. In that proceeding, Mr. Herbert presents a Customer Demand Study to determine the maximum day and maximum hour extra capacity demand factors which are used in the COSS he presents. The Customer Demand Study presented by Mr. Herbert in that proceeding utilizes the method described in Appendix A of the AWWA M1 Manual to develop demand factors, which is the same method I have utilized in this proceeding.

Q. BRIEFLY SUMMARIZE YOUR POSITION PRESENTED IN YOUR DIRECT TESTIMONY CONCERNING THE COMPANY'S PROPOSED MONTHLY WATER RESIDENTIAL CUSTOMER CHARGE FOR A CUSTOMER WITH A 5/8-INCH METER.

A. York is proposing to increase the current customer charge for a Residential customer with a 5/8-inch meter from $17.25 to $24.85. The $24.85 charge is based on an analysis of what the Company claims are direct customer costs presented in RS1-j Attachment. In my direct testimony, I found York's calculation of direct customer costs to be

unreasonable because it included costs that did not vary directly with the addition or subtraction of customers. York included bad debt expense in its calculation, and office buildings and furniture and equipment which are not direct customer costs. Finally, York included the investment costs associated with its Enterprise Software which do not change with the addition or subtraction of a customer. Therefore, I recommended that the monthly Residential customer charge for water service for a customer with a 5/8-inch meter should remain at $17.25. I also recommend that if the Commission did not accept my recommendation to maintain the current charge and determined that an increase is justified or warranted, I recommended that the customer charge be increased by a percentage no greater than the water increase assigned to the Residential class in this proceeding.

Q. DID MR. HERBERT AGREE WITH YOUR POSITION THAT BAD DEBT EXPENSE IS NOT A DIRECT CUSTOMER COST?

A. Mr. Herbert did not agree with my position that bad debt expense is not a direct customer cost. He claims that bad debit varies with the number of customers.

Q. SHOULD BAD DEBT EXPENSE BE INCLUDED IN A CALCULATION OF DIRECT CUSTOMER COSTS?

A. No. As I explained in my direct testimony, only those costs that vary with the addition or subtraction of a customer should be considered a direct customer cost. If bad debt expense did vary directly with the number of customers, each new customer added by York would contribute to bad debt expense, and each customer that discontinues service would reduce bad debt expense. Since this is not the case, and Mr. Herbert presented no evidence to indicate that this is the case for York, specifically, bad debt expense does not vary directly with the addition or a subtraction of a customer and, therefore, those costs should not be included in a calculation of direct customer costs.

Q. WHAT IS THE IMPACT OF ELIMINATING BAD DEBT EXPENSE FROM THE COMPANY'S CALCULATION OF DIRECT COSTS?

A. As shown on RS1-j Attachment, page 2, Mr. Herbert has included $579,243 of bad debt expense in his calculation of direct customer costs. As shown in page 1 of that attachment, the number of bills over which bad debt expense would be collected is 891,840. Thus, eliminating bad debt expense from Mr. Herbert's calculation of direct customer costs would reduce his calculated charge by $0.65 ($579,243/891,840).

Q. IN YOUR DIRECT TESTIMONY, DID YOU PROPOSE ANY CHANGES TO YORK'S PROPOSED WASTEWATER REVENUE ALLOCATIONS AND RATES?

A. Yes. In my direct testimony I noted that one of the principles of a sound revenue distribution was gradualism, and typically an increase of 1.5 to 2.0 times the system average increase is considered consistent with the principle of gradualism. Given the significant 46.3% system average increase York is requesting in this proceeding for wastewater service, I recommended that 1.5 times the system average increase serve as the gradualism benchmark in this proceeding. I further noted that the rate increase proposed by York for Monaghan Township, Shrewsbury and Springfield, Washington Township, and York Haven Borough/Newberry Township exceeded this benchmark.

In my direct testimony I found that for the Residential class, the rates proposed by York over collect the cost of service by approximately $1,275,000. For the Non-Residential class, the rates proposed by York under collect the cost of service by approximately $1,275,000. Therefore, to provide for gradualism for the four service territories with Residential customers receiving an increase greater than 1.5 times the system average increase, I recommended that, to the extent the Commission authorizes a total wastewater revenue requirement that is less than the revenue requirement

requested by York, the rates for these four service territories first be proportionately reduced to provide for a 1.5 times system average increase for the average Residential customer. Based on York's filed revenue requirement, I estimated that this would reduce the revenues collected from these four service territories by $51,600. To the extent the Commission reduces the revenue requirement increase for York by more than $51,600, I recommended that the first $1,275,000 of that reduction, less the $51,600 required to reduce the rates of the Residential customers in the four service territories to 1.5 times the system average increase, be applied to proportionately reduce the rates of all Residential customers. To the extent that the reduction to York's requested revenue requirement increase is greater than $1,275,000, I recommended that the reduction in excess of $1,275,000 be proportionately applied to reduce the proposed rates for both the Residential and Non-Residential classes.

Q. WHAT IS MR. HERBERT'S RESPONSE TO YOUR RECOMMENDATION TO LIMIT THE INCREASE TO THE MONAGHAN TOWNSHIP, SHREWSBURY AND SPRINGFIELD, WASHINGTON TOWNSHIP, AND YORK HAVEN BOROUGH/NEWBERRY TOWNSHIP SERVICE TERRITORIES TO 1.5 TIMES THE SYSTEM AVERAGE INCREASE?

A. Mr. Herbert claims that I testify that typically an increase of 1.5 to 2.0 times the system average increase is considered consistent with the principle of gradualism and that York has not proposed increases for any of these four service territories which exceed 2.0 times the system average increase.

Q. WHAT IS YOUR RESPONSE TO MR. HERBERT'S CLAIM THAT SINCE THE PROPOSED INCREASES FOR THE FOUR SERVICE TERRITORIES ARE LESS THAN 2.0 TIMES THE SYSTEM AVERAGE INCREASE, THE

PROPOSED INCREASES ARE CONSISTENT WITH THE CONCEPT OF GRADUALISM?

A. In applying the 1.5 to 2.0 times the system average increase standard to evaluate whether a proposed increase is consistent with the concept of gradualism, I believe the magnitude of the system average increase should be considered. If the system average increase is relatively low, 2.0 times the system average increase would generally be considered consistent with the concept of gradualism. However, if the system average increase is relatively high, to be consistent with the concept of gradualism, the increase should generally be limited to 1.5 times the system average increase. In this proceeding, York is proposing a relatively high system average wastewater rate increase of 46.3%. Therefore, to provide for sufficient gradualism, the increases to the four service territories previously identified should be limited to 1.5 times the system average increase.

I would also note that in his rebuttal testimony, Mr. Herbert states that he could not justify increasing the rates of Non-Residential class by more than 58.6% without jeopardizing the concept of gradualism for the Non-Residential class. An increase of 58.6% is 1.3 times the system average wastewater rate increase requested by York in this proceeding. Therefore, Mr. Herbert is applying an inconsistent principle of gradualism for Residential and Non-Residential customers.

Q. DOES MR. HERBERT AGREE WITH YOUR RECOMMENDATION THAT ANY REDUCTION TO THE REVENUE REQUIREMENT REQUESTED BY YORK DETERMINED TO BE APPROPRIATE BY THE COMMISSION FIRST BE APPLIED TO THE RESIDENTIAL CLASS TO REDUCE THE EXTENT WHICH THE RATES OF THE RESIDENTIAL CLASS EXCEED THE COST OF SERVICE?

A. No. Mr. Herbert continues to recommend that if the Commission authorizes a wastewater revenue increase which is less than York's requested increase, the revenue reduction should be addressed by proportionately scaling back the revenues to be collected from each customer class.

Q. DO YOU AGREE WITH THIS RECOMMENDATION?

A. No. As previously explained, the rates proposed by York for the Residential class exceed the cost of service by approximately $1,275,000. For the Non-Residential class, the cost of service exceeds the rates proposed by York by approximately $1,275,000. Under my proposed scale back wherein the first $1,275,000 of the revenue reduction will be assigned to the Residential class, the rates of both the Residential and Non-Residential customer classes will reflect additional movement towards the cost of service. Under Mr. Herbert's proposed scale back the rates of the Residential and Non-Residential classes will reflect no additional movement towards the cost of service.

DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does; however, I reserve the right to update this testimony as may be necessary.

SURREBUTTAL TESTIMONY

OF

BARBARA R. ALEXANDER

Barbara Alexander Consulting LLC

ON BEHALF OF THE

OFFICE OF CONSUMER ADVOCATE

October 6, 2025

PUBLIC VERSION

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member of Barbara Alexander Consulting LLC. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Office of Consumer Advocate (OCA).

Q. HAVE YOU PREVIOUSLY TESTIFIED IN THIS PROCEEDING?

A. Yes. I submitted Direct Testimony on behalf of the OCA on August 22, 2025.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I am filing Surrebuttal Testimony on behalf of the OCA to respond to the Rebuttal Testimony of York Water Company ("York Water") witnesses Joseph Hand (York Statement No. 1-R), Matthew Poff (York Water Statement No. 3-R), and Suzanne Becker (York Water Statement No. 8-R).

Q. DO YOU HAVE ANY EXHIBITS ATTACHED TO YOUR TESTIMONY?

A. Yes. I include the following Exhibit:

- Exhibit BA-6: Summary of a Proper Root Cause Analysis

Q. ARE YOU SPONSORING ANY CHANGE TO YOUR RECOMMENDATIONS AS SET FORTH IN YOUR DIRECT TESTIMONY?

A. Yes. I have eliminated my recommendation to remove the costs of the customer survey from the revenue requirement. However, I repeat my other recommendations without change. Based on my analysis, as described in my testimony, I have made the following recommendations, several of which reflect my evaluation of the Company's failure to comply with one or more commitments in the 2022 Base Rate Case Settlement:

- Customer Call Center Performance: I recommend that York Water's failure to improve its call center performance as required by the 2022 Base Rate Case Settlement[1] be taken into account in establishing the reasonable rate of return. The Company should not be rewarded for failing to meet its call center performance and other commitments in the Settlement. Second, I recommend that York Water be required to significantly improve its call center performance to meet the standard performance results of answering 80% of the calls with 30 seconds and meeting an abandonment rate of 4% or less by the rate effective year. This improvement should be monitored for compliance as a condition of any rate increase, such as through requiring a report or filing to this docket every quarter to monitor the same.
- Complaint Tracking and Analysis: First, I recommend that York Water's failure to create complaint logs consistent with the 2022 Base Rate Case Settlement, and as required by the Settlement, should be taken into account in the setting of the Company's rate of return. Second, I recommend that York Water immediately revise its complaint database and logs to conform to the specific requirements of Paragraph 54 of the 2022 Base Rate Case Settlement. Finally, I recommend that York Water undertake a root cause analysis of the complaint data to determine underlying trends and possible internal actions to respond to this analysis.
- Bill and Termination Notice Disclosures: I recommend that York Water be required to submit updated and revised billing and termination disclosures that reflect Chapter 56 requirements and plain language presentation as a condition of any rate increase in this proceeding within 90 days after the issuance of a final order.

[1] *Pa. PUC v. York Water Company, et al*, R-2022-3031340 (Order dated January 12, 2023) Order at 2-4 (*2022 Base Rate Case Settlement*).

- Customer Training and Compliance: First, while the Company has made progress in including summaries of key Chapter 56 rights in its training materials, it is not clear how these training materials have impacted interactions with customers, in part due to the nature of the rudimentary software used to capture such interactions and due to the lack of deliverables that were promised by and through the 2022 Base Rate Case Settlement and case. York Water's incomplete compliance with Paragraph 54 of the 2022 Base Rate Case Settlement should be considered in the determination of the reasonable rate of return. Second, York Water should be required to explain how the Chapter 56 rights that have been identified in its training materials are actually recorded and implemented in its software system. Finally, York Water should be required to identify the program to ensure ongoing evaluation and auditing of the call center transactions to ensure compliance with the plain words of the training materials and Chapter 56.
- Low Income Programs:

1) **Program Revision and Submission**

York should complete the analysis required by the previous settlement and submit a revised full bill discount program in accordance therewith —including application criteria, estimated enrollment, and projected implementation and program costs— within 90 days of the final order. The revised program should be implemented within six months of that order.

2) **Year-Round Availability and Initial Funding**

The revised program should offer a monthly bill discount or credit throughout the entire calendar year billing cycle. To support a more robust and meaningful program, reflective of practices among investor-owned water utilities in Pennsylvania, a

minimum funding level of $100,000 for the bill discount program, specifically, should be included in this rate case to support initial design and customer enrollment.

3) **Ongoing Data Collection and Evaluation**

The program should also include mechanisms for continuous data collection to assess its impact. Key metrics should include bill payment behavior, arrears, payment plans, collection activity, and participant feedback. The results should be reported as part of the Company's next base rate case filing.

4) **Additional Funding Sources**

The Company should consider using shareholder charitable contributions to enhance the program and/or to support the existing hardship program, particularly for customers with significant arrears who enroll in the new discount initiative.

- In other words, I recommend that the Company 1) implement a percentage discount on qualifying customers' entire bill (i.e., both fixed and volumetric charges), 2) the CARES program should be designed to supplement any bill discount program and should have reduced priority for York Water's limited low-income program funding and would be better implemented if funded using shareholder funds, and 3) the Company should allow $100,000, at a minimum, to implement a monthly bill discount program.
- Proposal for Higher Rate of Return for Management Performance: My testimony supports the rejection of this proposal and the use of the lowest reasonable rate of return based on the Company's failure to implement certain provisions of the 2022 Base Rate Case Settlement and the lack of any exceptional customer service performance.

Q. TURNING TO MR HAND'S REBUTTAL, DID HE OFFER ANY ADDITIONAL FACTS TO SUPPORT HIS PROPOSAL FOR A HIGHER RATE OF RETURN BASED ON "EXCEPTIONAL CUSTOMER SERVICE" AS HE ALLEGED IN HIS DIRECT TESTIMONY?

A. No. Mr. Hand summarizes the basis for this higher level of profits for customer service performance from his Direct Testimony at page 10. I acknowledge that York Water's new witness Ms. Becker addresses many of the findings I documented in my Direct and I will respond to her Rebuttal below. With regard to the reliance on York Water's low income program referenced by Mr. Hand at page 11 of his Rebuttal, my Direct testimony documented the lack of sufficient funding and the lack of any analysis of this program or the newly proposed Bill Discount Program on the low income customer's affordability or ongoing ability to maintain and retain essential water and wastewater service. Namely, the Company halted enrollment for the CARES program in March of 2025 and the separate CAP program that offers arrears forgiveness provided a total of **BEGIN CONFIDENTIAL** [redacted] **END CONFIDENTIAL** reflecting a program that has not had any significant impact.[2] For Mr. Hand to rely on a low income program that halts enrollment in March[3] of the program year due to lack of funding is not "exemplary."

[2] York Water Response to OCA-XVII-6, Attachment 1 (CONFIDENTIAL)
[3] https://www.yorkwater.com/customer-service/customer-assistance-programs/

Q. DOES MR. HAND OR ANY OTHER YORK WATER WITNESS PROMISE OR COMMIT TO ANY SPECIFIC LEVEL OF CUSTOMER SERVICE PERFORMANCE AS A CONDITION OF THIS RATE INCREASE?

A. No. This is a serious defect in York Water's attempt to raise rates and profits based on allegations of "exemplary" management performance.

Q. TURNING TO THE REBUTTAL TESTIMONY OF MR. POFF WHO REJECTS THE ADJUSTMENT TO ELIMINATE THE COSTS OF THE CUSTOMER SURVEY, PLEASE RESPOND.

A. Mr. Poff correctly points out that utilities routinely conduct customer surveys, and I agree that such expenditures are typically included in revenue recovery. He states, "The assertion that no action has yet been taken fails to account for the natural lag between data collection, analysis, leadership onboarding, and program development."[4] However, in this case York Water undertook a survey in December 2024 and had taken no documented action to respond to the survey results as of the filing of this rate case or by the time I filed my Direct Testimony in August 2025.[5] While I have eliminated my recommendation to deny cost recovery for this survey, my original recommendation was entirely proper at the time I made it.

Q. TURNING TO THE REBUTTAL TESTIMONY OF MS. BECKER, PLEASE IDENTIFY THE ISSUES YOU WILL DISCUSS IN YOUR SURREBUTTAL.

A. I will respond to the following issues and statements included in the Rebuttal Testimony of Ms. Becker:

- Whether it is proper to compare York Water's customer service performance to

[4]York Water St. No. 3-R, page 18, lines 20-22.
[5] See, Alexander Direct, OCA Statement No. 5, page 22.

larger utilities in Pennsylvania;

- York Water's Call Center Performance
- Customer Complaint Logs and root cause analysis.
- Termination Notices and Bill Revisions
- Survey Results
- Employee Training (updated training materials; field operations; internal monitoring and compliance)
- Low Income Programs

Q. MS. BECKER SAYS THAT COMPARING YORK WATER CUSTOMER SERVICE OR CALL CENTER RESULTS WITH LARGER ELECTRIC AND GAS UTILITIES IS NOT FAIR. DO YOU AGREE?

A. No. First, I point out that Mr. Hand and Ms. Becker[6] compare York Water's performance in certain selected areas with much larger water and wastewater utilities in Pennsylvania to justify the claim for a higher rate of return. Second, with regard to the call center performance standards, I have recommended this same level of performance for other Pennsylvania water and wastewater utilities[7] as well as larger electric and gas distribution companies because it is a widely viewed call center performance standard. As Ms. Becker should know, the Commission does not collect or publish call center performance data for Pennsylvania water and wastewater utilities. Finally, if York Water seeks a reward in the form of a higher rate of return for "exemplary" customer service as stated by Mr. Hand, there is an obligation to perform at a high level or a level beyond the norm,

[6] York Water Statement No. 8, page 6, lines 1 through 11.
[7] See Exhibit BA-1 that identifies my testimony on behalf of the OCA in base rate cases for Aqua Pennsylvania, Pennsylvania American Water Co., Pittsburgh Water, as well as my prior recommendation for York Water in its last base rate case in Docket No. R-2022-3031340.

a result that cannot be documented by York Water.

Q. PLEASE COMMENT ON MS. BECKER'S REVISED CALL CENTER DATA FOR CALL ABANDONMENT RATES.

A. I cannot comment on the technological difficulties that Ms. Becker has described in the development of the abandonment call data previously provided in discovery and, for the purposes of my Surrebuttal, I accept her revised call center performance data. I do observe, however, that York Water was operating with a seriously defective telephone system to have allowed these routine disruptions. However, this revised data continues to show a higher than reasonable level of call abandonment rate: 8.74% in 2024 and 9.60% in 2025 to date. I continue to recommend that York Water seek to combine its already reasonable percentage of calls answered in a timely basis with a reasonable level of a 4% call abandonment rate, a level that is widely delivered by other Pennsylvania utilities. It would be appropriate to phase in this improvement over a reasonable level of time, but certainly prior to the next base rate case.

Q. DOES MS. BECKER PROMISE OR COMMIT TO ANY SPECIFIC LEVEL OF CUSTOMER CALL CENTER PERFORMANCE AS A CONDITION OF THIS RATE INCREASE AND THE HIGHER RATE OF RETURN?

A. No. Ms. Becker offers no actual commitment to any specific performance level as a condition of this rate increase. When asked to provide any performance standard that York Water will commit to provide in the rate effective year, Ms. Becker responded with internal performance standards that would be used to evaluate their individual call center representatives[8], an approach that is not responsive to the request and does not reflect any

[8] York Water Response to OCA-XXI-4.

performance requirement on either a monthly or annual basis from the perspective of customers. As a result, York Water's performance could deteriorate in the rate effective year without any consequences to its recovery of higher rates. The Company's claim of customer service performance to justify its proposal for a higher rate of return should be rejected. Furthermore, the Company's focus on the defense to its commitments in the last rate case should not result in any "reward" in this proceeding.

Q. PLEASE COMMENT ON MS. BECKER'S STATEMENTS ABOUT THE ABILITY OF YORK WATER TO PERSONALLY INTERACT WITH THEIR CUSTOMERS.

A. Ms. Becker's claim of York Water's ability to have more personal interactions with their customers is not documented in any manner.[9] York Water has one staffed office in York, which is certainly an option for customers who want to drive to this office and talk to a customer service representative. Ms. Becker has documented an average of approximately 45-50 in-person payments per day at the York Water office in York in 2025 to date.[10] It is not reasonable to rely on this option for customers outside of the City of York. There is no basis for suggesting that this option is a reasonable level of service quality compared to calling the call center and expecting to interact with a human being in a prompt manner. With regard to the use of digital communications, I support those options. However, these digital communications do not replace the necessity of contacting call centers to respond to a termination notice, negotiate a payment plan, or dispute the quality of service.

[9] York Statement No. 8, page 5, lines 18-22: "In today's landscape of increasing consolidation among national and multinational utility providers, having in-person customer service available within the local community is not only rare, it is a defining strength of the Company. This personal, face-to-face support sets York Water apart and ensures that the Company's customers receive clear assistance when they need it most."

[10] York Water Response to OCA-XXI-5(b).

Q. MS. BECKER STATES THAT I FAILED TO REVIEW THE MOST RECENT CUSTOMER COMPLAINT LOGS AND THAT THOSE 2024 AND 2025 COMPLAINT LOGS INCLUDE THE REQUIRED DATA. DO YOU AGREE?

A. I agree that I focused on the 2023 complaint log provided in discovery. In response to Ms. Becker's Rebuttal, I once again reviewed the 2024 and 2025 complaint logs provided in discovery and included in her Exhibits.[11] The purpose of maintaining complaint logs is to allow management to identify trends that can then be evaluated and actions undertaken to respond to the root cause of trends and complaint indicia. A critical component of any complaint log is to rely on a set of defined complaint categories to enable analysis of trends. However, the complaint logs from 2024 and 2025 that Ms. Becker seeks to rely on do not fulfill this basic function and raises a more new and more significant concern.

Q. PLEASE DESCRIBE YOUR CONCERNS WITH THE 2024 AND 2025 COMPLAINT LOGS.

A. These complaint logs contain the following data fields:

- Customer
- Account Number
- Service Address
- Start Date
- Closed Date
- Resolution Summary
- Problem Summary
- SR Number
- Status
- Incident Type

[11] Exhibits SMB 4R and 5R (CONFIDENTIAL)

As Ms. Becker confirms, the data in these logs are manually entered..[12] I appreciate the work involved in maintaining this information. However, the entries primarily note the customer's contact as "COMMENT ONLY," when it is clear that in many entries the customer's call should be labeled a dispute and any necessary follow up should be documented. I have not identified all the entries that reflect this concern but provide several examples. For example, **BEGIN CONFIDENTIAL** [redacted]

[redacted]

[12] York Water St. No. 8, page 23, line 5.
[13] CONFIDENTIAL Exhibit SMB 6R at p. 1.
[14] *Id.*
[15] *Id.*

END CONFIDENTIAL

Q. IS THERE AN ADDITIONAL ISSUE ABOUT THESE COMPLAINT LOGS THAT SHOULD BE CONSIDERED?

A. Yes. The complaint logs do not use predetermined complaint categories that would allow an analysis of trends and identification of potential reforms or need for additional training. The vast majority of these contacts are labeled as "comment only" without any indicator or method of identifying the nature of the customer call. Furthermore, when something other than "comment only" is indicated, the actual nature of the customer's call is not always properly described. **BEGIN CONFIDENTIAL** [redacted]

[redacted]

[redacted] **END CONFIDENTIAL**

Q. PLEASE EXPLAIN WHY IT IS NECESSARY TO HAVE A DISCRETE LIST OF COMPLAINT CATEGORIES IN A COMPLAINT LOG.

A. First, it enables management, regulators, and consumer advocates to understand the full universe of the types of complaints made by York Water's customers. Despite the

[16] CONFIDENTIAL Exhibit SMB 6R at p. 3.

complaint log being created to assist with the OCA's review of York Water's handling of customer complaints, I was not able to conduct a full review of the complaints submitted because it is not clear how these complaints are logically grouped together when similar complaints may be assigned different categories. Second, it creates inconsistency within the log, where the Company staff responsible for maintaining the log may inadvertently code customer complaints under different categories. Third, as discussed more below, it becomes increasingly difficult for the Company to identify trends in customer complaints to try and address recurring issues. This is a core purpose of a complaint log and, while the Company may claim that it has been able to address such issues previously, over time it may become more difficult to identify and address the root cause of customers' concerns if the complaint log does not use a discrete set of customer complaint categories. As a result, a core feature of any reasonable complaint log is missing from York Water's logs.

Q. MS. BECKER REJECTS YOUR PROPOSAL THAT YORK WATER ROUTINELY CONDUCT A ROOT CAUSE OF CUSTOMER DISPUTES AND COMPLAINTS. PLEASE RESPOND.

A. Ms. Becker incorrectly interprets what a root cause analysis is and how it is conducted. It does not require, as Ms. Becker assumes, that every complaint be evaluated.[17] It does, however, require an evaluation of complaint trends with a deep dive into the root causes of complaint trends. As I indicated above, York Water's complaint logs do not allow for a proper root cause analysis because actual contacts and complaints are not categorized at

[17] Ibid., page 24, lines 14-18: "What the Company does not do is perform a root cause analysis for every "unjustified complaint" or "verified infraction." To the extent that Ms. Alexander believes a root cause analysis should be performed for each "unjustified complaint" or "verified infraction," that would be an exceedingly burdensome, expensive, and time-consuming task."

all or categorized incorrectly. Furthermore, Ms. Becker's claim of routine analysis of complaints with proper actions undertaken in response to regular review of complaint trends is not documented with either any report or evidence.[18] A proper root cause analysis leaves a documented trail of what trends are identified, an evaluation of their root cause, and steps taken to respond to that analysis with ongoing monitoring to determine if the response actually does address the root cause. As Exhibit BA-6, I attach a summary of a proper root cause analysis.

Q. DO YOU HAVE ANY CONCERNS WITH YORK WATER'S UPDATED BILL FORMAT AND PLEDGE TO REVIEW THEIR TERMINATION NOTICES?

A. No. My recommendations for these issues sought to reflect these commitments as conditions to any rate case order. I continue to do so and do not see why including these commitments as part of this rate case should be rejected since York Water is or will take steps to reflect these ongoing projects.

Q. TURNING TO THE CUSTOMER SURVEY THAT YORK WATER SEEKS TO INCLUDE IN ITS REVENUE REQUIREMENT, PLEASE RESPOND TO MS. BECKER'S REBUTTAL ON THE USE OF THE SURVEY.

A. Ms. Becker describes a number of actions she identified as undertaken as a result of the survey.[19] None of these activities or use of the survey results were identified in discovery responses that I relied upon for my Direct Testimony. I appreciate Ms. Becker's descriptions of actions that I interpret as more recent and related to her new position at

[18] York Water Response to OCA-XXI-10, Attachment 1 shows a 1-2 line description of the topics of these weekly meetings in 2025. However, there is no evidence of any proactive evaluation or analysis of customer contacts, disputes, or complaints filed with BCS or any actions taken to revise training materials or undertake policies to respond to such an analysis.

[19] York Water St. No. 8, page 29-30.

York Water. Therefore, I agree that the costs of the survey should be recovered in rates as proposed by York Water Witness Poff.

Q. TURNING TO INTERNAL TRAINING AND MONITORING FOR COMPLIANCE WITH CHAPTER 56 REQUIREMENTS, MS BECKER REJECTS YOUR FINDINGS AND CONCLUSIONS. PLEASE RESPOND.

A. I attached the training materials that York Water submitted to comply with the prior rate case settlement commitment to my Direct as Exhibit BA-4. These materials added several new pages to the existing documents for the previously omitted policies that York Water agreed to revise in its training materials as a commitment in the prior rate case. Those materials include standalone documents that do not link the statements about customer rights to how these rights must be recorded and documented and implemented in the Company's current billing system. Ms. Becker does not offer new or revised training materials. She does make several statements about some of the notable defects I identified that are useful clarifications.[20] However, none of those directives or requirements she describes are actually included in the training materials that were required to be developed as a result of the last rate case and I continue to support my overall recommendation in this regard.

Q. DO YOU AGREE WITH MS. BECKER'S INFORMATION ON THE CURRENT STATUS OF HOW PAYMENT ARRANGEMENTS ARE NEGOTIATED?

A. Yes. Her testimony confirms my statement about the limitations of the current system and points to the increased flexibility with the "new business system that will go live in 2026."[21]

[20] Ibid., page 32.
[21] Ibid., page 32, lines 19-25.

Q. DID MS. BECKER OFFER ANY ADDITIONAL TRAINING TO RESPOND TO YOUR FINDINGS CONCERNING THE DEFECTS FOR THE IN-PERSON CONTACT REQUIREMENT FOR TERMINATION OF SERVICE?

A. No. She repeats that field representatives are trained to knock on the door, but she does not respond to the lack of any training materials for field personnel concerning the customer rights and remedies that may come into play if contact is achieved.[22] That fact that she relies on the lack of any complaint is not dispositive since if customers are not informed of their rights or denied their rights without knowledge of their rights, it is likely that complaints will not occur. Furthermore, there are no training materials that inform field personnel on what a dispute is or how it should be handled.

Q. MS. BECKER DESCRIBES THE YORK COMPANY INTERNAL MONITORING FOR COMPLIANCE. PLEASE RESPOND.

A. Ms. Becker's response to the lack of any audit or internal monitoring requirement and results relies entirely on a description of quarterly training sessions and weekly meetings and informal consultations among employees and managers.[23] I appreciate that a relatively small call center and office can conduct this type of ongoing monitoring in a more informal manner than a larger company with multiple offices. However, the lack of any internal documentation that requires a routine audit and evaluation that is designed to ensure compliance with Pennsylvania's basic residential utility rights and remedies is a serious defect. My concern is exacerbated by the lack of sufficient information in the complaint logs to identify and respond to compliance related issues. The Company has not provided any documentation of the purpose and results of these ongoing monitoring

[22] Ibid., page 33, lines 4-8.
[23] Ibid., page 33, lines 14-21.

activities. It is entirely unlikely that if York Water was serious about monitoring and internal auditing that it would not be able to locate incidents of improper actions, failures to offer customer rights, improper description of customer rights, and related matters. No such evidence has been provided to date in this proceeding. In fact, the lack of proper recording of customer disputes and dispute categories in the Complaint Logs that I have documented above is evidence of the need for reform.

Q. TURNING TO YORK WATER'S CURRENT AND PROPOSED LOW INCOME PROGRAMS, PLEASE SUMMARIZE MS. BECKER'S TESTIMONY.

A. Ms. Becker states:

> "The proposed pilot low-income discount program, if approved, would be in addition to the current programs. Under that pilot program, up to 200 low-income customers would not be billed the fixed residential customer charge, which would save those customers at least $200 each year. Because the low-income customers can reduce the consumption based portion of their bill through conservation, the focus of the pilot low-income bill discount program is on the fixed charge."[24]
>
> "The proposal in this rate case request is for an increase from $40,000 to $60,000 for the CARES program specifically and an additional $40,000 for the pilot low-income bill discount program. The CAP program is a separate budget and is simply based on the previous year's spend as a budgeting tool; however, the Company does not turn away qualified CAP recipients when the budget is exhausted. Thus, the pilot program will have no impact on the funding available for CARES or CAP."[25]

Q. DOES THE COMPANY'S PROPOSED REVENUE REQUIREMENT INCLUDE AN ADDITIONAL $40,000 FOR THE PILOT LOW INCOME PROGRAM?

A. Yes. The Company's filing, which was not changed in Mr. Poff's Rebuttal, is to add $41,400 for the Pilot Bill Discount Program in Exhibit No. FII-2-40. I am now aware that the Company has included the current and increased budget of $60,000 for the CARES

[24] Ibid., page 36, lines 3-8.
[25] Ibid., page 38, lines 21-23 and page 39, lines 1-4.

program in its revenue requirement as part of "Outside Services." While not identified as a specific adjustment, York Water's response to OCA-IX-37 states that the additional funding for CARES is included in this amount. Therefore Ms. Becker's description of the total funding for York Water's low income programs as $100,000 is correct and this is equal to the amount for a properly designed low income program that I recommended as well. Therefore, the issue is the design of the low income programs and not the overall funding amount.

Q. PLEASE SUMMARIZE YOUR REASONS FOR REJECTING THE PROGRAM DESIGN THAT WOULD PROVIDE 200 CUSTOMERS WITH AN EXEMPTION FROM THE MONTHLY CHARGE.

A. Based on the evidence I included in my Direct and my review of Ms. Becker's Rebuttal, I set forth the following reasons to reject York Water's reliance on the CARES program in its program design:

- The projection that 200 customers will receive the new Bill Discount is based on a calculation that reflects the current monthly charge, but York Water is proposing an increase to that customer charge from $17.25 to $24.85, a 44% increase. If any increase in the monthly customer charge for residential customers is approved in this proceeding, the claim that 200 customers would receive this bill discount would be inaccurate. In fact, if York Water's customer charge proposal is adopted, the program would cost $59,640. Alternatively, if the dollar cap is used to allow entry into the program, only approximately 135 customers could participate.
- Second, as I documented in my Direct, York Water will require all currently known low income customers to complete another application form to obtain this

discount, thus eliminating what appears to be a rejection of the efficient method of simply enrolling all CARES and CAP customers in the bill discount program.[26]

- Finally, York has not been able to document any analysis of affordability or ability to maintain essential water and wastewater service with the continued reliance on the CARES program that provides a one-time grant for customers who are facing collection action and the additional Bill Discount program design for only 200 customers. Ms. Becker offers no evidence on the impact of the current or proposed program on bill payment, collection actions, payment plans, or termination of service. She opines that this program will have a positive impact: "Furthermore, York Water expects that other initiatives, such as its proposed increase in low-income program funding and its proposed pilot low-income discount program, will help customers better manage and pay their bills and either avoid the need for or help comply with their payment agreements."[27] However, my extensive discovery on the lack of ability of the current billing system to track the billing and payment history of current CARES customers is not contradicted by Ms. Becker and she offers no evidence to support her assumptions.
- In fact, the design of the Bill Discount pilot was selected without any consultation with stakeholders and first appeared in this rate case filing, based primarily, as Mr. Hand confirmed in discovery, on the constraints of their current billing system software.

[26] Ms. Becker appears to reflect Mr. Hand's approach: "For example, the Company will develop and send marketing materials to low-income customers about the program's availability, including those customers who have participated in CAP and CARES." Ibid., page 40, lines 17-19.
[27] Ibid., page 19, lines 15-18.

Q. WHAT IS YOUR RECOMMENDATION?

A. Since the Company has not designed this new program based on any analysis of affordability or impact on the customer's ability to pay and the funding level does not reflect any analysis of the low income customers in the current programs, I cannot endorse this program as proposed. Furthermore, any continuation of the current programs that run out of funding by March or April of the calendar year and will likely continue that pattern with the impact of the higher rates and higher monthly charge as proposed by the Company, is not a reasonable approach. I continue my recommendations for a monthly percentage bill discount funded in sufficient amount to ensure regular bill assistance throughout the year. My approach as presented in my Direct, would emphasize a regular monthly discount to a larger number of customers with the bulk of the $100,000 allocated to that program.

Q. DOES THIS COMPLETE YOUR TESTIMONY AT THIS TIME?

A. Yes.

Exhibit BA-6

A SUMMARY OF A PROPER ROOT CAUSE ANALYSIS

Barbara R. Alexander
Barbara Alexander Consulting LLC

A root cause analysis is a fact-based exercise in which the underlying cause or causes of an undesirable outcome(s) is identified and specific remedial steps are identified and determined to result in systematically correcting or improving the previously identified undesirable result. A list of customer complaints by category is not a root cause analysis.

While there may be differences in approach about what a root cause analysis entails, the following summary by the American Society for Quality (ASQ) provides a helpful overview:

> A root cause is defined as a factor that caused a nonconformance and should be permanently eliminated through process improvement. The root cause is the core issue—the highest-level cause—that sets in motion the entire cause-and-effect reaction that ultimately leads to the problem(s).

A "Root Cause Analysis" is defined as a collective term that describes a wide range of approaches, tools, and techniques used to uncover causes of problems. Some RCA approaches are geared more toward identifying true root causes than others, some are more general problem-solving techniques, and others simply offer support for the core activity of root cause analysis.

There are many methodologies, approaches, and techniques for conducting root cause analysis, including:

1. **Events and causal factor analysis:** Widely used for major, single-event problems, such as a refinery explosion, this process uses evidence gathered quickly and methodically to establish a timeline for the activities leading up to the accident. Once the timeline has been established, the causal and contributing factors can be identified.
2. **Change analysis:** This approach is applicable to situations where a system's performance has shifted significantly. It explores changes made in people, equipment, information, and more that may have contributed to the change in performance.
3. **Barrier analysis:** This technique focuses on what controls are in place in the process to either prevent or detect a problem, and which might have failed.
4. **Management oversight and risk tree analysis:** One aspect of this approach is the use of a tree diagram to look at what occurred and why it might have occurred.
5. **Kepner-Tregoe Problem Solving and Decision Making:** This model provides four distinct phases for resolving problems:
    a) Situation analysis
    b) Problem analysis

c) Solution analysis
d) Potential problem analysis[43]

According to the publications developed by the American Society for Quality, and other comparable publications[44], a proper analysis of any "root cause" requires the identification of "symptoms," which are not actual causes but signs of existing problems, and first level causes," which are the causes that directly lead to a problem; and "higher level causes," which are links in the chain of cause-and-effect relationships that ultimately create the problem.[45]

LIST OF TESTIMONY AND EXHIBITS FOR THE EVIDENTIARY RECORD OF THE OFFICE OF CONSUMER ADVOCATE

The Office of Consumer Advocate (OCA) intends to move for the admission of the following evidence into the evidentiary record in the above-captioned proceeding:

DIRECT TESTIMONY

OCA Statement 1	Public, Confidential, and Highly Confidential Direct Testimony of Dante Mugrace with Exhibits DM-1W through DM-21W and DM-1WW through DM-19WW and Verification.
OCA Statement 2	Direct Testimony of David J. Garret with Exhibits DJG-1 through DJG-16, Appendices A and B, and Verification.
OCA Statement 3	Direct Testimony of James Garren with Exhibits JSG-1 though JSG-3 and Verification.
OCA Statement 4	Direct Testimony of Jerome Mierzwa with Schedules JDM-1 though JDM-3 and Verification.
OCA Statement 5	Direct Testimony of Barbara Alexander with Exhibits BA-1 though BA-5 and Verification.

SUPPLEMENTAL DIRECT TESTIMONY

OCA Statement 6S	Supplemental Direct Testimony of LeeAnn Wise with Exhibits LMW-1S though LMW-2S and Verification.

REBUTTAL TESTIMONY

OCA Statement 4R	Rebuttal Testimony of Jerome Mierzwa and Verification.

SURREBUTTAL TESTIMONY

OCA Statement 1SR	Public and Confidential Surrebuttal Testimony of Dante Mugrace with Exhibits DM-SR-1W through DM-SR-22W and DM-SR-1WW through DM-SR-19WW, Appendix A, and Verification.
OCA Statement 2SR	Surrebuttal Testimony of David J. Garret and Verification.
OCA Statement 3SR	Surrebuttal Testimony of James Garren and Verification.
OCA Statement 4SR	Surrebuttal Testimony of Jerome Mierzwa with Schedule JDM-1SR and Verification.
OCA Statement 5SR	Public and Confidential Surrebuttal Testimony of Barbara Alexander with Exhibits BA-6 and Verification.

ADDITIONAL EVIDENCE

OCA Hearing Exh. 1	List of Evidence to be Admitted into the Evidentiary Record by the Office of Consumer Advocate
