COMMENTS MADE VIA E-FILING

RE; Docket M-2025-3054271

I strongly support separating billing for the electric power required by data centers. The companies that profit should pay for their own power. My bills are increasing because of these data centers.

The PUC can restructure the way electrical power is billed in this state and become a model for the nation in addressing this emerging technology/business. The actions to protect the average electric consumer taken by the Pennsylvania PUC can be replicated across the country and establish Pennsylvania as a leader on this issue.

Thank you for protecting consumers and addressing the need for reform in the rate structure.

Sincerely,

Theresa E. Woody
