

Public comment on docket M-2025-3054271

Dear Commissioners,

I oppose the creation or expansion of data centers, and urge the Commissioners to reject plans for them. Data centers poison our air, water, and soil, creating significant health problems for surrounding communities, including unique forms of cancer as found recently with the PNW Amazon data center. While endangering Pennsylvanians' health and increasing strain on our healthcare system, they also raise the strain on our electrical grid and cost regular electrical customers higher rates to provide for them. Data centers are a handout to the wealthy that ultimately hurt everyone.
