Re: Docket No. M-2025-3054271

I am very concerned that AI data centers will not be paying their way

While I recognize that their development is inevitable in our society, I feel that the costs in both water and electricity use are unaffordable to the communities at large

According to the Bipartisan Policy Center, “The exact trajectory of future electricity use by data centers is unknown due to 1) improvements in AI system efficiency; 2) the unpredictability of demand for AI services; and 3) limits in manufacturing production capacity of AI chips, servers, and associated infrastructure.” The PUC is operating in the dark as it attempts to establish a tariff. Electricity generation is not regulated in Pennsylvania, so the tariff only pertains to distribution costs. If approved, the tariff would not protect the public from generation costs which account for roughly 45% of consumer energy bills. Carnegie Mellon and its research partners projected that electricity generation costs will increase by as much as 25% by 2030.

According to Carnegie Mellon and its research partners, “Power sector emissions could increase 30% compared to scenarios without data center growth, reaching 275 million metric tonnes of CO₂ annually by 2030. That matches the entire annual carbon output of France.”, Natural gas would be used to power data centers. Methane leaks occurring at every step of natural gas production, transmission, and distribution exacerbate climate change. Hundreds of thousands of legacy wells leaking methane unchecked further add to the state’s contribution to the climate crisis. Continued and even increased natural gas production to power data centers is unacceptable.

Throughout the discussion of the tentative order, the PUC’s disposition fell short of imposing the most stringent requirements on large load customers. Therefore, the tentative order is weak and inadequate. PUC’s order requires Large Load Customers to contribute to the utility’s hardship fund; this is unfair, especially given the stunning figure cited by Commissioner Barrow that, according to U.S. Census Bureau data, “nearly a quarter of all Pennsylvanians have been unable to pay an energy bill in full in the last 12 months.” The fact that there is no agreement on contributions to the hardship fund among all of the commissioners is extremely concerning. The reporting requirements are out of step with the state’s efforts to fast-track data center approvals. The tentative order states that compliance reports must be filed on an annual basis by the end of the first quarter of the following year. Compliance data should be available on a real-time basis so that pertinent information is accessible as future data centers are fast-tracked.

I hope that your decision will be responsive to the needs of the community rather than the needs of private investors
