

Filer's Name: Caroline T. DeWalt

Docket Number: M-2025-3054271

As a resident of the State of Pennsylvania, I demand that high-use customers, like data centers, do NOT cause higher utility rates for Pennsylvania residents.

- Ensure that power remains just as available and affordable to residents in the future as it is today.
- Ensure that data centers are responsible for all their own infrastructure costs and local, union labor is used to build and service them.
- Prevent utilities from shifting expenditures across the general rate base, so residential households are not forced to absorb costs created by data centers.
- Ensure that data centers are liable for any stranded costs if a facility closes or ends up needing less energy than it asked the utility to supply.
- Require that data centers contribute to all utility universal service programs, not just hardship funds, to help residents keep up with rising energy costs.
- Require data centers enter into Community Benefits Agreements (CBAs) to specify up front how the local community will benefit and be protected.
- Ensure transparency, public accountability, and stakeholder participation in the final adoption of this model tariff by having a public hearing.
