Re: Docket No. M-2025-3054271

I strongly oppose the development of any AI data centers in Pennsylvania.

PA is a beautiful state - please don't destroy it with AI data centers.

Electricity generation is not regulated in Pennsylvania, so the tariff only pertains to distribution costs. If approved, the tariff would not protect the public from generation costs which account for roughly 45% of consumer energy bills. Carnegie Mellon and its research partners projected that electricity generation costs will increase by as much as 25% by 2030.

Natural gas would be used to power data centers. Methane leaks occurring at every step of natural gas production, transmission, and distribution exacerbate climate change. Hundreds of thousands of legacy wells leaking methane unchecked further add to the state's contribution to the climate crisis. Continued and even increased natural gas production to power data centers is unacceptable.

The reporting requirements are out of step with the state's efforts to fast-track data center approvals. The tentative order states that compliance reports must be filed on an annual basis by the end of the first quarter of the following year. Compliance data should be available on a real-time basis so that pertinent information is accessible as future data centers are fast-tracked.

Please work for the people and wildlife of Pennsylvania, not for special interests: Reject all AI data center proposals.
