A. I recommend that the Commission reject the Company's proposed increase in customer charges since the Company has no cost basis for its proposed customer charges. The Company's current residential and commercial customer charges are similarly near the average of other similarly situated natural gas distribution utilities in the region. Finally, the proposal would negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case.

Q. DO YOU HAVE AN ALTERNATIVE RECOMMENDATION IF THE COMMISSION DETERMINES AN INCREASE IN THE COMPANY'S CUSTOMER CHARGE IS WARRANTED?

A. Yes. If the Commission determines that increases in the Company's customer charges are warranted, I recommend that the Commission cap these increases to no more than the overall system average increase. This will prevent Company rates from becoming more reliant on fixed monthly charges relative to volumetric charges as a result of this proceeding.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

EXPERT WITNESS, LEGISLATIVE, AND PUBLIC TESTIMONY; EXPERT REPORTS, RECOMMENDATIONS, AND AFFIDAVITS

1. Expert Testimony. Cause No. 46120. (2025). Before the Indiana Utility Regulatory Commission. *Verified Petition of NIPSCO Generation LLC for Certain Determinations by the Commission with Respect to its Jurisdiction Over Petitioner's Activities as a Non-Retail Generator of Electric Power.* On Behalf of the Indiana Office of Utility Consumer Counselor. Issues: Rate Design, Large Data Center Loads.

2. Expert Testimony. Case No. U-21859. (2025). Before the Michigan Public Service Commission. *In the matter of the application of Consumers Energy Company for Ex Parte Approval of Certain Amendments to Rate GPD.* On Behalf of the Michigan Attorney General. Issues: Rate Design, Large Data Center Loads.

3. Expert Testimony. Docket No. R-2025-3053112. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. Philadelphia Gas Works.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Decoupling, Regulatory Lag.

4. Expert Testimony. Docket No. E-01773A-24-0220. (2025). Before the Arizona Corporation Commission. *In the Matter of the Application of Arizona Electric Power Cooperative, In. for a Hearing to Determine the Fair Value of its Property for Ratemaking Purposes, to Fix a Just and Reasonable Return Thereon and To Approve Rates Designed to Develop Such Return.* On Behalf of Arizona Corporation Commission Staff. Issues: Cost of Service, Qualifying Facilities.

5. Expert Testimony. Case No. U-21816. (2025). Before the Michigan Public Service Commission. *In the matter of Consumer Energy Company's application for the regulatory reviews, revisions, determinations, and/or approvals necessary to fully comply with Public Act 295 of 2008, as amended by Public Act 235 of 2023.* On Behalf of the Attorney General. Issues: Capital Expense, Cost Recovery

6. Expert Testimony. Cause No. 46120. (2024). Before the Indiana Utility Regulatory Commission. *Petition of Northern Indiana Public Service Company LLC Pursuant to Ind. Code §§ 8-1-2-42.4, 8-1-2-61 and 8-1-2.5-6 for (1) Authority to Modify its Retail Rates and Charges for Electric Utility Service Through a Phase in of Rates;*

(2) Approval of New Schedules of Rates and Charges, General Rules and Regulations, and Riders (both Existing and New); (3) Approval of Revised Common and Electric Depreciation Rates Applicable to its Electric Plant in Service; (4) Approval of Necessary and Appropriate Accounting Relief, Including, but Limited to, Authority to Capitalize as Rate Base All Expenditures for Improvements to Petitioner's Information Technology Systems through the Design, Development, and Implementation of a Work and Asset Management ("WAM") Program, to the Extent Necessary; and (5) Approval of Alternative Regulatory Plans for the Partial Waiver of 170 IAC 4-1-16(f) and Proposed Remote Disconnection and Reconnection Process and, to the Extent Necessary, Implementation of a Low Income Program. On Behalf of the Indiana Office of Utility Consumer Counselor. Issues: Cost of Service, Rate Design.

7. Expert Testimony. Cause No. 46097. (2024). Before the Indiana Utility Regulatory Commission. *In the Matter of the Verified Petition of Indiana Michigan Power Company for Approval of Modifications to its Industrial Power Tariff – Tariff I.P.* On Behalf of the Indiana Office of Utility Consumer Counselor. Issues: Rate Design, Large Data Center Loads.

8. Expert Report. Docket No. AHD-00000J-23-0273. (2024). Before the Arizona Corporation Commission. *In the Matter of the Application of the Arizona Corporation Commission's Exploration of Changes to the Up to 10% Annual Reduction in the Export Rate and the 10-Year Export Rate Effective Period Under the Resource Comparison Proxy Methodology Approved in the Value and Cost of Distributed Generation Docket (E-00000J-14-0023).* On Behalf of the Arizona Corporation Commission Staff. Issues: Value of Solar.

9. Expert Testimony. Case No. U-21585. (2024). Before the Michigan Public Service Commission. *In the Matter of the Application of Consumers Energy Company for Authority to Increase its Rates for the Generation and Distribution of Electricity and Other Relief.* On Behalf of the Attorney General. Issues: Capital Expenses.

10. Expert Report. *Review of LPSC Rules Regarding Distributed Generation: Report on Phase II of Rule-Making.* Docket No. R-33929. (2019). *In Re: Review of Policies Related to Customer-owned Solar Generation and Possible Modification of the Commission's Current Net Metering Rules.* On behalf of Louisiana Public Service Commission. Issues: Solar Net Metering.

11. Expert Report. (2011). *2011 Kansas Generation Planning Survey*. On behalf of the Kansas Corporation Commission Staff.

12. Expert Testimony. Docket No. 11-KCPE-581-PRE. (2011). Before the Kansas Corporation Commission. *In the Matter of the Petition of Kansas City Power & Light Company ("KCP&L") for Determination of the Ratemaking Principles and Treatment That Will Apply to the Recovery in Rates of the Costs to be Incurred by KCP&L for Certain Electric Generation Facilities Under K.S.A. 66-1239.* On Behalf

of the Kansas Corporation Commission Staff. Issues: System Planning, Predetermination.

13. Expert Testimony. Docket No. 10-KCPE-795-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Kansas City Power & Light Company for Approval to Implement a Portfolio of Demand Side Management Programs Including Affordability, Energy Efficiency, Demand Response and Educational Programs, and to Implement a Rider for Recovery of Program Costs and Incentives Associated with this Portfolio.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

14. Expert Testimony. Docket No. 10-WSEE-775-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Westar Energy, Inc. and Kansas Gas and Electric Company for an Order Authorizing them to participate in Efficiency Kansas, Approve the SimpleSavings Program Rider, and related cost recovery.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

15. Expert Testimony. Docket No. 10-BHCG-639-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Black Hills/Kansas Gas Utility Company, LLC, d/b/a Black Hills Energy for Approval to Implement Black Hills Energy's Five-Year Energy Efficiency Plan Consisting of Natural Gas Energy Efficiency Programs to Improve Building and Equipment Efficiency and to Educate About Efficient Energy Usage, to Provide for Program Cost Recovery Through a Rider Mechanism, Permit the Implementation of a Revenue Normalization Mechanism to Replace the Weather Normalization Adjustment, a Performance Incentive Mechanism, and Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

16. Expert Testimony. Docket No. 10-EPDE-497-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of the Empire District Electric Company for Approval to Implement its Portfolio of Energy Efficiency and Demand Response Programs for its Kansas Customers, to Provide for Program Cost Recovery and Lost Revenue Through a Rider Mechanism, to Obtain any Necessary Waivers for the Commission, and for Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

17. Expert Testimony. Docket No. 10-KGSG-421-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Kansas Gas Service, a Division of ONEOK, Inc., for Approval to Implement the Efficiency Kansas Energy Efficiency Program, to Implement Natural Gas Energy Efficiency Programs to Improve Building and Equipment Efficiency and to Educate about Efficient Energy*

Usage, To Provide for Program Cost Recovery Through a Rider Mechanism, to Establish Administrative Charges and a Program Initiation Fee, Permit the Implementation of a Revenue Decoupling Mechanism, and Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing. On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. PLEASE STATE YOUR OCCUPATION AND CURRENT PLACE OF EMPLOYMENT?

A. I am a Senior Research Consultant with the Acadian Consulting Group ("ACG"), a research and consulting firm that specializes in the analysis of regulatory, economic, financial, accounting, statistical, and public policy issues associated with regulated and energy industries. ACG is a Louisiana-registered partnership, formed in 1995, and is located in Baton Rouge, Louisiana.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL QUALIFICATIONS.

A. I hold a Bachelor of Arts degree in Business Economics from Buena Vista University in Storm Lake, Iowa, and a Master of Arts degree in Economics from the University of Kansas in Lawrence, Kansas. I began my professional career with the Staff of the Kansas Corporation Commission in 2008 while in graduate school conducting analyses of topics related to energy and economy as a Research Assistant, eventually being promoted to a Research Analyst and later Senior Research Economist after graduation. I left the Kansas Corporation Commission to take a position with ACG in late 2011, where I have been promoted to positions of increasing responsibility since, including my current position which I started in mid-2021. At ACG I managed research teams supporting expert testimony and have overseen dozens of litigated preceding, including multiple proceedings on behalf of the AG. Appendix A provides my professional

resume, which includes a listing of my publications, presentations, pre-filed expert witness testimony, expert reports, and expert legislative testimony.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I have been retained by the Pennsylvania Office of the Consumer Advocate ("OCA") to address matters related to the general rate case filed by Wellsboro Electric Company ("Wellsboro" or the "Company"). I specifically have been asked to review the Company's proposed Allocated Cost of Service Study ("ACOS") and rate design.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. Yes. I am sponsoring the following Exhibits MWD-1 (Wellsboro) through MWD-4 (Wellsboro).

- Exhibit MWD-1: Summary of Results of Company's Proposed ACOS
- Exhibit MWD-2: Summary of Results of Alternative ACOS
- Exhibit MWD-3: Summary of Company's Proposed Revenue Allocation
- Exhibit MWD-4: Summary of Results of Alternative Revenue Allocation

II. SUMMARY OF RECOMMENDATIONS

Q. WHAT ARE YOUR ACOS FINDINGS FOR WELLSBORO?

A. My alternative ACOS analysis shows that the Company's incorrect classification of secondary-voltage distribution plant skews the allocation of costs and revenue responsibilities away from larger customers and onto residential and small commercial customers. I recommend the Commission rely on the results of my alternative ACOS as

a fair and reasonable estimation of relative costs of service between Company customer classes.

Q. WHAT IS YOUR RECOMMENDATION REGARDING WELLSBORO'S PROPOSED REVENUE DISTRIBUTION?

A. I recommend that the Commission adopt a more reasonable revenue distribution allocation method based on my alternative ACOS results that also limits the rate increase to the non-residential heating ("NRH"), commercial space heating ("CSH"), and residential service-all electric ("RSAE") customer classes to 1.25 times the overall system average increase. Under Wellsboro's proposed overall distribution revenue increase of 45.3 percent this reduces the revenue increase to these rate classes to 56.61 percent, compared to the Company's proposed distribution rate increases of 75.0 percent for the NRH and CSH classes, and 60.52 percent for the RSAE class.

Q. WHAT IS YOUR RECOMMENDATION REGARDING WELLSBORO'S PROPOSED RATE DESIGN FOR CUSTOMER CHARGES?

A. I recommend the Commission reject Wellsboro's proposed increases in customer charges because they disproportionately impact low-income customers and reduce customer incentives to reduce usage, contrary to public goals of promoting energy efficiency. Furthermore, Wellsboro's existing residential customer charge is the third highest and the proposed increase would make the charges the highest among regional peer investor-owned utilities. Finally, a correct analysis of customer-related costs from Wellsboro's ACOS finds that all residential and commercial rate classes are currently recovering *nearly all* customer-related costs through monthly customer charges.

Q. DO YOU HAVE AN ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

A. Yes. I recommend that the Commission limit its increase in Wellsboro monthly customer charges to only that required to bring the Company's customer charges in line with Citizens' Electric Company. This would increase the residential customer charge to $13.10 per month.

III. ALLOCATED COST OF SERVICE STUDY

A. Introduction

Q. WHAT IS THE PURPOSE OF AN ACOS?

A. An ACOS is a modeling approach that reconciles utility costs and revenues across different customer classes. The goal of an ACOS is to evaluate the cost of providing service and revenue responsibility for each individual customer class. ACOS results are used to estimate class specific rates of return and can serve as a guidepost for class revenue responsibilities and ultimately rates.

Q. HOW IS AN ACOS PREPARED?

A. An ACOS utilizes a set of historic or projected cost information that is (1) functionalized, (2) classified, and (3) allocated. The functionalization process simply categorizes costs based upon the functions they serve within a utility's overall operations (i.e. production, transmission, and distribution). The classification process characterizes costs by type, including those that are (1) demand-related, (2) energy/commodity-related, or (3) customer-related. The last step of the process allocates each of these costs to a respective jurisdiction or customer class as appropriate.

Q. PLEASE EXPLAIN DEMAND-RELATED COSTS.

A. Demand-related costs are associated with meeting maximum electricity demands. At the distribution level, electric substations and line transformers are designed, in part, to meet the maximum customer demand requirements. The most common demand allocation factors used in an ACOS are those related to system Coincident Peaks ("CP") or Non-Coincident Peaks ("NCP"). At the production level, most power plants, also referred to as production plants or electric generation units ("EGU"), are typically viewed as being designed to serve both the energy/commodity and demand/capacity needs of the utility. The exact degree of this split between energy and demand depends on the individual EGU in question and how that unit is dispatched with baseload units serving more of the utility's energy needs and peak units serving more of the utility's capacity or demand needs. Therefore, it is not uncommon to develop composite energy and demand allocators to allocate plant-in-service costs associated with a utility's generation fleet.

Q. HOW ARE ENERGY-RELATED COSTS DEFINED?

A. Energy-related costs are defined as those that tend to change with the amount or volume of electricity (i.e., kilowatt-hour ("kWh")) sold. Electric generation costs and high-voltage transmission lines, for instance, can be allocated, in part, based on some measure of electricity sales.

Q. WHAT ABOUT CUSTOMER-RELATED COSTS?

A. Customer-related costs are those associated with connecting customers to the distribution system, metering household or business usage, and performing a variety of other customer support functions.

Q. IS THIS A RELATIVELY SIMPLE PROCESS?

A. No. Some costs can be clearly identified and directly assigned to a function, while other costs are more ambiguous and difficult to assign. The primary challenge in conducting a ACOS is the treatment of what are known as “joint and common” costs. Given their shared or integrated nature, these joint and common costs can often be difficult to compartmentalize. Therefore, unique allocation factors are utilized in a ACOS to classify joint and common costs. The process of developing these cost allocation factors can become subjective and is often imbued with policy considerations.

Q. HOW DOES AN ACOS RELATE TO COMMONLY QUOTED ECONOMIC PRINCIPLES?

A. An ACOS is referred to as a “fully allocated cost study” since it allocates test year revenues, rate base, expenses, and depreciation to various jurisdictions and customer classes based upon a series of different allocation factors. The purpose of the ACOS is to develop cost responsibility estimates for each customer class, which in turn, can be used to develop rates. An ACOS is based upon a set of historic utility book costs that have accumulated over decades. Rates are, therefore, based upon historic average costs, whereas economic theory suggests that the most efficient form of pricing in perfectly competitive markets should be based upon marginal costs. However, regulated utilities do not operate in perfectly competitive markets and, by their very nature, are natural monopolies. Thus, reaching the ideal pricing formula outlined in economic theory is impossible since the nature of natural monopolies makes pricing in the presence of declining average costs, coupled with the presence of joint and common costs, difficult.

Q. ARE THERE ANY OTHER CONFOUNDING PROBLEMS THAT CAN ARISE WITH AN ACOS?

A. Yes. The problems listed above are confounded by the fact that the cost information utilized in an ACOS is usually historic and static, or based on potentially inaccurate projections in the context of Fully Projected Future Test Years ("FPFTY"). These analytic deficiencies undermine many experts' cost causation/pricing claims. As a result, in regular practice there is no single correct answer that is revealed in an ACOS. It is often up to regulators to exercise an appropriate level of judgment regarding the nature of these costs, the results of the ACOS, and the implications both have in setting fair, just, and reasonable rates. This is one of the reasons why many regulators use ACOS results as a "guide" in setting rates and do not consider themselves unnecessarily bound by the ACOS results.

Q. WHAT CONTROVERSIES ARISE IN THE ANALYSIS AND COMPARISON OF VARIOUS ACOS METHODOLOGIES?

A. The ACOS process is significantly different from the revenue requirement or cost of capital phase of a typical rate case. While the latter two processes focus on determining how much revenue will be recovered through rates, the ACOS process determines how those costs (revenue requirements) will be recovered through customer rates. The primary controversy with the evaluation of various ACOS results often rests with determining whether costs (revenue requirements) will be recovered by the relative customer share of each class, the peak load contributions of each customer class, or whether and how the approach will be tempered through the use of customer, peak, and off-peak usage considerations. Methodologies that are heavily skewed toward customer and peak considerations, for instance, can shift costs more than proportionally to relatively lower load-factor customers, such as residential and small commercial

customers, and less costs to larger high load factor customer classes and off-peak customers. These approaches can also fail to capture the service being provided by the utility (i.e., electric service in this case), and how the value of that service varies by the amount purchased by different customer classes.

Q. PLEASE EXPLAIN THE BIAS IN METHODOLOGIES THAT ARE SKEWED TOWARD PEAK CONSIDERATIONS.

A. Residential and small commercial customer electricity loads are typically weather sensitive. On the other hand, larger industrial customers use electricity in processes that are generally not weather sensitive, and electric use thus tends not to cycle up and down, but rather runs on a more continuous basis. Because of this, daily and annual usage patterns for these two customer classes are significantly different. The peak loads for residential and small commercial customers tend to be more “peaked” than those for industrial customers, which are steadier and more evenly distributed across peak and non-peak hours. For example, an average residential customer may have relatively little electricity use during overnight hours and during weekday daytime working hours. Residential customers exhibit relatively significant use during early summer evening hours corresponding to returning home from work, and potentially during chilly early winter morning hours if the customer uses electric resistance heating. Similarly, small commercial customers see limited electricity use outside of workday hours. Thus, residential and small commercial customers tend to have relatively lower load factors than large industrial customers.

Q. PLEASE DEFINE “LOAD FACTOR.”

A. A load factor is defined as the ratio of the average load in kilowatt hours supplied during a designated period to the peak or maximum load in kilowatts occurring in that period. The load factor is expressed as a percentage and may be derived by taking the energy used during a period and dividing it by the product of the maximum demand and the number of hours in the period. A system that is estimated to have a high load factor is often thought to be utilizing electricity more efficiently, since usage is consistent and does not swing significantly between average and peak periods. Conversely, systems with low load factors must maintain idle capacity in order to meet the relatively large swings in load between average and peak periods.

Q. DOES A HIGH LOAD FACTOR INDICATE GREATER SYSTEM EFFICIENCY?

A. Yes, since a higher system load factor can be indicative of, or lead to better system resource utilization, other things being equal. However, it should be recognized that all utilities inherently have customers with different load profiles due to differences in how customers use electricity. Furthermore, the development of integrated wholesale bulk electricity transmission systems has allowed utilities to collectively diversify generation resources and individual system demands, which has reduced the impact of individual system load characteristics on generation needs in recent years. While rates should recognize and promote the efficient utilization of utility system resources, caution should be used in placing too much emphasis on this principle of rewarding high load factor industrial customers to the detriment of low load factor residential and small commercial customers.

Q. WHAT IMPACT DOES COST ALLOCATION HAVE ON REVENUE RECOVERY?

A. Higher use customers, such as industrial customers, are inherently more price sensitive than lower use customers due to the relative impact increases in rates can have on these customers' total utility bills and the margins of produced goods. These higher use industrial customers tend to have more energy supply alternatives, including fuel switching and self-generation, which is part of the reason why they are more price sensitive. These considerations can result in differences in revenue generation given the differences in the price elasticities of demand (i.e., price sensitivities) for the two sets of customers (residential, industrial).

Q. EXPLAIN HOW SOME ACOS METHODS CAN BE BIASED AGAINST LOWER LOAD-FACTOR CUSTOMERS.

A. Utilities by their nature are capital intensive industries with high levels of capital expenditures required to develop systems to generate and transmit power to customers. Therefore, deciding the appropriate allocation of costs associated with utility capital investments (e.g., utility "plant in service") largely affects the cost of providing service. Utilities can often over-emphasize peak demand factors in allocating these large plant costs in order to assign more costs away from their price sensitive customers. Likewise, utilities can emphasize non-diversified single CP demands, NCP demands, and individual customer demands in allocating costs associated with transmission and distribution plant facilities to favor high-load factor customers relative to low-load factor customers. Finally, utilities can over-emphasize customer connection aspects of lower voltage distribution facilities to favor high-use customers relative to low-use customers.

B. Overview of Company's ACOS

Q. PLEASE DESCRIBE WELLSBORO'S ACOS APPROACH.

A. The Company states that it developed its ACOS with four goals in mind: (1) recognition of cost causality as opposed to value of service, (2) stability of results over time, (3) logical consistency and completeness, and (4) ease of implementation.[1] To this end the Company utilizes the traditional three-step approach to ACOS. First the Company functionalizes its costs to six separate functions: supply; transmission; sub-transmission; primary distribution; secondary distribution; and billing.[2] Second, the Company classifies these functionalized costs to two separate purposes: demand and customer costs.[3] Finally, the Company defines a series of individual allocators to allocate these functionalized and classified costs to individual rate classes.[4]

Q. PLEASE EXPLAIN HOW THE COMPANY CLASSIFIES ITS DISTRIBUTION PLANT INVESTMENTS.

A. The Company classifies all distribution plant investment costs as either customer- or demand-related, or a combination of these two factors.[5] The Company utilized what it refers to as a "zero-load analysis" to define a portion of secondary distribution system costs associated with utility poles (FERC Account 364), overhead conductors (FERC Account 365), underground conductors (FERC Account 366), underground conduit (FERC Account 367), and line transformers (FERC Account 368) as partially customer-

Q. HAVE YOU EXAMINED THE COMPANY'S ACOS RESULTS?

A. Yes. Exhibit MWD-1 (Wellsboro), summarized in Table 1 above, presents the results of the Company's ACOS which estimates an overall FPFTY rate of return ("ROR") of current rates of 0.68 percent. Estimated individual class returns range from negative 14.12 percent for the commercial space heating or CSH class to 47.33 percent for the outdoor lighting ("POL") class. The residential service ("RS") rate class is estimated by the Company to achieve an ROR of negative 2.38 percent during the test year under current rates, which is negative 3.52 of the system average on a relative rate of return ("RROR") basis.

Q. DO YOU DISAGREE WITH ANY OF THE ASSUMPTIONS OR ALLOCATION FACTORS INCORPORATED IN THE COMPANY'S PROPOSED ACOS?

A. Yes. I disagree with the Company's reliance on the results of its zero-load analysis and minimize size analysis to classify secondary distribution plant assets as being partially customer-related. The Company's zero-load analysis for secondary distribution plant other than transformers and minimum size analysis for transformers are forms of

[6] Direct Testimony of Howard S. Gorman at 16:10-11, and Company Response to I&E-RE-1D, Attachment A.

what is referred to as a Minimum System Study ("MSS") that are not aligned with cost-causation.

C. Use of a "Minimum System Study" to Classify Distribution Plant Costs

Table 2: Summary of Results of Company's Zero-Load Analysis

FERC Account Description	Demand Allocation	Customer Allocation
364 Secondary Poles, Towers and Fixtures	36.96%	63.04%
365 Secondary Overhead Conductors and Devices	43.97%	56.03%
366 Secondary Underground Conduit	63.71%	36.29%
367 Secondary Underground Conductors and Devices	63.71%	36.29%
368 Secondary Line Transformers	22.45%	77.55%

Source: Company's Response to I&E-RE-1-D, Attachment A.

Q. PLEASE DESCRIBE HOW THE COMPANY CLASSIFIES THE CUSTOMER AND DEMAND COMPONENTS OF ITS SECONDARY-VOLTAGE DISTRIBUTION PLANT COSTS.

A. The Company's witness Mr. Gorman conducted an zero load analysis to determine the customer-related component of secondary-voltage distribution system costs included in FERC Account 364 – Overhead Electric Poles; FERC Account 365 – Overhead Conductors; FERC Account 366 – Underground Conductors; FERC Account 367 – Underground Conduits; and a minimum size analysis to determine the customer-related component of secondary-voltage transformer costs included in FERC Account 368 – Line Transformers.[7] Table 2 presents a summary of the results of the Company's zero load and minimum size analyses. The Company's zero load and minimum size analyses

[7] Direct Testimony of Howard S. Gorman at 20:5 to 21:3, and Company Response to I&E-RE-1D, Attachment A.

estimates customer-related classification from a low of 36.29 percent (FERC Account 366) to a high of 77.55 percent (FERC Account 368).[8]

Q. PLEASE DESCRIBE THE ZERO-LOAD ANALYSIS MR. GORMAN USES TO ESTIMATE THE CUSTOMER-RELATED PORTION OF UPSTREAM SECONDARY DISTRIBUTION PLANT OTHER THAN LINE TRANSFORMERS.

A. Mr. Gorman examined the total inventory of Citizens' poles, overhead conductors and underground conductors.[9] He then examined what appears to be the cost that would be required to replace this inventory based on recent workorders, separating these expenses into four categories: Labor, Overhead, Vehicle, and Materials.[10] All non-materials costs were viewed as labor-related (i.e. Labor, Overhead, and Vehicle expenses) and classified as customer-related with the balance being defined as demand-related.[11] As Mr. Gorman states in this proceeding, "The zero-load component of the Secondary system represents the cost of extending service to all customers, without regard to peak or average load, and is therefore customer-related."[12] Since this "zero-load component" has no load-carrying capacity, no adjustment to the demand allocators is proposed by Mr. Gorman.

Q. PLEASE DESCRIBE MR. GORMAN'S "MINIMUM SIZE ANALYSIS" FOR CLASSIFYING A PORTION OF LINE TRANSFORMERS AS CUSTOMER-RELATED.

---

[8] Company Response to I&E-RE-1D, Attachment A.

[9] *Id.*

[10] *Id.*

[11] Direct Testimony of Howard S. Gorman at 20:10-13.

[12] Direct Testimony of Howard S. Gorman at 20:5-18.

A. Similar to his zero-load analysis, Mr. Gorman first examined the total inventory of Citizens' line transformers. He then claims he defined a minimum size transformer of 10 kilovolt amperes ("kVa") serving one customer.[13] Finally, Mr. Gorman multiplied this minimum size transformer cost by the number of line transformers on the system to arrive at the portion of total line transformer costs that he defines as customer-related.[14]

Q, DO YOU AGREE WITH MR. GORMAN'S ZERO-LOAD ANALYSIS FOR SECONDARY PLANT OTHER THAN TRASNFORMERS OR MINIMUM SIZE ANALYSIS FOR TRANSFORMERS?

A. No. As stated, both Mr. Gorman's zero-load analysis and minimum size analysis are forms of a MSS that are not aligned with cost-causation, which I explain more fully below, and I disagree with Mr. Gorman's reliance on the results of his zero-load analysis and minimum size analysis to classify secondary distribution plant assets as being partially customer-related.

Q. PLEASE EXPLAIN THE THEORETICAL BASIS FOR A "MINIMUM SYSTEM" STUDY OR MSS.

A. Such studies are often advocated by those holding the view that certain distribution plant investments are made to serve a dual-nature: one consisting of meeting system load requirements, the other being focused on customer interconnection or access that requires a customer-based allocation component. This minimum system component is

[13] Direct Testimony of Howard S. Gorman at 20:20-21.

[14] Direct Testimony of Howard S. Gorman at 20:20-21.

determined through an MSS (referred to by the Company as a 'zero load analysis') or a related Zero-Intercept Study.

Q. WHAT ARE MSS AND ZERO-INTERCEPT STUDIES?

A. MSS and zero-intercept studies are cost allocation methodologies that attempt to estimate separate customer-related versus load-related costs. An MSS does this by estimating the hypothetical costs of developing a "minimum" system that only provides customers with connection to a utility's electric distribution system but not a system sufficient to actually serve the customer's electrical requirements. Likewise, a zero-intercept study utilizes regression analysis techniques to estimate the relationship between the electric demand requirements on a system and costs associated with installation of new distribution plant assets. Using these regression analyses, a zero-intercept study then calculates a hypothetical minimum cost by calculating the costs of the distribution plant assets given zero demand requirements.

Q. PLEASE DESCRIBE THE MECHANICS OF AN MSS.

A. It is argued that many distribution system assets can be classified as having both a customer and a demand component. For instance, distribution substations are built to serve customers but are often expanded to meet increases in customer loads. An MSS study attempts to separate the customer-related portion of total system costs from those associated with serving loads (or service volumes). An MSS study estimates the hypothetical costs of developing a minimum system to serve customers with no load. These calculations involve subjectivity since they use accounting and engineering analyses to develop assumptions about the minimum sizes and costs associated with various distribution system components, while still satisfying system requirements such

as pole height and efficient conductor and transformer sizes. The costs associated with these "minimum" components are then added together to derive the total minimum costs associated with the hypothetical system with no energy usage. This estimate is then divided by total actual system costs to approximate the customer-related share of overall distribution system costs.

Q. ARE THERE ANY THEORETICAL SHORTCOMINGS TO USING MSS AND ZERO-INTERCEPT STUDIES FOR CLASSIFICATION OF DISTRIBUTION PLANT ASSETS?

A. Yes. Both MSS and zero-intercept studies depend on deeply flawed counterfactual theoretical premises. MSS-based analyses deal in hypotheticals that do not exist in the real world, including the assumption that somehow there is an electric distribution system out there in the world that could or would be plausibly built to serve customers but not load. No such system exists, making the underlying assumptions and modeling of a "minimum system" difficult, if not impossible, to verify. Even if a minimum electric distribution system could be constructed in real life, it would still have the ability to service at least a portion of customers' loads, undermining this modeling approach's fundamental premise.

Q. DOES THE NARUC COST ALLOCATION MANUAL RECOGNIZE THESE CHALLENGES?

A. Yes. The National Association of Regulatory Utility Commissioners ("NARUC") Electric Cost Allocation Manual ("NARUC Manual") recognized this fundamental failing of MSS approaches in its discussion of the approach:

> Cost analysts disagree on how much of the demand costs should be allocated to customers when the minimum-size

> distribution method is used to classify distribution plant. When using this distribution method, the analyst must be aware that the minimum-size distribution equipment has a certain load-carrying capability, which can be viewed as a demand-related cost.[15]

Q. WHAT ARE THE THEORETICAL FAILINGS OF ZERO-INTERCEPT BASED STUDIES?

A. A zero-intercept-based approach is simply a statistically based MSS approach and suffers, conceptually, from the same shortcomings. A zero-intercept analysis attempts to model an empirical relationship that does not exist. One should recognize that the argument that electric distribution costs are related to the number of customers on a utility's system is not a new argument, and the academic literature in utility regulation has questioned for quite some time the use of both MSS and zero-intercept studies.

Q. HOW HAS THE ACADEMIC LITERATURE IN UTILITY REGULATION QUESTIONED THE USE OF MSS AND ZERO-INTERCEPT STUDIES?

A. Dr. James Bonbright, in his seminal work on public utility regulation, published originally in the 1970s, raises a number of questions about the use of MSS and zero-intercept methodologies in classifying costs. Dr. Bonbright's primary concern was the lack of empirical support in the academic literature for a causal relationship between distribution system costs and the number of customers. The true driving factors of utility distribution system costs are much more complicated and depend on a host of other factors, such as the size of a service territory and the population density within. The incremental cost of constructing an appropriate distribution system to serve an additional

[15] Electric Utility Cost Allocation Manual (January 1992), NARUC, p. 95.

customer within an urban area with existing nearby infrastructure is substantially less than the cost to extend an existing utility system by potentially miles to serve an additional customer located in a rural area, a fact inherently ignored by MSS and zero-intercept methodologies:

> …the annual costs of this phantom, minimum-sized distribution system are treated as customer costs and are deducted from the annual costs of the existing system, only the balance being included among those demand-related costs to be mentioned in the following section. Their [minimum distribution costs] inclusion among the customer costs is defended on the ground that, since they vary directly with the area of the distribution system (or else with the lengths of the distribution lines, depending on the type of distribution system), they therefore vary directly with the number of customers. Alternatively, they are calculated by the "zero-intercept" method whereby regression equations are run relating cost to various sizes of equipment and eventually solving for the cost of a zero-sized system (Sterzinger, 1981).
>
> What this last-named cost imputation overlooks, of course, is the very weak correlation between the area (or the mileage) of a distribution system and the number of customers served by this system. For it makes no allowance for the density factor (customers per linear mile or per square mile). Our casual empiricism is supported by a more systematic regression analysis in (Lessels, 1980) where no statistical association was found between distribution costs and number of customers. Thus, if the company's entire service area stays fixed, an increase in number of customers does not necessarily betoken any increase whatever in the costs of a minimum-sized distribution system.[16]

Q. WHAT WAS DR. BONBRIGHT'S CONCLUSION REGARDING THE USE OF MSS AND ZERO-INTERCEPT STUDIES?

[16] James C. Bonbright, *et al*. Principles of Public Utility Rates. 1988 Edition. Arlington, VA: Public Utilities Reports, Inc., p. 491.

A. Dr. Bonbright found that attempts to classify costs associated with a minimum-sized distribution system, whether determined through the use of an MSS or a zero-intercept study, as something other than demand-related as potentially of merit. However, he ultimately concluded that classifying these costs as customer-related as the Company has done in the current proceeding is "clearly indefensible,"[17] due to the lack of a relationship between changes in the number of customers on a utility system and its distribution costs.

Table 3: Correlation of Customers and Distribution Network Additions

Year	Change in Average Number of Customers	Net Distribution Plant Addition	Poles, Towers, and Fixtures Additions	Overhead Conductors Additions	Underground Conduits Additions	Underground Conductors Additions	Line Transformers Additions

Source: Company's Annual Reports

Q. HAVE YOU QUANTITATIVELY ASSESSED THE HISTORIC CORRELATION BETWEEN INCREASES IN COMPANY DISTRIBUTION PLANT AND INCREASED NUMBER OF CUSTOMERS?

[17] *Id* at 492.

A. Yes. Table 3 examines trends between changes in average number of customers on the Company's system and distribution plant accounts 364-368 for the years 2008 through 2024. This analysis finds that additions to the relevant distribution plant accounts are not highly correlated with changes in the Company's average number of customers. Specifically, I estimate the correlation coefficient for the individual FERC accounts in question to range from negative 0.3077 to positive 0.0510, and I estimate the correlation coefficient of these distribution plant accounts in total to be negative 0.2499. Overall, this demonstrates very weak correlation as observed by Dr. Bonbright decades ago.

Q. HAVE OTHER JURISDICTIONS REJECTED THE USE OF AN MSS?

A. Yes. In 2021, the Michigan Public Service Commission rejected a proposal that Consumers Energy be required to submit an MSS in its next rate case.[18] Likewise, in 2010, the Rhode Island Public Utilities Commission rejected a request that it require the use of a minimum system study for Narragansett Electric Company D/B/A National Grid.[19]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE RELIANCE ON AN MSS TO ALLOCATE COSTS ASSOCIATED WITH DISTRIBUTION PLANT ASSETS?

A. I recommend the Commission reject the Company's proposed MSS approaches in the classification of secondary-voltage distribution plant costs included in FERC Accounts 364-368. MSS and related zero-intercept approaches are fundamentally flawed and provide little to no value as to the just and reasonable setting of rates. Research has

[18] In the Matter of the Application of Consumers Energy Co. for Authority to Increase its Rates for the Generation and Distribution of Electricity and for Other Relief, Case No. U-20963, Order, dated December 22, 2021.

[19] In re: the Application of The Narragansett Elec. Co. D/B/A National Grid For Approval of A Change in Electric Base Distribution Rates, Docket No. 4065, Decision and Order, dated April 29, 2010.

shown these methods are flawed, and some state regulatory commissions have gone so far as to expressly reject their use. Further, while MSS is used by some utilities, it is not commonly used by all utilities. Thus, I recommend the Commission appropriately classify assets included in the relevant distribution plant accounts as 100 percent demand-related.

Q. DO YOU HAVE ANY OTHER QUALITATIVE COMMENTS ABOUT MR. GORMAN'S ANALYSIS TO CLASSIFY SECONDARY DISTRIBUTION PLANT BESIDES LINE TRANSFORMERS AS PARTIALLY CUSTOMER-RELATED?

A. Yes. As explained before, there is no direct relationship between the number of customers and the cost of these secondary distribution plant. For example, when a distribution line is upgraded, the costs of doing so are integrated and capitalized. If a new conductor is added, or new poles installed, there is no rationale to separating out the costs of labor, vehicle, and overhead as customer-related while only the costs of the materials of the poles and the conductor are related to demand. Without the poles and the conductor there would be no distribution line upgrade, and that upgrade was no doubt required because the expected future coincident demand to be imposed on those facilities required the upgrade, undermining the concept of attempting to identify a 'minimum' cost of interconnection since all of these costs are based on coincident demand considerations. Mr. Gorman's separation of these installation costs into customer- and demand-related is artificial and merely has the effect of shifting cost responsibility to low-load factor customer classes with numerous small customers.

Q. DO YOU HAVE ANY OTHER QUALITATIVE COMMENTS ABOUT MR. GORMAN'S ANALYSIS TO CLASSIFY LINE TRANSFORMERS AS PARTIALLY CUSTOMER-RELATED?

A. Yes. Similar to my observation concerning other secondary distribution network costs, upgrades to transformer capacity will depend upon the coincident demand that must be met by the local distribution systems. The reasons for making transformer investments is the need to meet these local coincident loads. Again, this undermines the concept of attempting to identify a 'minimum' cost since even this so-called minimum size transformer has significant load-carrying capability and its investment is made in recognition of these demand considerations and not simply to connect the customer to the system. For all these reasons, Mr. Gorman's classification of these costs should be rejected and 100 percent of these costs should be classified as demand-related.

D. Summary of ACOS Findings

Table 4: Summary of Results of Alternative ACOS

		Residential Service		Commercial and Industrial Service					Lighting Service		Exchange

Q. PLEASE SUMMARIZE YOUR ACOS FINDINGS.

A. Exhibit MWD-2 (Wellsboro), summarized in Table 4 above, presents the results of my alternative ACOS which appropriately classifies costs associated with secondary-voltage distribution plant accounts included in FERC Accounts 364-368 as 100 percent demand-related. My alternative ACOS show that the Company's incorrect classification of production plant and secondary-voltage distribution plant assets skews the allocation of costs and revenue responsibilities away from larger customers and onto residential customers. I recommend the Commission rely on the results of my alternative ACOS as

a fair and reasonable estimation of the relative costs of service between Company customer classes.

Table 5: Comparison of ACOS Results

IV. REVENUE DISTRIBUTION

Q. PLEASE EXPLAIN THE PURPOSE OF THE REVENUE DISTRIBUTION PROCESS IN SETTING RATES.

A. The revenue distribution process allocates a utility's overall revenue deficiency across customer classes, which in turn, is used to establish a new set of retail rates. The revenue distribution process often uses the results from the ACOS as its starting point, but not necessarily as its ending point. Class-specific revenue responsibilities are established by allocating the system-wide revenue deficiency to classes that are under-earning, relative to their estimated ROR, and assigning, at least in theory, revenue decreases to those classes that are over-earning relative to their ACOS-estimated class returns. The final class revenue responsibilities are then used, in conjunction with each class's billing determinants, to determine rates. In summary, the revenue distribution process can be thought of as the initial step taken to establish rates.

Q. DOES THE REVENUE DISTRIBUTION PROCESS INCLUDE ANY POLICY CONSIDERATIONS?

A. Yes. Allocating the overall system-wide revenue deficiency entirely on a full cost of service basis can result in a very significant and adverse rate impact for under-earning

classes. Given this, regulators often determine the revenue responsibilities assigned to various customer classes by considering a set of generally accepted ratemaking principles.

Q. WHAT ARE THOSE GENERALLY ACCEPTED RATEMAKING PRINCIPLES?

A. There are several generally accepted rate-making principles used in utility regulation that include:

1) Rates should be fair, just, and reasonable, and not unduly discriminatory.

2) To the extent possible, gradualism should be used to protect customers from rate shock.

3) Rate continuity should be maintained.

4) Rates should be informed by costs, but class cost of service results need not be the only factor used in rate development.

5) Rates should be understandable to customers.

Q. HOW ARE THE ABOVE PRINCIPLES APPLIED IN DEVELOPING RATES FOR A REGULATED UTILITY?

A. It is important to consider all of the ratemaking principles I reference above. However, any principle's relative weight can change depending upon the importance of certain policy goals. Rate design should strike a balance between policy goals and resulting rates that are fair, just, and reasonable. There is no pre-set or universally accepted formula for developing rates or rate design, and, as a result, sound judgment is necessary to formulate a rate design that meets these objectives.

Table 6: Summary of Company's Proposed Revenue Allocation

		Residential Service		Commercial and Industrial Service					Lighting Service		Exchange
	Total Citizens	Residential (RS)	All Electric (RSAE)	Non-Residential (NRS)	Non-Res. Heating (NRH)	Commercial (CS)	Comm. Heating (CSH)	Industrial (IS)	Municipal (MBL)	Outdoor (OL)	Service (EU)

Q. PLEASE EXPLAIN THE COMPANY'S APPROACH TO REVENUE DISTRIBUTION.

A. The Company states that cost of service is just one consideration in developing its proposed revenue allocation. Specifically, while the Company proposes to move each class closer to cost of service, it does so with an objective of mitigating extreme rate impacts on rate classes and on customer subgroups.[20] Exhibit MWD-3 (Wellsboro), summarized in Table 6 above, presents the Company's estimated current class RROR and its proposed revenue distribution.

Q. WHAT DO YOU MEAN BY RROR?

A. The RROR effectively standardizes the class-specific ROR estimated by an ACOS to the overall system average. In other words, it divides the estimated class ROR by the estimated system ROR. For instance, assume that the residential class is earning a class-specific eight percent ROR, and further assume that the system-wide average ROR estimated by the same ACOS is also eight percent. The residential class, in this example, can be said to be earning a 1.0 RROR if the estimated ROR is the same as the overall system (*i.e.*, eight percent divided by eight percent equals 1.0). Put another way, any class earning a 1.0 RROR can be said to be making its full contribution to the system's overall ROR (*i.e.*, there is no cross-subsidy). A RROR that is greater than 1.0 indicates that a particular class is contributing more than the system average contribution to the Company's overall return. Likewise, a class that earns a RROR less than 1.0 but greater than zero can be said to be making a less-than-average contribution to the overall system.

[20] Direct Testimony of Howard S. Gorman at 28:15-18.

Q. DO YOU AGREE THAT A CLASS RROR LESS THAN 1.0 IS PROBLEMATIC OR INEQUITABLE?

A. Not necessarily. Consistent with the ratemaking principles identified above, there may be policy reasons to support a result that reflects a cross-subsidization. For example, the presence and/or continuation of a RROR below 1.0 could be the result of a prior agreed-upon rate freeze that prevents class rates from increasing to correct a revenue deficiency (relative to cost of service). In this example, the presence of a RROR below 1.0 is simply a function of a prior policy decision, not necessarily the result of some arbitrary or intentionally designed unreasonable inequity.

Q. WHAT ARE THE CLASS RATE INCREASES UNDER THE COMPANY'S PROPOSED REVENUE DISTRIBUTION?

A. The Company proposes to increase base rates by 45.3 percent on a system-wide average basis. Under the Company's proposal individual classes would receive increases ranging from a 15.7 percent increase for POL customers to as high as a 75.0 percent for non-residential heating ("NRH") and commercial service heating ("CSH) customers. This proposed increase to NRH and CSH customers is equal to nearly 1.66 times the overall system average increase of 45.3 percent. Likewise, the Company proposes to increase residential service-all electric ("RSAE") rates by 60.5 percent, which is nearly 1.34 times the overall system average increase of 45.3 percent.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED REVENUE DISTRIBUTIONS?

A. No. The Company's proposed revenue distributions suffer from two deficiencies. First, the Company's proposal is based on the results of a faulty ACOS that overstates

the extent of any current subsidy from commercial and industrial customers to residential customers. Second, the Company's proposed increases to the NRH, CSH, and RSAE classes are inconsistent with the principles of gradualism.

Table 7: Summary of Alternative Proposed Revenue Allocation

	Total Citizens	Residential Service: Residential (RS)	Residential Service: All Electric (RSAE)	Commercial and Industrial Service: Non-Residential (NRS)	Commercial and Industrial Service: Non-Res. Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED REVENUE DISTRIBUTION?

A. I recommend that the Commission adopt a more reasonable revenue distribution allocation method based on my alternative ACOS results that also limits the rate increase to the NRH, CSH, and RSAE customer classes to 1.25 times the overall system average increase. Under the Company's proposed overall distribution revenue increase of 45.3 percent this reduces the revenue increase to this rate class to 56.61 percent, compared to the Company's proposed distribution rate increases of 75.0 percent.

Table 8: Comparison of Class Revenue Allocations

	Total Citizens	Residential Service: Residential (RS)	Residential Service: All Electric (RSAE)	Commercial and Industrial Service: Non-Residential (NRS)	Commercial and Industrial Service: Non-Res. Heating (NRH)	Commercial and Industrial Service: Commercial (CS)	Commercial and Industrial Service: Comm. Heating (CSH)	Commercial and Industrial Service: Industrial (IS)	Lighting Service: Municipal (MBL)	Lighting Service: Outdoor (OL)	Exchange Service (EU)
Wellsboro's Proposed											
Distribution Revenue Increase	$ 2,899,388	$1,668,860	$ 14,885	$ 236,093	$ 507	$ 601,598	$ 771	$ 354,548	$ 6,155	$ 12,757	$ 3,214
Percentage Increase	45.29%	49.51%	60.52%	47.35%	75.00%	39.51%	75.00%	40.29%	45.60%	15.68%	36.89%
OCA Alterantive											
Distribution Revenue Increase	$ 2,899,387	$1,582,946	$ 13,923	$ 212,711	$ 383	$ 710,279	$ 582	$ 354,826	$ 6,581	$ 14,075	$ 3,081
Percentage Increase	45.29%	46.96%	56.61%	42.66%	56.61%	46.65%	56.61%	40.32%	48.76%	17.30%	34.40%

Q. HAVE YOU PREPARED A SUMMARY OF THE EFFECTS OF YOUR PROPOSED REVENUE DISTRIBUTION?

A. Yes. Exhibit MWD-4 (Wellsboro) presents an illustrative summary of the effects of my proposed revenue at the Company's proposed revenue requirement increase. My

proposed revenue distribution would increase base rates for the residential class by 46.88 percent, compared to the Company's proposal, which would increase such rates by 49.5 percent.

V. RATE DESIGN

Table 9: Summary of Company's Proposed Customer Charges

Rate Schedule	Current Charge	Proposed Charge	Percent Increase
Schedule RS - Residential Service	$12.00	$16.50	37.5%
Schedule RSAE - Residential Service All Electric	$12.00	$16.50	37.5%
Schedule NRS - Non-Residential Service	$12.22	$16.50	35.0%
Schedule NRH - Non-Residential Service Space Heating	$12.22	$16.50	35.0%
Schedule CS - Commercial Service	$32.03	$32.03	0.0%
Schedule CSH - Commercial Service Space Heaters	$45.81	$45.81	0.0%
Schedule IS - General Service	$85.00	$150.00	76.5%

Source: Company's Response to I&E-RE-1-D, Attachment A

Q. PLEASE DISCUSS THE COMPANY'S RESIDENTIAL CUSTOMER CHARGE PROPOSAL.

A. As summarized by Table 9, the Company is proposing to increase the monthly customer charges for nearly all rate classes. The Company is proposing to increase the fixed Residential Service ("RS") and RSAE customer charge from $12.00 to $16.50 per month, representing a 37.5 percent increase.[21] Likewise, the Company is proposing to increase its Non-Residential Service ("NRS") and NRH customer charge from $12.22 to $16.50 per month, representing a 35 percent increase.[22]

[21] Direct Testimony of Howard Gorman, Exhibit HSG-1, Schedule B7.

[22] *Id.*

Table 10: Survey of Regional Customer Charges

Company	State	Residential Customer Charge ($/month)	Commercial Customer Charge ($/month)
Wellsboro Electric Company (Current)	**PA**	**$ 12.00**	**$ 12.22**
Wellsboro Electric Company (Proposed)	**PA**	**$ 16.50**	**$ 16.50**
Black Diamond Power Company	WV	8.00	10.12
Citizens' Electric Company	PA	13.10	16.00
Kentucky Utilities Company	VA	12.00	30.00
Pennsylvania Electric Company	NY	8.50	10.50
Pike County Light & Power Company	PA	8.80	17.26
Rockland Electric Company	NJ	5.75	16.00
The Toledo Edison Company	OH	4.00	7.00
UGI Utilities, Inc.	PA	10.75	17.00
Wheeling Power Company	WV	12.50	15.00
Peer Group Average		**$ 9.27**	**$ 15.43**

Source: Utility Tariffs

Q. HAVE YOU COMPARED THE COMPANY'S PROPOSED RESIDENTIAL CUSTOMER CHARGES TO OTHER REGIONAL ELECTRIC UTILITIES?

A. Yes, and this analysis is presented in Table 10, which surveys current residential and small commercial customer charges among other regional electric utility companies. There are only two (out of nine) electric utilities in the survey with residential customer charges greater than the Company's $12.00 per month. The average across all regional peers is $9.27, which is lower than the Company's current rate and significantly lower than the proposed customer charge of $16.50 per month. Indeed, the proposed customer charge of $16.50 per month is the highest in the region. Likewise, the Company's proposed increase in NRS and NRH customer charge to $16.50 per month would be higher than the regional average of $15.43 per month.

Q. WHAT IS THE BASIS OF THE COMPANY'S PROPOSED CUSTOMER CHARGE INCREASE?

A. The Company claims that its ACOS supports a $46.95 monthly residential customer charge based on cost of service.[23] Likewise, the Company provides information supporting a claim that its ACOS supports a $46.80 monthly NRS customer charge based on cost of service.[24]

Q. DO YOU AGREE WITH THE MANNER IN WHICH THE COMPANY MADE THESE CALCULATIONS?

A. No. The Company's analysis significantly overstates the cost directly attributable to residential customers. Specifically, it includes secondary distribution costs as customer-related based on its flawed zero-load analysis and minimum size analysis allocations, as discussed earlier.

Table 11: Analysis of Company Customer-Related Costs

Line No.	Description	Residential Service: Residential All Electric (RS)	Residential Service: (RSAE)	Commercial and Industrial Service: Non-Residential (NRS)	Non-Res. Heating (NRH)	Commercial (CS)	Comm. Heating (CSH)	Industrial (IS)
1	Customer-Related Costs per Company's ACOS							
2	Class Functionalized Customer Billing Expenses	$ 995,243	$ 5,626	$ 180,980	$ 193	$ 105,889	$ 270	$ 9,716

Source: Company's Response to OCA-I-1, Attachment A (Schedule E)

Q. HAVE YOU PREPARE AN ANALYSIS OF COSTS COMMONLY ASSOCIATED WITH CUSTOMER CHARGES?

A. Yes. That analysis is provided in Table 11. "Customer-related" expense accounts are those typically allocated on the basis of customers and can include: removing and

[23] Direct Testimony of Howard Gorman, Exhibit HSG-1, Schedule E-1B.

[24] *Id.*

setting meters; maintenance of meters; services expense; maintenance of service drops; meter reading expense; dispatch applications and orders; customer records and collections; customer billing and accounting; customer service and information; and sales expense. These costs can also include the depreciation expense associated with the service drop and meter plant accounts and property taxes, as well as the carrying charges (at the Company's requested rate of return) for the customer portion of services investment and 100 percent of the meters investment.

Q. HOW DO THE COMPANY'S CUSTOMER CHARGE REVENUES COMPARE WITH THE RESULTS OF YOUR ANALYSIS?

A. The Company's current customer charge revenue associated with the residential class is 74.5 percent of the class' customer-related cost responsibilities. Likewise, the Company's current customer charge revenue associated with the NRS class is 75.2 percent of the class' customer-related cost responsibilities.

Q. DO THESE RESULTS INDICATE ANY PRESSING NEED TO INCREASE MONTHLY CUSTOMER CHARGE RATES?

A. No. All Company residential and commercial service rate classes currently cover the majority of their customer-related costs through monthly customer charges. The lowest, the residential class, still recovers 74.5 percent of its customer-related costs through its monthly customer charge.

Q. IS THE COMPANY'S PROPOSAL TO INCREASE THE CUSTOMER CHARGE CONSISTENT WITH PROMOTING ENERGY EFFICIENCY AND CONSERVATION?

A. No. The Company's rate design proposal is inconsistent with energy efficiency, since it reduces economic incentives for ratepayers to control their monthly utility bills

through energy efficiency and conservation efforts, because only the variable component of bills is avoidable.

Q. HAVE OTHER REGULATORS RECOGNIZED THE NEGATIVE IMPACTS THAT CUSTOMER CHARGE INCREASES CAN HAVE FOR ENERGY EFFICIENCY?

A. Yes. In rejecting a request by Baltimore Gas and Electric ("BGE") to increase customer charges as part of a larger rate design proposal, the Maryland Public Service Commission ("MPSC") recognized the need to allow customers the opportunity to control their monthly bills by reducing energy usage.

> Even though this issue was virtually uncontested by the parties, we find we must reject Staff's proposal to increase the fixed customer charge from $7.50 to $8.36. Based on the reasoning that ratepayers should be offered the opportunity to control their monthly bills to some degree by controlling their energy usage, we instead adopt the Company's proposal to achieve the entire revenue requirement increase through volumetric and demand charges. This approach also is consistent with and supports our EmPOWER Maryland goals.[25]

Q. CAN YOU POINT TO ANY OTHER REGULATORY EXAMPLES?

A. Yes. The Montana Public Service Commission ("MT PSC") addressed this issue in evaluating, and rejecting, a proposal by Energy West Montana to eliminate volumetric charges and only have one fixed monthly customer charge (known as a "straight-fixed variable" or "SFV" rate design):

> The Commission agrees that most distribution costs are not avoidable, and that volumetric distribution charges may encourage conservation actions that, all other things being

[25] Maryland Public Service Commission Case No. 9299, In the Matter of the Application of Baltimore Gas and Electric Company for Adjustment in its Electric and Gas Base Rates (*"Case No. 9299"*). Order No. 85374 at p. 99, rel. February 22, 2013.

> equal, reduce the utility's embedded cost recovery between rate cases and contribute to future rate increases.
>
> …
>
> The Commission agrees that an SFV rate design is a clean and administratively inexpensive way to decouple revenue from volume. An often-cited public policy justification for revenue decoupling is to remove the volume disincentive for cost-effective conservation investment by a gas distribution company, which through SFV and other decoupling methods is rendered indifferent to the volume of gas consumed. Yet, SFV rates decouple revenue at the cost of decreasing returns to conservation investment by customers. For this reason the net conservation benefit of revenue decoupling via SFV rates is not clear, and may be negative.[26]

Q. HAVE ANY REGULATORY RESEARCH INSTITUTES ADDRESSED THE ISSUE OF THE RELATIONSHIP BETWEEN HIGH CUSTOMER CHARGES AND ENERGY EFFICIENCY?

A. Yes. A research document presented for consideration by the membership of NARUC notes that extreme increases in customer charges, that typically happen under SFV rate design proposals, are problematic because of its effects on customer incentives to conserve energy:

> **Straight-Fixed Variable Rate Design.** This mechanism eliminates all variable distribution charges and costs are recovered through a fixed delivery services charge or an increase in the fixed customer charge alone. With this approach, it is assumed that a utility's revenues would be unaffected by changes in sales levels if all its overhead or fixed costs are recovered in the fixed portion of customers' bills. <u>This approach has been criticized for having the unintended effect of reducing customers' incentive to use less</u>

[26] In The Matter Of Energy West Montana, Application To Establish Increased Service Rates In Its Great Falls, Cascade, And West Yellowstone Service Areas, Montana Public Service Commission, Docket No. D2010.9.90, Order No, 7132c, at 29–30, rel. November 17, 2011.

> electricity or gas by eliminating their volumetric charges and billing a fixed monthly rate, regardless of how much customers consume.[27]

Q. HAS ANY NATIONAL PUBLIC POLICY ANALYSIS NOTED THE EFFICIENCY DISINCENTIVES ASSOCIATED WITH HIGH CUSTOMER CHARGES?

A. Yes. The National Action Plan for Energy Efficiency ("NAPEE"), a joint venture of the U.S. Department of Energy and U.S. Environmental Protection Agency, published a whitepaper on various rate design effects on encouraging energy efficient behaviors. The NAPEE postulated that rate designs over-emphasizing customer charges, like SFV, can deter or weaken the economic signals sent to customers to change their energy usage behavior and make investments in energy efficiency devices:

> Because [SFV] tends to shift costs out of volumetric charges, it tends to reduce customers' efficiency incentive, because the marginal price of additional consumption is reduced. While SFV rates are being considered to better reflect the utility's costs behind the rate, these rates do not encourage customers to change energy usage behavior or invest in efficiency technologies. Such customer disincentives persist even when SFV rates are applied to individual components of the bill, such as charges for distribution service.[28]

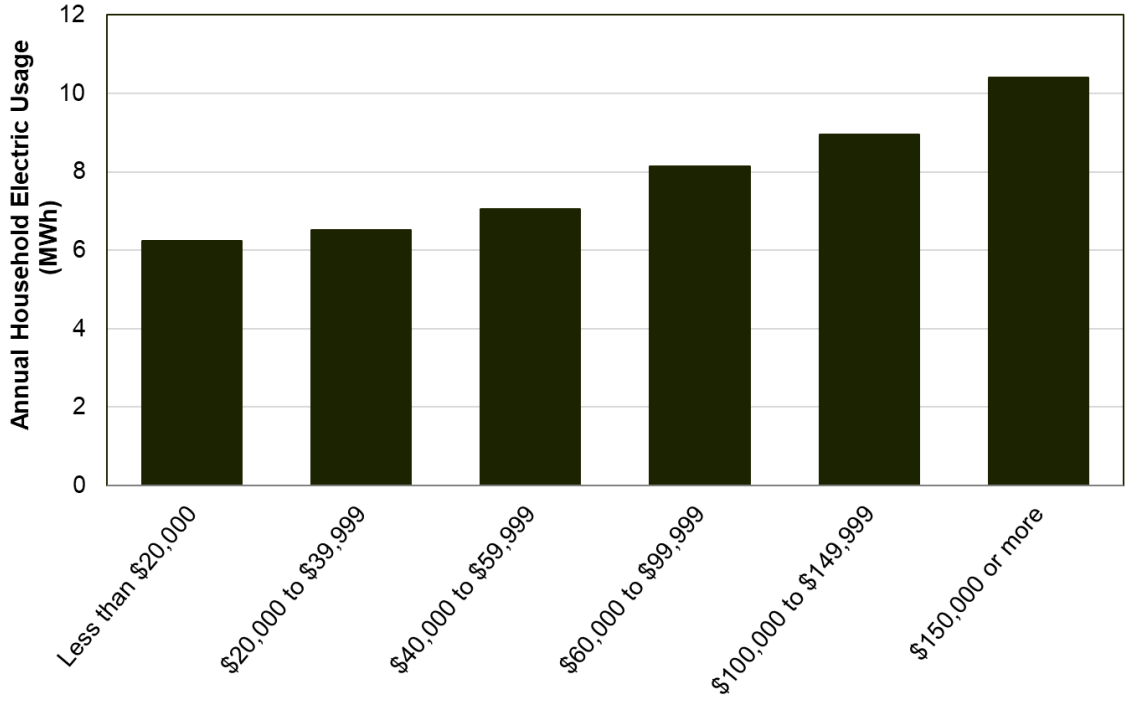
Q. SHOULD THE COMMISSION BE MINDFUL OF THE EFFECT OF THE COMPANY'S PROPOSED RATE DESIGN ON LOW-USE RESIDENTIAL CUSTOMERS?

---

[27] "Decoupling for Electric & Gas Utilities: Frequently Asked Questions (FAQ)" Grants & Research Department, National Association of Regulatory Utility Commissioners, at 5 (Sept. 2007) (emphasis added).
[28] Customer Incentives for Energy Efficiency Through Electric and Natural Gas Rate Design, National Action Plan for Energy Efficiency at 13-14, prepared by William Prindle, ICF International, Inc. (Sept. 2009) (emphasis added).

A. Yes. There are numerous studies in the academic literature supporting the hypothesis that electricity is a "normal good."[29] That is, the consumption of electricity is directly correlated with household income level, meaning that higher-use electrical customers are typically higher income individuals and lower-use electrical customers are typically lower income individuals. These are important factual considerations the Commission should bear in mind.

Figure 1: Analysis of Electricity Usage and Household Income



Source: EIA 2020 Residential Energy Consumption Survey

Bolduc, N. Yameogo, 2011, "A pseudo-panel data model of household electricity demand," Resource and Energy Economics 33(1), 315-325; Dax, P. 1987, "Estimation of Income Elasticity from Cross-Section Data," Applied Economics 19 (11), 1471-1482; Fell, H., S. Li, A. Paul. 2010, "A New Look at Residential Electricity Demand Using Household Expenditure Data," RFF DP 10-57; Fullerton, T. D. Juarez, A. Walke. 2012, "Residential Electricity Consumption in Seattle," Energy Economics; Reiss. P.C., and M. W. White, 2005, "Household electricity demand revisited," Review of Economic Studies 72, 853-858; and Swan L.G., V. I. Ugursan, 2009, "Modeling of end-use energy consumption in the residential sector: A review of modeling techniques," Renewable and Sustainable Energy Reviews 13, 1819-1835.

Q. HAVE YOU CONDUCTED ANY ANALYSES EXAMINING THE RELATIONSHIP OF ELECTRICITY USAGE AND INCOME?

A. Yes. Figure 1 provides the results of an analysis I have performed using data from the 2020 Residential Electricity Consumption Survey ("RECS") produced by the United States Energy Information Administration ("EIA") and household data from the Census division in which the Pennsylvania is located.[30] The results show a positive relationship between electricity consumption (in kWh terms) and income. This clearly shows that as income increases, electricity consumption increases, and vice versa: as income decreases, electricity usage decreases.

Q. WHAT ARE YOUR CUSTOMER CHARGE RECOMMENDATIONS AND CONCLUSIONS?

A. I recommend that the Commission reject Wellsboro's proposed increase in residential customer charges. First, the Company's proposal is based upon an inaccurate accounting of customer-related costs. A correct analysis of customer-related costs from Wellsboro's ACOS finds that all residential and commercial rate classes are currently recovering *nearly all* customer-related costs through monthly customer charges. Second, Wellsboro's existing residential customer charge is third highest and the proposed increase would make the charge the highest among regional peer investor-owned utilities. Third, the proposal would negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed

[30] This census division also includes the states of Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, and Vermont. This is the most detailed level of aggregation available in the RECS.

increase in the case. The Commission should keep Wellsboro's current customer charges for all customers.

Q. DO YOU HAVE AN ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

A. Yes. I recommend that the Commission limit its increase in Wellsboro monthly customer charges to only that required to bring the Company's customer charges in line with Citizens' Electric Company. This would increase the residential customer charge to $13.10 per month.

VI. CONCLUSIONS AND RECOMMENDATIONS

Q. WHAT ARE YOUR ACOS FINDINGS FOR WELLSBORO?

A. My alternative ACOS analyses shows that Wellsboro's incorrect classification of secondary-voltage distribution plant skews the allocation of costs and revenue responsibilities away from larger customers and onto residential customers. I recommend the Commission rely on the results of my alternative ACOS as a fair and reasonable estimation of relative costs of service between Wellsboro's customer classes.

Q. WHAT IS YOUR RECOMMENDATION REGARDING WELLSBORO'S PROPOSED REVENUE DISTRIBUTION?

A. For Wellsboro, I recommend that the Commission adopt a more reasonable revenue distribution allocation method based on my alternative ACOS results that also limits the rate increase to the to the NRH, CSH, and RSAE customer classes to 1.25 times the overall system average increase. Under Wellsboro's proposed overall distribution revenue increase of 45.3 percent this reduces the revenue increase to these rate classes

to 56.61 percent, compared to the Company's proposed distribution rate increases of 75.0 percent for the NRH and CSH classes, and 60.52 percent for the RSAE class.

Q. WHAT IS YOUR RECOMMENDATION REGARDING WELLSBORO'S PROPOSED RATE DESIGN FOR CUSTOMER CHARGES?

A. I recommend the Commission reject Wellsboro's proposed increases in customer charges because they disproportionately impact low-income customers and reduce customer incentives to reduce usage, contrary to public goals of promoting energy efficiency. Furthermore, Wellsboro's existing residential customer charge is third highest and the proposed increase would make the charge the highest among regional peer investor-owned utilities. Finally, a correct analysis of customer-related costs from Wellsboro's ACOS finds that all residential and commercial rate classes are currently recovering *nearly all* customer-related costs through monthly customer charges.

Q. DO YOU HAVE AN ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

A. Yes. I recommend that the Commission limit its increase in Wellsboro monthly customer charges to only that required to bring the Company's customer charges in line with Citizens' Electric Company. This would increase the residential customer charge to $13.10 per month.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

11. Expert Report. (2011). *2011 Kansas Generation Planning Survey*. On behalf of the Kansas Corporation Commission Staff.

12. Expert Testimony. Docket No. 11-KCPE-581-PRE. (2011). Before the Kansas Corporation Commission. *In the Matter of the Petition of Kansas City Power & Light Company ("KCP&L") for Determination of the Ratemaking Principles and Treatment That Will Apply to the Recovery in Rates of the Costs to be Incurred by KCP&L for Certain Electric Generation Facilities Under K.S.A. 66-1239.* On Behalf

of the Kansas Corporation Commission Staff. Issues: System Planning, Predetermination.

13. Expert Testimony. Docket No. 10-KCPE-795-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Kansas City Power & Light Company for Approval to Implement a Portfolio of Demand Side Management Programs Including Affordability, Energy Efficiency, Demand Response and Educational Programs, and to Implement a Rider for Recovery of Program Costs and Incentives Associated with this Portfolio.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

14. Expert Testimony. Docket No. 10-WSEE-775-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Westar Energy, Inc. and Kansas Gas and Electric Company for an Order Authorizing them to participate in Efficiency Kansas, Approve the SimpleSavings Program Rider, and related cost recovery.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

15. Expert Testimony. Docket No. 10-BHCG-639-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Black Hills/Kansas Gas Utility Company, LLC, d/b/a Black Hills Energy for Approval to Implement Black Hills Energy's Five-Year Energy Efficiency Plan Consisting of Natural Gas Energy Efficiency Programs to Improve Building and Equipment Efficiency and to Educate About Efficient Energy Usage, to Provide for Program Cost Recovery Through a Rider Mechanism, Permit the Implementation of a Revenue Normalization Mechanism to Replace the Weather Normalization Adjustment, a Performance Incentive Mechanism, and Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

16. Expert Testimony. Docket No. 10-EPDE-497-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of the Empire District Electric Company for Approval to Implement its Portfolio of Energy Efficiency and Demand Response Programs for its Kansas Customers, to Provide for Program Cost Recovery and Lost Revenue Through a Rider Mechanism, to Obtain any Necessary Waivers for the Commission, and for Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

17. Expert Testimony. Docket No. 10-KGSG-421-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Kansas Gas Service, a Division of ONEOK, Inc., for Approval to Implement the Efficiency Kansas Energy Efficiency Program, to Implement Natural Gas Energy Efficiency Programs to Improve Building and Equipment Efficiency and to Educate about Efficient Energy*

Usage, To Provide for Program Cost Recovery Through a Rider Mechanism, to Establish Administrative Charges and a Program Initiation Fee, Permit the Implementation of a Revenue Decoupling Mechanism, and Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing. On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

Introduction

Q. Please state your name and business address.

A. My name is LeeAnn Wise. My business address is 555 Walnut Street, Forum Place 5th Floor, Harrisburg, Pennsylvania 17101.

Q. By whom are you employed and in what capacity?

A. I am employed as a Regulatory Analyst by the Pennsylvania Office of Consumer Advocate (OCA).

Q. Please describe your educational background and qualifications to provide testimony in this case.

A. I have a Master's Degree in Business Administration from Shippensburg University and a Bachelor of Science degree in Professional Accountancy from the University of Pennsylvania. I have over fifteen years of experience in call center operations, with a strong background managing teams, improving workflow, and delivering outstanding customer service. Additionally, I have received internal training while working for the Office of Consumer Advocate (OCA). See Appendix A for additional information about my qualifications.

Q. What is the purpose of your testimony in this case?

A. I am filing the Direct Testimony in response to the application filed on April 30, 2025, by Citizens' Electric Company of Lewisburg, PA (Citizens or Company) to increase its base rate for electric service. The purpose of my testimony in this case is to address specific concerns regarding processing fees of $3.95 assessed to debit and credit card payments, how and when a security deposit is required, and the current payment arrangements available to customers.

Q. Have you previously provided testimony before the Pennsylvania Public Utility Commission?

A. No, I have not submitted testimony before the Pennsylvania Public Utility Commission.

Q. Have you prepared Exhibits to accompany your testimony?

A. No.

Summary

Q. Please describe the proposal for rate increase filed by Citizens Electric.

A. Citizens Electric proposes to increase its electric distribution rates by $1.79 million per year or about a 29.6% increase to annual distribution revenue,[1] with a proposed effective date of June 29, 2025. Based on this filing, residential customers are facing monthly bill increases in distribution rates of up to nearly 31.9%.[2] More specifically, if approved as filed, residential customers using 1,250 kwh per month would see increases to their monthly bills by 31.9% on a distribution rate only basis, including the fixed customer charge and volumetric distribution rates.[3] The Company noticed customers that they would see a monthly bill increase of 11%, on a total rate basis, including commodity charges; however, the commodity charges are not at issue in this proceeding. Citizens Electric's last rate case was in January 2023 and was settled for an annual revenue increase of $930,000.[4]

Q. Please summarize your conclusions and recommendations.

A. First, I recommend eliminating the payment fee imposed on customers paying their bills via credit or debit card through the Company's web-based and mobile application, known

[1] Citizens Statement No.1 pg.3 ln. 11-14.
[2] Exhibit HSG-1 Schedule B8-1 pg. 1 ln 8.
[3] Exhibit HSG-1 Schedule B8-2 pg. 1 ln. 8.
[4] Citizens Statement No. 4 pg.4 ln. 11-13.

as SmartHub, which allows customers to view billing statements, monitor energy usage, and make payments electronically. While SmartHub offers convenience and promotes energy monitoring and conservation, the implementation and associated fee structure raises serious concerns. The Company imposes a fee of $3.95 on customers paying their bills via credit or debit card. Today, where electronic and paperless transactions are the norm, assessing an additional fee is contrary to the principles of fair utility service.

Next, as to screening for low-income customers when assessing security deposits, I recommend that the Company should show in rebuttal that it has formal policies and procedures in place addressing these practices in which their employees are trained. If not, the Company should develop and implement formal policies or procedures to formalize these practices and ensure that employees are trained in them.

Finally, I recommend several improvements to ensure the success of customer payment arrangements.

Customer Payment Fees

Q. What is SmartHub?

A. SmartHub is a web and mobile application administered primarily by the Company, with support provided as needed by the software vendor and C&T IT.[5] Customers can use SmartHub to pay bills and are assessed a $3.95 fee, view usage, and billing statements.[6]

[5] Citizens response to OCA VI-5
[6] Citizens response to OCA-VI-1.

Q. What are the key functions of the SmartHub application?

A. Citizens' Electric implemented the SmartHub platform for customers to view their bills, monitor usage data, and process payments electronically. The adoption of technology provides a user-friendly method for customers to access their account using a mobile app or online. Many of the Companies' customers have opted to utilize SmartHub to view their account. The tool is helpful in providing customers with a view at their usage trends, which allows for better management of energy consumption.

Q. Should the Company continue using SmartHub?

A. Yes, the use of web-based and online applications is highly effective in providing customers with real-time access to their account information. It is my recommendation that the Company continue its utilization of the SmartHub platform and explore the implementation of additional technological enhancements such as alerts for unusually high usage, real-time notifications of outages, and estimated charges based on month-to-date usage, to further improve the quality and efficiency of customer service.

Q. Does Citizens Electric charge customers a processing fee for electronic payments?

A. Yes, the company charges a $3.95 fee when a customer pays using SmartHub or via telephone.[7]

Q. Why does the company charge this $3.95 fee?

A. The Company charges $3.95 fee to recover costs incurred from third-party vendor for processing electronic payments.[8]

[7] Citizens Electric response to OCA-III-3.
[8] Citizens Electric response to OCA-VI-1.

Q. How much revenue does the Company earn from charging the $3.95 payment fee?

A. In 2024, the amount collected from customers and remitted to the third-party vendor was $40,010.[9] The fees are passed directly onto the third-party vendor. Therefore, there would be no revenue earned by Citizens Electric.[10]

Q. If the payment fee was eliminated, how much revenue would be forfeited by the Company?

A. If the Company were to eliminate the fee, it would not result in any revenue loss. However, the Company would claim the expense as a distribution cost for recovery through rates. The vendor fees for the last two and a half years are shown below.[11]

	Third-Party Vendor Fees		
	2023	**2024**	**2025**
January	3,049	3,614	3,440
February	2,820	3,203	3,420
March	3,247	3,393	3,749
April	2,884	3,512	3,642
May	3,286	3,417	3,322
June	2,895	3,065	
July	2,970	3,358	
August	3,002	3,342	
September	3,121	3,358	
October	3,136	3,429	
November	3,018	3,132	
December	3,089	3,188	
Total	**$ 36,518**	**$ 40,010**	**$ 17,573**

Q. Is the $3.95 payment fee reasonable?

A. No. The Company accepts checks, money orders, or bank transfers with no processing fees to consumers. A customer can also enroll in direct debit withdrawal from their bank account with no processing fees. However, a fee of $3.95 is assessed when paying using a debit or credit card through SmartHub. Although assessing fees for payments are not prohibited by Chapter 56, the effect is to increase the rates for customers who pay by

[9] Citizens Electric response to OCA-VI-1.
[10] Citizens Electric response to OCA-VI-3.
[11] Citizens Electric response to OCA-VI-4.

certain options that are normative in today's economy. While the Company does not benefit from these fees, customers are penalized by the imposed payment conditions, resulting in higher costs for customers choosing to use SmartHub or by Interactive Voice Response (IVR) payment compared to other customers. The IVR system allows callers to interact with the company's phone system through voice prompts. The system uses pre-recorded information and routes customers to live agents. In my opinion, this policy is unreasonable and discriminates against those customers using credit and debit charge to pay for their service. The Company incurs administrative costs for processing cash and check payments, that are passed onto customers through the Company's rate base. Credit and debit charge payments should be handled in the same manner. Customers pay for household goods via credit and debit cards without being assessed an additional fee. Paying your utility bill should not be any different. The policy of charging a fee is also quite harmful to lower income customers who may be unbanked and rely on pre-purchase debit cards to make payments.[12]

Q. Do you have any recommendations?

A. Yes, I recommend as part of their rate request, that the Company should be required to absorb the fee for SmartHub and IVR payment and the revenue requirement be adjusted accordingly. The costs for the third-party vendor are within the Company's control since they are negotiated contracts. The reasonable cost of offering a variety of payment methods without additional customer fees on individual customers should be reflected in

[12] According to the 2023 FDIC National Survey of Unbanked and Underbanked Households, 5.9% of households were using general purchase reloadable prepaid cards and 49.7% of all households were using nonbank online payment services, such as PayPal, Venmo, and Cash App. The use of prepaid debit cards was much higher among unbanked households. Compared with banked households, substantially higher shares of unbanked households used online payment services and prepaid cards in ways that substitute for some of the core financial transactions that can be conducted using a bank account. - https://www.fdic.gov/household-survey/2023-fdic-national-survey-unbanked-and-underbanked-households-executive-summary.

the Company's revenue requirement, the same as the costs associated with processing checks and accepting payment at authorized locations.

Q. What are the benefits of your recommendation?

A. Providing a payment method through an application like SmartHub provides convenience for the Company and its customers, and is considered good practice.[13] However, when a utility customer makes multiple payments during a month, fees on credit and debit payments undercut their ability to apply funds to the payment of actual utility services. Citizens Electric should accept payment by any lawful means without additional fees. The reasonable cost of offering a variety of payment methods without additional customer fees should be reflected in the Company's revenue requirement, like the costs associated with processing checks and ACH payments for which fees are not charged. This recommendation is in line with a growing trend among Pennsylvania utilities[14] to eliminate payment fees and reflects the expectation of most customers to use online electronic payments without additional fees.

Q. Did you calculate the revenue adjustments needed if the payment processing fee of $3.95 was eliminated for customers?

A. No, I have not calculated the revenue adjustment. This calculation will be addressed by OCA witness Greg Meyer in his revenue requirement and accounting testimony. See OCA Statement No. 1.

[13] These and other reasons are discussed in NASUCA Resolution 2012-07. https://www.nasuca.org/2012-07-urgingutilities-to-eliminate-convenience-fees-for-paying-utility-bills-with-debit-and-credit-cards-and-urging-appropriatestate-regulatory oversight/.

[14] In the last several years Pittsburgh Water (Formally known as Pittsburgh Water and Sewer Authority), York Water, and Pennsylvania American Water have eliminated credit card and debit card payment fees.

Security Deposits

Q. Does the Company charge a security deposit?

A. Yes, The Company assesses a security deposit when the customer does not meet credit score requirements.

Q. Does the Company screen to ensure low-income customers do not have to pay a security deposit?

A. The Company states, if, after a customer is informed that a security deposit is due, the customer indicates that they may have difficulty paying the deposit, customer service staff will inform the customer that the deposit may be waived if they meet income requirements. If the customer wishes to proceed, staff will verify income and waive the deposit if appropriate. For customers meeting Level 1 criteria under Federal Poverty Income Guidelines, the deposit is waived. The Company states that it adheres to Chapter 56 of the Public Utility Code when determining deposit amounts and waiver eligibility.[15]

Level 1 (100% of FPL)

Household Size	Annual Income
1	$15,060
2	$20,440
3	$25,820
4	$31,200

Q. Do you have any comments?

A. Yes, the Company states they wait until the customer indicates they may have difficulty paying the deposit.[16] Many low-income customers may be unwilling or hesitant to disclose their financial hardship or income status. Additionally, the Company did not

[15] Citizens response to OCA-VI-8.
[16] Citizens response to OCA-VI-8

show that it has formal policies and procedures to support the practice of verifying income prior to charging a security deposit.

Q. Does the Company refund customers who have paid a security deposit and should not have?

A. Yes, customers who are confirmed as low-income prior to deposit are not charged a deposit. If the Company confirms the low-income status of a customer who has already been charged a deposit, the Company states that the deposit is credited to their account balance or refunded to them directly, less than any outstanding balance on their account.[17] The Company did not show that it has formal policies and procedures to support the practice of refunding security deposits where it should not have been charged.

Q. Do you have any recommendations?

Yes, while the Company should continue its practices of (1) verifying income levels and number of household members before requiring a security deposit, and (2) refunding security deposits that should not have been charged, the Company should show in rebuttal that it has formal policies and procedures in place addressing these practices in which their employees are trained. If not, the Company should develop and implement formal policies or procedures to formalize these practices and ensure that employees are trained in them.

Q. Do you have any further recommendations?

A. Yes, the Company should permit the customer to decide whether they want to receive the returned security deposit as a refund or credit to their utility account balance and decide whether they want that security deposit to be applied to their outstanding balance.

[17] Citizens response to OCA-VI-10.

Q. Why is your further recommendation reasonable?

A. Any security deposit that was unfairly assessed constitutes funds that rightfully belong to the customer. As such, the customer should retain the sole discretion over how those funds are utilized. For individuals living in poverty, financial management is often a day-to-day challenge. Allowing customers to have access to their own money provides them with greater autonomy and flexibility to address their most pressing needs. This approach may be more beneficial to the customer than applying the funds as credit to a future utility bill, which may not align with their immediate financial needs.

Payment Plans

Q. Does the Company offer payment plans?

A. Yes, the Company offers payment plans and encourages all customers who are having difficulty paying their account balance to discuss payment arrangements, regardless of income level.[18]

Q. How does the Company establish payment arrangements?

A. The Manager of Customer Service directly handles the negotiation and establishment of all long-term payment arrangements, including Commission payment arrangements, and is trained in the relevant Commission regulations and guidelines. Customer Service Representatives are trained and authorized to negotiate short-term arrangements—up to two months—with customers.[19]

[18] Citizens response to OCA-VI-16.
[19] Citizens response to OCA-III-2.

Q. Please describe the payment plans offered by the Company.

A. The Company offers payment plans to their customers, and states that it follows the Commission's Bureau of Consumer Services payment arrangement guidelines in determining the length of the arrangement, as follows:[20]

The monthly arrangement amount due is calculated by dividing the past due balance by the term of the arrangement and adding the average monthly bill.

Arrangement amounts may be adjusted periodically if the customer's average bill changes (either due to a change in average usage, or a change in applicable distribution or generation charges and/or rates). Changes to arrangement amounts are communicated to customers in advance of billing.[21]

Q. Does the Company track how successful its payment arrangements are in recovering payment, customer retention, and reducing late payments?

A. No, the Company does not currently track the success of their payment arrangements in terms of qualifying customers entering into them, customers being able to pay the amounts owed under the terms of the arrangements, and customers' ability to maintain service.[22]

Q. Do you have any concerns about the Company not collecting data on the success of its payment arrangements?

A. Yes, offering payment plans represents an effort to tailor payment obligations in line with a customer's financial means, and promotes fair and continued access to utility services. However, without performance metrics or ongoing analysis, it is difficult to determine

[20] Citizens response to OCA-VI-16.
[21] Citizens response to OCA-VI-16.
[22] Citizens response to OCA-VI-19.

whether these plans are achieving their intended goals, such as improving customer repayment rates or reducing delinquencies. In my professional opinion, the absence of such oversight may reflect a lack of due diligence and raise concerns about the company's ability to manage financial risk or make informed decisions regarding customer repayment strategies.

Q. Do you have any recommendations?

A. Yes, I recommend the Company establish metrics for measuring the success of payment plans and set documented plan policies, including how the Federal Poverty Income ranges are used, what verification is needed for low-income verification, and how payments and terms are calculated. The Company should also make sure payment options are clearly communicated to customers through all means of communication used, especially to low-income customers. In addition, I would also recommend the Company maintain internal controls on the number of payment plans offered, customers enrolled, and successful completion of said payments agreements. The Company should also consider separating plans by income levels. The Company should routinely evaluate its payment arrangements to identify the factors that contribute to the success or failure of the agreements and take steps to internalize the results of that analysis in its implementation of payment arrangements and communications with customers.

Q. Does this conclude your testimony.

A. Yes.

Qualifications of LeeAnn Wise, Senior Regulatory Analyst

Education:

- 2008, Master of Business Administration, Shippensburg University
- 1989, Bachelor of Science, Professional Accountancy, The Pennsylvania State University

Experience:

- January 2025 to Present, Senior Regulatory Analyst, Pennsylvania Office of Consumer Advocate
- January 2021 to January 2024, Senior Manager Finance & Accounting, COMCAST Corporation – Business Services
- January 2008 to January 2021, Manager Finance & Accounting, COMCAST Corporation
- May 1989 to March 2008, Senior Accountant, Penn Credit Corporation

Current Role Description:

I am currently employed by the Pennsylvania Office of Consumer Advocate (OCA) as a Senior Regulatory Analyst. In this position, my responsibilities include reviewing utility company filings with the Pennsylvania Public Utility Commission (Commission) and analyzing the financial, economic, accounting, rate of return, customer service, quality of service, and other technical or policy issues that are relevant to the filings. Additionally, I am tasked with preparing recommendations for the OCA's involvement in utility filings before the Commission, presenting written and oral testimony on behalf of the OCA.

Relevant Training and Experience:

I have over fifteen years of experience overseeing and evaluating planning and analysis for a $40 million customer call center operations, overseeing budgeting, forecasting, and variance analysis to improve financial accuracy and support strategic decision-making by senior leadership. This includes my employment at Comcast Corporation as a Manager and Senior Manager in Finance & Accounting, where I provided oversight of performance metrics, evaluating disputes and time to resolve, call-handle times, average speed of answer, and ensuring customer interactions align with policy standards. My training includes a sound understanding of the best practices in customer service delivery, call tracking protocols, and the importance of consistent documentation to support customer communication and reliability.

Customer Payment Fees 4

Security Deposits 8

Payment Plans 9

Introduction

Q. Please state your name and business address.

A. My name is LeeAnn Wise. My business address is 555 Walnut Street, Forum Place 5th Floor, Harrisburg, Pennsylvania 17101.

Q. By whom are you employed and in what capacity?

A. I am employed as a Regulatory Analyst by the Pennsylvania Office of Consumer Advocate (OCA).

Q. Please describe your educational background and qualifications to provide testimony in this case.

A. I have a Master's Degree in Business Administration from Shippensburg University and a Bachelor of Science degree in Professional Accountancy from the University of Pennsylvania. I have over fifteen years of experience in call center operations, with a strong background managing teams, improving workflow, and delivering outstanding customer service. Additionally, I have received internal training while working for the OCA. See Appendix A for additional information about my qualifications.

Q. What is the purpose of your testimony in this case?

A. I am filing the Direct Testimony in response to the application filed on April 30, 2025, by Valley Energy Inc. (Valley or Company) to increase its base rate for natural gas services. The purpose of my testimony in this case is to address specific concerns regarding processing fees of $3.95 assessed to debit and credit card payments, how and when a security deposit is required, and the current payment arrangements available to the Company's customers.

Q. Have you previously provided testimony before the Pennsylvania Public Utility Commission?

A. No, I have not submitted testimony before the Pennsylvania Public Utility Commission.

Q. Have you prepared Exhibits to accompany your testimony?

A. No.

Summary

Q. Please describe the proposal for a rate increase filed by Valley Energy Inc.

A. Valley proposes to increase its natural gas distribution rates by $1.6 million per year or about a 25.1% increase to distribution annual revenue,[1] with a proposed effective date of June 29, 2025. Based on this filing, residential customers are facing monthly bill increases in distribution rates of up to nearly 30%.[2] More specifically, if approved as filed, residential customers using 76 ccf per month would see increases to their monthly bills by 29.66% on a distribution rate only basis, including the fixed customer charge and volumetric distribution rates.[3] The Company noticed customers that they would see a monthly bill increase by 18.00%, on a total bill basis, including commodity charges; however, the commodity charges are not at issue in this proceeding. Valley's last rate increase was in February 2023 that settled for an annual revenue increase of $958,000.[4]

Q. Please summarize your conclusions and recommendations.

A. First, I recommend eliminating the payment fee imposed on customers paying their bills via credit or debit card through the Company's web-based and mobile application, known as SmartHub, which allows customers to view billing statements, monitor energy usage,

[1] Valley Statement No.1 pg.3 ln. 9-16.
[2] Exhibit HSG-1, Schedule B5-2 pg. 1 ln. 6.
[3] Exhibit_HSG-1, Schedules B5-1-B5-2.
[4] Valley Statement No.4 pg. 3, ln. 11-15.

and make payments electronically. While SmartHub offers convenience and promotes energy monitoring and conservation, the implementation and associated fee structure raise serious concerns. The Company imposes a fee of $3.95 on customers paying their bills via credit or debit card. Today, where electronic and paperless transactions are the norm, accessing an additional fee is contrary to the principles of reasonable utility service.

Next, as to screening for low-income customers when assessing security deposits, I recommend that the Company should show in rebuttal that it has formal policies and procedures in place addressing its practices and that their employees are trained in them. If not, I recommend that the Company develop and implement formal policies or procedures to formalize these practices and ensure that employees are trained in them. I further recommend that the Company permit the customer to decide whether they want to receive the returned security deposit as a refund or credit to their utility account balance.

Finally, I recommend several improvements to ensure the success of customer payment arrangements.

Customer Payment Fees

Q. What is SmartHub?

A. SmartHub is a web and mobile application administered primarily by the Company with support provided as needed by the software vendor and C&T IT.[5] Customers can use SmartHub to pay bills and are assessed a $3.95 fee, view usage, and billing statements.[6]

Q. What are the key functions of the SmartHub application?

A. Valley implemented the SmartHub platform for customers to view their bills, monitor usage data, and process payments electronically. The adoption of technology provides a user-friendly method for customers to access their account using a mobile app or online. Many of the Company's customers have opted to utilize SmartHub to view their account. The tool is helpful in providing customers with a view at their usage trends, which allows for better management energy consumption.

Q. Should the Company continue using SmartHub?

A. Yes, the use of web-based and online applications is highly effective in providing customers with real-time access to their account information. It is my recommendation that the Company continue its utilization of the SmartHub platform and explore the implementation of additional technological enhancements such as alerts for unusually high usage, real-time notifications of outages, and estimated charges based on month-to-date usage, to further improve the quality and efficiency of customer service.

to further improve the quality and efficiency of customer service.

[5] Valley Energy response to OCA-VI-5.
[6] Valley Energy response to OCA-VI-1.

Q. Does Valley charge customers a processing fee for electronic payments?

A. Yes, the company charges a $3.95 fee when a customer pays using SmartHub or via telephone.[7]

Q. Why does the company charge this $3.95 fee?

A. The Company charges $3.95 fee to recover costs incurred from third-party vendor for processing electronic payments.[8]

Q. How much revenue does the Company earn from charging the $3.95 payment fee?

A. In 2024, the amount collected from customers and remitted to the third-party vendor was $66,253.35.[9] The fees are passed directly onto the third-party vendor. Therefore, there would be no revenue earned by Valley.[10]

Q. If the payment fee was eliminated, how much revenue would be forfeited by the Company?

A. The $3.95 fee assessed to customers is passed directly onto the third-party vendor. If the Company were to eliminate the fee, it would not result in any revenue loss. However, the Company would claim the expense as a distribution cost for recovery through rates.

Q. Is the $3.95 processing fee reasonable?

No. The Company accepts checks, money orders, or bank transfers with no processing fees to consumers. A customer can also enroll in direct debit withdrawal from their bank account without a processing fee. However, a fee of $3.95 is assessed when paying using a debit or credit card through SmartHub. Although assessing fees for payments are not prohibited by Chapter 56, the effect is to increase the rates for customers who pay by certain

[7] Valley response to OCA-III-3.
[8] Valley response to OCA-VI-1.
[9] Valley response to OCA-VI-3.
[10] Valley response to OCA-VI-4.

options that are normative in today's economy. While the Company does not benefit from these fees, customers are penalized by the payment conditions imposed, resulting in higher costs for customers choosing to use SmartHub or Interactive Voice Response (IVR) payment compared to other customers. The IVR system allows callers to interact with the company's phone system through voice prompts. The system uses pre-recorded information and routes customers to live agents. In my opinion, this policy could be considered unreasonable discrimination in service. The Company incurs administrative costs for processing cash and check payments, that are passed onto customers through the Company's rate base. Credit and debit charge payments should be handled in the same manner. Customers pay for household goods via credit and debit cards without being assessed an additional fee. Paying your utility bill should not be any different. The policy of charging a fee is quite harmful to lower income customers who may be unbanked and rely on pre-purchase debit cards to make payments.[11]

Q. Do you have any recommendations?

A. Yes. I recommend that the Company should be required to absorb the fee for SmartHub and IVR payment and the revenue requirements be adjusted accordingly. The costs for the third-party vendor are within the Company's control since they are negotiated contracts. The reasonable cost of offering a variety of payment methods without additional customer fees on individual customers should be reflected in the Company's

[11] According to the 2023 FDIC National Survey of Unbanked and Underbanked Households, 5.9% of households were using general purchase reloadable prepaid cards and 49.7% of all households were using nonbank online payment services, such as PayPal, Venmo, and Cash App. The use of prepaid debit cards was much higher among unbanked households. Compared with banked households, substantially higher shares of unbanked households used online payment services and prepaid cards in ways that substitute for some of the core financial transactions that can be conducted using a bank account. - https://www.fdic.gov/household-survey/2023-fdic-national-survey-unbanked-and-underbanked-households-executive-summary.

revenue requirement, like the costs associated with processing checks and accepting payment at authorized locations.

Q. What are the benefits of your recommendations?

A. Providing a payment method through an application like SmartHub provides convenience for the Company and its customers and is considered good practice.[12] Also, when a utility customer makes multiple payments during a month, fees on credit and debit payments undercut their ability to apply funds to the payment of actual utility services. Valley Energy Inc. should accept payment by any lawful means without additional fees and reflect reasonable and prudent costs to process these payments in its revenue requirement. This recommendation is in line with a growing trend among Pennsylvania utilities[13] to eliminate payment fees and reflects the expectation of most customers to use online electronic payments without additional fees.

Q. Did you calculate the revenue adjustments needed if the payment processing fee of $3.95 was eliminated for customers?

A. No, I have not calculated the revenue adjustment. This calculation will be addressed by OCA witness Greg Meyer in his revenue requirement and accounting testimony. See OCA Statement No. 1.

[12] These and other reasons are discussed in NASUCA Resolution 2012-07. https://www.nasuca.org/2012-07-urgingutilities-to-eliminate-convenience-fees-for-paying-utility-bills-with-debit-and-credit-cards-and-urging-appropriatestate-regulatory oversight.

[13] In the last several years Pittsburgh Water (formerly Pittsburgh Water and Sewer Authority), York Water, and Pennsylvania American Water have eliminated credit and debit card payment fees.

Security Deposits

Q. Does the Company charge a security deposit?

A. Yes, The Company assesses a security deposit when the customer does not meet credit score requirements.

Q. Does the company screen to ensure low-income customers do not have to pay a security deposit?

A. Yes, the Company verifies income prior to charging a security deposit and uses Federal Poverty Level guidelines are followed to determine income levels.[14] However, the Company did not show that it has formal policies and procedures to support the practice of verifying income prior to charging a security deposit.

Q. Does the Company refund customers who have paid a security deposit and should not have?

A. Yes, the security deposit would be refunded by crediting the customer's account.[15] Valley's practice does not provide the customer with the choice of receiving a refund or credit to their utility account. Also, the Company did not show that it has formal policies and procedures to support the practice of refunding security deposits where it should not have been charged.

Q. Do you have any recommendations?

A. Yes, the Company should continue its practices of (1) verifying income levels and number of household members before requiring a security deposit, and (2) refunding security deposits that should not have been charged. The Company should show in rebuttal that it has formal policies and procedures in place addressing these practices and

[14] Valley response to OCA-VI-8.
[15] Valley response to OCA-VI-10.

that their employees are trained in them. If not, the Company should develop and implement formal policies or procedures to formalize these practices and ensure that employees are trained in them.

Q. Do you have any further recommendations?

A. Yes, the Company should permit the customer to decide whether they want to receive the returned security deposit as a refund or credit to their utility account balance.

Q. Why is your further recommendation reasonable?

A. Any security deposit that was unfairly assessed constitutes funds that rightfully belong to the customer. As such, the customer should retain the sole discretion over how those funds are utilized. For individuals living in poverty, financial management is often a day-to-day challenge. Allowing customers to have access to their own money provides them with greater autonomy and flexibility to address their most pressing needs. This approach may be more beneficial to the customer than applying the funds as credit to a future utility bill, which may not align with their immediate financial needs.

Payment Plans

Q. Does the Company offer payment plans?

A. Yes, the Company currently offers payment plans based on income levels using Federal Poverty Income (FPI) guidelines to determine the length of time to pay.[16]

Q. How does the Company establish payment arrangements?

A. The customer is asked to provide monthly household income and total number of household members. The Company then uses the FPI charts to determine the length of

[16] Valley response to OCA-VI-17.

time a customer is given to pay.[17] Payment history and past due balances are also considered in estimating a payment arrangement agreement.

Q. Does the Company track the success of their payment arrangements?

A. No, the Company currently does not track the effectiveness of their payment arrangements in terms of qualifying customers entering into them, customers being able to pay the amounts owed under the terms of the arrangements, and customers' ability to maintain service. The Company merely states that it manually monitors the plans for a customer's compliance with the payment terms of the payment arrangement and notifies the customer by telephone or letter of their upcoming payment.[18]

Q. Do you have any concerns about the Company not collecting data on the success of its payment arrangements?

A. Offering payment plans represents an effort to tailor payment obligations that are in line with a customer's financial means and promote fair and continued access to utility services. However, without performance metrics or ongoing analysis, it is difficult to determine whether these plans are achieving their intended goals, such as improving customer repayment rates or reducing delinquencies. In my professional opinion, the absence of such oversight may reflect a lack of due diligence and raise concerns about the company's ability to manage financial risk or make informed decisions regarding customer repayment strategies. In addition, as stated previously, the Company currently tracks plans manually. Manual tracking can lead to human error, omissions, and inconsistencies in record keeping.

[17] Id.
[18] Valley response to OCA-VI-19.

Q. Do you have any recommendations?

A. Yes, I recommend the Company establish metrics for measuring the success of payment plans and set documented plan policies, including how the FPI ranges are used, what verification is needed for low-income verification, and how payments and terms are calculated. The Company should also make sure payment options are clearly communicated to customers through all mean of communication used. In addition, I would also recommend the Company maintain internal controls on the number of payment plans offered, customers enrolled, and successful completion of said payments agreements. The Company should also consider separating plans by income levels. The Company should routinely evaluate its payment arrangements to identify the factors that contribute to the success or failure of the agreements and take steps to internalize the results of that analysis in its implementation of payment arrangements and communications with customers.

Q. Does this conclude your testimony.

A. Yes.

Qualifications of LeeAnn Wise, Senior Regulatory Analyst

Education:

- 2008, Master of Business Administration, Shippensburg University
- 1989, Bachelor of Science, Professional Accountancy, The Pennsylvania State University

Experience:

- January 2025 to Present, Senior Regulatory Analyst, Pennsylvania Office of Consumer Advocate
- January 2021 to January 2024, Senior Manager Finance & Accounting, COMCAST Corporation – Business Services
- January 2008 to January 2021, Manager Finance & Accounting, COMCAST Corporation
- May 1989 to March 2008, Senior Accountant, Penn Credit Corporation

Current Role Description:

I am currently employed by the Pennsylvania Office of Consumer Advocate (OCA) as a Senior Regulatory Analyst. In this position, my responsibilities include reviewing utility company filings with the Pennsylvania Public Utility Commission (Commission) and analyzing the financial, economic, accounting, rate of return, customer service, quality of service, and other technical or policy issues that are relevant to the filings. Additionally, I am tasked with preparing recommendations for the OCA's involvement in utility filings before the Commission, presenting written and oral testimony on behalf of the OCA.

Relevant Training and Experience:

I have over fifteen years of experience overseeing and evaluating planning and analysis for a $40 million customer call center operations, overseeing budgeting, forecasting, and variance analysis to improve financial accuracy and support strategic decision-making by senior leadership. This includes my employment at Comcast Corporation as a Manager and Senior Manager in Finance & Accounting, where I provided oversight of performance metrics, evaluating disputes and time to resolve, call-handle times, average speed of answer, and ensuring customer interactions align with policy standards. My training includes a sound understanding of the best practices in customer service delivery, call tracking protocols, and the importance of consistent documentation to support customer communication and reliability.

Payment Plans 10

Introduction

Q. Please state your name and business address.

A. My name is LeeAnn Wise. My business address is 555 Walnut Street, Forum Place 5th Floor, Harrisburg, Pennsylvania 17101.

Q. By whom are you employed and in what capacity?

A. I am employed as a Regulatory Analyst by the Pennsylvania Office of Consumer Advocate (OCA).

Q. Please describe your educational background and qualifications to provide testimony in this case.

A. I have a Master's Degree in Business Administration from Shippensburg University and a Bachelor of Science degree in Professional Accountancy from the University of Pennsylvania. I have over fifteen years of experience in call center operations, with a strong background managing teams, improving workflow, and delivering outstanding customer service. Additionally, I have received internal training while working for the OCA. See Appendix A for additional information about my qualifications.

Q. What is the purpose of your testimony in this case?

A. I am filing the Direct Testimony in response to the application filed on April 30, 2025, by Wellsboro Electric (Wellsboro or Company) to increase its base rate for electricity services. The purpose of my testimony in this case is to address specific concerns regarding processing fees of $3.95 assessed to debit and credit card payments, how and when a security deposit is required, and the current payment arrangements available to customers.

Q. Have you previously provided testimony before the Pennsylvania Public Utility Commission?

A. No, I have not submitted testimony before the Pennsylvania Public Utility Commission.

Q. Have you prepared Exhibits to accompany your testimony?

A. No.

Summary

Q. Please describe the proposal for a rate increase filed by Wellsboro Electric Co.

A. Wellsboro proposes to increase its electric distribution revenue by $2.9 million per year, or about a 45.3% increase to annual distribution revenue, with a proposed effective date of June 29, 2025. Based on this filing, residential customers are facing monthly bill increases in distribution rates of up to nearly 49.4%.[1] More specifically, if approved as filed, residential customers using 700 kWh per month would see increases to their monthly bills by 49.4% on a distribution rate-only basis, including the fixed customer charge and volumetric distribution rates. The Company noticed customers that they would see a monthly bill increase of 18.4%, on a total rate basis, including commodity charges; however, the commodity charges are not at issue in this proceeding. Wellsboro's last rate increase was in April 2020 and was the result of a rate proceeding that settled for an annual revenue increase of $950,243.[2]

Q. Please summarize your conclusions and recommendations.

A. First, I recommend eliminating the payment fee imposed on customers paying their bills via credit or debit card through the Company's web-based and mobile application, known as SmartHub, which allows customers to view billing statements, monitor energy usage,

[1] Wellsboro Electric Exhibit (HSG-1) Schedule B8-1 pg.1. ln.7.
[2] PUC Opinion and Order Wellsboro R-2019-3008208 pg. 1.

and make payments electronically. While SmartHub offers convenience and promotes energy monitoring and conservation, the implementation and associated fee structure raises serious concerns. The Company imposes a fee of $3.95 on customers paying their bills via credit or debit card. Today, where electronic and paperless transactions are the norm, assessing an additional fee is contrary to the principles of fair utility service.

Next, as to screening for low-income customers when assessing security deposits, I recommend that the Company establish a practice of verifying income levels prior to charging a security deposit and develop and implement formal policies and procedures to formalize these practices and ensure that employees are trained in them. Additionally, the Company should show in rebuttal that it has formal policies and procedures in place to support its practice of refunding security deposits that should not have been charged to low-income customers, including methods of screening and timelines to refund any unneeded security deposits. If the Company does not have such formal policies and procedures, it should develop and implement formal policies or procedures to formalize these practices and ensure that employees are trained in them. I further recommend that the Company permit the customer to decide whether they want to receive the returned security deposit as a refund or credit to their utility account balance.

Finally, I recommend several improvements to ensure the success of customer payment arrangements.

Customer Payment Fees

Q. What is SmartHub?

A. SmartHub is a web and mobile application administered primarily by the Company with support provided as needed by the software vendor and C&T IT.[3] Customers can use SmartHub to pay bills and are assessed a $3.95 fee, view usage, and billing statements.[4]

Q. What are the key functions of the SmartHub application?

A. Wellsboro implemented the SmartHub platform for customers to view their bills, monitor usage data, and process payments electronically. The adoption of technology provides a user-friendly method for customers to access their account using a mobile app or online. Many of the Companies' customers have opted to utilize SmartHub to view their account. The tool is helpful in providing customers with a view at their usage trends, which allows for better management of energy consumption.

Q. Should the Company continue using SmartHub?

A. Yes, the use of web-based and online applications is highly effective in providing customers with real-time access to their account information. It is my recommendation that the Company continue its utilization of the SmartHub platform and explore the implementation of additional technological enhancements such as alerts for unusually high usage, real-time notifications of outages, and estimated charges based on month-to-date usage, to further improve the quality and efficiency of customer service.

[3] Wellsboro response to OCA-VI-5.
[4] Wellsboro response to OCA VI-1.

Q. Does Wellsboro Electric charge customers a processing fee for electronic payments?

A. Yes, the company charges a $3.95 fee when a customer pays using SmartHub or via telephone.[5]

Q. Why does the company charge this $3.95 fee?

A. Yes, The Company charges $3.95 fee to recover costs incurred from the third-party vendor for processing electronic payments.[6]

Q. How much revenue does the Company earn from charging the $3.95 payment fee?

A. In 2024, the amount collected from customers and remitted to the third-party vendor was $35,028.60, with the past three-year average of $32,717.[7] The fees are passed directly onto the third-party vendor. Therefore, there would be no revenue earned by Wellsboro Electric.[8]

Q. If the payment fee was eliminated, how much revenue would be forgone by the Company?

A. The $3.95 fee assessed to customers is passed directly onto the third-party vendor. If the Company were to eliminate the fee, it would not result in any revenue loss. However, the Company would claim the expense as a distribution cost for recovery through rates.

Q. Is the $3.95 processing fee reasonable?

A. No. The Company accepts checks, money orders, or bank transfers with no processing fees to consumers. A customer can also enroll in direct debit withdrawal from their bank account with no processing fees. However, a fee of $3.95 is assessed when paying using a debit or credit card through SmartHub. Although assessing fees for payments are not

[5] Wellsboro Electric response to OCA-III-3.
[6] Wellsboro Electric response to OCA-VI-1.
[7] Wellsboro Electric response to OCA-VI-3.
[8] Wellsboro Electric response to OCA-VI-4

prohibited by Chapter 56, the effect is to increase the rates for customers who pay by certain options that are normative in today's economy. While the Company does not benefit from these fees, customers are penalized by the imposed payment conditions, resulting in higher costs for customers choosing to use SmartHub or Interactive Voice Response (IVR) payment compared to other customers. The IVR system allows callers to interact with the company's phone system through voice prompts. The system uses pre-recorded information and routes customers to live agents. In my opinion, this policy is unreasonable and discriminates against those customers using credit and debit cards to pay for their service. The Company incurs administrative costs for processing cash and check payments, that are passed onto customers through the Company's rate base. Credit and debit charge payments should be handled in the same manner. Customers pay for household goods via credit and debit cards without being assessed an additional fee. Paying your utility bill should not be any different. The policy of charging a fee is quite harmful to lower income customers who may be unbanked and rely on pre-purchase debit cards to make payments.[9]

Q. Do you have any recommendations?

A. Yes. I recommend that the Company should be required to absorb the fee for SmartHub and IVR payment and the revenue requirements be adjusted accordingly. The costs for the third-party vendor are within the Company's control since they are negotiated contracts. The reasonable cost of offering a variety of payment methods without

[9] According to the 2023 FDIC National Survey of Unbanked and Underbanked Households, 5.9% of households were using general purchase reloadable prepaid cards and 49.7% of all households were using nonbank online payment services, such as PayPal, Venmo, and Cash App. The use of prepaid debit cards was much higher among unbanked households. Compared with banked households, substantially higher shares of unbanked households used online payment services and prepaid cards in ways that substitute for some of the core financial transactions that can be conducted using a bank account. - https://www.fdic.gov/household-survey/2023-fdic-national-survey-unbanked-and-underbanked-households-executive-summary.

additional customer fees should be reflected in the Company's revenue requirement, the same as the costs associated with processing checks and accepting payment in authorized locations.

Q. What are the benefits of your recommendations?

A. Providing a payment method through an application like SmartHub provides convenience for the Company and its customers and is considered good practice.[10] However, when a utility customer makes multiple payments during a month, fees on credit and debit payments undercut their ability to apply funds to the payment of actual utility services. Wellsboro should accept payment by any lawful means without additional fees and reflect reasonable and prudent costs to process these payments in its revenue requirement. This recommendation is in line with a growing trend among Pennsylvania utilities[11] to eliminate payment fees and reflects the expectation of most customers to use electronic payments without additional fees.

Q. Did you calculate the revenue adjustments needed if the payment processing fee of $3.95 was eliminated for customers?

A. No, I have not calculated the revenue adjustment. This calculation will be addressed by OCA witness Greg Meyer in his revenue requirement and accounting testimony. See OCA Statement No. 1.

[10] These and other reasons are discussed in NASUCA Resolution 2012-07. https://www.nasuca.org/2012-07-urgingutilities-to-eliminate-convenience-fees-for-paying-utility-bills-with-debit-and-credit-cards-and-urging-appropriatestate-regulatory oversight.

[11] In the last several years Pittsburgh Water and Sewer Authority, York Water, and Pennsylvania American Water have eliminated credit card and debit card payment fees.

Security Deposits

Q. Does the Company charge a security deposit?

A. Yes, The Company assesses a security deposit when the customer does not meet credit score requirements.

Q. Does the company screen to ensure low-income customers do not have to pay a security deposit?

A. No, the Company does not verify customer income levels prior to requiring a security deposit.[12] Additionally, the Company did not show that it has formal policies and procedures to support the practice of verifying income prior to charging a security deposit.

Q. Do you have any comments?

A. Yes, not having a practice or policy to screen customers for low-income presents a hardship on these customers, many of whom do not have the means to make a security deposit.

Q. Does the Company refund customers who have paid a security deposit and should not have?

A. Yes, security deposits are refunded when the customer has provided verified low-income documentation.[13] However, the Company did not say how the security deposit is returned (either as a refund or applied to the account balance) and it did not show that it has formal policies and procedures to support the practice of refunding security deposits where it should not have been charged.

Q. Do you have any recommendations?

[12] Wellsboro Electric response to OCA-VI-8.
[13] Wellsboro Electric response to OCA-VI-10.

A. Yes, the Company should establish a practice of verifying income levels prior to charging a security deposit and develop and implement formal policies and procedures to formalize these practices and ensure that employees are trained in them. Additionally, the Company should show in rebuttal that it has formal policies and procedures in place to support its practice of refunding security deposits that should not have been charged to low-income customers, including methods of screening and timelines to refund any unneeded surety deposits. If the Company does not have such formal policies and procedures, it should develop and implement formal policies or procedures to formalize these practices and ensure that employees are trained in them.

Q. Do you have any further recommendations?

A. Yes, the Company should permit the customer to decide whether they want to receive the returned security deposit as a refund or credit to their utility account balance.

Q. Why is your further recommendation reasonable?

A. Any security deposit that was unfairly assessed constitutes funds that rightfully belong to the customer. As such, the customer should retain the sole discretion over how those funds are utilized. For individuals living in poverty, financial management is often a day-to-day challenge. Allowing customers to have access to their own money provides them with greater autonomy and flexibility to address their most pressing needs. This approach may be more beneficial to the customer than applying the funds as credit to a future utility bill, which may not align with their immediate financial needs.

Payment Plans

Q. Does the Company offer payment plans?

A. Yes, the Company currently offers payment plans based on income levels using the Federal Poverty Income chart to determine the length of time to pay.

Q. How does the Company establish payment arrangements?

A. The payment arrangement is determined by the unpaid balance, the customer's ability to pay, the customer's payment history, income level, and the length of time the bill accumulated. Special consideration may be given if the customer has experienced a change in circumstance. All arrangements are based on the customer's average monthly bill combined with a portion of their outstanding balance according to their income level. Customers at or below 150% FPIG, are eligible for a payment arrangement of their twelve-month average plus $15.00 to be applied toward the arrears. Payment period for customers whose income is higher than 150% FPIG is calculated based on the following:

- 36 months for income 150% or below 250%
- 12 months for income at 250% or below 300%
- 6 months for income exceeding 300% FPIG or higher [14]

Q. Does the Company track how successful its payment arrangements are in recovering payment, customer retention, and reducing late payments?

A. No, the Company does not currently track the success of their payment arrangements[15] in terms of qualifying customers entering into them, customers being able to pay the amounts owed under the terms of the arrangements, and customers' ability to maintain service.

[14] Wellsboro Electric response to OCA-VI-16.
[15] Wellsboro Electric response to OCA-VI-19.

Q. Do you have any concerns about the Company not collecting data on the effectiveness of its payment arrangements?

A. Yes, offering payment plans represents an effort to tailor payment obligations in line with a customer's financial means, and promotes fair and continued access to utility services. However, without performance metrics or ongoing analysis, it is difficult to determine whether these plans are achieving their intended goals, such as improving customer repayment rates or reducing delinquencies. In my professional opinion, the absence of such oversight may reflect a lack of due diligence and raise concerns about the company's ability to manage financial risk or make informed decisions regarding customer repayment strategies.

Q. Do you have any recommendations?

A. Yes, I recommend the Company establish metrics for measuring the success of payment plans and set documented plan policies, including how the Federal Poverty Income ranges are used, what verification is needed for low-income verification, and how payments and terms are calculated. The Company should also make sure payment options are clearly communicated to customers through all means of communication used, especially to low-income customers. In addition, I would also recommend the Company maintain internal controls on the number of payment plans offered, customers enrolled, and successful completion of said payments agreements. The Company should also consider separating plans by income levels. The Company should routinely evaluate its payment arrangements to identify the factors that contribute to the success or failure of the agreements and take steps to internalize the results of that analysis in its implementation of payment arrangements and communications with customers.

Q. Does this conclude your testimony.

A. Yes.

Qualifications of LeeAnn Wise, Senior Regulatory Analyst

Education:

- 2008, Master of Business Administration, Shippensburg University
- 1989, Bachelor of Science, Professional Accountancy, The Pennsylvania State University

Experience:

- January 2025 to Present, Senior Regulatory Analyst, Pennsylvania Office of Consumer Advocate
- January 2021 to January 2024, Senior Manager Finance & Accounting, COMCAST Corporation – Business Services
- January 2008 to January 2021, Manager Finance & Accounting, COMCAST Corporation
- May 1989 to March 2008, Senior Accountant, Penn Credit Corporation

Current Role Description:

I am currently employed by the Pennsylvania Office of Consumer Advocate (OCA) as a Senior Regulatory Analyst. In this position, my responsibilities include reviewing utility company filings with the Pennsylvania Public Utility Commission (Commission) and analyzing the financial, economic, accounting, rate of return, customer service, quality of service, and other technical or policy issues that are relevant to the filings. Additionally, I am tasked with preparing recommendations for the OCA's involvement in utility filings before the Commission, presenting written and oral testimony on behalf of the OCA.

Relevant Training and Experience:

I have over fifteen years of experience overseeing and evaluating planning and analysis for a $40 million customer call center operations, overseeing budgeting, forecasting, and variance analysis to improve financial accuracy and support strategic decision-making by senior leadership. This includes my employment at Comcast Corporation as a Manager and Senior Manager in Finance & Accounting, where I provided oversight of performance metrics, evaluating disputes and time to resolve, call-handle times, average speed of answer, and ensuring customer interactions align with policy standards. My training includes a sound understanding of the best practices in customer service delivery, call tracking protocols, and the importance of consistent documentation to support customer communication and reliability.

Rebuttal Testimony of Greg R. Meyer

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Greg R. Meyer. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q WHAT IS YOUR OCCUPATION?

A I am a consultant in the field of public utility regulation and a Senior Principal with the firm of Brubaker & Associates, Inc. ("BAI"), energy, economic and regulatory consultants.

Q ARE YOU THE SAME GREG R. MEYER WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR REBUTTAL TESTIMONY.

A My Rebuttal Testimony will address certain issues that the OCA would support and the revenue requirement impact from those issues. I am not addressing all issues of agreement due to the value of the issues, but the OCA will support those adjustments in either settlement negotiations or at the rate case hearings.

My silence regarding any issue should not be construed as an endorsement of or acquiescence to positions advanced by Citizens' Electric Company of Lewisburg, PA ("Citizens").

Q WHAT ADJUSTMENTS WILL YOU BE DISCUSSING IN YOUR REBUTTAL TESTIMONY?

A My Rebuttal Testimony will address the following issues:

- The adoption of Citizens' agreed to updates.
- The adoption of the 2026 state income tax rate of 7.49%.
- The normalization versus amortization of rate case expense and rate base treatment.

Q HAVE YOU PREPARED EXHIBIT GRM-R1 (CITIZENS) TO SHOW THE IMPACTS OF THESE TWO ISSUES ON THE OCA'S PROPOSED REVENUE REQUIREMENT?

A Yes. I have prepared Exhibit GRM-R1 (Citizens) that shows the revenue requirement impact from the issues that the OCA is supporting.

Table GRM-R1 (Citizens)

OCA Revenue Requirement Adjustments

Line	Description	Amount
1	Company Proposed Revenue Requirement Increase[1]	$ 1,794,525
	OCA Adjustments:	
2	Return on Equity	$ (268,215)
3	Rate Revenue	$ (56,136)
4	Uncollectible Expense	$ (5,111)
5	Labor	$ (125,320)
6	Acct 593 and 920	$ (272,331)
7	Sponsorship and Lobbying	$ (2,109)

13	Total OCA Adjustments	$ (867,492)
14	OCA Proposed Revenue Requirement Increase	$ 927,033

Source:
[1]OCA-I-1 Attachment A (Schedule A-D) Tab "C1."

CITIZENS' UPDATES

Q HAS CITIZENS IDENTIFIED ANY ISSUES THAT THEY PROPOSE TO UPDATE THAT WOULD LOWER ITS REQUESTED REVENUE REQUIREMENT?

A Yes, according to the Bureau of Investigation and Enforcement ("I&E") witness Zachari Walker, Citizens has proposed to update its revenue requirement to reflect

adjustments to rate case expense and generation supply costs that were erroneously included in office supplies and expenses. The rate case adjustment reduces expense by $8,298 and the office supplies adjustment reduces expense by $103,132.[1] Both of these adjustments are reflected in my Exhibit GRM-R1 (Citizens).

INCOME TAX RATE

Q HAVE YOU READ THE DIRECT TESTIMONY OF THE OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA") WITNESS JUSTIN FARR AND I&E WITNESS ZACHARI WALKER ADDRESSING THE STATE INCOME TAX RATE?

A Yes, I have.

Q WHAT DO THESE WITNESSES PROPOSE TO USE FOR THE STATE INCOME TAX RATE?

A Both witnesses propose to use the state income tax rate of 7.49% which will be in effect in 2026.[2] Both witnesses discuss that on July 8, 2022, Pennsylvania House Bill 1342 was signed into law as Act 53 of 2022. Act 53 lowered the state corporate income tax rate over several years to a 4.99% state corporate tax rate effective in 2031.

[1]Walker Direct Testimony (Citizens), I&E Statement 1, pages 13-16.
[2]Walker Direct Testimony (Citizens), I&E Statement 1, page 25.

Q DO YOU SUPPORT THIS POSITION?

A Yes, the 2026 state corporate tax rate of 7.49% should be used to calculate Citizens' revenue requirement. I have incorporated the 2026 state corporate tax rate (7.49%) in my revenue requirement calculation and reflected the impact on my Exhibit GRM-R1 (Citizens). The new corporate tax rate lowers Citizens' revenue requirement by $35,038. I would also note that this adjustment includes the reduction in the cash working capital balance required for this revenue requirement issue.

NORMALIZATION OF RATE CASE EXPENSES

Q HAVE YOU READ THE REBUTTAL TESTIMONY OF I&E WITNESS ZACHARI WALKER DISCUSSING RATE CASE EXPENSE?

A Yes, I have.

Q PLEASE SUMMARIZE MR. WALKER'S POSITION.

A Mr. Walker supports normalizing rate case expense over the projected period of time that will occur between Citizens' rate cases. Mr. Walker argues correctly that rate case expense should be normalized instead of establishing an amortization period. Mr. Walker also recognizes that rate case expense is an operating expense that is incurred periodically. Normalizing this expense for equal recovery over a multi-year period is the proper ratemaking principle. I support normalizing rate case expense. I support Citizens' and Mr. Walker's three-year rate case interval for normalizing rate case expense.[3]

[3]Walker Direct Testimony (Citizens), I&E Statement 1, page 9.

Q WHAT RATEMAKING TREATMENT DID CITIZENS PROPOSE?

A According to Mr. Walker, Citizens proposed to amortize rate case expense over a multi-year period. Given that Citizens chose to amortize rate case expense, it also is requesting rate base treatment for the unamortized rate case expense balance.

Q ARE YOU SUPPORTIVE OF INCLUDING THE UNAMORTIZED PORTION OF RATE CASE EXPENSE IN CITIZENS' RATE BASE?

A Absolutely not. Rate case expense is a normal operating expense of the utility. Normalizing the rate case expense recovery over a multi-year period is the proper method to collect these recurring, but not annual expenses. By including rate case expense in rate base, Citizens' shareholders would earn a profit on a normal and recuring expense item. I am opposed to enhancing the profits of Citizens' shareholders for the inclusion of rate case expense in rate base. Furthermore, rate cases also provide benefits for Citizens' shareholders. There is no need to reward shareholders further by allowing a profit return on those expenses.

Q WHAT IS THE REVENUE REQUIREMENT IMPACT FOR DISALLOWING RATE BASE TREATMENT OF RATE CASE EXPENSE?

A Removing the unamortized balance of rate case expense from Citizens' rate base would lower Citizens' revenue requirement by $26,475.

CONCLUSION

Q DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A Yes, it does.

VERIFICATION

I, Greg R. Meyer, hereby state that the facts above set forth in my Rebuttal Testimony, OCA Statement 1R, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

Rebuttal Testimony of Greg R. Meyer

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Greg R. Meyer. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q WHAT IS YOUR OCCUPATION?

A I am a consultant in the field of public utility regulation and a Senior Principal with the firm of Brubaker & Associates, Inc. ("BAI"), energy, economic and regulatory consultants.

Q ARE YOU THE SAME GREG R. MEYER WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR REBUTTAL TESTIMONY.

A My Rebuttal Testimony will address certain issues that the OCA would support and the revenue requirement impact from those issues. I am not addressing all issues of agreement due to the value of the issues, but the OCA will support those adjustments in either settlement negotiations or at the rate case hearings.

My silence regarding any issue should not be construed as an endorsement of or acquiescence to positions advanced by Valley Energy, Inc. ("Valley").

Q WHAT ADJUSTMENTS WILL YOU BE DISCUSSING IN YOUR REBUTTAL TESTIMONY?

A My Rebuttal Testimony will address the following issues:

- The adoption of Valley's updates.
- The adoption of the 2026 state income tax rate of 7.49%.
- The normalization versus amortization of rate case expense and rate base treatment.

Q HAVE YOU PREPARED EXHIBIT GRM-R1 (VALLEY) TO SHOW THE IMPACTS OF THESE TWO ISSUES ON THE OCA'S PROPOSED REVENUE REQUIREMENT?

A Yes. I have prepared Exhibit GRM-R1 (Valley) that shows the revenue requirement impact from the issues the OCA is supporting.

Table GRM-1 (Valley)

OCA Revenue Requirment Adjustments

Line	Description	Amount
1	Company Proposed Revenue Requirement Increase[1]	$ 1,626,099
	OCA Adjustments:	
2	Return on Equity	$ (375,363)
3	Labor	$ (19,892)

10	OCA Proposed Revenue Requirement Increase	$ 927,429

Source:
[1]OCA-I-1 Attachment A (Schedule A-D) Tab "C1."

VALLEY'S UPDATES

Q HAS VALLEY IDENTIFIED ANY ISSUES THAT THEY PROPOSE TO UPDATE THAT WOULD LOWER ITS REQUESTED REVENUE REQUIREMENT?

A Yes, according to the Bureau of Investigation and Enforcement ("I&E") witness Christine Wilson, Valley has indicated that incorrect source documents were used to develop its revenue requirement. Valley is in the process of updating its filing to reflect

corrections of the source documents.[1] Valley indicated that adjustments and potential errors could impact the following accounts:

- Mains and Services (Account #874)
- Ind./Com. Meters, Reg. (Account #876)
- Meters & Reg.-City Gate (Account #877)
- Meters & House Reg. (Account #878)
- Customer Installations (Account #879)
- Other Operations Expense (Account #880)
- Meas. & Reg. – Gen. (Account #889)

I will update my Exhibit GRM-R1 once I receive quantification of the errors.

INCOME TAX RATE

Q HAVE YOU READ THE DIRECT TESTIMONY OF THE OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA") WITNESS JUSTIN FARR AND I&E WITNESS CHRISTINE WILSON ADDRESSING THE STATE INCOME TAX RATE?

A Yes, I have.

[1]Wilson Direct Testimony (Valley), I&E Statement 1, page 32, lines 10-13.

Q WHAT DO THESE WITNESSES PROPOSE TO USE FOR THE STATE INCOME TAX RATE?

A Both witnesses propose to use the state income tax rate of 7.49% which will be in effect in 2026.[2] Both witnesses discuss that on July 8, 2022, Pennsylvania House Bill 1342 was signed into law as Act 53 of 2022. Act 53 lowered the state corporate income tax rate over several years to a 4.99% state corporate tax rate effective in 2031.

Q DO YOU SUPPORT THIS POSITION?

A Yes, the 2026 state corporate tax rate of 7.49% should be used to calculate Valley's revenue requirement. I have incorporated the 2026 state corporate tax rate (7.49%) in my revenue requirement calculation and reflected the impact on my Exhibit GRM-R1 (Valley). The new corporate tax rate decreases Valley's revenue requirement by $15,416. I would also note that this adjustment includes the effects in the cash working capital balance required for this revenue requirement issue.

NORMALIZATION OF RATE CASE EXPENSES

Q HAVE YOU READ THE REBUTTAL TESTIMONY OF I&E WITNESS CHRISTINE WILSON DISCUSSING RATE CASE EXPENSE?

A Yes, I have.

[2]Wilson Direct Testimony (Valley), I&E Statement 1, page 31.

Q PLEASE SUMMARIZE MS. WILSON'S POSITION.

A Ms. Wilson supports normalizing rate case expense over the projected period of time that will occur between Valley's rate cases. Ms. Wilson argues correctly that rate case expense should be normalized instead of establishing an amortization period. Ms. Wilson also recognizes that rate case expense is an operating expense that is incurred periodically. Normalizing this expense for equal recovery over a multi-year period is the proper ratemaking principle. I support normalizing rate case expense. I support Valley's proposed three-year rate case interval for normalizing rate case expense based on the Company's recent two rate case filings.

Q WHAT RATEMAKING TREATMENT DID VALLEY PROPOSE?

A According to Ms. Wilson, Valley proposed to amortize rate case expense over a multi-year period. Given that Valley chose to amortize rate case expense, it also is requesting rate base treatment for the unamortized rate case expense balance.

Q ARE YOU SUPPORTIVE OF INCLUDING THE UNAMORTIZED PORTION OF RATE CASE EXPENSE IN VALLEY'S RATE BASE?

A Absolutely not. Rate case expense is a normal operating expense of the utility. Normalizing the rate case expense recovery over a multi-year period is the proper method to collect these recurring, but not annual expenses. By including rate case expense in rate base, Valley's shareholders would earn a profit on a normal and recuring expense item. I am opposed to enhancing the profits of Valley's shareholders for the inclusion of rate case expense in rate base. Furthermore, rate cases also provide benefits

for Valley's shareholders. There is no need to reward shareholders further by allowing a profit return on those expenses.

Q WHAT IS THE REVENUE REQUIREMENT IMPACT FOR DISALLOWING RATE BASE TREATMENT OF RATE CASE EXPENSE?

A Removing the unamortized balance of rate case expense from Valley's rate base would lower Valley's revenue requirement by $20,785.

CONCLUSION

Q DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A Yes, it does.

541217

VERIFICATION

I, Greg R. Meyer, hereby state that the facts above set forth in my Rebuttal Testimony, OCA Statement 1-R, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

Rebuttal Testimony of Greg R. Meyer

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Greg R. Meyer. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q WHAT IS YOUR OCCUPATION?

A I am a consultant in the field of public utility regulation and a Senior Principal with the firm of Brubaker & Associates, Inc. ("BAI"), energy, economic and regulatory consultants.

Q ARE YOU THE SAME GREG R. MEYER WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR REBUTTAL TESTIMONY.

A My Rebuttal Testimony will address certain issues that the OCA would support and the revenue requirement impact from those issues. I am not addressing all issues of agreement due to the value of the issues, but the OCA will support those adjustments in either settlement negotiations or at the rate case hearings.

My silence regarding any issue should not be construed as an endorsement of or acquiescence to positions advanced by Wellsboro Electric Company ("Wellsboro").

Q WHAT ADJUSTMENTS WILL YOU BE DISCUSSING IN YOUR REBUTTAL TESTIMONY?

A My Rebuttal Testimony will address the following issues:

- The adoption of the 2026 state income tax rate of 7.49%.
- The normalization versus amortization of rate case expense and rate base treatment.

Q HAVE YOU PREPARED EXHIBIT GRM-R1 (WELLSBORO) TO SHOW THE IMPACTS OF THESE TWO ISSUES ON THE OCA'S PROPOSED REVENUE REQUIREMENT?

A Yes. I have prepared Exhibit GRM-R1 (Wellsboro) that shows the revenue requirement impact from the two issues that the OCA is supporting.

Table GRM-R1 (Wellsboro)

OCA Revenue Requirement Adjustments

Line	Description	Amount
1	Company Proposed Revenue Requirement Increase[1]	$ 2,899,388
	OCA Adjustments:	
2	Return on Equity	$ (405,756)
3	Rate Revenue	$ (28,210)
4	Labor	$ (139,491)
5	Acct 920 and 932	$ (152,463)
6	Sponsorship and Lobbying	$ (2,389)
7	Credit Card Fee	$ 37,645
8	Income Tax Rate	$ (43,372)
9	Rate Case Reg Liability	$ (25,938)
10	Rate Case Normalization Period	$ (47,444)
11	Total OCA Adjustments	$ (807,419)
12	OCA Proposed Revenue Requirement Increase	$ 2,091,970

INCOME TAX RATE

Q HAVE YOU READ THE DIRECT TESTIMONY OF THE OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA") WITNESS JUSTIN FARR AND THE BUREAU OF INVESTIGATION AND ENFORCEMENT ("I&E") WITNESS ZACHARI WALKER ADDRESSING THE STATE INCOME TAX RATE?

A Yes, I have.

Q WHAT DO THESE WITNESSES PROPOSE TO USE FOR THE STATE INCOME TAX RATE?

A Both witnesses propose to use the state income tax rate of 7.49% which will be in effect in 2026.[1] Both witnesses discuss that on July 8, 2022, Pennsylvania House Bill 1342 was signed into law as Act 53 of 2022. Act 53 lowered the state corporate income tax rate over several years to a 4.99% state corporate tax rate effective in 2031.

Q DO YOU SUPPORT THIS POSITION?

A Yes, the 2026 state corporate tax rate of 7.49% should be used to calculate Wellsboro's revenue requirement. I have incorporated the 2026 state corporate tax rate (7.49%) in my revenue requirement calculation and reflected the impact on my Exhibit GRM-R1 (Wellsboro). The new corporate tax rate lowers Wellsboro's revenue requirement by $43,372. I would also note that this adjustment includes the reduction in the cash working capital balance required for this revenue requirement issue.

NORMALIZATION OF RATE CASE EXPENSES

Q HAVE YOU READ THE REBUTTAL TESTIMONY OF I&E WITNESS ZACHARI WALKER DISCUSSING RATE CASE EXPENSE?

A Yes, I have.

[1]Walker Direct Testimony (Wellsboro), I&E Statement 1, page 22.

Q PLEASE SUMMARIZE MR. WALKER'S POSITION.

A Mr. Walker supports normalizing rate case expense over the projected period of time that will occur between Wellsboro's rate cases. Mr. Walker argues correctly that rate case expense should be normalized instead of establishing an amortization period. Mr. Walker also recognizes that rate case expense is an operating expense that is incurred periodically. Normalizing this expense for equal recovery over a multi-year period is the proper ratemaking principle. I support normalizing rate case expense. I support Mr. Walker's five-year period for normalizing rate case expenses based on the Company's three recent rate case filing intervals.[2] This results in a ratemaking adjustment of $47,444.

Q WHAT RATEMAKING TREATMENT DID WELLSBORO PROPOSE?

A According to Mr. Walker, Wellsboro proposed to amortize rate case expense over a multi-year period. Given that Wellsboro chose to amortize rate case expense, it also is requesting rate base treatment for the unamortized rate case expense balance.

Q ARE YOU SUPPORTIVE OF INCLUDING THE UNAMORTIZED PORTION OF RATE CASE EXPENSE IN WELLSBORO'S RATE BASE?

A Absolutely not. Rate case expense is a normal operating expense of the utility. Normalizing the rate case expense recovery over a multi-year period is the proper method to collect these recurring, but not annual expenses. By including rate case expense in rate base, Wellsboro's shareholders would earn a profit on a normal and

[2]Walker Direct Testimony (Wellsboro), I&E Statement 1, page 10.

recuring expense item. I am opposed to enhancing the profits of Wellsboro's shareholders for the inclusion of rate case expense in rate base. Furthermore, rate cases also provide benefits for Wellsboro's shareholders. There is no need to reward shareholders further by allowing a profit return on those expenses.

Q WHAT IS THE REVENUE REQUIREMENT IMPACT FOR DISALLOWING RATE BASE TREATMENT OF RATE CASE EXPENSE?

A Removing the unamortized balance of rate case expense from Wellsboro's rate base would lower Wellsboro's revenue requirement by $25,938.

CONCLUSION

Q DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A Yes, it does.

Table GRM-R1 (Wellsboro)

OCA Revenue Requirement Adjustments

Line	Description	Amount
1	Company Proposed Revenue Requirement Increase[1]	$ 2,899,388
	OCA Adjustments:

Rebuttal Testimony of Christopher C. Walters

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Christopher C. Walters. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q WHAT IS YOUR OCCUPATION?

A I am a consultant in the field of public utility regulation and a Principal with the firm of Brubaker & Associates, Inc. ("BAI"), energy, economic and regulatory consultants.

Q ARE YOU THE SAME CHRISTOPHER C. WALTERS WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR REBUTTAL TESTIMONY.

A The purpose of my Rebuttal Testimony in this proceeding is to address the recommendations relating to the recommended return on equity ("ROE") of 10.78% offered in the Direct Testimony of Bureau of Investigation & Enforcement ("I&E") witness Christopher Keller as well as the proxy ROE of 10.00% used in the testimony of Mr. Justin Farr on behalf of the Office of Small Business Advocate ("OSBA").

My silence on any particular issue should not be construed as tacit agreement or an endorsement of another party's position.

I. SUMMARY

Q PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.

A My Rebuttal Testimony will discuss areas of disagreement with Mr. Keller and some of the errors that are present in Mr. Keller's analysis which have ultimately led him to his recommended ROE of 10.78%. I will demonstrate that Mr. Keller's recommendations are unsupported and, at times, are even contradicted by his own testimony. I conclude that Mr. Keller's recommended ROE and capital structure are excessive. Finally, I reiterate my recommendations including the Citizens' Electric Company of Lewisburg, PA ("Citizens" or "Company") be awarded an ROE of 9.50% and an equity ratio of 48.5%.

II. RESPONSE TO MR. KELLER

Q HAVE YOU REVIEWED MR. KELLER'S DIRECT TESTIMONY?

A Yes. Mr. Keller's Direct Testimony explains that he used a single constant growth Discounted Cash Flow ("DCF") model as his primary method to estimate Citizens' cost of common equity. He presents a Capital Asset Pricing Model ("CAPM") analysis but states that it is only a comparison and not part of his recommendation. Using a proxy group of electric utilities that operate in deregulated states, Mr. Keller calculated a spot dividend yield of roughly 4.04% and an average earnings growth rate of 6.92%. After he removes a 13.60% projected growth rate for Dominion Energy, his adjusted average growth rate is 6.74%. Applying these inputs in the constant growth DCF formula produced a recommended cost of equity of 10.78%. He then adopted Citizens' proposed capital structure and estimates that this 10.78% ROE yields an overall rate of return of about 7.76%.

Q IS THERE ANY OVERALL AGREEMENT BETWEEN YOU AND MR. KELLER?

A Yes. Both Mr. Keller and I reject several aspects of the Citizens' witness Mr. D'Ascendis' analysis. In particular, we agree that Mr. D'Ascendis' use of an Empirical CAPM ("ECAPM") is not a reasonable method for estimating ROE; that his proposed size-premium adjustment is inappropriate for regulated utilities because empirical evidence shows size premiums are not present in utilities; and that his management-performance adder (or "performance incentive") is not justified. We also

share concerns about the risk-free rate and market-risk premium assumptions embedded in Mr. D'Ascendis' CAPM.

Q PLEASE SUMMARIZE YOUR CONCERNS WITH MR. KELLER'S ANALYSIS AND RECOMMENDATIONS.

A My concerns with Mr. Keller's analysis are as follows:

- Similar to Mr. D'Ascendis, Mr. Keller's ROE recommendation of 10.78% would be the highest allowed ROE for an electric distribution utility since at least 2010.
- Mr. Keller's proxy group results and recommended ROE are severely disjointed from industry-wide norms for a distribution-only electric utility and even vertically integrated electric utilities and contradicts his own critique of inflated ROEs stemming from overreliance on CAPM and other market-based models; in my opinion, this shows error in his process of forming his opinion to recommend an ROE of 10.78%.
- Mr. Keller's constant growth DCF model is based on excessive growth rates, demonstrating error in judgment and necessitating the consideration of a multi-stage DCF model.
- Mr. Keller's recommended ROE is subject to significant biases and lacks thoroughness given his recommendation is based on the application of a single flawed model.

A. Mr. Keller's ROE Recommendation Exceeds Relevant Benchmarks

Q IS MR. KELLER'S RECOMMENDED ROE OF 10.78% CONSISTENT WITH RELEVANT BENCHMARKS?

A No. Mr. Keller's recommended ROE of 10.78% is inconsistent with and a deviation from all relevant benchmarks. According to compiled data from Regulatory Research Associates, a division of S&P Global, the average authorized ROE for electric distribution utilities since 2010 has not exceeded 10.0% in any given year during that

time. In Table CCW-1R, I have provided the annual average and maximum authorized ROE for each year since 2010 for both distribution and vertically integrated electric utilities.

TABLE CCW-1R

Historical Electric ROE Comparison

	Electric Distribution		Vertically Integrated	
Year	Average - %	Maximum - %	Average - %	Maximum - %
2010	9.98	10.30	10.42	11.90
2011	9.85	10.50	10.33	12.88
2012	9.75	10.40	10.10	10.50
2013	9.37	9.84	9.95	10.95
2014	9.49	9.75	9.94	10.40
2015	9.17	9.75	9.75	10.30
2016	9.31	9.90	9.77	10.55
2017	9.43	10.00	9.80	11.95
2018	9.38	10.00	9.68	10.00
2019	9.37	9.70	9.74	10.50
2020	9.10	9.70	9.55	10.02
2021	9.04	9.70	9.53	10.60
2022	9.11	10.00	9.75	10.80
2023	9.24	9.70	9.80	11.45
2024	9.53	9.76	9.84	10.50
2025	9.47	9.75	9.74	10.20
Annual Average	9.41	9.92	9.86	10.84

Source: Regulatory Research Associates.

Notably, since 2010, the annual average authorized ROE for distribution-only electric utilities has been roughly 9.41% and, in 2010, the average authorized ROE for electric distribution utilities was 9.98%, and that was the closest to 10.0% in recent history. Since 2023, the average authorized ROE for distribution-only electric utilities has ranged from 9.24% to 9.53%, and the year-to-date average in 2025 was just 9.47%. In fact, the highest authorized ROE to be awarded to a distribution-only electric utility

since 2010 was 10.50% awarded to Commonwealth Edison in Illinois in 2011 when the national average was 9.85% for electric distribution utilities.

Q DO YOU HAVE A RECOMMENDATION GIVEN THE ABOVE?

A Yes. Given that Mr. Keller's recommended 10.78% is far removed from any reasonable observable benchmark for an electric distribution utility like Citizens, I recommend that Mr. Keller's recommendation be rejected.

B. Mr. Keller's ROE Recommendation is Disjointed from Industry Norms

Q WHAT OTHER CONCERNS DO YOU HAVE AS IT RELATES TO MR. KELLER'S RECOMMENDED ROE OF 10.78%?

A Mr. Keller's recommended ROE of 10.78% is disconnected from prevailing industry norms, particularly for distribution-only electric utilities. While he attempts to account for deregulated market conditions by restricting his proxy group to companies operating in states with electric retail choice, his final ROE recommendation is inappropriately high for a distribution-only electric utility. In fact, Mr. Keller's 10.78% ROE would be the highest ROE awarded to a regulated electric distribution utility in the United States since at least 2010. As shown in Table CCW-1R, his recommendation even exceeds the average ROE authorized for vertically integrated electric utilities every year since at least 2010. Importantly, vertically integrated electric utilities are generally understood to face higher business and regulatory risks due to ownership of generation assets.

Q WHY IS IT PROBLEMATIC THAT MR. KELLER'S ROE EXCEEDS THOSE OF VERTICALLY INTEGRATED UTILITIES?

A Vertically integrated electric utilities are widely viewed as riskier than distribution-only utilities because they are exposed to fuel price volatility, environmental compliance costs, and capital-intensive generation investments. By contrast, distribution utilities operate with significantly lower business risk due to cost-of-service regulation and more predictable cash flows. An ROE for a distribution utility that exceeds the ROEs authorized for vertically integrated peers contradicts this fundamental risk distinction and suggests a flaw in the application or interpretation of Mr. Keller's modeling results.

Q DOES MR. KELLER'S ATTEMPT TO USE A DEREGULATED-ONLY PROXY GROUP JUSTIFY HIS HIGH ROE RECOMMENDATION?

A No. While Mr. Keller's effort to screen for deregulated utility companies may have been intended to better match the business risks faced by Citizens, the resulting 10.78% ROE cannot be reconciled with the actual decisions rendered by regulators nationwide for comparable electric distribution utilities. His recommended ROE of 10.78% is not only irregular in the context of recent ROE trends, but it also contradicts his own critique of inflated ROEs stemming from overreliance on CAPM and other market-based models. Indeed, despite claiming to rely primarily on the DCF model, Mr. Keller's recommended ROE reflects the upper end of estimates produced by models he himself characterizes as flawed or distorted in the current economic climate.

C. Mr. Keller's DCF Model is Based on Excessive Growth Rates

Q PLEASE SUMMARIZE MR. KELLER'S DCF MODEL.

A Mr. Keller performs a constant growth DCF analysis based on spot prices 52-week average as of May 14, 2025.[1] Mr. Keller assumes an average growth rate of 6.74% for his proxy group.[2] The indicated cost of equity for the spot stock price analysis is 10.77%, while the result for his 52-week stock price analysis is 10.79%. The midpoint of these two results is 10.78% and serve as the basis for his recommendation.[3]

Q PLEASE EXPLAIN THE SIMILARITIES BETWEEN YOUR CONSTANT GROWTH DCF ANALYSIS AND MR. KELLER'S CONSTANT GROWTH DCF ANALYSIS.

A Mr. Keller's proxy group growth rate (6.74%) is close to my proxy group's average growth rate of 6.87%. Our average constant growth DCF results are nearly identical.[4]

Q PLEASE SUMMARIZE YOUR PRIMARY CONCERN WITH MR. KELLER'S DCF ANALYSIS.

A My primary concern with Mr. Keller's DCF analysis is his assumed growth rate of 6.74% for his proxy group because it vastly exceeds the projected growth rate of the U.S. economy. As I discussed in my Direct Testimony, the consensus of research on the subject finds a utility's growth rate cannot exceed the growth rate of the economy

[1] I&E Exhibit No. 2, Schedule 7.
[2] *Id.*
[3] *Id.*
[4] The average constant growth DCF results presented in my Exhibit CCW-4 is 10.79%, or 1 basis point higher than Mr. Keller's average DCF result and ultimately his recommendation.

in which it provides services in perpetuity, which is the time period assumed by the DCF model. Given that Citizens provides distribution services in the United States, the projected long-term U.S. Gross Domestic Product ("GDP") growth rate is relevant.

Q WHAT IS THE PROJECTED LONG-TERM GROWTH RATE FOR THE U.S. ECONOMY?

A At the time of my analysis in my Direct Testimony, which is the same time of the analysis of Mr. Keller's Direct Testimony, the consensus for long-term GDP growth in the United States was 4.09%, which is 265 basis points lower than Mr. Keller's assumed average growth rate of 6.74% for his proxy group.

Q WHY IS THE GDP GROWTH PROJECTION A REASONABLE PROXY FOR THE MAXIMUM SUSTAINABLE LONG-TERM GROWTH RATE?

A The United State GDP growth projection is a reasonable upper limit, or proxy, for the maximum sustainable long-term growth rate in the DCF model because public utilities cannot indefinitely sustain a growth rate that exceeds the growth rate of the economy in which they sell services. A utilities' earnings and dividend growth are created by increased utility investment in its rate base. Examples of what can drive such investment are: service area economic growth, system reliability upgrades, or state and federal green energy initiatives. As such, the nominal U.S. GDP growth projection is a reasonable upper limit for utility sales growth, rate base growth, and earnings growth in the long-run.

Q DO YOU HAVE ANY FURTHER COMMENTS?

A Yes. Mr. Keller's use of a growth rate that is higher than the projected nominal U.S. GDP growth rate effectively says that Mr. Keller believes that utilities can indefinitely sustain a growth rate that exceeds the growth rate of the U.S. economy, in which the utility sells distribution services. However, Mr. Keller offers no explanation or data to show how a utility can indefinitely sustain a growth rate that exceeds the growth of the U.S. economy. Mr. Keller also fails to explain in his Direct Testimony what, if any, upper limit he would consider to be reasonable for his assumed growth rate for his proxy group. Given this flaw in his constant growth DCF analysis, it necessitates the consideration of a multi-stage DCF model to balance his result.

Q IS THE APPLICATION OF A MULTI-STAGE DCF MODEL USED IN PRACTICE?

A Yes. As I explained in my Direct Testimony, the multi-stage DCF model is widely used in practice. For example, the Chartered Financial Analyst ("CFA") Institute curriculum text states as follows:

> Multistage models are a staple valuation discipline of investment management firms using DCF valuation models.
>
> A survey of CFA Institute members with job responsibility for equity analysis indicates that, among respondents using a dividend discount model, two-stage and multistage models are used more often than the single-stage model (Stowe, Pinto, and Robinson 2018). Among analysts using a dividend discount model, 55% use a two-stage model, 11% use an H-model (a type of two-stage model), and 50% use a model with more than two stages (Stowe, Pinto, and Robinson 2018).[5]

[5]Chartered Financial Analyst Institute, 2023 CFA Program Level 2 Refresher Reading, Equity Valuation: Discounted Dividend Valuation, at page 30. [footnote omitted].

As Stowe *et al*. have revealed, the majority of equity analysts rely on multi-stage models more frequently than single-stage or constant growth models.

Q WHAT WOULD THE RESULTS OF A MULTI-STAGE DCF ANALYSIS BE BASED ON MR. KELLER'S INPUTS?

A Given Mr. Keller's proxy group growth rate (6.74%) is relatively close to my proxy group's average growth rate (6.87%), and our average constant growth DCF results are nearly identical,[6] the results of my multi-stage DCF analysis (8.62% and 8.39%) would be a close approximation.

Q HOW CAN THE MULTI-STAGE DCF ANALYSIS RESULT BE USED TO BALANCE THE RESULT OF MR. KELLER'S FLAWED DCF ANALYSIS?

A Assuming a multi-stage DCF result of 8.62%, the average of my multi-stage DCF analysis result and Mr. Keller's flawed constant growth DCF analysis results would be 9.7% [(10.78% + 8.62%) / 2]. This result is consistent with my recommended range 9.0% to 10.0%.

D. Mr. Keller's ROE Recommendation is Not Based on a Thorough Analysis

Q WHY IS MR. KELLER'S EXCLUSIVE RELIANCE ON A SINGLE CONSTANT-GROWTH DCF MODEL PROBLEMATIC?

A Although Mr. Keller claims to use the CAPM as a comparison of the results of his constant growth DCF analysis, Mr. Keller's exclusive reliance on the constant growth

[6]The average constant growth DCF results presented in my Exhibit CCW-4 is 10.79%, or 1 basis point higher than Mr. Keller's average DCF result and ultimately his recommendation.

DCF analysis is problematic because the cost of equity is not a directly observable figure; rather, it must be estimated using financial models that are based on assumptions and market expectations. No single model can be relied upon exclusively to estimate a fair and reasonable cost of equity because each model has its own strengths, limitations, and sensitivities to input assumptions. Mr. Keller's exclusive reliance on the constant growth DCF model is problematic because, other than being flawed, it ignores the insights that other well-established models, such as the sustainable growth DCF and multi-stage DCF analysis, or even the CAPM and the Risk Premium model, can provide.

By relying solely on a single model, Mr. Keller increases the risk of model-specific bias and fails to capture the full range of investor expectations. The constant growth DCF model, for instance, is highly sensitive to the assumed growth rate. As I discussed earlier in this testimony, Mr. Keller's analysis is flawed because it relies on growth rates that exceed the projected growth rate of the U.S. economy by a significant margin, which leads to inflated ROE estimates. Had Mr. Keller employed a multi-model approach, such as including a multi-stage DCF analysis, the CAPM and Risk Premium methods, all of which are widely used in regulatory proceedings, he could have cross-validated his constant growth DCF analysis results and mitigated the upward bias from his irregularly high growth assumptions.

Q WHY IS THE CONSIDERATION OF MULTIPLE MODELS IMPORTANT INFORMING AN UNBIASED OPINION?

A The consideration of multiple models is important in forming an unbiased opinion on a ROE recommendation because it is standard practice in the field of utility finance and

enhances the robustness and credibility of the resulting ROE recommendation. Ignoring these other models diminishes the reliability of Mr. Keller's recommendation and weakens the basis for his proposed ROE of 10.78%, which is well above national averages and recent Commission-authorized returns.

III. RESPONSE TO MR. FARR

Q HAVE YOU REVIEWED MR. FARR'S DIRECT TESTIMONY?

A Yes. Mr. Farr recommended several adjustments to Citizens' proposed revenue requirement. While he did not propose a specific total revenue requirement, Mr. Farr recommended a $269,644 reduction to Citizens' proposed $1.79 million increase. This reduction reflects his proposed use of a 10.00% proxy ROE, derived from the Pennsylvania Public Utility Commission's ("Commission") authorized ROE for Distribution System Improvement Charges ("DSIC"), even though he deferred a full ROE analysis to the OCA and I&E. Mr. Farr also opposed the Company's proposed 85-basis point size premium and 5-basis point performance adder, arguing that such upward adjustments are excessive and unsupported. He further recommended using the enacted 7.49% Pennsylvania corporate income tax rate for 2026 rather than the outdated 9.99% rate used by Citizens. Collectively, these adjustments would reduce the Company's requested rate increase from $1,794,525 to $1,524,881.

Q DO YOU AGREE WITH MR. FARR'S USE OF THE 10.00% DSIC ROE FROM THE COMMISSION'S QUARTERLY EARNINGS REPORT ("QER") AS A PROXY ROE IN THIS PROCEEDING?

A No, I do not agree with Mr. Farr's use of the 10.00% DSIC ROE from the Commission's QER as a proxy ROE for the Company. While Mr. Farr does not offer his own ROE recommendation, he assumes a 10.00% proxy ROE derived from the Commission's DSIC return published in its most recent QER. However, the Commission has expressly and repeatedly rejected the use of its DSIC ROE for purposes of establishing the cost of equity in base rate proceedings.

Q HAS THE COMMISSION ADDRESSED THIS ISSUE IN PRIOR CASES?

A Yes. In its May 8, 2025 Order in the Pike County Light & Power rate case (Docket Nos. R-2024-3052357 and R-2024-3052359), the Commission held that the DSIC ROE is "not relevant" to a base rate proceeding and distinguished it as an *industry-specific* figure determined quarterly, not a *company-specific* return derived from a fully developed evidentiary record. The Commission stated:

> We have previously found that the DSIC ROE is different from a ROE established in a base rate proceeding. We explained that the Commission determines the DSIC ROE on a quarterly basis and it is industry-specific, rather than a company-specific ROE set in a rate case.[7]

[7] *Pa. PUC v. Pike County Light & Power*, May 8, 2025 Order at page 28.

Q WHY IS MR. FARR'S RELIANCE ON THE DSIC ROE INAPPROPRIATE IN THIS CASE?

A Mr. Farr's opinion to use the DSIC ROE as a proxy ROE is unrelated to the Company's actual risks, financial structure, or cost of capital. He bypasses the entire cost of equity analysis process, including market-based models such as the DCF or CAPM, and relies instead on a figure that the Commission has determined is not suitable for use in base rate proceedings. As a result, the 10.00% proxy ROE Mr. Farr applies is arbitrary and flawed.

Q DOES MR. FARR PRESENT ANY INDEPENDENT ROE ANALYSES IN THIS PROCEEDING?

A No. Mr. Farr fails to present any independent ROE analyses in this proceeding. Instead, he explicitly defers to the analyses of the OCA and I&E, stating: "I do not have a recommendation for a specific ROE but rather defer to analysis and recommendations promulgated by the Office of Consumer Advocate ('OCA') and the Bureau of Investigation and Enforcement ('I&E')."[8]

As such, the OSBA has not independently developed a ROE recommendation and has not performed any market-based analyses to support its 10.00% proxy figure.

[8]OSBA St. No. 1 at page 10.

Q SHOULD MR. FARR'S DEFERRAL TO THE OCA'S OR I&E'S ROE ANALYSIS AND RECOMMENDED ROE BE GIVEN ANY WEIGHT?

A No. Mr. Farr's blind deferral to the OCA's or I&E's analyses and recommended ROE should be given no weight because he did not review or have knowledge about either my or I&E witness Keller's analyses and results prior to the submission of direct testimony. His blind deference to the OCA and I&E is arbitrary, containing no analysis or foundation.

Q SHOULD MR. FARR'S PROPOSED REVENUE REQUIREMENT REDUCTION BASED ON THE 10.00% ROE BE GIVEN ANY WEIGHT?

A No. Because Mr. Farr's proxy ROE is not grounded in a proper cost of equity analysis and is inconsistent with Commission precedent, the portion attributed to ROE of his proposed $269,644 downward adjustment to the Company's revenue requirement should be rejected.

IV. CONCLUSION

Q DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	)	
v.	)	**R-2025-3054393**
Valley Energy, Inc.	)	

Rebuttal Testimony of Christopher C. Walters

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Christopher C. Walters. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q WHAT IS YOUR OCCUPATION?

A I am a consultant in the field of public utility regulation and a Principal with the firm of Brubaker & Associates, Inc. ("BAI"), energy, economic and regulatory consultants.

Q ARE YOU THE SAME CHRISTOPHER C. WALTERS WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR REBUTTAL TESTIMONY.

A The purpose of my Rebuttal Testimony in this proceeding is to address the recommendations relating to the recommended return on equity ("ROE") of 10.51% offered in the Direct Testimony of Bureau of Investigation & Enforcement ("I&E") witness D.C. Patel, as well as the proxy ROE of 10.15% used in the testimony of Mr. Justin Farr on behalf of the Office of Small Business Advocate ("OSBA").

My silence on any particular issue should not be construed as tacit agreement or an endorsement of another party's position.

I. SUMMARY

Q PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.

A My Rebuttal Testimony will discuss areas of disagreement with Mr. Patel and some of the errors that are present in Mr. Patel's analysis which have ultimately led him to his recommended ROE of 10.51%. I will demonstrate that Mr. Patel's recommendations are unsupported and, at times, are even contradicted by his own testimony. I conclude that Mr. Patel's recommended ROE and capital structure are excessive and reiterate my recommendations including Valley Energy, Inc. ("Valley" or "Company") be awarded an ROE of 9.50% and an equity ratio of 48.5%.

II. RESPONSE TO MR. PATEL

Q HAVE YOU REVIEWED MR. PATEL'S DIRECT TESTIMONY?

A Yes. Mr. Patel's Direct Testimony explains that he used a single constant-growth Discounted Cash Flow ("DCF") model as his primary method to estimate Valley's cost

of common equity. He presents a Capital Asset Pricing Model ("CAPM") analysis but states that it is only a comparison and not part of his recommendation. Using a proxy group of gas utilities, Mr. Patel calculated a spot dividend yield of roughly 3.64% and an average earnings growth rate of 6.87%. Applying these inputs in the constant-growth DCF formula produced a recommended cost of equity of 10.51%. He then adopted Valley's proposed capital structure and estimates that this 10.51% ROE yields an overall rate of return of about 7.71%.

Q IS THERE ANY OVERALL AGREEMENT BETWEEN YOU AND MR. PATEL?

A Yes. Both Mr. Patel and I reject several aspects of the Valley witness Mr. D'Ascendis' analysis. In particular, we agree that Mr. D'Ascendis' use of an Empirical CAPM ("ECAPM") is not a reasonable method for estimating ROE; that his proposed size-premium adjustment is inappropriate for regulated utilities because empirical evidence shows size premiums are not present in utilities; and that his management-performance adder (or "performance incentive") is not justified. We also share concerns about the risk-free rate and market-risk premium assumptions embedded in Mr. D'Ascendis' CAPM.

Q PLEASE SUMMARIZE YOUR CONCERNS WITH MR. PATEL'S ANALYSIS AND RECOMMENDATIONS.

A My concerns with Mr. Patel's analysis are as follows:

- Similar to Mr. D'Ascendis, Mr. Patel's ROE recommendation of 10.51% would be the highest allowed ROE for a natural gas utility in the lower-48 since at least 2017.

- Mr. Patel's constant growth DCF model is based on excessive growth rates, demonstrating error in judgment and necessitating the consideration of a multi-stage DCF model.

- Mr. Patel's recommended ROE is subject to significant biases and lacks thoroughness given his recommendation is based on the application of a single flawed model.

A. Mr. Patel's ROE Recommendation Exceeds Relevant Benchmarks

Q IS MR. PATEL'S RECOMMENDED ROE OF 10.51% CONSISTENT WITH RELEVANT BENCHMARKS?

A No. Mr. Patel's recommended ROE of 10.51% is inconsistent with and a deviation from all relevant benchmarks. According to compiled data from Regulatory Research Associates, a division of S&P Global, the annual average authorized ROE for natural-gas utilities since 2024 has been roughly 9.70%, and only in 2010 did the industry-wide average briefly exceed 10%. In fact, since 2017 there has been only one gas-utility rate case in the lower-48 states with a ROE authorization above 10.5%. That case involved a 10.55% ROE for Atlanta Gas Light Company in 2017. Mr. Patel's 10.51% recommendation, therefore, sits at the very top of the observed range since then. In Table CCW-1R, I have provided the annual average and maximum authorized ROE for each year since 2010.

TABLE CCW-1R

Historical Authorized ROE Comparison

Year	Gas Distribution Average - %	Gas Distribution Maximum - %	Electric Distribution Average - %	Electric Distribution Maximum - %	Elec. Vert. Integrated Average - %	Elec. Vert. Integrated Maximum - %
2010	10.15	12.55	9.98	10.30	10.42	11.90
2011	9.91	10.50	9.85	10.50	10.33	12.88
2012	9.93	10.50	9.75	10.40	10.10	10.50
2013	9.68	10.25	9.37	9.84	9.95	10.95
2014	9.78	10.80	9.49	9.75	9.94	10.40
2015	9.60	10.30	9.17	9.75	9.75	10.30
2016	9.53	10.20	9.31	9.90	9.77	10.55
2017	9.73	11.88	9.43	10.00	9.80	11.95
2018	9.59	10.20	9.38	10.00	9.68	10.00
2019	9.73	10.25	9.37	9.70	9.74	10.50
2020	9.47	10.00	9.10	9.70	9.55	10.02
2021	9.56	10.24	9.04	9.70	9.53	10.60
2022	9.53	10.20	9.11	10.00	9.75	10.80
2023	9.60	10.50	9.24	9.70	9.80	11.45
2024	9.71	11.88	9.53	9.76	9.84	10.50
2025	9.72	9.90	9.47	9.75	9.74	10.20
Annual Average	9.70	10.63	9.41	9.92	9.86	10.84

Source: Regulatory Research Associates.
Note: The maximum gas ROEs for years 2010, 2017, and 2024 were set by single Alaska rate case decisions.

Importantly, the data shows that the highest average authorized ROE for gas utilities throughout the United States since 2010 was 10.15%. This data point is the only instance since 2010 where gas utility ROEs had an average in excess of 10.0%. Notably, even the highest average of 10.15% observed in 2010 is still 36 basis points below Mr. Patel's egregious recommendation.

Consequently, Mr. Patel's recommendation places Valley at the upper end of the spectrum and is inconsistent with industry norms.

Q DO YOU HAVE A RECOMMENDATION GIVEN THE ABOVE?

A Yes. Given that Mr. Patel's recommended 10.51% is far removed from any reasonable observable benchmark for a regulated gas distribution utility like Valley, I recommend that Mr. Patel's recommendation be rejected.

B. Mr. Patel's DCF Model is Based on Excessive Growth Rates

Q PLEASE SUMMARIZE MR. PATEL'S DCF MODEL.

A Mr. Patel performs a constant growth DCF analysis based on spot prices 52-week average as of May 28, 2025.[1] Mr. Patel assumes an average growth rate of 6.87% for his proxy group.[2] The indicated cost of equity for the spot stock price analysis is 10.39%, while the result for his 52-week stock price analysis is 10.62%. The midpoint of these two results is 10.51% and serve as the basis for his recommendation.[3]

Q PLEASE SUMMARIZE YOUR CONCERNS WITH MR. PATEL'S DCF ANALYSIS.

A My primary concern with Mr. Patel's DCF analysis is the assumed growth rate of 6.87%. As I discussed in my Direct Testimony, the consensus of research on the subject finds a utility's growth rate cannot exceed the growth rate of the economy in which it provides services in perpetuity, which is the time period assumed by the DCF model.

[1] I&E Exhibit No. 2, Schedule 6.
[2] *Id.*
[3] *Id.*

Q WHAT IS THE PROJECTED LONG-TERM GROWTH RATE FOR THE U.S. ECONOMY?

A At the time of my analysis in my Direct Testimony, which overlaps some of Mr. Patel's study period, the consensus for long-term GDP growth in the United States was 4.09%, a difference of 278 basis points relative to Mr. Patel's assumed average growth rate of 6.87% for his proxy group.

Q WHY IS THE GDP GROWTH PROJECTION A REASONABLE PROXY FOR THE MAXIMUM SUSTAINABLE LONG-TERM GROWTH RATE?

A The United State GDP growth projection is a reasonable upper limit, or proxy, for the maximum sustainable long-term growth rate in the DCF model because public utilities cannot indefinitely sustain a growth rate that exceeds the growth rate of the economy in which they sell services. A utilities' earnings and dividend growth are created by increased utility investment in its rate base. Examples of what can drive such investment are: service area economic growth, system reliability upgrades, or state and federal green energy initiatives. As such, the nominal U.S. GDP growth projection is a reasonable upper limit for utility sales growth, rate base growth, and earnings growth in the long-run.

Q DO YOU HAVE ANY FURTHER COMMENTS?

A Yes. Mr. Patel's use of a growth rate that is higher than the projected nominal U.S. GDP growth rate effectively says that Mr. Patel believes that utilities can indefinitely sustain a growth rate that exceeds the growth rate of the U.S. economy, in which the

utility sells distribution services. However, Mr. Patel offers no explanation or data to show how a utility can indefinitely sustain a growth rate that exceeds the growth of the U.S. economy. Mr. Patel also fails to explain in his Direct Testimony what, if any, upper limit he would consider to be reasonable for his assumed growth rate for his proxy group. Given this flaw in his constant growth DCF analysis, it necessitates the consideration of a multi-stage DCF model to balance his result.

Q IS THE APPLICATION OF A MULTI-STAGE DCF MODEL USED IN PRACTICE?

A Yes. As I explained in my Direct Testimony, the multi-stage DCF model is widely used in practice. For example, the Chartered Financial Analyst ("CFA") Institute curriculum text states as follows:

> Multistage models are a staple valuation discipline of investment management firms using DCF valuation models.
>
> A survey of CFA Institute members with job responsibility for equity analysis indicates that, among respondents using a dividend discount model, two-stage and multistage models are used more often than the single-stage model (Stowe, Pinto, and Robinson 2018). Among analysts using a dividend discount model, 55% use a two-stage model, 11% use an H-model (a type of two-stage model), and 50% use a model with more than two stages (Stowe, Pinto, and Robinson 2018).[4]

As Stowe *et al*. have revealed, the majority of equity analysts rely on multi-stage models more frequently than single-stage or constant growth models.

[4]Chartered Financial Analyst Institute, 2023 CFA Program Level 2 Refresher Reading, Equity Valuation: Discounted Dividend Valuation, at page 30. [footnote omitted].

Q WHAT WOULD THE RESULTS OF A MULTI-STAGE DCF ANALYSIS BE BASED ON MR. PATEL'S INPUTS?

A Given Mr. Patel's proxy group growth rate (6.87%) is identical to my proxy group's average growth rate, and our constant growth DCF results are relatively close,[5] the results of my multi-stage DCF analysis (8.62% and 8.39%) would be a close approximation.

Q HOW CAN THE MULTI-STAGE DCF ANALYSIS RESULT BE USED TO BALANCE THE RESULT OF MR. PATEL'S FLAWED DCF ANALYSIS?

A Assuming a multi-stage DCF result of 8.62%, the average of the collective DCF analyses would be 9.57% [(10.51% + 8.62%) / 2]. This result is consistent with my recommended ROE of 9.5%.

C. Mr. Patel's ROE Recommendation is not Based on a Thorough Analysis

Q WHY IS MR. PATEL'S EXCLUSIVE RELIANCE ON A SINGLE CONSTANT-GROWTH DCF MODEL PROBLEMATIC?

A Although Mr. Patel claims to use the CAPM as a comparison of the results of his constant growth DCF analysis, Mr. Patel's exclusive reliance on the constant growth DCF analysis is problematic because the cost of equity is not a directly observable figure; rather, it must be estimated using financial models that are based on assumptions and market expectations. No single model can be relied upon exclusively to estimate a

[5]The average and median constant growth DCF results presented in my Exhibit CCW-4 are 10.79% and 10.31%, respectively. The midpoint of those two numbers is 10.55%, or 4 basis points higher than Mr. Patel's average DCF result and ultimately his recommendation.

fair and reasonable cost of equity because each model has its own strengths, limitations, and sensitivities to input assumptions. Mr. Patel's exclusive reliance on the constant-growth DCF model is problematic because, other than being flawed, it ignores the insights that other well-established models, such as the sustainable growth DCF and multi-stage DCF analysis, or even the CAPM and the Risk Premium model, can provide.

By relying solely on a single model, Mr. Patel increases the risk of model-specific bias and fails to capture the full range of investor expectations. The constant growth DCF model, for instance, is highly sensitive to the assumed growth rate. As I discussed earlier in this testimony, Mr. Patel's analysis is flawed because it relies on growth rates that exceed the projected growth rate of the U.S. economy by a significant margin, which leads to inflated ROE estimates. Had Mr. Patel employed a multi-model approach, such as including a multi-stage DCF analysis, the CAPM and Risk Premium methods, all of which are widely used in regulatory proceedings, he could have cross-validated his constant growth DCF analysis results and mitigated the upward bias from his irregularly high growth assumptions.

Q HOW CAN THE MULTI-STAGE DCF ANALYSIS RESULT BE USED TO BALANCE THE RESULT OF MR. PATEL'S FLAWED DCF ANALYSIS?

A The consideration of multiple models is important in forming an unbiased opinion on a ROE recommendation because it is standard practice in the field of utility finance and enhances the robustness and credibility of the resulting ROE recommendation. Ignoring these other models diminishes the reliability of Mr. Patel's recommendation and weakens the basis for his proposed ROE of 10.51%, which is well above national

averages and recent Pennsylvania Public Utility Commission ("Commission") authorized returns.

III. RESPONSE TO MR. FARR

Q HAVE YOU REVIEWED MR. FARR'S DIRECT TESTIMONY?

A Yes. Mr. Farr recommended several adjustments to Valley's proposed revenue requirement. While he did not propose a specific total revenue requirement, Mr. Farr recommended a $286,940 reduction to Valley's proposed $1.6 million increase. This reduction reflects his proposed use of a 10.15% proxy ROE, derived from the Commission's authorized ROE for Distribution System Improvement Charges ("DSIC"), even though he deferred a full ROE analysis to the OCA and I&E. Mr. Farr also opposed the Company's proposed 100-basis point size premium and 5-basis point performance adder, arguing that such upward adjustments are excessive and unsupported. He further recommended using the enacted 7.49% Pennsylvania corporate income tax rate for 2026 rather than the outdated 9.99% rate used by Valley. Collectively, these adjustments would reduce the Company's requested rate increase from $1,626,099 to $1,339,159.

Q DO YOU AGREE WITH MR. FARR'S USE OF THE 10.15% DSIC ROE FROM THE COMMISSION'S QUARTERLY EARNINGS REPORT ("QER") AS A PROXY ROE IN THIS PROCEEDING?

A No, I do not. While Mr. Farr does not offer his own ROE recommendation, he assumes a 10.15% proxy ROE derived from the Commission's DSIC return published in its most

recent QER. However, the Commission has expressly and repeatedly rejected the use of its DSIC ROE for purposes of establishing the cost of equity in base rate proceedings.

Q HAS THE COMMISSION ADDRESSED THIS ISSUE IN PRIOR CASES?

A Yes. In its May 8, 2025 Order in the Pike County Light & Power rate case (Docket Nos. R-2024-3052357 and R-2024-3052359), the Commission held that the DSIC ROE is "not relevant" to a base rate proceeding and distinguished it as an *industry-specific* figure determined quarterly, not a *company-specific* return derived from a fully developed evidentiary record. The Commission stated:

> We have previously found that the DSIC ROE is different from a ROE established in a base rate proceeding. We explained that the Commission determines the DSIC ROE on a quarterly basis and it is industry-specific, rather than a company-specific ROE set in a rate case.[6]

Q WHY IS MR. FARR'S RELIANCE ON THE DSIC ROE INAPPROPRIATE IN THIS CASE?

A Mr. Farr's use of the DSIC ROE as a proxy introduces into evidence an ROE that is unrelated to the Company's actual risks, financial structure, or cost of capital. He bypasses the entire cost of equity analysis process, including market-based models such as the DCF or CAPM, and relies instead on a figure the Commission has determined is not suitable for use in base rate proceedings. As a result, the 10.15% proxy ROE Mr. Farr applies is arbitrary and unsupported by record evidence in this case.

[6] *Pa. PUC v. Pike County Light & Power*, May 8, 2025 Order at page 28.

Q DOES MR. FARR PRESENT ANY INDEPENDENT ROE ANALYSES IN THIS PROCEEDING?

A No. Mr. Farr explicitly defers to the analyses of the OCA and I&E, stating: "I do not have a recommendation for a specific ROE but rather defer to analysis and recommendations promulgated by the Office of Consumer Advocate ('OCA') and the Bureau of Investigation and Enforcement ('I&E')."[7]

As such, the OSBA has not independently developed a ROE recommendation and has not performed any market-based analyses to support its 10.15% proxy figure.

Q SHOULD MR. FARR'S PROPOSED REVENUE REQUIREMENT REDUCTION BASED ON THE 10.15% ROE BE GIVEN ANY WEIGHT?

A No. Because Mr. Farr's proxy ROE is not grounded in a proper cost of equity analysis and is inconsistent with Commission precedent, his proposed $185,644 downward adjustment to the Company's revenue requirement should be rejected in its entirety.

IV. CONCLUSION

Q DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A Yes, it does.

Rebuttal Testimony of Christopher C. Walters

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Christopher C. Walters. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q WHAT IS YOUR OCCUPATION?

A I am a consultant in the field of public utility regulation and a Principal with the firm of Brubaker & Associates, Inc. ("BAI"), energy, economic and regulatory consultants.

Q ARE YOU THE SAME CHRISTOPHER C. WALTERS WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR REBUTTAL TESTIMONY.

A The purpose of my Rebuttal Testimony in this proceeding is to address the recommendations relating to the recommended return on equity ("ROE") of 10.78% offered in the Direct Testimony of Bureau of Investigation & Enforcement ("I&E") witness Christopher Keller as well as the proxy ROE of 10.00% used in the testimony of Mr. Justin Farr on behalf of the Office of Small Business Advocate ("OSBA").

My silence on any particular issue should not be construed as tacit agreement or an endorsement of another party's position.

I. SUMMARY

Q PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.

A My Rebuttal Testimony will discuss areas of disagreement with Mr. Keller and some of the errors that are present in Mr. Keller's analysis which have ultimately led him to his recommended ROE of 10.78%. I will demonstrate that Mr. Keller's recommendations are unsupported and, at times, are even contradicted by his own testimony. I conclude that Mr. Keller's recommended ROE and capital structure are excessive. Finally, I reiterate my recommendations including the Wellsboro Electric Company ("Wellsboro" or "Company") be awarded an ROE of 9.50% and an equity ratio of 48.5%.

II. RESPONSE TO MR. KELLER

Q HAVE YOU REVIEWED MR. KELLER'S DIRECT TESTIMONY?

A Yes. Mr. Keller's Direct Testimony explains that he used a single constant growth Discounted Cash Flow ("DCF") model as his primary method to estimate Wellsboro's

cost of common equity. He presents a Capital Asset Pricing Model ("CAPM") analysis but states that it is only a comparison and not part of his recommendation. Using a proxy group of electric utilities that operate in deregulated states, Mr. Keller calculated a spot dividend yield of roughly 4.04% and an average earnings growth rate of 6.92%. After he removes a 13.60% projected growth rate for Dominion Energy, his adjusted average growth rate is 6.74%. Applying these inputs in the constant growth DCF formula produced a recommended cost of equity of 10.78%. He then adopted Wellsboro's proposed capital structure and estimates that this 10.78% ROE yields an overall rate of return of about 7.76%.

Q IS THERE ANY OVERALL AGREEMENT BETWEEN YOU AND MR. KELLER?

A Yes. Both Mr. Keller and I reject several aspects of the Wellsboro's witness Mr. D'Ascendis' analysis. In particular, we agree that Mr. D'Ascendis' use of an Empirical CAPM ("ECAPM") is not a reasonable method for estimating ROE; that his proposed size-premium adjustment is inappropriate for regulated utilities because empirical evidence shows size premiums are not present in utilities; and that his management-performance adder (or "performance incentive") is not justified. We also share concerns about the risk-free rate and market-risk premium assumptions embedded in Mr. D'Ascendis' CAPM.

Q PLEASE SUMMARIZE YOUR CONCERNS WITH MR. KELLER'S ANALYSIS AND RECOMMENDATIONS.

A My concerns with Mr. Keller's analysis are as follows:

- Similar to Mr. D'Ascendis, Mr. Keller's ROE recommendation of 10.78% would be the highest allowed ROE for an electric distribution utility since at least 2010.

- Mr. Keller's proxy group results and recommended ROE are severely disjointed from industry-wide norms for a distribution-only electric utility and even vertically integrated electric utilities and contradicts his own critique of inflated ROEs stemming from overreliance on CAPM and other market-based models; in my opinion, this shows error in his process of forming his opinion to recommend an ROE of 10.78%.

- Mr. Keller's constant growth DCF model is based on excessive growth rates, demonstrating error in judgment and necessitating the consideration of a multi-stage DCF model.

- Mr. Keller's recommended ROE is subject to significant biases and lacks thoroughness given his recommendation is based on the application of a single flawed model.

A. Mr. Keller's ROE Recommendation Exceeds Relevant Benchmarks

Q IS MR. KELLER'S RECOMMENDED ROE OF 10.78% CONSISTENT WITH RELEVANT BENCHMARKS?

A No. Mr. Keller's recommended ROE of 10.78% is inconsistent with and a deviation from all relevant benchmarks. According to compiled data from Regulatory Research Associates, a division of S&P Global, the average authorized ROE for electric distribution utilities since 2010 has not exceeded 10.0% in any given year during that time. In Table CCW-1R, I have provided the annual average and maximum authorized ROE for each year since 2010 for both distribution and vertically integrated electric utilities.

TABLE CCW-1R

Historical Electric ROE Comparison

	Electric Distribution		Vertically Integrated	
Year	Average - %	Maximum - %	Average - %	Maximum - %
2010	9.98	10.30	10.42	11.90
2011	9.85	10.50	10.33	12.88
2012	9.75	10.40	10.10	10.50
2013	9.37	9.84	9.95	10.95
2014	9.49	9.75	9.94	10.40
2015	9.17	9.75	9.75	10.30
2016	9.31	9.90	9.77	10.55
2017	9.43	10.00	9.80	11.95
2018	9.38	10.00	9.68	10.00
2019	9.37	9.70	9.74	10.50
2020	9.10	9.70	9.55	10.02
2021	9.04	9.70	9.53	10.60
2022	9.11	10.00	9.75	10.80
2023	9.24	9.70	9.80	11.45
2024	9.53	9.76	9.84	10.50
2025	9.47	9.75	9.74	10.20
Annual Average	9.41	9.92	9.86	10.84

Source: Regulatory Research Associates.

Notably, since 2010, the annual average authorized ROE for distribution-only electric utilities has been roughly 9.41% and, in 2010, the average authorized ROE for electric distribution utilities was 9.98%, and that was the closest to 10.0% in recent history. Since 2023, the average authorized ROE for distribution-only electric utilities has ranged from 9.24% to 9.53%, and the year-to-date average in 2025 was just 9.47%. In fact, the highest authorized ROE to be awarded to a distribution-only electric utility since 2010 was 10.50% awarded to Commonwealth Edison in Illinois in 2011 when the national average was 9.85% for electric distribution utilities.

Q DO YOU HAVE A RECOMMENDATION GIVEN THE ABOVE?

A Yes. Given that Mr. Keller's recommended 10.78% is far removed from any reasonable observable benchmark for an electric distribution utility like Wellsboro, I recommend that Mr. Keller's recommendation be rejected.

B. Mr. Keller's ROE Recommendation is Disjointed from Industry Norms

Q WHAT OTHER CONCERNS DO YOU HAVE AS IT RELATES TO MR. KELLER'S RECOMMENDED ROE OF 10.78%?

A Mr. Keller's recommended ROE of 10.78% is disconnected from prevailing industry norms, particularly for distribution-only electric utilities. While he attempts to account for deregulated market conditions by restricting his proxy group to companies operating in states with electric retail choice, his final ROE recommendation is inappropriately high for a distribution-only electric utility. In fact, Mr. Keller's 10.78% ROE would be the highest ROE awarded to a regulated electric distribution utility in the United States since at least 2010. As shown in Table CCW-1R, his recommendation even exceeds the average ROE authorized for vertically integrated electric utilities every year since at least 2010. Importantly, vertically integrated electric utilities are generally understood to face higher business and regulatory risks due to ownership of generation assets.

Q WHY IS IT PROBLEMATIC THAT MR. KELLER'S ROE EXCEEDS THOSE OF VERTICALLY INTEGRATED UTILITIES?

A Vertically integrated electric utilities are widely viewed as riskier than distribution-only utilities because they are exposed to fuel price volatility, environmental compliance costs, and capital-intensive generation investments. By contrast, distribution utilities operate with significantly lower business risk due to cost-of-service regulation and more predictable cash flows. An ROE for a distribution utility that exceeds the ROEs authorized for vertically integrated peers contradicts this fundamental risk distinction and suggests a flaw in the application or interpretation of Mr. Keller's modeling results.

Q DOES MR. KELLER'S ATTEMPT TO USE A DEREGULATED-ONLY PROXY GROUP JUSTIFY HIS HIGH ROE RECOMMENDATION?

A No. While Mr. Keller's effort to screen for deregulated utility companies may have been intended to better match the business risks faced by Wellsboro, the resulting 10.78% ROE cannot be reconciled with the actual decisions rendered by regulators nationwide for comparable electric distribution utilities. His recommended ROE of 10.78% is not only irregular in the context of recent ROE trends, but it also contradicts his own critique of inflated ROEs stemming from overreliance on CAPM and other market-based models. Indeed, despite claiming to rely primarily on the DCF model, Mr. Keller's recommended ROE reflects the upper end of estimates produced by models he himself characterizes as flawed or distorted in the current economic climate.

C. Mr. Keller's DCF Model is Based on Excessive Growth Rates

Q PLEASE SUMMARIZE MR. KELLER'S DCF MODEL.

A Mr. Keller performs a constant growth DCF analysis based on spot prices 52-week average as of May 14, 2025.[1] Mr. Keller assumes an average growth rate of 6.74% for his proxy group.[2] The indicated cost of equity for the spot stock price analysis is 10.77%, while the result for his 52-week stock price analysis is 10.79%. The midpoint of these two results is 10.78% and serve as the basis for his recommendation.[3]

Q PLEASE EXPLAIN THE SIMILARITIES BETWEEN YOUR CONSTANT GROWTH DCF ANALYSIS AND MR. KELLER'S CONSTANT GROWTH DCF ANALYSIS.

A Mr. Keller's proxy group growth rate (6.74%) is close to my proxy group's average growth rate of 6.87%. Our average constant growth DCF results are nearly identical.[4]

Q PLEASE SUMMARIZE YOUR PRIMARY CONCERN WITH MR. KELLER'S DCF ANALYSIS.

A My primary concern with Mr. Keller's DCF analysis is his assumed growth rate of 6.74% for his proxy group because it vastly exceeds the projected growth rate of the U.S. economy. As I discussed in my Direct Testimony, the consensus of research on the subject finds a utility's growth rate cannot exceed the growth rate of the economy

[1] I&E Exhibit No. 2, Schedule 7.
[2] *Id.*
[3] *Id.*
[4] The average constant growth DCF results presented in my Exhibit CCW-4 is 10.79%, or 1 basis point higher than Mr. Keller's average DCF result and ultimately his recommendation.

in which it provides services in perpetuity, which is the time period assumed by the DCF model. Given that Wellsboro provides distribution services in the United States, the projected long-term U.S. Gross Domestic Product ("GDP") growth rate is relevant.

Q WHAT IS THE PROJECTED LONG-TERM GROWTH RATE FOR THE U.S. ECONOMY?

A At the time of my analysis in my Direct Testimony, which is the same time of the analysis of Mr. Keller's Direct Testimony, the consensus for long-term GDP growth in the United States was 4.09%, which is 265 basis points lower than Mr. Keller's assumed average growth rate of 6.74% for his proxy group.

Q WHY IS THE GDP GROWTH PROJECTION A REASONABLE PROXY FOR THE MAXIMUM SUSTAINABLE LONG-TERM GROWTH RATE?

A The United State GDP growth projection is a reasonable upper limit, or proxy, for the maximum sustainable long-term growth rate in the DCF model because public utilities cannot indefinitely sustain a growth rate that exceeds the growth rate of the economy in which they sell services. A utilities' earnings and dividend growth are created by increased utility investment in its rate base. Examples of what can drive such investment are: service area economic growth, system reliability upgrades, or state and federal green energy initiatives. As such, the nominal U.S. GDP growth projection is a reasonable upper limit for utility sales growth, rate base growth, and earnings growth in the long-run.

Q DO YOU HAVE ANY FURTHER COMMENTS?

A Yes. Mr. Keller's use of a growth rate that is higher than the projected nominal U.S. GDP growth rate effectively says that Mr. Keller believes that utilities can indefinitely sustain a growth rate that exceeds the growth rate of the U.S. economy, in which the utility sells distribution services. However, Mr. Keller offers no explanation or data to show how a utility can indefinitely sustain a growth rate that exceeds the growth of the U.S. economy. Mr. Keller also fails to explain in his Direct Testimony what, if any, upper limit he would consider to be reasonable for his assumed growth rate for his proxy group. Given this flaw in his constant growth DCF analysis, it necessitates the consideration of a multi-stage DCF model to balance his result.

Q IS THE APPLICATION OF A MULTI-STAGE DCF MODEL USED IN PRACTICE?

A Yes. As I explained in my Direct Testimony, the multi-stage DCF model is widely used in practice. For example, the Chartered Financial Analyst ("CFA") Institute curriculum text states as follows:

> Multistage models are a staple valuation discipline of investment management firms using DCF valuation models.
>
> A survey of CFA Institute members with job responsibility for equity analysis indicates that, among respondents using a dividend discount model, two-stage and multistage models are used more often than the single-stage model (Stowe, Pinto, and Robinson 2018). Among analysts using a dividend discount model, 55% use a two-stage model, 11% use an H-model (a type of two-stage model), and 50% use a model with more than two stages (Stowe, Pinto, and Robinson 2018).[5]

[5]Chartered Financial Analyst Institute, 2023 CFA Program Level 2 Refresher Reading, Equity Valuation: Discounted Dividend Valuation, at page 30. [footnote omitted].

As Stowe *et al*. have revealed, the majority of equity analysts rely on multi-stage models more frequently than single-stage or constant growth models.

Q WHAT WOULD THE RESULTS OF A MULTI-STAGE DCF ANALYSIS BE BASED ON MR. KELLER'S INPUTS?

A Given Mr. Keller's proxy group growth rate (6.74%) is relatively close to my proxy group's average growth rate (6.87%), and our average constant growth DCF results are nearly identical,[6] the results of my multi-stage DCF analysis (8.62% and 8.39%) would be a close approximation.

Q HOW CAN THE MULTI-STAGE DCF ANALYSIS RESULT BE USED TO BALANCE THE RESULT OF MR. KELLER'S FLAWED DCF ANALYSIS?

A Assuming a multi-stage DCF result of 8.62%, the average of my multi-stage DCF analysis result and Mr. Keller's flawed constant growth DCF analysis results would be 9.7% [(10.78% + 8.62%) / 2]. This result is consistent with my recommended range 9.0% to 10.0%.

D. Mr. Keller's ROE Recommendation is Not Based on a Thorough Analysis

Q WHY IS MR. KELLER'S EXCLUSIVE RELIANCE ON A SINGLE CONSTANT-GROWTH DCF MODEL PROBLEMATIC?

A Although Mr. Keller claims to use the CAPM as a comparison of the results of his constant growth DCF analysis, Mr. Keller's exclusive reliance on the constant growth

[6]The average constant growth DCF results presented in my Exhibit CCW-4 is 10.79%, or 1 basis point higher than Mr. Keller's average DCF result and ultimately his recommendation.

DCF analysis is problematic because the cost of equity is not a directly observable figure; rather, it must be estimated using financial models that are based on assumptions and market expectations. No single model can be relied upon exclusively to estimate a fair and reasonable cost of equity because each model has its own strengths, limitations, and sensitivities to input assumptions. Mr. Keller's exclusive reliance on the constant growth DCF model is problematic because, other than being flawed, it ignores the insights that other well-established models, such as the sustainable growth DCF and multi-stage DCF analysis, or even the CAPM and the Risk Premium model, can provide.

By relying solely on a single model, Mr. Keller increases the risk of model-specific bias and fails to capture the full range of investor expectations. The constant growth DCF model, for instance, is highly sensitive to the assumed growth rate. As I discussed earlier in this testimony, Mr. Keller's analysis is flawed because it relies on growth rates that exceed the projected growth rate of the U.S. economy by a significant margin, which leads to inflated ROE estimates. Had Mr. Keller employed a multi-model approach, such as including a multi-stage DCF analysis, the CAPM and Risk Premium methods, all of which are widely used in regulatory proceedings, he could have cross-validated his constant growth DCF analysis results and mitigated the upward bias from his irregularly high growth assumptions.

Q WHY IS THE CONSIDERATION OF MULTIPLE MODELS IMPORTANT INFORMING AN UNBIASED OPINION?

A The consideration of multiple models is important in forming an unbiased opinion on a ROE recommendation because it is standard practice in the field of utility finance and

enhances the robustness and credibility of the resulting ROE recommendation. Ignoring these other models diminishes the reliability of Mr. Keller's recommendation and weakens the basis for his proposed ROE of 10.78%, which is well above national averages and recent Commission-authorized returns.

III. RESPONSE TO MR. FARR

Q HAVE YOU REVIEWED MR. FARR'S DIRECT TESTIMONY?

A Yes. Mr. Farr recommended several adjustments to Wellsboro's proposed revenue requirement. While he did not propose a specific total revenue requirement, Mr. Farr recommended a $386,239 reduction to Wellsboro's proposed $2.9 million increase. This reduction reflects his proposed use of a 10.00% proxy ROE, derived from the Pennsylvania Public Utility Commission's ("Commission") authorized ROE for Distribution System Improvement Charges ("DSIC"), even though he deferred a full ROE analysis to the OCA and I&E. Mr. Farr also opposed the Company's proposed 85-basis point size premium and 5-basis point performance adder, arguing that such upward adjustments are excessive and unsupported. He further recommended using the enacted 7.49% Pennsylvania corporate income tax rate for 2026 rather than the outdated 9.99% rate used by Wellsboro. Collectively, these adjustments would reduce the Company's requested rate increase from $2,899,388 to $2,513,149.

Q DO YOU AGREE WITH MR. FARR'S USE OF THE 10.00% DSIC ROE FROM THE COMMISSION'S QUARTERLY EARNINGS REPORT ("QER") AS A PROXY ROE IN THIS PROCEEDING?

A No, I do not agree with Mr. Farr's use of the 10.00% DSIC ROE from the Commission's QER as a proxy ROE for the Company. While Mr. Farr does not offer his own ROE recommendation, he assumes a 10.00% proxy ROE derived from the Commission's DSIC return published in its most recent QER. However, the Commission has expressly and repeatedly rejected the use of its DSIC ROE for purposes of establishing the cost of equity in base rate proceedings.

Q HAS THE COMMISSION ADDRESSED THIS ISSUE IN PRIOR CASES?

A Yes. In its May 8, 2025 Order in the Pike County Light & Power rate case (Docket Nos. R-2024-3052357 and R-2024-3052359), the Commission held that the DSIC ROE is "not relevant" to a base rate proceeding and distinguished it as an *industry-specific* figure determined quarterly, not a *company-specific* return derived from a fully developed evidentiary record. The Commission stated:

> We have previously found that the DSIC ROE is different from a ROE established in a base rate proceeding. We explained that the Commission determines the DSIC ROE on a quarterly basis and it is industry-specific, rather than a company-specific ROE set in a rate case.[7]

[7] *Pa. PUC v. Pike County Light & Power*, May 8, 2025 Order at page 28.

Q WHY IS MR. FARR'S RELIANCE ON THE DSIC ROE INAPPROPRIATE IN THIS CASE?

A Mr. Farr's opinion to use the DSIC ROE as a proxy ROE is unrelated to the Company's actual risks, financial structure, or cost of capital. He bypasses the entire cost of equity analysis process, including market-based models such as the DCF or CAPM, and relies instead on a figure that the Commission has determined is not suitable for use in base rate proceedings. As a result, the 10.00% proxy ROE Mr. Farr applies is arbitrary and flawed.

Q DOES MR. FARR PRESENT ANY INDEPENDENT ROE ANALYSES IN THIS PROCEEDING?

A No. Mr. Farr fails to present any independent ROE analyses in this proceeding. Instead, he explicitly defers to the analyses of the OCA and I&E, stating: "I do not have a recommendation for a specific ROE but rather defer to analysis and recommendations promulgated by the Office of Consumer Advocate ('OCA') and the Bureau of Investigation and Enforcement ('I&E')."[8]

As such, the OSBA has not independently developed a ROE recommendation and has not performed any market-based analyses to support its 10.00% proxy figure.

[8]OSBA St. No. 1 at page 10.

Q SHOULD MR. FARR'S DEFERRAL TO THE OCA'S OR I&E'S ROE ANALYSIS AND RECOMMENDED ROE BE GIVEN ANY WEIGHT?

A No. Mr. Farr's blind deferral to the OCA's or I&E's analyses and recommended ROE should be given no weight because he did not review or have knowledge about either my or I&E witness Keller's analyses and results prior to the submission of direct testimony. His blind deference to the OCA and I&E is arbitrary, containing no analysis or foundation.

Q SHOULD MR. FARR'S PROPOSED REVENUE REQUIREMENT REDUCTION BASED ON THE 10.00% ROE BE GIVEN ANY WEIGHT?

A No. Because Mr. Farr's proxy ROE is not grounded in a proper cost of equity analysis and is inconsistent with Commission precedent, the portion attributed to ROE of his proposed $386,239 downward adjustment to the Company's revenue requirement should be rejected.

IV. CONCLUSION

Q DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A Yes, it does.

Citizens' Electric Company of Lewisburg	:	

REBUTTAL TESTIMONY

OF

Michael Deupree

On behalf of the

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

OCA Statement 3R

Date Served: August 13, 2025

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed direct testimony in this proceeding on July 15, 2025, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to respond to elements of the direct testimony of Ethan H. Cline on behalf of the Bureau of Investigation and Enforcement ("I&E"). Specifically, I will respond to I&E's presentation of Citizens' Electric Company of Lewisburg ("Citizens" or the "Company") customer cost analysis.

II. CUSTOMER COST ANALYSIS

Q. DID I&E PREPARE A CUSTOMER COST ANALYSIS FOR SOME COMPANY RATE CLASSES?

A. Yes. I&E in its Direct Testimony presents the results of a customer cost analysis that shows that the Company's proposed customer charge for residential service ("RS"), commercial space heating ("SH"), general light and power-1 ("GLP-1"), and general light and power-3 ("GLP-3") rate classes are less than cost per customer to provide customer-related activities such as meter reading, customer billing and accounting, and customer service and information expenses.[1]

[1] Direct Testimony of Ethan H. Cline at 8.

Q. DID YOU INCLUDE AN ANALYSIS OF CUSTOMER-RELATED COSTS IN YOUR DIRECT TESTIMONY?

A. Yes. Contrary to I&E's findings, I find that each of the four rate classes listed are currently fully recovering customer-related costs through the existing customer charge, and that, therefore, the Company's proposed increase in customer charges is not necessary.[2]

Q. CAN YOU RECONCILE I&E'S CUSTOMER COST ANALYSIS RESULTS TO YOUR OWN?

A. Yes. I&E's customer cost analysis results come directly from the Company's allocated cost of service ("ACOS") analysis.[3] However, this analysis assumes the Company's requested rate of return on rate base ("ROR") of 8.49 percent in calculating the required return on customer-related rate base such as services, meters, and line transformers.[4] The Company's requested ROR is dependent on the Commission's finding of a just and reasonable ROR at the end of this proceeding and therefore is unknown at the current juncture. Therefore, for my analysis of customer-related costs, I used the Company's estimated ROR under current rates of 1.46 percent for the fully-projected future test year ("FPFTY").

Q. DO YOU BELIEVE THAT IT IS CORRECT FOR THE COMMISSION TO RELY ON THE COMPANY'S ROR UNDER CURRENT RATES FOR AN ANALYSIS OF CUSTOMER-RELATED COSTS?

---

[2] Direct Testimony of Michael W. Deupree at 31, Table 11.

[3] *See*, Direct Testimony of Howard S. Gorman at Exhibit HSG-1, Schedule E-1C.

[4] *Id.*

A. Yes. The Company's forecasted ROR of 1.46 percent during the FPFTY assumes no change in rates, and, therefore, is not subject to the Commission's decision of just and reasonable rates in the current proceeding.

Q. HAVE YOU PREPARED AN ALTERNATIVE CUSTOMER COST ANALYSIS USING AN ROR OTHER THAN THE COMPANY'S ACHIEVED ROR OF 1.46 PERCENT?

A. Yes. Table 1 below presents the results of an alternative customer cost analysis assuming a ROR of 7.44 percent, consistent with OCA Witness Walters' proposed return on equity of 9.50 percent.[5]

Table 1: Analysis of Company Customer-Related Costs at OCA's Proposed ROR

Line No.	Description	Residential Service (RS)	Commercial and Industrial Service: Space Heating (SH)	General L&P (GLP-1)	General L&P (GLP-3)
1	Customer-Related Costs per Company's ACOS				
2	Class Functionalized Customer Billing Expenses	$ 1,248,583	$ 978	$ 278,990	$ 58,613
3	Number of Bills	72,612	36	13,644	504
4	**Monthly Customer-Related Costs/Customer**	**$ 17.20**	**$ 27.15**	**$ 20.45**	**$ 116.30**
5	Customer Charge Revenue at Current Rates				
6	Customer Charge Revenue at Current Rates	$ 951,217	$ 727	$ 218,304	$ 27,720
7	Number of Bills	72,612	36	13,644	504
8	**Monthly Customer Charge Revenue/Customer**	**$ 13.10**	**$ 20.19**	**$ 16.00**	**$ 55.00**
9	**Relationship of Customer Charge Revenues to Customer-Related Costs**	**76.18%**	**74.37%**	**78.25%**	**47.29%**

Source: Company's Response to OCA-I-1, Attachment A (Schedule E)

[5] Direct Testimony of Christopher C. Walters at 3:3-7.

Q. USING THE OCA's PROPOSED PRE-TAX ROR OF 7.44 PERCENT, WHAT DOES YOUR ALTERNATIVE CUSTOMER COST ANALYSIS FIND?

A. This alternative analysis finds that RS customers currently recover more than 76 percent of customer-related costs through the existing customer charge. Likewise, SH and GLP-1 customers currently recover more than 74 and 78 percent, respectively, of customer-related costs through the existing customer charge. Only the GLP-3 class' current customer charge fails to recover a significant portion of customer-related costs, recovering approximately 47 percent of customer-related costs.

Q. DO THESE RESULTS INDICATE ANY PRESSING NEED TO INCREASE MONTHLY CUSTOMER CHARGE RATES?

A. No. Even under this alternative analysis of customer-related costs, the RS and most of Citizens' commercial service rate classes currently cover the substantial portion of their customer-related costs through the existing monthly customer charge. The only potential exception to this finding is the GLP-3 rate class, which covers larger commercial customers with monthly billing demand in excess of 50 kW.[6]

III. CONCLUSIONS AND RECOMMENDATIONS

Q. HAVE YOUR RECOMMENDATIONS PRESENTED IN YOUR DIRECT TESTIMONY CHANGED AFTER REVIEWING INTERVENING PARTIES DIRECT TESTIMONIES?

[6] Notably, the level of customer charges for large commercial customers is not as meaningful as it is for residential and small commercial customers as large commercial customers pay a greater percentage of monthly bill through relatively fixed monthly demand charges.

A. No. I continue to recommend the Commission reject Citizens' proposed increases in customer charges because they disproportionately impact low-income customers and reduce customer incentives to reduce usage, contrary to public goals of promoting energy efficiency. Furthermore, Citizens' existing residential and small commercial customer charges are already higher than the regional average of peer investor-owned utilities, and the proposed increase would make the charges the among the highest of its peers. Finally, a correct analysis of customer-related costs from Citizens' ACOS finds that all residential and commercial rate classes are currently recovering *all* customer-related costs through monthly customer charges, and even an alternative analysis of customer-related costs from Citizens' ACOS finds that the RS and most commercial rate classes are currently recovering a very substantial portion of customer-related costs through monthly customer charges.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

REBUTTAL TESTIMONY

OF

Michael Deupree

On behalf of the

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

OCA Statement 3R

Date Served: August 13, 2025

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed direct testimony in this proceeding on July 15, 2025, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to respond to elements of the direct testimony of Ethan H. Cline on behalf of the Bureau of Investigation and Enforcement ("I&E"). Specifically, I will respond to I&E's presentation of Wellsboro Electric Company ("Wellsboro" or the "Company") customer cost analysis.

II. CUSTOMER COST ANALYSIS

Q. DID I&E PREPARE A CUSTOMER COST ANALYSIS FOR SOME COMPANY RATE CLASSES?

A. Yes. I&E in its Direct Testimony presents the results of a customer cost analysis that shows that the Company's proposed customer charge for residential service ("RS") and residential service-all electric ("RSAE"), non-residential service ("NRS") and non-residential service-heating ("NRH") rate classes are less than cost per customer to provide customer-related activities such as meter reading, customer billing and accounting, and customer service and information expenses.[1]

[1] Direct Testimony of Ethan H. Cline at 9.

Q. DID YOU INCLUDE AN ANALYSIS OF CUSTOMER-RELATED COSTS IN YOUR DIRECT TESTIMONY?

A. Yes. Simlar to I&E's findings, I find that commercial service ("CS"), commercial service-heating ("CSH"), and industrial service ("IS") customers are currently fully recovering customer-related costs through the existing customer charge.[2] However, I find that RS, RSAE, NRS, and NRH customers are currently recovering a substantial portion of customer-related costs through the existing customer charge.[3] I therefore find that the Company's proposed increase in customer charges is not necessary.[4]

Q. CAN YOU RECONCILE I&E'S CUSTOMER COST ANALYSIS RESULTS TO YOUR OWN?

A. Yes. I&E's customer cost analysis results come directly from the Company's allocated cost of service ("ACOS") analysis.[5] However, this analysis assumes the Company's requested rate of return on rate base ("ROR") of 8.18 percent in calculating the required return on customer-related rate base such as services, meters, and line transformers.[6] The Company's requested ROR is dependent on the Commission's finding of a just and reasonable ROR at the end of this proceeding and therefore is unknown at the current juncture. Therefore, for my analysis of customer-related costs, I used the Company's estimated ROR under current rates of 1.46 percent for the fully-projected future test year ("FPFTY").

[3] *Id.*

[4] *Id.* at 32:16-19.

[5] *See*, Direct Testimony of Howard S. Gorman at Exhibit HSG-1, Schedule E-1C.

[6] *Id.*

Q. DO YOU BELIEVE THAT IT IS CORRECT FOR THE COMMISSION TO RELY ON THE COMPANY'S ROR DURING UNDER CURRENT RATES FOR AN ANALYSIS OF CUSTOMER-RELATED COSTS?

A. Yes. The Company's forecasted ROR of 0.68 percent during FPFTY assumes no change in rates, and, therefore, is not subject to the Commission's decision of just and reasonable rates in the current proceeding.

Q. HAVE YOU PREPARED AN ALTERNATIVE CUSTOMER COST ANALYSIS USING AN ROR OTHER THAN THE COMPANY'S ACHIEVED ROR OF 0.68 PERCENT?

A. Yes. Table 1 below presents the results of an alternative customer cost analysis assuming a ROR of 7.13 percent, consistent with OCA Witness Walters' proposed return on equity of 9.50 percent.[7]

Table 1: Analysis of Company Customer-Related Costs at OCA's Proposed ROR

Line No.	Description	Residential Service		Commercial and Industrial Service				
		Residential (RS)	All Electric (RSAE)	Non-Residential (NRS)	Non-Res. Heating (NRH)	Commercial (CS)	Comm. Heating (CSH)	Industrial (IS)
1	Customer-Related Costs per Company's ACOS							
2	Class Functionalized Customer Billing Expenses	$1,075,688	$ 6,081	$ 195,616	$ 208	$ 121,425	$ 310	$ 11,241
3	Number of Bills	61,910	350	11,258	12	4,704	12	160
4	**Monthly Customer-Related Costs/Customer**	**$ 17.38**	**$ 17.37**	**$ 17.38**	**$ 17.37**	**$ 25.81**	**$ 25.81**	**$ 70.25**
5	Customer Charge Revenue at Current Rates							
6	Customer Charge Revenue at Current Rates	$ 741,480	$ 4,200	$ 136,106	$ 147	$ 149,132	$ 550	$ 13,600
7	Number of Bills	61,910	350	11,258	12	4,704	12	160
8	**Monthly Customer Charge Revenue/Customer**	**$ 11.98**	**$ 12.00**	**$ 12.09**	**$ 12.25**	**$ 31.70**	**$ 45.83**	**$ 85.00**
9	**Relationship of Customer Charge Revenues to Customer-Related Costs**	**68.93%**	**69.07%**	**69.58%**	**70.50%**	**122.82%**	**177.55%**	**120.99%**

Source: Company's Response to OCA-I-1, Attachment A (Schedule E)

Q. USING THE OCA's PROPOSED PRE-TAX ROR OF 7.13 PERCENT, WHAT DOES YOUR ALTERNATIVE CUSTOMER COST ANALYSIS FIND?

[7] Direct Testimony of Christopher C. Walters at 3:2-4.

A. This alternate analysis finds that RS and RSAE customers currently recover approximately 69 percent of customer-related costs through the existing customer charge. Likewise, NRS and NRH customers currently recover approximately 70 percent of customer-related costs through the existing customer charge. Larger commercial and industrial customers are currently recovering more than current customer-related costs through the existing customer charge.

Q. DO THESE RESULTS INDICATE ANY PRESSING NEED TO INCREASE MONTHLY CUSTOMER CHARGE RATES?

A. No. Even under this alternative analysis of customer-related costs, all Company residential and commercial service rate classes cover the majority of their customer-related costs through monthly customer charges. The lowest, the RS class, recovers nearly 69 percent of its customer-related costs through its monthly customer charge.

III. CONCLUSIONS AND RECOMMENDATIONS

Q. HAVE YOUR RECOMMENDATIONS PRESENTED IN YOUR DIRECT TESTIMONY CHANGED AFTER REVIEWING INTERVENING PARTIES DIRECT TESTIMONIES?

A. No. I continue to recommend the Commission reject Wellsboro's proposed increases in customer charges because they disproportionately impact low-income customers and reduce customer incentives to reduce usage, contrary to public goals of promoting energy efficiency. Furthermore, Wellsboro's existing residential customer charge is the third highest in the region and the proposed increase would make the charge the highest among regional peer investor-owned utilities. Finally, a correct analysis of customer-related costs from Wellsboro's ACOS finds that all residential and commercial

rate classes are currently recovering *nearly all* customer-related costs through monthly customer charges.

Q. DO YOU CONTINUE TO SUPPORT YOUR ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

A. Yes. I continue to recommend the Commission limit its increase in Wellsboro monthly customer charges to only that required to bring the Company's customer charges in line with Citizens' Electric Company, if the Commission decides an increase in monthly customer charges is warranted. This would limit the increase in residential customer charge to $13.10 per month.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

VERIFICATION

I, Michael W. Deupree, hereby state that the facts above set forth in my Rebuttal Testimony, OCA Statement No. 3R, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

OCA Exhibit ZT-3 – Billing Demand Proposal Summary Table

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND BUSINESS DESCRIPTION.

A. My name is Zach Teti. I am a Senior Regulatory Analyst at the Pennsylvania Office of Consumer Advocate ("OCA"). My office is located at 555 Walnut St, Harrisburg, PA 17101. The OCA is a state agency that represents the interests of Pennsylvania utility consumers before the Pennsylvania Public Utility Commission ("PUC"), federal regulatory agencies, and state and federal courts. The OCA was created by the Pennsylvania General Assembly in 1976 and is an independent office within the Office of Attorney General.

Q. PLEASE STATE YOUR EDUCATIONAL BACKGROUND.

A. I received a B.A. degree in Economics from Millersville University (Millersville, PA) in 2013 and an M.S. in Energy Economics from Pennsylvania State University (University Park, PA) in 2021.

Q. WHAT IS YOUR PROFESSIONAL BACKGROUND?

A. I have twelve years of experience in the banking and energy industries, most recently specializing in organized wholesale and retail electricity markets. My background comprises energy market design and analysis; econometric research in an academic setting; and financial planning, analysis, and control in a banking setting. I was employed as a Senior Regulatory Analyst serving as a representative of the NEPOOL Markets Committee between 2021 and 2024, analyzing wholesale market design and its impact on default service procurement of electricity. In this position, I also wrote energy policy recommendations and helped with implementation of rulemaking ordered by the Federal Energy Regulatory Commission ("FERC"), such as FERC Order 2222 which aimed to better enable distributed energy resources (DERs) to

participate in the electricity markets run by regional grid operators.[1] I joined the OCA as a Senior Regulatory Analyst in April 2025.

Q. ON WHOSE BEHALF ARE YOU OFFERING THIS TESTIMONY?

A. I am offering this testimony on behalf of the OCA. My testimony is intended to address issues from the standpoint of residential customers of electricity. My comments also impact sizable customer-generators; that is, customers with distributed generation resources with output capacity that exceeds 400 kilowatts ("kW"), are interconnected to the electric distribution system, and participate in net metering.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. I am responding to the Direct Testimony of Brett Nolt, Solar Projects' Statement No. 1, submitted on behalf of Kelly Road Solar, LLC, Lancaster Avenue Solar, LLC, and Twilight Renewables, LLC (collectively, the "Solar Projects"). My rebuttal testimony addresses certain elements of the proposed Billing Demand methodology of Citizens' Electric Company of Lewisburg, PA ("Citizens" or "Company") submitted to take effect in late 2025 or early 2026. The Company and Solar Projects have provided comments on specific issues that I will address including: (1) the importance of efficient procurement of the Company's default service passed through Generation Supply Service Rate-1 ("GSSR-1"); (2) the concern of a risk premium noted in a recent PUC Opinion and Order; and (3) the fairness of the rate of compensation for energy produced by customer-generators.

Q. HOW IS THE REMAINDER OF YOUR REBUTTAL TESTIMONY ORGANIZED?

[1] https://www.ferc.gov/ferc-order-no-2222-explainer-facilitating-participation-electricity-markets-distributed-energy

A. Section I is an introduction. Section II presents a summary of the Company's proposed Billing Demand methodology. Section III presents a summary of the Solar Projects' witness Nolt's Direct Testimony. Section IV, the final section of my Rebuttal Testimony, presents my discussion of the Company's proposal, responds to Mr. Nolt, and provides my recommendations concerning the Company's proposed Billing Demand methodology.

Q. DO YOU HAVE ANY APPENDICES OR EXHIBITS TO YOUR TESTIMONY?

A. Yes. Attached to my testimony as Appendix A is my CV. Also attached are Exhibit ZT-2 (Company's response to Interrogatory SP-II-5) and Exhibit ZT-3 (Billing Demand Proposal Summary Table).

Q. ARE YOU RECOMMENDING THAT THE COMPANY'S PROPOSED BILLING DEMAND METHODOLOGY BE APPROVED BY THE PUC?

A. Yes, I am. The overall default service supply portfolio and the specific default service procured on behalf of residential customers would benefit from the Company's proposed Billing Demand methodology.

Q. WHY ARE YOU RECOMMENDING THAT THE COMPANY'S PROPOSED BILLING DEMAND METHODOLOGY BE APPROVED?

A. In my review of (1) the Company's response to SP-II-5 (which is attached to my testimony as Exhibit ZT-2), and (2) the Direct Testimony of Brett Nolt on behalf of the Solar Projects, I found two themes to be most salient. First, the top priority in this matter should be to strive for fairness across customers and customer classes. In the Company's response to SP-II-5, the Company outlines the effect of a streamlined approach to default service procurement (albeit a somewhat abstract outline) arising from this proposed Billing Demand methodology. The analysis illustrates a fair

outcome for customers which will be explained in the next section. Second, Solar Projects may be overstating the impact of the proposed Billing Demand methodology on customer-generator compensation. The proposed Billing Demand methodology accomplishes fairness by improving the procurement process for default service and simultaneously compensating customer-generators at a "full retail value for all energy produced" that does not corrupt the efficiency of the procurement process.[2] For these reasons, I am recommending that the Company's proposed Billing Demand methodology be approved by the PUC.

Q. ARE YOU MAKING ANY ADDITIONAL RECOMMENDATIONS?

A. Yes. As just stated, Solar Projects may be overstating the impact of the proposed Billing Demand methodology on compensation for energy produced by customer-generators. In this regulatory proceeding and prior to any accepted tariff change, clarity should be reached on this subject. This topic provokes the complicated value proposition between (1) load reduction and its effect on PJM costs (and which customer class should be the recipient of these reduced costs while paying local customer-generators at a full retail rate), (2) compensating local customers-generators at a retail rate that consists of individual or multiple wholesale market components (even though they are not contributing to resource adequacy or reducing transmission cost allocation), or (3) direct wholesale market participation and effectively stripping customer-generators out of the retail market and procurement scope.

II. SUMMARY OF THE COMPANY'S BILLING DEMAND PROPOSAL

Q. HOW DOES THE COMPANY PROPOSE TO DEFINE BILLING DEMAND IN THIS PROCEEDING?

[2] Citizens' Tariff, Rider B – Net Metering p. 66

A. The Company proposes to add a new definition of "Billing Demand" in the Definitions section of the Tariff as follows: "Billing Demand shall reflect the Customer's use of the distribution system, which will be the greater of Gross Generator Rating (kW(AC)) as stated in the generator interconnection application or the maximum demand of the customer during any 15-minute period during the current month."[3]

Q. PLEASE DESCRIBE THE COMPANY'S PROPOSAL REGARDING BILLING DEMAND.

A. The Company further proposes a change to Paragraph 26(a) of the Tariff re: "Determination of Billing Demand," as follows: "Billing Demand shall reflect the Customer's maximum use of the distribution system during the 15-minute period of maximum use for the month. This shall be the maximum energy supplied by the Company to the Customer's meter during the applicable period or, for customer-generators that qualify for Rider B – Net Metering, the greater of the maximum energy supplied by the Company to the meter or the nameplate generator capacity indicated on the application to interconnect."[4]

Q. DID THE COMPANY ADDRESS ITS TARIFF CHANGES IN TESTIMONY?

A. Yes. In Citizens Statement No. 4, Direct Testimony of Company President Nathan Johnson, at pages 17-18,[5] Mr. Johnson explained that in the recent *UGI Electric* decision at Docket No. P-2004-3049343[6] the PUC indicated that customer-generators can be classified for generation purposes according to their peak electricity imported from the electric distribution company ("EDC") or exported to the EDC. Based on this decision, the

[3] Citizens' Rate Case Filing, p. 23

[4] *Id.*, p. 29

[5] Direct Testimony and Exhibits of Nathan Johnson, pp. 17-18

[6] *Petition of UGI Utilities, Inc-Electric Division for Approval of a Default Service Plan for the Period of June 1, 2025 though May 31, 2029*¸ Docket No. P-2004-3049343, et al (*UGI Electric*).

Company proposes to clarify in its tariff that customer-generator's net power flow from or onto the Company's distribution system will be used to establish the distribution charges for the account and eligibility for the Generation Supply Service Rate ("GSSR")-1 or GSSR-2. For customers with Billing Demands over 400 kW, the annual cash out will be a weighted average locational marginal price ("LMP").[7]

Q. ACCORDING TO MR. JOHNSON, WHY IS THE PROPOSAL APPROPRIATE?

A. Mr. Johnson explained that it is appropriate to use the net power flow from or onto the Company's distribution system because using these measures provides an accurate reflection of the Customer's use of the distribution system. From a distribution perspective, Mr. Johnson testified that the EDC must plan the same for a customer that is exporting 400 kW to Citizens' as it does for a customer that is receiving 400 kW from Citizens'. Mr. Johnson testified that the Company's planning for a customer's export of power to Citizens' system is more complicated because of potential variability, voltage sags/surges and other issues. Mr. Johnson testified that it is equitable to charge a customer exporting 400 kW to [the Company]] similar to how [they] charge a customer that uses or imports 400 kW. Mr. Johnson noted that in the recent *UGI Electric* Order, the Commission determined that [it] is appropriate to treat these customers similarly for generation supply services. For Citizens', this will ensure that [they] apply a uniform definition of "billing demand", which is used in [their] distribution rate schedules and the GSSR-1 and GSSR-2 Riders.[8]

[7] Direct Testimony and Exhibits of Nathan Johnson, pp. 17-18
[8] *Id.*

III. SUMMARY OF THE SOLAR PARTIES' RESPONSE

Q. PLEASE SUMMARIZE MR. NOLT'S DIRECT TESTIMONY.

A. Mr. Nolt opposes the Company's proposal to add a new definition of Billing Demand to the tariff for two reasons. First, he testified that the tariff change will institute a new demand charge in GLP-1 Rate Class for power being sent to the EDC system by customer-generators that will be approximately 126% higher than the current tariff (varying on a case-by-case basis) with no demonstration of increased costs by Citizens. Next, he testified that the tariff change will impact the default service procurement class in which the Solar Projects are classified and thus change the rate of their compensation. Under the current tariff, the Solar Projects are in GSSR-1 because demand for the five of the six projects of the Solar Projects is essentially zero as they are measured purely on the basis of what these customers receive from Citizens and not by the power they export. With the Company's proposed Billing Demand methodology, the above 400kW threshold would move the Solar Projects to GSSR-2, which Mr. Nolt argues is akin to a wholesale rate. He testified that Solar Projects would suffer irreparable harm as a result because the compensation method for net metering will change.[9]

IV. DISCUSSION AND RECCOMMENDATIONS

Q. DID YOU PREPARE A TABLE THAT OUTLINES THE IMPACT OF THE COMPANY'S BILLING DEMAND PROPOSAL ON RATE SCHEDULES AND SUPPLY RATES.

A. Yes. Please see Exhibit ZT-3.

[9] Direct Testimony of Brett Nolt, pp 3-9.

Q. PLEASE COMMENT ON THIS TABLE SHOWN IN EXHIBIT ZT-3.

A. GSSR-1 and GSSR-2 are applied to customers that take default service. For all RS customers, the generation charge is GSSR-1. RS customers pay at a GSSR-1 rate if they are net buyers and receive GSSR-1 if they are net sellers. For GLP-1 and GLP-3 customers, the service rate is determined by Billing Demand. Customers with monthly Billing Demands under 400 kW for each of the prior 12 months will be applied to the GSSR-1. Customers with a monthly Billing Demand of 400 kW or more during any month in the last 12 months will be applied to the GSSR-2. GSSR-1 is procurement-based. GSSR-1 is based on "Purchased Power Costs for the compliance period incurred by the Company to acquire generation supply."[10] GSSR-2 is market-based with multiple components. An example of a component is:

> *"GSSR-2 Energy Charge per kWh: The product of the actual real-time PJM West Hub Locational Marginal Prices ("LMPs") for each hour of the billing month expressed in cents per kWh (including the Distribution Loss Adjustment), times the customer's actual energy use during each hour of the billing month."*[11]

While the table illustrates that GSSR-1 can be applied to both RS and GLP-1 service schedules, the proposed delineation of service rate by Billing Demand for GLP-1 customers is created to procure an efficient quantity of supply for the bulk of customers via DSP suppliers in GSSR-1. This approach ringfences similarly situated customers apart from large customers and virtually commercial customers with generation that exceeds 400 kW.

Q. WHICH INTEROGATORY BETWEEN THE SOLAR PARTIES AND THE COMPANY BEST ADDRESSES THE IMPACT OF THE BILLING DEMAND PROPOSAL?

[10] Citizens' Rate Case Filing, p. 33
[11] Citizens' Rate Case Filing, p. 34

A. Interrogatory SP-II-5 and the Company's response thereto best addresses the impact of the Billing Demand proposal. It is attached to my testimony as Exhibit ZT-2. The interrogatory asks: "Please reference Citizens' St. No. 4, p. 17. Has Citizens conducted any studies or analyses of the effects of this tariff change on Citizens' default procurement of electricity based on its Default Service Plan ("DSP")? If yes, please provide all studies or analyses related to the same."

Q. PLEASE BRIEFLY DESCRIBE THE ANALYSIS DONE BY THE COMPANY.

A. In SP-II-5 Attachment A, the Company utilizes a numerical example to compare two scenarios. The first scenario entitled "Energy Purchase through Wholesale Supplier" reflects the proposed Billing Demand methodology which would effectively separate residential customers from sizable customer-generators. The second scenario entitled "Energy Purchase through Net Metered Export" reflects the status quo incorporation of sizable customer-generators in default service procurement under the GSSR-1. The comparison of these two scenarios illustrates that these customer-generators cannot be used to satisfy capacity requirements (due to findings in SP-II-5 Attachment B) and that PJM costs will be incurred in both scenarios (with and without generation from customer-generators).[12] In the first scenario, customers in essence "get what they paid for" which is cost-effective; that is, residential customers pay for the energy, capacity, and transmission that serves them. Paying only for what serves them is cost-effective. If expected output from local customer-generators could be taken into account to meet

[12] Citizens' Response to SP-II-5 at p. 2: "For nearly half of the past decade's PJM Capacity and Transmission Peak hours, SPV output from either model was 20% or less of rated capacity, demonstrating the limited ability of net-metered SPV to mitigate PJM costs."

capacity obligations, then there could be a reduction in PJM costs due to this accredited value, but that is not how it currently works as outlined by the Company.[13]

A. Importance of Efficient Procurement of the Default Service Served on the GSSR-1

Q. PLEASE EXPLAIN THE IMPORTANCE OF EFFICIENT PROCUREMENT OF DEFAULT SERVICE PASSED THROUGH GSSR-1.

A. Utilities must meet their statutory responsibilities by procuring a default service portfolio that is designed to ensure service at the least cost over time.[14] To achieve this, utilities ensure reliable electricity supply by engaging in prudently procured load supply contracts in a streamlined manner, which requires a clear understanding of forecasted load for a somewhat nuanced base of customers. That is, getting the quantity correct is key for the efficient procurement of default service supply that will be passed through to customers at GSSR-1. Implementation of the proposed Billing Demand methodology should reduce the uncertainty of output from large customer-generators (output capacity > 400 kW), helping with the efficiency of this procurement. By shifting large customer-generators into the existing rate of GSSR-2, the task of efficient default service procurement for the bulk of customers becomes more achievable. Again, I agree with the Citizens model provided in response to SP-II-5. The model reflects the difference between efficient and inefficient procurement of the company's DSP for residential customers.

[13] Citizens response to this topic on August 4, 2025: "The Company does not believe it is appropriate to incorporate any capacity or transmission impact into its analysis, however, because net-metered generation does not guarantee those savings and is economically disincentivized to export during peak demand periods. Please note that a customer generator on the GSSR-2 rate would see the benefit of a zero transmission and/or capacity obligation if it successfully offsets its on-site consumption during the relevant PJM peaks." In other words, this benefit appears to be capped at zero and seemingly cannot be negative (i.e., compensated as if contributing to resource adequacy or reducing transmission cost allocation). The OCA will send interrogatories to further clarify.

[14] 52 Pa. Code § 54.185. Default service programs and periods of service.

Q. PLEASE SUMMARIZE.

A. DSP suppliers will serve load and incur similar PJM costs with or without generation from local customer-generators. In default service procurement, it is important to procure the correct quantity of electricity to avoid incurring excessive costs.[15] Again, I agree with the Citizens model provided in response to SP-II-5, which reflects the effect of a straightforward load forecast used in procurement from wholesale suppliers passed through at GSSR-1. Excessive costs are mitigated by the Company's proposed Billing Demand methodology.

B. Extension of the Risk Premium Concern in PUC's *UGI Electric* Opinion and Order

Q. PLEASE PROVIDE THE RELEVANT PORITONS OF THE PUC'S RECENT *UGI ELECTRIC* DECISION (P-2024-3049343) RELATED TO RISK PREMIUMS DRIVEN BY CUSTOMER-GENERATOR UNCERTAINTY.

A. From the PUC's Opinion and Order:

> The Company determined that if large customer-generators were to be included in the GSR-1 group, then: (1) their output would decrease GSR-1 group load and tranche size; (2) there is substantial question as to the level of output and timing of when these projects will become operational; and (3) these large customer-generators have the ability to leave default service at any time and participate in the wholesale market, thereby creating an attrition risk if projects opt to leave GSR-1 service and shop their output elsewhere. **UGI argued that each of these factors would substantially increase risk for wholesale suppliers, causing higher bid premiums and likely reducing the number of competitive bidders.**[16]

[15] Refer to PJM Manual 18 7.5 Daily Unforced Capacity Obligations for these roles and responsibilities,
[16] PA PUC Opinion and Order, p. 23 (emphasis added).

Q. DOES CITIZENS OFFER ANY SIMILAR REMARKS?

A. Yes. From Citizens' Response to SP-II-5, "…net-metered customer-generators directly benefit from the price inflation that they cause in a compounding fashion that increases as more net-metered generation is installed."[17]

Q. DO YOU SHARE THIS CONCERN?

A. Yes, I do share this concern.

Q. IS THE EFFECT OF THIS RISK PREMIUM INCORPORATED IN CITIZENS' ANALYSIS OFFERED IN RESPONSE TO SP-II-5?

A. No. While the Company did not show this effect in their analysis, the Company and I share the concern about the risk premiums associated with customer-generator uncertainty described in the above excerpt of the PUC's Opinion and Order. In the above remark, the Company expresses a comparable concern: that a large customer-generator stands to benefit from "price inflation that they cause in a compounding fashion." I take this statement to mean that the large customer-generator (output capacity > 400 kW) stands to benefit from higher prices caused by the risk premiums added to DSP suppliers to address their risks caused by unknown output quantities and attrition risk of large customer-generators.

Q. WILL THE PROPOSED BILLING DEMAND METHODOLOGY MITIGATE THE NEED FOR THIS RISK PREMIUM?

A. Yes. The proposed Billing Demand methodology should reduce over time the need for suppliers to include this risk premium in their offers when participating in default service procurement auctions to be passed through GSSR-1.

[17] Citizens' Response to SP-II-5, p. 2

C. Solar Projects' Concern About the Rate for Compensation of Customer-Generators

Q. WHY ARE THE SOLAR PROJECTS CONCERNED WITH THE PROPOSED BILLING DEMAND PROPOSAL?

A. In the proposed Billing Demand methodology, net metering compensation for large customer-generators (output capacity > 400 kW) at a more advantageous rate will be discontinued.

Q. WHICH QUESTION RAISED BY MR. NOLT ADDRESSES THE IMPACT OF THE BILLING DEMAND PROPOSAL AS TO COMPENSATION?

A. "What are the effects on net metered solar projects over 400kW that primarily provide power for offsite usage (either virtual net metering from a customer site to a different site operated by that same customer due to siting constraints, or simply selling power to citizens) in the GLP-1 rate class?"[18]

Q. WHAT WAS MR. NOLT'S ANSWER?

A. "The tariff would immediately re-classify any solar project rated over 400kWAC from GSSR-1 (a retail rate averaging 8.565 cents/ kWh the last 10 years) down to GSSR-2 (a wholesale LMP rate of and average of 3.238 cents per kWh). From an operational perspective, based on data from 5/18/24 - 5/18/25, using a PA solar array overlaid to LMP pricing. The energy revenue will decrease by 62%."

Q. ARE THERE OTHER PORTIONS OF MR. NOLT'S TESTIMONY THAT INDICATE SOLAR PROJECTS ARE CONCERNED WITH COMPENSATION AT GSSR-2?

A. Yes. Please see the excerpt below.

[18] Direct Testimony of Brett Nolt, p. 3

Q. HOW IS THE RATE THAT CUSTOMERS WILL BE CHARGED FOR ENERGY IN THE GSSR 2 TO BE CALCULATED?

A. Hourly RTP Energy Charge (This is the LMP) will include the following:

- *Capacity Charge*
- *Transmission Charge*
- *RTEP Charge*
- *Administrative Charge (this is the costs incurred by the company and its wholesale supplier to manage energy procurement and delivery)*
- *Gross Receipts Tax*

Q. WILL THIS METHODOLOGY BE THE SAME METHODOLOGY APPLIED TO CUSTOMERS WHO GENERATE ENERGY IN EXCESS OF WHAT THAN THEY CONSUME IN A YEAR?

A. No, customer generators will be paid only at the LMP for excess generation.

Q. DO YOU AGREE WITH MR. NOLT'S ASSESSMENT AND STATEMENT?

A. In comparing this answer to the point of view shared by Mr. Johnson in testimony and interrogatory responses, I find this to be a difficult topic to interpret with (1) differing views of local customer-generator value as it relates to capacity and transmission costs and (2) use of unclear evidence which is outside of the tariff. [19,20] By statutory mandate, customer-generators must be compensated at a retail value and this is the aim of the Company according to Rider B in the Company's Tariff:

> The customer-generator will receive a credit for each kilowatt-hour received by the Company up to the total amount of electricity delivered to the Customer during the billing period at the full retail rate, consistent with Commission regulations. On an annual basis, the Company will compensate the customer-generator for kilowatt-hours received from the customer-generator in excess of

[19] When asked about the assertion that net exports will not be compensated as capacity or for reducing transmission cost allocation, Mr. Nolt responded: "Based on a discovery question response from Nate Johnson SP-I-4 it was stated that solar generation is only paid at LMP. Capacity and Transmission (among other items) are not paid out for solar production kWh, even though solar production in real time does not use the transmission system and does have a capacity value. It differs from how users are charged in the GSSR-2 class."

[20] Citizens response to this topic on August 4, 2025: "The Company does not believe it is appropriate to incorporate any capacity or transmission impact into its analysis, however, because net-metered generation does not guarantee those savings and is economically disincentivized to export during peak demand periods. Please note that a customer generator on the GSSR-2 rate would see the benefit of a zero transmission and/or capacity obligation if it successfully offsets its on-site consumption during the relevant PJM peaks."

> the kilowatt hours delivered by Company to the customer-generator during the preceding year at the **"full retail value for all energy produced"** consistent with Commission regulations. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.[21]

Q. WHY DO YOU RAISE THIS AS AN ISSUE?

A. Mr. Nolt may be overstating the impact of the proposed Billing Demand methodology on customer-generator compensation; meanwhile, Mr. Nolt's interpretations of Mr. Johnson's statements are understandable, but not supported by the tariff in my view. Additional clarity on this issue would be helpful, and I intend to ask the Company for more information. SP-I-1 Attachment A was an effective way to illustrate theoretical billing for a GSSR-2 customer with net load (*i.e.*, the customer receives more from the Company than it supplies to the Company). Obtaining a similar, theoretical workbook which would reflect the functioning of GSSR-2 billing/compensation to a customer-generator with net export (*i.e.*, the customer supplies more to the Company than the customer receives from the Company) and a negative (or zero) contribution to peak load for capacity and transmission charges would be helpful.

Q. WHAT ELSE MIGHT HELP WITH THIS ISSUE?

A. The Company and Mr. Nolt should focus on the tariff and ensure that the language of Rider B – Net Metering, p. 66 is clear that a customer-generator that is a net exporter to the system will receive a credit that includes "all charges of the appropriate rate schedule" as applied to the net kWhs of electricity that the customer-generator supplied to the Company. This very same clear language appears for net load customer-generators in paragraph 2 of Rider B.[22] Next, in the GSSR-2 Rider, while all components of a retail rate are listed, that is the energy charge, capacity charge, transmission charge, RTEP charge, e-factor, and administrative charge, greater clarity

[21] Citizens' Tariff, Rider B – Net Metering, p. 66 (emphasis added).
[22] *Id.*

on how the Company determines certain values within each charge when a customer-generator is a net exporter could be helpful. For example, in the GSSR-2 Capacity Charge, how does the Company determine a customer's fixed peak load capacity obligation (especially a customer that is a net exporter during this determination)? The tariff states "in accordance with the applicable PJM Agreements" which I believe could use more clarity.[23] I intend to seek further discovery on these points.

Q. WILL THE COMPANY'S PROPOSED BILLING DEMAND METHODOLOGY AFFECT RESIDENTIAL CUSTOMERS WITH DER?

A. No, not substantially. A vast majority of residential customers with DER have DER systems with output capacity of much less than 400 kW (most are order(s) of magnitude smaller) and accordingly they will remain in the GSSR-1 classification.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

[23] Citizens' Tariff, p. 39

COMPANY RESPONSE TO INTERROGATORY SP-II-5

SP-II-5

Please reference Citizens' St. No. 4, p. 17. Has Citizens conducted any studies or analyses of the effects of this tariff change on Citizens' default procurement of electricity based on its Default Service Plan ("DSP")? If yes, please provide all studies or analyses related to the same.

Response Provided By:
Nathan Johnson, President & CEO

Date: June 30, 2025 (original)
July 14, 2025 (revised)

Response:

July 14, 2025 Revisions:
The Company has revised the attachments ("SP-II-5 Attachment A" and "SP-II-5 Attachment B") provided with the original response to SP-II-5, and made revisions to the response below, highlighted in yellow after identifying a data error related to the AC-to-DC ratio of the model PV systems used.

Original Response with July 14, 2025 Revision Incorporated:

Yes, the Company has analyzed the impact of net metered energy on default service costs in two different ways:

1) The direct cost of purchased net-metered energy compared to the cost of purchasing the same volume of energy through the DSP.

2) The potential for net-metered generation to mitigate PJM Capacity, Transmission, and RTEP costs.

The purchase cost analysis can be found in the attachment titled "SP-II-5 Attachment A (REV)." It contains several comparisons, summarized in the table below:

Comparison	Description	Result
400kW	400kW$_{AC}$ Roof Mount SPV w/ no offset load, standard PVWatts® roof-mount parameters	~$27,000 increase in GSSR-1 costs annually.
Ex + Prop >400kW	Expected net-metered export purchases of existing and proposed systems with ≥400kW rated output capacity	~$88,000 increase in GSSR-1 costs annually.

3000kW	3MW$_{AC}$ Rack Mounted Tracking (w/ Backtracking) SPV, premium panels, standard PVWatts® parameters	~$230,000 increase in GSSR-1 costs annually.

The analysis of PJM cost mitigation can be found in the attachment titled "SP-II-5 Attachment B (REV)." It contains a ten year history of PJM Capacity and Transmission peak hours and hourly outputs from the same PVWatts® studies used in Attachment A (REV). For nearly half of the past decade's PJM Capacity and Transmission Peak hours, SPV output from either model was 20% or less of rated capacity, demonstrating the limited ability of net-metered SPV to mitigate PJM costs.

Additionally, while no quantitative analysis has been performed, basic market principles suggest that as the total volume of energy purchased decreases, the price-per-unit will increase. In essence, as more energy is purchased from net-metered exports, less is purchased through the DSP wholesale contract. This lowers the 'buying power' of the DSP while concentrating non- volumetric (Company and supplier admin costs, Capacity, Transmission, and RTEP) costs across a smaller total quantity purchased, increasing the cost per MWh of default supply.

Finally, as purchased net-metered energy creates net under collection of GSSR costs under the existing structure (where the customer generator receives the GSSR-1 price regardless of the generator's size), the resulting reconciliation in future periods through the E-factor inflates the cost of default supply which, in turn, inflates the purchased cost of future-period net-metered energy purchases. In short, net-metered customer-generators directly benefit from the price inflation that they cause in a compounding fashion that increases as more net-metered generation is installed.

The Company concludes from its analysis that 1) net-metered generation exports result in a significant increase to default supply costs and 2) its proposed tariff change will mitigate these increases by shifting large exporters to the GSSR-2 rate and corresponding reimbursement formula.

BILLING DEMAND PROPOSAL SUMMARY TABLE

	APPLICATION OF SCHEDULE	NET MONTHLY DISTRIBUTION RATE	GENERATION SUPPLY RATES
RS	Service supplied in accordance with Company's Residential Service Requirements contained in Rule 31, in Company's Rules and Regulations.[1]	$16.50 Customer Charge 4.506 cents per kWh for all kWh	GSSR-1[2]
GLP-1	This rate schedule is for small general light and power service at secondary voltage or at a higher available voltage at the option of the Customer.	$21.00 Customer Charge $4.52 per kilowatt for all kilowatts of the Billing Demand 1.164 cents per kWh for all kWh	GSSR-1 or GSSR-2[3, 4]
GLP-3	General light and power service for not less than 50 kilowatts of Billing Demand from available lines of three phase 230 volts or at a higher available voltage at the option of the Customer.	$100.00 Customer Charge $6.91 per kilowatt for all kilowatts of the Billing Demand 1.221 cents per kWh for 30 kWh per kilowatt of the Billing Demand 0.133 cents per kWh for all additional kWh	GSSR-1 or GSSR-2
MBL	This schedule applies to street lighting controlled by Company when proper underground cables and lighting standards are available in the Borough of Lewisburg, Pennsylvania.	$6.72 for each meter $6.97 for each light post connected to the meter	GSSR-1
OL	Outdoor dusk to dawn lighting service to any customer when such service can be supplied from existing overhead or underground secondary supply lines.	Other	Other

Notes:

1. RULE 31. RESIDENTIAL SERVICE REQUIREMENTS
   (a) Company's Residential Service, Schedule RS, except as otherwise provided herein, applies to the supply of single-phase electric service through one meter to a single private dwelling unit and its appurtenant detached buildings such as a garage, stable, barn, etc. A separate dwelling unit shall consist of three or more rooms having separate bathroom, kitchen and living room.
   (b) The schedule applies to service for:
      (1) A separate dwelling unit in an apartment house, but not the halls, basement, or other portions of such building common to more than one such unit.
      (2) A private dwelling in which space is only occasionally used in connection with the conduct of a business or profession by a person residing therein.
2. For all RS customers, the generation charge is GSSR-1.
3. Customers with monthly Billing Demands under 400 kW for each of the prior 12 months will be applied to the GSSR-1. Customers with a monthly Billing Demand of 400 kW or more during any month in the last 12 months will be applied to the GSSR-2.
4. GSSR-1 and GSSR-2 are applied to customers that take Default Service. For GLP-1, GLP-3 customers, the service rate is determined by Billing Demand (see Note 3).
   (a) GSSR-1 is procurement-based on "Purchased Power Costs for the compliance period incurred by the Company to acquire generation supply."

(b) GSSR-2 is more direct, or market-based: (example of a component: "GSSR-2 Energy Charge per kWh: The product of the actual real-time PJM West Hub Locational Marginal Prices ("LMPs") for each hour of the billing month expressed in cents per kWh (including the Distribution Loss Adjustment), times the customer's actual energy use during each hour of the billing month."

Surrebuttal Testimony of Greg R. Meyer

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Greg R. Meyer. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q ARE YOU THE SAME GREG R. MEYER WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025 AND REBUTTAL TESTIMONY ON AUGUST 13, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR SURREBUTTAL TESTIMONY.

A My Surrebuttal Testimony will address the following issues:

- I recommend the Pennsylvania Public Utility Commission ("Commission") not recognize a regulatory asset for the unrecovered rate case expense.
- I continue to support a revenue adjustment for Citizens' Electric Company of Lewisburg, PA ("Citizens").
- I support a Citizens labor adjustment.
- I recommend the Commission adjust Accounts 593 and 920 expenses.
- I recommend the Commission adjust Citizens' expenses to remove lobbying activities.
- I support an adjustment to uncollectible expense.

My silence regarding any issue should not be construed as an endorsement of or acquiescence to positions advanced by Citizens.

RATE CASE EXPENSE REGULATORY ASSET

Q IS CITIZENS CONTINUING TO REQUEST A REGULATORY ASSET FOR THE RECOVERY OF RATE CASE EXPENSE?

A Yes, and I am still opposed to granting recovery on the unamortized rate case expense balance. I am proposing, similar to the witnesses for the Bureau of Investigation and Enforcement and the Pennsylvania Office of Small Business Advocate, that rate case expense be normalized over a certain rate case interval. By normalizing rate case expense over a rate case interval there is no need to establish a regulatory asset.

Q CITIZENS ARGUES THAT THE UNAMORTIZED BALANCE IS REQUIRED TO COMPENSATE CITIZENS' SHAREHOLDERS FOR PROVIDING FUNDS NECESSARY TO FILE A RATE CASE AND RECOVER THOSE EXPENSES OVER A MULTI-YEAR PERIOD.[1] PLEASE COMMENT.

A What Citizens fails to recognize is that there are benefits to Citizens' shareholders from filing a rate case. In filing a rate case, Citizens' shareholders are given an opportunity to have all of its operations reviewed and just and reasonable rates established to collect its cost of service. This review includes a detailed analysis of current market conditions to establish a reasonable rate of return. Given these benefits to Citizens' shareholders, it is entirely fair to normalize rate case expense and deny the establishment of a regulatory asset.

Q IN ITS REBUTTAL TESTIMONY, CITIZENS ARGUES THAT THE UNAMORTIZED BALANCE OF RATE CASE EXPENSE IS SIMILAR TO THE INCLUSION OF MATERIALS AND SUPPLIES.[2] DO YOU AGREE?

A No. I do not think the arguments by Citizens trying to compare the ratemaking treatment of materials and supplies to the recovery of rate case expense is persuasive. Including materials and supplies in rate base recognizes that a utility should include a certain level of materials and supplies in its inventory to timely make repairs to the utility system to maintain reliable service. Given this expenditure of funds, it is necessary to provide a return on those inventory levels. That contrasts with the recovery of a recurring expense

[1] *See* the Rebuttal Testimony of Howard Gorman at page 6, lines 2-5.
[2] *Ibid.,* lines 6-8.

(not annually) for filing a rate case. Rate case expense recovery should be spread out over the rate case interval. This results in an even recovery of rate case expense from Citizens' ratepayers and assigns some of the benefits of rate case expenses to shareholders if they indeed prefunded those costs with shareholder funds.

RATE REVENUES

Q IS CITIZENS STILL SUPPORTING A FIVE-YEAR AVERAGE USAGE PER CUSTOMER TO ANNUALIZE REVENUES?

A Yes. Citizens continues to argue that usage per customer has decreased and, therefore, the use of a five-year average usage methodology is appropriate. Citizens' witness Howard Gorman states the following:

> As shown in Table HSG-3 below, the major rate classes have each shown marked declines in annual kWh usage per customer in recent periods. In fact, the 2023 and 2024 actual numbers are well below the 5-year averages that were used in the Company's forecast.[3]

Q ARE YOU AWARE OF ANY DATA THAT COULD EXPLAIN THE REASON WHY 2023 AND 2024 USAGE HAS DECLINED?

A Yes. First let me explain that Citizens' rate classes are affected by winter weather. I have included Table GRM-SR1 (Citizens) that shows the historic usage for the Residential class from 2020-2024.

[3] *Ibid.,* at page 8, lines 2-5.

Table GRM-SR1 (Citizens)

Historical Monthly Usage

Month	2020	2021	2022	2023	2024
	(1)	(2)	(3)	(4)	(5)
January	9,799,772	10,403,845	10,033,795	10,434,514	9,326,803
February	9,639,089	11,159,231	12,451,098	9,574,263	9,611,387
March	7,951,952	8,859,619	8,549,760	7,832,689	7,494,805
April	7,098,046	6,688,720	7,443,921	6,750,083	6,769,432
May	6,317,409	5,460,233	5,717,775	5,168,066	5,134,716
June	5,678,091	5,827,965	5,548,259	5,045,620	5,526,480

Source:
[1]Company Response to OCA Data Request 2-25 Attachment A

As can be seen from the table above, the four highest usage months are January, February, March, and December. Clearly this supports the theory that the Residential class is winter weather usage sensitive.

Q IS THERE A STANDARD MEASUREMENT TO ACCOUNT FOR WINTER WEATHER-SENSITIVE CUSTOMERS' USAGE?

A Yes. Heating Degree Days ("HDD") are a standard measurement of winter weather intensity. The theory behind HDD is the colder the weather in the winter, customers will use more electricity for space heating their homes. Colder winter weather translates

into higher HDDs for that year. I have prepared Table GRM-SR2 (Citizens) below that shows the annual HDDs ranked lowest to highest for the last 25 years dating back to 2000.

Table GRM-SR2 (Citizens)

Heating Degree Days

Year	HDD 65	Rank
2000	6,086	17
2001	5,735	8
2002	5,836	11
2003	3,532	1
2004	6,000	15
2005	6,161	19
2006	5,362	4
2007	5,936	14
2008	6,186	21
2009	6,161	20
2010	5,792	9
2011	5,852	12
2012	5,303	2
2013	6,300	24
2014	6,733	25
2015	6,225	23
2016	5,903	13
2017	5,810	10
2018	6,202	22
2019	6,016	16
2020	5,656	7
2021	5,586	6
2022	6,090	18
2023	5,303	2
2024	5,386	5
5 Year Ave	5,604	
10 Year Ave	5,818	
15 Year Ave	5,877	
20 Year Ave	5,898	
25 Year Ave	5,806	

Source:

National Centers for Environmental Information climate data for Station USC00364976 (LEWISBURG, PA US).

As can be seen from the table, the HDDs for 2023 and 2024 are significantly lower than the other 20 years. In fact, except for an uncharacteristic HDD total in 2003, 2023 and 2024 would have had the 1st and 4th lowest HDD totals recorded dating back to 2000. Establishing customer usage from a five-year average that includes these abnormal winter weather patterns will understate revenues going forward. I, therefore, continue to support a ten-year average usage for annualizing revenues.

LABOR

Q HAVE YOU READ CITIZENS' REBUTTAL TESTIMONY ADDRESSING LABOR EXPENSES?

A Yes. I have read the Rebuttal Testimony of Citizens' witness Nathan Johnson discussing payroll increases.

Q WHAT LEVEL OF PAYROLL INCREASE IS CITIZENS SEEKING IN THIS RATE CASE?

A Citizens is proposing to increase Operation and Maintenance ("O&M") payroll expense by $199,788 from 2024 to 2026 Fully Projected Future Test Year ("FPFTY") of approximately 19.6%.

Q DID CITIZENS PROVIDE ANY REASONS FOR THE PROPOSED INCREASE IN PAYROLL EXPENSE?

A Yes, Mr. Johnson explains that two hires are to replace retiring line technicians following 2026. Mr. Johnson goes on to explain the two hires are apprentices for the

line technicians and the apprenticeship takes four to five years to complete. During this four-to-five-year period, Citizens' workforce is actually overstaffed as the apprenticeships are working while the line technicians have not retired. Mr. Johnson further states that several of Citizens' positions required adjustments to better reflect market conditions.

Q HAVE YOU ANALYZED CITIZENS' WORKFORCE TO DETERMINE IF CITIZENS' WAGES ARE COMPETITIVE WITH THE MARKET.

A I have looked at two different workforce metrics. First, I looked at the employee levels at Citizens since 2020. Second, I analyzed the employee tenure of Citizens' employees.

Q PLEASE DESCRIBE THE LEVEL OF EMPLOYEES AT CITIZENS SINCE 2020.

A I have prepared Table GRM-SR3 (Citizens) that shows the annual level of employees at Citizens.

Table GRM-SR3 (Citizens)

Employee Levels

Year	Employee Count
2020	16
2021	18
2022	19
2023	18
2024	18
FTY	19
FPFTY	20

Source:
2020 to 2024 from annual reports;
TYs from OCA 7-12

As the table above reveals, the number of employees on Citizens' workforce is steady and shows a two person increase in 2025-2026. I assume the two-person increase is the increase in employees to replace the line technicians expected to retire following 2026. The steady workforce numbers suggest that Citizens does not have problems attracting employees to work for them.

Q PLEASE DISCUSS CITIZENS' EMPLOYEE TENURE ANALYSIS.

A In Response to OCA Data Request 7-16, Citizens reported that the average Citizens' employee tenure was 12.8 years. Excluding a brand-new hire with approximately 10 months experience raises the Citizens' employee tenure to 13.5 years. This level of tenure is an important metric in that it indicates that Citizens' employees view positively their total compensation package to work for Citizens. Having an average tenure of

12.8-13.5 years does not indicate dissatisfaction with the wages paid to Citizens' employees. I have summarized this response in Table GRM-SR4 (Citizens) below.

Table GRM-SR4 (Citizens)

Employee Tenure

Employee	Tenure
4003	32
4006	39
4010	32
4012	3
4015	7
4018	9
4021	7
4024	22
4025	22
4029	18
4033	10
4034	10
4035	6
4036	6
4037	4
4038	4
4039	2
4040	1
Average	12.8
Average (No 4040)	13.5

Source:

Company Response to OCA Data Request 7-16.

Q DO YOU HAVE ANY FURTHER INFORMATION ABOUT WAGE INCREASES GRANTED TO CITIZENS' EMPLOYEES OVER THE YEARS?

A Yes, I have compiled Table GRM-SR5 (Citizens) below that shows the wage increase information that Citizens includes in its annual reports to the Commission.

Table GRM-SR5 (Citizens)

Wage Scale Changes

Year	Wage Change
2009	3.5% COLA effective 1/1/2009, and merit increase throughout the year averaging 0.75%, Estimated annual effect $44,000.
2010	No COLA increases this year merit increase this year averaging 1.3%. estimated annual effect $14,560.
2011	4% COLA effective 01/12 and merit increases throughout the year averaging 1.67%, Estimated annual effect $63,000.
2012	3% COLA effective 01/12 and merit increases throughout the year averaging 1.8%. The labor decreased $22,000. This net labor decrease is a result of staff reduction due to retirement.
2013	3% COLA effective 01/2013 and merit increases throughout the year averaging 1.3%. Labor increased $47,000.
2014	3% COLA effective 01/2014 and merit increases throughout the year increased labor $65,000.
2015	3% COLA effective 01/2015 and merit increases throughout the year increased labor $70,941.
2016	3% COLA effective 01/2016 and merit increases throughout the year increased labor $91,173.
2017	3% COLA effective 01/2017. Merit increases throughout the year increased labor $22,268.
2018	3% COLA effective 01/2018, merit increases throughout the year, and additional staffing to replace retiring personnel increased labor $120,448.
2019	3% COLA effective 01/2019, merit increases throughout the year, and additional staffing to replace retiring personnel increase labor $17,151.70.
2020	3% COLA effective 1/2020, merit increases throughout the year increased labor $272.
2021	3% COLA effective 1/2021, merit increases throughout the year increased labor $7,817.
2022	4.5% COLA effective 1/2022, merit increases throughout the year increased labor $85,671.
2023	Six percent COLA effective 1/1/2023, merit increases throughout the year increased labor $129,027.
2024	Four percent COLA effective 1/1/2024, merit increases throughout the year increased labor $43,095.

Source:
[1] 2009 to 2024 annual reports to the Pennsylvania Public Utility Commission

The table above reveals that since 2009 the predominant wage increase granted to Citizens' employees has been 3% with additional merit increases above the 3%. I would also note that the average wage increase over those years as reported by Citizens is approximately $50,000.

Q DO YOU CONTINUE TO SUPPORT THE 4% WAGE INCREASE YOU APPLIED TO THE CITIZENS' WAGES?

A Yes, and I would also recognize the two employees who are to be hired as apprenticeship employees.

NON-LABOR ADJUSTMENT TO
MAINTENANCE OF OVERHEAD LINES – ACCOUNT 593

Q HAVE YOU REVIEWED THE REBUTTAL TESTIMONY OF CITIZENS' WITNESS NATHAN JOHNSON REGARDING YOUR ADJUSTMENT TO THE NON-LABOR PORTION OF MAINTENANCE OF OVERHEAD LINES?

A Yes, I have. Mr. Johnson notes the activities that make up the projected 57.5% increase over the Historic Test Year ("HTY") 2024 cost.[4] He also provides examples of how Citizens proposes to hold down costs.[5]

Q HOW DO YOU RESPOND?

A When we are looking at a projected increase of this magnitude ($240,947 greater than HTY 2024) one should expect concern for cost control, especially given that the risks

[4] *See* the Rebuttal Testimony of Nathan Johnson at pages 7-8.
[5] *Ibid.*, at page 9.

to Citizens' overhead lines are not new or sudden. All electric utilities incur these types of costs and have for many years. It would be normal to expect some growth in these costs, but the level proposed by Citizens is far beyond what we have seen in the past. From 2020 to 2024 we only saw $83,680 growth in costs – a compound annual growth rate of 5.73%.[6] Based on this pattern, the projected increases proposed by Citizens of 20.19% and 31.07% are staggering and not appropriate for inclusion in expense. I still support a non-labor expense of $468,197 for this account, a reduction to Citizens' expense of $191,571.

NON-LABOR ADJUSTMENT TO ADMINISTRATIVE AND GENERAL ("A&G") SALARIES – ACCOUNT 920

Q HAVE YOU REVIEWED THE REBUTTAL TESTIMONY OF CITIZENS' WITNESS KATHY STAUDER AS IT RELATES TO YOUR ADJUSTMENT TO THE A&G SALARIES ACCOUNT?

A Yes, I have. Ms. Stauder notes that these cost increases represent benefit costs that follow salaries and that $20,508 of the $88,472 increase over the HTY 2024 relates to the overlapping of positions.[7]

Q HOW DO YOU RESPOND?

A I have previously discussed my concerns with the substantial increase that Citizens has projected to labor expense. To the extent that these non-labor charges are driven by

[6]Data from Exhibit (HSG-1), Schedule C from last case and the present case. Summarized in Table GRM-7 (Citizens) on page 17 of my Direct Testimony.

[7]*See* the Rebuttal Testimony of Kathy Stauder at page 7, lines 5-10.

Citizens' inflated labor projections, I would also oppose building in inflated estimates for these costs.

As it concerns the building in an additional cost for having two people in Ms. Stauder's position at the same time, I maintain that this is a cost best borne by the shareholders. These are costs that do not reflect normal conditions. When we encounter non-normal conditions in operations in test years, the appropriate response is to normalize the cost, either by removing the non-normal cost, or in cases of unexpected and extremely large costs, proposing a normalizing adjustment to spread those costs over multiple years. This does not appear to meet the criteria for spreading over multiple periods and, so, my recommendation is that these costs are inappropriate for including in the revenue requirement. Customers should not be forced to pay for two people to fill the role at the same time. For these reasons, I remain steadfast in my position that the appropriate level of non-labor A&G Salaries expense is $404,145 and that Citizens' expense be reduced by $61,739.

LOBBYING

Q HAVE YOU REVIEWED THE REBUTTAL TESTIMONY OF KATHY STAUDER RELATED TO LOBBYING?

A Yes, I have. Ms. Stauder claims that only $38 represents the lobbying portion of the Energy Association of Pennsylvania ("EAP").[8]

[8] *Ibid.*, at page 5, lines 2-4.

Q HOW DO YOU RESPOND?

A A review of the organization's webpage clearly emphasizes EAP's lobbying and advocacy roles. Often trade organizations like EAP use the Internal Revenue Service's ("IRS") definition of lobbying that is much more narrowly defined and would tend to exclude advocacy from the definition. EAP appears to emphasize its benefits to utilities, rather than customers. On the "Who We Are" page of the EAP website, the organization states:

> "With roots dating back to 1908, the Energy Association of Pennsylvania is well-established as the voice of Pennsylvania's electric and natural gas utilities. The Association is an advocate for its members on policy issues before the General Assembly, the Public Utility Commission, and various other state governmental agencies."[9]

This type of advocacy should be borne by the shareholders who are clearly the beneficiaries of the EAP's work. I remain convinced that the full amount of the EAP membership should be excluded.

UNCOLLECTIBLES

Q HAVE YOU REVIEWED THE REBUTTAL TESTIMONY OF HOWARD GORMAN REGARDING UNCOLLECTIBLES?

A Yes, I have. Mr. Gorman asserts that I found a trend in uncollectibles rates when I compared revenues with net write-offs.[10] He then goes on to say that the 0.167% rate used by Citizens "is a reasonable continuation of this trend."[11]

[9] https://www.energypa.org/who-we-are/ last accessed August 23, 2025.
[10] *See* the Rebuttal Testimony of Howard Gorman at page 8, lines 15-16.
[11] *Ibid.*, at page 9, line 1.

Q DO YOU AGREE WITH MR. GORMAN?

A Reviewing my Table GRM-5 (Citizens), I do not see any such trend that could be extrapolated to support a 0.167% uncollectibles rate. The numbers that I showed fluctuated up and down and no real trend exits. I, therefore, opted to normalize by using a five-year average to develop a reasonable expected rate of uncollectibles. The level supported by Citizens exceeds anything we have seen in recent history and should not be adopted.

CONCLUSION

Q DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A Yes, it does.

Surrebuttal Testimony of Greg R. Meyer

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Greg R. Meyer. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q ARE YOU THE SAME GREG R. MEYER WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025 AND REBUTTAL TESTIMONY ON AUGUST 13, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR SURREBUTTAL TESTIMONY.

A My Surrebuttal Testimony will address the following issues:

- I recommend a depreciation expense adjustment.

- I recommend the Pennsylvania Public Utility Commission ("Commission") not recognize a regulatory asset for the unrecovered rate case expense.
- I support a Valley Energy, Inc. ("Valley") labor adjustment.
- I recommend the Commission adjust Account 880's expense level.

My silence regarding any issue should not be construed as an endorsement of or acquiescence to positions advanced by Valley.

DEPRECIATION EXPENSE

Q HAS VALLEY AGREED TO A CHANGE IN ITS ANNUALIZED DEPRECIATION EXPENSE BASED ON YOUR DIRECT TESTIMONY?

A Yes. Valley has reduced its annualized depreciation expense to eliminate depreciation expense for Account 391 – Office Furniture & Equipment.

Q DOES THIS CHANGE REMOVE ALL ISSUES YOU HAVE IDENTIFIED IN YOUR DIRECT TESTIMONY WITH VALLEY'S ANNUALIZED DEPRECIATION EXPENSE?

A No. I continue to support a depreciation change for Account 396 – Power Operated Equipment.

Q PLEASE EXPLAIN WHY YOU ARE RECOMMENDING A DEPRECIATION RATE CHANGE FOR ACCOUNT 396.

A At the end of the 2026 Fully Projected Future Test Year ("FPFTY"), Account 396 net book value will be negative $199. A negative net book value indicates that assets contained in Account 396 have been fully depreciated. Any future depreciation expense

charged to this account will only increase the negative net plant value assuming no new plant investment is made in Account 396. I would note that annual depreciation expense for Account 396 is $58,744 according to Valley. To address this negative net plant value issue, I am proposing a new depreciation rate for Account 396.

Q HOW DID VALLEY RESPOND TO YOUR PROPOSED CHANGE IN DEPRECIATION EXPENSE FOR ACCOUNT 396?

A Valley is opposed to changing the deprecation rate for Account 396. Valley presents the following arguments for why the deprecation rate for Account 396 should not be changed:

> "He [Mr. Meyer] did not present a depreciation study to support extending the depreciable life of this item."[1]

> "…ignores any capital spending the Company will do to replace this fully depreciated equipment."[2]

Q PLEASE DISCUSS THE ARGUMENT THAT YOU DID NOT PRESENT A DEPRECIATION STUDY.

A I assume the Valley witness is referring to the fact that I did not specifically perform a depreciation study for Account 396. That is correct since I merely took the 2026 depreciation expense for this account and spread it over the three-year rate case interval proposed by Valley. I would contend that a depreciation study was not necessary for that adjustment. However, I have since incorporated Valley's argument about plant additions and I will recommend a new depreciation rate.

[1] *See* the Rebuttal Testimony of Howard S. Gorman at page 7, lines 14-15.
[2] *Ibid*., lines 17-18.

Q PLEASE DISCUSS THE CONCERN RAISED BY MR. GORMAN CONCERNING NEW PLANT ADDITIONS.

A I agree that my original position did not recognize plant additions during the time the new rates will be in effect for this rate case because Valley did not propose any additions for 2025 or 2026. I have since developed a new scenario to support a new depreciation rate that includes annual plant additions.

Q PLEASE DISCUSS YOUR NEW ANALYSIS BASED ON MR. GORMAN'S REBUTTAL TESTIMONY.

A Before I address plant additions as raised by Mr. Gorman, I would like to show what the impact would be on the net plant value in Account 396 during the rate case interval if the depreciation rate (11.76%) is not changed.

I have prepared Table GRM-SR1 (Valley) that shows what the net plant value would be if no plant additions occurred during the three-year rate case interval.

Table GRM-SR1 (Valley)

Account 396 Scenario 1

Year	Ending Plant[1] (1)	Accumulated Depreciation Reserve[2] (2)	Plant Additions (3)	Depreciation Expense[3] (4)	Net Plant (5) = (1) - (2)
				11.76%	
2024	$ 499,528	$ 382,238	$ -	$ 48,647	$ 117,290
2025	$ 499,528	$ 440,982	$ -	$ 58,744	$ 58,546
2026	$ 499,528	$ 499,727	$ -	$ 58,744	$ (199)
2027	$ 499,528	$ 558,471	$ -	$ 58,744	$ (58,943)
2028	$ 499,528	$ 617,216	$ -	$ 58,744	$ (117,688)

Sources and Notes:

[1]2024 value from Company Schedule C3; following values are calculated as the previous ending plant plus the additions in Column 3.

[2]2024 value from Company Schedule C3; following values are calculated as the previous accumulated depreciation reserve plus that year's depreciation expense.

[3]2024 value from Company Schedule C3; following values are calculated as ending plant of previous year x the depreciation rate from similar accounts on Company Schedule C3 + a half year convention for additions in that year.

As can be seen from Table GRM-SR1 (Valley) above, the net plant value decreases from a negative $199 in 2026 to a negative $117,688 in 2028.

Q WHAT IMPACT WOULD PLANT ADDITIONS HAVE ON THIS ANALYSIS AND WHAT LEVEL OF PLANT ADDITIONS ARE YOU PROPOSING?

A I have prepared Table GRM-SR2 (Valley) that shows the historic plant additions/retirements for Account 396 dating back to 2015.

Table GRM-SR2 (Valley)

Account 396 Plant

Year	Additions	Retirements
2015	$ 74,195	$ -
2016	$ 1,214	$ -
2017	$ -	$ -
2018	$ -	$ -
2019	$ 110,377	$ 37,348
2020	$ 72,220	$ -
2021	$ 1,284	$ -
2022	$ -	$ -
2023	$ 51,721	$ -
2024	$ 28,666	$ -
Average	$ 33,968	$ 3,735

Source:
Valley Energy Annual Reports from 2015 to 2024.

As can be seen from Table GRM-SR2 (Valley) above, the total plant additions for Account 396 are approximately $400,000 since 2015. I have calculated a ten-year average of $33,968 annual plant additions.

Including those annual plant additions in the analysis still reveals that a negative net plant balance would occur at the end of the three-year rate case interval proposed by Valley. I have prepared Table GRM-SR3 (Valley) to show the effects on Account 396's net plant balance with plant additions and the current depreciation rate of 11.76%.

Table GRM-SR3 (Valley)

Account 396 Scenario 2

Year	Ending Plant[1] (1)	Accumulated Depreciation Reserve[2] (2)	Plant Additions[3] (3)	Depreciation Expense[4] (4)	Net Plant (5) = (1) - (2)
				11.76%	
2024	$ 499,528	$ 382,238	$ -	$ 48,647	$ 117,290
2025	$ 499,528	$ 440,982	$ -	$ 58,744	$ 58,546
2026	$ 499,528	$ 499,727	$ -	$ 58,744	$ (199)
2027	$ 533,496	$ 560,469	$ 33,968	$ 60,742	$ (26,973)
2028	$ 567,463	$ 625,205	$ 33,968	$ 64,736	$ (57,742)

Sources and Notes:

[1]2024 value from Company Schedule C3; following values are calculated as the previous ending plant plus the additions in Column 3.

[2]2024 value from Company Schedule C3; following values are calculated as the previous accumulated depreciation reserve plus that year's depreciation expense.

[3]Plant Additions are the 10 year average of plant additions for Account 396 per Valley Energy's annual reports from 2015 to 2024. See Table GRM-SR2 (Valley) for details.

[4]2024 value from Company Schedule C3; following values are calculated as ending plant of previous year x the depreciation rate from Company Schedule C3 + a half year convention for additions in that year.

As can be seen from Table GRM-SR3 (Valley) above, the negative net plant balance ($57,742) still exists with the budgeted plant additions of $33,968 for both 2027 and 2028. The negative net plant balance is still excessive, even assuming plant additions in 2027 and 2028, and the depreciation rate for Account 396 should be modified.

Q WHAT DEPRECIATION RATE DO YOU RECOMMEND FOR ACCOUNT 396 FOR PURPOSES OF THIS RATE CASE?

A I recommend a deprecation rate of 6.67% for Account 396.

Q WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A A depreciation rate of 6.67% is a common depreciation rate for Valley Administrative and General plant accounts.[3]

Q HAVE YOU PERFORMED AN ANALYSIS ON WHAT A DEPRECIATION RATE OF 6.67% WOULD HAVE ON THE NET PLANT BALANCE OF ACCOUNT 396?

A I have prepared a similar analysis that I have previously prepared and included as Tables GRM-SR1 and SR3 (Valley). I am including the results of that analysis in Table GRM-SR4 (Valley).

[3] *See* Exhibit_(HSG-1), Schedule C3, page 2.

Table GRM-SR4 (Valley)

Account 396 Scenario 3

Year	Ending Plant[1] (1)	Accumulated Depreciation Reserve[2] (2)	Plant Additions[3] (3)	Depreciation Expense[4] (4)	Net Plant (5) = (1) - (2)
				6.67%	
2024	$ 499,528	$ 382,238	$ -	$ 48,647	$ 117,290
2025	$ 499,528	$ 440,982	$ -	$ 58,744	$ 58,546
2026	$ 499,528	$ 474,301	$ -	$ 33,319	$ 25,227
2027	$ 533,496	$ 508,752	$ 33,968	$ 34,451	$ 24,743
2028	$ 567,463	$ 545,469	$ 33,968	$ 36,717	$ 21,994

Sources and Notes:

[1]2024 value from Company Schedule C3; following values are calculated as the previous ending plant plus the additions in Column 3.

[2]2024 value from Company Schedule C3; following values are calculated as the previous accumulated depreciation reserve plus that year's depreciation expense.

[3]Plant Additions are the 10 year average of plant additions for Account 396 per Valley Energy's annual reports from 2015 to 2024. See Table GRM-SR2 (Valley) for details.

[4]2024 and 2025 values from Company Schedule C3; following values are calculated as ending plant of previous year x the depreciation rate from similar accounts on Company Schedule C3 + a half year convention for additions in that year.

Table GRM-SR4 (Valley) above shows that by using a deprecation rate of 6.67% for Account 396, there will be an approximate positive net plant value of $21,994 at the end of the rate case interval proposed by Valley.

I would note that a positive net plant value of $21,994 still reflects the collection of a significant portion of the plant additions in those two years ($45,942 or 68%) in

between rate cases.[4] I would contend that a lesser depreciation rate could be justified for Account 396.

RATE CASE EXPENSE REGULATORY ASSET

Q IS VALLEY CONTINUING TO REQUEST A REGULATORY ASSET FOR THE RECOVERY OF RATE CASE EXPENSE?

A Yes, and I am still opposed to granting recovery on the unamortized rate case expense balance. I am proposing, similar to the witnesses for the Bureau of Investigation and Enforcement and the Pennsylvania Office of Small Business Advocate, that rate case expense be normalized over a certain rate case interval. By normalizing rate case expense over a rate case interval there is no need to establish a regulatory asset.

Q VALLEY ARGUES THAT THE UNAMORTIZED BALANCE IS REQUIRED TO COMPENSATE VALLEY'S SHAREHOLDERS FOR PROVIDING FUNDS NECESSARY TO FILE A RATE CASE AND RECOVER THOSE EXPENSES OVER A MULTI-YEAR PERIOD.[5] PLEASE COMMENT.

A What Valley fails to recognize is that there are benefits to Valley's shareholders from filing a rate case. In filing a rate case, Valley's shareholders are given an opportunity to have all of its operations reviewed and just and reasonable rates established to collect its cost of service. This review includes a detailed analysis of current market conditions to establish a reasonable rate of return. Given these benefits to Valley's shareholders,

[4] ($33,968 + $33,968 of plant additions) - $21,994 of remaining net plant = $45,942 already collected portion of additions.

[5] *See* the Rebuttal Testimony of Howard Gorman at page 4, lines 20-23.

it is entirely fair to normalize rate case expense and deny the establishment of a regulatory asset.

Q IN ITS REBUTTAL TESTIMONY, VALLEY ARGUES THAT THE UNAMORTIZED BALANCE OF RATE CASE EXPENSE IS SIMILAR TO THE INCLUSION OF MATERIALS AND SUPPLIES.[6] DO YOU AGREE?

A No. I do not think the arguments by Valley trying to compare the ratemaking treatment of materials and supplies to the recovery of rate case expense is persuasive. Including materials and supplies in rate base recognizes that a utility should include a certain level of materials and supplies in its inventory to timely make repairs to the utility system to maintain reliable service. Given this expenditure of funds, it is necessary to provide a return on those inventory levels. That contrasts with the recovery of a recurring expense (not annually) for filing a rate case. Rate case expense recovery should be spread out over the rate case interval. This results in an even recovery of rate case expense from Valley's ratepayers and assigns some of the benefits of rate case expenses to shareholders if they indeed prefunded those costs with shareholder's funds.

[6] *Ibid.,* at page 5, lines 1-5.

DISTRIBUTION EXPENSES – ACCOUNT 880

Q HAVE YOU REVIEWED THE REBUTTAL TESTIMONY OF VALLEY WITNESS EDWARD E. ROGERS AS IT RELATES TO YOUR ADJUSTMENT TO EXPENSES IN ACCOUNT 880 – OTHER DISTRIBUTION EXPENSES?

A Yes, I have. Mr. Rogers makes several claims in support of the forecasted expense levels for this account, stating that the "[h]istorical expense levels do not reflect the actual expenses that are now attributable to this account for the FTY and FPFTY."[7]

Q PLEASE DESCRIBE THE HISTORICAL EXPENSE LEVELS THAT YOU FOUND.

A In my Direct Testimony on Table GRM-3 (Valley), I showed that from 2010 through 2023, expense in this account ranged from a low of $1,855 (2013) to a high of $7,250 (2023).[8] In 2024, Valley suddenly began charging labor and overhead to this account.[9] This caused the expense level to balloon to $114,706, more than 1,400% growth. Valley expects that this will dip to $70,685 in the FPFTY 2026.

Q PLEASE ADDRESS MR. ROGERS' EXPLANATION OF WHY HISTORICAL EXPENSE DOESN'T REFLECT CURRENT OPERATIONS.

A Mr. Rogers first notes that Valley has started booking its Environmental Systems Research Institute, Inc. ("ESRI") software subscription and its Department of

[7] *See* the Rebuttal Testimony of Edward E. Rogers at page 10, lines 3-4.
[8] *See* the Direct Testimony of Greg R. Meyer at page 9, Table GRM-3 (Valley).
[9] *See* Exhibit_(ER-4R) attached to the Rebuttal Testimony of Edward E. Rogers.

Transportation training into a different account.[10] This would have the effect of reducing the overall expense, not provide justification for increasing it.

Mr. Rogers then states that Valley began charging expense related to training and evaluation into the account.[11] Of the $73,441 in non-direct labor charges to this account booked in 2024, this training platform represents a mere 7%, or $5,089. From there, Valley escalates the cost of this platform by 3% per year.

Mr. Rogers then notes that there is an additional Operational Qualification platform that will require additional labor and, thus, additional overhead.[12] It should be pointed out that my adjustment to Account 880 left the directly charged labor forecast alone because I addressed labor charges separately. What concerns me here is that the overheads that are being included represent a massive departure from the past and are greater than even the labor cost that Valley is projecting for this account.

Q ARE YOU IN ANY WAY ADJUSTING YOUR POSITION IN RESPONSE TO THE ADDITIONAL INFORMATION PROVIDED?

A Yes, slightly. Instead of limiting the non-direct labor cost to the 2023 expense level of $7,250, I am increasing my recommended expense to $8,582. This is to account for the new training software expense and the training supplies identified in Exhibit_(ER-4R). This represents a reduction of $34,121 to the non-direct labor portion of this account. As a reminder, I am not addressing the direct labor in this adjustment as it is handled in a separate adjustment.

[10] *See* the Rebuttal Testimony of Edward E. Rogers at page 10, lines 7-9.
[11] *Ibid*., lines 10-12.
[12] *Ibid*., lines 13-22.

INJURIES AND DAMAGES EXPENSES – ACCOUNT 925

Q HAVE YOU REVIEWED THE TESTIMONY OF VALLEY WITNESS JAMIE BEALE?

A Yes, Ms. Beale states that Valley is "comfortable accepting the reduction" that I proposed in my Direct Testimony.[13] This adjustment reduces Valley's Injuries and Damages expense by $30,981.

LABOR

Q HAVE YOU READ VALLEY'S REBUTTAL TESTIMONY ADDRESSING LABOR EXPENSES?

A Yes. I have read the Rebuttal Testimony of Valley's witness Edward E. Rogers discussing payroll increases.

Q WHAT LEVEL OF PAYROLL INCREASE IS VALLEY SEEKING IN THIS RATE CASE?

A Valley is proposing to increase Operation and Maintenance ("O&M") payroll expense by $113,582 from 2024 to 2026 FPFTY of approximately 10.0%.

[13] *See* the Rebuttal Testimony of Jamie Beale at page 3, lines 6-7.

Q HAVE YOU ANALYZED VALLEY'S WORKFORCE TO DETERMINE IF VALLEY'S WAGES ARE COMPETITIVE WITH THE MARKET?

A I have looked at two different workforce metrics. First, I looked at the employee levels at Valley since 2020. Second, I analyzed the historical average wage increases for Valley's employees.

Q PLEASE DESCRIBE THE LEVEL OF EMPLOYEES AT VALLEY SINCE 2020.

A I have prepared Table GRM-SR5 (Valley) below that shows the annual level of employees at Valley.

Table GRM-SR5 (Valley)

Employee Levels

Year	Employee Count
2020	31
2021	31
2022	31
2023	30
2024	31

Source:
2020 to 2024 from annual reports.

As the table above reveals, the number of employees on Valley's workforce is steady at 31 employees, except in 2023. The steady workforce numbers, as well as the ability to get back up to 31 employees, suggest that Valley does not have problems attracting employees to work for them.

Q WHAT FURTHER INFORMATION DO YOU HAVE ABOUT WAGE INCREASES GRANTED TO VALLEY'S EMPLOYEES OVER THE YEARS?

A I have compiled Table GRM-SR6 (Valley) below that shows the wage increase information that Valley includes in its annual reports to the Commission.

Table GRM-SR6 (Valley)

Wage Scale Changes

Year	Wage Change
2009	3.5% cost of living
2010	Rate increase effective December 1, 2010. Increase was in place for 1 month during 2010 year.
2011	4% wage adjustment
2012	3% wage adjustment
2013	3% wage adjustment
2014	3% wage adjustment
2015	3% wage adjustment
2016	3% wage adjustment
2017	3% wage adjustment
2018	3% wage adjustment
2019	3% wage adjustment
2020	3% wage adjustment
2021	3% wage adjustment
2022	4.5% wage adjustment
2023	6% wage adjustment
2024	4% wage adjustment

Source:

[1] 2009 to 2024 annual reports to the Pennsylvania Public Utility Commission

The table above reveals that since 2009 the predominant wage increase granted to Valley's employees has been 3%.

Q DO YOU CONTINUE TO SUPPORT THE 4% WAGE INCREASE YOU APPLIED TO THE VALLEY'S WAGES?

A Yes.

CONCLUSION

Q DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A Yes, it does.

Surrebuttal Testimony of Greg R. Meyer

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Greg R. Meyer. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q ARE YOU THE SAME GREG R. MEYER WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025 AND REBUTTAL TESTIMONY ON AUGUST 13, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR SURREBUTTAL TESTIMONY.

A My Surrebuttal Testimony will address the following issues:

- I recommend the Pennsylvania Public Utility Commission ("Commission") not recognize a regulatory asset for the unrecovered rate case expense.
- I continue to support a revenue adjustment for Wellsboro Electric Company ("Wellsboro").
- I support a labor adjustment.
- I recommend the Commission adjust Accounts 920 and 932 expenses.
- I support an adjustment for sponsorships and lobbying.

My silence regarding any issue should not be construed as an endorsement of or acquiescence to positions advanced by Wellsboro.

RATE CASE EXPENSE REGULATORY ASSET

Q IS WELLSBORO CONTINUING TO REQUEST A REGULATORY ASSET FOR THE RECOVERY OF RATE CASE EXPENSE?

A Yes, and I am still opposed to granting recovery on the unamortized rate case expense balance. I am proposing, similar to the witnesses for the Bureau of Investigation and Enforcement and the Pennsylvania Office of Small Business Advocate, that rate case expense be normalized over a certain rate case interval. By normalizing rate case expense over a rate case interval there is no need to establish a regulatory asset.

Q WELLSBORO ARGUES THAT THE UNAMORTIZED BALANCE IS REQUIRED TO COMPENSATE WELLSBORO'S SHAREHOLDERS FOR PROVIDING FUNDS NECESSARY TO FILE A RATE CASE AND RECOVER THOSE EXPENSES OVER A MULTI-YEAR PERIOD.[1] PLEASE COMMENT.

A What Wellsboro fails to recognize is that there are benefits to Wellsboro's shareholders from filing a rate case. In filing a rate case, Wellsboro's shareholders are given an opportunity to have all of its operations reviewed and just and reasonable rates established to collect its cost of service. This review includes a detailed analysis of current market conditions to establish a reasonable rate of return. Given these benefits to Wellsboro's shareholders, it is entirely fair to normalize rate case expense and deny the establishment of a regulatory asset.

Q IN ITS REBUTTAL TESTIMONY, WELLSBORO ARGUES THAT THE UNAMORTIZED BALANCE OF RATE CASE EXPENSE IS SIMILAR TO THE INCLUSION OF MATERIALS AND SUPPLIES.[2] DO YOU AGREE?

A No. I do not think the arguments by Wellsboro trying to compare the ratemaking treatment of materials and supplies to the recovery of rate case expense is persuasive. Including materials and supplies in rate base recognizes that a utility should include a certain level of materials and supplies in its inventory to timely make repairs to the utility system to maintain reliable service. Given this expenditure of funds, it is necessary to provide a return on those inventory levels. That contrasts with the recovery

[1] *See* the Rebuttal Testimony of Howard Gorman at page 5, lines 10-13.
[2] *Ibid.,* lines 14-18.

of a recurring expense (not annually) for filing a rate case. Rate case expense recovery should be spread out over the rate case interval. This results in an even recovery of rate case expense from Wellsboro's ratepayers and assigns some of the benefits of rate case expenses to shareholders if they indeed prefunded those costs with shareholder funds.

RATE REVENUES

Q IS WELLSBORO STILL SUPPORTING A FIVE-YEAR AVERAGE USAGE PER CUSTOMER TO ANNUALIZE REVENUES?

A Yes. Wellsboro continues to argue that usage per customer has decreased and, therefore, the use of a five-year average usage methodology is appropriate. Wellsboro's witness Howard Gorman states the following:

> Second and of paramount importance, as shown in Table HSG-2 below, these classes have shown marked declines in annual kWh usage per customer in recent periods. In fact, the 2023 and 2024 numbers are well below the 5-year averages.[3]

Q DO YOU STILL SUPPORT A 10-YEAR AVERAGE USAGE PER CUSTOMER FOR THE COMMERCIAL AND INDUSTRIAL RATE CLASSES?

A Yes, I do. In the statement from Mr. Gorman that I quoted, he acknowledges that 2023 and 2024 were abnormal. So, two of the five years in his average are not normal. Therefore, I believe it is appropriate to look at usage per customer over a longer term to reduce the influence of these two abnormal years.

[3] *Ibid.,* at page 7, lines 17-19.

LABOR

Q HAVE YOU READ WELLSBORO'S REBUTTAL TESTIMONY ADDRESSING LABOR EXPENSES?

A Yes. I have read the Rebuttal Testimony of Wellsboro's witness Byron Farnsworth, Jr. discussing payroll increases.

Q WHAT LEVEL OF PAYROLL INCREASE IS WELLSBORO SEEKING IN THIS RATE CASE?

A Wellsboro is proposing to increase Operation and Maintenance ("O&M") payroll expense by $222,440 from 2024 to 2026 Fully Projected Future Test Year ("FPFTY"), or approximately 19.6%.

Q HAVE YOU ANALYZED WELLSBORO'S WORKFORCE TO DETERMINE IF WELLSBORO'S WAGES ARE COMPETITIVE WITH THE MARKET.

A I have looked at two different workforce metrics. First, I looked at the employee levels at Wellsboro since 2020. Second, I analyzed the employee tenure of Wellsboro's employees.

Q PLEASE DESCRIBE THE LEVEL OF EMPLOYEES AT WELLSBORO SINCE 2020.

A I have prepared Table GRM-SR1 (Wellsboro) that shows the annual level of employees at Wellsboro.

Table GRM-SR1 (Wellsboro)

Employee Levels

Year	Employee Count
2020	13
2021	16
2022	16
2023	17
2024	17
FTY	17
FPFTY	17

Source:
2020 to 2024 from annual reports;
TYs from OCA 7-12

As the table above reveals, the number of employees on Wellsboro's workforce is steady. The steady workforce numbers suggest that Wellsboro does not have problems attracting employees to work for them.

Q PLEASE DISCUSS WELLSBORO'S EMPLOYEE TENURE ANALYSIS.

A In Response to OCA Data Request 7-16, Wellsboro reported that the average Wellsboro's employee tenure was 11.6 years. This level of tenure is an important metric in that it indicates that Wellsboro's employees view positively their total compensation package to work for Wellsboro. Having an average tenure of 11.6 years does not indicate dissatisfaction with the wages paid to Wellsboro's employees. I have summarized this in Table GRM-SR2 (Wellsboro).

Table GRM-SR2 (Wellsboro)

Employee Tenure

Employee	Tenure
1	36
2	34
3	24
4	21
5	16
6	11
7	9
8	8
9	7
10	6
11	5
12	4
13	4
14	4
15	4
16	3
17	2
Average	11.6

Source:

Company Response to OCA Data Request 7-16.

Q DO YOU HAVE ANY FURTHER INFORMATION ABOUT WAGE INCREASES GRANTED TO WELLSBORO'S EMPLOYEES OVER THE YEARS?

A Yes, I have compiled Table GRM-SR3 (Wellsboro) that shows the wage increase information that Wellsboro provided to OCA Data Request 7-13.

Table GRM-SR3 (Wellsboro)

Average Wage Rate Increase

Year	Non-Union	Union
2020	3.00%	3.00%
2021	3.00%	3.00%
2022	4.50%	4.50%
2023	6.00%	6.50%
2024	4.00%	5.50%
2025	3.00%	4.00%
2026	3.00%	4.00%

Source:
Company Response to OCA Data Request 7-13.

The table reveals that since 2020 the average wage increase granted to Wellsboro's non-union employees has been 4.1% and 4.5% for union employees. One can also see that for 2025 and 2026, Wellsboro is projecting only 3% per year for non-union employees and 4% for its union workforce.

Q DO YOU CONTINUE TO SUPPORT THE 4% WAGE INCREASE YOU APPLIED TO WELLSBORO'S WAGES?

A Yes.

NON-LABOR CHARGES TO ADMINISTRATIVE AND GENERAL ("A&G") SALARIES – ACCOUNT 920

Q HAVE YOU REVIEWED THE REBUTTAL TESTIMONY OF JILL CAMPBELL RELATED TO YOUR ADJUSTMENT TO THE NON-LABOR PORTION OF A&G SALARIES – ACCOUNT 920?

A Yes, I have. Ms. Campbell notes that Wellsboro allocates more overhead than direct payroll and that this supports, in part, professional development for staff and management.[4] She does not provide a detailed breakdown and her answers are more general in nature, claiming that costs today will potentially provide benefits that customers will eventually see in rates later.[5] This does not provide adequate support for the increases that I noted in my Direct Testimony. I maintain that the benefits alleged are aspirational and may never materialize, while the costs have little to no real support. Therefore, I maintain that these costs should be excluded from revenue requirement.

NON-LABOR CHARGES TO MAINTENANCE OF GENERAL PROPERTY – ACCOUNT 932

Q HAVE YOU REVIEWED THE REBUTTAL TESTIMONY OF JILL CAMPBELL RELATED TO YOUR ADJUSTMENT TO THE NON-LABOR PORTION OF MAINTENANCE OF GENERAL PROPERTY – ACCOUNT 932?

A Yes, I have. In her testimony, she proffers the same general statements that were provided in Response to Data Request I&E-RE-20-D that I included in my Direct

[4] *See* the Rebuttal Testimony of Jill Campbell at page 5, lines 10-16.
[5] *Ibid.*, lines 18-21.

Testimony regarding changes to costs due to the completion of construction. She also mentions an error in Wellsboro's estimate of IT-related costs.[6] This error of $40,240 in the FPFTY represents over two thirds of the amount that I proposed to remove in my Direct Testimony ($59,983). As no study or bids have been provided to support Wellsboro's estimates, I am convinced that my position to remove $59,983 from expense for this account is appropriate.

SPONSORSHIPS AND LOBBYING

Q HAVE YOU REVIEWED THE REBUTTAL TESTIMONY OF BYRON FARNSWORTH, JR. AS IT RELATES TO SPONSORSHIPS (TERMED "ADVERTISING" IN HIS TESTIMONY)?

A Yes, I have. Mr. Farnsworth believes that these activities are important to include in the revenue requirement because:

- The expenses help Wellsboro's image – "reinforce the Company's strong presence in the community."[7]
- Helps fund non-utility events to "foster community spirit and engagement."[8]
- Add some level of energy efficiency awareness building.[9]
- The local community doesn't have a diverse support base from businesses and advertising supports this.[10]

[6] *Ibid.*, at page 6, lines 9-23.
[7] *See* the Rebuttal Testimony of Byron Farnsworth, Jr. at page 10, lines 10-11.
[8] *Ibid.*, lines 12-13.
[9] *Ibid.*, lines 13-15.
[10] *Ibid.*, lines 18-19.

Q DO YOU BELIEVE THESE ARGUMENTS SUPPORT INCLUDING THE COST OF SPONSORSHIPS AND LOBBYING IN REVENUE REQUIREMENT?

A No. Customers should not be forced to contribute to "the community" as directed by Wellsboro. Customers may feel that they are being captive contributors or that they have better ways to support their community than enhancing Wellsboro's image. If shareholders feel that the community would benefit from its support, then the shareholders can fund these efforts rather than foist the cost on to ratepayers.

Additionally, Wellsboro has failed to offer up any real analysis showing what amount of the advertising is directed at polishing its image versus what is directed at providing usable information regarding the services offered to customers. For these reasons, I continue to support my adjustment to remove sponsorships and lobbying expenses.

CONCLUSION

Q DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A Yes, it does.

VERIFICATION

I, Greg R. Meyer, hereby state that the facts above set forth in my Surrebuttal Testimony, OCA Statement No. 1SR, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

Surrebuttal Testimony of Christopher C. Walters

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Christopher C. Walters. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q ARE YOU THE SAME CHRISTOPHER C. WALTERS WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025 AND REBUTTAL TESTIMONY ON AUGUST 13, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR SURREBUTTAL TESTIMONY.

A The purpose of my Surrebuttal Testimony in this proceeding is to respond to the Rebuttal testimony of Mr. D'Ascendis.

My silence on any particular issue should not be construed as tacit agreement or an endorsement of another party's position.

I. SUMMARY

Q PLEASE SUMMARIZE YOUR SURREBUTTAL TESTIMONY.

A In my Surrebuttal testimony, I respond to the criticisms of my analysis and testimony offered by Mr. D'Ascendis. I will demonstrate that Mr. D'Ascendis' criticisms are unfounded and lack merit. I reiterate my recommendation that the Companies be authorized a fair ROE of 9.50%, which is the midpoint of my recommended range of 9.0% to 10.0%.

II. RESPONSE TO CRITICISMS BY MR. D'ASCENDIS

A. Utility Credit Quality

Q MR. D'ASCENDIS ARGUES THAT UTILITIES HAVE NOT BEEN ABLE TO MAINTAIN CREDIT QUALITY DESPITE DECLINING AUTHORIZED ROES. WHAT EVIDENCE DOES HE OFFER IN SUPPORT OF THAT STATEMENT?

A Mr. D'Ascendis states that I often provide "the degradation of the credit quality of the utility industry over the recent period in a table in [my] direct testimony but does not in

this proceeding." He then asserts to reproduce a Table I provided in a recent testimony in an Ameren Illinois rate case, where we were both involved.

Q DID MR. D'ASCENDIS ACCURATELY REPRODUCE THAT TABLE?

A No, he did not. His Table 8 shows credit ratings of natural gas utility subsidiaries for two years: 2020 and 2025. His "replicated" table excludes 15 of the 17 years observed in my Ameren Illinois testimony which he cites. The full table from my Ameren Illinois testimony is provided below in Table CCW-1SR. As shown on this table, in 2009, approximately 75% of the industry was rated BBB+ or higher. Currently, 82% of the industry has a rating of BBB+ or higher. Mr. D'Ascendis opting to exclude more than 88% of the observations when claiming to have replicated my table is deceptive.

B. Use of Historical Authorized ROEs and the Risk Premium Method.

Q HOW DOES MR. D'ASCENDIS RESPOND TO YOUR USE OF HISTORICAL AUTHORIZED ROES IN YOUR ANALYSIS?

A He argues that my reliance on historical authorized returns is misplaced. According to him, those returns were set under different market and regulatory conditions, and therefore do not provide a reliable benchmark for determining the cost of equity today.

He emphasizes that the cost of equity must be forward-looking, reflecting current investor requirements rather than relying on past commission decisions. In his view, using historical averages risks understating today's return requirements.

Q DOES MR. D'ASCENDIS VIEW PAST AUTHORIZED ROES AS REPRESENTATIVE OF THE MARKET COST OF EQUITY?

A. No. He claims that past authorized returns were the product of regulatory compromises and policy considerations, not pure finance theory. Therefore, he argues that they should not be treated as direct evidence of investor-required returns.

Q IF HISTORICAL AUTHORIZED ROES ARE CONSIDERED, WHAT METHOD DOES MR. D'ASCENDIS ARGUE SHOULD BE APPLIED?

A He contends that the appropriate way to use that data is not by presenting simple averages, but by applying a linear Ordinary Least Squares ("OLS") regression model that measures the relationship between the equity risk premium ("ERP") (the difference between authorized ROEs and a corresponding interest rate) and interest rates. He believes this method better captures how regulators have adjusted returns in response to

changes in bond yields over time. He applies a similar methodology in response to my Risk Premium analysis. His OLS regression applied to my underlying data is presented in his Schedule DWD-11R.

Q WHAT ARE THE RESULTS OF HIS OLS REGRESSION ANALYSIS?

A For the Electric Risk Premium (Treasury Bond) analysis, his regression predicts a 5.94% ERP and a ROE of 10.50% assuming a projected 30-year Treasury yield of 4.56%. For the Gas Risk Premium (Treasury Bond) analysis, his regression predicts a 5.88% ERP and a ROE of 10.44%.

For the Electric Risk Premium (A rated Utility Bond) analysis, his regression predicts a 4.69% ERP and a ROE of 10.40% assuming a projected A-rated Utility bond yield of 5.71%. For the Gas Risk Premium (A rated Utility Bond) analysis, his regression predicts a 4.63% ERP and a ROE of 10.34%.

He notes that the R-squareds are both in excess of 82%, meaning that the movement in interest rates explains over 82% of the movement in the ERP, which he considers "to be a strong relationship."

Q DO YOU HAVE ANY GENERAL OBSERVATIONS ABOUT HIS "CORRECTION" TO YOUR RISK PREMIUM ANALYSIS YOU WOULD LIKE TO MAKE?

A Yes. Despite using prospective rates that are generally consistent with those realized in 2024 and 2025, Mr. D'Ascendis' "correction" to my Risk Premium analysis produces results so far removed from authorized returns over that same time period. For example,

his "corrected" version of my Electric Risk Premium over Treasury bonds assumes a prospective 30-year Treasury yield of 4.56%. The 2024 and 2025 average yield on 30-year Treasury bonds was 4.41% and 4.71%, respectively, meaning his prospective yield of 4.56% is squarely in the middle of those observations. During 2024 and year-to-date 2025, the average electric ROE was 9.78% and 9.72%, respectively. This means that the indicated ERP for 2024 and 2025 was 5.37% and 5.01%, respectively. Despite these most recent and relevant observations, Mr. D'Ascendis' "corrected" version of my Risk Premium analysis using OLS regression predicts an ERP of 5.94%, which is significantly higher than the ERP in 2024 or 2025. As a result of his disjointed analysis, his predicted ROE using the OLS regression method of 10.5% is also significantly in excess of the 9.78% and 9.72% average ROEs in 2024 and 2025.

Q DO YOU HAVE ANY CONCERNS WITH THE APPLICATION OF A SIMPLE OLS REGRESSION TO MEASURE THE RELATIONSHIP BETWEEN THE ERP AND INTEREST RATES?

A Yes, I do. The OLS regression model assigns equal weight to all observations over the study period, implicitly assuming that the relationship between the equity risk premium and bond yields has remained stable over that entire period. However, this approach may fail to capture structural changes in the regulatory landscape, investor expectations, and utility ratemaking practices that have occurred over time, particularly in more recent years. As a result, the model may give undue influence to outdated data and underrepresent the conditions currently driving authorized returns. If a regression

model is applied to capture the relationship between interest rates and the ERP, a Weighted Least Squares ("WLS") regression model is more appropriate.

Q WHAT IS WLS REGRESSION, AND WHY DO YOU BELIEVE IT IS MORE USEFUL THAN AN OLS REGRESSION?

A WLS regression is a variation of the traditional OLS regression method. Like OLS, it is used to estimate the relationship between variables such as the ERP and interest rates, but it improves on OLS by allowing certain observations to carry more influence than others based on their relevance or reliability.

OLS regression treats all data points equally, assigning the same weight to each observation regardless of when it occurred. This equal treatment can be problematic when analyzing long historical datasets, particularly when the relationship between variables (like bond yields and the ERP) has evolved over time due to changing market conditions or regulatory environments. For example, an ROE authorized by a state commission in 1988 may have been based on vastly different economic, policy, and risk considerations than one authorized in 2024 or 2025.

WLS regression addresses this by assigning greater weight to more recent data, which better reflects the current relationship between bond yields and the equity risk premium. In this analysis, I used an exponential weighting function that gradually reduces the influence of older data while emphasizing more recent observations. This approach helps ensure the regression model reflects contemporary market conditions more accurately, which is especially important for estimating the current cost of equity.

By using WLS, the goal is to produce a more relevant and timely estimate of the cost of equity for ratemaking purposes—one that better reflects today's utility environment rather than relying equally on data from decades ago that may no longer be representative.

Q WHAT ARE THE RESULTS OF A WLS REGRESSION ANALYSIS FOR THE ELECTRIC AND GAS RISK PREMIUM?

A The results of the WLS regression analysis for the electric and gas risk premium method are summarized below in Table CCW-2SR. I relied on the same data Mr. D'Ascendis used in his "correction" to my Risk Premium study. I also incorporated his prospective Treasury yield of 4.56% and his prospective A-rated utility bond yield of 5.71%. The results range from 9.80% to 9.86%. I will note that the R-squareds range from 0.9418 to 0.9530, all of which are higher than the R-squareds produced by Mr. D'Ascendis' simple OLS regression analysis which he concluded was a "strong relationship."

TABLE CCW-2SR

Bond Yield Plus Risk Premium
Weighted Least Squares Regression Summary Results

	Electric		Gas	
Description	Treasury	A-Rated Util.	Treasury	A-Rated Util.
Intercept (β0)	9.1053	8.8489	9.2518	9.0802

C. DCF Model

Q PLEASE DESCRIBE MR. D'ASCENDIS' CONCERNS WITH YOUR DCF ANALYSIS.

A Mr. D'Ascendis expresses three concerns with my DCF model. Specifically, he:

- Disagrees with my reasoning to discount the results of my constant growth DCF model using analyst growth rates;
- My use of the sustainable growth rate method in the constant growth DCF model and;

- My use of a multi-stage DCF model.

Q PLEASE RESPOND TO MR. D'ASCENDIS' CONCERN REGARDING YOUR USE OF A PROJECTED GROSS DOMESTIC PRODUCT ("GDP") GROWTH RATE IN YOUR MULTI-STAGE DCF ANALYSIS.

A As a matter of principle, no company's earnings and/or dividends can grow faster than the economy in which it sells goods and services into perpetuity. In the long run, earnings growth will be limited by several factors, including, but not limited to, competition and market saturation. Mr. D'Ascendis' conclusion that GDP growth is not an upper limit for company and industry growth defies the economic and financial literature of which I am aware. In addition to the texts cited in my Direct Testimony[1] in support of the premise that GDP is a long-term cap on growth, I refer Mr. D'Ascendis to the following excerpts. First, as detailed in the Chartered Financial Analyst ("CFA") Institute's curriculum:

> For earnings growth to exceed GDP growth, the ratio of corporate profits to GDP must trend upward over time. It should be clear that the share of profits in GDP cannot rise forever. At some point, stagnant labor income would make workers unwilling to work and would also undermine demand, making further profit growth unsustainable. *Thus, in the long run, real earnings growth cannot exceed the growth rate of potential GDP.*[2] (emphasis added)

Additionally, Dr. Roger A. Morin details in his book, *New Regulatory Finance*, as follows:

[1]Corrected OCA Statement 2 at 39.

[2]CFA Program Curriculum, 2014 Level II Vol.1, "Ethical and Professional Standards, Quantitative Methods, and Economics" Reading 15 – Economic Growth and the Investment Decision, pages 608-609.

> It is useful to remember that eventually all company growth rates, especially utility services growth rates, converge to a level consistent with the growth rate of the aggregate economy.
>
> * * *
>
> […] it is quite possible that a company's dividends can grow faster than the general economy for five years*, but it is quite implausible for such growth to continue into perpetuity.*[3] (emphasis added)

Thus, my use of projected GDP growth as an upper limit for company or industry growth is wholly defensible, regardless of it not being a market measure. Mr. D'Ascendis has provided no substantive evidence to refute the findings of the academic and practitioner texts cited here and in my Direct Testimony on the matter. As such, Mr. D'Ascendis' concerns are unfounded and lack merit.

Q MR. D'ASCENDIS ARGUES THAT YOUR MULTI-STAGE DCF MODEL IS INAPPROPRIATE BECAUSE UTILITIES ARE IN THE STEADY-STATE GROWTH STAGE. HOW DO YOU RESPOND?

A I disagree with Mr. D'Ascendis' conclusion that utilities are in a steady-state growth stage. His characterization overlooks the unprecedented expansion of data centers and the corresponding surge in demand growth that utilities are currently experiencing. This development is not reflective of a mature, flat growth environment. Instead, it represents a significant structural change in the utility industry, with utilities investing heavily in infrastructure to meet rapidly rising load requirements. Given this environment, it is inappropriate to assume utilities are currently settled into steady-state growth. A multi-

[3]Roger A. Morin, New Regulatory Finance, pages 308-309.

stage DCF model is well-suited to capture this dynamic, recognizing higher near-term growth expectations before transitioning to long-run sustainable levels.

Q DID MR. D'ASCENDIS ALSO TAKE ISSUE WITH YOUR SUSTAINABLE GROWTH RATE DCF ANALYSIS?

A Yes, he did. Specifically, he takes issue with the assumption that future earnings growth is inversely related to the dividend payout ratio. He cites studies performed by Zhou and Ruland (2006) and Gwilym, *et al*. (2006), both of which cite the Arnott and Asness (2003) study, in support of his argument.[4]

Q PLEASE RESPOND.

A As an initial matter, no model is perfect, and at times can be more or less accurate than other models depending on various factors, such as economic conditions. As Mr. D'Ascendis states in his Direct Testimony, "[…] the use of multiple generally accepted common equity cost rate models also adds reliability and accuracy when arriving at a recommended common equity cost rate."[5] I agree using multiple methods provides a more comprehensive, and therefore, more reliable perspective on investors' return requirements. For this reason alone, it is important to perform a thorough analysis, and apply informed, reasoned judgement in the interpretation of the results. The use of multiple DCF models and considering those results is consistent with that approach.

[4]Citizens/Valley/Wellsboro Joint Statement No. 2R at 39-40.
[5]Citizens/Valley/Wellsboro Joint Statement No. 2 at 21.

In addition, using the retention growth methodology is a recognized reasonable method for estimating sustainable dividend growth and should not be ignored.

As noted by the CFA Institute's curriculum text:

> "We define the sustainable growth rate as the rate of dividend (and earnings) growth that can be sustained for a given level of return on equity, assuming that the capital structure is constant through time and that additional common stock is not issued. The reason for studying this concept is that it can help in estimating the stable growth rate in a Gordon growth model valuation, or the mature growth rate in a multistage DDM in which the Gordon growth formula is used to find the terminal value of the stock."

The expression to calculate the sustainable growth rate is:
$g = b$ x ROE[6]

Notably, the same CFA text observes that, in light of the Arnott and Asness (2003) study cited by Mr. D'Ascendis, "caution is appropriate in assuming that dividends displace earnings."[7] However, that same text concludes that "[n]evertheless, the equation can be useful as a simple expression for approximating the average rate at which dividends can grow over a long horizon."[8] Further, *Brigham and Houston* state that, "Companies that retain a high percentage of their earnings rather than paying them out as dividends generate more retained earnings and thus need less external capital."[9]

D. CAPM

Q PLEASE SUMMARIZE MR. D'ASCENDIS' CONCERNS WITH YOUR CAPM ANALYSIS.

A At page 51 of his Rebuttal Testimony, Mr. D'Ascendis expresses four general concerns with my CAPM analysis: (1) he argues I violated the Efficient Market Hypothesis ("EMH") by failing to include farthest out projected interest rates; (2) he disagrees with certain of my beta estimates; (3) he disagrees with my use of Kroll's recommended Market Risk Premium ("MRP"), and (4) he argues I should have included an Empirical CAPM analysis.

Q PLEASE RESPOND TO MR. D'ASCENDIS' ASSERTION THAT YOU VIOLATED THE EMH BY NOT INCORPORATING THE LONGEST AVAILABLE PROJECTED RISK-FREE RATE.

A Mr. D'Ascendis' assertion is misplaced and inconsistent with his own testimony. Under the semi-strong form of the EMH, which Mr. D'Ascendis is asserting, it is assumed securities prices reflect all publicly available information and past market data. Because Blue Chip is a paid subscription, not all investors necessarily have access to the data and therefore it would be hard to classify the projections offered by Blue Chip as public, a classification that is required under the semi-strong form of EMH.

Further, to the extent Mr. D'Ascendis failed to include all publicly available data, both historical and projected, he himself violated the EMH.

Q DO YOU HAVE ANY GENERAL COMMENTS IN RESPONSE TO MR. D'ASCENDIS WITH REGARD TO THE METHODS USED TO CALCULATE THE EXPECTED MARKET RETURN, AND ULTIMATELY, THE EXPECTED MRP.

A Yes. Regardless of the method used to calculate the expected market return, they all produce expected MRPs in the range of 5.50% to 8.00%. These estimates of the MRP are fully supported by financial texts and empirical research. For example, Dr. Morin notes several studies of the MRP in his book, *Modern Regulatory Finance*, have concluded that a MRP in the range of 5.0% to 8.0% is a reasonable estimate for the United States.[10] For example, the Duarte and Rosa study he cites, concludes that it is "quite difficult to improve upon when considering out-of-sample performance measures."[11] Dr. Morin also notes that a survey of professional practices showed that 71% of textbooks/tradebooks used a historical average as the MRP, and 60% of financial advisors used a MRP in the range of 7.0% to 7.4%, or a long-term arithmetic average.[12] My MRPs, regardless of the method used to calculate the expected market return component, is supported by substantial empirical evidence. Mr. D'Ascendis' concerns are unsupported and lack merit.

Q MR. D'ASCENDIS ARGUES THAT YOUR USE OF KROLL'S RECOMMENDED MRP OF 5.00% SHOULD BE REJECTED IN FAVOR OF OTHER MRP'S CITED IN KROLL. HOW DO YOU RESPOND.

[10]Dr. Morin references studies by Duarte & Rosa; Professors Ross, Westerfield, and Jordan; Mahera; and Brealey, Myers, and Allen. *See Modern Regulatory Finance,* Dr. Roger Morin, at 190-192.
[11]*See Modern Regulatory Finance,* Dr. Roger Morin, at 191, citing the Duarte and Rosa study.
[12]*See Modern Regulatory Finance,* Dr. Roger Morin, at 190, footnote 35.

A Mr. D'Ascendis states, erroneously, that I relied on an MRP of 5.00% as recommended by Kroll.[13] However, Kroll's recommended MRP that I relied on is actually 5.50%, not 5.00% as alleged by Mr. D'Ascendis. Kroll's recommended MRP is well within the range of well-known empirical data. For example, Dr. Morin notes in his book, *Modern Regulatory Finance*, that several studies of the MRP have concluded that a MRP in the range of 5.0% to 8.0% is a reasonable estimate for the United States.[14]

In addition, Mr. D'Ascendis seems to ignore the significant support from *Kroll* describing their recommended normalized, or conditional market risk premium. Specifically, Kroll's recommended risk premium is not explicitly based on any particular set of returns, but rather it is a conditional risk premium based on observations of relevant factors including, but not limited to fluctuations in global economic and financial market conditions. Kroll explains its equity risk premium methodology on its Cost of Capital Navigator site as follows:

> There is no single universally accepted methodology for estimating the ERP; consequently, there is wide diversity in practice among academics and financial advisors regarding ERP estimates. In estimating the conditional ERP, valuation analysts cannot simply use the long-term historical ERP, whether as reported or adjusted as we discussed above. A better alternative would be to examine approaches that are sensitive to the current economic conditions.
>
> Kroll employs a multi-faceted analysis to estimate the conditional ERP that takes into account a broad range of economic information and multiple ERP estimation methodologies to arrive at its recommendation.
>
> First, a reasonable range of normal or unconditional ERP is established.

[13]Joint Statement No. 2R at 53.

[14]Dr. Morin references studies by Duarte & Rosa; Professors Ross, Westerfield, and Jordan; Mahera; and Brealey, Myers, and Allen. See *Modern Regulatory Finance,* Dr. Roger A. Morin, at 190-192. Dr. Morin notes in his textbook that there is a "slight preference" for the upper end of the range (i.e., 8%) during tumultuous times in capital markets with examples being the 2008-2009 credit crisis and the 2020 pandemic.

> Second, based on current economic conditions, Kroll estimates where in the range the true ERP likely lies (top, bottom, or middle) by examining the current state of the economy (both by examining economic indicators and forecasts, as well as by analyzing the level and trends of stock market indices as forward indicators), in conjunction with the implied equity volatility and corporate spreads as indicators of perceived risk.

Mr. D'Ascendis' concern with the Kroll market risk premium is clearly misplaced. Kroll is one of the most often cited names in valuation and cost of capital matters, particularly regarding cost of capital testimony offered in regulated utility proceedings such as this one.

Q PLEASE RESPOND TO MR. D'ASCENDIS WITH REGARD TO YOUR USE OF VASICEK BETAS FROM S&P CAPITAL IQ.

A S&P Capital IQ is one of the most cited sources of financial data and other relevant utility industry information by rate of return witnesses in cost of capital testimony throughout the country. Further, S&P Capital IQ is one of the most recognized names in finance. Investors rely on data from S&P Capital IQ, particularly in the utility sector, to inform their investment making decisions.

Q IS THERE FINANCIAL LITERATURE DISCUSSING THE VASICEK METHOD OF ADJUSTING BETA IN COMPARISON TO THE BLUME METHOD EMPLOYED BY *VALUE LINE*?

A Yes. In an article titled "An Examination of Blume and Vasicek Betas" published in the journal *The Financial Review,* Martin Lally discusses the merits of both methods of adjusting beta. An observation made by Lally as it relates to the utility industry is as follows:

> A dramatic example of this is in U.S. electric utilities. A typical such firm has an estimated beta (unadjusted) of around 0.4 (Value Line, 1993). By virtue of being typical, the Vasicek estimate, with prior corresponding to this industry, will also be 0.4. By contrast, Blume adjusts the 0.4 to 0.6 [i.e. 0.33 + 0.67(0.4)]. The result is a dramatic overestimate by Blume, because a singularly relevant fact is ignored, i.e., membership of an industry whose average estimated, and therefore presumably also true, beta is well below one. Given that these firms have output prices that are set so as to recover costs, including the cost of equity, and they have substantial equity investment, then the implications of using Blume betas (i.e., not partitioning into industries) for measuring costs of equity are particularly severe.[15]

Mr. D'Ascendis' concerns with Vasicek-adjusted betas are unsupported and lack merit.

Q PLEASE RESPOND TO MR. D'ASCENDIS WITH REGARD TO YOU NOT PERFORMING AN ECAPM ANALYSIS.

A At page 57 of his Rebuttal Testimony, Mr. D'Ascendis simply states that my CAPM methodology is flawed because, among other reasons, I did not perform an ECAPM analysis. I explained in detail why I disagree with the use of an ECAPM, particularly with an adjusted beta, in my Direct Testimony at pages 74-77. Mr. D'Ascendis has offered nothing substantive to alter my opinion on the matter.

Q IS IT NECESSARY TO PERFORM AN ECAPM AT THIS TIME?

A No, as I explain in my Direct Testimony, the purpose of the adjustments presented in the ECAPM is to raise the intercept and flatten the security market line ("SML"). The applications of the "traditional" CAPM offered by the witnesses in this proceeding are

[15]The Financial Review, Vol. 33 (1998) at 183-198, "An Examination of Blume and Vasicek Betas," Martin Lally. (Emphasis Added).

anything but "traditional" given the extensive use of projected long-term yields and adjusted betas, both of which raise the intercept and flatten the SML.

For example, the use of a projected 30-year Treasury yield is a departure from the traditional CAPM in two regards. First, projected yields as those employed by myself in this proceeding are generally higher than spot yields which were used in the traditional form of the CAPM. Second, long-term yields, as employed by some witnesses in this proceeding, are generally higher than short-term yields, which were used in the traditional form of the CAPM. Each of these revised inputs accomplishes a key goal of the ECAPM by raising the intercept and flattening the slope of the SML.

Further, as I demonstrated in my Direct Testimony, the use of an adjusted beta as published by *Value Line* also raises the intercept and flattens the slope of the SML. As such, the application of the "traditional" CAPM in this proceeding has accomplished the goal of the ECAPM by implementing several inputs that raise the intercept and flatten the SML. Specifically, I am referring to forecasted long-term Treasury yields being used in favor of short-term spot yields and adjusted betas. Therefore, I maintain my position on the ECAPM.

E. D'Ascendis' Performance Factor Adjustment

Q MR. D'ASCENDIS CONTINUES TO RECOMMEND A FIVE-BASIS POINT UPWARD ADJUSTMENT TO THE ROE UNDER 66 PA.C.S. § 523 FOR "MANAGEMENT EFFICIENCY." DO YOU AGREE?

A No, I do not. While I am not an attorney or offering a legal opinion, it is my understanding that Section 523 does not mandate a performance adjustment to the return

on equity for management efficiency; it requires the Commission to consider the efficiency, effectiveness and adequacy of utility service when determining just and reasonable rates and provides the Commission with discretion to make adjustments to specific components of the utility's claimed cost of service as it determines to be proper and appropriate in determining just and reasonable rates. It is my understanding Section 523 does not provide an entitlement, and the Commission is under no obligation to award a premium for utilities simply meeting their statutory obligations.

Q HOW DOES THIS PERFORMANCE PREMIUM PROPOSAL SQUARE WITH THE STANDARDS IN HOPE AND BLUEFIELD?

A It does not. The standards set forth in Hope and Bluefield assume that a utility's authorized return is based on the presumption of sound, economic, and efficient management. That standard is built into the regulatory compact itself. Awarding a separate upward adjustment for "management efficiency" would double count what is already assumed and required by law.

Q WHAT IS THE RISK OF ADOPTING A PERFORMANCE FACTOR ADJUSTMENT AS MR. D'ASCENDIS PROPOSES?

A Such an adjustment risks creating an artificial premium that overcompensates shareholders for management behavior that is expected. Utilities are legally obligated to provide safe and adequate service at just and reasonable rates. Efficiency is not an optional standard deserving of an extra ROE; it is the baseline expectation under regulatory precedent.

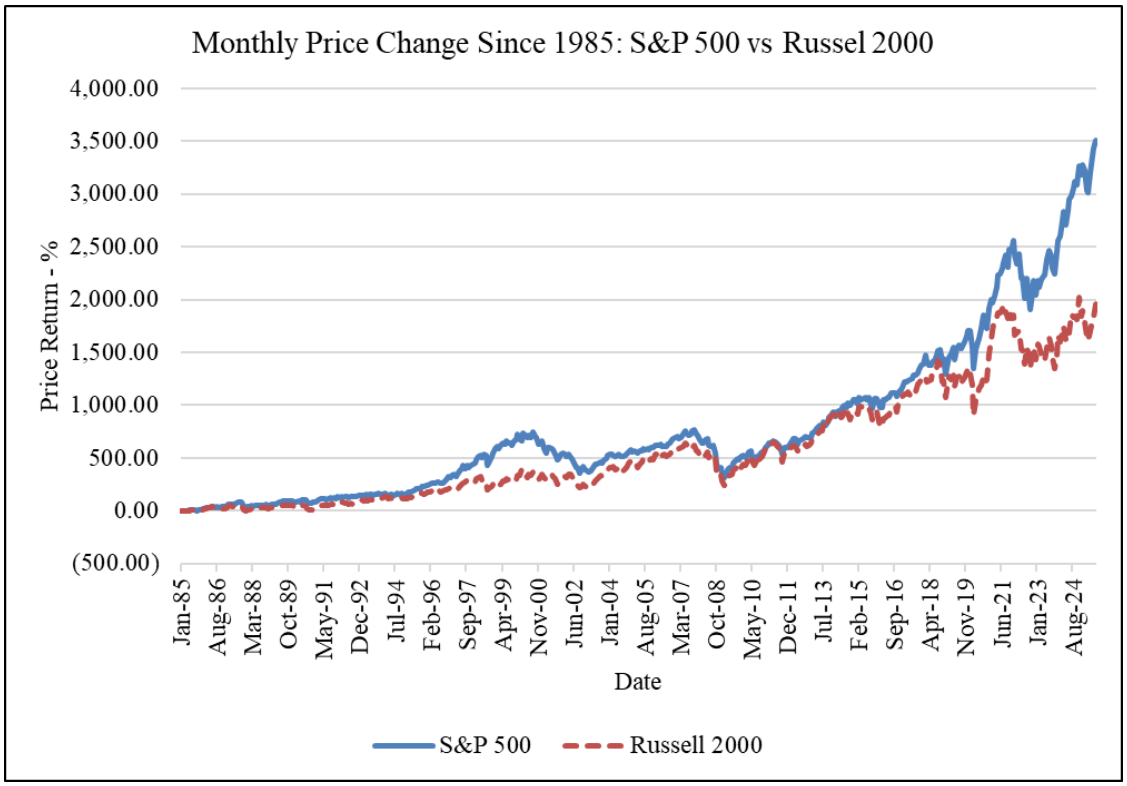
Q HOW SHOULD THE COMMISSION TREAT MR. D'ASCENDIS'S REQUEST?

A The Commission should reject it. Section 523 does not compel a performance factor adjustment and granting one would directly contradict Hope and Bluefield. The proper application of those precedents is to set a fair return that presumes efficient management, not to layer on an additional reward for simply meeting fundamental obligations.

F. D'Ascendis' Size Adjustment

Q MR. D'ASCENDIS TAKES ISSUE WITH YOUR FAILURE TO ADJUST YOUR RECOMMENDATION UPWARD TO ACCOUNT FOR SIZE. DOES HIS REBUTTAL TESTIMONY CHANGE YOUR POSITION ON THE MATTER?

A No. I continue to maintain my conclusion that a size adjustment is unnecessary. Trends in the returns of large capitalization stocks (i.e. the S&P 500) versus small capitalization stocks (i.e. the Russel 2000) show that small capitalization stock returns lag those produced by large capitalization stock returns. As shown in Figure CCW-1SR, the returns that used to be produced by investing in small capitalization stocks have disappeared in recent years, as the S&P 500 returns far exceed the returns compared to its small capitalization stock counterpart, the Russel 2000 index.



Finally, I&E Witnesses Keller and Patel (collectively the "I&E Witnesses"), and I all cite empirical evidence which concludes that, while size premiums are present in industrial companies, such a size premium is not present in utility companies, nor are they appropriate to include in valuing utilities. Mr. D'Ascendis cites an article by Dr. Thomas Zepp as a response to the evidence cited by the I&E Witnesses and me. Dr. Zepp's 2003 article is a narrow short communication that does not provide reliable support for applying a size adjustment in utility cost of equity determinations. While it critiques Wong's earlier work (the research article cited by the I&E witnesses and me), Dr. Zepp's analysis is incomplete, methodologically limited, and focused almost exclusively on a handful of small water utilities. This narrow evidence base is not sufficient to establish that a systematic size effect exists for utilities generally, let alone for electric or gas distribution companies.

Further, Dr. Zepp's recalculated betas are based on just three water companies, and his discounted cash flow study finds an average 99 basis point premium for small utilities that is only significant at the 90% confidence level. Typically, 95% is the standard confidence level used.

For these reasons, the size premium adjustment proposed by Mr. D'Ascendis is unsupported and lacks merit.

G. D'Ascendis' Updated Analysis

Q DID MR. D'ASCENDIS OFFER AN UPDATED COST OF EQUITY ANALYSIS IN HIS REBUTTAL?

A Yes, he did. The indicated range of ROEs attributable to Valley are from 10.42% to 10.89% (unadjusted) and from 11.47% to 11.94% (adjusted) and the indicated range of ROEs attributable to Citizens' and Wellsboro are from 10.19% to 10.76% 8 (unadjusted) and from 11.09% to 11.66% (adjusted). Each of the flaws that were present in Mr. D'Ascendis' analysis that I described in my direct testimony are present in his updated analysis. As such, Mr. D'Ascendis' updated analysis is still overstating the cost of equity for the Companies.

Q DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A Yes, it does.

Surrebuttal Testimony of Christopher C. Walters

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Christopher C. Walters. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q ARE YOU THE SAME CHRISTOPHER C. WALTERS WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025 AND REBUTTAL TESTIMONY ON AUGUST 13, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR SURREBUTTAL TESTIMONY.

A The purpose of my Surrebuttal Testimony in this proceeding is to respond to the Rebuttal testimony of Mr. D'Ascendis.

My silence on any particular issue should not be construed as tacit agreement or an endorsement of another party's position.

I. SUMMARY

Q PLEASE SUMMARIZE YOUR SURREBUTTAL TESTIMONY.

A In my Surrebuttal testimony, I respond to the criticisms of my analysis and testimony offered by Mr. D'Ascendis. I will demonstrate that Mr. D'Ascendis' criticisms are unfounded and lack merit. I reiterate my recommendation that the Companies be authorized a fair ROE of 9.50%, which is the midpoint of my recommended range of 9.0% to 10.0%.

II. RESPONSE TO CRITICISMS BY MR. D'ASCENDIS

A. Utility Credit Quality

Q MR. D'ASCENDIS ARGUES THAT UTILITIES HAVE NOT BEEN ABLE TO MAINTAIN CREDIT QUALITY DESPITE DECLINING AUTHORIZED ROES. WHAT EVIDENCE DOES HE OFFER IN SUPPORT OF THAT STATEMENT?

A Mr. D'Ascendis states that I often provide "the degradation of the credit quality of the utility industry over the recent period in a table in [my] direct testimony but does not in

this proceeding." He then asserts to reproduce a Table I provided in a recent testimony in an Ameren Illinois rate case, where we were both involved.

Q DID MR. D'ASCENDIS ACCURATELY REPRODUCE THAT TABLE?

A No, he did not. His Table 8 shows credit ratings of natural gas utility subsidiaries for two years: 2020 and 2025. His "replicated" table excludes 15 of the 17 years observed in my Ameren Illinois testimony which he cites. The full table from my Ameren Illinois testimony is provided below in Table CCW-1SR. As shown on this table, in 2009, approximately 75% of the industry was rated BBB+ or higher. Currently, 82% of the industry has a rating of BBB+ or higher. Mr. D'Ascendis opting to exclude more than 88% of the observations when claiming to have replicated my table is deceptive.

B. Use of Historical Authorized ROEs and the Risk Premium Method.

Q HOW DOES MR. D'ASCENDIS RESPOND TO YOUR USE OF HISTORICAL AUTHORIZED ROES IN YOUR ANALYSIS?

A He argues that my reliance on historical authorized returns is misplaced. According to him, those returns were set under different market and regulatory conditions, and therefore do not provide a reliable benchmark for determining the cost of equity today.

He emphasizes that the cost of equity must be forward-looking, reflecting current investor requirements rather than relying on past commission decisions. In his view, using historical averages risks understating today's return requirements.

Q DOES MR. D'ASCENDIS VIEW PAST AUTHORIZED ROES AS REPRESENTATIVE OF THE MARKET COST OF EQUITY?

A. No. He claims that past authorized returns were the product of regulatory compromises and policy considerations, not pure finance theory. Therefore, he argues that they should not be treated as direct evidence of investor-required returns.

Q IF HISTORICAL AUTHORIZED ROES ARE CONSIDERED, WHAT METHOD DOES MR. D'ASCENDIS ARGUE SHOULD BE APPLIED?

A He contends that the appropriate way to use that data is not by presenting simple averages, but by applying a linear Ordinary Least Squares ("OLS") regression model that measures the relationship between the equity risk premium ("ERP") (the difference between authorized ROEs and a corresponding interest rate) and interest rates. He believes this method better captures how regulators have adjusted returns in response to

changes in bond yields over time. He applies a similar methodology in response to my Risk Premium analysis. His OLS regression applied to my underlying data is presented in his Schedule DWD-11R.

Q WHAT ARE THE RESULTS OF HIS OLS REGRESSION ANALYSIS?

A For the Electric Risk Premium (Treasury Bond) analysis, his regression predicts a 5.94% ERP and a ROE of 10.50% assuming a projected 30-year Treasury yield of 4.56%. For the Gas Risk Premium (Treasury Bond) analysis, his regression predicts a 5.88% ERP and a ROE of 10.44%.

For the Electric Risk Premium (A rated Utility Bond) analysis, his regression predicts a 4.69% ERP and a ROE of 10.40% assuming a projected A-rated Utility bond yield of 5.71%. For the Gas Risk Premium (A rated Utility Bond) analysis, his regression predicts a 4.63% ERP and a ROE of 10.34%.

He notes that the R-squareds are both in excess of 82%, meaning that the movement in interest rates explains over 82% of the movement in the ERP, which he considers "to be a strong relationship."

Q DO YOU HAVE ANY GENERAL OBSERVATIONS ABOUT HIS "CORRECTION" TO YOUR RISK PREMIUM ANALYSIS YOU WOULD LIKE TO MAKE?

A Yes. Despite using prospective rates that are generally consistent with those realized in 2024 and 2025, Mr. D'Ascendis' "correction" to my Risk Premium analysis produces results so far removed from authorized returns over that same time period. For example,

his "corrected" version of my Electric Risk Premium over Treasury bonds assumes a prospective 30-year Treasury yield of 4.56%. The 2024 and 2025 average yield on 30-year Treasury bonds was 4.41% and 4.71%, respectively, meaning his prospective yield of 4.56% is squarely in the middle of those observations. During 2024 and year-to-date 2025, the average electric ROE was 9.78% and 9.72%, respectively. This means that the indicated ERP for 2024 and 2025 was 5.37% and 5.01%, respectively. Despite these most recent and relevant observations, Mr. D'Ascendis' "corrected" version of my Risk Premium analysis using OLS regression predicts an ERP of 5.94%, which is significantly higher than the ERP in 2024 or 2025. As a result of his disjointed analysis, his predicted ROE using the OLS regression method of 10.5% is also significantly in excess of the 9.78% and 9.72% average ROEs in 2024 and 2025.

Q DO YOU HAVE ANY CONCERNS WITH THE APPLICATION OF A SIMPLE OLS REGRESSION TO MEASURE THE RELATIONSHIP BETWEEN THE ERP AND INTEREST RATES?

A Yes, I do. The OLS regression model assigns equal weight to all observations over the study period, implicitly assuming that the relationship between the equity risk premium and bond yields has remained stable over that entire period. However, this approach may fail to capture structural changes in the regulatory landscape, investor expectations, and utility ratemaking practices that have occurred over time, particularly in more recent years. As a result, the model may give undue influence to outdated data and underrepresent the conditions currently driving authorized returns. If a regression

model is applied to capture the relationship between interest rates and the ERP, a Weighted Least Squares ("WLS") regression model is more appropriate.

Q WHAT IS WLS REGRESSION, AND WHY DO YOU BELIEVE IT IS MORE USEFUL THAN AN OLS REGRESSION?

A WLS regression is a variation of the traditional OLS regression method. Like OLS, it is used to estimate the relationship between variables such as the ERP and interest rates, but it improves on OLS by allowing certain observations to carry more influence than others based on their relevance or reliability.

OLS regression treats all data points equally, assigning the same weight to each observation regardless of when it occurred. This equal treatment can be problematic when analyzing long historical datasets, particularly when the relationship between variables (like bond yields and the ERP) has evolved over time due to changing market conditions or regulatory environments. For example, an ROE authorized by a state commission in 1988 may have been based on vastly different economic, policy, and risk considerations than one authorized in 2024 or 2025.

WLS regression addresses this by assigning greater weight to more recent data, which better reflects the current relationship between bond yields and the equity risk premium. In this analysis, I used an exponential weighting function that gradually reduces the influence of older data while emphasizing more recent observations. This approach helps ensure the regression model reflects contemporary market conditions more accurately, which is especially important for estimating the current cost of equity.

By using WLS, the goal is to produce a more relevant and timely estimate of the cost of equity for ratemaking purposes—one that better reflects today's utility environment rather than relying equally on data from decades ago that may no longer be representative.

Q WHAT ARE THE RESULTS OF A WLS REGRESSION ANALYSIS FOR THE ELECTRIC AND GAS RISK PREMIUM?

A The results of the WLS regression analysis for the electric and gas risk premium method are summarized below in Table CCW-2SR. I relied on the same data Mr. D'Ascendis used in his "correction" to my Risk Premium study. I also incorporated his prospective Treasury yield of 4.56% and his prospective A-rated utility bond yield of 5.71%. The results range from 9.80% to 9.86%. I will note that the R-squareds range from 0.9418 to 0.9530, all of which are higher than the R-squareds produced by Mr. D'Ascendis' simple OLS regression analysis which he concluded was a "strong relationship."

TABLE CCW-2SR

Bond Yield Plus Risk Premium
Weighted Least Squares Regression Summary Results

	Electric		Gas	
Description	Treasury	A-Rated Util.	Treasury	A-Rated Util.

C. DCF Model

Q PLEASE DESCRIBE MR. D'ASCENDIS' CONCERNS WITH YOUR DCF ANALYSIS.

A Mr. D'Ascendis expresses three concerns with my DCF model. Specifically, he:

- Disagrees with my reasoning to discount the results of my constant growth DCF model using analyst growth rates;
- My use of the sustainable growth rate method in the constant growth DCF model and;

- My use of a multi-stage DCF model.

Q PLEASE RESPOND TO MR. D'ASCENDIS' CONCERN REGARDING YOUR USE OF A PROJECTED GROSS DOMESTIC PRODUCT ("GDP") GROWTH RATE IN YOUR MULTI-STAGE DCF ANALYSIS.

A As a matter of principle, no company's earnings and/or dividends can grow faster than the economy in which it sells goods and services into perpetuity. In the long run, earnings growth will be limited by several factors, including, but not limited to, competition and market saturation. Mr. D'Ascendis' conclusion that GDP growth is not an upper limit for company and industry growth defies the economic and financial literature of which I am aware. In addition to the texts cited in my Direct Testimony[1] in support of the premise that GDP is a long-term cap on growth, I refer Mr. D'Ascendis to the following excerpts. First, as detailed in the Chartered Financial Analyst ("CFA") Institute's curriculum:

> For earnings growth to exceed GDP growth, the ratio of corporate profits to GDP must trend upward over time. It should be clear that the share of profits in GDP cannot rise forever. At some point, stagnant labor income would make workers unwilling to work and would also undermine demand, making further profit growth unsustainable. *Thus, in the long run, real earnings growth cannot exceed the growth rate of potential GDP.*[2] (emphasis added)

Additionally, Dr. Roger A. Morin details in his book, *New Regulatory Finance*, as follows:

[1]Corrected OCA Statement 2 at 39.

[2]CFA Program Curriculum, 2014 Level II Vol.1, "Ethical and Professional Standards, Quantitative Methods, and Economics" Reading 15 – Economic Growth and the Investment Decision, pages 608-609.

> It is useful to remember that eventually all company growth rates, especially utility services growth rates, converge to a level consistent with the growth rate of the aggregate economy.
>
> * * *
>
> […] it is quite possible that a company's dividends can grow faster than the general economy for five years*, but it is quite implausible for such growth to continue into perpetuity.*[3] (emphasis added)

Thus, my use of projected GDP growth as an upper limit for company or industry growth is wholly defensible, regardless of it not being a market measure. Mr. D'Ascendis has provided no substantive evidence to refute the findings of the academic and practitioner texts cited here and in my Direct Testimony on the matter. As such, Mr. D'Ascendis' concerns are unfounded and lack merit.

Q MR. D'ASCENDIS ARGUES THAT YOUR MULTI-STAGE DCF MODEL IS INAPPROPRIATE BECAUSE UTILITIES ARE IN THE STEADY-STATE GROWTH STAGE. HOW DO YOU RESPOND?

A I disagree with Mr. D'Ascendis' conclusion that utilities are in a steady-state growth stage. His characterization overlooks the unprecedented expansion of data centers and the corresponding surge in demand growth that utilities are currently experiencing. This development is not reflective of a mature, flat growth environment. Instead, it represents a significant structural change in the utility industry, with utilities investing heavily in infrastructure to meet rapidly rising load requirements. Given this environment, it is inappropriate to assume utilities are currently settled into steady-state growth. A multi-

[3]Roger A. Morin, New Regulatory Finance, pages 308-309.

stage DCF model is well-suited to capture this dynamic, recognizing higher near-term growth expectations before transitioning to long-run sustainable levels.

Q DID MR. D'ASCENDIS ALSO TAKE ISSUE WITH YOUR SUSTAINABLE GROWTH RATE DCF ANALYSIS?

A Yes, he did. Specifically, he takes issue with the assumption that future earnings growth is inversely related to the dividend payout ratio. He cites studies performed by Zhou and Ruland (2006) and Gwilym, *et al*. (2006), both of which cite the Arnott and Asness (2003) study, in support of his argument.[4]

Q PLEASE RESPOND.

A As an initial matter, no model is perfect, and at times can be more or less accurate than other models depending on various factors, such as economic conditions. As Mr. D'Ascendis states in his Direct Testimony, "[…] the use of multiple generally accepted common equity cost rate models also adds reliability and accuracy when arriving at a recommended common equity cost rate."[5] I agree using multiple methods provides a more comprehensive, and therefore, more reliable perspective on investors' return requirements. For this reason alone, it is important to perform a thorough analysis, and apply informed, reasoned judgement in the interpretation of the results. The use of multiple DCF models and considering those results is consistent with that approach.

[4]Citizens/Valley/Wellsboro Joint Statement No. 2R at 39-40.
[5]Citizens/Valley/Wellsboro Joint Statement No. 2 at 21.

In addition, using the retention growth methodology is a recognized reasonable method for estimating sustainable dividend growth and should not be ignored.

As noted by the CFA Institute's curriculum text:

> "We define the sustainable growth rate as the rate of dividend (and earnings) growth that can be sustained for a given level of return on equity, assuming that the capital structure is constant through time and that additional common stock is not issued. The reason for studying this concept is that it can help in estimating the stable growth rate in a Gordon growth model valuation, or the mature growth rate in a multistage DDM in which the Gordon growth formula is used to find the terminal value of the stock."

The expression to calculate the sustainable growth rate is:
$g = b$ x ROE[6]

Notably, the same CFA text observes that, in light of the Arnott and Asness (2003) study cited by Mr. D'Ascendis, "caution is appropriate in assuming that dividends displace earnings."[7] However, that same text concludes that "[n]evertheless, the equation can be useful as a simple expression for approximating the average rate at which dividends can grow over a long horizon."[8] Further, *Brigham and Houston* state that, "Companies that retain a high percentage of their earnings rather than paying them out as dividends generate more retained earnings and thus need less external capital."[9]

D. CAPM

Q PLEASE SUMMARIZE MR. D'ASCENDIS' CONCERNS WITH YOUR CAPM ANALYSIS.

A At page 51 of his Rebuttal Testimony, Mr. D'Ascendis expresses four general concerns with my CAPM analysis: (1) he argues I violated the Efficient Market Hypothesis ("EMH") by failing to include farthest out projected interest rates; (2) he disagrees with certain of my beta estimates; (3) he disagrees with my use of Kroll's recommended Market Risk Premium ("MRP"), and (4) he argues I should have included an Empirical CAPM analysis.

Q PLEASE RESPOND TO MR. D'ASCENDIS' ASSERTION THAT YOU VIOLATED THE EMH BY NOT INCORPORATING THE LONGEST AVAILABLE PROJECTED RISK-FREE RATE.

A Mr. D'Ascendis' assertion is misplaced and inconsistent with his own testimony. Under the semi-strong form of the EMH, which Mr. D'Ascendis is asserting, it is assumed securities prices reflect all publicly available information and past market data. Because Blue Chip is a paid subscription, not all investors necessarily have access to the data and therefore it would be hard to classify the projections offered by Blue Chip as public, a classification that is required under the semi-strong form of EMH.

Further, to the extent Mr. D'Ascendis failed to include all publicly available data, both historical and projected, he himself violated the EMH.

Q DO YOU HAVE ANY GENERAL COMMENTS IN RESPONSE TO MR. D'ASCENDIS WITH REGARD TO THE METHODS USED TO CALCULATE THE EXPECTED MARKET RETURN, AND ULTIMATELY, THE EXPECTED MRP.

A Yes. Regardless of the method used to calculate the expected market return, they all produce expected MRPs in the range of 5.50% to 8.00%. These estimates of the MRP are fully supported by financial texts and empirical research. For example, Dr. Morin notes several studies of the MRP in his book, *Modern Regulatory Finance*, have concluded that a MRP in the range of 5.0% to 8.0% is a reasonable estimate for the United States.[10] For example, the Duarte and Rosa study he cites, concludes that it is "quite difficult to improve upon when considering out-of-sample performance measures."[11] Dr. Morin also notes that a survey of professional practices showed that 71% of textbooks/tradebooks used a historical average as the MRP, and 60% of financial advisors used a MRP in the range of 7.0% to 7.4%, or a long-term arithmetic average.[12] My MRPs, regardless of the method used to calculate the expected market return component, is supported by substantial empirical evidence. Mr. D'Ascendis' concerns are unsupported and lack merit.

Q MR. D'ASCENDIS ARGUES THAT YOUR USE OF KROLL'S RECOMMENDED MRP OF 5.00% SHOULD BE REJECTED IN FAVOR OF OTHER MRP'S CITED IN KROLL. HOW DO YOU RESPOND.

[10]Dr. Morin references studies by Duarte & Rosa; Professors Ross, Westerfield, and Jordan; Mahera; and Brealey, Myers, and Allen. *See Modern Regulatory Finance,* Dr. Roger Morin, at 190-192.
[11]*See Modern Regulatory Finance,* Dr. Roger Morin, at 191, citing the Duarte and Rosa study.
[12]*See Modern Regulatory Finance,* Dr. Roger Morin, at 190, footnote 35.

A Mr. D'Ascendis states, erroneously, that I relied on an MRP of 5.00% as recommended by Kroll.[13] However, Kroll's recommended MRP that I relied on is actually 5.50%, not 5.00% as alleged by Mr. D'Ascendis. Kroll's recommended MRP is well within the range of well-known empirical data. For example, Dr. Morin notes in his book, *Modern Regulatory Finance*, that several studies of the MRP have concluded that a MRP in the range of 5.0% to 8.0% is a reasonable estimate for the United States.[14]

In addition, Mr. D'Ascendis seems to ignore the significant support from *Kroll* describing their recommended normalized, or conditional market risk premium. Specifically, Kroll's recommended risk premium is not explicitly based on any particular set of returns, but rather it is a conditional risk premium based on observations of relevant factors including, but not limited to fluctuations in global economic and financial market conditions. Kroll explains its equity risk premium methodology on its Cost of Capital Navigator site as follows:

> There is no single universally accepted methodology for estimating the ERP; consequently, there is wide diversity in practice among academics and financial advisors regarding ERP estimates. In estimating the conditional ERP, valuation analysts cannot simply use the long-term historical ERP, whether as reported or adjusted as we discussed above. A better alternative would be to examine approaches that are sensitive to the current economic conditions.
>
> Kroll employs a multi-faceted analysis to estimate the conditional ERP that takes into account a broad range of economic information and multiple ERP estimation methodologies to arrive at its recommendation.
>
> First, a reasonable range of normal or unconditional ERP is established.

[13]Joint Statement No. 2R at 53.

[14]Dr. Morin references studies by Duarte & Rosa; Professors Ross, Westerfield, and Jordan; Mahera; and Brealey, Myers, and Allen. See *Modern Regulatory Finance,* Dr. Roger A. Morin, at 190-192. Dr. Morin notes in his textbook that there is a "slight preference" for the upper end of the range (i.e., 8%) during tumultuous times in capital markets with examples being the 2008-2009 credit crisis and the 2020 pandemic.

> Second, based on current economic conditions, Kroll estimates where in the range the true ERP likely lies (top, bottom, or middle) by examining the current state of the economy (both by examining economic indicators and forecasts, as well as by analyzing the level and trends of stock market indices as forward indicators), in conjunction with the implied equity volatility and corporate spreads as indicators of perceived risk.

Mr. D'Ascendis' concern with the Kroll market risk premium is clearly misplaced. Kroll is one of the most often cited names in valuation and cost of capital matters, particularly regarding cost of capital testimony offered in regulated utility proceedings such as this one.

Q PLEASE RESPOND TO MR. D'ASCENDIS WITH REGARD TO YOUR USE OF VASICEK BETAS FROM S&P CAPITAL IQ.

A S&P Capital IQ is one of the most cited sources of financial data and other relevant utility industry information by rate of return witnesses in cost of capital testimony throughout the country. Further, S&P Capital IQ is one of the most recognized names in finance. Investors rely on data from S&P Capital IQ, particularly in the utility sector, to inform their investment making decisions.

Q IS THERE FINANCIAL LITERATURE DISCUSSING THE VASICEK METHOD OF ADJUSTING BETA IN COMPARISON TO THE BLUME METHOD EMPLOYED BY *VALUE LINE*?

A Yes. In an article titled "An Examination of Blume and Vasicek Betas" published in the journal *The Financial Review,* Martin Lally discusses the merits of both methods of adjusting beta. An observation made by Lally as it relates to the utility industry is as follows:

> A dramatic example of this is in U.S. electric utilities. A typical such firm has an estimated beta (unadjusted) of around 0.4 (Value Line, 1993). By virtue of being typical, the Vasicek estimate, with prior corresponding to this industry, will also be 0.4. By contrast, Blume adjusts the 0.4 to 0.6 [i.e. 0.33 + 0.67(0.4)]. The result is a dramatic overestimate by Blume, because a singularly relevant fact is ignored, i.e., membership of an industry whose average estimated, and therefore presumably also true, beta is well below one. Given that these firms have output prices that are set so as to recover costs, including the cost of equity, and they have substantial equity investment, then the implications of using Blume betas (i.e., not partitioning into industries) for measuring costs of equity are particularly severe.[15]

Mr. D'Ascendis' concerns with Vasicek-adjusted betas are unsupported and lack merit.

Q PLEASE RESPOND TO MR. D'ASCENDIS WITH REGARD TO YOU NOT PERFORMING AN ECAPM ANALYSIS.

A At page 57 of his Rebuttal Testimony, Mr. D'Ascendis simply states that my CAPM methodology is flawed because, among other reasons, I did not perform an ECAPM analysis. I explained in detail why I disagree with the use of an ECAPM, particularly with an adjusted beta, in my Direct Testimony at pages 74-77. Mr. D'Ascendis has offered nothing substantive to alter my opinion on the matter.

Q IS IT NECESSARY TO PERFORM AN ECAPM AT THIS TIME?

A No, as I explain in my Direct Testimony, the purpose of the adjustments presented in the ECAPM is to raise the intercept and flatten the security market line ("SML"). The applications of the "traditional" CAPM offered by the witnesses in this proceeding are

[15]The Financial Review, Vol. 33 (1998) at 183-198, "An Examination of Blume and Vasicek Betas," Martin Lally. (Emphasis Added).

anything but "traditional" given the extensive use of projected long-term yields and adjusted betas, both of which raise the intercept and flatten the SML.

For example, the use of a projected 30-year Treasury yield is a departure from the traditional CAPM in two regards. First, projected yields as those employed by myself in this proceeding are generally higher than spot yields which were used in the traditional form of the CAPM. Second, long-term yields, as employed by some witnesses in this proceeding, are generally higher than short-term yields, which were used in the traditional form of the CAPM. Each of these revised inputs accomplishes a key goal of the ECAPM by raising the intercept and flattening the slope of the SML.

Further, as I demonstrated in my Direct Testimony, the use of an adjusted beta as published by *Value Line* also raises the intercept and flattens the slope of the SML. As such, the application of the "traditional" CAPM in this proceeding has accomplished the goal of the ECAPM by implementing several inputs that raise the intercept and flatten the SML. Specifically, I am referring to forecasted long-term Treasury yields being used in favor of short-term spot yields and adjusted betas. Therefore, I maintain my position on the ECAPM.

E. D'Ascendis' Performance Factor Adjustment

Q MR. D'ASCENDIS CONTINUES TO RECOMMEND A FIVE-BASIS POINT UPWARD ADJUSTMENT TO THE ROE UNDER 66 PA.C.S. § 523 FOR "MANAGEMENT EFFICIENCY." DO YOU AGREE?

A No, I do not. While I am not an attorney or offering a legal opinion, it is my understanding that Section 523 does not mandate a performance adjustment to the return

on equity for management efficiency; it requires the Commission to consider the efficiency, effectiveness and adequacy of utility service when determining just and reasonable rates and provides the Commission with discretion to make adjustments to specific components of the utility's claimed cost of service as it determines to be proper and appropriate in determining just and reasonable rates. It is my understanding Section 523 does not provide an entitlement, and the Commission is under no obligation to award a premium for utilities simply meeting their statutory obligations.

Q HOW DOES THIS PERFORMANCE PREMIUM PROPOSAL SQUARE WITH THE STANDARDS IN HOPE AND BLUEFIELD?

A It does not. The standards set forth in Hope and Bluefield assume that a utility's authorized return is based on the presumption of sound, economic, and efficient management. That standard is built into the regulatory compact itself. Awarding a separate upward adjustment for "management efficiency" would double count what is already assumed and required by law.

Q WHAT IS THE RISK OF ADOPTING A PERFORMANCE FACTOR ADJUSTMENT AS MR. D'ASCENDIS PROPOSES?

A Such an adjustment risks creating an artificial premium that overcompensates shareholders for management behavior that is expected. Utilities are legally obligated to provide safe and adequate service at just and reasonable rates. Efficiency is not an optional standard deserving of an extra ROE; it is the baseline expectation under regulatory precedent.

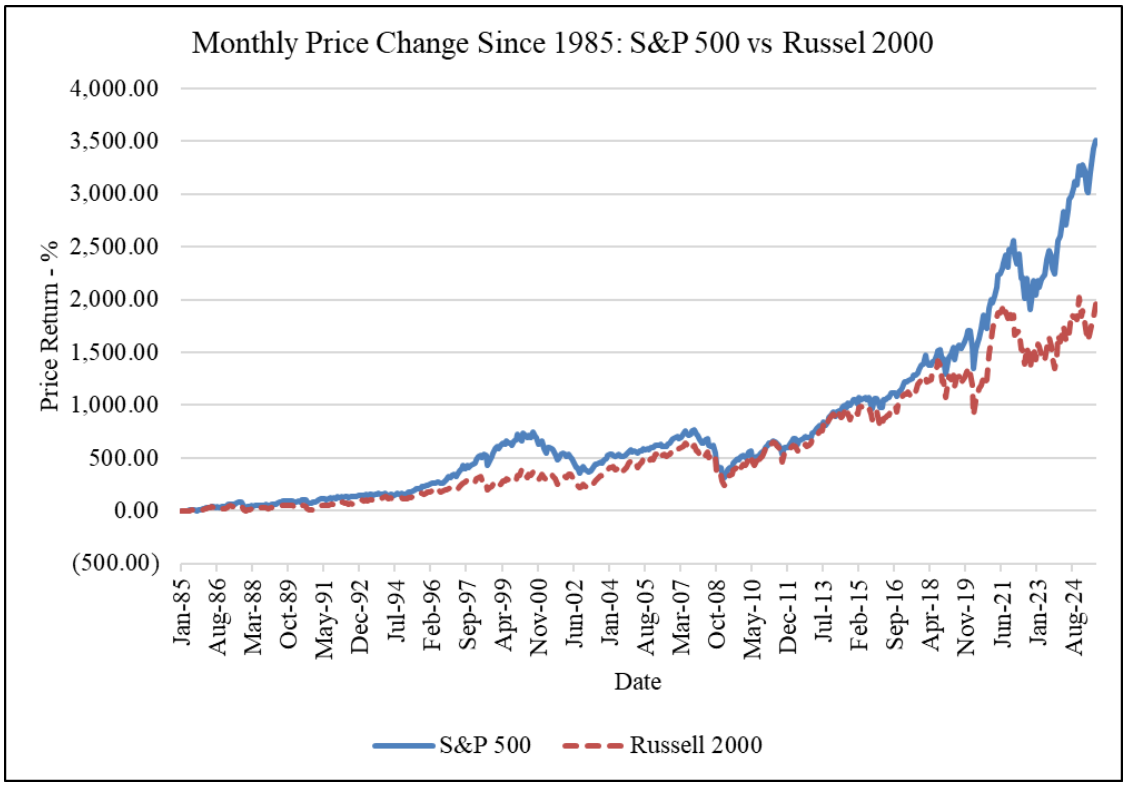
Q HOW SHOULD THE COMMISSION TREAT MR. D'ASCENDIS'S REQUEST?

A The Commission should reject it. Section 523 does not compel a performance factor adjustment and granting one would directly contradict Hope and Bluefield. The proper application of those precedents is to set a fair return that presumes efficient management, not to layer on an additional reward for simply meeting fundamental obligations.

F. D'Ascendis' Size Adjustment

Q MR. D'ASCENDIS TAKES ISSUE WITH YOUR FAILURE TO ADJUST YOUR RECOMMENDATION UPWARD TO ACCOUNT FOR SIZE. DOES HIS REBUTTAL TESTIMONY CHANGE YOUR POSITION ON THE MATTER?

A No. I continue to maintain my conclusion that a size adjustment is unnecessary. Trends in the returns of large capitalization stocks (i.e. the S&P 500) versus small capitalization stocks (i.e. the Russel 2000) show that small capitalization stock returns lag those produced by large capitalization stock returns. As shown in Figure CCW-1SR, the returns that used to be produced by investing in small capitalization stocks have disappeared in recent years, as the S&P 500 returns far exceed the returns compared to its small capitalization stock counterpart, the Russel 2000 index.



Finally, I&E Witnesses Keller and Patel (collectively the "I&E Witnesses"), and I all cite empirical evidence which concludes that, while size premiums are present in industrial companies, such a size premium is not present in utility companies, nor are they appropriate to include in valuing utilities. Mr. D'Ascendis cites an article by Dr. Thomas Zepp as a response to the evidence cited by the I&E Witnesses and me. Dr. Zepp's 2003 article is a narrow short communication that does not provide reliable support for applying a size adjustment in utility cost of equity determinations. While it critiques Wong's earlier work (the research article cited by the I&E witnesses and me), Dr. Zepp's analysis is incomplete, methodologically limited, and focused almost exclusively on a handful of small water utilities. This narrow evidence base is not sufficient to establish that a systematic size effect exists for utilities generally, let alone for electric or gas distribution companies.

Further, Dr. Zepp's recalculated betas are based on just three water companies, and his discounted cash flow study finds an average 99 basis point premium for small utilities that is only significant at the 90% confidence level. Typically, 95% is the standard confidence level used.

For these reasons, the size premium adjustment proposed by Mr. D'Ascendis is unsupported and lacks merit.

G. D'Ascendis' Updated Analysis

Q DID MR. D'ASCENDIS OFFER AN UPDATED COST OF EQUITY ANALYSIS IN HIS REBUTTAL?

A Yes, he did. The indicated range of ROEs attributable to Valley are from 10.42% to 10.89% (unadjusted) and from 11.47% to 11.94% (adjusted) and the indicated range of ROEs attributable to Citizens' and Wellsboro are from 10.19% to 10.76% 8 (unadjusted) and from 11.09% to 11.66% (adjusted). Each of the flaws that were present in Mr. D'Ascendis' analysis that I described in my direct testimony are present in his updated analysis. As such, Mr. D'Ascendis' updated analysis is still overstating the cost of equity for the Companies.

Q DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A Yes, it does.

Surrebuttal Testimony of Christopher C. Walters

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Christopher C. Walters. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q ARE YOU THE SAME CHRISTOPHER C. WALTERS WHO PREVIOUSLY FILED DIRECT TESTIMONY ON JULY 15, 2025 AND REBUTTAL TESTIMONY ON AUGUST 13, 2025, IN THIS PROCEEDING?

A Yes, I am.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR SURREBUTTAL TESTIMONY.

A The purpose of my Surrebuttal Testimony in this proceeding is to respond to the Rebuttal testimony of Mr. D'Ascendis.

My silence on any particular issue should not be construed as tacit agreement or an endorsement of another party's position.

I. SUMMARY

Q PLEASE SUMMARIZE YOUR SURREBUTTAL TESTIMONY.

A In my Surrebuttal testimony, I respond to the criticisms of my analysis and testimony offered by Mr. D'Ascendis. I will demonstrate that Mr. D'Ascendis' criticisms are unfounded and lack merit. I reiterate my recommendation that the Companies be authorized a fair ROE of 9.50%, which is the midpoint of my recommended range of 9.0% to 10.0%.

II. RESPONSE TO CRITICISMS BY MR. D'ASCENDIS

A. Utility Credit Quality

Q MR. D'ASCENDIS ARGUES THAT UTILITIES HAVE NOT BEEN ABLE TO MAINTAIN CREDIT QUALITY DESPITE DECLINING AUTHORIZED ROES. WHAT EVIDENCE DOES HE OFFER IN SUPPORT OF THAT STATEMENT?

A Mr. D'Ascendis states that I often provide "the degradation of the credit quality of the utility industry over the recent period in a table in [my] direct testimony but does not in

this proceeding." He then asserts to reproduce a Table I provided in a recent testimony in an Ameren Illinois rate case, where we were both involved.

Q DID MR. D'ASCENDIS ACCURATELY REPRODUCE THAT TABLE?

A No, he did not. His Table 8 shows credit ratings of natural gas utility subsidiaries for two years: 2020 and 2025. His "replicated" table excludes 15 of the 17 years observed in my Ameren Illinois testimony which he cites. The full table from my Ameren Illinois testimony is provided below in Table CCW-1SR. As shown on this table, in 2009, approximately 75% of the industry was rated BBB+ or higher. Currently, 82% of the industry has a rating of BBB+ or higher. Mr. D'Ascendis opting to exclude more than 88% of the observations when claiming to have replicated my table is deceptive.

B. Use of Historical Authorized ROEs and the Risk Premium Method.

Q HOW DOES MR. D'ASCENDIS RESPOND TO YOUR USE OF HISTORICAL AUTHORIZED ROES IN YOUR ANALYSIS?

A He argues that my reliance on historical authorized returns is misplaced. According to him, those returns were set under different market and regulatory conditions, and therefore do not provide a reliable benchmark for determining the cost of equity today.

He emphasizes that the cost of equity must be forward-looking, reflecting current investor requirements rather than relying on past commission decisions. In his view, using historical averages risks understating today's return requirements.

Q DOES MR. D'ASCENDIS VIEW PAST AUTHORIZED ROES AS REPRESENTATIVE OF THE MARKET COST OF EQUITY?

A. No. He claims that past authorized returns were the product of regulatory compromises and policy considerations, not pure finance theory. Therefore, he argues that they should not be treated as direct evidence of investor-required returns.

Q IF HISTORICAL AUTHORIZED ROES ARE CONSIDERED, WHAT METHOD DOES MR. D'ASCENDIS ARGUE SHOULD BE APPLIED?

A He contends that the appropriate way to use that data is not by presenting simple averages, but by applying a linear Ordinary Least Squares ("OLS") regression model that measures the relationship between the equity risk premium ("ERP") (the difference between authorized ROEs and a corresponding interest rate) and interest rates. He believes this method better captures how regulators have adjusted returns in response to

changes in bond yields over time. He applies a similar methodology in response to my Risk Premium analysis. His OLS regression applied to my underlying data is presented in his Schedule DWD-11R.

Q WHAT ARE THE RESULTS OF HIS OLS REGRESSION ANALYSIS?

A For the Electric Risk Premium (Treasury Bond) analysis, his regression predicts a 5.94% ERP and a ROE of 10.50% assuming a projected 30-year Treasury yield of 4.56%. For the Gas Risk Premium (Treasury Bond) analysis, his regression predicts a 5.88% ERP and a ROE of 10.44%.

For the Electric Risk Premium (A rated Utility Bond) analysis, his regression predicts a 4.69% ERP and a ROE of 10.40% assuming a projected A-rated Utility bond yield of 5.71%. For the Gas Risk Premium (A rated Utility Bond) analysis, his regression predicts a 4.63% ERP and a ROE of 10.34%.

He notes that the R-squareds are both in excess of 82%, meaning that the movement in interest rates explains over 82% of the movement in the ERP, which he considers "to be a strong relationship."

Q DO YOU HAVE ANY GENERAL OBSERVATIONS ABOUT HIS "CORRECTION" TO YOUR RISK PREMIUM ANALYSIS YOU WOULD LIKE TO MAKE?

A Yes. Despite using prospective rates that are generally consistent with those realized in 2024 and 2025, Mr. D'Ascendis' "correction" to my Risk Premium analysis produces results so far removed from authorized returns over that same time period. For example,

his "corrected" version of my Electric Risk Premium over Treasury bonds assumes a prospective 30-year Treasury yield of 4.56%. The 2024 and 2025 average yield on 30-year Treasury bonds was 4.41% and 4.71%, respectively, meaning his prospective yield of 4.56% is squarely in the middle of those observations. During 2024 and year-to-date 2025, the average electric ROE was 9.78% and 9.72%, respectively. This means that the indicated ERP for 2024 and 2025 was 5.37% and 5.01%, respectively. Despite these most recent and relevant observations, Mr. D'Ascendis' "corrected" version of my Risk Premium analysis using OLS regression predicts an ERP of 5.94%, which is significantly higher than the ERP in 2024 or 2025. As a result of his disjointed analysis, his predicted ROE using the OLS regression method of 10.5% is also significantly in excess of the 9.78% and 9.72% average ROEs in 2024 and 2025.

Q DO YOU HAVE ANY CONCERNS WITH THE APPLICATION OF A SIMPLE OLS REGRESSION TO MEASURE THE RELATIONSHIP BETWEEN THE ERP AND INTEREST RATES?

A Yes, I do. The OLS regression model assigns equal weight to all observations over the study period, implicitly assuming that the relationship between the equity risk premium and bond yields has remained stable over that entire period. However, this approach may fail to capture structural changes in the regulatory landscape, investor expectations, and utility ratemaking practices that have occurred over time, particularly in more recent years. As a result, the model may give undue influence to outdated data and underrepresent the conditions currently driving authorized returns. If a regression

model is applied to capture the relationship between interest rates and the ERP, a Weighted Least Squares ("WLS") regression model is more appropriate.

Q WHAT IS WLS REGRESSION, AND WHY DO YOU BELIEVE IT IS MORE USEFUL THAN AN OLS REGRESSION?

A WLS regression is a variation of the traditional OLS regression method. Like OLS, it is used to estimate the relationship between variables such as the ERP and interest rates, but it improves on OLS by allowing certain observations to carry more influence than others based on their relevance or reliability.

OLS regression treats all data points equally, assigning the same weight to each observation regardless of when it occurred. This equal treatment can be problematic when analyzing long historical datasets, particularly when the relationship between variables (like bond yields and the ERP) has evolved over time due to changing market conditions or regulatory environments. For example, an ROE authorized by a state commission in 1988 may have been based on vastly different economic, policy, and risk considerations than one authorized in 2024 or 2025.

WLS regression addresses this by assigning greater weight to more recent data, which better reflects the current relationship between bond yields and the equity risk premium. In this analysis, I used an exponential weighting function that gradually reduces the influence of older data while emphasizing more recent observations. This approach helps ensure the regression model reflects contemporary market conditions more accurately, which is especially important for estimating the current cost of equity.

By using WLS, the goal is to produce a more relevant and timely estimate of the cost of equity for ratemaking purposes—one that better reflects today's utility environment rather than relying equally on data from decades ago that may no longer be representative.

Q WHAT ARE THE RESULTS OF A WLS REGRESSION ANALYSIS FOR THE ELECTRIC AND GAS RISK PREMIUM?

A The results of the WLS regression analysis for the electric and gas risk premium method are summarized below in Table CCW-2SR. I relied on the same data Mr. D'Ascendis used in his "correction" to my Risk Premium study. I also incorporated his prospective Treasury yield of 4.56% and his prospective A-rated utility bond yield of 5.71%. The results range from 9.80% to 9.86%. I will note that the R-squareds range from 0.9418 to 0.9530, all of which are higher than the R-squareds produced by Mr. D'Ascendis' simple OLS regression analysis which he concluded was a "strong relationship."

TABLE CCW-2SR

Bond Yield Plus Risk Premium
Weighted Least Squares Regression Summary Results

	Electric		Gas	
Description	Treasury	A-Rated Util.	Treasury	A-Rated Util.
Intercept (β0)	9.1053	8.8489	9.2518	9.0802
Slope (β1)	-0.8345	-0.8242	-0.8779	-0.8739
Proj. Yield[1]	4.56	5.71	4.56	5.71
Predicted ERP	5.30	4.14	5.25	4.09
ROE Estimate	9.86	9.85	9.81	9.80
R-Square	0.9418	0.9426	0.9530	0.9521

C. DCF Model

Q PLEASE DESCRIBE MR. D'ASCENDIS' CONCERNS WITH YOUR DCF ANALYSIS.

A Mr. D'Ascendis expresses three concerns with my DCF model. Specifically, he:

- Disagrees with my reasoning to discount the results of my constant growth DCF model using analyst growth rates;
- My use of the sustainable growth rate method in the constant growth DCF model and;

- My use of a multi-stage DCF model.

Q PLEASE RESPOND TO MR. D'ASCENDIS' CONCERN REGARDING YOUR USE OF A PROJECTED GROSS DOMESTIC PRODUCT ("GDP") GROWTH RATE IN YOUR MULTI-STAGE DCF ANALYSIS.

A As a matter of principle, no company's earnings and/or dividends can grow faster than the economy in which it sells goods and services into perpetuity. In the long run, earnings growth will be limited by several factors, including, but not limited to, competition and market saturation. Mr. D'Ascendis' conclusion that GDP growth is not an upper limit for company and industry growth defies the economic and financial literature of which I am aware. In addition to the texts cited in my Direct Testimony[1] in support of the premise that GDP is a long-term cap on growth, I refer Mr. D'Ascendis to the following excerpts. First, as detailed in the Chartered Financial Analyst ("CFA") Institute's curriculum:

> For earnings growth to exceed GDP growth, the ratio of corporate profits to GDP must trend upward over time. It should be clear that the share of profits in GDP cannot rise forever. At some point, stagnant labor income would make workers unwilling to work and would also undermine demand, making further profit growth unsustainable. *Thus, in the long run, real earnings growth cannot exceed the growth rate of potential GDP.*[2] (emphasis added)

Additionally, Dr. Roger A. Morin details in his book, *New Regulatory Finance*, as follows:

[1]Corrected OCA Statement 2 at 39.

[2]CFA Program Curriculum, 2014 Level II Vol.1, "Ethical and Professional Standards, Quantitative Methods, and Economics" Reading 15 – Economic Growth and the Investment Decision, pages 608-609.

> It is useful to remember that eventually all company growth rates, especially utility services growth rates, converge to a level consistent with the growth rate of the aggregate economy.
>
> * * *
>
> […] it is quite possible that a company's dividends can grow faster than the general economy for five years*, but it is quite implausible for such growth to continue into perpetuity.*[3] (emphasis added)

Thus, my use of projected GDP growth as an upper limit for company or industry growth is wholly defensible, regardless of it not being a market measure. Mr. D'Ascendis has provided no substantive evidence to refute the findings of the academic and practitioner texts cited here and in my Direct Testimony on the matter. As such, Mr. D'Ascendis' concerns are unfounded and lack merit.

Q MR. D'ASCENDIS ARGUES THAT YOUR MULTI-STAGE DCF MODEL IS INAPPROPRIATE BECAUSE UTILITIES ARE IN THE STEADY-STATE GROWTH STAGE. HOW DO YOU RESPOND?

A I disagree with Mr. D'Ascendis' conclusion that utilities are in a steady-state growth stage. His characterization overlooks the unprecedented expansion of data centers and the corresponding surge in demand growth that utilities are currently experiencing. This development is not reflective of a mature, flat growth environment. Instead, it represents a significant structural change in the utility industry, with utilities investing heavily in infrastructure to meet rapidly rising load requirements. Given this environment, it is inappropriate to assume utilities are currently settled into steady-state growth. A multi-

[3]Roger A. Morin, New Regulatory Finance, pages 308-309.

stage DCF model is well-suited to capture this dynamic, recognizing higher near-term growth expectations before transitioning to long-run sustainable levels.

Q DID MR. D'ASCENDIS ALSO TAKE ISSUE WITH YOUR SUSTAINABLE GROWTH RATE DCF ANALYSIS?

A Yes, he did. Specifically, he takes issue with the assumption that future earnings growth is inversely related to the dividend payout ratio. He cites studies performed by Zhou and Ruland (2006) and Gwilym, *et al*. (2006), both of which cite the Arnott and Asness (2003) study, in support of his argument.[4]

Q PLEASE RESPOND.

A As an initial matter, no model is perfect, and at times can be more or less accurate than other models depending on various factors, such as economic conditions. As Mr. D'Ascendis states in his Direct Testimony, "[…] the use of multiple generally accepted common equity cost rate models also adds reliability and accuracy when arriving at a recommended common equity cost rate."[5] I agree using multiple methods provides a more comprehensive, and therefore, more reliable perspective on investors' return requirements. For this reason alone, it is important to perform a thorough analysis, and apply informed, reasoned judgement in the interpretation of the results. The use of multiple DCF models and considering those results is consistent with that approach.

[4]Citizens/Valley/Wellsboro Joint Statement No. 2R at 39-40.
[5]Citizens/Valley/Wellsboro Joint Statement No. 2 at 21.

In addition, using the retention growth methodology is a recognized reasonable method for estimating sustainable dividend growth and should not be ignored.

As noted by the CFA Institute's curriculum text:

> "We define the sustainable growth rate as the rate of dividend (and earnings) growth that can be sustained for a given level of return on equity, assuming that the capital structure is constant through time and that additional common stock is not issued. The reason for studying this concept is that it can help in estimating the stable growth rate in a Gordon growth model valuation, or the mature growth rate in a multistage DDM in which the Gordon growth formula is used to find the terminal value of the stock."

The expression to calculate the sustainable growth rate is:
$g = b$ x ROE[6]

Notably, the same CFA text observes that, in light of the Arnott and Asness (2003) study cited by Mr. D'Ascendis, "caution is appropriate in assuming that dividends displace earnings."[7] However, that same text concludes that "[n]evertheless, the equation can be useful as a simple expression for approximating the average rate at which dividends can grow over a long horizon."[8] Further, *Brigham and Houston* state that, "Companies that retain a high percentage of their earnings rather than paying them out as dividends generate more retained earnings and thus need less external capital."[9]

[6]*See* CFA Program Curriculum, 2014, Level II, Volume 4, "Dividend Discount Valuation," at page 264.

D. CAPM

Q PLEASE SUMMARIZE MR. D'ASCENDIS' CONCERNS WITH YOUR CAPM ANALYSIS.

A At page 51 of his Rebuttal Testimony, Mr. D'Ascendis expresses four general concerns with my CAPM analysis: (1) he argues I violated the Efficient Market Hypothesis ("EMH") by failing to include farthest out projected interest rates; (2) he disagrees with certain of my beta estimates; (3) he disagrees with my use of Kroll's recommended Market Risk Premium ("MRP"), and (4) he argues I should have included an Empirical CAPM analysis.

Q PLEASE RESPOND TO MR. D'ASCENDIS' ASSERTION THAT YOU VIOLATED THE EMH BY NOT INCORPORATING THE LONGEST AVAILABLE PROJECTED RISK-FREE RATE.

A Mr. D'Ascendis' assertion is misplaced and inconsistent with his own testimony. Under the semi-strong form of the EMH, which Mr. D'Ascendis is asserting, it is assumed securities prices reflect all publicly available information and past market data. Because Blue Chip is a paid subscription, not all investors necessarily have access to the data and therefore it would be hard to classify the projections offered by Blue Chip as public, a classification that is required under the semi-strong form of EMH.

Further, to the extent Mr. D'Ascendis failed to include all publicly available data, both historical and projected, he himself violated the EMH.

Q DO YOU HAVE ANY GENERAL COMMENTS IN RESPONSE TO MR. D'ASCENDIS WITH REGARD TO THE METHODS USED TO CALCULATE THE EXPECTED MARKET RETURN, AND ULTIMATELY, THE EXPECTED MRP.

A Yes. Regardless of the method used to calculate the expected market return, they all produce expected MRPs in the range of 5.50% to 8.00%. These estimates of the MRP are fully supported by financial texts and empirical research. For example, Dr. Morin notes several studies of the MRP in his book, *Modern Regulatory Finance*, have concluded that a MRP in the range of 5.0% to 8.0% is a reasonable estimate for the United States.[10] For example, the Duarte and Rosa study he cites, concludes that it is "quite difficult to improve upon when considering out-of-sample performance measures."[11] Dr. Morin also notes that a survey of professional practices showed that 71% of textbooks/tradebooks used a historical average as the MRP, and 60% of financial advisors used a MRP in the range of 7.0% to 7.4%, or a long-term arithmetic average.[12] My MRPs, regardless of the method used to calculate the expected market return component, is supported by substantial empirical evidence. Mr. D'Ascendis' concerns are unsupported and lack merit.

Q MR. D'ASCENDIS ARGUES THAT YOUR USE OF KROLL'S RECOMMENDED MRP OF 5.00% SHOULD BE REJECTED IN FAVOR OF OTHER MRP'S CITED IN KROLL. HOW DO YOU RESPOND.

[10]Dr. Morin references studies by Duarte & Rosa; Professors Ross, Westerfield, and Jordan; Mahera; and Brealey, Myers, and Allen. *See Modern Regulatory Finance,* Dr. Roger Morin, at 190-192.
[11]*See Modern Regulatory Finance,* Dr. Roger Morin, at 191, citing the Duarte and Rosa study.
[12]*See Modern Regulatory Finance,* Dr. Roger Morin, at 190, footnote 35.

A Mr. D'Ascendis states, erroneously, that I relied on an MRP of 5.00% as recommended by Kroll.[13] However, Kroll's recommended MRP that I relied on is actually 5.50%, not 5.00% as alleged by Mr. D'Ascendis. Kroll's recommended MRP is well within the range of well-known empirical data. For example, Dr. Morin notes in his book, *Modern Regulatory Finance*, that several studies of the MRP have concluded that a MRP in the range of 5.0% to 8.0% is a reasonable estimate for the United States.[14]

In addition, Mr. D'Ascendis seems to ignore the significant support from *Kroll* describing their recommended normalized, or conditional market risk premium. Specifically, Kroll's recommended risk premium is not explicitly based on any particular set of returns, but rather it is a conditional risk premium based on observations of relevant factors including, but not limited to fluctuations in global economic and financial market conditions. Kroll explains its equity risk premium methodology on its Cost of Capital Navigator site as follows:

> There is no single universally accepted methodology for estimating the ERP; consequently, there is wide diversity in practice among academics and financial advisors regarding ERP estimates. In estimating the conditional ERP, valuation analysts cannot simply use the long-term historical ERP, whether as reported or adjusted as we discussed above. A better alternative would be to examine approaches that are sensitive to the current economic conditions.
>
> Kroll employs a multi-faceted analysis to estimate the conditional ERP that takes into account a broad range of economic information and multiple ERP estimation methodologies to arrive at its recommendation.
>
> First, a reasonable range of normal or unconditional ERP is established.

[13]Joint Statement No. 2R at 53.

[14]Dr. Morin references studies by Duarte & Rosa; Professors Ross, Westerfield, and Jordan; Mahera; and Brealey, Myers, and Allen. See *Modern Regulatory Finance,* Dr. Roger A. Morin, at 190-192. Dr. Morin notes in his textbook that there is a "slight preference" for the upper end of the range (i.e., 8%) during tumultuous times in capital markets with examples being the 2008-2009 credit crisis and the 2020 pandemic.

> Second, based on current economic conditions, Kroll estimates where in the range the true ERP likely lies (top, bottom, or middle) by examining the current state of the economy (both by examining economic indicators and forecasts, as well as by analyzing the level and trends of stock market indices as forward indicators), in conjunction with the implied equity volatility and corporate spreads as indicators of perceived risk.

Mr. D'Ascendis' concern with the Kroll market risk premium is clearly misplaced. Kroll is one of the most often cited names in valuation and cost of capital matters, particularly regarding cost of capital testimony offered in regulated utility proceedings such as this one.

Q PLEASE RESPOND TO MR. D'ASCENDIS WITH REGARD TO YOUR USE OF VASICEK BETAS FROM S&P CAPITAL IQ.

A S&P Capital IQ is one of the most cited sources of financial data and other relevant utility industry information by rate of return witnesses in cost of capital testimony throughout the country. Further, S&P Capital IQ is one of the most recognized names in finance. Investors rely on data from S&P Capital IQ, particularly in the utility sector, to inform their investment making decisions.

Q IS THERE FINANCIAL LITERATURE DISCUSSING THE VASICEK METHOD OF ADJUSTING BETA IN COMPARISON TO THE BLUME METHOD EMPLOYED BY *VALUE LINE*?

A Yes. In an article titled "An Examination of Blume and Vasicek Betas" published in the journal *The Financial Review,* Martin Lally discusses the merits of both methods of adjusting beta. An observation made by Lally as it relates to the utility industry is as follows:

> A dramatic example of this is in U.S. electric utilities. A typical such firm has an estimated beta (unadjusted) of around 0.4 (Value Line, 1993). By virtue of being typical, the Vasicek estimate, with prior corresponding to this industry, will also be 0.4. By contrast, Blume adjusts the 0.4 to 0.6 [i.e. 0.33 + 0.67(0.4)]. The result is a dramatic overestimate by Blume, because a singularly relevant fact is ignored, i.e., membership of an industry whose average estimated, and therefore presumably also true, beta is well below one. Given that these firms have output prices that are set so as to recover costs, including the cost of equity, and they have substantial equity investment, then the implications of using Blume betas (i.e., not partitioning into industries) for measuring costs of equity are particularly severe.[15]

Mr. D'Ascendis' concerns with Vasicek-adjusted betas are unsupported and lack merit.

Q PLEASE RESPOND TO MR. D'ASCENDIS WITH REGARD TO YOU NOT PERFORMING AN ECAPM ANALYSIS.

A At page 57 of his Rebuttal Testimony, Mr. D'Ascendis simply states that my CAPM methodology is flawed because, among other reasons, I did not perform an ECAPM analysis. I explained in detail why I disagree with the use of an ECAPM, particularly with an adjusted beta, in my Direct Testimony at pages 74-77. Mr. D'Ascendis has offered nothing substantive to alter my opinion on the matter.

Q IS IT NECESSARY TO PERFORM AN ECAPM AT THIS TIME?

A No, as I explain in my Direct Testimony, the purpose of the adjustments presented in the ECAPM is to raise the intercept and flatten the security market line ("SML"). The applications of the "traditional" CAPM offered by the witnesses in this proceeding are

[15]The Financial Review, Vol. 33 (1998) at 183-198, "An Examination of Blume and Vasicek Betas," Martin Lally. (Emphasis Added).

anything but "traditional" given the extensive use of projected long-term yields and adjusted betas, both of which raise the intercept and flatten the SML.

For example, the use of a projected 30-year Treasury yield is a departure from the traditional CAPM in two regards. First, projected yields as those employed by myself in this proceeding are generally higher than spot yields which were used in the traditional form of the CAPM. Second, long-term yields, as employed by some witnesses in this proceeding, are generally higher than short-term yields, which were used in the traditional form of the CAPM. Each of these revised inputs accomplishes a key goal of the ECAPM by raising the intercept and flattening the slope of the SML.

Further, as I demonstrated in my Direct Testimony, the use of an adjusted beta as published by *Value Line* also raises the intercept and flattens the slope of the SML. As such, the application of the "traditional" CAPM in this proceeding has accomplished the goal of the ECAPM by implementing several inputs that raise the intercept and flatten the SML. Specifically, I am referring to forecasted long-term Treasury yields being used in favor of short-term spot yields and adjusted betas. Therefore, I maintain my position on the ECAPM.

E. D'Ascendis' Performance Factor Adjustment

Q MR. D'ASCENDIS CONTINUES TO RECOMMEND A FIVE-BASIS POINT UPWARD ADJUSTMENT TO THE ROE UNDER 66 PA.C.S. § 523 FOR "MANAGEMENT EFFICIENCY." DO YOU AGREE?

A No, I do not. While I am not an attorney or offering a legal opinion, it is my understanding that Section 523 does not mandate a performance adjustment to the return

on equity for management efficiency; it requires the Commission to consider the efficiency, effectiveness and adequacy of utility service when determining just and reasonable rates and provides the Commission with discretion to make adjustments to specific components of the utility's claimed cost of service as it determines to be proper and appropriate in determining just and reasonable rates. It is my understanding Section 523 does not provide an entitlement, and the Commission is under no obligation to award a premium for utilities simply meeting their statutory obligations.

Q HOW DOES THIS PERFORMANCE PREMIUM PROPOSAL SQUARE WITH THE STANDARDS IN HOPE AND BLUEFIELD?

A It does not. The standards set forth in Hope and Bluefield assume that a utility's authorized return is based on the presumption of sound, economic, and efficient management. That standard is built into the regulatory compact itself. Awarding a separate upward adjustment for "management efficiency" would double count what is already assumed and required by law.

Q WHAT IS THE RISK OF ADOPTING A PERFORMANCE FACTOR ADJUSTMENT AS MR. D'ASCENDIS PROPOSES?

A Such an adjustment risks creating an artificial premium that overcompensates shareholders for management behavior that is expected. Utilities are legally obligated to provide safe and adequate service at just and reasonable rates. Efficiency is not an optional standard deserving of an extra ROE; it is the baseline expectation under regulatory precedent.

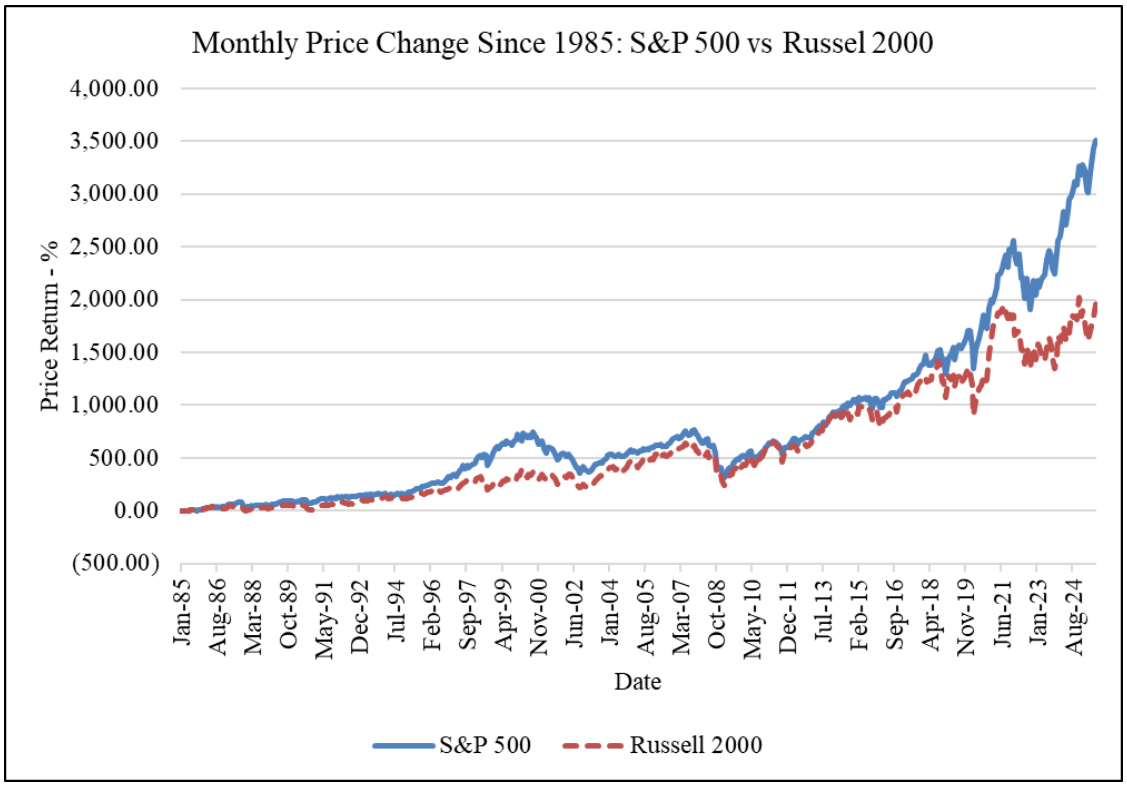
Q HOW SHOULD THE COMMISSION TREAT MR. D'ASCENDIS'S REQUEST?

A The Commission should reject it. Section 523 does not compel a performance factor adjustment and granting one would directly contradict Hope and Bluefield. The proper application of those precedents is to set a fair return that presumes efficient management, not to layer on an additional reward for simply meeting fundamental obligations.

F. D'Ascendis' Size Adjustment

Q MR. D'ASCENDIS TAKES ISSUE WITH YOUR FAILURE TO ADJUST YOUR RECOMMENDATION UPWARD TO ACCOUNT FOR SIZE. DOES HIS REBUTTAL TESTIMONY CHANGE YOUR POSITION ON THE MATTER?

A No. I continue to maintain my conclusion that a size adjustment is unnecessary. Trends in the returns of large capitalization stocks (i.e. the S&P 500) versus small capitalization stocks (i.e. the Russel 2000) show that small capitalization stock returns lag those produced by large capitalization stock returns. As shown in Figure CCW-1SR, the returns that used to be produced by investing in small capitalization stocks have disappeared in recent years, as the S&P 500 returns far exceed the returns compared to its small capitalization stock counterpart, the Russel 2000 index.



Finally, I&E Witnesses Keller and Patel (collectively the "I&E Witnesses"), and I all cite empirical evidence which concludes that, while size premiums are present in industrial companies, such a size premium is not present in utility companies, nor are they appropriate to include in valuing utilities. Mr. D'Ascendis cites an article by Dr. Thomas Zepp as a response to the evidence cited by the I&E Witnesses and me. Dr. Zepp's 2003 article is a narrow short communication that does not provide reliable support for applying a size adjustment in utility cost of equity determinations. While it critiques Wong's earlier work (the research article cited by the I&E witnesses and me), Dr. Zepp's analysis is incomplete, methodologically limited, and focused almost exclusively on a handful of small water utilities. This narrow evidence base is not sufficient to establish that a systematic size effect exists for utilities generally, let alone for electric or gas distribution companies.

Further, Dr. Zepp's recalculated betas are based on just three water companies, and his discounted cash flow study finds an average 99 basis point premium for small utilities that is only significant at the 90% confidence level. Typically, 95% is the standard confidence level used.

For these reasons, the size premium adjustment proposed by Mr. D'Ascendis is unsupported and lacks merit.

G. D'Ascendis' Updated Analysis

Q DID MR. D'ASCENDIS OFFER AN UPDATED COST OF EQUITY ANALYSIS IN HIS REBUTTAL?

A Yes, he did. The indicated range of ROEs attributable to Valley are from 10.42% to 10.89% (unadjusted) and from 11.47% to 11.94% (adjusted) and the indicated range of ROEs attributable to Citizens' and Wellsboro are from 10.19% to 10.76% 8 (unadjusted) and from 11.09% to 11.66% (adjusted). Each of the flaws that were present in Mr. D'Ascendis' analysis that I described in my direct testimony are present in his updated analysis. As such, Mr. D'Ascendis' updated analysis is still overstating the cost of equity for the Companies.

Q DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A Yes, it does.

SURREBUTTAL TESTIMONY

OF

Michael Deupree

On behalf of the

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

OCA Statement 3SR

Date Served: August 28, 2025

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed direct and rebuttal testimony in this proceeding on July 15, 2025, and August 13, 2025, respectively, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to respond to elements of the rebuttal testimonies of Howard S. Gorman on behalf of Citizens' Electric Company of Lewisburg ("Citizens" or the "Company"), and Justin B. Farr on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"). Specifically, I will respond to Citizens and OSBA's discussion on the use of a zero-load analysis to classify a portion of electric distribution costs as customer related, and Citizens' response to my proposed revenue allocation and analysis of customer-related costs.

II. CLASSIFICATION OF ELECTRIC DISTRIBUTION COSTS

Q. PLEASE SUMMARIZE COMPANY WITNESS GORMAN'S RESPONSE TO YOUR CLASSIFICATION OF THE SECONDARY PORTION OF DISTRIBUTION PLANT ACCOUNTS 364-368.

A. Mr. Gorman argues that classification of the secondary portion of distribution plant accounts 364-368 as 100 percent demand-related is problematic on several levels. First, he disputes my assertion that zero-load analyses are meaningless due to reliance on the

theoretical construct of a system incapable of having load-carrying capabilities.[1] Second, he argues that my direct testimony ignores important findings by Professor Bonbright in his treatise on rate design.[2] Finally, Mr. Gorman disregards my empirical findings showing a lack of statistical correlation between changes in customer counts and distribution system investments as making no sense on a prima-facie basis.[3]

Q. PLEASE SUMMARIZE OSBA WITNESS FARR'S RESPONSE TO YOUR CLASSIFICATION OF THE SECONDARY PORTION OF DISTRIBUTION PLANT ACCOUNTS 364-368.

A. OSBA witness Farr notes that the Company's Allocated Cost of Service ("ACOS") study classified all of FERC Account 368 (line transformers) as demand-related, which is inconsistent with the Company's testimony representations.[4] He also asserts that the NARUC Manual references accounts 364-368 as containing both customer and demand-related components.[5]

Q. WHY DOES MR. GORMAN ARGUE THAT ZERO-LOAD ANALYSES SERVE AS USEFUL TOOLS TO SEPARATE COSTS BETWEEN DEMAND-RELATED AND CUSTOMER-RELATED FUNCTIONS?

A. Mr. Gorman argues that my critiques about the classification of secondary distribution plant accounts represent "often-used but misleading argument."[6] Specifically,

---

[1] Rebuttal Testimony of Howard S. Gorman at 9:15-18 and 10:3-7.

[2] *Id.* at 10:11-14.

[3] *Id.* at 10:21-22.

[4] Rebuttal Testimony of Justin B. Farr at 2:11-19.

[5] *Id.* at 4:11 to 5:1.

[6] Rebuttal Testimony of Howard S. Gorman at 9:15.

he notes that he acknowledges that his zero-load analysis and related Minimum Size System ("MSS") analyses are theoretical constructs, but he argues that this is not a valid reason to reject the results of such analyses.[7] Instead, Mr. Gorman argues that these analyses represent "useful tools," to separate costs between demand-related and customer-related functions, regardless of the fact that no such system would be constructed in reality.[8] Mr. Gorman notes as evidence that it would be possible to install transformers with ratings of 12.5 kVA for customers where this is sufficient to meet demand, and to install larger capacity transformers only where needed.[9]

Q. DO YOU AGREE WITH COMPANY WITNESS GORMAN'S ARGUMENTS ABOUT THE POTENTIAL VALIDITY OF ZERO-LOAD AND MSS ANALYSES?

A. No. Mr. Gorman appears to have misunderstood that my critique is that the theoretical nature of these analyses is an inherent flaw of the analyses. The conceptual purpose of a zero-load analysis is supposedly to identify the system costs that are associated with a hypothetical electric distribution system that serves all customers on its system as connections but which **cannot** serve customer loads (or "zero-load") and thus **cannot** serve these connected customers. This contradiction in purpose is why such a system would never exist, which furthermore creates inherent problems highlighted by Mr. Gorman's statement concerning transformer capacity. Mr. Gorman's zero-load analysis estimates a replacement cost for the Company's inventory of transformers that

[7] *Id.* at 9:15-17.

[8] *Id.* at 9:17-18.

[9] *Id.* at 9:19-23.

range in capabilities from 15 to 1500 kVA.[10] As Mr. Gorman acknowledges, these replacement transformers, even a minimum-size system, **would be sufficient** to meet many customers' demand requirements, a direct violation of the conceptual purpose of a zero-load analysis which is to estimate the costs of a hypothetical electric distribution system **that is not sufficient** to meet customers' demand requirements.

Q. HAS AUTHORITATIVE SOURCES COMMENTED ON THIS CONCERN ASSOCIATED WITH MSS ANALYSES?

A. Yes. As I referenced in my direct testimony, the National Association of Regulatory Utility Commissioners ("NARUC") Electric Cost Allocation Manual ("NARUC Manual") specifically recognizes this fundamental failing of zero-load analyses in its discussion noting that "… the analyst must be aware that the minimum-size distribution equipment has a certain load-carrying capability, **which can be viewed as a demand-related costs**."[11] Essentially, a direct reliance on replacement costs, as the Company has done in the current proceeding for line transformers, would **necessarily over-estimate** the customer-related portion of the equipment costs, even if one accepts the premise of a zero-load or MSS analysis.

Q. IS IT POSSIBLE TO ESTIMATE THE COST OF A ZERO-LOAD SYSTEM?

A. No. When done appropriately, a zero-load analysis would involve estimating the costs of an electric distribution system which cannot function as an electric distribution system. For example, a correct zero-load analysis would require the estimation of the cost of an 'electric line transformer' which cannot function as an electric line transformer

[10] Company's Response to Data Request I&E-RE-1-D Attachment A, WP2_D.

[11] Direct Testimony of Michael W. Deupree at 17:23 to 18:2, *emphasis added.*

– effectively an empty box. Even if one could estimate the costs of this farcical 'electric line transformer,' it would be impossible to verify these estimates with any degree of analytical rigor required in the setting of just and reasonable rates.

Q. DOES THIS FLAW ALSO HOLD TRUE FOR MR. GORMAN'S ESTIMATION OF ZERO-LOAD COSTS ASSOCIATED WITH POLES, OVERHEAD AND UNDERGROUND CONDUCTORS?

A. Yes. Mr. Gorman's zero-load analysis does not include material costs in his analysis of the zero-load costs associated with secondary electric distribution poles, and overhead and underground conductors (i.e. lines), instead only estimating the labor, overhead, and vehicle costs associated with replacement. However, even this analysis does not truly estimate the costs of a zero-load replacement system as it assumes this replacement system would contain the same number of circuit miles as Citizens current system which was designed with customer's load requirements in mind.[12] A true zero-load replacement system would certainly contain fewer circuit miles compared to Citizens' current system.

Q. DO YOU AGREE WITH MR. GORMAN'S CHARACTERIZATION OF PROFESSOR BONBRIGHT'S STATEMENTS ON CLASSIFYING MINIMUM-SIZED DISTRIBUTION SYSTEM COSTS AS CUSTOMER-RELATED?

A. No. Mr. Gorman selectively quotes Professor Bonbright's treatise on the issue out of context. Professor Bonbright's full quote for the record is provided below, and clearly

[12] Company's Response to Data Request I&E-RE-1-D Attachment A, D1.

shows his negative opinion on classifying minimum-sized distribution system costs as customer-related.

> While, for the reason just suggested, **the inclusion of the costs of a minimum-sized distribution system among the customer-related costs seems to us clearly indefensible**, its exclusion from the demand-related costs stands on much firmer ground. For this exclusion of minimum-sized distribution system costs makes more plausible the assumption that the *remaining* cost of the secondary distribution system is a cost which varies continuously (and, perhaps, even more or less directly) with the maximum demand imposed on this system as measured by peak load.
>
> But if the hypothetical cost of a minimum-sized distribution system is properly excluded from the demand-related costs for the reason just given, while it is also denied a place among the customer costs for the reason stated previously, to which cost function does it then belong? **The only defensible answer, in our opinion, is that it belongs to none of them**. Instead, it should be recognized as a strictly unallocable portion of total costs. And this is the disposition that it would probably receive in an estimate of long-run marginal costs. But fully-distributed cost analysts dare not avail themselves of this solution, since they are the prisoners of their own assumption that "the sum of the parts equals the whole." They are therefore under impelling pressure to fudge their cost apportionments **by using the category of customer costs as a dumping ground for costs that they cannot plausibly impute to any of their other cost categories**.[13]

Q. WHY DOES PROFESSOR BONBRIGHT FIND THAT CLASSIFYING MINIMUM-SYSTEM COSTS AS CUSTOMER-RELATED "CLEARLY INDEFENSIBLE?"

A. Professor Bonbright notes the lack of empirical support in academic literature for a causal relationship between distribution system investments and changes in the number of customers on the system. A relationship, or rather lack thereof, which I showed in my

[13] James C. Bonbright, *et al.* Principles of Public Utility Rates. 1988 Edition. Arlington, VA: Public Utilities Reports, Inc., pp. 491-492; *emphasis added.*

direct testimony can also be seen when examining historic Citizens' distribution system investments.[14]

Q. WHAT IS WITNESS GORMAN'S RESPONSE TO YOUR EMPIRICAL ANALYSIS OF THE LACK OF A CAUSAL RELATIONSHIP BETWEEN ELECTRIC DISTRIBUTION SYSTEM INVESTMENTS AND CHANGES IN THE NUMBER OF CUSTOMERS ON THE SYSTEM?

A. Mr. Gorman dismisses the conclusion of my analysis showing little to no correlation between electric distribution system investments and changes in the number of customers on the system, as not making sense.[15] Mr. Gorman again appears to have misunderstood my complaint by correctly noting that it must make investments in its distribution system even during years when it experiences decreases in customer counts.[16] This is because a sizable portion of most electric distribution system investments are non-growth related, but instead associated with public policy such as improving/maintaining system reliability.[17] However, this recognition of the lack of a direct causal relationship between growth in customer counts and electric distribution investments undermines the very premise of attempting to classify a portion of such investment costs as customer-related, as Professor Bonbright observed decades ago, and which Mr. Gorman appears to agree with here, at least to an extent.

---

[14] Direct Testimony of Michael W. Deupree at 20:11 to 21:6.

[15] Rebuttal Testimony of Howard S. Gorman at 10:21-22.

[16] *Id.* at 10:22-23.

[17] *See*, Rebuttal Testimony of Howard S. Gorman at 10:23 to 11:5.

Q. WHAT IS YOUR RESPONSE TO OSBA WITNESS FARR'S CLAIMS THAT THE NARUC MANUAL PROVIDES THAT SECONDARY ELECTRIC DISTRIBUTION PLANT ASSETS CONTAIN BOTH DEMAND AND CUSTOMER COMPONENTS?

A. Mr. Farr's assertion is inaccurate as to the NARUC Manual because the NARUC Manual does not provide that secondary electric distribution plant assets contain both demand and customer components. Rather, as noted in the NARUC Manual preface, the manual is not intended to advocate for any one particular cost allocation method, but rather discuss all methods that are currently used.[18] Indeed, the NARUC Manual references the controversial classification of substations, poles, transformers, and conductors between demand and customer classifications. Contrast with the less controversial classification of distribution plant accounts 369-373 covering services, meters, street lights, and equipment installed on customer premises, which are generally recognized as fully customer-related and whose costs are either directly assigned to relevant customers or otherwise allocated based on a measure of customer accounts. Indeed, the NARC Manual provides as follows:

> The preceding discussion of the merits of minimum-system versus the zero-intercept classification schemes will affect the major distribution-plant accounts for FERC Accounts 364 through 368. Several other plant accounts remain to be classified. While the classification of the following distribution-plant accounts is an important step, **it is not as controversial as the classification of substation, poles, transformers, and conductors.**[19]

[18] Electric Utility Cost Allocation Manual (January 1992), NARUC, p. ii.

[19] *Id.* at pp. 95-96; *emphasis added.*

III. REVENUE ALLOCATION

Q. DOES COMPANY WITNESS GORMAN SUPPORT YOUR PROPOSED REVENUE ALLOCATIONS?

A. No. Mr. Gorman asserts that my proposed revenue allocations are not supported because they are based on what he asserts is my faulty alternative ACOS study, which he asserts fails to recognize any customer component to the secondary electric plant. Mr. Gorman did recognize my stated concern regarding the large increase in Municipal Boulevard Lighting ("MBL") rates,[20] and is now proposing that the proposed rate increase to this class be capped at 1.50 times the system average increase.[21]

Q. HOW DO YOU RESPOND TO MR. GORMAN STATEMENTS?

A. My alternative ACOS presented in my direct testimony is not faulty and provides a fair and reasonable estimation of relative costs of service between Citizens' customer classes. As I summarize in my direct testimony, Mr. Gorman's inappropriate classification of costs associated with secondary-voltage distribution plant accounts 364-368 skews the allocation of costs and revenue responsibilities away from larger customers and onto residential customers and small commercial customers.[22] MSS and related zero-load analyses depend on deeply flawed premises that have been criticized on theoretical and empirical grounds for decades.[23] As I showed in my direct testimony, there is no statistically significant relationship between changes in average number of customers on

---

[20] *Id.* at 13:1-3.

[21] *Id.* at 3:12-14.

[22] Direct Testimony of Michael W. Deupree at 23:12-18.

[23] *See*, *Id.* at 18:13 to 20:4.

Citizens' system and the utility's investment in distribution plant accounts 364-368, highlighting this empirical criticism.[24] It is important that the just and reasonable rates be based on an ACOS that corrects for this flaw.

Q. DO YOU HAVE A RESPONSE TO MR. GORMAN'S REDUCED INCREASE IN MBL RATES?

A. Yes. As shown in my Direct Testimony, Mr. Gorman's initial proposal would have seen base MBL distribution rates increase by 75.0 percent, or 2.53 times the overall Company system-average increase in distribution rates of 29.64 percent.[25] This large increase is inconsistent with principles of gradualism, so I recommended that the proposed rate increase to this class be capped at 1.25 times the overall system-average increase.[26] While Mr. Gorman's rebuttal proposal to cap the increase in MBL distribution rates to 1.50 times the system average is encouraging progress from the Company's initial proposal in this proceeding, I still find my proposed cap equal to 1.25 times the overall system-average increase to be more consistent with principles of gradualism.

[24] *Id.* at 20:6 to 21:5.

[25] Direct Testimony of Michael W. Deupree at 25.

[26] *Id.* at 28:5-10.

IV. CUSTOMER CHARGE

Q. DID MR. GORMAN AGREE WITH YOUR PROPOSAL TO REJECT ANY PROPOSED INCREASES IN EXISTING CUSTOMER CHARGES?

A. No. Mr. Gorman disagrees with my arguments regarding customer charges for multiple reasons. First, he argues that his analysis of customer-related costs was restricted to only customer-related expenses and therefore I did not identify any significant flaw in his computation of customer-related costs.[27] Second, Mr. Gorman disagrees with my regional peer group used to compare the Company's rates, instead arguing that the Company's proposed rates should be compared to its neighboring utility, PPL Electric Utilities Corporation.[28] Finally, Mr. Gorman disagrees with my concerns regarding the negative impacts of higher customer charges on energy conservation, noting that the Company's proposed customer charge recovers only 23 percent of monthly distribution charges for the typical residential customer.[29]

Q. HOW DO YOU RESPOND TO MR. GORMAN'S ARGUMENT THAT YOU DID NOT IDENTIFY ANY SIGNIFICANT FLAW IN THE COMPANY'S COMPUTATION OF CUSTOMER-RELATED COSTS?

[27] Rebuttal Testimony of Howard S. Gorman at 13:13-16.

[28] *Id.* at 13:19-22.

[29] *Id.* at 14:7-12.

A. First, Mr. Gorman's analysis of customer-related costs is flawed because it does include costs associated with line transformers (FERC Account 368). However, ignoring this element, Mr. Gorman's analysis is also flawed in that it assumes the Company's requested rate of return on rate base ("ROR") of 8.49 percent in calculating the required return on customer-related rate base, as I discussed in my rebuttal testimony.[30] The Company's requested ROR is dependent on the Commission's finding of a just and reasonable ROR at the end of this proceeding and therefore is unknown at the current juncture. I therefore based my analysis of customer-related costs on the Company's estimated ROR under current rates of 1.46 percent.[31]

Peer Group Average		**$ 12.76**	**$ 20.75**

Q. DO YOU AGREE THAT THE COMPANY'S RATES SHOULD BE COMPARED SOLELY TO ITS NEIGHBORING ELECTRIC UTILITY?

A. No. Benchmarking utility rates and financial performance to a sampling of similarly situated utilities is a common practice. Indeed, in the current proceeding, Mr. Gorman compares the Company's requested ROE to a suite of peer utility holding companies. Table 1 compares the Company's current and proposed residential and small commercial customer charges to the various electric utilities operated by these holding companies. My analysis finds that the Company's current residential customer charge of $13.10 is higher than the average of these ROE peer companies. Likewise, while the Company's current general light and power ('GLP-1") customer charge of $16.00 is lower than the average of these companies, the Company's proposed GLP-1 customer charge rate of $21.00 is higher than the average customer charge of these ROE peer companies.

Q. DO THESE RESULTS INDICATE ANY PRESSING NEED TO INCREASE MONTHLY CUSTOMER CHARGE RATES?

A. No, the Company's existing customer charges are reasonably similar to those utilities operated by the utility holding companies included in the Company's ROE peer group. This builds on the findings I presented in my direct testimony that showed that the Company's current residential customer charge is the highest in the region, while its current GLP-1 customer charge is the second highest in the region.

V. CONCLUSIONS AND RECOMMENDATIONS

Q. HAVE YOUR ACOS RECOMMENDATIONS PRESENTED IN YOUR DIRECT TESTIMONY CHANGED AFTER REVIEWING PARTIES REBUTTAL TESTIMONIES?

A. No. I continue to find that Citizens' incorrect classification of secondary-voltage distribution plant skews the allocation of costs and revenue responsibilities away from larger customers and onto residential customers. I continue to recommend the Commission rely on the results of my alternative ACOS presented in my direct testimony as a fair and reasonable estimation of relative costs of service between Citizens' customer classes.

Q. HAVE YOUR REVENUE DISTRIBUTION RECOMMENDATIONS PRESENTED IN YOUR DIRECT TESTIMONY CHANGED AFTER REVIEWING THE COMPANY'S WITNESS GORMAN'S REBUTTAL TESTIMONY?

A. No. I continue to recommend the Commission adopt a more reasonable revenue distribution allocation method based on my alternative ACOS results that also limits the rate increase to the MBL customer class to 1.25 times the overall system average increase.

Q. HAVE YOUR RECOMMENDATIONS REGARDING THE COMPANY'S PROPOSED INCREASE IN CUSTOMER CHARGES CHANGED AFTER REVIEWING MR. GORMAN'S REBUTTAL TESTIMONY?

A. No. I continue to recommend the Commission reject Citizens' proposed increases in customer charges because they disproportionately impact low-income customers and reduce customer incentives to reduce usage, contrary to public goals of promoting energy efficiency. Furthermore, Citizens' existing residential and small commercial customer charges are already higher than the regional average of peer investor-owned utilities, and the proposed increase would make the charges the highest among peers. Finally, a correct analysis of customer-related costs from Citizens' ACOS finds that all residential

and commercial rate classes are currently recovering *all* customer-related costs through monthly customer charges.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

SURREBUTTAL TESTIMONY

OF

Michael Deupree

On behalf of the

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

OCA Statement 3SR

Date Served: August 28, 2025

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed direct and rebuttal testimony in this proceeding on July 15, 2025, and August 13, 2025, respectively, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to respond to elements of the rebuttal testimonies of Howard S. Gorman on behalf of Wellsboro Electric Company ("Wellsboro" or the "Company"), and Justin B. Farr on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"). Specifically, I will respond to Wellsboro and OSBA's discussion on the use of a zero-load analysis to classify a portion of electric distribution costs as customer related, and Wellsboro's response to my proposed revenue allocation and analysis of customer-related costs.

II. CLASSIFICATION OF ELECTRIC DISTRIBUTION COSTS

Q. PLEASE SUMMARIZE COMPANY WITNESS GORMAN'S RESPONSE TO YOUR CLASSIFICATION OF THE SECONDARY PORTION OF DISTRIBUTION PLANT ACCOUNTS 364-368.

A. Mr. Gorman argues that classification of the secondary portion of distribution plant accounts 364-368 as 100 percent demand-related is problematic on several levels. First, he disputes my assertion that zero-load analyses are meaningless due to reliance on the

theoretical construct of a system incapable of having load-carrying capabilities.[1] Second, he argues that my direct testimony ignores important findings by Professor Bonbright in his treatise on rate design.[2] Finally, Mr. Gorman disregards my empirical findings showing a lack of statistical correlation between changes in customer counts and distribution system investments as making no sense on a prima-facie basis.[3]

Q. PLEASE SUMMARIZE OSBA WITNESS FARR'S RESPONSE TO YOUR CLASSIFICATION OF THE SECONDARY PORTION OF DISTRIBUTION PLANT ACCOUNTS 364-368.

A. Mr. Farr asserts that the NARUC Manual references accounts 364-368 as containing both customer and demand-related components.[4]

Q. WHY DOES WELLSBORO WITNESS GORMAN ARGUE THAT ZERO-LOAD ANALYSES SERVE AS USEFUL TOOLS TO SEPARATE COSTS BETWEEN DEMAND-RELATED AND CUSTOMER-RELATED FUNCTIONS?

A. Mr. Gorman argues that my critiques about the classification of secondary distribution plant accounts represent "often used but misleading argument."[5] Specifically, Mr. Gorman notes that he acknowledges that his zero-load analysis and related Minimum Size System ("MSS") analyses are theoretical constructs, but he argues that this is not a valid reason to reject the results of such analyses.[6] Instead, Mr. Gorman argues that

---

[2] *Id.* at 9:13-19.

[3] *Id.* at 10:1-4.

[4] Rebuttal Testimony of Justin B. Farr at 3:12 to 4:4.

[5] Rebuttal Testimony of Howard S. Gorman at 8:14.

[6] *Id.* at 8:14-16.

these analyses represent "useful tools," to separate costs between demand-related and customer-related functions, regardless of the fact that no such system would be constructed in reality.[7] Mr. Gorman notes as evidence that it would be possible to install transformers with ratings of 10.0 kVA for customers where this is sufficient to meet demand, and to install larger capacity transformers only where needed.[8]

Q. DO YOU AGREE WITH COMPANY WITNESS GORMAN'S ARGUMENTS ABOUT THE POTENTIAL VALIDITY OF ZERO-LOAD AND MSS ANALYSES?

A. No. Mr. Gorman appears to have misunderstood that my critique is that the theoretical nature of these analyses is an inherent flaw of the analyses. The conceptual purpose of a zero-load analysis is supposedly to identify the system costs that are associated with a hypothetical electric distribution system that serves all customers on its system as connections but which **cannot** serve customer loads (or "zero-load") and thus **cannot** serve these connected customers. This contradiction in purpose is why such a system would never exist, which furthermore creates inherent problems highlighted by Mr. Gorman's statement concerning transformer capacity. Mr. Gorman's zero-load analysis estimates a replacement cost for the Company's inventory of transformers that range in capabilities from 1.5 to 1500 kVA.[9] As Mr. Gorman acknowledges, these replacement transformers, even a minimum-size system, **would be sufficient** to meet many customers' demand requirements, a direct violation of the conceptual purpose of a

[7] *Id.* at 8:16-17.

[8] *Id.* at 9:1-4.

[9] Company's Response to Data Request I&E-RE-1-D Attachment A, D3.

zero-load analysis which is to estimate the costs of a hypothetical electric distribution system **that is not sufficient** to meet customers' demand requirements.

Q. HAS AUTHORITATIVE SOURCES COMMENTED ON THIS CONCERN ASSOCIATED WITH MSS ANALYSES?

A. Yes. As I referenced in my direct testimony, the National Association of Regulatory Utility Commissioners ("NARUC") Electric Cost Allocation Manual ("NARUC Manual") specifically recognizes this fundamental failing of zero-load analyses in its discussion noting that "… the analyst must be aware that the minimum-size distribution equipment has a certain load-carrying capability, **which can be viewed as a demand-related costs**."[10] Essentially, a direct reliance on replacement costs, as the Company has done in the current proceeding for line transformers, would **necessarily over-estimate** the customer-related portion of the equipment costs, even if one accepts the premise of a zero-load or MSS analysis.

Q. IS IT POSSIBLE TO ESTIMATE THE COST OF A ZERO-LOAD SYSTEM?

A. No. When done appropriately, a zero-load analysis would involve estimating the costs of an electric distribution system which cannot function as an electric distribution system. For example, a correct zero-load analysis would require the estimation of the cost of an 'electric line transformer' which cannot function as an electric line transformer – effectively an empty box. Even if one could estimate the costs of this farcical 'electric line transformer,' it would be impossible to verify these estimates with any degree of analytical rigor required in the setting of just and reasonable rates.

[10] Direct Testimony of Michael W. Deupree at 18:2-5, *emphasis added.*

Q. DOES THIS FLAW ALSO HOLD TRUE FOR MR. GORMAN'S ESTIMATION OF ZERO-LOAD COSTS ASSOCIATED WITH POLES, OVERHEAD AND UNDERGROUND CONDUCTORS?

A. Yes. Mr. Gorman's zero-load analysis does not include material costs in his analysis of the zero-load costs associated with secondary electric distribution poles, and overhead and underground conductors (i.e. lines), instead only estimating the labor, overhead, and vehicle costs associated with replacement. However, even this analysis does not truly estimate the costs of a zero-load replacement system as it assumes this replacement system would contain the same number of circuit miles as Wellsboro's current system which was designed with customer's load requirements in mind.[11] A true zero-load replacement system would certainly contain fewer circuit miles compared to Wellsboro's current system.

Q. DO YOU AGREE WITH MR. GORMAN'S CHARACTERIZATION OF PROFESSOR BONBRIGHT'S STATEMENTS ON CLASSIFYING MINIMUM-SIZED DISTRIBUTION SYSTEM COSTS AS CUSTOMER-RELATED?

A. No. Mr. Gorman selectively quotes Professor Bonbright's treatise on the issue out of context. Professor Bonbright's full quote for the record is provided below, and clearly shows his negative opinion on classifying minimum-sized distribution system costs as customer-related.

> While, for the reason just suggested, **the inclusion of the costs of a minimum-sized distribution system among the customer-related costs seems to us <u>clearly indefensible</u>**, its exclusion from the demand-related costs stands on much firmer ground. For this exclusion of minimum-sized

[11] Company's Response to Data Request I&E-RE-1-D Attachment A, D1.

> distribution system costs makes more plausible the assumption that the *remaining* cost of the secondary distribution system is a cost which varies continuously (and, perhaps, even more or less directly) with the maximum demand imposed on this system as measured by peak load.
>
> But if the hypothetical cost of a minimum-sized distribution system is properly excluded from the demand-related costs for the reason just given, while it is also denied a place among the customer costs for the reason stated previously, to which cost function does it then belong? **The only defensible answer, in our opinion, is that it belongs to none of them**. Instead, it should be recognized as a strictly unallocable portion of total costs. And this is the disposition that it would probably receive in an estimate of long-run marginal costs. But fully-distributed cost analysts dare not avail themselves of this solution, since they are the prisoners of their own assumption that "the sum of the parts equals the whole." They are therefore under impelling pressure to fudge their cost apportionments **by using the category of customer costs as a dumping ground for costs that they cannot plausibly impute to any of their other cost categories**.[12]

Q. WHY DOES PROFESSOR BONBRIGHT FIND THAT CLASSIFYING MINIMUM-SYSTEM COSTS AS CUSTOMER-RELATED "CLEARLY INDEFENSIBLE?"

A. Professor Bonbright notes the lack of empirical support in academic literature for a causal relationship between distribution system investments and changes in the number of customers on the system. A relationship, or rather lack thereof, which I showed in my direct testimony can also be seen when examining historic Wellsboro's distribution system investments.[13]

Q. WHAT IS WITNESS GORMAN'S RESPONSE TO YOUR EMPIRICAL ANALYSIS OF THE LACK OF A CAUSAL RELATIONSHIP BETWEEN ELECTRIC

---

[12] James C. Bonbright, *et al.* Principles of Public Utility Rates. 1988 Edition. Arlington, VA: Public Utilities Reports, Inc., pp. 491-492; *emphasis added.*

[13] Direct Testimony of Michael W. Deupree at 20:8 to 21:8.

DISTRIBUTION SYSTEM INVESTMENTS AND CHANGES IN THE NUMBER OF CUSTOMERS ON THE SYSTEM?

A. Mr. Gorman dismisses the conclusion of my analysis showing little to no correlation between electric distribution system investments and changes in the number of customers on the system, as not making sense.[14] Mr. Gorman again appears to have misunderstood my critique by correctly noting that it must make investments in its distribution system even during years when it experiences decreases in customer counts.[15] This is because a sizable portion of most electric distribution system investments are non-growth related, but instead associated with public policy such as improving/maintaining system reliability.[16] However, this recognition of the lack of a direct causal relationship between growth in customer counts and electric distribution investments undermines the very premise of attempting to classify a portion of such investment costs as customer-related, as Professor Bonbright observed decades ago, and which Mr. Gorman appears to agree with here, at least to an extent.

Q. WHAT IS YOUR RESPONSE TO OSBA WITNESS FARR'S CLAIMS THAT THE NARUC MANUAL PROVIDES THAT SECONDARY ELECTRIC DISTRIBUTION PLANT ASSETS CONTAIN BOTH DEMAND AND CUSTOMER COMPONENTS?

A. Mr. Farr's assertion is inaccurate as to the NARUC Manual because the NARUC Manual does not provide that secondary electric distribution plant assets contain both demand and customer components. Rather, as noted in the NARUC Manual preface, the

[14] Rebuttal Testimony of Howard S. Gorman at 10:1-4.

[15] *Id.* at 10:4-5.

[16] *See*, Rebuttal Testimony of Howard S. Gorman at 10:5-10.

manual is not intended to advocate for any one particular cost allocation method, but rather discuss all methods that are currently used.[17] Indeed, the NARUC Manual references the controversial classification of substations, poles, transformers, and conductors between demand and customer classifications. Contrast with the less controversial classification of distribution plant accounts 369-373 covering services, meters, street lights, and equipment installed on customer premises, which are generally recognized as fully customer-related and whose costs are either directly assigned to relevant customers or otherwise allocated based on a measure of customer accounts. The NARUC Manual provides as follows:

> The preceding discussion of the merits of minimum-system versus the zero-intercept classification schemes will affect the major distribution-plant accounts for FERC Accounts 364 through 368. Several other plant accounts remain to be classified. While the classification of the following distribution-plant accounts is an important step, **it is not as controversial as the classification of substation, poles, transformers, and conductors.**[18]

III. REVENUE ALLOCATION

Q. DOES WELLSBORO WITNESS GORMAN SUPPORT YOUR PROPOSED REVENUE ALLOCATIONS?

A. No. Mr. Gorman asserts that my proposed revenue allocations are not supported because they are based on what he asserts is my faulty alternative ACOS study, which he asserts fails to recognize any customer component to the secondary electric distribution system, and therefore should be rejected.[19]

---

[17] Electric Utility Cost Allocation Manual (January 1992), NARUC, p. ii.

[18] *Id.* at pp. 95-96; *emphasis added.*

[19] Rebuttal Testimony of Howard S. Gorman at 12:3-7.

Q. HOW DO YOU RESPOND TO MR. GORMAN?

A. My alternative ACOS presented in my direct testimony is not faulty and provides a fair and reasonable estimation of relative costs of service between Wellsboro's customer classes. As I summarize in my direct testimony, Mr. Gorman's inappropriate classification of costs associated with secondary-voltage distribution plant accounts 364-368 skews the allocation of costs and revenue responsibilities away from larger customers and onto residential customers and small commercial customers.[20] MSS and related zero-load analyses depend on deeply flawed premises that have been criticized on theoretical and empirical grounds for decades.[21] As I showed in my direct testimony, there is no statistically significant relationship between changes in average number of customers on Citizens' system and the utility's investment in distribution plant accounts 364-368, highlighting this empirical criticism.[22] It is important that the just and reasonable rates be based on an ACOS that corrects for this flaw.

IV. CUSTOMER CHARGE

Q. DID WELLSBORO WITNESS GORMAN AGREE WITH YOUR PROPOSAL TO REJECT ANY PROPOSED INCREASES IN EXISTING CUSTOMER CHARGES?

A. No. Mr. Gorman disagrees with my arguments regarding customer charges for multiple reasons. First, he argues that his analysis of customer-related costs was restricted to only customer-related expenses and therefore I did not identify any significant

[20] Direct Testimony of Michael W. Deupree at 23:14-20.

[21] *See*, *Id.* at 18:16 to 20:7.

[22] *Id.* at 20:8 to 21:7.

flaw in his computation of customer-related costs.[23] Second, Mr. Gorman disagrees with my regional peer group used to compare the Company's rates.[24] Finally, Mr. Gorman disagrees with my concerns regarding the negative impacts of higher customer charges on energy conservation, noting that the Company's proposed customer charge recovers only 28.7 percent of monthly distribution charges for the typical residential customer.[25]

Q. HOW DO YOU RESPOND TO MR. GORMAN'S ARGUMENT THAT YOU DID NOT IDENTIFY ANY SIGNIFICANT FLAW IN THE COMPANY'S COMPUTATION OF CUSTOMER-RELATED COSTS?

A. First, Mr. Gorman's analysis of customer-related costs is flawed because it does include costs associated with line transformers (FERC Account 368). However, ignoring this element, Mr. Gorman's analysis is also flawed in that it assumes the Company's requested rate of return on rate base ("ROR") of 8.18 percent in calculating the required return on customer-related rate base, as I discussed in my rebuttal testimony.[26] The Company's requested ROR is dependent on the Commission's finding of a just and reasonable ROR at the end of this proceeding and therefore is unknown at the current juncture. I therefore based my analysis of customer-related costs on the Company's estimated ROR under current rates of 1.46 percent.[27]

Q. DO YOU AGREE THAT THE COMPANY'S RATES SHOULD BE COMPARED SOLELY TO ITS NEIGHBORING ELECTRIC UTILITY?

A. No. Benchmarking utility rates and financial performance to a sampling of similarly situated utilities is a common practice. Indeed, in the current proceeding, Mr. Gorman compares the Company's requested ROE to a suite of peer utility holding companies. Table 1 compares the Company's current and proposed residential and small commercial customer charges to the various electric utilities operated by these holding companies. My analysis finds that the Company's current residential customer charge of $12.00 is only slightly below the average of these ROE peer companies.

Q. DO THESE RESULTS INDICATE ANY PRESSING NEED TO INCREASE MONTHLY CUSTOMER CHARGE RATES?

A. No, the Company's existing customer charges are reasonably similar to those utilities operated by the utility holding companies included in the Company's ROE peer group. This builds on the findings I presented in my direct testimony that showed that the Company's current residential customer charge is higher than the regional average, while its proposed non-residential service ("NRS") and non-residential heating ("NRH") customer charge of $16.50 would be higher than the regional average.

V. CONCLUSIONS AND RECOMMENDATIONS

Q. HAVE YOUR ACOS RECOMMENDATIONS PRESENTED IN YOUR DIRECT TESTIMONY CHANGED AFTER REVIEWING PARTIES REBUTTAL TESTIMONIES?

A. No. I continue to find that Wellsboro's incorrect classification of secondary-voltage distribution plant skews the allocation of costs and revenue responsibilities away from larger customers and onto residential customers. I continue to recommend the

Commission rely on the results of my alternative ACOS presented in my direct testimony as a fair and reasonable estimation of relative costs of service between Wellsboro's customer classes.

Q. HAVE YOUR REVENUE DISTRIBUTION RECOMMENDATIONS PRESENTED IN YOUR DIRECT TESTIMONY CHANGED AFTER REVIEWING COMPANY WITNESS GORMAN'S REBUTTAL TESTIMONY?

A. No. I continue to recommend the Commission adopt a more reasonable revenue distribution allocation method based on my alternative ACOS results that also limits rate increases to the NRH, commercial service-heating ("CSH"), and residential service-all electric ("RSAE") customer classes to 1.25 times the overall system average increase.

Q. HAVE YOUR RECOMMENDATIONS REGARDING THE COMPANY'S PROPOSED INCREASE IN CUSTOMER CHARGES CHANGED AFTER REVIEWING MR. GORMAN'S REBUTTAL TESTIMONY?

A. No. I continue to recommend the Commission reject Wellsboro's proposed increases in customer charges because they disproportionately impact low-income customers and reduce customer incentives to reduce usage, contrary to public goals of promoting energy efficiency. Furthermore, Wellsboro's existing residential customer charge is the third highest in the region and the proposed increase would make the charge the highest among regional peer investor-owned utilities. Finally, a correct analysis of customer-related costs from Wellsboro's ACOS finds that all residential and commercial rate classes are currently recovering *nearly all* customer-related costs through monthly customer charges.

Q. DO YOU HAVE AN ALTERANTIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

A. Yes. I still recommend that the Commission limit its increase in Wellsboro monthly customer charge to only that required to bring the Company's customer charges in line with Citizens' Electric Company.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

SURREBUTTAL TESTIMONY

OF

Michael Deupree

On behalf of the

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

OCA Statement 3R

Date Served: August 28, 2025

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed direct and rebuttal testimony in this proceeding on July 15, 2025, and August 13, 2025, respectively, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to respond to elements of the rebuttal testimonies of Howard S. Gorman on behalf of Valley Energy, Inc. ("Valley" or the "Company"). Specifically, I will respond to Valley's discussion of appropriate customer charge.

II. CUSTOMER CHARGE

Q. DID MR. GORMAN AGREE WITH YOUR PROPOSAL TO REJECT ANY PROPOSED INCREASES IN EXISTING CUSTOMER CHARGES?

A. No. Mr. Gorman disagrees with my arguments regarding customer charges for multiple reasons. First, he argues that an allocated cost of service ("ACOS") study is not necessary to evaluate the appropriateness of Valley's proposed customer charges.[1] Second, he disagrees with my conclusion that the Company's proposed customer charge is inconsistent with its regional peers.[2] Finally, Mr. Gorman disagrees with my concerns

[1] Rebuttal Testimony of Howard S. Gorman at 8:14-18.

[2] *Id.* at 8:21 to 9:8.

regarding the negative impacts of higher customer charges on energy conservation, noting that inefficient pricing and under-recovery of costs lead to more frequent rate cases.[3]

Q. DO YOU AGREE WITH MR. GORMAN THAT AN ACOS STUDY IS NOT NECESSARY TO EVALUATE THE APPROPRIATENESS OF VALLEY'S CUSTOMER CHARGES?

A. No. It is a major deficiency that Mr. Gorman's proposal is not supported by any cost-based analysis in the current proceeding or any known prior rate case proceeding. This is especially true since the Company's current residential and commercial customer charges are near the average of other similarly situated natural gas distribution utilities in the region. It is appropriate to reject any proposed increase in current customer charge until such an increase can be supported by an analysis of ACOS.

III. CONCLUSIONS AND RECOMMENDATIONS

Q. HAVE YOUR RECOMMENDATIONS REGARDING THE COMPANY'S PROPOSED INCREASE IN CUSTOMER CHARGES CHANGED AFTER REVIEWING THE COMPANY'S REBUTTAL TESTIMONY?

A. No. I continue to recommend the Commission reject Valley's proposed increases in customer charges because the Company has no cost basis for its proposed customer charges. The Company's current residential and commercial customer charges are similarly near the average of other similarly situated natural gas distribution utilities in the region. Finally, the proposed increase would disproportionately impact low-income

[3] *Id.* at 9:10-16.

customers and reduce customer incentives to reduce usage, contrary to public goals of promoting energy efficiency.

Q. DO YOU HAVE AN ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

A. Yes. If the Commission determines that increases in the Company's customer charge are warranted, I still recommend that the Commission cap these increases to no more than the overall system average increase. This will prevent Company rates from becoming more reliant on fixed monthly charges relative to volumetric charges as a result of this proceeding.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Valley Energy, Inc.

SURREBUTTAL TESTIMONY OF

LeeAnn Wise
ON BEHALF OF THE
OFFICE OF CONSUMER ADVOCATE

August 28, 2025

Q: PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A: LeeAnn Wise. 555 Walnut Street, Forum Place 5th Floor, Harrisburg Pennsylvania 17101.

Q: ARE YOU THE SAME LEEANN WISE WHO PREVIOUSLY FILED DIRECT TESTIMONY IN THIS PROCEEDING?

A: Yes, I am.

Q: WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A: I will respond to certain relevant comments in Company witnesses Ms. Beale and Mr. Rogers' rebuttal testimony related to my direct testimony. Both have offered numerous critiques of my testimony that I disagree with and wish to respond.

Q: DO YOU AGREE WITH MS. BEALE'S COMMENTS REGARDING FORMAL POLICIES AND PROCEDURE ON SECURITY DEPOSITIS?

No. While I understand the Company's perspective that its small staff and informal training practices may reduce the perceived need for formal policies and procedures, I continue to emphasize that written policies for refunding security deposits are essential—regardless of company size.

I acknowledge Mrs. Beale's statement that the Company's Customer Service Representative are thoroughly trained.[1] I respectfully ask, "What defines this training"? Is it side by side mentoring, team leader training, or some other format?

[1] Valley Statement No. 5R

Formal procedures promote consistency, transparency, and accountability. Even in small organizations, the absence of standardized processes increases the risk of misunderstandings, inconsistent application, and reliance on individual interpretation. Informal, experience-based training can vary significantly between employees, particularly in the event of staff turnover. Written policies help ensure clarity and uniformity in practice, regardless of staff size, skill level, or tenure. Small companies may benefit even more from having formal documentation, since reliance on a single employee for specific knowledge creates operational risk if that individual departs.

Q. DO YOU AGREE WITH MS. BEALE'S COMMENTS ON REFUNDING SECURITY DEPOSITS?

A. No. I continue to suggest that the Company provide the option for customers as to how they wish to receive a refund of security deposits. Mrs. Beale suggests that providing the option would involve additional administrative tasks and would take more time to return the deposit because the Company would need to wait for a customer's decision before proceeding. Ultimately, as long as the customers pay their current and future bills, the effect is the same.[2]

I am not suggesting the Company wait for the customer's decision before issuing a refund. I am suggesting if a customer requests their refund, they should have the option of receiving the cash back. Low-income customers face financial struggles

[2] Valley Statement No. 5R

daily and therefore may need these funds to satisfy immediate non-utility needs. Applying credit to the customer's account can inadvertently limit their ability to manage their money.

In today's economy, many households continue to face increasing financial pressures, providing flexibility would echo the Company's commitment to putting the customers' needs first.

Q: DO YOU AGREE WITH MS. BEALE'S STATEMENT THAT PAYMENT PLAN METRICS ARE NOT APPROPRIATE?

A: No, I continue to believe that implementing formal policies and establishing clear performance metrics for payment plans, ensuring transparency in verifying low-income eligibility, are both appropriate and necessary.

The absence of documented policies and objective metrics introduces the risk of inconsistent handling of payment arrangements. While informal training and individualized case-by-case decisions may seem sufficient for a small team, standardized procedures are essential to ensure equity, accountability, and transparency, particularly for customers facing financial hardships. A well-defined framework protects the interests of both the Company and its customers.

My recommendation to evaluate the effectiveness of the Company's payment plans was not intended to be criticism, nor did I intend to suggest that all payment plans are broken due to lack of payment. Rather, it reflects a recognized utility challenge: unaffordable or poorly aligned payment agreements often lead to broken arrangements. Without properly tracking success rates for identifying underlying

reasons why customers default, it becomes difficult to improve plan structure or anticipate disconnections.

Certainly, service disconnections sometimes become unavoidable. These situations underscore the need for payment plans to be realistic, affordable, and sustainable.

Evaluating why plans fail can yield valuable insights that lead to better strategies and ultimately support customer retention.

In conclusion, I stand by my recommendation that the Company adopt formal policies, define success metrics, and implement evaluation procedures. Without structured oversight and measurable standards, can lead to concerns about the Company's ability to manage payment plan strategies in a fair and effective manner. These actions will not only improve customer outcomes and reduce terminations but also enhance customer satisfaction.

Q: DO YOU AGREE WITH MR. ROGERS STATEMENTS REGARDING THE ELIMINATION OF THE $3.95 CREDIT/DEBIT CARD FEES?

A: No. Assessing a $3.95 processing fee for credit and debit card payments is not reasonable nor is it in public interest. This fee unfairly penalizes customers who choose – or are often forced – to use a more efficient and modern method of payment.

The Company states the customer currently has many options to pay, which are much cheaper on a transactional basis compared to the current fee associated with

debit or credit card payments.[3] They fail to acknowledge processing these forms of payment carry administrative and operational expenses which are included in revenue requirement.

There is a fundamental contradiction in how payment processing costs are treated. The administrative costs of handling checks, and cash are included in the utility rate base – and therefore shared among all customers. However, the credit/debit card fee is being passed only to customers using that method, creating an unfair and discriminatory issue.

If the principle of cost causation is to be applied consistently, then card processing fees – like other administrative payment costs – should be treated as part of the utility's cost of doing business, not an add-on fee to customers. Customers choosing a secure, fast, and modern method of payment should not be penalized.

The Company's statement that customers using credit cards to receive rewards or "perks" is irrelevant. In many cases, the fee far exceeds any reward value the card holder may receive. Any "perk" a customer may receive does not justify charging a $3.95 fee. Most importantly, many customers use credit cards out of necessity, not to earn points, but to avoid late payments and or possible service disconnections.

Although I recognize there are utilities that pass along service fees onto their customers, it should also be noted utilities have recognized the inequity and inefficiency of these charges and have moved to eliminate them. For example:

[3] Valley Statement No. 4R

- Columbia Gas of PA. No fees apply to residential customers for credit/debit/Pay Pay/Venmo one-time card payments.[4]
- Pennsylvania American Water eliminated its $1.95 fee for credit card payments in 2023 (PA PUC Docket No. R-2022-3031672).[5]
- Pittsburgh Water and Sewer Authority (PWSA) similarly removed credit card convenience fees to enhance accessibility and reduce barriers to payment (PWSA Customer Service Update, 2022).[6]

Q. DO YOU HAVE ANY COMMENTS ON THE COMPANY'S CONCERN WITH INCREASED CREDIT CARD USAGE ON FUTURE RATE CASES?

Yes, I would agree that the removal of the $3.95 represents the possibility of increased usage of credit/debit cards. However, these processing fees are a small part of the Company's overall operating expenses. The Company has not provided any evidence that increased usage of credit card payments would outweigh the benefits to customers or significantly impact on its revenue requirement which already includes administrative expenses.

As I stated previously, processing fees would reduce other operation expenses such as check processing fees, reduction in posting of payments, reduced past due balances, and collection costs. It is important to weigh both the cost increase along

[4] http://www.columbiagaspa.com/search-results#/?term=payment%20fees

[5] PA PUC Docket No. R-2022-303167

[6] https://www.pgh2o.com/residential-commercial-customers/account-billing-info/update-contact-information

with the reduction of administrative costs and the elimination of the processing fee brings.

There are several utilities in Pennsylvania and neighboring states who have eliminated these fees without experiencing destabilizing costs or large rate impacts to their customers. The fee is unfair and severely burdens low-income customers who rely on credit cards to pay their bills and therefore should be eliminated. For these reasons, I continue to support the elimination of the $3.95 processing fees.

Q: DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A: Yes.

Citizens' Electric Company

SURREBUTTAL TESTIMONY OF

LeeAnn Wise
ON BEHALF OF THE
OFFICE OF CONSUMER ADVOCATE

August 28, 2025

Q: PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A: LeeAnn Wise. 555 Walnut Street, Forum Place 5th Floor, Harrisburg Pennsylvania 17101.

Q: ARE YOU THE SAME LEEANN WISE WHO PREVIOUSLY FILED DIRECT TESTIMONY IN THIS PROCEEDING?

A: Yes, I am.

Q: WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A: I will respond to Company witnesses Mr. Johnson and Ms. Stauder's rebuttal testimony to my direct testimony. Both Mr. Johnson and Ms. Stauder disagree with my findings on the topics of evaluating the effectiveness of payment plans, establishing procedures for handling security deposits, and eliminating credit card fees. I disagree with their critiques and will use this opportunity in surrebuttal testimony to explain why.

Q: DO YOU AGREE WITH MR. JOHNSON'S COMMENT RELATED TO PAYMENT PLANS?

A: No. While Mr. Johnson indicates that the Company follows general billing and collection practices, he does not directly address the specific concern raised in my testimony regarding the effectiveness of payment plans. Actively managing customer accounts is not equivalent to evaluating the success of payment agreements—such as tracking repeat arrangements, agreement completions versus defaults, or reductions in arrearages over time.

Without defined performance metrics, the Company cannot determine whether its payment plans meet customers' needs or are leading to improved financial outcomes. Simply offering payment arrangements is not enough; the Company must also assess whether those arrangements are successful and sustainable on a customer-by-customer basis.

Evaluating the outcomes of payment agreements does not need to be complex. In fact, the relatively small number of agreements currently in place makes such an evaluation more manageable. Without specific metrics, Citizens cannot meaningfully assess the effectiveness of its payment plans or identify areas where improvements are needed.

Financially responsible utilities do more than manage accounts receivable—they measure performance of activity to ensure their strategies are effective, sustainable, and serve the best interests of both the customer and the Company.

Q: DO YOU AGREE WITH MR. JOHNSON'S COMMENTS REGARDING FORMAL POLICIES AND PROCEDURE ON SECURITY DEPOSITIS?

No. While I understand the Company's perspective that its small staff and informal training practices may reduce the perceived need for formal policies and procedures, I continue to emphasize that written policies for refunding security deposits are essential, regardless of company size.

Formal procedures promote consistency, transparency, and accountability. Even in small organizations, the absence of standardized processes increases the risk of misunderstandings, inconsistent application, and reliance on individual

interpretation. Informal, experience-based training can vary significantly between employees, particularly in the event of turnover. Written policies help ensure clarity and uniformity in practice, regardless of staff size, skill level, or tenure. In fact, I would argue that small companies can benefit most from having formal documentation, since reliance on a single employee for specific knowledge creates operational risk if that employee were to depart the organization.

In my direct testimony, I acknowledge that the Company currently verifies income prior to assessing a security deposit. However, the Company also admits that it lacks a formal policy outlining this process. Without such documentation, there is no assurance that the Company is consistently identifying and exempting all qualified low-income applicants. While there is no statute mandating written procedures, having formal written policies can help ensure employees are complying with Commission regulations under 52 Pa. Code § 56.32 and meeting the quality-of-service standards mandated by statute at 66 Pa. C.S. § 1501.

For these reasons, I continue to recommend the Company implement formal written policies and procedures relating to accessing a security deposit.

Q: DO YOU AGREE WITH MR. JOHNSON'S STATEMENT REGARDING PAYMENT PLANS?

A: No. As I have previously acknowledged, I understand and respect the Company's small size. However, I continue to believe that implementing formal policies, establishing clear performance metrics for payment plans, and ensuring transparency in verifying low-income eligibility are both appropriate and necessary.

The absence of documented policies and objective metrics introduces the risk of inconsistent handling of payment arrangements. While informal training and individualized case-by-case decisions may seem sufficient for a small team, standardized procedures are essential to ensure equity, accountability, and transparency, particularly for customers facing financial hardships. A well-defined framework protects the interests of both the Company and its customers.

My recommendation to evaluate the effectiveness of the Company's payment plans was not intended to be criticism, nor did I intend to suggest that all payment plans are broken due to lack of payment. Rather, it reflects a recognized utility challenge: unaffordable or poorly aligned payment agreements often lead to broken arrangements. Without properly tracking success rates for identifying underlying reasons why customers default, it becomes difficult to improve plan structure or anticipate disconnections.

Certainly, service disconnections sometimes become unavoidable. These situations underscore the need for payment plans to be realistic, affordable, and sustainable. Evaluating why plans fail can yield valuable insights that lead to better strategies and ultimately support customer retention.

In conclusion, I stand by my recommendation that the Company adopt formal policies, define success metrics, and implement evaluation procedures. These actions will not only improve customer outcomes and reduce terminations but also enhance customer satisfaction.

Q: DO YOU AGREE WITH MS. STAUDER'S STATEMENTS REGARDING THE ELIMINATION OF THE $3.95 CREDIT/DEBIT CARD FEES?

A: No. Assessing a $3.95 processing fee for credit and debit card payments of utility bills is not reasonable nor is it in public interest. This fee unfairly penalizes customers who choose – or are often forced – to use a more efficient and modern method of payment.

While the Company argues that processing credit or debit card payments through a third-party vendor results in costs, it also downplays the true and total cost of processing cash and check payments that also carry administrative and operational expenses. The Company estimates a cost of $0.25 per transaction[1] to process a cash or check transaction, assuming 30 seconds or less per transaction at $30 per hour. However, they do not account for staff time to open mail, manually match checks with account numbers, input payments into the billing system, totaling cash/check amounts, preparing deposits, traveling to the bank, and updating account balances. Contrast with credit/debit card payments, which are processed electronically, immediately verified, and require no physical handling, deposit preparation, or travel. Credit/debit card payments also eliminate bounced check risk and reduce bad debit collection activities.

There is a fundamental contradiction in how payment processing costs are treated. The administrative costs of handling checks, and cash are included in the utility

[1] Citizens' Statement No. 5R

revenue requirement – and therefore shared among all customers. However, the credit/debit card fee is being passed only to customers using that method, creating an unfair and discriminatory issue.

If the principle of cost causation is to be applied consistently, then card processing fees – like other administrative payment costs – should be treated as part of the utility's cost of doing business, not an add-on fee imposed only on certain customers. Customers choosing a secure, fast, and modern method of payment should not be penalized.

The Company's statement that customers using credit cards to receive rewards or "perks" is irrelevant. In many cases, the fee far exceeds any reward value the card holder may receive. Any "perk" a customer may receive does not justify charging a $3.95 fee. Most importantly, many customers use credit cards out of necessity, not to earn points. For example, avoiding late payments and or possible service disconnections.

Although I recognize there are utilities that pass along service fees onto their customers, it should also be noted utilities have recognized the inequity and inefficiency of these charges and have moved to eliminate them. For example:

- Columbia Gas of PA has no fees apply to residential customers for credit/debit/Pay Pay/Venmo one-time card payments.[2]

[2] http://www.columbiagaspa.com/search-results#/?term=payment%20fees

- Pennsylvania American Water eliminated its $1.95 fee for credit card payments in 2023 (PA PUC Docket No. R-2022-3031672).[3]
- Pittsburgh Water and Sewer Authority (PWSA) similarly removed credit card convenience fees to enhance accessibility and reduce barriers to payment (PWSA Customer Service Update, 2022).[4]

Q. **DO YOU HAVE ANY COMMENTS ON THE COMPANY'S CONCERN WITH INCREASED CREDIT CARD USAGE ON FUTURE RATE CASES?**

Yes, I would agree that the removal of the $3.95 represents the possibility of increased usage of credit/debit cards. However, these processing fees are a small part of the Company's overall operating expenses. The Company has not provided any evidence that increased usage of credit card payments would outweigh the benefits to customers or significantly impact on their revenue requirement which already includes administrative expenses.

As I stated previously, processing fees would reduce other operation expenses such as check processing fees, reduction in posting of payments, reduced past due balances, and collection costs. It is important to weigh both the cost increase along with the reduction of administrative costs and the elimination of the processing fee brings.

There are several utilities in Pennsylvania and neighboring states who have eliminated these fees without experiencing destabilizing costs or large rate impacts

[3] PA PUC Docket No. R-2022-3031672

[4] https://www.pgh2o.com/residential-commercial-customers/account-billing-info/update-contact-information

to their customers. The fee is unfair and severely burdens low-income customers who rely on credit cards to pay their bills and therefore should be eliminated. For these reasons, I continue to support the elimination of the $3.95 processing fees.

Q: DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A: Yes.

Wellsboro Electric Company		

SURREBUTTAL TESTIMONY OF

LeeAnn Wise
ON BEHALF OF THE
OFFICE OF CONSUMER ADVOCATE

August 28, 2025

Q: PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A: LeeAnn Wise. 555 Walnut Street, Forum Place 5th Floor, Harrisburg Pennsylvania 17101.

Q: ARE YOU THE SAME LEEANN WISE WHO PREVIOUSLY FILED DIRECT TESTIMONY IN THIS PROCEEDING?

A: Yes, I am.

Q: WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A: I will respond to Company witness Mr. Farnsworth's rebuttal testimony as it relates to my direct testimony. Mr. Farnsworth disagrees with my findings on the topics of evaluating the effectiveness of payment plans, establishing procedures for handling security deposits, and eliminating credit card fees. I disagree with their critiques and will use this opportunity in surrebuttal testimony to explain why.

Q: DO YOU AGREE WITH MR. FARNSWORTH'S COMMENTS ON PAYMENT PLANS?

A: No. I would first like to clarify that my review of Wellsboro's practices is not based on a misunderstanding of regulatory requirements, nor am I disputing the experience and knowledge of the Company's employees. Rather, it is a valid and necessary analysis of the Company's lack of formal documentation and measurable performance metrics related to its payment plans.

My testimony emphasized the absence of such metrics as a barrier to evaluating the effectiveness of these plans. Without data on the outcomes of current payment arrangements, the Company cannot determine what is working or where

improvements are needed. This is not speculative—across the utility industry it is well-established that unaffordable or poorly structured payment plans often lead to customer defaults. Without measuring success rates or understanding why customers fail to meet their agreements, it is difficult to improve structures or identify breakdowns that can lead to disconnections.

These metrics are not just tools for internal improvement, they are also necessary to ensure transparency, accountability, and equitable treatment of customers, particularly in regulatory proceedings. While there is no legal mandate requiring utilities to maintain written policies or specific metrics, having formal written policies can help ensure employees are complying with Commission regulations.

Furthermore, Mr. Farnsworth's reference to delinquency rates of 14–17% lacks the necessary context to assess the success of the Company's payment plans. These figures do not address the core issue I raised: whether the payment plans are effectively helping customers avoid disconnecting and maintain service. Delinquency percentages alone do not reflect how accessible or sustainable the payment plans are.

I recommend that the Company should be tracking, at minimum, the following:

- What percentage of payment arrangements are completed successfully?
- How many customers default shortly after enrollment?
- How many payment arrangements were denied?
- Are there disparities in outcomes among different customer groups?

In conclusion, while the Company rightly emphasizes its local presence and the dedication of its staff, these strengths should be supported—not to replace structured policies, performance metrics, and evaluative practices. These tools will enhance customer outcomes, reduce service terminations, and ultimately strengthen the Company's customer service and regulatory accountability.

Q: DO YOU AGREE WITH MR. FARNSWORTH'S COMMENTS REGARDING FORMAL POLICIES AND PROCEDURE ON SECURITY DEPOSITIS?

No. I do agree with Mr. Farnsworth's observation that some customers may be hesitant to seek assistance or may feel uncomfortable engaging with assistance organizations. However, this reality does not eliminate the Company's responsibility to proactively and formally screen applicants for low-income status prior to assessing a security deposit.

I continue to recommend that the Company adopt written policies for income screening in advance of charging a security deposit. This will help ensure that eligible customers receive the low-income deposit waivers they are entitled to under 52 Pa. Code § 56.32. While the Company's willingness to include language in its Denial of Credit Statement is a positive step, it is not sufficient on its own. Improving disclosure does not correct the impact on the customer nor does it eliminate concerns of fairness, accessibility, or possible unfair burden. Clear, proactive communication about waiver eligibility is essential for ensuring that

customers are informed and have the opportunity to access protections afforded by law.

In addition, with respect to the refunding of deposits, I continue to urge the Company to give low-income customers—who were incorrectly charged a deposit—the option to receive a refund, rather than having the amount automatically applied as a credit to their account. In Mr. Farnsworth's rebuttal testimony, he states "we believe that it is appropriate to follow a consistent policy for all customer".[1]Treating all customers the same, in this regard fails to account for the financial realities that disproportionately affect low-income households. Policies should be designed with consideration for those challenges and should not unintentionally disadvantage those already facing economic hardship.

Q: DO YOU AGREE WITH MR. FARNWORTH'S STATEMENTS REGARDING THE ELIMINATION OF THE $3.95 CREDIT/DEBIT CARD FEES?

A: No. Assessing a $3.95 processing fee for credit and debit card payments of utility bills is not reasonable nor is it in public interest. This fee unfairly penalizes customers who choose – or are often forced – to use a more efficient and modern method of payment.

While the Company acknowledges that there are no true "free" payment options, as customers also experience costs to make cash or check payments. They fail to

[1] Wellsboro Statement No. 4R

acknowledge processing these forms of payment carry administrative and operational expenses which are included in base rate making.

There is a fundamental contradiction in how payment processing costs are treated. The administrative costs of handling checks, and cash are included in the utility revenue requirement – and therefore shared among all customers. However, the credit/debit card fee is being passed only to customers using that method, creating an unfair and discriminatory issue.

If the principle of cost causation is to be applied consistently, then card processing fees – like other administrative payment costs – should be treated as part of the utility's cost of doing business, not an add-on fee to customers. Customers choosing a secure, fast, and modern method of payment should not be penalized.

The Company's statement that customers using credit cards to receive rewards or "perks" is irrelevant. In many cases, the fee far exceeds any reward value the card holder may receive. Any "perk" a customer may receive does not justify charging a $3.95 fee. Most importantly, many customers use credit cards out of necessity, not to earn points, but to avoid late payments and or possible service disconnections.

Although I recognize there are utilities that pass along service fees onto their customers, it should also be noted utilities have recognized the inequity and inefficiency of these charges and have moved to eliminate them. For example:

- Columbia Gas of PA. No fees apply to residential customers for credit/debit/Pay Pay/Venmo one-time card payments.[2]
- Pennsylvania American Water eliminated its $1.95 fee for credit card payments in 2023 (PA PUC Docket No. R-2022-3031672).[3]
- Pittsburgh Water and Sewer Authority (PWSA) similarly removed credit card convenience fees to enhance accessibility and reduce barriers to payment (PWSA Customer Service Update, 2022).[4]

Q. **DO YOU HAVE ANY COMMENTS ON THE COMPANY'S CONCERN WITH INCREASED CREDIT CARD USAGE ON FUTURE RATE CASES?**

Yes, I would agree that the removal of the $3.95 represents the possibility of increased usage of credit/debit cards. However, these processing fees are a small part of the Company's overall operating expenses. The Company has not provided any evidence that increased usage of credit card payments would outweigh the benefits to customers or significantly impact on their revenuer requirement which already includes administrative expenses.

As I stated previously, processing fees would reduce other operation expenses such as check processing fees, reduction in posting of payments, reduced past due balances, and collection costs. It is important to weigh both the cost increase along

[2] http://www.columbiagaspa.com/search-results#/?term=payment%20fees

[3] PA PUC Docket No. R-2022-3031672

[4] [4] https://www.pgh2o.com/residential-commercial-customers/account-billing-info/update-contact-information

with the reduction of administrative costs and the elimination of the processing fee brings.

There are several utilities in Pennsylvania and neighboring states who have eliminated these fees without experiencing destabilizing costs or large rate impacts to their customers. The fee is unfair and severely burdens low-income customers who rely on credit cards to pay their bills and therefore should be eliminated. For these reasons, I continue to support the elimination of the $3.95 processing fees.

Q: DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

Topics:

Revenue Requirement Adjustments
Cost of Service
Revenue Allocation

Date Served: July 15, 2025

Date Submitted for the Record: _____

DIRECT TESTIMONY OF JUSTIN B. FARR

Section I - Introduction

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Justin B. Farr. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Director in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. My testimony is being sponsored by the Pennsylvania Office of Small Business Advocate ("OSBA").

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE AND QUALIFICATIONS.

A. My academic background includes a B.S. in economics and an M.B.A. from the University of Utah. After completing my undergraduate degree and while I was completing courses for my master's degree, I worked in the Utah Governor's Office as an economist focused on revenue forecasting and tax policy. I joined Energy Strategies in 2005, where I assist private and public sector clients in the areas of energy-related economic and policy analysis, including evaluation of electric and gas utility rate matters.

From 2013 to 2017 and again from 2020 to early 2022, I worked at PacifiCorp, a six-state electric utility that operates in Utah, Wyoming, Idaho, Oregon, Washington, and California. My roles at PacifiCorp included Manager of Economic & Financial Analysis where I led teams of engineers and plant managers in developing economic solutions for optimizing existing thermal and renewable infrastructure investment, and Assistant Manager of Regulation where I focused on the company's internal 10-year plan. Between 2017 and 2019, I served as Vice President of Financial Planning at Magnum Development where I supported the commercial development of the company's underground salt dome assets. My qualifications are attached in the Appendix to this testimony.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?

A. Yes. I testified in a proceeding concerning the Second DER Management Plan filed by PPL Electric Utilities Corp, Docket No. P-2024-3049223.

Q. HAVE YOU TESTIFIED BEFORE UTILITY REGULATORY COMMISSIONS IN OTHER STATES?

A. Yes. I have provided testimony before the Utah Public Service Commission and the Indiana Utility Regulatory Commission.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?

A. My testimony addresses recommended revenue requirement adjustments. The absence of comment on my part regarding a particular issue or revenue requirement item does not signify support for (or opposition to) the Company's filing with respect to that issue.

Q. ARE YOU MAKING A RECOMMENDATION FOR A SPECIFIC TOTAL REVENUE REQUIREMENT IN THIS CASE?

A. No. My revenue requirement adjustment recommendations address a limited number of issues. Therefore, I am not offering a recommendation for a specific total revenue requirement.

Q. PLEASE SUMMARIZE YOUR PRIMARY CONCLUSIONS AND RECOMMENDATIONS.

A. I offer the following recommendations and conclusions:

1) I recommend certain adjustments that will have the effect of reducing revenue requirement by $269,644 relative to the $1.7 million increase proposed by the Company. My recommended adjustments are outlined in Table JBF-1 presented later in my testimony. My recommended reduction does not account for or incorporate any other adjustments advanced by other parties that are not specifically addressed in my testimony.

2) I conclude that the cost of service study aligns with the principles of cost causation and that Citizens' proposed revenue allocation falls within the range of reasonableness.

Section II - Revenue Requirement Adjustments

Q. BRIEFLY DESCRIBE THE REVENUE REQUIREMENT INCREASE BEING REQUESTED BY CITIZENS' IN THIS CASE.

A. Citizens' Electric Company of Lewisburg, Pennsylvania ("Citizens'" or "Company") is requesting a $1,794,525 increase in annual distribution revenue,

representing a 29.6% increase over present distribution rates. The requested increase is based on a Fully Projected Future Test Year ("FPFTY") ending December 31, 2026, and is designed to produce an overall rate of return of 8.49% on Citizens' rate base.[1]

Q. DO YOU HAVE ANY RECOMMENDED ADJUSTMENTS TO CITIZENS' PROPOSED REVENUE REQUIREMENT?

A. Yes. My recommended adjustments would reduce Citizen's proposed revenue requirement increase by $269,644. As discussed in greater detail later in my testimony, this reduction incorporates a proxy return on equity ("ROE") of 10.0%, which is derived from the ROE authorized by the Commission for the Distribution System Improvement Charge ("DSIC") applicable to most electric utilities in the state. Table JBF-1 presents a summary of my recommended adjustments.

[1] Direct Testimony of Howard S. Gorman (Citizens' Statement No. 1), page 3.

Table JBF-1
Summary of OSBA Adjustments to Citizens' Revenue Requirement

	OSBA Adjustments	Revenue Requirement
Revenue Requirement Increase Requested by Citizens'		**1,794,525**
O&M Adjustments		
Remove POLR/PJM-2024 Expense	(8,298)	
Adjust Generic Escalation Assumptions	(16,051)	
Remove Portion of Rate Case Printing Expense	(1,667)	
Income Tax Rate Adjustment		
Change PA Income Tax Rate from 9.99% to 7.49%	(89,131)	
Proxy Return on Equity		
Change ROE from 11.65% to Proxy 10%	(138,425)	
Impact of GRT gross up	(15,899)	
Rounding	(173)	
Adjusted Revenue Requirement Increase		**1,524,881**

I provide more detail for each of these recommended adjustments as follows:

POLR/PJM-2024 Expense Adjustment

Q. PLEASE EXPLAIN THE BASIS FOR YOUR ADJUSTMENT.

A. In response to interrogatory I&E-RE-7-D, Nathan Johnson, President, and CEO of Citizens' Electric Company, agreed that the POLR/PJM-2024 expense that had been included as a rate case expense and subsequently rolled into O&M expense is actually a generation-related cost that was inadvertently included.[2] Mr. Johnson

[2] Citizens' response to I&E-RE-7-D

noted that this expense would be removed by Company witness Mr. Gorman in rebuttal testimony.

Q. PLEASE EXPLAIN YOUR ADJUSTMENT.

A. My adjustment simply recommends correcting for this error by removing the generation-related expense from this rate case.

Q. WHAT IS THE IMPACT OF THIS ADJUSTMENT?

A. As reported in Table JBF-1, removing the POLR/PJM-2024 expense reduces revenue requirement by $8,298.

General Inflationary Factor Adjustment

Q. PLEASE EXPLAIN CITIZENS' USE OF A GENERAL INFLATIONARY FACTOR TO ESCALATE CERTAIN O&M EXPENSES.

A. In the process of developing expected costs for FPFTY 2026, the Company must forecast or project how historical expenses will increase or decrease. For budget items that have relatively few sources of expense, the Company develops forecasts based on known historical trends and future price projections supplied by vendors or other industry sources. However, for budget items with numerous contributing expense sources, the sheer number and small size of individual components make it impractical to employ a "bottom-up" approach to project expenses for the future test year. For these budget items, the company employs a general inflationary factor of 3.0%.[3]

[3] Citizens' response to I&E-RE-5-D.

Q. PLEASE DESCRIBE IN DETAIL HOW THE COMPANY HAS CALCULATED FPFTY 2026 EXPENSES FOR BUDGET ITEMS THAT RELY ON THIS 3.0% GENERIC INFLATION FACTOR.

A. Rather than using actual data for HTY 2024 as a starting point for escalating to calculate FPFTY 2026 values, the Company used a three-step process to develop 2024 values, which were then escalated by 3% to arrive at FTY 2025 values and then escalated once again to arrive at FPFTY 2026 values. Based upon my analysis of I&E-RE-5-D Attachment A[4], the Company utilized the following three-step process to arrive at 2024 values:

- Step 1: the Company calculated "Annualized" 2024 values based on actual values from January through September of 2024. It's unclear how the Company determined which escalation factors to use for each budget item, but the sum of all of the budget items identified in I&E-RE-5-D Attachment A represented a 3.1% increase over the sum of all 2023 actual values (note: the annual percent change for individual budget items between 2023 and the annualized 2024 values varied between -98% and 608%). The sum total of "Annualized" values for all budget items that the Company identified as being escalated by a general inflationary factor equals $310,199.
- Step 2: the Company calculated a three-year average for each budget item using actual 2022, actual 2023, and annualized 2024 values. The sum total three-year average for these budget items equals $306,744, which is a

[4] JBF WP-2 I&E-RE-5-D Attachment A (Direct)

1.9% increase over the total 2023 value and a 1.1% reduction from the annualized 2024 value.

- Step 3: The Company then "Normalized" the three-year average values by escalating each budget item value by 3.0%. The result of this escalation is labeled "Normalized 3yr Avg" and the Company represents this as the 2024 values. The sum total equals $315,946.

Using the "Normalized 3yr Avg" values as a proxy for actual 2024 values, the company then calculated 2025 values by escalating each budget item by 3.0%. The sum total equals $325, 425. And finally, the company escalated each calculated 2025 budget item one more time by 3.0% for the values that are included in FPFTY 2026. The total equals $335,188. An excel worksheet with formulae intact for the calculations that I have just described is included in my attached work paper JBF WP-2 I&E-RE-5-D Attachment A (Direct).

Q. DO YOU AGREE WITH THE COMPANY'S METHODOLOGY?

A. Yes, I agree with the general approach of using a generic inflationary factor on budget items that are difficult to employ a "bottom-up" approach, but I propose two modifications to Citizens' calculations.

Q. HOW DO YOU RECOMMEND MODIFYING THE COMPANY'S METHODOLOGY?

A. I recommend using actual 2024 values instead of the calculated normalized values. However, since actual 2024 values have not been provided, I recommend using the "3-year average" values the Company calculated to represent 2024 values instead of the Company's "Normalized 3yr Avg" values. The sum of the

normalized values that the Company uses for 2024 values equates to a 5.0% annual increase between 2024 and 2023 values, which seems high considering that the compound annual growth rate ("CAGR") is 1.6% between 2019 and 2023[5] (note: the CAGR is 1.8% between 2020 and 2023, and 0.1% between 2021 and 2023). If the calculated 3-year average values are used for 2024, as I recommend, the annual growth rate from 2023 to 2024 is 1.9%[6], which is still greater than actual recent escalation for these budget items.

My second recommendation is to use 2.0% as a general inflationary factor for these budget items to escalate to FTY 2025 and FPFTY 2026 values instead of the 3.0% proposed by Citizens'. A 2.0% inflationary factor is more consistent with recent inflation experienced by these budget items as a group. These recommendations are illustrated in Table JBF-2.

Table JBF-2
Proposed Modification to Expenses Escalated
Using Generic Inflationary Factor

Company Proposed Methodology

Year	Sum of Expenses	% Change
2019	$282,046	
2020	$285,428	1.2%
2021	$300,083	5.1%
2022	$309,146	3.0%
2023	$300,888	-2.7%
Normalized 2024	$315,946	5.0%
2025	$325,425	3.0%
2026	$335,188	3.0%

OSBA Proposed Methodology

Year	Sum of Expenses	% Change
2019	$282,046	
2020	$285,428	1.2%
2021	$300,083	5.1%
2022	$309,146	3.0%
2023	$300,888	-2.7%
3 Year Ave 2024	$306,744	1.9%
2025	$312,879	2.0%
2026	$319,137	2.0%

[5] JBF WP-2 I&E-RE-5-D Attachment A (Direct)
[6] JBF WP-2 I&E-RE-5-D Attachment A (Direct)

Q. WHAT IS THE IMPACT OF THIS ADJUSTMENT?

A. As reported in Table JBF-1, this adjustment would reduce revenue requirement by $16,051 in FPFTY 2026.

Rate Case Printing Expense

Q. PLEASE DESCRIBE CITIZENS' REQUEST TO RECOVER EXPENSES ASSOCIATED WITH THIS RATE CASE PROCEEDING.

A. Citizens' seeks recovery of costs incurred because of filing this rate case. The total costs included in the filing equal $326,667. Citizens' recommends recovering this expense over three years so that each annual payment equals $108,889. One of the line items included in the budget for rate case expenses is "Printing, other" for $10,000. In response to I&E-RE-6-D, Citizens' summarized the amounts requested in the last three rate cases and the amounts actually spent. In the 2016 rate case, Citizens' claimed $13,000, but only spent $4,335. In the 2019 rate case, Citizens' claimed $13,000, but only spent $3,767. In the 2022 rate case, Citizens' claimed $15,000, but only spent $4,614.[7] It is clear that Citizens' has a history of over-budgeting how much will be required for printing expenses.

Q. WHAT IS YOUR RECOMMENDATION REGARDING RATE CASE PRINTING EXPENSE?

A. I recommend reducing the "Printing, other" rate case expense to $5,000, since the Company has not used more than $5,000 in any of the last three rate cases.

Q. WHAT IS THE IMPACT OF THIS ADJUSTMENT?

[7] Citizens' Response to I&E-RE-6-D

A. Because the rate case expense is spread over three years, a $5,000 reduction in printing expense results in a reduction to revenue requirement of $1,667 in FPFTY 2026, as reported in Table JBF-1.

Pennsylvania Corporate Income Tax Rate Adjustment

Q. DESCRIBE THE PENNSYLVANIA CORPORATE NET INCOME TAX RATE AND ITS HISTORY.

A. For nearly three decades, Pennsylvania maintained a flat Corporate Net Income ("CNI") Tax rate of 9.99%, among the highest in the United States. This rate remained unchanged from 1995 until 2022. In July 2022, the Pennsylvania General Assembly enacted Act 53-2002 (H.B. 1342), initiating a phased reduction of the CNI Tax rate over nine years. The schedule for the rate reductions shown in Table JBF-3 as follows[8]:

Table JBF-3
Pennsylvania Corporate Net Income Tax Rates

Tax Year	CNIT Rate
January 1, 2023 - December 31, 2023	8.99 percent
January 1, 2024 - December 31, 2024	8.49 percent
January 1, 2025 - December 31, 2025	7.99 percent
January 1, 2026 - December 31, 2026	7.49 percent
January 1, 2027 - December 31, 2027	6.99 percent
January 1, 2028 - December 31, 2028	6.49 percent
January 1, 2029 - December 31, 2029	5.99 percent
January 1, 2030 - December 31, 2030	5.49 percent
January 1, 2031 and each taxable year thereafter	4.99 percent

[8] https://www.pa.gov/agencies/revenue/resources/tax-rates/corporation-tax-rates.html

Q. WHAT PENNSYLVANIA CNI TAX RATE WAS USED IN THE DEVELOPMENT OF THE COMPANY'S REQUESTED INCREASE IN REVENUE REQUIREMENT IN THIS CASE?

A. The Company used 9.99% as the Pennsylvania corporate income tax rate.[9]

Q. WHAT PENNSYLVANIA CNI TAX RATE WAS USED IN THE LAST RATE CASE?

A. In docket R-2022-3032369, Citizens' last general rate case, Citizens' initial application included a 9.99% CNIT rate.[10] However, as part of the settlement agreement, parties agreed to an 8.99% CNIT rate, which is equal to the new phased rates enacted through Act 53-2002 for calendar year 2023. The Settlement Terms included in the ALJ's Recommended Decision letter stated:

> The Parties agree that the Pennsylvania Corporate Net Income ("CNI") Tax rate in this proceeding will be set at 8.99%. The Company will reflect actual CNI rates for the post-2023 tax years through the Company's State Tax Adjustment Surcharge, or future base rate proceedings.[11]

Q. WHAT PENNSYLVANIA CNI TAX RATE DO YOU RECOMMEND?

A. I recommend using 7.49% as the CNI Tax rate for FPFTY 2026, which is the tax rate enacted by Act 53-2022 for calendar year 2026, and to require the company to reflect actual CNI rates for the post-2026 tax years through the Company's State Tax Adjustment Surcharge until the next rate case proceeding.

[9] Direct Testimony of Howard S. Gorman (Citizens' Statement No. 1), page 11.
[10] R-2022-3032369, Citizens' Statement No. 1, page 12.
[11] Recommended Decision Letter of Administrative Law Judge's Eranda Vero and Charece Z. Collins, page 5.

Q. WHAT IS THE IMPACT OF THIS ADJUSTMENT?

A. As reported in Table JBF-1, this adjustment would reduce revenue requirement by $89,131 in FPFTY 2026.

Common Equity Cost Rates

Q. WHAT IS THE PERFORMANCE FACTOR ADJUSTMENT?

A. Citizens' witness Nathan Johnson explains that Section 523 of the Public Utility Code provides the Commission's guidelines for performance adjustments. He states that counsel has advised him that the Public Utility Code identifies several criteria to be considered in assessing the performance of a fixed utility for purposes of a performance factor adjustment, including consideration of any relevant and material evidence of efficiency, effectiveness, and adequacy of service. Mr. Johnson provides information on Citizens' operations, which he asserts support receiving a performance factor adjustment.[12]

Q. WHAT IS CITIZENS' PROPOSED PERFORMANCE FACTOR ADJUSTMENT?

A. Citizens' proposes a performance factor adjustment of a 5-basis point addition to the cost of common equity.[13]

Q. WHAT IS YOUR RESPONSE TO CITIZENS' PROPOSED PERFORMANCE FACTOR ADJUSTMENT?

A. Utilities are expected to provide safe and reliable service to their customers. They should also deliver quality customer service, upgrade their systems, and manage

[12] Direct Testimony of Nathan Johnson (Citizens' Statement No.4), pp. 9-12.
[13] Revised Direct Testimony of Dylan W. D'Ascendis (Joint Statement No. 2), page 52.

their costs effectively. Utilities already receive a guaranteed rate of return for performing these functions. Providing an additional upward adjustment for effective operations, at the expense of customers, is excessive.

Q. WHAT IS THE SIZE ADJUSTMENT?

A. Citizens' witness Dylan D'Ascendis explains that the Companies' smaller size relative to the Electric Utility Proxy Group indicates greater relative business risk for the Company because, all else being equal, size has a material bearing on risk. He asserts that size affects business risk because smaller companies generally are less able to cope with significant events that affect sales, revenues, and earnings. For example, smaller companies face more risk exposure to business cycles and economic conditions, both nationally and locally. Additionally, Mr. D'Ascendis states that the loss of revenue from a few larger customers would have a greater effect on a small company than on a bigger company with a larger, more diverse customer base.[14]

Q. WHAT IS CITIZENS' PROPOSED SIZE ADJUSTMENT?

A. Citizens' proposes a size factor adjustment of an 85-basis point addition to the cost of common equity.[15]

Q. WHAT IS YOUR RESPONSE TO CITIZENS' PROPOSED SIZE FACTOR ADJUSTMENT?

A. The Company's arguments for an upward adjustment focus solely on potential losses, without acknowledging the possibility of potential gains. While it is true that a small company losing a large customer could experience reduced revenues,

[14] Revised Direct Testimony of Dylan W. D'Ascendis (Joint Statement No. 2), page 47.

[15] Revised Direct Testimony of Dylan W. D'Ascendis (Joint Statement No. 2), page 51.

it is also possible for the company to gain large customers, therefore increasing revenues. At the very least, new customers could offset the impact of losing existing ones. Customers should not bear the burden of shielding a utility from every possible risk, particularly when utilities have the ability to file a rate case with the Commission to address extreme risks if they arise. An 85-basis-point upward adjustment to account for unspecified risks is excessive.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE PERFORMANCE FACTOR ADJUSTMENT, THE SIZE FACTOR ADJUSTMENT?

A. I recommend eliminating the performance factor adjustment entirely and lowering or removing the size factor adjustment. These changes support, and help justify, a lower return on equity ("ROE") for the company, which I will discuss in greater detail below.

Proxy Return on Equity Adjustment

Q. WHAT ROE IS CITIZENS' REQUESTING IN THIS PROCEEDING?

A. Citizens' witness Dylan W. D'Ascendis recommends a ROE of 11.65%.[16]

Q. DO YOU SUPPORT CITIZENS' REQUESTED ROE?

A. No.

Q. WHAT OBSERVATIONS HAVE YOU MADE IN REGARD TO CITIZENS' REQUESTED ROE?

[16] Revised Direct Testimony of Dylan W. D'Ascendis (Joint Statement No. 2), page 6.

A. A comparison of Citizens' requested ROE of 11.65% with the most recent Report on the Quarterly Earnings of Jurisdictional Utilities for the year ending December 31, 2024, produced by the Bureau of Technical Utility Services indicates to me that the requested 11.65% is too high and should be adjusted down. Based on the report, the current market indicated ROE as calculated by the Bureau of Technical Utility Services should fall within the range of 9.17% to 11.23%[17]. This report is included as Exhibit JBF-1 at the end of my testimony.

A review of recently completed rate cases across the country for electric distribution companies that were either settled, or fully litigated within the last year, suggests that the proper ROE is likely near the lower part of the range provided by the Bureau of Technical Utility Services. The average authorized ROE in cases involving electric distribution companies that were approved between June 1, 2024, and June 30, 2025, is 9.50%. Expanding the universe of approved rate cases to include vertically integrated electric utilities over the same period increases the authorized ROE to 9.77%. A detailed listing of approved ROE's from rate cases finalized over the last year is included at the end of my testimony as Exhibit JBF-2. I present the results for electric distribution utilities in Table JBF-4.

[17] Exhibit JBF-1, Report on the Quarterly Earnings of Jurisdictional Utilities (Year ending December 31, 2024, page 14.

Table JBF-4
Survey of Approved ROE's for Electric Distribution Companies Between June 1, 2024 & June 30, 2025

State	Company	Case identification	Approved Date	ROE (%)
MD	Potomac Electric Power Company	C-9702	6/10/2024	9.50
MA	Fitchburg Gas and Electric Light Company, In	DPU 23-80	6/28/2024	9.40
NY	Central Hudson Gas & Electric Corporation	C-23-E-0418	7/18/2024	9.50
MA	Massachusetts Electric Company	DPU 23-150	9/30/2024	9.35
DC	Potomac Electric Power Company	FC-1176	11/25/2024	9.50
ME	Versant Power	D-2023-00336	3/13/2025	9.35
TX	AEP Texas Inc.	D-56165	10/3/2024	9.76
NJ	Public Service Electric and Gas Company	D-ER23120924	10/9/2024	9.60
TX	CenterPoint Energy Houston Electric, LLC	D-56211	3/13/2025	9.65
NY	Orange and Rockland Utilities, Inc.	C-24-E-0060	3/20/2025	9.75
NH	Liberty Utilities (Granite State Electric) Corp.	D-DE-23-039	3/25/2025	9.10

Q. DO YOU RECOMMEND A SPECIFIC ROE?

A. No, I do not have a recommendation for a specific ROE but rather defer to analysis and recommendations promulgated by the Office of Consumer Advocate ("OCA") and the Bureau of Investigation and Enforcement ("I&E"). However, for purposes of my testimony, I have assumed a proxy 10.0% ROE based upon the Commission's approved ROE for Distribution System Improvement Charge (DSIC) included in the most recent Report on the Quarterly Earnings of Jurisdictional Utilities[18] for the year ended December 31, 2024, produced by the Bureau of Technical Utility Services referenced previously.

Q. WHAT IS THE REVENUE REQUIREMENT IMPACT OF USING A PROXY 10.0% ROE?

[18] Exhibit JBF-1, Report on the Quarterly Earnings of Jurisdictional Utilities (Year ending December 31, 2024, page 15.

A. As reported in Table JBF-1, this adjustment would reduce revenue requirement by $138,425 in FPFTY 2026.

Section III - Class Cost of Service and Revenue Allocation

Q. DID CITIZENS' PERFORM A CLASS COST OF SERVICE STUDY?

A. Yes, Citizens' completed an allocated class cost of service study ("ACOS") that follows the traditional three-step process of: 1) functionalization of rate base and costs; 2) classification of functionalized costs as demand-related, commodity-related or customer-related; and 3) class allocation of the functionalized, classified costs among the rate classes.

Q. DO YOU HAVE ANY COMMENTS ON THE COST ALLOCATION METHODS USED BY CITIZENS'?

A. Yes. As a general matter, I find the cost allocation methods employed by Citizens, as outlined by Mr. Gorman, to align with the principles of cost causation. Therefore, I am not proposing any modifications to the Company's cost allocation approach in this proceeding.

Q. PLEASE DESCRIBE CITIZENS' REVENUE ALLOCATION PROPOSAL.

A. Citizens' revenue allocation proposal is guided by the objectives of 1) moving each class closer to cost of service as computed in the ACOS, and 2) mitigating extreme rate impacts on rate classes and on customer subgroups.[19]

Q. WHAT IS YOUR ASSESSMENT OF CITIZENS' REVENUE ALLOCATION PROPOSAL?

[19] Direct Testimony of Howard S. Gorman (Citizens' Statement No. 1), page 28.

A. The Company's revenue allocation proposal reasonably balances moving class revenue recovery in the direction of cost causation, while adhering to the principle of gradualism. All classes have reductions in the subsidy paid or received. In my opinion, the proposed revenue allocation falls within the range of reasonableness.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

Vitae

Professional Experience

Energy Strategies, Salt Lake City UT, April 2022 - Present
An energy consulting firm focused on regulatory services, policy, and markets serving power producers, transmission developers, utilities, government agencies, NGO's, and large energy users

Director

- Perform energy-related economic and policy analysis, regulatory intervention, and strategic negations on behalf of industrial, commercial, and public sector interests
- Provide risk management and market fundamentals analysis to large consumers of natural gas
- Executive director of the Utah Association of Energy Users

PacifiCorp, Salt Lake City UT, January 2020 – April 2022
Berkshire Hathaway owned electric utility serving over 1.6 million customers in Utah, Oregon, Washington, Wyoming, Idaho, and parts of Northern California

Assistant Manager of Regulation, March 2021 – April 2022
Senior Fuels Manager, January 2020 – March 2021

- Performed rate projections tied to the company's 10-year plan
- Provided testimony on the Renewable Energy Credits balancing account
- Procured fuel and managed contracts for company owned and jointly owned thermal plants

Magnum Development, Holladay UT, 2017 – Oct 2019
Private Equity backed developer of utility-scale storage in underground salt caverns. Developing storage for natural gas, compressed air created from renewable electricity, green hydrogen, and helium.

Vice President of Financial Planning, January 2019 – October 2019
Assistant Vice President of Financial Planning, February 2017 – December 2018

- Worked on commercial team developing bidding strategies and analysis to support joint development negotiations

- Managed all financial and economic modeling across all of Magnum's business verticals including: Magnum Midstream (Natural Gas), Magnum Compressed Air Energy Storage (CAES), Magnum Hydrogen, and Magnum Industrial Gases (Helium)

PacifiCorp, Salt Lake City UT, 2013 – 2017
Berkshire Hathaway owned electric utility serving over 1.6 million customers in Utah, Oregon, Washington, Wyoming, Idaho, and parts of Northern California

Manager Economic & Financial Analysis, August 2015 – February 2017
Senior Financial Planning Analyst, October 2013 – August 2015

- Managed team of Sr. Financial Analysts responsible for economic analysis, internal audit of joint owned plants, and annual budget of resource development division
- Led team of engineers, plant managers, and vice presidents in developing economic solutions that optimized existing thermal and renewable infrastructure investment
- Developed economic models to explore new resource development opportunities such as utility scale solar and battery installations
- Prepared annual cost of generation report for senior management

Energy Strategies, Salt Lake City UT, 2005 – 2013
An energy consulting firm focused on regulatory services, policy, and markets serving power producers, transmission developers, utilities, government agencies, NGO's, and large energy users

Senior Consultant, January 2010 – October 2013
Consultant, July 2005 – December 2009

- Developed strategies for clients with energy infrastructure that optimized environmental performance and financial objectives while meeting their utility requirements
- Performed market studies focused on thermal & renewable energy need, transmission availability, pricing, and impacts of public policy initiatives. Studies were designed to inform and improve clients' energy decisions including risk management and procurement strategy.

Education

- Master of Business Administration, University of Utah, May 2005
- Bachelor of Science in Economics/Business Minor, University of Utah, May 2000
- Graduated Magna Cum Laude; GPA 3.92
- Honors at Entrance Scholarship; 1999-2000 Law & Economic Society Fellowship

Expert Testimony

"In the Matter of the Petition of PPL Electric Utilities Corp for Approval of its Second Distributed Energy Resources Management Plan," Public Utilities Commission of **Pennsylvania**, Docket No. P-2024-3049223. Direct testimony submitted September 17, 2024. Surrebuttal testimony filed January 22, 2024.

"In the Matter of the Verified Petition of Indiana Michigan Power Company for Approval of Modifications to its Industrial Power Tariff – Tariff IP," **Indiana** Utility Regulatory Commission, Cause No. 46097. Direct testimony submitted October 15, 2024. Cross-Answering testimony filed November 4, 2024. Settlement testimony filed December 4, 2024.

"In the Matter of the Application of Rocky Mountain Power for Authority to Revise Rates in Tariff Schedule 98, Renewable Energy Credits Balancing Account," **Utah** Public Service Commission, Docket No. 22-035-07. Direct testimony submitted March 15, 2022.

TABLE OF CONTENTS

Page No.

Introduction..... 4

Attachment A – Summary of Equity Returns..... 5

Attachment B – Summary of Returns..... 12
This chart depicts the overall and equity returns (actual and adjusted) for the filing utilities for the current quarter. The last authorized equity returns and the year authorized is also shown.

Attachment C – Allowed Rates of Return on Common Equity..... 14
This is a historical chart that shows the most recent rate cases for select companies in electric, gas, and water. A docket number followed by their final return on equity and year is also given.

Attachment D – Distribution System Improvement Charge Return on Equity 15
Compares utility adjusted return on equity to Commission authorized return on equity for utilities with a Distribution System Improvement Charge.

Attachment E – Explanation of Return on Equity Methods 16
Criteria for determining the industry barometer groups used in ROE calculations. Also, provides details of the Discounted Cash Flow equation and Capital Asset Pricing Model equation.

Attachment F – Market Based Returns on Equity – Electric..... 18
The market indicated common equity cost rate range consists of data used from the electric barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment F – Historic DCF and CAPM – Electric..... 19
Historic barometer group DCF and CAPM average ROEs.

Attachment F – Electric Barometer Group Calculation of a Current and 52 Week Average Dividend Yield..... 20-21
Electric barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment F – Development of a Representative Dividend Growth Rate..... 22
Multiple sources of the gas barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Attachment G – Market Based Returns on Equity – Gas..... 23
The market indicated common equity cost rate range consists of data used from the gas barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment G – Historic DCF and CAPM – Gas 24
Historic barometer group DCF and CAPM average ROEs, including a linear trend line graph.

Attachment G – Gas Barometer Group Calculation of a Current and 52 Week Average Dividend Yield 25
Gas barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment G – Development of a Representative Dividend Growth Rate 26
Multiple sources of the gas barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Attachment H – Market Based Returns on Equity – Water 27
The market indicated common equity cost rate range consists of data used from the water barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment H – Historic DCF and CAPM – Water 28
Historic barometer group DCF and CAPM average ROEs, including a linear trend line graph.

Attachment H – Water Barometer Group Calculation of a Current and 52 Week Average Dividend Yield 29
Water barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment H – Development of a Representative Dividend Growth Rate 30
Multiple sources of the water barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Introduction:

On September 20, 1991, the Commission initiated a rulemaking at L-00910061 pertaining to earnings disclosures by the public utilities subject to its jurisdiction. At that docket, the Commission stated that the submission of accurate, reliable, and complete earnings disclosure reports, at regular intervals, is essential to the fulfillment of the broad regulatory oversight responsibilities entrusted to the Commission by the Legislature in the Public Utility Code. The earnings disclosure regulations promulgated by the Commission were adopted October 1, 1992, and published January 23, 1993, at 23 Pa.B. 463. Based upon those regulations, codified at 52 Pa. Code, Chapter 71, a reporting format was developed and distributed to the jurisdictional fixed utilities of Pennsylvania.

All fixed utilities having jurisdictional revenues of $1,000,000 or more, for a calendar year, are required to file the report by March 31 of each year. Such reports are to be based upon the results of operations for the 12-month period ending December 31 of the prior year. Utilities having more than $10,000,000 in jurisdictional revenues are also required to file reports for the 12 months ending on March 31, June 30, and September 30 of each year.[1] On November 30, 2004, however, the Pennsylvania General Assembly signed into law Act 183 concerning alternative telecommunications regulation and broadband deployment. As a result of Act 183, the reporting requirements for the PUC jurisdictional telecommunications companies of Pennsylvania have been streamlined at section 3015(e) of the Public Utility Code. A quarterly earnings report is not listed among those reports now required of PUC jurisdictional telecommunications utilities in Pennsylvania and, therefore, this report does not address telephone company earnings.

The reports have been filed for the period ending December 31, 2024, at Docket No. M-2025-3052807.[2] The Finance Staff of the Bureau of Technical Utility Services has reviewed the reports and has prepared this summary report for public release. This report sets forth the achieved return on equity for each company, the last allowed return for that utility, a market return as determined through the analysis of the barometer group data and the most recent returns allowed, per industry, by the Pennsylvania Public Utility Commission and by other regulatory bodies. Where a utility has not filed a report, the reasons for not filing are indicated.

Questions pertaining to the preparation and contents of this Report should be directed to Mr. Marc Hoffer, Manager - Finance, Bureau of Technical Utility Services, at (717) 787-1869.

[1] Per Commission regulations at 52 Pa. Code § 71.3(a)(1), the major electric utilities are specifically identified by name rather than utilizing the $10,000,000 revenue threshold utilized by gas and water utilities.

[2] Columbia Gas of PA Inc., UGI Utilities, Inc. – Gas Division, and FirstEnergy Pennsylvania Electric Co. have rate filings at Docket Nos. R-2025-3053499, R-2024-3052716, and R-2024-3047068, respectively, and have filed a letter with the Secretary in place of a report in accordance with 52 Pa. Code § 71.4.

Attachment A

The equity return summaries that follow in Attachment A are, for each quarter;

ACTUAL

1. Based on actual results of operations

and

ADJUSTED

2. Based on company proposed pro forma and ratemaking adjustments

Veolia Water Pennsylvania, Inc.	5.36	9.75
Columbia Water Company	6.86	9.75
Newtown Artesian Water	2.52	9.75

* Columbia Gas of PA Inc., UGI Utilities, Inc. – Gas Division, and FirstEnergy Pennsylvania Electric Co. have rate filings at Docket Nos. R-2025-3053499, R-2024-3052716, and R-2024-3047068, respectively, and have filed a letter with the Secretary in place of a report in accordance with 52 Pa. Code § 71.4.

3 Each utility lists adjustments on Schedule B of their quarterly financial report.
4 The ROE is approved in a utility's most recent fully litigated base rate proceeding for hich a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years have elapsed between the entry of a final order and the DSIC effective date, the ROE is from this report. If the base rate proceeding is settled, without a stipulated ROE, the ROE is from this report.

Explanation of Discounted Cash Flow (DCF) and Capital Asset Pricing Model (CAPM)

Barometer Group Criteria

The criteria used for determining the industry barometer groups used to calculate ROEs in this report are as follows:

- 50% or more of the company's assets must be related to the jurisdictional utility industry;
- The company's stock must be publicly traded and must have at least three years of earnings history;
- Companies targeted by merger and acquisition (M&A) activity will be excluded; companies involved in M&A activity may be excluded;
- Investment information for the company must be available to the Commission from more than one source;
- The barometer group companies must have an investment grade credit rating (S&P BBB- or better, Moody's Baa3 or better); and
- Geographic Regions:
  EDCs: *Value Line* Investment Survey's East, Central, and West Group Electric Utility companies;
  NGDCs: *Value Line* Investment Survey's Natural Gas Utility industry group companies;
  Water/Wastewater: *Value Line* Investment Survey's Water Utility industry group companies.

The barometer group companies are reviewed by staff on a quarterly basis and make any changes to these companies based upon the criteria above.

ROE Calculations

The Commission consistently uses the DCF model to determine the appropriate cost of equity for utilities. In this report, the DSIC ROE is calculated using two DCF models.

TUS uses the following formula to calculate the current dividend DCF: $K = D_1/P_0 + G$

TUS uses the following formula to calculate the 52-week average dividend DCF: $K = D_0/P_a + G$

Definitions:

K	=	Cost of equity
D_1	=	Dividend expected during the year
	=	$D_0 + ½g$
D_0	=	Latest indicated dividend, obtained from Yahoo! Finance
g	=	Expected 5-year dividend growth rate of barometer group obtained from Value Line Investment Survey.
P_0	=	Current price of the stock, obtained from Yahoo! Finance
P_a	=	Average of high and low stock price over the latest 52-week period, obtained from Yahoo! Finance
G	=	Average of 5-year expected earnings growth rate forecasts obtained from Value Line, Zacks Investment Survey, and S&P Capital IQ.

The CAPM uses the yield of a risk-free interest-bearing obligation plus a rate of return premium that is proportional to the systematic risk of an investment.

TUS uses the following formula to calculate CAPM: $K = R_f + \beta(R_m - R_f)$

Three components are necessary to calculate the CAPM cost of equity:

β	=	Beta, a measure of systematic risk for each stock
R_f	=	The risk-free rate of return, 10-year U.S. Treasury yields are used for R_f. Yields are taken from the previous two quarters and forecasted next four quarters.
R_m	=	Total return of the equity market as determined by Kroll

The Commission determines the ROE used for DSIC purposes based on the range of reasonableness from the DCF barometer group data, CAPM data, recent ROE adjudicated by the Commission, and informed judgment.

The market indicated common equity cost rate range consists of data used from the barometer groups and is based on a series of calculations to average the DCF methods.

Market Based Returns on Common Equity[1]

Re: Pennsylvania Public Utility Commission v. Citizens' Electric Company of Lewisburg, PA / Docket No. R-2025-3054394

Dear Judge Long:

Enclosed please find the Rebuttal Testimony of Justin B. Farr, labelled OSBA Statement No.1-R, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-referenced proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Rebecca Lyttle

Rebuttal Testimony

of

Justin B. Farr

on behalf of

Pennsylvania Office of Small Business Advocate

Topics:

Classification of Distribution Costs

Date Served: August 13, 2025

Date Submitted for the Record: _____

REBUTTAL TESTIMONY OF JUSTIN B. FARR

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Justin B. Farr. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Director in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ARE YOU THE SAME JUSTIN B. FARR WHO PREFILED DIRECT TESTIMONY IN THIS DOCKET ON BEHALF OF THE PENNSYLVANIA OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA")?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. My rebuttal testimony responds to the direct testimony of Citizens' witness Howard Gorman and Pennsylvania Office of Consumer Advocate ("OCA") witness Michael Deupree.

RESPONSE TO CITIZENS

Q. DO YOU AGREE WITH CITIZENS' FILED COST OF SERVICE STUDY WITH RESPECT TO THE CLASSIFICATION OF SECONDARY DISTRIBUTION PLANT ACCOUNTS 364 THROUGH 366?

A. Yes. Citizens Electric ("Citizens" or "the Company") proposes to classify distribution plant accounts 364 through 366 as partially demand-related, and partially customer-related. I agree with this approach. Citizens witness Mr. Gorman conducted a zero-load analysis to determine the customer-related component of secondary-voltage distribution system costs included in accounts 364-366.[1] Mr. Gorman's use of the zero-load analysis to classify distribution plant assets in accounts 366-366 as partially customer-related is supported by the National Association of Regulatory Utility Commissions ("NARUC").

Q. HOW IS SECONDARY DISTRIBUTION PLANT IN ACCOUNT 368 (LINE TRANSFORMERS) PURPORTED TO BE CLASSIFIED?

A. According to Mr. Gorman's testimony, Account 368 was classified between customer-related and demand-related using a minimum size analysis[2] which results in the 35.85% customer allocation factor included in Schedule D3.[3] The resulting demand allocation factor is 64.15%.[4]

Q. HOW WAS SECONDARY PLANT IN ACCOUNT 368 ACTUALLY CLASSIFIED?

A. Account 368 was classified as 100% demand related.[5] There is clearly a discrepancy between the testimony and class cost of service study regarding how this account was classified.

[1] Direct Testimony of Howard S. Gorman (Citizens' Statement No. 1), page 20 ln 6-7.
[2] Direct Testimony of Howard S. Gorman (Citizens' Statement No. 1), page 20 ln 16-17.
[3] Citizens' Electric Exhibit HSG-1 (Schedule A-D), worksheet D3, row 30.
[4] Citizens' Electric Exhibit HSG-1 (Schedule E), worksheet ClassFctr, row 23, column G.
[5] Citizens' Electric Exhibit HSG-1 (Schedule E), worksheet Classify, row 17, column U.

Q. DO YOU HAVE A RECOMMENDATION ON HOW TO CLASSIFY SECONDARY PLANT IN ACCOUNT 368?

A. Yes, I recommend the secondary distribution plant in account 368 be classified as partially customer-related and partially demand-related as described in Mr. Gorman's testimony.

RESPONSE TO OCA

Q. WHAT DOES OCA WITNESS MR. DEUPREE RECOMMEND REGARDING THE CLASSIFICATION OF DISTRIBUTION PLANT ACCOUNTS 364 THROUGH 368?

A. Mr. Deupree recommends that the Commission reject the Company's proposed use of zero-load analysis and minimum-size analysis, together referred to as the minimum system study ("MSS") approach, for classifying the costs of secondary-voltage distribution plant included in FERC accounts 364 through 368. He claims that both the minimum system and zero-intercept methods are fundamentally flawed, offer little to no value in setting just and reasonable rates, and have been discredited by research. He further notes that some state regulatory commissions have expressly rejected the use of these methods. Instead, Mr. Deupree recommends that the Commission classify the assets in distribution plant accounts 364 through 368 as 100 percent demand-related.[6]

Q. WHAT EVIDENCE DOES MR. DEUPREE PROVIDE TO SUPPORT HIS RECOMMENDATION?

[6] OCA Statement No. 3, Direct Testimony of Michael Deupree, pages 21-22.

A. Mr. Deupree cites a passage from the Electric Utility Cost Allocation Manual published by NARUC ("NARUC Manual") in support of his position. However, the NARUC Manual clearly states that Accounts 364 through 368 contain both customer-related and demand-related components. In addition, Mr. Deupree references two jurisdictions that have rejected the use of MSS analyses. He does not acknowledge the jurisdictions that use MSS analyses.

Q. IS YOUR POSITION CONSISTENT WITH THE RECOMMENDED TREATMENT OF THESE COSTS AS PRESENTED IN THE NARUC MANUAL?

A. Yes, it is. The NARUC Manual states that:

> Distribution Plant Accounts 364 through 370 involve demand and customer costs. **The customer component of distribution facilities is that portion of costs which varies with the number of customers. Thus, the number of poles, conductors, transformers, services, and meters are directly related to the number of customers on the utility's system**. As shown in Table 6-1, each primary plant account can be separately classified into a demand and customer component. Two methods are used to determine the demand and customer components of distribution facilities. They are, the minimum-size-of-facilities method, and the minimum-intercept cost (zero-intercept or positive-intercept cost, as applicable) of facilities[7] (emphasis added).

Table 6-1, referenced above, from the NARUC Manual is included below. Table 6-1 shows FERC Accounts 364-368 as having demand-related and customer-related components.

[7] Electric Utility Cost Allocation Manual, January 1992, p. 90.

TABLE 6-1

CLASSIFICATION OF DISTRIBUTION PLANT[1]

FERC Uniform System of Accounts No.	Description	Demand Related	Customer Related
	Distribution Plant [2]		
360	Land & Land Rights	X	X
361	Structures & Improvements	X	X
362	Station Equipment	X	-
363	Storage Battery Equipment	X	-
364	Poles, Towers, & Fixtures	X	X
365	Overhead Conductors & Devices	X	X
366	Underground Conduit	X	X
367	Underground Conductors & Devices	X	X
368	Line Transformers	X	X
369	Services	-	X
370	Meters	-	X
371	Installations on Customer Premises	-	X
372	Leased Property on Customer Premises	-	X
373	Street Lighting & Signal Systems [1]	-	-

[1]Assignment or "exclusive use" costs are assigned directly to the customer class or group which exclusively uses such facilities. The remaining costs are then classified to the respective cost components.

[2]The amounts between classification may vary considerably. A study of the minimum intercept method or other appropriate methods should be made to determine the relationships between the demand and customer components.

Q. WHAT IS YOUR RESPONSE TO MR. DEUPREE'S RECOMMENDATION THAT COSTS ASSOCIATED WITH DISTRIBUTION PLANT ACCOUNTS 364 THROUGH 368 BE CLASSIFIED AND ALLOCATED ON ONLY A DEMAND BASIS?

A. I disagree with Mr. Deupree's recommendation. The costs associated with distribution plant accounts 364 through 368 include facilities such as poles and

conductors, which have a significant customer-related component. These facilities are installed to deliver service to customer premises, and a substantial portion of the investment required is directly related to the number of customers and their geographic dispersion across the utility's service territory.

A well-designed and equitable distribution cost-of-service study should reflect these cost-causation factors. By contrast, Mr. Deupree's approach overlooks the influence of customer count and geographic layout on system investment needs. His proposal to classify all costs in these accounts as solely demand-related would under-assign cost responsibility to customers based on their number and location, while over-assigning costs based solely on demand. This would result in an unreasonable cost shift to larger customers served on the distribution system. I recommend that the Commission maintain the Company's proposed approach which correctly classifies distribution plant accounts 364 through 368 as partially demand-related, and partially customer-related.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

Re: Pennsylvania Public Utility Commission v. Citizens' Electric Company of Lewisburg, PA / Docket No. R-2025-3054394

Dear Judge Long:

Enclosed please find the Surrebuttal Testimony and Exhibit of Justin B. Farr, labelled OSBA Statement No.1-SR, with associated Exhibit JBF-1SR, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-referenced proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Rebecca Lyttle

Revenue Requirement Adjustments

Date Served: August 28, 2025

Date Submitted for the Record: _____

SURREBUTTAL TESTIMONY OF JUSTIN B. FARR

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Justin B. Farr. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Director in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ARE YOU THE SAME JUSTIN B. FARR WHO PREFILED DIRECT TESTIMONY AND REBUTTAL TESTIMONY IN THIS DOCKET ON BEHALF OF THE PENNSYLVANIA OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA")?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. My surrebuttal testimony responds to the rebuttal testimony of Citizens' Electric Company of Lewisburg ("Citizens" or "the Company") witness Dylan W. D'Ascendis, and Pennsylvania Office of Consumer Advocate ("OCA") witness Christopher C. Walters regarding my use of a 10% proxy return on equity ("ROE") in my revenue requirement calculations.

I respond to Citizens' witness Nathan Johnson regarding the Performance Factor Adjustment and the Size Adjustment.

I also respond to rebuttal testimony of Citizens' witness Kathy Stauder regarding statements made about sponsorship, meter expense, and my O&M inflationary adjustments.

Q. WHAT CONCLUSIONS DO YOU OFFER IN YOUR SURREBUTTAL TESTIMONY?

A. I offer the following conclusions:

1) I explain my use of a proxy ROE in my direct testimony revenue requirement calculations and provide the results of my revenue requirement calculations using the costs of capital recommended by the Bureau of Investigation & Enforcement ("I&E") and OCA.
2) I continue to recommend eliminating the performance factor entirely and lowering or removing the size factor adjustment.
3) I continue to recommend the revenue requirement adjustment of $16,051 for O&M Inflationary Adjustments as I explained in my direct testimony.

REVENUE REQUIREMENT ADJUSTMENTS

Proxy Return on Equity Adjustment

Q. PLEASE DESCRIBE YOUR PROXY ROE ADJUSTMENT.

A. I assumed the 10% ROE authorized by the Commission for the Distribution System Improvement Charge ("DSIC") included in the most recent Report on the Quarterly Earnings of Jurisdictional Utilities for the year ended December 31, 2024 produced by the Bureau of Technical Utility Services ("TUS").[1]

[1] Direct Testimony of Justin B. Farr (OSBA Statement No. 1) p. 17.

Q. DO ANY PARTIES TAKE ISSUE WITH YOUR USE OF THIS PLACEHOLDER ROE?

A. Yes. Citizens' witness Dylan W. D'Ascendis testifies that while the range of ROEs calculated by the TUS in its quarterly report is generally consistent with both his initial and updated model results – and while the upper end of the TUS ranges for gas and electric utilities aligns with his Company-specific recommendation – the TUS ranges do not account for the performance of Citizens' management. As a result, he argues the TUS analysis provides an incomplete basis for determining the Companies' appropriate ROE.[2]

OCA witness Christopher C. Walters states that he disagrees with my use of a 10% DSIC ROE from the Commission's Quarterly Earnings Report as a proxy ROE for the Company. He claims that the Commission has expressly and repeatedly rejected the use of its DSIC ROE for purposes of establishing the cost of equity in base rate proceedings and cites one case, a Pike County Light and Power rate case.[3] Mr. Walters concludes that because my proxy ROE is not grounded in a proper cost of equity analysis and is inconsistent with Commission precedent, the portion attributed to ROE of my proposed downward adjustment to the Company's revenue requirement should be rejected.[4]

Q. HOW DO YOU RESPOND TO THESE CONCERNS?

A. To clarify, I am not suggesting that the DSIC ROE be adopted in this proceeding in the absence of a detailed ROE analysis. My use of the proxy 10% DSIC ROE is

[2] Rebuttal Testimony of Dylan W. D'Ascendis (Joint Statement No. 2R) p. 3.
[3] Rebuttal Testimony of Christopher C. Walters (OCA Statement 2R) p. 14.
[4] *Id.* p.16.

not intended to replace the Commission's consideration of traditional cost of capital analyses offered by other parties in this proceeding.

Q. HAVE YOU ANALYZED THE IMPACT OF OTHER PARTIES' COST OF CAPITAL RECOMMENDATIONS ON YOUR REVENUE REQUIREMENT CALCULATIONS?

A. Yes. In Table JBF-1SR, I provide a summary of the total revenue increases that would result from utilizing I&E's and OCA's recommended return on equity rate in my revenue requirement calculations.

Table JBF-1SR
OSBA Revenue Increase with OCA and I&E ROE Recommendations

	Low	Mid	High
Source of ROE Assumption	OCA	OSBA	I&E
ROE Rate Assumption	9.50%	10.00%	10.78%
Total Revenue Increase*	$1,462,826	$1,524,881	$1,619,205
Difference from OSBA Direct	-$62,055	$0	$94,324

*Assumes adjustments made in OSBA Direct Testimony

For comparison purposes, Table JBF-2SR summarizes the total revenue increases that I recommended in my direct testimony, as well as those recommended by I&E, OCA, and Citizens.

Table JBF-2SR
Comparison of Proposed Revenue Increases

	Revenue Increase	Difference from Citizen's
Citizen's Application	$1,794,525	$0
OSBA Direct Testimony	$1,524,881	-$269,644
I&E Direct Testimony	$1,478,944	-$315,581
OCA Direct Testimony	$1,108,317	-$686,208

Performance Factor Adjustment and Size Adjustment

Q. PLEASE DESCRIBE YOUR PERFORMANCE FACTOR ADJUSTMENT AND SIZE ADJUSTMENT PROPOSALS.

A. I recommend eliminating the performance factor entirely and lowering or removing the size factor adjustment.[5]

Q. HOW DID CITIZENS RESPOND TO YOUR PERFORMANCE FACTOR ADJUSTMENT?

A. Citizens' witness Nathan Johnson states that the Company agrees there is no obligation or entitlement to performance adjustments, and that satisfactory performance does not warrant an adjustment. He states that the proposed adjustment, however, is based on exceptional performance provided above and beyond regulatory requirements and provides examples of the Company's exceptional performance as he did in direct testimony. He also states that the Commission acknowledged the adjustment in the Company's 2019 proceeding and concludes by urging the Commission to recognize the value of regulatory consistency and certainty by adopting a similar approach in this proceeding.[6]

Q. HOW DID CITIZENS RESPOND TO YOUR SIZE ADJUSTMENT PROPOSAL?

A. Mr. Johnson states that the Commission acknowledged the adjustment in the Company's 2019 proceedings and urges the Commission to recognize the value of regulatory consistency and certainty by adopting a similar approach in this proceeding. He also states that the Company has lost several major customers in

[5] Direct Testimony of Justin B. Farr (OSBA Statement No. 1) p. 15.
[6] Rebuttal Testimony of Nathan Johnson (Citizens' Statement No. 4R) pp. 2-5.

recent years, and large net metering installations continue to increase in number. In contrast, new load has failed to offset or exceed these losses.[7]

Q. HOW DO YOU RESPOND TO CITIZENS' POSITION THAT THE COMMISSION SHOULD RECOGNIZE THE VALUE OF REGULATORY CONSISTENCY AND CERTAINTY BY ADOPTING SIMILAR APPROACHES IN THIS PROCEEDING FOR THE PERFORMANCE FACTOR ADJUSTMENT AND THE SIZE ADJUSTMENT AS IN PREVIOUS PROCEEDINGS?

A. Consistency cannot be the justification for perpetuating adjustments that are unwarranted. Citizens should not receive upward adjustments simply for meeting obligations that every regulated utility is required to meet. Nor should it benefit from adjustments intended to shield it from hypothetical or speculative risks. Citizens already operates under a framework that provides consistency and certainty, as a regulated utility, the Company is guaranteed a rate of return. That guarantee offers far greater consistency and certainty than what is available to nearly all other businesses subject to competitive market forces. Extending additional adjustments in the name of consistency would only reward Citizens beyond what is reasonable or necessary.

Q. HOW DO YOU RESPOND TO MR. JOHNSON'S STATEMENT THAT THE COMPANY HAS LOST SEVERAL MAJOR CUSTOMERS IN RECENT YEARS, AND LARGE NET METERING INSTALLATIONS

[7] *Id.* p.6.

CONTINUE TO INCREASE IN NUMBER AND IN CONTRAST, NEW LOAD HAS FAILED TO OFFSET OR EXCEED THESE LOSSES?

A. The Company's claims of potential declining load are speculative. Even if the Company were to face significant load losses, it can file a new rate case with the Commission. Speculative concerns about potential load loss do not justify imposing upward adjustments that ultimately burden customers. Customers should not be forced to act as insurers for the Company against hypothetical scenarios that may never occur.

Q. DID I&E AND OCA MAKE PROPOSALS RELATED TO THE PERFORMANCE FACTOR ADJUSTMENT AND THE SIZE ADJUSTMENT?

A. Yes. Both I&E and OCA witnesses recommended eliminating the performance factor adjustment and the size adjustment.

Sponsorships & Meter Expense

Q. CITIZENS' WITNESS MS. STAUDER ATTRIBUTES PROPOSED ADJUSTMENTS TO SPONSORSHIPS AND METER EXPENSES TO YOU. DID YOU PROPOSE ADJUSTMENTS TO SPONSORSHIPS AND METER EXPENSES IN YOUR DIRECT TESTIMONY?

A. No, I did not. Ms. Stauder seems to have confused me with Mr. Walker, a witness for I&E.

O&M Inflationary Adjustment

Q. PLEASE DESCRIBE YOUR O&M INFLATIONARY ADJUSTMENT.

A. I generally agree with using a generic inflationary factor for budget items that cannot be developed through a bottom-up approach, but I proposed two modifications to the Company's methodology that resulted in a downward revenue requirement adjustment of $16,051.

First, I recommended using actual 2024 values, but since these were unavailable, I recommended using the Company's calculated 3-year average values instead of the company's "Normalized 3-year Average" to act as a proxy for 2024 values. The normalized method used by the company results in a 5.0% increase from 2023 to 2024, which is excessive compared to the historical compound annual growth rate ("CAGR") of 1.6% from 2019–2023. Using the 3-year average to represent 2024 values produces a 1.9% increase from 2023 to 2024, which is more reasonable when compared to the CAGR of 1.6% experienced over the last four years.

Second, I recommended applying a 2.0% inflation factor for escalating values to 2025 and 2026, rather than Citizens' proposed 3.0%, as 2.0% better reflects recent inflation trends for these accounts.[8]

Q. HOW DID CITIZENS RESPOND TO YOUR O&M INFLATIONARY ADJUSTMENT?

[8] Direct Testimony of Justin B. Farr (OSBA Statement No. 1) pp. 8-9.

A. Citizens witness Kathy Stauder claims that my omission of a normalization factor for past-year expenses undervalues them. She states that while I acknowledge inflation, I then fail to adjust past-year actuals accordingly.

Ms. Stauder introduces in her rebuttal testimony, for the first time in this proceeding, the actual 2024 expenses for the accounts subject to the generic inflation adjustment. These expenses total $323,888, reflecting a 7.6% increase over 2023 levels – a significant rise compared to prior years. Using the actual 2024 data, Ms. Stauder develops two new FPFTY 2026 projections based on generic inflation, yielding results of $336,890 and $340,145. She asserts that OSBA's proposed FPFTY 2026 value of $319,137 is a clear outlier, while both recalculated projections are slightly above the Company's original proposal. Despite her analysis using actual 2024 values, she recommends that the Commission accept the Company's original expense projections for these accounts, as presented in Mr. Gorman's Direct Testimony.[9]

Q. HOW DO YOU RESPOND TO MS. STAUDER'S PROPOSAL THAT THE COMPANY'S ORIGINAL PROPOSED EXPENSES FOR THESE ACCOUNTS BE ACCEPTED?

A. I disagree with Ms. Stauder's proposal. Once actual 2024 values are vetted and approved, they should be used to determine the amount for FPFTY 2026 that will be included in rates. But until that has happened, using the company's calculated 3-year average as a proxy for 2024 as I recommend, instead of the company's

[9] Rebuttal Testimony of Kathy Stauder (Citizens' Statement No. 5R) pp. 8-9.

normalized average, results in an inflation assumption that is more in line with what the company has experienced since 2019.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

Revenue Requirement Adjustments

Date Served: July 15, 2025

Date Submitted for the Record: _____

DIRECT TESTIMONY OF JUSTIN B. FARR

Section I - Introduction

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Justin B. Farr. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Director in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. My testimony is being sponsored by the Pennsylvania Office of Small Business Advocate ("OSBA").

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE AND QUALIFICATIONS.

A. My academic background includes a B.S. in economics and an M.B.A. from the University of Utah. After completing my undergraduate degree and while I was completing courses for my master's degree, I worked in the Utah Governor's Office as an economist focused on revenue forecasting and tax policy. I joined Energy Strategies in 2005, where I assist private and public sector clients in the areas of energy-related economic and policy analysis, including evaluation of electric and gas utility rate matters.

From 2013 to 2017 and again from 2020 to early 2022, I worked at PacifiCorp, a six-state electric utility that operates in Utah, Wyoming, Idaho, Oregon, Washington, and California. My roles at PacifiCorp included Manager of Economic & Financial Analysis where I led teams of engineers and plant managers in developing economic solutions for optimizing existing thermal and renewable infrastructure investment, and Assistant Manager of Regulation where I focused on the company's internal 10-year plan. Between 2017 and 2019, I served as Vice President of Financial Planning at Magnum Development where I supported the commercial development of the company's underground salt dome assets. My qualifications are attached in the Appendix to this testimony.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?

A. Yes. I testified in a proceeding concerning the Second DER Management Plan filed by PPL Electric Utilities Corp, Docket No. P-2024-3049223.

Q. HAVE YOU TESTIFIED BEFORE UTILITY REGULATORY COMMISSIONS IN OTHER STATES?

A. Yes. I have provided testimony before the Utah Public Service Commission and the Indiana Utility Regulatory Commission.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?

A. My testimony addresses recommended revenue requirement adjustments. The absence of comment on my part regarding a particular issue or revenue requirement item does not signify support for (or opposition to) the Company's filing with respect to that issue.

Q. ARE YOU MAKING A RECOMMENDATION FOR A SPECIFIC TOTAL REVENUE REQUIREMENT IN THIS CASE?

A. No. My revenue requirement adjustment recommendations address a limited number of issues. Therefore, I am not offering a recommendation for a specific total revenue requirement.

Q. PLEASE SUMMARIZE YOUR PRIMARY CONCLUSIONS AND RECOMMENDATIONS.

A. I offer the following recommendation:

I recommend certain adjustments that will have the effect of reducing the revenue requirement by $286,940 relative to the $1.6 million increase proposed by Valley Energy, Inc. ("Valley" or "the Company"). My recommended adjustments are outlined in Table JBF-1 presented later in my testimony. My recommended reduction does not account for or incorporate any other adjustments advanced by other parties that are not specifically addressed in my testimony.

Section II - Revenue Requirement Adjustments

Q. BRIEFLY DESCRIBE THE REVENUE REQUIREMENT INCREASE BEING REQUESTED BY VALLEY IN THIS CASE.

A. Valley is requesting a $1,626,099 increase in annual distribution revenue, representing a 29.6% increase over present distribution rates. The requested increase is based on a Fully Projected Future Test Year ("FPFTY") ending

December 31, 2026, and is designed to produce an overall rate of return of 8.27% on Valley's rate base.[1]

Q. DO YOU HAVE ANY RECOMMENDED ADJUSTMENTS TO VALLEY'S PROPOSED REVENUE REQUIREMENT?

A. Yes. My recommended adjustments would reduce Valley's proposed revenue requirement increase by $286,940. As discussed in greater detail later in my testimony, this reduction incorporates a proxy return on equity ("ROE") of 10.15%, which is derived from the ROE authorized by the Commission for the Distribution System Improvement Charge ("DSIC") applicable to most natural gas utilities in the state. Table JBF-1 presents a summary of my recommended adjustments.

Table JBF-1
Summary of OSBA Adjustments to Valley's Revenue Requirement

	OSBA Adjustments	Revenue Requirement
Revenue Requirement Increase Requested by Valley		**1,626,099**
Income Tax Rate Adjustment		
Change PA Income Tax Rate from 9.99% to 7.49%	(98,668)	
Proxy Return on Equity		
Change ROE from 11.65% to Proxy 10.15%	(185,644)	
Uncollectables	(2,628)	
Adjusted Revenue Requirement Increase		**1,339,159**

I provide more detail for each of these recommended adjustments as follows:

[1] Direct Testimony of Howard S. Gorman (Valley Statement No. 1), page 15.

Pennsylvania Corporate Income Tax Rate Adjustment

Q. DESCRIBE THE PENNSYLVANIA CORPORATE NET INCOME TAX RATE AND ITS HISTORY.

A. For nearly three decades, Pennsylvania maintained a flat Corporate Net Income ("CNI") Tax rate of 9.99%, among the highest in the United States. This rate remained unchanged from 1995 until 2022. In July 2022, the Pennsylvania General Assembly enacted Act 53-2002 (H.B. 1342), initiating a phased reduction of the CNI Tax rate over nine years. The schedule for the rate reductions is as follows[2]:

Table JBF-3
Pennsylvania Corporate Net Income Tax Rates

Tax Year	CNIT Rate
January 1, 2023 - December 31, 2023	8.99 percent
January 1, 2024 - December 31, 2024	8.49 percent
January 1, 2025 - December 31, 2025	7.99 percent
January 1, 2026 - December 31, 2026	7.49 percent
January 1, 2027 - December 31, 2027	6.99 percent
January 1, 2028 - December 31, 2028	6.49 percent
January 1, 2029 - December 31, 2029	5.99 percent
January 1, 2030 - December 31, 2030	5.49 percent
January 1, 2031 and each taxable year thereafter	4.99 percent

Q. WHAT PENNSYLVANIA CNI TAX RATE WAS USED IN THE DEVELOPMENT OF THE COMPANY'S REQUESTED INCREASE IN REVENUE REQUIREMENT IN THIS CASE?

A. The Company used 9.99% as the Pennsylvania corporate income tax rate.[3]

Q. WHAT PENNSYLVANIA CNI TAX RATE DO YOU RECOMMEND?

[2] https://www.pa.gov/agencies/revenue/resources/tax-rates/corporation-tax-rates.html

[3] Direct Testimony of Howard S. Gorman (Valley Statement No. 1), page 15.

A. I recommend using 7.49% as the CNI Tax rate for FPFTY 2026, which is the tax rate enacted by Act 53-2022 for calendar year 2026, and to require the company to reflect actual CNI rates for the post-2026 tax years through the Company's Rider "B" - State Tax Surcharge until the next rate case proceeding.

Q. WHAT IS THE IMPACT OF THIS ADJUSTMENT?

A. As reported in Table JBF-1, this adjustment would reduce the revenue requirement by $98,668 in FPFTY 2026.

Adjustments to the Common Equity Cost Rates

Q. WHAT IS THE PERFORMANCE FACTOR ADJUSTMENT?

A. Valley witness Edward E. Rogers explains that Section 523 of the Public Utility Code provides the Commission's guidelines for performance adjustments. He states that counsel has advised him that the Public Utility Code identifies several criteria to be considered in assessing the performance of a fixed utility for purposes of a performance factor adjustment, including consideration of any relevant and material evidence of efficiency, effectiveness, and adequacy of service. Mr. Rogers provides information on Valley's operations, which he asserts support receiving a performance factor adjustment.[4]

Q. WHAT IS VALLEY'S PROPOSED PERFORMANCE FACTOR ADJUSTMENT?

A. Valley proposes a performance factor adjustment of a 5-basis point addition to the cost of common equity.[5]

[4] Direct Testimony of Edward W. Rogers (Valley Statement No.4), pp. 9-11.
[5] Revised Direct Testimony of Dylan W. D'Ascendis (Joint Statement No. 2), page 52.

Q. WHAT IS YOUR RESPONSE TO VALLEY'S PROPOSED PERFORMANCE FACTOR ADJUSTMENT?

A. Utilities are expected to provide safe and reliable service to their customers. They should also deliver quality customer service, upgrade their systems, and manage their costs effectively. Utilities already receive a guaranteed rate of return for performing these functions. Providing an additional upward adjustment for effective operations, at the expense of customers, is excessive.

Q. WHAT IS THE SIZE ADJUSTMENT?

A. Valley witness Dylan D'Ascendis explains that the Companies' smaller size relative to the Gas Utility Proxy Group indicates greater relative business risk for the Company because, all else being equal, size has a material bearing on risk. He asserts that size affects business risk because smaller companies generally are less able to cope with significant events that affect sales, revenues and earnings. For example, smaller companies face more risk exposure to business cycles and economic conditions, both nationally and locally. Additionally, Mr. D'Ascendis states that the loss of revenue from a few larger customers would have a greater effect on a small company than on a bigger company with a larger, more diverse, customer base.[6]

Q. WHAT EXAMPLES OF SIZE RISK ARE PROVIDED BY VALLEY?

A. Valley cites the ability of many of its largest customers to switch from natural gas to a different fuel source as a risk that is enhanced by its small size. Valley witness Mr. Rogers states, "…our five largest customers represent approximately

[6] Revised Direct Testimony of Dylan W. D'Ascendis (Joint Statement No. 2), page 47.

32% of our annual distribution margins, and three of the five have dual-fuel capabilities…In addition to the largest customers, many of our other customers have access to potential alternatives to natural gas service, including propane, fuel oil, wood and electric."[7]

Q. WHAT IS VALLEY'S PROPOSED SIZE ADJUSTMENT?

A. Valley proposes a size factor adjustment of a 100-basis point addition to the cost of common equity.[8]

Q. WHAT IS YOUR RESPONSE TO VALLEY'S PROPOSED SIZE FACTOR ADJUSTMENT?

A. The Company's arguments for an upward adjustment focus only on potential losses, without acknowledging the possibility of potential gains. While it is true that a small company losing a large customer could experience reduced revenues, it is also possible for the company to gain large customers, therefore increasing revenues. At the very least, new customers could offset the impact of losing existing ones.

Also, Mr. Rogers' argument that a size factor adjustment is justified due to the risk of its largest customers switching from natural gas to other types of fuel is counter intuitive. Adding 100-basis points to the cost of common equity will increase the price of natural gas service, which in turn will increase the risk of fuel switching, resulting in the loss of customers.

Customers should not bear the burden of shielding a utility from every possible risk, particularly when utilities have the ability to file a rate case with the

[7] Direct Testimony of Edward E. Rogers (Valley Statement No. 4), page 8. [8] Direct Testimony of Howard S.

Gorman (Valley Statement No. 1), page 15.

Commission to address extreme risks if they arise. A 100-basis-point upward adjustment to account for unspecified risks, and likely even increase some of the risks, is excessive.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE PERFORMANCE FACTOR ADJUSTMENT AND THE SIZE FACTOR ADJUSTMENT?

A. I recommend eliminating the performance factor adjustment entirely and lowering or removing the size factor adjustment. These changes support, and help justify, a lower return on equity ("ROE") for the company, which I will discuss in greater detail below.

Proxy Return on Equity Adjustment

Q. WHAT ROE IS VALLEY REQUESTING IN THIS PROCEEDING?

A. Valley witness Dylan W. D'Ascendis recommends a ROE of 11.65%.[9]

Q. DO YOU SUPPORT VALLEY'S REQUESTED ROE?

A. No.

Q. WHAT OBSERVATIONS HAVE YOU MADE IN REGARD TO VALLEY'S REQUESTED ROE?

A. A comparison of Valley's requested ROE of 11.65% with the most recent Report on the Quarterly Earnings of Jurisdictional Utilities for the year ending December 31, 2024, produced by the Bureau of Technical Utility Services indicates to me that the requested 11.65% is too high and should be adjusted down. Based on the

9 Revised Direct Testimony of Dylan W. D'Ascendis (Joint Statement No. 2), page 6.

report, the current market indicated ROE for natural gas utilities as calculated by the Bureau of Technical Utility Services should fall within the range of 8.92% to 12.05%[10]. This report is included as Exhibit JBF-1 at the end of my testimony.

A review of recently completed rate cases across the country for natural gas distribution companies that were either settled, or fully litigated within the last year, suggests that the proper ROE is likely near the lower part of the range provided by the Bureau of Technical Utility Services. The average authorized ROE in cases involving gas distribution companies that were approved between June 1, 2024, and June 30, 2025, is 9.70%. A detailed listing of approved ROE's from rate cases finalized over the last year is included at the end of my testimony as Exhibit JBF-2. I present the ROE's of a subset of natural gas distribution utility cases that were finalized in 2025 in Table JBF-4.

Table JBF-4
Survey of Approved ROE's for Natural Gas Distribution Companies
Between January 1, 2025 & June 30, 2025

State	Company	Case identification	Approved Date	ROE (%)
OR	Avista Corporation	D-UG-519	5/23/2025	9.50
VA	Columbia Gas of Virginia, Incorporated	C-PUR-2024-00030	5/15/2025	9.75
TX	Atmos Energy Corporation	D-OS-24-00018879	5/13/2025	9.80
MD	Columbia Gas of Maryland, Incorporated	C-9754	4/22/2025	9.80
VA	Roanoke Gas Company	C-PUR-2024-00006	4/10/2025	9.90
AZ	Southwest Gas Corporation	D-G-01551A-23-0341	3/27/2025	9.84
NY	Orange and Rockland Utilities, Inc.	C-24-G-0061	3/20/2025	9.75
WA	Cascade Natural Gas Corporation	D-UG-240008	2/24/2025	9.50

WA	Puget Sound Energy, Inc.	D-UG-240005	1/15/2025	9.90
NC	Piedmont Natural Gas Company, Inc.	D-G-9 Sub 837	1/7/2025	9.80
			Average	9.74

[10] Exhibit JBF-1, Report on the Quarterly Earnings of Jurisdictional Utilities (Year ending December 31, 2024, page 14.

Q. DO YOU RECOMMEND A SPECIFIC ROE?

A. No, I do not have a recommendation for a specific ROE but rather defer to analysis and recommendations promulgated by the Office of Consumer Advocate ("OCA") and the Bureau of Investigation and Enforcement ("I&E"). However, for purposes of my testimony, I have assumed a proxy 10.15% ROE based upon the Commission's approved ROE for Distribution System Improvement Charge (DSIC) included in the most recent Report on the Quarterly Earnings of Jurisdictional Utilities[11] for the year ended December 31, 2024 produced by the Bureau of Technical Utility Services referenced previously.

Q. WHAT IS THE REVENUE REQUIREMENT IMPACT OF USING A PROXY 10.15% ROE?

A. As reported in Table JBF-1, this adjustment would reduce revenue requirement by $185,644 in FPFTY 2026.

<u>Accounts 874 through 880, 889, 920, 932</u>

Q. DO O&M ACCOUNTS 874 THROUGH 880, 889, 920, AND 932 CONTAIN ERRORS IN VALLEY'S APPLICATION TO THE COMMISSION?

A. Yes, they do.

Q. PLEASE EXPLAIN.

A. In several responses to interrogatories posed by I&E in set I&E-RE, Valley stated, "An incorrect source document was inadvertently used for the 2025 expenses in Accounts 874 through 880, 889, 920, and 932. We are in the process of preparing

[11] Exhibit JBF-1, Report on the Quarterly Earnings of Jurisdictional Utilities (Year ending December 31, 2024, page 15.

revisions to Exhibit HSG-1 to correct this oversight, which we will send to the parties (and file with the Commission)."[12]

Q. HAVE YOU RECEIVED THE REVISED EXHIBIT HSG-1?

A. No, I have not. Intervening parties should have the ability to review and make recommended adjustments to those accounts once the revised Exhibit HSG-1 is available.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

Vitae

Professional Experience

Energy Strategies, Salt Lake City UT, April 2022 - Present
An energy consulting firm focused on regulatory services, policy, and markets serving power producers, transmission developers, utilities, government agencies, NGO's, and large energy users

Director

- Perform energy-related economic and policy analysis, regulatory intervention, and strategic negations on behalf of industrial, commercial, and public sector interests
- Provide risk management and market fundamentals analysis to large consumers of natural gas
- Executive director of the Utah Association of Energy Users

PacifiCorp, Salt Lake City UT, January 2020 – April 2022
Berkshire Hathaway owned electric utility serving over 1.6 million customers in Utah, Oregon, Washington, Wyoming, Idaho, and parts of Northern California

Assistant Manager of Regulation, March 2021 – April 2022
Senior Fuels Manager, January 2020 – March 2021

- Performed rate projections tied to the company's 10-year plan
- Provided testimony on the Renewable Energy Credits balancing account
- Procured fuel and managed contracts for company owned and jointly owned thermal plants

Magnum Development, Holladay UT, 2017 – Oct 2019
Private Equity backed developer of utility-scale storage in underground salt caverns. Developing storage for natural gas, compressed air created from renewable electricity, green hydrogen, and helium.

Vice President of Financial Planning, January 2019 – October 2019
Assistant Vice President of Financial Planning, February 2017 – December 2018

- Worked on commercial team developing bidding strategies and analysis to support joint development negotiations

- Managed all financial and economic modeling across all of Magnum's business verticals including: Magnum Midstream (Natural Gas), Magnum Compressed Air Energy Storage (CAES), Magnum Hydrogen, and Magnum Industrial Gases (Helium)

PacifiCorp, Salt Lake City UT, 2013 – 2017
Berkshire Hathaway owned electric utility serving over 1.6 million customers in Utah, Oregon, Washington, Wyoming, Idaho, and parts of Northern California

Manager Economic & Financial Analysis, August 2015 – February 2017
Senior Financial Planning Analyst, October 2013 – August 2015

- Managed team of Sr. Financial Analysts responsible for economic analysis, internal audit of joint owned plants, and annual budget of resource development division
- Led team of engineers, plant managers, and vice presidents in developing economic solutions that optimized existing thermal and renewable infrastructure investment
- Developed economic models to explore new resource development opportunities such as utility scale solar and battery installations
- Prepared annual cost of generation report for senior management

Energy Strategies, Salt Lake City UT, 2005 – 2013
An energy consulting firm focused on regulatory services, policy, and markets serving power producers, transmission developers, utilities, government agencies, NGO's, and large energy users

Senior Consultant, January 2010 – October 2013
Consultant, July 2005 – December 2009

- Developed strategies for clients with energy infrastructure that optimized environmental performance and financial objectives while meeting their utility requirements
- Performed market studies focused on thermal & renewable energy need, transmission availability, pricing, and impacts of public policy initiatives. Studies were designed to inform and improve clients' energy decisions including risk management and procurement strategy.

Education

- Master of Business Administration, University of Utah, May 2005
- Bachelor of Science in Economics/Business Minor, University of Utah, May 2000
- Graduated Magna Cum Laude; GPA 3.92
- Honors at Entrance Scholarship; 1999-2000 Law & Economic Society Fellowship

Expert Testimony

"In the Matter of the Petition of PPL Electric Utilities Corp for Approval of its Second Distributed Energy Resources Management Plan," Public Utilities Commission of **Pennsylvania**, Docket No. P-2024-3049223. Direct testimony submitted September 17, 2024. Surrebuttal testimony filed January 22, 2024.

"In the Matter of the Verified Petition of Indiana Michigan Power Company for Approval of Modifications to its Industrial Power Tariff – Tariff IP," **Indiana** Utility Regulatory Commission, Cause No. 46097. Direct testimony submitted October 15, 2024. Cross-Answering testimony filed November 4, 2024. Settlement testimony filed December 4, 2024.

"In the Matter of the Application of Rocky Mountain Power for Authority to Revise Rates in Tariff Schedule 98, Renewable Energy Credits Balancing Account," **Utah** Public Service Commission, Docket No. 22-035-07. Direct testimony submitted March 15, 2022.

TABLE OF CONTENTS

Page No.

Introduction..... 4

Attachment A – Summary of Equity Returns..... 5

Attachment B – Summary of Returns..... 12
This chart depicts the overall and equity returns (actual and adjusted) for the filing utilities for the current quarter. The last authorized equity returns and the year authorized is also shown.

Attachment C – Allowed Rates of Return on Common Equity..... 14
This is a historical chart that shows the most recent rate cases for select companies in electric, gas, and water. A docket number followed by their final return on equity and year is also given.

Attachment D – Distribution System Improvement Charge Return on Equity 15
Compares utility adjusted return on equity to Commission authorized return on equity for utilities with a Distribution System Improvement Charge.

Attachment E – Explanation of Return on Equity Methods 16
Criteria for determining the industry barometer groups used in ROE calculations. Also, provides details of the Discounted Cash Flow equation and Capital Asset Pricing Model equation.

Attachment F – Market Based Returns on Equity – Electric..... 18
The market indicated common equity cost rate range consists of data used from the electric barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment F – Historic DCF and CAPM – Electric..... 19
Historic barometer group DCF and CAPM average ROEs.

Attachment F – Electric Barometer Group Calculation of a Current and 52 Week Average Dividend Yield..... 20-21
Electric barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment F – Development of a Representative Dividend Growth Rate..... 22
Multiple sources of the gas barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Attachment G – Market Based Returns on Equity – Gas..... 23
The market indicated common equity cost rate range consists of data used from the gas barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment G – Historic DCF and CAPM – Gas 24
Historic barometer group DCF and CAPM average ROEs, including a linear trend line graph.

Attachment G – Gas Barometer Group Calculation of a Current and 52 Week Average Dividend Yield 25
Gas barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment G – Development of a Representative Dividend Growth Rate 26
Multiple sources of the gas barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Attachment H – Market Based Returns on Equity – Water 27
The market indicated common equity cost rate range consists of data used from the water barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment H – Historic DCF and CAPM – Water 28
Historic barometer group DCF and CAPM average ROEs, including a linear trend line graph.

Attachment H – Water Barometer Group Calculation of a Current and 52 Week Average Dividend Yield 29
Water barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment H – Development of a Representative Dividend Growth Rate 30
Multiple sources of the water barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Introduction:

On September 20, 1991, the Commission initiated a rulemaking at L-00910061 pertaining to earnings disclosures by the public utilities subject to its jurisdiction. At that docket, the Commission stated that the submission of accurate, reliable, and complete earnings disclosure reports, at regular intervals, is essential to the fulfillment of the broad regulatory oversight responsibilities entrusted to the Commission by the Legislature in the Public Utility Code. The earnings disclosure regulations promulgated by the Commission were adopted October 1, 1992, and published January 23, 1993, at 23 Pa.B. 463. Based upon those regulations, codified at 52 Pa. Code, Chapter 71, a reporting format was developed and distributed to the jurisdictional fixed utilities of Pennsylvania.

All fixed utilities having jurisdictional revenues of $1,000,000 or more, for a calendar year, are required to file the report by March 31 of each year. Such reports are to be based upon the results of operations for the 12-month period ending December 31 of the prior year. Utilities having more than $10,000,000 in jurisdictional revenues are also required to file reports for the 12 months ending on March 31, June 30, and September 30 of each year.[1] On November 30, 2004, however, the Pennsylvania General Assembly signed into law Act 183 concerning alternative telecommunications regulation and broadband deployment. As a result of Act 183, the reporting requirements for the PUC jurisdictional telecommunications companies of Pennsylvania have been streamlined at section 3015(e) of the Public Utility Code. A quarterly earnings report is not listed among those reports now required of PUC jurisdictional telecommunications utilities in Pennsylvania and, therefore, this report does not address telephone company earnings.

The reports have been filed for the period ending December 31, 2024, at Docket No. M-2025-3052807.[2] The Finance Staff of the Bureau of Technical Utility Services has reviewed the reports and has prepared this summary report for public release. This report sets forth the achieved return on equity for each company, the last allowed return for that utility, a market return as determined through the analysis of the barometer group data and the most recent returns allowed, per industry, by the Pennsylvania Public Utility Commission and by other regulatory bodies. Where a utility has not filed a report, the reasons for not filing are indicated.

Questions pertaining to the preparation and contents of this Report should be directed to Mr. Marc Hoffer, Manager - Finance, Bureau of Technical Utility Services, at (717) 787-1869.

[1] Per Commission regulations at 52 Pa. Code § 71.3(a)(1), the major electric utilities are specifically identified by name rather than utilizing the $10,000,000 revenue threshold utilized by gas and water utilities.

[2] Columbia Gas of PA Inc., UGI Utilities, Inc. – Gas Division, and FirstEnergy Pennsylvania Electric Co. have rate filings at Docket Nos. R-2025-3053499, R-2024-3052716, and R-2024-3047068, respectively, and have filed a letter with the Secretary in place of a report in accordance with 52 Pa. Code § 71.4.

Attachment A

The equity return summaries that follow in Attachment A are, for each quarter;

ACTUAL

1. Based on actual results of operations

and

ADJUSTED

2. Based on company proposed pro forma and ratemaking adjustments

Veolia Water Pennsylvania, Inc.	5.36	9.75
Columbia Water Company	6.86	9.75
Newtown Artesian Water	2.52	9.75

* Columbia Gas of PA Inc., UGI Utilities, Inc. – Gas Division, and FirstEnergy Pennsylvania Electric Co. have rate filings at Docket Nos. R-2025-3053499, R-2024-3052716, and R-2024-3047068, respectively, and have filed a letter with the Secretary in place of a report in accordance with 52 Pa. Code § 71.4.

3 Each utility lists adjustments on Schedule B of their quarterly financial report.
4 The ROE is approved in a utility's most recent fully litigated base rate proceeding for hich a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years have elapsed between the entry of a final order and the DSIC effective date, the ROE is from this report. If the base rate proceeding is settled, without a stipulated ROE, the ROE is from this report.

Explanation of Discounted Cash Flow (DCF) and Capital Asset Pricing Model (CAPM)

Barometer Group Criteria

The criteria used for determining the industry barometer groups used to calculate ROEs in this report are as follows:

- 50% or more of the company's assets must be related to the jurisdictional utility industry;
- The company's stock must be publicly traded and must have at least three years of earnings history;
- Companies targeted by merger and acquisition (M&A) activity will be excluded; companies involved in M&A activity may be excluded;
- Investment information for the company must be available to the Commission from more than one source;
- The barometer group companies must have an investment grade credit rating (S&P BBB- or better, Moody's Baa3 or better); and
- Geographic Regions:
  EDCs: *Value Line* Investment Survey's East, Central, and West Group Electric Utility companies;
  NGDCs: *Value Line* Investment Survey's Natural Gas Utility industry group companies;
  Water/Wastewater: *Value Line* Investment Survey's Water Utility industry group companies.

The barometer group companies are reviewed by staff on a quarterly basis and make any changes to these companies based upon the criteria above.

ROE Calculations

The Commission consistently uses the DCF model to determine the appropriate cost of equity for utilities. In this report, the DSIC ROE is calculated using two DCF models.

TUS uses the following formula to calculate the current dividend DCF: $K = D_1/P_0 + G$

TUS uses the following formula to calculate the 52-week average dividend DCF: $K = D_0/P_a + G$

Definitions:

K	=	Cost of equity
D_1	=	Dividend expected during the year
	=	$D_0 + ½g$
D_0	=	Latest indicated dividend, obtained from Yahoo! Finance
g	=	Expected 5-year dividend growth rate of barometer group obtained from Value Line Investment Survey.
P_0	=	Current price of the stock, obtained from Yahoo! Finance
P_a	=	Average of high and low stock price over the latest 52-week period, obtained from Yahoo! Finance
G	=	Average of 5-year expected earnings growth rate forecasts obtained from Value Line, Zacks Investment Survey, and S&P Capital IQ.

The CAPM uses the yield of a risk-free interest-bearing obligation plus a rate of return premium that is proportional to the systematic risk of an investment.

TUS uses the following formula to calculate CAPM: $K = R_f + \beta(R_m - R_f)$

Three components are necessary to calculate the CAPM cost of equity:

β	=	Beta, a measure of systematic risk for each stock
R_f	=	The risk-free rate of return, 10-year U.S. Treasury yields are used for R_f. Yields are taken from the previous two quarters and forecasted next four quarters.
R_m	=	Total return of the equity market as determined by Kroll

The Commission determines the ROE used for DSIC purposes based on the range of reasonableness from the DCF barometer group data, CAPM data, recent ROE adjudicated by the Commission, and informed judgment.

The market indicated common equity cost rate range consists of data used from the barometer groups and is based on a series of calculations to average the DCF methods.

Market Based Returns on Common Equity[1]	
April 7, 2025

Revenue Requirement Adjustments

Date Served: August 28, 2025

Date Submitted for the Record: _____

SURREBUTTAL TESTIMONY OF JUSTIN B. FARR

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Justin B. Farr. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Director in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ARE YOU THE SAME JUSTIN B. FARR WHO PREFILED DIRECT TESTIMONY IN THIS DOCKET ON BEHALF OF THE PENNSYLVANIA OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA")?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. My surrebuttal testimony responds to the rebuttal testimony of Valley Energy, Inc ("Valley" or "the Company) witness Dylan W. D'Ascendis, and Pennsylvania Office of Consumer Advocate ("OCA") witness Christopher C. Walters regarding my use of a 10% proxy return on equity ("ROE") in my revenue requirement calculations.

I respond to Valley witness Edward E. Rogers regarding the Performance Factor Adjustment and Size Adjustment.

I also respond to Valley witness Howard S. Gorman regarding my Uncollectibles expense adjustment.

Q. WHAT CONCLUSIONS DO YOU OFFER IN YOUR SURREBUTTAL TESTIMONY?

A. I offer the following conclusions:

1) I explain my use of a proxy ROE in my direct revenue requirement calculations and provide the results of my revenue requirement calculations using the costs of capital recommended by the Bureau of Investigation & Enforcement ("I&E") and OCA.
2) I continue to recommend eliminating the performance factor entirely and lowering or removing the size factor adjustment.
3) I continue to recommend a decrease in Uncollectables expense of $2,628 reflected in Table JBF-1 of my direct testimony.

REVENUE REQUIREMENT ADJUSTMENTS

Proxy Return on Equity Adjustment

Q. PLEASE DESCRIBE YOUR PROXY ROE ADJUSTMENT.

A. I assumed the 10.15% ROE authorized by the Commission for the Distribution System Improvement Charge ("DSIC") for natural gas utilities included in the most recent Report on the Quarterly Earnings of Jurisdictional Utilities for the year ended December 31, 2024 produced by the Bureau of Technical Utility Services ("TUS").[1]

[1] Direct Testimony of Justin B. Farr (OSBA Statement No. 1) p. 11.

Q. DO ANY PARTIES TAKE ISSUE WITH YOUR USE OF THIS PLACEHOLDER ROE?

A. Yes. Citizens' witness Dylan W. D'Ascendis testifies that while the range of ROEs calculated by the TUS in its quarterly report is generally consistent with both his initial and updated model results – and while the upper end of the TUS ranges for gas and electric utilities aligns with his Company-specific recommendation – the TUS ranges do not account for the performance of Valley's management. As a result, he argues the TUS analysis provides an incomplete basis for determining the Companies' appropriate ROE.[2]

OCA witness Christopher C. Walters states that he disagrees with my use of a 10.15% DSIC ROE from the Commission's Quarterly Earnings Report as a proxy ROE for the Company. He claims that the Commission has expressly and repeatedly rejected the use of its DSIC ROE for purposes of establishing the cost of equity in base rate proceedings and cites one case, a Pike County Light and Power rate case.[3] Mr. Walters concludes that because my proxy ROE is not grounded in a proper cost of equity analysis and is inconsistent with Commission precedent, the portion attributed to ROE of my proposed downward adjustment to the Company's revenue requirement should be rejected.[4]

Q. HOW DO YOU RESPOND TO THESE CONCERNS?

A. To clarify, I am not suggesting that the DSIC ROE be adopted in this proceeding in the absence of a detailed ROE analysis. My use of the proxy 10.15% DSIC ROE

[2] Rebuttal Testimony of Dylan W. D'Ascendis (Joint Statement No. 2R) p. 3.
[3] Rebuttal Testimony of Christopher C. Walters (OCA Statement 2R) pp. 11-13.
[4] *Id.* p.13.

is not intended to replace the Commission's consideration of traditional cost of capital analyses offered by other parties in this proceeding.

Q. HAVE YOU ANALYZED THE IMPACT OF OTHER PARTIES' COST OF CAPITAL RECOMMENDATIONS ON YOUR REVENUE REQUIREMENT CALCULATIONS?

A. Yes. In Table JBF-1SR I provide a summary of the total revenue increases that would result from utilizing I&E's and OCA's recommended return on equity in my revenue requirement calculations.

Table JBF-1SR
OSBA Revenue Increase with OCA and I&E ROE Recommendations

	Low	Mid	High
Source of ROE Assumption	OCA	OSBA	I&E
ROE Rate Assumption	9.50%	10.15%	10.51%
Total Revenue Increase*	$1,227,958	$1,339,159	$1,398,235
Difference from OSBA Direct	-$111,201	$0	$59,075

*Assumes adjustments made in OSBA Direct Testimony

For comparison purposes, Table JBF-2SR summarizes the total revenue increases that I recommended in my direct testimony, as well as those recommended by I&E, OCA, and Valley.

Table JBF-2SR
Comparison of Proposed Revenue Increases

	Revenue Increase	Difference from Valley
Valley Application	$1,626,099	$0
OSBA Direct Testimony	$1,339,159	-$286,940
I&E Direct Testimony	$1,212,076	-$414,023
OCA Direct Testimony	$963,630	-$662,469

Performance Factor Adjustment and Size Adjustment

Q. PLEASE DESCRIBE YOUR PERFORMANCE FACTOR ADJUSTMENT AND SIZE ADJUSTMENT PROPOSALS.

A. I recommend eliminating the performance factor entirely and lowering or removing the size factor adjustment.[5]

Q. HOW DID VALLEY RESPOND TO YOUR PERFORMANCE FACTOR ADJUSTMENT?

A. Valley witness Edward E. Rogers states that Valley is committed to exceeding performance standards, not merely meeting them.[6] He states that a performance adjustment mechanism is available under Pennsylvania statute, and he believes Valley has earned it based on the Company's achievements and initiatives which he outlined in his Direct Testimony.[7]

Q. HOW DID VALEY RESPOND TO YOUR SIZE ADJUSTMENT PROPOSAL?

A. Mr. Roger's referred to his Direct Testimony that explains the risk of losing one or more of the largest customers who have access to potential alternatives to natural gas service. He additionally states that the Commission has previously approved a size adjustment for small utilities, including Valley.[8] He claims that when the Company is making investment decisions and planning for future financial activities, including the timing of rate cases, it is important for them to be able to use consistent assumptions and that large changes in regulatory treatment on the

[5] Direct Testimony of Justin B. Farr (OSBA Statement No. 1) p. 9.
[6] Rebuttal Testimony of Edward E. Rogers (Valley Statement No. 4R) p. 3.
[7] *Id.* p. 4.
[8] *Id.*

size adjustment would complicate their planning and create additional financial risk for Valley.[9]

Q. HOW DO YOU RESPOND TO VALLEY'S CONCERN THAT LARGE CUSTOMERS HAVE ACCESS TO POTENTIAL ALTERNATIVES TO NATURAL GAS SERVICE?

A. The decision of large customers to pursue alternative energy sources is primarily influenced by cost considerations. As Valley's prices increase, so does the likelihood that customers with the flexibility to switch will do so. Implementing the size adjustment will raise costs further, thereby exacerbating the very risk that Valley asserts the adjustment is intended to mitigate.

Q. HOW DO YOU RESPOND TO VALLEY'S POSITION THAT IT IS VERY IMPORTANT FOR THE COMPANY TO BE ABLE TO USE CONSISTENT ASSUMPTIONS AND THAT LARGE CHANGES IN REGULATORY TREATMENT ON THE SIZE ADJUSTMENT WOULD COMPLICATE PLANNING AND CREATE ADDITIONAL RISK FOR THE COMPANY?

A. Consistency cannot be the justification for perpetuating adjustments that are unwarranted. Valley should not receive upward adjustments simply for meeting obligations that every regulated utility is required to meet. Nor should it benefit from adjustments intended to shield it from hypothetical or speculative risks. Valley already operates under a framework that provides consistency and certainty, as a regulated utility, the Company is guaranteed a rate of return. That guarantee offers far greater consistency and certainty than what is available to nearly all other

[9] *Id.* p.6.

businesses subject to competitive market forces. Extending additional adjustments in the name of consistency would only reward Valley beyond what is reasonable or necessary.

Q. DID I&E AND OCA MAKE PROPOSALS RELATED TO THE PERFORMANCE FACTOR ADJUSTMENT AND THE SIZE ADJUSTMENT?

A. Yes. Both I&E and OCA witnesses recommended eliminating the performance factor adjustment and the size adjustment.

Uncollectibles Expense

Q. PLEASE DESCRIBE YOUR UNCOLLECTIBLES EXPENSE ADJUSTMENT.

A. In my direct testimony, Table JBF-1 shows a decrease in Uncollectibles expense of $2,628.[10]

Q. HOW DID VALLEY RESPOND TO YOUR UNCOLLECTIBLES EXPENSE ADJUSTMENT PROPOSAL?

A. Valley Witness Howard S. Gorman states that I include this decrease and offer no support for this proposed change, and that it should be rejected by the Commission.[11]

Q. HOW DO YOU RESPOND TO MR. GORMAN'S CLAIM THAT YOU PROVIDE NO SUPPORT FOR THIS PROPOSED CHANGE AND IT SHOULD BE REJECTED BY THE COMMISSION?

[10] Direct Testimony of Justin B. Farr (OSBA Statement No. 1) p. 4.
[11] Rebuttal Testimony of Howard S. Gorman (Valley Statement No. 1R) p. 10.

A. Valley Energy Exhibit HSG-1, worksheet C1-6 includes an Uncollectibles expense amount of $14,892. This figure is calculated by applying a rate of 0.924% to the projected increase in revenue required to achieve the requested return in FPFTY 2026. In my analysis, I used the exact same formula Valley applied: 0.924% multiplied by the revenue increase required, based on the adjustments I recommend. Using this method results in an Uncollectibles expense of $12,264, $2,628 less than the Company's request.

If the Commission ultimately disagrees with Valley's assumption of a 0.924% Uncollectibles rate, then the entire $14,892 proposed by Valley should be rejected or at least adjusted based upon the Commission's determination of a proper Uncollectibles rate assumption.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

DIRECT TESTIMONY OF JUSTIN B. FARR

Section I - Introduction

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Justin B. Farr. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Director in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. My testimony is being sponsored by the Pennsylvania Office of Small Business Advocate ("OSBA").

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE AND QUALIFICATIONS.

A. My academic background includes a B.S. in economics and an M.B.A. from the University of Utah. After completing my undergraduate degree and while I was completing courses for my master's degree, I worked in the Utah Governor's Office as an economist focused on revenue forecasting and tax policy. I joined Energy Strategies in 2005, where I assist private and public sector clients in the areas of energy-related economic and policy analysis, including evaluation of electric and gas utility rate matters.

From 2013 to 2017 and again from 2020 to early 2022, I worked at PacifiCorp, a six-state electric utility that operates in Utah, Wyoming, Idaho, Oregon, Washington, and California. My roles at PacifiCorp included Manager of Economic & Financial Analysis where I led teams of engineers and plant managers in developing economic solutions for optimizing existing thermal and renewable infrastructure investment, and Assistant Manager of Regulation where I focused on the company's internal 10-year plan. Between 2017 and 2019, I served as Vice President of Financial Planning at Magnum Development where I supported the commercial development of the company's underground salt dome assets. My qualifications are attached in the Appendix to this testimony.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?

A. Yes. I testified in a proceeding concerning the Second DER Management Plan filed by PPL Electric Utilities Corp, Docket No. P-2024-3049223.

Q. HAVE YOU TESTIFIED BEFORE UTILITY REGULATORY COMMISSIONS IN OTHER STATES?

A. Yes. I have provided testimony before the Utah Public Service Commission and the Indiana Utility Regulatory Commission.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?

A. My testimony addresses recommended revenue requirement adjustments. The absence of comment on my part regarding a particular issue or revenue requirement item does not signify support for (or opposition to) the Company's filing with respect to that issue.

Q. ARE YOU MAKING A RECOMMENDATION FOR A SPECIFIC TOTAL REVENUE REQUIREMENT IN THIS CASE?

A. No. My revenue requirement adjustment recommendations address a limited number of issues. Therefore, I am not offering a recommendation for a specific total revenue requirement.

Q. PLEASE SUMMARIZE YOUR PRIMARY CONCLUSIONS AND RECOMMENDATIONS.

A. I offer the following recommendations and conclusions:

1) I recommend certain adjustments that will have the effect of reducing revenue requirement by $386,239 relative to the $2.9 million increase proposed by the Company. My recommended adjustments are outlined in Table JBF-1 presented later in my testimony. My recommended reduction does not account for or incorporate any other adjustments advanced by other parties that are not specifically addressed in my testimony.

2) I conclude that the cost of service study aligns with the principles of cost causation and that Citizens' proposed revenue allocation falls within the range of reasonableness.

Section II - Revenue Requirement Adjustments

Q. BRIEFLY DESCRIBE THE REVENUE REQUIREMENT INCREASE BEING REQUESTED BY WELLSBORO IN THIS CASE.

A. Wellsboro Electric Company ("Wellsboro" or "the Company") is requesting a $2,899,166 increase in annual distribution revenue, representing a 45.3% increase

over present distribution rates. The requested increase is based on a Fully Projected Future Test Year ("FPFTY") ending December 31, 2026, and is designed to produce an overall rate of return of 8.18% on Wellsboro's rate base.[1]

Q. DO YOU HAVE ANY RECOMMENDED ADJUSTMENTS TO WELLSBORO'S PROPOSED REVENUE REQUIREMENT?

A. Yes. My recommended adjustments would reduce Wellsboro's proposed revenue requirement increase by $386,239. As discussed in greater detail later in my testimony, this reduction incorporates a proxy return on equity ("ROE") of 10.0%, which is derived from the ROE authorized by the Commission for the Distribution System Improvement Charge ("DSIC") applicable to most electric utilities in the state. Table JBF-1 presents a summary of my recommended adjustments.

Table JBF-1
Summary of OSBA Adjustments to Wellsboro's Revenue Requirement

	OSBA Adjustments	Revenue Requirement
Revenue Requirement Increase Requested by Wellsboro		**2,899,388**
O&M Adjustment		
Account 921 Adjustment	(25,365)	
Income Tax Rate Adjustment		
Change PA Income Tax Rate from 9.99% to 7.49%	(135,283)	
Proxy Return on Equity		
Change ROE from 11.65% to Proxy 10%	(210,283)	
Impact of GRT gross up	(23,257)	
Rounding	7,949	
Adjusted Revenue Requirement Increase		**2,513,149**

[1] Direct Testimony of Howard S. Gorman (Wellsboro Statement No. 1), page 3.

I provide more detail for each of these recommended adjustments as follows:

Account 921 Adjustment

Q. PLEASE DESCRIBE ACCOUNT 921 – OFFICE SUPPLIES AND EXPENSES.

A. Account 921 covers general administrative office supplies and expenses related to company operations that are not specifically counted elsewhere. There are no labor costs included in Account 921. Wellsboro has subdivided Account 921 into the following sub-accounts:

- 921 – Office Supplies and Expense
- 921.1 – Utilities
- 921.4 – Subscriptions
- 921.5 – Office Supplies
- 921.6 – WECO Telephone
- 921.7 – Dispatch Telephone
- 921.8 – Data Circuit #008
- 921.9 – MISC
- 921.99 – Working Capital Claim-Admin

Q. BRIEFLY DESCRIBE HOW WELLSBORO CALCULATED FPFTY 2026 EXPENSES FOR ACCOUNT 921.

A. Wellsboro adjusted HTY 2024 values for each sub-account individually to forecast FTY 2025 values. FPFTY 2026 values for all 921 sub-accounts, except 921.99, were projected to equal FTY 2025 values. In other words, Wellsboro assumed no escalation between FTY 2025 and FPFTY 2026 for sub-accounts 921 through 921.9. Sub-account 921.99 – Working Capital Claim-Admin, which is an offset to 921 expenses was projected to increase 16%. An increase in sub-account 921.99 reduces total 921 expenses.

Wellsboro estimated the total for Account 921 to equal $123,007 in FTY 2025 and $109,710 in FPFTY 2026, which represents a 9% increase over HTC 2024 and an 11% decrease over FTY 2025, respectively. When asked to explain the 9% increase between HTY 2024 and FTY 2025, Wellsboro responded: "From HTY 2024 to FTY 2025, Account #921 reflects modest increases and/or decreases across most expense categories".[2]

Q. WHAT IS ACTUALLY HAPPENING TO SUB-ACCOUNTS IN 921?

A. Sub-accounts within Account 921 are projected to experience annual changes between HTY 2024 and FTY 2025 ranging from a reduction of 34% (921.4 – Subscriptions) to an increase of 164% (921.5 – Office Supplies).[3] These annual projected changes run contrary to Wellsboro's assertion that assumptions driving changes between HTY 2024 and FTY 2025 in Account #921 "reflect modest increases and/or decreases across most expense categories."

Q. WHAT IS YOUR RECOMMENDED ADJUSTMENT TO ACCOUNT 921?

A. I recommend limiting the allowed increase in sub-account 921.5 – Office Supplies from 164% to 2.00% and the increase in sub-account 921.9 – MISC from 128% to 2.00%. Limiting these accounts to 2.00% escalation between HTY 2024 and FTY 2025 still allows the total Account 921 to grow at a compound annual growth rate of 10.9% between 2023 and FPFTY 2026 which is a healthy escalation rate. This is largely attributable to the 82% increase in Account 921 between 2023 and HTY 2024. A comparison of growth rates between Wellsboro's requested amounts and OSBA's proposed amounts is found in Table JBF-2.

[2] Wellsboro response to I&E-RE-18-D-C.
[3] JBF WP-2 Account 921

Table JBF-2
Comparison of Growth Rates in Account #921

Wellsboro Requested

Acct. #	Account Description	Annual % Change 2023-24	2024-25	2025-26	CAGR 2023-2026
921.5	Gen Office - Office Supp	37.6%	163.6%	0.0%	53.6%
921.9	Gen Office - MISC	-11.7%	128.5%	0.0%	26.4%
921.99	Working Capital Claim-Admin	-20.8%	23.9%	16.3%	4.5%
Other 921	All Other 921 Sub-Accounts	25.2%	0.1%	0.0%	7.8%
	Total	**82.3%**	**9.0%**	**-10.8%**	**21.0%**

OSBA Proposed

Acct. #	Account Description	Annual % Change 2023-24	2024-25	2025-26	CAGR 2023-2026
921.5	Gen Office - Office Supp	37.6%	2.0%	0.0%	12.0%
921.9	Gen Office - MISC	-11.7%	2.0%	0.0%	-3.4%
921.99	Working Capital Claim-Admin	-20.8%	23.9%	16.3%	4.5%
Other 921	All Other 921 Sub-Accounts	25.2%	0.1%	0.0%	7.8%
	Total	**82.3%**	**-13.5%**	**-13.6%**	**10.8%**

Q. WHAT IS THE IMPACT OF THIS ADJUSTMENT?

A. As reported in Table JBF-1, capping sub-accounts 921.5 and 921.9 at 2.00% inflation in FTY 2025 reduces revenue requirement by $25,365 in FPFTY 2026.

Pennsylvania Corporate Income Tax Rate Adjustment

Q. DESCRIBE THE PENNSYLVANIA CORPORATE NET INCOME TAX RATE AND ITS HISTORY.

A. For nearly three decades, Pennsylvania maintained a flat Corporate Net Income ("CNI") Tax rate of 9.99%, among the highest in the United States. This rate remained unchanged from 1995 until 2022. In July 2022, the Pennsylvania General Assembly enacted Act 53-2002 (H.B. 1342), initiating a phased reduction

of the CNI Tax rate over nine years. The schedule for the rate reductions is as follows[4]:

Table JBF-3
Pennsylvania Corporate Net Income Tax Rates

Tax Year	CNIT Rate
January 1, 2023 - December 31, 2023	8.99 percent
January 1, 2024 - December 31, 2024	8.49 percent
January 1, 2025 - December 31, 2025	7.99 percent
January 1, 2026 - December 31, 2026	7.49 percent
January 1, 2027 - December 31, 2027	6.99 percent
January 1, 2028 - December 31, 2028	6.49 percent
January 1, 2029 - December 31, 2029	5.99 percent
January 1, 2030 - December 31, 2030	5.49 percent
January 1, 2031 and each taxable year thereafter	4.99 percent

Q. WHAT PENNSYLVANIA CNI TAX RATE WAS USED IN THE DEVELOPMENT OF THE COMPANY'S REQUESTED INCREASE IN REVENUE REQUIREMENT IN THIS CASE?

A. The Company used 9.99% as the Pennsylvania corporate income tax rate.[5]

Q. WHAT PENNSYLVANIA CNI TAX RATE DO YOU RECOMMEND?

A. I recommend using 7.49% as the CNI Tax rate for FPFTY 2026, which is the tax rate enacted by Act 53-2022 for calendar year 2026, and to require the company to reflect actual CNI rates for the post-2026 tax years through the Company's State Tax Adjustment Surcharge until the next rate case proceeding.

Q. WHAT IS THE IMPACT OF THIS ADJUSTMENT?

A. As reported in Table JBF-1, this adjustment would reduce revenue requirement by $135,283 in FPFTY 2026.

[5] Direct Testimony of Howard S. Gorman (Wellsboro Statement No. 1), page 11.

Adjustments to the Common Equity Cost Rates

Q. WHAT IS THE PERFORMANCE FACTOR ADJUSTMENT?

A. Wellsboro witness Byron Farnsworth, Jr. explains that Section 523 of the Public Utility Code provides the Commission's guidelines for performance adjustments. He states that counsel has advised him that the Public Utility Code identifies several criteria to be considered in assessing the performance of a fixed utility for purposes of a performance factor adjustment, including consideration of any relevant and material evidence of efficiency, effectiveness, and adequacy of service. Mr. Farnsworth provides information on Wellsboro's operations, which he asserts support receiving a performance factor adjustment.[6]

Q. WHAT IS WELLSBORO'S PROPOSED PERFORMANCE FACTOR ADJUSTMENT?

A. Wellsboro proposes a performance factor adjustment of a 5-basis point addition to the cost of common equity.[7]

Q. WHAT IS YOUR RESPONSE TO WELLSBORO'S PROPOSED PERFORMANCE FACTOR ADJUSTMENT?

A. Utilities are expected to provide safe and reliable service to their customers. They should also deliver quality customer service, upgrade their systems, and manage their costs effectively. Utilities already receive a guaranteed rate of return for performing these functions. Providing an additional upward adjustment for effective operations, at the expense of customers, is excessive.

Q. WHAT IS THE SIZE ADJUSTMENT?

[6] Direct Testimony of Byron Farnsworth, Jr. (Wellsboro Statement No.4), pp. 8-10.
[7] Revised Direct Testimony of Dylan W. D'Ascendis (Joint Statement No. 2), page 52.

A. Wellsboro witness Dylan D'Ascendis explains that the Companies' smaller size relative to the Electric Utility Proxy Group indicates greater relative business risk for the Company because, all else being equal, size has a material bearing on risk. He asserts that size affects business risk because smaller companies generally are less able to cope with significant events that affect sales, revenues and earnings. For example, smaller companies face more risk exposure to business cycles and economic conditions, both nationally and locally. Additionally, Mr. D'Ascendis states that the loss of revenue from a few larger customers would have a greater effect on a small company than on a bigger company with a larger, more diverse, customer base.[8]

Q. WHAT IS WELLSBORO'S PROPOSED SIZE ADJUSTMENT?

A. Wellsboro proposes a size factor adjustment of an 85-basis point addition to the cost of common equity.[9]

Q. WHAT IS YOUR RESPONSE TO WELLSBORO'S PROPOSED SIZE FACTOR ADJUSTMENT?

A. The Company's arguments for an upward adjustment focus solely on potential losses, without acknowledging the possibility of potential gains. While it is true that a small company losing a large customer could experience reduced revenues, it is also possible for the company to gain large customers, therefore increasing revenues. At the very least, new customers could offset the impact of losing existing ones. Customers should not bear the burden of shielding a utility from every possible risk, particularly when utilities have the ability to file a rate case

[8] Revised Direct Testimony of Dylan W. D'Ascendis (Joint Statement No. 2), page 47.
[9] Revised Direct Testimony of Dylan W. D'Ascendis (Joint Statement No. 2), page 51.

with the Commission to address extreme risks if they arise. An 85-basis-point upward adjustment to account for unspecified risks is excessive.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE PERFORMANCE FACTOR ADJUSTMENT AND THE SIZE FACTOR ADJUSTMENT?

A. I recommend eliminating the performance factor adjustment entirely and lowering or removing the size factor adjustment. These changes support, and help justify, a lower return on equity ("ROE") for the company, which I will discuss in greater detail below.

Proxy Return on Equity Adjustment

Q. WHAT ROE IS WELLSBORO REQUESTING IN THIS PROCEEDING?

A. Wellsboro witness Dylan W. D'Ascendis recommends a ROE of 11.65%.[10]

Q. DO YOU SUPPORT WELLSBORO'S REQUESTED ROE?

A. No.

Q. WHAT OBSERVATIONS HAVE YOU MADE IN REGARD TO WELLSBORO'S REQUESTED ROE?

A. A comparison of Wellsboro's requested ROE of 11.65% with the most recent Report on the Quarterly Earnings of Jurisdictional Utilities for the year ending December 31, 2024, produced by the Bureau of Technical Utility Services indicates to me that the requested 11.65% is too high and should be adjusted down. Based on the report, the current market indicated ROE as calculated by the

[10] Revised Direct Testimony of Dylan W. D'Ascendis (Joint Statement No. 2), page 6.

Bureau of Technical Utility Services should fall within the range of 9.17% to 11.23%[11]. This report is included as Exhibit JBF-1 at the end of my testimony.

A review of recently completed rate cases across the country for electric distribution companies that were either settled, or fully litigated within the last year, suggests that the proper ROE is likely near the lower part of the range provided by the Bureau of Technical Utility Services. The average authorized ROE in cases involving electric distribution companies that were approved between June 1, 2024, and June 30, 2025, is 9.50%. Expanding the universe of approved rate cases to include vertically integrated electric utilities over the same period increases the authorized ROE to 9.77%. A detailed listing of approved ROE's from rate cases finalized over the last year is included at the end of my testimony as Exhibit JBF-2. I present the results for electric distribution utilities in Table JBF-4.

Table JBF-4
Survey of Approved ROE's for Electric Distribution Companies Between June 1, 2024 & June 30, 2025

State	Company	Case identification	Approved Date	ROE (%)
MD	Potomac Electric Power Company	C-9702	6/10/2024	9.50
MA	Fitchburg Gas and Electric Light Company, In	DPU 23-80	6/28/2024	9.40
NY	Central Hudson Gas & Electric Corporation	C-23-E-0418	7/18/2024	9.50
MA	Massachusetts Electric Company	DPU 23-150	9/30/2024	9.35
DC	Potomac Electric Power Company	FC-1176	11/25/2024	9.50
ME	Versant Power	D-2023-00336	3/13/2025	9.35
TX	AEP Texas Inc.	D-56165	10/3/2024	9.76
NJ	Public Service Electric and Gas Company	D-ER23120924	10/9/2024	9.60
TX	CenterPoint Energy Houston Electric, LLC	D-56211	3/13/2025	9.65
NY	Orange and Rockland Utilities, Inc.	C-24-E-0060	3/20/2025	9.75
NH	Liberty Utilities (Granite State Electric) Corp.	D-DE-23-039	3/25/2025	9.10

[11] Exhibit JBF-1, Report on the Quarterly Earnings of Jurisdictional Utilities (Year ending December 31, 2024, page 14.

Q. DO YOU RECOMMEND A SPECIFIC ROE?

A. No, I do not have a recommendation for a specific ROE but rather defer to analysis and recommendations promulgated by the Office of Consumer Advocate ("OCA") and the Bureau of Investigation and Enforcement ("I&E"). However, for purposes of my testimony, I have assumed a proxy 10.0% ROE based upon the Commission's approved ROE for Distribution System Improvement Charge (DSIC) included in the most recent Report on the Quarterly Earnings of Jurisdictional Utilities[12] for the year ended December 31, 2024, produced by the Bureau of Technical Utility Services referenced previously.

Q. WHAT IS THE REVENUE REQUIREMENT IMPACT OF USING A PROXY 10.0% ROE?

A. As reported in Table JBF-1, this adjustment would reduce revenue requirement by $210,283 in FPFTY 2026.

Section III - Class Cost of Service and Revenue Allocation

Q. DID WELLSBORO PERFORM A CLASS COST OF SERVICE STUDY?

A. Yes, Wellsboro completed an allocated class cost of service study ("ACOS") that follows the traditional three-step process of: 1) functionalization of rate base and costs; 2) classification of functionalized costs as demand-related, commodity-related or customer-related; and 3) class allocation of the functionalized, classified costs among the rate classes.

[12] Exhibit JBF-1, Report on the Quarterly Earnings of Jurisdictional Utilities (Year ending December 31, 2024, page 15.

Q. DO YOU HAVE ANY COMMENTS ON THE COST ALLOCATION METHODS USED BY WELLSBORO?

A. Yes. As a general matter, I find the cost allocation methods employed by Wellsboro, as outlined by Mr. Gorman, to align with the principles of cost causation. Therefore, I am not proposing any modifications to the Company's cost allocation approach in this proceeding.

Q. PLEASE DESCRIBE WELLSBORO'S REVENUE ALLOCATION PROPOSAL.

A. Wellsboro revenue allocation proposal is guided by the objectives of 1) moving each class closer to cost of service as computed in the ACOS, and 2) mitigating extreme rate impacts on rate classes and on customer subgroups.[13]

Q. WHAT IS YOUR ASSESSMENT OF WELLSBORO'S REVENUE ALLOCATION PROPOSAL?

A. The Company's revenue allocation proposal reasonably balances moving class revenue recovery in the direction of cost causation. Most classes have reductions in the subsidy paid or received. In my opinion, the proposed revenue allocation falls within the range of reasonableness.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

[13] Direct Testimony of Howard S. Gorman (Wellsboro Statement No. 1), page 28.

Vitae

Professional Experience

Energy Strategies, Salt Lake City UT, April 2022 - Present
An energy consulting firm focused on regulatory services, policy, and markets serving power producers, transmission developers, utilities, government agencies, NGO's, and large energy users

Director

- Perform energy-related economic and policy analysis, regulatory intervention, and strategic negations on behalf of industrial, commercial, and public sector interests
- Provide risk management and market fundamentals analysis to large consumers of natural gas
- Executive director of the Utah Association of Energy Users

PacifiCorp, Salt Lake City UT, January 2020 – April 2022
Berkshire Hathaway owned electric utility serving over 1.6 million customers in Utah, Oregon, Washington, Wyoming, Idaho, and parts of Northern California

Assistant Manager of Regulation, March 2021 – April 2022
Senior Fuels Manager, January 2020 – March 2021

- Performed rate projections tied to the company's 10-year plan
- Provided testimony on the Renewable Energy Credits balancing account
- Procured fuel and managed contracts for company owned and jointly owned thermal plants

Magnum Development, Holladay UT, 2017 – Oct 2019
Private Equity backed developer of utility-scale storage in underground salt caverns. Developing storage for natural gas, compressed air created from renewable electricity, green hydrogen, and helium.

Vice President of Financial Planning, January 2019 – October 2019
Assistant Vice President of Financial Planning, February 2017 – December 2018

- Worked on commercial team developing bidding strategies and analysis to support joint development negotiations

- Managed all financial and economic modeling across all of Magnum's business verticals including: Magnum Midstream (Natural Gas), Magnum Compressed Air Energy Storage (CAES), Magnum Hydrogen, and Magnum Industrial Gases (Helium)

PacifiCorp, Salt Lake City UT, 2013 – 2017
Berkshire Hathaway owned electric utility serving over 1.6 million customers in Utah, Oregon, Washington, Wyoming, Idaho, and parts of Northern California

Manager Economic & Financial Analysis, August 2015 – February 2017
Senior Financial Planning Analyst, October 2013 – August 2015

- Managed team of Sr. Financial Analysts responsible for economic analysis, internal audit of joint owned plants, and annual budget of resource development division
- Led team of engineers, plant managers, and vice presidents in developing economic solutions that optimized existing thermal and renewable infrastructure investment
- Developed economic models to explore new resource development opportunities such as utility scale solar and battery installations
- Prepared annual cost of generation report for senior management

Energy Strategies, Salt Lake City UT, 2005 – 2013
An energy consulting firm focused on regulatory services, policy, and markets serving power producers, transmission developers, utilities, government agencies, NGO's, and large energy users

Senior Consultant, January 2010 – October 2013
Consultant, July 2005 – December 2009

- Developed strategies for clients with energy infrastructure that optimized environmental performance and financial objectives while meeting their utility requirements
- Performed market studies focused on thermal & renewable energy need, transmission availability, pricing, and impacts of public policy initiatives. Studies were designed to inform and improve clients' energy decisions including risk management and procurement strategy.

Education

- Master of Business Administration, University of Utah, May 2005
- Bachelor of Science in Economics/Business Minor, University of Utah, May 2000
- Graduated Magna Cum Laude; GPA 3.92
- Honors at Entrance Scholarship; 1999-2000 Law & Economic Society Fellowship

Introduction..... 4

Attachment A – Summary of Equity Returns..... 5

Attachment B – Summary of Returns..... 12
This chart depicts the overall and equity returns (actual and adjusted) for the filing utilities for the current quarter. The last authorized equity returns and the year authorized is also shown.

Attachment C – Allowed Rates of Return on Common Equity..... 14
This is a historical chart that shows the most recent rate cases for select companies in electric, gas, and water. A docket number followed by their final return on equity and year is also given.

Attachment D – Distribution System Improvement Charge Return on Equity 15
Compares utility adjusted return on equity to Commission authorized return on equity for utilities with a Distribution System Improvement Charge.

Attachment E – Explanation of Return on Equity Methods 16
Criteria for determining the industry barometer groups used in ROE calculations. Also, provides details of the Discounted Cash Flow equation and Capital Asset Pricing Model equation.

Attachment F – Market Based Returns on Equity – Electric..... 18
The market indicated common equity cost rate range consists of data used from the electric barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment F – Historic DCF and CAPM – Electric..... 19
Historic barometer group DCF and CAPM average ROEs.

Attachment F – Electric Barometer Group Calculation of a Current and 52 Week Average Dividend Yield..... 20-21
Electric barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment F – Development of a Representative Dividend Growth Rate..... 22
Multiple sources of the gas barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Attachment G – Market Based Returns on Equity – Gas..... 23
The market indicated common equity cost rate range consists of data used from the gas barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment G – Historic DCF and CAPM – Gas 24
Historic barometer group DCF and CAPM average ROEs, including a linear trend line graph.

Attachment G – Gas Barometer Group Calculation of a Current and 52 Week Average Dividend Yield 25
Gas barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment G – Development of a Representative Dividend Growth Rate 26
Multiple sources of the gas barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Attachment H – Market Based Returns on Equity – Water 27
The market indicated common equity cost rate range consists of data used from the water barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment H – Historic DCF and CAPM – Water 28
Historic barometer group DCF and CAPM average ROEs, including a linear trend line graph.

Attachment H – Water Barometer Group Calculation of a Current and 52 Week Average Dividend Yield 29
Water barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment H – Development of a Representative Dividend Growth Rate 30
Multiple sources of the water barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Introduction:

On September 20, 1991, the Commission initiated a rulemaking at L-00910061 pertaining to earnings disclosures by the public utilities subject to its jurisdiction. At that docket, the Commission stated that the submission of accurate, reliable, and complete earnings disclosure reports, at regular intervals, is essential to the fulfillment of the broad regulatory oversight responsibilities entrusted to the Commission by the Legislature in the Public Utility Code. The earnings disclosure regulations promulgated by the Commission were adopted October 1, 1992, and published January 23, 1993, at 23 Pa.B. 463. Based upon those regulations, codified at 52 Pa. Code, Chapter 71, a reporting format was developed and distributed to the jurisdictional fixed utilities of Pennsylvania.

All fixed utilities having jurisdictional revenues of $1,000,000 or more, for a calendar year, are required to file the report by March 31 of each year. Such reports are to be based upon the results of operations for the 12-month period ending December 31 of the prior year. Utilities having more than $10,000,000 in jurisdictional revenues are also required to file reports for the 12 months ending on March 31, June 30, and September 30 of each year.[1] On November 30, 2004, however, the Pennsylvania General Assembly signed into law Act 183 concerning alternative telecommunications regulation and broadband deployment. As a result of Act 183, the reporting requirements for the PUC jurisdictional telecommunications companies of Pennsylvania have been streamlined at section 3015(e) of the Public Utility Code. A quarterly earnings report is not listed among those reports now required of PUC jurisdictional telecommunications utilities in Pennsylvania and, therefore, this report does not address telephone company earnings.

The reports have been filed for the period ending December 31, 2024, at Docket No. M-2025-3052807.[2] The Finance Staff of the Bureau of Technical Utility Services has reviewed the reports and has prepared this summary report for public release. This report sets forth the achieved return on equity for each company, the last allowed return for that utility, a market return as determined through the analysis of the barometer group data and the most recent returns allowed, per industry, by the Pennsylvania Public Utility Commission and by other regulatory bodies. Where a utility has not filed a report, the reasons for not filing are indicated.

Questions pertaining to the preparation and contents of this Report should be directed to Mr. Marc Hoffer, Manager - Finance, Bureau of Technical Utility Services, at (717) 787-1869.

[1] Per Commission regulations at 52 Pa. Code § 71.3(a)(1), the major electric utilities are specifically identified by name rather than utilizing the $10,000,000 revenue threshold utilized by gas and water utilities.

[2] Columbia Gas of PA Inc., UGI Utilities, Inc. – Gas Division, and FirstEnergy Pennsylvania Electric Co. have rate filings at Docket Nos. R-2025-3053499, R-2024-3052716, and R-2024-3047068, respectively, and have filed a letter with the Secretary in place of a report in accordance with 52 Pa. Code § 71.4.

Attachment A

The equity return summaries that follow in Attachment A are, for each quarter;

ACTUAL

1. Based on actual results of operations

and

ADJUSTED

2. Based on company proposed pro forma and ratemaking adjustments

Columbia Water Company	6.86	9.75
Newtown Artesian Water	2.52	9.75

* Columbia Gas of PA Inc., UGI Utilities, Inc. – Gas Division, and FirstEnergy Pennsylvania Electric Co. have rate filings at Docket Nos. R-2025-3053499, R-2024-3052716, and R-2024-3047068, respectively, and have filed a letter with the Secretary in place of a report in accordance with 52 Pa. Code § 71.4.

3 Each utility lists adjustments on Schedule B of their quarterly financial report.
4 The ROE is approved in a utility's most recent fully litigated base rate proceeding for hich a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years have elapsed between the entry of a final order and the DSIC effective date, the ROE is from this report. If the base rate proceeding is settled, without a stipulated ROE, the ROE is from this report.

Explanation of Discounted Cash Flow (DCF) and Capital Asset Pricing Model (CAPM)

Barometer Group Criteria

The criteria used for determining the industry barometer groups used to calculate ROEs in this report are as follows:

- 50% or more of the company's assets must be related to the jurisdictional utility industry;
- The company's stock must be publicly traded and must have at least three years of earnings history;
- Companies targeted by merger and acquisition (M&A) activity will be excluded; companies involved in M&A activity may be excluded;
- Investment information for the company must be available to the Commission from more than one source;
- The barometer group companies must have an investment grade credit rating (S&P BBB- or better, Moody's Baa3 or better); and
- Geographic Regions:
  EDCs: *Value Line* Investment Survey's East, Central, and West Group Electric Utility companies;
  NGDCs: *Value Line* Investment Survey's Natural Gas Utility industry group companies;
  Water/Wastewater: *Value Line* Investment Survey's Water Utility industry group companies.

The barometer group companies are reviewed by staff on a quarterly basis and make any changes to these companies based upon the criteria above.

ROE Calculations

The Commission consistently uses the DCF model to determine the appropriate cost of equity for utilities. In this report, the DSIC ROE is calculated using two DCF models.

TUS uses the following formula to calculate the current dividend DCF: $K = D_1/P_0 + G$

TUS uses the following formula to calculate the 52-week average dividend DCF: $K = D_0/P_a + G$

Definitions:

K	=	Cost of equity
D_1	=	Dividend expected during the year
	=	$D_0 + ½g$
D_0	=	Latest indicated dividend, obtained from Yahoo! Finance
g	=	Expected 5-year dividend growth rate of barometer group obtained from Value Line Investment Survey.
P_0	=	Current price of the stock, obtained from Yahoo! Finance
P_a	=	Average of high and low stock price over the latest 52-week period, obtained from Yahoo! Finance
G	=	Average of 5-year expected earnings growth rate forecasts obtained from Value Line, Zacks Investment Survey, and S&P Capital IQ.

The CAPM uses the yield of a risk-free interest-bearing obligation plus a rate of return premium that is proportional to the systematic risk of an investment.

TUS uses the following formula to calculate CAPM: $K = R_f + \beta(R_m - R_f)$

Three components are necessary to calculate the CAPM cost of equity:

β	=	Beta, a measure of systematic risk for each stock
R_f	=	The risk-free rate of return, 10-year U.S. Treasury yields are used for R_f. Yields are taken from the previous two quarters and forecasted next four quarters.
R_m	=	Total return of the equity market as determined by Kroll

The Commission determines the ROE used for DSIC purposes based on the range of reasonableness from the DCF barometer group data, CAPM data, recent ROE adjudicated by the Commission, and informed judgment.

The market indicated common equity cost rate range consists of data used from the barometer groups and is based on a series of calculations to average the DCF methods.

Re: Pennsylvania Public Utility Commission v. Wellsboro Electric Company / Docket No. R-2025-3054392

Dear Judge Long:

Enclosed please find the Rebuttal Testimony of Justin B. Farr, labelled OSBA Statement No.1-R, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-referenced proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Rebecca Lyttle

Rebuttal Testimony

of

Justin B. Farr

on behalf of

Pennsylvania Office of Small Business Advocate

Topics:

Classification of Distribution Costs

Date Served: August 13, 2025

Date Submitted for the Record: _____

REBUTTAL TESTIMONY OF JUSTIN B. FARR

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Justin B. Farr. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Director in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ARE YOU THE SAME JUSTIN B. FARR WHO PREFILED DIRECT TESTIMONY IN THIS DOCKET ON BEHALF OF THE PENNSYLVANIA OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA")?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. My rebuttal testimony responds to the direct testimony of Citizens' witness Howard Gorman and Pennsylvania Office of Consumer Advocate ("OCA") witness Michael Deupree.

RESPONSE TO CITIZENS

Q. DO YOU AGREE WITH WELLSBORO'S FILED COST OF SERVICE STUDY WITH RESPECT TO THE CLASSIFICATION OF SECONDARY DISTRIBUTION PLANT ACCOUNTS 364 THROUGH 368?

A. Yes. Wellsboro Electric Company ("Wellsboro" or "the company") proposes to classify distribution plant accounts 364 through 368 as partially demand-related, and partially customer-related. I agree with this approach. Wellsboro witness Mr. Gorman conducted a zero-load analysis to determine the customer-related component of secondary-voltage distribution system costs included in accounts 364-367, and a minimum size analysis to determine the customer-related component of costs in account 368.[1] Mr. Gorman's use of the zero-load analysis and minimum-size analysis to classify distribution plant assets as partially customer-related is supported by the National Association of Regulatory Utility Commissions ("NARUC").

RESPONSE TO OCA

Q. WHAT DOES OCA WITNESS MR. DEUPREE RECOMMEND REGARDING THE CLASSIFICATION OF DISTRIBUTION PLANT ACCOUNTS 364 THROUGH 367?

A. Mr. Deupree recommends that the Commission reject the Company's proposed use of zero-load analysis and minimum-size analysis, together referred to as the minimum system study ("MSS") approach, for classifying the costs of secondary-voltage distribution plant included in FERC accounts 364 through 368. He claims that both the minimum system and zero-intercept methods are fundamentally flawed, offer little to no value in setting just and reasonable rates, and have been discredited by research. He further notes that some state regulatory commissions

[1] Direct Testimony of Howard S. Gorman (Wellsboro Statement No. 1), page 20.

have expressly rejected the use of these methods. Instead, Mr. Deupree recommends that the Commission classify the assets in the relevant distribution plant accounts as 100 percent demand-related.[2]

Q. WHAT EVIDENCE DOES MR. DEUPREE PROVIDE TO SUPPORT HIS RECOMMENDATION?

A. Mr. Deupree cites a passage from the Electric Utility Cost Allocation Manual published by NARUC ("NARUC Manual") in support of his position. However, the NARUC Manual clearly states that Accounts 364 through 368 contain both customer-related and demand-related components. In addition, Mr. Deupree references two jurisdictions that have rejected the use of MSS analyses. He does not acknowledge the jurisdictions that use MSS analyses.

Q. IS YOUR POSITION CONSISTENT WITH THE RECOMMENDED TREATMENT OF THESE COSTS AS PRESENTED IN THE NARUC MANUAL?

A. Yes, it is. The NARUC Manual states that:

> Distribution Plant Accounts 364 through 370 involve demand and customer costs. **The customer component of distribution facilities is that portion of costs which varies with the number of customers. Thus, the number of poles, conductors, transformers, services, and meters are directly related to the number of customers on the utility's system**. As shown in Table 6-1, each primary plant account can be separately classified into a demand and customer component. Two methods are used to determine the demand and customer components of distribution facilities. They are, the minimum-size-of-facilities method, and the minimum-intercept cost (zero-intercept or positive-intercept cost, as applicable) of facilities.[3] (emphasis added).

[2] OCA Statement No. 3, Direct Testimony of Michael Deupree, pages 21-22.
[3] Electric Utility Cost Allocation Manual, January 1992, p. 90.

Table 6-1, referenced above, from the NARUC Manual is included below. Table 6-1 shows FERC Accounts 364-368 as having demand-related and customer-related components.

TABLE 6-1

CLASSIFICATION OF DISTRIBUTION PLANT[1]

FERC Uniform System of Accounts No.	Description	Demand Related	Customer Related
	Distribution Plant [2]		
360	Land & Land Rights	X	X
361	Structures & Improvements	X	X
362	Station Equipment	X	-
363	Storage Battery Equipment	X	-
364	Poles, Towers, & Fixtures	X	X
365	Overhead Conductors & Devices	X	X
366	Underground Conduit	X	X
367	Underground Conductors & Devices	X	X
368	Line Transformers	X	X
369	Services	-	X
370	Meters	-	X
371	Installations on Customer Premises	-	X
372	Leased Property on Customer Premises	-	X
373	Street Lighting & Signal Systems [1]	-	-

[1]Assignment or "exclusive use" costs are assigned directly to the customer class or group which exclusively uses such facilities. The remaining costs are then classified to the respective cost components.

[2]The amounts between classification may vary considerably. A study of the minimum intercept method or other appropriate methods should be made to determine the relationships between the demand and customer components.

Q. WHAT IS YOUR RESPONSE TO MR. DEUPREE'S RECOMMENDATION THAT COSTS ASSOCIATED WITH DISTRIBUTION PLANT ACCOUNTS

364 THROUGH 368 BE CLASSIFIED AND ALLOCATED ON ONLY A DEMAND BASIS?

A. I disagree with Mr. Deupree's recommendation. The costs associated with distribution plant accounts 364 through 368 include facilities such as poles and conductors, which have a significant customer-related component. These facilities are installed to deliver service to customer premises, and a substantial portion of the investment required is directly related to the number of customers and their geographic dispersion across the utility's service territory.

A well-designed and equitable distribution cost-of-service study should reflect these cost-causation factors. By contrast, Mr. Deupree's approach overlooks the influence of customer count and geographic layout on system investment needs. His proposal to classify all costs in these accounts as solely demand-related would under-assign cost responsibility to customers based on their number and location, while over-assigning costs based solely on demand. This would result in an unreasonable cost shift to larger customers served on the distribution system. I recommend that the Commission maintain the Company's proposed approach which correctly classifies distribution plant accounts 364 through 368 as partially demand-related, and partially customer-related.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

Re: Pennsylvania Public Utility Commission v. Wellsboro Electric Company / Docket No. R-2025-3054392

Dear Judge Long:

Enclosed please find the Surrebuttal Testimony and Exhibit of Justin B. Farr labelled OSBA Statement No.1-SR, with associated Exhibit JBF-1SR, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-referenced proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Rebecca Lyttle

Surrebuttal Testimony and Exhibit

of

Justin B. Farr

on behalf of

Pennsylvania Office of Small Business Advocate

Topics:

Revenue Requirement Adjustments

Date Served: August 28, 2025

Date Submitted for the Record: _____

SURREBUTTAL TESTIMONY OF JUSTIN B. FARR

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Justin B. Farr. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Director in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ARE YOU THE SAME JUSTIN B. FARR WHO PREFILED DIRECT TESTIMONY AND REBUTTAL TESTIMONY IN THIS DOCKET ON BEHALF OF THE PENNSYLVANIA OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA")?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. My surrebuttal testimony responds to the rebuttal testimony of Wellsboro Electric Company ("Wellsboro" or "the Company") witness Dylan W. D'Ascendis, and Pennsylvania Office of Consumer Advocate ("OCA") witness Christopher C. Walters regarding my use of a 10% proxy return on equity ("ROE") in my revenue requirement calculations.

I also respond to Wellsboro witness Bryon Farnsworth, Jr. regarding the Performance Factor Adjustment.

Q. WHAT CONCLUSIONS DO YOU OFFER IN YOUR SURREBUTTAL TESTIMONY?

A. I offer the following conclusions:

1) I explain my use of a proxy ROE in my direct revenue requirement calculations and provide the results of my revenue requirement calculations using the costs of capital recommended by the Bureau of Investigation and Enforcement ("I&E") and OCA.
2) I continue to recommend eliminating the performance factor adjustment entirely and lowering or removing the size factor adjustment.

REVENUE REQUIREMENT ADJUSTMENTS

Proxy Return on Equity Adjustment

Q. PLEASE DESCRIBE YOUR PROXY ROE ADJUSTMENT.

A. I assumed the 10% ROE authorized by the Commission for the Distribution System Improvement Charge ("DSIC") included in the most recent Report on the Quarterly Earnings of Jurisdictional Utilities for the year ended December 31, 2024 produced by the Bureau of Technical Utility Services ("TUS").[1]

Q. DO ANY PARTIES TAKE ISSUE WITH YOUR USE OF THIS PLACEHOLDER ROE?

A. Yes. Wellsboro witness Dylan W. D'Ascendis testifies that while the range of ROEs calculated by the TUS in its quarterly report is generally consistent with both his initial and updated model results - and while the upper end of the TUS ranges

[1] Direct Testimony of Justin B. Farr (OSBA Statement No. 1) p. 13.

for gas and electric utilities aligns with his Company-specific recommendation - the TUS ranges do not account for the performance of Wellsboro's management. As a result, he argues the TUS analysis provides an incomplete basis for determining the Companies' appropriate ROE.[2]

OCA witness Christopher C. Walters states that he disagrees with my use of a 10% DSIC ROE from the Commission's Quarterly Earnings Report as a proxy ROE for the Company. He claims that the Commission has expressly and repeatedly rejected the use of its DSIC ROE for purposes of establishing the cost of equity in base rate proceedings and cites one case, a Pike County Light and Power rate case.[3] Mr. Walters concludes that because my proxy ROE is not grounded in a proper cost of equity analysis and is inconsistent with Commission precedent, the portion attributed to ROE of my proposed downward adjustment to the Company's revenue requirement should be rejected.[4]

Q. HOW DO YOU RESPOND TO THESE CONCERNS?

A. To clarify, I am not suggesting that the DSIC ROE be adopted in this proceeding in the absence of a detailed ROE analysis. My use of the proxy 10% DSIC ROE is not intended to replace the Commission's consideration of traditional cost of capital analyses offered by other parties in this proceeding.

Q. HAVE YOU ANALYZED THE IMPACT OF OTHER PARTIES' COST OF CAPITAL RECOMMENDATIONS ON YOUR REVENUE REQUIREMENT CALCULATIONS?

[2] Rebuttal Testimony of Dylan W. D'Ascendis (Joint Statement No. 2R) p. 3.
[3] Rebuttal Testimony of Christopher C. Walters (OCA Statement 2R) p. 14.
[4] *Id.* p.16.

A. Yes. In Table JBF-1SR I provide a summary of the total revenue increases that would result from utilizing I&E's and OCA's recommended return on equity in my revenue requirement calculations.

Table JBF-1SR
OSBA Revenue Increase with OCA and I&E ROE Recommendations

	Low	Mid	High
Source of ROE Assumption	OCA	OSBA	I&E
ROE Rate Assumption	9.50%	10.00%	10.78%
Total Revenue Increase*	$2,422,951	$2,513,149	$2,655,963
Difference from OSBA Direct	-$90,198	$0	$142,814

*Assumes adjustments made in OSBA Direct Testimony

For comparison purposes, Table JBF-2SR summarizes the total revenue increases that I recommended in my direct testimony, as well as those recommended by I&E, OCA, and Wellsboro.

Table JBF-2SR
Comparison of Proposed Revenue Increases

	Revenue Increase	Difference from Wellsboro
Wellsboro Application	$2,899,388	$0
OSBA Direct Testimony	$2,513,149	-$386,239
I&E Direct Testimony	$2,279,151	-$620,237
OCA Direct Testimony	$2,208,724	-$690,664

Performance Factor Adjustment and Size Adjustment

Q. PLEASE DESCRIBE YOUR PERFORMANCE FACTOR ADJUSTMENT AND SIZE ADJUSTMENT PROPOSALS.

A. I recommend eliminating the performance factor entirely and lowering or removing the size factor adjustment.[5]

Q. HOW DID WELLSBORO RESPOND TO YOUR PERFORMANCE FACTOR ADJUSTMENT?

A. Wellsboro witness Bryon Farnsworth Jr. states that the Company has made significant improvements to the reliability and resiliency of its distribution system. He provides examples of the Company's improvements. He claims that when the Company is planning system improvements and projecting their future financial situation, they rely on receiving consistent treatment by the Commission, including certainty on items such as the recognition of the size and performance adjustments which the Commission granted the Company in the past.[6]

Q. HOW DO YOU RESPOND TO WELLSBORO'S POSITION THAT THE COMPANY RELIES ON RECEIVING CONSISTENT TREATMENT BY THE COMMISSION, INCLUDING CERTAINTY ON ITEMS LIKE SIZE AND PERFORMANCE FACTOR ADJUSTMENTS?

A. Consistency cannot be the justification for perpetuating adjustments that are unwarranted. Wellsboro should not receive upward adjustments simply for meeting obligations that every regulated utility is required to meet. Nor should it benefit from adjustments intended to shield it from hypothetical or speculative risks. Wellsboro already operates under a framework that provides consistency and certainty, as a regulated utility, the Company is guaranteed a rate of return. That guarantee offers far greater consistency and certainty than what is available to

[5] Direct Testimony of Justin B. Farr (OSBA Statement No. 1) p. 11.
[6] Rebuttal Testimony of Byron Farnsworth, Jr. (Wellsboro Statement No. 4R) pp. 2-4.

nearly all other businesses subject to competitive market forces. Extending additional adjustments in the name of consistency would only reward Wellsboro beyond what is reasonable or necessary.

Q. DID I&E AND OCA MAKE PROPOSALS RELATED TO THE PERFORMANCE FACTOR ADJUSTMENT AND THE SIZE ADJUSTMENT?

A. Yes. Both I&E and OCA witnesses recommended eliminating the performance factor adjustment and the size adjustment.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

DIRECT TESTIMONY

AND EXHIBITS

OF

HOWARD S. GORMAN

ON BEHALF OF

WELLSBORO ELECTRIC COMPANY

APRIL 30, 2025

BEFORE

THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	**:**	
	:	
v.	**:**	**Docket No. R-2025-_____**
	:	
Wellsboro Electric Company	**:**	

DIRECT TESTIMONY OF HOWARD S. GORMAN ON BEHALF OF WELLSBORO ELECTRIC COMPANY

Q. Please state your name, occupation and business address.

A. My name is Howard Gorman. I am the President of HSG Group, Inc., a consulting firm specializing in utility rate and regulatory matters, located in Great Neck, NY.

Q. Please summarize your educational background and professional experience.

A. My educational background, professional experience and summary of testimony are outlined in Attachment A.

Q. Please state on whose behalf you are testifying and describe the purposes of your testimony.

A. I am testifying on behalf of the petitioner, Wellsboro Electric Company ("Wellsboro" or "Company"). The purposes of my testimony are:

- To develop the Fully Projected Future Test Year ("FPFTY") Revenue Requirement and Rate Base, and Future Test Year ("FTY") net income, based on Historic Test Year ("HTY") data and appropriate adjustments;
- To present the allocated class cost of service study that I performed; and

- To present the Company's proposed revenue allocation and the proposed Rates and Charges that produce the overall revenue requirement and the class revenue targets, as well as the proof of revenue and bill comparisons at the proposed rates. I will also discuss proposed changes to the rate structures for certain rate schedules.

The rates proposed in this filing are for the FPFTY; the FPFTY Revenue Requirement and Rate Base were determined for Distribution only. Revenue and costs related to Wellsboro Generation Supply Service Rate ("GSSR") were excluded from the analysis.

The supporting calculations and data for the filing are in Exhibit__(HSG-1). Throughout my testimony, I will reference the various schedules within Exhibit__(HSG-1) that explain the calculations and results. References in my testimony are to *Exhibit __ (HSG-1)*; for example, *Schedule C1* refers to *Exhibit __ (HSG-1), Schedule C1*.

In my testimony, dollar amounts (excluding rates and charges) are rounded to the nearest thousand dollars; in computing revenue requirements and rates, whole dollars are used.

Q. What HTY, FTY and FPFTY were used?

A. The HTY is Wellsboro's actual results for calendar year 2024. The FTY is Wellsboro's forecast for 2025 and the FPFTY is Wellsboro's forecast for 2026. Wellsboro uses a calendar year for financial reporting.

When will the new rates take effect?

A. If the Commission suspends the filing for the statutory period, then the rates will take effect on January 30, 2026; however, the rate changes could be effective sooner if the Commission doesn't suspend the filing or if the parties reach a settlement that includes an accelerated effective date and that settlement is approved by the Commission.

Q. Is the presented FPFTY consistent with the Commission's revised regulations for rate cases using a FPFTY?

A. Yes. Earlier this year, the Commission adopted revised regulations for Sections 53.51-53.56 that are pending before the Independent Regulatory Review Commission, with final action expected soon after the Company submits this filing. The revised regulations contain the following definition of FPFTY:

> A 12-consecutive-month period beginning with the first month that the new rates will be in effect after application of the full suspension period permitted under section 1308(d) of the Public Utility Code, 66 Pa.C.S. § 1308 (relating to voluntary changes in rates) and reflecting estimated results of operations of the public utility.

Q. Please summarize the results of your testimony regarding Wellsboro's revenue requirement.

A. Under the present rates, Wellsboro would have a shortfall of approximately $2,899,000 in revenue compared to revenue requirements for the FPFTY (Schedule C1). Wellsboro is proposing that the rates and charges subject to the Tariff be increased as shown on Schedule B7. This would increase its distribution revenue in the FPFTY by 45.3%. This equals an increase in total revenue (distribution and supply) of 22% of Wellsboro's 2024 total revenue.

Based on Wellsboro's as-filed increase, the average annual increase in distribution revenue from the prior rate case (with new rates effective May 1, 2020) to 2026 is 6.8% per year.

The revenue produced by the as-filed rate increase, approximately $9,301,000 (plus $328,000 Other revenue, for a total revenue requirement of $9,629,000) would recover the costs forecast to be incurred by Wellsboro in the FPFTY, including a return on rate base of

8.18%, as shown on Schedule C1, as supported by Company witnesses Dylan D'Ascendis and Ryan Kucan of ScottMadden, Inc.

Q. Please summarize the Company's proposed revenue allocation and rate design.

A. The Company's proposed revenue allocation is presented on Schedule B6-4, line 24, and the proposed revenue increase on line 36. This schedule also shows, for each rate class, 1) return on rate base at the proposed revenue allocation (line 32); 2) relative return compared to system average (line 33); 3) progress toward unity (line 34), which measures how much of the gap between x) relative return at present rates and y) relative return at proposed revenue allocation, is closed based on the proposed revenue allocation; and 4) change in subsidy paid (received) (lines 41-44), where the subsidy is the difference between xx) rate of return produced by the rate class and yy) average rate of return, applied to the rate base allocated to the class.

The Company's proposed rates are presented on Schedule B6-3, lines 19-30, and also on Schedule B7. Schedule B6-3 demonstrates that the proposed rates produce the class revenue targets (except for rounding) (lines 38-39).

Q. Is the Company allocating the same percentage increase to every customer class?

A. No. The Company used the results of the ACOS to allocate the proposed increase among customer classes to move the classes closer to the cost-to-serve as indicated in the ACOS.

Q. Are you sponsoring any exhibits?

A. Yes. Exhibit ___ (HSG-1), Schedule A presents an Index of the exhibits supporting the Company's revenue requirement of $9,301,000 and increase of $2,899,000.

Q. Please describe the approach used to develop the Company's revenue requirement and proposed rates.

A. *First*, the FTY and FPFTY forecast of sales and distribution revenue was developed. Information about HTY sales and revenue was obtained from Wellsboro accounting and financial records provided by Company witness Jill Campbell. Summary information on sales and revenues is presented in Exhibit __ (HSG-1), Schedule B. Information for HTY 2024 is on Schedule B1, with supporting computations on Schedule B1-1. Schedule B4 presents a reconciliation of HTY 2024 revenue to Wellsboro's financial statements. Sales and revenue information for FTY 2025 is on Schedule B2, with supporting computations on Schedule B2-1. Sales and revenue information for FPFTY 2026 is on Schedule B3, with supporting computations on Exhibit Schedule B3-1.

Second, costs were obtained for the HTY, and forecasted costs were obtained for the FTY and FPFTY. These costs, detailed by account, are presented on Schedule C1-1.

Third, the Rate Base for the HTY, FTY and FPFTY was developed, using information for the HTY, projected capital expenditures for the FTY and FPFTY and computing annual depreciation expense. In addition, accumulated deferred income taxes, excess deferred income taxes, cash working capital allowance and other rate base components were computed. These computations are shown on Schedule C1-5.

Fourth, the required Net Utility Operating Income was developed using the FPFTY costs and rate base, and the required rate of return developed by Mr. D'Ascendis and Mr. Kucan. This computation indicated that FPFTY revenue of $9,629,000 (including Other revenue) is needed to produce the required rate of return. These results are presented on Schedule C1, which also shows the rate of return for the HTY, FTY and FPFTY at present rates.

Fifth, the ACOS (Schedule E) was performed to develop the share of the total revenue requirement attributable to each rate class.

Finally, proposed rates were developed that produce the required FPFTY revenue. The proposed rates are shown on Schedules B6-3 and B7. The amounts that typical ratepayers can expect to pay under the proposed rates are compared to the amounts they would pay under the present rates on Schedule B8 (including current GSSR) and Schedule B8-1 (excluding GSSR). Schedule B8-2 provides the rate comparisons on a total rate basis using the GSSR that is expected to take effect on June 1, 2025. Schedule B6-3 demonstrates that the proposed rates produce the required revenue.

Q. What are the reasons that Wellsboro needs an increase in rates at this time?

A. Schedule C5-1 presents the financial drivers for the requested rate increase by comparing the FPFTY to Wellsboro's last rate case, Docket R-2019-3008208.

Q. What service classifications does Wellsboro use to report sales and revenue?

A. Wellsboro reports sales and revenue using the following service classifications:

Schedule 1- Residential Service (RS)
Schedule 2- Residential Service All Electric (RSAE)

Schedule 3- Non-Residential Service (NRS), Non-Residential Space Heating (NRH)
Schedule 4- Commercial Service (CS) and Commercial Space Heating (CSH)
Schedule 5- Industrial Services (IS)

Schedule 6- Municipal Streets Lights (MSL)
Schedule 7- Private Outdoor Lighting Service (POL)

Schedule 8- Sales for Resale (Exchange of Service (EU))

Q. What types of charges are in the current Tariff?

A. Schedule 1 (RS) rates include a fixed monthly charge, a per-kWh distribution charge and the per-kWh GSSR charge.

Schedule 2 (RSAE) rates include a fixed monthly charge, a per-kWh distribution charge and the per-kWh GSSR charge.

Schedule 3 (NRS) rates include a fixed monthly charge, a per-kWh distribution charge and the per-kWh GSSR charge.

Schedule 3 (NRH) rates include a fixed monthly charge, a per-kWh distribution charge and the per-kWh GSSR charge.

Schedule 4 (CS) rates include a fixed monthly charge, a per-kWh distribution charge, a distribution per-kW (demand) charge (with a 50% ratchet based on past 11 months actual demand but not less than 7 kW), and the GSSR charge, which may be the GSSR-1 (per-kWh) or the GSSR-2 (per-kWh and per-kW (demand) components).

Schedule 4 (CSH) rates include a fixed monthly charge, a per-kWh distribution charge and the GSSR charge, which may be the GSSR-1 (per-kWh) or the GSSR-2 (per-kWh and per-kW (demand) components).

Schedule 5 (IS) rates include a fixed monthly charge, a distribution demand (per-kW) charge (with a 50% ratchet based on past 11 months), a two-block per-kW distribution charge and the GSSR charge, which may be the GSSR-1 (per-kWh) or the GSSR-2 (per-kWh and per-kW (demand) components). The per-kWh distribution charge has two blocks, with the number of kWh in the first block based on the customer's billed demand for the month.

Schedule 6 (MSL) rates and Schedule 7 (POL) rates include a fixed monthly distribution charge per lamp and the per-kWh GSSR charge.

Schedule 8 (EU) rates include a per-kWh distribution charge.

All customers are billed monthly.

Q. Is the Company proposing any rate structure changes?

A. No, the Company is not proposing any rate structure changes.

HTY INFORMATION

Q. Please identify and describe the exhibits that show HTY sales and revenue.

A. Schedule B shows total revenue by customer type for HTY 2024, and distribution-only revenue for HTY 2024, FTY 2025 and FPFTY 2026. HTY total revenue is $13,158,392 based on Wellsboro's financial statements. The HTY distribution-only amounts is total revenue amounts minus GSSR and Transmission revenue. The HTY total revenue amounts are from Schedule B1, which is supported by detailed computations on Schedule B1-1, using present rates and HTY billing units. The billing units are sales in kWh, numbers of customer bills and demand in kW.

Q. Please describe the HTY information regarding costs.

A. Schedule C1-1 shows the details of operating expenses by function for the HTY. This exhibit is described in detail later in my testimony.

Q. Please describe the HTY information regarding rate base and Rate of Return.

A. Schedule C1-5 computes the rate base for the HTY. Schedule C1 shows the return on rate base for HTY 2024 was 3.97% for distribution-only.

FTY AND FPFTY SALES AND REVENUE

Q. Please identify and describe the exhibits that show FTY 2025 and FPFTY 2026 sales and revenue at present rates.

A. Information on sales and revenue is presented in Schedule B. For HTY 2024, sales were approximately 97 million kWh, with approximately 160,000 kW billed demand.

For FTY 2025, the sales forecast represents normalized annual use per customer times expected number of customers. Normalized annual use per customer was developed by Wellsboro in a special study. The number of customers equals average number of customers in 2024 plus expected growth. Sales for FTY 2025 are projected at

approximately 104 million kWh (Schedule B2-1, line 2), and distribution revenue is projected to be $6,380,000 (Schedule B2-1, line 39).

For FTY 2026, the sales forecast used the same normalized annual use per customer, and additional growth in the number of customers. Sales for FPFTY 2026 are projected at approximately 106 million kWh (Schedule B3-1, line 2), and distribution revenue is projected to be $6,400,000 (Schedule B3-1, line 39).

FTY AND FPFTY COSTS

Q. Please list the types of costs included in FTY and FPFTY costs.

A. FTY and FPFTY costs include Operating and Maintenance costs ("O&M") and Non-operating costs. O&M costs include Purchased Electricity, Distribution expenses, Customer accounting and collection expenses, Sales and public relations expense and Administrative & General expenses. Non-operating costs include Depreciation expense, Taxes other than income, Rate case expense amortization and Income tax expense.

Q. How did you develop the FTY and FPFTY O&M costs?

A. HTY actual O&M costs, totaling $9,252,000, are summarized on Schedule C1, line 18. Schedule C1-1 shows the detail of O&M costs by account for 2023 and HTY 2024 (actual) and for FTY 2025 and FPFTY 2026 (forecast). The costs are carried forward to Schedule C-1. Schedule C1-1, lines 51-55, presents a summary of costs by type (labor, overhead, transportation, materials).

The columns to the right of HTY actual O&M costs on Schedule C1-1 show the changes between HTY 2024 and FTY 2025; the columns to the right of FTY 2025 show the changes between FTY 2025 and FPFTY 2026.

The Labor portion of each O&M account is also shown on Schedule C1-1.

The HTY, FTY and FPFTY costs are summarized and carried forward to Schedule C1.

Q. How was Depreciation expense computed for each year?

A. Schedule C3, page 1, shows the asset values at original cost in PAPUC / FERC account detail as of December 31, 2023, actual additions and retirements during HTY 2024, and planned additions for FTY 2025 and FPFTY 2026.

Schedule C3, page 2, shows the depreciation rate applicable to each account, and depreciation expense for each year. The annual depreciation expense for each asset account was computed by multiplying X) the depreciation rate for the asset account times Y) original cost at prior year end plus one-half of the additions for the year. The total FPFTY depreciation expense, less the amount charged to clearing accounts and recovered in O&M costs, is $1,939,000; this amount is carried forward to Schedule C1.

Schedule C4 shows the Reserve for Depreciation at the ends of the HTY, FTY and FPFTY.

Q. How did you compute Taxes other than income for FTY 2025 and FPFTY 2026?

A. Schedule C1-3 shows the components of Taxes other than income.

The Pennsylvania Use Tax and the Public Utility Realty Tax are assumed to be the same in FTY and FPFTY as in HTY. The Pennsylvania Gross Receipts Tax ("GRT") is computed by applying the tax rate of 5.90% to the applicable revenue for each year.[1] The FTY and FPFTY totals are carried forward to Schedule C1.

Q. How did you compute the FPFTY Rate case expense amortization?

A. The Rate case expense amortization reflects the normalized rate case expense. Expenses for the pending rate case, if fully litigated, are estimated at $331,000 and a three-year

[1] The effective tax rate is calculated using the 59 mills GRT.

normalization period was determined to be reasonable, starting January 1, 2026 (the start of the FPFTY). The computation is shown on Schedule C1-3 and the result is included in Account 928 on Schedule C1-1.

Q. How did you compute the FTY and FPFTY Income tax expense?

A. Income tax expense for the FTY and FPFTY is computed on Schedule C1-4.

Net operating income before income taxes (line 1), is from Schedule C1, line 25.

Synchronized interest expense (lines 3-8) is computed by multiplying rate base (Schedule C1, line 30) and by the weighted cost of debt (Schedule C1-2).

Taxable income before depreciation tax adjustments (line 9) is equal to Net operating income before income taxes less Synchronized interest expense.

Regulatory Pennsylvania taxable income and Regulatory Pennsylvania tax expense are computed using the Full flow through method; that is, tax depreciation is used in the computation. The Pennsylvania depreciation adjustment (lines 11-14) reflects the depreciation expense on Wellsboro's Pennsylvania tax return and is computed using the double declining balance method applied to tax basis and tax life (just as on the tax return). Regulatory Pennsylvania taxable income (line 15) is equal to Taxable income before depreciation tax adjustments as adjusted by the Pennsylvania depreciation adjustment. Regulatory Pennsylvania income tax expense (line 16) is equal to Regulatory Pennsylvania taxable income times the statutory 9.99% rate.

Regulatory Federal taxable income and Regulatory Federal tax expense are computed using a modified Full flow through method; that is, a modified tax depreciation amount is used in the computation. The Federal depreciation adjustment (lines 19-21), is based on the straight line method applied to tax basis and tax life. Federal taxable income (line 26) is

equal to Taxable income before depreciation tax adjustments as adjusted by the Federal depreciation adjustment and less Regulatory Pennsylvania tax expense. Regulatory Federal income tax (line 27) is equal to Regulatory Federal taxable income times the statutory 21% rate.

Regulatory Total income tax expense (line 29) is equal to Regulatory Pennsylvania income tax expense plus Regulatory Federal income tax expense, and is carried forward to Schedule C1, line 27.

Q. Does the computation of income tax expense included in the revenue requirement comply with Act No. 40 of 2016, which amends the Public Utility Code regarding the treatment of income tax expense for ratemaking purposes?

A. Yes. The computation of income tax expense for ratemaking purposes, presented on Schedule C1-4 (i.e., in the revenue requirement), reflects a tax deduction for each item of expense of investment (i.e., depreciation expense) in the revenue requirement. In addition, there are no items that reduce the income tax expense for ratemaking purposes, or increase the deferred tax liability, other than reflected in the revenue requirement.

Q. Did you compute the Net Utility Operating Income and Return on Rate Base at present rates?

A. Yes. Schedule C1, line 28 and Schedule C5, line 14 show Net Utility Operating Income at Present Rates for the HTY, FTY and FPFTY. Schedule C1, line 31 shows Return on Rate Base for distribution-only at present rates of 3.97% for the HTY, 1.44% in FTY 2025 and 0.68% in FPFTY 2026.

RATE BASE FOR THE FTY AND FPFTY

Q. How did you develop the Rate Base?

A. The Rate Base at the end of the HTY, FTY and FPFTY is presented in Schedule C1-5. Assets at original cost and accumulated depreciation are carried forward from Schedule C3. Schedule C3 shows assets, accumulated depreciation and annual depreciation expense, as discussed above.

The HTY amounts for Customer deposits and Materials and supplies are from Wellsboro's financial statements at December 31, 2024. These items were estimated to be the same for the FTY and the FPFTY as for the HTY.

The rate base includes a reduction for Accumulated deferred income taxes ("ADIT"), equal to the difference between Accumulated depreciation based on X) Federal tax expense borne by ratepayers (i.e., based on straight line method, discussed above) and Y) Wellsboro actual tax Federal tax expense (i.e., based on double declining balance method), times the current Federal income tax rate. The ADIT is computed on Schedule C1-5, lines 27-32 and carried up to Schedule C1-5, line 6.

The rate base includes a reduction for Accrued Pension / OPEB liability, reflecting the excess of amounts charged to expense over amounts paid (Schedule C1-5, lines 42-46, carried up to Schedule C1-5, line 9).

An allowance for Cash Working Capital was determined by using the widely-accepted formula of 1/8 of non-fuel cash operating costs (Schedule C1-5, lines 15-25, carried up to Schedule C1-5, line 12).

Total Rate Base, Schedule C1-5, line 13, is carried forward to Schedule C1, line 30.

NET UTILITY OPERATING INCOME

Q. What is the distribution revenue requirement for the FPFTY?

A. The FPFTY distribution revenue requirement (excluding Other income) is $9,301,000, as shown on Schedule C1.

Q. What revenue is included in the distribution revenue requirement?

A. The total revenue requirement includes:

- Electric operating revenue: Revenue from distribution of electricity, including exchange with other utilities.
- Other Revenue: Other revenue includes Forfeited Discounts (late payment charges) and Revenue from rental of electric property.
- Unbilled Revenue: Because the FPFTY is fully normalized, there is no unbilled revenue.

Q. What rate of return on rate base did Mr. D'Ascendis and Mr. Kucan recommend?

A. Mr. D'Ascendis and Mr. Kucan recommended a return of rate base of 8.18%.

Q. What rate of return on rate base does the proposed revenue requirement produce?

A. The proposed revenue requirement produces a rate of return of 8.18%, on the rate base of $25,857,000 (Schedule C1). The distribution revenue requirement (excluding Other income) needed to produce this rate of return is $9,301,000 (Schedule C1, line 7).

ALLOCATED CLASS COST OF SERVICE STUDY

Q. Please briefly describe the purpose of an allocated class cost of service study.

A. The purpose of an allocated class cost of service study ("ACOS") is to assign, on a cost-causation basis, the total distribution revenue requirement of a utility among the rate classes

in its Tariff. In performing the ACOS, all of the utility's costs of providing service are analyzed, in order to assign or allocate the costs among the rate classes, so that the utility can establish rates that ensure, subject to assumptions such as delivery volumes and customer counts, that it recovers its costs in full from each class.

Q. What are the guiding principles in performing an ACOS?

A. The essential element in performing an ACOS is the selection of allocators based on causal relationships between customer demands, load profiles and usage characteristics on one hand, and the costs incurred by the Company to meet those requirements on the other hand. The primary goals in selecting allocators are:

1. recognition of **cost causality** as opposed to **value of service**;
2. **stability** of results over time;
3. logical **consistency** and **completeness**; and
4. ease of implementation.

Q. What rate classes are included in Wellsboro's ACOS?

A. The rate classes included in Wellsboro's ACOS are Schedule 1- Residential Service (RS), Schedule 2- Residential Service All Electric (RSAE), Schedule 3- Non-Residential Service (NRS) and Non-Residential Space Heating (NRH), Schedule 4- Commercial Service (CS) and Commercial Space Heaters (CSH), Schedule 5- Industrial Services (IS), Schedule 6- Municipal Streets Lights (MSL), Schedule 7- Private Outdoor Lighting Service (POL) and Schedule 8- Sales for Resale (Exchange of Service (EU)).

Q. Please summarize the approach you followed in preparing Wellsboro ACOS.

A. The most critical task in performing an ACOS is establishing relationships between customer demands, load profiles and usage characteristics on one hand, and the costs

incurred to meet those requirements on the other hand. This requires an understanding of the utility system design and its relationship to the characteristics of the customers it is designed to serve. Wellsboro, like most utilities, designs its electric distribution system to meet three primary objectives:

1. To extend distribution services to all customers;
2. To deliver the aggregate peak demand for electricity of all firm delivery customers; and
3. To deliver electricity to customers throughout the year.

The allocation of costs in a class cost of service study must recognize these ***cost-causative*** characteristics of the utility's plant investments and operating expenses. A cost of service study should objectively reflect cost-causation factors and should not be influenced by end-results, customer equity or other *revenue allocation and rate design* considerations.

Wellsboro's ACOS follows the traditional three-step process: 1) *functionalization* of rate base and costs; 2) *classification* of functionalized costs as demand-related, commodity-related or customer-related; and 3) *class allocation* of the functionalized, classified costs among the rate classes.

Q. What functions are included in the ACOS?

A. Wellsboro's ACOS includes the following functions:

Primary Distribution - Designed to move power from the transmission system to the Secondary Distribution system; includes substations as well as conductors operating primarily at voltages of over 600V up to and including 12 kV, and related assets.

Secondary Distribution - Designed to move power from the Primary Distribution system to customers' premises; includes services.

Billing - Includes meter as well as assets and activities related to enabling the distribution of electricity to customers, and billing and collecting revenue.

Q. Wellsboro owns a limited number of 115 kV facilities. How did you address those facilities in the ACOS?

A. Wellsboro's 115 kV facilities are limited to equipment at the substation where it accepts power 115 kV power from MAIT that is stepped down to distribution voltage. These facilities are functionally equivalent to the Primary Distribution facilities and have been treated as such in the ACOS.

Q. Please describe the classification step of an ACOS.

A. In the **classification** step, the previously functionalized assets and costs are separated according to the system design or operating characteristics that cause those costs to be incurred in the first instance. Each asset and cost is determined to be incurred to serve **customers**, to deliver the electricity or **commodity** year-round or to meet peak **demand** including coincident and non-coincident peaks ("NCPs").

Customer related costs are the costs incurred to attach a customer to the distribution system, to meter usage and to maintain the customer's account. Customer costs are a function of the number of customers served and continue to be incurred whether or not the particular customer uses any electricity. They include capital costs associated with services and meters, and operating costs such as customer service, field service, billing and accounting expenses.

Commodity related costs are those costs that vary with the quantity of electricity delivered throughput sold to, or transported for, customers. These costs include purchased electricity costs and related costs.

Demand, or **capacity**, related costs are associated with plant that is designed, installed and operated to meet peak usage. Distribution assets are designed to meet the peak loads of the particular customers they serve.

Q. Please describe the class allocation step of an ACOS.

A. In the **class allocation** step, the functionalized, classified costs are allocated among the rate classes, based on causal relationships with the utility's design and operations, its accounting records and its system and customer usage and load data. Based on those analyses of cost relationships, each plant and cost item in the rate base and revenue requirement is directly assigned to a rate class, or an allocator is selected to apportion the item.

Q. Please explain the term "direct assignment."

A. The term "direct assignment" means identifying plant investments or costs incurred exclusively to serve a specific customer or group of customers. Direct assignments best reflect the cost-causation of serving individual customers or groups of customers, and should be used whenever the data are available.

Q. In a typical ACOS are most costs directly assigned, or are most costs allocated?

A. Most costs must be allocated, because utility operations are characterized by common facilities. In addition, direct assignments require detailed information which may be unavailable or require a great deal of time to prepare. The assets and costs that cannot be directly assigned are distributed among the rate classes using allocation factors.

Q. Please explain how allocators are derived.

A. Two types of allocators are typically used in performing an ACOS: external allocators and internal allocators. *External allocators* are based on special studies derived from the utility's accounting and other records. Examples of external allocators are number of

customers and NCPs. Schedule D lists the external allocators used in the ACOS, and Schedules D1 through D6 show the development of the external allocators.

Internal allocators are based on some combination of external allocators, previously directly assigned costs and other internal allocators. For example, the allocator for property insurance costs is based on plant investment amounts assigned to components of the rate base; as a result, it is necessary to compute the rate base before property insurance costs can be allocated. Both external and internal allocators are used in functionalization, classification and class allocation.

Q. What is the rate base and how is it used in the ACOS?

A. The rate base is the cost, net of accumulated depreciation, of Wellsboro investment in plant and other assets used to serve customers. The FPFTY rate base is $25,857,000 (Schedule C1). The revenue requirement reflects the return on the rate base of 8.18%, as discussed above. The ACOS allocates the rate base (and return on rate base) among rate classes.

Q. What are the major components of Wellsboro's rate base?

A. In discussing how I functionalized, classified and allocated the rate base in the ACOS, I will refer to the following major rate base categories:

- Distribution plant
- Intangible plant
- General plant
- Depreciation reserve
- Other rate base items

Q. How was distribution plant functionalized, classified and allocated among the rate classes?

A. Distribution plant comprises:

Land and Land Rights and Stations Equipment were functionalized to Primary Distribution, classified as demand and allocated among the rate classes using the NCP-Primary allocator.

Poles, Towers and Fixtures; Overhead Conductors and Devices; Underground Conduit; Underground Conductors & Devices were functionalized between Primary and Secondary based on circuit miles / lines miles (Schedule D1, lines 1-28).

The Primary portion was classified as demand-related and allocated among the rate classes using the NCP- Primary allocator.

The Secondary portion was classified between customer-related and demand-related using a zero-load analysis. The portion of total installation costs that are labor-related (i.e., all costs except material) were classified as customer-related, and the balance as demand-related (Schedule D1, lines 29-48). The zero-load component of the Secondary system represents the cost of extending service to all customers, without regard to peak or average load, and is therefore customer-related. The assets and costs functionally classified to Secondary-customer were allocated among the rate classes based on number of customers served at Secondary voltages. The assets and costs functionally classified to Secondary-demand were allocated using the NCP- Secondary allocator.

Line Transformers were functionalized to Secondary and classified between customer-related and demand-related using a minimum size analysis (Schedule D3). The minimum size was determined to be a 10 kVA transformer serving one customer. The minimum size portion was classified as customer-related and allocated among the rate classes based on number of customers served at Secondary voltages. The balance of costs were classified

as demand-related and allocated using the NCP-LTr allocator, which is the NCP-Secondary allocator reduced by the load-carrying capacity of the minimum size transformers (Schedule D2, lines 18-22).

Services connect individual customers to the system, and were functionalized to Secondary, classified as customer-related and allocated based on total replacement cost for each class (Schedule D4). Total replacement cost of Services for a class was computed as X) estimated replacement cost of a typical service for the class times Y) number of customer locations in the class.

Meters were functionalized to Billing, classified as customer-related and allocated based on total replacement cost for each class (Schedule D5). Meter costs include CT (current transformers) and PT (Potential transformers). Total replacement cost of Meters for a class was computed as X) estimated replacement cost of meters for the class times Y) number of customers in the class.

Street Lighting and Signal Systems were functionalized to Secondary Distribution, classified as customer-related and directly assigned to Lighting.

Q. What is the NCP-Primary allocator and how was it developed?

A. The NCP-Primary allocator (or "NCP-Prim") is used in the ACOS to allocate among the rate classes, the assets and costs that are functionalized to Primary distribution. To develop the NCP-Prim allocator, I first computed the annual peak demand for each customer class, for each year 2018-2024. Then I determined the annual sum of the class peaks, and computed each class' share of the annual sum. The NCP-Prim allocator is each class' average share of annual peaks. By averaging shares over an extended period, fluctuations due to weather, economy and other events are smoothed out.

In computing the NCP-Primary allocator, metered values were used. A more refined analysis would reflect losses (i.e., by transforming the metered values to primary-level values), which have a slight effect on the relative NCP-Primary values for each class.

Q. What is the NCP-Secondary allocator and how was it developed?

A. The NCP-Secondary allocator (or "NCP-Sec") is used in the ACOS to allocate among the rate classes the assets and costs that are functionalized to Secondary distribution and classified as demand-related, except for Line Transformers (and assets and costs that include Line Transformers).

The NCP-Secondary allocator value for each rate class is the sum of the peak demands of the individual customers in the class, excluding customers that are served at Primary voltages (Schedule D2, lines 14-16).

Q. What is the NCP-Line-Transformer allocator and how was it developed?

A. The NCP-Line-Transformer allocator (or "NCP-LTr") is used in the ACOS to allocate among the rate classes the cost of Line Transformers that are functionalized to Secondary distribution and classified as demand-related. It represents the demands on the Secondary distribution system in excess of the minimum system and is equal to the NCP-Secondary allocator values, minus the load-carrying capacity of the minimum size transformers (Schedule D2, lines 18-22).

Q. How was Intangible plant functionalized, classified and allocated among the rate classes?

A. Intangible plant is the Company's investment in EDI (Electronic Data Interchange) software. The EDI software performs a variety of functions for customers that purchase supply from an Electric Generation Supplier ("EGS") and those that want to shop for an

EGS. EDI enables customers that shop to receive a bill from their EGS for supply, if they choose. The data to be transmitted via EDI includes customer identification; date of service; kWh usage; and total monthly bill (distribution items). The EDI software will also permit customers to switch suppliers on three business days' notice. In the ACOS, the costs were allocated on a per-customer basis because the same data is made available for each customer, regardless of the customer's rate class, usage, demand or shopping status.

Q. How was General plant functionalized, classified and allocated among the rate classes?

A. General plant includes primarily Structures and improvements, Office furniture and equipment, Computers and Communications equipment, as well as other assets. These assets were functionalized, classified and allocated among rate classes based on the direct labor content of operating expenses, reflecting the nature of the assets and common cost of service practice.

Q. How was Depreciation reserve functionalized, classified and allocated among the rate classes?

A. Each component of the Depreciation reserve was functionalized, classified and allocated among rate classes in the same ratio as the related assets.

Q. How were other Rate Base Items functionalized, classified and allocated among the rate classes?

A. Other Rate Base Items were functionalized, classified and allocated as follows:

Cash working capital represents Wellsboro's need for cash to keep the business running until revenues are collected to pay costs. This item was functionalized, classified and allocated among the rate classes in proportion to operating expenses.

Materials and supplies was functionalized, classified and allocated among rate classes in proportion to operating expenses.

Customer Deposits were directly assigned between Residential and Non-residential, then allocated among the rate classes based on revenues (Schedule D6).

ADIT was functionalized, classified and allocated among rate classes in proportion to plant in service.

Accrued Pension / OPEB Liability was functionalized, classified and allocated among rate classes in proportion to labor content of O&M expense accounts.

Q. What are the major categories of Wellsboro costs?

A. The major cost categories in Wellsboro cost of service are:

- Distribution operating and maintenance expenses
- Customer accounts and service expenses
- Administrative and general expenses
- Depreciation expense
- Tax expense, other than on income
- Income tax expense

Q. In determining how to treat these costs in the ACOS, was any other important category of costs considered?

A. Yes, labor costs affect most of the cost categories because many costs are assigned based on the direct labor content of other costs. For example, Administrative & General Salaries, Account 920, is allocated among rate classes based on the direct labor content of operating expense accounts. To perform these allocations, the direct labor content of each cost account was provided by Wellsboro, and appropriate allocators were developed.

Q. What costs are included in distribution operating and maintenance costs and how were they functionalized, classified and allocated among the rate classes?

A. Wellsboro's distribution operating and maintenance costs include operating and maintenance costs for its distribution system including stations; poles, towers and fixtures; overhead and underground conductors and related equipment; meters; line transformers; lighting; and other assets. Each cost was analyzed to determine which assets it was incurred to operate or maintain, and the cost was functionalized, classified and allocated among rate classes in the same manner as those assets. For example, Miscellaneous distribution expenses, Account 588, relates to the Overhead and Underground assets, and was functionalized, classified and allocated in proportion to those assets.

Q. What costs are included in customer accounts and service expenses and how were they functionalized, classified and allocated among the rate classes?

A. Customer-accounts costs includes primarily meter-reading expenses, customer records and collection expenses and uncollectible-accounts expense. These costs were functionalized to Billing and classified as customer-related.

Meter reading expenses were allocated among the rate classes in proportion to Meter costs.

Customer records and collection expenses includes activities for billing, call center, payment processing, recoveries and service initiation / termination, and were allocated based on the number of customers.

Uncollectible accounts expense was directly assigned between Residential and Non-residential based on Wellsboro historic data, then allocated among the specific rate classes based on revenues (Schedule D6).

Q. How were Administrative and general expenses functionalized, classified and allocated among rate classes?

A. Administrative and general ("A&G") expenses comprises the following:

Administrative and general salaries, Office supplies and expense, and Employee benefits were functionalized, classified and allocated among rate classes based on labor content of the operating and maintenance and customer accounting costs. Most Employee benefits costs are included in the O&M and customer accounting accounts, and not in A&G costs.

Property insurance, Injuries and damages and Maintenance of general property were functionalized, classified and allocated based on plant costs.

Outside services and Miscellaneous general expenses were functionalized, classified and allocated based on a 50/50 weighting of labor and plant costs.

Regulatory commission expenses were functionalized to Billing, classified as customer-related and allocated among rate classes in proportion to rate base.

Q. How was depreciation expense functionalized, classified and allocated among the rate classes?

A. Depreciation expense was computed for each asset account (Schedule C3); each component was functionalized, classified and allocated among rate classes in proportion to the related assets.

Q. How were taxes other than GRT and income taxes functionalized, classified, and allocated among the rate classes?

A. These taxes are includes PURTA, Real estate tax and Use taxes, which were functionalized, classified and allocated among rate classes in proportion to plant.

Q. How was GRT functionalized, classified, and allocated among the rate classes?

A. GRT is based on revenue, and GRT at present rates was computed for each function, classification and rate class on that basis. In computing the revenue requirement, the GRT expense for each class was computed based on class revenue requirements.

Q. How was income tax expense functionalized, classified and allocated among rate classes?

A. Income tax expense in the FTY was functionalized, classified and allocated in proportion to pretax income. In computing the revenue requirement, Income tax expense was computed for each class based on the pretax income needed to produce the revenue requirement for the class.

Q. How was revenue at present rates computed for each rate class?

A. Distribution revenue at present rates is shown on the proof of revenue at Schedule B1. The total was functionalized and classified based on pro forma revenue requirements, and was assigned to each rate class based on forecast revenue at present rates for each rate class.

Forfeited discounts was functionalized to Billing and allocated based on historical experience for write-offs.

Rent for Electric Property represents pole rental revenue and was functionalized, classified and allocated in proportion to Poles, Towers and Fixtures.

Other Electric Revenue was allocated among the rate classes in proportion to Distribution revenue.

Q. How was the revenue requirement for each rate class developed?

A. The revenue requirements for each rate class are computed in the same manner as for the total Company, as shown on Schedule C1. The revenue requirement for each rate class is the sum of its allocated operating expenses, depreciation expense, general taxes, return on

rate base and income tax expense. Return on rate base was computed by multiplying the class' rate base by the proposed system average Rate of Return. Income tax expense for each class was computed by grossing up the required return on rate base for the class at the income tax rate related to the overall revenue requirement. GRT for each class was computed by grossing up the required revenue for the class including income tax rate. Schedule E-1A, line 190 and Schedule E-1, line 13, show the total rate class revenue requirements based on fully allocated distribution cost of service at the proposed system Rate of Return.

Q. Please summarize the results of the ACOS.

A. Schedule E-1, shows Net income at present rates for each rate class (line 7) and Return on rate base at present rates (line 11). It also shows the revenue requirement for each class to produce the proposed system return of 8.18% (line 13) and the increase or decrease this represents over revenue at present rates (line 28).

PROPOSED REVENUE ALLOCATION

Q. What were the considerations in the proposed revenue allocation for each class?

A. The following objectives were established for the proposed revenue allocation:

1. To move each class closer to its cost of service, as computed in the ACOS (Schedule E-1).
2. To mitigate extreme rate impacts on rate classes and on customer subgroups.

Q. Have you prepared a schedule that presents the proposed revenue allocation?

A. Yes, Schedule B6-4 presents the proposed revenue allocation and related information. Line 20 presents the increase required for each class to produce a return of 8.18%, and line 24 presents the proposed distribution revenue including the increase.

Lines 1-8 show net income and return on rate base at present rates. Lines 11-21 show the revenue requirement for each class to provide a return of 8.18%. This information is from the ACOS summary at Schedule E-1.

Line 34 computes progress toward unity (i.e., the system average return) for each class, by dividing a) the difference line between relative return at proposed rates (line 33) and relative return at present rates (line 8), by b) the difference between unity and relative return at present rates (line 8). For example, Residential would move from a relative return of (3.52)X system average return, to a relative return of 0.75X system average return; so Residential would move from 452 percentage points away from system average at present rates to 20 points away at proposed, which reduces the gap by 432 percentage points out of 452, or 95% of the difference.

Line 38 shows the percent change in total revenue, assuming 100% sales.

Q. Please summarize why you believe the proposed revenue allocation presented at Schedule B6-4 is fair and reasonable.

A. The revenue allocation is fair and reasonable because almost all classes make significant progress toward the system average return (Schedule B6-4, line 34), meeting the goal of moving each class closer to cost of service; and no class receives an increase greater than 75% (Schedule B6-4, line 37), meeting the goal of mitigating extreme impacts. In addition, most classes have significant reductions in the subsidy paid or received; the exceptions are NRH, CSH and EU, very small classes (Schedule B6-4, line 44).

PROPOSED RATES

Q. Please identify and describe the exhibits that show FPFTY sales and revenue at proposed rates.

A. Schedule B6 shows the same information as Schedule B, with an additional column showing distribution revenue at "PROPOSED Rates" for FPFTY 2026. The information in this column is from Schedule B6-1, which is carried forward from Schedule B6-2. Schedule B6-2 summarizes the detailed computations of billing units times proposed rates, presented on Schedule B6-3.

Q. Did you prepare a schedule that summarizes the present and proposed rates?

A. Yes. Schedule B7 presents the present and proposed rates for each rate class.

Q. Did you compare the amounts that typical customers in each rate class would pay under the present and proposed rates?

A. Yes. Schedule B8 compares the amounts that customers in each rate class with a range of usage levels would pay in the FPFTY, both at present rates and proposed rates. The schedule presents a total bill comparison (i.e., including GSSR). Schedule B8-1 presents the comparisons for distribution-only comparison (i.e., excluding GSSR).

Schedule B8-2 presents the total bill comparison using the GSSR that is expected to take effect on June 1, 2025.

Q. Did you prepare a schedule showing the number of customers whose bills would increase under the proposed rates?

A. Yes. Schedule B5 presents that information.

Q. What were the overall goals for rate design?

A. The goals of rate design for each class were to produce the target revenue, to align the rates more closely with costs, to stabilize revenue for the utility and costs for customers and to mitigate extreme impacts on most customers.

Q. How did you compute the proposed rates for RS?

A. For RS, the As-filed monthly charge was increased from $12.00 to $16.50. The balance of the class revenue target is proposed to be recovered in the volumetric kWh charge.

The proposed monthly charge is less than the customer-related costs typically included, based on the ACOS ($17.59, Schedule E1-C, line 25).

Q. How did you compute the proposed rates for RSAE?

A. For RSAE, customer-related costs typically included are the same as for RS ($17.59, Schedule E1-C, line 25). Therefore, the monthly charge is proposed to be the same as RS, $16.50, and the balance of the class revenue target is proposed to be recovered in the volumetric kWh charge.

Q. How did you compute the proposed rates for NRS and NRH?

A. For NRS and NRH, customer-related costs typically included are the same as for RS ($17.59, Schedule E1-C, line 25). Therefore, the monthly charge for each is proposed to be the same as RS, $16.50, and the balance of the revenue target for each is proposed to be recovered in the respective volumetric kWh charges.

Q. How did you compute the proposed rates for CS?

A. The proposed monthly charge for CS is $32.03, the same as at present. The customer-related costs typically included, based on the ACOS are $26.35 (Schedule E1-C, line 25). However CS has a minimum demand of 7 kW and demand-related costs are $25.85 per kW-month (Schedule E1-B, line 6). The proposed demand charge was increased by 40%,

approximately equal to the class revenue increase. The balance of the class revenue target is proposed to be recovered in the volumetric kWh charge.

Q. How did you compute the proposed rates for CSH?

A. The proposed monthly charge for CSH is $45.81, the same as at present. The customer-related costs typically included, based on the ACOS are $26.35 (Schedule E1-C, line 25). However CSH has a minimum demand of 7 kW and demand-related costs are $26.01 per kW-month (Schedule E1-B, line 6). The balance of the class revenue target is proposed to be recovered in the volumetric kWh charge.

Q. How did you compute the proposed rates for IS?

A. The proposed monthly charge for IS of $150.00. The customer-related costs typically included, based on the ACOS are $71.80 (Schedule E1-C, line 25). However IS has a minimum demand of 50 kW and demand-related costs are $21.64 per kW-month (Schedule E1-B, line 6). The proposed demand charge and the proposed Block 2 kWh charge were each increased by 40%, approximately equal to the class revenue increase. The balance of the class revenue target is proposed to be recovered in the Block 1 volumetric kWh charge.

Q. How did you compute the proposed rates for MSL and POL?

A. For each lamp under MSL and POL, the proposed rates were changed by the same percentage as the overall revenue change for the respective class.

Q. How did you compute the proposed rates for EU?

A. The kWh charge for EU was increased to produce the revenue target for the class.

Q. Do the proposed rates produce the targeted revenues?

A. Yes. Schedule B6-3, line 38, demonstrates that the proposed rates will produce total distribution revenue in FPFTY 2026 of $9,301,000. This amount (plus a rounding adjustment) equals the total distribution revenue requirement (not including Other revenue), shown on Schedule C1, line 7.

Q. Does this conclude your Direct Testimony?

A. Yes.

EXHIBITS

OF

HOWARD S. GORMAN

ON BEHALF OF

WELLSBORO ELECTRIC COMPANY OF LEWISBURG, PA

APRIL 30, 2025

RESUME OF
HOWARD S. GORMAN

SUMMARY

Mr. Gorman has more than 35 years of experience in the energy industry, including 25 years in rate and regulatory proceedings. His areas of expertise include embedded class cost of service studies, marginal cost studies, revenue allocation, rate design and revenue requirements, for both electric and gas utilities. He has testified as an expert witness before the Massachusetts Department of Public Utilities, New Hampshire Public Utilities Commission, New Jersey Board of Public Utilities, New York State Public Service Commission, Ontario Energy Board, Pennsylvania Public Utility Commission and Rhode Island Public Utilities Commission. Mr. Gorman also has experience in financial modeling, financial analysis and forecasting and treasury and financial management.

PROFESSIONAL EMPLOYMENT

2010 - Present HSG Group, Inc.
- *President*

1997 - 2010 Black & Veatch Corporation (R.J. Rudden Associates, Inc. before 2005)
- *Principal Consultant*

1995 - 1997 Independent Consultant

1987 – 1995 Trigen Energy Corporation
- 1987-1993- *Corporate Controller; Trigen was formed in 1987*
- 1993-1995- *Treasurer; Trigen had IPO with NYSE listing in 1994*

1982 - 1987 Coleco Industries, Inc.
- *Director, Treasury*

1976 - 1979 Touche Ross & Co.
- *Staff Accountant*

PROFESSIONAL EXPERIENCE

Utility Accounting and Costing

Mr. Gorman has performed numerous class cost of service studies, and has developed and supported revenue requirements, revenue allocation, rate designs and marginal cost studies, in rate cases before regulatory commissions in several jurisdictions, for electric and gas utilities. These assignments included developing test year data and rate year forecasts, establishing cost causality, selecting and developing allocators and analyzing customer impacts and policy considerations

Energy Project Analysis and Financing

Mr. Gorman has negotiated and completed transactions including construction and term loans, tax-exempt bonds, taxable bonds, subordinated debt and asset-backed (receivables and inventory) revolving credit facilities. He has worked successfully with lenders and borrowers to source and structure transactions, and was instrumental in negotiating loan documents and in designing power sale and supply procurement contracts to be financed. Mr. Gorman has performed financial analyses of energy-related assets, including electric and gas distribution companies, power plants and transmission operators. These analyses included development of cash flows and financial statements based on both regulatory and accounting presentations, and included review of assumptions, analysis of data, modeling and forecasting, sensitivity testing and stress testing.

Accounting and Financial Management

As controller of Trigen Energy Corporation, Mr. Gorman built the finance and accounting function; developed reports, procedures and management tools; and managed subsidiary controllers across North America, including an IPO with NYSE listing. He managed the corporate insurance portfolios and the benefit plans for Trigen Energy Corporation and for Coleco Industries, and has managed interest rate and currency forward contracts for the purpose of managing risk.

REBUTTAL TESTIMONY

AND EXHIBIT

OF

HOWARD S. GORMAN

ON BEHALF OF

WELLSBORO ELECTRIC COMPANY

AUGUST 13, 2025

BEFORE

THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
	:	
v.	:	**Docket No. R-2025-3054392**
	:	
Wellsboro Electric Company	:	

REBUTTAL TESTIMONY OF HOWARD S. GORMAN ON BEHALF OF WELLSBORO ELECTRIC COMPANY

Q. Please state your name, occupation and business address.

A. My name is Howard Gorman. I am the President of HSG Group, Inc., a consulting firm specializing in utility rate and regulatory matters, located in Great Neck, NY.

Q. Are you the same Howard Gorman that provided Direct Testimony on behalf of Wellsboro Electric Company ("Wellsboro" or "Company")?

A. Yes. Terms defined in my Direct Testimony have the same meaning in this Rebuttal Testimony.

Q. What is the purpose of your testimony today?

A. The purposes of my testimony are to update the Company's filing and to rebut portions of the testimony of the following witnesses:

- Bureau of Investigation and Enforcement ("I&E") Witness Walker (I&E St. No. 1), regarding Pennsylvania Corporate Income Tax rate, Rate Case expense, Unamortized Rate Case expense and Cash Working Capital.
- I&E Witness Cline (I&E St. No. 3), regarding Materials and Supplies and Customer Deposits amounts in Rate Base, Scale Back and Customer charges.
- Office of Consumer Advocate ("OCA") Witness Myer (OCA St. No. 1), regarding Revenue at present rates and Uncollectible accounts expense.

- OCA Witness Deupree (OCA St. No. 3), regarding the Company's Allocated Class Cost of Service Study ("ACOS"), Revenue allocation and Rate design.

Q. Are you sponsoring any exhibits today?

A. Yes, I am sponsoring Exhibit___(HSG-1R), which includes an index on Schedule A (R). The Company is supporting an increase of $2,848,804 compared to $2,899,388 in its original filing, reflecting the changes shown in Table HSG-1:

Line	Table HSG-1	Revenue Increase
1	Original Filing	2,899,388
2	Update PA Tax rates	(54,519)
3	Customer counts, 2025 and 2026	33,045
4	Materials & Supplies, Customer Deposits- Most recent 13-months	11,130
5	Remove Duplicate IT Acct 932	(40,240)
6		2,848,804

These changes in the revenue requirement are summarized below:

Items Discussed Below

- PA Corporate Income tax rate - Change to 7.49% in 2026
- Materials and Supplies and Customer Deposits - Include most recent 13-month average balances in rate base
- Cash Working Capital - Adjust the allowance in Rate Base to equal 1/8 times applicable expenses.
- Revenue Allocation and Rate Design - Revenue Allocation and Rate Design are updated for the revenue requirement on Exhibit___(HSG-1R), Schedule C1 (R).

Items Discussed In Rebuttal Testimony of Other Company Witnesses

- Customer Counts - Correct clerical error identified in response to OCA-IX-6.
- Lobbying expense - Remove $32 from Account 930 (Wellsboro St. No. 5-R)

- Information Technology ("IT") - Remove $40,240 in FPFTY and $34,816 in FTY from Account 932 to eliminate double count of certain IT costs (Wellsboro St. No. 5R)

Q. Have you updated the ACOS, revenue allocation and rates that Wellsboro is proposing to recover its revenue requirement?

A. Yes. The results of the ACOS, and the class revenue required to produce a return of 8.172% (target 8.18%; difference is due to rounding in rates), are on Schedule B6-4 (R), lines 1-21. There were no changes in methodology in preparing this ACOS, from the original filed ACOS.

The proposed revenue allocation, presented on Schedule B6-4 (R), lines 24-47 including metrics.

The proposed rates, which produce the revenue target for each class as well as the overall revenue target, are developed on Schedule B6-3 (R), with bill impacts on Schedules B8 (R) I will discuss the scale back methodology later in this testimony.

I&E Witness Walker

PA Corporate Income Tax Rate

Q. What does Mr. Walker propose regarding the PA Corporate Income Tax rate?

A. Mr. Walker notes that pursuant to Pennsylvania House Bill 1342 and Act 53 of 2022, the PA Corporate Income Tax rate is 8.49% in 2024, 7.99% in 2025 and 7.49% in 2026, with annual reductions of 0.5% until it reaches 4.99% in 2031 (I&E St. No. 1, p. 22). Wellsboro's original filing inadvertently used 9.99% for 2026. Wellsboro agrees that the appropriate rate for 2026 is 7.49%. The correct rates as proposed by Mr. Walker are reflected in the Company's Rebuttal filing, Exhibit___(HSG-1R).

Rate Case Expense

Q. What does Mr. Walker propose regarding Rate Case Expense?

A. Mr. Walker proposes normalizing the Company's Rate Case expense over 60 months, which would reduce the annual expense by $44,157 to $66,236 (I&E St. 1, p. 9). His reason is that the average interval between rate cases for the Company's last four rate cases has been 69 months. The Company has proposed normalization over 36 months.

Q. Do you agree with this proposed adjustment?

A. No. As Mr. Farnsworth explains, the Company was able to avoid filing a rate case in 2022, when its sister companies Citizens' Electric Company of Lewisburg, PA ("Citizens'") and Valley Energy, Inc. ("Valley") filed rate cases, due to exceptional and abnormal load growth at that time. Wellsboro's projections for the upcoming period do not include similar abnormal load growth. Additionally, as explained by Mr. Farnsworth in his Rebuttal Testimony, the Company was able to manage operating expenses and supplement revenues by participating in temporary funding programs made available during the COVID-19 pandemic. Those funding sources were unique and non-recurring.

Based on the non-recurring nature of the factors that allowed the Company to avoid a 2022 rate case filing, the Company expects it will need to file approximately every three years, to account for expected declines in annual usage per customer as discussed below, continuing cost escalation, and the need to continue to invest in plant. Notably, Wellsboro's sister company, Citizens', proposed a three-year normalization period, and no intervenor has objected to this. The Company's proposed three-year normalization period is customary and reasonable, and this adjustment should be rejected by the Commission.

Unamortized Rate Case Expense

Q. What does Mr. Walker propose regarding Unamortized Rate Case Expense?

A. Mr. Walker proposes removing Unamortized Rate Case expense from rate base, on the grounds that Rate Case expense is a normal operating expense for a utility, and the utility should not earn a return on a normal operating expense (I&E St. No. 1, pp. 14-15).

Q. Do you agree?

A. No. The utility has working capital tied up in unrecovered Rate Case expense and is entitled to a return on that working capital. The Company pays the Rate Case expense on a real-time basis during the proceeding, then collects the projected amount included in the Rate Case expense claim over the normalization period without carrying charges. As such, allowing the return on the balance is necessary to compensate Wellsboro for the delay between paying the expense and receiving the compensation in post-proceeding distribution revenues.

This treatment is analogous to Materials and Supplies, where the Company has laid out or committed working capital and the item has not flowed through expense yet. The cost of unused Materials and Supplies is routinely included in rate base. For the same reason, the unrecovered portion of Rate Case expense should be included as well, and this adjustment should be rejected.

Cash Working Capital

Q. What does Mr. Walker propose regarding Cash Working Capital?

A. Mr. Walker proposes that the Cash Working Capital ("CWC") allowance be computed based on the Commission's determination of revenue, expenses, taxes and rate base in this case (I&E St. No. 1, pp. 20-21). He accepts the Company's use of the 1/8 convention in

computing CWC. The Company has adjusted its CWC claim in Rebuttal using the 1/8 convention and will use this approach for the final revenue requirement. The Company accepts this proposal.

I&E Witness Cline

Materials and Supplies and Customer Deposits

Q. What does Mr. Cline propose regarding Materials and Supplies and Customer Deposits?

A. Mr. Cline proposes including these two items in Rate Base based on their 13-month averages for the most recent periods available at the time of determination. (I&E St. No. 3, pp. 6-8). The Company accepts this proposal and has reflected it in its Rebuttal filing, Exhibit___(HSG-1R), Schedule C1-5 (R).

Scale Back and Customer Charges

Q. What does Mr. Cline propose regarding Scale Back and Customer Charges?

A. Mr. Cline accepts the customer charges proposed by the Company based on the revenue requirement in its original filing. He proposes that the final rates be based on "the cost of service study ultimately approved by the Commission." (I&E St. 3, pp. 10).

If the Commission accepts the Company's ACOS but reduces its requested revenue requirement, then the Company proposes to use a proportionate scale back to allocate the increase. Wellsboro does not agree, however, that the proposed customer charges should be reduced (unless an updated customer cost analysis indicates otherwise). The proposed customer charges are consistent with the Commission's policy and should be approved as submitted. I will address in more detail below why appropriate rate design should include

customer charges at levels that promote revenue stability for the utility and balance other factors.

OCA Witness Meyer

Revenue

Q. What adjustments to Revenue does Mr. Meyer propose?

A. The Company's sales and revenue forecast was based on annual average kWh per customer, by rate class, over the most recent 5 years. Mr. Meyer proposes using the most recent 10 years, which he supports by showing that the 10-year average is close to the 15-year average. (OCA St. No. 1, pp. 5-9).

Q. Does Mr. Meyer's analysis support his proposed adjustment?

A. No, I believe his analysis supports the Company's position.

First, the sales forecast represents normalized annual use per customer multiplied by expected number of customers. Normalized annual use per customer data was developed by Wellsboro in a special study. This information has been provided to Mr. Meyer in the Company's response to OCA-IX-6. Mr. Meyer did not identify any errors in the special study or even discuss it in his testimony.

Second, and of paramount importance, as shown in Table HSG-2 below, these classes have shown marked declines in annual kWh usage per customer in recent periods. In fact, the 2023 and 2024 numbers are well below the 5-year averages. In his Rebuttal Testimony (Wellsboro Statement No. 4R), Mr. Farnsworth explains the reasons for the decreasing average customer sales. Mr. Meyer's adjustment would exacerbate under-collection of revenues, would shortchange the company in the short run, and would accelerate the need for the next rate case. This adjustment should be rejected by the Commission.

Line	Table HSG-2	Sch. 3- NRS	Sch. 4- CS	NRS+CS		Sch. 5- IS

OCA Witness Deupree

ACOS

Q. Please summarize Mr. Deupree's views regarding the Company's ACOS.

A. Mr. Deupree appears to accept the Company's ACOS, *except for* the classification of Secondary portions of distribution plant (accounts 364, 365, 366) and Line Transformers (account 368). He claims these items have no customer component and are 100% demand-related. He makes the following arguments in support of his claims:

- Theoretical Nature of Zero-Load System - Mr. Deupree notes that the Company's separation of costs into demand-related and customer-related is based on "hypotheticals that do not exist in the real world, including the assumption that somehow there is an electric distribution system out there in the world that could or would be plausibly built to serve customers but not load." (OCA St. No. 3, p. 17).

  This is an often used, but misleading argument. I acknowledge that the Zero-Load System and the Minimum Size System are theoretical constructs, but this is not a valid reason to reject them. They are useful tools to separate costs between demand-related and customer-related, regardless of the fact that no such systems would be built.

As an aside, Mr. Deupree's argument regarding Line Transformers is incorrect and falls apart. It would be possible to install transformers with ratings of 10 kVA for customers where this is sufficient to meet demand and to install larger capacity transformers where needed.

- Load Carrying Capacity - Mr. Deupree cites the National Association of Regulatory Utility Commissioners ("NARUC") Manual's caution that a minimum system would have a certain load-carrying capacity. (OCA St. 3, pp. 17-18).

  For items other than Line Transformers, the Zero-Load System presented in my ACOS excludes the cost of materials and would have no load-carrying capacity.

  For Line Transformers, the demand component does reflect the capacity of the minimum system. (Exhibit___(HSG-1R), Schedule D2 (R), lines 18-22, with the capacity of the minimum system shown on line 20).

- Bonbright - Mr. Deupree cites Professor Bonbright's claim that including the minimum-sized distribution system in customer-related costs is "clearly indefensible." (Bonbright, p. 492, cited at OCA St. No. 3, p. 20). Yet, he ignores Bonbright's claim that "its exclusion from the demand-related costs stands on much firmer ground" (Bonbright, p. 492) and goes ahead and classifies all costs, including any minimum size component, as demand-related. One cannot simultaneously criticize and rely on the same source.

- Relation to Number of Customers - Mr. Deupree analyzes the relationship between the number of customers the Company added (or lost) 2008 through 2024, and net dollar additions to distribution plant. Unsurprisingly, he finds no statistical correlation (OCA St. No. 3, p. 20).

I applaud Mr. Deupree's efforts, but I disagree with his conclusion that because he could not demonstrate statistical correlation, there is no relationship between the number of customers added and distribution system costs. On the face of it, this conclusion does not make sense. Even in years with decreases in the number of customers, the utility must invest in the distribution system. The reasons that Mr. Deupree does not demonstrate correlation include: the amount of net investment is affected by asset retirements; net dollar additions to distribution plant vary due to factors other than new customers, such as repairs, maintenance and upgrades; the timing of customer additions has not been matched to the timing of investments; and critically, the dollar value of investments may be affected by demand capacity added, which the analysis ignores.

Mr. Deupree's conclusion that because he could not demonstrate statistical correlation, there is therefore no relationship between the number of customers added and distribution system costs, is wrong.

Q. Please summarize the discussion regarding Mr. Deupree's objections to your ACOS.

A. First, the endpoints of the distribution system connect to customers, usually through a transformer; it is a tautology that the investment in distribution system, especially the Secondary system, is directly related to the number of customers. Regarding Transformers, the Company uses the rule of thumb that one 10kVA transformer serves one customer (Schedule D3), establishing a direct relationship between this particular component and the number of customers.

Second, each of the several arguments that Mr. Deupree raised are flawed, as discussed above.

Q. Do other intervenors comment on the Company's ACOS?

A. Yes. Office of Small Business Advocate ("OSBA") Witness Farr concludes that "the cost of service study aligns with the principles of cost causation and that [the Company's] proposed revenue allocation falls within the range of reasonableness." (OSBA St. No. 1, p. 3). I&E Witness Cline does not comment on the ACOS but relies on the Company's ACOS to review customer charges. (I&E. St. No. 3, p. 8).

Q. Has the Commission provided guidance regarding minimum system studies in allocated cost studies?

A. Yes, many times. The Commission repeatedly has endorsed minimum system studies, including in Wellsboro's 2019 rate case, in Citizens' 2019 rate case at Docket No. R-2019-3008212, in UGI Utilities, Inc.—Electric Division's 2018 rate case at Docket No. R-2017-2640058, and in PPL Electric Utilities Corporation's 2019 and 2012 rate cases. The Commission found that Wellsboro's analysis in the 2019 rate case, which I personally performed, was reasonable and appropriate for the classification and allocation of distribution system costs.

Q. What do you recommend regarding the Company's ACOS?

A. The Commission must reject Mr. Deupree's criticism of the Company's ACOS for the reasons stated above. The Commission should accept the Company's ACOS, found in Exhibit___(HSG-1R), Schedule E (R). This ACOS is based on the Company's revenue requirement submitted in Rebuttal, and uses the same methodology as the Company's originally filed ACOS as set forth in Exhibit___(HSG-1), Schedule E.

Revenue Allocation

Q. What does Mr. Deupree recommend regarding revenue allocation?

A. Mr. Deupree prepared his own ACOS, in which he failed to recognize any customer component of the Secondary distribution system. This is a fatal flaw. He relies on his ACOS for revenue allocation. Because Mr. Deupree's ACOS is fatally flawed, the Commission should reject it and should also reject his recommendations as to revenue allocation, as they rely on the flawed ACOS.

Rate Design

Q. What does Mr. Deupree recommend regarding rate design?

A. Mr. Deupree recommends that the Commission reject the Company's proposed increases to Customer charges. He cites several reasons, which I address below.

- Computation of customer-related costs - Mr. Deupree claims the Company's ACOS inaccurately reflects customer-related costs and, presumably, should not be relied on to develop the Customer charge. However, the Company's analysis of customer-related costs for inclusion in the Customer charge (Exhibit__(HSG-1R), Schedule E-1C(R)) excludes the Secondary portion of the distribution system, which is the only portion of the ACOS that Mr. Deupree contested. The analysis does include Transformers; however, the impact of Transformers on the costs is minor in comparison to the total costs that are included in the analysis. Mr. Deupree has not identified a significant flaw in my computation of the customer-related costs.
- Comparison to other regional utilities - Mr. Deupree claims the Company's present and proposed Customer charges for residential and small commercial customers are higher than the charges of neighboring utilities. This is not relevant to our discussion—the

relevant issue is how the current and proposed charges compare to the results of the computation of customer-related costs.

- Effect on energy conservation and low-usage customers - Mr. Deupree claims that higher Customer charges are contrary to the goal of energy conservation. However, the goal of energy conservation should not be considered in a vacuum; rate design must balance this with concerns such as revenue stability for the utility and efficient price signals, as well as affordability. In fact, Commission policy permits only certain costs to be recovered in the customer charge, and these do not include all fixed costs the utility incurs. As proposed, the customer charge recovers only 28.7% of monthly distribution charges for a typical residential customer using 750 kWh per month, while the remaining 71.3% is recovered on a kWh basis. This does not include the impact of the Generation Supply Service Rate ("GSSR"), which is recovered fully on a kWh basis. Inefficient pricing and under-recovery of costs lead to more frequent rate cases and also to cross-subsidies within rate classes, as costs are shifted to higher-usage customers.

OSBA Witness Farr

PA Corporate Income Tax Rate

Q. What does Mr. Farr propose?

A. Mr. Farr makes the same proposal as Mr. Walker regarding the PA Corporate Income Tax rate (OSBA St. No. 1, pp. 7-8); as discussed above, the correct rates are reflected in the Company's Rebuttal filing, Exhibit___(HSG-1R).

Q. Does this conclude your Rebuttal Testimony today?

A. Yes.

SURREBUTTAL TESTIMONY

OF

HOWARD S. GORMAN

ON BEHALF OF

WELLSBORO ELECTRIC COMPANY

AUGUST 28, 2025

BEFORE

THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	**:**	
	:	
v.	**:**	**Docket No. R-2025-3054392**
	:	
Wellsboro Electric Company	**:**	

SURREBUTTAL TESTIMONY OF HOWARD S. GORMAN ON BEHALF OF WELLSBORO ELECTRIC COMPANY

Q. Please state your name, occupation and business address.

A. My name is Howard Gorman. I am the President of HSG Group, Inc., a consulting firm specializing in utility rate and regulatory matters, located in Great Neck, NY.

Q. Are you the same Howard Gorman that provided Direct Testimony on behalf of Wellsboro Electric Company ("Wellsboro" or "Company")?

A. Yes. Terms defined in my Direct Testimony or my Rebuttal Testimony have the same meaning in this Surrebuttal Testimony.

Q. What is the purpose of your testimony today?

A. The purpose of my testimony is to respond to the Rebuttal Testimony of the following witnesses:

- Office of Consumer Advocate ("OCA") Witness Myer (OCA St. 1R)
- OCA Witness Deupree (OCA St. 3R)

Q. Are you sponsoring any exhibits today?

A. No.

Q. Are you supporting any changes to the Company's filing, as amended by Exhibit___(HSG-1R)?

A. No.

Q. Please summarize your review of the Rebuttal Testimony of Mr. Meyer (OCA St. 1R) and Mr. Deupree (OCA St. 3R).

A. Except for Mr. Deupree's discussion of the Company's Customer Cost Analysis, which I address immediately below, neither Mr. Meyer nor Mr. Deupree raise any new issues or provide any new arguments for their positions.

Mr. Meyer addresses two adjustments that were suggested in the Direct Testimony by other parties. Wellsboro accepted one of those adjustments (Tax Rate). I addressed the other adjustment (Unamortized Rate Case Expense) in my Rebuttal Testimony. Mr. Meyer has not raised any arguments that I have not fully refuted.

Q. What did Mr. Deupree say regarding the Company's Customer Costs Analysis?

A. Mr. Deupree repeated his objection to any increase in the monthly Customer charges (OCA St. 3R, p. 4). I will address the specifics of his testimony below:

- Mr. Deupree opines that the Customer Cost Analysis should be based on the Rate of Return ("ROR") at present rates of 0.68%, because the Commission has not approved its requested ROR or that of any other witness (OCA St. 3R, p. 3). This approach does not make sense. First, Mr. Deupree is implicitly accepting the Company's computation of its revenue requirement, but the Commission has not accepted that either. Second, we are establishing the rates for a Fully Projected Future Test Year assuming that a rate increase will be granted. Using the existing ROR without consideration of the rate relief is inconsistent with this process. Third, the rates and revenues currently charged

by the Company are too low; that is why a rate case was filed, so using the existing ROR only perpetuates the shortfall. What if the Company had been producing a negative ROR; would Mr. Deupree advocate using a negative ROR to set new rates?

- Mr. Deupree compared the Company's current Customer Charges to Customer-Related Costs computed using the ROR proposed by the Bureau of Investigation and Enforcement ("I&E") Witness Walters, 7.13%; and computed that current Customer Charges for Rate Schedules Residential Service ("RS"), Residential Service All Electric ("RSAE"), Non-Residential Service ("NRS"), and Non-Residential Heating ("NRH") recover approximately 69%-70% of Customer-Related Costs; and therefore in his view there is no "pressing need to increase" Customer Charges for Residential or Commercial classes (OCA St. 3R, p. 4). For the reasons stated in my prior testimony, it is important that Customer Charges reflect costs, and this view is supported by prior guidance from the Commission, including the UGI 2017 Order, p. 173, where the Commission said, "Thus, we find that UGI's proposal is consistent with *Lloyd*, which held that rate structures should be adjusted to reflect the cost of service to each rate class and to eliminate cross-subsidization." There is no authority or rationale to substitute Mr. Deupree's judgment that the current monthly Customer Charges are "good enough" for ratemaking and economic theory and practice and the guidance of the Commission regarding the appropriate method to establish customer charges.
- Finally, Mr. D'Ascendis has explained why OCA Witness Walters' ROR recommendation is unreasonably low and not appropriate to establish rates in this proceeding.

I recommend the Commission evaluate the Company's proposed Customer Charges based on the information it has filed in this case, Exhibit___(HSG-1R), and the principles which have been established by precedents.

Q. Does this conclude your Surrebuttal Testimony today?

A. Yes.

v.	**:**	**Docket No. R-2025-**
	:	
Wellsboro Electric Company	**:**	

DIRECT TESTIMONY OF BYRON FARNSWORTH, JR.
ON BEHALF OF WELLSBORO ELECTRIC COMPANY

Q. Please state your name and business address.

A. My name is Byron (Barney) Farnsworth, Jr., and my business address is 33 Austin Street, Wellsboro, Pennsylvania.

Q. By whom are you employed and what position do you hold with Wellsboro Electric Company?

A. I am employed by C&T Enterprises, Inc. ("C&T"), and assigned to Wellsboro Electric Company ("Wellsboro" or "Company") as the President and Chief Executive Officer.

Q. What are your duties in that capacity?

A. My duties are to lead and provide general management to Wellsboro. I am also responsible for strategic direction, power supply and regulatory/legislative issues at Wellsboro.

Q. Please describe your educational background and professional background.

A. I have a Bachelor's Degree in electrical engineering from the Rochester Institute of Technology and a Masters Degree from Rochester Institute of Technology with concentrations in Management and Finance. I previously worked at Rochester Gas & Electric and NYSEG for over 23 years in varying roles that increased in responsibility. I

started as a lineman moved into engineering and into Power Control as an Energy Scheduler/Forecaster. In 1996, RG&E formed an unregulated company and I was brought in to build out the electric and natural gas supply, pricing models and risk management functions and assumed the same duties for NYSEG Solutions in 2004. During 2008, I started at MXEnergy and worked in the retail space in Executive roles managing supply, pricing and risk management for various EGS's until I was hired by Wellsboro Electric Company in July 2018 as the VP, Engineering & Operations/ COO. I became Wellsboro's President and CEO in January 2020.

Q. Please describe the purpose of your testimony.

A. My testimony starts with a general overview of Wellsboro, its service territory, and its customer base. Then, I will address historical and future test year expenditures and capital improvement information provided to HSG Group, Inc. ("HSG Group") for compilation and preparation of Wellsboro's filing. This will include the Wellsboro labor costs for both union and non-union employees. Additionally, I will outline the factors supporting a performance adjustment to Wellsboro's rate of return. Finally, I will discuss the proposed changes to Wellsboro's tariff.

COMPANY BACKGROUND AND OVERVIEW

Q. Please provide a brief overview of Wellsboro and its service territory.

A. Wellsboro is a small investor-owned Electric Distribution Company ("EDC") under the jurisdiction of the Pennsylvania Public Utility Commission ("PUC" or "Commission") operating in the Borough of Wellsboro and surrounding areas in Tioga County. The Company's service territory is predominately rural. We have over 550 miles of distribution facilities and provide service to approximately 6,478 customers as of December 31, 2024,

of whom 5,159 were residential, and 1,319 were commercial, industrial, lighting or sales for resale.

Wellsboro has been providing electric service to consumers in Tioga County since 1894, with a variety of owners and shareholders since then. In 1995, Wilderness Utilities, Inc., acquired all of Wellsboro's common stock from members of the McCarthy Family, which had owned the majority of the Company since 1984. Wilderness was a holding company formed by Tri-County Rural Electric Cooperative ("Tri-County") for the purpose of acquiring and owning Wellsboro.

On January 1, 2005, Wellsboro transferred 100% of its common stock in Wellsboro to C&T and Wilderness was then inactivated. C&T is a holding company and management services firm that is jointly owned by Tri-County, based in Mansfield, Pennsylvania, and Claverack Rural Electric Cooperative based in Wysox, Pennsylvania. C&T is also the parent corporation of Citizens' Electric Company of Lewisburg, PA ("Citizens'"), and Valley Energy, Inc. ("Valley"). We obtained the Pennsylvania Public Utility Commission's ("PUC" or "Commission") approval for the transfer of control and ownership from Wilderness to C&T on December 23, 2004, at Docket No. A-111200F000.

Q. What changes were made to the Company's tariff or operations as a result of the Electric Generation Customer Choice and Competition Act ("Competition Act")?

A. Wellsboro unbundled its generation supply service from its electric distribution service. Electric distribution service remains a service that is regulated by the Commission pursuant to traditional ratemaking processes under Chapter 13 of the Public Utility Code. This filing implements proposed changes to our unbundled distribution rates in accordance with the Chapter 13 requirements and process.

Wellsboro retains the obligation to provide generation supply service to all customers as the Default Service Provider ("DSP") in its service territory in conformance with requirements set forth in the Competition Act. The generation rate is known as our Generation Supply Service Rate ("GSSR"), which includes the GSSR-1 and GSSR-2. We are proposing a minor change to our GSSR-1 and GSSR-2 Riders in this proceeding to ensure that customer generators are charged for distribution and generation service using a consistent measure of their use of the system (e.g., Billing Demand). I will address this in more detail later in my testimony.

Q. Do the proposed distribution rates include any expenses related to generation supply?

A. No. HSG Group's analysis focused solely on our regulated distribution service rates. As a result, both the revenues and expenses related to generation supply services in the historic, future, and fully-projected future test years (HTY, FTY and FPFTY) are removed from our overall revenue and expenses.

In addition, the legal and consulting fees that Wellsboro incurs for the generation function are collected through the GSSR and were not included in the distribution rates in this filing. Finally, our cash working capital assumption for the new distribution rates is based only on the portion of the expenses and bills related to distribution service and does not include generation expenses.

Q. When was Wellsboro's last base rate proceeding?

A. Wellsboro's last base rate proceeding was in 2019, with rates taking effect in early May 2020. It has been approximately six years since Wellsboro filed the last distribution rate increase.

Q. Can you explain generally the changes that have occurred since the last case?

A. Yes. Many elements of our financial and operational environment have changed in six years, especially during the COVID-19 pandemic and its aftermath. We were able to avoid filing for a rate case because we pursued cost management strategies, searched for available grants and experienced a few new customer installations; however, the cumulative impact of slowing growth and increasing costs now require us to seek a rate increase.

First, there has been substantial inflation in the cost of materials and equipment over that time. During the COVID-19 pandemic and into 2023, the United States economy experienced Consumer Price Index (CPI) inflation that peaked at about 9.1% year over year in June 2022 and remained above 4% through mid-2023 and has remained on average above 3.5% in late 2023 through 2024. The Headline Producer Price Index (Total) (PPI), which reflects the prices that companies are receiving for their products, peaked at 11.2% for the 12-month measure in March 2022. Although inflation has moderated, this only reduces the rate of growth going forward for our materials and supplies—it does not reduce the costs back to the 2019 levels.

Second, our labor costs and benefits have increased since 2019. I will discuss in more detail later how our union and non-union wages have increased. Our increases are consistent with those seen in other industries, as reported by the Bureau of Labor Statistics. Based on information on their website, the year over year inflation to wages and salaries exceeded 4% beginning in the September 2020 through September 2021 period and continuing for each yearly survey period thereafter through the June 2023 to June 2024 survey period.

Third, our outside contractor expenses for tree-trimming and other reliability enhancing activities also have increased due to the Commission's emphasis on service reliability. In

general, vegetation management and routine maintenance on our overhead lines is reflected in our operating expenses in Accounts 588 and 593. Mr. Gorman's Exhibit __ (HSG-1), Schedule C1-1 provides an illustration of how our actual expenses increased from calendar year 2023 through calendar year 2026. Since our last rate change took effect in 2020, our Operating & Maintenance Expenses increased by $ 98,513 from $1,236,336 in 2020 to $1,334,849 in 2024. We are projecting further increases in 2025 and 2026 to focus on additional vegetation management, new technology to manage outages, customer information and billing.

Similarly, our Administrative & General Expenses and our Customer Account and Collection Expenses have increased, as reflected in Mr. Gorman's analysis.

In addition, Wellsboro has also completed numerous projects to upgrade and modernize its distribution system that were necessary to maintain service and reliability, including the replacement of our antiquated office and crew building. These improvements will be placed into rate base as a part of this proceeding.

Q. What has the Company done to mitigate those increases?

A. We have searched for areas where costs can be reduced through greater efficiency or outsourcing. We have continued to expand our use of the NISC system (CIS, OMS, material management, staking/mapping, budgeting and financial data) since 2019. Employees have been going through training each year to continuously develop their skills on our NISC system which has increased productivity and efficiency since 2019. Employees have also been cross-training to increase our collective knowledge and the coverage as employees are out of the office for vacations and training while planning for potential Succession. Increased use of existing technology has been deployed for Work

Management (Work orders and meter orders) by our linemen in addition they perform PUC mandated Inspection and Maintenance (I&M) work each year. Tablets are used to record I&M data (pole inspections, pole pulls, line inspections, transformer inspections, miscellaneous inspections) in the field and then it is brought back to the office and all data is uploaded into our NISC system as a permanent record which has eliminated the use of paper that was used prior to 2019. We completed required voltage conversion work and installed any remaining automated meters during the Spring of 2019 and have been 100% AMI since late 2019. We are using the AMI meters as of 2024 to transmit voltages multiple times a day into a report to help us continually monitor and identify potential issues on our system in advance of customers calling. The voltage report has reduced the need to send personnel into the field to install/remove a recording device. All of the technology adoptions have enabled us to keep the work force focused and efficient while avoiding the need for additional employees. The enhancements have improved the system reliability, resilience and ultimately the service to customers which has been demonstrated in survey results. Wellsboro collaborates with Citizens' and other PA EDCs on best practices for Engineering, Operations, Customer Service and Regulatory/Legislative issues.

COMPANY PERFORMANCE

Q. In Statement No. 2, the Direct Testimony of Dylan D'Ascendis and Ryan Kucan, Mr. D'Ascendis and Mr. Kucan propose both a size adjustment and a performance adjustment to their recommended rate of return. Do you agree with their approach?

A. Yes. A size adjustment and a performance adjustment are both appropriate.

Q. What is the basis for the performance adjustments proposed by Mr. D'Ascendis and Mr. Kucan?

A. As a basis for the performance adjustment, Mr. D'Ascendis and Mr. Kucan reference Section 523 of the Public Utility Code, which outlines the factors considered by the Commission in awarding performance adjustments. I am advised by counsel that the Public Utility Code identifies several criteria to be considered in assessing the performance of a fixed utility for purposes of a performance factor adjustment, including consideration of any relevant and material evidence of efficiency, effectiveness, and adequacy of service. The Commission should approve a performance adjustment based on Wellsboro's performance in the following areas:

- **Excellent reliability metrics.** Wellsboro has met or exceeded all PUC reliability metrics as shown in the Quarterly Reliability Dashboard Report for 4th Quarter 2024 attached as Exhibit __ (BF-1). Additionally, Exhibit __ (BF-2) contains Wellsboro's 2024 Annual Reliability Report, which similarly shows Wellsboro complying with PUC guidelines and exceeding the performance of the other EDCs regulated by the Commission. The 2024 report also includes reliability metrics for the prior two years (2022-2023).
- **Low customer complaints.** For the period 2022-2024, Wellsboro received no formal complaints and 10 informal complaints.
- **Favorable customer feedback.** Wellsboro has seen a steady improvement in positive reviews and evaluations from its customers since 2019. The Annual Customer Contact surveys for the period 2022-2024 are attached as Exhibit __ (BF-3).

- **High responsiveness: customer support calls.** Records from the Commission's Quality of Service System attached as Exhibit __ (BF-4) show Wellsboro answered, on average, approximately 97% of its customer phone calls in 2024 within 30 seconds.
- **Significant capital investment.** Addressed later in my testimony, Wellsboro continues to invest approximately $2.02 million annually in system replacements and improvements. This calculation does not include the building project. Exhibit __ (BF-5) shows three years of capital results and YTD 2025 is tracking closely to $2.00 million. There was roughly 1 project per year driven by customer requests that were close to $1.0M and almost wholly paid by customers from 2021 through 2024. There were multiple fiber providers that came through our territory in 2020 and 2021 that saw roughly 200 pole replacements that were paid in entirety by the attachers. The Commission should note these investments were funded without reliance on a Distribution System Improvement Charge.
- **Technology adoption: Smarthub use.** A total of 2,706 customers (approximately forty-two percent (42%) of Wellsboro's total customer count) use Smarthub to review and pay bills electronically, review usage reports, track outages, and remain connected to the Company's services via a mobile application or the website. Smarthub is available 24 hours a day for the convenience of Wellsboro’s customers.
- **Very low reportable injuries.** Wellsboro had zero (0) reportable injuries or MVA’s from 2019 through 2024, as demonstrated by the OSHA Form 300A attached as Exhibit __ (BF-6).

- **Street Light Upgrades.** Wellsboro received Commission approval for its LED tariff in 2019 and completed the subsequent LED fixture replacements in December 2023. The LED conversion has significantly reduced street light maintenance and the energy consumption when compared to older mercury vapor and sodium lighting fixtures.

CAPITAL IMPROVEMENTS AND PROJECTS

Q. Could you please describe some of the distribution system projects Wellsboro has completed since the Company's last rate case?

A. Yes. In addition to ongoing maintenance and operations, the Company has invested an average of $2.2million per year in capital improvements and expansions since the last rate case, not including the new office and crew building. When Wilderness purchased Wellsboro in 1995, the distribution system needed much repair. Since 1995, Wellsboro has invested over $36.6 million in system improvements and repairs. The Company continues a long-term effort to maintain and upgrade our distribution system. These plant investments were in the form of replacing its aging distribution infrastructure, including reconductoring and installing three-phase tie-points on select lines, increasing pole replacements towards a target of 250-300 per year, replacing aging porcelain equipment, installing switches and vacuum reclosers to automate the isolation of faults to reduce customer outages, performing improvements that will enable future voltage conversions and completing other reliability-enhancing improvements.

Finally, since the last rate case, we completed the upgrade of the FirstEnergy Mid-Atlantic Interstate Transmission Company (“FE MAIT”) transmission facility that serves our service territory. As part of the last rate case, we committed to undertake required

substation and transmission work that cost approximately $980,000 to ensure that the FE MAIT would upgrade the line feeding our substation from 34.5 kV to 115 kV. This service voltage conversion increased the reliability for our customers and also has helped us to avoid approximately $365,000 a year that we were paying to FE MAIT for the 35 kV connection. Since the new 115 kV line was energized in September 2020, the Wellsboro customers have avoided approximately $1,642,500 in extra transmission costs ($365,000 x 4.5 years).

Q. Please discuss Wellsboro's office and crew building project.

A. Wellsboro was formed in 1894 and some of the facilities dated back to its inception and others were built in the 1940s and 1950s and a small portion of the facility was remodeled in 1992. The main building was the old coal generating plant which had multiple roof leaks, exterior brick and mortar were failing, site drainage was poor, the property was exposed to an oil spill, the heating and cooling systems were obsolete and began failing in 2021 and some finally quit working in 2022. We began the process to evaluate moving to a new site, remodeling the old structures or building new structures in mid-2021. As we proceeded, the consensus was to remove the old buildings in phases and begin building new structures in phases. Phase 1 started in early 2023 and was completed in November 2023. Phase 1 encompassed dismantling our pole yard and an old substation adjacent to the pole yard and then a new steel building was built to house our linemen, vehicles, pole yard and the installation of oil containment pads. Phase 2 was started in November 2023, to remove asbestos roofing to clear the way for demolition of the area we had stored trucks and the linemen in over the years. Demolition of the brick and steel exo-skeleton began in December 2023 and we quickly found several significant issues in the old structures. The

roofing was riddled in holes, many pieces of steel in the building sagged once the brick supporting it was removed. The old brick and mortar were in such disrepair that large sections of wall fell or began sagging during demolition. The decision to build a new space optimized office was proven wise during the demolition process. The new office was completed to the point we could move out of our old space and into the new office in early November 2024. The last structure (old office) had asbestos roofing removed and demolition work started in December 2024. January and February 2025 were extremely cold so the final pieces of the building project (landscaping and the topcoat of blacktop) were shutdown until April/May 2025.

Q. Please provide some examples of projects that the Company is undertaking.

A. Significant 2025 capital projects include:

- **Hilltop Substation:** Wellsboro is working with our external engineering company to design a new exit for 5 of our 8 circuits that exit the substation built with Hendrix material on single pole structures with long spans. The project will construct 2 circuits onto a new steel structure reducing the span length using open wire construction. The project will be bid out in late 2025 for the material and a contractor in preparation to perform the work in the Spring of 2026. This project will enable the Company to reduce exposure to the loss of one structure that would impact over 4,000 customers (62%) and expose them to a lengthy outage as repairs are made.
- **Pole Replacements:** Wellsboro has experienced a high failure rate during pole testing (10-15%) from 2018-2023. There have been roughly 300 red tag replacements completed each year representing roughly 2.5% (15% of system). The

2024 testing dropped to a 6% failure rate which is requiring only 150 red tag pole replacements. Replacing poles that are beyond their useful life has improved reliability and we're expecting the failure rate to trend down toward 1-2% in the next few years. This reduction in pole replacements will enable capital to be shifted toward more reconductoring work identified in our 20-year work plan.

- **EATON Regulator upgrades:** Wellsboro has new Eaton Quik Drive Regulators to install that will help stabilize voltage anomalies.
- **Voltage Conversion:** Wellsboro will complete a voltage conversion (2.4/7.2 kV) in 2025 that is associated with a 3-phase tie-point project that started in 2025 and is expected to be finished in 2026. The conversion work will construct a new single-phase tie and setup future conversion work for roughly 150 customers. The work will improve reliability and help reduce the line losses on our system.
- **SCADA:** The SCADA was installed in December 2023 and is receiving substation data on transformers, reclosers and metering. Wellsboro has been approved for a PA Department of Environmental Protection ("DEP") Grid Resilience Grant to install new self-healing reclosers on a portion of our system that a loop constructed at the completion of a 2023 tie-point project. The new self-healing reclosers are expected to be installed in late 2025 or in early 2026 and will be interfaced into our SCADA. This equipment will enable devices to communicate with each other and reconfigure the circuit within a few minutes and then isolate a faulted area. This would be a significant improvement to reliability and resilience.
- **3-Phase Tie-Point and Reconductoring:** We have built 5 tie-points since 2019 that connect at minimum of 2 circuits together, which has enabled customers on

most of our system to have an alternate feed during storms, MVA or planned work situations. The 2025 tie-point work will connect the last circuit to an alternate feed. The work consists of several new poles, a 1-mile section of 3-phase line built with a larger conductor and a 1-mile 3-phase line reconductor to larger conductor. The remaining 1 mile of new 3-phase line is planned for completion in 2026. There is another 1-mile section of 3-phase line reconductor work that will be replaced in 2025 with a larger conductor on another circuit. This work will enhance the carrying capacity when the line needs to be reconfigured during a storm, MVA or planned work. Wellsboro developed a 20-year work plan in 2023 that has been used to keep the Company focused on future Capital improvements (reconductoring, new lines, replacing obsolete equipment in 2026 and out into the 2030's.

- Porcelain Replacements: Wellsboro started a project in 2022 to replace porcelain line cutouts, line arrestors and dead-end bells that fail unexpectedly causing outages. The project is roughly 60% completed at the end of 2024. The porcelain replacement will continue in 2025 and is expected to be completed in 2027.

Q. Do you anticipate that the rate of capital improvements will continue?

A. Yes. Wellsboro has a 5-year work plan that includes additional improvements. The projects for 2025 and 2026 are included in Mr. Gorman's analysis. A copy of our 5-year work plan is included in the budget that is provided as Wellsboro Confidential Exhibit 2.

Q. Does Wellsboro face any significant vegetation management issues?

A. Yes. Wellsboro's annual tree-trimming contractor costs have increased steadily by over $50,000-80,000 depending on the year due to contractor cost increases over the past three years. The Emerald Ash Borer and Pine Beetle removals, and enhanced tree growth in On

and Off ROW's due to wet growing seasons has impacted tree trimming costs the past few years. Vegetation management activities are particularly critical in a rural territory like Wellsboro's, which has many miles of off-road rights-of-way carrying poles and wires. Another significant issue is limited, qualified vegetation contractor interest due to the relatively small size of our contracts. Wellsboro implemented a multi-year bid process back in 2020 that enables the Company to control costs over the bid period which allowed us to bring our trimming back near a 5-year cycle.

Q. Are you planning to increase the tree trimming in 2025 and beyond?

A. Yes. We have included enhanced tree trimming objectives for 2025 and 2026, targeting $25,000/year of dead Off-rights-of-way trees that are leaning toward our 3-phase lines. If the tree trimming expense claim is fully reflected in our rates in this proceeding, we intend to continue this enhanced vegetation management rate.

Q. Are Wellsboro's operations, maintenance and replacement practices resulting in safe, adequate and reliable service to customers?

A. Yes. Wellsboro has demonstrated strong performance as measured by the Company's SAIDI (System Average Interruption Duration Index – measures average outage duration time for every customer served), SAIFI (System Average Interruption Frequency Index – measures average frequency of interruptions for every customer), and CAIDI (Customer Average Interruption Duration Index – measures average restoration time for every customer who lost power) among Pennsylvania electric utilities. As documented in the Company's 2024 Annual Reliability Report, Wellsboro achieved a SAIFI of .99 outages, a SAIDI of 102 minutes, and a CAIDI of 102 minutes. Exhibit __ (BF-2).

WELLSBORO STAFFING

Q. Please describe the relationship between C&T Enterprises and Wellsboro.

A. As Company witness Melissa Sullivan, Chief Financial Officer of C&T, explains in her Direct Testimony, C&T is a holding company, which owns 100% of Wellsboro's common stock. C&T also contracts with the other C&T affiliates to provide the staff necessary to meet their needs. Currently, C&T provides 9 employees to fulfill all of Wellsboro's staffing needs, with the exception of 8 union employees employed by Wellsboro. C&T also provides support services for activities that may not justify Wellsboro employing its own full or part-time employee, such as Human Resources, Information Technology support (e.g., network maintenance and administration), Safety Coordinator, Legal/Regulatory, Call Center and Communications activities. In addition to Wellsboro, C&T provides these same services to Citizens', Valley, Claverack Rural Electric Cooperative, and Tri-County Rural Electric Cooperative through a single set of C&T employees, who are considered "shared services" employees. Ms. Sullivan explains how the shared services costs are allocated.

Q. Do you anticipate any increases or decreases to the staffing at Wellsboro in the foreseeable future?

A. Wellsboro's Management team has been entrusted by the Board of Directors, shareholders, customers and the Commission to provide safe and reliable service at a fair cost. To address this core responsibility and the potentially negative impact from a failure to plan, we have a Succession plan for my role and I have each of my Department heads develop a Succession plan for their areas of responsibility that I report to our Board. One of our goals is preventing a lapse in experience and job knowledge necessary to effectively operate

Wellsboro's system. There are no retirements expected during 2025 or 2026. All of the office employees have Goals & Objectives developed annually which are reviewed periodically throughout the calendar year to ensure completion. My Goals & Objectives roll down through my direct reports and then to their direct reports to make sure yearly expectations are aligned from top to bottom in our organization. Within everyone's Goals & Objectives there is a Personal Development section that covers NISC training and other training to keep employee skills and knowledge growing each year. Along with the Personal Development we have ongoing cross training that is performed within departments and across departments based on Company needs, this provides us employees that can cover for vacations, unexpected absences and while other employees are out for training. There are no plans to change the staffing size in 2025 or 2026.

Q. Please discuss the Wage & Salary Study undertaken by Wellsboro and other C&T companies in 2024.

A. C&T undertook a Wage and Salary (W&S) study that was last performed 10-12 years prior. The need for a W&S study became evident during COVID as businesses moved critical employees to remote settings and needed to remain competitive to retain their employees. The W&S study started with each CEO evaluating their respective job descriptions and time for competency which were then used to compare similar positions across the various C&T companies with a goal for consistency. A third-party consultant was contracted to take our company positions and insert it into the market wage data they assembled from the market. The consultant data was reviewed by C&T personnel for reasonableness. In the end, Wellsboro found some employees that required increases which were planned to be

paid in one to two years depending on the magnitude of the increase. The first increase was performed on January 1, 2025 and the second increase will be performed on January 1, 2026. Going forward the consultant will provide updated market wage data annually that C&T will evaluate and update as appropriate. Wellsboro had some employees that were right where their wage needed to be, some required a modest increase and some were significantly below the market data for comparable positions. It is very important for Wellsboro to pay its employees appropriately for their jobs to ensure employees can be retained after investing in their training.

DERIVATION OF EXPENSES FOR FTY AND FPFTY

Q. Please explain how Wellsboro calculated the expenses for the HTY, FTY, and FPFTY that were provided to Mr. Gorman for his analysis.

A. Mr. Gorman's analysis uses calendar years in the statement of the HTY, FTY, and FPFTY expenses. This is consistent with Wellsboro's budgeting and financial reporting.

The HTY shows our actual 2024 expenses, with any appropriate ratemaking adjustments.

The FTY is based on the budget we approved for 2025, with any adjustments that we may have adopted since the Board of Directors approved the budget in late Fall 2024.

The FPFTY incorporates additional cost increases that we anticipate for 2026. These cost increases are based on our best judgment regarding wage, benefit and material costs inflation, which is approximately 3.0% each year on an overall aggregate basis.

Q. Please explain why a 3% inflation factor is appropriate for 2026.

A. As Ms. Campbell discusses, most of our expenses are labor and overhead. Ms. Sullivan's testimony discusses the historic and projected increases for non-union labor and benefits provided by C&T. Ms. Campbell discusses the projected increases for our union labor and

benefits. Combined, we view a 3% increase from 2025 to 2026 as a conservative projection.

Material and supply costs are impacted by both general economic inflation trends, tariffs and, at times, by product-specific developments. The most recent 12-month percentage change CPI published by the Bureau of Labor Statistics in March 2025, without food and energy, was just under 3%, while the total 12-month PPI in March 2025 was 3.4%. Many of our materials and supplies have components or materials that are sourced from non-domestic markets. The cost of those items will be impacted by President Trump's imposition of tariffs and other trade policies. Currently, it is uncertain how those costs will be impacted; however, we are anticipating that it will push the year over year prices higher than the normal rate of inflation (which we project at 3%). Given this uncertainty, we have not further increased the projections beyond the normal inflation measure (i.e., 3%).

PROPOSED TARIFF CHANGES

Q. What changes does Wellsboro propose to make to its Tariff as part of this filing?

A. Wellsboro proposes to make various changes to the rates in its Tariff. While I will discuss the general basis for certain proposals, Mr. Gorman's will more comprehensively review the specific rates and rate designs in his Direct Testimony.

Q. Please discuss the reasons supporting the Company's rate design proposals, including the increase in the Customer Charge for Rate Schedules RS – Residential, CS – Commercial Service, and IS – General Service.

A. As an EDC, almost all of Wellsboro's costs to provide service are fixed and do not shift with changing consumption. For example, the cost to produce a monthly bill for a customer

remains identical whether that customer uses 10 kWh of electricity per month or 5,000 kWh. Additionally, the cost to construct and maintain poles, wires, and services do not vary with usage. In our prior case, Wellsboro began adopting rate designs for each customer class that better reflect cost of service by collecting more costs through the flat monthly Customer Charge and moving away from declining rate block rates that rely so heavily on volumetric consumption. We propose to continue that progress in this proceeding. Mr. Gorman's testimony will provide greater detail regarding the specific changes the Company proposes to make in this proceeding to the rates in these customer classes.

Q. Please discuss the Company's proposed changes regarding Billing Demand, including the impact on customer-generators that are eligible for Net Metering under Rider D of Wellsboro's tariff.

A. Since our last rate case, the Pennsylvania courts invalidated the Commission's regulations that placed limitations on the size of a customer generator entitled to Net Metering under the Alternative Energy Portfolio Standards ("AEPS") Act. The Commission's regulations had required that the customer generator have independent load (e.g., usage for retail purposes) at the location where the generation is installed. In addition, the regulations placed size limitations on the capacity of the generation in relation to the independent load, in some configurations. In May 2020, the Pennsylvania Supreme Court invalidated

portions of the Commission's net metering regulations, including the "independent load" requirement.[1] /

As a result, EDCs like Wellsboro must accommodate the interconnection and net metering of customer generators with capacity of up to 3 MW that use very little electricity supplied by the EDC. In addition, we may have a customer that has generation producing power that exceeds their usage at the service location. In both scenarios, the customer generator uses the Wellsboro distribution system to deliver its output, which then offsets the energy that must be delivered to the Wellsboro service territory through the PJM (FE MAIT) transmission system. We are obligated to compensate the customer generator first by netting any electricity used by the account against the exported kWh, then by paying them "full retail value" for the remaining kWh at the end of the year that has not been netted against their usage. For customers with Billing Demands over 400 kW, the annual cash out will be a weighted average locational marginal price ("LMP").

Q. Has the Commission recently addressed the "full retail value" for the customer generators?

A. Yes. In a recent UGI Electric Division default service proceeding, the Commission clarified that the full retail value of the excess generation can be determined by an hourly generation price and that determinations for using a fixed or hourly generation price can

[1] *Hommrich v. Pennsylvania Public Utility Commission*, 231 A.3d 1027, 1036 (Pa. Cmwlth. 2020).

be made according to the size of the installed generation. In UGI's case, the threshold for applying the hourly price was 100 kW.

Q. Does the UGI decision extend to other rate placement determinations for customer generators?

A. I am advised by counsel that the logical legal extension of the UGI decision is that distribution service schedule placement and billing can reflect the customer generator's use of the distribution system, whether through its peak import from the system or its peak export to the distribution system. This ensures non-discriminatory treatment between customers that use the distribution system to power their non-residential operations and those who use the distribution system for the delivery of their energy product.

Q. What is Wellsboro proposing in this proceeding?

A. We are proposing to ensure that the customer generator's use of the distribution system and placement on our GSSR-1 or 2 appropriately reflects the use of the distribution system. Specifically, we are adding a definition of "Billing Demand" to our tariff, which states:

> **Billing Demand:** Billing Demand shall reflect the Customer's use of the distribution system, which will be the greater of Gross Generator Rating (kW(AC)) as stated in the generator interconnection application or the maximum demand of the customer during any 15-minute period during the current month.

We also propose to modify the "Billing KW" section in Service Schedules 4 and 5 to incorporate the "Billing Demand" definition above. The occurrences of the phrase "billing demand" in the GSSR-1 and GSSR-2 rate schedules, and in the "Generation and Transmission Charge" section of Service Schedules 4 and 5 will be changed to "Billing Demand" to incorporate the new definition. Finally, we will make minor changes in the

"Application of Schedule" sections in Service Schedules 3, 4 and 5 to clarify that the minimum or maximum demands listed will be determined based on Billing Demand (e.g., 7 kW maximum for Service Schedule No. 3; 7 kW minimum for Service Schedule No. 4; and 50 kW minimum for Service Schedule No. 5).

Q. Are Wellsboro's actions to design and maintain the distribution system different for a Service Schedule 5 customer that is using the distribution system to import 400 kW of electricity in comparison to a customer generator that is using the distribution system to export 400 kW of electricity to the system?

A. No. The design of the system and maintenance activities are very similar. We cannot plan segments of our system based on the theory that other local customers will have sufficient needs when the customer generator is exporting power to take that electricity. We have to engage in the same planning, maintenance, billing, customer service and other activities for both types of customers. It is fair for the customer generator to pay for their use of the distribution system. We have a System Study process that is required to be performed for any new interconnects that could adversely impact electric service for the other customers. The System Study is performed using the Peak (kW(AC)) value that is provided in the interconnection application. Using the Gross Generator Rating kW(AC) value in determining Billing Demand would be consistent with the evaluation performed during the System Study to maintain a stable system.

Q. Why is Wellsboro proposing to use the same definition of Billing Demand to determine the eligibility for the GSSR-1 or GSSR-2?

A. First, using the same definition will reduce customer confusion. Second, it ensures that the larger customer generators are categorized with similar customers (e.g., commercial

establishments). Without this change, their cash-out could be reflected in the GSSR-1 class, which is residential and small commercial customers. This would shift costs from their commercial activities and use of our system onto the residential class.

Q. Do you have any other changes to Wellsboro's tariff?

A. Yes. We have several sections that are no longer necessary and can be deleted.

First, because we have completed the conversion of the lighting on our system to LEDs, the old light fixture rates and the "conversion" language is no longer necessary and can be removed from Service Schedules 6 and 7.

Second, Rider B—Qualified Advanced Meters and Meter-related Devices can be removed. Our metering technology has greatly expanded and we accommodate this functionality with our utility meters.

Q. Does this conclude your Direct Testimony?

A. Yes.

Summary

Trees caused (62.1%) of the outages (2.9% ON-ROW and 59.2% OFF-ROW)

Animal contacts caused (20.4%) of the outages

Equipment failures (10.0%) these outages were associated with cutouts, arrestors, and jumpers.

Unknown (6.3%)

Lightning (1.3%)

The Company filed exemptions for 3 major events in the 4th quarter of 2024.

WELLSBORO ELECTRIC COMPANY
ANNUAL ELECTRIC RELIABILITY REPORT

Filed April 15, 2025

52 Pa Code §57.195 Reporting Requirements

(a)(2) The name, title, telephone number and e-mail address of the persons who have knowledge of the matters, and can respond to inquiries.

Byron Farnsworth Jr. – President/CEO
(570)724-6701, barneyf@ctenterprises.org

Tyler Mead – Director of Engineering & Operations
(570)724-6725, tylerm@ctenterprises.org

(b)(1) An overall current assessment of the state of the system reliability in the electric distribution company's service territory including a discussion of the electric distribution company's current programs and procedures for providing reliable electric service.

Wellsboro Electric Company has maintained excellent reliability indices during 2024 keeping all of our indices below the PUC established standard. The Company experienced 10 major events throughout 2024 including rain, wind, and heavy snow events that impacted reliability. By maintaining a small number of major events, the Company recognizes this will increase some of our indices because the outages will be much smaller and be pushed out to the extremities of our system, which will not allow them to qualify as a major event. The Company will continue trimming 70-75 miles per year, which amounts to a circuit or a portion of a circuit each year and keeps us around a 5-year cycle. The Company identified hot spot trimming on the downtown three phase portion of the system. Danger trees were identified In and Out of ROW during the year and urgent removals were dealt with immediately and other Danger trees are prioritized and removed as funding is available.

In 2024, the Company reconductored 7 miles of line, and installed other group operated switches to create tie points in the system. In 2025, the Company plans to reconductor another 3 miles of line and work to build another tie point. This will provide reliability to the circuits allowing an alternate feed.

The Company continues to participate in and gather information from various industry best practice groups. These groups include members from diverse utility groups such as the Pennsylvania Rural Electric Association, the Energy Association of Pennsylvania, and the National Rural Electric Cooperative Association. The Company will continue to implement best practices defined by these groups as appropriate.

The Company does not own or maintain any transmission facilities.

Current Maintenance Programs

Program	Description	Cycle
Infrared Inspection	All substation equipment monthly, and overhead lines as needed.	Monthly
Vegetation Management	Each year, primary lines are visually inspected on 4 circuits. This comprehensive field inspection allows us to identify areas that require trimming. We are striving to maintain a 5–6 year trimming cycle and the Boro is inspected annually to help identify unexpected "hot spots." Based on a bid the winning bidder. Trimmed 70 miles by the end of 2024.	2 Years – Visual 5-6 Years – Trimming
Visual Line Inspection	4 distribution circuits lines and pole hardware are visually inspected each year during preparation of tree trimming contract. Line sections receiving infrared inspection are also inspected visually during that process. Drones are used on a limited basis in tough to access ROWs to inspect structures, equipment and tree conditions. AppSuite is being used to capture specific information which is then transferred into our IVUE system to run reports.	2 Years
Overhead Transformer Inspection	Overhead equipment on 4 circuits are visually inspected each year to identify and correct any developing problems or safety concerns.	2 Years
Padmount Transformer Inspection	Padmounted equipment on 2 circuits are visually inspected each year to identify and correct any developing problems or safety concerns.	4 Years
Line Equipment Inspection	Air switches, circuit tie switches, capacitors, regulators, and reclosers are visually inspected during the Line Inspections each year. Where applicable, proper operation of control equipment is verified, and counter readings are recorded.	Annual
Pole Inspection	Poles are inspected at the ground line with a sonic and bore style test.	10 Years
Reject Pole Replacements	Replace condemned poles identified during pole inspection.	As needed, annually
Substation Equipment Inspection	Entire station is visually inspected. Equipment batteries are tested, communications equipment operation is verified, fans are tested, various gauge and counter readings are recorded. An infrared inspection is performed on all equipment monthly.	Monthly
Regulator/OCR Maintenance	Tripsaver reclosers will be inspected during the Line Inspections each year. Regulators are visually inspected monthly	Monthly - Regulators Annually – OCR's

(b)(2) A description of each major event that occurred during the year being reported on, including the time and duration of the event, the number of customers affected, the cause of the event and any modified procedures adopted in order to avoid or minimize the impact of similar events in the future.

Date	Time	Duration of Event (Minutes)	#of Customers Affected	Cause
1/9/2024	12:46 PM	2,129,900	5382	High wind

7/15/2024	17:15 PM	1,223,750	1837	High Wind
10/13/2024	12:54 PM	98,653	1078	High Wind/Off ROW Tree
10/14/2024	10:30 AM	62,340	735	High Wind/Off ROW Tree
11/28/2024	06:05 AM	150,057	1078	

(b)(3) A table showing the actual values of each of the reliability indices (SAIFI, CAIDI, SAIDI, and if available, MAIFI) for the electric distribution company's service territory for each of the preceding 3 calendar years. The report shall include the data used in calculating the indices, namely the average number of customers served, the number of sustained customer minutes interruptions, the number of customers affected, and the minutes of interruption. If MAIFI values are provided, the number of customer momentary interruptions shall also be reported.

RELIABILITY BENCHMARKS AND STANDARDS
Wellsboro Electric Company**

	SAIDI	SAIFI	CAIDI	MAIFI
2024	102	.99	102	*
2023	155	1.37	114	*
2022	142	1.09	130	*
3 Year Average	133	1.15	116	*

* Sufficient information to calculate MAIFI is unavailable.
** System Performance Measures with Major Events and Planned Outages Excluded

Formulas Used in Calculating the Indices

SAIFI = Number of Customers experiencing an Interruption / Average Customers served

SAIDI = (Total Cust.-minutes interrupted) - (Cust.-minutes for a major event) / Average Customers served

CAIDI = SAIDI/SAIFI

(b)(4) A breakdown and analysis of outage causes during the year being reported on, including the number and percentage of service outages and customer interruption minutes categorized by outage cause such as equipment failure, animal contact, tree related, and so forth. Proposed solutions to identified service problems shall be reported.

January 1, 2024 through December 31, 2024

Wellsboro Electric Co. Customer Service
Utility Code 111200
2022 Survey Results

Please choose one of the following ratings for each question that appears below:

1 Very Satisfied
2 Somewhat Satisfied
3 Neither Satisfied nor Dissatisfied
4 Somewhat Dissatisfied
5 Very Dissatisfied
6 Don't Know
7 Did not Call or Visit Office

1. How satisfied were you with the ease of contacting Wellsboro Electric Company?

1	2	3	4	5	6	7
44	5	4	0	1	0	21

2. How courteous was the customer service representative with whom you spoke?

1	2	3	4	5	6
51	2	0	1	0	0

3. How knowledgeable was the customer service representative with whom you spoke?

1	2	3	4	5	6
50	3	1	0	0	0

4. How satisfied were you with the way in which the customer service representative handled your question?

1	2	3	4	5	6
49	3	0	2	0	0

5. As a result of your contact with Wellsboro Electric Company, did anyone from our company make a visit to your home or property? Yes - 9

6. Were the visit and/or required work completed in a timely manner?

1	2	3	4	5	6
8	0	0	0	0	1

7. How courteous was the field representative who visited your home or property?

1	2	3	4	5	6
6	0	0	0	0	3

8. How knowledgeable was the field representative who visited your home or property?

1	2	3	4	5	6
5	0	2	0	0	2

9. How satisfied were you with how the field representative handled the visit to your home or property?

1	2	3	4	5	6
4	2	0	0	0	3

10. Considering all aspects of this recent contact with Wellsboro Electric Company, how satisfied were you with the quality of service provided by Wellsboro Electric Company.

1	2	3	4	5	6
47	6	0	0	1	0

11. If you indicated that you were somewhat dissatisfied or very dissatisfied with your interaction with Wellsboro Electric Company, would you like someone from our office to contact you about this?

Yes – 4

OSHA's Form 300A (Rev. 01/2004)

Summary of Work-Related Injuries and Illnesses

Note: You can type input into this form and save it.
Because the forms in this recordkeeping package are "fillable/writable" PDF documents, you can type into the input form fields and then save your inputs using the free Adobe PDF Reader.

Year 20 22

U.S. Department of Labor
Occupational Safety and Health Administration

Form approved OMB no. 1218-0176

All establishments covered by Part 1904 must complete this Summary page, even if no work-related injuries or illnesses occurred during the year. Remember to review the Log to verify that the entries are complete and accurate before completing this summary.

Using the Log, count the individual entries you made for each category. Then write the totals below, making sure you've added the entries from every page of the Log. If you had no cases, write "0."

Employees, former employees, and their representatives have the right to review the OSHA Form 300 in its entirety. They also have limited access to the OSHA Form 301 or its equivalent. See 29 CFR Part 1904.35, in OSHA's recordkeeping rule, for further details on the access provisions for these forms.

Number of Cases

Total number of deaths	Total number of cases with days away from work	Total number of cases with job transfer or restriction	Total number of other recordable cases
0	0	0	0
(G)	(H)	(I)	(J)

Number of Days

Total number of days away from work	Total number of days of job transfer or restriction
0	0
(K)	(L)

Injury and Illness Types

Total number of . . . (M)			
(1) Injuries	0	(4) Poisonings	0
(2) Skin disorders	0	(5) Hearing loss	0
(3) Respiratory conditions	0	(6) All other illnesses	0

Post this Summary page from February 1 to April 30 of the year following the year covered by the form.

Public reporting burden for this collection of information is estimated to average 50 minutes per response, including time to review the instructions, search and gather the data needed, and complete and review the collection of information. Persons are not required to respond to the collection of information unless it displays a currently valid OMB control number. If you have any comments about these estimates or any other aspects of this data collection, contact: US Department of Labor, OSHA Office of Statistical Analysis, Room N-3644, 200 Constitution Avenue, NW, Washington, DC 20210. Do not send the completed forms to this office.

Establishment information

Your establishment name: Wellsboro Electric Co.

Street: 33 Austin St

City: Wellsboro State: PA Zip: 16901

REBUTTAL TESTIMONY AND EXHIBIT

OF

BYRON FARNSWORTH, JR.

ON BEHALF OF

WELLSBORO ELECTRIC COMPANY

AUGUST 13, 2025

BEFORE
THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
	:	
v.	:	**Docket No. R-2025-3054392**
	:	
Wellsboro Electric Company	:	

REBUTTAL TESTIMONY OF BYRON FARNSWORTH, JR. ON BEHALF OF WELLSBORO ELECTRIC COMPANY

Q. Please state your name and business address.

A. My name is Byron (Barney) Farnsworth, Jr., and my business address is 33 Austin Street, Wellsboro, Pennsylvania.

Q. Are you the same Byron (Barney) Farnsworth, Jr., who previously submitted Direct Testimony in this proceeding on behalf of Wellsboro Electric Company ("Wellsboro")?

A. Yes, Terms defined in my direct testimony have the same meaning in this rebuttal testimony.

Q. What is the purpose of your testimony today?

A. The purpose of my testimony is to rebut the testimony of the Office of Consumer Advocate ("OCA") witness Greg Meyer, OCA witness LeeAnn Wise, Office of Small Business Advocate ("OSBA") witness Justin Farr and Bureau of Investigation and Enforcement ("I&E") witness Christopher Keller regarding Performance Adjustment, Size Adjustment, Wage and Salary justification, Security Deposits, Payment Plans, Advertising Expense, Miscellaneous Expenses (588) and Rate Case Amortization timeframe.

Q. Do you agree with OSBA witness Justin Farr and I&E witness Christopher Keller's rejection of Performance and Size Adjustments?

A. No, Mr. D'Ascendis will discuss the reasons why the Pennsylvania Public Utility Commission ("Commission" or "PUC") should again recognize the size adjustment. I will address the performance adjustment.

The Company has made significant improvements to the reliability and resiliency of the WECO distribution system over the past seven years. As a result, the Company has experienced a reduction in customer complaints. The majority of complaints relate to payment plans and are typically resolved in the Company's favor.

PAPUC Complaints (WECO)

	2018	2019	2020	2021	2022	2023	2024	2025
Informal	4	4	1	1	2	5	3	1
Formal	0	1	0	0	0	0	0	0

Customer survey responses have remained very positive over the past seven years for the Company. This is a testament to our employees who know our customers and are very responsive to their needs. I have received positive feedback during local meetings and from local organizations I am involved with, commending the Company for its improved reliability and maintaining consistent power supply.

Over the past seven years, the Company has systematically implemented capital projects to improve the overall reliability and resilience of the WECO distribution system. This work has been executed in phases, beginning with enhancements to the transmission feed and substation, followed by improvements to the three-phase circuits, and finally work continues on all remaining lines that serve the Company's customers.

In 2019 and 2020, the Company upgraded its substation to accommodate a new 115 kV transmission line being constructed by FirstEnergy MAIT. This upgrade eliminated outages previously attributed to the "Power Supplier" category across the entire service territory, stabilized system voltage regulation, and reduced the Tap Changer movement by half, which reduced our maintenance costs. The project also reduced costs for our customers by eliminating FirstEnergy's monthly "Other Supporting Facilities" charge.

The Company also began two voltage conversion projects in the downtown area to transition the last two circuits to the main substation. These conversions addressed persistent outages experienced in 2016–2018, allowed for the completion of AMI meter installations, and supported the development of tie-points (loop feeds) to enhance system flexibility.

Since 2020, the Company has been actively reconductoring its three-phase lines, further supporting the development of tie-points and providing backup feeds for each circuit. These efforts have increased redundancy, reduced outage durations, and improved storm resilience throughout the system.

Additionally, the Company has expedited its wood pole replacement program. Over the past seven years, this initiative has lowered historical pole failure rates from 12–15% to under 5% during 2025 testing. The failure rate is expected to continue declining through 2027 toward an industry standard of 1-2%.

Finally, the Company installed vacuum reclosers that replaced aging and high maintenance hydraulic reclosers. This modernization has contributed to reduced outages and helped the Company control maintenance costs over the past seven years.

Q. Please discuss the benefits of consistent regulatory treatment for Wellsboro.

A. When we are planning our system improvements and projecting our future financial situation, we rely on receiving consistent treatment by the Commission. This includes certainty on items such as the recognition of the size and performance adjustments, which the Commission granted to us in the past.

Q. Do you agree with OCA witness Greg Meyer that WECO payroll should be reduced?

A. No, our payroll expense has been fully supported and should be approved. We provided support demonstrating how the 2024 (HTY) payroll will increase over the FTY and FPFTY through a combination of base compensation increases, merit increases and market adjustments to reflect the results of the Wage & Salary Study. Mr. Meyer advocates for a simplistic 4% annual increase in place of our more detailed calculation. This should be rejected.

The Company conducted a comprehensive review of employee wages during 2024 led by a third-party consultant hired by C&T Enterprises, Inc. ("C&T"). The purpose of the Wage & Salary (W&S) study was to evaluate existing wage grades and assess how employees were positioned within those grades. This was the first corporate-wide W&S study in over a decade, and it followed the identification of employee compensation as a corporate risk during the COVID-19 pandemic. Ensuring competitive wages was deemed essential for employee retention, business continuity, and cost stability.

The study concluded that, overall, the Company's wages were below market. To address this, a phased adjustment process was implemented in January 2025 with some employees receiving targeted adjustments over a one to two year period to bring compensation closer

to market levels. This approach was selected to balance fairness to employees with our responsibility to the ratepayers.

The Company recognized the importance of long-term wage competitiveness and will be reviewing wages annually with the help of the third-party consultant to keep wages close to market. Our Exhibit JC-5 provided a year-by-year breakdown of salary adjustments for union and non-union employees. OCA was provided access to extensive data in discovery, including the actual salary plan results for all of the non-union employees. Mr. Meyer ignores this evidence and instead relies on his observational experience. The Company's wage expenses are reasonable based on the 2024 W&S study and the other supporting evidence. Mr. Meyer's adjustment should be rejected.

Q. I&E proposes to use a sixty-month (five year) rate case normalization period based on the average time between Wellsboro's last three rate cases. Please explain why a three year normalization period is appropriate.

A. Wellsboro's last three rate cases were filed in 2016, 2019 and 2025. Our sister-affiliates Citizens' Electric Company of Lewisburg PA ("Citizens'") and Valley Energy, Inc. ("Valley") filed rate cases in 2022; however, Wellsboro did not join with Citizens' and Valley. Generally, Wellsboro, Citizens' and Valley attempt to coordinate filing schedules so we can share a portion of the litigation costs and expert witness fees; however, in 2022 several factors went into the decision for the Company not to file for a rate increase in 2022.

First, the Company's financial projections in 2022 showed that a rate case would not be cost-effective for our ratepayers. Even with the cost sharing that I previously discussed, rate cases are expensive for the ratepayers and require significant internal resources. These

factors must be balanced against the rate increase that could be expected to result from the filing. Due to several unique developments, our revenues were sufficient to support a reasonable overall return.

To maintain our financial outlook, we managed operating expenses and supplemented our revenues by securing grant funding through the Paycheck Protection Program ("PPP") and Tioga County grant opportunities. Those funding sources were tied to the COVID-19 pandemic, which is a unique and non-recurring situation.

In addition, we undertook efforts to increase non-customer revenues from pole attachments. Back in 2018, the Company performed an asset verification project with Davey Resources that found hundreds of attachments that were not being captured. The Company then proceeded to back bill for those attachments which recovered approximately $120,000 in additional "Other Revenue" during 2019 and 2020. Going forward, the Company then saw growth in pole attachments due to an initial push for broadband services in the area around COVID in 2020. As Tri-County Rural Electric Cooperative constructed its broadband network, other broadband providers also upgraded their facilities on our poles. Additionally, the Company renegotiated its pole attachment agreements to include the Federal Communications Commission ("FCC") formula rate that adjusts each year, ensuring that attachment rates remain aligned with the costs associated with ongoing system upgrades. Finally, the Company implemented an application fee to cover administrative costs while reviewing the application(s) and to perform a system evaluation to confirm pole attachment application data.

Wellsboro also saw unusual growth in regulated revenues. From 2020-2025 the Company saw growth from the Marcellus shale gas industry in our service territory. Those companies

requested significant three-phase builds/rebuilds on the distribution system to serve their expansion plans. On average, the Company has energized approximately one new account per year in the 400 kW to 1,200 kW range. These additions have helped the Company maintain flat to slightly positive revenue growth, contributing to the Company's return on equity ("ROE") exceeding the PUC-approved level. Many of these new accounts are expected to operate for five years before they are retired from service, which does not support long- term company revenue growth.

Q. Do you anticipate that similar factors will recur to enable the Company to avoid a rate case for the next five years?

A. No, the circumstances outlined above are very extraordinary. Although the pole attachment changes result in ongoing benefits, the revenue infusion that we experienced in the last five years will not occur again. Similarly, the additional accounts from the Marcellus activity have limited durations. We anticipate that we will return to a three-year filing interval for our next rate case.

Q. Do you agree with OCA witness Greg Meyer requesting the Company use ten or fifteen-year periods to calculate customer growth and revenue values?

A. No, there are several factors that have led to flat or declining revenues. These factors include a lower kilowatt sales usage by customers and an increase in net metered installations. The Wellsboro area had a robust Industrial base up until 2016 when two large industrial customers abruptly ceased operations without new customers replacing them in the territory. The system peak in 2016 was 24.1 MWs and has continually declined to the current value of 18.0 MWs in 2025. Using ten or fifteen-year sales data is unrealistically high and thus will significantly overstate any realistic revenue estimates for the Company.

The local area faces limited availability of property and housing, which has contributed to flat customer growth. The primary source of growth in recent years has come from the addition of second meters on existing properties, typically for garages. However, these garages tend to have minimal load, primarily limited to lighting, which offers little impact on overall system usage. While this may result in a slight increase in customer count, it simultaneously reduces the average usage per customer. The broader trend of declining usage is largely driven by customer energy efficiency and conservation efforts, supported by advancements in technology such as Energy STAR appliances, LED lighting, and other energy-saving devices used in everyday life. As more solar installations have increased over the past 3-4 years, more customers/developers are taking advantage of current Net Metering rules which have led to lower distribution revenues. Another shortcoming of Net Metering is that customers are compensated at the full retail rate, a price well above market pricing for their excess generation impacting distribution ROE. Based on the rapid change in energy with accelerated growth of solar installations under net metering, increased energy efficiency and conservation over the past 5–6 years, it is more appropriate to use a five-year sales forecast when developing the Company's revenue projections.

Q. Please address I&E's proposal to disallow Wellsboro's entire claim for Account 588 (Miscellaneous Distribution Expenses)?

A. Ms. Campbell provides a detailed explanation of the costs in Account 588. It is important to note that the Company manages our workforce based on our needs and these choices are evaluated with the best operational and financial decision in mind for ratepayers and the Company. The size of our workforce is small and consistent; however, if we have to change the duties assigned to an individual employee due to special projects, regulatory

requirements or absences, the expenses in our individual accounts will follow that reassignment. We expect our employees to cross-train and to be flexible in helping with shifting project needs.

Shifting just one Full-Time Employee ("FTE") can significantly impact an annual budget based on the size of the Company. The Company has eight employees in the field to carry out metering, line maintenance and capital work. One of the FTEs was used exclusively to meet the PUC mandated Inspection and Maintenance ("I&M") plan that the Company is required to perform each year. The Company experienced a retirement a few years ago that was backfilled with one FTE. Based on the Maintenance work and Capital improvements the Company has performed on the distribution system it was found that the I&M work took less time to complete. The Company had a vacant lineman position and the employee working on I&M showed interest in becoming a line worker. The employee that was performing I&M work completed his work in the first half of the year and then was shifted to work with the linemen during the second half of the year. The Company had budgeted for a resource for the second half of 2025 and may look at it again in the future. Based on the negative financial start in 2025 we have opted to hold on to the Part-Time ("PT") resource and have chosen to complete the 2025 I&M work by shifting a lineman to perform the required I&M inspections. The Company will be evaluating the effectiveness of the shared resource at the end of 2025.

The Company also employs a fully qualified outdoor workforce. During COVID and for a couple years following it was difficult to get any external training completed. Training was implemented again in 2024 and moving into future years. Account 588 contains training costs. It is very important for the Company to continuously train our outside workforce to

keep their skills sharp for the purpose of re-emphasizing and implementing safe work practices. The training keeps the workforce retrained and sharp while teaching employees about new tools, equipment and practices in the industry. As a small Electric Distribution Company ("EDC"), it is important that we keep training continuously to maintain a fully qualified workforce. Otherwise, the resources available in our area each year are limited, and any workforce reduction would increase costs, lead to decreased efficiency and potentially impact safety in the future.

Q. How are Advertising Expenses important to the Wellsboro area and the Company?

A. The Company's advertising expenses are limited and primarily focused on supporting local community activities within our service territory. The Company is a major business in the area, so advertising efforts reinforce the Company's strong presence in the community. This contributes to initiatives that may otherwise lack visibility or funding, such as the broadcasting of local sporting events that help foster community spirit and engagement. In conjunction with this support, the Company incorporates energy efficiency messaging into its advertising to help educate customers on ways to manage their energy use. These dollars serve a dual purpose, community support and customer education, to ensure that advertising dollars provide value both in terms of public engagement and responsible energy stewardship. The loss of advertising would be harmful to our local community that lacks a wide breath of business support in our remote area of the state.

Q. Are you in agreement with OCA witness LeeAnn Wise's thoughts about the handling of Payment Plans?

A. No, I respectfully disagree and am genuinely concerned with OCA witness Wise's characterization of the Company's Payment Plan administration. Witness Wise asserts "the

absence of such oversight may reflect a lack of due diligence and raise concerns about the company's ability to manage financial risk or make informed decisions regarding customer repayment strategies." This assertion reflects a misunderstanding of the legal and regulatory framework under which EDCs in Pennsylvania must operate. I would encourage the witness to further review the applicable regulations under Chapter 14 of the Public Utility Code and Chapter 56 of the Commission's regulations, which govern how EDCs manage customer accounts and interactions. Our employees are very well versed in these requirements and use them daily while serving our customers. The lack of a formal "procedure" or a "study" with "metrics" should in no way be construed as our employees or the Company lacking the knowledge to run the business. To the contrary, a high percentage of our customer surveys acknowledge the fact that our employees get the job done.

The Company has built a knowledgeable and responsive organization, fully aligned with these requirements. Our employees are locally staffed and receive ongoing training to ensure compliance and effective customer service. Because our employees live in and are part of the community we serve, they bring unique insight into the needs of our customer base. This community connection allows our employees to engage more effectively with customers, directing them toward appropriate solutions such as budget billing, payment arrangements, or available assistance programs like LIHEAP, the Dollar Energy Fund, and programs that were available during COVID such as ERAP and PAHAF. Overdue account balances are reported monthly to senior management, and our staff has consistently done an exceptional job in monitoring and managing those balances, keeping them at manageable levels and minimizing the risk of uncollectible accounts. Historically, the

Company's write-off levels have remained reasonable due to these diligent and locally informed practices. The Company sees a typical Delinquent ("DQ") % to Accounts Receivable averaging 17% for 2020-2024 and 2025 is averaging 14%, this is a testament to the work performed by our employees to stay on top of the DQ balances.

Q. Please discuss why the OCA's proposed payment arrangement study and metrics are not appropriate.

A. The OCA's suggestion that we conduct a study of payment arrangement and establish metrics to evaluate our effectiveness is not necessary and, in my opinion, unworkable. At the core, the OCA's witness assumes that the Company will be able to pinpoint a reason for a customer failing to adhere to a payment arrangement. In our experience, however, many factors influence customer behavior.

A significant portion of our customer base consists of hardworking individuals who take great pride in their independence and often find it difficult to seek assistance. Some choose not to pursue help from available programs because they believe others are in greater need, or they feel uncomfortable with the experience of engaging with assistance organizations. As a result, some customers who may benefit from support decline to access those resources.

At the same time, the Company has observed a small subset of customers who, despite having the financial means to pay their bills, intentionally attempt to delay payment by exploiting provisions of Chapter 14. This behavior became particularly evident during the COVID-19 moratorium period. These customers may file repeated or frivolous complaints with the PUC's Bureau of Consumer Services ("BCS") to delay collections, especially as the Winter Moratorium approaches. Others misuse medical certificates or repeatedly break

payment agreements in order to postpone payment obligations. Unfortunately, these delays often lead to significantly higher arrearage balances, making it more difficult for the customer to become current, increasing the risk of disconnection for non-payment, which increases write-offs and supports the need to collect a security deposit.

We believe the OCA's study and metrics will be an administrative burden that produces little statistically valid information for our Company. We comply with Chapter 56 and the Commission's reporting requirements. Additional studies and metrics are not warranted.

Q. OCA Witness Wise also requests changes to the Company's security deposit policies. Please comment.

A. The OCA request that we engage in additional income screening before we request a security deposit and that we provide low-income customers with the option to receive the full security deposit back rather than applying it to outstanding charges first.

We have collected security deposits consistently across our customer base utilizing Chapter 14 regulations based on the applicant's creditworthiness. The Company utilizes Online Utility Exchange for all Residential applications to determine creditworthiness. If the credit check determines a security deposit is required, the applicant is provided with a Denial of Credit Statement outlining why a security deposit is required. The Company is open to incorporating language to inform customers of the opportunity to qualify for a waiver as part of the Denial of Credit Statement. If it is determined that the applicant is low income, Chapter 56 waiver guidelines will be followed.

For the return of security deposits, we believe that it is appropriate to follow a consistent policy for all customers, rather than creating a separate policy for the return of security deposits for low-income customers.

Q. Finally, Witness Wise objects to Wellsboro requiring ratepayers to pay the third-party credit card convenience fees of $3.95. Does Wellsboro agree with this proposal?

A. No, first, it is important to clarify that the Company does not charge the $3.95 convenience fee. This fee is assessed by the third-party credit card processing company that handles credit, debit, and electronic check payments. The fee is intended to cover the processing costs incurred by that vendor and is not retained by the Company.

While it was noted that customers have other payment options that do not include the $3.95 fee, those alternatives are not cost-free for the customer. For example, customers who mail a check bear the cost of purchasing the check itself and paying for postage, which continues to rise. Customers who choose to pay in person incur fuel or transportation expenses. Similarly, customers who use their own bank's online bill pay system may be subject to fees charged by their financial institution.

The Company believes customers should have the freedom to choose their preferred payment method—and the associated costs—without shifting the burden of credit/debit card processing fees onto the ratepayers. Additionally, customers who choose to pay by credit card may do so to earn rewards or benefits that can offset the cost of the convenience fee. Increasingly, local businesses are itemizing credit card processing fees as separate charges rather than absorbing them, due to the growing cost of payment processing. It is common practice for businesses to apply "cash" versus "card" pricing to manage these costs, and the Company's current approach aligns with this broader trend.

Q. If the Commission determines that the cost of the third-party service should be added to distribution rates, is the OCA's proposed adjustment sufficient?

A. No, we are very concerned that credit card payments will increase if it becomes a free option. Attached as Exhibit BF-1R is information from a New York utility that saw a substantial increase in the use of credit card payments when it became a free option. As a result, we should be allowed to track all costs in excess of the amount that OCA has calculated for inclusion in distribution rates and recover those costs, with appropriate carrying charges, in a subsequent proceeding.

Q. Does this complete your Rebuttal Testimony?

A. Yes.

SURREBUTTAL TESTIMONY OF BYRON FARNSWORTH, JR.
ON BEHALF OF WELLSBORO ELECTRIC COMPANY

Q. Please state your name and business address.

A. My name is Byron (Barney) Farnsworth, Jr., and my business address is 33 Austin Street, Wellsboro, Pennsylvania.

Q. Are you the same Byron (Barney) Farnsworth, Jr., who previously submitted Direct Testimony and Rebuttal Testimony in this proceeding on behalf of Wellsboro Electric Company ("Wellsboro")?

A. Yes. Terms defined in my Direct Testimony or Rebuttal Testimony have the same meaning as in this Surrebuttal Testimony.

Q. What is the purpose of your Surrebuttal Testimony?

A. My Surrebuttal Testimony will respond to certain issues raised during the August 21, 2025, Public Input Hearings, including general comments and more specifically: (1) the testimony of Mrs. Cheryl Kaminski (Tr. 110) regarding a billing question; and (2) the testimony of Mrs. Candace Callahan regarding a tree trimming matter (Tr. 103).

Q. Please respond to the general concerns raised during the Public Input Hearings about the impact of the rate increase on residents of Wellsboro.

A. The Company takes customer affordability very seriously as we serve the Wellsboro residents. We have taken reasonable steps to operate efficiently, and we continually make improvements. There are several steps, which I spoke about in my Direct Testimony and Rebuttal Testimony, that the Company took to delay the need for a rate case over the past six (6) years. Growth in the natural gas business in the area provided revenue for a few years after the last rate case; however, the duration for most of these projects is limited to roughly five (5) years, meaning these revenue streams will not continue to recur. Also, the Company reviewed all pole attachment agreements, implemented new agreements, and then back-billed pole attachers for several years of unbilled attachments, which provided $120K in Other Revenue. The Company proactively secured Paycheck Protection Program (PPP) and Tioga County grant opportunities to offset expenses. The Company has continually monitored spending over the past six (6) years and has only purchased items if they were deemed essential or purchased to address a safety deficiency. There has been an efficiency directive established by management for the Company to utilize our existing National Information Solutions Cooperative ("NISC") system more efficiently (service orders, work orders, meter orders, inspection data capture, corporate assets, etc.) and remove the use of standalone spreadsheets, which carry considerable risk of human error. The Company completed the Advanced Metering Infrastructure ("AMI") project back in 2019 to automate all meter readings into the NISC system for billing and removed all manual meter reading, which essentially eliminates the chance for erroneous reads.

Q. Did the Company follow up with Mrs. Kaminski about her bill?

A. Yes, the Company was concerned that a printing error might have placed an "Activation Charge" on a bill(s) that we were unaware of at the time of the public meeting. Upon further review, the Company checked Mrs. Kaminski's bill and found nothing erroneous on it. Mrs. Kaminski checked her Wellsboro electric bill after the public meeting, called the office immediately to inform us that there was no "Activation Charge" on her bill, and also apologized for the confusion.

Q. Has the Company been contacted by Mr. or Mrs. Callahan regarding tree trimming?

A. Yes, the Company received a call from Mr. Callahan in June 2019 about a dead tree on his property. The Company met with Mr. Callahan and the tree was found to be 40' outside of the Company right-of-way. This tree was well outside the reasonable distance where the Company would consider removal of a tree for reliability purposes. Mr. Callahan was informed that the tree removal was his responsibility. He was also asked if he wanted contact information for tree companies to assist with removal of the tree, and he declined.

Q. Does this complete your Surrebuttal Testimony?

A. Yes.

DIRECT TESTIMONY

AND EXHIBITS

OF

JILL CAMPBELL

ON BEHALF OF

WELLSBORO ELECTRIC COMPANY

APRIL 30, 2025

BEFORE

THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	**:**	
	:	
v.	**:**	**Docket No. R-2025**
`	**:**	
Wellsboro Electric Company	**:**	

DIRECT TESTIMONY OF JILL CAMPBELL
ON BEHALF OF WELLSBORO ELECTRIC COMPANY

Q. Please state your name and business address.

A. My name is Jill Campbell, and my business address is 33 Austin Street, Wellsboro, Pennsylvania.

Q. By whom are you employed and in what capacity do you serve at Wellsboro Electric Company?

A. I am employed by C&T Enterprises, Inc. ("C&T"), and assigned to Wellsboro as the Vice President of Finance and Administration.

Q. Please describe your duties in this capacity.

A. My duties are to organize, direct, and coordinate the financial department. I provide administrative direction and oversight for billing for electric service to consumers. I also advise the President & CEO of the financial aspects of the company, manage the financial record keeping, coordinate the budget, coordinate with computer services, and coordinate with consumer services. I also am involved in the negotiation and administration of Wellsboro’s collective bargaining agreement (“CBA”) with its union workers.

Q. Please describe your employment and educational background.

A. I have a bachelor's degree from Pennsylvania State University as well as a Masters in Business Administration with Accounting concentration from Keller Graduate School of Management. I have been with C&T Enterprises assigned to Wellsboro Electric since June of 2014. I have served in various capacities in the company prior to being promoted to my current position as Vice President of Finance and Administration in May of 2019.

Q. What were your responsibilities with respect to this filing?

A. As the Vice President of Finance and Administration, I was responsible for coordinating with our auditors and representatives of HSG Group, Inc. ("HSG Group") to ensure that historic and test year expenses, taxes, revenues, and rate base are appropriately reflected.

Q. Are Wellsboro and its records regularly audited by a licensed accounting firm?

A. Yes. The accounting firm of FORVIS MAZARS, LLC ("FORVIS") audits the Company's financial records. Prior to FORVIS, BKD and Beard Miller Company, LLP performed the audits. They prepare an annual report of the Company operations and assist Company personnel on specific PUC filings, such as our State Tax Adjustment Surcharge ("STAS") filings. They also prepare our tax returns. A copy of our Annual Report for the year ended December 31, 2024, is attached as Exhibit __ (JC-1). A copy of our most recent Pennsylvania state tax return is included as Wellsboro Confidential Exhibit 3.

Q. Do you have any comments regarding the future test year expenses?

A. Yes. Attached as Exhibit __ (JC-3) is a table showing the operating expenses for the Historic Test Year ("HTY"), Future Test Year ("FTY") and Fully-Projected Future Test Year ("FPFTY"). Also enclosed are actual expenses in the FTY through March 31, 2025. Although there is some variation within particular categories and expenses, on the whole

our actual year 2025 expenses are tracking closely to the projected FTY expenses used by HSG Group in the filing. We will continue to update this information on a quarterly basis during the proceeding.

Q. Did you compile a similar comparison of future test year plant?

A. Yes. Attached as Exhibit __ (JC-4) is a table showing the utility plant for the HY, FTY and FPFTY, as well as actual plant as of March 31, 2025.

Q. Is Wellsboro proposing to roll-in its STAS?

A. Yes. Mr. Gorman has reflected the current levels of state taxes in his analysis. As a result, the current STAS is being rolled-into based rates. When the new rates take effect, we will adjust the then-applicable STAS rate to reflect any difference between the then-applicable tax levels and the ones that were rolled-into base rates. Our most recent STAS filing is included as Exhibit __ (JC-2).

Q. How does Wellsboro develop its annual budget?

A. As part of the budget process, Leadership reviews the goals and priorities of the company. Revenue is then forecasted based on an estimate of expected sales, customer growth, and approved rates. Each department then submits anticipated expenses which are then compiled to form the revenue and expenses budget. Capital expenditures are identified and budgeted separately. The consolidated budget is then reviewed internally by the management team and adjustments made when necessary to align with the strategic goals of the company. A final draft is then presented to the Board of Directors for approval to then be used as a guide throughout the fiscal year.

A copy of Wellsboro's 2025 budget and 5-year financial plan is included as Wellsboro Confidential Exhibit 2.

Q. Please discuss Wellsboro's major expense categories.

A. Wellsboro's expenses are budgeted and tracked in the following categories: (1) Labor & Overheads, including C&T Shared Services; (2) Transportation; (3) Materials & Supplies; (4) Administrative & General; (5) Outside Services; (6) Uncollectibles; (7) Depreciation & Amortization; (8) Regulatory Fees; and (9) Taxes. Wellsboro also reports by account, corresponding to the FERC chart of accounts. Each Operating and Maintenance account includes (as appropriate) costs for Labor, Overhead, Material and Transportation. The information provided to Mr. Gorman is by FERC account, with subaccounts for Labor, Overhead, Material and Transportation.

Q. What is the largest expense category?

A. Labor & Overheads constitute the largest expense item. This category includes our employees and the various benefits that we provide (health, dental, vision, retirement, etc.). To develop the projected 2025 costs for Labor & Overheads, we examined the wages and benefits for our employees. This included the impacts of the Wage & Salary Study discussed by Mr. Farnsworth and the annual compensation adjustment discussed by Ms. Sullivan. Ms. Sullivan's testimony discusses the C&T Shared Services and insurance benefits.

Q. How were Labor and Overhead costs projected for Wellsboro's union employees?

A. We have 8 Union employees who are covered by a collective bargaining agreement ("CBA"). The current CBA is included in the filing as Wellsboro Confidential Exhibit . The CBA expires at the end of 2026.

To develop the FTY and FPFTY, the union employees' salaries were adjusted from 2024 to 2025, and then from 2025 to 2026 based on the CBA.

Q. Have you prepared an exhibit showing the impact of the salary changes and the position changes for the FTY and FPFTY?

A. Yes. Attached as Exhibit__(JC-5) is an analysis that supports that impact. It also calculates the impact on the associated Overheads, using the benefits projections explained by Ms. Sullivan. We have assumed the same rate of change for the union benefits that we projected for the C&T employees. The impact of these changes are distributed among the various FERC accounts that Mr. Gorman reflects in his analysis according to where the employees' time is booked (based on activities performed).

Ms. Sullivan's testimony discusses the 2025 and projected 2026 C&T base compensation adjustments and our projections for personnel insurance benefits cost changes. Ms. Sullivan also discusses the C&T Shared Services that are included in our Labor & Overheads for 2024, 2025 and 2026.

Q. Please discuss the Transportation projections.

A. This item reflects the costs of our vehicles and other equipment, including fuel and maintenance expenses. For 2025 and 2026, we are projecting vehicle and equipment purchases, including a bucket truck in 2025.

Q. Is Wellsboro projecting increased Materials and Supplies costs?

A. Yes. The various materials and supplies for our business have increased consistent with general inflation of many items. We included a 3% increase for office supplies. Mr. Farnsworth will address the increases in our materials.

Q. Please discuss the costs incurred by Wellsboro for Administrative and General.

A. The items in this category include the general costs to heat, furnish and maintain our office space and warehouses.

Q. What costs are included in Outside Services?

A. Outside Services includes the charges by various vendors for their service. This includes attorneys, accountants, auditors, consultants, cleaning vendors and contractors that we hire for capital projects. Most of the construction contractor expense would be capitalized rather than expensed.

Q. Could costs in the other categories that you addressed above be capitalized rather than being expensed?

A. Yes. As part of this filing, we have made assumptions regarding the portion of Labor & Overheads, Transportation, Materials & Supplies and Administrative & General that will be capitalized rather than expensed. We have done this based on both historic experience and projected 2025 and 2026 capital projects.

Q. How did Wellsboro develop the Uncollectible expenses?

A. Uncollectible expense is based on historical experience.

Q. Please discuss the Depreciation and Amortization expense reflected in the filing.

A. Depreciation expense is developed by Mr. Gorman, Exhibit__(HSG-1), Schedule C3 and explained in his testimony.

Q. What depreciation changes is the Company proposing for this filing?

A. We are proposing to reduce the useful life of our computer equipment and software from 5 years to 3 years. This is consistent with the replacement cycle for IT equipment that we follow and is also consistent with the warranty period on new equipment. We are also proposing to reduce the useful life for power operated equipment from 33 to 25 years consistent with actual replacement cycles. If these changes are accepted by the Commission, we will make them going forward in 2026.

Q. Finally, what Regulatory Fees and Taxes are reflected in the filing?

A. These are developed by Mr. Gorman, Exhibit__(HSG-1), Schedule C1-3, and explained in his testimony.

WELLSBORO'S FINANCING ACTIVITIES

Q. Please explain the Company's financing arrangements.

A. Wellsboro's primary source of financing is its parent company, C&T., which obtains long-term loans, lines of credit and letters of credit on Wellsboro's behalf through the National Cooperative Servicing Corporation ("NCSC"). Each long-term loan is supported by a Securities Certificate approved by the Commission. Ms. Sullivan provides an exhibit with details of each loan. We also have access to a short-term line of credit through C&T, as described by Ms. Sullivan.

Finally, we maintain a local banking relationship with C&N Bank, Wellsboro, PA.

AFFILIATE CHARGES

Q. Does Wellsboro have any affiliate charges in the HTY, FTY or FPFTY in addition to the ones with C&T that are discussed by Ms. Sullivan?

A. No.

Q. Does this conclude your testimony at this time?

A. Yes.

Independent Auditor's Report

Board of Directors
Wellsboro Electric Company
Wellsboro, Pennsylvania

Opinion

We have audited the financial statements of Wellsboro Electric Company (Company), which comprise the balance sheets as of December 31, 2024 and 2023, and the related statements of operations, stockholders' equity, and cash flows for the years then ended, and the related notes to the financial statements.

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2024 and 2023, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the "Auditor's Responsibilities for the Audit of the Financial Statements" section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern within one year after the date that these financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.

- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.

- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Supplementary Information

Our audits were conducted for the purpose of forming an opinion on the financial statements that collectively comprise the Company's basic financial statements. The supplementary information listed in the table of contents is presented for purposes of additional analysis and is not a required part of the basic financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the basic financial statements.

The information has been subjected to the auditing procedures applied in the audit of the basic financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the basic financial statements or to the basic financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the information is fairly stated in all material respects in relation to the basic financial statements as a whole.

Wellsboro Electric Company
Notes to Financial Statements
December 31, 2024 and 2023

Note 1. Nature of Operations and Summary of Significant Accounting Policies

Nature of Operations

Wellsboro Electric Company ("Company"), also known as Wellsborough Electric Company, is a regulated public utility distributing electric service to customers in and around Wellsboro, Pennsylvania. C & T Enterprises, Inc. ("C&T") owns all of the outstanding common stock of the Company. The Company's operations are regulated by the Pennsylvania Public Utility Commission ("PUC"). The Company extends unsecured credit to its customers.

Basis of Accounting

The Company maintains its accounting records in accordance with the Federal Energy Regulatory Commission's ("FERC") uniform system of accounts for public utilities as modified and adopted by the PUC. The accompanying financial statements and the related notes have been prepared on the basis of U.S. generally accepted accounting principles ("GAAP").

In accordance with FERC guidelines, the Company also maintains its accounts in accordance with Codification Topic 980, *Regulated Operations*. On a regular basis, the Company reevaluates its application of accounting for regulated operations. The Company has determined that regulatory assets and liabilities should continue to be accounted for under provisions of Codification Topic 980 because it is reasonable to assume that the Company will continue to be able to charge and collect its cost of service-based rates.

Purchased Power

The Company purchases power under a default service plan that utilizes a third party generator to fulfill its requirements under the current plan. The plan, which was approved by the PUC, allows for full recovery of the cost of energy supply and all related costs, including legal and consulting fees and allows adjustments to rates to reflect current market conditions. Power costs can be different than what is recovered in base charges, resulting in over or under collected power costs.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. Significant estimates include unbilled revenues, depreciation and postretirement benefits.

Cash and Cash Equivalents

The Company considers all liquid investments with original maturities of three months or less to be cash equivalents. At December 31, 2024 and 2023, cash equivalents consisted primarily of a daily investment fund account.

At December 31, 2024, the Company's cash accounts did not exceed federally insured limits.

Accounts Receivable

Accounts receivable include billed and unbilled amounts for services provided to customers for which the Company has an unconditional right to payment. The Company provides an allowance for credit losses, which is based upon a review of outstanding receivables, historical collection information and existing economic conditions adjusted for current conditions and reasonable and supportable factors.

Accounts receivable are generally due within 20 days after the date of the billing. Accounts that are unpaid after the due date bear interest at 1.50% per month. Accounts past due more than 30 days are considered delinquent. Interest continues to accrue on delinquent accounts until the account is no longer classified as delinquent.

Delinquent receivables are written off based on individual credit evaluation and specific circumstances of the customer.

During the years ended December 31, 2024 and 2023, there was no credit loss expense related to doubtful accounts receivable, where collectability is not reasonably assured.

Inventories

Inventories consist of materials and supplies and are stated at the lower of cost or net realizable value. Cost is determined based on average cost.

Utility Plant

Utility plant is carried at cost. Additions to utility plant and replacements of property are capitalized at cost. Retirements of electric plant or replacements are removed from electric plant accounts at cost and these costs plus cost of removal less salvage are charged to accumulated depreciation. Assets under finance lease obligations are amortized over the shorter of the lease term or respective estimated useful lives. Depreciation of utility plant is provided over the estimated useful life of the respective assets on a straight line basis as follows:

Utility Plant	Years
Distribution plant	10-40
General plant	5-40
Vehicles	5

Maintenance and repairs of property and replacements are charged to expense.

Nonutility Property

Nonutility property consists of land and other depreciable property not currently used for utility purposes.

Impairment of Long-Lived Assets

The Company reviews the carrying amount of an asset for possible impairment whenever events or changes in circumstances indicate that such amounts may not be recoverable. If a long-lived asset is tested for recoverability and the undiscounted estimated future cash flows expected to result from the use and eventual disposition of the asset is less than the carrying amount of the asset, the asset cost is adjusted to fair value and an impairment loss is recognized as the amount by which the carrying amount of a long-lived asset exceeds its fair value. No asset impairment was recognized during the years ended December 31, 2024 and 2023.

Deferred Compensation

As described in Note 11, the amount of expense accrued for deferred compensation is based on the present value of the total amount payable under the agreement.

Income Taxes

The Company is included in the consolidated federal income tax return filed by C&T. The Company files its own tax return in Pennsylvania. The Company's federal income tax expense is computed using the separate return method for intercorporate tax allocation.

The Company accounts for income taxes in accordance with income tax accounting guidance (Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") 740, *Income Taxes*). The income tax accounting guidance results in two components of income tax expense: current and deferred. Current income tax expense reflects taxes to be paid or refunded for the current period by applying the provisions of the enacted tax law to the taxable income or excess of deductions over revenues. The Company determines deferred

income taxes using the liability (or balance sheet) method. Under this method, the net deferred tax asset or liability is based on the tax effects of the differences between the book and tax bases of assets and liabilities, and enacted changes in tax rates and laws are recognized in the period in which they occur. Deferred income tax expense results from changes in deferred tax assets and liabilities between periods. Deferred tax assets are reduced by a valuation allowance if, based on the weight of evidence available, it is more likely than not that some portion or all of a deferred tax asset will not be realized.

Tax positions are recognized if it is more likely than not, based on the technical merits, that the tax position will be realized or sustained upon examination. The term “more likely than not” means a likelihood of more than 50%; the terms examined and upon examination also include resolution of the related appeals or litigation processes, if any. A tax position that meets the more likely than not recognition threshold is initially and subsequently measured as the largest amount of tax benefit that has a greater than 50% likelihood of being realized upon settlement with a taxing authority that has full knowledge of all relevant information. The determination of whether or not a tax position has met the more likely than not recognition threshold considers the facts, circumstances and information available at the reporting date and is subject to the management’s judgment.

The Company recognizes interest and penalties on income taxes as a component of income tax expense.

Regulatory Matters

The Company is subject to the authoritative accounting guidance applicable to rate-regulated organizations. The Pennsylvania PUC has full authority to establish electric rates. Certain items collected in rates have been recorded as regulatory liabilities. These amounts will be recognized as revenue in future periods as costs for which the amounts have been collected are incurred, or when authorized by the Pennsylvania PUC. Certain expenses have been recorded as regulatory assets, and management believes these amounts are probable of future rate recovery.

Revenue Recognition

Revenues from the sale of electricity are recognized as electricity is delivered to customers. Revenues also include amounts receivable from or payable to customers through purchased power clauses, which are adjusted semi-annually.

Costs that are recoverable or refundable in future periods through purchase power recovery are deferred. Costs that are refundable or recoverable in future periods through purchased power recovery rates are subject to audit and approval by the appropriate regulatory body. Changes to the related asset or liability amounts that result from these audits are recorded as a charge to current operations.

The amount and timing of revenue recognition varies based on the nature of the goods or services provided and the terms and conditions of the customer contract. Unbilled revenues of $667,515 and $483,780 at December 31, 2024 and 2023, respectively, represent amounts delivered through December 31 and not billed to the customers until the following month. Customer deposits of $195,713 and $164,443 at December 31, 2024 and 2023, respectively, represent amounts received in advance of services provided. See Note 14 for additional information about the Company’s revenue.

For significant financing components, the Company elected a practical expedient, which allows an entity to recognize the promised amount of consideration without adjusting for the time value of money if the contract has a duration of one year or less, or if the reason the contract extended beyond one year is because the timing of delivery of the product is at the customer’s discretion. As the Company’s contracts are typically less than one year in length and do not have significant financing components, the Company does not present revenue on a present value basis.

Leases

The Company determines if an arrangement is a lease or contains a lease at inception. Leases result in the recognition of right-of-use (ROU) assets and lease liabilities on the balance sheets. ROU assets represent the right to use an underlying asset for the lease term, and lease liabilities represent the obligation to make lease payments arising from the lease, measured on a discounted basis. The Company determines lease classification as operating or finance at the lease commencement date. The ROU asset for finance leases are included in utility plant in our balance sheets.

At lease commencement, the lease liability is measured at the present value of the lease payments over the lease term. The ROU asset equals the lease liability adjusted for any initial direct costs, prepaid or deferred rent, and lease incentives. The Company has made a policy election to use a risk-free rate (the rate of a zero-coupon U.S. Treasury instrument) for the initial and subsequent measurement of all lease liabilities. The risk-free rate is determined using a period comparable with the lease term.

The lease term may include options to extend or to terminate the lease that the Company is reasonably certain to exercise. Lease expense is generally recognized on a straight-line basis over the lease term.

The Company has elected not to record leases with an initial term of 12 months or less on the balance sheets. Lease expense on such leases is recognized on a straight-line basis over the lease term.

Treasury Stock

Common stock shares repurchased are recorded at cost. Cost of shares retired or reissued is determined using the first-in, first-out method.

Taxes Collected from Customers and Remitted to Governmental Authorities

Sales and gross receipts taxes collected from customers and remitted to governmental authorities are presented in the accompanying statements of income on a net basis.

Note 2. Leases

Nature of Leases

The Company has the following lease arrangements:

Finance Leases

These leases mainly consist of vehicles for the use of the Company. Termination of the leases generally are prohibited unless there is a violation under the lease agreement.

All Leases

The Company has no material related-party leases. The Company’s lease agreements do not contain any material residual value guarantees or material restrictive covenants.

Quantitative Disclosures

The lease cost and other required information for the years ended December 31, 2024 and 2023, are:

	2024	2023
Lease cost		
Finance lease cost		
Amortization of right-of-use asset	$ 93,050	$ 109,180
Interest on lease liabilities	25,420	15,650
Short-term lease cost	36,561	33,159
Total lease cost	$ 155,031	$ 157,989
Other information		
Cash paid for amounts included in the measurement of lease liabilities		
Financing cash flows from finance leases	$ 137,479	$ 108,464
Weighted-average remaining lease term		
Finance leases	4.0 years	4.0 years
Weighted-average discount rate		
Finance leases	1.74%	2.13%

See Note 7 for future minimum lease payments and reconciliation to the balance sheet at December 31, 2024.

Note 3. Utility Plant

Utility plant consists of the following at December 31:

	2024	2023
Electric plant in service		
Distribution plant	$ 31,648,701	$ 29,731,485
General plant	9,453,235	6,298,889
	41,101,936	36,030,374
Construction work-in-progress	27,017	54,982
	41,128,953	36,085,356
Accumulated depreciation	(15,226,786)	(15,048,529)
	$ 25,902,167	$ 21,036,827

Note 4. Regulatory Assets and Liability

Regulatory assets consist of the following at December 31:

	2024	2023	Amortization Period
Default service plan	$ 32,362	$ 25,397	4 years
Other regulatory assets	7,783	6,077	3 years
	$ 40,145	$ 31,474	

For the years ended December 31, 2024 and 2023, the Company recorded a regulatory liability of $230,379 and $243,375, respectively, for other postretirement benefits that resulted from unrecognized gains. The Company expects to recover the deferred other postretirement benefits consistent with the anticipated income recognition of other postretirement income.

Amortization expense was $17,927 and $54,149 for the years ended December 31, 2024 and 2023, respectively.

Note 5. Nonutility Property

Nonutility property consists of the following at December 31:

	2024	2023
Land	$ 51,909	$ 51,909
Buildings and improvements	154,174	154,174
	206,083	206,083
Accumulated depreciation	(62,040)	(58,855)
	$ 144,043	$ 147,228

Note 6. Line of Credit

The Company has a $3,000,000 revolving line of credit with C&T payable on demand. At December 31, 2024, there was $700,000 borrowed against this line. At December 31, 2023, there were no borrowings against this line. Interest varies based on the CoBank quoted variable rate. The rate was 6.39% and 7.41% on December 31, 2024 and 2023, respectively, and is payable monthly.

While the line of credit above is due on demand, the Company utilized the financing for long-term operating purposes and does not have liquid funds available to repay the balance. The borrowings are available as a result of a line of credit agreement that C&T has with a third party, which is due in July 2026. C&T has no intentions of calling the debt before July 2026.

Wellsboro Electric Company
Notes to Financial Statements
December 31, 2024 and 2023

Note 7. Long-Term Debt and Finance Lease Liabilities

	2024	2023
Notes payable, C&T, payable in quarterly installments of approximately $80,000 including interest through September 2038; interest at 2.76% to 4.88%; collateralized by substantially all Company assets	$ 3,269,885	$ 3,440,823
Note payable, C&T, quarterly principal and interest payments of approximately $22,000; interest at 2.37%; collateralized by substantially all Company assets; due December 2028	280,213	346,225
Note payable, C&T, payable in quarterly installments of approximately $29,000 including interest through September 2031; interest at 2.635% to 4.63%; collateralized by substantially all Company assets	615,703	695,977
Note payable, C&T, quarterly principal and interest payments of approximately $22,000; interest at 3.575%; collateralized by substantially all Company assets; due December 2034	675,020	730,233
Note payable, C&T, quarterly principal and interest payments of approximately $36,000; interest at 4.175% to 4.80%; collateralized by substantially all Company assets; due June 2035	1,204,597	1,292,609
Note payable, C&T, quarterly principal and interest payments of $15,931; interest at 3.925%; collateralized by substantially all Company assets; due December 2041	787,765	819,781
Note payable, C&T, quarterly principal and interest payments of $17,075; interest at 4.175%; collateralized by substantially all Company assets; due December 2041	828,462	861,312
Note payable, C&T, quarterly principal and interest payments of $26,317; interest at 3.26%; collateralized by substantially all Company assets; due June 2050	1,818,139	1,863,214
Notes payable, C&T, quarterly principal and interest payments of $53,642; interest at 5.865% to 6.00%; collateralized by substantially all Company assets; due October 2052 through March 2053	5,862,965	5,942,857
Note payable, C&T, quarterly principal and interest payments of $66,095; interest at 5.18%; collateralized by substantially all Company assets; due December 2054	4,000,000	-
Finance lease liabilities for equipment, requiring monthly principal and interest payments ranging from $1,707 to $3,661, collateralized by leased equipment, payments due in varying amounts through December 2030	478,758	549,847
	19,821,507	16,542,878
Less current maturities	994,288	740,160
	$ 18,827,219	$ 15,802,718

Aggregate annual maturities of long-term debt and payments on finance lease liabilities at December 31, 2024, are:

	Long-Term Debt	Finance Lease Liabilities
2025	$ 865,074	$ 139,518
2026	902,292	129,400
2027	941,209	114,658
2028	981,908	70,731
2029	950,182	51,059
Thereafter	14,702,084	32,890
	$ 19,342,749	538,256
Less amount representing interest		59,498
Present value of future minimum lease payments		$ 478,758

Transportation equipment under finance lease liabilities is as follows:

	2024	2023
Transportation equipment	$ 1,016,222	$ 949,832
Accumulated depreciation	(561,754)	(432,235)
	$ 454,468	$ 517,597

C&T has a Master Letter of Credit agreement with National Cooperative Services Corporation. This Letter of Credit is for $7,000,000 and expires October 2029. The Company has the ability to post letters of credit with wholesale electric suppliers under the terms of this agreement. As of December 31, 2024 and 2023, the Company had no outstanding letters of credit.

Note 8. Income Taxes

The credit for income taxes includes these components:

	2024	2023
Taxes currently payable	$ 244,954	$ 61,919
Deferred income taxes	(358,000)	(380,300)
Income tax benefit	$ (113,046)	$ (318,381)

A reconciliation of income tax expense (benefit) at the statutory rate to the Company's actual income tax benefit is shown below:

	2024	2023
Computed at the statutory rate (21%)	$ (43,919)	$ 75,585
Increase (decrease) resulting from		
State income rates	(55,584)	4,608
Utilization of federal net operating losses	-	(380,300)
Other	(13,543)	(18,274)
Actual tax benefit	$ (113,046)	$ (318,381)

The tax effects of temporary differences related to deferred taxes shown on the balance sheets were:

	2024	2023
Deferred tax assets		
Allowance for credit losses	$ 3,400	$ 5,600
Post retirement benefits	58,000	64,700
Net operating loss carryforwards	-	12,300
Deferred compensation	-	13,700
Other	103,300	103,900
	164,700	200,200
Deferred tax liabilities		
Depreciation	(1,324,100)	(1,722,600)
Other	(13,300)	(8,300)
	(1,337,400)	(1,730,900)
Net deferred tax liability	$ (1,172,700)	$ (1,530,700)

At December 31, 2024 and 2023, the Company had no allocation of C&T consolidated unused federal operating loss carryforwards.

Note 9. Pension, Profit-Sharing and Postretirement Plans

Multiemployer Pension Plans

C&T is a member of the National Rural Electric Cooperative Association ("NRECA") Retirement Security Plan ("RS Plan"), a defined benefit pension plan qualified under Section 401 and tax-exempt under Section 501(a) of the Internal Revenue Code. It is a multiemployer plan under the accounting standards. The Plan sponsor's Employer Identification Number is 53-0116145 and the Plan Number is 333.

A unique characteristic of a multiemployer plan compared to a single employer plan is that all plan assets are available to pay benefits of any plan participant. Separate asset accounts are not maintained for participating employers. This means that assets contributed by one employer may be used to provide benefits to employees of other participating employers.

C&T contributions to the RS Plan in 2024 and 2023 represented less than 5% of the total contributions made to the plan by all participating employers. C&T made contributions to the plan of $3,497,266 and $3,441,415 for the years ended December 31, 2024 and 2023, respectively. The Company reimbursed C&T $271,079 and $259,724 for its share of the contributions for the years ended December 31, 2024 and 2023, respectively. There have been no significant changes affecting the comparability of the 2024 and 2023 contributions.

In the RS Plan, a "zone status" determination is not required, and therefore not determined, under the *Pension Protection Act* ("PPA") of 2006. In addition, the accumulated benefit obligations and plan assets are not determined or allocated separately by individual employer. In total, the RS Plan was over 80% funded on January 1, 2024 and 2023, based on the PPA funding target and PPA actuarial value of assets on those dates.

Because the provisions of the PPA do not apply to the RS Plan, funding improvement plans and surcharges are not applicable. Future contribution requirements are determined each year as a part of the actuarial valuation of the plan and may change as a result of plan experience.

C&T is also a member of the NRECA SelectRE Pension Plan. C&T makes a matching contribution of 200% of the employees' contributions up to 2.5% of compensation. The Company reimbursed C&T $51,725 and $43,729 for its share of contributions for the years ended December 31, 2024 and 2023, respectively.

Profit Sharing Plan

The Company has a profit sharing plan that covers all full-time employees who have attained one year of service. Contributions are discretionary and are allocated based upon eligible compensation. A vesting schedule provides for full vesting after six years of service while in the Plan. The Company made a discretionary profit-sharing plan contribution to the Plan of $89,000 and $75,000 for the years ended December 31, 2024 and 2023, respectively.

Other Postretirement Plans

The Company also has a defined contribution retirement plan that covers all full-time employees covered under a collective bargaining agreement who have attained the age of 18 years and have one year of service. Employees are permitted to make tax deferred contributions of up to 15% of eligible compensation. The Company makes a matching contribution to the Plan up to 5% of a participant's eligible compensation. The Company contributed $38,489, and $36,416 to the Plan for the years ended December 31, 2024 and 2023, respectively.

C&T has a postretirement health care plan covering substantially all employees. The plan is unfunded. The estimated costs that will be paid after retirement are generally being accrued over the employees' active service periods to the dates they are fully eligible for benefits. The Company expects to contribute $9,000 to the Plan in 2025. The following table sets forth the plan's funded status and the amounts of accrued benefit cost of the C&T plan and the Company's allocation based on an actuarial valuation as of December 31, 2024 and 2023.

	2024	2023
C&T's benefit obligation	$ 5,587,931	$ 5,725,208
Company's allocation of benefit obligation	$ 212,352	$ 233,542
C&T's accrued benefit cost	$ 5,587,931	$ 5,725,208
Company's allocation of accrued benefit cost	$ 212,352	$ 233,542
Amounts recognized in the Company's balance sheets		
Current liability, included in accrued expenses	$ 26,773	$ 43,364
Non-current liability	185,579	190,178
	$ 212,352	$ 233,542
C&T's benefit expense	$ 472,065	$ 480,148
Company's allocation of benefit expense	$ 9,188	$ 10,867

The Company uses a December 31 measurement date for the plans. For measurement purposes, a 6.50% annual rate of increase in the per capita cost of covered health care benefits was assumed in 2024. The rate was assumed to decrease gradually to 4.75% in 2031 and remain at that level thereafter.

The benefit obligation was calculated assuming a weighted average discount rate of 5.15% and 5.10% in 2024 and 2023, respectively.

The amount of net gain and net prior service cost expected to be recognized by the Company during 2025 is $12,385 and $-0-, respectively.

Benefits expected to be paid by the Company in each of the next five years and in the aggregate for the five years thereafter are as follows:

2025	$	26,773
2026	$	34,678
2027	$	25,401
2028	$	19,611
2029	$	24,382
2030-2034	$	14,371

Because the Company is subject to regulation in the states in which it operates, it is required to maintain its accounts in accordance with the regulatory authority's rules and regulations, which may differ from other authoritative accounting pronouncements. In those instances, the Company follows the guidance of accounting for regulated operations. Based on prior regulatory practice, and in accordance with the related guidance, the Company recorded an unfunded postretirement obligation, which otherwise would be recognized as other comprehensive income, as a regulatory asset, and expects to recover those costs in rates charged to customers.

Note 10. Related Party Transactions

The Company has a contract for services with C&T to purchase all employee services. The contract automatically renews annually unless terminated by either party.

The Company has a lease agreement with C&T for space in the primary office building, the contract renews monthly unless terminated by either party. The Company also had a lease agreement with C&T for space in the secondary office building, this contract was terminated November 2023.

In the ordinary course of business, the Company's activities involve significant transactions with C&T. The activity between the Company and C&T for the years ended December 31, 2024 and 2023, and the effected account balances at December 31, 2024 and 2023, are as follows:

	2024		2023	
Allocation of overhead recorded as operating expense	$	442,449	$	404,670
Other costs in accounts receivable - other	$	276,900	$	276,900
Accounts payable - related party	$	133,216	$	136,794
Accrued vacation liability in accrued expenses	$	147,991	$	131,852
Payroll costs paid in advance and included in advances, affiliate	$	49,000	$	49,000
Interest expense	$	859,424	$	727,220
Acquisition debt expense	$	361,458	$	124,686
Rental income in miscellaneous income	$	-	$	33,000

The Company paid C&T $1,037,111 and $984,657 for payroll and $450,012 and $397,354 for benefits in 2024 and 2023, respectively.

Note 11. Deferred Compensation

The Company had a deferred compensation agreement with a certain former officer. The total amount payable under the agreement is $152,074, to be paid in three equal annual installments of $50,691, starting in January 2022 through January 2024. As of December 31, 2024, installment payments of $152,074 have been paid to the former officer.

At December 31, 2024, there was no deferred compensation liability. At December 31, 2023, the present value of the 2024 payment is $49,411 which is included in current liabilities.

Note 12. Commitments and Contingencies

The Company has guaranteed payments on notes payable that are obligations of C&T. At December 31, 2024, the amounts outstanding on these obligations are $23,092,250, of which $19,342,749 is recorded by the Company, see Note 7. These obligations are being repaid in quarterly payments of principal and interest through 2054. The amounts outstanding that are not recorded by the Company are being repaid through acquisition debt expense. The Company would be required to perform under this guarantee if C&T were to default under the notes payable and the bank were to demand the Company's performance.

Note 13. Significant Concentration

Accounting principles generally accepted in the United States of America require disclosure of current vulnerabilities due to certain concentrations.

Labor Agreement

Approximately 50% of the Company's employees are covered by a collective bargaining agreement, which expires December 31, 2026.

Note 14. Revenue from Contracts with Customers

Performance Obligations

The Company's revenues are derived primarily from the sale of electric power to customers. Customers consist of commercial, industrial and residential accounts within dedicated territories in and around Wellsboro, Pennsylvania.

Rates charged for electric power sales to customers are established by the Pennsylvania PUC. The Company provides energy and capacity to customers as one stand-ready performance obligation. Electric power revenue is recognized by the Company upon transfer of control of promised services to customers in an amount that reflects the consideration expected to be received in exchange for those services.

The Company transfers control of the electric power to customers at each customer's meter point and the customers simultaneously receive and consume the benefits of the energy provided. Electric power provided to customers is accounted for as a series of performance obligations. Progress towards completion is measured using the output method [kilowatt hour (kwh) received by the customer], meter readings are taken at the end of each month for billing purposes, the quantity of energy transferred is determined after the meter readings.

Payments from customers are received in accordance with each customer's contract, which is ordinarily 20 days from the invoice date.

Revenue associated with the electric power performance obligation to customers are recorded as sales of electric energy and capacity to customers in our accompanying statements of income.

The Company has determined that the nature, amount, timing and uncertainty of revenue and cash flows are primarily affected by factors that impact demand.

Contract Balances

The following table provides information about the Company's accounts receivable and customer deposits from contracts with customers:

	2024	2023
Accounts receivable - customers, beginning of year	$ 1,380,833	$ 1,508,966
Accounts receivable - customers, end of year	$ 1,186,224	$ 1,380,833
Unbilled revenues, beginning of year	$ 483,780	$ 752,184
Unbilled revenues, end of year	$ 667,515	$ 483,780
Customer deposits, beginning of year	$ 164,443	$ 157,003
Customer deposits, end of year	$ 195,713	$ 164,443

Note 15. Subsequent Events

Subsequent events have been evaluated through March 12, 2025, which is the date the financial statements were available to be issued.

RE: Wellsboro Electric Company
Supplement No. 159 to Tariff Electric PA. P.U.C. No. 8 (State Tax Adjustment Surcharge Recalculation); Docket No. _____

Dear Secretary Chiavetta:

Attached for filing with the Commission is Wellsboro Electric Company's ("Wellsboro" or the "Company") Supplement No. 159 to Tariff Electric-Pa. P.U.C. No. 8 ("Supplement No. 159"). Supplement No. 159 reflects a recalculation of the State Tax Adjustment Surcharge ("STAS"). Supplement No. 159 contains an issued date of December 19, 2024, and an effective date of January 1, 2025. This complies with the ten (10) day notice period for STAS modifications specified on page 46 of Wellsboro's tariff.

This filing adjusts Wellsboro's STAS to refund a prior period overcollection and to reflect changes in the Corporate Net Income Tax and Utility Realty Tax. The documents supporting the Company's recalculation are set forth in Tab A, Attachments A, B, C, D, E, and F (computation of STAS for period January 1, 2025, through December 31, 2025). For completeness, a copy of proposed Supplement No. 159 is attached at Tab B. The supporting documents at Tab A demonstrate that Wellsboro's STAS rate will decrease from a surcredit of -0.0102% to a surcredit of -0.0438%, effective January 1, 2025. See Tab A.

If you have any questions regarding the documents, please feel free to contact the undersigned. Thank you.

Very truly yours,

Adeolu A. Bakare

RIDER A – STATE TAX ADJUSTMENT SURCHARGE

(Applicable to all rates except Service Schedule No. 8)

In addition to the charges provided in this tariff, a surcredit of -0.0438% will apply to all bills for service rendered on or after January 1, 2025. (D) (C)

The above surcharge will be recomputed, using the elements prescribed by the Pennsylvania Public Utility Commission.

(a) Whenever any of the tax rates used in the calculations of the surcharge are changed.

(b) Whenever the Company makes effective increased or decreased rates.

The above recalculations will be submitted to the Commission within 10 days after the occurrence of the event or date which occasion such re-computation. If the recomputed surcharge is less than the one in effect the Company will, and if the recomputed surcharge is more than the one then in effect the company may submit with such re-computation a Tariff or supplement to reflect such recomputed surcharge; the effective date of which shall be ten days after filing.

v.	:	**Docket No. R-2025-3054392**
`	:	
Wellsboro Electric Company	:	

REBUTTAL TESTIMONY OF JILL CAMPBELL
ON BEHALF OF WELLSBORO ELECTRIC COMPANY

Q. Please state your name and business address.

A. My name is Jill Campbell, and my business address is 33 Austin Street, Wellsboro, Pennsylvania.

Q. Are you the same Jill Campbell who previously submitted Direct Testimony in this proceeding on behalf of Wellsboro Electric Company ("Wellsboro" or "Company")?

A. Yes. Terms defined in my direct testimony have the same meaning in this rebuttal testimony.

Q. What is the purpose of your testimony today?

A. The purpose of my testimony is to rebut the testimony of the Bureau of Investigation and Enforcement's ("I&E") Zachari Walker regarding the proposed disallowance of $12,804 in membership dues and subscriptions for ratemaking purposes, the $258,688 disallowance related to GL 588 miscellaneous distribution expenses, the request for additional detail regarding the $81,880 in administrative and general expenses, and the need for clarification on GL 932 maintenance of general property. My testimony also addresses the statement made by the Office of Consumer Advocate ("OCA") witness Greg Walker regarding

purchased power costs. I also will provide updated actual expenses and plant additions/retirements through the 2nd Quarter 2025.

Q. Do you agree with Mr. Walker's basis for disallowing $12,804 in membership dues and subscriptions claims for ratemaking purposes?

A. No, I do not agree. Mr. Walker asserts that sufficient detail was not provided in response to I&E-RE-10-D because the payee and account number were not included. The table below provides the requested information, including the payee and account details, to fully support the Company's claim for membership dues and subscriptions.

Account Number	Bank Charges	2024	2025	2026
921.00	C&N Bank	5,134	6,000	6,000
	Subscriptions	**2024**	**2025**	**2026**

Q. Do you agree with Mr. Walker's rationale for disallowing the full $285,688 FPFTY for GL 588 miscellaneous distribution expense claimed for ratemaking purposes?

A. No, I do not agree. Mr. Walker denied Wellsboro's recovery for all expenses in this Account based on our purported failure to provide sufficient detail to assess whether the

Company's miscellaneous distribution expense claim is appropriate for ratemaking purposes. In response, we are providing a detailed breakdown of General Ledger Account 588 subaccounts.

588.42	Misc Dist Exp-Safety Meeting Training-Overhead	12,441.63	12,981.13	28,865.00	29,506.00
		157,251.44	158,562.11	248,971.56	254,238.35
		170,671.11	173,944.04	280,421.56	285,688.35

These include costs related to employee training, which is critical for apprentice development, journeyman education, and the meter department's ability to stay current with evolving AMI technology. The account also includes mandatory CDL medical card expenses for commercial drivers, which are conditions of employment.

Other items include safety meetings, safety equipment, and random drug and alcohol testing, which is mandatory for employment, and it supports our safety culture and safe work practices.

Labor projections for this account reflect annual wage increases, as well as adjustments due to staffing changes and workload distribution. In 2024, a temporary vacancy in the

General Utility position contributed to lower labor costs. Additionally, a higher proportion of labor was charged to capital projects that year, further reducing expense allocations to this GL. Since then, responsibilities have been realigned among existing staff, and the Company is now budgeting for the workforce to have a normalized balance between capital and expense labor. This results in an appropriate reallocation of labor costs to this account for the test year.

Labor activities captured within this GL include PA One Call notifications, substation and regulator inspections, safety meetings and training, and on-call coverage to ensure prompt response to system outages. The budgeted labor levels reflect the resources needed to maintain safe, reliable operations across our service territory under typical conditions.

Other general miscellaneous distribution expenses include the repair of customer property. While the Company has not incurred a lot of expense under the repair of customer property, miscellaneous expenses, right of way filing fees, and the tree replacement program budget line items in recent years, it remains a reasonable and prudent expense to include in the budget. These categories represent a contingency for events that are unpredictable but plausible—such as accidental damage to customer property caused by utility operations (e.g., during service restoration, equipment failure, or construction work), filing fees for new projects, or the need for tree replacements on customer property.

Omitting these line items entirely would leave no allocated funds for addressing such occurrences should they arise, potentially requiring the reallocation of resources from other operational areas or delaying response and repair efforts. Including a modest, consistent amount in the budget ensures readiness, supports responsible financial planning, and

demonstrates the Company's commitment to maintaining positive customer relationships by addressing unforeseen issues promptly.

All costs in this category are reasonable, directly related to the safe and reliable operation of the distribution system and therefore appropriate for recovery through rates.

Q. How do you respond to Mr. Walker's concern that the Company has not provided sufficient justification for the $81,880 increase in forecast Administrative and General (A&G) overhead expense?

A. Further detailed breakdown of A&G expenses are provided below:

Description	2023	2024	2025	2026
Admin Salaries	281,014.75	304,110.07	334,261.75	361,797.26
Admin Salaries OH	351,030.64	402,852.45	468,335.00	484,732.00
Continuing Education Management & Staff	20,593.33	50,938.85	67,300.00	64,700.00
	652,638.72	757,901.37	869,896.75	911,229.26

The percentage of overheads allocated to administrative salaries increased from 125% in 2023 actuals to 132% in 2024 actuals and is projected at 140% and 134% for 2025 and 2026, respectively. This represents a 7.2% increase in overheads as a percentage of salaries from 2023 to the 2026 budget, with a percentage difference over that period of 29% in labor and 38% in overheads.

A portion of the A&G expenses includes continued investment in education and professional development of staff and management. The Company has prioritized educational opportunities to strengthen cross-training and operational resilience by ensuring multiple employees are proficient in key systems, which helps maintain continuity during absences and turnover. These investments also drive efficiency improvements and cost savings, as well-trained employees use systems more effectively, reducing manual processes, data entry errors, and customer service issues. Additionally, providing

professional development opportunities supports employee retention by increasing engagement and job satisfaction, which is more cost-effective than external hiring. Finally, these initiatives support succession planning which is driven by our president/CEO and Board of Directors to prepare the next generation of manager, supervisors, and employees to assume leadership roles as retirements or vacancies occur.

Q. How do you respond to the claim that the Company did not provide a detailed breakdown of the cost drivers contributing to the increase in Account 932, as referenced in response to I&E-RE-20-D?

A. In response to I&E-RE-20-D, I provided key components of Account 932 to support the budgeted costs. The Company experienced irregular expenses during the construction of its new building, with some items temporarily elevated and others reduced. Now that the building project is complete, we expect maintenance-related expenses in this account to return to more normalized and levelized levels. However, it is prudent to budget for a typical winter season, including snow removal services, especially given the recent trend of milder winters that may not reflect a typical year. Additionally, with construction concluded, the Company has resumed routine outdoor maintenance activities, such as lawn care, blacktop coating, HVAC checks, and other various maintenance to catch issues before they become major expenses, which were minimized or temporarily suspended during the building period.

The Company acknowledges that, as part of the transition to a revised budgeting process, certain IT-related expenses were inadvertently allocated twice, once within departmental budgets and again within the centralized IT budget. Upon review, we identified approximately $34,816 in duplicated IT-related costs for FTY 2025 and $40,240 in

duplicated IT-related costs for FPFTY 2026. To avoid any potential overstatement, the Company is voluntarily removing $40,240 from its FPFTY 2026 claim. A revised, more detailed breakdown is shown below.

		2023	2024	2025	2026

Q. Has the Company identified any corrections or clarifications to the actual purchased power cost for the Historic Test Year ("HTY") 2024 in response to Mr. Meyer's concern regarding the revenue requirement adjustment proposed to remove purchased power expenses from the Company's revenues and expenses?

A. Yes; however, it does not impact the Company's revenue requirement for distribution service. Upon review, I identified that the actual purchased power cost for the HTY 2024, as shown in Cell C22 (Line 13), should be $6,429,293. This corrects an error in the original filing, which inaccurately reported the actual purchased power cost. As a result, the true difference between the actual and projected purchased power costs is approximately

$474,034. This variance is largely attributable to normal fluctuations in over- and under-collections related to the E-Factor mechanism, as well as the inherent uncertainty involved in forecasting purchased power costs during the budgeting process.

Q. Please explain how the Company's generation costs are recovered.

A. Our generation costs are recovered through automatic adjustment mechanisms that were approved in our default service proceedings. The GSSR-1 is a fixed rate with just a kWh component for customers with a Billing Demand under 400 kW. The GSSR-2 is a variable rate for customers with a Billing Demand Over 400 kW, which includes kWh and demand-based components. We change the GSSR-1 rate twice per year based on our forward projections of the purchased power costs and our projections of sales to that group of customers. We also calculate an e-factor to address any overcollection or undercollection of the prior period costs and revenues (in comparison to the projections used to establish the prior period GSSR-1 rate). The GSSR-2 includes a real time hourly price (kWh), the supplier adder (kWh), a Company administrative charge (kWh), a capacity charge (kW) and a transmission charge (kW). All elements of the GSSR-2 retail rate are customer-specific, except the supplier adder and Company administrative charge, which are uniform for all GSSR-2 customers. Starting with the period that began on June 1, 2025, we also will be calculating an E-Factor for the GSSR-2 rate.

Q. Does the Commission separately audit the GSSR mechanisms?

A. Yes. Our GSSR mechanisms are periodically audited by the Commission.

Q. Does the unbundling of the generation costs streamline the process for removing generation costs and revenues for the rate case?

A. Yes. Unbundling enables us to account for the generation costs and revenues separately from distribution.

Q. Finally, can you provide actual expenses and plant additions/retirements for the FTY?

A. Yes. Attached as Exhibit__(JC-1R) are the updated expenses and plant, by account, through the 2nd Quarter 2025.

Q. Does this complete your Rebuttal Testimony?

A. Yes.

DIRECT TESTIMONY

AND EXHIBITS

OF

HOWARD S. GORMAN

ON BEHALF OF

VALLEY ENERGY, INC.

APRIL 30, 2025

BEFORE

THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	**:**	
	:	
v.	**:**	**Docket No. R-2025-_____**
	:	
Valley Energy, Inc.	**:**	

DIRECT TESTIMONY OF HOWARD S. GORMAN
ON BEHALF OF VALLEY ENERGY, INC.

Q. Please state your name, occupation and business address.

A. My name is Howard Gorman. I am the President of HSG Group, Inc., a consulting firm specializing in utility rate and regulatory matters, located in Great Neck, NY.

Q. Please summarize your educational background and professional experience.

A. My educational background, professional experience and summary of testimony are outlined in Attachment A.

Q. Please state on whose behalf you are testifying and describe the purposes of your testimony.

A. I am testifying on behalf of the petitioner, Valley Energy, Inc. ("Valley" or "Company"). The purposes of my testimony are:

- To develop the Fully Projected Future Test Year ("FPFTY") Revenue Requirement and Rate Base, and Future Test Year ("FTY") net income, based on Historic Test Year ("HTY") data and appropriate adjustments; and

- To present the Company's proposed Rates and Charges that produce the overall revenue requirement, as well as the proof of revenue and bill comparisons at the proposed rates.

The rates proposed in this filing are for the FPFTY; the FPFTY Revenue Requirement and Rate Base were determined for Distribution only. Revenue and costs related to Valley's obligation as a Supplier of Last Resort have been excluded from the analysis.

In my testimony, dollar amounts (excluding rates and charges) are rounded to the nearest thousand dollars; in computing revenue requirements and rates, whole dollars are used.

Q. What FPFTY, FTY and HTY were used?

A. The HTY is Valley's actual results for calendar year 2024. The FTY is Valley's forecast for 2025 and the FPFTY is Valley forecast for 2026. Valley uses a calendar year for financial reporting. The supporting calculations and data for the filing are in Exhibit__(HSG-1). Throughout my testimony, I will reference the various schedules within Exhibit__(HSG-1) that explain the calculations and results. References in my testimony are to *Exhibit __ (HSG-1)*; for example, *Schedule C1* refers to *Exhibit __ (HSG-1), Schedule C1*.

Q. When will the new rates take effect?

A. If the Commission suspends the filing for the statutory period, then the rates will take effect on January 30, 2026; however, the rate changes could be effective sooner if the Commission doesn't suspend the filing or if the parties reach a settlement that includes an accelerated effective date and that settlement is approved by the Commission.

Q. Is the presented FPFTY consistent with the Commission's revised regulations for rate cases using a FPFTY?

A. Yes. Earlier this year, the Commission adopted revised regulations for Sections 53.51-53.56 that are pending before the Independent Regulatory Review Commission, with final action expected soon after the Company submits this filing. The revised regulations contain the following definition of FPFTY:

> A 12-consecutive-month period beginning with the first month that the new rates will be in effect after application of the full suspension period permitted under section 1308(d) of the Public Utility Code, 66 Pa.C.S. § 1308 (relating to voluntary changes in rates) and reflecting estimated results of operations of the public utility.

Q. Please summarize the results of your testimony regarding Valley's revenue requirement.

A. Under its present rates, Valley is forecast to have net operating income of approximately $937,000 in FPFTY 2026, representing a return on rate base of 3.72%. To produce the return of 8.27% that Company witnesses Mr. D'Ascendis and Mr. Kucan recommend would require an increase in revenue of $1,626,000, an increase of 25.1% over Distribution revenue at present rates. This equals an increase in total revenue (distribution and supply) of 19% of Valley's 2024 total revenue.

The revenue produced by the proposed rates, $8,109,000 (plus $24,000 Other revenue, for total revenue of $8,133,000) would recover the costs forecast to be incurred by Valley in the FPFTY, including a return on rate base of 8.27%. To produce the total revenue requirement, the Company proposes to increase the revenue from each class, excluding customers taking service under negotiated contracts, by 29.6%. (Schedule C1).

Valley is proposing that the rates and charges subject to the Tariff be increased as shown on Schedule B5.

Q. Please describe the approach used to develop the revenue requirement and the proposed rates.

A. *First*, a forecast of Valley's sales and distribution revenue for the FTY and FPFTY was developed. A summary of Valley's sales and revenues for the HTY, FTY and FPFTY is presented in Schedule B.

For HTY 2024, sales and revenue information was obtained from Valley's accounting and financial records. This information is presented on Schedule B1, with computations on Schedule B1-1. Schedule B1-2 reconciles the revenue computed using HTY 2024 billing units and current rates, to revenue to Valley 2024 financial statements.

For FTY 2025, sales and revenue information is presented on Schedule B2, with supporting computations on Schedule B2-1. For FPFTY 2026, sales and revenue information is presented on Schedule B4. FPFTY revenue at present rates is computed on Schedule B4-1, and FPFTY revenue at proposed rates is computed on Schedule B4-2. The development of the forecasts for the number of customers and the sales volumes for the FTY and FPFTY is based on regression analyses, which are discussed below.

Second, costs were obtained for the HTY, and forecasted costs were obtained for the FTY and FPFTY. These costs, detailed by account, are presented on Schedule C1-1.

Third, the Rate Base for the HTY, FTY and FPFTY was developed, using information from Valley's HTY financial statements and projected capital expenditures for the FTY and FPFTY. The rate base adjusts the Company's financial statements to remove an acquisition adjustment, contributions from customers and assets not subject to regulation, as discussed below. As of December 31, 2024, these amounts totaled $6,127,000 in Plant cost and $4,030,000 in Accumulated depreciation. In addition, accumulated deferred income taxes,

cash working capital allowance and other rate base components were computed. The computation of the rate base is presented on Schedule C1-5.

Fourth, the required Net Utility Operating Income was developed using the FPFTY costs and rate base. To produce the required to return of 8.27%, Valley is proposing FPFTY revenue of $8,109,000 (plus $24,000 Other revenue, for total revenue of $8,133,000) (excluding Other revenue), an increase of $1,626,000. This amount is an increase of 25.1% in total Distribution revenue and an increase of 29.6% excluding customers being served under long-term contracts (and not subject to these increases).

Finally, proposed rates were developed that produce the required FPFTY revenue for each rate class. The Company is proposing a uniform percentage increase in revenue for classes whose rates are subject to change (*i.e.* all non-contract customers). Schedule B4-2 shows that the proposed rates produce the revenue target for each class. Schedule B5 summarizes current rates and proposed rates; the amounts that ratepayers with different usage levels will pay under the current and proposed rates are presented on Schedule B5-1 (including the Gas Cost Rate ("GCR")) and Schedule B5-2 (excluding the GCR).

Q. What are the reasons that Valley needs an increase in rates at this time?

A. Schedule C1-6 presents the financial drivers for the requested rate increase by comparing the FPFTY to the final results of Valley's prior rate case, Docket R-2022-3032300. As the Schedule shows, Valley's requested rate increase is driven primarily by cost increases and new utility plant. The Company's corporate witnesses explain the cost increases and utility plant investments that are included in the proposed rates, as well as cost mitigation efforts.

Q. What service classifications does Valley use to report sales and revenue?

A. Valley reports sales and revenue using the following service classifications:

Customer Type	Rate Schedule
Residential	• Rate R- Residential
Commercial and Industrial Sales	• Rate C- Commercial • Rate IS- Interruptible Service • Rate SI- Small Industrial
Transportation	• Transport Firm • Transport- Contract • Transport Firm- DDQ • Rate I- Large Industrial Firm • Transport- Interruptible

Q. Are any changes being proposed to these service classifications?

A. No.

Q. What types of charges are in the Tariff?

A. Rate R is a firm sales class that includes a monthly customer charge and a volumetric charge for distribution, and the volumetric "GCR".

Rate C is a firm sales class for commercial customers that includes a monthly customer charge and a volumetric charge for distribution, and the GCR. Transport Firm- DDQ has the same monthly customer charge and volumetric charge for distribution as Rate C, and no GCR.

Rate I is a firm sales class for industrial customers that includes a blocked volumetric charge for distribution, a blocked charge for demand and the GCR. Rate I is available when and where the Company's facilities are adequate and suitable for the customer's requirements. As explained below, the Company is proposing to revise the rate design for this offering.

Rate IS is an interruptible class that includes a monthly customer charge and a volumetric charge for distribution, and the GCR. Transport- Interruptible has the same monthly customer charge and volumetric charge for distribution as Rate IS, and no GCR.

Rate SI is a firm sales class that includes a monthly customer charge and a volumetric charge for distribution, and the GCR. Transport- Firm has the same monthly customer charge and volumetric charge for distribution as Rate SI, and no GCR.

Transport- Contract customers are served under their applicable contract terms, which can include a flat monthly charge and/or blocked volumetric distribution rates. All customers are billed monthly.

Q. Why is the Company proposing a uniform percentage increase in revenue for non-contract classes?

A. A uniform increase in revenue is appropriate because:

- The composition of ccf sales is stable. In the HTY, FTY and FPFTY, residential deliveries are 15%-17% of the total deliveries, commercial and industrial classes are 7%-9%, and transportation classes are 74%-77%.
- A uniform rate increase is the simplest to implement, and Valley management believes it would be the most acceptable to ratepayers.
- A class cost of service study would be expensive and time-consuming.

Q. Is the Company proposing any rate design changes?

A. Yes, the Company is proposing changes for Rate I, which are discussed in more detail later in my testimony.

HTY SALES AND REVENUE AND HTY COSTS

Q. Please identify and describe the exhibits that show HTY sales and revenue.

A. Schedule B shows Valley's total rate revenue for HTY 2024, and distribution-only revenue for HTY 2024, FTY 2025 and FPFTY 2026.

HTY total operating revenue is $10,005,000 based on Valley's financial statements (Schedule B1-2, line 18). Total rate case revenue is $8,531,000 (Schedule B1-2, lines 10 and 18), which *excludes* timing differences for GCR over / undercollection and Unbilled revenue, rounding differences in computation, the State Tax Adjustment (STAS) and a cost recovery item which is excluded from regulated rates. The HTY Distribution-only amounts are from Schedule B1, which is supported by the detailed computations on Schedule B1-1, using present rates and HTY deliveries in ccf, and number of customer bills.

Pursuant to Rate Schedule T, Valley is providing transportation contract service to a customer referenced here as "Customer A" using assets constructed and operated at the request of the customer. The amount included in HTY distribution revenue in this rate case is the contract revenue applicable to providing transportation service only, exclusive of reimbursements for construction of the assets serving Customer A. In addition, the capital costs related to the assets used to serve Customer A, and the related accumulated depreciation are not included in the rate base;furthermore, the related depreciation expense is not included in the revenue requirement.

Q. Please describe the HTY information regarding costs.

A. Schedule C1-1 shows operating costs by account for the HTY. This exhibit is described in detail later in my testimony. The costs are carried forward to Schedule C1.

Q. Please describe the HTY information regarding rate base and Rate of Return.

A. Schedule C1-5 computes the rate base for the HTY. Schedule C1 shows the return on rate base for the HTY was 4.30% for Distribution-only.

FTY AND FPFTY SALES AND REVENUE

Q. Please identify and describe the exhibits that show FTY and FPFTY sales and revenue at present rates.

A. Information on sales and revenue is presented in Schedule B. Information for HTY is on Schedule B1, with computations on Schedule B1-1. Deliveries in HTY totaled approximately 32.9 million ccf.

The FTY and FPFTY forecasts of delivery volumes were developed as discussed below.

Rate R - This class consists of full-service (sales plus transportation) customers taking service under Rate R. The monthly use per customer was developed based on a regression analysis using number of customers and sales data for 2016-2024, and Heating Degree Days ("HDD"). The R-square was 94.7%, indicating that HDDs explain 94.7% of the variation in monthly usage per customer. The regression results were applied to the weather-normal monthly HDD, and to the forecast number of customers (including 50 new customers in 2025 and 50 additional new customers in 2026), to forecast deliveries for FTY and FPFTY. The "weather-normal monthly HDD" are the monthly averages for July 2015 through December 2024.

Rate C - This class consists of full-service customers taking service under Rate C. The monthly use per customer was developed based on a regression analysis, using sales data for 2016-2024. The R-square was 94.0%. The regression results were applied to the weather-normal monthly HDD, and to the forecast number of customers, to determine forecast deliveries for the FTY and FPFTY.

Rate IS - This class consists of full-service customers taking interruptible service under Rate IS. The monthly use per customer was developed based on a regression analysis, using sales data for 2019-2024. This period was chosen because the R-squares for longer periods were not as good as for this period (*i.e.* correlation was lower). The R-square was 65.5%. The relationship between HDD and usage per customer is not as strong as for Rate R and Rate C, which is expected for an Interruptible class. The regression results were applied to the weather-normal monthly HDD, and to the forecast number of customers, to determine forecast deliveries for the FTY and FPFTY.

Rate SI - This class consists of full-service customers taking interruptible service under Rate SI. The monthly use per customer was developed based on a regression analysis, using data for 2016-2024. The R-square was 72.8%. The regression results were applied to the weather-normal monthly HDD, and to the forecast number of customers, to determine forecast deliveries for the FTY and FPFTY.

Transport Firm - This class consists of transportation-only customers, with two customer types:

- *Customers taking transportation-only service under Rate SI*. The monthly use was developed based on a regression analysis, using data for 2018-2024. In addition, Customer Z's customer's data was removed from the analysis (see below regarding Rate I). The R-square was 4.8%. The regression results were applied to weather-normal monthly HDD, to determine forecast deliveries for the FTY and FPFTY. While the R-square correlation is very weak, it results in almost the same forecast ccf for FTY and FPFTY as using a simple average, therefore the regression results were deemed acceptable.

- *Customers taking transportation-only service pursuant to contracts*. These are two such customers in the Company' service territory. The monthly use for each customer was developed based on a regression analysis, using data for 2018-2024. The regression determined the R-squares were 54.1% and 68.7%. While HDD explains a meaningful portion of the variation, other factors also affect usage, therefore the regressions were accepted as reasonable. The regression results were applied to the weather-normal monthly HDD, to determine forecast deliveries for each customer for FTY and FPFTY.

Transport DDQ - This class includes transportation-only customers taking service under Rate C. The monthly use per customer was developed based on a regression analysis, using data for same period as for Rate R. The R-square was 92.0%. The regression results were applied to the weather-normal monthly HDD and to the forecast number of customers to determine forecast deliveries for the FTY and FPFTY.

Transport Interruptible - This class includes transportation-only customers taking service under Rate IS. The monthly use per customer was developed based on a regression analysis, using data for 2016-2024. In addition, Customer Z's customer's data was removed from the analysis (see below regarding Rate I). The R-square was 44.3%. The relationship between HDD and usage per customer is not as strong as for Rate R and Rate C, which is expected for an Interruptible class. The regression results were applied to the weather-normal monthly HDD, and to the forecast number of customers, to determine forecast deliveries for the FTY and FPFTY.

Rate I - This class includes transportation-only customers taking service under Rate I, Large Industrial Firm. This class had no customers in the recent past, however a customer

("Customer Z") that had been taking service under two other rates is migrating to Rate I in 2025. Customer Z's monthly usage was removed from the other two classes, and included in Rate I. for this purpose. The monthly use was developed based on a regression analysis, using data for 2019-2024. The R-square was 59.3%. The regression results were applied to the weather-normal monthly HDD, and to the forecast number of customers, to determine forecast deliveries for the FTY and FPFTY.

The table below summarizes the results of the sales forecast.

Rate Class/ Level of Service	Customers FPFTY 2026	CCF FPFTY 2026	Customers HTY 2024	CCF HTY 2024	R-squared
R- Full service	6,586	5,886,309	6,486	5,020,399	94.7%
C- Full service	851	2,566,623	854	2,258,909	94.0%
IS- Full service	1	222,000	1	251,560	65.5%
SI- Full service	4	59,459	4	57,691	72.8%
Trans Firm	13	17,528,029	13	16,709,307	4.8%/ 54.1% 68.7%/
Trans DDQ(C)	56	947,972	56	975,293	92.0%
Rate I	1	3,581,019	1	3,643,460	59.3%
Trans Interr(IS)	4	4,139,558	5	4,031,939	44.3%
Total	**7,516**	**34,930,969**	**7,420**	**32,948,558**	
HDD		6,393		5,643	

FTY AND FPFTY COSTS

Q. Please identify the schedules that present Valley's costs.

A. Schedule C1 presents a summary of all costs for the HTY, Distribution-only costs for the HTY and Distribution-only costs for the FTY and FPFTY. Schedule C1-1 presents operating costs, detailed by account. Schedule C3 presents the computation of depreciation expense. Schedule C1-3 presents the computation of Taxes other than income. Rate case expense and Income tax expense, and adjustments to reflect costs to be unbundled from distribution rates and recovered in the GCR rate, are discussed below.

Q. How did you develop the FTY and FPFTY operating costs?

A. Schedule C1-1 presents operating costs for HTY 2024, FTY 2025 and FPFTY 2026, detailed by account. Total operating costs for the HTY 2024, excluding Purchased Gas, were $3,654,000 (line 48).

The totals for Distribution O&M, Customer accounting and Administrative and General ("A&G") are carried forward to Schedule C1, lines 11, 12 and 14 respectively. Costs are also summarized by type- Labor, Transportation, Material, Overhead and Other (Schedule C1-1, lines 50-55).

Q. How did you compute Depreciation expense for FTY and FPFTY?

A. Schedule C3, pages 1-3, shows the asset values at original cost in PAPUC/FERC account detail as of December 31, 2024, and planned additions and removals for the FTY and FPFTY. Schedule C3, page 2, shows the depreciation rate applicable to each account, and depreciation expense for HTY, FTY and FPFTY. Depreciation expense for each account for the FTY and the FPFTY was computed by multiplying X), the depreciation rate for the account, times Y), original cost at the prior year end, plus one-half of additions for the year. The total FPFTY depreciation expense, less amounts charged to operating costs (and included on Schedule C1-1), is $1,543,000 (line 39); this amount is carried forward to Schedule C1, line 17.

Q. What adjustments were made to plant amounts in Valley's financial statements?

A. Two adjustments were made. First, Gas Plant Acquisition costs, shown on Schedule C3, line 2, were removed from plant costs (line 36). Second, costs incurred to serve Customer A were removed from lines 3-5, in accordance with the Commission's approval of the service arrangement for this customer at Docket No. A-2012-2335954, which states that

all such costs would be paid by Customer A. In both cases, the corresponding accumulated depreciation was also removed. This is consistent with how these costs were addressed, without objection from any party, in Valley's last rate case.

Q. How did you compute Taxes other than income for FTY 2025 and FPFTY 2026?

A. Schedule C1-3 shows Taxes other than income, which comprises the Pennsylvania Use Tax and the Public Utility Realty Tax and the PUC Assessment. The Utility Realty Tax is assumed to change in relation to Net plant. Pennsylvania Use Tax is assumed to remain the same as for the HTY. The total is carried forward to Schedule C1, line 18.

Q. How did you compute the FPFTY Rate case expense amortization?

A. The Rate case expense amortization reflects the normalized rate case expense. Expenses for the pending rate case, if fully litigated, are estimated at $277,000 and a three-year normalization period was determined to be reasonable, starting January 1, 2026 (the start of the FPFTY). The elements of Valley's rate case expense are shown on Schedule C1-3, lines 10-18 and the result is carried forward to Schedule C1, line 13.

Q. How did you compute the FTY and FPFTY Income tax expense?

A. Income tax expense for the FTY and FPFTY is computed on Schedule C1-4.

Operating Income (Loss) before Income Tax (line 1), is from Schedule C1, line 22.

Synchronized interest expense (lines 4-9) is computed by multiplying rate base (Schedule C1, line 27) multiplying by weighted cost of debt (Schedule C1-2).

Taxable income before depreciation tax adjustments (line 10) is equal to Operating Income (Loss) Income Tax (line 1) less Synchronized interest expense (line 9).

Regulatory Pennsylvania taxable income and Regulatory Pennsylvania tax expense are computed using the Full flow through method; that is, tax depreciation is used in the

computation. The Pennsylvania depreciation adjustment (lines 12-15) reflects the depreciation expense on Valley's Pennsylvania tax return and is computed using the double declining balance method applied to tax basis and tax life (just as on the tax return). Regulatory Pennsylvania taxable income (line 16) is equal to Taxable income before depreciation tax adjustments as adjusted by the Pennsylvania depreciation adjustment. Regulatory Pennsylvania income tax expense (line 17) is equal to Regulatory Pennsylvania taxable income times the statutory 9.99% rate.

Regulatory Federal taxable income and Regulatory Federal tax expense are computed using a modified Full flow through method; that is, a modified tax depreciation amount is used in the computation. The Federal depreciation adjustment (lines 19-22), reflects straight line depreciation applied to tax basis and tax life. Federal taxable income (line 27) is equal to Taxable income before depreciation tax adjustments as adjusted by the Federal depreciation adjustment and less Regulatory Pennsylvania tax expense. Regulatory Federal income tax (line 28) is equal to Regulatory Federal taxable income times the statutory 21% rate.

Regulatory total income tax expense (line 29) is equal to Regulatory Pennsylvania income tax expense plus Regulatory Federal income tax expense, and is carried forward to Schedule C1, line 24.

Q. Does the computation of income tax expense included in the revenue requirement comply with Act No. 40 of 2016, which amends the Public Utility Code regarding the treatment of income tax expense for ratemaking purposes?

A. Yes. The computation of income tax expense for ratemaking purposes, presented on Schedule C1-4 (i.e., in the revenue requirement), reflects a tax deduction for each item of

expense (e.g., depreciation expense) in the revenue requirement. In addition, there are no items that reduce the income tax expense for ratemaking purposes, or increase the deferred tax liability, other than those reflected in the revenue requirement.

Q. Did you compute the Net Utility Operating Income and Return on Rate Base at present rates?

A. Yes. Schedule C1, line 25 shows Net Utility Operating Income at Present Rates for the HTY, FTY and FPFTY. Schedule C1, line 28 shows Return on Rate Base for Distribution-only at present rates of 4.30% for HTY, 5.29% for FTY and 3.72% for FPFTY.

RATE BASE FOR THE FTY AND FPFTY

Q. How did you develop the Rate Base?

A. The Rate Base at the end of the HTY, FTY and FPFTY is presented in Schedule C1-5. Assets at original cost and accumulated depreciation are carried forward from Schedule C3. Schedule C3 shows assets at original cost at the end of the HTY (December 31, 2024) and adds forecast capital expenditures to compute assets at the end of the FTY (December 31, 2025) and the FPFTY (December 31, 2026). As described above, annual depreciation expense for each account is computed by multiplying X) the depreciation rate for the account times Y) original cost at the prior year end plus one-half of additions for the year. Accumulated depreciation at each year-end is computed by adding annual depreciation expense, and subtracting retirements, to the previous year-end balance.

The amounts for Customer deposits and Materials and supplies, are the amounts on Valley's Balance Sheets at December 31, 2024, presented in Schedule C2. Each of these items was estimated to be the same for the FTY and the FPFTY as for the HTY.

Natural Gas Inventories (Schedule C1-5, line 8) is the average monthly volume over the period 2014-2024, times the currently effective GCR rate. This amount is unbundled from distribution rates and recovered in the GCR, and therefore not included in rate base.

The rate base includes a reduction for Accumulated Deferred Income Taxes ("ADIT"), equal to the difference between Accumulated depreciation based on X) Federal tax expense borne by ratepayers (i.e., based on straight line method discussed above) and Y) Valley's actual Federal tax expense (i.e., based on double declining balance method), times the current Federal income tax rate. The ADIT is computed on Schedule C1-5, lines 26-31 and carried up line 6.

The rate base includes a reduction for Accrued Pension / OPEB liability, reflecting the excess of amounts charged to expense over amounts paid in case (Schedule C1-5, lines 34-32, carried up to line 10).

Cash Working Capital was determined by using the widely-accepted formula of 1/8 of non-fuel cash operating costs (Schedule C1-5, lines 16-24, carried up to line 13).

The total Rate Base, Schedule C1-5, line 14, is carried forward to Schedule C1, line 27.

NET UTILITY OPERATING INCOME

Q. What is the distribution revenue requirement for the FPFTY?

A. FPFTY forecast revenue at present rates (including Other revenue) is $6,507,000. The FPFTY revenue required to produce Mr. D'Ascendis and Mr. Kucan's recommended rate of return of 8.27% is $8,133,000. Valley is requesting a revenue increase of $1,626,000 (Schedule C1, line 7).

Q. What revenue is included in the Distribution revenue requirement?

A. The total revenue requirement includes:

- Gas delivery revenue: Revenue from delivery of gas, for both sales and transportation customers, including contract and non-contract customers.
- Other revenue: Primarily Forfeited Discounts (late payment charges).

Unbilled Revenue is not included because FPFTY sales are normalized.

Q. What rate of return on rate base do Mr. D'Ascendis and Mr. Kucan recommend?

A. Mr. D'Ascendis and Mr. Kucan recommend a return on rate base of 8.27%.

Q. What rate of return on rate base do the proposed rates produce?

A. Valley's proposed rates produce FPFTY Distribution revenue of $8,109,000 (excluding Other revenue), Net Operating Income of $2,083,000 and rate of return of 8.27%, on rate base (Schedule C1).

PROPOSED RATES

Q. How were the proposed rates developed?

A. A revenue target was established for each class (other than contract transportation customers) by increasing revenue at present rates by 29.56%. The proposed fixed monthly charges are based on comparisons to those charged by other Pennsylvania utilities, and represent increases of approximately 14% for Residential and small Commercial customers, and approximately 22% for most other customers (Schedule B4-2, lines 27-28). For each class, the balance of the revenue target was recovered by changing volumetric or demand rates. The current rates and proposed rates are shown in Schedule B5.

Q. Is the Company proposing any rate design changes?

A. Valley is proposing to revise the rate design for Rate I to promote conservation, to better reflect cost of service and to simplify the rate. Specifically, Valley is proposing to add a monthly customer charge and to combine the 2nd and 3rd blocks of the volumetric commodity charge per Ccf.

Q. Did you compare the amounts that customers in each rate class would pay under the present and proposed rates?

A. Yes. Schedule B5-1 compares the amounts that customers in each rate class with a range of usage levels would pay in the FPFTY, both at present rates and the proposed rates, including the GCR. Schedule B5-2 shows the comparison excluding the GCR and is therefore applicable to transportation customers.

Q. Did you prepare a schedule showing the number of customers whose bills would increase under the proposed rates?

A. Yes. Schedule B3 presents that information.

Q. Do the proposed rates produce the required revenue?

A. Yes. Schedule B4-2 computes the distribution revenue that would be produced by the proposed rates. Line 22 shows that the revenue produced by the proposed rates is $8,109,000, representing an increase of $1,626,000, producing a return of 8.27%.

Q. Does this conclude your Direct Testimony?

A. Yes.

OF

HOWARD S. GORMAN

ON BEHALF OF

VALLEY ENERGY, INC.

APRIL 30, 2025

RESUME OF
HOWARD S. GORMAN

SUMMARY

Mr. Gorman has more than 35 years of experience in the energy industry, including 25 years in rate and regulatory proceedings. His areas of expertise include embedded class cost of service studies, marginal cost studies, revenue allocation, rate design and revenue requirements, for both electric and gas utilities. He has testified as an expert witness before the Massachusetts Department of Public Utilities, New Hampshire Public Utilities Commission, New Jersey Board of Public Utilities, New York State Public Service Commission, Ontario Energy Board, Pennsylvania Public Utility Commission and Rhode Island Public Utilities Commission. Mr. Gorman also has experience in financial modeling, financial analysis and forecasting and treasury and financial management.

PROFESSIONAL EMPLOYMENT

2010 - Present	HSG Group, Inc. • *President*
1997 - 2010	Black & Veatch Corporation (R.J. Rudden Associates, Inc. before 2005) • *Principal Consultant*
1995 - 1997	Independent Consultant
1987 – 1995	Trigen Energy Corporation • 1987-1993- *Corporate Controller; Trigen was formed in 1987* • 1993-1995- *Treasurer; Trigen had IPO with NYSE listing in 1994*
1982 - 1987	Coleco Industries, Inc. • *Director, Treasury*
1976 - 1979	Touche Ross & Co. • *Staff Accountant*

PROFESSIONAL EXPERIENCE

Utility Accounting and Costing

Mr. Gorman has performed numerous class cost of service studies, and has developed and supported revenue requirements, revenue allocation, rate designs and marginal cost studies, in rate cases before regulatory commissions in several jurisdictions, for electric and gas utilities. These assignments included developing test year data and rate year forecasts, establishing cost causality, selecting and developing allocators and analyzing customer impacts and policy considerations

Energy Project Analysis and Financing

Mr. Gorman has negotiated and completed transactions including construction and term loans, tax-exempt bonds, taxable bonds, subordinated debt and asset-backed (receivables and inventory) revolving credit facilities. He has worked successfully with lenders and borrowers to source and structure transactions, and was instrumental in negotiating loan documents and in designing power sale and supply procurement contracts to be financed. Mr. Gorman has performed financial analyses of energy-related assets, including electric and gas distribution companies, power plants and transmission operators. These analyses included development of cash flows and financial statements based on both regulatory and accounting presentations, and included review of assumptions, analysis of data, modeling and forecasting, sensitivity testing and stress testing.

Accounting and Financial Management

As controller of Trigen Energy Corporation, Mr. Gorman built the finance and accounting function; developed reports, procedures and management tools; and managed subsidiary controllers across North America, including an IPO with NYSE listing. He managed the corporate insurance portfolios and the benefit plans for Trigen Energy Corporation and for Coleco Industries, and has managed interest rate and currency forward contracts for the purpose of managing risk.

Publications And Presentations

"What Wall Street Needs From FERC," published in R. J. Rudden Financial, LLC's *Energy Capital Markets Report*, September 2002

"A Balanced Look at Balance Sheets," published in R.J. Rudden Financial, LLC's *Energy Capital Markets Report,* June 2002

"Assessment of Retail Choice Programs," presented at the American Gas Association Rate and Strategic Issues Committee Conference, March 2002

"The Remarkable Story on Enron," published in Scudder's *Annual End of Year Issue*, 2001
