I'm a Whitemarsh Township resident, and I'm disgusted & concerned about the potential impacts to my local community stemming from speculative data center development. Local families in this area should not be compelled to pay for the massive power needs of these energy sucks. We are also the ones who will live with the potential environmental impacts of these massive, noise polluting facilities. My concerns are primary about the water usage, pollution, and of course, noise from the cooling systems. The Whitemarsh/Conshohocken area I live in is already strained by overpopulation & overdevelopment. If any development is to take place, the PUC absolutely must require large-load customers to use clean, renewable energy to avoid detrimental environmental impacts.
