OF

HOWARD S. GORMAN

ON BEHALF OF

VALLEY ENERGY, INC.

AUGUST 13, 2025

BEFORE

THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
	:	
v.	:	**Docket No. R-2025-3054393**
	:	
Valley Energy, Inc.	:	

REBUTTAL TESTIMONY OF HOWARD S. GORMAN ON BEHALF OF VALLEY ENERGY, INC.

Q. Please state your name, occupation and business address.

A. My name is Howard Gorman. I am the President of HSG Group, Inc., a consulting firm specializing in utility rate and regulatory matters, located in Great Neck, NY.

Q. Are you the same Howard Gorman that provided direct testimony on behalf of Valley Energy, Inc. ("Valley" or "Company")?

A. Yes. Terms defined in my direct testimony have the same meaning in this rebuttal testimony.

Q. What is the purpose of your testimony today?

A. The purpose of my testimony is to rebut the testimony of the following witnesses:

- Bureau of Investigation and Enforcement ("I&E") Witness Wilson (I&E St. No. 1), regarding Pennsylvania Corporate Income Tax rate, Rate Case expense, Unamortized Rate Case expense, Regulatory Commission expense and Cash Working Capital.
- I&E Witness Sakaya (I&E St. No. 3) regarding Scale Back and Customer Charges.
- Office of Consumer Advocate ("OCA") Witness Meyer (OCA St. No. 1) regarding Depreciation Expense.
- OCA Witness Deupree (OCA St. No. 3) regarding Revenue Allocation and Customer Charges.

- Office of Small Business Advocate ("OSBA") Witness Farr (OSBA St. No. 1), regarding Pennsylvania Corporate Income Tax rate and Uncollectibles expense.

Q. Are you sponsoring any exhibits today?

A. Yes, I am sponsoring Exhibit___(HSG-1R), which includes an index on Schedule A (R). The Company is supporting an increase of $1,285,942 compared to $1,626,099 in its original filing, reflecting the changes shown in Table HSG-1:

Line	Table HSG-1	Revenue Increase
1	Company's Original Filing	1,626,099
2	Update PA Tax rates	(30,798)
3	Remove $58,195 from Account 928	(59,494)
4	Remove $161,942 Depreciation expense from Account 391	(206,688)
5	Remove $199 Depreciation expense from Account 396	(254)
6	Remove GCR costs from Account 923	(3,565)
7	Remove costs from Accounts 923, 930	(3,367)
8	Reduce 925 for Lower Insurance cost	(31,673)
9	Reduce 930 for Advertising / Dues	(1,374)
10	Reduce 924 for Property Insurance	(2,944)
11		1,285,942

These changes to the revenue requirement are the result of adjustments suggested by the witnesses and adjustments that the Company identified as being appropriate during the discovery process.

Items Raised in Direct Testimony and Discussed Below

- PA Corporate Income tax rate - Change to 7.49% in 2026.
- Regulatory Commission Expense - Remove $58,195 which was included in error.
- Depreciation Expense - Remove $161,942 depreciation expense for Account 391 and $199 depreciation expense for Acct 396.
- Cash Working Capital - Adjust the allowance in Rate Base to equal 1/8 times applicable expenses.
- Revenue Allocation and Rate Design - Revenue Allocation and Rate Design were updated for the revenue requirement on Exhibit___(HSG-1R), Schedule C1 (R).

Items Identified During Discovery and Voluntarily Corrected

- Remove GCR costs from Account 923 - Company's response to I&E-RE-40.
- Remove costs from Accounts 923, 930 - Company's response to I&E-RE-40.

Items Discussed In Rebuttal Testimony of Other Company Witnesses

- Reduce Account 925 due to lower Insurance policy cost (Valley St. No. 5R).
- Reduce Account 925 due to removal of Advertising/Dues (Valley St. No. 5R).
- Reduce Account 924 for Property Insurance (Valley St. No. 5R).

I&E Witness Wilson

PA Corporate Income Tax Rate

Q. What does Ms. Wilson propose regarding the PA Corporate Income Tax rate?

A. Ms. Wilson notes that pursuant to Pennsylvania House Bill 1342 and Act 53 of 2022, the PA Corporate Income Tax rate is 8.49% in 2024, 7.99% in 2025 and 7.49% in 2026, with annual reductions of 0.5% until it reaches 4.99% in 2031 (I&E St. No. 1, p. 31). The Company agrees with this adjustment. The correct rates, as proposed by Ms. Wilson, are reflected in the Company's Rebuttal filing, Exhibit___(HSG-1R), Schedule C-1 (R).

Rate Case Expense

Q. What does Ms. Wilson propose regarding the Rate Case Expense?

A. Ms. Wilson proposes to normalize Rate Case Expense over 60 months, compared to the Company's proposed 36 months (I&E St. No. 1, p. 9). She cites the Company's average frequency of filing since 2010 in support of her 60-month normalization period. The Company does not agree with this adjustment.

Ms. Wilson's testimony discusses the Company's filing frequency since 2010; however, that average reflects that the Company did not file a rate case from 2010-2019. Prior to the

2010 rate case, the Company filed rate cases in 2004 and 2007. The long gap from 2010 to 2019 was due to the Moxie project, which provided incremental revenue to the Company. The Company explained the reasons for the abnormal filing gap in the fully-litigated 2019 rate case and was granted a 3-year normalization period in the Commission's Order (Docket No. R-2019-3008209). Since the 2019 rate case, the Company has filed rate cases in 2022 and 2025. The Company expects that going forward, it will need to file a rate case every 3 years (36 months). There is no reason to depart from the Commission's 2019 Order given the Company's overall history and future projections. This adjustment should be rejected by the Commission, and the Company's 3-year normalization period should be accepted.

Unamortized Rate Case Expense

Q. What does Ms. Wilson propose regarding Unamortized Rate Case Expense?

A. Ms. Wilson proposes removing Unamortized Rate Case expense from rate base, on the grounds that Rate Case expense is a normal operating expense for a utility, and the utility should not earn a return on a normal operating expense (I&E St. No. 1, p. 13).

Q. Do you agree?

A. No. The utility has working capital tied up in unrecovered Rate Case expense and is entitled to a return on that working capital. The Company pays the rate case expense on a real-time basis during the proceeding, then collects the projected amount included in the rate case expense claim over the normalization period without carrying charges. As such, allowing the return on the balance is necessary to compensate Valley for the delay between paying the expense and receiving the compensation in post-proceeding distribution revenues.

This treatment is analogous to Materials and Supplies, where the Company has laid out or committed working capital and the item has not flowed through expense yet. The cost of unused Materials and Supplies is routinely included in rate base. For the same reason, the unrecovered portion of Rate Case expense should be included as well, and this adjustment should be rejected.

Regulatory Commission Expense (Account 928)

Q. What does Ms. Wilson propose regarding Regulatory Commission Expense?

A. Ms. Wilson identifies an amount of $58,195 in this account that was included by mistake, and she proposes reducing the Company's Regulatory Commission Expense by this amount (I&E St. No. 1, p. 16). The Company agrees and has reduced Regulatory Commission Expense by this amount in its Rebuttal filing, Exhibit___(HSG-1R), Schedule C1-1 (R).

Cash Working Capital

Q. What does Ms. Wilson propose regarding Cash Working Capital?

A. Ms. Wilson proposes that the Cash Working Capital ("CWC") allowance be computed based on the Commission's determination of expenses in this case (I&E St. No. 1, p. 30). She appears to accept the Company's use of the 1/8 convention in computing CWC. The Company agrees that the CWC claim should reflect the approved expenses. Valley has adjusted its CWC claim in Rebuttal using the 1/8 convention and will use this approach for the final revenue requirement. The Company accepts this proposal, and it has been reflected in that amount in its Rebuttal exhibits (Exhibit___(HSG-1R)).

I&E Witness Sakaya

Revenue Allocation / Scale Back

Q. What does Mr. Sakaya recommend regarding Revenue Allocation/Scale Back?

A. Mr. Sakaya recommends "scaling back the rates so each class receives the same percentage increase" (I&E St. No. 3, p. 8), except for the contract rates which will remain as negotiated. This is what the Company proposed in its filing, and the Company agrees with the recommendation to give each class an equal percentage increase if the Commission authorizes a lower increase than the Company requested, with the understanding that this would not apply to contract customers; the rates for contract customers would be determined by the applicable contracts.

Customer Charges

Q. What does Mr. Sakaya recommend regarding Customer Charges?

A. Mr. Sakaya recommends that the proposed Customer Charges also be "included in the scale back" (I&E St. No. 3, p. 9). His reasons are to limit the increase to zero- and low-usage customers, to encourage conservation, and possibly to reflect cost of service. In proposing customer charges, the Company balances several issues: cost of service, conservation, rate and revenue stability, and affordability. As Mr. Rogers discusses in his Rebuttal Testimony, the Companies' peer group of mid- to large-sized Pennsylvania natural gas distribution companies generally have current customer charges that are higher than Valley's proposal. It is important to ensure that an appropriate portion of Valley's revenues are collected through the monthly customer charge to support revenue stability, considering variable weather conditions that would impact monthly usage. Valley's customer charges

should not be included in the scale back if the Company receives less than the full increase it requested.

OCA Witness Meyer

Depreciation Expense

Q. What adjustments to Depreciation Expense does Mr. Meyer propose?

A. Mr. Meyer proposes two adjustments to Depreciation expense.

- Office Furniture and Equipment, Account 391 (OCA St. No. 1, p. 13) - Mr. Meyer notes that this account was fully depreciated as of December 31, 2025, and proposes that no depreciation expense be allowed in 2026. The Company accepts this adjustment and has reflected it on Exhibit___(HSG-1R), Schedule C-3 (R).
- Power Operated Equipment, Account 396 (OCA St. No. 1, p. 14) - Mr. Meyer notes that this item will be fully depreciated by December 31, 2026, and proposes to depreciate the net book value as of December 31, 2025, over three years. Mr. Meyer's proposed treatment is incorrect and contrary to ratemaking principles. He did not present a deprecation study to support extending the depreciable life of this item. His rationale, that this will prevent overcollection of depreciation expense in years after 2026, ignores any capital spending the Company will do to replace this fully depreciated equipment. The rate year is 2026, and it would be inequitable to consider that there is no depreciable book value in later years, while ignoring additional capital spending. Mr. Meyer's proposed adjustment must be limited to the $199 negative net book value that he identified at December 31, 2026.

OCA Witness Deupree

Revenue Allocation

Q. What does Mr. Deupree recommend regarding Revenue Allocation?

A. Mr. Deupree finds the Company's "proposed equal allocation of its proposed revenue increase … to be reasonable" (OCA St. No. 3, p. 3).

Customer Charges

Q. What does Mr. Deupree recommend regarding Customer charges?

A. Mr. Deupree recommends the Commission reject the Company's proposed increases in Customer charges, and if the Commission authorizes an increase to the Customer charge, then the percentage increase should be no more than the system average overall increase (OCA St. No. 3, p. 11). He cites several reasons, which I address below.

- Support for Customer charges - Mr. Deupree is correct that the Company has not performed an Allocated Class Cost of Service Study ("ACOS") to support the proposed Customer charges. An ACOS is not necessary to evaluate the appropriate customer charges for Valley. Also, there is no ACOS to support revenue allocation, and various witnesses, including Mr. Deupree, have commented on (and uniformly supported) the Company's proposed revenue allocation. The lack of a cost study cannot be a bar to evaluating the appropriate Customer charges.
- Comparison to other regional utilities - Mr. Deupree claims the Company's proposed Customer charges for Residential and Commercial customers are higher the average for his peer group of regional utilities. My conclusion differs from Mr. Deupree's. Valley's proposed $14.00 Residential charge is close to his average of $13.79 (1.5% higher), and Valley's proposed $25.00 Commercial charge is a little higher than his

average of $22.65 (10.4% higher). However, these results account for the rate environment existing just after Valley's rate case; we do not know when the other utilities will file rate cases and what they will propose for Customer charges. My conclusion from reviewing this information is that Valley's proposed Customer charges are comfortably within the range of the present, and likely future, Customer charges of regional utilities. Moreover, as Mr. Rogers discusses, Valley's proposed customer charges are consistent with Pennsylvania natural gas utilities, which is a more relevant peer group.

- Effect on energy conservation and low-usage customers - Mr. Deupree claims that higher Customer charges are contrary to the goal of energy conservation. However, the goal of energy conservation should not be considered in a vacuum; rate design must balance this with concerns such as revenue stability for the utility and efficient price signals, as well as affordability. This is especially important for a weather-sensitive utility product such as natural gas. Inefficient pricing and under-recovery of costs lead to more frequent rate cases and also to cross-subsidies within rate classes, as costs are shifted to higher-usage customers.

Q. What do you recommend?

A. I recommend the Commission accept the Company's proposed Customer charges because they reflect a reasonable balance of the factors to be considered, and they are comfortably within the range of the present, and likely future, Customer charges of regional utilities. In his Rebuttal Testimony, Mr. Rogers discusses why the comparison group used by Mr. Deupree is not appropriate for Valley. I also note that the proposed increases to the

Customer charges are below the overall system average increase, as Mr. Deupree recommended.

OSBA Witness Farr

PA Corporate Income Tax Rate

Q. What does Mr. Farr propose regarding PA Corporate Income Tax Rate?

A. Mr. Farr makes the same proposal as Ms. Wilson regarding the PA Corporate Income Tax rate (OSBA St. No. 1, pp. 5-7), and as discussed above the correct rates are reflected in the Company's Rebuttal filing, Exhibit___(HSG-1R), Schedule C-1 (R).

Uncollectibles Expense

Q. What does Mr. Farr propose regarding Uncollectibles expense?

A. Mr. Farr's Table JBF-1 (OSBA St. No. 1, p. 4) has a decrease in Uncollectibles expense of $2,628. He offers no support for this proposed change, and it should be rejected by the Commission.

Q. Does this conclude your Rebuttal Testimony today?

A. Yes.

THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
	:	
v.	:	**Docket No. R-2025-3054393**
	:	
Valley Energy, Inc.	:	

SURREBUTTAL TESTIMONY OF HOWARD S. GORMAN
ON BEHALF OF VALLEY ENERGY, INC.

Q. Please state your name, occupation and business address.

A. My name is Howard Gorman. I am the President of HSG Group, Inc., a consulting firm specializing in utility rate and regulatory matters, located in Great Neck, NY.

Q. Are you the same Howard Gorman that provided Direct Testimony on behalf of Valley Energy, Inc. ("Valley" or "Company")?

A. Yes. Terms defined in my Direct Testimony or my Rebuttal Testimony have the same meaning in this Surrebuttal Testimony.

Q. What is the purpose of your testimony today?

A. The purpose of my testimony is to respond to the Rebuttal Testimony of the following witness:

- Office of Consumer Advocate ("OCA") Witness Myer (OCA St. 1R)

Q. Are you sponsoring any exhibits today?

A. No.

Q. Are you supporting any changes to the Company's filing, as amended by Exhibit___(HSG-1R)?

A. No.

Q. Please summarize your review of the Rebuttal Testimony of Mr. Meyer (OCA St. 1R).

A. Mr. Meyer did not raise any new issues or provide any new arguments for his positions. Mr. Meyer addresses two adjustments that were suggested in the Direct Testimony by other parties. Valley accepted one of those adjustments (Tax Rate). I addressed the other adjustment (Unamortized Rate Case Expense) in my Rebuttal Testimony. Mr. Meyer has not raised any arguments that I have not fully refuted.

Q. Please discuss the source document error that Mr. Meyer references in his Rebuttal Testimony.

A. In the course of responding to discovery, Valley alerted the parties that a limited subset of data for the Future Test Year ("FTY") was not pulled from the final version of the Company's files. This data error did not impact the Fully Projected Future Test Year ("FPFTY") that supports the Company's claim. This oversight was detected and corrected through revised schedules previously distributed to the parties.

Q. Does this conclude your Surrebuttal Testimony today?

A. Yes.

DIRECT TESTIMONY OF EDWARD E. ROGERS
ON BEHALF OF VALLEY ENERGY, INC.

Q. Please state your name and business address.

A. My name is Edward E. Rogers. My business address is 523 Keystone Avenue, Sayre, Pennsylvania.

Q. By whom are you employed and what position do you hold with Valley Energy, Inc.?

A. I am employed by C&T Enterprises, Inc., and assigned to Valley Energy, Inc. ("Valley" or "Company"), as the President and Chief Executive Officer.

Q. What are your duties in that capacity?

A. My duties include the management of all administrative, engineering, operations, safety, compliance, and customer service activities of Valley.

Q. Please describe your educational and professional background.

A. I attended Marquette University as a computational mathematics major from 1980 to 1982 and enrolled in Pennsylvania State University's Mechanical Engineering Technology Program from 1989 to 1991. I worked for various construction firms prior to joining Valley.

Q. Please describe the purpose of your testimony.

A. My testimony provides a general overview of Valley, its operations, service territory, and customer base. I will discuss the major factors that necessitate the rate relief that we are requesting. I also discuss proposed changes to the tariff.

Q. Please provide a brief corporate history of Valley.

A. Valley was formed by C&T Enterprises in 2000 to purchase from NUI Corporation ("NUI") the assets of Valley Cities Gas Service and Waverly Gas Service. Ownership and operational control of the assets was transferred to Valley on November 7, 2002.

In 1944, Pennsylvania & Southern Gas Company formed Valley Cities by acquiring the following companies: The Athens and Sayre Gas Company (originally formed in 1899); The Athens, Sayre and South Waverly Heat and Power Company (originally formed in 1899); and The South Waverly Gas Light Company (originally formed in 1885). Pennsylvania & Southern added the Towanda portion of the service territory from Towanda Gas and Water Company (originally formed in 1859) in 1945. Finally, The Waverly Gas Light Company (1883) was acquired in 1959. Pennsylvania & Southern operated the combined assets (known as Valley Cities Gas in Pennsylvania and Waverly Gas in New York) through 1994. In 1994, NUI acquired Pennsylvania & Southern.

Q. Please describe the current service territory for Valley.

A. Valley serves twelve communities in Bradford County, Pennsylvania, and Tioga and Chemung Counties in New York. Valley supplies natural gas to more than 7,349 residential, commercial and industrial customers in Pennsylvania. Our

Pennsylvania natural gas distribution system includes over 167 miles of mains. We operate the Pennsylvania and New York systems as an integrated system, with all natural gas injected into the system at points in Pennsylvania.

Q. How does Valley arrange the gas supplies for its system?

A. Valley has two interconnection gate stations with the Tennessee Gas pipeline system. One point currently serves the Hamilton (previously Panda) electric generation station that is located south of Towanda. The other interconnection serves the remainder of our system, including Valley's customers in New York. We hold firm capacity contracts on Tennessee and also have various storage contracts.

Q. In what year was the last filing to adjust the base rates for customers on the Valley system?

A. The last base rate proceeding adjusting rates for Valley customers was in 2022, with new rates taking effect on February 1, 2023. In that case, Valley settled with the other parties to obtain an annual revenue increase of $958,000.

Q. Why is Valley requesting to increase its rates?

A. The primary reason that we are submitting this filing is to ensure the continued financial viability of the company. We must continue to earn an appropriate return on our rate base investments and cover our expenses. Operating costs continue to increase throughout the economy. We also continue to replace equipment, mains, pipelines and services, which increases our rate base. Mr. Chapman will address the past and future enhancements to utility plant in more detail.

We also are experiencing other material and supply increases for everything from office supplies to vehicle fuels. Ms. Beale will address our current and future expenses in her testimony.

As the analysis conducted by Mr. Gorman indicates, Valley's pro forma return on rate base for historic year 2024 was 4.3%. *See* Exhibit__(HSG-1), Schedule C1. Without a rate increase, the Company projects a return on rate base of only 3.72% for 2025. *Id.* Using an appropriate market-reflective return on equity ("ROE") as Mr. D'Ascendis and Mr. Kucan recommend in their testimony would establish rates that provide Valley with the opportunity to earn a return on rate base of 8.27% and result in a proposed rate increase of $1.6 million.

Q. Is Valley seeking the full rate increase to which it is entitled?

A. Yes. The Commission recently adopted changes to its regulations to allow smaller companies to proceed with non-major rate cases for amounts up to $5 million. Although the revised regulations have not been published in the *Pennsylvania Bulletin*, we are asking for the full amount pending that publication.

We have added to our filing information requested under the existing regulations for rate increase requests that exceed $1 million, as specified in Section 53.53 of the regulations.

Q. Has Valley been pursuing a systemic improvement of the distribution system over the last ten years?

A. Yes. Valley has continued to make significant improvements to the distribution system to enhance service, safety and reliability. As Mr. Chapman addresses in more detail, we prepare periodic Distribution Management Integrity Plans

("DIMPs"), which provide a systematic approach for maintaining the reliability of our system. Our annual capital plans then include projects to address the risks identified in the DIMP, as well as known major replacement/improvement projects by PennDOT and other utilities in our area, and other necessary capital improvements.

Valley has been proactive in addressing reliability throughout the years. For example, Valley completed the replacement of all cast iron and bare steel pipe on its system 8 years ago. We now are working through the replacement of troubled Aldyl-A vintage plastic pipelines and service lines, which we project to have fully replaced within 3 to 5 years.

Over the last ten years, the Company has also performed upgrades to its City Gate facility; upgraded transmission mains; added, replaced or upgraded 14 district regulator stations; installed over 26 miles of new or replacement plastic gas mains; installed 2,383 new or replacement services; relocated over 107 meters from indoors to outdoors; added remote pressure monitoring devices; installed additional over-pressure protection equipment on low-pressure systems and added or replaced 36 large commercial metering facilities.

Valley's prudent management and attention to its distribution system has resulted in an excellent safety record. We also have one of the lowest lost and unaccounted for gas percentages in Pennsylvania, which saves our ratepayers money on their supply service. Attached as Exhibit__(EER-1) is a table showing our historic lost and unaccounted gas performance.

Q. Does Valley anticipate any major capital projects to enhance its building and facilities?

A. Yes. In late 2024, Valley purchased a property that will be used for warehousing construction equipment, as work space for construction crews, to locate a pressure regulation shop, and as a training center. We are in the process of making upgrades to that facility, which will be completed in 2026.

Q. Why is Valley adding a training center?

A. The Office of Pipeline Safety of the U.S. DOT, requires operators to develop and maintain a qualification program for individuals performing tasks identified in the regulation (i.e., investigating leak or odor complaints). To comply with the requirements of this regulation, Valley Energy implemented an Operator Qualification (OQ) Program. The intent of the OQ regulation is to minimize human error by establishing a verifiable qualified workforce. The training component of the OQ Program continues to increase and evolve, resulting in increased training and testing hours. To meet the OQ program training requirements, increased instructor led, scenario-based training is required as the number of tasks that require a hands-on component to fully qualify for a task continues to increase. Employees are required to train in specific tasks and demonstrate their proficiency in those tasks through the successful completion of a written and/or performance-based evaluation. The continued evolution of the requirements pertaining to OQ rules and the increase in performance-based tasks continue to highlight the need for augmented training facilities which would enable scenario-based training for gas pipe installation and repair functions.

While on-the-job training is still occurring and will occur into the future, the Company will have the ability to enhance on-the-job training with the addition of live, scenario-based hands-on training that will be utilized in the new training center. This will provide us with the ability to train our employees on equipment and in conditions that mimic the real-world environment, but in a safe, controlled manner.

Investing in employee development through dedicated training resources and formal standardized training programs will, as discussed earlier, provide greater depth, consistency and frequency to employee training. Additionally, the new programs will enable the Company to adequately respond to emerging trends in the rapidly changing utility industry while simultaneously managing continuous changes in the workforce as experienced employees retire. Training and development has never been more important or critical to keep pace with the changes in our business.

Q. Does this property also enhance Valley's ability to serve its customers?

A. Yes. The property is strategically located in the northern portion of our territory and provides ready access to our service territory for our construction crews and the regulator technician.

SMALL UTILITY ISSUES AND COMPANY PERFORMANCE

Q. Mr. Rogers, is it accurate to categorize Valley as a small utility?

A. Yes. I already mentioned that Valley serves less than 7,500 customers in Pennsylvania. Similarly, the market capitalization analysis in the Direct Testimony

of Company witnesses Dylan D'Ascendis and Ryan Kucan of ScottMadden, Inc., shows Valley to be a small public utility relative to his comparison group.

Q. As a small privately held utility, does Valley face any unique financial challenges?

A. Yes, it does. As Mr. D'Ascendis and Mr. Kucan explain, small utilities face increased financial and business risks.

Q. Mr. Rogers, can you provide an example of a risk faced by smaller utilities that larger utilities may not face?

A. Yes. As discussed by Mr. D'Ascendis and Mr. Kucan, smaller utilities are at greater risk to experience adverse financial impacts from a single customer leaving the system (either by plant closure or by switching to alternate fuel). Currently, Valley's three largest customers represent nearly 30% of distribution revenues per year. In addition, our five largest customers represent approximately 32% of our annual distribution margins, and three of the five have dual-fuel capabilities.

Q. Is Valley at risk to lose other customers?

A. Yes. In addition to the largest customers, many of our other customers have access to potential alternatives to natural gas service, including propane, fuel oil, wood and electric.

Q. How do you think the Commission should address the additional risks faced by small utilities?

A. I believe the Commission should address this risk through an appropriate overall return on distribution rates, including a size adjustment. Additionally, the

Commission should adopt the recommendations of Mr. D'Ascendis and Mr. Kucan for a market-reflective return on equity and a management performance adjustment.

Q What are the bases for the performance adjustments proposed by Mr. D'Ascendis and Mr. Kucan?

A. Mr. D'Ascendis' and Mr. Kucan's testimony cites to Section 523 of the Public Utility Code, 52 Pa. Code § 523, which sets forth the Commission's guidelines for performance adjustments. I am advised by counsel that the Public Utility Code identifies several criteria to be considered in assessing the performance of a fixed utility for purposes of a performance factor adjustment, including consideration of any relevant and material evidence of efficiency, effectiveness, and adequacy of service. The Commission should consider Valley's operations as supportive of the proposed performance adjustment, including the following.

- **Main replacements.** Valley has replaced all cast iron, bare-steel and the majority of vintage plastic mains without assessing a Distribution System Improvement Charge on its customers.
- **Low customer complaints.** Valley has also demonstrated exceptional customer service, as evidenced by the Company's record of no formal or informal complaints filed with the PUC over the prior 3 years.
- **Emergency Response**. For the period 2022 – 2024, Valley has responded to 98.77% of emergency calls in 60 minutes or less.
- **Favorable customer feedback.** Over the same three-year period from 2022-2024, over 97% of customers surveyed as part of Valley's annual Customer Contact Survey responded that they are "Very Satisfied" with

Valley's overall quality of service. The "Very Satisfied" election is the highest ranking on the survey, which is conducted by Valley, consistent using a form developed by the Commission's Bureau of Consumer Services, and provided annually to the Commission pursuant to 52 Pa. Code § 62.35.

- **Technology adoption: Smarthub use.** Valley has adopted Smarthub as an option for customers to manage bills electronically, analyze consumption, and conduct other business with the Company using their smartphone or other device. To date, 2,440 of Valley's customers use Smarthub and benefit from the convenience of this resource.
- **PIPE Grant for East Athens Expansion.** To reduce customer costs for a significant main extension project, the Company applied for grant funding from the Pennsylvania Department of Community and Economic Development's ("DCED") Pipeline Investment Program ("PIPE"). DCED approved the application and awarded an $850,000 PIPE grant for the project. The PUC Chairman noted the impact of this grant in a public statement, commending the Company on its "practical commitment to extending natural gas service" and specifically stating "I am pleased to see Valley utilize PIPE grant funds."
- **Low Lost and Unaccounted For Gas.** Valley's maintenance and replacement of gas infrastructure initiatives have resulted in an extremely low lost and unaccounted for percentage of -0.17%. There are two primary causes of lost gas — (1) leaks on mains and equipment that leak gas into the atmosphere.; and (2) meter inaccuracies. As explained by Mr.

Chapman, Valley proactively addresses both issues. At a $4 per Mcf gas cost, each 0.5% improvement in the lost and unaccounted for percentage saves our supplier of last resort customers $17,774 per year.

VALLEY STAFFING

Q. You previously mentioned that you are a C&T employee assigned to Valley. Can you please describe the employment structure at Valley?

A. C&T is both a holding company and a management services firm. Based on Valley's indications of need and preferred person to serve in each position, C&T provides the employees to fill all of Valley's employee positions. This includes management, administrative, customer support, and operational employees. In addition, C&T provides support services for activities that may not justify Valley employing its own full or part-time employee. Melissa Sullivan, Chief Financial Officer of C&T, will provide additional details regarding these shared services and how Valley compensates C&T for access to the services.

In total, Valley has 29 employees with two open positions that are in the process of being filled. This represents a significant increase from 2010, when Valley had 24 employees.

Q. Has Valley taken steps to determine whether the current workforce is appropriate for the current expectations in the gas industry?

A. Yes. We recently identified two full-time positions that will be changing to seasonal in late 2025. We have also added a leak survey technician position in 2025. This will enable us to increase the frequency of leak surveys, moving to a 3-year cycle rather than our historic 5-year cycle for residential areas, and leak

surveying Aldyl-A vintage plastic pipelines and steel tubing services on an annual basis. Mr. Gorman has made appropriate adjustments to the FPFTY to incorporate these changes.

Q. Has Valley examined the competitiveness of its wage and salary plan?

A. Yes. In 2024, we undertook a comprehensive review of our salaries in conjunction with the other operating companies in the C&T Enterprises corporate family. We compared the responsibilities, work experience, educational requirements and leadership responsibility for over 105 positions across the operating companies and the C&T Shared Services functions. We engaged a consultant to review salary data from various sources to develop salary ranges for various employee grades, keeping similar functions within the same grade, where feasible.

Q. Did Valley adjust salaries as a result of that review?

A. We identified a handful of positions that needed to be adjusted upward to reflect the current employment conditions. We began making those adjustments in early 2025, with a two-year phase-in (2025 and 2026). Ms. Beale provides an exhibit that calculates the net expense impacts of the Wage & Salary study and other anticipated staffing changes.

Our employees will also continue to receive annual salary adjustments as approved by the C&T Board of Directors, as well as any merit-based adjustments. Finally, the consultant will update the survey annually to confirm that our salary ranges for each grade in the plan remain appropriate. If necessary, we may adjust individual (or groups of) employees based on that annual update. Ms. Sullivan discusses the projected annual base salary adjustments and benefits costs.

Q. Why is it important to maintain competitive salary and benefits offerings?

A. Natural gas utility workers must possess specialized knowledge and skills. We need to attract quality applicants and then often must provide training for the individual to become fully competent in their job. Some of the positions require qualification tests and other certifications. Once Valley attracts the candidate, we invest our time and resources to help that worker enhance their skills. This benefits our customers through excellent customer service and through reliable maintenance and operation of the natural gas system. Competitive salary and benefits offerings help us to attract and retain our workforce, and to meet the customers' needs.

CUSTOMER SERVICE SCHEDULE CHANGES

Q. Does Valley anticipate any significant changes in service schedule for any customers?

A. Yes. One of our larger customers has requested to move to Rate Schedule I, as a transportation customer. In 2024 and the beginning of 2025, they were served on Rate Schedule IS-Interruptible Service and SI-Small Industrial. Mr. Gorman has reflected this change in his analysis by increasing the volume delivered under Rate Schedule I and decreasing the volumes under the two rate schedules. We also are proposing some changes to the rate design for Rate Schedule I.

Q. Please explain the changes to Rate Schedule I.

A. We are proposing to add a monthly customer charge to make the rate design consistent with other classes. Also, we are proposing to simplify the rate design by

decreasing the number of rate blocks for the commodity-based portion of the rate from the current three blocks to two blocks for the new rate.

TARIFF CHANGES

Q. Please explain Valley's proposed tariff rule changes.

A. We propose to modify Tariff Rules 4 and 6.

In Tariff Rule 4, we are adding a new section to address Excess Flow Valves (EFVs). This section requires the Company to include EFVs in new or replacement installations at our cost, consistent with Federal safety regulations. Those standards allow limited exceptions that would apply to the new rule. In addition, a customer with an existing installation can request and pay for an EVF.

In Tariff Rule 6, we are clarifying the customer's responsibility to pay for any costs or damages if they (or a third party on their behalf) tamper with our equipment.

Q. Does this complete your testimony?

A. Yes.

REBUTTAL TESTIMONY AND EXHIBITS

OF

EDWARD E. ROGERS

ON BEHALF OF

VALLEY ENERGY, INC.

AUGUST 13, 2025

BEFORE
THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
	:	
v.	:	**Docket No. R-2025-3054393**
	:	
Valley Energy, Inc.	:	

REBUTTAL TESTIMONY OF EDWARD E. ROGERS ON BEHALF OF VALLEY ENERGY, INC.

Q. Please state your name and business address.

A. My name is Edward E. Rogers. My business address is 523 Keystone Avenue, Sayre, Pennsylvania.

Q. Are you the same Edward E. Rogers who previously submitted Direct Testimony in this proceeding on behalf of Valley Energy, Inc. ("Valley")?

A. Yes. Terms defined in my direct testimony have the same meaning in this rebuttal testimony.

Q. What is the purpose of your testimony today?

A. The purpose of my testimony is to rebut the testimony of the following witnesses' direct testimony:

- Office of Consumer Advocate ("OCA") Witness Walters, Office of Small Business Advocate ("OSBA") Witness Farr and Bureau of Investigation and Enforcement ("I&E") Witness Patel regarding recommended Return on Equity ("ROE") allowances, including their proposals to deny the Company's proposed size and performance adjustments.

- OCA Witness Deupree regarding his recommendation to reject or reduce the Company's requested increase for the customer charge.
- OCA Witness Wise regarding her proposed elimination of processing fees for debit and credit card payments.
- OCA Witness Meyer regarding his proposed adjustments to the Company's payroll expenses and account 880 (Other Distribution Expenses).
- I&E Witness Wilson regarding her proposed adjustments to the Company's operations and maintenance expenses.

RETURN ON EQUITY

Q. Please summarize the parties' positions regarding an appropriate ROE for Valley (OCA Statement No. 2 at 3; OSBA Statement No. 1 at 4; I&E Statement No. 2 at 7).

A. OCA Witness Mr. Walters recommends an ROE of 9.5%; OSBA Witness Mr. Farr recommends an ROE of 10.15%; and I&E Witness Mr. Patel recommends an ROE of 10.51%.

Q. Do you have any initial comments regarding the OCA, OSBA and I&E recommendations?

A. Yes. The parties oppose the Company's proposed size and performance adjustment when arriving at their recommended ROE (OCA Statement No. 2 at 78-82; OSBA Statement No. 1 at 6-9; I&E Statement No. 2 at 48-59).

Q. Do you have any further comments with regard to the size and performance adjustments?

A. Mr. D'Ascendis' Rebuttal Testimony provides the primary response to OCA, OSBA and I&E on these adjustments. My testimony supplements Mr. D'Ascendis' response.

Regarding the performance adjustment, Mr. Walters, Mr. Farr and Mr. Patel inappropriately accuse the Company of seeking additional returns for complying with its mandatory obligations. These arguments are directly contradicted by my Direct Testimony, where I review several initiatives and accomplishments that reflect Valley's commitment to exceeding performance standards, not merely meeting them. For example, Valley was under no obligation to offer Smarthub online account access to its customers, which is an option for customers to manage bills electronically, analyze consumption, and conduct other business with the Company using their smartphone or other device. Similarly, Valley proactively replaced 100% of its cast iron and bare steel mains years before larger Natural Gas Distribution Companies ("NGDCs") implemented Distribution System Improvement Charges ("DSICs") for their replacement programs, which is illustrative of the Company's effective management and commitment to reliability and customer service. The Company is now focused on replacing leak prone Aldyl-A vintage plastic pipelines and service lines, which we project to have fully replaced within 3 to 5 years. Our proactive initiatives to maintain and replace gas infrastructure serveto significantly reduce the lost and unaccounted for gas to levels that are far below other NGDCs. Exhibit__(ER-1R) compares our lost and

unaccounted gas percentage to other Pennsylvania utilities. Proactively managing our lost and accounted for gas percentage saves our customers money on every mcf of gas that they use and is better for the environment.

Additionally, our outstanding emergency response, low customer complaints rate and high favorable customer feedback, as well as Valley's low termination rate should be considered in awarding an upward performance adjustment. The Company's 2.5% residential termination rate is considerably lower compared to the larger NGDC's average rate of 4.5% reflected in the Pennsylvania Public Utility Commission's ("Commission" or "PUC") 2023 Universal Service Programs & Collections Performance Report – September 2024.

We quantified the value to our customers from operational efficiencies as part of our discovery responses in this proceeding. Based on previous improvements and continued efficiencies, the Company has been able to provide overall cost savings in excess of $452K or $61 annually per customer (OCA-VI-24 Attachment A – Cost savings.xlsx). A copy of this response is attached as Exhibit__(ER-2R).

A performance adjustment mechanism is available under Pennsylvania statute, and I believe Valley has earned it based on the Company's achievements and initiatives outlined in my Direct Testimony.

Q. Do you have any comments regarding the size adjustment?

A. With respect to Valley's proposed size adjustment, my Direct Testimony explains the real risk of losing one or more of our largest customers who have access to potential alternatives to natural gas service. Additionally, the Commission has previously approved a size adjustment for small utilities, including Valley.

Contrary to I&E Witness Patel's characterization of the Commission's holding regarding the outcome of Citizens' and Valleys' request for a size adjustment in its 2019 rate base case proceeding, the Commission specifically considered the size of the company. In doing so, the Commission approved an upward adjustment to the cost of equity by allowing for one standard deviation above the average of the mean and median proxy group ROE of the Company's DCF analysis.[1] In doing so, the Commission specifically recognized Mr. D'Ascendis' record evidence of a general inverse relationship between size and risk, such that smaller companies like Citizens' and Valley face greater risk. Consistent with the Commission's affirmative finding of size risk in the 2019 Valley and Citizens' decisions, Company Witness D'Ascendis recommended a size premium of 1.00% for Valley. This recommendation should be approved by the Commission.

Q. Have the considerations on which the Commission's size and performance adjustment determinations were based changed since the 2019 rate case?

A. No. Valley is still a very small utility. As Mr. D'Ascendis testified, it still requires a higher return to provide the resources to handle significant events that affect revenues, costs, plant and earnings. As stated above, Valley still performs very well

[1] *Pa. PUC v. Citizens Electric Company of Lewisburg, PA,* Docket No. R-2019-3008212 (Order Entered April 29, 2020). See generally Disposition of Cost of Common Equity at 103-104 and *Pa. PUC v. Valley Energy, Inc.,* Docket No. R-2019-3008209 (Order Entered April 27, 2020). See generally Disposition of Rate of Return of Common Equity at 124-125.

on the measures of management effectiveness discussed in the Commission's Order in the 2019 rate case.

Q. Is it important that the Commission be consistent in applying the criteria it uses to determine ROE?

A. Yes, it is critically important, especially for business and financial planning. When we are making investment decisions and planning for future financial activities, including the timing of rate cases, it is important for us to be able to use consistent assumptions. Large changes in regulatory treatment on the size adjustment would complicate our planning and create additional financial risk for Valley.

CUSTOMER CHARGE

Q. Please describe OCA Witness Deupree's analysis of an appropriate customer charge (OCA Statement No. 3 at 3-10).

A. Mr. Deupree relies on current residential and small commercial customer charges of other regional gas utility companies to justify the denial of an increase or to limit the increase to no more than the overall system average increase of the peer group of regional gas utilities.

Q. Does Mr. Deupree's analysis explore the customer charges of other Pennsylvania gas utilities which rates are set by the Commission for comparison with Company?

A. No. Mr. Deupree relies on non-Pennsylvania gas utilities to justify his recommendation. The appropriate comparison group is the other Pennsylvania natural gas distribution companies of similar or larger size. Exhibit__(ER-3R) provides the customer charges for the relevant Pennsylvania utilities as reflected in

the Commission's most recent rate comparison report. The exhibit also includes the charges for Corning Natural Gas, which is just across the Pennsylvania-New York border. Compared to these gas utility companies, the Company's residential and small commercial customer charges are lower than all the companies surveyed. The requested customer charge is not unreasonable as compared to other gas utilities in Pennsylvania.

OTHER PROPOSED ADJUSTMENTS

Q. Mr. Rogers, will you be the only respondent addressing adjustments to expenses and rate base proposed by the OCA and I&E Witnesses in this proceeding?

A. No. Mr. Gorman and Ms. Beale will also address the proposed expense adjustments. To the extent I do not address a proposed adjustment in my testimony, such omission does not represent my acceptance of, or agreement with, the proposed adjustment.

PAYROLL EXPENSE

Q. Did OCA Witness Meyer propose adjustments to Valley's Payroll Expense (OCA Statement No. 1 at 5-7)?

A. Yes. Mr. Meyer proposed an adjustment of $19,892 to the Company's Fully Projected Future Test Year ("FPFTY") payroll expenses based on his recommendation to apply a 4% payroll increase for Future Test Year ("FTY") 2025 and FPFTY 2026.

Q. Did you find the adjustments to Valley's Payroll Expense proposed by OCA to be generally reasonable?

A. No. Mr. Meyer's proposed adjustment was based on "experience" and not the multiple detailed discovery responses that support the Payroll Expense projections for the FTY and FPFTY. Historic Test Year ("HTY") 2024 preceded implementation of the C&T Wage and Salary Study, which identified 22 of the 31 positions (71%) needing market adjustments. The C&T Wage and Salary implementation plan was structured to increase wages over a two-year period, starting in January 2025, with final adjustments being made in January 2026. We also must account for salary increases for performance or competency progression within the payroll grade. All of this was summarized in our Exhibit__(JB-3).

In support of the exhibit, Valley provided the OCA with the ability to review the detailed spreadsheet that includes all Valley positions, including the adjustments. Adjusting for the base compensation increases, as the OCA has done, understates the projected expenses and ignores the evidence that we provided in support of our FTY and FPFTY labor expenses.

OFFICE SUPPLIES & EXPENSE

Q. Did I&E Witness Wilson propose adjustments to Valley's Office Supplies & Expense (I&E Statement No. 1 at 16-18)?

A. Yes. Ms. Wilson proposed an adjustment of $17,126 to the Company's FPFTY Office Supplies & Expense based on averaging the most recent three years and denying a 3% inflation adjustment.

Q. Did you find the adjustments to Valley's Office Supplies & Expense proposed by I&E reasonable?

A. No. Averaging the most recent three years does not take into account the lower expense anomaly that occurred in 2024 due to external pressures on cash flows, as a result of unexpected contractor expenses and material costs, which resulted in reductions in travel and training expenses. Like many businesses, when we are faced with unexpected cost increases or lower than expected revenues, we may reduce items such as business travel and training in the year to maintain our budget. 2024 was a year when we took those temporary cost reduction measures; however, reduced travel and training is not sustainable if we want to keep our workforce competent. This expense account increased by 20% from 2022 to 2023 and an annual increase of 3.5% from 2023 to FTY 2025. Based on 2025 YTD expenses of $42,445, the annualized expense for FTY 2025 would be $84,890, higher than the amount included in the filing. Finally, a 3% inflation adjustment is not unreasonable based on the percentage increases in response I&E-RE-10-D.

ACCOUNT 880 (Other Distribution Expenses)

Q. Did OCA Witness Meyer propose adjustments to Account 880 (Other Distribution Expenses), (OCA Statement No. 1 at 7-10)

A. Yes. Mr. Meyer proposed an adjustment of $35,452 to the Company's FPFTY Other Distribution Expense.

Q. Does the proposed adjustment accurately reflect the basis for the Company's FPFTY expense for this account?

A. No. Historical expense levels do not reflect the actual expenses that are now attributable to this account for the FTY and FPFTY.

Q. What has changed to make historic experience non-reflective of changes to this account going forward?

A. First, we have actually transferred accounting for our ESRI subscription and certain United States Department of Transportation/PHMSA training from this account into Account 930.20 starting in 2025.

Second, beginning in 2024, we added an Energy WorldNet subscription, which is a computer-based training and evaluation platform for the Company's Operator Qualification (OQ) program.

Third, we implemented a new OQ platform starting in 2024 that involved significant labor hours in order to qualify all of the relevant employees in our workforce to the new OQ testing and evaluation requirements, which significantly increased the expense for this account. Going forward, we are implementing a staggered three-year cycle for recertification activities for our operators. This decreased the labor expenses for Account 880 from 2024 to FTY 2025. From the FTY to the FPFTY, we are continuing the three-year cycle with the 2nd cohort; however, the labor expense (and overheads) will increase along with the labor and overheads in other accounts. Exhibit__(ER-4R) provides a detailed breakdown of the costs by line item.

Q. Was Account 880 impacted by the data error that Mr. Gorman identified during the discovery phase?

A. Yes. Exhibit__(HSG-1), Schedule C1-1 labor entry for account 880 was inadvertently included for account 879. The correct labor entry for account 880 should be $41,265 rather than $0. Please refer to Mr. Gorman's revised Schedule C1-1(R) for supporting data claim.

Q. Do you have any final comments regarding Mr. Meyer's adjustment?

A. Mr. Meyer's adjustment assumes that the increase from FTY 2025 to FPFTY 2026 is non-labor expenses; however, as shown on Exhibit__(ER-5R), the majority of the expenses for this account are labor and labor overheads.

CUSTOMER PAYMENT FEES

Q. Did OCA Witness Wise propose eliminating the processing fees for debit and credit card payments, (OCA Statement No. 4 at 2-7)?

A. Yes. Ms. Wise proposes to eliminate the $3.95 fee for customers paying their bills via credit or debit card.

Q. Do you agree with eliminating the $3.95 fee for customers to pay via credit card or debit card?

A. No. While I agree that electronic and paperless transactions are becoming more common, I don't agree with her statements that "accessing an additional fee is contrary to the principles of reasonable utility service," or "Customers pay for household goods via credit and debit cards without being assessed an additional fee," or "The policy of charging a fee is quite harmful to lower income customers who may be unbanked and rely on pre-purchase debit cards to make payments."

As for reasonable utility service, the customer currently has many options to pay, which are much cheaper on a transactional basis compared to the current fee associated with debit or credit card payments. Also, consumers often get incentives from the credit card company to pay by card. Is it reasonable for a fixed-income customer who still uses checks and drops their payment off at the office to pay higher rates so a more affluent customer can get airline miles for their next vacation?

While some household purchases may not involve a fee, there are many that do. A local sewer authority charges a fee when paying via debit or with credit card, as well as other retail offerings.

For lower income customers who may be unbanked, the Company has many options for these customers to pay: at our office and at three strategically located banks in our service territory that will accept cash payments without a fee.

If the fee is eliminated, usage will certainly increase and the OCA adjustment based on the fees collected in 2024 will be insufficient to account for this change. A slightly larger (15,000 customers) natural gas utility in New York saw a dramatic increase in the use of online payments when they discontinued the practice of charging a fee for this service. The number of online payments for 2021 (30,063) compared to 2023 (45,913) increased by 53% over a two-year timeframe, post COVID. Exhibit__(ER-6R) includes this information.

Q. If the Commission requires Valley to assume the credit card fees, is the OCA's addition to the revenue requirement sufficient to compensate Valley for these projected costs?

A. Due to the evidence that I just discussed, the OCA's proposal is not sufficient. If it is accepted despite our opposition, then the Commission should allow Valley to track and defer any costs that exceed the OCA's projection for recovery in our next rate case.

Q. Does this complete your Rebuttal Testimony?

A. Yes

OCA-VI-24

Of the benefits described on Valley Energy, Inc. Statement 4, page 9 line 13-23, page 10 line 1-23, page 11 line 1-3 of Mr. Rodgers testimony, please provide in detail (live excel format with formulas intact) the cost savings the company has experience through operational efficiencies.

Response Provided By:
Edward E. Rogers, President and Chief Executive Officer, Valley Energy, Inc.

Date: June 16, 2025

Response:

The Company has provided cost savings for our customers over the past and continuing projected years by operating efficiently while still providing a safe and reliable service cost effectively. Based on previous improvements and continued efficiencies, the Company has been able to provide overall cost savings in excess of $452K or $61 annually per customer.

In regard to providing efficient customer service, the Company has: (1) reduced costs associated with errors or rework, (2) reduced support needed, leading to lower labor costs and reduced need for resources, and (3) increased efficiency by providing self-service options via the Company's updated website, based on a demonstrated exceptional customer survey, as evidenced by the Company's lack of formal or informal complaints filed and customer survey results (OCA-III-20 Attachment B).

Examples of cost savings associated with operational efficiencies:

A. The company has eliminated all cast iron, bare steel and the majority of vintage plastic mains within its service territory, all without assessing a Distribution System Improvement Charge and incurring interest expenses for long-term debt. Another cost saving measure attributed to eliminations of these assets is the decrease in the size of the construction department. Refer to OCA-VI-24 Attachment A – Cost Savings.

B. As part of an internal review of projected work processes and evaluation of required employee complement, there were two positions that were re-classified from full-time to seasonally, resulting in reduced employee labor costs and overheads. Refer to OCA-VI-24 Attachment A – Cost Savings.

C. The awarding of the PIPE Grant for the E. Athens project resulted in overall savings, thus reducing the monthly surcharge from $127.15 per month to $29.20 per month.

D. The Company has an extremely low, lost and unaccounted for gas percentage (-0.17%), for the most recent reporting period. The Company’s percentage is significantly lower than the allowed 3% distribution loss as established in docket No. L-2021-2294746. Refer to OCA-VI-24 Attachment A – Cost Savings for estimated annual cost savings based on low lost

and accounted for gas percentages, which is based on overall system improvements, efficiency in managing leak repairs and accelerated meter testing program.

	Estimated - Current Annual Cost Savings	Note
A. Main Replacements		
When the Company did have cast iron, bare-steel and incrementally more vintage plastic mains in system, there were six construction department employees employed by the Company, where two employees were predominantly tasked with repairing leaks on these types of facilities. With all cast iron, bare-steel and the majority of vintage plastic mains replaced, the construction department has shrank in size, from six to four.	$187,491	Two employees - wages, benefits and taxes
	$40,712	Transportation and equipment costs associated with two employees
	$228,203	
B. Re-classification of two positions from full time to seasonal	$117,836	
Meter Reader position (FTE)	$88,366	annual salary with benefits
Meter Reader position (Seasonal)	$31,503	annual salary + pension/401K
	$56,863	annual savings
Regulator Shop position (FTE)	$99,879	annual salary with benefits

	$ 7,250	$ 114,706	$ 54,436	$ 70,685

2024

A new Operator Qualification (OQ) Program established late 2023 using the Energy WorldNet platform. To adequately track the increased expenses for the new OQ program, all OQ expenses were allocated to account 880, where previously they were allocated to a holding account and allocated based on labor hours.

2025 / 2026

Expenses for US DOT - PHMSA and ESRI were budgeted to account 930.20 for 2025 and 2026, going forward. Decrease in labor and corresponding overhead accounts in 2025 and 2026 is due to fewer labor hours as a result of averaging a portion of the OQ task requirements on a three year schedule.

Valley Energy, Inc.	**:**	

DIRECT TESTIMONY OF JAMIE BEALE
ON BEHALF OF VALLEY ENERGY, INC.

Q. Please state your name and business address.

A. My name is Jamie Beale and my business address is 523 Keystone Avenue, Sayre, Pennsylvania.

Q. By whom are you employed and in what capacity do you serve at Valley Energy, Inc. ("Valley")?

A. I am employed by C&T Enterprises, Inc. ("C&T"), and assigned to Valley as the Vice President of Finance and Treasurer.

Q. Please describe your duties in this capacity.

A. My duties are to organize, direct, and coordinate the financial department. I provide administrative direction for billing for gas service to consumers. I also advise the President & CEO of the financial aspects of the company, manage the financial record keeping, coordinate the budget, coordinate with computer services, and coordinate with consumer services. I am also responsible for coordinating credit discussions with Valley's wholesale natural gas suppliers.

Q. Please describe your educational and employment background.

A. I attended Mansfield University from 2005 to 2008 and graduated with a BS in Business Management. I worked for Guthrie Healthcare Systems and Evangelical Community Hospital prior to joining Valley Energy.

Q. What were your responsibilities with respect to this filing?

A. As the Vice President of Finance and Treasurer, I was responsible for coordinating with our auditors and Company witness Mr. Gorman to ensure that historic and test year expenses, taxes, revenues, sales and rate base were appropriately reflected. I was responsible for ensuring that the expense, plant and sales information provided to Mr. Gorman that is reflected in Exhibit __ (HSG-1) was correct.

Q. Have you previously testified before the Pennsylvania Public Utility Commission?

A. Yes. I provided Direct, Rebuttal and Oral Rejoinder testimony in Valley's 2019 rate case at Docket No. R-2019-3008209 and Direct and Rebuttal testimony in Valley's 2022 rate case at Docket No. R-2022-3032300.

VALLEY FINANCIAL INFORMATION

Q. Are Valley and its records regularly audited by a licensed accounting firm?

A. Yes. The accounting firm of FORVIS MAZARS, LLC audits the Company's financial records. They prepare an annual report of the Company operations and assist Company personnel on specific Pennsylvania Public Utility Commission ("PUC" or "Commission") filings, such as our State Tax Adjustment Surcharge filings. They also prepare our tax returns. A copy of our Annual Report for the year ended December 31, 2024, is attached as Exhibit__(JB-1). A copy of our most

recent STAS filing is attached as Exhibit__(JB-2). Copies of our most recent state income tax filings for Pennsylvania are included in Volume III of the filing as Valley Confidential Exhibit 3. Valley's New York filing is included in the C&T Consolidated Federal tax file that is included as Joint Confidential Exhibit 3.

Q. How did the Company develop the financial data provided to HSG Group?

A. The Historic Test Year ("HTY") data is based on actual experiences during the HTY ending December 31, 2024. The Future Test Year ("FTY") data is based largely on our operating budget for the year ending December 31, 2025, with updates for any known and measurable changes that we have identified between the date that budget was approved by our Board of Directors and April 2025 when we are submitting this filing. The Fully-Projected Future Test Year ("FPFTY") data is based on our projections for the year ending December 31, 2026.

Q. Please discuss the major expense categories for Valley.

A. Valley's expenses are budgeted and tracked in the following categories: (1) Labor & Overheads, including C&T Shared Services; (2) Transportation; (3) Materials & Supplies (4) Administrative & General; (5) Outside Services; (6) Uncollectibles; (7) Depreciation & Amortization; (8) Regulatory Fees; and (9) Taxes. Valley also reports by account, corresponding to the FERC chart of accounts. Each Operating and Maintenance account includes (as appropriate) costs for Labor, Overhead, Material and Transportation. The information provided to Mr. Gorman is by FERC account, with subaccounts for Labor, Overhead, Material and Transportation.

Q. What is the largest expense category?

A. Labor & Overheads constitute the largest expense item. This category includes our employees and the various benefits that we provide (health, dental, vision, retirement, etc.). To develop the projected 2026 costs for Labor & Overheads, we examined the wages and benefits for our employees. We also accounted for the position changes discussed in Mr. Rogers' testimony.

Q. Have you prepared an exhibit showing the impact of the salary changes and the position changes for the FTY and FPFTY?

A. Yes. Attached as Exhibit__(JB-3) is an analysis that supports that impact. The impact of these changes are distributed among the various FERC accounts that Mr. Gorman reflects in his analysis according to where the employee's time is booked (based on activities performed).

Ms. Sullivan's testimony discusses the 2025 and projected 2026 C&T base compensation adjustments and our projections for personnel insurance benefits cost changes. Ms. Sullivan also discusses the C&T Shared Services that are included in our Labor & Overheads for 2024, 2025 and 2026.

Q. Please discuss the Transportation projections.

A. This item reflects the costs of our vehicles and other equipment, including fuel and maintenance expenses. For 2025, we are projecting to add one vehicle and replace one with no new additions or replacements in 2026. Our expenses for Transportation also reflect our expected fuel purchases for vehicles and equipment.

Q. Is Valley projecting increased Materials and Supplies costs?

A. Yes. The costs of various materials and supplies for our business have continued to increase, consistent with general inflation of many items. Each expense account

was reviewed and projected known increases were included. Mr. Chapman will address the increases in our system materials.

Q. Please discuss the costs incurred by Valley for Administrative and General.

A. The items in this category include the general costs to heat, furnish and maintain our office space and warehouses. For 2025, we made an adjustment to the HTY expenses to include expenses that were previously allocated to Account 880.45 and for a new recuring expense for Environmental System Research Institute (ESRI) cloud services that will work with the Company's Geographic Information System (GIS).

Q. What costs are included in Outside Services?

A. Outside Services includes the charges by various vendors for their service. This includes attorneys, accountants, auditors, consultants, cleaning vendors and contractors.

Q. Could costs in the categories that you addressed above be capitalized rather than being expensed?

A. Yes. As part of this filing, we have made assumptions regarding the portion of Labor & Overheads, Transportation, Materials & Supplies and Administrative & General that will be capitalized rather than expensed. We have done this based on both historic experience and projected 2025 and 2026 capital projects.

Q. How does Valley apportion costs between the Pennsylvania and New York jurisdictions?

A. Valley Energy uses a four-factor allocation method to apportion costs between Pennsylvania and New York jurisdictions. The four factors are: operating expense

ratio, investment in plant ratio, average customer ratio, and payroll ratio. The 2024 allocation, which was used by Mr. Gorman, is attached to my testimony as Exhibit__(JB-6).

Q. How did Valley develop the Uncollectibles expenses?

A. Uncollectibles expense is based on historic experience.

Q. Please discuss the Depreciation and Amortization expense reflected in the filing.

A. Depreciation expense is developed by Mr. Gorman, Exhibit__(HSG-1), Schedule C3 and explained in his testimony.

Q. Finally, what Regulatory Fees and Taxes are reflected in the filing?

A. These are developed by Mr. Gorman, Exhibit__(HSG-1), Schedule C1-3, and explained in his testimony.

Q. Do you have any information regarding Valley's actual expenses during the FTY?

A. Yes. Attached as Exhibit__(JB-4) is a table showing the operating expenses for the HTY as contained in the filing in Schedule C1-1 of Exhibit__(HSG-1), as well as actual expenses booked as of March 31, 2025. Although there is some variation within particular categories and expenses, on the whole, our actual year 2025 expenses are tracking as we would expect at this point of the FTY. We will continue to update this Exhibit during the FTY to confirm that our projected expenses are accurate.

Q. Is it unusual for Valley's expenses by Account to vary from quarter to quarter during the year?

A. No. For many of our Accounts, our actual expenses vary quarter-to-quarter based on the activities that our workers and contractors are doing. Over the entire year, there can be some overall variation if more of our work is done on projects that are expensed rather than projects that are capitalized. Mr. Chapman will explain how the types of projects and focus of our workers may vary during the various quarters of the year. The expenses can also vary due to unexpected weather or other circumstances.

Q. Did the Company assist Mr. Gorman in the compilation of the plant account information included in Valley Exhibit HSG-1?

A. Yes. We provided detailed information to Mr. Gorman regarding the original cost, book depreciation reserve, depreciation rates and depreciation expenses on the Company's books. With the exception of minor prospective changes to depreciation assumptions that were justified in Valley's 2010 base rate filing and as explained below for this filing, the original cost and depreciation reserve reflect the amounts on NUI's books when C&T acquired the system on November 7, 2002, without any reflection of an "acquisition premium" or adjustment. We also provided data regarding the additions to utility plant that we anticipate will occur through 2026. Mr. Gorman's Exhibit__(HSG-1), Schedule C3 shows the net increase in the original cost of our utility plant in service from the HTY to the FPFTY.

Q. What depreciation changes is the Company proposing for this filing?

A. We are proposing to reduce the useful life of our computer equipment and software from 5 years to 3 years. This is consistent with the replacement cycle for IT

equipment that we follow, and is also consistent with the warranty period on new equipment. We are asking for this change to apply prospectively after this case; Mr. Gorman has not included the adjusted depreciation assumption in his calculations.

Q. Do you have any information regarding Valley's actual plant during the FTY?

A. Yes. Attached as Exhibit__(JB-5) is a table showing the original cost of our plant in service for the HTY as contained in the filing, as well as the costs booked as of March 31, 2025. Although there is some variation within particular categories, again, on the whole our actual year 2025 capital additions are consistent with our expectations for this time of the year. As previously discussed and addressed in more detail by Mr. Chapman, some variation can be expected because we undertake capital improvement projects primarily during the warmer months of the year (when the ground has thawed). We also will update this Exhibit during the course of this proceeding.

VALLEY ENERGY FINANCING ACTIVITIES

Q. Please explain the Company's financing arrangements.

A. Valley's primary source of financing is its parent company, C&T Enterprises, Inc., which obtains long-term loans, lines of credit and letters of credit on Valley's behalf through the National Cooperative Servicing Corporation ("NCSC"). Each long-term loan is supported by a Securities Certificate approved by the Commission. Ms. Sullivan provides an exhibit with details of each loan. We also

have access to a short-term line of credit through C&T, as described by Ms. Sullivan.

Finally, we maintain a local banking relationship with C&N Bank.

AFFILIATE CHARGES

Q. Does Valley have any affiliate charges in the HTY, FTY or FPFTY in addition to the ones with C&T that are discussed by Ms. Sullivan?

A. No.

Q. Does this conclude your testimony at this time?

A. Yes.

Independent Auditor's Report

Board of Directors
Valley Energy, Inc.
Sayre, Pennsylvania

Opinion

We have audited the financial statements of Valley Energy, Inc. (Company), which comprise the balance sheets as of December 31, 2024 and 2023, and the related statements of income, stockholder's equity, and cash flows for the years then ended, and the related notes to the financial statements.

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2024 and 2023, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the "Auditor's Responsibilities for the Audit of the Financial Statements" section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern within one year after the date that these financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Supplementary Information

Our audits were conducted for the purpose of forming an opinion on the financial statements that collectively comprise the Company's basic financial statements. The supplementary information listed in the table of contents is presented for purposes of additional analysis and is not a required part of the basic financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the basic financial statements.

The information has been subjected to the auditing procedures applied in the audit of the basic financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the basic financial statements or to the basic financial statement themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the information is fairly stated in all material respects in relation to the basic financial statements as a whole.

Valley Energy, Inc.
Notes to Financial Statements
December 31, 2024 and 2023

Note 1. Nature of Operations and Summary of Significant Accounting Policies

Nature of Operations

Valley Energy, Inc. ("Company"), a wholly-owned subsidiary of C & T Enterprises, Inc. ("C&T"), is a regulated public utility distributing natural gas to customers in the Sayre, Pennsylvania area, including Athens, Towanda, Wysox, and Waverly, New York. The Company's operations in Pennsylvania are regulated by the Pennsylvania Public Utility Commission ("PUC") and its operations in New York are regulated by the State of New York Public Service Commission ("NYPSC"). The Company extends unsecured credit to its customers.

Basis of Accounting

The Company maintains its accounting records in accordance with the Federal Energy Regulatory Commission's ("FERC") uniform system of accounts for public utilities as modified and adopted by the PUC and NYPSC. The accompanying financial statements and the related notes have been prepared on the basis of U.S. generally accepted accounting principles ("GAAP").

In accordance with FERC guidelines, the Company also maintains its accounts in accordance with Codification Topic 980, *Regulated Operations.* On a regular basis, the Company reevaluates its application of accounting for regulated operations. The Company has determined that regulatory assets and liabilities should continue to be accounted for under provisions of Codification Topic 980 because it is reasonable to assume that the Company will continue to be able to charge and collect its cost of service-based rates.

Purchased Gas

The Company obtains all of its natural gas from an agreement with an energy broker that expires in March 2027. Gas costs can be different than what is recovered in base charges, resulting in over or under collected gas costs.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. Significant estimates include unbilled revenues, depreciation and postretirement benefits.

Cash and Cash Equivalents

The Company considers all liquid investments with original maturities of three months or less to be cash equivalents. At December 31, 2024 and 2023, cash equivalents consisted of a daily investment fund account.

At December 31, 2024, the Company's cash accounts exceeded federally insured limits by approximately $250,000.

Accounts Receivable

Accounts receivable include billed and unbilled amounts for services provided to customers for which the Company has an unconditional right to payment. The Company provides an allowance for credit losses, which is based upon a review of outstanding receivables, historical collection information and existing economic conditions adjusted for current conditions and reasonable and supportable factors.

Accounts receivable are ordinarily due 21 days after the issuance of the invoice. Accounts that are unpaid after the due date bear interest at 1.25% per month. Accounts past due more than 30 days are considered delinquent. Interest continues to accrue on delinquent accounts until the account is no longer classified as delinquent. Delinquent receivables are written off based on individual credit evaluation and specific circumstances of the customer.

During the years ended December 31, 2024 and 2023, credit loss expense (recoveries) related to doubtful accounts receivable, where collectability is not reasonably assured, was approximately $(12,000) and $66,000, respectively.

Inventories

Inventories consist of natural gas and materials and supplies and are stated at the lower of cost or net realizable value. Cost is determined based on average cost.

Utility Plant

Utility plant is carried at cost. Additions to utility plant and replacements of property are capitalized at cost. Retirements of utility plant or replacements are removed from utility plant accounts at cost and these costs plus cost of removal less salvage are charged to accumulated depreciation. Assets under finance lease obligations are amortized over the shorter of the lease term or respective estimated useful lives. Depreciation of utility plant is provided over the estimated useful life of the respective assets on a straight line basis, as follows:

Utility Plant	Years
Gas plant acquisition	8 - 41
Transmission plant	25 - 50
Distribution plant	33 - 50
General plant	10 - 15
Vehicles	5

Maintenance and repairs of property and replacements are charged to expense.

Impairment of Long-Lived Assets

The Company reviews the carrying amount of an asset for possible impairment whenever events or changes in circumstances indicate that such amounts may not be recoverable. If a long-lived asset is tested for recoverability and the undiscounted estimated future cash flows expected to result from the use and eventual disposition of the asset is less than the carrying amount of the asset, the asset cost is adjusted to fair value and an impairment loss is recognized as the amount by which the carrying amount of a long-lived asset exceeds its fair value. No asset impairment was recognized during the years ended December 31, 2024 and 2023.

Income Taxes

The Company is included in the consolidated federal and State of New York income tax returns filed by C&T. The Company files its own tax return in Pennsylvania. The Company's federal income tax expense is computed using the separate return method for intercorporate tax allocation.

The Company accounts for income taxes in accordance with income tax accounting guidance (Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") 740, *Income Taxes*). The income tax accounting guidance results in two components of income tax expense: current and deferred. Current income tax expense reflects taxes to be paid or refunded for the current period by applying the provisions of the enacted tax law to the taxable income or excess of deductions over revenues. The Company determines deferred income taxes using the liability (or balance sheet) method. Under this method, the net deferred tax asset or liability is based on the tax effects of the differences between the book and tax bases of assets and liabilities, and enacted changes in tax rates and laws are recognized in the period in which they occur. Deferred income tax expense results from changes in deferred tax assets and liabilities between periods. Deferred tax assets are reduced by a valuation allowance if, based on the weight of evidence available, it is more likely than not that some portion or all of a deferred tax asset will not be realized.

Tax positions are recognized if it is more likely than not, based on the technical merits, that the tax position will be realized or sustained upon examination. The term more likely than not means a likelihood of more than 50%; the terms examined and upon examination also include resolution of the related appeals or litigation processes, if any. A tax position that meets the more likely than not recognition threshold is initially and subsequently measured as the largest amount of tax benefit that has a greater than 50% likelihood of being realized upon settlement with a taxing authority that has full knowledge of all relevant information. The determination of whether or not a tax position has met the more likely than not recognition threshold considers the facts, circumstances and information available at the reporting date and is subject to the management's judgment.

The Company recognizes interest and penalties on income taxes as a component of income tax expense.

Regulatory Matters

The Company is subject to the authoritative accounting guidance applicable to rate-regulated organizations. The Pennsylvania PUC and NYPSC approve natural gas rates for each state respectively. Certain items collected in rates have been recorded as regulatory liabilities. These amounts will be recognized as revenue in future periods as costs for which the amounts have been collected are incurred, or when authorized by the Pennsylvania PUC and NYPSC. Certain expenses have been recorded as regulatory assets, and management believes these amounts are probable of future rate recovery.

Revenue Recognition

Revenue from the sale of natural gas is recognized as gas is delivered to customers. Revenues also include amounts receivable from or payable to customers through gas recovery clauses, which are adjusted annually.

Costs that are recoverable or refundable in future periods through the gas recovery clauses are deferred. Costs that are refundable or recoverable in future periods through gas cost recovery rates are subject to audit and approval by the appropriate regulatory body. Changes to the related asset or liability amounts that result from these audits are recorded as a charge to current operations.

The amount and timing of revenue recognition varies based on the nature of the goods or services provided and the terms and conditions of the customer contract. Unbilled revenues of $530,469 and $360,508 at December 31, 2024 and 2023, respectively, represent amounts delivered through December 31 and not billed to the customers until the following month. Customer deposits of $543,379 and $564,111 at December 31, 2024 and 2023, respectively, represent amounts received in advance of services provided. See Note 12 for additional information about the Company's revenue.

For significant financing components, the Company elected a practical expedient, which allows an entity to recognize the promised amount of consideration without adjusting for the time value of money if the contract has a duration of one year or less, or if the reason the contract extended beyond one year is because the timing of delivery of the product is at the customer's discretion. As the Company's contracts are typically less than one year in length and do not have significant financing components, the Company does not present revenue on a present value basis.

Leases

The Company determines if an arrangement is a lease or contains a lease at inception. Leases result in the recognition of right-of-use (ROU) assets and lease liabilities on the balance sheets. ROU assets represent the right to use an underlying asset for the lease term, and lease liabilities represent the obligation to make lease payments arising from the lease, measured on a discounted basis. The Company determines lease classification as operating or finance at the lease commencement date. The ROU asset for finance leases are included in utility plant in our balance sheets.

At lease commencement, the lease liability is measured at the present value of the lease payments over the lease term. The ROU asset equals the lease liability adjusted for any initial direct costs, prepaid or deferred rent, and lease incentives. The Company has made a policy election to use a risk-free rate (the rate of a zero-coupon U.S. Treasury instrument) for the initial and subsequent measurement of all lease liabilities. The risk-free rate is determined using a period comparable with the lease term.

The lease term may include options to extend or to terminate the lease that the Company is reasonably certain to exercise. Lease expense is generally recognized on a straight-line basis over the lease term.

The Company has elected not to record leases with an initial term of 12 months or less on the balance sheets. Lease expense on such leases is recognized on a straight-line basis over the lease term.

Taxes Collected from Customers and Remitted to Governmental Authorities

Sales and gross receipts taxes collected from customers and remitted to governmental authorities are presented in the accompanying statements of income on a net basis.

Note 2. Leases

Nature of Leases

The Company has the following lease arrangements:

Finance Leases

These leases mainly consist of vehicles for the use of the Company. Termination of the leases generally are prohibited unless there is a violation under the lease agreement.

All Leases

The Company has no material related party leases. The Company's lease agreements do not contain any material residual value guarantees or material restrictive covenants.

Quantitative Disclosures

The lease cost and other required information for the years ended December 31, 2024 and 2023 are:

	2024	2023
Lease cost		
Finance lease cost		
Amortization of right-of-use asset	$ 56,627	$ 65,227
Interest on lease liabilities	7,767	9,196
Total lease cost	$ 64,394	$ 74,423

	2024	2023
Other information		
Cash paid for amounts included in the measurement of lease liabilities		
Financing cash flows from finance leases	$ 60,220	$ 63,367
Weighted-average remaining lease term		
Finance leases	3.5 years	3.6 years
Weighted-average discount rate		
Finance leases	1.65%	1.65%

See Note 6 for future minimum lease payments and reconciliation to the balance sheet at December 31, 2024.

Note 3. Utility Plant

Utility plant consists of the following at December 31, 2024 and 2023:

	2024	2023
Gas plant in service		
Gas plant acquisition	$ 4,621,318	$ 4,621,318
Distribution plant	38,070,873	36,457,686
General plant	8,758,243	7,137,584
Transmission plant	5,245,359	5,173,911
	56,695,793	53,390,499
Construction work-in-progress	277,959	101,383
	56,973,752	53,491,882
Accumulated depreciation	(29,002,827)	(27,581,623)
	$ 27,970,925	$ 25,910,259

Note 4. Regulatory Assets and Liability

Regulatory assets consist of the following at December 31, 2024 and 2023:

	2024	2023	Amortization Period
Rate case - 2022	$ 52,196	$ 104,391	3 years
Rate case - 2023	28,417	43,917	3 years
	$ 80,613	$ 148,308	

Regulatory liability of $375,898 and $406,915 at December 31, 2024 and 2023, respectively, consists of other postretirement benefits that resulted from unrecognized gains. The Company expects to recover the deferred other postretirement benefits consistent with the anticipated income recognition of other postretirement income.

Amortization expense was $67,695 and $81,178 for the years ended December 31, 2024 and 2023, respectively.

Note 5. Line of Credit

The Company has a $7,000,000 revolving line of credit with C&T payable on demand. At December 31, 2024 and 2023, there was $2,650,000 and $2,150,000 borrowed against this line, respectively. Interest varies based on the CoBank quoted variable rate. The rate was 6.39% and 7.41% on December 31, 2024 and 2023, respectively, and is payable monthly.

While the line of credit above is due on demand, the Company utilizes the financing for long-term operating purposes and does not have liquid funds available to repay the balance. The borrowings are available as a result of a line of credit agreement that C&T has with a third party, which is due in July 2026. C&T has no intentions of calling the debt before July 2026.

Note 6. Long-Term Debt and Finance Lease Liabilities

	2024	2023
Notes payable, C&T, quarterly principal and interest payments ranging from $12,530 to $50,284, interest ranging from 2.635% to 4.800%; collateralized by substantially all Company assets; due March 2032	$ 4,833,387	$ 5,387,593
Note payable, C&T, quarterly principal and interest payments ranging from $5,697 to $29,326, interest ranging from 2.41% to 3.22%; collateralized by substantially all Company assets; paid in full December 2024; available borrowings up to $1,125,000	-	216,479
Note payable, C&T, quarterly principal and interest payments of approximately $27,895, interest at 6.27%; collateralized by substantially all Company assets; due December 2054	1,500,000	-
Finance lease liability for transportation equipment, requiring monthly principal and interest payments ranging from $335 to $1,190; collateralized by leased equipment; payments due in varying amounts through October 2029	142,351	104,781
	6,475,738	5,708,853
Less current maturities	637,348	811,759
	$ 5,838,390	$ 4,897,094

Aggregate annual maturities of long-term debt and payments on finance lease liabilities at December 31, 2024, are:

	Long-Term Debt	Finance Lease Liabilities
2025	$ 596,923	$ 50,096
2026	641,918	44,723
2027	689,318	36,699
2028	739,255	21,725
2029	791,870	15,439
Thereafter	2,874,103	-
	$ 6,333,387	168,682
Less amount representing interest		26,331
Present value of future minimum lease payments		$ 142,351

Transportation equipment under finance lease liabilities is as follows:

	2024	2023
Transportation equipment	$ 376,912	$ 279,122
Accumulated depreciation	(282,668)	(180,464)
	$ 94,244	$ 98,658

C&T has a Master Letter of Credit agreement with National Cooperative Services Corporation. This Letter of Credit is for $7,000,000 and expires October 2029. The Company has the ability to post letters of credit with wholesale gas suppliers under the terms of this agreement. As of December 31, 2024 and 2023, the Company had $500,000 in outstanding letters of credit.

C&T holds a first lien secured interest in the assets of the Company that are located in Pennsylvania. C&T has pledged substantially all of the Company's assets as collateral for its borrowing arrangements.

Note 7. Income Taxes

The provision for income taxes includes these components:

	2024	2023
Taxes currently payable	$ 546,599	$ 567,798
Deferred income taxes	(269,931)	(443,200)
Income tax expense	$ 276,668	$ 124,598

A reconciliation of income tax expense at the statutory rate to the Company's actual income tax expense is shown below:

	2024	2023
Computed at the statutory rate (21%)	$ 249,500	$ 205,200
Increase (decrease) resulting from		
State income taxes	58,058	20,510
Other	(30,890)	(101,112)
Actual tax expense	$ 276,668	$ 124,598

The tax effects of temporary differences related to deferred taxes shown on the balance sheets were:

	2024	2023
Deferred tax assets		
Allowance for credit losses	$ 32,900	$ 39,900
Postretirement benefits	349,000	346,800
Other	204,700	47,400
	586,600	434,100
Deferred tax liabilities		
Depreciation	(3,236,500)	(3,340,200)
Other	(44,169)	(57,900)
	(3,280,669)	(3,398,100)
Net deferred tax liability	$ (2,694,069)	$ (2,964,000)

At December 31, 2024 and 2023, the Company had no allocation of C&T consolidated unused federal operating loss carryforwards.

Note 8. Pension and Postretirement Plans

Multiemployer Pension Plans

C&T is a member of the National Rural Electric Cooperative Association ("NRECA") Retirement Security Plan ("RS Plan"), a defined benefit pension plan qualified under Section 401 and tax-exempt under Section 501(a) of the Internal Revenue Code. It is a multiemployer plan under the accounting standards. The plan sponsor's Employer Identification Number is 53-0116145 and the Plan Number is 333.

A unique characteristic of a multiemployer plan compared to a single employer plan is that all plan assets are available to pay benefits of any plan participant. Separate asset accounts are not maintained for participating employers. This means that assets contributed by one employer may be used to provide benefits to employees of other participating employers.

C&T contributions to the RS Plan in 2024 and 2023 represented less than 5% of the total contributions made to the plan by all participating employers. C&T made contributions to the plan of $3,497,266 and $3,441,415 for the years ended December 31, 2024 and 2023, respectively. The Company reimbursed C&T $613,429 and $610,861 for its share of the contributions for the years ended December 31, 2024 and 2023, respectively. There have been no significant changes affecting the comparability of the 2024 and 2023 contributions.

In the RS Plan, a "zone status" determination is not required, and therefore not determined, under the *Pension Protection Act* ("PPA") of 2006. In addition, the accumulated benefit obligations and plan assets are not determined or allocated separately by individual employer. In total, the RS Plan was over 80% funded on January 1, 2024 and 2023, based on the PPA funding target and PPA actuarial value of assets on those dates.

Because the provisions of the PPA do not apply to the RS Plan, funding improvement plans and surcharges are not applicable. Future contribution requirements are determined each year as a part of the actuarial valuation of the plan and may change as a result of plan experience.

C&T is also a member of the NRECA SelectRE Pension Plan. C&T makes a matching contribution of 200% of the employees' contributions up to 2.5% of compensation. The Company reimbursed C&T $113,043 and $101,551 for its share of contributions for the years ended December 31, 2024 and 2023, respectively.

Other Postretirement Benefit Plan

C&T has a postretirement health care plan covering substantially all employees. The plan is unfunded. The estimated costs that will be paid after retirement are generally being accrued over the employees' active service periods to the dates they are fully eligible for benefits. The Company expects to contribute $82,000 to the plan in 2025. The following table sets forth the plan's funded status and the amounts of accrued benefit cost of the C&T plan and the Company's allocation based on an actuarial valuation as of December 31, 2024 and 2023.

	2024	2023
C&T's benefit obligation	$ 5,587,931	$ 5,725,208
Company's allocation of benefit obligation	$ 901,940	$ 844,997
C&T's accrued benefit cost	$ 5,587,931	$ 5,725,208
Company's allocation of accrued benefit cost	$ 901,940	$ 844,997
Amounts recognized in the Company's balance sheets:		
Current liability, included in accrued expenses	$ 85,235	$ 57,374
Non-current liability	816,705	787,623
	$ 901,940	$ 844,997
C&T's benefit expense	$ 472,065	$ 480,148
Company's allocation of benefit expense	$ 83,317	$ 80,892

The Company uses a December 31 measurement date for the plans. For measurement purposes, a 6.5% annual rate of increase in the per capita cost of covered health care benefits was assumed in 2024. The rate was assumed to decrease gradually to 4.75% in 2030 and remain at that level thereafter.

The benefit obligation was calculated assuming a weighted average discount rate of 5.15% and 5.10% in 2024 and 2023, respectively.

The amount of net gain and net prior service cost expected to be recognized by the Company during 2025 is $24,559 and $26,257, respectively.

Benefits expected to be paid by the Company in each of the next five years and in the aggregate for the five years thereafter are as follows:

2025	$	85,235
2026	$	87,392
2027	$	97,256
2028	$	50,966
2029	$	44,230
2030-2033	$	472,561

Because the Company is subject to regulation in the states in which it operates, it is required to maintain its accounts in accordance with the regulatory authority's rules and regulations, which may differ from other authoritative accounting pronouncements. In those instances, the Company follows the guidance of accounting for regulated operations. Based on prior regulatory practice, and in accordance with the related guidance, the Company recorded an unfunded postretirement obligation, which otherwise would be recognized as other comprehensive income, as a regulatory asset, and expects to recover those costs in rates charged to customers.

Note 9. Related Party Transactions

The Company has a contract for service with C&T to purchase all employee services. The contract automatically renews annually unless terminated by either party.

In the ordinary course of business, the Company's activities involve significant transactions with C&T. The activity between the Company and C&T for the years ended December 31, 2024 and 2023 and the effected account balances at December 31, 2024 and 2023, are as follows:

	2024	2023
Allocation of overhead recorded as operating expense	$ 151,581	$ 462,600
Other costs included in accounts receivable - other	$ 287,548	$ 269,069
Payroll related costs included in accrued expenses	$ 276,700	$ 237,033
Accrued vacation liability included in accrued expenses	$ 203,127	$ 171,127
Payroll costs paid in advance and included in advances, affiliates	$ 100,398	$ 100,398
Interest expense	$ 421,052	$ 632,935

The Company paid C&T $2,690,807 and $2,506,461 for payroll and $1,222,197 and $1,150,104 for benefits in 2024 and 2023, respectively.

Note 10. Significant Concentration

Accounting principles generally accepted in the United States of America require disclosure of certain vulnerabilities due to certain concentrations.

Major Suppliers

The Company obtains all of its natural gas from an agreement with an energy broker that expires on March 31, 2027. The Company obtained approximately 95% and 94% of its natural gas and distribution from three suppliers during 2024 and 2023.

Note 11. Commitments and Contingencies

The Company has guaranteed payments on note payables that are the obligation of C&T. At December 31, 2024, the amounts outstanding on these obligations are $6,333,387, which is fully recorded by the Company, see Note 6. This obligation is being repaid in quarterly payments of principal and interest through 2054. The Company would be required to perform under this guarantee if C&T were to default under the note payable and the bank were to demand the Company's performance.

Note 12. Revenue from Contracts with Customers

Performance Obligations

The Company's revenues are derived primarily from the sale of natural gas to customers. Customers consist of commercial, industrial and residential accounts within dedicated territories in the Sayre, Pennsylvania and Waverly, New York areas.

Rates charged for natural gas sales to customers are established by the Pennsylvania PUC and NYPSC for each state, respectively. The Company provides gas to customers as one stand-ready performance obligation. Sale of natural gas is recognized by the Company upon transfer of control of promised services to customers in an amount that reflects the consideration expected to be received in exchange for those services.

The Company transfers control of the natural gas to customers at each customer's meter point and the customers simultaneously receive and consume the benefits of the natural gas provided. Natural gas provided to customers is accounted for as a series of performance obligations. Progress towards completion is measured using the output method [hundreds of cubic feet (CCF) received by the customer], meter readings are taken at the end of each month for billing purposes, the quantity of energy transferred is determined after the meter readings. Payments from customers are received in accordance with each member's contract, which is ordinarily 21 days from the invoice date.

Revenue associated with the natural gas performance obligation to customers are recorded as sales of natural gas and capacity to customers in our accompanying statements of income.

The Company has determined that the nature, amount, timing and uncertainty of revenue and cash flows are primarily affected by factors that impact demand.

Contract Balances

The following table provides information about the Company's accounts receivable and customer deposits from contracts with customers:

	2024	2023
Accounts receivable - customers, beginning of year	$ 935,592	$ 1,290,993
Accounts receivable - customers, end of year	$ 936,044	$ 935,592
Unbilled revenues, beginning of year	$ 360,508	$ 386,906
Unbilled revenues, end of year	$ 530,469	$ 360,508
Customer deposits, beginning of year	$ 564,111	$ 443,986
Customer deposits, end of year	$ 543,376	$ 564,111

Note 13. Subsequent Events

Subsequent events have been evaluated through March 12, 2025, which is the date the financial statements were available to be issued.

RE: Valley Energy, Inc., Supplement No. 68 to Tariff Gas – Pa. P.U.C. No. 2 (State Tax Adjustment Surcharge Recalculation); Docket No._____

Dear Secretary Chiavetta:

Attached for filing with the Commission is Valley Energy, Inc.'s ("Valley" or the "Company") Supplement No. 68 to Tariff Gas-Pa. P.U.C. No. 2 ("Supplement No. 68"). Supplement No. 68 reflects a recalculation of the State Tax Adjustment Surcharge ("STAS"). Supplement No. 68 contains an issued date of December 19, 2024, and an effective date of January 1, 2025. This complies with the ten (10) day notice period for STAS modifications specified on page 81 of Valley's tariff.

This filing adjusts Valley's STAS to collect a prior period undercollection and to reflect changes in the Company's Corporate Net Income Tax and Utility Realty Tax. The documents supporting the Company's recalculation are set forth in Tab A, Attachments A, B, C, D, E, and F (computation of STAS for period January 1, 2025, through December 31, 2025). For completeness, a copy of proposed Supplement No. 68 is attached at Tab B. The supporting documents at Tab A demonstrate that Valley's STAS rate will increase from a surcredit of -0.0128% to a surcharge of 0.0095%, effective January 1, 2025. See Tab A.

If you have any questions regarding the documents, please feel free to contact the undersigned. Thank you.

Very truly yours,

Adeolu A. Bakare

RIDER "B" - STATE TAX SURCHARGE

In addition to the charges provided in this tariff, a surcharge of 0.0095% will apply to all bills for sales service rendered on or after January 1, 2025. (C) (I) (C)

The above surcharge will be recomputed, using the elements prescribed by the Commission:

1. Whenever any of the tax rates used in calculation of the surcharge are changed.

2. Whenever the utility makes effective increased or decreased rates.

3. And on March 31,1992, and each year thereafter.

The above recalculation will be submitted to the Commission within ten days after the occurrence of the event or date which occasions such recomputation. If the recomputed surcharge is less than the one in effect the utility will, and if the recomputed surcharge is more than the one then in effect the utility may submit with such recomputation a tariff or supplement to reflect.

Pennsylvania Public Utility Commission	:	
	:	
v.	:	**Docket No. R-2025-3054393**
	:	
Valley Energy, Inc.	:	

REBUTTAL TESTIMONY OF JAMIE BEALE
ON BEHALF OF VALLEY ENERGY, INC.

Q. Please state your name and business address.

A. My name is Jamie Beale, and my business address is 523 Keystone Avenue, Sayre, Pennsylvania.

Q. Are you the same Jamie Beale who previously submitted Direct Testimony in this proceeding on behalf of Valley Energy, Inc. ("Valley" or "Company")?

A. Yes. Terms defined in my direct testimony have the same meaning in this rebuttal testimony.

Q. What is the purpose of your testimony today?

A. The purpose of my testimony is to rebut the testimony of the following witnesses' direct testimony:

- OCA Witness Wise regarding her proposed implementation of formal policies and procedures surrounding security deposits and payment plan tracking.
- OCA Witness Meyer regarding purchased gas cost expenses and revenues, and his proposed adjustments to the Company's account 925 (Injuries and Damages).
- I&E Witness Wilson regarding her proposed adjustments to the Company's operations and maintenance expenses.

- I&E Witness Sakaya regarding his proposed reporting requirements on plant additions.

PROPOSED ADJUSTMENTS

Q. Ms. Beale, will you be the only respondent addressing adjustments to expenses and rate base proposed by the OCA and I&E Witnesses in this proceeding?

A. No. Mr. Gorman and Mr. Rogers will also address the proposed expense adjustments. To the extent I do not address a proposed adjustment in my testimony, such omission does not represent my acceptance of, or agreement with, the proposed adjustment.

INJURIES AND DAMAGES EXPENSE

Q. Did I&E Witness Wilson and OCA Witness Meyer propose adjustments to Valley's Injuries and Damages Expense (I&E Statement No. 1 at 26-28), (OCA Statement No. 1 at 7-12)?

A. Yes. Ms. Wilson proposes an adjustment of $15,935 to the Company's Fully Projected Future Test Year ("FPFTY") Injuries and Damages Expense based on the amount for the policy period ending May 1, 2026. Mr. Meyer proposed an adjustment of $30,981 to the Company's FPFTY Injuries and Damages Expense based on holding the account to the Historic Test Year ("HTY") 2024 level of exposure. Both witnesses object to Valley's 17% adjustment from the HTY to the FPFTY, which we calculated based on average yearly increases from 2021 to 2024.

Q. Did you find the adjustments to Valley's Injuries and Damages Expense proposed by I&E and OCA reasonable?

A. Yes, but for different reasons. As Mr. Rogers stated in his response to I&E-RE-13-D the Company has shopped around to reduce the overall insurance costs. As a result of those efforts, we were able to find comparable coverage at a lower premium. Based on this, the Company would be comfortable accepting the reduction proposed by Mr. Meyer.

Q. Do you have any comments in response to I&E's proposed adjustments to Employee Pension and Benefits?

A. Yes. I&E Witness Wilson proposes to disallow $10,194 of costs related to Employee Benefits and Pension (I&E Statement No. 1 at 18-19). The "Benefits and Pension" expenses at issue are employee recognition costs. I am informed by counsel that the Commission has a long history of supporting the inclusion of this type of expense in rates, because employee recognition events can incentivize an effective workforce. For example, the Commission allowed Citizens' employee recognition expenses in their 2019 base rate case.[1] At every Valley employee appreciation event, remarks are made by the Company's senior staff recognizing employee contributions to the Company as well as including safety and/or training messages. An important benefit of these minor costs is to improve morale, which reduces turnover and improves customer service. Accordingly, the Company should be permitted to recover expenses for employee recognition events.

[1] *Pa. PUC v. Citizens Electric Company of Lewisburg, PA,* Docket No. R-2019-3008212 (Order Entered April 29, 2020). See generally Employee Pension & Benefits (Account 926) at 73-75.

Q. Do you have any comments in response to I&E's proposed adjustments to Advertising Expenses?

A. Yes. I&E Witness Wilson proposes to disallow $2,098 of costs related to Advertising (I&E Statement No. 1 at 19-21). The advertisements convey safety and other information to the ratepayers, therefore, this is a proper expense.

Q. Do you have any comments in response to the proposed I&E adjustments to Dues/Memberships Expenses?

A. Yes. I&E Witness Wilson proposes to disallow $3,569 of costs related to Dues and Memberships (I&E Statement No. 1 at 21-23). The Company agrees that dues and subscriptions costs for fraternal, social clubs, and chamber of commerce organizations as well as lobbying expenses should not be included. This results in a reduction of $1,344, not $3,569. Attached as Exhibit__(JB-1R) is a segregation of the originally-claimed costs to support the revised level.

Q. Do you have any comments in response to I&E's proposed adjustments to Property Insurance Expenses?

A. Yes. I&E Witness Wilson proposes to disallow $5,843 of costs related to Property Insurance Expense (I&E Statement No. 1 at 24-25). As Mr. Rogers stated in his response to I&E-RE-12-D, the Company has shopped around to reduce the overall insurance costs ($41,699 included in filing, $38,819 are actual new rates). Based on this, the Company would be comfortable accepting a reduction of $2,880 ($41,699 minus $38,819) rather than the reduction of $5,843 suggested by Ms. Wilson.

OTHER TOPICS

Q. Do you have any comments in response to I&E's proposed reporting requirements on Plant Additions?

A. Yes. I&E Witness Sakaya proposes that the Company be required to provide I&E and the Office of Consumer Advocate with an update to Valley Exhibit HSG-1, Schedule C3 no later than April 1, 2026, under this docket number, which should include actual plant additions and retirements by month for the year ending December 31, 2025. An additional update should be required for actual plant additions and retirements by month through December 31, 2026, no later than April 1, 2027 (I&E Statement No. 3 at 6). The Company is willing to provide the requested updates.

Q. Do you have updates for expenses and plant additions through the 2nd Quarter 2025?

A. Yes. Attached as Exhibits__(JB-2R) and (JB-3R) are the actual experienced expenses and plant additions/retirements through the end of the 2nd Quarter.

Q. Did OCA Witness Wise propose any recommendations regarding security deposits?

A. Yes. OCA Witness Wise proposes that the Company be required to show in rebuttal that there are formal policies and procedures in place to support the practice of refunding a security deposit where it should not have been charged. She also recommended the Company should permit the customer to decide whether they want to receive the returned security deposit as a refund or credit to their utility account balance (OCA Statement No. 4 at 8-9).

Q. Do you have any comments in response to OCA's proposed recommendations regarding security deposits?

A. Yes. The Company feels that no formal policies and procedures are necessary. Our Customer Service Representatives ("CSR") are thoroughly trained, which is sufficient. With a small staff, we find that training and ongoing informal management of our CSR team are the best ways to create a customer-friendly environment.

Q. Please address the OCA request regarding security deposit returns.

A. We provide all customers who are receiving a security deposit refund the same treatment. The goal is to refund the customer as quickly and efficiently as possible. This is accomplished by crediting the deposit against any current charges. A customer that is leaving our service territory would get a refund of the security deposit. Providing an option would involve additional administrative tasks and would take more time to return the deposit because the Company would need to wait for a customer's decision before proceeding. Ultimately, as long as the customer intends to pay their current and future bills, the effect is the same.

Q. Did OCA Witness Wise propose any recommendations regarding payment plans?

A. Yes. OCA Witness Wise proposes that the Company establish metrics for measuring the success of payment plans and set documented plan policies, including how the Federal Poverty Income ("FPI") ranges are used, what verification is needed for low-income verification, and how payments and terms are calculated. (OCA Statement No. 4 at 9-11).

Q. Do you have any comments in response to OCA's proposed recommendations regarding payment plans?

A. Yes, the OCA's request for policies and metrics is not necessary. As previously mentioned, we have a small Customer Service Department team that handles payment arrangements. Customers with more significant arrearages or more complicated situations are addressed by the manager of the department or myself. Informal training and performance coaching are more effective than formal policies for our situation.

The OCA's request for Valley to evaluate the effectiveness of payment plans is inappropriate. The Company follows the PUC Chapter 14 guidelines, even though Chapter 14 is no longer in effect. Additional tracking and reporting are not necessary.

Our due diligence and financial management are about getting our customers to pay their overdue invoices. I review general billing and collection matters on a regular basis, including the status of payment arrangements. For customers that are unable to pay their invoices, the Company's Customer Service Department connects them with assistance options. Unfortunately, there are times when service must be terminated, but that is not due to a failure in Company procedures. It is also not necessarily the result of the customer having agreed to a payment arrangement that they cannot afford, which the OCA appears to assume is the cause of broken payment arrangements. We are very proud of how our Customer Service Department team tries to connect our customers to available resources in order to help keep their service active.

Q. Did the OCA have questions regarding Purchased Gas Expense?

A. Yes. OCA Witness Meyer requested clarification on the difference between the revenue and expense adjustments for Purchased Gas Expense removed from the HTY (OCA Statement No. 1 at 16).

Q. Do you have any comments in response to OCA's questions regarding Purchased Gas Expense?

A. Yes. First, I would note that the removal of the Purchased Gas Expenses and revenues for the HTY does not impact our revenue requirement calculation. Valley's rates are unbundled. The revenues and expenses are booked accurately, which is easier due to unbundled rates. We are subject to periodic audits by the Commission for our Gas Cost Rate ("GCR").

Purchased Gas Revenues and expenses can show a mismatch from year to year because of how the GCR is calculated and reconciled. We calculate the GCR once per year based on the projected costs and sales for the upcoming period. Those projections are subsequently reconciled against actual costs and revenues, which is reflected in the E-Factor for the next rate period. It can be positive or negative to account for the prior period over or under collection. Exhibit__(JB-4R) shows the E-Factor levels in effect during 2024 and the monthly impact. In this instance, it was a negative E-factor, which was refunding a prior period overcollection.

Q. Does this complete your Rebuttal Testimony?

A. Yes.

Pennsylvania Public Utility Commission	**:**	
	:	
v.	**:**	**Docket No. R-2025-_____**
	:	
Valley Energy, Inc.	**:**	

DIRECT TESTIMONY OF CODY CHAPMAN
ON BEHALF OF VALLEY ENERGY, INC.

Q. Please state your name and business address.

A. My name is Cody E. Chapman, PE, and my business address is 523 Keystone Avenue, Sayre, Pennsylvania.

Q. By whom are you employed and in what capacity do you serve at Valley Energy, Inc. ("Valley")?

A. I am employed by C&T Enterprises, Inc. ("C&T"), and assigned to Valley as the Vice President of Operations.

Q. Please describe your duties in this capacity.

A. My duties are to organize, direct, and coordinate the operations and engineering functions at Valley, including, but not limited to designing and coordinating all capital projects and managing all pipeline and facility maintenance activities. These duties include technical services functions in accordance with the objectives and policies of the Company, the Pennsylvania Public Utility Commission, the Federal Pipeline Hazardous Materials and Safety Administration's Office of Pipeline Safety, the Federal Occupational Safety and

Health Administration, and other related regulatory procedures. I also advise the President and CEO of the operational aspects of the company.

Q. Please describe your educational and employment background.

A. I attended Pennsylvania State University from 2003 to 2007 and graduated with a Bachelor of Science degree in Civil Engineering. From 2022 to 2024, I attended Youngstown State University and graduated with a Master of Business Administration degree. In 2013, I received licensure as a Professional Engineer from the Pennsylvania State Board of Professional Engineers, Land Surveyors, and Geologists. I worked for Hawk Engineering, PC and JHA Companies prior to joining Valley Energy.

Q. What were your responsibilities with respect to this filing?

A. As the Vice President of Operations, I was responsible for coordinating with Company witness Mr. Gorman and our other witnesses to address the anticipated capital projects and other operational expenses that we will undertake during the Future Test Year and the Fully-Projected Future Test Year. This includes development of the capital budgets and assessing other operational needs such as vehicles.

Q. Have you previously testified before the Pennsylvania Public Utility Commission?

A. Yes. I provided testimony during Valley's 2022 rate case at Docket No. 2022-3032300.

CAPITAL IMPROVEMENTS AND PROJECTS

Q. Please explain the Company's capital and system improvement activities reflected in the historic, future, and fully-projected future test years.

A. Each year, Valley adopts a capital budget and work plan that sets forth our projected capital and system improvements for the next five years. Our capital and system improvements are a combination of activities to extend service to new customers and to replace existing

facilities. Our capital budget projects annual amounts to be devoted to Mains, Services, Meters/Regulators, District Regulator Stations, Gate Stations/Transmission Mains, Structure/Improvements, IT/Office Equipment and Transportation. The 2025 itemized capital budget is attached as Exhibit__(CC-1), while the five-year capital budget projection from our most recent plan is attached as Exhibit__(CC-2). Our planned work on many of these categories takes into account the results of our Triennial Distribution Integrity Management Plan ("DIMP"), which is attached as Exhibit__(CC-3).

Q. Please explain how the DIMP impacts the Company's capital projects.

A. A good example of the impact of the DIMP is our focus on pressurization. To reduce the risk of over-pressurization of low-pressure distribution systems, the Company is installing redundant relief stations to each of our low-pressure systems. In 2025, we are continuing our multi-year plan to address pressurization, with additional projects identified for 2026. In addition, in 2025 we also plan to replace Aldyl-A vintage plastic equipment on Railroad Street. We hope to have all of the troubled Aldyl-A facilities removed from our system in the next 3 to 5 years.

Q. Valley's 2026 projected capital additions include a substantial increase in activity for Mains and Services. Please explain this increase.

A. Valley's 2026 projected capital additions will include an increase in activity due to several planned projects.

- PennDOT has a scheduled road project that will require Valley to relocate our facilities near a major intersection in Wysox, Pennsylvania.

- Valley will replace approximately two thousand seven hundred fifty feet of Aldyl-A vintage plastic mains and fifty-one Aldyl-A vintage plastic services in a project in Athens Township, Pennsylvania.
- In an effort to reinforce the two systems in Athens Township, Pennsylvania, Valley will extend a main to connect the systems together. This effort will involve crossing Murray Creek with the new main.
- Valley will replace steel mains and seventy-four Aldyl-A vintage plastic and steel tubing services in the east portion of Sayre, Pennsylvania. Due to the large number of services to be replaced on the eight streets and the municipal required paving involved, the project would consist of replacing and relocating the existing steel mains with newer plastic mains.

Q. What steps has Valley undertaken to mitigate Lost and Unaccounted For Gas?

A. The Company performs accelerated leak surveys on leak prone pipe materials, as outlined in the Company's DIMP, such as steel tubing services and vintage plastic (Aldyl-A) mains. In addition, the Company has eliminated all cast iron and bare steel mains, which are susceptible to joint leakage and cracking due to the severe frost conditions experienced in our area. Mitigating these leaks to atmosphere reduces our lost gas.

Another area of influence to Lost and Unaccounted for Gas is meter inaccuracies. To minimize meter inaccuracies, the Company tests large industrial meters at an advanced rate depending on usage. The Company purposely works to maintain a cushion ahead of the

regulated meter testing scheduled to maintain compliance, but also to test meter accuracies to ensure gas is accounted for and billed for in a manner to minimize inaccuracies.

Q. Are the improvements in the historic, future, and fully-projected future test years unique in comparison to Valley's historic practice?

A. We have one unique project in 2025, which is the renovation of the newly-acquired building to serve as a warehousing of construction equipment, work space for construction crews, pressure regulation shop, and training center. Otherwise, our practice and criteria for replacement of pipelines and equipment as they become obsolete or to ensure compliance with safety regulations has not changed in many years; however, we are focusing more closely on pipeline safety improvements as a result of federal requirements and the Company's DIMP.

Q. Please explain how the current inflation and supply chain interruptions are impacting Valley?

A. In 2024 and 2025, we have seen an increase in material costs, inclusion of fuel or tariff surcharges, increase in order minimums, and a decrease in material availability. A sampling of reoccurring purchases from 2023, 2024, and 2025, has shown prices have increased an average of 5.4%, with outliers (not included in our analysis) increasing as much as 28.7%. Some suppliers are instituting minimum order amounts, while others are increasing their existing minimum order requirements. Material lead times have continued to increase. Lead time increases and minimum order requirements necessitate that Valley orders additional material and keeps more material on hand.

Q. Are there any notable types of equipment where Valley is projecting cost increases in excess of normal?

A. Yes. The C&T Information Technology Department has informed us that equipment quotations for computers and other electronic devices are increasing due to the potential tariffs announced by the Federal Government. We are closely monitoring this situation. Valley has been starting to see quotations for products contain a tariff surcharge added in or a notation that invoices may add a tariff surcharge if the manufacturer receives an impact from the tariffs at the time of shipment.

Q. Does the information that you provided to Mr. Gorman reflect the current expected costs for materials and supplies?

A. The information that we provided reflects our current assessment as of March 31, 2025. We conservatively increased most material and supply costs by 3%, with the exception of costs that have a larger historic increase or known projected increases. The costs could change based on general economic conditions and other factors.

Q. Can you address how Valley's capital projects can vary from quarter to quarter?

A. Our service territory is on the New York-Pennsylvania border and can experience cold weather and freezing. Ground frost depth can be a large factor as to capital project constructability. There are certain capital projects that we try to schedule for the months when we expect to have warmer weather. Another factor in scheduling capital projects is varying start dates due to municipal or Pennsylvania Department of Transportation seasonal start and/or stop guidelines. When our employees are not working on capital projects, they undertake other necessary activities that are reflected in O&M expenses.

In addition, there are quarters when Valley's planned capital projects are modified due to third-party requests and activities, such as projects by the local or state road departments

to relocate or repave streets, or projects by other utilities to replace underground facilities within common rights of way. In those situations, we may accelerate or vary our planned projects for the quarter to replace our underground facilities simultaneously. This serves to reduce the inconvenience to the public and to avoid redundant excavation and repaving activities.

Q. Does this conclude your Direct Testimony?

A. Yes.

FUTURE YEARS NOTES

2026

Specific costs include:
$458,000 for renovations for training center and storage building
$198,000 for a PennDOY relocation project
$864,000 for replacement of vintage services
$765,000 for vintage main replacement

2027

Specific costs include:
$107,000 for main system reinforcement project
$400,000 for additional over-pressure protection devices and station upgrades
$308,000 for replacement of vintage services
$120,000 for vintage main replacement

2028

Specific costs include:
$164,000 for viontage main replacments
$160,000 for district regulating station upgrades
$766,000 for replacement of vintage services

2029 Specific costs include:
$541,000 for vintage main replacments
$217,000 for replacement of vintage services

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christine Wilson, and my business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (PUC or Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst Supervisor.

Q. WHAT IS YOUR EDUCATION AND EMPLOYMENT BACKGROUND?

A. An outline of my education and employment is set forth in the attached Appendix A.

Q. PLEASE DESCRIBE I&E'S ROLE IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to review the base rate filing of Valley Energy, Inc. (Valley or Company) and make recommended adjustments to the Company's proposed operating and maintenance (O&M) expenses and rate base claims for the fully projected future test year (FPFTY) ending December 31, 2026. I also present the overall I&E recommended revenue requirement based on my adjustments and the adjustments of I&E witness D.C. Patel.[1]

Q. DOES YOUR DIRECT TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 1 contains schedules that support my direct testimony.

Q. WHAT TEST YEARS IS VALLEY USING IN THIS PROCEEDING?

A. Valley is using the year ended December 31, 2024, as the historic test year (HTY), the year ending December 31, 2025, as the future test year (FTY), and the year ending December 31, 2026, as the FPFTY in this proceeding.[2] The Company indicates that its effective date of new rates is January 30, 2026, while also noting that a Commission-approved settlement between the parties could accelerate the effective date.

[1] I&E Statement No. 2.
[2] Valley Statement No. 1, p. 2.

Q. DO YOU AGREE THAT NEW RATES MAY GO INTO EFFECT PRIOR TO THE JANUARY 30, 2026 EFFECTIVE DATE?

A. To an extent. However, rates should not under any circumstances go into effect prior to the beginning of the FPFTY which is January 1, 2026. This date is the beginning of the twelve-month period on which new rates are based. For this reason, it would be unjust and unreasonable for ratepayers to pay the increase in rates prior to the beginning of the first day of the FPFTY.

Q. WHAT IS VALLEY'S REQUESTED REVENUE INCREASE?

A. Valley is requesting an annual total revenue increase of $1,626,099.[3]

SUMMARY OF RECOMMENDED ADJUSTMENTS

Q. PLEASE SUMMARIZE YOUR RECOMMENDED ADJUSTMENTS.

A. The following table summarizes my recommended adjustments:

[3] Valley Exhibit HSG-1, Schedule C1.

	Valley Claim	I&E Recommended Allowance	I&E Adjustment
O&M Expense Adjustments:			
Rate Case Expense	$92,222	$55,333	($36,889)
Regulatory Commission Expense	$105,514	$47,317	($58,197)
Office Supplies & Expense	$81,390	$64,264	($17,126)
Employee Pension & Benefits Exp.	$10,194	$0	($10,194)
Advertising Expense	$2,098	$0	($2,098)
Dues/Company Memberships	$17,295	$13,726	($3,569)
Property Insurance Expense	$41,699	$35,856	($5,843)
Injuries and Damages Expense	$124,881	$108,946	($15,935)
Total O&M Adjustments			**($149,851)**
	Valley Claim	**I&E Recommended Allowance**	**I&E Adjustment**
Income Tax Exp. Adjustments:			
State Income Tax Expense	$122,024	$53,501	($68,523)
Total Income Tax Adjustments			**($68,523)**
Rate Base Adjustments:			
Unamortized Rate Case Expense	$230,556	$0	($230,556)
Cash Working Capital	$491,679	$472,948	($18,731)
Total Rate Base Adjustments			**($249,287)**

OVERALL I&E POSITION

Q. WHAT IS I&E'S TOTAL RECOMMENDED REVENUE REQUIREMENT?

A. I&E's total recommended revenue requirement for Valley is $7,718,567. This recommended revenue requirement represents an increase of $1,212,076 to

Valley's claimed present rate revenues of $6,506,491. This total recommended allowance incorporates my adjustments made in this direct testimony to O&M expenses and rate base, and those recommended adjustments made in the direct testimony of I&E witness D.C. Patel (I&E Statement No. 2). A calculation of the I&E recommended revenue requirement is shown below:

Valley Energy, Inc.		TABLE I			
R-2025-3054393		INCOME SUMMARY			
	12/31/26	INVESTIGATION & ENFORCEMENT			
	Proforma	[----------			----------]
	Present Rates	Adjustments	Present Rates	Allowances	Proposed
	$	$	$	$	$
Operating Revenue	6,506,491	0	6,506,491	1,212,076	7,718,567
Deductions:					
O&M Expenses	4,080,000	-149,851	3,930,149	11,200	3,941,349

Rate Base	25,187,466	-249,287	24,938,179	0	24,938,179
Rate of Return	3.72%		4.19%		7.71%

RATE CASE EXPENSE

Q. BRIEFLY DESCRIBE THE NATURE AND TYPES OF EXPENDITURES TYPICALLY ALLOWED AS A PART OF A REGULATED UTILITY'S OVERALL RATE CASE EXPENSE.

A. The nature and types of individual expenditures that comprise a utility's allowable

claim for rate case expense are those directly incurred to compile, present, and defend a utility's request for a base rate increase before the Commission. The actual expenditures and estimated costs typically found in an allowable rate case expense claim include legal fees for outside counsel, fees to outside consultants, and the cost of printing, document assembly, and postage.

Q. HOW HAS THE COMMISSION TRADITIONALLY TREATED RATE CASE EXPENSE FOR RATEMAKING PURPOSES?

A. The Commission has historically stated that it considers prudently incurred rate case expense as an ongoing expense, occurring at irregular intervals, related to the rendering of utility service. The Commission has also cited the importance of considering the subject utility's history regarding the frequency of rate case filings as an essential element to determine the normalized level of rate case expense for ratemaking purposes.[4]

Q. HOW IS THE FREQUENCY OF RATE CASE FILINGS DETERMINED?

A. The frequency is determined by calculating the average number of months between the utility's recent base rate case filings.

[4] "A Guide to Utility Ratemaking," by James H. Cawley and Norman J. Kennard (2018 Edition), p. 112, https://www.puc.pa.gov/General/publications_reports/pdf/Ratemaking_Guide2018.pdf, accessed July 2, 2025.

Q. WHAT IS THE COMPANY'S CLAIM FOR RATE CASE EXPENSE?

A. The Company's FPFTY claim for rate case expense is $92,222.[5]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company has estimated its total rate case expense of $276,667 via the breakdown in the filing and is requesting an amortization period of three years (36 months)[6] based on the belief that Valley needs to file rate cases every three years to avoid large rate increases at one time.[7] While the Company states that it is requesting an amortized rate case expense, it states that the choice of terminology (amortization versus normalization) does not affect the schedule.[8]

Q. AS MENTIONED ABOVE, THE COMPANY REFERENCES ITS CLAIM AS AN AMORTIZED EXPENSE. BRIEFLY DISCUSS THE CONCEPT OF AMORTIZATION.

A. Amortization is an accounting procedure that extinguishes an atypical, nonrecurring asset over a predetermined number of years by incrementally charging to expense the total cost over a selected amortization period. For accounting purposes, amortization is typically used for intangible assets. However, for ratemaking purposes, amortization is generally limited to expense

[5] Valley Exhibit HSG-1, Schedule C1-3.
[6] Valley Exhibit HSG-1, Schedule C1-3.
[7] I&E Exhibit No. 1, Schedule 1, p. 1.
[8] I&E Exhibit No. 1, Schedule 1, p. 1.

events that have been authorized for deferral by the Commission through specific company petitions for which a regulatory asset is established. An amortized expense is claimed in subsequent rate cases if there is a remaining unamortized balance. However, when normalizing an expense, a claim for an unrecovered normalized expense should be disallowed if requested in a subsequent rate case.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED AMORTIZATION TREATMENT FOR RATE CASE EXPENSE?

A. No. Rate case expense should be normalized for ratemaking purposes.

Q. WHAT IS NORMALIZATION?

A. Normalization is a ratemaking concept used to address the transformation of an operating expense that recurs at irregular intervals into a "normal" annual test year allowance. Normalization specifically addresses the prospective recovery of an ongoing expense that recurs sporadically. Normalized expenses are no different than any other O&M expenses in that the Company has the opportunity to achieve full recovery.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM FOR RATE CASE EXPENSE?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR RATE CASE EXPENSE?

A. I recommend that the Company be required to normalize rate case expense over a period of 60 months resulting in an FPFTY allowance of $55,333 [($276,667 ÷ 60 months) x 12 months], or a reduction of $36,889 ($92,222 - $55,333) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. First, as discussed above, I recommend normalization of rate case expense in contrast to the Company's claimed amortization of rate case expense. The Company's rate case expense claim should be normalized instead of amortized because it is an ongoing expense that recurs at irregular intervals, which is the precise circumstance under which normalization treatment of an expense should occur.

Second, I disagree with the Company's claimed 36-month amortization period, because it is not supported by Valley's historic filing frequency. The Company's proposed amortization period fails to properly rely upon the historical data and is speculative in nature. In contrast to the Company's claimed 36-month amortization period, I recommend a 60-month normalization period, which is reasonable and validated by the Company's recent filing history as shown below.[9]

[9] I&E Exhibit No. 1, Schedule 2.

Docket No.	Filing Date	Filing Interval in Months	Average of Three Intervals in Months
R-2025-3054393	4/30/2025	36	60
R-2022-3032300	4/29/2022	34	
R-2019-3008209	7/1/2019	110	
R-2010-2174470	4/30/2010		

The historic filing details shown above produce an average historic filing frequency of 60 months [(36 + 34 + 110) ÷ 3], which supports my recommended normalization period. Valley's claim for rate case expense amortization over 36 months is speculative and should be disallowed both with respect to the time period and the proposed amortization treatment.

Q. HAVE OTHER UTILITIES BEEN GRANTED A NORMALIZATION PERIOD BASED ON SPECULATION OF FUTURE FILINGS, AND IF SO, WHAT WAS THE RESULT?

A. Yes. In 2012, the Commission granted PPL Electric Utilities Corporation (PPL) permission to normalize its rate case expense over a 24-month period based on the expected timing of future base rate case filings.[10] That base rate case was filed on March 30, 2012; however, PPL did not file its next rate case until March 31, 2015, which was 36 months after the 2012 rate case filing. I&E's recommended normalization period in that 2012 proceeding was a 32-month interval based on

[10] *PA PUC v. PPL Electric Utilities Corporation*, Docket No. R-2012-2290597, pp. 47-48 (Order Entered December 28, 2012).

PPL's historic filing frequency.[11] I&E's recommendation in that instance produced a much more accurate result than PPL's stated future intention to file a rate case.

Q. ARE THERE ANY RECENT COMMISSION DECISIONS THAT SUPPORT YOUR RECOMMENDATION FOR A RATE CASE FILING INTERVAL BASED ON HISTORIC FILING FREQUENCY?

A. Yes. The following six cases resulted in the Commission using each company's historic average filing frequency.

First, in a base rate case filed by Emporium Water Company, the Commission adopted I&E's recommended historic filing frequency including I&E's recommended five-year normalization period based on a historic average filing frequency that was rounded down from 64 months.[12]

Second, in a base rate case filed by the City of DuBois, the Commission agreed with I&E's recommendation to use an historic filing frequency and adopted I&E's recommended 64-month normalization period which matched the actual historic filing frequency.[13]

---

[11] I&E Statement No. 2, pp. 13-14 at Docket No. R-2012-2290597.

[12] *PA PUC v. Emporium Water Company*, Docket No. R-2014-2402324, Opinion and Order, p. 50 (Order Entered January 28, 2015).

[13] *PA PUC v. City of DuBois - Bureau of Water*, Docket No. R-2016-2554150, Opinion and Order, pp. 65-66 (Order Entered March 28, 2017) and PA PUC v. City of DuBois - Bureau of Water, Docket No. R-2016-2554150, Opinion and Order, p. 13 (Order Entered May 18, 2017).

Third, in a base rate case filed by Columbia Gas of Pennsylvania, Inc., the Commission held that the normalization period should align with the historic data rather than the company's intent to file its next base rate case.[14]

Fourth, in a base rate case filed by PECO Energy Company - Gas Division (PECO), the Commission granted I&E's recommended five-year normalization period rather than PECO's claim based on a three-year period because the Commission determined a normalization period based on actual historic filing frequency is more reliable than future speculation.[15]

Fifth, in a base rate case filed by Philadelphia Gas Works (PGW), the Commission agreed with I&E's recommended 53-month normalization period over PGW's claim based on a three-year period, granting a normalization period based on actual historic filing frequency rather than PGW's future intention to file a rate case.[16]

Finally, in the most recent base rate case filed by the Columbia Water Company, the Commission held that the normalization period should align with the historic filing frequency rather than that company's intent to file its next rate case, and that the intent to file a base rate case does not justify deviating from the Commission's practice of relying on historic filing frequency.[17]

Q. GIVEN THESE COMMISSION ORDERS AND THE COMPANY'S FILING HISTORY, IS THE CLAIMED 36-MONTH RECOVERY PERIOD REASONABLE?

A. No. The Company has not demonstrated that it will file its next base rate case within 36 months of filing this rate case.

Q. DO YOU HAVE ANY OTHER ISSUE TO ADDRESS RELATED TO RATE CASE EXPENSE?

A. Yes. The Company improperly claims the unamortized portion of rate case expense in rate base. This issue is addressed in the following section.

UNAMORTIZED RATE CASE EXPENSE IN RATE BASE

Q. WHAT IS INCLUDED IN THE COMPANY'S RATE BASE CLAIM FOR RATE CASE EXPENSE?

A. The Company is claiming what it refers to as the unrecovered portion of rate case expense in rate base.[18]

Q. WHAT IS THE COMPANY'S CLAIM FOR UNAMORTIZED RATE CASE EXPENSE IN RATE BASE?

A. The Company is claiming $230,556 in a regulatory asset.[19]

[18] I&E Exhibit No. 1, Schedule 1, p. 2.
[19] Valley Exhibit HSG-1, Schedule C1-5, p. 2.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company opines that it is appropriate to claim this amount in rate base since it is a prepaid expense.[20]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND?

A. I recommend the entire claim of $230,556 be disallowed.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A If the Company were allowed to include unamortized rate case expense in rate base along with capturing an amount on the expense side, it would earn a return on and a return of rate case expense. Any allowance for return on an expense, in addition to a return of such an expense, is not an appropriate ratemaking practice. Also, as stated previously, with respect to rate case expense, normalization of such a claim, rather than amortization, is the appropriate ratemaking treatment, and normalization does not include a remaining balance nor allow for a remaining balance to be captured in rate base. Rate case expense represents a routine operating expense which is not extraordinary in nature. As such, rate base

[20] I&E Exhibit No. 1, Schedule 1, p. 2.

treatment of this cost should not be granted.

REGULATORY COMMISSION EXPENSE

Q. WHAT IS INCLUDED IN THE COMPANY'S CLAIM FOR REGULATORY COMMISSION EXPENSE?

A. The Company's claim includes PUC assessments and 2025 rate case expense.[21]

Q. WHAT IS THE COMPANY'S CLAIM FOR REGULATORY COMMISSION EXPENSE?

A. The Company is claiming $105,514.[22]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company has included $47,317 for PUC assessments and $58,195 for 2025 rate case expense which produces a total of $105,512.[23] Note, this amount is $2 less than the amount included in the revenue requirement computation of $105,514.[24]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

[21] I&E Exhibit No. 1, Schedule 3.
[22] Valley Exhibit HSG-1, Schedule C1-1, p. 2.
[23] I&E Exhibit No. 1, Schedule 3.
[24] Valley Exhibit HSG-1, Schedule C1-1, p. 2.

Q. WHAT DO YOU RECOMMEND?

A. I recommend an allowance of $47,317 or a reduction of $58,197 ($105,514 - $47,317) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A The PUC assessment claim of $47,317 was supported with a recent assessment invoice,[25] however, the "2025 PA Rate Case Expense" claim included in regulatory commission expense is improper due to rate case expense being claimed elsewhere on Valley Exhibit HSG-1, Schedule C1, line 13, in the amount of $92,222.[26] Therefore, it is necessary to reduce regulatory commission expense by $58,195 for this unsupported additional rate case expense claim.

OFFICE SUPPLIES & EXPENSE

Q. WHAT IS INCLUDED IN OFFICE SUPPLIES & EXPENSE?

A. The Company includes general office supplies, meal expenses, travel and training, and communication equipment in this expense account.[27]

[25] I&E Exhibit No. 1, Schedule 4, p. 2.
[26] See also Valley Exhibit HSG-1, Schedule C1-3 for the rate case expense breakdown producing a claim of $92,222.
[27] I&E Exhibit No. 1, Schedule 5.

Q. WHAT IS THE COMPANY'S CLAIM FOR OFFICE SUPPLIES & EXPENSE?

A. The Company is claiming $81,390.[28]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on historic year balances along with an adjustment to travel and training over the 2024 actual amount due to "external pressures on cash flows, as result of unexpected contractor and material costs" and a 3% inflation adjustment between the FTY and FPFTY.[29]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND FOR OFFICE SUPPLIES & EXPENSE?

A. I recommend an allowance of $64,264 or a reduction of $17,126 ($81,390 - $64,264) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on averaging the most recent three years, 2022, 2023, and 2024 [($62,075 + $74,240 + $56,476) ÷ 3 = $64,264], due to the yearly

[28] Valley Exhibit HSG-1, Schedule C1-1, p. 2.
[29] I&E Exhibit No. 1, Schedule 5.

fluctuation in this expense. This three-year average excludes the unsupported 3% inflation adjustment between the FTY and FPFTY and takes into consideration the yearly fluctuation in each line item reported in response to I&E-RE-10-D.[30]

EMPLOYEE PENSION & BENEFITS EXPENSE

Q. WHAT IS INCLUDED IN EMPLOYEE PENSION & BENEFITS EXPENSE?

A. This account has historically included items such as parties, luncheons, token gifts, etc. along with a single salary survey in 2024.[31] Based on the information provided, it would be more appropriately referred to as employee appreciation expense.

Q. WHAT IS THE COMPANY'S CLAIM FOR EMPLOYEE PENSION & BENEFITS EXPENSE?

A. The Company is claiming $10,194.[32]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on an average of 2021 to 2024 expenses with a 3% inflation adjustment between the FTY and FPFTY.[33]

[30] I&E Exhibit No. 1, Schedule 5.
[31] I&E Exhibit No. 1, Schedule 6, p. 2.
[32] Valley Exhibit HSG-1, Schedule C1-1, p. 2.
[33] I&E Exhibit No. 1, Schedule 6, p. 1.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR EMPLOYEE PENSION & BENEFITS EXPENSE?

A. I recommend disallowance of the entire $10,194 claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. I recommend disallowance of the entire amount because ratepayers should not be required to fund the Company's choice to offer or sponsor special events for its employees. If leadership is inclined to hold such events, the Company should fund those picnics and celebrations, not the ratepayers. Additionally, the salary survey that is built into the historic average due to a single 2024 survey is not appropriate since it is a historic one-time occurrence and should not be deferred for future recovery given the routine nature of the expense. This recommended disallowance of the entire claim also addresses my concern about a blanket 3% inflation adjustment for this expense category that I disagree with in principle.

<u>ADVERTISING EXPENSE</u>

Q. WHAT IS INCLUDED IN ADVERTISING EXPENSE?

A. This account includes payments to multiple local organizations, many of which

appear to be charities.[34]

Q. WHAT IS THE COMPANY'S CLAIM FOR ADVERTISING EXPENSE?

A. The Company is claiming $2,098.[35]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company states that the ads are meant to remind customers of Valley's availability, services, contact information, and safety information, and a 3% inflation adjustment is included for the FPFTY.[36]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR ADVERTISING EXPENSE?

A. I recommend disallowance of the entire $2,098 claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. I recommend disallowance of the entire amount because ratepayers should not be required to fund the Company's choice to run such sponsorship ads.[37] If

[34] I&E Exhibit No. 1, Schedule 7, p. 2.
[35] Valley Exhibit HSG-1, Schedule C1-1, p. 2.
[36] I&E Exhibit No. 1, Schedule 7, p. 1.
[37] I&E Exhibit No. 1, Schedule 7, pp. 2-11.

leadership is inclined to make such payments, they should be funded by the Company, not the ratepayers, since the ad examples provided indicate little to no tangible benefit to ratepayers.[38] The ad examples provided also appear redundant, as the same material shown in the ads can be shared on invoices, bill inserts, the Company's website and/or social media accounts. Furthermore, allowing the Company to claim this amount in the revenue requirement is problematic, as the ratepayers have no say in the choice of which charitable organizations should receive such sponsorships. Finally, my recommended disallowance of the entire claim also addresses my concern about a blanket 3% inflation adjustment for this expense category that I disagree with in principle.

DUES/COMPANY MEMBERSHIPS

Q. WHAT IS INCLUDED IN DUES/COMPANY MEMBERSHIPS?

A. This account (#930.22) includes various Company-funded memberships to organizations such as the American Gas Association, Northeast Gas Association,

[38] 66 Pa. C.S. § 1316(a) states:
The [C]ommission shall also disallow as operating expense for ratemaking purposes expenditures for other advertising, unless and only to the extent that the [C]ommission finds that such advertising is reasonable and meets one or more of the following criteria:
(1) Is required by law or regulation.
(2) Is in support of the issuance, marketing, or acquisition of securities or other forms of financing.
(3) Encourages energy independence by promoting the wise development and use of domestic sources of coal, oil, or natural gas and does not promote on method of generating electricity as preferable to other methods of generating electricity.
(4) Provides important information to the public regarding safety, rate changes, means of reducing usage or bills, load management, or energy conservation.
(5) Provides a direct benefit to ratepayers.
(6) Is for the promotion of community service or economic development.

Sayre Rotary Club etc.[39]

Q. WHAT IS THE COMPANY'S CLAIM FOR DUES/COMPANY MEMBERSHIPS?

A. The Company is claiming $17,295.[40]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company has provided a list of amounts anticipated to be paid in 2026 for such dues/memberships, but the list of items sums to $15,070 (American Gas Association, $7,534 + Northeast Gas Association, $5,978 + Sayre Rotary Club, $608 + National Fire Protection Association, $205 + Central Bradford Chamber of Commerce, $384 + C&T – Forvis Hotline, $361), and it includes amounts for lobbying.[41]

Additionally, the Company's response to I&E-RE-40-D indicates that 2% increases were applied to the FTY and FPFTY for this expense.[42]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

[39] I&E Exhibit No. 1, Schedule 8.
[40] I&E Exhibit No. 1, Schedule 8.
[41] I&E Exhibit No. 1, Schedule 8.
[42] I&E Exhibit No. 1, Schedule 9, p. 2.

Q. WHAT IS YOUR RECOMMENDATION FOR DUES/COMPANY MEMBERSHIPS?

A. I recommend an allowance of $13,726 or a reduction of $3,569 ($17,295 - $13,726) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. I recommend disallowance of the Sayre Rotary Club payment of $608, the Central Bradford Chamber of Commerce payment of $384, the lobbying expense for the American Gas Association of $285, and the lobbying expense for the Energy Association of Pennsylvania of $67, which sum to my recommended reduction of $1,344 to the Company "supported" amount of $15,070 listed in response to I&E-RE-23-D. This calculation supports my recommendation of $13,726 ($15,070 - $1,344). The Rotary Club payment and lobby expense amounts should not be funded by ratepayers because they are not necessary for the provision of safe and reliable service to ratepayers.

Finally, the unsupported 2% per year increases for the FTY and FPFTY should be disallowed since there is no basis for these adjustments. My recommended adjustment addresses this indirectly since the Company's supporting detail sums to $15,070 which is less than the $17,295 FPFTY claim.

PROPERTY INSURANCE EXPENSE

Q. WHAT IS THE COMPANY'S CLAIM FOR PROPERTY INSURANCE EXPENSE?

A. The Company is claiming $41,699.[43]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company has provided an insurance policy breakdown with prices showing total property insurance of $35,856 for the policy period May 1, 2025 through May 1, 2026.[44] To arrive at the FPFTY claim, the Company states that it inflated its 2025 amount by 12%,[45] representing the average yearly increase between 2021 and 2024, producing an FPFTY claim of $41,699.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No. First, the Company's math is inaccurate, as a 12% increase in the $36,257 FTY claim[46] would be $40,608 ($36,257 x 1.12). I also disagree with the 12% increase for the FPFTY generally.

Q. WHAT IS YOUR RECOMMENDATION FOR PROPERTY INSURANCE?

A. I recommend an allowance of $35,856 or a reduction of $5,843 ($41,699 -

[43] Valley Exhibit HSG-1, Schedule C1-1, p. 2.
[44] I&E Exhibit No. 1, Schedule 10, p. 3.
[45] I&E Exhibit No. 1, Schedule 10, p. 4.
[46] Valley Exhibit HSG-1, Schedule C1-1, p. 2.

$35,856) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on the known and measurable $2,988 monthly property insurance expense[47] amount annualized over twelve months, producing an FPFTY recommended allowance of $35,856 ($2,988 x 12). While I do see that property insurance has increased from one year to the next since 2021, it just increased significantly in 2025, and that 2025 annualized monthly expense amount is a supportable allowance. The Company asserts that it should increase this expense by 12% due to the historic average increase, however, the Company's response to I&E-RE-40-D indicates that the expense is inflated by 15% after adjustment for the new training facility in the FTY and 15% again in the FPFTY[48] which appears arbitrary and in conflict with the proposed 12% increase. Regardless of the apparent conflicting percentages, the Company has explained in response to I&E-RE-12-D that it shopped around in an effort to reduce insurance costs overall and has added coverage for a recently acquired training center and warehouse.[49] Thus, the historic average 12% increase is speculative at best as a basis for an FPFTY claim. In contrast, the property expense allowance should be based on the known and measurable monthly expense of $2,988 annualized to produce an FPFTY allowance as explained above.

[47] I&E Exhibit No. 1, Schedule 10, p. 4.
[48] I&E Exhibit No. 1, Schedule 9, p. 2.
[49] I&E Exhibit No. 1, Schedule 10, p. 5.

INJURIES AND DAMAGES EXPENSE

Q. WHAT DOES THE COMPANY INCLUDE IN INJURIES AND DAMAGES EXPENSE?

A. According to the response to I&E-RE-40-D, the Company includes injuries and damages expense as well as automobile insurance in Account No. 925, injuries and damages.[50]

Q. WHAT IS THE COMPANY'S CLAIM FOR INJURIES AND DAMAGES EXPENSE?

A. The Company is claiming $124,881.[51]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. When asked for support for the total claim of $124,881 in I&E-RE-13-D, the Company only provided an explanation for $75,665 in injuries and damages expense.[52] However, upon reviewing the response to I&E-RE-40-D, it seems clear that the Company also includes its automobile insurance claim on this line in the filing.[53] The Company provided an insurance policy breakdown with prices showing total injuries and damages, including automobile insurance, of $108,946 ($67,379 + $41,567) for the policy period May 1, 2025 through May 1, 2026.[54]

[50] I&E Exhibit No. 1, Schedule 9, p. 2.
[51] Valley Exhibit HSG-1, Schedule C1-1, p. 2.
[52] I&E Exhibit No. 1, Schedule 11, pp. 1-2.
[53] I&E Exhibit No. 1, Schedule 9, p. 2.
[54] I&E Exhibit No. 1, Schedule 10, p. 3.

To arrive at the FPFTY claim, the Company states that it inflated its 2025 amount by 17%[55] representing the average yearly increase between 2021 and 2024. However, in response to I&E-RE-40-D, the Company states that it increased the FTY and FPFTY amounts by 15%.[56]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No. I disagree with both the 15% and 17% increases for the FTY and FPFTY.

Q. WHAT IS YOUR RECOMMENDATION FOR INJURIES AND DAMAGES EXPENSE?

A. I recommend an allowance of $108,946 or a reduction of $15,935 ($124,881 - $108,946) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on the known and measurable $67,379 amount for injuries and damages and the $41,567 amount for automobile insurance[57] producing an FPFTY recommended allowance of $108,946 ($67,379 + $41,567). Historically, injuries and damages expense has fluctuated between 2021 and 2024,[58] thus, the known and measurable amount for the policy period ending

[55] I&E Exhibit No. 1, Schedule 11, p. 2.
[56] I&E Exhibit No. 1, Schedule 9, p. 2.
[57] I&E Exhibit No. 1, Schedule 10, p. 3.
[58] I&E Exhibit No. 1, Schedule 9, p. 2.

May 1, 2026, provides the most reliable basis for an allowance for injuries and damages expense. The Company has explained in response to I&E-RE-13-D that it has shopped around to reduce the overall insurance costs.[59] For this reason, using a historic average increase is speculative at best as a basis for an FPFTY allowance. In contrast, the amount for the policy period ending May 1, 2026 provides the most reliable basis for an FPFTY allowance.

CASH WORKING CAPITAL

Q. WHAT IS A CWC ALLOWANCE FOR RATEMAKING PURPOSES?

A. CWC includes the amount of funds necessary to operate a utility during the interim period between the rendition of service, including the payment of related expenses, and the receipt of revenue in payment for services rendered by the utility.

Q. HOW DOES THE COMPANY CALCULATE ITS CWC CLAIM?

A. The Company has calculated its CWC claim using the one-eighth method.[60]

Q. DO YOU ACCEPT THE COMPANY'S USE OF THE ONE-EIGHTH METHOD?

A. Yes.

[59] I&E Exhibit No. 1, Schedule 11, p. 1.
[60] Valley Exhibit HSG-1, Schedule C1-5, p. 2.

Q. WHAT IS THE COMPANY'S CLAIM FOR CWC?

A. The Company's claim for CWC is $491,679.[61]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND?

A. I recommend an allowance of $472,948 or reduction of $18,731 ($491,679 - $472,948) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation includes modification of the Company's claim based on all recommended adjustments to O&M expenses as discussed previously in this direct testimony.

Q. WHY DID YOU MAKE ADJUSTMENTS FOR YOUR O&M RECOMMENDATIONS AS DISCUSSED IN YOUR DIRECT TESTIMONY ABOVE?

A. All recommended O&M adjustments that are cash-based expense claims are included when determining the Company's overall CWC requirement. Therefore,

[61] Valley Exhibit HSG-1, Schedule C1-5, p. 2.

CWC was adjusted to reflect these recommendations.

Q. HOW DID YOU CALCULATE YOUR RECOMMENDATION?

A. The sum of all my recommended O&M adjustments shown in the Summary of Recommended Adjustments table above ($149,851) multiplied by 1/8th (or divided by 8) produces my recommended reduction of $18,731 ($149,851 ÷ 8) to CWC.

Q. IS YOUR RECOMMENDED CWC ALLOWANCE A FINAL RECOMMENDATION?

A. No. All adjustments to the Company's claims for revenues, expenses, taxes, and rate base must be continually brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claim.

STATE INCOME TAX EXPENSE

Q. WHAT IS THE COMPANY'S CLAIM FOR STATE INCOME TAX EXPENSE?

A. The Company's claim for state income tax expense is $122,024.[62]

[62] Valley Exhibit HSG-1 Schedule C1-4.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's state income tax expense claim is based on the existing corporate net income tax rate of 9.99%.[63]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND FOR STATE INCOME TAX EXPENSE?

A. I recommend an allowance of $53,501 or a reduction of $68,523 ($122,024 - $53,501) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. On July 8, 2022, Pennsylvania House Bill 1342 was signed into law as Act 53 of 2022. Act 53 lowers the corporate net income tax rate to 7.49% in 2026 (the Company's claimed FPFTY) and decreases the tax rate by 0.5% each year until 2031, when the tax rate will be 4.99%.[64] Therefore, I recommend a Pennsylvania income tax rate of 7.49% to reflect the Pennsylvania corporate income tax rate that will be in effect for the FPFTY. This recommended allowance also incorporates the state income tax effect of my other recommended adjustments and those of I&E witness D.C. Patel.[65]

---

[63] Valley Exhibit HSG-1 Schedule C1-4.
[64] I&E Exhibit No. 1, Schedule 12, p. 1.
[65] I&E Statement No. 2.

Q. DOES THE COMPANY AGREE TO CORRECT ITS STATE INCOME TAX EXPENSE CLAIM?

A. Yes. The Company has agreed to correct the state income tax rate in rebuttal testimony.[66]

PENDING ITEMS FOR INFORMATION NOT PROVIDED IN RESPONSE TO DISCOVERY

Q. ARE THERE AREAS WHERE THE COMPANY SAID ITS CLAIMS WERE BASED ON INCORRECT INFORMATION?

A. Yes. In response to numerous discovery questions, Valley indicated that incorrect source documents were used, that the Company is in the process of updating its filing, and that it will send updates to the parties and file updated information with the Commission.[67]

Q. WHICH ACCOUNTS DID VALLEY MENTION IN THOSE RESPONSES THAT MIGHT BE IMPACTED?

A. The responses mentioning potential errors are as follows:

Mains and Services (Account #874)

Ind./Com. Meters, Reg. (Account #876)

Meters & Reg.-City Gate (Account #877)

[66] I&E Exhibit No. 1, Schedule 13.
[67] I&E Exhibit No. 1, Schedule 14.

Meters & House Reg. (Account #878)

Customer Installations (Account #879)

Other Operations Expense (Account #880)

Meas. & Reg. – Gen. (Account #889)

Q. DO YOU HAVE ANY RECOMMENDED ADJUSTMENTS RELATED TO THE COMPANY'S USE OF INCORRECT SOURCE DOCUMENTS FOR THE ABOVE LISTED ACCOUNTS?

A. No. Not currently. However, as of the writing of this direct testimony the Company has not provided updated schedules. Therefore, I reserve my right to make recommended adjustments in surrebuttal testimony in the instant proceeding to the accounts listed above or any other impacted accounts that the Company updates due to the errors Valley has identified.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

Christine S. Wilson
Professional and Educational Background

Experience:

Pennsylvania Public Utility Commission, Harrisburg, Pennsylvania
August 2013 to Present:
Fixed Utility Financial Analyst Supervisor, Bureau of Investigation and Enforcement
Responsible for supervising a team of fixed utility financial analysts and engineers in the analysis and preparation of written and oral testimony in base rate case proceedings, purchased gas cost proceedings, and other proceedings as required.

February 2008 to August 2013:
Fixed Utility Financial Analyst, Bureau of Investigation & Enforcement
Review of operating and maintenance expenses for regulated utilities as a part of the evaluation and recommendation process for utility base rate and purchased gas cost filings, preparing written testimony for cases, and testifying as an expert witness.

Prior Accounting Employment: Approximately fifteen years of performing public, corporate, and nonprofit accounting, in addition to eight years of full-time administrative work.

Education/Certification:

Certified Public Accountant in Pennsylvania, 2000 to 2023 (inactive as of January 1, 2024)

Green Mountain College, Poultney, Vermont
Sustainable MBA Program, four credits earned, 2009 to 2010

Pennsylvania State University, Middletown, Pennsylvania
Bachelor of Science, Professional Accountancy, 1995
(Graduated with distinction)

I&E Exhibit No. 1
Witness: Christine Wilson

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

VALLEY ENERGY, INC.

Docket No. R-2025-3054393

Exhibit to Accompany

the

Direct Testimony

of

Christine Wilson

Bureau of Investigation & Enforcement

Concerning:

OPERATING AND MAINTENANCE EXPENSES

INCOME TAX EXPENSE

RATE BASE

I&E-RE-24-D

Reference Valley Exhibit HSG-1, Schedules C1 and C1-3, concerning rate case expense amortization, provide the following:

A. Detailed breakdown by category of the Company's actual rate case expenses from its prior rate case filing along with the claimed amounts by category.
B. Explain what is meant by "BKD" and the claim of $2,000.
C. Detailed breakdown of the printing, other claim of $10,000 for the current filing.
D. Copies of all current outside service contract agreements for rate case-related services for the current filing.
E. Receipts/invoices for rate case expenses incurred to date for the current filing and provide periodic updates during the duration of this proceeding.
F. Justification for the Company's proposed amortization period of three years.
G. Explanation why the Company references an "amortization period" of three years (as opposed to normalization period).
H. State any claimed unamortized balance that the Company has reflected in rate base or operating expenses and explain the basis for any such inclusion.
I. An estimated breakdown of rate case expense for the current proceeding:
    1. If the case settles prior to rebuttal testimony.
    2. If the case settles after written testimony is prepared by the parties.

Response Provided By:
Edward E. Rogers, President & Chief Executive Officer, Valley Energy, Inc.
Jamie Beale, Vice President/Treasurer, Valley Energy, Inc.
Howard Gorman, President, HSG Group, Inc.

Date: June 2, 2025

Response:

A. Refer to Attachment I&E-RE-24-D Attachment A – 2022 and Current Rate Case filing expense breakdown by category of the Company's actual rate case expenses from its prior rate case filing along with the claimed amounts by category.
B. BKD is the prior name of the Company's auditing firm which is now Forvis Mazars
C. For printing and other expenses are for the printing, postage and handling of notices to the customers and miscellaneous expenses associated with the filing.
D. Refer to I&E-RE-24-D Attachments B1, B2 and B3 for outside service contract agreements for rate case-related services for the current filing.
E. Refer to I&E-RE-24-D Attachment E for invoices incurred to date.
F. The Company believes that three years is the normal time between rate cases. Valley has filed rate cases in 2019, 2022 and now 2025.
G. The Company believes it needs a rate case every three years, especially in order to avoid large increases at one time for its customers. The choice of names, amortization versus normalization, does not affect this schedule.

H. The unrecovered portion of Rate Case expense is included in Rate Base, Schedule C1-5, line 36. This is appropriate, as for any cost the Company prepays, realizes the benefit and charges to expense over an extended period.

I(1) & I(2) Refer to Attachment I&E-RE-24-D Attachment A – 2022 and Current Rate Case filing expense breakdown.

I&E-RE-25-D

Reference Valley Exhibit HSG-1, Schedule C1-3, concerning the claim for rate case expense amortization, provide the following details for the last three base rate cases filed with the Commission:

A. The docket number, date of filing, and the method of resolution (e.g., settlement or litigation); and
B. Requested rate case expense and the actual rate case expense incurred.

Response Provided By: Edward E. Rogers, President & CEO
Valley Energy, Inc.

Date: June 5, 2025

Response:

Docket	Filed	Resolution	Claimed	Incurred
R-2022-3032300	4/29/2022	Settled	$367,077	$157,848
R-2019-3008209	7/1/2019	Litigated	$271,000	$325,773
R-2010-2174470	4/30/2010	Settled	$200,000	$162,237

VALLEY ENERGY, INC.
DOCKET NO. R-2025-3054393

I&E-RE-17-D

Reference Valley Exhibit HSG-1, Schedule C1-1, p. 2 concerning Regulatory Commission Expense (Account 928):

A. Provide a detailed breakdown, supporting documentation, and the basis for HTY 2024, FTY 2025, and FPFTY 2026 claims of $89,218, $99,514, and $105,514 respectively.

B. Explain the reason for the $10,296 ($99,514 - $89,218) increase from the HTY 2024 to FTY 2025 which represents a 12% increase.

C. Explain the reason for the $6,000 ($105,514 - $99,514) increase from the FTY 2025 to FPFTY 2026 which represents a 6% increase.

D. State whether any prior rate case amortizations are included in this FPFTY 2026 claim and if so, state the dollar amount for such claim.

Response Provided By:
Jamie Beale, Vice President/Treasurer, Valley Energy, Inc.

Date: June 2, 2025

Response:

A.

	HTY 2024	FTY 2025	FPFTY 2026
2022 PA Rate Case Expense	$52,195	$52,195	$ -
PUC Assessments	$37,023	$47,317	$ 47,317
2025 PA Rate Case Expense	$ -		$ 58,195
	$89,218	**$99,512**	**$105,512**

B. The increase is due to using the updated PUC assessment amount for the whole year, whereas 2024 only has 8 months at the old rate.

C. The increase is due to increased anticipated expense for the 2025 PA Rate Case.

D. No, no prior rate case amortiztions are included in the FPFTY 2026 claim.

VALLEY ENERGY, INC.
DOCKET NO. R-2025-3054393

I&E-RE-26-D

Reference Valley Exhibit HSG-1, Schedule C1-3 concerning taxes other than income:

A. Provide a copy of the Company's most recent PURTA notification and determination statement in its entirety and indicate the payment status.

B. Indicate why no amount is claimed for PUC/OCA/OSBA assessments, state on which filing schedule/line item the claim is reflected in the revenue requirement (if so), provide the claimed dollar amount, and provide the most recent assessment invoices.

Response Provided By:
Jamie Beale, Vice President/Treasurer, Valley Energy, Inc.

Date: June 2, 2025

Response:

A. See I&E-RE-26-D Attachment A, which has been paid.

B. The claim is reflected on Valley Exhibit HSG-1, Schedule C1-1 Line 42. See I&E-RE-26-D Attachment B.

DOCKET NO. R-2025-3054393

I&E-RE-10-D

Reference Valley Exhibit HSG-1, Schedule C1-1, p. 2 concerning Office Supplies & Expense (Account 921):

A. Explain the expense adjustment in detail, going from $56,476 in the HTY 2024 to $79,370 in the FTY 2025, which represents a 41% increase.
B. Explain the expense adjustment in detail, going from $79,370 in FTY 2025 to $81,390 in FPFTY 2026.
C. Provide the expense amounts by year for 2022 and 2023.
D. Provide a yearly detailed breakdown by expense type for the historical amounts in 2022, 2023, 2024, and the claimed amounts for FTY 2025 and FPFTY 2026.

Response Provided By:
Edward E. Rogers, President & Chief Executive Officer, Valley Energy, Inc.

Date: June 2, 2025

Response:

A. through C. The table below presents the detail requested for the amounts in Exhibit HSG-1, Schedule C1-1, page 2 and preceding years.

ACCOUNT 921	2022	2023	2024	2025	2026
GENERAL OFFICE SUPPLIES (00)	13,448	10,761	10,762	12,053	12,053
MEAL EXPENSES (40)	5,155	8,346	8,346	9,132	9,406
TRAVEL AND TRAINING (45)	27,948	38,885	16,808	40,834	42,059
COMMUNICATION EQUIPMENT (50)	15,524	16,248	20,560	17,871	17,352
TOTAL	62,075	74,240	56,476	79,370	81,390

A. The increase from $56,476 in HTY 2024 to $79,370 in FTY 2025 is due primarily to the increased expenses for the travel and training account. Travel and training was reduced in 2024 due to external pressures on cash flows, as result of unexpected contractor and material costs. All training including associated travel and meals are to stay abreast of regulatory requirements, technological advances in industry, best practices, and maintaining industry certifications and licensing.
B. The increase from $79,370 in FTY 2025 to $81,390 in FPFTY 2026 is attributable to an inflation factor of 3% applied.
C. Refer to the table above for 2022 and 2023 expense amounts.
D. Refer to the table above for 2022 through 2026 actual and budgeted expense amounts.

I&E-RE-14-D

Reference Valley Exhibit HSG-1, Schedule C1-1, p. 2 concerning Employee Pension and Benefits (Account 926):

A. Provide a detailed breakdown by type of benefit for the following:
1. HTY 2024 - $6,502.
2. FTY 2025 - $9,898.
3. FPFTY 2026 - $10,194.

B. Provide a similar expense breakdown to those provided in response to Parts A through C above for the years 2022 and 2023.

Response Provided By:
Jamie Beale, Vice President/Treasurer, Valley Energy, Inc.

Date: June 2, 2025

Response:

For A1 and B, see I&E-RE-14-D Attachment A. To develop the budget for FTY 2025, the Company took the average expense of 2021-2024. To develop the budget for FPFTY 2026, the Company added a 3% inflation to the FTY amount.

I&E-RE-14-D Attachment A

I&E-RE-18-D

Reference Valley Exhibit HSG-1, Schedule C1-1, p. 2 and Standard Filing Requirement in Exhibit A, III-25 concerning Advertising (Account 913):

A. Explain why it is appropriate to claim ad payments for organizations such as Towanda Rotary Club, Sayre Little League, St. Agnes School, Lady Redskins Softball, a golf tournament, the Valley Chorus, etc. in base rates.
B. Provide a breakdown of anticipated payments to organizations for FPFTY 2026.
C. Explain how the increases of $59 for FTY 2025 and $41 for FPFTY 2026 were determined.
D. Provide samples of the ads that are claimed in this account.

Response Provided By:
Edward E. Rogers, President & Chief Executive Officer, Valley Energy, Inc.

Date: June 2, 2025

Response:

A. Valley places ads in various publications and guides to remind customers of the Company's availability, services, contact and safety information. It is a normal and recurring cost of operations for all businesses.

B. Refer to I&E-RE-18-D Attachment A, Advertising Breakdown for FPFTY 2026 anticipated payments.

C. The increase was based on a standard 3% annual increase.

D. Refer to I&E-RE-18-D Attachment B, Ad Samples that are claimed for this account.

Kathy McCutcheon
Valley Energy
PO Box 340
Sayre, PA 18840

Dear Kathy,

The Towanda Rotary Club is hosting the **Ninth Annual Rotary Wine & Beer Festival** to benefit the Bradford County YMCA on Saturday, May 18th from 12:00 P.M. – 5:00 P.M. at *Mountaineer Park, 117 Thrasher Lane, Monroeton, PA 18832.* We have been ever so grateful for your support of this event in past years and hope you will continue your generosity this year.

In addition to featuring several of our region's wineries, breweries and even a couple of distilleries, we will have a nice variety of local vendors. There will be food stands and food trucks, plus live entertainment from local fan favorite Uncle Stosh's, DJ Ben Jammin – Kim and Jimmy, as well as the talented Logan Route performing. New this year joining us will be the McNett Country Band, featuring square dancing.

The YMCA is an inclusive organization of men, women and children joined together by a shared commitment to Youth Development, promoting Healthy Living and fostering a sense of Social Responsibility. Strengthening the community is our cause. Financial assistance ensures that the YMCA is available to ALL residents of our community. We rely on the generosity of our donors, volunteers, members, and partners to give the additional financial support that will enable the YMCA to make meaningful impact in the community we serve.

Therefore, we are reaching out again this year for sponsors for this worthwhile community event, which has been remarkably successful. Please review the sponsorship levels on the attached form. We are offering **4** free tickets to gold sponsors, **2** tickets to silver sponsors, and **1** to bronze level sponsors. **All sponsors names/logos will be displayed on the WOW website, Instagram, FACEBOOK page and Event Page as well as a sponsor board proudly displayed at the event. The level of displayed ads depends on the level of sponsorship, with Gold receiving the most advertising.** We thank you in advance for your generosity.

Sincerely,

Val

Dear Business Owner,

We are thrilled to once again be able to present a musical theatre production for the public! This year's show will be "Newsies Jr.," which is based on the real-life newies' strike of 1899. The New York newsies – boys and girls who sold newspapers on the street – went up against two powerful newspaper publishers to fight for the chance to earn a livable wage. Our performances are scheduled for April 19th & 20th at 7pm at the historic Keystone Theatre in downtown Towanda, with students in Kindergarten through sixth grade participating!

This year marks our twenty-first school musical, and we hope to once again perform for a packed house (approximately 1,000 attendees over both evenings). We ask that you please consider donating to our sponsorship program, which includes a listing in the program booklet, PLUS an ad on our school's Facebook page beginning on April 1st! The sponsor categories will be as follows:

GALAXY SPONSOR
$100

CONSTELLATION SPONSOR
$75

STAR SPONSOR
$50

SPARKLE SPONSOR
$25

You may supply your own JPEG, PNG or PDF for the Facebook page post, or we can make one for you, which will include your business name and contact information!

We are a non-profit school, part of the Diocese of Scranton's Catholic Schools System, and a 501(c)3 business entity. Your donation would be tax deductible, and we will gladly email or mail a donation receipt to you.

Thank you for your time, and we hope to see you at the show!

Sincerely,

Jessica L Bundle

VALLEY ENERGY, INC.
DOCKET NO. R-2025-3054393

I&E-RE-23-D

Reference Valley Standard Filing Requirement in Exhibit A, III-27 concerning Dues/Company Memberships (Account 930.22):

A. Explain why it is appropriate to claim dues or memberships for the Sayre Rotary Club.
B. Provide the FPFTY 2026 amount claimed for dues or memberships and the account where that claim is reflected in Valley Exhibit HSG-1, Schedule C1-1.
C. Provide a detailed breakdown by payee for the FPFTY 2026 claim.
D. Confirm whether the Company excluded all portions of lobbying expense from its claim for dues and membership, and if not, provide FPFTY 2026 dollar amounts by payee that relate to any claimed lobbying expenses.

Response Provided By:
Edward E. Rogers, President & Chief Executive Officer, Valley Energy, Inc.

Date: June 2, 2025

Response:

A. The claim for Sayre Rotary Club was erroneously included in account 930.22.
B. The amount claimed for dues and memberships for FPFTY 2026 is included Valley Exhibit HSG-1, Schedule C1-1, page 2 of 2, Line 43, Account 930 in the amount of $17,295.
C. Refer to table for detailed breakdown by payee for the FPFTY 2026.

Ameican Gas Association	$7,534
Northeast Gas Asociation	$5,978
Sayre Rotary Club	$608
National Fire Protection Association	$205
Central Bradford Chamber of Commerce	$384
C&T – Forvis - Hotline	$361

D. Lobbying expense for dues and membership for FPFTY 2026 were not excluded. Dollar amounts by payee that relate to any claimed lobbying expenses are:
American Gas Association - $285
Energy Association of Pennslyvania - $67

I&E-RE-40-D

Reference Valley Exhibit HSG-1, Schedule C1-1, pp. 1-2 concerning operating expenses:

A. Provide details on any claimed across-the-board inflation adjustments for direct and/or allocated expenses.

B. Provide the expense line items for the related FTY and FPFTY claims, inflation factors used, and calculations for the inflation adjustments discussed in response to Part A above.

C. Provide a copy of the source used to determine any inflation factors.

Response Provided By:
Edward E. Rogers, President & Chief Executive Officer, Valley Energy, Inc.
Cody Chapman, Vice President of Operations, Valley Energy, Inc.

Date: June 2, 2025

Response:

A. All expense claims are evaluated on a line-by-line basis as part of the budget setting process to evaluate known and expected changes to each. Each expense is reviewed and adjusted by historical data, known increases and/or calculated inflationary factors.

B. Refer to I&E-RE-40-D Attachment A – 2025-2026 Inflation-Adjustment Factors

C. Refer to I&E-RE-40-D Attachments B through J – for historical examples of increases for some of the material and equipment that are included in these accounts in addition to increase notices provided by vendors.

I&E-RE-40-D Attachment A

	Non-Labor Expenses	2021	2022	2023	2024	2025	Basis for Adjustment	2026	Basis for Adjustment

I&E-RE-12-D

Reference Valley Exhibit HSG-1, Schedule C1-1, p. 2 concerning Property Insurance (Account 924):

A. Provide a detailed breakdown by insurer/property type by year from HTY 2024 ($23,202), FTY 2025 ($36,257), and FPFTY 2026 ($41,699).
B. Provide recent statements or other documentation that support the Company's FPFTY 2026 claim of $41,699.
C. Explain in detail and provide support for the increase from $23,202 in HTY 2024 to $36,257 in FTY 2025 which represents a 56% increase.
D. Explain in detail and provide support for the increase from $36,257 in FTY 2025 to $41,699 in FPFTY 2026 which represents a 15% increase.

Response Provided By:
Edward E. Rogers, President & Chief Executive Officer, Valley Energy, Inc.

Date: June 2, 2025

Response:

Due to escalating insurance costs, the Company explored other options and was able to reduce its overall insurance costs by switching carriers for the effective period of May 1, 2025, to May 1, 2026, from $206,229 to $144,802. Property insurance costs have increased 37% over the past 4 years. Please note that Federated, which provides the property insurance coverage for Citizens' and Wellsboro, does not offer property insurance for natural gas assets.

Property (924) insurance expense for 2025 and 2026 is $31,920 and $38,819 respectively. Refer to I&E-RE-12-D Attachment A - Previous Insurer quote for 2025/2026, I&E-RE-12-D Attachment B - Current Insurance carrier quote for 2025/2026, I&E-RE-12-D Attachment C – Property Insurance Expense, and I&E-RE-12-D Attachment D – Installment Invoice. As noted on Attachment C, a portion of the increases are due to insurance for the recently-acquired training center and warehouse.

PREMIUM SUMMARY

ACCOUNT:

VALLEY ENERGY INC

Property	$34,951.00
Inland Marine	$2,820.00
General Liability	$33,366.00
Auto	$41,567.00
Umbrella	$30,666.00
Total	$143,370.00

Optional Coverages: If you would like to purchase any of the optional coverages the premium amounts shown below will be added to the policy total above.

Terrorism:

Property	$905.00
IM	$100.00
GL	$256.00
UMB	$171.00
Total	$1,432.00

Property (924) $34,951.00
\+ $ 905.00
= $35,856.00 / 12 = $2,988/month

I&D (925) $ 2,820.00
$33,366.00
$30,666.00
$ 100.00
$ 256.00
\+ $ 171.00
= $67,379.00 / 12 = $5,614.92/month

Employment Practices		
EPLI Limit of Liability	$25,000	
EPLI deductible	$2,500	
EPLI w/third party		$211.00

The amounts of insurance quoted is based on our discussion with you. Under the terms of the policy you are responsible for maintaining an adequate amount at all times. Higher limits of liability are available. If you want higher limits than those quoted here, please ask, and we will seek a quotation to satisfy your request. This form is for illustration purposes only. Policy terms and conditions will supersede the above.

Thank You

Ed Carle

Pennsylvania: Changes to corporate net income tax laws, other tax changes

House Bill 1342 was signed into law in Pennsylvania on July 8, 2022. The bill makes significant changes to the Commonwealth's corporate net income tax laws, as discussed below.

Corporate net income tax rate reduction

The Commonwealth's current corporate net income tax rate is 9.99%, which is one of the highest in the country. House Bill 1342 reduces that rate incrementally to 4.99%. These rate reductions are scheduled to occur automatically and are not contingent on state tax revenues meeting or exceeding specific thresholds.

The rate is first reduced to 8.99% for the 2023 tax year—the tax year beginning on or after January 1, 2023 through December 31, 2023. The rate is further reduced as follows:

- 8.49% for tax year 2024
- 7.99% for tax year 2025
- 7.49% for tax year 2026
- 6.99% for tax year 2027
- 6.49% for tax year 2028
- 5.99% for tax year 2029
- 5.49% for tax year 2030
- 4.99% for tax years beginning January 1, 2031 and thereafter

KPMG observation

Previous corporate net income rate reductions were included in bills that would also have adopted unitary combined reporting. However, unitary combined reporting is not included in this legislation.

Sales factor changes

Under current law, specific sourcing rules apply to receipts from sales of services and receipts from sales of tangible personal property. All other receipts are sourced under the statutory income-producing activity test and

are included in the Pennsylvania sales factor numerator if the income-producing activity is performed in Pennsylvania, or if a greater proportion of the income-producing activity is performed in Pennsylvania, based on costs of performance. House Bill 1342 adopts comprehensive customer-based sourcing rules for a number of "other" types of receipts, including:

- Gross receipts from the lease or license of intangible property
- Gross receipts from sales of intangibles
- Gross receipts from the sale, redemption, maturity or exchange of securities held by a taxpayer primarily for sale to customers
- Gross receipts related to lending activities involving real property and tangible personal property
- Gross receipts received from interest, fees, and penalties from credit card holders
- Gross receipts received from interest not otherwise addressed in the revised law

Any gross receipts associated with intangible property that are not specifically addressed will be excluded from both the numerator and denominator of the sales factor. The state tax authority is directed to promulgate rules and regulations to implement the new sourcing rules, which are effective for tax years beginning after December 31, 2022.

KPMG observation

There is ongoing litigation in Pennsylvania over the application of the income-producing activity test as applied to service receipts. The *Synthes* case, currently pending before the Pennsylvania Supreme Court, involves the interpretation of the statutory income-producing activity test in years prior to 2014 before the legislature revised the law to provide that service receipts are sourced to the location where the services are delivered. In *Synthes*, the state tax authority and the taxpayer were on the same side and argued that the tax authority's market-based interpretation of the income-producing activity test, which resulted in a refund for Pennsylvania-based taxpayer, was entitled to deference. The Attorney General, however, disagreed that the tax authority's interpretation was entitled to deference. The Commonwealth Court held in favor of the taxpayer and the tax authority, the Attorney General appealed to the Pennsylvania Supreme Court, and oral arguments were held in March 2022. Although *Synthes* involves service receipts, the outcome may be instructive as to application of the income-producing activity test to other types of receipts for years prior to 2023.

Codification of economic nexus standards

House Bill 1342 codifies Corporation Tax Bulletin 2019-04, issued post-*Wayfair*, in which the state tax authority announced that for tax years beginning on or after January 1, 2020, corporations meeting an economic nexus standard would be required to file corporate net income tax returns (unless protected under Public Law 86-272). The bulletin set forth a rebuttable presumption that a corporate taxpayer without a physical presence in Pennsylvania that had $500,000 or more of direct or indirect gross receipts sourced to Pennsylvania from any combination of (1) gross receipts from the sale, rental, lease, or licensing of tangible personal property; (2) gross receipts from the sale of services; or (3) gross receipts from the sale or licensing of intangibles, including franchise agreements, would have a filing responsibility.

Effective for tax years beginning after December 31, 2022, House Bill 1342 codifies the rebuttable presumption that a corporation with $500,000 or more of receipts sourced to Pennsylvania will have substantial nexus with the Commonwealth, despite the lack of a physical presence. However, an exception applies to affiliated entities domiciled in foreign nations that have entered into comprehensive income tax treaties with the United States. The treaties must provide "for the allocation of all categories of income subject to taxation, or the withholding of tax, on royalties, licenses, fees and interest for the prevention of double taxation of the respective nations' residents and the sharing of information."

KPMG observation

It is important to consider the economic nexus standard in conjunction with the revised sourcing rules that apply beginning with the 2023 tax year. A taxpayer that previously sourced receipts under the income-producing

activity test may not have had the requisite level of receipts sourced to the Commonwealth. However, that may no longer be the case when those receipts are sourced using the new customer-based rules.

Sales and use tax and other tax changes

Effective January 1, 2023, House Bill 1342 requires peer-to-peer car sharing marketplace facilitators (as defined) to collect sales and use tax on facilitated shared vehicle rentals. The up-to-$2 per day fee that applies to vehicle rentals is extended to vehicles rented as part of a peer-to-peer car sharing program. However, the Commonwealth's 2% vehicle rental tax does not apply to a shared vehicle that is rented through a peer-to-peer car sharing program. The bill also extends the computer data center sales tax exemption qualification period from 15 years to 25 years for qualified purchases of equipment installed in the computer data center.

For individual (personal) income tax purposes, effective for tax years beginning after December 31, 2022, the bill conforms the Commonwealth to the section 179 expensing provisions and the section 1031 deferral provisions. A new refundable tax credit is adopted for eligible taxpayers who receive the federal child and dependent care tax credit. Finally, the bill increases the annual cap for the research and development and film production tax credits and makes certain changes to the keystone opportunity zone provisions.

I&E-RE-27-D

Reference Valley Exhibit HSG-1, Schedule C1-4 concerning income taxes, explain why a state income tax rate of 9.99% is appropriate for FPFTY 2026.

Response Provided By: Howard Gorman, President, HSG Group, Inc.

Date: June 5, 2025

Response:

This was an oversight in preparing the schedules. We will make the appropriate changes when Rebuttal testimony is filed, using the following rate for Pennsylvania Corporate Net Income Tax:

2024 at 8.49%
2025 at 7.99%
2026 at 7.49%

VALLEY ENERGY, INC.
DOCKET NO. R-2025-3054393

I&E-RE-30-D

Reference Valley Exhibit HSG-1, Schedule C1-1, p. 1 concerning Mains and Services (Account 874), explain the following adjustments in detail:

A. Non-labor expense increase from $286,866 ($454,825 - $167,959) in HTY 2024 to $314,210 ($450,488 - $136,278) in FTY 2025 which represents a 10% increase.

B. Non-labor expense increase from $314,210 ($450,488 - $136,278) in FTY 2025 to $387,246 ($580,482 - $193,236) in FPFTY 2026 which represents a 23% increase.

Response Provided By:
Edward E. Rogers, President & Chief Executive Officer, Valley Energy, Inc.

Date: June 2, 2025

Response:

An incorrect source document was inadvertently used for the 2025 expenses in Accounts 874 through 880, 889, 920 and 932. We are in the process of preparing revisions to Exhibit HSG-1 to correct this oversight, which we will send to the parties (and file with the Commission). At this time, we do not anticipate that those revisions will impact the overall rate increase request or the proposed rates by customer class.

Valley will update this response after completion of the revisions.

I&E-RE-31-D

Reference Valley Exhibit HSG-1, Schedule C1-1, p. 1 concerning Ind./Com. Meters, Reg. (Account 876), explain the following adjustments in detail:

A. Non-labor expense decrease from $94,026 ($102,463 - $8,437) in HTY 2024 to $50,979 ($82,518 - $31,539) in FTY 2025.

B. Non-labor expense increase from $50,979 ($82,518 - $31,539) in FTY 2025 to $58,030 ($94,402 - $36,372) in FPFTY 2026 which represents a 14% increase.

Response Provided By:
Edward E. Rogers, President & Chief Executive Officer, Valley Energy Inc.

Date: June 2, 2025

Response:

An incorrect source document was inadvertently used for the 2025 expenses in Accounts 874 through 880, 889, 920 and 932. We are in the process of preparing revisions to Exhibit HSG-1 to correct this oversight, which we will send to the parties (and file with the Commission). At this time, we do not anticipate that those revisions will impact the overall rate increase request or the proposed rates by customer class.

Valley will update this response after completion of the revisions.

I&E-RE-32-D

Reference Valley Exhibit HSG-1, Schedule C1-1, p. 1 concerning Meters & Reg-City Gate (Account 877), explain the negative non-labor expense of $33,221 ($34,460 - $67,681) in HTY 2024.

Response Provided By:
Edward E. Rogers, President & Chief Executive Officer, Valley Energy, Inc.

Date: June 2, 2025

Response:

An incorrect source document was inadvertently used for the 2025 expenses in Accounts 874 through 880, 889, 920 and 932. We are in the process of preparing revisions to Exhibit HSG-1 to correct this oversight, which we will send to the parties (and file with the Commission). At this time, we do not anticipate that those revisions will impact the overall rate increase request or the proposed rates by customer class.

Valley will update this response after completion of the revisions.

I&E-RE-33-D

Reference Valley Exhibit HSG-1, Schedule C1-1, p. 1 concerning Meters & House Reg (Account 878), explain in detail the non-labor expense increase from $84,034 ($144,252 - $60,218) in FTY 2025 to $92,124 ($159,622 - $67,498) in FPFTY 2026 which represents a 10% increase.

Response Provided By:
Edward E. Rogers, President & Chief Executive Officer, Valley Energy, Inc.

Date: June 2, 2025

Response:

An incorrect source document was inadvertently used for the 2025 expenses in Accounts 874 through 880, 889, 920 and 932. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is D. C. Patel and my business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. WHAT IS YOUR EDUCATION AND PROFESSIONAL EXPERIENCE?

A. My educational and professional experience is set forth in the attached Appendix A.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for representing the public interest in rate and other proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the utility company, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to review the base rate filing of Valley Energy, Inc. (Valley or Company) and make recommendations regarding the Company's rate of return, including capital structure, cost of long-term debt, the cost of equity, and the overall fair rate of return for the fully projected future test year (FPFTY) ending December 31, 2026.

Q. DOES YOUR DIRECT TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 2 contains schedules that support my direct testimony.

BACKGROUND

Q. WHAT IS THE GENERAL DEFINITION OF RATE OF RETURN IN THE CONTEXT OF A RATE CASE?

A. Rate of return is one of the components of the revenue requirement formula. Rate of return is the amount of revenue an investment generates in the form of net income. It is typically expressed as a percentage of the amount of an asset base at a particular point in time, which in base rate proceedings, is the projected rate base balance at the end of the test year.

Q. WHAT IS THE REVENUE REQUIREMENT FORMULA?

A. The revenue requirement formula used in base rate cases is as follows:

$$RR = E + D + T + (RB \times ROR)$$

Where:

RR = Revenue Requirement

E = Operating Expenses

D = Depreciation Expense

T = Taxes

RB = Rate Base

ROR = Overall Rate of Return

In the above formula, the rate of return is expressed as a percentage. The calculation of that percentage is independent of the determination of the appropriate rate base value for ratemaking purposes. As such, the appropriate total dollar return is dependent upon the proper computation of the rate of return and the proper valuation of the Company's rate base.

Q. WHAT CONSTITUTES A FAIR AND REASONABLE OVERALL RATE OF RETURN?

A. A fair and reasonable overall rate of return is one that will allow the utility an opportunity to recover those costs prudently incurred by all classes of capital used to finance the rate base during the prospective period in which its rates will be in effect. The Commission has the authority to determine the fair revenue requirement and rate of return, which is an opportunity for the utility to earn, but not a guarantee to earn.

The *Bluefield Water Works & Improvements Co. v. Public Service Comm. of West Virginia,* 262 U.S. 679, 692-93 (1923), and the *Federal Power*

Commission et al v. Hope Natural Gas Co., 320 U.S. 591, 603 (1944) cases set forth the principles that are generally accepted by regulators throughout the country as the appropriate criteria for measuring a fair rate of return:

1. A utility is entitled to a return similar to that being earned by other enterprises with corresponding *similar risks and uncertainties*, but not as high as those earned by highly profitable or speculative ventures.
2. A utility is entitled to a return level reasonably sufficient to assure financial soundness.
3. A utility is entitled to a return sufficient to maintain and support its credit and raise necessary capital.
4. A fair return can change (increase or decrease) along with economic conditions and capital markets.

Q. EXPLAIN HOW THE OVERALL RATE OF RETURN IS TRADITIONALLY CALCULATED IN BASE RATE PROCEEDINGS.

A. In base rate proceedings, the overall rate of return is traditionally calculated using the weighted average cost of capital method. To calculate the weighted average cost of capital, a company's capital structure must first be determined by comparing the percentage of each capitalization component which has financed the rate base to total capital. In Valley's case, the capital components consist of long-term debt and common equity. Next, the effective cost rate of each capital structure component must be determined. The historical component of the debt

cost rate can be computed accurately, and any future debt issuances are based on estimates. The cost rate of common equity is not fixed and is more difficult to measure. Because of this difficulty, a proxy group is used as discussed later in this direct testimony. Then, each capital structure component percentage is multiplied by its corresponding effective cost rate to determine the weighted capital component cost rate. The table in the *"I&E Position"* section below demonstrates the interaction of each capital structure component and its corresponding effective cost rate. Finally, the sum of the weighted cost rates produces the overall rate of return. This overall rate of return is multiplied by the rate base to determine the return portion of a company's revenue requirement.

COMPANY'S RATE OF RETURN CLAIM

Q. WHO IS THE COMPANY'S RATE OF RETURN WITNESS?

A. Dylan W. D'Ascendis is the primary witness addressing the Company's claimed rate of return. Mr. D'Ascendis filed revised testimony and a corresponding revised exhibit on July 2, 2025. Throughout his direct testimony Mr. D'Ascendis provides analysis for the proxy group, cost of common equity, and overall rate of return for Valley (Valley Joint Statement No. 2 and Exhibit (DWD-1)). Mr. Ryan M. Kucan also filed a revised testimony and a corresponding revised exhibit on July 2, 2025. He provides analysis for the ratemaking capital structure and cost of long-term debt (Valley Joint Statement No. 2A and Exhibit (RMK-1)). Additionally, Edward E. Rogers of Valley provides testimony regarding the Company's "management effectiveness" claim for a 5-basis point reward or adder

to the claimed rate of return on common equity (Valley Statement No. 4).

Q. PLEASE SUMMARIZE MR. D'ASCENDIS AND MR. KUCAN'S RECOMMENDATIONS FOR THE COMPANY'S RATE OF RETURN CLAIM.

A. Mr. D'Ascendis and Mr. Kucan recommend the following rate of return for the Company based on the FPFTY ending December 31, 2026 (Valley Joint Statement No. 2, p. 3, lines 12-13, Table 1 and Valley Joint Statement No. 2A, p. 3, lines 15-16 and Exhibit (RMK-1), Schedule RMK-1):

Valley Energy, Inc. Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	51.06%	5.03%	2.57%
Common Equity	48.94%	11.65%	5.70%
Total	**100.00%**		**8.27%**

I&E POSITION

Q. PLEASE SUMMARIZE YOUR RATE OF RETURN RECOMMENDATION FOR THE COMPANY.

A. I recommend the following rate of return for the Company (I&E Exhibit No. 2, Schedule 1):

I&E Recommendation Valley Energy, Inc. Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	51.06%	5.03%	2.57%
Common Equity	48.94%	10.51%	5.14%
Total	**100.00%**		**7.71%**

PROXY GROUP

Q. WHAT IS A PROXY GROUP AS USED IN BASE RATE CASES?

A. A proxy group is a set of companies that have similar traits as compared to the subject utility. This group of companies acts as a benchmark for determining the subject utility's rate of return in a base rate case.

Q. WHAT ARE THE REASONS FOR USING A PROXY GROUP?

A. A proxy group's cost of equity is used as a benchmark to satisfy the long-established guideline of utility regulation that seeks to provide the subject utility with the opportunity to earn a return similar to that of companies with corresponding risks and uncertainties.

A proxy group is typically utilized since the use of data exclusively from one company may be less reliable. The lower reliability occurs because the data for one company may be subject to events that can cause short-term anomalies in the marketplace. The rate of return on common equity for a single company could

become distorted in these circumstances and would therefore not be representative of similarly situated companies. Thus, a proxy group has the effect of smoothing out potential anomalies associated with a single company.

Q. WHAT CRITERIA DID YOU USE IN SELECTING YOUR GAS UTILITY PROXY GROUP?

A. The criteria for my proxy group was designed to select companies that are representative of Valley. I applied the following criteria to the Value Line Investment Survey Industry Classification as a "Natural Gas Utility" company group:

1. Fifty percent or more of the company's revenues must be generated from the regulated gas utility industry.
2. The company's stock must be publicly traded.
3. Investment information for the company must be available from more than one source, which must include Value Line.
4. The company must not be currently involved in an announced merger or the target of an acquisition.
5. The company must have four consecutive years of historic earnings data.
6. The company must be operating in a state that has a deregulated gas utility market.

Q. WHAT CRITERIA DID MR. D'ASCENDIS USE IN SELECTING THE COMPANIES THAT FORMULATE THE GAS UTILITY PROXY GROUP?

A. Mr. D'Ascendis applied the following screening criteria in determining the "Gas Utility Proxy Group" (Valley Joint Statement No. 2, pp. 14, lines 7-22 and p. 15, lines 1-2):

1. The company is included in the Natural Gas Utility Group of Value Line's Standard Edition.
2. The company must have 60% or greater of fiscal year 2023 total operating income derived from, or 60% or greater of fiscal year 2023 total assets attributable to regulated gas distribution operations.
3. The company has not publicly announced that it is involved in any major merger or acquisition activity (i.e., one publicly traded utility merging with or acquiring another or any other major development).
4. The company has not cut or omitted common dividends during the five years ended 2023 or through the time of preparation of the testimony.
5. The company must have Value Line and Bloomberg Professional Services adjusted beta coefficients.
6. The company must have positive Value Line five-year dividends per share growth rate projections.
7. The company must have Value Line, Zacks, or S&P Capital IQ consensus five-year earnings per share growth rate projections.

Q. WHAT PROXY GROUP DID YOU USE IN YOUR ANALYSIS?

A. I included the following seven natural gas distribution companies in my proxy group:

Company	Stock Ticker
Atmos Energy Corp.	ATO
Chesapeake Utilities Corp.	CPK
New Jersey Resources Corp.	NJR
NiSource Inc.	NI
Northwest Natural Gas Co.	NWN
One Gas Inc.	OGS
Spire Inc.	SR

Q. WHAT PROXY GROUP DID MR. D'ASCENDIS USE IN HIS ANALYSIS?

A. Mr. D'Ascendis's core proxy group identified as the "Gas Utility Proxy Group" consists of the following seven natural gas distribution companies (Valley Joint Statement No. 2, p. 15, lines 3-5):

Company	Stock Ticker
Atmos Energy Corp.	ATO
New Jersey Resources Corp.	NJR
NiSource Inc.	NI
Northwest Natural Holding Co.	NWN
One Gas Inc.	OGS
Southwest Gas Holdings Inc.	SWX
Spire Inc.	SR

Q. DO YOU AGREE WITH MR. D'ASCENDIS'S GAS UTILITY PROXY GROUP?

A. Not entirely. Mr. D'Ascendis's Gas Utility Proxy Group includes six companies of my proxy group; however, they exclude Chesapeake Utilities Corp. that I include, and they include Southwest Gas Holdings Inc. that I exclude.

Q. PLEASE EXPLAIN WHY YOU EXCLUDED SOUTHWEST GAS HOLDINGS, INC. FROM YOUR PROXY GROUP.

A. I have excluded Southwest Gas Holdings, Inc. from my proxy group as this company did not meet my first criterion that fifty percent or more of the company's revenues must be generated from the regulated gas utility industry. This is important because revenues represent the percentage of cash flow a company receives from each business line related to providing a good or service. If less than fifty percent of revenues come from the regulated gas sector, the company is not comparable to the subject utility and does not provide a similar level of regulated business. Therefore, I did not include Southwest Gas Holdings, Inc. in my proxy group.

Q. WHAT OTHER PROXY GROUP DID MR. D'ASCENDIS USE IN HIS ANALYSIS?

A. Mr. D'Ascendis opine that the purpose of rate regulation is to be a substitute for marketplace competition, and he believes that non-price regulated companies

operating in the competitive marketplace make an excellent proxy as they are comparable in total risk to the Gas Utility Proxy Group because all companies, utility and non-utility, compete for capital in the same markets (Valley Joint Statement No. 2, p. 41, lines 9-16). Therefore, he formulated another proxy group of forty-nine non-utility/unregulated companies, identified as the "Non-price Regulated Proxy Group" and claims that this group is similar in total risk to the Gas Utility Proxy Group measured by beta coefficient (Valley Joint Statement No. 2, p. 41, lines 20-23). Then, he presented a separate cost of equity analysis results using the Discounted Cash Flow (DCF), Capital Asset Pricing Model (CAPM), and Risk Premium (RP) method for the Non-price Regulated Proxy Group in determining the cost of equity for Valley (Valley Joint Statement No. 2, p. 45, lines 9-10, Table 11).

Q. DO YOU AGREE WITH MR. D'ASCENDIS'S NON-PRICE REGULATED PROXY GROUP OR NON-UTILITY GROUP?

A. No. Mr. D'Ascendis argue that because the U.S. Supreme Court did not specify in the Hope Natural Gas and Bluefield Gas Works cases that comparable risk companies must be utilities, non-price regulated companies can also serve as appropriate proxies (Valley Joint Statement No. 2, p. 41, lines 8-9). I disagree with this argument because it misses the Supreme Court's point that a utility is entitled to a return similar to that being earned by other enterprises with corresponding similar risks and uncertainties, but not as high as those earned by

highly profitable or speculative ventures. I disagree with Mr. D'Ascendis's use of a Non-price Regulated Proxy Group and his opinion that all the companies included in this group have similar total risk traits as compared to Valley and his Gas Utility Proxy Group for the reasons discussed below.

Based on Mr. D'Ascendis's proxy group selection criteria, the Non-price Regulated Proxy Group is comprised of forty-nine companies that operate in the competitive and diverse business segments such as consumer products, chemical processing, pharmaceuticals, auto parts distribution, drug distribution, information technology, consumer equipment, medical equipment, insurance, transportation, industrial products manufacturing, and service sectors of the business economy (Valley Exhibit (DWD-1), Schedule DWD-6, p. 4). This group includes large and highly profitable corporations such as Abbott, Inc., Air Products and Chemicals, Inc., Alphabet, Inc., Apple, Inc., Auto Zone, Inc., CVS Health, Hunt (J.B.), Microsoft Corp., Oracle Corp., Pfizer, Inc., UnitedHealth Group, etc. Mr. D'Ascendis chose these companies from a universe of thousands of non-regulated companies operating in different industry sectors. Despite the differences in operating business risk profiles and the highly competitive market conditions for each industry and company, Mr. D'Ascendis opine that the Non-price Regulated Proxy Group companies face comparable total risks similar to the Gas Utility Proxy Group companies.

These non-utility companies with unrelated or entirely dissimilar business segments are simply not comparable to gas distribution utilities in terms of

business risk and financial risk profiles. Natural gas distribution utilities are monopolies that are subject to very little competition, if any at all. Due to this minimal competition, natural gas distribution utilities in general have very low business risk and can maintain higher financial risk profiles by employing more leverage. Conversely, since the companies in Mr. D'Ascendis's Non-price Regulated Proxy Group operate in an unregulated competitive environment with a higher level of business risks and uncertainties, they must maintain lower financial risk profiles by employing a smaller amount of leverage.

Q. DO YOU AGREE WITH MR. D'ASCENDIS'S COST OF EQUITY ANALYSIS RESULTS OF THE NON-PRICE REGULATED PROXY GROUP?

A. No. Since I disagree with Mr. D'Ascendis's Non-price Regulated Proxy Group, I disagree with the Non-price Regulated Proxy Group equity analysis results of 11.92% based on the DCF, CAPM, and RP methods presented for determining an appropriate cost of equity for Valley in this proceeding (Valley Joint Statement No. 2, p. 45, lines 11-13, Table 11). Additionally, I disagree with the cost of equity estimates for Valley based on an indicated cost of equity range that includes equity results of the Non-price Regulated Proxy Group and the Gas Utility Proxy Group (Valley Joint Statement No. 2, p. 5, line 5, Table 4).

I recommend that the Commission consider only the gas distribution utilities group when evaluating Valley's requested return on equity (ROE) in this proceeding.

CAPITAL STRUCTURE

Q. WHAT IS A CAPITAL STRUCTURE?

A. A capital structure represents how a firm has financed its rate base with different sources of funds. The primary sources of funding are long-term debt and common equity. A capital structure may also include preferred stock and/or short-term debt.

Q. WHAT IS THE COMPANY'S CLAIMED CAPITAL STRUCTURE?

A. The Company's claimed capital structure is summarized in the table below (Valley Joint Statement No. 2A, p. 4, lines 9-11 and Valley Exhibit (RMK-1), Schedule RMK-1, p. 1):

VALLEY ENERGY, INC. Projected Capital Structure as on December 31, 2026	
Type of Capital	**Capitalization Ratio**
Long-Term Debt	51.06%
Common Equity	48.94%
Total	**100.00%**

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIMED CAPITAL STRUCTURE?

A. Mr. Kucan recommend the use of the capital structure maintained by the Company's parent organization, C&T Enterprises, Inc. (C&T), consisting of 51.06% long-term debt and 48.94% common equity (Valley Joint Statement No. 2A, p. 4, lines 9-11). Mr. Kucan state that Valley's standalone capital structure as of December 31, 2024 contained 69.90% common equity, which is inappropriate for ratemaking purposes because it is not consistent with equity ratios of comparable utilities (Valley Joint Statement No. 2A, p. 4, line 14 and p. 5, lines 1-4). He concludes that Valley's proposed hypothetical capital structure is reasonable to use and is consistent with the range of capital structures maintained by the Gas Utility Proxy Group as shown in Valley Exhibit (RMK-1), Schedule RMK-2, p. 1 (Valley Joint Statement No. 2A, p. 5, lines 10-13).

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S CAPITAL STRUCTURE?

A. I recommend using the Company's claimed capital structure as presented in the table above.

Q. WHAT IS THE BASIS FOR YOUR CAPITAL STRUCTURE RECOMMENDATION?

A. A capital structure of 50% long-term debt and 50% common equity is optimal

when trying to balance the financial integrity of a utility as well as trying to control costs for ratepayers. However, I recommend using the Company's claimed capital structure as it falls within the range of my proxy group's 2024 (most recently available) capital structures. The most recent five-year average range of my proxy group companies' capital structure ratios are from 39.33% to 57.23% long-term debt and 35.96% to 60.16% common equity, with an overall five-year average of 47.42% long-term debt and 44.73% common equity (I&E Exhibit No. 2, Schedule 2). Additionally, six of seven companies in my proxy group have a capital structure with a common equity ratio of less than 50% for the most recent five-year average (I&E Exhibit No. 2, Schedule 2).

COST OF DEBT

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S COST OF LONG-TERM DEBT?

A. I recommend using the Company's claimed FPFTY long-term debt cost rate of 5.03% (Valley Joint Statement No. 2A, p. 5, lines 16-19 and Valley Exhibit (RMK-1), Schedule RMK-1, p. 1).

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION TO USE THE COMPANY'S CLAIMED COST RATE OF LONG-TERM DEBT?

A. The parent company, C&T Enterprises borrows funds from National Cooperatives Services Corporation on behalf of its subsidiaries, Valley and two electric

companies (Citizens' and Wellsboro), which is guaranteed by subsidiaries' assets and stocks (Valley Statement No. 3, p. 12, lines 7-10). The Company's claimed FPFTY cost rate of long-term debt is based on the outstanding long-term debt embedded interest cost of 5.028% as of December 31, 2024 (I&E Exhibit No. 2, Schedule 3, pp. 1-2).

The Company's claimed 5.03% long-term debt cost rate falls within my proxy group's 2024 implied long-term debt cost range of 2.54% to 6.49% (I&E Exhibit No. 2, Schedule 3, p. 3). The Mergent Bond Record shows an average yield of 5.63% (June 2024 through May 2025) for A-rated public utility bond (I&E Exhibit No. 2, Schedule 3, p. 3). Based on this analysis, I believe that the Company's claimed long-term debt cost rate is representative of the gas utility industry.

COST OF COMMON EQUITY

COMMON METHODS

Q. WHAT METHODS ARE COMMONLY PRESENTED BY UTILITIES IN DETERMINING THE COST OF COMMON EQUITY?

A. Four methods commonly presented to estimate the cost of common equity are the DCF, CAPM, RP, and Comparable Earnings (CE) method.

Q. WHAT IS THE THEORETICAL BASIS FOR THE DCF METHOD?

A. The DCF method is the "dividend discount model" of financial theory, which

maintains that the value (price) of any security or commodity is the discounted present value of all future cash flows. The DCF method assumes that investors evaluate stocks in the traditional economic framework, which maintains that the value of a financial asset is determined by its earning power, or its ability to generate future cash flows. The DCF method is also considered a forward-looking model to estimate the cost of common equity.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CAPM?

A. The CAPM describes the relationship of a stock's investment risk and its market rate of return. It identifies the rate of return investors expect so that it is comparable with returns of other stocks of similar risk. This method hypothesizes that the investor-required return on a company's stock is equal to the return on a "risk free" asset plus an equity premium reflecting the company's investment risk. In the CAPM, two types of risk are associated with a stock: (1) firm-specific risk (unsystematic risk); and (2) market risk (systematic risk), which is measured by a firm's beta. The CAPM allows for investors to receive a return only for bearing systematic risk. Unsystematic risk is assumed to be diversified away, and therefore, does not earn a return.

Q. WHAT IS THE THEORETICAL BASIS FOR THE RP METHOD?

A. The theoretical basis for the RP method is a simplified version of the CAPM. The RP method's theory is that common stock is riskier than debt, thus, investors

require a higher expected return on stocks than bonds. In the RP approach, the cost of equity is made up of the cost of debt and a risk premium. While the CAPM uses the market risk premium, it measures the systematic risk of a company or proxy group through the use of beta. The RP method does not measure the specific risk of a company.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CE METHOD?

A. The CE method utilizes the concept of opportunity cost. This means that investors will likely dedicate their capital to the investment offering the highest return with similar risk to alternative investments. Unlike the DCF, CAPM, and the RP methods, the CE method is not market-based and relies upon historic accounting data. Like the RP method, the CE method does not measure the specific risk of a company. The most problematic issue with the CE method is determining what constitutes comparable companies.

I&E RECOMMENDED METHOD TO EMPLOY

Q. WHAT METHOD DO YOU RECOMMEND TO DETERMINE AN APPROPRIATE COST OF COMMON EQUITY FOR VALLEY?

A. I recommend using the DCF method as the primary method to determine the cost of common equity. Additionally, I provide a CAPM analysis to be used as a comparison, not as a check, to the DCF results. The DCF method has the most wide-spread regulatory acceptance, and while the Commission has more recently

based its ROE decisions on a combination of methods, I still recommend primary reliance on the DCF method due to the shortcomings associated with the CAPM method.

Q. PLEASE EXPLAIN WHY YOU CHOSE TO EMPLOY THE DCF TO DETERMINE YOUR RECOMMENDED RETURN ON EQUITY.

A. I recommend using the DCF for a variety of reasons. The DCF is appealing to investors since it is based on the concept that the receipt of dividends in addition to expected appreciation is the total return requirement determined by the market.[1] The use of a growth rate and expected dividend yield are also strengths of the DCF, as this recognizes the time value of money and is forward-looking. The use of the utility's own, or in this case the proxy group's, stock prices and growth rates directly in the calculation also causes the DCF to be industry and company specific. Finally, the current inflationary and economic trends are most certainly reflected in a stock's price, which is used in determining the dividend yield, and the earnings growth rates forecasted by independent professional analysts. Therefore, the DCF contains the most up-to-date projected information of any model and is the superior method for determining the rate of return for the current economic market conditions because it measures the cost of equity directly.

[1] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2020 Edition, p. 153.

Q. PLEASE EXPLAIN WHY YOU CHOSE TO USE THE CAPM AS A COMPARISON TO THE DCF IN YOUR ANALYSIS.

A. I have included a CAPM analysis only as a comparison, and not as a basis, for my recommendation because both the CAPM and the DCF include inputs that allow the results to be specific to the utility industry. However, the CAPM is based on the performance of U.S. Treasury bonds and the performance of the capital market as measured through the S&P 500 and is company-specific only through the use of beta. Beta reflects a stock's volatility relative to the overall market, thereby incorporating an industry-specific aspect to the CAPM, but only as a measure of how reactive the industry is compared to the market as a whole. Although changes in the utility industry are more likely to be accurately reflected in the DCF, which uses the companies' actual stock prices, dividends, and forecasted growth rates, I have included the results of my CAPM analysis because changes in the market, whether as a whole or specific to the utility industry, affect the outcome of each method in different ways. I have provided the results of my CAPM analysis only as a comparison, and not as a check, as it has several disadvantages and should not be given comparable weight to the DCF.

Q. EXPLAIN THE DISADVANTAGES OF THE CAPM.

A. The CAPM, and the RP method by virtue of its similarities to the CAPM, give results that indicate to an investor what the equity cost rate should be if current economic and regulatory conditions are the same as those present during the

historical period in which the risk premiums were determined. This is because beta, which is the only company-specific variable in the CAPM model, measures the *historical* volatility of a stock compared to the *historical* overall market return. Reliance on historical values is especially problematic now given relatively recent events that have impacted economic conditions. Although the CAPM and RP results can be useful to investors in making rational buy and sell decisions within their portfolios, the DCF method is the superior method for determining the rate of return for the current economic market and measuring the cost of equity directly. The CAPM and the RP methods are less reliable indicators because they measure the cost of equity indirectly and risk premiums vary depending on the debt and equity being compared. Also, regulators can never be certain that economic and regulatory conditions underlying the historical period during which the risk premiums were calculated are the same today or will be the same in the future.

Q. IS THERE ANY ACADEMIC EVIDENCE THAT QUESTIONS THE CREDIBILITY OF THE CAPM MODEL?

A. Yes. An article, "Market Place; A Study Shakes Confidence in the Volatile-Stock Theory," which appeared in the *New York Times* on February 18, 1992, summarized a CAPM study conducted by professors Eugene F. Fama and Kenneth R. French.[2] Their study examined the importance of beta, CAPM's risk

[2] Berg, Eric N. "Market Place; A Study Shakes Confidence in the Volatile-Stock Theory" *The New York Times*, February 18, 1992: *nytimes.com* Web. March 23, 2016.

factor, in explaining returns on common stock. In CAPM theory, a stock with a higher beta should have a higher expected return. However, they found that the model did not do well in predicting actual returns and suggested the use of more elaborate multi-factor models.

A more recent article, "The Capital Asset Pricing Model: Theory and Evidence," which appeared in the *Journal of Economic Perspectives,* states that "the attraction of the CAPM is that it offers powerful and intuitively pleasing predictions about how to measure risk and the relation between expected return and risk. Unfortunately, the empirical record of the model is poor - poor enough to invalidate the way it is used in applications."[3] As a result, I conclude that the CAPM's relevance to the investment decision making process does not carry over into the regulatory rate setting process.

Q. PLEASE EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE RP METHOD FROM YOUR ANALYSIS.

A. The RP method is excluded because it is a simplified version of the CAPM and is subject to the same faults explained above. The RP method has a number of underlying assumptions and the most critical one, as well as the most disputed one, is the assumption that the equity risk premium is constant over the time.[4] Most importantly, unlike the CAPM, the RP method does not recognize company-specific risk through beta.

[3] Fama, Eugene F. and French, Kenneth R., "The Capital Asset Pricing Model: Theory and Evidence." *Journal of Economic Perspectives* (2004): Volume 18, Number 3, pp. 25-46.

[4] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2020 Edition, pp. 167-168.

Q. EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE CE METHOD IN YOUR ANALYSIS.

A. The CE method is excluded because the choice of which companies are comparable is highly subjective, and it is debatable whether historic accounting values are representative of the future. Moreover, its historical usage in this regulatory forum has been minimal.

Q. HAVE YOU IDENTIFIED ANY SPECIFIC PROBLEMS WITH THE COMMISSION'S RECENT USE OF THE CAPM METHOD AS A FACTOR IN ESTABLISHING AN ROE?

A. Yes. The Commission indicated in the 2021 Aqua Pennsylvania, Inc. (Aqua) base rate case order that its method "for determining Aqua's ROE shall utilize both I&E's DCF and CAPM methodologies"[5] and that "I&E's DCF and CAPM produce a range of reasonableness for the ROE…",[6] which deviates from prior Commission practice of primarily relying on the DCF. And more recently, the Commission's Columbia Water Company (Columbia Water) base rate case order relied on the results of I&E's DCF and CAPM analyses for determining Columbia Water's ROE.[7]

---

5 *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 154 (Order entered May 16, 2022).

6 *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 178 (Order entered May 16, 2022).

7 *Pa. PUC v. Columbia Water Company,* Docket No. R-2023-3040258, p. 105 (Order entered January 18, 2024).

In a report issued by Regulatory Research Associates, a group within S&P Global Market Intelligence,[8] Aqua's ROE of 10.00% was stated as being above the national average for water utility base rate cases. The referenced S&P report, which directly reviews Aqua's ROE of 10.00% on the very date the Commission entered its order in Aqua's base rate proceeding demonstrated that the ROE awarded to Aqua was higher than average. Specifically, the S&P report determined that the average ROE for water utility base rate cases that have been completed during the first four months of 2022 was 9.63% and for the twelve months ended April 30, 2022 was 9.53%, each of which were well below the 10.00% ROE authorized by the Commission for Aqua. This demonstrates the unreasonable skewing of results associated with using the CAPM as a ceiling for determining a utility's ROE.

In the Columbia Water order, the Commission noted that I&E's DCF and CAPM produced a range of reasonableness for the ROE from 7.84% to 11.09% and approved an ROE of 9.75% as reasonable and appropriate for that company, which is based upon consideration of a variety of factors such as increasing inflation leading to increases in interest rates and capital costs.[9] I respectfully disagree with the Commission's basis (current inflation and interest rates) for determining Columbia Water's ROE of 9.75%. I have presented and discussed

[8] Regulatory Research Associates, "Commission authorizes management performance bonus for Aqua Pennsylvania," *S&P Global Market Intelligence*, May 16, 2022. CIQ Pro: RRA Regulatory Focus: Commission authorizes management performance bonus for Aqua Pennsylvania (spglobal.com) (Accessed June 10, 2025).

[9] *Pa. PUC v. Columbia Water Company,* Docket No. R-2023-3040258, pp.108-109 (Order entered January 18, 2024).

below the forecasted lower-level inflation rates, and the likelihood that the Federal Reserve will cut interest rates in 2025-2026, which would have the effect of reducing potential inflation and interest rate risks on capital costs during 2026, when Valley's new rates will be in effect.

Additionally, as explained above, the CAPM should not be used as a primary method, and it should only be used as a comparison (not as a check) of the DCF. Also, as demonstrated below, the use of the CAPM in this proceeding would result in a significant burden to ratepayers during a time of increased levels of inflation. Therefore, I disagree with providing the CAPM comparable weight to the DCF method.

Q. PLEASE COMMENT ON CURRENT INFLATION AND INTEREST RATE CONCERNS.

A. First, I cannot dispute the current economic conditions with respect to increased interest rates and government bond yields, however, it is important to note that all companies, including regulated utilities, are impacted by high interest rates. It is my understanding that the Federal Reserve may consider resuming interest rate cuts later this year, which would impact Valley's FPFTY when the new rates will be in effect.[10] At the latest, a new Federal Reserve Chair will be appointed during the FPFTY and will likely be someone who is certainly open to reducing interest

[10] https://www.reuters.com/business/fed-keep-rates-hold-least-until-september-inflation-risks-linger-2025-06-10/ (accessed June 10, 2025).

rates.[11]

Per the recent monthly Blue Chip Financial Forecasts (July 1, 2025),[12] the 2026 inflation rates by two measures are forecasted to be in the range of 2.2% to 2.8% as shown in the table below:

	Q3 2025	Q4 2025	Q1 2026	Q2 2026	Q3 2026	Q4 2026
Consumer Price Index	3.7%	3.2%	2.8%	2.5%	2.4%	2.4%
PCE Price Index	3.5%	3.0%	2.7%	2.4%	2.2%	2.2%

Likely future reductions in interest rates would have the effect of reducing interest rate risks in the capital costs in 2026, when Valley's new rates will be in effect. Lastly, it is important to note that unlike unregulated companies, public utilities may file rate cases to address unforeseen or increased expenses, increases in the costs of borrowing, and equity and/or revenue shortfalls due to changes in market conditions.

SUMMARY OF THE COMPANY'S RESULTS

Q. WHAT ARE THE RESULTS OF THE COMPANY'S COST OF EQUITY ANALYSES?

A. Mr. D'Ascendis applied the DCF, CAPM, and RP methods to Gas Utility Proxy Group in analyzing the Company's cost of equity. Additionally, he applied these

[11] https://www.foxbusiness.com/economy/trump-eyes-cabinet-member-replace-mr-too-late-powell-fed-report (accessed on June 30, 2025).
[12] Blue Chip Financial Forecasts, Vol. 44, No. 7, July 1, 2025, p. 2.

models to Non-price Regulated Proxy Group companies. Then he adjusted analysis results range by applying a size premium adjustment/adder of 1.00% and the management performance adjustment of 0.05% to each of his analysis results to conclude an indicated range of common equity cost rates. Mr. D'Ascendis's equity cost analysis results are summarized in the table below (Valley Joint Statement No. 2, p. 5, line 5, Table 4):

Method/Model	**Gas Utility Proxy Group**
DCF	10.29%
Traditional CAPM	11.12%
Risk Premium	10.86%
Cost of Equity Models Applied to Non-Price Regulated Companies	11.92%

Ultimately, Mr. D'Ascendis concludes a cost of equity range of 10.29% -11.92% before adjustments and 11.34% - 12.97% after positive adjustments (size premium adjustment of 1.00% and management performance adder of 0.05%) and recommend an 11.65% cost of equity for Valley (Valley Joint Statement No. 2, p. 5, lines 6-12 and p. 6, lines 1-5). Based on this cost of equity range, he recommends a 11.65% return on common equity for Valley and opines that it is reasonable and conservative (Valley Joint Statement No. 2, p. 6, lines 6-8 and p. 52, lines 19-20 and p. 53, lines 1-2).

I&E RECOMMENDATION

Q. WHAT IS YOUR RECOMMENDED COST OF COMMON EQUITY FOR VALLEY?

A. Based upon my analysis, I recommend a cost of common equity of 10.51% for Valley (I&E Exhibit No. 2, Schedule 1).

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on the use of the DCF method. As explained above, I used my CAPM result only to present a comparison to my DCF results. My DCF analysis uses the proxy group companies' spot dividend yield, a 52-week dividend yield, and five-year earnings growth forecasts. In calculating the dividend yield, I use the forecasted dividend. My DCF result provides a forward-looking estimation for the cost of equity that would be more appropriate and consistent for FPFTY ratemaking.

DISCOUNTED CASH FLOW

Q. PLEASE EXPLAIN YOUR DCF ANALYSIS.

A. My analysis employs the constant growth DCF model as portrayed in the following formula:

$$K = D_1/P_0 + g$$

Where:

K = Cost of equity

D_1 = Dividend expected during the year

P_0 = Current price of the stock

g = Expected growth rate

When a forecast for D_1 is not available, D_0 (the current dividend) must be adjusted by one half of the expected growth rate to account for changes in the dividend paid in period one. As forecasts for each company in my proxy group are available from Value Line, no dividends are adjusted for the purpose of my analysis.

Q. PLEASE EXPLAIN HOW YOU DEVELOPED THE DIVIDEND YIELDS USED IN YOUR DCF ANALYSIS.

A. A representative dividend yield must be calculated over a time frame that avoids the problems of both short-term anomalies and stale data series. For my DCF analysis, the dividend yield calculation places equal emphasis on the most recent spot and the 52-week average dividend yields. The following table summarizes my dividend yield computations for the proxy group (I&E Exhibit No. 2, Schedule 4):

Proxy Group - Average Dividend Yields	
(a) Spot Dividend Yield	3.52%
(b) 52-week Average Dividend Yield	3.75%
(c) Average ((a +b) ÷ 2)	3.63%

Q. WHAT INFORMATION DID YOU RELY ON TO DETERMINE YOUR EXPECTED GROWTH RATE?

A. I have used five-year projected growth rate estimates from S&P, Value Line, and Zacks.

Q. WHAT ARE THE RESULTS OF YOUR FORECASTED EARNINGS GROWTH RATES?

A. The expected average growth rates for my gas proxy group range are 5.31% to 8.44% with an overall average growth rate of 6.87% (I&E Exhibit No. 2, Schedule 5).

Q. WHAT IS THE RESULT OF YOUR DCF ANALYSIS BASED ON YOUR RECOMMENDED DIVIDEND YIELD AND GROWTH RATE?

A. The results of my DCF analysis are calculated as follows (I&E Exhibit No. 2, Schedule 6):

K	$=$	D_1/P_0	$+$	g
10.51%	=	3.64%	+	6.87%

<u>CAPITAL ASSET PRICING MODEL</u>

Q. PLEASE EXPLAIN YOUR CAPM ANALYSIS.

A. My analysis employs the traditional CAPM as portrayed in the following formula:

$$K = R_f + \beta(R_m - R_f)$$

Where:

K	=	Cost of equity
R_f	=	Risk-free rate of return
R_m	=	Expected rate of return on the overall stock market
β	=	Beta measures the systematic risk of an asset

Q. WHAT IS BETA AS EMPLOYED IN YOUR CAPM ANALYSIS?

A. Beta is a measure of the systematic risk of a stock in relation to the rest of the stock market. A stock's beta is estimated by calculating the linear regression of a stock's return against the return on the overall stock market. The beta of a stock with a price pattern identical to that of the overall stock market will equal one. A stock with a price movement that is greater than the overall stock market will have a beta that is greater than one and would be described as having more investment risk than the market. Conversely, a stock with a price movement that is less than the overall stock market will have a beta of less than one and would be described as having less investment risk than the overall stock market.

Q. HOW DID YOU DETERMINE YOUR BETA FOR YOUR CAPM ANALYSIS?

A. In estimating an equity cost rate for my proxy group of seven companies, I used the average of the betas for the proxy group companies as provided in the Value

Line Investment Survey. The average beta for my proxy group is 0.80 (I&E Exhibit No. 2, Schedule 7).

Q. WHAT RISK-FREE RATE OF RETURN HAVE YOU USED FOR YOUR FORECASTED CAPM ANALYSIS?

A. I have chosen to use the risk-free rate of return (R_f) from the projected yield on 10-year Treasury Notes. The yield on the short-term T-Bill is a more theoretically correct parameter to represent a risk-free rate of return, however, it can be extremely volatile. The volatility of short-term T-Bills is directly influenced by Federal Reserve policy. On the other hand, the 30-year Treasury Bond exhibits more stability but is not risk-free. Long-term Treasury Bonds have substantial maturity risk associated with market risk and the risk of unexpected inflation. Long-term treasuries normally offer higher yields to compensate investors for these risks. As a result, I chose to use the yield on the 10-year Treasury Note because it mitigates the shortcomings of the other two alternatives. Additionally, the Commission has historically agreed with I&E and recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return.[13]

[13] *Pa. PUC v. UGI Utilities, Inc. - Electric Division;* Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 99; *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, p. 154 (Order entered May 16, 2022); *Pa. PUC v. Valley Water Company*; Docket No. R-2023-3040258 (Order Entered January 18, 2024). See generally Disposition of Cost of Common Equity, pp. 107-108; Pa. PUC v. Pennsylvania-American Water Company; Docket Nos. R-2023-3043189 and R-2023-3043190 (Order Entered July 22, 2024). See generally Disposition of Capital Asset Pricing Model (CAPM), pp. 171-172.

The forecasted yield on the 10-year Treasury Note, as seen in Blue Chip Financial Forecasts,[14] is expected to range between 4.00% and 4.30% from the second quarter of 2025 through the second quarter of 2026, and it is forecasted to be 4.00% from 2026-2030. For my CAPM analysis, I used 4.13% risk-free rate, which is the average of all the yield forecasts I observed (I&E Exhibit No. 2, Schedule 8).

Q. HOW DID YOU DETERMINE THE ESTIMATED RETURN ON THE OVERALL STOCK MARKET EMPLOYED IN YOUR CAPM ANALYSIS?

A. To arrive at an estimated return on the overall stock market, I observed Value Line's 1700 stocks and the S&P 500 Index returns. The S&P 500 Index has an average return of 12.29% over the past 99 years (1926-2024) and the trendline for the returns over the past 99 years has been relatively flat (I&E Exhibit No. 2, Schedule 9). Value Line expects its universe of approximately 1700 stocks to have an average yearly return of 11.93% over the next three to five years based on a forecasted dividend yield of 2.20% and a yearly index appreciation of 45% (I&E Exhibit No. 2, Schedule 10). I have averaged S&P 500 return of 12.29% and Value Line return of 11.93%, producing an estimated market return of 12.11% (I&E Exhibit No. 2, Schedule 10).

[14] Blue Chip Financial Forecasts, Vol. 44, No. 5, May 1, 2025, p. 2.

Q. WHAT IS THE COST OF EQUITY RESULT FROM YOUR CAPM ANALYSIS?

A. The result of my analysis is as follows (I&E Exhibit No. 2, Schedule 11).

K	=	R_f	+	$\beta(R_m - R_f)$
10.51%	=	4.13%	+	0.80 (12.11% - 4.13%)

Q. HAVE YOU PROVIDED AN ADDITIONAL CAPM ANALYSIS?

A. Yes. I have provided an additional CAPM analysis using Kroll's (formerly Duff & Phelps) recommended U.S. Equity Risk Premium (ERP). Kroll is a trusted and publicly available source that bases its recommended ERP on current and forecasted economic and financial market conditions.

Q. WHAT IS KROLL'S CURRENT RECOMMENDED ERP?

A. Based on recent economic indicators and financial market conditions, Kroll recommends an ERP of 5.50% as of April 25, 2025.[15]

Q. WHAT IS THE COST OF EQUITY RESULT FROM YOUR CAPM ANALYSIS USING KROLL'S RECOMMENDED ERP?

A. The result of my analysis using Kroll's recommended ERP and 20-Year U.S.

[15] Kroll Cost of Capital Inputs Updated to Reflect Heightened Uncertainty in Global Economy (accessed on May 29, 2025).

Treasury yield as risk-free rate is as follows (I&E Exhibit No. 2, Schedule 11):

K	=	R_f	+	β(ERP)
9.36%	=	4.96%	+	0.80 (5.50%)

Q. WHAT IS THE RESULT OF YOUR CAPM ANALYSIS BASED ON THE AVERAGE OF CAPM WITH FORECASTED OVERALL MARKET RETURN AND CAPM WITH KROLL'S RECOMMENDED ERP?

A. The average of my CAPM analyses is 9.94% ((10.51% + 9.36%) ÷ 2) (I&E Exhibit No. 2, Schedule 11).

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS REGARDING YOUR CAPM ANALYSIS?

A. Yes. As discussed above, my recommended cost of equity is based on my DCF analysis. I only present a CAPM analysis as a comparison and not for recommendation purposes as the inputs are highly subjective, and other than beta, the CAPM analysis result is not company or industry specific.

Q. IS IT NECESSARY TO APPLY THE CAPM WITH SIMILAR WEIGHT TO THE DCF WHEN DETERMINING A SPECIFIC RETURN ON EQUITY DUE TO RECENT INFLATIONARY TRENDS?

A. No. My use of the DCF as a primary method in determining an appropriate return

on equity already sufficiently takes inflationary trends into consideration. As mentioned above, the DCF includes a spot stock price in the dividend yield calculation and analysts who generate forecasted earnings growth would take inflation into consideration as well, so it contains the most up-to-date projected information of any model. In other words, the inputs of the DCF capture all known economic factors, including inflation.

CRITIQUE OF MR. D'ASCENDIS'S PROPOSED COST OF EQUITY

Q. DO YOU AGREE WITH MR. D'ASCENDIS'S PROPOSED COST OF EQUITY?

A. No. I disagree with Mr. D'Ascendis's proposed cost of equity for several reasons. First, I disagree with the weights given to the results of CAPM including the Empirical CAPM (ECAPM), and RP analyses of the Gas Utility Proxy Group in determining the cost of equity for Valley. Second, I take issue with certain aspects of Mr. D'Ascendis's risk analysis of Valley. Third, I disagree with his use of the 30-year Treasury Bond yield in place of the 10-year Treasury Note yield. Fourth, I disagree with Mr. D'Ascendis's application of a size adjustment/adder to the market analysis results. Fifth, I disagree with Mr. Mr. D'Ascendis's recommendation to include adder points to the market cost of equity for recognition of superior management performance.

Lastly, as discussed above, I disagree with Mr. D'Ascendis's consideration of the DCF, CAPM including ECAPM, and RP analysis results of Non-price

Regulated Companies Proxy Group used in determining the cost of equity for Valley.

WEIGHTS GIVEN TO THE CAPM/ECAPM AND RP METHODS

Q. DO YOU AGREE WITH MR. D'ASCENDIS'S RELIANCE ON THE CAPM/ECAPM AND RP MODELS?

A. No. I am not opposed to providing the Commission with the results of the traditional CAPM methodology for a point of comparison to the results of the DCF calculation; however, I am opposed to giving the CAPM including the ECAPM and RP model considerable weight in determining an appropriate cost of equity for Valley. For the reasons previously discussed in this testimony, it is inappropriate to give the CAPM including the ECAPM and RP model results similar weight to the DCF as Mr. D'Ascendis has done in creating his indicated cost of equity range of 11.34% to 12.97% after adjustments and recommending an 11.65% cost of equity rate for Valley (Valley Joint Statement No. 2, p. 5, line 5, Table 4 and p. 6, lines 3-8). As discussed above, the CAPM measures the cost of equity indirectly and can be manipulated by the time period chosen. Since the RP is a simplified version of the CAPM/ECAPM, it suffers these same flaws. I briefly discussed below the reasons for disagreement with the ECAPM's use alongside the traditional CAPM in a separate section below. Mr. D'Ascendis acknowledges that he is not aware of any instances where the Commission

explicitly relied on the RP analysis results in the last ten years (I&E Exhibit No. 2, Schedule 12).

RISK ANALYSIS

Q. PLEASE SUMMARIZE MR. D'ASCENDIS'S CLAIM REGARDING THE POTENTIAL BUSINESS RISK FACTORS THE COMPANY FACES.

A. Mr. D'Ascendis describes the Company's risk factors as unique to Valley. Mr. D'Ascendis states that business risks generally faced by utilities include, but are not limited to, the regulatory environment, mandatory environmental compliance requirements, customer mix and concentration of customers, service territory economic conditions, market demand, risks and uncertainties of supply, operations, capital intensity, size, the degree of operating leverage, emerging technologies including distributed energy resources, and the vagaries of weather (Valley Joint Statement No. 2, p. 10, lines 22-23 and p. 11, lines 1-4). Then, he claims that to the extent investors view a company as being exposed to higher risk, the required return will increase, and vice versa (Valley Joint Statement No. 2, p. 11, lines 9-11).

Q. WHAT IS YOUR RESPONSE TO MR. D'ASCENDIS'S CLAIM FOR VALLEY'S POTENTIAL BUSINESS RISKS?

A. Most companies in the natural gas utility sector face similar potential business risks of varying scale as mentioned above. Mr. D'Ascendis did not specifically

address any risks with quantitative and qualitative data faced by Valley, which are significantly dissimilar to the companies within his Gas Utility Proxy Group.

Q. WHAT IS MR. D'ASCENDIS'S CLAIM REGARDING POTENTIAL FINANCIAL RISK FACTORS THE COMPANY FACES?

A. First, Mr. D'Ascendis states that financial risk is the additional risk created by the introduction of debt and preferred stock into the capital structure. The higher the proportion of debt and preferred stock in the capital structure, the higher the financial risk to common equity owners and the equity investors demand higher returns as compensation for bearing higher financial risk (Valley Joint Statement No. 2, p. 12, lines 13-18). Second, Mr. D'Ascendis states that similar bond ratings/issuer credit ratings reflect and are representative of similar combined business and financial risks (i.e., investment risk) faced by bond investors. Although specific business or financial risks may differ between companies, the same bond/credit rating indicates that the combined risks are roughly similar from a debtholder perspective. He agrees that the debtholder risk measures do not translate directly to risks for common equity (Valley Joint Statement No. 2, p. 12, lines 22-23 and p. 13, lines 1-4).

Q. WHAT ARE YOUR COMMENTS REGARDING MR. D'ASCENDIS'S FINANCIAL RISK DISCUSSION?

A. Mr. D'Ascendis discussed, in general, higher financial risk for higher debt and

preferred stock in the capital structure faced by all companies and did not specifically address financial risks with quantitative and qualitative data faced by Valley, which are significantly dissimilar to the companies within his Gas Utility Proxy Group.

Q. WHAT IS YOUR RESPONSE TO MR. D'ASCENDIS'S OVERALL INVESTMENT RISK ASSESSMENT?

A. The risks referenced by Mr. D'Ascendis affect the entire gas utility industry, therefore, Valley faces the same exposure to these risks and uncertainties as all the other companies in our proxy groups. Investors voluntarily buy and hold stocks in natural gas utility companies, indicating they are aware of these risks and the returns. The cost of equity I recommend in this proceeding is adequately measured by my proxy group. Therefore, any additional consideration of the Company's risk profile and making corresponding adjustments or adders in determining the cost of equity for Valley is unwarranted, unjustified, and unsupported.

COST OF EQUITY ADJUSTMENTS

RISK-FREE RATE OF RETURN

Q. HOW HAS MR. D'ASCENDIS CALCULATED THE PROSPECTIVE RISK-FREE RATE FOR USE IN THE CAPM MODEL?

A. Mr. D'Ascendis's calculation of the risk-free rate is similar to mine. He

considered the U.S. Treasury yield estimates published by Blue Chip Financial Forecasts for the six quarters (first quarter of 2025 through second quarter of 2026) and the long-term projections for the years 2026-2030 and 2031-2035 from the time of his analysis (Valley Joint Statement No. 2, p. 38, lines 10-13). However, he used the 30-year Treasury Bond while I employed the 10-year Treasury Note. Also, I used five quarters (second quarter of 2025 through second quarter of 2026) for the treasury rate and a long-range, five-year average, future data point accounting for 2026-2030 predictions. He recommends using a 4.55% risk-free rate for the CAPM analysis (Valley Joint Statement No. 2, p. 38, lines 9-10).

Q. WHAT COMMENTS DO YOU HAVE REGARDING MR. D'ASCENDIS'S RISK-FREE RATE?

A. I disagree with Mr. D'Ascendis's method and inputs to determine the risk-free rate based on the 30-year Treasury Bond yield. I must reiterate my earlier statements that long-term Treasury Bonds have substantial maturity risk associated with the market risk and the risk of unexpected inflation and normally offer higher yields to compensate investors for these risks. Using the 10-year Treasury Note is more appropriate to balance the short-term volatility risk and the long-term inflation risk.

The Commission has recognized the 10-year Treasury Note as the superior measure for the risk-free rate by stating the following,[16]

> We agree with I&E and the ALJs that using the yield on the 10-year Treasury Note provides a better measure of the risk-free rate of return than using the yield on the 30-year Treasury Bond, as recommended by UGI. In our view, using the 10-year Treasury Note balances the shortcomings of the short-term T-Bill and the 30-year Treasury Bond. Although long-term Treasury Bonds have less risk of being influenced by federal policies, they have substantial maturity risk associated with the market risk. In addition, long-term Treasury Bonds bear the risk of unexpected inflation.

Additionally, applying a long-term Treasury Bond yield projection for the years 2031-2035 is inappropriate and is too far out for determining the cost of capital for Valley's new rates to be effective in 2026.

CAPM MARKET RISK PREMIUM

Q. WHAT MARKET RISK PREMIUM DID MR. D'ASCENDIS USE IN HIS TRADITIONAL CAPM ANALYSIS FOR THE GAS UTILITY PROXY GROUP?

A. Mr. D'Ascendis used an 8.15% market risk premium in his CAPM analysis, calculated by averaging results of five measures for the historic and prospective market risk premium [(7.31% + 7.94% + 8.18% + 6.65% + 10.68%) ÷ 5] as shown in Table 10 (Valley Joint Statement No. 2, p. 40, lines 5-7).

[16] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order entered October 25, 2018), p. 99. (Disposition of Capital Asset Pricing Model (CAPM)).

Q. DO YOU AGREE WITH MR. D'ASCENDIS'S USE OF AN AVERAGE MARKET RISK PREMIUM OF 8.15%?

A. No. Mr. D'Ascendis inappropriately mingled the historic risk premium with the prospective risk premium and used the average 8.15% risk premium in his CAPM analysis. Since the cost of equity is determined for the FPFTY, using a historic risk premium skews the prospective market risk premium and the CAPM results. In fact, Kroll's latest forecast (April 15, 2025) for the equity risk premium is 5.50%,[17] which is significantly lower than Mr. D'Ascendis's calculated risk premium of 8.15%.

Additionally, Mr. D'Ascendis inappropriately included the outlier 10.68% (15.23% - 4.55%) prospective equity risk premium using measures of capital appreciation and income returns for the S&P 500 in the calculation of average market risk premium (Valley Exhibit (DWD-1), Schedule DWD-5, p. 2). A market risk premium of 10.68% is 23.40% higher than the next lowest market risk premium of 8.18% included in his average risk premium calculation. Excluding the outlier market risk premium of 10.68%, the average market risk premium of his four measures is 7.52% [(7.31% + 7.94% + 8.18% + 6.65%) ÷ 4] as opposed to 8.15% applied in the CAPM analysis.

[17] Kroll Cost of Capital Inputs Updated to Reflect Heightened Uncertainty in Global Economy (accessed on June 17, 2025).

Q. WHAT WOULD BE MR. D'ASCENDIS'S TRADITIONAL CAPM RESULTS USING THE MODIFIED MARKET RISK PREMIUM?

A. Using the modified risk premium of 7.52%, Mr. D'Ascendis's traditional CAPM result would be 10.49% as opposed to 10.96% (Valley Exhibit (DWD-1), Schedule DWD-5, p. 1) as shown in the table below:

K	=	R	+	β (R_m - R_f)
10.49%	=	4.55%	+	0.79 (7.52%)

If he uses Kroll's risk premium of 5.50%, his CAPM result would be 8.90% as shown in the table below:

K	=	R	+	β (R_m - R_f)
8.90%	=	4.55%	+	0.79 (5.50%)

EMPIRICAL CAPM

Q. WHAT IS THE ECAPM?

A. The ECAPM is a modified version of the CAPM which attempts to address the belief that the actual risk versus return correlation is flatter than what is predicted by the CAPM. The implication is that the CAPM underestimates returns with lower levels of risk and over-estimates the returns associated with higher levels of risk. The ECAPM entails assigning 25% weight to the market beta (1.0) and 75%

weight to the individual company (or proxy group) beta.[18]

Q. EXPLAIN WHY YOU DISAGREE WITH MR. D'ASCENDIS'S USE OF THE ECAPM.

A. The use of the ECAPM in estimating the cost of capital does not increase the validity of the result, but instead it injects another measure of subjectivity into the CAPM in an attempt to make the Security Market Line more accurate. The ECAPM reduces the purpose of the beta, which is the only company-specific variable applied the CAPM model. This additional layer of subjectivity provides an even stronger basis to rely on the DCF, as I have done, as the primary method to calculate a utility's cost of equity.

Q. DO YOU AGREE WITH MR. D'ASCENDIS'S ECAPM RESULT FOR GAS UTILITY PROXY GROUP?

A. No. I recommend the Commission reject Mr. D'Ascendis's calculated ECAPM result, which he used along with the traditional CAPM result to produce a combined average CAPM result. Averaging the ECAPM with the traditional CAPM produce a result of 11.12% (average of mean and median results) as opposed to 10.96%, the average of mean and median results of traditional CAPM. Mr. D'Ascendis inflated the traditional CAPM result of 10.96% by simply combining the ECAPM to produce the indicated CAPM cost of equity rate of

[18] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2020 Edition, p. 106.

11.12% (Valley Joint Statement No. 2, p. 40, lines 11-13 and Exhibit (DWD-1), Schedule DWD-5, p. 1).

SIZE PREMIUM ADJUSTMENT TO ANALYSIS RESULTS

Q. PLEASE EXPLAIN MR. D'ASCENDIS'S PROPOSED SIZE PREMIUM ADJUSTMENT TO THE ANALYSIS RESULTS.

A. Mr. D'Ascendis added a 100-basis point (1.00%) size premium adjustment to his indicated cost of common equity results range of 10.29% - 11.92% (Valley Joint Statement No. 2, p. 5, line 5, Table 4). He asserts that size affects business risk because smaller companies generally are less able to cope with significant events that affect sales, revenues, and earnings. For example, smaller companies face more risk exposure to business cycles and economic conditions, both nationally and locally. Additionally, the loss of revenues from a few larger customers would have a greater effect on a small company than on a bigger company with a large more diverse customer base (Valley Joint Statement No. 2, p. 47, lines 9-14). He claims that smaller firms are riskier and investors generally demand greater returns from smaller firms to compensate for less marketability and liquidity of their securities (Valley Joint Statement No. 2, p. 47, lines 15-17). Lastly, Mr. D'Ascendis cite financial literature of Kroll's Cost of Capital Navigator: U.S. Cost of Capital Module, Fama and French - "The Capital Asset Pricing Model: Theory and Evidence," and Eugene Brigham's notes (Valley Joint Statement No. 2, pp. 47-48) in support of his claim for a size adjustment for Valley.

Q. HOW DID MR. D'ASCENDIS CALCULATE A SIZE PREMIUM ADJUSTMENT OF 1.00%.

A. Mr. D'Ascendis measured size premium by comparing the market capitalization of Valley with Gas Utility Proxy Group's companies. The average companies in the Gas Utility Proxy Group have a market capitalization 253.8 times that of Valley's capitalization (Valley Joint Statement No. 2, p. 49, lines 14-15, Table 12). Using the Ibbotson Associates' size premia for the decile portfolios of the NYSE/AMEX/NASDAQ, the average size premium for the Gas Utility Proxy Group with market capitalizations of $4.721 billion falls in the 5th decile while Valley's estimated market capitalization of $18.603 million, placing it in the 10th decile, which results in a size premium spread of 3.73% between the 5th decile and 10th decile (Valley Joint Statement No. 2, p. 50, lines 10-19 and Valley Exhibit (DWD-1), Schedule DWD-8, p. 1). Relying on the standard deviation of 1.53% of the DCF model indicated results (10.29%), Mr. D'Ascendis recommends a 1.00% size premium adjustment or adder to the indicated cost of equity results (Valley Joint Statement No. 2, p. 51, lines 15-20).

Q. DO YOU AGREE WITH MR. D'ASCENDIS'S SIZE PREMIUM ADJUSTMENT TO THE INDICATED COST OF EQUITY RESULTS?

A. No. Mr. D'Ascendis's proposed size adjustment of 1.00% is unnecessary because the technical literature he cites supporting a size premium adjustment related to the small size of a company is not specific to the utility industry, and, therefore, has

no relevance in this proceeding. Regulated utilities stand out from non-regulated industries because all utilities, small or large, have a monopoly market environment that affords protection from competition risk. Valley is owned by C&T Enterprises, Inc., which provides Valley the required equity and loan funding support in addition to technical, operational, and managerial support. Moreover, it is improper to assume the market-to-book ratio of Valley is equal to the market-to-book ratio of the Gas Utility Proxy Group of seven companies to determine the size difference because Valley and C&T's stocks are not traded on the stock market. Therefore, it is inappropriate to determine that Valley's smaller size creates higher risk as compared to the Gas Utility Proxy Group companies thus qualifying Valley for a higher return.

Furthermore, any expense impact resulting from the lesser buying power of a smaller utility is reflected in the revenue requirement and the dollar-for-dollar recovery that applies to expenses. To apply an additional size adjustment to a smaller regulated utility would only duplicate the burden to ratepayers. Valley's cost of equity is determined based on market data of the Gas Utility Proxy Group and therefore there is no need to apply an unsupported size premium adder to inflate the market based cost of equity results. Lastly, In response to I&E-RR-21, Valley states that there have been no "large customers" accounts lost or gained in 2022, 2023, and 2024. One Compressed Natural Gas (CNG) station closed in April 2025 and another CNG station is expected to close later this year. However, the April 2025 station closure only affected a small portion of Valley's total

revenue, an average revenue loss of $2,389 and the later station closure would result in an average revenue loss of $1,773 (I&E Exhibit No. 2, Schedule 13).

Q. IS THERE ACADEMIC EVIDENCE THAT SUPPORTS YOUR CONCLUSION THAT A SIZE ADJUSTMENT IS NOT APPLICABLE TO UTILITY COMPANIES?

A. Yes. In the article "Utility Stocks and the Size Effect: An Empirical Analysis," Dr. Annie Wong concludes,

> The objective of this study is to examine if the size effect exists in the utility industry. After controlling for equity values, there is some weak evidence that firm size is a missing factor from the CAPM for the industrial but not for utility stocks. This implies that although the size phenomenon has been strongly documented for the industrials, the findings suggest that there is no need to adjust for the firm size in utility rate regulation.[19]

Valley presents no evidence to support the application of a non-utility study regarding a size adjustment to a utility setting. Absent any credible article to refute Dr. Wong's findings, Mr. D'Ascendis's proposed size adjustment of 1.00% should be rejected. The size premium data based on market capitalization is not reliable, because for certain periods, large-capitalization stocks outperform mid-capitalization stocks and vice versa, and it is difficult to establish a sufficient correlation to prove that size is a specific risk for utilities.

[19] Dr. Annie Wong, "Utility Stocks and the Size Effect: An Empirical Analysis," *Journal of Midwest Finance Association* 1993, pp. 95-101.

Q. CAN YOU PROVIDE ANY RELEVANT PRIOR COMISSION RULINGS ON THIS SUBEJCT?

A. The Commission has rejected the application of a size adjustment to the CAPM cost of equity calculation where it agreed that the literature the company cites is not specific to the utility industry.[20]

Mr. D'Ascendis cite the Commission order[21] in the 2019 Citizens' Electric base rate case where the Commission notes that it recognizes that Citizens' size is a factor in assessing its ability to attract capital (Valley Joint Statement No. 2, p. 51, lines 3-4). However, the Commission did not specifically approve or quantify a size premium adjustment/adder (in basis points or percentage) in Citizens' cost of equity. The Commission order[22] notes,

> Consistent with the foregoing discussion, like the ALJs, we shall not specify an exact size adjustment. Instead, we shall adopt the ALJs' recommendation that Citizens' be awarded a DCF cost of common equity of 9.49%. In our view, this cost of equity is reasonable and strikes an appropriate balance by recognizing the general inverse relationship between a company's size and its risk, while acknowledging that there is not substantial evidence in the record to prove that an explicit size basis point adjustment is warranted in this case.

Similarly, in the 2019 Valley's base rate case, the Commission order[23] notes,

---

[20] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order Entered October 25, 2018), p. 100 (Disposition of Cost of Common Equity).

[21] *Pa. PUC v. Citizens Electric Company of Lewisburg, PA*; Docket No. R-2019-3008212 (Order Entered April 27, 2020), p. 103 (Disposition of Cost of Common Equity).

[22] *Pa. PUC v. Citizens Electric Company of Lewisburg, PA*; Docket No. R-2019-3008212 (Order Entered April 27, 2020), p. 104 (Disposition of Cost of Common Equity).

[23] *Pa. PUC v. Valley Energy, Inc.*; Docket No. R-2019-3008209 (Order Entered April 27, 2020), p. 114 (Disposition of Cost of Common Equity).

> We decline to award an explicit 100-basis point size adjustment, as advocated by Valley. Consistent with the foregoing discussion, like the ALJs, we shall not specify an exact size adjustment. Instead, we shall adopt the ALJs' recommendation that the Company be awarded a DCF cost of common equity of 9.68%, which is one standard deviation above I&E's DCF recommendation of 8.46%. In our view, this cost of equity is reasonable and strikes an appropriate balance by recognizing the general inverse relationship between a company's size and its risk, while acknowledging that there is not substantial evidence in the record to prove that an explicit size basis point adjustment is warranted in this case.

Q. BASED ON THE COMPANY'S CLAIMED RATE BASE AND CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 100 BASIS POINTS FOR MR. D'ASCENDIS'S PROPOSED SIZE PREMIUM ADJUSTMENT TO THE COST OF EQUITY?

A. The example below illustrates the impact of 1.00% (100 basis points) to the Company's cost of equity if the size premium adjustment is allowed in the cost of equity when applied to the Company's total claimed rate base and capital structure:

Valley's Claimed Equity Percentage of Capital Structure*	49.94%
Size Premium Adjustment applied to the CAPM Results	1.00%
Claimed Rate Base*	$25,187,466
Impact Prior to Gross Up (0.4894 x 0.01 x $25,187,466)	$123,267
Gross Revenue Conversion Factor*	1.41943
Total Impact to Ratepayers ($123,267 x 1.41943)	**$174,969**

* Valley Exhibit (HSG-1), Schedule C1, p. 1.

In this example, an addition of 100 basis points for the size premium adjustment to the cost of equity would force ratepayers to fund an unwarranted additional amount of $174,969 annually to cover the increase of the overstated rate of return along with the associated impact resulting from increases to income taxes and uncollectibles.

MANAGEMENT PERFORMANCE

Q. DISCUSS THE COMPANY'S CLAIM SPECIFIC TO EXEMPLARY MANAGEMENT PERFORMANCE.

A. Mr. D'Ascendis proposes a 5-basis point (0.05%) upward adjustment to his recommended cost of equity range 10.29% - 11.92% in recognition of the Company's management performance (Valley Joint Statement No. 2, p. 52, lines 1-2 and Exhibit (DWD-1), Schedule DWD-1, p. 1). He primarily relies on the direct testimony of Company witness Edward E. Rogers (Valley Joint Statement No. 4) to support the consideration of additional basis points for Valley's management performance in the cost of equity (Valley Joint Statement No. 2, p. 51, lines 25-27).

Q. WHAT INFORMATION DOES MR. ROGERS PROVIDE TO SUPPORT THE COMPANY'S CLAIM FOR EFFECTIVE MANAGEMENT PERFORMANCE?

A. Mr. Rogers states that pursuant to 52 Pa. Code § 523, the Commission should

consider Valley's operations as supportive of the proposed performance adjustment for Valley's management performance demonstrated by its efforts, which include main replacements, low customer complaints, emergency response, favorable customer feedback, technology adoption (Smart hub use), the Pennsylvania Department of Community and Economic Development's grant use for the East Athens Expansion, and the low lost and unaccounted for gas volume (Valley Joint Statement No. 4, p. 9, lines 11-23, p. 10, lines 1-23, and p. 11, lines 1-3). He reasons that all these efforts provide material evidence of efficiency, effectiveness, and adequacy of services to customers.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIMS REGARDING MANAGEMENT PERFORMANCE?

A. No. First, many of the topics presented by the Company fall within the categories of safe and reliable customer service and satisfaction required of every public utility under 66 Pa C.S.A. §1501. There is no basis or support for the addition of 5 basis points (0.05%) for superior or exemplary management performance. Additionally, all operating and management expenses and costs to implement various programs and initiatives listed above are recovered from ratepayers and the Company passes capital expenditure program costs to its ratepayers via base rates. Further, if the Company is effective at controlling operating and maintenance costs, those savings should flow through to ratepayers and/or investors. These savings would likely be offset by the addition of basis points for

management performance as ratepayers would have to fund the additional costs. This defeats the purpose of any cost cutting measures to benefit ratepayers. Lastly, Valley's efforts to continue providing safe, reliable, and efficient services does not demonstrate exemplary management performance that the Company has gone above and beyond what it is required to do under the Code and warrants recognition through an affirmative adjustment to its cost of common equity. The management effectiveness adjustment should only be awarded for management effectiveness in truly exceptional circumstances.

Q. ARE YOU AWARE OF ANY COMPANIES THAT HAVE RECENTLY RECEIVED ADDITIONAL BASIS POINTS IN RECOGNITION OF MANAGEMENT PERFORMANCE?

A. Yes. Most recently, the Commission awarded Aqua an addition of 25 basis points for its management performance efforts.[24] However, it is important to recognize that this addition was based specifically on Aqua rescuing troubled water and wastewater systems at the Commission's request. The Commission stated: [25]

> We specifically recognize Aqua's efforts and willingness to quickly provide emergency aid to various water and wastewater systems that needed substantial improvement. Aqua has often provided this emergency aid on short notice and at the request of the Commission or other parties to protect the public from egregious health and safety threats and to

[24] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 168-173 (Order entered May 16, 2022).

[25] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, p. 169 (Order entered May 16, 2022).

protect the Commonwealth's drinking water resources from catastrophic damage.

The Commission awarded a performance factor adjustment of 0.05% to Valley in a base rate case at Docket No. R-2019-3008209 and the Company asserts that the performance factor adjustment still applies in this case (Valley Joint Statement No. 2, p. 52, lines 5-9).

Q. DOES THE COMMISSION'S PAST ISSUANCE OF ADDITIONAL EQUITY POINTS TO RECOGNIZE MANAGEMENT PERFORMANCE MEAN THAT VALLEY SHOULD ALSO RECEIVE AN ADJUSTED RETURN ON EQUITY?

A. No. The issuance of equity points to recognize management performance should be done on a case-by-case basis. The situation in the Aqua proceeding as discussed above was very specific to Aqua rescuing troubled water and wastewater systems and preventing health and safety concerns regarding drinking water. This scenario does not apply to Valley. The Commission's reward for the management performance in the 2019 base rate case does not warrant or automatically qualify Valley for the performance reward in this base rate case as there is no record of evidence for change or exceptional performance since 2019.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE CONSIDERATION OF ADDITIONAL BASIS POINTS FOR THE COMPANY'S MANAGEMENT PERFORMANCE?

A. I am aware that under 66 Pa C.S.A. § 523 the Commission has the authority to consider a utility's performance, however, it is not mandatory that the Commission grant additional basis points to the ROE. Ultimately, as alluded to above, true strong management performance is earning a higher return through efficient use of resources and cost cutting measures. The greater net income resulting from cost savings and true efficiency in management and operations is available to be passed on to both ratepayers and shareholders. I do not believe that Valley, or any utility should be gifted an additional 5 basis points for doing what they are required to do to provide adequate, efficient, safe, and reasonable service under 66 Pa C.S.A. §1501.

For all the reasons discussed above and the additional financial impact on ratepayers, I recommend that any addition of basis points to the cost of equity for management performance be disallowed.

Q. WHAT WOULD MR. D'ASCENDIS'S COST OF EQUITY RESULTS BE WITHOUT A SIZE PREMIUM ADJUSTMENT OF 1.00% AND MANAGEMENT PERFORMANCE REWARD OF 0.05%?

A. Mr. D'Ascendis's cost of equity results range would be 10.29% - 11.92% without the unnecessary size premium adjustment of 1.00% and management performance

adjustment of 0.05% in contrast to his indicated cost of equity range of 11.34% - 12.97% and the recommended cost of equity would be 10.60% rather than the claimed 11.65% cost of equity for Valley (Valley Joint Statement No. 2, p. 5, line 5, Table 4, p. 52, lines 19-20, and p. 53, lines 1-2).

OVERALL RATE OF RETURN RECOMMENDATION

Q. WHAT IS THE COMPANY'S PROPOSED COST OF EQUITY AND OVERALL RATE OF RETURN?

A. The Company recommends a cost of equity of 11.65% and an overall rate of return of 8.27%.

Q. WHAT IS I&E'S RECOMMENDED COST OF EQUITY AND OVERALL RATE OF RETURN?

A. I&E Exhibit No. 2, Schedule 1, shows the calculation of an appropriate cost of equity to be 10.51% with an overall rate of return for Valley to be 7.71%.

Q. DO YOU HAVE ANY FINAL COMMENTS REGARDING THE COMPANY'S PROPOSED RETURN ON EQUITY?

A. Yes. A report issued by Regulatory Research Associates, a group within S&P Global Market Intelligence,[26] illustrates that Valley's 11.65% requested return on

[26] S&P Global, RRA Regulatory Focus, "Major energy rate case decisions in US – January-March 2025, Quarterly update on decided rate cases," April 25, 2025.

equity is higher by 192 basis points (1.92%) than the average return on equity of 9.73% of all gas utility rate cases decided/approved by state regulatory authorities in the first quarter of 2025, largely in line with the 9.72% average return on equity for the full year 2024.

Finally, while I am aware of the rising costs of capital due to the after-effects of the pandemic and inflation, I believe it is equally important not to overburden ratepayers with consistent rate increases. Despite current economic conditions, Valley is requesting a record return on equity, which would burden customers' rates. As detailed above, the effect of Mr. D'Ascendis's adjustments to the market-determined cost of common equity are an enormous burden to ratepayers and are completely unwarranted and unnecessary.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes. However, any topics discussed, or assertions made by any Valley witnesses that I have not addressed should not be construed as I&E's agreement or acceptance of inputs, discussion, or assertions made by the Valley witnesses in this proceeding.

D. C. PATEL

PROFESSIONAL EXPERIENCE AND EDUCATION

EXPERIENCE:

- Pennsylvania Public Utility Commission, Harrisburg, Pennsylvania
  June 2015 to present
  Fixed Utility Financial Analyst, Bureau of Investigation and Enforcement
- Pennsylvania Insurance Department, Harrisburg, Pennsylvania
  March 2013 - June 2015
  Insurance Company Financial Analyst, Bureau of Company Licensing & Financial Analysis
- Pennsylvania Department of Revenue, Harrisburg, Pennsylvania
  November 2010 - March 2013
  Accounting Assistant, Bureau of Corporation Taxes (Accounting)
- Hersha Hospitality Management, Harrisburg, Pennsylvania
  June 2007 - November 2010
  Staff Accountant (Taxes), Accounting Department
- Corporate Experience-India
  February 1987 - April 2007
  Company Secretary for three different companies during this period, which were listed on the Stock Exchanges.

EDUCATION/CERTIFICATION:

- Gujarat State University, Ahmedabad, India:
  - Bachelor of Commerce (Major concentration: Accounting)
    June 1980 - April 1983
  - Bachelor of Law
    June 1983 - December 1988

- The Institute of Company Secretaries of India, New Delhi, India:
  Post Graduate Professional Degree: Company Secretary
  June 1983 - December 1985

RATE CASE TRAINING:

- Attended SURFA - 56th Financial Forum (ROR) in April 2025
- Attended SURFA - 54th Financial Forum (ROR) in April 2023
- Attended 37th Western NARUC Utility Rate School in May 2016

VALLEY ENERGY, INC.
DOCKET NO. R-2025-3054393

I&E-RR-12-D

Reference Valley Joint Statement No. 2, p. 38, line 1 (Table 9) concerning the RP analysis indicated result of 11.86%. State whether Mr. D'Ascendis is aware of any instances where the Commission specifically relied upon an RP analysis to determine an appropriate cost of equity in any Pennsylvania base rate proceeding in the last ten years. If so, identify the applicable cases, including the docket numbers.

Response Provided By:
Dylan W. D'Ascendis, Partner, ScottMadden Inc.
Ryan M. Kucan, Manager, ScottMadden Inc.

Date: May 28, 2025

Response:

Messrs. D'Ascendis and Kucan are not aware of any instances where the Commission relied upon an RP analysis in the last ten years specifically; however, in Docket No. R-2013-2360798, concerning Columbia Water Company, the Commission states in its disposition that:

> In this case, the range of ROE recommendations presented by the Parties based on the DCF methodology is 8.25% to 11.35%. Based on our review of the testimony, data, and cost models presented, we believe that the evidence in this case supports an ROE finding in the reasonable range of 9.25% to 10.25% using the DCF method as the foundation. The equity-heavy capital structure of Columbia indicates that a slightly lower ROE is appropriate. However, the small size of the Company, its management effectiveness, and the results of ROE models other than DCF are all reasons to set a higher ROE. Therefore, within our indicated range of reasonableness, we conclude that a ROE of 9.75% is appropriate for our ratemaking determinations herein.

While not specifically stated, the RPM was one of the models presented in that proceeding. Furthermore, in Docket No. R-2014-2402324, concerning Emporium Water Company, in the recommended decision, Administrative Law Judge Buckley states:

> The Company witness, Dylan W. D'Ascendis, recommended that the Commission authorize Emporium the opportunity to earn an overall rate of return of 7.17% based upon a comparable industry group hypothetical capital structure which consists of 46.29% long-term debt and 53.71% common equity at an embedded or actual debt cost rate of 2.68%. He also recommended a common equity cost rate of 11.05%. Emporium Statement No. 2 at 2. While the Commission may see fit to adjust this, these recommendations are at least in the zone of reasonableness and fiscal reality.

RESPONSE OF
VALLEY ENERGY INC.
TO THE BUREAU OF INVESTIGATION AND ENFORCEMENT
DATA REQUESTS
DOCKET NO. R-2025-3054393

I&E-RR-21

Reference Valley Statement No. 2, p. 51, lines 12-14, where Mr. Rea states that the loss of revenues from a few larger customers would have a greater effect on a small company. Identify all "large customer" accounts lost and gained by year for the years 2022, 2023, and 2024.

Response Provided By: Edward E. Rogers, President & CEO
Valley Energy, Inc.

Date: June 27, 2025

Response:

There have been no "large customers" accounts lost or gained for the years 2022, 2023, and 2024. With a smaller customer base, "large customers" losses have the potential to significantly affect revenues, e.g. one large industrial plant closure could result in an 8 percent decrease in revenues that would need to be absorbed by the remaining customers.

While there have been no large customers lost or gained in the last 3 years, the Company did lose a Transport Firm – DDQ customer, a Compressed Natural Gas (CNG) station that closed in April 2025 and was advised that another CNG station will close later this year. The station closure resulted in an average revenue loss of $2,389 and the latter station will result in an average revenue loss of$1,773, for a combined loss of $4,162. Both revenue losses were not addressed or included in the current filing.

Concerning:

Rate Base
Test Year
Reporting Requirements
Scale Back of Rates

TABLE OF CONTENTS

INTRODUCTION **1**

TEST YEAR **2**

UTILITY PLANT REPORTING REQUIREMENTS **3**

SCALE BACK OF RATES **7**

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Esyan A. Sakaya. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, Pennsylvania 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed as a Fixed Utility Valuation Engineer in the Pennsylvania Public Utility Commission's (Commission) Bureau of Investigation and Enforcement (I&E).

Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?

A. My educational and professional background is set forth in the attached Appendix A.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. The I&E analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. My direct testimony relates to Valley Energy, Inc.'s (Valley or Company) request for a base rate revenue increase of $1,626,099 (Valley Ex. HSG-1, Sch. C1). My testimony specifically addresses the following issues:

- Test Year
- Rate Base
- Fully Projected Future Test Year Reporting Requirements
- Scale back of rates

Q. DOES YOUR DIRECT TESTIMONY INCLUDE AN EXHIBIT?

A. No.

TEST YEAR

Q. WHAT IS A TEST YEAR AND HOW IS IT USED BY A COMPANY IN A RATE PROCEEDING?

A. A test year is the twelve-month period over which a utility's costs and revenues are measured as the basis for setting prospective base rates. To meet its burden of proof, a utility has the option of using a historic test year (HTY), a future test year (FTY), or a Fully Projected Future Test Year (FPFTY). An HTY is a twelve-month period selected by a company that represents the most recent full year of actual data. An FTY begins the day after the HTY ends and is determined using a combination of actual data and a projection of annualized and normalized

estimates of future revenues and expenses and a corresponding rate base at the end of that period. The FPFTY is defined as the twelve-month period that begins with the first month that new rates will be placed into effect, after the application of the full suspension period permitted under Section 1308(d). The FPFTY created a shift from the fundamental ratemaking principle that a public utility should only be permitted to include projects in rate base and earn a reasonable return on its investments after they become "used and useful" for the utility's public service.

Q. WHAT TEST YEARS HAS THE COMPANY USED IN THIS PROCEEDING?

A. Valley has selected the year ended December 31, 2024 as the HTY, the year ending December 31, 2025 as the FTY, and the year ending December 31, 2026 as the FPFTY (Valley St. No. 1, p. 16).

Q. WHAT TEST YEAR HAS THE COMPANY BASED ITS REVENUE REQUIREMENT ON IN THIS PROCEEDING?

A. Valley based its requested revenue requirement on the FPFTY ending December 31, 2026 (Valley St. No. 1, p. 2).

UTILITY PLANT REPORTING REQUIREMENTS

Q. WHERE IS UTILITY PLANT IN SERVICE CLAIMED IN A RATE FILING?

A. Utility plant in service is claimed as a component of rate base.

Q. WHAT IS INCLUDED IN RATE BASE?

A. Rate base consists of the depreciated original cost of a utility's investment in plant a utility has in place to serve customers (utility plant in service) plus other additions and deductions that the Commission determines to be necessary to keep the utility operating and providing safe and reliable service to its customers.

Q. HOW IS RATE BASE USED WITHIN THE RATEMAKING FORMULA?

A. Rate base is one part of the financial equation used by the Commission to determine the appropriate revenue that a utility is granted in a rate proceeding. The revenue determination allows the utility to meet its expense obligations and gives it the opportunity to earn the rate of return established by the Commission in a rate proceeding. The equation used to determine the proper revenue requirement level is:

Revenue Requirement = (Rate Base x Rate of Return) + Operating Expenses + Depreciation Expenses + Taxes

Q. HOW IS THE DEPRECIATED ORIGINAL COST OF UTILITY PLANT IN SERVICE AT THE END OF THE TEST YEAR DETERMINED?

A. The depreciated original cost is equal to the original cost of the plant in service that is used and useful in the provision of utility service to the customers less the depreciation reserve as adjusted by other items such as salvage value and removal costs. By using an FPFTY, the depreciated original cost of the plant in service is

computed by taking a "snapshot" look at the value of used and useful utility plant estimated to be in service at the end of the FPFTY.

Q. WHAT IS THE COMPANY CLAIMING FOR UTILITY PLANT IN SERVICE FOR THE FPFTY ENDING DECEMBER 31, 2026?

A. The Company is claiming FPFTY assets of $49,963,792 less accumulated depreciation of $24,061,709 producing a net plant claim of $25,902,083 (Valley Ex. HSG-1, Sch. C1-5).

Q. HOW MUCH ADDITIONAL PLANT IN SERVICE DOES VALLEY CLAIM AS FTY AND FPFTY ADJUSTMENTS TO UTILITY PLANT?

A. The Company has projected $3,075,049 in FTY plant additions and $10,826 of FTY retirements, and $3,349,479 of FPFTY plant additions and $25,156 of FPFTY retirements, producing an FPFTY gross plant claim of $49,963,792 (Valley Ex. HSG-1, Sch. C3, p. 1, line 37).

Q. DO YOU HAVE ANY RECOMMENDED CHANGES TO UTILITY PLANT IN SERVICE OR CORRESPONDING DEPRECIATION?

A. No.

Q. DO YOU HAVE ANY RECOMMENDATIONS REGARDING PLANT ADDITIONS THAT THE COMPANY PROJECTS TO BE IN SERVICE DURING THE FTY ENDING DECEMBER 31, 2025, AND THE FPFTY ENDING DECEMBER 31, 2026?

A. Yes. I recommend that the Company be required to provide I&E and the Office of Consumer Advocate with an update to Valley Exhibit HSG-1, Schedule C3 no later than April 1, 2026, under this docket number, which should include actual plant additions and retirements by month for the year ending December 31, 2025. An additional update should be required for actual plant additions and retirements by month through December 31, 2026, no later than April 1, 2027.

Q. WHY DO YOU RECOMMEND THAT VALLEY BE REQUIRED TO PROVIDE THESE UPDATES?

A. There is value in determining how closely Valley's projected investments in future plant comport with the actual investments that are made by the end of the FTY and FPFTY. Determining the correlation between Valley's projected and actual results will help inform the Commission and the parties in future rate cases.

The updates are important because, as previously explained, by using an FPFTY, Valley is requiring ratepayers to pay a return on its projected investment in future plant that is not in place and providing service at the time the new rates take effect but also is not subject to any guarantee of being installed and placed into service. While the FPFTY provides for such projections, there should be verification of the projections. Therefore, requiring the Company to provide

updates demonstrating that actual investments comport with projections used in setting rates in the FPFTY provides the Commission with actual data to gauge the accuracy of Valley's projected investments in future proceedings and has become common practice among Pennsylvania utilities using an FPFTY.

SCALE BACK OF RATES

Q. PLEASE SUMMARIZE THE COMPANY'S PROPOSED INCREASE BY CLASS?

A. The Company proposes to increase Residential class revenue by $933,998 (29.56%), the Commercial class (Rate C) revenue by $270,382 (28.73%), the Interruptible class (Rate IS) revenue by $5,926 (29.28%), and the Small Industrial class (Rate SI) revenue by $4,184 (27.80%). For Transportation customers, the Company proposes the following increases: $107,445 (29.64%) for Firm customers, $90,410 (32.35%) for Firm-DDQ customers, $106,434 (29.56%) for Large Industrial customers (Rate I), and $107,333 (29.58%) for Transport. Interruptible customers. For contract customers, the Company is not proposing rate increases for the Firm-Fixed and Firm-Volumetric classes (Valley Ex. HSG-1, Sch. B4, p. 1).

Q. DOES THE COMPANY PROPOSE CORRESPONDING INCREASES TO THE CUSTOMER CHARGES?

A. Yes. The Company proposes from 13.36% to 18.68% for the Residential customer classes, from 13.90% to 14.88% for Commercial customers, depending on usage,

and from 10.57% to 21.95% for the Small Industrial customers (again depending on usage) (Valley Ex. HSG-1, Sch's. B5-1 and B5-2).

Q. WHAT IS A COST OF SERVICE STUDY (COSS)?

A. A COSS is an analysis of a Company's revenue, expenses, return, and taxes. In the analysis, these items are assigned or allocated to various rate classes such as Residential, Commercial, or Industrial to determine if the revenue received from each class is equal to, more than, or less than the corresponding cost of providing service to that class. It can include a customer cost analysis that determines the monthly fixed costs incurred to provide service to the various classes to establish the fixed customer charges.

Q. DID THE COMPANY PROVIDE A COST OF SERVICE STUDY?

A. No.

Q. WHAT SCALE BACK DO YOU RECOMMEND IF THE COMMISSION GRANTS LESS THAN THE FULL INCREASE?

A. If the Commission grants an increase less than the full amount requested, I recommend that the percentage increase for each class be adjusted so each class other than the Contract classes receive the same percentage increase.

Q. WHY DO YOU RECOMMEND THAT EACH CLASS OTHER THAN THE CONTRACT CLASSES RECEIVE THE SAME PERCENTAGE INCREASE?

A. The Company did not provide a COSS to compare the revenue received to the expenses incurred to provide service to each class. Thus, there is no justification for proposing a different percentage increase for the classes receiving an increase. Therefore, scaling back the rates so each class receives the same percentage increase is the most reasonable approach to establish rates if the Commission grants less than the full increase.

Q. DOES YOUR RECOMMENDATION TO SCALE BACK EACH CLASS SO THAT THE PERCENTAGE INCREASE FOR EACH CLASS IS THE SAME INCLUDE THE CUSTOMER CHARGES IN THOSE CLASSES?

A. Yes, I recommend that the scale back includes the customer charges for several reasons. First, the customer charges should be included in the scale back to limit the increase in the customer charge applicable to zero and low-usage customers. Second, this recommendation promotes conservation because it causes a larger portion of the customers' bill to be recovered in volumetric rates, thus giving customers more of an incentive to reduce usage. Finally, adjustments resulting in a reduced revenue requirement would also affect those items that are included in the customer costs, so any scale back related to a lower revenue allowance should also apply to customer charges.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

Esyan A. Sakaya

THE PENNSYLVANIA PUBLIC UTILITY COMMISSION
400 North Street
HARRISBURG, PA 17120

EXPERIENCE:

12/2018-Present
Pennsylvania Public Utility Commission-Harrisburg, PA
Fixed Utility Valuation Engineer - Assist in engineering related studies related to valuation, depreciation, cost of service, quality of service as they apply to regulated utilities. Contribute in evaluating, contrasting and conducting performance analyses in distinctive sections of valuation engineering and rate structure involving valuation concepts, original cost, rate base, fixed capital costs, inventory processing, excess capacity, cost of service, and rate design. Provide expert testimony in rate related utility cases.

4/2018-12/2018
Pennsylvania Department of Transportation-Harrisburg, PA
Photogrammetry Technician I - Created three-dimensional mapping layouts of natural and man-made features from stereoscopic images on a computer workstation. Assisted in the field placement of ground based surveyed control-points prior to aerial photography acquisition. Provided field support in the use of laser scans for comprehensive digital surveying data. Operated global positioning satellite surveying equipment to obtain accurate geodetic coordinates of pre-established benchmarks.

8/2017-4/2018
Pennoni and Associates. Consulting Engineers-King of Prussia, PA
Construction Inspector – Provided quality assurance in the onsite material testing of concrete, soils, and asphalt. Read and interpreted construction drawings and specifications of materials and components. Completed daily reports regarding project progress to engineers, project managers/superintendents, contractors, and clients.

EDUCATION:

National Association of Regulatory Utility Commissioners, Clearwater, FL
Utility Rate School; Utility Rate Making Basics, October 2019

Society of Depreciation Professionals, Philadelphia, PA
Introduction to Depreciation; Depreciation Fundamentals, September 2019

Temple University, Philadelphia, PA
Bachelor of Science; Major in Engineering Technology, 2015

Community College of Philadelphia, Philadelphia, PA
Associate of Applied Science; Major in Construction Management Technology, 2011

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christine Wilson, and my business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation and Enforcement (I&E) as a Fixed Utility Financial Analyst Supervisor.

Q. ARE YOU THE SAME CHRISTINE WILSON WHO PREPARED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. I have prepared I&E Statement No. 1 and I&E Exhibit No. 1.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN ACCOMPANYING EXHIBIT?

A. No.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of the following witnesses for Valley Energy, Inc. (Valley or Company): Howard S.

Gorman, Valley Statement No. 1R; Edward E. Rogers, Valley Statement No. 4R; and Jamie Beale, Valley Statement No. 5R.

EFFECTIVE DATE OF NEW RATES

Q. WHAT TEST YEARS IS VALLEY USING IN THIS PROCEEDING?

A. Valley is using the year ended December 31, 2024, as the historic test year (HTY), the year ending December 31, 2025, as the future test year (FTY), and the year ending December 31, 2026, as the fully projected future test year (FPFTY) in this proceeding.[1] The Company indicates that its effective date of new rates is January 30, 2026, while also noting that a Commission-approved settlement between the parties could accelerate the effective date.

Q. SUMMARIZE YOUR DIRECT TESTIMONY REGARDING WHETHER NEW RATES SHOULD BE ALLOWED TO GO INTO EFFECT PRIOR TO THE JANUARY 30, 2026 EFFECTIVE DATE.

A. As stated in my direct testimony, rates should not go into effect prior to the beginning of the FPFTY which is January 1, 2026. This date is the beginning of the twelve-month period on which new rates are based. For this reason, it would be unjust and unreasonable for ratepayers to pay the increase in rates prior to the beginning of the first day of the FPFTY.

[1] Valley Statement No. 1, p. 2.

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. No.

SUMMARY OF RECOMMENDED ADJUSTMENTS

Q. HAS VALLEY UPDATED ITS OVERALL REVENUE REQUIREMENT CLAIM IN REBUTTAL TESTIMONY?

A. Yes. The Company updated its requested overall increase to $1,285,942, a $340,157 ($1,626,099 - $1,285,942) reduction to the initial requested increase, based upon the updated FPFTY revenue requirement calculation.[2]

Q. PLEASE SUMMARIZE YOUR RECOMMENDED ADJUSTMENTS AS UPDATED IN THIS SURREBUTTAL TESTIMONY.

A. The following table summarizes my updated recommendations discussed herein:

	Company Claim	I&E Recommended Allowance	I&E Adjustment
Operating & Maintenance (O&M) Expense Adjustments			
Employee Pension & Benefits Exp.	$10,194	$6,502	($3,692)
Advertising Expense	$2,098	$0	($2,098)
Property Insurance Expense	$38,819	$35,856	($2,963)
Total O&M Adjustments			**($8,753)**

[2] Valley Statement No. 1R, p. 2 and Valley Exhibit HSG-1R, Schedule C1R.

Rate Base Adjustments:			
Unamortized Rate Case Expense	$230,556	$0	($230,556)
Cash Working Capital	$479,156	$478,062	($1,094)
Total Rate Base Adjustments			**($231,650)**

OVERALL I&E UPDATED POSITION

Q. WHAT IS I&E'S TOTAL UPDATED RECOMMENDED REVENUE REQUIREMENT?

A. I&E's total updated recommended revenue requirement is $7,565,294. This recommended revenue requirement represents an increase of $1,085,803 to present rate revenues of $6,506,491. This total recommended allowance incorporates my adjustments made in this surrebuttal testimony to O&M expenses and cash working capital, the Company's corrected state income tax rate of 7.49%,[3] and the recommended adjustments made in the testimony of I&E witness D.C. Patel.[4] I&E's updated recommended revenue requirement is shown below:

[3] Valley Statement No. 1R, p. 3.
[4] I&E Statement No. 2-SR.

RATE CASE EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR RATE CASE EXPENSE.

A. In contrast to the Company's claim for a 36-month amortization of rate case expense, I recommended that this expense be normalized over 60 months. While the Company stated that it needs to file rate cases every three years to avoid a large rate increase at one time, Valley's historic filing frequency precisely computes to a 60-month average filing frequency. For the reasons explained in my direct testimony, normalization is the appropriate treatment for this expense to allow for the transformation of this operating expense into a normal test year allowance. My recommendation produced an allowance of $55,333 [($276,667 ÷

60 months) x 12 months], or a reduction of $36,889 ($92,222 - $55,333) to the Company's claim.[5]

Furthermore, as described in my direct testimony, there are numerous recent cases where the Commission agreed that a historic filing frequency produces a more accurate allowance.[6]

Q. DID ANY WITNESSES RESPOND TO YOUR RECOMMENDATION?

A. Yes. Valley witness Howard Gorman disagrees with my recommendation. Additionally, OCA witness Greg Meyer responds to my recommendation as explained below.

Q. PLEASE SUMMARIZE MR. GORMAN'S RESPONSE.

A. Mr. Gorman explains how the long gap between the 2010 and 2019 rate filings was due to the Moxie project that provided incremental revenue to the Company, that this was addressed in the 2019 Valley rate filing at Docket No. R-2019-3008209, and as a result, the Commission granted a 36-month normalization period for rate case expense in that proceeding.

[5] I&E Statement No. 1, pp. 6-10.
[6] I&E Statement No. 1, pp. 10-12.

Q. DO YOU ACCEPT MR. GORMAN'S EXPLANATION ABOUT THE MOXIE PROJECT ALLOWING THE COMPANY TO ABSTAIN FROM FILING A RATE CASE BETWEEN 2010 AND 2019?

A. Yes. I have verified that in the 2019 Valley rate proceeding the Commission granted a 36-month normalization period due to the addition of this large contract customer which allowed for a longer time between rate filings.[7]

Q. DID ANY WITNESSES RESPOND TO YOUR ARGUMENT THAT RATE CASE EXPENSE SHOULD BE NORMALIZED AND NOT AMORTIZED FOR RATEMAKING?

A. Yes. OCA witness Greg Meyer agrees with my recommendation that rate case expense should be normalized as opposed to amortized but accepts the Company's filing frequency of 36 months based on Valley's most recent two rate case filings.[8] However, Valley witness Gorman disagrees and continues to recommend that rate case expense be amortized for ratemaking purposes. His argument concerning amortization versus normalization will be addressed in the "Unamortized Rate Case Expense in Rate Base" section that follows.

[7] *PA PUC v. Valley Energy, Inc.*, Docket No. R-2019-3008209, Opinion and Order, pp. 50-54 (Order Entered April 27, 2020).

[8] OCA Statement No. 1R, p. 6.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR RATE CASE EXPENSE?

A. Yes. I continue to recommend normalization of rate case expense for the reasons summarized above and in my direct testimony. Since I accept the 36-month normalization period based on the Commission's 2019 order as those circumstances still apply, I am withdrawing my recommended dollar adjustment to rate case expense. However, I continue to recommend disallowance of the related rate base claim as explained below.

UNAMORTIZED RATE CASE EXPENSE IN RATE BASE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR UNAMORTIZED RATE CASE EXPENSE.

A. In direct testimony, I recommended the complete disallowance of unamortized rate case expense of $230,556 that was included in the Company's rate base claim.[9]

This recommendation was made because, as stated in my direct testimony, if the Company were allowed to include the unamortized rate case expense balance in rate base along with capturing an amount on the expense side, it would earn a return on, as well as a return of rate case expense. Any allowance for return on this routine operating expense, in addition to a return of such an expense, is not an appropriate ratemaking practice. Also, with respect to rate case expense,

[9] I&E Statement No. 1, p. 13.

normalization of such a claim, rather than amortization, is the appropriate ratemaking treatment, and normalization does not include a remaining balance nor allow for a remaining balance to be captured in rate base as it represents a prospective recovery of an ongoing expense between rate cases. Rate case expense represents a routine operating expense which is not extraordinary in nature. As such, rate base treatment of this cost should be disallowed.[10]

Q. DID ANY WITNESSES RESPOND TO YOUR RECOMMENDATION?

A. Yes. Mr. Gorman disagrees with my recommendation.[11] However, OCA witness Meyer agrees with my recommendation to disallow unamortized rate case expense in rate base.[12]

Q. PLEASE SUMMARIZE MR. GORMAN'S RESPONSE.

A. He disagrees with my assertion that rate case expense is a normal operating expense for a utility and that utilities should not earn a return on a normal operating expense. He asserts that Valley has working capital tied up in unrecovered rate case expense and opines that the Company should be allowed to earn a return on that amount. He further states that the Company pays the total on a real-time basis during the rate proceeding and collects a normalized amount over the normalization period without carrying charges. He disagrees with this

[10] I&E Statement No. 1, p. 14.
[11] Valley Statement No. 1R, pp. 4-5.
[12] OCA Statement No. 1R, pp. 6-7.

handling. Then he attempts to compare rate case expense to materials and supplies.[13]

Q. WHAT IS YOUR RESPONSE TO MR. GORMAN'S ARGUMENTS IN FAVOR OF AMORTIZATION TREATMENT OF RATE CASE EXPENSE?

A. What Mr. Gorman fails to acknowledge is that rate case expense is included in the computation for cash working capital. Rate case expense is an operating expense, unlike materials and supplies which are appropriately reflected in rate base for the capitalized amount.

As stated above and in my direct testimony, I reiterate that rate case expense is a routine operating expense for a regulated utility and as such should be normalized for ratemaking purposes.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR UNAMORTIZED RATE CASE EXPENSE?

A. No. For all the reasons explained above and in my direct testimony, I continue to recommend that rate case expense be normalized and that the Company's claim for unamortized rate case expense of $230,556[14] in rate base be disallowed in its entirety.

[13] Valley Statement No. 1R, pp. 4-5.
[14] Valley Exhibit HSG-1R, Schedule C1-5R, p. 2.

REGULATORY COMMISSION EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR REGULATORY COMMISSION EXPENSE.

A. In direct testimony I recommended an allowance of $47,317 or a reduction of $58,197 ($105,514 - $47,317) to the Company's claim. My recommendation was based on disallowing a duplicative amount for 2025 rate case expense of $58,197, since that expense was claimed elsewhere in the filing in Valley Exhibit HSG-1, Schedule C1, line 13 ($92,222).[15]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Mr. Gorman accepts my recommendation; however, he misstates my adjustment by $2, stating that I recommend an adjustment of $58,195 and reducing regulatory commission expense by this amount.[16]

Q. DO YOU ACCEPT HIS CORRECTION TO REGULATORY COMMISSION EXPENSE?

A. Yes.

[15] I&E Statement No. 1, pp. 15-16.
[16] Valley Statement No. 1R, p. 5.

OFFICE SUPPLIES & EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR OFFICE SUPPLIES & EXPENSE.

A. I recommended an allowance of $64,264 or a reduction of $17,126 ($81,390 - $64,264) to the Company's claim. My recommendation was based on averaging the most recent three years, 2022, 2023, and 2024 [($62,075 + $74,240 + $56,476) ÷ 3 = $64,264], due to the yearly fluctuation in this expense. This three-year average excludes the unsupported 3% inflation adjustment between the FTY and FPFTY and takes into consideration the yearly fluctuation in each line item reported in response to I&E-RE-10-D.[17]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Valley witness Edward Rogers disagrees with my recommendation.

Q. PLEASE SUMMARIZE MR. ROGERS' RESPONSE.

A. Mr. Rogers disagrees with the historic three-year average and removal of the inflation adjustment for office supplies and expenses that I used in calculating my recommendation. He repeats arguments previously made concerning external pressures on cash flow in 2024, due to unexpected contractor expenses and material costs, and the need to cut back on travel and training expenses

[17] I&E Statement No. 1, p. 17 and I&E Exhibit No. 1, Schedule 5.

accordingly in that year. Finally, he argues that an annualized 2025 claim would be $84,890 based on its $42,445[18] year-to-date expense amount as of June 30, 2025, and that a 3% inflation amount is reasonable as compared to the percentage increases provided in response to I&E-RE-10-D.[19]

Q. DO YOU ACCEPT MR. ROGERS' ARGUMENT RELATED TO EXTERNAL PRESSURES ON CASH FLOW IN 2024 AND THAT THIS JUSTIFIES A LARGER FPFTY ALLOWANCE FOR OFFICE SUPPLIES & EXPENSE?

A. Yes. Based on further analysis of annual reports filed with the Commission by Valley since 2017, I have noticed that excluding the pandemic years 2020 and 2021, the average annual increase in office supplies and expense was approximately 16% per year. The yearly amounts for Account 921 shown in the annual reports is as follows:

2017 - $37,612

2018 - $52,025 (38% increase)

2019 - $56,085 (8% increase)

2020 - $30,312 (46% decrease likely due to pandemic)

2021 - $44,898 (48% increase likely due to pandemic)

2022 - $62,075 (38% increase)

[18] Valley Exhibit JB-2R.
[19] Valley Statement No. 4R, p. 9.

2023 - $74,240 (20% increase)

2024 - $56,476 (24% decrease)

Based on this historic data obtained via a document search on the Commission's website,[20] I have determined that the average annual increase from 2017 through 2024, excluding the pandemic years as noted above, is approximately 16% [(38% + 8% + 38% + 20% - 24%) ÷ 5]. Applying that 16% increase to the year 2023 ($74,240), produces an amount ($74,240 x 1.16 = $86,118) in line with but even above the Company's claim.

Q. DO YOU AGREE THAT IT WOULD BE PROPER TO ANNUALIZE THE YEAR-TO-DATE ACTUAL EXPENSE AS OF JUNE 30, 2025, AS A COMPARISON TO AN APPROPRIATE FPFTY CLAIM?

A. Not necessarily. There is no basis to assume that office supplies and expenses will be incurred equally in the first half and the second half of 2025, and I find this comparison not fully convincing. However, I do accept that annualizing the June 2025 year-to-date amount also produces an amount ($84,890) in line with the Company's claim.

[20] https://www.puc.pa.gov/search/document-search/?DocketNumber=&ReferenceDocketNumber=&eFilingConfirmationNumber=&CaseType=&PublicMeetingFromDate=&PublicMeetingToDate=&DocumentReceivedFromDate=&DocumentReceivedToDate=&DocumentServedFromDate=&DocumentServedToDate=&DocumentTitle=&DocumentType=11717119&UtilityCode=125100&UtilityName=&UtilityType=&ufprt=87A2FF0B4664F95EAC64EE1995AAC31AF56660600832141ED90E526149D3B6679EF27A9893BA5B320815DE26726FDAD181AD346D2294CF6572B7273DEAEC6275CEEB1E1B74310F4A4D9380C8EED52F3CF0539D1F0AE3DA1FB7C447390B5B440C3F9B2DDA908412732E5678FEFC0185FCCA91F640ED4CC5D0E53CFFA22097F10817C18B1A7FD6DA65323BE83BF4FAD207A7DFCD6AFB8DE6ABFFDE573C726CECD08E938B87BB08AFA5795D123888BB30E0AF9AD201242198A6BDF2CE2C16922D14#search-results, accessed August 14, 2025.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. Yes. Based on my analysis of the years 2017 through 2024 for this expense account, I have determined that the Company's claim appears to be in line with the general historical trend. However, I recommend that the Company be required to evaluate potential cost saving measures and report back in the next base rate filing what it has done to mitigate these excessive yearly increases.

It should be noted that I continue to disagree with 3% across the board inflation adjustments and did not use this methodology to determine acceptance of the Company's claim.

EMPLOYEE PENSION & BENEFITS EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR EMPLOYEE PENSION & BENEFITS EXPENSE.

A. I recommended disallowance of the entire claim of $10,194 for employee pension and benefits expense. As stated in my direct testimony, I recommended disallowance of the entire amount because ratepayers should not be required to fund the Company's choice to offer or sponsor special events for its employees. I stated that, if leadership is inclined to hold such events, the Company should fund those picnics and celebrations, not the ratepayers. Additionally, I stated the salary survey that is built into the historic average due to a single 2024 survey is not appropriate since it is a historic one-time occurrence and should not be deferred for future recovery given the routine nature of the expense. This recommended

disallowance of the entire claim also addressed my concern about a blanket 3% inflation adjustment for this expense category that I disagree with in principle.[21]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Valley witness Jamie Beale responded to my recommendation.

Q. PLEASE SUMMARIZE MS. BEALE'S RESPONSE.

A. Ms. Beale disagrees with my recommendation based on the Commission's prior support of this type of expense in the 2019 Citizens Electric Company of Lewisburg, PA (Citizens) rate case and counsel informing her that the Commission has "a long history" of allowing similar claims in rates. Furthermore, she indicates that senior management speaks at such events recognizing employee contributions and discussing safety and training.[22]

Q. DO YOU AGREE WITH MS. BEALE THAT THE TOTAL CLAIM SHOULD BE ALLOWED?

A. No. This expense has gone down every year between 2022 and 2024, and this makes a prior multi-year average adjusted for inflation[23] an inappropriate method to develop a proper claim amount.

---

21 I&E Statement No. 1, pp. 18-19.
22 Valley Statement No. 5R, p. 3.
23 I&E Exhibit No. 1, Schedule 6, pp. 1-2.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. Yes. Based on the argument that the Commission allowed this similar claim in the 2019 Citizens rate case and that work-related matters were discussed at the events, I have a modification to my recommendation.

Q. WHAT IS YOUR UPDATED RECOMMENDATION?

A. I recommend an allowance of $6,502, or a reduction of $3,692 ($10,194 - $6,502) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR UPDATED RECOMMENDATION?

A. This recommended allowance is appropriate since the actual amount of this expense has gone down every year from 2022 through 2024, and it is based on the 2024 actual expense incurred.[24]

ADVERTISING EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR ADVERTISING EXPENSE.

A. I recommended disallowance of the entire $2,098 claim because ratepayers should not be required to fund the Company's choice to run such sponsorship ads shown in the response to I&E-RE-18-D.[25] As stated in my direct testimony, (1) if

[24] I&E Exhibit No. 1, Schedule 6, p. 2.
[25] I&E Exhibit No. 1, Schedule 7, pp. 2-11.

Company leadership is inclined to make such payments, they should be funded by the Company, not the ratepayers, since the ad examples provided indicate little to no tangible benefit to ratepayers;[26] (2) the ad examples appear redundant, as the same material shown in the ads can be shared on invoices, bill inserts, the Company's website and/or social media accounts; (3) ratepayers have no say in the choice of which charitable organizations should receive such sponsorships; and (4) my recommended disallowance of the entire claim also addresses my concern about a blanket 3% inflation adjustment for this expense category that I disagree with in principle.[27]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Valley witness Jamie Beale disagrees with my recommendation.

[26] 66 Pa. C.S. § 1316(a) states:

> The [C]ommission shall also disallow as operating expense for ratemaking purposes expenditures for other advertising, unless and only to the extent that the [C]ommission finds that such advertising is reasonable and meets one or more of the following criteria:
>
> (1) Is required by law or regulation.
>
> (2) Is in support of the issuance, marketing, or acquisition of securities or other forms of financing.
>
> (3) Encourages energy independence by promoting the wise development and use of domestic sources of coal, oil, or natural gas and does not promote on method of generating electricity as preferable to other methods of generating electricity.
>
> (4) Provides important information to the public regarding safety, rate changes, means of reducing usage or bills, load management, or energy conservation.
>
> (5) Provides a direct benefit to ratepayers.
>
> (6) Is for the promotion of community service or economic development.

[27] I&E Statement No. 1, pp. 20-21.

Q. PLEASE SUMMARIZE MS. BEALE'S RESPONSE.

A. Ms. Beale asserts that my recommendation should be disallowed because the advertisements convey safety and other information to ratepayers.[28]

Q. DO YOU AGREE WITH MS. BEALE'S ASSERTION RELATED TO ADVERTISING EXPENSE?

A. No. I disagree that these ads placed via places like the rotary club, little league, softball teams, etc.[29] are necessary to convey safety and other customer communications when a limited set of ratepayers would participate in such organizations. These ads are duplicative to other more direct lines of communication coming from the Company via bill inserts, the Company's website, and its own social media pages. Thus, I continue to recommend that for the same reasons expressed in my direct testimony[30] and above that this $2,098 claim be disallowed.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR ADVERTISING EXPENSE?

A. No.

[28] Valley Statement No. 5R, p. 4.
[29] I&E Exhibit No. 1, Schedule 7, p. 2.
[30] I&E Statement No. 1, pp. 20-21.

DUES/COMPANY MEMBERSHIPS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR DUES/COMPANY MEMBERSHIPS.

A. I recommended an allowance of $13,726 or a reduction of $3,569 ($17,295 - $13,726) to the Company's claim.[31] My recommendation was based on disallowance of amounts attributable to rotary club, chamber of commerce, and lobbying expense payments. Additionally, I stated that I disagreed with the unsupported 2% per year increases, however, not directly adjusting for such increases since my recommended adjustment was based on the Company's $15,070 supported amount and not the $17,295 claim.[32]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Valley witness Jamie Beale responded to my recommendation.

Q. PLEASE SUMMARIZE MS. BEALE'S RESPONSE.

A. Ms. Beale agrees that dues and subscriptions for fraternal, social clubs, chamber of commerce organizations, and lobby expense should be excluded and has updated the Company's claim accordingly in rebuttal testimony to $15,951.[33]

[31] I&E Statement No. 1, p. 22.
[32] I&E Statement No. 1, p. 23.
[33] Valley Statement No. 5R, p. 4.

Q. DO YOU ACCEPT THE COMPANY'S CORRECTED CLAIM FOR DUES/COMPANY MEMBERSHIPS?

A. Yes. I accept the Company's correction to its claim based on the removal of subscriptions for fraternal, social clubs, chamber of commerce organizations, and lobbying expense. Additionally, I note that the Company identified a portion of the claim for the Energy Association of Pennsylvania[34] that was missing from the breakdown provided in response to I&E-RE-23-D.[35]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. Yes. Based on these corrections and clarification, I accept the Company's updated claim and withdraw my recommended adjustment.

PROPERTY INSURANCE EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR PROPERTY INSURANCE EXPENSE.

A. I recommended an allowance of $35,856 or a reduction of $5,843 ($41,699 - $35,856) to the Company's claim. My recommendation was based on the known and measurable $2,988 monthly property insurance expense amount[36] annualized over twelve months, producing an FPFTY recommended allowance of $35,856 ($2,988 x 12). While property insurance had increased in prior years, the

[34] Valley Exhibit JB-1R.
[35] I&E Exhibit No. 1, Schedule 8.
[36] I&E Exhibit No. 1, Schedule 10, p. 4.

Company had just shopped and changed providers to reduce insurance costs, and thus, the historic average 12% increase is speculative. Instead, I recommended using the current known and measurable cost to produce an appropriate FPFTY allowance.[37]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Valley witness Jamie Beale disagrees with my recommendation.

Q. PLEASE SUMMARIZE MS. BEALE'S RESPONSE.

A. Ms. Beale states that the Company has recently shopped for insurance, and based on this, Valley is comfortable accepting a reduction of $2,880 rather than my recommended reduction of $5,843.[38] This change produces an updated claim of $38,819 ($41,699 - $2,880).[39]

Q. DO YOU ACCEPT THE COMPANY'S UPDATED CLAIM FOR PROPERTY INSURANCE EXPENSE?

A. No. While I appreciate the movement toward what I believe is a more appropriate claim, the Company did not provide a clear explanation for the reduction of $2,880 to its claim as compared to my recommendation which was based on the most recent known cost.

---

[37] I&E Statement No. 1, pp. 24-25.
[38] Valley Statement No. 5R, p. 4.
[39] Valley Exhibit HSG-1R, Schedule C1-1R, p. 2.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. Yes. Based on the Company's update to its claim, I must update my recommended adjustment.

Q. WHAT IS YOUR UPDATED RECOMMENDATION?

A. I continue to recommend an allowance of $35,856 based on the reasons summarized above and in my direct testimony, however, this recommended allowance now results in a reduction of $2,963 ($38,819 - $35,856) to the Company's updated claim.

INJURIES AND DAMAGES EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR INJURIES AND DAMAGES EXPENSE.

A. I recommended an allowance of $108,946 or a reduction of $15,935 ($124,881 - $108,946) to the Company's claim which was meant to cover injuries and damages including automobile insurance.[40] My recommendation was based on the known and measurable $67,379 amount for injuries and damages and the $41,567 amount for automobile insurance. This recommendation was appropriate since the Company had just shopped to reduce its insurance cost after it was historically increasing from year to year.[41]

[40] I&E Statement No. 1, pp. 26-27.
[41] I&E Statement No. 1, pp. 27-28.

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Valley witness Jamie Beale responded to my recommendation.

Q. SUMMARIZE MS. BEALE'S RESPONSE.

A. Ms. Beale states that she finds my adjustment and a similar type of adjustment made by OCA witness Greg Meyer to be reasonable but for different reasons. She ultimately accepts the OCA adjustment of $30,981 to this account because the Company has shopped around to reduce the overall insurance cost and was therefore able to find comparable coverage at a lower premium.[42]

Q. DO YOU ACCEPT THE UPDATED CLAIM AMOUNT?

A. Yes. I find the larger reduction of $30,981 to the Company's claim reasonable and withdraw my original recommendation.

<u>CASH WORKING CAPITAL</u>

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR CASH WORKING CAPITAL (CWC).

A. I recommended an allowance of $472,948 or reduction of $18,731 ($491,679 - $472,948) to the Company's claim based on all recommended adjustments to O&M expenses as discussed in my direct testimony.[43]

[42] Valley Statement No. 5R, pp. 2-3.
[43] I&E Statement No. 1, p. 29.

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Mr. Gorman addresses this issue by stating that I have accepted Valley's use of the one-eighth method, that the Company is using this method in its final revenue requirement calculation, and that he has updated the Company's claim based on the expense adjustments that affect the CWC calculation.[44]

Q. WHAT IS THE COMPANY'S UPDATED CLAIM FOR CWC?

A. The Company's updated CWC claim is $479,156.[45]

Q. DO YOU AGREE WITH THE COMPANY'S UPDATED CLAIM?

A. No. Due to our disagreement on a few remaining O&M issues, I also disagree with the Company's CWC claim. Thus, I am modifying my CWC recommendation to reflect the remaining O&M expense adjustments as discussed above.

Q. BASED ON THE ABOVE SURREBUTTAL TESTIMONY, WHAT IS YOUR UPDATED RECOMMENDED ALLOWANCE FOR CWC?

A. Reflecting all my recommended adjustments as discussed above, my updated recommendation for CWC is $478,062 or a reduction of $1,094 ($479,156 - $478,062) to the Company's claim.

[44] Valley Statement No. 1R, p. 5.
[45] Valley Exhibit HSG-1R, Schedule C1-5R, p. 1.

Q. HOW DID YOU CALCULATE YOUR UPDATED RECOMMENDATION?

A. The sum of all my recommended O&M adjustments shown in the "Summary of Recommended Adjustments" table above ($8,753) multiplied by 1/8th (or divided by 8) produces my recommended reduction of $1,094 ($8,753 ÷ 8) to CWC.

Q. IS YOUR RECOMMENDED CWC ALLOWANCE A FINAL RECOMMENDATION?

A. No. All adjustments to the Company's claims for revenues, expenses, taxes, and rate base must be continually brought together for each operating unit in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claims.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

INTRODUCTION OF WITNESS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is D. C. Patel and my business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME D. C. PATEL WHO SUBMITTED THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 2 AND I&E EXHIBIT NO. 2?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of by Valley Energy, Inc. (Valley or Company) witness Dylan W. D'Ascendis regarding rate of return topics including the cost of common equity and the overall

fair rate of return, which will be applied to the Company's rate base.[1] I will also address the Company's size adjustment and management performance claims discussed by Mr. D'Ascendis and Company witnesses Edward E. Rogers.[2] Additionally, I am addressing the rebuttal testimony of Pennsylvania Office of Consumer Advocate (OCA) witness Christopher C. Walters disputing my recommendation for Valley's return on equity (ROE), because it is based on the DCF results.[3]

The absence of any comments or responses to statements or topics addressed in Valley and the OCA's rebuttal testimony concerning the cost of common equity or ROE does not imply my acceptance or support of their positions in this proceeding.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. No. I refer to my direct testimony[4] and schedules contained in my exhibit[5] where necessary.

[1] Joint Statement No. 2R.
[2] Valley Statement No. 4R.
[3] OCA Statement No. 2-R.
[4] I&E Statement No. 2.
[5] I&E Exhibit No. 2.

Q. WHAT WAS YOUR ORIGINAL OVERALL RECOMMENDATION IN DIRECT TESTIMONY?

A. I recommended the following rate of return for the Company:[6]

I&E Recommendation Valley Energy, Inc. Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	51.06%	5.03%	2.57%
Common Equity	48.94%	10.51%	5.14%
Total	**100.00%**		**7.71%**

SUMMARY OF MR. D'ASCENDIS'S REBUTTAL TESTIMONY

Q. SUMMARIZE MR. D'ASCENDIS'S RESPONSE TO YOUR RATE OF RETURN RECOMMENDATION.

A. Mr. D'Ascendis disputes my: (1) exclusive reliance on the Discounted Cash Flow (DCF) model for my ROE recommendation; (2) use and application of the Capital Asset Pricing Model (CAPM) and exclusion of the Empirical CAPM (ECAPM) analysis; (3) failure to reflect a size adjustment; and (4) my rejection of his use of the Risk Premium (RP) method.[7] Mr. D'Ascendis also takes issue with my dismissal of his Non-Price Regulated Proxy Group and his application of the cost

[6] I&E Statement No. 2, pp. 6-7 and I&E Exhibit No. 2, Schedule 1.
[7] Joint Statement No. 2R, pp. 7-12 and 14-26.

of equity analysis methods.[8] Finally, he disagrees with my recommended disallowance of additional basis points for management performance.[9]

MR. D'ASCENDIS'S UPDATED ANALYSIS

Q. DID THE COMPANY UPDATE ITS RATE OF RETURN CLAIM?

A. No. Mr. D'Ascendis provides updated cost of equity analysis results including his gas utility proxy group using market data as of July 18, 2025 because his original analysis was performed using market data as of February 28, 2025.[10] Based on the results produced by his updated analysis, his indicated common equity cost rate range (before adjustments) is 10.42% - 10.89%[11] in contrast to his originally indicated common equity cost rate range (before adjustments) of 10.29% - 11.92%.[12] Similarly, based on his updated analysis, his indicated common equity cost rate range (after adjustments) is 11.47% - 11.94%[13] in contrast to his originally indicated common equity cost rate range (after adjustments) of 10.34% - 12.97%.[14] However, Mr. D'Ascendis continues to support his original cost of equity recommendation of 11.65% and the overall rate of return of 8.27% as shown below:[15]

[8] Joint Statement No. 2R, pp. 27-30.
[9] Joint Statement No. 2R, p. 13.

[12] Revised Joint Statement No. 2, p. 5, Table 4.
[13] Joint Statement No. 2R, p. 6 and Exhibit_(DWD-1R), Schedule DWD-1R, p. 2.
[14] Revised Joint Statement No. 2, p. 5, Table 4.
[15] Revised Joint Statement No. 2, p. 3, Table 1.

Valley Energy, Inc. Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	51.06%	5.03%	2.57%
Common Equity	48.94%	11.65%	5.70%
Total	**100.00%**		**8.27%**

Q. DO YOU HAVE ANY UPDATES TO YOUR RATE OF RETURN ANALYSIS AND RECOMMENDATION?

A. No. My cost of equity analysis is based on the most recent market data at the time of my analysis; therefore, I have no changes.

DISCOUNTED CASH FLOW

Q. SUMMARIZE MR. D'ASCENDIS'S REBUTTAL TESTIMONY REGARDING YOUR DCF ANALYSIS.

A. Mr. D'Ascendis opines that I have inappropriately relied solely on the DCF model for my cost of equity recommendation. He states that using multiple models adds reliability to the estimation of the common equity cost rate and that using multiple cost of common equity models is supported in both the financial literature and regulatory precedent.[16] Relying on academic financial literature,[17] Mr. D'Ascendis asserts that using multiple models (the DCF, CAPM, and RP method)

[16] Joint Statement No. 2R, p. 14.
[17] Joint Statement No. 2R, pp. 14-16.

is appropriate in determining the cost of equity for Valley. He then cites Commission's orders[18] from 2013 for Columbia Water Company, 2014 for Emporium Water Company, and 2021 for Aqua Pennsylvania, Inc.'s base rate cases where the Commission relied on the DCF and CAPM results to determine the cost of equity for these utilities.

ALLEGED SOLE RELIANCE ON THE DCF

Q. PLEASE RESPOND TO MR. D'ASCENDIS'S ASSERTION THAT YOU RELIED SOLELY ON THE DCF.

A. As discussed at length in my direct testimony,[19] while my recommendation was based on the results of my DCF analysis, I also employed the CAPM as a comparison only, since the DCF method is the most reliable and accepted method for determining a forward-looking cost of equity estimation. The DCF model: (1) is based on the concept that the receipt of dividends plus expected appreciation is the total return requirement determined by the market; (2) uses the utilities' own stock prices and growth rates, which are directly employed in a formalistic calculation; (3) recognizes the time value of money and is forward-looking; and (4) has the most widespread regulatory acceptance.

I have considered the fact that no method can perfectly predict the ROE, which is why I also provided the CAPM as a comparison to the DCF. Although

[18] Joint Statement No. 2R, pp. 16-18.
[19] I&E Statement No. 2, pp. 21-24.

no one method can capture every factor that influences an investor, including the results of methods less reliable than the DCF, this does not make the end result of the DCF less reliable or less accurate. As a result, I stand by my method of using the DCF with a CAPM comparison, which is consistent with the methodology historically used by the Commission in base rate proceedings, even as recently as 2017, 2018, 2020, and 2021.[20]

Q. WHICH CASES DOES MR. D'ASCENDIS REFERENCE WHERE HE CLAIMS THE COMMISSION HAS CONSIDERED MULTIPLE COST OF EQUITY MODELS?

A. Mr. D'Ascendis references the 2013 Columbia Water Company,[21] the 2014 Emporium Water Company,[22] and the 2021 Aqua Pennsylvania, Inc.[23] cases to suggest the Commission has considered multiple cost of common equity models.

[21] *Pa. PUC v. The Columbia Water Company*, Docket No. R-2013-2360798 (Order Entered January 23, 2014).

[22] P*a. PUC v. Emporium Water Company*, Docket No. R-2014-2402324 (Order Entered January 28, 2015).

[23] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 and R-2021-3027386 (Order entered May 16, 2022).

Q. WHAT COMMENTS DO YOU HAVE REGARDING THE CASES MR. D'ASCENDIS REFERENCES?

A. First, within the citation Mr. D'Ascendis presents the Columbia Water Company case,[24] where the Commission states that,

> [T]he evidence in this case supports an ROE finding in the reasonable range of 9.25% to 10.25% using the *DCF method as the foundation* (emphasis added). Therefore, within our indicated range of reasonableness, we conclude that a ROE of 9.75% is appropriate for our ratemaking determinations herein.

The Commission order does not specifically mention its reliance on the results of other cost of equity methods in determining an appropriate ROE of 9.75%. Any adjustments to the cost of equity after the fact are at the Commission's discretion and independent of the result of any cost of equity model. In the Emporium Water case,[25] the Commission stated that "based on our review of the testimony, data, and cost models presented and considering our adoption of a 60% / 40% hypothetical capital structure, we believe that the range of returns provided in evidence supports an ROE finding of 10.0% for our ratemaking determinations herein."[26] The Commission simply summarized the recommendations presented by OCA, I&E, and the Company; it did not specifically comment on which model(s) it relied upon and any weighting assigned to each cost of equity models for determining a 10.0% ROE. Lastly, in the Aqua Pennsylvania case,[27] the

[24] Joint Statement No. 2R, pp. 16-17.
[25] Joint Statement No.2R p. 17.
[26] Joint Statement No, 2R, p. 17.
[27] Joint Statement No. 2R, pp.17-18.

Commission specifically noted that "we shall determine an appropriate ROE for Aqua using informed judgement based on I&E's DCF and CAPM methodologies."[28] As I stated in my direct testimony,[29] Aqua's return on equity of 10.00% is above the national average for water utility base rate cases, which demonstrates the problem associated with using the CAPM as a ceiling for determining a utility's return on equity.

CAPITAL ASSET PRICING MODEL

Q. SUMMARIZE MR. D'ASCENDIS'S RESPONSE TO YOUR CAPM ANALYSIS.

A. Mr. D'Ascendis disputes my use of the 10-year U.S. Treasury Note as a proxy to measure the risk-free rate that I use in my CAPM analysis.[30] He also disagrees with my exclusion of the ECAPM method in computing the Company's return on equity.[31]

RISK-FREE RATE

Q. WHAT IS MR. D'ASCENDIS'S RESPONSE TO YOUR USE OF THE YIELD ON THE 10-YEAR U.S. TREASURY NOTE?

A. Mr. D'Ascendis claims his use of the yield on a 30-year U.S. Treasury Bond is

[28] Joint Statement No. 2R, p. 18.
[29] I&E Statement No. 2, pp. 25-26.
[30] Joint Statement No. 2R, pp. 24-25.
[31] Joint Statement No. 2R, pp. 21-23.

more appropriate than my use of the yield on a 10-year Treasury Note because it better reflects the life of the underlying investment. He also claims 30-year U.S. Treasury Bonds do not have maturity risk as an investor will receive the stated coupon rate and principal when the bond has matured. Additionally, he asserts that since the cost of equity is a long-term concept, the investment horizon of an individual investor is irrelevant. He claims that equity securities represent a perpetual claim on cash flows, and 30-year Treasury bonds are the longest maturity securities available to match that perpetual claim. He then asserts that my use of a medium-term (10-year) Treasury Note does not match the life of the assets being valued.[32]

Q. IS THE LIFE OF THE INVESTMENT THE ONLY FACTOR THAT SHOULD BE CONSIDERED IN THE CHOICE OF A RISK-FREE RATE?

A. No. The risk-free rate is the return that can be earned without accepting any risk, and while the life of the investment can be considered in the choice of risk-free rates, the most important consideration is that the rate be as risk-free as possible. As explained in my direct testimony,[33] I chose the 10-year Treasury Note as it mitigates the shortcomings of the short-term Treasury Bill and the 30-year Treasury Bond. Although long-term Treasury Bonds have less risk of being influenced by federal policies, they have substantial maturity risk associated with

[32] Joint Statement No. 2R, pp. 24-25.
[33] I&E Statement No. 2, pp. 34-35.

market risk. In addition, long-term Treasury Bonds bear the risk of unexpected inflation. As such, my choice of a 10-year Treasury Note is appropriate. Further, as also pointed out in my direct testimony, the Commission recently agreed with I&E that the 10-year Treasury Note is the superior measure of the risk-free rate of return.[34] Finally, I disagree with Mr. D'Ascendis's statement that the cost of equity is a long-term concept and that the investment horizon of an individual investor is irrelevant. I believe an investor does not invest funds in perpetuity. Rather, an investor is interested in total return on investment over a certain period. If an investor finds another better investment opportunity or needs money for other purposes, they will switch or redeem their equity investment.

Q. DO YOU AGREE WITH MR. D'ASCENDIS THAT 30-YEAR TREASURY BONDS DO NOT HAVE MATURITY RISK?

A. No. Longer term bonds have maturity risk associated with them because long-term forecasts are less accurate in predicting inflation, interest rates, the market as a whole, changes in the tax code, and other unpredictable events that affect the value of a bond; therefore, their uncertainty, or risk, is increased. As a result, the 10-year U.S. Treasury Note is superior to the 30-year Treasury Bond in providing a measurement of the risk-free rate of return.

[34] *Pa. PUC v. UGI Utilities, Inc. - Electric Division,* Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 99.

MARKET RISK PREMIUM (MRP)

Q. SUMMARIZE MR. D'ASCENDIS'S RESPONSE TO YOUR DISAGREEMENT WITH HIS USE OF AN AVERAGE MARKET RISK PREMIUM OF 8.15% IN THE CAPM ANALYSIS.

A. Mr. D'Ascendis claims that his calculated market returns and MRPs are consistent with the actual realized returns and MRPs. Therefore, he dismisses my concern about his use of an 8.15% average of the historic risk premium and prospective risk premium used in his CAPM analysis.[35]

Q. WHAT IS YOUR RESPONSE TO MR. D'ASCENDIS REJECTING YOUR DISAGREEMENT WITH THE MRP USED IN HIS CAPM ANALYSIS?

A. In rebuttal testimony, Mr. D'Ascendis presents a revised MRP of 8.86%[36] in place of the 8.15% MRP used in his original CAPM analysis. As discussed in my direct testimony,[37] using a historic market risk premium skews the prospective market risk premium and the CAPM results. Kroll's latest forecast (as of April 15, 2025) for the MRP (equity risk premium) is 5.50%, which is significantly lower than Mr. D'Ascendis's calculated average MRP of 8.15% and the updated MRP of 8.86%.

[35] Joint Statement No. 2R, pp. 25-27.
[36] Joint Statement No. 2R, p. 25.
[37] I&E Statement No. 2, pp. 45-46.

EXCLUSION OF THE ECAPM

Q. PLEASE SUMMARIZE MR. D'ASCENDIS'S RESPONSE TO YOUR EXCLUSION OF THE ECAPM IN YOUR ANALYSIS.

A. Mr. D'Ascendis asserts that the empirical Security Market Line (SML) described by the traditional CAPM is not as steeply sloped as the CAPM model predicts and that tests of the CAPM have measured the extent to which security returns and betas are related as predicted by the CAPM that confirms its validity. Thus, he asserts ECAPM should be used in the CAPM analysis.[38]

Q. WHY IS THE ECAPM EXCLUDED FROM YOUR ANALYSIS?

A. The ECAPM is a modified version of the CAPM which attempts to address the belief that the actual risk vs. return correlation is flatter than what is predicted by the CAPM. The implication is that the CAPM underestimates returns with lower levels of risk and overestimates the returns associated with higher levels of risk. The model entails assigning a 25% weight to the market beta and a 75% weight to the individual company or proxy group.[39]

Additionally, the use of the ECAPM in estimating the cost of capital does not increase the validity of the result but merely adds another measure of subjectivity to the CAPM in an attempt to make the SML more accurate. The ECAPM reduces the purpose of the beta, which is the only company-specific

[38] Joint Statement No. 2R, pp. 21-23.
[39] David C. Parcell, "The Cost of Capital - A Practitioner's Guide," 2020 Edition, p. 106.

variable in the CAPM model. This additional layer of subjectivity provides an even stronger basis to rely on the DCF as the primary method to calculate a utility's cost of equity. In fact, as discussed in my direct testimony,[40] Mr. D'Ascendis inflated his traditional CAPM result of 10.96% by simply combining the ECAPM results to produce the indicated CAPM cost of equity rate of 11.12%.

Lastly, I am unaware of whether the Commission has specifically recognized or approved ECAPM results in a cost of equity determination.

Q. ARE YOU CHANGING YOUR CAPM RETURN ON EQUITY RECOMMENDATION AS A RESULT OF MR. D'ASCENDIS'S REBUTTAL TESTIMONY?

A. No. I continue to recommend using my traditional CAPM result of 10.51% and CAPM result using Kroll's ERP of 9.36% (with an average of both CAPM results of 9.94%)[41] only as a comparison to my DCF result of 10.51%.[42]

NON-PRICE REGULATED PROXY GROUP

Q. WHAT WAS YOUR RECOMMENDATION IN DIRECT TESTIMONY CONCERNING MR. D'ASCENDIS'S USE OF A NON-REGULATED PROXY GROUP?

A. I recommended that the Commission reject all analyses performed using the non-

[40] I&E Statement No. 2, pp. 47-48.
[41] I&E Exhibit No. 2, Schedule 11.
[42] I&E Exhibit No. 2, Schedule 6.

price regulated company proxy group as it is highly speculative and subjective. Mr. D'Ascendis's non-price regulated proxy group in effect blends the CE approach into the DCF, CAPM, and RP models.[43]

Q. SUMMARIZE MR. D'ASCENDIS'S RESPONSE REGARDING YOUR DISAGREEMENT WITH HIS USE OF A NON-PRICE REGULATED PROXY GROUP.

A. In rebuttal testimony,[44] Mr. D'Ascendis attempts to justify the use of the companies in his non-price regulated proxy group based on the unadjusted betas and standard errors of the regression being similar to that of the companies in his gas company proxy group. Therefore, he opines that they are comparable to Valley in the context of total risks (business risk and financial risk). He admits that business risk and financial risk may vary between companies and proxy groups. However, he claims that if the collective average betas and standard errors of the regression of the proxy group are similar, then the total non-diversifiable market risks and diversifiable risks are similar as noted in an academic article entitled, "Comparable Earnings - New Life for an Old Precept."[45] He then concludes that the non-price regulated companies are selected based on analyses of market data, and hence, they are comparable in total risk (even though

[43] I&E Statement No. 2, pp. 14-15.
[44] Joint Statement No. 2R, p. 27.
[45] Joint Statement No. 2R, p. 27.

individual risks may vary) to his gas utility proxy group.[46] Finally, he concludes that the results of market models applied to the non-price regulated proxy group are comparable in total risk to his gas utility proxy group, and therefore, should be accepted by the Commission.[47]

Q. HAS MR. D'ASCENDIS PROVEN THAT THE RISKS FACED BY HIS NON-PRICE REGULATED PROXY GROUP ARE SIMILAR TO THAT OF HIS GAS UTILITY PROXY GROUP?

A. No. The risks faced in each industry for the companies used in Mr. D'Ascendis's non-price regulated group differ from the risks faced by his gas utility group. Specifically, the level of competition between non-price regulated companies and monopolies, which utilities largely are, is too difficult a factor to control. Although beta is an indicator of a company's investment risk in relation to the entire stock market, beta is not a quantification of the total investment risk of a given company. Mr. D'Ascendis's unregulated proxy group may have a beta comparable to that of his gas proxy group, but that does not mean the companies face sufficiently similar risks and uncertainties to be used as a substitute for an industry's market. Both beta and the standard error of regression are measures of the past performance of a stock and as such do not necessarily reflect where an industry is going or what risks it is expected to face.

[46] Joint Statement No. 2R, p. 28.
[47] Joint Statement No. 2R, p. 30.

Additionally, the Commission made the following comments in the 2017 UGI Electric case regarding the CE method, specifically for the use of non-utility (unregulated) companies as comparable groups, and stated,[48]

> With respect to the CE method, as noted above, this cost of equity method utilizes data for non-regulated firms. Thus, by its very nature, determining which companies are comparable is entirely subjective. In addition, the record indicates that the companies UGI utilized in its CE group results in the selection of companies such as Coca-Cola Company, Kellogg Company, and Walmart Stores, Inc.…Each of these companies operate in industries that are very different from a utility company and have significantly more competition, which would require a higher return for the associated additional risk.

As discussed in my direct testimony,[49] I reiterate that non-price regulated or non-utility companies with unrelated or entirely dissimilar business segments are simply not comparable to gas distribution utilities in terms of business risk and financial risk profiles. Natural gas distribution utilities are monopolies that are subject to very little competition, if any at all. Due to this minimal competition, natural gas distribution utilities in general have very low business risk and can maintain higher financial risk profiles by employing more leverage. Conversely, since the companies in Mr. D'Ascendis's non-price regulated proxy group operate in an unregulated competitive environment with a higher level of business risks

[48] *Pa. PUC v. UGI Utilities, Inc. - Electric Division,* Docket No. R-2017-2640058 (Order Entered October 25, 2018), p. 105. The Commission has also ruled "[t]he use of nonregulated companies as a comparable group for regulated firms requires numerous unsupportable assumptions which results in a highly speculative finding." *Pennsylvania Public Utility Commission v. Philadelphia Electric Co.* 33 PUR 4th 319, 341 (Pa PUC 1980).

[49] I&E Statement No. 2, pp. 12-14.

and uncertainties, they must maintain lower financial risk profiles by employing a smaller amount of leverage.

Finally, I am advised by counsel that use of a non-price regulated proxy group defies the principle set forth in the *Hope* and *Bluefield cases*[50] that a utility is entitled to a return similar to that being earned by companies with similar risks and uncertainties, but not as high as those earned by highly profitable or speculative ventures.

SIZE ADJUSTMENT

Q. SUMMARIZE YOUR DIRECT TESTIMONY REGARDING MR. D'ASCENDIS'S CLAIM FOR THE COMPANY'S SIZE ADJUSTMENT.

A. In my direct testimony,[51] I discussed that Mr. D'Ascendis's 100-basis point (1.00%) adjustment is unnecessary because none of the technical literature cited in his direct testimony supporting an adjustment related to the size of a company is specific to the utility industry. Additionally, I presented an article by Dr. Annie Wong that demonstrated that there is no need to make an adjustment for the size of a company in utility rate regulation. Finally, I indicated that the Commission has recently rejected the application of a size adjustment to the cost of equity calculation.

[50] *See Bluefield Water Works & Improvements Co. v. Public Service Comm. of West Virginia,* 262 U.S. 679,692-93 (1923), and the *FPC v. Hope Natural Gas Co.,* 320 U.S. 591, 603 (1944).

[51] I&E Statement No. 2, pp. 49-53.

Q. DID ANY WITNESSES RESPOND TO YOUR RECOMMENDED REJECTION OF THE SIZE ADJUSTMENT?

A. Yes. Company witnesses D'Ascendis and Rogers disagree with my recommendation.

Q. SUMMARIZE MR. D'ASCENDIS'S RESPONSE IN REBUTTAL TESTIMONY REGARDING A SIZE RISK FACTOR ADJUSTMENT.

A. Mr. D'Ascendis opines that smaller companies are simply less able to cope with significant events that affect sales, revenues, and earnings. For example, smaller companies face more exposure to business cycles and economic conditions, both nationally and locally. Additionally, he claims that the loss of revenues from a few large customers would have a far greater effect on a small company than on a larger company with a more diverse customer base.[52] He supports these statements by pointing to a study from Fama and French relating the size of a company to its return on equity, which indicates that small capitalization firms are more risky than large capitalization firms.[53] Mr. D'Ascendis also attempts to discredit a study performed by Dr. Wong, that I relied upon in rejecting his size adjustment, by citing a review of her study authored by Thomas M. Zepp.[54] He presents two graphs showing: (1) the relationship between size (measured by capitalization of Value Line utility companies) and risk for the Value Line

[52] Joint Statement No. 2R, p. 8.
[53] Joint Statement No. 2R, pp. 8-9.
[54] Joint Statement No. 2R, p. 9.

universe of utility companies to demonstrate risk variance and (2) the relationship between size and safety ranking for the Value Line universe of utility companies.[55] Finally, Mr. D'Ascendis points to a 2019 Commission order in Citizens Electric case, where he claims that the Commission considered a size adjustment.[56]

Q. SUMMARIZE MR. ROGERS'S RESPONSE IN REBUTTAL TESTIMONY REGARDING A SIZE RISK FACTOR ADJUSTMENT.

A. Mr. Rogers states that Valley has real risk of losing one or more of the largest customers who have access to potential alternatives to natural gas service. Additionally, he states that the Commission has previously approved a size adjustment for small utilities, including Valley. He claims that in 2019 Citizens Electric and Valley cases, the Commission has specifically considered the size of the Company and approved an upward adjustment to the cost of equity by allowing for one standard deviation above the average of the mean and median proxy group ROE of the Company's DCF analysis. He then reiterates Mr. D'Ascendis's opinion that a general inverse relationship exists between size and risk, and the smaller companies like Valley face a greater risk. Therefore, he asserts that a higher return is required to provide the resources to handle significant events that affect revenues, costs, plant, and earnings.[57]

[55] Joint Statement No. 2R, p. 10-11.
[56] Joint Statement No. 2R, p. 12.
[57] Valley Statement No. 4R, pp. 4-6.

Q. ARE THE WITNESSES' ASSERTIONS REGARDING FIRMS OF SMALLER SIZE RELEVANT TO THE REGULATED UTILITY INDUSTRY?

A. No. The study performed by Dr. Wong provides empirical evidence that refutes Mr. D'Ascendis's claim, which I will further elaborate on below. Furthermore, regulated utility companies have the option to file base rate cases to address declining revenues and to recover the increasing cost of doing business in addition to emergency rate relief provisions for large unforeseen impacts. In contrast, non-utility businesses that may be significantly impacted by events of this nature due to small operating size do not have these opportunities. Further, while a smaller utility may pay higher prices for services and materials simply due to low volume buying power, the actual costs are part of the revenue requirement presented by that company. Thus, increasing the equity return to account for the potential size disadvantage would only further unfairly burden ratepayers who are already likely paying higher utility bills to recover the higher operating costs.

Regarding concerns raised related to a revenue deficiency due to potential loss of a few large customers and its consequential effect on financials of a small utility company, I refer to Valley's response to I&E-RR-21, where Valley states that there have been no "large customers" accounts lost or gained in 2022, 2023, and 2024. One Compressed Natural Gas (CNG) station closed in April 2025 and another CNG station is expected to close later this year. However, the April 2025 station closure only affected a small portion of Valley's total revenue with an

average revenue loss of $2,389, and the later station closure would result in an average revenue loss of $1,773.[58]

Q. PLEASE CONTINUE.

A. It is also important to note that the assertion that as a company's size decreases, risk increases, is speculative and not reliable because size measurement is based on the stock price volatility (risk) and market capitalization (size) relationship. Stock price volatility is not an appropriate risk measure as the stock prices are influenced by various factors such as economic conditions, financial and capital market conditions, regulatory changes, company-specific operational and financial risks and uncertainties, and a company's quarterly and annual financial results.

Q. WHAT ARE YOUR OBSERVATIONS REGARDING THE STUDIES MR. D'ASCENDIS RELIES ON TO SUPPORT HIS CLAIM OF A SIZE ADJUSTMENT?

A. The Fama and French study is not specific to the utility industry. While I relied upon the Fama and French study in this proceeding, as Mr. D'Ascendis correctly points out, the purpose for which I cited the study was to demonstrate empirically the shortcomings of the CAPM. The Fama and French study is irrelevant for the determination of the size risk factor because it is not specific to the utility industry.

[58] I&E Exhibit No. 2, Schedule 13.

Q. PLEASE COMMENT ON THE REVIEW OF DR. WONG'S STUDY PERFORMED BY DR. ZEPP.

A. The article Mr. D'Ascendis references from Dr. Zepp does not recreate Dr. Wong's study; it simply speculates on other possible reasons for Dr. Wong's results and references the results of two other studies. The first study, completed by the California Public Utilities Commission Staff in 1991, is not included in the article, and, therefore, Dr. Zepp's opinions cannot be properly evaluated. Dr. Zepp also draws his conclusions about an entire industry based on the second study, which examines the effects of size on only four water utility companies. This article does not contain enough credible evidence to refute Dr. Wong's findings.

Q. HAVE YOU FOUND FURTHER EVIDENCE TO SUPPORT YOUR RECOMMENDATION REGARDING SIZE ADJUSTMENTS?

A. Yes. The difficulty in predicting the risk effect of a company's size is demonstrated in the variance from year to year of the measurement of difference between the annual returns on the large and small-capitalization stocks of the NYSE/AMEX/NASDAQ in the Ibbotson *Stocks, Bonds, Bills & Inflation: 2015 Yearbook.* As stated on page 100,

> While the largest stocks actually declined in 2001, the smallest stocks rose more than 30%. A more extreme case occurred in the depression-recovery year of 1933, when the difference between the first and 10th decile returns was far more substantial. The divergence in the performance of small- and

large- cap stocks is evident. In 30 of the 89 years since 1926, the difference between the total returns of the largest stocks (decile 1) and the smallest stocks (decile 10) has been greater than 25 percentage points.

Page 109 states,

> In four of the last 10 years, large-capitalization stocks (deciles 1-2 of NYSE/AMEX/NASDAQ) have outperformed small-capitalization stocks (deciles 9-10). This has led some market observers to speculate that there is no size premium. But statistical evidence suggests that periods of underperformance should be expected.

Page 112 states,

> Because investors cannot predict when small-cap returns will be higher than large-cap returns, it has been argued that they do not expect higher rates of return for small stocks.

Aswath Damodaran notes in his study "Equity Risk Premiums (ERP):

Determinants, Estimation, and Implications" - The 2022 Edition on page 50 states,

> In the four decades since 1980, the small cap premium has been non-existent, raising questions about whether it still persists or whether it was an artifact of the twentieth century.

Page 51 states,

> Finally, a series of studies have argued that market capitalization, by itself, is not the reason for excess returns but that it is a proxy for other ignored risks such as illiquidity and poor information. The argument that there is, in fact, no small cap premium and that we have observed over time is just an artifact of history that should be given credence.

Page 53-54 states,

> Even if you believe that small cap companies are more exposed to market risk than large cap ones, this is a sloppy and lazy way of dealing with that risk, since risk ultimately has to come from something fundamental (and size is not a fundamental factor).

Q. WHAT IS YOUR RESPONSE TO MR. D'ASCENDIS'S REBUTTAL TESTIMONY REGARDING THE REFERENCED COMMISSION ORDER FOR CITIZENS' ELECTRIC COMPANY?

A. Mr. D'Ascendis admits that the Commission did not make an explicit size adjustment in the Citizens' Electric proceeding, however, he states that the Commission did acknowledge that size is a factor in assessing a company's ability to attract capital. He then claims that the Commission adjusted the DCF result by one standard deviation of the mean and median to account for size.[59] Although the Commission in the Citizens' Electric proceeding agreed that there is an inverse relationship between size and risk, the Commission concluded that there is no substantial evidence that size is specifically a risk for utilities as follows,

> At the same time, however, we echo the ALJs that the Parties have presented offsetting arguments such that there is not substantial evidence to determine whether size is specifically a risk for utilities. As I&E and the OCA both noted, the technical literature presented by Citizens' is not specific to the utility industry and also may not definitively support a size adjustment. Additionally, as I&E observed, the empirical study undertaken by the Company's witness Mr. D'Ascendis illustrates the difficulty in predicting the risk effect of a company's size. More specifically, while Mr. D'Ascendis used market information from the NYSE, the AMEX, and the NASDAQ, we find that I&E offered evidence indicating that for certain periods, large-capitalization stocks have outperformed small-capitalization stocks such that there is not sufficient correlation to prove that size is a specific risk for utilities. I&E St. 2-SR at 23-24. Therefore, we are not persuaded by the Company's argument that the ALJs erred by not awarding Citizens' a greater size adjustment. For this

[59] Joint Statement No. 2R, p. 12.

reason, we decline to award an explicit 100-basis point size adjustment, as advocated by Citizens.[60]

Similarly, in the 2019 Valley Energy case the Commission rejected 100-bassis point size adjustment.[61] The Commission has also rejected the application of a size adjustment to the CAPM cost of equity calculation where it agreed that the literature the company cites is not specific to the utility industry.[62]

Q. HAS YOUR RECOMMENDATION REGARDING MR. D'ASCENDIS AND MR. ROGERS'S SIZE ADJUSTMENT CHANGED SINCE YOUR DIRECT TESTIMONY?

A. No. I continue to recommend that any adjustments in consideration of the Company's size be disallowed for the reasons explained above and in my direct testimony.

MANAGEMENT PERFORMANCE POINTS

Q. SUMMARIZE MR. D'ASCENDIS AND MR. ROGERS'S REBUTTAL TESTIMONY REGARDING MANAGEMENT PERFORMANCE POINTS.

A. Mr. D'Ascendis simply states that the Company should be awarded a five-basis point (0.05%) upward adjustment to its indicated ROE based on Code 66 Pa. C.S.

---

60 *Pa. PUC v. Citizens Electric Company of Lewisburg, PA,* Docket No. R-2019-3008212 (Order Entered April 29, 2020). *See generally* Disposition of Cost of Common Equity, pp. 103-104.

61 I&E Statement No. 2, p. 52-53. *Pa. PUC v. Valley Energy, Inc*., Docket No. R-2019-3008209 (Order Entered April 27, 2020), p. 114 (Disposition of Cost of Common Equity).

62 *Pa. PUC v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058 (Order Entered October 25, 2018), p. 100 (Disposition of Cost of Common Equity).

§ 523 regarding performance factor.[63] He further states, "Simply put, Code 66 Pa. C.S. § 523 is in existence to incentivize companies to 'do their job' at a high level. The Companies in this case fulfill the requirement of the statute and should receive the benefit of doing so."[64] He does not offer an explanation beyond what he argued in his direct testimony.

Mr. Rogers reiterates most of Mr. D'Ascendis's reasons from his direct testimony to support the Company's claim for a performance adjustment. These reasons include smart hub online account access to its customers, replacement of 100% of its cast iron and bare steel mains, replacement of leak prone Aldyl-A vintage plastic pipelines and service lines, reduced lost and unaccounted for gas, outstanding emergency response, low customer complaints, etc.[65] Finally he states that based on the above improvements and continued efficiencies, the Company has been able to provide overall cost savings in excess of $452,000 or $61 annually per customer. Therefore, he asserts that Valley has earned a performance adjustment based on the Company's achievements and initiatives as outlined above and in his direct testimony.[66]

[63] Joint Statement No. 2R, p. 13.
[64] Joint Statement No. 2R, p. 13.
[65] Joint Statement No. 4R, pp. 3-4.
[66] Joint Statement No. 4R, p. 4.

Q. WHAT IS YOUR RESPONSE TO MR. D'ASCENDIS AND MR. ROGERS'S REBUTTAL TESTIMONY REGARDING MANAGEMENT PERFORMANCE?

A. My position remains unchanged from the arguments made in my direct testimony.[67] Awarding the Company management effectiveness points would add an increased cost to ratepayers for service. Furthermore, any savings from effective operating and maintenance cost measures should flow through to ratepayers and investors. These claimed savings would likely be offset by the addition of basis points for management effectiveness as ratepayers would have to fund the additional costs. This defeats the purpose of implementing cost saving measures to benefit ratepayers.

Additionally, the Company should not be awarded management performance points in order to provide a sufficient return on equity or to affect investment decisions and planning for future financial activities, including the timing of rate cases. The purpose of base rate cases is to allow a utility to recover its costs and provide it the *opportunity* to earn a reasonable return on capital investments where additional basis points for management performance would not be necessary if management was as effective as they claim.

[67] I&E Statement No. 2, pp. 54-59.

Finally, as discussed in my direct testimony, true management effectiveness is earning a higher return through efficient use of resources and cost cutting measures. The greater net income resulting from cost savings and true efficiency in management and operations is available to be passed on to shareholders. Many of the topics presented by the Company fall within the categories of safe and reliable customer service and satisfaction required of every public utility under 66 Pa C.S.A. §1501. There is no basis or support for the addition of five basis points (0.05%) for superior or exemplary management performance. Valley, or any utility, should not be awarded additional basis points for doing what they are required to do to provide adequate, efficient, safe, and reasonable service under 66 Pa C.S.A. §1501.

SUMMARY OF MR. WALTERS' REBUTTAL TESTIMONY

Q. SUMMARIZE MR. WALTERS' RESPONSE TO YOUR ROE RECOMMENDATION.

A. Mr. Walters raises concerns for my: (1) recommended ROE of 10.51% because he claims that this ROE is the highest allowed for natural gas utility since at least 2017; (2) use of constant growth DCF model, which he claims based on excessive growth rates; and (3) recommended ROE which he opines is subject to significant biases and lacks thoroughness because it is based on a single model.[68]

[68] OCA Statement No. 2-R, pp. 3-4.

BENCHMARKING ROE

Q. SUMMARIZE MR. WALTERS'S RESPONSE TO YOUR RECOMMENDED ROE CHARACTERIZING IT AS INCONSISTENT WITH HIS BENCHMARK.

A. Mr. Walters states that my recommended ROE of 10.51% is inconsistent with and a deviation from all relevant benchmarks. He relies on the S&P Global research data point and points to the 2024 annual average authorized ROE of 9.70% for natural gas utilities and states that only in 2010 did an industry-wide average ROE briefly exceed 10%. Further, he adds that since 2017, Atlanta Gas Light Company has been awarded a 10.55% ROE.[69] Considering this, he concludes that my recommended 10.51% places Valley at the upper end of the spectrum and is inconsistent with industry norms or benchmarks for a regulated gas distribution utility and recommends that my recommended ROE be rejected.[70]

Q. WHAT IS YOUR RESPONSE TO MR. WALTERS'S BENCHMARKING YOUR RECOMMENDED ROE WITH THE NATIONAL AVERAGE ROE FOR NATURAL GAS UTILITIES?

A. As discussed at length in my direct testimony concerning use of appropriate cost of equity methods,[71] I performed the cost of equity analysis (DCF and CAPM) using the latest available market data of the gas utility proxy group at the time of

[69] OCA Statement No. 2-R, p. 4.
[70] OCA Statement No. 2-R, p. 5.
[71] I&E Statement No. 2, pp. 19-27.

my analysis. The DCF and CAPM analysis are traditionally used, industry-wide and Commission accepted, and the trusted formula-based method. I have not maneuvered or altered market data that I used in my analysis. Historically, the Commission has accepted and approved I&E analysis results based on the DCF and CAPM methodologies as presented in base rate cases. I&E has not deviated from these traditional DCF and CAPM analysis methods. Therefore, it is inappropriate to compare I&E's market-driven data analysis results with other state jurisdictional utilities' ROE analysis methods and results.

USE OF GROWTH RATES

Q. SUMMARIZE MR. WALTERS'S RESPONSE TO YOUR GROWTH RATES USED IN YOUR CONSTANT GROWTH DCF MODEL.

A. Mr. Walters disputes the analysts' forecasted growth rate of 6.87% used in my DCF analysis because this rate exceeds the consensus for a long-term 4.09% GDP growth rate of the United States by 278 basis points.[72] He asserts that the United States GDP growth projection is a reasonable upper limit, or proxy, for the maximum sustainable long-term growth rate in the DCF model because public utilities cannot indefinitely sustain a growth rate that exceeds the growth rate of the economy in which they sell services.[73] Therefore, he asserts that my constant growth DCF analysis is flawed and suggests consideration of a widely used multi-

[72] OCA Statement No. 2-R, p. 7.
[73] OCA Statement No. 2-R, p. 7.

stage DCF model to balance my result.[74] Finally, he concludes that assuming a multi-stage DCF result of 8.62%, the average of my constant growth DCF and multi-stage DCF analyses would be 9.57% [(10.51% + 8.62%) ÷ 2], which is consistent with his recommended ROE of 9.50% for Valley.[75]

Q. WHAT IS YOUR RESPONSE TO MR. WALTERS'S COMMENT ON USE OF ANALYSTS' FORECASTED GROWTH RATES IN THE CONSTANT GROWTH DCF MODEL AND HIS SUGGESTION TO USE MULTI-STAGE DCF MODEL IN DETERMINING THE ROE FOR VALLEY?

A. As discussed in my direct testimony and data presented in my exhibit,[76] I used a five-year earnings growth forecast estimate of S&P Global, Zacks, and Value Line for my proxy group companies, which results in an average growth rate of 6.87%. Notably, S&P Global, Zacks, and Value Line forecasted earnings growth rates are based on in-depth data research and consider company and industry specific data points and growth potentials as well as external factors such as capital market, inflation, investor sentiments, and the economy in forecasting a utility's earnings growth forecast. Thus, the analyst forecasted growth rates are widely used and accepted by the industry, investors, utility regulators, and the capital market. Analysts' forecasted earnings growth rates reflect a true representation of proxy group companies' growth rates rather than the U.S. Gross Domestic Product

[74] OCA Statement No. 2-R, p. 8.
[75] OCA Statement No. 2-R, p. 9.
[76] I&E Statement No. 2, p. 21 and I&E Exhibit No. 2, Schedule 5.

(GDP) growth rates. The DCF method has the most wide-spread regulatory acceptance, and the Commission has historically relied mostly upon the constant growth DCF results with analysts' forecasted growth rates in base rate proceedings as recently as 2017, 2018, 2020, and 2021.[77]

The U.S. GDP growth rate is not a market measure, rather it is a measure of the value of the total output of goods and services excluding inflation in an economy. GDP is the sum of all private industry and government output in the United States, and its growth rate is simply an average of the value of those industries. The GDP growth rate is measured using a basket of a variety of goods and services produced in the country, which does not truly represent or is not comparable with industry specific or gas utilities' growth rates. Some industries grow faster than other industries, while some industries grow slowly or do not grow or remain on a steady growth trajectory, so the specific industry's growth rate should not be measured or compared with the overall GDP growth rate. Therefore, it is inappropriate and speculative to assume that the gas utility growth rates cannot exceed the GDP growth rate. Ironically, Mr. Walters did use a

[77] *Pa. PUC v. City of DuBois - Bureau of Water*, Docket No. R-2016-2554150 (Order Entered March 28, 2017). *See generally* Disposition of Cost Rate Models, pp. 96-97; *Pa. PUC v. UGI Utilities, Inc. - Electric Division,* Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Cost of Common Equity, p. 119; *Pa. PUC v. Wellsboro Electric Company,* Docket No. R-2019-3008208 (Order Entered April 29, 2020). *See generally* Disposition of Primary Methodology to Determine ROE, pp. 80-81; *Pa. PUC v. Citizens Electric Company of Lewisburg, PA,* Docket No. R-2019-3008212 (Order Entered April 29, 2020). *See generally* Disposition of Cost of Common Equity, pp. 91-92; *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2020-3018835 (Order Entered February 19, 2021). *See generally* Disposition of Cost of Common Equity, p. 131; , Docket No. R-2020-3018929 (Order Entered June 22, 2021). See generally Disposition of Return of Rate on Common Equity, p. 171.

consensus analysts' (Zacks, S&P, and I/B/E/S) average growth rate of 6.87% in his constant growth DCF model.[78]

It is important to note that my DCF analysis uses the proxy group companies' spot dividend yield, a 52-week dividend yield, and five-year earnings growth forecasts, which provides a forward-looking estimation for the cost of equity that would be more appropriate and consistent with FPFTY ratemaking.

Considering the above, I disagree with Mr. Walters' characterization that my constant growth DCF analysis result is flawed and his suggestion to consider a multi-stage DCF model in my DCF analysis. I also disagree with Mr. Walters's calculated average of my constant growth DCF and his multi-stage DCF analyses result of 9.57% [(10.51% + 8.62%) ÷ 2].

EXCLUSIVE RELIANCE ON THE DCF

Q. SUMMARIZE MR. WALTERS'S RESPONSE TO YOUR EXCLUSIVE RELIANCE ON THE CONSTANT-GROWTH DCF MODEL.

A. Mr. Walters states that no single model can be relied upon exclusively to estimate a fair and reasonable cost of equity because each model has its own strengths, limitations, and sensitivities to input assumptions. He claims that my exclusive use of a constant growth DCF model fails to capture the full range of investor expectations because it is highly sensitive to the assumed growth rate and exceeds

[78] OCA Exhibit CCW-3.

the projected growth rate of the U.S. economy by a significant margin. Therefore, he advocates for the use of a multi-model approach, such as including a multi-stage DCF, CAPM, and RP method.[79]

Q. WHAT IS YOUR RESPONSE TO MR. WALTERS'S COMMENT ON YOUR EXCLUSIVE RELIANCE ON A CONSTANT-GROWTH DCF MODEL AND HIS SUGGESTION TO USE MULTI-MODEL APPROACH?

A. For the reasons discussed in the "Sole Reliance on DCF" section above in response to Mr. D'Ascendis's comment concerning my exclusive use of the DCF model in determining the cost of equity for Valley, I disagree with Mr. Walters's assertions that the DCF model fails to capture the full range of investor expectations and that the use of analysts' growth rates in the DCF model is inappropriate because it is higher than the GDP growth rate. Additionally, the Commission has accepted and relied on I&E's DCF methodology (using analysts' forecasted growth rates) and DCF results in several rate cases cited above in determining the appropriate and reasonable ROE for utilities.

[79] OCA Statement No. 2-R, pp. 9-10.

OVERALL RATE OF RETURN

Q. HAS YOUR OVERALL RATE OF RETURN RECOMMENDATION CHANGED FROM YOUR DIRECT TESTIMONY?

A. No. I continue to support each recommendation made in my direct testimony.[80]

Q. PLEASE RESTATE YOUR RATE OF RETURN RECOMMENDATION?

A. I continue to recommend the following rate of return for the Company:[81]

I&E Recommendation
Valley Energy, Inc.
Summary of Cost of Capital

Type of Capital	Ratio	Cost Rate	Weighted Cost Rate
Long-Term Debt	51.06%	5.03%	2.57%
Common Equity	48.94%	10.51%	5.14%
Total	**100.00%**		**7.71%**

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

[80] I&E Statement No. 2.
[81] I&E Statement No. 2, pp. 6-7.

I&E Statement No. 3-SR
Witness: Esyan A. Sakaya

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Bureau of Investigation and Enforcement

Concerning:

Revenue Requirement
Reporting Requirements
Scale Back of Rates

TABLE OF CONTENTS

INTRODUCTION **1**

REVENUE REQUIREMENT **2**

REPORTING REQUIREMENTS **3**

SCALE BACK OF RATES **4**

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Esyan A. Sakaya. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, Pennsylvania 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Valuation Engineer.

Q. ARE YOU THE SAME ESYAN A. SAKAYA WHO IS RESPONSIBLE FOR THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 3?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony submitted on behalf of Valley Energy, Inc. (Valley or Company) by Howard Gorman (Valley Statement No. 1-R) and Jamie Beale (Valley Statement No. 5-R). My surrebuttal testimony specifically addresses the issues of reporting requirements and the scale back of rates.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. No.

REVENUE REQUIREMENT

Q. WHAT WAS THE COMPANY'S INITIAL REQUESTED INCREASE?

A. The Company's initial revenue requirement claim was $1,626,099.[1]

Q. HAS THE COMPANY REVISED ITS REQUESTED INCREASE?

A. Yes. The Company revised its requested increase claim from $1,626,099 to $1,285,942.[2]

Q. WHY DID THE COMPANY REVISE ITS REQUESTED INCREASE?

A. Valley accepted recommended adjustments related to the state income tax expense rate, regulatory commission expense, depreciation expense, the gas cost rate, insurance, and advertising.[3]

[1] Valley Exhibit HSG-1, Sch. C1.
[2] Valley Statement No. 1-R, p. 2.
[3] Valley Statement 1-R, p. 2.

REPORTING REQUIREMENTS

Q. WHAT DID YOU RECOMMEND REGARDING PLANT ADDITIONS THAT THE COMPANY PROJECTS TO BE IN SERVICE DURING THE FTY ENDING DECEMBER 31, 2025 AND THE FPFTY ENDING DECEMBER 31, 2026?

A. In my direct testimony I recommended that the Company be required to provide the I&E and the Office of Consumer Advocate with an update to Valley Exhibit HSG-1, Schedule C3 no later than April 1, 2026, under this docket number, which should include actual capital expenditures, plant additions, and retirements by month for the year ending December 31, 2025. I also recommended that the Company be required to provide an additional update for actuals through December 31, 2026, no later than April 1, 2027.[4]

Q. DID THE COMPANY RESPOND TO YOUR PLANT ADDITIONS AND REPORTING REQUIREMENT RECOMMENDATIONS?

A. Yes. The Company accepted my recommendation.[5]

[4] I&E Statement No. 3, pp. 8-9.
[5] Valley Statement No. 5-R, p. 5.

SCALE BACK OF RATES

Q. WHAT IS THE IMPACT OF VALLEY REDUCING ITS REQUESTED REVENUE INCREASE FROM $1,626,099 TO $1,285,942?

A. By virtue of Valley revising its requested increase from $1,626,099 to $1,285,942, the revised increases by customer class range between 22% and 25%, which is lower than Valley's initial 29% to 32% as shown below in Table 1.

Table 1

AS FILED Source: Valley Exhibit HSG-1, Schedule B4, p. 1			REVISED Source: Valley Exhibit HSG-1R, Schedule B4 (R), p. 1		
Rate Class	Proposed Increase Revenue	Proposed Increase Percentage	Rate Class	Proposed Increase Revenue	Proposed Increase Percentage
Residential:			**Residential:**		
Rate-R	$933,998	29.56%	Rate-R	$738,632	23.38%
Subtotal Residential	**$933,998**		**Subtotal Residential**	**$738,632**	
Commercial:			**Commercial:**		
Rate C - Commercial	$270,382	29.73%	Rate C - Commercial	$215,250	22.88%
Rate IS - Interruptible Service	$5,926	29.28%	Rate IS - Interruptible Service	$4,720	23.33%
Rate SI - Small Industrial	$4,184	27.80%	Rate SI - Small Industrial	$3,468	23.05%
Subtotal Commercial	**$280,491**	28.73%	**Subtotal Commercial**	**$223,439**	22.89%
Transportation:			**Transportation:**		
Firm	$107,445	29.64%	Firm	$84,805	23.39%
Firm-Fixed	$0	0.00%	Firm-Fixed	$0	0.00%
Firm-Volumetric	$0	0.00%	Firm-Volumetric	$0	0.00%
Firm-DDQ	$90,410	32.35%	Firm-DDQ	$70,048	25.06%
Large Industrial	$106,434	29.56%	Large Industrial	$84,176	23.38%
Interrruptible	$107,333	28.58%	Interrruptible	$84,856	23.38%
Subtotal Transportation	**$411,623**	17.54%	**Subtotal Transportation**	**$323,885**	13.80%
Total	**$1,626,112**	**25.08%**	**Total**	**$1,285,956**	**19.84%**

Q. DID VALLEY CHANGE ITS PROPOSED CUSTOMER CHARGES?

A. No. While Valley's revision to its revenue requirement reduced the percentage increases per rate class, the Company is still proposing the same monthly customer

charges. The proposed customer charges and usage rates are shown on Valley Exhibit HSG-1, Schedule B4-R, p. 1.

Q. WHAT DID YOU RECOMMEND IF THE COMMISSION GRANTS LESS THAN THE FULL INCREASE?

A. I recommended that if the Commission grants less than Valley's full requested increase, the percentage increase for each class be adjusted so each class, other than the Contract classes, receive the same percentage increase. I also recommended that the customer charges be included in the scale back to limit the increase in the customer charge that is applicable to zero and low usage customers.[6]

Q. WHY DID YOU RECOMMEND THAT EACH CLASS BESIDES THE CONTRACT CLASSES RECEIVE THE SAME PERCENTAGE INCREASE?

A. Valley did not provide a cost of service study to compare the revenue received to the expenses incurred to provide service to each class. Thus, there is no justification for proposing different percentage increases for the classes receiving an increase. Therefore, scaling back the rates so each class receives the same percentage increase is the most reasonable approach to establish rates if the Commission grants less than the full increase.

[6] I&E Statement No. 3, pp. 8-9.

Q. DID THE COMPANY RESPOND TO YOUR SCALE BACK RECOMMENDATION?

A. Yes. The Company agreed with my scale back recommendation with respect to the percentage increases, but it did not agree with my recommendation to include the customer charge in the scale back.[7]

Q. DO YOU AGREE THAT THE CUSTOMER CHARGE NOT BE INCLUDED IN THE SCALE BACK?

A. No, I continue to recommend that the customer charge be included in any scale back.

Q. PLEASE EXPLAIN.

A. As stated in my direct testimony, I recommended that any scale back include the customer charges for the following reasons. First, zero and low usage customers should be included in the scale back in order to limit the increase in the customer charge. Second, including the customer charge in the scale back promotes conservation because it causes a larger portion of the customer's bill to be recovered in volumetric rates, thus giving customers more of an incentive to reduce usage. Finally, adjustments resulting in a reduced revenue requirement

[7] Valley Statement No-1-R, pp. 6-7.

would also affect those items that are included in the customer costs, so any scale back related to a lower revenue allowance should also apply to customer charges.[8]

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

I. INTRODUCTION

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dylan W. D'Ascendis. My business address is 1820 Chapel Ave., W., Suite 300, Cherry Hill, N.J. 08003.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Partner at ScottMadden, Inc.

Q. PLEASE SUMMARIZE YOUR PROFESSIONAL EXPERIENCE AND EDUCATIONAL BACKGROUND.

A. I have offered expert testimony on behalf of investor-owned utilities before over 40 state regulatory commissions in the United States, the Federal Energy Regulatory Commission, the Alberta Utility Commission, the Canadian Energy Regulator, an American Arbitration Association panel, and the Superior Court of Rhode Island on issues including, but not limited to, common equity cost rate, rate of return, valuation, capital structure, class cost of service, and rate design.

On behalf of the American Gas Association ("AGA"), I calculate the AGA Gas Index, which serves as the benchmark against which the performance of the American Gas Index Fund ("AGIF") is measured on a monthly basis. The AGA Gas Index and AGIF are a market capitalization weighted index and mutual fund, respectively, comprised of the common stocks of the publicly traded corporate members of the AGA.

I am a member of the Society of Utility and Regulatory Financial Analysts ("SURFA"). In 2011, I was awarded the professional designation "Certified Rate

of Return Analyst" by SURFA, which is based on education, experience, and the successful completion of a comprehensive written examination.

I am also a member of the National Association of Certified Valuation Analysts ("NACVA") and was awarded the professional designation "Certified Valuation Analyst" by the NACVA in 2015.

I am a graduate of the University of Pennsylvania, where I received a Bachelor of Arts degree in Economic History. I have also received a Master of Business Administration with high honors and concentrations in Finance and International Business from Rutgers University.

The details of my educational background and expert witness appearances are included in Appendix A.

II. PURPOSE OF TESTIMONY

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A. The purpose of my testimony is to present evidence on behalf of Valley Energy, Inc. ("Valley"), Citizens' Electric Company of Lewisburg, PA ("Citizens'"), and Wellsboro Electric Company ("Wellsboro") (collectively, "the Companies") supporting the appropriate return on common equity ("ROE") for each company's jurisdictional rate base.

Q. HAVE YOU PREPARED AN EXHIBIT IN SUPPORT OF YOUR RECOMMENDATION?

A. Yes. I have prepared Exhibit __ (DWD-1), which consists of Schedules DWD-1 through DWD-8.

III. SUMMARY

Q. WHAT ARE YOUR RECOMMENDED ROES FOR THE COMPANIES?

A. I recommend that the Pennsylvania Public Utility Commission (the "Commission") authorize Valley, Citizens', and Wellsboro opportunities to earn an ROE of 11.65% on their jurisdictional rate bases. These ROEs, as applied to the Companies' ratemaking capital structures and long-term debt cost rates, result in recommended weighted average costs of capital ("WACC") of 8.27%, 8.49% and 8.18% for Valley, Citizens', and Wellsboro, respectively. The Companies' ratemaking capital structures and costs of long-term debt are supported by Company Witness Ryan M. Kucan. The summary of the Companies' requested WACCs are shown on Tables 1, 2, and 3 below.

Table 1: Summary of Recommended Weighted Average Cost of Capital for Valley

Type of Capital	Ratios	Cost Rate	Weighted Cost Rate
Long-Term Debt	51.06%	5.03%	2.57%
Common Equity	48.94%	11.65%	5.70%
Total	100.00%		8.27%

Table 2: Summary of Recommended Weighted Average Cost of Capital for Citizens'

Type of Capital	Ratios	Cost Rate	Weighted Cost Rate
Long-Term Debt	51.06%	5.47%	2.79%
Common Equity	48.94%	11.65%	5.70%
Total	100.00%		8.49%

Table 3: Summary of Recommended Weighted Average Cost of Capital for Wellsboro

Type of Capital	Ratios	Cost Rate	Weighted Cost Rate
Long-Term Debt	51.06%	4.85%	2.48%
Common Equity	48.94%	11.65%	5.70%
Total	100.00%		8.18%

Q. PLEASE SUMMARIZE YOUR RECOMMENDED COMMON EQUITY COST RATES.

A. My recommended common equity cost rates of 11.65% applicable to Valley, Citizens', and Wellsboro are summarized on page 1 of Schedule DWD-1. I have assessed the market-based common equity cost rates of companies of relatively similar, but not necessarily identical, risk to the Companies. Using companies of relatively comparable risk as proxies is consistent with the principles of fair rate of return established in the *Hope*[1] and *Bluefield*[2] decisions. No proxy group can be identical in risk to any single company. Consequently, there must be an evaluation of relative risk between the Companies and the proxy group to determine if it is appropriate to adjust the proxy group's indicated rate of return.

My recommendation results from applying several cost of common equity models, specifically the Discounted Cash Flow ("DCF") model, the Risk Premium Model ("RPM"), and the Capital Asset Pricing Model ("CAPM"), to the market data of a Gas Utility Proxy Group and an Electric Utility Proxy Group (collectively, the "Utility Proxy Groups") whose selection criteria will be discussed below. In

[1] *Federal Power Comm'n v. Hope Natural Gas Co.*, 320 U.S. 591 (1944*)("Hope").*
[2] *Bluefield Water Works Improvement Co. v. Public Serv. Comm'n*, 262 U.S. 679 (1922).

addition, I applied the DCF model, RPM, and CAPM to proxy groups of domestic, non-price regulated companies comparable in total risk to the Gas and Electric Utility Proxy Groups (collectively, the "Non-Price Regulated Proxy Groups"). The results derived from each are as follows:

Table 4: Summary of Common Equity Cost Rates

	Gas Proxy Group	Electric Proxy Group
Discounted Cash Flow Model	10.29%	10.32%
Risk Premium Model	10.86%	10.79%
Capital Asset Pricing Model	11.12%	10.75%
Cost of Equity Models Applied to Comparable Risk, Non-Price Regulated Companies	11.92%	11.84%
Indicated Range of Common Equity Cost Rates Before Adjustments	10.29% - 11.92%	10.32% - 11.84%
Size Adjustment	1.00%	0.85%
Performance Factor Adjustment	0.05%	0.05%
Indicated Range of Common Equity Cost Rates After Adjustments	11.34% - 12.97%	11.22% - 12.74%
Recommended Cost of Common Equity After Adjustments	11.65%	11.65%

The indicated ranges of common equity cost rates were 10.29% to 11.92% and 10.32% to 11.84% for the Gas and Electric Utility Proxy Groups, respectively, before any company-specific adjustments. I then adjusted the indicated ranges of common equity cost rates upward by 1.00% to reflect Valley's smaller relative size, as compared to the Gas Utility Proxy Group, and by 0.85% to reflect Citizens' and Wellsboro's smaller relative size, as compared to the Electric Utility Proxy Group. I also adjusted the Companies' indicated ranges of common equity cost rates

upward by 0.05% to reflect a performance factor adjustment, based on guidance from Section 523 of the Pennsylvania Public Utility Code, 66 Pa.C.S. § 523, and the Commission Order in the Companies' last litigated rate case.[3] These adjustments resulted in company-specific ranges of common equity cost rates of 11.34% to 12.97% for Valley and 11.22% to 12.74% for Citizens' and Wellsboro. Given the indicated ranges of common equity cost rates for the Companies, I recommend the Commission to approve a common equity cost rate of 11.65% for Valley, Citizens', and Wellsboro.

IV. GENERAL PRINCIPLES

Q. WHAT GENERAL PRINCIPLES HAVE YOU CONSIDERED IN ARRIVING AT YOUR RECOMMENDED COMMON EQUITY COST RATES?

A. In unregulated industries, marketplace competition is the principal determinant of the price of products or services. For regulated public utilities, regulation must act as a substitute for marketplace competition. Assuring that the utility can fulfill its obligations to the public, while providing safe and reliable service at all times, requires a level of earnings sufficient to maintain the integrity of presently invested capital. Sufficient earnings also permit the attraction of needed new capital at a reasonable cost, for which the utility must compete with other firms of comparable risk, consistent with the fair rate of return standards established by the U.S. Supreme Court in the previously cited *Hope* and *Bluefield* cases. The U.S. Supreme Court affirmed the fair rate of return standards in *Hope*, when it stated:

[3] Docket No. R-2019-3008209 (Valley), at 118-120 and R-2019-3008212 (Citizens'), at 108-110.

> The rate-making process under the Act, *i.e.*, the fixing of 'just and reasonable' rates, involves a balancing of the investor and the consumer interests. Thus we stated in the Natural Gas Pipeline Co. case that 'regulation does not insure that the business shall produce net revenues.' 315 U.S. at page 590, 62 S.Ct. at page 745. But such considerations aside, the investor interest has a legitimate concern with the financial integrity of the company whose rates are being regulated. From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. Cf. Chicago & Grand Trunk R. Co. v. Wellman, 143 U.S. 339, 345, 346 12 S.Ct. 400,402. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.[4]

In summary, the U.S. Supreme Court has found a return that is adequate to attract capital at reasonable terms enables the utility to provide service while maintaining its financial integrity. As discussed above, and in keeping with established regulatory standards, that return should be commensurate with the returns expected elsewhere for investments of equivalent risk. Therefore, the Commission's decision in this proceeding should provide the Companies with the opportunity to earn a return that is: (1) adequate to attract capital at reasonable cost and terms; (2) sufficient to ensure their financial integrity; and (3) commensurate with returns on investments in enterprises having corresponding risks.

Lastly, the required return for a regulated public utility is established on a stand-alone basis, i.e., for the utility operating company at issue in a rate case. Parent entities, like other investors, have capital constraints and must look at the attractiveness of the expected risk-adjusted return of each investment alternative in

[4] *Hope*, 320 U.S. 591 (1944), at 603.

their capital budgeting process. That is, utility holding companies that own many utility operating companies have choices as to where they will invest their capital within the holding company family. Therefore, the opportunity cost concept applies regardless of the source of the funding, whether it be public funding or corporate funding.

When funding is provided by a parent entity, the return still must be sufficient to provide an incentive to allocate equity capital to the subsidiary or business unit rather than other internal or external investment opportunities. That is, the regulated subsidiary must compete for capital with all the parent company's affiliates, and with other, similarly situated companies. In that regard, investors value corporate entities on a sum-of-the-parts basis and expect each division within the parent company to provide an appropriate risk-adjusted return.

It therefore is important that the authorized ROE reflects the risks and prospects of the utility's operations and supports the utility's financial integrity from a stand-alone perspective, as measured by its combined business and financial risks. Consequently, the ROE authorized in this proceeding should be sufficient to support the operational (i.e., business risk) and financing (i.e., financial risk) of the Companies on a stand-alone basis.

Q. WITHIN THAT BROAD FRAMEWORK, HOW IS THE COST OF CAPITAL ESTIMATED IN REGULATORY PROCEEDINGS?

A. Regulated utilities primarily use common stock and long-term debt to finance their permanent property, plant, and equipment (i.e., rate base). The fair rate of return for a regulated utility is based on its weighted average cost of capital, in which, as

noted earlier, the costs of the individual sources of capital are weighted by their respective book values with appropriate adjustments.

The cost of capital is the return investors require to make an investment in a firm. Investors will provide funds to a firm only if the return that they *expect* is equal to, or greater than, the return that they *require* to accept the risk of providing funds to the firm.

The cost of capital (that is, the combination of the costs of debt and equity) is based on the economic principle of "opportunity costs." Investing in any asset (whether debt or equity securities) represents a forgone opportunity to invest in alternative assets. For any investment to be sensible, its expected return must be at least equal to the return expected on alternative, comparable risk investment opportunities. Because investments with like risks should offer similar returns, the opportunity cost of an investment should equal the return available on an investment of comparable risk.

Whereas the cost of debt is contractually defined and can be directly observed as the interest rate or yield on debt securities, the cost of common equity must be estimated based on market data and various financial models. Because the cost of common equity is premised on opportunity costs, the models used to determine it are typically applied to a group of "comparable" or "proxy" companies. In the end, the estimated cost of capital should reflect the return that investors require in light of the subject company's business and financial risks, and the returns available on comparable investments.

Q. IS THE AUTHORIZED RETURN SET IN REGULATORY PROCEEDINGS GUARANTEED?

A. No, it is not. Consistent with the *Hope* and *Bluefield* standards, the ratemaking process should provide the utility a reasonable opportunity to recover its return of, and return on, its reasonably incurred investments, but it does not guarantee that return. While a utility may have control over some factors that affect the ability to earn its authorized return (e.g., management performance, operating and maintenance expenses, etc.), there are several factors beyond a utility's control that affect its ability to earn its authorized return. Those may include factors such as weather, the economy, and the prevalence and magnitude of regulatory lag.

A. <u>Business Risk</u>

Q. PLEASE DEFINE BUSINESS RISK AND EXPLAIN WHY IT IS IMPORTANT FOR DETERMINING A FAIR RATE OF RETURN.

A. The investor-required return on common equity reflects investors' assessment of the total investment risk of the subject firm. Total investment risk is often discussed in the context of business and financial risk.

Business risk reflects the uncertainty associated with owning a company's common stock without the company's use of debt and/or preferred stock financing. One way of considering the distinction between business and financial risk is to view the former as the uncertainty of the expected earned return on common equity, assuming the firm is financed with no debt.

Examples of business risks <u>generally</u> faced by utilities include, but are not limited to, the regulatory environment, mandatory environmental compliance

requirements, customer mix and concentration of customers, service territory economic conditions, market demand, risks and uncertainties of supply, operations, capital intensity, size, the degree of operating leverage, emerging technologies including distributed energy resources, and the vagaries of weather.

Although analysts, including rating agencies, may categorize business risks individually, as a practical matter, such risks are interrelated and not wholly distinct from one another. When determining an appropriate return on common equity, the relevant issue is where investors see the subject company in relation to other similarly situated utility companies (i.e., the Utility Proxy Groups). To the extent investors view a company as being exposed to higher risk, the required return will increase, and vice versa.

For regulated utilities, business risks are both long-term and near-term in nature. Whereas near-term business risks are reflected in year-to-year variability in earnings and cash flow brought about by economic or regulatory factors, long-term business risks reflect the prospect of an impaired ability of investors to obtain both a fair rate of return on, and return of, their capital. Moreover, because utilities accept the obligation to provide safe, adequate and reliable service at all times (in exchange for the opportunity to earn a fair return on their investment), they generally do not have the option to delay, defer, or reject capital investments. Because those investments are capital-intensive, utilities generally do not have the option to avoid raising external funds during periods of capital market distress, if necessary.

Because utilities invest in long-lived assets, long-term business risks are of paramount concern to equity investors. That is, the risk of not recovering the return on their investment extends far into the future. The timing and nature of events that may lead to losses, however, also are uncertain and, consequently, those risks and their implications for the required return on equity tend to be difficult to quantify. Regulatory commissions (like investors who commit their capital) must review a variety of quantitative and qualitative data and apply their reasoned judgment to determine how long-term risks weigh in their assessment of the market-required return on common equity.

B. Financial Risk

Q. PLEASE DEFINE FINANCIAL RISK AND EXPLAIN WHY IT IS IMPORTANT IN DETERMINING A FAIR RATE OF RETURN.

A. Financial risk is the additional risk created by the introduction of debt and preferred stock into the capital structure. The higher the proportion of debt and preferred stock in the capital structure, the higher the financial risk to common equity owners (i.e., failure to receive dividends due to default or other covenants). Therefore, consistent with the basic financial principle of risk and return, common equity investors demand higher returns as compensation for bearing higher financial risk.

Q. CAN BOND AND CREDIT RATINGS BE A PROXY FOR A FIRM'S COMBINED BUSINESS AND FINANCIAL RISKS TO EQUITY OWNERS (I.E., INVESTMENT RISK)?

A. Yes, similar bond ratings/issuer credit ratings reflect, and are representative of, similar combined business and financial risks (i.e., total risk) faced by bond

investors.[5] Although specific business or financial risks may differ between companies, the same bond/credit rating indicates that the combined risks are roughly similar from a debtholder perspective. The caveat is that these debtholder risk measures do not translate directly to risks for common equity.

V. VALLEY, CITIZENS', WELLSBORO, AND THE UTILITY PROXY GROUPS

Q. PLEASE SUMMARIZE YOUR KNOWLEDGE OF THE COMPANIES.

A. Valley is an investor-owned natural gas distribution utility that provides natural gas service to customers in Sayre and surrounding communities in Bradford County, which is in the northern tier of Pennsylvania and is predominantly rural. Valley's Pennsylvania operations serve approximately 7,500 customers.

Citizens' is a Pennsylvania corporation with its principal office located in Lewisburg, Union County, Pennsylvania. Citizens' is an investor-owned, for-profit electric distribution utility. Citizens' service territory is a 55-square-mile territory in and around Lewisburg, Pennsylvania. As of February 16, 2023, Citizens' served 7,118 customers, of which 5,913 were residential and 1,205 were commercial, industrial or lighting.[6]

Wellsboro is a small investor-owned electric distribution utility providing service in the Borough of Wellsboro, Pennsylvania and surrounding areas in Tioga County. Wellsboro's approximate 200-square-mile service territory is

[5] Risk distinctions within S&P's bond rating categories are recognized by a plus or minus, e.g., within the A category, an S&P rating can by at A+, A, or A-. Similarly, risk distinction for Moody's ratings are distinguished by numerical rating gradations, e.g., within the A category, a Moody's rating can be A1, A2 and A3.

[6] Source: https://citizenselectric.com/about-us/

predominantly rural. Wellsboro serves 6,478 customers, of which 5,159 were residential and 1,319 were commercial and industrial.[7]

The Companies are wholly-owned by C&T Enterprises, Inc., and are not publicly-traded.

Q. PLEASE EXPLAIN HOW YOU CHOSE THE COMPANIES IN THE GAS UTILITY PROXY GROUP.

A. The companies selected for the Gas Utility Proxy Group met the following criteria:

(i) They were included in the Natural Gas Utility Group of *Value Line Investment Survey's Standard Edition* ("*Value Line*") (February 21, 2025);

(ii) They have 60% or greater of fiscal year 2023 total operating income derived from, or 60% or greater of fiscal year 2023 total assets attributable to, regulated gas distribution operations;

(iii) At the time of preparation of this testimony, they had not publicly announced that they were involved in any major merger or acquisition activity (i.e., one publicly-traded utility merging with or acquiring another) or any other major development;

(iv) They have not cut or omitted their common dividends during the five years ended 2023 or through the time of preparation of this testimony;

(v) They have *Value Line* and Bloomberg Professional Services ("Bloomberg") adjusted beta coefficients ("beta");

(vi) They have positive *Value Line* five-year dividends per share ("DPS") growth rate projections; and

[7] Source: https://wellsboroelectric.com/about-us/

(vii) They have *Value Line*, Zacks, or S&P Capital IQ consensus five-year earnings per share ("EPS") growth rate projections.

The following seven companies met these criteria: Atmos Energy Corporation, New Jersey Resources Corporation, NiSource Inc., Northwest Natural Holding Company, ONE Gas, Inc., Southwest Gas Holdings, Inc., and Spire Inc.

Q. PLEASE EXPLAIN HOW YOU CHOSE THE COMPANIES IN THE ELECTRIC UTILITY PROXY GROUP.

A. The companies selected for the Electric Utility Proxy Group met the following criteria:

(i) They were included in the Eastern, Central, or Western Electric Utility Group of *Value Line*;

(ii) They have 70% or greater of fiscal year 2023 total operating income derived from, and 70% or greater of fiscal year 2023 total assets attributable to, regulated electric operations;

(iii) At the time of preparation of this testimony, they had not publicly announced that they were involved in any major merger or acquisition activity (i.e., one publicly-traded utility merging with or acquiring another) or any other major development;

(iv) They have not cut or omitted their common dividends during the five years ended 2023 or through the time of preparation of this testimony;

(v) They have *Value Line* and Bloomberg adjusted betas;

(vi) They have positive *Value Line* five-year DPS growth rate projections; and

(vii) They have *Value Line*, Zacks, or S&P Capital IQ consensus five-year EPS growth rate projections.

The following 15 companies met these criteria: Alliant Energy Corporation, Ameren Corporation, American Electric Power Company, Inc., Duke Energy Corporation, Edison International, Entergy Corporation, Evergy, Inc., Energy, IDACORP, Inc., NorthWestern Corporation, OGE Energy Corporation, Pinnacle West Capital Corporation, Portland General Electric Company, The Southern Company, TXNM Energy Inc., and Xcel Energy Inc.

Q. PLEASE DESCRIBE PAGES 1 AND 2 OF SCHEDULE DWD-2.

A. Pages 1 and 2 of Schedule DWD-2 contain comparative capitalization and financial statistics for the Gas and Electric Utility Proxy Groups identified above for the years 2019 to 2023.

During the five-year period ending 2023, the historically achieved average earnings rate on book common equity for the Gas and Electric Utility Proxy Groups averaged 8.41% and 9.29%, respectively. Total debt to earnings before interest, taxes, depreciation, and amortization for the years 2019 to 2023 ranged between 4.81 and 5.72, with an average of 5.34 for the Gas Utility Proxy Group, and ranged between 4.73 and 5.98, with an average of 5.41 for the Electric Utility Proxy Group. Funds from operations to total debt ranged from 9.24% to 27.32%, with an average of 15.50% for the Gas Utility Proxy Group, and 6.06% to 13.34% with an average of 10.99% for the Electric Utility Proxy Group.

VI. COMMON EQUITY COST RATE MODELS

Q. IS IT IMPORTANT THAT COST OF COMMON EQUITY MODELS BE MARKET-BASED?

A. Yes. As discussed previously, regulated public utilities, like the Companies, must compete for equity in capital markets along with all other companies with commensurate risk, including non-utilities. The cost of common equity is thus determined based on equity market expectations for the returns of those companies. If an individual investor is choosing to invest their capital among companies with comparable risk, they will choose the company providing a higher return over a company providing a lower return.

Q. ARE YOUR COST OF COMMON EQUITY MODELS MARKET-BASED?

A. Yes. The DCF model uses market prices in developing the model's dividend yield component. The RPM uses bond ratings and expected bond yields that reflect the market's assessment of bond/credit risk. In addition, betas (β), which reflect the market/systematic risk component of equity risk premium, are derived from regression analyses of market prices. The CAPM is market-based for many of the same reasons that the RPM is market-based (i.e., the use of expected bond yields and betas). Selection criteria for comparable risk non-price regulated companies are based on regression analyses of market prices and reflect the market's assessment of total risk.

Q. WHAT ANALYTICAL APPROACHES DID YOU USE TO DETERMINE THE COMPANIES' ROE?

A. As discussed earlier, I have relied on the DCF model, the RPM, and the CAPM,

which I apply to the Utility Proxy Groups described above. I also applied these same models to a Non-Price Regulated Proxy Group described later in this section.

I rely on these models because reasonable investors use a variety of tools and do not rely exclusively on a single source of information or single model. Moreover, the models on which I rely focus on different aspects of return requirements and provide different insights to investors' views of risk and return. The DCF model, for example, estimates the investor-required return assuming a constant expected dividend yield and growth rate in perpetuity, while risk premium-based methods (i.e., the RPM and CAPM approaches) provide the ability to reflect investors' views of risk, future market returns, and the relationship between interest rates and the cost of common equity. Just as the use of market data for the Utility Proxy Groups adds the reliability necessary to inform expert judgment in arriving at a recommended common equity cost rate, the use of multiple generally accepted common equity cost rate models also adds reliability and accuracy when arriving at a recommended common equity cost rate.

The use of multiple models also makes intuitive sense considering that market prices are set by the buying and selling behavior of multiple investors, whose circumstances, objectives, and constraints vary over time and across market conditions. One cannot assume a single method is the best measure of the factors motivating those decisions for all investors at all times. Giving undue weight to a single method runs the very real risk of ignoring important information provided by other methods.

In other words, no single model is more reliable than all others under all market conditions. Intuition suggests it is more appropriate to use as many methods as one reasonably can and to reflect the many factors motivating investment decisions as best one can. In this instance, intuition, financial theory,[8] and financial practice reach a common conclusion: one should apply and reasonably consider multiple methods when estimating the ROE.

A. Discounted Cash Flow Model

Q. WHAT IS THE THEORETICAL BASIS OF THE DCF MODEL?

A. The theory underlying the DCF model is that the present value of an expected future stream of net cash flows during the investment holding period can be determined by discounting those cash flows at the cost of capital, or the investors' capitalization rate. DCF theory indicates that an investor buys a stock for an expected total return rate, which is derived from the cash flows received from dividends and market price appreciation. Mathematically, the dividend yield on market price plus a growth rate equals the capitalization rate; i.e., the total common equity return rate expected by investors.

Q. WHICH VERSION OF THE DCF MODEL DID YOU USE?

A. I used the single-stage constant growth DCF model.

[8] As Brigham explains: "Whereas debt and preferred stocks are contractual obligations which have easily determined costs, it is not at all easy to estimate [the ROE]. However, three methods can be used: (1) the Capital Asset Pricing Model (CAPM), (2) the discounted cash flow (DCF) model, and (3) the bond-yield-plus-risk-premium approach. These methods should not be regarded as mutually exclusive – no one dominates the others, and all are subject to error when used in practice. Therefore, when faced with the task of estimating a company's cost of equity, we generally use all three methods and then choose among them on the basis of our confidence in the data used for each in the specific case at hand." Eugene F. Brigham, Louis C. Gapenski, Financial Management, Theory and Practice, 7th ed., The Dryden Press, 1994, at 341.

Q. PLEASE DESCRIBE THE DIVIDEND YIELD YOU USED IN APPLYING THE CONSTANT GROWTH DCF MODEL.

A. The unadjusted dividend yields are based on the proxy companies' dividends as of February 28, 2025, divided by the average closing market price for the 60 trading days ended February 28, 2025.[9]

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO THE DIVIDEND YIELD.

A. Because dividends are paid periodically (e.g. quarterly), as opposed to continuously (daily), an adjustment must be made to the dividend yield. This is often referred to as the discrete, or the "Gordon Periodic," version of the DCF model.

DCF theory calls for using the full growth rate, or D_1, in calculating the model's dividend yield component. Because the companies in the Gas and Electric Utility Proxy Groups increase their quarterly dividends at various times during the year, a reasonable assumption is to reflect one-half the annual dividend growth rate in the dividend yield component, or $D_{1/2}$. Because the dividend should be representative of the next 12-month period, this adjustment is a conservative approach that does not overstate the dividend yield. Therefore, the actual average dividend yields in Column 1, page 1 of Schedule DWD-3 have been adjusted upward to reflect one-half the average projected growth rate shown in Column 5.

Q. PLEASE EXPLAIN THE BASIS FOR THE GROWTH RATES YOU APPLIED TO THE UTILITY PROXY GROUPS IN YOUR CONSTANT GROWTH DCF MODEL.

A. Investors with more limited resources than institutional investors are likely to rely

[9] *See*, Column 1, page 1 of Schedule DWD-3.

on widely available financial information services, such as *Value Line*, Zacks, and S&P Capital IQ. Investors realize that analysts have significant insight into the dynamics of the industries and individual companies they analyze, as well as companies' abilities to effectively manage the effects of changing laws and regulations, and ever-changing economic and market conditions. For these reasons, I used analysts' five-year forecasts of EPS growth in my DCF analysis.

Over the long run, there can be no growth in DPS without growth in EPS. Security analysts' earnings expectations have a more significant influence on market prices than dividend expectations. Thus, using earnings growth rates in a DCF analysis provides a better match between investors' market price appreciation expectations and the growth rate component of the DCF.

Q. PLEASE SUMMARIZE THE CONSTANT GROWTH DCF MODEL RESULTS.

A. As shown on page 1 of Schedule DWD-3, for the Gas Utility Proxy Group, the mean result of applying the single-stage DCF model is 10.27%, the median result is 10.31%, and the average of the two is 10.29%. For the Electric Utility Proxy Group, the mean DCF result is 10.33%, the median result is 10.30%, and the average of the two is 10.32%. In arriving at a conclusion for the constant growth DCF-indicated common equity cost rate for the Gas and Electric Utility Proxy Groups, I relied on an average of the mean and the median results of the DCF, or 10.29% (gas) and 10.32% (electric). This approach considers all the proxy utilities' results, while mitigating the high and low outliers of those individual results.

B. The Risk Premium Model

Q. PLEASE DESCRIBE THE THEORETICAL BASIS OF THE RPM.

A. The RPM is based on the fundamental financial principle of risk and return; namely, that investors require greater returns for bearing greater risk. The RPM recognizes that common equity capital has greater investment risk than debt capital, as common equity shareholders are behind debt holders in any claim on a company's assets and earnings. As a result, investors require higher returns from common stocks than from bonds to compensate them for bearing the additional risk.

While it is possible to directly observe bond returns and yields, investors' required common equity returns cannot be directly determined or observed. According to RPM theory, one can estimate a common equity risk premium over bonds (either historically or prospectively) and use that premium to derive a cost rate of common equity. The cost of common equity equals the expected cost rate for long-term debt capital, plus a risk premium over that cost rate, to compensate common shareholders for the added risk of being unsecured and last-in-line for any claim on the corporation's assets and earnings upon liquidation.

Q. PLEASE EXPLAIN THE TOTAL MARKET APPROACH RPM.

A. The total market approach RPM adds a prospective public utility bond yield to an average of: 1) an equity risk premium that is derived from a beta-adjusted total market equity risk premium, 2) an equity risk premium based on the S&P Utilities Index, and 3) an equity risk premium based on authorized ROEs for gas and electric utilities, respectively.

Q. PLEASE EXPLAIN THE BASIS OF THE EXPECTED BOND YIELD OF 5.80% APPLICABLE TO THE GAS UTILITY PROXY GROUP AND THE 5.86% EXPECTED BOND YIELD APPLICABLE TO THE ELECTRIC UTILITY PROXY GROUP.

A. The first step in the total market approach RPM analysis is to determine the expected bond yield. Because both ratemaking and the cost of capital, including common equity cost rate, are prospective in nature, a prospective yield on similarly-rated long-term debt is essential. I relied on a consensus forecast of about 50 economists of the expected yield on Aaa-rated corporate bonds for the six calendar quarters ending with the second quarter of 2026, and *Blue Chip Financial Forecasts'("Blue Chip")* long-term projections for 2026 to 2030, and 2031 to 2035. As shown on line 1, page 1 of Schedule DWD-4, the average expected yield on Moody's Aaa-rated corporate bonds is 5.35%. To derive an expected yield on Moody's A2-rated public utility bonds, I made an upward adjustment of 0.38%, which represents a recent spread between Aaa-rated corporate bonds and A2-rated public utility bonds, in order to adjust the expected Aaa-rated corporate bond yield to an equivalent A2-rated public utility bond yield.[10] Adding that recent 0.38% spread to the expected Aaa-rated corporate bond yield of 5.35% results in an expected A2-rated public utility bond yield of 5.73%.

I then reviewed the average credit rating for the Utility Proxy Groups from Moody's to determine if an adjustment to the estimated A2-rated public utility bond was necessary. Since the Gas Utility Proxy Group's average Moody's long-term

[10] As shown on line 2 and explained in note 2, page 1 of Schedule DWD-4.

issuer rating is A3, and the Electric Utility Proxy Group's average Moody's long-term issuer rating is Baa1, additional adjustments to the expected Moody's A2 public utility bond yields are needed to reflect the difference in bond ratings for each group. Upward adjustments of 0.07% and 0.13%, which are one-third and two-thirds the recent spread between A2 and Baa2 public utility bond yields, respectively, result in 5.80% and 5.86% expected bond yields for the Gas Utility Proxy Group and Electric Utility Proxy Group, respectively.

Table 5: Summary of the Calculation of the Gas and Electric Utility Proxy Groups' Projected Bond Yields[11]

	Gas	**Electric**
Prospective Yield on Moody's Aaa-Rated Corporate Bonds (*Blue Chip)*	5.35%	5.35%
Adjustment to Reflect Yield Spread Between Moody's Aaa-Rated Corporate Bonds and Moody's A2-Rated Utility Bonds	0.38%	0.38%
Adjustment to Reflect the Gas Utility Proxy Group's Average Moody's Bond Rating of A3	0.07%	
Adjustment to Reflect the Electric Utility Proxy Group's Average Moody's Bond Rating of Baa1		0.13%
Prospective Bond Yield Applicable to the Utility Proxy Group	5.80%	5.86%

Q. PLEASE EXPLAIN HOW THE BETA-DERIVED EQUITY RISK PREMIUM IS DETERMINED.

A. The components of the beta-derived risk premium model are: 1) an expected market equity risk premium over corporate bonds, and 2) the beta. The derivation of the beta-derived equity risk premium that I applied to the Gas and Electric Utility Proxy

[11] As shown on page 1 of Schedule DWD-4.

Groups are shown on lines 1 through 8, page 6 of Schedule DWD-4. The total beta-derived equity risk premium I applied is based on an average of three historical market data-based equity risk premiums, a *Value Line*-based equity risk premium, and a combined *Value Line,* Bloomberg, and S&P Capital IQ-based equity risk premium. Each of these is described below.

Q. HOW DID YOU DERIVE A MARKET EQUITY RISK PREMIUM BASED ON LONG-TERM HISTORICAL DATA?

A. To derive a historical market equity risk premium, I used the most recent holding period returns for the large company common stocks less the average historical yield on Moody's Investors Service ("Moody's") Aaa/Aa2-rated corporate bonds for the period 1928 to 2024. Using holding period returns over a very long time is appropriate because it is consistent with the long-term investment horizon presumed by investing in a going concern, i.e., a company expected to operate in perpetuity.

The long-term arithmetic mean monthly total return rate on large company common stocks was 12.05% and the long-term arithmetic mean monthly yield on Moody's Aaa/Aa2-rated corporate bonds was 5.95% from 1928-2024. As shown on line 1, page 6 of Schedule DWD-4, subtracting the mean monthly bond yield from the total return on large company stocks results in a long-term historical equity risk premium of 6.10%.

I used the arithmetic mean monthly total return rates for the large company stocks and yields (income returns) for the Moody's Aaa/Aa-rated corporate bonds, because they are appropriate for the purpose of estimating the cost of capital as

noted in Kroll's Stocks, Bonds, Bills, and Inflation ("SBBI") Yearbook 2023 ("SBBI – 2023").[12] Using the arithmetic mean return rates and yields is appropriate because historical total returns and equity risk premiums provide insight into the variance and standard deviation of returns needed by investors in estimating future risk when making a current investment. If investors relied on the geometric mean of historical equity risk premiums, they would have no insight into the potential variance of future returns, because the geometric mean relates the change over many periods to a constant rate of change, thereby obviating the year-to-year fluctuations, or variance, which is critical to risk analysis.

Q. PLEASE EXPLAIN THE DERIVATION OF THE REGRESSION-BASED MARKET EQUITY RISK PREMIUM.

A. To derive the regression-based market equity risk premium of 6.82% shown on line 2, page 6 of Schedule DWD-4, I used the same monthly annualized total returns on large company common stocks relative to the monthly annualized yields on Moody's Aaa/Aa-rated corporate bonds as mentioned above. I modeled the relationship between interest rates and the market equity risk premium using the observed monthly market equity risk premium as the dependent variable, and the monthly yield on Moody's Aaa/Aa-rated corporate bonds as the independent variable. I then used a linear Ordinary Least Squares ("OLS") regression, in which the market equity risk premium is expressed as a function of the Moody's Aaa/Aa-rated corporate bonds yield:

$$RP = \alpha + \beta\ (R_{Aaa/Aa})$$

[12] *See*, SBBI - 2023, at 194.

Q. PLEASE EXPLAIN THE DERIVATION OF THE PREDICTIVE RISK PREMIUM MODEL ("PRPM") EQUITY RISK PREMIUM.

A. The PRPM, published in the *Journal of Regulatory Economics* and *The Electricity Journal,*[13] was developed from the work of Robert F. Engle, who shared the Nobel Prize in Economics in 2003 "for methods of analyzing economic time series with time-varying volatility ("ARCH")".[14] Engle found that volatility changes over time and is related from one period to the next, especially in financial markets. Engle discovered that the volatility in prices and returns clusters over time, and is therefore highly predictable, and can be used to predict future levels of risk and risk premiums.

The PRPM estimates the risk / return relationship directly, as the predicted equity risk premium is generated by the prediction of volatility or risk. The PRPM is not based on an estimate of investor behavior, but rather on the evaluation of the results of that behavior (i.e., the variance of historical equity risk premiums).

The inputs to the model are the historical returns on large company stocks minus the historical monthly yield on Moody's Aaa/Aa-rated corporate bonds from January 1928 through February 2025. Using a generalized form of ARCH, known as GARCH, I calculated each of the projected equity risk premiums using Eviews© statistical software. When the GARCH model is applied to the historical return

[13] Autoregressive conditional heteroscedasticity. *See*, "A New Approach for Estimating the Equity Risk Premium for Public Utilities", Pauline M. Ahern, Frank J. Hanley and Richard A. Michelfelder, *The Journal of Regulatory Economics* (December 2011), 40:261-278 and "Comparative Evaluation of the Predictive Risk Premium Model, the Discounted Cash Flow Model and the Capital Asset Pricing Model for Estimating the Cost of Common Equity", Richard A. Michelfelder, Pauline M. Ahern, Dylan W. D'Ascendis, and Frank J. Hanley, *The Electricity Journal* (May 2013), 84-89.

[14] www.nobelprize.org.

data, it produces a predicted GARCH variance series and a GARCH coefficient. Multiplying the predicted monthly variance by the GARCH coefficient and then annualizing it, produces the predicted annual equity risk premium. The resulting PRPM predicted a market equity risk premium of 7.32%.[15]

Q. PLEASE EXPLAIN THE DERIVATION OF A PROJECTED EQUITY RISK PREMIUM BASED ON *VALUE LINE* DATA FOR YOUR RPM ANALYSIS.

A. As noted above, because both ratemaking and the cost of capital are prospective, a prospective market equity risk premium is needed. The derivation of the forecasted or prospective market equity risk premium can be found in note 4, page 6 of Schedule DWD-4. Consistent with my calculation of the dividend yield component in my DCF analysis, this prospective market equity risk premium is derived from an average of the three- to five-year median market price appreciation potential by *Value Line* for the 13 weeks ended February 28, 2025, plus an average of the median estimated dividend yield for the common stocks of the 1,700 firms covered in *Value Line*'s Standard Edition.[16]

The average median expected price appreciation is 42%, which translates to a 9.16% annual appreciation, and, when added to the average of *Value Line's* median expected dividend yields of 2.04%, equates to a forecasted annual total return rate on the market of 11.20%. The forecasted Moody's Aaa-rated corporate bond yield of 5.35% is deducted from the total market return of 11.20%, resulting in an equity risk premium of 5.85%, as shown on line 4, page 6 of Schedule DWD-4.

[15] Shown on line 3, page 6 of Schedule DWD-4.
[16] As explained in detail in note 1, page 2 of Schedule DWD-5.

Q. PLEASE EXPLAIN THE DERIVATION OF AN EQUITY RISK PREMIUM BASED ON BLOOMBERG DATA.

A. Using data from *Value Line*, Bloomberg, and S&P Capital IQ, I calculated an expected total return on the S&P 500 companies using expected dividend yields and long-term growth estimates as a proxy for capital appreciation. The expected total return for the S&P 500 is 15.23%. Subtracting the prospective yield on Moody's Aaa-rated corporate bonds of 5.35% results in a 9.88% projected equity risk premium as shown on page 6, line 5 of Schedule DWD-4.

Q. WHAT WAS YOUR CONCLUSION OF A BETA-DERIVED EQUITY RISK PREMIUM FOR USE IN YOUR RPM ANALYSIS?

A. I gave equal weight to all five equity risk premiums based on each source - historical, *Value Line*, and combined *Value Line*, Bloomberg, and S&P Capital IQ - in arriving at a 7.19% equity risk premium.

Table 6: Summary of the Calculation of the Equity Risk Premium Using Total Market Returns[17]

Historical Spread Between Total Returns of Large Stocks and Aaa and Aa2-Rated Corporate Bond Yields (1928 – 2024)	6.10%
Regression Analysis on Historical Data	6.82%
PRPM Analysis on Historical Data	7.32%
Prospective Equity Risk Premium using Total Market Returns from *Value Line* Summary & Index less Projected Aaa Corporate Bond Yields	5.85%
Prospective Equity Risk Premium using Measures of Capital Appreciation and Income Returns for the S&P 500 less Projected Aaa Corporate Bond Yields	9.88%
Average	7.19%

[17] As shown on page 6 of Schedule DWD-4.

After calculating the average market equity risk premium of 7.19%, I adjusted it by beta to account for the risk of the Gas and Electric Utility Proxy Groups. As discussed below, beta is a meaningful measure of prospective relative risk to the market as a whole, and is a logical way to allocate a company's, or proxy group's, share of the market's total equity risk premium relative to corporate bond yields. As shown on page 1 of Schedule DWD-5, the average of the mean and median betas for the Gas and Electric Utility Proxy Groups are 0.79 and 0.73, respectively. Multiplying the average betas for each group by the market equity risk premium of 7.19% results in beta-adjusted equity risk premiums for the Gas and Electric Utility Proxy Groups of 5.68% and 5.25%, respectively.

Q. HOW DID YOU DERIVE THE EQUITY RISK PREMIUM BASED ON THE S&P UTILITY INDEX AND MOODY'S A-RATED PUBLIC UTILITY BONDS?

A. I estimated three equity risk premiums based on S&P Utility Index holding period returns and one equity risk premium based on the expected returns of the S&P Utilities Index, using *Value Line,* Bloomberg, and S&P Capital IQ data. Turning first to the S&P Utility Index holding period returns, I derived a long-term monthly arithmetic mean equity risk premium between the S&P Utility Index total returns of 10.59% and monthly Moody's A2-rated public utility bond yields of 6.42% from 1928 to 2024 to arrive at an equity risk premium of 4.16%.[18] I then used the same historical data to derive an equity risk premium of 4.80% based on a regression of the monthly equity risk premiums. The final S&P Utility Index holding period

[18] As shown on line 1, page 9 of Schedule DWD-4.

equity risk premium involved applying the PRPM using the historical monthly equity risk premiums from January 1928 to February 2025 to arrive at a PRPM-derived equity risk premium of 5.07% for the S&P Utility Index.

I then derived expected total returns on the S&P Utilities Index of 10.73% using data from *Value Line*, Bloomberg, and S&P Capital IQ and subtracted the prospective Moody's A2-rated public utility bond yield of 5.73%,[19] which resulted in an equity risk premium of 5.00%. As with the market equity risk premiums, I averaged the four risk premiums to arrive at my utility-specific equity risk premium of 4.76%.

Table 7: Summary of the Calculation of the Equity Risk Premium Using S&P Utility Index Holding Returns[20]

Historical Spread Between Total Returns of the S&P Utilities Index and A2-Rated Utility Bond Yields (1928 – 2024)	4.16%
Regression Analysis on Historical Data	4.80%
PRPM Analysis on Historical Data	5.07%
Prospective Equity Risk Premium using Measures of Capital Appreciation and Income Returns for the S&P Utilities Index less Projected A2 Utility Bond Yields	5.00%
Average	4.76%

Q. HOW DID YOU DERIVE AN EQUITY RISK PREMIUM OF 4.73% BASED ON AUTHORIZED ROES FOR GAS DISTRIBUTION UTILITIES?

A. The equity risk premium of 4.73% shown on line 3, page 5 of Schedule DWD-4 is the result of a regression analysis based on regulatory awarded gas distribution

[19] Derived on line 3, page 1 of Schedule DWD-4.
[20] As shown on page 9 of Schedule DWD-4.

ROEs related to the yields on Moody's A2-rated public utility bonds. That analysis is shown on page 10 of Schedule DWD-4. Page 10 of Schedule DWD-4 contains the graphical results of a regression analysis of 848 rate cases for gas distribution utilities which were fully litigated during the period from January 1, 1980 through February 28, 2025. It shows the implicit equity risk premium relative to the yields on A2-rated public utility bonds immediately prior to the issuance of each regulatory decision. It is readily discernible that there is an inverse relationship between the yield on A2-rated public utility bonds and equity risk premiums. In other words, as interest rates decline, the equity risk premium rises and vice versa, a result consistent with financial literature on the subject.[21] I used the regression results to estimate the equity risk premium applicable to the projected yield on Moody's A2-rated public utility bonds of 5.73%. Given the expected A2-rated utility bond yield of 5.73%, it can be calculated that the indicated equity risk premium applicable to that bond yield is 4.73%, which is shown on line 3, page 5 of Schedule DWD-4.

Q. HOW DID YOU DERIVE AN EQUITY RISK PREMIUM OF 4.77% BASED ON AUTHORIZED ROES FOR ELECTRIC UTILITIES?

A. The equity risk premium of 4.77% shown on line 4, page 7 of Schedule DWD-4 is the result of a regression analysis based on regulatory awarded electric utility ROEs related to the yields on Moody's A2-rated public utility bonds. That analysis is shown on page 11 of Schedule DWD-4. Page 11 of Schedule DWD-4 contains the

[21] *See, e.g.*, Robert S. Harris and Felicia C. Marston, *The Market Risk Premium: Expectational Estimates Using Analysts' Forecasts*, Journal of Applied Finance, Vol. 11, No. 1, 2001, at 11-12; Eugene F. Brigham, Dilip K. Shome, and Steve R. Vinson, *The Risk Premium Approach to Measuring a Utility's Cost of Equity*, Financial Management, Spring 1985, at pp. 33-45.

graphical results of a regression analysis of 1,257 rate cases for electric utilities which were fully litigated during the period from January 1, 1980 through February 28, 2025. It shows the implicit equity risk premium relative to the yields on A2-rated public utility bonds immediately prior to the issuance of each regulatory decision. Similar to the analysis using gas distribution utilities, it is readily discernible that there is also an inverse relationship between the yield on A2-rated public utility bonds and equity risk premiums for electric utilities. I therefore used the regression results to estimate the equity risk premium applicable to the projected yield on Moody's A2-rated public utility bonds of 5.73%. Given the expected A2-rated utility bond yield of 5.73%, it can be calculated that the indicated equity risk premium applicable to that bond yield is 4.77%, which is shown on line 4, page 5 of Schedule DWD-4.

Q. WHAT IS YOUR CONCLUSION OF AN EQUITY RISK PREMIUM FOR USE IN YOUR TOTAL MARKET APPROACH RPM ANALYSIS?

A. The equity risk premiums I applied to the Gas and Electric Utility Proxy Groups were 5.06% and 4.93%, respectively, which gave equal weight to the beta-adjusted equity risk premium for the Gas and Electric Utility Proxy Groups, the S&P Utilities Index, and the authorized return utility equity risk premiums as shown on page 5 of Schedule DWD-4.

Table 8: Summary of Conclusions for the Equity Risk Premium for Use in the Total Market Approach for the Utility Proxy Groups[22]

	Gas Proxy Group	Electric Proxy Group
Beta-Adjusted Equity Risk Premium	5.68%	5.25%
S&P Utilities Index Equity Risk Premium	4.76%	4.76%
Authorized ROE Equity Risk Premium	4.73%	4.77%
Average	5.06%	4.93%

Q. WHAT IS THE INDICATED RPM COMMON EQUITY COST RATE BASED ON THE TOTAL MARKET APPROACH?

A. As shown on line 7, page 1 of Schedule DWD-4, I calculated common equity cost rates of 10.86% and 10.79% for the Gas and Electric Utility Proxy Groups, respectively, based on the total market approach RPM.

Table 9: Summary of the Total Market Return Risk Premium Model[23]

	Gas Proxy Group	Electric Proxy Group
Prospective Moody's Utility Bond Yield Applicable to the Utility Proxy Group	5.80%	5.86%
Prospective Equity Risk Premium	5.06%	4.93%
Indicated Cost of Common Equity	10.86%	10.79%

C. The Capital Asset Pricing Model

Q. PLEASE EXPLAIN THE THEORETICAL BASIS OF THE CAPM.

A. CAPM theory defines risk as the co-variability of a security's returns with the market's returns as measured by the beta (β). A beta less than 1.0 indicates lower

[22] As shown on page 5 of Schedule DWD-4.
[23] As shown on page 1 of Schedule DWD-4.

variability than the market as a whole, while a beta greater than 1.0 indicates greater variability than the market.

The CAPM assumes that all non-market or unsystematic risk can be eliminated through diversification. The risk that cannot be eliminated through diversification is called market, or systematic, risk. In addition, the CAPM presumes that investors only require compensation for systematic risk, which is the result of macroeconomic and other events that affect the returns on all assets. The model is applied by adding a risk-free rate of return to a market risk premium, which is adjusted proportionately to reflect the systematic risk of the individual security relative to the total market as measured by beta. The traditional CAPM model is expressed as:

$$R_s = R_f + \beta (R_m - R_f)$$

Where:
- R_s = Return rate on the common stock
- R_f = Risk-free rate of return
- R_m = Return rate on the market as a whole
- β = Adjusted beta (volatility of the security relative to the market as a whole)

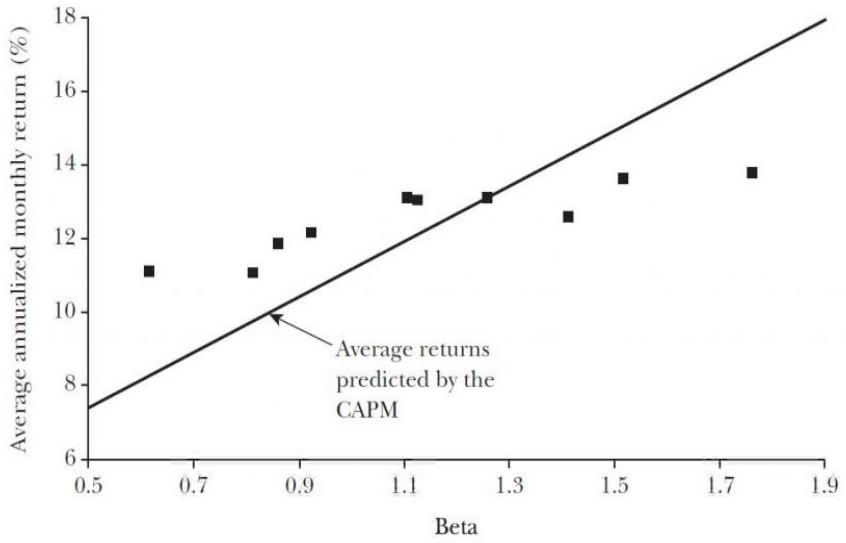
Numerous tests of the CAPM have measured the extent to which security returns and beta are related as predicted by the CAPM, confirming its validity. The empirical CAPM ("ECAPM") reflects the reality that while the results of these tests support the notion that the beta is related to security returns, the empirical Security

Market Line ("SML") described by the CAPM formula is not as steeply sloped as the predicted SML.[24]

The ECAPM reflects this empirical reality. Fama and French clearly state regarding their Figure 2, below, that "[t]he returns on the low beta portfolios are too high, and the returns on the high beta portfolios are too low."[25]

Figure 2 http://pubs.aeaweb.org/doi/pdfplus/10.1257/0895330042162430

Average Annualized Monthly Return versus Beta for Value Weight Portfolios Formed on Prior Beta, 1928–2003



Morin also states that:

> With few exceptions, the empirical studies agree that … low-beta securities earn returns somewhat higher than the CAPM would predict, and high-beta securities earn less than predicted.[26]

* * *

[24] Roger A. Morin, Modern Regulatory Finance (Public Utility Reports, Inc., 2021), at 223. ("Morin")

[25] Eugene F. Fama and Kenneth R. French, *The Capital Asset Pricing Model: Theory and Evidence*, Journal of Economic Perspectives, Vol. 18, No. 3, Summer 2004 at p. 33 ("Fama & French").

[26] Morin, at 207.

Therefore, the empirical evidence suggests that the expected return on a security is related to its risk by the following approximation:

$$K = R_F + x (R_M - R_F) + (1-x) \beta(R_M - R_F)$$

where x is a fraction to be determined empirically. The value of x that best explains the observed relationship [is] Return = 0.0829 + 0.0520 β is between 0.25 and 0.30. If x = 0.25, the equation becomes:

$$K = R_F + 0.25(R_M - R_F) + 0.75 \beta(R_M - R_F)$$[27]

Fama and French provide similar support for the ECAPM when they state:

> The early tests firmly reject the Sharpe-Lintner version of the CAPM. There is a positive relation between beta and average return, but it is too "flat."… The regressions consistently find that the intercept is greater than the average risk-free rate… and the coefficient on beta is less than the average excess market return… This is true in the early tests… as well as in more recent cross-section regressions tests, like Fama and French (1992).[28]

Finally, Fama and French further note:

> Confirming earlier evidence, the relation between beta and average return for the ten portfolios is much flatter than the Sharpe-Linter CAPM predicts. The returns on low beta portfolios are too high, and the returns on the high beta portfolios are too low. For example, the predicted return on the portfolio with the lowest beta is 8.3 percent per year; the actual return as 11.1 percent. The predicted return on the portfolio with the t beta is 16.8 percent per year; the actual is 13.7 percent.[29]

Clearly, the justification from Morin, and Fama and French, along with their reviews of other academic research on the CAPM, validate the use of the ECAPM. In view of theory and practical research, I have applied both the traditional CAPM and the ECAPM to the companies in the Gas and Electric Utility Proxy Groups and averaged the results.

[27] Morin, at 221.
[28] Fama & French, at 32.
[29] Fama & French, at 33.

Q. WHAT BETA DID YOU USE IN YOUR CAPM ANALYSIS?

A. For the beta in my CAPM analysis, I considered two sources: *Value Line* and Bloomberg. While both of those services adjust their calculated (or "raw") betas to reflect the tendency of beta to regress to the market mean of 1.00, *Value Line* calculates beta over a five-year period, while Bloomberg calculates it over a two-year period.

Q. PLEASE DESCRIBE YOUR SELECTION OF A RISK-FREE RATE OF RETURN.

A. As shown in Column 5, page 1 of Schedule DWD-5, the risk-free rate adopted for applications of the CAPM is 4.55%. This risk-free rate is based on the average of the *Blue Chip* consensus forecast of the expected yields on 30-year U.S. Treasury bonds for the six quarters ending with the second calendar quarter of 2026, and long-term projections for the years 2026 to 2030 and 2031 to 2035.

Q. WHY DO YOU USE THE PROJECTED 30-YEAR TREASURY YIELD IN YOUR ANALYSES?

A. The yield on long-term U.S. Treasury bonds is almost risk-free and its term is consistent with the long-term cost of capital to public utilities measured by the yields on Moody's A2-rated public utility bonds; the long-term investment horizon inherent in utilities' common stocks; and the long-term life of the jurisdictional rate base to which the allowed fair rate of return (i.e., cost of capital) will be applied. In contrast, short-term U.S. Treasury yields are more volatile and largely a function of Federal Reserve monetary policy.

Q. PLEASE EXPLAIN THE ESTIMATION OF THE EXPECTED RISK PREMIUM FOR THE MARKET RISK PREMIUM USED IN YOUR CAPM ANALYSES.

A. The basis of the market risk premium is explained in detail in note 1 on Schedule DWD-5. As discussed above, the market risk premium is derived from an average of three historical data-based market risk premiums, one *Value Line* data-based market risk premiums, and one *Value Line*, Bloomberg, and S&P Capital IQ data-based market risk premium.

The long-term income return on U.S. Government securities of 4.99% was deducted from the monthly historical total market return of 12.29%, which results in a historical market equity risk premium of 7.31%. A linear OLS regression was applied to the monthly annualized historical returns on the S&P 500 relative to historical yields on long-term U.S. Government securities, which yielded a market equity risk premium of 7.94%. The PRPM market equity risk premium is 8.18% and is derived using the PRPM relative to the yields on long-term U.S. Treasury securities from January 1926 through February 2025.

The *Value Line*-derived forecasted total market equity risk premium is derived by deducting the forecasted risk-free rate of 4.55%, discussed above, from the *Value Line* projected total annual market return of 11.20%, resulting in a forecasted total market equity risk premium of 6.65%.

The S&P 500 projected market equity risk premium using *Value Line,* Bloomberg and S&P Capital IQ data is derived by subtracting the projected risk-

free rate of 4.55% from the projected total return of the S&P 500 of 15.23%. The resulting market equity risk premium is 10.68%.

These five measures, when averaged, result in an average total market equity risk premium of 8.15%

Table 10: Summary of the Calculation of the Market Risk Premium for Use in the CAPM[30]

Historical Spread Between Total Returns of Large Stocks and Long-Term Government Bond Yields (1926 – 2024)	7.31%
Regression Analysis on Historical Data	7.94%
PRPM Analysis on Historical Data	8.18%
Prospective Equity Risk Premium using Total Market Returns from *Value Line* Summary & Index less Projected 30-Year Treasury Bond Yields	6.65%
Prospective Equity Risk Premium using Measures of Capital Appreciation and Income Returns for the S&P 500 less Projected 30-Year Treasury Bond Yields	10.68%
Average	8.15%

Q. WHAT ARE THE RESULTS OF YOUR APPLICATION OF THE TRADITIONAL AND EMPIRICAL CAPM TO THE GAS AND ELECTRIC UTILITY PROXY GROUPS?

A. As shown on page 1 of Schedule DWD-5, the mean result of my CAPM/ECAPM analyses for the Gas Utility Proxy Group is 11.10%, the median is 11.13%, and the average of the two is 11.12%. For the Electric Utility Proxy Group, the mean CAPM/ECAPM result is 10.79%, the median is 10.70%, and the average of the two is 10.75%. Consistent with my reliance on the average of mean and median DCF

[30] As shown on page 2 of Schedule DWD-5.

results discussed above, the indicated common equity cost rates for the Gas and Electric Utility Proxy Group using the CAPM/ECAPM are 11.12% and 10.75%, respectively.

D. Common Equity Cost Rates for Proxy Group of Domestic, Non-Price Regulated Companies Based on the DCF, RPM, and CAPM

Q. WHY DID YOU ALSO CONSIDER PROXY GROUPS OF DOMESTIC, NON-PRICE REGULATED COMPANIES?

A. In the *Hope* and *Bluefield* cases, the U.S. Supreme Court did not specify that comparable risk companies had to be utilities. Because the purpose of rate regulation is to be a substitute for marketplace competition, non-price regulated firms operating in the competitive marketplace make an excellent proxy if they are comparable in total risk to the Gas and Electric Utility Proxy Groups being used to estimate the cost of common equity. The selection of such domestic, non-price regulated competitive firms theoretically and empirically results in a proxy group that is comparable in total risk to the Gas and Electric Utility Proxy Groups, because all of these companies compete for capital in the exact same markets.

Q. HOW DID YOU SELECT NON-PRICE REGULATED COMPANIES THAT ARE COMPARABLE IN TOTAL RISK TO THE REGULATED GAS AND ELECTRIC UTILITY PROXY GROUPS?

A. In order to select proxy groups of domestic, non-price regulated companies similar in total risk to the Gas and Electric Utility Proxy Groups, I relied on beta and related statistics derived from *Value Line* regression analyses of weekly market prices over the most recent 260 weeks (i.e., five years) for each group. These selection criteria resulted in a proxy group of 49 domestic, non-price regulated firms comparable in

total risk to the Gas Utility Proxy Group and 47 non-price regulated firms comparable in total risk to the Electric Utility Proxy Group. Total risk is the sum of non-diversifiable market risk and diversifiable company-specific risk. The criteria used in selecting the domestic, non-price regulated firms were:

(i) They must be covered by *Value Line* (Standard Edition);

(ii) They must be domestic, non-price regulated companies, i.e., not utilities;

(iii) Their betas must lie within plus or minus two standard deviations of the average unadjusted betas of the Gas and Electric Utility Proxy Groups, respectively; and

(iv) The residual standard errors of the *Value Line* regressions which gave rise to the unadjusted betas must lie within plus or minus two standard deviations of the average residual standard errors of the Gas and Electric Utility Proxy Groups, respectively.

Betas measure market, or systematic, risk, which is not diversifiable. The residual standard errors of the regressions measure each firm's company-specific, diversifiable risk. Companies that have similar betas and similar residual standard errors resulting from the same regression analyses have similar total investment risk.

Q. HAVE YOU PREPARED A SCHEDULE WHICH SHOWS THE DATA FROM WHICH YOU SELECTED THE DOMESTIC, NON-PRICE REGULATED COMPANIES THAT ARE COMPARABLE IN TOTAL RISK TO THE GAS AND ELECTRIC UTILITY PROXY GROUPS?

A. Yes, the basis of my selection and both proxy groups' regression statistics are shown in Schedule DWD-6.

Q. DID YOU CALCULATE COMMON EQUITY COST RATES USING THE DCF MODEL, RPM, AND CAPM FOR THE NON-PRICE REGULATED PROXY GROUPS?

A. Yes. Because the DCF model, RPM, and CAPM have been applied in an identical manner as described above, I will not repeat the details of the rationale and application of each model. One exception is in the application of the RPM, where I did not use public utility-specific equity risk premiums.

Pages 2 and 3 of Schedule DWD-7 derives the constant growth DCF model common equity cost rate. As shown, the indicated common equity cost rate, using the constant growth DCF for the Non-Price Regulated Proxy Groups comparable in total risk to the Gas and Electric Utility Proxy Groups, are 11.87% and 11.17%, respectively.

Pages 4 through 7 of Schedule DWD-7 contain the data and calculations that support the 12.27% and 12.29% RPM common equity cost rates applicable to the Non-Price Regulated Proxy Groups comparable in total risk to the Gas and Electric Utility Proxy Groups, respectively. As shown on line 1, page 4 of Schedule DWD-7, the consensus prospective yield on Moody's Baa2-rated corporate bonds

for the six quarters ending in the second quarter of 2026, and for the years 2026 to 2030 and 2031 to 2035, is 6.14%.[31] Since the Non-Price Regulated Proxy Group relative to the Gas Utility Proxy Group has an average Moody's long-term issuer rating of A3/Baa1, a downward adjustment of 0.14% to the projected Baa2-rated corporate bond yield is necessary to reflect the difference in ratings.[32] Similarly, as the Non-Price Regulated Proxy Group relative to the Electric Utility Proxy Group has an average Moody's long-term issuer rating of A3, a downward adjustment of 0.18% to the projected Baa2-rated corporate bond yield is necessary to reflect the difference in ratings.[33]

This results in a projected A3/Baa1-rated corporate bond yield of 6.01% applicable to the Non-Price Regulated Proxy Group comparable in total risk to the Gas Utility Proxy Group, and a projected A3-rated corporate bond yield of 5.96% applicable to the Non-Price Regulated Proxy Group comparable in total risk to the Electric Utility Proxy Group

When the beta-adjusted risk premiums of 6.26% and 6.33%[34] relative to the Non-Price Regulated Proxy Groups comparable in total risk to the Gas and Electric Utility Proxy Groups, respectively, are added to the prospective A3/Baa1-rated and A3-rated corporate bond yields of 6.01% and 5.96%, the indicated RPM common equity cost rates are 12.27% and 12.29%, respectively.

Pages 8 and 9 of Schedule DWD-7 contain the inputs and calculations that support my indicated CAPM/ECAPM common equity cost rates of 11.75% and

---

31 *Blue Chip Financial Forecasts*, February 28, 2025, at 2 and November 27, 2024 at 14.
32 As demonstrated in line 2 and described in note 2, page 4 of Schedule DWD-7.
33 As demonstrated in line 2 and described in note 2, page 4 of Schedule DWD-7.
34 Derived on page 7 of Schedule DWD-7.

11.89% for the Non-Price Regulated Proxy Groups comparable in total risk to the Gas and Electric Utility Proxy Groups, respectively.

Q. WHAT IS THE COST RATE OF COMMON EQUITY BASED ON THE NON-PRICE REGULATED PROXY GROUPS COMPARABLE IN TOTAL RISK TO THE GAS AND ELECTRIC UTILITY PROXY GROUPS?

A. As shown on page 1 of Schedule DWD-7, the results of the common equity models applied to the Non-Price Regulated Proxy Groups that are comparable in total risk to the Gas and Electric Utility Proxy Groups are as follows:

Table 11: Summary of Common Equity Cost Rates for the Non-Price Regulated Proxy Groups

	Non-Utility Group Based on Gas Utility Group	Non-Utility Group Based on Electric Utility Group
Discounted Cash Flow Model	11.87%	11.17%
Risk Premium Model	12.27%	12.29%
Capital Asset Pricing Model	11.75%	11.89%
Mean	11.96%	11.78%
Median	11.87%	11.89%
Average of Mean and Median	11.92%	11.84%

The average of the mean and median of these models for the Non-Price Regulated Proxy Groups comparable in total risk to the Gas and Electric Utility Proxy Groups are 11.92% and 11.84%, respectively, which I used as the indicated common equity cost rates for the Non-Price Regulated Proxy Groups.

VII. CONCLUSION OF COMMON EQUITY COST RATES BEFORE ADJUSTMENTS

Q. WHAT ARE THE INDICATED COMMON EQUITY COST RATES FOR THE GAS AND ELECTRIC UTILITY PROXY GROUPS BEFORE ADJUSTMENTS?

A. By applying multiple cost of common equity models to the Gas and Electric Utility Proxy Groups and the Non-Price Regulated Proxy Group, the indicated cost of common equity before any relative risk adjustments is 10.29% - 11.92% for the Gas Utility Proxy Group and 10.32% - 11.84% for the Electric Utility Proxy Group. I used multiple cost of common equity models as primary tools in arriving at my recommended range of common equity cost rates, because no single model is so inherently precise that it can be relied on to the exclusion of other theoretically sound models. Using multiple models adds reliability to the estimated common equity cost rate, with the prudence of using multiple cost of common equity models supported in both the financial literature and regulatory precedent.

As will be discussed below, the Companies have greater risk than their respective Utility Proxy Groups. Because of this, the indicated range of model results based on the Utility Proxy Groups must be adjusted to reflect the Companies' greater relative risk.

VIII. ADJUSTMENTS TO THE COMMON EQUITY COST RATES

A. Size Adjustment

Q. DOES THE COMPANIES' SMALLER SIZE RELATIVE TO THE GAS AND ELECTRIC UTILITY PROXY GROUPS INCREASE THEIR BUSINESS RISK?

A. Yes. The Companies' smaller size relative to the Gas and Electric Utility Proxy Groups indicates greater relative business risk for the Companies because, all else being equal, size has a material bearing on risk.

Size affects business risk because smaller companies generally are less able to cope with significant events that affect sales, revenues and earnings. For example, smaller companies face more risk exposure to business cycles and economic conditions, both nationally and locally. Additionally, the loss of revenues from a few larger customers would have a greater effect on a small company than on a bigger company with a larger, more diverse, customer base.

As further evidence that smaller firms are riskier, investors generally demand greater returns from smaller firms to compensate for less marketability and liquidity of their securities. Kroll's Cost of Capital Navigator: U.S. Cost of Capital Module ("Kroll") discusses the nature of the small-size phenomenon, providing an indication of the magnitude of the size premium based on several measures of size. In discussing "Size as a Predictor of Equity Premiums," Kroll states:

> The size effect is based on the empirical observation that companies of smaller size are associated with greater risk and, therefore, have greater cost of capital [sic]. The "size" of a company is one of the most important risk elements to consider when developing cost of equity capital estimates for use in valuing a business simply because size has been shown to be a *predictor* of equity returns. In other

> words, there is a significant (negative) relationship between size and historical equity returns - as size *decreases*, returns tend to *increase*, and vice versa. (footnote omitted) (emphasis in original)[35]

Furthermore, in "The Capital Asset Pricing Model: Theory and Evidence," Fama and French note size is indeed a risk factor which must be reflected when estimating the cost of common equity. On page 38, they note:

> . . . the higher average returns on small stocks and high book-to-market stocks reflect unidentified state variables that produce undiversifiable risks (covariances) in returns not captured in the market return and are priced separately from market betas.[36]

Based on this evidence, Fama and French proposed their three-factor model which includes a size variable in recognition of the effect size has on the cost of common equity.

Also, it is a basic financial principle that the use of funds invested, and not the source of funds, is what gives rise to the risk of any investment.[37] Eugene Brigham, a well-known authority, states:

> A number of researchers have observed that portfolios of small-firms (sic) have earned consistently higher average returns than those of large-firm stocks; this is called the "small-firm effect." On the surface, it would seem to be advantageous to the small firms to provide average returns in a stock market that are higher than those of larger firms. In reality, it is bad news for the small firm; **what the small-firm effect means is that the capital market demands higher returns on stocks of small firms than on otherwise similar stocks of the large firms**. (emphasis added)[38]

---

35 Kroll, Cost of Capital Navigator: U.S. Cost of Capital Module, Size as a Predictor of Equity Returns, at 1.

36 Fama & French, at 25-43.

37 Richard A. Brealey and Stewart C. Myers, Principles of Corporate Finance (McGraw-Hill Book Company, 1996), at 204-205, 229.

38 Eugene F. Brigham, Fundamentals of Financial Management, Fifth Edition (The Dryden Press, 1989), at 623.

Consistent with the financial principle of risk and return discussed above, increased relative risk due to small size must be considered in the allowed rate of return on common equity. Therefore, the Commission's authorization of a cost rate of common equity in this proceeding must appropriately reflect the Companies' unique risks, including their small size, which is justified and supported above by evidence in the financial literature.

Q. IS THERE A WAY TO QUANTIFY A RELATIVE RISK ADJUSTMENT DUE TO THE COMPANIES' SMALL SIZE RELATIVE TO THE GAS AND ELECTRIC UTILITY PROXY GROUPS?

A. Yes. The Companies have greater relative risk than the average utility in the Gas and Electric Utility Proxy Groups because of their smaller size compared with the utilities in those groups, as measured by an estimated market capitalization of common equity for the jurisdictional operations of each company.

Table 12: Size as Measured by Market Capitalization for Valley, Citizens', and Wellsboro, and the Gas and Electric Utility Proxy Groups

	Market Cap (in Millions)*	Times Greater than The Company
Valley Energy, Inc.	$18.603	
Gas Utility Proxy Group	$4,721.136	253.8x
Citizens' Electric Company	$18.097	
Electric Utility Proxy Group	$16,525.930	913.2x
Wellsboro Electric Company	$24.787	
Electric Utility Proxy Group	$16,525.930	666.7x

*From page 1 of Schedule DWD-8.

Valley's, Citizens', and Wellsboro's estimated market capitalizations were $18.603 million, $18.097 million, and $24.787 million respectively, as of February 28, 2025, compared with the market capitalization of the average company in the Gas and Electric Utility Proxy Groups of $4.721 billion and $16.526 billion, respectively, as of February 28, 2025. The average companies in the Gas and Electric Utility Proxy Groups have a market capitalization 253.8 times, 913.2 times and 666.7 times Valley, Citizens', and Wellsboro, respectively.

As a result, it is necessary to adjust the indicated common equity cost rates attributable to the Gas and Electric Utility Proxy Groups upward to reflect the Companies' greater risk due to their smaller relative size. The determination is based on the size premiums for portfolios of New York Stock Exchange, American Stock Exchange, and NASDAQ listed companies ranked by deciles for the 1926 to 2024 period. The average size premium for the Gas and Electric Utility Proxy Groups with market capitalizations of $4.721 and $16.526 billion fall in the 5th and 3rd deciles, respectively, while Valley's, Citizens', and Wellsboro's estimated market capitalizations of $18.603 million, $18.097 million, and $24.787 million respectively, place them in the 10th decile. The size premium spread between the 5th decile and the 10th decile is 3.73%, while the size premium between the 3rd decile and the 10th decile is 3.98%.

Q. HAS THIS COMMISSION CONSIDERED SIZE IN DETERMINING THE AUTHORIZED ROE?

A. Yes, it has. In Docket No. R-2019-3008212, the Commission stated:

> Based on the evidence of record, we agree with the recommendation of the ALJs that the Company be awarded a DCF cost of common

> equity which is one standard deviation about the average of the mean and median proxy group ROE from the Company's DCF analysis. In so doing, we recognize that the Company's size is a factor in assessing its ability to attract capital. Accordingly, we shall reject Citizens' Exception No. 10, I&E's Exception No. 4, and the OCA's Exception No. 7, consistent with the following discussion.
>
> We are not convinced by the arguments of I&E and the OCA that the ALJs erred in awarding a size adjustment to Citizens'. Rather, we are of the same position as the ALJs that the Company's witness Mr. D'Ascendis offered persuasive record evidence that there is a general inverse relationship between size and risk, such that smaller utilities like Citizens' face greater risk.[39]

Q. WHAT WOULD BE THE ROE RESULT USING THE COMMISSION'S METHOD IN THIS CASE?

A. The average of the mean and median DCF model results are 10.29% and 10.32% for the Gas and Electric Utility Proxy Groups, respectively, as shown on page 1 of Schedule DWD-3. The standard deviation of those results is 1.53% and 0.85%, respectively. In view of the indicated size premiums of 3.73% and 3.98% and DCF model size premiums of 1.53% and 0.85%, I recommend size premiums of 1.00% for Valley and 0.85% for Citizens' and Wellsboro.

B. <u>Performance Factor Adjustment</u>

Q. HAVE YOU REFLECTED THE COMPANIES' REQUESTED RATE OF RETURN PREMIUM BASED ON CODE 66 Pa.C.S. § 523 REGARDING PERFORMANCE FACTOR?

A. Yes. The adjustment is shown on line 7 of page 2 of Schedule DWD-1. The testimonies for including the performance factor adjustment in the ROE for the Companies are sponsored by Valley's Witness Mr. Rogers, Citizens' Witness Mr.

[39] Pennsylvania Public Utility Commission, Docket No. R-2019-3008212, Opinion and Order, at 103.

Johnson, and Wellsboro's Witness Mr. Farnsworth. The rate of return premium associated with the performance factor is 0.05%.

Q. HAS THE COMMISSION AWARDED THE COMPANIES A PERFORMANCE FACTOR ADJUSTMENT?

A. Yes, it has. In Docket Nos. R-2019-3008209 (Valley) and R-2019-3008212 (Citizens'), the Commission awarded the Companies performance factor adjustments of 0.05%.[40] As discussed by Valley's Witness Mr. Rogers, Citizens' Witness Mr. Johnson, and Wellsboro's Witness Mr. Farnsworth, it is their belief that the performance factor adjustment still applies.

Q. WHAT IS THE INDICATED COST OF COMMON EQUITY AFTER YOUR COMPANY-SPECIFIC ADJUSTMENTS?

A. Applying the 1.00% and 0.85% size adjustments, and the 0.05% performance factor adjustment to the indicated costs of common equity of 10.29% - 11.92% and 10.32% - 11.84%, applicable to the Gas and Electric Utility Proxy Groups, respectively, results in a range of common equity cost rates of 11.34% - 12.97% for Valley, and 11.22% - 12.74% for Citizens' and Wellsboro.

IX. CONCLUSION

Q. WHAT ARE YOUR RECOMMENDED ROES FOR THE COMPANIES?

A. Given the adjusted ranges of ROEs from 10.29% to 11.92% for the Gas Utility Proxy Group and 11.22% to 12.74% for the Electric Proxy Group, I recommend a

[40] Docket No. R-2019-3008209 (Valley), at 118-120, and Docket No. R-2019-3008212 (Citizens'), at 108-110. Wellsboro did not file a rate case in 2019.

cost of common equity rate of 11.65% for the Companies, which is reasonable and conservative.

Q. IN YOUR OPINION, ARE YOUR PROPOSED ROES FAIR AND REASONABLE TO THE COMPANIES AND THEIR CUSTOMERS?

A. Yes, they are.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

Appendix A:

Dylan W. D'Ascendis, CRRA, CVA
Partner

Summary

Dylan is an experienced consultant and a Certified Rate of Return Analyst (CRRA) and Certified Valuation Analyst (CVA). Dylan joined ScottMadden in 2016 and is a leading expert witness with respect to cost of capital, capital structure, and valuation. He has served as a consultant for investor-owned and municipal utilities and authorities for 17 years. Dylan has testified as an expert witness on over 150 occasions regarding rate of return, cost of service, rate design, and valuation before more than 40 regulatory jurisdictions in the United States and Canada, an American Arbitration Association panel, and the Superior Court of Rhode Island. He also maintains the benchmark index against which the Hennessy Gas Utility Mutual Fund performance is measured. Dylan holds a B.A. in economic history from the University of Pennsylvania and an M.B.A. with concentrations in finance and international business from Rutgers University.

Notes:
(1) All capitalization and financial statistics for the group are the arithmetic average of the achieved results for each individual company in the group, and are based upon financial statements as originally reported in each year.

(2) Computed by relating actual total debt interest or preferred stock dividends booked to average of beginning and ending total debt or preferred stock reported to be outstanding.

(3) Total debt relative to EBITDA (Earnings before Interest, Income Taxes, Depreciation and Amortization).

(4) Funds from operations (sum of net income, depreciation, amortization, net deferred income tax and investment tax credits, less total AFUDC) plus interest charges as a percentage of total debt.

						Average of Mean and Median	10.32 %	

Notes:

(1) Indicated dividend at 02/28/2025 divided by the average closing price of the last 60 trading days ending 02/28/2025 for each company.
(2) From pages 2 through 23 of this Schedule.
(3) Average of columns 2 through 4 excluding negative growth rates.
(4) This reflects a growth rate component equal to one-half the conclusion of growth rate (from column 5) x column 1 to reflect the periodic payment of dividends (Gordon Model) as opposed to the continuous payment. Thus, for Atmos Energy Corporation, 2.44% x (1+(1/2 x 6.85%)) = 2.52%.
(5) Column 5 + Column 6.
(6) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

BUSINESS: Atmos Energy Corporation is engaged primarily in the distribution and sale of natural gas to over 3.3 million customers through six regulated natural gas utility operations: Louisiana Division, West Texas Division, Mid-Tex Division, Mississippi Division, Colorado-Kansas Division, and Kentucky/Mid-States Division. Gas sales breakdown for fiscal 2024: 68.8%, residential; 27.1%, commercial; 2.7%, industrial; and 1.4% other. The company sold Atmos Energy Marketing, 1/17. Officers and directors own approximately .5% of common stock (12/24 Proxy). President and Chief Executive Officer: Kevin Akers. Incorporated: Texas. Address: Three Lincoln Centre, Suite 1800, 5430 LBJ Freeway, Dallas, Texas 75240. Telephone: 972-934-9227. Internet: www.atmosenergy.com.

Atmos Energy Corporation got off to a decent start in fiscal 2025. (The year concludes on September 30th.) Indeed, for the first quarter, the bottom line advanced 7.2%, to $2.23 per share, which matched our target, compared to fiscal 2024's tally of $2.08. One contributor was the distribution segment, supported partly by rate adjustments and benefits of residential customer growth (both occurring primarily in the Mid-Tex Division). Furthermore, the pipeline and storage unit was aided, among other factors, by the Gas Reliability Infrastructure Program filing approved in May 2024 and the System Safety and Integrity Rider filing approved in November 2024. But the company's results were weighed down, to a certain extent, by increases in bad-debt expense, depreciation, and property taxes, as well as higher interest expense. Nevertheless, we believe that full-year profits will finish in the vicinity of $7.20 a share (unchanged from the estimate in our last report three months ago). That would mark a 5% increase from fiscal 2024's $6.83 figure. Regarding the next fiscal year, earnings per share may grow at a similar percentage rate, to $7.60, assuming additional expansion of operating margins.

The Financial Strength rating is solid, at A. When the December period ended, cash and equivalents were $584.5 million. Moreover, long-term borrowings seemed reasonable (40% of total capital) and short-term debt was only $19.9 million. Too, $6.3 billion in common stock and/or debt securities remained available for issuance (out of $8.0 billion) under a shelf registration statement expiring in December, 2027. Finally, the company had four undrawn revolving credit facilities aggregating $3.1 billion plus a $1.5 billion commercial paper program.

These top-quality shares offer unspectacular long-term total return potential. The dividend yield does not stand out when measured against the average of *Value Line's* Natural Gas Utility group. Also, capital gains potential for the pull to 2028-2030 is nothing to write home about. That's because the stock is already trading within our Target Price Range. Meanwhile, the Timeliness rank resides at just 3 (Average).

Frederick L. Harris, III February 21, 2025

BUSINESS: New Jersey Resources Corp. is a holding company providing retail/wholesale energy svcs. to customers in NJ, and in states from the Gulf Coast to New England, and Canada. New Jersey Natural Gas had 583,000 cust. at 9/30/24. Fiscal 2024 volume: 158 bill. cu. ft. (16% interruptible, 41% residential, commercial & firm transportation, 43% other). N.J. Natural Energy subsidiary provides unregulated retail/wholesale natural gas and related energy svcs. 2024 dep. rate: 3.2%. Has 1,370 empls. Off./dir. own less than 1% of common; BlackRock, 17.3%; Vanguard, 11.9% (12/24 Proxy). CEO, President & Director: Steven D. Westhoven. Incorporated: New Jersey. Address: 1415 Wyckoff Road, Wall, NJ 07719. Telephone: 732-938-1480. Web: www.njresources.com.

New Jersey Resources finished fiscal 2024 in good shape. (Year ended September 30th.) The company closed out the year with a better-than-expected bottom-line result in the fiscal fourth quarter. Full year earnings per share advanced a solid 9%, to $2.95. September's significant year-over-year increase came from wider fuel margins and lower operations and maintenance expense, offset somewhat by an uptick in depreciation. The company invested more than $500 million over the year, with over 40% of capital expenditures providing immediate returns. Operations at Clean Energy Ventures accelerated throughout the year, with its residential solar portfolio selling out, generating $135 million that will be reinvested, and over 70 megawatts of solar projects either completed or under construction (of 1 gigawatt in the pipeline). The Storage and Transportation business also showed strengths, highlighted by a recent rate case filed for the recovery of investments in the Adelphia Gateway project. The company did well setting up good growth opportunities.

The first quarter of fiscal 2025 was also a standout. The bottom line advanced to $1.28 from $0.74 in the year before. A $157 million annual revenue increase from the natural gas utility rate case settlement, effective November 21st, was a contributing factor. Favorable winter conditions also contributed to the strong operating performance.

We have raised out earnings targets. Notably, we've lifted our fiscal 2025 bottom-line estimate by $0.20, to $3.10 per share. This is in line with management's predictions. We have also initiated targets for 2026 and upped our 3- to 5-year calls. The company is set to invest roughly $1.5 billion over the next two years, targeting infrastructure improvements, clean energy expansion, and storage and transportation efficiency. We also look for the Adelphia rate case to conclude in the current year.

The stock may appeal to conservative long-term accounts. NJR's earnings growth, rooted in a strong regional energy economy, is a solid foundation for returns. Too, the company's steady dividend growth trajectory adds to its overall value. The issue is untimely, however.

Earl B. Humes *February 21, 2025*

(A) Fiscal year ends Sept. 30th.
(B) Diluted earnings. Qtly. revenues and egs. may not sum to total due to rounding and change in shares outstanding. Next earnings report due early May.

BUSINESS: NiSource Inc. is a holding company for Northern Indiana Public Service Company (NIPSCO), which supplies electricity and gas to the northern third of Indiana. Customers: 488,833 electric in Indiana, 3,200,000 gas in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland, through its Columbia subsidiaries. Revenue breakdown, 2023: electrical, 32%; gas, 67%; other, less than 1%. Generating capacity, coal, 69.4%; purchased & other, 30.6%. 2023 reported depreciation rates: 3.5% electric, 2.4% gas. Has 7,364 employees. Chairman: Richard L. Thompson. President & Chief Executive Officer: Lloyd Yates. Incorporated: Indiana. Address: 801 East 86th Avenue, Merrillville, Indiana 46410. Telephone: 877-647-5990. Internet: www.nisource.com.

NiSource likely posted good results in 2024. (Note: the company was scheduled to report its fourth-quarter numbers as we went to press with this Issue.) Earnings per share probably advanced upwards of 9% in the year. This follows a cycle of heavy capital investments over the past few years, that the company is now earning returns on. NiSource is positioned across the mid-Atlantic and mid-West regions of the United States, and much of its operating areas have experienced strong growth, particularly from new data centers and industrial hubs. The utility may have invested as much as $2.5 billion in 2024 on projects including infrastructure hardening and clean energy programs. In addition to some regulatory success with rate cases, the utility is also enjoying wider fuel margins, bolstering profits, although higher depreciation and interest expenses have offset this to a degree. The company's good performance and strong positioning have led to a roughly 50% increase in its stock price over the past year, as investors see the utility as an increasingly attractive safe haven for funds.

The year ahead may see growth slow slightly. We've raised our 2025 earnings target by $0.05 per share, to $1.85, owing to good fundamental conditions and ongoing net-plant expansion. However, an uptick in volatility from new economic policies could bring about some near-term headwinds as businesses readjust to the emerging regulatory environment. We expect the utility will remain fairly aggressive through the current capital investment cycle while growing its rate base.

Over the long run we expect fairly steady growth. Rate-base growth is likely to follow a high-single-digit trajectory, in line with other associated metrics, including net plant and earnings per share. The company's transition away from coal and investment in clean energy and infrastructure hardening should provide a substantial growth ramp to late decade.

The shares have much of the gains we foresee already baked into the price. The stock offers below-average 3- to 5-year appreciation potential. We think there are more appealing selections out there, though the issue may interest conservative accounts.

BUSINESS: Northwest Natural Holding Co. distributes natural gas to 1,000 communities, 795,000 customers, in Oregon (88% of customers) and in southwest Washington state. Principal cities served: Portland and Eugene, OR; Vancouver, WA. Service area population: 3.7 mill. (77% in OR). Company buys gas supply from Canadian and U.S. producers; has transportation rights on Northwest Pipeline system. Owns local underground storage. Rev. breakdown: residential, 38%; commercial, 23%; industrial, gas transportation, 39%. Employs 1,380. BlackRock Inc. owns 17.6% of shares; Vanguard, 12.4%; Off./Dir., .84% (4/24 proxy). CEO: David H. Anderson. Inc.: Oregon. Address: 220 NW 2nd Ave., Portland, OR 97209. Tel.: 503-226-4211. Internet: www.nwnatural.com.

Northwest Natural probably had a weak performance in 2024. (Note: The company was scheduled to release its full-year results as we went to press with this Issue.) Fourth-quarter earnings probably compared favorably versus years past, driven by the resolution of an Oregon gas utility rate case in October. The company's revenue requirement increased $93 million as a result. Unfortunately, regulators did not approve recovery for $14 million of investments in line extensions, which were previously allowed, and will result in a noncash disallowance charge in the quarter. A new rate case was filed for about half as much, expected to take effect in late 2025. Customer expansion and various auxilliary water and waste-water business additions completed this year probably contributed to some growth. However, earnings for the full year likely decreased to around $2.30 per share, after having plataued at roughly $2.55 for the past three years. This is in large part due to regulatory lag that was partially resolved in the recent rate case, as well as specific non-recurring other income and taxes.

We expect earnings to rebound in the year ahead. The bottom line should find support from a mix of factors. The company has diversified market exposure to various geographies across natural gas, water, and renewables, which improves its ability to capitalize on several growth opportunities. Furthermore, its positioning in strong geographies adds to this expansion potential with single-family housing permits in the Portland area up 13% and relatively low unemployment lending strong underlying economic trends. We think the company could achieve earnings of $3.00 per share in 2025.

Long-term growth will likely be in the high-single digits. The company has room for further expansion through system buildouts, maintenance and innovation associated with an increasing focus on climate resiliency, which should help to drive investment out to late decade.

The stock offers solid recovery potential out three to five years, and boasts a high dividend yield. However, recent weakness makes this a below-average pick for year-ahead performance (Timeliness 4).

Earl B. Humes *February 21, 2025*

The shares of ONE Gas, Inc. began trading "regular-way" on the New York Stock Exchange on February 3, 2014. That happened as a result of the separation of ONEOK's natural gas distribution operation. Regarding the details of the spinoff, on January 31, 2014, ONEOK distributed one share of OGS common stock for every four shares of ONEOK common stock held by ONEOK shareholders of record as of the close of business on January 21. It should be mentioned that ONEOK did not retain any ownership interest in the new company.

BUSINESS: ONE Gas, Inc. provides natural gas distribution services to more than two million customers. There are three divisions: Oklahoma Natural Gas, Kansas Gas Service, and Texas Gas Service. The company purchased 160 Bcf of natural gas supply in 2023, compared to 165 Bcf in 2022. Total volumes delivered by customer (fiscal 2023): transportation, 59.3%; residential, 29.7%; commercial & industrial, 10.6%; other, .4%. ONE Gas has around 3,900 employees. BlackRock owns 14.5% of common stock; The Vanguard Group, 11.6%; American Century Investment, 7.5%; officers and directors, 1.5% (4/24 Proxy). CEO: Robert S. McAnnally. Incorporated: Oklahoma. Address: 15 East Fifth Street, Tulsa, Oklahoma 74103. Tel.: 918-947-7000. Internet: www.onegas.com.

Earnings for ONE Gas likely took a turn for the worse in 2024. (Please be aware that fourth-quarter results were not released to the public when this report went to press.) Recall that during the first nine months, the bottom line retreated 10.5%, to $2.57 per share, relative to the $2.87 tally that was posted for the same period in 2023. This stemmed partially from higher employee-related costs, given planned investments in the company's workforce and ongoing in-sourcing efforts. Depreciation & amortization expense climbed, too, reflecting additional capital investments. Furthermore, sales volumes decreased and interest charges rose. So, it appears that earnings per share finished in the vicinity of $3.85 for the full year. That would mark a 7% decline from 2023's $4.14 total.

We believe that a recovery is possible in 2025, however. New rates should be one contributing factor. Benefits arising from additional expansion of the customer base ought to lift results, as well. Operating expenses (including those already mentioned) stand to continue to mount, but that is to be expected as the company grows. Consequently, profits might advance around 10%, to $4.25 a share. Regarding 2026, we look for the bottom line to increase another 6% or so, to $4.50 per share, assuming that business conditions cooperate.

The quarterly dividend was raised by one cent, to $0.67 a share. ONE Gas states that it intends to keep the average annual dividend growth rate between 1% and 2% through fiscal 2029. We think that significantly slower increase, compared to previous years, is partially because of climbing operating costs. In any case, the payout ratio out to the beginning of the next decade should be reasonable, in the neighborhood of 55%.

What about OGS shares? The dividend yield is decent when measured against those of other stocks in *Value Line's* Natural Gas Utility category. But, at the recent quotation, capital appreciation potential over the 3- to 5-year horizon is nothing to write home about. Meanwhile, the equity is pegged to trail the market for the next six to 12 months (Timeliness rank 4: Below Average).

Frederick L. Harris, III February 21, 2025

(A) Diluted EPS. Excludes nonrecurring gain: 2017, $0.06. Next earnings report due early May. Quarterly EPS figures for 2022 don't equal total due to rounding.

BUSINESS: Southwest Gas Holdings, Inc. is the parent holding company of Southwest Gas. Centuri Group spun-off 4/22/24. Southwest Gas is a regulated gas distributor serving 2.2 million customers in Arizona, Nevada, and California. 2023 margin mix: residential 68%; small commercial, 20%; large commercial and industrial, 8%; transportation, 4%. Total throughput: 2.2 billion therms. Southwest has 2,371 employees; Centuri 12,572. Off. & dir. own .4% of common stock; Carl C. Icahn, 15.4%; BlackRock, 13.0%; The Vanguard Group, 10.1%; (3/24 Proxy). Chairman: Michael J. Melarkey. Pres. & CEO: Karen S. Haller. Inc.: DE. Addr.: 8360 S. Durango Drive, P.O. Box 98510 Las Vegas, Nevada 89193. Telephone: 702-876-7237. Internet: www.swgas.com.

Southwest Gas Holdings' performance has been affected by significant corporate restructuring over the past two years. In early 2023 the company sold its MountainWest Pipeline business, then spun off Centuri Group's infrastructure services operation in an early 2024 initial public offering, although it still retains a significant portion of the newly issued stock. These changes have contributed to many unique charges and uneven results over the past few years. All of this is in the aim of transitioning into a fully regulated natural gas utility. We think this strategy will likely enhance operating efficiency and maximize shareholder value over the long run. The sale of these auxiliary businesses has also helped to provide capital to invest and optimize the capital structure.

The pure-play utility likely had a good showing for 2024. We expect the company reported net income of at least $200 million, though management's more optimistic guidance range calls for this figure in the range of roughly $235 million to $245 million. Capital expenditures likely totaled $850 million.

Southwest has a fairly bright outlook for the years ahead. One key strength is in the company's strong geographic positioning. Southwest's operating footprint includes some of the fastest growing regions in the country in Arizona and Nevada. These areas also offer good potential for semiconductor manufacturing and data centers. To help meet new and existing demand, management has a robust pipeline of capital investments and projects rate base growth of 10% per year. The company also operates in a more favorable regulatory environment with respect to rate case executions.

The stock appears to price in many of these good qualities. The equity has increased roughly 30% over the past year, significantly diminishing long-term upside potential at the recent quotation. The stock's dividend yield is above average, but many industry peers offer more appeal. Too, there is still significant uncertainties regarding the company's future performance as a stand-alone utility group. Ultimately, we think most investors will want to turn the page.

BUSINESS: Spire Inc., formerly known as the Laclede Group, Inc., is a holding company for natural gas utilities, which distributes natural gas across Missouri, including the cities of St. Louis and Kansas City, Alabama, and Mississippi. Has roughly 1.7 million customers. Acquired Missouri Gas 9/13, Alabama Gas Co 9/14. Utility therms sold and transported in fiscal 2024: 3.1 bill. Revenue mix for regulated operations: residential, 66%; commercial and industrial, 24%; transportation, 5%; other, 5%. Officers and directors own 2.3% of common shares; BlackRock, 11.9%; The Vanguard Group, 9.6% (12/24 proxy). Chairman: Edward Glotzbach; CEO: Steve Lindsey. Inc.: Missouri. Address: 700 Market Street, St. Louis, Missouri 63101. Tel.: 314-342-0500. Internet: www.spireenergy.com.

Spire got off to a rather uninspiring start in fiscal 2025 (ends September 30th). First-quarter earnings per share slipped 11.8%, to $1.34, versus the prior year's $1.52 result. That stemmed partially from diminished profits in the Gas Marketing division, given less favorable market conditions coupled with increased transportation and storage fees. There was a greater number of diluted shares outstanding, too. But the Gas Utility unit and Midstream segment had better showings during the period. Still, for the full year, we think the company's bottom line will retreat about 6%, to $3.95 per share, relative to fiscal 2024's $4.19 figure. Concerning fiscal 2026, however, earnings stand to recover around 5%, to $4.15 a share. That is based, to a certain degree, on our assumption that the business climate brightens. Improvements in operating efficiencies should lend further support.

Capital expenditures for this year are anticipated to be $790 million. (That's 8.3% lower than the fiscal 2024 level of $861.3 million.) The bulk of the funds are being deployed to infrastructure upgrades, the installation of advanced meters, plus new business development initiatives at the utilities. Management adds that it expects total capital spending from fiscal 2025 through fiscal 2034 to be $7.4 billion. If the balance sheet remains in sound condition, we believe that Spire will have minimal difficulty accomplishing these objectives.

The quarterly common stock dividend was raised about 4%, to $0.785 per share. That was made possible, no doubt, by the company's solid capital position. What's more, we anticipate additional steady hikes in the distribution out to 2028-2030. The payout ratio over that span should be manageable, in the neighborhood of 74%. It is worth mentioning that the dividend yield looks attractive when compared to the average of all Natural Gas Utility equities within the *Value Line* universe.

Besides the generous income component, there's not much else here, right now. At the recent quotation, 3- to 5-year capital appreciation possibilities are limited. Meanwhile, SR shares are ranked just 3 (Average) for Timeliness.

Frederick L. Harris, III February 21, 2025

(A) Fiscal year ends Sept. 30th.
(B) Based on diluted shares outstanding. Next earnings report due late April.

BUSINESS: Alliant Energy Corporation is the parent company of Interstate Power and Light Company (IPL) and Wisconsin Power and Light Company (WPL). Together, the utility subsidiaries serve approximately one million electric and 425,000 natural gas customers in Wisconsin and Iowa. Electric revenue: residential, 36%; commercial, 25%; industrial, 29%; wholesale, 8%; other, 2%. Generating sources: coal, 32%; gas, 32%; wind, 16%; other, 1%; purchased, 19%. Fuel costs: 25% of revenues. '23 reported depreciation rates: 2.9%-6.1%. Has 3,300 employees. Chairman, President & CEO: John O. Larsen. Incorporated: Wisconsin. Address: 4902 N. Biltmore Lane, Madison, WI 53718-2148. Telephone: 608-458-3311. Internet: www.alliantenergy.com.

Alliant Energy could very well enjoy a strong boost in power demand, beginning in 2028. To that point, management recently announced that the electric utility was preparing to bring two "prestigious" data-center (DC) customers on board, both of which would operate out of Alliant's Big Cedar Industrial Center in Cedar Rapids, Iowa. As we understand it, the first phase of the Big Cedar DC opportunity is likely to increase peak demand by 1.1 gigawatts and go live sometime in late 2028. What's more, assuming Alliant continues to have success attracting commercial customers to the Hawkeye State, a second phase could be launched, potentially by decade's end.

Alliant remains focused on reducing its reliance on fossil fuels. To wit, its Interstate Power & Light subsidiary continues to target 400 megawatts of solar power generation by the end of 2024. Meantime, Wisconsin Power & Light was recently expected to complete the last of several projects that will increase the utility's overall solar-power capacity in the Badger State to 1.1 gigawatts. Importantly, these solar projects have zero fuel costs, thus reducing Alliant's susceptibility to swings in natural-gas prices and the like. Its investments in "green" power also yield significant tax credits that can be sold to regional manufacturers and other third parties looking to maintain compliance with restrictions on harmful carbon emissions. In 2025 alone, Alliant could realize as much as $400 million from the sale of tax credits.

The power company is likely to get a bit leaner. Indeed, in the December quarter, Alliant initiated a voluntary employee separation program that may very well result in a 5% reduction in its overall workforce. More than 160 workers could be impacted.

Alliant Energy shares remain neutrally ranked for relative year-ahead price performance. And with the stock up 23% in price year to date, long-term appreciation potential no longer stands out. Still, the utility company boasts an attractive, well-covered dividend that could hold some appeal for income-oriented accounts (current yield: 3.0% versus 1.9% for the *Value Line* universe as a whole).

BUSINESS: Ameren Corporation is a holding company formed through the merger of Union Electric and CIPSCO. Has 1.2 million electric and 127,000 gas customers in Missouri; 1.2 million electric and 813,000 gas customers in Illinois. Discontinued nonregulated power-generation operation in '13. Electric revenue breakdown: residential, 49%; commercial, 34%; industrial, 8%; other, 9%. Generating sources: coal, 73%; nuclear, 11%; hydro & other, 9%; purchased, 7%. Fuel costs: 25% of revenues. Has approximately 9,250 employees. Chairman: Warner L. Baxter. President & CEO: Martin J. Lyons, Jr. Inc.: Missouri. Address: One Ameren Plaza, 1901 Chouteau Ave., P.O. Box 66149, St. Louis, MO 63166-6149. Tel.: 314-621-3222. Internet: www.ameren.com.

Ameren is poised to report solid results in 2024. The utility is benefiting from elevated power demand, strategic infrastructure investments, and disciplined cost management. Our profit estimate remains at $4.60 per share, which is right near the midpoint of management's updated target range of $4.55-$4.69. Ameren looks to close out the year with significant year-over-year operations and maintenance cost reductions from several savings initiatives. Meanwhile, these shares have jumped nicely in value as of late. Indeed, the stock is up nearly 15% over the past three months and has risen more than 30% in 2024, thanks to solid financial results and a strong outlook in the coming years.

We look for sharper top- and bottom-line growth next year. The utility is well positioned to benefit from clean energy advancements and its three solar facilities, as well as additional rate relief from its transmission and Illinois Electric operations over that interim. Indeed, Ameren recently received approval to build an 800 megawatt (mw) natural gas energy center, which is expected to be operational in 2027. The utility also acquired the Huck Finn renewable energy center, a 200 mw solar facility in Missouri. Ameren is also well positioned over that interim to benefit from increased demand for power from data centers and artificial intelligence innovations. Accordingly, we look for 2025 earnings of $4.90 per share, indicating an increase of 7% from our 2024 estimate. We also raised our top-line target by $100 million to reflect clean energy and regulatory advancements.

We think that the quarterly disbursement will be boosted by $0.04 a share (6%) in 2025. Ameren's goals for the dividend include hikes in line with profit growth and a payout ratio of 55%-70%.

These shares are suitable for conservative, income-oriented investors. Both short- and long-term capital gains prospects are below average at this juncture. But, the 1 (Highest) Safety rank and top (100) Earnings Predictability score should appeal to risk-averse accounts. The stock's dividend is perhaps its most notable feature, though it is about average by utility standards.

Zachary J. Hodgkinson *December 6, 2024*

BUSINESS: American Electric Power Company Inc. (AEP), through 10 operating utilities, serves 5.5 million customers in Arkansas, Kentucky, Indiana, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia, & West Virginia. Has a transmission subsidiary. Electric revenue breakdown: residential, 43%; commercial, 23%; industrial, 18%; wholesale, 10%; other, 6%. Sold commercial barge operation in '15. Generating sources not available. Fuel costs: 33% of revenues. '23 reported depreciation rates (utility): 2.6%-12.5%. Has approximately 16,700 employees. Interim Chief Executive Officer: Benjamin G.S. Fowke III. Incorporated: New York. Address: 1 Riverside Plaza, Columbus, Ohio 43215-2373. Telephone: 614-716-1000. Internet: www.aep.com.

American Electric Power is on track to post a strong profit increase this year. Increased investments in its transmission business, elevated volume and power demand, along with a number of pending rate cases, should continue to benefit performance through the end of 2024. Third-quarter earnings of $1.85 per share outperformed our and Wall Street's call of $1.80 due to the aforementioned tailwinds. And, management narrowed its 2024 target range to $5.58-$5.68 a share, right near our unchanged midpoint.

Earnings growth will likely slow down in 2025, though. Despite anticipated growth in the regulated utilities and a significant boost in power demand, lower contributions from the generation and marketing segments due to reduced activities and lower retail and wholesale margins should negatively impact results. Accordingly, we have lowered our 2025 earnings estimate by $0.15 a share, which is at the midpoint of management's updated target range of $5.75-$5.95 a share. We have also slightly pared our 2027-2029 projections by $0.05 a share, and now look for profits of $7.05 a share over that interim. Meanwhile, AEP unveiled a new long-term growth rate of 6%-8% based off its 2025 profit outlook range.

The board of directors raised the dividend, effective with the December payment. This is the typical timing for increases for AEP. The hike was $0.05 a share (6%), in line with the company's 6%-7% long-term earnings growth range and within AEP's target for a payout ratio of 60%-70%.

This issue is best suited for risk-averse investors seeking income. These shares are ranked 4 (Below Average) for Timeliness, making them a weak selection for the year ahead. What's more, intermediate- and long-term capital appreciation potential is nothing to write home about. Indeed, the recent quotation is already above the midpoint of our 18-month Target Price Range. And, over the 2027-2029 period, return prospects are also limited as we look for the stock to trade between $115-$140 over that interim. But, the dividend yield of 3.6% stands above the industrywide average and remains AEP's most notable feature.

Zachary J. Hodgkinson *December 6, 2024*

BUSINESS: Duke Energy Corporation is a holding company for utilities with 7.6 mill. elec. customers in NC, FL, IN, SC, OH, and KY, and 1.6 mill. gas customers in OH, KY, NC, SC, and TN. Owns independent power plants & has 25% stake in National Methanol in Saudi Arabia. Acq'd Progress Energy 7/12; Piedmont Natural Gas 10/16; discontinued most int'l ops. in '16. Elec. rev. breakdown: residential, 45%; commercial, 28%; industrial, 13%; other, 14%. Generating sources: gas, 32%; nuclear, 30%; coal, 18%; other, 1%; purchased, 19%. Fuel costs: 28% of revs. '22 reported deprec. rate: 3.6%. Has 27,600 employees. Chairman, President & CEO: Lynn J. Good. Inc.: DE. Address: 550 South Tryon St., Charlotte, NC 28202-1803. Tel.: 704-382-3853. Internet: www.duke-energy.com.

For 2025 and 2026, we expect Duke Energy will continue to build on its solid track record of consecutive annual earnings gains. This assumes that the final tally for 2024, which will be reported on February 13th, is near our $5.90 estimate. The utility is apt to continue to take advantage of strong weather-adjusted electric volume growth and constructive regulatory outcomes over the intermediate term. Solid population growth in its service territories, at three to four times the national average of 0.5%, is a key part of the story. This is largely being driven by strong migration trends in the Carolinas and Florida. The company is also likely to keep benefiting from rate relief (higher regulated price adjustments) as outlined below. Leadership continues to affirm its earnings growth rate of 5%-7% per annum through 2028. As such, we're comfortable with our respective 2025 and 2026 share-earnings projections of $6.35 and $6.70.

Duke Energy has been making steady progress in a number of recent and pending general rate cases (GRC). In the Sunshine State, the Florida Public Service Commission approved a settlement which will increase Duke Energy Florida's base electric rates and assist in the building of solar-energy facilities. The decision will increase rates by $203 million in 2025 and another $59 million in 2026. It also included up to $141 million for a dozen new solar plants as they are completed. The settlement dictates that Duke uses roughly $50 million in federal tax credits to offset the need for a base-rate hike in 2027. Meanwhile, the final order in Duke's South Carolina GRC became effective in August of last year and will increase rates by 13% over a two-year period. The GRC includes $215 million of new investments in highly efficient natural gas, solar, nuclear, and hydroelectric units over a seven-year period. In addition, delivery rates in North Carolina recently increased by 2.9%. Duke also has pending GRCs in Ohio and Indiana with decisions due in the next few quarters.

This equity is untimely. The 3.7% dividend yield is right on the peer-group average. Annual total return prospects are not favorable from the recent valuation.

Los Angeles & San Diego). Edison Energy is an energy svcs. co. Disc. Edison Mission Energy (independent power producer) in '12. Elec. rev. breakdown: residential, 40%; commercial, 43%; industrial, 3%; other, 14%. Generating sources: nuclear, 9%; gas, 5%; hydroelectric, 6%; purchased, 80%. Power costs: 34% of revs. '23 reported depr. rate: 4.1%. Employs 14,316. Board Chair: Peter J. Taylor. President & CEO: Pedro J. Pizzaro. Inc.: CA. Address: 2244 Walnut Grove Ave., P.O. Box 976, Rosemead, CA 91770. Tel.: 626-302-2222. Internet: www.edison.com.

As this report went to press, shares of Edison International were under significant pressure, as wild fires swept through portions of Los Angeles County. Until very recently, this stock was holding up well in terms of the overall utility group's latest correction. That performance may have been an indication that institutional investors had been warming up to Edison Int'l. As described in the Electric Utility West Industry report, bankruptcy risk is much lower today than it had been a number of years ago. However, if the company's equipment is at fault of causing a major fire or suffers damages from wildfires, the company can still suffer material adverse losses. Having said that, finances have been improving and major legacy wildfire settlements are nearly paid off. Moreover, the company will be allowed to recoup $1.65 billion (60% of the $2.7 billion filed for) related to TKM disaster legacy payouts. It has also filed for a $5.4 billion rate recovery related to the 2018 Woolsey fire.

For a utility, growth prospects are solid. Rising long-term demand for electricity in California is approaching 3% due to trends in electrification for vehicles and heavy equipment, as well as high tech usage. This is well above the national average and leads to transmission and distribution work that pays off rapidly in terms of return on investment for regulated utilities in the state. Fire mitigation also keeps the rate base growing. Edison's current authorized return on equity (ROE) is 10.3%, but may see an improvement by the middle of this year when a general rate case decision is due. State peer PG&E received an authorized ROE of 10.7% from regulators in 2024. Odds are EIX will receive an increase, too. If so, it may be able to grow earnings by 11% in 2025 and 7% per annum for 2025 to 2028.

This equity is untimely. And even though EIX's annual total return prospects through 2027-2029 look good relative to the group, investors must still weigh the wildfire risks involved here. Mitigation has reduced the odds of the company's equipment being at fault for fires, and the California Wildfire Fund has vastly reduced bankruptcy risk, but the company can still suffer material wildfire losses.

Anthony J. Glennon *January 17, 2025*

BUSINESS: Entergy Corporation supplies electricity to 3 million customers through subsidiaries in Arkansas, Louisiana, Mississippi, Texas, and New Orleans (regulated separately from Louisiana). Distributes gas to 206,000 customers in Louisiana. Is selling its last nonutility nuclear unit (shut down 5/22). Electric revenue breakdown: residential, 37%; commercial, 24%; industrial, 27%; other, 12%. Generating sources: gas, 68%; nuclear, 22%; coal, 9%; hydro and solar, 1%. Fuel costs: 32% of revenues. '23 reported depreciation rate: 2.7%. Has 11,707 employees. Chairman & CEO: Leo P. Denault. Incorporated: Delaware. Address: 639 Loyola Avenue, P.O. Box 61000, New Orleans, Louisiana 70161. Telephone: 504-576-4000. Internet: www.entergy.com.

Entergy recorded lackluster 2024 third-quarter results. Revenues fell below $3.4 billion as the company faced some downtime due to a few hurricanes in its service area in the period. This halted operations at several industrial customers, while Entergy faced higher costs related to fixing damaged infrastructure. Absent these problems, better retail sales occurred, and industrial usage continued to grow during the quarter. Additionally, the power generator benefited from lower fuel costs and fewer asset write-downs. Even so, greater interest expenses are due to an expansion of debt, and depreciation increased as the company has continued to build out its supply operations. Overall, these factors netted earnings of $2.99 per share during the quarter.

The company ought to have weaker fourth-quarter results. However, revenues should grow thanks to better usage of its industrial power sources, including the Entergy Arkansas Walnut Bend Solar project, adding around 100-megawatt generation capacity into service. Still, we think that interest costs will rise. These factors will likely cause a decline in profits to $0.93 per share.

We expect positive results over the long haul. The service coverage area has benefited from more demand for power, including amongst its industrial base, as more customers are brought on board. This includes a new deal for a large customer in Louisiana, while the company has $7.0 billion in capital expansion projects, including renewables in its pipeline. Greater industrial activity across Texas and Louisiana should also drive population growth, allowing for greater retail usage. Still, costs will likely rise, and we think an expanding share count should dilute share profits a bit. Even so, we project earnings will rebound to $6.85 in 2025 and $8.05 by 2027-2029.

Shares of Entergy are neutrally ranked for Timeliness. Also, this stock holds lackluster 3- to 5-year appreciation potential, having moved up considerably since our September report. Meanwhile, the company hiked the dividend by 6% to $4.80 annually. Note that the board approved a 2-for-1 stock split on December 13th, not yet reflected in our presentation.

BUSINESS: Evergy, Inc. was formed through the merger of Great Plains Energy and Westar Energy in June of 2018. Through its subsidiaries (now doing business under the Evergy name), provides electric service to 1.6 million customers in Kansas and Missouri, including the greater Kansas City area. Electric revenue breakdown: residential, 32%; commercial, 27%; industrial, 15%; wholesale, 13%; other, 13%. Generating sources: coal, 54%; nuclear, 17%; purchased, 29%. Fuel costs: 28% of revenues. '23 reported deprec. rate: 3%. Has 4,900 employees. Chairman: Mark A. Ruelle. President & CEO: David A. Campbell. COO: Kevin E. Bryant. Inc.: Missouri. Address: 1200 Main Street, Kansas City, Missouri 64105. Tel.: 816-556-2200. Internet: www.evergy.com.

Evergy looks set to post significantly higher profits in 2024. Indeed, the utility recorded better-than-expected third-quarter results. Revenues of $1.81 billion and earnings of $2.02 a share both surpassed our estimates and improved substantially from the year-prior period. An increased number of cooling days, along with new retail rates and transmission investments were the primary drivers of the strong showing. Management reaffirmed its 2024 bottom-line target range of $3.73-$3.93 per share. Our unchanged estimate sits near the middle of this range. And, the stock price has risen nicely over the past three months. Indeed, these shares are up more than 10% in value over that interim, and have jumped nearly 30% in the past year.

Our full-year 2025 earnings estimate is staying put at $4.05 a share. We expect slower growth compared to 2024, but our estimates are still within Evergy's long-term annual adjusted share-earnings growth target. Indeed, we look for a 5% increase from our 2024 estimate, which is right in the middle of management's updated 4%-6% yearly profit growth target. The company will likely take advantage of elevated power demand due to data centers and AI innovations, along with regulatory and rate improvements.

The board of directors raised the quarterly dividend, effective with the December payout. The increase was $0.025 a share (4%). The utility's target for the payout ratio is a range of 60%-70%. The yield of 4.4% stands comfortably above the utility average, which is one of the highest dividend-paying industries in the market.

These shares are best suited for conservative, income-oriented accounts. The aforementioned recently raised yield is Evergy's most notable feature. Long-term total return potential remains decent, on a risk-adjusted basis, in comparison to most of its peers, despite the recent stock price increase. We continue to look for the stock to trade around $70-$95 by 2027-2029, and think the company will earn $4.75 a share by then, which has been raised by $0.05 a share. Meanwhile, the stock is ranked to mirror the broader market averages in the year ahead.

Zachary J. Hodgkinson December 6, 2024

2025					

BUSINESS: IDACORP, Inc. is a holding company for Idaho Power Company, a regulated electric utility that serves 633,000 customers throughout a 24,000-square-mile area in southern Idaho and eastern Oregon (population: 1.4 million). Most of the company's revenues are derived from the Idaho portion of its service area. Revenue breakdown: residential, 39%; commercial, 21%; industrial, 14%; irrigation, 10%; other, 16%. Generating sources: hydro, 35%; coal, 13%; gas, 15%; purchased, 37%. Fuel costs: 40% of revenues. '23 reported depreciation rate: 3.1%. Has 2,112 employees. Chairman: Dennis L. Johnson. President & CEO: Lisa Grow. Incorporated: Idaho. Address: 1221 W. Idaho St., Boise, Idaho 83702. Telephone: 208-388-2200. Internet: www.idacorpinc.com.

IDACORP has performed well over the first nine months of 2024. The utility company saw a 5% year-over-year increase in its top line and approximately 6% growth in the bottom line. A rise in Idaho base rates, significant customer growth, and higher customer usage due to warmer weather partially offset the impact of increased depreciation and interest expenses. Some of these costs were tied to IDACORP's ongoing infrastructure expansion efforts (more below).

The near-term profit picture appears healthy. Given the utility's recent performance, management has raised the lower end of its anticipated share earnings to the $5.35-$5.45 range, up from the previous $5.30-$5.45 forecast. Key assumptions in this projection include Idaho Power, its subsidiary, expecting additional tax credits of $25 million to $35 million, as well as normal weather trends. Additionally, rate increases requested by the company took effect on January 1, 2025. We believe the utility has strong prospects for both top- and bottom-line growth in the near term, despite the elevated costs related to infrastructure. Therefore, we estimate IDACORP to have ended 2024 with a 6% increase in full-year share profit, to $5.45. In 2025, the bottom line will likely continue to grow at a similar pace, reaching $5.80 per share.

IDACORP has a long-term capital expenditure plan in place. The company intends to invest $1 billion to $1.1 billion in 2025, $3.5 billion to $4.0 billion in 2026, and $3.5 billion to $4.0 billion from 2027 to 2028. This plan will help IDACORP meet demand and maintain affordable prices for its customers. Utility companies have incentives to pursue capital projects, which can support future rate-base negotiations.

The board raised the fourth-quarter dividend. The new payment of $0.86 per share, made in December, represents a 3.6% increase over the previous-year tally.

Shares of IDACORP are ranked to underperform the broader market averages in the year ahead (Timeliness: 4). Plus, the stock has a subpar dividend yield for a utility. Also, these shares do not stand out for 18-month capital gains potential.

Emma Jalees *January 17, 2025*

2025					

BUSINESS: NorthWestern Energy Group, Inc. supplies electricity & gas in the Upper Midwest and Northwest, serving 467,700 electric customers in Montana and South Dakota and 307,600 gas customers in Montana, South Dakota, and Nebraska. Electric revenue breakdown for 2023: residential, 44%; commercial, 50%; industrial, 4%; and other, 2%. Generating sources: coal, 18%; hydro, 37%; wind, 4%; natural gas, 12%; purchased power, 29%. Fuel costs: 30% of revenues. 2023 reported depreciation rate: 2.8%. Had 1,573 employees as of 12/31/23. Chair of the board of directors: Dana J. Dykhouse. President and CEO: Brian B. Bird. Incorporated: DE. Address: 3010 West 69th Street, Sioux Falls, SD 57108. Telephone: 605-978-2900. Internet: www.northwesternenergy.com.

NorthWestern Energy's 2024 earnings per share were likely lower than we previously expected. While rate relief from the October 2023 general rate case (GRC) decision in Montana was a major plus last year, milder-than-typical weather crimped electricity and natural gas demand in the company's service territory. NorthWestern had also counted on receiving higher interim rates ahead of its next Montana GRC as it had in the last major state regulatory decision. Interim rate relief was delayed and as a result, management revised its share-earnings target range lower to $3.32-$3.47 from the initial $3.42-$3.62 outlook. The company is due to report year-end results after the market closes on February 14th.

NorthWestern is once again due for major rate relief. The public hearing for the GRC, which was filed last year, is scheduled to begin on April 22nd, with a final decision projected to conclude by year's end. It's unclear if interim rates will be forthcoming. In the utility's application to the Montana Public Service Commission, it requested a more than one percentage point hike to its authorized return on equity (ROE), to 10.8% for both natural gas and electric investments. The company is also seeking a $164 million annual revenue increase from electricity customers and $29 million from gas customers. A significant portion of the hike is associated with infrastructure the company has paid for, but not yet billed for. This includes utility poles, pipelines, and a 175-megawatt natural gas generation plant that was delayed and over budget, in part due to it being contested by environmentalist groups. The company said the final cost on the project was about $315 million, up from the budgeted $275 million. Our expectation is that NWE will get much of, but certainly not all of, what it's asking for. We'd be surprised if the ROE is significantly raised.

Income-oriented accounts might find these shares of interest. The 5.1% yield is well above the median 3.7% for electric utilities. We don't see much appreciation potential. And, it will likely take years for the dividend payout ratio to drop enough to allow for growth in the annual payout to match share-earnings gains.

BUSINESS: OGE Energy Corp. is a holding company for Oklahoma Gas and Electric Company (OG&E), which supplies electricity to 879,000 customers in Oklahoma (84% of electric revenues) and western Arkansas (8%); wholesale is (8%). Owns 3% of Energy Transfer's limited partnership units. Electric revenue breakdown: residential, 44%; commercial, 25%; industrial, 11%; oilfield, 10%; other, 10%. Generating sources: gas, 25%; coal, 21%; wind, 6%; purchased, 48%. Fuel costs: 58% of revenues. '23 reported depreciation rate (utility): 2.6%. Has 2,200 employees. Chairman, President and Chief Executive Officer: Sean Trauschke. Incorporated: Oklahoma. Address: 321 North Harvey, P.O. Box 321, Oklahoma City, OK 73101-0321. Tel.: 405-553-3000. Internet: www.oge.com.

OGE Energy's utility subsidiary is progressing on the regulatory front. Remember that in Oklahoma, a $126.6 million rate increase took effect in July, subject to a final order to approve the hike. The Oklahoma Corporation Commission recently delayed the vote due to differences of opinions between commission chairs. The utility initially proposed a $322 million (13.85%) hike or a $19.02 average monthly rise per residential customer. The increase will likely help OGE recover essential capital investments to strengthen and improve the reliability of the electric grid. An order is expected by the end of this year or the beginning of 2025.

Our 2024 profit estimate is staying put at $2.15 a share. Management looks for earnings to come in at the high end of its range of $2.06-$2.18 due to strong load growth and warmer than normal weather. This assumes approval of the Oklahoma rate review, among other things. We look for sharper growth next year compared to 2024 levels. Indeed, our 2025 bottom-line estimate represents 7% growth from our 2024 projections. OGE looks to be increasingly well positioned over the next few years, and should take advantage of increased power demand and the clean energy transition, as a pure play electric utility.

The board of directors has raised the dividend, effective with the October payment. The increase was modest, at $0.003 a share quarterly (1% higher). This issue offers a very attractive dividend, and the yield of 4.3% stands comfortably above the utility average, which is one of the best dividend-paying industries in the market.

This issue is best suited for income-oriented investors. The aforementioned recently raised dividend distribution remains the most notable feature at this juncture. But, intermediate- and long-term risk-adjusted capital appreciation potential is unattractive. Indeed, the current quotation is well within both our 18-month and 3- to 5-year Target Price Ranges. Too, the Timeliness rank has been lowered one notch to 4 (Below Average), which means OGE is slated to trail the broader market averages in the year ahead.

2025					

BUSINESS: Pinnacle West Capital Corporation is a holding company for Arizona Public Service Company (APS), which supplies electricity to 1.4 million customers in most of Arizona, except about half of the Phoenix metro area, the Tucson metro area, and Mohave County in northwestern Arizona. Discontinued SunCor real estate subsidiary in '10. Electric revenue breakdown: residential, 49%; commercial/industrial, 44%; other, 7%. Generating sources: gas, 25%; nuclear, 25%; coal, 18%; renewables, 2%; purchased, 30%. Fuel costs: 38% of revenues. '23 reported deprec. rate: 2.98%. Has 6,133 employees. Chairman, President & CEO: Jeffrey B. Guldner. Inc.: AZ. Address: 400 North Fifth St., P.O. Box 53999, Phoenix, AZ 85072-3999. Tel.: 602-250-1000. Internet: www.pinnaclewest.com.

Pinnacle West Capital will likely report a very strong earnings gain for 2024. Constructive progress on the regulatory front last March helped. A revamped Arizona Corporate Commission raised the utility's authorized return on equity (ROE) to 9.55%, with upside to 9.85% if certain conditions are met, from a miserly 8.7% previously. The restoration of a more reasonable regulated ROE boosted Pinnacle West's earnings power by about $1.00 per share. In addition, the company benefited from a record-setting heat wave in its Arizona service area, as customers used more electricity to cool their homes and businesses. There was a stretch of 113 consecutive days when temperatures rose above 100 degrees in the Phoenix area. There were also 70 days when temperatures rose above 110 degrees, which was up from the previous record of 55 days above 110, set in 2023.

Management expects the company's overheated bottom line to cool off some this year. It has provided a preliminary 2025 weather-normalized earnings projection of $4.40 to $4.60 per share. We suspect the company will be proven to be too conservative in its forecast. Sweltering heat in 2023 followed by an even more oppressive stretch in 2024 doesn't seem like a trend that will pivot back to management's idea of average temperatures, which are based on several decades of data. In addition, Pinnacle West's service area benefits from strong migration, as Arizona's 2.5% flat income tax rate helps draw in out-of-state retirees. A business friendly government also keeps the regional economy headed in the right direction. Customer growth was likely up 2% last year and will probably be up by a similar amount going forward.

These shares are neutrally ranked for year-ahead relative performance. Longer term, we like this electric utility a lot, as it's the beneficiary of a premium service area in terms of rising energy demand from population growth and a thriving economy. Even so, utility investors need to be disciplined buyers and wait for a bit more of a drawdown before committing here. A 5%-7% dip would translate to a worthwhile risk-adjusted annual total return expectation.

Anthony J. Glennon *January 17, 2025*

BUSINESS: Portland General Electric Company provides electricity to 934,000 customers in 51 cities in a 4,000-square-mile area of Oregon, including Portland and Salem (population: 1.9 million). The company is in the process of decommissioning the Trojan nuclear plant, which was closed in 1993. Electric revenue breakdown: residential, 52%; commercial, 33%; industrial, 15%; other, less than 1%. Generating sources: gas, 40%; wind, 7%; coal, 8%; hydro, 4%; purchased, 41%. Fuel costs: 40% of revenues. '23 reported depreciation rate: 3.4%. Has 2,842 full-time employees. Chair: James P. Torgerson. President and CEO: Maria M. Pope. Incorporated: Oregon. Address: 121 S.W. Salmon Street, Portland, OR 97204. Tel.: 503-464-8000. Internet: www.portlandgeneral.com.

Portland General Electric should report a strong bottom-line increase for 2024. Admittedly, 2023 comparisons were easy to improve upon, as demand suffered from mild weather. At the same time, purchased-power costs were exceptionally high in 2023. The weather situation improved last year, and volumes rose due to strong demand growth from the semiconductor industry and data centers. It was also a plus that Portland General has become less reliant on volatile at-the-market purchased power. The utility brought its Clearwater Wind development project on line early in 2024. Portland General will continue to bring on new renewable capacity additions under the formula of half company owned and half long-term stable purchased power agreements from a strategic partner.

Higher electric rates are likely to lift earnings further in 2025. In December, the utility received its general rate case decision from Oregon regulators. Effective from January 1st of this year, residential rates are set to rise by 5.5%. Commercial and industrial rates will be up as much as 7.7%. The company was seeking an 8.6% across-the-board hike in rates for recoupment of investments made, plus timely recovery mechanisms via customer billing pass-throughs. The new rates are based on an authorized return on equity of 9.35%, which suffered a 15 basis point trim from the previous 9.5% level.

Longer-term prospects are favorable. Portland General ought to benefit from 2%-3% annual load growth, supported by a healthy high-tech industrial segment in its service area. Profitability will likely be on the rise, as the utility continues to reduce its reliance on open-market power purchases, which are vulnerable to price spikes during periods of high demand or constrained supply. Portland General has the green light from regulators to add more nonemitting annual power generation, plus significant battery storage capacity. Over the stretch to 2027-2029, 5%-6% annual earnings gains looks feasible.

Utility investors focused on the longer term should find this equity of interest. POR's dividend yield is 120 basis points above the peer-group average. And, total return prospects look worthwhile.

Electric revenue breakdown: residential, 43%; commercial, 35%; industrial, 21%; other, 1%. Generating sources: gas, 51%; coal, 19%; nuclear, 10%; other, 11%; purchased, 9%. Fuel costs: 26% of revenues. '23 reported deprec. rates (utility): 2.7%-3.4%. Has 27,300 employees. President and CEO: Chris Womack. Incorporated.: Delaware. Address: 30 Ivan Allen Jr. Blvd., N.W., Atlanta, Georgia 30308. Telephone: 404-506-0747. Internet: www.southerncompany.com.

We look for Southern Company's earnings to advance moderately in 2025. Our profit estimate this year remains unchanged at $4.30 per share, implying 6% growth, which is in line with the utility's long-term 5%-7% target. The recent completion of the Vogtle Nuclear Construction Project should start to benefit results in 2025 and beyond. The Vogtle plant stands to deliver 2,200 megawatts of reliable, carbon free energy for decades, and is the largest generator of clean energy in the U.S. In turn, Southern is increasingly well positioned to take advantage of the clean energy transition and elevated power demand due to technological advancements.

We have introduced our top- and bottom-line estimates for 2026. We think the company will post similar growth in 2026, within management's long-term targets. The demand for nuclear power expansion and electricity should remain elevated for the foreseeable future. And, Southern continues to expect that the U.S. will need to install more than 10 gigawatts of nuclear power to meet increased electricity demand in the coming years. Accordingly, we look for earnings of $4.60 per share and revenues of $28.25 billion.

These shares have fallen a bit in value since our early November report. The stock is down more than 5% over that interim, partly due to weak projected year over year earnings comparisons as well as increased energy transition costs. Still, Southern shares are up more than 25% over the past year, along with the sharp rise in demand for nuclear power expansion and electricity.

This issue is best suited for conservative, income-oriented investors. Indeed, the utility pays a solid dividend, which remains its most notable feature, and is ranked Above Average (2) for Safety. But, many of its peers pay even higher dividends. What's more, intermediate- and long-term capital appreciation potential is weak at this juncture. After rolling out our estimates to 2028-2030, the recent quotation is already well within our new range of $75-$105. The recent price also stands above the midpoint of our 18-month Target Price Range.

BUSINESS: TXNM Energy, Inc. (formerly PNM Resources) is a holding company with two regulated electric utilities. Public Service Company of New Mexico (PNM) serves about 550,000 customers in north central New Mexico, including Albuquerque and Santa Fe. Texas-New Mexico Power Company (TNMP) transmits and distributes power to more than 270,000 homes and businesses in Texas. Electric revenue: residential, 32%; commercial, 28%; indust'l, 7%; other, 33%. Fuel costs: 46% of revenues in 2023; reported depreciation rates: 2.67%-7.64%. Has about 1,600 employees. Chairman and CEO: Patricia K. Collawn. Incorporated: New Mexico. Address: 414 Silver Ave. SW, Albuquerque, New Mexico 87102-3289. Telephone: 505-241-2700. Internet: www.txnmenergy.com.

Last year was an interesting period of transition for TXNM Energy. From the start of 2024 through mid-year, this issue badly underperformed its peer group, with the share price dropping nearly 15% in the wake of the failed merger with Avangrid, which pulled the plug on its $50.30-per-share cash offer. That situation had dragged on since October of 2020, before Avangrid's parent company, the Spanish multinational Iberdrola, lost patience with the process. Oddly enough, it was Avangrid that ended up going private, as Iberdrola recently bought out the minority shareholders. Perhaps to put that saga in the rearview mirror, PNM Resources was rebranded as TXNM Energy. As management explains it, the shift was made to better reflect the changing dynamics of the company, where the Lewisville-Texas based TNMP subsidiary now makes up 40% of the holding company's rate base, and is its engine of growth. It's fair to ask, "what's in a name?" Yet, the tactic has seemingly worked. From its June low, the issue rallied 38% through the close of 2024 and has been one of the best performing utility stocks of late.

Longer-term prospects here appear decent relative to the electric utility peer group. The Public Service Company of New Mexico (PNM) subsidiary is suffering from a poor outcome in the latest general rate case decision, which was handed down about a year ago. On the positive side, PNM's state regulators did green light the utility's intermediate-term resources plan, which should get the New Mexico rate base growing again. Meanwhile, TNMP is expected to see nearly 13% annual rate-base growth for the 2024-2028 stretch, driven by above-average demographic trends and a vibrant Texas economy. For its part, leadership says that it is targeting 6%-7% earning growth over the 2024 to 2028 stretch, using the midpoint of its 2024 initial profit outlook of $2.70 per share as the starting point. We think that's a little aggressive and would be content if the company met our 5.5% annual share-earnings projection.

This equity is not timely. Annual total return prospects don't stand out either at the recent valuation. Moreover, its yield is 20 basis points below the peer median.

BUSINESS: Xcel Energy Inc. is the parent of Northern States Power Company (NSP), which supplies electricity to MN, WI, ND, SD & MI & gas to MN, WI, ND & MI; Public Service Company of Colorado (PSCo), which supplies electricity & gas to CO; & Southwestern Public Service Company (SPS), which supplies electricity to TX and NM. Customers: 3.8 mill. electric, 2.2 mill. gas. Electric revenues: resid'l, 31%; comm'l & ind'l, 50%; other, 19%. Purchases 34% of power, owns 66%. Total electric mix: wind, 29%; gas, 23%; coal, 13%, nuclear, 24%, solar/other, 11%. Fuel cost: 40% of revenues. '23 deprec. rate: 3.6%. Employs 11,311. Chrmn., President, and CEO: Robert Frenzel. Inc.: MN. Addr.: 414 Nicollet Mall, Minneapolis, MN 55401. Tel.: 612-330-5500. Int.: www.xcelenergy.com.

Xcel Energy stock has recovered nicely from the sharp sell-off of March, 2024, which coincided with Texas wildfires caused by downed wires. Even with the most recent industry correction, the share price is up nearly 40% from its 2024 nadir. The overreaction came at a time when the complete damages could not yet be assessed and the fires were still raging. It also came when the company was already mired in an ongoing investigation into the causes of the late 2021 Marshall fire in Colorado, with estimated damages of $2 billion. Subsequently, it has been found that physical damages in the Texas panhandle are likely to be around half of the company's $500 million of insurance per incident. The company has already settled nearly 50% of the cases and Texas law typically doesn't support major punitive damages.

Meanwhile, hundreds of Colorado wildfire claims have been combined into one case regarding liability, tentatively schedule for September of this year. Colorado law caps punitive damages at three times actual damages, so there is the potential for billions in payouts. But, there is also a fairly high hurdle for proving negligence in Colorado, which differs markedly from California law, for instance. Net of insurance, we'd be surprised if Xcel was liable for more than $1.5 billion, which is a manageable amount.

The company shored up its balance sheet with a substantial equity offering late last year. About 18 million shares were priced at $65.50 each, raising $1.2 billion. That the company was able to fetch a valuation of 18.5 times expected 2024 adjusted earnings of $3.55 per share is a testament to the Street's confidence in Xcel's ongoing business prospects. The company's diversification across several major service areas affords it financial resources few in the electric utility industry can match. Xcel always seems to have its ducks in a row in its rate cases and resource plans. It will likely find increased avenues of investment via mitigation work in response to these wildfire tragedies.

This stock is untimely. We'd want to see about a 10% pullback in the share price before comfortably recommending XEL to long-term utility investors.

6.	Conclusion of Equity Risk Premium	7.19 %	7.19 %
7.	Adjusted Beta (6)	0.79	0.73
8.	Forecasted Equity Risk Premium	5.68 %	5.25 %

Notes:

(1) Based on the arithmetic mean historical monthly returns on large company common stocks from Kroll Cost of Capital Navigator and Bloomberg Professional Services minus the arithmetic mean monthly yield of Moody's average Aaa and Aa2 corporate bonds from 1928-2024.

(2) This equity risk premium is based on a regression of the monthly equity risk premiums of large company common stocks relative to Moody's average Aaa and Aa2 rated corporate bond yields from 1928-2024 referenced in Note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the average consensus forecast of Aaa corporate bonds of 5.35% (from page 1 of this Schedule).

(3) The Predictive Risk Premium Model (PRPM) is discussed in the accompanying direct testimony. The Ibbotson equity risk premium based on the PRPM is derived by applying the PRPM to the monthly risk premiums between Ibbotson large company common stock monthly returns and average Aaa and Aa corporate monthly bond yields, from January 1928 through February 2025.

(4) The equity risk premium based on the Value Line Summary and Index is derived by subtracting the average consensus forecast of Aaa corporate bonds of 5.35% (from page 1 of this Schedule) from the projected 3-5 year total annual market return of 11.20% (described fully in note 1 on page 2 of Schedule DWD-5).

(5) Using data from the Bloomberg Professional Services, Value Line, and S&P Global Market Intelligence for the S&P 500 for the S&P 500, an expected total return of 15.23% was derived based upon expected dividend yields as a proxy for income returns and long-term earnings growth estimates as a proxy for capital appreciation. Subtracting the average consensus forecast of Aaa corporate bonds of 5.35% results in an expected equity risk premium of 9.88%.

(6) Average of mean and median beta for each proxy group from page 1 of Schedule DWD-5.

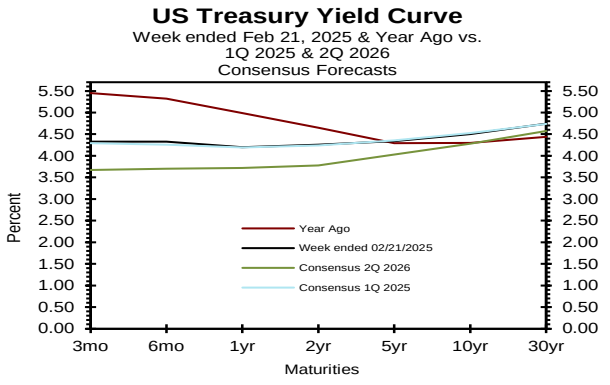
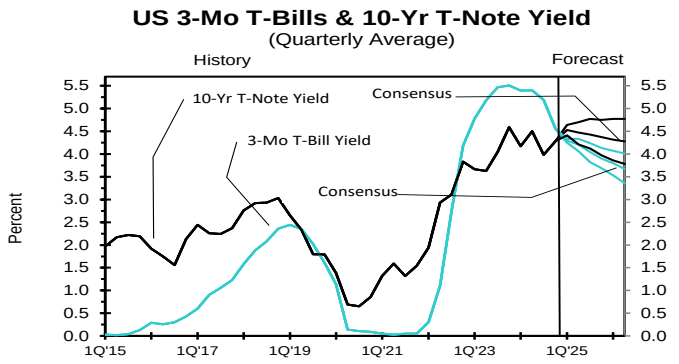
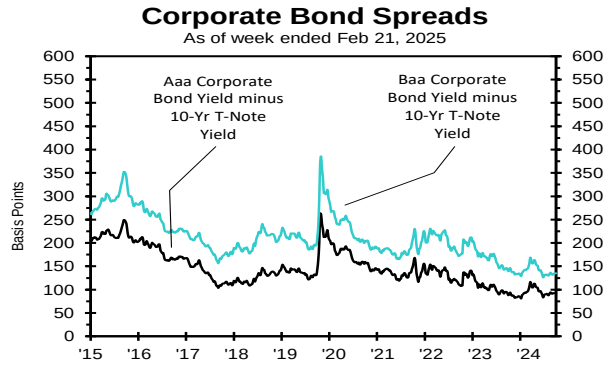
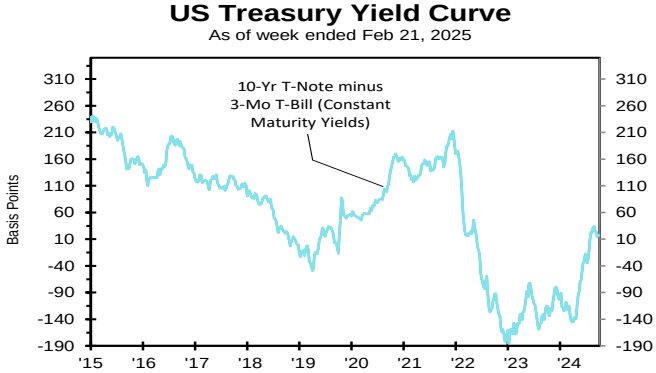
Forecasts for interest rates and the Federal Reserve's Advanced Foreign Economies Index represent averages for the quarter. Forecasts for Real GDP, GDP Price Index, CPI and PCE Price Index are seasonally adjusted annual rates of change (saar). Individual panel members' forecasts are on pages 4 through 9. Historical data: Treasury rates from the Federal Reserve Board's H.15; AAA-AA and A-BBB corporate bond yields from Bank of America-Merrill Lynch and are 15+ years, yield to maturity; State and local bond yields from Bank of America-Merrill Lynch, A-rated, yield to maturity; Mortgage rates from Freddie Mac, 30-year, fixed; SOFR from the New York Fed. All interest rate data are sourced from Haver Analytics. Historical data for Fed's Major Currency Index are from FRSR H.10. Historical data for Real GDP, GDP Price Index and PCE Price Index are from the Bureau of Economic Analysis (BEA). Consumer Price Index history is from the Department of Labor's Bureau of Labor Statistics (BLS).









Long-Range Survey:

The table below contains the results of our twice-annual long-range CONSENSUS survey. There are also Top 10 and Bottom 10 averages for each variable. Shown are consensus estimates for the years 2026 through 2030 and averages for the five-year periods 2026-2030 and 2031-2035. Apply these projections cautiously. Few if any economic, demographic and political forces can be evaluated accurately over such long time spans.

		Average For The Year					Five-Year Averages	
		2026	2027	2028	2029	2030	2026-2030	2031-2035

Projected Market Appreciation of the S&P Utility Index
Derivation of Mean Equity Risk Premium Based Studies
Using Holding Period Returns and
Projected Market Appreciation of the S&P Utility Index

Line No.		Implied Equity Risk Premium
1.	Historical Equity Risk Premium (1)	4.16 %
2.	Regression of Historical Equity Risk Premium (2)	4.80
3	Forecasted Equity Risk Premium Based on PRPM (3)	5.07
4.	Forecasted Equity Risk Premium based on Projected Total Return on the S&P Utilities Index (Bloomberg, Value Line, and S&P Capital IQ Data) (4)	5.00
5.	Average Equity Risk Premium (5)	4.76 %

Notes: (1) Based on S&P Public Utility Index monthly total returns and Moody's Public Utility Bond average monthly yields from 1928-2024. Holding period returns are calculated based upon income received (dividends and interest) plus the relative change in the market value of a security over a one-year holding period.

(2) This equity risk premium is based on a regression of the monthly equity risk premiums of the S&P Utility Index relative to Moody's A2 rated public utility bond yields from 1928 - 2024 referenced in note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the prospective A2 rated public utility bond yield of 5.73% (from line 3, page 1 of this Schedule).

(3) The Predictive Risk Premium Model (PRPM) is applied to the risk premium of the monthly total returns of the S&P Utility Index and the monthly yields on Moody's A2 rated public utility bonds from January 1928 - February 2025.

(4) Using data from Bloomberg, Value Line, and S&P Capital IQ for the S&P Utilities Index, an expected return of 10.73% was derived based on expected dividend yields as a proxy for income returns and long-term growth estimates as a proxy for market appreciation. Subtracting the expected A2 rated public utility bond yield of 5.73%, calculated on line 3 of page 1 of this Schedule results in an equity risk premium of 5.00%. (10.73% - 5.73% = 5.00%).

(5) Average of lines 1 through 4.

Notes on page 2 of this Schedule.

Valley Energy, Inc. / Citizens' Electric Company of Lewisburg, PA / Wellsboro Electric Company
Notes to Accompany the Application of the CAPM and ECAPM

Notes:

(1) The market risk premium (MRP) is derived by using five different measures from four sources: Kroll, Value Line, Bloomberg, and S&P Capital IQ as illustrated below:

Measure 1: Kroll Arithmetic Mean MRP (1926-2024)

Arithmetic Mean Monthly Returns for Large Stocks 1926-2024:	12.29 %
Arithmetic Mean Income Returns on Long-Term Government Bonds:	4.99
MRP based on Kroll Historical Data:	7.31 %

Measure 2: Application of a Regression Analysis to Kroll Historical Data

(1926-2024)	7.94 %

Measure 3: Application of the PRPM to Kroll Historical Data

(January 1926 - February 2025)	8.18 %

Measure 4: Value Line Projected MRP (Thirteen weeks ending February 28, 2025)

Total projected return on the market 3-5 years hence*:	11.20 %
Risk-Free Rate (see notes 2 and 3):	4.55
MRP based on Value Line Summary & Index:	6.65 %

*Forcasted 3-5 year capital appreciation plus expected dividend yield

Measure 5: Bloomberg, Value Line, and S&P Capital IQ Projected Return on the Market based on the S&P 500

Total return on the Market based on the S&P 500:	15.23 %
Risk-Free Rate (see notes 2 and 3):	4.55
MRP based on Bloomberg, Value Line, and S&P Capital IQ data	10.68 %

Average of all MRP Measures:	8.15 %

(2) For reasons explained in the Direct Testimony, the appropriate risk-free rate for cost of capital purposes is the average forecast of 30 year Treasury Bonds per the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts. (See pages 7 and 8 of Schedule DWD-4.) The projection of the risk-free rate is illustrated below:

First Quarter 2025	4.70 %
Second Quarter 2025	4.70
Third Quarter 2025	4.70
Fourth Quarter 2025	4.60
First Quarter 2026	4.60
Second Quarter 2026	4.60
2026-2030	4.30
2031-2035	4.20
	4.55 %

(3) Average of Column 6 and Column 7.

Valley Energy, Inc. / Citizens' Electric Company of Lewisburg, PA / Wellsboro Electric Company
Basis of Selection of the Group of Non-Price Regulated Companies
Comparable in Total Risk to the Proxy Group of Seven Natural Gas Distribution Companies

The criteria for selection of the proxy group of non-price regulated companies comparable in total risk to the proxy group of seven natural gas distribution companies was that the non-price regulated companies be domestic and reported in Value Line Investment Survey (Standard Edition).

The proxy group of non-price regulated companies was selected based on the unadjusted beta range of 0.64 - 0.92 and residual standard error of the regression range of 2.8368 - 3.3832 of the proxy group of seven natural gas distribution companies.

These ranges are based upon plus or minus two standard deviations of the unadjusted beta and standard error of the regression. Plus or minus three standard deviations captures 95.50% of the distribution of unadjusted betas and residual standard errors of the regression.

The standard deviation of the proxy group of seven natural gas distribution companies' residual standard error of the regression is 0.1366. The standard deviation of the standard error of the

$$\text{Standard Deviation of the Std. Err. of the Regr.} = \frac{\text{Standard Error of the Regression}}{\sqrt{2N}}$$

where: N = number of observations. Since Value Line betas are derived from weekly price change observations over a period of five years, N = 259

$$\text{Thus,} \quad 0.1366 = \frac{3.1100}{\sqrt{518}} = \frac{3.1100}{22.7596}$$

Valley Energy, Inc. / Citizens' Electric Company of Lewisburg, PA / Wellsboro Electric Company
Basis of Selection of the Group of Non-Price Regulated Companies
Comparable in Total Risk to the Proxy Group of Fifteen Electric Companies

The criteria for selection of the proxy group of non-price regulated companies comparable in total risk to the proxy group of fifteen electric companies was that the non-price regulated companies be domestic and reported in Value Line Investment Survey (Standard Edition).

The proxy group of non-price regulated companies was selected based on the unadjusted beta range of 0.71 - 0.97 and residual standard error of the regression range of 2.6065 - 3.1089 of the proxy group of fifteen electric companies.

These ranges are based upon plus or minus two standard deviations of the unadjusted beta and standard error of the regression. Plus or minus three standard deviations captures 95.50% of the distribution of unadjusted betas and residual standard errors of the regression.

The standard deviation of the proxy group of fifteen electric companies' residual standard error of the regression is 0.1256. The standard deviation of the standard error of the regression is

$$\text{Standard Deviation of the Std. Err. of the Regr.} = \frac{\text{Standard Error of the Regression}}{\sqrt{2N}}$$

where: N = number of observations. Since Value Line betas are derived from weekly price change observations over a period of five years, N = 259

$$\text{Thus,} \quad 0.1256 = \frac{2.8577}{\sqrt{518}} = \frac{2.8577}{22.7596}$$

Notes:

(1) The application of the DCF model to the domestic, non-price regulated comparable risk companies is identical to the application of the DCF to the Utility Proxy Groups. The dividend yield is derived by using the 60 day average price and the spot indicated dividend as of 02/28/2025. The dividend yield is then adjusted by 1/2 the average projected growth rate in EPS, which is calculated by averaging the 5 year projected growth in EPS provided by Value Line, www.zacks.com, and S&P Capital IQ (excluding any negative growth rates) and then adding that growth rate to the adjusted dividend yield.

(2) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

Notes:

(1) The application of the DCF model to the domestic, non-price regulated comparable risk companies is identical to the application of the DCF to the Utility Proxy Groups. The dividend yield is derived by using the 60 day average price and the spot indicated dividend as of 02/28/2025. The dividend yield is then adjusted by 1/2 the average projected growth rate in EPS, which is calculated by averaging the 5 year projected growth in EPS provided by Value Line, www.zacks.com, and S&P Capital IQ (excluding any negative growth rates) and then adding that growth rate to the adjusted dividend yield.

(2) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

Valley Energy, Inc. / Citizens' Electric Company of Lewisburg, PA / Wellsboro Electric Company
Indicated Common Equity Cost Rate
Through Use of a Risk Premium Model
Using an Adjusted Total Market Approach

Line No.		Proxy Group of Forty-Nine Non-Price Regulated Companies	Proxy Group of Forty-Seven Non-Price Regulated Companies
1.	Prospective Yield on Baa2 Rated Corporate Bonds (1)	6.14 %	6.14
2.	Adjustment to Reflect Bond rating Difference of Non-Price Regulated Companies (2)	(0.14)	(0.18)
3.	Adjusted Bond Yield	6.01	5.96
4.	Equity Risk Premium (3)	6.26	6.33
5.	Risk Premium Derived Common Equity Cost Rate	12.27 %	12.29

Notes: (1) Average forecast of Baa corporate bonds based upon the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts dated November 27, 2024 and February 28, 2025 (see pages 7 and 8 of Schedule DWD-4). The estimates are detailed below.

First Quarter 2025	6.20 %
Second Quarter 2025	6.20
Third Quarter 2025	6.20
Fourth Quarter 2025	6.20
First Quarter 2026	6.20
Second Quarter 2026	6.20
2026-2030	6.00
2031-2035	5.90
Average	6.14 %

(2) The average yield spread of Baa2 rated corporate bonds over A2 corporate bonds for the three months ending February 2025. To reflect the A3/Baa1 average rating of the Proxy Group of Forty-Nine Non-Price Regulated Companies, the yield on the Baa corporate bond must be adjusted by one-half the spread between A2 and Baa2 corporate bond yields. Further, to reflect the A3 average rating of the Proxy Group of Forty-Seven Non-Price Regulated Companies, the yield on the Baa corporate bond must be adjusted by two-thirds the spread between A2 and Baa2 corporate bond yields, both shown below:

	A2 Corp. Bond Yield	Baa2 Corp. Bond Yield	Spread
Feb-25	5.66 %	5.92 %	0.26 %
Jan-25	5.80	6.08	0.28
Dec-24	5.53	5.80	0.27
		Average yield spread	0.27
		1/2 of spread	0.14
		2/3 of spread	0.18

REBUTTAL TESTIMONY

AND EXHIBIT

OF

DYLAN W. D'ASCENDIS

ON BEHALF OF

CITIZENS' ELECTRIC COMPANY OF LEWISBURG, PA,
VALLEY ENERGY, INC., AND
WELLSBORO ELECTRIC COMPANY

AUGUST 13, 2025

TABLE OF CONTENTS

I. INTRODUCTION, PURPOSE AND SUMMARY 1

II. UPDATED ANALYSIS 4

III. RESPONSE TO I&E ROE WITNESSES KELLER AND PATEL 6
- A. Failure to Reflect The Companies' Greater Relative Risk Due to Their Small Size 8
- B. Performance Factor Adjustment 13
- C. Response to the I&E ROE Witnesses' Criticisms of Company Testimony 13

IV. RESPONSE TO OCA WITNESS WALTERS 31
- A. Relevance of Historical Authorized Returns 33
- B. Discounted Cash Flow Model Analyses 35
- C. Risk Premium Method 43
- D. Capital Asset Pricing Model 50
- E. Adjustments to Common Equity Cost Rate 60
- F. Response to Mr. Walters' Critiques 61

V. RESPONSE TO OSBA WITNESS FARR 63

VI. CONCLUSION 65

I. INTRODUCTION, PURPOSE AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dylan W. D'Ascendis. My business address is 1820 Chapel Ave., W., Suite 300, Cherry Hill, N.J. 08003.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Partner at ScottMadden, Inc.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING?

A. I am submitting this rebuttal testimony (referred to throughout as my "Rebuttal Testimony") before the Pennsylvania Public Utility Commission ("PA PUC" or the "Commission") on behalf of Valley Energy, Inc. ("Valley"), Citizens' Electric Company of Lewisburg, PA ("Citizens'"), and Wellsboro Electric Company ("Wellsboro") (collectively "the Companies").

Q. ARE YOU THE SAME DYLAN W. D'ASCENDIS WHO PROVIDED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes, I am.

Q. WHAT IS THE PURPOSE OF THIS REBUTTAL TESTIMONY?

A. The purpose of my Rebuttal Testimony is two-fold. First, I update the analyses in my Direct Testimony to reflect current data. Second, I address certain aspects of the direct testimonies of Mr. Christopher Keller and Mr. D. C. Patel, witnesses for the PA PUC's Bureau of Investigation and Enforcement ("I&E") (collectively, the "I&E ROE Witnesses"), Mr. Christopher C. Walters, witness for the Pennsylvania Office of Consumer Advocate ("OCA"), and Mr. Justin B. Farr, witness for the Pennsylvania Office of Small Business Advocate ("OSBA") (collectively referred to as the "Opposing Witnesses") as they pertain to the Companies' allowed cost of capital, which the Companies should have the opportunity to earn on their authorized jurisdictional rate base.

Q. PLEASE SUMMARIZE THE KEY ISSUES AND RECOMMENDATIONS OFFERED BY THE OPPOSING WITNESSES THAT YOU ADDRESS IN YOUR REBUTTAL TESTIMONY.

A. Due to the passage of time since my Direct Testimony analysis (which included data as of February 28, 2025), I have updated my analysis using data as of July 18, 2025. Based on these updated analyses, the reasonable range of ROEs attributable to Valley are from 10.42% to 10.89% (unadjusted) and from 11.47% to 11.94% (adjusted) and the reasonable range of ROEs attributable to Citizens' and Wellsboro are from 10.19% to 10.76% (unadjusted) and from 11.09% to 11.66% (adjusted). Given these ranges, my recommended ROEs for the Companies of 11.65% continues to be reasonable. Conversely, recommended ROEs of 10.51% (Mr. Patel for Valley), 10.78% (Mr. Keller for Citizens' and Wellsboro), and 9.50% (Mr. Walters for all Companies) are inadequate at this time.[1]

My Rebuttal Testimony also responds to substantive recommendations offered by the Opposing Witnesses in their direct testimonies. Regarding the I&E ROE Witnesses' direct testimonies, their ROE recommendations generally fall within my initial and updated model results before adjustments for Company-specific factors. I will address why the Companies' small size and management performance adjustments should continue to be considered by the Commission when determining their ROEs. Adjusting the I&E ROE Witnesses' recommended ROEs for Company-specific factors would result in ROEs similar to my recommendation.

Regarding Mr. Walters' direct testimony, I will discuss my disagreement with several inputs Mr. Walters uses in his analysis that serve to understate his recommended

[1] Mr. Farr does not conduct an independent analysis of the Companies' ROE, but relies on the Commission's Bureau of Technical Utility Services ("TUS") quarterly calculation of the ROE for the Distribution System Improvement Charge ("DSIC") for his recommendation.

ROE. For example, I disagree with Mr. Walters' use of the sustainable growth version of the Discounted Cash Flow ("DCF") model, his use of the multi-stage DCF model ("MSDCF") and his application of the Capital Asset Pricing Model ("CAPM").

Regarding Mr. Farr's direct testimony, while he does not conduct an independent assessment of the Companies' appropriate ROEs, he relies on the Bureau of Technical Utility Services' ("TUS") quarterly calculation of the ROE for the Distribution System Improvement Charge ("DSIC"). Like the I&E ROE Witnesses' analysis, the range of ROEs calculated by the TUS in their quarterly report are comparable to my initial and updated model results and the top end of the ROE ranges for gas and electric utilities are comparable to my Company-specific recommendation. The calculated ranges of ROEs, however, do not reflect the Companies' managements' performance, and therefore is an incomplete analysis of the Companies' ROE.

My Rebuttal Testimony discusses these factors and others in detail. My Rebuttal Testimony also addresses the unfounded critiques of my Direct Testimony.

Q. HAVE YOU PREPARED AN EXHIBIT WHICH SUPPORTS YOUR REBUTTAL TESTIMONY?

A. Yes. It has been designated as Exhibit__(DWD-1R), which consists of Schedules DWD-1R through DWD-14R.

Q. HOW IS THE REMAINDER OF YOUR REBUTTAL TESTIMONY ORGANIZED?

A. The remainder of my Rebuttal Testimony is organized as follows:

- Section II – Presents my updated analysis;
- Section III – Contains my response to the I&E ROE Witnesses;
- Section IV – Contains my response to Mr. Walters; and

- Section V – Contains my response to Mr. Farr;
- Section VI – Summarizes my conclusions and recommendations.

II. UPDATED ANALYSIS

Q. HAVE YOU UPDATED YOUR COST OF COMMON EQUITY ANALYSES?

A. Yes, I have. Due to the passage of time since my Direct Testimony analysis (which included data as of February 28, 2025), I have updated my analysis using data as of July 18, 2025.

Q. HAVE YOU APPLIED ANY OF YOUR ROE MODELS DIFFERENTLY IN YOUR UPDATED ANALYSES?

A. No, I have not.

Q. HAVE YOU UPDATED YOUR UTILITY PROXY GROUPS IN YOUR UPDATED ANALYSES?

A. Yes, I have. I re-ran my selection criteria put forth in my Direct Testimony[2] and used 2024 fiscal year data to select updated proxy groups as shown on Tables 1 and 2 below:

Table 1: Updated Gas Proxy Group[3]

Company	Ticker
Atmos Energy Corporation	ATO
Chesapeake Utilities Corporation	CPK
New Jersey Resources Corporation	NJR
NiSource, Inc.	NI
Northwest Natural Holding Company	NWN
ONE Gas, Inc.	OGS
Southwest Gas Holdings, Inc.	SWX
Spire Inc.	SR

[2] D'Ascendis Direct Testimony, at 14-15.

[3] Chesapeake Utilities Corporation passed all selection criteria using fiscal year 2024 data.

Table 2: Updated Electric Proxy Group[4]

Company	Ticker
Alliant Energy Corporation	LNT
American Electric Power Corporation	AEP
Ameren Corporation	AEE
Duke Energy Corporation	DUK
Edison International	EIX
Entergy Corporation	ETR
Evergy, Inc.	EVRG
FirstEnergy Corporation	FE
IDACORP, Inc.	IDA
OGE Energy Corporation	OGE
Pinnacle West Capital Corporation	PNW
Portland General Electric Company	POR
Southern Company	SO
Xcel Energy, Inc.	XEL

Q. PLEASE SUMMARIZE YOUR UPDATED COST OF COMMON EQUITY RESULTS BASED ON YOUR UPDATED ANALYSES.

A. Using data as of July 18, 2025, my updated results are presented in page 2 of Schedule DWD-1R, and in Table 3, below.

[4] FirstEnergy's sale of transmission assets closed March of 2024 and now passes all other selection criteria. NorthWestern Corporation no longer passes the criterion that requires 70% or more assets attributable to regulated electric operations. TXNM Energy Inc. no longer passes criterion (iii) which prohibits inclusion of companies involved in any major merger or acquisition activity.

Table 3: Summary of Updated Common Equity Rates

	Gas Proxy Group	Electric Proxy Group
Discounted Cash Flow Model	10.42%	10.19%
Risk Premium Model	10.72%	10.70%
Capital Asset Pricing Model	10.82%	10.42%
Cost of Equity Models Applied to Comparable Risk, Non-Price Regulated Companies	10.89%	10.76%
Indicated Range of Common Equity Cost Rates Before Adjustments	10.42% - 10.89%	10.19% - 10.76%
Size Adjustment	1.00%	0.85%
Performance Factor Adjustment	0.05%	0.05%
Indicated Range of Common Equity Cost Rates After Adjustments	11.47% - 11.94%	11.09% - 11.66%
Recommended Cost of Common Equity After Adjustments	11.65%	11.65%

In view of the unadjusted and adjusted ranges of ROEs, I maintain my original recommendation of 11.65% for the Companies.

III. RESPONSE TO I&E ROE WITNESSES KELLER AND PATEL

Q. PLEASE SUMMARIZE MR. PATEL'S RECOMMENDATIONS REGARDING THE OVERALL COST OF CAPITAL FOR VALLEY.

A. Mr. Patel accepts Valley's requested capital structure and cost of long-term debt.[5] Regarding the appropriate ROE for Valley, Mr. Patel recommends a 10.51% ROE based on his DCF results.[6]

[5] Patel Direct Testimony, at 16-17.
[6] *Id.* at 30.

Q. PLEASE SUMMARIZE MR. KELLER'S RECOMMENDATIONS REGARDING THE OVERALL COST OF CAPITAL FOR CITIZENS' AND WELLSBORO.

A. Mr. Keller accepts Citizens' and Wellsboro's capital structure and long-term debt cost rate.[7] Regarding ROE, Mr. Keller recommends an ROE of 10.78%, based on his DCF model.[8]

Q. DO YOU HAVE ANY GENERAL COMMENTS ON THE I&E ROE WITNESSES' INDICATED MODEL RESULTS?

A. Yes, I do. While I do not agree generally with several inputs used by the I&E ROE Witnesses in their analyses, or their sole reliance on the DCF model, their ROE recommendations fall within my unadjusted range of ROE results. Because the U.S. Supreme Court stated that: "Under the statutory standard of 'just and reasonable' it is the result reached not the method employed which is controlling."[9], and both of our approaches indicate comparable results applicable to our respective proxy groups, I will not discuss my concerns with their approaches or the bases of their recommendations.

Q. THAT SAID, DO YOU HAVE ANY CONCERNS ABOUT THE I&E ROE WITNESSES' ULTIMATE ROE RECOMMENDATIONS?

A. Yes, I do. The I&E ROE Witnesses' recommendations do not reflect the Companies' smaller size compared to their own proxy groups or a performance factor adjustment. These omissions serve to understate the Companies' required return.

---

7 Keller Direct Testimony, at 16-17.
8 *Id.* at 29.
9 *Fed. Power Comm'n v. Hope Nat. Gas Co*., 320 U.S. 591, 64 S. Ct. 281, 88 L. Ed. 333 (1944)

A. FAILURE TO REFLECT THE COMPANIES' GREATER RELATIVE RISK DUE TO THEIR SMALL SIZE

Q. DO THE I&E ROE WITNESSES MAKE A SPECIFIC ADJUSTMENT TO REFLECT THE SMALLER SIZE OF THE COMPANIES RELATIVE TO THEIR PROXY GROUPS?

A. No. As discussed in my Direct Testimony,[10] relative company size is a significant element of business risk for which investors expect to be compensated through greater returns. Smaller companies are simply less able to cope with significant events which affect sales, revenues and earnings. For example, smaller companies face more exposure to business cycles and economic conditions, both nationally and locally. Additionally, the loss of revenues from a few large customers would have a far greater effect on a small company than on a larger company with a more diverse customer base. Finally, smaller companies are generally less diverse in their operations and have less financial flexibility. Consistent with the financial principle of risk and return in my Direct Testimony,[11] such increased risk due to small size must be taken into account in the allowed rate of return on common equity.

Q. DO THE I&E ROE WITNESSES RELY ON STUDIES THAT SUPPORT THE SMALL SIZE PREMIUM?

A. Yes. In the Fama and French article cited by the I&E ROE Witnesses in their direct testimony,[12] the authors propose that their three-factor model include the "Small Minus Big" factor, which indicates that small capitalization firms are more risky than large

10 D'Ascendis Direct Testimony, at 47-51.
11 *Id.* at 47-49.
12 *See,* Keller Direct Testimony, at 44 and Patel Direct Testimony, at 48.

capitalization firms,[13] confirming that size is a risk factor which must be taken into account in estimating the cost of common equity.

Q. THE I&E ROE WITNESSES CITE A STUDY BY DR. ANNIE WONG FOR THE PROPOSITION THAT THERE IS NO SIZE PREMIUM FOR UTILITIES.[14] DOES THIS STUDY ESTABLISH THAT CONTENTION?

A. No, it does not. In the Wong study, Dr. Wong attempted to relate a change in beta to the size effect. Dr. Wong's beta study is incorrect, as beta is a measure of market risk, whereas size is a company-specific, or diversifiable risk. While betas may contain some measure of diversifiable risk, betas have low explanatory power. As shown in Schedule DWD-2R, the R-Squared, which measures the variability of returns applicable to beta, is approximately 0.19 for Mr. Patel's gas proxy group and 0.20 for Mr. Keller's electric proxy group, which means approximately 79% to 80% of the I&E ROE Witnesses' proxy group's returns are unexplained by beta.

Q. IS THERE ALSO A PUBLISHED RESPONSE TO DR. WONG'S ARTICLE?

A. Yes, there is. In response to Professor Wong's article, *The Quarterly Review of Economics and Finance* published an article in 2003, authored by Thomas M. Zepp, which commented on the Wong article cited by Mr. Keller. Relative to Dr. Wong's results, Dr. Zepp concluded in the Abstract on page 1 of his article: "Her weak results, however, do not rule out the possibility of a small firm effect for utilities."[15] Dr. Zepp also noted on page 582 that: "Two other studies discussed here support a conclusion that smaller water utility

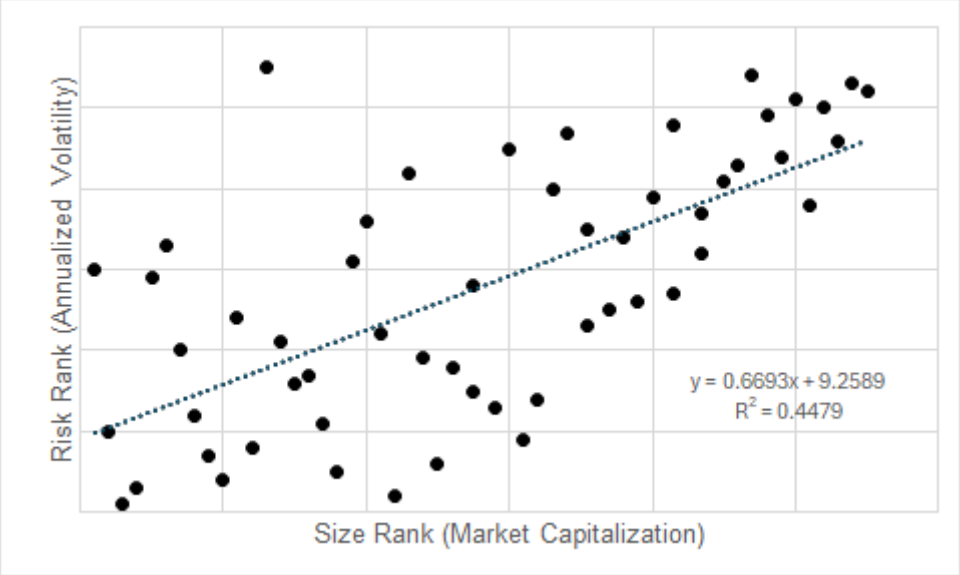
15 Thomas M. Zepp, "Utility Stocks and the Size Effect --- Revisited", *The Quarterly Review of Economics and Finance*, 43 (2003), at 578-582.

stocks are more risky than larger ones. To the extent that water utilities are representative of all utilities, there is support for smaller utilities being more risky than larger ones."[16]

Q. HAVE YOU PERFORMED STUDIES LINKING SIZE AND RISK FOR UTILITY COMPANIES?

A. Yes, I have performed two studies that link size and risk for utility companies. My first study included the universe of electric, gas, and water companies included in *Value Line* Standard Edition. For each of the utilities, the annualized volatility (a measure of risk)[17] was calculated, and each company was ranked by its current market capitalization (a measure of size) as reported by *Value Line*. Ranking the companies by size (largest to smallest) and risk (least risky to most risky), results in the scatterplot shown on Chart 1, below:

Chart 1: Relationship Between Size and Risk for the *Value Line* Universe of Utility Companies[18]



[16] Thomas M. Zepp, "Utility Stocks and the Size Effect --- Revisited", *The Quarterly Review of Economics and Finance*, 43 (2003), at 578-583.

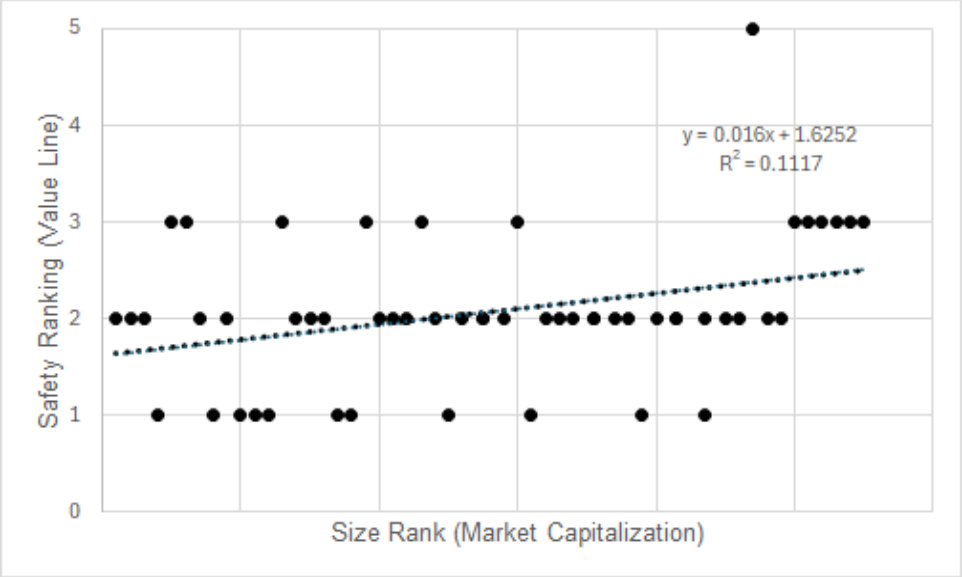
[17] Annualized volatility equals the standard deviation of returns over the period multiplied by the square root of 252, or the approximate number of trading days in a year.

[18] Source: *Value Line*

As shown in Chart 1 above, as company size decreases (increasing size rank), the annualized volatility increases, linking size and risk for utilities, which is significant at 95.0% confidence level.

The second study used the same universe of companies, but instead of annualized volatility, I used the *Value Line* Safety Ranking, which is another measure of total risk.[19] After ranking the companies by size and Safety Ranking, I made a scatterplot of those data, as shown on Chart 2, below:

Chart 2: Relationship Between Size and Safety Ranking for the *Value Line* Universe of Utility Companies[20]



Similar to the first study, as company size decreases, Safety Ranking degrades, indicating a link between size and risk for utilities. This study is also significant at the 95% confidence level. The I&E ROE Witnesses assertions that size and risk are not linked for utility companies should be dismissed by the Commission.

[19] *Value Line* also ranks stocks for Safety by analyzing the total risk of a stock compared to the approximately 1,700 stocks in the *Value Line* universe. Each of the stocks tracked in the *Value Line Investment Survey* is ranked in relationship to each other, from 1 (the highest rank) to 5 (the lowest rank). Safety is a quality rank, not a performance rank, and stocks ranked 1 and 2 are most suitable for conservative investors; those ranked 4 and 5 will be more volatile. Volatility means prices can move dramatically and often unpredictably, either down or up. The major influences on a stock's Safety rank are the company's financial strength, as measured by balance sheet and financial ratios, and the stability of its price over the past five years.

[20] Source: *Value Line*.

Q. THE I&E ROE WITNESSES POINT TO THE COMMISSION'S DECISION IN DOCKET NO. 2019-3008212 IN NOTING THAT THE COMMISSION DID NOT MAKE AN EXPLICIT SIZE ADJUSTMENT.[21] PLEASE COMMENT.

A. While the Commission did not make an explicit size adjustment in that proceeding, it did acknowledge that size is a factor in assessing a company's ability to attract capital (i.e., the cost required by investors).[22] Specifically, the Commission adjusted the DCF result by one standard deviation of the mean and median to account for size. Applying that same approach in my Direct Testimony resulted in size premiums of 1.53% for Valley and 0.85% for Citizens' and Wellsboro,[23] consistent with my recommended size premiums for Valley and Citizens' and Wellsboro, respectively.

Q. HAVE YOU CALCULATED THE STANDARD DEVIATION OF THE I&E ROE WITNESSES' DCF RESULTS?

A. Yes, I have. As put forth in Schedule DWD-3R, using data from the I&E ROE Witnesses' Exhibits, I have calculated an 81-basis-point standard deviation for Mr. Patel's DCF results and a 115-basis-point standard deviation for Mr. Keller's DCF results. These indicated size adjustments are comparable to my recommended size adjustments and should continue to be considered by the Commission when determining the appropriate ROEs for the Companies in this proceeding.

---

21 *See,* Keller Direct Testimony, at 46, and Patel Direct Testimony, at 52.
22 D'Ascendis Direct Testimony, at 50-51.
23 *Id.* at 51.

B. PERFORMANCE FACTOR ADJUSTMENT

Q. THE OPPOSING WITNESSES HAVE NOT CONSIDERED A PERFORMANCE FACTOR ADJUSTMENT FOR THE COMPANIES' COST OF COMMON EQUITY. PLEASE COMMENT.

A. As discussed in my Direct Testimony,[24] the Companies should each be awarded a five-basis point upward adjustment to their indicated ROE based on Code 66 Pa.C.S. § 523 regarding performance factor. Mr. Rogers (Valley), Mr. Johnson (Citizens'), and Mr. Farnsworth (Wellsboro) testified[25] regarding the management efficiency of the Companies. No witness from I&E or the OCA has refuted the efficiency of each Company's management, yet both refuted the adjustment, since the Companies were simply doing "what they are required to do". Simply put, Code 66 Pa.C.S. § 523 is in existence to incentivize companies to "do their job" at a high level. The Companies in this case fulfill the requirement of the statute and should receive the benefit of doing so.

C. RESPONSE TO THE I&E ROE WITNESSES' CRITICISMS OF COMPANY TESTIMONY

Q. DO THE I&E ROE WITNESSES HAVE CRITIQUES OF THE ANALYSES MADE IN YOUR DIRECT TESTIMONY?

A. Yes. The I&E ROE Witnesses have the following critiques of my analyses in my Direct Testimony: (1) that I have given weight to models other than the DCF in my determination of the ROE for the Companies; (2) that the PRPM is relatively new and not commonly used and cannot be performed without expense; (3) my use of the Empirical CAPM ("ECAPM"); (4) that I rely on the 30-year Treasury bond in my CAPM analysis; (5) that

[24] D'Ascendis Direct Testimony, at 51-52.

[25] *See,* Rogers Rebuttal Testimony, at 3-4, Johnson Rebuttal Testimony, at 2-5, and Farnsworth Rebuttal Testimony, at 2-3.

the Market Risk Premium ("MRP") used in my CAPM is too high; (6) that my selection and use of a Non-Price Regulated Proxy Group similar in total risk to my Utility Proxy Group is "speculative and subjective";[26] (7) that the size adjustment I use is not applicable to utility companies; and (8) that exemplary management performance is not a basis for awarding a higher ROE.

As I addressed critiques (7) and (8) in my response to the I&E ROE Witnesses' analyses, I will not address them again here. I will address the remaining critiques in turn.

Q. DO YOU AGREE WITH THE I&E ROE WITNESSES THAT YOU PLACE TOO MUCH WEIGHT ON MODELS OTHER THAN THE DCF MODEL?

A. No, I do not. As discussed in my Direct Testimony,[27] the use of multiple models adds reliability to the estimation of the common equity cost rate, with the prudence of using multiple cost of common equity models supported in both the financial literature and regulatory precedent.

Q. DOES MR. WALTERS ECHO YOUR OPINION IN HIS DIRECT TESTIMONY?

A. Yes, he does. At page 27 of his direct testimony, Mr. Walters states that "Using multiple models provides a more comprehensive and balanced view, helps identify outlier results, and increases confidence that the final estimate reasonably reflects investor expectations under current market conditions."

Q. ARE THERE EXAMPLES FROM FINANCIAL LITERATURE WHICH SUPPORT THE USE OF MULTIPLE COST OF COMMON EQUITY MODELS IN DETERMINING THE INVESTOR-REQUIRED RETURN?

A. Yes. In one example, Morin states:

> Each methodology requires the exercise of considerable judgment on the reasonableness of the assumptions underlying the methodology and on the

[26] Keller Direct Testimony, at 42.
[27] D'Ascendis Direct Testimony, at 46.

reasonableness of the proxies used to validate a theory. The inability of the DCF model to account for changes in relative market valuation, discussed below, is a vivid example of the potential shortcomings of the DCF model when applied to a given company. Similarly, the inability of the CAPM to account for variables that affect security returns other than beta tarnishes its use.

No one individual method provides the necessary level of precision for determining a fair return, but each method provides useful evidence to facilitate the exercise of an informed judgment. Reliance on any single method or preset formula is inappropriate when dealing with investor expectations because of possible measurement difficulties and vagaries in individual companies' market data. (emphasis added)

* * *

There is ample academic support in the financial literature for the need to rely upon several financial models in arriving at a recommended common equity cost rate. Professor Eugene Brigham, a widely respected scholar and finance academician, asserts(footnote omitted):

> *Three methods typically are used: (1) the Capital Asset Pricing Model (CAPM), (2) the discounted cash flow (DCF) method, and (3) the bond-yield-plus-risk-premium approach.* ***These methods are not mutually exclusive – no method dominates the others****, and all are subject to error when used in practice. Therefore, when faced with the task of estimating a company's cost of equity, we generally use all three methods and then choose among them on the basis of our confidence in the data used for each in the specific case at hand. (italics in original) (emphasis added)*

Another prominent finance scholar, Professor Stewart Myers, in an early pioneering article on regulatory finance, stated(footnote omitted):

> *Use more than one model when you can. Because estimating the opportunity cost of capital is difficult,* ***only a fool throws away useful information****. That means you should not use any one model or measure mechanically and exclusively. Beta is helpful as one tool in a kit, to be used in parallel with DCF models or other techniques for interpreting capital market data. (italics in original) (emphasis added)*

* * *

Reliance on multiple tests recognizes that no single methodology produces a precise definitive estimate of the cost of equity. As stated in Bonbright, Danielsen, and Kamerschen (1988), *'no single or group test or technique is conclusive.'* (italics in original)

* * *

> **While it is certainly appropriate to use the DCF methodology to estimate the cost of equity, there is no proof that the DCF produces a more accurate estimate of the cost of equity than other methodologies.** Sole reliance on the DCF model ignores the capital market evidence and financial theory formalized in the CAPM and other risk premium methods. **The DCF model is one of many tools to be employed in conjunction with other methods to estimate the cost of equity.** It is not a superior methodology that supplants other financial theory and market evidence. The broad usage of the DCF methodology in regulatory proceedings in contrast to its virtual disappearance in academic textbooks does not make it superior to other methods. The same is true of the Risk Premium and CAPM methodologies. (emphasis added)[28]

Finally, Brigham and Gapenski note:

> In practical work, *it is often best to use all three methods* – CAPM, bond yield plus risk premium, and DCF – and then apply judgment when the methods produce different results. People experienced in estimating equity capital costs recognize that both careful analysis and some very fine judgments are required. It would be nice to pretend that these judgments are unnecessary and to specify an easy, precise way of determining the exact cost of equity capital. Unfortunately, this is not possible. Finance is in large part a matter of judgment, and we simply must face this fact. (italics in original)[29]

In the academic literature cited above, three methods are consistently mentioned: the DCF, CAPM, and the RPM, all of which I used in my analyses.

Q. ARE THERE SPECIFIC EXAMPLES WHERE THE PA PUC HAS CONSIDERED MULTIPLE COST OF COMMON EQUITY MODELS?

A. Yes. In Docket No. R-2013-2360798, concerning Columbia Water Company ("Columbia"), where I was Columbia's ROE witness, the Commission stated:

> Based on our review of the testimony, data, and cost models presented, we believe that the evidence in this case supports an ROE finding in the reasonable range of 9.25% to 10.25% using the DCF method as the foundation. The equity-heavy capital structure of Columba indicates that a slightly lower ROE is appropriate. However, the small size of the Company, its management effectiveness, and the results of other ROE

[28] Roger A. Morin, Modern Regulatory Finance, Public Utilities Reports, Inc., 2021 (Morin), at 476-479.

[29] Eugene F. Brigham and Louis C. Gapenski, Financial Management – Theory and Practice, 4th Ed. (The Dryden Press, 1985) at 256.

> models other than the DCF are all reasons to set a higher ROE. Therefore, within our indicated range of reasonableness, we conclude that an ROE of 9.75% is appropriate for our ratemaking determinations herein.

Also, in Docket No. R-2014-2402324 concerning Emporium Water Company ("Emporium"), where I was Emporium's ROE witness, the Commission stated the following:

> The ALJ recommended that the Commission adopt the Company's proposed return on common equity of 11.05%.[Footnote Omitted] R.D. at 11. The ALJ explained that the Company's position allows it to pay its debt service, which includes principal payments and interest, and provides a modest return on equity ($34,000). The ALJ states that I&E's and the OCA's positions fail to meet the standards set by the *Hope* and *Bluefield* by not even allowing the Company to pay their debt service, which may lead to possible default on the loans and the bankruptcy of the Company. R.D. at 35.
>
> * * *
>
> As discussed, *supra*, the OCA recommends a return of 9.10% as the midpoint of its DCF and CE analyses; I&E recommends a return of 8.89% based on its DCF analyses; and the Company proposes a return of 10.3%, which utilizes its DCF, RP, and CAPM analyses to which the Company adds a size risk adjustment of 75 basis points. Based on our review of the testimony, data, and cost models presented, and considering our adoption of a 60% / 40% hypothetical capital structure, we believe that the range of returns provided in evidence supports an ROE finding of 10.0% for our ratemaking determinations herein.

Lastly, in Docket Nos. R-2021-3027385 and R-2021-3027386 concerning Aqua, the Commission stated:

> Therefore, our methodology for determining Aqua's ROE shall utilize both I&E's DCF and CAPM methodologies. As noted above, the Commission recognizes the importance of informed judgment and information provided by other ROE models. In the *2012 PPL Order*, the Commission considered PPL's CAPM and RP methods, tempered by informed judgment, instead of DCF-only results. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation. Historically, we have relied primarily upon the DCF methodology in arriving at ROE determinations and have utilized the results of the CAPM as a check upon the reasonableness of the DCF derived equity return. As such, where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of

> reasonableness for our equity return determination. In light of the above, we shall determine an appropriate ROE for Aqua using informed judgement based on I&E's DCF and CAPM methodologies.[30]

In the Commission Orders cited above, there is clear language that the Commission considers multiple models in its determination of ROE. It is also my interpretation of these Orders that the Commission correctly observes capital market conditions and their effect on the model results in determining an ROE for utility companies.

Q. MR. KELLER SAYS THAT THE PRPM WAS PUBLISHED IN 2011.[31] DOES THAT MEAN THAT THE METHODOLOGY BEHIND THE PRPM WAS ALSO PUBLISHED IN 2011?

A. No. As discussed in my Direct Testimony,[32] the PRPM is based on the research of Robert F. Engle, dating back to the early 1980s. Dr. Engle discovered that the volatility of market prices, returns and risk premiums clusters over time, making prices, returns and risk premiums highly predictable. In 2003, he shared the Nobel Prize in Economics for this work, characterized as "methods of analyzing economic time series with time-varying volatility ("ARCH").[33] Dr. Engle[34] noted that relative to volatility, "the standard tools have become the ARCH / GARCH[35] models." Hence, the methodology is <u>not</u> new.

In addition, the GARCH methodology has been well tested by academia, since Engle's, *et al*. research was originally published in 1982, over 40 years ago. I use the well-established GARCH methodology to estimate the PRPM model using a standard commercial and relatively inexpensive statistical package, Eviews,© to develop a means by which to

Q. HAS THE PRPM BEEN IMPLICITLY ACCEPTED BY OTHER REGULATORY COMMISSIONS?

A. Yes. In Docket No. 2017-292-WS, the Public Service Commission of South Carolina ("PSC SC") accepted Carolina Water Services' entire requested ROE, which included the PRPM. The relevant portion states:

> The Commission finds Mr. D'Ascendis' arguments persuasive. He provided more indicia of market returns, by using more analytical methods and proxy group calculations. Mr. D'Ascendis' use of analysts' estimates for his DCF analysis is supported by consensus, as is his use of the arithmetic mean. The Commission also finds that Mr. D'Ascendis' non-price regulated proxy group more accurately reflects the total risk faced [by] price regulated utilities and CWS. Furthermore, there is no dispute that CWS is significantly smaller than its proxy group counterparts, and, therefore, it may present a higher risk. An appropriate ROE for CWS is 10.45% to 10.95%. The Company used an ROE of 10.5% in computing its Application, a return on the low end of Mr. D'Ascendis' range, and the Commission finds that ROE is supported by the evidence.[40]

In addition, in Docket No. W-354, Subs 363, 364 and 365, the State of North Carolina Utilities Commission ("NCUC") approved my RPM and CAPM analyses, which used PRPM analyses as presented in this proceeding. The relevant portion of the order states:

> In doing so the Commission finds that the DCF (8.81%), Risk Premium (10.00%) and CAPM (9.29%) model results provided by witness D'Ascendis, as updated to use current rates in D'Ascendis Late-Filed Exhibit No. 1, as well as the risk premium (9.57%) analysis of witness Hinton, are credible, probative, and are entitled to substantial weight as set forth below.[41]

Q. MR. KELLER POSITS THAT YOU USE PROPRIETARY SOFTWARE TO CONDUCT YOUR PRPM.[42] IS THAT TRUE?

A. No. The GARCH methodology is available in various statistical packages such as EViews®, SAS, RATS, S-Plus and JMulti, which are not cost-prohibitive and provide instructions for

using the various statistical methodologies in their software. I provided all parties in these proceedings the backup data to run their own GARCH models. While the software I used in this proceeding costs approximately $2,375 for a single user commercial license,[43] JMulti is a free downloadable software with GARCH estimation applications.

Q. THE I&E ROE WITNESSES DO NOT AGREE WITH YOUR USE OF THE ECAPM. PLEASE RESPOND.[44]

A. I disagree. As discussed in my Direct Testimony,[45] although numerous tests of the CAPM have confirmed its validity, it has been determined that the empirical Security Market Line ("SML") described by the traditional CAPM is not as steeply sloped as the predicted SML. Tests of the CAPM have measured the extent to which security returns and betas are related as predicted by the CAPM, thus confirming its validity. As such, the ECAPM should be used in a CAPM analysis.

Q. IS THERE ADDITIONAL EVIDENCE THAT SUPPORTS THE VALIDITY OF THE ECAPM?

A. Yes, there is. The empirical issues with the CAPM have been present since the presentation of the model, as noted by Dianna R. Harrington in her text Modern Portfolio Theory & the Capital Asset Pricing Model:

> So far we have learned some very interesting things about the CAPM and reality. Some of the earliest work tested realized data (history) against data generated by simulated portfolios. Early studies by Douglas (1969) and Lintner (Douglas [1969]) showed discrepancies between what was expected on the basis of the CAPM and the actual relationships that were apparent in the capital markets. Theoretically, the minimal rate of return from the portfolios (the intercept) and the actual risk-free rate for the period should have been equal. They were not.

* * *

[43] http://www.eviews.com/general/prices/prices.html

[44] *See,* Keller Direct Testimony at 40; Patel Direct Testimony at 47.

[45] D'Ascendis Direct Testimony, at 35-36.

Another study, now more famous than Lintner's was done by Black, Jensen, and Scholes (1972). Lintner had used what is called a cross-sectional method (looking at a number of stock returns during one time period), whereas Black, Jensen, and Scholes used a time-series method (using returns for a number of stocks over several time periods). To make their test, Black, Jensen, and Scholes assumed that what had happened in the past was a good proxy for the investor expectations (a frequent assumption in CAPM tests). Using historical data, they generated estimates using what we call the market model:

$$R_{jt} = \alpha_j + \beta_j (R_{mt}) + \varepsilon_j$$

Where:
R = total returns
β = the slope of the line (the incremental return for risk)
α = the intercept or a constant (expected to be 0 over time and across all firms)
ε = an error term (expected to be random, without information)
m = the market proxy
j = the firm or portfolio
t = the time period

Instead of using single stocks, they formed portfolios in an effort to wash out one source of error; because betas of single firms are quite unstable.

On the basis of the CAPM, they expected to find

1. That the intercept was equal to the risk-free rate (their proxy was the Treasury bill rate)
2. That the capital market line had a positive slope and that riskier (higher beta) securities provided higher return

Instead they found

1. That the intercept was different from the risk-free rate
2. That high-risk securities earned less and low-risk securities earned more than predicted by the model
3. That the intercept seemed to depend on the beta of any asset: high-beta stocks had a different intercept than low-beta stocks

* * *

Fama and MacBeth (1974) criticized the Black, Jensen, and Scholes study (hereafter called BJS). In a reformulation of the study, they supported the first of the BJS findings. They found that the intercept exceeded the risk-free proxy, but did not find the evidence to support the other BJS conclusions.[46]

Harrington discusses Black's potential solution to this phenomenon:

[46] Dianna R. Harrington, Modern Portfolio Theory & the Capital Asset Pricing Model – A User's Guide, Prentice-Hall, Inc. 1983, at 43-45.

> Black's replacement for the risk-free asset was a portfolio that had no covariability with the market portfolio. Because the relevant risk in the CAPM is systematic risk, a risk-free asset would be the one with no volatility relative to the market – that is, a portfolio with a beta of zero. All investor-perceived levels of risk could be obtained from various linear combinations of Black's zero-beta portfolio and the market portfolio… Since R_z (the rate of return of the zero-beta asset) and R_m are uncorrelated (as R_f and R_m were assumed to be in the simple CAPM), the investor can choose from various combinations of R_z and R_m. On segment R_mY, R_z, is sold short and proceeds are invested in R_m. On segment R_zR_m, portions of the zero-beta portfolio are purchased. At R_m, the investor is fully invested in the market portfolio. The equilibrium CAPM was rewritten by Black as follows:
>
> $$E(R_i) = (1 - \beta_i) E(R_z) + \beta_i E(R_m)$$
>
> Where:
>
> E indicates expected,
> $E(R_z)$ is less than $E(R_m)$, and
> R_z holdings over the whole market must be in equilibrium. That is, the number of short sellers and lenders of securities must be equal.
>
> Black's adaptation is intriguing. The result of using this model is a capital market line that has a less steep slope and a higher intercept than those of the simple CAPM. If Black's model is more correct in its description of investor behavior in the marketplace, then the use of the simple model would produce equity return predictions that would be too low for sticks with betas greater than one and too high for stocks with betas of less than one.[47]

As such, while I still find the CAPM to be appropriate, if the I&E ROE Witnesses are of the opinion that the CAPM is not reliable,[48] they should have applied an ECAPM analysis.

Q. HAVE OTHER JURISDICTIONS CONSIDERED THE ECAPM?

A. Yes, it has been accepted in Alaska, Minnesota, Mississippi, Nevada, New York, and Virginia.[49]

---

47 Dianna R. Harrington, Modern Portfolio Theory & the Capital Asset Pricing Model – A User's Guide, Prentice-Hall, Inc. 1983, at 30-31.

48 Keller Direct Testimony at 22; Patel Direct Testimony at 22-23.

49 The Regulatory Commission of Alaska, Docket P-97-7, Order Rejecting 1997, 1998, 1999 and 2000 Filed TAPS Rates; Setting Just and Reasonable Rates; Requiring Refunds and Filings; and Outlining Phase II Issues, November 27, 2002, at 146; Minnesota Public Utilities Commission, MPUC Docket No. G011/GR-15-736, In the Matter of the Application of Minnesota Energy Resources Corporation for Authority to Increase Rates for Natural Gas Service in Minnesota, Findings of Fact, Conclusions of Law, and Recommendation, August 19, 2016, at 29; Mississippi Public Service Commission, Docket No. 01-UN-0548, Notice of Intent of Mississippi Power Company to Change Rates for Electric Service in its Certificated Areas

Q. DO YOU AGREE WITH THE I&E ROE WITNESSES' OPINION[50] THAT THE 10-YEAR TREASURY NOTE IS SUPERIOR TO THE 30-YEAR TREASURY BOND IN THE CAPM?

A. No, I do not. As discussed below, the tenor of the risk-free rate used in the CAPM should match the life (or duration) of the underlying investment. As noted by Morningstar:

> The traditional thinking regarding the time horizon of the chosen Treasury security is that it should match the time horizon of whatever is being valued. When valuing a business that is being treated as a going concern, the appropriate Treasury yield should be that of a long-term Treasury bond. Note that the horizon is a function of the investment, not the investor. If an investor plans to hold stock in a company for only five years, the yield on a five-year Treasury note would not be appropriate since the company will continue to exist beyond those five years.[51]

Morin also confirms this when he states:

> [b]ecause common stock is a long-term investment and because the cash flows to investors in the form of dividends last indefinitely, the yield on very long-term government bonds, namely, the yield on 30-year Treasury bonds, is the best measure of the risk-free rate for use in the CAPM (footnote omitted)… The expected common stock return is based on long-term cash flows, regardless of an individual's holding time period.[52]

Pratt and Grabowski recommend a similar approach to selecting the risk-free rate: "In theory, when determining the risk-free rate and the matching ERP you should be matching the risk-free security and the ERP with the period in which the investment cash flows are

---

in the Twenty-Three Counties of Southeast Mississippi, Final Order, December 3, 2001, at 19; Public Utilities Commission of Nevada, Docket No. 20-02023, Application of Southwest Gas Corporation for authority to increase its retail natural gas utility service rates for Southern and Northern Nevada, Order, September 23, 2020, at 35; New York Public Service Commission, Case 16-G-0058, Proceeding on Motion of the Commission as to the Rates, Charges, Rules and Regulations of KeySpan Gas East Corporation d/b/a National Grid for Gas Service, Order Adopting Terms of Joint Proposal and Establishing Gas Rate Plans, December 16, 2016, at 32; In the Matter of Application of Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina, Docket No. E-22, Sub 562 Order Accepting Public Staff Stipulation in Part, Accepting CIGFUR Stipulation, Deciding Contested Issues, and Granting Partial Rate Increase, February 24, 2020, at 40.

50 Keller Direct Testimony, at 41; Patel Direct Testimony, at 43-44.

51 Morningstar, Inc., 2013 Ibbotson Stocks, Bonds, Bills and Inflation Valuation Yearbook, at 44.

52 Morin, at 169.

expected."[53] As a practical matter, equity securities represent a perpetual claim on cash flows; 30-year Treasury bonds are the longest-maturity securities available to match that perpetual claim. The I&E ROE Witnesses' use of a medium-term Treasury bond does not match the life of the assets being valued. The use of a 30-year Treasury bond is the more appropriate risk-free rate.

Q. THE I&E ROE WITNESSES CLAIM THAT LONG-TERM GOVERNMENT BONDS ARE SUBJECT TO MATURITY RISK.[54] PLEASE COMMENT.

A. They are mistaken. If a long-term Treasury note is held to maturity, there is no risk (the investor will get the stated coupon rate and principal at the end). Since the cost of equity is a long-term concept, the investment horizon of an individual investor is irrelevant.

Q. MR. PATEL BELIEVES THAT YOUR CALCULATED MARKET RETURNS AND MRPS ARE TOO HIGH.[55] PLEASE RESPOND.

A. Even though Mr. Patel questions the reasonableness of my calculated market returns and MRPs, they are consistent with actual realized returns and MRPs, as shown on Table 4, below, and Schedule DWD-4R.

Table 4: Percentile Ranks of Calculated Market Returns and Risk Premiums[56]

	D'Ascendis Testimony	%	Percentile Rank
Average Market Return	Direct	12.70%	47th
Average Market Return	Rebuttal	13.46%	48th
Average Market Risk Premium	Direct	8.15%	48th
Average Market Risk Premium	Rebuttal	8.86%	50th

53 Shannon Pratt and Roger Grabowski, Cost of Capital: Applications and Examples, 3rd Ed. (Hoboken, NJ: John Wiley & Sons, Inc., 2008), at 92. "ERP" is the Equity Risk Premium.
54 Keller Direct Testimony, at 41; Patel Direct Testimony, at 43.
55 Patel Direct Testimony, at 45-46.
56 Schedule DWD-4R.

Chart 3: Frequency Distribution of Observed Market Returns, 1926 - 2024[57]

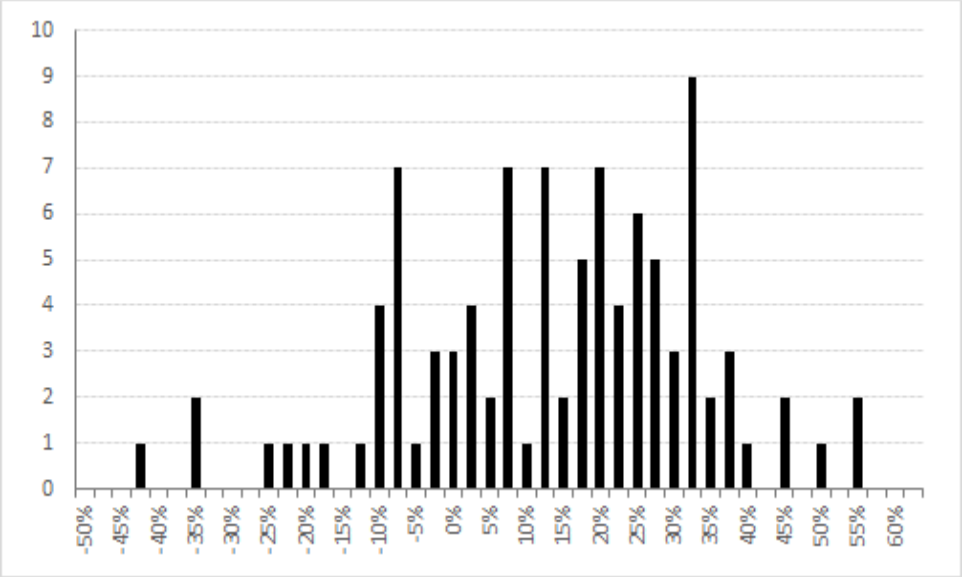

Chart 4: Frequency Distribution of Observed Market Risk Premiums, 1926 - 2024[58]

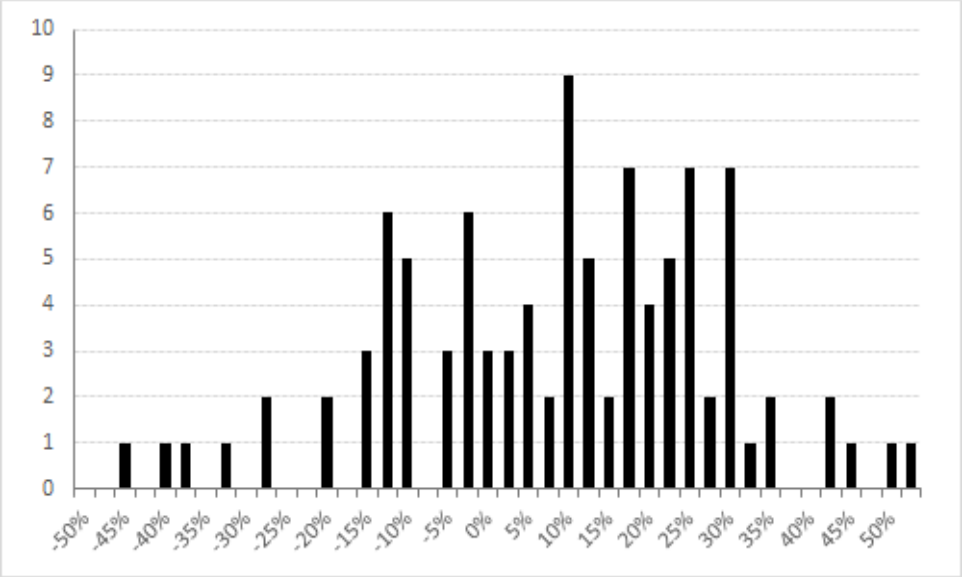


I will also note that Mr. Keller's calculated MRP of 8.99% exceeds my updated MRP of 8.86%. Given all of the above, my calculation of the market returns and MRPs

[57] Schedule DWD-4R.
[58] *Id.*

are consistent with observed values and values used by I&E in their own analysis. Thus, Mr. Patel's concern should be dismissed.

Q. THE I&E ROE WITNESSES STATE THAT THE SELECTION AND USE OF NON-PRICE REGULATED GROUPS COMPARABLE IN TOTAL RISK TO THE UTILITY PROXY GROUPS IS SPECULATIVE AND SUBJECTIVE.[59] PLEASE RESPOND.

A. The selection criteria for my Non-Price Regulated Proxy Group were based on ranges of two measures of risk: (1) the unadjusted beta of the Utility Proxy Group, which measures systematic, or market risk; and (2) the standard error of the regression, which gave rise to those betas, measuring non-systematic or diversifiable risk. Systematic plus non-systematic risk is one definition of total risk.[60] This is agreed upon by Mr. Keller and Mr. Patel, who state in their testimony: "two types of risk are associated with a stock: (1) firm-specific risk (unsystematic risk); and (2) market risk (systematic risk), which is measured by a firm's beta."[61]

Each company I selected for my Non-Price Regulated Proxy Group was required to have an unadjusted beta (a measure of systematic risk) and a standard error of the regression (a measure of unsystematic risk) within the ranges generated by my proxy group, as explained in page 46 of my Direct Testimony and on Schedule DWD-6.

Business and financial risks may vary between companies and proxy groups, but if the collective average betas and standard errors of the regression of the group are similar, then the total, or aggregate, non-diversifiable market risks and diversifiable risks are similar, as noted in "Comparable Earnings: New Life for an Old Precept" provided in

---

59 Keller Direct Testimony, at 36.
60 Business risk plus financial risk is a second definition of total risk.
61 Keller Direct Testimony, at 18; Patel Direct Testimony, at 19.

Schedule DWD-5R. Thus, because the non-price regulated companies are selected based on analyses of market data, they are comparable in total risk (even though individual risks may vary) to my Utility Proxy Group. This is demonstrated clearly on page 273 of Jack C. Francis' Investments: Analysis and Management (page 3 of Schedule DWD-6R), which shows that total risk can be "partitioned into its systematic and unsystematic components." Essentially, companies that have similar betas and standard errors of regression have similar total investment risk.

Q. HAVE YOU CONDUCTED ANY ADDITIONAL ANALYSES TO DETERMINE WHETHER YOUR UTILITY PROXY GROUP AND NON-PRICE REGULATED PROXY GROUP ARE OF COMPARABLE RISK?

A. Yes, I have. I compared the average and median *Value Line* Safety Ranking, the annualized volatility of stock returns, and the Coefficient of Variation ("CoV")[62] of net profit for the Utility Proxy Group and Non-Price Regulated Proxy Group, as shown on Table 5, below:

[62] The CoV, which is a measure of relative volatility, equals the standard deviation divided by the average.

Table 5: Comparison of Safety Rankings, CoV of Net Profit, and Annualized Volatility of Mr. D'Ascendis' Utility Proxy Groups and Non-Price Regulated Proxy Groups

Group	Average Safety Ranking	Median Safety Ranking	Average CoV Net Profit	Median CoV Net Profit	Average Annualized Volatility	Median Annualized Volatility
Gas Proxy Group	1.88	2.00	0.31	0.16	23.83%	24.42%
Non-Price Regulated Proxy Group (Gas)	1.68	2.00	0.61	0.12	23.84%	23.61%
Electric Proxy Group	1.79	2.00	0.11	0.10	21.31%	20.60%
Non-Price Regulated Proxy Group (Electric)	1.38	1.00	0.13	0.11	22.89%	23.00%

As shown, the Safety Rankings, annualized volatility of their stock returns, and CoV of net profit of the Utility Proxy Groups and the Non-Price Regulated Proxy Groups are comparable or lower, indicating comparable or lower total risk. This, in addition to all of the above, should lead the Commission to consider the results of my Non-Price Regulated Proxy Groups as another measure of the Companies' ROE in this proceeding.

Q. MR. KELLER CRITICIZES THE USE OF YOUR NON-PRICE REGULATED PROXY GROUPS BECAUSE THE RESULTS OF THE MODELS APPLIED TO THE GROUPS ARE NOT SIMILAR TO THE RESULTS OF THE SAME MODELS APPLIED TO YOUR UTILITY PROXY GROUPS.[63] PLEASE RESPOND.

A. The role of regulation when setting rates for a utility company is to simulate a competitive market and the returns that the regulator approves should be commensurate with the rates of return earned by firms with comparable risk. That being said, the ranges of the indicated ROEs produced by the common equity models applied to the Utility Proxy Group and Non-Price Regulated Proxy Group in my ROE update do mostly overlap as shown below:

[63] Keller Direct Testimony, at 43.

Table 6: Comparison of Model Results Applied to Mr. D'Ascendis' Gas and Non-Price Regulated Proxy Groups

	DCF	RPM	CAPM
D'Ascendis Gas Proxy Group	9.00% - 11.41%	10.72%	10.51% - 11.29 %
Non-Regulated Group Comparable to Gas Group	6.40% - 15.15%	11.27%	10.05% - 11.83%

Table 7: Comparison of Model Results Applied to Mr. D'Ascendis' Electric and Non-Price Regulated Proxy Groups

	DCF	RPM	CAPM
D'Ascendis Electric Proxy Group	8.13% - 10.90%	10.70%	9.66% - 11.13%
Non-Regulated Group Comparable to Electric Group	7.22% - 12.30%	11.11%	10.05% - 11.83%

Given the indicated ranges of results of cost of common equity models applied to the Utility Proxy Groups and Non-Price Regulated Proxy Groups, the objective of the comparable earnings model, and the adherence to the regulatory compact, the results of market models applied to the Non-Price Regulated Proxy Groups comparable in total risk to my Utility Proxy Groups should be accepted by the Commission.

Q. THE I&E ROE WITNESSES BOTH NOTE THEY ARE UNAWARE OF ANY AUTHORIZED ROES IN THE LAST TWO YEARS ABOVE YOUR REQUESTED ROE OF 11.65%.[64] PLEASE COMMENT.

A. While authorized ROEs may be reasonable benchmarks of acceptable ROEs in static economic conditions, they can mis-specify the investor-required return in a dynamic economic environment, such as this one. The reason why historical authorized returns mis-specify the investor-required return in changing markets is because authorized ROEs are a lagging indicator of investor-required returns; i.e., authorized ROEs are based on market data presented in an evidentiary record, which spans a period before the decision, lasting over a year in some cases. Because markets are constantly changing, historical authorized

[64] Keller Direct Testimony, at 54; Patel Direct Testimony, at 59-60.

returns do not completely reflect the investor required return because the economic conditions in the past are not representative of economic conditions now. That is, what investors require in the future may not correlate to what they required and/or received in the past. We must remember that projecting the investor required ROE is a forward-looking concept. Because this is the case, the I&E ROE Witnesses' observations regarding historically allowed ROEs are of little value.

IV. RESPONSE TO OCA WITNESS WALTERS

Q. PLEASE SUMMARIZE MR. WALTERS' RECOMMENDATION REGARDING THE COMPANIES' OVERALL COST OF CAPITAL.

A. Like the I&E ROE Witnesses, Mr. Walters accepts the Companies' requested capital structures and debt cost rates.[65] Regarding the return on common equity, Mr. Walters recommends an ROE of 9.50%, within a range of 9.00% to 10.00%.[66] Mr. Walters' range is derived using three versions of the DCF model, a risk premium model, and the CAPM.

Q. DO YOU HAVE ANY GENERAL COMMENTS ON MR. WALTERS' RECOMMENDED RANGE OF ROES AND THE INDICATED RESULTS OF HIS MODELS?

A. Yes, I do. As shown on Chart 5 below and in Schedule DWD-7R, the indicated results of Mr. Walters' cost of equity models generally exceed his recommended range of common equity cost rates and his recommended point estimate of 9.50%. As shown on Schedule DWD-7R, Mr. Walters provided 20 individual cost of equity estimates; six DCF results; five RPM results; and nine CAPM results. Of those results, only three of those are below his recommended range, while ten exceed the top of his range, and 17 of 20 of his indicated

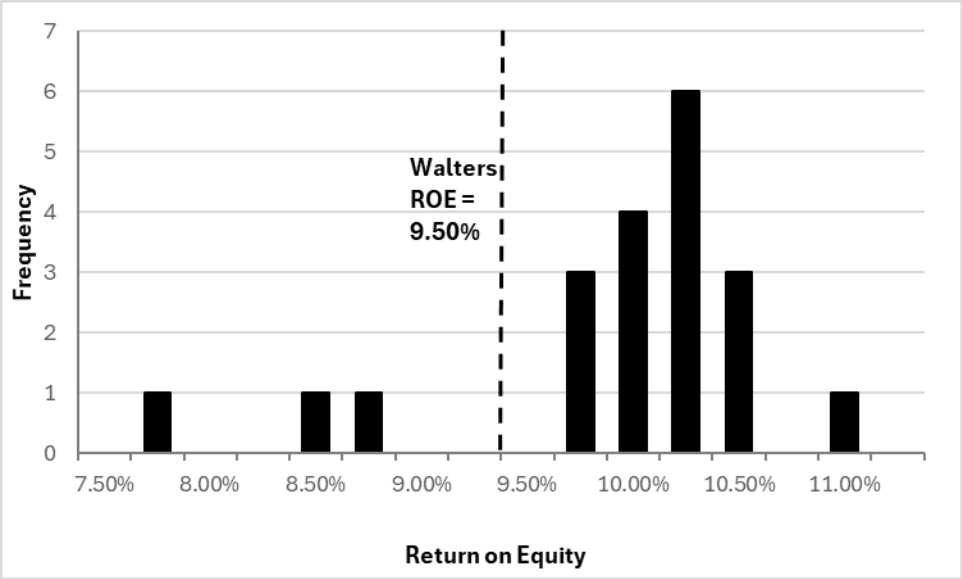
---

65 Walters Direct Testimony, at 23-24.

66 *Id.* at 3.

results exceed his recommended ROE of 9.50%. While I do not agree with Mr. Walters' application of his models, as will be explained in detail below, his own model results indicate a higher ROE for the Companies than he ultimately recommends.

Chart 5: Histogram of Walters Indicated Model Results and Ultimate Range and Recommendation



Q. WHAT ARE THE AREAS OF DISAGREEMENT BETWEEN YOU AND MR. WALTERS?

A. The principal areas in which I disagree with Mr. Walters include: (1) his contention that utilities are maintaining their credit quality despite being awarded lower ROEs; (2) specific inputs to his DCF model; (3) the assumptions and methods underlying his RPM; (4) specific assumptions and inputs to his CAPM; and (5) his decision to not reflect any flotation costs.

A. RELEVANCE OF HISTORICAL AUTHORIZED RETURNS

Q. YOUR RECOMMENDED ROE OF 11.65% IS ABOVE THE AVERAGE ROE APPROVED FOR UTILITIES OVER THE PAST SEVERAL YEARS. ARE HISTORICAL ROES A GOOD MEASURE OF PROSPECTIVE ROES?

A. No, they are not. As I discussed previously, while authorized ROEs may be reasonable benchmarks of acceptable ROEs, they do not reflect the current cost of common equity.

Q. IS THERE A WAY TO USE HISTORICAL AUTHORIZED RETURNS TO DERIVE A MEASURE OF THE INVESTOR REQUIRED RETURN?

A. Yes, there is. A useful way to use historical authorized ROEs for cost of capital purposes would be to determine whether a relationship between authorized ROEs (or equity risk premiums) and interest rates exists so one can determine an expectational ROE or equity risk premium given an interest rate. Studies by Harris and Marston (2001) and Brigham, Dilip, Shone, and Vinson (1985) indicate an inverse relationship between equity risk premiums and interest rates (i.e., as interest rates move, equity risk premiums move in the opposite direction, but not to the extent of the interest rate move) as discussed in my Direct Testimony.[67]

As shown on pages 35 and 36 of Schedule DWD-1R, using historical authorized ROEs and interest data in regression analyses produces statistically significant inverse relationships between interest rates and equity risk premiums, which can be used to determine expectational investor-required returns. Given an expectational A2-rated Public Utility bond yield of 5.71%, indicated equity risk premiums of 4.74% and 4.78% are calculated using natural gas and electric historical ROE data, respectively. Adding the expectational

[67] D'Ascendis Direct Testimony, at 32.

A2-rated public utility bond yield to those equity risk premiums results in indicated ROEs of 10.45% and 10.49%, respectively.

Q. MR. WALTERS STATES THAT UTILITY COMPANIES HAVE BEEN ABLE TO MAINTAIN THEIR CREDIT QUALITY DESPITE DECLINING AUTHORIZED ROES.[68] DO YOU AGREE?

A. No, I do not. Although Mr. Walters' statements regarding a supportive credit environment for utilities sounds reasonable, a closer look reveals that not to be the case. For example, in January of 2025, S&P noted:

> In 2024, downgrades among North America's investor-owned regulated utilities outpaced upgrades for the fifth consecutive year (see Chart 8). Most were directly attributable to rising wildfire risks, robust capital spending, and challenging regulatory constructs. We expect those risks to persist for 2025, further pressuring the industry's credit quality.[69]

Mr. Walters often provides the degradation of the credit quality of the utility industry over the recent period in a table in his direct testimony but does not in this proceeding. I have reproduced Mr. Walters' table from his testimony in Ameren Illinois, in which both of us were involved (Direct Testimony filed May 8, 2025).

Table 8: Mr. Walters' Table CCW-3 in Docket No. 25-0084 Concerning Ameren Illinois Company S&P Ratings by Category Natural Gas Subsidiaries[70]

Rating	2020	2025
A or higher	38%	5%
A-	38%	25%
BBB+	13%	52%
BBB	13%	17%
BBB-	0%	2%

As shown in the table above, since 2020, there has been significant downward movement in industry credit ratings. The number of BBB and BBB+ rated utilities has increased.

[68] Walters Direct Testimony, at 7-9.

[69] S&P Global Ratings: Industry Credit Outlook 2025 – North America Regulated Utilities, January 14, 2025.

[70] Illinois Corporation Commission, Docket No. 25-0084, Direct Testimony of Christopher C. Walters, at 8.

That shift toward lower credit ratings indicates a deteriorating credit environment for the utility industry and consequently increases overall investment risk.

B. DISCOUNTED CASH FLOW MODEL ANALYSES

Q. PLEASE SUMMARIZE MR. WALTERS' DCF ANALYSES.

A. Mr. Walters uses three DCF models; a constant growth DCF, a sustainable growth DCF analysis, and a MSDCF, all using price data for the 13-week period ending May 30, 2025. For his projected three- to five-year EPS growth rates, Mr. Walters uses Zacks, S&P Capital IQ Market Intelligence, and I/B/E/S; and he uses *Blue Chip* for the terminal growth rate in his MSDCF.[71] Using these inputs, he derives indicated ROEs between 10.31% and 10.79% for his constant growth DCF models, 9.57% and 9.59% for his sustainable growth DCF, and between 8.39% and 8.62% for his MSDCF model. From these results, Mr. Walters concludes that more weight should be placed on his sustainable growth DCF and MSDCF models.[72]

Q. DO YOU HAVE ANY CONCERNS WITH MR. WALTERS' APPLICATION OF THE DCF MODEL AND HIS INTERPRETATION OF HIS RESULTS?

A. Yes, I do. I have concerns with (1) his reasoning to discount his constant growth DCF using analysts' growth; (2) his use of "sustainable" growth rates in a DCF model, and (3) his use of the MSDCF.

Q. PLEASE SUMMARIZE MR. WALTERS' COMMENTS AS THEY RELATE TO THE REASONABLENESS OF ANALYST GROWTH RATES IN THE CONSTANT GROWTH DCF MODEL.

A. Mr. Walters argues that "[A]lthough there may be short-term peaks, the long-term sustainable growth rate for a utility stock cannot exceed the growth rate of the economy in

---

71 Walters Direct Testimony at 31-40.

72 *Id.* at 42-43

which it sells its goods and services."[73] Mr. Walters estimates the growth rate in GDP to be 4.09% relative to the 6.87% average growth rate based on analysts' growth rates in his constant growth DCF model.[74]

Q. WHY IS LONG-TERM GROWTH IN GDP NOT AN UPPER LIMIT FOR GROWTH, AS MR. WALTERS CONTENDS?

A. First, GDP is not a market measure – Rather it is a measure of the value of the total output of goods and services excluding inflation in an economy. While I understand that EPS growth is also not a market measure, it is well established in the financial literature that projected growth in EPS is the superior measure of dividend growth in a DCF model.[75] Furthermore, GDP is the sum of all private industry and government output in the United States, and its growth rate is simply an average of the value of those industries. To illustrate, Schedule DWD-8R presents the compound growth rate of the industries that comprise GDP from 1947 to 2024. Of the 15 industries represented, seven industries, including utilities, grew faster than the overall GDP, and eight industries grew slower than the overall GDP.[76] Because of this, the GDP growth rate cannot be an upper limit for long-term growth, as several industries have grown faster than GDP for extended periods of time.

76 Source of Information: Bureau of Economic Analysis.

Q. HOW DOES THE UTILITY PROXY GROUP'S GROWTH RATE COMPARE TO THE HISTORICAL GROWTH RATE OF THE UTILITY INDUSTRY FOR THE PERIOD 1947 TO 2024?

A. The average growth rate used in my updated DCF analysis is 6.55%, which is comparable to the long-term growth rate of the utility industry of 6.47%. The comparability of these growth rates reinforces the maturity of the industry and that the MSDCF model is not needed.

Q. DID YOU CONDUCT ANOTHER ANALYSIS THAT CALCULATES THE AMOUNT OF TIME IT WOULD TAKE AN INDUSTRY TO OVERTAKE THE ENTIRE ECONOMY?

A. Yes. I examined the value added by industry from 1947 to 2024 in Schedule DWD-8R and used the compound annual growth rates for the highest growth rate industry (Educational Services, Healthcare, and Social Assistance, 8.55% / year) to see when that industry would comprise the entire economy. In the year 2300, or 353 years from the 1947 starting point, the industry would comprise over 50% of GDP; and in the year 7963, or 6,016 years after the 1947 starting point, the industry would comprise 100% of GDP.[77] Not only have individual companies or industries consistently grown at rates beyond GDP growth, but they have done so without overtaking the entire economy. While Mr. Walters' argument is technically correct, it is unrealistic at best.

[77] To put the amount of time that will take these two milestones to happen in perspective, approximately 300 years ago, in the year 1719, France and Spain were at war in New France (now Louisiana), and approximately 3,482 years ago, in the year 1457 BC, the first recorded battle in military history, the Battle of Megiddo, was waged between the Egyptians, led by Pharaoh Thutmose III against Kadesh, Canaanite, Mitanni, and Amurru forces. *See also* Zager and Evans, *In the Year 2525*, *on* 2525 (Exordium & Terminus) (RCA 1968).

Q. DO YOU AGREE WITH MR. WALTERS'APPLICATION OF A SUSTAINABLE GROWTH RATE?

A. No, I do not. Professor Morin discusses the sustainable growth model and shows that it relies on knowledge of several factors, including:

- "b": the fraction of earnings per share retained;
- "r": the rate of return on equity (ROE);
- "s": the growth rate in common equity due to the sale of stock; and
- "v": the fraction of a stock sale that increases existing book value.

Specifically, Professor Morin states the following:

> There are three problems in the practical application of the sustainable growth method:
>
> (1) It may be even more difficult to estimate what b, r, s and v investors have in mind than it is to estimate what g[rowth] they envisage. It would appear far more economical and expeditious to use available growth forecasts and obtain g directly instead of relying on four individual forecasts of the determinants of such growth. *It seems only logical that the measurement and forecasting errors inherent in using four different variables to predict growth far exceed the forecasting error inherent in a direct forecast of growth itself*.
>
> (2) *There is an element of circularity in estimating g by a forecast of b and ROE for the utility being regulated, since ROE is determined in large part by regulation. To estimate what ROE resides in the minds of investors is equivalent to estimating the market's assessment of the outcome of regulatory hearings.* Expected ROE is exactly what regulatory commissions set in determining an allowed rate of return. In other words, the method requires an estimate of ROE before it can even be implemented. *Common sense would dictate the inconsistency of a return on equity recommendation that is different than the expected ROE that the method assumes the utility will earn forever.*
>
> For example, using an expected return on equity of 11% to determine the growth rate and using that same growth rate to recommend a return on equity of 9% is inconsistent. *It is not reasonable to assume that this regulated utility company is expected to earn 11% forever, but estimate a 9% return on equity. The only way this utility can earn 11% is that rates be set by the regulator so that the utility will in fact earn 11%....*

> (3) The empirical finance literature discussed earlier demonstrates that the sustainable growth method of determining growth is not as significantly correlated to measures of value, such as stock price and price/earnings ratios, as other historical growth measures or analysts' growth forecasts. *Other proxies for growth, such as historical growth rates and analysts' growth forecasts, outperform retention growth estimates.* (Emphasis and clarification added.)[78]

The circular nature of the sustainable growth DCF is illustrated in the following steps:

1. The sustainable growth rate relies on an expected ROE on book common equity;
2. That expected ROE on book common equity is then used in a DCF analysis to establish an ROE cost rate related to the market value of the common stock; and
3. That market-related ROE, if authorized as the allowed ROE in a regulatory proceeding, becomes the expected ROE on book common equity.

Put simply, the estimated ROEs Mr. Walters used to derive his sustainable growth rate become the regulatory outcome of this proceeding, even as those ROEs are themselves based on regulatory outcomes.

Q. DOES INDEPENDENT RESEARCH SUPPORT THE FINDING THAT FUTURE EARNINGS AND THE RETENTION RATIO ARE NOT POSITIVELY RELATED?

A. Yes. In 2006, for example, two articles in Financial Analysts Journal addressed the theory that high dividend payouts (i.e., low retention ratios) are associated with low future earnings growth.[79] Both articles cite a 2003 study by Arnott and Asness,[80] who found that

---

[78] Morin, at 383-384.

[79] *See*, Ping Zhou, William Ruland, *Dividend Payout and Future Earnings Growth*, Financial Analysts Journal, Vol. 62, No. 3, 2006. *See also*, Owain ap Gwilym, James Seaton, Karina Suddason, Stephen Thomas, *International Evidence on the Payout Ratio, Earnings, Dividends and Returns*, Financial Analysts Journal, Vol. 62, No. 7, 2006.

[80] *See*, Robert Arnott, Clifford Asness, *Surprise: Higher Dividends = Higher Earnings Growth*, Financial Analysts Journal, Vol. 59, No. 1, January/February 2003.

over the course of 130 years of data, future earnings growth is associated with high, rather than low, payout ratios.[81] In essence, the findings of all three studies found that there is a negative, not a positive, relationship between the two.

Q. DID YOU PERFORM ANY ANALYSES TO TEST THAT ASSUMPTION?

A. Yes, I did. Using EPS and DPS data from *Value Line*, I calculated the historical dividend payout ratio, retention ratio, and subsequent five-year average earnings growth rate for the companies included in the *Value Line* electric, natural gas and water utility industry. I then performed a regression analysis in which the dependent variable was the five-year earnings growth rate, and the explanatory variable was the earnings retention ratio. The purpose of that analysis was to determine whether the data empirically supports the assumption that higher retention ratios necessarily produce higher earnings growth rates.

Q. WHAT DID THAT ANALYSIS REVEAL?

A. As shown in Schedule DWD-9R and Table 9, below, there was a statistically significant negative relationship between the five-year average earnings growth rate and the earnings retention ratio. That is, based on *Value Line* data, earnings growth actually decreased as the retention ratio increased. Those findings clearly call into question Mr. Walters' use of the sustainable growth rate as a proxy for the long-term growth rate in his analysis.

[81] Because the payout ratio is the inverse of the retention ratio, the authors found that future earnings growth is negatively related to the retention ratio.

Table 9: Retention Ratio / Earnings Growth[82]

	Coefficient	Standard Error	t-Statistic
Intercept	0.1540	0.0106	14.5753
Retention Ratio	-0.2704	0.0211	-12.7862

Q. DO THOSE RESULTS MAKE PRACTICAL SENSE?

A. Yes, they do. As a practical matter, dividend-paying companies such as utilities are reluctant to reduce dividends, given the often-disproportionate stock price reaction. Consequently, a higher-than-expected dividend increase may signal to investors that management has confidence in higher future earnings and cash flow. That is, a near-term reduction in the retention ratio supporting a higher dividend increase may provide information or "signaling" content regarding future growth prospects.[83] In view of the foregoing, Mr. Walters' use of a retention ratio growth rate DCF analysis is an exercise in circularity which ignores the basic principle of rate base/rate of return regulation.

Q. IS MR. WALTERS' MSDCF MODEL A REASONABLE APPROACH TO ESTIMATING THE COMPANY'S ROE?

A. No, it is not. The MSDCF model and its growth rates reflect the company/industry lifecycle, which is typically described in three stages: (1) the growth stage, which is characterized by rapidly expanding sales, profits, and earnings. In the growth stage, dividend payout ratios are low in order to grow the firm; (2) the transition stage, which is characterized by slower growth in sales, profits, and earnings. In the transition stage, dividend payout ratios increase, as their need for exponential growth diminishes; and (3) the maturity (steady-state) stage, which is characterized by limited, slightly attractive

82 Schedule DWD-9R.

83 *See,* Eugene F. Brigham, Louis C. Gapenski, Financial Management, Theory and Practice, Seventh Ed., 1994, at 618.

investment opportunities, and steady earnings growth, dividend payout ratios, and returns on equity.

Q. ARE THERE EXAMPLES IN BASIC FINANCE TEXTS THAT SUPPORT YOUR POSITION?

A. Yes. For example, in *Investments*, life cycles and multi-stage growth models are discussed:

> As useful as the constant-growth DDM (dividend discount model) formula is, you need to remember that it is based on a simplifying assumption, namely, that the dividend growth rate will be constant forever. In fact, firms typically pass through life cycles with very different dividend profiles in different phases. In early years, there are ample opportunities for profitable reinvestment in the company. Payout ratios are low, and growth is correspondingly rapid. In later years, the firm matures, production capacity is sufficient to meet market demand, competitors enter the market, and attractive opportunities for reinvestment may become harder to find. In this mature phase, the firm may choose to increase the dividend payout ratio, rather than retain earnings. The dividend level increases, but thereafter it grows at a slower pace because the company has fewer growth opportunities.
>
> Table 18.2 illustrates this pattern. It gives Value Line's forecasts of return on assets, dividend payout ratio, and 3-year growth in earnings per share for a sample of the firms in the computer software industry versus those of east coast electric utilities…
>
> By in large, the software firms have attractive investment opportunities. The median return on assets of these firms is forecast to be 19.5%, and the firms have responded with high plowback ratios. Most of these firms pay no dividends at all. The high return on assets and high plowback result in rapid growth. The median growth rate of earnings per share in this group is projected at 17.6%.
>
> In contrast, the electric utilities are more representative of mature firms. Their median return on assets is lower, 6.5%; dividend payout is higher, 68%; and median growth is lower, 4.6%.
>
> ***
>
> To value companies with temporarily high growth, analysts use a multistage version of the dividend discount model. Dividends in the early high-growth period are forecast and their combined present value is calculated. Then, once the firm is projected to settle down to a steady-growth phase, the

> constant-growth DDM is applied to value the remaining stream of dividends.[84]

The economics of the public utility business indicates that the industry is in the steady-state, or constant-growth stage of a MSDCF. This means that the three- to five-year projected growth rates for each company would be the "steady-state" or terminal growth rate appropriate for the DCF model for utility companies, not the GDP growth rate, which is not a company-specific growth rate, nor is it an upward bound for growth.

Q. WHAT ARE YOUR CONCLUSIONS AS THEY RELATE TO MR. WALTERS' DCF ANALYSIS?

A. First, Mr. Walters' MSDCF model is inappropriate to rely on given that utilities are in the steady state growth stage. As such, the MSCF results should be ignored. Second, Mr. Walters' use of "sustainable" growth rates in his DCF analysis is an exercise in circularity which ignores the basic principle of rate base / rate of return regulation. Namely the expected ROE from which the growth rate is derived is used to generate an ROE for regulatory purposes. Also, empirical tests show that the basis of the sustainable growth DCF (i.e., higher retention rates lead to higher growth) is not true in reality. Therefore, Mr. Walters' constant growth DCF model results are the only relevant ROEs presented and the only ones that the Commission should consider in this proceeding.

C. <u>RISK PREMIUM METHOD</u>

Q. PLEASE BRIEFLY DESCRIBE MR. WALTERS' RPM.

A. Mr. Walters defines the "Risk Premium" as the difference between average annual authorized equity returns for utilities and a measure of long-term interest rates each year from 1986 through 2025.[85] Mr. Walters' first approach to estimating the RPM looks to the

---

[84] Z. Bodie, A. Kane, and A. J. Marcus, *Investments*, 7th Edition, McGraw-Hill Irwin, 2008, at 616-617

[85] Walters Direct Testimony, at 44.

30-year Treasury yield, and his second considers the average A-rated utility bond yield.[86] In each case, Mr. Walters establishes his risk premium estimate by reference to historical averages.

Mr. Walters looks to 40 years of returns, arguing "a relatively long period of time where stock valuations reflect premiums to book value indicates that the authorized ROEs and the corresponding equity risk premiums were supportive of investors' return expectations."[87] Mr. Walters considers the current and projected capital markets when selecting equity risk premiums ("ERP") of 5.50% (over Treasury bonds) and 4.16% (over Utility bonds).[88] Applying a forecasted 30-year Treasury yield and 13- and 26-week average A-rated and Baa-rated public utility bond yields to those ERPs result in indicated ROEs ranging from 9.97% to 10.30%.[89]

Q. DO YOU HAVE SPECIFIC CONCERNS WITH MR. WALTERS' APPLICATION OF THE RPM?

A. Yes. I have three concerns with Mr. Walters' analysis, namely: (1) the use of the 1986 – 2025 time period; (2) Mr. Walters' method and recommendation ignore an important relationship revealed by his own data, i.e., that there is an inverse relationship between ERPs and interest rates (whether measured by U.S. Treasury bonds or public utility bond yields); and (3) his mismatched application of projected Treasury bond yields and current utility bond yields.

86 *Id.* at 44-45.
87 *Id.* at 45.
88 *Id.* at 48-49.
89 *Id.* at 50.

Q. WHAT ARE YOUR CONCERNS WITH MR. WALTERS 1986 – 2025 TIME PERIOD TO DETERMINE AN ERP?

A. Mr. Walters selected the period 1986 – 2025 "because public utility stocks consistently traded at a premium to book value during that period."[90] He concludes that "[o]ver this period, an analyst can infer authorized ROEs were sufficient to support market prices that at least exceeded book value."[91] Mr. Walters is mistaken. Market values can diverge from book values for a myriad of reasons including earnings per share ("EPS") and dividends per share ("DPS") expectations, merger / acquisition expectations, interest rates, etc. As noted by Phillips:[92]

> Many question the assumption that market price should equal book value, believing that 'the earnings of utilities should be sufficiently high to achieve market-to-book ratios which are consistent with those prevailing for stocks of unregulated companies.

In addition, Bonbright[93] states:

> In the first place, commissions cannot forecast, except within wide limits, the effect their rate orders will have on the market prices of the stocks of the companies they regulate. In the second place, whatever the initial market prices may be, they are sure to change not only with the changing prospects for earnings, but with the changing outlook of an inherently volatile stock market. In short, market prices are beyond the control, though not beyond the influence of rate regulation. Moreover, even if a commission did possess the power of control, any attempt to exercise it ... would result in harmful, uneconomic shifts in public utility rate levels. (italics added)

Also, Kroll's 2023 SBBI® Yearbook ("SBBI – 2023") makes it clear that the arbitrary selection of historical periods is highly suspect and unlikely to be representative of long-term trends in market data. For example, SBBI - 2023 states:

---

90 *Id.* at 44.

91 *Id.*

92 Phillips, Charles F., The Regulation of Public Utilities – Theory and Practice (Public Utility Reports, Inc., 1993) 395.

93 James C. Bonbright, Albert L. Danielsen and David R. Kamerschen, Principles of Public Utility Rates (Public Utilities Reports, Inc., 1988) 334.

> The estimate of the equity risk premium depends on the length of the data series studied. A proper estimate of the equity risk premium requires a data series long enough to give a reliable average without being unduly influenced by very good and very poor short-term returns. When calculated using a long data series, the historical equity risk premium is relatively stable. Furthermore, because an average of the realized equity risk premium, is quite volatile when calculated using a short history, using a long series makes it less likely that the analyst can justify any number he or she wants.[94]

The academic literature demonstrates and confirms that while regulation is a substitute for marketplace competition, it has an effect on, but no direct control over market prices, and hence market-to-book ("M/B") ratios of regulated utilities. The academic literature also shows that a subset of data could be subject to data manipulation. Because of this, no valid conclusion of ERPs can be drawn for the 1986 – 2025 period.

Q. IS THERE A DIRECT RELATIONSHIP BETWEEN THE M/B RATIOS OF UNREGULATED COMPANIES AND THEIR EARNED RATES OF RETURN ON BOOK COMMON EQUITY?

A. No. Since regulation acts as a surrogate for competition, it is reasonable to look to the competitive environment for evidence of a direct relationship between M/B ratios and earned returns on common equity. To determine if Mr. Walters' implicit assumption of such a direct relationship has any merit, I observed the M/B ratios and the earned returns on common equity of the S&P Industrial Index, and the S&P 500 Composite Index, over a long period of time. In Schedule DWD-10R, I have shown the M/B ratios, rates of return on book common equity (earnings / book ratios), annual inflation rates, and the earnings / book ratios net of inflation (real rate of earnings) annually for the years 1947 through 2024. In each year, the M/B ratios of the S&P Industrial Index equaled or exceeded 1.00 times (or 100%). In 1949, the only year in which the M/B ratio was 1.00, the real rate of earnings

94 SBBI – 2023 at 193-194.

on book equity, adjusted for deflation, was 18.10% (16.30% + 1.80%). In contrast, in 1961, when the S&P Industrial Index experienced an M/B ratio of 2.01 times, the real rate of earnings on book equity for the S&P Industrial Index was only 9.10% (9.80%-0.70%). In 1997, the M/B ratio for the Index was 5.88 times, while the average real rate of earnings on book equity was 22.90% (24.60%-1.70%).

This analysis clearly demonstrates that competitive, unregulated companies have never sold below book value, on average, and have sold at book value in only one year since 1947. Because this lack of a relationship between earnings / book ratios and M/B ratios covers a 78-year period, 1947 through 2024, it cannot be validly argued that going forward a relationship would exist between earnings / book ratios and M/B ratios. The analysis shown in Schedule DWD-10R coupled with the supportive academic literature, demonstrate the following: (1) that while regulation is a substitute for marketplace competition, it can influence, but not directly control market prices, and hence, M/B ratios; and (2) that the rates of return investors expect to achieve, and which influence their willingness to pay market prices well in excess of book values have no meaningful, direct relationship to rates of earnings on book equity. Because of this, no valid conclusion of ERPs can be drawn for the 1986-2025 period because of M/B ratios in excess of one.

Q. DOES MR. WALTERS' RPM ANALYSIS IGNORE THE INVERSE RELATIONSHIP BETWEEN ERPS AND INTEREST RATES?

A. Yes. Reviewing the data in Exhibits CCW-10 and CCW-11, I discovered that the ERP as presented by Mr. Walters tends to move inversely with changes in interest rates. In other words, as interest rates fall, the ERP increases.

Q. HOW DOES MR. WALTERS' DATA SHOW THE INVERSE RELATIONSHIP BETWEEN ERPS AND INTEREST RATES?

A. As shown in Schedule DWD-11R, empirical analyses of the data presented in Exhibits CCW-10 and CCW-11, ERPs have moved inversely with changes in U.S. Treasury bond yields for 1986 – 2024.

When looking at the inverse relationship between ERP and interest rates, as shown on Schedule DWD-11R, which uses Mr. Walters' data, the R-squareds are in excess of 82%. This means that the movement in interest rates explains over 82% of the movement in ERP, which I would consider to be a strong relationship.[95]

Q. MR. WALTERS USED CURRENT A- AND BAA-RATED PUBLIC UTILITY BOND YIELDS IN HIS RPM ANALYSIS. PLEASE COMMENT.

A. Mr. Walters' use of a Baa-rated public utility bond yield is incorrect for two reasons. First, Mr. Walters applies a Baa-rated public utility bond yield to an ERP derived from A-rated public utility bonds, improperly matching the ERP measured relative to A-rated public utility bond yields with a Baa rated public utility bond yield. Second, Mr. Walters' use of current A- and Baa-rated public utility bond yield is inconsistent with his entire return on common equity analysis. For example, Mr. Walters used an expected risk-free rate in both his CAPM analysis and his U.S. Treasury Bond-based ERP analysis, analyst projections of EPS and sustainable growth in his constant growth DCF model applications and projected inflation in his derivation of his projected market ERP. For internal consistency in his analyses and to be theoretically correct, as well as consistent with the prospective nature of both ratemaking and the cost of capital, a projected A-rated public utility bond yield should be used in Mr. Walters' RPM analysis.

[95] I also note the t-statistics from these analyses indicate the relationship is highly statistically significant.

Q. HOW CAN A PROJECTED A-RATED PUBLIC UTILITY BOND YIELD BE ESTIMATED?

A. One source is *Blue Chip's*[96] forecasts of Aaa corporate bond yields adjusted to reflect a recent spread between A-rated public utility bond and Aaa corporate bond yield. *Blue Chip* forecasts Aaa-rated corporate bonds to yield an average 5.25%, based upon an average of the six quarters ending with the third quarter of 2026 and 2027– 2031 and 2032– 2036. However, the 5.25% projected Aaa corporate bond yield needs to be adjusted to estimate an equivalent A-rated public utility bond yield. Using a three-month average bond yield spread (approximately 13 weeks, consistent with Mr. Walters' analysis), an upward adjustment of 46 basis points is necessary, resulting in a prospective A-rated public utility bond yield of 5.71% as derived on page 5 of Schedule DWD-11R.

Q. PLEASE SUMMARIZE THE RANGE OF RPM INDICATED COMMON EQUITY COST RATES AFTER CORRECTING MR. WALTERS' RPM ANALYSIS.

A. As shown on Schedule DWD-11R, applying a projected risk-free rate of 4.56% and prospective A2-rated public utility bond yield of 5.71%[97] to the regression equations in Schedule DWD-11R produces results of 5.94% and 4.69%, respectively, for the electric utilities, and 5.88% and 4.63%, respectively, for the natural gas utilities. This results in an ROE of 10.50% and 10.40% for electric utilities using the projected 30-year Treasury and the prospective A-rated public utility bond yield, respectively, and ROE of 10.44% and 10.34%, respectively, for natural gas utilities. As discussed previously, while I do not agree with Mr. Walters' basic RPM, the corrected RPM results based upon regression analyses of his data are more appropriate indicators of common equity cost rate.

---

96 *Blue Chip* is a source relied upon by Mr. Walters for projected inflation in developing his projected MRP for his CAPM analysis.

97 *See, Blue Chip Financial Forecasts*, June 2, 2025, at 2, 14.

D. CAPITAL ASSET PRICING MODEL

Q. PLEASE BRIEFLY SUMMARIZE MR. WALTERS' CAPM ANALYSIS AND RESULTS.

A. Mr. Walters' CAPM analysis combines three estimates of the MRP and three estimates of beta, along with his projected risk-free rate of 4.50% from *Blue Chip*[98] to calculate nine CAPM estimates that range from 7.29% to 11.08%.[99]

Mr. Walters' first MRP estimate is based on the historical average real market return over the 1926-2024 period as reported by Morningstar Direct, combined with an expected inflation rate of 2.50% to calculate an expected market return of 11.75%. Subtracting his 4.50% projected risk-free rate results in an MRP of 7.20%.[100]

In the second calculation, he applies a modified version of FERC's DCF method to the S&P 500 Index to calculate the total expected market return. Mr. Walters calculates the weighted average dividend yield and growth rate for each company in the S&P 500, excluding non-dividend paying companies and companies with growth rates that are negative or above 20%. Mr. Walters then applies a one-half growth rate adjustment to the resulting dividend yield to arrive at the expected dividend yield for the S&P 500 of 1.79%. Adding the expected dividend yield to the weighted average growth rate of 10.80% results in a market return of 12.19%.[101] Subtracting his 4.50% projected risk-free rate from his DCF-based market return of 12.19% results in an MRP of 7.70%.[102] Mr. Walters then performed the same analysis including all companies in the S&P 500, which resulted in an MRP of 8.09%.[103]

102 *Id*.
103 *Id.* at 59; Exhibit CCW-15, page 2.

Mr. Walters' final MRP is the 5.50% "normalized" MRP recommended by Kroll.[104]

Q. IS MR. WALTERS' CAPM METHODOLOGY AND RESULT SOUND?

A. No. Mr. Walters' CAPM analysis is flawed in at least four respects: (1) while Mr. Walters does use a short-term projected risk-free rate in his CAPM analysis, he does not consider the long-term projection of the risk-free rate published by *Blue Chip*; (2) he relies, in part, on Vasicek betas; (3) his choice and calculation of his MRP are flawed; and (4) he did not perform an ECAPM analysis.

Q. DOES MR. WALTERS RELY ON *BLUE CHIP* THROUGHOUT HIS ANALYSIS?

A. Yes, he does. Specifically, Mr. Walters uses *Blue Chip* for his short-term projected interest yield on 30-year Treasury bonds for his CAPM analysis, his terminal growth rate in his MSDCF model analysis, and also discusses five- and ten-year projected interest rates in the capital markets section of his direct testimony.[105] Because of Mr. Walters' reliance on *Blue Chip*, I find it curious that he does not use the long-term projections published by *Blue Chip* for his analysis.

Not incorporating the longest projection available is inconsistent with Mr. Walters' application of the DCF model in which there is an assumption that the projected "g" is constant into perpetuity, creating a mismatch between the application of his models. It is also inconsistent with the Efficient Market Hypothesis ("EMH").

Q. WHAT IS THE EMH?

A. According to Eugene F. Fama,[106] a market in which prices always "fully reflect" available information is called "efficient." There are three forms of the EMH, namely:

---

104 *Id.* at 62.

105 Walters Direct Testimony, at 39-40, 48.

106 Eugene F. Fama, *Efficient Capital Markets: A Review of Theory and Empirical Work*, The Journal of Finance, Vol. 25, No. 2. (May 1970), at 383-417.

- The "weak" form asserts that all past market prices and data are fully reflected in securities prices. In other words, technical analysis cannot enable an investor to "outperform the market."
- The "semi-strong" form asserts that all publicly available information is fully reflected in securities prices. In other words, fundamental analysis cannot enable an investor to "outperform the market."
- The "strong" form asserts that all information, both public and private, is fully reflected in securities prices. In other words, even insider information cannot enable an investor to "outperform the market."

The "semi-strong" form is generally considered the most realistic because the illegal use of insider information can enable an investor to "beat the market" and earn excessive returns, thereby disproving the "strong" form. The semi-strong form of the EMH assumes that all information (including long-term forecasts of interest rates) is available to the investor, which means the long-term forecasted interest rate would be considered by investors when making investment decisions and, therefore, should be included in Mr. Walters' CAPM analysis.

Q. DO YOU AGREE WITH MR. WALTERS' USE OF VASICEK-ADJUSTED BETAS IN HIS CAPM ANALYSIS?

A. No, I do not. First, Vasicek-adjusted betas are not widely available in the market or known to investors as compared to Blume-adjusted betas. Second, the Vasicek adjustment looks to standard errors of betas; the higher the standard error, the less reliable the beta estimate is, and the larger the adjustment of the beta to the market, peer group, or industry average beta. While the Vasicek-adjusted beta adjusts beta toward the industry average, it does not account for the tendency of low-beta stocks to understate expected risk. Third and finally, Duff & Phelps cites to a Delaware Court of Chancery decision that may support that more

extreme betas tend to revert to the industry mean over time,[107] but Mr. Walters has provided no evidence that utility betas are extreme, nor has he provided any evidence that utility betas do not revert to 1.0.

Q. DO YOU AGREE WITH MR. WALTERS' USE OF HISTORICAL BETAS IN HIS CAPM ANALYSIS?

A. No, I do not. The determination of the ROE is a measure of the investor expected return at any given point of time using current and expected measures. The use of historical betas is neither current nor expected. The analytical models that form the basis of the recommended ROE represent a snapshot of the Companies' investor-required return at the time of the analysis and should not be normalized based on speculation that current market conditions may change in the future that are not based on publicly-available data.

Q. WHAT IS YOUR POSITION ON THE 5.00% MRP QUOTED BY KROLL?

A. A forecast is only as good as its inputs, and if the assumptions within those forecasts are by its nature unpredictable (e.g. productivity growth forecasts), they are of little value. In addition, the determination of the MRP as calculated by Kroll is not transparent, especially in view of the historical data presented in SBBI – 2023, or the composition of its supply side method, which are already well known by investors. Because of the transparency of the historical data and how to gather and use the components of the supply side model, both the historical MRP (using the long-term arithmetic mean return on large company stocks less the long-term arithmetic income returns on long-term Government bonds) and the supply side model are superior measures of the MRP, when comparing to Kroll's simplistic and opaque MRP forecast.

---

[107] Duff & Phelps Investment Analyzer, 2020, Chapter 5, at 8.

Q. DID YOU CONDUCT A STUDY TO DETERMINE THE FORECAST ACCURACY OF THE KROLL RECOMMENDED MARKET RETURN RELATIVE TO THE HISTORICAL MARKET RETURNS THEY PUBLISH?

A. Yes, I did. I have calculated the forecast bias[108] of the long-term historical average return and the implied market returns from Kroll from 2009-2024.[109] For example, the long-term average market return from 1926-2008 was used to determine the forecasted return for 2009. The result of this analysis is shown in Schedule DWD-12R and Table 10, below:

Table 10: Comparison of Forecast Bias for Various Measures 2009-2024

Year	Observed Market Return	Long-Term Average Return	Kroll Forecasted Market Return
2009	26.46%	11.67%	10.50%
2010	15.06%	11.85%	10.08%
2011	2.11%	11.88%	9.63%
2012	16.00%	11.77%	10.00%
2013	32.39%	11.82%	9.50%
2014	13.69%	12.05%	9.00%
2015	1.38%	12.07%	9.00%
2016	11.96%	11.95%	9.00%
2017	21.83%	11.95%	9.00%
2018	-4.38%	12.06%	8.50%
2019	31.49%	11.88%	9.00%
2020	18.40%	12.09%	8.00%
2021	28.71%	12.16%	8.00%
2022	-18.11%	12.33%	8.00%
2023	26.61%	12.02%	9.00%
2024	25.62%	12.16%	9.00%
Sum	249.22%	191.71%	145.71%
Forecast Bias[110]		76.93%	58.47%

As shown in Table 10, while both of these measures understate the actual return (all forecast bias values are under 100%), the Kroll forecasted market return significantly and consistently understates the actual return. The Kroll projected market return is a less

[108] Forecast bias can be described as a tendency to either over-forecast or under-forecast a given variable.

[109] 2008 was selected as the starting year as it is the first year Kroll published its recommended MRP and risk-free rate.

[110] Calculated by dividing the sum of the forecast returns by the sum of the actual returns.

accurate predictor of the actual return than the historical average return. These findings are consistent with Campbell, who states that when returns are serially uncorrelated, the arithmetic average represents the best forecast of future returns in any randomly selected future year.[111]

Q. MR. WALTERS REFERS TO EXPECTED MARKET RETURNS AS PUBLISHED BY FINANCIAL INSTITUTIONS TO SUGGEST HIS EXPECTED MARKET RETURNS SHOULD BE CONSIDERED HIGH-END ESTIMATES.[112] IS HIS COMPARISON VALID?

A. No, it is not. Expected market returns from pension funds or investment houses try to predict what the market's earned return will be, not the return that investors require in order to invest, which is the subject of this proceeding. For example, a benefit plan asset manager will match the **expected returns** available from various asset classes to the expected liabilities that must be funded. An investor seeking to maximize their risk-adjusted return will only invest in a security if the expected return is equal to or greater than the **required return**. Because *expected* returns may or may not equal *required* returns, one cannot assume pension funding assumptions or expected returns from investment houses (that is, expected returns) may be viewed as a measure of investors' required returns.

Benefit plan managers develop asset allocation and investment decisions based on expected risks and returns for various asset classes subject to the investment objective or expected timing and nature of the liabilities being funded by those investments. In the U.S., they must consider: (1) the diversification of the portfolio; (2) the liquidity and current return of the portfolio relative to the expected cash flow requirements under the plan; (3) the

---

111 John Y. Campbell, "Forecasting US Equity Returns in the 21st Century," Social Security Administration, July 2001.

112 Walters Direct Testimony, at 59-60.

portfolio's projected return relative to the plan's funding objective; and (4) the return expected on alternative investments with similar risks.[113] Pension asset managers, therefore, are concerned with investing funds at an expected return to meet expected liabilities. As to the documents cited by Mr. Walters, several contain clearly stated limiting assumptions and disclaimers, which call into question their use for the purpose of setting the ROE in this proceeding. For example, Blackrock notes:

> References to future returns are not promises or even estimates of actual returns a client portfolio may achieve. Assumptions, opinions and estimates are provided for illustrative purposes only.
>
> This material has been prepared for information purposes only and is not intended to provide, and should not be relied on for, accounting, legal, or tax advice. The outputs of the assumptions are provided for illustration purposes only and are subject to significant assumptions. "Expected" return estimates are subject to uncertainty and error.[114]

Similarly, JP Morgan Chase notes:

> Assumptions, opinions and estimates are provided for illustrative purposes only. They should not be relied upon as recommendations to buy or sell securities. Forecasts of financial market trends that are based on current market conditions constitute our judgment and are subject to change without notice. We believe the information provided here is reliable, but do not warrant its accuracy or completeness.[115]

Lastly, Vanguard notes:

> The projections and other information generated by the VCMM regarding the likelihood of various investment outcomes are hypothetical in nature, do not reflect actual investment results, and are not guarantees of future results.[116]

116 Vanguard economic and market outlook for 2025: Beyond the landing, at 2.

Q. DO YOU RECOMMEND THAT THE COMMISSION REPLACE MR. WALTERS' KROLL MRP?

A. Yes. On pages 61 and 62 of his direct testimony, Mr. Walters references two well-known Kroll MRPs: (1) the historical arithmetic mean MRP of 7.17%, and (2) the 6.22% arithmetic MRP as calculated using the supply-side model. I would recommend the Commission consider the average of those MRPs (6.70%) in favor of the opaque "recommended" Kroll MRP.

Q. DID MR. WALTERS CONDUCT AN ECAPM ANALYSIS?

A. No, he did not. Mr. Walters does not conduct an ECAPM analysis because he does not agree with the use of adjusted betas in the ECAPM.[117]

Q. WHAT IS YOUR RESPONSE TO MR. WALTERS' CONCERN WITH THE USE OF ADJUSTED BETAS IN THE ECAPM STRUCTURE?

A. Mr. Walters seems to believe that using adjusted betas in the ECAPM analysis leads to two duplicative adjustments to the expected return line.[118] To the contrary, using adjusted betas in a CAPM analysis is not equivalent to using the ECAPM nor is it a duplicative adjustment.

Betas are adjusted because of their general regression tendency to converge toward 1.0 over time, i.e., over successive calculations of beta. As also noted above, numerous studies have determined that the security market line (SML) described by the CAPM formula at any given moment in time is not as steeply sloped as the predicted SML. Morin states:

> …some critics of the ECAPM argue that the use of Value Line adjusted betas in the traditional CAPM amounts to using an ECAPM. This is incorrect. The use of adjusted betas in a CAPM analysis is not equivalent to the ECAPM. Betas are adjusted because of the regression tendency of betas to converge toward 1.0 over time.

117 Walters Direct Testimony, at 73.
118 *Id.* at 75.

* * *

> The use of an adjusted beta by Value Line is correcting for a different problem than the ECAPM. The adjusted beta captures the fact that betas regress toward one over time. The ECAPM corrects for the fact that the CAPM under-predicts observed returns when beta is less than one and over-predicts observed returns when beta is greater than one.

* * *

> Another way of looking at it is that the Empirical CAPM and the use of adjusted betas comprise two separate features of asset pricing. Assuming arguendo a company's beta is estimated accurately, the CAPM will still understate the return for low-beta stocks. Furthermore, if a company's beta is understated, the Empirical CAPM will also understate the return for low-beta stocks. Both adjustments are necessary.[119]

Moreover, the slope of the SML should not be confused with beta. As Brigham and Gapenski state:

> The slope of the SML reflects the degree of risk aversion in the economy – the greater the average investor's aversion to risk, then (1) the steeper is the slope of the line, (2) the greater is the risk premium for any risky asset, and (3) the higher is the required rate of return on risky assets.[12]
>
> [12]Students sometimes confuse beta with the slope of the SML. This is a mistake. As we saw earlier in connection with Figure 6-8, and as is developed further in Appendix 6A, beta does represent the slope of a line, but not the Security Market Line. This confusion arises partly because the SML equation is generally written, in this book and throughout the finance literature, as ki = RF + bi(kM – RF), and in this form bi looks like the slope coefficient and (kM – RF) the variable. It would perhaps be less confusing if the second term were written (kM – RF)bi, but this is not generally done.[120]

As noted in Appendix 6A of Brigham and Gapenski's textbook, beta, which accounts for regression bias, is not a return adjustment but rather is based on the slope of a different line.

---

119 Morin, at 223-224.

120 Eugene F. Brigham and Louis C. Gapenski, Financial Management: Theory and Practice, The Dryden Press, 1985, at 201-204.

A 1980 study by Litzenberger, et al. found the CAPM underestimates the ROE for companies, such as public utilities, with betas less than 1.00. In that study, the authors applied adjusted betas and still found the CAPM to underestimate the ROE for low-beta companies. Similarly, Brattle Group's Risk and Return for Regulated Industries supports the use of adjusted betas in the ECAPM:

> Note that the ECAPM and the Blume adjustment are attempting to correct for different empirical phenomena and therefore both may be applicable. It is not inconsistent to use both, as illustrated by the fact that the Litzenberger et.al (1980) study relied on Blume adjusted betas and estimated an alpha of 2% points in a short-term version of the ECAPM. This issue sometimes arises in regulatory proceedings.[121]

Hence, using adjusted betas does not address the previously discussed empirical issues with the CAPM. In view of the foregoing, my use of adjusted betas in both the traditional and empirical applications of the CAPM is neither incorrect or inconsistent with the financial literature, nor is it a duplicative adjustment.

Q. WHAT WOULD THE RESULTS OF MR. WALTERS' CAPM ANALYSIS BE IF HE RELIED ON PROPER INPUTS?

A. As shown in Schedule DWD-13R, using Mr. Walters' *Value Line* betas from page 1 of CCW-15, I have corrected Mr. Walters CAPM analysis by: (1) including both the short-term and long-term projections of the 30-year Treasury yield in the estimation of the risk-free rate; (2) excluding his historical and S&P Capital IQ betas; (3) replacing the Kroll "recommended" MRP with measurable MRPs; and (4) estimating the ECAPM. Those corrections result in an average CAPM estimate of 10.64% and an average ECAPM estimate of 10.93%.

[121] Bente Villadsen, *et. al*, Risk and Return for Regulated Industries (2017) at 95, endnote 147 of Chapter 4.

E. ADJUSTMENTS TO COMMON EQUITY COST RATE

Q. DOES MR. WALTERS CONSIDER A SIZE ADJUSTMENT?

A. No, he does not. Mr. Walters does not consider a size adjustment for three reasons: (1) since the Companies are not publicly-traded, one cannot calculate a market capitalization and therefore cannot compare the Companies to the Utility Proxy Group; (2) Mr. Walters does not believe that there is a link between size and risk for utilities; and (3) that portfolio theory dictates that company-specific risks are diversifiable and would not be compensated.[122]

Q. DO YOU AGREE WITH MR. WALTERS' REASONS TO NOT INCLUDE A SIZE ADJUSTMENT?

A. No, I do not. As a preliminary matter, I have already addressed Mr. Walters' concern regarding the applicability of a size premium for utilities while discussing the I&E ROE Witnesses' direct testimonies, and I will not address that concern again here.

Regarding Mr. Walters' concern that the Companies are not publicly-traded, while that is the case, Mr. Walters determined a comparable risk proxy group to determine the ROE for the Companies. As his proxy group is assumed to be of comparable risk to the Companies, we can also assume that the Companies would have comparable market multiples (such as M/B ratios) as the average proxy group company. Because that is the case, multiplying each Company's book equity by the average M/B ratio of the comparable risk proxy group is a suitable proxy for an estimated market capitalization for the Companies.

[122] Walters Direct Testimony, at 81.

Q. WHAT IS YOUR RESPONSE TO MR. WALTERS' ASSERTION THAT THE SIZE ADJUSTMENT IS INAPPROPRIATE BECAUSE THE COMPANIES SHOULD NOT BE CONSIDERED AS STAND-ALONE ENTITIES?

A. As discussed in my Direct Testimony, the ROE in this proceeding should be set on a stand-alone basis.[123] That is, the ROE witnesses in this case are estimating the ROE for the Companies, which needs to be based on their individual risks. Consistent with the stand-alone ratemaking principle, it is reasonable and appropriate to consider the small size of the Companies relative to the companies in the Utility Proxy Group.

F. RESPONSE TO MR. WALTERS' CRITIQUES

Q. DOES MR. WALTERS HAVE ANY CRITIQUES OF YOUR ANALYSES?

A. Yes, he does. Mr. Walters' critiques of my direct testimony are as follows: (1) that I rely solely on the constant growth DCF; (2) my recommendations exceed recently authorized ROEs; (3) that my calculation of my projected A2 rated utility bond yield is not market-based; (4) the level of my ERPs and MRPs in my RPM and CAPM analyses; (5) that the PRPM is not frequently used or widely accepted; (6) my use of adjusted betas in the ECAPM model; (7) my use of non-price regulated risk proxy group; and (8) my inclusion of Company-specific premiums.

I have addressed critiques (1), (2), and (5) through (8) during the course of this Rebuttal Testimony. I will discuss Mr. Walters' remaining critiques below.

Q. MR. WALTERS STATES YOUR ESTIMATE OF THE PROJECTED A2-RATED UTILITY BOND IS NOT SUPPORTED.[124]

A. I respectfully disagree with Mr. Walters on this point. Because there are no projections of A-rated public utility bonds in the market to my knowledge, I use market data to derive an

---

123 D'Ascendis Direct Testimony, at 7-8.
124 Walters Direct Testimony, at 70.

expected bond yield. Mr. Walters and I both use *Blue Chip* in our analyses, which is a trusted publication for analysts. While credit spreads are narrower than historically, as noted by Mr. Walters, that would serve to lower the indicated Risk Premium Model ("RPM") ROE in this proceeding. Likewise, current A2-rated bonds are higher than my project A2-rated bond. Because of this, my RPM result can be considered conservative.

Q. MR. WALTERS IS CONCERNED WITH INDIVIDUAL MEASURES OF YOUR ERP IN YOUR RPM.[125] PLEASE RESPOND.

A. As a preliminary matter, Mr. Walters does not critique the method or theory supporting my calculation of any ERP, just the level of the ERP. As noted by Mr. Walters in his direct testimony, since I average several ERPs to arrive at my recommended ERP, it mitigates high and low values.[126] Mr. Walters also states that "employing multiple methods helps cross-check and validate results, mitigate the impact of any one model's limitations or potentially flawed assumptions, and reduce reliance on any single uncertain output. By considering results from different perspectives, a more informed and credible estimate can be made. This approach is consistent with both sound financial practice and regulatory expectations for fair and reasonable return determinations.[127] To those points, my initial and updated ERPs are consistent with actual realized ERPs as shown on Table 11 below and in Schedule DWD-14R

Table 11: Percentile Ranks of Calculated Equity Risk Premiums[128]

	%	Percentile Rank
Average Equity Risk Premium (Natural Gas – Direct)	5.06	49
Average Equity Risk Premium (Natural Gas – Rebuttal)	4.95	49
Average Equity Risk Premium (Electric – Direct)	4.93	49

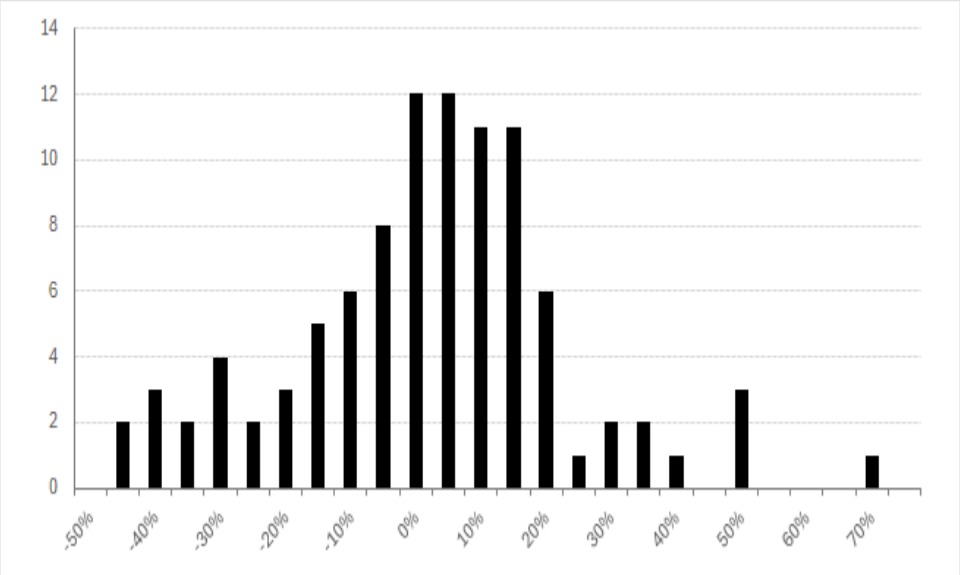
128 Schedule DWD-14R.

Average Equity Risk Premium (Electric – Rebuttal)	4.86	49

Chart 6: Frequency Distribution of Equity Risk Premiums 1928-2024[129]



Given the above, my calculation of my recommended ERP is consistent with the use of multiple models, as advocated by Mr. Walters and produces a result consistent with historical experience. Mr. Walters' concerns should be dismissed.

V. RESPONSE TO OSBA WITNESS FARR

Q. PLEASE SUMMARIZE MR. FARR'S RECOMMENDATIONS REGARDING THE APPROPRIATE ROE FOR THE COMPANIES.

A. Mr. Farr does not conduct an independent assessment of the Companies' required ROE, but instead relies on the TUS quarterly calculation of the ROE used for each type of utilities' (i.e., gas, electric, water) DSIC.[130] Relying on the TUS report, Mr. Farr recommends ROEs of 10.15%, 10.00%, and 10.00% for Valley, Citizens' and Wellsboro, respectively.[131]

---

129 *Id.*

130 OSBA Statement No. 1, Docket Nos. R-2025-3054394 (Citizens') 3054393 (Valley), and 3054392 (Wellsboro), at 4.

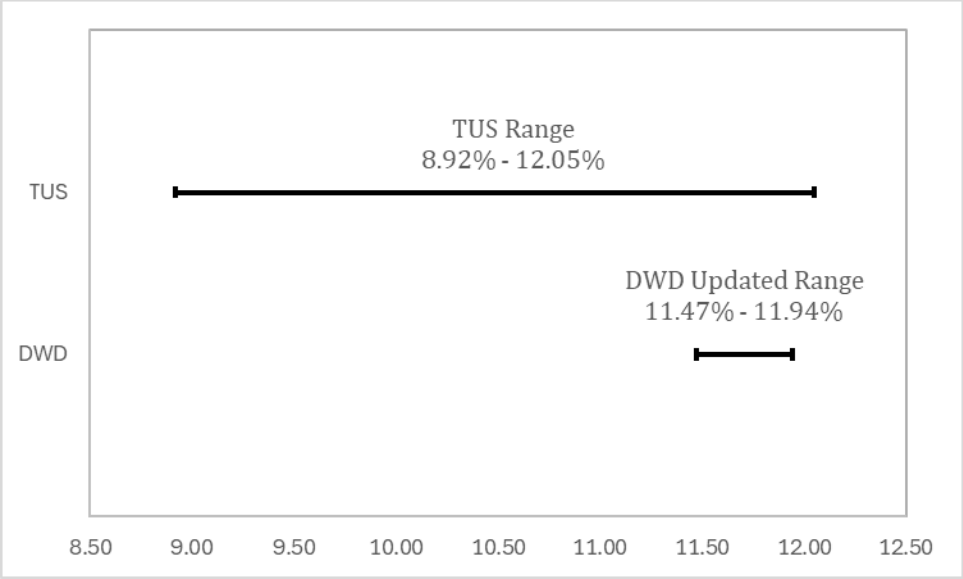
131 *Id.*

Q. DO YOU HAVE ANY OBSERVATIONS REGARDING THE TUS REPORT?

A. Yes, I do. As noted by Mr. Farr in his direct testimony, the current market ranges of indicated ROEs calculated by the TUS for gas and electric companies are from 8.92% to 12.05% and from 9.17% to 11.23%, respectively.[132] The top of both representative ranges (12.05% gas, 11.23% electric) represent one standard deviation above the mean DCF model result, which would be applicable to the Companies, given their small size and previous authorization of similar adjustments to the Companies' indicated ROEs in Docket No. R-2109-3008212 as discussed in my Direct Testimony.[133]

As shown in Charts 7 and 8 below, my recommended adjusted range overlaps TUS' indicated range of ROEs, confirming the reasonableness of my recommendation and size adjustment.

Chart 7: Comparison of TUS' Range of ROEs for Gas Utilities and D'Ascendis' Adjusted Range[134]

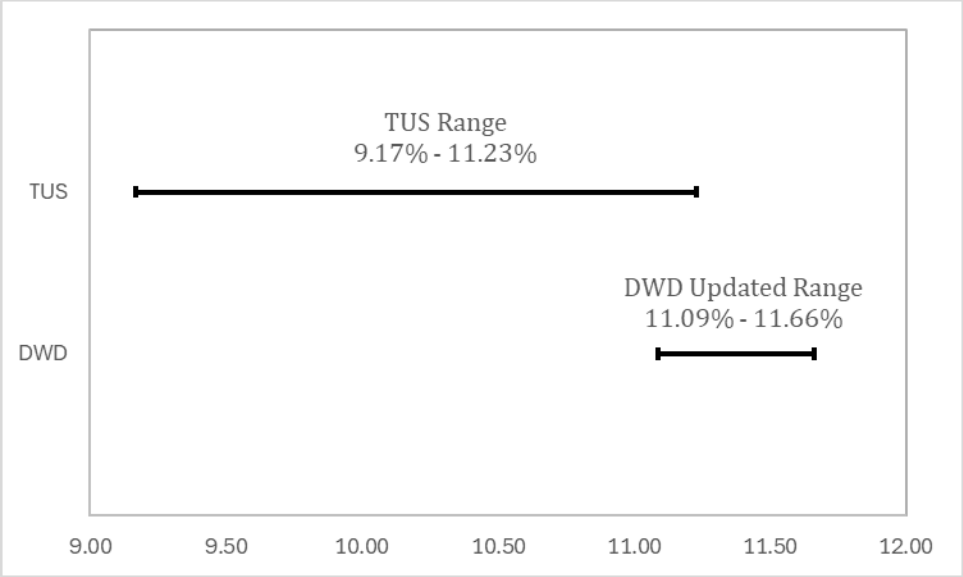


[132] Pennsylvania Public Utility Commission, Bureau of Technical Utility Services, Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended December 31, 2024, May 8, 2025, at 18 (electric) and 23 (gas).

[133] D'Ascendis Direct Testimony, at 50-51.

[134] Pennsylvania Public Utility Commission, Bureau of Technical Utility Services, Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended December 31, 2024, May 8, 2025, at 18 (electric) and 23 (gas).

Chart 8: Comparison of TUS' Range of ROEs for Electric Utilities and D'Ascendis' Adjusted Range[135]



VI. CONCLUSION

Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY

A. Given the discussion above and my updated analysis, an ROE of 11.65% remains reasonable for the Companies at this time. The I&E ROE Witnesses' recommended ROEs fall within the range of my unadjusted ROE model results and support my recommendation. Likewise, the indicated ranges of ROEs calculated by the TUS for gas and electric utilities overlap my adjusted range of ROEs for the Companies, supporting both my indicated model results and the magnitude of my size adjustment.

Concerning Mr. Walters' recommended ROE, I discuss that the majority of his indicated results exceed his recommendation, and that his reliance on non-traditional DCF models and betas serve to significantly understate his ultimate conclusion.

135 *Id.*

Q. IN YOUR OPINION, IS YOUR PROPOSED ROE OF 11.65% FAIR AND REASONABLE FOR VALLEY AND ITS CUSTOMERS?

A. Yes, it is.

Q. IN YOUR OPINION, IS YOUR PROPOSED ROE OF 11.65% FAIR AND REASONABLE FOR CITIZENS' AND ITS CUSTOMERS?

A. Yes, it is.

Q. IN YOUR OPINION, IS YOUR PROPOSED ROE OF 11.65% FAIR AND REASONABLE FOR WELLSBORO AND ITS CUSTOMERS?

A. Yes, it is.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

BUSINESS: Atmos Energy Corporation is engaged primarily in the distribution and sale of natural gas to over 3.3 million customers through six regulated natural gas utility operations: Louisiana Division, West Texas Division, Mid-Tex Division, Mississippi Division, Colorado-Kansas Division, and Kentucky/Mid-States Division. Gas sales breakdown for fiscal 2024: 68.8%, residential; 27.1%, commercial; 2.7%, industrial; and 1.4% other. The company sold Atmos Energy Marketing, 1/17. Officers and directors own approximately .5% of common stock (12/24 Proxy). President and Chief Executive Officer: Kevin Akers. Incorporated: Texas. Address: Three Lincoln Centre, Suite 1800, 5430 LBJ Freeway, Dallas, Texas 75240. Telephone: 972-934-9227. Internet: www.atmosenergy.com.

Atmos Energy is having a decent year thus far. Earnings per share through the first half of fiscal 2025 (ended March 31st) increased 6.7%, to $5.26, relative to the $4.93 figure that was registered for the fiscal 2024 period. One supporting factor was the distribution unit, aided partially by rate adjustments and benefits of residential customer growth (both happening mainly in the Mid-Tex Division). Moreover, the pipeline and storage segment was helped, among other things, by the Gas Reliability Infrastructure Program filing approved in May 2024 and the System Safety and Integrity Rider filing approved in November 2024. But the company's results were hurt, to some degree, by a rise in bad-debt expense, depreciation, and property taxes. Nonetheless, it appears that, for the full year, the bottom line will end up around $7.30 per share. That would indicate a 7% advance from fiscal 2024's $6.83 tally. Concerning the following fiscal year, per-share profits stand to grow another 5% or so, to $7.70, as operating margins widen further.

There has been activity on the rate-filing front. During the first six months, Atmos managed to complete some regulatory proceedings leading to a $152.6 million boost in annual operating income. What's more, there were ratemaking initiatives in progress at the conclusion of March seeking $224.7 million of annual operating income. Of course, there are no guarantees that the company will receive everything it requests.

Good things seem to be in store out to 2028-2030. Atmos ranks as one of the nation's biggest natural gas-only distributors, with over three million customers across several states, including Texas, Louisiana, and Mississippi. Also, we believe that the pipeline and storage business has promising overall expansion opportunities, since it operates in one of the most-active drilling regions in the world. The solid balance sheet is another positive.

The equity's long-term total return prospects look rather uninspiring. The dividend yield does not impress versus the average of *Value Line's* Natural Gas Utility Industry. Also, 3- to 5-year capital appreciation potential lacks appeal, given recent stock-price strength.

BUSINESS: Chesapeake Utilities Corporation consists of two main units. The Regulated Energy segment distributes natural gas in Delaware, Maryland, and Florida; distributes electricity in Florida; and transmits natural gas on the Delmarva Peninsula and in Florida. The Unregulated Energy operation wholesales and distributes propane; markets natural gas; and provides other unregulated energy services, including midstream services in Ohio. Revenue breakdown for 2024: Regulated Energy, 74.1%; Unregulated Energy, 29.0%; Other, d3.1%. Officers and directors own 1.5% of common stock; BlackRock, 16.1% (3/25 Proxy). Chairman and CEO: Jeffry Householder. Inc.: DE. Address: 500 Energy Lane, Dover, DE 19901. Tel.: (302) 734-6799. Internet: www.chpk.com.

Chesapeake Utilities Corporation began 2025 on the right foot. Indeed, first-quarter earnings per share increased almost 7%, to $2.21, compared to the $2.07 figure that was posted last year. One supporting factor was higher customer consumption resulting from cooler temperatures, mainly across the Mid-Atlantic and Ohio service areas. Another plus was a rise in demand for virtual pipeline services. Other positives included internal growth in the natural gas distribution businesses and contributions from regulated infrastructure programs. So, at this juncture, it appears that full-year profits will end up in the vicinity of $5.70 a share. That would show a roughly 8% advance from 2024's $5.26 tally. Regarding 2026, the company's bottom line may grow at a similar percentage rate, to $6.10 a share, assuming additional expansion of operating margins.

This year's capital expenditures are anticipated to lie between $325 million and $375 million. The bulk of the funds are being deployed to the Regulated Energy division, with an emphasis on the natural gas distribution and transmission segments. Moreover, Chesapeake looks for total capital spending to be in the range of $1.5 billion to $1.8 billion for the five-year period between 2024 and 2028. All told, we believe these objectives are achievable, assuming that corporate finances remain in healthy condition, of course.

The quarterly common stock dividend was raised by 7%, to $0.685 per share. That was made possible, no doubt, by the company's solid capital position. Furthermore, our 3- to 5-year projections indicate that additional steady increases in the distribution will probably take place. The payout ratio over that horizon ought to be in the neighborhood of 40%, which is quite manageable.

The stock is not a standout selection at the moment. Its dividend yield is not exciting when measured against those of other Natural Gas Utility equities tracked by *Value Line*. Moreover, capital gains potential out to 2028-2030 does not impress. That's because the recent quotation is already within our Target Price Range. Meanwhile, these shares are ranked just 3 (Average) for Timeliness.

BUSINESS: New Jersey Resources Corp. is a holding company providing retail/wholesale energy svcs. to customers in NJ, and in states from the Gulf Coast to New England, and Canada. New Jersey Natural Gas had 583,000 cust. at 9/30/24. Fiscal 2024 volume: 158 bill. cu. ft. (16% interruptible, 41% residential, commercial & firm transportation, 43% other). N.J. Natural Energy subsidiary provides unregulated retail/wholesale natural gas and related energy svcs. 2024 dep. rate: 3.2%. Has 1,370 empls. Off./dir. own less than 1% of common; BlackRock, 17.3%; Vanguard, 11.9% (12/24 Proxy). CEO, President & Director: Steven D. Westhoven. Incorporated: New Jersey. Address: 1415 Wyckoff Road, Wall, NJ 07719. Telephone: 732-938-1480. Web: www.njresources.com.

New Jersey Resources reported strong financial and operational results in the second quarter of fiscal 2025. (Year ends September 30th.) Favorable winter conditions and effective execution across its business portfolio led to a significant outperformance of both our top- and bottom-line estimates. Revenues advanced 40%, to $913 million, while earnings per share jumped 26% to $1.78. Principally, the utility's operations benefited from new rates following a recent base rate case settlement. Too, a gain realized on the sale of the company's residential solar portfolio at Clean Energy Ventures added to the earnings outperformance. Although the macroeconomic environment reflected some volatility during the period, and the company had to contend with policy uncertainty in energy markets, we view this result as a strong business-as-usual performance, reflecting NJR's solid fundamental market approach.

We've raised our fiscal 2025 full-year targets, reflecting a strong first half. With the remaining two fiscal quarters consisting of the gas utility's low season, we have a measure of confidence in our full year top- and bottom-line targets of $1.965 billion and $3.30, respectively. The latter is near the high end of management's guidance range.

We expect fiscal 2026 results will be mostly flat. Thanks to a weather tailwind in fiscal 2025, the comparison may be challenging and we expect a soft reset, with both revenues and earnings coming in a bit lower, overall. Operationally, this would reflect the steady advance of NJR's core business verticals.

Long-term growth prospects are defined by several key factors. NJR maintains a solid financial position, with manageable leverage and a strong regional economy as its foundation. Much of the growth we envision is a result of capital spending already planned for the next two years, with infrastructure modernization, energy efficiency and renewable initiatives all representing avenues for expansion.

The stock offers a solid long-term return profile, bolstered by non-regulated businesses that add a measure of growth potential, compared to pure-play utilities.

Earl B. Humes *May 23, 2025*

(A) Fiscal year ends Sept. 30th.
(B) Diluted earnings. Qtly. revenues and egs. may not sum to total due to rounding and change in shares outstanding. Next earnings report due early August.
(C) Dividends historically paid in early Jan., April, July, and October. ■ Dividend reinvestment plan available.
(D) Includes regulatory assets in 2024: $612.6 million, $6.16/share.
(E) In millions, adjusted for 3/15 split.

BUSINESS: NiSource Inc. is a holding company for Northern Indiana Public Service Company (NIPSCO), which supplies electricity and gas to the northern third of Indiana. Customers: 492,690 electric in Indiana, 3.3 million gas in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland, through its Columbia subsidiaries. Revenue breakdown, 2024: electrical, 34%; gas, 63%; other, 3%. Generating capacity, fossil feuls 56%; renewables, 44%. 2024 reported depreciation rates: 3.0% electric, 2.6% gas. Has 7,746 employees. Chairman: Richard L. Thompson. President & Chief Executive Officer: Lloyd Yates. Incorporated: Indiana. Address: 801 East 86th Avenue, Merrillville, Indiana 46410. Telephone: 877-647-5990. Internet: www.nisource.com.

NiSource posted a strong profit in the first quarter of 2025. Revenues expanded 28% to $2.2 billion, driven by regulated revenue growth and the recovery of significant capital investments made over the past few years. This pushed earnings to increase 15% to $0.98 per share, outpacing our target. Representing over half of our full-year earnings estimate, the result reflects stable utility performance across its gas and electric operations. Management noted the success of capturing efficiency gains from recent investments in technology, with artificial intelligence-optimized scheduling resulting in an impressive 60,000 hours improvement in measured labor productivity. Regulatory progress also supported results, with several successful rate cases contributing to the quarter's strong earnings.

The near-term outlook is somewhat mixed. Continued improvements may face pressure from uncertain regulatory proceedings. Particularly, a new proposal in Indiana is currently pending in settlement discussions. Too, a shifting landscape for renewables investment could affect the company's strategic priorities, especially as it seeks to decomission its legacy coal generation plants over the next few years. On a positive note, management has taken a proactive approach to tariff-related inflation risks by advancing its procurement for key infrastructure, however, broader economic developments may influence future costs. As a result, we are tentatively expecting mid- to high-single-digit earnings growth over the next few years.

NiSource is well positioned to benefit from long-term trends. Regional economic development, including the buildout of data centers and the potential for manufacturing reshoring, along with infrastructure modernization, provide promising tailwinds for energy demand and opportunities for investment. However, we are uncertain about the future for its ambitious clean-energy transition strategy, given the potential for policy shifts. Overall, the utility is likely to maintain a positive trajectory to late decade.

Despite the business' strengths, these untimely shares offer below-average capital appreciation potential to late decade, overall.

BUSINESS: Northwest Natural Holding Co. distributes natural gas to more than 800,000 customers in Oregon (88% of customers) and in southwest Washington state. Principal cities served: Portland and Eugene, OR; Vancouver, WA. Company buys gas supply from Canadian and U.S. producers; has transportation rights on Northwest Pipeline system. Owns local underground storage. Gas margin breakdown: residential, 65%; commercial, 25%; industrial, 6%; other, 4%. Also operates water and wastewater services across six states. Employs 1,452. BlackRock Inc. owns 16.1% of shares; Vanguard, 10.8%; Off./Dir., .93% (4/25 proxy). CEO: Justin B. Palfreyman. Inc.: Oregon. Address: 220 NW 2nd Ave., Portland, OR 97209. Tel.: 503-226-4211. Internet: www.nwnatural.com.

Northwest Natural posted a strong start to what we expect will be a wide recovery performance in 2025. Driven by the resolution of regulatory lag in the last Oregon gas utility rate case, which was settled in October, earnings per share advanced a remarkable 35% to $2.28 in the March period. This long-awaited decision allowed for the recovery of significant capital investments made over the past few years, while seasonal strength in gas demand boosted the result. Organic customer growth across all utilities added up to roughly 2.2%, while the total count increased 9.6% thanks to acquisitions, including that of SiEnergy in January, which added 73,000 gas meters in Texas. The company has been opportunistically expanding into new geographies and verticals over the past few years, including water and wastewater, to help diversify its operating footprint. With the remainder of 2025 in mind, the recent rate case should underpin a majority of the earnings recovery we have envisioned. However, management expects that expansion into water and the SiEnergy acquisition will add roughly $0.25 - $0.30 per share.

Growth will likely be more moderate and consistent both in 2026 and out to late decade. After the expected recovery in 2025, growth will probably be limited to just over 3% in 2026. The company has already filed another rate case in Oregon, seeking a revenue increase of $60 million, or 5.8%. Further out, leadership is positioned to continue its capital investment cycle, targeting system upgrades and reinforcement across the main gas utility and growing number of subsidiaries, which should amount to multiple smaller rate adjustments. Also, although the company is likely to remain active on the acquisition front, with several bolt-on deals already inked, we won't include these in our projections until they are completed. We expect these initiatives to gas up the company's growth over the 3- to 5-years.

Northwest's multi-faceted approach to reinvigorating growth should pay off with above-average long-term upside from the recent quotation. Risks are a modest consideration, with regulatory and operational complexities potentially creating headwinds.

The shares of ONE Gas, Inc. began trading "regular-way" on the New York Stock Exchange on February 3, 2014. That happened as a result of the separation of ONEOK's natural gas distribution operation. Regarding the details of the spinoff, on January 31, 2014, ONEOK distributed one share of OGS common stock for every four shares of ONEOK common stock held by ONEOK shareholders of record as of the close of business on January 21. It should be mentioned that ONEOK did not retain any ownership interest in the new company.

BUSINESS: ONE Gas, Inc. provides natural gas distribution services to more than two million customers. There are three divisions: Oklahoma Natural Gas, Kansas Gas Service, and Texas Gas Service. The company purchased 149 Bcf of natural gas supply in 2024, compared to 160 Bcf in 2023. Total volumes delivered by customer (fiscal 2024): transportation, 60.7%; residential, 28.6%; commercial & industrial, 10.1%; other, .6%. ONE Gas has around 3,900 employees. BlackRock owns 14.5% of common stock; The Vanguard Group, 11.6%; American Century Investment, 8.0%; officers and directors, 1.2% (4/25 Proxy). CEO: Robert S. McAnnally. Incorporated: Oklahoma. Address: 15 East Fifth Street, Tulsa, Oklahoma 74103. Tel.: 918-947-7000. Internet: www.onegas.com.

ONE Gas got off to an auspicious start in 2025. First-quarter earnings per share advanced 13.1%, to $1.98, relative to the prior-year tally of $1.75. That stemmed partially from benefits from new rates. Another contributing factor was higher residential sales, which reflected net customer growth in both Oklahoma and Texas. But increased depreciation & amortization expense, due to additional capital investments, provided somewhat of an offset to the good results. Also, employee-related costs climbed attributable, to a certain degree, to planned investments in the company's workforce. Still, it seems that full-year profits will grow 10%, to $4.30 a share, versus 2024's $3.91 total. Turning to 2026, the bottom line might rise at a slower (though still respectable) 5% rate, to $4.50 per share, given the tough comparison.

Finances are sound. When the March period concluded, cash on hand resided at $19.3 million (excluding $8.9 million in restricted cash). Furthermore, ONE Gas possesses a $1.3 billion revolving credit facility maturing in March, 2028. Also, at the end of the first quarter, long-term debt was a manageable 43% of total capital and short-term borrowings of $841.7 million did not appear to be a big hurdle. So, the company should continue to handle its obligations with little difficulty.

This year's capital expenditures, including asset removal costs, are expected to be roughly $750 million. (That would be moderately below the 2024 figure of $762.1 million.) The majority of the budget is devoted to system integrity and pipeline replacement projects. It's worth mentioning that the energy firm projects total spending to be $4.0 billion between 2025 and 2029, with around the same percentage of funds allocated to where they are at present. These goals seem achievable assuming, of course, that the balance sheet remains in solid shape.

What is an investor to do? The equity's dividend yield looks decent when stacked against those of other stocks in *Value Line's* Natural Gas Utility group. But at the recent quotation, capital gains potential for the pull to 2028-2030 is not alluring. These shares are ranked just 3 (Average) for Timeliness, as well.

Frederick L. Harris, III *May 23, 2025*

BUSINESS: Southwest Gas Holdings, Inc. is the parent holding company of Southwest Gas. Centuri Group spun-off in IPO 4/22/24. Southwest Gas is a regulated gas distributor serving 2.3 million customers in Arizona, Nevada, and California. 2024 revenue mix: residential 68%; small commercial, 20%; large commercial and industrial, 5%; transportation, 7%. Southwest has 2,435 employees as of 12/31/24; Centuri has 8,687. Off. & dir. own .5% of common stock; Carl C. Icahn, 13.4%; BlackRock, 12.9%; The Vanguard Group, 10.1%; Corvex Management, 6.6% (3/25 Proxy). Chairman: Michael J. Melarkey. Pres. & CEO: Karen S. Haller. Inc.: DE. Addr.: 8360 S. Durango Drive, P.O. Box 98510 Las Vegas, Nevada 89193. Telephone: 702-876-7237. Internet: www.swgas.com.

Southwest Gas has posted good but slightly underwhelming recent results. The company reported earnings per share of $1.58, reflecting a record quarterly profit figure, but still landed below our target of $1.75. The December period figure was similarly just below our expectation. For now, the ongoing separation from the Centuri Group poses an ongoing headwind to the bottom line. Southwest still maintains a majority interest in the company, post IPO, and partially recognizes its losses, which amounted to $18 million in the March quarter. The utility has performed fairly well, supported by new rates implemented in Arizona and Nevada, along with steady customer growth, having added roughly 40,000 meters in a year. This has helped the utility's operating margin to expand by nearly $40 million. Lower operating and maintenance costs also benefited, but higher depreciation and interest expenses served to offset somewhat.

We've lowered our full-year 2025 targets, but still expect good results. As a result of ongoing struggles at the Centuri Group, we have cut a dime from our bottom-line estimate, now at $3.50 per share. However, the gas utility is going strong, and we still expect overall share-earnings growth of over 25% this year, with net income around $255. However, results will likely depend on management's plans for divesting from its position in Centuri. It's worth noting that we do not take divestitures into account when presenting our forecasts, until such actions are completed. As a result, it is likely that our estimates could prove conservative.

The utility is well positioned to capitalize on investment opportunities. Market dynamics in the company's territories remain favorable, bolstered by population growth and strength in sectors such as hospitality, manufacturing, and mining. Management expects to invest more than $4 billion over the next years, providing a significant infrastructure platform from which to generate long-term returns.

The stock appears to offer below average return prospects over the 3- to 5-year horizon, however. The shares remain unranked for Timeliness, due to the ongoing corporate restructuring.

BUSINESS: Spire Inc., formerly known as the Laclede Group, Inc., is a holding company for natural gas utilities, which distributes natural gas across Missouri, including the cities of St. Louis and Kansas City, Alabama, and Mississippi. Has roughly 1.7 million customers. Acquired Missouri Gas 9/13, Alabama Gas Co 9/14. Utility therms sold and transported in fiscal 2024: 3.1 bill. Revenue mix for regulated operations: residential, 66%; commercial and industrial, 24%; transportation, 5%; other, 5%. Officers and directors own 2.3% of common shares; BlackRock, 11.9%; The Vanguard Group, 9.6% (12/24 proxy). Chairman: Rob L. Jones; CEO: Scott Doyle. Inc.: Missouri. Address: 700 Market Street, St. Louis, Missouri 63101. Tel.: 314-342-0500. Internet: www.spireenergy.com.

In April, Spire Inc. announced that its CEO Steve Lindsey was "terminated without cause." The company added, however, that the move was not because of some material or unexpected financial event. In any case, his successor Scott Doyle had been serving as the chief operating officer. (When Mr. Lindsey took a leave of absence earlier this year for health-related reasons, he filled in.) Prior to joining Spire in January of 2024, Mr. Doyle was executive vice president of utility operations at CenterPoint Energy. All things considered, we believe that the company is in capable hands.

Results have been lackluster thus far in fiscal 2025 (concludes September 30th). First-half profits of $4.85 a share were 5% lower than the previous year's $5.10 tally. That was due partly to reduced earnings from the Gas Marketing arm, reflecting less favorable market conditions combined with greater transportation and storage fees. The number of diluted shares outstanding rose, too. But the Gas Utility division and Midstream unit had improved performances during the period. Nevertheless, for the whole year, we expect Spire's bottom line to slip about 3%, to $4.05 per share, compared to fiscal 2024's $4.19 total. Regarding fiscal 2026, though, earnings per share may rebound around 5%, to $4.25. That is based, to some extent, on our assumption that the business climate is better. Improvements in operating efficiencies should also help.

The capital spending budget for this year was increased from $790 million to $840 million. (That's slightly below the fiscal 2024 level of $861.3 million.) The majority of the funds are being used for infrastructure upgrades, the installation of advanced meters, plus new business development initiatives at the utilities. Management adds that it expects total capital expenditures from fiscal 2025 through fiscal 2034 to be $7.4 billion. If finances stay healthy, the company ought to have little trouble achieving those goals.

These shares' big draw is the dividend yield. It stacks up nicely versus other Natural Gas Utility stocks covered by *Value Line*. Also, we expect more steady hikes in the payout out to 2028-2030.

Frederick L. Harris, III *May 23, 2025*

(A) Fiscal year ends Sept. 30th.
(B) Based on diluted shares outstanding. Next earnings report due late July.
(C) Dividends paid in early January, April, July, and October. ■ Dividend reinvestment plan available.
(D) Includes deferred charges. In '24: $1,171.6 mill., $20.31/sh.
(E) In millions.
(F) Quarterly earnings may not sum due to rounding or change in shares outstanding.

BUSINESS: Alliant Energy Corporation is the parent company of Interstate Power and Light Company (IPL) and Wisconsin Power and Light Company (WPL). Together, the utility subsidiaries serve approximately one million electric and 430,000 natural gas customers in Wisconsin and Iowa. Electric revenue: residential, 37%; commercial, 24%; industrial, 28%; wholesale, 8%; other, 3%. Generating sources: coal, 18%; gas, 41%; wind, 16%; other, 1%; purchased, 24%. Fuel costs: 19% of revenues. '24 reported depreciation rates: 2.9%-6.1%. Has 2,998 employees. President & CEO: Lisa M. Barton. Incorporated: Wisconsin. Address: 4902 North Biltmore Lane, Madison, Wisconsin 53718-2148. Telephone: 608-458-3311. Internet: www.alliantenergy.com.

Alliant Energy could enjoy strong power demand across its two-state service area over the next several years. That's, in part, thanks to the success that the electric utility and its municipal partners are having in attracting new business to Wisconsin and Iowa. To wit, in the March quarter, Alliant inked an additional energy supply agreement (ESA) with a data center client operating out of the Big Cedar Industrial Center in Cedar Rapids, Iowa. It also recently cinched an ESA with a data center customer in Beaver Dam, Wisconsin.

Up next is securing regulatory approval for the individual customer rates that Alliant plans to charge these data center customers. As we understand it, the Iowa Utility Commission was recently reviewing the first of Alliant's data-center submissions.

The utility's 2025-2029 capital plan totaled approximately $11.5 billion, as of mid-May. A majority of the debt- and equity-funded spending has been earmarked for renewable-energy and energy-storage projects. Alliant also expects to add natural gas-fueled capacity. That said, we do worry some that it may have to rely temporarily on purchased power to meet its growing needs.

Alliant is vulnerable to potential changes in government policy at it relates to tax credits for renewable power generation. The utility regularly sells the tax credits that it earns from producing clean power. However, that income stream seems increasingly at risk under the new Trump Administration and possible changes to or rollbacks of the Biden-era Inflation Reduction Act. Still, Alliant is apparently able to request rate relief under certain circumstances, including the termination of these tax credits.

Alliant Energy shares are an untimely selection for relative year-ahead price performance. And with the stock up 23% in price over the past 12 months, long-term appreciation potential no longer stands out. Still, the utility company boasts an attractive, well-covered dividend that could hold some appeal for income-oriented accounts (current yield: 3.3% versus 2.3% for the *Value Line* universe as a whole).

BUSINESS: American Electric Power Company Inc. (AEP), through 10 operating utilities, serves 5.5 million customers in Arkansas, Kentucky, Indiana, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia, & West Virginia. Has a transmission subsidiary. Electric revenue breakdown: residential, 43%; commercial, 23%; industrial, 18%; wholesale, 10%; other, 6%. Sold commercial barge operation in '15. Generating sources not available. Fuel costs: 33% of revenues. '23 reported depreciation rates (utility): 2.6%-12.5%. Has approximately 16,700 employees. Chief Executive Officer: William J. Fehrman. Incorporated: New York. Address: 1 Riverside Plaza, Columbus, Ohio 43215-2373. Telephone: 614-716-1000. Internet: www.aep.com.

American Electric Power looks set to post another year of solid results. First-quarter numbers came in well above our expectations, with earnings per share of $1.54 versus our estimate of $1.40. Revenue grew 9.2% year-over-year to $5.46 billion, led by a 12.3% increase in commercial load, largely driven by continued growth in the data center sector. The company reaffirmed its 2025 profit target range of $5.75-$5.95 a share and long-term growth target of 6%-8%. Our 2025 profit estimate now stands at $5.90, up a nickel from our prior view. Recent regulatory approvals in Indiana, Kentucky, and West Virginia reinforce AEP'S strong positioning.

We continue to expect strong earnings next year. Our 2026 target remains unchanged at $6.30 per share, which is at the top end of management's long-term growth range. With demand tailwinds, regulatory support, and a clear capex roadmap, we see strong visibility for sustained earnings and dividend growth moving forward. The utility's $54 billion capital investment plan through 2029 remains a major growth engine, targeting upgrades across transmission, generation, and distribution. Management expects to add 20 GW of new power load through the end of the decade. These trends are primarily being driven by data center buildouts and industrial expansions across key service territories in Ohio and Texas.

The financial foundation remains strong. The company completed a $2.3 billion forward equity offering to meet funding needs through 2029. The utility holds a strong Financial Strength (A) rating, and a top-notch Price Stability (100) score. The dividend yield, which remains a hallmark of AEP's investor appeal, stands at 3.7%. The company continues to target a 60%-70% payout ratio, which supports consistent dividend growth even as capital investments ramp up.

These shares are best suited for conservative and income-oriented investors. The stock is ranked 1 (Highest) for Safety, and the dividend likely remains AEP's most notable feature. The utility's Timeliness rank has been upgraded one notch to 3 (Average) since our last review in early March.

BUSINESS: Ameren Corporation is a holding company formed through the merger of Union Electric and CIPSCO. Has 1.2 million electric and 127,000 gas customers in Missouri; 1.2 million electric and 813,000 gas customers in Illinois. Discontinued nonregulated power-generation operation in '13. Electric revenue breakdown: residential, 49%; commercial, 34%; industrial, 8%; other, 9%. Generating sources: coal, 73%; nuclear, 11%; hydro & other, 9%; purchased, 7%. Fuel costs: 25% of revenues. Has approximately 9,250 employees. Chairman: Warner L. Baxter. President & CEO: Martin J. Lyons, Jr. Inc.: Missouri. Address: One Ameren Plaza, 1901 Chouteau Ave., P.O. Box 66149, St. Louis, MO 63166-6149. Tel.: 314-621-3222. Internet: www.ameren.com.

Ameren's earnings are on track to rise steadily in 2025. The company posted first-quarter profits of $1.07 per share, which came in ahead of our $1.00 a share estimate, and the $0.98 tally in the year-ago period. Growth was driven by infrastructure investments and colder weather, which boosted retail sales at Ameren Missouri. First-period results were partially offset by higher interest and storm-related expenses, but remain consistent with Ameren's full year target of $4.85-$5.05 per share. Our 2025 profit estimate is staying put at $4.95, the midpoint of that range. Execution across all business segments continues to reflect the strength of Ameren's business and long-term planning.

We remain encouraged by the utility's prospects moving forward. The updated Integrated Resource Plan includes over 1,200 megawatts of new generation, and the company is accelerating investments in solar, natural gas, and storage. Ameren signed construction agreements tied to 2.3 GW of future data center demand, up from 1.8 GW just months ago. A constructive electric rate settlement in Missouri will support near-term returns while keeping rates below regional averages. The company expects a large-load rate structure filing soon. Our 2026 profit forecast is unchanged at $5.30 per share, representing a 7% year-over-year increase. From 2025 through 2029, Ameren sees $63 billion in investment opportunities, backed by 9.2% annual rate base growth.

Dividend growth remains reliable and well supported. Ameren raised its quarterly dividend by 6% in February, now paying $0.71 per share. This marks the second-consecutive year of 6% increases, in line with management's target of 6%-8% annual dividend growth. The current payout ratio sits comfortably within the 55%-70% range. With continued visibility into rate base expansion, dividend growth should remain sustainable well into the next decade.

Although untimely, these shares will likely appeal to conservative accounts. This stock is ranked Highest for Safety. And while the stock yields 3.0%, slightly below the utility group average, it has a strong track record of payouts.

BUSINESS: Duke Energy Corporation is a holding company for utilities with 8.4 mill. elec. customers in NC, FL, IN, SC, OH, and KY, and 1.7 mill. gas customers in OH, KY, NC, SC, and TN. Owns independent power plants & has 17.5% stake in National Methanol in Saudi Arabia. Acq'd Progress Energy 7/12; Piedmont Natural Gas 10/16; discontinued most int'l ops. in '16. Electric revenue breakdown: residential, 34%; commercial, 31%; industrial, 18%; other, 17%. Generating sources: gas, 35%; nuclear, 27%; coal, 14%; other, 2%; purchased, 22%. Fuel costs: 32% of revs. '24 reported deprec. rate: 3.0%. Has 26,400 employees. Chairman: Ted Craver CEO: Harry Sideris. Inc.: DE. Addr.: 525 South Tryon St., Charlotte, NC 28202-1803. Tel.: 800-488-3853. Int.: www.duke-energy.com.

We're looking for solid intermediate-term results from Duke Energy to continue. We think this year and next may well mark the ninth- and tenth-consecutive years of higher annual core operating earnings gains. The utility is likely to continue to benefit from solid weather-adjusted electric volume growth and constructive regulatory outcomes. Good population growth in Duke's service areas, at two to four times the national average of 0.5%, is a key part of the story. This is largely being driven by healthy migration trends to the Carolinas and Florida, where a generally lower cost of living and the temperate coastal climate are draws. The company is also likely to keep benefiting from rate relief (higher regulated price adjustments) as discussed below. Leadership has introduced its 2025 adjusted earnings-per-share target of $6.17-$6.42 and extended its long-term bottom-line growth rate of 5%-7% per annum through 2029 off of the $6.30 midpoint of this year's range.

The company has been successful on the regulatory front of late. Florida officials approved a $203 million revenue increase this year and $59 million more in 2026. Up to $141 million for 12 new solar plants was approved to be paid out as they are completed. The settlement dictates that Duke uses roughly $50 million in federal tax credits to offset the need for a rate hike in 2027. Meanwhile, the final order in Duke's South Carolina regulatory decision became effective in August of last year and will increase electric delivery rates by 13% over a two-year span from then. The decision includes $215 million of new investments in highly efficient natural gas, solar, nuclear, and hydroelectric units over a seven-year period. Prices in North Carolina recently increased by 2.9%, and Indiana rates were lifted by 8.0%. An Ohio regulatory decision is pending.

Duke stock has outperformed the peer group so far this year. Utilities tend to do well when the economy appears to be on shaky ground. A flight to quality large-cap, low-risk plays within the group has DUK's share price up 12% year to date and 22% over the past 12 months. As a result, much of the earnings growth we're projecting is already baked in, leading to below-average total return potential.

BUSINESS: Edison International is a holding company for Southern California Edison Company (SoCal Edison), which supplies electricity to 5.28 mill. customers in a 50,000 sq. mi. area in central, coastal, & southern CA (excl. Los Angeles & San Diego). Edison Energy is an energy svcs. co. Disc. Edison Mission Energy (independent power producer) in '12. Elec. rev. breakdown: residential, 40%; commercial, 43%; industrial, 3%; other, 14%. Generating sources: nuclear, 9%; gas, 5%; hydroelectric, 6%; purchased, 80%. Power costs: 34% of revs. '24 reported depr. rate: 4.1%. Employs 13,500. Board Chair: Peter J. Taylor. President & CEO: Pedro J. Pizzaro. Inc.: CA. Address: 2244 Walnut Grove Ave., P.O. Box 976, Rosemead, CA 91770. Tel.: 626-302-2222. Internet: www.edison.com.

Edison International is being sued for allegedly igniting the Eaton Fire, one of the two more destructive blazes that rampaged through Los Angeles County in January. Lawsuits have been filed against the company by firms representing residents, shareholders, insurers, the county, and the cities of Pasadena and Sierra Madre. While investigations are ongoing, the utility's equipment is being thoroughly considered as a potential ignition source of the wildfire. The company has acknowledged a possible link, but has not determined a definitive cause yet. The origin of the similarly destructive Palisades Fire began outside of Edison's service area, but it has still been named in lawsuits related to that blaze. The Eaton Fire destroyed over 9,400 structures and resulted in 18 fatalities, while the Palisades Fire wrecked more than 6,800 structures and led to 12 deaths. Combined, tens of thousands of acres were burned and significant public infrastructure was ruined. Property damages alone are estimated to be as high as $55 billion. It may take several more months before authorities' investigations conclude.

The California Wildfire Fund of 2019 (CWF) will probably limit Edison's potential liability. The CWF serves as self insurance for the state's three major utilities. It was funded by the companies and their customers and contains $21 billion. Under most circumstances the CWF would prevent utilities from suffering major material losses beyond the first $1 billion of damages per incident, which is like a deductible and is not covered. Hence, even if EIX's equipment is found to be at fault for the Eaton Fire and possibly the smaller Hurst blaze, $2 billion would not be too problematic for the company's balance sheet. It pales in comparison to the $11 billion in market capitalization lost since early January. The problem is this exercise may not be as straightforward as that. There are uncertainties. The CWF does not fully cover negligence. Also, the CWF is likely to be largely depleted and will need to be replenished. There is no predefined mechanism for that.

This stock is not timely. Sentiment may remain poor for quite a while, with ongoing headline risk a factor to consider.

BUSINESS: Entergy Corporation supplies electricity to 3 million customers through subsidiaries in Arkansas, Louisiana, Mississippi, Texas, and New Orleans (regulated separately from Louisiana). Distributes gas to 206,000 customers in Louisiana. Is selling its last nonutility nuclear unit (shut down 5/22). Electric revenue breakdown: residential, 37%; commercial, 24%; industrial, 27%; other, 12%. Generating sources: gas, 68%; nuclear, 22%; coal, 9%; hydro and solar, 1%. Fuel costs: 32% of revenues. '24 reported depreciation rate: 2.8%. Has 11,707 employees. Chairman & CEO: Leo P. Denault. Incorporated: Delaware. Address: 639 Loyola Avenue, P.O. Box 61000, New Orleans, Louisiana 70161. Telephone: 504-576-4000. Internet: www.entergy.com.

Entergy reported a decent improvement in its first-quarter results. Revenues expanded 2% year over year to $2.849 billion, as the company delivered 13% more residential usage in its coverage area during the quarter. This benefited from cooler weather across the area. Costs related to energy generation declined considerably as Entergy purchased less fuel, while Entergy recorded higher costs due to growth in its capital structure. Interest costs rose due to a greater debt load. Even so, these factors netted a gain of $0.82 per share during the quarter.

The company remains on track to deliver a solid performance for the remainder of the year. A few major projects are expected to come online, while we anticipate continued demand from the residential sector as more consumers move into the coverage area. However, Entergy received approval to sell its local distribution companies in the Louisiana coverage area, which may be a headwind. Cost growth will likely occur at a steady pace, while we expect interest costs to rise due to a large-scale capital buildout financed by debt. All told, we estimate that earnings per share will be $3.35 in 2025.

Long-term expansion is likely to benefit from several trends. The company has continued to win new industrial customers, including a recently announced low-carbon blue ammonia facility from CF Industries, as well as a manufacturing plant in the company's Louisiana territory, announced by Hyundai Motor Group. Other industrial activities are likely to occur, helping to boost demand, especially as these plants hire new workers, which in turn will stimulate residential usage. We expect growth in data centers to occur, thereby furthering demand, but interest expenses should rise. Greater infrastructure buildouts in the years ahead will lead to increased administrative and maintenance expenses. All told, we think that earnings per share will advance to $3.60 in 2026 and $4.20 by 2028-2030.

Shares of Entergy are neutrally ranked for Timeliness. The stock holds unimpressive 3- to 5-year appreciation potential. However, the dividend yield is above average. Thus, we believe this equity is best suited for income seekers.

BUSINESS: Evergy, Inc. was formed through the merger of Great Plains Energy and Westar Energy in June of 2018. Through its subsidiaries (now doing business under the Evergy name), provides electric service to 1.6 million customers in Kansas and Missouri, including the greater Kansas City area. Electric revenue breakdown: residential, 32%; commercial, 27%; industrial, 15%; wholesale, 13%; other, 13%. Generating sources: coal, 54%; nuclear, 17%; purchased, 29%. Fuel costs: 28% of revenues. '24 reported deprec. rate: 3%. Has 4,900 employees. Chairman: Mark A. Ruelle. President & CEO: David A. Campbell. COO: Kevin E. Bryant. Inc.: Missouri. Address: 1200 Main Street, Kansas City, Missouri 64105. Tel.: 816-556-2200. Internet: www.evergy.com.

Evergy appears set for solid earnings growth in 2025. The company reported first-quarter profits of $0.54 a share, nearly matching results from a year ago but falling short of our $0.65 estimate. Regulatory recovery on infrastructure investment supported results, though industrial activity was negatively impacted by unplanned maintenance and severe winter storms. Management reaffirmed its full-year earnings-per-share target of $3.92-$4.12, and we remain confident in our 2025 forecast, which is staying put. The Kansas rate case, which seeks a $196 million increase, is progressing and could take effect by September.

We continue to see multiple catalysts for mid- and long-term growth. Evergy is investing in two new 705 MW combined-cycle gas plants in Kansas, scheduled for completion in 2029 and 2030. The utility also expects strong customer growth, particularly from advanced manufacturing and data centers. Load growth is forecasted at 2%-3%, with potential upside depending on finalized contracts. Legislative progress in both Kansas and Missouri is providing a tailwind for capital investments and grid modernization. Notably, new policies are supporting wildfire mitigation efforts and data center readiness, giving Evergy a stronger competitive position in the central U.S. energy landscape. Our 2026 projection is staying put at $4.25 per share, implying a 5% year-over-year gain, within Evergy's long-term 4%-6% bottom-line growth target.

The dividend yield looks to be the stock's most compelling feature. The company recently declared a quarterly payout of $0.6675 per share, continuing its trend of consistent returns to shareholders. The current yield of 4.1% stands above the utility sector average.

Conservative, income-oriented accounts will likely want to take a closer look here. The stock is ranked 2 (Above Average) for Safety, and holds high scores for Price Stability (95) and Earnings Predictability (85). The utility has a proven track record of dividend increases and we look for more of the same in the future. Meanwhile, Evergy has been downgraded one notch in Timeliness to Below Average (4).

BUSINESS: FirstEnergy Corp. is a holding company for Ohio Edison, Pennsylvania Power, Cleveland Electric, Toledo Edison, Metropolitan Edison, Penelec, Jersey Central Power & Light, West Penn Power, Potomac Edison, & Mon Power. Provides electric service to about 6.3 million customers in OH, PA, NJ, WV, MD, & NY. Acq'd Allegheny Energy 2/11. Electric revenue breakdown: residential, 60%; commercial, industrial & other, 40%. Purchases most of its power. Power costs: 32.5% of revenues. 2024 reported depreciation rate: 2.9%. Employs about 12,300. Chair, President and Chief Executive Officer: Brian X. Tierney. Incorporated: Ohio. Address: 76 South Main Street, Akron, Ohio 44308-1890. Telephone: 800-736-3402. Internet: www.firstenergycorp.com.

FirstEnergy changed how it reports adjusted (non-GAAP) earnings per share. According to leadership, the company has made substantial strides in improving its core regulated earnings over the past few years, but the growth has not come through clearly because of the impact of non-core components of historical operating profits. To rectify the situation, FirstEnergy will report adjusted earnings for its distribution, integrated, standalone transmission, and corporate segments, excluding the impact on profits from the pension and the company's interest in the non-core Signal Peak coal mine. We're not restating prior-year figures, but under the new format, last year's adjusted earnings would have been reported as $2.37 per share, a 7.7% gain from the comparable $2.20 pro forma level in 2023. Leadership's target for adjusted earnings this year is $2.40-$2.60 per share, but given the strong first-quarter results our call stands at $2.55. Next year, we're projecting core operating earnings of $2.70 per share, as the company continues to benefit from constructive rate settlements across much of its Mid-Atlantic service area.

The company's Ohio rate case has dragged on and has been met with a fair amount of political opposition. A year ago, FirstEnergy filed for higher rates in the state for the first time since the 2020 bribery scandal there came to light. While new leadership has done a good job of turning the page on that chapter of the company's history, the public is loath to forget it, and requests for higher prices make for good headlines in the local press. FirstEnergy requested a $190 million hike in annual revenue, which was met with a recommendation for an $8.5 million increase from the Public Utilities Commission of Ohio staff. The Ohio Consumer's Counsel, the state's consumer watchdog agency, has been actively involved in the case, suggesting significant price cuts. The company has since amended its request to $183 million. A final decision is expected by year's end. Ohio represents about 17% of FirstEnergy's rate base.

This issue is untimely. The 4.2% dividend yield compares favorably to the 3.6% industry median. But 3- to 5-year total return potential does not stand out.

BUSINESS: IDACORP, Inc. is a holding company for Idaho Power Company, a regulated electric utility that serves 649,000 customers throughout a 24,000-square-mile area in southern Idaho and eastern Oregon (population: 1.4 million). Most of the company's revenues are derived from the Idaho portion of its service area. Revenue breakdown: residential, 38%; commercial, 22%; industrial, 15%; irrigation, 11%; other, 14%. Generating sources: hydro, 54%; steam fired, 18%; gas, 28%; purchased,33%. Fuel costs: 14% of revenues. '24 depreciation rate: 12.2%. Has 2,141 employees. Chairman: Dennis L. Johnson. President & CEO: Lisa A. Grow. Incorporated: Idaho. Address: 1221 W. Idaho St., Boise, Idaho 83702. Telephone: 208-388-2200. Internet: www.idacorpinc.com.

IDACORP continues to enjoy healthy share earnings despite elevated infrastructure costs. First-quarter results benefited from strong customer growth, recent rate cases, and the expected application of federal tax credits through Idaho's regulatory framework. These tailwinds helped offset rising depreciation and financing costs tied to its expanding infrastructure base.

We anticipate earnings momentum to carry through the rest of the year. Management reaffirmed its full-year guidance of $5.65-$5.85 per share based on assumptions of typical weather and stable power supply costs. The utility also expects to use $60 million to $77 million in additional tax credits through 2025, helping ease the cost of service for customers. Rate increases implemented at the start of the year should also lend support. In all, we estimate 2025 earnings to land near the high end of guidance, around $5.80, with a further increase to $6.30 in 2026, reflecting annual growth of more than 5% and 8%, respectively.

IDACORP has mapped out a substantial capital investment strategy. The utility plans to invest $1.0 billion to $1.1 billion in 2025, between $1.25 billion and $1.35 billion in 2026, and $3.1 billion to $3.6 billion from 2027 to 2029. These funds will support a broad range of projects, including three major transmission lines, resource procurement for new generation, and continued enhancements to system reliability. The company's 2025 Integrated Resource Plan, recently filed with regulators, highlights the urgent need for additional energy resources, battery storage, and efficiency programs as it prepares for one of its most rapid demand expansions. Over the next 20 years, peak demand is expected to rise nearly 45%, or roughly 1,700 megawatts, with more than half of that increase arriving in the next five years.

That said, IDACORP's investment appeal may remain limited in the near term. At the current quotation, the equity is ranked to underperform the broader market averages. At 3.0%, the dividend yield is below average for the utility sector, and capital appreciation potential appears subpar.

Emma Jalees *July 18, 2025*

BUSINESS: OGE Energy Corp. is a holding company for Oklahoma Gas and Electric Company (OG&E), which supplies electricity to 879,000 customers in Oklahoma (84% of electric revenues) and western Arkansas (8%); wholesale is (8%). Owns 3% of Energy Transfer's limited partnership units. Electric revenue breakdown: residential, 44%; commercial, 25%; industrial, 11%; oilfield, 10%; other, 10%. Generating sources: gas, 25%; coal, 21%; wind, 6%; purchased, 48%. Fuel costs: 58% of revenues. '24 reported depreciation rate (utility): 2.6%. Has 2,200 employees. Chairman, President and Chief Executive Officer: Sean Trauschke. Incorporated: Oklahoma. Address: 321 North Harvey, P.O. Box 321, Oklahoma City, OK 73101-0321. Tel.: 405-553-3000. Internet: www.oge.com.

OGE Energy is positioned for another year of solid earnings growth. The utility posted first-quarter earnings of $0.31 per share, ahead of our $0.25 estimate and up sharply from $0.09 a year ago. OG&E, the utility subsidiary, contributed nicely, driven by strong demand and lower operating expenses, partially offset by holding company losses. Overall, residential and commercial loads rose 3% and 28% respectively, leading to 8% weather-normalized load growth. A 1% increase in customer count, paired with ongoing grid modernization, also supported results. The company reaffirmed its full year earnings target range of $2.21-$2.33, and our 2025 estimate remains unchanged at $2.30 per share.

We are monitoring potential regulatory hurdles in Oklahoma. While the Oklahoma Corporation Commission approved a $127 million rate increase last year, a new legal challenge could affect the implementation. State lawmakers have petitioned the Oklahoma Supreme Court to disqualify Commissioner Todd Hiett, who cast the deciding vote. The case, if successful, could delay or unwind the rate decision. Meanwhile, OGE is pursuing additional regulatory filings in both Oklahoma and Arkansas tied to resource planning and customer growth.

The long-term outlook for the utility remains bright. Management reaffirmed its long-term earnings growth goal of 5%-7%, and we are maintaining our 2026 forecast of $2.45 per share, which reflects 7% year-over-year growth. Load expansion tied to data center clients, including Google, could provide further upside as agreements finalize and generation needs are submitted to regulators. Proactive supply chain planning, including advance transformer orders through 2027, helps mitigate inflationary and logistics risks. OGE's competitive rates in Oklahoma and Arkansas position it favorably in a rising demand environment.

Income-oriented investors may want to take a closer look. Indeed, the dividend yield of 3.9% continues to stand above the high industry-wide average. Meanwhile, the utility was recently downgraded one notch to Below Average (4) for Timeliness.

BUSINESS: Pinnacle West Capital Corporation is a holding company for Arizona Public Service Company (APS), which supplies electricity to 1.4 million customers in most of Arizona, except about half of the Phoenix metro area, the Tucson metro area, and Mohave County in northwestern Arizona. Discontinued SunCor real estate subsidiary in '10. Electric revenue breakdown: residential, 50%; commercial/industrial, 46%; other, 4%. Generating sources: gas, 24%; nuclear, 21%; coal, 14%; renewables, 19%; purchased, 22%. Fuel costs: 36% of revenues. '24 reported deprec. rate: 3.13%. Has 6,403 employees. Chairman, President & CEO: Ted Geisler. Inc.: AZ. Address: 400 North Fifth St., P.O. Box 53999, Phoenix, AZ 85072-3999. Tel.: 602-250-1000. Internet: www.pinnaclewest.com.

Pinnacle West Capital's profits will likely be down in 2025. The utility benefited from a record heat wave last year in Arizona that lifted cooling demand, helping to send retail sales volume up 7.4%. Leadership affirmed its 2025 weather-normalized earnings projection of $4.40 to $4.60 per share. This range takes into account the first quarter loss, which was largely due to higher planned operations and maintenance expense related to power plant overhauls. The extra work was needed to ensure reliability during peak seasonal demand. Still, we think the company will prove to be a bit too conservative in its forecast. Sweltering heat in 2022 and 2023, followed by an even more oppressive stretch last year, doesn't seem like a trend that will readily pivot back to normalized temperatures. In addition, Pinnacle West's service area benefits from strong migration, as Arizona's 2.5% flat income tax rate helps draw in out-of-state retirees. A business friendly government also keeps the regional economy headed in the right direction. Customer growth rose 2.1% in 2024 and 2.3% during the March quarter. It will probably be up similar levels over the next couple of years.

Earnings should be back on a growth trajectory in 2026. In addition to the higher than typical electricity volumes in 2024, which make for difficult quarterly bottom-line comparisons this year, the company is also experiencing regulatory lag. The utility filed a rate case application in June, seeking a net base-rate increase of $580 million. It should garner a decision next year, and a potential revenue increase in the back half of 2026. In the utility's most recent rate-case decision, handed down in February 2024, it received fair treatment from a revamped Arizona Public Service Commission.

This issue is untimely. Longer term, we continue to like this electric utility, as it is the beneficiary of a premium service area with rising energy demand from population growth and a healthy economy. Still, utility investors need to be disciplined buyers and wait for a better entry point. We think a 5% drawdown, sending the stock into the mid-$80 area, would provide a worthwhile risk-adjusted annual total return expectation.

BUSINESS: Portland General Electric Company provides electricity to 950,000 customers in 51 cities in a 4,000-square-mile area of Oregon, including Portland and Salem (population: 1.9 million). The company is in the process of decommissioning the Trojan nuclear plant, which was closed in 1993. Electric revenue breakdown: residential, 51%; commercial, 33%; industrial, 16%; other, less than 1%. Generating sources: gas, 28%; wind, 16%; coal, 4%; hydro, 7%; purchased, 45%. Fuel costs: 41% of revenues. '24 reported depreciation rate: 3.5%. Has 2,915 full-time employees. Chair: James P. Torgerson. President and CEO: Maria M. Pope. Incorporated: Oregon. Address: 121 S.W. Salmon Street, Portland, OR 97204. Tel.: 503-464-8000. Internet: www.portlandgeneral.com.

Portland General Electric stock has been a weak performer lately. The results of the company's Oregon rate-case decision in December were disappointing, as the authorized return on equity (ROE) was reduced from 9.5% to 9.34%. Portland General was seeking an 8.6% across-the-board rate increase for the recoupment of investments made, but instead received a 5.5% residential hike and 7.7% commercial/industrial increase. Overall, Portland got a $98 million revenue lift, representing 54% of the requested amount. The rise helps, but up against higher interest and depreciation expenses and rising operations and maintenance costs, the company is targeting earnings of $3.13 to $3.33 per share this year. Our $3.25 estimate is slightly north of the midpoint of the range and still only represents 3.5% earnings-per-share growth. This is despite the company seeing solid demand trends (more below). Another factor potentially hurting share performance is the impact of January's wildfires in California on sentiment for Pacific Northwest utilities. Portland General by all accounts does a very good job with wildfire mitigation, but material adverse risks remain for operators whose territory spans densely forested areas.

Long-term electricity demand growth in the utility's service area is a plus. There's a cluster of high-tech companies occupying an area referred to as the "Silicon Forest" within Portland General's territory. Key employers there include Intel, Adobe, Microsoft, NTT Global, NVIDIA, Synopsys, and Stack Infrastructure. Portland also counts Microchip Technology, Lam Research, and ON Semiconductor, among others as commercial/industrial customers. Weather-adjusted demand has been rising at a solid pace from the semiconductor industry and data centers, which also provide a lift to the region's economy. The company is expecting load growth to average 2.5% to 3.5% for the foreseeable future.

This equity is ranked to track the year-ahead market. POR's dividend yield is more than a percentage point and a half above the 3.6% peer-group median. While total return prospects look appealing, investors do need to consider the wildfire risk in the Pacific Northwest.

Anthony J. Glennon *July 18, 2025*

BUSINESS: The Southern Company, through its subsidiaries, supplies electricity to 4.4 mill. customers in GA, AL, and MS. Also has a competitive generation business. Acq'd AGL Resources (renamed Southern Company Gas, 4.4 mill. customers in GA, NJ, IL, VA, & TN) 7/16. Sold Gulf Power 1/19. Electric revenue breakdown: residential, 43%; commercial, 35%; industrial, 21%; other, 1%. Generating sources: gas, 51%; coal, 19%; nuclear, 10%; other, 11%; purchased, 9%. Fuel costs: 26% of revenues. '24 reported deprec. rates (utility): 2.7%-3.4%. Has 27,300 employees. President and CEO: Chris Womack. Incorporated.: Delaware. Address: 30 Ivan Allen Jr. Blvd., N.W., Atlanta, Georgia 30308. Telephone: 404-506-0747. Internet: www.southerncompany.com.

We look for Southern Company's earnings to advance nicely in 2025 and 2026. The company was slated to report first-quarter earnings results shortly after this report went to press. Southern closed out 2024 on a strong note and should continue to benefit from rate relief and volume growth. Growing demand from data centers and population surges have driven electricity consumption to record highs. Accordingly, Southern raised its capital spending plan by 30%, to $63 billion through 2030, to meet the elevated jump in electricity demand. Our 2025 estimate, which remains unchanged, is at the high point of management's updated target of $4.20-$4.30 per share, reflecting 6% growth from last year's midpoint target. Long-term profit growth guidance remains at 5%-7%, but management has indicated the potential to reach the high end of that range. We have introduced our 2026 top- and bottom-line estimates of $28.75 billion and $4.60 per share, respectively.

Southern Company shares have performed strongly alongside recent broader market pressure. The stock price is up nearly 10% since the start of 2025 and has risen about 5% over the past three months. Utilities have recently served as a safe haven, outperforming the broader market, and Southern is performing better than almost all of its peers. This is a testament to its regional electricity volume growth, financial strength, safety, and consistent dividend payout.

The Board of Directors remains committed to boosting shareholder value. Indeed, the utility recently announced its 24th consecutive annual dividend increase. Southern declared a 3% quarterly dividend increase to $0.74 per share. The stock now carries a dividend yield of 3.3%.

Investors may want to take a closer look at these shares, especially given the current challenging macroeconomic environment. Southern offers strong defensive qualities, including fixed returns, a top-notch Price Stability score, an above-average (2) Safety rank, and a well-supported dividend payout. On the other hand, the recent quotation is already well within the 3- to 5-year Target Price Range.

BUSINESS: Xcel Energy Inc. is the parent of: Northern States Power Company (NSP), which supplies electricity to MN, WI, ND, SD & MI & gas to MN, WI, ND & MI; Public Service Company of Colorado (PSCo), which supplies electricity & gas to CO; & Southwestern Public Service Company (SPS), which supplies electricity to TX and NM. Customers: 3.9 mill. electric, 2.2 mill. gas. Electric revenues: resid'l, 32%; comm'l & ind'l, 49%; other, 19%. Purchases 35% of power, owns 65%. Total electric mix: wind, 33%; gas, 33%; coal, 15%, nuclear, 10%, solar/other, 9%. Fuel cost: 35% of revenues. '24 deprec. rate: 3.8%. Employs 11,380. Chrmn., President, and CEO: Robert Frenzel. Inc.: MN. Addr.: 414 Nicollet Mall, Minneapolis, MN 55401. Tel.: 612-330-5500. Int.: www.xcelenergy.com.

Xcel Energy was off to a bit of a slow start to the year, but will likely reach its bottom-line expectations. The last time Xcel's profits failed to surpass the previous year's level was 2005. The company has consistently delivered results within the targeted range management provides at the start of a new year. Xcel has a huge service area, encompassing sections of eight large states through its four wholly owned utility subsidiaries. That provides plenty of diversification, scale, and flexibility. In 2024, Xcel needed to rein in costs to deliver on-target financial results. Last year's $3.50 per share came in at the bottom of management's $3.50-$3.60 forecast, but that was largely due to fewer overall cooling and heating days than typical. (Retail electric volume was down 2.4% in 2024 despite a 1.2% rise in the customer base.) For this year, the aggregate comparison should be relatively easy, and we expect the company to make good on management's $3.75 to $3.85 earnings-per-share outlook. First-quarter profits were lower than the comparable year-ago figure, largely due to more scheduled maintenance work.

Prospects to late decade look good. Xcel's five-year capital expenditure plan is expected to deliver annual rate-base growth in excess of 9%, which should translate to 6%-8% share-earnings gains. Regulated prices set for electricity and natural gas delivery in ratepayers' bills result in revenue streams that provide the recoupment of capital expenditures plus an economic return on investment. Xcel's main focus of late has been on increasing its utility-owned generating capacity. Due to major wildfires in portions of its Colorado and Texas service areas, mitigation technologies will likely become a more prominent source of investment.

Xcel shares don't stand out at the recent valuation. A Colorado court case related to Xcel's alleged role in the Marshall fire of 2021 is due to commence this September. It may result in some headline risk later this year and a potential buying opportunity. It's difficult to say how that case will turn out, but we believe that it's doubtful Xcel will be liable for more than $1.5 billion, net of insurance. That level would be quite manageable in our view.

6.	Conclusion of Equity Risk Premium	7.99 %	7.99 %
7.	Adjusted Beta (6)	0.66	0.62
8.	Forecasted Equity Risk Premium	5.27 %	4.95 %

Notes:

(1) Based on the arithmetic mean historical monthly returns on large company common stocks from Kroll Cost of Capital Navigator and Bloomberg Professional Services minus the arithmetic mean monthly yield of Moody's average Aaa and Aa2 corporate bonds from 1928-2024.

(2) This equity risk premium is based on a regression of the monthly equity risk premiums of large company common stocks relative to Moody's average Aaa and Aa2 rated corporate bond yields from 1928-2024 referenced in Note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the average consensus forecast of Aaa corporate bonds of 5.23% (from page 26 of this Schedule).

(3) The Predictive Risk Premium Model (PRPM) is discussed in the accompanying direct testimony. The Ibbotson equity risk premium based on the PRPM is derived by applying the PRPM to the monthly risk premiums between Ibbotson large company common stock monthly returns and average Aaa and Aa corporate monthly bond yields, from January 1928 through June 2025.

(4) The equity risk premium based on the Value Line Summary and Index is derived by subtracting the average consensus forecast of Aaa corporate bonds of 5.23% (from page 26 of this Schedule) from the projected 3-5 year total annual market return of 13.13% (described fully in note 1 on page 38 of this Schedule).

(5) Using data from the Bloomberg Professional Services, Value Line, and S&P Global Market Intelligence for the S&P 500, an expected total return of 16.15% was derived based upon expected dividend yields as a proxy for income returns and long-term earnings growth estimates as a proxy for capital appreciation. Subtracting the average consensus forecast of Aaa corporate bonds of 5.23% results in an expected equity risk premium of 10.92%.

(6) Average of mean and median beta for each proxy group from page 37 of this Schedule.

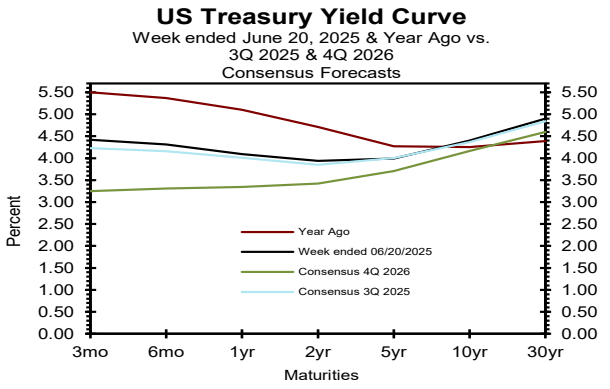
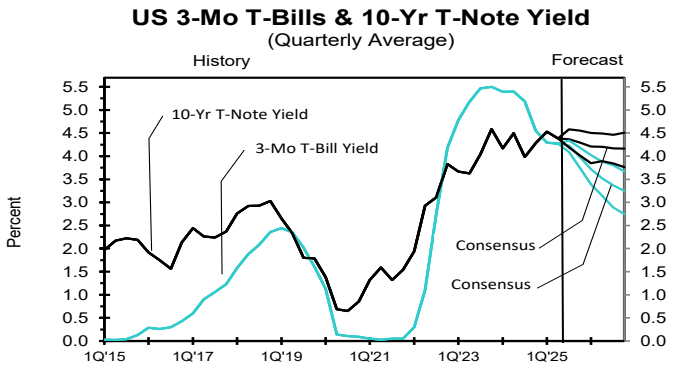
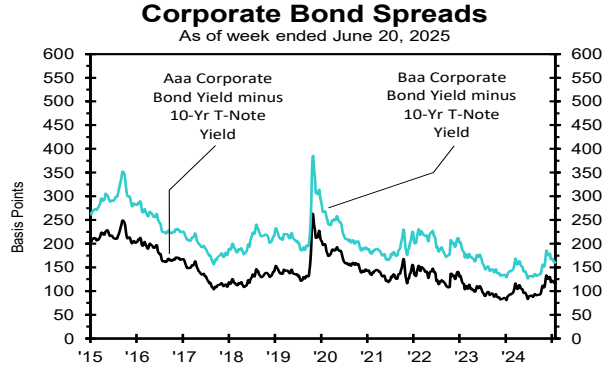
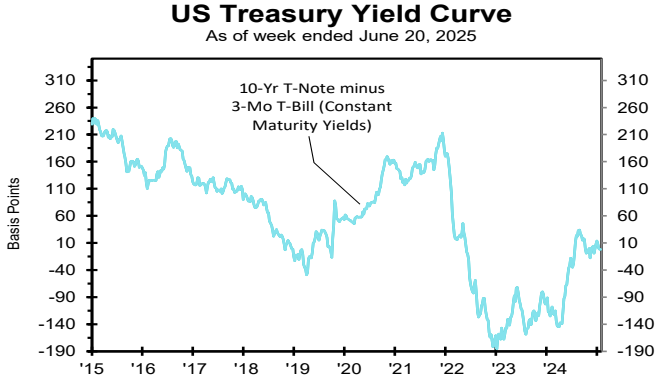
Forecasts for interest rates and the Federal Reserve's Advanced Foreign Economies Index represent averages for the quarter. Forecasts for Real GDP, GDP Price Index, CPI and PCE Price Index are seasonally adjusted annual rates of change (saar). Individual panel members' forecasts are on pages 4 through 9. Historical data: Treasury rates from the Federal Reserve Board's H.15; AAA-AA and A-BBB corporate bond yields from Bank of America-Merrill Lynch and are 15+ years, yield to maturity; State and local bond yields from Bank of America-Merrill Lynch, A-rated, yield to maturity; Mortgage rates from Freddie Mac, 30-year, fixed; SOFR from the New York Fed. *Interest rate data for 2Q 2025 based on historical data through the week ended June 20. **Data for 2Q 2025 for the Fed's AFE $ Index based on data through the week ended June 20. Figures for 2Q 2025 Real GDP, GDP Chained Price Index, Consumer Price Index, and PCE Price Index are consensus forecasts from the June 2025 survey.









Long-Range Survey:

The table below contains results of our semi-annual long-range CONSENSUS survey. There are also Top 10 and Bottom 10 averages for each variable. Shown are estimates for the years 2026 through 2031 and averages for the five-year periods 2027-2031 and 2032-2036. Apply these projections cautiously. Few economic, demographic and political forces can be evaluated accurately over such long time spans.

		Average For The Year						Five-Year Averages

Projected Market Appreciation of the S&P Utility Index
Derivation of Mean Equity Risk Premium Based Studies
Using Holding Period Returns and
Projected Market Appreciation of the S&P Utility Index

Line No.		Implied Equity Risk Premium
1.	Historical Equity Risk Premium (1)	4.16 %
2.	Regression of Historical Equity Risk Premium (2)	4.82
3	Forecasted Equity Risk Premium Based on PRPM (3)	4.39
4.	Forecasted Equity Risk Premium based on Projected Total Return on the S&P Utilities Index (Bloomberg, Value Line, and S&P Capital IQ Data) (4)	6.02
5.	Average Equity Risk Premium (5)	4.85 %

Notes:
(1) Based on S&P Public Utility Index monthly total returns and Moody's Public Utility Bond average monthly yields from 1928-2024. Holding period returns are calculated based upon income received (dividends and interest) plus the relative change in the market value of a security over a one-year holding period.
(2) This equity risk premium is based on a regression of the monthly equity risk premiums of the S&P Utility Index relative to Moody's A2 rated public utility bond yields from 1928 - 2024 referenced in note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the prospective A2 rated public utility bond yield of 5.71% (from line 3, page 26 of this Schedule).
(3) The Predictive Risk Premium Model (PRPM) is applied to the risk premium of the monthly total returns of the S&P Utility Index and the monthly yields on Moody's A2 rated public utility bonds from January 1928 - June 2025.
(4) Using data from Bloomberg, Value Line, and S&P Capital IQ for the S&P Utilities Index, an expected return of 11.73% was derived based on expected dividend yields as a proxy for income returns and long-term growth estimates as a proxy for market appreciation. Subtracting the expected A2 rated public utility bond yield of 5.71%, calculated on line 3 of page 26 of this Schedule results in an equity risk premium of 6.02%. (11.73% - 5.71% = 6.02%).
(5) Average of lines 1 through 4.

Notes on page 38 of this Schedule.

Valley Energy, Inc. / Citizens' Electric Company of Lewisburg, PA / Wellsboro Electric Company
Notes to Accompany the Application of the CAPM and ECAPM

Notes:

(1) The market risk premium (MRP) is derived by using five different measures from four sources: Kroll, Value Line, Bloomberg, and S&P Capital IQ as illustrated below:

Measure 1: Kroll Arithmetic Mean MRP (1926-2024)

Arithmetic Mean Monthly Returns for Large Stocks 1926-2024:	12.29	%
Arithmetic Mean Income Returns on Long-Term Government Bonds:	4.99	
MRP based on Kroll Historical Data:	7.31	%

Measure 2: Application of a Regression Analysis to Kroll Historical Data

(1926-2024)	7.88	%

Measure 3: Application of the PRPM to Kroll Historical Data

(January 1926 - June 2025)	9.03	%

Measure 4: Value Line Projected MRP (Thirteen weeks ending July 18, 2025)

Total projected return on the market 3-5 years hence*:	13.13	%
Risk-Free Rate (see note 2):	4.60	
MRP based on Value Line Summary & Index:	8.53	%

*Forcasted 3-5 year capital appreciation plus expected dividend yield

Measure 5: Bloomberg, Value Line, and S&P Capital IQ Projected Return on the Market based on the S&P 500

Total return on the Market based on the S&P 500:	16.15	%
Risk-Free Rate (see note 2):	4.60	
MRP based on Bloomberg, Value Line, and S&P Capital IQ data	11.55	%

Average of all MRP Measures:	8.86	%

(2) For reasons explained in the Direct Testimony, the appropriate risk-free rate for cost of capital purposes is the average forecast of 30 year Treasury Bonds per the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts. (See pages 32 and 33 of this Schedule.) The projection of the risk-free rate is illustrated below:

Third Quarter 2025	4.80	%
Fourth Quarter 2025	4.70	
First Quarter 2026	4.70	
Second Quarter 2026	4.70	
Third Quarter 2026	4.60	
Fourth Quarter 2026	4.60	
2027-2031	4.40	
2032-2036	4.30	
	4.60	%

(3) Average of Column 6 and Column 7.

(4) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

Valley Energy, Inc. / Citizens' Electric Company of Lewisburg, PA / Wellsboro Electric Company
Basis of Selection of the Group of Non-Price Regulated Companies
Comparable in Total Risk to the Proxy Group of Eight Natural Gas Distribution Companies

The criteria for selection of the proxy group of non-price regulated companies comparable in total risk to the proxy group of eight natural gas distribution companies was that the non-price regulated companies be domestic and reported in Value Line Investment Survey (Standard Edition).

The proxy group of non-price regulated companies was selected based on the unadjusted beta range of 0.45 - 0.79 and residual standard error of the regression range of 2.6575 - 3.1695 of the proxy group of eight natural gas distribution companies.

These ranges are based upon plus or minus two standard deviations of the unadjusted beta and standard error of the regression. Plus or minus three standard deviations captures 95.50% of the distribution of unadjusted betas and residual standard errors of the regression.

The standard deviation of the proxy group of eight natural gas distribution companies' residual standard error of the regression is 0.1280. The standard deviation of the standard error of the regression is calculated as follows:

$$\text{Standard Deviation of the Std. Err. of the Regr.} = \frac{\text{Standard Error of the Regression}}{\sqrt{2N}}$$

where: N = number of observations. Since Value Line betas are derived from weekly price change observations over a period of five years, N = 259

$$\text{Thus,} \quad 0.128 = \frac{2.9135}{\sqrt{518}} = \frac{2.9135}{22.7596}$$

Value Line Investment Survey (Standard Edition).

Valley Energy, Inc. / Citizens' Electric Company of Lewisburg, PA / Wellsboro Electric Company
Basis of Selection of the Group of Non-Price Regulated Companies
Comparable in Total Risk to the Proxy Group of Fourteen Electric Companies

The criteria for selection of the proxy group of non-price regulated companies comparable in total risk to the proxy group of fourteen electric companies was that the non-price regulated companies be domestic and reported in Value Line Investment Survey (Standard Edition).

The proxy group of non-price regulated companies was selected based on the unadjusted beta range of 0.44 - 0.74 and residual standard error of the regression range of 2.4553 - 2.9285 of the proxy group of fourteen electric companies.

These ranges are based upon plus or minus two standard deviations of the unadjusted beta and standard error of the regression. Plus or minus three standard deviations captures 95.50% of the distribution of unadjusted betas and residual standard errors of the regression.

The standard deviation of the proxy group of fourteen electric companies' residual standard error of the regression is 0.1183. The standard deviation of the standard error of the regression is calculated as follows:

$$\text{Standard Deviation of the Std. Err. of the Regr.} = \frac{\text{Standard Error of the Regression}}{\sqrt{2N}}$$

where: N = number of observations. Since Value Line betas are derived from weekly price change observations over a period of five years, N = 259

$$\text{Thus,} \quad 0.1183 = \frac{2.6919}{\sqrt{518}} = \frac{2.6919}{22.7596}$$

Notes:

(1) The application of the DCF model to the domestic, non-price regulated comparable risk companies is identical to the application of the DCF to the Utility Proxy Groups. The dividend yield is derived by using the 60 day average price and the spot indicated dividend as of 7/18/2025. The dividend yield is then adjusted by 1/2 the average projected growth rate in EPS, which is calculated by averaging the 5 year projected growth in EPS provided by Value Line, www.zacks.com, and S&P Capital IQ (excluding any negative growth rates) and then adding that growth rate to the adjusted dividend yield.

(2) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

Indicated Common Equity Cost Rate
Through Use of a Risk Premium Model
Using an Adjusted Total Market Approach

Line No.		Proxy Group of Twenty-Eight Non-Price Regulated Companies	Proxy Group of Sixteen Non-Price Regulated Companies
1.	Prospective Yield on Baa2 Rated Corporate Bonds (1)	6.05 %	6.05
2.	Adjustment to Reflect Bond rating Difference of Non-Price Regulated Companies (2)	(0.21)	(0.21)
3.	Adjusted Bond Yield	5.84	5.84
4.	Equity Risk Premium (3)	5.43	5.27
5.	Risk Premium Derived Common Equity Cost Rate	11.27 %	11.11

Notes: (1) Average forecast of Baa corporate bonds based upon the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts dated June 2, 2025 and July 1, 2025 (see pages 32 and 33 of this Schedule). The estimates are detailed below.

Third Quarter 2025	6.30 %
Fourth Quarter 2025	6.20
First Quarter 2026	6.10
Second Quarter 2026	6.00
Third Quarter 2026	5.90
Fourth Quarter 2026	5.90
2027-2031	6.00
2032-2036	6.00
Average	6.05 %

(2) The average yield spread of Baa2 rated corporate bonds over A2 corporate bonds for the three months ending June 2025. To reflect the A3 average rating of both the Proxy Group of Twenty-Eight Non-Price Regulated Companies and the Proxy Group of Sixteen Non-Price Regulated Companies, the yield on the Baa corporate bonds must be adjusted by two-thirds of the spread between A2 and Baa2 corporate bond yields, as shown below.

	A2 Corp. Bond Yield	Baa2 Corp. Bond Yield	Spread
Jun-25	5.86 %	6.15 %	0.29 %
May-25	5.97	6.29	0.32
Apr-25	5.85	6.18	0.33
		Average yield spread	0.31
		2/3 of spread	0.21

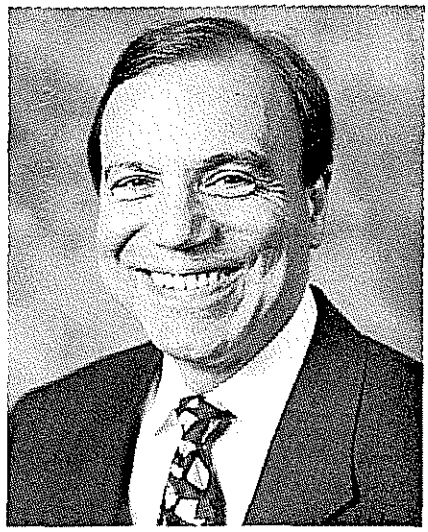
Summer 1994 edition, Arlington, Va.

Comparable Earnings: New Life for an Old Precept

Accelerating deregulation has greatly increased the investment risk of natural gas utilities. As a result, the authors believe it more appropriate than ever to employ the comparable earnings model. We believe our application of the model overcomes the greatest traditional objection to it — lack of comparability of the selected non-utility proxy firms. Our illustration focuses on a target gas pipeline company with a beta of 0.96 — almost equal to the market's beta of 1.00.



Frank J. Hanley is president of AUS Consultants — Utility Services Group. He has testified in several hundred rate proceedings on the subject of cost of capital before the Federal Energy Regulatory Commission and 27 state regulatory commissions. Before joining AUS in 1971, he was an assistant treasurer of a number of operating companies in the American Water Works System, as well as a financial planning officer with the Philadelphia National Bank. He is a Certified Rate of Return Analyst.

Pauline M. Ahern is a senior financial analyst with AUS Consultants — Utility Services Group. She has participated in many cost-of-capital studies. A former employee of the U.S. Department of the Treasury and the Federal Reserve Bank of Boston, she holds an MBA degree from Rutgers University and is a Certified Rate of Return Analyst.

Introduction

The comparable earnings model used to determine a common equity cost rate is deeply rooted in the standard of "corresponding risk" enunciated in the landmark *Bluefield* and *Hope* decisions of the U.S. Supreme Court.[1] With such solid grounding in the foundations of rate of return regulation, comparable earnings should be accepted as a principal model, along with the currently popular market-based models, provided that its most common criticism, non-comparability of the proxy companies, is overcome.

Our comparable earnings model overcomes the non-comparability issue of the non-utility firms selected as a proxy for the target utility, in this example, a gas pipeline company. We should note that in the absence of common stock prices for the target utility (as with a wholly-owned subsidiary), it is appropriate to use the average of a proxy group of similar risk gas pipeline companies whose common stocks are actively traded. As we will demonstrate, our selection process results in a group of domestic, non-utility firms that is comparable in total risk, the sum of business and financial risk, which reflects both non-diversifiable systematic, or market, risk as well as diversifiable unsystematic, or firm-specific, risk.

Embedded in the Landmark Decisions

As stated in *Bluefield* in 1922: "A public utility is entitled to such rates as will permit it to earn a return ... on investments in other business undertakings which are attended by corresponding risks and uncertainties ..."

In addition, the court stated in *Hope* in 1944: "By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks."

Thus, the "corresponding risk" precept of *Bluefield* and *Hope* predates the use of such market-based cost-of-equity models as the Discounted Cash Flow (DCF) and Capital Asset Pricing (CAPM), which were developed later and are currently popular in rate-base/rate-of-return regulation. Consequently, the comparable earnings model has a longer regulatory and judicial history. However, it has far greater relevance now than ever before in its history because significant deregulation has substantially increased natural gas utilities' investment risk to a level similar to that of non-utility firms. As a result, it is

Comparable Earnings *from page 4*

more important than ever to look to similar-risk non-utility firms for insight into common equity cost rate, especially in view of the deficiencies inherent in the currently popular market-based cost of common equity models, particularly the DCF model.

Despite the fact that the landmark decisions are still regarded as having set the standards for determining a fair rate of return, the comparable earnings model has experienced decreased usage by expert witnesses, as well as less regulatory acceptance over the years. We believe the decline in the popularity of the comparable earnings model, in large measure, is attributable to the difficulty of selecting non-utility proxy firms that regulators will accept as comparable to the target utility. Regulatory acceptance is difficult to gain when the selection process is arbitrary. Our application of the model is objective and consistent with fundamental financial tenets.

Principles of Comparable Earnings

Regulation is a substitute for the competition of the marketplace. Moreover, regulated public utilities compete in the capital markets with all firms, including unregulated non-utilities. The comparable earnings model is based upon the opportunity cost principle; i.e., that the true cost of an investment is the return that could have been earned on the next best available alternative investment of similar risk. Consequently, the comparable earnings model is consistent with regulatory and financial principles, as it is a surrogate for the competition of the marketplace, and investors seek the greatest available rate of return for bearing similar risk.

The selection of comparable firms is the most difficult step in applying the comparable earnings model, as noted by Phillips[2] as well as by Bonbright, Danielsen and Kamerschen.[3] The selection of non-utility proxy firms should result in a sufficiently broad-based group in order to minimize the effect of company-specific aberrations. However, if the selection process is arbitrary, it likely would result in a proxy group that is too broad-based, such as the Standard & Poor's 500 Composite Index or the Value Line Industrial Composite. The use of such groups would require subjective adjustments to the comparable earnings results to reflect risk differences between the group(s) and the target utility, a gas pipeline company in this example.

Authors' Selection Criteria

We base the selection of comparable non-utility firms on market-based, objective, quantitative measures of risk resulting from market prices that subsume investors' assessments of all elements of risk. Thus, our approach is based upon the principle of risk and return; namely, that firms of comparable risk should be expected to earn comparable returns. It is also consistent with the "corresponding risk" standard established in *Bluefield* and *Hope*. We measure total investment risk as the sum of non-diversifiable systematic and diversifiable unsystematic risk. We use the unadjusted beta as a measure of systematic risk and the standard error of the estimate (residual standard error) as a measure of unsystematic risk. Both the unadjusted beta and the residual standard error are derived from a regression of the target utility's security returns relative to the market's returns, which takes the general form:

$$r_{it} = a_i + b_i r_{mt} + e_{it}$$

where:

- r_{it} = tth observation of the ith utility's rate of return
- r_{mt} = tth observation of the market's rate of return
- e_{it} = tth random error term
- a_i = constant least-squares regression coefficient
- b_i = least-squares regression slope coefficient, the unadjusted beta.

As shown by Francis,[4] the total variation or risk of a firm's return, Var (r_i), comes from two sources:

Var (r_i) = total risk of ith asset

$= \text{var}(a_i + b_i r_m + e)$
substituting $(a_i + b_i r_m + e)$ for r_i

$= \text{var}(b_i r_m) + \text{var}(e)$ since $\text{var}(a_i) = 0$

$= b_i^2 \text{ var}(r_m) + \text{var}(e)$ since $\text{var}(b_i r_m) = b_i^2 \text{ var}(r_m)$

= systematic + unsystematic risk

Francis[5] also notes: "The term $\sigma^2(r_i|r_m)$ is called the *residual variance around the regression line* in statistical terms or *unsystematic risk* in capital market theory language. $\sigma^2(r_i|r_m) = \ldots = \text{var}(e)$. The residual variance is the squared standard error in regression language, a measure of unsystematic risk." Application of these criteria results in a group of non-utility firms whose average total investment risk is indeed comparable to that of the target gas pipeline.

As a measure of systematic risk, we use the Value Line unadjusted beta. Beta measures the extent to which market-wide or macro-economic events affect a firm's stock price. We use the unadjusted beta of the target utility as a starting point because it results from the regression of the target utility's security returns relative to the market's returns. Thus, the resulting standard deviation of beta relates to the unadjusted beta. We use the standard deviation of the unadjusted beta to determine the range around it as the selection criterion based on systematic risk.

We use the residual standard error of the regression as a measure of unsystematic risk. The residual standard error reflects the extent to which events specific to the firm's operations affect a firm's stock price. Thus, it is a measure of diversifiable, unsystematic, firm-specific risk.

An Illustration of Authors' Approach

Step One: We begin our approach by establishing the selection criteria as a range of both unadjusted beta and residual standard error of the target gas

continued on page 6

Comparable Earnings *from page 5*

pipeline company.

As shown in table 1, our target gas pipeline company has a Value Line unadjusted beta of 0.90, whose standard deviation is 0.1250. The selection criterion range of unadjusted beta is the unadjusted beta plus (+) and minus (-) three of its standard deviations. By using three standard deviations, 99.73 percent of the comparable unadjusted betas is captured.

Three standard deviations of the target utility's unadjusted beta equals 0.38 (0.1250 x 3 = 0.3750, rounded to 0.38). Consequently, the range of unadjusted betas to be used as a selection criteria is 0.52 - 1.28 (0.52 = 0.90 - 0.38) and (1.28 = 0.90 + 0.38).

Likewise, the selection criterion range of residual standard error equals the residual standard error plus (+) and minus (-) three of its standard deviations. The standard deviation of the residual standard error is defined as: $\sigma/\sqrt{2N}$.

As also shown in table 1, the target gas pipeline company has a residual standard error of 3.7867. According to the above formula, the standard deviation of the residual standard error would be 0.1664 (0.1664 = 3.7867/ $\sqrt{2(259)}$ = 3.7867/22.7596, where 259 = N, the number of weekly price change observations over a period of five years). Three standard deviations of the target utility's residual standard error would be 0.4992 (0.1664 x 3 = .4992). Consequently, the range of residual standard errors to be used as a selection criterion is 3.2875 - 4.2859 (3.2875 = 3.7867 - 0.4992) and (4.2859 = 3.7867 + 0.4992).

Step Two: The step one criteria are applied to Value Line's data base of nearly 4,000 firms for which Value Line derives unadjusted betas and residual standard errors on a weekly basis. All firms with unadjusted betas and residual standard errors within the criteria ranges are then selected.

Step Three: In the regulatory ratemaking environment, authorized common equity return rates are applied to a book-value rate base. Thus, the earnings rates on book common equity, or net worth, of competitive, non-utility firms are highly relevant provided those firms are indeed comparable in total risk to the target gas pipeline. The use of the return rates of other utilities has no relevance because their allowed, and hence subsequently achieved, earnings rates are dependent upon the regulatory

table 1

Summary of the Comparable Earnings Analysis for the Proxy Group of 248 Non-Utility Companies Comparable in Total Risk to the Target Gas Pipeline Company[1]

	1	2	3	4	5	6	7	8
			residual	rate of return on net worth				
	adj. beta	unadj. beta	standard error	3-year average[2]	4-year average[2]	5-year average[2]	5-year projected[3]	
average for the proxy group of 248 non-utility companies comparable in total risk to the target gas pipeline company	0.97	0.92	3.7705					
target gas pipeline company	0.96	0.90[4]	3.7867					
median				11.7%	12.0%	12.6%	15.5%	
average of the median historical returns					12.1%			
conclusion[5]								13.8%

[1]The criteria for selection of the non-utility group was that the non-utility companies be domestic and included in *Value Line Investment Survey*. The non-utility group was selected based on an unadjusted beta range of 0.52 to 1.28 and a residual standard error range of 3.2875 to 4.2859.
[2]Ending 1992.
[3]1996-1998/1997-1999.
[4]The average standard deviation of the target gas pipeline company's unadjusted beta is 0.1250.
[5]Equal weight given to both the average of the 3-, 4- and 5-year historical medians (12.1%) and 5-year projected median rate of return on net worth (15.5%). Thus, 13.8% = (12.1% + 15.5% / 2).

Value Line Investment Survey

Comparable Earnings *from page 6*

process. Consequently, we believe all utilities must be eliminated to avoid circularity. Moreover, we believe non-domestic firms must be eliminated because their reporting methods differ significantly from U.S. firms.

Step Four: We then eliminated those firms for which Value Line does not publish a "Ratings & Report" in *Value Line Investment Survey* so that the historical and projected returns on net worth[6] are from a consistent source. We use historical returns on net worth for the most recent five years, as well as those projected three to five years into the future. We believe it is logical to evaluate both historical and projected return rates because it is reasonable to assume that investors avail themselves of both when they are available from widely disseminated information services, such as Value Line Inc. The use of Value Line's return rates on net worth understates the common equity return rates for two reasons. First, preferred stock is included in net worth. Second, the net worth return rates are as of the end of each period. Thus, the use of average common equity return rates would yield higher results.

Step Five: Median returns based on the historical average three, four and five years ending 1992 and projected 1996-1998 or 1997-1999 rates of return on net worth are then determined as shown in columns 4 through 7 of table 1. The median is used due to the wide variations and skewness in rates of return on net worth for the non-utility firms as evidenced by the frequency distributions of those returns as shown in illustration 1.

However, we show the average unadjusted beta, 0.92, and residual standard error, 3.7705, for the proxy group in columns 2 and 3 of table 1 because their frequency distributions are not significantly skewed, as shown in illustration 2.

Step Six: Our conclusion of a com-

Comparable Earnings *from page 7*

parable earnings cost rate is based upon the mid-point of the average of the median three-, four- and five-year historical rates of return on net worth of 12.1 percent as shown in column 5 and the median projected 1996-1998/1997-1999 rate of return on net worth of 15.5 percent as shown in column 7 of table 1. As shown in column 8, it is 13.8 percent.

Summary

Our comparable earnings approach demonstrates that it is possible to select a proxy group of non-utility firms that is comparable in total risk to a target utility. In our example, the 13.8 percent comparable earnings cost rate is very conservative as it is an expected achieved rate on book common equity (a regulatory allowed rate should be greater) and because it is based on end-of-period net worth. A similar rate on average net worth would be about 20 to 40 basis points higher (i.e., 14.0 to 14.2 percent) and still understate the appropriate regulatory allowed rate of return on book common equity.

Our selection criteria are based upon measures of systematic and unsystematic risk, specifically unadjusted beta and residual standard error. They provide the basis for the objective selection of comparable non-utility firms. Our selection criteria rely on changes in market prices over approximately five years. We compare the aggregate total risk, or the sum of systematic and unsystematic risk, which reflects investors' aggregate assessment of both business and financial risk. Thus, no adjustments are necessary to the proxy group results to compensate for the differences in business risk and financial risk, such as accounting practices and debt/equity ratios. Moreover, it is inappropriate to attempt a comparison of the target utility with any individual firm, or subset of firms, in the proxy group because only the average firm of the group is relevant.

Because the comparable earnings model is firmly anchored in the "corresponding risk" precept established in the landmark court decisions, it is worthy of consideration as a principal model for use in estimating the cost rate of common equity capital of a regulated utility. Our approach to the comparable earnings model produces a proxy group that is indeed comparable in total risk because the selection process is objective and quantitative. It therefore overcomes criticism linked to arbitrary selection processes.

All cost-of-common-equity models, including the DCF and CAPM, are fraught with deficiencies, usually stemming from the many necessary but unrealistic assumptions that underlie them. The effects of the deficiencies of individual models can be mitigated by using more than one model when estimating a utility's common equity cost rate. Therefore, when the non-comparability issue is overcome, the comparable earnings model deserves to receive the same consideration as a primary model, as do the currently popular market-based models. ■

[6] Returns on net worth must be used when relying on Value Line data because returns on book common equity for non-utility firms are not available from Value Line.

Report Lists Pipeline, Storage Projects

More than $9 billion worth of projects to expand the nation's natural gas pipeline network are in various stages of development, according to an A.G.A. report. These projects involve nearly 8,000 miles of new pipelines and capacity additions to existing lines and represent 15.3 billion cubic feet (Bcf) per day of new pipeline capacity.

During 1993 and early 1994, construction on 3,100 miles of pipeline was completed or under way, at a cost of nearly $4 billion, says A.G.A. These projects are adding 5.4 Bcf in daily delivery capacity nationwide.

Among the projects completed in 1993 were Pacific Gas Transmission Co.'s 805 miles of looping that allows increased deliveries of Canadian gas to the West Coast; Northwest Pipeline Corp.'s addition of 433 million cubic feet of daily capacity for customers in the Pacific Northwest and Rocky Mountain areas; and the 156-mile Empire State Pipeline in New York.

In addition, major construction projects were started on the systems of Texas Eastern Transmission Corp. and Algonquin Gas Transmission Co. — both subsidiaries of Panhandle Eastern Corp. — and along Florida Gas Transmission Co.'s pipeline.

The report goes on to discuss another $5 billion in proposed projects, which, if completed, will add nearly 5,000 miles of pipeline and 9.8 Bcf per day in capacity, much of it serving Florida and West Coast markets.

A.G.A. also identifies 47 storage projects and says that if all of them are built, existing storage capacity will increase by more than 500 Bcf, or 15 percent.

For a copy of *New Pipeline Construction: Status Report 1993-94* (#F00103), call A.G.A. at (703) 841-8490. Price per copy is $6 for employees of member companies and associates and $12 for other customers.

Beta Measurements The beta coefficient is an *index of systematic risk.* Beta coefficients may be used for ranking the systematic risk of different assets. If the beta is larger than 1, $b > 1.0$, then the asset is more volatile than the market and is called an **aggressive asset.** If the beta is less than 1, $b < 1.0$, the asset is a **defensive asset;** its price fluctuations are less volatile than the market's. Figure 10-1 illustrates the characteristic lines for three different assets that have low, medium, and high levels of beta (or undiversifiable risk).

Figure 10-2 shows that IBM is a stock with an average amount of systematic risk. IBM's beta of 1.02 indicates that its return tends to increase 2 percent more than the return on the market average when the market is rising. When the market falls, IBM's return tends to fall 2 percent more than the market's. The characteristic line for IBM has an above average correlation coefficient of $\rho = .7495$, indicating that the returns on this security follow its particular characteristic line slightly more closely than those of the average stock.

Partitioning Risk Total risk can be measured by the variance of returns, denoted Var(r). This measure of *total risk is partitioned into its systematic and unsystematic components in Equation (10-8).*[7]

$$\begin{aligned} \text{Var}(r_i) &= \text{total risk of } i\text{th asset} \\ &= \text{Var}(a_i + b_i r_{m,t} + e_{i,t}) \\ &\quad \text{by substituting } (a_i + b_i r_{m,t} + e_{i,t}) \text{ for } r_{i,t} \\ &= 0 + \text{Var}(b_i r_{m,t}) + \text{Var}(e_{i,t}) \\ &\quad \text{since Var}(a_i) = 0 \end{aligned} \tag{10-8}$$

$$\begin{aligned} \text{Var}(r_i) &= b_i^2 \text{ Var}(r_m) + \text{Var}(e) \qquad \text{since Var}(b_i r_m) = b_i^2 \text{ Var}(r_m) \\ &= \text{systematic} + \text{unsystematic risk} \end{aligned} \tag{10-8a}$$

$$.01389 = .00780 + .00609 \qquad \text{for IBM}$$

The unsystematic risk measure Var(e) is called in regression language the *residual variance* or, synonymously, the *standard error squared.*

Undiversifiable Proportion The percentage of total risk that is systematic can be measured by the coefficient of determination ρ^2 (that is, the characteristic line's squared correlation coefficient).

[7]In this context, **partition** is a technical statistical term that means to divide the total variance into *mutually exclusive* and *exhaustive* pieces. This partition is only possible if the returns from the market are statistically independent from the residual error terms that occur simultaneously, $\text{Cov}(r_{m,t}, e_{i,t}) = 0$. The mathematics of regression analysis will orthogonalize the residuals and thus ensure that the needed statistical independence exists.

Notes:

(1) Market-to-Book Ratio equals average of the high and low market price for the year divided by the average book value.
(2) Earnings/Book equals earnings per share for the year divided by the average book
(3) On January 2, 2001 Standard & Poor's released Global Industry Classification Standard (GICS) price indexes for all Standard & Poor's U.S. indexes. As a result, all S&P Indexes have been calculated with a common base of 100 at a start date of December 31, 1994. Also, the GICS industrial sector is not comparable to the former S&P Industrial Index and data for the former S&P Industrial Index was discontinued.
(4) As measured by the Consumer Price Index (CPI).

DIRECT TESTIMONY

AND EXHIBIT

OF

RYAN M. KUCAN

ON BEHALF OF

CITIZENS' ELECTRIC COMPANY OF LEWISBURG, PA,
VALLEY ENERGY, INC., AND
WELLSBORO ELECTRIC COMPANY

APRIL 30, 2025

TABLE OF CONTENTS

I. Introduction 1
II. Purpose of Testimony 2
III. Summary 2
IV. Capital Structure and Associated Cost Rates 4
V. Conclusion 5

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ryan M. Kucan. My business address is 1 Speen St., Suite 150, Framingham, MA 01701.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Manager at ScottMadden, Inc. ("ScottMadden")

Q. PLEASE SUMMARIZE YOUR PROFESSIONAL EXPERIENCE AND EDUCATIONAL BACKGROUND.

A. I have worked in the regulated utilities industry since 2016 and have been employed by ScottMadden as a consultant for more than six years. At ScottMadden, I have provided support to over 100 utility regulatory proceedings covering topics such as common equity cost rate, rate of return, capital structure, and valuation.

On behalf of the American Gas Association ("AGA"), I help calculate the AGA Gas Index, which serves as the benchmark against which the performance of the American Gas Index Fund ("AGIF") is measured on a monthly basis. The AGA Gas Index and AGIF are a market capitalization weighted index and mutual fund, respectively, comprised of the common stocks of the publicly traded corporate members of the AGA.

I am a member of the Society of Utility and Regulatory Financial Analysts ("SURFA"). In 2023, I was awarded the professional designation "Certified Rate of Return Analyst" by SURFA, which is based on education, experience, and the successful completion of a comprehensive written examination.

I received a Bachelor of Science in Business Administration with concentrations in Finance and Accounting from Northeastern University prior to a Master of Business Administration from the Rotman School of Management at the University of Toronto.

The details of my educational background and professional experience are shown in Appendix A.

II. PURPOSE OF TESTIMONY

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A. The purpose of my testimony is to present evidence on behalf of Valley Energy, Inc. ("Valley"), Citizens' Electric Company of Lewisburg, PA ("Citizens'"), and Wellsboro Electric Company ("Wellsboro") (collectively, "the Companies") supporting their ratemaking capital structure and cost of long-term debt. Company witness Dylan W. D'Ascendis will sponsor the Companies' appropriate return on common equity ("ROE").

Q. HAVE YOU PREPARED AN EXHIBIT IN SUPPORT OF YOUR RECOMMENDATION?

A. Yes. I have prepared Exhibit __ (RMK-1), which consists of Schedules RMK-1 and RMK-2.

III. SUMMARY

Q. WHAT ARE YOUR RECOMMENDED RATEMAKING CAPITAL STRUCTURES FOR THE COMPANIES?

A. I recommend that the Pennsylvania Public Utility Commission (the "Commission")

authorize a ratemaking capital structure that consists of 51.06% long-term debt and 48.94% common equity for the Companies. This recommendation is based on the capital structure of their parent company, C&T Enterprises, as will be discussed below.

Q. WHAT IS YOUR RECOMMENDED COST OF LONG-TERM DEBT FOR THE COMPANIES?

A. I recommend the costs of long-term debt of 5.03% for Valley, 5.47% for Citizens', and 4.85% for Wellsboro, as they are their expected costs of debt at the end of the projected test year.

Q. WHAT ARE THE COMPANIES' REQUESTED ROES?

A. As discussed in Mr. D'Ascendis' direct testimony, the cost of common equity for each of the Companies is 11.65%. The summary of the Companies' requested capital structures and associated cost rates are shown on page 1 of Schedule RMK-1, and on Tables 1, 2, and 3 below.

Table 1: Summary of Recommended Weighted Average Cost of Capital for Valley

Type of Capital	Ratios	Cost Rate	Weighted Cost Rate
Long-Term Debt	51.06%	5.03%	2.57%
Common Equity	48.94%	11.65%	5.70%
Total	100.00%		8.27%

Table 2: Summary of Recommended Weighted Average Cost of Capital for Citizens'

Type of Capital	Ratios	Cost Rate	Weighted Cost Rate
Long-Term Debt	51.06%	5.47%	2.79%
Common Equity	48.94%	11.65%	5.70%
Total	100.00%		8.49%

Table 3: Summary of Recommended Weighted Average Cost of Capital for Wellsboro

Type of Capital	Ratios	Cost Rate	Weighted Cost Rate
Long-Term Debt	51.06%	4.85%	2.48%
Common Equity	48.94%	11.65%	5.70%
Total	100.00%		8.18%

IV. CAPITAL STRUCTURE AND ASSOCIATED COST RATES

Q. WHAT CAPITAL STRUCTURE RATIOS DO YOU RECOMMEND BE EMPLOYED IN DEVELOPING AN OVERALL FAIR RATE OF RETURN APPROPRIATE FOR THE COMPANIES?

A. For Valley, Citizens', and Wellsboro, I recommend the use of the capital structure maintained by the Companies' parent organization, C&T Enterprises, which consists of 51.06% long-term debt and 48.94% common equity.

Q. WHY ARE YOU RECOMMENDING A HYPOTHETICAL CAPITAL STRUCTURE IN THIS PROCEEDING?

A. Valley's, Citizens', and Wellsboro's capital structures at December 31, 2024

contain 69.90%, 86.62%, and 20.46% common equity, respectively.[1] Although these capital structures finance the Companies' rate bases, equity ratios of 69.90%, 86.62%, and 20.46% are inappropriate at this time for ratemaking purposes because they are not consistent with equity ratios of comparable utilities.

Q. HOW DOES YOUR PROPOSED HYPOTHETICAL CAPITAL STRUCTURE COMPARE WITH THE CAPITAL STRUCTURES MAINTAINED BY THE COMPANIES IN THE GAS AND ELECTRIC UTILITY PROXY GROUPS USED TO DETERMINE THE ROE IN THIS PROCEEDING?

A. My proposed hypothetical capital structure is reasonable to use and is consistent with the range of capital structures maintained by the Gas and Electric Utility Proxy Groups used by Mr. D'Ascendis to determine the appropriate ROE for the Company, as shown on pages 1 through 3 of Schedule RMK-2.

Q. WHAT ARE YOUR RECOMMENDED EMBEDDED LONG-TERM DEBT COST RATES FOR THE COMPANIES?

A. I recommend the expected long-term debt cost rates of 5.03% (Valley), 5.47% (Citizens'), and 4.85% (Wellsboro). These long-term debt cost rates are the expected costs of long-term debt for the Companies at the end of the projected test year.

V. <u>CONCLUSION</u>

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

[1] The Companies' December 31, 2024 Return on Equity Report to the Commission.

Appendix A
Ryan M. Kucan, CRRA
Manager

Summary

Ryan Kucan first joined ScottMadden in 2016 as an analyst and rejoined in 2021 as an associate. The majority of his experience has been providing primary support for the preparation of cost-of-capital expert witness testimony to support utility rate case filings before multiple jurisdictions in the United States and Canada. Ryan earned a B.S. in business administration, with a double concentration in accounting and finance, at the D'Amore-McKim School of Business at Northeastern University and an M.B.A. at the University of Toronto's Rotman School of Management. Ryan also earned his Certified Rate of Return Analyst designation in 2023.

Areas of Specialization

- Rates and regulation
- Capital market assessment
- Valuation
- Regulatory strategy and analysis
- Rate-of-return analysis
- Financial modeling

Recent Assignments

- Performed a net-financing-benefits analysis to support utility procurement contracts of offshore wind generation
- Reviewed financial models and state regulatory conditions to assist a potential private equity acquisition of a utility
- Assisted with a market-based valuation of natural gas pipeline assets for a transaction between utilities
- Conducted an analysis to calculate the historical return on equity based on a new model outlined in FERC Opinion No. 531
- Supported expert testimony on the cost of capital for ratemaking purposes before numerous state utility regulatory agencies for electric, natural gas, and water utilities

DIRECT TESTIMONY OF MELISSA SULLIVAN
ON BEHALF OF CITIZENS' ELECTRIC COMPANY OF LEWISBURG, PA,
WELLSBORO ELECTRIC COMPANY, AND VALLEY ENERGY, INC.

Q. Please state your name and business address.

A. My name is Melissa Sullivan and my business address is 33 Austin Street, Wellsboro, Pennsylvania.

Q. By whom are you employed?

A. I am employed by C&T Enterprises, Inc. ("C&T"), as the Chief Financial Officer ("CFO").

Q. What are your duties in that capacity?

A. As CFO, I have a number of duties, including: administering C&T's financial activities; reporting to C&T's Chief Executive Officers and Board of Directors regarding C&T's financial condition and making recommendations when required; providing accounting support to the affiliated companies; arranging long-term and short-term financing for C&T's affiliates; reviewing the operating companies' monthly financial statements and consolidating the financial statements quarterly for C&T's officers, directors and lending institutions review; assisting each accounting department with preliminary and year-end audits; reviewing and consolidating annual budgets and supplying the operating companies with projections for shared services and long-term and short-term debt service projections;

and attending at least one Board of Directors meeting for each operating company to review audited financials and provide an update on C&T. In addition, I have responsibility for the oversight of regulatory activities of C&T's affiliates: Citizens' Electric Company of Lewisburg, PA ("Citizens'"); Wellsboro Electric Company ("Wellsboro"); and Valley Energy, Inc. ("Valley") (collectively, "Companies"). Regulatory activities include annual Pennsylvania Public Utility Commission ("PUC" or "Commission") reporting, securities certificate filings, rate filings, Public Utility Realty Tax Act ("PURTA") filings, State Tax Adjustment Surcharge ("STAS") filings and Generation Supply Service Rate ("GSSR")/Gas Cost Rate ("GCR") filings and GSSR/GCR audits.

Q. Please describe your employment and educational background.

A. I have a Bachelor of Science degree in Business Administration and Industrial Relations (Human Resources) from Clarion University of Pennsylvania as well as a Master of Science degree in Business Leadership from Wilkes University. I began my career as Business Manager at Galeton Area School District in 2007 and remained there until 2013. In 2013, I accepted a position at Mansfield University of Pennsylvania as Human Resources Manager working directly with the Director of Human Resources and other top officers. In 2014, due to cutbacks at the University, I began serving as Director of Human Resources at SMC Powder Metallurgy, where I remained until taking the position as Chief Financial Officer at C&T Enterprises, Inc. in 2018.

Q. What are your responsibilities with respect to this filing?

A. I am responsible for coordinating the internal and external resources for this case, including legal, consulting, auditing and company support.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to explain C&T's roles and procedures as the management services company, and to discuss the history and circumstances surrounding C&T's acquisition of the three operating companies that are seeking rate relief (Citizens', Wellsboro, and Valley). I will also discuss affiliate transactions, financing and tax issues.

Q. Did you provide information to other witnesses to prepare their testimony for this proceeding?

A. Yes. Mr. Gorman, Mr. D'Ascendis and the Citizens', Wellsboro and Valley witnesses rely upon certain information that I provided.

HISTORY OF C&T AND ACQUISITIONS

Q. Please explain the relationship between C&T and the affiliates.

A. C&T is a for-profit subsidiary of Claverack Rural Electric Cooperative ("Claverack") and Tri-Country Rural Electric Cooperative ("Tri-County"). C&T was formed in 1998 to facilitate the purchase of Citizens'. C&T now owns all of the stock of Citizens', Wellsboro and Valley. Charts showing the current corporate family structures are attached as Exhibit __ (MS-1). Also included in Exhibit __ (MS-1) is a description of each entity within the C&T family.

Q. Could you please provide a brief history of each of the affiliate acquisitions by C&T?

A. As noted above, C&T was originally formed by Tri-County and Claverack in 1998 to acquire Citizens'. On February 8, 1999, C&T completed a stock purchase acquiring approximately 99% of Citizens' stock. Subsequently, C&T acquired the remaining shares. On March 10, 1994, Tri-County formed Wilderness Area Utilities, Inc. ("Wilderness"), to acquire Wellsboro. On January 4, 1995, Wilderness completed a stock purchase acquiring

100% of Wellsboro. On January 1, 2005, Tri-County transferred 100% ownership of its common stock in Wilderness to C&T. Wilderness then transferred 100% of its stock in Wellsboro to C&T and Wilderness was subsequently inactivated.

C&T formed Valley on October 17, 2000, to facilitate the purchase of the assets of Valley Cities Gas and Waverly Gas Service from NUI Corporation. On November 7, 2002, the transaction was completed and Valley assumed ownership of the assets and began operation. C&T's most recent consolidated financial statements for the years ending 2023 and 2024 are included in Volume III as Joint Confidential Exhibit 1.

Q. Do you have any comments on the capital structures that exist for each operating company?

A. Yes. Attached as Exhibit__(MS-2) is a comparison of the capital structures for Citizens', Wellsboro, Valley and C&T (consolidated) for the HTY, FTY and FPFTY. C&T's three PUC-regulated subsidiaries have different capital structures, due to the historic financial practices of each particular subsidiary prior to C&T's acquisition, the amount of debt that has been incurred since acquisition to fund system improvements, and/or the deal structure for the acquisition. All three C&T subsidiaries have rate cases pending before the Commission. As the shareholder for all three utilities, C&T believes that it is fair and appropriate to adopt a reasonable hypothetical capital structure in each case to ensure that the interests of shareholders and ratepayers are balanced with respect to all three of its PUC-regulated subsidiaries. Mr. D'Ascendis' and Mr. Kucan's testimony explains the hypothetical capital structure that is appropriate for Citizens', Wellsboro, and Valley.

C&T SERVICES PROVIDED TO CITIZENS', WELLSBORO, AND VALLEY

Q. Please describe the services that C&T provides the affiliates.

A. In addition to being the parent holding company, C&T currently provides various management services to its affiliates. These services include shared services such as legal/regulatory; human resources and payroll; communications; call center; information technology; cyber-security; and safety oversight.

Q. Are there Affiliated Interest Agreements that address the services provided among the C&T entities?

A. Yes. There is an Affiliated Interest Agreement ("AIA") that was executed by all of the C&T entities (including the cooperatives) in 2022. A copy of the AIA is attached as Exhibit__(MS-3). C&T has a more detailed Contract for Services with each subsidiary that implements the AIA. The Contracts for Services for Citizens', Wellsboro and Valley are attached as Exhibits__(MS-4) (Citizens'), __(MS-5) (Wellsboro) and __(MS-6) (Valley). Please note that the schedule containing confidential salary and overhead information for specific positions has been redacted from each of these exhibits; however, the schedules are included in Volume III of the filings as Citizens' Confidential Exhibit 1, Wellsboro Confidential Exhibit 1 and Valley Confidential Exhibit 1

Q. How does C&T determine the wages and benefits that are billed to each of the affiliates for these assigned employees?

A. The affiliates choose their employees, but the official "employer" for all non-union employees is C&T. The wages and benefits billed to Citizens', Wellsboro and Valley for the C&T employees are a direct assignment of the salaries and benefits provided to the

particular employees by C&T. This applies only to non-union positions. Wellsboro's linemen are union employees that are employed directly by Wellsboro.

With the exception of the salaries for the CEOs of Claverack, Tri-County and the three subsidiaries, which are established by the respective Boards of Directors, C&T applies its recently-updated Wage & Salary Study to determine the salaries for each of its employees. The Companies' witnesses discuss the development of the study and how it impacted their FTY and FPFTY expenses.

Each year, our human resources department monitors general wage and salary trends. After consideration of these factors, C&T's Board of Directors, upon the recommendation of the human resources department and C&T's management oversight committee, determines the annual base salary plan maintenance adjustment to be applied to the pay rates of each employee. The CEOs of Citizens', Wellsboro and Valley are part of the oversight committee.

Based on performance, an employee may be awarded a merit increase or bonus. The CEO of the individual operating companies approve merit increases and bonuses when appropriate for their employees. Finally, a third-party consultant will be providing annual updates to the Wage & Salary Study that may result in targeted adjustments for certain positions based on the labor market for the particular position.

Q. Did you provide the Companies with an estimate of the base salary increase for the FPFTY?

A. Yes. Based on the historical increases approved by the Board of Directors, a 3% increase is a reasonable projection. The historic annual base salary plan maintenance increases for

the last five years are set forth in Joint Confidential Exhibit 2, which has been submitted with other confidential exhibits as Volume III of this filing.

Q. Please discuss the benefits costs for employees.

A. All full-time C&T employees assigned to the Companies are eligible for the benefits provided by C&T regardless of the operating company to which they are assigned. C&T negotiates with the providers for bulk benefit packages and premiums. The benefits for the C&T employees at Citizens', Wellsboro and Valley include: medical, vision, dental, short-term disability, long-term disability, pension and a 401(k) match.

Our pension plan, 401k, short-term disability insurance, and long-term disability insurance are provided through the National Rural Electric Cooperative Association ("NRECA"). We annually evaluate the options for health, dental and vision insurance with the assistance of an insurance broker. We also pursue negotiations regarding any insurance premium adjustments to request credits for longevity and other factors. C&T passes through the actual benefit costs of each employee.

Q. How did you forecast benefit costs for the FPFTY?

A. For the C&T Shared Services employees, we included a 3% increase.

Q. How has C&T historically billed the operating companies for the various employees and services provided?

A. When possible, C&T attempts to directly assign costs to the operating companies. If direct assignment is not administratively feasible, then we develop another reasonable allocation methodology consistent with the approved affiliated-interest agreements.

Wages are billed monthly based on weekly time sheets submitted by each operating company. The operating companies are billed for the direct and indirect labor expenses

for their employees. All employee benefits are arranged for and paid by C&T. The premiums for medical, prescription, vision, dental, life insurance, and contributions to the pension fund are directly assigned to the companies based on which company the employee is assigned. All other benefits are allocated monthly based on percentage of payroll.

C&T SHARED SERVICES

Q. Please provide a more detailed description of the "shared services" that the affiliates have access to from C&T.

A. The shared services provided by C&T are described in Exhibit__(MS-1) and include the following: human resources and payroll, information technology, communications, call center, controller, safety compliance, and legal/regulatory. These departments perform numerous services for the operating companies.

Human resources and payroll are responsible for employee wages and benefits. They complete bi-weekly payrolls, maintain employee personnel files, process insurance claims, counsel employees on benefits, handle job vacancies, administer evaluations and complete all payroll tax returns and other reports.

The information technology department lends support for the software and hardware used by the affiliates. They also purchase required software and hardware. They are the liaison between the operating companies and tech support of the third-party billing and accounting software companies. We also recently created an internal position for a Director of Cybersecurity, which oversees cybersecurity and network integrity. The costs for this function are allocated as a subset of the IT function costs.

Communications assists with public relations, preparing customer newsletters and other communications and coordinating press inquiries.

Customers of all entities in the C&T family can contact the Call Center after normal working hours to report outages and emergencies.

The legal/regulatory department provides corporate legal and regulatory support for C&T and its subsidiaries. This includes regulatory filings, PUC comments and working groups, assistance with various contracts (vendor and customer), regulatory and business strategy and other matters.

I have already detailed the activities of the controller's department. My assistance in these rate filings and on other regulatory and financial issues is part of the shared services that C&T provides.

Q. What are the advantages of providing the C&T affiliates with the shared services?

A. There are several advantages. First, the shared services are functions that any single entity within the C&T family may not be able to support on a stand-alone basis. For example, Citizens', Wellsboro, and Valley likely would not be able to justify having a person dedicated to human resources when viewed separately; however, when the needs of the entire C&T family are assessed, the six companies clearly can justify a person dedicated to human resources. The people filling our shared services functions have specialized knowledge on highly technical issues due, largely, to their ability to devote their entire attention to the particular topic.

Second, the personnel at C&T who provide this advice have the experience of working with three PUC-regulated entities and two non-PUC-regulated entities with a combined workforce in excess of 200 employees, more than 61,000 combined customers and combined 2021 revenues exceeding $106.5 million. These shared resources enable C&T

and its affiliates to implement more standardized solutions reflecting the "best practices" of all of the affiliated companies.

Q. How has C&T historically billed the operating companies for the shared services?

A. Salaries and benefits for shared services (except the Controller Department) are billed monthly based on a pro-rata comparison of the number of active meters and the revenues for each operating company during the previous year, as follows: 60% active meters and 40% revenue. Under the implementation plan approved by the Bureau of Audits in 2007, the expenses for the shared services and other C&T administrative expenses (other than salaries and benefits) are being allocated based on the same formula as above and billed monthly. The Controller's Department is allocated one-third to each regulated operating company. No allocation is made to Tri-County or Claverack because none of the controller's activities are performed for them.

Call Center charges are billed monthly based on a flat charge plus a nominal amount for incoming and outgoing calls attributed to the particular operating company.

Q. How do the companies allocate the costs for the Legal/Regulatory function?

A. The cost allocation for the legal/regulatory function reflects the anticipated activities for this department. Specifically, 10% of the costs of this function are classified as relating to the operation of the C&T corporation. That 10% is allocated among the member organizations using the meters/revenue allocation that is used for the other C&T Shared Support Services (except Treasury/Corporate Finance and Call Center). The remaining 90% of the Legal/Regulatory department costs are allocated 1/3, 1/3, 1/3 to Citizens', Valley and Wellsboro, like the allocation of the Treasury/Corporate Finance department costs. To appropriately account for any projects or activities done for Claverack and Tri-

County, the Legal/Regulatory department tracks the hours on those projects. Claverack and Tri-County compensate C&T for the tracked Legal/Regulatory hours, and those payments are used to offset the costs allocated to Citizens', Valley and Wellsboro.

Q. Did you compile an exhibit with historic affiliate charges between C&T and Citizens', Wellsboro and Valley?

A. Yes. Volume III includes Joint Confidential Exhibit 3 with the inter-affiliate charges by month for the last three years.

FINANCING AND OTHER BENEFITS OF C&T STRUCTURE

Q. How does the C&T relationship enhance financing options for Citizens', Wellsboro and Valley?

A. C&T's relationship with Tri-County and Claverack provides C&T access to reasonable cost financing with better terms. C&T offers this financing to the operating companies. Also, C&T has obtained reasonable premiums for Directors & Officers ("D&O"), liability, and property insurance for its electric affiliates through Federated Rural Electric Cooperative Insurance Company.[1] The parent companies (C&T, Claverack and Tri-County) also provide parental guarantees when necessary for various contracts such as Citizens' and Wellsboro's wholesale electricity supply agreements, thus reducing the operating companies' need to access independent or third-party financing for these arrangements. Citizens', Wellsboro, and Valley each have access from C&T to a $14 million short-term line of credit.

[1] Federated does not provide certain types of insurance for natural gas companies.

Q. Please describe the financing arrangements that C&T has in place for Citizens', Wellsboro, and Valley.

A. Due to its affiliation with Tri-County and Claverack, C&T is able to borrow funds for Citizens', Wellsboro's and Valley's use from the National Cooperative Services Corporation ("NCSC"). NCSC is a lending institution formed by the Cooperative Finance Corporation to address the financing needs of for-profit affiliates of rural electric cooperatives. C&T borrows funds from NCSC on behalf of Citizens', Wellsboro, and Valley. Currently, C&T has approximately $35.2 million in outstanding debt with NCSC on behalf of its subsidiaries. Citizens', Wellsboro, and Valley guarantee this debt with their assets and stock.

Q. Have you compiled a list of all outstanding loans between C&T and Citizens', Wellsboro and Valley?

A. Yes. Attached as Exhibit__(MS-7) is a table with the outstanding debt, original value, current outstanding, issuance date, maturity date and interest rate for all three affiliates.

Q. What requirements or covenants does NCSC place on C&T?

A. In addition to the standard Affirmative and Negative Covenants, NCSC requires C&T to meet certain financial ratios, such as an annual Debt Service Coverage ("DSC") ratio on a consolidated basis of not less than l.15, and an Equity Ratio. NCSC also requires quarterly financial reporting on a consolidated basis and an audited annual report for each subsidiary. By January 31 of each calendar year each subsidiary must provide an updated five-year financial plan.

Other covenants include that C&T shall not declare or make any dividend payments without the written consent of NCSC. Without the prior written consent of NCSC, C&T

shall not cause or permit any subsidiary to: (i) consolidate with, merge, or sell all or substantially all of its business or assets, to another entity or person, or (ii) acquire the assets of another business or entity. Finally, C&T must notify NCSC of any changes in its management agreements with any of its affiliates and shall submit copies of such revised agreements to NCSC.

Q. Will the requested rate relief be viewed positively by C&T's lender?

A. Yes. As discussed above, NCSC actively monitors the financial condition of C&T and its subsidiaries. Improving Citizens', Wellsboro's, and Valley's financial conditions through the requested rate relief will contribute to C&T's ability to continue meeting its loan covenants and also influence the amount of financing that NCSC may be willing to provide C&T and its subsidiaries in the future for various purposes. Finally, by ensuring that the Companies' rates provide the Companies with the opportunity to earn a fair return, the companies may be able to fund some capital improvements without incurring additional debt.

TAX MATTERS

Q. Does C&T submit a consolidated federal tax filing?

A. Yes. We submit a federal filing that consolidates C&T, Citizens', Wellsboro and Valley for tax purposes. A copy of our most recent tax filing is included in Volume III as Joint Confidential Exhibit 4. Each of the companies files a separate state income tax return.

Q. Does this complete your Direct Testimony?

A. Yes.

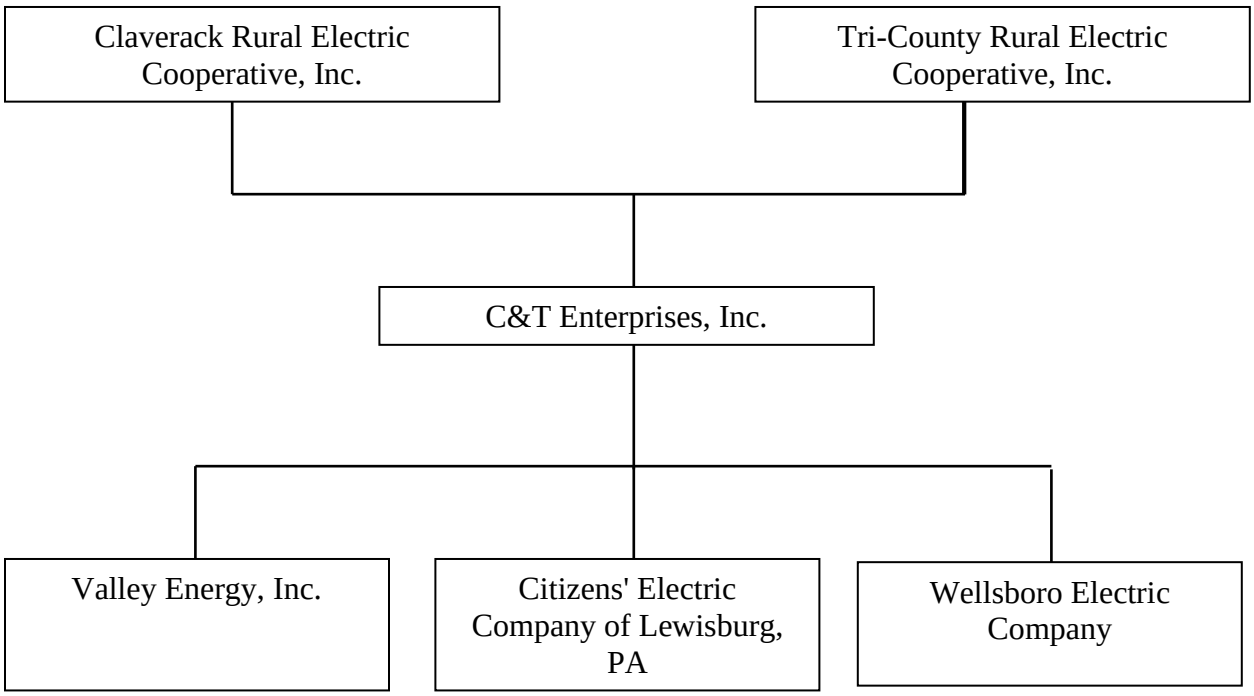
C&T ENTERPRISES, INC.
CORPORATE CHART



DESCRIPTION OF
C&T ENTERPRISES CORPORATE CHART

Citizens' Electric Company of Lewisburg, Inc.

Citizens' is an investor-owned, for-profit electric utility incorporated under the laws of Pennsylvania. Citizens' serves approximately 7,150 customers in and around Lewisburg, Pennsylvania, in a 55 square mile territory in Northumberland and Union Counties. Approximately eighty-three percent (83%) of Citizens' customers are residential, with the remaining seventeen percent (17%) of customers being commercial, small industrial, or lighting customers. Citizens' is subject to regulation by the Pennsylvania Public Utility Commission ("PUC" or "Commission").

Claverack Rural Electric Cooperative, Inc.

Claverack is a member-owned rural electric cooperative incorporated under the Pennsylvania Electric Cooperative Corporation Act of 1937 providing service to approximately 19,100 meters in an eight-county region in northeastern Pennsylvania. Its service area is approximately 1,820 square miles in area. Claverack's service area includes all or parts of the following counties: Bradford, Lackawanna, Luzerne, Lycoming, Sullivan, Susquehanna, Tioga and Wyoming. Approximately ninety (90%) of Claverack's customers are residential or seasonal customers.

C&T Enterprises, Inc.

C&T is a Pennsylvania business corporation originally established for the acquisition of Citizens' stock and generally for the management of Citizens' electric utility operations. C&T currently functions as a public utility holding company and a management services company for the Group Members.

Tri-County Rural Electric Cooperative, Inc.

Tri-County is a member-owned rural electric cooperative incorporated under the Pennsylvania Electric Cooperative Corporation Act of 1937. Tri-County provides electric service to approximately 19,600 meters in the following counties in northcentral Pennsylvania: Bradford, Cameron, Clinton, Lycoming, McKeon, Potter and Tioga. Tri-County's service territory is

approximately 4,484 square miles in area. The Rural Utility Service, Office of the United States Department of Agriculture, provides administrative oversight of Tri-County's operations.

Valley Energy, Inc.

Valley is a for-profit, investor-owned public utility incorporated under the laws of Pennsylvania. Valley has two operating divisions: VE-PA and VE-NY. VE-PA is engaged in the business of supplying and distributing natural gas to approximately 6,500 residential customers, 850 commercial and industrial customers, and 73 transportation customers. VE-PA's service territory is in and around Sayre, Pennsylvania, in northcentral Pennsylvania. VE-PA is subject to regulation by the Commission.

VE-NY is a for-profit, investor-owned public utility incorporated under the laws of Pennsylvania. VE-NY is engaged in the business of supplying and distributing natural gas to approximately 1,800 residential and 200 commercial and industrial customers. VE-NY's service area is in and around Waverly, New York. VE-NY is subject to regulation by the New York Public Service Commission.

Wellsboro Electric Company

Wellsboro is a for-profit, investor owned utility rendering electric utility service in the Borough of Wellsboro, Pennsylvania and surrounding communities. Wellsboro serves approximately 6,400 customers, of which approximately eighty percent (80%) are residential and nineteen percent (20%) are commercial or industrial. Wellsboro is regulated by the PUC.

AFFILIATED INTEREST AGREEMENT

Agreement dated as of this 31st day of May, 2022, between Citizens' Electric Company of Lewisburg, PA ("Citizens'), Wellsboro Electric Company ("WECO"), Valley Energy, Inc. – Pennsylvania Division ("VE-PA"), Valley Energy, Inc. – New York Division ("VE-NY"), C&T Enterprises, Inc. ("C&T"), Tri-County Rural Electric Cooperative, Inc. ("Tri-County"), and Claverack Rural Electric Cooperative, Inc. ("Claverack"), which are collectively referred to herein as the "Group" or individually as "Member".

Citizens', WECO and VE-PA are public utilities regulated by the Pennsylvania Public Utility Commission ("PUC-regulated Members"). VE-NY is a public utility regulated by the New York Public Service Commission. The other Members noted above do not provide public utility services that are subject to the jurisdiction of a state regulatory agency. A description of each Member is included as Attachment A. A corporate organization chart is included as Attachment B.

From time to time, Citizens', WECO, VE-PA, VE-NY, C&T, Claverack, and Tri-County may provide equipment for use by other Members and/or furnish services consistent with the categories specified herein and have agreed to the amounts to be paid.

Now, therefore, in consideration of the mutual covenants herein, the parties hereto agree as follows:

ARTICLE I

SERVICES PROVIDED AMONG GROUP MEMBERS ON TEMPORARY BASIS

Members of the Group may furnish personnel, equipment, and other resources on temporary basis to other Members of the Group. These services include C&T Shared Support

Services: Treasury/Corporate Finance, Human Resources, Information Technology, , Corporate Communication, Safety and Compliance, Call Center, Legal/Regulatory; and Group Member Services: Management, Construction, and Engineering. The rates and charges for such services shall be the lower of market or actual cost.

ARTICLE II

PAYMENT OF CHARGES FOR GROUP MEMBER SERVICES

A. Services. A Member of the Group receiving services hereunder shall pay to the Member providing said services the actual cost thereof or a market rate, whichever is less. Payment for services rendered by personnel for another Member or in common with another Member shall be based on actual time spent by such personnel as reflected in their daily time sheets or other reasonable means of determination, and will include the actual wages, fringe benefits and overheads applicable to such personnel, including the employee's wage and salary (including base pay, overtime, vacation, holiday, sick, personal days and bereavement), benefits (life insurance, pension, medical, prescription, vision, and dental) and overhead (FICA/Medicare, FUTA/SUTA, matching 401(k) contributions, and workers compensation). Attachment C sets forth the elements of Benefits and Overhead, and the source of the charges for each. Costs incurred in connection with services rendered which can be readily identified and related exclusively to a Member shall be charged directly to that Member. Costs incurred by C&T in rendering services in shared support services that cannot be identified to a specific Member shall be allocated among the appropriate Members using allocation methods specified in Article III.

B. Equipment. A Member of the Group using equipment hereunder shall pay to the Member providing the equipment all readily identifiable costs related to use of that equipment. Costs related to jointly-used equipment shall be allocated to Members based on the relative proportionate use of the equipment and/or other allocation methods generally accepted for ratemaking and financial reporting purposes.

ARTICLE III

C&T SHARED SUPPORT SERVICES

A. C&T shall provide to the Members of the Group certain shared support services, including:

1. Treasury/Corporate Finance - advice and assistance on accounting, financial, regulatory support, management of long-term and short-term financing arrangements.

2. Human Resources - responsibility for employee wages and benefits, completing bi-weekly payrolls, maintaining employee personnel files, processing insurance claims, counseling employees on benefits, handling job vacancies, administering evaluations and completing all payroll tax returns and other reports.

3. Information Technology - support for the network infrastructure, cybersecurity, software and hardware used by the Members, including the purchase of required networking equipment, security appliances, software and hardware, and acting as the liaison between the Members and third-party technology companies.

4. Corporate Communications - provides public relations support and assists with press inquiries.

5. Safety and Compliance - assists Members with understanding and fulfilling safety and compliance issues, including compliance with state and federal workplace safety regulations and requirements.

6. Call Center - after hours call center to handle inquiries from Members' customers.

7. Legal/Regulatory – advice and assistance on legal and regulatory issues, including contracts, rates, ratemaking, tariffs, commission proceedings, legislative proposals, regulatory business strategy and similar issues.

B. To the extent a cost incurred by C&T to perform the shared support services can be directly allocated to a particular Member of the Group, it will be billed in accordance with the procedures set forth in Article V below.

C. The labor, overhead, benefits, expenses, administrative expenses and other costs of C&T's provision shared support services that cannot be directly assigned shall be allocated as follows:

1. Treasury/Corporate Finance: The costs of the Corporate Finance function shall be allocated equally among Citizens', WECO and VE-PA/VE-NY (i.e., 1/3 to each). For purposes of this allocation, VE-PA/VE-NY will be classified as a single Member.

2. Call Center: The costs of the Call Center will be allocated to the Members based on a combination of a fixed monthly base fee and usage of the Call Center services during the month. On a calendar year basis, C&T will

compare the revenues collected for the Call Center and the expenses of the Call Center. If the revenues exceed the expenses, C&T will refund the excess amount to the Members pro rata based on the percentage of calls handled for each Member in comparison to the total calls handled for the group. If the expenses exceed the revenues, C&T will collect the excess amount from the Members pro rata based on the percentage of calls handled for each Member in comparison to the total calls handled for the group.

3. Legal/Regulatory: The costs of the Legal/Regulatory function shall be allocated: (A) 10% to C&T to reflect corporate administration activities (which shall then be subject to the apportionment as reflected in Section III(C)(4) below); and (B) 90% to the regulated utilities (Citizens', WECO and VE-PA/VE-NY), to be shared 1/3, 1/3 and 1/3. For purposes of this allocation, VE-PA/VE-NY will be classified as a single Member. The Legal/Regulatory department shall track and report hours that are spent on projects for Tri-County or Claverack, which shall be billed for such work by C&T as set forth in Article II(a). Citizens', WECO and VE-PA/VE-NY shall receive credits for any hours spent by the Legal/Regulatory department on projects for Tri-County or Claverack.

4. Other Shared Support Services: The costs for the other shared support services will be allocated based on each Member's pro-rata share of the total meters and total revenues. Specifically, 60% of the costs will be allocated based on active meters and 40% of the costs will be allocated based on

annual revenues. The results of this allocation shall be updated each calendar year.

5. Other Expenses: Any expenses of C&T that are not addressed through the allocations discussed in sections 1, 2, 3 and 4 above shall be billed to the Group Members based on the allocation formula specified in section 4 above.

ARTICLE IV

GROUP MEMBER SERVICES PROVIDED ON AS NEEDED BASIS

Members of the Group may provide the following services to other Members on an as needed basis:

A. Management - advice and guidance on business operations and projects such as additions or improvement to property, plant or equipment.

B. Construction - personnel to assist in construction or service restoration activities.

C. Engineering - advice on the design and implementation of utility system extensions and enhancements, including the connection of customer generation.

ARTICLE V

BILLING PRACTICES

As soon as practical after the 15th of each month, or such other period as may be agreed upon by the respective Members of the Group, a billing or accounting shall be rendered for all amounts due for services and expenses for such period, computed pursuant to this Agreement. These bills shall be in sufficient detail to show separately the charge for each class of service

rendered and any intercompany allocations hereunder. Each Member shall keep its books and records available at all times for inspection by regulatory bodies having jurisdiction over them and shall furnish, upon request, any and all information required with respect to services rendered, the costs thereof and the allocation of such costs among the parties to this Agreement.

ARTICLE VI

FINANCING

A Member may, from time to time, loan funds to another Member(s) of the Group. Short-term loans will be evidenced by promissory notes bearing interest at applicable market rates. Long-term loans will be evidenced by promissory notes bearing interest at applicable market rates or the equivalent cost of financing by the lending Member and containing repayment terms consistent with reasonable market terms or those assumed by the lending Member. All long term loans to PUC-regulated Members made pursuant to this Article shall be subject to the applicable provisions of the Public Utility Code, including but not limited to, Chapter 19 Securities and Obligations.

ARTICLE VII

CONTROLLING AGREEMENT

Until this Agreement takes effect, Citizens', C&T, Claverack, Tri-County, VE-PA/VE-NY and WECO will continue to operate pursuant to the Affiliated Interest Agreement dated October 9, 2019, that was approved at Pennsylvania Public Utility Commission Docket Nos. G-2008-2020732, G-2008-2020733 and G-2008-2021399. This Agreement shall be in full force and effect as of the date approved by the Pennsylvania Public Utility Commission, and shall continue in effect through December 31, 2022 (the "initial term"). Thereafter, the Agreement shall automatically

renew for successive one-year terms unless terminated by any party hereto by giving the others sixty days written notice of termination prior to the end of the initial or renewal terms; provided, however, this Agreement shall terminate immediately with regard to any party as of the date such Member ceases to be an affiliated Member of the Group (except to the extent that compensation is still to be paid for services rendered by, or to, any Member prior to the date of such cessation of affiliation). The terms of this Agreement shall be automatically extended to the successors and assignees of the parties. This Agreement may be executed in multiple counterparts.

IN WITNESS WHEREOF, the parties have hereunto executed this Agreement as of the day and year first above written.

AFFILIATED INTEREST AGREEMENT
OF
CITIZENS' ELECTRIC COMPANY, WELLSBORO ELECTRIC COMPANY,
VALLEY ENERGY, INC. – PENNSYLVANIA DIVISION, ET AL.

DOCKET NO. _____

DESCRIPTION OF GROUP MEMBERS

Citizens' Electric Company of Lewisburg, PA

Citizens' is an investor-owned, for-profit electric utility incorporated under the laws of Pennsylvania. Citizens' serves approximately 7,200 customers in and around Lewisburg, Pennsylvania, in a 55 square mile territory in Northumberland and Union Counties. Approximately eighty percent (80%) of Citizens' customers are residential, with the remaining twenty percent (20%) of customers being commercial and small industrial users. Citizens' is subject to regulation by the Pennsylvania Public Utility Commission.

Claverack Rural Electric Cooperative, Inc.

Claverack is a rural electric cooperative incorporated under the Pennsylvania Electric Cooperative Corporation Act of 1937 providing service to approximately 18,000 members in an eight-county region in Northeastern Pennsylvania. It's service area is approximately 1,820 square miles in area. Claverack's service area includes all or parts of the following counties: Bradford, Lackawanna, Luzerne, Lycoming, Sullivan, Susquehanna, Tioga, and Wyoming. Approximately ninety-four percent (94%) of Claverack's customers are residential or seasonal customers. The remaining six percent (6%) are commercial or small industrial customers. The Rural Utility Service, Office of the United States Department of Agriculture, provides oversight of Claverack's operations.

C&T Enterprises, Inc.

C&T is a Pennsylvania business corporation that functions as a public utility holding company, which owns all of the stock of Valley Energy, WECO, and Citizens'. C&T acts as a management services company for the Group Members.

Tri-County Rural Electric Cooperative, Inc.

Tri-County is a member-owned rural electric cooperative incorporated under the Pennsylvania Electric Cooperative Corporation Act of 1937. Tri-County provides electric service to approximately 19.500 members in the following counties in Northcentral, Pennsylvania: Bradford, Cameron, Clinton, Lycoming, McKeon, Potter, and Tioga. Tri-County's service territory is approximately 4,484 square miles in area. The Rural Utility Service, Office of the United States Department of Agriculture, provides administrative oversight of Tri-County's operations.

Valley Energy, Inc. – Pennsylvania Division

VE-PA is a for-profit, investor-owned public utility incorporated under the laws of Pennsylvania. VE-PA is engaged in the business of supplying and distributing natural gas to approximately 6,450 residential customers and 950 commercial and industrial customers. VE-PA's service territory is in and around Sayre, Pennsylvania, in Northcentral Pennsylvania. VE-PA is subject to regulation by the Pennsylvania Public Utility Commission.

Valley Energy, Inc. – New York Division

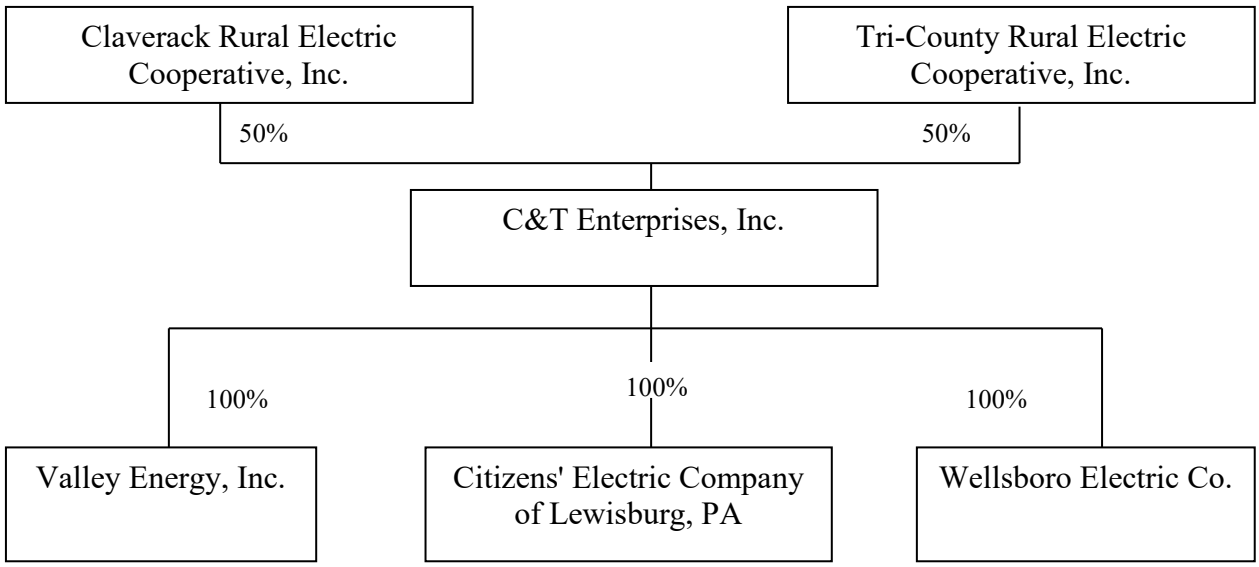
VE-NY is a for-profit, investor-owned public utility incorporated under the laws of Pennsylvania. VE-NY is engaged in the business of supplying and distributing natural gas to approximately 1,800 residential and 225 commercial and industrial customers. VE-NY's service area is in and around Waverly, New York. VE-NY is subject to regulation by the New York Public Service Commission.

Wellsboro Electric Company

WECO is a for-profit, investor-owned utility rendering electric utility service in the Borough of Wellsboro, Pennsylvania and surrounding communities. WECO serves approximately 6,400 customers, over eighty percent (80%) of which are residential and twenty percent (20%) of which are commercial or industrial. WECO is regulated by the Pennsylvania Public Utility Commission.

Attachment "B"

C & T ENTERPRISES, INC., CORPORATE CHART



Attachment "C"
Overhead and Benefits

Overhead and Benefits for C&T Employees Assigned to a Member or Providing Shared Services

Workers comp is allocated based on % of total payroll and the rate is based on the rated charged by Federated.

$$\frac{?}{\text{Total Payroll}} \times \text{Federated?} = \text{Workers Compensation}$$

NRECA R&S, medical (e.g., Blue Cross Blue Shield), dental (e.g., Delta Dental), NRECA group insurance - are all charged as billed by the provider and charged by employee to the company they are assigned to.

401k - allocated based on companies % of total payroll and the options elected by the employee under the available plan (e.g., contribution level selected by employee, current matching policy, etc.)

FICA, Medicare, FUTA, SUTA allocated based on payroll and calculated using Federal and state rates.

Overhead and Benefits—Temporary Use of Member Employees by other Members

When an assigned employee is temporarily used by another Member, the Member receiving the temporary services is billed the employee's wages plus an overhead rate of 10%.

REVISED CONTRACT FOR SERVICES

THIS CONTRACT, made and executed in duplicate this 24th day of October, 2019, by and between **C&T ENTERPRISES, INC.**, a Pennsylvania corporation, with offices at 33 Austin Street, Wellsboro, Pennsylvania, (hereinafter referred to as "C&T") and **CITIZENS' ELECTRIC COMPANY OF LEWISBURG, PA**, a Pennsylvania public utility corporation, with offices at 1775 Industrial Boulevard, Lewisburg, Pennsylvania (hereinafter referred to as "Operating Company") (each, individually, "Party" or collectively, "Parties").

WHEREAS, C&T is a public utility holding company organized for the purpose of providing management, communication, financial, technical, operational and other business-related services to its public utilities and others; and

WHEREAS, Operating Company is a for-profit, investor-owned public utility that desires to purchase services from C&T and C&T desires to sell services to Operating Company; and

WHEREAS, Operating Company and C&T are also parties to a general Affiliated Interest Agreement that is filed with the Pennsylvania Public Utility Commission among Operating Company, C&T and other entities that are classified as affiliates of Operating Company under the relevant state statutes (the "AIA")[1]; and

WHEREAS, the Parties wish to reduce their agreement to writing.

NOW THEREFORE, in consideration of the foregoing recitals of fact and the mutual benefits and obligations set forth herein, the Parties agree as follows:

1. DESCRIPTION OF SERVICES. The Parties agree to provide to each other the specific services described herein and set forth in the Addenda attached hereto, which Addenda shall be dated, signed by both C&T and Operating Company, marked alphabetically, e.g., Addendum "A," and so forth, and are incorporated by reference herein.

   1.1 PROVISION OF EMPLOYEES. C&T shall provide service to Operating Company through the assignment of individual C&T Employees to perform specific work and other activities for, and as directed by, the Operating Company. Services will be provided by the specific C&T Employees as identified in Addendum B. Such employees will be considered to be assigned to the Operating Company for purposes of the specific work and other activities.

   1.2 PROVISION AND USE OF VEHICLES, SPACE, MATERIALS AND OTHER EQUIPMENT. In addition to the services described in Paragraph 1.1 of this Contract, the Parties may provide to each other certain vehicles, space, materials and other equipment for use. The rates and charges for such vehicles, materials

[1] The Docket Number and date of approval of the most recent AIA will be set forth in Addendum A of this Contract, which will be updated as necessary.

and other equipment provided will be set forth in Addendum C to this Contract. The rates and charges for space will be set forth in Addendum D to this Contract.

1.3 OTHER SERVICES. In addition to the services described in Paragraphs 1.1 and 1.2 of this Contract, the Parties may provide other services of a nature mutually agreed on by C&T and Operating Company. C&T and Operating Company will execute additional Addenda to this Contract describing such services and specifying the rates and charges for the services. Alternatively, C&T and Operating Company may enter into additional contracts or agreements for such services.

2. RATES AND CHARGES. The rates and charges to be paid by each Party for the services provided shall be set forth on the Addenda attached hereto as provided for in Paragraph 1 of this Contract. These rates and charges shall reflect the lower of actual cost or market. Throughout the course and term of this Contract such rates and charges may be adjusted and revised for any calendar quarter period commencing on the first day of each calendar quarter, upon written notice from C&T to Operating Company not less than thirty (30) days in advance of the calendar quarter for which rates are to be changed. Operating Company's failure to notify C&T in writing of objection to the proposed rates and charges revision within thirty (30) days after receipt of proposed price revision shall be considered acceptance of such revision. In the absence of written notice from C&T to Operating Company regarding any revision of charges and rates, the rates and charges then in effect shall continue until notice is given in accordance with the foregoing schedule.

2.1 LABOR & OVERHEAD CHARGES. C&T shall calculate and bill, on a periodic basis, labor and overhead for all Employees assigned to Operating Company. Overhead charges include, but are not limited to, payroll taxes, pension, workers compensation and health insurance contributions. C&T reserves the right to estimate the monthly cost of certain benefits, subject to subsequent reconciliation. As soon as practical, any benefit adjustments will be charged or credited to the Operating Company.

2.2 SHARED SUPPORT SERVICE ALLOCATION. Consistent with the AIA, C&T will calculate and bill Operating Company for shared support services provided by C&T employees that are not assigned to Operating Company. Shared support services will include, but not be limited to, Human Resources, Payroll, Information Technology, Corporate Communications, Call, Center and Key Accounts.

3. BILLING AND PAYMENT. All rates and charges to be paid by Operating Company to C&T for services rendered to Operating Company shall be billed by C&T by invoice with sufficient detail to document and support the rates and charges set forth therein and submitted to Operating Company on or before the 15th day of each month for services rendered by C&T during the preceding month. Any amounts due from C&T to Operating Company shall be netted against the C&T charges on the monthly invoice. Payment of

such invoice shall be made in full by Operating Company to C&T on or before twenty (20) days from the date of receipt of such invoice, and in the event such invoice is not paid in full, the unpaid portion thereof shall, at C&T's option, accrue interest at the rate of one percent (1%) of the unpaid amount per month, with a partial month being counted as a full month.

3.1 ADVANCED PAYMENT. To enable C&T to meet its obligations due during the initial month of this Contract, C&T may continue to retain any Advanced Payment provided pursuant to the prior Contract for Services between the Parties. C&T may refund the Advanced Payment to the Operating Company, at any time before the termination of the Contract. To the extent not previously refunded, Operating Company shall be entitled to return of the Advanced Payment upon termination of this Contract. The amount of any Advanced Payment that remains in C&T's possession shall be set forth in Addendum E to this Contract.

3.2 ACCOUNTING LIABILITIES. In addition to any rates and charges due hereunder, Operating Company may set up a payable to C&T for amounts necessary under generally accepted accounting principles to book liabilities for future payments due, including for FAS 106 and accrued vacation obligations. C&T shall provide to Operating Company a separate invoice once per year indicating the amount of such liabilities for the year based on an actuarial estimate. Any variance between actual amounts paid by C&T during the year and the actuarial estimate provided to Operating Company shall be subject to reconciliation at the end of the year.

4. TERM. The initial term of this Contract for Services shall commence on the date of this Contract and shall continue for three years. This Contract will thereafter automatically renew for successive one-year terms unless terminated by either party by written notice provided at least sixty (60) days prior to the end of any initial or renewal term. Any such termination shall not affect any obligations undertaken or liabilities incurred by either party prior to the date of termination.

5. DESIGNATION OF OPERATING COMPANY OFFICERS. The Board of Directors of Operating Company retains full authority, power and discretion to designate the Officers for the Operating Company. To the extent the Board of the Operating Company designates a C&T Employee as an Officer of the Operating Company, the Parties shall enter into or revise Addendum B and appropriate schedules to assign the employee to the Operating Company.

6. TEMPORARY ASSIGNMENT OF C&T EMPLOYEES. Notwithstanding the categorization of the C&T Employees designated in Addendum B Schedule 1 to this Contract as being assigned to the Operating Company, C&T may, from time to time, request to use such employees to provide services to other entities. Operating Company's monthly compensation to C&T for such employee's services shall be reduced by the applicable percentage of employee's total working hours allocable to work outside Operating Company. Whenever employees assigned to Operating Company are

temporarily assigned to another operating company, their labor, overhead and expenses will be billed based the provisions of Article II, Section A and/or Article III of the AIA.

7. MANAGEMENT OF ASSIGNED C&T EMPLOYEES. Operating Company will have management authority over C&T Employees assigned to Operating Company under this Contract.

8. REQUEST FOR ADDITIONAL SERVICES. Operating Company may request, from time to time, that C&T provide additional services on a temporary or a permanent basis by C&T employees that are not permanently assigned to Operating Company. By way of example, Operating Company may request the placement of full-time staff members with IT experience on-site during a computer system conversion. Any request for additional services must be conveyed to C&T in a timely manner. To the extent such service is desired on a permanent basis, C&T and Operating Company shall mutually agree on addition of or modification to an Addendum to this Contract. If the permanently-assigned or temporarily-assigned C&T Employee is currently assigned to another entity, the Operating Company will pay a percentage of the compensation for said C&T Employee otherwise recoverable from the other entity based on the portion of total monthly working hours allocable to Operating Company or a written agreement between the two Operating Companies. To the extent such assignment is temporary and such C&T Employee is not currently assigned to another entity, C&T and Operating Company will mutually agree on appropriate compensation.

9. OVERSIGHT COMMITTEE. C&T shall form and convene an Oversight Committee to address complaints, problems or grievances that arise under this Contract or similar agreements entered into with other entities. Each such entity, including Operating Company, shall have the opportunity to designate a member of the Oversight Committee. The Oversight Committee will attempt to resolve all complaints, problems and grievances raised by the Operating Company and other represented entities. To the extent the Oversight Committee cannot resolve such issues, the issues will be submitted to a neutral arbitrator, mutually agreed to by Operating Company and C&T, for binding resolution. Such arbitration will be conducted according to the rules of the American Arbitration Association.

10. RELATIONSHIP OF THE PARTIES. The parties hereto understand and agree that C&T is to provide services under this Contract as an independent contractor to the Operating Company and not as an agent, employee, representative, or in any other manner or relationship whatsoever. At all times throughout the term hereof, C&T shall be free to and intends to contract to provide services to others. Except as stated herein nothing in this Contract shall in any way be construed to constitute C&T or any of C&T's agents or employees as the agent, employee or representative of the Operating Company.

11. CONFIDENTIALITY. All information furnished under and pursuant to this Contract shall be held by C&T and Operating Company in strict confidence and shall never be reproduced, revealed or made accessible in whole or in part, in any manner whatsoever, to any other persons unless required by law, applicable regulatory agencies (including the

Pennsylvania Public Utility Commission) or unless the Party first obtains the other Party's express and written consent; provided, however, the Party may reveal to the subject of the information that the other Party is a source of information about the subject and refer same to the Other Party for the purpose of obtaining such information and reviewing it. Any information specifically designated as "Confidential" may be viewed only by the Officers of the Party and only to the extent necessary to perform their designated duties. Each Party shall take reasonable steps to limit the public disclosure of confidential information provided hereunder.

12. INDEMNIFICATION. Operating Company shall hold C&T harmless against all liability or loss and against all claims or actions based on or arising out of damage or injury (including death) to persons or property caused by or sustained in connection with the performance of this contract or by conditions created thereby, or based on any violation of statue or regulation and the defense of any such claims or actions.

13. INSURANCE. C&T shall, at its sole cost and expense, be covered by comprehensive general liability insurance including contractual liability insurance with combined single limits of not less than One Million Dollars ($1,000,000.00), which insurance coverage and limits shall be evidenced by certificates of insurance as requested by the Operating Company and which insurance policies shall name the Operating Company as additional insured thereon.

14. WORKERS COMPENSATION. Any employees assigned to Operating Company hereunder shall at all times remain C&T Employees for workers compensation purposes. C&T will take reasonable actions with respect to such employees, including, but not limited to, retaining an appropriate amount of Workers Compensation Insurance. C&T agrees to indemnify, defend and hold harmless Operating Company for any workers compensation claim asserted by a C&T Employee.

15. HEADINGS. The description headings of the various paragraphs of this Contract are inserted for reference purposes only and do not form a part of this Contract and shall in no way affect meaning or interpretation thereof.

16. ENTIRE AGREEMENT. This Agreement constitutes and contains the entire understanding and agreement of the parties hereto and supersedes any and all prior understandings and agreements, oral or written, by, between and among the parties regarding the subject matter hereof.

17. AMENDMENTS. This Contract and the Addenda incorporated herein shall be modified and/or amended only by writing signed by both parties hereto, and shall not be effective until filed with and approved by any applicable regulatory agencies, including the Pennsylvania Public Utility Commission. The requirement for approval prior to effectiveness shall not apply to periodic changes to Addenda to update information such as the information regarding the AIA set forth in Addendum A and the employees and related costs assigned to Operating Company under Addendum B.

18. AUTHORITY. C&T and Operating Company hereby covenant and agree, each to the other, that their respective signatories have the authority to execute and bind each pursuant to the appropriate actions of the governing bodies of each. C&T also warrants that it has the authority to provide the services contemplated hereunder.

19. NOTICES. Any notices to be delivered under the terms of this Contract shall be sent by U.S. Mail certified, return receipt requested, addressed as follows;

To C&T:

C&T Enterprises, Inc.
33 Austin Street
Wellsboro, PA 16901

To Operating Company:

Citizens' Electric Company of Lewisburg, PA
1775 Industrial Boulevard
Lewisburg, PA 17837

20. FORCE MAJEURE. C&T shall use diligence to perform its obligations under this Contact, however, in the event that C&T is delayed in or prevented from performing or carrying out its obligations under this Contract by reason of an unforeseeable event or occurrence beyond reasonable control of and without the fault and negligence of C&T, including, but not limited to, acts of God, strike, flood, earthquake, storm, fire, lightning, epidemic, war, riot, civil disturbance, sabotage, acts of public enemy, explosion, change in law or applicable regulation subsequent to the date hereof and action or inaction by any federal, state or local legislative, executive, administrative, or judicial agency or body which, in any of the foregoing cases, by exercise of due foresight C&T could not reasonably have been expected to avoid, C&T shall not be liable to the Operating Company for or on account of any loss, damage, injury or expense resulting from or arising out of such delay or prevention, provided, however, that C&T shall use due diligence to remove the cause or causes thereof. The settlement of strikes and labor disturbances shall be wholly within the discretion of C&T. Economic hardship shall not constitute a Force Majeure under this Contract.

21. REGULATORY OVERSIGHT/APPROVAL. This Contract constitutes a component of the Affiliated Interest Agreement and relationship between C&T and Operating Company that is subject to oversight by the Pennsylvania Public Utility Commission ("PUC"). To the extent the PUC invalidates and/or modifies any portion of this Contract or the Affiliated Interest Agreement, either during an independent review of the agreement or in a proceeding before the Commission, and such action impacts the terms of this Contract, the parties agree to mutually negotiate in good faith modifications to this Contract consistent with the Commission's decision.

22. PRIOR AGREEMENTS. This Contract shall supersede and replace in its entirety the Contract for Services dated November 18, 1999 (as amended), between the Parties; provided, however, that the Parties shall remain liable for any obligations incurred under the prior Contract for Services.

23. SEVERABILITY. All agreements and covenants contained in this Contract are severable, and in the event any of them are held to be invalid by any competent court, this Contract will be interpreted as if the invalid agreements or covenants were not contained in this Contract.

24. ASSIGNMENT. This Contract may not be assigned, transferred or conveyed in whole or part by either party without the express written permission of the other.

25. CONSTRUCTION. This Contract shall be governed by the laws of the Commonwealth of Pennsylvania.

26. BINDING EFFECTS. The parties hereto covenant and agree that the terms, conditions and provisions of this Contract shall be binding upon themselves, their respective successors, and assigns.

IN WITNESS WHEREOF, the parties have caused this Contract to be executed and delivered as of the day and year first above written.

CITIZENS' ELECTRIC COMPANY
CONTRACT FOR SERVICES
DATED THE 24TH DAY OF OCTOBER, 2019
ADDENDUM B
(EMPLOYEES)

1. DESCRIPTION OF SERVICES.

C&T shall provide to Operating Company the services of the C&T Employees set forth on the attached listing, marked Schedule B-1. For the period during which this Addendum remains effective, the persons listed on Schedule B-1 shall be considered to be assigned to Operating Company. Schedule B-1 may be modified by mutual consent of C&T and Operating Company.

2. RATES AND CHARGES FOR SERVICES.

The rate and charge for services provided by C&T Employees to Operating Company shall be calculated monthly based on C&T's direct monthly costs related to each such employee, including salary, payroll taxes and benefits. The annual charge for each employee will be listed on Schedule B-1, which shall consequently be designated as highly confidential and handled in accordance with the confidentiality provisions in Paragraph 11 of the Contract.

3. EMPLOYEE BONUSES.

The C&T Employees listed on Schedule B-1 may, from time to time, be provided certain bonuses or other performance-based incentives. To the extent such bonuses or incentives are proposed or instituted by C&T, Operating Company shall have the right to refuse, for reasonable reasons and grounds, to compensate C&T for such bonuses or incentives. Operating Company may also request that C&T provide a bonus or other incentive to specific C&T Employees listed on Schedule B-1. Bonuses or incentives shall be passed through to and paid by Operating Company.

President & CEO

REVISED CONTRACT FOR SERVICES

THIS CONTRACT, made and executed in duplicate this 6th day of October, 2010, by and between **C&T ENTERPRISES, INC.**, a Pennsylvania corporation, with offices at 33 Austin Street, Wellsboro, Pennsylvania, (hereinafter referred to as "C&T") and **WELLSBORO ELECTRIC COMPANY** a Pennsylvania public utility corporation, with offices at 33 Austin Street, Wellsboro, Pennsylvania (hereinafter referred to as "Operating Company") (each, individually, "Party" or collectively, "Parties").

WHEREAS, C&T is a public utility holding company organized for the purpose of providing management, communication, financial, technical, operational and other business-related services to its public utilities and others; and

WHEREAS, Operating Company is a for-profit, investor-owned public utility that desires to purchase services from C&T and C&T desires to sell services to Operating Company; and

WHEREAS, Operating Company and C&T are also parties to a general Affiliated Interest Agreement that is filed with the Pennsylvania Public Utility Commission among Operating Company, C&T and other entities that are classified as affiliates of Operating Company under the relevant state statutes (the "AIA")[1]; and

WHEREAS, the Parties wish to reduce their agreement to writing.

NOW THEREFORE, in consideration of the foregoing recitals of fact and the mutual benefits and obligations set forth herein, the Parties agree as follows:

1. DESCRIPTION OF SERVICES. The Parties agree to provide to each other the specific services described herein and set forth in the Addenda attached hereto, which Addenda shall be dated, signed by both C&T and Operating Company, marked alphabetically, e.g., Addendum "A," and so forth, and are incorporated by reference herein.

   1.1 PROVISION OF EMPLOYEES. C&T shall provide service to Operating Company through the assignment of individual C&T Employees to perform specific work and other activities for, and as directed by, the Operating Company. Services will be provided by the specific C&T Employees as identified in Addendum B. Such employees will be considered to be assigned to the Operating Company for purposes of the specific work and other activities.

   1.2 PROVISION AND USE OF VEHICLES, SPACE, MATERIALS AND OTHER EQUIPMENT. In addition to the services described in Paragraph 1.1 of this Contract, the Parties may provide to each other certain vehicles, space, materials and other equipment for use. The rates and charges for such vehicles, materials

[1] The Docket Number and date of approval of the most recent AIA will be set forth in Addendum A of this Contract, which will be updated as necessary.

and other equipment provided will be set forth in Addendum C to this Contract. The rates and charges for space will be set forth in Addendum D to this Contract.

1.3 OTHER SERVICES. In addition to the services described in Paragraphs 1.1 and 1.2 of this Contract, the Parties may provide other services of a nature mutually agreed on by C&T and Operating Company. C&T and Operating Company will execute additional Addenda to this Contract describing such services and specifying the rates and charges for the services. Alternatively, C&T and Operating Company may enter into additional contracts or agreements for such services.

2. RATES AND CHARGES. The rates and charges to be paid by each Party for the services provided shall be set forth on the Addenda attached hereto as provided for in Paragraph 1 of this Contract. These rates and charges shall reflect the lower of actual cost or market. Throughout the course and term of this Contract such rates and charges may be adjusted and revised for any calendar quarter period commencing on the first day of each calendar quarter, upon written notice from C&T to Operating Company not less than thirty (30) days in advance of the calendar quarter for which rates are to be changed. Operating Company's failure to notify C&T in writing of objection to the proposed rates and charges revision within thirty (30) days after receipt of proposed price revision shall be considered acceptance of such revision. In the absence of written notice from C&T to Operating Company regarding any revision of charges and rates, the rates and charges then in effect shall continue until notice is given in accordance with the foregoing schedule.

2.1 LABOR & OVERHEAD CHARGES. C&T shall calculate and bill, on a periodic basis, labor and overhead for all Employees assigned to Operating Company. Overhead charges include, but are not limited to, payroll taxes, pension, workers compensation and health insurance contributions. C&T reserves the right to estimate the monthly cost of certain benefits, subject to subsequent reconciliation. As soon as practical, any benefit adjustments will be charged or credited to the Operating Company.

2.2 SHARED SUPPORT SERVICE ALLOCATION. Consistent with the AIA, C&T will calculate and bill Operating Company for shared support services provided by C&T employees that are not assigned to Operating Company. Shared support services will include, but not be limited to, Human Resources, Payroll, Information Technology, Corporate Communications, Call, Center and Key Accounts.

3. BILLING AND PAYMENT. All rates and charges to be paid by Operating Company to C&T for services rendered to Operating Company shall be billed by C&T by invoice with sufficient detail to document and support the rates and charges set forth therein and submitted to Operating Company on or before the 15th day of each month for services rendered by C&T during the preceding month. Any amounts due from C&T to Operating Company shall be netted against the C&T charges on the monthly invoice. Payment of

such invoice shall be made in full by Operating Company to C&T on or before twenty (20) days from the date of receipt of such invoice, and in the event such invoice is not paid in full, the unpaid portion thereof shall, at C&T's option, accrue interest at the rate of one percent (1%) of the unpaid amount per month, with a partial month being counted as a full month.

3.1 ADVANCED PAYMENT. To enable C&T to meet its obligations due during the initial month of this Contract, C&T may continue to retain any Advanced Payment provided pursuant to the prior Contract for Services between the Parties. C&T may refund the Advanced Payment to the Operating Company, at any time before the termination of the Contract. To the extent not previously refunded, Operating Company shall be entitled to return of the Advanced Payment upon termination of this Contract. The amount of any Advanced Payment that remains in C&T's possession shall be set forth in Addendum E to this Contract.

3.2 ACCOUNTING LIABILITIES. In addition to any rates and charges due hereunder, Operating Company may set up a payable to C&T for amounts necessary under generally accepted accounting principles to book liabilities for future payments due, including for FAS 106 and accrued vacation obligations. C&T shall provide to Operating Company a separate invoice once per year indicating the amount of such liabilities for the year based on an actuarial estimate. Any variance between actual amounts paid by C&T during the year and the actuarial estimate provided to Operating Company shall be subject to reconciliation at the end of the year.

4. TERM. The initial term of this Contract for Services shall commence on the date of this Contract and shall continue for three years. This Contract will thereafter automatically renew for successive one-year terms unless terminated by either party by written notice provided at least sixty (60) days prior to the end of any initial or renewal term. Any such termination shall not affect any obligations undertaken or liabilities incurred by either party prior to the date of termination.

5. DESIGNATION OF OPERATING COMPANY OFFICERS. The Board of Directors of Operating Company retains full authority, power and discretion to designate the Officers for the Operating Company. To the extent the Board of the Operating Company designates a C&T Employee as an Officer of the Operating Company, the Parties shall enter into or revise Addendum B and appropriate schedules to assign the employee to the Operating Company.

6. TEMPORARY ASSIGNMENT OF C&T EMPLOYEES. Notwithstanding the categorization of the C&T Employees designated in Addendum B Schedule 1 to this Contract as being assigned to the Operating Company, C&T may, from time to time, request to use such employees to provide services to other entities. Operating Company's monthly compensation to C&T for such employee's services shall be reduced by the applicable percentage of employee's total working hours allocable to work outside Operating Company. Whenever employees assigned to Operating Company are

temporarily assigned to another operating company, their labor, overhead and expenses will be billed based the provisions of Article II, Section A and/or Article III of the AIA.

7. MANAGEMENT OF ASSIGNED C&T EMPLOYEES. Operating Company will have management authority over C&T Employees assigned to Operating Company under this Contract.

8. REQUEST FOR ADDITIONAL SERVICES. Operating Company may request, from time to time, that C&T provide additional services on a temporary or a permanent basis by C&T employees that are not permanently assigned to Operating Company. By way of example, Operating Company may request the placement of full-time staff members with IT experience on-site during a computer system conversion. Any request for additional services must be conveyed to C&T in a timely manner. To the extent such service is desired on a permanent basis, C&T and Operating Company shall mutually agree on addition of or modification to an Addendum to this Contract. If the permanently-assigned or temporarily-assigned C&T Employee is currently assigned to another entity, the Operating Company will pay a percentage of the compensation for said C&T Employee otherwise recoverable from the other entity based on the portion of total monthly working hours allocable to Operating Company or a written agreement between the two Operating Companies. To the extent such assignment is temporary and such C&T Employee is not currently assigned to another entity, C&T and Operating Company will mutually agree on appropriate compensation.

9. OVERSIGHT COMMITTEE. C&T shall form and convene an Oversight Committee to address complaints, problems or grievances that arise under this Contract or similar agreements entered into with other entities. Each such entity, including Operating Company, shall have the opportunity to designate a member of the Oversight Committee. The Oversight Committee will attempt to resolve all complaints, problems and grievances raised by the Operating Company and other represented entities. To the extent the Oversight Committee cannot resolve such issues, the issues will be submitted to a neutral arbitrator, mutually agreed to by Operating Company and C&T, for binding resolution. Such arbitration will be conducted according to the rules of the American Arbitration Association.

10. RELATIONSHIP OF THE PARTIES. The parties hereto understand and agree that C&T is to provide services under this Contract as an independent contractor to the Operating Company and not as an agent, employee, representative, or in any other manner or relationship whatsoever. At all times throughout the term hereof, C&T shall be free to and intends to contract to provide services to others. Except as stated herein nothing in this Contract shall in any way be construed to constitute C&T or any of C&T's agents or employees as the agent, employee or representative of the Operating Company.

11. CONFIDENTIALITY. All information furnished under and pursuant to this Contract shall be held by C&T and Operating Company in strict confidence and shall never be reproduced, revealed or made accessible in whole or in part, in any manner whatsoever, to any other persons unless required by law, applicable regulatory agencies (including the

Pennsylvania Public Utility Commission) or unless the Party first obtains the other Party's express and written consent; provided, however, the Party may reveal to the subject of the information that the other Party is a source of information about the subject and refer same to the Other Party for the purpose of obtaining such information and reviewing it. Any information specifically designated as "Confidential" may be viewed only by the Officers of the Party and only to the extent necessary to perform their designated duties. Each Party shall take reasonable steps to limit the public disclosure of confidential information provided hereunder.

12. INDEMNIFICATION. Operating Company shall hold C&T harmless against all liability or loss and against all claims or actions based on or arising out of damage or injury (including death) to persons or property caused by or sustained in connection with the performance of this contract or by conditions created thereby, or based on any violation of statue or regulation and the defense of any such claims or actions.

13. INSURANCE. C&T shall, at its sole cost and expense, be covered by comprehensive general liability insurance including contractual liability insurance with combined single limits of not less than One Million Dollars ($1,000,000.00), which insurance coverage and limits shall be evidenced by certificates of insurance as requested by the Operating Company and which insurance policies shall name the Operating Company as additional insured thereon.

14. WORKERS COMPENSATION. Any employees assigned to Operating Company hereunder shall at all times remain C&T Employees for workers compensation purposes. C&T will take reasonable actions with respect to such employees, including, but not limited to, retaining an appropriate amount of Workers Compensation Insurance. C&T agrees to indemnify, defend and hold harmless Operating Company for any workers compensation claim asserted by a C&T Employee.

15. HEADINGS. The description headings of the various paragraphs of this Contract are inserted for reference purposes only and do not form a part of this Contract and shall in no way affect meaning or interpretation thereof.

16. ENTIRE AGREEMENT. This Agreement constitutes and contains the entire understanding and agreement of the parties hereto and supersedes any and all prior understandings and agreements, oral or written, by, between and among the parties regarding the subject matter hereof.

17. AMENDMENTS. This Contract and the Addenda incorporated herein shall be modified and/or amended only by writing signed by both parties hereto, and shall not be effective until filed with and approved by any applicable regulatory agencies, including the Pennsylvania Public Utility Commission. The requirement for approval prior to effectiveness shall not apply to periodic changes to Addenda to update information such as the information regarding the AIA set forth in Addendum A and the employees and related costs assigned to Operating Company under Addendum B.

18. AUTHORITY. C&T and Operating Company hereby covenant and agree, each to the other, that their respective signatories have the authority to execute and bind each pursuant to the appropriate actions of the governing bodies of each. C&T also warrants that it has the authority to provide the services contemplated hereunder.

19. NOTICES. Any notices to be delivered under the terms of this Contract shall be sent by U.S. Mail certified, return receipt requested, addressed as follows;

To C&T:

C&T Enterprises, Inc.
33 Austin Street
Wellsboro, PA 16901

To Operating Company:

Wellsboro Electric Company
33 Austin Street
Wellsboro, PA 16901

20. FORCE MAJEURE. C&T shall use diligence to perform its obligations under this Contact, however, in the event that C&T is delayed in or prevented from performing or carrying out its obligations under this Contract by reason of an unforeseeable event or occurrence beyond reasonable control of and without the fault and negligence of C&T, including, but not limited to, acts of God, strike, flood, earthquake, storm, fire, lightning, epidemic, war, riot, civil disturbance, sabotage, acts of public enemy, explosion, change in law or applicable regulation subsequent to the date hereof and action or inaction by any federal, state or local legislative, executive, administrative, or judicial agency or body which, in any of the foregoing cases, by exercise of due foresight C&T could not reasonably have been expected to avoid, C&T shall not be liable to the Operating Company for or on account of any loss, damage, injury or expense resulting from or arising out of such delay or prevention, provided, however, that C&T shall use due diligence to remove the cause or causes thereof. The settlement of strikes and labor disturbances shall be wholly within the discretion of C&T. Economic hardship shall not constitute a Force Majeure under this Contract.

21. REGULATORY OVERSIGHT/APPROVAL. This Contract constitutes a component of the Affiliated Interest Agreement and relationship between C&T and Operating Company that is subject to oversight by the Pennsylvania Public Utility Commission ("PUC"). To the extent the PUC invalidates and/or modifies any portion of this Contract or the Affiliated Interest Agreement, either during an independent review of the agreement or in a proceeding before the Commission, and such action impacts the terms of this Contract, the parties agree to mutually negotiate in good faith modifications to this Contract consistent with the Commission's decision.

22. PRIOR AGREEMENTS. This Contract shall supersede and replace in its entirety the Contract for Services dated March 29, 2002, between the Parties; provided, however, that the Parties shall remain liable for any obligations incurred under the prior Contract for Services.

23. SEVERABILITY. All agreements and covenants contained in this Contract are severable, and in the event any of them are held to be invalid by any competent court, this Contract will be interpreted as if the invalid agreements or covenants were not contained in this Contract.

24. ASSIGNMENT. This Contract may not be assigned, transferred or conveyed in whole or part by either party without the express written permission of the other.

25. CONSTRUCTION. This Contract shall be governed by the laws of the Commonwealth of Pennsylvania.

26. BINDING EFFECTS. The parties hereto covenant and agree that the terms, conditions and provisions of this Contract shall be binding upon themselves, their respective successors, and assigns.

IN WITNESS WHEREOF, the parties have caused this Contract to be executed and delivered as of the day and year first above written.

CONTRACT FOR SERVICES
DATED THE 6TH DAY OF OCTOBER, 2010
ADDENDUM B
(EMPLOYEES)

1. DESCRIPTION OF SERVICES.

C&T shall provide to Operating Company the services of the C&T Employees set forth on the attached listing, marked Schedule B-1. For the period during which this Addendum remains effective, the persons listed on Schedule B-1 shall be considered to be assigned to Operating Company. Schedule B-1 may be modified by mutual consent of C&T and Operating Company.

2. RATES AND CHARGES FOR SERVICES.

The rate and charge for services provided by C&T Employees to Operating Company shall be calculated monthly based on C&T's direct monthly costs related to each such employee, including salary, payroll taxes and benefits. The annual charge for each employee will be listed on Schedule B-1, which shall consequently be designated as highly confidential and handled in accordance with the confidentiality provisions in Paragraph 11 of the Contract.

3. EMPLOYEE BONUSES.

The C&T Employees listed on Schedule B-1 may, from time to time, be provided certain bonuses or other performance-based incentives. To the extent such bonuses or incentives are proposed or instituted by C&T, Operating Company shall have the right to refuse, for reasonable reasons and grounds, to compensate C&T for such bonuses or incentives. Operating Company may also request that C&T provide a bonus or other incentive to specific C&T Employees listed on Schedule B-1. Bonuses or incentives shall be passed through to and paid by Operating Company.

COMMERCIAL PROPERTY LEASE

This lease is made between **WELLSBORO ELECTRIC COMPANY**, of 33 Austin Street, Wellsboro, Tioga County, Pennsylvania, 16901, herein called "Lessors", and **C&T ENTERPRISES, INC.**, of P.O. Box 551, Lewisburg, Pennsylvania, 17838, herein called the "Lessee".

Lessors hereby offer to lease to Lessee the premises situate in the Borough of Wellsboro, County of Tioga, Commonwealth of Pennsylvania, 33 Austin Street, 3rd Floor, Wellsboro, Tioga County, 16901, upon the following TERMS and CONDITIONS:

SGA 3/25/22 BMF 3/25/2022

1. **USE:** Lessee agrees that he will use and occupy the demised premises as a ~~communication center~~ office space only and for no other purpose without the written consent of the Lessors first had and obtained; nor shall Lessee obstruct or interfere with the rights of other Lessees, or in any other way injure or annoy them nor will the Lessee allow the leased premises, or any part of it, to be occupied by any other person, business or entity, other than the Lessee or Lessee's employees without the written consent of the Lessors endorsed on this Agreement.

2. **TERM:** Lessors demise the office space at 33 Austin Street, 3rd Floor, Wellsboro, Tioga County, Pennsylvania 16901, for a term of one (1) year commencing on January 1, 2022, and terminating on December 31, 2022. After the initial term, this lease shall automatically renew on a month to month basis. Either party may terminate the lease with thirty (30) days' written notice provided to the other party.

3. **RENT:** Monthly rent for the lease term shall be at of $250.00 per month payable in advance on the first (1st) day of each month for that month's rental. All rental payments shall be made to Lessors at the address specified above. Any payment made ten (10) days or later after the due date shall be assessed a ten (10%) percent late fee which will be added to the monthly payment.

4. **ALTERATIONS:** Lessee shall not, without first obtaining the written consent of Lessors, make any alterations, additions, or improvements, in, to or about the premises. Lessors will pay only for materials that they deem necessary. Any alterations, additions or improvements, in, to or about the leased premises shall be made solely at the Lessee's expense, except for repairs to the roof. Further, any alterations, additions, or improvements in, to or about the premises, except movable or attachable office equipment shall be the property of the Lessors, and shall remain upon and be surrendered with the premises, as a part of it, at the termination of this lease, without molestation or injury.

5. **ORDINANCES AND STATUTES:** Lessee shall comply with all statutes, ordinances and requirements of a municipal, state, and federal authorities now in force, or which may hereafter be in force, pertaining to the premises, occasioned by or affecting the use thereof by Lessee.

6. **ASSIGNMENT AND SUBLETTING:** Lessee shall not assign this Lease or sublet any portion of the premises without prior written consent of the Lessors. Any such assignment or

subletting without consent shall be void and, at the option of the Lessors, may terminate this Lease.

7. **UTILITIES:** Lessors agree to provide and be responsible for the payment of the following: electric, gas, water, sewer, and removal of garbage. Lessee shall be solely liable for telephone/FAX/TV and/or cable bills, as they become due.

8. **ENTRY AND INSPECTION:** Lessee shall permit Lessors or Lessors' agents to enter upon the premises at reasonable times and upon reasonable notice, for the purpose of inspecting the same, and will permit Lessors anytime within sixty (60) days prior to the expiration of this Lease, to place upon the premises any usual "To Let" or "For Lease" signs, and permit persons desiring to lease the same to inspect the premises thereafter. It is understood that the Lessors shall have the option and right to enter the leased premises at any time upon activation of the fire alarm system.

9. **INDEMNIFICATION OF LESSORS:** Lessors shall not be liable for any damage or injury to Lessee, or any other person, or to any property, occurring on the demised premises or any part thereof, and Lessee agrees to hold Lessors harmless from any/and all claims for damages, no matter how caused. Further, Lessee agrees to carry liability insurance in the minimum of $1,000000.00 on the demised premises listing the Lessors as a named insured.

10. **EMINENT DOMAIN:** If the premises or any part thereof or any estate therein, or any other part of the building materially affecting Lessee's use of the premises, shall be taken by eminent domain, this lease shall terminate on the date when title vests pursuant to such taking. The rent, and any additional rent, shall be apportioned as of the termination date, and any rent paid for any period beyond that date shall be repaid to Lessee. Lessee shall not be entitled to any part of the award for such taking or any payment in lieu thereof, but Lessee may file a claim for any taking of fixtures and improvements owned by Lessee, and for moving expenses.

11. **DESTRUCTION OF PREMISES:** In the event of partial destruction of the premises during the term hereof, from any cause, Lessors shall forthwith repair the same, provided that such repairs can be made within sixty (60) days under the existing governmental laws and regulations, but such destruction shall not terminate this lease except that Lessee shall be entitled to a proportionate reduction of rent while such repairs are being made, based upon the extent to which the making of such repairs shall interfere with the business of Lessee on the premises. If such repairs cannot be made within the said sixty (60) days, Lessors, at their option, may take the same within a reasonable time, this lease continuing in effect, with the rent proportionately abated as aforementioned, and in the event that Lessors shall not elect to make such repairs which cannot be made within sixty (60) days, this lease may be terminated at the option of either party. In the event that the building in which the demised premises may be situated is destroyed to an extent of not less than one-third (1/3) of the replacement costs thereof, Lessors may elect to terminate this lease whether the demised premises be injured or not. A total destruction of the building in which the premises may be situated shall terminate this lease.

12. **LESSORS' REMEDIES ON DEFAULT:** If Lessee defaults in the payment of rent, or any additional rent, or default in the performance of any of the other covenants or conditions hereof, Lessors may give Lessee notice of such default, and if Lessee does not cure any such

default, and if Lessee does not cure any such default within fifteen (15) days, after the giving of such notice [or if such default is of such a nature that it cannot be completely cured within reasonable diligence and in good faith to cure such default], then Lessors may terminate this lease on not less than ten (10) days' notice to Lessees. On the date specified in such notice the tenn of this lease shall terminate, and Lessees shall then quit and surrender premises to Lessors, but Lessee shall remain liable as hereinafter provided. If this lease shall have been so terminated by Lessors, Lessors may at any time thereafter resume possession of the premises by any lawful means and remove Lessee or other occupants and their effects.

13. **NO WAIVER OF DEFAULT:** No failure to enforce any term shall be deemed a waiver. This agreement shall remain in full force and effect unless and until terminated under and pursuant to the terms of this agreement. The failure of either party to insist upon strict performance of any of the provisions of this agreement shall in no way affect the right of such party thereafter to enforce that provision. The waiver of any breach of any provision hereof shall not be construed as a waiver of any subsequent breach of the same or similar nature, and shall not be construed as a waiver of strict performance of any other obligations.

14. **ATTORNEY'S FEES:** In case suit should be brought for recovery of the premises, or for any sum due hereunder, or because of any act which may arise out of the possession of the premises, by either party, the prevailing party shall be entitled to all costs incurred in connection with such action, including reasonable attorney's fees.

15. **NOTICES:** Any notice which either party may be or is required to give, shall be given by mailing the same, postage prepaid, to the addresses shown below:

LESSEES: 1775 Industrial Blvd.
Lewisburg, Pennsylvania 17837

LESSORS: 33 Austin Street
Wellsboro, Pennsylvania 16901

Or at such other places as may be designated by the parties from time to time.

16. **NOTICE OF DEFECTS:** Lessee shall give to Lessors prompt written notice of any accident to, or any defects in, to, or on the demised premises that may come to its attention.

17. **ASSIGNS AND SUCCESSORS:** This Lease is binding upon and inures to the benefit of the assigns and successors in interest to the parties.

18. **SUBORDINATION:** This Lease is and shall be subordinated to all existing and future liens and encumbrances against the property.

19. **JURISDICTION, VENUE AND CHOICE OF LAW:** This Agreement shall be construed in accordance with the laws of the Commonwealth of Pennsylvania. Furthermore, the parties agree to utilize and submit to the Jurisdiction and Venue of the Court of Common Pleas of Tioga County, Pennsylvania.

20. **ENTIRE AGREEMENT:** The foregoing constitutes the entire agreement between the parties and may be modified only by a writing signed by both parties. The following Exhibits, if any, have been made a part of this lease before the parties' execution hereof:

REVISED CONTRACT FOR SERVICES

THIS CONTRACT, made and executed in duplicate this 28th day of October, 2019, by and between **C&T ENTERPRISES, INC.**, a Pennsylvania corporation, with offices at 33 Austin Street, Wellsboro, Pennsylvania, (hereinafter referred to as "C&T") and **VALLEY ENERGY, INC.** a Pennsylvania public utility corporation, with offices at 523 South Keystone Avenue, Sayre, Pennsylvania (hereinafter referred to as "Operating Company") (each, individually, "Party" or collectively, "Parties").

WHEREAS, C&T is a public utility holding company organized for the purpose of providing management, communication, financial, technical, operational and other business-related services to its public utilities and others; and

WHEREAS, Operating Company is a for-profit, investor-owned public utility that desires to purchase services from C&T and C&T desires to sell services to Operating Company; and

WHEREAS, Operating Company and C&T are also parties to a general Affiliated Interest Agreement that is filed with the Pennsylvania Public Utility Commission among Operating Company, C&T and other entities that are classified as affiliates of Operating Company under the relevant state statutes (the "AIA")[1]; and

WHEREAS, the Parties wish to reduce their agreement to writing.

NOW THEREFORE, in consideration of the foregoing recitals of fact and the mutual benefits and obligations set forth herein, the Parties agree as follows:

1. DESCRIPTION OF SERVICES. The Parties agree to provide to each other the specific services described herein and set forth in the Addenda attached hereto, which Addenda shall be dated, signed by both C&T and Operating Company, marked alphabetically, e.g., Addendum "A," and so forth, and are incorporated by reference herein.

   1.1 PROVISION OF EMPLOYEES. C&T shall provide service to Operating Company through the assignment of individual C&T Employees to perform specific work and other activities for, and as directed by, the Operating Company. Services will be provided by the specific C&T Employees as identified in Addendum B. Such employees will be considered to be assigned to the Operating Company for purposes of the specific work and other activities.

   1.2 PROVISION AND USE OF VEHICLES, SPACE, MATERIALS AND OTHER EQUIPMENT. In addition to the services described in Paragraph 1.1 of this Contract, the Parties may provide to each other certain vehicles, space, materials and other equipment for use. The rates and charges for such vehicles, materials

[1] The Docket Number and date of approval of the most recent AIA will be set forth in Addendum A of this Contract, which will be updated as necessary.

and other equipment provided will be set forth in Addendum C to this Contract. The rates and charges for space will be set forth in Addendum D to this Contract.

1.3 OTHER SERVICES. In addition to the services described in Paragraphs 1.1 and 1.2 of this Contract, the Parties may provide other services of a nature mutually agreed on by C&T and Operating Company. C&T and Operating Company will execute additional Addenda to this Contract describing such services and specifying the rates and charges for the services. Alternatively, C&T and Operating Company may enter into additional contracts or agreements for such services.

2. RATES AND CHARGES. The rates and charges to be paid by each Party for the services provided shall be set forth on the Addenda attached hereto as provided for in Paragraph 1 of this Contract. These rates and charges shall reflect the lower of actual cost or market. Throughout the course and term of this Contract such rates and charges may be adjusted and revised for any calendar quarter period commencing on the first day of each calendar quarter, upon written notice from C&T to Operating Company not less than thirty (30) days in advance of the calendar quarter for which rates are to be changed. Operating Company's failure to notify C&T in writing of objection to the proposed rates and charges revision within thirty (30) days after receipt of proposed price revision shall be considered acceptance of such revision. In the absence of written notice from C&T to Operating Company regarding any revision of charges and rates, the rates and charges then in effect shall continue until notice is given in accordance with the foregoing schedule.

2.1 LABOR & OVERHEAD CHARGES. C&T shall calculate and bill, on a periodic basis, labor and overhead for all Employees assigned to Operating Company. Overhead charges include, but are not limited to, payroll taxes, pension, workers compensation and health insurance contributions. C&T reserves the right to estimate the monthly cost of certain benefits, subject to subsequent reconciliation. As soon as practical, any benefit adjustments will be charged or credited to the Operating Company.

2.2 SHARED SUPPORT SERVICE ALLOCATION. Consistent with the AIA, C&T will calculate and bill Operating Company for shared support services provided by C&T employees that are not assigned to Operating Company. Shared support services will include, but not be limited to, Human Resources, Payroll, Information Technology, Corporate Communications, Call, Center and Key Accounts.

3. BILLING AND PAYMENT. All rates and charges to be paid by Operating Company to C&T for services rendered to Operating Company shall be billed by C&T by invoice with sufficient detail to document and support the rates and charges set forth therein and submitted to Operating Company on or before the 15th day of each month for services rendered by C&T during the preceding month. Any amounts due from C&T to Operating Company shall be netted against the C&T charges on the monthly invoice. Payment of

such invoice shall be made in full by Operating Company to C&T on or before twenty (20) days from the date of receipt of such invoice, and in the event such invoice is not paid in full, the unpaid portion thereof shall, at C&T's option, accrue interest at the rate of one percent (1%) of the unpaid amount per month, with a partial month being counted as a full month.

3.1 ADVANCED PAYMENT. To enable C&T to meet its obligations due during the initial month of this Contract, C&T may continue to retain any Advanced Payment provided pursuant to the prior Contract for Services between the Parties. C&T may refund the Advanced Payment to the Operating Company, at any time before the termination of the Contract. To the extent not previously refunded, Operating Company shall be entitled to return of the Advanced Payment upon termination of this Contract. The amount of any Advanced Payment that remains in C&T's possession shall be set forth in Addendum E to this Contract.

3.2 ACCOUNTING LIABILITIES. In addition to any rates and charges due hereunder, Operating Company may set up a payable to C&T for amounts necessary under generally accepted accounting principles to book liabilities for future payments due, including for FAS 106 and accrued vacation obligations. C&T shall provide to Operating Company a separate invoice once per year indicating the amount of such liabilities for the year based on an actuarial estimate. Any variance between actual amounts paid by C&T during the year and the actuarial estimate provided to Operating Company shall be subject to reconciliation at the end of the year.

4. TERM. The initial term of this Contract for Services shall commence on the date of this Contract and shall continue for three years. This Contract will thereafter automatically renew for successive one-year terms unless terminated by either party by written notice provided at least sixty (60) days prior to the end of any initial or renewal term. Any such termination shall not affect any obligations undertaken or liabilities incurred by either party prior to the date of termination.

5. DESIGNATION OF OPERATING COMPANY OFFICERS. The Board of Directors of Operating Company retains full authority, power and discretion to designate the Officers for the Operating Company. To the extent the Board of the Operating Company designates a C&T Employee as an Officer of the Operating Company, the Parties shall enter into or revise Addendum B and appropriate schedules to assign the employee to the Operating Company.

6. TEMPORARY ASSIGNMENT OF C&T EMPLOYEES. Notwithstanding the categorization of the C&T Employees designated in Addendum B Schedule 1 to this Contract as being assigned to the Operating Company, C&T may, from time to time, request to use such employees to provide services to other entities. Operating Company's monthly compensation to C&T for such employee's services shall be reduced by the applicable percentage of employee's total working hours allocable to work outside Operating Company. Whenever employees assigned to Operating Company are

temporarily assigned to another operating company, their labor, overhead and expenses will be billed based the provisions of Article II, Section A and/or Article III of the AIA.

7. MANAGEMENT OF ASSIGNED C&T EMPLOYEES. Operating Company will have management authority over C&T Employees assigned to Operating Company under this Contract.

8. REQUEST FOR ADDITIONAL SERVICES. Operating Company may request, from time to time, that C&T provide additional services on a temporary or a permanent basis by C&T employees that are not permanently assigned to Operating Company. By way of example, Operating Company may request the placement of full-time staff members with IT experience on-site during a computer system conversion. Any request for additional services must be conveyed to C&T in a timely manner. To the extent such service is desired on a permanent basis, C&T and Operating Company shall mutually agree on addition of or modification to an Addendum to this Contract. If the permanently-assigned or temporarily-assigned C&T Employee is currently assigned to another entity, the Operating Company will pay a percentage of the compensation for said C&T Employee otherwise recoverable from the other entity based on the portion of total monthly working hours allocable to Operating Company or a written agreement between the two Operating Companies. To the extent such assignment is temporary and such C&T Employee is not currently assigned to another entity, C&T and Operating Company will mutually agree on appropriate compensation.

9. OVERSIGHT COMMITTEE. C&T shall form and convene an Oversight Committee to address complaints, problems or grievances that arise under this Contract or similar agreements entered into with other entities. Each such entity, including Operating Company, shall have the opportunity to designate a member of the Oversight Committee. The Oversight Committee will attempt to resolve all complaints, problems and grievances raised by the Operating Company and other represented entities. To the extent the Oversight Committee cannot resolve such issues, the issues will be submitted to a neutral arbitrator, mutually agreed to by Operating Company and C&T, for binding resolution. Such arbitration will be conducted according to the rules of the American Arbitration Association.

10. RELATIONSHIP OF THE PARTIES. The parties hereto understand and agree that C&T is to provide services under this Contract as an independent contractor to the Operating Company and not as an agent, employee, representative, or in any other manner or relationship whatsoever. At all times throughout the term hereof, C&T shall be free to and intends to contract to provide services to others. Except as stated herein nothing in this Contract shall in any way be construed to constitute C&T or any of C&T's agents or employees as the agent, employee or representative of the Operating Company.

11. CONFIDENTIALITY. All information furnished under and pursuant to this Contract shall be held by C&T and Operating Company in strict confidence and shall never be reproduced, revealed or made accessible in whole or in part, in any manner whatsoever, to any other persons unless required by law, applicable regulatory agencies (including the

Pennsylvania Public Utility Commission and the New York Public Service Commission) or unless the Party first obtains the other Party's express and written consent; provided, however, the Party may reveal to the subject of the information that the other Party is a source of information about the subject and refer same to the Other Party for the purpose of obtaining such information and reviewing it. Any information specifically designated as "Confidential" may be viewed only by the Officers of the Party and only to the extent necessary to perform their designated duties. Each Party shall take reasonable steps to limit the public disclosure of confidential information provided hereunder.

12. INDEMNIFICATION. Operating Company shall hold C&T harmless against all liability or loss and against all claims or actions based on or arising out of damage or injury (including death) to persons or property caused by or sustained in connection with the performance of this contract or by conditions created thereby, or based on any violation of statue or regulation and the defense of any such claims or actions.

13. INSURANCE. C&T shall, at its sole cost and expense, be covered by comprehensive general liability insurance including contractual liability insurance with combined single limits of not less than One Million Dollars ($1,000,000.00), which insurance coverage and limits shall be evidenced by certificates of insurance as requested by the Operating Company and which insurance policies shall name the Operating Company as additional insured thereon.

14. WORKERS COMPENSATION. Any employees assigned to Operating Company hereunder shall at all times remain C&T Employees for workers compensation purposes. C&T will take reasonable actions with respect to such employees, including, but not limited to, retaining an appropriate amount of Workers Compensation Insurance. C&T agrees to indemnify, defend and hold harmless Operating Company for any workers compensation claim asserted by a C&T Employee.

15. HEADINGS. The description headings of the various paragraphs of this Contract are inserted for reference purposes only and do not form a part of this Contract and shall in no way affect meaning or interpretation thereof.

16. ENTIRE AGREEMENT. This Agreement constitutes and contains the entire understanding and agreement of the parties hereto and supersedes any and all prior understandings and agreements, oral or written, by, between and among the parties regarding the subject matter hereof.

17. AMENDMENTS. This Contract and the Addenda incorporated herein shall be modified and/or amended only by writing signed by both parties hereto, and shall not be effective until filed with and approved by any applicable regulatory agencies, including the Pennsylvania Public Utility Commission. The requirement for approval prior to effectiveness shall not apply to periodic changes to Addenda to update information such as the information regarding the AIA set forth in Addendum A and the employees and related costs assigned to Operating Company under Addendum B.

18. AUTHORITY. C&T and Operating Company hereby covenant and agree, each to the other, that their respective signatories have the authority to execute and bind each pursuant to the appropriate actions of the governing bodies of each. C&T also warrants that it has the authority to provide the services contemplated hereunder.

19. NOTICES. Any notices to be delivered under the terms of this Contract shall be sent by U.S. Mail certified, return receipt requested, addressed as follows;

To C&T:

C&T Enterprises, Inc.
33 Austin Street
Wellsboro, PA 16901

To Operating Company:

Valley Energy, Inc.
523 South Keystone Avenue
Sayre, PA 18840

20. FORCE MAJEURE. C&T shall use diligence to perform its obligations under this Contact, however, in the event that C&T is delayed in or prevented from performing or carrying out its obligations under this Contract by reason of an unforeseeable event or occurrence beyond reasonable control of and without the fault and negligence of C&T, including, but not limited to, acts of God, strike, flood, earthquake, storm, fire, lightning, epidemic, war, riot, civil disturbance, sabotage, acts of public enemy, explosion, change in law or applicable regulation subsequent to the date hereof and action or inaction by any federal, state or local legislative, executive, administrative, or judicial agency or body which, in any of the foregoing cases, by exercise of due foresight C&T could not reasonably have been expected to avoid, C&T shall not be liable to the Operating Company for or on account of any loss, damage, injury or expense resulting from or arising out of such delay or prevention, provided, however, that C&T shall use due diligence to remove the cause or causes thereof. The settlement of strikes and labor disturbances shall be wholly within the discretion of C&T. Economic hardship shall not constitute a Force Majeure under this Contract.

21. REGULATORY OVERSIGHT/APPROVAL. This Contract constitutes a component of the Affiliated Interest Agreement and relationship between C&T and Operating Company that is subject to oversight by the Pennsylvania Public Utility Commission ("PUC") and the New York Public Service Commission ("PSC"). To the extent the PUC or PSC invalidates and/or modifies any portion of this Contract or the Affiliated Interest Agreement, either during an independent review of the agreement or in a proceeding before the Commission, and such action impacts the terms of this Contract, the parties agree to mutually negotiate in good faith modifications to this Contract consistent with the Commission's decision.

22. PRIOR AGREEMENTS. This Contract shall supersede and replace in its entirety the Contract for Services dated March 29, 2002, between the Parties; provided, however, that the Parties shall remain liable for any obligations incurred under the prior Contract for Services.

23. SEVERABILITY. All agreements and covenants contained in this Contract are severable, and in the event any of them are held to be invalid by any competent court, this Contract will be interpreted as if the invalid agreements or covenants were not contained in this Contract.

24. ASSIGNMENT. This Contract may not be assigned, transferred or conveyed in whole or part by either party without the express written permission of the other.

25. CONSTRUCTION. This Contract shall be governed by the laws of the Commonwealth of Pennsylvania.

26. BINDING EFFECTS. The parties hereto covenant and agree that the terms, conditions and provisions of this Contract shall be binding upon themselves, their respective successors, and assigns.

IN WITNESS WHEREOF, the parties have caused this Contract to be executed and delivered as of the day and year first above written.

CONTRACT FOR SERVICES
DATED THE 23rd DAY OF OCTOBER, 2019
ADDENDUM B
(EMPLOYEES)

1. DESCRIPTION OF SERVICES.

C&T shall provide to Operating Company the services of the C&T Employees set forth on the attached listing, marked Schedule B-1. For the period during which this Addendum remains effective, the persons listed on Schedule B-1 shall be considered to be assigned to Operating Company. Schedule B-1 may be modified by mutual consent of C&T and Operating Company.

2. RATES AND CHARGES FOR SERVICES.

The rate and charge for services provided by C&T Employees to Operating Company shall be calculated monthly based on C&T's direct monthly costs related to each such employee, including salary, payroll taxes and benefits. The annual charge for each employee will be listed on Schedule B-1, which shall consequently be designated as highly confidential and handled in accordance with the confidentiality provisions in Paragraph 11 of the Contract.

3. EMPLOYEE BONUSES.

The C&T Employees listed on Schedule B-1 may, from time to time, be provided certain bonuses or other performance-based incentives. To the extent such bonuses or incentives are proposed or instituted by C&T, Operating Company shall have the right to refuse, for reasonable reasons and grounds, to compensate C&T for such bonuses or incentives. Operating Company may also request that C&T provide a bonus or other incentive to specific C&T Employees listed on Schedule B-1. Bonuses or incentives shall be passed through to and paid by Operating Company.

CONTRACT FOR SERVICES
DATED THE 28th DAY OF OCTOBER, 2019
ADDENDUM C
(VEHICLES, MATERIALS AND EQUIPMENT)

1. DESCRIPTION OF SERVICES.

C&T shall provide to Operating Company (or Operating Company shall provide to C&T) the vehicles, materials and other equipment more particularly detailed and set forth on the attached listing, marked Schedule C-1 , which schedule is incorporated herein as though set forth at length. Schedule C-1 may be changed from time to time by mutual agreement of C&T and Operating Company.

2. RATES AND CHARGES FOR SERVICES.

The rates and charges for services set forth in Paragraph 1 hereof shall be calculated monthly based on the monthly fixed and variable costs related to such vehicles, material or equipment.
