Re: Docket No. M-2025-3054271

Don't race into setting up data centers when you have NOT done sufficient due diligence and research.

I support the following statement from the Better Path Coalition and No False Climate Solutions PA. “The problems being addressed in PUC’s tentative order are largely manufactured ones resulting from the state’s rush to get into the data center business before the boom goes bust. As is too often the case, the public is only engaged after the big decisions are made. Our first opportunity to comment comes when the only things left to decide are how to deal with the new project/business/industry. At that point, advancement of the thing under consideration is taken to be an inevitability when it really isn’t. Therefore, we feel it is important to state up front that we oppose the approval of hyperscale data centers in Pennsylvania based on many well-documented concerns about their environmental, health, safety, climate, quality of life, economic, and ethical impacts that scattershot regulations across agencies, in this case tariffs, cannot address. Our regulatory agencies should be our advocates, using their expertise to stop the state from creating preventable problems rather than resigning themselves to managing them.”

Pennsylvania has been famous for dirty coal. Don't continue the shameful legacy by permitting hyperscale data centers that rob citizens of their quality of life.

Electricity generation is not regulated in Pennsylvania, so the tariff only pertains to distribution costs. If approved, the tariff would not protect the public from generation costs which account for roughly 45% of consumer energy bills. Carnegie Mellon and its research partners projected that electricity generation costs will increase by as much as 25% by 2030.

Carnegie Mellon and its research partners say that already “Virginia's data center growth drives increased fossil fuel use in nearby states like Ohio, Pennsylvania, and West Virginia, potentially undermining state and regional climate goals.”

PUC’s order requires Large Load Customers to contribute to the utility’s hardship fund; this is unfair, especially given the stunning figure cited by Commissioner Barrow that, according to U.S. Census Bureau data, “nearly a quarter of all Pennsylvanians have been unable to pay an energy bill in full in the last 12 months.” The fact that there is no agreement on contributions to the hardship fund among all of the commissioners is extremely concerning.

Do the right thing for we little people.
