PENNSYLVANIA AMERICAN WATER COMPANY
CHRISTINA CHARD
852 WESLEY DRIVE
MECHANICSBURG PA 17055

Dear Christina Chard,

The Commission submitted a request for pre-payment of Pennsylvania American Water Company's estimated Public Utility Commission assessment for fiscal year 2025-26. This pre-payment of $3,200,000.00 was an estimate based on the revenues shown on your Company's GAO-24 submission and the Commission's fiscal year 2025-26 approved budget. The following is a summary of the actual invoice amount less this pre-payment:

Description	Amount
PA Public Utility Commission 2025-26 Assessment	$4,680,497.00
Office of Consumer Advocate 2025-26 Assessment	$1,225,475.00
Office of Small Business Advocate 2025-26 Assessment	$399,561.00
Damage Prevention Committee 2025-26 Assessment	$0.00
Total Assessment for 2025-26	$6,305,533.00
Less: Prepayment of Estimated 2025-26 Assessment	($3,200,000.00)
Remaining Amount Due for 2025-26 Assessment	**$3,105,533.00**

For payment by check, please send to:
Pennsylvania Public Utility Commission
Bureau of Administration
Keystone Bldg. Room 303N
400 North Street
Harrisburg, PA 17120

For payment via ACH/wire transfer:
Bank: Wells Fargo Bank
ABA#: 121000248
Acct Name: Commonwealth of PA
Acct #: 2100019662887
OBI: 2025-26 PUC Assessment

The Commission would like to take this opportunity to express its gratitude for Pennsylvania American Water Company's continued cooperation in the pre-payment methodology.

If you have any questions concerning this pre-billing, please contact Amy Zuvich at (717) 783-6806.

Sincerely,

Robert C. Gramola
Director of Administration

PENNSYLVANIA PUBLIC UTILITY COMMISSION
Harrisburg, PA 17120

NOTICE OF ASSESSMENT

EXPLANATION OF INVOICE FOR GENERAL ASSESSMENT FOR FISCAL YEAR JULY 1, 2025 TO JUNE 30, 2026

In Section 510 of the Public Utility Code, 66 Pa. C.S. §510, the Pennsylvania General Assembly has authorized the Pennsylvania Public Utility Commission to assess all public utilities a percentage of their gross intrastate operating revenues for the preceding calendar year. Under Section 510, each public utility is required, on or before March 31 of each year to file with the Commission a statement of the utility's gross intrastate operating revenues for the preceding calendar year. After receiving the utilities' statements of gross intrastate operating revenues, the Commission sends general assessment invoices to all public utilities to advise each utility of the amount of assessment that utility owes based upon that utility's activity (gross intrastate operating revenues) in the preceding year. The enclosed assessment is for your proportionate share of the estimated expenses of the Public Utility Commission for the Commission's Fiscal Year July 1, 2025 to June 30, 2026.

YOU ARE REQUIRED TO PAY THIS INVOICE WITHIN THIRTY DAYS AFTER YOU RECEIVE IT. Objections to the assessment must be made in writing within 15 days and shall set out in detail the grounds upon which you regard the assessment to be excessive, erroneous, unlawful, or invalid. Objections may be filed only by the person, partnership, or corporation assessed. Filing an objection, however, does not eliminate your obligation to pay the assessment while your objection is being considered. **FAILURE TO PAY THE ASSESSMENT WHEN PAYMENT IS DUE WILL SUBJECT YOU TO PENALTIES.**

Be sure that your personal check or money order is written out in the same amount as your assessment invoice, and make your remittance payable to, "Commonwealth of PA". DO NOT SEND CASH. If you have reason to correspond with the Commission regarding your assessment invoice, please refer to your invoice number. A receipt for payment will not be issued. Please mail your payment with the return portion of your invoice in the enclosed self-addressed envelope. Please note that rounding of your assessment to the nearest dollar has occurred. Your assessment for the PUC, including the OCA, OSBA and the DPC where applicable, has been combined into one invoice; one payment for all applicable assessments is acceptable. **A TWENTY DOLLAR ($20.00) FEE WILL BE CHARGED FOR ALL DISHONORED OR BAD CHECKS REMITTED AS PAYMENT OF ASSESSMENTS.**

Your assessment has been computed by multiplying your gross intrastate operating revenues for the calendar year 2024 by the assessment factor for the public utility group of which you are a member. Your gross intrastate operating revenues for 2024 have been taken from the Assessment Reports Form GAO-24, AR-24-RR or AR-24-MC which you have filed with the Commission, or have been estimated by the Commission if you failed to file a timely report. Gross operating revenue reported to the Commission on the Assessment Reports may have been revised by the Commission to accurately reflect assessable revenue. The assessment factors for the various public utility groups are set forth in Schedule B enclosed herewith.

The approved estimate of expenditures of the Commission for the period July 1, 2025 to June 30, 2026 payable as a General Assessment by the public utilities which the Commission regulates has been determined as follows:

Approved budget for the Commission for the Fiscal Year July 1, 2025 through June 30, 2026:	$93,475,240
Deduct:	
Pipeline Operators Allocation per Act 127 of 2011	679,278
Various Fees Collected in FY 2024-25	331,377
UGWF Administration per Act 13 of 2012	607,300
Prior Year Cost Saving	1,964,811
UCR Collection for CY 2024	4,945,527
EGS/NGS Allocation per Act 155 of 2014	4,207,321
Total Deductions	$12,735,614
General Assessment Total Amount	$80,739,626

The way in which the total Public Utility Commission assessment of $80,739,626 has been allocated to the various groups of public utilities as shown on Schedules A and B enclosed herewith.

OFFICE OF CONSUMER ADVOCATE
NOTICE OF ASSESSMENT

EXPLANATION OF INVOICE FOR GENERAL ASSESSMENT FOR PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE, OFFICE OF ATTORNEY GENERAL FOR FISCAL YEAR JULY 1, 2025 TO JUNE 30, 2026

The Pennsylvania Public Utility Commission is mandated under Act 15 of 1977, P.L. 19 as amended by Act 107 of 1978 and Act 25 of 1983, to levy upon the public utilities the Commission regulates a yearly assessment to fund the Pennsylvania Office of the Consumer Advocate (herein called Consumer Advocate), Office of the Attorney General. The Governor and the Appropriation Committees of the Pennsylvania House and Senate approved an estimated operating budget of $7,252,000 for the Consumer Advocate for the Fiscal Year July 1, 2025 to June 30, 2026.

The enclosed assessment invoice shows your proportionate share of the expenses of the Consumer Advocate for the Fiscal Year July 1, 2025 to June 30, 2026.

YOU ARE REQUIRED TO PAY THIS INVOICE WITHIN THIRTY DAYS AFTER YOU RECEIVE IT. Objections to the assessment must be made in writing within 15 days and shall set out in detail the grounds upon which you regard the assessment to be excessive, erroneous, unlawful, or invalid. Objections may be filed only by the person, partnership, or corporation assessed. **FAILURE TO PAY THE ASSESSMENT WHEN PAYMENT IS DUE WILL SUBJECT YOU TO PENALTIES.**

Be sure that your personal check or money order is written out in the same amount as your assessment invoice, and make your remittance payable to, “Commonwealth of PA”. **DO NOT SEND CASH**. If you have reason to correspond with the Office of Consumer Advocate regarding your assessment invoice, please refer to your invoice number. Please note that rounding of your assessment to the nearest dollar has occurred. Your assessment for the PUC, including the OCA, OSBA and the DPC where applicable, has been combined into one invoice; one payment for all applicable assessments is acceptable. **A TWENTY DOLLAR ($20.00) FEE WILL BE CHARGED FOR ALL DISHONORED OR BAD CHECKS REMITTED AS PAYMENT OF ASSESSMENTS.**

Your Consumer Advocate assessment has been computed by multiplying your gross intrastate operating revenues for the calendar year 2024 by the assessment factor for the public utility group of which you are a member. Your gross intrastate operating revenues for 2024 have been taken from the report on Form GAO-24 which you have filed with the Commission, or have been estimated by the Commission, if you failed to file a timely report. Gross operating revenue reported to the Commission on the Assessment Reports may have been revised by the Commission to accurately reflect assessable revenue. The assessment factors for the various public utility groups are set forth in Schedule B enclosed herewith.

Estimate of the expenditures of the Office of Consumer Advocate for the Fiscal Year July 1, 2025 through June 30, 2026:	$7,252,000
Deduct:	
Credit from previous fiscal year	$0
Total OCA Assessment:	$7,252,000

The way in which the total Consumer Advocate assessment of $7,252,000 has been allocated to the various groups of public utilities as shown on Schedules A and B enclosed herewith.

PENNSYLVANIA ONE CALL LAW
APPLICABLE PUBLIC UTILITIES AND PA ONE CALL SYSTEM, INC.
NOTICE OF ASSESSMENT

EXPLANATION OF INVOICE FOR GENERAL ASSESSMENT
FOR FISCAL YEAR JULY 1, 2025 TO JUNE 30, 2026

The Pennsylvania Public Utility Commission is mandated under Act 50 of 2017, amended by Act 127 of 2024, to levy upon the applicable public utilities the Commission regulates a yearly assessment to fund the Damage Prevention Committee (DPC). The Governor and the Appropriation Committees of the Pennsylvania House and Senate approved an estimated operating budget of $1,530,760 for the Damage Prevention Committee for the Fiscal Year July 1, 2025 to June 30, 2026.

The enclosed assessment invoice shows your proportionate share of the expenses of the Damage Prevention Committee for the Fiscal Year July 1, 2025 to June 30, 2026.

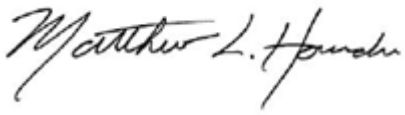
YOU ARE REQUIRED TO PAY THIS INVOICE WITHIN THIRTY DAYS AFTER YOU RECEIVE IT. Objections to the assessment must be made in writing within 15 days and shall set out in detail the grounds upon which you regard the assessment to be excessive, erroneous, unlawful, or invalid. Objections may be filed only by the person, partnership, or corporation assessed. **FAILURE TO PAY THE ASSESSMENT WHEN PAYMENT IS DUE WILL SUBJECT YOU TO PENALTIES.**

Be sure that your personal check or money order is written out in the same amount as your assessment invoice, and make your remittance payable to, "Commonwealth of PA". **DO NOT SEND CASH.** Please note that rounding of your assessment to the nearest dollar has occurred. Your assessment for the PUC, including the OCA, OSBA and the DPC where applicable, has been combined into one invoice; one payment for all applicable assessments is acceptable. **A TWENTY DOLLAR ($20.00) FEE WILL BE CHARGED FOR ALL DISHONORED OR BAD CHECKS REMITTED AS PAYMENT OF ASSESSMENTS.**

Your Damage Prevention Committee assessment has been computed by following the formula prescribed in the Act. We subtract from the estimated budget to operate the DPC in fiscal year 2025-26 the amount that was received in DPC fines in FY 2024-25 and Federal Grant funds that were received toward the operation of the program. Eighty percent of the remaining balance shall be included within the amount assessed to applicable public utilities under 66 PA.C.S. Section 510 and twenty percent of the remaining costs shall be assessed to the PA One Call System, with the fee to be paid to the Commission.

Estimate of the expenditures of the Damage Prevention Committee for the Fiscal Year July 1, 2025 through June 30, 2026:	$1,530,760
Deduct:	
Amount billed to Federal Grants (One Call Grant):	$46,899
Amount of fines collected in FY 2024-25:	$2,255,378
Prior year cost savings:	$5,750
Total Assessment:	($777,267)
Amount paid by PA One Call System (20%):	$0
Amount paid by public utilities (80%):	$0

The way in which the total Damage Prevention Committee assessment of $0 has been allocated to the various groups of public utilities as shown on Schedules A and B enclosed herewith.



Matthew L. Homsher
Secretary

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF JUSTIN L. LADNER

INTRODUCTION

Q. Please state your name and address?

A. My name is Justin L. Ladner and my business address is 852 Wesley Drive, Mechanicsburg, Pennsylvania 17055.

Q. By whom are you employed and in what capacity?

A. I am the President of Pennsylvania-American Water Company, Inc. ("Pennsylvania-American", "PAWC" or the "Company").

Q. What are your responsibilities in this position?

A. As President of PAWC, I am responsible for all aspects of its business, including financial operations, production, distribution, customer service, engineering and capital investment planning, employee relations, environmental, and regulatory affairs. I lead a team of skilled professionals who are dedicated to providing safe and reliable service to approximately 810,000 residential, commercial and industrial water and wastewater service accounts in 38 counties across the Commonwealth of Pennsylvania. PAWC has three operating areas, western, northeast, and central/southeast, collectively serving an estimated population of over 2.4 million people.

Q. Please describe your educational background and business experience.

A. I joined American Water in 2018 as director of National Regulatory Affairs. In this role I was responsible for developing and implementing strategies, practices, and processes related to national regulatory affairs. In 2020, I joined Illinois American Water, serving in the role of president until 2022, when I joined PAWC. Before joining American Water,

I served in multiple roles at Southern Company, including attorney for Southern Nuclear and governmental affairs and policy manager, project manager for the Integration Management Office, and assistant to the executive vice president of Nuclear Development at George Power. Prior to joining Southern Company, I was an associate attorney for Huie, Fernambucq & Stewart in Birmingham, Alabama. I also worked for U.S. Steel as a metallurgical engineer.

I received my law degree, cum laude, from the University of Alabama School of Law, as well as a master's and a bachelor's degree in Metallurgical and Materials Engineering with honors from the University of Alabama.

Q. Have you previously submitted testimony at the Pennsylvania Public Utility Commission ("PUC" or "Commission")?

A. Yes, I submitted testimony in the Company's 2023 base rate case at Docket Nos. R-2023-3043189 and R-2023-3043190.

Q. What is the purpose of your testimony in this proceeding?

A. The purpose of my testimony in this proceeding is to provide an overview of PAWC's initial filing, including an introduction of the Company's other witnesses that are providing direct testimony in this case and a discussion of the major drivers of the Company's request for rate relief in this proceeding. I also discuss the Company's overall management performance in relation to the factors identified in Section 523 of the Pennsylvania Public Utility Code ("Code"), 66 Pa.C.S. § 523, and the Commission's Policy Statement at 52 Pa. Code § 69.711 and explain why the Company's strong management performance supports a rate of return on equity at the upper end of the range determined by PAWC's rate of return witness, Ms. Ann E. Bulkley, in PAWC Statement No. 13. In addition, I discuss our

community involvement and customer outreach, particularly with respect to educating customers about our customer assistance programs.

Q. Please identify the other witnesses who are providing direct testimony on behalf of PAWC in this proceeding.

A. In addition to me, the following witnesses will be responsible for presenting PAWC's direct case:

- **PAWC Statement No. 2 – Dr. Christina Chard** is the Senior Director of Rates and Regulatory for PAWC. Dr. Chard discusses the Company's principal accounting exhibit in the case; PAWC's commitment to affordability of water and wastewater service under present and proposed rates and a description of its customer assistance programs; an overview of PAWC's rate structure and rate design proposals; the Company's proposed regulatory accounting treatment for pension and other post-employment benefit ("OPEB") costs; the Company's use of authority conferred by Section 1311(c) of the Public Utility Code (the "Code") to mitigate the impact of revenue increases on wastewater customers by recovering a portion of the Company's wastewater revenue requirement from its total water and wastewater customer base; the Company's proposed Customer Assistance Program Rider; and the Company's other proposed tariff changes in this case.
- **PAWC Statement No. 3 – Jim Runzer** is the Vice President of Operations for PAWC. Mr. Runzer discusses the general operations of the Company; PAWC's commitment to supplying high quality water and wastewater service; initiatives taken to increase efficiency, enhance service and control costs, including efforts to control non-revenue water and implementation of advanced metering infrastructure; the Company's

investment in troubled systems and receiverships; employee and customer safety and employee training and development; and support for employee levels and compensation.

- **PAWC Statement No. 4 – Anthony M. Nokovich** is the Vice President of Engineering for PAWC. Mr. Nokovich's testimony discusses the Company's capital investment planning process; PAWC's plant additions to be placed in service during the future test year ("FTY") ending June 30, 2026 and fully projected future test year ("FPFTY") ending June 30, 2027; operational and regulatory risks associated with maintaining safe and adequate water quantity and water quality and complying with applicable drinking water and environmental regulations associated with owning and operating facilities for supplying water and wastewater services to the public; complying with environmental regulations applicable to owning and operating facilities for furnishing wastewater service to the public; and the challenges climate variability could create for water and wastewater utilities; and the Company's strategic investment in acquired systems.
- **PAWC Statement No. 5 – Jared Deason** is Director, Rates and Regulatory for American Water Works Service Company, Inc. ("AWWSC"). His testimony discusses the Company's claims for rate base, depreciation and amortization and acquisitions since its last rate case that PAWC has reflected in its proposed rate base in this case.
- **PAWC Statement No. 6 – Lori O'Malley** is Senior Manager Regulatory Services for AWWSC. Her testimony addresses the Company's claims for labor and labor-related expenses, Service Company expenses, other operation and maintenance ("O&M") expenses, miscellaneous expenses, rate case and regulatory expense, and taxes other

than income; and describes the allocation of expenses between water and wastewater operations.

- **PAWC Statement No. 7 – Don Wieczenski** is Senior Director of Business Development for PAWC. His testimony describes various acquisitions that PAWC has included in this base rate case; provides support for the Company's request for acquisition adjustments pursuant to 66 Pa. C.S. § 1327 (relating to acquisition of water and sewer utilities) and 52 Pa. Code § 69.711 (statement of policy regarding small nonviable water and wastewater systems); and describes the Company's proposed demand-based wastewater riders and receivership tariff provisions.
- **PAWC Statement No. 8 – Linda Schlessman** is Director of Tax Regulatory for AWWSC. Her testimony addresses the Pennsylvania state tax rate change; the Corporate Alternative Minimum Tax; and the tax treatment of acquisitions included in the Company's rate case.
- **PAWC Statement No. 9 – Deba F. Ather** is Senior Manager of Regulatory Services for AWWSC. Her testimony presents the Company's affordability analyses for water and wastewater service.
- **PAWC Statement No. 10 – Max McClellan** is a Principal Regulatory Analyst for AWWSC. His testimony explains the design of current and proposed tariff rates; describes the Company's analysis of residential, commercial, and municipal water consumption; and discusses the Company's claimed revenues.
- **PAWC Statement No. 11 – John J. Spanos is President of Gannett Fleming Valuation and Rate Consultants LLC.** Mr. Spanos' testimony explains the

development of the depreciated original cost of the Company's utility plant in service and its claims for annual depreciation expense.

- **PAWC Statement No. 12** – **Gregory R. Herbert** is Assistant Project Manager, Rate Studies for Gannett Fleming Valuation and Rate Consultants, LLC. Mr. Herbert's testimony explains the allocation of the cost of service to customer classifications and the identification of stormwater-related costs of service of combined sewer systems.
- **PAWC Statement No. 13 – Ann E. Bulkley is a Principal with The Brattle Group.** Ms. Bulkley's testimony provides a recommendation regarding PAWC's authorized return on equity and assesses the reasonableness of its proposed capital structure for ratemaking purposes.
- **PAWC Statement No. 14 – John Popiolek** is a Retirement Plan Actuary and Director with Willis Towers Watson. Mr. Popiolek presents the actuarial projections that support the Company's claim for pension and OPEB expense.

REASONS FOR RELIEF REQUESTED

Q. What amount of rate relief is the Company seeking in this case?

A. PAWC is seeking an increase of $168.7 million in annual revenue over present rates. The proposed increase will provide the Company with an opportunity to recover its cost of service and earn a reasonable return on the capital invested in the system. PAWC is fully committed to continued investment in the Company's operations at the level and in the manner necessary to continue to provide safe and reliable service for our customers over the long term and is simply seeking the revenues to support doing so.

Q. Why is the Company filing this rate case?

A. PAWC's customers rely on the Company to provide them with safe and reliable water and

wastewater services. Providing these services requires the Company to make ongoing, significant capital investments, as well as to incur a substantial amount of O&M expenses. This filing is primarily driven by the capital investment required to maintain and improve our infrastructure. As Company witness Mr. Nokovich explains, from the end of the FPFTY in the Company's last base rate case (June 30, 2025) through the end of the FPFTY in this case (June 30, 2027), the Company will have invested over $1 billion in new or replacement plant and equipment. The Company's investments improve resiliency of the Company's distribution system and treatment plants; implement treatment changes to maintain regulatory compliance; adopt technology improvements to enhance service to customers; and improve management of supply and customer demands. Part of this investment is also used to improve service to small, troubled water and wastewater systems that PAWC has acquired.

A secondary driver of this rate case filing is the inclusion of the Company's recent acquisitions into base rates for the first time. Since the Company's last rate case, the PUC has approved eleven PAWC acquisitions (six water systems and five sewer systems), which have not been incorporated into PAWC's rate base. All of these acquisitions have either closed or are scheduled to close by the end of 2025, before the FPFTY begins.

PERFORMANCE FACTORS AND 52 PA. CODE § 69.711

Q. Does the Code authorize the Commission to consider performance factors in arriving at a utility's allowable revenue requirement in a base rate case?

A. Yes. Section 523 of the Code provides that the Commission "shall consider" the "efficiency, effectiveness and adequacy of service" of a utility when determining just and reasonable rates.

Q. What does Section 523 provide regarding performance factors to be considered by the Commission?

A. Section 523(a) requires the Commission to consider performance factors, while Section 523(b) identifies the kinds of factors that are relevant in assessing a utility's performance. Section 523(a) and the portions of 523(b) that are relevant to a water and wastewater utility are set forth below:

> (a) Considerations. – The Commission shall consider, in addition to all other relevant evidence of record, the efficiency, effectiveness and adequacy of service of each utility when determining just and reasonable rates under this title. On the basis of the commission's consideration of such evidence, it shall give effect to this section by making such adjustments to specific components of the utility's claimed cost of service as it may determine to be proper and appropriate. Any adjustment made under this section shall be made on the basis of the specific findings upon evidence of record, which findings shall be set forth explicitly, together with their underlying rationale, in the final order of the commission.
>
> (b) Fixed Utilities. – As part of its duties pursuant to subsection (a), the commission shall set forth criteria by which it will evaluate future fixed utility performance and in assessing the performance of a fixed utility pursuant to subsection (a), the commission shall consider specifically the following:
>
> (1) Management effectiveness and operating efficiency as measured by an audit pursuant to Section 516 (relating to audits of certain utilities) to the extent that the audit or portions of the audit have been properly introduced with applicable rules of evidence and procedure.
>
> **…**
>
> (5) Action or failure to act to encourage cost-effective conservation by customers of water utilities
> * * *
> (7) Any other relevant and material evidence of efficiency, effectiveness and adequacy of service.

Q. Are there any other Commission rules or policies that the Commission should consider when determining the revenue requirement for a water and wastewater utility?

A. Yes. Section 69.711 of the Commission's regulations states in relevant part as follows:

> *(a) Acquisition incentives.* In its efforts to foster acquisition of suitable water and wastewater systems by viable utilities when the acquisitions are in the public interest, the Commission seeks to assist these acquisitions by permitting the use of a number of regulatory incentives. Accordingly, the Commission will consider the following acquisition incentives:
>
> (1) *Rate of return premiums*. Under 66 Pa.C.S. § 523 (relating to performance factor considerations), additional rate of return basis points may be awarded for certain acquisitions and for certain associated improvement costs, based on sufficient supporting data submitted by the acquiring utility within its rate case filing. The rate of return premium as an acquisition incentive may be the most straightforward and its use is encouraged.

Q. Do you believe PAWC should be awarded additional rate of return basis points under Section 523 of the Public Utility Code and Section 69.711 of the Commission's regulations?

A. Yes. While I am proud of PAWC's efforts in many areas across the business that benefit customers, there are two areas of performance I intend to highlight that demonstrate PAWC's rate of return should be increased under these provisions: (1) small and troubled water and wastewater system acquisitions, receiverships, and leadership and (2) the cost savings created by the Company's commitment to seeking PENNVEST funding for its infrastructure investments.

Q. Please explain the Company's record as a solution provider for troubled water and wastewater systems through acquisition, receivership, and other leadership.

A. For more than 25 years, PAWC has been an industry leader in helping resolve the significant challenges faced by troubled water and wastewater systems. In the last ten years alone, the Company has completed 14 acquisitions of very small, less-viable water and wastewater systems – systems with less than 1,000 customer connections each. This base rate filing includes four additional acquisitions of water and wastewater systems with less than 1,000 customer connections each: Sadsbury Township Municipal Authority wastewater system (252 customers), Farmington Township water system (464 customers), Farmington Township wastewater system (448 customers), and Corner Water Company (605 customers).[1] None of these systems were acquired under 66 Pa. Code C.S. § 1329 for fair market value although Sadsbury and Farmington were eligible.

Over the last few years, the Company has also completed the acquisitions of systems that were not, at the time of acquisition, providing adequate, efficient, safe and reasonable service. These systems, which were acquired pursuant to 66 Pa. C.S. § 529, include Delaware Sewer Company ("Delaware Sewer") and Winola Water Company. Prior to acquisition, the Company also acted as the receiver for Winola Water Company. The Company has made capital investments to improve service to customers of these systems and increase environmental compliance. The Company also acted as the receiver for Indian Springs Water Company ("Indian Springs") during the pendency of the Commission's proceeding under 66 Pa. C.S. § 529. As a resolution for the Commission's Section 529

[1] In addition, this base rate case includes five acquisitions of systems serving between 1,000 and 2,000 customers: Elizabeth Borough Municipal Authority (672 direct customers and 1,504 indirect customers), East Dunkard Water Authority (1,571 customers), Manwalamink Water Company (1,271 customers), Manwalamink Sewer Company (1,266 customers), and Appalachian Utilities, Inc. (1,456 customers).

investigation into Indian Springs, the Company coordinated a plan for all customers to have an adequate alternative supply of water from private wells. PAWC offset all of its receivership costs and a significant portion of the costs that customers had to pay for private wells by negotiating a sale of land owned by Indian Springs, to the benefit of PAWC customers and Indian Springs customers. The land was sold back to the community to be preserved for the recreation and enjoyment of the residents.

In addition to providing solutions for small, troubled systems, PAWC has also had a positive impact on communities through acquisitions of larger systems such as McKeesport, Scranton and York wastewater systems where significant investments were made (and continue to be made) to address environmental challenges and aging infrastructure. This base rate case includes two additional acquisitions, the Butler Area Sewer Authority and the Elizabeth Borough Municipal Authority, which the Commission approved, in part, because it found these acquisitions had significant environmental benefits.

Q. Please discuss PAWC's service as receiver of the East Dunkard Water Authority ("EDWA").

A. EDWA was a municipal water authority that owned and operated a municipal drinking water system serving a population of approximately 4,200 in Greene County. After PAWC signed an agreement to acquire the EDWA system, EDWA faced dire challenges requiring a more immediate solution. For example, on October 24, 2023, the EDWA system experienced a major upset resulting from operational failure of the filters at the water treatment plant and the clarifier system at the water treatment plant ceased proper operation. The EDWA system's water treatment plant ceased producing water and all

customers were without even non-potable water for several days for basic sanitary and hygienic purposes, including bathing, dishwashing, and toilet flushing. Water service was eventually restored but all customers remained under a boil water advisory and had to continue to boil their water before consumption.

EDWA represented to the Pennsylvania Department of Environmental Protection ("DEP") that it did not have the financial resources to (a) effectively and properly operate the EDWA system; (b) comply with orders of the DEP and an order of the Commonwealth Court of Pennsylvania ("Commonwealth Court"); or (c) employ a certified operator to be responsible for system operations. Because EDWA's actions threatened immediate harm to public health and safety, DEP sought PAWC's assistance to find a creative near-term solution prior to eventual acquisition. The Company was ready and willing to provide a solution but faced jurisdictional hurdles. The Commission did not have jurisdiction over EDWA and so did not have authority to appoint a receiver under Section 529. Only a court of competent jurisdiction like the Commonwealth Court had that authority. Additionally, PAWC required the Commission's approval to be appointed receiver by the Commonwealth Court as it is not customary for a jurisdictional utility to be appointed receiver of a municipal authority. To solve these jurisdictional challenges, together, PAWC and DEP developed a two-step plan whereby they would (1) file a joint application to the Commission for emergency approval for PAWC to be appointed receiver for the EDWA System and (2) upon approval of that application, DEP would file an application with the Commonwealth Court seeking the appointment of PAWC as receiver for the EDWA System. DEP and PAWC jointly requested that the Commission take emergency action to permit PAWC to be appointed as receiver of EDWA by the Commonwealth Court and on

November 1, 2023, the Commission entered an Order providing PAWC with the necessary authorization.[2] The Commonwealth Court appointed PAWC as receiver for EDWA on February 8, 2024.[3]

As receiver, and subsequently as owner of the assets of the EDWA system, PAWC has taken the steps necessary for the system to provide water that complies with relevant safe drinking water standards. For example, PAWC has improved service and reliability by: repairing 82 leaks (saving approximately 16 million gallons of water since the receivership began), updating the SCADA system, and installing additional system valves and blowoffs. PAWC has also upgraded and improved the operation of the water treatment plant ("WTP") by operating the plant 24 hours a day, 7 days a week (rather than shutting down the WTP for part of each day), installing a new chlorine feed system, and replacing several pumps and all filter media. These improvements have brought the system into water quality and environmental compliance for the first time in eleven years. All 76 DEP Notices of Violation have been resolved, no new safe drinking water violations have occurred, and there have been no lapses in monitoring or reporting related to safe drinking water. These improvements have also improved customer confidence in the system. Water quality complaints dropped from dozens a day to fewer than six per month on average in 2025, and they continue to decrease as PAWC remains focused on routine maintenance and implements planned capital improvements.

---

[2] *Joint Petition of Pennsylvania-American Water Company and the Pennsylvania Department of Environmental Protection Requesting an Ex Parte Emergency Order in Regard to Receivership of East Dunkard Water Authority*, Docket No. P-2023-3043950 (Order entered November 1, 2023).

[3] *Commonwealth of Pennsylvania Department of Environmental Protection v. East Dunkard Water Authority*, 557 M.D. 2022 (Order entered February 8, 2024).

On June 12, 2025, Commission Chairman DeFrank joined state, local and utility leaders to celebrate the transition of the East Dunkard system to PAWC. He stated "[t]oday is a victory for the people of this community. It's also a powerful example of what happens when state agencies, local governments, utilities, and community leaders work together toward a common goal – providing safe and reliable water to the Pennsylvanians who depend on it."[4]

Q. Please discuss PAWC's service as receiver of Rock Spring Water Company.

A. Rock Spring Water Company ("Rock Spring") is a certificated water utility serving approximately 464 customers in Ferguson Township, Centre County. Rock Spring's unaccounted-for water has been 50-70% for years, which is well above the 20% level that the Commission considers excessive. In 2018, DEP issued an Administrative Order against Rock Spring and imposed a $40,000 civil penalty assessment. DEP subsequently filed a Petition to Enforce the 2018 Administrative Order with the Commonwealth Court, which was granted. The Commonwealth Court later found Rock Spring in contempt of court for not complying with the Court's order.

On September 20, 2024, the Commission's Bureau of Investigation and Enforcement ("I&E") filed a Petition to Request the Commission Open a Section 529 Investigation into the Acquisition of Rock Spring. On February 6, 2025, the Office of Consumer Advocate ("OCA") filed a Petition for Issuance of an Interim Emergency Order asking that the Commission appoint a receiver for Rock Spring. On March 21, 2025, the Commission ordered PAWC to serve as the receiver for Rock Spring until a final order is

[4] https://www.puc.pa.gov/press-release/2025/puc-applauds-multi-agency-response-that-secured-safe-reliable-water-for-east-dunkard-community-06122025.

entered in the Section 529 Investigation or until Rock Spring abandons its certificate of public convenience (whichever is later). The Section 529 Investigation of Rock Spring remains in litigation at this time.

As receiver, PAWC has substantially improved Rock Spring's operations. In addition to reducing daily system water delivery by 25%, saving up to 40,000 gallons per day, PAWC has initiated an infrastructure stabilization strategy including real-time remote monitoring and chemical system feed upgrades. PAWC also has improved water quality by (1) adding an on-line chlorine analyzer at the well station so chlorine levels can be monitored around the clock; (2) installing an off-gas device on the chemical feed pump system to prevent the chlorine feed line from going off-line due to it being air bound; (3) conducting daily and quarterly compliance sampling; and (4) establishing new bacteria sampling locations in the distribution system. Finally, PAWC has improved safety and security at the system by installing new locks at key locations to prevent unauthorized access, installing chlorine shutdowns, and installing chemical containment in the chemical room at the well station.

The Company remains committed to helping DEP and the Commission resolve the issues posed by the many troubled water and wastewater systems that still exist across the Commonwealth. Consistent with 52 Pa. Code § 69.711, a rate of return premium is appropriate to recognize the Company's efforts with respect to troubled systems.

Q. In addition to acquisitions of troubled systems and acting as a receiver for troubled systems, how else has PAWC provided a solution for customers in need of safe and reliable service?

A. PAWC routinely extends service to customers who are in need of water and/or wastewater service. In late 2021, the Office of then-Attorney General Josh Shapiro reached out to PAWC to ask if the Company would assist in helping to find a drinking water solution for a community of approximately 21 Dimock properties that had not had access to safe well water for approximately 15 years due to unsafe levels of methane and other contaminants. In recognition of the severe water quality problems facing this community, the Company worked to develop a plan for the most effective public drinking water system for Dimock residents and filed an application to extend its service territory for a public groundwater project in Dimock, Pennsylvania.

In November 2022, the Company and the Office of Attorney General presented the proposed system design to Dimock residents who expressed strong support for the project. Subsequently, the Office of Attorney General and Coterra Energy entered into a Plea Agreement under which PAWC's construction of this project is fully funded and thus provides the benefit of public water to these residents without a cost to other PAWC customers.

As of September 30, 2025, PAWC's contractor had installed approximately 31,750 of the approximately 32,500 feet of pipeline necessary for the project. In addition, PAWC's consultant had submitted the design of the new water treatment process and facility to DEP. Finally, PAWC had ordered the long lead-time water treatment equipment and had issued

a contract for the construction of the new water treatment facility. PAWC projects that the new drinking water system in Dimock will be in service by the end of 2026.

The Company remains committed to being a community partner throughout the Commonwealth and providing solutions for those in need of safe and reliable water and wastewater service.

Q. Are there any other projects that demonstrate the Company's commitment to aid individuals and businesses in need of reliable water and wastewater solutions?

A. Yes. PAWC has also undertaken projects to support economic development in the Commonwealth. For example, PAWC recognizes the economic and technological importance of data centers in today's digital economy and is committed to helping attract and support data centers by providing them with reliable water service. PAWC has received more than twenty formal requests for data center service throughout the Commonwealth, although Northeastern and Southwestern Pennsylvania are emerging as key hubs for this type of development. PAWC collaborates with developers to identify and implement infrastructure upgrades, while carefully managing the impact of data centers to protect customers (such as by requiring that all infrastructure upgrades are fully funded by developers, not customers).

One recent project involved the extension of service to an additional portion of Salem Township in Luzerne County. The impetus for this project was a request from Amazon Data Services, Inc. ("Amazon") for water service to a proposed data center site. This site is part of Amazon's investment of a least $20 billion to establish multiple high-tech cloud computing and artificial intelligence ("AI") innovation campuses across the Commonwealth. With respect to this project, Governor Shapiro stated "This initial

investment from Amazon will create thousands of good-paying, stable jobs." He celebrated Amazon's investment as "creating opportunity for our workers, generating new revenue for our local communities, and ensuring the future of AI runs right through Pennsylvania."[5] Commission Chairman DeFrank commented on the project, saying:

> Based on a review of PAWC's application, it is apparent that the proposed water service for the data center is well planned. For example, Amazon will fund the installation of a water main extension system and 24 public fire hydrants along the main extension route. Amazon will also pay for the installation of a 1.5-million-gallon water storage tank and will contribute to the incremental costs associated with its use of a proposed per- and polyfluoralkyl substance (PFAS) treatment facility. Both the water storage tank and the PFAS treatment facility are designed to meet the added demand of the data center and provide increased reliability for PAWC's entire Berwick water system.[6]

Q. Please explain the Company's record related to operating cost savings through PENNVEST funding.

A. Several PAWC operating efficiencies are described in Mr. Runzer's testimony (PAWC Statement No. 3) but I specifically want to highlight the cost savings created by the Company's commitment to seeking PENNVEST funding for its infrastructure investments. PAWC has been exploring ways to reduce the costs associated with its capital projects and identified PENNVEST as a financing option it should be pursuing more frequently where PAWC is eligible to receive such funds. Since 2024, PAWC has received PENNVEST funding for approximately $156 million in a combination of grants and loans ($135.5 million loans and $20.1 million grants). PAWC calculated the total customer benefit of

[5] https://dced.pa.gov/newsroom/governor-josh-shapiro-announces-amazon-plans-to-invest-20-billion-in-pennsylvania-for-ai-infrastructure-in-largest-capital-investment-in-commonwealth-history/

[6] *Application of Pennsylvania-American Water Company for Approval of the Right to Offer, Render, Furnish and Supply Water Service to the Public in an Additional Portion of Salem Township, Luzerne County, Pennsylvania,* Docket No. A-2024-3051136 (January 8, 2025 Statement of Chairman DeFrank).

this PENNVEST funding to be approximately $100 million in savings over the life of the loans based on the lower interest rates of PENNVEST loans and the receipt of project grants, which typically do not require repayment.

Q. Do you believe the Company's efforts described in this section warrant an adjustment to the Company's rate of return?

A. Yes. I believe the Company's exemplary performance to provide solutions to troubled water and wastewater systems in Pennsylvania and to create cost savings for customers through its efforts to obtain PENNVEST grants and low interests loans fully justifies approving a rate of return at the upper end of Ms. Bulkley's recommended range (PAWC Statement No. 13).

COMMUNITY INVOLVEMENT AND CUSTOMER OUTREACH

Q. Has PAWC taken a leadership role in community engagement in the Commonwealth?

A. Yes. Investing in and giving back to the communities we serve is very important to us. In 2024, we donated more than $1.4 million to 325 organizations throughout the communities we serve through general charitable contributions, grants, sponsorships and programming support. The Company primarily directs its giving to community sustainability, food insecurity, environmental protection, fire departments, health and wellness, and education and workforce development. Through the American Water Charitable Foundation, an additional $630,000 was donated to non-profit organizations in PAWC's service territory as part of the Foundation's "Keep Communities Flowing" grant programs as well as its employee matching gift program. In 2024, PAWC representatives engaged with customers and community leaders through participation in 199 volunteer projects, speaking

engagements, educational programs and community events, and our employees spent 2,000 hours volunteering their time at local non-profits. PAWC offers a robust public education program focused especially on educating the youth of the Commonwealth. Not only do we conduct water camps for children ages 7-11 during the summer and teach classes on watershed protection, water treatment, the water cycle and water conservation in the classroom during the school year, we also conduct treatment plant tours for students and adults alike, judge "Envirothon" competitions, and participate in Earth Day activities.

The Company also plays a leadership role in educating the workforce of tomorrow. PAWC offers paid summer internships in its operations, water quality, external affairs, health and safety, customer service, and engineering departments to build a future talent pipeline, increase diversity, and bring new perspectives to the Company while providing important real-life work experience to college students in local communities. This past summer, PAWC also hosted a three-day internship camp for interested high schoolers to learn about the different careers available at a water and wastewater public utility. Finally, the American Water Scholarship Program offers 10 renewable scholarships of $10,000 each to students residing in or attending college in one of the states where American Water operates, including Pennsylvania.

Q. Are there any customer outreach efforts you would like to highlight?

A. Yes. As further detailed in Dr. Chard's testimony (PAWC Statement No. 2), the provision of affordable utility service is an important objective for the Company. To that end, PAWC has conducted significant outreach efforts to enroll customers in its H2O Help to Others customer assistance programs. In 2025, PAWC hosted dozens of in-person information sessions statewide in areas such as Coatesville, McKeesport, Norristown, and Lackawanna

and Luzerne Counties, and attended various utility fairs and township meetings to educate customers about all of PAWC's assistance programs. PAWC also conducted a texting campaign and a paid customer education media campaign raising awareness about these programs. PAWC has met with elected leaders, community-based organizations, and many other utility stakeholders to educate and brainstorm potential solutions for increasing program participation.

In addition, PAWC recently launched a door-to-door canvassing campaign in the City of York to enroll customers for the Company's assistance programs at their front door. Canvassers visited 8,220 households and were able to have conversations with 1,219 residents. If the canvasser did not make contact with a resident, educational materials were left at the homes instead. PAWC intends to continue to deploy innovative and wide-ranging customer outreach efforts moving forward in an effort to continue to drive increased enrollment in its H2O Help to Orders assistance programs. To that end, canvassing efforts have been expanded to several other communities across Pennsylvania and are currently underway in Coatesville and Scranton.

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

DATE: NOVEMBER 14, 2025

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF DR. CHRISTINA E. CHARD

INTRODUCTION

Q. Please state your name and business address.

A. My name is Christina E. Chard, and my business address is 1600 Pennsylvania Avenue, Charleston, WV 25302.

Q. By whom are you employed and in what capacity?

A. I am employed by American Water Works Service Company, Inc. ("Service Company") as the Senior Director of Rates and Regulatory. The Service Company is a wholly owned subsidiary of American Water Works Company, Inc. that provides services to Pennsylvania-American Water Company ("PAWC" or "Company") and its affiliates. I work in the Charleston, WV and Mechanicsburg, PA offices.

Q. Please describe your educational background and business experience.

A. I hold a doctorate degree in Executive Leadership, a Master's degree in Forensic Accounting, and a Bachelor of Science Degree in Mathematics from the University of Charleston. I have also completed the National Association of Regulatory Utility Commissioners' utility ratemaking course and am currently serving as a coach/instructor for the course. I have worked in various state rates and regulatory support roles of increasing responsibility since 2018. Please see Appendix A to this testimony for additional details of my professional experience.

Q. Have you previously testified before regulatory agencies?

A. Yes. I prepared and provided testimony in PAWC's 2020 base rate case at Docket No. R-2020-3019369, the Rock Spring receivership case at Docket No. P-2024-3051313, and the East Coventry acquisition case at Docket No. A-2025-3053487. In addition, I have testified in numerous acquisition cases, surcharge mechanism cases, a 2018 federal tax change investigation, and base rate cases before the West Virginia Public Service Commission on behalf of another American Water subsidiary, West Virginia-American Water. I also testified in an acquisition rulemaking case before the Tennessee Public Utility Commission.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to explain the overall structure of PAWC's case and to address certain specific claims being made by the Company to support its proposed rates. My testimony is divided into several parts.

First, I will explain the sources of the accounting data that were the starting point for the Company's rate case presentation, identify the test years the Company is employing in this case, and give an overview of PAWC's Exhibit No. 3-A.

Second, I will address the affordability of water and wastewater service under present and proposed rates and proposals the Company is making to improve affordability for its customers.

Third, I will provide an overview of the Company's rate structure and rate design as proposed in this case.

Fourth, I will discuss and, together with other PAWC witnesses, support the following specific parts of the Company's case:

(1) The Company's use of authority conferred by Act 11 of 2012 ("Act 11") and Section 1311(c) of the Pennsylvania Public Utility Code ("Code") to mitigate the impact of revenue increases on wastewater customers by recovering a portion of the Company's wastewater revenue requirement from its total water and wastewater customer base; and

(2) The Company's request for regulatory and accounting treatment for the deferral of pension and other post-employment benefits ("OPEB").

Fifth, I will describe the Company's proposal to implement a Customer Assistance Program ("CAP") Rider as an alternative ratemaking mechanism under Section 1330 of the Code.

Finally, I will discuss the Company's other proposed tariff changes in this proceeding.

GENERAL OVERVIEW; SOURCE OF ACCOUNTING DATA; AND THE TEST YEARS EMPLOYED BY THE COMPANY

Q. Please summarize the rate increase sought by PAWC in this proceeding.

A. The Company is seeking an increase in the rates of its water and wastewater operations that will produce additional annual operating revenues of $168.7 million, or 14.6%, over PAWC's annualized total revenues at present rates including Distribution System Improvement Charge ("DSIC") revenue. The key elements of the Company's rate request are summarized on Schedule CEC-1 to this statement. Schedule CEC-2 to this statement is a more detailed summary that provides an overview of revenue requirements and revenues at existing and proposed rates on a total-Company basis.

As Company witnesses Justin Ladner (PAWC Statement No. 1) and Anthony M. Nokovich (PAWC Statement No. 4) describe in their testimonies, the most significant driver

of this request for rate relief is PAWC's ongoing infrastructure investment. From the end of the fully projected future test year ("FPFTY") in the Company's last base rate case (June 30, 2025) through the end of the FPFTY in this case (June 30, 2027), the Company will have invested approximately $1.2 billion in new or replacement plant and equipment, and the overwhelming majority of this investment is and will be in source of supply, treatment, distribution and collection assets. Part of this investment is also being used to improve service to small, troubled water and wastewater systems that PAWC has acquired. While the acquisition of smaller systems will result in increased economies of scale over time, the Company is currently incurring increased capital investment and an increase in operating costs.

While the Company has been generally successful in controlling operating and maintenance ("O&M") expense over the last decade, it continues to experience inflationary increases as well as moderate increases in costs with pension/OPEB and fuel and power. I will speak about the Company's pension/OPEB expense later in my testimony, which will be further supported by Company witness John Popiolek (PAWC Statement No. 14). Company witness Jim Runzer (PAWC Statement No. 3) will discuss the Company's efforts on energy efficiency and procurement, and Company witness Lori O'Malley (PAWC Statement No. 6) provides details of the Company's adjustments for known and measurable price changes by the Company's electricity generation suppliers and electric distribution companies that furnish distribution service. The requested increases in O&M expense are necessary to support the Company's efforts to continue to provide high quality water and wastewater service to our customers in the most cost-effective way in the long term.

To address the Company's diverse capital needs, PAWC must raise substantial amounts of debt and equity capital and, in the process, must demonstrate its ability to provide a reasonable return for investors to commit their funds to the Company for its use. On an annual basis, PAWC's capital investment program is greater than its allowance for depreciation, which results in negative free cash flow. Therefore, the Company needs to seek financing for its capital investments beyond any internally generated cash flow. As shown in Schedule CEC-2 and explained in the Statement of Specific Reasons for Proposed Increase in Rates that accompanies the Company's filing, absent rate relief, the Company's overall rate of return on an original cost basis will be only 6.29% as of June 30, 2027. The indicated return on common equity is anticipated to be 7.63% as of June 30, 2027, which is clearly far less than what is required.

Q. What is PAWC's principal accounting exhibit in this case?

A. PAWC Exhibit No. 3-A is PAWC's principal accounting exhibit in this case. PAWC Exhibit No. 3-A includes five separate revenue requirement studies, one of which relates to the Company's water operations and four that relate to its wastewater operations.

Q. What is the source of the accounting data used in PAWC Exhibit No. 3-A?

A. The starting point for each of the revenue requirement studies in PAWC Exhibit No. 3-A is the accounting information recorded in the Company's books and records for the twelve months ended June 30, 2025. The Company's books and records are maintained in conformity with the National Association of Regulatory Utility Commissioners ("NARUC") Uniform System of Accounts for Water Companies, the NARUC Uniform System of Accounts for Wastewater Companies, and generally accepted accounting principles. Because the purpose of ratemaking is to establish rates to be applied in the future, per-book data were adjusted on

a pro forma basis, as appropriate, to reflect changes in operating conditions that are not fully reflected in the book data for the historic test year ("HTY"), the future test year ("FTY") or the FPFTY.

Q. Briefly explain what is set forth in Exhibit No. 3-A.

A. PAWC Exhibit No. 3-A contains five separate revenue requirement studies, each of which is set forth at a separate tab within the exhibit, consisting of the following:

Tab 1	Water Operations
Tab 2	Wastewater Sanitary Sewer Systems General Operations ("SSS")
Tab 3	Butler Area Sewer Authority ("BASA") WW Operations
Tab 4	Wastewater Combined Sewer Systems Operations ("CSS")
Tab 5	Elizabeth Borough WW CSS Operations

A summary page at the beginning of PAWC Exhibit No. 3-A shows the Company's rate request on a consolidated (total Company) basis. Applicable workpapers and supporting documentation for PAWC Exhibit No. 3-A are set forth in PAWC Exhibit Nos. 3-B and 3-C. I am responsible for portions of each of these exhibits. Other witnesses are responsible for other portions of these exhibits as explained in their respective statements. Each page of PAWC Exhibit No. 3-A identifies the witness responsible for that portion of the exhibit.

In order to reflect data for the FPFTY, PAWC Exhibit No. 3-A presents PAWC's rate base, revenues, expenses and tax information on the basis of an HTY ended June 30, 2025, a FTY ending June 30, 2026, and a FPFTY ending June 30, 2027. The support for the Company's requested revenue increase is based principally upon the data presented for the FPFTY. Within PAWC Exhibit No. 3-A, HTY data are generally identified by the title or heading "Present Rates at June 30, 2025" and FTY data are generally identified by the title or heading "Present Rates at June 30, 2026." Data for the FPFTY are generally identified by the title or heading "Present Rates at June 30, 2027."

Q. Why is the Company presenting five separate revenue requirement studies in PAWC Exhibit No. 3-A?

A. The Company is presenting five separate revenue requirement studies in its Exhibit No. 3-A to comply with the terms set forth in the 2023 Rate Case Order[1] and the terms and conditions of the Commission approvals of PAWC's acquisitions of certain systems that are included in this case.

In the 2023 Rate Case Order (p. 218), the Commission directed PAWC to create separate classes in the cost-of-service study ("COSS") for several Rider DIS and DRS customers instead of deducting the revenues received from contract sales to those customers from the total cost of service and from each of the classes of service. Exhibit No. 12-A (or the water operations COSS) reflects Rider DIS and Rider DRS customers as separate customer classes. Company witness Gregory Herbert discusses the Company's COSS in further detail in his testimony.

The 2023 Rate Case Order also directed PAWC to prepare separate COSSs for new Section 1329 acquisitions in the first base rate case where those systems are included in the Company's revenue requirement. PAWC closed on its acquisition of the BASA wastewater assets under Section 1329 of the Code on October 29, 2024. On October 9, 2025, the Commission approved PAWC's application to acquire the Elizabeth Borough Municipal Authority ("EBMA") wastewater assets with the commitments provided in a unanimous settlement reached by all parties to the Section 1329 acquisition proceeding.[2] As previously

---

[1] *See Pa. P.U.C. v. Pa.-Am. Water Co.*, Docket Nos. R-2023-3043189 and R-2023-3043190 (Opinion and Order entered Jul. 22, 2024) ("2023 Rate Case Order"), p. 217 n. 94.

[2] *See Application of Pa-Am. Water Co. under Sections 1102(a) and 1329 of the Pa. Pub. Util. Code, 66 Pa.C.S. §§ 1102(a) and 1329, for approval of (1) the transfer, by sale, to Pa-Am. Water Co, of substantially all of the assets, properties and rights related to the wastewater treatment plant and collection system owned and operated by the*

noted, PAWC anticipates closing on the EBMA acquisition approved by the Commission before the end of 2025. Company witness Don Wieczenski provides a detailed description of the BASA and EBMA acquisitions in his direct testimony.

In addition, PAWC Exhibit No. 3-A includes a separate revenue requirement study, in aggregate, for the SSSs it currently owns, which consist of the Royersford, York, Sadsbury, Farmington and Manwalamink systems, and a separate revenue requirement study, in aggregate, for the CSSs it currently owns, which consist of the Scranton, McKeesport, and Kane systems.

Q. Please summarize what the Commission required in the Company's last rate case regarding the continuation of separate COSSs for Section 1329 acquisitions.

A. On page 217 of the Order entered on July 22, 2024 in the Company's last rate case, the Commission determined that:

> We agree with the ALJs' recommendation that, not only should PAWC continue to prepare separate COSSs for new Section 1329 acquisitions in the first base rate proceeding where those systems are included in PAWC's revenue requirement, but for Section 1329 acquisitions that are included in the present base rate case, PAWC should continue to prepare separate COSSs either individually for each acquisition or as a group.[94]
>
> [94] This group should include only non-CSS wastewater Section 1329 systems. The CSS wastewater systems (whether or not acquired under Section 1329) should be included in the separate COSS for CSS wastewater systems.

.

Q. To which acquisition(s) does the Company believe that requirement applies?

Elizabeth Borough Municipal Auth. and (2) the rights of Pa-Am. Water Co. to begin to offer or furnish wastewater service to the public in the Borough of Elizabeth, and portions of the Borough of Lincoln, and the Twps. of Elizabeth and Forward, in Allegheny Cnty., Pa., Docket No. A-2025-3052983 (Opinion and Order entered Oct. 9, 2025).

A. The Section 1329 acquisitions included in the 2023 rate case were BASA and Brentwood. The Brentwood acquisition has not closed, so at this time, the Company's understanding of the 2023 Order is that the continuing requirement would apply only to the BASA system.

Q. Does the Company ask that the Commission reconsider the requirement?

A. Yes, the Company requests that the Commission reconsider this requirement to maintain a separate COSS in future rate cases for BASA. Maintaining a separate COSS for a Section 1329 acquisition after its first base rate case contradicts the intent of single tariff pricing and therefore blocks customers from receiving the benefits of PAWC's economies of scale by spreading cost of service across a larger group of customers. This requirement would also increase expense that ultimately gets recovered from customers through rates to perform additional studies. The Company recommends that the Commission continue its approach of moving toward single tariff pricing for all of its systems, including those acquired under Section 1329 of the Public Utility Code. The service provided to customers of a system acquired under Section 1329 is indistinguishable from the service provided to customers acquired either organically or through non-Section 1329 acquisitions. The Company also recommends that the Commission continue to evaluate the necessity of separate COSSs as part of future acquisition proceedings.

AFFORDABILITY OF WATER AND WASTEWATER SERVICE

Q. In general, why is PAWC's proposed rate increase reasonable and appropriate?

A. PAWC's proposed rate increase is reasonable and appropriate because, as I previously discussed, it is driven primarily by investments that keep our water and wastewater service safe and reliable. Such investments cannot be avoided and are in the long-term best interests of our customers. If such investment is not made, our customers will be adversely impacted

in the long run as costs will increase even more. For example, when mains are not replaced in a timely fashion, or equipment is neglected, our costs rise as unanticipated main breaks create water quality issues, unexpected expenses, and disruption to our customers and communities. Similarly, equipment in need of replacement makes workers less efficient and can create safety issues.

Q. Has PAWC evaluated the impact of the proposed rate increases on its customers?

A. Yes. The Company's water and wastewater service is critical for our customers, and Company leadership understands how important it is for that service to remain affordable. A Zone 1 residential customer using 109 gallons of water per day would pay approximately $3.18 per day for water under our rate proposal. In other words, for about $3.18 per day, an average residential customer has all the water they and their family need to drink, cook, wash, and maintain their general health and well-being.

Q. Has the Company performed an analysis of the affordability of its water and wastewater service under the proposed rates?

A. Yes. Ms. Ather (PAWC Statement No. 9) conducted a detailed analysis of the affordability of our historical and proposed residential rates and relates the median household income ("MHI") for customers in our service territory to our utility bills over time. Ms. Ather's analysis demonstrates that our water and wastewater service has been affordable over time and will remain affordable for the majority of residential customers under the proposed rates. Her testimony compares historical average monthly water bills to monthly household income for PAWC customers from 2014 through 2024, both in absolute terms and in terms of bill-to-income ("BTI") ratios. Ms. Ather then analyzed customer bills in this case after the proposed rate increase and estimated MHI for PAWC customers during the FPFTY. Her analysis shows

that BTI ratios for PAWC's water service have held steady from 2014 to 2024 at levels between a low of 0.83% and a high of 1.03% of MHI and are expected to be 1.04% under the Company's proposed rates in this case during the FPFTY. Ms. Ather shows that BTI ratios for wastewater service have similarly held steady from 2014 through 2024 at levels between a low of 0.86% and a high of 1.35% of MHI but rose in 2023 to 1.41% and are expected to be 1.37% under the Company's proposed wastewater rates in this case. Ms. Ather's analysis is a tangible demonstration that our customer bills will remain affordable for the majority of customers even with PAWC's requested rate increase.

Q. How does PAWC maintain the affordability of its water service?

A. An important way that we maintain affordability is by continuously seeking to improve our business processes and make investments that improve operational efficiencies, and we have been very successful in doing so. As Mr. Nokovich and Mr. Runzer explain, we use targeted and proactive investments to permit us to work smarter and more efficiently as well as leverage the power of our organization to purchase equipment and supplies at advantageous terms. All of these initiatives help us better manage our cost structure and mitigate cost increases.

In addition, Mr. Ladner highlights the Company's efforts to pursue PENNVEST funding for its infrastructure investments. PAWC calculated the total customer benefit of this PENNVEST funding to be approximately $100 million in savings over the life of the loans based on the lower interest rates of PENNVEST loans and the receipt of project grants, which typically do not require repayment. As further described by Mr. Nokovich, the Company has been awarded PENNVEST grants and loans associated with Buter area pump station investment projects, lead service line investment projects, and dam rehabilitation projects.

Q. Notwithstanding the overall affordability of PAWC's rates, are there customers who might face affordability issues?

A. Yes, some of our customers face challenging economic circumstances. Thus, Ms. Ather also examined the affordability of our rates for customers at different MHI levels. Her assessment compares annualized bills for "basic water and/or wastewater service" (i.e., service that is necessary and reasonable to meet basic household needs for drinking, cooking, sanitation, and general health service that does not include seasonal discretionary water use) to measures of household income for lower income groups. The Company estimates that there are approximately 152,000 residential water customers in its service areas with household incomes at or below 200% of Federal Poverty Level ("FPL"), or approximately 24% of the Company's residential water customer base. For these customers, the Company continues to offer various assistance programs, which I describe below. The Company proposes in this case to maintain its income-based tariff discount program to include customers between 0% and 200% of FPL in order to address the affordability of water or wastewater service, as explained in more detail by Mr. McClellan.

Q. What customer assistance programs does PAWC offer its low-income customers to maintain the affordability of its service?

A. PAWC offers several customer assistance programs to help our low-income customers. The Company supports low-income customers through PAWC's H2O Help to Others Program™ ("H2O"). The H2O program currently offers a four-fold approach, including bill discounts for water and wastewater service, arrearage management, hardship grants, and water conservation assistance.

The bill discount program ("BDP") currently includes a four-tier discount with discounts on the total bill ranging from 20% to 90%. I discuss a slight change to the low-income discount structure below.

The arrearage management program ("AMP") assists low-income customers with arrearages. As part of the AMP, customers receive a $25 arrearage forgiveness credit in exchange for each full and timely monthly payment. The AMP launched on October 1, 2024. As of August 31, 2025, 3,149 customers were enrolled in the AMP.

The hardship fund program is a bill-paying assistance program funded by PAWC shareholders, donations from customers, and others who want to help our customers in need. Customers who qualify may receive grants of up to $500 annually toward their water bill and $500 annually toward their wastewater bill. The hardship fund is administered by Dollar Energy Fund ("DEF"), an independent, non-profit organization. For the 2025 to 2026 program year, the Company is contributing $1.45 million to the hardship fund.[3] On October 9, 2025, the Commission approved a settlement at Docket No. A-2025-3052983 permitting PAWC to acquire the EBMA wastewater system. As part of that settlement, PAWC agreed to contribute a total of $100,000 to its hardship fund either (1) in installments over the five-year period after closing of the acquisition, or (2) as a one-time contribution within 60 days after closing. These donations are funded by PAWC's shareholders and not recovered from customers.

The Company's water conservation assistance program offers tools and tips to help customers save water and money. The program includes a leak detection kit to help identify household leaks, conservation tips and water use calculator.

[3] PAWC's donations to the hardship fund are at an increased level for a five-year period consistent with the settlement approved in the Company's application to acquire the BASA wastewater system, at Docket No. A-2022-3037047.

In addition, the Company offers qualifying residential and commercial customers flexible payment arrangements through installment agreements if they are financially unable to pay a water and/or wastewater service bill when due. The Company also offers residential customers the option of paying bills under its budget billing plan. For customers electing budget billing, the Company estimates the customer's total billed amount for service during a succeeding twelve-month period and, for that period, issues monthly bills based on one-twelfth of the twelve-month estimate.

PAWC understands the importance of affordability, and the Company strives to assist those customers who have difficulty paying their water and wastewater bills. As further detailed in Mr. Ladner's testimony, PAWC has conducted significant outreach efforts to enroll customers in its H2O Help to Others customer assistance programs through statewide in-person information sessions, texting and paid customer education media campaigns, and select door-to-door canvassing efforts.

Q. You mentioned PAWC is proposing a slight change to its low-income discount structure. What is PAWC's proposal?

A. The Company's current discount tariff rates are based on the customers' percentage of FPL, with four tiers from 0% to 200% of the Federal Poverty Income Guidelines ("FPIG"). The Company is proposing to align water fixed and volumetric percentage discounts.

With this modification, the Company proposes the following discounts by tier:

Company Proposed Low Income Discounts

Eligible Customers	**Water Total Bill Discount**	**Wastewater Total Bill Discount**
0% - 50% FPL	82%	85%
51% - 100% FPL	67%	73%
101% - 150% FPL	44%	55%
151% - 200% FPL	22%	37%

This change is further explained by Mr. McClellan in his testimony (PAWC Statement No. 10).

Renter Assistance Pilot Program

Q. Is PAWC proposing to make any other changes to its low-income program offerings?

A. Yes, PAWC is proposing a renter assistance pilot program ("RAPP") for income-eligible renters receiving water and wastewater service in master-metered buildings.

Q. Please describe the RAPP.

A. The RAPP assists low-income residents with paying their utility bills when they are not responsible for paying for their utility service directly to their utilities because they are located in an apartment building that is master metered. The landlord pays for the entire building's utility service and collects the full amount required for utility service as part of rent from the building residents. Because low-income residents who live in master-metered buildings do not pay their utility directly for their utility service, they are not eligible for a utility's customer assistance programs such as PAWC's BDP or AMP. Therefore, when the landlord allocates a portion of the building's utility charges to each resident as part of their rent, the residents are paying a full tariff rate for their utility service, which is inappropriate if the resident is income-eligible for a customer assistance program. In other words, low-income residents in master-metered buildings are unable to take advantage of customer assistance programs simply because they live in a building that is not configured to allow them to pay for their own utility service directly.

The RAPP seeks to remove this barrier to assistance for low-income residents of master-metered buildings by making the residents eligible for quarterly stipends that are approximately equivalent to what the resident would be receiving if they were enrolled in the

Company's BDP based on an average level of residential customer usage. For example, PAWC calculates an average level of residential water customer usage in Pennsylvania to be 3,263 gallons per month. As summarized in the above chart, if the customer's household income level is at 150% of FPIG, they would receive quarterly stipends of the monthly bill discount amount of $41.92 (average usage x discount) x 3 equaling $125.76. By contrast, if the customer's household income level is at 50% of FPIG, they would receive quarterly stipends of the monthly bill discount amount of $78.12 (average usage x discount) x 3 equaling $234.36.

Q. How would PAWC administer the RAPP?

A. PAWC intends to use its third-party assistance program administrator, DEF, to process and approve RAPP applications. Because the RAPP is a new concept for Pennsylvania, PAWC is proposing to deploy it initially in two separate municipalities in different regions across the state with high renter populations: Eastern Pennsylvania (Scranton) and Western Pennsylvania (Butler). All water and wastewater customers of PAWC in those municipalities would be eligible to apply for RAPP stipends. The Company intends to launch education and outreach campaigns in the municipalities to create awareness regarding the RAPP and to partner with local officials and landlords to support those efforts.

Once a customer applies for the RAPP, DEF will 1) review the customer's income documentation, 2) confirm that the customer is income eligible for the program, 3) confirm that the customer resides in a master-metered property in one of the eligible municipalities for the program (a lease will be required), and 4) notify the customer if they are enrolled in the

program. The customer will then begin to receive quarterly stipends from DEF that are calculated based on their income level as if they were enrolled in the Company's BDP.

Q. How will PAWC manage reverification and removal for the RAPP?

A. PAWC expects the reverification and removal process to be more complicated than it is for the BDP and AMP because renters do not need to call the Company to end service in their name when they move out. As a result, the Company is proposing both 1) an annual income and address recertification process, and 2) program removal if DEF receives a returned check. Program removal upon receipt of a returned check is reasonable because it is unlikely residents will remember they need to cancel RAPP participation at the time of a move out. If a check is returned in error, the resident can contact the Company and/or DEF to reapply. The increased likelihood of move-outs among renters is also the reason PAWC intends to require annual income and address recertification.

Q. How does PAWC intend to manage the costs associated with the RAPP?

A. PAWC is unable to accurately predict the costs of the RAPP because there are no similar programs for other utilities in Pennsylvania. As a result, PAWC is proposing a $1 million annual cap on RAPP stipends. The pilot will gather and evaluate all cost data during the pilot to help understand what the approximate budget of a permanent program would be.

Q. How will PAWC manage enrollments if it hits the $1 million cap for stipends?

A. PAWC will continue to enroll new RAPP participants but inform participants that the stipends may run out before the end of the program year. PAWC will begin sending new quarterly stipends when the next program year begins.

Q. How does PAWC intend to recover RAPP costs?

A. PAWC intends to recover its RAPP stipend amounts and program administrative costs through its proposed CAP rider, which is described in detail later in my testimony. Program administrative costs will be limited to the costs charged to PAWC for DEF's administration of the RAPP.

Q. What is the duration of the RAPP?

A. If approved by the Commission, the RAPP would launch within one year of the Commission's Final Order in this proceeding. The Company will continue the RAPP for at least two years in those two municipalities. In the first rate case filed after that two-year period concludes, based on the results of the pilot, PAWC will propose either to 1) convert the pilot program into a permanent program, or 2) wind down the pilot.

RATE STRUCTURE AND RATE DESIGN PROPOSAL

Q. Please discuss the Company's rate zones in effect following the last base rate case.

A. A large majority of the Company's customers are now being billed under the same set of rates for metered service. This consolidation represents the continued implementation of the Commission-approved concept of Single Tariff Pricing. Water Rate Zone 2 (Valley) and Rate Zone 3 (Turbotville) continue to have separate rate schedules. Additionally, Wastewater Rate Zone 1a (Royersford), Rate Zone 1b (York), Rate Zone 1c (Foster), Rate Zone 2 (Kane, McKeesport), and Rate Zone 2a (Scranton) continue to have separate rate schedules.

Q. Please summarize the rate zones that have been created since the last rate case.

A. Since the last case, the Company has created the following rate zones for closed acquisitions:

Water:

Rate Zone 4	Farmington
Rate Zone 5	East Dunkard
Rate Zone 6	Audubon
Rate Zone 7	Manwalamink
Rate Zone 8	Appalachian

Wastewater:

Rate Zone 1d	Butler
Rate Zone 1e	Sadsbury
Rate Zone 1f	Audubon
Rate Zone 1g	Manwalamink

Upon completion of the Corner Water and EBMA acquisitions by the end of 2025, the Company will add one water rate zone and one wastewater rate zone, respectively, for those new customers.

Q. Has the Company created separate tariff groups for SSS and CSS customers?

A. In the settlement of the Company's base rate case at Docket No. R-2022-3031672, PAWC committed to creating a separate tariff group for current and future CSS customers. The Company's proposed wastewater tariff reflects the use of Rate Zone 1 for the consolidation rates of SSS customers, using subparts such as 1a, 1b, 1c, etc., for those SSS customers who are currently on separate rates, but moving toward consolidation in the future. Rate Zone 2

will be used for the consolidation rates of CSS customers, using subparts such as 2a, 2b, 2c, etc., for those CSS customers who are currently on separate rates, but moving toward consolidation in the future.

Q. Does the Company propose the consolidation of water and wastewater rates in this proceeding?

A. Yes. The Company proposes consolidation of certain water and wastewater rate zones and changes to the current water and wastewater rate structure. Please refer to the direct testimony of Company witness Mr. McClellan (PAWC Statement No. 10) for a detailed explanation of the Company's proposals.

Q. Please summarize the Company's commitments regarding rate increases for certain prior acquisitions.

A. The Scranton system, acquired by the Company in 2016, is subject to rate increase requirements and limitations. In the Scranton acquisition proceeding, the Commission approved the Amended Asset Purchase Agreement ("APA"), which provided that PAWC would not propose rate increases that would be equal to an amount greater than a 1.9% Compounded Annual Growth Rate ("CAGR") increase in annual revenues over a ten-year period relative to the starting amount of annual revenues. The pro forma revenues at present rates exceed the level of increase PAWC is permitted to propose under the CAGR provision during the ten years following closing of the acquisition. As such, and in compliance with the APA, the Company is not proposing an increase to the wastewater rates of the Scranton system. However, the Company does reflect the roll-in of the DSIC at present rate revenues, therefore changing the actual rate being charged to Scranton customers, while the average monthly bill will remain unchanged.

Q. Please summarize the Company's commitments regarding rate increases for acquisitions included in this filing since the last rate case.

A. PAWC has included the following acquisitions in this base rate case:

(1) BASA (wastewater);

(2) EBMA (wastewater).

(3) Sadsbury Township Municipal Authority (wastewater);

(4) Farmington Township (water and wastewater);

(5) Audubon Water Company (water);

(6) East Dunkard Water Authority (water);

(7) Manwalamink Water Company and Manwalamink Sewer Company;

(8) Appalachian Utilities, Inc. (water); and

(9) Corner Water Supply and Service Corporation (water).

In the following paragraphs, I will explain the rate increase commitments for these acquisitions which are further detailed in the testimonies of Don Wieczenski (Statement No. 7) and Max McClellan (PAWC Statement No. 10):

In the BASA application proceedings, a unanimous settlement was reached and filed with the Commission on August 14, 2023 ("BASA Settlement"). The BASA Settlement (p. 7) included the following provision regarding a proposed rate increase:

> PAWC will propose to move the System to 1.4x the current System rate or PAWC's proposed Rate Zone 1 system-average wastewater rates, whichever is lower, upon the later of (a) the first anniversary of Closing or (b) January 1, 2025.

The Company's rate proposal complies this provision and several other settlement provisions regarding rates, including a proposed rate for the Veterans Administration Hospital in Butler, Pennsylvania and proposed metered rates for BASA customers. The Company is proposing rates for the BASA system consistent with the revenue increases outlined in the BASA

Settlement. Please refer to the testimony of Max McClellan (PAWC Statement No. 10) for details on the proposed increases.

In the EBMA application proceedings, a unanimous settlement was reached and filed with the Commission on June 27, 2025 ("EBMA Settlement"). The EBMA Settlement (p. 5) included the following provision regarding a proposed rate increase:

> PAWC will not propose to increase rates for the EBMA zone more than 30% of EBMA's rates in effect at Closing in PAWC's first base rate case in which the System is included. PAWC also will not propose to increase rates for the EBMA zone more than 60% of EBMA's rates in effect at Closing in PAWC's second base rate case in which the System is included.

The Company proposes rates for the EBMA system consistent with the revenue increases outlined in the EBMA Settlement. Please refer to the testimony of Max McClellan (PAWC Statement No. 10) for details on the proposed increases.

The settlement in the Farmington Township water and wastewater application proceedings provides that PAWC should include proposals in its first base rate case after the acquisitions for (a) metered water and wastewater rates for Farmington customers, and (b) a rate increase that moves water and wastewater rates for Farmington customers toward the cost of service. The Company's proposals in this case comply with these provisions. Please refer to the testimony of Max McClellan (PAWC Statement No. 10) for detail on the proposed increases.

In the East Dunkard Water Authority (also known as Dilliner) application proceedings, the settlement provides that in the first base rate case following the closing of the acquisition, PAWC is to propose a public fire rate for the East Dunkard service territory equal to PAWC's statewide public fire rates. The Company's proposal in this case complies with this provision because PAWC is proposing to apply the statewide public fire hydrant rates to the East

Dunkard service area. Please refer to the testimony of Max McClellan (PAWC Statement No. 10) for detail on the proposed increases.

During the Manwalamink Water Company and Manwalamink Sewer Company application proceedings, PAWC accepted the Office of Small Business Advocate ("OSBA's") proposed condition that, if PAWC includes the Manwalamink service area in a future base rate case with an effective date prior to the expiration of the two-year rate freeze, PAWC will impute revenue to the Manwalamink service area in its proposed proof of revenues. This rate case complies with these provisions because PAWC is proposing a rate increase in this case, with an effective date at the end of the two-year rate freeze. Revenues associated with the proposed rate increase are imputed in the Company's proposed revenues. Please refer to the testimony of Max McClellan (PAWC Statement No. 10) for detail on the proposed increases.

SUPPORT FOR SPECIFIC ELEMENTS OF THE COMPANY'S FILING

Q. What is the Company's recommended rate of return on equity in this case?

A. The Company strongly believes, and proposes, that the Commission should consider the terms of Section 523 in determining the Company's allowed rate of return on equity in this case. Specifically, Ms. Bulkley has recommended a range of reasonable rates of return on equity from 10.25% to 11.25%. Both Ms. Bulkley and I recommend that the Commission adopt a rate of return on equity of 10.95% – at the upper end of Ms. Bulkley's range – in recognition of PAWC's superior management performance as is further supported in the testimony of Mr. Ladner.

Development of Water and Wastewater Revenue Requirements and the Application of Section 1311(c) of the Code

Q. Has the Company relied upon provisions of Act 11 in developing its proposed rates in this case?

A. Yes, it has. As authorized by Section 1311(c) of the Code, PAWC is proposing to allocate in the FPFTY approximately $53 million of its wastewater cost of service to its water operations, which is approximately 5% of total proposed water revenue. The authority granted by Act 11 would be used to mitigate the increases that wastewater customers in certain service areas would experience if their rates were established on a stand-alone basis. The Company's proposed rates would also make meaningful progress in moving the rates of its separate wastewater rate zones closer to a single consolidated wastewater rate design for all of the Company's wastewater operations.

The following table shows the effect on each wastewater operation of allocating a portion of wastewater revenue requirement to water operations and developing rates in the manner discussed above in summary form for the FPFTY:

Revenue Requirement Allocated from Wastewater to Water Customer Base Wastewater Operations	**FPFTY June 30, 2027**
Wastewater Sanitary Sewer Systems General Operations	$12,710,621
Butler Wastewater ("WW") Operations	$30,280,040
Elizabeth Borough WW Operations	$2,957,046
Wastewater Combined Sewer Systems Operations	$7,062,475
Total	**$53,010,182**

Q. What is the impact on the Company's proposed revenue requirement for water and wastewater customers of allocating a portion of wastewater revenue requirement to water operations, as shown above?

A. Based on the Company's cost of service and proposed customer class revenue allocation in this case, the allocation would increase the monthly water bill of a residential water customer by approximately $5.09 per month at proposed rates. The allocation would decrease the monthly wastewater bill of a residential wastewater customer by up to approximately $146 per month at proposed rates depending on the rate and location of the customer.

Q. What does Section 1311(c) of the Code state concerning the allocation of wastewater revenue requirement to water customers?

A. Section 1311(c) of the Code states: "The commission, when setting base rates, after notice and an opportunity to be heard, may allocate a portion of the wastewater revenue requirement to the combined water and wastewater customer base if in the public interest."

Q. What is your understanding of the phrase "in the public interest" in Section 1311(c) of the Code?

A. The phrase is not specifically defined in Section 1311(c). However, I am advised by counsel that the Commission provided guidance on the meaning of "in the public interest" in the Company's 2020 base rate proceeding with respect to acquisitions that were approved under Section 1329 of the Public Utility Code.[4] The Commission held that it is in the public interest for a utility to recover a portion of the wastewater revenue requirement associated with an acquired wastewater system from the combined water and wastewater customer base "because otherwise, large viable public utilities would be discouraged from acquiring municipal and

[4] *Comm'n v. Pa.-Am. Water Co.*, Docket Nos. R-2020-3019369 and R-2010-3019371 (Opinion and Order entered Feb. 25, 2021), p. 82.

wastewater systems and contravene the legislative intent and the Commission's policy of encouraging consolidation and regionalization."[5]

Q. Is the public interest served by distributing a portion of the revenue requirement of the Company's wastewater operations across PAWC's water customers?

A. Yes, it is. As recognized by the Commission, it is in the public interest for the Company to recover a portion of its wastewater revenue requirement associated with its acquired wastewater systems from its combined water and wastewater customer base.[6] Distributing a portion of the revenue requirement of the Company's wastewater operations across the Company's entire customer base is consistent with legislative intent and the important policy considerations underlying Sections 1311(c) and Section 1329, including ameliorating rate impacts on wastewater customers while imposing only a modest increase on the water bills of the much larger base of water customers, and promoting the Commission's policy of encouraging consolidation and regionalization.

The amendment Act 11 made to Section 1311(c) extended to combined water and wastewater utilities a policy similar to the concept of single tariff pricing, which this Commission has approved and encouraged water utilities to adopt for nearly forty years. As with single tariff pricing, allocating a portion of wastewater revenue requirement to the entire customer base recognizes that: (1) PAWC is an integrated water and wastewater company; (2) a multitude of functions needed to provide water and wastewater service are performed on a consolidated basis by PAWC employees and by the Service Company; (3) providing both water and wastewater service creates opportunities, over time, to capture additional economies of scale and scope; (4) the need for capital additions in different parts of the Company's water

[5] *Id.*
[6] *Id.*

and wastewater systems will be higher in some areas and lower in others at any given point in time, but will average out over time; and (5) "averaging" water and wastewater costs is very much like the cost averaging that single tariff pricing is explicitly designed to accomplish and stabilizes rates and mitigates rate impacts for all customers over the long run. Consistent with these factors, PAWC's proposal represents a reasonable approach to allocating revenue requirement that supports economies of scale over the long term.

Pension and OPEB Expense and Request for Regulatory and Accounting Treatment

Q. Please describe PAWC's request for deferral accounting treatment for pension and OPEB expenses and why it is appropriate.

A. PAWC is requesting Commission authorization to establish regulatory accounts for its pension and OPEB expenses. These expenses are difficult to predict and can materially increase or decrease from year-to-year because pension and OPEB costs are based on actuarial forecasts that take into account a number of economic and demographic factors described by Mr. Popiolek. When the actual outcomes differ from the predicted values for those factors, pension and OPEB costs can be materially higher or lower than forecasted for recovery in rates, resulting in under- or over-recovery by the Company and corresponding under- or overpayment by customers. The Company's proposal would compare its actual pension and OPEB expenses incurred to the amount included within base rates. The differences between the two would be deferred to a regulatory asset or liability, and the net balance would be addressed in the Company's next rate case.

Q. What was the authorized amount for pension and OPEB expense in the Company's last rate case?

A. The Commission approved amounts of ($3,874,748) and ($8,118,709) for pension and OPEB, respectively.

Q. What were the actuals recorded by the Company in the first year of rates that would coincide with these approved amounts?

A. The Company recorded expenses of $1,437,467 and ($6,744,367) for pension and OPEBs, respectively, for the period of August 2024 through July 2025.

Q. Please calculate the difference between the allowed amounts and the actuals.

A. The variance for the pension expense was $5,312,216 ($1,437,467 - ($3,874,748)), meaning that the Company recorded $5.3 million more in expense than the Commission authorized. The variance for the OPEB expense was $1,374,342 (($6,744,367) - ($8,118,709)), meaning that the Company recorded $1.4 million more in expense than the Commission authorized. The combined variance for pension and OPEBs was $6.69 million higher than authorized.

Q. What is the main driver of the variance?

A. The main driver of the variance is the use of the three-year historical average.

Q. What was the Company's original and rebuttal positions for pension and OPEB?

A. The Company's original filing reflected pension and OPEB expenses of $22,218 and ($5,817,327), respectively. The Company's rebuttal position reflected pension and OPEB expenses of $971,071 and ($6,496,737), respectively.

Q. Please compare the Company's as-filed case and its rebuttal position to actuals.

A. The as filed variance for pension expense was $1,415,249 ($1,437,467 - $22,218) over the as filed expense level. The rebuttal variance for pension expense was $466,396 ($1,437,467 - $971,071) over the rebuttal expense level. The as-filed variance for OPEB expense was ($927,040) (($6,744,367) – ($5,817,327)) under the as-filed expense level. The rebuttal variance for OPEB expense was ($247,630) (($6,744,367) – ($6,496,737)) under the rebuttal expense level. In total, the as-filed position for pension and OPEBs was $488,209 ($1,415,249

+ ($927,040)) higher than filed. In total, the rebuttal position for pension and OPEB expenses was $218,766 ($466,396 + ($247,630)) higher than filed.

Q. Which forecast was the most accurate?

A. The Company's rebuttal position was the most accurate as the variance to actuals was only $218,766. The Company's as-filed position was the next most accurate as the variance to actuals was $488,209. The Commission-authorized variance to actuals (based on a three-year average) was $6.69 million, which is over thirteen times the variance of the Company's as-filed position and over thirty times the variance of the Company's rebuttal position.

Q. Are you aware of any changes in the expense level of pensions in the future?

A. Yes, the amortization of the deferred pension liability for the Company and the Service Company will end on December 31, 2027. This liability was approved by the Commission in case R-2017-2595853 and is related to the amortization of the liability that was created when the Company switched from cash contributions to the accrual basis. The two amortizations total $1,958,418 ($1,479,089 per year for the Company and $479,329 per year for the Service Company). Company witness John Popiolek (PAWC Statement No. 14) speaks to pension and OPEB expense and forecasts in greater detail.

Q. What pension and OPEB expense methodology is the Company proposing to use in this case for the forecasted FPFTY expense?

A. PAWC is requesting that the Commission reconsider its three-year historical average methodology that underestimates the actual pension and OPEB expense impact on the Company and instead consider the Company's expert witness forecast using methodology explained in the testimony of John Popiolek (PAWC Statement No. 14). In addition, the

Company requests that the Commission allow deferral accounting treatment for these expenses between base rate cases as described below.

Q. Please describe PAWC's request for deferral accounting treatment for pension and OPEB expenses and why it is appropriate.

A. PAWC is requesting Commission authorization to establish regulatory accounts for its pension and OPEB expenses. These expenses are difficult to predict and can materially increase or decrease from year-to-year because pension and OPEB costs are based on actuarial forecasts that take into account a number of economic and demographic factors described by Mr. Popiolek. When the actual outcomes differ from the predicted values for those factors, pension and OPEB costs can be materially higher or lower than forecasted for recovery in rates, resulting in under- or over-recovery by the Company and corresponding under- or overpayment by customers. The Company's proposal would compare its actual pension and OPEB expenses incurred to the amount included within base rates. The differences between the two amounts would be deferred to a regulatory asset or liability, and the net balance would be addressed in PAWC's next base rate case.

PROPOSED CUSTOMER ASSISTANCE PROGRAM RIDER

Q. Is the Company proposing any alternative ratemaking mechanisms in this proceeding?

A. Yes, the Company is proposing a CAP rider for actual costs of the Company's customer assistance programs.

Q. Does Pennsylvania law allow the Commission to approve alternative rate mechanisms?

A. Yes, 66 Pa. Code C.S. § 1330(b) was added to the Public Utility Code in a 2018 amendment. I am advised by counsel that Section 1330 allows the Commission to approve an application

by PAWC to establish various forms of alternative ratemaking, including rates under Section 1307 of the Public Utility Code.[7]

Q. Does Section 1330 state the policy goals of this alternative ratemaking treatment?

A. Yes. Section 1330(a)(2) states as follows:

> It is the policy of the Commonwealth that utility ratemaking should encourage and sustain investment through appropriate cost-recovery mechanisms to enhance the safety, security, reliability or availability of utility infrastructure and be consistent with the efficient consumption of utility service.

Q. How does the Company's proposed CAP rider meet these policy objectives?

A. Section 1330(a)(2) recognizes that appropriate cost recovery mechanisms are necessary to enhance the safety, security, reliability, and availability of utility infrastructure. The Company's customer assistance programs are critical for maintaining income-eligible customers' access to affordable water and wastewater service.

Q. How is the CAP rider structured?

A. The CAP rider acts as a true-up mechanism: it either collects or refunds the difference between PAWC's CAP costs included in base rates and PAWC's actual CAP costs. CAP costs include PAWC's BDP discounts, AMP credits, RAPP stipends, and RAPP administrative costs. The CAP rider is similar to energy utilities' universal service riders ("USRs") in the types of costs it encompasses, but it is different because it will only apply to a portion of such costs since the Company is proposing to continue to recover the bulk of its CAP costs in base rates. Unlike energy companies' USRs, it is possible the CAP riders will result in a credit to residential customers' bills if PAWC's actual CAP costs are below the costs built into the Company's base rates. PAWC is proposing CAP riders in both its water and wastewater tariffs.

[7] 66 Pa. Code C.S. § 1330(b)(1)(v)-(b)(2).

Q. What is the initial proposed CAP rider charge in this case?

A. The initial CAP rider charge is $0 in both PAWC's water and wastewater tariffs. Consistent with Section 1307(e) of the Public Utility Code, PAWC would make an annual reconciliation filing at the Commission to establish a new CAP rider charge or credit each year. In this filing, PAWC would present 1) the total revenues received under the rider; 2) the total costs incurred which are the basis for the rider; and 3) the difference between the amounts specified in 1) and 2), and 4) a tariff supplement identifying the new CAP rider charge or credit based on the difference between the amount of PAWC's CAP costs in base rates versus PAWC's actual CAP costs for that period.

Q. The Company has offered customer assistance programs for many years. Why is the Company proposing a CAP rider at this time?

A. Several recent developments necessitate the adoption of a CAP rider at this time. First, the Company launched a documentation-based income verification process in the first quarter of 2025, which resulted in a dramatic reduction in its bill discount program enrollment.[8] At the start of 2025, approximately 30,000 customers were enrolled in PAWC's BDP. After the income verification process was complete, approximately 16,000 accounts were removed from the BDP due to failure to reverify income. In response, PAWC conducted extensive customer outreach activity to enroll income-eligible customers in its BDP and AMP. These efforts included door-to-door canvassing, an educational media campaign, and a research project to better understand barriers, behaviors, and opportunities to improve CAP participation, among others. Through these efforts, as of September 30, 2025, PAWC's enrollment increased back up to approximately 21,500 customers. A CAP rider is necessary

[8] PAWC previously obtained income information orally from customers rather than requesting supporting income documentation.

at this time due to the dramatic CAP enrollment fluctuations PAWC experienced this year, which PAWC anticipates will continue moving forward as PAWC continues its outreach to enroll low-income customers and applies its income verification and recertification processes.

PAWC's income recertification process will occur for all BDP and AMP on the following schedule: (a) every six months for zero income customers; (b) every two years for variable income customers; and (c) every three years for fixed income customers. Recertifications will be regularly occurring year-round and PAWC has no basis for predicting the amounts of customers who will be removed from the programs due to failure to recertify their income at those times. Therefore, the CAP costs included in base rates may either be too low or too high based on the actual costs that PAWC incurs. A CAP rider that is set up to either flow costs back to customers in the case of over-collection or collect additional costs in the case of under-collection is reasonable under these circumstances.

Energy companies follow this same documentation-based income verification process, but they do not have to worry about the fluctuating levels of their CAP enrollments because they receive full and timely recovery of their costs through their USRs. PAWC should have this same opportunity. PAWC continues to grow its CAPs and adopt CAP requirements (such as documentation-based income verification) that are more consistent with the CAPs offered by energy companies. Accordingly, PAWC should be permitted to recover its CAP costs in a similar manner.

Second, the Company recently launched its AMP, which provides income-eligible customers with past due balances the opportunity for monthly arrearage forgiveness. AMP costs are also difficult to predict. All AMP customers are also BDP customers and will be subject to the same documentation-based income recertification requirements moving

forward. Arrearage levels also differ extensively from customer to customer, and the Company cannot reliably predict which customers at which arrearage levels will enroll in its AMP. If the Company's AMP enrollment increases significantly, the CAP costs included in PAWC's proposed base rates may be far below the Company's actual AMP costs.

Third, as already discussed, the Company is proposing a RAPP with potential costs that are unpredictable because it is a new program both for the Company and across the Commonwealth among all utilities. Although PAWC is proposing to cap the budgets for the renter assistance stipends, the potential administrative costs that would be incurred by DEF are unknown at this time. Therefore, the Company has not included a projected cost level for this program in base rates, but instead is seeking to recover the costs of the pilot through the CAP rider.

Q. Is PAWC proposing to change its class allocation of CAP costs due to the introduction of the CAP rider?

A. No, the Public Utility Code is clear that Section 1330 mechanisms should feature cost allocation and recovery from the customers who use the programs that are the subject of the mechanism.[9] PAWC currently allocates its CAP costs to residential customers because residential customers are the only customers eligible to participate in CAP programs. Consistent with Section 1330 and the ratemaking principle of cost causation, PAWC is proposing to continue this allocation methodology and only apply the CAP rider to residential customers.

Q. Does the Company have any other information to present regarding its proposed CAP rider?

[9] 66 Pa. Code C.S. § 1330(a)(1).

A. Yes, Section 69.3302 of the Commission's regulations identifies several factors the Commission may consider when evaluating a Section 1330 mechanism. In Schedule CEC-3, I explain how each of these factors relates to the CAP rider.

Proposed Water and Wastewater Tariffs

Q. Please discuss the proposed changes shown in the proposed Water Tariff.

A. The Company is proposing changes to its Water Tariff, which include the following:

1. In the Territories Served—Western Pennsylvania, the Company proposes to update this section to include the Dilliner District, and to rename the Washington/McDonald district to McMurray.
2. In the Schedule of Rates—Rider DIS—Demand Based Industrial Service, Schedule of Rates—Rider DRS—Demand-Based Resale Service and Schedule of Rates—Rider DGS—Demand Based Governmental Service the Company proposes to add a paragraph requiring a change of law clause in the Service Agreements entered into under this section, and to add the requirement that copies of Service Agreements shall be provided by the Company to the OSBA, in addition to the existing requirement that copies are to be provided to the Office of Consumer Advocate for consistency with the Wastewater Tariff, as further discussed in the testimony of Mr. Wieczenski (PAWC Statement No. 7).
3. In the Schedule of Rates—Private Fire Service—Unmetered (Cont'd), the Company proposes to clarify that a customer is responsible for usage that flows through a consumption detection device and that the Company may require the installation of a meter vault if the installation of metering equipment is determined to be needed.

4. In the Schedule of Rates-Private Fire Service—Metered, the Company proposes to modify the amount of usage that would evidence a service is being utilized as a general water service line from in excess of 10,000 gallons per month to in excess of 3,000 gallons per month for a period of three or more consecutive months.
5. In the Schedule of Rates—Miscellaneous Fees, the Company proposes to add a section to permit bulk sales of water through Company-approved bulk filling stations under the specified conditions.
6. In the Schedule of Rates, the Company proposes to include a new section, Customer Assistance Program Rider, as further discussed in my testimony above.
7. In Rule 2—Definitions, the Company proposes removing the definition for "Equivalent Dwelling Units or EDU" in Section 2.5.1 because the Company is also proposing to convert customers in the service area formerly served by Farmington Township to a metered rate as further discussed in the testimony of Company witness McClellan (PAWC Statement No. 10).
8. In Rule 2—Definitions, the Company proposes adding definitions for "meter box" and "meter vault."
9. In Rule 4—Service Pipes, the Company proposes a new section that permits the Company to require, on a customer's service line, the installation of a device that controls the rate at which a customer's service can draw water from the Company's system.
10. In Rule 5—Meters and Meter Installations, the Company proposes edits to language in Sections 5.2 and 5.4 to clarify that "meter box" and "meter vault" are not synonymous.

11. In Rule 5.3—Automatic Meter Reading, the Company proposes to modify the existing language to reflect that meters capable of being read automatically may not need access to telephone lines.

12. In Rule 5.4—Outside Meter Installations (Meter Box/Vaults), the Company proposes to allow the Company to determine if it is appropriate for the Company, rather than the customer, to own, furnish, install and maintain a meter box.

13. In Rule 8.5—Application for Public Fire Hydrant Service, the Company proposes to add language to its application that would allow a municipal corporation of the Commonwealth of Pennsylvania to furnish and install a public fire hydrant, and then transfer ownership to the Company following installation.

14. In Rule 10—Payment Terms, the Company proposes to add a new Section 10.7 to formalize the Company's commercial customer payment arrangement program within its tariff.

15. In Rule 12.1—Termination by Company, the Company proposes that it may terminate water service upon the receipt of an order or notice from the Department of Environmental Protection, a health agency, a local plumbing inspector, or other similar authority, on the grounds of violation of law or ordinance.

16. In Rule 16—General, the Company proposes a new Section 16.5 requiring a customer to provide notification to the Company prior to testing a fire flow system or refilling a water storage tank.

17. In Rule 23—Main Extensions for Non Bona Fide Service Applicants, the Company proposes to modify its agreements used for main extensions for non bona fide service applicants, to add a developer administrative review agreement with an accompanying

schedule of fees, and to require a deposit for the costs associated with engineering and inspection of facilities that will ultimately be owned by the Company.

18. In Rule 24—Water Conservation Contingency Plan, the Company proposes to include "the use of water for data centers" as a nonessential use of water.

19. In Rule 26—Classification of Revenue, the Company proposes to identify that data centers will be considered part of the commercial classification of revenue (class of service).

20. In Rule 26—Classification of Revenue (Classes of Service) (cont'd), the Company proposes to add a bulk sales class of service to permit the purchase of water at bulk filling stations owned by the Company.

21. In Rule 27.2—Extension Deposit Agreement for Bona Fide Service Applicant, the Company proposes to add language requiring payments made under the Extension Deposit Agreement to be made by electronic funds transfer.

22. In Rule 27.3—Special Utility Service, the Company proposes to add language requiring payments made under the Agreement to be made by electronic funds transfer.

23. The Company proposes to include a new Section 30, PAWC's Powers and Duties as Receiver, to enumerate the actions the Company would be authorized to take in its capacity as a receiver of a public utility's water system as further discussed in the testimony of Company witness Wieczenski (PAWC Statement No. 7).

Q. Please discuss the proposed changes shown in the proposed Wastewater Tariff.

A. The Company is proposing changes to its Wastewater Tariff, which include the following:

1. In the Schedule of Rates, the Company proposes to move metered customers, where possible, from a monthly service charge per equivalent dwelling unit ("EDU") to a monthly service charge, as discussed in the testimony of Company witness McClellan (PAWC Statement No. 10).
2. In the Schedule of Rates, the Company proposes to simplify its Unmetered Charges subsections by removing the sentence, "This charge is a flat rate fee for customers not metered for water consumption."
3. In the Schedule of Rates, Rate Zone 1f, the Company proposes to simplify its Unmetered Charges subsection by removing "and customers not metered for water consumption."
4. In the Schedule of Rates, Rate Zone 2- Combined Sewer System, the Company proposes to simplify its Unmetered Charges subsection by removing "for all customers not metered for water consumption."
5. In the Schedule of Rates, the Company proposes to clarify that the flat rate Special Rate Charges under Rate Zone 1—Sanitary Sewer System Unmetered Charges are based on assumed sewage flows.
6. In the Schedule of Rates, the Company proposes to eliminate the $0.00 flat rate per month Special Rate and to instead charge a monthly charge and usage rate to the VA Hospital in Rate Zone 1c—Metered and Unmetered.
7. In the Schedule of Rates, Miscellaneous Fees and Charges, the Company proposes to clarify the method by which capacity reservation fees are charged per equivalent dwelling unit and the time at which capacity reservation fees must be paid to the Company.

8. In the Schedule of Rates, Miscellaneous Fees and Charges, the Company proposes to add a new section that permits the Company to pass through improvement charges from third party companies or municipalities for conveyance and treatment to the new customer in addition to the capacity reservation fee.

9. In the Schedule of Rates, Miscellaneous Fees and Charges, the Company proposes to add a new section that identifies that the new customer is responsible for the costs of upgrades or replacement, if needed, to the Company's existing facilities to accommodate the new wastewater flow from the new customer.

10. In the Schedule of Rates, Miscellaneous Fees and Charges (cont'd), the Company proposes to clarify that for bulk customers who are members of the Municipal Sewer Group in the Company's Coatesville service territory, no capacity reservation fee will be charged for an applicant for wastewater service for existing residential or commercial structures that only produce residential strength wastewater.

11. In the Schedule of Rates, Miscellaneous Fees and Charges, the Company proposes to modify its Service Reconnection Fee to allow the Company to collect the actual costs incurred by the Company for the shut-off and turn-on of any service.

12. In the Schedule of Rates, Miscellaneous Fees and Charges, the Company proposes to standardize its treatment of waste haulers throughout its service territories. In this section, the Company also proposes a 5% increase on per gallon fees, a hauled waste permit fee of $250 in order to have the administrative costs borne by waste haulers, and a minimum unloading/dumping fee of $50 per visit to cover employee costs associated with unloading and processing paperwork.

13. In the Schedule of Rates, the Company proposes to include a new Demand Based Governmental Service ("DGS") Rider as further discussed by Company witness Wieczenski (PAWC Statement No. 7).

14. In the Schedule of Rates, the Company proposes to include a new Demand Based Industrial Service ("DIS") Rider as further discussed by Company witness Wieczenski (PAWC Statement No. 7).

15. In the Schedule of Rates, the Company proposes to include a new section, Customer Assistance Program (CAP) Rider, as further discussed in my testimony above.

16. In the Rules and Regulations, Section A – Definitions, the Company proposes modifications in the definition of "Equivalent Dwelling Units (or EDU)" to (1) clarify the method by which EDUs are allocated to new customers of the Company who become customers through a purchase or acquisition and (2) explain that the Company is permitted to re-calculate the number of EDUs allocated to a customer, subject to certain timeframe restrictions.

17. In the Rules and Regulations, Section A – Definitions, the Company proposes to add definitions for the following terms: "Appliance," "Black Water," "Brown Grease," "Fat, Oil, and Grease (FOG)," "FOG Control Device," "FOG Discharge Permit," "FOG Interceptor," "FOG Recycle Container," "FOG Trap," "FOG User," "FOG/Grit Separator," "Food Service Establishment (FSE)," "Grey Water," "Petroleum Oil Establishment (POE)", and "Yellow Grease."

18. In the Rules and Regulations, Section A – Definitions, the Company proposes to add references to its proposed new Section X—FOG Control Section to the existing

definitions of "Best Management Practices (BMP)" and "Prohibited Discharge Standards or Prohibited Discharges."

19. In the Rules and Regulations, Section C—Applications for Service, the Company proposes to clarify that wastewater service can be established without any further action on the part of a customer if the Company is made aware, pursuant to a usage data agreement, that the customer of a service location has changed.

20. In the Rules and Regulations, Section D – Construction and Maintenance of Facilities, the Company proposes that, following the installation of an initial customer service line, the customer will be responsible for the costs of installation of new service connections, including in instances where one property is converted into multiple premises.

21. In the Rules and Regulations, Section F – Billing and Collection, the Company proposes to add a new Section F.15 to formalize the Company's commercial customer payment arrangement program within its tariff.

22. In the Rules and Regulations, Section F – Billing and Collection, the Company adds a new Section F.17 Deduct Adjustment, proposing to use a winter average consumption to be applied to volume of sewer use for specified meter reads, as further discussed in the testimony of Company witness McClellan (PAWC Statement No. 10).

23. In the Rules and Regulations, Section H, the Company proposes to modify its agreements used for main extensions for non bona fide service applicants, add a developer administrative review agreement with an accompanying schedule of fees, and to require a deposit for the costs associated with engineering and inspection of facilities that will ultimately be owned by the Company.

24. In the Rules and Regulations, Section N—Extension Deposit Agreement for Bona Fide Service Applicant, the Company proposes to eliminate refunds for bona fide service applicants who enter into an Extension Deposit Agreement with the Company and to require payments be made under the Extension Deposit Agreement via electronic funds transfer.

25. In the Rules and Regulations, Section O—Special Utility Service, the Company proposes to add language requiring payments made under the Agreement to be made by electronic funds transfer.

26. In the Rules and Regulations, Section P – Grinder Pumps for Paint-Elk Wastewater, the Company proposes to remove existing language requiring the Company to own, maintain, repair/replace grinder pump units for a period of three years from the Closing on its acquisition of the Paint-Elk Joint Sewer Authority system. Closing on the acquisition of the Paint-Elk Joint Sewer Authority system occurred on July 31, 2014 (see Docket No. A-2013-2395998).

27. In the Rules and Regulations, Section T—Wastewater Control and Industrial Pretreatment Regulations, the Company proposes to add the following additional prohibitions to Section T.2.1—Prohibited Discharge Standards: (1) FOG of animal, vegetable or petroleum in the specified concentrations; (2) unused or outdated pharmaceuticals; (3) antifreeze or antifreeze mixtures; and (4) chemicals, enzymes, or biological additives for the purpose of FOG metabolism or alteration unless approved by the Company.

28. In the Rules and Regulations, Section T—Wastewater Control and Industrial Pretreatment Regulations, the Company proposes to add to Section T.2.11—

Accidental Discharge/Slug Discharge Control Plans, that accidental discharge/slug discharge control plans shall be prepared when required by the Company.

29. In the Rules and Regulations, Section T—Wastewater Control and Industrial Pretreatment Regulations, the Company proposes to remove Section T.2.13—Grease Traps due to its proposal of a definition of "FOG Trap" discussed earlier.

30. In the Rules and Regulations, Section T—Wastewater Control and Industrial Pretreatment Regulations, the Company proposes in Section T.3.2—Proper Operation and Maintenance, to add language requiring the retention period of records to be extended during litigation.

31. In the Rules and Regulations, Section T—Wastewater Control and Industrial Pretreatment Regulations, the Company proposes in Section T.3.7—Additional Pretreatment Measures, to replace existing language regarding "interceptors or traps" with the updated terminology of "separators" and to specify that cleaning and maintenance records, including hauling manifests for the past five years must be made available to the Company upon request.

32. In the Rules and Regulations, Section T—Wastewater Control and Industrial Pretreatment Regulations, the Company proposes in Section T.3.7—Additional Pretreatment Measures, to add the prohibition against a food waste disposer discharging to a FOG control device.

33. In the Rules and Regulations, Section T—Wastewater Control and Industrial Pretreatment Regulations, the Company proposes in Section T.6.10—Sample Collection, to add a new subsection (f) to prohibit damage, tampering or the prevention of access to any structure, appurtenance, equipment or part of the treatment works.

34. In the Rules and Regulations, Section T—Wastewater Control and Industrial Pretreatment Regulations, the Company proposes in Section T.6.10—Sample Collection, to add a new subsection (g) to permit the Company to require a user discharging industrial or other wastes into a sewer system to construct and maintain at their expense a suitable control manhole as specified by the Company.

35. In the Rules and Regulations, Section T—Wastewater Control and Industrial Pretreatment Regulations, the Company proposes in Section T.6.11—Date of Receipt of Reports, to add language clarifying that when documentation and written reports are physically mailed, they will be deemed to be submitted on the date postmarked or shipped, and when electronically submitted, the date of receipt will be the date of submission.

36. In the Rules and Regulations, Section T—Wastewater Control and Industrial Pretreatment Regulations, the Company proposes in Section T.7.2—Specific Fees, to allow the Company to use the results from a user's previous quarters to determine pollutant loading when results have not been provided within a particular quarter.

37. In the Rules and Regulations, Section T—Wastewater Control and Industrial Pretreatment Regulations, the Company proposes in Section T.8.1—Right of Entry: Inspection and Sampling to permit the Company the right to enter a facility for the purposes of confirming compliance with the Company's rules or compliance with a permit or compliance directive issued by the Company pursuant to its rules.

38. In the Rules and Regulations, Section V.2—Wastewater Control and Protection of Collection Systems, the Company proposes to add references to its new proposed Section X-FOG Control, and clarify that currently referenced subsections are

subsections of Section T—Wastewater Control and Industrial Pretreatment Regulations.

39. In the Rules and Regulations, the Company proposes a new Section X—FOG Control, to implement a statewide FOG control program to prevent interference or pass-through in the Company's treatment works caused in part or wholly by the contribution and accumulation of FOG and associated solids from FOG users, with the goal or preventing blockages, restrictions, obstructions and overflows in sanitary sewer systems as well as combined sewer systems, as further discussed in the testimony of Company witness Runzer (PAWC Statement No. 3).

40. The Company proposes to include a new section, PAWC's Powers and Duties as Receiver, to enumerate the actions the Company would be authorized to take in its capacity as a receiver of a public utility's wastewater system as further discussed in the testimony of Company witness Wieczenski (PAWC Statement No. 7).

Q. Has the Company provided a redlined version of the proposed tariffs?

A. Yes, the Company has provided a redlined version of its proposed tariffs showing all changes made relative to its current Water and Wastewater Tariffs, which include the changes to the rules described above, the Company's proposed rate changes, and the consolidation of rate zones, discussed in more detail in the testimony of Company witness McClellan (PAWC Statement No. 10).

CONCLUSION

Q. Does this conclude your direct testimony at this time?

A. Yes, it does. However, I reserve the right to supplement my testimony as additional issues and facts arise during the course of the proceeding. Thank you.

APPENDIX A

From 2015 to 2017, I served as Assistant Professor and Director of the University of Charleston's Master of Forensic Accounting ("MFAcc") Program. I provided administrative oversight of the program to include curriculum development, faculty development and coordination, program assessment, recruiting, retention, marketing, and fiscal planning and management. I also served as faculty in the MFAcc program, teaching MFACC 624 - Data as Evidence which included data mining, probability concepts and calculations, link analysis, timelines and relationship charts, and applications of statistics in the courtroom. In addition, I taught the following undergraduate courses: BUSI 215 – Business Software, ACCT 460 – Accounting Information Systems, and ACCT 281 - Introduction to Forensic Accounting.

From 2010 to 2015, I served as Manager of Information Technology Services Expense Management for American Water ("AW"), responsible for managing operating and capital expenditures for the ITS department. I proposed and received approval for establishment of AW's first IT Finance team overseeing the management of IT related operating and capital funding projects across AW's subsidiaries. I was responsible for business planning and reporting, contracts processing, capital asset management, procurement of ITS goods/services, and budget management of $70M+ annually. During this time, I also served as the ITS functional lead member of AW's Procure to Pay Service Delivery Council. I established the Centrally Sponsored Financial Model for use by the company in SAP and related system asset management post-system implementation. I established an annual CIO communication to state presidents, finance, rates, and capital leads within the operating companies for the purpose of communication business planning needs for information systems projects at enterprise and state levels.

APPENDIX A

From 2003 to 2010, I served as Team Lead for the ITS Service Delivery department overseeing up to 9 states and service company locations with 22 support specialists for the delivery of information technology services such as local network, computer, and software support.

I also serve as a contract instructor and presenter for the National Association of Valuators and Analysts (NACVA), presenting topics such as computer forensics and the digital age.

Pennsylvania-American Water Company
Response to Distribution Rates – Statement of Policy
Proposed Customer Assistance Program Rider

52 Pa. Code § 69.3302. Distribution rate considerations.

(a) In determining just and reasonable alternative distribution ratemaking mechanisms and rate designs that promote the purpose and scope of this statement of policy and the objectives of 66 Pa.C.S. § 1330 (relating to alternative ratemaking for utilities), the Commission may consider, among other relevant factors, the following:

(1) How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.

The Customer Assistance Program ("CAP") rider aligns with cost causation because it is allocated to and is primarily recovered from only those customers who benefit from the Company's CAPs, *i.e.*, the bill discount program and arrearage management program: residential customers.

(2) How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.

The Company's proposed CAP rider is not expected to impact the fixed utility's capacity utilization.

(3) Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.

The Company's proposed CAP rider is not expected to impact the level of demand associated with customers' anticipated consumption levels.

(4) How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

The proposed CAP rider would apply to both water and wastewater service under separate tariffs. The proposed CAP rider will not affect interclass or intraclass cost shifting between residential and non-residential customer classes.

(5) How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.

The proposed CAP rider is designed to limit or eliminate disincentives for the promotion of customer assistance programs rather than efficiency programs. Because the CAP rider allows for recovery of actual costs associated with the Company's CAPs, the Company is incentivized to promote its CAPs, which are

necessary programs to provide all customers with access to affordable water and wastewater service. The Company would not face the budgetary constraints it would face if the projected CAP costs in base rates are insufficient to cover actual program costs.

(6) How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.

The Company's proposed CAP rider is not expected to impact customer incentives to employ efficiency measures and distributed energy resources.

(7) How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.

The Company's proposed CAP rider will benefit low-income customers and support customer assistance programs because it permits the Company to deploy CAP enhancements and new programs such as the renter assistance pilot program even where the costs of such changes were not included as part of the Company's base rates.

(8) How the ratemaking mechanism and rate design impact customer rate stability principles.

The Company's proposed CAP rider is not expected to materially impact rate stability.

(9) How weather impacts utility revenue under the ratemaking mechanism and rate design.

Weather would not materially impact the proposed CAP rider.

(10) How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.

Because PAWC's rate cases are typically driven by system investment needs, the proposed CAP rider likely would not reduce the need for such cases.

(11) If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).

The Company's proposed CAP rider does not interact with other rider or alternative ratemaking mechanisms.

(12) Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.

The proposed CAP rider includes consumer protections through the annual reconciliation process, which includes Commission staff and external stakeholder review. Customers may end up receiving a credit through the CAP rider if the Company's actual CAP costs are below the costs included in PAWC's base rates.

(13) Whether the alternative ratemaking mechanism and rate design are understandable to consumers.

Customers are already familiar with the CAP charge on their electric and gas utility bills under their universal service riders. As a result, customers should understand the purpose of such a charge or credit once it is included on their PAWC bills.

(14) How the ratemaking mechanism and rate design will support improvements in utility reliability.

The Company's proposed CAP rider is not expected to impact utility reliability.

Statement No. 3

Runzer

PAWC STATEMENT NO. 3

DIRECT TESTIMONY

OF

JIM RUNZER

DESCRIBING
PENNSYLVANIA-AMERICAN WATER COMPANY'S OPERATIONS, WATER QUALITY AND SOURCE WATER MONITORING EFFORTS, SAFETY PERFORMANCE, OPERATING AND MAINTENANCE EXPENSE, OPERATING EFFICIENCIES, AND EMPLOYEE LEVELS AND COMPENSATION

DOCKET NOS.
R-2025-3057983 (WATER)
R-2025-3058051 (WASTEWATER)

DATE: NOVEMBER 14, 2025

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF JIM RUNZER

Q. Please state your name and business address for the record.

A. Jim Runzer, 852 Wesley Drive, Mechanicsburg, Pennsylvania 17055.

Q. By whom are you employed and in what capacity?

A. I am employed by Pennsylvania-American Water Company ("PAWC" or the "Company") as the Vice President – Operations.

Q. What are your responsibilities as PAWC's Vice President - Operations?

A. I am responsible for all the Company's water and wastewater operations across the Commonwealth, managing a team of approximately 1,186 professionals, in 67 districts, serving 2.4 million Pennsylvanians.

Q. Please describe your professional education and experience.

A. I received a bachelor's degree in education in 1991 from Kean University and a Master of Business Administration in 2012 from the Keller Graduate School of Management. I also completed an Advanced Water Treatment and Distribution certification from the Camden County Institute of Technology in 2004 and Advanced Wastewater Collection certification from the University of Sacramento in 2014.

I began my career at American Water Works Company, Inc. ("American Water") in 1994 as a bargaining unit employee for New Jersey-American Water Company, Inc. ("NJAWC"), working in both Production and Field Operations until being promoted to Operations Supervisor for NJAWC in Mount Holly, New Jersey, in 2008. I was promoted to Field Operations Superintendent in Delran, New Jersey, in 2011 and was then promoted to Operations Manager for the Coastal South New Jersey system in 2014, where I was

responsible for Field Operations, Production, and Construction Operations. I was named Director of Operations for Iowa-American Water Company in April 2018 and was later named Vice President of Operations for New York American Water Company in July of 2019. I held that position until taking on my current role as Vice President of Operations for the Company on June 28, 2021.

Q. What is the purpose of your direct testimony in this proceeding?

A. The purpose of my testimony is to describe PAWC's strong operational performance throughout the Commonwealth. First, I will describe the Company's water and wastewater operations and facilities throughout Pennsylvania. Second, I will explain PAWC's industry-leading water quality improvement, wastewater environmental compliance and proposed wastewater fat, oil and grease ("FOG") Control Program, and source water monitoring efforts. Third, I will provide information regarding PAWC's operating and maintenance expenses. Fourth, I will describe several technical efficiencies within PAWC's Operations, such as our use of electronic work management for field employees, Geographic Information System ("GIS") platforms, and our deployment of smart phones and tablets for real time collection of asset data. Fifth, I will describe additional operational efficiencies, including energy usage, reduction of unaccounted for water, and our implementation of Advanced Metering Infrastructure ("AMI") water meters. Sixth, I will describe our system resiliency and storm preparation. Seventh, I will describe our strong safety record and Company commitment to safety for the benefit of both our customers and employees. Eighth, I will discuss our investment in troubled systems and receiverships. Finally, I will describe the Company's current and anticipated employee levels, employee compensation philosophy, and commitment to employee development.

Operations and Facilities

Q. Please describe PAWC's Operations.

A. PAWC owns, operates, and maintains potable water production, treatment, storage, transmission and distribution systems, and wastewater collection, pumping, and/or treatment systems, for furnishing water and wastewater services to approximately 810,000 residential, commercial, industrial, and governmental customers in communities located in 38 of the 67 counties across Pennsylvania.

The Company has established three geographically defined operating areas that collectively serve an estimated population of more than 2.4 million people. The three operating areas are western, northeast, and central/southeast. The western Pennsylvania operating area serves an estimated population of 1,100,000 people. Some of the larger communities served include Butler, Clarion, New Castle, Ellwood, Indiana, Punxsutawney, Warren, Kane, portions of the City of Pittsburgh and its southern suburbs, McMurray, Uniontown, Brownsville, and Connellsville. Large customers include Cleveland-Cliffs Butler Works, Municipal Authority Westmoreland, Allegheny County Parks, Koppel Steel, United Refining, Indiana University of Pennsylvania, Clarion University, and St. Clair Hospital. The Northeastern Pennsylvania operating area serves an estimated population of 740,000 people. Some of the larger communities served include Wilkes-Barre, Scranton, Montrose, Bangor, and Nazareth. Several of the large customers served in Northeastern Pennsylvania are the Lackawanna Energy Center, Lion Brewery, SVC Manufacturing, University of Scranton, and the State Correctional Institution – Dallas. The Central/Southeast operating area serves an estimated 560,000 people. Some of the larger communities include Camp Hill, Mechanicsburg, Hershey, Palmyra,

Philipsburg, Milton, Norristown, Coatesville, Royersford, Berwick, Milton, Yardley, and the suburbs of Reading. Several large customers include ConAgra Grocery Products Co., Mesorah Farms, Penn State Hershey Medical Center, and Cleveland-Cliffs Plate LLC.

Q. Please describe the facilities and property that PAWC uses to provide water and wastewater services to customers.

A. PAWC's utility plant accounts include land and land rights, structures and improvements, wells, pumping equipment and associated facilities, purification plant and equipment, sludge disposal facilities, transmission and distribution mains, collection pipes, distribution storage facilities, service lines, meters, hydrants, and other facilities, including materials and supplies. All of this plant and property is used to provide safe, adequate, efficient, and reliable water and wastewater services to PAWC's customers. A more detailed description of the source of supply, treatment, storage, and distribution facilities within each district is provided as Volume 2 of the Company's responses to the Pennsylvania Public Utility Commission's ("PUC's" or the "Commission's") filing requirements, which is titled *Scope of Operations.*

Water Quality

Q. Please describe the Company's commitment to excellent water quality.

A. At PAWC, we know that water isn't just a utility—it's a vital part of our daily lives. For more than 120 years, we've proudly served communities across Pennsylvania, delivering clean, reliable drinking water and wastewater services to homes, schools, and businesses.

We take that responsibility seriously. Drinking water is the only utility people consume directly, and we're committed to making sure our water meets all regulatory requirements, as well as tastes and looks the way our customers expect. Behind the scenes,

our teams work around the clock to treat and monitor the drinking water using advanced technologies and approved methods to protect public health and give customers peace of mind.

But our work doesn't stop at the tap. We also operate wastewater treatment systems that help protect local rivers, streams, and ecosystems. Every drop that enters our collection systems is carefully treated before it returns to the environment. We follow strict environmental standards to make sure we're doing our part to keep Pennsylvania's natural resources clean and healthy.

We're always looking for ways to improve—whether it's upgrading our facilities, optimizing treatment, or listening to customer feedback. PAWC firmly believes everyone deserves water they can trust and a utility company that puts customers and the environment first.

Q. How has PAWC been recognized for its optimization and water quality achievements?

A. PAWC is dedicated to providing reliable, high-quality water and wastewater services. While we strive to meet all regulatory requirements, we also take additional steps to improve our operations and service delivery. Our participation in the American Water Works Association ("AWWA") Partnership for Safe Water and the Partnership for Clean Water programs reflects our ongoing efforts to enhance system performance and water quality through voluntary, industry-recognized initiatives. These voluntary programs demonstrate our dedication to going beyond compliance, ensuring our communities receive the best water services possible.

PAWC's drinking water treatment plants have consistently been recognized for their excellence in optimization and water quality across our footprint. Thirty-three of our facilities are proud recipients of the Partnership for Safe Water awards, with nine of them achieving the highest level of performance—the prestigious Phase IV Presidents Award. Since PAWC's last rate case, the Clarion, Norristown, and Philipsburg Water Treatment Plants have each earned the 10-Year Presidents Award, underscoring their sustained commitment to excellence. At the 2025 Pennsylvania AWWA awards ceremony, PAWC was honored with 21 out of the 28 Partnership for Safe Drinking Water awards, including 19 25-Year Director Awards and two additional 10-Year Presidents Awards. These accolades reflect our unwavering dedication to delivering reliable, high-quality drinking water—and we are incredibly proud of these accomplishments.

The Pennsylvania Department of Environmental Protection ("DEP") has an on-going program called the Filter Plant Performance Evaluation ("FPPE"), where DEP performs inspections to determine the effectiveness of a drinking water treatment plant in removing disease-causing organisms from the incoming raw water. Since PAWC's last rate case, seven PAWC Filter Plants have undergone an FPPE inspection and each received a Commendable[1] rating (the highest rating possible). The ratings focus on operational and equipment performance rather than strict regulatory compliance. This is another way PAWC has been recognized for its investments in our facilities and the commitment to compliance by our staff of certified operators.

[1] The FPPE Rating System uses the following categories: "Commendable," "Satisfactory," and "Needs Improvement."

In addition to the Partnership for Safe Water program, the AWWA offers the Partnership for Clean Water program—another opportunity for utilities to demonstrate their commitment to environmental compliance. By participating in this initiative, PAWC reinforces its dedication to optimizing the performance of its wastewater treatment plants, a critical step in protecting source water. As of 2025, we're proud to report that 11 PAWC wastewater facilities—Coatesville, Exeter, New Cumberland, McKeesport, Pocono Country Place, Scranton, Butler, Clarion, Fairview North, Fairview South, and York—are enrolled and have successfully completed both Phase I and Phase II of the program. Our ultimate goal is to have the first fully optimized wastewater systems in Pennsylvania recognized by the Partnership for Clean Water.

Q. Please describe some of PAWC's water quality and environmental compliance standard operating procedures.

A. PAWC is firmly dedicated to maintaining full compliance with all regulatory standards across our drinking water and wastewater facilities. The Company has put clear processes in place so that our employees have the tools they need to do their jobs well. To uphold our commitment to providing high-quality water and wastewater services, PAWC has set internal standards that drive excellence and promote customer satisfaction.

PAWC continues to require that all sample collection, review of results, and reporting undergo dual validation internally prior to submittal to the reviewing regulatory agency. This serves to ensure that the data is accurate and that any concerning results are addressed immediately. Since PAWC's last rate case, the Company implemented this same rigorous review on wastewater discharge testing and data. Along with dual validation, PAWC also implemented weekly compliance data review meetings between our water

quality staff and the local operations staff. These meetings provide a focus time for operational and water quality and environmental compliance experts to review data collected and analyzed by the local operators and confirm that all requirements are met. These meetings also provide a conduit for coordination between local operations and water quality and environmental compliance staff, which is critical to maintain compliance with water quality and environmental requirements. In addition, although it is not required by regulation, PAWC also began quarterly testing of secondary contaminants to better manage the water we provide for aesthetic considerations, such as taste, color, and odor.

PAWC is continuously working to implement technology solutions with the greatest opportunity for successful and efficient operations. The drinking water team continues to use our internal monitoring results program, Sample 1 View ("Sample 1V"). Sample 1V provides a user-friendly dashboard for bacterial and chlorine requirements that is reflective of real-time sample collection in the field and follows through to the laboratory analysis. This is a powerful tool that allows PAWC staff to ensure that all required samples are collected, and results are reviewed and received, in a timely manner. Sample 1V is used by all PAWC staff responsible for the collection and reporting of bacteria samples and has improved efficiency significantly. Our wastewater teams have recently begun utilizing Hach WIMS (Water Information Management Solution), a software platform for managing and reporting data for water and wastewater utilities, to manage wastewater compliance programs and data. Hach WIMS centralizes data from various sources into a single, secure database to streamline operations, support regulatory compliance, and provide insights for decision-making.

Finally, PAWC created a dedicated team to address recently established lead service line assessment, mitigation, and replacement requirements. The team is focused on all aspects of lead in drinking water, from ensuring compliance with regulatory requirements to working with the Pennsylvania Infrastructure Investment Authority ("PENNVEST") to obtain the lowest cost funding for lead service line replacement projects.

In addition to the improvements that have been implemented locally, PAWC has also benefited from procedural and structural improvements implemented by American Water. In 2025, American Water reorganized its water quality and environmental compliance program. This reorganization benefits PAWC by expanding and providing more focused resources to local teams. American Water also instituted a policy requiring the development of internal action plans, for both drinking water and wastewater, to address testing results that show a contaminant level above 80% of the established primary maximum contaminant level ("MCL") or 80% of the discharge permit limit. These plans are site-specific and include review of treatment optimization, potential disruptions in treatment or impacts from collection system customers, and distribution system/collection system improvements and/or modifications. This approach ensures that water quality concerns are addressed proactively before a violation occurs.

The Company's environmental near miss program continues to add great value and support strong environmental compliance. PAWC takes a proactive approach in identifying potential water quality and compliance issues and implementing prompt improvements. The environmental near miss program identifies water quality or environmental vulnerabilities before they create an adverse impact. From 2023 to 2024,

PAWC employees submitted 526 environmental near miss reports, which identified and avoided potential compliance impacts in both our drinking water and wastewater systems.

Q. In 2024, the PUC opened a quality-of-service investigation for the Company's Northeastern Service Territory and issued a final report in August 2025 at Docket No. M-2024-3051789. What were the overall report findings and has PAWC been asked to respond with additional information on the water quality provided to its systems in the Northeast?

A. The report did not find any systemic issues across the Northeastern Service Territory that are affecting water service. The report further found that PAWC appears to be proactive in identifying the specific factors causing customer complaints and is utilizing the necessary tools to manage quality-of-service issues and remediate. Following the investigation, PAWC will provide water quality and main break data for its Northeast systems to the Commission's Bureau of Technical Utility Services every six months for the next three years. PAWC will continue to seek opportunities to improve service quality and meet customer needs in the Northeast and across its territories.

Q. Please discuss some of the Company's other water treatment effectiveness initiatives.

A. With the increasing number of wastewater facilities owned and operated by PAWC, the Company is making significant efforts to improve the effluent quality discharged to receiving streams. Investments include a transition to ultra-violet ("UV") disinfection at several wastewater plants and a focused effort to reduce inflow and infiltration ("I&I") in our collection systems.

UV disinfection is not only safer for our treatment plant employees, but it also allows for the reduction in chemical usage and eliminates the potential for chlorinated

water to reach waters of the Commonwealth. To date, 19 of our wastewater treatment plants have been converted to UV as their disinfectant and four are in the design phase. The investment and upgrade in treatment technology shows our commitment to source water protection and environmental compliance. Since PAWC's last rate case, our effluent exceedances pertaining to chlorine have significantly decreased. Year to date, PAWC has zero end of pipe exceedance related to chlorine permit limits.

Continuing our commitment to environmental compliance, PAWC has worked with contractors to televise certain collection systems and identify defects. The Company has devoted significant effort to reduce I&I in York, Exeter, Upper Pottsgrove, McKeesport, Dravosburg, Claysville, and Duquesne. In Exeter, the Company collected three years' worth of televising and GPS data to develop a corrective action plan for the collection system. Pipeline replacement started in 2024 and continues into 2025. PAWC also continues to invest heavily in the York collection system. From 2023 through August 1, 2025, we completed CCTV inspection of all collection system piping 18" and smaller and completed lining of over 75,000 feet of collection system piping in 2024 and 2025.

Q. Has the Company made efforts to further improve operations at its wastewater facilities?

A. Yes. Below is a list of additional efforts the Company has made to further improve operations at its wastewater facilities:

(1) York Wastewater ("WW") Prospect Street Interceptor Replacement. The project is in progress and includes the replacement of 2500 feet of 12" vitrified clay pipe interceptor and manholes with a new 18" interceptor to increase capacity and reduce I&I.

(2) York Wastewater Treatment Plant ("WWTP") Supervisory Control and Data Acquisition System ("SCADA") System Upgrades. The consent order project went into service in late 2023 and involved updating/replacing the existing antiquated SCADA system.

(3) York WWTP Security Upgrades. The project involved security upgrades that went into service in 2024.

(4) York Recurring Projects. The Company has various recurring projects including process/facility equipment replacements or improvements including pumps, valves/gates, chemical tanks, instruments, electrical, HVAC, site improvements, fence, safety improvements, etc.

(5) Fairview North and South WWTPs Chemical Improvements and South Dewatering. The project is in progress and includes chemical improvement to increase safety and compliance with American Water standards and also replacement of the belt press which has reached the end of its useful life.

(6) Fairview South Beinhower Lift Station. The project went into service in 2024 and involved increasing the capacity of the station and replacing the building.

(7) McEwensville WWTP Phosphorus Removal Project. The project is in progress and involves chemical addition and mixing for phosphorus removal.

(8) Exeter Plant Improvements. In 2026, major improvements at the Exeter plant will begin with equalization and a new influent pump station.

(9) Scranton WWTP. The project involved replacing sludge press with centrifuges which has increased the percentage solids and decreased sludge waste being hauled to landfill. This project was completed at the end of 2023.

(10) Scranton WWTP. The project involved installing an emergency generator that can power the entire plant, which will help keep the Company in compliance during power outages. This project is in-service, with testing completed, and the project will be entirely completed in 2025.

(11) Scranton WWTP. The project involved increasing the capacity of the main influent pumps which provides better control and allows PAWC to consistently meet the 60 million gallons per day minimum flow requirements during rain events. This project was completed at the end of 2023.

(12) Scranton WW Long Term Control Plan. The project involved completion of two additional combined sewer overflow ("CSO") control projects: CSO 004 (84,000 gallon off-line storage facility), and CSO 006 (780,000 gallon off-line storage facility); with four more to be completed by end of 2028. CSO 004 was completed earlier this year, and CSO 006, while in-service, will be completed in 2025.

(13) Saw Creek WWTP. The project involved replacement of a 100,000 gallon steel influent equalization ("EQ") tank with new concrete EQ tank. This project was completed in 2024.

(14) Saw Creek Collection System. The project involved replacement of the Timothy Lake EQ tank and lift station. This project is in-service and will be completed in 2025.

Finally, as new systems are acquired by PAWC, the Company acts to improve effluent quality and return systems to regulatory compliance. PAWC develops a New Acquisition System Improvement Plan for each new wastewater acquisition, which serves as a roadmap for addressing system issues and regulatory compliance needs in an efficient manner. The plans are updated quarterly by all functional areas within the business. New

risks are added when they are identified, and items are removed when the issues are mitigated.

Q. What has the Company done to educate its customers and protect them from lead service lines?

A. PAWC is proactively identifying and replacing lead and galvanized service lines throughout its service territory with a strong focus on protecting public health and meeting evolving regulatory standards. As part of this initiative, the Company is conducting a comprehensive assessment of service line materials to build an accurate inventory for future replacements. Once a service line containing lead or galvanized material is identified, PAWC will plan a replacement project to replace the customer-owned portion, at no direct cost to the customer.

PAWC leverages both internal expertise and external partnerships to execute this large-scale initiative. The Company's dedicated team includes program managers, field supervisors, analysts, and a third-party consultant that provides canvassers, technical specialists, and a data validation team. To accelerate material verification and encourage customer participation, the Company has developed a robust outreach strategy utilizing direct mail, email communications, social media engagement, and door-to-door canvassing. Prior to canvassing, a sequence of communications is deployed across the targeted area, including two separate postcards, an alert notification, and, when applicable, emails to customers with unknown service material information. Municipal coordination meetings are held with local leaders such as city managers, police chiefs, and emergency coordinators to ensure transparency, community alignment, and logistical support. Customers are encouraged to participate by allowing in-home inspections or by self-

reporting their service line material through the interactive public-facing map on the Company's website. Self-reported submissions are reviewed and verified via photograph, after which the property record is updated accordingly. To date, 12,645 customers have responded to the self-reporting survey. In addition to the standard process for collecting service line material data to build out a comprehensive service line material inventory, PAWC has developed a stakeholder toolkit designed to equip local government and municipal leaders to share this important information with their communities. This resource supports broader outreach efforts by leveraging trusted voices to amplify awareness and encourage customer engagement.

Recently, PAWC employees visited the Pennsylvania Capitol to engage directly with several state Representatives and Senators, seeking community support for upcoming PENNVEST lead service line replacement projects. During these meetings, each legislator received the same information packet distributed to their constituents highlighting the Company's extensive efforts to educate customers about the materials used in their service lines and offer customers with lead or galvanized lines a service line replacement at no direct cost.

This initiative underscores the Company's commitment to transparency, regulatory compliance, and collaborative progress toward infrastructure modernization. By working in close coordination with both state and federal agencies, PAWC continues to prioritize public health and community trust while advancing its mission to eliminate legacy materials from the water distribution system.

Q. What has the Company done to meet the state per- and polyfluoroalkyl ("PFAS") limits and federal PFAS limits?

A. The Company is proactively deploying treatment processes in its water systems to reduce the levels of the six PFAS covered by the current National Primary Drinking Water Regulations to levels below federal limits. To date, the Company has completed PFAS treatment projects at three groundwater well sources for three different systems – Frackville, Yardley, and Pine Ridge – with a total cost of $21.9 million. The Company is planning to invest $32.8 million during the future test year ("FTY") and fully projected future test year ("FPFTY") and $321.4 million by 2030 on PFAS treatment projects for ten water systems to comply with the federal limits. These systems include Berwick, Silver Springs, Hershey, Pocono, Homesite, Ellwood, Norristown, Glen, Penn, and Lock 57 Water Treatment Plant.

For the newly acquired Audubon system, the Company started infrastructure work immediately following the merger (on May 28, 2025) and was able to shut off the three wells exceeding the DEP PFAS MCLs in July 2025. The Company is planning to invest approximately $750,000 in necessary infrastructure improvements to route more water from the Company's Norristown system and shut off all the Audubon system wells by 2029 to comply with federal limits.

Q. Is the Company proposing to implement a state-wide fat, oil, and grease control program?

A. Yes. The Company is proposing a series of wastewater tariff changes to set standards for FOG producing facilities with the goal of preventing or reducing interference or pass-through in wastewater treatment works that are caused solely, or partially, by the

contribution and accumulation of FOG and associated solids. The FOG Control Program ultimately seeks to prevent or reduce sanitary sewer system and combined sewer system blockages, obstructions, restrictions and overflows. As part of the FOG Control Program, the Company is proposing to add additional definitions to its tariff, align its existing tariff sections within its Wastewater Control and Industrial Pretreatment Regulations, and add a specific section to its tariff describing the rules and regulations of its FOG Control Program.

Q. Please describe the Company's proposed FOG Control Program.

A. The FOG Control Program would apply to any customer and/or establishment that the Company deems as a wastewater contributor of FOG and associated solids ("FOG Users"). FOG Users would be prohibited from discharging enumerated substances and wastewater (such as cooking oils) into the Company's treatment works. The FOG Control Program also would require FOG Users to install and maintain FOG control devices to capture and remove FOG and associated solids prior to discharging into the Company's treatment works. FOG control devices would be required to comply with the standards set by the Company, and FOG Users would be required to furnish documentation regarding FOG control devices to the Company. FOG Users would be required to implement best management practices to minimize the discharge of FOG into the Company's sewer systems.

Under the FOG Control Program, the Company would be able, in its discretion, to issue FOG discharge permits to FOG Users. FOG Users would be subject to reporting requirements such as the duty to report that a FOG control device has become inoperable, as well as the duty to maintain records concerning the operation and maintenance of FOG

control devices. The Company would have the right to enter the premises of FOG Users to inspect the facility, perform sampling, review and copy records, and take other actions necessary to evaluate whether FOG Users are complying with FOG Control Program and permit requirements. Finally, the FOG Control Program would provide the Company with the discretion to determine enforcement remedies and to assess fees (such as a FOG User Discharge Permit Application Fee, and a FOG User Facility Inspection Fee).

Source Water Protection

Q. Please describe how the Company is demonstrating its commitment to water quality through source water protection.

A. The Company has a dedicated source water protection program, which includes personnel who lead efforts to identify and mitigate potential threats to raw sources of supply. The program involves an integrated approach to planning, risk assessment, water quality monitoring, outreach, and education. The Company has deployed and continues to evaluate and incorporate innovative technologies that support informed decision-making for changes in raw water quality and corresponding treatment, whether naturally occurring or related to a potential contamination incident.

Q. Please describe other ways the Company is demonstrating its commitment to source water quality.

A. The Company has enhanced its source water protection program by taking an integrated approach to monitoring its source water quality and evaluating risks. The integrated approach includes source water quality monitoring sondes and a map-based information gathering tool called WaterSuite, both of which support the Company's ability to make

informed decisions regarding treatment and in responding to potential source water contamination events.

WaterSuite is a GIS map-based tool that collects information about potential sources of contamination from various sources and integrates that information into a database for a defined area of concern. The data sources may include publicly available regulatory databases, aerial imagery analyses, and local knowledge. The database is updated annually to include the latest available information and has search and reporting capabilities, which provide a significant advantage over standard static contaminant assessments. It is a dynamic tool the Company can continue to use over time rather than a paper-based equivalent that captures only the circumstances present at a single point in time. The database also provides a larger set of data that is automatically updated on a periodic basis without requiring manual work by PAWC. As a result, PAWC can access information more efficiently than in the past to address water quality concerns. WaterSuite is fully implemented for surface water and groundwater systems.

In addition, the Company has implemented the use of SolarBee mixers in our reservoirs to disrupt algal growth. PAWC has expanded the use of SolarBee mixers in two additional reservoirs for a total of seven reservoirs utilizing the equipment. Finally, the Company continues to evaluate emerging technologies to help monitor and control algae growth in our reservoirs.

Q. Please describe the Company's source water protection planning efforts.

A. The Company is committed to developing and implementing Source Water Protection Plans for each system with a surface water and/or groundwater source. Each plan consists of the following six elements: 1) local steering committee and public participation; 2)

source water protection area delineation; 3) contaminant source inventory; 4) management methods and commitment; 5) contingency planning; and 6) protection of identified new source sites. This work is done in conjunction with the DEP Source Water Protection Technical Assistance Program ("SWPTAP"), and all PAWC systems have a Source Water Protection Plan, which includes Small System Plans, in place or under development in SWPTAP.

Source water protection is also a critical component of the Company's risk and resilience assessments ("RRAs") to comply with provisions of the federal Water Infrastructure Act of 2018. The Company has conducted all required RRAs and developed plans, strategies, and resources to improve the resiliency of PAWC's water systems.

Q. Please describe PAWC's source water quality monitoring panels.

A. The Company has installed online source water monitoring systems at each of its surface water treatment plants. The sensors installed at each location were determined based on risk to the source water and monitor parameters in the source water that include turbidity, pH, oxygen reduction potential, temperature, conductivity, dissolved oxygen, refined fuels, nitrate, and total algae. This equipment helps establish baseline water quality data for each parameter and alerts water plant operators to certain changes in water characteristics. The Company uses this information to better understand the characteristics of its source water and optimize chemical usage. In addition, a change in the baseline characteristics may indicate an issue that warrants additional investigation.

Q. Please explain the Company's outreach and education efforts related to source water and environmental stewardship.

A. The Company conducts ongoing outreach and education to engage the community in protecting sources of drinking water. Activities include watershed service projects, school programs, plant tours, and community events. PAWC also engages the community through annual commitments, such as the American Water Charitable Foundation Environmental Grant Program. In addition, PAWC staff represents the Company and industry on various professional committees at the local and national levels to share information and practices related to source water protection. These committees include Pennsylvania AWWA Water Resources, National AWWA Source Water Protection, local emergency planning committees, and several other coalitions and advisory groups.

Q. Please describe any of the Company's other innovative approaches to protecting sources of drinking water.

A. The Company has a continued partnership with the Natural Resources Conservation Service ("NRCS") on one of sixteen source water protection pilot projects initiated in 2019 under the National Water Quality Initiative. The project, funded by the NRCS, is aimed at improving the watershed by reducing nutrient and sediment loading from agricultural runoff. This effort has leveraged and directed funding toward water quality improvements for the entire watershed that will ultimately benefit the whole community including PAWC customers. We continue to support this initiative by providing data and resources.

Q. Does the Company utilize any other sources to obtain source water quality information?

A. The Company also participates in watershed monitoring networks such as the Ohio River Valley Water Sanitation Commission Organics Detection System and the Delaware River Valley Early Warning System. These networks provide additional information about water quality in the watersheds that contribute water to sources of supply. The Company also partners with the Susquehanna and Delaware River Basin Commissions on various initiatives.

Q. Please describe how the Company prepares for source contamination events.

A. The Company has developed source water event preparation and response plans to outline the planned response to contamination of surface water sources of supply. These plans include system-specific options to consider in a contamination event along with a phased protocol response. This approach is consistent with National Incident Management System and Environmental Protection Agency guidance, and augments emergency response plans that cover a wide variety of potential emergency situations.

The Company also developed Cyanotoxin Management Plans to aid in the identification and response to harmful algal blooms. PAWC employees receive training on the source water event preparation and response plans and the cyanotoxin management plans through online learning and emergency response drills. These exercises are coordinated by Operations and include tabletop exercises and after-action reporting.

Q. How does the Company compare to the rest of Pennsylvania drinking water systems for Source Water Protection Plan development?

A. All PAWC systems are in the SWPTAP with approved DEP Source Water Protection Plans and Small System Plans or have draft Source Water Protection Plans that are awaiting DEP approval. The Company proudly takes a proactive approach in creating, developing, and implementing Source Water Protection Plans for all of its systems. The total number of systems in the SWPTAP compared to the PAWC systems in the SWPTAP are reflected in the statistics below demonstrating that PAWC's systems represent a significant percentage of systems in the SWPTAP:

- Total number of project systems in SWPTAP: 318
- Number of PAWC project systems in SWPTAP: 46
- Total number of Small System Plans: 287
- Number of PAWC Small System Plans: 19

Operational Efficiency

Operating and Maintenance Expense

Q. What is PAWC's forecasted Operating and Maintenance ("O&M") expense for the FPFTY ending June 30, 2027?

A. PAWC's total O&M expense for the FPFTY is approximately $342 million, which is discussed in more detail in the Direct Testimony of Lori O'Malley (PAWC Statement No. 6).

Q. What factors contribute to increases in operating expenses?

A. Several factors have caused an increase in the Company's O&M expenses. For example, PAWC has faced higher chemical prices due to volatility in the chemical supply market

driven by both materials and transportation, which in turn results in chemical suppliers unwilling to commit to long-term agreements. The Company has also experienced increased O&M expenses from employee-related costs including wage increases, training, and development.

As PAWC has grown over time, many of the systems it has acquired require significant work to address outstanding operational issues. In its efforts to provide excellent water and wastewater quality and service, particularly in newly acquired systems, the Company incurs increased expenses related to maintenance of assets and operation of the facilities. These efforts will marginally increase operating expenses to improve operational integrity and mitigate operational risk.

Management Efficiency - Operations

Q. Why does the Company focus on increasing and enhancing operational efficiency?

A. Increasing and enhancing operational efficiency is central to American Water's mission of delivering safe, clean, reliable, and affordable water and wastewater services. It allows the Company to reduce expenses, optimize resource use, and operate in a more environmentally responsible way.

In 2025, operational efficiency remains a core strategic pillar, alongside capital and regulatory strategy. By managing operations efficiently, PAWC can lower capital and operating costs, improve system resiliency and reliability, reduce environmental impact and preserve natural resources, deliver better service and value to customers, and support long-term affordability and rate stability. Operational efficiency also enables smarter decision-making. Through investments in data analytics and automation, the Company is reducing manual processes, improving accuracy, and gaining real-time insights into system

performance. This empowers teams to proactively address issues, forecast needs, and streamline reporting and compliance.

Ultimately, increasing operational efficiency supports PAWC's stakeholders, customers, employees, regulators, and investors by ensuring that the Company delivers high-quality service while maintaining financial and environmental sustainability.

Q. Please describe PAWC's operational efficiency initiatives.

A. The Company's ongoing focus on operational efficiency covers a wide range of targeted measures to enhance efficiencies, including supply-side practices, such as increased pump efficiency, more accurate meter reading and leak detection, and main replacement and repair programs, as well as demand-side strategies, such as customer efficiency and public education programs to support water and energy efficiency. From an operational perspective, improving water and wastewater efficiency requires achieving a cost-effective mix of prudent investments and improved operations and maintenance management capabilities targeting safety, customer satisfaction, sustainability, and system efficiency. Customers, utilities, businesses, and the environment can all benefit from more efficient, higher quality service, reduced costs, and sustainable use of natural resources.

Q. Please describe PAWC's efforts to improve water and wastewater efficiency.

A. The Company strives to improve water and wastewater efficiency through operational excellence, the use of technology, system maintenance, and efforts to manage costs as efficiently as possible to provide a more cost-effective level of service for its customers over the long term. The Company also leverages the size and scale of American Water to improve transactional efficiencies through increased automation, the adoption of more effective business practices, and a continuous improvement mindset.

Utilization of Technology for Operational Efficiency

Q. How is PAWC using technology to improve employee effectiveness?

PAWC employs advanced technology solutions to enhance productivity, streamline operations, and improve service delivery. A cornerstone of this effort is the Company's use of GIS, which provides employees with immediate access to institutional infrastructure knowledge through accurate, spatially referenced maps.

PAWC has digitized its water and wastewater system assets within its GIS platform, making detailed facility maps accessible via the Company's internal network. These maps include location data and concise facility descriptions, offering a comprehensive spatial overview of the system. GIS also supports customer service by identifying affected service areas during outages and enabling more targeted communication.

To further strengthen this platform, PAWC has integrated GIS with its Enterprise Asset Management system, computer-aided design tools, work management system (MapCall), and fixed asset records. This cross-platform integration facilitates seamless data exchange and improves retrieval efficiency.

The GIS platform is continuously updated to reflect the addition of new assets and the retirement of outdated ones, ensuring field technicians have access to the most current information. In 2022, PAWC launched a Digital As-Built Workflow to standardize GIS updates and improve synchronization with MapCall. This initiative significantly reduced the lag between asset installation and system updates, helping maintain a GIS database that is current, complete, and accurate for all end users.

Q. How have PAWC and its customers benefited from the GIS platform?

A. PAWC continues to leverage its GIS platform to enhance operational efficiency, regulatory compliance, and customer service. GIS map layers now include the spatial location of water quality events, chlorine residuals, maintenance activities, and pipe failures. This spatial intelligence enables PAWC to respond more effectively to customer inquiries, identify system performance trends, and prioritize water main replacement projects based on data-driven insights.

The GIS platform also plays a critical role in regulatory compliance, particularly with federal and state lead service line inventory requirements. Known customer and Company service line material data have been integrated into MapCall and are visually displayed on GIS maps. This integration provides employees with a clear, visual representation of known and suspected lead service lines across the service territory.

Q. How does PAWC's work management system improve employee effectiveness?

A. MapCall is a web-based application that enables employees and contractors to complete the lifecycle of work orders and assets in the field. Employees and contractors can view historical information, including work order history on an asset, standard operating practices associated with an asset, maintenance history, O&M manuals, and tap card images. MapCall provides the flexibility to create work orders, configure workflows and report progress while in the field. For example, a supervisor can create a work order to flush a dozen hydrants in a particular area. Using MapCall, the field worker can report progress as flushing is performed, and both the supervisor and others in the field can visually see the progress made toward completing the identified work in real time through the MapCall interface. The same can be done to schedule and monitor other routine work, as well as emergency work, such as

main break repairs. MapCall also allows those in the field to communicate water quality and other events more efficiently through preloaded notifications via email to both internal and external stakeholders, including regulators, allowing workers to quickly shift back to focusing on the task at hand and providing quality service to customers. Water main break locations are continually added to GIS and MapCall to help identify sections of pipe that have outlived their useful life. This information is used to prioritize water main replacements by strategically focusing on the pipe with the highest risk of failure.

Q. Are there other technology solutions that have been implemented to improve employee effectiveness?

A. Yes. In addition to GIS and MapCall, PAWC has implemented a suite of technology solutions designed to improve employee effectiveness, streamline operations, and enhance customer service.

PAWC utilizes applications such as MyWater, Customer1View ("C1V"), and Work1View ("W1V") to provide employees with real-time access to customer data, service order history, billing information, and meter details. These platforms empower field service representatives ("FSRs") to resolve customer issues directly in the field without needing to contact the customer service organization. FSRs can also update records and add notes during interactions, ensuring that all employees have access to the most current information.

PAWC has also strengthened its chemical receiving practice through enhanced verification and safety protocols. The technology includes digital systems that support verification of chemical identity and quantity before unloading, real-time monitoring and documentation of chemical deliveries, and integration with safety protocols, including

personal protective equipment ("PPE") compliance and incident tracking. These systems help prevent errors such as mis-delivery or contamination and ensure that both drivers and operators follow strict procedures.

Q. Please describe how MyWater and W1V improve employee effectiveness.

A. MyWater enhances employee effectiveness by providing both FSRs and customer service representatives ("CSRs") with streamlined access to customer data including premise history, service orders, meter details, billing, and payment information. This shared visibility enables FSRs to address customer inquiries directly during field visits, eliminating the need to contact the Customer Service Center ("CSC") or ask customers to follow up separately. FSRs can also update customer records and document interactions in real time, ensuring that all employees have access to the most current information. Additionally, MyWater serves as the customer-facing portal, offering customers a consistent view of their account information that mirrors what employees see, which supports more seamless and informed conversations. Ongoing and planned enhancements continue to improve the platform's self-service capabilities, resilience, and usability.

W1V complements MyWater by offering a unified interface for managing field service orders, customer data, and meter information. It features a real-time operations map that displays active work orders, nearby tasks, and alerts, helping employees optimize routing and prioritize assignments. FSRs can dynamically manage their daily workload—adding or deferring tasks, placing orders on hold, or responding to emergencies—while supervisors retain the ability to reroute work as needed. Integrated with MapCall, W1V provides a single access point for all relevant data, enabling efficient decision-making and

reducing administrative overhead. Together, MyWater and W1V empower employees to deliver faster, more accurate service and contribute to improved customer satisfaction.

Fleet

Q. How has the Company created additional efficiencies with respect to its fleet management?

A. With a fleet of over 1,100 vehicles and other rolling equipment, the Company maintains a robust program to manage its fleet. PAWC continues to evolve its centralized fleet management organization, enhancing its support for both fleet purchasing and maintenance.

In 2025, the Company expanded its focus on data-driven decision making and technology integration. The fleet management team now leverages Amazon QuickSight dashboards to monitor key performance indicators ("KPIs") across operations, including vehicle usage, maintenance schedules, and safety compliance. These dashboards are accessible to over 1,500 employees and support smarter, real-time business decisions.

As part of the capital planning process, PAWC continues to identify vehicles nearing the end of their depreciable life for replacement. The Company remains committed to selecting smaller, more fuel-efficient vehicles with lower initial and lifecycle costs. The mix of vehicle types varies annually based on business needs. Our capital program typically replaces over 120 vehicles per year. A summary of recent and planned vehicle replacements is as follows:

Year	Capital Spend	Vehicles Replaced
2021	$12.3M	146
2022	$11.5M	148
2023	$10.5M	145
2024	$10.8M	113
2025	$11.2M (est.)	118 (planned)

In addition, our third-party fleet management partner, Holman (formerly ARI Inc.), continues to provide monthly data on vehicle repair costs, fuel consumption, and usage trends. This data is integrated into our QuickSight dashboards and used to identify opportunities for cost savings and operational improvements.

We also maintain a policy of strategic vehicle sharing across districts, particularly when a vehicle is nearing its depreciable life and requires repair before its permanent replacement is available. This approach ensures business continuity and maximizes fleet utilization.

Q. How has the Company improved its fleet management?

A. In addition to the centralized structure and capital planning strategies previously described, PAWC has implemented several targeted improvements to enhance fleet management efficiency and accountability.

The Company formalized its telematics initiative by completing a business case analysis and establishing performance metrics focused on driver behavior, fuel efficiency, and maintenance optimization. These metrics are now actively monitored through enterprise dashboards, which support real-time decision-making and operational transparency.

To further strengthen oversight, PAWC clarified internal roles and responsibilities within its fleet organization. This includes dedicated positions for Pennsylvania

Department of Transportation ("PennDOT") compliance, capital planning, and local fleet coordination, allowing for consistent execution of fleet policies and timely response to operational needs. These improvements demonstrate PAWC's commitment to continuous enhancement of its fleet operations, supporting broader goals of safety, service reliability, and cost-effective asset management.

Q. Does PAWC utilize a fleet monitoring system?

A. Yes, PAWC utilizes a fleet monitoring system based on telematics technology. As part of its enterprise-wide safety and operational efficiency initiatives, the Company has implemented telematics devices across its fleet vehicles to monitor driver behavior, vehicle performance, and compliance with safety protocols. The telematics deployment is designed to enhance safety and reduce operating costs, while delivering measurable improvements without compromising service quality.

Telematics devices are installed in all company-provided vehicles and are connected to the vehicle's onboard diagnostics port. These devices collect and transmit data on key metrics such as location, speed, seatbelt usage, engine diagnostics, and driving behavior, including hard braking, rapid acceleration, and idling. The system also supports crash detection alerts and real-time GPS tracking to improve dispatching and situational awareness.

The Company uses the GeoTab platform to manage and analyze telematics data. This platform provides weekly driver scorecards that are shared with employees and their managers to support coaching and performance improvement. All drivers are required to badge into the telematics system before operating a vehicle, ensuring that data is accurately linked to individual drivers.

The telematics program is governed by the Fleet Telematics Policy, which outlines expectations for safe driving, data usage, and compliance. Unauthorized tampering with telematics devices is prohibited under the Company's Workplace Conduct and Behavior Practice.

These efforts reflect PAWC's commitment to leveraging technology to enhance fleet safety and improve operational efficiency.

Operational Efficiency

Q. Please describe the Company's energy efficiency initiatives and cost control measures.

A. PAWC is using various strategies to improve energy efficiency and reduce energy costs, including the following components: (1) conducting competitive energy procurements; (2) upgrading energy efficiency of treatment and pumping facilities; (3) performing lighting upgrades; (4) deploying energy-use monitoring and demand response; and (5) obtaining rebates made available under electric utility programs implementing Act 129 of 2008 ("Act 129").

Q. Please describe some of PAWC's energy cost mitigation strategies.

A. ***Competitive Energy Procurement.*** PAWC actively procures a diverse portfolio of electricity supplies across its operations. The Company uses competitive sourcing to procure electricity supplies for its operations in West Penn Power, Duquesne Light, Met Ed, PECO, Penelec, Penn Power and PPL service territories. PAWC's supply contracts currently are based on "shaped" fixed pricing, which offers both competitive and stable pricing over time. The aggregate annual electricity supply covered by a mix of short- and

long-term fixed contracts accounts for over 95% of the Company's annual electricity consumption.

The remaining percentage of the Company's annual electricity consumption is from bundled sales service provided by the delivery utility. The Company will continue to employ all reasonable efforts to obtain competitive electric pricing for the benefit of customers.

Energy Efficiency Upgrades. The objectives of the Company's energy efficiency efforts are to reduce energy costs and greenhouse gas emissions that are associated with inefficient power consumption. The Company has performed "water-to-wire" efficiency testing (i.e., the efficiency of a pump and motor together) of its largest pumping facilities to identify opportunities to improve the efficiency of motors and pumps. The Company has systematically refurbished and/or replaced pumps at all of the top 20 energy consuming facilities. The Company continues to monitor these large stations to ensure that pumping efficiencies remain at acceptable levels and, in the event further upgrades are required to maintain or efficiently achieve greater efficiencies, PAWC will plan capital projects, as needed, to implement such upgrades.

Lighting Upgrades. The Company has upgraded the lighting and switches at more than 55 treatment plants, pumping stations and office buildings/operations centers. These projects consisted of replacing existing metal halide and T12 fluorescent fixtures with new, high-efficiency T8 fluorescent and/or LED fixtures, installing high-efficiency lamps, installing new high-efficiency outdoor LED lighting, and/or installing new switches with occupancy-sensor controls. The projects have payback periods of about two years and provide energy savings and improved lighting for workspaces well into the future. The

Company continues to look for opportunities during capital upgrade projects to replace inefficient equipment to gain efficiencies and realize savings.

Energy Use Monitoring and Demand Response. PAWC uses an American Water enterprise-wide application to monitor its energy accounts across the state. This monitoring tool provides "before and after" benchmarking capabilities to help the Company assess the success of various efficiency initiatives. The Company has also installed real-time electricity meters and dashboards at 19 of its largest pumping facilities. The dashboard provides our operators with real-time visibility of their electricity consumption and wire-to-water efficiency, and also provides our engineers with discrete energy efficiency data on these large units to monitor and plan for future efficiency upgrades.

PAWC was also an early adopter of smart-grid technology to help integrate the way it operates its treatment plants and pumps with electric grid system conditions. PAWC has installed equipment at three of its largest water pumping stations and one of its largest wastewater treatment plants that allows those facilities to vary electric usage (up or down) based on signals from the local grid operator. PAWC receives revenues from participation in demand response programs at these locations ranging from $25,000 to $95,000 annually that are used to offset electricity expenses, and PAWC's participation in these programs also helps ensure the integrity of the electricity grid during peak demand emergencies.

Act 129 Rebates. PAWC has been working with its electric utilities since the inception of the programs for energy efficiency and conservation ("EE&C") that those utilities instituted to comply with Act 129. When electric utilities were developing their EE&C programs, the Company participated in stakeholder meetings with their service

providers to provide input from the water and wastewater industries. As the EE&C programs were introduced by the electric utilities, PAWC reviewed its capital projects for eligibility under the rebate programs and applied for, and received, several rebates. As of 2025, the Company has received over 40 rebates for more than $1,020,000.

Q. What are the benefits of PAWC's efforts to improve energy efficiency?

A. The benefits of PAWC's efforts to improve energy efficiency are three-fold. Improved energy efficiency (1) provides more efficient, higher quality service, (2) reduces operating costs through reduced energy consumption, and (3) reduces carbon and other emissions. Through the comprehensive energy efficiency programs outlined above, the Company has been able to minimize increases to its fuel and power expenses.

Q. Please describe what the Company has done to control waste disposal expenses.

A. The Company has a long history of exploring and implementing cost-effective beneficial uses for its treatment residuals, rather than relying on costly landfill disposal. The Company has implemented beneficial use practices at 32 of the Company's 35 surface water treatment plants. On a dry weight basis, approximately 95% of the Company's water treatment residuals are beneficially used across the state, at a cost far lower than conventional disposal at a landfill. The Company recently implemented a capital improvement project at the Hays Mine Water Treatment Plant in Pittsburgh in order to improve the residuals dewatering process. This process lowers the overall weight of the product to be transported and disposed of, and thus, the associated costs as well. The new sludge press process at the plant has improved the percentage solids reduction from an original range of 10% to 15%, to greater than 20%, thereby reducing the overall disposal costs.

Q. Please describe what the Company has done to control purchased water expenses.

A. The Company has implemented changes in two districts to control purchased water expenses. PAWC is currently maximizing all extra capacity from its Brownsville treatment plant by pumping it to Uniontown to reduce the purchased water load. The Company also increased its leak detection activities in Uniontown to minimize purchased water. The Company is continually investigating potential capital upgrades to be able to shift even more load to the lower-cost provider in the longer term.

Non-Revenue Water

Q. What is non-revenue water?

A. Non-revenue water ("NRW") is the difference between system delivery and water sales. Typically, NRW is measured as a volume, or a percentage of system delivery based on a 12-month rolling average. NRW is not just leakage but also includes water for beneficial uses such as firefighting, flushing new water mains, flushing to maintain adequate chlorine levels, and annual hydrant flushing, as well as theft and meter inaccuracies. To avoid any ambiguity, American Water, based in part on guidance from the AWWA, measures its reduction in water loss in terms of NRW rather than Unaccounted for Water ("UFW").[2] In contrast to UFW, which can be defined in a variety of ways across the water industry, NRW is consistently calculated by subtracting the number of gallons of water sold from the number of gallons of water treated.

[2] The AWWA began to discourage the use of the term Unaccounted for Water in 2012 because its definition is inconsistent from organization to organization. There are several opportunities for inconsistency. For example, some organizations may deduct the number of gallons lost during a known main break, while others exclude gallons lost as a result of main breaks altogether.

Q. Please describe the Company's program to reduce NRW.

A. As noted, reducing water loss is a complex issue with many contributing factors. To reduce actual water losses as effectively as possible, PAWC strives to gather standard data from its operating centers so that it can efficiently and effectively communicate what is working, what is not working, and how the Company is progressing on mitigating NRW around the Commonwealth.

The Company rigorously applies water loss reduction practices in the normal course of business. These practices include regular monthly NRW meetings in both our east and west divisions that provide target NRW reductions and goals by independent NRW report cards of activities, routine maintenance, and pursuing and repairing leaks that are identified. In addition, the Company has several NRW control measures embedded in its on-going business practice, which consist principally of:

- Monitoring night flows within the different District Metering Areas ("DMA") across its systems (unexpected usage during off-peak periods can indicate leakage).
- Metering water usage within various parts of a water district as another indicator of possible leakage; the addition of DMAs working in conjunction with advanced metering infrastructure ("AMI") customer metering to assist in lost water identification within an operating district.
- Using NRW-trained crew to find and report leaks daily so that leaks can be promptly repaired.
- In conjunction with the state training lead, PAWC provides NRW and leak detection training for our new and current employees, including hands-on equipment training.

- Using NRW crews periodically in a "SWAT"-type approach to sweep larger areas of a particular system for leaks.
- Implementation of leak detection specialists to help locate leaks throughout PAWC's service territory when needed in the case of an emergency.
- Using the Company's MapCall work management system to capture all work done by PAWC's crews, including main break repairs, so that patterns can be analyzed geographically (this will allow the Company to identify future main and service replacement projects).
- Usage of MapCall for more accurate monthly reporting and monitoring of all NRW use; and documenting all accounted-for water loss and authorized consumption in total gallons.
- Training meter readers and other field personnel to identify and report possible theft-of-service situations (such as evidence of occupancy or other activity in premises with no registered consumption) and raising public awareness and understanding of the operational and financial consequences of NRW.
- Asking local municipalities to develop theft-of-service ordinances and to enlist citizens and law enforcement to help address this problem.
- Annual and semi-annual testing and calibration of our production delivery meters per AWWA M36 manual standards.
- Metering all automatic blow-offs for water quality flushing and new water main installation flushing to help account for all authorized consumption water loss.

In addition to these operations activities, PAWC has an aggressive capital expenditure program to reduce the number of small diameter mains, which also helps to

reduce water loss from the system. The Company's capital expenditures for main replacement and rehabilitation are described in more detail by Mr. Anthony Nokovich (PAWC Statement No. 4).

Q. Please describe the leak detection technology used by the Company to control NRW.

A. The Company plans to install approximately 17,500 leak detection sensors in the Company's distribution system by 2026. These active acoustic listening devices are cellular based and can transmit their findings to the Company daily for analysis. This transmittal eliminates the need to deploy resources to patrol the areas to collect the data, which allows for more timely analysis of the collected data. This technology also allows PAWC to better identify those areas that need the most attention, resulting in more efficient deployment of repair crews. PAWC installed 5,500 leak loggers in 2023 and 4,000 leak loggers in 2024. The Company plans on installing an additional 8,000 by 2026. These leak detection sensors have helped pinpoint over 2,000 non-surfacing leaks that would have otherwise been unknown, allowing for quick repair by field operations staff. These data loggers are monitored weekly, analyzed and prioritized with data sent to districts in report form. These specialized reports provide the districts with (1) leak frequency, (2) analysis notes, (3) address, (4) duration of leak, (5) logger mode, (6) last notes, (7) recording time, and (8) last leak date.

The Company's leak detection specialists use a variety of additional state-of-the-art equipment in the field, such as ground listening microphones, leak correlators, and line locating devices to locate and pinpoint leaks. Based on the latest metering technology in tandem with PAWC GIS Mapping, PAWC installed 24 HydrINS 2 Electromagnetic Insertion meters to monitor water flow and pressure in the DMAs without requiring a large

excavation or disruption of service to customers. These meters record water flow and pressure transients every second and alert PAWC personnel (via text messaging or email notification) of any increase or decrease in pressure or flow that can indicate potential main breaks resulting in water loss. Ground microphones are also used to sound each valve and hydrant during PAWC's yearly inspection of these assets.

AMI and Asset Management

Q. Is the Company deploying AMI technology?

A. Yes, as of August 1, 2025, the Company has installed 317,817 AMI meters and smart endpoint systems. AMI technology is an integrated system of meters, communications networks, and data management systems. The AMI network utilize smart cellular endpoints installed on each meter to transmit the meter data via an existing third party cellular infrastructure to a central database system for analysis and reporting.

Q. Please describe the Company's AMI deployment progress.

A. The Company is taking an approach that strategically selects areas for concentrated AMI efforts based on local needs and opportunities. As of August 1, 2025, 44% of the Company's customers are equipped with AMI technology, with Scranton customers comprising the majority of our AMI customers. The Company also adopted cellular AMI technology, and all length of service meter and faulty meter replacements will be upgraded to AMI throughout the Company's service areas. PAWC expects that 54% of its customers will be equipped with AMI by the end of 2025.

Q. How does AMI benefit customers and the Company?

A. AMI will enable strategic and permanent improvements in safety, customer experience, operational efficiencies, and environmental benefits. AMI can be leveraged to empower

customers with near real-time consumption data to enable smart water use choices, enhance customer communication regarding customer water consumption patterns and unusually high-water use, optimize PAWC's ability to measure and address non-revenue water, and improve water system operations and management, among other things.

AMI provides a variety of benefits by allowing the Company to collect hourly consumption data from the meter and transmit it to a computer network. This will improve safety, operational efficiency, and customer service. With AMI, it is no longer necessary for employees to walk or drive by meter routes in order to gather consumption data. This will make our meter reading more efficient, reduce work site safety hazards associated with meter reading, reduce our environmental impact by reducing monthly trips taken to obtain meter readings, and shift our employees time spent reading meters to activities related to customer service requests.

The implementation of AMI will also increase billing accuracy and reduce the likelihood of estimated bills (e.g., due to weather events or other obstacles to accessing customer meters) by automatically providing timely, accurate reads through the network. The Company will also be able to more efficiently collect, organize, analyze, and communicate large quantities of meter data. AMI data can also be used to uncover irregularities that may signal a leak, meter tampering or water theft. Water loss could potentially be reduced due to more timely meter readings, including on demand readings to help with potential issues and leaks. Readings currently are taken around every 30 days. AMI has the ability to read every few minutes or when needed. This greatly improves the response time to potential leak issues. AMI provides customers with more timely access to water usage data which allows them to identify opportunities for conservation and bill

reducing tips to enable smart water use choices, and to identify and address unusually high usage.

Q. Does the Company have a Fire Hydrant Inspection Program?

A. Yes. The Company inspects 100% of our fire hydrants annually. Our inspection process follows AWWA standards, including the inspection of the isolation valve, and inspection-related information is recorded in MapCall. Inspectors document static pressure, flow (pitot gauge), pre- and post-free chlorine residual, pre- and post-total chlorine residual, and minutes flowed. If a hydrant does not operate properly, a maintenance work order is entered into MapCall at the time of inspection and repairs will be scheduled to a distribution crew. If the fire hydrant cannot be repaired, a replacement work order will be created, and the fire hydrant will be replaced within 48 hours.

Q. Does the Company have established practices to communicate with the PUC and customers regarding pressure in the system?

A. Yes. PAWC established a practice to record pressure information and report it to the PUC in response to pressure complaints. Following the 2023 rate case, PAWC also established a process by which it notifies customers in areas where water pressure regularly exceeds 100 psi.

Rule 4.7 of our water tariff requires that customers install a pressure reducing valve ("PRV") to help protect the meter and internal plumbing if water pressure consistently reaches 100 psi or above. The Company uses its GIS system to identify customers who receive service in such areas. If such an area is identified, an annual bill insert will be sent to customers within that area explaining that the customer is responsible for PRV installation. Additionally, if a customer moves into an area known to experience pressures

regularly exceeding 100 psi, they will be notified about customer PRV responsibilities via a letter as part of the new service process.

Q. What is the frequency of the Company's valve inspection program?

A. The frequency of valve inspections depends on whether a valve is classified as critical or non-critical. Critical valves are defined as valves that are operated on an annual basis and are either (1) 16" or larger or (2) located at a stream and /or railroad crossing. In most cases, the critical valve is to be exercised at a minimum of two full cycles, i.e., closed a minimum of two times. If it is determined that completely closing a valve will impact customers or system pressures, that valve will be partially closed during the inspection. All non-critical valves are operated on a five-year cycle and are also to be operated a minimum of two full cycles or until the proper number of turns is achieved. All documentation for the inspection is entered into MapCall and recorded in real time. If maintenance is required on the valve, a work order is created in MapCall at the time of inspection.

Q. Is the Company proposing to modify its practice regarding meter box installation and ownership?

A. In certain circumstances, yes. Rule 5.4 of Company's proposed water tariff allows PAWC to agree to install and maintain meter boxes, as opposed to the customer, in cases where meter box installation is complicated by location or accessibility challenges. These meter boxes will be included in the service record and treated as Company assets moving forward. The customer will not be charged for the meter box installation in these instances.

The most common scenario where the Company envisions installing new meter boxes on behalf of customers is where the current meter is located inside the service location and therefore inaccessible to the Company. Installing a new outdoor meter box

offers several advantages. When the meter is installed in an outdoor meter box, the customer does not need to schedule time to be home for an FSR to service their meter. The Company will also benefit from efficiencies created by having unfettered access to the meters for replacement, stopped meters, and the ability to log data without entering a customer's premise. In addition, the Company will be able to more efficiently investigate underground service leaks. Finally, outside meter boxes will allow PAWC to more easily resolve estimated meter read issues.

System Resiliency

Q. How does PAWC handle emergency response issues?

A. PAWC maintains emergency response manuals at each operating location. These manuals are updated annually and include emergency contact information for Company personnel, DEP, PUC, emergency response services, vendors, suppliers, and critical customers.

PAWC conducted 11 functional water/wastewater treatment plant emergency response tabletop exercises over the last two years. These exercises test each plant's ability to respond to emergencies such as power outages, chemical supply disruptions, cyber-attacks, loss of a third-party water source, I&I events, sanitary sewer overflows, loss of digester biomass, explosive gas leak requiring external support, and violent confrontation or entrapment involving FSRs. A key benefit of these sessions is the enhancement of cross-functional communication and the integration of external resources, including county emergency response teams and local fire departments. These exercises emphasized the importance of testing both internal and external communications and included participation from state, county, and city regulators and first responders. Strengthening these relationships helps PAWC better understand external expectations and the support

available during emergencies. Situational awareness was a major takeaway, as participants were alerted to potential hazards they might encounter when responding to PAWC facilities.

Q. Can you provide an example of the Company's utilization of an emergency response plan?

A. Yes. One example is the Mechanicsburg Water Main Break that occurred on August 9, 2024. This incident affected approximately 29,000 service connections, including 27,100 in Cumberland County and 1,900 in York County.

PAWC activated its emergency response protocols immediately. The outage report to the PUC was filed within the required 10-day window, and internal coordination included CodeRed alerts and direct outreach to critical customers.

This incident demonstrated PAWC's ability to rapidly deploy its emergency response plan, maintain situational awareness, and coordinate across internal and external stakeholders. The Company coordinated with four local municipalities/fire companies to stage bottled water distribution sites throughout the water distribution system during the event. The Company also coordinated with local police departments and the Pennsylvania National Guard to provide officers/troops for traffic control and to be on-site 24/7 to provide safety and security. The Company set up two calls per day during the event with all impacted local municipalities in order to provide updates on the status of repairs and system re-pressurizing. The Company had daily calls with Pennsylvania Emergency Management Agency officials to provide updates during the event. Both Cumberland County 911 Control and York County 911 Control were notified at the beginning and end of the event.

Q. Can you provide examples of the Company's storm preparation practices?

A. PAWC's storm preparation practices are outlined in site-specific storm preparation planning documents, which detail a comprehensive approach to maintaining operations during adverse weather events. Key practices include monitoring storm paths and determining impact timelines, pre-staging generators at critical sites to maintain SCADA communications, adjusting chemical deliveries and fuel supplies in advance, securing facilities with flood bulkheads, sandbags, and tarps, testing submersible pumps and backup generators at multiple locations, and implementing staffing adjustments to ensure adequate staffing per shift to support operational needs during high-impact events.

Q. Please provide an example of PAWC's response to a significant storm event.

A. In April 2025, Pittsburgh was impacted by a severe thunderstorm system with wind speeds between 70 and 90 miles per hour. The storm event caused widespread destruction across the city, including hundreds of downed trees blocking major roads, extensive structural damage to public and private properties, and city-wide utility outages. PAWC's storm preparation practices (e.g., ensuring adequate plant staffing, mobilizing portable generators) allowed the Company to respond to this weather event and create positive outcomes for its customers and the public at large. The Company leveraged inter-agency coordination through the Pennsylvania Water/Wastewater Agency Response Network ("PaWARN") and the Pennsylvania Emergency Management Agency, real-time monitoring and infrastructure optimization to track raw water quality changes during storm events, public communication systems, and regulatory compliance. These actions led to continuity of service, environmental protection, and customer safety during and after the storm.

Q. Please describe your Underground Damage Prevention Program as it relates to Act 50.

A. PAWC maintains a comprehensive Underground Damage Prevention Program designed to ensure compliance with the Pennsylvania Underground Utility Line Protection Law, commonly referred to as Act 50 of 2017. This program is administered through a combination of internal policies, technology platforms, training initiatives, and oversight mechanisms.

The Company's program is governed by the PAWC Underground Damage Prevention Manual, which outlines procedures for excavation safety, utility locating, emergency response, and documentation. The manual incorporates best practices and is regularly reviewed and updated to reflect regulatory changes and operational needs.

PAWC's Underground Damage Prevention Program includes several key components that support safe excavation and regulatory compliance. The Company utilizes KorWeb to manage locate requests and GIS mapping systems to maintain accurate underground facility records. These tools enable timely and precise utility marking, which is essential for meeting Act 50's lawful start date and tolerance zone requirements. PAWC also emphasizes training and education, providing ongoing instruction for employees through PA 811-sponsored sessions, internal onboarding, and job-shadowing. Refresher training is conducted periodically to reinforce best practices and reduce the risk of line strikes. As part of its commitment to continuous improvement, PAWC regularly updates its damage prevention manual, expands training programs, and maintains oversight through internal review processes, reflecting a proactive approach to reducing underground facility damage.

Q. What measures are in place to ensure compliance?

A. PAWC ensures compliance with its Underground Damage Prevention Program through a structured set of oversight, training, and performance monitoring practices. A cross-functional group meets to review Alleged Violation Reports , analyze root causes of facility strikes, and implement corrective actions. The Company tracks damage prevention metrics monthly and uses this data to identify trends and evaluate the effectiveness of its procedures. All employees and contractors involved in excavation or locating activities are required to complete formal training, including PA 811-sponsored sessions and internal refreshers. PAWC also leverages technology platforms such as KorWeb and GIS to document locate requests, verify timely and accurate responses, and support audit readiness. When a facility strike occurs, the Company follows an investigation and documentation protocol, which may include cost recovery actions if the damage is determined to be preventable. These measures collectively support PAWC's commitment to regulatory compliance, operational safety, and continuous improvement in damage prevention.

Q. Please describe the Company's performance with regard to underground locate requests.

A. Underground locate requests are submitted through the PA One Call System (PA 811). PAWC responds to these tickets to mark the location of underground water infrastructure before excavation work begins. PAWC has over 200 employees that perform underground locate requests in response to PA 811 efforts, including several employees who perform underground locates as their primary job. In 2023, the Company completed 188,302 One

Call tickets. In 2024, the Company completed 190,231 One Call tickets. This year, as of September 30, 2025, the Company has completed 151,645 One Call tickets.

PAWC tracks both completion of tickets and timeliness, i.e., completed within the applicable statutory time frame for response.[3] The Company's performance has been very strong with 100% of tickets completed in 2024 and 2025 so far and a steadily decreasing percentage of tickets that are responded to late (only 0.67% through September 2025). Any opportunity for improving response time is discussed with local management, which has enabled the organization to continually improve.

Commitment to Safety

Q. Please describe PAWC's overall commitment to safety.

A. The health and safety of PAWC's employees and customers, as well as protecting the quality of the water it delivers, are the top priorities for the Company and critical to its success. Employee, contractor, and customer safety are of the utmost importance to PAWC. PAWC is committed to encouraging every employee to choose safety, so they go home each day in the same or better condition than when they came to work.

The Company is also committed to cyber and physical security and recognizes the importance of protecting its water sources, treatment plants, infrastructure, and data from malevolent acts. American Water has invested in several technology improvements to its security programs, including a new, modernized video management system software and the expanded use of video cameras across American Water facilities to improve physical security. American Water has also invested in cyber security, with a focus on operational

[3] There are various time frames within which different types of tickets must be completed. Emergency tickets are to be completed as soon as practical and routine tickets must be completed within three days.

technology ("OT") and SCADA security. These proactive investments include replacement of all OT firewalls across the American Water environment and implementation of Tenable OT, an OT-specific technology to help identify vulnerable OT assets across the organization.

Finally, the Company's emergency response program demonstrates the Company's recognition that rapid response and recovery from security incidents are critical to maintaining resilient water and wastewater systems.

Q. How is safety relevant to operational performance?

A. The Company considers safety to be a core value, as well as a strategy. Employee health and safety is the responsibility of every PAWC employee, and to that end, every employee strives for safety. PAWC asks its employees to place safety first in everything they do. The Company has a strong commitment to its employees (and their families) to keep them, PAWC's customers, and the public safe. A safe workplace increases employee morale, increases employee commitment to one another, and makes for a more engaged and productive workforce.

Q. Please describe PAWC's safety program and Operations' role in promoting safety and a safe working environment at PAWC.

A. The Company's safety program includes multiple activities and initiatives to maintain compliance with Occupational Safety and Health Administration ("OSHA") requirements and Company standards, support employee engagement, and help ensure the safety of its workforce and its customers, as well as the public. Operations is responsible for administering the health and safety program, which includes the delivery of all OSHA-

required training, training and qualification of employees, physical security, cyber security, business continuity planning, and event management.

Q. How do you know the commitment to safety is effective?

A. PAWC is building a strong safety culture, which is illustrated by its year-over-year safety performance. The Company's OSHA recordable incident rate ("ORIR") improved from 2.62 in 2018 to 0.68 as of October 1, 2025. In 2025, American Water and PAWC enhanced focus on Serious Injury Incident Rate ("SIIR") and Days Away Restricted or Transferred ("DART") injuries. In the first eight months of 2025, PAWC had its best safety record in its operational history at 0.08 DART and 0.0 SIIR. The Company has experienced only six OSHA recordable injuries as of October 1, 2025 (as compared to 61 injuries in all of 2024). This reduction has resulted in record rates in the key safety performance metrics of ORIR and DART.

Q. What other safety programs does PAWC use?

A. In addition to establishing ORIR targets, the Company's Hazard Identification Reporting Program allows employees to identify any hazards that could have resulted in an injury or accident. For example, if a piece of equipment becomes worn outside of a regular maintenance cycle, an employee can report this as a "Hazard Identification," and PAWC can replace the worn part and avoid a potential injury from an equipment malfunction. Reported Hazard Identifications improve safety by encouraging employees to look for hazards in the workplace, which improves the employees' awareness and helps make their workspaces safer. In 2025, PAWC employees reported 990 Hazard Identifications from across the state. 99% of all Hazard Identifications reported in 2025 were resolved within 30 days.

PAWC also uses the services of an occupational training and information company called Work Right ("WR"). WR supplies two athletic trainers, one in eastern PA and the other in western PA, to provide training, health-related information, on-site first aid medical services and injury (home/work) consultation to PAWC employees. WR has developed and implemented ergonomic programs to reduce and eliminate soft tissue injuries (strains and sprains) for PAWC's affected field operations and treatment plant employees. To date in 2025, PAWC had five injuries classified as "ergonomic" in nature, down from a total of 18 ergonomic related injuries in 2024. Since 2020, PAWC has also utilized WR to provide First Aid/CPR/AED training for its employees. As of October 1, 2025, 93% of PAWC's employees are First Aid/CPR/AED certified, with the goal of 100% by the end of the year.

PAWC employees also participated in the American Water *Becoming a Safety Leader* program, formerly known as the Certified Safe Worker program. This is a self-directed program promoting safety and health awareness, encouraging active participation, and documenting both work-related and at-home safety activities. In 2025, 1,199 PAWC employees completed the program, achieving the highest number in the history of the program, and the highest total of all the American Water subsidiaries.

Q. How does operations training improve operational performance?

A. Hands-on operational training at PAWC bridges the gap between theoretical knowledge and real-world application, allowing employees to build confidence and competence in performing critical tasks. In 2025, PAWC enhanced its commitment to operational training by designing and opening several operational training facilities in Pennsylvania (2 new training locations and 1 addition to an existing training facility). By working directly with

the tools, equipment, and systems they will use in the field, staff develop a deeper understanding of operational processes, safety protocols, and troubleshooting techniques. This approach reinforces learning through muscle memory and situational awareness, enabling teams to react quickly and effectively during routine operations or unexpected incidents. It also fosters cross-functional understanding, as employees experience how their actions affect other parts of the utility system.

Improved operational performance follows naturally from this immersive learning model. Field crews trained in realistic scenarios are better equipped to make informed decisions, maintain infrastructure reliability, and minimize downtime. Practical exercises in pump maintenance, pipeline repair, water quality monitoring, and emergency response build technical proficiency, teamwork, and communication skills essential for coordinated operations. As a result, PAWC can achieve higher service reliability, reduce operational risks, and enhance customer trust.

Q. Please describe PAWC's overall commitment to safety for its contractors.

A. PAWC holds all contractors to a high safety standards as evident in the American Water Health and Safety Charter, which states, "We hold all contractors to the same safety standards as our employees." Holding contractors to high safety standards benefits PAWC by reducing the risk of accidents, service disruptions, and costly liabilities, ensuring that work is completed efficiently and without harm to people or infrastructure. By enforcing rigorous safety expectations, the Company protects its own employees and the public, safeguards critical assets like pipelines and treatment facilities, and maintains compliance with regulatory requirements. To ensure compliance with this standard, PAWC and American Water have a rigorous contractor pre-qualification requirement and thorough

contractor evaluation requirements. To date in 2025, PAWC employees have completed approximately 890 job evaluations on over 170 contractors completing work for PAWC.

Operation & Maintenance of Troubled Systems

Q. Please explain PAWC's involvement with the East Dunkard Water Authority ("EDWA").

A. On February 8, 2024, the Company was appointed by the Commonwealth Court of Pennsylvania to become the receiver of the EDWA. On February 9, 2024, PAWC assumed operations of the EDWA system as receiver and began operating the system on a continuous basis; this included operating all property, facilities, and assets of the system. The Commonwealth Court's Order required PAWC to conduct an evaluation of the system and to identify any deficiencies in operational procedures. PAWC was also required to prepare a plan of capital and operational improvements, water quality compliance, and proper expense management. The findings and improvements were then to be submitted to DEP, PUC, and EDWA on a quarterly basis (See Docket No. P-2023-3043950).

Q. What operational improvements did the Company make in the system?

A. The evaluation of the treatment plant identified numerous issues that needed to be addressed to maintain compliance, redundancy, and optimize water quality. The improvements consisted of upgrading redundant chemical feed systems to current standards, installing a chlorine gas detection system, filter media replacement, clarifier and lagoon cleaning, and replacement of the entry point chlorine analyzer. The improvements improved water quality and compliance, and created a safer environment for employees. Employees within the facility were also supplied with proper PPE for the lab or the plant and improvements were made to the walkways/platforms to keep employees safe. The

Company purchased gas detection devices to monitor for hazardous atmosphere and also installed a platform to safely sample the lagoon. Additionally, an ARC flash analysis was completed within the facility to ensure employees would have the proper PPE on when working on the electrical equipment.

Finally, PAWC field employees were also able to identify multiple leaks in the distribution system and a lack of proactive leak detection investigation in the system. PAWC repaired 82 main and service line leaks, which allowed it to turn off an emergency interconnect to a neighboring system and eliminate the related monthly expense. Routine flushing was also implemented to maintain water quality within the system. This work, along with the implementation of the plant processes, allowed PAWC to reduce water quality complaints from over 30 at the time PAWC began acting as receiver for EDWA down to one in 2025.

Q. How has the Company become involved in the Rock Spring Water Company's ("Rock Spring") system?

A. As of March 21, 2025, PAWC has been acting as the receiver of Rock Spring in Ferguson Township, Centre County, pursuant to an order ("March 21, 2025 Order") entered by the PUC at Docket No. P-2024-3051313. The March 21, 2025 Order was issued in response to Rock Spring's numerous regulatory violations, deteriorating infrastructure, low water pressure, frequent power outages and prolonged boil-water advisories.

Q. Please describe the improvements that PAWC has made to Rock Spring's system.

A. PAWC recently implemented a series of critical enhancements to support its interim receivership and help to promote the safety, reliability and quality of the community's drinking water. Notably, the Company upgraded Rock Spring's drinking water treatment

system's SCADA. This upgrade enables the Company to continuously monitor and control well equipment and processes using real-time data. It also allows PAWC to quickly identify any changes or issues that may arise and respond accordingly. The Company also installed an online chlorine analyzer for the well's chlorine feed pump, which continuously monitors chlorine levels and promotes water quality stability. PAWC has taken over all of Rock Spring's compliance sample collection and reporting responsibilities.

Q. Has the Company made improvements to the distribution system at Rock Spring?

A. Yes, PAWC's leak detection efforts identified numerous leaks that have been repaired by the Company or the customer if it was a customer-side service leak. To date, two water main breaks, two Company service line leaks, and five customer-side service line leaks were found and repaired, resulting in a reduction of daily system delivery by approximately 40,000 gallons per day.

Q. Are there other examples of the Company becoming involved with nonviable systems?

A. Other examples of PAWC providing solutions for troubled systems include the Winola Water Company (Docket No. C-2018-2644592), Delaware Sewer Company (Docket No. I-2016-2526085), Clean Treatment Sewage Company (Docket No. I-2009-2109324), Nittany Water Company (Docket No. C-2008-2070315), Wildcat Park Corporation (Docket No. A-2011-2257622), and the Sewer Authority of the City of Scranton (Docket No. A-2016-2537209). In all of these examples, PAWC quickly improved the reliability and safety of those systems by investing the necessary capital to move the systems toward regulatory compliance.

Employee Levels and Compensation

Q. Please discuss how PAWC staffs its business operations.

A. As a public utility, PAWC is required to provide safe, reliable, and adequate water and wastewater services. PAWC's employees are responsible for assuring the production of high-quality drinking water, operating and maintaining the Company's production and treatment facilities and its distribution and collection systems, monitoring water quality, providing engineering services, and supporting the efficient management of all the Company's operations.

The Company continually strives to find more efficient and cost-effective ways to operate and maintain its business. As part of that effort, it strives to manage its cost structure as efficiently as possible, including employee costs. PAWC recognizes its duty to staff its business in a way consistent with providing safe, reliable and affordable utility service. This requires a constant evaluation of the right mix of internal and contract labor, straight time versus overtime, training programs, and technology. In this vein, the Company continues to evaluate costs and expenses going forward, always looking for the best solution for the unique and changing challenges it faces. A substantial portion of PAWC's cost structure is associated with the Company's cost of labor, and as a position becomes vacant in its organization, the Company looks to the value of that position. PAWC reviews the overall need for that position and considers, among other things, whether it should be transferred to another area, modified, or even eliminated. Workforce optimization and improved business performance are the goals of these efforts. The Company continues to evaluate the new roles that will be created as new regulatory

requirements are promulgated, and the appropriate positions that PAWC will need to optimize recent technology and most effectively serve its customers.

Q. What is PAWC's forecasted staffing level in this case?

A. We have identified 1,278 full-time equivalent employees as the appropriate staffing level for the Company's water and wastewater operations in the FPFTY. The number of employees is based upon each department and each functional area's need to provide safe, adequate, efficient, and reliable service to the Company's customers. Service needs and related resource requirements are consistent with meeting regulatory requirements, tariff requirements, industry standards, service requests, customer needs, and providing adequate support to PAWC's business operations.

Q. Please describe PAWC's approach to employee compensation.

A. The Company aims to offer compensation that is on par with other companies PAWC competes with for talent. Therefore, the Company targets its total direct compensation (inclusive of base and performance compensation) for each role near the market median (50th percentile). Offering market-level total compensation ensures that PAWC compensation is not only competitive, but also reasonable.

Q. Please discuss the Company's decision to leverage a goal-based performance compensation plan as part of its total direct compensation.

A. As part of its compensation philosophy, the Company has chosen to make a portion of its compensation variable, driving continued performance across the enterprise. By using a combination of fixed and variable compensation, the Company satisfies a dual objective of having a competitive market-based total compensation for all employees, while continuing

to motivate employees to achieve goals that will improve performance and efficiency for the benefit of its customers.

Q. Please identify the various employee classifications at PAWC and briefly describe how each group is compensated.

A. There are three classifications of employees: collective bargaining unit ("CBU") hourly employees, non-collective bargaining unit ("non-CBU") hourly employees, and exempt employees. Full-time hourly employees are compensated through base pay, overtime, performance compensation, and in some instances, shift premium and meal compensation pursuant to the terms of applicable collective bargaining agreements. Exempt employees are compensated through base pay and performance compensation.

Q. How is performance compensation provided to PAWC employees?

A. The performance compensation component of the Company's total direct compensation may be awarded under two performance plans – the Annual Performance Plan ("APP") and the Long-Term Performance Plan ("LTPP"). All full-time employees, including CBU employees, participate in the APP. Eligibility for the LTPP is limited to certain exempt employees. Copies of the plans, which are marked as confidential and proprietary, are provided as Filing Requirement III.22 (Volume 6b) of the Company's responses to the PUC's filing requirements.

Q. Please describe the key performance objectives underlying the APP.

A. The APP is designed to recognize performance against key performance goals and targets that drive the Company's strategy. For 2025, the APP goals include safety goals related to reducing the SIIR and DART employee safety rates, customer goals related to customer satisfaction, environmental goals related to avoiding violations, people goals related to

improving diverse representation in the workforce, and growth goals related to the Company's financial performance.

Q. Please describe the Company's LTPP.

A. American Water provides restricted stock units ("RSUs") and performance stock units ("PSUs") as long-term variable compensation under the LTPP. American Water's RSUs and PSUs are based on three-year vesting periods. RSUs are based on time-based vesting, meaning they vest in three equal installments over the three-year vesting period; and PSUs are based on performance vesting conditions, in addition to time.

Q. Do the Company's compensation plans benefit customers?

A. Yes. As I mentioned, the plans are designed to attract and retain customer-committed, highly qualified employees, provide compensation for performance, and focus plan participants on delivering safe, reliable and affordable water and wastewater services. The design of the plans emphasizes customer service, environmental compliance, a safe work environment, and people, as well as certain financial goals. The APP and LTPP performance objectives – both operational and financial – focus employees' efforts in ways that ultimately benefit customers. The use of multiple measures further strengthens our ability to drive results across the enterprise. The operational components measure performance that can most directly influence customer satisfaction, health and safety, environmental performance, and workforce diversity. Customers benefit from the plan goals because operational performance is improved by controlling costs, capturing efficiencies, promoting effective safety and risk management practices, enhancing customer service, and doing so with a diverse workforce that reflects the communities we serve. Performance is determined by goals that benefit customers by creating a more

productive and engaged workforce that is focused on customer satisfaction and achieving efficiency, environmental and safety goals. Further, well-grounded financial measures keep the organization focused on improved performance at all levels of the organization, particularly in increasing efficiency, decreasing waste, and boosting overall productivity.

Finally, a financially healthy utility focused on efficiency and customer satisfaction can attract the capital investments necessary to provide safe and reliable service at favorable rates. Because utilities are capital intensive and must routinely and consistently access the capital markets, customers ultimately benefit when their utility has the financial health to do so at reasonable rates. Simply put, a financially healthy utility benefits customers, because it enables the utility to meet its service obligations at reasonable financing costs.

Employee Development

Q. Describe the Company's commitment to employee development.

A. At American Water, employee growth and development remain a core value and strategic priority. In 2025, the Company continues to invest in learning opportunities that support both job-specific competencies and broader career advancement.

LEARN, American Water's Learning Management System, serves as the centralized platform for all training activities. Accessible via Single Sign-On, LEARN offers a wide range of learning formats, including eLearning, instructor-led sessions, and virtual events. Content is curated by the Learning & Development team, business units, and external providers like Skillsoft.

Training is aligned with both regulatory requirements and strategic goals. The 2025 required learning curriculum includes courses focused on ethics, cybersecurity, workplace

conduct, and performance management. These are assigned throughout the year and tailored to roles, locations, and compliance needs.

In addition to role-specific training, employees have access to over 200 professional development courses covering business, leadership, and technical skills. Managers are encouraged to engage in ongoing performance and development conversations, supported by resources like goal-setting guides and check-in templates.

Safety training remains a cornerstone of PAWC's development program. All employees are required to complete the following safety courses: Defensive Driving; Fire Safety and Prevention; Hazard Communication; Slips, Trips, and Falls; and Stop Work Authority. Additional role-specific training is assigned based on job responsibilities and is designed to align with OSHA standards and American Water's operational and safety requirements.

These courses are considered foundational and are supplemented by additional training based on job responsibilities and regulatory requirements.

This commitment reflects American Water's belief that continuous learning empowers employees to deliver exceptional service, drive innovation, and grow their careers.

Q. Does this conclude your testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
v.	:	**DOCKET NOS. R-2025-3057983 (WATER)** **R-2025-3058051 (WASTEWATER)**
PENNSYLVANIA-AMERICAN WATER COMPANY	:	

VERIFICATION

I, **Jim Runzer**, hereby state that the facts set forth in the pre-marked Statement No. 3 and accompanying exhibits, if any, are true and correct to the best of my knowledge, information, and belief. I understand that this verification is made subject to the provisions and penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

OF

ANTHONY M. NOKOVICH

WITH REGARD TO

PENNSYLVANIA-AMERICAN WATER COMPANY'S FUTURE TEST YEAR AND FULLY PROJECTED FUTURE TEST YEAR PLANT ADDITIONS; RISKS ASSOCIATED WITH FURNISHING PUBLIC WATER AND WASTEWATER SERVICE; RECEIVERSHIP AND ACQUISITION-RELATED INVESTMENT

DOCKET NOS.
R-2025-3057983 (WATER)
R-2025-3058051 (WASTEWATER)

DATE: NOVEMBER 14, 2025

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF ANTHONY M. NOKOVICH

Q. What is your name and business address?

A. My name is Anthony M. Nokovich, and my business address is 852 Wesley Drive, Mechanicsburg, Pennsylvania 17055.

Q. By whom are you employed and in what capacity?

A. I am employed by Pennsylvania-American Water Company ("PAWC" or the "Company") as Vice President of Engineering.

Q. Please describe your educational background and business experience.

A. I have a Bachelor of Science degree in Civil Engineering from the Pennsylvania State University and have been in the engineering and construction field for approximately thirty years. I am a licensed Civil Engineer in the Commonwealth of Pennsylvania.

Q. Do you belong to any professional or industry associations?

A. Yes, I am a member of American Water Works Association, American Society of Civil Engineers, Association of State Dam Safety Officials, and United States Society on Dams.

Q. What are your duties and responsibilities in your current position?

A. As Vice President of Engineering for PAWC, I am responsible for the administration of engineering services, including but not limited to the planning, design and construction of water and wastewater capital investment projects for PAWC's systems and facilities.

Q. What is the purpose of your testimony?

A. First, I will discuss the Company's capital investment planning process. Second, I will describe and support the additions to the Company's water and wastewater utility plant and equipment that will be placed in service during the future test year ("FTY") ending

June 30, 2026 and the fully projected future test year ("FPFTY") ending June 30, 2027, including projects to support PAWC's efforts to eliminate a potential source of elevated lead levels at the customer's tap under its lead service line replacement program ("LSLRP") approved by the Pennsylvania Public Utility Commission ("PUC" or "Commission"). Third, I will describe the risks associated with maintaining safe and adequate water quantity and water quality and complying with applicable drinking water and environmental regulations associated with owning and operating facilities for supplying water services to the public; complying with environmental regulations applicable to owning and operating facilities for furnishing wastewater service to the public; and the challenges climate variability could create for water and wastewater utilities. Finally, I will provide examples of PAWC's strategic investment in acquired systems to leverage the Company's technical expertise and decades of experience to deliver safe, clean, and reliable water and wastewater service to additional communities.

The Company's Capital Investment Planning and Governance Process

Q. Please explain the Company's capital investment planning and governance process.

A. The Company uses a standardized Capital Program Management ("CPM") process to prioritize and manage its capital investments. PAWC conducts planning studies that assess necessary improvement projects and prioritize those projects. Further, each facility is evaluated using the Company's High Risk Asset Management ("HRAM") process to identify facilities or individual assets that may pose a high risk to the Company's system(s) due to either their importance and/or a possibility of failure. All capital investment programs and projects are then prioritized within an overall strategic planning process, utilizing the HRAM process. In the HRAM process, facilities and critical assets are

evaluated against risk and consequence of failure to formulate a five-year Strategic Capital Expenditure Plan ("SCEP"). Following more detailed design engineering, implementation plans are developed for those projects that are contained in the SCEP. The Company's annual capital construction plan is based upon projects and programs contained in the SCEP. Main replacement projects are prioritized on a statewide basis annually. Numerous factors are considered when determining funding allocations for infrastructure investment, such as current and future service needs, assessments of the physical condition of existing plant, economic and risk factors, performance characteristics, regulatory compliance, and the potential to coordinate with municipalities and other utilities in joint improvement projects. The CPM governance process provides formal approvals and consistent controls optimizing the effectiveness of asset investment aligned with the Company's strategic goals.

Q. How does the Company's construction planning process impact its claim for plant additions?

A. The Company's claim for plant additions consists of the projects scheduled for completion during the FTY and the FPFTY. The overwhelming majority of the Company's projects will be constructed and completed as planned. However, some projects may be substituted for others initially included in the budget due to unanticipated events, such as plant or equipment failures that require an immediate capital addition or permitting delays for a specific planned project. In general, the overall cost of plant construction will be consistent with the values in the Company's claim. Often, where one project may lag for a variety of reasons, another may be completed early, thereby offsetting another project's delay such that the overall program remains consistent.

With timely recovery of its investment, the Company is better able to plan and deploy capital more efficiently over the long term. The Company employs a proactive approach to planning construction work and has accelerated investments in replacement of high-risk or poor-performing water and wastewater underground infrastructure before problems arise, such as leaks and main breaks, through its Commission-approved Distribution System Improvement Charge ("DSIC"). Planned infrastructure replacements are much less costly on a unit cost basis than addressing pipe breaks on an ad hoc basis. Similarly, addressing pipe breaks only after they occur can result in service disruptions, property damage, health risks from potential drinking water contamination exposure during pipe breaks, opportunity costs related to community health and economic development, and a steep increase in future underground infrastructure investments resulting from prior deferrals of the replacements. PAWC's above-ground assets, such as booster systems and storage tanks, are not DSIC-eligible property. Therefore, the Commission's approval of the Company's proposed FTY and FPFTY plant additions will support PAWC's ability to continue replacing pipes and above-ground infrastructure on a planned and proactive basis with timely recovery of those investments.

Description of Claimed Plant Additions

Q. Please describe the Company's claimed plant additions, as shown in Exhibit No. 3-C.

A. The Company has undertaken gross plant additions (including projects funded by customer advances and contributions) to be completed by June 30, 2026 (the end of the FTY) that are estimated to total $488,705,042. The Company has also undertaken, or will undertake, gross plant additions (including projects funded by customer advances and contributions) to be completed by June 30, 2027 (the end of the FPFTY) that are estimated to total

$676,410,111. Thus, the total gross plant additions for the FTY and FPFTY are $1,165,115,153. When projected retirements of $115,712,336 are considered for the FTY and FPFTY, the combined net increase in plant additions for those two years is estimated to be $1,049,402,817.

Q. In general terms, could you explain why the Company is planning to spend over $1 billion on infrastructure investment through the FPFTY?

A. Pennsylvania's water and wastewater infrastructure requires significant upgrade and repair. In its 2022 Report Card for Pennsylvania's Infrastructure ("Report Card"), the American Society of Civil Engineers concluded that the Commonwealth's water and wastewater infrastructure received grades of D and D-, respectively.[1] With regard to drinking water, the Report Card provides the following Executive Summary:

> Most of Pennsylvania's public drinking water systems are struggling to fund projects to meet their replacement goals as well as new regulations. That's despite recent investment in main replacement and improvement in identifying vulnerability to failures for prioritization of repairs. Over the next 10 years, Pennsylvania's public water systems are projected to have a $10.2 billion funding gap, a number only very slightly offset with recent federal actions to provide infrastructure funding. In addition, there remain substantial amounts of lead service lines posing risk to public health, particularly for underserved communities. Emerging contaminants such as perfluoroalkyl and polyfluoroalkyl substances (PFAS) pose a growing public health threat. To conquer these issues, water utilities need to adopt full-cost pricing and find technologies that enable more efficient operation and emergency response.[2]

The Report Card's Executive Summary for Wastewater is as follows:

> Aging wastewater management systems discharge billions of gallons of raw sewage into Pennsylvania's surface water each year.

---

[1] Report Card for Pennsylvania's Infrastructure, Pennsylvania State Council of the American Society of Civil Engineers (available at https://infrastructurereportcard.org/wp-content/uploads/2016/10/PA-Report-Card-2022.pdf.

[2] *Id*. at 36.

> The average age of most sewer systems is approaching 75 years with many pipes over 100 years old. 26% of the state is served by on-lot systems with nearly one-quarter failure rate. Two-thirds of the state's Sewage Facility Plans are over 20 years old. The Commonwealth has a funding gap of $8.4 billion over the next 10 years to repair existing systems, upgrade existing systems to meet regulatory requirements, control Combined Sewer Overflows ("CSOs"), address illicit Sanitary Sewer Overflows, and construct new or expand existing systems to meet increasing demand. Available funding over that time is estimated to be $900 million, only about one-tenth of the required annual investment.[3]

Dams fair a bit better with an overall grade of C. However, as pointed out in the Report Card there is still much work to be done:

> Dams in Pennsylvania manage flood risk, provide fish and wildlife habitats, recreational opportunities, and drinking water supply. Of the 1,498 dams in Pennsylvania, over half (54%) are classified as high hazard, likely causing death and economic damage under failure. The average age of Pennsylvania dams is 76 years old, nearly 20 years older than the national average and well beyond the typical 50-year design life. The high average age of Pennsylvania dams makes incorporating resiliency and innovation into the redesign cost-prohibitive, especially for the 61% of owners who are private citizens or organizations. Raising the grade on Pennsylvania dams requires increased funding, perhaps the establishment of a loan or grant program to financially assist owners with repairs, abandonment, and removal projects. Supporting modernization of current federal assistance programs through the passage of the 21st Century Dams Act would also serve to benefit Pennsylvanians.[4]

Many of the high hazard dams owned by the Company are well beyond 100 years old and no longer fully comply with Pennsylvania Department of Environmental Protection ("PADEP") regulations, thus requiring significant investment in the dams to achieve compliance with newer regulations and to prevent failure to the dam and/or spillways.

---

[3] *Id.* at 146.

[4] *Id.* at 29.

The Company needs to increase investment in replacement and improvement of its older and high-risk water mains to avoid the potential health risks, environmental impacts and financial losses noted in the Report Card. Substantial investment in PAWC's wastewater systems is also required to properly address combined and sanitary sewer overflows, repair existing systems, upgrade systems to meet U.S. Environmental Protection Agency ("EPA") and PADEP regulatory requirements and build new required facilities. The Company's planned infrastructure investment through the FPFTY and beyond is intended to continue to address these infrastructure concerns in the Commonwealth, as well as to meet several environmental and public health standards described later in my testimony.

Q. Can you provide an update on the actual plant in service through September 30, 2025?

A. The actual plant retirements and additions through September 30, 2025, are listed in Schedule AMN-1.

Q. What types of projects are included in the Company's total gross plant additions for its FTY and FPFTY?

A. The projects that comprise the Company's claim for plant additions are set forth by applicable property account and PAWC Project Number in the portion of PAWC Exhibit No. 3-C that I am sponsoring, along with the estimated completion date and associated retirement for each project. As shown in Exhibit No. 3-C, the Company's claimed plant additions vary from what may be characterized as small, routine projects, such as the installation of individual distribution mains to substantially larger projects, such as the Dunmore #7 Dam Rehabilitation. The Company's claims also include projects necessary

to satisfy new regulations to ensure the removal of per- and polyfluoroalkyl substances ("PFAS") as well as safety and reliability projects such as the installation of emergency power generation equipment and pipeline reinforcements; water storage tank projects; and improvements to acquired systems that I discuss below along with other large projects. This includes the Company's investment in technology projects that are completed on an enterprise-wide basis for the benefit of all American Water's operating utilities (including PAWC). Those technology projects upgrade and enhance our foundational technology and customer-facing platforms, among others, to continue to provide safe, reliable, and efficient service to customers.

Q. Does Exhibit No. 3-C also reflect the Company's acquisitions in its FTY and FPFTY?

A. Yes. Exhibit No. 3-C reflects the asset cost, reserve, and depreciated cost by plant account and year for the acquired assets for the systems that the Company will acquire in the FTY and FPFTY, including Butler Area Sewer Authority ("BASA") (wastewater), Sadsbury Township Municipal Authority (wastewater), Farmington Township (water and wastewater), East Dunkard Water Authority ("EDWA") (water), Audubon Water Company ("AWC") (water), Manwalamink Water Company (water), Manwalamink Wastewater Company (wastewater), Appalachian Water Utilities, Inc. (water), Corner Water Company (water), and Elizabeth Borough Municipal Authority ("EBMA") (wastewater).

Q. Are there any particular projects that, because of their size or importance, you would like to discuss further?

A. Yes. While there are hundreds of individual plant additions detailed in Exhibit No. 3-C, the larger individual components of the Company's claim for plant additions are described

below. Water system projects are presented first by year of anticipated completion, followed by wastewater system projects also by year of planned completion. The following summary also indicates if a project is a PADEP or EPA requirement.

(July 2026-June 2027) Water Projects

1. Philipsburg Clearwell (I24-720008)

PAWC will install a new one million gallon ("MG") prestressed concrete distribution storage tank at the Philipsburg Water Treatment Plant ("WTP") because the existing distribution storage tank cannot be taken out of service for painting or other maintenance due to lack of adequate storage in the system. In addition, the project will install a new small baffled concrete clearwell to ensure the Philipsburg WTP can meet minimum chlorine contact time requirements. The estimated cost of the project is $6,604,070.

2. Lead Service Line Inventory Phase 4 through Phase 7 (I24-010025, I24-01XX9902, I24-01XX9903 and I24-01XX9904)

The EPA's Lead and Copper Rule ("LCR") was first established in 1991 to require public water systems to monitor lead and copper levels in drinking water and implement treatment measures triggered by certain action level exceedances. In 2021, the EPA revised the LCR (the "LCRR") to, among other things, require public water systems to develop an initial lead service line ("LSL") inventory and strengthen the requirements for LSL replacements. To comply with the EPA's LCRR, PAWC is required to maintain an annually updated service line inventory that includes both company-owned and customer-owned service line materials, with public notification. PAWC began its inventory initiative in 2021 and submitted its initial inventory to PADEP ahead of the October 16, 2024 compliance deadline under the LCRR. The Company has since expanded the scope of its LSR

inventory and annual updates to address additional requirements under the most recent LCR improvements promulgated by the EPA on October 30, 2024 (the "LCRI"). The Company has segmented the service line inventory projects to comply with the LCRI into six-month phases, and PAWC will complete Phases 4 through 7 during the FTY and FPFTY.

The LCRI mandates nationwide proactive LSL replacement within a ten-year timeframe, reduces the lead action level from 15 to 10 parts per billion, and requires public water systems to update their initial inventory with information about connector materials and locations, along with any new information on service line materials. These requirements emphasize the urgency of accurately identifying service line materials in the near term to meet the LCRI deadline of December 2037 for full replacement of all LSRs in the Company's water systems.

PAWC's current inventory process relies on reviewing tap cards and historical company records. However, many records are incomplete, lack customer-side material data, or are not integrated into the Company's system of record. To address these deficiencies, PAWC has retained a consultant to:

- Conduct customer-side material investigations
- Scan and digitize missing tap cards
- Update the system of record with verified service line data
- Perform onsite inspections, test pits, canvassing, and record reviews
- Apply statistical modeling to supplement data gaps

While these efforts support compliance with both federal and state regulations, challenges remain. In particular, limited access to customer-side material information

poses a risk to the completeness of the inventory. Although statistical modeling has been explored as a supplemental tool, it is not currently approved by the PADEP as a standalone method of investigation.

PAWC continues to pursue all viable strategies to ensure a complete and accurate inventory, which is foundational to developing and executing a service line replacement plan that meets regulatory deadlines and protects public health. The estimated cost of Phases 4 to 7 of PAWC's updates to its LSL inventory to comply with all recent EPA and PADEP requirements is $28,465,000.

3. Curtis Dam (I24-910008)

Curtis Dam, originally constructed in 1887, impounds approximately 360 million gallons of water at normal pool and serves as a component of the raw water supply system for the Lake Scranton Water Treatment Plant. The PADEP Dam Safety Division classifies Curtis Dam as a medium-sized, high-hazard (B-1) dam. Dams within this category are required to safely convey flood flows up to the Probable Maximum Flood ("PMF") for their respective watersheds.

At present, the existing spillway can pass only 36% of the PMF. As a result, PADEP Dam Safety identified the hydraulic capacity of the spillway system as deficient and requested that PAWC provide additional spillway capacity. To address these concerns, PAWC initially proposed a rehabilitation project to replace the existing spillway with a new piano key spillway, thereby increasing spillway capacity from 36% to 100% of the PMF. The scope of work also included outlet works of rehabilitation, installation of a seepage collection system, masonry repointing, stabilization of the masonry dam, and

modifications to the spillway exit channel. The estimated cost of this project was approximately $20 million.

During the commencement of rehabilitation construction in 2024, the upstream face of the dam experienced a significant slope failure. In light of this development, PAWC has decided to remove the dam rather than pursue further rehabilitation. The revised estimated cost for dam removal is approximately $7 million.

4. Wyomissing High Gradient Tank #2 (I24-630009)

The Wyomissing High Gradient Tank project involves the construction of two new ground storage tanks within the Wyomissing service area that will provide 800,000 gallons of storage. This infrastructure enhancement is designed to improve system pressure, increase operational flexibility, and strengthen fire protection capabilities. The tank will also play a vital role in meeting peak demand periods and supporting future growth and increased service demands. This project represents a proactive investment in water system resilience, ensuring reliable service delivery and regulatory compliance for the Wyomissing community. The estimated cost of the project is $12,902,083.

5. Hershey South Reservoir 2 MG tank (I24-620012)

The existing South Reservoir is a three MG underground potable water reservoir located in Hershey, Pennsylvania. It is a part of a gradient that has limited storage and sees significant operational challenges during peak summer demand seasons. A new two MG partially buried concrete tank will be installed to align with PADEP standards regarding necessary storage, and to address operational issues and increase operational flexibility when servicing the existing reservoir. The project also includes a new booster pump station at the North Reservoir site. The North Reservoir frequently experiences lack of adequate

water turnover due to limitations in the system hydraulics, and it was determined that the best method to alleviate the issue would be the installation of a booster pump station to draw water out of the tank for delivery into the distribution system. PAWC will install a prefabricated booster pump station, along with a new electrical service. The estimated total cost of the project is $9,564,527.

6. Royersford Lock 57 WTP (I24-640011)

The Lock 57 WTP project is a strategic initiative aimed at modernizing the facility's treatment processes to meet evolving regulatory standards and improve operational efficiency. The project replaces the existing Shady Lane WTP, which was constructed in 1917, with a new 11 MG per day WTP, located on a 22-acre property, purchased from Owen J. Roberts School District in 2019, approximately a quarter mile from the existing Shady Lane WTP site. The project's structural improvements include installation of a new intake structure and Raw Water Pump Station along the Schuylkill River, adjacent to the existing Shady Lane WTP. The Lock No. 57 WTP will include conventional pretreatment, flocculation, sedimentation, and granular activated carbon gravity filtration processes, as well as both ultraviolet ("UV") and liquid chlorine disinfection, taste and odor control, and chlorination, to meet current regulatory standards. Following the construction of Lock 57 WTP, the Shady Lane WTP will be decommissioned. The overall plant capacity will supply the current increased demand to the Royersford region. The estimated total cost of this project is $118,328,351.

7. Dunmore Dam No. 7 (I24-910005)

Dunmore Dam No. 7, located on Roaring Brook Creek about five miles southeast of Scranton, was built in 1872 as a Class B, Category 1 water supply dam with a 101-MG

capacity. PADEP Dam Safety classifies it as a medium-sized and high hazard (B-1), requiring it to pass the PMF. Currently, its spillway can only handle 48% of the PMF, making it hydraulically deficient. To resolve this, PAWC plans to rehabilitate the dam by installing anchors, adding concrete buttresses, upgrading the overflow crest to an ogee profile, armoring abutment rocks, and constructing a new concrete block at the spillway toe. The project is estimated to cost $17,878,505.

8. New Castle Water Treatment Plant – Filter Rehabilitation I24-310027

The four existing filters at the New Castle WTP pose concerns because of the age and condition of the media. The Company regularly evaluates the condition and efficacy of filter media, which require replacement every 15-20 years. The filter work will consist of the removal and replacement of existing media, upgrades to valving and instrumentation, and installation of davit arm retrieval mounts. The total estimated cost of the project is $5,000,000.

9. Mid-Monroe Fernwood Interconnect (I24-680036)

The Mid-Monroe water system in Middle Smithfield Township, Monroe County will not be able to adequately meet system demand in five years, according to the Comprehensive Planning Study developed by PAWC's planning engineering department. The groundwater wells in the public water system currently struggle to meet demands due to production losses over time. Rehabilitation of the wells has resulted in higher production capacity, but with a corresponding increase in naturally occurring iron and manganese concentrations. The search for a new source has found potential sources to be either too low in production or under the influence of surface water requiring intensive treatment. The Fernwood water system owned by PAWC is located three miles from Mid-Monroe

with production levels high enough to satisfy the demands of both systems. This project will interconnect the two systems with 19,000 linear feet of 12-inch ductile iron pipe and a pump station capable of delivering a minimum of 200 gallons per minute from Fernwood to Mid-Monroe to provide safe, reliable drinking water to customers of both systems. The project is estimated to cost $7,875,000.

10. New 24" Main to Dekalb Tank and Booster Pump Station (I24-510029)

This project involves the installation of a new 24-inch transmission main serving the DeKalb area. Designed to enhance system reliability, improve operational efficiency and support future demand, the new main will significantly improve hydraulic capacity while reducing reliance on aging infrastructure. This strategic investment reflects a commitment to long-term infrastructure sustainability and service excellence for the DeKalb pressure zone within the Norristown community. The estimated cost of the project is $5,304,041.

11. Marshwood Dam (I24-91XX42)

Marshwood Dam, constructed by the Scranton Gas and Water Company in 1927, stores 40.4 MG and supplies water to Dunmore, Dickson City, and nearby areas. Classified by PADEP as a small, high-hazard (C-1) dam, it must safely pass the PMF. The current spillway handles only 55% of the PMF, not meeting hydraulic standards. The $7.3 million rehabilitation project aims to modernize the outlet works and upgrade the spillway to convey the full PMF. This project was selected for low interest PENNVEST funding in the amount of $7,326,000.

12. Maple Lake Dam (I24-91XX43)

PAWC plans to upgrade Maple Lake Dam (PADEP ID No. D35-042) to comply with

current state dam safety regulations. The existing spillway can handle only 76% of the required PMF; a new spillway system is proposed to meet safety standards. Upgrades will also include outlet modifications, embankment improvements, enhanced drainage, and improved access across the principal spillway. Maple Lake covers about 100 acres and holds roughly 657 acre-feet of water. The project, estimated at $7.4 million, will increase spillway capacity for safe and reliable dam operation. This project was selected for low interest PENNVEST funding in the amount of $7,370,000.

13. Coatesville to Caln Township Main Replacement Project (I24-650026)

This project involves installing approximately 13,500 feet of 16-inch ductile iron water main into local municipal streets in the Coatesville system. This project will decommission a 1903 24-inch cast iron transmission main that runs just a few feet parallel to Amtrak's railroad tracks, which has broken several times over the past few years. This project will allow for both the safe installation and future maintenance of the water main. This is the final leg of a decade-long effort to rehabilitate the entire major transmission main that runs through and feeds the entire Coatesville system. The estimated cost of the project is $11,852,084.

(July 2026-June 2027) Wastewater Projects

1. Exeter Wastewater Equalization Tanks (124-130007)

The Exeter Equalization ("EQ") Tanks project is a major infrastructure upgrade at the Exeter Wastewater Treatment Plant ("WWTP") that is part of the Consent Order and Agreement and Corrective Action Plan ("CAP") aimed at eliminating sewer system overflows ("SSO"). Two 1.5 MG EQ tanks will be installed to provide temporary storage during high-flow events, ensuring consistent hydraulic loading and preventing system

overload. The project includes partial demolition of the east plant that is no longer in use, and installation of the tanks, piping, and pumps necessary to pump back to the headworks, diversion chamber and flow meter vault. The estimated cost of the project is $15,840,424.

2. BASA Wastewater Pump Station CAP Improvements: Fischer Heights (I24-320002); Brewster (I24-320003); Brewster Booster (I24-320004); Greenwood (I24-320005); Benbrook (I24-320006); and Bryson (I24-320007)

The Butler WW Pump Station CAP Improvement project was identified as part of a 2019 CAP with PADEP. This CAP was entered with the sole purpose of reducing hydraulic overload conditions and eliminating SSO events. In October 2024, PAWC acquired the BASA system, thus taking responsibility for the implementation of this project and the fulfillment of the CAP. This project includes improvements to six pump stations. The service areas for these stations are influenced by infiltration and inflow ("I&I") which causes high flows and capacity issues during wet weather events. These stations receive peak flows that exceed the current pumping capacities of these stations causing SSO events.

This project includes improvements such as new submersible pumps, pump controls, flow metering, electrical improvements, emergency standby power, wet weather storage, and overall site and security improvements. Upon completion of this project, these improvements will increase the capacity at each pump station to capture peak flows and eliminate SSO events. The overall project is estimated at approximately $21,995,000 for implementation of improvements at all six stations and was selected for low interest PENNVEST funding in this amount.

3. Scranton Wastewater Outfall #027 – Washington – Locust (I24-92022)

The CSO-027 Washington & Locust project is a Phase C project of the Scranton Wastewater Long Term Control Plan ("LTCP"). The Scranton Sewer System Consent Decree and LTCP requires a reduction in sewer overflow activations and a reduction in the volume of wastewater from CSO-027 due to rainfall events during a typical year.

This project generally includes the construction of a new 0.211 MG offline storage facility. The facility will consist of three 11-foot diameter High-Density Polyethylene pipes; each 100 feet long connected with concrete structures on both ends. The existing CSO diversion chamber will be modified with weirs and a new pipe to divert wet weather flows from the combined sewer system ("CSS") into the storage facility during wet weather events and then a new pump station installed in the structure will pump the wastewater back into the sewer system after the storm event has passed. This new control system will reduce typical year CSO events from 15 to 7 and reduce the typical year overflow volume from nine MG to two MG in accordance with the LTCP. The project is estimated to cost $5,972,000.

4. Kane Kinzua Road Wastewater Improvements (I24-190004)

Upon acquisition of the Kane wastewater system, PAWC entered into a Consent Order Agreement ("COA") with PADEP due to various issues that occurred under prior ownership including effluent exceedances at the Kinzua Road WWTP. The COA requires a CAP for plant improvements due to environmental compliance challenges. This project will meet the CAP requirements and will also address other improvements that are needed at the facility, such as improvements to the preliminary treatment/headworks building, sequencing batch reactor process, UV disinfection, post aeration, electrical system – power

distribution/emergency power, supervisory control and data acquisition system ("SCADA"), and security. The project has an anticipated in-service date of mid-2027 with a project cost estimate of $15,938,041.

5. McKeesport 31st Street Stormwater Line Separation Phase 1 (I24-12XX1601)

In the McKeesport operating district, several sanitary laterals were discovered that are suspected, or known, to be cross connected to a dedicated stormwater line that discharges to Monongahela River along 31st Street. This project will identify the sewer laterals connected to the storm line, disconnect them, and connect them to a new sanitary main. The project is split into two phases. Phase 1 will disconnect all identified sanitary laterals from the dedicated stormwater line between Beale Street and the Youghiogheny River. The laterals will be connected to a proposed new sanitary sewer along 31st Street. Phase 2 of the project will continue construction of the sanitary line from Beal Street to Patterson Street and 30th street. The total budget for Phase 1 of the project is estimated to be $3,214,500, and work is expected to be completed in 2027.

6. BASA Collection System Improvements (I24-320012)

The project will locate I&I and identify projects to reduce I&I in the BASA collection system. The overall system consists of approximately 265 miles of 6-inch diameter through 24-inch diameter piping and over 6,500 manholes. I&I within the system has resulted in areas of the collection and conveyance system being hydraulicly overloaded, and at times resulting in system bypasses and SSOs during periods of excessive rainfall and elevated groundwater levels. PAWC will undertake a Sewer System Evaluation Survey ("SSES") to locate and identify sources that can be cost-effectively eliminated. The SSES will include flow monitoring and analysis of select subsystems, rainfall simulation

by smoke and dye testing, flow isolation gaging, manhole inspections, and preparatory cleaning and internal inspection of piping and service sewer laterals. Collection system improvements including manhole and piping improvements will be completed as part of the project. The project is estimated to cost $3,000,000.

7. Fairview WWTP Dewatering and Chemical Improvements (I24-600008)

The Fairview North WWTP was constructed in 1965 and is located in New Cumberland, PA. The Fairview South WWTP was constructed in 1993 and is located in Goldsboro, PA. The existing belt press at the Fairview North WWTP is at the end of its useful life, and additional capacity is needed. Existing chemical feed facilities at both plants need upgrades for compliance. The upgrade for the Fairview North WWTP will consist of the removal of the unused 5,000-gallon ferric chloride tank, replacement of the existing bulk sodium aluminate tanks with a single bulk tank and the addition of a chemical truck unloading station/containment. The upgrade of the Fairview South WWTP will consist of upgrades to the bulk sodium aluminate system, the addition of a chemical truck unloading station/containment, and the replacement of the dewatering belt press with a new screw press. Construction is slated to begin in 2026 with the project expected to be in-service by 2027. The estimated cost of the project is $3,947,983.

Q. Please explain in general terms the other types of improvements that the Company will make in its water and wastewater systems during the FTY.

A. The Company will replace or upgrade approximately 60,000 existing meters at various points throughout its water distribution system at an estimated cost of approximately $28.1 million, exclusive of meters associated with projects previously described. Meters are routinely replaced as they approach 20 years of age in the case of 5/8 inch meters and at

various other ages for larger size meters. Meters are also replaced due to failures or malfunctions or to incorporate new meter technology.

The Company is also planning to replace approximately 3,700 Company-owned old water service lines and 500 wastewater laterals at an estimated cost of approximately $37.9 million, exclusive of services associated with projects previously described. Additionally, services are replaced for a variety of reasons, including leakage discovered through the Company's leak detection program and other actions to maintain the quality of water service. Pressure and water quality problems can result from old service lines made from obsolete materials, such as galvanized iron. When municipal paving projects are planned, the Company reviews its records and determines if there are any obsolete services that should be replaced along the street. Service replacement costs are minimized by doing the service replacements before repaving occurs.

The Company also plans to replace approximately 66 miles of various diameter water mains and 17 miles of sewer mains at a total cost of approximately $181.6 million, exclusive of the larger pipeline investment projects previously described. This construction is being done for a variety of reasons including improving flow capabilities, preventing water quality degradation, systematically replacing aging distribution system infrastructure, enhancing system reliability and minimizing service disruptions to customers caused by main breaks. The Company anticipates additional developer projects, which will be funded by developer advances.

Q. Please describe in general terms the types of improvements that the Company will make in its water and wastewater systems during the FPFTY.

A. The following routine improvement activities planned for the FPFTY will be conducted

for the same reasons projects are undertaken in the FTY. The Company will install approximately 5,400 new meters and replace or upgrade approximately 66,500 existing meters at various points throughout its distribution system at an estimated cost of approximately $35.4 million, exclusive of meters associated with projects previously described.

The Company is also planning to replace approximately 3,800 old water service lines and 1,230 wastewater laterals at an estimated cost of approximately $47.3 million, exclusive of services associated with projects previously described. The Company plans to replace approximately 51 miles of various diameter water pipes and approximately 15 miles of sewer main at a cost of approximately $147.3 million, exclusive of the larger pipeline investment projects previously described. The Company anticipates that additional developer projects will occur in the FPFTY, which will be funded by advances.

Q. Please describe PAWC's LSLRP and recent updates approved by the PUC in August 2025 at Docket No. P-2024-3050236.

A. The Company is at the forefront of the water industry in proactively eliminating the risks posed by the presence of LSLs. PAWC was the first water utility for which the PUC approved a plan for LSLs pursuant to Act 120 of 2018 ("Act 120"), which requires Pennsylvania water utilities to ensure total removal of LSLs in their water systems within 25 to 30 years. Since the PUC approved that plan in 2019, PAWC has expanded its service line inventory efforts to identify unknown service line materials across its service territory. In accordance with the PUC's Act 120 regulations, PAWC updated and resubmitted its LSLRP in July 2024 to account for the LCRI, including the requirement for the Company to replace all LSLs in its system by December 2037, and allowing PAWC to perform up to

$35 million in replacements per year. Other enhancements in the updated LSLRP approved by the PUC include the following:

- Expanded Customer Outreach – The Company will implement targeted communication strategies to raise awareness about the risk of exposure to lead, service line replacement options and how to contact the Company regarding available opportunities. This includes multilingual materials, community engagement events, a comprehensive stakeholder toolkit, and digital tools to help customers identify and self-report their service line material.
- Funding Opportunities – PAWC has actively pursued state available funding to offset replacement costs, particularly in low-income and disadvantaged communities. To date, the Company has received PENNVEST funding in the amount of $23.4 million of combined low-interest loans and grants to replace roughly 1,400 LSLs across several locations in Pittsburgh, New Castle and Coatesville.
- Customer Termination and Step-In Rights – To ensure full LSL replacements, the updated plan includes provisions that allow the Company to temporarily disconnect service or step in to complete an LSL replacement when obstacles arise, such as refusal to participate or lack of access or response.

In short, PAWC is compliant with current LCR requirements and has been aggressively identifying and replacing Company-side lead and galvanized service lines and using the PUC-approved LSLRP to support simultaneous customer side replacements. PAWC anticipates spending $32,486,635 from June 30, 2025 through June 30, 2027 to replace LSLs in its water system, supporting the Company's goal of replacing all remaining known LSLs by 2037.

Risks Associated with Furnishing Public Water and Wastewater Service
Public Water Service

Q. Please provide an overview of the risks associated with furnishing safe and adequate water quantity and water quality and complying with drinking water and environmental regulations that apply to PAWC's water supply facilities and operations.

A. Water supply utilities are subject to a complex array of regulations at the federal, state and river basin commission levels with respect to water quantity, water quality and other environmental aspects of their facilities and operations.

With respect to water sources and the quantity of water that can be withdrawn, PAWC's surface water and groundwater sources are subject to a combination of common-law riparian rights and groundwater rights coupled with regulatory regimes administered by the PADEP, the Susquehanna River Basin Commission ("SRBC") and Delaware River Basin Commission ("DRBC"). These organizations administer the 1939 Water Rights Act,[5] which requires that public water supply agencies wishing to withdraw water from surface sources, or to acquire rights in surface sources, first obtain a permit. Water systems with sources developed prior to 1939 were accorded "orders of confirmation" confirming grandfathered withdrawals, but subsequent changes to those systems and/or increased withdrawals may trigger permitting requirements and possible loss of the "order of confirmation." Both SRBC and DRBC are empowered to review and approve projects having a substantial effect on basin water resources.[6] Pursuant to their project review authority, SRBC and DRBC review proposed surface and groundwater withdrawals that

[5] 32 P.S. §§ 631-641.

[6] DRBC Compact § 3.8; SRBC Compact § 3.10(2).

may have a "substantial effect" on basin waters (which are defined in both basins to include withdrawals of greater than 100,000 gallons per day from any source or combination of sources). Such project review is focused on determining consistency with Commission-adopted comprehensive plans and "the proper conservation, development, management or control of the water resources of the basin." In administering their permitting programs, the PADEP, SRBC, and DRBC apply varying policies imposing limitations on withdrawals or requirements for conservation releases from reservoirs to protect stream flows.

Pennsylvania, overall, does not currently suffer serious constraints on its supply of usable water.[7] However, that assessment does not apply uniformly to all parts of the Commonwealth and can change with the climate. In the fall of 2024, the entire Commonwealth experienced uncommonly dry weather. The drier weather, while not as severe as in the Southwest part of the United States, still placed every county on a drought watch. The potential of having sources compromised and the inability to provide water is a significant concern. The legacy of coal mining, the effect of oil and gas drilling, run-off from high-intensity agricultural land use, and contamination from inadequate or malfunctioning on-lot septic systems create challenges to obtaining adequate supplies of water in various areas of Pennsylvania. Today, as in the past, these factors continue to drive requests by homeowners for PAWC to extend its facilities to serve areas that do not have a public water supply. Under the Commission's regulations on water utilities' responsibility for main extensions, PAWC is required to make a significant investment to extend its facilities to serve bona fide applicants.

[7] As explained below, climate variability is expected to affect the pattern of precipitation in ways that will challenge water suppliers by increasing the severity of both major storm events and intermittent periods of drought.

Additionally, as explained above, there are multiple levels of authorization and regulation that apply to a water system that wants to add a new source of supply or increase its withdrawals from existing sources. These factors add to the costs and lead time for obtaining new, or increasing existing, water sources to meet new demands that may arise in portions of the Company's system. These are additional risk factors that can directly affect PAWC's ability to furnish safe, adequate and reliable service, and increase the costs PAWC incurs to provide that service.

Drinking water quality is addressed by a combination of federal regulation established under the Safe Drinking Water Act of 1973 coupled with state regulation under the Pennsylvania Safe Drinking Water Act. The federal act established the EPA as the federal regulatory authority on drinking water. Under that authority, the EPA has created standards for contaminant levels in drinking water and a series of mandatory treatment method standards, coupled with monitoring and reporting requirements, and public notification mandates in the event of contaminant level or treatment method non-compliance.[8] In turn, Pennsylvania has adopted the federal regulatory standards, plus some even more stringent rules, as codified in 25 Pa. Code Ch. 109, which are administered by the PADEP.

In recent years, there has been an increase in public concern over potential contaminants that laboratories can now identify at levels that, in the past, could not be detected. Certain experts suggest these contaminants might have health effects. The EPA and state drinking water regulators have responded by increasing their own research and, in some cases, imposing or proposing more stringent regulatory standards, such as with

[8] *See* 40 C.F.R. Parts 141-143.

respect to PFAS. On April 10, 2024, the EPA announced the final National Primary Drinking Water Regulations ("NPDWR") that establish legally enforceable levels (Maximum Contaminant Levels, or "MCLs" and Maximum Contaminant Level Goals ("MCLGs")) for six PFAS, including perfluorooctanoic acid ("PFOA") and perfluorooctanesulfonic acid ("PFOS"). The NPDWR gives public water systems until 2029 to complete water treatment system adjustments and infrastructure upgrades, as may be necessary, to comply with the MCLs. In addition to these federal regulatory requirements, Pennsylvania has promulgated state drinking water standards establishing strict MCLs and MCLGs for PFOA and PFOS with compliance monitoring mandates that were effective January 1, 2024. The state and federal PFAS rules both provide a very short time frame for compliance. To mitigate potential supply shortages, the Company is proactively deploying treatment processes in its water systems to reduce the levels of the six PFAS covered by the current NPDWR to levels below the EPA standards, even if the levels of these PFAS in the applicable PAWC system comply with the PADEP MCLs. Company witness Jim Runzer provides more details on PAWC's PFAS measures planned for the FTY and FPFTY to comply with federal and state PFAS standards.

Upstream releases of chemicals also represent a significant risk and concern for the Company. For example, earlier in 2025, a tanker overturned on a major highway in Harrisburg, Pennsylvania, spilling over 3,000 gallons of petroleum product onto the roadway. This runoff had the potential to enter a stormwater drain and ultimately discharge directly upstream of a Company WTP intake located in Steelton, Pennsylvania. The County Office of Emergency Management directly called PAWC from the accident site, and a coordination call was set up to start communication and action planning for PAWC

operations. With such advanced notice, PAWC staff were able to delay the WTP startup so that we could receive confirmation that the Company's source of supply was not contaminated from the runoff. A National Response Center report of an unknown amount of "fall dam solution" was released onto the ground and made its way to a drain to an outfall. Several regulatory agencies and environmental groups supplied more information and eyes on the scene both during and after business hours, which PAWC was able to utilize to make treatment decisions in real time.

While this release did not impact PAWC's systems, these types of incidents illustrate that contamination is a significant risk faced by water suppliers and the importance of their ability to operate dynamically to prepare for and respond to future chemical releases by third parties.

Public Wastewater Service

Q. Provide an overview of the risks that environmental regulation poses for PAWC as the owner and operator of public wastewater systems.

A. Like the provision of public water supply service, the operation of wastewater collection and treatment systems entails a range of environmental regulatory risks. Each of the wastewater systems acquired by the Company over the past several years came with significant regulatory compliance challenges. For example, the York wastewater system acquired by the Company in 2022 is subject to a Consent Agreement with the EPA that requires system upgrades to address violations of untreated wastewater discharges that have occurred historically. The Company is required to ensure any high-flow events receive treatment prior to discharge. Another example is that the Butler wastewater system that was acquired in 2024 is subject to a Corrective Action Plan with PADEP due to SSOs

within the collection system that requires improvements to six lift stations to address those SSOs.

Wastewater operations are also regulated at both the federal and state levels pursuant to numerous statutes and voluminous regulations. At the federal level, wastewater systems are regulated pursuant to the Clean Water Act, and numerous regulations adopted by the EPA under that law. At the state level, the Pennsylvania Clean Streams Law, Sewage Facilities Act, Solid Waste Management Act, Storage Tank and Spill Prevention Act and other laws administered by the PADEP, coupled with the regulations adopted under those statutes, set standards and requirements for virtually every aspect of wastewater system operations.

One risk associated with operating wastewater systems is that effluent limitations imposed on WWTP discharges are stringent and often become more stringent over time. The Clean Water Act requires wastewater systems to obtain and comply with NPDES permits, which, in Pennsylvania, are issued by PADEP. Every five years, NPDES permits are up for renewal, and in any such renewal, more stringent limits may be triggered.

Another risk for PAWC is that several Pennsylvania streams, including those where PAWC is operating wastewater systems, are parts of watersheds that are classified as "impaired," meaning their instream quality does not meet state standards. Such impaired waters are subject to the development and imposition of Total Maximum Daily Loads ("TMDLs") for parameters that contribute to the instream conditions. A prime example is the Chesapeake Bay watershed, which includes the entire Susquehanna River Basin, where a TMDL has been established for sediments (total suspended solids) and nutrients (phosphorous and nitrogen). Where TMDLs are established by the EPA or the PADEP,

stringent waste load allocations are made to point-source discharges (such as WWTPs), and allocations are also made to non-point sources, such as agriculture and urban runoff. In the case of the Chesapeake Bay TMDL, for example, every WWTP in the Susquehanna Basin has been accorded an annual "cap load" for total nitrogen and total phosphorous – where any cap loading exceedance irrespective of the cause (such as increased flows and loadings from system customers or high stormwater flows entering the system) – can lead to stiff penalties and other enforcement actions.

Wastewater systems also face significant regulatory and environmental liability risks. Non-compliance with wastewater system effluent limits and other permit conditions can result in severe penalties. Regulatory violations open the operator to not only governmental agency enforcement actions, but also private lawsuits in which both injunctive relief and civil penalties can be imposed.

Another risk arises from PAWC's CSSs (Kane, McKeesport, Scranton and the to-be-acquired CSS from Elizabeth Borough Municipal Authority), where both storm water and sanitary/industrial wastewaters flow in the same sewer lines. CSSs incur high flows during and after storms, which may exceed the system's conveyance and/or treatment capacity, with excess untreated wastewater discharged to receiving streams through CSO outfalls. In many cases, separation of CSSs into separate sanitary and storm systems is logistically and economically infeasible. While the Company and the communities it serves did not and do not create the problems facing the treatment of wastewater, additional costs to address actions by previous dischargers and upstream polluters and cleanup water ways cannot be avoided.

Under applicable NPDES permits, operators of CSSs must develop and implement LTCPs, consisting of collection system and treatment plant improvement projects designed to reduce CSOs to no more than four to nine (depending on the receiving water body) events per year and/or capture and treatment of 85% to 90% of annual storm water flows. These LTCP requirements often involve substantial multi-year capital expenditure programs.

CSS operators must adopt and implement a Nine Minimum Controls Plan,[9] consisting of a series of actions that address the management of storm water and constituents in storm water runoff, including regulation of storm water connections, regulation of land development/erosion and sedimentation activities, control of industrial and other dischargers, catch basin maintenance, and street sweeping, etc.

Moreover, even where systems being acquired do not involve combined sewers, high rates of I&I[10] during wet weather can surcharge the system and exceed the hydraulic or treatment capacity of the WWTP. System upgrades to reduce I&I may require major capital expenditures. Some I&I can be isolated and remedied; however, the bulk of I&I comes in through small defaults and requires relining or replacement of the entire pipeline with services reconnected to the main. The recently acquired York WW system has had historically high I&I. Overcoming the I&I challenge requires projects at the WWTP, as well as significant upgrades to the collection system, to reduce the I&I to a level it does not over stress the WWTP.

---

[9] U.S. Environmental Protection Agency, Combined Sewer Overflows Guidance for Nine Minimum Controls, EPA 832-B-95-003 (May 1995), available at: https://www3.epa.gov/npdes/pubs/owm0030.pdf.

[10] I&I involves the infiltration of groundwater and stormwater into what is considered to be a sanitary only sewer line, such as through joints and other weaknesses in the pipelines.

Challenges Climate Variability May Create

Q. Does climate variability pose additional risks for water supply and wastewater system utilities such as PAWC?

A. Yes. Whatever the debate may be concerning the causes of climate variability, water supply and wastewater utilities face the reality of changing climatic conditions and attendant stresses on water resources. In recent years, Pennsylvania has experienced increased droughts of varying degrees of severity and more frequent and intense high-flow events, and floods significantly impact water and wastewater utilities.

Water supply systems are fundamentally resource-dependent and, therefore, the effects of climate variability pose a significant ongoing risk and create challenges with regard to maintaining a reliable water supply during the full range of potential future conditions. The safe yields of water supply sources have historically been evaluated based on historical climatic patterns, data from so called "droughts of record" or dry period frequency analysis. However, changing climatic conditions suggest that historical hydrologic data (which in many cases only reflect 50-100 years of rainfall and stream flow measurement collection – a quite short period in geologic or climatic time) may not accurately predict future conditions. Thus, the calculated safe yield of streams, reservoirs and groundwater wells are put in question as the effects of climate variability are experienced across the northeastern United States. Thus, in response to climate variability, water supply systems must address the risks posed to the reliability and resilience of their sources.

While droughts are the major challenge for water supply systems, heavy precipitation and high-flow events are the concern of wastewater systems. As mentioned previously, wastewater systems of all types are impacted by storm water – directly in the

case of CSSs and indirectly (but nevertheless significantly) by I&I in "sanitary only" systems, which must cope with and treat higher peak flows while avoiding exceedance of effluent limitations and reducing the potential for untreated overflows. An additional challenge related to high intensity rain events is higher levels and frequency of flooding, which has the potential to impact both water and wastewater treatment facilities, which are often located in proximity to waterways.

Receivership and Acquisition Related Improvements

Q. Does PAWC serve as a receiver for any troubled water systems?

A. Yes. As of this base rate case filing, PAWC has one system in receivership under Section 529 of the Public Utility Code, the Rock Spring Water Company ("Rock Spring") water system, which serves approximately 1,000 customers in Centre County. PAWC assumed its receivership of Rock Spring via a PUC order entered on March 20, 2025. Additionally, on April 28, 2025, PAWC acquired the water system assets of the EDWA that serves approximately 1,600 customers in Greene County. Prior to the acquisition, PAWC managed and operated the EDWA system as its receiver following a November 2023 PUC emergency order and February 2024 Pennsylvania Commonwealth Court decision.

Q. Please describe in general terms the types of improvements that the Company will make in post-acquisition investment during the FTY and FPFTY.

A. Exhibit 3-C includes approximately $59 million in acquisition system investments. In general terms, for water systems, we invest in safety, SCADA, security, geographic information system ("GIS") asset inventory, leak detection, targeted main replacement, meter replacement, LSL replacement, and treatment improvements to bring acquired systems into compliance with safety and environmental regulatory standards. For

wastewater systems, we invest in safety, SCADA, security, GIS asset inventory, collection system condition-based assessment, targeted main replacement, and treatment improvements to bring acquired systems into compliance with safety and environmental regulatory standards.

Q. Please describe some recent wastewater acquisitions where PAWC successfully addressed long standing environmental compliance issues.

A. PAWC acquired the York wastewater system in 2022 from the City of York. The system was in disrepair, and during the time leading up to the sale, EPA was in the process of developing an Administrative Order for Compliance on Consent ("AOCC") related to the WWTP. The AOCC was executed by both the City of York and PAWC prior to the closing of the acquisition. The AOCC lists numerous WWTP outfall exceedances that occurred from January 1, 2017 through August 31, 2020, and identifies various evaluations and compliance projects that need to be completed. PAWC has been working diligently on the remedial actions identified in the AOCC. The PAWC work order management system (Mapcall) was implemented shortly after the closing of the acquisition. A SCADA system upgrade was substantially completed in 2024. Replacement of Screw Pump #3 and Outfall 001 disinfection improvements are currently in progress and awaiting PADEP permits before they can be implemented. The AOCC also requires evaluation of the treatment process and identification/implementation of capital projects to ensure compliance with Outfall 001 effluent limits. This evaluation is currently in progress, but the lack of significant storm events and no Outfall 001 discharges since the acquisition has prevented the completion of this investigation.

In addition to the projects in AOCC, PAWC has made additional significant investments to improve the operation and reliability of the WWTP and collection system. Various work has been completed at the WWTP including a new security system, safety improvements, HVAC improvements, electrical improvements, and replacement of various treatment process equipment such as pumps, valves, instruments, etc. PAWC has also made significant investments in the collection system to improve I&I and minimize overflows. CCTV inspection has been completed for the entire portion of the collection system within the city owned by PAWC. The vast majority of the collection system is constructed of old vitrified clay pipe, which is in poor condition. PAWC has completed lining of over 75,000 feet of collection system piping in 2024/2025 and plans to continue lining work for the foreseeable future. A project to replace 2,500 feet of 12" vitrified clay pipe interceptor and manholes is underway and expected to be complete in 2025. The new 18" interceptor will increase capacity, reducing the risk of overflows and I&I. Future projects at the WWTP will include any projects identified as part of the AOCC evaluation process. Additional projects will likely include replacing the aged dewatering centrifuges, replacing the aeration system, and rehabilitating the primary pump house.

PAWC purchased the Exeter Township ("Exeter") wastewater system in 2019. At the time of the sale, the system was in disrepair and Exeter was under PADEP order to remedy a long list of deficiencies in its system and its operational procedures. To be specific, from January 2015 through March 2019, PADEP cited Exeter for the following violations: six (6) NPDES permit final effluent violations; twenty-six (26) discrete SSOs to the surface of the ground and to waters of the Commonwealth; one (1) unpermitted discharge of an estimated five (5) million gallons of raw sewage from manholes on the

WWTP's influent line to Heisters Creek, a tributary to the Schuylkill River and a water of the Commonwealth; five (5) unpermitted discharges of raw sewage from the WWTP's treatment units to the surface of the ground and the plant's stormwater collection and conveyance system due to operational and maintenance issues; two (2) unpermitted discharges of sewage to the surface of the ground and to waters of the Commonwealth due to power/equipment failure at sewage pumping stations; one (1) spill of hauled-in sewage sludge to the WWTP's stormwater collection and conveyance system; one (1) incident where the WWTP failed to disinfect effluent discharge flow to the Schuylkill River, a water of the Commonwealth, for an estimated 24 hours; one (1) incident where a contractor excavated and struck a section of the 30-inch main raw influent interceptor to the WWTP causing sewage to back up into the excavation; and evidence of hydraulic loading in the collection system that necessitated a CAP under the Chapter 94 Municipal Wasteload Management program.

Concurrently with the closing of the transaction, PAWC entered into a COA with PADEP to resolve the deficiencies and bring the system back into compliance. Since acquiring the system, PAWC has been working diligently on the remedial actions identified in the COA and has met every deadline established by PADEP. PAWC has invested over $32 million in capital improvements to the collection system and WWTP. Work has included major projects like remedying the issues identified by PADEP in the COA as well as projects that improve environmental compliance, improve system reliability, and expand piping and pumping capacity to accommodate heavy rains and growth of the community. The Exeter Equalization Tank project described earlier in my direct testimony will be underway in 2026.

Q. Please describe some recent water acquisitions where PAWC successfully addressed long-standing water quality, environmental compliance, and system reliability issues.

A. PAWC acquired the Audubon water system on May 28, 2025, from AWC. The system was in disrepair and struggled with water quantity and water quality and PAWC entered into a COA with PADEP on May 21, 2025, which documents the corrective actions PAWC will perform. The Audubon water system consists of two water systems that are not interconnected with each other. The main system has 10 groundwater wells, three of which were exceeding PADEP's PFAS MCLs, while nine of which are exceeding EPA's PFAS MCLs. By August 4, 2025, PAWC was able to permit and construct improvements to the Egypt Road Interconnect to allow a portion of the main system to be isolated and served from the PAWC Norristown system and the three ground water wells that were exceeding PADEP's PFAS MCLs to be removed from service.

The Valley Forge Crossing Mobile Home Park has three active groundwater wells, which also have elevated PFAS levels exceeding EPA's PFAS MCLs. PAWC is meeting the milestones established within the COA to evaluate alternatives for a main extension from the nearby PAWC Norristown system. Once completed, the three ground water wells will be removed from service. PAWC is continuing to install additional interconnects from the Audubon system to the Norristown system, and by 2028, all water to the Audubon system will be provided from the PAWC Norristown and/or Royersford water systems and all wells will be removed from service.

In 2019, PAWC purchased the public water system of Steelton Borough. This system was suffering from a lack of investment and was facing numerous challenges at the time of sale, including an antiquated control system that was a view-only system and did

not allow full operator control; outdated water quality analyzers that were no longer supported by the manufacturer; lack of any corrosion control process to protect against elevated lead and copper concentrations in the water consumed by customers; deteriorating distribution storage tanks; areas of low pressure and insufficient fire flow volumes in the distribution system; disinfection byproduct ("DBP") levels exceeding MCLs under the Safe Drinking Water Act; insufficient filter backwash capability and lack of filter-to-waste facilities required by PADEP; and numerous safety deficiencies.

Over the last six years, PAWC has made numerous improvements to resolve these deficiencies and ensure that the plant produces high quality drinking water in compliance with state and federal regulations. The control system was replaced with a new state-of-the-art SCADA system that allows operators to fully control the process, collects and stores all water quality compliance data for reporting, and will alarm and automatically shut the plant down if a treatment upset is detected. The new SCADA system provides full compliance data reports by continuously monitoring and recording compliance data every 15 minutes. Prior to the new system, the operations staff had to manually calculate disinfection log removal during the highest flow period for the day. The new SCADA system continuously calculates disinfection log removal and provides alarms to let the staff know that they are approaching a regulatory limit. All water quality analyzers were replaced with state-of-the-art units. The new turbidimeters house an SD card that continuously records turbidity data and provides a backup of compliance data that was not possible with the old analyzers. Chlorine and pH analyzers were also updated to provide reliable and accurate log removal calculations and chlorine residual recording.

Numerous safety upgrades have been completed to make sure the plant is safe for the workers and is compliant with Occupation Safety and Health Administration ("OSHA") regulations. Removable handrails were added to the loading dock. Toe guards were added to all handrailing on filters and clarifiers. Safety gates in the handrail system allow for safe ingress/egress into the filters. Both MG distribution storage tanks were completely rehabilitated and repainted. A new booster station was added to the distribution system to remedy the low-pressure concerns and increase fire flow volumes. The new booster station will also assist in reducing disinfection byproducts ("DBP") by allowing the storage tanks to have better turnover and improve the ability to perform flushing in this part of the distribution system.

In 2024, a project was completed to convert the treatment plant coagulant from aluminum sulfate to Delpac 2020 poly-aluminum chloride and install corrosion control treatment using zinc orthophosphate. This project resulted in improved corrosion control in the distribution system for lead and copper compliance, improved clarifier settled turbidities in the treatment plant, and DBPs. The system has complied with DBP limits since PAWC took over the system, but these improvements will provide a larger margin of safety and minimize or eliminate the need for the automatic blowoffs that PAWC previously added to the distribution system.

In 2025, a project was completed to redesign and rebuild the filter backwash and filter-to-waste processes and convert from gas chlorine to liquid sodium hypochlorite for increased safety. A new backwash tank was added to provide higher backwash flows and will allow the plant to meet the required bed expansion during a backwash for improved filter cleaning. Previously, the plant could not achieve the required bed expansion. The

filters were fitted with an air scour system, which also assists in cleaning the filters during a backwash. Finally, filter-to-waste capability is being added to the filters to meet PADEP public water supply manual recommendations. The filter-to-waste portion of the project is expected to be completed in the fall of 2025. This most recent project has improved filter performance and run times and is expected to further assist in DPB reductions. The conversion from gas chlorine to liquid sodium hypochlorite has improved the safety of the employees and local community.

Q. Does this conclude your direct testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

R-2025-3058051 (WASTEWATER)

DATE: NOVEMBER 14, 2025

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF JARED DEASON

Q. What is your name and business address?

A. My name is Jared Deason, and my business address is 1 Water Street, Camden, New Jersey 08102.

Q. By whom are you employed and in what capacity?

A. I am employed by American Water Works Service Company, Inc. (the "Service Company" or "AWWSC"), a subsidiary of American Water Works Company, Inc. ("American Water") and an affiliate of Pennsylvania-American Water Company ("PAWC" or the "Company"), as Director, Rates and Regulatory. The Service Company provides shared services to American Water's utility subsidiaries, including PAWC.

Q. Please summarize your educational background and professional experience.

A. I have a bachelor's degree in economics from Florida State University. I have approximately 16 years of experience in the water and wastewater utility industry, the last two years of which have been with AWWSC. Prior to my time with AWWSC, from 2015 to 2023, I was employed as the Regulatory Manager for Sunshine Water Services, the Florida subsidiary of Nexus Water Group. I was also previously employed by the Florida Public Service Commission from 2007 to 2011 as a Regulatory Analyst IV assigned to the water and wastewater section of the former Division of Economic Regulation. In that role, I was the lead analyst in many water and wastewater rate proceedings. Additionally, I am a current member of the Society of Utility and Regulatory Financial Analysts and a Certified Rate of Return Analyst.

Q. What are your duties as Director of Rates and Regulatory?

A. My primary responsibilities involve the review and preparation of regulatory filings, proceedings, and related endeavors for the regulated subsidiaries of American Water. This includes the preparation of written testimony, exhibits, and workpapers in support of regulatory proceedings. In addition, I also review regulatory developments and evaluate alternative strategies that may impact the operations of American Water and its subsidiaries.

Q. Have you previously submitted testimony before any public utility commission?

A. Yes, I have provided written testimony before the Florida Public Service Commission, the Tennessee Public Utility Commission, the Alabama Public Service Commission, the Utilities Division of the Arizona Corporation Commission, the Iowa Utilities Commission, the Indiana Utility Regulatory Commission, the Hawaii Public Utilities Commission, and the Maryland Public Service Commission.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to explain the portions of the Company's principal accounting exhibit (*see* Exhibit No. 3-A, which is being sponsored by Company witness Dr. Christina Chard) that relate to the Company's claims for rate base, depreciation and amortization, and acquisitions in rate base since its last base rate case.

The Development of the Combined Water and Wastewater Revenue Requirement

Q. Please explain how the Company developed its revenue requirement in this case.

A. The total Company revenue requirement was developed based on five separate revenue requirements, defined as follows:

- Water Operations,

- Wastewater ("WW") Sanitary Sewer Systems ("SSS") General Operations,
- Butler Area Sewer Authority ("BASA") WW Operations,
- Elizabeth Borough Municipal Authority ("Elizabeth" or "EBMA") WW Combined Sewer Systems ("CSS") Operations, and
- WW CSS Operations.

In this case, the Company is distributing a portion of the revenue requirements for its wastewater operations to the revenue requirements of its water operations as shown in Exhibit No. 3-A on the Revenue Requirement Summary. The allocation of a portion of wastewater revenue requirements to water revenue requirements by utilities that provide both forms of service was authorized by amendments to the Public Utility Code made by Act 11 of 2012. Those amendments provide the Pennsylvania Public Utility Commission ("Commission") with a reasonable means of moderating the rate impact of significant investments needed to improve the service, reliability and environmental compliance of acquired wastewater systems. The Commission approved the allocation of a portion of the Company's wastewater revenue requirements to water revenue requirements in the Company's last five base rate proceedings.

For the Company's five revenue requirements identified above, the Company has prepared five detailed revenue requirement studies that set forth the Company's claims for rate base, depreciation, operating and maintenance expenses, taxes and pro forma revenues for a historic test year ending June 30, 2025 ("HTY"), a future test year ending June 30, 2026 ("FTY"), and a fully projected future test year ending June 30, 2027 ("FPFTY"). In Exhibit No. 3-A, the historic test year data are generally identified by the title or heading "Present Rates at June 30, 2025," and the FTY and FPFTY are generally

identified by the title or heading "Present Rates at June 30, 2026" and "Present Rates at June 30, 2027," respectively.

Q. Why did the Company prepare separate revenue requirements?

A. The Company developed revenue requirements for its base water, wastewater sanitary sewer systems, and wastewater combined sewer systems, and also developed individual revenue requirements for its wastewater operations in BASA and EBMA since, in the Company's last base rate case (*see* Docket Nos. R-2023-2043189; R-2023-2043190), the Commission directed the Company to prepare separate cost of service studies for new Section 1329 acquisitions in the first base rate proceeding where those systems are included in the Company's revenue requirement. The Joint Petition for Settlement (the "2022 Settlement"), which was approved by the Commission in the Company's 2022 base rate case (*see* Docket Nos. R-2022-3031672; R-2022-3031673), provides that the Company is not required to provide a separate study for each combined stormwater system. The Company has included one CSS study for Scranton, McKeesport and Kane wastewater systems, as permitted under the 2022 Settlement.

Rate Base

Q. What are the Company's rate base claims in this proceeding?

A. The total Company rate base claim in this proceeding is shown below for each of the five revenue requirements:

Rate Base	**2027 Proposed**
Water Operations	$5,174,843,488
WW SSS General Operations	$661,192,899
BASA WW Operations	$245,527,676
Elizabeth WW CSS Operations	$28,350,331
WW CSS Operations	$520,293,107
Total:	**$6,630,207,501**

The calculations of these amounts are shown in Exhibit No. 3-A under the respective rate base sections for each revenue requirement.

Q. What are the elements of the Company's rate base claims?

A. PAWC's rate base claims consist of several elements. The first and largest element is the depreciated original cost of net plant in service. To this amount, three items have been added to each of the rate base claims: (1) materials and supplies; (2) cash working capital; and (3) accrued taxes net of prepaid taxes.

For Water Operations, items four and five described below were added:

(4) the unamortized balance of the Commission-approved utility plant acquisition adjustments ("UPAA") associated with the Company's acquisitions of the water assets of the former Pennsylvania Gas & Water Company ("PG&W"), Lake Spangenberg Water Company, the Fernwood Community Water System, the Olwen Heights Water Service Company, Inc., the Steelton Borough Authority, Municipal Authority of the Borough of Turbotville, Valley Township, SLIBCO Utilities, and Creekside Homeowner's Association.

In addition, the Company is seeking approval for recovery of the UPAA and/or transaction and closing costs associated with its acquisitions of the water systems from Farmington Township ("Farmington"), Audubon Water Company ("Audubon"), Manwalamink Water Company, East Dunkard Water Authority ("East Dunkard"), Appalachian Utilities, Inc. ("Appalachian"), and Corner Water Supply and Service Corporation ("Corner Water").

The purchase price of $5,545,000 for the Farmington acquisition was allocated in the amounts of $2,621,313 for the water assets and $2,923,687 for the wastewater assets.

For the Farmington water system, the depreciated original cost was calculated to be $2,485,868, resulting in a proposed UPAA of $135,444. The transaction and closing costs for the Farmington acquisition are $66,141. For Audubon, the difference in the purchase price and depreciated original cost resulted in a proposed UPAA of $7,639,771; however, the Company is seeking a UPAA of $3,239,771.[1] The transaction and closing costs for Audubon are $299,089. For Manwalamink Water Company, the UPAA is $1,157,427, and the transaction and closing costs are $131,892. The transaction and closing costs for East Dunkard, Appalachian, and Corner Water are $174,008, $156,852, and $12,398, respectively. Please refer to the rate base sections of Exhibit Nos. 3-A and 3-C for more detail on these acquisition adjustments.

(5) The Company is requesting ongoing amortization of the costs incurred by the Company as receiver of Winola Water Company as approved at Docket Nos. R-2020-3019369 and R-2022-3031672, and seeking approval of costs as receiver of East Dunkard.

For the Wastewater SSS General Operations rate base claim, a fourth item was added: the unamortized balance of the Commission-approved UPAAs associated with the Company's acquisitions of the wastewater assets of the former Clean Treatment Sewage Company and Delaware Sewer Company, Borough of New Cumberland, Sadsbury Township Municipal Authority ("STMA"), Exeter Township, Delaware Sewer Company, the Borough of Turbotville, Valley Township, Foster Township, the Borough of Royersford, Upper Pottsgrove Township, and the City of York. In addition, the Company is seeking a UPAA of $1,058,334 for Manwalamink Sewer Company. Also, the Company

[1] On January 23, 2025, the Commission entered an Order at Docket Nos. A-2023-3043194 and A-2023-3043196 approving the Joint Petition of Settlement of All Issues ("Audubon Settlement"). The Audubon Settlement included a provision in which the Company agreed to limit the amount it requests to add to rate base for the Audubon system to $3,600,000.

is seeking approval for recovery of the acquisition transaction and closing costs associated with the acquisitions of wastewater assets of Farmington Township ($86,961) and Sadsbury Township Municipal Authority ("STMA") (Lancaster County) ($97,262), Manwalamink Sewer Company ($134,017), and Towamencin Township ($660,138). These acquisition transaction and closing costs are similar to the acquisition transaction and closing costs approved by the Commission and previously discussed in my testimony.

For BASA WW Operations, a fourth item was added: the Company is seeking approval for recovery of $1,291,045 for the acquisition transaction and closing costs associated with the Company's acquisition of BASA's wastewater assets, Docket No. A-2022-3037047, which was approved on November 16, 2023. These acquisition transaction and closing costs are similar to the acquisition transaction and closing costs discussed previously.

For Elizabeth WW CSS Operations, a fourth item was added: the Company is seeking approval for recovery of $545,516 for the acquisition transaction and closing costs associated with the Company's acquisition of EBMA's wastewater assets, Docket No. A-2025-3052983, which is expected to close in December 2025. These acquisition transaction and closing costs are similar to the acquisition transaction and closing costs discussed previously.

For the WW CSS Operations rate base claim, a fourth item was added: the unamortized balance of the Commission-approved transaction and closing costs associated with the Company's acquisitions of the wastewater assets of the Sewer Authority of the City of Scranton, the Municipal Authority of the City of McKeesport, and the Borough of Kane Authority.

For the calculation of the Water Operations rate base claim, seven items have been deducted: (1) a net offset to cash working capital requirements to reflect the timing of the payment of interest and preferred dividends; (2) unamortized investment tax credits that were generated prior to 1971; (3) a 13-month average of extension deposits in suspense; (4) contributions-in-aid-of-construction ("CIAC") and customer advances for construction ("CAC") associated with the Company's acquisition of the water assets of the former Citizens Utilities Water Company of Pennsylvania ("Citizens"); (5) balance of the regulatory liability for the federal income tax savings associated with the 2017 Tax Cuts and Jobs Act ("TCJA") for January 1, 2018 through June 30, 2018 (the "Stub Period") and the unamortized balance of the Negative Deferred Tax Credit reconciliation from January 28, 2021 through January 27, 2023; (6) other deductions (as described below); and (7) accumulated deferred taxes.

For the calculation of the WW SSS General Operations and WW CSS Operations rate base claims, three items have been deducted: (1) a net offset to cash working capital requirements to reflect the timing of the payment of interest and preferred dividends; (2) the balance of the regulatory liability for federal income tax savings associated with the TCJA Stub Period relating to Wastewater SSS General and Scranton WW CSS Operations; and (3) accumulated deferred taxes.

For the calculation of the BASA and Elizabeth WW Operations rate base claims, two items have been deducted: (1) a net offset to cash working capital requirements to reflect the timing of the payment of interest and preferred dividends; and (2) accumulated deferred taxes.

Q. Please explain how the depreciated original cost of net plant for the FPFTY was determined.

A. Net plant is the total utility plant in service, less CIAC, CAC, and excluded property. Depreciated original cost is the original cost, less accrued depreciation. The original cost of net utility plant as of the end of the FPFTY consists of the amount recorded in PAWC's plant accounts at June 30, 2025, plus projected additions, net of retirements, through June 30, 2026 and 2027, respectively, less CIAC and CAC. The original cost of plant in service at June 30, 2025, and the original cost of claimed additions and retirements, shown by detailed plant account, are set forth in Exhibit No. 3-A under the respective rate base sections for each revenue requirement study. Company witness Tony Nokovich discusses the more significant plant additions in his direct testimony (*see* PAWC Statement No. 4). The accrued depreciation at June 30, 2026 and 2027, respectively, related to net plant in service was determined by the Company's depreciation consultant, John J. Spanos, and is shown in Exhibit No. 3-A under the respective rate base sections for each revenue requirement study.

Q. Do the continuing property records, as maintained by the Company and augmented by depreciated original cost studies and fair market value appraisals for acquisitions, accurately reflect additions and retirements to plant in service?

A. Yes, they do. The Company's filing for the fair market value acquisition of the BASA wastewater assets reflects the net value of the assets at the ratemaking rate base agreed to by the parties in the Joint Petition for Approval of Unanimous Settlement of All Issues, filed with the Commission on August 14, 2023, Docket No. A-2022-3037047.[2] For the

[2] The Commission entered a final Order approving the Joint Petition for Approval of Unanimous Settlement of All Issues in this case on November 16, 2023.

fair market value acquisition of the EBMA wastewater system, the Company also reflects the net value of the ratemaking rate base reflected in the Company's acquisition application in Docket No. A-2025-3052983.[3] Preliminary depreciated original cost studies were completed and filed with the Commission for the following acquisitions:

- Farmington Township Water assets – Docket No. A-2023-3042587
- Farmington Township Wastewater assets – Docket No. A-2023-3042567
- STMA Wastewater assets – Docket No. A-2023-3042058
- East Dunkard assets – Docket No. A-2024-3049759

For the acquisitions of Audubon (Docket Nos. A-2023-3043194; A-2023-3043196), Manwalamink Water Company (Docket Nos. A-2023-3044418; A-2023-3044419), Manwalamink Sewer Company (Docket Nos. A-2023-3044421; A-2023-3044423), Corner Water (Docket Nos. A-2025-3052745; A-2025-3052747), and Appalachian (Docket Nos. A-2023-3046084; A-2023-3046092), the Company did not prepare an original cost study, as these acquired water and sewer systems are Commission-regulated utilities, and it is assumed that the original cost and accumulated depreciation of these utilities have been captured in their respective current rates.

Q. Are the data shown on the Company's continuing property records an accurate basis for developing the original cost of property?

A. Yes, they are.

[3] The Commission issued a final Order approving the Joint Petition for Approval of Non-Unanimous Settlement of All Issues on October 9, 2025.

Q. Do the Company's rate base claims include the cost of water and wastewater assets that have been acquired since the Company's last rate proceeding?

A. Yes, the Company's rate base claims include the cost of water and wastewater assets acquired from BASA, EBMA, STMA, Farmington Township, East Dunkard, Audubon, Manwalamink Water Company, Manwalamink Sewer Company, Corner Water, and Appalachian.

Q. Should the depreciation studies for wastewater operations be consolidated in future rate proceeding?

A. Yes. The consolidation of wastewater system depreciation studies is important for improving long-term financial planning, achieving economies of scale, and ensuring regulatory compliance. Combining studies will allow for a unified system of accounts to better track the depreciation of all assets, leading to more accurate budgeting for future infrastructure replacement and maintenance and creating more stable revenue streams. There are multiple benefits of a consolidation of wastewater operations into one operation with one set of depreciation rates. As noted in the direct testimony of Company witness John Spanos, these include:

- Consolidation would reduce unnecessary complexity and effort when filing future rate cases.
- Having one life characteristic and one rate that includes analysis of all the historical transactions makes for a more significant and valid life estimation.
- There will be much fewer swings in recovery patterns when there are capital expenditures.

- A consolidated approach would be consistent with how PAWC currently performs depreciation studies for water operations.

Additional advantages to consolidating depreciation studies include, but are not limited to:

- Consolidating studies allows for a more accurate and comprehensive view of the overall asset value and the true cost of lost value over time.
- The unified data helps in creating more accurate operating budgets that account for the need to save for future capital asset replacements.
- Larger, consolidated systems often result in operating efficiencies, as fixed costs can be spread over a larger customer base. This can lead to lower or equal customer rates for the same level of service, while maintaining revenue stability.
- It is easier to track the age and condition of all assets in a single, unified system rather than multiple separate ones. This in turn helps in developing a single, coherent asset management plan, which is crucial for identifying and prioritizing the rehabilitation or replacement of aging infrastructure. This can provide the funding needed to address major infrastructure upgrades and replacements identified in the consolidated depreciation studies.
- Consolidation can help ensure that a utility meets all necessary regulatory requirements by providing a clearer picture of its financial health and infrastructure needs and also reduces the risk of facing regulatory penalties.

Q. Has the Company made any adjustments to its historic test year end CIAC and CAC balances?

A. Yes, adjustments have been made to the balances for Water Operations, Wastewater SSS General Operations, and Wastewater CSS Operations. The June 30, 2025 CIAC balance for Water Operations has been increased to reflect $2,818,179 of additional contributions projected to be received through the end of the FPFTY. In addition, the FTY reflects $93,531 of additional contributions associated with the acquisition of Appalachian. The CAC balance has been adjusted to reflect $12,906,831 and $9,581,241 of additional advances projected to be received through the FTY and FPFTY, respectively, and decreased for $8,978,768 and $9,354,618 of refunds anticipated to be paid during 2026 and 2027, respectively, with respect to customer advances received in prior years.

For WW SSS General Operations, the June 30, 2025 CIAC balance has been increased to reflect $758,267 of additional contributions projected to be received through the FPFTY.

For WW CSS Operations, the June 30, 2025 CIAC balance has been increased to reflect $116,667 of additional contributions projected to be received through the FPFTY.

The Company does not anticipate any changes to the CAC balances for its WW SSS General Operations or WW CSS Operations. In addition, the Company does not anticipate any changes to the CIAC and CAC balances for its remaining operations. Therefore, no adjustments to the June 30, 2025 balances for those operations are required. These calculations are shown in Exhibit No. 3-A under the respective rate base sections for the revenue requirements of Water Operations, WW SSS General Operations, and WW CSS Operations.

Q. Has the Company excluded from its rate base certain property recorded in its utility plant accounts?

A. Yes. The amount of $1,558,014 has been excluded from the Company's rate base claim for Water Operations as shown in Exhibit No. 3-A under the corresponding rate base section. For the most part, the excluded amount represents the original cost of utility plant in service for which the Company received relocation reimbursement payments from the Commonwealth of Pennsylvania. The remainder of the excluded amount consists of certain allowance for funds used during construction ("AFUDC") accruals that the Company agreed to remove from rate base pursuant to a stipulation approved in the Company's rate proceeding at Docket No. R-00932670.

Q. Please explain the addition to rate base for materials and supplies.

A. In accordance with procedures previously approved by the Commission, the Company's materials and supplies claims were determined by averaging the monthly balances of the materials and supplies account for the 13 months ended June 30, 2025. The calculations of the materials and supplies claims are shown in Exhibit No. 3-A under the respective rate base sections for each revenue requirement study. The Company's materials and supplies claim for the BASA WW Operations and EBMA WW CSS Operations were derived as follows: (1) monthly balances of the materials and supplies accounts for PAWC's WW SSS General Operations for the 13 months ended June 30, 2025 were summed and the total divided by the number of customers in those wastewater districts to determine the average materials and supplies balance per customer; and (2) the average materials and supplies balance per customer was multiplied by the total number of customers served by the water

and wastewater systems. The calculation of this adjustment is shown in Exhibit No. 3-A under the respective rate base sections for materials and supplies.

Q. Please explain the Company's claim for cash working capital.

A. The cash working capital requirement is calculated by multiplying the net lag days (revenue lag days less expense lag days) by the average operating expenses per day (total operating expenses/365 days). All calculations have been made to two decimal places. In accordance with Commission policy, uncollectible accounts expense and amortizations were subtracted from total operating expenses before performing the calculation. The calculation of the gross cash working capital requirement is shown in Exhibit No. 3-A under the respective rate base sections for cash working capital for each of the Company's revenue requirements.

Q. How were the revenue and expense lags determined?

A. Revenue and expense lags were determined by a lead-lag study. The revenue lag consists of three components: (1) the lag from the midpoint of the service period to the end of the service period, i.e., the meter-read date; (2) the time required for bill preparation and mailing; and (3) the lag in receipt of payment. The first component was calculated as follows: the sum of the number of service days relative to each customer bill in the last quarter of the HTY was calculated. That figure was divided by two to determine the interval from the midpoint to the end of the service period. The average of the service days for the period April through June 2025 was then computed, resulting in a service lag period of 14.8 days.

The second component is billing lag. The billing lag of two days used for this calculation was proposed by a witness for the Commission's Bureau of Investigation and

Enforcement, and agreed to by the Company in a prior base rate case at Docket No. R-2013-2355276.

The third component, the collection lag, requires a further calculation to determine the average length of time that revenues are outstanding before payment. This calculation was performed as follows: (1) daily accounts receivable balances for the 12 months ended June 30, 2025 were summed and the total divided by the number of days in the same period to determine the average accounts receivable balance per day; (2) the Company's total revenue for the 12 months ended June 30, 2025 was divided by the number of days in the same period to determine the average revenue billed per day; and (3) the average accounts receivable balance per day was divided by the average revenue billed per day. The result of the division in (3), above, yields the number of days on average that billed revenue was outstanding prior to receipt of payment, which in the study was 44.21 days. This is a standard calculation used by other water utilities in Pennsylvania. Finally, 0.91 days of "Lockbox Collection Lag" was added to the revenue lag, which represents the time between the collection of customer remittances to a post office box and the deposit of those funds into the Company's bank account. The total revenue lag for this study, when the items above are combined, is 45.12 days.

The expense lag was based upon a comprehensive lag study. Using procedures approved by the Commission in prior proceedings and data obtained from the Company's centralized accounts payable system, samples of expense vouchers for each category of expense were analyzed to determine the lag between the receipt of goods or services and the applicable payment due date. A summary of the expense lags by category is shown in Exhibit No. 3-A under the corresponding rate base section. These lag calculations reflect

an addition for "Check Float," which represents the average amount of time that it takes for a vendor to deposit a payment from the Company. For the Labor and Service Company calculations, an addition of 0.05 days was included, which has the same purpose as the "Check Float," but is instead calculated by taking a weighted average of direct deposit and check payments to employees. The detailed calculations of the revenue and expense lag days appear in the response to Question No. FR V.8 of the Commission's Standard Filing Requirements.

Q. Please explain the addition to rate base for accrued and prepaid taxes.

A. This addition to rate base reflects the fact that, on balance, taxes are paid in advance. The lead/lag in payment of Pennsylvania corporate net income tax is based on payments throughout the test year. The General Assessment tax lead was calculated based upon actual payment dates in 2024, for the tax period of July 1, 2024 through June 30, 2025, and a payment in 2025, for the tax period of July 1, 2025 through June 30, 2026. The lead/lag day calculations for the payment of taxes imposed by the Public Utility Realty Tax Act and federal income tax were based upon statutory payment schedules. The lag for local property taxes was determined using the regular expense lag calculation, which was discussed above. Payments are made by check, and the average payment was adjusted when Check Float was accounted for. The calculations of the lead/lag days for the aforementioned taxes are set forth in Exhibit No. 3-A in the respective rate base sections for each of the Company's revenue requirements. The net lead/lag days for each tax are then applied to the pro forma tax amounts, as shown in the applicable section of Exhibit No. 3-A, to calculate the overall working capital effect, which, in this instance, is positive for all operations. Thus, the average net lead in payment of these taxes constitutes an

addition to cash working capital requirements and, therefore, is reflected as a rate base addition.

Q. Please explain the addition to rate base for acquisition adjustments.

A. There are two types of acquisition adjustments claimed by the Company in this case. The first type represents UPAAs. The second type represents acquisition transaction and closing costs. These are further broken down to the unamortized balance of adjustments that were approved in prior base rate cases and adjustments that the Company is seeking approval for in this case. The applicable rate base claims and docket numbers are shown on Exhibit No. 3-A under the rate base section titled Acquisition Adjustments. Exhibit No. 3-C provides additional support. In this case, as discussed above, the Company is seeking approval of the acquisition transaction and closing costs for the acquisitions of the Farmington water and wastewater systems, the Audubon water system, the STMA wastewater system, the East Dunkard water system, the Appalachian water system, the Manwalamink water and wastewater systems, the Corner Water system, the EBMA wastewater system, and the BASA wastewater system, as well as the Company's intended acquisition of the Towamencin wastewater system.

Q. Please explain other rate base additions for water.

A. The fifth addition to Water Operations, shown in Exhibit No. 3-A in the corresponding rate base section, is the continued amortization of the Company's receivership costs related to Winola Water Company, as approved by the Commission in the Company's base rate case at Docket No. R-2023-3043189.

Q. Please explain the items that were deducted from rate base for the Company's water and wastewater operations.

A. Three items were deducted from rate base for the Company's water and wastewater operations. The first deduction, which offsets cash working capital requirements, relates to the average net lag in payment of interest on long-term debt and dividends on preferred stock. The deduction was calculated using procedures previously approved by the Commission and is set forth in Exhibit No. 3-A in the corresponding rate base section for each of the Company's revenue requirements.

The second deduction is for the balance of the regulatory liability for the federal income tax savings associated with the TCJA for the Stub Period and the unamortized balance of the Negative Deferred Tax Credit reconciliation from January 28, 2021 through January 27, 2023. This deduction only relates to Water, WW SSS and WW CSS Operations.

The third deduction is for accumulated deferred taxes, which is discussed in greater detail in the direct testimony of Company witness Linda Schlessman (PAWC Statement No. 8).

Q. Please describe the adjustment to the rate base deduction for the Negative Deferred Tax Credit.

A. The Company calculated a reconciliation of the difference between the total credits provided to customers for bills rendered. The calculated difference, plus applicable interest, has been added to the unamortized balance approved at Docket No. R-2023-3043189 of $307,606, plus applicable interest, and is included as an addition to rate base offsetting the balance of the regulatory liability for federal income tax savings associated

with the TCJA Stub Period for Water Operations. The Company is seeking approval of this adjustment with an amortization period of two years.

Q. Were additional items deducted from rate base for the Company's water operations?

A. Yes. Four rate base deductions apply only to the Company's water operations. The first item is unamortized investment tax credits generated prior to 1971. These amounts are shown in Exhibit No. 3-A under the respective rate base sections. Investment tax credits accrued in 1971, and thereafter, are amortized to income and are not permitted to be deducted from rate base under the requirements of Section 46(f) of the Internal Revenue Code.

Another item deducted from rate base for water operations, shown in Exhibit No. 3-A under the respective rate base sections, is a 13-month average of extension deposits in suspense. The Company requires applicants for water service to advance a portion of the cost to construct main extensions needed to serve them under specified conditions, as more fully set forth in the Company's tariff. At the completion of the project, accounting entries are made to adjust the estimated costs of construction to the actual costs of construction. The difference is recorded in the extension deposit in suspense account until it is either refunded to the party that made the advance, or an additional amount owed is collected. In its final Order at Docket No. R-891208, the Commission agreed with the Office of Consumer Advocate ("OCA") that an average balance of such funds should be reflected in rate base, and the Company has made this adjustment, shown in Exhibit No. 3-A, to comply with that determination.

The third rate base offset for Water Operations comprises CIAC and CAC booked by Citizens prior to its acquisition by PAWC. The Joint Petition for Settlement at Docket

No. R-2009-2097323 ("Citizens Joint Petition for Settlement"), as approved by the Commission for ratemaking purposes, provided as follows:

> (i) $14,147,208, or 40%, of the December 31, 2009, balance of the net customer advances for which Citizens retained the refund liability upon the Company's acquisition of Citizens' water utility assets will be deemed deducted from the Company's rate base; (ii) $8,895,830 (100%) of the December 31, 2009 balance of the net contributions in aid of construction the OCA proposed to attribute to PAWC from its acquisition of Citizens' water assets will be deducted from PAWC's rate base; (iii) in future base rate cases, the foregoing balances, adjusted to reflect accumulated amortization, will be deducted for ratemaking purposes until such balances are fully amortized; and (iv) the applicable depreciation rate for PAWC's transmission and distribution mains will be used to calculate the amortization of such balances for ratemaking purposes to offset the portion of depreciation expense on gross plant in service that is related to these advances and contributions.

The adjustments that were made to implement the terms of the Citizens Joint Petition for Settlement, set forth above, are detailed in Exhibit No. 3-A under the rate base section.

The final rate base deduction is for the Commission-approved amortization associated with an equipment discount.

Q. Do the adjustments explained above constitute all of the adjustments necessary to establish the Company's rate base?

A. Yes, they do.

<u>Depreciation and Amortization Expense</u>

Q. Have adjustments been made to the annual depreciation expense recorded on the Company's books at June 30, 2025?

A. Yes. Adjustments to booked amounts were made to a full annual amount of the depreciation accrual for the Company's plant in service as of June 30, 2025 and for plant to be added during 2026 and 2027. The annual accrual was determined largely on a

Straight-Line Average Remaining Life basis. The adjustments to reflect the annual accrual for depreciation related to plant in service in 2025, 2026, and 2027 are shown in Exhibit No. 3-A under the respective rate base sections, and, as noted previously, are explained and sponsored by Mr. Spanos. For Water Operations, a reduction to depreciation was made for CIAC and CAC associated with the Company's acquisition of the water assets from Citizens in accordance with the Citizens Joint Petition for Settlement. Additionally, for each of the operational areas, a reduction to depreciation was made for the capitalized portion of depreciation on vehicles.

Q. Please explain the Company's claim for "Amortizations" that appears in Exhibit No. 3-A.

A. The amortization claims for each of the revenue requirements are described as follows and are reflected in Exhibit Nos. 3-A and 3-B under the respective operational sections:

For Water Operations, nine amortization claims are made:

(1) amortization of the UPAA amounts as previously approved by the Commission, which include the Commission-approved utility plant acquisition adjustments associated with the Company's acquisition of the water assets of the former PG&W, Lake Spangenberg Water Company, the Fernwood Community Water System, and the Olwen Heights Water Service Company, Inc., plus the UPAA adjustment for the Farmington water system, Audubon, and the Manwalamink Water Company. The detail of the amortizations can be found in Exhibit No. 3-A. Additionally, the Company has included the previously Commission-approved amortizations of the transaction and closing costs associated with the acquisitions of the Borough of Turbotville, Steelton Borough Authority, Valley Township, SLIBCO Utilities, and Creekside Homeowner's Association, as well as the

proposed amortization of the transaction and closing costs associated with the water system acquisitions of Farmington, Audubon, East Dunkard, Appalachian, Manwalamink Water Company, and Corner Water as part of this claim;

(2) amortization of the previously Commission-approved equipment discount noted earlier in my testimony;

(3) amortization of SFAS 109 regulatory assets – AFUDC as previously approved by the Commission;

(4) amortization of receivership costs for Winola Water Company, Docket No. R-2022-3031672, as previously discussed in my testimony;

(5) amortization of the TCJA Stub Period and deferred taxes, as previously discussed in my testimony. The Company is using a two-year amortization period for the TCJA Stub Period June 30, 2025 balance in order to reflect a more appropriate ongoing annual level of expense in proposed rates. Additionally, as previously discussed in my testimony, the Company has included the two-year amortization of the reconciliation of the negative surcharge for deferred tax credits. This reconciliation covers the period from June 30, 2025 through June 30, 2027;

(6) Commission-approved amortization of Pennsylvania Department of Environmental Protection Safe Drinking Water fees, reflecting an updated amortization period of two years on the balance as of June 30, 2027; and

(7) Commission-approved amortization of the deferred financial impacts authorized in the Commission's September 15, 2021 Order at Docket No. P-2020-3022426 associated with the COVID-19 emergency response. As part of the settlement of the Company's rate case at Docket No. R-2022-3031672, the Company agreed it would cease

the deferral of carrying costs and uncollectible expense as of December 31, 2022. The balance of the deferral at June 30, 2025 reflects a reduction to the deferred settlement balance in the amount of ($875,913). The Company proposes to amortize the revised balance of ($67,378) liability, as of June 30, 2026.

For WW SSS General Operations, five amortization claims are made:

(1) Commission-approved utility plant acquisition adjustments associated with the Company's acquisition of the wastewater assets of the former Clean Treatment Sewage Company, and the Delaware Sewer Company. Additionally, the Company has included the previously approved amortizations of the transaction and closing costs associated with the acquisitions of the Borough of New Cumberland, the Borough of Turbotville, STMA, Exeter Township, Delaware Sewer Company, Valley Township, Foster Township, the Borough of Royersford, Upper Pottsgrove Township, and City of York. In addition, the Company is proposing a 10-year amortization of the acquisition transaction and closing costs associated with the acquisition of the wastewater assets of Farmington, STMA, and Manwalamink Sewer Company, and the intended acquisition of the wastewater assets of Towamencin;

(2) Commission-approved amortization of post-in-service AFUDC for new plant additions made after the acquisition for Exeter Township. The Company also proposes a two-year amortization period, similar to what was proposed for the amortization of the Steelton Borough Authority post-in-service AFUDC;

(3) Commission-approved amortization of deferred depreciation associated with the acquisition for Exeter Township. The Company also proposes a new two-year

amortization period, similar to what was proposed for the amortization of the Steelton Borough Authority deferred depreciation;

(4) Commission-approved amortization of the deferred financial impacts authorized in the Commission's September 15, 2021 Order at Docket No. P-2020-3022426 associated with the COVID-19 emergency response, as described above; and

(5) amortization of the TCJA Stub Period and deferred taxes, as described above.

For BASA WW Operations, the only amortization claim being made is the acquisition transaction and closing costs associated with the Company's acquisition of the wastewater assets of the BASA, Docket No. A-2022-3037047.

For Elizabeth WW CSS Operations, the only amortization claim being made is the acquisition transaction and closing costs associated with the Company's acquisition of the wastewater assets of EBMA, Docket No. A-2025-3052983.

For Wastewater CSS Operations, four amortization claims are made:

(1) Commission-approved acquisition transaction and closing costs associated with the Company's acquisitions of the wastewater assets of Sewer Authority of the City of Scranton, the Municipal Authority of the City of McKeesport, and the Borough of Kane Authority;

(2) deferred depreciation associated with the acquisition of the Municipal Authority of the City of McKeesport. The Company proposes a new two-year amortization period, similar to what was proposed for the amortization of the Steelton Borough Authority deferred depreciation;

(3) Commission-approved amortization of the deferred financial impacts authorized in the Commission's July 22, 2024 Order at Docket No. P-2023-3043189 associated with the COVID-19 emergency response, as described above; and

(4) amortization of the TCJA Stub Period and deferred taxes, as described above.

Q. Please describe the proposed claim for the amortization of the balance of the deferred expense related to the Arrearage Management Plan ("AMP").

A. In the proceedings involving the Company's petition for approval of an arrearage management plan ("AMP"),[4] the Further Amended Joint Petition for Full Settlement filed with the Commission on September 11, 2023 states in Paragraph 46.c that "[d]uring the period that the AMP is considered a pilot program, the Company will record a regulatory asset or liability for amounts over or under the amount included in rates for recovery or refund in the next base rate case." As a result of expenses claimed in the Company's last base rate case at Docket No. R-2023-3043189, a regulatory liability was recorded in the amount of $1,545,937.

Conclusion

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF LORI O'MALLEY

BACKGROUND

Q. What is your name and business address?

A. My name is Lori O'Malley. My business address is 1 Water Street, Camden, New Jersey 08102.

Q. By whom are you employed and in what capacity?

A. I am employed by American Water Works Service Company, Inc. ("AWWSC" or the "Service Company") as Senior Manager Regulatory Services. The Service Company is a wholly owned subsidiary of American Water Works Company, Inc. ("American Water") that provides support services to Pennsylvania-American Water Company ("PAWC," "Pennsylvania-American" or the "Company") and its affiliates.

Q. What are your responsibilities as Senior Manager Regulatory Services?

A. My responsibilities include the review, preparation and presentation of regulatory filings and related activities for Pennsylvania-American and West Virginia-American Water Company. In addition, my responsibilities include the preparation of written testimony, exhibits, and workpapers in support of rate applications and other regulatory filings, as well as responses to data requests related to filing requirements. In this role, I stay apprised of regulatory developments and policy initiatives that may impact regulated water utilities and support the analysis and coordination of process improvements of rates and regulatory processes and services.

Q. Please summarize your educational background.

A. I received a Bachelor of Science Degree in Business Administration with a specialization in Accounting from Rowan University in 1995. I have also attended the Utility Rate School sponsored by the National Association of Regulatory Utility Commissioners.

Q. Please outline your business experience.

A. I began my employment with the Service Company as an Accountant for the Regional Companies in July 1996. At the time, the Regional Companies included American Water affiliates located in the states of Iowa, Maryland, Michigan, Missouri, Ohio, Tennessee, and Virginia. In October 1998, I was promoted to Senior Accountant and then Accounting Supervisor in March 1999. In May 2004, I accepted a position in the Regulatory Services group. From 2004 to today, I have held increasing levels of responsibility as an Intermediate Financial Analyst, Senior Financial Analyst, Principal Regulatory Analyst, and my current position as Senior Manager Regulatory Services.

PURPOSE OF TESTIMONY

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to support and explain the Company's claim for the following operation and maintenance ("O&M") expenses: (1) labor and labor-related expenses; (2) Service Company expenses; (3) rate case and regulatory expense; (4) production costs; (5) other O&M expenses; (6) miscellaneous expense adjustments; (7) acquisition O&M expenses; and (8) the allocation of common costs between water and wastewater operations. I also support the Company's claims for property taxes and general assessments.

Q. Are you sponsoring any Schedules as part of your Direct Testimony?

A. Yes. I am sponsoring Schedule LNO-1, which is attached to my testimony. I discuss this schedule later in my testimony.

Q. What methodology did the Company use in calculating its pro forma O&M expense levels in this case?

A. In this case, the Company is presenting supporting data for a historic test year ended June 30, 2025 ("HTY"), a future test year ending June 30, 2026 ("FTY"), and a fully projected future test year ending June 30, 2027 ("FPFTY"). The Company began with the expenses recorded on its books of account for the HTY and made various adjustments to reflect known and measurable changes that occurred during the HTY. For the FTY and FPFTY, the Company made specific adjustments to certain expenses or categories of expenses based on known and measurable changes (e.g., collective bargaining agreements), projected changes in expenses or, in some cases for expenses that are variable, relied upon historical averages to reflect a normalized level of expense. All adjustments are detailed in PAWC Exhibit Nos. 3-A and 3-B.

Q. Please provide a brief overview of the Company's O&M expense levels.

A. The Company is requesting $342,313,479 in O&M expense for the FPFTY. The requested increases in O&M expense support the Company's efforts to continue providing high quality water and wastewater service in the most cost-effective way to our customers in the long term.

There are numerous factors that contribute to the increase in O&M expenses, including those associated with production costs and employee-related expenses discussed by Company witness Jim Runzer in PAWC Statement No. 3, as well as the addition of

multiple acquired systems since the Company's last base rate case, as addressed in the testimony of Company witness Don Wieczenski in PAWC Statement No. 7.

Q. Please explain how the adjustments you describe below apply to the revenue requirement studies set forth in PAWC Exhibit No. 3-A.

A. The adjustments I describe below apply to the expenses reflected in each of the five revenue requirement studies that are set forth in PAWC Exhibit No. 3-A. Because the adjustments apply to the expense claims set forth in each revenue requirement study, I will describe those adjustments generally and not address the specific adjustments reflected in each study.

LABOR AND LABOR-RELATED EXPENSES

Q. Please describe PAWC's labor and labor-related expenses.

A. PAWC's labor and labor-related expenses are associated with employees who support PAWC exclusively and, therefore, are on the payroll of PAWC. As Mr. Runzer explains, PAWC's labor force is responsible for the production of high-quality drinking water, operating and maintaining the Company's production and treatment facilities and its distribution and collection systems, monitoring water quality, providing engineering services, and generally supporting the efficient management of all of the Company's operations.

The labor and labor-related expenses that are discussed in my testimony include:

(1) Salaries and wages (including Annual and Long-Term Performance Pay)

(2) Group Insurance

(3) Other benefits, including:

a. 401k

b. Defined Contribution Plan ("DCP")

c. Pension and Other Post-Employment Benefits ("OPEBs") for certain eligible employees

d. Employee Stock Purchase Plan ("ESPP")

(4) Payroll Taxes

These costs are described further in my testimony below.

Q. Please describe the overall approach the Company has used to calculate labor and labor-related expenses.

A. PAWC's proposed labor and labor-related expenses are reflected in the labor and labor-related sections of Exhibit Nos. 3-A and 3-B. Pro forma labor and labor-related expenses were calculated on a position-by-position basis, based on the Company's HTY actual number of employees, consisting of 1,205 full-time positions and one part-time position. The labor and labor-related expenses claimed for the FTY and the FPFTY reflect a full complement of employees for each of the Company operations, as set forth in the table below:

PAWC Operations Employee Levels	**2025**	**2026**	**2027**
Water Operations	1,011	1,068	1,068
Wastewater Sanitary Sewer System ("SSS") General Operations	75	79	79
Wastewater Combined Sewer System ("CSS") Operations	92	98.75	98.75
Butler Area Sewer Authority ("BASA") WW Operations	28	29	29
Elizabeth Borough Municipal Authority ("Elizabeth" or "EBMA") WW CSS Operations	0	3.25	3.25
Total Company	1,206	1,278	1,278

Some labor and labor-related costs are capitalized and added to the costs of utility plant. Therefore, a capitalization percentage is applied to total labor and labor-related costs to calculate the portion of those costs that are recorded as capital costs. The Company has calculated capitalization percentages based on the historic three-year average ratio (2023-2025) of direct labor dollars charged to capital to total direct labor costs. The capitalization percentages calculated in that manner are 42.81% for the Company's water operations and 19.78% for its wastewater operations. The complement of those percentages represents the portion of labor and labor-related costs recorded as an expense.

Salaries and Wages

Q. Please describe the types of pay PAWC employees receive.

A. There are three classifications of PAWC employees: collective bargaining unit ("CBU") hourly employees, non-collective bargaining unit ("non-CBU") hourly employees, and exempt employees. CBU hourly employees receive base pay, overtime pay, and, in some cases, other compensation (such as shift premiums and meal allowances) and are also eligible for performance pay. Non-CBU hourly employees receive base pay and overtime pay and are eligible for performance pay. Exempt employees receive base pay and are eligible for performance pay. Therefore, total wages or salaries for each classification of employees include fixed pay (base pay) and some form(s) of variable pay (e.g. overtime, shift pay and performance pay) for eligible employees.

Q. Please describe how the various components of pro forma salaries and wages are calculated.

A. Salary and wage expense has four components: (1) base pay; (2) overtime; (3) shift premium and meal compensation pursuant to the terms of applicable collective bargaining

agreements ("CBAs"); and (4) annual and long-term performance compensation for eligible employees. Each component is discussed in further detail below.

Base Pay – The HTY labor hours were annualized and adjusted to a normalized level. Regular working hours total 2,088 for all full-time hourly employees and 2,080 for all full-time exempt employees. These hours were then multiplied by the actual 2025 wage rates by employee position to determine an annualized level of expense. This amount was then adjusted using a historic three-year average (2023-2025) of base pay increases for non-CBU employees and exempt employees. To adjust the level of expense for CBU employees, the most recent CBAs that remain in effect were used to determine costs for each of the FTY and FPFTY. For those bargaining units for which CBAs expired, a historic three-year average (2023-2025) of contract wage increases was used to determine projected costs for the FTY and FPFTY. The Company's FPFTY annualizes the effects of the increases calculated using the methodologies described above. The details of these calculations, by employee position, are set forth in Exhibit No. 3-B.

Overtime – Overtime was calculated by starting with the historical three-year average (2023-2025) of overtime hours by position and multiplying those hours by the projected overtime wage rate for each employee position.

Shift Premium – CBU employees' CBAs provide wage premiums for employees working on uncommon shifts or when employees obtain certain licenses or complete certain training. Historical three-year average (2023-2025) amounts of shift premiums, licensing, and training premiums were determined on a per-employee basis and included in salary and wage expense for the FTY and FPFTY.

Meal Compensation – CBU employees' CBAs provide compensation for meals during extended shifts and, therefore, meal compensation is included in salaries and wage expense. Historical test year amounts of meal compensation were determined on a per-employee basis and included in salary and wage expense for the FTY and FPFTY.

Performance Pay – The last component of labor expense is the annual and long-term performance compensation for eligible employees. Performance pay was calculated on a position-by-position basis for eligible employees based on each position's target percent, or percentage of base salary that is provided if program goals are achieved, under both the Annual Performance Plan ("APP") and Long-Term Performance Plan ("LTPP"). The target percentage was multiplied by each eligible employee's pro forma base salary in the FTY and FPFTY to determine the cost of compensation under the APP and LTPP. In PAWC Statement No. 3, Mr. Runzer describes the performance pay program in more detail.

Group Insurance

Q. Please describe the components of the Company's group insurance expense.

A. Group insurance includes several insurance coverages that PAWC provides its employees. These can be grouped into two primary categories: (1) basic life, short-term disability, long-term disability, and accidental death and disability insurance ("AD&D"); and (2) medical, dental, prescription, and vision insurance.

Q. How was the pro forma adjustment for group insurance expense calculated?

A. Costs were calculated for the pro forma adjustment as follows:

- Basic life, short- and long-term disability and AD&D. The starting point is the 2025 premium rates for each position under the applicable insurance plans for CBU, non-CBU, and exempt positions.
- Medical, dental, and vision insurance. The Company's cost for this category of insurance is net of employee contributions. The total costs and employee contributions vary by plan type (e.g., family, employee, or employee plus spouse). Costs and contributions were calculated using the 2026 plan rates, on a position-by-position basis, taking into account actual employee plan selections.

Once the 2026 cost level was established, a historical three-year average of the change in Company costs for group insurance between 2023 and 2026 was applied to the annualized amount for 2026 in order to adjust the insurance expense to the level appropriate for the FPFTY.

Other Benefits

Q. Please describe the components of other benefits the Company provides and how the costs of those benefits were calculated.

A. Other benefits PAWC provides include savings programs, such as 401k plans, DCP, pension benefits, OPEBs, and the Company's ESPP. The costs of these benefits were calculated on a position-by-position basis. The calculations of the costs included in the Company's labor-related expense claims are described below.

401(k) – PAWC incurs 401(k) expense when it matches employee contributions to 401k retirement accounts. The matching amounts are determined by each employee's benefit group or hire date. For employees whose benefit group falls into an "original" category (including CBU employees hired before 2001 and non-CBU employees hired

before 2006), the Company matches 50% of the first 5% of the employee's contribution (for a maximum of 2.5%). For the remaining employees, the Company matches 100% of the first 3%, and 50% of the next 2% of the employee's contributions (for a maximum of 4%). Pro forma 401(k) costs were calculated for each position based on FTY wages, current employee contribution levels, and the level of match for the benefit group.

DCP – DCP, or Defined Contribution Plan, is a retirement savings program for employees not eligible for the defined benefit pension program. Under the DCP, PAWC contributes an amount equal to 5.25% of an employee's base pay into a retirement account. The pro forma DCP expense was calculated by multiplying the FTY and FPFTY regular time pay of each eligible position by 5.25%.

Pension – Certain Company employees, upon retirement, are eligible for pension benefits under a defined benefit plan. Covered employees include non-CBU employees hired before January 1, 2006, and CBU employees hired before January 1, 2001. Consistent with the methodology approved in PAWC's 2017 base rate case Docket No. R-2017-2595853, the Company calculated its pension expense claim in this case in accordance with Financial Account Standards Board Accounting Standards Codification Topic 715 or "ASC 715" (formerly Statement of Financial Accounting Standards 87).[1] The Company started with the report furnished by its actuary, Willis Towers Watson ("WTW"), that furnished pension costs for 2025 determined in accordance with ASC 715. From that report, the Company identified the service and non-service cost components of its pension

[1] Under ASC 715, net changes in the actuarial determination of pension and OPEB obligations and associated plan funding levels directly impact the amount reflected on a company's income statement for the applicable accounting period, which can be either expense or income.

costs. The service cost portion was reduced by the capitalization rate of 42.81% described above to determine the portion of total pension costs recorded as an expense.

In addition to the pro forma pension expense determined in the manner described above, the Company's claim reflects a credit for the annual amortization of a deferred pension asset that was created when the Company began using the accrual method of accounting, based on ASC 715, to calculate pension expense for ratemaking purposes in its 2017 base rate case. Prior to the 2017 case, the Company's pension expense claimed for ratemaking purposes had been based on its cash contributions to its pension plan. The amortization of the deferred pension asset is being continued at the level approved in PAWC's 2017 base rate case. The ten-year amortization began with the effective date of the rates set in that case and, therefore, will expire in 2028.

OPEB – Certain PAWC employees are eligible for OPEBs upon their retirement depending on their employment start date. Only non-CBU employees hired before January 1, 2002, and CBU employees hired before January 1, 2006 are eligible for OPEBs. The investments made to fund OPEBs are divided into three Voluntary Employees Beneficiary Association Plans ("VEBAs"): Post-Retirement Medical Benefits/Bargaining Unit, Post-Retirement Medical Benefits/Non-Bargaining Unit, and Life Insurance Benefits. In 2016 and 2018, American Water negotiated a cap on benefits in the Non-Bargaining Unit and Bargaining Unit VEBAs, respectively. OPEB expense is based on the accrual cost recognized under ASC 715, as projected by WTW for 2025. The 42.81% capitalization rate was applied to the service cost component that will be charged to capital.

In addition, for active bargaining unit employees covered under American Water's National Benefits Agreement who are not eligible for retiree medical benefits under the

OPEB plan, the Company makes an annual contribution of $600 per employee to a separate VEBA plan that is administered by the Utility Workers Union of America. That plan is designed to reimburse eligible participants for certain health care expenses they incur in retirement. A pro forma adjustment to reflect these contributions on behalf of eligible employees of the Company's Water Operations, Wastewater SSS General Operations, BASA Wastewater Operations, and Wastewater CSS Operations has been made to the Company's OPEB expense claim in this case.

ESPP – ESPP expense is incurred to fund the 15% discount on purchases of American Water stock by employees who are enrolled in the ESPP. This expense was calculated based on the FTY and FPFTY salaries and wages for each employee who participates in the plan. The employees' forecasted base compensation is multiplied by the percentage of base compensation each employee has selected to devote to purchasing American Water stock. That amount was then multiplied by the 15% discount on stock purchases to determine the pro forma expense for the ESPP.

Q. Please describe the Company's payroll tax expense.

A. Payroll tax expense consists of the federal and state taxes the Company pays based on its employees' salaries and wages. The Federal Insurance Contributions Act imposes taxes on employers for Old Age Survivors and Disability Insurance (or more commonly "FICA") and Hospital Insurance (or more commonly "FICA Medicare"). The Company is also required to pay Federal Unemployment Tax ("FUTA") and State Unemployment Tax ("SUTA"). Pro forma payroll taxes were calculated on a position-by-position basis using current 2025 tax rates and pro forma wages for the FTY and FPFTY. The current 6.2% FICA tax rate will apply to wages of up to $176,100 in 2025. The wage ceiling for applying

the FICA tax rate is estimated to increase to $187,060 for the FTY and $198,702 for the FPFTY, based on a three-year average (2023-2025) of historical actual increases in the wage ceiling for FICA tax. For the FTY and FPFTY, the Company applied the FICA Medicare tax rate of 1.45% to all wages, applied the SUTA tax rate of 2.18% to the first $10,000 of wages, and applied the FUTA tax rate to the first $7,000 in wages.

SERVICE COMPANY COSTS

Q. What kinds of support services does PAWC obtain from the Service Company?

A. The support services provided by the Service Company include customer service, water quality testing, environmental compliance, human resources, communications, information technology, finance, accounting, legal, engineering, supply chain, and risk management. As part of the broad range of services summarized above, the Service Company provides a variety of financial and accounting services for Pennsylvania-American that include payroll, human resources data management, utility plant accounting, cash management, general accounting and reporting, accounts payable, and tax accounting. As part of its customer-service function, the Service Company handles customer calls, billing, and collection activities for PAWC and American Water's other public utility subsidiaries. The customer service organization also handles customer inquiries and correspondence and processes service order requests.

In addition, the Service Company provides Field Resource Coordination which is responsible for tracking and dispatching service orders for PAWC's field representatives and distribution crews. The Service Company also operates the Central Laboratory located in Belleville, Illinois, which employs chemists, laboratory technicians, analysts, and support employees to perform water quality testing and research. The Central Laboratory

is certified by the United States Environmental Protection Agency, the Pennsylvania Department of Environmental Protection and the regulatory agencies of other states in which American Water's subsidiaries provide service. The Central Laboratory owns and uses state-of-the-art water testing equipment to test source water and finished water for all American Water's subsidiaries, including PAWC.

Q. What are the principal advantages of the support services that AWWSC provides on a centralized basis to Pennsylvania-American, other American Water utilities, and their customers?

A. PAWC receives access to highly trained professionals who possess expertise in various specialized areas, whose background, experience and training are focused on water and wastewater utility operations and who work exclusively for American Water's subsidiaries. Furthermore, the size of AWWSC and the scope of its operations have enabled it to assemble a uniquely qualified group of professionals who, through AWWSC, have a platform for sharing their extensive knowledge, expertise, and experience across the American Water system to the benefit of all of American Water's state-regulated utilities and their customers. The Company and customers benefit from getting these services and tapping into the expertise of AWWSC's personnel at cost. The Company also benefits from the size and breadth of American Water, which affords the Company increased purchasing power that it could not obtain on its own, and provides access to discounts on equipment and supplies needed for utility operations, including, for example, pipe, fittings, and water treatment chemicals. If PAWC were to try to maintain a full complement of comparably qualified personnel on its own payroll, the total cost the Company would incur to obtain the same level and quality of support services it receives from AWWSC likely

would be considerably higher. In this way, Pennsylvania-American achieves cost savings that it could not obtain if it were a stand-alone water company. Those cost savings are ultimately passed through to customers in rates.

Q. How is PAWC charged for the support services it receives from AWWSC?

A. The Service Company provides its services to PAWC at cost and issues monthly invoices. Under the Service Company's billing system, costs can be billed as direct charges to a single company or as charges reflecting an allocation among several companies. If the Service Company can identify costs that relate exclusively to PAWC, 100% of those costs are charged directly to Pennsylvania-American. Costs the Service Company incurs in rendering services in common to a group of companies and not exclusively to Pennsylvania-American are charged to each service recipient in the relevant group based on an allocation.

Q. How are Service Company costs allocated to PAWC?

A. Service Company costs are charged to PAWC and its affiliates using Tier One or Tier Two allocation factors. The Tier One allocation factor represents the allocation of costs between regulated and non-regulated companies. The allocation factors are based on cost-causation drivers for a particular service and include operating revenues, net property, plant and equipment and number of employees. The allocation is calculated using one or an applicable combination of these allocation factors. If a combination of allocation factors is used, each factor is equally weighted in the calculation. The Tier Two allocation factor is used to allocate regulated company costs to the regulated businesses that benefit from a service. Tier Two factors are primarily based on the number of customers served in the immediately preceding calendar year.

Q. What level of Service Company expense is Pennsylvania-American seeking in this case and how was it calculated?

A. The Company is seeking recovery of Service Company expense of $77.2 million for the FPFTY. The expense is divided into two categories consisting of labor and labor-related expenses and all other expenses. For the labor and labor-related portion, the expenses incurred for the HTY have been adjusted to annualize a base pay increase in January 2025 of 4.0% for non-CBU employees of the Service Company, and annual contract increases of 2.60% for CBU employees of the Service Company. For non-CBU employees, the HTY level of base pay was further adjusted to annualize base pay increases of 3.75% to calculate the base pay for the FTY and 3.90% for the FPFTY. For CBU employees, the HTY level of base pay was further adjusted to annualize annual base pay increases of 2.65% to calculate the base pay for the FTY and 2.62% for the FPFTY. For both CBU and non-CBU employees, the FTY and FPFTY percentages were calculated using historical three-year averages (2023-2025 and 2024-2026, respectively). Severance expense was adjusted using a historic three-year average. Additionally, adjustments were made to normalize pension and OPEB costs, to modify LTPP costs based on the latest compensation information, and to reflect the movement of employees between PAWC and the Service Company.

Q. Please explain the adjustment for employee movements between PAWC and AWWSC.

A. Eighteen PAWC positions in Compliance, Customer Advocacy, Engineering and Fleet Management were transferred to the Service Company during the HTY. The difference is reflected as an addition to support services expense to annualize the salary and benefits for

those employees to reflect a full year of compensation. The transferred employees are not reflected in PAWC's HTY employee level.

Q. What other adjustments were made to Service Company expense?

A. Costs pertaining to lobbying, charitable contributions, penalties, injuries, and damages have been removed and, therefore, are not included in the pro forma expenses reflected in the Company's expense claim in this case. Adjustments were also made to remove NAWC dues less additional employees and one-time costs related to a tax accrual, a cyber incident, and an executive discretionary payment. Additional adjustments were made for depreciation, interest associated with capital leases, postage, executive compensation, software costs and additional headcount.

RATE CASE AND REGULATORY EXPENSE

Q. Please explain the adjustment for regulatory and rate case expense.

A. These adjustments are being made to reflect and normalize the costs related to this rate case and to recover the annual amounts necessary to amortize other regulatory expenses that were incurred by the Company with the Pennsylvania Public Utility Commission's ("Commission's") prior approval.

The costs for preparing and litigating this rate filing consist of the costs associated with the Company's consultants and outside legal counsel. Costs for customer communications, mailings, legal notices, administrative fees, and miscellaneous expenses associated with this application are also part of the regulatory expense adjustment. Some of these costs have already been incurred. The Company's claim reflects its total costs, both incurred to date and estimated to be incurred through the completion of this case. PAWC proposes that these costs be normalized over a two-year period, which reflects the

average period of time in between the Company's last four base rate filings. Detail of the cost categories included in the projected rate case expense can be found in the Rate Case Expense section of Exhibit No. 3-B.

Q. Please identify the additional claims for regulatory expense the Company is making in this case.

A. The Company is claiming for recovery four other categories of regulatory expense. First, the Company is continuing the ten-year amortization of the costs it incurred for a Customer Class Demand Study performed in accordance with the terms of the Commission-approved settlement of PAWC's rate proceeding at Docket No. R-2011-2232243. The costs of that study were approved for recovery via a ten-year amortization, beginning in January 2018, as part of the Company's 2017 base rate case at Docket No. R-2017-2595853. Second, the Company is continuing the ten-year amortization of the costs incurred for the preparation, filing, litigation and resolution by settlement of the Company's petition at Docket No. P-2017-2606100 for approval of a plan to replace customer-owned lead service pipes. Those costs were approved for recovery via a ten-year amortization, beginning in January 2021, as part of the Company's 2020 base rate case, Docket No. 2020-3019369. Additionally, the Company is proposing the two-year amortization of costs for both the Customer Demand Feasibility Study and the System-Wide Max Hours Demand Study beginning in August 2026, as ordered in the Company's 2023 base rate case, Docket No. 2023-3043189.

Q. Has the Company allocated the pro forma rate case and regulatory expense?

A. Yes. The Company uses an allocation factor based on customer counts to apportion the projected rate case and regulatory expense to the individual water and wastewater

operations for which separate revenue requirement studies have been provided in Exhibit No. 3-A. The allocation factor will be explained in more detail below. The Rate Case Expense section of Exhibit No. 3-B shows the costs allocated to each separate revenue requirement study from applying this allocation factor.

PRODUCTION COSTS

Purchased Power Expense

Q. Please explain the methodology used to forecast purchased power expense.

A. Purchased power expense is incurred for treating, pumping and delivering water and collecting and treating wastewater. In order to forecast purchased power expense, HTY expenses were adjusted to remove closed accounts and credit balances, to annualize electricity expense for active accounts, and to reflect known changes in the prices charged by the Company's electricity generation suppliers ("EGSs") and in the rates of the electric distribution companies ("EDCs") that furnish distribution service. Changes experienced during the HTY and projected to occur during the FTY and FPFTY were used to derive the expense levels for those years.

The Company has contracted with multiple EGSs to supply the Company's electric generation. The contract prices that were used to calculate electric expense for the FTY and FPFTY were from contracts that the Company successfully obtained through its competitive energy procurement process described by PAWC witness Jim Runzer in PAWC Statement No. 3. For the distribution and transmission portions of the Company's bills, the applicable EDC's distribution and transmission rates and applicable riders and surcharges/credits in effect as of June 30, 2025, were reflected to determine total purchase

power expense. The purchased power adjustments are summarized in Exhibit No. 3-A, and supporting workpapers are provided in Exhibit No. 3-B.

Purchased Water Expense

Q. Please explain the methodology used to forecast purchased water expense.

A. Purchased water expense is composed of two components: contractual usage and diversion rights. The annualized usage levels from all contracted suppliers in the HTY were priced at the applicable supplier's rates effective in the FTY, and those rates were used to annualize purchased water expense for the FTY and the FPFTY. The purchased water adjustments are summarized in Exhibit No. 3-A and supporting workpapers are provided in Exhibit No. 3-B.

Chemical Expense

Q. Please explain the methodology used to forecast chemical expense.

A. PAWC uses various chemicals for water and wastewater treatment. In order to obtain the best available pricing, the Company participates in American Water's system-wide competitive bidding process and enters into unit-price contracts with the successful bidders for the chemicals needed at its water and wastewater treatment facilities throughout Pennsylvania. Chemical usage levels were adjusted in three respects. First, adjustments were made to eliminate the chemicals that are no longer being used as of June 2025 and to add chemicals the Company will begin using for the first time starting in or after July 2025. Then, usage levels were adjusted based on known and measurable changes that occurred in the HTY or changes that are projected to occur in the FTY and FPFTY.

Contract prices effective on July 1, 2025 were applied to the adjusted levels of chemical usage to project the FTY expense claim. To determine chemical expense for the

FTY and FPFTY, chemical costs were increased by a percentage for each chemical family each year. The adjustments for chemical expenses for all the Company's water and wastewater systems are summarized in Exhibit No. 3-A, and supporting workpapers are included in Exhibit No. 3-B.

Change in Consumption

Q. Please explain the adjustment necessary to account for changes in customer water consumption.

A. PAWC Exhibit No. 3-A sets forth an adjustment to operating expenses to reflect changes in power and chemical costs due to changes in pro forma water consumption, including the decline in residential and commercial usage discussed in detail by Company witness McClellan in PAWC Statement No. 10. The adjustment was calculated by computing the ratio of HTY power and chemical costs to actual HTY consumption. This ratio was then applied to the projected change in consumption between the HTY and FTY, and the FTY and FPFTY. The adjustment was applied to both existing water and wastewater operations. Supporting details are included in Exhibit No. 3-B.

Waste Disposal

Q. Please explain the methodology used to forecast waste disposal expense.

A. The Company's claims for waste disposal expenses are based on the HTY level of expense, increased by a three-year average (2023-2025) change in expense for the FTY and FPFTY. The waste disposal adjustments are summarized in Exhibit No. 3-A. Supporting workpapers are included in Exhibit No. 3-B.

OTHER OPERATION AND MAINTENANCE EXPENSES

Transportation Expense

Q. Please explain the methodology used to forecast transportation expense.

A. Transportation expense includes the fleet management cost per vehicle, costs for fuel, titling and registration fees, maintenance expense, and reimbursement for Company use of personal vehicles. The forecast of the fleet management expense is based on the number of vehicles claimed in FTY and FPFTY. The changes in the number of vehicles from the HTY level are reflected in the forecast of costs for fuel expense, titling and registration fees, and maintenance expense. Additionally, these costs, along with the reimbursement for personal use of Company vehicles, were adjusted by using a three-year average (2023-2025) CPI Transportation Services factor for the FTY and FPFTY (6.94%).[2] A portion of the transportation costs is capitalized and, therefore, excluded from O&M expense. The Company's adjustments to transportation expense are shown in Exhibit No. 3-A. Detailed supporting calculations are provided in Exhibit No. 3-B.

Insurance Other Than Group

Q. Please explain the methodology used to forecast insurance other than group insurance.

A. PAWC incurs costs related to several types of insurance, including Auto Liability, General Liability, Excess Liability, Workers' Compensation, and Property. The Company's General Liability, Auto Liability and Workers' Compensation premiums are based upon a combination of loss experience (50%) and exposure (50%). The loss experience is generally based upon a five-year historical average. The five-year average is used to

[2] http://data.bls.gov/timeseries/CUSR0000SAS4?data_tool=XGtable.

normalize losses in any particular year. This is consistent with the commercial insurance market underwriting practice. The Company also has other policy coverages such as Directors and Officers Liability, Employment Practices, Fiduciary, Special Contingency Risk, Comprehensive Crime, Law Liability, Pollution Legal Liability, Cyber Liability, and Unmanned Aircraft/Drones. The FTY expense represents an increase from the HTY based upon the five-year average expense increase excluding casualty reserve adjustments (8.01%) applied to insurance coverage expenses excluding casualty reserve and accruals. The total FTY Workers' Compensation coverage cost was then multiplied by the three-year average labor capitalization ratio as of end of HTY, June 30, 2025, to eliminate the capitalized portion of Workers' Compensation coverage cost not charged to operating expenses. The insurance other than group expense for the FTY and FPFTY was allocated between water and wastewater operations based on allocation Factor 4 (Depreciated Utility Plant in Service as of end of HTY, June 30, 2025). The development of the capitalization percentage is discussed above in the Labor and Labor-Related Expenses section. The factors used to allocate common costs between water and wastewater operations are discussed in further detail later in my testimony. The Company's adjustments to insurance other than group expense are shown in Exhibit No. 3-A. Detailed supporting calculations are provided in Exhibit No. 3-B.

Rent Expense

Q. Please explain the Company's adjustment to rent expense.

A. The Company's specific adjustments to rent expense reflect changes projected to occur including lease escalation clauses in the FTY and FPFTY in current lease agreements for water and combined sewer system operations. The Company's adjustment to rent expense

is shown in Exhibit No. 3-A. Detailed supporting calculations are provided in Exhibit No. 3-B.

Uncollectible Accounts Expense

Q. Please describe the Company's proposed level of uncollectible expense reflected in PAWC's revenue requirement for the fully projected future test year.

A. PAWC calculated its claim for uncollectible accounts expense using a historic three-year ratio of net write-offs as a percentage of sales revenues. As shown below, the uncollectible accounts rate (1.097%) was calculated using the Company's actual write-off experience for the July 1, 2022 through June 30, 2025 period divided by PAWC's total billed revenues for the same period.

	July 1, 2022 to June 30, 2023	July 1, 2023 to June 30, 2024	July 1, 2024 to June 30, 2025	Three Year Average
Net Write-offs	$9,374,665	$10,273,763	$12,698,533	$10,782,320
Total Billed Revenues	$886,675,101	$971,802,515	$1,090,166,730	$982,881,449
Total	1.057%	1.057%	1.165%	**1.097%**

MISCELLANEOUS EXPENSES

Q. Please explain what is included in the Miscellaneous Expense Adjustment.

A. Exhibit No. 3-A sets forth items that are being adjusted or eliminated from the Company's O&M claim in this proceeding.

First, I will discuss deductions reflected in the Miscellaneous Expense Adjustment. The Company eliminated expense items such as donations, lobbying expenses, and fines that were incurred during the HTY. Additionally, duplicative expense items such as pension and OPEB that have been included in the development of the Company's claim for ongoing water expense levels have been eliminated (Exhibit No. 3-A Water Operations). Costs associated with temporary employees were excluded from the

Company's claim because the need for these employees will be significantly reduced by the full-time staffing levels reflected in the salary and wage claim in this case. This part of the adjustment assumes recognition in this proceeding of the requested staffing levels. An adjustment to the cost of credit card and e-check transaction fees has been calculated using the projected residential customers as of the FTY and FPFTY.

For Water Operations, the Company removed a one-time cost for a cancelled project. The Company has reduced per-book severance costs, as well as injuries and damages, to reflect a normalized level that is based on a historic three-year average (2023-2025). Additionally, the Company has included an adjustment in Exhibit No. 3-A to reflect the allocation of a portion of the cost of the Capital Campus in Mechanicsburg from Water Operations to Wastewater SSS General Operations, BASA Wastewater Operations, and Wastewater CSS Operations.

Second, the Miscellaneous Expense Adjustment also includes additions to the Company's O&M claim for water operations. The Company added costs associated with the revolving line of credit because the costs were reclassified from interest expense to operating costs.

Finally, the Company has included costs related to the Arrearage Management Program ("AMP"). The total cost of discounts and arrearage forgiveness is based on the average number of customers that received credits in the HTY, adjusted based on the monthly fluctuation of participants, multiplied by the annual credits. The adjustment also includes monthly costs provided by Dollar Energy, which facilitates the Company's AMP and H2O Bill Discount Program.

ACQUISITION O&M EXPENSES

Q. Please explain what is included in the Acquisition O&M Adjustment.

A. The Company made adjustments to annualize the O&M expenses not fully recognized in the HTY for the Company's acquisitions, as follows:

> **Water Operations**: the water assets of Farmington Township (acquisition closed on November 21, 2024), East Dunkard Water Authority (acquisition closed on April 29, 2025), Audubon Water Company (merger effective May 29, 2025), Manwalamink Water Company (merger effective June 25, 2025), Corner Water Company (anticipated acquisition close in November 2025) and Appalachian Utilities, Inc. (acquisition closed on October 27, 2025).
>
> **Wastewater SSS General Operations**: the wastewater assets of Sadsbury Township (acquisition closed on October 31, 2024); Farmington Township (acquisition closed on November 21, 2024) and Manwalamink Sewer Company (merger effective June 25, 2025)
>
> **Wastewater BASA Operations:** the wastewater assets of BASA (acquisition closed on October 29, 2024).
>
> **Wastewater Elizabeth CSS Operations**: the wastewater assets of EBMA (anticipated acquisition close in December 2025).

Details supporting these adjustments are provided in Exhibit No. 3-B.

ALLOCATION OF COSTS BETWEEN WATER AND WASTEWATER OPERATIONS

Q. Please describe the Company's approach to allocating costs between water and wastewater operations in this rate proceeding.

A. The Company is proposing to allocate costs between water and wastewater operations utilizing the same allocation methodology the Company used in its last base rate case at Docket Nos. R-2023-3043189 and R-2023-3043190.

Q. Please describe the cost categories that fall under the term "common costs".

A. The costs classified as "common costs" include Service Company expenses (including postage and customer accounting costs), insurance other than group, rate case expense and

regulatory expense, and the costs associated with the PAWC Corporate Headquarters (Capital Campus) located in Mechanicsburg, Pennsylvania.

Q. What is the methodology used by the Company to allocate common costs between its water and wastewater operations?

A. The Company allocates the above categories based on four different factors, as shown in Schedule LNO-1.

Factor 1 – Customers (for Service Company and Customer Accounting). This factor was calculated based on the number of customers as of June 30, 2025. In allocating costs to PAWC, the Service Company identifies customers that receive both water and wastewater service from the Company. These accounts are not treated as two separate customers in the customer-count used to allocate Service Company costs. Instead, each dual service customer is assigned the value of 1.05 in the count of total Company customers and the value of 0.05 in the count of wastewater customers. PAWC used the same convention in allocating costs between water and wastewater operations. The dual service customers counted in the manner explained above plus wastewater-only customers are summed to arrive at the wastewater customer count used for the customer-based allocation.

Factor 2 – Customers (for Rate Case and Regulatory Expense). This calculation is based on the total number of customers for each water or wastewater system and allows for subsets of allocations based on water and wastewater SSS, water and wastewater CSS, and wastewater SSS and wastewater CSS customers. The breakdown of this level is necessary, as there are certain rate case expense components that only relate to specific customer types. For example, cost of service and rate design activities are completed for water and

wastewater SSS customers, but separately for wastewater CSS customers. The application of this allocation factor is shown in the Rate Case Expense section of Exhibit No. 3-B.

Factor 3 – Customers (for PAWC's Corporate Headquarters (Capital Campus)). This allocation is based on each water or wastewater system's percentage of the Company's total customers as of June 30, 2025.

Factor 4 – Depreciated Cost of Utility Plant in Service (for Insurance Other Than Group). This factor is based on the depreciated original cost of total net utility plant in service as of June 30, 2025 for each water or wastewater system. The percentages of utility plant are applied to the pro forma Insurance Other Than Group expenses claimed by the Company to determine the portion of total expenses allocated to water and wastewater operations. The Company's expense for Insurance Other than Group consists of property, vehicle and general liability, which closely aligns with plant assets.

PROPERTY TAXES AND GENERAL ASSESSMENTS

Q. Please explain the adjustments to claims for property taxes.

A. Public Utility Realty Tax ("PURTA") tax is imposed on certain real property dedicated to utility water service in Pennsylvania based upon the fair market value of such property, as determined by applying per-county common level ratios to the assessed values of the property. In Pennsylvania, property taxes imposed on real property not subject to PURTA are administered at the county level. In every county, the sum of local tax rates (school taxes, municipal taxes and county taxes) is applied to the assessed value of each property. However, each county has its own system for determining assessed value. The Company's claims for its Water Operations, Wastewater SSS General Operations, and Wastewater CSS Operations were calculated based on the ratio of actual 2024/2025 tax liability to tax base.

This ratio was applied to the Company's pro forma claim for property tax eligible utility plant at June 30, 2026 and June 30, 2027. These calculations are detailed in Exhibit No. 3-A, Pennsylvania Property Tax under the section for Taxes Other Than Income. The Company's claim for its BASA and Elizabeth wastewater operations is included as part of the Acquisition O&M Adjustments in Exhibit No. 3-A and are described above.

Q. Please explain the adjustment for General Assessments.

A. The General Assessments are imposed on regulated utilities to provide funding for the Commission and Damage Prevention Committee, the Office of Consumer Advocate, and the Office of Small Business Advocate. The General Assessment rates are applied to a tax base consisting of revenue from water and wastewater service. To calculate pro forma General Assessments, the current assessment rates from the fiscal year July 1, 2025 to June 30, 2026 were applied to a tax base consisting of pro forma sales revenue under present and proposed rates as shown on Exhibit No. 3-A under the respective rate base sections. The Company will update these adjustments with the new General Assessment rates once they are available. Backup for the calculation of these adjustments is provided in the Company's Exhibit No. 3-A under the respective rate base sections.

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

Allocation Factors for Common Costs to be Allocated from Water to Wastewater
Pennsylvania-American Water Company

Factor 1: Customers (for Service Company and Customer Accounting)

As of 06/30/25	Total Customers	Dual Water/Wastewater Customers	Wastewater Only Customer Equivalent (5% of Dual Customers)	Wastewater Only	Total Customers For Allocation (Wastewater: D+E)	Allocation Factor
Water Operations	694,439				694,439	95.3%
Wastewater SSS General Operations	57,516	37,920	1,896	19,596	21,492	2.9%
BASA WW Operations	15,813	15,461	773	352	1,125	0.2%
Wastewater CSS Operations	42,903	32,916	1,646	9,987	11,633	1.6%
Total	810,671	86,297	4,315	29,935	728,689	100%

Factor 2: Customers (for Rate Case and Regulatory Expense)

As of 06/30/27	Total Customers	Allocation Factor	Water	WW SSS Only	W & WW SSS Only	WW CSS
Water Operations	701,264	85.6%	100.0%		92.4%	
Wastewater SSS General Operations	57,851	7.1%		100.0%	7.6%	
BASA WW Operations	15,813	1.9%				
Wastewater CSS	43,304	5.3%				100.0%
Elizabeth Borough WW CSS	669	0.1%				
Total	818,902	100.00%	100%	100%	100%	100%

[1] Includes Manwalamink, Appalachian & Corner Water in Water Operations and Manawalamink WW in Wastewater SSS General Operations.

Factor 3: Customers (for Pennsylvania-American Corporate Headquarters -Capital Campus)

As of 06/30/25	Total Customers	Allocation Factor
Water Operations	694,439	85.7%
Wastewater SSS General Operations	57,516	7.1%
BASA WW Operations	15,813	2.0%
Wastewater CSS Operations	42,903	5.3%
Total	810,671	100.00%

Factor 4: Depreciated Utility Plant in Service (Insurance Other Than Group)

As of 06/30/25	**Depreciated Utility Plant in Service**	**Percentage**
Water Operations	5,688,059,616	79.0%
Wastewater SSS General Operations	717,362,617	10.0%
Wastewater BASA General Operations	226,837,897	3.2%
Wastewater CSS Operations	566,427,234	7.9%
Total Net Utility Plant in Service	7,198,687,364	100.0%

[1] 5% is the percentage used per the Service Company methodology of qualifying a dual service customer. The Massachusetts Formula approach supports that dual service customers be counted as one customer plus 5% of another customer.
The Massachusetts Formula includes three factors: gross property, plant and equipment, direct labor expenses, and gross revenues

Factor 4: Depreciated Utility Plant in Service (Insurance Other Than Group) Schedule LNO-1

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF DON WIECZENSKI

INTRODUCTION

Q. What is your name and business address?

A. My name is Don Wieczenski and my business address is 300 Galley Road, McMurray, PA 15317.

Q. By whom are you employed and in what capacity?

A. I am employed by Pennsylvania-American Water Company ("PAWC" or the "Company") as Senior Director of Business Development.

Q. What are your responsibilities as Senior Director of Business Development?

A. I manage a team of Business Development professionals. The team's responsibilities include developing business opportunities including merger and acquisition opportunities that fit the company's growth strategy and submitting applications to the Pennsylvania Public Utility Commission ("Commission") to acquire said acquisition. The team develops and maintains necessary contacts to stay abreast of new business opportunities. The team manages the acquisition from initial contact, responding to Requests for Qualifications, Requests for Proposals, Requests for Bids, contract negotiation, preparation of the Application for submission to the Commission and manages the workflows required to close the acquisition. These responsibilities necessitate that I maintain a working knowledge of regulatory and technical developments, recent technologies and current trends as they affect the water and wastewater utility industries, and that I be familiar with legislation, regulations and public policy affecting business opportunities.

Q. Please describe your professional education and experience.

A. I earned a Bachelor of Science in Mechanical Engineering from the University of Pittsburgh in 1990 and a Master of Science degree in Mechanical Engineering from Penn State University in 1992. Prior to my role as Senior Director of Business Development for PAWC, I served as Director of Business Development for PAWC. In that role, my primary responsibilities included developing acquisition opportunities in Western Pennsylvania. Prior to that role I worked as Senior Manager of Business Development for American Water Works Company, Inc. ("American Water"). In that role, my primary responsibilities included business development and business incubation for various subsidiaries of American Water including PAWC, New York-American Water, American Water's Military Service Group, American Water's Homeowner's Service Group, American Water's Shale Development Group and American Water's Keystone Clearwater subsidiary. I was responsible for vetting technical and business issues in supporting these subsidiaries while managing a team that executed pilot projects and strategy development. Before joining PAWC, I served in various positions with Curtiss-Wright Corporation, EMD division and Salem Corporation, Salem Furnace Division. In my career, I've held leadership roles in Engineering Management, Program Management, Project Management and Business Development. The industries that I have served include the Commercial Nuclear Industry, the Defense Industry, the Steel Industry, the Oil and Gas Industry and the Water and Wastewater Industries as an employee of PAWC and American Water.

Q. Have you previously testified before the Commission?

A. Yes. I submitted testimony on behalf of PAWC's proposed acquisition of the water distribution system and the wastewater collection and treatment system of Farmington Township, Docket Nos. A-2023-3042567 and A-2023-3042587.

Q. What is the scope of your Direct Testimony?

A. I will discuss the water and wastewater system acquisitions that PAWC has included in this base rate case and the Company's request for acquisition adjustments pursuant to 66 Pa. C.S. § 1327 (relating to acquisition of water and sewer utilities) and 52 Pa. Code § 69.711 (statement of policy regarding small nonviable water and wastewater systems). I will also explain the Company's proposed tariffs establishing a negotiated wastewater rate for industrial and large governmental customers. Finally, I will explain a tariff provision addressing PAWC's powers and duties when the Commission appoints it to serve as a Receiver for another utility system.

ACQUISITIONS INCLUDED IN THIS BASE RATE CASE

Q. What acquisitions are being included for the first time in base rates in this case?

A. PAWC has included the following acquisitions in this base rate case:

(1) Butler Area Sewer Authority (wastewater);

(2) Elizabeth Borough Municipal Authority (wastewater).

(3) Sadsbury Township Municipal Authority (wastewater);

(4) Farmington Township (water and wastewater);

(5) Audubon Water Company (water);

(6) East Dunkard Water Authority (water);

(7) Manwalamink Water Company and Manwalamink Sewer Company;

(8) Appalachian Utilities, Inc. (water); and

(9) Corner Water Supply and Service Corporation (water).

Q. Please provide a detailed description of these acquisitions.

A. **Butler Area Sewer Authority ("BASA"):** On November 16, 2023, the Commission entered an Opinion and Order approving this acquisition pursuant to Section 1329 of the Pennsylvania Public Utility Code ("Code"), 66 Pa. C.S. § 1329. The Commission's decision was appealed to the Commonwealth Court of Pennsylvania ("Commonwealth Court"), which dismissed the appeal. *Center Tp., Butler County v. Pa. Pub. Util Comm'n and Summit Tp., Butler County v. Pa. Pub. Util. Comm'n,* Docket Nos. 1459 C.D. 2023 and 1460 C.D. 2023 (Aug. 9, 2024). This decision was not appealed to the Supreme Court of Pennsylvania ("Supreme Court"). Consequently, the Commission's decision became final and unappealable. PAWC and BASA closed on the acquisition on October 29, 2024. The BASA system is a regional wastewater service provider in Butler County, providing wastewater service to the City of Butler, the Township of Butler, and portions of the Townships of Center, Summit, Connoquenessing, and Oakland, as well as the Borough of East Butler. As of June 30, 2023, the BASA system furnished wastewater service to approximately 14,755 customers. It has no bulk service agreements with any contributing municipalities.

The BASA system is a sanitary-only system; there are no combined sewers in the system. The system consists of 224 miles of interceptor sewers, eight miles of force mains, twenty-three pump stations, seven flow equalization tanks, and a wastewater treatment plant ("WWTP") that has a design and permitted average daily flow capacity of

10.0 million gallons per day ("MGD") and a rated maximum flow capacity of 28.0 MGD. BASA also owns nearly 6,500 manholes.

Public benefits of the transaction include:

- the promotion of the Commission's policy favoring regionalization and consolidation of water/wastewater systems and the General Assembly's policy goals when it enacted Section 1329;
- the Commission will now regulate the system, giving BASA's customers access to the Commission, the OCA, the OSBA and I&E;
- PAWC will expand eligibility for hardship grants and will contribute $3,500,000, over five years, to its hardship grant program, which would not be recoverable in rates; and
- PAWC will make capital improvements to the system to address long-standing environmental issues.

Elizabeth Borough Municipal Authority ("EBMA"): By Order entered October 9, 2025, the Commission approved PAWC's acquisition of EBMA's wastewater collection and treatment system pursuant to Section 1329. The acquisition is scheduled to close on December 16, 2025. The EBMA system is located in Allegheny County. As of December 31, 2024, the system directly served approximately 672 customers in Elizabeth Borough and, pursuant to several bulk agreements, approximately 1,504 indirect customers in Elizabeth Township, Lincoln Borough and Forward Township. The system consists of sanitary sewers, combined sewers, interceptors, five combined sewer outfall/regulator structures, and a WWTP.

Public benefits of the acquisition include:

- Portions of the sales proceeds will be paid to EBMA, Elizabeth Borough, Elizabeth Township, and Forward Township all of which will use the funds to benefit the public in those communities;
- Approval of the settlement will gradually increase rates for EBMA customers, whereas disapproval would result in EBMA substantially increasing rates for those customers in the near term;
- EBMA's customers will gain access to PAWC's customer assistance programs ("CAPs");

- PAWC will make a $100,000 contribution to its Hardship Fund either in one payment or in installments over the first five years following closing.

Sadsbury Township Municipal Authority ("STMA"): By Order entered September 12, 2024, the Commission approved PAWC's acquisition of STMA's wastewater collection and conveyance system pursuant to Section 1102 of the Code, 66 Pa. C.S. § 1102. PAWC and STMA closed on the acquisition on October 31, 2024.

The STMA wastewater collection and conveyance system serves approximately 226 residential and 26 commercial customers in Sadsbury Township, Lancaster County. Treatment service is provided by Christiana Borough Authority and the Township of Salisbury.

Public benefits of the transaction include:

- STMA's customers will receive service from a large, financially sound company with the employees and equipment to ensure that customers receive high quality wastewater service meeting federal and state requirements;
- PAWC's experience in operating wastewater systems will result in efficiencies;
- Other efficiencies will result from economies of scale, due to PAWC's greater purchasing power; and
- STMA's customers will benefit from an expanded customer base, allowing costs to be spread among a larger number of customers, which helps to protect customers from dramatic price spikes.

The purchase price for the system is $990,000. On November 7, 2024, PAWC filed an Original Cost Study of the system. The original cost of the system was determined to be $2,451,913 and the depreciated original cost was $1,976,073. The depreciated original cost of the assets included in this transaction is more than the purchase price, therefore, PAWC will amortize the difference between what was paid and the cost of the assets over ten years, thus lowering expenses for the Company's existing customers.

Farmington Township ("Farmington"): By Order entered September 26, 2024, the Commission approved PAWC's acquisition of Farmington's wastewater collection, conveyance and treatment system (Docket No. A-2023-3042587) and its water distribution system (Docket No. A-2023-3042567), pursuant to 66 Pa. C.S. § 1102. PAWC and Farmington closed on this acquisition on November 21, 2024.

The Farmington wastewater system serves approximately 448 customers in Farmington Township, Clarion County. The system consists of a WWTP, four pumping stations, approximately 340 grinder pumps and 14 miles of collection mains. The water distribution system serves approximately 464 customers in the township and consists of 16 miles of water mains, 70 water hydrants and one storage tank.

Public benefits of the acquisition include:

- Farmington's customers will receive service from a large, financially sound company with the employees and equipment to ensure that customers receive high quality wastewater and water services meeting federal and state requirements;
- The water distribution system will be folded into PAWC's Clarion water system, which will create cost-savings;
- PAWC's experience in operating wastewater systems will result in proper adherence to environmental regulations;
- Farmington's WWTP was projected to be hydraulically overloaded within the next five years. PAWC has the necessary capital and expertise to reduce or eliminate the stormwater infiltration and inflow, which reduces the potential for overloading;
- Farmington does not have the necessary personnel or financial resources to maintain the water system or wastewater system;
- Efficiencies will result from economies of scale due to PAWC's greater purchasing power;
- PAWC offers CAPs, whereas Farmington does not;
- Farmington's customers will benefit from an expanded customer base, allowing the costs to be spread among a larger number of customers, which helps to stabilize rates over the long term; and
- Farmington will be able to use the proceeds of the sale to retire all debt associated with both systems, thus eliminating a significant burden from the township budget.

The total purchase price for both systems is $5,545,000. On November 21, 2024, PAWC filed an original cost study showing that the original cost of the wastewater system was $5,683,299 and the depreciated original cost was $3,960,307. Also on November 21, 2024, PAWC filed an original cost study showing that the original cost of the water system was $3,110,083 and the depreciated original cost was $2,484,712. PAWC will pay slightly more than the depreciated original cost of the assets, therefore PAWC is requesting an acquisition adjustment on the water system pursuant to 66 Pa. C.S. § 1327 (relating to acquisition of water and sewer utilities) and 52 Pa. Code § 69.711 (statement of policy regarding small nonviable water and wastewater systems).

Audubon Water Company ("AWC"): By Order entered January 23, 2024, the Commission approved PAWC's acquisition by merger of AWC's water distribution and treatment system pursuant to Section 1102 of the Code. Pursuant to the Merger Agreement, AWC first merged with American Water's AWC Acquisition Company, LLC, with AWC as the surviving corporation. AWC then merged with PAWC. The merger of AWC with and into PAWC was effective as of May 29, 2025.

The AWC system is located in Montgomery County and serves approximately 2,651 residential customers, 167 commercial customers, 90 private fire customers, 29 multi-family dwelling customers, 3 public customers, and 1 public fire customer primarily located within Lower Providence Township. The AWC system consists of two water systems that are not interconnected with each other. The main system supplies the town of Audubon and the second system serves the Valley Forge Crossing Trailer Park. AWC's primary source of supply is from 15 groundwater wells located within its service area. The main AWC system has six storage tanks, five booster pump stations, 160 fire hydrants and

a distribution network of approximately 40 miles of water mains. There are thirteen water treatment facilities associated with the ground water systems for the AWC system.

AWC and American Water entered into a Merger Agreement pursuant to which all issued and outstanding shares of the capital stock of AWC would be cancelled and converted to the right to receive American Water Common Stock equal to a *pro rata* portion of the merger consideration identified in the Merger Agreement. The issued and outstanding shares of AWC's capital stock were surrendered to American Water in exchange for American Water Common Stock in accordance with the Merger Agreement.

At closing, a number of shares of American Water Common Stock equal to the Contingent Escrowed Shares identified in the Merger Agreement (value of $2,000,000) were held in escrow. The Merger Agreement provided that PAWC will seek distressed utility treatment under 66 Pa. C.S. § 1327(a) for the AWC system in its next rate case. If the Commission grants 1327(a) treatment and some or all of the difference between the depreciated original cost of the assets and the purchase price is approved for inclusion in rate base, American Water will release the Contingent Escrowed Shares to AWC in a corresponding percentage in an amount up to $2,000,000 upon entry of a final, non-appealable Commission order. If the Commission does not grant the request for 1327(a) treatment, the purchase price for AWC will be $6,000,000 and the Contingent Escrowed Shares will be returned to American Water.

PAWC has included in this case the original cost and accumulated depreciation of the AWC system. As explained in the testimony of PAWC witness Mr. Deason, the

Company proposes to amortize the difference between the depreciated original cost and $3,600,000[1] over a ten-year period.

Public benefits of the acquisition include:

- The water distribution system can eventually be fully integrated into PAWC's Norristown and/or Royersford systems to eliminate the need to draw water from AWC's insufficient and contaminated wells;
- PAWC's experience in operating water systems will result in proper adherence to environmental regulations;
- If the transaction does not occur, the capital investment needed in this system will significantly increase rates for AWC customers;
- Efficiencies will result from economies of scale due to PAWC's greater purchasing power; and
- PAWC offers CAPs whereas AWC does not.

East Dunkard Water Authority ("East Dunkard"): PAWC served as Receiver of East Dunkard beginning on February 9, 2024 as authorized by both the Commission[2] and the Commonwealth Court. PAWC filed an Application to acquire the East Dunkard system on June 21, 2024. By Order entered on March 13, 2025, the Commission approved PAWC's acquisition of the East Dunkard system pursuant to Section 1102. Closing occurred on April 29, 2025.

The East Dunkard system is located in Greene County and serves approximately 1,492 residential customers, 79 commercial customers and 92 public fire hydrants. The

[1] In the Joint Petition for Approval of Settlement of All Issues ("AWC Settlement") filed at Docket Nos. A-2023-3043194 and A-2023-3043196, PAWC agreed to limit the amount it requests to add to rate base for the AWC System to $3,600,000 as opposed to $7,200,000. By Order entered January 23, 2025, the Commission approved the AWC Settlement.

[2] The Commission's Receivership Order at Docket No. P-2023-3043950 allowed PAWC to charge EDWA reasonable rates for all services rendered to or for East Dunkard as Receiver. It also allowed PAWC to establish a deferred expense account for expenses incurred by East Dunkard that are payable to the Receiver. In addition, operating expenses and capital expenses incurred by PAWC are eligible for deferred accounting treatment and may be charged to a deferred expense account. Finally, the Commission's Receivership Order allowed PAWC to establish a deferred expense account for expenses incurred by the Receiver, including prudent and reasonable legal expenses.

system includes a water treatment plant, approximately 230 miles of water mains, six booster pump stations and ten finished water storage tanks.

The East Dunkard system is a troubled system with a long history of water quality issues and environmental non-compliance. Public benefits of the acquisition include promoting the people's right to clean, potable water and a clean environment. In addition:

- The acquisition will result in better water service for East Dunkard's customers;
- The system will become part of a system with a larger customer base, allowing East Dunkard's customers to share the costs of improving and operating the system with many other customers;
- PAWC's existing water customers will also benefit from the larger customer base, because it will allow the costs of operating and improving PAWC's system to be shared with a greater number of customers;
- PAWC's existing wastewater customers will benefit because, by adding more water customers to PAWC's system, the acquisition will help keep rates stable for PAWC's wastewater customers because a portion of the wastewater revenue requirement can be spread among more water customers.

Manwalamink Water Company ("MWC") and Manwalamink Sewer Company ("MSC") (collectively "Manwalamink"): By Order entered March 27, 2025, the Commission approved PAWC's acquisition by merger of Manwalamink pursuant to Section 1102 of the Code. PAWC acquired all of the issued and outstanding capital stock of Manwalamink for a purchase price of $3,400,000. PAWC allocated the purchase price as follows: $1,809,000 for the MWC water system and $2,191,000 for the MSC wastewater system. The merger became effective on June 25, 2025.

Manwalamink is located in Monroe County. MWC provides water service to approximately 1,224 residential and 47 commercial customers. It has five producing groundwater wells, pump house and treatment facilities, two water booster pumping stations, five above ground water storage tanks, transmission lines, distribution mains and

fire hydrants. MSC provides wastewater service to approximately 1,219 residential and 47 commercial customers. Its facilities consist of a WWTP, sections containing gravity sewers, low pressure collection mains, and over a dozen sewage pumping stations.

NextEra Water Pennsylvania, LLC ("NextEra") had agreed to acquire Manwalamink, but the Stock Purchase Agreement and Asset Purchase Agreement for the transaction were assigned from NextEra to PAWC. PAWC agreed to purchase all the issued and outstanding capital stock of Manwalamink. Post-acquisition, Manwalamink was merged with and into PAWC.

Public benefits of the acquisition include:

- providing a succession plan for the aged owners and employees of Manwalamink, allowing the continuation of water and wastewater services to Manwalamink's customers;
- addressing the system's operational issues, which have resulted in violations or non-compliance;
- providing a prudent option for the systems to achieve much-needed improvements while moving rates toward a more reasonable cost of service.

Appalachian Utilities, Inc. ("AUI"): By Opinion and Order entered September 23, 2025, the Commission approved PAWC's acquisition of the AUI water system pursuant to Section 1102 of the Code. The merger of AUI with and into PAWC closed on October 27, 2025.

AUI is located in Clinton County. As of February 2024, AUI furnished water service to approximately 1,456 customers. The system consists of two systems that normally run separately but are interconnected in case the need arises to feed water from one system to the other. The Woolrich system has two wells and 1,000,000 gallons of storage. The Avis system has two wells. Finished water from these wells is supplied to the distribution system or is stored in the 1,000,000 gallon Avis Storage Reservoir.

The acquisition occurred through a two-step process. First, AUI merged with a merger subsidiary of American Water with AUI as the surviving corporation, then AUI merged with and into PAWC with PAWC as the surviving corporation.

Public benefits of the transaction include:

- Promoting public safety because PAWC has a better record of compliance with the Pennsylvania "One Call Act" than does AUI;
- Promoting rate stability for AUI's customers, who are currently exposed to rate spikes due to the small size of the utility's customer base;
- Permitting AUI customers to participate in PAWC's CAPs (AUI does not have CAPs); and
- Allowing AUI customers to receive service from a financially sound public utility, as opposed to a utility that is losing money annually.

Corner Water and Service Corporation ("Corner"): By order entered September 2, 2025, the Commission approved PAWC's acquisition of Corner's water system pursuant to Section 1102 of the Code. The acquisition is expected to close on or around November 19, 2025.

Corner is located in Clarion County. It is a ground water system with two wells, a treatment plant, two finished water storage tanks and a distribution network. The system serves approximately 605 customers (355 residential, 83 commercial, 5 industrial, 2 public fire service and 160 "other" customers).

Public benefits of the transaction include:

- promoting regionalization and consolidation because, after closing, the system will be physically integrated into PAWC's Clarion Regional Water System and Corner's aging water treatment plant will be decommissioned;
- rectifying Corner's environmental non-compliance issues;
- addressing Corner's issues with limited sources of supply;
- upgrading and improving the system because PAWC will invest more than $4 million in it during the first five years of ownership; and

- resolving Corner's issues with excessive levels of non-revenue water (30%).

Q. Please describe any settlement commitments for the BASA acquisition that relate to the instant base rate filing and your understanding of how the filing complies with those commitments.

A. In the settlement, PAWC, the statutory advocates, and the other parties to the proceeding agreed that PAWC could include $228,000,000 in rate base as a result of the acquisition. Customer notice was provided to the acquired customers and PAWC's legacy customers in the application proceeding. As a result, rate base issues related to the BASA acquisition should not be re-litigated in this proceeding.

On other issues resolved in the BASA proceeding (such as transaction and closing costs, accrual of Allowance for Funds Used During Construction ("AFUDC") for post-acquisition improvements not recovered through the Distribution System Improvement Charge ("DSIC") for book and ratemaking purposes, and deferred depreciation related to post-acquisition improvements not recovered through the DSIC for book and ratemaking purposes), the settling parties agreed that PAWC could include a claim for those expenses in this proceeding. On those issues, the parties reserved their rights to litigate the reasonableness of those claimed expenses. Nevertheless, I note that Section 1329 expressly permits the recovery of such expenses.

The instant base rate filing also includes a cost-of-service study that removes all costs and revenues associated with the operations of the BASA system, as well as a cost-of-service study for the BASA system. The instant base rate case also reflects claims for rate recovery of the transaction and closing costs as well as PAWC's outside legal fees associated with the BASA acquisition.

In the settlement, PAWC agreed that it would not propose an increase in BASA's base rates if the rates would become effective before the later of: (a) the first anniversary of closing or (b) January 1, 2025. The instant base rate case complies with these provisions by proposing an increase for BASA system customers that would become effective after October 29, 2025. PAWC also agreed that it would propose to move the system to 1.4x the current system rate or PAWC's proposed Rate Zone 1 system-average wastewater rates, whichever is lower, upon the later of (a) the first anniversary of Closing or (b) January 1, 2025. PAWC is proposing an overall increase in rates of 40% for BASA customers. The Company's rate proposal complies with several other settlement provisions regarding rates: PAWC is proposing a rate for the Veterans Administration Hospital and is proposing metered rates for BASA customers.

Q. Please describe any settlement commitments for the EBMA acquisition that relate to the instant base rate filing and your understanding of how the filing complies with those commitments.

A. The settling parties agreed that PAWC could include $27,138,703 in rate base as a result of the acquisition. Customer notice was provided to the acquired customers and PAWC's legacy customers in the application proceeding. As a result, rate base issues related to the EBMA acquisition should not be re-litigated in this proceeding.

On other issues resolved in the EBMA proceeding (such as transaction and closing costs, AFUDC for post-acquisition improvements not recovered through the DSIC for book and ratemaking purposes, and deferred depreciation related to post-acquisition improvements not recovered through the DSIC for book and ratemaking purposes), the signatories to the settlement agreed that PAWC could include a claim for those expenses

in this proceeding. On those issues, the parties reserved their rights to litigate the reasonableness of those claimed expenses. Nevertheless, I note that Section 1329 expressly permits the recovery of such expenses.

In the first base rate case that includes system assets, the settlement provides that PAWC will not propose to increase rates for the EBMA zone more than 30% of EBMA's rates in effect at Closing. This base rate case complies with this settlement provision because PAWC proposed rates totaling an increase of 29.98% which is an increase of less than 30% of EBMA's rates in effect at closing.

Additionally, the settlement provides that, in the first base rate case that includes the acquired assets, PAWC will propose to limit any shift of a revenue requirement related to EBMA's operations pursuant to 66 Pa. C.S. § 1311(c) to no more than is needed to achieve the proposed rates described above. The proposed revenue requirement shift, as described in the Direct Testimony of my colleague, Max McClellan, PAWC St. No. 10, complies with this settlement provision (McClellan pp 30-37).

The settlement also requires that, in the first base rate case in which the system is included, PAWC will submit (a) a cost of service study that removes all costs and revenues associated with the operation of the system, and (b) a separate cost of service study for the system. This base rate case includes such cost of service studies.

Q. Please describe any settlement commitments for the STMA acquisition that relate to the instant base rate filing and your understanding of how the filing complies with those commitments.

A. The settlement permits PAWC to claim transaction and closing costs associated with the acquisition in its first base rate case that includes the system assets (but PAWC cannot

claim transaction and closing costs incurred by STMA). The other Joint Petitioners reserved their right to litigate their positions fully in future rate cases when the issue is ripe.

Additionally, in the first base rate case that includes the STMA system:

> (a) Pennsylvania-American Water Company shall not be permitted to seek a "substantial public interest" exception to the requirement of 66 Pa. C.S. § 1327(e) for this System and Pennsylvania-American Water Company shall pass through to customers any difference between the depreciated original cost of the System and the purchase price as an addition to income that offsets expenses included in revenue requirement.
>
> (b) Pennsylvania-American Water Company shall treat costs incurred for System wastewater treatment, including but not limited to fees and charges pursuant to service agreements with the Borough of Christiana, Christiana Borough Authority, Sadsbury Township and Salisbury Township as Operations and Maintenance expenses to be recovered in Pennsylvania-American Water Company's base rates, subject to Commission review and approval.

The instant base rate case complies with these provisions by proposing to amortize the difference between the system's depreciated original cost and its purchase price as an addition to income. In addition, PAWC proposes to treat the system's costs for wastewater treatment as operations and maintenance expenses.

Q. Please describe any settlement commitments for the Farmington acquisition that relate to the instant base rate filing and your understanding of how the filing complies with those commitments.

A. The settlement permits PAWC to claim transaction and closing costs associated with the acquisition of the system in its first base rate case that includes the system assets (but PAWC cannot claim transaction and closing costs incurred by Farmington). The other Joint Petitioners reserved their right to litigate their positions fully in future rate cases when the issue is ripe.

Additionally, in the first base rate case that includes Farmington, PAWC

> … may allocate the purchase price of the Township of Farmington system between the water and wastewater systems to allocate proportionately the purchase price and depreciated original cost between the two systems, based on the respective depreciated original cost of the two systems, but in no case will more than fifty percent (50%) of the total be allocated to the water assets. That allocation may be reflected in any claim for an acquisition adjustment under 66 Pa. C.S. § 1327 for the Township of Farmington water system.

The instant base rate case complies with these provisions by proposing an allocation of less than 50% to water. Mr. Deason (PAWC Statement No. 5) further addresses this in his testimony.

The settlement further provides that PAWC will not claim an acquisition adjustment pursuant to Section 1327 of the Code for the Farmington wastewater system. This base rate case complies with this provision because it only proposes a Section 1327 adjustment for Farmington's water system.

The settlement further provides that PAWC should include in its first base rate case proposals for (a) metered water and wastewater rates for Farmington customers, and (b) a rate increase that moves water and wastewater rates for Farmington customers toward the cost of service. This base rate case complies with these provisions. As described by Mr. McClellan, PAWC is proposing to move Farmington's water rates to equal PAWC's Zone 1 metered rates and Farmington's wastewater rates for metered customers to rates consisting of a service charge and a volumetric rate.

Q. Please describe any settlement commitments for the East Dunkard acquisition that relate to the instant base rate filing and your understanding of how the filing complies with those commitments.

A. The settlement provides that, after closing, the PENNVEST loan surcharge on East Dunkard's bills is to be removed and rolled into base rates, but if PAWC assumes the PENNVEST loan, that loan is to be treated as PAWC treats other current debt (*i.e.,* not as a surcharge). With regard to the PENNVEST loan, PAWC did not assume the loan. The loan surcharge was removed at closing and rolled into base rates.

The settlement also provides that, in the first base rate case following Closing, PAWC is to propose a public fire rate for the East Dunkard service territory equal to PAWC's statewide public fire rates. The instant rate case proposal complies with this provision because PAWC is proposing to apply the statewide public fire hydrant rates to the East Dunkard service area.

In addition, the settlement provides that, in the first base rate case following closing on the Transaction, PAWC is to propose a nonzero qualified private fire hydrant rate for the East Dunkard service territory. The instant rate case proposal complies with this provision because PAWC is proposing to apply the statewide private fire hydrant rates to the East Dunkard service area.

Finally, the settlement provides that any claim by PAWC to recover transaction and closing costs associated with the acquisition of East Dunkard is not to include transaction and closing costs incurred by East Dunkard. However, PAWC may seek recovery of any costs it incurred as Receiver of the East Dunkard system that are not reimbursed from the proceeds of the sale. This base rate case complies with this provision because PAWC is

proposing to recover its transaction costs associated with the acquisition of East Dunkard and amortize the costs over 10 years.

Q. Please describe any commitments for the Manwalamink acquisition that relate to the instant base rate filing and your understanding of how the filing complies with those commitments.

A. The SPA First Amendment provides for a two-year rate freeze following closing of the transaction (*i.e.,* until June 25, 2027), followed by a ten-year cap of no more than ten (10) percent Compound Annual Growth Rate ("CAGR") per rate increase for Manwalamink customers, subject to Commission approval and applicable law. During the litigation, PAWC accepted the OSBA's proposed condition that, if PAWC includes the Manwalamink service area in a future base rate case with an effective date prior to the expiration of the two-year rate freeze, PAWC will impute revenue to the Manwalamink service area in its proposed proof of revenues. This rate case complies with these provisions because PAWC is proposing a rate increase in this case, with an effective date at the end of the two-year rate freeze. Revenues associated with the proposed rate increase are imputed in the Company's proposed revenues, as discussed in the Direct Testimony of my colleague, Max McClellan, PAWC St. No. 10.

Q. Please describe any settlement commitments for the Corner acquisition that relate to the instant base rate filing and your understanding of how the filing complies with those commitments.

A. The settlement provides that any claim by PAWC to recover transaction and closing costs associated with the acquisition will not include costs incurred by Corner. The instant rate base filing complies with this provision.

SECTION 1327

Q. What is your understanding of Section 1327?

A. I am advised by counsel that Section 1327 creates a rebuttable presumption that a purchase price in excess of the original cost less depreciation of an acquired system is reasonable and should be included in rate base if certain conditions are met. Those conditions are: (1) the property is used and useful in providing water or wastewater service; (2) the acquired system had 3,300 or fewer customer connections or was not viable; (3) the acquired system was not providing adequate, efficient, safe and reasonable service and facilities; (4) reasonable and prudent investments will be made to provide adequate, efficient, safe and reasonable service and facilities; (5) the acquired entity agrees to the acquisition and the negotiations were conducted at arm's length; (6) the actual purchase price is reasonable; (7) the acquiring public utility is not affiliated with the acquired entity; (8) the rates charged to the acquiring utility's preacquisition customers will not increase unreasonably because of the acquisition; and (9) the excess of the acquisition cost over depreciated original cost will be added to rate base to be amortized over a reasonable period with corresponding reductions in the rate base.

Q. You testified earlier that the Company is requesting that the Commission grant Section 1327 treatment for the AWC system. Please explain why.

A. The system satisfies each of the nine criteria contained in Section 1327:

(1) all of the assets acquired by PAWC are used and useful in the public service;

(2) the AWC system had 2,893 customers as of June 30, 2025, which is fewer than 3,300 customer connections;

(3) the AWC system struggled to provide adequate, efficient, safe and reasonable service and facilities because the owners of the system were of retirement age, they were no longer able to properly manage and operate the system, and they did not have successors available to assume management of the system. At the time of PAWC's acquisition of the AWC system, AWC faced inadequate water supply and quality issues, challenged by proximity to an EPA superfund site. AWC's customer base had been increasing with demand outstripping its production levels and AWC was unable to rely on its water wells to meet its customers' needs. AWC had been dealing with volatile organic compound ("VOC") remediation at two other EPA superfund sites, which would have required water towers to be installed at these sites.

In addition, eleven out of the system's fifteen wells were tested and found to have detectable levels of PFAS. Moreover, AWC had some secondary exceedances on some of its wells, including two wells with sulphate exceedances that prevented redrilling. As AWC was limited in its sources of supply, AWC would have been forced to construct PFAS treatment for these wells. The cost of constructing and operating these treatment units would have ranged in the tens of millions of dollars, causing a significant financial burden on the system's customers. AWC did not have the ability to spread these costs over a large customer base nor the technical expertise to properly operate these complex treatment units.

Complicating matters further, the groundwater in the Audubon area is known or expected to have issues with PFAS. In general, issues with groundwater contamination in the area would have limited AWC's ability to develop additional sources of supply to meet future demands in its service area.

The Pennsylvania Department of Environmental Protection ("DEP")'s Drinking Water Reporting System showed 957 violations of Pennsylvania's Safe Drinking Water Act ("SDWA") in AWC's main system from 2020 through January 2024, as well as 130 violations in AWC's Valley Forge Crossing Trailer Park system over the same period. The DEP issued two Notice of Violation letters to AWC in January and February 2024 for SDWA violations;

(4) PAWC has made and will continue to make reasonable and prudent investments to provide adequate, efficient, safe and reasonable service and facilities. These investments include:

- Improvements to provide enhanced safety and security; pad locks on all doors and gates for wells and booster stations; added spill containment for all wells.
- Remote monitoring and data collection systems; added SCADA at Egypt Road IC and communications to VFCC elevated tank with remote monitoring to the PAWC SCADA system; added panel and SCADA to Shannondell booster station.
- Distribution system improvements to address reliability, water quantity issues, and to reduce lost water in the system; changed out over 500 water meters and continuing to replace until all are AMI cellular, which helps with identifying leaks; Installed about 160 leak loggers to help identify leaks in the system; removed VFCC wells which were over the DEP limit for PFAS and supplied a portion of the system from Norristown through the Egypt Road interconnect; repaired four major

leaks and breaks that caused significant unaccounted water, which resulted in a 20% reduction in lost water; added valves to isolate the system better, and connections to improve fire flow to areas in need; added three VFDs to the Shannondell booster pump station to improve reliable service.

- Improvements to the disinfection systems; added spill containment and transfer pumps for the chlorine at the well stations; added back up data storage on all chlorine analyzers.
- Additional interconnections between the AWC system and PAWC's Royersford and Norristown systems to enhance system reliability, provide adequate supply for periods of high demand, and to address future demands in AWC's certificated service area; added the Egypt Road interconnect and planning and permitting and design continuing for the Highley Road interconnect and Valley Forge Crossing mobile home park.

PAWC already has an interconnection with AWC via a pipeline that travels through the system's service territory. The pipeline connects PAWC's Royersford and Norristown systems, allowing PAWC to supply the AWC system with water from either or both of the PAWC systems. After acquisition, PAWC will be able to consolidate the sources of supply and halt using any problematic wells in the AWC system. PAWC has performed PFAS testing on the Royersford and Norristown sources of supply and has not found any impacts from PFAS. This acquisition will provide a cost effective solution to the contamination and demand issues facing the customers of AWC;

(5) AWC agreed to the acquisition and the negotiations were conducted at arm's length;

(6) the purchase price of $7,200,000 (with the Section 1327(a) contingency) is reasonable. A comparison of AWC's purchase price per customer ("PP/C") at a purchase price of $7,200,000 yields a favorable comparison to the average PP/C for PAWC's § 1102 transactions over the last six years. AWC's PP/C of $2,448 ($7,200,000/2,893 customers = $2,448) is 24% less than the average § 1102 PP/C during the last six years;

PAWC § 1102 TRANSACTIONS SINCE 2019

Date of Closing	System	Purchase Price	Customers	PP/C
7/24/2019	Turbotville Water	$635,000	330	$1,900
7/24/2019	Turbotville Wastewater	$365,000	318	$1,100
10/27/2022	Foster Township Water	$3,750,000	456	$8,200
6/21/2023	Creekside Water	$171,580	78	$2,200
10/31/2024	Sadsbury Township	$990,000	251	$3,944
11/21/2024	Farmington Township Water	$2,621,312	549	$4,775
11/21/2024	Farmington Township Wastewater	$2,923,688	468	$6,247
4/29/2025	East Dunkard Water Authority	$5,000,000	1600	$3,125
5/28/2025	Audubon	$7,200,000	2893	$2,488
6/25/2025	Manwalamink Water Company	$1,209, 000	1263	$957
6/25/2025	Manwalamink Sewer Company	$2,191,000	1256	$1,744
10/27/2025	Appalachian Water Company	$3,500,000	1432	$2,444
Average				$3,260

(7) PAWC is not affiliated with AWC;

(8) the rates charged to PAWC's preacquisition customers will not increase unreasonably because of the acquisition. The proposed rate base for this system is $3.6 million, which represents less than 0.08% of PAWC's $4.7 billion rate base at the end of the FPFTY. The transaction will have a *de minimus* impact on rates; and

(9) the excess of the acquisition cost over depreciated original cost will be added to rate base to be amortized over ten years (a reasonable period) with corresponding reductions in the rate base.

Q. You also testified earlier that the Company is requesting that the Commission grant Section 1327 treatment for the Farmington water system. Please explain why.

A. Again, the water system satisfies each of the nine criteria contained in Section 1327:

(1) all of the assets acquired by PAWC are used and useful in the public service;

(2) the Farmington water system has 464 total customers, which is fewer than 3,300 customer connections;

(3) the Farmington water system was not providing adequate, efficient, safe and reasonable service and facilities. The Farmington water system has an extensive history of recurring violations of DEP SDWA regulations. The system received 41 Safe Drinking Water violations between 2018 and 2023. As shown below, violations were received every year during this period:

- 2018 4 violations
- 2019 10 violations
- 2020 7 violations
- 2021 10 violations
- 2022 5 violations

- 2023 5 violations

Violations include persistent failure to collect weekly water samples, such as: disinfectant residual samples, disinfectant by-product contaminant samples, and lead and copper samples. The system also repeatedly failed to collect follow-up disinfectant residual samples even after initial samples showed residual disinfectant concentrations below standards. By failing to collect samples, the Farmington system provided inadequate and unreliable service, exposing customers to the risk of ingesting improperly disinfected water. Proper water sampling is a basic health and safety function performed by water providers. The failure to properly sample water and provide results to DEP is symptomatic of greater operational problems of a system.

The system also repeatedly failed to issue public notification of its violations as required by DEP SDWA regulations and failed to issue its U.S. Environmental Protection Agency ("EPA") mandated Consumer Confidence Report on a timely basis. By failing to inform the public of critical drinking water alerts and information in a timely manner, the system provided inadequate and unreasonable service by not communicating public health safety concerns;

(4) PAWC will make reasonable and prudent investments to provide adequate, efficient, safe and reasonable service and facilities. These investments include an estimated $1.04 million of capital improvements in the water system, such as:

- Security, safety and SCADA improvements at the interconnection/chemical feed facility and the water storage tank;
- Automatic flushing units to help maintain water quality at dead end mains;
- GIS mapping of system;

- Full meter replacement;
- Purchase new vehicle to replace old, unreliable vehicle;
- Leak logger purchase; and
- Recurring projects (new or relocated mains, capitalized main break repairs, new/replacement hydrants, new/replacement valves, new/replacement services, tools & equipment);

(5) Farmington agreed to the acquisition and the negotiations were conducted at arm's length;

(6) the allocated purchase price of $2,621,312 for the water system is reasonable. Farmington chose not to pursue a fair market value transaction, despite its ability to do so. The purchase price for the water system was based on the depreciated original cost ("DOC") of the assets of the system. The allocated purchase price of $2,621,312 is only 5% higher than the water system's DOC of $2,501,654;

(7) PAWC is not affiliated with Farmington;

(8) the rates charged to PAWC's preacquisition customers will not increase unreasonably because of the acquisition of the Farmington water system. The proposed rate base for this system is $2,718,300, which represents less than 0.1% of PAWC's $4.7 billion rate base at the end of the FPFTY. The transaction will have a *de minimus* impact on rates; and

(9) the excess of the acquisition cost over depreciated original cost will be added to rate base to be amortized over ten years (a reasonable period) with corresponding reductions in the rate base.

Q. Are there any other systems for which the Company is requesting Section 1327 treatment?

A. Yes. The Company is requesting Section 1327 treatment for the MWC water system and the MSC wastewater system.

Q. Please explain why the Company is requesting Section 1327 treatment for the MWC water system.

A. The system satisfies each of the nine criteria contained in Section 1327:

(1) all of the assets acquired by PAWC are used and useful in the public service;

(2) the MWC water system has approximately 1,263 customers, which is fewer than 3,300 customer connections;

(3) the MWC water system struggled to provide and maintain adequate, efficient, safe and reasonable service and facilities because of the age of the owners. The owners postponed retirement to continue to operate the system through the protracted closing caused by NextEra's inability to close on its purchase agreement with MWC. The owners of MWC could not maintain adequate, efficient, safe, and reasonable service and facilities due to their advanced age;

(4) PAWC will make reasonable and prudent investments to provide adequate, efficient, safe and reasonable service and facilities. These investments include:

- Safety, Security, and SCADA improvements to the wells and treatment buildings;
- Improvements to the treatment processes at the well buildings;
- Leak detection and GIS survey;
- Meter replacement; and

- Targeted main replacement;

(5) MWC agreed to the acquisition and the negotiations were conducted at arm's length;

(6) the purchase price of $1,209,000 is reasonable. The purchase price was negotiated by another utility (NextEra), which demonstrates that the purchase price was reasonable based on the market at that time. Significantly, despite inflation during the nine months between the date of NextEra's agreement to purchase the MWC water system and the date of NextEra's assignment of that agreement to PAWC, there was no increase in the purchase price for the system.

A comparison of MWC's PP/C at a purchase price of $1,209,000 for 1,263 customers yields a favorable comparison to the PP/C for PAWC's § 1102 transactions over the last six years. According to the chart above listing PAWC's § 1102 transactions since 2018, MWC's PP/C of $1,423 ($1,209,000/1,263 customers = $957) is less than all of the Company's other § 1102 acquisitions during the last seven years;

(7) PAWC is not affiliated with MWC;

(8) the rates charged to PAWC's preacquisition customers will not increase unreasonably because of the acquisition. The proposed rate base for this system is $1,809,000, which represents less than .04% of PAWC's $4.7 billion rate base at the end of the FPFTY. The transaction will have a *de minimus* impact on rates; and

(9) the excess of the acquisition cost over depreciated original cost will be added to rate base to be amortized over 10 years (a reasonable period) with corresponding reductions in the rate base.

Q. Please explain why the Company is requesting Section 1327 treatment for the MSC wastewater system.

A. The system satisfies each of the nine criteria contained in Section 1327:

(1) all of the assets acquired by PAWC are used and useful in the public service;

(2) the MSC wastewater system has approximately 1,256 customers, which is fewer than 3,300 customer connections;

(3) the MSC wastewater system struggled to provide and maintain adequate, efficient, safe and reasonable service and facilities because of the age of the owners. The owners postponed retirement to continue to operate the system through the protracted closing caused by NextEra's inability to close on its purchase agreement with MSC. The owners of MSC could not maintain adequate, efficient, safe, and reasonable service and facilities due to their advanced age;

(4) PAWC will make reasonable and prudent investments to provide adequate, efficient, safe and reasonable service and facilities. These investments include:

- Safety, Security, and SCADA improvements to the treatment facility;
- Improvements to the treatment processes at the treatment facility;
- I/I detection and GIS survey; and
- Targeted main replacement;

(5) MSC agreed to the acquisition and the negotiations were conducted at arm's length;

(6) the purchase price of $2,191,000 is reasonable. The purchase price was negotiated by another utility (NextEra), which demonstrates that the purchase price was reasonable based on the market at that time. Significantly, despite inflation during the nine

months between the date of NextEra's agreement to purchase the MSC wastewater system and the date of NextEra's assignment of that agreement to PAWC, there was no increase in the purchase price for the system.

A comparison of MSC's PP/C at a purchase price of $2,191,000 for 1,256 customers yields a favorable comparison to the PP/C for PAWC's § 1102 transactions over the last seven years. According to the chart above listing PAWC's § 1102 transactions since 2018, MWC's PP/C of $1,731 ($2,191,000/1,263 customers = $1,744) is less than all but one of the Company's other § 1102 acquisitions during the last six years;

(7) PAWC is not affiliated with MSC;

(8) the rates charged to PAWC's preacquisition customers will not increase unreasonably because of the acquisition. The proposed rate base for this system is $2,191,000, which represents less than .05% of PAWC's $4.7 billion rate base at the end of the FPFTY. The transaction will have a *de minimus* impact on rates; and

(9) the excess of the acquisition cost over depreciated original cost will be added to rate base to be amortized over 10 years (a reasonable period) with corresponding reductions in the rate base.

WATER AND WASTEWATER TARIFF PROVISIONS REGARDING NEGOTIATED RATES

Q. Are you aware that PAWC is proposing several demand based riders to its wastewater tariff?

A. Yes. PAWC is proposing two riders entitled "Rider DIS – Demand Based Industrial Service" and "Rider DGS – Demand Based Governmental Service." The two new riders address the situation in which an existing or potential industrial or governmental customer

has competitive alternatives to wastewater service from PAWC. In order to retain or attract these customers, PAWC is proposing riders that would allow the Company to negotiate rates that would be less than PAWC's existing rates but more than the variable costs of providing service to these customers.

The two new riders are modeled after two riders that have been in PAWC's water tariff since 1994.[3] In addition, I am advised by counsel that the Commission has long allowed discounts in other regulated industries where there is competition, a need for load retention, or a need for economic development. The Commission has permitted discounting by natural gas distribution companies and steam distribution companies. Where the bulk customer has a viable economic alternative throughout the term of the agreement for taking service from the system, the discount is the minimum necessary to maintain the customer, and the rate includes an escalation provision such as one based on a Consumer Price Index. So long as the variable costs of providing service to the customer are covered and the customer makes a contribution to shared fixed costs, rate discounting is permitted in order to attract or maintain the customer. The theory is that it is better, and to the benefit of other customers, to have the customer making some contribution toward fixed costs than not to have the customer at all.

In addition, this proposal is similar to PAWC's current wastewater tariff at page 14, concerning miscellaneous fees and charges. One miscellaneous fee is a capacity reservation fee. PAWC's current tariff allows the Company to enter into a negotiated

[3] Specifically, the proposed riders are modeled after Rider DIS – Demand Based Industrial Service and Rider DGS – Demand Based Governmental Service. PAWC's water tariff also contains a Rider DRS – Demand Based Resale Service, but the Company does not see a need for a resale tariff for wastewater service.

Service Agreement that limits the application of the capacity reservation fee to attract and retain bulk customers that have a viable competitive alternative to service by the Company.

Q. Please explain why the Company is proposing these two new riders.

A. A negotiated rate is necessary, appropriate, and beneficial to the system and PAWC's other customers where there is a competitive threat to service from the Company. For example, sometimes an existing customer, or a potential new customer, may have a competitive alternative to service from PAWC. Under PAWC's existing tariff, the Company has limited ability to offer these customers a more favorable rate to attract new customers or to retain existing customers. This situation can put PAWC at a competitive disadvantage relative to the other wastewater provider and can result in PAWC losing an existing or potential customer. The two new riders are intended to give PAWC some flexibility so it can better compete to attract and retain certain types of large customers.

PAWC is proposing two riders. The first would apply to customers or applicants that receive service under the Industrial Class. PAWC believes the business reasons supporting a demand based rider only warrant offering negotiated rates to large customers or large potential customers (*i.e.,* industrial class customers). The second rider would only apply to a department, agency or instrumentality of the United States or Commonwealth government.

Q. You stated that the two riders are modeled after existing riders in PAWC's water tariff. Are the wastewater riders identical to the water riders?

A. No. There are differences between water systems and wastewater systems that warrant differences in the riders. For example, if a customer would need to have an average of 20 million gallons of sewage flow or water usage per month to be eligible for the wastewater

rider, very few customers would be eligible. The proposed wastewater riders would apply to customers who have an average of five million gallons of sewage flow or water usage per month.

Q. Please provide an overview of these two riders.

A. The two riders allow PAWC and the customer to negotiate a Service Agreement for wastewater service, but the riders include important safeguards to protect PAWC's other customers. First, the customer or potential customer must present documentation sufficient to establish the existence of a competitive alternative. Second, each Service Agreement must include a rate that is between the minimum and the maximum amount allowed by the tariff. Third, because each Service Agreement would be for a minimum term (two years for Industrial Class customers and ten years for governmental customers), each agreement must include an escalation clause and a change of law clause. Fourth, no contract executed pursuant to these two new riders would take effect until it is approved by the Commission.

Q. Please explain the documentation sufficient to establish the existence of a competitive alternative.

A. The customer would need to present PAWC with documentation sufficient to prove that the customer has an existing competitive alternative to service from PAWC. Such documentation includes, but is not limited to, an affidavit of the customer or, if the customer is a corporate entity, an affidavit of one or more corporate officers. The customer would be required to provide an update every five years to demonstrate that it continues to have an existing competitive alternative to receiving wastewater service from PAWC. If the customer no longer has an existing competitive alternative, the Service Agreement should not be renewed.

Q. Please explain the rate that can be charged pursuant to a negotiated Service Agreement.

A. The proposed riders establish a floor and a ceiling for negotiated rates. This is intended to establish a range of "just and reasonable" rates for the negotiated rates. This approach balances the interests of the customers negotiating rates under the riders with the interests of PAWC's other customers.

The maximum rate that could be charged under the new rider is the rate that would apply to the customer if there was no rider. I am advised by counsel that this is consistent with Section 1303 of the Code, which requires that, if more than one rate applies to service provided to a customer, a public utility must charge the customer the rate that is most favorable to the customer.

The minimum amount that can be charged is an amount sufficient to cover the treatment costs of wastewater, the fixed costs associated with new facilities added to serve the customer, and some portion of the fixed costs of the Company's other facilities.

Q. Please explain the escalation clause that must be included in each Service Agreement.

A. Let me begin by pointing out that Service Agreements under these riders must be for a minimum term of either two or ten years. This term is recommended so that customers receiving this favorable rate are locked in to receiving service from PAWC for a reasonable period. These terms are consistent with PAWC's existing demand based water tariff riders.

Circumstances can change during this period, however. The escalation clause is intended to ensure that the high-load customers paying negotiated rates are not unreasonably sheltered from increases in the Company's long-term marginal costs of serving these customers. This provision provides protection for PAWC's other customers.

The required escalation clause will be based on changes in a published price index and/or changes in the Company's cost of service, as the Company and the customer agree.

Q. Please explain the change in law clause that must be included in each Service Agreement.

A. Due to the lengthy terms of the Service Agreements, a clause is needed to ensure that customers with negotiated rates pay their fair share of costs that the Company incurs as a result of the enactment of a new law, the adoption of a new regulation, or the issuance of a court or regulatory decision that requires a material capital expenditure or a material increase in operations and maintenance expenses for the Company to serve that customer. Such a clause is critically important in this time of increasingly stringent environmental laws and regulations.

Q. Please explain the requirement for filing each Service Agreement with the Commission.

A. The proposed riders require each negotiated Service Agreement to be filed with the Commission, with copies served on the OCA and the OSBA. This provides additional protection for PAWC's other customers because the OCA and the OSBA could challenge any Service Agreement that they believe is unfair to PAWC's other customers, or for any other reason.

Q. Is there any evidence of a need for these new riders?

A. Yes. Keystone Sanitary Landfill ("Keystone") is a large and very significant wastewater customer of PAWC located in Dunmore, Pennsylvania. PAWC provides both collection and treatment services to Keystone. Keystone initially approached PAWC and asked if it were possible to discuss negotiating a lower rate. PAWC met with Keystone on numerous

occasions and explained that a demand based rider would be necessary in order to offer a discounted rate to Keystone. Following those conversations, PAWC learned that Keystone has proposed to leave the PAWC system and discharge its leachate through the neighboring Throop Borough sanitary system into the Lackawanna River Basin Sewer Authority ("LRBSA") wastewater treatment plant, which has lower treatment costs than PAWC.[4] It is PAWC's understanding that despite Keystone stating that it is generally pleased with PAWC's quality of service, it is not willing to continue to pay PAWC's higher rates if an alternative is available.

Q. What, if any, operational and financial impact would Keystone's departure from PAWC's system have on PAWC and its remaining customers?

A. Keystone's departure from PAWC's system would have both short- and long-term impacts. The change in waste stream would likely require short-term monitoring due to possible impacts to the biological treatment process. Financially the lost revenue is impactful but may be partially offset by reductions in operating costs in the long term. The lost revenue could place an additional burden on our customers.

Q. Does PAWC have any examples of municipal government customers choosing alternative systems to treat wastewater due to those systems having lower rates?

A. Yes, PAWC was contacted by Connoquenessing Township as they are required by DEP to sewer a large portion of the Township due to failing on-lot sewage disposal systems. The Township is adjacent to our Butler system and believed that a viable solution would be to send their wastewater flows to PAWC's Butler facility for treatment. They have another

[4] https://www.thetimes-tribune.com/2025/03/21/keystone-sanitary-landfill-looks-to-send-wastewater-to-new-destination/

treatment option that is also nearby to the to-be constructed wastewater collection system. The Saxonburg Area Authority also has capacity available to treat the wastewater from the to-be constructed system, however the rates charged by Saxonburg are significantly lower than those outlined in our current tariff. The result was Connoquenessing Township recommending treatment at Saxonburg as the preferred option in their official submission of the Act 537 plan to DEP. Had PAWC been able to offer Connoquenessing Township a negotiated rate, it may have been able to attract those flows to the Butler system to the benefit of customers.

Q. Is the Company proposing any changes to the three demand-based riders in the Company's water tariff?

A. Yes. The Company is proposing changes in the three riders in the water tariff to promote consistency between the water tariff and the wastewater tariff. Specifically, the Company is proposing to add a Change of Law Clause to the three water riders, for the same reasons as discussed above with regard to the Change of Law Clause in the wastewater riders. Additionally, PAWC proposes that contracts filed with the Commission be served on both the OCA and the OSBA. The water tariff riders currently only require that contracts filed with the Commission be served on the OCA.

RECEIVERSHIP TARIFF PROVISION

Q. Please explain the Company's proposed receivership tariff provision.

A. The Commission occasionally appoints PAWC to serve as the receiver for troubled public utilities pursuant to Section 529(g) of the Code, 66 Pa. C.S. § 529(g).[5] When the

[5] The Commission recently authorized PAWC to serve as receiver for a municipal authority (a non-jurisdictional entity), pursuant to Section 501 of the Code, conditioned on the issuance of a valid Court Order appointing PAWC to serve as receiver. *Joint Petition of PAWC and DEP Requesting an Ex Parte Emergency Order in Regard to*

Commission enters an order appointing PAWC to serve as receiver, the Order includes an appendix that specifies the powers and duties of PAWC in its capacity as receiver. These appendices are not uniform, although it is unclear whether the differences are intentional. Uniformity of the receiver's powers and duties would ease the administration of troubled systems.

To facilitate assistance in receiverships, PAWC is proposing new provisions in its water tariff and its wastewater tariff that would specify PAWC's powers and duties as receiver, unless otherwise specified by the Commission. If the proposed tariff provisions would be approved, the Commission's Order appointing PAWC as receiver could specify PAWC's powers and duties quickly and easily by referring to PAWC's tariff rule and incorporating it by reference. This approach would promote the uniformity of Commission Orders appointing PAWC to serve as receiver.

Nevertheless, the Commission would retain its ability to modify PAWC's powers and duties in a specific case. If the Commission desires to modify PAWC's powers and duties in a specific case, it could describe the modification in its order and explain why it is making the change in that specific case.

Q. Please explain the powers and duties that are included in the proposed tariff provision.

A. The proposed tariff is modeled after the Commission's ratification order in the *East Dunkard* order, Docket No. P-2023-3043950. This appendix was selected because it is one

Receivership of East Dunkard Water Authority, Docket No. P-2023-3043950 (*Ex Parte* Emergency Order entered Nov. 2, 2023, Ratification Order entered Nov. 20, 2023). Considering that this appears to be the only instance in which the Commission has named a public utility to serve as receiver for a municipal entity, the Company's receivership tariff provision only addresses the more common situation in which the Commission appoints PAWC to serve as the receiver for a public utility.

of the most recent Commission orders naming PAWC as a receiver and because it includes several provisions specifically addressing financial issues arising out of the receivership.[6] The appendix has been changed to make it apply whenever PAWC is appointed to serve as a receiver for a water or wastewater public utility.

Among other things, the proposed tariff states that PAWC, as receiver, has the power and duty to: operate the system in compliance with all applicable state, federal and local laws; assume the utility's billing and collection function and keep financial and accounting records; provide the utility's customer service; comply with the utility's rates, rules and regulations; and charge the utility a reasonable rate for all services that the receiver provides on behalf of the utility. In addition, the proposed tariff requires PAWC to submit status reports detailing relevant updates and permits PAWC to establish a deferred expense account for expenses incurred by the receiver.

CONCLUSION

Q. Does this conclude your direct testimony at this time?

A. Yes. However, I reserve the right to supplement my testimony as additional issues or facts arise during the course of this proceeding.

[6] Subsequent PAWC receiverships include the receivership for the Rock Spring Water Company. *Pennsylvania Public Utility Commission Bureau of Investigation and Enforcement Petition to Request the Commission Open a Section 529 Investigation into the Acquisition of Rock Spring Water Company,* Docket No. P-2024-3051313 (Opinion and Order entered March 21, 2025). The Appendix A in that case was very similar, but not identical to, the Appendix A in the *East Dunkard* case.

WITH REGARD TO
PENNSYLVANIA-AMERICAN WATER COMPANY'S
INCOME TAXES, PENNSYLVANIA STATE TAX RATE CHANGE, CORPORATE ALTERNATIVE MINIMUM TAX

DOCKET NOS.
R-2025-3057983 (WATER)
R-2025-3058051 (WASTEWATER)

DATE: NOVEMBER 14, 2025

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF LINDA SCHLESSMAN

Q. What is your name and business address?

A. My name is Linda Schlessman. My business address is 1 Water Street, Camden, NJ 08102.

Q. By whom are you employed, and in what capacity?

A. I am employed by American Water Works Service Company, Inc. ("AWWC" or "American Water") as the Director - Tax Regulatory. I am responsible for the oversight of calculating tax expense and accumulated deferred income taxes in rate cases and rate filings for AWWC's subsidiaries, including Pennsylvania-American Water Company ("PAWC" or the "Company").

Q. Please summarize your educational background and professional experience.

A. I received a Bachelor of Business Administration Degree in Accounting from Miami University in 2006 and am a Certified Public Accountant in the State of Ohio. I have 18 years of tax experience and six years of utility tax experience. Prior to joining American Water in September of 2024, I was a Tax Accounting and Regulatory Support Manager at American Electric Power, Inc. Prior to that, I held positions in both public accounting and the private sector. My previous employers include GBQ Partners, LLC, HBD Industries, Inc. and L Brands, Inc., now Bath and Body Works, Inc.

Q. Have you previously filed testimony before any regulatory agencies?

A. Yes. At American Water I have filed testimony in rate proceedings before the Kentucky Public Service Commission in Case No. 2025-00122, the Missouri Public Service Commission in Case No. WR-2024-0320, the Tennessee Public Utility Commission in

Docket No. 24-00032, and the Iowa Utilities Commission in Docket No. RPU-2024-0002. I also filed testimony in rate proceedings while employed at American Electric Power before the Oklahoma Corporation Commission in Case No. PUD 2022-000093, the Arkansas Public Service Commission in Case No. 23-012-FR, the Kentucky Public Service Commission in Case No. 2023-00159, and the Public Utility Commission of Texas in Docket No. 56165.

Q. What is the purpose of your testimony?

A. My testimony addresses (1) a change in Pennsylvania's corporate tax rate enacted in July 2022, (2) the Corporate Alternative Minimum Tax ("CAMT") adopted as part of the Inflation Reduction Act ("IRA"), which was enacted in August 2022, and (3) the tax treatment of acquisitions included in the Company's rate case.

Pennsylvania Corporate Tax Rate Change

Q. Please explain the Pennsylvania Corporate Tax Rate Change.

A. On July 8, 2022, House Bill ("H.B.") 1342 was signed into law in Pennsylvania, which incrementally reduces the Commonwealth's corporate net income tax ("CNIT") rate from 9.99% to 4.99% over a period of nine years. The CNIT rate change reduction became effective for tax years beginning in 2023, reducing the rate to 8.99%. The CNIT rate will continue to be reduced each year through 2031, when the CNIT rate will be set at 4.99%.

Q. Does the Company's proposed revenue requirement reflect the changes in the CNIT rate determined by H.B. 1342?

A. Yes. As shown in Exhibit No. 3-A, the Company's proposed revenue requirement is calculated using the 6.99% CNIT rate that will be in effect at the end of the Fully Projected Future Test Year ("FPFTY"), which is the 12 months ending June 30, 2027.

Q. Has the Company remeasured its Accumulated Deferred Income Tax ("ADIT") to account for the tax rate change?

A. Yes, the Company estimated a remeasurement of the ADIT in the third quarter of 2022. The ADIT balance will be remeasured annually to account for the reductions in the Company's CNIT rate through 2031.

Q. What is the reason for the annual remeasurement?

A. According to ASU 740, Accounting for Income Taxes, ADIT must be reported on the balance sheet at the rate at which the tax filer is expected to settle with the taxing authority. In the case of the declining state tax rate, it is difficult to estimate precisely at which rate the accumulated deferred taxes will settle. Therefore, each year, the Company will remeasure the deferred taxes based on available information at the time of remeasurement.

Q. Has the Pennsylvania tax rate change been included in past rate cases?

A. Yes. In the Company's prior rate case, filed with the Pennsylvania Public Utility Commission in November 2023 (*see* Docket Nos. R-2023-2043189; R-2023-2043190), the Company calculated its proposed revenue requirement using the CNIT rate that was going to be in effect at the end of the FPFTY in that case (June 30, 2025), which was 7.99%. The Company's method of addressing the CNIT rate change in that case was not contested and was ultimately adopted. The Company is applying the same methodology in this case.

Q. How is the tax rate change currently being treated in rates?

A. The Excess Accumulated Deferred Income Taxes ("EADIT") that resulted from the state tax rate change is being amortized for 20 years.

Q. How do you propose to return the Pennsylvania EADIT to customers?

A. The Company proposes to calculate the EADIT for rate-making purposes after each CNIT rate change by multiplying the normalized gross temporary difference balance at the end

of the year before the rate change by the incremental change in the tax rate (net of the federal effect of state taxes) for the next year. The resulting EADIT will be amortized over 20 years as an unprotected EADIT, consistent with the treatment approved in the prior rate case.

Q. How much Pennsylvania EADIT is included in the rate case to be returned to customers?

A. The reductions in the CNIT rate from 9.99% in 2023 to 6.99% at the end of the FPFTY results in Pennsylvania EADIT in the amount of $50,457,557. As determined in the prior case, annual amortization of $1,418,153 is included in rates starting in 2025. The Company proposes increasing that amount to $2,522,879 to incorporate the 2026 and 2027 tax rate reductions. As discussed earlier in my testimony, the Company proposes to amortize this amount over 20 years, resulting in a bill credit of $2,522,879 that will be returned to customers.

Corporate Alternative Minimum Tax

Q. How does the enactment of the IRA impact the Company?

A. The IRA implemented a new CAMT beginning in 2023 that imposes a 15% tax on adjusted financial statement income ("AFSI"), for which applicable corporations will be required to pay the greater of the 15% of adjusted financial statement income or their calculated regular federal tax liability. AWWC and its subsidiaries, including PAWC, are subject to CAMT beginning with tax year 2024.

Q. Is AWWC an applicable corporation? If so, how was that determined?

A. AWWC was considered an applicable corporation beginning in tax year 2024. AWWC meets the AFSI test, which states that if a corporation's average annual AFSI exceeds $1

billion over the preceding three-year period, then the corporation and its subsidiaries are applicable corporations.

Q. For CAMT purposes, how is AFSI determined?

A. The starting point to calculate AFSI is the net income or loss per the financial statements. The financial statement net income or loss is then adjusted for federal income taxes, book and tax depreciation, pension, and other post-employment benefits. As a result, for purposes of determining AFSI or loss, federal income taxes, accelerated tax depreciation, pension, and other post-employment benefits are exactly the same with respect to the regular federal income tax liability calculation.

Q. Why does AWWC's and PAWC's CAMT exceed the regular tax liability?

A. Under tax law, certain expenditures capitalized for financial statement purposes qualify for accelerated tax deductions, such as tax repairs. These accelerated tax deductions, which lower regular tax, are not included in the AFSI calculation for determining the CAMT liability. Therefore, the regular tax is below the CAMT tax liability.

Q. How is PAWC accounting for the CAMT in its financial statements?

A. For income tax accounting purposes, a current income tax liability and current income tax expense are recorded for the CAMT liability but are equally offset by recording a deferred tax asset and a reduction to deferred income tax expense to reflect the CAMT credit carryforward. As a result, there is no net incremental income tax expense associated with the CAMT; however, a deferred tax asset is established for the minimum tax credit carryforward. Corporations are entitled to a tax credit equal to the amount by which the minimum tax liability exceeds the regular tax liability. This amount can be carried forward indefinitely and used in future years when the regular tax liability exceeds the CAMT liability.

Q. If PAWC is below the $1 billion threshold, why is PAWC subject to CAMT?

A. PAWC is a subsidiary of AWWC. Strictly for purposes of determining if AWWC exceeds the $1 billion threshold in average profits under the AFSI test, AWWC must include all of its subsidiaries, including PAWC, because AWWC is considered a "single employer group" under the applicable tax rules. As previously stated, the CAMT applies to "applicable corporations." If a "single employer group," in the aggregate, exceeds the $1 billion profits threshold, each corporation that is part of that "single employer group" is considered an "applicable corporation" and separately subject to CAMT. In addition, the applicable tax rules further support recording CAMT at the operating companies. That is illustrated by the fact that if a subsidiary ceases to be a member of an affiliated group of corporations, the departing subsidiary is entitled to its CAMT credit carryforward and can utilize that credit in future tax years when its regular tax exceeds its CAMT liability.

Q. What are the rate-making impacts associated with CAMT?

A. Under the normalization method, for ratemaking purposes, accumulated deferred income taxes are a reduction to the rate base calculation to reflect the lower cost of capital attributable to accelerated tax benefits. However, the CAMT reduces the tax benefits associated with accelerated tax deductions. Therefore, a corresponding deferred tax asset is included as a rate base increase to reflect the appropriate cost of capital.

Q. What is the amount of deferred tax asset for CAMT as of the historic test period?

A. The deferred tax asset for CAMT at June 30, 2025 is $40,089,119.

Q. What is the amount of deferred tax asset for CAMT through the FPFTY, and how was it calculated?

A. The deferred tax asset for CAMT through the FPFTY is $24,432,740. The amount is calculated for each period ended June 30, 2026, and June 30, 2027, using the income and

expenses as proposed in the case. The calculation begins with the pre-tax book income and is adjusted for the difference between book and tax depreciation on tax basis, known as method/life depreciation, excluding depreciation on intangible assets. Next, the calculation is adjusted for state taxes. The result is the AFSI. The AFSI is multiplied by 15%, and the result is compared to the Company's regular tax liability. The difference between the CAMT and the regular tax liability is either added or subtracted from the previous period's deferred tax asset for CAMT.

Tax Expense Adjustment for the Audubon Acquisition

Q. How is the acquisition of Audubon Water Company ("Audubon") being treated for tax purposes?

A. The Audubon acquisition is being treated as a stock acquisition for tax purposes.

Q. What is another way to treat acquisitions for tax purposes?

A. Another way to treat an acquisition for tax purposes is as an asset acquisition. Acquisitions can be treated as asset acquisitions for tax purposes if, for book purposes, the acquisition is treated as an asset acquisition. If, for book purposes, the acquisition is treated as a stock acquisition and certain criteria are met, there is a tax election under Internal Revenue Code ("IRC") Section 338(h)(10) that allows for the transaction to be treated as an asset acquisition for tax purposes. In order to make the 338(h)(10) election, the target corporation must either be a small business corporation ("S-corporation") as defined in IRC Section 1361 or a subsidiary in a consolidated group.

Q. Why is the Audubon acquisition being treated as a stock acquisition for tax purposes?

A. The Audubon acquisition is being treated as a stock acquisition for tax purposes because it is treated as a stock acquisition for book purposes and does not meet the requirements for

the IRC Section 338(h)(10) election to be treated as an asset acquisition for tax purposes because Audubon is not an S-corporation nor is it a subsidiary in a consolidated group.

Q. What are the differences between acquisitions treated as asset acquisitions for tax purposes and acquisitions treated as stock acquisitions for tax purposes?

A. In an asset acquisition for tax purposes, the ADIT does not transfer from the seller to the buyer. Instead, the tax basis in the acquired plant is increased to align with the book basis. Book basis and tax basis are the same on the date of the transaction. Any premium paid above the book basis of the property is goodwill for tax purposes and amortized over a 15-year period. In a stock acquisition for tax purposes, the ADIT transfers from the seller to the buyer unchanged. Any premium paid above the book basis of the property is goodwill for tax purposes; however, the goodwill is not amortized for tax purposes.

Q. Is the Company seeking to include a utility plant acquisition adjustment ("UPAA") in rate base from the acquisition of Audubon?

A. Yes. Please refer to the testimony of Company Witness Jared Deason, PAWC Statement No. 5.

Q. How is the Company seeking to treat the UPAA in the case?

A. The Company is seeking to include UPAA of $3,239,771 in rate base and amortize the balance over 10 years. Annual amortization is in the amount of $323,977.

Q. How is UPAA treated for tax purposes in a stock acquisition?

A. For tax purposes, the UPAA is treated as non-deductible goodwill. Because it is non-deductible, the amortization of the UPAA for book purposes creates a permanent tax difference that is included in the calculation of tax expense in cost of service.

Q. What is the amount of the permanent tax difference, and how does it affect tax expense?

A. The permanent tax difference is $323,977 annually for 10 years based on the UPAA amortization. The effect on tax expense is an increase to tax expense of $85,919 based on the effective tax rate of 26.52% (federal rate of 21%, state rate of 6.99%, and a federal benefit of state rate of -1.47%).

Q. Are there any other tax expense adjustments due to the acquisition of Audubon?

A. Yes. The acquisition included a regulatory liability in the amount of $141,025 for EADIT from the federal tax rate reduction in the Tax Cuts and Jobs Act ("TCJA") in 2017. Prior to the acquisition, Audubon was amortizing the balance of $12,821 annually. The Company proposes to continue to amortize the balance of $12,821 annually over the remaining life of approximately 11 years.

Conclusion

Q. Does that conclude your direct testimony at this time?

A. Yes, it does.

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF DEBA F. ATHER

INTRODUCTION

Q. Please state your name and business address.

A. My name is Deba F. Ather, and my business address is 1 Water Street, Camden, NJ 08102.

Q. By whom are you employed?

A. I am employed by American Water Works Service Company, Inc. ("AWWSC") as Senior Manager of Regulatory Services. AWWSC is a wholly owned subsidiary of American Water Works Company, Inc. ("American Water"), which provides services to its affiliates, including Pennsylvania-American Water Company ("PAWC" or the "Company").

Q. Please summarize your educational and professional qualifications.

A. I received a Bachelor of Science degree in Environmental Science from Rutgers University, New Brunswick. I have been employed by AWWSC since March 2023 in my current role. Prior to my employment with AWWSC, I worked in various roles for a global satellite company, followed by PECO Energy Company ("PECO"), an electric and gas utility under the parent company Exelon. I joined PECO's Safety department in 2012 as a Senior Business Analyst. Over the next 10 years, I held various positions of increasing responsibility within the Safety, Human Performance, and Regulatory Performance departments.

Q. What are your current employment responsibilities?

A. Since joining AWWSC in 2023, my duties consist of preparing, assisting, and reviewing regulatory filings and related activities, centering on the concept of affordability, for regulated subsidiaries of American Water. My responsibilities include the preparation of

written testimony, exhibits, and work papers in support of rate applications and other regulatory filings as well as responding to data requests for American Water's regulated subsidiaries, including PAWC.

Q. Have you previously testified before the Pennsylvania Utility Commission ("PUC" or the "Commission") or other public utility regulatory agencies?

A. Yes. I sponsored testimony regarding affordability of service before the Kentucky Public Service Commission on behalf of Kentucky-American Water Company in Docket No. 2025-00122. I also sponsored testimony regarding affordability of service before the Maryland Public Service Commission on behalf of Maryland-American Water Company in Case No. 9808. In addition, during my employment with PECO, I testified before the PUC as a company witness in formal complaint hearings.

SCOPE OF TESTIMONY

Q. What is the purpose of your testimony in this rate proceeding?

A. The purpose of my Direct Testimony is to sponsor and testify in support of PAWC's affordability studies for water and wastewater service.

Q. Please identify the exhibits you will be sponsoring and for which you will be providing testimony.

A. I am sponsoring Exhibit DFA-1: Water Affordability Analysis and Exhibit DFA-2: Wastewater Affordability Analysis.

Q. Were each of these exhibits prepared by you or under your direction and supervision?

A. Yes.

AFFORDABILITY OF SERVICE

Introduction

Q. Please describe the concept of affordability.

A. The concept of affordability for water and wastewater service is based on the idea that everyone should have access to drinking water and wastewater service that is (1) safe, meaning it complies with the U.S. Safe Drinking Water Act and regulations promulgated by the U.S. Environmental Protection Agency ("EPA"); (2) reliable, so that it is resilient in the face of floods, droughts, and other climate risks; and (3) affordable, meaning that these services should be priced such that families and households can pay for these services without undue economic hardship.

Q. Why is the affordability of water and wastewater service an important issue to the Company?

A. The Company knows that its water and wastewater services are vital and that it must make necessary investments to continue to provide safe and reliable water and wastewater service. The Company also knows how important it is for its services to remain affordable. Maintaining affordability of service is an important objective for PAWC, as discussed in the Direct Testimony of Company witness Christina Chard in PAWC Statement No. 2.

Q. Please describe the Company's approach in assessing the affordability of its water and wastewater service.

A. The Company assesses the affordability of its water and wastewater service by comparing annual bills for water and wastewater service to household income in the communities that we serve. Using this as a foundation, the Company's assessment of affordability is made up of two complementary analyses. The first analysis is an Enterprise-Level analysis of

affordability, which considers the affordability of PAWC's service at a high level over a multi-year period. The second analysis is a Community-Level analysis of affordability, which is a more in-depth analysis than the Enterprise-Level analysis with a narrower focus. The Community-Level analysis looks at the affordability of service at proposed rates in this case, for individual groups of customers using the most recent currently available household information on income, size, and ownership status from the U.S. Census Bureau and usage assumptions consistent with usage levels being used to set proposed rates in this case. Both analyses are further discussed below.

Q. Why are both of these approaches to assessing affordability of service important?

A. Both of these approaches are important because, together, they provide a layered and comprehensive picture of the affordability of the Company's services to its customers. The Enterprise-Level analysis on its own provides a historical and forward-looking view of the affordability of service over time for residential customers but does not address affordability differences within the residential customer class. The Community-Level analysis looks at the affordability of service at proposed rates specifically in this case for individual groups of customers, and most importantly for lower-income customers, but does not provide any larger historical context for the Company's rate proposals. Taken separately, these components provide useful and important information but do not provide a complete picture of the affordability of the Company's services. Taken together, these components provide a comprehensive picture of the affordability of the Company's services to its customers.

Q. Has the Company provided an affordability analysis of its water and wastewater service for the proposed rates in this case?

A. Yes. The Company's affordability study for water and wastewater service are provided as Exhibits DFA-1 and DFA-2, respectively. Each exhibit contains both the Enterprise-Level Analysis and a Community-Level Analysis for the applicable service.

Q. Please summarize the conclusions of the Company's affordability analysis for the proposed rates in this case.

A. There are three conclusions that can be drawn from the Company's affordability study:

- The affordability of the Company's water and wastewater service indicates that the way the Company has invested in and managed its water and wastewater systems has indeed been for the long-term benefit of our customers.
- The Company's water and wastewater service has been, is, and is expected to continue to be affordable for the vast majority of its residential customers, including under the rates proposed in this case.
- There are, however, groups of customers, particularly lower-income customers, for whom the affordability of water and wastewater service can be challenging.

Q. What are the key data points and metrics utilized by the Company to analyze affordability?

A. An affordability analysis requires at least two data points – the average monthly or annual bill for water and wastewater service and some measure of household income for the customer population. From these two data points, a metric is developed called the Bill-to-Income ("BTI") Ratio, which is defined as annual water or wastewater bills divided by estimated annual household income. For the broader residential customer base, commonly

available household income measures are measures of income at different percentiles. Median Household Income ("MHI"), which is household income at a 50th percentile level (50% of households in a given population have incomes greater than the median and 50% of households have incomes lower than the median), can be measured at a statewide or community level and can be paired with a data set that provides the number of customers served in each community to arrive at a weighted number that represents MHI for the Company's entire service territory.

At a more detailed level, individual household income, household size, and home ownership data is considered across a full range of households. Using this information, affordability can then be assessed at a more detailed level based on various income levels and bill amounts for water and/or wastewater service. A variety of household information on income, size, and ownership status is readily and publicly available from the U.S. Census Bureau and the American Community Survey ("ACS") at the national, state, county, and community levels.

Q. Is there a generally accepted standard for the affordability of water and wastewater service?

A. Historically, water and wastewater affordability have been evaluated using numerous methods and metrics with no specific method being academically recognized as a right or wrong approach for assessing affordability. Of the various methods utilized, BTI ratios, along with an established percentage of household income dedicated to water and wastewater service, have been the predominant approach for assessing affordability. In general, bills have been considered to be unaffordable when they exceed a specified threshold in the range of 2% (water only) to 4.5% (combined water and wastewater) of

annual income. In a recent 2024 national water and wastewater affordability analysis report to Congress, the EPA utilized 3% and 4.5% of annual income as affordability thresholds for combined water and wastewater bills when analyzing national data.[1]

1. Enterprise-Level Analysis

Q. Please describe the Company's Enterprise-Level Analysis of affordability of service.

A. The Enterprise-Level Analysis of affordability for water and wastewater service is a historical and forward-looking comparison of average monthly bills to household income for the Company's residential customers. This view looks at average monthly residential bills for all customers over time compared to MHI for the Company's residential customer base.

Q. What is the purpose and value of this Enterprise-Level Analysis?

A. The purpose of the Enterprise-Level Analysis is to provide a high-level historical perspective on how the affordability of service has been trending over time and how it is expected to continue to trend under proposed rates. Although the Company proposes to increase customer rates in this proceeding, the important metric to consider is the impact that proposed rates and bills have on customer finances and how those impacts have trended over time and are expected to trend going forward. This metric must consider not only trends in rates and bills but trends in household income. The value of the BTI Ratio metric proposed by the Company is that it considers all of these factors. The Company's BTI Ratio as presented in the Company's affordability analyses is therefore the appropriate metric to use when looking at the impact of the Company's rates for water and wastewater service on customers.

[1] U.S. EPA. Water Affordability Needs Assessment: Report to Congress. (Report No. 830-R-24-015) (2024), at pp. 33–36, https://www.epa.gov/system/files/documents/2024-12/water-affordability-needs-assessment.pdf.

Q. Why do you use average monthly residential bills in your Enterprise-Level Analysis?

A. Average monthly bills are used because this is the best representation of the total revenue the Company collects from its residential customers over time, which is in turn the best metric on which to evaluate the total affordability picture for residential customers. Average monthly bills consider total residential revenue along with the total number of customers each year that revenue is collected from and the total level of water sales each year that revenue amount is collected over. This provides the most complete representation of what customers paid in the past and what they may pay in the future for the Company's water and wastewater service.

Q. Why do you use MHI in your Enterprise-Level Analysis?

A. The Enterprise-Level Analysis uses MHI for two reasons. The first is that MHI is a widely recognized, well understood, and readily available measure of household income in different communities and is available for different breakdowns of household demographics (homeowners versus renters, for example). The second is that MHI is consistent in scope with the concept of average monthly bills, which is the first input in the analysis that I previously discussed. Average monthly bills encompass all residential customers, not a subset. MHI also encompasses the entire residential customer base, not a subset. It is important in any analysis of affordability that there is consistency in assumptions between bills used in the analysis and household income metrics used in the analysis. This is something that many analyses of affordability of water and wastewater service do not consider. Use of MHI as a measure of total population income brings that consistency to the analysis when paired with average monthly bills.

Q. How do you determine MHI for the customers in the Company's service territory?

A. The MHI for the Company's service territory is a weighted average of the number of customers in each community in PAWC's service territory and the median household income in each of those communities for owner-occupied and single-unit, renter-occupied homes as reported by data in the ACS based on the most recent year's available data (2023 in this proceeding). The relationship between this service territory–specific figure and the MHI for the Commonwealth of Pennsylvania for 2023 (also provided at the community level through the ACS) is then applied to historical MHI data for Pennsylvania to arrive at historical MHI data for the PAWC service territory.

Q. What are the results of your Enterprise-Level Analysis of affordability for water service?

A. The charts below compare historical average monthly water bills to MHI for PAWC customers from 2014 through 2024, stated in absolute terms and stated in terms of BTI Ratio, along with estimated average monthly bills under the Company's proposed rates in this case and estimated MHI for PAWC customers during the Fully Projected Future Test Year ("FPFTY") ending June 30, 2027. The data shows that the BTI Ratios for water service for PAWC customers have remained steady since 2014 and increased very slightly from 0.93% in 2023 to 0.94% in 2024. The BTI Ratio at the median income level is expected to be 1.04% under the Company's proposed rates in this case.

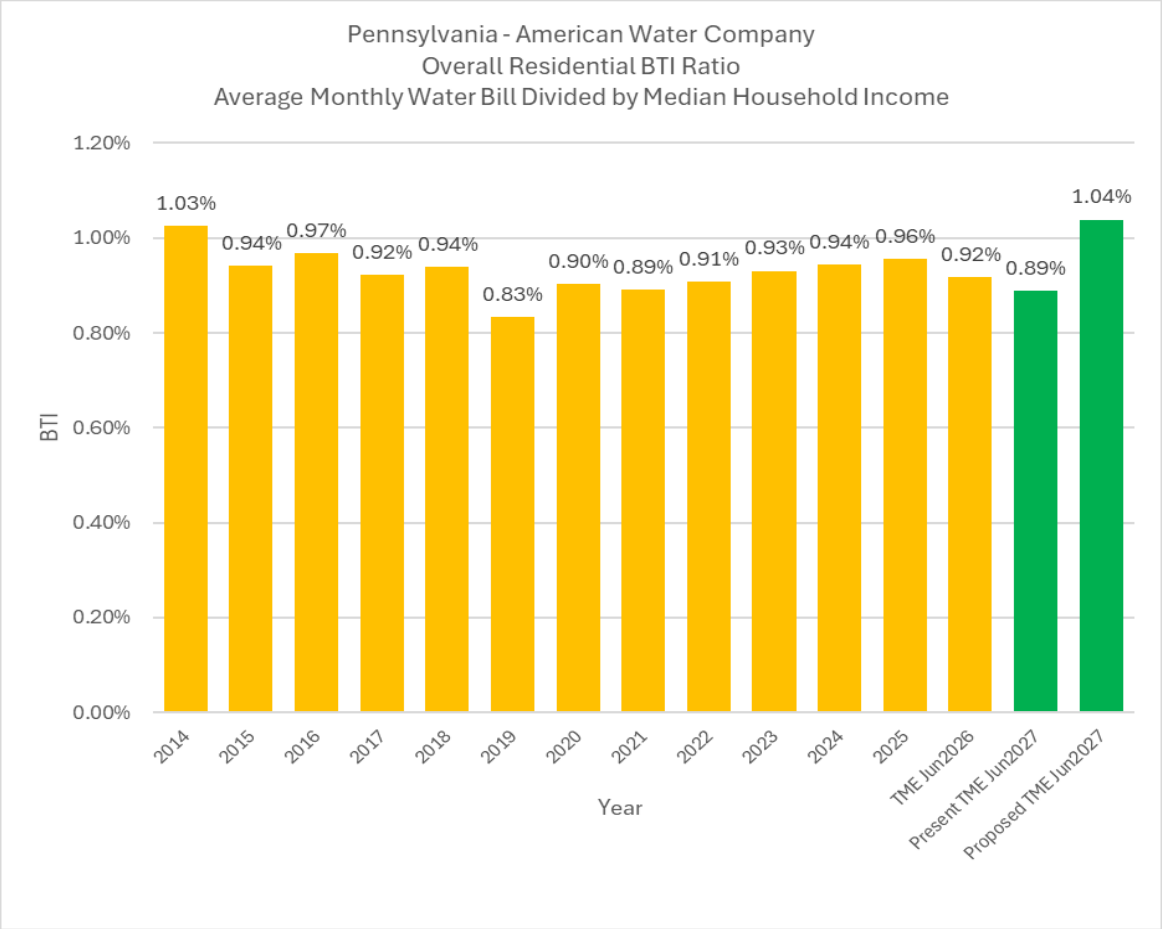
CHART 2



Q. What are the results of your Enterprise-Level Analysis of affordability for wastewater service?

A. The charts below compare historical average monthly wastewater bills to MHI for PAWC customers from 2014 through 2024, stated in absolute terms and stated in terms of BTI Ratio, along with estimated average monthly bills under the Company's proposed rates in this case and estimated MHI for PAWC customers during the FPFTY. The data shows that the BTI Ratios for wastewater service for PAWC customers have remained steady and decreased from 1.41% in 2023 to 1.35% in 2024. The BTI Ratio at the median income level is expected to be 1.37% under the Company's proposed rates in this case.

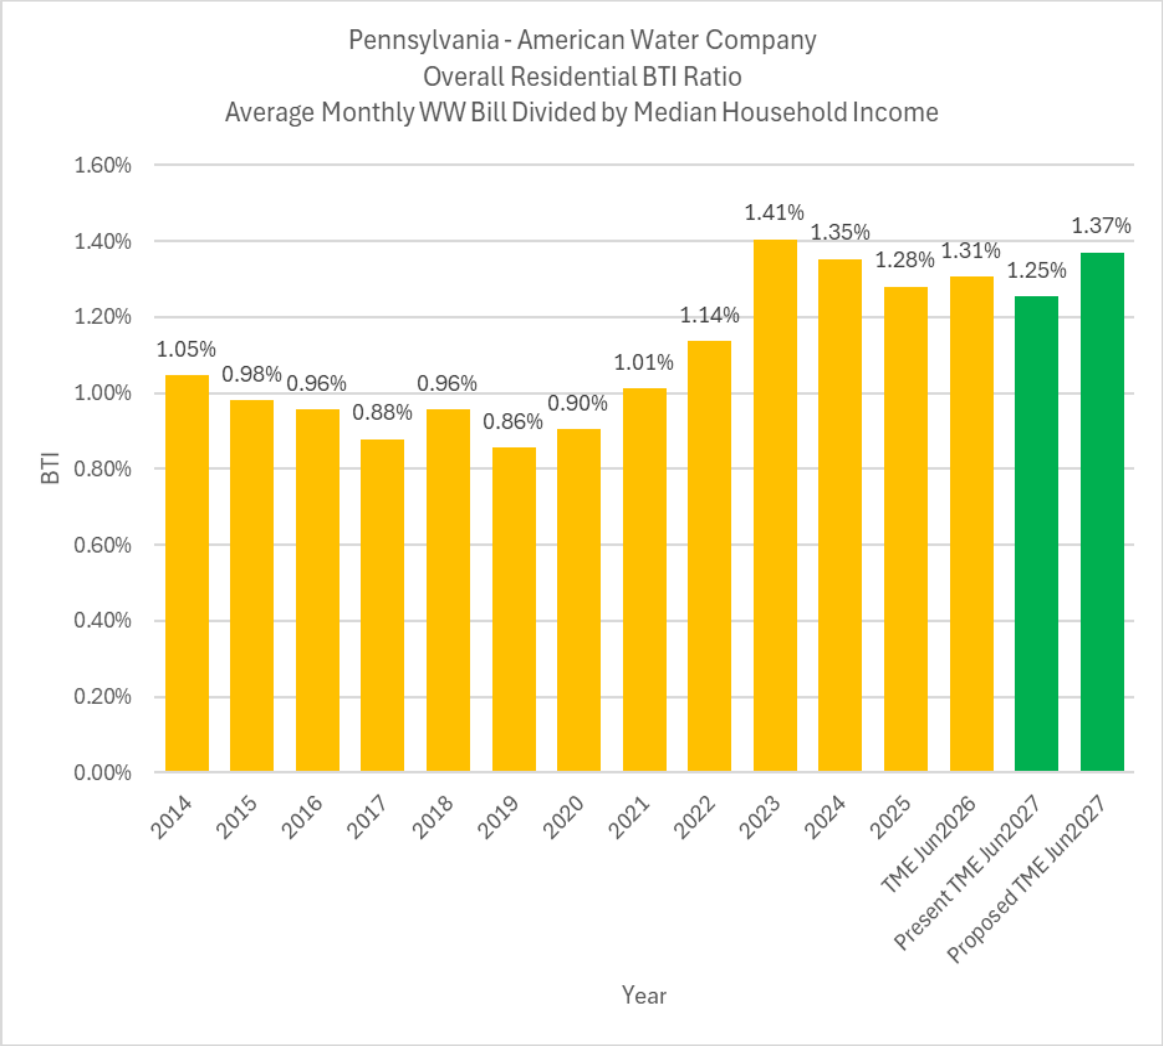
CHART 4



Q. Does the Enterprise-Level Analysis indicate whether service is affordable or unaffordable, in your opinion?

A. Not necessarily. The overall assessment of the affordability of service is not a yes or no question. The affordability of water or wastewater service will never be that simple. One can generally measure average water or wastewater bills against any given benchmark and come up with a yes or no answer, but affordability of service is a continuum, and that is what the Company's Community-Level Analysis, which I describe next in my Direct Testimony, shows. There will always be customers for whom water and/or wastewater

service is more affordable than for others depending on demographics and income levels. This is true across all of the communities that PAWC serves, including even the wealthiest communities that the Company serves.

Q. Does your Enterprise-Level Analysis speak at all to the affordability of service for lower-income customers?

A. No, it does not, and it is not intended to. The Enterprise-Level Analysis is one component of the Company's comprehensive analysis of affordability in this proceeding, and it is not intended to target any specific customer group. The Enterprise-Level Analysis is intended to show the long-term impact of changes in rates and usage on the general affordability of water and wastewater service for our customers. Specific examination of the affordability of the Company's water and wastewater service for different customer groups, and specifically for lower-income customers, is the focus of the Company's Community-Level Analysis, which I describe next.

2. Community-Level Analysis

Q. Please describe the Company's Community-Level Analysis of affordability of service.

A. The Community-Level Analysis takes a deeper dive into the affordability of water and wastewater service at a more granular level. The Community-Level Analysis looks at the affordability of service at proposed rates in this case for individual groups of customers using the most current available information on household income, size, and home ownership data from the U.S. Census Bureau and usage assumptions consistent with usage levels being used to set proposed rates in this case. This analysis is done community by community at a zip code level.

Q. What is the purpose of this Community-Level Analysis?

A. The purpose of the Community-Level Analysis is twofold. The first is to estimate at the community (zip code) level the number of customers the Company serves at different levels of household income stated in terms of multiples of the Federal Poverty Level ("FPL"). The second is to estimate, by community and household income level, the number of customers for whom bills for Basic Water Service (which I will define later in my testimony) are expected to be different percentages of household income at the Company's proposed rates.

Q. How is this analysis different from the Enterprise-Level Analysis you previously presented?

A. The Enterprise-Level Analysis and the Community-Level Analysis are two different but complementary views of affordability. As previously stated, the purpose of the Enterprise-Level Analysis is to provide a high-level historical perspective on how the affordability of service has been trending over time and how it is expected to continue to trend under proposed rates. The Community-Level Analysis is a deeper but narrower view of affordability that looks specifically at proposed rates in this case and the most currently available household demographic information across the Company's service territory.

Q. Is there academic research that supports the Company's approach to assessing the affordability of service at this detailed level?

A. Yes. Cardoso and Wichman outline a framework for assessing affordability of water service that uses the full distribution of household income at the local level rather than MHI or some other static representative level of income and uses varying levels of water usage

at the individual household level instead of a static representative level of water usage.[2] While the methodology presented here differs from Cardoso and Wichman in certain areas, the goal remains the same, which is to analyze affordability at a more granular level and identify customer groups where affordability of service may be an issue at the proposed rates.

Q. What information is needed to conduct an analysis of the affordability of service at this detailed level?

A. The following information is used to assess the affordability of service at the community (zip code) level:

- The number of customers served in each community.
- The distribution of owner-occupied households and renter-occupied households by income level in each community.
- The percentage of occupied housing units that are owner-occupied households or renter-occupied households that are not in multi-dwelling buildings in each community.
- The average number of persons per household in each community for both owner-occupied and renter-occupied households.
- The distribution of the size of households (one-person, two-person, etc.) for households of different income levels.
- The standard definition of Basic Water Service.
- Current or proposed rate structures.

[2] Cardoso, Diego S. and Wichman, Casey J., "Water Affordability in the United States," Water Resources Research, vol. 58, issue 12 (2020).

I will return to the Community-Level Analysis after I discuss the concept of Basic Water Service.

Q. Please describe the concept of Basic Water Service ("BWS").

A. For this analysis, we define BWS as water that is used for indoor domestic use and is expected to be relatively constant from month to month (e.g., water needed for drinking, cooking, cleaning, and sanitation). This differentiates BWS from total water sales, which also includes discretionary outdoor use of water in the summertime (lawn maintenance, swimming, recreation, etc.), which is not usually the focus of public policy discussions on the affordability of water service.

Q. How do you define BWS for the purposes of your Community-Level Analysis?

A. For the purpose of the Company's Community-Level Analysis, BWS is defined to be 40 gallons of water per household member per day.

Q. How did you arrive at 40 gallons per household member per day for your definition of BWS?

A. The specific estimate of 40 gallons of water per household member per day is based on the monthly residential use per customer for the FPFTY used in the development of the Company's proposed billing determinants as sponsored by Company witness McClellan. For non-summer months, average residential monthly usage in the forecast period is 2,913 gallons per customer. The Company's water affordability analysis shows an average of 2.32 persons per household in 2023 for the Company's residential customers. Dividing the 2,913 gallons per month figure by 2.32 persons per household divided by 30.5 days per month (on average) results in 41.2 gallons per person per day, which is just slightly higher than the 40 gallons per household member per day used for the definition of BWS in the

Company's affordability analyses. This analysis confirms that the Company's definition of BWS is consistent with the levels of residential usage used to develop proposed rates in this proceeding.

Q. Is this definition of BWS also suitable for wastewater analysis?

A. Yes. The definition of BWS as 40 gallons per household member per day is also suitable for wastewater analysis because wastewater billings, especially in light of the Company's proposal for a deduct adjustment described by Company witness McClellan, are based on the same type of service that BWS is meant to represent (i.e., indoor water use). All of this service effectively is returned through the wastewater collection system and, therefore, the definition of BWS serves as an appropriate benchmark for analysis of affordability for wastewater service.

Q. Why is it important that both household size and household income be considered in this analysis?

A. Household size and household income are both important because FPL, which is the measure of household income most often used as a metric for affordability studies and customer assistance programs, depends on both household size and income. Also, because water consumption in the home increases as the number of people in the home increases, and because lower-income households tend to have fewer people in them on average, it is important to differentiate between larger households and small households at different levels of income in conducting the affordability analysis.

Q. Can you discuss FPL in more detail?

A. The FPL is a measurement set by the U.S. Department of Health and Human Services of the minimum amount of annual income that is needed for individuals and families to pay

for essentials, such as room and board, clothes, and transportation. The FPL considers the number of people in a household, their income, and the state in which they live. For the Commonwealth of Pennsylvania, the FPL guidelines for 2025 are set at $15,650 for a household size of one and $5,500 per year for each additional household member.

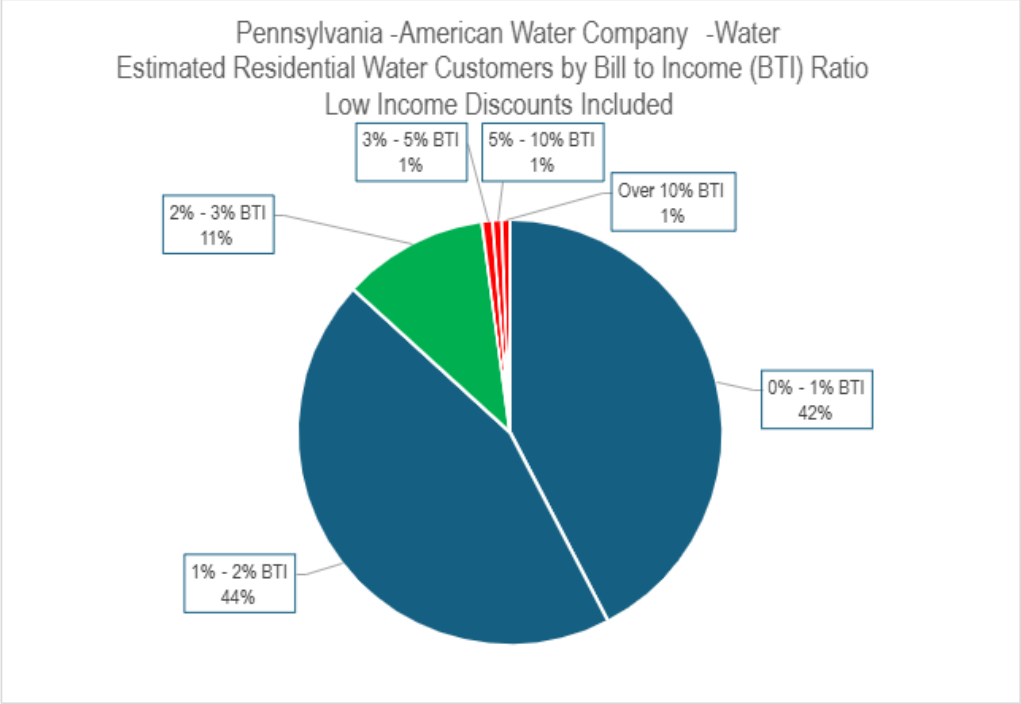
Q. What information does your Community-Level Analysis provide?

A. The Community-Level Analysis produces a complete set of data that consists of estimates for the number of customers in the Company's service territory by community (zip code), and then by annual household income and household size within each community. From this, the number of customers by multiples of FPL can also be estimated. Also included in this data is a bill amount at proposed rates differentiated by household size that reflects the Company's assumed level of BWS that I described earlier. From this, BTI Ratios can then be estimated by income level and household size, and by multiples of FPL, for each community (zip code) the Company serves.

Q. What does your Community-Level Analysis show?

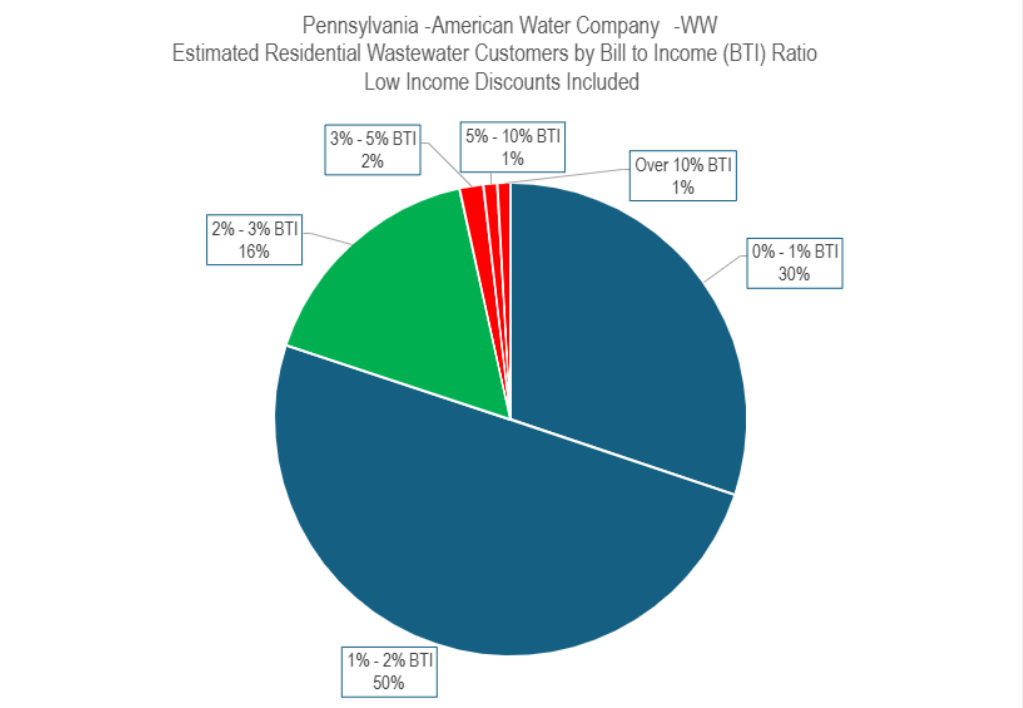
A. Charts 5 and 6 below show, for both water and wastewater service, the percentage of residential customers for whom bills for BWS under the Company's proposed rates are expected to be at different multiples of household income assuming full participation in the Company's Bill Discount Program for water and wastewater service.

CHART 5



1

CHART 6



2

These charts show that under the Company's proposed rate structure, including full participation in the Bill Discount Program, the Affordability Index metric (discussed below) for the Company's service territory in total is 86% under proposed rates for water service and 80% under proposed rates for wastewater service, meaning that 86% of our residential water customers and 80% of our residential wastewater customers can expect to see bills for BWS to be less than 2% of their household income. The Company estimates that there are approximately 84,300 residential water customers and 21,000 wastewater customers that will see bills for BWS above 2% of their household income, which is approximately 14% and 20% of the total customer population for water and wastewater service, respectively.

Q. Please describe the Affordability Index.

A. The Affordability Index ("AI") is a metric that reflects the percentage of a group of customers for whom BWS is expected to be less than a given percentage of annual household income. Consistent with my previous discussion in testimony regarding standards for affordability, the Company uses 2% of household income per service (water or wastewater) as the benchmark for this metric, which is at the conservative end of the range of affordability often cited. As an example, if, for a certain group of customers, it is estimated that 80% of those customers will have bills for BWS less than 2% of annual household income, the AI value for that group of customers is 80%.

The AI metric is designed to reflect the percentage of residential customers in a state, community, or demographic group for whom BWS is expected to cost 2% or less of annual household income. An AI value of 100% means that all customers within a selected group can expect BWS at less than 2% of annual household income. An AI value of 70%

means that approximately 70% of customers within a selected group can expect BWS at less than 2% of annual household income, and 30% of customers in that group can expect BWS to cost more than 2% of annual household income. The AI value is calculated based on modeling of proposed rates and community-level household information that I have previously described in my testimony.

Q. Why do you use 2% of annual household income as your benchmark for affordability of water or wastewater service?

A. The 2% benchmark is frequently used as an industry standard for the affordability threshold of an individual household. This percentage of household income standard has become the common water affordability standard used today.

Q. Does your analysis consider customers who rent in multi-family buildings without individual meters?

A. No. The Company's Community-Level Analysis only considers customers that are assumed to be direct customers of the Company, meaning that they are directly responsible for payment of services to the Company. Direct customers are assumed to be owner-occupied households and single-family, renter-occupied households as reported by ACS data.

Q. Why does your Community-Level Analysis only concentrate on customers that are direct customers of the Company?

A. For indirect customers of the Company (e.g., renters in multi-family buildings), it is impossible to know definitively what these households pay in rent for water and wastewater service. Presumably, building owners that receive water and wastewater service from PAWC are recovering those costs through rents, but rents are generally market-based and

not cost-based, with property owners charging what the market will bear. There is no way to know if owners are overcharging or undercharging renters or if they are also charging renters for building water or wastewater service that renters themselves are not actually using.

Q. Will the Company's proposed change in rates have an impact on people who use the Company's service but are not direct customers of the Company?

A. It is impossible to know what the impact of the Company's proposed rates will be on indirect customers of the Company. Rents may increase in part to recover increases in water service costs, but rents change for many reasons, and the extent to which any increases can be attributable to the Company's proposed rates and the timing of such increases cannot be determined.

CONCLUSIONS

Q. How is this affordability information useful?

A. Assessing affordability information of water and wastewater service for the entire residential customer population can demonstrate whether customers, in general, are having or would have difficulty paying their water or wastewater bills under the Company's current or proposed tariff structure. Assessing affordability information about water and wastewater service for lower-income customers can indicate the number of customers that may be having trouble paying their utility bills, where the customers are in the Company's service territory, and the extent to which those bills may pose challenges. This can, in turn, inform decision-makers about the size and scope of efforts that may be needed to help these vulnerable customers better afford water and wastewater service, both in terms of general rate design proposals that can reduce the cost of BWS for all customers, including lower-

income customers, and customer assistance programs that may include customer grants, tariff discounts, levelized billing, and outreach programs. Company witness Chard discusses the Company's existing programs that help our more financially vulnerable customers pay their bills.

Q. What conclusions do you draw based on the Company's enterprise-level and community-level affordability studies?

A. As noted above, there are three conclusions that can be drawn from the Company's affordability study:

- The affordability of the Company's water and wastewater service from 2014 through the FPFTY indicates that the way the Company has invested in and managed its water and wastewater systems has indeed been for the long-term benefit of our customers.
- The Company's water and wastewater service has been, is, and is expected to continue to be affordable for the majority of its residential customers, including under the rates proposed in this case.
- There are, however, groups of customers for whom the affordability of water and wastewater service can be challenging.

Q. Does the Company's affordability analyses provide any additional useful information about the value of the Company's water and wastewater service?

A. Indeed, it does. All stakeholders (regulators, customers, consumer advocates, community leaders, employees, shareholders, etc.) benefit from a financially sound utility providing safe, reliable, and affordable service to its customers. The Company's analysis demonstrates that PAWC's management of its operations and maintenance costs and its

decisions on how to execute on the capital investments needed to provide safe and reliable water service has been and continues to be done in a responsible and effective manner and continues to result in reasonable rates for our customers.

Q. Does this conclude your direct testimony?

A. Yes, it does.

REVENUE CALCULATIONS AND PROJECTIONS

DOCKET NOS.
R-2025-3057983 (WATER)
R-2025-3058051 (WASTEWATER)

DATE: NOVEMBER 14, 2025

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF MAX MCCLELLAN

Q. What is your name and business address?

A. My name is Max McClellan. My business address is 1 Water Street, Camden, NJ 08102.

Q. By whom are you employed and in what capacity?

A. I am employed by American Water Works Service Company, Inc. ("AWWSC" or "Service Company") as a Principal Regulatory Analyst. I am providing testimony on behalf of Pennsylvania-American Water Company ("PAWC" or the "Company").

Q. Please summarize your educational background and professional experience.

A. I received a Bachelor of Science degree in Mathematical Decision Sciences from the University of North Carolina at Chapel Hill in 2013. I have been employed by AWWSC since March 2024 in my role as Principal Regulatory Analyst. Prior to my employment with AWWSC, I was employed by Duke Energy from October 2018 through March 2024. In my most recent position at Duke Energy, I was a Principal Load Forecasting Analyst. In that position, I had responsibility for planning, evaluation, and operational management of Duke Energy's long-term load forecasts in Ohio and Kentucky, as well as direct responsibility for electric and natural gas sales forecasting, electric peak demand forecasting, and customer count forecasting. I have more than five years of utility experience covering a wide range of issues including integrated resource planning, electric load forecasting, gas volumes forecasting, electric load research, rates, tariff administration, and energy efficiency. I also have more than five years of experience in the retail pricing and structuring of electric and natural gas products.

Q. Have you previously filed testimony before this Commission?

A. No, I have not.

Q. Have you previously filed testimony before any other regulatory commissions?

A. Yes. During my employment with AWWSC, I have provided testimony regarding the cost of service, rate design proposals, and revenue projections for Missouri-American Water Company in its most recent general rate case, Case No. WR-2024-0320 as well as Kentucky American Water in its most general rate case, Case No. 2025-00122. I also provided testimony regarding long-term load forecasting on behalf of Duke Energy Kentucky in Case No. 2022-00372.

Q. What are your current employment responsibilities?

A. My primary responsibility in my role as Principal Regulatory Analyst is to serve as a subject-matter expert on rate design and revenue issues. I am responsible for the development and preparation of rate design analyses, as well as presenting cost of service and rate design proposals to our internal and external stakeholders. In addition, I am the Company's subject-matter expert on forecasting and the statistical analysis of customer usage for rate case purposes.

Q. What is the purpose of your direct testimony?

A. I will (1) discuss PAWC's proposed changes to its Bill Discount Program ("BDP"); (2) sponsor the Company's proposed rate design for both water and wastewater service and provide calculations and evidence necessary to support the Company's proposed rates; (3) discuss the reallocation of a portion of the Company's wastewater revenue requirement to its water service customers pursuant to Act 11 of 2012 ("Act 11"); (4) present the Company's analysis of residential, commercial, and public authorities' water consumption

as it relates to the impacts of weather and the COVID-19 pandemic on water usage and long-term trends in water usage; and (5) present the Company's determination of test year revenues at present and proposed rates.

Q. Please identify the exhibits you will be sponsoring in this proceeding.

A. I am sponsoring the following Company Exhibits attached to my testimony:

- Exhibit MWM-1 – Proposed Water Rate Design
- Exhibit MWM-2 – Proposed Wastewater Rate Design
- Exhibit MWM-3 – Residential Usage Analysis
- Exhibit MWM-4 – Commercial Usage Analysis
- Exhibit MWM-5 – Municipal Usage Analysis

I also am sponsoring Exhibit Nos. 10-A through 10-E, which set forth the proof of revenues from the application of present and proposed rates for each system.

Q. How is your Direct Testimony organized?

A. My Direct Testimony is organized into the following sections:

- Bill Discount Program
- Rate Design
- Wastewater to Water Revenue Requirement Reallocation (Act 11)
- Analysis of PAWC Usage
- Revenue Calculations

BILL DISCOUNT PROGRAM

Q. Please describe the Company's current Bill Discount Program ("BDP") for water and wastewater service.

A. The Company's current BDP[1] offers four tiers of discounts for both water and wastewater service based on different levels of household income, stated as multiples of the Federal Poverty Level ("FPL"). The FPL is a measure of income issued annually by the U.S. Department of Health and Human Services that reflects the minimum amount of income needed for individuals and families to afford basic necessities. The Company's current discount program is as follows:

TABLE 1 Eligible Customers	Water Service Charge Discount	Water Service Volumetric Discount	Wastewater Total Bill Discount
0% - 50% FPL	90%	80%	85%
51% - 100% FPL	75%	65%	73%
101% - 150% FPL	60%	40%	55%
151% - 200% FPL	30%	20%	37%

Q. How many customers are eligible for the BDP?

A. Based on the affordability analysis presented by Company witness Deba Ather in this case, the number of eligible customers for the current program by income level is as follows:

TABLE 2 Eligible Customers	Water	Wastewater
0% - 50% FPL	22,926	5,336
51% - 100% FPL	33,470	7,196
101% - 150% FPL	47,396	9,812
151% - 200% FPL	48,766	9,497

[1] While the Company's low-income discount programs are well established, the Company's current program was approved by the Commission in the Company's last base rate case in Docket No. R-2023-3043189.

Q. Is the Company proposing to make changes to the BDP as a part of this proceeding?

A. Yes. The Company is proposing to modify the discount percentages of each of the four tiers of eligibility (customers whose household incomes are up to 200% of the FPL) for water customers as a part of this proceeding.

Q. Please describe the proposed changes to the BDP discount percentages.

A. Currently, water customers in each tier of eligibility receive a different discount percentage for their fixed and volumetric charges. The Company is proposing to consolidate the percentages of the 5/8" meter charge and the volumetric rate and apply a single discount on the total bill. The proposed discount percentages are as follows:

TABLE 3 **Eligible Customers**	**Water Total Bill Discount**	**Wastewater Total Bill Discount**
0% - 50% FPL	82%	85%
51% - 100% FPL	67%	73%
101% - 150% FPL	44%	55%
151% - 200% FPL	22%	37%

Q. Is the Company proposing any changes to the discounts offered to wastewater customers?

A. No. The Company is not proposing any changes to the programs for existing eligible wastewater customers.

Q. Why is the Company proposing to modify the percentage discounts of the BDP?

A. The Company is proposing to modify the percentage discounts of water customers to improve clarity and operational efficiency. The percentages applied to fixed and volumetric charges are already close together, and the new consolidated percentages approximate the same overall percentage discount on the bill as the existing discounts.

RATE DESIGN

Introduction

Q. Do you sponsor exhibits that provide the Company's complete proposed rate design in this case?

A. Yes. Exhibits MWM-1 and MWM-2 provide the Company's proposed rate design for water and wastewater service in this case, which are based on the current rate design as modified by the proposals discussed below.

Q. Please discuss some of the important guiding principles associated with sound rate design.

A. There are a number of important principles that pricing analysts and policymakers consider when developing appropriate design mechanisms for retail water and wastewater service:

- **Cost Causation**: An important goal of rate design is to develop prices for water and wastewater service to retail customers that are intended to recover the Company's approved revenue requirement and that reflect the cost of providing service to retail customers. Cost of service results inform pricing decisions and guide how rates should be set such that each customer class contributes to the revenue requirement commensurate with their cost to serve. The principle of cost causation, which simply states that customers should pay for the costs that they are deemed to cause the Company to incur, reflects the use of cost of service results in designing rates.
- **Revenue Stability**: Rates should be designed in a way that provides revenue stability to the utility and that can be reasonably expected to recover the utility's revenue requirement over the long run. Consistent recovery of the approved revenue requirement through well-designed rates helps the utility to prudently manage and

invest in the water and wastewater systems, while poor rate design decisions can hamper the utility's ability to make investments, operate, and maintain the water and wastewater systems in a manner consistent with the long-term interest of its customers.

- **Efficiency of Use**: Rates should be designed to encourage the efficient use of water resources by customers. The volumetric charges for water service should appropriately reflect the variable cost of providing water service while also providing customers an appropriate incentive to conserve water and manage their bills. Rates should communicate to customers the full cost of providing water service.
- **Gradualism**: Changes in rate design should be made in a manner that avoids inappropriate levels of rate shock. Rate shock can come both from general increases in revenues that can affect all customers and from changes in rate designs that can cause large increases to specific groups of customers. Drastic changes in rates can cause customer confusion and dissatisfaction and have adverse effects on the utility's ability to provide quality customer service.
- **Avoidance of Discrimination**: Rates should not unduly discriminate between particular customer groups or provide different price signals to similarly situated customers taking similar services from the utility.
- **Simplicity and Feasibility**: Rate designs should be relatively simple, easy to understand, easy to communicate and manage, and should result in bills that are clear and understandable.
- **Affordability**: Development of rate designs that enhance the affordability of service to more vulnerable customers while still adhering to other more established principles of

rate design is an important way that utility providers can enhance and maintain the value of service.

Q. How does the Company incorporate these guiding principles in its rate design?

A. Cost causation is the foundation of the Company's rate design. Revenue targets for customer classes, to be recovered through rate design, begin with the results of the Company's cost of service analysis, which allocates revenue requirements to customer class based on cost-causation principles. Cost causation, however, is not the be-all and end-all of rate design. All of the rate design principles I discuss are important; none more so than any other, and it is the consideration and balancing of these principles in total that constitutes the public policy aspect of ratemaking and leads to a determination of just and reasonable rates. Layered on top of cost causation are the other principles that I previously discussed (gradualism, revenue stability, avoidance of discrimination, affordability, for example), which ultimately result in a rate design that is fair to all customer groups and that is just and reasonable.

Water Rate Design

Q. Please describe the Company's current tariff structure for water service.

A. The Company currently offers water service in eight different rate zones. These rate zones are as follows:

- Rate Zone 1 - General Statewide Rate
- Rate Zone 2 - Valley
- Rate Zone 3 - Turbotville
- Rate Zone 4 - Farmington
- Rate Zone 5 - East Dunkard

- Rate Zone 6 - Audubon
- Rate Zone 7 - Manwalamink
- Rate Zone 8 - Appalachian

The largest of these rate zones by far is Rate Zone 1, with over 99% of the Company's total water revenue.

Q. Is the Company including any pending water service acquisitions in this case?

A. Yes. The Company is including a pending acquisition of territories previously served by Corner Water. I will refer to this rate zone as Rate Zone 9 Corner Water. Please refer to the direct testimony of Don Wieczenski for more information about this acquisition.

Q. Please describe the Company's current rate structures for these tariffs for residential and nonresidential customers in Rate Zone 1.

A. The Rate Zone 1 tariff offers service to all residential and non-residential customer classes through a monthly fixed charge that varies with the size of the meter (identified in PAWC's water tariff as a "service charge") and volumetric rates (identified in PAWC's water tariff as "consumption charges"). There are separate rate structures for each customer class.

- The residential water service charge for most customers is $18.80 per month for a 5/8", 3/4", 1" and 1½" meter, and the service charge increases with the size of the meter beginning with 2" meters. A single volumetric rate of $1.8772 per hundred gallons applies to all residential customers.
- The commercial water service charge begins at $19.30 per month for a 5/8" meter, and the service charge increases with the size of the meter beginning with ¾" meters. A two-block volumetric rate applies to commercial customers of

$1.8033 per hundred gallons for the first 16,000 gallons per month and $1.3523 per hundred gallons for usage over 16,000 gallons per month.

- The municipal water service charges are the same as the commercial service charges, but the volumetric rates are different. A two-block volumetric rate applies to municipal customers of $1.8988 per hundred gallons for the first 16,000 gallons per month and $1.0499 per hundred gallons for usage over 16,000 gallons per month.
- The industrial water service charge begins at $28.00 per month for a 5/8" meter, and the service charge increases with the size of the meter beginning with 3/4" meters. A three-block volumetric rate applies to industrial customers of $1.6720 per hundred gallons for the first 16,000 gallons per month, $1.2860 per hundred gallons for the next 584,000 gallons of usage per month, and $1.0022 per hundred gallons for usage over 600,000 gallons per month. In addition, the Company offers industrial curtailment rates that are identical to those described above, but with an additional rate step of $0.6001 per hundred gallons for all usage above 15,000,000 gallons per month and the requirement that the customer meet specified requirements to qualify for the rate, such as a minimum monthly purchase volume, a minimum load factor, and on-site water storage for industrial (non-fire protection) use during periods of curtailment.
- The Sales to Other Water Utilities service charge begins at $29.10 per month for a 5/8" meter, and the service charge increases with the size of the meter beginning with 3/4" meters. The volumetric rates for Group A service is $1.0072 per hundred

gallons for all water service and the volumetric rate for Group B service is $1.4368 per hundred gallons for all water service.

Q. Does the Company have special rates for larger water customers?

A. The Company offers a limited number of special rates designed to retain and attract the load of larger customers in Rate Zone 1 that have competitive alternatives to service from the Company. Currently, the Company has customers that are served on two of those rates: the Demand-Based Industrial Service rate and the Demand-Based Resale Service rate.

Q. Does the Company offer fire protection service?

A. Yes. The Company offers both public and private fire protection service. Public fire protection rates are based on a monthly hydrant fee that varies depending on where in the service territory the service is offered and the vintage of the rates. These rates are subject to the requirement that revenues from fire hydrants can be no more than 25% of the calculated cost of service for public fire service. Private fire service rates are also offered and are generally based on the size of the service line used in providing the service. Service is offered on both a metered and an unmetered service basis.

Q. Please describe the Company's current rate structures in the other pricing zones where water service is offered.

A. In zones other than Rate Zone 1, the Company's rate structures are as follows:

- Rate Zone 2 (Valley): Service in Rate Zone 2 is offered to all customers through a monthly service charge that varies with the size of the meter and volumetric rates. Service charges are identical to Rate Zone 1. A single volumetric rate of $1.6276 per hundred gallons applies to all residential customers. Commercial and municipal volumetric rates are set at $1.5779 per hundred gallons for the first 16,000 gallons

of usage per month and $1.3282 per hundred gallons for usage above 16,000 gallons per month. Industrial volumetric rates are the same as Zone 1.

- Rate Zone 3 (Turbotville): Service in Rate Zone 3 is offered to all customers through a monthly service charge that varies with the size of the meter and volumetric rates. Service charges are identical to Rate Zone 1. Volumetric rates are the same as Zone 1, except for the commercial rate, where volumetric rates are set at $1.5779 per hundred gallons for the first 16,000 gallons of usage per month and $1.3282 per hundred gallons for usage above 16,000 gallons per month.
- Rate Zone 4 (Farmington): Service in Rate Zone 4 is offered to all customers through a monthly service charge of $67.50 per equivalent dwelling unit ("EDU") associated with the premises. Volumetric rates are set at $0.0000 per hundred gallons for the first 5,000 gallons of usage per month and $1.5000 per hundred gallons for usage above 5,000 gallons per month.
- Rate Zone 5 (East Dunkard): Service in Rate Zone 5 is offered to all customers through a monthly service charge that varies with the size of the meter and volumetric rates. A single volumetric rate of $1.3100 per hundred gallons applies to all customers.
- Rate Zone 6 (Audubon): Service in Rate Zone 6 is offered to all customers through a monthly service charge that varies with the size of the meter and volumetric rates. A single volumetric rate of $0.8619 per hundred gallons applies to all residential customers. For all other customers, volumetric rates are set at $0.8619 per hundred gallons for the first 100,000 gallons of usage per month and $0.5723 per hundred gallons for usage above 100,000 gallons per month. There is also a special rate for

water for building purposes where water service for the construction of a single family dwelling is offered for $170.92 per month.

- Rate Zone 7 (Manwalamink): Service in Rate Zone 7 is offered to all customers through a monthly service charge that varies with the size of the meter and volumetric rates. For all customers, volumetric rates are set at $0.5810 per hundred gallons for the first 100,000 gallons of usage per month and $0.4130 per hundred gallons for usage above 100,000 gallons per month. There is also a special rate for water for multiple unit billing based on the actual meter size serving the multiple unit customer.
- Rate Zone 8 (Appalachian): Service in Rate Zone 8 is offered to all customers through a monthly service charge that varies with the size of the meter and volumetric rates. For all customers, volumetric rates are set at $0.7600 per hundred gallons for the first 16,500 gallons of usage per month and $0.3540 per hundred gallons for usage above 16,500 gallons per month. There is also a $2.40 monthly charge for each customer having any part of a building or structure located within 600 feet of a fire hydrant.
- Rate Zone 9 (Corner Water): Service in Rate Zone 9 is anticipated to be offered to all customers through a monthly service charge that varies with the size of the meter and volumetric rates. For all customers except mobile home parks, there is an allowance for the first 1,000 gallons. Beyond the allowance, volumetric rates are set at $1.1510 per hundred gallons for the next 9,000 gallons of usage per month, $0.9870 per hundred gallons for the next 110,000 gallons per month, and $0.7840 per hundred gallons for all usage in excess of 120,000 gallons per month. There is

also a special rate for water for mobile home parks in which there is a service charge multiplied by the number of dwelling units plus a consumption charge based on a per dwelling unit consumption less a 25% discount multiplied by the number of dwelling units.

Q. Is the Company proposing consolidation of rate zones for water service in this case?

A. Yes. The Company is proposing in this case to move Rate Zone 2 Valley, Rate Zone 3 Turbotville, Rate Zone 4 Farmington, and Rate Zone 5 East Dunkard rates to Rate Zone 1 rates. The Company is also proposing to move Rate Zone 6 Audubon, Rate Zone 7 Manwalamink, Rate Zone 8 Appalachian, and Rate Zone 9 Corner Water toward Rate Zone 1 rates and rate structures.

Q. Is the Company proposing to change the monthly service charges in this case?

A. Yes. The cost-of-service analysis supported by Company witness Gregory Herbert in PAWC Statement No. 12 shows a customer-related unit cost per month of $26.15 per 5/8" meter. The Company is proposing a 5/8" monthly meter service charge of $20.00 per month for residential, commercial, and municipal customers in Rate Zone 1 and moving to Rate Zone 1 rates in the other rate zones. The Company is proposing to increase meter charges for residential, commercial, and municipal customers for other meter sizes proportionally, except that residential meter charges for 3/4", 1", and 1½" meters will all be set at $20.00. No increases are proposed to existing Rate Zone 1 industrial and Other Water Utility meter charges. In the rate zones not being moved to Rate Zone 1 rates, the Company is proposing to move the monthly meter charges directionally toward those of Rate Zone 1 across all classes.

Q. Is the Company proposing to change the rate structure associated with its volumetric rates?

A. The changes in the volumetric rate structure proposed in this case are changes in the steps for volumetric rates necessary to move several of the rate zones I previously mentioned (Farmington, East Dunkard, Audubon, Manwalamink, Appalachian and Corner Water) to or directionally towards Rate Zone 1 rates. Generally, in moving directionally toward Rate Zone 1 rates, residential rates are moved toward a uniform rate with no usage allowance, and nonresidential rates are moved towards having a declining block rate with the second usage block starting at 16,000 gallons. Rate Zone 4 Farmington and Rate Zone 9 Corner Water would no longer have usage allowances under the Company's proposal. No other changes in volumetric rate structures are being proposed for water service.

Q. Is the Company proposing any new water service rates in this proceeding?

A. Yes. The Company is proposing a rate with which community members can purchase water at bulk filling stations. There is currently no rate available for this practice and it would be appropriate to establish a specific rate for this type of service.

Q. What is the bulk sales rate that is being proposed?

A. The Company is proposing a bulk sales rate of $2.1713 per 100 gallons, which is the same as the Rate Zone 1 Commercial volumetric rate for the first 16,000 gallons. There would be no fixed charge associated with this rate as the customers would not have metered service. The service would be available at locations deemed appropriate by the Company and any service taken under the bulk sales rate would be prepaid by the customer.

Q. Is the Company proposing any changes to public fire or private fire rates in this proceeding?

A. Yes. The Company is proposing to set public hydrant rates for the East Dunkard and Audubon services at 25% of the public hydrant cost of service. The Company is also proposing to remove a fire protection charge in which a subset of Rate Zone 8 Appalachian customers within a certain proximity of a fire hydrant pay an additional fee. For private fire hydrants, the Company is proposing private hydrant rates for East Dunkard and Corner Water that equal the statewide private hydrant rate. For all other fire rates, rates are generally proposed to move to or towards corresponding statewide rates.

Q. Are there any other changes the Company is proposing to its water service rate design?

A. The Company is proposing to remove Rate Zone 6 Audubon's special rate for water for building purposes as the same water service can be accessed through general service rates. The Company is also proposing to modify the consumption charges for "Mobile Home Parks Only" in Rate Zone 9 Corner Water to remove the 25% discount to the per unit consumption revenue. The only other change proposed to the Company's water service rate design is a proposed change to the discount percentages of the low-income discount tariff program, as described earlier in my testimony.

Q. Please describe how the Company is proposing to allocate its proposed revenue increase for water service to each customer class.

A. The Company is proposing to set water service rates based on the cost of service studies sponsored by Mr. Herbert. In addition, the Company is proposing a reallocation of a portion

of its wastewater revenue requirements to its water service customers consistent with Act 11, which I describe later in my testimony.

Q. Do you have a schedule that shows the Company's current and proposed rate design for water service?

A. Yes. The Company's proposed rate design in this case for water service is provided in Exhibit MWM-1.

Wastewater Rate Design

Q. Please describe the Company's current tariff structure for wastewater service.

A. The Company provides wastewater service under a variety of different rate schedules and in a variety of different rate zones. The categories of rate zones under which the Company offers wastewater service are as follows:

- Sanitary Sewer Systems ("SSS"):
  - Rate Zone 1: PAWC Statewide
  - Rate Zone 1a: Royersford
  - Rate Zone 1b: York
  - Rate Zone 1c: Foster
  - Rate Zone 1d: Butler Area Sewer Authority ("BASA")
  - Rate Zone 1e: Sadsbury
  - Rate Zone 1f: Farmington
  - Rate Zone 1g: Manwalamink
- Combined Sewer Systems ("CSS"):
  - Rate Zone 2: Kane and McKeesport
  - Rate Zone 2a: Scranton

Q. Is the Company including any pending wastewater service acquisitions in this case?

A. Yes. The Company is including a pending acquisition of the CSS currently owned and operated by Elizabeth Borough Municipal Authority ("EBMA"). I will refer to this rate zone as Rate Zone 2b EBMA. Rate Zone 2b EBMA is a combined sewer system. Mr. Wieczenski provides details about this acquisition in PAWC Statement No. 7.

Q. Are there multiple revenue requirements for wastewater service in this case?

A. Yes. The Company has the following wastewater revenue requirements in this case:

- Wastewater SSS General Operations
- BASA WW Operations
- Wastewater CSS Operations
- Elizabeth Borough WW CSS Operations

Please see the direct testimony of Dr. Christina Chard (PAWC Statement No. 2) for additional information on the separate revenue requirement studies for the BASA and EBMA acquisitions under Section 1329 of the Public Utility Code.

Q. Please describe the Company's current rate structures in its SSS rate zones.

A. Rate structures differ for the eight rate zones in the SSS group as follows:

- Rate Zone 1 (Statewide Rate): Service in Rate Zone 1 is offered through a monthly service charge per EDU and volumetric rate for all residential and nonresidential service. The monthly service charge is $15.00 per month per EDU for residential customers and $36.70 per month per EDU for nonresidential customers. The volumetric rate applies to all metered usage and is $2.9539 per hundred gallons for residential service and $2.1986 per hundred gallons for nonresidential service.

Unmetered service is offered to residential customers at $110.00 per EDU per month and commercial customers at $150.00 per EDU per month.

- Rate Zone 1a (Royersford): Service charges in Rate Zone 1a are identical to service charges in Rate Zone 1, but the volumetric rates for service are slightly lower. In Rate Zone 1a, the volumetric rate is $1.4150 per hundred gallons for residential service and $0.7500 per hundred gallons for nonresidential service. There is a special provision for public laundromats where metered flow shall be calculated on the basis of 75% of the volume of water usage. Unmetered service is offered to residential customers at $75.00 per month and commercial customers at $113.00 per month.
- Rate Zone 1b (York): Service charges in Rate Zone 1b are identical to service charges in Rate Zone 1. The residential class has a volumetric rate of $0.7500 for the first 2,000 gallons per month and a volumetric rate of $2.9539 for usage over 2,000 gallons per month. The commercial and municipal classes have a volumetric rate of $0.4000 for the first 2,000 gallons per month and a volumetric rate of $2.1986 for usage over 2,000 gallons per month. A single volumetric rate of $2.1986 per hundred gallons applies to Industrial customers.
- Rate Zone 1c (Foster): Rates in Rate Zone 1c consist of a flat rate of $110.00 per EDU per month for residential customers and a flat rate of $150.00 per EDU per month for non-residential customers. These flat rates are identical to those of Rate Zone 1. There is a special conveyance-only rate for Butler Township of $40.00 per EDU per month.

- Rate Zone 1d (BASA): Rates in Rate Zone 1d consist of a flat rate of $45.50 per EDU per month for all customers. There is a special rate for multi-family dwelling units with slightly lower rates for premises with greater than 25 EDUs. There is also a special rate of $0.00 per EDU per month for the VA Hospital.
- Rate Zone 1e (Sadsbury): Rates in Rate Zone 1e consist of a flat rate of $128.33 per EDU per month for all customers.
- Rate Zone 1f (Farmington): Rates in Rate Zone 1f consist of a flat rate of $53.50 per EDU per month for all customers.
- Rate Zone 1g (Manwalamink): Service in Rate Zone 1g is offered through a single monthly service charge and volumetric rate for all residential and nonresidential service. The monthly service charge is $16.92 for all customers. All classes have a volumetric rate of $0.6590 for the first 10,000 gallons per month and a volumetric rate of $0.2530 for usage over 10,000 gallons per month. Unmetered service, applicable only to customers previously charged a flat rate by Manwalamink Sewer Company, is offered to residential customers at $44.80 per month and commercial customers at $58.00 per month. There are also special rates for multiple unit billing and several large customers.

Q. Please describe the Company's current rate structures in its CSS rate zones.

A. The rate structures differ for the two rate zones in the CSS group as follows:

- Rate Zone 2 (Kane and McKeesport): Service in Rate Zone 2 is offered through a monthly service charge of $20.00 per month for residential accounts and $40.00 per month for nonresidential accounts. A volumetric rate of $2.6117 per hundred gallons applies to residential usage and a volumetric rate of $2.1320 per hundred

gallons applies to all non-residential usage. Additionally, there is a bulk service rate in McKeesport that consists of a $86.00 per month service charge and a volumetric rate of $1.6680 per hundred gallons. Unmetered service is offered to all customers at a flat fee of $104.00 per month.

- Rate Zone 2a (Scranton): Service in Rate Zone 2a is offered through a monthly service charge per EDU and volumetric rate for all residential and nonresidential service. For residential customers, the monthly service charge per EDU is $20.00 and the volumetric rate is $2.6117 per hundred gallons. For nonresidential customers, the monthly service charge is $40.00 and the volumetric rate is $2.1320 per hundred gallons. Unmetered service is offered to residential customers at $104.00 per month per EDU.
- Service in Rate Zone 2b EBMA is offered through a monthly service charge of $35.00 per month per EDU for all customer classes. A volumetric rate of $0.8000 per hundred gallons applies to all usage. Additionally, there is flat fee of $37.75 per month per EDU for unmetered customers.

Q. Is the Company proposing to recover all of the revenue requirements for wastewater service from its wastewater customers?

A. No. The Company is proposing to reallocate a portion of the wastewater revenue requirement calculated in this case to its water service customers under the provisions of Act 11. I will describe this reallocation and provide support for this reallocation in the next section of my testimony.

Q. Is the Company proposing consolidation of rate zones for wastewater service in this case?

A. Yes. The Company is proposing in this case to move Rate Zone 1c Foster to Rate Zone 1 rates. The Company is also proposing in this case to move Rate Zone 1a Royersford, Rate Zone 1b York, Rate Zone 1f Farmington, and Rate Zone 1g Manwalamink rates toward Rate Zone 1 rates and rate structures. Additionally, the Company is proposing fixed charges that are largely the same for all wastewater customers.

Q. What is the Company's proposal for wastewater service rate design and tariff consolidation in this case?

A. The Company's proposal for wastewater service rate design and tariff consolidation in this case includes the following:

- The Company is proposing to set all residential service charges for metered customers at $20 per month and all non-residential service charges for metered customers at $45.50 per month, except for in Rate Zones 1f Farmington, 1g Manwalamink, 2 Kane and McKeesport, 2a Scranton, and 2b EBMA.
- SSS volumetric rates are increased to a level that brings residential bills for average levels of usage for Zone 1 customers to approximately $119.50 per month with similar increases to non-residential volumetric rates. No increases are proposed for large industrial contract customers.
- The Company is proposing to modify the tariff for Rate Zone 1 and Rate Zone 1c by moving all metered customers from a monthly service charge per EDU to a monthly service charge per customer. Metered customers would continue to incur a usage charge per 100 gallons. Unmetered residential customers would pay a flat

rate per customer. Unmetered nonresidential customers would continue to pay a flat rate per month per EDU. With this change, the Company intends to begin a pivot from charging service charges per EDU.

- For Rate Zone 1b York, all usage over 2,000 gallons per month is set to be equal to the volumetric rate of Rate Zone 1. The Company is also proposing to begin charging a monthly service charge to Rate Zone 1b York's Industrial class to bring it in line with the nonresidential classes in Rate Zones 1 and 1b.
- Rate Zone 1d BASA and Rate Zone 1f Farmington metered customers are proposed to move from being charged flat rates per month per EDU to a monthly service charge per customer plus a usage rate per 100 gallons. The proposed service charge for metered residential customers is $20 per month for each rate zone. The proposed service charges for metered non-residential customers are $45.50 and $53.50 respectively, which are their current service charges per month per EDU. In Rate Zone 1d BASA, the VA Hospital is proposed to have the same $45.50 service charge as other non-residential customers but with a differentiated volumetric rate. Similar to the proposal for Rate Zone 1, unmetered residential customers would pay a flat rate per customer representative of a metered customer's average bill with unmetered nonresidential customers continuing to pay a flat rate per month per EDU.
- Rate Zone 1g Manwalamink rates are proposed to uniformly increase just under 10%. Any changes to Rate Zone 1g Manwalamink are proposed to take place on June 25, 2027, with rate increases not to exceed a 10% compound annual growth

rate, in accordance with a Pennsylvania Public Utility Commission ("PUC" or "Commission")-approved settlement that currently applies to that Rate Zone.

- CSS volumetric rates are increased to a level that brings residential bills for average levels of usage for Zone 2 customers to approximately $124 per month, with proportional increases to non-residential volumetric rates.
- No changes are proposed for Rate Zone 2a Scranton rates except for the roll-in of the Distribution System Improvement Charge ("DSIC") mechanism, which results in the same percentage increase to all rate components in Scranton.
- Rate Zone 2b EBMA rates are proposed to be increased to a level that brings residential bills for average levels of usage for customers to approximately $77 per month with a proportional increase to non-residential volumetric rates.

Q. Under the Company's proposed rate design, in which rate zones would PAWC continue to charge customers monthly service charges and flat rates per EDU?

A. In the Company's proposal, the rate zones in which the Company would continue to charge monthly fixed charges per EDU for all customers are Rate Zones 1e, 2a, and 2b. The Company would also charge monthly fixed charges per EDU for nonresidential unmetered customers in Rate Zones 1, 1a, 1c, 1d, and 1f. Rate Zone 2a Scranton is proposed to continue to charge metered customers a monthly service charge per EDU because, as explained by Dr. Chard (PAWC Statement No. 2), the Company is not able to propose new rates for Scranton at this time.

Q. Is the Company proposing any additional changes to its wastewater rate design in this case?

A. Yes. The Company is proposing to change the way that it determines the volumetric component of bills for residential customers from the method used today, where volumetric charges are based on total metered water usage for the month, to a methodology referred to as a deduct adjustment (formerly referred to as "winter averaging").

Q. Please describe the concept of a deduct adjustment.

A. The deduct adjustment is a method for determining volumetric components of wastewater bills that attempts to separate metered water usage that is likely to go through the wastewater system from water usage that is used for outdoor purposes in the summertime (e.g., watering lawns, car washing, filling pools, etc.). Under a deduct adjustment, a customer's wastewater bill in the wintertime is determined by actual metered water usage for the month, and in the summertime the customer's wastewater bill is determined by the lesser of actual metered water usage for the month or the average water consumption for that customer in the winter months.

For example, in the winter period, if a customer's metered water use is 4,000 gallons, the customer is billed for 4,000 gallons of water usage on their wastewater bill. In the summer period, if a customer's metered water use is 6,000 gallons and their average winter usage over the previous winter months was 5,000 gallons per month, the customer would only be billed for 5,000 gallons on their wastewater bill. If that customer's metered use was 3,000 gallons and their average winter usage over the previous winter months was 5,000 gallons per month, they would be billed for 3,000 gallons of usage on their wastewater bill.

Q. Is this a common way to design volumetric rates for wastewater service?

A. It is. There are numerous examples of wastewater utilities that bill customers in the summertime based on this deduct adjustment method. The Company's affiliates in Illinois and New Jersey use this method before determining wastewater bills in the summertime. Illinois-American Water Company, which has a significant wastewater customer base, bills all of its residential customers across the state using this methodology. New Jersey-American Water Company, which also has a significant wastewater customer base, uses this methodology in select tariffs in the New Jersey-American Water Company service territory.

Q. How is the Company defining winter months under its deduct adjustment proposal?

A. The Company is defining the winter months as January, February, and March. These three months are the months for which the baseline usage will be determined for the purposes of billing for the rest of the year.

Q. Is the deduct adjustment calculation the same for every customer?

A. No. The deduct adjustment calculation will be customized to each individual customer. The methodology will be the same for all customers, but the calculations will be done on an individual customer basis so that each individual customer will be billed based on their winter average usage, not the average winter monthly usage for residential customers in total.

Q. What happens in cases where the customer is new or otherwise does not have any winter billing history to base a winter average usage on?

A. In cases where the customer is new or there is no winter average billing data upon which to base a calculation, the Company will use the actual consumption until sufficient winter average billing data is available.

Q. What happens in cases where the customer has low usage non-representative of actual consumption included in their deduct adjustment calculation, such as periods in which they traveled during the winter months?

A. In cases where the deduct adjustment calculation includes a month with less than 1,000 gallons, then 1,000 gallons shall be used in place of the month's consumption in order to represent essential minimum usage. If a customer were to have less than 1,000 gallons of consumption in all three of their winter months, then their winter-average would be (1,000 + 1,000 + 1,000)/3 = 1,000 gallons. If a customer were to have less than 1,000 gallons in one month and 2,500 in the other two months, their winter-average would be (1,000 + 2,500 + 2,500)/3 = 2,000 gallons.

Q. Why is the Company proposing to implement a deduct adjustment in its rate design for residential wastewater service?

A. The Company is proposing to move to this deduct adjustment methodology to more closely align wastewater bills in the summertime with cost-causation rate design principles. Under the current rate structure, customers are charged for wastewater service in the summertime based on metered water usage that is not actually going through the wastewater system. This methodology remedies that inconsistency in the Company's wastewater rate design and better aligns customer usage with the amounts billed.

Q. What effect does this proposed move to implementing a deduct adjustment have on volumetric rates for wastewater service?

A. The effect of this deduct adjustment methodology on wastewater volumetric rates is that rates will be slightly higher than they otherwise would have been for the same revenue requirement. Volumetric billing determinants for wastewater service will be slightly lower than they otherwise would have been because usage that would have been included in the summertime, such as water that was being used for outdoor purposes, will now be excluded from the rate calculation.

Q. The Company previously proposed a winter averaging methodology for wastewater customers in its last base rate case at Docket Nos. R-2023-3043189 and R-2023-3043190 (the "2023 Rate Case"). What was the disposition of PAWC's winter averaging proposal at that time?

A. The Company's proposal was opposed by various parties. The Commission rejected PAWC's winter averaging proposal in that case based on its finding that variability in residential water consumption between winter and non-winter periods was "de minimis" over the last two years and concerns that winter averaging may have a disproportionate adverse impact on low-income customers.

Q. Is the Company's present deduct adjustment proposal distinguishable from its proposal in the prior case?

A. Yes. In the 2023 Rate Case, the Company proposed a standard 3,000 gallon assumption for customers with no winter usage history. In this case's proposal, there would be no assumption, and customers would pay for their actual consumption until there is sufficient history to calculate a winter average to eliminate any concerns about discrimination against

new customers similar to those raised by the Office of Consumer Advocate ("OCA") in the 2023 Rate Case. The Company is also including, in its present proposal, a minimum usage of 1,000 gallons for any given month included in the winter average calculation to mitigate OCA's concern advanced in the 2023 Rate Case that higher-income households may be more likely to travel during winter months. The Company also renamed the proposal to be more understandable to customers who understand what a deduct meter is, but who do not understand the concept of winter averaging. The objective of this proposal is to mimic the impact of a deduct meter.

Q. Is customer outdoor water usage in the Company's service area during the summer distinguishable from that of winter to justify adopting a deduct adjustment?

A. Yes. The usage modeling that I discuss later in my direct testimony shows that there are increased levels of water consumption in the summertime on a weather-normal basis related to changes in season such as increased irrigation and outdoor activity.

Q. Do you have a schedule that shows the Company's current and proposed rate design for wastewater service?

A. Yes. The Company's proposed rate design in this case for water service is provided in Exhibit MWM-2.

Scale-Back Proposal

Q. In the event that the Commission approves a revenue requirement in this proceeding that is less than that proposed by the Company, either for water service or wastewater service or both, what is the Company's proposal for the scale back of its proposed water and wastewater rates?

A. In the event that the Commission approves a revenue requirement that is less than that proposed by the Company, the Company proposes to reduce the revenue requirements for water service and wastewater service, and the proposed amount of reallocation from wastewater to water under Act 11 to be proportional so that the same relative percentages to the total of water service revenue requirement, wastewater service revenue requirement, and Act 11 reallocation amounts be maintained at proposed levels. The Company believes that the rate design proposed in this case is reasonable and that the levels of rates for water service and wastewater service relative to each other should be maintained as proposed in the event that a lower revenue requirement is approved by the Commission in this case.

REALLOCATION OF WASTEWATER REVENUE REQUIREMENT

Company Proposal

Q. What is the Company's proposal with respect to wastewater revenue requirement reallocation?

A. The Company is proposing to reallocate a portion of the total calculated wastewater revenue requirement shown in Exhibit 3-A to water service customers. This reallocation of wastewater revenue requirement to water customers is provided for in Act 11. Under Act 11, the Commission may, when approving base rates and after providing notice and an opportunity to be heard, authorize utilities to allocate a portion of the wastewater revenue requirement to the combined water and wastewater customer base if in the public interest.

Q. What portion of the wastewater revenue requirement is the Company proposing to reallocate to water customers?

A. The total calculated revenue requirement for wastewater service is $278,144,981. The Company is proposing to recover $225,134,799 of that revenue requirement from wastewater customers under its proposed rates in this case. This is approximately 81% of the total. The remaining $53,010,182 is proposed to be a revenue requirement reduction for wastewater service customers that will be recovered from water service customers.

Q. Please provide a summary of the amounts of PAWC's proposed wastewater revenue requirement that it proposed to be reallocated to water customers, by customer class, pursuant to Act 11.

A. The reallocation of wastewater revenue requirements by water customer class is as follows:

TABLE 4
Wastewater Reallocation to Water Customers by Class

	Amount
Residential	$38,603,876
Commercial	$11,227,453
Municipal	$1,034,699
Industrial	$1,838,332
Private Fire	$305,822

Q. Please identify the amounts to be reallocated to water customers under Act 11 by wastewater rate zone category.

A. The reallocation of wastewater revenue requirement by wastewater pricing group is presented in Table 5 below.

TABLE 5
Wastewater Reallocation by Wastewater System

Wastewater System	Amount
Wastewater SSS General Operations	$12,710,621
Wastewater CSS Operations	$7,062,475
BASA WW Operations	$30,280,040
Elizabeth Borough WW CSS Operations	$2,957,046

Rationale

Q. What is the guiding principle behind the Company's reallocation proposal?

A. The guiding principle behind the Company's reallocation proposal is to promote gradualism of rates and avoid the risk of rate shock to PAWC customers. In this case, PAWC's reallocation proposal seeks to help mitigate rate shock for wastewater customers that they may otherwise experience without the reallocation, based on the full revenue requirements for wastewater systems. The Company is targeting residential bills for average wastewater usage of approximately $119.50 per month for customers in the SSS Zone and $124 per month for customers in the CSS Zone, subject to the other constraints I have already noted. This reallocation also results in residential bills for average water usage of approximately $95 per month. The Company's reallocation proposal helps bring more parity to residential bills for water service and wastewater service at average usage levels than there otherwise would be without reallocation. This also results in a Bill-to-Income ("BTI") Ratio for most wastewater residential customers that is at or below 2%, which in turn helps to manage the affordability of wastewater service and bring a level of parity to the affordability of water and wastewater service.

Q. Why is the Company proposing a reallocation of wastewater revenue requirements to water customers under Act 11 in this case?

A. The Company is proposing a reallocation of wastewater revenue requirements to water customers under Act 11 for four main reasons:

- Affordability of wastewater service in those communities would be significantly eroded without a reallocation of a portion of those revenue requirements to water customers. Additionally, without reallocation, some wastewater zones would experience disproportionately higher rate increases due to system investment needs. PAWC's proposal helps align customer rates consistently with the efficiencies shared across the integrated system and supports the Company's overarching goal of affordability.
- In BASA WW Operations, the parties in that acquisition proceeding agreed to propose a 40% increase for BASA customers in the first case in which BASA is included, which leaves a significant gap between revenues at proposed rates and the revenue requirements to serve the BASA system proposed by the Company. After the proposed 40% increase as agreed to in the settlement, there is an approximate $30 million shortfall the Company proposes to recover from water customers through the Act 11 reallocation.
- In the Wastewater CSS Operations, the Company is not permitted to propose increases in rates to Rate Zone 2a Scranton, as explained in the direct testimony of Dr. Chard (PAWC Statement No. 2). This limitation means that the proposed revenue requirement increase of approximately $10 million for the CSS Group

would otherwise have to be recovered from customers in Kane and McKeesport, which would result in significant increases for those customers.

- In the Elizabeth Borough WW CSS Operations, the parties in the EBMA acquisition proceeding agreed to limit any rate increase to 30% in the first case in which EBMA is included, which leaves a significant gap between revenues at proposed rates and the revenue requirements to serve the EBMA system proposed by the Company. After a proposed 30% increase, there is an approximate $3 million shortfall the Company proposes to recover from water customers through the Act 11 reallocation.

Q. Is it in the public interest in this proceeding to reallocate a portion of the wastewater revenue requirement to water customers?

A. Yes, the proposed reallocation of wastewater revenue requirement to water service customers is appropriate and in the public interest from both a rate design and a policy perspective.

Q. Why is the Company's proposal in the public interest from a rate design perspective?

A. A primary rate design principle that supports the partial reallocation of wastewater cost of service to water customers is the principle of gradualism. The gradualism principle in rate design is based on the idea that changes in rates and rate design should be made in a way that avoids rate shock. Rate shock can come both from general increases in revenues that can affect all customers, as well as from changes in rate designs that can cause large increases to specific groups of customers. Drastic changes in rates can cause customer confusion and dissatisfaction and have adverse effects on the utility's ability to provide quality customer service. The increases that would be applied to certain communities in

the Company's wastewater territory, absent the Company's reallocation proposal, would certainly fall within this concept.

Another important rate design principle is the concept of affordability. As I mentioned previously, it is certainly in the public interest to have affordable water and wastewater service for as many customers as possible. Under the Company's proposed benchmark of 2% of household income per service (water or wastewater), the Company's proposal seeks to maximize the total number of customers for whom water and wastewater service will fall below that threshold.

Q. What are the important policy considerations that support the Company's proposal?

A. From a policy perspective, it is important to note that PAWC is an integrated company that provides both water and wastewater services on a consolidated basis. The Company provides such services through the efforts of both PAWC employees and the resources of the Service Company. This consolidation of functions creates opportunities to capture economies of scale that ultimately will drive down costs to customers, which do not exist where water and wastewater operations are fragmented. It is in the long-term best interest of our customers and the Commonwealth of Pennsylvania to adopt policies that encourage the development of these cost-reducing or mitigating economies of scale. The temporary reallocation of revenue requirement between water and wastewater systems is an important piece of that equation.

Capital expansion plans often drive the need for utility rate increases. As PAWC witness Anthony M. Nokovich points out in PAWC Statement No. 4, a significant driver of this rate increase request is PAWC's ongoing infrastructure investment plans. In the short term, capital additions in different parts of the Company's water and wastewater

systems will exhibit peaks and valleys. This can be especially true in newly acquired systems where upfront investment needs may be more significant than in other systems where the Company has been making more modest, annual investments over a longer period of time. Over time, these investment plans will revert to an average long-term investment pattern, and the associated changes in rates will reflect that long-term investment pattern. The initial rate changes in newly acquired systems can be extreme, however, if all of the investments are required to be recovered exclusively from the customers of those systems upfront. A reallocation of a portion of the revenue requirement to a larger customer base can ease the burden on new system customers and further the goal of consolidation and prudent investment in these systems. The long-term benefits of consolidation are already experienced by existing customers, and this proposal allows those benefits to be extended to new customers as well.

Impacts to Customers

Q. What will be the impact of the Company's proposal to reallocate a portion of wastewater revenue requirement to water service customers on the Company's water service bills?

A. Based on the Company's cost of service and proposed customer class revenue allocation in this case, this reallocation results in an increase in residential water volumetric rates of $0.16 per hundred gallons, which would increase the monthly water bill of a Rate Zone 1 residential water customer with an average usage of 3,263 gallons per month by approximately $5.09 per month. In contrast, this reallocation results in lower wastewater residential bills for approximately the same usage level up to $146 per month depending on the rate and location of the customer.

QUANTITATIVE STATISTICAL ANALYSIS OF WATER CONSUMPTION

Introduction

Q. Are there revenue adjustments the Company is proposing in this case that require quantitative analysis of water consumption by PAWC's water customers?

A. Yes. I will explain the modeling used to develop the revenue forecasts for residential, commercial and municipal customers, and in the next section, I will discuss the development of the revenue projections for all customer classes (residential, commercial, industrial, municipal, and sales for resale). For residential, commercial, and municipal customers, the Company is proposing adjustments for the normalization of the actual billing determinants for the historic test year ending June 30, 2025 ("HTY") related to trends in declining use, weather normalization, and the impact of the COVID-19 public health emergency on water consumption for PAWC's water customers. These adjustments require the Company to analyze water consumption and determine (1) if there is a significant and pervasive rate of decline in water use per customer over time; (2) if there are significant relationships between water consumption and weather conditions in the Company's service territory, if weather was different from normal in the HTY period, and assuming both of those conditions exist, if a weather normalization adjustment to usage is appropriate to reflect normal weather conditions for the future test year ending June 30, 2026 ("FTY"), and the fully projected future test year ending June 30, 2027 ("FPFTY"); and (3) if the COVID-19 public health emergency has had a significant impact on water consumption for PAWC's customers, to determine if a COVID-19–related adjustment to usage is appropriate for the HTY and FPFTY.

Q. How do you determine the parameters and relationships necessary to analyze declining water use, weather impacts on water consumption, and the impact of COVID-19 on water consumption for PAWC's customers?

A. The parameters and relationships necessary to analyze declining use, weather, and COVID-19 on water consumption for PAWC's customers are estimated through the use of statistical linear regression modeling.

Review of Methodologies

Q. What is a statistical linear regression model?

A. Statistical linear regression modeling is a commonly used type of mathematical predictive analysis. The overall idea of regression modeling is to examine two things: (1) whether a set of independent explanatory variables do a good job of predicting an outcome (dependent) variable, and (2) which independent explanatory variables are significant predictors of the dependent variable, and in what way in particular do they help predict the results of the dependent variable.

There are three major uses for statistical linear regression analysis. These major uses are: (1) determining the predictive power of independent explanatory variables; (2) forecasting the effect that independent variables have on a dependent variable; and (3) trend forecasting. First, the regression analysis can be used to identify the strength of the effect that independent explanatory variables have on a dependent variable. A typical question is: "What is the strength of the relationship between summer heat, precipitation, and water sales?" Second, the regression analysis can be used to forecast effects or impacts of changes. That is, the regression analysis helps us understand how much the dependent variable changes with a change in one or more of the independent variables. A typical

question is: "What volume of water sales can the Company expect to lose for each inch of rainfall above normal in any given period?" Third, regression analysis can predict trends and future values. The regression analysis can be used to get point estimates of future values of the dependent variable based on assumed values for the independent variables. A typical question can be: "Given current trends in water sales, what can we expect water sales to be each month next year assuming normal weather?"

Q. What does a statistical regression model produce?

A. A statistical linear regression analysis is a way of mathematically validating which independent variables have a significant impact on the dependent variable – i.e., the main factor, or the factor you are trying to better understand or predict. A statistical linear regression model produces an equation that describes a historical relationship between a set of independent variables and a single dependent variable that can be used to forecast future values of the dependent variable based on assumed values of the independent variables. An example of such an equation is shown below:

UPCn = a0 + (a1 x RAINn) + (a2 x CDDn) +
(a3 x COVIDn) + (a4 x TIMEn)

Where:	UPCn =	Use per customer in month n
	RAINn =	Rainfall in month n
	CDDn =	Cooling Degree Days ("CDD") in month n
	COVIDn =	COVID-19 effect in month n (0% to 100%)
	TIMEn =	Year/Month for month n
and:	a0 =	constant term
	a1 =	coefficient for RAIN
	a2 =	coefficient for CDD

a3 = coefficient for COVID-19 impact per customer

a4 = coefficient for TIME (declining use value)

In this example, use per customer is the dependent variable (outcome) and all other variables are independent variables (predictors).

Q. Can statistical linear regression models be used to weather normalize historical water sales for different customer classes?

A. Yes. In the statistical model in the example above, the a1 coefficient for RAIN can be used to estimate the impact of rainfall on use per customer in any given historical period and estimate what the usage per customer would have been if rainfall had been different, especially when actual precipitation was higher or lower than normal. Below is a sample calculation of how weather normalization works with a statistical regression model that uses weather as a strong predictive independent variable that affects the use per customer dependent variable.

IMPACTn = a1 x (ACTUAL RAINn – NORMAL RAINn)

Where: IMPACTn = Weather impact due to abnormal rainfall in period n

ACTUAL RAINn = Actual Rainfall (in inches) in period n

NORMAL RAINn = Average Rainfall (in inches) in period n

If the value of the a1 coefficient for rainfall is -0.30 in this example, actual rainfall for the period is 6 inches and normal rainfall for the period is 4 inches, the weather impact for the period due to higher-than-normal rainfall is a negative 600 gallons per customer, meaning that the Company sold 600 fewer gallons per customer of water than it otherwise would have [-0.30 x (6 – 4) = -0.60]. If there are multiple weather variables in the statistical regression analysis, this calculation is completed separately for each variable and the sum of the calculations is rolled up into a single weather impact. This approach to weather

normalization allows an analyst to independently assess the impact of each weather component, and also allows an analyst to state the weather impacts over time both in terms of consumption and in terms of revenues by multiplying the consumption impact by a volumetric price.

Q. Can statistical linear regression models be used to estimate the impacts of COVID-19 on water sales for different customer classes?

A. Yes. In the statistical model example above, the a3 coefficient for COVID-19 is the estimate of the impact of the COVID-19 public health emergency on monthly use per customer. The historical data set contains a variable for each month that indicates the assumed qualitative level impact from COVID-19 in that month. In all months prior to April 2020, that value was set at 0%. From April 2020 on, that value is set at 100% when maximum COVID-19 impacts are observed, or at a level less than 100% where we see reduced COVID-19 impacts on usage. The coefficient for the COVID-19 impact variable estimates the average monthly use per customer based on the months that have been designated as COVID-19 months. This coefficient can then be used to (1) identify a normal level of usage that is not influenced by the impact of COVID-19, in a manner similar to a normalization calculation that adjusts for the influence on water usage associated with weather conditions that depart from normal, and (2) reflect estimates of future impacts of the COVID-19 public health emergency.

Q. Can these models be used to estimate trends in declining use per customer for different customer classes?

A. Yes. In the same statistical model example represented above, the a4 coefficient for TIME is the estimate of declining use per customer per month. This coefficient measures the rate

of decline in use per customer over the historical data set independent of the effect of any other variable in the model. The historical data set contains a variable for each month that is a timestamp that starts at one for the first month in the dataset and increases by one for every month going forward. This acts as a trend variable for both historical periods in the dataset and future forecast periods. The coefficient for this trend variable is applied to future increasing values of the trend that results in decreasing forecasts of use per customer.

Q. How does one assess the accuracy of a statistical linear regression model?

A. A statistical linear regression model produces a set of statistics that can be used to judge the accuracy and fitness of the model. The most common statistics are (1) the "R-Squared" value, which is a statistical measure in a regression model that determines the proportion of variance in the dependent variable that can be explained by the independent variables, and (2) values and standard deviations for the coefficients, which can be used to determine "t-statistics" and "p-values," which tell how accurately and precisely the different coefficients are being calculated and whether the associated independent variables are strong predictors of the dependent variable.

In the equation described above, the "R-Squared" value is a statistic that measures the percentage of variation from period to period in the dependent variable (water use per customer) that is explained by the mathematical relationship with the independent variables. The R-Squared can range from 0% (no explanatory ability) to 100% (perfect explanatory accuracy). In general, the higher the R-squared, the better the predictive value of the model.

The second major test involves comparisons of the values of each of the model coefficients and their associated standard errors. Because a statistical regression model

estimates an explanatory relationship between a dependent variable and a set of independent variables, there will always be some degree of uncertainty around what that explanatory relationship actually is. As a result, each model coefficient has a level of uncertainty around it, and this level of uncertainty is represented by measuring how many standard errors each coefficient is away from zero, which the model also calculates.

Dividing the value of each coefficient by its standard error yields a t-statistic, which can be used to judge the predictive power of the independent variable that the coefficient represents. For example, in the case of the generic statistical model described above, if the value of the a1 coefficient for rainfall is -0.30 and the standard error for that coefficient is 0.05 (meaning that the real value of the coefficient could be anywhere between -0.35 and -0.25 with -0.30 being the most likely value), the value of the t-statistic is -6.0 (-0.30 divided by 0.05 = 6.0). Generally speaking, t-statistic values greater than 2.0 for positive coefficients or less than -2.0 for negative coefficients indicate an acceptable predictive relationship between that independent variable and the dependent variable of interest. The higher the t-statistic value, the greater the confidence we have in the coefficient as a predictor. Values between 2.0 and -2.0 indicate that the predictive power of that independent variable may not be very strong.

Q. Are there other more qualitative ways to determine whether a statistical linear regression model is accurate and produces reasonable results?

A. Yes. There are also several qualitative ways to determine whether a statistical regression model accurately describes the relationship that a chosen set of independent variables has with the dependent variable:

- **Does the model represent reality?** If it is generally known that water consumption is seasonal and is driven in the summertime by heat and precipitation, it is logical to assume that a statistical model that attempts to describe and predict seasonal water consumption would have explanatory variables related to summer heat and precipitation, and those explanatory variables would be shown to have a strong predictive value in the model. Models that attempt to accurately describe the drivers behind water consumption that do not contain statistically significant coefficients for independent variables that are logically known to drive water consumption are likely not strong predictive models.
- **Are the signs of the coefficients for major independent variables correct?** If water consumption increases in the summertime with increasing heat and decreases in the summertime with increasing precipitation, it is logical to expect that the coefficients for the independent variables that represent summertime heat and summertime precipitation would be positive and negative, respectively.
- **Is the model based on a robust data set?** It is easy for a statistical model with many independent variables and relatively few observations of the dependent variable to accurately explain variation in the dependent variable, but that does not mean that the model has strong predictive power if the data set being analyzed is small in scope. A statistical model that attempts to describe water consumption and that has good predictive explanatory power over multiple years of monthly historical data is very useful and accurate in projecting future trends and in explaining how changes in strong predictive independent variables will affect levels of the dependent variable.

- **Do the impacts on the dependent variable that the model describes make logical sense?** It is possible, outside of a statistical linear regression model, to make ballpark estimates of other facts like the impact of COVID-19 on water consumption and long-term trends in declining use. This can be done with a simple linear plot of annual usage data by year. For example, if a linear plot of annual usage data suggests that there is a downward trend of approximately 1,000 gallons per customer per year, one would expect that a statistical model that is measuring that impact would yield a result that is similar. The same is true when looking at the potential impacts of COVID-19 on water consumption. If a visual examination of data suggests that water use per customer for a commercial class has decreased by 2,000 gallons per customer in 2020 due to the COVID-19 emergency, it is logical to expect a statistical regression model that attempts to statistically measure that impact to yield estimates consistent with that expectation.

Pennsylvania Modeling and Results

Q. Please describe the statistical linear regression model you are using to analyze water consumption data for PAWC.

A. In this proceeding, we are using multiple regression statistical models to analyze use per customer for the residential and commercial classes that relate the dependent variable (i.e., water use per customer) to a collection of independent variables. The models use 120 months of monthly data beginning in July 2015 through June 2025. Each regression model uses independent variables that can be broken down into four categories to explain monthly use per customer. The four categories are:

- **Weather**: The weather variables used in the models are CDDs and precipitation. These weather variables are a weighted average of current month and lagged month weather readings taken by the National Oceanic and Atmospheric Administration at Pittsburgh Allegheny County Airport. This weighted average lagged approach is used to account for the differences between billing month sales and calendar month weather. Coefficients from these variables show the impact of weather on monthly use per customer over the 10-year period. Weather variables are modeled as monthly deviations from normal for each month in the data set (actual weather for the month less normal weather for the month for each individual weather variable). Normal weather is calculated for each month of the year based on the weather over the 10-year period that the historical data spans.

- **Time**: The time variable is a trending variable that notes the passage of time in the model and produces a coefficient that estimates the monthly decline in usage per customer over the 10-year model. The time variable captures the range of conservation efforts that have been implemented by customers over time, such as the installation of more water-efficient fixtures and appliances. Time on its own is of no consequence, but it is a powerful variable because it is the medium for capturing the conservation effect.

- **COVID-19 indicator**: The COVID-19 indicator variable is set at 0% for months prior to April 2020, 100% for the months of April 2020 through November 2020, and 40% for the months from December 2020 through July 2021. The effect of this variable in the model is to look specifically for increases or decreases in use per customer for the April 2020 through July 2021 timeframe that may have happened

due to systemic changes in the amounts of water customers use as a result of the COVID-19 public health emergency.

- **Monthly indicators**: The monthly indicator variables in the model measure structural monthly and/or seasonal changes in use per customer that cannot be explained by any of the other variables in the model.

Q. What information do these models provide that is useful for developing pro forma adjustments to revenues that you are sponsoring in your testimony?

A. Each model produces a set of weather coefficients that can be used to weather-normalize historical sales for the HTY period, a coefficient that indicates the monthly trend in declining use per customer for each class, and a coefficient that shows for each class the average use per customer impact associated with changes in usage due to COVID-19.

Q. You mentioned that you have developed models for customer usage relating to the residential, commercial, and municipal classes. Are you also modeling usage for the industrial and sales for resale customer classes?

A. No. The statistical modeling in this case is only for the residential, commercial, and municipal classes. Usage estimates for the industrial and sales for resale classes are developed based on the HTY, with adjustments to annual usage based on current or expected conditions that are described later in the revenue section of my testimony.

Q. You previously discussed the various statistical tests used for accuracy and predictability. Please discuss the results of these tests for your models and why they are appropriate to use in this proceeding.

A. As shown in Exhibits MWM-3, MWM-4, and MWM-5, the Adjusted R-Squared statistics for the residential usage model is 80%, the Adjusted R-Squared statistic for the commercial

usage model is 83%, and the Adjusted R-Squared statistic for the municipal model is 64%. This indicates that in all models, the explanatory variables (weather, COVID-19 impacts, declining use, etc.) strongly explain the variability in use per customer over time. The values of the coefficients, standard errors, and t-statistics for the major explanatory variables in the models are as follows:

TABLE 6

Residential Model Major Explanatory Variables	Coefficient	Standard Error	t-Statistic
Usage Trend	-0.0028	0.0003	-8.1672
COVID-19 Impact	0.2700	0.0450	6.0034
Precipitation	-0.0271	0.0127	-2.1286
CDD	0.0012	0.0006	2.0134

TABLE 7

Commercial Model Major Explanatory Variables	Coefficient	Standard Error	t-Statistic
Usage Trend	-0.0261	0.0026	-10.0489
COVID-19 Impact	-2.1369	0.3457	-6.1809
Precipitation	-0.2033	0.1003	-2.0269

TABLE 8

Municipal Model Major Explanatory Variables	Coefficient	Standard Error	t-Statistic
Usage Trend	-0.0088	0.0150	-0.5866
COVID-19 Impact	-17.9833	2.0001	-8.9910
Precipitation	-1.0301	0.5124	-2.0103

The statistics for the individual explanatory independent variables above show a high degree of explanatory power with all parameters having t-statistics all outside of the +/- 2.00 range apart from the usage trend variable for the municipal class, which is not statistically significant. The signs for the precipitation variables are negative as expected, meaning that more rainfall over a summer period results in less seasonal water usage from our residential customers. The signs for the CDD variable is positive, which indicates that

the hotter the weather gets in the summer, the more water customers use, which is expected, and the COVID-19 impact variable indicates that residential usage went up as a result of COVID-19 and commercial and municipal usage went down. The sign for the declining use variable for the residential and commercial classes are negative and are statistically significant, which means that there is a pervasive decline in use per customer for residential and commercial customers over the 10-year historical period.

Q. Please describe specifically how you are modeling the effect of the COVID-19 pandemic in your statistical analysis.

A. As stated previously, the COVID-19 indicator variable in each model is set at 0% for months prior to April 2020, 100% for the months of April 2020 through November 2020, and 40% for the months from December 2020 through July 2021. The effect of this variable in the model is to look specifically for increases or decreases in use per customer for April 2020 through July 2021, which may have happened due to systemic changes in the amounts of water customers used as a result of the COVID-19 public health emergency.

Q. Based on this information, what assumptions are you making going forward regarding the impacts on customer usage related to the COVID-19 pandemic?

A. The Company's forecast of use per customer includes no ongoing impacts related to the COVID-19 pandemic, meaning that impacts for each of the residential, commercial, and municipal classes are forecasted to be zero, and usage is expected to revert back to the underlying trend seen before the pandemic.

Declining Usage Discussion

Q. Your regression models show a trend of declining use per customer. What is the amount of declining use your models have identified?

A. The annual amount of declining use identified for residential customers is approximately 400 gallons per year per customer. The annual amount of declining use identified for commercial customers is approximately 3,150 gallons per year per customer. The annual amount of declining use identified for municipal customers is approximately 1,270 gallons per year per customer.

Q . Why do you believe that declining use is a valid trend for residential and commercial customers that will continue?

A. Consumption patterns for the Company's customers are similar to those for other American Water operating companies, which have experienced a decline in consumption per customer over the last 10 years. According to the 2010 Water Research Foundation report, "many water utilities across the United States and elsewhere are experiencing declining water sales among households." The report further states: "A pervasive decline in household consumption has been determined at the national and regional levels."[2]

Q. What is causing the decline in customers' usage?

A. Several factors drive the decline in usage. These factors include the incremental introduction of low-flow fixtures and appliances, new regulations that lead to further reductions in fixture flow rates, conservation programs, and public initiatives that have led to greater consumer water conservation awareness.

[2] Coomes, Paul et al., *North America Residential Water Usage Trends Since 1992* – Project #4031, p. 1 (Water Research Foundation, 2010).

Plumbing fixtures such as toilets, showerheads, and faucets available to consumers today are more water-efficient than those fixtures manufactured in the past. Similarly, appliances such as dishwashers and washing machines are also more water efficient. When a customer replaces an older toilet, washing machine, or dishwasher with a new unit, the new unit will almost certainly use less water than the one it replaced. Similarly, the construction of new homes results in the installation of water-efficient fixtures meeting new, more efficient, regulatory standards.

Q. How much water do the new fixtures and appliances save?

A. The Energy Policy Act of 1992 mandated the manufacture of water-efficient toilets, showerheads, and faucet fixtures. For example, a toilet manufactured after 1994 must use no more than 1.6 gallons per flush, compared to a pre-1994 toilet, which typically used from 3.5 to 7 gallons per flush. In fact, toilets using only 1.28 gallons per flush or less are becoming more prevalent in the marketplace. Replacing an old toilet with a new one, therefore, can save from 2 gallons to nearly 6 gallons per flush.

The Energy Independence & Security Act of 2007, which established stringent efficiency standards for dishwashers and washing machines, has further reduced indoor water consumption. Dishwashers manufactured after 2009 and washing machines manufactured after 2010 must use 54% and 30% less water, respectively. All other factors being equal, a typical residential household in a new home constructed in 2015, with water-efficient toilets, washing machines, dishwashers, and other fixtures, uses approximately 35% less water for indoor purposes than a non-retrofitted home built prior to 1994.

Q. Are there other factors contributing to the continued decline in water consumption patterns?

A. Yes. Programs to raise customer awareness and interest in the benefits of conserving water and energy continue to increase. As awareness of water and energy efficiency increases, customers may decide to replace a fixture or appliance even before it has broken. Additionally, customers may further reduce consumption by changing their household water use habits in other various ways.

Q. Do you expect the trend of declining usage to continue in the future?

A. Yes. Water-efficient fixtures and other drivers such as conservation education and government-mandated standards will continue to drive further efficiency into residential and nonresidential usage per customer. In fact, the trend is well established and continues to affect water usage on the Company's system, as well as most water utilities across the United States. The rate of the continued trend is dependent on the pace of fixture replacement within the Company's footprint, as well as the broadening acceptance of a conservation ethic through customer and business awareness programs, government conservation policy, and similar behavior modification–related programs.

Technology is now available for newer, more water-efficient products that further improve on Energy Policy Act levels, and there has been a growing movement to codify these more stringent specifications. The introduction of progressive code modifications – such as the International Code Council's International Green Construction Code and the International Association of Plumbing and Mechanical Officials Green Plumbing and Mechanical Code Supplement (2011) – support uniform implementation of increased water efficiency standards. An article in the June 2012 issue of the AWWA Journal titled

"Insights into declining single-family residential water demands" recognizes this decline in water consumption: "[r]educed residential demand is a cornerstone of future urban water resource management. Great progress has been made in the last 15 years and the industry appears poised to realize further demand reductions in the future."[3] The trend of declining water consumption based on improved water efficiency has continued over time.

Conclusions

Q. Normalizing historical usage for weather and the COVID-19 emergency, what has the overall trend been for use per customer for the residential, commercial, and municipal classes?

A. The statistical analysis of usage for the residential, commercial, and municipal classes shows that once weather effects and the one-time effects of COVID-19 have been accounted for, there is a significant downward trend in usage for these customer classes. The charts below show use per customer for each class for the 10 years ending June 2025, adjusted for the weather impacts and COVID-19 impacts that I previously described in my testimony.

[3] DeOreo, W. and Mayer, P., American Water Works Association Journal, vol. 104, issue 6 (June 2012), http://apps.awwa.org/WaterLibrary/showabstract.aspx?an=JAW_0076117.

Chart 1

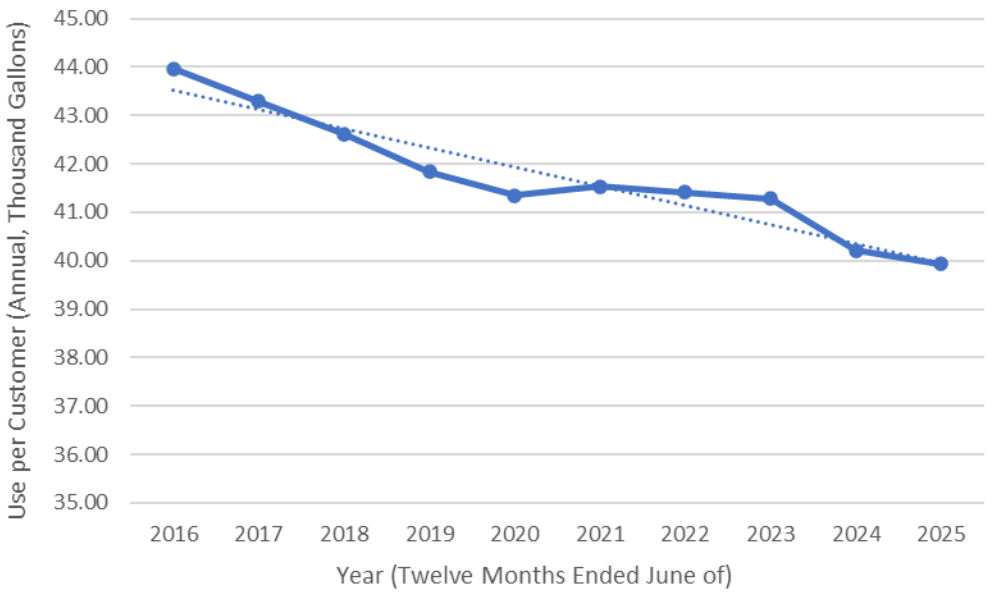

Chart 2

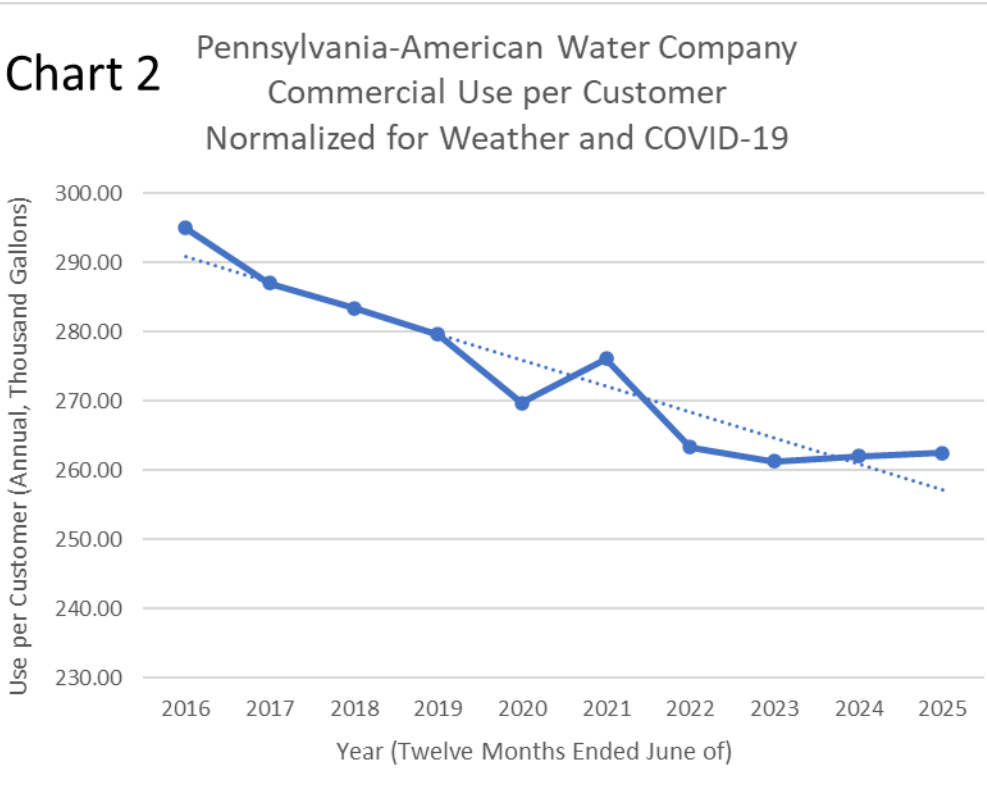
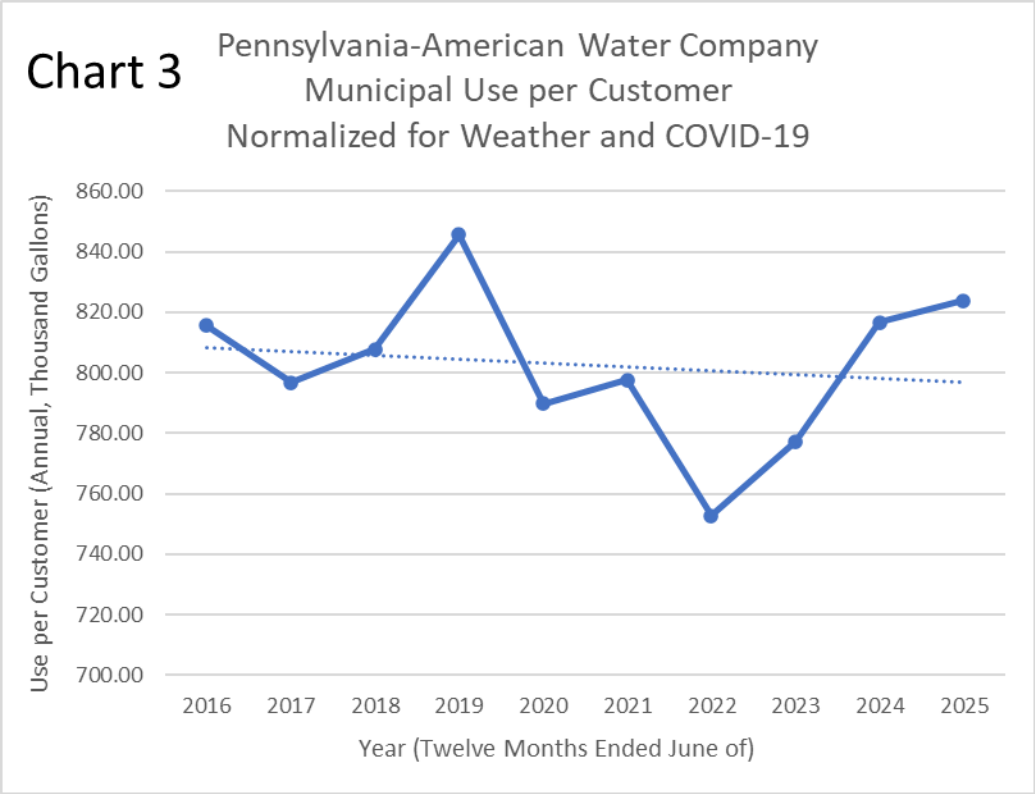
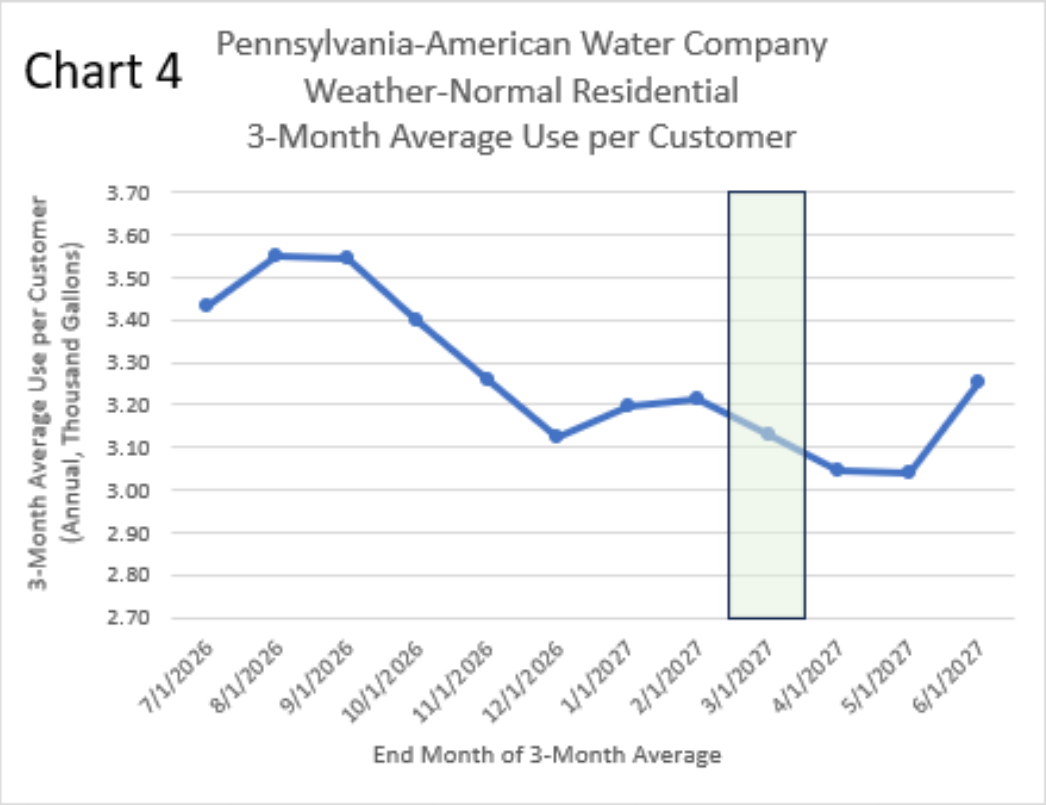




Q. Does the data support the Company's deduct mechanism proposal that includes the Company's deduct adjustment proposal for wastewater service rate design?

A. As described above, the Company is proposing a deduct adjustment to prevent customers being charged for wastewater service based on metered water usage that is not actually going through the wastewater system. The months to be used in the winter average are January, February, and March. Chart 4 shows how a 3-month average ending in March compares to the other months of the year. Notably, 3-month averages including months in the middle of the summer are much higher than the proposed 3-month average. While the proposed 3-month average is not the lowest in Chart 4 on a weather-normal basis, it should be expected to have less variability due to weather impacts than a 3-month average that includes months in the spring or fall.



Q. What conclusions do you draw from these charts and your supporting analysis?

A. The charts and the supporting analysis demonstrate that there has been a significant and pervasive decline in normalized use per customer for the residential, commercial and municipal customers in the PAWC service territory. The Company's modeling normalizes for weather and COVID-19 and shows that there has been a pervasive decline in usage for these classes over the past 10 years. The historical trends in adjusted monthly use per customer for the residential, commercial and municipal classes will continue through the relevant periods going forward. There is also a difference between winter and non-winter billed usage that should be considered in rate design. Currently, the Company has wastewater customers in many rate zones paying volumetric rates based on billed water usage even if that usage is for irrigation or outdoor activities.

REVENUE CALCULATIONS

General Calculations

Q. Please explain the development of pro forma revenues as set forth in Exhibit No. 3-A for Water Operations.

A. The process of developing the Company's revenue claim begins with revenues recorded on the Company's books of account at June 30, 2025, to which various adjustments were made. Exhibit No. 3-A shows a summary of the development of pro forma revenues for Water Operations under present and proposed rates for the HTY, FTY, and FPFTY periods.

Additionally, for each of the test years, Exhibit No. 3-A includes a schedule showing operating revenues by customer classification, as well as a schedule showing a summary of the various adjustments made to book operating revenues to arrive at pro forma operating revenues under present rates.

Q. Does Exhibit No. 3-A show a similar development of pro forma revenues for revenue requirements other than for water operations?

A. Yes. The revenue schedules described above are also provided for the four wastewater revenue requirements:

- Wastewater SSS General Operations
- Wastewater CSS Operations
- BASA WW Operations
- Elizabeth Borough WW CSS Operations

Q. Please explain the various adjustments to the Company's book revenues that were made to develop pro forma sales and revenues under present and proposed rates for the Company's water and wastewater operations.

A. The following adjustments were made to per book revenues by class:

- Adjustment 2a: Tax Cuts and Job Act ("TCJA") and Excess Accumulated Deferred Income Tax ("EADIT") Surcharge Adjustment
- Adjustment 2b: Unbilled Revenue Adjustment
- Adjustment 2c: DSIC Annualization Adjustment
- Adjustment 2d: Arrearage Management Plan ("AMP") Deferred Revenue Adjustment
- Adjustment 2e: Annualization of Base Year Rate Changes
- Adjustment 2f: Private Fire Adjustment
- Adjustment 2g: Public Fire Adjustment
- Adjustment 2h: Changes in Customers
- Adjustment 2i: Usage Trend Adjustment
- Adjustment 2j: Non-Residential Fixed Charge Normalization Adjustment
- Adjustment 2k: Specific Contract Customer Adjustment
- Adjustment 2l: Rental Income Adjustment
- Adjustment 2m: Intercompany Rental Adjustment
- Adjustment 2n: Usage Data Revenue Adjustment
- Adjustment 2o: Industrial Pretreatment Program ("IPP") Adjustment
- Adjustment 2p: Annualization Adjustment for Farmington Water
- Adjustment 2q: Annualization Adjustment for Farmington WW
- Adjustment 2r: Annualization Adjustment for East Dunkard Water

- Adjustment 2s: Annualization Adjustment for Audubon Water
- Adjustment 2t: Annualization Adjustment for BASA WW
- Adjustment 2u: Annualization Adjustment for Sadsbury WW
- Adjustment 2v: Annualization Adjustment for WW SSS Rate Zone 1 EDUs
- Adjustment 2w: Normalization Adjustment for Plant Idling
- Adjustment 2x: Acquisition Adjustment for Manwalamink Water
- Adjustment 2y: Acquisition Adjustment for Manwalamink WW
- Adjustment 2z: Acquisition Adjustment for Appalachian Water
- Adjustment 2za: Acquisition Adjustment for Corner Water
- Adjustment 2zb: Acquisition Adjustment for EBMA WW
- Adjustment 2zc: Late Payment Fees

Description of Adjustments

Q. Please describe the TCJA and EADIT Surcharge Adjustment in Schedule 2a.

A. The TCJA and EADIT Surcharge adjustment is made to eliminate booked revenues for the HTY period associated with the TCJA tax credit and EADIT surcharge revenues. The amount of the adjustments for Water Operations is ($1,500,952). The amount of the adjustment for Wastewater SSS General Operations is ($84,026). The amount of the adjustment for Wastewater CSS Operations is ($61,805).

Q. Please describe the Unbilled Revenue Adjustment in Schedule 2b.

A. The Unbilled Revenue adjustment is made to eliminate unbilled revenues that were accrued for the HTY period. The amount of the adjustment for Water Operations is ($9,834,285). The amount of the adjustment for Wastewater SSS General Operations is ($108,968). The

amount of the adjustment for CSS Operations is ($243,272). The amount of the adjustment for BASA WW Operations is ($654,354).

Q. Please describe the DSIC Annualization Adjustment in Schedule 2c.

A. The DSIC Annualization adjustment is made to eliminate the DSIC revenues per book for the HTY period, in order to reset the DSIC to zero. The FPFTY pro forma revenue adjustment is to annualize the DSIC revenues for the FPFTY period based on the Company's pro forma level rate of 1.88% for water and 0.96% for wastewater. The adjustments by year and by system are as follows:

TABLE 9

DSIC Adjustments	**HTY**	**FPFTY**
Water Operations	($2,061,585)	$16,843,941
Wastewater SSS General Operations	($74,468)	$991,201
Wastewater CSS Operations	($134,085)	$809,543
BASA WW Operations	($4,360)	$120,539
Total	**($2,274,498)**	**$18,765,224**

Q. Please describe the AMP Deferred Revenue and Residential Sales Billed Paperless Bill Credits Revenue Adjustment in Schedule 2d.

A. The AMP Deferred Revenue and Residential Sales Billed Paperless Bill Credits Revenue adjustment is made to remove Arrearage Management Program ("AMP") and paperless bill revenue credits booked in residential revenue accounts for the HTY period. The amount of the adjustments for Water Operations is $1,140,855. The amount of the adjustment for Wastewater SSS General Operations is $125,805.

Q. Please describe the Base Year Rate Annualization Adjustment in Schedule 2e.

A. This revenue adjustment is made to revenues for the HTY period to reflect the annualization of new base rates for water and wastewater service that took effect on August 7, 2024. The adjustments by customer class and system are as follows:

TABLE 10 Class Adjustments	Water	Wastewater SSS	Wastewater CSS	BASA WW
Residential	$19,331,182	$11,262,261	$1,576,483	($1,312)
Commercial	$4,860,097	$5,265,885	$619,933	$24,204
Industrial	$976,496	$213,574	$66,476	$0
Municipal	$589,781	$278,551	$26,542	$3,052
Sales for Resale	$63,780			
Unmetered Sales	$570			
Bulk		$451,642	$32,302	$0
Total	**$25,821,907**	**$17,471,914**	**$2,321,735**	**$25,943**

Q. Please describe Private Fire Adjustment in Schedule 2f.

A. This adjustment is being made to reflect the annualization of private fire revenues for the HTY and FTY periods. This revenue adjustment is being made to reflect the annualization of new rates for private fire service that took effect in August 2024 including Audubon fire services. The revenue adjustment for the FTY period includes additional annualization of private fire services based upon the number of customers receiving such service as of June 30, 2025. The total adjustment is $200,448 for the HTY period and ($10,657) for the FTY period.

Q. Please describe the Public Fire Adjustment in Schedule 2g.

A. This adjustment is being made to reflect the annualization of new rates that took effect in August 2024 for public fire service based on the number of customers and hydrants as of June 30, 2025. The revenue adjustment for the HTY period is $258,038.

Q. Please describe the Customer Change Adjustment in Schedule 2h.

A. This adjustment is being made to reflect expected increases in the number of residential and commercial customers for water and wastewater service exclusive of acquisitions. The historic revenue adjustment reflects the change in revenue associated with the average number of customers for the HTY period. The future and fully forecasted revenue

adjustments reflect customer growth in the residential and commercial classes from the HTY period and is estimated based on a two-year historical growth pattern in these customer classes. The revenue adjustments themselves were calculated by applying the average annual consumption per residential and commercial customer to projected increases in customers for the FTY and FPFTY periods. The total adjustments by class are as follows:

TABLE 11
Customer Growth Adjustment

Water Service	**HTY**	**FTY**	**FPFTY**
Residential	$921,967	$1,480,437	$2,960,875
Commercial	$984,273	$650,323	$1,300,647
Total	**$1,906,240**	**$2,130,761**	**$4,261,521**

TABLE 12
Customer Growth Adjustment

SSS Wastewater Service	**HTY**	**FTY**	**FPFTY**
Residential	($55,471)	($5,160)	($10,320)
Commercial	$464,781	632,922	$1,265,845
Total	**$409,310**	**$627,762**	**$1,255,525**

TABLE 13
Customer Growth Adjustment

CSS Wastewater Service	**HTY**	**FTY**	**FPFTY**
Residential	$76,124	$147,989	$295,978
Commercial	$139,756	$122,317	$244,634
Total	**$215,880**	**$270,306**	**$540,612**

Q. Please describe the Usage Trend Adjustment in Schedule 2i.

A. This adjustment is being made to reflect changes in usage for residential, commercial, and municipal customers that I have described previously in testimony. These changes incorporate weather normalization, COVID-19 normalization, and adjustments for trends in declining use that I have previously described. The adjustments apply to both water and

wastewater operations. The revenue adjustments are made by multiplying usage adjustments by expected customer counts, breaking out the resulting total adjustments in usage for these classes by rate step, and applying rates to the resulting adjustments in order to determine the revenue adjustments for the HTY, FTY, and FPFTY periods. The total adjustments by class are as follows:

TABLE 14
Usage Trend Adjustment

Water Service	**HTY**	**FTY**	**FPFTY**
Residential	($2,843,735)	($4,255,165)	($4,610,475)
Commercial	($811,378)	($6,872,162)	($2,225,297)
Municipal	($587,602)	($736,444)	($32,778)
Total	**($4,242,715)**	**($11,863,771)**	**($6,868,550)**

TABLE 15
Usage Trend Adjustment

SSS Wastewater Service	**HTY**	**FTY**	**FPFTY**
Residential		($475,730)	($513,020)
Municipal		($678,360)	($218,385)
Commercial		($58,793)	($2,616)
Total		**($1,212,883)**	**($734,021)**

TABLE 16
Usage Trend Adjustment

CSS Wastewater Service	**HTY**	**FTY**	**FPFTY**
Residential		-$363,086	-$391,546
Municipal		-$777,637	-$250,348
Commercial		-$42,551	-$1,893
Total		**-$1,183,274**	**-$643,787**

Q. Please describe the Fixed Charge Normalization Adjustment in Schedule 2j.

A. This adjustment is to annualize wastewater revenues for several customers of Wastewater SSS General Operations to reflect amounts of fixed charges that are multiples of twelve. The total water adjustment for Wastewater SSS General Operations for the HTY period is $32,304.

Q. Please describe the Specific Contract Customer Adjustments in Schedule 2k.

A. The adjustments to revenues in Schedule 2k are for specific and individual Industrial Standby and Resale Standby water customers and wastewater bulk customers to account for changes in rates and terms per specific contract agreements. The total adjustments for the HTY, FTY, and FPFTY periods for water customers are ($5,583), $172,260, and $197,526, respectively. The SSS wastewater adjustment for the FPFTY period is $451,064.

Q. Please describe the Rental Income Adjustment in Schedule 2l.

A. The Company receives money from cellular phone providers for the lease of space on top of its water towers for the placement of antennas. An adjustment is being made, which represents the difference between revenues that were recorded for the HTY period for cell tower rental income and revenues expected to be recorded as cell tower rental income for the FTY and FPFTY periods. These adjustments are $19,851 and $19,963, respectively. Additionally, the Company receives money for the rights to land that it owns for tree harvesting. This revenue income is expected to end in 2026. This income adjustment related to timber rights income for the FTY and FPFTY periods are each ($70,800). The total combined adjustments for the FTY and FPFTY periods are ($50,949) and ($50,837), respectively. These adjustments are made only to revenue for water operations.

Q. Please describe the Intercompany Rental Adjustment in Schedule 2m.

A. PAWC charges AWWSC for Service Company employees that work in PAWC's Stafford Avenue and Mechanicsburg offices. An adjustment is being made, which represents the difference between revenues that were recorded for the HTY period and the revenue that is expected to be recorded as intercompany office rental income in 2026 and 2027 from

this agreement. The reduction in revenue is expected to be $19,117. This adjustment is made only to revenue for water operations.

Q. Please describe the Usage Data Revenue Adjustment in Schedule 2n.

A. The Company supplies water usage data to certain municipalities so that these municipalities can bill their residents for sewer service. The Company made an adjustment to 2025 book revenues for the provision of usage data to include revenues from a new locality using the service. This adjustment for 2025 was to reduce usage data revenue by $502. The Company increases these fees annually based on changes in the Consumer Price Index ("CPI"). An adjustment is being made for 2026 and 2027 revenues to reflect a CPI change of 3.12% in those years, which is based on a historical average change in the CPI from January 2023 through December 2024. The adjustment amount for the FTY period is to increase usage data revenue by $15,038. The adjustment amount for the FPFTY period is to increase usage data revenue by $15,507. This adjustment is made only to revenue for water operations.

Q. Please describe the IPP Adjustment in Schedule 2o.

A. The IPP Surcharge wastewater revenue adjustment is made to account for the change in the Company's IPP surcharge and to reflect all IPP revenues in the Other WW Revenue account. The revenue adjustments by customer class for the HTY period are as follows.

TABLE 17 IPP Adjustments	Wastewater SSS	Wastewater CSS	BASA WW
Residential	$110	($9)	$0
Commercial	($29,757)	($41,868)	$0
Industrial	($69,392)	($9,711)	$0
Municipal	$0	$0	$0
Miscellaneous / Bulk	($124,302)	$0	$0
Other WW Revenue	($127,233)	$12,430	$5,700
Total	**($350,575)**	**($39,159)**	**$5,700**

Q. Please describe the Annualization Adjustment for Farmington Water in Schedule 2p.

A. On November 21, 2024, the Company closed on the acquisition of the Farmington Township water and wastewater systems and began providing direct service to those systems' customers. This adjustment annualizes the water revenues associated with this acquisition. The annualization is based on EDU counts by customer class as of June 2025. The revenue adjustment amount for the HTY period is $176,516.

Q. Please describe the Annualization Adjustment for Farmington Wastewater in Schedule 2q.

A. On November 21, 2024, the Company closed on the acquisition of the Farmington Township water and wastewater systems and began providing direct service to those systems' customers. This adjustment annualizes the wastewater revenues associated with this acquisition. The annualization is based on EDU counts by customer class as of June 2025. The revenue adjustment amount for the HTY period is $127,615.

Q. Please describe the Annualization Adjustment for East Dunkard Water in Schedule 2r.

A. In April 2025, the Company closed on the acquisition of the water assets of the East Dunkard Water Authority. The revenue adjustment for the HTY period annualizes

revenues to reflect a full 12 months of billing of East Dunkard customers. The revenue adjustment for the HTY period is $1,415,551.

Q. Please describe the Annualization Adjustment for Audubon Water in Schedule 2s.

A. In May 2025, the Company completed its acquisition of the Audubon Water Company. The revenue adjustment for the HTY period annualizes revenues to reflect a full 12 months of billing of Audubon customers. The revenue adjustment for the HTY period is $2,418,441.

Q. Please describe the Annualization Adjustment for BASA Wastewater in Schedule 2t.

A. In October 2024, the Company closed on the acquisition of the BASA wastewater utility property and began providing service to these customers. The annualization is based on EDU counts by customer class as of June 2025. The adjustment for revenues for the HTY period is $5,091,521.

Q. Please describe the Annualization Adjustment for Sadsbury Wastewater in Schedule 2u.

A. In November 2024, the Company closed on the acquisition of the wastewater utility property of the Sadsbury Township Municipal Authority and began providing service to these customers. The annualization is based on EDU counts by customer class as of June 2025. The adjustment for revenues for the HTY period is $200,247.

Q. Please describe the Annualization Adjustment for Wastewater SSS Rate Zone 1 EDUs in Schedule 2v.

A. The adjustments to revenues in Schedule 2v are for the annualization of EDU counts in the Wastewater SSS General Operations' Rate Zone 1. As part of an initiative to update customer EDU counts, of which some were previously understated, EDU levels were

updated to reflect more accurate data. Inorganic growth of EDU counts in excess of the customer growth calculations in Schedule 2h was annualized based on EDU counts as of September 2025. The SSS wastewater adjustment for the FTY period, reflecting the updated EDU counts, is $511,867.

Q. Please describe the Normalization Adjustment for Plant Idling in Schedule 2w.

A. The adjustments to revenues in Schedule 2w are for the normalization of annual usage related to a plant in water's Rate Zone 1 that idled on June 30, 2025. Usage was based on usage levels of the associated accounts as of September 2025. The water adjustment for the FTY period is ($438,527).

Q. Please describe the Annualization Adjustment for Manwalamink Water in Schedule 2x.

A. In June 2025, the Company completed its acquisition of Manwalamink Water and Sewer Company's water and wastewater systems and began providing service to those systems' customers. This adjustment annualizes the water revenues associated with this acquisition and is based on the Company's estimate of the annualized revenues that will be produced based on the number of meter counts by meter size as of July 2025. The net adjustment for revenues for the FTY period is $422,381.

Q. Please describe the Annualization Adjustment for Manwalamink Wastewater in Schedule 2y.

A. In June 2025, the Company completed its acquisition of Manwalamink Water and Sewer Company's water and wastewater systems and begin providing service to those systems' customers. This adjustment annualizes the wastewater revenues associated with this acquisition and is based on the Company's estimate of the annualized revenues that will be

produced based on the number of metered customers as of July 2025. The net adjustment for revenues for the FTY period is $503,249.

Q. Please describe the Acquisition Adjustment for Appalachian Water in Schedule 2z.

A. On October 27, 2025, the Company closed on the acquisition of Appalachian Utilities, Inc. and began providing service to these customers. This adjustment is based on the Company's estimate of the annualized revenues that will be produced following the recent closing of this acquisition. The adjustment for revenues for the FTY period is $719,850.

Q. Please describe the Acquisition Adjustment for Corner Water in Schedule 2za.

A. In November 2025, the Company anticipates it will close on the acquisition of the Corner Water Supply and Service Corporation and begin providing service to these customers. This adjustment is based on the Company's estimate of the annualized revenues that will be produced following the closing of this acquisition. The adjustment for revenues for the FTY period is $417,239.

Q. Please describe the Acquisition Adjustment for EBMA in Schedule 2zb.

A. In December 2025, the Company anticipates it will close on the acquisition of the wastewater system assets of the Elizabeth Borough Municipal Authority in Allegheny County and begin providing direct service to these customers as well as indirect service to additional customers through bulk connections. This adjustment is based on the Company's estimate of the annualized revenues that will be produced following the closing of this acquisition. The adjustment for revenues for the FTY period is $1,758,126.

CONCLUSION

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

R-2025-3058051 (WASTEWATER)

STATEMENT NO. 11 - DIRECT TESTIMONY OF JOHN J. SPANOS

EXHIBIT NO. 11-A - DEPRECIATION STUDY
WATER OPERATIONS
AS OF JUNE 30, 2025

PAWC Statement No. 11

DIRECT TESTIMONY OF

JOHN J. SPANOS

WITH REGARD TO DEPRECIATION

DOCKET NOS.
R-2025-3057983 (WATER)
R-2025-3058051 (WASTEWATER)

DATE: NOVEMBER 14, 2025

PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF JOHN J. SPANOS

Q. Please state your name and address.

A. My name is John J. Spanos. My business address is 300 Sterling Parkway, Mechanicsburg, Pennsylvania 17050 (formerly 207 Senate Avenue, Camp Hill, Pennsylvania 17011).

Q. With what firm are you associated?

A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming").

Q. How long have you been associated with Gannett Fleming?

A. I have been associated with the firm since June 1986.

Q. What is your position in the firm?

A. I am President.

Q. What is your educational background?

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie Mellon University and a Master of Business Administration degree from York College of Pennsylvania.

Q. Are you a member of any professional societies?

A. Yes. I am a member and past President of the Society of Depreciation Professionals. I am also a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

Q. Do you hold any special certification as a depreciation expert?

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.**Q. Please outline your experience in the field of depreciation.**

A. I have over 39 years of depreciation experience, which includes giving expert testimony in more than 500 cases before 47 regulatory commissions, including the Pennsylvania Public Utility Commission ("Commission"). My participation in the cases where I appeared as an expert witness has included conducting and analyzing depreciation studies for companies, government-owned utilities and other service providers in the electric, gas, water, wastewater and pipeline industries. In addition to the cases in which I submitted testimony, I have supervised over 900 other depreciation or valuation assignments. Please refer to Appendix A for additional information on my qualifications, work history, case experience and my leadership in the Society of Depreciation Professionals.

I. PURPOSE OF TESTIMONY AND OVERVIEW OF EXHIBITS

Q. What is the purpose of your testimony?

A. I was asked by Pennsylvania-American Water Company ("PAWC" or the "Company") to prepare depreciation studies of the Company's water and wastewater plant in service as of June 30, 2025, and its water and wastewater plant projected to be in service as of June 30, 2026 and June 30, 2027. The

depreciation studies are presented for the total water operations and separately for the four wastewater operations, consisting of the following:

(1) Water Operations

(2) Wastewater Sanitary Sewer System ("SSS") General Operations

(3) Butler Area Sewer Authority ("BASA") Wastewater Operations

(4) Wastewater Combined Sewer System ("CSS") Operations

(5) Elizabeth Borough Wastewater Operations

Additionally, I present a recommendation that, in future base rate proceedings, the depreciation analysis for wastewater operations be consolidated in order to produce a common depreciation rate by account for all of the Company's wastewater operations. This consolidation would simplify the depreciation analysis of PAWC wastewater operations for the Company, the Commission, and the parties in the proceeding.

Q. Have you prepared exhibits presenting the results of your studies?

A. Yes, I have prepared a total of fourteen exhibits, consisting of the following:

- **Exhibit Nos. 11-A, 11-D, 11-G and 11-J** present the results of the depreciation studies for each water and wastewater operation as of June 30, 2025, except for Elizabeth Borough Operations because PAWC will acquire the system during the future test year ending June 30, 2026, as explained by Company witness Don Wieczenski in PAWC Statement No. 7.

- **Exhibit Nos. 11-B, 11-E, 11-H, 11-K and 11-M** present the results of the depreciation study for each water and wastewater operation as of June 30, 2026.
- **Exhibit Nos. 11-C, 11-F, 11-I, 11-L and 11-N** present the results of the depreciation study for each water and wastewater operation as of June 30, 2027.

In addition, I am responsible for the responses to Depreciation Data Filing Requirements FR VI.1, FR VI.2, FR VI.3, FR VI.4, FR VI.5 and FR VI.6, which are presented as Appendix B to my testimony.

II. DESCRIPTION OF THE DEPRECIATION STUDIES AND METHODS USED

Q. Please describe what is set forth in each of Exhibit Nos. 11-A through 11-N.

A. **Exhibit No. 11-A**, titled "2025 Depreciation Study - Calculated Annual Depreciation Accruals Related to Water Plant as of June 30, 2025," includes the results of the depreciation study related to the assets of the Water Operations as of June 30, 2025. The report also includes the detailed depreciation calculations.

Exhibit No. 11-B, titled "2026 Depreciation Study - Calculated Annual Depreciation Accruals Related to Water Plant as of June 30, 2026," includes the results of the depreciation study related to the assets of Water Operations estimated as of June 30, 2026. The report also includes explanatory text, statistics related to the estimation of service life, and the detailed depreciation calculations.

Exhibit No. 11-C titled "2027 Depreciation Study - Calculated Annual Depreciation Accruals Related to Water Plant as of June 30, 2027," includes the

results of the depreciation study related to the assets of Water Operations estimated as of June 30, 2027.

Exhibit Nos. 11-D through 11-N pertain to the Company's wastewater operations and are organized in the same fashion described above for PAWC's Water Operations. Except, as I noted before, there is no exhibit presenting the results of a depreciation study for the Elizabeth Borough Wastewater Operations as of June 30, 2025, because PAWC will acquire the system during the future test year ending June 30, 2026.

Q. What was the purpose of your depreciation studies?

A. The purpose of the depreciation studies is to estimate the annual depreciation accruals related to the water and wastewater plant in service for ratemaking purposes and, using Commission-approved procedures, to estimate the Company's book reserve as of June 30, 2025, June 30, 2026 and June 30, 2027.

Q. Is the Company's claim for annual depreciation in the current proceeding based on the same method of depreciation used in its most recent rate proceeding in Docket Nos. R-2023-3043189 and R-2023-3043190?

A. Yes, it is. For most plant accounts, the current claim for annual depreciation is based on the straight-line remaining life method of depreciation, which has been used for over 39 years. For Accounts 340.00, 342.00, 343.00, 344.00, 346.00, 347.00 and 348.00 for water assets and Accounts 390, 392, 393.00, 394.00, 396.00, 397.00 and 398.00 for wastewater assets, the claim for annual depreciation is based on the straight- line remaining life method of amortization. That method employs amortization accounting to distribute the unrecovered cost

of fixed capital assets over the remaining amortization period selected for each account.

Q. What group procedure is being used in this proceeding for depreciable accounts?

A. The equal life group procedure is used in the current studies for all depreciable accounts and installation years of water and wastewater plant, which is the same procedure that has been used by the Company for many years with the Commission's approval and, in fact, was used most recently in the Company's last base rate case (Docket Nos. R-2023-3043189 and R-2023-3043190).

Q. Is the Company's claim for accrued depreciation in the current proceeding made on the same basis that has been used for over thirty-nine years?

A. Yes. The current claim for accrued depreciation for water assets is the book reserve brought forward from the book reserves approved by the Commission at Docket Nos. R-842621, R-842675 and R-842755. Similarly, for wastewater assets, accrued depreciation is brought forward from a starting point previously approved by the Commission in prior rate proceedings and at the time of each acquisition.

Q. How was the book reserve used in the calculation of annual depreciation?

A. The book reserve was allocated to vintages, by account, to determine original cost less accrued depreciation by vintage. The total annual accrual is the sum of the results of dividing the original costs less accrued depreciation by the vintage composite remaining lives.

Q. How was the book reserve as of June 30, 2026 and June 30, 2027 estimated?

A. The book reserve as of June 30, 2026 and June 30, 2027, by account, was projected by adding estimated accruals, gross salvage and the amortization of net salvage and subtracting estimated retirements and cost of removal from the book reserve as of June 30, 2025. Annual accruals were calculated based on average yearly or monthly plant balances. For most accounts, salvage and cost of removal were estimated by: (1) expressing actual salvage and cost of removal as a percent of retirements, by account, for the most recent five-year period; and (2) applying those percentages to the projected retirements by account. The projected book reserve, by account, was allocated to vintages for the purpose of the annual accrual calculation based on calculated accrued depreciation as of June 30, 2026 and June 30, 2027.

Q. Has a service life study of the Company's water and wastewater utility property been performed?

A. Yes. Service life studies were most recently performed in 2022 (based on plant data through 2021) for the Company's water assets and 2020 (based on plant data through 2019) for its wastewater assets. The service life studies were the basis for the service lives and survivor curves I used to calculate annual accruals.

Q. Briefly outline the procedure used in performing the service life studies.

A. The service life studies consisted of assembling and compiling historical data from the records related to the water and wastewater plant of the Company and its predecessors; statistically analyzing such data to obtain historical trends of survivor characteristics; obtaining supplementary information from management and operating personnel concerning Company practices and plans as they relate

to plant operations; and interpreting the above data to form judgments of service life characteristics.

Iowa-type survivor curves were used to describe the estimated survivor characteristics of the mass property groups. Individual service lives were used for major individual units of plant, such as reservoirs and buildings housing treatment plants, pump stations, offices and shops. The life span concept was recognized by coordinating the lives of associated plant installed in subsequent years with the probable retirement date defined by the life estimated for the major unit.

Q. What statistical data were employed in the historical analyses performed for the purpose of estimating service life characteristics?

A. The data consisted of the entries made to record retirements and other transactions related to the water plant during the period 1960 to 2021 and the wastewater plant during the period 2000 to 2019. These entries were classified by depreciable group, type of transaction, the year in which the transaction took place, and the year in which the plant was installed. The types of transactions included in the data were plant additions, retirements, transfers, and balances.

Q. What was the source of these data?

A. The data were assembled from Company records related to its utility plant in service.

Q. Were the methods used in the service life study the same as those used in other depreciation studies for water and wastewater plant presented before the Commission?

A. Yes. The methods are the same ones that have been presented previously for the Company and for other water and wastewater companies before the Commission,

which have been accepted by the Commission in its past orders for water and wastewater utilities, including PAWC.

Q. Are the factors considered in your estimates of service life presented in Exhibit Nos. 11-B, 11-E, 11-H, 11-K and 11-M?

A. Yes. A discussion of the factors considered in the estimation of service lives is presented in Part III of each of these exhibits.

Q. Please outline the contents of Exhibit Nos. 11-B, 11-E, 11-H, 11-K and 11-M, which include the results of your service life studies for water and wastewater plant.

A. Exhibit No. 11-B is presented in eight parts. Part I, Introduction, discusses the plan of the report and the basis of the study. Part II, Estimation of Survivor Curves, presents descriptions of the considerations and the methods used in the service life studies. Part III, Service Life Considerations, presents the factors and judgments utilized in the average service life analysis. Part IV, Calculation of Annual and Accrued Depreciation, describes the procedures used in the calculation of group depreciation. Part V, Results of Study, presents a summary by depreciable group of annual depreciation accrual rates and amounts. Part VI, Service Life Statistics, presents the statistical analysis of service life estimates. Part VII, Detailed Depreciation Calculations, presents the detailed tabulations of annual depreciation. Finally, Part VIII, Experienced and Estimated Net Salvage, presents the cost of removal and gross salvage recorded for the period 2021 to 2025.

Table 1, pages V-5 and V-6, presents the book cost of Water Plant as of June 30, 2026, Customers' Advances for Construction, Contributions in Aid of Construction, and the resulting net original cost used in the depreciation study. Table 2, pages V-7 through V-9, presents the estimated survivor curve, the net original cost as of June 30, 2026, and the book reserve and calculated annual depreciation for each account or subaccount of Water Plant. Table 3, pages V-10 and V-11, presents the bring-forward to June 30, 2026, of the book depreciation reserve as of June 30, 2025. Table 4, pages V-12 and V-13, sets forth the calculation of the annual accruals used in the bring-forward. Table 5, page V-14, presents the experienced and estimated net salvage during the five-year period, 2021 through 2025.

The section beginning on page VI-2 presents the results of the retirement rate analyses prepared as the historical bases for the service life estimates. The section beginning on page VII-2 presents the depreciation calculations related to original cost. The tabulation on pages VII-3 through VII-6 presents the cumulative depreciated original cost by year installed. The tabulations on pages VII-8 through VII-150 present the calculation of annual depreciation by vintage by account for each depreciable group of water plant. The tabulation on pages VIII-2 through VIII-6 presents the retirements, gross salvage, and cost of removal by account for each year during the period 2021 through 2025.

Exhibit Nos. 11-E, 11-H, 11-K and 11-M are presented in the same fashion described above for all of the Company’s wastewater plant by operating system.

Q. Please outline the contents of Exhibit Nos. 11-C, 11-F, 11-I, 11-L and 11-N.

A. Exhibit No. 11-C includes a description of the results, summaries of the depreciation calculations, and the detailed depreciation calculations as of June 30, 2027. The descriptions and explanations presented in Exhibit No. 11-B are also applicable to the depreciation calculations presented in Exhibit No. 11-C. The graphs and tables related to service lives presented in Exhibit No. 11-B also support the service life estimates used in Exhibit No. 11-C, inasmuch as the estimates are the same for both test years. The summary tables and detailed depreciation calculations as of June 30, 2027, are organized and presented in the same manner as those as of June 30, 2026. Exhibit Nos. 11-F, 11-I, 11-L and 11-N present data and information for all of PAWC's wastewater plant, by operating system, in the same fashion described above.

Q. Please outline the contents of Exhibit Nos. 11-A, 11-D, 11-G and 11-J.

A. Exhibit No. 11-A includes a description of the results, summaries of the depreciation calculations, and the detailed depreciation calculations as of June 30, 2025. The descriptions and explanations presented in Exhibit No. 11-B are also applicable to the depreciation calculations presented in Exhibit No. 11-A. The graphs and tables related to service lives presented in Exhibit No. 11-B also support the service life estimates used in Exhibit No. 11-A, inasmuch as the estimates are the same for both test years. The summary tables and detailed depreciation calculations as of June 30, 2025, are organized and presented in the same manner as those as of June 30, 2026. Exhibit Nos. 11-D, 11-G and 11-J are

presented in the same fashion as the Water Operations assets and use the same format for all wastewater plant by operating system.

Q. Please use an example to illustrate the manner in which the study is presented in Exhibit Nos. 11-A through 11-N.

A. I will use Account 331, Mains and Accessories, as my example, inasmuch as it is the largest depreciable group of water assets and represents approximately 50 percent of the original cost of depreciable water utility plant as of June 30, 2026.

The retirement rate method was used to analyze the survivor characteristics of this group. The life table for the 1948-2021 experience band is presented on pages VI-112 through VI-116 of Exhibit No. 11-B. The life table, or original survivor curve, is plotted along with the estimated smooth survivor curve, the 90-R2, on page VI-111.

The calculation of the annual depreciation related to the original cost of water plant as of June 30, 2025, is presented on pages II-120 through II-123 of Exhibit No. 11-A. The calculation is based on the 90-R2 survivor curve, the attained age, and the allocated book reserve. The calculation as of June 30, 2026, is presented on pages VII-118 through VII-121 of Exhibit No. 11-B and is based in part on the bring-forward of the book reserve. The calculation as of June 30, 2027, is presented on pages II-118 through II-121 of Exhibit No. 11-C and is based in part on the bring-forward of the book reserve. The tabulations in Exhibit Nos. 11-A, 11-B and 11-C set forth the installation year, the original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual. The totals are brought forward to Table 2 on page I-7 in Exhibit

No. 11-A, on page V-9 in Exhibit No. 11-B and on page I-7 in Exhibit No. 11-C. The same process was conducted for the plant of all the wastewater systems.

Q. Do the exhibits exclude the original cost of certain plant?

A. Yes. Certain items of plant, as well as amounts received from customers as advances or contributions, have been excluded from the original cost used in the study. The original cost and a description of the plant excluded are set forth on page I-5 of Exhibit No. 11-B. The net original cost used in the study is developed in Table 1 on pages I-3 and I-4 of Exhibit No. 11-A, on pages V-5 and V-6 of Exhibit No. 11-B and on pages I-3 and I-4 of Exhibit No. 11-C. The same description pertains to all the studies for the Company's wastewater operations.

Q. In what manner is net salvage incorporated in the depreciation calculations?

A. As stated on page IV-7 of Exhibit No. 11-B, no adjustment for net salvage was made to the calculated annual depreciation amounts. The total calculated annual depreciation set forth on page I-7 of Exhibit No. 11-A, on page V-9 of Exhibit No. 11-B and on page I-7 of Exhibit No. 11-C reflects an addition for the amortization of negative net salvage in accordance with the practice of the Commission. The amortization is based on: (1) experience during the period 2020 through 2024 for the calculation as of June 30, 2025; (2) experience during the period 2021 through June 30, 2025, plus estimates for the last six months of year 2025, for the calculation as of June 30, 2026; and (3) experience during the period 2022 through June 30, 2025, plus estimates for the last six months of 2025 and year 2026, for the calculation as of June 30, 2027. The detail by plant account of regular retirements, salvage, and cost of removal for each year is presented on: (1) pages

III-2 through III-6 of Exhibit No. 11-A; (2) pages VIII-2 through VIII-6 of Exhibit No. 11-B; and (3) pages III-2 through III-6 of Exhibit No, 11-C. The totals are brought forward to Table 3 on page I-8 of Exhibit No. 11-A, to Table 5 on page V-14 of Exhibit No. 11-B and to Table 5 on page I-12 of Exhibit No. 11-C, in which the amounts of the five-year amortizations are calculated. The same calculations are presented in all the studies for the Company's wastewater operations.

Q. Do any systems have additional calculations performed?

A. Yes. The BASA Wastewater Operations acquisition was recorded at the net value of the assets in 2024 determined by the Commission under Section 1329(c) of the Public Utility Code. The Elizabeth Borough Wastewater Operations acquisition will be recorded at the net value of the assets in 2026 determined by the Commission under Section 1329(c) of the Public Utility Code. The calculated depreciation expense at acquisition was based on the service lives and survivor curves for each plant account based on the seller's original cost for the acquired property.

III. RECOMMENDATION FOR WASTEWATER OPERATIONS DEPRECIATION STUDY IN FUTURE BASE RATE PROCEEDINGS

Q. Do you have any further recommendations for the wastewater operations?

A. Yes. I join Company witness Jared Deason (PAWC Statement No. 5) in recommending that in the next rate case wastewater operations be consolidated and studied together in order to produce a common depreciation rate by account for all wastewater operations. The consolidation should include all wastewater operations that are owned or have been acquired by the end of the historic test year.

Q. What are the benefits of your recommended consolidation?

A. There are various benefits of a consolidation of wastewater operations into one operation with one set of depreciation rates. First, consolidation would reduce unnecessary complexity and effort when filing future rate cases. Given that all assets within an account are managed by the same operating groups, having one life characteristic and one rate that includes analysis of all the historical transactions makes for a more significant and valid life estimation. Additionally, with all systems together there will be much fewer swings in recovery patterns when there are capital expenditures. Finally, a consolidated approach would be consistent with how PAWC currently performs depreciation studies for water operations.

Q. Does this complete your testimony?

A. Yes, it does.

VERIFICATION

I, **John J. Spanos**, hereby state that the facts set forth in the pre-marked Statement No. 11 and accompanying exhibits, if any, are true and correct to the best of my knowledge, information, and belief. I understand that this verification is made subject to the provisions and penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

Date: November 14, 2025

John J. Spanos

Appendix A

JOHN SPANOS

DEPRECIATION EXPERIENCE

Q. Please state your name.

A. My name is John J. Spanos.

Q. What is your educational background?

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College.

Q. Do you belong to any professional societies?

A. Yes. I am a member and past President of the Society of Depreciation Professionals and a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

Q. Do you hold any special certification as a depreciation expert?

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.

Q. Please outline your experience in the field of depreciation.

A. In June 1986, I was employed by Gannett Fleming Valuation and Rate Consultants, Inc. as a Depreciation Analyst. During the period from June 1986 through December 1995, I helped prepare numerous depreciation and original cost studies for utility companies in various industries. I helped perform depreciation studies for the following telephone companies: United Telephone of Pennsylvania, United Telephone of New Jersey, and Anchorage Telephone Utility. I helped perform depreciation studies for the following companies in

the railroad industry: Union Pacific Railroad, Burlington Northern Railroad, and Wisconsin Central Transportation Corporation.

I helped perform depreciation studies for the following organizations in the electric utility industry: Chugach Electric Association, The Cincinnati Gas and Electric Company (CG&E), The Union Light, Heat and Power Company (ULH&P), Northwest Territories Power Corporation, and the City of Calgary - Electric System.

I helped perform depreciation studies for the following pipeline companies: TransCanada Pipelines Limited, Trans Mountain Pipe Line Company Ltd., Interprovincial Pipe Line Inc., Nova Gas Transmission Limited and Lakehead Pipeline Company.

I helped perform depreciation studies for the following gas utility companies: Columbia Gas of Pennsylvania, Columbia Gas of Maryland, The Peoples Natural Gas Company, T. W. Phillips Gas & Oil Company, CG&E, ULH&P, Lawrenceburg Gas Company and Penn Fuel Gas, Inc.

I helped perform depreciation studies for the following water utility companies: Indiana-American Water Company, Consumers Pennsylvania Water Company and The York Water Company; and depreciation and original cost studies for Philadelphia Suburban Water Company and Pennsylvania-American Water Company.

In each of the above studies, I assembled and analyzed historical and simulated data, performed field reviews, developed preliminary estimates of service life and net salvage, calculated annual depreciation, and prepared reports for submission to state public utility commissions or federal regulatory agencies. I performed these studies under the general direction of William M. Stout, P.E.

In January 1996, I was assigned to the position of Supervisor of Depreciation Studies. In July 1999, I was promoted to the position of Manager, Depreciation and

Valuation Studies. In December 2000, I was promoted to the position as Vice-President of Gannett Fleming Valuation and Rate Consultants, Inc., in April 2012, I was promoted to the position as Senior Vice President of the Valuation and Rate Division of Gannett Fleming Inc. (now doing business as Gannett Fleming Valuation and Rate Consultants, LLC) and in January of 2019, I was promoted to my present position of President of Gannett Fleming Valuation and Rate Consultants, LLC. In my current position I am responsible for conducting all depreciation, valuation and original cost studies, including the preparation of final exhibits and responses to data requests for submission to the appropriate regulatory bodies.

Since January 1996, I have conducted depreciation studies similar to those previously listed including assignments for Pennsylvania-American Water Company; Aqua Pennsylvania; Kentucky-American Water Company; Virginia-American Water Company; Indiana-American Water Company; Iowa-American Water Company; New Jersey-American Water Company; Hampton Water Works Company; Omaha Public Power District; Enbridge Pipe Line Company; Inc.; Columbia Gas of Virginia, Inc.; Virginia Natural Gas Company National Fuel Gas Distribution Corporation - New York and Pennsylvania Divisions; The City of Bethlehem - Bureau of Water; The City of Coatesville Authority; The City of Lancaster - Bureau of Water; Peoples Energy Corporation; The York Water Company; Public Service Company of Colorado; Enbridge Pipelines; Enbridge Gas Distribution, Inc.; Reliant Energy-HLP; Massachusetts-American Water Company; St. Louis County Water Company; Missouri-American Water Company; Chugach Electric Association; Alliant Energy; Oklahoma Gas & Electric Company; Nevada Power Company; Dominion Virginia Power; NUI-Virginia Gas Companies; Pacific Gas & Electric Company; PSI Energy; NUI - Elizabethtown Gas Company; Cinergy Corporation – CG&E; Cinergy

Corporation – ULH&P; Columbia Gas of Kentucky; South Carolina Electric & Gas Company; Idaho Power Company; El Paso Electric Company; Aqua North Carolina; Aqua Ohio; Aqua Texas, Inc.; Aqua Illinois, Inc.; Ameren Missouri; Central Hudson Gas & Electric; Centennial Pipeline Company; CenterPoint Energy-Arkansas; CenterPoint Energy – Oklahoma; CenterPoint Energy – Entex; CenterPoint Energy - Louisiana; NSTAR – Boston Edison Company; Westar Energy, Inc.; United Water Pennsylvania; PPL Electric Utilities; PPL Gas Utilities; Wisconsin Power & Light Company; TransAlaska Pipeline; Avista Corporation; Northwest Natural Gas; Allegheny Energy Supply, Inc.; Public Service Company of North Carolina; South Jersey Gas Company; Duquesne Light Company; MidAmerican Energy Company; Laclede Gas; Duke Energy Company; E.ON U.S. Services Inc.; Elkton Gas Services; Anchorage Water and Wastewater Utility; Kansas City Power and Light; Duke Energy North Carolina; Duke Energy South Carolina; Monongahela Power Company; Potomac Edison Company; Duke Energy Ohio Gas; Duke Energy Kentucky; Duke Energy Indiana; Duke Energy Progress; Northern Indiana Public Service Company; Tennessee- American Water Company; Columbia Gas of Maryland; Maryland-American Water Company; Bonneville Power Administration; NSTAR Electric and Gas Company; EPCOR Distribution, Inc.; B. C. Gas Utility, Ltd; Entergy Arkansas; Entergy Texas; Entergy Mississippi; Entergy Louisiana; Entergy Gulf States Louisiana; the Borough of Hanover; Louisville Gas and Electric Company; Kentucky Utilities Company; Madison Gas and Electric; Central Maine Power; PEPCO; PacifiCorp; Minnesota Energy Resource Group; Jersey Central Power & Light Company; Cheyenne Light, Fuel and Power Company; United Water Arkansas; Central Vermont Public Service Corporation; Green Mountain Power; Portland General Electric Company; Atlantic City Electric; Nicor Gas Company; Black Hills Power; Black Hills Colorado Gas; Black Hills Energy Arkansas, Inc.; Black Hills Kansas

Gas; Black Hills Service Company; Black Hills Utility Holdings; Public Service Company of Oklahoma; City of Dubois; Peoples Gas Light and Coke Company; North Shore Gas Company; Connecticut Light and Power; New York State Electric and Gas Corporation; Rochester Gas and Electric Corporation; Greater Missouri Operations; Tennessee Valley Authority; Omaha Public Power District; Indianapolis Power & Light Company; Vermont Gas Systems, Inc.; Metropolitan Edison; Pennsylvania Electric; West Penn Power; Pennsylvania Power; PHI Service Company - Delmarva Power and Light; Atmos Energy Corporation; Citizens Energy Group; PSE&G Company; Berkshire Gas Company; Alabama Gas Corporation; Mid-Atlantic Interstate Transmission, LLC; SUEZ Water; WEC Energy Group; Rocky Mountain Natural Gas, LLC; Illinois-American Water Company; Northern Illinois Gas Company; Public Service of New Hampshire; FirstEnergy Service Corporation; Northeast Ohio Natural Gas Corporation; Blue Granite Water Company; Spire Missouri, Inc.; Dominion Energy South Carolina, Inc.; South FirstEnergy Operating Companies; Dayton Power and Light Company; Liberty Utilities; East Kentucky Power Cooperative; Bangor Natural Gas; Hanover Borough Municipal Water Works; West Virginia American Water Company; Evergy Metro; Evergy Missouri West; Granite State Electric; Bluegrass Water; The Borough of Ambler; Newtown Artesian Water Company and Connecticut Water Company.

My additional duties include determining final life and salvage estimates, conducting field reviews, presenting recommended depreciation rates to management for its consideration and supporting such rates before regulatory bodies.

Q. Have you submitted testimony to any state utility commission on the subject of utility plant depreciation?

A. Yes. I have submitted testimony to the Pennsylvania Public Utility Commission; the

Commonwealth of Kentucky Public Service Commission; the Public Utilities Commission of Ohio; the Nevada Public Utility Commission; the Public Utilities Board of New Jersey; the Missouri Public Service Commission; the Massachusetts Department of Telecommunications and Energy; the Alberta Energy & Utility Board; the Idaho Public Utility Commission; the Louisiana Public Service Commission; the State Corporation Commission of Kansas; the Oklahoma Corporate Commission; the Public Service Commission of South Carolina; Railroad Commission of Texas – Gas Services Division; the New York Public Service Commission; Illinois Commerce Commission; the Indiana Utility Regulatory Commission; the California Public Utilities Commission; the Federal Energy Regulatory Commission ("FERC"); the Arkansas Public Service Commission; the Public Utility Commission of Texas; Maryland Public Service Commission; Washington Utilities and Transportation Commission; The Tennessee Regulatory Commission; the Regulatory Commission of Alaska; Minnesota Public Utility Commission; Utah Public Service Commission; District of Columbia Public Service Commission; the Mississippi Public Service Commission; Delaware Public Service Commission; Virginia State Corporation Commission; Colorado Public Utility Commission; Oregon Public Utility Commission; South Dakota Public Utilities Commission; Wisconsin Public Service Commission; Wyoming Public Service Commission; the Public Service Commission of West Virginia; Maine Public Utility Commission; Iowa Utility Board; Connecticut Public Utilities Regulatory Authority; New Mexico Public Regulation Commission; Commonwealth of Massachusetts Department of Public Utilities; Rhode Island Public Utilities Commission and the North Carolina Utilities Commission.

Q. Have you had any additional education relating to utility plant depreciation?

A. Yes. I have completed the following courses conducted by Depreciation Programs, Inc.:

"Techniques of Life Analysis," "Techniques of Salvage and Depreciation Analysis," "Forecasting Life and Salvage," "Modeling and Life Analysis Using Simulation," and "Managing a Depreciation Study." I have also completed the "Introduction to Public Utility Accounting" program conducted by the American Gas Association.

Q. Does this conclude your qualification statement?

A. Yes.

LIST OF CASES IN WHICH JOHN J. SPANOS SUBMITTED TESTIMONY

	Year	Jurisdiction	Docket No.	Client Utility	Subject
01.	1998	PA PUC	R-00984375	City of Bethlehem – Bureau of Water	Original Cost and Depreciation
02.	1998	PA PUC	R-00984567	City of Lancaster	Original Cost and Depreciation
03.	1999	PA PUC	R-00994605	The York Water Company	Depreciation

Appendix B

Pennsylvania-American Water Company
Data Requirements of the Pennsylvania Public Utility Commission
Depreciation Study

FR VI.1

Pennsylvania-American Water Company
VI. Depreciation

1. Provide a description of the depreciation methods used to calculate annual depreciation amounts and depreciation reserves, together with a discussion of the factors which were considered in arriving at estimates of service life and dispersion by account. Supply a comprehensive statement of any changes made in method of depreciation. Provide dates of all field inspections and facilities visited.

Answer:

The depreciation methods utilized in calculating annual and accrued depreciation are discussed in Exhibit No. 11-B in Part IV of the water depreciation study. The calculation of annual and accrued depreciation are discussed in Exhibit Nos. 11-E, 11-H, 11-K and 11-M in Part IV of the wastewater depreciation studies.

Field trips and facilities visited for Pennsylvania-American Water Company water and wastewater systems are presented in Part III. Service Life Considerations, in Exhibit Nos. 11-B, 11-E, 11-H, 11-K and 11-M of those that had recent visits.

FR VI.2

Pennsylvania-American Water Company
VI. Depreciation

2. Set forth, in exhibit form, charts depicting the original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized.

Answer:

Charts depicting the original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized is presented in Exhibit No. 11-B in Part VI. Service Life Statistics, of the water depreciation study. The original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized is presented in Exhibit Nos. 11-E, 11-H, 11-K and 11-M in Part VI. Service Life Statistics, for wastewater depreciation studies.

Pennsylvania-American Water Company
VI. Depreciation

3. Provide the surviving original cost at historic test year-end by vintage by account and include applicable depreciation reserves and accruals. These calculations should be provided for plant in service as well as other categories of plant, including contributions in aid of construction and customers' advances for construction.

Answer:

The surviving original cost at the end of the historical year June 30, 2025 by vintage by account and the applicable depreciation reserve for utility plant are presented in Exhibit No. 11-A beginning on page II-8, in Exhibit No. 11-D beginning on page II-7, in Exhibit No. 11-G beginning on page II-6, and in Exhibit No. 11-J beginning on page II-6.

The surviving original cost at test year end June 30, 2026, by vintage by account and the applicable depreciation reserve for utility plant are presented in Exhibit No. 11-B beginning on page VII-8, in Exhibit No. 11-E beginning on page VII-7, in Exhibit No. 11-H beginning on page VII-6, in Exhibit No. 11-K beginning on page VII-6, and in Exhibit No. 11-M beginning on page VII-5.

The surviving original cost at test year end June 30, 2027, by vintage by account and the applicable depreciation reserve for utility plant are presented in Exhibit No. 11-C beginning on page II-8, in Exhibit No. 11-F beginning on page II-7, in Exhibit No. 11-I beginning on page II-6, in Exhibit No. 11-L beginning on page II-6, and in Exhibit No. 11-N beginning on page II-5.

Pennsylvania-American Water Company
VI. Depreciation

4. Provide a comparison of the calculated depreciation reserve used for ratemaking purposes v. the book reserve by account at the end of the test year, if they differ.

Answer:

A comparison of the calculated depreciation reserve v. book reserve by account at June 30, 2025, at June 30, 2026, and at June 30, 2027, are attached as pages FR VI.4 (2) through (18) for all water and wastewater systems by account.
