

To the public utilities commission. We see that regarding AI data centers you see this as an opportunity for investments and job creation. What is citizens see if habitat destruction, false promises of high tax payment back to communities, false claims for large job growth, and most of all, the inevitable act of making everyday families foot the bill to power these dystopian mega machines. In so many ways AI data centers are a poetic manifestation of how wrong the direction of humanity is.

Please we urge the PUC not to lick the boots of these mega corporations moving into impoverished areas to take advantage of more desperate communities, exploit us with promises of jobs. Genuinely people in positions like yours NEED to think past the aspect of money especially in a case like this. SO MUCH more is at stake in the face of these data centers encroaching. We firmly do not trust any kind of implementation you want to enact to help energize data centers.

Do not sell beautiful Pennsylvania out. We are more than fertile industrial land. Save us do not forsake us
