

I am writing to express my strong opposition to the proposed construction of an AI Data Center adjacent to my residence in Spring City, Pennsylvania. As a homeowner in this community, I am deeply concerned about the potential impact of this project on my quality of life, property values, and the character of our neighborhood. My neighborhood has been working tirelessly on improving our small area to be a healthy yard for us and the environment around us, as well. As a recent CANCER SURVIVOR, I would like for the environment around my home to be safe and health for the future of myself, my family and my neighbors. My type of cancer was caused from an environmental source, so I am adamant to keep the area around my home safe.

The proximity of the data center to my home raises several issues, including increased noise pollution, potential environmental hazards, and strain on local infrastructure. Furthermore, I am concerned about the aesthetic impact of such a large industrial facility on our otherwise residential area.

I understand the potential economic benefits of such a project, but I firmly believe that these benefits do not outweigh the potential negative consequences for local residents. I urge the board to consider alternative locations that would minimize the impact on residential areas.

I would appreciate the opportunity to discuss this matter further and explore alternative solutions that balance economic development with the needs and concerns of local residents. Please listen to what your residents in the area are saying and do what is best for US! We are the ones living here!

Sincerely,

Laura Roth
