Re: Docket No. M-2025-3054271

In regards to Data Centers being used for AI enhancement or any development in Pennsylvania I wish to see the company's usage in their production are footing the bill and NOT dispersed to end users.

I have seen my Met-Ed electric bill jump an extra \$30 - 50 dollars this past year compared to last year after hearing development of data centers here in Pennsylvania. If Big tech companies like Google / Alphabet, Meta or NVIDIA want to build their data centers here. They pay for their energy consumption.

I do want to see the average citizen especially in Pennsylvania footing the bill for big business. I have seen enough of it in my lifetime. I don't want to see the same thing happen here in Pennsylvania with Meta in Georgia.

I want our energy providers in Pennsylvania such as Met-Ed, PPL or PECO to inform it's consumers of any updates on this issue and be **required** to do so.
