A. Yes. The National Action Plan for Energy Efficiency (NAPEE), a joint venture of the U.S. Department of Energy and U.S. Environmental Protection Agency, published a whitepaper on various rate design effects on encouraging energy efficient behaviors. The NAPEE postulated that SFV had a detrimental effect on economic signals to encourage customers to change energy usage behavior and investments in energy efficiency devices, and specifically noted that such disincentives persist even when applied to individual components of a customer's utility bill, such as SFV for strictly distribution services:

> Because [SFV] tends to shift costs out of volumetric charges, it tends to reduce customers' efficiency incentive, because the marginal price of additional consumption is reduced. While SFV rates are being considered to better reflect the utility's costs behind the rate, these rates do not encourage customers to change energy usage behavior or invest in efficiency technologies. Such customer disincentives persist even when SFV rates are applied to individual components of the bill, such as charges for distribution service.[106]

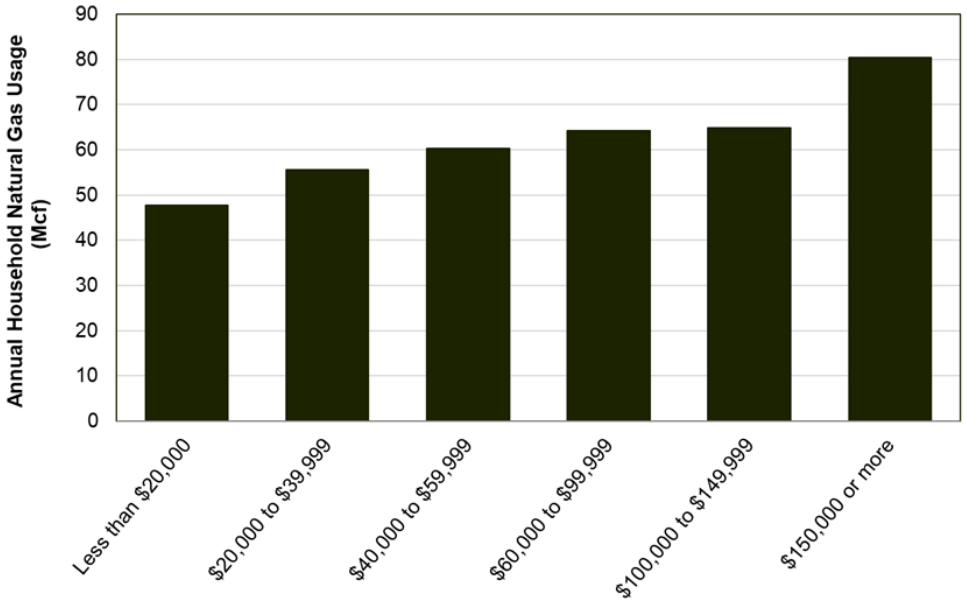
Q. SHOULD THE COMMISSION BE MINDFUL OF THE EFFECT OF THE COMPANY'S PROPOSED RATE DESIGN ON LOW-USE RESIDENTIAL CUSTOMERS?

A. Yes. There are numerous studies in the academic literature supporting the hypothesis that natural gas is a "normal good."[107] That is, the consumption of natural gas is directly correlated with household income level, meaning that higher-use natural gas customers are typically higher income individuals and lower-use natural gas customers are typically lower income individuals. These are important factual considerations the Commission should bear in mind.

Figure 5: Analysis of Natural Gas Usage and Household Income



Source: EIA 2020 Residential Energy Consumption Survey

[107] *See*, Alberini, A., W. Gans, D. Velez-Lopez. 2011, "Residential consumption of gas and electricity in the U.S.: The role of prices and income," Energy Economics 33, 870-881; Dax, P. 1987, "Estimation of Income Elasticity from Cross-Section Data," Applied Economics 19 (11), 1471-1482; and Swan L.G., V. I. Ugursan, 2009, "Modeling of end-use energy consumption in the residential sector: A review of modeling techniques," Renewable and Sustainable Energy Reviews 13, 1819-1835.

Q. HAVE YOU CONDUCTED ANY ANALYSES EXAMINING THE RELATIONSHIP OF NATURAL GAS USAGE AND INCOME?

A. Yes. Figure 5 provides the results of an analysis I performed using data from the 2020 Residential Energy Consumption Survey ("RECS") produced by the United States Energy Information Administration ("EIA") and household data from the Census division in which Pennsylvania is located.[108] The results show a positive relationship between natural gas consumption (in Mcf terms) and income. This clearly shows that as income increases, natural gas consumption increases, and vice versa: as income decreases, natural gas usage decreases.

Q. WHAT ARE YOUR CUSTOMER CHARGE RECOMMENDATIONS AND CONCLUSIONS?

A. I recommend that the Commission reject the Company's proposed increase in residential and commercial customer charges. An analysis of customer-related costs finds that residential rate classes are currently recovering a majority of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers.

[108] This census division also includes the states of Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, and Vermont. This is the most detailed level of aggregation available in the RECS.

Q. DO YOU HAVE AN ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

A. Yes. I recommend that the Commission limit its increase in the Company's monthly customer charges to the percentage rate increase in class revenue requirement. In the context of my proposed revenue apportionment this would be a 14.34 percent increase for residential customers at the Company's proposed overall requested rate increase. This would correspond to a roughly $2.00 increase in the monthly customer charge, or an increase from the current $14.00 per month to $16.00 per month. I further recommend that any increase in customer charges be subject to scalebacks to reflect changes in allocated class revenue increases pursuant to Commission Orders.

X. CONCLUSION AND RECOMMENDATIONS

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

A. I recommend the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company. Average Pennsylvanians are struggling with lingering inflation concerns besides looking at potential additional concerns placed on them due to fallout from the conflict in the Persian Gulf. This while the Company has seen increasing stock prices for its shareholders and no obvious market distress. The Commission, in particular, should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company. I have been advised by counsel that the OCA will argue in their legal briefs that the Commission

should not grant NFG any increase in this proceeding due to the substantial affordability concerns that consumers are facing.

Q. WHAT IS YOUR OVERALL RECOMMENDATION REGARDING REGULATORY LAG?

A. The Company has not demonstrated that the existing regulatory framework in Pennsylvania is failing to support timely and adequate cost recovery. Rather, the evidence suggests that regulatory lag is already being effectively managed. The Commission should reaffirm the value of regulatory lag as a structural feature of traditional ratemaking and recognize that further erosion of this principle is neither necessary nor justified in this case.

Q. WHAT IS YOUR POSITION ON THE CONTINUATION OF THE COMPANY'S WNA?

A. I recommend that the Commission affirmatively discontinue the current WNA mechanism. The mechanism has failed to produce balanced outcomes for ratepayers, functioning as an asymmetric surcharge on customers' bills for the two full years the mechanism has been in operation, even though the mechanism was designed to symmetrically provide both surcharges and credits to customers. The WNA is also not required to address regulatory lag concerns of the Company given the Company's use of a FPFTY and DSIC.

Q. DO YOU HAVE ANY ALTERNATIVE PROPOSAL IF THE COMMISSION DECIDES TO CONTINUE THE WNA?

A. If the Commission decides to continue the WNA, I recommend that it remain as a five-year pilot program rather than being adopted as a permanent mechanism. This will allow the Commission the opportunity to routinely reevaluate the WNA to ensure that the mechanism is not producing negative outcomes for ratepayers. I further recommend that the Commission increase

the deadband from three percent to five percent and eliminate the months of October and May from the WNA period. This would strengthen ratepayer protections and would furthermore make the Company's WNA pilot consistent with the recent WNA pilot the Commission approved for Columbia Gas.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE PROPOSED ENERGY EFFICIENCY PROGRAM RIDER?

A. I recommend the Commission reject the proposed EE Program rider. The proposed rider fails to satisfy any of the three commonly held evaluation criteria for a sound cost tracker mechanism. Specifically, the EE Program expenses are not substantial, not outside the control of the utility, and are neither unpredictable nor volatile. Therefore, the costs associated with the Company's proposed EE Program do not have the characteristics that are conducive for recovery through a cost tracker outside of base rates.

Q. WHAT ARE YOUR RECOMMENDATIONS REGARDING THE CLASSIFICATION OF DISTRIBUTION MAINS INVESTMENT AND THE USE OF ZERO INTERCEPT STUDY IN ITS ALLOCATED COST OF SERVICE STUDY?

A. I recommend the Commission reject the Company's proposed ZIS approach. ZIS and related MSS that are used to classify distribution mains investments are fundamentally flawed and provide little to no value in setting just and reasonable rates. In the alternative I recommend that the Commission approve an alternative classification of distribution mains that incorporates a P&A cost allocation method using weights based on the Company's test year system load factor. These recommendations better reflect cost causation principles and provide a more reasonable basis for allocating costs among customer classes.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED REVENUE APPORTIONMENT.

A. I recommend the Commission adopt a more reasonable revenue apportionment method based on my alternative ACOSS results that also limits the rate increase compared to the Company's proposed revenue allocation method. First, I recommend that classes with current relative cost parity ratios below 0.95 receive a rate increase equal to 1.15 times the system average increase. Second, I recommend that classes with current relative cost parity ratios greater than 1.05 receive a rate increase equal to 0.85 times the system average increase. Finally, I recommend that the remaining rate increase be equally allocated to remaining rate classes with current relative cost parity ratios of between 0.95 and 1.05.

Q. WHAT ARE YOUR CUSTOMER CHARGE RECOMMENDATIONS AND CONCLUSIONS?

A. I recommend that the Commission reject the Company's proposed increase in residential and commercial customer charges. An analysis of customer-related costs finds that residential rate classes are currently recovering a majority of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers.

Q. DO YOU HAVE AN ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

A. Yes. I recommend that the Commission limit its increase in the Company's monthly customer charges to the percentage rate increase class revenue requirement. In the context of my proposed revenue apportionment this would be a 14.34 percent increase for residential customers at the Company's proposed overall requested rate increase. This would correspond to a roughly $2.00 increase in the monthly customer charge, or an increase from the current $14.00 per month to $16.00 per month. I further recommend that any increase in customer charges be subject to scalebacks to reflect changes in allocated class revenue increases pursuant to Commission Orders.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

Before the Indiana Utility Regulatory Commission. *Petition of Indianapolis Power & Light Company D/B/A AES Indiana ("AES Indiana") for Authority to Increase Rates and Charges for Electric Utility Service Through a Phase-In Rate Adjustment; and For Approval of Related Relief, Including (1) Revised Depreciation Rates, Including Cost of Removal Less Salvage and Updated Depreciation Expense; (2) Accounting Relief, Including Deferrals and Amortizations, (3) Inclusion of Capital Investment, (4) Rate Adjustment Mechanism Proposal, Including a New Propoerty Tax Rider, and (5) New Schedules of Rates, Rules and Regulations for Service.* On Behalf of the Indiana Office of Utility Consumer Counselor. Issues: Cost of Service, Rate Design.

11. Expert Testimony. Docket Nos. R-2025-3055010, R-2025-3055011, and R-2025-3055012. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. The Pittsburgh Water and Sewer Authority d/b/a Pittsburgh Water.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Alternative Regulation, Regulatory Lag.

12. Expert Testimony. Docket No. G-04204A-24-0237. (2025). Before the Arizona Corporation Commission. *In the Matter of the Application of UNS Gas, Inc. for the Establishment of Just and Reasonable Rates and Charges Designed to Realize a Reasonable Rate of Return on the Fair Value of the Properties of UNS Gas, Inc. Devoted to its Operations Throughout the State of Arizona and for Related Approvals.* On Behalf of the Staff of the Arizona Corporation Commission. Issues: Cost of Service, Rate Design.

13. Expert Testimony. Docket No. R-2025-3054394. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. Citizens' Electric Company of Lewisburg.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Cost of Service, Rate Design.

14. Expert Testimony. Docket No. R-2025-3054393. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. Valley Energy, Inc.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Cost of Service, Rate Design.

15. Expert Testimony. Docket No. R-2025-3054392. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. Wellsboro Electric Company.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Cost of Service, Rate Design.

16. Expert Testimony. Docket No. R-2025-3053499. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. Columbia Gas of Pennsylvania, Inc.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Decoupling, Regulatory Lag.

17. Expert Testimony. Cause No. 46120. (2025). Before the Indiana Utility Regulatory Commission. *Verified Petition of NIPSCO Generation LLC for Certain Determinations by the Commission with Respect to its Jurisdiction Over Petitioner's Activities as a Non-Retail Generator of Electric Power.* On Behalf of the Indiana Office of Utility Consumer Counselor. Issues: Rate Design, Large Data Center Loads.

18. Expert Testimony. Case No. U-21859. (2025). Before the Michigan Public Service Commission. *In the matter of the application of Consumers Energy Company for Ex Parte Approval of Certain Amendments to Rate GPD.* On Behalf of the Michigan Attorney General. Issues: Rate Design, Large Data Center Loads.

19. Expert Testimony. Docket No. R-2025-3053112. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. Philadelphia Gas Works.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Decoupling, Regulatory Lag.

20. Expert Testimony. Docket No. E-01773A-24-0220. (2025). Before the Arizona Corporation Commission. *In the Matter of the Application of Arizona Electric Power Cooperative, In. for a Hearing to Determine the Fair Value of its Property for Ratemaking Purposes, to Fix a Just and Reasonable Return Thereon and To Approve Rates Designed to Develop Such Return.* On Behalf of Arizona Corporation Commission Staff. Issues: Cost of Service, Qualifying Facilities.

21. Expert Testimony. Case No. U-21816. (2025). Before the Michigan Public Service Commission. *In the matter of Consumer Energy Company's application for the regulatory*

reviews, revisions, determinations, and/or approvals necessary to fully comply with Public Act 295 of 2008, as amended by Public Act 235 of 2023. On Behalf of the Attorney General. Issues: Capital Expense, Cost Recovery

22. Expert Testimony. Cause No. 46120. (2024). Before the Indiana Utility Regulatory Commission. *Petition of Northern Indiana Public Service Company LLC Pursuant to Ind. Code §§ 8-1-2-42.4, 8-1-2-61 and 8-1-2.5-6 for (1) Authority to Modify its Retail Rates and Charges for Electric Utility Service Through a Phase in of Rates; (2) Approval of New Schedules of Rates and Charges, General Rules and Regulations, and Riders (both Existing and New); (3) Approval of Revised Common and Electric Depreciation Rates Applicable to its Electric Plant in Service; (4) Approval of Necessary and Appropriate Accounting Relief, Including, but Limited to, Authority to Capitalize as Rate Base All Expenditures for Improvements to Petitioner's Information Technology Systems through the Design, Development, and Implementation of a Work and Asset Management ("WAM") Program, to the Extent Necessary; and (5) Approval of Alternative Regulatory Plans for the Partial Waiver of 170 IAC 4-1-16(f) and Proposed Remote Disconnection and Reconnection Process and, to the Extent Necessary, Implementation of a Low Income Program.* On Behalf of the Indiana Office of Utility Consumer Counselor. Issues: Cost of Service, Rate Design.

23. Expert Testimony. Cause No. 46097. (2024). Before the Indiana Utility Regulatory Commission. *In the Matter of the Verified Petition of Indiana Michigan Power Company for Approval of Modifications to its Industrial Power Tariff – Tariff I.P.* On Behalf of the Indiana Office of Utility Consumer Counselor. Issues: Rate Design, Large Data Center Loads.

24. Expert Report. Docket No. AHD-00000J-23-0273. (2024). Before the Arizona Corporation Commission. *In the Matter of the Application of the Arizona Corporation Commission's Exploration of Changes to the Up to 10% Annual Reduction in the Export Rate and the 10-Year Export Rate Effective Period Under the Resource Comparison Proxy Methodology Approved in the Value and Cost of Distributed Generation Docket (E-00000J-14-0023).* On Behalf of the Arizona Corporation Commission Staff. Issues: Value of Solar.

25. Expert Testimony. Case No. U-21585. (2024). Before the Michigan Public Service Commission. *In the Matter of the Application of Consumers Energy Company for Authority to Increase its Rates for the Generation and Distribution of Electricity and Other Relief.* On Behalf of the Attorney General. Issues: Capital Expenses.

26. Expert Report. *Review of LPSC Rules Regarding Distributed Generation: Report on Phase II of Rule-Making.* Docket No. R-33929. (2019). *In Re: Review of Policies Related to Customer-owned Solar Generation and Possible Modification of the Commission's Current Net Metering Rules.* On behalf of Louisiana Public Service Commission. Issues: Solar Net Metering.

27. Expert Report. (2011). *2011 Kansas Generation Planning Survey*. On behalf of the Kansas Corporation Commission Staff.

28. Expert Testimony. Docket No. 11-KCPE-581-PRE. (2011). Before the Kansas Corporation Commission. *In the Matter of the Petition of Kansas City Power & Light Company ("KCP&L") for Determination of the Ratemaking Principles and Treatment That Will Apply to the Recovery in Rates of the Costs to be Incurred by KCP&L for Certain Electric Generation Facilities Under K.S.A. 66-1239.* On Behalf of the Kansas Corporation Commission Staff. Issues: System Planning, Predetermination.

29. Expert Testimony. Docket No. 10-KCPE-795-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Kansas City Power & Light Company for Approval to Implement a Portfolio of Demand Side Management Programs Including Affordability, Energy Efficiency, Demand Response and Educational Programs, and to Implement a Rider for Recovery of Program Costs and Incentives Associated with this Portfolio.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

30. Expert Testimony. Docket No. 10-WSEE-775-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Westar Energy, Inc. and Kansas Gas and Electric Company for an Order Authorizing them to participate in Efficiency Kansas, Approve the SimpleSavings Program Rider, and related cost recovery.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

31. Expert Testimony. Docket No. 10-BHCG-639-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Black Hills/Kansas Gas Utility Company, LLC, d/b/a Black Hills Energy for Approval to Implement Black Hills Energy's Five-Year Energy Efficiency Plan Consisting of Natural Gas Energy Efficiency Programs to Improve Building and Equipment Efficiency and to Educate About Efficient Energy Usage, to Provide for Program Cost Recovery Through a Rider Mechanism, Permit the Implementation of a Revenue Normalization Mechanism to Replace the Weather Normalization Adjustment, a Performance Incentive Mechanism, and Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

32. Expert Testimony. Docket No. 10-EPDE-497-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of the Empire District Electric Company for Approval to Implement its Portfolio of Energy Efficiency and Demand Response Programs for its Kansas Customers, to Provide for Program Cost Recovery and Lost Revenue Through a Rider Mechanism, to Obtain any Necessary Waivers for the Commission, and for Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

33. Expert Testimony. Docket No. 10-KGSG-421-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Kansas Gas Service, a Division of ONEOK, Inc., for Approval to Implement the Efficiency Kansas Energy Efficiency Program, to Implement Natural Gas Energy Efficiency Programs to Improve Building and Equipment Efficiency and to Educate about Efficient Energy Usage, To Provide for Program Cost Recovery Through a Rider Mechanism, to Establish Administrative Charges and a Program Initiation Fee, Permit the Implementation of a Revenue Decoupling Mechanism, and Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

Analysis of Customer-Related Costs	Exhibit MWD-9

Commission Alternative Regulation Consideration (§ 69.3302)

	Commission Consideration Criteria	National Fuel Claim	Response
§ 69.3302(a)(1)	How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.	National Fuel Gas's WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while mitigating the variance between actual and projected distribution revenues due to weather. The Company recovers a significant portion of fixed costs through volumetric rates. These fixed costs do not vary with the amount of gas delivered to customers and are composed of fixed operation and maintenance expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary in the short-term with changes in temperature. In the absence of a rate design that affords the Company the opportunity to recover all fixed costs in a fixed monthly charge, the WNA mechanism better aligns distribution revenues with cost causation principles.	The WNA does not address the Commission's consideration criteria aligning revenues with cost causation. The WNA is premised on ensuring the Company will recover its annual fixed costs of providing gas distribution service; however, the WNA adjustment is applied as a variable charge to customer's bills.
§ 69.3302(a)(2)	How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.	The WNA mechanism indirectly supports efficient capacity utilization by stabilizing the recovery of fixed distribution costs, which are incurred to maintain National Fuel Gas's infrastructure and capacity to serve customers regardless of fluctuations in gas usage. Since these fixed costs do not change with short-term usage variations, the WNA ensures that the Company can continue investing in the infrastructure necessary to meet peak demand and long-term capacity needs and be compensated for these investments. By supporting revenue stability, the WNA reduces under-recovery risks during periods of lower gas usage, ensuring that the revenues collected align with customers' continued reliance on the utility's fixed assets that provide peak service.	Proposed WNA does not impact capacity utilization, as the determining metric for the charge is weather, not utilization.
§ 69.3302(a)(3)	Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.	Customer specific usage factors corresponding to their individual demand is continually updated through the WNA formula and reflects the level of demand associated with the customer's anticipated consumption levels. In this proceeding, the Company is also proposing to set Normal Heating Degree Days using a 10-year average rather than a 15-year average, which more accurately captures recent warming trends. Using a more current weather baseline ensures that the WNA formula better aligns normalized usage with customers' anticipated consumption levels under today's climate conditions.	The WNA adjustment mechanism creates the anomaly where customers see rate increases when they reduce consumption and rate decreases when they increase consumption. If the WNA is generating revenue, then it inherently does not reflect the level of demand associated with the customer's anticipated consumption levels, because the WNA only generates revenue if the demand is less than anticipated.
§ 69.3302(a)(4)	How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.	National Fuel Gas's WNA is applied on a customer-specific basis and is designed to be revenue-neutral within each customer class, such that it does not create or exacerbate cross-subsidization either within or across classes.	The WNA may have led to intraclass cost shifting to the extent that smaller use residential customers typically have a greater percentage of natural gas use that is temperature-sensitive compared to larger use residential customers.
§ 69.3302(a)(5)	How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.	The Company's WNA only addresses variations due to weather and does not affect customers' ability to pursue energy efficiency measures. Further, the Company continues and will continue to promote the use of energy efficiency measures to its customers as the WNA removes the financial disincentive for National Fuel Gas to promote energy efficiency.	The WNA does not limit or eliminate disincentives for the promotion of energy efficiency. The WNA is solely tied to adjustment in customer usage attributed to changes in heating requirements and is not impacted by a reduction in customer use due to energy efficiency initiatives. The Company has not demonstrated that the lack of a WNA would present a major obstacle for the promotion of energy efficiency programs.
§ 69.3302(a)(6)	How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.	Customers retain strong incentives to reduce usage because the commodity and other charges remain volumetric. The proposed WNA does not eliminate these price signals, so lower usage still results in lower bills.	The WNA may be perceived as a disincentive to employ energy efficiency measures for customers whose energy efficiency initiative takes place during periods of warmer than normal weather. These customers will see increased WNA charges after reducing usage through implementing energy efficiency initiatives.
§ 69.3302(a)(7)	How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.	Under the proposed WNA mechanism, customers who are currently enrolled to pay their bills based on a percentage of their household income see little to no impact to their bills under the WNA mechanism.	The WNA may harm low-income customers as these customers have less ability to weatherize homes to reduce impact of weather fluctuations on consumption.
§ 69.3302(a)(8)	How the ratemaking mechanism and rate design impact customer rate stability principles.	The American Gas Association Gas Rate Fundamentals book (Pages 152 – 156) states: "The goal of stability recognizes historical relationships among customers in terms of the proportion of system costs each customer group bears. Stability leads to a policy of gradualism in rate changes if substantial increases (or decreases) are called for in the context of a single rate case. Changes in gas utility pricing policy should be imposed gradually so that customers can adjust and any adverse impacts on the customers' operation are minimized." The WNA mechanism provides customers with more stable annual bills and directly mitigates volatility in their monthly costs. Customers would pay for the costs assigned to the volumetric base rate in the most recent rate case and customers would not pay more or less than that amount solely because the actual weather for the month the customers are billed is different than the weather used to determine the rate design of the volumetric base rate.	The WNA adds another surcharge to customers' bills without any showing that the WNA would reduce the frequency of base rate case filings. It therefore does not improve rate stability.

Commission Alternative Regulation Consideration (§ 69.3302)

	Commission Consideration Criteria	National Fuel Claim	Response
§ 69.3302(a)(9)	How weather impacts utility revenue under the ratemaking mechanism and rate design.	The Company's WNA adjusts customers' bills due to variations from normal weather during the heating season months (October through May), and it only mitigates the revenue effect of weather on the original rate design of the volumetric base rate. Without it, the Company is deprived of the opportunity to recover the Commission approved distribution revenue requirement for the applicable classes during times when warmer than normal weather occurs. Moreover, the absence of a WNA places the Company in a position of receiving a higher amount of revenues from customers when the weather is colder than normal. The WNA avoids both scenarios by minimizing the impact of weather on the Company's revenues and customers' bills.	While the WNA is premised on reducing risks to the Company revenue stability caused by fluctuations in weather conditions, in practice it is not a revenue neutral mechanism. None of the two full heating seasons the WNA has been in effect for (2023-2024, and 2024-2025) have produced net credits for ratepayers. Indeed, over these 2 heating seasons the Company has collected on net nearly $9.2 million from ratepayers through the WNA.
§ 69.3302(a)(10)	How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.	The WNA does not impact the Company's rate case frequency nor it effects regulatory lag.	Historically the Company has filed multiple rate case over the last decade, despite possessing the WNA. This is unlikely to change and the WNA does not prevent the Company from seeking additional rate increases driven by future investment needs or higher expenses and associated cost recovery. The WNA does, however, weaken the positive impacts regulatory lag has on promoting cost containment between rate cases. Regulatory lag has long been recognized as a key component of the overall regulatory compact that disciplines utility operational and investment decisions between rate cases. Regulatory lag in particular diminishes incentives for utilities to overcapitalize since the inefficiencies associated with overcapitalization are passed directly to shareholders until reviewed by the Commission in the utility's next rate case.
§ 69.3302(a)(11)	If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).	National Fuel Gas's WNA is solely focused on recovering costs that are part of the base revenue requirement and does not interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, restructuring riders, or system improvement charges under Section 1353.	The WNA applies only to base rates and does not impact surcharges.
§ 69.3302(a)(12)	Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.	National Fuel Gas's WNA includes several consumer protections to ensure fairness and transparency, as follows: a. No Over-Recovery of Revenue: The WNA mechanism results in an adjusted bill that reflects the revenues that would be recovered under normal weather, i.e., the same normal weather used to set rates. The Company does not recover additional distribution revenues due to colder than average temperatures that result in higher-than-normal usage from customers. This is ensured by limiting the mechanism to the heating season and having a deadband. b. No Cross-Subsidization: The WNA is customer-specific. c. Regulatory Oversight: The WNA is subject to Commission review and regulatory reporting requirements to ensure compliance with approved revenue stabilization objectives and to protect consumers from unintended rate impacts. d. Customer Transparency: National Fuel Gas provides clear bill disclosures and customer education regarding WNA adjustments, ensuring consumers understand how the mechanism works and how it impacts their bills.	The WNA does not include sufficient consumer protections. These include checks on over-earnings to prevent overall rate increases through WNA reconciliations.
§ 69.3302(a)(13)	Whether the alternative ratemaking mechanism and rate design are understandable to consumers.	The WNA is not a new concept to the regulated utility industry and similar versions have been successfully implemented by other Pennsylvania natural gas distribution companies. The WNA tariff provides detailed information to the customer of how the mechanism works and the adjustments are displayed separately on bills, ensuring full transparency. The Company has also made available Frequently Asked Questions (FAQs) on its website https://www.nationalfuel.com/utility/weather-normalizationadjustment-pa-home-biz/ Additionally, the Company sent customers a WNA reminder and plain language insert September 2025, ahead of the winter heating season.	Customers have no means of anticipating future WNA changes as it is impossible for customers to forecast WNA charges in advance and likely difficult for customers to calculate even after the fact. For these reasons elements of the WNA likely not understandable to customers and effectively is viewed as just another surcharge present on the customer's bill.
§ 69.3302(a)(14)	How the ratemaking mechanism and rate design will support improvements in utility reliability.	The proposed WNA targets the revenue requirement that would have been already subject to scrutiny and approved by the Commission, meaning that its prudency and reasonableness would have been reviewed and deemed appropriate to support reliability driven initiatives. The proposed WNA would help minimize the volatility of the recovery of these costs.	The WNA has not lead to changes in the Company's quality of service, either positively or negatively. The WNA is not tied to achievement of increased service reliability performance, but has reduced the positive incentive of regulatory lag for the Company to control costs and led to customer confusion. The Company retains the ability to file rate cases using a projected future test year to address concerns associated with capital improvements required to facilitate reliable delivery of natural gas.

Survey of Approved Pennsylvania Natural Gas WNA Mechanisms

Docket No. R-2025-3059428
Exhibit MWD-2

Utility	Docket No.	Filing Year	Decision Type	Customer Applicability	Pilot (Y/N)	Pilot Duration	Deadband	Heating Months	NHDD Methodology	Customer Education	Reporting Requirements	Other
National Fuel Gas Distribution Corporation	R-2022-3035730	2022	Settled	Residential, CAP, Commercial, and Public Authority	Y	5 years	3%	October-May	15-year average	Provide WNA and bill impact information.	Two annual WNA reports by month and customer class providing: (1) bills subject to WNA, (2) total bills, (3) volume adjustment, (4) revenue adjustment, (5) NHDDs and AHDDs.	N/A
Peoples Natural Gas Company	R-2023-3044549	2023	Partially settled	Residential, Commercial SGS, and Commercial MGS	N	N/A	3%	October-May	Based on HDDs adopted in R-2023-3044549 rate case	N/A	Annual report due September 1 providing: (1) monthly WNA billed revenues, (2) AHDD and NHDD data, (3) customer count and bill impacts by class.	(1) Separate line item on customer bills; (2) Bills rendered calculation basis; (3) May adjustment capped at 100% of billed distribution amount.
PECO Energy Company	R-2024-3046932	2024	Partially settled	---------- The Commission agreed with the ALJs' findings and denied PECO's request to implement a WNA ----------								
Pike County Light & Power Company	R-2024-3052357	2024	Partially settled	---------- The Company proposed a WNA mechanism but withdrew the proposal pursuant to settlement ----------								
Columbia Gas of Pennsylvania, Inc.	R-2025-3053499	2025	Litigated	RSS, RDS, and CAP	Y	Until final order in next base rate case	5%	November-April	10-year average	N/A	Annual report due October 1 providing: (1) monthly WNA computations and (2) all underlying supporting data.	N/A
UGI Utilities, Inc.	R-2024-3052716	2025	Settled	R, RT, N, and NT	Y	Until October 31, 2027	3%	October-April	15-year average	Review/revise WNA pilot communication materials with party input (review due 12/31/2025).	Two annual WNA reports by month and customer class providing: (1) bills subject to the WNA, (2) total bills, (3) volume and revenue adjustments, (4) NHDDs and AHDDs, (5) number and percentage of bills adjusted upward or downward due to warmer or colder than normal weather.	(1) CAP customers on percent-of-income bills exempt from WNA beginning November 1, 2025; (2) Future filing must evaluate use of rolling 10-year HDD average.

v. Docket No. R-2025-3059428

National Fuel Gas Distribution Corp.

:

VERIFICATION

I, Michael Deupree, hereby state that the facts above set forth in my Direct Testimony, OCA Statement 4, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: April 16, 2026

REBUTTAL TESTIMONY

OF

MICHAEL DEUPREE ON BEHALF OF THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

May 12, 2026

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed direct testimony in this proceeding on April 16, 2026, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to respond to elements of the direct testimony of Jennifer Warabak on behalf of the Pennsylvania Weatherization Providers Task Force ("PWPTF"), Justin B. Farr on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"), and Ethan H. Cline on behalf of the Bureau of Investigation and Enforcement ("I&E"). Specifically, I will respond to PWPTF's recommendation that low-income usage reduction program ("LIURP") funding be increased commensurate with the percentage increase in rates for residential customers in this proceeding, as well as OSBA and I&E's testimony concerning National Fuel Gas Distribution Company's ("NFG" or the "Company") proposed allocated cost of service study ("ACOSS") and revenue allocation.

II. LIURP FUNDING

Q. WHAT IS PWPTF'S POSITION ON THE PROPOSED RESIDENTIAL RATE INCREASE?

A. PWPTF is generally concerned with the Company's proposed increase in residential rates in the current proceeding, particularly the Company's 35 percent increase in fixed monthly

customer charges.[1] PWPTF notes that increases in fixed customer charges discourages conservation by reducing the ability of customers to control monthly utility bills through reducing consumption and thus conserving energy.[2] PWPTF argues that these rate increases particularly impact low-income households, especially in the current economic climate that is characterized by high rates of inflation across multiple sectors.[3]

Q. DO YOU SHARE PWPTF'S CONCERNS REGARDING THE CURRENT MACROECONOMIC CONDITIONS FACING PENNSYLVANIA RATE PAYERS?

A. Yes. As I discussed in detail in my direct testimony, the Pennsylvania Public Utility Commission ("Commission") should take into consideration the current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company.[4] Average Pennsylvanians are still struggling with lingering inflation concerns besides looking at potential additional concerns placed on them due to the current conflict in the Persian Gulf.[5] This is while NFG's parent company has seen increasing stock prices for its shareholders and no obvious market distress.[6] As noted by PWPTF, inflation disproportionately impacts low-income households and households that are on a fixed income, negatively affecting energy affordability for these communities.[7]

[1] Direct Testimony of Jennifer Warabak, PWPTF Statement 1 at 4:7-9.
[2] Direct Testimony of Jennifer Warabak, PWPTF Statement 1 at 4:10-15.
[3] Direct Testimony of Jennifer Warabak, PWPTF Statement 1 at 4:15 to 5:1.
[4] *See*, Direct Testimony of Michael W. Deupree, OCA Statement 1 at 18:14-16.
[5] *See*, Direct Testimony of Michael W. Deupree, OCA Statement 1 at 8:17 to 17:19.
[6] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 18:4-11; National Fuel, the Company's parent entity, has seen its stock price trending upward for several years, and on March 13, 2026, National Fuel's stock price reached an all-time high of $96.30 per share. While National Fuel's stock price has declined since its March 13, 2026, high, as of May 7, 2026, National Fuel still closed at a price of $80.22 per share; this current share price is consistent with where National Fuel traded at the beginning of 2026, and one-year ago in May 2025.
[7] *See,* Direct Testimony of Jennifer Warabak, PWPTF Statement 1 at 5:8-14.

Q. HOW DO YOU DEFINE ENERGY AFFORDABILITY?

A. Energy affordability reflects a fundamental household value proposition: it defines how expensive energy is relative to a household's income. Affordability, more generally, can be utilized as an index number to measure, among other things, the ability of a specific type of household to pay for essential utility services such as water, electric, and/or natural gas.

Q. ARE THERE ANY THRESHOLDS AT WHICH ENERGY SIMPLY BECOMES "UNAFFORDABLE" OR "BURDENSOME?"

A. There is no universal definition of "unaffordability;" however, the most accepted and utilized threshold at which a customer's utility, and thus energy, bills reach a level of significant burden is when the percentage of income spent on energy exceeds six percent.[8] This threshold comes from the Fisher, Sheehan, and Colton's *Home Energy Affordability Gap Study* from 2011. The threshold is based on the premise that total shelter costs (including rent/mortgage and all utilities) should not exceed 30 percent of income, and that 20 percent of shelter costs should be allocated to energy bills. Thus, 20 percent of 30 percent yields a six percent affordable utility burden.[9]

Q. HAS THE COMMISSION ESTABLISHED MAXIMUM ENERGY BURDEN LEVELS FOR PENNSYLVANIA RATEPAYERS?

A. Yes. The Commission examined home energy burdens for low-income Pennsylvanians in its *Home Energy Affordability* 2019 report,[10] and subsequently issued a policy statement on March 21, 2020, establishing maximum energy burdens for customers.[11] Specifically, the Commission

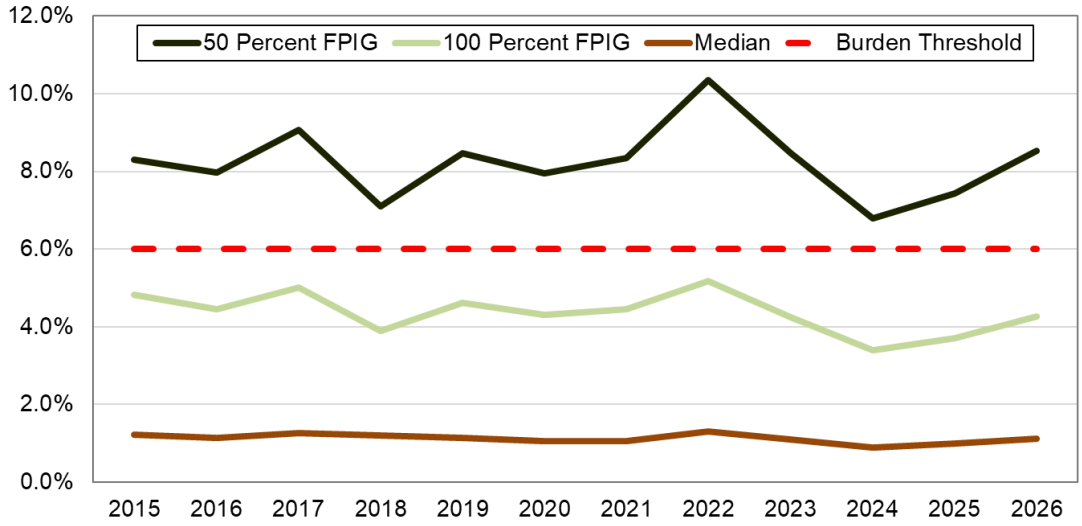
[8] *See, Understanding Energy Affordability* ACEEE, 2015, page 2.
[9] Fisher, Sheehan, and Colton. *Home Energy Affordability in New York: The Affordability Gap 2008-2010*, June 2011, page 2.
[10] *Home Energy Affordability for Low-Income Customers in Pennsylvania*, (January 2019) Pennsylvania Public Utility Commission.
[11] 52 Pa. Code Ch. 69.

established a maximum energy burden of six percent for natural gas heating customers with annual household incomes earning at least 50 percent of the Federal Poverty Income Guidelines ("FPIG").[12]

Q. HAVE YOU ESTIMATED THE EFFECT THE COMPANY'S PROPOSED RATE INCREASE WOULD HAVE ON THE AFFORDABILITY OF ENERGY IN PENNSYLVANIA?

A. Yes. As shown in Figure 1 below, I calculated the energy affordability index by income level to offer a comprehensive assessment of energy affordability in Pennsylvania. The index does not take rent into account and was calculated for two low-income residential customer groups: 50 percent of the FPIG and 100 percent of the FPIG, as well as for median income households.

Figure 1: Energy Affordability Index by Income Level (before Inclusion of Rent Expenses)



[12] 52 Pa. Code Ch. 69, at 1661.

Q. WHAT ARE THE RESULTS OF THE ENERGY AFFORDABILITY INDEX THAT MEASURE THE ENERGY BURDEN OF LOW-INCOME HOUSEHOLDS WITHOUT FACTORING IN RENT?

A. In 2024, the energy affordability index for low-income households at 50 percent of the FPIG had an energy burden of 6.8 percent, while households earning 100 percent of the FPIG had an energy burden of 3.4 percent. With the Company's proposed rate increase, the energy affordability index will increase to 8.5 percent in 2026 for residential customers earning 50 percent of the FPIG and increase to 4.3 percent for residential customers earning 100 percent of the FPIG. Both existing energy burdens as of 2024 and estimated energy burdens in 2026 will be greater than the six percent "unaffordable" threshold established in 52 Pa. Code Chapter 69 for customers earning 50 percent of the FPIG and will be nearly unaffordable for customers earning 100 percent of the FPIG. This means that low-income households will experience increasingly unaffordable utility services, something the Commission needs to take into consideration when evaluating the Company's proposed rate increase.

Q. WHAT IS YOUR CONCLUSION FROM A REVIEW OF ENERGY BURDEN IN THE COMPANY'S SERVICE TERRITORY?

A. Low-income customers in the Company's service territory increasingly face high energy burdens, and the Company's proposed rate increase will not improve this negative situation. Specifically, energy burdens for low-income households in the Company's service territory will remain above the six percent threshold through 2026, after the Company's proposed rate increase. The Commission must consider the effect of the proposed rate increase on the Company's most vulnerable customers, who are struggling to afford their monthly utility bills.

Q. DO YOU AGREE WITH PWPTF'S CONCERN THAT INCREASES IN THE RESIDENTIAL CUSTOMER CHARGE WILL NEGATIVELY IMPACT ENERGY EFFICIENCY AND LOW-INCOME HOUSEHOLDS?

A. Yes, and I discussed these concerns at length in my direct testimony.[13] The PWPTF is especially concerned with the increased burden the Company's proposed increase in the current residential customer charge will have on the Company's LIURP, without any proposed increase in LIURP funding.[14] The PWPTF recommends that annual LIURP funding be increased at least commensurate with the percentage increase in rates for residential customers that result from this proceeding.[15]

Q. DO YOU AGREE THAT THE COMPANY'S PROPOSED INCREASE IN THE RESIDENTIAL CUSTOMER CHARGE WILL LIKELY IMPACT LIURP PARTICIPATION?

A. Yes. However, the Commission should recognize that PWPTF's proposal to increase LIURP funding to keep up with the proposed increase in residential rates represents a second-best solution. If the Commission were to accept lower increase in residential rates, including maintaining the existing residential customer charge rather than accepting the increase in charge requested by the Company, concerns regarding LIURP funding would be mitigated, if not completely resolved.

[13] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 71:13 to 75:11.

[15] Direct Testimony of Jennifer Warabak, PWPTF Statement 1 at 7:4-6.

III. ALLOCATED COST OF SERVICE AND REVENUE ALLOCATION

Q. PLEASE SUMMARIZE INTERVENING PARTIES' DIRECT TESTIMONY RELATED TO THE COMPANY'S PROPOSED ACOSS.

A. Intervening parties in their direct testimony primarily focused on the Company's proposed classification of costs associated with distribution mains as both demand and customer-related, due to the importance of these costs in establishing relative revenue allocations. OSBA overall found the Company's ACOSS to conform to cost causation principles and therefore did not recommend any changes.[16] I&E, on the other hand, disagreed with the Company's cost allocation methodology for costs associated with distribution mains on the basis of both demand and customer-related aspects and argued that the Company's proposal was inconsistent with long-standing Commission precedent most recently reaffirmed in the Commission's Order involving Columbia Gas of Pennsylvania, Inc.[17] Specifically, I&E referenced the Commission's finding that, although distribution mains serve customers, it is throughput that determines the type of distribution main investment, and that, therefore, it is not reasonable to allocate costs associated with distribution mains investments on either a customer-demand basis or a 100 percent demand basis.[18]

Q. WHAT IS YOUR RESPONSE TO INTERVENING PARTIES ON THE APPROPRIATE CLASSIFICATION OF COSTS ASSOCIATED WITH DISTRIBUTION MAINS INVESTMENTS WITHIN THE COMPANY'S ACOSS?

A. As I stated in my direct testimony, the Company's classification of costs associated with distribution mains investments as both customer and demand-related are based on a fundamentally

[16] Direct Testimony of Justin B. Farr, OSBA Statement 1 at 16:3-5.
[17] Direct Testimony of Ethan H. Cline, I&E Statement 3 at 9:13-15.
[18] Direct Testimony of Ethan H. Cline, I&E Statement 3 at 9:16 to 10:16, *citing,* Pa. PUC v. Columbia Gas of Pennsylvania, Inc., Docket No. R-2025-3053499, pp. 254-255.

flawed zero-intercept study ("ZIS").[19] A ZIS, and the related minimum system study, attempt to estimate the costs associated with a zero-diameter distribution main, a hypothetical construct that does not, and indeed could not, exist in the real world.[20] Furthermore, these approaches have been criticized in academic literature for decades as being untethered to empirical studies that have failed to establish a causal relationship between distribution system costs and the number of utility customers.[21] Professor Bonbright, in his seminal text on public utility rates ultimately found that attempting to classify costs associated with a minimum-sized distribution system as customer-related is something that is "clearly indefensible."[22]

Q. HAVE YOU EXAMINED THE POTENTIAL EMPIRICAL RELATIONSHIP BETWEEN HISTORICAL COMPANY INVESTMENTS IN DISTRIBUTION MAINS AND CHANGES IN THE COMPANY'S AVERAGE NUMBER OF CUSTOMERS?

A. As discussed in my direct testimony, I have examined trends in changes in the average number of customers taking service on the Company's system with Company net investments in distribution mains over the ten-year period 2014 through 2024. Consistent with past criticism in the academic literature, I find no statistical correlation between changes in the Company's historic net investment in distribution mains and changes in its average number of customers.[23] Likewise, this result is consistent with the understanding that significant portion of the Company's annual investment in distribution mains are associated with non-growth activities covered by the Company's distribution system improvement charge ("DISC").[24] Overall, the premise that

[19] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 51:4 to 56:3.
[20] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 52:13-17.
[21] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 53:1-7.
[22] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 54:13-16.
[23] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 55:9-17, and Exhibit MWD-4.
[24] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 55:19 to 56:3.

changes in the Company's customer count are a significant driver of distribution mains investment is outdated and unsupported by empirical evidence.

Q. DO YOU FURTHERMORE AGREE WITH THE INCLUSION OF A THROUGHPUT COMPONENT IN THE ALLOCATION OF COSTS ASSOCIATED WITH DISTRIBUTION MAINS?

A. Yes. As the Federal Power Commission (the predecessor agency to the Federal Energy Regulatory Commission) noted in its 1952 decision involving the Atlantic Seaboard Corporation, pipelines are not built to supply service on peak days only but instead supply service on all days throughout the year.[25] Failure to recognize this fact results in an under-allocation of pipeline costs to customers that predominantly utilize the natural gas system during off-peak periods such as large volume industrial customers on interruptible rates.[26] It is therefore appropriate to include a throughput component when allocating costs associated with distribution mains.

Q. PLEASE SUMMARIZE THE INTERVENING PARTIES' DIRECT TESTIMONY RELATED TO THE COMPANY'S PROPOSED REVENUE ALLOCATION.

A. OSBA finds that the Company's proposed revenue allocation proposal to reasonably balance moving class revenue recovery in the direction of cost causation while adhering to the principles of gradualism.[27] I&E, on the other hand, argues that the Company's proposed revenue allocation is based on the results of a flawed ACOSS, and therefore is itself flawed.[28] I&E, also appears to take issue with the Company's proposal to cap revenue increases at 1.10 times the system average, proposing this cap to be increased to 1.50 times the system average.[29]

---

[25] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 57:12-24, *citing,* Re Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.
[26] Re Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.
[27] Direct Testimony of Justin B. Farr, OSBA Statement 1 at 17:1-4.
[28] Direct Testimony of Ethan H. Cline, I&E Statement 3 at 11:4-8.
[29] Direct Testimony of Ethan H. Cline, I&E Statement 3 at 12:8 to 13:2.

Q. WHAT IS YOUR RESPONSE TO INTERVENING PARTIES ON THE APPROPRIATE CLASSIFICATION OF COSTS ASSOCIATED WITH THE COMPANY'S PROPOSED REVENUE ALLOCATION?

A. As discussed in my direct testimony, the Company's proposed revenue allocation suffers from two major deficiencies.[30] First, the Company's proposal is based on the results of a faulty ACOSS that overstates the current rate of return the Company derives from its large commercial and industrial service customers while understating the rate of return the Company derives from its residential service customers. Second, the Company's proposed revenue apportionment process results in rate increases that are inconsistent with rate gradualism. Specifically, the Company's proposed revenue allocation process fails to recognize that ACOSS results may not fully reflect the relative cost of providing service after the conclusion of the rate case proceeding.

Q. DO OSBA AND I&E'S PROPOSED REVENUE ALLOCATIONS ADDRESS THESE DEFICIENCIES?

A. No. OSBA's finding that the Company's proposed revenue allocation reasonably balances moving class revenue recovery in the direction of cost causation while adhering to the principles of gradualism fails to recognize that the Company's proposed revenue allocation is based on the results of a faulty ACOSS that overstates the current rate of return the Company derives from its large commercial and industrial service customers, while understating the rate of return the Company derives from its residential service customers. I&E's proposed revenue allocation, while correctly recognizing that the Company's ACOSS is based on a flawed customer-demand cost allocation methodology for distribution mains, proposes to increase the Company's proposed cap

[30] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 65:13-20.

on revenue increases to 1.50 times the system average, which is inconsistent with the concept of gradualism.

Q. WHAT IS YOUR RECOMMENDED REVENUE APPORTIONMENT?

A. As stated in my direct testimony, I recommend the Commission adopt a more reasonable revenue apportionment method based on the results of my alternative ACOSS.[31] I also recommend the Commission apply a +/- 0.05 error range to cost parity ratio estimates such that all classes within the range 0.95 to 1.05 are consider to be at full cost parity.[32] Lastly, I find that the Commission should cap the allowed revenue increase to under-earning rate classes to no more than 1.15 times the system average increase.[33] Capping the allowed revenue increase to under-earning rate classes to no more than 1.15 times the system average would align the proposed revenue allocation with the concept of gradualism when compared to I&E's proposed cap equal to 1.50 times the system average.

IV. CONCLUSIONS AND RECOMMENDATIONS

Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.

A. Having reviewed the direct testimony filed by the other non-company parties in this proceeding; I continue to recommend the Commission:

- Require some level of shared burden in light of recent macroeconomic challenges, balancing consumer affordability concerns with the financial interests of the Company.
- Reject the Company's proposed ZIS approach to allocate costs associated with distribution mains within the Company's ACOSS. ZIS and related minimum system study that are used to classify distribution mains investments are fundamentally flawed and provide little to no value in setting just and reasonable rates. In the alternative I recommend that the Commission approve an alternative classification of distribution mains that incorporates a

[32] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 64:17 to 65:2.
[33] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 66:3-10.

P&A cost allocation method using weights based on the Company's test year system load factor.

- Adopt a more reasonable revenue apportionment method based on my alternative ACOSS results that also limits the rate increase compared to the Company's proposed revenue allocation method. First, I recommend that classes with current relative cost parity ratios below 0.95 receive a rate increase equal to 1.15 times the system average increase. Second, I recommend that classes with current relative cost parity ratios greater than 1.05 receive a rate increase equal to 0.85 times the system average increase. Finally, I recommend that the remaining rate increase be equally allocated to remaining rate classes with current relative cost parity ratios of between 0.95 and 1.05.

- Reject the Company's proposed increase in residential and commercial customer charges. An analysis of customer-related costs finds that residential rate classes are currently recovering a majority of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers. If the Commission decides in the alternative that an increase in monthly customer charges is warranted, these increases should be limited to the percentage increase in class revenue requirement. This would furthermore be subject to scalebacks to reflect changes in allocated class revenue increases pursuant to Commission Orders.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

SURREBUTTAL TESTIMONY

OF

MICHAEL DEUPREE ON BEHALF OF THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

May 27, 2026

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed direct testimony in this proceeding on April 16, 2026, and rebuttal testimony on May 12, 2026, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to elements of the rebuttal testimony of Rebecca E. Hillery, Cathryn E. Hilliard, John D. Taylor, and Erik M. Solomon on behalf of National Fuel Gas Distribution Company ("NFG" or the "Company"), and Justin B. Farr on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"). Specifically, I will respond to NFG's discussion of macroeconomic issues, as well as issues concerning its proposed allocated cost of service study ("ACOSS") and rate design. I will also address OSBA's new hybrid allocation approach to allocating NFG costs related to distribution mains for ACOSS purposes that was discussed in OSBA's rebuttal filing.

II. MACROECONOMIC ISSUES

Q. PLEASE SUMMARIZE NFG'S STATEMENT RESPONDING TO YOUR DISCUSSION OF MACROECONOMIC ISSUES IN ITS REBUTTAL TESTIMONY.

A. NFG states that it is not appropriate to compare the increase requested in this case to NFG's parent company's stock price since jurisdictional ratemaking must be based on utility-specific

risk.[1] Specifically, the Company argues that NFG's parent company's stock price is materially influenced by perceived risk and performance of non-Pennsylvania and non-regulated operations.[2]

Q. DID YOU ARGUE IN YOUR DIRECT TESTIMONY THAT THE COMPANY'S REQUESTED RATE INCREASE SHOULD BE DIRECTLY COMPARED AGAINST NFG'S PARENT COMPANY'S STOCK PRICE?

A. No. My direct testimony contains an extensive discussion of current macroeconomic conditions affecting Pennsylvanians. I specifically found that average Pennsylvanians are still struggling with lingering inflation concerns while also facing potential additional concerns due to current hostilities in the Persian Gulf.[3] This, while the Company's parent company has seen increasing stock prices for its shareholders and no obvious market distress.[4] I recommended that the Commission take these concerns, including consumer affordability concerns, into consideration when determining just and reasonable rates for the Company.[5] In particular, I argued that the Commission should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company.[6]

Q. HAVE OTHER PROMINENT FIGURES EXPRESSED SIMILAR CONCERNS IN PENNSYLVANIA SUBSEQUENT TO THE FILING OF YOUR DIRECT TESTIMONY?

A. Yes. On April 29, 2026, Governor Josh Shapiro issued an open letter to the Commission arguing that customers across the Commonwealth are experiencing higher utility costs, and that rising utility bills have become a driver of inflation.[7] Governor Shapiro stated that utilities must seek ways of procuring capital to finance investments in more affordable ways, conscious of the

[1] Rebuttal Testimony of Rebecca E. Hillery, NFG St. 1-R, at 10:18-22.
[2] *Id.* at 10:22 to 11:1.
[3] Direct Testimony of Michael W. Deupree, OCA St. 1, at 19:7-9.
[4] *Id.* at 19:9-10.
[5] *Id.* at 19:5-7.
[6] *Id.* at 19:10-11.
[7] Open Letter dated April 29, 2026, from Governor Josh Shapiro to Utility Leaders, at 1.

utility burdens facing many consumers across the Commonwealth.[8] In this, Governor Shapiro's message appears to mirror my general argument that the Commission should balance consumer affordability concerns with the financial interests of utilities when determining just and reasonable rates for the Company. I have attached Governor Shapiro's letter to this surrebuttal testimony as Exhibit MWD-10. Likewise, subsequent to withdrawing a proposed increase in rates for its electric and gas operations, David Vahos, the president and chief executive officer ("CEO") of PECO Energy Company ("PECO") stated that PECO's decision to withdraw was based on customer affordability considerations.

> While our filing with the [Commission] would have provided needed improvements in safe and reliable energy delivery, we recognize that Pennsylvanians are struggling with basic necessities like gas, food, and energy and have decided to withdraw our proposal.[9]

I have attached PECO's press release to this surrebuttal testimony as Exhibit MWD-11.

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

A. I continue to recommend that the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company. Average Pennsylvanians are struggling with lingering inflation concerns while also facing potential additional concerns due to fallout from the conflict in the Persian Gulf. Meanwhile, the Company has seen increasing stock prices for its shareholders and no obvious market distress. The Commission, in particular, should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company.

[8] *Id*.
[9] PECO Communications (April 16, 2026), "PECO Withdraws Electric and Natural Gas Regulatory Rate Review Filings to Prioritize Customer Affordability."

Governor Shapiro's recent open letter raising similar concerns only strengthens the urgency for the Commission to recognize these larger concerns, and the broader context surrounding the Company's proposed rate increase.

III. WEATHER NORMALIZATION ADJUSTMENT

Q. PLEASE SUMMARIZE THE COMPANY'S RESPONSE TO INTERVENORS' CONCERNS REGARDING THE COMPANY'S WNA.

A. The Company reiterates its position that the WNA is a symmetrical mechanism which balances weather-driven financial risks equally for both ratepayers and the Company.[10] The Company references the current 2025-2026 heating season, where customers received approximately $2.6 million in net WNA credits as an example of how the WNA functions as a symmetrical mechanism that produces both surcharges and credits for ratepayers.[11] The Company also takes issue with my arguments that the WNA is not needed in the context of other mechanisms at the Company's disposal to address regulatory lag, arguing that the WNA is not designed to address regulatory lag.[12]

Q. DO YOU AGREE WITH THE COMPANY'S CHARACTERIZATION OF THE WNA?

A. No. First, the Company's reference to the WNA producing approximately $2.6 million in net WNA credits to ratepayers is outdated and does not include either the months of April or May 2026. In its rebuttal testimony, the Company estimated that it received $1.4 million in revenues through the WNA in the month of April 2026 alone.[13] It is possible that this remaining credit will be paid to the Company after the month of May 2026 if Pennsylvania experiences warm weather

[10] Rebuttal Testimony of Rebecca E. Hillery, NFG St. 1-R, at 7:10-13.
[11] Rebuttal Testimony of John D. Taylor, NFG St. 19-R, at 30:15-17.
[12] *Id.* at 32:4-16.
[13] Rebuttal Testimony of Rebecca E. Hillery, NFG St. 1-R, at 9, Table 1.

consistent with what was seen in 2024. In total, with the additional $1.4 million the Company estimates it received in revenue in April 2026, it is estimated that the WNA has netted the Company more than $7.9 million since October 2023.

Q. IS IT SURPRISING THAT THE COMPANY'S WNA MECHANISM HAS RESULTED IN DISPROPORTIONATELY PRODUCED SURCHARGES FOR RATEPAYERS?

A. No. Table 1 provides a summary of the results provided in a report prepared on the behalf of several energy advocacy groups in the Pacific Northwest by Graceful Systems that was purportedly designed to support the adoption of revenue decoupling.[14] The table provides the number of instances in which there were observed rate increases or rate decreases for electric and gas utilities under revenue decoupling over a 10-year period. The table shows 72 percent of the gas utilities in the sample and 57 percent of all the electric utilities in the same sample had reconciliations resulting in rate increases instead of rate decreases. This stands in contradiction to the typical utility assertion that decoupling will yield results that are symmetrical (i.e., will lead to equal rate increases and decreases). The results are even more prevalent when examining large reconciliations. Only three percent of all survey reconciliations associated with gas decoupling programs resulted in refunds to customers greater than three percent. This is approximately one-sixth of the 19 percent of surveyed gas decoupling reconciliations that resulted in surcharges to customers of greater than three percent.

[14] *See,* Pamela Lesh, Rate Impacts and Key Design Elements of Gas and Electric Utility Decoupling: A Comprehensive Review (2009).

Table 1: Summary of Lesh Report

Refund/Surcharge	Number of Reconciliations Gas	Electric	Total	Share of All Reconciliations Gas	Electric	Total
Refund Percent						
Greater than 3 percent	2	0	2	3.1%	0.0%	2.3%
Less than or equal to 3 percent	1	3	4	1.5%	13.0%	4.5%
Less than or equal to 2 percent	2	1	3	3.1%	4.3%	3.4%

Source: Rate Impacts and Key Design Elements of Gas and Electric Utility Decoupling

Q. DO YOU AGREE WITH THE COMPANY'S ASSERTION THAT THE WNA SHOULD BE VIEWED INDEPENDENTLY OF REGULATORY LAG?

A. No. The Company takes a narrow view of regulatory lag as only applying to mechanisms designed to recover investments placed into service between rate cases. However, the WNA allows the Company to recover declines in revenues caused by decreasing use per customer ("UPC") between rate cases due to moderating weather. The Company itself highlighted this trend in decreasing Heating Degree Days ("HDDs") in Erie, Pennsylvania, in its direct testimony.[15]

Q. DID THE COMPANY ADDRESS ANY OF YOUR PROPOSED ALTERNATIVE MODIFICATIONS TO THE WNA?

A. Yes. The Company opposes both expanding the WNA deadband to 5 percent and eliminating the months of October and May from the WNA. The Company argues that, given the effectiveness and symmetrical nature of the WNA design, increasing the current deadband from 3

[15] Direct Testimony of John D. Taylor, NFG St. 19, at 25:11-17; and 26, Figure 1.

to 5 percent would increase risks for both ratepayers and the Company unnecessarily.[16] Likewise, the Company opposes removing the months of October and May from the WNA, arguing that there are still some heating requirements during these months.[17]

Q. DO YOU AGREE THAT INCREASING THE WNA DEADBAND FROM THREE TO FIVE PERCENT WOULD INCREASE RISK FOR THE COMPANY AND RATEPAYERS UNNECESSARILY?

A. No. As demonstrated above, mechanisms like the WNA predominantly result in surcharges in the utility's favor. This is true for the Company as well since the WNA has resulted in more than $7.9 million in revenues for the Company since it was first implemented in October 2023. Therefore, increasing the WNA deadband to 5 percent would provide additional protection to ratepayers from minor deviations from normal weather. It would also place the WNA in line with the recently modified WNA mechanisms for Columbia Gas.

Q. DO YOU AGREE WITH THE COMPANY THAT THE PRESENCE OF HEATING REQUIREMENTS DURING A MONTH SHOULD BE THE BASIS FOR INCLUSION IN THE WNA?

A. No. The Company's finding that there are some customer heating requirements during the months of October and May is irrelevant to the question at hand. The Commission need not, nor should it, shift all volumetric weather-related risks from the Company to customers. Indeed, if the purpose of the WNA was to shift all volumetric weather-related risks the mechanism would apply year-round, and the Commission has never approved a year-round WNA mechanism for any Pennsylvania natural gas utility. As shown in Table 2, very little of the annual average customer heating requirements are included in the months of October and May. Specifically, the months of

[16] Rebuttal Testimony of Rebecca E. Hillery, NFG St. 1-R, at 8:7-9.
[17] Rebuttal Testimony of Cathryn E. Hilliard, NFG St. 13-R, at 5:3-7.

October and May represent 6 and 4 percent, respectively, of the total annual heating requirement in Pennsylvania as represented by HDDs. Indeed, the months of November through April contain approximately 88 percent of all Pennsylvania heating requirements.

Table 2: Average 10-Year Pennsylvania Heating Degree Days

Month	10-Year (2016-2025) Average Heating Degree Day	Percent of Total
January	1,145	20%
February	933	16%
March	802	14%
April	503	9%
May	229	4%
June	55	1%
July	6	0%
August	19	0%
September	88	2%
October	361	6%
November	721	12%
December	993	17%
Total	**5,855**	**100%**

Note: Values represent a simple average of four weather stations: Dubois (USW00004787), Erie (USW00014860), Pittsburgh (USW00094823), and Bradford (USW00004751)
Source: National Oceanic and Atmospheric Administration, National Centers for Environmental Information, GHCN-Daily.

Q. DID THE COMPANY RESPOND TO THE CRITICISM THAT IT NORMALIZES ALL PENNSYLVANIA CUSTOMERS BASED ON WEATHER CONDITIONS IN ERIE, PENNSYLVANIA?

A. Yes. The Company claims that, while its Pennsylvania service territory spans a wide geographic area, its customer base is not evenly distributed across it. Specifically, the Company notes that the Erie Service Center alone represents approximately 35 percent of total residential customers in the Company's Pennsylvania service territory.[18] The Company further notes that, when grouped based on the nearest weather station, approximately 44 percent of its customers

[18] *Id.* at 2:19-22.

would be grouped to the Erie weather station.[19] Likewise, the Company claims that if this analysis is extended to include both Erie and Youngstown, which the Company claims has similar weather to Erie, nearly 60 percent of the Company's residential customers would be covered by these two weather stations.[20]

Q. DO YOU FIND THE COMPANY'S ARGUMENTS PERSUASIVE?

A. No. The Company itself notes how the weather along the shores of Lake Erie is distinct from that experienced elsewhere in the Commonwealth.

> National Fuel's service territory in northwest Pennsylvania, along the shores of Lake Erie, experiences longer winters and colder autumn and spring seasons than other utilities in the Commonwealth.[21]

It should be concerning that, after recognizing the distinctive weather patterns of Lake Erie compared to the rest of Pennsylvania, the Company chooses to normalize heating requirements for all of its customer base to a single weather station in Erie, Pennsylvania, even though only 35 percent of its customers live in the surrounding community. Indeed, even if one was to accept the Company's claim that upwards of 60 percent of its residential customer base is represented by weather conditions of Erie or related Youngstown, that still leaves more than 40 percent – almost half – of the Company's residential customer base that the Company inappropriately normalizes to weather conditions in Erie.

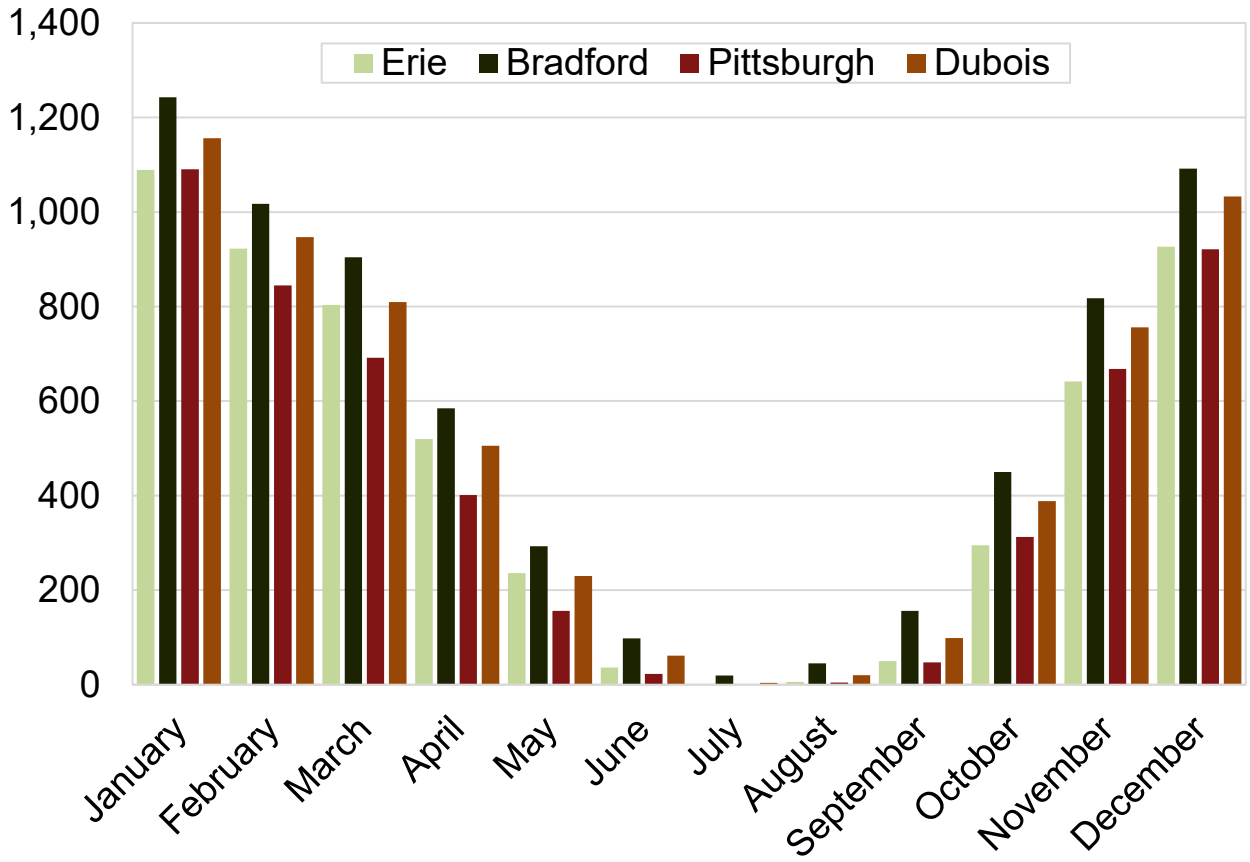
Q. HAVE YOU EXAMINED NORMAL HEATING REQUIREMENTS FOR THE COMPANY'S PENNSYLVANIA SERVICE TERRITORY?

A. Yes. Figure 1 examines the average 10-year HDDs in Erie and three other weather stations located in or near the Company's service territory: DuBois, Pittsburgh, and Bradford,

[19] *Id.* at 3:5-8.
[20] *Id.* at 3:13-15.
[21] Rebuttal Testimony of Rebecca E. Hillery, NFG St. 1-R, at 9:3-6, *emphasis added.*

Pennsylvania. Figure 1 shows that Erie experiences distinctive weather conditions when compared to the Company's service territory located away from Lake Erie. Specifically, Erie experiences relatively mild fall and early winter conditions; however, Erie also experiences prolonged relatively higher heating requirements during the late winter and spring periods compared to other areas of the Company's service territory.

Figure 1: Average 10-Year Heating Degree Days



Source: National Oceanic and Atmospheric Administration, National Centers for Environmental Information, GHCN-Daily.

Q. WHAT ARE YOUR RECOMMENDATIONS REGARDING THE WNA?

A. I continue to recommend the following from my direct testimony:

- The Commission should affirmatively discontinue NFG's current WNA mechanism. The mechanism has failed to produce balanced outcomes for ratepayers, functioning as an

asymmetric surcharge on customers' bills for the two full years the mechanism has been in operation, even though the mechanism was designed as a pilot to symmetrically provide both surcharges and credits to customers. The WNA is also not required to address regulatory lag concerns of the Company given the Company's use of a fully projected future test year ("FPFTY") and distribution system improvement charge ("DSIC").

- If the Commission decides to continue the WNA, I recommend that it be continued as a three-year pilot program rather than being adopted as a permanent mechanism. This will allow the Commission the opportunity to routinely reevaluate the WNA to ensure that the mechanism is not producing negative outcomes for ratepayers. I further recommend that the Commission increase the deadband from three percent to five percent and eliminate the months of October and May from the WNA period. This would strengthen ratepayer protections and would furthermore make the Company's WNA pilot consistent with the recent WNA pilot the Commission approved for Columbia Gas of Pennsylvania (Columbia Gas).

Q. DO YOU HAVE ANY NEW RECOMMENDATIONS BASED ON YOUR REVIEW OF THE COMPANY'S REBUTTAL FILING?

A. Yes. If the Commission decides to continue the WNA, I recommend the Commission order the Company to expand the weather normalization to include three new separate weather stations, in addition to the weather station in Erie, located in or near the Company's service territory: DuBois, Pittsburgh, and Bradford, Pennsylvania. The Company's current process of normalizing its entire service territory based on weather conditions in Erie is flawed based on the unique weather conditions of Erie when compared against the rest of the Commonwealth.

Q. DO OTHER PENNSYLVANIA NATURAL GAS UTILITIES UTILIZE MULTIPLE WEATHER STATIONS IN ITS WNA PROCESS?

A. Yes. UGI Utility's gas division currently uses seven weather stations to normalize heating requirements across its service territory. These include: (1) Wilkes-Barre/Scranton International Airport, (2) Bradford Regional Airport, (3) Reading Regional Airport, (4) Harrisburg International

Airport, (5) Lancaster Airport, (6) Allentown Lehigh Valley International Airport, and (7) Clearfield-Lawrence Airport.[22]

IV. ALLOCATED COST OF SERVICE STUDY

A. Response to NFG

Q. WHAT IS THE COMPANY'S RESPONSE TO YOUR COMPLAINTS REGARDING THE COMPANY'S ACOSS?

A. The Company argues that the development of allocation factors within an ACOSS should use principles of both economics and engineering to develop allocation factors appropriate for different elements of costs, and that my alternative ACOSS fails to fully follow these principles. Specifically, the Company argues that my recommended rejection of the Company's zero-intercept study ("ZIS") and alternative peak and average ("P&A") allocation method "conflates cost recovery with cost causation,"[23] and that while annual throughput influences rate recovery, distribution mains are built to connect customers to the system and provide sufficient capacity to meet coincident peak-day demand.[24]

Q. DO YOU AGREE THAT YOUR RECOMMENDED REJECTION OF THE COMPANY'S ZERO-INTERCEPT STUDY AND ALTERNATIVE P&A ALLOCATION METHOD CONFLATE COST RECOVERY WITH COST CAUSATION?

A. No. The Company over-simplifies the question at issue. As I explained in my direct testimony, zero-intercept studies are fundamentally flawed because they attempt to model an empirical relationship that can be empirically shown not to exist.[25] ZIS methodologies have been

[22] *See, UGI Utilities, Inc. – Gas Division*, PA P.U.C. Docket No. R-2025-3059523, Direct Testimony of John D. Taylor, Exhibit JDT-2 at 1, f.n. 1.
[23] Rebuttal Testimony of John D. Taylor, NFG St. 19-R, at 10:1.
[24] *Id.* at 10:2-5.
[25] Direct Testimony of Michael W. Deupree, OCA St. 1, at 54:14-16.

criticized in academic literature for decades for exactly this point.[26] Likewise, my proposed P&A allocation approach is based on the understanding that natural gas facilities are built to supply both peak and non-peak service as recognized by the Federal Power Commission ("FPC") in 1952.[27] Indeed, the FPC found that "both capacity and annual use are important considerations in the conception of the project," and that therefore both capacity and throughput are cost causation factors driving capital outlays for a pipeline project.[28]

Q. DOES THE COMPANY HAVE OTHER CRITICISMS OF YOUR REJECTION OF THE ZIS APPROACH?

A. Yes. The Company argues that my criticism of ZIS methodologies relying on hypothetical constructs is invalid and mischaracterizes the methodology. Instead, the Company argues that a ZIS does not assume a fictional system but instead uses observed relationships between pipe size and costs to distinguish customer-related investment from capacity-related investment.[29]

Q. DO YOU AGREE WITH THE COMPANY'S ARGUMENTS ABOUT THE ZIS APPROACH NOT RELYING ON HYPOTHETICAL CONSTRUCTS?

A. No. The Company's ZIS uses statistical regression methods to observe the relationship between pipe diameter and pipe unit costs to estimate the cost associated with a hypothetical zero diameter pipe. The Commission should recognize that a zero-diameter pipeline is a complete hypothetical construct used to calculate the supposed customer-related portion of pipeline investments. This makes it so that there is no way to ground truth the Company's ZIS findings to actual services and products in the real world. Indeed, the best verification of the Company's ZIS

[26] *Id.* at 55:29 to 56:8; *citing* James C. Bonbright, et. al. Principles of Public Utility Rates. 1988 Edition. Arlington, VA: Public Utilities Reports, Inc., p. 491.
[27] *Id.* (*citing* Re: Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43).
[28] Re: Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.
[29] Rebuttal Testimony of John D. Taylor, NFG St. 19-R, at 12:18-22.

findings would be to confirm a strong statistical relationship between new customers and increased investments in distribution mains.

Q. CAN YOU CONFIRM A STRONG STATISTICAL RELATIONSHIP BETWEEN NEW CUSTOMERS AND INCREASED INVESTMENT IN DISTRIBUTION MAINS?

A. No. As I showed in my direct testimony, an examination of the trend between changes in the average number of customers on the Company's system and the Company's net investment in distribution mains for the 10-year period 2015 through 2024 fails to find a strong statistical correlation between these two variables.[30] Indeed, I found that, if anything, there is a negative relationship between changes in the Company's customer counts and distribution main investments as the Company made significant investments in its distribution mains system during years when it had slower than average growth. In all, my findings confirm the criticisms of the ZIS method that have been made in academic texts for decades, namely that the ZIS method fails to recognize empirical evidence showing a weak relationship between changes in a utility's customer counts and increased investment in distribution systems.

Q. DID THE COMPANY ADDRESS PROFESSOR BONBRIGHT'S CRITICISM OF OVER-ASSIGNMENT OF COSTS TO THE CUSTOMER COMPONENT?

A. No. The Company argues that Professor Bonbright elsewhere in his 645-page text Principles of Public Utility Rates, makes statements that "strongly suggest" the opposite view that the recognition of a customer component of distribution mains for a gas utility is appropriate. However, the statement the Company references merely expresses the common view that costs related to metering equipment and meter reading, billing and accounting, and either service drops or service lines (depending on whether the utility in question is an electric or natural gas utility)

[30] Direct Testimony of Michael W. Deupree, OCA St. 1, at 57:13-21.

are customer-related as these costs directly vary with changes in a utility's number of customers on its system. Indeed, I summarized customer-related costs similarly to Professor Bonbright's discussion in my direct testimony.[31] The Company fails to address Professor Bonbright's clear and unambiguous position that "the inclusion of the costs of a minimum-sized distribution system among the customer-related costs seems to us clearly indefensible."[32]

Q. HAVE OTHER COMMISSIONS ACROSS THE COUNTRY CRITICIZED ZIS AND RELATED MINIMUM SYSTEM STUDY APPROACHES?

A. Yes. The Iowa State Commerce Commission (now known as the Iowa Utilities Board or "IUB") in a 1984 decision rejected a proposed minimum system study ("MSS") approach by a natural gas utility as "improper and unacceptable,"[33] to functionalize any portion of costs associated with distribution mains as customer-related.[34]

> Distribution mains are not customer-related costs; no part of distribution costs should be allocated to customer-related costs; and the use of a minimum system study to allocate distribution costs to customer-related costs is therefore improper and unacceptable.[35]

Q. WHAT WAS THE BASIS FOR THE IUB'S DECISION?

A. The IUB reviewed a prior decision it had made in a 1981 proceeding, which was highly critical of an MSS approach on both practical and theoretical grounds. Specifically, the IUB noted that in a true "minimum system" circumstance, there would be no need for a distribution system at all as there would be no need to supply energy to customers.[36] While admitting that its prior

[31] *Id.* at 71:19 to 72:5.
[32] James C. Bonbright, *et. al.* Principles of Public Utility Rates. 1988 Edition. Arlington, VA: Public Utilities Reports, Inc., pp. 491-492; emphasis added.
[33] *In Re: Peoples Natural Gas Company, Division of InterNorth Inc.,* Iowa State Commerce Commission Docket No. RPU-84-42, Proposed Decision and Order (June 6, 1985) at 48.
[34] *Id.*
[35] *Id.*
[36] *Id.* at 39-40; citing *In Re: Iowa Power and Light Company,* Iowa State Commerce Commission Docket No. RPU-78-27.

decision referred to a proceeding involving an electric distribution system, the IUB felt the positions expressed were equally applicable to natural gas companies as follows:[37]

> We believe that this minimum system analysis ignores the fact that if no customer were ever to use electric power or energy, there would be no need for a distribution system at all. Thus, the existence of any distribution system, including the Company's proposed minimum system, is justified not by the fact that the Company has customers which it must meter and bill, but rather because Company's customers demand that the system provide electric power and electric energy.
>
> In our opinion, **there is no logical justification for contending that the minimum distribution system cost is customer related**, while conceding that the remaining distribution costs are demand related. The explanation offered by Company – that such a minimum system is necessary to supply "service" to customers (where service is defined as the availability of power and energy whether or not used, with the expectation that customers will not use any power or energy) – ignores the real reason for the existence of the distribution system. That system exists for the sole purpose of supplying power and energy to customers. The Commission sees no reasonable justification for hypothesizing the existence of a distribution system whose purpose is to make power and energy available to customers who are assumed not to want power or energy, and which is not capable of carrying power or energy to those customers should they actually desire to make use of the service. For that reason we reject the inclusion of minimum distribution system costs in Company's proposed customer charge.[38]

Q. HAS THE COMMISSION ITSELF RECENTLY WEIGHED IN ON THE VALIDITY OF CLASSIFYING A PORTION OF COSTS ASSOCIATED WITH DISTRIBUTION MAINS AS CUSTOMER-RELATED?

A. Yes. In its recent 2025 decision regarding proposed rates for Columbia Gas, the Commission adopted a P&A cost allocation method to classify and allocate costs associated with natural gas distribution mains.[39] In reaching its decision, the Commission directly addressed the

[37] *Id.* at 39.
[38] *Id.* at 40 (citing *In Re: Iowa Power and Light Company,* Iowa State Commerce Commission Docket No. RPU-78-27, emphasis in original).
[39] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, Opinion and Order at 255.

position that a portion of these costs could be classified as customer-related based on an analysis of a hypothetical minimum system, reaching much the same position as that elaborated by the IUB in the 1980s.

> In light of the above, we remain of the opinion that although mains serve customers, it is the throughput that determines the type of main investment because it is the load that determines the main investment, not the number of customers served. As the Commission stated in Columbia Gas 2021, the existence of one customer, five customers, or ten customers does not determine the amount of mains investment. Mains investment is driven by the loads placed upon it, not by the number of customers served.[40]

B. Response to OSBA

Q. HAVE YOU REVIEWED OSBA'S REBUTTAL TESTIMONY AS IT RELATES TO COST ALLOCATION?

A. Yes. The OSBA in its rebuttal testimony recommends an alternative hybrid cost allocation method that was not expressed previously in its direct testimony.[41] Specifically, the OSBA recommends a cost allocation method which assigns 50 percent of the weight to customer-related costs that are otherwise derived from NFG's ZIS with the remaining allocation determined using the P&A allocation method I recommend in my direct testimony.[42]

Q. DO YOU SUPPORT OSBA'S PROPOSED HYBRID COST ALLOCATION METHODOLOGY?

A. No. The OSBA attempts to propose a Solomonic solution but fails to recognize the inherently flawed nature of the Company's proposed ZIS allocation method. Attempting to mitigate a flawed ACOSS by reducing the influence of the flawed cost allocation does not render the resulting ACOSS any less flawed.

[40] *Id.* (emphasis added).
[41] Rebuttal Testimony of Justin B. Farr, OSBA St. 1-R, at 2:2-6.
[42] *Id.* at 4:11-15.

V. RATE DESIGN

Q. PLEASE SUMMARIZE THE COMPANY'S POSITION REGARDING YOUR RECOMMENDATION THAT THE COMMISSION REJECT THE COMPANY'S PROPOSED INCREASE IN ITS RESIDENTIAL BASIC SERVICE CHARGE.

A. The Company argues that my opposition, and the opposition of the Bureau of Investigation and Enforcement's, to the Company's proposed increase in its residential basic service charge is premised on a misunderstanding of the Company's ACOSS.[43] Specifically, the Company states that its identified residential customer-related costs of $27.17 per month from its ACOSS is independent of its allocation of costs related to distribution mains within the ACOSS.[44]

Q. WHAT IS YOUR RESPONSE TO THE COMPANY'S ARGUMENT?

A. The Commission should recognize the inherent contradiction in the Company's statements. While the Company argues that there is a customer-related component associated with its investments in distribution mains, it recognizes that these costs should not be included in an analysis of customer-related costs for benchmarking monthly basic service charges. Furthermore, while the Company's analysis of customer-related costs does not include costs associated with its investments in distribution mains, it does include costs that are not directly related to providing service to customers such as general plant investments and administrative and general ("A&G") overhead expenses.[45] In my direct testimony, I independently analyzed Company expenses directly related to providing service to customers and found that customer-related costs to provide service to residential customers on the Company's system are approximately $22.70 per customer

[43] Rebuttal Testimony of John D. Taylor, NFG St. 19-R, at 23:16-19.
[44] *Id.* at 23:20 to 24:1.
[45] *See*, Company's ACOSS Workpapers.

per month.[46] Importantly, this means that the Company's current monthly customer charge of $14.00 per month recovers nearly 62 percent of monthly customer-related costs.[47]

Q. DID THE COMPANY RESPOND TO YOUR ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN RESIDENTIAL BASIC SERVICE CHARGES IS WARRANTED?

A. Yes. If the Commission decides that an increase in residential basic service charges is warranted, I argued that this increase should be capped at the overall allowed increase in residential rates, including scalebacks for any adjustment in the overall allowed increase in residential rates. The Company disagrees with this alternative recommendation, arguing that basic service charges should be based on the cost to serve, and that scaling back the customer charge merely to match a reduced revenue requirement would disconnect the rate design from cost causation.[48]

Q. DO YOU AGREE WITH THE COMPANY?

A. No. The Commission should recognize that increasing the customer charge disproportionately to volumetric rates increases the burden on low use customers which are typically low-income customers, as well as decreasing the incentive for customers to conserve energy. Partially for this reason I disagree with the Company's proposed increase in the residential basic service charge. However, if the Commission believes an increase in the residential basic service charge is warranted, it should maintain the existing balance between volumetric and fixed customer charges to not increase the burden on vulnerable communities.

[46] Direct Testimony of Michael W. Deupree, OCA St. 1, at Exhibit MWD-9.
[47] *Id.* at 72:8-9.
[48] Rebuttal Testimony of John D. Taylor, NFG St. 19-R, at 24:16-20.

VI. ENERGY EFFICIENCY PROGRAM

Q. DOES THE COMPANY RESPOND TO YOUR CONCERNS RELATED TO THE PROPOSED ENERGY EFFICIENCY RIDER IN ITS REBUTTAL TESTIMONY?

A. Yes. The Company notes that the criteria established by the National Regulatory Research Institute ("NRRI") are not legally binding on the Commission.[49] The Company furthermore argues that the Commission has consistently evaluated riders on a case-specific basis, considering factors such as policy objectives, scope, duration, customer protections, and reporting requirements.[50]

Q. DO YOU CONTINUE TO RECOMMEND THAT THE COMMISSION REJECT THE PROPOSED ENERGY EFFICIENCY PROGRAM RIDER?

A. Yes. The NRRI guidance I referenced in my direct testimony is based on an examination of regulatory jurisdictions throughout the country, and the requirements that are typically placed on the creation of a cost recovery rider. Specifically, NRRI found that most jurisdictions restrict costs subject to rider recovery to those that are (1) substantial, (2) outside the control of the utility, and (3) volatile in nature. Costs associated with the proposed energy efficiency program satisfy none of these three requirements. I therefore continue to recommend the Commission reject the creation of the proposed energy efficiency rider, instead requiring the Company to recover these costs through base rates.

VII. CONCLUSIONS AND RECOMMENDATIONS

A. Having reviewed the rebuttal testimony filed by the Company in this proceeding, I continue to recommend the Commission:

- Require some level of shared burden in light of recent macroeconomic challenges, balancing consumer affordability concerns with the financial interests of the Company.

[49] Rebuttal Testimony of Erik M. Solomon, NFG St. 18-R at 12:7-10.
[50] *Id.* at 12:13-18.

- Reject the Company's proposed ZIS approach to allocate costs associated with distribution mains within the Company's ACOSS. ZIS and related minimum system studies that are used to classify distribution mains investments are fundamentally flawed and provide little to no value in setting just and reasonable rates. In the alternative, I recommend that the Commission approve an alternative classification of distribution mains that incorporates a P&A cost allocation method using weights based on the Company's test year system load factor.
- Adopt a more reasonable revenue apportionment method based on my alternative ACOSS results that also limits the rate increase compared to the Company's proposed revenue allocation method. First, I recommend that classes with current relative cost parity ratios below 0.95 receive a rate increase equal to 1.15 times the system average increase. Second, I recommend that classes with current relative cost parity ratios greater than 1.05 receive a rate increase equal to 0.85 times the system average increase. Finally, I recommend that the remaining rate increase be equally allocated to remaining rate classes with current relative cost parity ratios of between 0.95 and 1.05.
- Reject the Company's proposed increase in residential and commercial customer charges. An analysis of customer-related costs finds that residential rate classes are currently recovering a majority of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers. If the Commission decides in the alternative that an increase in monthly customer charges is warranted, these increases should be limited to the percentage increase in class revenue requirement. This would furthermore be subject to scalebacks to reflect changes in allocated class revenue increases pursuant to Commission Orders.

Q. DO YOU HAVE ANY NEW RECOMMENDATION BASED ON YOUR REVIEW OF THE COMPANY'S REBUTTAL FILING?

A. Yes. If the Commission decides to continue the WNA, I recommend the Commission order the Company to expand the weather normalization to include three new separate weather stations, in addition to the weather station in Erie, located in or near the Company's service territory: DuBois, Pittsburgh, and Bradford, Pennsylvania. The Company's current process of normalizing its entire service territory based on weather conditions in Erie is flawed based on the unique weather conditions of Erie when compared against the rest of the Commonwealth.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Open Letter from Governor Josh Shapiro dated April 29, 2026

GOVERNOR JOSH SHAPIRO

April 29, 2026

Dear Utility Leaders:

As you are no doubt aware, many of your customers across the Commonwealth are experiencing markedly higher utility costs. Rising utility bills have themselves become drivers of inflation. While there are many factors affecting those increases, several core causes are directly within your control and result from your policy and fiscal decisions, including the excessive rate requests several utilities have sought in recent years. Last year alone, 13 Pennsylvania utilities requested $975 million in higher rates after those very same utilities had earned a total of $1.4 billion in profits in 2024.

We have reached a tipping point, and this is a moment to put your customers first and change the behaviors causing rate increases. As I've expressed publicly and privately, I believe the 20th century utility model is broken—we can no longer simply prioritize corporate profitability to drive infrastructure development. Rather, we must be laser focused on delivering on the actual needs of our communities. As I stated clearly in my Budget Address in February, Pennsylvania consumers should not be asked to pay a single dollar more than is needed to support a safe and reliable utility system.

Change is needed, and my Administration stands ready to support each Pennsylvania utility in raising the capital you need to invest in your service territories and workers, both in modernizing with cost-effective new technologies and maximizing the existing infrastructure that you have developed over time. However, as we work together to implement this new approach, you must seek to procure that capital in more affordable ways, conscious of the utility burdens facing many consumers across our Commonwealth.

Open Letter from Governor Josh Shapiro dated April 29, 2026

I write today to lay out three commonsense practices to ensure the needs of Pennsylvanians come first. My Administration will use these three practices as a benchmark to evaluate rate case proposals going forward. Let me be clear: my Administration and I will vocally and forcefully oppose rate case requests from utilities that fail to adhere to these three commonsense practices.

First, utilities should seek to raise the most cost-effective forms of capital. Best practices now require you to protect consumers by disfavoring expensive equity when lower-cost debt is available. Given the low risk profile of monopolistic utilities, which maintain a captive rate base able to repay obligations over time, consumers should not be expected to bolster corporate profits through over reliance on costly equity. This means debt should normally represent a clear majority of a utility's proposed ratemaking capital structure, as it does in many other lower-risk industries. As one measure of this approach, any equity share proposed in a rate case in excess of the amount of equity employed by the utility's parent holding company will require extraordinary justification to receive my Administration's support.

For utilities looking to find low-cost sources of capital, my Administration encourages you to apply to the Department of Energy, which is currently offering loan terms as favorable as the 10-year U.S. Treasury yield plus 35 basis points. By comparison, the average Pennsylvania utility requested a return on equity a staggering 682 basis points above the 10-year U.S. Treasury yield last year. Before raising such expensive equity, you should take advantage of more affordable sources of capital, like these loans, that many of your fellow utilities across the country are pursuing. My Administration stands ready to facilitate an introduction to loan officers at the Department of Energy upon your request.

Second, whenever new revenue is sought, a utility must explain in plain, clear language why its proposed investments are necessary, using transparent data to identify a specific reliability or safety concern that will be addressed, or demonstrating with a thorough cost/benefit analysis that the investment will produce significant savings or reliability benefits for consumers. This means showing the value customers will receive in terms of discrete improvements producing tangible outcomes that are timebound, verifiable, and logically linked to the need for additional capital. Creating real value for customers also means maximizing existing grid resources in ways that control costs and defer the need for future upgrades. You must also describe explicitly what amount of your

requested rate increase will be remitted to shareholders through corporate dividends or other means, as compared to what would be used to directly advance the needs of your customers.

Third, you must provide transparent, justifiable equity returns. Pennsylvania has a long, proud tradition of trusting free markets to deliver fair, transparent pricing. In fact, this year marks the 30th anniversary of Act 138, which introduced competition into our utility sector for the first time. That bipartisan law embodies Pennsylvania's deep-seated belief that free-market competition—when properly implemented and overseen—is the best tool for delivering customers the fair value they deserve. Today, we use markets to price our wholesale power and rely on principles of competition to fairly and impartially award public contracts. Yet less accurate administrative determinations—essentially amounting to educated guesses—still govern how much utilities earn on their equity investment. And all too often the outcome of this administrative process is shrouded in "black box" settlements, that do not provide the public with transparency about costs they will have to pay. These vestiges of the past need to evolve to ensure that utilities are not seeking excessive profits but only the opportunity to earn the fair rate of return to which they are entitled.

To accomplish this, utilities can prove their need for a requested return on equity by providing a benchmark (representing at least 10% of the incremental requested equity) that is transparently derived through a public process with competitive bidding by multiple participants to establish a fair market cost of that equity. This sample offers the energy consumer and Public Utility Commission real-world evidence of the proper authorized return on equity, an amount that will allow the utility to earn reasonable equity returns under efficient operations. If a utility declines to justify its requested return on equity through a competitive, transparent process, it creates a presumption in the view of my Administration that the requested rate is higher than would have been derived from such a competitive process. Absent extraordinary and unforeseen circumstances, a utility can overcome that presumption by requesting a return on equity that does not exceed the rate of the current 10-year U.S. Treasury yield plus the five-year median of the equity risk premium as published in the Federal Reserve's Financial Stability Reports. In simple terms, this allows the filing utility to earn the same expected return as the stock market as a whole, according to Federal Reserve estimates, comfortably exceeding typical Public Utility Commission calculations of risk for the utility sector.

Open Letter from Governor Josh Shapiro dated April 29, 2026

This provides an outcome that is fair for your utility and your customers even without an auction or other market-based price discovery mechanism.

This letter is an effort to be up front with you about my Administration's approach to rate requests going forward. In directly laying out these practices, I am making clear my expectations. I stand ready to collaborate with you, the Public Utility Commission, and other stakeholders in advancing thoughtful rate requests that put Pennsylvania families and businesses first and control costs after years of unacceptably high rate increases. Should you wish to have my Administration's support for any future rate requests, you must submit a description of your compliance with these practices to my Special Counsel for Energy Affordability alongside your rate case filings.

I appreciate your compliance with these practices and look forward to working together to control costs for ratepayers and build out the needed infrastructure for our Commonwealth.

Sincerely,

Governor Josh Shapiro

Mark Szybist, Special Counsel for Energy Affordability, Office of General Counsel

PECO Communication dated April 16, 2026

FOR IMMEDIATE RELEASE

PECO Withdraws Electric and Natural Gas Regulatory Rate Review Filings to Prioritize Customer Affordability

PHILADELPHIA | April 16, 2026

PECO Communications | PECO.Media@exeloncorp.com

PHILADELPHIA, PA (April 16, 2026) – Citing significant financial pressures facing households and businesses across southeastern Pennsylvania, PECO announced it is withdrawing its previously filed electric and natural gas distribution rate review filings with the Pennsylvania Public Utility Commission (PUC). The decision reflects a deliberate effort to prioritize customer affordability while continuing to deliver safe and reliable service.

Customers and communities across the region are facing sustained financial strain driven by rising costs for housing, food, healthcare, transportation, energy supply costs, and other everyday essentials. Against that broader economic backdrop, and taking into consideration conversations with Governor Josh Shapiro, as well as input from customers, community partners, and stakeholders, PECO reassessed the cumulative impact of the proposed rate changes on customers and determined now is not the right time to move forward.

"Keeping bills as low as possible through efforts like PECO's $12.5 million Customer Relief Fund to help low- and middle-income customers struggling with high energy costs is a top priority," said David Vahos, PECO president and CEO. "While our filing with the PUC would have provided needed improvements in safe and reliable energy delivery, we recognize that Pennsylvanians are struggling with basic necessities like gas, food, and energy and have decided to withdraw our proposal. We look forward to working with stakeholders across the region to find long-term solutions to high energy costs and to make needed investments at another time."

The withdrawn filings were intended to support near- and long-term electric and natural gas system modernization. However, it was determined that advancing those longer-term investments at this time would place additional strain on customers who are already managing significantly higher energy supply costs and broader cost-of-living challenges.

This decision reflects a careful balance between customer affordability and the company's responsibility to deliver high-quality service for the long term. PECO is committed to putting customers and communities first and acting responsibly when making major decisions. The company will continue near-term investments focused on system safety, essential maintenance, operational integrity, and reliability standards customers depend on every day. Customers can expect continued strong reliability performance as PECO continues to manage costs responsibly.

At the same time, PECO will continue evaluating longer-term grid modernization investments that support economic growth, job creation, and evolving energy needs across southeastern Pennsylvania. Withdrawing the filings gives the company the flexibility to better assess the timing, scope, and sequencing of those investments in the context of affordability and system priorities.

The company will also refocus on efforts to enact changes that will help to drive down energy supply prices – costs that the company does not control or profit from – to ensure adequate energy supply is available to meet rising demand. This continued "**all-of-the-above**" strategy is essential to continued affordability and reliability.

Safety remains non-negotiable. This strategic pivot does not change how PECO operates or protects its electric and natural gas systems, its employees, or the communities it serves.

PECO remains committed to a strong, transparent partnership with the PUC and will continue engaging regulators and stakeholders as it evaluates the appropriate path forward.

I. Introduction

Q. **PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

A. My name is Lafayette K. Morgan, Jr. My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland, 21044. I am a Public Utilities Consultant working with Exeter Associates, Inc. ("Exeter"). Exeter is a consulting firm specializing in issues pertaining to public utilities.

Q. **PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND QUALIFICATIONS.**

A. I received a Master of Business Administration degree from The George Washington University. The major area of concentration for this degree was Finance. I received a Bachelor of Business Administration degree with concentration in Accounting from North Carolina Central University. I was previously a CPA licensed in the state of North Carolina, however, in 2009, I elected to place my license in an inactive status as I focused on start-up activities for other business interests.

Q. **PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE.**

A. From May 1984 until June 1990, I was employed by the North Carolina Utilities Commission - Public Staff in Raleigh, North Carolina. I was responsible for analyzing testimony, exhibits, and other data presented by parties before the North Carolina Utilities Commission. I had the additional responsibility of performing the examination of books and records of utilities involved in rate proceedings and summarizing the results into testimony and exhibits for presentation before that Commission. I was also involved in numerous special projects, including participating in compliance and prudence audits of a major utility, and conducting research on several issues affecting natural gas and electric utilities.

From June 1990 until July 1993, I was employed by Potomac Electric Power Company ("Pepco") in Washington, D.C. At Pepco, I was involved in the preparation of the cost of service, rate base and ratemaking adjustments supporting Columbia's requests for revenue increases in the State of Maryland and the District of Columbia.

From July 1993 through 2010, I was employed by Exeter as a Senior Regulatory Analyst. During that period, I was involved in the analysis of the operations of public utilities, with emphasis on utility rate regulation. I reviewed and analyzed utility rate filings, focusing primarily on revenue requirements determination. This work involved natural gas, water, electric, and telephone companies.

In 2010, I left Exeter to focus on start-up activities for other ongoing business interests. In late 2014, I returned to Exeter continuing to work in a similar capacity as prior to my hiatus.

Q. **HAVE YOU PREVIOUSLY TESTIFIED IN REGULATORY PROCEEDINGS ON UTILITY RATES?**

A. Yes. I have previously presented testimony and affidavits on numerous occasions before the Regulatory Commission of Alaska, the Colorado Public Utilities Commission, the Georgia Public Service Commission, the Illinois Commerce commission, the Kansas Corporation Commission, the Kentucky Public Service Commission, the Louisiana Public Service Commission, the Maine Public Utilities Commission, the Maryland Public Service Commission, the Massachusetts Department of Public Utilities the North Carolina Utilities Commission, the Public Utilities Commission of Ohio, the Corporation Commission of Oklahoma, the Pennsylvania Public Utility Commission, the Philadelphia Gas Commission, the Philadelphia Water, Sewer and Storm Water Rate Board, the Public Utilities Commission of Rhode Island,

the Public Service Commission of South Carolina, the Public Utility Commission of Texas, the Vermont Public Service Board, the Virginia Corporation Commission, the West Virginia Public Service Commission, the Wyoming Public Service Commission, and the Federal Energy Regulatory Commission ("FERC"). My resume is attached hereto as Appendix A.

Q. **ON WHOSE BEHALF ARE YOU APPEARING?**

A. I am presenting this testimony on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. **WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?**

A. Exeter has been retained by the OCA to assist in the evaluation of the general rate filing submitted by National Fuel Gas Distribution Corporation ("NFG" or the "Company"). I have been asked by the OCA to present my findings with respect to the Company's revenue requirement and its proposed rate increase. I calculate the Company's rate base, pro forma operating income under present rates, and overall revenue deficiency based upon my recommended adjustments to the Company's claims. My findings are based upon incorporating the recommendations and findings of other OCA witnesses who are also presenting testimony in this proceeding.

II. Summary of NFG's Rate Increase Application

Q. **PLEASE SUMMARIZE THE RATE RELIEF REQUESTED BY THE COMPANY IN ITS FILING.**

A. On January 28, 2026, NFG filed its base rate case with the Pennsylvania Public Utility Commission (the "Commission") seeking a general rate increase pursuant to 66 Pa. C.S. § 1308(d) of the Public Utility Code. If NFG's full requested increase is granted, the Company's annual base rate distribution revenue would increase by approximately

$19.7 million, or 7.4% on a total revenue basis.[1] For a residential customer using 80 ccf per month, that customer's bill would increase from $83.49 to $88.44 per month, resulting in an increase of $4.95, or 5.9%.[2] The requested increase in rates is intended to provide the Company with an opportunity to earn an 8.78% overall rate of return (including an 11.25% return on common equity) on a rate base of $571.6 million.[3]

According to the Company, the principal reasons for the requested increase in rates are: (1) The required increase in investment in rate base related to the Company's acceleration of its leak-prone pipeline replacement and system modernization activities; (2) The increasing levels of operating costs, such as higher employee wages and compensation, information technology and cybersecurity costs, and the continued effects of inflation driving higher overall costs; and (3) Declining levels of residential and commercial customer usage for heating due to warming weather trends.[4]

Q. **IN CONNECTION WITH THIS CASE, HAVE YOU PERFORMED AN EXAMINATION AND REVIEW OF THE COMPANY'S TESTIMONY AND EXHIBITS?**

A. Yes. I have reviewed the Company's testimonies, exhibits and its rate filing. I have also reviewed the Company's responses to the OCA and the Bureau of Investigation & Enforcement ("I&E") interrogatories.

Q. **WHAT PERIOD HAVE YOU USED IN MAKING YOUR DETERMINATION OF THE COMPANY'S REVENUE REQUIREMENTS?**

[1] Direct Testimony of Rebecca E. Hillery at 5:24.
[2] National Fuel Gas Distribution Corporation Docket No. R-2025-3059428 January 28, 2026 filing cover letter.
[3] National Fuel Gas Distribution Corporation Docket No. R-2025-3059428, Exhibit A - FPFTY Schedule A-1.
[4] Direct Testimony of Rebecca E. Hillery at 13.

A. I used the Fully Projected Future Test Year ("FPFTY") ending October 31, 2027, as the basis for determining the FPFTY revenue requirements, the same period as requested by the Company.

Q. **HAVE YOU PREPARED EXHIBITS TO ACCOMPANY YOUR TESTIMONY?**

A. Yes. I have prepared two sets of exhibits that derives the change in revenues based upon the two rate of return ("ROR") presentations of OCA witness Reno. In Ms. Reno's direct testimony, she presents a recommended ROR of 7.66% and an alternative ROR of 7.62% which are summarized below. In her testimony, Ms. Reno explains the reasons for the two ROR presentations.

OCA Recommended ROR Calculation

Description	Capitalization Ratio	Cost Rate	Weighted Cost
Long-Term Debt	50.00%	5.58%	2.79%
Short-Term Debt	0.00%	0.00%	0.00%
Total Debt	50.00%		2.79%
Common Equity	50.00%	9.74%	4.87%
Total	100.00%		7.66%

Source:
Per OCA Witness Reno

OCA Alternative ROR Calculation

Description	Capitalization Ratio	Cost Rate	Weighted Cost
Long-Term Debt	43.60%	5.58%	2.43%
Short-Term Debt	0.00%	0.00%	0.00%
Total Debt	43.60%		2.43%
Common Equity	56.40%	9.21%	5.19%
Total	100.00%		7.62%

Source:
Per OCA Witness Reno

Accordingly, I am presenting two sets of revenue requirement exhibits which calculate the revenue requirements under both of Ms. Reno's presentations. My Exhibit Set A is

based upon Ms. Reno's recommended ROR of 7.66%. Exhibit Set B is based upon Ms. Reno's alternative ROR of 7.62%. Both sets of exhibits are composed of 19 exhibits and are differentiated by the suffix "A" and "B" to denote the underlying ROR on which the calculation is based. (Eg., Exhibits LKM-1A through LKM-19A.) Both sets of exhibits are consistent in the presentation of the cost of service.

Exhibit LKM-1 provides a summary of revenues and expenses under present and proposed rates. Exhibit LKM-2 summarizes my adjustments to the Company's FPFTY rate base. Exhibit LKM-3 provides a summary of my adjustments to the FPFTY revenues and expenses and the resulting operating income. The supporting schedules for each of the adjustments that I am recommending to the Company's claimed rate base, revenues and operating expenses are presented on Exhibits LKM-4 through LKM-19.

III. Summary of OCA's Change in Revenue

Q. **PLEASE SUMMARIZE YOUR FINDINGS AND RECOMMENDATIONS.**

A. Exhibit Set A presents the OCA's primary recommendation. As shown on Exhibit LKM-1A, I have determined that the Company's annual revenues, using the OCA's recommended ROR, should be increased by $4.069 million annually for the FPFTY ending October 31, 2027. This represents a decrease of $15.612 million from the Company's requested increase of $19.7 million. This is the amount by which revenues exceed those required to generate an overall rate of return on rate base of 7.66% percent after accounting for the OCA's adjustments to the Company's claimed rate base and operating income. Using the OCA's alternative ROR, the Company's annual revenues should be increased by $4.533 million annually for the FPFTY ending October 31, 2027. This represents a decrease of $15.148 million from the Company's requested

increase of $19.7 million. This is the amount by which revenues exceed those required to generate an overall rate of return on rate base of 7.62% percent after accounting for the OCA's adjustments to the Company's claimed rate base and operating income. The table below summarizes my adjustment to the cost of service.

National Fuel Gas Distribution Corporation
Summary of Cost of Service Adjustments
($ in Thousands)

Line No.	Description	Rate Base	Revenue	Operating Expenses	Income Taxes Effect
1	Adjustment to Cash Working Capital	$ (1,184)	$ -	$ -	$ -
2	Include CIAC in Rate Base	(45)	-	-	-
3	Include Customer Advances in Rate Base	(54)	-	-	-
4	Effect of Depreciation Rates on Accum. Depreciation	4,670	-	-	-
5	Reflect Growth in Rent From Gas Property	-	12	-	3
6	Remove Stock-Based Compensation	-	-	(1,430)	379
7	Amortize Insurance Settlement Proceeds	-	-	(312)	83

14	Include Customer Payment Transaction Costs	-	-	930	(247)
15	Reflect OCA Recommended Depreciation Rates	-	-	(4,670)	1,238
16	Interest Synchronization Adjustment	-	-	-	(571)
17	Total OCA Adjustments	$ 3,387	$ 12	$ (6,113)	$ 1,051

Q. **HOW IS THE REMAINDER OF YOUR TESTIMONY ORGANIZED?**

A. This section, Section I, provides the introductory information to my testimony. Section II presents a summary of my findings and conclusions. In Section IV, I document and explain each of the accounting adjustments that I have made to the rate base and operating income to arrive at the test year revenue increase shown on Exhibit LKM-1.

Additionally, attached to this testimony, I present the exhibits that support my adjustments and summarize my revenue requirement recommendation. Appendix A, attached to this testimony, provides my resumé which summarizes my professional experience.

IV. Revenue Requirement Issues

1. Working Capital Allowance

Q. **WHAT ARE THE COMPONENTS OF RATE BASE THAT FORM A UTILITY'S TOTAL WORKING CAPITAL CLAIM?**

A. For ratemaking purposes, the working capital allowance is composed of two categories of funds that are captured in rate base in order to recognize the cost of funds that a utility needs to dedicate to acquiring certain goods and services and to provide cash for day-to-day operations. The two categories are: (1) the Cash Working Capital Allowance and (2) Inventory and Prepayments (i.e., Materials & Supplies inventory, Stored Gas inventory and Prepaid Expenses)

Q. **WHAT IS THE CASH WORKING CAPITAL ALLOWANCE?**

A. The cash working capital allowance measures the funds which the utility needs to have on hand to fund its day-to-day utility operations. The Company's cash working capital allowance is calculated based upon the results of a lead/lag study. A lead/lag study is an in-depth analysis that measures the difference between the lapse of time when a company receives revenue for the provision of service and the lapse of time when a company pays for the costs of providing service. This difference is expressed as a number of days and is used to calculate the level of investor-supplied funds advanced for operations, or the funds advanced by customers for operations. A positive cash working capital allowance is considered to represent funds provided by investors; the

utility is entitled to earn a return on those funds. Negative cash working capital represents funds supplied by ratepayers that should be recognized as a rate base offset to reflect funds advanced for operations by ratepayers.

Q. **WHAT CHANGES HAVE YOU MADE TO THE CASH WORKING CAPITAL ALLOWANCE?**

A. The operating expenses (O&M expenses and taxes) and interest expense are the bases on which the lead/lag study derives the cash working capital allowance. Therefore, when calculating the cash working capital allowance, any adjustment made to operating expenses, taxes or interest expense (as a result of changes in the capital structure or the cost of debt) should also be incorporated in the lead/lag study.

My adjustment to the cash working capital allowance reflects the following adjustments. First, I have adjusted the lead/lag study to reflect the adjustments to the operating expenses that I have recommended. In addition, the changes that I recommended to rate base have also affected the synchronized interest adjustment. This results in a change in the interest expense used in the lead/lag study. Second, there are a number of amortizations and accrued expenses that are reflected in the operating expenses. These expenses do not require the use of cash, so I have removed those expenses from the lead/lag study. Given that these are non-cash expenses, it is inappropriate to include a cash working capital allowance for these expenses. After reflecting the changes discussed above, I am recommending an adjustment to the cash working capital allowance. This adjustment results in a decrease in rate base of $1,184,000 as presented on Exhibit LKM-4A.

Q. **WHAT ADJUSTMENT ARE YOU RECOMMENDING TO PREPAID EXPENSES?**

A. Prepaid expenses represent the payment of expenses prior to the period in which the goods or services are used. This means that the Company loses the ability to use the cash, used to pay the prepaid expenses, for other purposes. From a working capital perspective, since the cash used for the prepaid expense is lost to the vendor before the goods or services are used for the period, the Company is entitled to the time value of the funds during the period before the goods or services have been used. However, the expenses that are recognized during the accounting period cannot also be included in the lead/lag study where an allowance for cash working capital is provided, while simultaneously including the related prepaid expenses in rate base. This would lead to a double counting of the cash working capital related to these expenses. To prevent this double counting of the cash working capital related to the prepaid expenses, I am recommending an adjustment to remove the prepaid expenses from rate base. This adjustment results in a decrease in rate base of $1,080,000 which was claimed by the Company.

2. Contributions in Aid of Construction

Q. **WHY ARE YOU MAKING AN ADJUSTMENT TO CONTRIBUTIONS IN AID OF CONSTRUCTION?**

A. Contributions in aid of construction ("CIAC") is a transaction in which a utility receives upfront payments for new or expanded service, such as a line extension under certain circumstances. It may also include plant in service or other goods and services given to a utility for nothing in return. Utilities typically receive contributions such as land, buildings, equipment, from developers and large customers. The value of the payments received, system infrastructure equipment and materials that are received and used by the utility to provide service to customers represent the cost of investments that are not

incurred by the utility. For ratemaking purposes, the value of the investments not incurred by the utility represents cost free capital to the utility. Therefore, the utility is not entitled to receive a return on the avoided cost of the investment and CIAC is deducted from rate base.[5]

NFG has certain CIAC on its books which it has not reflected as a reduction to rate base. Consistent with traditional ratemaking practices, I am recommending an adjustment to reduce rate base by $45,000, the value of the CIAC account. This adjustment is presented on Exhibit- LKM 5A.

3. Customer Advances for Construction

Q. **WHY ARE YOU MAKING AN ADJUSTMENT TO CUSTOMER ADVANCES FOR CONSTRUCTION?**

A. Customer Advances for Construction represents advances by customers for construction which are to be refunded either wholly or in part by the utility at a later date. While these funds are held by the Company, it has use of these funds for the construction project which is used to offset its costs. For ratemaking purposes, the value of the investments not incurred by the utility represents cost free capital to the utility. Therefore, the utility is not entitled to receive a return on the avoided cost of the investment and Customer Advances are deducted from rate base.

NFG has certain Customer Advances on its books which it has not reflected as a reduction to rate base. Consistent with traditional ratemaking practices, I am recommending an adjustment to reduce rate base by $54,000, the value of the Customer Advances account. This adjustment is presented on Exhibit- LKM 5A.

[5]Pennsylvania Public Utility Commission, A guide to Utility Ratemaking, 2018 Edition, page 124.

4. Forfeited Discounts

Q. **PLEASE EXPLAIN YOUR ADJUSTMENT TO FORFEITED DISCOUNTS.**

A. Forfeited Discounts are additional charges, such as late fees, imposed on customers because of the failure of customers to pay their utility bills on or before a specified date. These fees are usually charged as a percentage of the original bill. Because the rate increase to be decided will result in higher bills, the forfeited discount will increase as well since it is based on a percentage of the utility service bill. I have calculated the forfeited discount percentage based on the ratio of the forfeited discount to total service revenues for the three most recent historical years. This results in an increase in Other Revenues of $25,000 which is the amount by which I have adjusted Forfeited Discounts. This adjustment is presented on Exhibit LKM-6A.

5. Rent from Gas Property

Q. **PLEASE EXPLAIN YOUR ADJUSTMENT TO RENT FROM GAS PROPERTY.**

A. The Company indicates that Rent From Gas Property was held flat for the FTY and the FPFTY.[6] However, in the three most recent years, the Company has experienced a 6% average annual growth in Rent From Gas Property. Based upon the historical experience, I believe it is appropriate to reflect the historical growth in this account for the FPFTY. Therefore, I have adjusted Rent From Gast Property by $12,000 on Exhibit LKM-7A.

6. Incentive Compensation Expense

Q. **PLEASE EXPLAIN YOUR ADJUSTMENT TO INCENTIVE COMPENSATION EXPENSES.**

[6] Responses to Section 53.53 III-H.5.

A. **[Confidential Begins.]** [redacted][7] **[Confidential Ends]**

I am recommending an adjustment to remove the 2010 Equity Compensation Plan expense from the cost of service based upon the stated purpose of the plan, which is to "advance the interests of the Company and its stockholders."[8] As an investor-owned utility, the interests of the Company and its stockholders primarily depend on the Company remaining a going concern. As such, operating the Company is based upon a profit motive. Hence, one of the primary interests of the Company and its shareholders is to achieve earnings that are high enough to attract investors, achieve financing on good terms and improve shareholder value. The achievement of earnings goals is primarily targeted towards increasing shareholder value and benefiting shareholders. Therefore, these costs are not properly recoverable from ratepayers for several reasons.

[7] 2010 Equity Compensation Plan, Amended and Restated December 7, 2023, Section 1.
[8] *Id.*

First, if the financial targets are set properly, achieving the necessary performance should be self-supporting. This means that the measures that achieve additional cost savings, increase revenue, or otherwise improve financial results should generate the necessary income to cover the incentive plan payments. Second, these payments are not tied to ratepayer benefits such as meeting quality of service, operational efficiency, or conservation goals. Finally, the incentive to improve financial performance is not necessarily consistent with the interests of NFG's ratepayers, but, instead, is more aligned with shareholders' interests. Shareholder value has a correlation to earnings, so when improved earnings are reported, shareholder value improves but rates do not go down. Thus, the beneficiaries of the improved earnings are the shareholders. Therefore, it is appropriate for shareholders, not ratepayers, to bear these costs. Finally, the incentive to improve financial performance is not necessarily consistent with the interests of NFGD's ratepayers, but, instead, is more aligned with shareholders' interests. Shareholder value has a correlation to earnings, so when improved earnings are reported, shareholder value improves but rates do not go down. Thus, the beneficiaries of the improved earnings are the shareholders. Therefore, it is appropriate for shareholders, not ratepayers, to bear these costs.

Q. **WHAT IS THE EFFECT OF YOUR ADJUSTMENT TO ELIMINATE THE INCENTIVE COMPENSATION PAYMENTS?**

A. The adjustment to incentive compensation is presented on Exhibit LKM-8A. My adjustment reduces O&M expenses by $1.430 million.

7. Insurance Settlement Proceeds

Q. **PLEASE EXPLAIN YOUR ADJUSTMENT TO INSURANCE SETTLEMENT PROCEEDS.**

A. The Company has $936,314 in a regulatory liability account on its books which represents environmental proceeds from an insurance settlement. According to the Company, the insurance proceeds that have been deferred as a regulatory liability since the ratepayers paid for the premiums on the original policy.[9] I am recommending that this liability be returned to customers since the insurance costs were paid by customers.

Q. **ACCORDING TO THE COMPANY, THE AMOUNT IN THIS ACCOUNT WAS USED TO PAY FOR ENVIRONMENTAL CLAIMS AS THEY ARISE.[10] WHY IS IT NECESSARY TO REFUND THE BALANCE TO RATEPAYERS?**

A. As explained by the Company, these are ratepayers' funds,[11] so they are entitled to have them returned. The statement by the Company that the funds in this account are used to pay claims as they arise is vague as far as how long the Company may end up holding these funds. As I understand the Commission's historical practice, I am unaware of a means by which ratepayers can receive the time value of the funds held by the Company. This means that the Company has use of these funds on a cost-free basis. If these funds are not returned to ratepayers by lowering their rates, ratepayers will end up paying higher rates while the Company retains use of their funds on a cost-free basis. I believe this is not a fair proposition for ratepayers. Therefore, on Exhibit-LKM 9A, I am recommending a reduction in operating expense of $312,000 to reflect a 3-year flowback of these funds to ratepayers.

8. Office Employee Expenses

Q. **PLEASE EXPLAIN YOUR ADJUSTMENT TO OFFICE EMPLOYEE EXPENSES.**

[9] III-F.8, Footnote 4.
[10] III-F.8, Footnote 4.
[11] *Id.*

A. The Company has proposed an adjustment to increase Office Employee Expenses using a compound growth rate of 3.67% based on the FY 2023 to FY 2025 period. I am recommending an adjustment to remove the increase in this expense line item because this approach is inconsistent with my understanding of the zero-based budgeting approach that NFG witness Formato claims the Company uses for its operating budget. My understanding of zero-based budgeting is that the development of the budget each year begins with a clean slate, and then based upon the activities and plans for the budget year, the budget is developed based upon costing out the resources needed to achieve those plans and activities. In my opinion, applying a compound growth rate to historical costs is not consistent with zero-based budgeting and does not produce results that are representative of the cost that would be incurred in the FPFTY because there is no correlation of the planned activities for the budget year and the underlying costs used to develop the budget. Therefore, I am recommending an adjustment to remove the effects of the compound growth rate from this expense. This expense is presented on Exhibit LKM-10A_ and results in a $64,000 decrease in operating expenses.

9. Other Expense -Line Hit Collections

Q. **PLEASE EXPLAIN YOUR ADJUSTMENT TO OTHER EXPENSE -LINE HIT COLLECTIONS.**

A. Line hit collections represent the amount recovered in reimbursements for damage to the Company gas lines. The Company made an adjustment to normalize line hit collections because the amount recovered during FY 25 was unusually high in comparison to the two prior years.

I am recommending an adjustment to reverse the Company's adjustment because I believe it is one-sided and unfair. Based on my understanding, the Other

Expense account is used to capture the expense incurred to repair damages to the Company's gas lines. This means that line hit collections received are used to offset the repair expenses. If the line hit collections are unusually high in any one year, by extension, it means that line hit repairs expenses were higher as well. Therefore, both components of the net cost to repair damaged lines should be normalized to fairly normalize the cost of repairs. In other words, if the cost offsetting component is being normalized, then it is also appropriate to normalize the expenses incurred. If only the reimbursements (line hits collections) are normalized, it would result in higher expenses. Therefore, on Exhibit 11A, I am recommending an adjustment to reduce operating expenses by $156,000.

10. Charge Off of Customer A/R

Q. **PLEASE EXPLAIN YOUR ADJUSTMENT TO "CHARGE OFF OF CUSTOMER A/R."**

A. The Company uses the uncollectible expense account to normalize and recover uncollectible expenses. Hence, it is understood that this account is considered to be the account that is used to capture write-offs of customer accounts receivables. However, during my review of Other Expenses, I discovered a line item described as "Charge Off Of Customer A/R". From the name of the account, it appears to be a second account that is included in the cost of service to recover write-offs of accounts receivables. I have removed this account because it is unclear to me what this account represents and whether it is duplicative of the costs included in the uncollectible expense. I am requesting that in NFG's rebuttal testimony, the Company should fully explain the nature of this account and why it is appropriate to have another account to write-off

customer accounts receivable. Therefore, on Exhibit 12A, I am recommending an adjustment of $147,000 to remove this expense from the cost of service.

11. Uncollectible Expense

Q. **PLEASE EXPLAIN YOUR ADJUSTMENT TO UNCOLLECTIBLE EXPENSE.**

A. The uncollectible expense is derived from a ratio based upon a three-year average of uncollectible expense (based on net write-offs) to revenues. The Company calculated an uncollectible factor of 1.53% based on the three-year uncollectible ratio that was calculated from the historical data, and then added a 0.02% management adjustment to derive a total uncollectible factor of 1.55%. The Company stated that "the management adjustment of 0.02% was made to account for the dynamic that the uncollectible factor would likely rise because of higher customer bills stemming from the Company's proposed rate increase."[12] I disagree with this approach because the revenue gross up factor includes a component for uncollectible expense. As a result, the calculated revenue increase is grossed up to reflect the value of higher uncollectible accounts resulting from the rate increase.

I am recommending an adjustment which reduces uncollectible expense by $73,000 as a result of removing the 0.02% management adjustment. This adjustment is presented on Exhibit LKM-13A.

Q. **DID YOU MAKE ANOTHER ADJUSTMENT RELATED TO THE UNCOLLECTIBLE FACTOR?**

A. Yes. The 1.55% uncollectible factor was used by NFG in the revenue gross-up factor. As I explained above, I have corrected the uncollectible factor in the revenue gross-up

[12] Response to OCA 14-12.

calculation to reflect the 1.53% uncollectible factor which is based on the actual three-year historical data.

12. Postage Expense

Q. **PLEASE EXPLAIN YOUR ADJUSTMENT TO POSTAGE EXPENSE.**

A. The Company adjusted 1st class postage expense based on the compound annual growth rate for three years. I disagree that the Company growth rate is representative of the future increases in 1st class postage. First, the analysis is backward looking during a period when the US Postage Service implemented frequent rate increases. This type of increase is not likely to be repeated based on statements made by the US Postage service. In September 2026, the U.S. Postal Service ("USPS") announced there would be no stamp price changes for January 2026.[13] Although, the USPS subsequently announced price changes for 2026, those price changes were not for 1st class mail.[14] On April 9, 2026, , the U.S. Postal Service announced a 4.8% increase in 1st class stamp prices effective July 12, 2026.[15] At this time, this is the only known change in the price of 1st class postage. Hence, the Company's 9% projected postal price increase is speculative and not known or certain at this time. Therefore, on Exhibit 14A, I have calculated postage expense to reflect the 4.8% scheduled postage rate increase. This calculation results in an adjustment that decreases postage expenses by $175,000.

13. Economic Development Expense

Q. **PLEASE EXPLAIN YOUR ADJUSTMENT TO ECONOMIC DEVELOPMENT EXPENSE.**

[13] https://about.usps.com/newsroom/national-releases/2025/0924-usps-announces-no-stamp-price-changes-for-january-2026.htm
[14] https://about.usps.com/newsroom/national-releases/2025/1114-usps-recommends-new-competitive-prices-for-2026.htm
[15] https://about.usps.com/newsroom/national-releases/2026/0409-usps-recommends-new-prices-for-july.htm

A. The Company included annual dues for membership in three economic development organizations in the cost of service -- Erie Downtown Development Corporation, Penn-Northwest Development Corp, and Clarion County Economic Development. Erie Downtown Development Corporation's ("EDDC") mission statement states: "Downtown Erie is undergoing massive transformational change. Visionary business, philanthropic and community leaders formed the EDDC in 2017, to transform the city of Erie's downtown core and spark revitalization across the region."[16] The mission statement of Penn-Northwest Development Corporation states: "Penn-Northwest Development Corporation was born out of a necessity to confront and overcome the economic challenges faced by Mercer County. Witnessing the effects of industrial downturns and the need for sustainable economic revitalization, our mission is clear: to proactively address these challenges with robust solutions. We are deeply invested in Mercer County's prosperity, not merely because it is our home, but because we believe in the potential and resilience of its people. Our commitment to economic development is, at its core, a commitment to the community's future—fueling growth, opportunity, and a better quality of life for every resident."[17] Finally, Clarion County Economic Development's mission statement states: "For more than 30 years, the Clarion County Economic Development Corporation's mission has been to work with existing and prospective wealth generating companies to create and keep family sustaining jobs in Clarion County."[18] Clearly, none of these organizations are focused on employee development or related to the utility operations.

Accordingly, the amount paid by NFG to the Erie Downtown Development Corporation is for annual dues for the non-profit organization focused on revitalizing

[16] https://www.erieddc.org/
[17] https://www.penn-northwest.com/about
[18] https://www.co.clarion.pa.us/government/departments/economic_development_corp_/index.php

downtown Erie, Pennsylvania, through development projects.[19] The amount paid to Penn-Northwest Development Corp is for annual membership in the organization which provides economic development functions in cooperation with existing development groups and local governments throughout Mercer County, Pennsylvania.[20] For Clarion County Economic Development, the amounts paid were for annual membership in the organization that assists existing and prospective wealth generating companies to create and keep family sustaining jobs in Clarion County.[21]

Membership in these entities has very little to do with providing service to current ratepayers and is more closely aligned to corporate image building. Moreover, economic development is not a function of a public utility, so it is not appropriate to recover these costs from ratepayers. Therefore, on Exhibit LKM-15A, I am recommending an adjustment to remove these costs of $17,000 from the cost of service.

14. Customer Payment Transaction Fees

Q. **PLEASE EXPLAIN YOUR ADJUSTMENT TO CUSTOMER PAYMENT TRANSACTION FEES.**

A. OCA witness Wise recommends that customer bill payment transaction fees be absorbed by the Company for those customers who pay their bills by credit and debit cards, as well as electronic payment methods such as Venmo and PayPal. Based on her recommendation, I have adjusted operating expenses by $930,000 to include the cost of the transaction fees in the cost of service. This adjustment is presented on Exhibit LKM16A.

[19] Response to OCA 10-34 Attachment.
[20] *Id.*
[21] *Id.*

15. Depreciation Expense

Q. **WHAT ADJUSTMENT ARE YOU RECOMMENDING TO DEPRECIATION EXPENSE?**

A. OCA witness Andrews is recommending changes to the Company's proposed depreciation rates. On Exhibit LKM-17A, I am recommending an adjustment to decrease depreciation expense to reflect Mr. Andrews' recommendations. This adjustment results in a decrease to Depreciation Expense of $4.67 million.

Q. **BASED ON THE ADJUSTMENT TO DEPRECIATION EXPENSE, ARE YOU MAKING ANY ADDITIONAL ADJUSTMENTS?**

A. Yes. I am also adjusting the Company's claimed accumulated depreciation balance. Annual depreciation expense accruals are summed and included in the utility's accumulated depreciation balance as an offset to gross plant in service. I have made a corresponding downward adjustment of $4.67 million to NFG's accumulated depreciation claim consistent with OCA witness Andrews' depreciation expense adjustment, resulting in an increase to the Company's claimed rate base balance of the same amount.

16. Pennsylvania Corporate Income Tax

Q. **WHAT ADJUSTMENT HAVE YOU MADE TO THE PENNSYLVANIA CORPORATE INCOME TAX?**

A. The Commonwealth of Pennsylvania passed legislation that instituted a multi-year phasedown of corporate income tax rates beginning in 2023 to reduce the tax rate from 9.99% to 4.99% by 2031. The Company used the 2026 tax rate of 7.49% in the determination of the revenue requirement. However, for the majority of the months in the FPFTY, the tax rate will be at the 2027 tax rate of 6.99%. Therefore, I have used

the 2027 tax rate of 6.99% in the determination of my recommended change in revenues. It should be noted that in this jurisdiction, the Commission allows utilities to recover or refund any difference in tax expense related to changes in the tax rates. As a result, NFG does not run the risk of under recovering its state income tax expense for the FPFTY.

17. Interest Synchronization

Q. **PLEASE EXPLAIN YOUR INTEREST SYNCHRONIZATION ADJUSTMENT.**

A. To determine the tax deductible interest expense for ratemaking, I have multiplied the OCA's recommended rate base by the weighted cost of debt included in the capital structure recommended by OCA witness Reno. This procedure synchronizes the interest expense deduction for tax purposes with the interest component of the return on rate base to be recovered from ratepayers. As shown at the bottom of Exhibit LKM-18A, this adjustment increases the interest expense deduction by $2,153,000 to a total of $16.042 million compared to the interest deduction of $13.889 million calculated by NFG. This decreases state and federal income taxes by $150,000 and $421,000, respectively.

18. Cost of Capital

Q. **ON EXHIBIT LKM -19A, YOU PRESENT A CALCULATION OF THE RATE OF RETURN, INCLUDING THE CAPITAL STRUCTURE. ARE YOU MAKING ANY RECOMMENDATION REGARDING THE RATE OF RETURN OR CAPITAL STRUCTURE?**

A. No. The OCA's capital structure and cost of capital recommendations are sponsored by Ms. Reno. The purpose of this exhibit is to show the calculation of the rate of return used in my derivation of the revenue requirement.

Q. **DOES THIS COMPLETE YOUR DIRECT TESTIMONY?**

A. Yes, it does.

BEFORE THE

PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION		
V.	:	DOCKET NO. 2025-3059428
NATIONAL FUEL GAS DISTRIBUTION CORPORATION PENNSYLVANIA DIVISION		

DIRECT TESTIMONY
OF
LAFAYETTE K. MORGAN, JR.

Appendix A

LAFAYETTE K. MORGAN, JR.

Mr. Morgan is an independent regulatory consultant focusing in the area of the analysis of the operations of public utilities with particular emphasis on rate regulation. He has reviewed and analyzed utility rate filings, focusing primarily on revenue requirements determination, accounting and regulatory policy and cost recovery mechanisms. This work has included natural gas, water, electric, and telephone utilities.

Education and Qualifications

B.B.A. (Accounting) – North Carolina Central University, 1983

M.B.A. (Finance) – The George Washington University, 1993

C.P.A. – Licensed in the State of North Carolina (Inactive status)

Previous Employment

1993-2010	Senior Regulatory Analyst Exeter Associates, Inc. Columbia, MD
1990-1993	Senior Financial Analyst Potomac Electric Power Company Washington, D.C.
1984-1990	Staff Accountant North Carolina Utilities Commission – Public Staff Raleigh, NC

Professional Experience

As a Staff Accountant with the North Carolina Utilities Commission – Public Staff, Mr. Morgan was responsible for analyzing testimony, exhibits, and other data presented by parties before the Commission. In addition, he performed examinations of the books and records of utilities involved in rate proceedings and summarized the results into testimony and exhibits for presentation before the Commission. Mr. Morgan also participated in several policy proceedings and audits involving regulated utilities.

As a Senior Financial Analyst with Potomac Electric Power Company, Mr. Morgan was a lead analyst and was involved in the preparation of the cost of service, rate base, and ratemaking adjustments supporting the Company's request for revenue increases in its retail jurisdictions.

As a Senior Regulatory Analyst with Exeter Associates, Inc., Mr. Morgan has been involved in the analysis of the operations of public utilities with particular emphasis on rate regulation. He has reviewed and analyzed utility rate filings, focusing primarily on revenue requirements determination, accounting and regulatory policy and cost recovery mechanisms. This work included natural gas, water, electric, and telephone utilities.

Kings Grant Water Company (North Carolina Utilities Commission, Docket No. W-250, Sub 5), 1984. Presented testimony on rate base, cost of service, and revenue and expense adjustments on behalf of the North Carolina Utilities Commission – Public Staff.

Northwood Water Company (North Carolina Utilities Commission, Docket No. W-690, Sub 1), 1985. Presented testimony on rate base, cost of service, and revenue and expense adjustments on behalf of the North Carolina Utilities Commission – Public Staff.

Emerald Village Water System (North Carolina Utilities Commission, Docket No. W-184, Sub 3), 1985. Presented testimony on rate base, cost of service, and revenue and expense adjustments on behalf of the North Carolina Utilities Commission – Public Staff.

Assisted the Pennsylvania Office of Consumer Advocate (OCA) with investigation of Apollo Global Management, Inc. application to acquire Pike County Light and Power Company and Leatherstocking Gas Company, LLC,. Provided testimony, on behalf of the OCA, identifying issues and recommendations to be considered by the Commission in approving the transaction.

American Water Works Company, Inc. ("American Water"), Pennsylvania-American Water Company ("PAWC"), Nexus Regulated Utilities, LLC ("Nexus") and Community Utilities of Pennsylvania Inc. ("CUPA") for all the necessary authority, approvals, and certificates of public convenience under Sections 1102 and 1103 of the Pennsylvania Public Utility Code to approve the transfer of control of CUPA from Nexus to American Water. (Pennsylvania Public Utility Commission, A-2025-3055551, A-2025-3055552, A-2025-3055553, A-2025-3055554), October 2025. Assisted the Pennsylvania Office of Consumer Advocate (OCA)

with investigation of Pennsylvania-American Water application to acquire Community Utilities of Pennsylvania Inc. Provided testimony, on behalf of the OCA, identifying issues and recommendations to be considered by the Commission in approving the transaction.

Energy Center Harrisburg LLC. (Pennsylvania Public Utility Commission, Docket No. R-2025-3055959, October 2025. Assisted the Pennsylvania Office of Consumer Advocate (OCA) with the evaluation of Energy Center Harrisburg LLC's request for a base rate increase. Presented testimony, on behalf of the OCA, on accounting issues including test year revenue requirements.

City of Lancaster – Water Department (Pennsylvania Public Utility Commission, Docket No. R-2025-3057237), December 2025. Assisted the Pennsylvania Office of Consumer Advocate (OCA) with the City of Lancaster – Water Department's application for an increase in rates. Presented testimony, on behalf of the OCA, on accounting issues including test year revenue requirements.

PPL Electric Utilities (Pennsylvania Public Utility Commission, Docket No. R-2025-3057164), December 2025. Presented testimony on rate base and cost of service issues on behalf of the Pennsylvania Office of Consumer Advocate.

Special Projects

Developed a Uniform System of Accounts and Financial Data Collection Template for five countries participating in the National Association of Regulatory Utility Commissioners (NARUC)/East Africa Regional Energy Regulatory Partnership. Also conducted training seminars and participated as a panel member addressing issues in the utility industry from the perspective of the regulator. This work was conducted by NARUC) and the United States Agency for International Development (USAID).

Other Projects

Texas Gas Transmission Corporation (Federal Energy Regulatory Commission, Docket No. RP93-106). Technical analysis and participation in settlement negotiations on cost of service, invested capital, and revenue deficiency on behalf of the Indiana Office of Utility Consumer Counselor.

Natural Gas Pipeline Company of America (Federal Energy Regulatory Commission, Docket No. RP93-36). Technical analysis and participation in settlement negotiations on cost of service, invested capital, and revenue deficiency on behalf of the Indiana Office of Utility Consumer Counselor.

Texas Gas Transmission Company (Federal Energy Regulatory Commission, Docket No. RP94-423). Technical analysis and participation in settlement negotiations on cost of service, invested capital, and revenue deficiency on behalf of the Indiana Office of Utility Consumer Counselor.

Lafourche Telephone Company (Louisiana Public Service Commission, Docket No. U-21181). Analysis and investigation of earnings and appropriate rate of return on behalf of the Louisiana Public Service Commission Staff.

Natural Gas Pipeline Company of America (Federal Energy Regulatory Commission, Docket No. RP95-326). Technical analysis and participation in settlement negotiations on cost of service, invested capital, and revenue deficiency on behalf of the Indiana Office of Utility Consumer Counselor.

Pymatuning Independent Telephone Company (Pennsylvania Public Utility Commission, Docket No. R-00953502). Technical analysis and development of settlement position in the Company's rate case on behalf of the Pennsylvania Office of Consumer Advocate.

Illinois Bell Telephone Company (Illinois Commerce Commission, Docket No. 96-0172). Technical analysis of the Company's annual rate filing pursuant to its Price Cap Plan on behalf of Citizens Utility Board.

Illinois Bell Telephone Company (Illinois Commerce Commission, Docket No. 97-0157). Technical analysis of the Company's annual rate filing pursuant to its Price Cap Plan on behalf of Citizens Utility Board.

TDS Telecom (Pennsylvania Public Utility Commission, Docket Nos. R-00973892 and R-00973893). Technical analysis regarding rate base, cost of service, rate design, and rate of return, and assistance in settlement negotiations in the Company's rate case and alternative regulatory filing on behalf of the Pennsylvania Office of Consumer Advocate.

Appalachian Power Company (Virginia State Corporation Commission, Case No. PUE 960301). Technical analysis regarding rate base and cost of service and assistance in settlement negotiations in the Company's rate case and alternative regulatory filing on behalf of the Virginia Office of the Attorney General.

Central Maine Power Company (Maine Public Utilities Commission, Docket No. 97-580). Technical analysis regarding attrition and accounting issues in the Company's Transmission and Distribution unbundling proceeding on behalf of the Maine Public Utilities Commission Staff.

Illinois Bell Telephone Company (Illinois Commerce Commission, Docket No. 98-0259). Technical Analysis of the Company's annual rate filing pursuant to its Price Cap Plan on behalf of Citizens Utility Board.

Maine Public Service Company (Maine Public Utilities Commission, Docket No. 98-577). Technical analysis regarding attrition and accounting issues in the Company's Transmission and Distribution unbundling proceeding on behalf of the Maine Public Utilities Commission Staff.

Bangor Hydro-Electric Company (Maine Public Utilities Commission, Docket No. 97-596). Technical analysis regarding attrition and accounting issues in the Company's Transmission and Distribution unbundling proceeding on behalf of the Maine Public Utilities Commission Staff.

TDS Telecom (Maine Public Utilities Commission, Docket Nos. 98-894, 98-895, 98-904, 98-906, 98-911, and 98-912). Technical analysis regarding accounting issues and access rate changes on behalf of the Maine Office of the Public Advocate.

Mid-Maine Telecom (Maine Public Utilities Commission, Docket No. 2000-810). Technical analysis regarding accounting issues and access rate changes on behalf of the Maine Office of the Public Advocate.

Unitel, Inc. (Maine Public Utilities Commission, Docket No. 2000-813). Technical analysis regarding accounting issues and access rate changes on behalf of the Maine Office of the Public Advocate.

Hydraulics International, Inc. (Armed Services Board of Contract Appeals, ASBCA No. 51285). Technical analysis and support relating to the Economic Adjustment Clause claim on behalf of the Air Force Materiel Command.

Tidewater Telecom and Lincolnville Telephone Company (Maine Public Utilities Commission, Docket Nos. 2002-100 and 2002-99). Technical analysis regarding accounting issues and access rate changes on behalf of the Maine Office of the Public Advocate.

TDS Telecom (Vermont Public Service Board, Docket No. 6576). Technical analysis regarding rate base, cost of service, and depreciation expense on behalf of the Vermont Department of Public Service.

CenterPoint Energy-Entex (Louisiana Public Service Commission, Docket No. U-26720, Subdocket A). Technical analysis regarding rate base and cost of service on behalf of the Louisiana Public Service Commission Staff.

CenterPoint Energy-Arkla (Louisiana Public Service Commission, Docket No. U-27676). Technical analysis regarding rate base and cost of service on behalf of the Louisiana Public Service Commission Staff.

Provided technical analysis and support on behalf of the Louisiana Public Service Commission Staff relating to CLECO Power LLC Rate Stabilization Plan.

Provided technical analysis and support on behalf of the Louisiana Public Service Commission Staff relating to CLECO Power LLC post-Katrina power purchases.

Provided technical analysis and support on behalf of the Louisiana Public Service Commission Staff relating to Entergy Louisiana LLC recovery of storm damage costs.

Westar Energy, Inc. (Westar Energy) and Kansas Gas and Electric Company (KGE), (Kansas State Corporation Commission, Docket No. 17-WSEE-147-RTS). Technical analysis regarding rate base and cost of service on behalf of the Federal Executive Agencies.

Westar Energy, Inc. (Westar Energy) and Kansas Gas and Electric Company (KGE), (Kansas State Corporation Commission, Docket No. 17-WSEE-147-RTS). Technical analysis regarding rate base and cost of service on behalf of the Federal Executive Agencies.

I. Introduction

Q. **PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

A. My name is Lafayette K. Morgan, Jr. My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland, 21044. I am a Public Utilities Consultant working with Exeter Associates, Inc. ("Exeter"). Exeter is a consulting firm specializing in issues pertaining to public utilities.

Q. **ARE YOU THE SAME LAFAYETTE K. MORGAN JR. WHO SUBMITTED PRE-FILED DIRECT TESTIMONY IN THIS PROCEEDING?**

A. Yes, I am.

Q. **WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?**

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimonies of National Fuel Gas Distribution Corporation ("NFG" or the "Company") witnesses Courtney T. Mann, Donald N. Koch, Anthony T. Formato, Michael P. Weidner, Monika M. Duszenko and Erica L. Forcucci which were filed on May 12, 2026. In this surrebuttal testimony, I will respond to these witnesses' disagreements with the adjustments I recommended in my direct testimony and further explain why I continue to recommend the adjustments I made. In certain instances, NFG has accepted my adjustments. Similarly, in certain instances, I have also either withdrawn or revised certain adjustments that I initially recommended in direct testimony. I will provide an explanation of those changes later in this testimony.

Q. **DID NFG REVISE ITS REQUESTED REVENUE INCREASE?**

A. Yes. Company witness Koch stated in his rebuttal testimony that the Company revised its revenue increase from $19,680,000 to $18,475,000 which resulted in a reduction of $1,205,000.

Q. **HAVE YOU PREPARED EXHIBITS TO ACCOMPANY YOUR SURREBUTTAL TESTIMONY?**

A. Yes. As presented in my direct testimony, I have prepared two sets of exhibits that presents the OCA position based upon the recommended rate of return ("ROR") and the alternative ROR. As the starting point for my surrebuttal revenue requirement, I have used the cost of service presented in NFG's rebuttal filing, and I made adjustments consistent with the positions taken in my direct testimony, except where I have revised the adjustments. Consistent with my direct testimony, the exhibits with the suffix "A" present the OCA's recommended position and the suffix "B" denotes the OCA alternate position. The difference in the two sets of exhibits is caused by the difference in the ROR.

To the extent I have made any changes from my direct testimony, I will explain why the change was necessary. After incorporating NFG's and the OCA's changes to the cost of service, I have determined that the Company's annual revenues, using the OCA's recommended ROR, should be increased by $ 4.305 million annually as shown on Exhibit LKM-1A-SR. This represents a decrease of $14.170 million from the Company's revised increase of $18.475 million. Using the OCA's alternative ROR, the Company's annual revenues should be increased by $4.205 million annually. This represents a decrease of $14.270 million from the Company's revised increase of $18.475 million. This is the amount by which revenues exceed those required to generate an overall rate of return on rate base of 7.54% percent after accounting for the OCA's adjustments to the Company's claimed rate base and operating income. It should be noted that Ms. Reno has revised her alternative ROR recommendation from 7.62% to 7.54%. The table below summarizes my adjustment to the cost of service.

National Fuel Gas Distribution Corporation
Summary of Cost of Service Adjustments
($ in Thousands)

Line No.	Description	Rate Base	Revenue	Operating Expenses	Income Taxes Effect
1	Adjustment to Cash Working Capital	$ (1,195)	$ -	$ -	$ -
2	Include CIAC in Rate Base	(20)	-	-	-
3	Include Customer Advances in Rate Base	7	-	-	-
4	Effect of Depreciation Rates on Accum. Depreciation	4,670	-	-	-
5	Reflect Growth in Rent From Gas Property	-	12	-	3
6	Remove Stock-Based Compensation	-	-	(1,430)	385
7	Amortize Insurance Settlement Proceeds	-	-	(266)	72
8	Remove Office Employee Inflation Adjustment	-	-	(64)	17

15	Reflect OCA Recommended Depreciation Rates	-	-	(4,670)	1,257
16	Interest Synchronization Adjustment	-	-	-	(579)
17	Total OCA Adjustments	$ 3,462	$ 12	$ (5,920)	$ 1,016

II. Revenue Requirement Issues

Q. **PLEASE RESPOND TO MR. KOCH'S REBUTTAL TESTIMONY.**

A. In Mr. Koch's rebuttal testimony, he presents the Company's revised revenue requirement. He explains that the $1,205,000 reduction in NFG's revenue requirement is the result of NFG's adjustments to include Customer Advances and Contribution in Aid of Construction ("CIAC") in rate base, and to reduce the requested ROE from 11.25% to 11.0%. Mr. Koch concludes his testimony by stating that the Company has reviewed I&E, OCA, and OSBA's (the statutory parties) proposed revenue requirement adjustments, but that the Company maintains its position that the original revenue

requirement filing accurately reflects its needs and obligations, except where noted.[1] He urges the Commission to deny any adjustments proposed by the statutory parties.[2]

As I will explain in the following sections of this testimony, I do not agree with Mr. Koch's overall conclusion. In response to NFG witnesses' rebuttal testimony relating to revenue requirement, I will further explain why the Commission should not accept the costs of service as proposed by NFG.

1. Forfeited Discounts

Q. **PLEASE RESPOND TO NFG WITNESS MANN'S REBUTTAL TESTIMONY WITH RESPECT TO YOUR ADJUSTMENT TO FORFEITED DISCOUNTS.**

A. In my direct testimony, I adjusted forfeited discounts to reflect the effect of the OCA's recommended increase in revenue requirement as a result of this proceeding. Mr. Mann disagrees with my adjustment. First, he states that the magnitude of my adjustment is tied to the OCA's recommended revenue increase. Second, he disagrees with my use of a three-year average to determine the forfeited discounts factor. Third, he states that I improperly excluded transportation revenues from the derivation of the adjustment to forfeited discounts.

Mr. Mann's disagreement with the magnitude of my adjustment is misplaced because he misunderstands the reason for my adjustment. The reason for my adjustment is to recognize that as service revenues increase, there will be a corresponding increase in forfeited discounts because the forfeited discounts are assessed based upon the outstanding customer bill. NFG did not propose an adjustment to recognize the inter-related relationship between service revenues and forfeited discounts. Ultimately, the value of the adjustment is not likely to be the amount I recommended because it would

[1] Rebuttal Testimony of Donald N. Koch at 4:6-12.
[2] *Id.*

be based on the increase in revenue granted by the Commission. This adjustment is a typical adjustment made in rate cases before this Commission. Hence, I believe this adjustment is valid.

The second reason Mr. Mann disagrees with my adjustment, the use of a three-year average for the forfeited discounts factor, is because he claims that Fiscal Year 2024 late payment charges (forfeited discounts) were unusually high and are not representative of the FPFTY. However, this is the reason for using a three-year average, because the intent is to normalize the forfeited discounts factor to recognize the year-to-year fluctuations. The three-year average is a standard methodology used by the Commission because it is recognized that no single year is representative to use for deriving the forfeited discounts factor. As an example, NFG uses a three-year average to determine uncollectible expense. Thus, Mr. Mann's criticism of the three-year average is not valid.

The third reason for disagreement with my adjustment is that I excluded transportation revenue when calculating the forfeited discounts factor. This exclusion was inadvertent. Therefore, I have revised the calculation of the forfeited discounts factor on Exhibit LKM-6A-SR. This revision results in a change in the adjustment to forfeited discounts from $26,000 to $21,000, a $5,000 decrease.

2. <u>Rent From Gas Property</u>

Q. **PLEASE RESPOND TO NFG WITNESS MANN'S DISAGREEMENT WITH YOUR ADJUSTMENT TO RENT FROM GAS PROPERTY IN HIS REBUTTAL TESTIMONY.**

A. In Mr. Mann's rebuttal testimony, he disagrees with my adjustment of $12,000 to Rent From Gas Property. According to him there are no known or measurable changes to

support an additional increase in Rent From Gas Property. However, the Company's own data shows a clear pattern and trend of annual increases in Rent From Gas Property. Below I present a reproduction of the attachment OCA 10-21 which was provided by the Company. The annual growth pattern and be seen on the highlighted lines. Based on this data I believe my adjustment for $12,000 to Rent From Gas Property, presented on Exhibit LKM -7A, is appropriate and reasonable.

3. Working Capital Allowance

Q. **PLEASE RESPOND TO NFG WITNESS MONIKA M. DUSZENKO'S REBUTTAL TESTIMONY WITH RESPECT TO YOUR WORKING CAPITAL ADJUSTMENTS.**

A. In my direct testimony, I explained my adjustments to the cash working capital allowance. First, I adjusted the lead/lag study to reflect the adjustments to the operating expenses that I have recommended. Second, I removed amortization expenses and accrued expenses from the lead/lag study because those expenses do not require the use of cash, so it is inappropriate to include a cash working capital allowance for these expenses. Third, I recommended an adjustment to remove prepaid expenses (Prepayments) from rate base. I explained that because the Company included Prepayments as a component of the cash working capital allowance but did not remove prepaid expenses from the expenses in the lead lag expense, there was a double count of the working capital related to prepaid expenses.[3]

In her rebuttal testimony, Ms. Duszenko disagrees with my adjustment to remove prepayments from rate base.[4] According to Ms. Duszenko, the inclusion of prepayments in rate base is consistent with the methodology used in NFG's prior rate case.[5] However, she indicates that the Company made an adjustment to remove prepaid

[3] Reference to "Prepaid Expenses" and "Prepayments" may sometimes be used interchangeably. For the purpose of clarity in the discussion of the Cash Working Capital Allowance, there is a distinction that I want to recognize to avoid confusion. In my discussion, the word "Prepayments" is used to refer to unused expenses that were prepaid. These prepayments are held in Balance Sheet accounts and are included as a separate line item called "Prepayments" in the presentation of Cash Working Capital Allowance. When I refer to "prepaid expenses," I am referring to the portion of prepayments that are recognized as expenses in the annual account period. NFG has included prepaid expenses have been included in the operating expenses used in the lead/lag to calculate the Cash Working Capital Allowance.

[4] Rebuttal Testimony of Monika M. Duszenko at 3:17-22.

[5] *Id.*

expenses from the O&M expenses total which calculates the expense lag days, which was reflected in the lead lag study on the Company's Exhibit A, Schedule C-4.[6]

I will accept the approach used by NFG, in its rebuttal filing, which includes prepayments in rate base, but removes prepaid expenses from the lead/lag study.

However, I disagree with the quantification of the prepaid expenses removed from the lead/lag study because the Company removed as prepaid expenses from "Other Expenses" by the Company totals only $2,732,664. However, when my summation of the annual expenses for the following components of prepayments: insurance, PUC Assessments, AGA Dues and IT Services, it amounts to $9.455 million.[7] Hence, it appears to me that the Company did not capture all the expenses.

In addition to the removal of the prepaid expenses, I also recommended adjustments to remove non-cash expenses from the lead/lag study in my direct testimony. The Company did not address this adjustment in its rebuttal testimony. Nevertheless, as I explained in my direct testimony, non-cash expenses should not be included in the lead/lag study because the inclusion would result in providing a cash working capital allowance for a non-cash expense. Therefore, I recommend that the Commission reject NFG's inclusion of the non-cash expenses in the lead/lag study.

Although the Company opposes the adjustments I recommend to O&M expenses, it is appropriate for the Commission to reflect any of my O&M adjustments it accepts in the lead/lag study. Therefore, I continue to reflect those adjustments in the cost of service because they are appropriate. On Exhibit LKM-4A, I present my adjustment to cash working capital which reduces rate base by $1,195,000.

[6] *Id.* at 4:2-5.
[7] See Exhibit LKM – 4.

4. Contributions in Aid of Construction and Customer Advances

Q. **NFG APPEARS TO HAVE ACCEPTED YOUR ADJUSTMENT TO INCLUDE CONTRIBUTIONS IN AID OF CONSTRUCTION ("CIAC") AND CUSTOMER ADVANCES IN RATE BASE. IS THE OCA AND NFG NOW IN AGREEMENT ON THIS ISSUE?**

A. No. Conceptually, NFG agrees with the OCA that it is appropriate to include CIAC and Customer Advances in rate base. However, the Company proposes to include the HTY balances for CIAC and Customer Advances in the FPFTY rate base. I disagree with using the HTY values.

Q. **WHY DO YOU DISAGREE WITH USING THE HTY BALANCES?**

A. I disagree with using the HTY balances because the data is stale in comparison with the FPFTY (on which rates are being established). The FPFTY uses the values of plant that are projected two years into the future. Therefore, I recommend using the most recent 13-month average because of the difficulty in forecasting these two accounts. The most recent 13-month average is also more appropriate than the HTY values, because it captures the CIAC and Customer Advances for plant currently in service and included in the FPFTY cost of service. It is important to keep in mind that CIAC and Customer Advances are only collected when plant is placed in service to serve customers. Therefore, including the most recent 13-month balance CIAC and Customer Advances is appropriate because it matches plant that are already included in Plant in Service. Therefore, the Commission should reject the Company's proposed inclusion of the HTY average in rate base for CIAC and Customer Advances. On Exhibit LKM-5A, I present this adjustment which decreases rate base by a net amount of $13,000 to reflect the 13-month average CIAC and Customer Advances balances.

5. Incentive Compensation Expense

Q. **PLEASE RESPOND TO MR. WEIDNER'S DISAGREEMENT WITH YOUR ADJUSTMENT TO INCENTIVE COMPENSATION EXPENSES.**

A. In my direct testimony, I recommended an adjustment to remove the 2010 Equity Compensation Plan expense from the cost of service. The rationale for my adjustment was taken from a direct quote of the Company's plan.[8] Mr. Weidner disagrees with my adjustment and raises several issues that I will address separately below.

Q. **IS IT YOUR TESTIMONY THAT STOCK-BASED COMPENSATION IS SOLELY FOR THE BENEFIT OF SHAREHOLDERS, AND THEREFORE THE ENTIRE RATE RECOVERY REQUEST SHOULD BE DISALLOWED?**

A. No. Mr. Weidner states that I claimed that stock-based compensation is "solely for the benefit of shareholders".[9] I do not make such a claim in my testimony. However, I did state that, based on the purpose of the plan, shareholders are the primary beneficiaries of the plan. To claim that I stated that shareholders are the sole beneficiaries of the plan is a misrepresentation of my testimony. The purpose of the plan is quoted in my direct testimony,[10] and as can be seen in the quote, there is no mention of any measure other than the Company and shareholder success.

Q. **MR. WEIDNER STATES THAT A PORTION OF THE RESTRICTED STOCK AWARDS FOR EXECUTIVES AND NON-EXECUTIVE SUPERVISORS, ARE BASED ON THE RECIPIENTS CONTINUED SERVICE TO THE COMPANY OVER THE REQUISITE TIME. WITH RESPECT TO RATEPAYERS AND SHAREHOLDERS, DOES EMPLOYEE RETENTION HAVE A GREATER IMPACT ON EITHER RATEPAYERS OR SHAREHOLDERS?**

[8] Direct Testimony of Lafayette Morgan Jr. at 13:1-24.
[9] Rebuttal Testimony Michael P. Weidner at 9:10-12.
[10] Direct Testimony of Lafayette Morgan Jr. at 13:1-24.

A. In my opinion, an empirical study or analysis would be needed to reach a conclusion. However, the Company has indicated that a competitive total rewards package is needed to retain its current workforce.[11] The adjustment I am recommending does not challenge the total employee rewards package. Instead, the concern is who should bear the cost of the compensation that is aligned primarily with shareholders' interest.

Q. **MR. WEIDNER STATES THAT RESTRICTED STOCKS ARE USED TO ENCOURAGE RETENTION OF TOP PERFORMERS AND CONTROL COSTS ASSOCIATED WITH TURNOVER.[12] DOES THAT MEAN THAT THE COST OF THE PLAN SHOULD BE RECOVERED FROM RATEPAYERS?**

A. No. In my opinion, the purpose of the plan and the metrics used to determine the plan's payout are key to determine whether the plan is primarily established in the interest of shareholders or ratepayers. Hence, the basis of my adjustment has very little to do with the payoff being based on stock or cash. However, the payout in restricted stock more closely aligns the employee's interest to the shareholders' interest. An employee who gets rewarded with stock has an incentive to act or make decisions that would increase share values. Shareholders' interests are not necessarily compatible with ratepayers' interests. For example, delaying certain expenditures may improve earnings and share value while degrading customer service. This is why those plans with customer service metrics tend to be in the interest of ratepayers. Based on the foregoing discussion, I recommend that the Equity Compensation Plan expenses be removed from the cost of service. On Exhibit LKM-8A, I present this adjustment which reduces operating expenses by $1,430,000.

[11] Direct Testimony of Valerie L. Hawthorn Wagner at 9:11-14.
[12] Rebuttal Testimony Michael P. Weidner at 8:7-8.

6. Charge Off of Customer A/R

Q. **PLEASE RESPOND TO MR. FORMATO'S REBUTTAL TESTIMONY ADDRESSING YOUR ADJUSTMENT TO THE CHARGE OFF OF CUSTOMER ACCOUNTS RECEIVABLE.**

A. In my direct testimony, I made an adjustment to remove the "Charge Off of Customer Accounts Receivable" expense account from the cost of service because the nature of the costs included in this account was unknown. My concern was to avoid including costs that were duplicative of the costs included in the Uncollectible Expense account. I then requested NFG to fully explain the nature of this account in its rebuttal testimony.

In Mr. Formato's rebuttal testimony, he explained that the Charge Off of Customer Accounts Receivable is a separate and distinct type of write-off that does not include the financial write-offs for non-payment which are recovered through the Uncollectible Expense.[13] In his explanation, examples were provided to provide additional insight on these costs.[14]

Based on the explanation in Mr. Formato's rebuttal testimony, I will withdraw my adjustment because I do not believe the costs in the "Charge Off of Customer Accounts Receivable" expense account is duplicative of the Uncollectible Expense account.

7. Uncollectible Expense

Q. **DID THE COMPANY RESPOND TO YOUR ADJUSTMENT TO UNCOLLECTIBLE EXPENSE?**

A. No. In my direct testimony, I explained that an uncollectible factor of 1.53% was calculated based on the three-year uncollectible ratio that was calculated from the

[13] Rebuttal Testimony of Anthony T. Formato at 4:17-18.
[14] Rebuttal Testimony of Anthony T. Formato at 4:18-20.

historical data. NFGD then included a 0.02% management adder which increased the uncollectible factor to 1.55%. I recommended an adjustment to remove the .02% management adder in my direct testimony. However, the Company did not address this issue in its rebuttal testimony. Nevertheless, I continue to disagree with NFGD's approach and recommend that the Commission change the uncollectible factor to the 1.53%, which is based on the historical data. I am also continuing to recommend that the Commission reduce the uncollectible expense and the uncollectible factor included in the revenue requirement gross up factor to reflect the 1.53% uncollectible factor. On Exhibit LKM-13A, I present this adjustment which reduces operating expenses by $73,000.

8. Office Employee Expenses

Q. **PLEASE RESPOND TO MR. FORMATO'S DISAGREEMENT WITH YOUR ADJUSTMENT TO REMOVE THE COMPOUND GROWTH ADJUSTMENT FROM OFFICE EMPLOYEE EXPENSE.**

A. In my direct testimony, I recommended an adjustment to reverse the Company's adjustment to escalate Office Employee Expenses using a compound growth rate of 3.67% based on the FY 2023 to FY 2025 period. I indicated that I was recommending an adjustment to remove the increase in this expense line item because this approach is inconsistent with my understanding of the zero-based budgeting approach that NFG witness Formato claims the Company uses for its operating budget.

In Mr. Formato's rebuttal testimony, he disagrees with my adjustment stating that the Office Employee Expenses line item is primarily made up of software, office equipment and employee training and travel expenses, which are subject to inflationary price increases. He argues that the Company will not be able to negotiate terms which

would allow for flat prices for two years, which is what I am suggesting by not allowing for inflationary growth on this line item between the HTY and the FPFTY.

Mr. Formato's explanation is inaccurate. The portion of these costs that were related to software and office equipment were separate from the costs that were identified as Normalized Office Expense. The Computer-related costs were adjusted to reflect a full year related to the Consolidated Oracle DBMS & Exadata licensing. To my knowledge, those costs were not escalated by a compound annual growth rate (CAGR), and I did not adjust them. Therefore, Mr. Formato's claim that the Company will not be able to negotiate terms which would allow for flat prices for two years is not applicable to the CAGR adjustment.

With respect to the remaining Normalized Office Expenses, the Company describes the adjustment as an inflation adjustment but uses a CAGR to escalate the costs. There are three reasons I disagree with the use of an inflation escalation for projecting the FPFTY expenses. First, the CAGR is not an inflation escalation rate. Instead, it captures the changes in expenses from two points in time. It does not separate the change in the unit prices from changes in quantities. Hence, it combines changes in unit prices and quantities. As a result, it is unclear whether the increase in expenses are driven by the unit prices or the quantities.

Second, if the Company's intent was to capture inflation, the annual inflation rate would have been more appropriate than the CAGR because it would capture the changes between each year rather than the two points in time that is captured by the CAGR.

Third, I disagree with the use of inflation escalation solely as the basis of determining the FPFTY level of expenses. These inflationary adjustments are not

known and measurable because they are blanket cost increases. More importantly, for ratemaking purposes, the costs and cost increases included in the cost of service should be related to the specific activities, initiatives, and plans that the Company intends to undertake during the rate effective period. Those costs should be based upon evidence or documentation that can be identified, supported, and calculated with a degree of certainty. The inflation escalation does none of those things.

Therefore, I am recommending that the Commission reject the Company's inflation adjustment. On Exhibit LKM-10A, I present this adjustment which reduces operating expenses by $64,000.

9. Postage Expense

Q. **PLEASE RESPOND TO THE COMPANY'S DISAGREEMENT WITH YOUR ADJUSTMENT TO POSTAGE EXPENSE.**

A. In my direct testimony, I explained my adjustment to postage expense to reflect the 4.8% scheduled postage rate increase that was announced by the USPS. NFG disagrees with my adjustment stating:

> While neither OCA nor the Company can predict future postage rates, it is clear that postage rates continue to rise. By July of 2026, a first-class stamp, which was $0.60 at the start of January 2023, will be $0.82. Even with these increases, the USPS is still facing significant financial challenges and continues to warn of additional increases beyond July of 2026. As such, the Company feels that OCA's adjustment stops short and does not include likely increases in January and July of 2027.[15]

I disagree with the Company's approach to deriving the postage expense because it depends on speculation of the postage rate increase. Whatever problems the USPS faces, it would be inappropriate to use an escalation rate that is not known or certain. It

[15] Rebuttal Testimony of Anthony T. Formato at 6:11-16.

is also not appropriate to use historical price increases to forecast future postal increases because those rates were set to recover specific costs at the time they were increased. Therefore, past postage rate increases are not indicative of the level of future rate increases. As a result of the foregoing, the Commission should reject the Company's proposed increase in postage expense because it is speculative. I present my adjustment, which reduces operating expenses by $175,000, on Exhibit LKM-14A.

10. Insurance Settlement Proceeds

Q. **PLEASE RESPOND TO THE COMPANY'S DISAGREEMENT WITH YOUR ADJUSTMENT TO INSURANCE SETTLEMENT PROCEEDS.**

A. In my direct testimony, I recommended that a regulatory liability from an insurance settlement and held on NFGD's Balance Sheet be returned to customers over a three-year period.

Mr. Formato disagrees with my recommendation, stating that my recommendation has two fundamental flaws.[16] First, he claims that the balance in this account is being reduced as the Company processes environmental expenses. Second, he states that if the insurance regulatory liability is flowed-back to ratepayers, a normalizing adjustment would be needed to reestablish the environmental expense that ratepayers were "shielded from" because of the regulatory liability account.[17] Mr. Formato proposes to continue NFG's practice of using the insurance settlement proceeds to offset new environmental expenses.[18]

Mr. Formato's claim that there are flaws in my adjustment is misleading, and he mischaracterizes my adjustment when he claims that my recommended adjustments have "flaws." To be clear, characterizing my adjustment as containing flaws implies

[16] Rebuttal Testimony Anthony T. Formato at 11:6-15.
[17] *Id.*
[18] *Id.*

that there is something incorrect in adjustment. In fact, there is no flaw in the adjustment; I have simply chosen to flow back ratepayer funds on different terms than the Company has been doing. What Mr. Formato characterizes as flaws is his recognition of the changes from the status quo if my adjustment is accepted with respect to accounting for the funds in the regulatory liability account.

Q. **HOW ARE RATEPAYERS AFFECTED BY NOT FLOWING BACK THE INSURANCE SETTLEMENT FUNDS?**

A. First off, the insurance settlement funds are ratepayers' funds to which they are entitled.[19] If the Company continues to hold these funds, the Company has use of nearly $798,079[20] cost-free, and ratepayers lose the time value of these funds because the Company is not currently accruing any carrying charges. This is unfair to ratepayers. Moreover, using the amount presented in my adjustment on Exhibit LKM-9A, rates from this proceeding will be $266,000 lower than proposed by the Company. To avoid the loss of value to the ratepayers, the Commission should reject the position taken by the Company as explained in Mr. Formato's rebuttal testimony.

Q. **IF THE COMMISSION DOES NOT ACCEPT YOUR ADJUSTMENT, WILL NFG ACCRUE CARRYING CHARGES ON THESE CUSTOMER FUNDS THAT IT HOLDS UNTIL THEY ARE RETURNED TO CUSTOMERS?**

A. No. NFG has stated that "[t]he Company does not intend to accrue carrying charges on these funds as they will be used to cover future environmental costs. In general, regulatory liabilities and assets do not accrue carrying costs."[21] While it may be true that generally regulatory liabilities do not accrue carrying charges, based on my

[19] NFG Filing Book I, Responses to Section 53.53 - III-F.8, Footnote 4.
[20] In my direct testimony, I presented $936,000 as the amount to flow back based on the HTY as shown in NFG's filing (Book I, Responses to Section 53.53 - III-F.8, Footnote 4). In response to OCA 19-1, NFG provided the updated amount as of $798,079.
[21] OCA 19-1(d).

experience, I am aware that the Commission has the authority to require the Company to accrue carrying charges on customer funds that it holds until returned to customers. Moreover, how the funds are to be returned in the future (i.e., by offsetting environmental expenses, or by reducing the cost of service) is irrelevant to whether carrying charges are accrued. Hence, if the Commission does not accept my adjustment to flow back the insurance settlement funds to customers, as a matter of fairness and equity, NFG must be required to accrue carrying charges because the Company has free use of these funds until they are exhausted. Therefore, if the Commission agrees with the Company's approach of using the insurance settlement funds it holds to offset future environmental expenses, then carrying charges must be accrued because it is unknown how long the Company will have use of these funds.

In fact, it should be recognized that rather than recommend that the insurance settlement funds be flowed back over the three years with carrying charges, I have chosen to moderate my adjustment to reduce the level of controversy around this issue by not recommending carrying charges be included in my adjustment to flow back the insurance settlement funds.

Q. **DID YOU NORMALIZE THE ENVIRONMENTAL EXPENSE AS MR. FORMATO SUGGESTED IN HIS REBUTTAL TESTIMONY?**[22]

A. No. In OCA 19-1, NFG was asked to provide the normalized environmental expense assuming the insurance proceeds are passed back to customers. NFG responded stating:

> If the insurance proceeds were passed back to customers, the normalized environmental expense for the HTY would have been the filed environmental expense of $52,546 + $144,486 (HTY activity in regulatory liability account # 254020), for a total of $197,032. The HTY value would have been held flat for the FPFTY. The Company proposes to reduce the FPFTY claim by $52,546 as it will use the

[22] Rebuttal Testimony Anthony T. Formato at 11:6-15.

> remaining regulatory liability balance to cover any future environmental expenses.[23]

The $197,032 provides as the normalized expense for the HTY is not the normalized expense. It represents the activity for only one year, which could be unusually high or low. Typically, expense normalization before this Commission ranges between three to five years to establish a normalized expense level. So, I cannot accept one year's activity as the normalized level of expense.

11. Other Expense-Line Hit Collections

Q. **PLEASE RESPOND TO THE COMPANY'S DISAGREEMENT WITH YOUR ADJUSTMENT TO OTHER EXPENSE-LINE HIT COLLECTIONS.**

A. In my direct testimony, I recommended an adjustment to reverse the Company's adjustment to increase "Other Expense-Line Hit Collections" because the Company's adjustment only accounts for the expense side of the costs and revenues in connection with the recovery of damage to the Company's gas lines.

In Mr. Formato's rebuttal testimony, he states:

> OCA proposed to move away from the Company's three-year average approach with respect to line hit collections. OCA's proposal to simply use the HTY value rather than a three-year average (FY23-FY25) results in a reduction of $156,000 to the Other Expense line item as collections were higher in the HTY as compared to the other two years used in the three-year average calculation. OCA's claim is based on the belief that a period that exhibits high line hit collections, like the HTY, would also have higher repair expenses in that year such that the higher expense and higher collections act as a natural offset.[24]

Mr. Formato's explanation (above) demonstrates that he misunderstands my adjustment. The intent of my adjustment is not to move away from the 3-year

[23] OCA 19-1(c).
[24] Rebuttal Testimony Anthony T. Formato at 6:20 - 7:4.

normalization concept. I also did not assume that a period that experienced high line hit collections would also have higher repair expenses in the same year to act as a natural offset. The intent of my adjustment is to recognize that the Company is attempting to normalize an expense account that contains two interrelated components – one is an expense and the other is a reimbursement of expenses (expense offsets).

In this instance, NFG is attempting to normalize only the reimbursements without also normalizing the expenses. This approach is one-sided. The Company has provided no evidence to show that the expenses in the account are not unusually high, even though I have challenged the collections claim.

Mr. Formato argues that line hit collections have a significant lag such that the recovery from third parties routinely crosses over fiscal years from the incidents themselves.[25] However, this claim supports my adjustment. Because of the lag between when the cost is incurred and when the reimbursement is received, the probability that expenses recorded in the account could be higher than normal increases.

I also disagree with Mr. Formato that because the primary cost being recovered is labor, my argument falls apart because labor has been annualized.[26] This argument ignores the costs associated with materials, overheads, contractors, permits, etc.

In short, I disagree with the Company's position unless it can demonstrate that the overall account has not been overstated by its decision to annualize only one component of the net costs recorded in the account. On Exhibit LKM-11A, I present this adjustment which reduces O&M expenses by $156,000.

[25] Rebuttal Testimony Anthony T. Formato at 7:7-9.
[26] Rebuttal Testimony Anthony T. Formato at 7:16-19.

12. Economic Development Expense

Q. **PLEASE RESPOND TO THE COMPANY'S DISAGREEMENT WITH YOUR ADJUSTMENT TO ECONOMIC DEVELOPMENT EXPENSE.**

A. In my direct testimony, I recommended an adjustment to remove membership fees and dues related to economic development entities because I find that those memberships and activities have very little to do with providing utility service to current ratepayers and are more closely aligned to corporate image building.[27] Moreover, I believe economic development is not a function of a public utility Instead, economic development initiatives are more aligned with governmental functions and responsibilities. Moreover, in the description of each of the organizations to whom NFG pays dues and contributions,[28] it is apparent that these organizations are quasi-governmental and philanthropic in nature. They are not potential large-use customers whose revenues will impact the recovery of fixed costs nor attract complementary businesses that become customers of NFG.

Mr. Formato argues that economic growth helps to retain and attract commercial and industrial use of natural gas. He believes participation in these organizations ensures energy infrastructure, safety, and reliability considerations are incorporated into local growth planning, thereby reducing long term system risks and costs.[29] In my opinion, unless NFG can demonstrate that the local governments are unable, the utility's involvement and awareness of local growth planning of energy infrastructure, safety, and reliability considerations should occur even if NFG were not a member of these economic development organizations. This is because part of the

[27] Direct Testimony of Lafayette K. Morgan Jr. at 21:8-11.
[28] Direct Testimony of Lafayette K. Morgan Jr. at 20:1-21-7.
[29] Rebuttal Testimony of Anthony T. Formato at 8:17-21.

functions of a utility's marketing department is to stay abreast of local development initiatives in order to capture new customers.

Based on the foregoing, I believe that my position that the economic development fees are more related to charitable contributions and less related to economic development is supported. Therefore, the Commission should reject the Company's position on the inclusion of these costs in the cost of service. On Exhibit LKM-15A, I present this adjustment which reduces O&M expenses by $17,000.

13. Pennsylvania Corporate Income Tax

Q. **PLEASE RESPOND TO COMPANY'S DISAGREEMENT WITH YOUR ADJUSTMENT TO THE PENNSYLVANIA CORPORATE INCOME TAX?**

A. In my direct testimony, I used the 2027 tax rate of 6.99% to calculate the Pennsylvania Corporate Net Income Tax based on my expectation that the Company would be subject to the 2027 tax rate for most of the FPFTY. NFG witness Erica L. Forcucci has explained that because of NFG's fiscal year, the Company will not be subject to the 2027 tax rate of 6.99% until October 1, 2027. Therefore, I have revised my tax calculation and the revenue gross up factor to reflect the 7.49% instead of the 6.99%.

Q. **DOES THIS COMPLETE YOUR SURREBUTTAL TESTIMONY?**

A. Yes, it does.

DOCKET NO. R-2025-3059428
NATIONAL FUEL GAS DISTRIBUTION CORPORATION - RATE CASE
DIRECT TESTIMONY OF
MAUREEN L. RENO

I. INTRODUCTION AND QUALIFICATIONS

Q. PLEASE STATE YOUR FULL NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Maureen L. Reno. I am an economist with a specialization in public utility economics and finance. I am the founder and principal consultant of Reno Energy Consulting Services, L.L.C. My business address is 19 Hope Hill Road, Derry, New Hampshire 03038.

Q. PLEASE SUMMARIZE YOUR EDUCATION.

A. I received a Bachelor of Arts degree in Economics from the University of Maine at Orono, Maine in 1996. In 1998, I earned a Master of Arts degree in Economics from the University of New Hampshire in Durham, New Hampshire, where I also completed all course work and examination requirements for a Ph.D. degree in Economics, except for my dissertation. My areas of academic concentration included industrial organization and environmental economics.

Q. WHAT IS YOUR PROFESSIONAL BACKGROUND?

A. I have 25 years of professional experience in the regulated utilities and energy sectors. From 2001 to 2011, I served as a utility analyst and program manager with the New Hampshire Public Utilities Commission, advising the Commissioners on regulated utilities' cost of capital and return on equity ("ROE"), among other regulatory matters. From 2011 to 2012, I served as a Senior Energy Economist with the Union of Concerned Scientists, advising on the intricacies of the regulated utility industry and helping to develop alternative financing programs for renewable energy investments. Since 2012, I have served as an independent consultant to multiple firms, including Exeter Associates, Inc. and TAHOEconomics, LLC on utility cost of capital, ROE, and

capital structure; Stephenson Strategic Communications, LLC on federal climate and energy policy; and TrueLight Energy, LLC on regulated utility rate impacts and energy markets.

Q. HAVE YOU PREVIOUSLY TESTIFIED AS AN EXPERT WITNESS BEFORE A PUBLIC UTILITY COMMISSION?

A. Yes. My testimony was presented and accepted in 53 regulated utility proceedings in several states, including Alaska, Arizona, California, Delaware, Georgia, Hawaii, Kansas, Missouri, New Hampshire, New Mexico, North Carolina, North Dakota, Oklahoma, Pennsylvania, Rhode Island, South Carolina and Texas, on a wide range of issues concerning regulated utilities, retail and wholesale energy markets, and renewable energy. (See Appendix A for my curriculum vitae and qualifications).

Q. ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A. I am serving as an expert witness on cost of capital, ROE, and capital structure on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. HOW IS YOUR TESTIMONY ORGANIZED?

A. My testimony is organized into ten sections including this one. In Section II, I discuss the purpose of my testimony, which is to compare the rate of return ("ROR") proposed by National Fuel Gas Distribution Corporation ("NFGD" or "the Company") with the ROR that I am recommending. In Section III, I review current and near-term economic and financial conditions in the United States and Pennsylvania. In Section IV, I evaluate NFGD's proposed capital structure and discuss my recommended capital structure. In Section V, I summarize NFGD's proposed cost of debt. In Section VI, I discuss different types of risks for regulated gas utilities and evaluate whether NFGD is facing greater or lesser risks than its peers in the proxy group that I use in my ROE analysis.

In Section VII, I present my ROE analysis which includes the methodologies that I applied to develop my ROE recommendation. I also evaluate NFGD's proposed ROE. In Section VIII, I offer a critique of NFGD's witness, Joshua C. Nowak's, proposal related to ROE Adders. In Section IX, I present illustrative ROE values for different equity ratios based on results using the Hamada model. Finally, in Section X, I summarize my recommendations concerning a fair and reasonable ROR, which includes my recommended capital structure and ROE.

II. PURPOSE AND SUMMARY OF RECOMMENDATIONS

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?

A. The purpose of my direct testimony is to recommend an ROR for ratemaking purposes.[1] In my direct testimony, I recommend a different ROR—to include a different ROE and capital structure—rather than that proposed by NFGD. I also provide a second ROE recommendation if the Commission were to grant the Company's proposed capital structure. My ROE recommendations were determined in accordance with the standards identified in *Bluefield Water Works v. Public Service Commission*, 262 U.S. 679, 692-93 (1923) ("*Bluefield*") and *Federal Power Commission v. Hope Natural Gas Co.*, 320 U.S. 591, 605 (1944) ("*Hope*"). In *Bluefield* and *Hope*, the U.S. Supreme Court established the principle that a public utility may be allowed to earn a return comparable to a return on investments in other enterprises having similar risks that allow the utility, under efficient management, to maintain financial integrity so that it can attract capital on reasonable terms and maintain its credit.

[1] For the purpose of my testimony, I will utilize the term "rate of return," or ROR, which I consider to be synonymous with the terms "return on rate base" or "weighted average cost of capital."

Q. PLEASE DESCRIBE NFGD AND ITS OPERATIONS.

A. NFGDC provides natural gas distribution service to approximately 756,000 customers, with 213,000 customers in Pennsylvania and 543,000 customers in New York.[2]

Q. WHAT IS THE RATE OF RETURN THAT NFGD IS PROPOSING?

A. For the fully projected future test period ending October 31, 2027 ("FPFTY"), NFGD proposed a ROR of 8.78%, which is composed of (1) a capital structure of 56.4% common equity, and 43.6% long-term debt; (2) a cost of long-term debt of 5.58%;; and (3) an ROE of 11.25%.[3] See Table 1 at the end of this section of my testimony for a comparison of the proposed and recommended RORs.

Q. SHOULD THE COMMISSION ACCEPT NFGD'S PROPOSED RATE OF RETURN?

A. No. The Commission should reject NFGD's proposed ROR because of two main reasons. First, it is based on an overstated ROE that does not accurately reflect investors' current expected returns on utility stocks. Second, NFGD's proposed natural gas system ROR of 8.78% is excessively high and inconsistent with the RORs typically allowed for distribution natural gas utilities in the recent past.

Q. SHOULD THE COMMISSION ACCEPT NFGD'S PROPOSED CAPITAL STRUCTURE?

A. No, NFGD's proposed equity ratio of 56.4%, based on the FPFTY ending October 31, 2027, is unreasonable for establishing the Company's capital structure for ratemaking purposes in the current proceeding. NFGD's proposed equity ratio of 56.4% is inconsistent with regulated utility sector trends and exceeds recently observed average

[2] NFGD St. 10 at 24.
[3] NFGD Ex. A:B-6-7; NFGD St. 10 at 55.

capital structures allowed by commissions across the U.S. I also have significant concerns regarding the reasonableness of NFGD's ROR, and a higher equity ratio further amplifies these concerns.

Q. SHOULD THE COMMISSION ACCEPT NFGD'S PROPOSED COST OF LONG-TERM DEBT?

A. Yes. NFGD's long-term debt costs appear to be based on the Company's embedded cost of long-term debt, individual outstanding debt costs are in line with market rates during the time of each debt issuance.

Q. SHOULD THE COMMISSION ACCEPT NFGD'S PROPOSED ROE?

A. No. The 11.25% ROE proposed by NFGD witness Joshua C. Nowak does not comport with current market trends and the return on equity investors expect for a stock from a similar-risk gas utility.

Mr. Nowak skews his analysis by over-relying on inputs with an upward bias. For instance, he relies almost exclusively on earning growth estimates, which has the effect of inflating his Discounted Cash Flow ("DCF") and Capital Asset Pricing Model ("CAPM") results. By contrast, I rely on a combination of earnings growth estimates as well as dividend growth, book value growth, and sustainable growth in order to produce more accurate results. Mr. Nowak also inflates his ROE recommendation through the use of an unsupported 25 basis-point Management Efficiency Adder.

Q. HAS THE COMMISSION RECENTLY EXPRESSED CONCERN REGARDING THE COMPANY'S REQUESTED ROR, ROE, AND CAPITAL STRUCTURES?

A. Yes. Vice Chair Kimberly Barrow recently issued a statement during the February 19, 2026 Public Meeting expressing concern regarding NFGDC's prosed ROR, ROE, and

capital structure, stating the following, "I urge the parties to take a critical look at the Company's requested rate of return and return on equity (ROE) as well as capital structure (common equity ratio and debt capital) to ensure reasonableness. Deviations in each of these items translate into millions of dollars charged to customers of all rate classes."[4]

Q. WHAT DO YOU RECOMMEND AS THE APPROPRIATE ROR FOR NFGD?

A. For NFGD, I recommend an overall ROR of 7.66%, which is composed of (1) a capital structure of 50.0% equity and 50.0% long-term debt, (different from the Company's claim); (2) a cost of long-term debt of 5.58% (no difference from the Company's claim); and (3) an ROE of 9.74% (again, different from the Company's claim). See Table 1A below for a comparison of the proposed and recommended RORs. Table 1B presents my alternative ROE and ROR values calculated under the assumption that the Commission approves the Company's proposed capital structure of 43.60/56.40% debt/equity.

Q. WHY SHOULD THE COMMISSION ACCEPT YOUR RECOMMENDED 9.74% ROE?

A. My ROE recommendation of 9.74% is based on the midpoint of my DCF results and falls within my ROE range of 8.88% to 10.61%. I recommend a ROE based on the midpoint of my DCF range because it represents a fair and reasonable ROE for NFGD in consideration of its risks and investors' current valuation of public utilities and equity assets in general. I discuss my modeling in greater detail further in my direct testimony.

Q. DID YOU EMPLOY ANY OTHER MODELS WHEN ESTIMATING YOUR ROE RESULTS?

[4] *Statement of Vice Chair Kimberly Barrow Re: Pa. PUC v. National Fuel Gas Distribution Corporation*, Docket No. R-2025-3059428, Public Meeting (Feb. 19, 2026).

A. Yes. I also use the CAPM as a check on the reasonableness of my DCF results; however, my recommended ROE is not based on my CAPM results. I use the CAPM to estimate a range of ROE results of 7.43% to 10.55%, with a midpoint of 8.99%. This midpoint of CAPM result is 75 basis points lower than my DCF midpoint. As noted, these CAPM results serve as a check on my DCF results to show that my recommendation based on the DCF model is reasonable and should be accepted by the Commission.

Q. HAVE YOU PREPARED A TABLE THAT COMPARES NFGD'S REQUESTED ROR TO THE ROR THAT YOU RECOMMEND?

A. Yes. See Table 1A below.

TABLE 1A. COMPARISON OF PROPOSED & RECOMMENDED RATES OF RETURN

	NFGD WITNESSES NOWAK			OCA WITNESS RENO		
	Weight	**Cost of Capital**	**Weighted Cost**	**Weight**	**Cost of Capital**	**Weighted Cost**
Long-Term Debt	43.60%	5.58%	2.43%	50.00%	5.58%	2.79%
Common Equity	56.40%	11.25%	6.35%	50.00%	9.74%	4.87%
Total Capital Structure	100.00%		8.78%	100.00%		7.66%

Amounts and percentage calculations may not add up due to independent rounding.
Source: NFGD Ex. A:B-6-7. Weighted average debt cost figure does not match written testimony (NFGD St. 10 at 55) due to rounding.

Q. DO YOU PROVIDE AN ALTERNATIVE ROE AND ROR IF THE COMMISSION WERE TO GRANT THE COMPANY'S REQUESTED CAPITAL STRUCTURE?

A. Yes, if the Commission were to approve the Company's proposed capital structure of 43.60/56.40% debt/equity, my alternative ROE is 9.21% with a resulting ROR of 7.62%. This alternative ROE and resulting ROR is calculated using the Hamada formula adjustment framework to the CAPM to demonstrate how the Company's proposed capital structure justifies a lower ROE due to lower leverage risk. Please refer to Section IX of my direct testimony for further detail on the methodology and calculations.

TABLE 1B. ALTERNATIVE PROPOSED & RECOMMENDED RATES OF RETURN

ALTERNATIVE ROE/ROR

	Weight	Cost of Capital	Weighted Cost
Long-Term Debt	43.60%	5.58%	2.43%
Common Equity	56.40%	9.21%	5.19%
Total Capital Structure	100.00%		7.62%

Amounts and percentage calculations may not add up due to independent rounding.
Source: NFGD Ex. A: B-6-7. Weighted average debt cost figure does not match written testimony (NFGD St. 10 at 55).

III. MACROECONOMIC AND FINANCIAL MARKET CONDITIONS

Q. WHY IS IT IMPORTANT TO CONSIDER MACROECONOMIC CONDITIONS IN DEVELOPING A RECOMMENDED ROE, COST OF DEBT, AND ROR?

A. I present current and expected macroeconomic conditions in this section to set the context for my ROE, cost of debt, and resulting ROR recommendations to the Commission. With respect to the expected ROE, investors evaluate both economic and

monetary conditions when assessing the opportunity costs of their investments. Global, national, and regional economic conditions affect investor expectations regarding investment returns, as measured by stock prices, interest rates, and sustainable dividend growth, each of which serve as inputs I use in my DCF and CAPM analyses. Additionally, investors closely monitor market interest rates and the return on fixed income securities, in particular U.S. Treasury bonds[5] as they weigh alternative investment options when making capital allocation decisions. The cost of new debt issuances is also determined according to the expectations set by bond holders.

Q. HOW ARE INTEREST RATES ON FIXED-INCOME SECURITIES DETERMINED?

A. Interest-rates or bond yields on long-term bonds are determined by investors' expectation on economic growth and inflation over the duration of the term of a particular bond. Interest rates on short-term bonds while influenced by these expectations, are largely driven by the actions of the U.S. Federal Reserve Bank ("Federal Reserve"). Specifically, the Federal Open Markets Committee ("FOMC") determines these rates by adjusting the Federal Funds Rate (the overnight interest rate it charges commercial banks) and buying or selling U.S. Treasury securities to meet certain policy objectives.

Q. PLEASE ELABORATE ON THE FEDERAL RESERVE'S POLICY OBJECTIVES.

A. The Federal Reserve has two policy objectives: the first is to maintain full employment or the total amount of employment that the economy can experience without any overt inflationary pressures; and the second, is to maintain a target rate of inflation of 2.0%

[5] *See* Risk discussion *infra* Section VI.

over the long run.[6] Thus, the Federal Reserve monitors key economic indicators to gauge whether it is necessary to adjust the Federal Fund Rate to influence borrowing behaviors and/or adjust its balance of securities to change the level of money supply in the economy.

Q. WHAT ECONOMIC INDICATORS DO BOTH THE FEDERAL RESERVE AND INVESTORS MONITOR?

A. The Federal Reserve and investors monitor economic indicators including measures of economic growth, such as real Gross Domestic Product ("GDP'), the unemployment rate, and measures of inflation, such as the Consumer Price Index ("CPI"), among others.

Q. HOW WOULD YOU DESCRIBE THE CURRENT STATE OF THE U.S. ECONOMY?

A. In general, economic signs show a slight economic slowdown and continued decrease in inflation throughout 2025. Recent economic growth, as measured by real GDP, shows that the U.S. economy has stabilized at a lower rate after experiencing a post-COVID-19 pandemic rebound. However, economists are concerned that recent U.S. military operations in Iran and the resulting global crude oil shortage will reverse the inflation reduction trends.

[6] *Why does the Federal Reserve Aim for Inflation of 2 Percent Over the Longer Run?*, Bd. Governors Fed. Rsrv. Sys., https://www.federalreserve.gov/faqs/economy_14400.htm (last visited Apr. 7, 2026).

Q. HOW HAS ECONOMIC GROWTH CHANGED SINCE THE COVID-19 PANDEMIC?

A. In 2021, real GDP growth reached an annual high of 6.2%, falling to 2.5% in 2022 and then rebounding slightly to 2.9% in 2023 and 2.8% in 2024. During 2025, real GDP decreased to 2.2%.[7]

Q. HOW HAS UNEMPLOYMENT CHANGED SINCE THE COVID-19 PANDEMIC?

A. Unemployment decreased from 5.3% in 2021 to 3.6% in 2022 and 2023. Unemployment increased to 4.0% in 2024 and 4.3% in 2025.[8]

Q. HOW HAS INFLATION CHANGED SINCE THE COVID-19 PANDEMIC?

A. Inflation, as measured by the CPI, remains the primary concern to the economy, though it decreased substantially from its peak of 8.0% in 2022 to 2.9% in 2024 and 2.6% in 2025.[9] The most recent quarterly data shows that the CPI rose to 3.3% for the 12 months ending March 2026.[10]

Q. HOW HAS THE FEDERAL RESERVE RESPONDED TO THESE ECONOMIC TRENDS?

A. Since July 2023, the FOMC has paused its campaign of aggressively increasing the Federal Funds Rate to dampen stubborn inflationary pressures, reducing the amount of money circulating through the economy, and driving down aggregate demand. Since then, the FOMC decreased the Federal Funds Rate three consecutive times in late 2024 and further decreased it three more times in late 2025. In its March 2026 meeting, the

[7] *Economic Indicators*, Council Econ. Advisors, Feb. 2026, at 3.

[8] *Id.* at 11.

[9] *Id.* at 24.

[10] *Economic News Release: Consumer Price Index Summary*, U.S. Bureau Labor Statistics (Apr. 10, 2026), https://www.bls.gov/news.release/cpi.nr0.htm#:~:text=Transmission%20of%20material%20in%20this,%2C%20education%2C%20and%20new%20vehicles.

FOMC held the target for the Federal Funds Rate steady at the 3.50% to 3.75% range.[11] In the press release issued on March 18, 2026, the FOMC states that "[a]vailable indicators suggest that economic activity has been expanding at a solid pace. Job gains have remained low, and the unemployment rate has seen little change in recent months. Inflation remains somewhat elevated."[12] The FOMC continued by stating, "[t]he Committee seeks to achieve maximum employment and inflation at the rate of 2 percent over the longer run. Uncertainty about the economic outlook remains elevated. The implications of developments in the Middle East for the U.S. economy are uncertain. The Committee is attentive to the risks to both sides of its dual mandate."[13] The FOMC further stated, "[i]n assessing the appropriate stance of monetary policy, the Committee will continue to monitor the implications of incoming information for the economic outlook. The Committee would be prepared to adjust the stance of monetary policy as appropriate if risks emerge that could impede the attainment of the Committee's goals. The Committee's assessments will take into account a wide range of information, including readings on labor market conditions, inflation pressures and inflation expectations, and financial and international developments."[14]

Q. HOW HAVE INVESTORS RESPONDED TO THESE ECONOMIC TRENDS?

A. According to *Value Line Investment Survey* ("*Value Line*"), investors are growing concerned about this persistent inflation particularly since the latest indicators have not fully reflected international oil supply shocks caused by U.S. military operations in Iran. This disruption in the world's oil supply has led to a jump in oil prices, which will

[11] *Federal Reserve Issues FOMC Statement*, Bd. Governors Fed. Rsrv. Sys. (Mar. 18, 2026), https://www.federalreserve.gov/newsevents/pressreleases/monetary20260318a.htm.
[12] *Id.*
[13] *Id.*
[14] *Id.*

make it more expensive for businesses to operate and for consumers to heat their homes and fuel their vehicles.[15] *Value Line* also notes that recent stock market volatility has been accompanied by indexes falling by mid-single digits.[16]

Q. HOW DO INVESTOR'S EXPECTATIONS INFLUENCE YOUR ROE RESULTS?

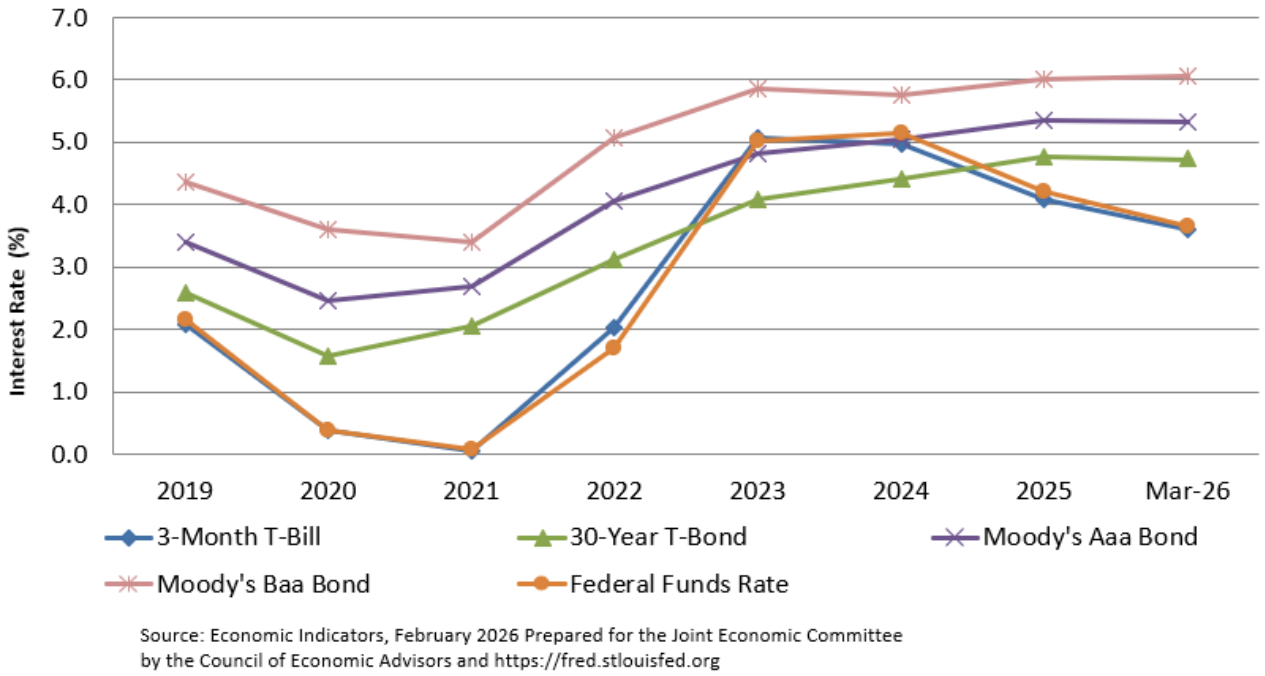
A. Investors consider action of the Federal Reserve and the economic conditions discussed above when estimating the opportunity cost of investing in a share of utility stock, or their expected return on equity in the long run. Thus, in addition to assessing economic growth, unemployment, and inflation, they will consider the yields or the return on fixed-income securities (e.g., interest rates on bonds), in particular interest rates on U.S. Treasury bonds.

Q. HOW HAVE INTEREST RATES AND INVESTOR EXPECTATIONS CHANGED IN RECENT YEARS?

A. Figure 1 below shows how the interest rates have changed from 2019 to March 2026. Yields on short-term Treasury bonds have decreased from elevated levels in 2023/2024 in response to the FOMC's recent actions. Yields on long-term Treasury bonds and corporate bonds have remained near peak levels.

[15] *Selection & Opinion*, 9 The Value Line Investment Survey 1769, 1769 (Apr. 2026).
[16] *Id.*

FIGURE 1. INTEREST RATES AND BOND YIELDS (2019-2026)



Source: Economic Indicators, February 2026 Prepared for the Joint Economic Committee by the Council of Economic Advisors and https://fred.stlouisfed.org

Schedule MLR-2a (Interest Rates and Bond Yields (2019-2026)).

Yields on long-term bonds (reference the 30-Year Treasury Bond or "T-Bond," shown in red in Figure 1 above) rose from 2.06% in 2021 to 4.78% in 2025 and have remained high as of March 2026.[17] The cost of debt for Moody's Investors Service ("Moody's") Baa-rated corporations peaked in 2023 at 5.87%, fell slightly to 5.76% in 2024, however, it rebounded to 6.00% in 2025 and 6.05% in March 2026.[18] Moreover, short-term interest rates (reference the 3-Month U.S. Treasury Bill or "T-Bill," shown

[17] *Economic Indicators*, Council Econ. Advisors, Feb. 2026, at 30.
[18] *Id.*

in blue in Figure 1 above) rebounded from 0.04% in 2021 to 4.98% in 2024 and have since decreased to 3.61% in March 2026.[19]

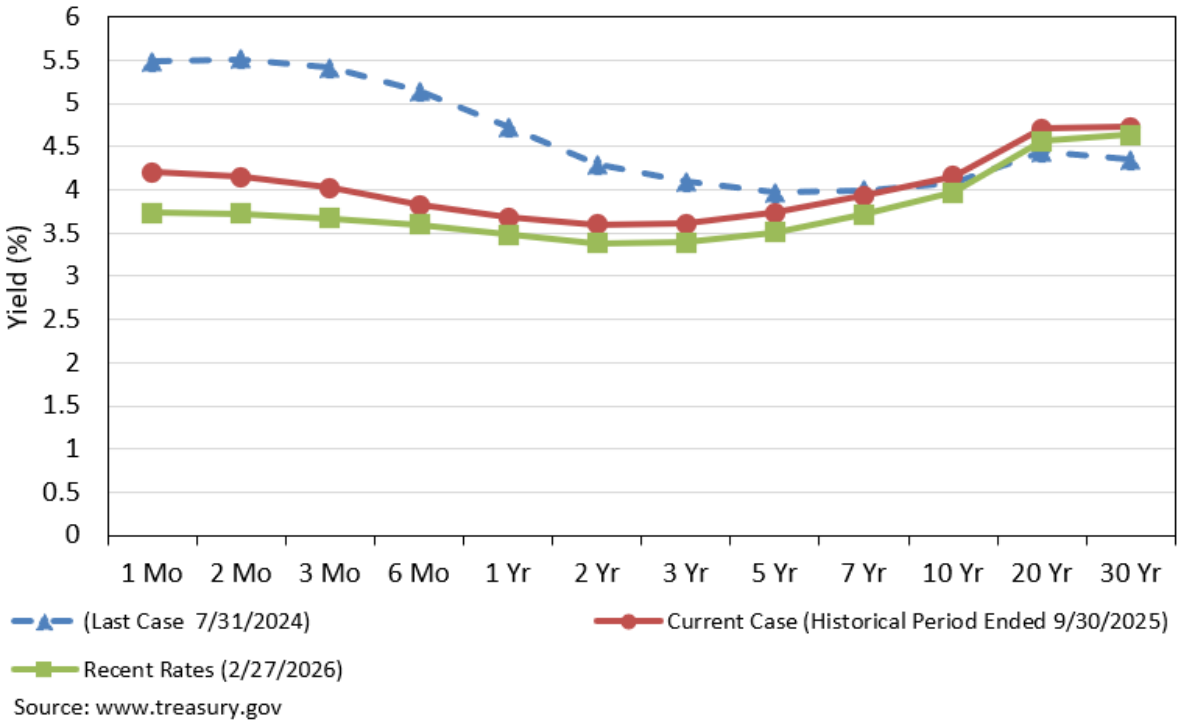
Short-term interest rates are primarily determined by the FOMC's policy actions. Recent decreases in short-term interest rates follow the FOMC's decrease in the Federal Funds Rate and reduction on its holdings of Treasury and agency mortgage-backed securities to increase money supply.[20] Long-term interest rates are primarily determined by market forces, including investor expectations of future levels of inflation and economic growth.

Figure 2 below shows the yields on the different types of T-Bills and T-Bonds, with values along the horizontal axis representing the maturity of each T-Bill or T-Bond and the vertical axis showing the corresponding yield or interest rate. Each line represents the yields associated with each type of asset on a particular date and is referred to by financial analysts as the "yield curve." The yield curve reflects the bond market's consensus opinion of future financial market conditions as investors decide which bill or bond to purchase in response to expected levels of inflation and interest rates.

[19] *Id.*

[20] *Monetary Policy Report*, Bd. Governors Fed. Rsrv. Sys. (Feb. 7, 2026), https://www.federalreserve.gov/publications/files/20250207_mprfullreport.pdf.

FIGURE 2. TREASURY SECURITY YIELD CURVE



Q. HOW HAS THE YIELD CURVE CHANGED IN RECENT YEARS?

A. It is important to recall the evolution of the yield curve in recent years to understand investors' expectations of economic growth and inflation since the Company's last rate case. During NFGD's last rate case which incorporated a future test period ended July 31, 2024, the yield curve was downward-sloping with yields ranging from 5.49% for 1-month T-Bills to 4.35% for 30-year T-Bonds. The yields on short-term T-Bills were at 5.49% in response to FOMC actions, while the yields on some long-term T-Bonds were lower, creating a downward sloping yield curve. Investors were expecting both a sustained economic slowdown and for the FOMC to shift its monetary policy to start decreasing interest rates to mitigate the slowdown.

The shape of the yield curve has since flipped in 2025 and most recently in February 2026. As shown in Figure 2 above, yields on long-term T-Bonds are higher than the yields on short-term T-Bills as of February 27, 2026. This shows that yields on longer-term bonds are still near high levels while yields on short-term T-Bills have decreased in light of easing interest rates by the FOMC, which suggests that investors may not be expecting an economic slowdown.

Q. WHAT OTHER MEASURES OF INVESTORS' EXPECTATIONS DO YOU CONSIDER?

A. Another metric by which to gauge investor expectations regarding long-term inflation is the Treasury Inflation-Protected Securities ("TIPS") spread, or the difference between yields on long-term nominal Treasury securities and long-term TIPS. The yield on a long-term conventional Treasury bond pays its holder a fixed nominal coupon and principal to compensate the investor for future inflation, and it includes the real rate of interest and inflation compensation. For TIPS, the coupons and principal both rise and fall with inflation, as measured by the CPI. The published yield includes only the real rate of interest. Therefore, the difference, roughly speaking, between the prevailing yields on these two types of Treasury securities reflects the inflation compensation over that maturity horizon that is expected by bond investors.

The 30-day average difference in the yield on the 30-year T-Bond and 30-year TIPS for the period ended February 27, 2026, equals 2.24% and represents the market's most recent expectations of long-term inflation. In other words, this data confirms that investors are anticipating that the rate of inflation over the long term is expected to stabilize at a higher rate than the FOMC's goal of 2.0%, which may further feed fears that the FOMC may delay any further interest rate cuts.

Q. WHAT ARE THE EXPECTATIONS FOR THE U.S. ECONOMY IN THE NEAR FUTURE?

A. As the FOMC continues to pause reducing short-term interest rates in response to persistent inflation, forecasters have noted the projections in near-term economic growth are higher than previously forecasted figures. However, the economy is still expected to slow down in the near term and then hover around 2.0% in the longer term. Specifically, according to the First Quarter ("Q1") 2026 edition of *Survey of Professional Forecasters* published by the Federal Reserve Bank of Philadelphia, economic growth, as measured by real GDP, is expected to decrease from 2.5% during 2026 to 2.1% during 2027 and 2028.[21] Long-run economic growth beyond 2027 is expected to decrease further to 1.9% in 2029.[22]

Over the next year, inflation is expected to decrease but remain near moderate levels, with the CPI remaining near 2.6% in 2026 and then falling to 2.5% in 2027 and 2.4% in 2028.[23] Another inflation metric closely watched by the FOMC is the Personal Consumption Expenditures ("PCE") index because it represents a broader measure of inflation. The PCE is expected to decrease from 2.7% in 2026 to 2.3% in 2027 and 2.2% in 2028, which is slightly greater than the FOMC's monetary policy goal of 2% inflation.[24] The data also show that analysts expect the national unemployment rate to decrease slightly from 4.5% in 2026 to 4.4% in 2027, 2028, and 2029.[25]

[21] *Survey of Professional Forecasters: First Quarter 2026*, Fed. Rsrv. Bank Philadelphia, Mar. 6, 2026, at 9, 11.
[22] *Id.*
[23] *Id.*
[24] *Id.*
[25] *Id*.

Q. HOW WILL U.S. MILITARY OPERATIONS IN IRAN AFFECT THESE FORECASTS?

A. Since this report by the Federal Reserve Bank of Philadelphia was released in the beginning of March 2026, the forecasts therein do not reflect the economic and financial impacts of the sudden decrease in global crude oil supplies. I expect that the next quarterly report will show higher inflation and possible higher unemployment and lower economic growth as businesses and consumers adjust to increasing fuel costs.

Q. HOW DO INVESTORS VIEW UTILITY STOCKS?

A. In general, investors view utility stocks as a safe investment because of the utility industry's defensive fundamentals and high dividend yields. Natural Gas stocks are considered defensive by investors because gas service is essential, and utilities are regulated monopolies. Thus, during times of uncertainty investors seek low risk stocks, such as Natural Gas stocks. *Value Line* reports that the big draw of utility equities is their dividends, which tend to be adequately covered by corporate earnings.[26] As of February 20, 2026, *Value Line* reports that the average yield for the Natural Gas group was approximately 3.3%, compared to the Value Line median of 2.0%.[27] According to *Value Line*, long-term prospects are optimistic due to the abundance of domestic natural gas supply and the fact that about half of all domestic households use natural gas, with few alternatives available.[28] Total returns on utility stocks are dependent on investors' expectations of where interest rates will go next and prospects for the economy in general since investors choose these stocks (with low betas) over economically sensitive higher-risk stocks during economic uncertainty.

[26] *Natural Gas Utility*, Value Line Investment Survey, Feb. 20, 2026, at 534.
[27] *Id.*
[28] *Id.*

Q. HOW DO INVESTORS' EXPECTATIONS RELATE TO NFGD'S ROE?

A. As discussed previously in this testimony, despite a slight reprieve in inflation last year, inflation may increase again due to crude oil supply shocks caused by U.S. military operations in Iran. In response, the Federal Reserve may continue to delay reducing interest rates or even increase rates. Given this uncertainty, investors may choose more defensive stocks, such as utility stocks, that typically have a lower expected return compared to higher-risk stocks. This trend is demonstrated by my cost of equity study estimates.

IV. CAPITAL STRUCTURE

Q. WHAT IS MEANT BY THE TERM "CAPITAL STRUCTURE"?

A. Capital structure refers to the relative percentage of equity, preferred stock, and debt that a company uses to finance its investments.

Equity (or common equity) represents ownership in a company and its investments. It includes common stock, retained earnings, and additional paid-in capital. Equity financing is more expensive than debt financing for two reasons: (1) because companies have a legal obligation to pay debt before equity, stockholders expect a higher return to compensate for this risk and (2) returns on equity (or dividends) are not tax deductible as a business expense like a company's interest payments on debt.

Preferred stock is a type of stock that offers greater benefits than common equity. Preferred stockholders receive a fixed dividend and have priority for payment over common stockholders.

Debt represents liabilities on a company's books that must be repaid prior to any common or preferred stockholders receiving a return on their investment. Corporate debt generally includes two time horizons: (1) long-term debt that matures over a period of more than one year; and (2) short-term debt that matures within one year.

Q. HOW IS A UTILITY'S TOTAL RATE OF RETURN CALCULATED?

A. The total rate of return is composed of the weighted costs of long-term debt and equity capital. Long-term debt costs are typically computed using the utility's actual debt costs as of a certain date (e.g., the last day of the test year). In some jurisdictions, such as Pennsylvania, short-term debt is sometimes included in the capital structure for ratemaking purposes. Unlike the debt components of the capital structure, equity cost rates must be estimated.

The utility's total ROR is developed by multiplying the percentage of each type of financing (common equity, long-term debt, and short-term debt) by their specific cost rates and then totaling the results for a total after-tax ROR. This rate is then converted to pre-tax returns by grossing up the common equity and the preferred stock dividends for taxes. The final pre-tax return is then multiplied by the utility's rate base to determine the amount of money that customers must pay to the utility for the Company to have an opportunity to earn its return on investment and associated tax payments.

Q. HOW DOES THE CAPITAL STRUCTURE IMPACT THE TOTAL RATE OF RETURN?

A. The cost of equity is generally higher than the cost of debt, so ratepayers bear higher costs when the utility finances more of its rate base investment using common equity

and preferred stock. As explained above, stockholders expect a higher return because companies are contractually obligated to repay their debt, however, no such obligation exists for equity. Additionally, equity is also more expensive than debt because debt financing is tax deductible while stock dividend payments are not. Thus, if a utility is allowed to use a capital structure for ratemaking purposes that has more equity than debt, ratepayers also pay a higher tax burden.

Q. HOW DO INVESTORS VIEW THE CAPITAL STRUCTURE?

A. On the one hand, investors may view a high reliance on debt as risky (referred to as financial or leverage risk) because debt has priority of payment over equity. Given that creditors must be paid before investors, a company's relatively high debt burden can lead to a higher required ROE relative to similar investment opportunities to accommodate the higher risk. On the other hand, excessive equity, while reducing financial risk for an enterprise's creditors and investors, increases the overall cost of capital (and therefore return on rate base), which must be recovered through customers rates. This raises investor concern over affordability of utility rates in the context of macroeconomic inflation conditions.

Q. WHAT CAPITAL STRUCTURE IS NFGD REQUESTING FOR USE IN THIS CASE?

A. For the FPFTY ending October 31, 2027, NFGD is proposing a capital structure of 56.4% common equity and 43.6% long-term debt.[29] NFGD issued a $175 million promissory note in February 2025 and has $125 million remaining through December 31, 2026. This capital structure also includes new financed long-term debt that NFGD plans to receive of $125 million and $275 million from its parent, National Fuel Gas

[29] NFGD St. 10 at 56.

Company ("NFG" or the "Parent"), as part of an issuance by NFG of $500 million 10-year notes in October 2026.[30]

Q. WHAT IS NFGD'S CURRENT CAPITAL STRUCTURE?

A. NFGD's actual capitalization for the historical period ended September 30, 2025, is 43.9% long-term debt and 56.1% equity.[31]

Q. HOW HAS NFGD'S CAPITAL STRUCTURE CHANGED SINCE THE LAST RATE CASE?

A. NFGD response to Interrogatory OCA-VIII-10 shows that the Company's equity ratio (excluding short-term debt balances) has decreased since the last rate case, with equity ratios of 64.02% in Sept 2022, 58.61% in September 2023, 59.10% in September 2024, and 56.15% in September 2025.[32]

Q. SHOULD THE COMMISSION ACCEPT NFGD'S PROPOSED CAPITAL STRUCTURE?

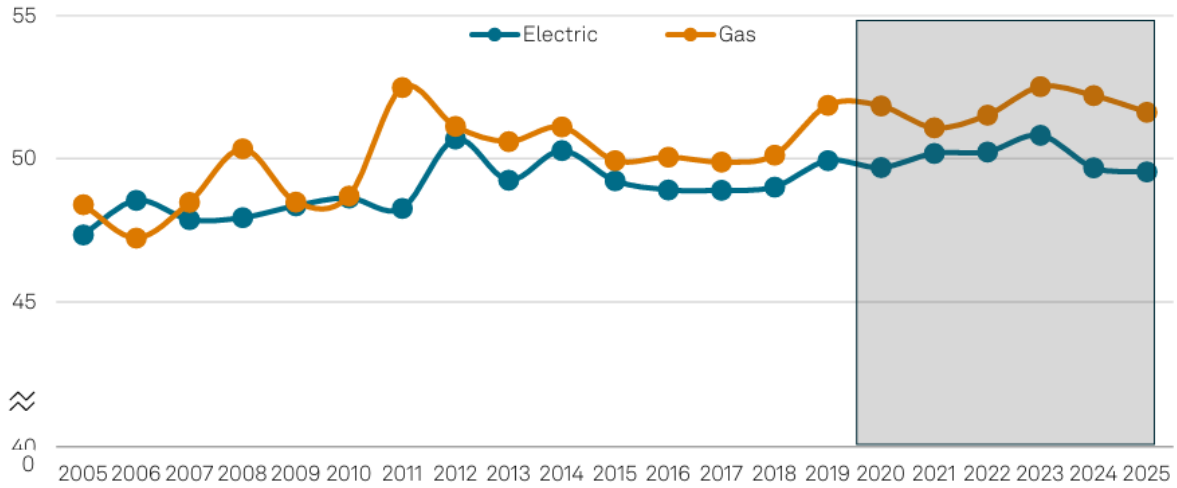
A. No.

Q. WHY SHOULD THE COMMISSION REJECT NFGD'S PROPOSED CAPITAL STRUCTURE.

[30] NFGD St. 11 at 9-10.
[31] Exhibit MLR-2 (Company Response to Interrogatory OCA VIII-4).
[32] Exhibit MLR-3 (Company Response to Interrogatory OCA VIII-10).

A. NFGD's proposed equity ratio of 56.4% exceeds annual average equity ratios approved by regulatory commissions for regulated gas utilities. For example, the average equity ratio approved by regulatory commissions for regulated gas utilities was 52.45% in 2023, 52.52% in 2024, and 51.63% in 2025.[33] Furthermore, NFGD's proposed equity ratio of 56.40% exceeds the proxy group average of 48.00% and median of 45.00% that is expected for 2026.[34]

FIGURE 3. AVERAGE AUTHORIZED EQUITY RATIO



Data compiled March 20, 2026.
The data prior to 2020 is subject to revision. The data for 2020 and beyond reflect the enhanced dataset.

RRA Regulatory Focus - Major Energy Rate Case Decisions in the US January – December 2025, S&P Global Market Intelligence, Apr. 2026, at 7.

Additionally, NFGD's proposed equity ratio of 56.4% far exceeds the 53.9% equity ratio of its parent company, NFG, in its Historic Test Year.[35] The Commission needs to be aware that the Parent, NFG, would benefit from double leveraging, in which

[33] *RRA Regulatory Focus - Major Energy Rate Case Decisions in the US January – December 2025*, S&P Global Market Intelligence, Apr. 2026, at 7-8.
[34] OCA Ex. MLR-1: Schedule MLR-4 (Sample Characteristics).
[35] OCA Ex. MLR-4 (Company Response to Interrogatory OCA VIII-5).

a parent company issues debt and then infuses that debt into the regulated subsidiary as common equity.

Q. PLEASE EXPLAIN THE CONCEPT OF DOUBLE LEVERAGE.

A. Double leverage occurs when a utility parent company issues debt and then infuses that debt into the regulated subsidiary as common equity. NFG as the holding company wholly owns the regulated utility subsidiary, NFGD, and itself does not offer utility services. The purpose of the parent company issuing debt and infusing it into the utility subsidiary is to reduce costs to the parent company at the expense of the subsidiary's ratepayers because equity is more expensive than debt. Also, equity is grossed up for taxes, such that the costs that NFG can collect from NFGD, as the subsidiary, are far greater than the cost of issuing the debt.

Q. DID YOU ESTIMATE THE IMPACT THAT YOUR CAPITAL STRUCTURE RECOMMENDATION COULD HAVE ON THE COMPANY'S INDICATED COST OF CAPITAL?

A. Yes. I estimate the impact of my recommended capital structure on the Company's cost of capital estimate by using the Hamada model. Since the DCF does not directly incorporate the impact of the capital structure on ROE, I use the Hamada version of the CAPM. Later in this testimony I provide this analysis after I introduce and explain the CAPM.

Q. PLEASE SUMMARIZE THE RESULTS OF THE HAMADA FORMULA BASED ON YOUR PROPOSED CAPITAL STRUCTURE?

A. My recommended capital structure consists of 50% debt and 50% equity. Since NFGD's debt ratio is lower than my proposed capital structure, when the beta is "relevered" to match the proxy group beta, it results in a lower ROE than if NFGD had

been operating with a capital structure equal to my recommended capital structure. If the Commission were to adopt the Company's proposed capital structure consisting of 56.4% equity and 43.6% debt, then its indicated cost of equity would be 9.21%.

V. COST OF DEBT

Q. WHAT DOES NFGD PROPOSE AS THE COST OF LONG-TERM DEBT?

A. NFGD's proposed cost of long-term debt of 5.58% is the Company's embedded cost of debt for the FPFTY ending October 31, 2027.[36]

Q. DO YOU CONSIDER THE COMPANY'S REQUESTED OVERALL COST OF LONG-TERM DEBT REASONABLE?

A. Yes. The Company's proposed cost of debt is reasonable when compared to the prevailing yields on equivalent long-term debt for utilities of similar risk profiles at the time of its issuances. For instance, current (2026) expected market rates for Moody's Aaa-rated corporate bonds are 5.21% and Baa-rated corporate bonds are 5.86% and are expected to further decrease in 2027 to 5.05% and 5.83%, respectively.[37]

Q. DO YOU RECOMMEND THAT THE COMMISSION ACCEPT NFGD'S REQUESTED COST OF LONG-TERM DEBT?

A. Yes. Given the current financial circumstances, this rate is reasonable.

VI. RETURN ON EQUITY

Q. HOW DO YOU DETERMINE THE ROE FOR A REGULATED UTILITY?

A. For ratemaking purposes, the cost of equity must be estimated because it cannot be directly observed, and it varies with changing expectations of financial market

[36] NFGD St. 11 at 8:1-6; 53.53.III-E-6, Page 4 of 15.
[37] OCA Ex. MLR-1: Schedule MLR-3 (Survey of Professional Forecasters).

conditions. The cost of equity is the long-term annualized market return that investors (in general) expect when they purchase equity shares of a particular company. It reflects the risk factors of that investment as compared to alternative investment opportunities and investors' current opportunity cost of investing in the securities of that company (i.e., the investors' risk-adjusted alternatives).

Because NFGD is a wholly-owned subsidiary of NFG and is not a publicly traded company, it is not possible to directly apply cost of equity models to the Company. As an alternative, I calculate an estimate of NFGD's cost of equity by deriving average expected market returns for a proxy group of regulated gas utility companies with comparable risk.

Q. HOW DID MR. NOWAK CHOOSE THE COMPANIES FOR HIS UTILITY PROXY GROUP?

A. For his proxy group, Mr. Nowak begins with nine investor-owned domestic natural gas distribution companies that are publicly traded and listed in Value Line's Natural Gas Utility Group.[38] He then applies a series of criteria to determine his proxy group, which includes companies that have at least 50% of net operating income from regulated operations and at least 60% of their net operating income from natural gas distribution operations; companies that pay consistent quarterly cash dividends; companies that have investment grade long-term issuer credit ratings; and companies that have not publicly announced involvement in any major merger or acquisition activity.[39] After he applies these criteria, Mr. Nowak's proxy group contains seven companies.[40]

[38] NFGD St. 10 at 24-25.
[39] *Id.*
[40] *Id.*

Q. IN YOUR ANALYSIS, DO YOU MAKE ANY CHANGES TO MR. NOWAK'S PROXY GROUP?

A. No. I use Mr. Nowak's natural gas utility proxy group companies because they meet criteria that appear reasonable.[41] Also, I typically require companies in my sample to have no ongoing involvement in a major merger or acquisition, an investment-grade credit rating (BBB- or higher), and no cuts in dividend payments during the past six months. I typically exclude firms involved in any significant merger or acquisition activity because the market values of such firms differ significantly from those companies not involved in such activities. This difference would be reflected in a company's stock price and dividend yields, which would distort the estimated cost of equity. I also exclude companies that have recently cut dividend payments to shareholders because such a management decision is usually perceived by investors as a sign of financial distress.

Q. WHY DO YOU INCLUDE SPIRE, INC. IN YOUR NATURAL GAS UTILITY PROXY GROUP?

A. Although Spire, Inc. ("Spire") announced that it is acquiring the Piedmont Gas Tennessee business from Duke Energy, the acquisition is not expected to have a transformative effect on the company. Since the announcement in July 2025, there has been no meaningful change in Spire's stock price performance relative to other utility companies.

Q. PLEASE DISCUSS THE DIFFERENT TYPES OF RISK THAT A REGULATED MONOPOLY, SUCH AS A GAS UTILITY, MAY FACE.

[41] OCA Ex. MLR-1: Schedule (MLR-4) (Sample Characteristics).

A. An investor's expected return on an investment is composed of the risk-free rate and different types of risk, including inflation risk, interest rate risk, business risk, financial risk, and regulatory risk.

The risk-free rate is the level of return investors can achieve without assuming any risk. In general, most investors agree that a Treasury bond is an asset perceived by the market as having relatively less risk than other market instruments because the federal government's access to tax proceeds to fulfill its debt obligations and strong credit rating make Treasury securities practically default-free. However, Treasury bonds are not absolutely risk-free because they incorporate a risk premium associated with interest rate risk. This is the premium investors require to compensate them for the foregone opportunity cost of an alternative, higher interest rate later.

From an investor's perspective, inflation risk, also called purchasing power risk, is the chance that the cash flows from an investment will not be worth as much in the future because of changes in purchasing power due to inflation.

Interest rate risk is the risk that arises for investors from the variability in returns caused by fluctuating interest rates, which depends on how sensitive an asset's price is to interest rate changes in the market. For bonds, for example, their price sensitivity to interest rates depends on the time it takes for the bond to reach maturity and the coupon rate of the bond.

Business risk, as perceived by investors, includes all the operating factors that increase the probability that expected future cash flows accruing to investors may not be realized. Business risk would include such factors as sales volatility and operating leverage. A utility's business risk is a function of factors such as customer base

diversity, necessary capital expenditures, the regional and national economy, and the regulatory environment in which the utility operates.

Financial risk relates to the capital structure of a company, including its fixed contractual obligations and ability to pay interest on its debt and refinance that debt when it is due. Credit-rating agencies assess the financial health of a company through the use of key financial ratios that measure the extent to which a company can pay its debt, including principal and interest. Corporate rating designations that are commonly used are shown later in Table 2 of my testimony, which identifies rating categories used by S&P, Fitch, and Moody's for investment-grade issuances.

One of the key financial ratios used by credit-rating agencies is the debt ratio. The higher the portion of the capital structure that is comprised of debt or leverage, the higher the risk of default on those debt obligations.

Regulatory risk is based on the investor's perceived understanding of the current regulatory environment along with possible changes to that regulatory environment. How regulators treat regulatory lag is one example of regulatory risk. To the extent that companies face a time lag between incurring expenses and cost recovery, such risk is best measured by choosing a proxy group of companies that face similar regulatory oversight and earn the majority of their revenues from regulated operations.

A. INFLATION RISK

Q. IN YOUR VIEW, DOES NFGD FACE GREATER INFLATION RISK THAN OTHER REGULATED UTILITIES IN THE PROXY GROUP?

A. No. The risks associated with current inflation trends, which have decreased from a CPI of 8.0% in 2022 to 2.6% in 2025,[42] are shared by all regulated utilities and, as a result, are reflected in the utility proxy group's calculated costs of equity.

B. INTEREST RATE RISK

Q. IN YOUR VIEW, DOES NFGD FACE GREATER INTEREST RATE RISK THAN OTHER REGULATED UTILITIES IN THE PROXY GROUP?

A. Yes. Since changes in interest rates affect borrowing costs, the effect of such risk depends on the company's credit rating and portion of debt to total financial capital compared to the proxy group. As I discuss in greater detail in the financial risk section below, since NFGD is not credit-rated and receives debt and equity funding through its parent company, NFG, the relevant comparison is NFG's credit rating. NFG has a lower credit rating than the average of the proxy group. Thus, in general, NFGD faces higher debt cost when issuing new debt compared with the debt costs incurred by one of the proxy group companies, on average.

C. BUSINESS RISK

Q. DOES MR. NOWAK IDENTIFY ANY BUSINESS RISK THAT HE CLAIMS IS UNIQUE TO THE COMPANY?

A. Yes. Mr. Nowak lists four risk factors that justify an ROE premium: (1) capital expenditure risk, (2) small company size, (3) customer concentration risk, and (4) regulatory risk.

[42] OCA Ex. MLR-1: Schedule MLR-1.

Q. HOW DOES MR. NOWAK CHARACTERIZE NFGD'S CAPITAL EXPENDITURE RISK?

A. Mr. Nowak asserts that the Company's capital expenditure program increases risk by exposing it to the potential for under-recovery or delayed recovery of investments. Specifically, he states that "an elevated level of capital investment increases the risk of under-recovery or delayed recovery of the invested capital."[43]

Q. DO YOU AGREE WITH THIS CHARACTERIZATION?

A. No. Mr. Nowak's characterization is inconsistent with the economic framework governing regulated utilities.

Q. PLEASE EXPLAIN.

A. In a cost-of-service regulatory model, capital investment is not a discretionary risk but rather the foundation of earnings. Utilities are permitted the opportunity to recover prudently incurred capital costs through rates, including a return on invested capital. The Company's investments are largely driven by safety and reliability mandates and are incorporated into rate base through established regulatory processes.

Q. WHAT IS THE ECONOMIC FLAW IN MR. NOWAK'S REASONING?

A. Mr. Nowak treats regulatory lag as though it were a unique or extraordinary risk, when in fact it is a standard feature of utility regulation that is already reflected in industry-wide ROE benchmarks. All regulated utilities face some degree of timing difference between when investments are made and when they are reflected in rates. This does not distinguish the Company from its peers and therefore does not justify an upward adjustment to ROE.

Q. HOW DOES MR. NOWAK ADDRESS THE COMPANY'S SIZE?

[43] NFGD St. 10 at 41.

A. Mr. Nowak states that the Company's "significantly smaller size compared to the proxy companies" contributes to its risk profile.[44]

Q. DOES SMALLER SIZE, IN THIS CASE, JUSTIFY A HIGHER ROE?

A. No. The Company's size, when properly evaluated in context, does not increase its risk in a manner that warrants an ROE premium.

Q. PLEASE EXPLAIN WHY THE COMPANY'S SIZE DOES NOT JUSTIFY A HIGHER ROE.

A. The Company operates as a subsidiary of NFG, a larger holding company that provides access to capital markets, centralized financing, and operational support. As a result, the financial risks typically associated with small, standalone utilities are substantially mitigated. The Company does not independently raise capital and therefore benefits from the scale and credit profile of its parent organization.

Q. HOW DOES MR. NOWAK DESCRIBE DEMAND-RELATED RISK?

A. Mr. Nowak asserts that the Company's customer concentration exposes it to demand risk, stating that "customer concentration exposes the Company to significant risk related to natural gas demand."[45]

Q. IS THIS CONCERN VALID IN THE CONTEXT OF A REGULATED UTILITY?

A. Not to the extent suggested by Mr. Nowak. The Company operates under a regulatory framework that includes mechanisms designed to mitigate volumetric and demand risk. These mechanisms include weather normalization adjustments, distribution system improvement charges, fully projected future test years, rate design features such as fixed customer charges, and the ability to reset rates through periodic rate case

[44] NFGD St. 10 at 41.
[45] *Id.* at 52.

proceedings. Together, these features significantly reduce the sensitivity of revenues to fluctuations in customer usage.

Q. WHAT IS THE MAIN ISSUE WITH MR. NOWAK'S ARGUMENT?

A. Mr. Nowak effectively applies a commodity-market perspective to a regulated utility environment. In competitive markets, demand fluctuations directly impact revenues and profitability. In contrast, under cost-of-service regulation, revenue recovery is largely stabilized through regulatory mechanisms. As a result, the Company's exposure to demand variability is materially limited.

Q. HOW DOES MR. NOWAK CHARACTERIZE REGULATORY RISK?

A. Mr. Nowak emphasizes the importance of the regulatory environment, noting that "half of Moody's overall assessment… is based on the regulatory environment."[46] While Mr. Nowak correctly observes that regulation is a key determinant of utility risk, he does not demonstrate that the Company operates in a regulatory environment that is more adverse than those of its peers. In fact, Pennsylvania's regulatory framework includes features—such as forward-looking test years and established cost recovery mechanisms—that are generally viewed as supportive of utility financial stability. I will provide more detail regarding Pennsylvania's regulatory environment later in Section VI.E of this direct testimony.

Q. WHAT IS MISSING FROM HIS ANALYSIS?

A. Mr. Nowak does not present evidence of systematic disallowances, extraordinary regulatory lag, or other adverse regulatory outcomes that would indicate elevated risk. Without such evidence, his reliance on general statements about regulatory importance does not support a higher ROE.

[46] *Id.* at 52-53.

Q. IN YOUR VIEW, DOES NFGD FACE GREATER BUSINESS RISK THAN OTHER REGULATED UTILITIES IN THE PROXY GROUP?

A. No. The fundamental comparison here is to the proxy group. Every utility is different, but I do not believe that NFGD has greater business risk than its peers in the proxy group.

D. FINANCIAL RISK

Q. IN YOUR VIEW, DOES NFGD FACE GREATER FINANCIAL RISK THAN OTHER REGULATED UTILITIES IN THE PROXY GROUP?

A. No. NFGD faces similar financial risk compared to the proxy group. Although NFGD acquires financing through its parent company, NFG, which has a lower credit rating than the proxy group, NFGD's lower debt ratio relative to the proxy group reduces its financial risk. NFG has long-term issuer ratings from Moody's of Baa3 (Outlook: Stable), S&P of BBB- (Outlook: Stable), and Fitch Ratings of BBB (Outlook: Stable). NFG's ratings are lower than the median for the proxy group, which is an S&P rating of A-/BBB+ and a Moody's rating of A3/Baa1.

Table 2. Rating Categories (Investment Grade)

S&P and Fitch	Moody's
AAA	Aaa
AA+	Aa1
AA	Aa2
AA-	Aa3
A+	A1
A	A2
A-	A3
BBB+	Baa1
BBB	Baa2
BBB-	Baa3

Q. DOES THE CAPITAL STRUCTURE OF NFGD INDICATE THAT IT IS EXPOSED TO LESS FINANCIAL RISK THAN OTHER MEMBERS OF THE PROXY GROUP?

A. Yes. NFGD's current capital structure of 43.9% long-term debt is lower than the utility proxy group's average debt-to-total-capital ratio average of 50.69% and median of 51.57%, meaning that NFGD faces lower financial or leverage risk than the proxy group.[47]

E. REGULATORY RISK

Q. IN YOUR VIEW, DOES NFGD FACE GREATER REGULATORY RISK THAN OTHER REGULATED UTILITIES IN THE PROXY GROUP?

A. No. NFGD does not face greater regulatory risk than the proxy group. Pennsylvania has a regulatory ranking of "Above Average/2", according to S&P Market Intelligence, which is the second highest rating and outranked by only Alabama with a ranking "Above Average/1."[48] In a more recent publication by Regulatory Research Associates ("RRA"), a division of S&P Market Intelligence, RRA states that, "RRA views the regulatory climate for energy utilities in Pennsylvania to be relatively constructive from an investor standpoint …."[49] RRA continues by stating that the Commission allows utilities to employ a series of ratemaking practices meant to reduce regulatory lag, such as recovering costs using a forward-looking test year and year-end base valuations. The Commission also permits utilities to employ a series of rate mechanisms meant to recover costs in between general rate cases. Moreover, RRA notes that almost all the

[47] OCA Ex. MLR-1, Schedule MLR-4 (Sample Characteristics); OCA Ex. MLR-2 (Company Response to Interrogatory OCA VIII-4).

[48] *RRA State Regulatory Evaluations – Energy*, S&P MI, Mar. 2026, at 5.

[49] *State Commission Database*, S&P MI (last visited April 14, 2026).

cases decided since the 1990s have been resolved by black box settlements that do not disclose the settled ROE or ROR.

Q. PLEASE EXPLAIN HOW THE USE OF YEAR-END OR FULLY PROJECTED YEAR-END RATE BASE AFFECTS REGULATORY LAG.

A. The use of a year-end or fully projected year-end rate base reduces regulatory lag by aligning the level of plant included in rates with the level of plant that will actually be in service when rates are effective. Under a traditional historical or average test year approach, rates are based on plant balances that are already outdated by the time new rates are implemented. Because utilities continue to invest in infrastructure between the test year and the effective date of rates, this mismatch results in systematic under-recovery of invested capital. By contrast, a year-end or fully projected approach incorporates plant levels expected at the time rates go into effect, thereby significantly narrowing the gap between the authorized rate base and the utility's actual investment.

Q. PLEASE ELABORATE ON HOW A FUTURE TEST YEAR REDUCES REGULATORY LAG AND, ULTIMATELY, RISK.

A. A future test year allows a utility to forecast costs forward into the first full year when the proposed new rates will be in effect so that rates can be matched to costs. It significantly reduces regulatory lag, which is the time between when a utility incurs increases in costs and when it recovers costs through increases in rates.

Q. HOW DOES REDUCING REGULATORY LAG REDUCE REGULATORY RISK?

A. Reducing the time or "lag" in between rate cases or when costs increase helps mitigate regulatory risk in several ways. It allows utilities to better align their revenues with current operating expenses, which in turn improves cash flow and enhances financial

stability. By enabling more timely cost recovery, reducing lag also lowers uncertainty for investors, increasing the likelihood that a utility will achieve its authorized ROE without delay. Additionally, when rates more accurately reflect contemporaneous operating conditions, a utility can more effectively manage its expenses and maintain a sound financial position, ultimately reducing financial risk.

Q. HOW DO INVESTORS PERCEIVE THE USE OF FUTURE TEST YEARS?

A. Investors consider this type of test year to reduce regulatory risk, particularly in periods where there is a robust level of capital spending, high inflation, and rising interest rates.[50] S&P MI reports that less than a quarter of states allow a future test year.[51]

Q. IS THE REDUCTION IN REGULATORY RISK ASSOCIATED WITH A FUTURE YEAR ALREADY INCORPORATED IN YOUR ROE ESTIMATES?

A. No. I use the gas utility proxy group that includes utilities from across the country. As noted above, less than a quarter of states allow the use of future test years, so NFGD's regulatory risk is arguably lower than the proxy group.

Q. DOES NFGD HAVE ANY RATE MECHANISMS THAT CAN IMPROVE COST RECOVERY IN BETWEEN RATE CASES?

A. Yes. NFGD has a series of rate mechanisms or adjustment clauses that allow it to recover associated costs in between cases, thereby reducing recovery lag and regulatory risk. Such mechanisms also reduce business risk because they provide more predictable earnings and consistent cash flow than otherwise. These rate mechanisms include the Purchase Gas Cost Clause (Rider A), State Tax Adjustment Surcharge (Rider B), Customer Education Charge (Rider E), Customer Assistance Program (Rider F),

[50] *RRA State Regulatory Evaluations – Energy, Regulatory Research Associates*, S&P MI, May 24, 2023, at 18.
[51] *Id.*

Merchant Function Charge (Rider G), Gas Procurement Charge (Rider H), OPEB related temporary riders, and Distribution System Improvement Charge (DSIC).[52]

Q. PLEASE EXPLAIN THE PURPOSE OF THE PURCHASE GAS COST CLAUSE.

A. The purpose of the Purchase Gas Cost Clause is to recover the costs associated with supplying gas to customers. It ensures that the company can cover the expenses incurred in purchasing and delivering gas, and it is adjusted quarterly to reflect changes in these costs. This charge essentially shifts the risk associated with market price swings onto customers and provides cash flow support to the Company.

Q. WHAT IS THE PURPOSE OF THE STATE TAX ADJUSTMENT SURCHARGE.

A. The State Tax Adjustment Surcharge is recomputed whenever NFGD experiences a material change in any of the taxes used in calculating the surcharge.

Q. WHAT IS THE PURPOSE OF THE DSIC?

A. The DSIC is a surcharge that appears on consumer bills as a line item and is used to recover the reasonable and prudent costs incurred by the utility to repair, improve, or replace eligible property that is placed in service in between rate cases, subject to certain consumer protections. The DSIC permits NFGD to recover eligible costs in between general rate cases and allows NFGD to accelerate the replacement of aging infrastructure.

Q. ARE THE ABOVE-REFERENCED RIDERS CURRENTLY IN EFFECT?

A. Yes.

[52] OCA Ex. MLR-5 (Company Response to Interrogatory OCA VIII-13).

Q. DOES THE COMPANY PROPOSE A NEW WEATHER NORMALIZATION ADJUSTMENT MECHANISM IN THIS PROCEEDING?

A. No. NFGD is not proposing a new Weather Normalization Adjustment ("WNA") mechanism. Rather, it acknowledges that the WNA already exists as a pilot program, stating that "the WNA pilot was part of the 2022 Case settlement agreement approved by the Commission on June 15, 2023."[53] The Company proposes making the existing pilot permanent. Specifically, it states that it is requesting the Commission to approve the current pilot WNA mechanism, which is scheduled to expire in October 2028, as a permanent program.

Q. WHAT IS THE PURPOSE OF THE WNA?

A. The Company states that the WNA is intended "to moderate the bill impacts of unusually warm or cold weather, providing customers with greater stability while aligning billed revenues more closely with the Commission-approved revenue requirement."[54] Ultimately, the WNA shifts weather-related risk away from NFGD and onto customers by normalizing revenues regardless of usage swings.

Q. DO THESE RATE MECHANISMS REDUCE NFGD'S REGULATORY RISK?

A. Yes. Because the recovery in between rate cases is guaranteed for prudently incurred expenses, NFGD's regulatory risk is comparable to the regulatory risk of other utilities in its proxy group.

Q. HOW DO INVESTORS VIEW THESE RATE MECHANISMS?

A. Investors view these rate mechanisms favorably because they reduce regulatory lag. As discussed above, S&P MI considers these rate mechanisms as constructive but also looks at the frequency with which the adjustments occur and whether there is a true-up

[53] NFGD St. 19 at 23.
[54] *Id.* at 24.

mechanism. S&P MI addresses the DSIC mechanism in particular as contributing to Pennsylvania's "Above average/2 rating," because it allows utilities to update rates for incremental infrastructure capital investment as often as quarterly.

VII. ROE METHODOLOGIES

Q. WHAT METHODOLOGIES DO YOU USE TO DERIVE YOUR COST OF EQUITY RECOMMENDATION?

A. I use the Constant-Growth DCF model to form the basis of my recommendation of a 9.74% ROE, which is the midpoint of the range of my DCF results for NFGD. My recommendation is further supported by the average of the results of my CAPM analyses of 8.99%, which is within the range of my DCF results, demonstrating the reasonableness of my DCF analysis.

Q. WHAT IS THE PREDOMINANT ROE MODEL UTILIZED BY REGULATORY BODIES IN THE UNITED STATES?

A. For decades, the Federal Energy Regulatory Commission (FERC) and public utility commissions across the United States, including Pennsylvania, have relied primarily on the DCF model to develop a range of returns earned on investments in companies with corresponding risks for purposes of determining the ROE for regulated entities.[55] Although I use variants of the Constant-Growth DCF model and the CAPM, I rely on my Constant-Growth DCF to form the basis of my recommendation of a 9.74% ROE for NFGD.

A. CONSTANT-GROWTH DISCOUNTED CASH FLOW MODEL

Q. PLEASE DESCRIBE THE CONSTANT-GROWTH DCF MODEL.

[55] *RRA Regulatory Focus, FERC and Electric ROEs – 2022 Update*, S&P MI, Sept. 26, 2022, at 3.

A. The Constant-Growth DCF model is based on the dividend discount model first proposed by J.B. Williams in 1938.[56] The model is based on the premise that since cash dividends are the only income from a share of stock held to infinity, the value of that stock will be the present value of its stream of dividends, where the discount rate is the market's required return. The model can be modified to take into account the (more common) situation whereby shares of stock are bought and sold, producing capital gains income in addition to dividend income. To simplify the mathematics of the model, expected future dividends are represented by applying a constant-growth rate to the current observable dividend. Mathematically, the present value of an asset (common stock) is expressed as:

$$P_0 = \frac{D_1}{(K-g)},$$

Where:

D_1 is the dividend payment in one year from today or the expected dividend;
K is the rate of return used by investors to discount future dividends; and
g is the growth rate of the dividend payment.

The estimated cost of equity, K, is specified as:

$$K = \frac{D_1}{P_0} + g,$$

Where:

D_1 is the expected dividend, represented by $D_1 = D_0 (1 + g)$

Where:

D_0 is the current annual dividend per share.

[56] J.B. Williams, *The Theory of Investment Value* 45-48 (1938).

Therefore, the market ROE capital is the sum of the dividend yield (anticipated dividend payments divided by the market price) and the expected growth in dividend income.

Q. PLEASE DESCRIBE HOW YOU DERIVE THE DIVIDEND YIELD COMPONENT OF YOUR DCF ANALYSIS.

A. The dividend yield in my DCF analysis is the annual dividend per share over the next 12 months, divided by the stock price average for different historical periods ended February 27, 2026. I first calculate the dividend yields using the 30-calendar day average of closing stock prices. I also use a 90-calendar day average of closing stock prices for capturing longer market trends.

In general, the most recent price of a security can be used to calculate the dividend yield because it represents current valuations in equity markets, calculating an average, over time, to mitigate any irregularities as necessary. However, using the average of a range of dates (e.g., 30 and 90 days) helps reduce the bias that might occur from day trading-driven irregularities or short-term volatility. The average 30-calendar day stock price for the proxy group is $82.91 per share, which is more than the 90-calendar day average stock price of $79.76 per share.[57]

I then estimate the expected dividend yield by applying the growth rate component of my Constant-Growth DCF analysis. I use three variants for calculating the growth rate component. These methods produce a range of expected dividend yields from 3.29% to 3.48% using the proxy group.[58]

Q. DO YOU MAKE ANY FURTHER ADJUSTMENTS TO YOUR EXPECTED DIVIDEND YIELD?

[57] OCA Ex. MLR-1, Schedule MLR-5a-6f.
[58] *Id.*

A. Yes. I adjust the dividend yield by one-half the expected growth to reflect growth over the coming year. Since I use annualized dividends, I make this adjustment to account for the fact that companies tend to announce changes in dividends at different times throughout the year.

Q. PLEASE DESCRIBE THE GROWTH RATE COMPONENT OF YOUR DCF ANALYSIS.

A. My first set of growth rates is based on published earnings per share ("EPS") forecasts because investors typically view earnings growth as an indicator of future dividend growth. Investors also incorporate other sources of information when setting their expectations of dividend growth, which I will discuss shortly.[59]

I calculate the estimated earnings growth rates by taking the average of analysts' forecasts (which typically cover roughly the next five years) from *Value Line*, S&P MI, and Zacks. The S&P MI and Zacks websites report results incorporating forward-looking surveys of securities analysts' EPS projections. *Value Line*, in contrast, uses a historical base period average value for 2023-2025 and a forecast for 2029-2031 to calculate its growth rates, and it is not a survey. The average expected earnings growth rate using the proxy group of companies is 7.92%, with median DCF results of 10.48% and 10.61%.[60]

However, I then refine my calculation of the growth rate by averaging *Value Line's* dividends per share ("DPS") and book value per share ("BVPS") estimates with the previously estimated earnings growth rate projections weighted equally. I include these three components of growth in my analysis because investors are not only concerned with earnings growth but also dividend and book value growth as an

[59] Williams, *supra* note 56, at 47.
[60] OCA Ex. MLR-1, Schedule MLR-5a, 5c.

assurance that dividend growth will be sustained. Moreover, dividend growth rates are more stable than expected earnings growth. These calculations produce an average growth rate of 5.45%, with median DCF results of 8.88% and 9.03%.[61]

Q. WHAT IS MR. NOWAK'S OVERALL DCF-DERIVED ROE RESULT?

A. Mr. Nowak applies the DCF model using a constant growth model that is similar to my application. Using his constant growth DCF model, he applies low mean, median, mean, and mean high earnings growth rates to estimate a range of ROE results from 10.51% to 12.45%. Mr. Nowak offers a wide range of estimates in his DCF model because he isolates the growth rates by showing a set of results for his minimum growth rates, mean or average growth rates, and maximum growth rates. As I will discuss later in my testimony, this practice is misleading. In contrast, I average all my growth rates.

Q. WHY DO YOUR RESULTS DIFFER FROM MR. NOWAK'S RESULTS?

A. My DCF results using only EPS growth rates are similar to Mr. Nowak's DCF results. Since he only uses EPS growth rates in his DCF analysis, his median utility proxy group result of 10.64% (30-day average stock price) is higher than my utility proxy group results of 10.48% (30-day), and his median proxy group result of 10.68% (90-day) is slightly higher than my proxy group result of 10.61% (90-day). The notable difference between his median results and my results is due to the different time periods used for stock price averages, which reflect varying market trends. Specifically, the ending period of my stock price averages for both 30-day and 90-day averages is February 27, 2026, while the ending date for his 30-day, 90-day, and 180-day stock prices averages for his proxy group is November 28, 2025.[62]

Q. WHY ARE MR. NOWAK'S DCF GROWTH RATES PROBLEMATIC?

[61] OCA Ex. MLR-1, Schedule MLR-5b, 5d.
[62] NFGD St. 10 at 33.

A. Although his median DCF results using the utility proxy group are similar to my results, Mr. Nowak's growth rates are problematic because he only uses the EPS growth rates. While earnings growth is an important indicator of dividend growth, investors also incorporate other financial data when estimating their required returns, such as dividend growth and book value growth. Moreover, dividend growth rates are more stable than expected earnings growth because dividends are determined by the company's dividend payout policy. Later in this direct testimony, I will show that incorporating other growth rates yields even lower ROE estimates.

Mr. Nowak's growth rates are also problematic because he isolates the growth rates by showing a set of results for his minimum growth rates, mean or average growth rates, and maximum growth rates. This practice is misleading because he appears to only use his DCF results that are based on his highest growth rates when providing his recommended ROE of 11.25%.

Q. WHAT EFFECTS DO MR. NOWAK'S GROWTH RATES HAVE ON HIS DCF RESULTS?

A. If Mr. Nowak were to incorporate more than just earnings growth, as I have done with respect to dividend growth and book value growth, his DCF estimates would be lower.

B. <u>SUSTAINABLE-GROWTH DISCOUNTED CASH FLOW MODEL</u>

Q. DO YOU EMPLOY OTHER METHODS TO DERIVE GROWTH RATES IN YOUR DCF MODEL?

A. Yes. I also use the sustainable growth method to estimate the rate of dividend growth. The standard DCF model assumes only one source of equity financing, namely the

retention of earnings. Growth in earnings and dividends, however, can also be achieved by the sale of new common equity.[63] The basic Constant-Growth DCF model of:

$$K = \frac{D_1}{P} + g$$

can be rewritten to assume that external sources of financing influence investor expectations of dividend growth, and is represented as the following:

$$K = \frac{D_1}{P} + br + sv$$

Therefore:

$$G = br + sv,$$

Where:

G is the retention growth rate;

b is the portion of retained earnings or 1 minus payout ratio;

r is the earned rate of return;

s represents the funds raised from the sale of stock as a fraction of existing common equity; and

v is the fraction of funds raised from the sale of stock that accrues to current shareholders.

I use *Value Line* expectations regarding retention ratios and ROEs for five years into the future to derive estimates for *b* and *r*, which in turn are used to calculate the expected internal growth component, *br*. To incorporate external financing growth, *sv*, I use *Value Line* data to derive the market-to-book ratio (which is an actual, observed figure) and expected growth in the number of outstanding shares. The average

[63] This expanded version of the DCF model allows for the value of stocks to vary from book values. If the stock prices equal book value, then the equity held by new shareholders is equal to the funds they invest and the existing shareholders' equity is not changed. If, however, stock prices are greater than book value, a portion of the funds accrues to the existing shareholders, thereby increasing their expectations of dividend growth in the future. David Parcell, *The Cost of Capital – A Practitioner's Guide* 144-45 (2010).

sustainable growth rates for my proxy group is 6.87% (30-calendar day stock prices) and 6.67% (90-calendar day stock prices).[64]

Q. DO YOU APPLY A REASONABLENESS SCREEN TO YOUR INDIVIDUAL ROE RESULTS USING THE DCF METHOD?

A. Yes. After adding the growth-rate estimates and the dividend-yield estimates for each company in my proxy group to obtain the individual ROE estimates, I examined individual company ROE results for reasonableness and whether some results are extreme outliers. Thus, in lieu of relying on the average of my proxy group results for each model, I use the median. The median is the middle value of a set of data and is not skewed by outliers.

Q. PLEASE SUMMARIZE YOUR DCF MODEL RESULTS.

A. As shown in Table 3 below, I employ three different methods for deriving the growth rate in the DCF model, yielding three sets of estimates of the ROE for my proxy group. First, I use the Constant-Growth DCF model using only EPS growth rates. Assuming that investors are only concerned with earnings growth when valuing a company's stock, thereby only using EPS growth in the DCF model, I derive ROE estimates of 10.48% (30-calendar day stock prices) and 10.61% (90-calendar day stock prices).[65]

Second, I use the Constant-Growth DCF model using EPS, DPS, and BVPS growth rates. Once I allow for other sources of growth, such as DPS and BVPS growth rates, to influence investors' expectations of the return on a particular equity, my analyses yield lower results. For instance, incorporating DPS and BVPS growth rates

[64] OCA Ex.MLR-1, Schedule MLR-6c, 6f.
[65] OCA Ex. MLR-1, Schedule MLR-5a, 5c.

results in median ROE estimates of 8.88% (30-calendar day stock prices) and 9.03% (90-calendar day stock prices).[66]

Third, I use the Sustainable-Growth DCF model. When I allow for both internal and external funding sources to drive growth in investor income, for my sustainable growth rate model, I derive median ROE results of 9.87% (30-calendar day stock prices) and 10.03% (90-calendar day stock prices), after adjusting for reasonable growth rates.[67] The overall range of ROE estimates using my DCF is 8.88% to 10.61%, with a midpoint of 9.74%.

TABLE 3. RENO DCF RESULTS (AVERAGE RESULTS)

Estimated Return on Equity	**ROE**		
DCF Methodology	30-Day Stock Price	90-Day Stock Price	Midpoint
Constant-Growth DCF (EPS Growth)	10.48%	10.61%	
Constant-Growth DCF (DPS, EPS and BVPS)	8.88	9.03	
Sustainable-Growth DCF	9.87	10.03	
DCF Range (Min. & Max.)[1]	**8.88%**	**10.61%**	**9.74%**

[1] ROE range (minimum and maximum values) for the 30-day and 90-day DCF results.

Q. HOW DOES YOUR METHODOLOGY FOR CALCULATING THE DCF GROWTH RATE DIFFER FROM THAT OF MR. NOWAK?

A. The major differences in our Constant-Growth DCF methodologies are that Mr. Nowak only uses earnings growth rates in his DCF model to develop his ROE recommendation. As discussed previously, if Mr. Nowak were to conduct his DCF method using other growth rates in addition to EPS growth, he would derive lower

[66] OCA Ex. MLR-1, Schedule MLR-5b, 5d.
[67] OCA Ex. MLR-1, Schedule MLR-6c, 6f.

ROE estimates. Applying Mr. Nowak's EPS-only growth rate approach to my model yields ROE results of 10.48% and 10.61% over the 30-day and 90-day periods, as shown above in Table 3. However, because the DCF estimate is derived from the concept that cash dividends are the only income from a share of stock, in principle, the growth component should only include dividends. Investors, however, are also concerned about whether dividends are sustainable, and they are concerned over how earnings and book value growth affect dividend growth sustainability. As a result, investors may not necessarily use a single growth estimate when valuing a utility's stock. Therefore, I believe it appropriate to include other estimates for the growth component in my analysis.

C. CAPITAL ASSET PRICING MODEL

Q. DO YOU USE ANY OTHER METHODOLOGIES TO ESTIMATE THE ROE FOR NFGD?

A. Yes. I also apply the CAPM to derive a total of three ROE estimates, which serve as a check of the reasonableness of my DCF results. However, my recommended ROE is not based on my CAPM results. My CAPM results range from 7.43% to 10.55% with a midpoint of 8.99%.

Q. PLEASE DESCRIBE THE CAPM.

A. The CAPM is a version of the "risk premium" approach that is rooted in modern portfolio theory. It recognizes that common equity capital is riskier than debt from an investor's perspective because debt holders are typically paid before shareholders, and as such, investors require higher returns on stocks than on bonds to be compensated for

the additional risk.[68] The cost of common equity is represented by the following equation:

$$K_e = R_f + \beta_s * RP,$$

Where:

K_e is the cost of equity;

R_f is the yield on risk-free securities;

β_s or Beta coefficient ("Beta") is a company-specific measure that reflects the movement in a company's stock price relative to movements in a composite group of companies representing the stock market. Beta measures the investment risk that cannot be eliminated by holding a diverse portfolio of assets; and

RP is the equity risk premium ("ERP") demanded by shareholders to accept equity relative to debt.

Q. PLEASE DESCRIBE THE RISK-FREE RATE YOU USE IN YOUR CAPM ANALYSIS.

A. The first term in the CAPM is the risk-free rate (R_f). I use the yield on the 30-year T-bond observed over a recent 30-day period ended February 27, 2026, of 4.76%, based on recent market information.[69] I also include in one of my CAPM analyses the Kroll (formerly Duff & Phelps) Normalized Risk-Free Rate of 3.50%.[70]

Q. DOES YOUR RISK-FREE RATE DIFFER FROM THE RISK-FREE RATE USED BY MR. NOWAK?

A. Yes. Mr. Nowak relies on three estimates of the risk-free rate: (1) the current 30-day average yield on 30-year Treasury bonds (4.66%); (2) a projected 30-year Treasury

[68] The CAPM is generally superior to the simple risk premium method because the CAPM recognizes the risk of a particular company or industry through the use of betas, whereas the simple risk premium method assumes the same risk premium for all companies exhibiting similar bond ratings.

[69] *Selected Interest Rates (Daily)*, Fed. Rsrv., https://www.federalreserve.gov/releases/h15 (last visited Apr. 10, 2026).

[70] *Impact of the Middle East Conflict on Cost of Capital Assumptions – March 2026 Update*, Kroll, Mar. 24, 2026, at 4.

yield for Q1 2026 through Q1 2027 (4.60%); and (3) the projected 30-year Treasury yield for the period 2027-2031 (4.60%).[71] His projected 30-year Treasury yield is the average of a series of forecasted rates provided by *Blue Chip Financial Forecasts* ("*Blue Chip*").[72] By comparison, I derive a risk-free rate of 4.76%, using the 30-day average of the yield on the 30-year T-bond, ended February 27, 2026. Both our actual risk-free rate averages are higher than published forecasts of the expected risk-free rate of 3.50% published by Kroll.

Q. HOW DO YOU CALCULATE THE EQUITY RISK PREMIUM?

A. In each of my three CAPM analyses, I use different estimates of the ERP that range from 5.00% to 7.37%. For the high end of this range, I use the Kroll estimate of the historical arithmetic average of real market returns over the period 1926 to 2025, which is the total return on common stocks (S&P 500) including capital appreciation, less the income returns on T-bond investments.[73]

Kroll also provides an updated Ibbotson & Chen supply-side model, which found that the market risk premium based on the S&P 500 was influenced by an abnormal experience of price-to-earnings ("P/E") ratios relative to earnings and dividend growth over the last 30 years. Thus, Kroll adjusted this market risk premium and published a long-horizon, supply-side ERP of 6.31%.[74]

Kroll also recommends a forward-looking ERP that was derived in conjunction with a normalized risk-free rate. Thus, my final CAPM analysis uses the Kroll Recommended U.S. ERP of 5.00% and Normalized Risk-Free Rate of 3.50%.[75]

[71] NFGD St. 10 at 35.
[72] *Id.*
[73] OCA Ex. MLR-1, Schedule MLR-7a-b.
[74] OCA Ex. MLR-1, Schedule MLR-7c-d.
[75] OCA Ex. MLR-1, Schedule MLR-7e-7f; Kroll, *supra* note 70, at 4.

Therefore, the estimated ERP used across my three CAPM methods ranges from 5.00% to 7.17%.

Q. DO YOU CALCULATE YOUR ERP THE SAME WAY AS MR. NOWAK?

A. No. While I rely on historical market return data from Kroll that is in line with the current expectations of market returns, Mr. Nowak calculates his Market Risk Premium, which is based on the expected total return on the S&P 500 Index less the 30-year Treasury bond yield. He estimates the expected total return on the S&P 500 Index using his DCF analyses for companies listed in the S&P 500 for which dividend yields and long-term earnings projections are available. As I previously discussed, Mr. Nowak relies solely on earnings growth projections in his DCF analyses. Applying such growth rates in his CAPM produces a weighted dividend yield of 1.16% and a long-term annual growth rate of 13.85%, yielding an estimated required annual market return for the S&P 500 Index of 15.09%. As a result, his implied market risk premiums over an average risk-free rate range from 10.43% to 10.79%.[76]

Mr. Nowak also applies FERC's more conservative convention to consider only a subset of S&P 500 companies with growth rates between 0% and 20% to estimate an expected market return of 11.62%, with a market risk premium ranging from 6.96% to 7.02%.

Q. WHY ARE YOU CONCERNED ABOUT MR. NOWAK'S EXPECTED MARKET RISK PREMIUMS?

A. Mr. Nowak's estimated 11.62% market return, based on estimated required market returns for the S&P 500 Index as of November 28, 2025, far exceeds investors' current expectations of equity returns, and only serves to inflate his average equity risk

[76] NFGD St. 10 at 34-36.

premiums and resulting ROE estimates. By comparison, the Federal Reserve Bank of Philadelphia reported earlier this year that the average (mean) forecast of expected stock returns (S&P 500) over the next ten years (2026-2035) is 7.31% and the median is 7.00%.[77]

Q. HOW DO YOU ACCOUNT FOR THE VARIABILITY IN EQUITY MARKETS?

A. To capture investors' expected equity market returns, I focus on longer trends in stock market returns from 1928 to 2025. This period shows annual stock returns over multiple business cycles, avoiding the influence of any given period.[78]

Q. HOW DO YOU ADJUST THE EQUITY RISK PREMIUM TO ACCOUNT FOR COMPANY-SPECIFIC RISK?

A. I multiply company-specific betas by the ERPs to account for company-specific risk. I rely on *Value Line* betas because *Value Line* is widely used by the utility regulatory community and investment community in general. It is also known that *Value Line* adjusts its betas to account for the long-term tendencies of stocks to converge to a beta of one (1.0).[79] As a result, *Value Line* betas tend to have higher values than betas provided by some other sources. The average *Value Line* beta for the proxy group is 0.79. A beta value of 0.79 means that the stock price movement is less than the movement, in percentage terms, of the overall stock market. The price of a gas utility stock is, therefore, less volatile and less risky than the overall market.

Q. WHAT ARE THE RESULTS OF YOUR CAPM ANALYSES?

[77] Fed. Rsrv Bank Philadelphia, *supra* note 21, at 19, Table 9.

[78] A business cycle typically includes an expansion and a recession that can vary in duration.

[79] Marshall Blume investigated the regression tendency of betas and reached the conclusion that betas have the tendency to approach a value of one (1) over time. That is, high-beta portfolios tend to decline over time toward one (1), while low-beta portfolios tend to increase to one (1). Marshall Blume, *Betas and Their Regression Tendencies*, J. Finance 785, 785-96 (1975).

A. As shown in Table 4 below, applying the same risk-free rates, market risk premium, and betas from the proxy group, I estimate expected returns ranging from 7.43% to 10.55%, with a midpoint of 8.99%.

TABLE 4. CAPM ESTIMATED ROE RESULTS

	ERP	Beta-Adjusted ERP	Risk-Free Rate	CAPM ROE	Max	Midpoint
CAPM (Hist. L-T ERP)	7.37	5.79	4.76	10.55%		
CAPM (Supply-Side ERP)	6.31	4.96	4.76	9.72%		
CAPM (Kroll Recommended ERP)	5.00	3.93	3.50	7.43%		
CAPM Range				7.43%	10.55%	8.99%

Q. WHY DO YOUR RESULTS DIFFER FROM MR. NOWAK'S RESULTS?

A. My results for the proxy group, shown in Table 4 above, are lower than Mr. Nowak's (average or mean) CAPM results, which range from 11.07% to 11.30%.[80] My results for my proxy group are lower than his results, which range from 7.43% to 10.55%, with a midpoint of 8.99%. As stated previously in my testimony, his preference for inflated market returns, EPS growth rates, and resulting high equity risk premium exaggerates both his CAPM estimates.

Q. DO YOU HAVE ANY OTHER CONCERNS REGARDING MR. NOWAK'S ROE METHODOLOGIES?

A. Yes. In addition to Mr. Nowak's focus on earnings growth in his DCF, reliance on inflated market equity returns, as discussed earlier in this testimony, he also wrongly applies his Bond Yield Plus Risk Premium Approach.

[80] NFGD St. 10 at 37.

Q. HOW DOES MR. NOWAK APPLY HIS BOND YIELD PLUS RISK PREMIUM APPROACH?

A. Mr. Nowak first estimates the equity risk premium using the difference between authorized ROEs and the prevailing 30-year Treasury bond yield, using the average authorized ROEs for 863 natural gas utility rate proceedings from January 1, 1992, through November 28, 2025. Mr. Nowak relies on three estimates of the risk-free rate: (1) the current 30-day average yield on 30-year Treasury bonds (4.66%); (2) a projected 30-year Treasury yield for Q1 2026 through Q1 2027 (4.60%); and (3) the projected 30-year Treasury yield for the period 2027-2031 (4.60%). Mr. Nowak then applies a regression analysis to estimate the relationship between bond yields and the equity risk premium. Using regression analysis, he finds that the equity risk premium increases as interest rates fall. Mr. Nowak then adds his resulting risk premiums of 5.76%, 5.79%, and 5.79% to his three risk-free rates to estimate ROE estimates of 10.41%, 10.39%, and 10.39%.[81]

Q. WHAT IS PROBLEMATIC ABOUT MR. NOWAK'S BOND YIELD PLUS RISK PREMIUM APPROACH?

A. Mr. Nowak's application of this model is problematic for a couple of reasons. First, Mr. Nowak's approach assumes a simplistic inverse relationship without any regard to differences in investment risk. Although interest rates are an important factor in assessing current and expected market equity risk premiums, the risk premium is also determined by changes in the market's perception of investment risk of debt and equity securities. This relationship can also be influenced by interest rate volatility. Moreover, his analysis focuses on nominal interest rates, thereby ignoring the effect of inflation

[81] *Id.* at 39.

on risk premiums. Second, his use of the authorized ROEs means that the risk premium measures commission decisions, not investors' behavior. Equity and bond rates in general reflect the financial decisions of investors in light of company-specific financial data, such as dividend yields, expected growth rates, assessments of risk, and the opportunity cost of other investments. However, authorized ROEs reflect other factors considered by commissions such as capital structure, credit ratings, the individual performance of these utilities in carrying out their duty to provide safe and reliable services (customer service performance metrics, etc.) and other risk measures, particularly if authorized returns were set through settlements and not fully litigated.

VIII. CRITIQUE OF MR. NOWAK'S ROE ADDERS

Q. WHAT ADJUSTMENTS DOES MR. NOWAK MAKE TO ACCOUNT FOR HIS CLAIM THAT NFGD FACES UNIQUE RISK?

A. Mr. Nowak makes two adjustments to his base ROE models that include a size risk adjustment and a management efficiency adjustment.

A. SIZE RISK ADDER

Q. WHAT SIZE RISK ADJUSTMENT DOES MR. NOWAK ADD TO HIS BASE ROE RESULTS?

A. While Mr. Nowak did not make a specific adjustment to reflect the Company's size, he uses his analysis to show that NFGD's cost of equity is higher than the midpoint of his range of proxy group results. He claims that this is necessary to account for NFGD's greater business risk relative to his utility proxy group due to its smaller relative size.

Q. HOW DOES MR. NOWAK QUANTIFY NFGD'S SIZE RISK?

A. Mr. Nowak begins by applying the proxy group median market-to-book ratio of 1.61 to NFGD's historical test year book equity balance of $768 million, finding that the Company's implied market capitalization is $1.24 billion, or 23.92% of the proxy group median market capitalization of $5.17 billion. He also estimates each of the proxy group companies' market capitalization and assigns the corresponding market quartile size premium provided by Kroll Cost of Capital Navigator-Size Premium: Annual Data as of December 31, 2024. Then, he compares the proxy group median size premium to NFGDs estimated size premium for a difference of 0.14%. However, he does not directly apply this difference to his base ROE results.[82]

Q. DO YOU AGREE THAT AN ADJUSTMENT FOR NFGD'S SIZE IS NECESSARY?

A. No. I disagree with Mr. Nowak's assessment of NFGD's size risk for a couple of reasons. First, the foundation of his calculations uses 2025 Kroll Associates size premium (formerly SBBI Center for Research in Security Prices ["CRSP"]) data that are based on the premise that small publicly owned companies are inherently riskier than large publicly owned companies and thus require a higher cost of capital. It is not clear whether these differences in returns are due to size itself or to other factors that tend to be statistically correlated with size. In the words of the "Dean of Valuation," New York University finance professor Aswath Damodaran,[83] the size effect is "fiction."[84] Mr. Nowak fails to acknowledge that the smaller companies reflected in

[82] *Id.* at 44-47; NFGD Ex. JCN-8.

[83] Aswath Damodaran is a Professor of Finance at NYU Stern School of Business and is widely recognized as a leading authority on valuation, corporate finance, and investment analysis. He has authored multiple seminal books on valuation and provides widely used public data and models on cost of capital and equity risk premiums that are relied upon by practitioners, academics, and regulators.

[84] *Size Effect is 'Fiction,' Damodaran Reiterates*, 225-4 BVWire (June 30, 2021), *https*://www.bvresources.com/articles/bvwire/size-effect-is-fiction-damodaran-reiterates.

the SBBI database tend to be engaged in riskier businesses than larger companies, which is not the case for regulated monopolies, such as natural gas utility companies.

Second, Mr. Nowak fails to acknowledge that NFGD is a subsidiary of a much larger corporation and benefits from shared affiliate services including financial support, such as debt and equity, and other resources as needed. Therefore, the more appropriate analysis would be to compare the market capitalization of the parent company with the proxy group median.

Q. IS A SIZE RISK ADJUSTMENT NECESSARY?

A. No. As shown above, a size risk adjustment is not necessary and only serves the purpose of increasing Mr. Nowak's recommended ROE. Therefore, the Commission should disregard this implied adjustment.

B. MANAGEMENT EFFICIENCY ADDER

Q. WHAT MANAGEMENT EFFICIENCY ADJUSTMENT DOES MR. NOWAK ADD TO HIS ROE RESULTS?

A. Mr. Nowak adds a management efficiency adjustment of 25 basis points to his base ROE estimate, increasing his recommended ROE from 11.00% to 11.25%.

Q. WHY DOES MR. NOWAK BELIEVE THAT A 25-BASIS-POINT ADJUSTMENT TO HIS MARKET-DERIVED RESULTS IS NECESSARY?

A. Mr. Nowak states that he recommends a 25-basis point premium to recognize the Company's exceptional performance and efficiency as summarized in the direct testimony of Rebecca E. Hillery and claims that the Commission's practice has been to recognize management performance through a rate of return incentive.

Q. PLEASE SUMMARIZE MS. HILLARY'S ASSESSMENT OF THE COMPANY'S MANAGEMENT EFFICIENCY?

A. According to Ms. Hillery's testimony, the Company is a leader and sets the bar in many areas, claiming its metrics indicate exceptional management effectiveness and performance, which benefit customers through the provision of safe and reliable natural gas service at affordable rates.[85]

Q. HAS THE COMMISSION GRANTED A UTILITY'S REQUEST TO APPLY A MANAGEMENT EFFICIENCY ADDER TO A UTILITY'S ALLOWED RETURN ON EQUITY IN OTHER RATE CASES?

A. Yes, however, I am only aware of a few instances where the Commission awarded a fixed basis-point adder for management performance. The Commission has, in the past, approved management adders where the Company "presented substantial evidence of management effectiveness in a number of areas."[86]

Q. DO YOU AGREE THAT A SEPARATE MANAGEMENT EFFICIENCY ADDER IS APPROPRIATE?

A. No. The proposed adder is unsupported by the record, duplicative of elements already embedded in the ROE, and inconsistent with established ratemaking principles.

Q. WHY IS THE PROPOSED ADDER UNSUPPORTED?

A. The Company does not provide any quantitative methodology, empirical analysis, or market-based evidence to support either the existence or the magnitude of the proposed 25 basis point adjustment. Instead, the Company relies on generalized and subjective statements regarding its performance, including the assertion that it "is a leader… in many of the areas and metrics that indicate exceptional management effectiveness."[87] Such qualitative characterizations do not establish a measurable or replicable basis for

[85] NFGD St. 1 at 34.
[86] *Pa. PUC v. UGI Electric*, Docket No. R-2017-2640058 et al., Order at 112 (Oct. 4, 2018).
[87] *Id.*

increasing the allowed ROE and therefore do not meet the evidentiary standard required for ratemaking.

Moreover, OCA witness LeeAnn M. Wise describes the Company's performance as average, stating the following in her direct testimony:

> NFGD's request for a higher rate of return based on management performance should be denied. NFGD has not provided documented evidence of superior managerial and customer service performance that would warrant a reward or additional adjustment to its authorized rate of return. NFGD has not demonstrated that its service levels exceed established standards or materially outperform reasonable expectations in a manner that would justify an additional performance adjustment. And most importantly, they have not shown how these metrics produce benefits to customers. In most areas its performance aligns with the average of other Pennsylvania natural gas distribution companies, and, in some important areas, its performance is below the norm. The Company should focus on increasing the completion rates of meter readings, reducing busy-out occurrences, and decreasing the total number of customer complaints. I recommend requiring the company to perform regular, thorough root cause analyses of complaint trends, covering both internal disputes and BCS informal complaints, to identify and document infractions and confirmed violations.[88]

Q. WHY IS THE PROPOSED ADDER DUPLICATIVE?

A. The proposed adder is duplicative because management performance is already reflected in the ROE results produced by standard financial models. Mr. Nowak develops a model-based ROE range of "10.30 percent to 11.30 [percent]" based on market data from comparable companies.[89] These comparable companies' returns inherently reflect investor expectations regarding management quality, operational efficiency, and execution risk. By adding a separate 25 basis point "management efficiency premium" on top of this range, the Company is effectively double counting the same factor that is already embedded in the model results.

[88] OCA St. 5 at 5, 7-12, 14.
[89] NFGD St. 10 at 56.

Q. DOES THE COMPANY DEMONSTRATE THAT ITS ROE MODELS FAIL TO CAPTURE MANAGEMENT PERFORMANCE?

A. No. The Company provides no evidence that its ROE models exclude or understate management performance. There is no indication in Mr. Nowak's testimony that the model-derived ROE range is deficient or requires an upward adjustment to account for management-related factors. Instead, the adder is applied as a discretionary increment above the model results without any demonstrated analytical gap.

Q. WHY IS THE PROPOSED ADDER INCONSISTENT WITH REGULATORY PRACTICE?

A. The proposed adder is inconsistent with regulatory practice because it introduces a subjective and non-standard adjustment that lacks a clear, administrable framework. The Company relies on general claims of effective management, including statements that its management "has effectively implemented … obligations in a disciplined and consistent manner."[90] However, such performance reflects the expected obligation of any regulated utility to provide safe and reliable service. It does not constitute an extraordinary circumstance that would justify a discrete numerical premium to ROE.

Q. WHAT IS THE APPROPRIATE CONCLUSION REGARDING MR. NOWAK'S JUSTIFICATION FOR THE 25-BASIS POINT ADDER?

A. The Commission should reject the proposed 25 basis point management efficiency adder. A reasonable ROE can be determined based on the Company's risk profile and the results of standard financial models without any separate adjustment for management performance.

[90] NFGD St. 16 at 27.

IX. ALTERNATIVE RETURN ON EQUITY

Q. DID YOU ESTIMATE THE IMPACT THAT YOUR CAPITAL STRUCTURE RECOMMENDATION COULD HAVE ON THE COMPANY'S INDICATED COST OF CAPITAL?

A. Yes. I estimate the impact of my recommended capital structure on the Company's cost of capital estimate by using the Hamada model.

Q. WHAT IS THE HAMADA MODEL?

A. The Hamada model is best thought of as a capital-structure adjustment for beta applying the CAPM and is not a standalone model. In its standard form, it links a firm's unlevered beta (business risk) to its levered beta (equity risk after debt financing):

$$\beta_L = \beta_U[1+(1\text{-}T)]\,{}^{D}/_{E}$$

Where T is the corporate tax rate and D/E is the debt-to-equity ratio. In the usual implementation, the formula assumes debt has little or no market beta; more complete variants adjust for a nonzero debt beta.

The purpose of the Hamada model is to separate operating risk from financing risk. The unlevered beta captures the risk of the underlying assets or business franchise. Leverage then reallocates that risk: because debt holders have a prior claim, equity becomes a thinner residual claim, so its cash flows become more sensitive to underlying shocks. The result is a higher equity beta, and therefore a higher CAPM cost of equity, as leverage rises. The tax term reflects the fact that interest deductibility softens the effective burden of debt.

In practice, economists and valuation analysts use the Hamada model for two related tasks. First, they unlever peer betas to compare firms on a common business-risk basis, abstracting from capital-structure differences. Second, they relever that business beta to a target capital structure in order to estimate a firm's required return on equity, often as an input to CAPM and WACC. Professor Aswath Damodaran's bottom-up beta procedure follows exactly this logic and recommends relevering with the firm's market debt-to-equity ratio.

Q. WHAT DATA INPUTS DO YOU USE WHEN USING THE HAMADA VERSION OF THE CAPM?

A. I use my 30-day average of yields on the 30-year Treasury bond of 4.76%, the proxy group's average beta, and the average of my market risk premium of 6.23%.

Q. PLEASE SUMMARIZE THE RESULTS OF THE HAMADA FORMULA BASED ON YOUR PROPOSED CAPITAL STRUCTURE?

A. My recommended capital structure consists of 50% debt and 50% equity. Since NFGD's debt ratio is lower than my proposed capital structure, when the beta is "relevered" to match the proxy group beta, it results in a lower ROE than if NFGD had been operating with a capital structure equal to my recommended capital structure. The results of my Hamada model are shown in Table 5 below.

Table 5. Hamada Model
Unlevered Beta

Proxy Debt Ratio	50.00%
Proxy Equity Ratio	50.00%
Proxy Debt / Equity Ratio	100.00%
Tax Rate	26.52%
Average Equity Risk Premium	6.23%
Risk-free Rate	4.76%
Proxy Group Beta	0.79
Unlevered Beta	0.46

Relevered Betas and Cost of Equity Estimates

Debt Ratio	D/E Ratio	Levered Beta	Cost of Equity
0.0%	0.00	0.46	7.60%
20.0%	0.25	0.54	8.12%
25.0%	0.33	0.57	8.29%
30.0%	0.43	0.60	8.49%
43.6%	**0.77**	**0.71**	**9.21%**
50.0%	1.00	0.79	9.68%
60.0%	1.50	0.96	10.72%

Thus, if the Commission were to adopt the Company's proposed capital structure consisting of 56.4% equity and 43.6% debt, then its indicated cost of equity would be 9.21%.

X. ROR AND ROE RESULTS SUMMARY

Q. PLEASE SUMMARIZE YOUR ROR RESULTS.

A. For NFGD, I recommend an overall ROR of 7.66%, which is composed of (1) a capital structure of 50.0% equity and 50.0% long-term debt; (2) a cost of long-term debt of 5.58%; and (3) an ROE of 9.74%. If the Commission rejects my hypothetical capital structure, then I recommend an overall ROR of 7.62%, which includes (1) a capital

structure of 56.4% equity and 43.60% long-term debt; (2) a cost of long-term debt of 5.58%; and (3) an ROE of 9.21%.

Q. HOW DOES YOUR PROPOSED ROR OF 7.66% COMPARE TO RECENT AND HISTORICAL ALLOWED ROR VALUES APPROVED BY REGULATORY COMMISSIONS ACROSS THE COUNTRY?

A. According to S&P MI, the average allowed ROR for distribution natural gas utilities in Calendar Year (CY) 2025 was 7.22%, with a median value of 7.17%, a minimum of 5.99%, a maximum of 8.03%, and a mode of 7.16%. For CY 2024, the average allowed ROR was 7.26%, with a median of 7.21%, a minimum of 5.80%, a maximum of 8.80%, and a mode of 7.01%.[91]

While I acknowledge that ROR values for different utilities are influenced by factors such as approved ROE level, capital structure, and cost of debt, it is noteworthy that my proposed ROR of 7.66%, if approved by the Commission, would be significantly higher than those recently authorized by other state regulators.

Looking at a broader historical perspective, over the 10-year period from January 1, 2016, through January 1, 2026, the average ROR awarded by state regulators has been 7.07% across 361 general rate cases for distribution natural gas utilities.[92] Notably, in this same period, there have been only 34 instances—out of 330 cases—where a state commission approved an ROR higher than my proposed 7.66%.[93]

By contrast, NFGD's proposed ROR of 8.78% is inconsistent with recent regulatory precedent and exceeds the levels typically approved in the U.S. over the last decade. Over the past ten years, out of 361 rate cases in which a state regulator approved

[91] Derived from data provided by S&P MI, reflecting only distribution natural gas utilities for which S&P MI reported an ROR value.
[92] *Id.*
[93] *Id.*

an ROR level, only one utility was granted an ROR exceeding 8.78%.[94] My proposed ROE of 7.66% is much more reasonable than NFGD's request. I urge the Commission to adopt my proposed ROR, as it better aligns with recent regulatory trends while still accounting for the necessary financial considerations related to NFGD.

Approving an ROR that significantly deviates from historical norms risks setting a precedent that could lead to unjustified rate increases for consumers and undermine regulatory consistency. A balanced approach—one that recognizes financial needs of NFGD while staying grounded in recent precedent—is the best path forward for the Commission.

Q. PLEASE SUMMARIZE YOUR ROE RESULTS.

A. As shown in Table 6 below, my ROE recommendation of 9.74% is the midpoint of my DCF results and falls with my DCF range of 8.88% to 10.61% and represents a fair and reasonable ROE for NFGD for the reasons I have previously discussed. The minimum of my range is the minimum of my DCF results, and the maximum of my range is the maximum result derived from my DCF results.

[94] *Id.*

TABLE 6. ROE ESTIMATES (%)

DCF Methodology	30-Day Stock Price	90-Day Stock Price	Midpoint
Constant-Growth DCF (EPS Growth)	10.48	10.61	
Constant-Growth DCF (DPS, EPS and BVPS)	8.88	9.03	
Sustainable-Growth DCF	9.87	10.03	
DCF Range (Minimum & Maximum):	**8.88**	**10.61**	**9.74**

CAPM Methodology	CAPM	Max	Midpoint
Capital Asset Pricing Model (Lg. Stock ERP, 30-yr T-Bond Rate)	10.55		
Capital Asset Pricing Model (Supply-Side ERM, 30-yr T-Bond Rate)	9.72		
Capital Asset Pricing Model (Kroll Normalized Rate)	7.43		
CAPM Range (Minimum & Maximum):	**7.43**	**10.55**	**8.99**

Summary			
DCF-Based ROE Average			9.81
	Min	**Max**	**Midpoint**
ROE Range	8.88	10.61	9.74
Recommended ROE			**9.74**
Recommended ROE if using NFGD's Capital Structure			**9.21**

Q. WHY IS YOUR ROE RECOMMENDATION OF 9.74% BASED ON A RANGE DERIVED FROM YOUR DCF METHODOLOGIES?

A. I place more emphasis on my DCF-derived results because it is widely used by both the finance community and public utility commissions across the country and yields more reliable results. It is a forward-looking model that directly incorporates investors' expectations of company dividend income through current market pricing signals, particularly in the case of utility stocks where stock valuations are telling a different story than the general market. The DCF also reflects recent developments in

management decisions regarding key financials reflected in expected dividend and earnings growth.

The CAPM results, by contrast, are largely reliant on financial market outcomes complicated by monetary policy and investors' expectations of inflation and economic growth over the long run. Specifically, the estimated risk-free rate has a direct impact on the estimated ROE and is largely influenced by the analyst's assumptions. Moreover, the CAPM lacks a direct and immediate link between stock prices and the results. Although the beta coefficient in the CAPM reflects changes in the ROE, such information is delayed. However, I rely on my CAPM results as a reasonableness check.

Q. HOW DOES YOUR RECOMMENDATION COMPARE TO RECENTLY ALLOWED EQUITY RETURNS?

A. My recommended ROE of 9.74% is in line with current allowed ROEs issued by regulatory commissions across the country. S&P MI reports that the average allowed equity return for natural gas utilities for 2025 was 9.70%, which is lower than the average for 2024 of 9.71%.[95] My recommended ROE of 9.74% is only four basis-points higher than the average allowed ROE for gas utilities in 2025.

Q. HOW DOES NFGD'S ROE RECOMMENDATION COMPARE TO RECENTLY ALLOWED EQUITY RETURNS?

A. NFGD's recommended ROE of 11.25% is 115 basis-points higher than the average allowed ROE for gas utilities for 2024. Thus, if the Commission grants NFGD's recommended ROE, it would be an outlier relative to the average allowed ROE for gas utilities throughout the U.S.

[95] *Id.*

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does. However, I reserve the right to supplement my testimony as new information becomes available.

APPENDIX A: CURRICULUM VITAE AND QUALIFICATIONS

Maureen L. Reno

Maureen Reno is a seasoned expert with 25 years of experience in the field of public utility regulation. After she completed her Ph.D. studies in Economics at the University of New Hampshire, Ms. Reno launched her career in public utility regulation as a utility analyst and program manager at the New Hampshire Public Utilities Commission, where she worked for the next 10 years. In this capacity, she provided expert testimony on rate of return (to include return on equity) in electricity, natural gas, and water utility rate cases. Ms. Reno also led the development and implementation of New Hampshire's Renewable Portfolio Standard program, helping both owners of distributed generation and load serving entities meet compliance requirements and maneuver the dynamic wholesale energy and renewable energy certificate markets. In addition, she managed New Hampshire's participation in the Regional Greenhouse Gas Initiative. Finally, Ms. Reno served as an expert witness on financial issues regarding the regulation of electric, natural gas, and water utilities, to include cost of capital and return on shareholder equity.

Subsequently, Ms. Reno served as a Senior Energy Economist with the Union of Concerned Scientists. In this capacity, she developed clean energy financing policies and advocated for electricity sector solutions to global warming.

Since 2012, Ms. Reno has served as an independent consultant, working with other small businesses to advise government and industry clients on diverse utility-related matters. In addition, she has served as an expert witness on rate design and rate of return (to include return on equity) in numerous cases. Her testimony has been presented to public utility commissions across the United States, to include the Regulatory Commission of Alaska, Arizona Corporation Commission, California Public Utilities Commission, Delaware Public Service Commission, Georgia Public Service Commission, Hawaii Public Utilities Commission, Kansas Corporation Commission, Missouri Public Service Commission, New Hampshire Public Utilities Commission, New Mexico Public Regulation Commission, North Carolina Utilities Commission, North Dakota Public Service Commission, Oklahoma Corporation Commission, Pennsylvania Public Utility Commission, South Carolina Public Service Commission, and Public Utility Commission of Texas. Ms. Reno's testimony has been consistently accepted by public utility commissions.

Ms. Reno stays abreast of the latest developments in utility regulatory law and policy through her research and professional activities. Given the complexity of Federal and state regulations that affect her clients, Ms. Reno dedicates significant time and energy to reviewing regulatory developments enacted by the U.S. Department of Energy, the Federal Energy Regulatory Commission (FERC), and the U.S. Environmental Protection Agency.

EDUCATION

- Completed all course work and exam requirements towards the Doctorate of Philosophy in Economics – University of New Hampshire, Durham.
  Fields of Specialization: Industrial Organization and Environmental Economics
- Master of Arts in Economics – University of New Hampshire, Durham, 1998
- Bachelor of Arts in Economics – University of Maine, Orono, 1996

PROFESSIONAL EXPERIENCE

- Independent Consultant and Principal, Reno Energy Consulting Services, LLC (2016-Present)
- Rates and Market Policy Director, New Hampshire Office of the Consumer Advocate (2021-2022)
- Independent Consultant (2012-2016)
- Senior Energy Economist, Union of Concerned Scientists (2011-2012)
- Analyst, Program Manager, Utility Analyst, and Economist, New Hampshire Public Utilities Commission (2001-2011)
- Survey Manager, New Hampshire Small Business Development Center (1999-2001)
- Adjunct Instructor, University of New Hampshire (1999-2001)

PROFESSIONAL WORK

As an independent consultant (as a prime contractor with Reno Energy Consulting Services, LLC and subcontractor under Exeter Associates, TAHOEconomics, and Nordee Enterprise LLC), Ms. Reno:

- Reviewed, analyzed, and prepared oral and written testimony in electric, natural gas, and water utility rate cases on topics that include rate design (revenue decoupling mechanisms); rate of return (including return on equity, capital structure, and accounting adjustments), and mergers and acquisitions.

- Worked with solar power installer to assess return on investment and payback period for investments in energy storage that included analyzing customer load profiles, utility tariffs, tax credits, and potential revenues from wholesale markets and state programs.

- Prepared report that included assessment of electricity options and projected revenues and costs for the Army & Air Force Exchange Service's West Coast Distribution Center, which included analyzing Pacific Gas & Electric Company's tariffs and potential revenues from wholesale markets for investments in solar power and energy storage.

As the Rates and Market Policy Director at the New Hampshire Office of the Consumer Advocate, Ms. Reno:

- Reviewed and analyzed utility filings and prepared written recommendations in two natural gas utility proceedings pertaining to a revenue decoupling adjustment mechanism and a renewable natural gas contract.

- Reviewed and analyzed utility filings and provided oral testimony in an electric utility's electric vehicle make-ready program and proposed tariff rates.

- Reviewed, analyzed and prepared oral and written recommendations for the Consumer Advocate on utility requests for changes in energy service rate charges (electric default service and cost of gas) and other surcharges reflected in utility company tariffs.

As an independent consultant for Exeter Associates Inc., Ms. Reno:

- Preparing the financial analysis and ratepayer impacts of a long-term contract requirement under Maryland's RPS for the Power Plant Research Program (PPRP) on behalf of the Maryland Department of Natural Resources.

  Evaluated utility proposals for deployment, cost-benefit analysis, and cost recovery of Maryland's Statewide Electric Vehicle Portfolio on behalf of the Maryland Energy Administration through the PPRP in Case No. 9478 In the Matter of the Petition of the Electric Vehicle Work Group for Implementation of a Statewide Electric Vehicle Portfolio.

- Conducted research and drafted sections of regional energy market operations manuals for the US Department of Energy's Federal Energy Management Program. The reports focused on how federal facilities were pursuing renewable energy development under the different market constructs, such as by vertically integrated electric utilities, electric utilities with the PJM footprint, and electric utilities in California, and how those market constructs affected the prospects for future renewable energy development.

As an independent consultant for TAHOEconomics LLC, Ms. Reno:

- Provided written and oral testimony and legal briefs on behalf of the City of Clovis, New Mexico, in a water utility rate cases before the New Mexico Public Regulation Commission. Assessed EPCOR Water New Mexico Inc.'s weighted average cost of capital and estimated the rate of return on equity using discounted cash flow, risk premium, and capital asset pricing models.

As an independent consultant for Stephenson Strategic Communications, LLC, Ms. Reno:

- Provided consulting services to build support in New Hampshire for strong national climate and energy policies on behalf of a nationally recognized, non-profit environmental organization.
- Mobilized experts and leaders in New Hampshire to engage elected federal, state and local officials through targeted Senator visits, media interviews, public events, letters to the editor, and opinion and editorial articles.
- Communicated directly with targeted legislators and their staff to determine their positions on climate and clean air policies and address their concerns.

As an independent consultant for TrueLight Energy, LLC, Ms. Reno:

- Acted as director of regulatory affairs to expand upon current services to provide clients with guidance on how to navigate the dynamic deregulated electricity industry.
- Developed regulatory service product for clients, which includes ISO/utility tariff tracking and rate impact analysis, policy analysis, new market identification and participation in regulatory processes.
- Identified and originated new commercial opportunities in the U.S. to support principle product/service lines: retail supplier solutions; generation asset management; and sustainability management solutions for large energy users.
- Developed and implemented business development and business-to-business marketing strategies in coordination with senior management.

As a senior economist at the Union of Concerned Scientists, Ms. Reno:

- Promoted the development of clean energy technologies and policies in the electricity sector. Designed and evaluated energy policies at the state, regional, and national levels to maximize economic benefits and overcome market barriers to renewable energy.
- Evaluated and developed alternative financial policies to national and state renewable energy standards. Completed internal documents and research focusing on master limited partnerships and real estate investment trusts as possible sources of financing capital for renewable energy projects.
- Informed and enhanced coalition strategies by evaluating and developing appropriate responses to federal policy opportunities, including a low-carbon electricity standard, production tax credit, and other emerging opportunities.

- Evaluated the net benefits and opportunities for economic development in renewable energy manufacturing and the supply chain.

As an analyst and program manager at the New Hampshire Public Utilities Commission, Ms. Reno:

- Developed and managed New Hampshire's RPS Program.
- Developed internal protocols for managing New Hampshire's RPS program pursuant to PUC's RPS program rules (N.H. Code of Administrative Rules PUC 2500), including designing resource eligibility application forms.
- Verified electricity providers' compliance with New Hampshire's RPS program and processed applications for renewable energy source eligibility.
- Prepared and submitted annual RPS compliance reports, including program evaluation and policy analysis, to the State legislature on behalf of the PUC.
- Monitored and forecasted renewable energy certificate market trends in New England and New Hampshire to estimate available revenues supporting rebate programs.
- Maintained an RPS program website and renewable energy sources database.
- Participated in various regional working groups, including the RGGI Allowance and Offset Market Groups, and the GIS Regulators' Caucus to develop and maintain the NEPOOL GIS Operating Rules.
- Developed Greenhouse Gas Emissions Reduction Fund Cost Effectiveness Analysis model for request for proposal applicants.

As a utility analyst and economist at the New Hampshire Public Utilities Commission, Ms. Reno:

- Reviewed, analyzed and prepared oral and written recommendations in eight electric, natural gas and water utility rate cases in which she calculated each company's weighted average cost of capital and estimated the rate of return on equity using discounted cash flow, risk premium, and capital asset pricing models.
- Advised the PUC on utilities' debt financings, bond issuances, power plant retrofit, advanced/net metering, demand response, environmental disclosure, and incentives for in-state energy efficiency programs.
- Collaborated on behalf of the PUC with public and private entities to write New Hampshire's RPS law (HB 873), state participation in RGGI (HB 1434) and the PUC's RPS program rules (N.H. Code of Administrative Rules Puc 2500).

- Advised the Commissioners on the development of the RGGI carbon dioxide emission limits and the Allowance Auction Market.

- Prepared fiscal impact statements regarding proposed legislation and regulations in the State of New Hampshire using cost-benefit analysis.

As a Survey Manager for the New Hampshire Small Business Development Center, Ms. Reno:

- Designed and distributed a survey to collect data on the characteristics of New Hampshire manufacturers.

- Managed collection of survey data, designed a database for the data collected and oversaw data entry efforts.

- Analyzed the economic and behavioral factors that lead to the growth of New Hampshire manufacturing companies using multivariate regression, factor and cluster analysis of survey data.

As an Adjunct Instructor for the University of New Hampshire, Ms. Reno:

- Taught undergraduate courses in Principles of Macroeconomics and Microeconomics, including lectured on a daily basis, and developed lesson plans and teaching materials.
- Managed teaching assistant's work correcting and grading testing materials and writing assignments.

UTILITY LITIGATION

UTILITY-RELATED MATTERS

State	Client	Description of Tasks
New Mexico	Bernalillo County	Provided Comments regarding incorporating Cost-Benefit Analyses and related modifications to Grid Modernization Rule, Title 17, Chapter 9, in a new Part 587 in Docket No. 22-00089-UT.
New Jersey	Division of the Rate Counsel	Provided comments on Jersey Central Power & Light Co. request for authority to issue and sell up to $1.7 billion in senior notes in Docket No. EF025030121.
New Jersey	Division of the Rate Counsel	Provided comments on Jersey Central Power & Light Co. request to participate in FirstEnergy Money Pool Docket No. EF02030185.
New Jersey	Division of the Rate Counsel	Provided cost of capital and return on equity to client for settlement purposes in Jersey Central Power & Light EnergizeNJ case EO-23110793.
California	Small Business Utility Advocates	Provided comments on utility draft annual reports concerning California's RPS Rulemaking Cases No. R.18-07-003 and R.24-01-017.
New Hampshire & Massachusetts	Nordee Enterprise LLC	Worked with a solar power installer to assess return on investment and payback period for investments in energy storage that included analyzing customer load profiles, utility tariffs, tax credits, and potential revenues from wholesale markets and state programs.
New Hampshire	Office of the Consumer Advocate (NH OCA)	Negotiated settlement terms in DE 21-119 Eversource Energy's Proposed Tariff Amendment to Residential Time-of-Day Rate.
New Hampshire	NH OCA	Negotiated settlement terms in DE 20-170 Electric Distribution Utilities' Electric Vehicle Time of Use Rates.
Federal	Army & Air Force Exchange Service (AAFES)	Prepared report that included assessment of electricity options and projected revenues and costs for AAFES' West Coast Distribution Center, which included analyzing Pacific Gas & Electric Company's tariffs and potential revenues from wholesale markets for investments in solar power and energy storage.
New Hampshire	NH OCA	Evaluated utility proposal and ratepayer impacts of Liberty Utilities cost of gas proposal in DG 21-130 (EnergyNorth Natural Gas) and DG 21-132 (Liberty-

		Keene Division).
New Hampshire	NH OCA	Evaluated Liberty Utilities' Firm Transportation Agreement with Tennessee Gas Pipeline Company LLC in DG 21-008.
Maryland	Department of Natural Resources (DNR)	Prepared the financial analysis and ratepayer impacts of a long-term contract requirement under Maryland's RPS. The report titled "Final Report Concerning the Maryland Renewable Portfolio Standard as Required by Chapter 393 of the Acts of the Maryland General Assembly of 2017" was publicly released in December 2019.
Maryland	Energy Administration (EA)	Evaluated utility proposals for deployment, cost-benefit analysis, and cost recovery of Maryland's Statewide Electric Vehicle Portfolio in Case No. 9478 In the Matter of the Petition of the Electric Vehicle Work Group for Implementation of a Statewide Electric Vehicle Portfolio.
Federal	US Department of Energy (DOE)	Conducted research and drafted sections of regional energy market operations manuals for the US Department of Energy's Federal Energy Management Program. The reports focused on how federal facilities were pursuing renewable energy development under different market constructs, such as by vertically integrated electric utilities, electric utilities with the PJM footprint, and electric utilities in California.
New Hampshire	Derry Town Council	Oversaw the town energy committee's involvement in various energy cost saving projects or initiatives, such as installing a large solar array on the town's landfill, updating streetlights with LED fixtures, building a new transfer station that meets LEED certification, installing an electric vehicle charging station downtown, and hosting/managing resident participation in two Solar Up campaigns.
New Hampshire	Derry Town Council	Advised town council on establishing the Derry Net Zero Task Force and town goal of becoming Net Zero by 2025.
Massachusetts	Union of Concerned Scientists (UCS)	Evaluated and developed alternative financial policies to national and state renewable energy standards. Completed internal documents and research focusing on master limited partnerships and real estate investment trusts as possible sources of financing capital for renewable energy projects.

Massachusetts	UCS	Conducted manufacturing supply chain analysis of wind power systems
New Hampshire	Public Utilities Commission (PUC)	Developed internal protocols for managing New Hampshire's RPS program pursuant to NHPUC's RPS program rules (N.H. Code of Administrative Rules PUC 2500), including designing resource eligibility application forms.
New Hampshire	PUC	Verified electricity providers' compliance with New Hampshire's RPS program and processed applications for renewable energy source eligibility.
New Hampshire	PUC	Prepared and submitted annual RPS compliance reports to the State legislature on behalf of the NHPUC.
New Hampshire	PUC	Developed Greenhouse Gas Emissions Reduction Fund Cost Effectiveness Analysis model for grant proposals.
New Hampshire	PUC	Collaborated on behalf of the NHPUC with public and private entities to write New Hampshire's RPS law (HB 873), law concerning state participation in Regional Greenhouse Gas Initiative (RGGI) (HB 1434) and the NHPUC's RPS program rules (N.H. Code of Administrative Rules Puc 2500).
New Hampshire	PUC	Advised the Commissioners on the development of the RGGI carbon dioxide emission limits and the RGGI Allowance Auction Market.
New Hampshire	PUC	Assisted researchers at the University of New Hampshire in estimating the net benefits of New Hampshire's RPS and its participation in RGGI for the state legislature.

Schedule MLR-1 - Historical Economic Trends (Percent Change from Previous Period)							
	2019	**2020**	**2021**	**2022**	**2023**	**2024**	**2025**
Real GDP	2.6	-2.1	6.2	2.5	2.9	2.8	2.2

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please provide the most current balances for all components of the Company's capital structure, net outstanding debt balances, effective cost rate on such debt, and equity contributions.

Response

The most current balances for all components of the Company's capital structure including debt and equity balances are shown in the table below.

National Fuel Gas Distribution Corp. (NFGDC)

	9/30/2025	12/31/2025
Capital Structure		
Long Term Debt	600,000	600,000
Common Equity	768,205	788,742
Total Capitalization	1,368,205	1,388,742
Capital Ratios		
Long Term Debt	43.9%	43.2%
Equity	56.1%	56.8%
Total Capitalization	100.0%	100.0%

Note: Common Equity excludes Accumulated Other Comprehensive Income

Note that the debt balances and effective cost rate of debt as of 12/31/2025 are unchanged from the HTY period that ended on 9/30/2025. Please reference page 2 of 53.53.III-E.6 for the effective cost of debt as of 9/30/2025.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please provide the most current balances for all components of NFGDC Parent Company's capital structure, net outstanding debt balances, effective cost rate on such debt, and equity contributions.

Response

The most current balances for all components of NFGC's capital structure including debt and equity balances are shown in the table below.

National Fuel Gas Company (NFG)

	9/30/2025	12/31/2025
Capital Structure		
Long Term Debt	2,700,000	2,700,000
Common Equity	3,153,826	3,282,950
Total Capitalization	5,853,826	5,982,950
Capital Ratios		
Long Term Debt	46.1%	45.1%
Equity	53.9%	54.9%
Total Capitalization	100.0%	100.0%

Note: Common Equity excludes Accumulated Other Comprehensive Income and acquisition related equity

The cost of debt for NFGC as of 12/31/2025 is 5.25% as shown on the following page based on the methodology used for 53.53.III-E.6.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Provide a comprehensive list of clauses, rate mechanisms, trackers, and/or riders that the Commission permits the Company to utilize for cost recovery between general rate cases. Include the relevant docket numbers and copies of the corresponding Commission decisions or orders in the most recent proceedings.

Response

The Commission allows the Company to recover certain costs between rate cases using specific riders, clauses, and adjustment mechanisms that are already built into the Company tariff. The most recent approval for these mechanisms came from the Company's last Pennsylvania rate case ("last brc"), Docket No. R-2022-3035730, with a tariff effective August 1, 2023.

The Commission approved clauses, rate mechanisms, trackers, and riders currently permitted for cost recovery between general rate cases include the following: Purchase Gas Cost clause (Rider A), State Adjustment surcharge (Rider B), Customer Education Charge (Rider E), Customer Assistance Program (Rider F), Merchant Function Charge (Rider G), Gas Procurement Charge (Rider H), OPEB related temporary riders, and Distribution System Improvement Charge (DSIC). The initial DSIC, Docket No. P-2022-3034957, was effective beginning January 1, 2025.

Please see attached for the last brc and DSIC orders.

National Fuel Gas Distribution Corp.
:

VERIFICATION

I, Maureen L. Reno, hereby state that the facts above set forth in my Direct Testimony, OCA Statement 3, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: April 16, 2026 Signature:
Maureen L. Reno

Address:

R-2025-3059428
NATIONAL FUEL GAS DISTRIBUTION CORPORATION - BASE RATE CASE
SURREBUTTAL TESTIMONY OF
MAUREEN L. RENO

I. IDENTIFICATION

Q. PLEASE STATE YOUR FULL NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Maureen L. Reno. I am an economist with a specialization in public utility economics and finance. I am the principal consultant of Reno Energy Consulting Services, L.L.C. My business address is 19 Hope Hill Road, Derry, New Hampshire 03038.

Q. ARE YOU THE SAME MAUREEN L. RENO EXPERT WITNESS WHO PROVIDED DIRECT TESTIMONY IN THIS DOCKET?

A. Yes.

Q. ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A. I am serving as an expert witness on cost of capital, ROE, and capital structure on behalf of the Pennsylvania Office of Consumer Advocate (“OCA”).

II. OVERVIEW

Q. WHAT IS THE PURPOSE OF THIS SURREBUTTAL TESTIMONY?

A. The purpose of this testimony is to respond to the rebuttal testimony of Mr. Joshua C. Nowak and Company witness James C. Welch as it relates to my cost of capital, capital structure, return on equity ("ROE"), and rate of return ("ROR") recommendations.

Q. PLEASE SUMMARIZE MR. NOWAK'S PRINCIPAL CRITIQUES OF YOUR DIRECT TESTIMONY.

A. Mr. Nowak criticizes my recommended capital structure, Discounted Cash Flow ("DCF") growth-rate inputs, Capital Asset Pricing Model ("CAPM") reasonableness check, Bond Yield Plus Risk Premium critique, Hamada-model alternative ROE, and assessment of National Fuel Gas Distribution Company's ("NFGD's") size, business, financial, regulatory, and macroeconomic risk. He also argues that correcting my analysis would increase my average ROE result to 10.55% and that his analyses support a 10.30% to 11.30% range with an 11.00% base ROE.[1]

Q. PLEASE SUMMARIZE MR. WELCH'S PRINCIPAL CRITIQUES OF YOUR DIRECT TESTIMONY.

A. Mr. Welch criticizes my recommendation to use a hypothetical capital structure of 50.00% common equity and 50.00% long-term debt. He argues that the Commission should use NFGD's actual projected capital structure if it falls within the range of a similarly situated proxy group.[2] He also argues that NFGD does not use double leverage, that National Fuel Gas ("NFG"), NFGD's parent company, has not issued debt and infused it into NFGD as equity, and that my reference to NFG's historic test year capital structure should not be used to support a hypothetical capital structure for the fully projected future test year.[3]

[1] NFGD St. 10-R at 12-13, 59-79.
[2] NFGD St. 11-R at 2-5.
[3] *Id.* at 4-5.

Q. DO MR. NOWAK'S OR MR. WELCH'S REBUTTAL CRITICISMS CAUSE YOU TO CHANGE YOUR RECOMMENDATIONS?

A. I continue to recommend an overall ROR of 7.66%, based on a capital structure of 50.00% equity and 50.00% long-term debt, a 5.58% cost of long-term debt, and a 9.74% ROE. I also continue to provide an alternative ROE of 9.06% if the Commission accepts NFGD's proposed 56.40% equity and 43.60% debt capital structure.[4] However, I change my alternative ROE from 9.21% to 9.06% because of corrections I made considering Mr. Nowak's critique of my Hamada model.

My recommendations remain grounded in the *Hope* and *Bluefield* standards, which require a return comparable to returns available on investments of similar risk and sufficient to maintain financial integrity and attract capital on reasonable terms.[5] Mr. Nowak's rebuttal relies on higher-cost inputs and upward adjustments that would increase customer costs without demonstrating that NFGD faces materially greater risk than the proxy group. Mr. Welch's rebuttal does not rebut the customer-cost concern created by NFGD's proposed 56.40% equity ratio, and it does not show that the proposed equity ratio is reasonable compared with recent gas utility authorized equity ratios or the expected proxy group average and median.

[4] OCA St. 3 at 6:6-21.
[5] *Id.* at 3:10-23.

III. CAPITAL STRUCTURE

Q. WHAT CAPITAL STRUCTURE RECOMMENDATIONS ARE BEFORE THE COMMISSION?

A. NFGD proposes a capital structure of 56.40% common equity and 43.60% long-term debt for the fully projected future test year. I recommend a hypothetical capital structure of 50.00% common equity and 50.00% long-term debt. I&E witness Breuning proposes a capital structure of 55.00% common equity and 45.00% long-term debt.[6]

Q. HOW DO MR. NOWAK AND MR. WELCH CRITICIZE YOUR CAPITAL STRUCTURE RECOMMENDATION?

A. Mr. Nowak argues that my 50.00% equity and 50.00% debt recommendation relies on an inappropriate comparison to holding-company capital structures and that I do not provide a substantiated rationale for recommending an equity ratio below recent average authorized equity ratios. He also argues that actual capital structures should be used unless they greatly diverge from industry practice or are clearly unsound or extravagantly conservative.[7] Mr. Welch similarly argues that the Commission should use the Company's actual capital structure if it falls within the range of a similarly situated proxy group and cites Commission precedent favoring use of actual capital structures absent a finding that they are atypical or too heavily weighted toward debt or equity.[8]

[6] NFGD St. 11-R at 1-2.
[7] NFGD St. 10-R at 12-14.
[8] NFGD St. 11-R at 2-3.

Q. DO YOU AGREE THAT THE COMPANY'S PROPOSED CAPITAL STRUCTURE SHOULD BE ADOPTED BECAUSE IT FALLS WITHIN A BROAD PROXY-GROUP RANGE?

A. No. The fact that a capital structure may fall somewhere within a broad proxy-group range does not automatically make it reasonable for ratemaking purposes. Considering that Mr. Nowak's referenced range is 43.17% to 61.05% equity, he would support an equity ratio even if the Company's actual equity ratio was as high as 61.05%, which is unreasonable.[9] The Commission's task is to establish a just and reasonable rate of return. Equity is more expensive than debt, higher equity ratios raise the weighted cost of capital paid by customers, and equity also increases the customer tax burden because dividends are not tax deductible.[10] My testimony evaluates whether the Company's proposed 56.40% equity ratio is reasonable in this case, not merely whether similar or higher equity ratios can be found somewhere in a broad range.[11]

Q. WHAT EVIDENCE SUPPORTS YOUR CONCLUSION THAT NFGD'S PROPOSED EQUITY RATIO IS EXCESSIVE FOR RATEMAKING PURPOSES?

A. NFGD's proposed 56.40% equity ratio exceeds recent average authorized equity ratios for regulated gas utilities, including 52.45% in 2023, 52.52% in 2024, and 51.63% in 2025. It also exceeds the proxy group expected average of 48.00% and median of

[9] NFGD St. 10-R at 16, Figure 3.
[10] OCA St. 3 at 21:21-24, 22:1-6.
[11] *Id.* at 24.

45.00% for 2026.[12] Because equity is the more expensive form of capital, using a higher equity ratio increases the total rate of return customers must pay.[13]

Q. DOES YOUR 50.00% COMMON EQUITY RECOMMENDATION FALL WITHIN MAINSTREAM COMMISSION PRACTICE?

A. Yes. My recommendation is not an outlier. The recent rate-case history I reviewed includes more than 40 state commission-approved decisions or settlements using a 50.00% common equity ratio,[14] including natural gas distribution cases for Southwest Gas in Arizona and Nevada, Ameren Illinois and Northern Illinois Gas in Illinois, Northwest Natural in Oregon, and Puget Sound Energy in Washington, as well as electric distribution examples such as United Illuminating in Connecticut and Public Service Company of New Hampshire d/b/a Eversource. Those examples include fully litigated decisions as well as approved settlements. They reflect the same ratemaking principle underlying my recommendation: equity is more expensive than debt, so the authorized capital structure should provide enough equity to support financial integrity and access to capital without requiring customers to fund an equity-rich structure. The Ameren Illinois and Eversource decisions are particularly instructive because those commissions adopted 50.00% common equity after considering higher company-proposed equity levels and customer-cost concerns.[15]

---

[12] *Id.* at 24:1-6.
[13] *Id.* at 21: 6-24, 22:1-6.
[14] Ex. MLR-1-SR: Schedule MLR-1-SR.
[15] *Ameren Ill. Co., d/b/a Ameren Ill.*, ICC Docket No. 25-0084, Final Order at 213; *Public Service Company of New Hampshire d/b/a Eversource*, NH PUC Docket No. DE 24-070, Order at 41-43.

Q. DOES YOUR RECOMMENDATION IGNORE NFGD'S ACTUAL CAPITAL STRUCTURE?

A. No. I considered NFGD's actual and proposed capital structure. NFGD's actual capitalization for the historical period ended September 30, 2025 was 43.90% long-term debt and 56.10% equity, and the Company's equity ratio excluding short-term debt decreased from 64.02% in September 2022 to 56.15% in September 2025.[16] I also considered NFGD's proposed fully projected future test year capital structure of 56.40% equity and 43.60% debt.[17] My conclusion is that the proposed equity ratio is unreasonable for ratemaking purposes because it is above recent industry-authorized averages and proxy-group expected measures and imposes unnecessary costs on customers.

Q. HOW SHOULD THE COMMISSION VIEW MR. NOWAK'S AND MR. WELCH'S RELIANCE ON PRECEDENT FAVORING ACTUAL CAPITAL STRUCTURES?

A. Use of an actual capital structure is not an end in itself. The purpose is to set a just and reasonable rate of return. The precedent cited by Mr. Welch still requires the Commission to evaluate whether the proposed capital structure is atypical or too heavily weighted on either the debt or equity side.[18] My recommendation addresses that reasonableness question by considering the Company's proposed capital structure,

[16] OCA St. 3 at 23.
[17] *Id.* at 17-24.
[18] NFGD St. 11-R at 2:11-23, 3:1-11.

recent authorized gas utility equity ratios, expected proxy-group capital structures, and the customer-cost impact of excess equity.

Q. HOW DO YOU RESPOND TO THE COMPANY'S CRITICISM OF YOUR DOUBLE-LEVERAGE CONCERN?

A. My testimony does not ask the Commission to disregard NFGD's stand-alone operations. Rather, it identifies a ratemaking concern created when a parent company issues debt and infuses capital into a regulated subsidiary as common equity. That concern is relevant because NFGD is not publicly traded and obtains financing through its parent, NFG. Mr. Nowak's assertion that the concern is inconsistent with the stand-alone regulatory principle does not eliminate the Commission's responsibility to evaluate whether the proposed equity ratio is reasonable for customers.[19]

Q. DOES THE COMPARISON BETWEEN NFGD'S PROPOSED EQUITY RATIO AND NFG'S PROJECTED EQUITY RATIO CHANGE YOUR RECOMMENDATION?

A. No. Mr. Nowak states that NFGD's proposed 56.40% equity ratio is 610 basis points below NFG's projected 62.50% equity ratio.[20] That assertion does not rebut the customer-cost concern or the ratemaking evidence showing that NFGD's proposed equity ratio is above recent gas utility authorized averages and above the expected proxy-group average and median.[21]

[19] NFGD St. 10-R at 19-22.
[20] *Id.* at 20:21-24, 21:1-2.
[21] OCA St. 3 at 22-24.

Q. DOES I&E'S POSITION IN NFGD'S PRIOR RATE CASE AFFECT YOUR RECOMMENDATION?

A. No. Mr. Welch states that, in the Company's most recent rate case, I&E supported the Company's claimed capital structure because it fell within the range of the proxy group's most recent available capital structures.[22] That was a case-specific position in a prior proceeding. It does not determine whether NFGD's proposed 56.40% equity ratio is reasonable in this case. My recommendation is based on the current record, including the Company's proposed fully projected future test year capital structure, recent authorized gas utility equity ratios, expected proxy-group capital structures, and the ratepayer impact of excess equity.

Q. SHOULD CUSTOMER AFFORDABILITY ALSO INFORM THE COMMISSION'S EVALUATION OF NFGD'S PROPOSED CAPITAL STRUCTURE?

A. Yes. As I discuss in more detail later in my testimony regarding macroeconomic conditions and affordability, the current economic climate reinforces the need to avoid unnecessary customer costs in setting NFGD's rate of return. My recommended 50.00% common equity and 50.00% long-term debt capital structure is fair to both the Company and customers. It provides sufficient equity to support financial integrity and access to capital, while avoiding the higher customer costs associated with the Company's proposed equity-rich capital structure. Other OCA witnesses also explain

[22] NFGD St. 11-R at 3:20-27.

that customers are facing significant affordability pressures. In that context, the Commission should use the ratemaking tools available to it, including a reasonable hypothetical capital structure, to set just and reasonable rates and to avoid requiring customers to fund excessive equity costs.

Q. WHAT CAPITAL STRUCTURE SHOULD THE COMMISSION ADOPT?

A. The Commission should reject the Company's proposed 56.40% equity and 43.60% long-term debt capital structure and adopt my recommended 50.00% equity and 50.00% long-term debt capital structure for ratemaking purposes. That recommendation recognizes the customer-cost impact of excess equity, the recent authorized equity ratios for regulated gas utilities, the expected proxy-group capital structures, and the financing relationship between NFGD and its parent company.

IV. NFG HISTORIC TEST YEAR AND FPFTY COMPARISON

Q. HOW DOES MR. WELCH CRITICIZE YOUR REFERENCE TO NFG'S HISTORIC TEST YEAR CAPITAL STRUCTURE?

A. Mr. Welch argues that, to remain consistent with the revenue requirement calculations, the projected capital structure at the end of the fully projected future test year ("FPFTY") should be used. He also states that comparing NFG's historic test year equity ratio as of January 31, 2025, to NFGD's equity ratio as of October 31, 2027, is illogical and lacks any basis for consideration.[23]

[23] NFGD St. 11-R at 5:4-12.

Q. HOW DO YOU RESPOND?

A. My capital structure recommendation does not depend solely on the comparison between NFG's historic test year equity ratio and NFGD's FPFTY equity ratio. I considered multiple benchmarks: NFGD's actual historical capital structure, its proposed FPFTY capital structure, recent average authorized equity ratios for gas utilities, the proxy group expected average and median, and the customer cost implications of a higher equity ratio.[24]

Q. MR. WELCH STATES THAT NFG HAS A PROJECTED FPFTY EQUITY RATIO OF 62.50%, WHICH IS HIGHER THAN NFGD'S PROPOSED 56.40% EQUITY RATIO. DOES THAT CHANGE YOUR CONCLUSION?

A. No. Mr. Welch states that NFG's projected FPFTY equity ratio is 62.50%, compared with NFGD's proposed 56.40% equity ratio. That comparison does not establish that NFGD's proposed equity ratio is reasonable for ratemaking purposes. My testimony shows that NFGD's proposed equity ratio exceeds recent average authorized gas utility equity ratios and exceeds the expected proxy group average and median.[25] The central issue remains whether customers should bear the higher cost associated with the Company's requested equity-heavy capital structure.

[24] OCA St. 3 at 22-24.
[25] *Id.* at 24.

IV. DOUBLE LEVERAGE AND PARENT-COMPANY FINANCING

Q. HOW DO MR. NOWAK AND MR. WELCH RESPOND TO YOUR DOUBLE-LEVERAGE DISCUSSION?

A. Mr. Nowak states that my double leverage concern is unfounded and inconsistent with the stand-alone regulatory principle.[26] Mr. Welch states that NFGD does not use double leverage and that NFG has not issued debt and infused it into NFGD as equity.[27] Mr. Welch also states that double leverage is not relevant or instructive because, in his view, the Company has not used double leverage.[28]

Q. DO THOSE REBUTTAL CRITICISMS CAUSE YOU TO WITHDRAW YOUR CONCERN?

A. No. My direct testimony does not ask the Commission to disregard NFGD's stand-alone operations. Rather, it identifies a ratemaking concern that can arise when a parent company issues debt and infuses capital into a regulated subsidiary as common equity.[29] That concern is relevant because equity is more expensive than debt, higher equity ratios increase the weighted cost of capital paid by customers, and dividends are not tax deductible.[30]

[26] NFGD St. 10-R at 19:10-12.
[27] NFGD St. 11-R, at 4:7-10.
[28] *Id.* at 4:12-16.
[29] OCA St. 3 at 24:9-11, 25:1-10.
[30] *Id.* at 21:21-24, 22:1-6.

Q. IF MR. WELCH STATES THAT NFGD DOES NOT USE DOUBLE LEVERAGE, WHY IS PARENT-COMPANY FINANCING STILL RELEVANT?

A. Parent-company financing remains relevant because NFGD is not publicly traded and obtains financing through its publicly traded parent company, NFG.[31] Mr. Welch likewise states that NFGD relies on NFG as a source of capital through public offerings of debt securities and that this financing arrangement is governed by a Credit and Security Agreement.[32] That financing relationship is relevant to evaluating the reasonableness of the capital structure charged to customers in this rate case.

Q. DOES COMMISSION APPROVAL OF THE CREDIT AND SECURITY AGREEMENT RESOLVE THE RATEMAKING CAPITAL STRUCTURE ISSUE?

A. No. Mr. Welch states that the Commission has accepted the Credit and Security Agreement as reasonable and consistent with the public interest.[33] But approval of that financing agreement does not determine the appropriate ratemaking capital structure in this base rate case. The issue here is whether customers should pay a return based on NFGD's proposed 56.40% equity ratio or on a more reasonable capital structure.[34]

---

[31] *Id.* at 27:6-10, 35:8-15.
[32] NFGD St. 11-R at 4:18-23, 5:1-2.
[33] *Id.*
[34] OCA St. 3 at 21: 21-24, 22: 1-6.

Q. HOW SHOULD THE COMMISSION CONSIDER THE DOUBLE LEVERAGE ISSUE IN THIS CASE?

A. The Commission should consider the double leverage discussion as part of the broader capital structure reasonableness analysis. Even accepting Mr. Welch's statement that NFGD has not used double leverage in the manner he describes, the record still shows that NFGD is financed through its parent and that the proposed 56.40% equity ratio would increase the customer cost of capital. Therefore, Mr. Nowak's and Mr. Welch's rebuttal testimony does not eliminate the need to evaluate whether NFGD's proposed capital structure is reasonable for ratemaking purposes.

Q. WHAT CONCLUSION SHOULD THE COMMISSION REACH?

A. The Commission should reject the argument that parent-company financing and double leverage concerns are irrelevant. Those issues support the need to scrutinize NFGD's proposed equity-rich capital structure and to protect customers from paying a return based on excessive equity. My recommended 50.00% equity and 50.00% long-term debt capital structure remains reasonable for ratemaking purposes.

V. MANAGEMENT EFFICIENCY ADDER

Q. HOW DOES MR. NOWAK RESPOND TO YOUR CRITIQUE OF THE COMPANY'S PROPOSED MANAGEMENT EFFICIENCY ADDER?

A. Mr. Nowak disagrees with the intervenor witnesses' characterization of the adder, continues to support it in concept, but states that NFGD has chosen to forgo the request in this case due to customer affordability, inflationary pressures, and bill impacts.[35]

Q. DOES THE WITHDRAWAL OF THE MANAGEMENT EFFICIENCY ADDER AFFECT YOUR RECOMMENDATION?

A. It confirms that no management efficiency adder should be included in the authorized ROE in this proceeding. My direct testimony explained that the proposed 25-basis-point adder was unsupported by the record, duplicative of factors already embedded in market-based ROE results, and inconsistent with established ratemaking principles.[36]

Q. SHOULD THE MANAGEMENT EFFICIENCY ISSUE HAVE ANY CONTINUING EFFECT ON THE BASE ROE?

A. No. Once NFGD withdrew the adder, the Commission should not allow the same concept to influence the base ROE indirectly. My direct testimony explained that market-derived ROE models already reflect investor expectations regarding management quality, operational efficiency, and execution risk for comparable companies.[37] The appropriate conclusion is that a reasonable ROE can be determined

[35] NFGD St. 10-R at 21-22.
[36] OCA St. 3 at 59-62.
[37] *Id.* at 61:20-28.

using the Company's risk profile and standard financial models without any separate adjustment for management performance.

VI. DCF GROWTH INPUTS

Q. HOW DOES MR. NOWAK CRITICIZE YOUR DCF ANALYSIS?

A. Mr. Nowak argues that projected earnings growth is superior to dividend and book value growth estimates, that there are no consensus dividend growth forecasts comparable to earnings per share ("EPS") forecasts, and that my combined dividend per share ("DPS"), EPS, and book value per share ("BVPS") growth results should be disregarded.[38]

Q. DO YOU AGREE THAT EPS GROWTH SHOULD BE THE ONLY GROWTH INPUT IN THE DCF MODEL?

A. No. I use EPS growth in my analysis, but I do not agree that it should be the only growth input. My first DCF variant uses EPS forecasts from Value Line, S&P MI, and Zacks and produces median results of 10.48% and 10.61%.[39] I then refine the growth calculation by averaging DPS and BVPS growth estimates with EPS growth because investors are not concerned only with earnings growth; they also consider dividend growth and book value growth as indicators of whether dividend growth can be sustained.[40]

[38] NFGD St. 10-R at 62-63.
[39] OCA St. 3, at 44.
[40] *Id.* at 44-45.

Q. WHY IS IT IMPORTANT TO CONSIDER DIVIDEND AND BOOK VALUE GROWTH IN A DCF ANALYSIS?

A. The DCF model is fundamentally a dividend discount model. I explained in my direct testimony, the value of stock is based on the present value of expected dividends and that the model estimates the required return by adding expected dividend yield and expected growth.[41] Because the model is based on dividends, it is reasonable to consider whether dividends are sustainable. Earnings are relevant, but investors may not rely on a single growth estimate when valuing a utility's stock.[42]

Q. MR. NOWAK SAYS YOUR COMBINED DPS, EPS, AND BVPS DCF RESULTS ARE BELOW RECENT AUTHORIZED ROES AND FAIL THE COMPARABLE RETURN STANDARD. HOW DO YOU RESPOND?

A. I disagree. Mr. Nowak's comparison relies on authorized ROEs as if they were a direct measure of investor-required returns. In my direct testimony, I explained that authorized ROEs measure commission decisions, not investor behavior, and can reflect many factors other than market-required returns, including capital structure, credit ratings, settlements, utility performance, and other risk measures.[43]

[41] *Id.* at 42.
[42] *Id.* at 44, 50.
[43] *Id.* at 56-57.

Q. DOES MR. NOWAK'S EPS-ONLY APPROACH CREATE AN UPWARD BIAS?

A. Yes. In my direct testimony, I explained that Mr. Nowak relies almost exclusively on earnings growth estimates, which inflates his DCF and CAPM results.[44] I also explained that while his median DCF results are similar to my EPS-only DCF results, he isolates growth rates and appears to rely on higher-growth results to support his ROE recommendation.[45] If Mr. Nowak incorporated more than earnings growth, including dividend and book value growth, his DCF estimates would be lower.[46]

VII. SUSTAINABLE-GROWTH DCF

Q. HOW DOES MR. NOWAK CRITICIZE YOUR SUSTAINABLE GROWTH DCF ANALYSIS?

A. Mr. Nowak argues that the sustainable growth DCF should receive no weight because, in his view, the theory underlying retention growth does not hold and because the model requires estimates of multiple variables.[47]

Q. DO YOU AGREE THAT THE SUSTAINABLE GROWTH DCF SHOULD BE DISREGARDED?

A. No. I use the sustainable growth DCF as one DCF variant, not as the sole basis for my recommendation. The method recognizes that growth in earnings and dividends can be

[44] *Id.* at 5:9-29.
[45] *Id.* at 45:12-22, 46:1-17.
[46] *Id.* at 46:14-17.
[47] NFGD St. 10-R at 63-66.

achieved not only through retention of earnings but also through external equity financing. I used Value Line expectations regarding retention ratios and ROEs to estimate the internal growth component, and Value Line data concerning market-to-book ratios and expected shares outstanding to estimate the external financing growth component.[48]

Q. HOW DOES THE SUSTAINABLE GROWTH DCF FIT WITHIN YOUR OVERALL ROE RECOMMENDATION?

A. The sustainable-growth DCF results are part of the range of evidence. They produce median ROE estimates of 9.87% and 10.03%, which fall within my DCF range and support my 9.74% midpoint recommendation.[49] My recommendation is not dependent on any single DCF variant. It is based on the range of DCF results and supported by the CAPM as a reasonableness check.

Q. DOES MR. NOWAK'S CRITIQUE INVALIDATE THE SUSTAINABLE GROWTH DCF FOR THIS CASE?

A. No. His critique identifies potential limitations of one DCF variant, but all ROE models require judgment and no single model is perfect. The appropriate response is not to rely exclusively on EPS growth, which creates its own upward bias, but to consider a range of reasonable DCF growth inputs. The sustainable growth DCF is a reasonable component of that range.

[48] OCA St. 3 at 47:17-22, 48:1-2.
[49] *Id.* at 49:3-8, Table 3.

VIII. CAPM AND KROLL INPUTS

Q. HOW DOES MR. NOWAK CRITICIZE YOUR CAPM ANALYSIS?

A. Mr. Nowak states that I use three CAPM estimates ranging from 7.43% to 10.55% with a midpoint of 8.99%, and he argues that I do not consider whether some results are too low.[50]

Q. DO YOU RELY ON THE CAPM AS THE BASIS FOR YOUR RECOMMENDED ROE?

A. No. My recommended ROE is based on the midpoint of my DCF results. I use the CAPM only as a check on the reasonableness of the DCF results. The CAPM results range from 7.43% to 10.55% with a midpoint of 8.99%.[51] Because my recommended 9.74% ROE is above the CAPM midpoint and within my DCF range, the CAPM check supports rather than undermines my recommendation.[52]

Q. HOW DO YOU RESPOND TO MR. NOWAK'S ASSERTION THAT YOUR 7.43% CAPM RESULT IS TOO LOW?

A. The 7.43% result is one CAPM scenario and is not my recommended ROE. I used the CAPM as a reasonableness check, and the full CAPM range includes a 10.55% result.[53] The relevant point is that the CAPM results, taken together, do not support Mr. Nowak's 11.00% base ROE or the previously requested 11.25% ROE with the management efficiency adder.

[50] NFGD St. 10-R at 67:1-7.
[51] OCA St. 3 at 55:1-3, Table 4.
[52] *Id.* at 6-7.
[53] *Id.* at 55, Table 4.

Q. HOW DOES MR. NOWAK CRITICIZE YOUR USE OF KROLL MARKET RISK PREMIUM INPUTS?

A. Mr. Nowak argues that Kroll's recommended 5.00% Equity Risk Premium ("ERP") does not move in a clear inverse relationship with Kroll's recommended risk-free rate, and that Kroll's supply-side and long-term historical market risk premiums do not adequately reflect forward-looking investor expectations.[54]

Q. DO YOU AGREE THAT YOUR KROLL INPUTS SHOULD BE REJECTED?

A. No. Kroll is a recognized source of cost of capital inputs, and I used multiple Kroll-based ERP measures to avoid reliance on a single estimate. My CAPM analyses use ERP estimates ranging from 5.00% to 7.37%, including Kroll's historical arithmetic average of real market returns, Kroll's supply-side ERP, and Kroll's recommended U.S. ERP paired with Kroll's normalized risk-free rate.[55] Mr. Nowak's criticism does not show that these inputs are unreasonable; it shows that he prefers a higher market return assumption.

Q. WHY DO YOU REJECT MR. NOWAK'S MARKET RISK PREMIUM INPUTS?

A. Mr. Nowak's market return assumptions are overstated. He estimates an expected market return for the S&P 500 of 15.09%, with implied market risk premiums of 10.43% to 10.79%, and an alternative FERC-convention market return of 11.62%.[56] I

[54] NFGD St. 10-R at 67-70.
[55] OCA St. 3 at 55:1-3, Table 4.
[56] *Id.* at 53.

explained that the 11.62% market return far exceeds investors' current expectations, including the Federal Reserve Bank of Philadelphia's reported average expected S&P 500 return of 7.31% and median of 7.00% over 2026-2035.[57] Mr. Nowak's use of higher EPS-based market return estimates inflates his CAPM results.

Q. DOES MR. NOWAK'S STATEMENT, THAT FORWARD-LOOKING INPUTS ARE NEEDED, CHANGE YOUR CONCLUSION?

A. No. My testimony already accounts for current market conditions using recent Treasury yields, current Kroll inputs, Value Line beta coefficients, and a reasonableness comparison to longer-term market return data. Forward-looking analysis does not require adopting an overstated S&P 500 expected market return or an inflated market risk premium.

IX. BOND YIELD PLUS RISK PREMIUM

Q. HOW DOES MR. NOWAK RESPOND TO YOUR CRITIQUE OF HIS BOND YIELD PLUS RISK PREMIUM ANALYSIS?

A. Mr. Nowak argues that the Risk Premium approach provides another useful perspective, that it is based on an inverse relationship between Treasury bond yields and equity risk premiums, that some other state regulators use risk premium methods, and that it provides stability relative to DCF and CAPM results.[58]

[57] *Id.* at 53:19-23, 54:1-4.
[58] NFGD St. 10-R at 72-75.

Q. DO YOU AGREE THAT HIS BOND YIELD PLUS RISK PREMIUM ANALYSIS SHOULD BE USED TO SUPPORT HIS ROE?

A. No. In my direct testimony, I explained that Mr. Nowak's risk premium analysis is problematic because it assumes a simplified inverse relationship without adequate regard to differences in investment risk, changes in the market's perception of debt and equity risk, interest-rate volatility, and the effect of inflation on risk premiums.[59]

Q. WHY IS HIS USE OF AUTHORIZED ROES IN THE RISK PREMIUM MODEL PROBLEMATIC?

A. Authorized ROEs are regulatory outcomes, not direct measures of investor behavior. They may reflect capital structures, credit ratings, utility performance, settlement outcomes, and other risk measures. Mr. Nowak's model relies on authorized ROEs from historical commission decisions, even though he criticizes other witnesses when they use authorized ROEs as a benchmark without sufficient market context.

Q. IS IT NECESSARY TO RELY ON THE BOND YIELD PLUS RISK PREMIUM METHOD TO APPLY MULTIPLE METHODOLOGIES?

A. No. I used the Constant-Growth DCF model as the basis for my recommendation and CAPM as a reasonableness check. Using multiple methodologies does not require accepting every methodology offered by Mr. Nowak, particularly where the method is built on historical authorized ROEs rather than direct investor market behavior.

[59] OCA St. 3 at 56:15-23, 57:1-9.

X. HAMADA MODEL ALTERNATIVE ROE

Q. HOW DOES MR. NOWAK CRITICIZE YOUR ALTERNATIVE ROE CALCULATED USING THE HAMADA MODEL?

A. Mr. Nowak argues that my Hamada model is flawed because I used 50.00% as the "Proxy Equity Ratio," because my market risk premium inputs are flawed, and because I use the CAPM framework for the alternative ROE while using DCF results for my primary recommendation.[60]

Q. WHAT WAS THE PURPOSE OF YOUR HAMADA MODEL?

A. The purpose of applying the Hamada model is to show how the Company's proposed capital structure affects the indicated cost of equity. The Hamada model is a capital structure adjustment to beta coefficients in the CAPM framework, not a standalone model. It separates operating risk from financing risk and shows how leverage changes equity risk and the CAPM cost of equity.[61]

Q. WHY IS THE HAMADA ANALYSIS RELEVANT IF YOUR PRIMARY RECOMMENDATION IS BASED ON THE DCF MODEL?

A. Because capital structure changes financial risk, investors view higher debt as increasing leverage risk, and conversely, excessive equity lowers financial risk while increasing the cost of capital. The Hamada model illustrates that if the Commission adopts NFGD's proposed lower-debt, higher-equity capital structure, the indicated cost of equity is lower because equity investors face less leverage risk.

[60] NFGD St. 10-R at 75-76.
[61] OCA St. 3 at 63-65.

Q. HOW DO YOU RESPOND TO MR. NOWAK'S CRITICISM THAT YOUR "PROXY EQUITY RATIO" IS FLAWED?

A. Mr. Nowak is correct that the label "Proxy Equity Ratio" could be clarified, and the Hamada analysis can be refined using the proxy group average equity ratio. However, because the proxy group equity ratios are not materially different from 50%, as he acknowledges, this issue does not invalidate the analysis or the broader conclusion that a lower-debt, higher-equity capital structure supports a lower equity cost rate.

Q. DID YOU RECALCULATE THE HAMADA-MODEL-DERIVED ROE USING THE PROXY GROUP EQUITY RATIO?

A. Yes. Using the proxy group average equity ratio of 48.00% and 52.00% debt, the resulting ROE if the Commission were to approve the Company's proposed capital structure is 9.06%.[62]

Q. DOES THIS NEW RESULT CAUSE YOU TO CHANGE YOUR RECOMMENDED ALTERNATIVE ROE?

A. Yes. If the Commission approves the Company's proposed capital structure of 56.40% equity and 43.60% debt, my recommended alternative ROE is 9.06% in lieu of 9.21%, with a resulting weighted average cost of capital or rate of return of 7.54%.[63]

Q. DOES MR. NOWAK'S CRITICISM OF THE "PROXY EQUITY RATIO" LABEL INVALIDATE THE ANALYSIS?

A. No. The analysis is intended to show the ROE implication of alternative capital structures, including NFGD's proposed 56.40% equity and 43.60% debt capital structure. The underlying economic point remains: a higher equity ratio reduces

leverage risk and therefore supports a lower equity cost rate than would apply under a more leveraged capital structure.

XI. SIZE RISK

Q. HOW DOES MR. NOWAK RESPOND TO YOUR CRITIQUE OF HIS SIZE RISK DISCUSSION?

A. Mr. Nowak states that he did not make a specific size adjustment, but that his recommended ROE above the midpoint of his range considers NFGD's company-specific risks, including small size. He also argues that NFGD should be evaluated on a stand-alone basis and that Kroll's CRSP database includes electric and natural gas utilities.[64]

Q. DO YOU AGREE THAT NFGD'S SIZE SUPPORTS A HIGHER ROE?

A. No. Mr. Nowak did not quantify or apply a discrete size risk adjustment. His size discussion therefore should not be used to justify moving his recommendation above the midpoint of his model range.

Q. WHY IS THE PARENT-COMPANY CONTEXT RELEVANT TO SIZE RISK?

A. NFGD is not a publicly traded stand-alone company. It is a subsidiary of NFG, and it obtains financing through its parent. The financial risks typically associated with small

[62] Ex. MLR-1-SR: Schedule MLR-2-SR.
[63] Ex. MLR-1-SR: Schedule MLR-3-SR.
[64] NFGD St. 10-R at 76:13-20, 77:1-20, 78:1-3.

stand-alone companies are mitigated by access to parent-company financing, centralized financing support, and affiliate resources.[65]

Q. DOES THE PRESENCE OF UTILITIES IN THE CRSP DATABASE RESOLVE YOUR CONCERN WITH KROLL SIZE PREMIUMS?

A. No. My concern is not simply whether any utilities appear in the CRSP database. My concern is whether a generalized small-company return premium, developed from publicly traded companies across many industries, should be applied or used to support a higher ROE for a regulated monopoly utility subsidiary that receives financing and support through a larger parent company.[66] Mr. Nowak's rebuttal does not demonstrate that NFGD requires a size-related ROE increase to attract capital on reasonable terms.

XII. BUSINESS, CUSTOMER CONCENTRATION, AND REGULATORY RISK

Q. HOW DOES MR. NOWAK CRITICIZE YOUR TREATMENT OF BUSINESS AND REGULATORY RISK?

A. Mr. Nowak states that my criticism is too narrow, that NFGD's partial revenue decoupling does not fully insulate the Company from fixed-cost recovery risk, and that NFGD has somewhat elevated regulatory risk due to limitations on its partial revenue decoupling and capital cost recovery mechanisms.[67]

[65] OCA St. 3 at 58:10-22, 59:1-9.
[66] *Id.* at 58:1-22, 59:1-9.
[67] NFGD St. 10-R at 78-79.

Q. DO YOU AGREE THAT NFGD FACES GREATER BUSINESS RISK THAN THE PROXY GROUP?

A. No. My direct testimony addressed the business risk categories Mr. Nowak identified, including capital expenditure risk, small size, customer concentration, and regulatory risk.[68] I concluded that NFGD does not face greater business risk than the proxy group.[69] In a cost-of-service regulatory model, capital investment is the foundation of utility earnings and prudently incurred capital costs are recoverable through rates, including a return on invested capital.

Q. HOW DO YOU RESPOND TO MR. NOWAK'S CUSTOMER CONCENTRATION ARGUMENT?

A. Mr. Nowak overstates the effect of demand risk in a regulated utility context. I explained that NFGD operates under mechanisms that mitigate volumetric and demand risk, including the Weather Normalization Adjustment ("WNA") mechanism, the Distribution Systems Improvement Charge ("DSIC"), fully projected future test years, rate design features such as fixed customer charges, and the ability to reset rates through rate cases. These mechanisms materially reduce the sensitivity of revenues to customer usage fluctuations.[70]

[68] OCA St. 3 at 31-35.
[69] *Id.* at 35:1-5.
[70] *Id.* at 33:13-23, 34:1-8.

Q. DOES NFGD FACE GREATER REGULATORY RISK THAN THE PROXY GROUP?

A. No. Pennsylvania's regulatory environment is constructive from an investor standpoint. I explained that Pennsylvania has an "Above Average/2" ranking from S&P Market Intelligence, that Regulatory Research Associates ("RRA") views Pennsylvania's energy utility regulatory climate as relatively constructive, and that Pennsylvania allows mechanisms that reduce regulatory lag, including forward-looking test years, year-end base valuations, and rate mechanisms between general rate cases.[71]

Q. HOW DO FUTURE TEST YEARS AND RIDERS AFFECT REGULATORY RISK?

A. They reduce it. A future test year aligns rates with the costs expected when rates are in effect and reduces the mismatch between authorized rate base and actual investment.[72] NFGD also has several riders and mechanisms, including the Purchase Gas Cost Clause, State Tax Adjustment Surcharge, Other-Post Employment Benefits ("OPEB") riders, DSIC, and WNA, that support cost recovery between rate cases and reduce regulatory and business risk.[73]

[71] *Id.* at 36:8-21.
[72] *Id.* at 37-38.
[73] *Id.* at 38-40.

Q. DOES MR. NOWAK QUANTIFY ANY REGULATORY-RISK ADJUSTMENT IN REBUTTAL?

A. No. Mr. Nowak states that NFGD has somewhat elevated regulatory risk, but he also states that he does not make a specific ROE adjustment to account for regulatory risk.[74] That supports my conclusion that the record does not justify increasing the ROE above my market-based recommendation for alleged regulatory risk.

XIII. MACROECONOMIC AND FINANCIAL MARKET CONDITIONS

Q. DOES MR. NOWAK'S DISCUSSION OF ELEVATED INFLATION, INTEREST RATES, AND GEOPOLITICAL UNCERTAINTY UNDERMINE YOUR ROE RECOMMENDATION?

A. No. My direct testimony already considered current and expected macroeconomic conditions. I explained that economic conditions provide context for ROE, cost of debt, and ROR recommendations and that investors consider Federal Reserve actions, economic conditions, and fixed-income yields when estimating utility stock returns. I also discussed persistent inflation, oil supply shocks, long-term Treasury yields, and corporate bond yields.[75]

[74] NFGD St. 10-R at 79:1-5.
[75] OCA St. 3 at 10-14.

Q. DOES ELEVATED MACROECONOMIC UNCERTAINTY NECESSARILY SUPPORT MR. NOWAK'S 11.00% BASE ROE?

A. No. Elevated uncertainty must be evaluated through market-based cost of equity evidence, not assumed to require an upward adjustment. I explained that in uncertain times investors may choose more defensive stocks, such as utility stocks, that typically have lower expected returns than higher-risk stocks, and that this trend is reflected in my cost of equity study estimates.[76] My recommendation already accounts for the current market environment through my DCF and CAPM analyses.

XIV. AFFORDABILITY AND CUSTOMER BURDEN

Q. DOES YOUR DISCUSSION OF MACROECONOMIC AND FINANCIAL MARKET CONDITIONS ALSO INFORM THE COMMISSION'S CONSIDERATION OF CUSTOMER AFFORDABILITY?

A. Yes. My discussion of macroeconomic and financial market conditions is relevant not only to investor-required returns, but also to the affordability context in which the Commission must set just and reasonable rates. I have evaluated inflation, interest rates, Treasury yields, corporate bond yields, and broader uncertainty through market-based cost-of-equity evidence, rather than assuming that uncertainty automatically supports a higher ROE. At the same time, those same economic conditions affect residential

[76] *Id.* at 20:1-8.

customers who must absorb utility rate increases along with higher costs for food, housing, transportation, and other necessities.[77]

Q. HOW DOES THE OCA AFFORDABILITY TESTIMONY RELATE TO YOUR RATE OF RETURN RECOMMENDATION?

A. The affordability testimony reinforces the importance of authorizing only the return that is necessary to satisfy the *Hope* and *Bluefield* standards. OCA Witness Michael Deupree explains that NFGD's requested increase follows a recent rate increase and would contribute to cumulative rate pressure on customers, including evidence that terminations and reconnections increased in 2025.[78] He also explains that affordability concerns are especially acute for low-income households.[79] Those facts do not replace the cost-of-capital analysis, but they do matter when the record supports a lower, reasonable cost of capital than what the Company requests.

Q. WHAT DOES MR. DEUPREE'S AFFORDABILITY ANALYSIS SHOW FOR LOW-INCOME RESIDENTIAL CUSTOMERS?

A. Mr. Deupree's analysis shows that low-income customers already face high energy burdens. Using the 6.0% affordability threshold, he estimates that the Company's proposed rate increase would raise the energy burden to approximately 8.5% for residential customers at 50.0% of the Federal Poverty Income Guidelines ("FPIG") and 4.3% for customers at 100% of FPIG.[80] Mr. Deupree concludes that the proposed

[77] OCA St. 1 at 3:9-20.
[78] *Id.* at 9.
[79] *Id.* at 3-6.
[80] OCA St. 1-SR at 5.

increase in rates would worsen affordability conditions for the most vulnerable customers.

Q. CAN AN AUTHORIZED CAPITAL STRUCTURE AND ROE BE USED TO REDUCE CUSTOMER BURDEN?

A. Yes. The authorized capital structure and ROE are core drivers of the revenue requirement. Equity is more expensive than debt, and a higher equity ratio increases the weighted cost of capital paid by customers. In addition, equity returns are recovered from customers and grossed up for income taxes, while interest on debt is tax deductible. For that reason, adopting a more balanced capital structure and a lower, market-supported ROE can reduce the revenue requirement without disallowing prudent investment.

Q. IS THE CAPITAL STRUCTURE ONE WAY THE COMMISSION CAN REDUCE CUSTOMER BURDEN WHILE STILL PROVIDING THE COMPANY A FAIR RETURN?

A. Yes. My recommended 9.74% ROE is market-based and already reflects current financial conditions through my DCF analysis and CAPM check. It is not an affordability discount. Rather, it is the fair return supported by the record. Because the Company has not shown that NFGD faces materially greater risk than the proxy group, customers should not be required to pay the Company's requested 11.00% ROE or the higher return produced by its equity-heavy capital structure.

Q. ARE YOUR RECOMMENDATIONS CONSISTENT WITH THE OTHER OCA WITNESSES' AFFORDABILITY RECOMMENDATIONS?

A. Yes. My recommendations complement the OCA's broader affordability position. Mr. Deupree recommends that the Commission require shared burden in light of current macroeconomic conditions and reject the Company's rate design proposals, such as increasing the residential basic service charge from $14 to $19 per month and making the WNA permanent , that would increase burdens on low-use or vulnerable customers. OCA Witness Brian Andrews recommends the Average Life Group ("ALG") depreciation procedure, which provides near-term customer relief while still allowing full recovery of prudent investment.[81] My ROE and capital structure recommendations serve the same ratemaking purpose: reducing unnecessary customer burden while preserving the Company's opportunity to earn a fair return.

XV. CONCLUSION

Q. WHAT SHOULD THE COMMISSION CONCLUDE REGARDING MR. NOWAK'S AND MR. WELCH'S REBUTTAL TESTIMONY?

A. The Commission should reject Mr. Nowak's and Mr. Welch's criticisms of my direct testimony. Mr. Nowak's proposed "corrections" remove reasonable DCF growth inputs, narrow my CAPM evidence to higher selected inputs, and reject the Hamada-model implication of lower leverage risk under the Company's proposed capital structure. Mr. Welch's rebuttal does not rebut the customer-cost concern created by NFGD's proposed 56.40% equity ratio, does not show that the proposed equity ratio is reasonable

[81] OCA St. 4-SR at 2.

compared with recent gas utility authorized equity ratios or the expected proxy group average and median, and does not eliminate the relevance of parent-company financing considerations.

Q. WHAT SHOULD THE COMMISSION CONCLUDE?

A. The Commission should view affordability and cost of capital together, not as separate issues. The record shows that customers are facing real affordability pressures, and the cost-of-capital record provides concrete ways to mitigate those pressures without undermining NFGD's financial integrity.

Q. WHAT RECOMMENDATION DO YOU CONTINUE TO MAKE?

A. I continue to recommend an overall ROR of 7.66%, consisting of a 50.00% equity / 50.00% long-term debt capital structure, a 5.58% cost of long-term debt, and a 9.74% ROE. My 9.74% ROE recommendation remains the midpoint of the DCF range and is supported by the CAPM check. If the Commission accepts NFGD's proposed 56.40% equity / 43.60% debt capital structure, it should adopt my alternative 9.06% ROE and 7.54% ROR.

Q. DOES THIS CONCLUDE YOUR TESTIMONY AT THIS TIME?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission

v. Docket No. R-2025-3059428

National Fuel Gas Distribution Corp.
:

VERIFICATION

I, Maureen L. Reno, hereby state that the facts above set forth in my Surrebuttal Testimony, OCA Statement 3SR, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: May 27, 2026 Signature:

Direct Testimony of Brian C. Andrews

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Brian C. Andrews. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q WHAT IS YOUR OCCUPATION?

A I am a consultant in the field of public utility regulation and a Principal with the firm of Brubaker & Associates, Inc. ("BAI"), energy, economic and regulatory consultants.

Q PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND EXPERIENCE.

A This information is included in Appendix A to my testimony.

Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?

A I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q HAVE YOU TESTIFIED BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION") IN PRIOR PROCEEDINGS?

A Yes, I have. I provided testimony in Dockets R-2024-3047068 (FirstEnergy Pennsylvania Electric Co), R-2024-3046519 (Columbia Gas of Pennsylvania), and R-2024-3047822 / R-2024-3047824 (Aqua Pennsylvania, Inc.), on behalf of the OCA and Large User Groups.

Q PLEASE GIVE A BRIEF OVERVIEW OF YOUR TESTIMONY.

A My testimony will provide a brief overview of the case and discuss various aspects of National Fuel Gas Distribution Corporation's ("National Fuel" or the "Company") proposed depreciation rates. I show that National Fuel has greatly overstated its proposed depreciation rates and recommend adjusting the proposed depreciation rates and test year depreciation expense downward by more than $4 million. The reduction is the result of using the Average Life Group ("ALG") (also known as the Broad Group) procedure rather than the Equal Life Group ("ELG") procedure.

My silence in regard to any issue should not be construed as an endorsement of or acquiescence to National Fuel's position.

CASE OVERVIEW

Q PLEASE DESCRIBE THE RATE INCREASE THAT NATIONAL FUEL GAS DISTRIBUTION CORPORATION FILED.

A On January 28, 2026, the Company filed Supplement No. 294 to National Fuel Gas Distribution Corporation Gas Tariff – PA P.U.C. No. 9 ("Supplement No. 294") seeking approval to increase base rates by $19.7 million. The Company is seeking this rate

increase due to inflationary pressures and investments in infrastructure replacement and system modernization.[1]

SUMMARY OF RECOMMENDATIONS

Q PLEASE SUMMARIZE YOUR CONCLUSIONS AND RECOMMENDATIONS.

A My conclusions and recommendations are as follows:

1. National Fuel has filed a depreciation study based on plant balances for its Fully Projected Future Test Year ("FPFTY") as of October 31, 2027, using the ELG procedure. These depreciation rates would result in excessive and burdensome depreciation expense for National Fuel's customers.

2. National Fuel's total proposed 2027 depreciation expense of $23.4 million represents 8% of its proposed total $285.2 million revenue requirement.

3. National Fuel is in an accelerated investment period that will substantially drive an increase to rate base and revenue requirement.

4. The use of the ALG procedure can be used to mitigate the rate increases associated with National Fuel's accelerated investment to upgrade its infrastructure. The ALG equitably spreads the annual depreciation expense on rate base investment over the generations of customers that receive service from the investments. Conversely, the ELG method assigns more depreciation expense to customers that take service early in the asset's service life and reduces the expense to customers toward the end of the asset's service life.

5. The PUC should order National Fuel to use depreciation rates that are based on the ALG procedure.

6. The proposed test year depreciation expense would be reduced by $4.67 million if the ALG depreciation rates are utilized.

7. The PUC should approve the depreciation rates that are presented in Exhibit BCA-2.

[1]National Fuel Statement No. 1 at page 6, line 19 through page 7, line 5.

DEPRECIATION OVERVIEW

Q PLEASE PROVIDE A GENERAL OVERVIEW OF DEPRECIATION.

A Depreciation expense and accumulated depreciation are both accounting entries on a utility's books that refer to the gradual reduction of an asset's value over time. The main difference between the two is where they are reported on financial statements and how they are recognized and used for purposes of setting a utility's overall revenue requirement for ratemaking purposes:

- Depreciation expense is reported in a utility's income statement and shows the use of the assets to provide utility service over an annual period and is included in the calculation of the utility's overall revenue requirement.

- Accumulated depreciation is the total depreciation expense recorded to date, less recorded retirements and cost of removal, plus recorded gross salvage. Accumulated depreciation is reported on a utility's balance sheet as a contra asset, meaning it is paired with the fixed asset account for allowed utility plant-in-service (*i.e.*, rate base) and functions to reduce the value of allowed utility plant-in-service to determine the net book value of plant-in-service. The net book value of rate base is multiplied by the utility's authorized rate of return and the product is included in the calculation of the utility's overall revenue requirement.

Generally speaking, depreciation expense accounting provides for the recovery of the original cost of the utility's assets that are currently providing service – this capital recovery generally occurs over the remaining service life of the investment or assets.

BOOK DEPRECIATION CONCEPTS

Q PLEASE EXPLAIN THE PURPOSE OF BOOK DEPRECIATION ACCOUNTING.

A Book depreciation is the recognition in a utility's income statement of the consumption or use of assets to provide utility service. Book depreciation is recorded as an expense

and is included in the ratemaking formula to calculate the utility's overall revenue requirement.

The basic underlying principle of utility depreciation accounting is intergenerational equity, where the customers/ratepayers who benefit from the service of assets pay all the costs for those assets during the benefit period, which is over the life of those assets.[2] This concept of intergenerational equity can be achieved through depreciation by allocating costs to customers in a systematic and rational manner that is consistent with the period of time in which customers receive the service value.[3]

Book depreciation provides for the recovery of the original cost of the utility's assets that are currently providing service. Book depreciation expense is not intended to provide for replacement of the current assets, but provides for capital recovery or return of current investment. Generally, this capital recovery occurs over the average service life of the investment or assets. As a result, it is critical that appropriate average service lives be used to develop the depreciation rates so no generation of ratepayers is disadvantaged.

In addition to capital recovery, depreciation rates also contain a provision for net salvage. Net salvage is simply the scrap or reuse value less the removal cost of the asset being depreciated. Accordingly, a utility will also recover the net salvage costs over the useful life of the asset. However, in Pennsylvania, net salvage is not included in the calculation of depreciation rates.

[2]Edison Electric Institute, Introduction to Depreciation for Public Utilities and Other Industries, April 2013, page viii.

[3]*Id.* at 22.

Q PLEASE FURTHER EXPLAIN NET SALVAGE.

A Net salvage is simply the value received from the sale or reuse of retired property (salvage value), less the cost of retiring such property (cost of removal). Net salvage can be either positive or negative. If the salvage value exceeds the cost of removal, the net salvage is positive. If the cost of removal is greater than the salvage value received as a result of retirement, the resulting net salvage is negative. For most utilities, negative net salvage is a significant component of its depreciation rates and expense.

Q ARE THERE ANY DEFINITIONS OF DEPRECIATION ACCOUNTING THAT ARE UTILIZED FOR RATEMAKING PURPOSES?

A Yes. One of the most quoted definitions of depreciation accounting is the one contained in the Code of Federal Regulations ("CFR"):

> Depreciation, as applied to depreciable gas plant, means the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of gas plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand and requirements of public authorities, and, in the case of natural gas companies, the exhaustion of natural resources.[4]

Effectively, depreciation accounting provides for the recovery of the original cost of an asset over its useful life.

[4] 18 CFR, Chapter I, Subchapter F, Part 201(12)(B).

Q HOW DO DEPRECIATION RATES AFFECT A UTILITY'S REVENUE REQUIREMENT?

A Depreciation expense is typically one of the largest single line items in a utility's overall revenue requirement that is ultimately recovered through tariff rates. When a utility updates its depreciation rates, it is effectively updating the amount of capital that is returned to it each year for investments that have been made to provide utility service. The depreciation rates are calculated in a depreciation study. The resulting depreciation rates are then applied to test year plant balances to determine the depreciation expense component of the utility revenue requirement.

Q HOW ARE DEPRECIATION RATES DETERMINED?

A Depreciation rates are determined in a depreciation study using a depreciation system. There are three components, each with a number of variations, used to determine a depreciation system, which is then used to estimate depreciation rates. The three basic components are: (1) methods, (2) procedures, and (3) techniques. The choice of a depreciation system can significantly affect the resulting depreciation rates, thus, the revenue requirement.

Q PLEASE FURTHER DESCRIBE THE METHODS THAT ARE USED IN A DEPRECIATION SYSTEM.

A There generally are three types of methods of spreading depreciation expense over the life of property. These are the Straight-Line Method, accelerated methods, and deferred methods. The Straight-Line Method is the method most widely used by utility

companies for accounting and ratemaking purposes as it is easy to apply and does not create intergenerational inequities because it spreads an equal portion of the plant cost across each accounting period. Accelerated methods result in higher depreciation rates earlier in an asset's life, and lower depreciation rates later. Deferred methods have increasing rates over an asset's life.

Q PLEASE DESCRIBE THE GROUPING PROCEDURES THAT ARE USED IN A DEPRECIATION SYSTEM.

A There are four main grouping procedures used in a depreciation system. These four procedures are the Individual procedure, the Broad Group (more commonly known as the ALG), the Vintage Group, and the ELG.

In the ALG procedure, all units within a particular account or category are assumed to be part of a single group that exhibits the same life and retirement characteristics. This is the most commonly utilized procedure nationwide.

The Vintage Group and the ELG procedure assume that sub-groups within a particular account or category may exhibit unique life characteristics. As an example of the Vintage Group procedure, it may assume that all services installed in 1985 have a 50-year life, while all services installed in year 1995 have a 45-year life. The ELG procedure may assume that all services that will attain a life of 50 years should have one depreciation rate while services that only attain life spans of 45 years would have a different depreciation rate. The overall group depreciation rate for the account would be a composite of the ELG and vintage depreciation rates.

Q PLEASE FURTHER DESCRIBE THE TECHNIQUES THAT ARE USED IN A DEPRECIATION SYSTEM.

A There are two techniques used to calculate depreciation rates: Whole Life and Remaining Life. The Whole Life Technique spreads the original cost plus net salvage of the account over the average life of the account. This technique requires that separate amortizations be made to correct for over- and under-accumulations due to changes in an account's average service life.

The Remaining Life Technique spreads the unrecovered cost plus net salvage over the remaining life of the account. The Remaining Life Technique is the most common technique used and it has a self-correcting nature that spreads any over- or under-accumulations over the remaining life.

Q IN YOUR EXPERIENCE, WHAT DEPRECIATION SYSTEM IS MOST COMMONLY UTILIZED TO DETERMINE UTILITY DEPRECIATION RATES FOR RATEMAKING PURPOSES?

A The most common depreciation system is one that consists of the Straight-Line Method, the ALG procedure, and the Remaining Life Technique.

Q WHAT ARE SURVIVOR CURVES AND HOW ARE THEY USED IN DEVELOPING DEPRECIATION RATES?

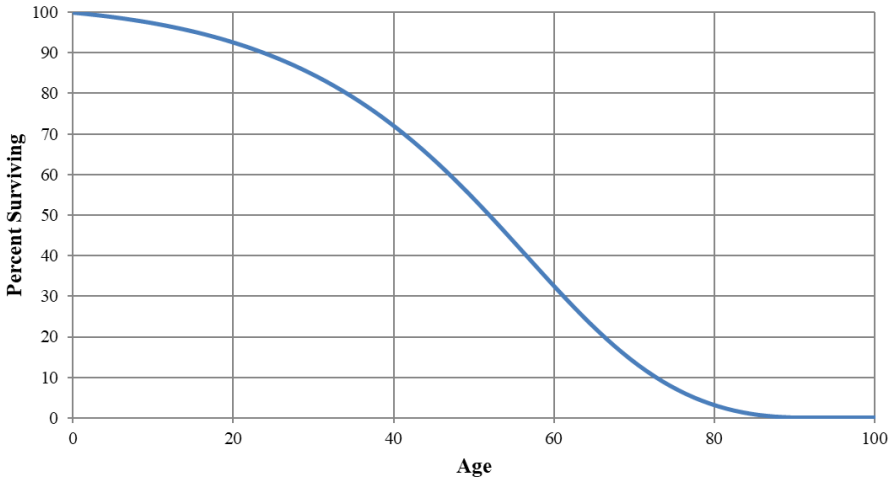
A The selection of the survivor curve is one of the most important decisions in conducting a depreciation study. A survivor curve is a graphical representation of the amount of property existing at each age interval throughout the life of a group of property. From

the survivor curve, parameters required to calculate depreciation rates can be determined, such as the average service life of the group of property and the composite remaining life. For assets with an assumed lifespan or retirement date, the survivor curve is used to estimate the interim retirements that will occur between the study date and the estimated year of final retirement. These parameters directly affect the depreciation rate calculations; therefore, informed judgment should be used in their selection.

In this proceeding, as well as the majority of utility regulatory rate case proceedings throughout the U.S. and Canada, the Iowa Curves are the general survivor curves utilized to describe the mortality characteristics of a group of property. There are four types of Iowa Curves: right-moded (R1, R2, R3, etc.), left-moded (L1, L2, L3, etc.), symmetrical-moded (S1, S2, S3, etc.), and origin-moded (O1, O2, O3, etc.). Each type describes where the greatest frequency of retirements occur relative to the average service life.

A survivor curve consists of an average service life and Iowa Curve type combination. For example, when describing property with a 50-year average service life that has mortality characteristics of the R2 Iowa Curve, the survivor curve would simply be notated as "50-R2." I present the 50-R2 survivor curve in Figure 1 below.

Figure 1
50-R2
Survivor Curve



NATIONAL FUEL'S DEPRECIATION STUDY

Q HAS NATIONAL FUEL PROPOSED NEW DEPRECIATION RATES IN THIS PROCEEDING?

A Yes. National Fuel retained Mr. John Spanos, of Gannett Fleming, to conduct depreciation studies on the Company's property as of September 30, 2025, September 30, 2026, and October 31, 2027. The 2025 Depreciation Study has been filed as National Fuel Exhibit C – Historic, the 2026 Depreciation Study has been filed as National Fuel Exhibit C – Future, and the 2027 Depreciation Study has been filed as National Fuel Exhibit C – Fully Projected.

Q WHAT DEPRECIATION SYSTEM DOES NATIONAL FUEL UTILIZE IN THE CALCULATION OF ITS PROPOSED DEPRECIATION RATES?

A National Fuel used a depreciation system consisting of the Straight-Line Method, the ELG procedure,[5] and the Remaining Life Technique[6] to calculate its proposed depreciation rates.

Q HOW DOES NATIONAL FUEL'S PROPOSED DEPRECIATION RATES IMPACT THE REVENUE REQUIREMENT IN THIS PROCEEDING?

A National Fuel's proposed depreciation rates significantly impact the revenue requirement in this proceeding. As is shown on National Fuel's Exhibit C, National Fuel's total depreciation expense is $23.41 million for the 2027 projected test year, representing 8% of National Fuel's proposed $285.2 million revenue requirement. National Fuel shows that the 2024 depreciation and amortization expense was $20.71 million, meaning a 13% increase in depreciation expense over a three-year period. As I will discuss later, National Fuel's use of the ELG procedure is exacerbating this increase. I summarize the increase by functional group in Table 1 below.

[5]National Fuel uses the ALG procedure for assets installed prior to 1982 and the ELG procedure for assets installed in 1982 and later. The 1982 and later assets represent 92% of its depreciable plant in-service as of September 30, 2025.

[6]National Fuel Statement No. 8 at page 4, line 4 through line 22.

TABLE 1

National Fuel Annual Depreciation Expense
($ Millions)

Group	Current 7/31/2024	Proposed 10/31/2027	Delta Amount	Delta Percent
Intangible	$ 2.13	$ 0.35	$ (1.78)	-83.6%
Production	$ 0.11	$ 0.15	$ 0.03	31.1%
Transmission	$ 1.27	$ 1.90	$ 0.63	49.9%
Distribution	$ 12.92	$ 14.89	$ 1.97	15.3%
General	$ 4.28	$ 6.13	$ 1.86	43.4%
Total Gas Plant	**$ 20.71**	**$ 23.43**	**$ 2.71**	**13.1%**

Sources: Filing Requirement III.K-6, pages 6-7, and Exhibit C, FPFTY, Table 1

Q WHAT IS THE PRIMARY FACTOR DRIVING THE INCREASE TO NATIONAL FUEL'S DEPRECIATION EXPENSE?

A National Fuel is in an accelerated investment cycle. NFG witness Hillery states:

> The investment in net plant in-service for the FPFTY ended October 31, 2027, is projected to be $637 million. When the Company last requested a rate increase for the FPFTY ended July 31, 2024, the Company's investment in net plant was approximately $496 million. The $141 million increase in net plant has largely been the result of continued investments necessary to enhance and maintain the safety and reliability of the Company's distribution system, which include the replacement of aging gas plant infrastructure.[7]

Ms. Hillery also mentions that the Company has "eliminated over 371 miles of leak-prone bare steel and wrought iron pipeline and 7,337 base steel services" since 2016, and at the current rate of replacement of 57 miles per year, the Company anticipates retirement of all leak-prone pipe by 2039.[8] This indicates continued

[7]National Fuel Statement No. 1 at page 14, line 1 through line 7.
[8]*Id.* at page 14, line 7 through line 11.

increased spending is likely to occur for at least the next 10 years. Although National Fuel implemented the Distribution System Improvement Charge ("DSIC") in January 2025, the DSIC is currently capped at 5% of distribution revenues, and the Company anticipates this cap will be met by the end of March 2026.[9]

In Table 2, I show the increase in National Fuel's plant-in-service and depreciation expense from 2023-2027.

TABLE 2

National Fuel Annual Plant in Service and Depreciation Expense
($ Millions)

Description	Currently Approved 2023	Currently Approved 2024	Proposed Parameters 2025	Proposed Parameters 2026	Proposed Parameters 2027	2023 to 2027 Increase	Percent Increase
Total Depreciable Plant in Service	$ 733.78	$ 780.13	$ 823.36	$ 883.40	$ 955.94	$ 222.15	30.27%
Total Depreciation Expense	$ 18.88	$ 20.71	$ 20.59	$ 20.89	$ 23.43	$ 4.55	24.08%

Sources: Filing Requirement III-K.6 and Exhibit C

As can be seen, the depreciation expense has increased over 24% over a 5-year period, largely coinciding with a 30% increase to plant-in-service. Additionally, the oldest assets still in service are from 1883. The Company has been providing gas service in Pennsylvania since 1902, approximately 124 years. Contrast this to the average age of the Company's gas plant, which is just 19 years old. A 124-year-old company with assets with an average age of 19 years further confirms that National Fuel has been in a higher-than-average investment cycle.

[9] *Id.* at page 14, line 13 through line 22.

Q PLEASE FURTHER ELABORATE ON NATIONAL FUEL'S INVESTMENT CYCLE AND THE IMPACT ON RATEPAYERS.

A A changed landscape exists among utility rates. The affordability of utility rates is of significant concern of regulators, credit agencies, and especially customers themselves. A recent poll by the Commonwealth Foundation found that rising energy costs are a top voter concern, claiming that "Eight in 10 voters say their household energy bills have increased over the past two years, and more than two-thirds (70%) say they're concerned about affording their family's energy needs. Rising energy costs (63%) top the list as the most prominent environmental issue in Pennsylvania."[10] The high inflationary environment that has existed over the past few years is taking its toll on Pennsylvanians. The switch to ALG depreciation rates will help alleviate the gas bill burden for National Fuel's customers.

Q DO YOU TAKE ISSUE WITH NATIONAL FUEL'S DEPRECIATION STUDIES?

A Yes. National Fuel's proposed depreciation rates are overstated and unnecessarily burdensome for National Fuel's customers due to excessive depreciation expense and the subsequently inflated revenue requirement. In particular, National Fuel's reliance on the ELG procedure results in depreciation rates that are front-loaded and forces unnecessary depreciation expense on current customers. This compounds the cost of the infrastructure asset in the early years of the asset's service life by increasing both the return on the asset (because undepreciated net plant cost is highest in the early years)

[10] https://www.commonwealthfoundation.org/2024/03/19/pa-voters-energy-costs-2024/.

and the annual recovery of the asset or depreciation expense. Like most other regulatory commissions, the ELG procedure should be rejected by the PUC in favor of the ALG procedure.

Q WHY SHOULD THE PUC REJECT NATIONAL FUEL'S USE OF ELG DEPRECIATION RATES?

A As I will demonstrate, the ELG procedure results in front-loaded depreciation rates that burden customers with unnecessarily high depreciation expense. The vast majority of utilities in the country calculate depreciation rates using the ALG procedure. As far as I am aware, only some Pennsylvania utilities, one Oregon utility, and a few utilities in Texas and Colorado rely on the ELG procedure presently. Utilities in Indiana recently have made the switch to ALG rates due to the Indiana Utility Regulation Commission's ("IURC") finding that "the use of ELG in a higher than average investment cycle has the effect of unnecessarily increasing the near term depreciation expense as compared to the use of ALG."[11] Accordingly, the PUC should reject National Fuel's proposed use of the ELG procedure to calculate depreciation rates and instead order the use of the ALG procedure to mitigate the rate impact of substantial rate base increases.

[11] *Petition of Duke Energy Indiana, LLC Pursuant to Ind. Code § 8-1-2-42.7 and § 8-1-2-61,* Indiana Utility Regulatory Commission ("IURC"), June 29, 2020, IURC Final Order in Docket No. 45253 at page 90, See Exhibit BCA-5.

ELG VS. ALG DEPRECIATION RATES

Q WHAT DEPRECIATION GROUPING PROCEDURE DOES NATIONAL FUEL PROPOSE?

A National Fuel has used the ELG procedure to calculate its proposed depreciation rates. I would note that National Fuel uses the ALG grouping method in its New York jurisdiction and in every other regulated entity under the National Fuel Corporation.

Q WHAT IS THE MOST COMMONLY UTILIZED GROUPING PROCEDURE?

A The most commonly utilized depreciation grouping procedure throughout the nation is the ALG procedure. I have addressed in testimony, or reviewed depreciation studies conducted in approximately half of the states in the USA. In all states where I have experience, except for a few utilities in Texas, Colorado, Oregon, and Pennsylvania, depreciation rates are routinely calculated using the ALG procedure.

Q HOW ARE DEPRECIATION RATES COMPUTED IN THE ELG PROCEDURE?

A When depreciation rates are computed using the ELG procedure, an attempt is made to precisely identify the exact year in which all property will retire and create a depreciation rate that ensures recovery of the property over the computed remaining life. Accordingly, property that will only have a 1-year life (according to a survivor curve) should have 100% depreciation rate; property that will have a 2-year life would have a 50% depreciation rate, property that has a 3-year life would have a 33%

depreciation rate and so on. These are the ELGs, each with a unique depreciation rate to ensure recovery over the life of the ELG.

To be more specific, National Fuel's Depreciation Study was conducted based on 2027 plant balances (the FPFTY in use in this proceeding). Because National Fuel is relying on the ELG procedure, it is essentially claiming it knows exactly how much property will retire in 2028, and established a depreciation rate for that property that ensures all unrecovered investment is recovered in 2028. Similarly, it must know exactly how much property will retire in 2029, 2030, 2031, and every single year in the future. Each ELG for each account will have a unique depreciation rate, in an attempt to recover the cost of those groups over the remaining life. The annual accruals for each ELG are summed to determine the total annual accrual for each account. The depreciation rate would then be equal to the sum of annual accruals divided by the total account balance. The selection of the survivor curve has a significant impact on the amount of property assumed to be in each ELG.

Q HOW ARE DEPRECIATION RATES COMPUTED IN THE ALG PROCEDURE?

A With the ALG procedure, all assets in an account are assumed to have an average life equal to that of the proposed survivor curve. While some property will be retired before the average service life, and some will be retired after the average service life, on average, the property will exhibit life characteristics according to the survivor curve. For each vintage of property within an account, the remaining life is determined based on the age of the property and the survivor curve selected for the account. The

unrecovered cost for each vintage is spread over the remaining life of that vintage, yielding an annual accrual for each vintage. The vintage annual accruals are summed for the entire account, and the total of annual accruals is divided by the account balance to determine the depreciation rate.

Q HAVE YOU CREATED AN EXAMPLE THAT COMPARES THE ELG AND THE ALG PROCEDURES?

A Yes. I have created an example that will demonstrate the differences between the ALG and ELG procedures. It will demonstrate how the rates are calculated under each procedure and will show that the ELG is front-loaded and requires annual updates.

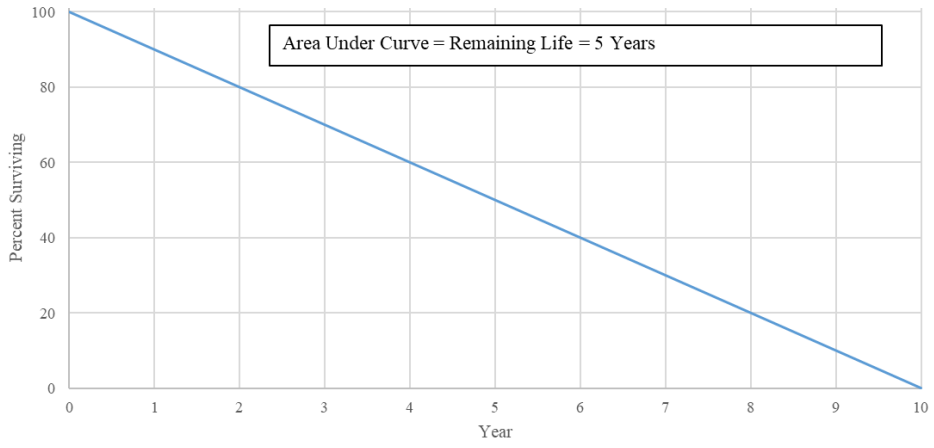
Q WHAT ASSUMPTIONS ARE YOU MAKING IN YOUR EXAMPLE?

A This example assumes that $100,000 of property is placed in-service into an account. It is the first and only property to exist in the account, and it will not be replaced as the initial $100,000 investment retires. The property will retire consistent with the 5-O1 survivor curve and has a 0% net salvage rate. This example will demonstrate how $100,000 will be recovered over the life of the property.

Q PLEASE DESCRIBE THE 5-O1 SURVIVOR CURVE.

A The 5-O1 survivor curve is presented in Figure 2.

Figure 2
5-O1 Survivor Curve



The 5-O1 survivor curve has a 5-year average service life and assumes that all property is retired by year 10. This survivor curve assumes that 10% retires each year, therefore, in this example, it is assumed that $10,000 retires each year.

Q HOW WOULD THE ALG DEPRECIATION RATE BE CALCULATED FROM THE 5-O1 SURVIVOR CURVE?

A In the ALG procedure, the depreciation rate is calculated by ensuring recovery of the investment less net salvage over the remaining service life of the property. In this example, the net salvage rate is 0%, therefore, 100% of the investment needs to be recovered over the average service life, which in this example is 5 years. 100% divided by 5 years equals 20%. Therefore, 20% is the depreciation rate that needs to be in place for 10 years to ensure the recovery of the $100,000 investment and $0 for net salvage over the life of the property.

Q HOW WOULD THE ELG DEPRECIATION RATE BE CALCULATED FROM THE 5-O1 SURVIVOR CURVE?

A With the ELG procedure, a different depreciation rate is needed for each year. The 5-O1 survivor curve in this example yields 10 different ELGs. The first group will have a 1-year life, the second group will have a 2-year life, and so on until the last group, which would have a 10-year life. In the first year, the total depreciation rate would allow for recovery of a portion of all 10 of the ELGs. In the second year, the depreciation rate would recover a portion of all of the ELGs except for the 1-year ELG, which according to the survivor curve is retired. The last year's depreciation rate would only provide for the last annual accrual of the 10-year ELG.

Q CAN YOU PROVIDE A COMPARISON OF THE ANNUAL DEPRECIATION EXPENSE IN YOUR EXAMPLE?

A Yes. In Table 3, below, I provide a comparison of the annual depreciation rates and expense needed to recover the $100,000 investment over its service life, assuming it retires according to the 5-O1 survivor curve and has a 0% net salvage rate.

TABLE 3

Comparison of ALG Procedure and ELG Procedure
Recovery of $100,000 Investment with 0% Net Salvage and 5-O1 Survivor Curve

Year	First of Year Surviving Original Cost	ALG Rate	ALG Expense	ELG Rate	ELG Expense	Delta
1	$ 100,000	20.00%	$ 19,000	34.38%	$ 32,665	$ 13,665
2	90,000	20.00%	17,000	22.74%	19,332	2,332
3	80,000	20.00%	15,000	18.66%	13,998	(1,002)
4	70,000	20.00%	13,000	16.26%	10,570	(2,430)
5	60,000	20.00%	11,000	14.60%	8,030	(2,970)

7	40,000	20.00%	7,000	12.38%	4,332	(2,668)
8	30,000	20.00%	5,000	11.58%	2,896	(2,104)
9	20,000	20.00%	3,000	10.94%	1,641	(1,359)
10	10,000	20.00%	1,000	10.53%	526	(474)
	Total Recovered Investment:		**$ 100,000**		**$ 100,000**	**$ (0)**

Source: BCA WP-2

Q WHAT DOES YOUR EXAMPLE DEMONSTRATE?

A Table 3 above demonstrates how both the ALG and ELG procedures allow for capital recovery of the $100,000 investment over the same 10-year period. The ALG depreciation rate is 20% and held constant through the 10-year period in which this property provides service. The ELG procedure requires a 34.38% depreciation rate in year 1, a 22.74% depreciation rate in year 2, declining until there is a 10.53% depreciation rate in year 10. This example shows how the ELG depreciation rates must be adjusted every year, otherwise significant intergenerational inequities will exist, and more cost will be recovered than is necessary in the first two years. However, in ratemaking, depreciation expense that is included in customer base rates are only updated when the Commission approves new base rates, which means that the year 1

depreciation expense would essentially be fixed in place and utilized as the test year expense until new depreciation rates are approved in a future rate case. In my example above, this would effectively "lock in" depreciation expense based on a 34.38% depreciation rate until new rates are established in a future rate case as opposed to the 20% depreciation rate calculated by the ALG method.

Q PLEASE EXPAND ON YOUR LAST STATEMENT.

A Utilities typically only update their depreciation expense recovered from customers in the context of a base rate case, which is often not an annual occurrence. When depreciation rates for new assets are proposed using the ELG procedure, the rates put forward for approval would be analogous to the year 1 depreciation rate in this example. Therefore, if the ELG method were approved in a depreciation study, given this example and left in place for 10 years, the effective depreciation rate would be 34.38% every year. To be just to consumers and to produce reasonable rates, ELG depreciation rates should be updated each year and the corresponding depreciation expense adjusted in base rates; however, the ELG depreciation rates are not properly implemented and create intergenerational inequities, significantly overcharging customers in base rates based on the higher depreciation rates in the earlier years. Between rate cases, the depreciation expense component of a utility's revenue requirement remains at the level approved in the rate case, so while National Fuel may routinely update its depreciation rates for accounting purposes, the depreciation expense for rate purposes provided by customers remains at the level approved in the most recent rate case. Table 4 shows an example of improperly implemented ELG depreciation rates. This table shows that if

the year 1 ELG rates were left unchanged for the entire 10-year period, the utility would actually recover $71,922, or 72%, more than it is entitled to recover.

TABLE 4

Comparison of ALG Procedure and Improperly Implemented ELG Procedure
Recovery of $100,000 Investment with 0% Net Salvage and 5-O1 Survivor Curve

Year	First of Year Surviving Original Cost	ALG Rate	ALG Expense	ELG Rate	ELG Expense	Delta
1	$ 100,000	20.00%	$ 19,000	34.38%	$ 32,665	$ 13,665
2	90,000	20.00%	17,000	34.38%	29,227	12,227
3	80,000	20.00%	15,000	34.38%	25,788	10,788
4	70,000	20.00%	13,000	34.38%	22,350	9,350
5	60,000	20.00%	11,000	34.38%	18,911	7,911
6	50,000	20.00%	9,000	34.38%	15,473	6,473
7	40,000	20.00%	7,000	34.38%	12,035	5,035
8	30,000	20.00%	5,000	34.38%	8,596	3,596

	Total Recovered Investment:		**$ 100,000**		**$ 171,922**	**$71,922**

Source: BCA WP-2

Q WHY IS IT IMPORTANT TO AVOID INTERGENERATIONAL INEQUITIES?

A As I discussed earlier in my testimony, the underlying principle for determining depreciation rates is to achieve intergenerational equity. Given that traditional ratemaking sets rates on a forward-looking basis based on test year expense and remain in effect until a future rate case, the use of a depreciation system that utilizes the ELG procedure in the test year is at odds with this principle. As my example has clearly demonstrated, the ELG procedure is an accelerated form of depreciation, which causes current customers to pay greater depreciation expense than future customers for the same level of utility service. It is important to note that whichever grouping procedure

is utilized, the utility will recover the full cost of its prudent investments to provide utility service over the life of the assets.

Q SHOULD DEPRECIATION RATES THAT ARE CALCULATED USING THE ELG PROCEDURE BE UPDATED ANNUALLY?

A Yes. The only way for depreciation expense to "accurately" charge customers under the ELG procedure is for the depreciation expense component to be updated and implemented in base rate calculations annually. Otherwise, the depreciation expense that is left in effect will be the high year 1 depreciation rate, as demonstrated in this example. The depreciation expense is also only accurate if the utility property retires in exactly the manner dictated by the survivor curves used to calculate the ELG rates. This precision does not exist in the traditional rate setting paradigm as it would amount to impermissible single-issue ratemaking, which I understand is disfavored in Pennsylvania.

Q WHAT DEPRECIATION GROUPING PROCEDURES DO THE OTHER NATIONAL FUEL COMPANIES UTILIZE?

A Based on National Fuel's response to OCA's 13th Request for Information, Questions OCA 13-1 and 13-2, the depreciation rates for all of National Fuel's regulated utilities, except in Pennsylvania, were determined using the ALG procedure.

Q CAN THE RATE IMPACT OF SUBSTANTIAL INCREASES TO RATE BASE BE MITIGATED WITHOUT UNREASONABLE ADVERSE IMPACT ON THE UTILITY?

A Yes. The rate impact of substantial increases to rate base can be mitigated by depreciating these assets using depreciation rates that are determined using the ALG procedure. The ALG procedure is the most commonly used deprecation procedure in use in the country and is used by National Fuel in other jurisdictions where they operate around the country. The ALG procedure will properly allow National Fuel to recover the full cost of investments over the life of the assets; however, it will be at a more affordable rate and, therefore, reduces the expense in the interest of consumers and allows for more just and reasonable rates.

Q. DOES THE USE OF THE ELG PROCEDURE IMPACT THE REMAINING LIFE OF PROPERTY?

A. Yes. National Fuel's use of ELG significantly understates the remaining life, and thus, the recovery period for its assets.

Q HOW DOES THE ELG UNDERSTATE THE REMAINING LIFE OF NATIONAL FUEL'S ASSETS?

A According to the depreciation study data as of October 31, 2027, the largest single sub-account is Account 376.1 (Mains – Excluding Cathodic Protection). Account 376.1 is $426.7 million, or approximately 45%, of National Fuel's $955.9 million gas plant-in-service. This sub-account represents 32% of National Fuel's proposed 2027

gas plant depreciation expense. By analyzing the 2027 study data, the average age of investment for Account 376.1 is 19.9 years. According to National Fuel, Account 376.1 has an average service life of 70 years. One would expect that something with a lifespan of 70 years and an age of 19.9 years would have a remaining life close to 50 years. The use of the ELG procedure significantly shortens the recovery period for this account. Table 5 below shows the composite remaining life for Account 376.1 under the ELG and ALG procedures.

TABLE 5

Remaining Life of Account 376.1 with ELG vs. ALG
Depreciation Study as of 10/31/2027

Distribution Account	Remaining Life ELG	Remaining Life ALG	Delta
Account 376.1 - Mains - Excluding Cathodic Protection	40.7	55.5	14.8

Sources: Exhibit C, FPFTY and Exhibit BCA-2

As can be seen, with the ELG procedure, the remaining life of Account 376.1 is 40.7 years. With the more commonly used ALG procedure, the remaining life, or recovery period for the investment is 55.5 years. National Fuel's use of the ELG procedure recovers its investment almost 15 years faster than under the ALG. Even though National Fuel supports a 70-year life for these assets, the use of the ELG procedure only gives it an expected life of 60.6 years.[12] This significantly overstates

[12] 19.9 year average age + 40.7 year remaining life = 60.6 year life expectancy.

the depreciation rates, and thus, the depreciation expense. This issue exists for all of National Fuel's depreciable accounts, due to the use of the ELG procedure.

I would note that the ELG procedure produces this result because it subdivides the account into numerous equal life groups, each with a different remaining life, and assigns disproportionate depreciation expense to the shorter-lived groups. The precision of this allocation is entirely dependent on the survivor curve selected for the account. If the actual retirement pattern deviates from the selected survivor curve in any respect, the allocation among equal life groups will not match reality, and the claimed advantage of the ELG procedure over the ALG procedure is undermined.

Q HOW DOES THE USE OF THE ELG OR ALG PROCEDURE IMPACT THE REVENUE REQUIREMENT?

A Generally, the use of the ELG procedure results in a higher revenue requirement in the near-term and the ALG procedure results in a lower revenue requirement. Near-term lower utility bills will certainly help with affordability, which as previously stated, is a top concern for Pennsylvanians. Utility customers do not plan for future utility bills, they pay and plan for bills on a monthly basis not on a decennial basis; most people prefer the next bill to be as low as possible. With the affordability of utility bills of significant concern, the IURC decision in the Duke Energy Indiana case is certainly applicable; it states, "the consideration of service affordability in the near term provides sufficient weight to temper our historical preference for ELG."

Q DO YOU HAVE ADDITIONAL DISCUSSION POINTS RELATED TO THE USE OF THE ELG PROCEDURE?

A Yes, I do. As discussed in authoritative depreciation texts and literature, the ELG procedure is seen as "the only mathematically correct procedure"[13] and the assertion is made that the application of the ELG procedure is "generally considered to better match the consumption of capital with service provided" than use of the ALG procedure.[14]

However, while the ELG method may be more precise mathematically, it is not a precision that exists in reality as it is extremely sensitive to the survivor curve that is used to determine the depreciation rates. The depreciation expense is also only accurate if and only if the utility property retires in exactly the manner dictated by the survivor curves used to calculate the ELG rates. This precision does not exist in real life.

Again, ELG and ALG are grouping procedures for assets in a utility account. There are many different types of assets within each account. For example, Account 376.1, the distribution mains account includes distribution mains of various materials (steel, plastic, etc.) and various sizes (1/2", ¾", 1", etc.). Each individual asset will retire in a different manner and at a different age. The ELG procedure assumes that every asset will retire in a manner exactly like the survivor curve. The ALG procedure assumes, that on average, the group of assets will retire in a manner consistent with the survivor curve. The ALG procedure is more appropriate because the precision of the ELG procedure does not match reality.

[14]Frank K. Wolf and W. Chester Fitch, *Depreciation Systems* (Ames, IA: Iowa State University Press, 1994); p.75

Q DO YOU ANTICIPATE THAT NATIONAL FUEL WILL ARGUE THAT THE ELG PROCEDURE IS SUPPORTED BY LONGSTANDING PENNSYLVANIA PRACTICE?

A Yes, I do. The ELG procedure has been utilized by several Pennsylvania utilities for many years. However, the fact that a procedure has been used for a long period of time does not mean that it remains the most appropriate procedure under current circumstances. Under 52 Pa. Code §73.9(c), the most recently approved depreciation report constitutes a rebuttable presumption as to the reasonableness of accrued depreciation, and the burden of proving unreasonableness falls on the challenging party. I accept that burden in this proceeding.

As I have demonstrated in my testimony, National Fuel is in an accelerated investment cycle, with plant-in-service increasing 30% over five years and continued elevated capital spending projected through at least 2039. The Company implemented a DSIC in January 2025, and the 5% cap on distribution revenues was reached within approximately 14 months, necessitating this rate case. The use of the ELG procedure in this investment environment front-loads depreciation expense onto current customers, shortens the effective recovery period for National Fuel's assets well below the average service lives that the Company itself supports, and produces depreciation rates that are inconsistent with the vast majority of utility depreciation practice throughout the United States. National Fuel itself uses the ALG procedure in every other jurisdiction in which it operates, including New York.

Q ARE YOU AWARE OF PUBLIC UTILITY COMMISSIONS THAT HAVE REJECTED THE USE OF THE ELG?

A Yes. I can provide three examples of public utility commissions that have rejected the use of the ELG, due to the excessive depreciation expense that results from its use.

The Kentucky Public Service Commission ("Kentucky PSC") found that the ELG procedure front-loads depreciation expense in earlier years and decreases it in the later years of an asset's depreciation life, creating a mismatch of revenues and expenses. The Kentucky PSC states reasoning for rejecting the ELG is as follows:

> Duke Kentucky proposes, as part of developing its depreciation rates, the continued use of the ELG procedure. The Attorney General recommends the Commission adopt the ALG procedure in developing Duke Kentucky's depreciation rates. The Attorney General contends that the ALG methodology is the predominant method that is used in the electric industry for developing depreciation rates. The Attorney General contends that, under the ELG methodology, the capital recovery periods are accelerated and shortened and, thus, the depreciation rates are greater than if the ALG procedure was used. The Attorney General argues that the ALG procedure is as accurate as the ELG procedure and the ALG procedure smooths the data so that the depreciation rates for the group of assets tend to remain constant. Use of the ALG procedure will result in a decrease in Duke Kentucky's depreciation expense of $6.920 million.
>
> Duke Kentucky requested an increase in depreciation expense of $6.920 million, based on its request to utilize the ELG procedure for computing depreciation rates. As was discussed in the rate base section of this Order, this Commission has found that the ELG procedure does not accurately match revenues and expenses, is front-loaded, and Duke Kentucky is the only Kentucky based utility that utilizes the ELG procedure for computing depreciation rates.
>
> Regulatory accounting requires the proper matching of revenues and expense in order to produce fair, just and reasonable rates. The Commission finds Duke Kentucky's proposed ELG procedure does not meet that criteria and that Duke Kentucky's depreciation expense should be reduced by $6.920 million.

In the Matter of: Electronic Application of Duke Energy Kentucky, Inc., Kentucky PSC, Order at pages 26-27, Case No. 2017-00321.[15]

I have included the relevant pages of the Kentucky PSC Final Order as my Exhibit BCA-4.

More recently, the IURC rejected the use of ELG in Duke Energy Indiana's rate case, stating:

> First, with respect to the question of whether the ELG or ALG method should be used, we find the evidence presented by OUCC witness Mr. Garrett and Industrial Group witness Mr. Andrews persuasive, as both witnesses showed that the **ELG method results in unreasonably high depreciation rates. ALG depreciation rates result in systematical and rational cost recovery with near term customer rate relief and full cost recovery of utility investments**. While we have determined in the past that the ELG methodology was appropriate and acknowledge the weight given to precedent in many prior decisions, we always evaluate each case as it comes before us and do not need to approve the same methodology based on prior decisions, especially in light of a changed landscape. **The use of ELG in a higher than average investment cycle has the effect of unnecessarily increasing the near term depreciation expense as compared to the use of ALG**. A review and comparison of Mr. Andrew's exhibits reflecting only the ALG verses the ELG modifications applied to Mr. Spanos' results indicate that the impact of the methodology change on a percentage basis is markedly more significant for the distribution and transmission components than the production, or generation, component. This evidence is not surprising given the increased investment cycle in these categories as highlighted by the relatively recent statutory support for such investment codified at Indiana Code ch. 8-1-39. A changed and encouraged investment cycle is a material landscape change through which we consider our previous proclamations on methodology. Furthermore, the consideration of service affordability in the near term provides sufficient weight to temper our historical preference for ELG. Again, a recently enacted statute, Indiana Code § 8-1-2-0.5, directing the commission to consider "all practical means and measures" to balance necessary investment with service affordability enhances the regulatory landscape.

[15] https://psc.ky.gov/pscscf/2017%20Cases/2017-00321//20180413_PSC_ORDER.pdf

IURC Final Order at page 90 (emphasis added).[16]

I have included the relevant pages of the IURC Final Order as my Exhibit BCA-5.

The Arkansas PSC rejected ELG in favor of ALG stating,

> With regard to the proposal to adopt ELG depreciation, we agree with the criticisms raised by Ms. Freier. As we have noted in the past, **ELG will continue to result in higher depreciation rates and expense as long as a utility's plant continues to grow**. The higher accruals in the early years of an asset's life exacerbate the problem that capital costs are already front end loaded because of the higher return on investment in the early years of that asset's life**. Both ALG and ELG provide for full recovery of the investment in an asset over its life when coupled with remaining life depreciation**. **We conclude that ALG better balances the interests of shareholders and ratepayers** and reject Arkla's argument that the ELG procedure is appropriate to establish depreciation rates.

Arkansas PSC Final Order at page 29 (emphasis added)[17].

I have included the relevant pages of the Arkansas Final Order as my Exhibit BCA-6.

Q WHY IS IT APPROPRIATE FOR THE PUC TO REJECT NATIONAL FUEL'S PROPOSED USE OF THE ELG PROCEDURE AND TO REQUIRE THE USE OF THE ALG PROCEDURE AT THIS TIME?

A Just as in the 2020 Duke Electric rate case in which the IURC found that "the use of ELG in a higher-than-average investment cycle has the effect of unnecessarily increasing the near term depreciation expense as compared to the use of ALG,"[18]

[16] https://iurc.portal.in.gov/_entity/sharepointdocumentlocation/7b316e6f-1bba-ea11-a812-001dd8018831/bb9c6bba-fd52-45ad-8e64-a444aef13c39?file=45253%20ORDER%20062920.pdf

[17] https://apps.apsc.arkansas.gov/olsv2/viewdoc/pdfview.asp?document=04-121-u_286_1.pdf

[18] *See n.* 8.

National Fuel is in an accelerated investment cycle. As I have demonstrated above, depreciation rates calculated using the ELG procedure result in the front-loading of depreciation rates, and when the resulting depreciation rates are not updated annually, customers pay substantially more depreciation expense than is necessary for the utility to recover its investments.

OCA'S PROPOSED DEPRECIATION RATES

Q HAVE YOU CALCULATED 2027 DEPRECIATION RATES USING THE ALG PROCEDURE FOR NATIONAL FUEL?

A Yes. In Exhibit BCA-2, I present depreciation rates that were calculated using all of National Fuel's proposed life and net salvage parameters but applying the ALG procedure for National Fuel's gas plant. The PUC should approve the depreciation rates contained in this exhibit.

Q IF ALG DEPRECIATION RATES ARE ADOPTED TO DETERMINE DEPRECIATION EXPENSE, WILL THE ACCUMULATED DEPRECIATION BALANCE REFLECT THIS CHANGE?

A Yes. If the Commission adopts my recommendation to switch to the ALG procedure to calculate National Fuel's depreciation rates and expense going forward, the accumulated depreciation balances will automatically reflect this change on a going forward basis. I am advised by counsel that under Pennsylvania law, both annual

depreciation expense and accrued or accumulated depreciation should be calculated on a reasonably consistent basis.[19]

Q WHEN CALCULATING THE DEPRECIATION RATES USING THE ALG PROCEDURE, DID YOU ACCOUNT FOR THE CHANGE TO THE ACCUMULATED DEPRECIATION?

A Yes, I did. In Exhibit BCA-1, I present the bring forward of accumulated depreciation reserves from September 30, 2025, to October 31, 2027, based on the ALG procedure. As a result, my recommended annual depreciation expense and accumulated depreciation are calculated on a reasonably consistent basis in each service areas' presented revenue requirement.

Q HOW DO THE ALG DEPRECIATION RATES CHANGE THE DEPRECIATION EXPENSE BASED ON PLANT BALANCES AS OF OCTOBER 31, 2027?

A I present this comparison in Exhibit BCA-3. The ALG depreciation rates would reduce the depreciation expense, on plant balances as of October 31, 2027, by $4.67 million. I summarize these changes by functional group in Table 6.

[19] *Pa. Power & Light Co. v. Pa. Pub. Util. Com.*, 311 A.2d 151, 158 (Pa. Cmwlth. 1973) (*Pa. Power*).

TABLE 6

Depreciation Expense and Rate Comparison
Depreciation Study as of 10/31/2027

Group	Depreciation Expense ($ Millions) NFG PA	OCA	Delta Amount	Delta Percent	Depreciation Rate NFG PA	OCA	Delta
Intangible	$ 0.35	$ 0.35	$ (0.00)	-0.5%	1.43%	1.42%	(0.01%)
Production	$ 0.15	$ 0.09	$ (0.06)	-37.9%	3.24%	2.01%	(1.23%)
Transmission	$ 1.90	$ 1.53	$ (0.38)	-19.8%	1.79%	1.44%	(0.35%)
Distribution	$ 14.89	$ 10.76	$ (4.13)	-27.7%	1.95%	1.41%	(0.54%)
General	$ 6.13	$ 6.03	$ (0.10)	-1.6%	10.45%	10.27%	(0.18%)
Total Gas Plant	**$ 23.43**	**$ 18.76**	**$ (4.67)**	**-19.9%**	**2.45%**	**1.96%**	**(0.49%)**

Source: Exhibit BCA-3

1 **Q PLEASE DISCUSS THE APPROPRIATENESS OF OCA'S PROPOSED**
2 **DEPRECIATION RATES.**

3 A Although the 1.96% composite depreciation rate I recommend may appear to be
4 unreasonably low, that is not the case. Pennsylvania is unique in that net salvage is not
5 included in depreciation expense but rather recovered through a five-year amortization
6 of actual costs of removal. This drastically reduces depreciation rates. For gas utilities,
7 the net salvage rate for mains can be around -40% to well past -100%. Meaning that for
8 every dollar invested in mains, the utility would recover $1.40 to over $2.00 through
9 depreciation expense. In ALG depreciation, all assets are assumed to have the average
10 life of the group. For National Fuel, the Transmission Mains Account 367.1 and
11 Distribution Mains Account 376.1, represent 54% of the plant in-service. Each has a
12 proposed life of 70 years. With the ALG procedure, a 70-year life and 0% net salvage
13 would yield a depreciation rate of 1.43%.[20] If net salvage were to be included at an

[20] 1/70 = 1.43%.

average level of -50%, then the depreciation rate would be 2.14%.[21] Since National Fuel does not include net salvage in depreciation, a 1.96% composite depreciation rate is perfectly reasonable.

CONCLUSION

Q DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A Yes, it does.

[21] [1 – (-50%)]/70 = 2.14%.

QUALIFICATIONS OF BRIAN C. ANDREWS

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Brian C. Andrews. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q PLEASE STATE YOUR OCCUPATION.

A I am a consultant in the field of public utility regulation and a Principal with the firm of Brubaker & Associates, Inc. ("BAI"), energy, economic and regulatory consultants.

Q PLEASE STATE YOUR EDUCATIONAL BACKGROUND AND PROFESSIONAL EMPLOYMENT EXPERIENCE.

A I received a Bachelor of Science Degree in Electrical Engineering from the Washington University in St. Louis/University of Missouri - St. Louis Joint Engineering Program. I have also received a Master of Science Degree in Applied Economics from Georgia Southern University.

I have attended training seminars on multiple topics including class cost of service, depreciation, power risk analysis, production cost modeling, cost-estimation for transmission projects, transmission line routing, MISO load serving entity fundamentals and more.

I am a member and a former President of the Society of Depreciation Professionals. I have been awarded the designation of Certified Depreciation Professional ("CDP") by the Society of Depreciation Professionals. I am also a certified Engineer Intern in the State of Missouri.

As a Principal at BAI, and as an Associate, Senior Consultant, Consultant, Associate Consultant and Assistant Engineer before that, I have been involved with several regulated and competitive electric service issues. These have included book depreciation, fuel and purchased power cost, transmission planning, transmission line routing, resource planning including renewable portfolio standards compliance, electric price forecasting, class cost of service, power procurement, and rate design. This has involved use of power flow, production cost, cost of service, and various other analyses and models to address these issues, utilizing, but not limited to, various programs such as Strategist, RealTime, PSS/E, MatLab, R Studio, ArcGIS, Excel, and the United States Department of Energy/Bonneville Power Administration's Corona and Field Effects ("CAFÉ") Program. In addition, I have received extensive training on the PLEXOS Integrated Energy Model and the EnCompass Power Planning Software. I have provided testimony on many of these issues before the Public Service Commissions in Arizona, Arkansas, California, Colorado, Florida, Illinois, Indiana, Kansas, Kentucky, Louisiana, Michigan, Minnesota, Missouri, Montana, New Mexico, Oklahoma, South Carolina, Texas, Virginia, and Washington DC.

BAI was formed in April 1995. BAI provides consulting services in the economic, technical, accounting, and financial aspects of public utility rates and in the acquisition of utility and energy services through RFPs and negotiations, in both regulated and unregulated markets. Our clients include large industrial and institutional customers, some utilities and, on occasion, state regulatory agencies. We also prepare special studies and reports, forecasts, surveys and siting studies, and present seminars on utility-related issues.

In general, we are engaged in energy and regulatory consulting, economic analysis and contract negotiation.

COMMONWEALTH OF KENTUCKY

BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

ELECTRONIC APPLICATION OF DUKE ENERGY KENTUCKY, INC. FOR: 1) AN ADJUSTMENT OF THE ELECTRIC RATES; 2) APPROVAL OF AN ENVIRONMENTAL COMPLIANCE PLAN AND SURCHARGE MECHANISM; 3) APPROVAL OF NEW TARIFFS; 4) APPROVAL OF ACCOUNTING PRACTICES TO ESTABLISH REGULATORY ASSETS AND LIABILITIES; AND 5) ALL OTHER REQUIRED APPROVALS AND RELIEF	)	CASE NO. 2017-00321

ORDER

Duke Energy Kentucky, Inc. ("Duke Kentucky") is a jurisdictional electric utility that generates, transmits, distributes, and sells electricity to approximately 140,600 consumers in Boone, Campbell, Grant, Kenton, and Pendleton counties.[1] Duke Kentucky also is a utility engaged in purchasing, selling, storing, and transporting natural gas to approximately 98,200 customers in Boone, Bracken, Campbell, Gallatin, Grant, Kenton, and Pendleton counties.[2] Its most recent general rate increase for its electric operations was granted in Case No. 2006-00172.[3]

---

[1] Application at 2. *See also*, Direct Testimony of James P. Henning ("Henning Testimony") at 4.

[2] *Id.*

[3] Application at 4. Case No. 2006-00172, *Application of the Union Light, Heat and Power Company D/B/A Duke Energy Kentucky for an Adjustment of Electric Rates* (Ky. PSC Dec. 21, 2006).

extraordinary. In using this forecasted test period, the Commission has given full consideration to appropriate known and measurable changes.

Jurisdictional Rate Base Ratio

Duke Kentucky proposed a test-year-end Kentucky jurisdictional rate base of $700,204,561.[22] The Kentucky jurisdictional electric rate base is divided by Duke Kentucky's test-year-end total company electric rate base to derive the Kentucky jurisdictional electric rate base ratio ("Jurisdictional Ratio") for Duke Kentucky. This Jurisdictional Ratio is then applied to Duke Kentucky's total company electric capitalization to derive its Kentucky jurisdictional electric capitalization. The Jurisdictional Ratio uses the test-year-end rate base before any ratemaking adjustments applicable to either Kentucky jurisdictional operations or other jurisdictional operations. Duke Kentucky used a Jurisdictional Ratio of 100 percent.[23] The Commission has reviewed and agrees with the calculation of Duke Kentucky's test-year electric rate base for purposes of establishing the Jurisdictional Ratio.

Pro Forma Jurisdictional Rate Base

Duke Kentucky calculated a pro forma jurisdictional rate base of $700,204,561,[24] which reflects the types of adjustments made by the Commission in prior rate cases to determine the pro forma rate base. The Attorney General provided testimony and several adjustments to Duke Kentucky's proposed rate base as discussed below. The Commission finds seven adjustments are warranted to Duke Kentucky's rate base. The

---

[22] Application, Schedule B-1.

[23] *Id.*, Schedule B-7.

[24] *Id.*, Schedule B.1. Duke Kentucky is not requesting to include recovery of Construction Work in Progress in base rates.

Commission finds that the excess amortization of the Carbon Management Research Group regulatory asset in the test year and the amortization of excess accumulated deferred income tax ("ADIT") should be added to the rate base. The Commission also finds that the East Bend Operations and Maintenance Expense ("East Bend O&M") regulatory asset, the East Bend Ash Pond Asset Retirement Obligation ("East Bend Ash Pond ARO") regulatory asset, the reduction in cash working capital ("CWC"), and the reduction in depreciation expense as discussed herein due to the Commission's decision to deny use of the Equal Life Group ("ELG") procedure and require use of the Average Life Group ("ALG") procedure for computing depreciation rates, net of the related ADIT as found reasonable herein, should be removed from rate base.

The Commission accepts Duke Kentucky's proposed amortization of the protected excess ADIT. The amortization for the protected excess ADIT is based upon the Average Rate Assumption Method ("ARAM"). For the unprotected excess ADIT, the Attorney General initially proposed a 20-year amortization period.[25] Subsequently, the Attorney General proposed a five-year amortization period for the unprotected excess ADIT but did not amend his testimony to reflect the change in the amortization period.[26] The Commission finds that a reasonable amortization period for the excess ADIT for Duke Kentucky's unprotected assets should be 10 years. A 10-year amortization period for the unprotected excess ADIT will balance the impact to Duke Kentucky's cash flow and provide ratepayers the full benefit of the reduction in the federal corporate income tax in a timely manner. As a result of the foregoing adjustments, the Commission finds the total

---

[25] *Id.*

[26] March 8, 2018, Video Transcript of Evidence at 3:35:00.

test-year amortization for the total excess ADIT to be $4,471,984, which is an increase of $1,651,639 over the amount proposed by Duke Kentucky. The Commission finds that the amortization of the excess ADIT related to protected and unprotected excess ADIT found reasonable herein should be removed from Duke Kentucky's ADIT, which increases its rate base. Therefore, Duke Kentucky's rate base should be increased by $4,471,984 for this adjustment.

Duke Kentucky deferred $2 million it incurred to fund carbon management research by the Carbon Management Research Group ("CMRG"). In Case No. 2008-00308, Duke Kentucky sought and obtained authorization from the Commission to defer these costs for accounting purposes.[27] The regulatory asset, net of ADIT, is included in the capitalization in this proceeding. In the instant matter, Duke Kentucky sought to recover the amortization of the deferred asset over a five-year period at $400,000 per year. In the Commission's Order in Case No. 2008-00308, it stated that the CMRG regulatory asset will be amortized over a 10-year period or $200,000 per year. Therefore, the Commission finds that the Duke Kentucky's capitalization should be increased by $200,000 to reflect the proper amount of the regulatory asset in the rate base.

The Commission finds that the ADIT arising from its requirement to change Duke Kentucky's procedure for computing depreciation rates from the ELG to the ALG procedure should reduce Duke Kentucky's rate base. As discussed in the testimony of the Attorney General, the ELG procedure front-loads depreciation expense in earlier

[27] Case No. 2008-00308, *Joint Application of Duke Energy Kentucky, Kentucky Utilities Company and Louisville Gas and Electric Company for an Order Approving Accounting Practices to Establish Regulatory Assets* (Ky. PSC Oct. 30, 2008).

years and decreases it in the later years of an asset's depreciable life, creating a mismatch of revenues and expenses.[28] The Attorney General states that the ALG procedure is the dominant procedure for other electric utilities, including all other electric utilities in Kentucky.[29] Therefore, the Commission finds that the Attorney General's position on this issue is reasonable and that Duke Kentucky should use the ALG procedure for computing depreciation rates, and that its rate base should be reduced by $2,733,299 to reflect the increase in ADIT.

The East Bend O&M regulatory asset was approved by the Commission in Case No. 2014-00201.[30] In addition, in that proceeding, the Commission authorized Duke Kentucky to defer carrying charges on the O&M expense at its cost of debt. The Attorney General disputed the amount of the regulatory asset and made a recommendation of the amount of amortization assuming that the regulatory asset was included in rate base.[31]

The Commission finds that the East Bend O&M regulatory asset should be removed from rate base and Duke Kentucky's request to amortize the East Bend O&M regulatory asset over a 10-year period is reasonable and should be approved. The Commission also finds that carrying charges should be based on the cost of debt approved herein. This adjustment reduces Duke Kentucky's rate base by $36,540,123.

---

[28] Direct Testimony of Lane Kollen ("Kollen Testimony") beginning at 31.

[29] *Id.* at 32

[30] Case No. 2014-00201, *Application of Duke Energy Kentucky, Inc. for (1) a Certificate of Public Convenience and Necessity Authorizing the Acquisition of the Dayton Power & Light Company's 31% Interest in the East Bend Generating Station; (2) Approval of Duke Energy Kentucky, Inc.'s Assumption of Certain Liabilities in Connection with the Acquisition; (3) Deferral of Costs Incurred as part of the Acquisition; and (4) All Other Necessary Waivers, Approvals and Relief* (Ky. PSC Dec. 4, 2014).

[31] Kollen Testimony at 31.

The East Bend Ash Pond ARO was approved by the Commission in Case No. 2015-00187.[32] Duke Kentucky proposed that the East Bend Ash Pond ARO amortization be recovered through the Environmental Surcharge Mechanism ("ESM") in its application. In addition, Duke Kentucky requested a 10-year amortization period. The Attorney General proposed that the East Bend Ash Pond ARO be removed from capitalization, as it was erroneous for Duke Kentucky to include it in both its ESM rider rate base and in base rates. The Commission finds the East Bend Ash Pond ARO should not be included in base rates because that amount is proposed to be recovered through Duke Kentucky's ESM. The Commission also finds that a 10-year amortization period is reasonable and should be approved. The parties have agreed upon this issue. This adjustment reduces Duke Kentucky's rate base by $18,509,346.

The CWC allowance included in rate base shown below is based on the adjusted operation and maintenance expenses discussed in this Order, as approved by the Commission. This adjustment reduces Duke Kentucky's rate base by $2,008,320.

Based on the Commission's finding herein where it denied Duke Kentucky's proposal to use ELG procedure rather than the ALG procedure for computing depreciation rates, the Commission finds that Duke Kentucky's accumulated depreciation in its rate base should be increased by $6,919,475.

We have determined Duke Kentucky's pro forma jurisdictional rate base for rate-making purposes for the test year to be as follows:

---

[32] Case No. 2015-00187, *Application of Duke Energy Kentucky, Inc. for an Order Approving the Establishment of a Regulatory Asset for the Liabilities Associated with Ash Pond Asset Retirement Obligations* (Ky. PSC Dec. 15, 2015).

Depreciation Expense

Duke Kentucky proposes, as part of developing its depreciation rates, the continued use of the ELG procedure. The Attorney General recommends the Commission adopt the ALG procedure in developing Duke Kentucky's depreciation rates. The Attorney General contends that the ALG methodology is the predominant method that is used in the electric industry for developing depreciation rates. The Attorney General contends that, under the ELG methodology, the capital recovery periods are accelerated and shortened and, thus, the depreciation rates are greater than if the ALG procedure was used.[76] The Attorney General argues that the ALG procedure is as accurate as the ELG procedure and the ALG procedure smooths the data so that the depreciation rates for the group of assets tend to remain constant.[77] Use of the ALG procedure will result in a decrease in Duke Kentucky's depreciation expense of $6.920 million.

Duke Kentucky requested an increase in depreciation expense of $6.920 million, based on its request to utilize the ELG procedure for computing depreciation rates. As was discussed in the rate base section of this Order, this Commission has found that the ELG procedure does not accurately match revenues and expenses, is front-loaded, and Duke Kentucky is the only Kentucky based utility that utilizes the ELG procedure for computing depreciation rates.

Regulatory accounting requires the proper matching of revenues and expense in order to produce fair, just and reasonable rates. The Commission finds Duke Kentucky's

[76] *Id.* at 33.

[77] *Id.* at 35

proposed ELG procedure does not meet that criteria and that Duke Kentucky's depreciation expense should be reduced by $6.920 million.

Terminal Net Salvage – Generation Units

Duke Kentucky included an adjustment of its depreciation expense of $4.506 million to reflect the impact of terminal net salvage value.[78] Duke Kentucky's proposed depreciation rates reflect terminal net salvage, which the company contends is required under the Federal Energy Regulatory Commissions' Uniform System of Accounts.[79] Duke Kentucky further contends that, to avoid intergenerational inequity, these costs should be borne by those ratepayers who receive the benefit from the production assets.[80]

The Attorney General recommends reducing the proposed depreciation rates by removing terminal net salvage from production plant depreciation rates. The Attorney General argues that Duke Kentucky's proposed recovery of future terminal net negative salvage for production plant is unreasonable because those costs are not known with reasonable certainty today.[81] The Attorney General's recommendation is to reduce Duke Kentucky's depreciation expense by $4.506 million.[82]

The Commission finds Dukes Kentucky's recommendation on the treatment of terminal net salvage value in the computing the depreciation rates for generating units is reasonable in order to avoid intergenerational inequity and should be approved.

STATE OF INDIANA

INDIANA UTILITY REGULATORY COMMISSION

PETITION OF DUKE ENERGY INDIANA, LLC PURSUANT TO IND. CODE §§ 8-1-2-42.7 AND 8-1-2-61, FOR (1) AUTHORITY TO MODIFY ITS RATES AND CHARGES FOR ELECTRIC UTILITY SERVICE THROUGH A STEP-IN OF NEW RATES AND CHARGES USING A FORECASTED TEST PERIOD; (2) APPROVAL OF NEW SCHEDULES OF RATES AND CHARGES, GENERAL RULES AND REGULATIONS, AND RIDERS; (3) APPROVAL OF A FEDERAL MANDATE CERTIFICATE UNDER IND. CODE § 8-1-8.4-1; (4) APPROVAL OF REVISED ELECTRIC DEPRECIATION RATES APPLICABLE TO ITS ELECTRIC PLANT IN SERVICE; (5) APPROVAL OF NECESSARY AND APPROPRIATE ACCOUNTING DEFERRAL RELIEF; AND (6) APPROVAL OF A REVENUE DECOUPLING MECHANISM FOR CERTAIN CUSTOMER CLASSES	**CAUSE NO. 45253** **APPROVED: JUN 29 2020**

ORDER OF THE COMMISSION

Presiding Officers:
James F. Huston, Chairman
Sarah E. Freeman, Commissioner
David E. Veleta, Senior Administrative Law Judge

Table of Contents

1. Notice and Jurisdiction 9
2. Petitioner's Organization and Business 9
3. Existing Rates 9
4. Test Year and DEI Forecast 9
5. Petitioner's Rate Base 10
   a. Utility Plant in Service – Edwardsport IGCC Plant 10
   b. Utility Plant in Service – Solar and Battery Storage Projects 12
   c. Utility Plant in Service – Gallagher Units 2 and 4 19
   d. Utility Plant in Service – Capital-Related Vegetation Management Investments 21

process. Sierra Club and Joint Intervenors took issue with the retirement dates of Edwardsport IGCC and other coal units, finding that DEI should consider an earlier retirement of these units. In considering Edwardsport first, we find Mr. Gurganus' testimony persuasive. Edwardsport is the newest coal unit on the DEI system and continues to be a valuable asset for the Company's generating system, especially as the Company moves, as many utilities are, to retire older and less efficient coal plants. We also understand the many complexities and issues associated with primarily operating the plant on natural gas pointed out by Mr. Gurganus, not least of which is the requirement for new air permitting, elimination of tax incentives, and losing the optionality and diversity that operation primarily on coal provides. In contrast to the cross answering testimony of Mr. Schlissel, and based on the testimony provided by Mr. Gurganus, we find that Edwardsport has showed steadily increasing gasifier availability and capacity factor in line with expectations, and we note that the Company has invested in improvements at the plant, often at shareholder expense, to achieve these improvements, which Mr. Gurganus expects to continue.

As to the Company's other coal units, Sierra Club and Joint Intervenors criticize the Company's modeling that does not allow these units to retire prior to 2024. However, we find Mr. Pike's testimony on this point persuasive. There are clearly practical constraints and considerations to retiring units that should not be ignored by IRP modeling, such as labor force, community impacts, transmission constraints, and not least of all rate impact to customers. We also agree with Mr. Pike and Wabash Valley witnesses that it is reasonable to swap the retirement dates of Gibson Units 4 and 5, to accommodate the wishes of the joint owners of Gibson 5 and save the expense associated with the planned flue gas work for the units. Overall, we find that this moderate transition approach is reasonable and results in reasonable depreciation rates that, while increased compared to previous depreciation studies, are moderated to that which would accompany a more expedited transition.

Regarding the other Joint Intervenors' criticism of the IRP process, we find that the IRP is at issue in this proceeding only to the extent it helps support the proposed depreciation rates. We find Mr. Park's response to the various IRP issues reasonable and thorough. Further, we agree with Mr. Pike that models only inform us and do not themselves make reasoned recommendations or decisions. Rather, the Company does that through a review of various scenarios, sensitivities, and portfolios.

In sum, we find that DEI's proposed retirement dates, as revised in its rebuttal testimony for the Gibson 4/5 retirement date switch, are reasonable and prudent and will result in fair and reasonable rates for customers who benefit from the Company's rate base.

(C) <u>Depreciation Rates and Expense</u>. Mr. Spanos presented and supported a depreciation study related to DEI's electric plant as of December 31, 2018, as well as a fair value study. He testified that depreciation refers to the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes which are known to be in current operation, against which the Company is not protected by insurance. He stated that among the causes to be given consideration are wear and tear, decay, action of the elements, obsolescence, changes in the art, changes in demand and the requirements of public authorities. He testified that in preparation of his study, he followed generally accepted practices in the field of depreciation and valuation. He

testified that his recommended depreciation rates appropriately reflect the rates at which the costs of DEI's assets are being consumed over their useful lives, and that the rates are an appropriate basis for setting electric rates in this matter and for the Company to use for booking depreciation and amortization expense going forward.

He testified the purpose of the depreciation study was to estimate the annual depreciation accruals related to electric plant in service for ratemaking purposes and determine appropriate average service lives and net salvage percentages for each plant account. He stated that in preparing his study, he used the straight line remaining life method of depreciation, with the equal life group procedure for all plant assets except some general plant accounts. He stated the annual depreciation is based on a method of depreciation accounting that seeks to distribute the unrecovered cost of fixed capital assets over the estimated remaining useful life of each unit, or group of assets, in a systematic and rational manner. He testified that for certain General Plant Accounts, he used the straight line remaining life method of amortization. He explained that the annual amortization is based on amortization accounting that distributes the unrecovered cost of fixed capital assets over the remaining amortization period selected for each account and vintage.

To determine his recommended annual depreciation accrual rates, in the first phase of his study, he estimated the service life and net salvage characteristics for each depreciable group -- each plant account or subaccount identified as having similar characteristics. Then in the second phase of his study, he calculated the composite remaining lives and annual depreciation accrual rates based on the service life and net salvage estimates determined in the first phase.

He explained that in the first phase of the study he compiled historic data through 2018 from records related to DEI's plant; analyzed these data to obtain historic trends of survivor and net salvage characteristics; obtained supplementary information from DEI's management, and operating personnel concerning practices and plans as they relate to plant operations; and interpreted the above data and the estimates used by other electric utilities to form judgments regarding average service life and net salvage characteristics. To analyze the service life data, he used the retirement rate method and applied the retirement rate method to each different group of property in the study. He explained that the retirement rate method produces an original survivor curve for that property group, and that interpretation of the original survivor curves is required in order to use them as valid considerations in estimating service life. He explained that widely used Iowa-type survivor curves were used to perform the interpretations. He further testified that he used the life span technique, which has been used previously for DEI, to estimate the lives of significant facilities for which concurrent retirement of the entire facility is anticipated.

He testified that DEI provided the production facility life span estimates based on informed judgment that incorporates factors for each facility such as the age, use, size, nature of construction, and technology of the facility; management plans and outlook for the facility; the estimates for similar facilities for other utilities; and the results of the Company's 2018 IRP. DEI witness Mr. Keith Pike discusses the life span estimates in detail, as is discussed below. Mr. Spanos also stated that he made a field review of DEI's property during November 2018 to observe representative portions of plant and that he also made field visits during prior studies since 1999. He explained that field reviews are conducted to become familiar with Company operations and

obtain an understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements.

He next discussed net salvage -- a component of the service value of capital assets that is recovered through depreciation rates. He explained that the service value of an asset is its original cost less its net salvage, and net salvage is the salvage value received for the asset upon retirement less the cost to retire the asset. He stated that when the cost to retire exceeds the salvage value, the result is negative net salvage.

He testified that inasmuch as depreciation expense is the loss in service value of an asset during a defined period, (*e.g.* one year), it must include a ratable portion of both the original cost and the net salvage. That is, he stated, the net salvage related to an asset should be incorporated in the cost of service during the same period as its original cost so that customers receiving service from the asset pay rates that include a portion of both elements of the asset's service value, the original cost and the net salvage value.

He testified that the net salvage percentages estimated in the depreciation study were based on informed judgment that incorporated factors such as the statistical analyses of historical net salvage data; information provided by the Company's operating personnel; general knowledge and experience of industry practices; and trends in the industry in general. He stated that the statistical net salvage analyses incorporate the Company's actual historical data for the period 1989 through 2018 and consider the cost of removal and gross salvage ratios to the associated retirements during the 30-year period. He explained that the net salvage percentages for generating facilities were based on two components: the interim net salvage percentage, and the final net salvage percentage. He stated that the interim net salvage percentage was determined based on the historical indications from the period 1989 to 2018 of the cost of removal and gross salvage amounts as a percentage of the associated plant retired. He stated that the final net salvage, or decommissioning and dismantlement component, was determined based on the retirement activities associated with the assets anticipated to be retired at the concurrent date of final retirement. He testified that the decommissioning or dismantlement component has been included in the net salvage percentage for steam, hydro and other production facilities; the decommissioning and dismantlement component is part of the overall net salvage for each location within the production assets. He stated that based on studies for other utilities and the cost estimates of DEI, it was determined that the decommissioning or dismantlement component for steam, hydro, and other production facilities is best calculated by dividing the decommissioning or dismantlement cost by the surviving plant at final retirement. He explained that these amounts at a location basis are added to the interim net salvage percentage of the assets anticipated to be retired on an interim basis to produce the weighted net salvage percentage for each location.

He testified that the decommissioning or dismantlement cost estimates are based on the decommissioning study of each generating site performed by Burns and McDonnell (discussed below). He explained that these estimates are based on the current cost (year 2018 dollars) to decommission the facilities. He noted, however, that the costs to decommission power plants have tended to increase over time (as have construction costs in general). For this reason, he testified, in order to recover the full decommissioning costs for each site, these costs need to be escalated to the time of retirement.

After Mr. Spanos estimated the service life and net salvage characteristics for each depreciable property group, he then calculated the annual depreciation accrual rates for each depreciable group based on the straight line remaining life method, using remaining lives weighted consistent with the equal life group procedure. He stated that the calculations of annual depreciation accrual rates were developed as of December 31, 2018. He explained that the straight line remaining life method of depreciation allocates the original cost of the property, less accumulated depreciation, less future net salvage, in equal amounts to each year of remaining service life.

He testified that in the equal life group procedure, the property group is subdivided according to service life -- that is, each equal life group includes that portion of the property which experiences the life of that specific group. He stated that the relative size of each equal life group is determined from the property's life dispersion curve. He explained that this procedure eliminates the need to base depreciation on average lives, inasmuch as each group is equivalent to a unit having a single life. The full costs of short-lived units are accrued during their lives, he stated, leaving no deferral of accruals required to be added to the annual costs associated with long-lived units. The calculated depreciation for the property group is the summation of the calculated depreciation based on the service life of each equal life group, according to Mr. Spanos.

Mr. Spanos testified that the equal life group procedure allocates the capital cost of a group property to annual expense in accordance with the consumption of the service value of the group.

He added that the more timely return of plant investment accomplished by fully accruing each item's cost during its service life not only reduces the risk of incomplete capital recovery, but also results in less investment-related cost over the life span of a depreciable group. He explained that under the equal life group procedure, the future book accruals (original cost less book reserve) for each vintage are divided by the composite remaining life for the surviving original cost of that vintage, and the vintage composite remaining life is derived by summing the original cost less the calculated reserve for each equal life group and dividing by the sum of the whole life annual accruals.

Mr. Spanos stated that amortization accounting is used for accounts with a large number of units, but small asset values. In amortization accounting, he explained, units of property are capitalized in the same manner as they are in depreciation accounting; however, depreciation accounting is difficult for these assets because periodic inventories are required to properly reflect plant in service. Consequently, he stated, retirements are recorded when a vintage is fully amortized rather than as the units are removed from service -- that is, there is no dispersion of retirement; all units are retired for depreciation purposes when the age of the vintage reaches the amortization period. He emphasized that amortization accounting is only appropriate for certain Common and General Plant accounts – in this case, for plant accounts which represent approximately one percent of depreciable plant.

Mr. Spanos testified that the development of the book reserve for each location has been established based on a composite rate for a group of locations within an account; thus, the actual book reserve at the location level was determined by applying a composite rate to the plant balance.

He explained that when dealing with group depreciation there are multiple parameters that affect the rate, such as interim survivor curve, probable retirement date and net salvage percent among the key factors. He further explained that in conducting a depreciation study, a more defined manner of determining the individual location rates should be established. He testified that these key factors or parameters establish the theoretical reserve which is utilized to appropriately assign the book reserve at the location and vintage level. He noted that updating retirement dates adjusts the weighting between the locations; therefore, a changed retirement date, survivor curve or net salvage percent for one location affects all the locations in the account.

Mr. Spanos next addressed depreciation rates for DEI's new solar generation assets planned by year-end 2019. He explained that the rates for these assets will be based on interim survivor curves for each account, a negative net salvage percent for some of the accounts, and a 25- year life span for all assets at the location. He stated that an estimated rate for new battery storage assets in Account 363 was also prepared.

Mr. Spanos testified concerning his fair value study. He explained that his study segregated the property by plant account consistent with the depreciation study and Company accounting system. More specifically, he first determined the Reproduction Cost New ("RCN") for the property in service at December 31, 2018, by trending the original cost and then deducting depreciation to arrive at the Reproduction Cost New Less Depreciation ("RCNLD"). He explained that for the property for which he determined the trended original cost, he used cost indexes. He calculated the RCN of the Company's electric plant in service as of December 31, 2018, to be $27,218,507,545; and he calculated the RCNLD of the Company's electric utility plant in service as of December 31, 2018 to be $11,633,493,162, which is 43% of the Reproduction Cost New. Mr. Spanos also provided the same fair value study information using the Company's forecasted electric utility plant in service as of December 31, 2020. He testified that it was calculated using the same methodology as his 2018 study and that the RCN of the Company's electric plant in service as of December 31, 2020, is $28,967,368,703 and the RCNLD is $12,054,723,694.

Company witness Mr. Jeffery Kopp sponsored the decommissioning study prepared by Burns & McDonnell for this proceeding. Mr. Kopp explained why it is necessary to demolish a generating station at the end of useful life, citing reuse of land, public safety, and environmental remediation of potential health hazards. The decommissioning study provided an estimated total cost, in 2018 dollars, of decommissioning and dismantling each Company-owned generation unit at the end of its useful life, as well as the total cost of decommissioning and dismantling the common facilities at these generating plants. The total decommissioning and dismantlement cost as determined by Burns and McDonnell and reflected in the Decommissioning Study, was net of salvage value for scrap materials at each plant. In general, the study assumed that each generating site would be restored to a condition appropriate for industrial use. This means that all sites will have above grade buildings and equipment removed, foundations removed to two feet below grade, be rough graded, and seeded. Sites also will have small diameter underground pipes capped and abandoned in place. Mr. Kopp explained that each of DEI's electric generating plants was evaluated, including steam, hydro and other facilities, including solar and that the Burns & McDonnell team visited all plants for which site-specific decommissioning and dismantlement cost estimates were prepared. Mr. Kopp described the types of costs included in the decommissioning study and how the estimates for the direct costs were developed using a bottoms-

up cost estimating approach. He explained how scrap values were determined and the necessity of including project indirect costs in the estimate, as well as the determination of the indirect costs included. He further explained that contingency costs had been included in the estimate, and that a contingency cost accounts for unspecified but reasonably expected additional costs to be incurred by the Company during the execution of decommissioning and dismantlement activities and contingency. He explained that these costs are in addition to the direct costs associated with the base decommissioning and dismantlement known scope items and that application of contingency is not only appropriate, but also standard industry practice. He further explained that DEI provided estimated remaining M&S inventory balances for inclusion in the Decommissioning Study, with a portion of the inventory given a salvage credit to reflect potential reuse or resale of remaining M&S. The estimated total net decommissioning and dismantlement cost for DEI's generation facilities included in the study is $420,569,400 in 2018 dollars. Mr. Kopp stated that the estimates used in the study were carefully prepared using standard and accepted estimating techniques and the best information available, and are consistent with Burns & McDonnell's industry experience. He stated that assumptions used were reasonable and that the inclusion of remaining M&S balance in the decommissioning and dismantlement costs is also reasonable, as maintaining an adequate inventory of M&S for the operation and maintenance of the generating units up to their end of life represents a prudently incurred cost for providing service to customers.

OUCC witness Garrett testified that he employed a depreciation system using actuarial plant analysis to statistically analyze the Company's depreciable assets and develop reasonable depreciation rates and annual accruals. In contrast to Mr. Spanos' use of the Equal Life Group ("ELG") procedure, Mr. Garrett recommends the calculation of depreciation rates under the Average Life Group ("ALG") procedure. He also proposed adjustments to the Company's proposed terminal net salvage rates. More specifically, Mr. Garrett testified that the OUCC's proposed depreciation adjustments comprise several key issues: (1) calculating rates under the ALG method; (2) removing contingency costs from DEI's decommissioning cost estimates; (3) removing inventory costs from DEI's decommissioning cost estimates; (4) removing escalation factors from DEI's terminal net salvage calculations; and (5) adjusting the Company's proposed service lives for several of its transmission and distribution accounts. During cross-examination, Mr. Garrett testified that he did not make a field visit prior to completing his depreciation recommendations.

Mr. Garrett testified that depreciation rates calculated under the ELG procedure for a particular vintage group of property will be higher in earlier years relative to later years, citing to [Wolf] and the National Association of Regulatory Utility Commissions ("NARUC") as support for his testimony. In contrast, he stated, depreciation rates calculated under the ALG procedure for a particular vintage group of property will be the same each year. Further, he testified that in order for depreciation rates calculated under the ELG procedure to be accurately applied, a utility's depreciation rates would need to be adjusted each year to reflect the decreasing depreciation rates for applicable account. He stated that under the ELG procedure, as proposed by DEI, the Company's depreciation rates would simply be applied each year until the next depreciation study is filed, regardless of the fact that depreciation rates should decrease annually during that time under the ELG procedure. He testified that this arrangement does not result in a systematic and rational cost recovery mechanism, and, by proposing depreciation rates under this scheme, DEI

has failed to meet its burden to make a convincing showing that its proposed depreciation rates are not excessive.

He stated that, in theory, the ELG could be part of a systematic and rational cost recovery system. In practice, however, it would be difficult to come to the same conclusion, because in order for the ELG procedure to be properly applied, a utility would need to revise depreciation each year. However, he stated, given the logistical realities involved with prosecuting rate cases, this would be impractical and inefficient.

He further testified that when a utility has made substantial, recent capital investments, depreciation expense calculated under the ELG method will always be higher than the expense calculated under the ALG method; the larger the amount of the investments, the larger the discrepancy will be between the two procedures. He attributed utilities' use of the ELG method to a desire by utility finance managers to increase cash flow and a desire by utility investors to reduce risk through accelerated capital recovery. He emphasized that the rules and standards governing capital recovery through depreciation require that public utilities recover their capital investments in a systematic and rational manner, accomplished by estimating service life through actuarial analysis and other objective techniques.

He noted that in the pending I&M rate case, the utility proposed depreciation rates using the ALG procedure; no party opposed the utility's use of the ALG procedure and no party proposed using the ELG procedure. He stated that, in his experience, the ALG procedure is the most commonly used procedure by analysts in depreciation proceedings. Thus, he concluded, the majority of depreciation rates approved by regulators around the country are calculated under the ALG procedure.

Mr. Garrett testified that if the IURC accepted all of DEI's substantive depreciation positions, but simply adopted the ALG procedure, it would result in depreciation rates that are much more fair and reasonable than those proposed by the Company. He further testified that it could be reasonable to use the ELG procedure if DEI was also proposing to have its depreciation rates adjusted every year in order to reflect a mathematically proper application of the ELG procedure, but that was not a part of the Company's filing. Instead, he claimed, to the extent the Company's ELG-derived rates are adopted, the Company will receive arbitrarily higher cash flows for its investors each subsequent year after this proceeding until its next depreciation study is filed. Under these circumstances, he concluded, the Company has not made a convincing showing that its proposed rates are not excessive.

Mr. Garrett next addressed the issue of contingency costs. He testified that the Company's terminal net salvage costs are estimated through demolition studies for most of its generating units. He stated that the demolition studies include contingency costs that purportedly reflect uncertainties in future demolition estimates. However, he claimed that contingency costs are unknown by definition, and therefore are not known and measurable. He stated that charging current ratepayers for speculative costs that may not even occur up to decades in the future is inherently problematic from a ratemaking perspective. Mr. Garrett stated that Duke identified no legal obligation in its testimony that requires it to demolish its power plants consistent with the activities described in the decommissioning cost estimates. He opined that in the absence of such

a legal requirement being imposed in the foreseeable future, actually incurring these costs is speculative. He also suggested that if and when Duke actually demolishes the power plants and requires more funding to do so, it can request additional funds from ratepayers when actual costs are known.

With regard to the issue of inventory costs, Mr. Garrett noted that DEI included $185 million of inventory costs as part of its decommissioning cost estimates. However, he stated, inventory costs are not typically included as part of decommissioning cost estimates, and he testified that he could not recall ever seeing such costs proposed in a decommissioning study, including those filed by Burns & McDonnell in prior cases. He noted that decommissioning studies estimate the terminal salvage and cost of removal of generating facilities, and he testified that DEI has not shown how the inclusion of inventory relates to that process. Furthermore, he stated that Burns & McDonnell has not conducted an analysis supporting the level of inventory included in the decommissioning costs.

Mr. Garrett next addressed the Company's use of escalation factors to escalate its demolition cost estimates from present-day dollars to the future retirement date of each generating unit by applying an annual cost inflation factor. According to Mr. Garrett, the problem with this approach is that current ratepayers are forced to pay for a future-value cost with present-day dollars. He claims that this "scheme" violates basic time-value-of-money principles. He testified that if future, escalated costs are allowed, they should then be discounted back to present-day dollars by the Company's weighted average cost of capital, noting that a similar approach is used to account for asset retirement obligations. He concluded, however, that it would be more straight-forward and reasonable to simply disallow the escalation factors and base the Company's decommissioning costs on present value.

Brian Andrews testified on behalf of the Industrial Group with respect to depreciation issues. His stated that DEI's proposed depreciation expense increase is excessive and unduly burdens customers.

He testified that DEI's continued reliance on the ELG procedure for calculating depreciation rates is burdensome to customers. He claimed that ELG depreciation rates are front-loaded and must be updated annually for proper implementation. He further claimed that DEI is the only Duke electric company that utilizes the ELG procedure to calculate depreciation rates, and it has the highest depreciation rate of any of the Duke electric companies. He stated that all other Duke electric companies use the ALG procedure, the most commonly utilized procedure for calculating depreciation rates.

He argued that, by rejecting ELG in favor of ALG, the Commission has an excellent opportunity to achieve the following: (1) allow Duke to retire its coal plants early according to its preferred portfolio, helping achieve significant carbon reductions in Indiana, (2) significantly reduce the rate increase while allowing those early retirements and the resources that will eventually replace them, and (3) utilize the depreciation procedure that is most commonly used in the country.

Mr. Andrews also argued that DEI is attempting to recover through depreciation rates an excessive amount of costs for the demolition of its production plants. He noted that in the decommissioning cost estimates, Duke has included net inventory costs, which is the level of inventory that existed at the plants as of June 2018. He took the position that, as Duke knows the precise retirement dates of these facilities, Duke should effectively manage this inventory and strive to eliminate these balances over the remaining life of the plants. He argued that these costs should be removed from the decommissioning costs estimates that are included in the net salvage rate and depreciation rate calculations.

He also noted that, in the decommissioning cost estimates, Duke has included contingency costs. He characterized these costs as simply a 20% adder to the demolition costs and unnecessary depreciation expense. He recommended that these contingency costs be removed from the decommissioning costs estimates that are included in the net salvage rate and depreciation rate calculations.

Mr. Andrews observed that in the net salvage rate calculations, Duke has included cost escalation. He testified that these costs were determined with an excessive and unsupported 2.5% annual inflation rate and burden current customers with unnecessary depreciation expense. He recommended that these escalation costs should be based on 2.0% inflation before being included in the net salvage rate and depreciation rate calculations.

Mr. Andrews stated that the IURC should reject Duke's ELG depreciation rates and approve the depreciation rates presented in his testimony. He testified that this will reduce the test year depreciation expense by $120 million, or by 83% of Duke's proposed increase, while still allowing coal plant retirements at Duke's proposed time schedule.

Mr. Spanos testified in rebuttal, noting that while each party proposes a fairly significant change in depreciation expense compared to the Company's proposal, the vast majority of the dollar impact of their changes is due to their deviation from Commission precedent. That is, most of their proposed reduction in depreciation expense is based on issues that the Commission has already decided. He stated that the issue with the single largest impact is the Company's use of the Equal Life Group ("ELG") procedure instead of the Average Life Group ("ALG") procedure. He noted that the Commission has clearly stated that "[w]e consider the debate between ELG and ALG to have already been resolved. This Commission has frequently and consistently expressed its preference for the use of the ELG procedure."[5] The Commission has similarly ruled that it is appropriate to include contingency in decommissioning estimates and that decommissioning estimates should be escalated to the date of retirement (for example, see NIPSCO Cause No. 43526). Accordingly, the only issues raised by OUCC and IG that have not been resolved by the Commission relate to the inclusion of inventory costs in decommissioning (which is addressed by DEI rebuttal witnesses Kopp and Mosley), Mr. Andrews' use of a lower escalation rate, and Mr. Garrett's life estimates for a few accounts.

[5] IURC 8/25/2010 Final Order in Cause No. 43526 at 51.

Mr. Spanos stated that the OUCC proposes a reduction in depreciation expense of $107 million, however, $93 million of this amount is due to the use of the ALG procedure, the removal of contingency and the removal of escalation. Similarly, he stated, the Industrial Group proposes a $120 million reduction in depreciation expense, however, $88.7 million of this is due to the use of the ALG procedure. An additional amount is the result of the parties' proposal to remove contingency.

With regard to Mr. Garrett's and Mr. Andrews' argument that ELG depreciation requires annual updates, Mr. Spanos testified the simple examples they provide to support their opinions are not reflective of real-world operations. He stated that this argument is unpersuasive for multiple reasons. First, he noted this Commission has used ELG for many years and has not required companies to update depreciation rates annually. Second, he stated that both Mr. Garrett and Mr. Andrews are incorrect that annual updates would be required. He pointed out that both examples shown to support their opinions are simplistic examples based on only a single vintage of plant. Thus, their examples do not match real-world experience. For most utility plant accounts, he stated, assets are added and retired every year. Due to this continual activity, he testified, ELG depreciation rates do not actually change as much as Mr. Garrett and Mr. Andrews claim. Third, he testified that annual updates are quite common in Pennsylvania. He stated that his firm performs depreciation studies – and annual updates – for most utilities in Pennsylvania. As a result, he has the opportunity to review changes to depreciation rates that occur each year that result from annual updates to depreciation calculations. In actual practice, he testified, ELG depreciation rates are much more stable than Mr. Garrett and Mr. Andrews claim. He stated that in aggregate, the ELG depreciation rates typically do not change dramatically from year to year and would not warrant annual updating as Mr. Garrett and Mr. Andrews assume.[6] Mr. Spanos testified that, in reality, there is little need to update depreciation rates annually when using the ELG procedure. He noted that the Commission has not been concerned enough with this issue to require annual updates in the many decades since the ELG procedure was first adopted. Accordingly, he concluded, Mr. Garrett's and Mr. Andrews' arguments to this effect are not a persuasive reason to abandon its use in Indiana.

Mr. Spanos also testified about the downsides of moving to an ALG methodology. He testified that a switch from ELG to ALG depreciation rates will result in artificially low depreciation rates due to the higher accumulated depreciation currently on the Company's books due to the historical use of ELG depreciation rates. He stated that this in turn will result in a short-term benefit that will be paid for by future customers who will also pay a return on the higher rate

[6] Mr. Spanos noted there are other aspects of depreciation that have the potential to change each year. For example, any additions to life span property result in a change to the depreciation rate (since the new asset will have a shorter life than the existing assets at the life span facility). Remaining life depreciation rates also change each year. He pointed out that Mr. Garrett proposes a change in approach from Commission precedent for terminal net salvage that would require annual updates, proposing to only include decommissioning costs at today's cost levels, which would mean the decommissioning costs would need to change each year due to changes in cost levels that occur from year to year. However, Mr. Spanos stated, for Mr. Garrett's terminal net salvage proposal (as well as other aspects of depreciation that change each year), he appears unconcerned with the potential for annual updates to depreciation rates. This gives less merit to Mr. Garrett's concerns regarding ELG, in Mr. Spanos' view.

base that will result from the proposed ALG depreciation rates. He characterized this approach as inequitable both because it will artificially reduce rates at the expense of future customers and because those customers will have to pay for the costs of generation that replaces the Company's coal-fired generation that will be retired. He concluded that Mr. Andrews' proposal would unfairly shift the costs of power plants that will soon be retired to future customers, who will receive no service from these plants. Additionally, Mr. Spanos noted, the historical use of ELG depreciation rates, as well as the inclusion of contingency and escalation in decommissioning estimates, already provides a benefit to customers as the Company transitions from coal-fired generation. While the retirement of coal-fired generation at earlier ages than previously expected does result in an increase in depreciation expense in this case, he stated that the Company has recovered more depreciation to date due to the historic use of ELG depreciation rates and more adequate levels of decommissioning (due to the inclusion of contingency and escalation) means that accumulated depreciation is higher than had Mr. Andrews' and Mr. Garrett's preferred approaches been adopted. The result, he noted, is that there is less to recover for the plants that will be retired. To put this a different way, he explained, had ALG been used in the past and no contingency or escalation included, the increase in depreciation resulting from earlier coal-fired generation would be higher than it is in the current case.

Mr. Spanos testified that Mr. Garrett is incorrect to argue that "it is preferable for regulators to ensure that assets are not depreciated before the end of their economic useful lives." While the goal is to estimate depreciation as accurately as possible, it is important to remember that depreciation is a forecast of events many years in the future and as a result estimates do not always match the actual experienced lives and net salvage of a Company's assets. Given this reality, Mr. Spanos opined, erring on the higher side for depreciation rates is preferable than the lower side because the likelihood and the risks of adverse effects on both the utility and customers are greater if depreciation is underestimated. He also added that too low of depreciation rates increases rate base, which results in customers paying higher total rates due to the return on rate base.

Mr. Spanos also took issue with Mr. Garrett's and Mr. Andrews' use of the word "accelerated" to describe the ELG methodology. He testified that ELG is a straight line method; ELG recovers costs on a straight line basis over the expected life of each equal life group.

Mr. Spanos reiterated that there are sound reasons to use the ELG procedure. He noted that this Commission has addressed this issue multiple times in the past and ruled in favor of ELG. And he noted that ELG is also discussed and supported in authoritative depreciation texts and academic literature. One such authority – and a very significant one – is Robley Winfrey, who, as a professor at Iowa State University, developed the Iowa survivor curves that are universally used in estimating service lives based on historical retirement data and is generally regarded as the father of utility depreciation practices, referred to the ELG procedure as "the only mathematically correct procedure."[7]

[7] Robley Winfrey, Depreciation of Group Properties, Bulletin 155 (Ames, IA: Iowa State University Press, 1942, reprinted 1969); p. 71.

Additionally, he emphasized that it is also important to understand that the change in depreciation resulting from the OUCC and Industrial Group's proposed change to ALG rates is not simply due to the difference between the two procedures. Rather, a portion of this change results from the fact that accumulated depreciation is higher today due to the historical use of ELG depreciation rates than it would have been had ALG depreciation rates been used. A change to ALG rates today will, therefore, result in a greater benefit to today's customers than to other generations of customers. This occurs both because depreciation rates are lower due to the historical use of ELG depreciation rates and because rate base is lower due to the higher accumulated depreciation resulting from the historical use of ELG depreciation rates. If Mr. Andrews' proposal were adopted, it will be future customers that pay the cost for this benefit given to current customers. Future customers will have to pay higher ALG depreciation rates than current customers as remaining life depreciation rates result in accumulated depreciation that will eventually revert to a lower level from the use of the ALG procedure. Future customers will also have to pay a return on the higher rate base that results from the lower ALG depreciation rates. In summary, he testified, Mr. Andrews' proposal will result in shifting costs from today's customers to future generations of customers.

Mr. Spanos next addressed the three adjustments proposed by the OUCC and Industrial Group to the decommissioning cost estimates used in the depreciation study. The first type of adjustment is related to the escalation of decommissioning costs to the time of retirement. The OUCC proposes to remove the escalation component entirely. The Industrial Group recommends the escalation of decommissioning costs, but uses a 2.0% escalation rate instead of the 2.5% escalation rate proposed by Mr. Spanos. The second proposed adjustment is that both the OUCC and Industrial Group advocate removing contingency from the decommissioning estimates. Mr. Spanos noted that both of these issues have been previously addressed by the Commission, which has ruled in favor of the Company's proposals to include escalation and contingency. The third proposed adjustment is that both parties propose the removal of inventory costs from the Company's terminal net salvage estimates. Mr. Spanos noted that he does not address this issue, which is instead addressed by rebuttal witnesses Mr. Kopp and Mr. Mosley. He also noted that Mr. Kopp also addresses the contingency issue, although Mr. Spanos briefly discussed Commission precedent regarding this issue.

With regard to the issue of including escalation in the calculation of decommissioning costs, Mr. Spanos stated that escalation is necessary in order to recover the full net salvage costs of these facilities over their service lives and has previously been accepted by the Commission. He noted that Mr. Andrews recognizes that escalation should be included in the terminal net salvage estimates, but proposes a lower escalation rate of 2.0%. Mr. Spanos testified that, in order to equitably recover the full costs of the Company's assets, including net salvage, net salvage must be based on future costs because decommissioning is going to occur in the future. He emphasized that net salvage must include the effects of future increases in costs, as recognized on multiple occasions by this Commission.

Mr. Spanos noted that Mr. Garrett makes one main argument in support of his proposal to eliminate escalation from the terminal net salvage estimates. He states that "[i]t is not proper to charge current ratepayers for a future cost that has not been discounted to present value." He supports this assertion by stating that "[t]he 'time value of money' concept is a cornerstone of

finance and valuation." Mr. Spanos testified, his opinion on this concept with regard to depreciation is incorrect. Mr. Spanos reiterated that depreciation is based on the actual cost at the time of installation or retirement. While the "time value of money" may be a cornerstone of finance and valuation, it is not a concept used in depreciation as widely practiced in the industry. Indeed, Mr. Spanos testified, failing to incorporate escalation, as Mr. Garrett proposes, will result in understating future net salvage costs, resulting in intergenerational inequity by forcing future customers to pay too much for the facilities.

Mr. Spanos next noted that, unlike Mr. Garrett, Mr. Andrews includes an escalation component in his terminal net salvage estimates. However, he uses a 2.0% escalation rate instead of the 2.5% escalation rate used by the Company which he says "has no support and is excessive." Mr. Spanos testified that his estimate of 2.5% is reasonable for a long term rate of cost increases for power plant decommissioning. He stated that his estimate is consistent with escalation rates used previously, as well as other sources including long-term averages of Consumer Price Index ("CPI") inflation and long-term inflation forecasts; the latter is compiled by the Federal Reserve in the Livingston Survey. He noted that CPI inflation has typically been lower than long-term construction cost increases and so, if anything, his estimate is conservative.

Mr. Spanos testified that Mr. Andrews only provided an analysis based on comparing the Livingston Survey to actual CPI inflation since 1991. From this analysis, he concludes that the "average forecast error is 0.6 percentage points" for this survey since 1991. Since the current 10-year median forecast is 2.26%, he subtracts 0.6 from 2.26% to get a value a 1.66%. He concludes that 1.66% is a more realistic forecast, although he proposes an escalation rate of 2.0% "to be conservative." Mr. Spanos testified that there are multiple issues with Mr. Andrews' analysis. First, he stated that the Livingston Survey is not the only support for Mr. Spanos' estimate. Second, Mr. Andrews' calculation of the forecast error is entirely the result of two periods of time. The first is from the early 1990s and the second from the late 2000s. The forecast error in the early 1990s resulted because these years followed the high inflation of the 1970s and 1980s. That is, forecasters not unreasonably expected that higher inflation to continue, but it did not. The second period is comprised of years that encompassed the Great Recession. The Great Recession resulted in very low inflation and even deflation, but was an abnormal event. Accordingly, Mr. Spanos testified, the period of time reviewed by Mr. Andrews' likely overstates any forecast error, particularly downside errors. Indeed, the last two decades have experienced low inflation by historical standards. It should be at least as likely that current forecasts would be too low rather than too high. However, he testified, Mr. Andrews only anticipates that forecasters could be estimating too high of inflation.

Mr. Spanos testified that these concepts are illustrated if we look at longer term inflation. He stated that looking at longer term inflation rates shows that there have been many years with higher inflation. As a result, he explained, simply assuming that a 2.0% inflation rate will continue into the future is not necessarily a reasonable assumption. Mr. Spanos provided data going back to 1960 and noted that the inflation that occurred over 10-year periods was greater than 2.5% in many years. Additionally, Mr. Spanos testified that while the CPI provides a good indication of changes in prices in the overall economy, it is not necessarily a good indicator of changes in decommissioning costs. A price index that serves as a better proxy for changes in decommissioning costs is the Handy Whitman construction cost index. Mr. Spanos provided a comparison of the

changes in the Handy Whitman Index for Steam Production Plant to CPI over the past 20 years; the data shows that construction costs have increased faster than CPI over this time period. Further, he stated, the data indicates that for every single long-term period ending in 1960 through 2018, the Handy Whitman index increased at an average rate that was greater than the 2.5% escalation rate he proposed. Thus, he concluded, the Handy Whitman index supports a higher escalation rate than he proposed. In summary, he testified that multiple sources support the 2.5% escalation rate he used, and, if anything, his estimate is conservative. He concluded that Mr. Andrews' estimate is, in his judgment, too low and will not fully recover the costs to retire the Company's power plants over their service lives.

Mr. Spanos next discussed the issue of contingency. He stated that Mr. Garrett and Mr. Andrews also both propose the removal of the contingency component from the decommissioning cost estimates. Mr. Spanos noted that the use of contingency has also been previously addressed by the Commission. For example, he noted the following excerpt from a NIPSCO case, in which the Commission held that the inclusion of contingency was appropriate and also noted that Commission precedent supported the inclusion of contingency:

> Mr. Selecky argued either the post-remediation value of the land in industrial condition should be an offset to the dismantlement costs or the contingency should be eliminated as a trade-off for the value of the land. Mr. Selecky did not identify the dollar value of the land after dismantlement. As a result, there is no evidence in the record to guide us in determining whether this would produce a material difference in the depreciation rates or be a reasonable trade-off for the contingency, assuming for the sake of argument it would even be proper to treat a non- depreciable asset like land as salvage. Further, we find it noteworthy that Mr. Selecky is not a licensed real estate appraiser. As a result, the record is devoid of any evidence to judge whether his proposal to equate the value of the land with the contingency is reasonable. (42356 Order at 53-54.) We also give weight to the fact that the 20% contingency factor used in the BMcD demolition cost studies is conservative compared to the 25% contingency factor we accepted in PSI Energy, Inc., Cause No. 42359, at 70-71. Also, the assumption that the sites will be remediated to industrial condition, rather than greenfield condition, is also conservative. Id. at 70. No evidence was presented that this Commission has ever used the value of land as an offset to an asset's cost of removal. In fact, Mr. Selecky did not identify to us any decision of any regulatory commission accepting his position regarding land and the contingency. Petitioner's JJS-R5; Petitioner's Ex. JJS-R6. Given that Mr. Selecky's recommendation would be such a departure from our past practice and that we have scant evidence to guide us in this exercise, we reject Mr. Selecky's proposal.

Mr. Kopp also provided rebuttal testimony regarding the appropriateness of including contingency in the decommissioning study for this proceeding. Specifically, he noted that the application of contingency is a common and prudent practice in the construction industry, and it is included in order to recognize the probability of increases in cost over the base estimated costs due to unknowns. Mr. Kopp explained that some of these costs cannot be determined until the dismantlement process has begun. Therefore, contingency is applied on top of the base estimated cost in order to formulate a reasonable estimate to dismantle the generating facilities.

Mr. Kopp explained that the 20% contingency amount he included in this decommissioning study is the same percentage as the contingencies he has prepared for decommissioning studies for other electric utilities that have been approved by regulatory agencies in other states.

Contingency is added to account for unknown, but reasonably expected to be incurred costs. These costs are related to weather delays, unknown environmental contamination, discovering equipment or materials not shown on drawings, additional dewatering requirements and changes in the manner the work is performed.

Mr. Kopp responded to Mr. Andrews' contention that DEI has no legal obligation to demolish its retired power plants by expanding on the explanation in his direct testimony of the necessity for demolition of power plants. He explained that although there may be no legal obligation to demolish a power plant, there are legal obligations to comply with environmental regulations. He also explained that the alternative to full demolition is to retire a plant in place. He explained that retiring a plant in place requires carrying costs that are necessary to maintain a safe site and be in compliance with applicable regulations. Mr. Kopp stated in his experience he has found that retiring in place is not a cost-effective long-term scenario when the carrying costs are taken into account.

Mr. Kopp concluded by stating that excluding these reasonably expected to be incurred costs by not including contingency costs will not give the full picture of decommissioning costs. If these costs are not accounted for in planning for future decommissioning, the costs will be passed on from the current ratepayers to future ratepayers.

Company witness, Mr. Mosley, provided rebuttal testimony addressing the inclusion of inventory in the decommissioning study. He explained Duke Energy has experience managing generating stations as they near the end of their useful lives and consistently attempts to deplete remaining inventory and/or transfer it to another generating facility where it can still be used. However, there are risks associated with premature depletion of inventory due to limited availability and long lead time of parts required to sustain reliable operation that must be considered.

In addition, Mr. Mosley stated that there are often limitations on the compatibility of inventoried parts that could be transferred from one station to another. For example, most spare parts that fit Gallagher's coal mills do not fit the mills at Gibson or Cayuga. Most steam turbine and generator parts are model specific and cannot be used at other facilities. Combustion turbine and generator parts have some capability with like-in-kind models, but circa-2000 machine parts would rarely be compatible with future gas-fired generators.

Mr. Mosley also explained that as the existing coal and gas-fired generators are retired, there are increasingly less remaining opportunities to transfer useful inventory. Therefore, reflecting leftover inventory in the cost of decommissioning is a reasonable means of addressing a future where increasing numbers of generating units are retired and replaced.

Mr. Kopp also provided rebuttal testimony regarding the inclusion of obsolete inventory remaining at the end of a generating station's useful life in this decommissioning study. He explained that disposing of remaining inventory is just as much a part of decommissioning a station as disposing of other equipment and plant components. It must be safely sold, moved to other locations, or scrapped. In fact, the warehouse or other portions of the plant where the supplies are held cannot be demolished until the inventory is safely removed.

Mr. Kopp then rebutted Mr. Andrews' contention that if this equipment is not placed in service, then it is not used and useful. Mr. Kopp stated that Andrews' argument ignores that inventory is required to be maintained in order to achieve appropriate reliability of the plants and to facilitate routine maintenance on the facilities. Furthermore, Mr. Kopp stated that it is necessary to purchase this inventory before it is needed, in order to reduce outage time, and even if it is not installed, it has still served a useful purpose in maintaining plant reliability.

Mr. Kopp's testimony also stated that the value of this inventory that cannot be reclaimed through sale or scrap of the inventory is directly related to the retirement of the facility. If the facility were to remain in service, this inventory would retain its value to the plant. However, when the plant is retired, the value of this inventory is reduced to the value it has as salvage or scrap. This reduction in value of the inventory is a cost associated with net salvage rates associated with retirement and demolition of the facility. In response to Mr. Garrett's contention that Mr. Kopp had never proposed including inventory in decommissioning studies before, Mr. Kopp also cited to approval of the inclusion of inventory in a decommissioning study prepared for FPL by the Florida Public Service Commission.

Company witness Ms. Douglas also responded to the recommendations of Mr. Garrett and Mr. Andrews regarding the inclusion of end-of-life generating plant M&S inventory costs as a cost of decommissioning and dismantlement. She explained that unlike other plant, property and equipment used at a generating station, which is depreciated over its useful life and the cost of which is recovered from customers served by and benefitting from the electricity generated at the station during its useful life, under the current ratemaking construct, recovery of the cost of M&S maintained in inventory occurs only once the parts and equipment in inventory are installed in the plant. She explained that when base rates are set, under traditional Indiana ratemaking practice, inventory is included in rate base for return purposes, but is not depreciated over its life like plant. Further, the current construct assumes the M&S inventory can be used up before retirement occurs and whatever amount is left can be reused elsewhere or sold, with no current ratemaking means for recovering the cost of the remaining end-of-life inventory from the customers for whose benefit the inventory held for reliability purposes at the station was maintained. As also discussed in the rebuttal testimony of Company witness Ms. Melissa B. Abernathy, without assurance of regulatory recovery of any remaining inventory costs that have now become obsolete due to the retirement, the Company must write the inventory off as an additional, one-time expense. Ms. Douglas further

explained that the Company's proposal is reasonable because it enables the forecasted costs of the end-of-life M&S inventory to be recovered in a rational and systematic way over the remaining life of the plant from the customers who are being served by the plant and benefitting from the reliability that the inventory brings to the plant. Ms. Douglas opined that this approach is a fair and balanced way to address this issue to prevent large negative financial impacts at a plant's end of life for companies who have purchased and managed their M&S reasonably for the benefit of customers. Ms. Douglas noted that the rebuttal testimony of Company witness Mr. John Sullivan addresses the negative impacts on credit quality and financing costs that may result from write-offs such as this. Ms. Douglas concluded by noting that an alternative to recovery over the life of the plant via decommissioning costs would be the pre-approval by the Commission of the use of a regulatory asset at the end of the plant's life, with the remaining value to be recovered from customers over time in a future rate case.

(1) Commission Discussion and Findings. The depreciation-related issues in this case relate to: (1) the ELG versus ALG methodology; (2) the appropriate calculation of terminal net salvage estimates; and (3) estimated useful lives for certain mass property accounts and coal generating units. We address each of these issues in turn.

First, with respect to the question of whether the ELG or ALG method should be used, we find the evidence presented by OUCC witness Mr. Garrett and Industrial Group witness Mr. Andrews persuasive, as both witnesses showed that the ELG method results in unreasonably high depreciation rates. ALG depreciation rates result in systematical and rational cost recovery with near term customer rate relief and full cost recovery of utility investments. While we have determined in the past that the ELG methodology was appropriate and acknowledge the weight given to precedent in many prior decisions, we always evaluate each case as it comes before us and do not need to approve the same methodology based on prior decisions, especially in light of a changed landscape. The use of ELG in a higher than average investment cycle has the effect of unnecessarily increasing the near term depreciation expense as compared to the use of ALG. A review and comparison of Mr. Andrew's exhibits reflecting only the ALG verses the ELG modifications applied to Mr. Spanos' results indicate that the impact of the methodology change on a percentage basis is markedly more significant for the distribution and transmission components than the production, or generation, component. This evidence is not surprising given the increased investment cycle in these categories as highlighted by the relatively recent statutory support for such investment codified at Indiana Code ch. 8-1-39. A changed and encouraged investment cycle is a material landscape change through which we consider our previous proclamations on methodology. Furthermore, the consideration of service affordability in the near term provides sufficient weight to temper our historical preference for ELG. Again, a recently enacted statute, Indiana Code § 8-1-2-0.5, directing the commission to consider "all practical means and measures" to balance necessary investment with service affordability enhances the regulatory landscape. In response to a Docket Entry question DEI confirmed that it had not identified investments that would not be recovered with the ALG methodology as described. Therefore, we find that the application of ALG serves as a reasonable regulatory mechanism to provide rate impact moderation while not limiting DEI's reasonable recovery of its investment.

With regard to the issues surrounding the calculation of terminal net salvage estimates, we note that no party has proposed depreciation rates without terminal net salvage estimates, and,

accordingly, no party appears to disagree with the concept of including terminal net salvage in depreciation rates. Instead, the differences are related to components of the estimated costs that are included. Based on the evidence presented in this case, we find that Mr. Spanos' 2.5% inflation estimate is more realistic and should be used. Mr. Spanos supported his estimate with CPI data going back to the 1960s, as well as more relevant Handy-Whitman index data, while Mr. Andrews' supported his inflation estimate with arguably selective time periods that are not representative of future conditions.

Next we address the parties' contention that contingency be removed from the decommissioning study. We disagree with the parties that the circumstances here warrant such removal. Commission precedent supports the inclusion of contingency and we find it reasonable and appropriate again here. Similar to our previous holdings, we give weight to the fact that the 20% contingency factor used in the demolition cost studies is conservative compared to the 25% contingency factor we approved in the Company's most recent rate case. Furthermore, the assumption that the sites will be remediated to industrial condition, rather than greenfield condition, is also conservative. We therefore decline to depart from our previous practice.

Regarding the parties' arguments concerning inclusion of the cost to address end-of-life inventory at retired generating plants, these type of inventory costs are not typically included as part of decommissioning cost estimates. Normally any unrecovered amount would be expensed at the time of retirement. In rebuttal, Ms. Douglas suggested an alternative in which the Commission pre-approves a regulatory asset at end of life rather than a write-off. As presented in the Industrial Group's February 6 filing this alternative would materially lower the impact of Duke Energy Indiana's rate request. In addition, the alternative affords DEI an opportunity to undertake any and all reasonable actions to minimize the end-of-life inventories as any station retirement draws nearer. Thus, we approve the use of a regulatory asset at the end of life with the understanding that any recoverable amount will be subject to a review of actions taken in advance of any associated retirement.

Based on and incorporating the findings above, we approve for use by DEI the depreciation rates presented in the revised attachment to the Industrial Group's February 6 filing.

iii. O&M Expenses (Other than Depreciation and Taxes).

(A) Production O&M Expense. Petitioner's witness Mosley testified that DEI's 2020 power production O&M forecast is $407 million, as follows:

Category	O&M ($ in millions)
Edwardsport IGCC	$139
Coal Combustion Products	$12
New Generation Resources	$0
Power Production	$229
Other Miscellaneous Power Production	$27
Total	**$407**

ARKANSAS PUBLIC SERVICE COMMISSION

IN THE MATTER OF AN APPLICATION FOR A GENERAL CHANGE OR MODIFICATION IN CENTERPOINT ENERGY ARK.LA, A DIVISION OF CENTERPOINT ENERGY RESOURCES CORP'S RATES, CHARGES, AND TARIFFS

DOCKET NO. 04-121-U
ORDERNO. fb

ORDER

On November 24, 2004, CenterPoint Energy Arkla ("Arkla" or the "Company") filed an Application for approval of a general change or modification in its rates and tariffs.[1] Arkla's initial Application reflects that it was seeking a non-gas rate increase of$33,996,382 based on an overall non-gas revenue requirement of $182,525,265. Order No. 4, entered on December 16, 2004, suspended Arkla's proposed rates, charges, and tariffs pending further investigation by the Commission.

The parties to this proceeding are Arkla, the General Staff of the Arkansas Public Service Commission ("Staff'), the Attorney General of Arkansas ("AG"), Arkansas Gas Consumers ("AGC"), and the Commercial Energy Users Group ("CEUG").

Arkla filed the written testimonies of Jeffrey A. Bish, Charles J. Harder, F. Jay Cummings, Samuel C. Hadaway, Alan D. Henry, Michael TheBerge, Gerald W. Tucker, Steve Malkey, Michael J. Adams, Walter L. Fitzgerald, Michael Hamilton, and John J. Spanos. The Staff filed the written testimonies of Robert Booth, Alice D. Wright, Alisa Williams2, Don E. Martin, Gail P. Fritchman, Don Malone, L.A. Richmond, Gayle Frier, Johnny Brown, Robert H. Swaim, and Adrienne R.W. Bradley. The AG filed the written testimony of William B. Marcus.

---

[1] Arkla filed additional revisions to its Application on December 27, 2004, January 10, 2005, and January 13, 2005.
[2] On August 3, 2005, the Staff filed Notice that Jeff Hilton, Manager of Staffs Audit Section, was adopting the pre-filed testimony of Staff witness Alisa Williams.

to accept his recommendation. We also note that by the parties' agreement on the 50/50 sharing of the LTIP and our acceptance of the 50/50 sharing of the STIP, the CEO bonus is effectively being shared on a 50/50 basis between ratepayers and shareholders. (TR 89-90.) As a result, AG witness Marcus' recommendation regarding the CEO bonus is resolved, and a separate adjustment is not needed. In summary, an adjustment to payroll expense of $530,874 is found appropriate in this proceeding. This reflects Staffs adjustment to disallow 50 percent of STIP expense.

Depreciation - Rates {IS-48 Depreciation Expense)

In its Application, Arkla proposed to continue to utilize the depreciation rates approved in Arkla's prior rate case and elected not to present a new depreciation study in this proceeding. (T. 85) Because of concerns which were raised in that rate case (Docket No. 01-243-U) with regard to net negative salvage, Staff witness Freier prepared a depreciation study and has proposed new depreciation rates. Based on the findings of her study, Ms. Freier recommended that the Company's proposal to adopt the currently authorized depreciation rates be rejected. Adoption of Staff witness Freier's recommended depreciation rates will result in a composite depreciation rate of approximately 3.80 percent compared to the current composite rate of approximately 5.42 percent. (T. 2007-2009)

According to Ms. Freier, the primary factor causing the difference between her proposed depreciation rates and the current rates relates to net negative salvage for the mains and services accounts. The current depreciation rates for mains and services are based on negative net salvage factors of -115 percent and -275 percent, respectively. (T. 2012-2013) Based on her

analysis, Ms. Freier proposed negative net salvage allowances of -70 percent for Mains and -115 percent for services. (T. 2032)

The salvage ratios underlying Arkla's current depreciation rate are based on the ratio of the cost of removal net of any gross salvage realized compared to the original cost of the assets retired and removed from service. Staff witness Freier notes that this has the effect of not stating retirement amounts and the negative net salvage amounts in comparable dollars because of the historical inflation which has taken place from installation to removal. According to Ms. Freier, the failure to restate historical original costs on the same basis as retirements "interjects considerable historical inflation differences into the calculation and significantly overstates the appropriate net salvage [and] the depreciation rates ...." (T. 2013) Accordingly, Ms. Freier developed her negative net salvage ratios and, in tum, her depreciation rates by restating retirements, gross salvage and cost of removal on a constant price level. (Id., p. 10.)

In addition to developing revised depreciation rates, Staff witness Freier also made several other recommendations with regard to depreciation expense. These recommendations deal with various data retention and recordkeeping issues as set forth on pages 16-18 of her Prepared Testimony. Ms. Freier also identified six accounts that are fully recovered or overrecovered including: Other Structures-Distribution; Cast Iron Mains; Other Structures-Levy PH (call center); Structures & Improvements-Services; Data Processing Equipment-Misc.; and Other Equipment-Communications Equipment-Mtr. She recommended that depreciation accruals cease on these and any other accounts where the reserve ratio equals 100 percent plus or minus any applicable net salvage. (T. 2032)

In his rebuttal testimony, Arkla witness Harder argued that Ms. Freier's proposed depreciation rates significantly understate the appropriate allowance for depreciation expense. Mr. Harder indicated that Arkla did not propose to adjust its current depreciation rates in order to narrow the issues in the instant proceeding. However, in response to Ms. Freier's proposals, Arkla submitted its own new depreciation study, sponsored by Mr. John Spanos.[6] (T. 170)

In his study, Mr. Spanos took exception to Ms. Freier's net salvage calculations. He argued that the Commission should follow the traditional method of calculating net salvage, as it has in the past. He noted that the traditional approach (comparing net salvage to original cost of the retired plant) collects net salvage ratably over the life of the plant, from the customers served by that plant. Mr. Spanos claimed this approach is both equitable and consistent with sound ratemaking principles. In contrast, he contended Staff witness Freier's approach fails to recover the total loss in-service value (depreciation plus net salvage) over the life of the asset. Mr. Spanos testified that by excluding inflation, Ms. Freier's proposal will delay recovery of full service value and create intergenerational inequities. (T. 370-371, 383-384)

In addition to responding to Staff witness Freier with regard to net salvage, Arkla witness Spanos also presented a new depreciation study to demonstrate that Ms. Freier's proposed depreciation rates were too low. As part of this study, Mr. Spanos developed new estimates of service lives and salvage percentages. In addition, the depreciation rates which he developed were based on converting from average life group ("ALG") to equal life group ("ELG") procedure.

---

[6] In our Order No. 14 in this docket dated August 4, 2005, we ruled that this study was proper rebuttal, but could not be used to amend the Company's application to seek a higher depreciation allowance.

In her Surrebuttal Testimony, Ms. Freier argued that Mr. Spanos' proposal should be rejected. She noted that the composite depreciation rate proposal by Mr. Spanos would be 7.42 percent compared to the composite of 5.42 percent based on Arkla's current depreciation rates and her proposed composite of 3.80 percent. She compared this composite with the composite rates for other LDCs regulated by this Commission and concluded that the new depreciation rates proposed by Arkla are excessive. (T. 2045-2047)

In response to Mr. Spanos' criticisms of her proposal to restate the salvage allowance on a constant dollar basis, Ms. Freier noted that her treatment is fundamentally consistent with the treatment of negative salvage used in Entergy Arkansas, Inc.'s[7] nuclear decommissioning calculations. Those calculations provide for the recovery of decommissioning costs over the life of the plant in levelized, not constant, dollars. (T. 2057)

Ms. Freier also responded to Mr. Spanos' proposal to utilize the ELG procedure for calculating depreciation rates by noting that this procedure was inconsistent with Commission practice. Ms. Freier explained that both ALG and ELG are systematic and rational frameworks for calculating depreciation accruals over the life of the asset. However, ELG would cause depreciation rates to be higher in the early years of an asset's life. Moreover, because of the increasing cost of plant over time, she argued that depreciation expense will always be higher under ELG than under ALG. (T. 2047- 2050) This is particularly important for a utility such as Arkla that is adding new plant as a result of its main replacement program (TR 273.)

In his Sur-Surrebuttal testimony, Mr. Spanos argued that comparisons of composite depreciation rates are not meaningful without more specific information. (T. 394) He also

claimed that the higher depreciation accruals under ELG compared to ALG are offset by future return on rate base savings. (T. 395-397) In addition, Mr. Spanos noted that Staff witness Freier's adjustment to levelize salvage cost recovery will result in the underrecovery of future net salvage costs. He further argued that, because the accruals for the recovery of original cost are not stated in levelized dollars, Ms. Freier's procedure to restate salvage costs creates an inconsistency between the recovery of the original cost of the plant and salvage costs. Finally, Mr. Spanos noted that ratepayers receive a rate base deduction for the amounts they provide for the recovery of future net salvage because those amounts are included in the balance of accumulated depreciation until the net negative salvage costs are incurred. (T. 397-399)

With regard to the proposal to adopt ELG depreciation, we agree with the criticisms raised by Ms. Freier. As we have noted in the past, ELG will continue to result in higher depreciation rates and expense as long as a utility's plant continues to grow. The higher accruals in the early years of an asset's life exacerbate the problem that capital costs are already front end loaded because of the higher return on investment in the early years of that asset's life. Both ALG and ELG provide for full recovery of the investment in an asset over its life when coupled with remaining life depreciation. We conclude that ALG better balances the interests of shareholders and ratepayers and reject Arkla's argument that the ELG procedure is appropriate to establish depreciation rates.

We are also very concerned about the high level of negative net salvage associated with Arkla's mains and services. This issue arose previously in Arkla Docket No. 01-243-U in which Arkla was directed to perform a removal cost study. However, according to Staff witness Freier,

---

[7] Entergy Arkansas, Inc. is a retail public electric distribution utility regulated by this Commission.

that study did not explain why Arkla's net salvage values are so far out of the norm. As a result, Ms. Freier proposed an inflation adjustment as a means of addressing this issue. (T. 271) Ms. Freier's methodology for calculating net salvage on a constant dollar basis represents a departure from the historical procedure we have followed to set Arkla's depreciation rates. However, we note that the net salvage allowances recommended by Ms. Freier of -70 percent for Mains and -115 percent for Services are still significant and are in line with experience elsewhere as cited by Mr. Spanos. (T. 218-220) Moreover, the use of remaining life depreciation will ensure that Arkla will fully recover its original investment and the actual amount it incurs for negative net salvage. Accordingly, we adopt Staffs proposed net salvage values and, in tum, Staffs depreciation rates as a means of capping net salvage cost.

We agree with Ms. Freier's recommendation that depreciation should cease on all plant accounts where depreciation accruals are at or above 100 percent adjusted for net salvage. Arkla has accepted the Ms. Freier's recommendation that Arkla be required to apply the depreciation rates approved by this Commission to each of its accounts whether is direct-assigned allocated, general or shared, with the condition that it be allowed to use fixed life depreciation for certain general plant assets. (T. 978-979) Given the low dollar value of these assets, this is reasonable and is accepted. Finally, we hereby require Arkla to implement the new reporting requirements proposed by Ms. Freier. We are concerned about the issues that have arisen with regard to plant accounting under Arkla's new SAP accounting system ("SAP") and will take this opportunity to ensure that they are corrected. Accordingly, Arkla is directed to:

- Retain both electronically and in hard-copy format, the data that was ultimately provided in the responses to Staff data requests AUD-057 and AUD-058, to be used in future depreciation studies, as well as to keep the same level of data going forward.

  Perform an analysis and produce a report that 1) identifies each and every missing retirement for all accounts other than mains and services since **SAP** was implemented; 2) describes the processes followed in identifying and reporting the missing data; and 3) provides any source documents that were relied upon. This report should be filed with the Commission by March 31, 2006.

- File data annually that would support a depreciation study, including by activity year, plant additions by vintage, retirements by vintage, salvage and cost of removal by individual plant account, for the preceding calendar year. The first submission should be filed by March 31, 2006, and include the two years of data for 2004 and 2005, and thereafter include one year of data.

IS-65 Test Year Audit Sampling

For purposes of this proceeding, Staff and Arkla agreed to utilize sampling to evaluate the amount of costs included in Arkla's test year that are not properly recovered from ratepayers. At pages 22 through 25 of her Prepared Testimony, Staff witness Fritchman described the problems that Staff encountered in obtaining the necessary sampling and conducting its audit in a timely manner. Because of these difficulties, Staff was unable to complete its review prior to its direct testimony. Accordingly, Ms. Fritchman proposed to eliminate $1,580,576 from test year

Surrebuttal Testimony of Brian C. Andrews

Q PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A Brian C. Andrews. My business address is 16690 Swingley Ridge Road, Suite 140, Chesterfield, MO 63017.

Q ARE YOU THE SAME BRIAN C. ANDREWS WHO PREVIOUSLY FILED DIRECT TESTIMONY IN THIS PROCEEDING ON BEHALF OF THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE ("OCA")?

A Yes, I am.

Q WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of National Fuel Gas Distribution Corporation's ("National Fuel" or the "Company") witness John Spanos (Statement No. 8-R) and to reiterate my support for, and recommendation of, the use of the Average Life Group ("ALG") procedure to calculate depreciation rates for National Fuel.

My silence in regard to any issue should not be construed as an endorsement of or acquiescence to any parties' positions raised in their direct or rebuttal testimonies.

SUMMARY OF RECOMMENDATIONS

Q PLEASE SUMMARIZE YOUR CONCLUSIONS AND RECOMMENDATIONS.

A My conclusions and recommendations are as follows:

1. I continue to recommend that the depreciation rates for National Fuel be calculated using the Average Life Group ("ALG") procedure. The ALG procedure is the most commonly used depreciation procedure in the country and provides National Fuel with full recovery of its investment, while resulting in more reasonable depreciation rates.

2. Mr. Spanos concedes that both the ALG and Equal Life Group ("ELG") procedures are designed to recover the total service value of an asset over the asset's service life. Mr. Spanos further concedes that if the Company were to switch from ELG to ALG there would be a short-term benefit to current customers.[1] Both procedures ensure full cost recovery for the utility; the only question is how the timing of that cost recovery is allocated among generations of customers.

3. The precision associated with the ELG procedure only exists in theory. The survivor curve selected by National Fuel for its largest account, Account 376.1 (Mains, Excluding Cathodic Protection), does not closely match the Company's actual retirement experience, which means the ELG procedure's allocation of cost among equal life groups will not reflect reality.

4. The record in this proceeding is materially different from the record before the Commission in Docket No. R-2025-3053499 (Columbia Gas) in important respects, and the evidence and arguments presented here provide additional support for the adoption of ALG that was not before the Commission in that proceeding.

5. Mr. Spanos's own analysis in Exhibit No. JJS-R1 demonstrates that the ALG procedure produces lower revenue requirements for National Fuel's customers through approximately 2038. When the time value of money is considered, the purported long-run advantage of ELG is significantly overstated, because a dollar of savings today has substantially greater purchasing power than a dollar of savings in the 2040s.

6. Mr. Spanos's comparable utility exhibit (Exhibit No. JJS-R2) provides no meaningful basis for comparison. The exhibit lists 16 anonymous companies with

[1] Spanos Rebuttal at page 16, lines 8-10.

no information regarding their depreciation procedures, service lives, net salvage rates, average age of plant, or plant-to-reserve ratios, despite Mr. Spanos testifying that all of these factors must be considered when comparing depreciation rates across utilities.

7. National Fuel is in a higher-than-average investment cycle, a fact that Mr. Spanos concedes.[2] The use of the ALG procedure can mitigate the rate increases associated with National Fuel's accelerated investment without any adverse impact on the utility's ability to recover its prudent investments.

8. The PUC should approve the depreciation rates that are presented in Exhibit BCA-2.

RESPONSE TO THE REBUTTAL TESTIMONY OF JOHN J. SPANOS

Q MR. SPANOS CHARACTERIZES YOUR TESTIMONY AS AN "EXCESSIVE REDUCTION OF DEPRECIATION EXPENSE" AND CLAIMS THAT YOU "CLEARLY IGNORE ALL OF THE COMPONENTS OF HOW DEPRECIATION RATES ARE ESTABLISHED IN PENNSYLVANIA."[3] PLEASE RESPOND.

A I disagree with Mr. Spanos's characterization. In preparing my direct testimony, I reviewed the depreciation study that Mr. Spanos prepared for National Fuel, including the service life estimates, the net salvage parameters, and the depreciation technique. After reviewing these parameters, I determined that reasonable adjustments to service lives and net salvage rates were not warranted, and I accepted all of the Company's proposed life and net salvage parameters. The only change I recommended is the use of the ALG grouping procedure rather than the ELG grouping procedure.

Mr. Spanos's claim that I ignored the components of depreciation rate development is inaccurate. Choosing not to propose changes to specific parameters

[2]Spanos Rebuttal at page 25, line 3.
[3]Spanos Rebuttal at page 2, lines 16-20.

after reviewing them is not the same as ignoring them. I explicitly discussed Pennsylvania's unique treatment of net salvage as a five-year amortization of actual costs of removal rather than inclusion in depreciation rates, and I explained why this treatment causes Pennsylvania depreciation rates to appear lower than rates in other jurisdictions.[4] I also explicitly proposed the use of the remaining life technique.[5] Mr. Spanos's assertion that I ignored these factors is simply not supported by the record.

Q MR. SPANOS STATES ON PAGE 23 THAT YOU DO NOT CONSIDER "HOW CLOSE THE THEORETICAL RESERVE TO BOOK RESERVE VARIANCE IS." PLEASE RESPOND.

A The theoretical reserve to book reserve variance is a measure of how closely the accumulated depreciation on the utility's books matches what would have been accumulated if the currently proposed depreciation parameters had been in place throughout the history of the property. A small variance suggests that the parameters in place over time have produced a reasonable pattern of cost recovery. I do not dispute that observation. However, the theoretical reserve to book reserve variance reflects the cumulative effect of all depreciation parameters, including the ELG procedure, that have been in place over the past forty years. The fact that the variance is small when measured against parameters that include ELG does not demonstrate that ELG is the correct procedure going forward; it demonstrates that the recovery pattern to date has been internally consistent with the parameters that were in place. The question before

[4]Direct Testimony of Brian C. Andrews at pages 36-37.
[5]Direct Testimony of Brian C. Andrews, Exhibit BCA-2.

the Commission is whether those parameters, specifically the ELG procedure, should continue to be used, and the variance does not answer that question.

Q MR. SPANOS PROVIDES CITATIONS TO AUTHORITATIVE DEPRECIATION TEXTS BY ROBLEY WINFREY AND WOLF & FITCH, WHICH REFER TO THE ELG PROCEDURE AS "THE ONLY MATHEMATICALLY CORRECT PROCEDURE" AND STATE THAT ELG IS "GENERALLY CONSIDERED TO BETTER MATCH THE CONSUMPTION OF CAPITAL WITH SERVICE PROVIDED" THAN THE ALG PROCEDURE.[6] PLEASE RESPOND.

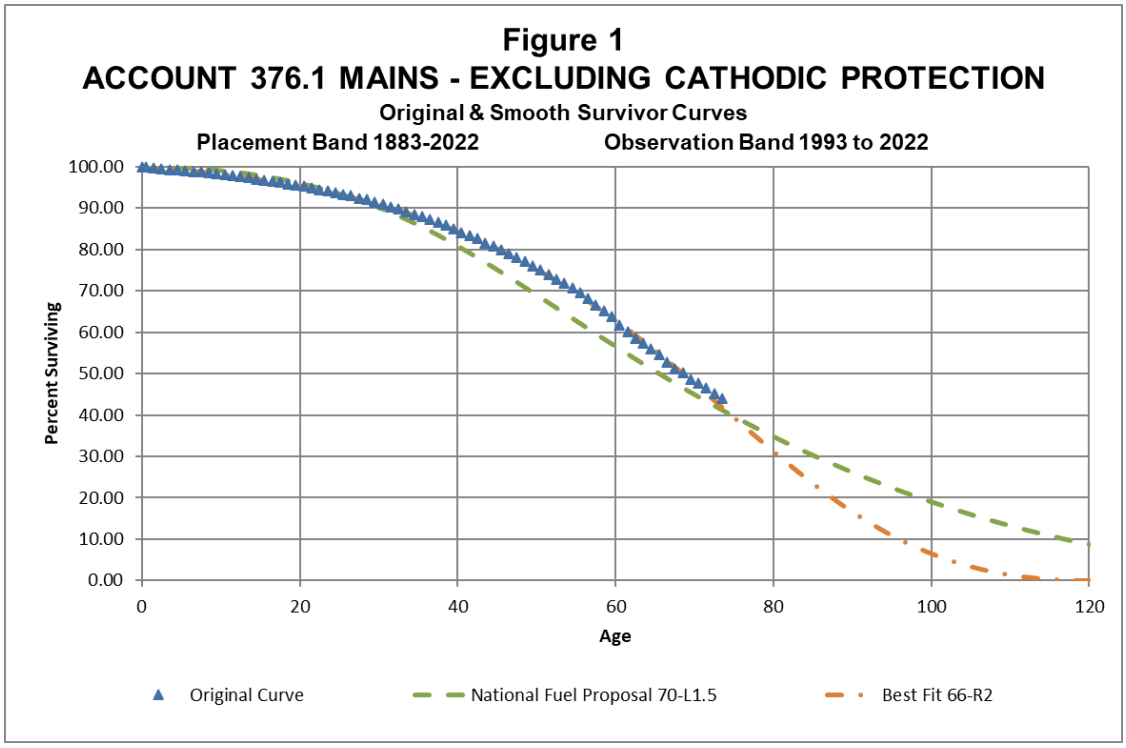
A I do not disagree that these statements are made within these authoritative texts. I acknowledged these same citations in my direct testimony.[7] While the ELG method may be more precise mathematically, this precision only exists in theory, as it is extremely sensitive to the survivor curve that is used to determine the depreciation rates. The depreciation expense calculated under ELG is accurate if and only if the utility property retires in exactly the manner dictated by the survivor curves used to calculate the ELG rates. This precision does not exist in real life.

To illustrate this point, I have examined the survivor curve that National Fuel has selected for Account 376.1 (Mains, Excluding Cathodic Protection), which is the largest single sub-account in the depreciation study. Account 376.1 represents approximately $426.7 million, or 45%, of National Fuel's $955.9 million gas

[6]Spanos Rebuttal at page 4, lines 9-14.
[7]Direct Testimony of Brian C. Andrews at page 29, lines 3-6.

plant-in-service, and it represents 32% of National Fuel's proposed 2027 gas plant depreciation expense.[8] National Fuel proposes the 70-L1.5 survivor curve for this account.

In Figure 1, I present National Fuel's original retirement data for Account 376.1 compared to the proposed 70-L1.5 survivor curve.



Q WHAT IS THE SIGNIFICANCE OF THIS FIGURE?

A Mr. Spanos claims that the ELG procedure is more accurate, but this is true if and only if property retires exactly as dictated by the survivor curve. Figure 1 demonstrates that the 70-L1.5 survivor curve that National Fuel proposes for Account 376.1 does not closely match the Company's actual retirement experience, particularly in the middle

[8]Direct Testimony of Brian C. Andrews at page 26, line 20 – page 27, line 1.

section of the curve. The original data points diverge from the 70-L1.5 curve notably in the range of approximately 30 to 80 years of age, where the actual data consistently lies above the proposed curve, indicating that assets are retiring somewhat slower than the 70-L1.5 curve predicts.

In discussing how an analyst should approach selecting a survivor curve, Wolf & Fitch state in *Depreciation Systems*, "Often the middle section of the curve (that section ranging from approximately 80% to 20% surviving) is given more weight than the first and last sections. This middle section is relatively straight and is the portion of the curve that often best characterizes the survivor curve."[9] The 70-L1.5 does not closely track the actual retirement data in this critical middle section.

I would note that I am not challenging the service life selection made by Mr. Spanos. The best fit curve, a 66-R2, has a shorter average service life, and I have accepted National Fuel's proposed life parameters. The point I am making is that the mathematical precision that is the entire theoretical justification for the ELG procedure can only be achieved if assets retire in the exact manner indicated by the survivor curve. Figure 1 demonstrates that this precision does not exist for National Fuel's largest account, which means the ELG procedure's allocation of cost among equal life groups will not match reality for nearly half of National Fuel's gas plant-in-service.

[9]Frank K. Wolf and W. Chester Fitch, *Depreciation Systems* (Ames, IA: Iowa State University Press, 1994), p. 46-47.

Q MR. SPANOS STATES ON PAGE 8 THAT "THE ELG PROCEDURE RECOGNIZES THE REALITY OF DISPERSION." PLEASE RESPOND.

A The ALG procedure also recognizes the reality of dispersion. The entire purpose of using Iowa survivor curves in the ALG procedure is to model the dispersion pattern of property retirements within an account. Both procedures use the same survivor curves, and both procedures recognize that assets within an account will retire at ages ranging from well before the average service life to well after it. The difference between the procedures is how they handle that dispersion: the ELG procedure attempts to assign specific depreciation rates to specific life groups within the curve, while the ALG procedure uses the average of the dispersion pattern to set a single depreciation rate for the group. Mr. Spanos's suggestion that ELG is unique in recognizing dispersion is incorrect.

Q MR. SPANOS USES THE TERMS "EXPECTED LIFE," "APPROXIMATES THE RESULT," AND "ACTUAL LIVES FORECAST BY THE ESTIMATED SURVIVOR CURVE" IN DESCRIBING THE ELG PROCEDURE.[10] PLEASE COMMENT.

A Mr. Spanos's own language reveals the fundamental limitation of the ELG procedure. The lives used in the ELG calculation are not actual lives; they are expected lives, estimated lives, and forecasted lives, all of which are derived from the selected survivor curve. There is no guarantee that the actual life of each asset will match the life forecast by the survivor curve. As Mr. Spanos himself states on page 18 of his rebuttal

[10]Spanos Rebuttal at pages 9-10.

testimony, "in real-world operations, circumstances can change such that assets are retired earlier than expected." This acknowledgment undermines the claimed precision of the ELG procedure: if circumstances can and do change such that assets are retired at times different than expected, then the precise allocation of cost among equal life groups that the ELG procedure relies on will not match the actual pattern of retirements. The ALG procedure is better equipped to handle this reality because it depreciates all assets based on the average life of the group, rather than attempting to assign individual costs to individual life groups based on forecasts that Mr. Spanos himself acknowledges may not materialize.

Q HAS MR. SPANOS CONFIRMED THAT BOTH THE ALG AND ELG PROCEDURES RECOVER THE TOTAL SERVICE VALUE OF AN ASSET OVER ITS SERVICE LIFE?

A Yes. On page 19, lines 17-20 of his rebuttal testimony, Mr. Spanos states, "Both procedures are designed to recover the total service value of an asset over the asset's service life." This is a critically important concession. It confirms that the ALG procedure I have recommended will fully recover National Fuel's prudent investments over the life of its assets. The utility's financial integrity is not at risk under the ALG procedure; the only difference between the two procedures is the timing of cost recovery, not the total amount recovered.

Q HAS MR. SPANOS CONFIRMED THAT SWITCHING FROM ELG TO ALG WOULD PROVIDE A BENEFIT TO CURRENT CUSTOMERS?

A Yes. On page 16, lines 8-10 of his rebuttal testimony, Mr. Spanos states, "It is correct to assume that if the Company were to switch from ELG to ALG there would be a short-term benefit to current customers." When paired with Mr. Spanos's concession that both procedures recover the total service value of an asset, the conclusion is straightforward: both procedures ensure that the utility recovers its full investment, but the ALG procedure does so in a manner that provides immediate, measurable relief to customers who are facing rate increases driven by an accelerated investment cycle. In a period of affordability concern and elevated infrastructure investment, the procedure that provides near-term relief while still ensuring full cost recovery is the more reasonable choice for establishing depreciation rates.

Q MR. SPANOS CITES THE COMMISSION'S OPINION AND ORDER IN DOCKET NO. R-2025-3053499, IN WHICH THE COMMISSION REJECTED THE OCA'S PROPOSAL TO ADOPT THE ALG PROCEDURE FOR COLUMBIA GAS OF PENNSYLVANIA.[11] PLEASE RESPOND.

A I am aware of the Commission's decision in the Columbia Gas proceeding, and I have reviewed it carefully. While I respect the Commission's decision in that proceeding, the record before the Commission in this case is materially different from the record in the Columbia Gas case in several important respects, and the evidence and arguments

[11]Spanos Rebuttal at page 13.

presented here provide additional support for the adoption of ALG that was not before the Commission in that proceeding.

Q PLEASE EXPLAIN HOW THE RECORD IN THIS PROCEEDING DIFFERS FROM THE COLUMBIA GAS PROCEEDING.

A The Commission's decision in the Columbia Gas proceeding was influenced by a significant methodological criticism of the OCA's depreciation witness in that case, Mr. Garrett. Specifically, the Commission noted that Mr. Spanos's "main criticism was that Mr. Garrett applied the ASL depreciation procedure but continued to use book reserve balances developed under the ELG procedure."[12] The Commission found this methodological inconsistency to be a factor in its decision to reject the OCA's proposal.

That criticism does not apply to my analysis in this proceeding. In my direct testimony, I presented a reserve bringforward of accumulated depreciation from September 30, 2025 to October 31, 2027 based on the ALG procedure, which I provided in Exhibit BCA-1.[13] My recommended annual depreciation expense and accumulated depreciation are calculated on a reasonably consistent basis, which is required under Pennsylvania law.[14] Mr. Spanos does not challenge my reserve bringforward or identify any methodological inconsistency in my analysis in this proceeding, because none exists. This is a material difference from the Columbia Gas record.

In addition, this proceeding presents arguments and evidence that were not before the Commission in the Columbia Gas case. These include the time value of

[12]Pa. PUC v. Columbia Gas of Pennsylvania, Inc., Docket No. R-2025-3053499, Opinion and Order at pages 110-111.
[13]Direct Testimony of Brian C. Andrews at page 35, lines 2-5.
[14]Pa. Power & Light Co. v. Pa. Pub. Util. Com., 311 A.2d 151, 158 (Pa. Cmwlth. 1973).

money analysis I present later in this testimony, the specific demonstration that National Fuel's selected survivor curve for its largest account does not closely match the Company's actual retirement experience, and the identification of specific concessions by Mr. Spanos that both procedures recover the full service value of assets and that switching to ALG would provide a short-term benefit to current customers. These considerations provide the Commission with additional support for the adoption of the ALG procedure that the record in the Columbia Gas proceeding did not contain.

Q THE COLUMBIA GAS ORDER STATES THAT THE BENEFIT OF ALG IS "A RESULT OF THE PROPOSED CHANGE IN PROCEDURE" RATHER THAN THE PROCEDURE ITSELF.[15] PLEASE RESPOND.

A The fact that the customer benefit comes from changing the procedure does not diminish its value to customers. Every time the Commission adjusts a depreciation parameter, whether it is a service life, a net salvage rate, or a grouping procedure, the resulting impact on rates is the product of the change. That is inherent in any regulatory adjustment, and it does not mean the change is unjustified. The relevant question is whether the change produces more reasonable rates going forward, and for the reasons I have set forth in my direct testimony and in this surrebuttal testimony, the ALG procedure produces more reasonable depreciation rates for National Fuel.

I would also note that the Commission's observation that ALG produces lower customer rates in the near term is fully consistent with my recommendation. Mr. Spanos

[15]Pa. PUC v. Columbia Gas of Pennsylvania, Inc., Docket No. R-2025-3053499, Opinion and Order at page 108.

concedes that both procedures recover the total service value of the asset,[16] which means the utility is made whole under either procedure. The question is which procedure better serves customers, and the answer is the procedure that provides more affordable rates during a period of accelerated investment and rising costs, while still ensuring full cost recovery for the utility.

Q MR. SPANOS ARGUES THAT HIGHER DEPRECIATION EXPENSE UNDER ELG LEADS TO HIGHER ACCUMULATED DEPRECIATION, LOWER RATE BASE, AND ULTIMATELY LOWER CUSTOMER RATES OVER TIME.[17] HAS HE PROVIDED AN ANALYSIS TO SUPPORT THIS CLAIM?

A Yes. Mr. Spanos has provided an analysis in Exhibit No. JJS-R1, which forecasts plant and reserve balances for National Fuel through 2050 under two scenarios: one adopting the ALG procedure and the other maintaining the currently-approved ELG procedure. Mr. Spanos also provides Figure 3 on page 17 of his rebuttal testimony, which shows a comparison of estimated revenue requirements through 2050 under each scenario.

Q PLEASE COMMENT ON MR. SPANOS'S ANALYSIS.

A Mr. Spanos's own analysis demonstrates that the ALG procedure produces lower revenue requirements for National Fuel's customers through approximately 2037. This means that for approximately the next 11 years, customers would pay less under the ALG procedure than under the ELG procedure. Mr. Spanos characterizes the benefit of

[16]Spanos Rebuttal at page 19, lines 17-20.
[17]Spanos Rebuttal at pages 15-16.

ALG as "short-term," but 11 years of lower utility bills is a substantial benefit to customers who are experiencing rate increases and facing affordability concerns today.

Beyond the crossover point around 2037, Mr. Spanos projects that ALG would produce marginally higher revenue requirements than ELG. However, these long-range projections are based on speculative assumptions about plant activity, retirements, and rate of return extending 25 years into the future. The assumptions embedded in this forecast drive the result, and there is no way to verify whether those assumptions will prove accurate over a quarter-century time horizon. In contrast, the near-term benefit of the ALG procedure is real and measurable.

Q IS THERE AN ADDITIONAL CONSIDERATION THAT MR. SPANOS'S ANALYSIS DOES NOT ACCOUNT FOR?

A Yes. Mr. Spanos's revenue requirement comparison treats a dollar of savings in 2026 as equivalent to a dollar of cost in 2050, but this fails to account for the time value of money. Due to inflation, the purchasing power of a dollar erodes over time. At a 3% inflation rate, which is consistent with recent experience, the purchasing power of a dollar declines as follows:

- By 2030 (4 years from now), a dollar will have the purchasing power of approximately $0.89 in today's dollars.
- By 2035 (9 years from now), approximately $0.77.
- By 2037 (11 years from now, the approximate crossover point in Mr. Spanos's analysis), approximately $0.72.
- By 2045 (19 years from now), approximately $0.57.
- By 2050 (24 years from now, the end of Mr. Spanos's projection), approximately $0.49.

The ALG procedure produces lower revenue requirements during the period when customers' dollars have the greatest purchasing power, and the higher revenue requirements that Mr. Spanos projects under ALG in later years are in dollars that are worth substantially less. By the end of Mr. Spanos's projection period, a dollar of savings would be worth less than half of what it is worth today. Savings to customers today are always more valuable than savings in the future, because the purchasing power of those future savings is diminished by inflation. Mr. Spanos's analysis does not account for this fundamental economic reality.

Q IS THERE ANYTHING ELSE YOU WOULD LIKE TO NOTE REGARDING MR. SPANOS'S REVENUE REQUIREMENT ANALYSIS?

A Yes. Mr. Spanos's analysis assumes a static regulatory environment in which depreciation rates, plant activity, and rate of return remain on a fixed trajectory through 2050. In reality, National Fuel will continue to file rate cases and depreciation studies, and depreciation rates will be updated periodically to reflect current conditions. Mr. Spanos's long-range comparison is a theoretical exercise that does not reflect how ratemaking actually works. Each time new rates are set, the accumulated depreciation balances, plant balances, and depreciation rates are all updated. The theoretical long-run disadvantage that Mr. Spanos projects under ALG assumes that no such updates occur, which is inconsistent with actual regulatory practice.

While National Fuel has filed just three rates cases over the past 20 years, I would expect that with the continued elevated level of infrastructure investment that rate case filings would be more routine going forward. It would be reasonable to assume

that National Fuel would file rate cases approximately every three years (the most recent prior case was in 2022, and the instant case was filed in 2025). With this frequency of rate case filings, depreciation rates are regularly updated to reflect current plant and reserve conditions, which further diminishes the relevance of 25-year revenue requirement projections.

Q MR. SPANOS CLAIMS THAT THE ALG PROCEDURE PRODUCES INTERGENERATIONAL INEQUITY BECAUSE CUSTOMERS PAY FOR ASSETS FROM WHICH THEY RECEIVE NO SERVICE.[18] PLEASE RESPOND.

A Mr. Spanos identifies two concepts of intergenerational equity: the inequity of customers paying for retired assets, and the inequity of uneven distribution of depreciation charges over the life of an asset. He argues that the first form is more detrimental than the second.[19]

I would note several points in response. First, the concern about customers paying for retired assets under ALG is addressed by the Remaining Life Technique, which both Mr. Spanos and I use. The Remaining Life Technique is self-correcting: any over-accumulations or under-accumulations due to the use of the average life are automatically spread over the remaining life of the account in subsequent depreciation studies. This means that the theoretical concern about stranded cost recovery under

[18]Spanos Rebuttal at pages 18-21.
[19]Spanos Rebuttal at page 18, lines 1-20.

ALG is mitigated through the regular updating of depreciation rates, which as I noted above occurs on a regular basis for National Fuel.

Second, Mr. Spanos's own testimony acknowledges that "in real-world operations, circumstances can change such that assets are retired earlier than expected."[20] This acknowledgment applies equally to the ELG procedure: if assets are retired at times different than the survivor curve predicts (which Mr. Spanos concedes will happen), then the ELG procedure's allocation of cost among equal life groups will also be incorrect, and the claimed intergenerational equity advantage of ELG does not materialize in practice.

Third, Mr. Spanos's focus on the first form of intergenerational equity (paying for retired assets) overlooks the fact that the ELG procedure creates the second form of intergenerational equity (front-loading depreciation expense). As I stated in my direct testimony, the ELG method assigns more depreciation expense to customers that take service early in the asset's service life and reduces the expense to customers toward the end of the asset's service life.[21] Mr. Spanos does not dispute this characterization. In the current environment, where National Fuel is in a higher-than-average investment cycle and the majority of its assets are relatively young (average age of 19.9 years for a company with a 70-year average service life for its largest accounts), the front-loading effect of ELG is particularly pronounced.

[20]Spanos Rebuttal at page 18, lines 8-9.
[21]Direct Testimony of Brian C. Andrews at page 3, lines 17-19.

Q MR. SPANOS HAS PROVIDED EXHIBIT NO. JJS-R2, WHICH PURPORTS TO SHOW COMPOSITE DEPRECIATION RATES OF COMPARABLE GAS DISTRIBUTION UTILITIES.[22] PLEASE RESPOND.

A Mr. Spanos has provided a list of 16 gas distribution utilities in Exhibit No. JJS-R2, identified only as "Company 01" through "Company 16," with composite depreciation rates averaging 2.73%. From this, he concludes that the composite 2.45% depreciation rate that National Fuel proposes (and the 1.96% rate that I recommend) are comparable or unreasonably low, respectively.

This exhibit provides no meaningful basis for comparison. Mr. Spanos himself testifies on page 22 of his rebuttal testimony that depreciation rates are determined by many factors, including service life, net salvage percentage, depreciation procedure and method, plant-to-reserve ratio, and age of surviving plant, and that "you must consider all of these factors when comparing to other utilities within the same state as well as those in other state jurisdictions."[23] Yet Mr. Spanos's own exhibit provides none of this information. The exhibit does not identify the utilities by name, does not state whether ELG or ALG was used, does not indicate whether net salvage is included in the composite rates, does not provide service lives, does not provide average age of plant, and does not provide plant-to-reserve ratios. Mr. Spanos has established the requirements for a valid comparison and then failed to satisfy any of them in his own exhibit.

[22]Spanos Rebuttal at pages 25-26.
[23]Spanos Rebuttal at page 22, lines 12-24.

Further, the composite rates shown in Exhibit JJS-R2 include a net salvage component for 13 of the 16 companies,[24] because Pennsylvania is unique in excluding net salvage from depreciation rates. Including net salvage increases depreciation rates. Mr. Spanos concedes this point on page 26 of his rebuttal testimony when he states that "including a net salvage accrual like other jurisdictions would significantly increase the annual depreciation rate." As I explained in my direct testimony, for gas utilities, the net salvage rate for mains can range from approximately -40% to well past -100%, meaning that for every dollar invested in mains, the utility would recover $1.40 to over $2.00 through depreciation expense in jurisdictions that include net salvage.[25] If net salvage were included in National Fuel's depreciation rates at even a moderate level, the composite rate would increase significantly and would likely exceed Mr. Spanos's "comparable" average.

For these reasons, the Commission should give Exhibit JJS-R2 no weight in its evaluation of the appropriate depreciation procedure for National Fuel.

Q MR. SPANOS ARGUES THAT THE INDIANA AND KENTUCKY DECISIONS YOU CITED IN YOUR DIRECT TESTIMONY ARE NOT APPLICABLE BECAUSE THEY INVOLVE ELECTRIC UTILITIES WITH "SIGNIFICANTLY DIFFERENT ASSETS. "[26] PLEASE RESPOND.

A Mr. Spanos's dismissal of these decisions is not well founded. The IURC's decision in the Duke Energy Indiana case explicitly addressed the relative impact of the

[24]See Exhibit BCA-1-SR for National Fuel's response to OCA 20-2.
[25]Direct Testimony of Brian C. Andrews at page 36, lines 7-9.
[26]Spanos Rebuttal at page 24, lines 3-7.

ELG-to-ALG methodology change across different asset categories and stated that "the impact of the methodology change on a percentage basis is markedly more significant for the distribution and transmission components than the production, or generation, component."[27] In other words, the IURC specifically found that the distribution infrastructure was the category of assets most affected by the choice of procedure. National Fuel's system consists entirely of gas distribution and transmission infrastructure. The IURC's reasoning is directly applicable to this proceeding.

The Kentucky PSC decision in the Duke Kentucky case addresses the general concept that under the ELG method, the "capital recovery periods are accelerated and shortened" resulting in higher depreciation rates, and the "ALG procedure is as accurate as the ELG procedure" and "smooths the data" for constant and consistent group rates. The PSC also noted the ELG procedure front-loads the depreciation expense and does not accurately match the revenues and expenses.[28] All of these discussion points are certainly applicable, as the recovery of expenses and the matching of revenues and expenses is relevant regardless of whether the utility supplies electricity or natural gas.

Further, the Arkansas PSC decision that I provided in my direct testimony as Exhibit BCA-6 involved Centerpoint Energy Arkla, a natural gas distribution utility, not an electric utility. The Arkansas PSC rejected ELG in favor of ALG for a gas distribution company, stating that "ELG will continue to result in higher depreciation rates and expense as long as a utility's plant continues to grow" and concluding that

[27]IURC Final Order in Docket No. 45253 at page 90.
[28]Kentucky PSC Final Order, Case No. 2017-00321, at page 26.

"ALG better balances the interests of shareholders and ratepayers."[29] Mr. Spanos does not address the Arkansas decision in his rebuttal testimony.

The relevance of these out-of-state decisions is not that Pennsylvania should adopt the exact depreciation parameters used in other jurisdictions. The relevance is that other commissions, including one with longstanding ELG precedent (Indiana), have evaluated the same procedural question on the merits and concluded that ALG produces more reasonable rates in a higher-than-average investment environment. The Commission can and should consider these decisions as part of the overall body of evidence before it.

Q MR. SPANOS STATES THAT YOU HAVE NOT OFFERED ANY NEW SUPPORT FOR YOUR ALG PROPOSAL THAT WAS NOT ALREADY PROVIDED IN OTHER RECENT PENNSYLVANIA CASES.[30] PLEASE RESPOND.

A Mr. Spanos has likewise not offered any new rebuttal arguments. His testimony in this case contains the same two-unit example, the same dispersion argument, the same rate base revenue requirement exhibit format, and the same anonymous comparable utility exhibit that he has presented in prior proceedings. If Mr. Spanos's standard is that the challenging party must present something new, then by the same logic the defending party should be held to the same standard.

[29]Arkansas PSC Final Order, Docket No. 04-121-U, at page 29.
[30]Spanos Rebuttal at page 13, lines 20-25.

However, the appropriate standard is not novelty; it is whether the evidence supports the requested relief. National Fuel's continued use of the ELG procedure is unreasonable under current conditions. The evidence I have presented, including the front-loading effect of ELG during an accelerated investment cycle, the fact that ELG shortens the effective recovery period for National Fuel's assets well below the average service lives that the Company itself supports, the fact that both procedures recover the total service value (as Mr. Spanos concedes), and the fact that National Fuel itself uses the ALG procedure in every other jurisdiction in which it operates, constitutes substantial support for the adoption of ALG.

I would finally like to point out that in the previous two cases in Pennsylvania where I have recommended the switch to ALG deprecation, both of those cases settled, and the Commission did not consider or submit a ruling regarding my arguments in favor of ALG and against ELG.

Q PLEASE COMMENT ON MR. SPANOS'S RESPONSE TO YOUR DISCUSSION OF THE HIGHER-THAN-AVERAGE INVESTMENT CYCLE.

A Mr. Spanos concedes that National Fuel is experiencing a higher-than-average investment cycle.[31] He argues that this is due to the replacement of older pipe rather than high growth, and that the investment plan is consistent with others in the area.

The cause of the higher-than-average investment cycle is not relevant to the question of how depreciation rates should be calculated. Whether the increased investment is driven by infrastructure replacement, system expansion, or rising material

[31]Spanos Rebuttal at page 25, line 3.

costs, the effect on customers is the same: rate base is growing, revenue requirements are increasing, and the ELG procedure compounds these increases by front-loading depreciation expense. Mr. Spanos acknowledges that the cost of materials is much higher,[32] which reinforces the point that National Fuel is in an elevated investment environment regardless of the underlying cause.

As I discussed in my direct testimony, National Fuel's plant-in-service has increased approximately 30% over five years, the Company implemented a DSIC in January 2025 and reached the 5% cap on distribution revenues within approximately 14 months (necessitating this rate case), the Company projects continued elevated capital spending through at least 2039, and the average age of National Fuel's investment is just 19.9 years despite the Company having operated for well over a century.[33] The IURC concluded that "the use of ELG in a higher than average investment cycle has the effect of unnecessarily increasing the near term depreciation expense as compared to the use of ALG."[34] That reasoning applies here, regardless of whether the investment cycle is driven by replacement or growth.

Q MR. SPANOS NOTES THAT THE COMPANY'S COMPOSITE ELG DEPRECIATION RATE DECREASED FROM THE HISTORIC TEST YEAR TO THE FULLY PROJECTED FUTURE TEST YEAR.[35] PLEASE RESPOND.

A This observation does not support Mr. Spanos's position. The ELG composite rate for National Fuel's three test year periods is 2.50% (HTY), 2.36% (FTY), and

[32]Spanos Rebuttal at page 25, line 5.
[33]Direct Testimony of Brian C. Andrews at pages 13-14.
[34]IURC Final Order in Docket No. 45253 at page 90.
[35]Spanos Rebuttal at page 23, lines 17-18.

2.45% (FPFTY). Under the ALG procedure, the composite rates for the same periods are 2.03%, 1.90%, and 1.96%. The two sets of rates follow the same directional trend, declining from the HTY to the FTY and then increasing slightly in the FPFTY relative to the FTY. The spread between ELG and ALG rates remains approximately 0.47% to 0.49% across all three periods. The trend that Mr. Spanos identifies is not an attribute of the ELG procedure; it reflects the changing composition of plant and reserves over those years, and the same trend exists under ALG. This observation does not provide any basis for preferring one procedure over the other.

CONCLUSION

Q PLEASE SUMMARIZE YOUR CONCLUSIONS AND RECOMMENDATIONS.

A I continue to recommend the PUC approve the use of the ALG procedure in this case. The arguments presented in Mr. Spanos's rebuttal testimony do not contain convincing evidence that the ELG procedure is in the best interests of National Fuel's customers, nor that the depreciation rates produced under the ALG procedure are unreasonable. Both procedures ensure that the utility recovers its full investment, but the ALG procedure does so in a manner that provides immediate, measurable relief to customers who are facing rate increases driven by an accelerated investment cycle

The precision required for the theoretical justification of the ELG procedure only exists if the assets retire in the exact same manner as the survivor curve indicates. As I've shown, this precision does not exist with National Fuel's assets.

Mr. Spanos's revenue requirement analysis regarding the ELG vs. ALG does not provide compelling evidence. The analysis assumes a static regulatory environment

and does not account for the time value of money and the erosion of the purchasing power of a dollar overtime.

Mr. Spanos's comparable utility exhibit (Exhibit No. JJS-R2) provides no meaningful basis for comparison, listing anonymous companies with no information regarding their depreciation procedures, service lives, net salvage rates, average age of plant, or plant-to-reserve ratios.

Finally, National Fuel is in a higher-than-average investment cycle, a fact that Mr. Spanos concedes. The use of the ALG procedure can mitigate the rate increases associated with National Fuel's accelerated investment without any adverse impact on the utility's ability to recover its prudent investments.

For all of the reasons discussed within my direct and surrebuttal testimonies, the PUC should reject the continued use of the ELG procedure and approve the depreciation rates that are presented in Exhibit BCA-2.

Q DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A Yes, it does.

573468

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to exhibit JJS-R2 and answer or provide the following: a. Please identify each of the 16 companies; b. Please explain if these 16 companies include net salvage in their depreciation rates; and c. For each Company, please provide the summary table of estimated survivor curve, original cost, book depreciation reserve and calculated annual depreciation accruals that supports the composite depreciation rates shown in the exhibit, similar to Table 1 in Mr. Spanos' depreciation studies (National Fuel Exhibit C). d. Please identify the grouping procedure used for each of the 16 companies.

Response

a.) The attached document, OCA 20-2 Attachment xlsx, sets forth a listing of the 16 companies that were included in the exhibit JJS-R2. The composite rates are deliberately not matched to the Company name.
b.) All Companies include net salvage in their depreciation rates except for the Pennsylvania companies: Columbia Gas of Pa, UGI Utilities and Peoples Natural Gas.
c.) The summary tables of each Company can be found in their most recent filing within their jurisdiction.
d.) As previously discussed there is more to determining a depreciation rate than the depreciation procedure. Some of the companies are whole life or remaining life technique, some have a net salvage component in their rates, if not in Pennsylvania and some have a reserve to plant ratio that is high or low. The gas companies that have rates based on the ELG procedure or some vintages based on the Equal Life Group procedure in this list are Black Hills Colorado Gas, Columbia Gas of Pa, Peoples Natural Gas and UGI Utilities.

DIRECT TESTIMONY

LeeAnn Wise

ON BEHALF OF

THE PENNSYLVNAIA

OFFICE OF CONSUMER ADVOCATE

April 16, 2026

I. INTRODUCTION AND SUMMARY

Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND OCCUPATION.

A. My name is Lee Ann Wise. My business address is 555 Walnut Street, Forum Place, 5th Floor, Harrisburg, Pennsylvania 17101. I am currently employed as a Senior Regulatory Analyst by the Pennsylvania Office of Consumer Advocate (OCA).

Q. PLEASE DESCRIBE OUR EDUCATIONAL BACKGROUND AND QUALIFICATIONS TO PROVIDE TESTIMONY IN THIS CASE.

A. I have a Master's Degree in Business Administration from Shippensburg University and a Bachelor's degree in Professional Accountancy from the University of Pennsylvania. I also attended Michigan State University's Institute of Public Utilities online rate school program. I have attached my CV as LMW-1.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE PENNSYLVANIA PUBLICUTILITY COMMISSION(COMMISSION)?

A. Yes, a list of the cases I have provided testimony on can be found as LMW-2.

Q. PLEASE SUMMARIZE NATIONAL FUEL GAS DISTRIBUTION CORPORATION'S (NFGD) PROPOSAL TO INCREASE RATES IN THIS PROCEEDING.

A. NFGD serves approximately 214,000 residential customers in a 14-county area in northwestern Pennsylvania. NFGD serves the smallest number of residential customers

compared to other major natural gas distribution companies.[1] NFGD has a sister utility in New York with service territory adjacent to the Pennsylvania service territory. NFGD proposes an average 5.9% increase in its base distribution rate for residential customers. That average reflects a wide range of bill impacts based on usage and does not consider the increase in natural gas supply service that is purchased by NFGD on behalf of its customers in the wholesale market. The commodity or natural gas supply portion of the customer bill is 63% of the total bill based on usage, and approximately 70% for System Control and Planning Area's (SCPA) rates.[2] As a result, the total bill issued by NFGD that is subject to collection action and potential termination of service is significantly higher than the portion of the bill regulated in this base rate proceeding.

Q. WHAT ISSUES WILL YOU ADDRESS IN YOUR TESTIMONY?

A. I will address the following issues in these proceedings:

- NFGD's proposal to add a 25-basis-point incentive to its return on common equity.
- Customer service, including the performance of the call center, billing, meter reading, complaint handling, customer satisfaction survey results, and other metrics tracked by the Commission, along with the Company's request for a performance management increase.
- Payment Plan Performance
- Payment based fees

Q. IS YOUR TESTIMONY EXCLUSIVE TO THESE ISSUES?

[1] The other major gas distribution companies no less than twice as many or more residential customers compared to NFG. See Appendix C of the Public Utility Commission's 2024 Customer Service Performance Report issued December 2025.

[2] NFGD Statement No.19 Direct Testimony John Taylor pg. 27, ln 12-16.

A. No. While I am the primary witness on customer service and service reliability as it relates to any management award, my testimony supplements and contributes to the overall recommendations of other OCA witnesses, including Michael Dupree, Maureen Reno, Brian Andrews, and Lafayette Morgan.

Q. HOW IS YOUR ANALYSIS OF SERVICE QUALITY AND CUSTOMER SERVICE PERFORMANCE RELATED TO THE PROPOSED PERFORMANCE-BASED RATE ADJUSTMENT?

A. Any public utility must justify its proposed rates, in part, by demonstrating that it can perform its essential service quality and customer service functions at a reasonable level.[3] In this context, it is appropriate to compare the performance of NFGD to other Pennsylvania gas utilities.

My testimony is intended to provide and inform the Pennsylvania Public Utility Commission (Commission) of the reasonableness of the proposed performance rate adjustment request. When a utility seeks higher rates but exhibits deficiencies in customer service performance, the Commission may wish to evaluate, on a case-by-case basis, whether to approve a return on equity (ROE) that appropriately reflects the level of customer service delivered. Additionally, any adjustment to performance-based rates should be considered only when the utility demonstrates truly exceptional performance across all areas, supported by clear and comprehensive evidence in the record.

Q. WILL YOU PROPOSE CHANGES TO THE REVENUE REQUIREMENT OR RATES PROPOSED BY NFGD?

[3] 66 Pa.C.S. Section 1501.

A. No, not directly. My testimony regarding customer service and reliability of service performance is intended to provide additional information or insight when determining the appropriate rate of return approved by the Commission in this proceeding. It should be considered alongside the testimony of Maureen Reno, who, on behalf of the OCA, offers specific recommendations regarding the appropriate rate of return to be used in calculating the revenue requirement and resulting rates.

Q. DOES NFGD PROPOSE A HIGHER RATE OF RETURN DUE TO "MANAGEMENT EFFECTIVENESS?"

A. Yes. The filing states that NFGD has provided reliable service at low rates and identifies its safety programs, quality customer service performance, information technology and cybersecurity, affordability and operational efficiencies, universal service programs and customer payment assistance, and community engagement initiatives as reasons for deserving a performance management increase.[4] These criteria assume an 11.25% return on common equity, which includes a 25-basis-point increase in the return on common equity included in the rate increase request based on management performance.

Q. WHAT EVIDENCE IS NFGD BASING THEIR CLAIM THAT THEY ARE ENTITLED TO A MANAGEMENT PERFORMANCE ADDER?

A. NFGD bases their claim for a management performance adder on the following:

- Safety
- Customer Service
- Information technology and cyber security

[4] NFG Statement No. 1-Direct Testimony of Rebecca E. Hillery p.20, ln. 11-19.

- Affordability and Operational Effectiveness
- Universal Services and Customer Payment Assistance
- Community Engagement

Q. PLEASE SUMMARIZE YOUR OVERALL CONCLUSIONS AND RECOMMENDATIONS.

A. I recommend the following in response to NFGD's proposal to raise distribution rates in this proceeding:

- NFGD's request for a higher rate of return based on management performance should be denied. NFGD has not provided documented evidence of superior managerial and customer service performance that would warrant a reward or additional adjustment to its authorized rate of return. NFGD has not demonstrated that its service levels exceed established standards or materially outperform reasonable expectations in a manner that would justify an additional performance adjustment. And most importantly, they have not shown how these metrics produce benefits to customers. In most areas its performance aligns with the average of other Pennsylvania natural gas distribution companies, and, in some important areas, its performance is below the norm. The Company should focus on increasing the completion rates of meter readings, reducing busy-out occurrences, and decreasing the total number of customer complaints. I recommend requiring the company to perform regular, thorough root cause analyses of complaint trends, covering both internal disputes and BCS informal complaints, to identify and document infractions and confirmed violations.
- NFGD currently charges a fee of up to $2.95 to customers who make payments with credit cards, debit cards, Apple Pay, Google Pay, PayPal and Venmo, as well as use

of their Interactive Voice Response (IVR) payment system. Eliminating these fees would support broader access to payment methods and reduce barriers for customers wanting to keep their accounts current. The reasonable cost of processing payments, regardless of the method, should be incorporated into NFGD's overall revenue requirement rather than charged directly to customers. This charge is especially important for low-income customers, and customers needing to avoid termination of service.

- NFGD does not maintain or analyze data regarding the effectiveness of its payment plans in preventing service termination. Such data is material to assess and structure payment plans in a manner that minimizes the risk of service termination. I recommend that NFGD establish a formal tracking process for all payment plans to assess the percentage of customers who enroll in a plan and subsequently avoid termination.

II. NFGD'S CUSTOMER SERVICE PERFORMANCE DOES NOT JUSTIFY A REWARD.

Q. PLEASE SUMMARIZE THE CUSTOMER SERVICE PERFORMANCE METRICS MONITORED BY THE COMMISSION AND NFGD'S RESULTS.

A. The Commission publishes annual reports on customer service performance for call centers, meter reading, billing timeliness, customer satisfaction survey responses, outages, and complaints. These reports compare the performance of Pennsylvania's largest natural gas distribution companies. My presentation of NFGD's performance reflects the 2024

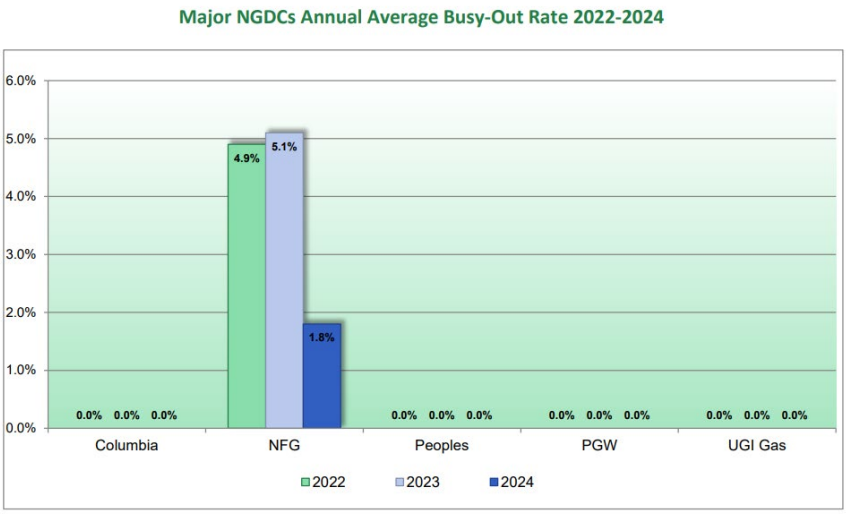
Customer Service Performance Report issued December 2025[5] and the UCARE[6] reports issued quarterly that include information on complaint volume, payment arrangements, and results of Bureau of Consumer Services (BCS) conclusions on informal customer complaints referred to that Commission bureau. I reviewed the 2024 report and the three available quarters for 2025.[7] My findings also reflect NFGD's responses to OCA data requests in this proceeding.

Q. OVERALL, HOW DOES NFGD COMPARE WITH OTHER PENNSYLVANIA NATURAL GAS DISTRIBUTION COMPANIES?

A. Overall, NFGD's performance is generally in line with the average of other Pennsylvania natural gas distribution companies. However, there are certain areas where NFGD's performance is only at the average level or falls below it.

Although NFGD's call center performance has improved in 2024, the Commission's 2024 Customer Service Performance Report documents NFGD's poor performance with a busy out rate of 4.9% in 2022, 5.1% in 2023, 1.8% in 2024 and a 1.2% busy out rate in 2025 compared to a 0% busy out rate of other gas distribution companies for each of the three years referenced.

[5] Available at: https://www.puc.pa.gov/media/3762/2024-customer-service-performance-report-final
[6] Available at: https://www.puc.pa.gov/media/3636/ucare_2024-q1-4.pdf
[7] Available at: https://www.puc.pa.gov/filing-resources/reports/consumer-activities-report-evaluation/



This result means that this percentage of NFGD customers could not even get into the queue to speak to a customer representative. While I acknowledge NFGD's improved performance, it still operates significantly below its peer gas utility companies, and therefore its results do not rise to the level of exceptional performance necessary to justify a management adder.

- The call abandonment rate decreased from 2.8% in 2023 to 0.8% in 2024. However, it increased to 1.8% in 2025, aligning with the same trend observed among most other gas distribution companies.
- Regarding calls that reached the Company, 91% were answered within 30 seconds in 2024. This 91% result is consistent with the performance of most other gas distribution companies that year.
- With regards to issuing timely bills and ease of reaching the company, NFGD's performance in 2024 aligns with the industry's average of 54% and 85% respectively.[8]

[8] Available at: https://www.puc.pa.gov/media/3762/2024-customer-service-performance-report-final.pdf, p. 16.

- With regards to customer satisfaction surveys, in 2022 NFGD's averaged 88.6%, in 2023, 88.4%, with 2024 showing a decline to 87.6%.[10]
- NFGD has seen year-over-year increases in service outages over the last three years with 379 outages in 2022, 465 outages in 2023, and 478 outages in 2024.[11] This trend shows an increase in service outages over time.
- With regards to meter reading, NFGD's meter reading performance is below average. In 2024, NFGD's percentage of residential meters not read by the company or the customer within six months was the highest of its peers in 2022, 2023 and 2024.[12] All other gas utilities averaged very close to zero percentage of unread meters, while NFGD's percentage averaged slightly above one percent.[13] This performance in 2025 has remained relatively flat compared to prior year's performance.[14] The same trend and result is applicable to the number and percentage of residential meters not read in 12 months.[15]

- With regards to customer complaints informally appealed to the BCS and presented in the 2024 and 2025 UCARE filings, NFGD's performance shows a significant increase in the volume of payment arrangement disputes, from 311 in 2024, to 262 in the first three quarters of 2025. Based on the 262 complaints from the first three quarters of 2025, the average of 26 complaints per month projects a year-end total of approximately 340 complaints, continuing the upward trajectory. While these types of disputes increased for Columbia Gas and Peoples Gas, their percentage increase was lower than that of NFGD's. NFGD's performance is typical and not a reflection of any particularly exceptional level of performance.

- NFGD's 2024 customer satisfaction results for field representatives regarding overall satisfaction with the way the premises visit was handled has significantly decreased over the past three years, ranking well below other natural gas providers. NFGD's three-year average is 89%. In contrast, the combined average of the other gas utilities was 92%.[16]

2021-23 Average Response Time to BCS
Residential Consumer Complaints
Major Natural Gas Distribution Companies

Utility	Number of Days		
	2021	2022	2023
Columbia	10.3	8.2	6.2
NFG	13.6	16.9	16.7
Peoples	4.8	4.6	5.3
PGW	21.2	19.8	18.4
UGI Gas	7.6	10.7	15.4
Industry Average	**13.0**	**14.2**	**14.7**

The Company's customer service metrics, overall, are in line with industry standards. Although some indicators reflect performance slightly above peer levels, others demonstrate results that are comparatively below those benchmarks. Therefore, performance that is average does not justify the Commission's approval of a performance management adder.

Q. HAS NFGD COMPLETED AN ANALYSIS OF ITS PAYMENT PLANS IN TERMS OF THEIR SUCCESS OR OUTCOME?

A. No.[18] NFGD does not collect data on whether a termination notice is avoided when a customer makes a payment or enters a payment plan.[19] This information is important for determining the effectiveness of any company response to customers who indicate that they are unable to pay their current bill. Without such data, it is difficult to evaluate whether existing customer assistance or payment arrangement options are successfully preventing service termination. I recommend that NFGD be required to conduct such an analysis as a condition of any rate increase ordered in this proceeding. The company

[18] NFGD Response to OCA-Set 3-14.
[19] NFGD Response to OCA-Set 12-2.

should evaluate the extent to which payments or payment arrangements prevent terminations after a notice has been issued and report this information to the parties within six months. This analysis would provide useful insight into how well current policies support customers experiencing payment difficulties and help inform any future policy or program adjustments.

III. CONCLUSION AND RECOMMENDATION REGARDING PROPOSED CUSTOMER SERVICE PERFORMANCE INCENTIVE

Q. BASED ON YOUR REVIEW OF HOW NFGD HAS JUSTIFIED ITS PROPOSED REWARD TO INCREASE ITS EARNINGS FROM PENNSYLVANIA CUSTOMERS BASED ON ITS CUSTOMER SERVICE PERFORMANCE, WHAT IS YOUR CONCLUSION AND RECOMMENDATION.

A. The Company's operational performance does not support a reward for exceptional or excellent customer service. Specifically, performance in call center operations, meter reading timelines, and service outage increases do not demonstrate results that exceed reasonable expectations. In other operational areas, NFGD's performance is generally consistent with the industry average among natural gas distribution companies. Based on this record, there is no basis to increase the return on common equity for management performance.

Q. DO YOU HAVE ANY ADDITIONAL COMMENT REGARDING NFGD'S REQUEST FOR A PERFORMANCE ADJUSTMENT?

A. Yes. The Company has not demonstrated sufficient performance to justify a 25-point performance management adjustment. Performance adjustments are intended to recognize superior performance that provides incremental customer benefits. The data provided does not support superior levels. The Company's call center performance for the most part is in line with other natural gas providers in PA. However, their performance on meter reading is subpar.

In summary, the Company has not shown that it has achieved results that distinguish it from their peers to warrant a performance management adjustment.

IV. NFGD'S PAYMENT FEES SHOULD BE ELIMINATED

Q. PLEASE DISCUSS NFGD'S BILL PAYMENT OPTIONS FOR RESIDENTIAL CUSTOMERS.

A. NFGD offers multiple ways to pay the customer bill. However, other than payment by mailing a check or automated bill payment from the customer's checking account, these methods require the customer to pay a fee that is added on to the bill amount:

- *Online – AutoPay, One-Time Pay, or Pay by Text (www.nationalfuel.com)*
- *IVR Self-Service by Phone (1-855-437-1168)*
- *By Mail (National Fuel Gas, PO Box 371835, Pittsburgh, PA 15250-7835)*
- *In Person (drop boxes at 1100 State St, Erie PA and 1 Relief St, Oil City PA)*

- *Authorized Payment Center*
  - *o Money Gram*
  - *o Western Union*[20]

This policy operates to increase the customers' bill for electronic payment, even though electronic payment is encouraged by NFGD and is the more popular way to pay routine utility bills. Exhibit LMW-3 shows these additional fees resulted in customer payments of $815,559 in 2024 and $930,384 in 2025 for the commonly accepted method of paying by credit or with debit card or using the call center to make a payment. These fees particularly have a discriminatory impact on fixed and lower income customers who often need to make a last-minute payment to avoid termination of service. In 2025, 233,756 online payments were made totaling $692,014[21] supporting my concern about the adverse impact on vulnerable customers.

Q. WHAT DO YOU RECOMMEND WITH REGARD TO THESE PAYMENT FEES CHARGED BY NFGD?

A. I recommend that NFGD transition to a fee-free payment system allowing customers to use a broad range of payment options without incurring a fee. Other gas utilities such as UGI and Peoples Gas allow one-time credit or debit card payments online or by phone with no fee.[22] I understand that NFGD may have contracts with third parties to process

[20] NFGD Attachment OCA III-3.
[21] Response to OCA-7-4. Attachment OCA VII-04.
[22] Available at: https://www.ugi.com/payments-billing

these electronic payments. However, a more reasonable approach is to require NFGD to investigate lower cost payment processing options. Reasonable and practical payment processing costs, similar to how the handling cost for checks sent through the postal service are treated, should be included in the overall revenue requirement. It is also likely that eliminating payment fees will encourage more customers to adopt online payment methods. Increased use of electronic payments may improve the Company's cash flow because these payments are credited to customer accounts more quickly and require less processing than mailed checks handled by NFGD or its agent.

Q. DOES THIS CONCLUDE YOUR TESTIMONY AT THIS TIME?

A. Yes. However, I reserve the right to supplement my testimony upon receipt of late-filed discovery.

Qualifications of

LeeAnn Wise

Education:

2008 Master's of Business Administration, Shippensburg University

1989 B.S. Professional Accountancy, Pennsylvania State University

Relevant Positions:

March 2025 Regulatory Analyst, Pennsylvania Office of Consumer Advocate

Role Description:

I am currently employed by the Pennsylvania Office of Attorney General, Office of Consumer Advocate (OCA) as a Senior Regulatory Analyst. In this position, my responsibilities include reviewing utility company filings with the Pennsylvania Public Utility Commission (Commission) and analyzing the financial, economic, rate of return, and policy issues that are relevant to the filings. Additionally, I am tasked with preparing recommendations for the OCA's involvement in utility filings with the PA PUC, writing testimony and presenting oral testimony on behalf of the OCA. As part of my role, I also assist in the policy matters regarding low-income issues and customer service subjects.

Relevant Training: I have over fifteen years of experience overseeing and evaluating customer service operations of utility-affiliated and third-party call centers. This includes time at Comcast as Senior Finance Manager, where I provided oversight of performance metrics, evaluating disputes and time to resolve, call-handle times, average speed of answer, and ensuring customer interactions align to policy standards. My training includes a sound understanding of the best practices in customer service delivery, call tracking protocols, and the importance of consistent documentation to support customer communication and reliability.

SURREBUTTAL TESTIMONY

LeeAnn Wise

ON BEHALF OF

THE PENNSYLVNAIA

OFFICE OF CONSUMER ADVOCATE

May 27, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND OCCUPATION.

A. My name is Lee Ann Wise. My business address is 555 Walnut Street, Forum Place, 5th Floor, Harrisburg, Pennsylvania 17101. I am currently employed as a Senior Regulatory Analyst by the Pennsylvania Office of Consumer Advocate (OCA).

II. PURPOSE OF TESTIMONY

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of NFG witness Mr. Jason Scouten regarding completion of meter readings and customer outages, NFG witness Mr. Matthew Stoops Jr. regarding call center performance, root cause analysis, and payment fees, and NFG witness Joshua C. Nowak regarding NFG's request for a management performance adder to NFG's Return on Equity.

Q. DID YOU PREVIOUSLY SUBMIT TESTIMONY IN THIS PROCEEDING ON BEHALF OF THE OCA?

A. Yes, my direct testimony, OCA Statement No. 5, was served on April 16, 2026.

III. METER READING

Q. DID THE COMPANY DISAGREE WITH YOUR ASSESSMENT ON METER READING COMPLETION?

A. Yes, NFG witness Scouten disagreed with my direct testimony regarding the timely completion of meter readings, including my recommendation that NFG focus on improving the timeliness of meter reading performance**.**

Q. WHY DID NFG WITNESS SCOUTEN DISAGREED?

A. NFG witness Scouten stated "comparing National Fuel's 'meter reading' performance to other utilities is not exactly a clean 'apples-to-apples' comparison because the Company has maintained a model that emphasizes in-person meter reads (in part to promote meter access and inspection)."[1]

Q. DO YOU HAVE ANY COMMENTS?

A. Other natural gas distribution companies also perform field inspections and safety-related activities while achieving stronger meter reading compliance metrics. NFG suggests that the timeliness of meter reading performance is a result of utilizing in-house meter reading staff who also conduct safety-related operations. However, the Company has not provided detailed support demonstrating that these activities caused or contributed to the lower completion rates.

[1] NFG Rebuttal Testimony Scouten pg. 5 ln. 4-7.

The concern is not whether in-person inspections provide safety benefits, but whether the Company is operating efficiently and using available best practices to reduce estimated bills and improve customer service.

The Company also cites expanded appointment availability and the relocation of approximately 20% of inside meters to outside locations since 2021 as evidence of improvement efforts.[2] While these actions are constructive, they also demonstrate that operational changes can improve meter accessibility and reading performance. Overall, these initiatives do not resolve concerns regarding the Company's current performance relative to peer utilities.

The Company presents safety and modernization as competing objectives. However, the Company does not demonstrate that improving meter reading practices would prevent continued in-person safety activities.

IV. OUTAGES

Q. **DID NFG WITNESS SCOUTEN AGREE WITH YOUR CONCERNS REGARDING OUTAGE INCREASES?**

A. No. NFG witness Scouten noted a slight increase in service outages over the past three years but stated that they are not always tied to operational deficiencies.[3]

Q. **DO YOU HAVE ANY COMMENTS?**

[2] NFG Rebuttal Testimony Stoops pg. 6, ln 2-3.
[3] NFG Rebuttal Testimony Stoops pg. 6, ln. 8-9.

A. Yes, according to the data provided by the Company, in 2023, NFG experienced 465 outages. In 2024, NFG experienced 478 outages, which is an increase of 2.80% in year over year outages. NFG witness Scouten does not provide data or analysis necessary to support the claimed .046% increase year-over-year outage percentage stated in his rebuttal testimony[4], making it unclear how this figure was calculated. While the percentage of the increase may seem small relatively, it is concerning that the number of outages increased. NFG witness Scouten attempts to downplay the number of outages by noting that a snow event occurred in NFG's service territory.[5] While an increase in severe weather events may contribute to more outages, attributing the rise in outages solely to weather—and characterizing the increase as only slight—does not address the underlying reliability concerns. For natural gas distribution companies, outages can pose serious, potentially life-threatening risks, making it unreasonable to minimize any increase in outage frequency.

While I acknowledge that the December 2024 lake-effect snow event in Erie County cited by the Company was severe[6]; utilities are generally expected to plan for and adapt to changing operating conditions, including more frequent or severe weather, through resiliency, preparedness, and operational improvements.

The Company attributes some outage increases to safety-driven operational practices during leak response and third-party line strikes, including shutting off valves rather than other repair methods. While safety is of the utmost importance, the record does not reflect the extent to which these practices have contributed to outage growth or whether

[4] NFG Rebuttal Testimony Scouten pg. 6, ln. 5-22.
[5] NFG Rebuttal Testimony Scouten pg. 6, ln. 8-15.
[6] NFG Rebuttal Testimony Stoops pg. 6, ln. 10-12.

alternative approaches, infrastructure investments, or enhanced damage prevention could reduce customer interruptions.

The Company also references improvements in damage prevention, but NFG witness Scouten does not provide sufficient data to evaluate trends in third-party damage or how performance compares to peer utilities. As a result, it is unclear whether observed outage levels are driven primarily by external factors or whether additional improvement opportunities exist.

External factors do not eliminate the need to maintain strong reliability performance and pursue continuous improvement in outage prevention and restoration while maintaining safe operations.

V. CALL CENTER METRICS

Q. DOES THE COMPANY AGREE WITH YOUR ASSESSMENT OF THEIR CALL CENTER METRICS?

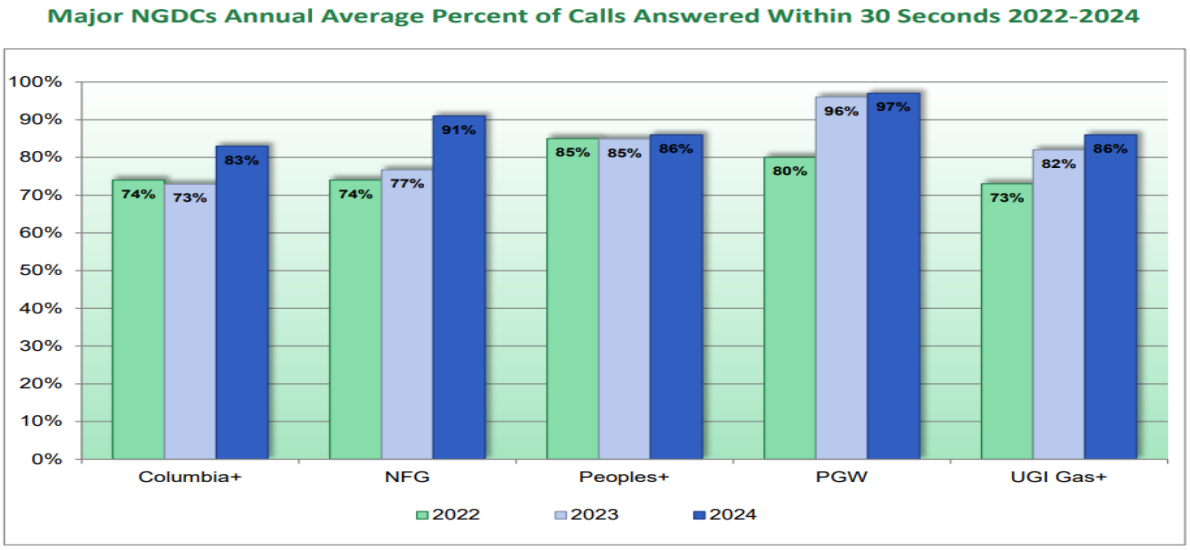
A. No, the Company does not agree with my assessment of call center metrics. These metrics were obtained from the 2024 Customer Service Performance Report issued December 2025 and the UCARE reports issued quarterly that include information on complaint volume, payment arrangements, and results of Bureau of Consumer Services (BCS) conclusions on informal customer complaints referred to that Commission bureau.

Q. WHY DOES THE COMPANY DISAGREE WITH YOUR ASSESSMENT OF CALL CENTER METRICS?

A. NFG witness Stoops noted the fact that no mention was given to the metrics in which the Company has strong performance. NFG witness Stoops stated, "the Company has made improvements in its average calls answered within 30 seconds from 74% in 2022, 77% in 2023, and 91% in 2024. The positive increase from 2022 to 2025 was the largest increase seen by the Company's peers all NGDCs saw increased performance in this area during the same period. Moreover, in 2025 the Company's average calls answered within 30 seconds was the second highest of the NGDCs."[7] Pointing to NFG's performance with certain metrics in an attempt to disregard poor performance in other metrics is unreasonable.

The Company highlights improvements in the percentage of calls answered within 30 seconds between 2022 and 2024, however, improvement alone does not establish that customer service performance is adequate or exemplary. The fact that performance increased from prior years merely shows that prior performance was lower. The chart below shows NFG's three-year performance versus other NGDCs:

[7] NFG Rebuttal Testimony Stoops, pg. 32, ln. 4-9.



As shown above, although the Company points to improvements in the percentage of calls answered within 30 seconds, the resulting performance appears generally comparable to that of peer NGDCs rather than demonstrably superiority.

NFG witness Stoops emphasized that NFG's annual call abandonment rates were comparatively low.[8] However, abandonment rate statistics do not fully capture customer frustration where callers receive busy signals, encounter repeated call attempts, or are otherwise unable to access customer service in a timely manner. These metrics should therefore be considered together rather than in isolation.

NFG witness Stoops also feels it is unfair to compare NFG to other gas utilities regarding busy out rates due to NFG not using an Interactive Voice Response (IVR) system.[9] This argument is unpersuasive for several reasons. Most importantly, the

[8] Rebuttal Testimony Stoops pg.32, ln.10-12.
[9] Rebuttal Testimony Stoops pg.32, ln.15-19.

Company's decision not to implement an IVR system is a management and operational choice. Customers should not bear the consequences of that decision through increased busy signals or reduced accessibility. If peer utilities have implemented technologies that reduce busy outs and improve customer access, those operational improvements are relevant and appropriate points of comparison. The purpose of benchmarking customer service metrics is to evaluate actual customer experience and operational effectiveness, regardless of the internal business decisions that produced the results.

NFG witness Stoops provides subjective claims that customers prefer speaking directly with live representatives but does not provide evidence demonstrating that customers prefer receiving busy signals or delayed access over the availability of modern call-routing and self-service options.[10] The implementation of an IVR system does not preclude the provision of direct access to live customer service representatives. The way calls are routed, including whether and when customers are connected to live representatives, is a matter of Company design and discretion.

The Company's argument suggests that the lack of an IVR system may be a contributing factor to higher busy-out rates. Instead of justifying the result, this points to a potential need for operational improvements to enhance customer access and call-handling capacity.

VI. ROOT CAUSE ANALYSIS

[10] Rebuttal Testimony Stoops pg.32, ln. 20-21.

Q. DOES THE COMPANY AREE WITH YOUR RECOMMENDATION ON ROOT CAUSE ANALYSIS ?

A. No. The Company does not agree with my recommendation to conduct a root cause analysis on complaints. Company NFG witness Stoops stated that the Company already conducts an analysis of all customer complaints, referred to as "Justified Complaints."[11]

Q. DO YOU HAVE ANY COMMENTS?

A. The Company's described process is reactive and case-specific, focusing on whether individual policies or procedures were followed in response to a complaint by either internal company personnel or third-party contractors. In contrast, a root cause analysis is a proactive, structured methodology designed to identify systemic issues that may not be apparent from individual complaint investigations. A structured root cause analysis, on internal and third-party complaints is needed to identify recurring issues at their source, rather than relying only on case-by-case complaint corrections.

VII. PAYMENT PLAN EFFECTIVENESS

Q. DOES THE COMPANY AGREE WITH YOUR RECOMMENDATION TO CONDUCT AN ANALYSIS OF WHETHER TERMINATION NOTICE IS AVOIDED WHEN A CUSTOMER MAKES A PAYMENT OR ENTERS A PAYMENT PLAN.

[11] NFG Rebuttal Testimony Stoops, pg. 33, ln. 11-12.

A. No. The Company disagrees with my recommendation that it be required to conduct an additional payment plan effectiveness analysis as a condition of any rate increases in this proceeding.

Q. WHY DOES THE COMPANY DISAGREE WITH YOUR RECOMMENDATION?

A. NFG witness Stoops states that the Company has developed and implemented comprehensive, formal training for its call center employees that is specifically designed to ensure customers experiencing financial hardship are fully informed of all available options. [12]

NFG witness Stoops also notes the Company's percentage of Total Dollars in Debt of customers on an arrangement rose from 38.6% in 2022, to 46.8% in 2024.[13]

Q. DO YOU HAVE ANY COMMENTS?

A. The Company's response does not establish that its current evaluation methods are adequate to assess whether payment arrangements and related assistance tools are effectively preventing service terminations.

The Company merely describes training for call center staff to inform customers of available assistance options, including payment arrangements, budget billing, extensions, and referrals. While important for program implementation, training alone does not demonstrate program effectiveness in reducing arrearages or preventing service

[12] Rebuttal Testimony Stoops pg.34, ln.15-19.
[13] Rebuttal Testimony Stoops pg.35, ln. 6-7.

disconnections. Program effectiveness must be supported by outcome-based evidence showing that the intended customer benefits have been achieved.

The Company cites an increase in arrearage dollars associated with customers associated with payment arrangements as evidence of effectiveness.[14] This reflects participation but does not measure outcomes such as reduced terminations, successful completion of arrangements, or sustained payment performance. Accordingly, it is insufficient to evaluate program effectiveness.

The Company acknowledges that it does not track termination avoidance in the manner contemplated by my recommendation. [15]

Preventing disconnections is essential to maintaining safe and reliable service. If payment arrangements are not actually reducing terminations, then the program is not fulfilling its fundamental purpose of maintaining continuous service while customers resolve arrears.

A payment arrangement is intended to function as a bridge that allows customers to keep essential utility service while paying down past-due balances over time. Without tracking whether those arrangements are successful in avoiding shutoffs, there is no way to determine whether customers—particularly vulnerable ones—are still being disconnected despite participating in assistance programs. In that circumstance, the program risks becoming a procedural offering rather than an effective safeguard.

For the Company, this type of metric is also critical because it provides direct, actionable insight into program performance. Elevated termination rates among

[14] NFG Rebuttal Testimony Stoops, pg. 35, ln. 6-7.
[15] Rebuttal Testimony Stoops pg.35, ln.16-19.

customers on payment arrangements can indicate underlying problems such as unaffordable repayment terms, gaps in customer outreach or enrollment, misalignment between arrearage levels and structured payment plans, or weaknesses in plan administration. Without this type of measurement, those issues may go undetected until they surface through complaints or increased bad debt. The result is that the Company is responding in a reactive manner to outcomes rather than identifying and correcting root causes.

Requiring this tracking helps close an important accountability gap. The Commission is not only concerned with whether programs exist, but whether they are effective in the real-world. Payment arrangements are frequently relied upon as a primary alternative to disconnection; if they do not actually prevent termination, then the underlying assumption supporting their use is not being met. Measuring termination avoidance allows the Commission to evaluate real-world effectiveness rather than relying on assumptions about program performance.

VII. PAYMENT FEES

Q. DOES THE COMPANY OPPOSE YOUR RECOMMENDATION TO TRANSITION TO A FEE-FREE ELECTRONIC PAYMENT POSITION?

A. Yes, the Company opposes my recommendation to move to a fee-free payment position.

Q. WHY DOES THE COMPANY OPPOSE MOVING TO A FEE-FREE PAYMENT POSITION?

A. NFG witness Stoops notes that customers currently have multiple payment options that do not incur a payment fee. Only payment options (Online, By Phone, or Authorized Payment Center) that involve a third party are fees charged and they are charged by the third-party company.[16]

Q. DO YOU HAVE ANY COMMENTS?

A. Although the Company has two payment fee-free payment options, (In-person or Auto-Pay ACH) the Company does not address the underlying customer affordability and accessibility concerns. The existence of alternative payment methods does not eliminate the burden imposed on customers who must use more immediate payment channels, particularly customers facing financial hardship or risk of service termination. Customers with limited banking access, transportation barriers, irregular work schedules, or urgent payment needs may not always be able to utilize the Company's preferred fee-free methods. As a result, payment processing fees can operate as an additional financial burden on customers who are already struggling to maintain service. The Company does not dispute that customers have collectively incurred substantial payment processing fees, nor does it argue that eliminating such fees could increase adoption of electronic payment methods. Increased electronic payment usage may also yield operational benefits, including reduced billing costs, improved payment timeliness, and lower collection-related expenses.

[16] NFG Direct Testimony Stoops, pg. 37, ln 5-7.

Finally, the Company's acknowledgment that eliminating fees could increase electronic payment participation further supports evaluation of a fee-free payment structure, particularly where such changes may enhance both customer experience and operational efficiency.

For these reasons, the recommendation to evaluate payment processing fees remains reasonable and appropriate.

VIII. PERFORMANCE ADDER

Q. DOES THE COMPANY DISAGREE WITH YOUR POSITION ON A MANAGEMENT EFFICIENCY ADDER?

A. Yes, company NFG witness Novak states, "I disagree with the Intervenor Witnesses' categorization of the Company's request and support the Company's request based on its demonstration of performance in the key areas discussed in NFG Witness Rebecca E. Hillery's Direct Testimony. While the Company continues to support the applicability of a management efficiency adder, NFGDC recognizes the importance of customer affordability amid ongoing inflationary pressures and has therefore chosen to forgo the request for an adder in the instant proceeding."[17]

Q. DO YOU HAVE ANY COMMENTS?

[17] NFG Rebuttal Testimony Nowak pg. 22, ln. 9-16.

A. Yes. My direct testimony demonstrated that NFG's performance is generally consistent with, and in certain metrics below, that of comparable peer gas utilities operating within Pennsylvania. NFG's overall performance reflects the level reasonably expected of a public utility and, therefore, does not justify the approval of a performance-based adder or a high return on equity.

I support the Company's decision to withdraw its request for an additional 25-basis-point performance adder but note that NFG's requested ROE remains unreasonably high.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes, however, I reserve the right to file such additional testimony as may be necessary or appropriate.

Re: Pennsylvania Public Utility Commission v. National Fuel Gas Distribution Corporation / Docket No. R-2025-3059428

Dear Judge Dunderdale:

Enclosed please find the Direct Testimony and Exhibits of Justin B. Farr, labelled OSBA Statement No. 1, with associated Exhibit JBF-1, Exhibit JBF-2, Exhibit JBF-3, Exhibit JBF-4, Exhibit JBF-5, Exhibit JBF-6, Exhibit JBF-7, and Exhibit JBF-8, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-referenced proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Rebecca Lyttle

DIRECT TESTIMONY & EXHIBITS

of

JUSTIN B. FARR

on behalf

of

Pennsylvania Office of Small Business Advocate

Topics:

Revenue Requirement Adjustments
Cost of Service
Revenue Allocation
Energy Efficiency

Date Served: April 16, 2026

Date Submitted for the Record: _____

DIRECT TESTIMONY OF JUSTIN B. FARR

Section I - Introduction

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Justin B. Farr. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Director in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. My testimony is being sponsored by the Pennsylvania Office of Small Business Advocate ("OSBA").

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE AND QUALIFICATIONS.

A. My academic background includes a B.S. in economics and an M.B.A. from the University of Utah. While I was pursuing my M.B.A., I also worked in the Utah Governor's Office as an economist focused on revenue forecasting and tax policy. I joined Energy Strategies in 2005, where I assist private and public sector clients in the areas of energy-related economic and policy analysis, including evaluation of electric and gas utility rate matters.

From 2013 to 2017 and again from 2020 to early 2022, I worked at PacifiCorp, a six-state electric utility that operates in Utah, Wyoming, Idaho,

Oregon, Washington, and California. My roles at PacifiCorp included Manager of Economic & Financial Analysis where I led teams of engineers and plant managers in developing economic solutions for optimizing existing thermal and renewable infrastructure investment, and Assistant Manager of Regulation where I focused on the company's internal 10-year plan. Between 2017 and 2019, I served as Vice President of Financial Planning at Magnum Development where I supported the commercial development of the company's underground salt dome assets. My qualifications are attached in the Appendix to this testimony.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?

A. Yes. I have testified in the following proceedings: the Second DER Management Plan filed by PPL Electric Utilities Corp, Docket No. P-2024-3049223; Wellsboro Electric Company's 2025 Rate Case, Docket No. R-2025-3054392, Valley Energy Inc's 2025 Rate Case, Docket No. R-2025-3054393; Citizens' Electric Company of Lewisburg's 2025 rate case, Docket No. R-2025-305394; PECO Energy Company's Phase V EE&C Plan, Docket No. M-2025-3057328; and Duquesne Light Company's Phase V EE&C Plan, Docket No. M 2025-3057325.

Q. HAVE YOU TESTIFIED BEFORE UTILITY REGULATORY COMMISSIONS IN OTHER STATES?

A. Yes. I have provided testimony before the Utah Public Service Commission and the Indiana Utility Regulatory Commission.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?

A. My testimony addresses the base rate revenue requirement proposed by National Fuel Gas Distribution Corporation Pennsylvania Division ("National Fuel" or the "Company"), as well as issues pertaining to class cost allocation, revenue allocation, and energy efficiency. The absence of comment on my part regarding a particular issue or revenue requirement item does not signify support for (or opposition to) the Company's filing with respect to that issue.

Q. ARE YOU MAKING A RECOMMENDATION FOR A SPECIFIC TOTAL REVENUE REQUIREMENT IN THIS CASE?

A. No. My revenue requirement adjustment recommendations address a limited number of issues. Therefore, I am not offering a recommendation for a specific total revenue requirement.

Q. PLEASE SUMMARIZE YOUR PRIMARY RECOMMENDATIONS AND CONCLUSIONS.

A. I offer the following recommendations and conclusions:

(1) I recommend adjusting National Fuel's salaries and wages to reflect staffing levels for the most recent 12-month period for which information is available (February 2025 – January 2026), rather than the projected increase proposed by the Company. This adjustment results in a revenue requirement reduction of approximately $525,364 relative to the Company's filed case.

(2) I recommend disallowing the portion of National Fuel's stock-based compensation that is tied to financial performance. This adjustment results in a revenue requirement reduction of approximately $1,517,718 relative to the Company's filed case.

(3) I recommend that the Commission deny National Fuel's request for a 25-basis point Management Premium that has been proposed as an adder to the Company's requested base Return on Equity ("ROE"). This adjustment results in a revenue requirement reduction of approximately $1,191,103 relative to the Company's filed case.

(4) I present a "proxy" ROE to supplement traditional cost-of-capital analysis. Use of this proxy ROE results in a revenue requirement reduction of approximately $5,560,798 relative to the Company's filed case.

(5) The methods used by the Company to allocate costs among classes are reasonably aligned with cost causation and at this time I am not recommending any changes to the cost allocation methods proposed by National Fuel in this case.

(6) I conclude that the Company's class revenue allocation proposal reasonably balances moving class revenue recovery in the direction of cost causation, while adhering to the principle of gradualism. In my opinion, National Fuel's proposed revenue allocation falls within the range of reasonableness.

(7) I recommend that National Fuel include in its proposal an energy efficiency program for non-residential customers.

If adopted, my recommendations will result in reducing the revenue requirement by $8.8 million compared to the $19.7 million increase proposed by National Fuel. My recommended adjustments are outlined in Table JBF-1 presented later in my testimony. My recommended reduction in revenue requirement does not account for or incorporate any other adjustments advanced by other parties that are not specifically addressed in my testimony.

Section II - Revenue Requirement Adjustments

Q. BRIEFLY DESCRIBE THE REVENUE REQUIREMENT INCREASE BEING REQUESTED BY NATIONAL FUEL IN THIS CASE.

A. National Fuel is requesting a $19,680,503 increase in annual distribution revenue, representing a 14.0% increase over present delivery rates, or 7.4% on a total revenue basis. The requested increase is based on a Fully Projected Future Test Year ("FPFTY") ending October 31, 2027.[1] The requested increase is designed to produce an overall rate of return of 8.78% on National Fuel's rate base.[2]

Q. DO YOU HAVE ANY RECOMMENDED ADJUSTMENTS TO NATIONAL FUEL'S PROPOSED REVENUE REQUIREMENT?

A. Yes. My recommended adjustments would reduce National Fuel's proposed revenue requirement increase by approximately $8.8 million. As discussed in greater detail later in my testimony, this reduction incorporates a proxy return on equity ("ROE") of 9.75%, which is derived from the median ROE authorized in recent rate cases for natural gas distribution companies of similar risk. Table JBF-1 presents a summary of my recommended adjustments and are attached as Exhibit JBF-1 to this testimony.

[1] National Fuel Statement No. 1, Direct Testimony of Rebecca E. Hillery, page 5-6.
[2] National Fuel Statement No. 10, Direct Testimony of Joshua C. Nowak, page 55.

Table JBF-1
Summary of OSBA Adjustments to National Fuel's Revenue Requirement

Adjustment Description	Adjustment Amount ($000s)	Increase Amount ($000s)
National Fuel Requested Non-Fuel Revenue Increase		$19,680
Expense Adjustments		
Employee Count	($525)	$19,155
Stock-based Compensation	($1,518)	$17,637
Capital Structure		
Management Premium	($1,191)	$16,446
Proxy Return on Equity	($5,561)	$10,885
Total Adjustments	($8,795)	
Adjusted Revenue Requirement Increase		$10,885

I provide details for each of these recommended adjustments in the following sections.

Employee Count

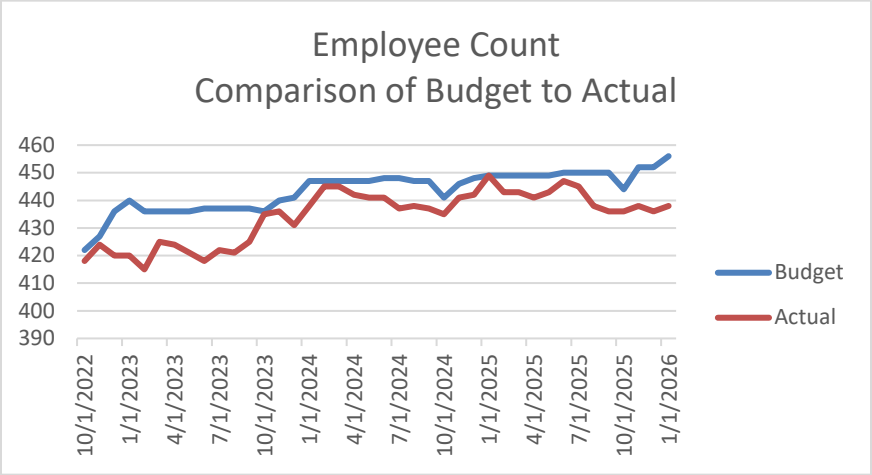
Q. PLEASE DESCRIBE NATIONAL FUEL'S ADJUSTMENT FOR EMPLOYEE COUNT.

A. Starting with the actual headcount of 436 employees as of 9/30/2025, the company added 17 budgeted employees for the Future Test Year ("FTY") and another six positions for the FPFTY, for a total of 450 and 459 employees,

respectively.[3] Recognizing that normal vacancies occur as a result of terminations and retirements, the company reduced the budgeted headcount by nine employees in both the FTY and FPFTY. As a result of this adjustment, the Company assumes 444 employees in FTY and 450 employees in FPFTY in its derivation of future Labor Expense.

Q. ARE YOU PROPOSING AN ADJUSTMENT TO NATIONAL FUEL'S LABOR EXPENSE?

A. Yes. I recommend adjusting National Fuel's salaries and wages to reflect the staffing level for this most recent 12-month period for which information is available. National Fuel has consistently reported actual employee counts below its budgeted staffing levels as shown in the following chart.



During the last 12 months for which data has been provided, National Fuel actually averaged 440.3 FTE's, which is approximately ten less FTE's than the Company is requesting to include in its revenue requirement.[4] This adjustment is shown in Exhibit JBF-2.

[3] Standard Data Request, Question No. RR-20, Respondent: Formato, page 1 of 1.
[4] Company response to I&E-RE-8-D&E and Exhibit ATF-4, Schedule 4 (Labor Savings), page 1.

Q. ARE YOU ADVOCATING THAT A PARTICULAR NUMBER OF EMPLOYEES IS APPROPRIATE FOR NATIONAL FUEL?

A. No, my adjustment is intended solely to reflect an accurate level of employment for ratemaking purposes. I am not recommending a specific staffing level, nor am I suggesting that the Commission should micro-manage the Company's operations. National Fuel remains responsible for managing its workforce to ensure efficient and safe operations. This adjustment simply maintains labor expense to be recovered through customer rates at a realistic level. Customers should not be required to pay rates based on an employee count that exceeds the Company's most recent actual experience.

Q. WHAT IS THE IMPACT OF THIS ADJUSTMENT?

A. As reported in Table JBF-1, this adjustment would reduce the revenue requirement by $525,364 in FPFTY 2027.

Stock-based Compensation

Q. PLEASE BRIEFLY EXPLAIN NATIONAL FUEL'S INCENTIVE-BASED COMPENSATION PROGRAM.

A. Effective October 1, 2022, National Fuel implemented an Annual Cash Bonus Program designed to incentivize salaried employees to achieve the Company's business objectives, while also supporting the attraction and retention of valuable talent. This incentive-based compensation is only paid if certain organizational goals based on customer service/satisfaction rates, operational safety measures, methane emissions reductions, employee safety and human capital/inclusion

initiatives are achieved during each fiscal year. In addition to the Annual Cash Bonus Program just described, National Fuel offers a stock-based compensation program, in the form of time-vested restricted stock.[5] With a small exception of stock shares issued for Environmental, Social, and Governance ("ESG") criteria, "all performance shares are based on financial results."[6]

Q. IN YOUR OPINION, IS IT APPROPRIATE TO RECOVER THE COST OF INCENTIVE-BASED COMPENSATION PROGRAMS IN UTILITY RATES?

A. It can be appropriate to recover the cost of incentive-based programs in utility rates to the extent that the compensation for such programs is not excessive and is tied to organizational goals such as customer service, operating efficiency, and safety, but is not appropriate for programs tied to financial performance. While rewarding employees for financial performance can be entirely appropriate, the responsibility for funding such awards rests most appropriately with shareholders, who are the primary beneficiaries of meeting or exceeding financial targets.

Q. WHAT IS YOUR RECOMMENDATION REGARDING RECOVERY OF ANNUAL STOCK-BASED COMPENSATION EXPENSES?

A. I recommend that expenses for stock-based compensation incentives be disallowed for ratemaking purposes because they are primarily tied to financial performance metrics that benefit shareholders, not the provision of safe and reliable utility services. My revenue requirement adjustment removes the FPFTY stock-based compensation expense, less the 5% portion of the stock-based

[5] National Fuel Statement No. 4, Direct Testimony of Valerie L. Hawthorn Wagner, pages 13-14.
[6] Company response to I&E-35-E.

compensation expense that the Company identified as being issued historically from December 2022 – December 2024 based on ESG criteria. This adjustment is shown in Exhibit JBF-3.

Q. WHAT IS THE IMPACT OF THIS ADJUSTMENT?

A. As reported in Table JBF-1, this adjustment would reduce the revenue requirement by $1,517,718 in FPFTY 2027.

Return on Equity Adjustments

Q. WHAT ROE IS NATIONAL FUEL REQUESTING IN THIS PROCEEDING?

A. National Fuel witness Joshua C. Nowak recommends an ROE of 11.25%. Mr. Nowak's recommended ROE is comprised of a base ROE of 11.00% and a 25-basis point premium for exceptional management performance and efficiency.[7]

Q. DO YOU SUPPORT NATIONAL FUEL'S REQUESTED ROE?

A. No. I do not support the proposed 25-basis point management premium or the 11.00% base ROE.

Q. PLEASE EXPLAIN YOUR OPPOSITION TO NATIONAL FUEL'S PROPOSED 25-BASIS POINT MANAGEMENT PREMIUM.

A. The Company's justification for the management premium relies on qualitative assertions regarding its performance across several areas, including safety, customer service, and operational efficiency. However, the Company does not establish:

[7] National Fuel Statement No. 10, Direct Testimony of Joshua C. Nowak, pages 3-4.

- Objective criteria for what constitutes "exceptional" management
- A benchmark for comparison to peers, or
- A quantifiable linkage between those attributes and a specific 25-basis point increment.

Without clearly defined and measurable standards, the proposed premium is inherently subjective and cannot be applied consistently across proceedings. This lack of rigor makes it unsuitable for inclusion in the determination of just and reasonable rates.

Q. DO THE PERFORMANCE METRICS CITED BY THE COMPANY JUSTIFY A HIGH ROE?

A. No. National Fuel points to metrics such as relatively low customer bills, operational efficiencies, and customer service performance. While these outcomes are positive, they do not justify an incremental ROE management premium for several reasons, including: 1) these outcomes are expected and reflect the core responsibilities of a prudently managed gas distribution utility, and 2) these metrics do not demonstrate that the Company faces greater financial risk, which is the fundamental basis for a higher ROE. In short, good management performance is not a separate risk factor warranting an additional premium return, it is the standard expectation embedded in the regulatory compact.

Q. WHAT IS THE REVENUE REQUIREMENT IMPACT IF THE MANAGEMENT PREMIUM IS REMOVED?

A. As reported in Table JBF-1, disallowing the 25-basis point management premium would reduce the revenue requirement by $1,191,103 in FPFTY 2027. This adjustment is shown in Exhibit JBF-4.

Q. WHAT OBSERVATIONS HAVE YOU MADE IN REGARD TO NATIONAL FUEL'S REQUESTED BASE ROE?

A. Mr. Nowack's recommended base ROE of 11.00% is high compared to the authorized ROE's from recent rate cases for the companies of similar risk included in his proxy group.

Q. PLEASE EXPLAIN.

A. Mr. Nowack's proxy group includes the following seven companies:

- Atmos Energy Corporation,
- New Jersey Resources Corporation,
- NiSource Inc.,
- Northwest Natural Holding Co.,
- ONE Gas Inc.,
- Southwest Gas Holdings, Inc.,
- and Spire, Inc.

These companies were included in the proxy group because they "possess a set of business and operating characteristics similar to the Company's (National Fuel's) natural gas utility operations, and thus provide a reasonable basis for estimating the Company's ROE"[8] based upon screening criteria that "reflect key risk factors that investors consider in making investments in natural gas utilities."[9]

Please refer to Table JBF-2 which shows both the utility requested ROE's and commission authorized ROE's approved for subsidiaries of the companies in

[8] National Fuel Statement No. 10, Direct Testimony of Joshua C. Nowak, page 23.
[9] National Fuel Statement No. 10, Direct Testimony of Joshua C. Nowak, page 27.

the proxy group since 2022, as reported by S&P Capital IQ. The median requested ROE for the proxy group was 10.85% and the median approved ROE for the proxy group was 9.75%. National Fuel's proposed base ROE of 11.00% is 125 basis points above the median approved ROE for the proxy group.

Table JBF-2
Survey of Approved ROE's for Natural Gas Distribution Companies in National Fuel's Proxy Group Between January 1, 2022 & March 26, 2026

Docket Number	Utility Name	State	Decision Type	Rate Case Completion Date	Requested ROE	Authorized ROE
D-OS-25-00028202	Texas Gas Service Company, Inc.	TX	Settled	2/5/2026	10.40%	9.80%

C-21-0637-GA-AIR	Columbia Gas of Ohio, Inc.	OH	Settled	1/26/2023	10.95%	9.60%
D-18328 (2022)	Spire Alabama Inc.	AL	Settled	9/30/2022	Not Provided	9.70%
				Mean	10.78%	9.68%
				Median	**10.85%**	**9.75%**

Q. HOW DOES MR. NOWACK'S PROXY GROUP COMPARE TO THE BAROMETER GROUP USED BY THE BUREAU OF TECHNICAL UTILITY SERVICES IN ITS REPORT ON THE QUARTERLY EARNINGS OF JURISDICTION UTILITIES?

A. The proxy group and the barometer group used by the Bureau of Technical Utility Services are very similar. The barometer group includes all of the utilities in the proxy group plus Chesapeake Utilities Corporation. When Chesapeake is added to the proxy the median authorized ROE is 9.73%

Q. HOW DOES THE MEDIAN OF THE PROXY GROUP COMPARE TO THE MEDIAN OF ALL GAS DISTRIBUTION RATE CASES DURING THE SAME TIME PERIOD?

A. When the sample size is expanded to include all natural gas distribution rate cases completed since January 1, 2022, the median authorized ROE drops to 9.65%, indicating a lower level or risk compared to companies included in the proxy group. Please refer to Exhibit JBF-6 for a list of all dockets included in the calculation of a median 9.65%.

Q. IN OFFERING THIS DISCUSSION OF PROXY GROUP AND NATIONAL TRENDS, ARE YOU INTENDING TO SUPPLANT THE COMMISSION'S CONSIDERATION OF TRADITIONAL COST-OF-CAPITAL ANALYSIS?

A. No, I fully expect that other intervenors will file cost-of-capital analyses for the Commission's consideration, along with that filed by National Fuel. My discussion of recently approved ROE's is intended to supplement other analyses.

Q. WHAT WOULD BE THE REVENUE REQUIREMENT IMPACT IF NATIONAL FUEL'S ROE WERE SET AT 9.75%

A. The revenue requirement impact of setting National Fuel's allowed ROE equal to 9.75% reduces the Company's revenue requirement by approximately $5,560,798 relative to the Company's filed case. This adjustment is incremental to my adjustment to remove the proposed 25 basis point management ROE premium explained above. The impact is included in my presentation of the OSBA's recommended revenue requirement in Table JBF-1. I have incorporated an ROE

of 9.75% into the OSBA's overall revenue requirement recommendations at this time, pending further information being presented into the record by other parties. This adjustment is shown in Exhibit JBF-5.

Section III – Class Cost of Service and Revenue Allocation

Q. PLEASE DESCRIBE THE METHOD USED BY NATIONAL FUEL TO ALLOCATE COSTS TO ITS CUSTOMER CLASSES.

A. As described by National Fuel witness Mr. John D Taylor, the Company proposes to allocate distribution mains costs to customer classes using a peak allocation methodology with distribution mains classified as demand and customer related. Specifically, the Company classified 61% of its investment in distribution mains as customer-related and 39% of the investment as demand related. The customer-related portion of the distribution mains investment was then allocated to the rate classes based on the number of customers on the system. The demand related portion was allocated to the rate classes based on their respective contribution to the Company's peak day demand under system design and weather conditions (design-day basis).

Transmission mains are allocated to the customer classes based on the contribution to peak day demand. The company used special cost studies to allocate meters, services, and regulators.[10]

[10] National Fuel Statement No. 19, Direct Testimony of John D. Taylor, page 12.

Q. DO YOU HAVE ANY COMMENTS ON THE COST ALLOCATION METHODS USED BY NATIONAL FUEL?

A. Yes. Overall, I find that National Fuel's cost allocation methods, as described by Mr. Taylor, align with cost causation principles. Accordingly, I do not recommend any changes to the Company's cost allocation methods in this case.

Q. PLEASE DESCRIBE NATIONAL FUEL'S REVENUE ALLOCATION PROPOSAL.

A. The Company recommends an approach in which class rate increases are guided by the results of the Class Cost of Service study, but without moving all classes to fully-cost-based rates in the interest of gradualism. More specifically, for the classes with a revenue-to-cost parity ratio below 1.0, the Company proposes an increase of 1.1 times the system increase. This applies to the Residential class and NGV class. For those classes with a revenue-to-cost parity ratio greater than 1.0, but less than 1.5, the Company proposes an increase of 0.9 times the system increase. This applies to the SCPA-LL and SCPA-UL classes. And for all other classes with revenue-to-cost parity ratios above 1.5, the Company proposes an increase of .67 times the system increase, which recovers the Company's remaining requested increase. This applies to the LCPA, SVIS, IVIS, LVIS, and LIS classes.[11]

Q. WHAT IS YOUR ASSESSMENT OF NATIONAL FUEL'S REVENUE ALLOCATION PROPOSAL?

[11] National Fuel Statement No. 19, Direct Testimony of John D. Taylor, page 21.

A. The Company's revenue allocation proposal reasonably balances moving class revenue recovery in the direction of cost causation, while adhering to the principle of gradualism. In my opinion, the proposed revenue allocation falls within the range of reasonableness.

Q. WHAT WOULD BE THE IMPACT TO EXISTING RATES IF YOUR RECOMMENDATIONS ARE ADOPTED BY THE COMMISSION?

A. If the Commission were to adopt the recommendations included in my direct testimony, the average rate increase for Pennsylvania retail customers would be 7.7%. This is a reduction of 6.3% from the Company's requested 14.0%.

To the extent the Commission does approve a revenue requirement that is lower than National Fuel's request, I recommend that the Company's revenue allocation be used to establish each rate classes percentage share of the final base revenue requirement. Specifically, each customer classes base rate revenue requirement should be adjusted by an equal percentage to recover the final approved revenue requirement. Table JBF-3 shows each classes rate increase that would result from incorporating the Company's proposed revenue allocation methodology and my recommended adjustments to the proposed revenue requirement.

Table JBF-3
% Increase in Base Rates by Customer Class

Rate Class	National Fuel Request: Base Rate Increase ($)	National Fuel Request: Base Rate Increase (%)	OSBA Adjustments: Base Rate Increase ($)	OSBA Adjustments: Base Rate Increase (%)
Residential	$ 15,403,535	15.8%	$ 9,229,006	9.5%
Total Residential	15,403,535	15.8%	9,229,006	9.5%
SCPA<250	882,692	12.9%	460,975	6.8%
SCPA>250	904,611	12.9%	472,422	6.8%
LCPA	1,341,863	9.6%	506,912	3.6%
NGV	20,763	15.8%	12,440	9.5%
SVIS	42,813	9.6%	16,173	3.6%
IVIS	566,965	9.6%	214,181	3.6%
LVIS	263,427	9.6%	99,514	3.6%
LIS	238,351	9.6%	90,041	3.6%
LIS Negotiated	(68,334)	-2.3%	(225,851)	-7.7%
Total Commercial and Industrial	4,193,151	9.9%	1,646,808	3.9%
Other Operating Revenue	83,817	6.6%	9,507	0.7%
Total Pennsylvania Retail	**$ 19,680,503**	**14.0%**	**$ 10,885,321**	**7.7%**

The derivation of class revenue increases in Table JBF-3 is shown in Exhibit JBF-7.

Section IV – Energy Efficiency

Q. DOES NATURAL FUEL OFFER AN ENERGY EFFICIENCY PROGRAM?

A. No, the Company does not currently have an Energy Efficiency (EE) program in Pennsylvania. However, they are proposing an EE program in this rate proceeding.

Q. PLEASE BRIEFLY SUMMARIZE NATIONAL FUEL'S EE PROPOSAL.

A. National Fuel proposes implementing an EE program over a five-year period beginning in October 2026. The proposed program will provide rebate incentives to residential customers to encourage the installation of high-efficiency natural gas space heating, water heating, and clothes drying appliances.

Q. DOES NATURAL FUEL'S PROPOSAL INCLUDE AN EE PROGRAM FOR NON-RESIDENTIAL CUSTOMERS?

A. No, it does not.

Q. DOES THE COMPANY HAVE ANY EXPERIENCE RUNNING AN EE PROGRAM INCLUDING A PROGRAM FOR NON-RESIDENTIAL CUSTOMERS?

A. Yes, it does. Natural Fuel's New York division has been running an EE program for over 17 years.[12] It is my understanding that the Company's EE program in NY includes both residential and non-residential programs.[13] The non-residential program in New York provides rebates for replacing specified appliances with new, energy efficient models. Please see Exhibit JBF-8 for fixed rebate information for non-residential customers in the Company's New York territory.

Q. DO YOU HAVE A RECOMMENDATION?

A. Yes. I recommend that National Fuel include in its proposal an energy efficiency program for non-residential customers based upon the Company's experience running the non-residential program in New York.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

[12] National Fuel Statement No. 18, Direct Testimony of Erik M. Solomon, page 4.

Vitae

Professional Experience

Energy Strategies, Salt Lake City UT, April 2022 - Present
An energy consulting firm focused on regulatory services, policy, and markets serving power producers, transmission developers, utilities, government agencies, NGO's, and large energy users

Director

- Perform energy-related economic and policy analysis, regulatory intervention, and strategic negations on behalf of industrial, commercial, and public sector interests
- Provide risk management and market fundamentals analysis to large consumers of natural gas
- Executive director of the Utah Association of Energy Users

PacifiCorp, Salt Lake City UT, January 2020 – April 2022
Berkshire Hathaway owned electric utility serving over 1.6 million customers in Utah, Oregon, Washington, Wyoming, Idaho, and parts of Northern California

Assistant Manager of Regulation, March 2021 – April 2022
Senior Fuels Manager, January 2020 – March 2021

- Performed rate projections tied to the company's 10-year plan
- Provided testimony on the Renewable Energy Credits balancing account
- Procured fuel and managed contracts for company owned and jointly owned thermal plants

Magnum Development, Holladay UT, 2017 – Oct 2019
Private Equity backed developer of utility-scale storage in underground salt caverns. Developing storage for natural gas, compressed air created from renewable electricity, green hydrogen, and helium.

Vice President of Financial Planning, January 2019 – October 2019
Assistant Vice President of Financial Planning, February 2017 – December 2018

- Worked on commercial team developing bidding strategies and analysis to support joint development negotiations

- Managed all financial and economic modeling across all of Magnum's business verticals including: Magnum Midstream (Natural Gas), Magnum Compressed Air Energy Storage (CAES), Magnum Hydrogen, and Magnum Industrial Gases (Helium)

PacifiCorp, Salt Lake City UT, 2013 – 2017
Berkshire Hathaway owned electric utility serving over 1.6 million customers in Utah, Oregon, Washington, Wyoming, Idaho, and parts of Northern California

Manager Economic & Financial Analysis, August 2015 – February 2017
Senior Financial Planning Analyst, October 2013 – August 2015

- Managed team of Sr. Financial Analysts responsible for economic analysis, internal audit of joint owned plants, and annual budget of resource development division
- Led team of engineers, plant managers, and vice presidents in developing economic solutions that optimized existing thermal and renewable infrastructure investment
- Developed economic models to explore new resource development opportunities such as utility scale solar and battery installations
- Prepared annual cost of generation report for senior management

Energy Strategies, Salt Lake City UT, 2005 – 2013
An energy consulting firm focused on regulatory services, policy, and markets serving power producers, transmission developers, utilities, government agencies, NGO's, and large energy users

Senior Consultant, January 2010 – October 2013
Consultant, July 2005 – December 2009

- Developed strategies for clients with energy infrastructure that optimized environmental performance and financial objectives while meeting their utility requirements
- Performed market studies focused on thermal & renewable energy need, transmission availability, pricing, and impacts of public policy initiatives. Studies were designed to inform and improve clients' energy decisions including risk management and procurement strategy.

Education

- Master of Business Administration, University of Utah, May 2005
- Bachelor of Science in Economics/Business Minor, University of Utah, May 2000
- Graduated Magna Cum Laude; GPA 3.92
- Honors at Entrance Scholarship; 1999-2000 Law & Economic Society Fellowship

Expert Testimony

"In the Matter of the Petition of PPL Electric Utilities Corp for Approval of its Second Distributed Energy Resources Management Plan," Public Utilities Commission of **Pennsylvania**, Docket No. P-2024-3049223. Direct testimony submitted September 17, 2024. Surrebuttal testimony filed January 22, 2024.

"In the Matter of the Verified Petition of Indiana Michigan Power Company for Approval of Modifications to its Industrial Power Tariff – Tariff IP," **Indiana** Utility Regulatory Commission, Cause No. 46097. Direct testimony submitted October 15, 2024. Cross-Answering testimony filed November 4, 2024. Settlement testimony filed December 4, 2024.

"In the Matter of the Application of Rocky Mountain Power for Authority to Revise Rates in Tariff Schedule 98, Renewable Energy Credits Balancing Account," **Utah** Public Service Commission, Docket No. 22-035-07. Direct testimony submitted March 15, 2022.

"In the Matter of the Petition of Wellsboro Electric Company for Approval of its Application to Increase Distribution Rates," Public Utilities Commission of **Pennsylvania**, Docket No. R-2025-3054392. Direct testimony submitted July 15, 2025. Rebuttal testimony filed August 13, 2025. Surrebuttal testimony filed August 28, 2025.

"In the Matter of the Petition of Valley Energy, Inc. for Approval of its Application to Increase Distribution Rates," Public Utilities Commission of **Pennsylvania**, Docket No. R-2025-3054393. Direct testimony submitted July 15, 2025. Surrebuttal testimony filed August 28, 2025.

"In the Matter of the Petition of Citizen's Electric Company of Lewisburg, PA for Approval of its Application to Increase Distribution Rates," Public Utilities Commission of **Pennsylvania**, Docket No. R-2025-3054394. Direct testimony submitted July 15, 2025. Rebuttal testimony filed August 13, 2025. Surrebuttal testimony filed August 28, 2025.

"In the Matter of the Petition of PECO Energy Company for Approval of its Act 129 Phase V Energy Efficiency and Conservation Plan," Public Utilities Commission of **Pennsylvania**, Docket No. M-2025-3057328. Rebuttal testimony filed January 30,2026.

"In the Matter of the Petition of Duquesne Light Company for Approval of its Act 129 Phase V Energy Efficiency and Conservation Plan," Public Utilities Commission of **Pennsylvania**, Docket No. M-2025-3057325. Rebuttal testimony filed January 30,2026.

Rebate Information for National Fuel's Non-Residential Conservation Incentive Program in New York

National Fuel®

Non-Residential Conservation Incentive Program

The National Fuel Conservation Incentive Program offers WNY non-residential customers several money-saving rebates for replacing specified appliances with new, energy-efficient models.

Two Ways to Save with National Fuel:

1.	Fixed (Pre-Qualified) Rebate	Available on pre-qualified equipment. (See table below.)
2.	Customized (Performance-Based) Rebate	Determined case-by-case, based on the results of an energy-use analysis. Customized rebates are determined by multiplying the annual energy savings in Mcf by $15. This may result in a larger rebate compared with the fixed rebate.

Free Technical Assistance

As a courtesy to both our customers and contractors, National Fuel has partnered with C.J. Brown Energy to provide free technical assistance with the application process. Contact C.J. Brown Energy at 1-844-365-3493 or email NFRebateHelp@cjbrownenergy.com.

Pre-Qualified Rebates

Equipment Type	National Fuel Minimum Efficiency	Equipment Size (MBtu/h)	National Fuel Rebate
Space Heating Equipment			
Hot Air Furnace	≥ 95% AFU	≤ 300	$5.00/MBtu/h
Hot Water Boiler (Condensing)	≥ 90% AFUE ≥ 90% E_t ≥ 90% E_t ≥ 90% E_t ≥ 90% E_t	≤ 300 301–500 501–1,000 1,001–1,700 > 1,700	$1,000 $1,500 $2,500 $3,500 $4,500
Steam Boiler	≥ 82% AFUE ≥ 79% E_t ≥ 80% E_t	≤ 300 301–2,500 2,501–10,000	$2.00/MBtu/h $1.00/MBtu/h $1.00/MBtu/h
Warm Air Unit Heater	> 90% AFUE or E_t		$2.00/MBtu/h
Low-Intensity Infrared Heater	Any efficiency		$2.50/MBtu/h
Pipe Insulation	R-value ≥ 4. For existing gas-fired hot water or steam systems only.		$3.00/ft.
Duct Insulation	R-value ≥ 6. For existing uninsulated ductwork only.		$0.50/ft.
Demand Control Ventilation	N/A		$200/sensor
Furnace Tune-Up Service*	N/A		$125
Boiler Tune-Up Service*	N/A		$125
Water Heating Equipment			
Tankless Water Heater	0.87 UEF or 0.90 EF		$400
Other Gas Appliances			
Commercial Natural Gas Dryers	ENERGY STAR® qualified		$50
Controls			
Wi-Fi Thermostat	N/A		$100
Smart Thermostat	N/A		$200

*One tune-up service per furnace/boiler, per year.

Rebates only for equipment installed between October 1, 2025 and December 31, 2025.

Re: Pennsylvania Public Utility Commission v. National Fuel Gas Distribution Corporation / Docket No. R-2025-3059428

Dear Judge Dunderdale:

Enclosed please find the Rebuttal Testimony of Justin B. Farr, labelled OSBA Statement No. 1-R, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-referenced proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Rebecca Lyttle

REBUTTAL TESTIMONY

of

JUSTIN B. FARR

on behalf

of

Pennsylvania Office of Small Business Advocate

Topics:

Class Cost of Service
Revenue Allocation

Date Served: May 12, 2026

Date Submitted for the Record: _____

REBUTTAL TESTIMONY OF JUSTIN B. FARR

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Justin B. Farr. My business address is 111 East Broadway, Suite 1200, Salt Lake City, Utah, 84111.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Director in the firm of Energy Strategies, LLC. Energy Strategies is a private consulting firm specializing in economic and policy analysis applicable to energy production, transportation, and consumption.

Q. ARE YOU THE SAME JUSTIN B. FARR WHO PREFILED DIRECT TESTIMONY IN THIS DOCKET ON BEHALF OF THE PENNSYLVANIA OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA")?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony responds to the direct testimony of Bureau of Investigation and Enforcement ("I&E") and Office of Consumer Advocate ("OCA") witnesses on the topics of class cost allocation and revenue allocation.

Q. PLEASE SUMMARIZE THE CONCLUSIONS AND RECOMMENDATIONS IN YOUR REBUTTAL TESTIMONY.

A. In my rebuttal testimony:

(1) I disagree with the recommendations of I&E witness Mr. Ethan Cline and OCA witness Mr. Michael Deupree to use the Peak and Average method to

allocate distribution mains, without any consideration of customer-related costs. In the alternative, I recommend a hybrid approach, which assigns 50% of the weight to customer-related costs that are otherwise derived from National Fuel's zero-intercept analysis (i.e., 50% x 61% = 30.5%) with the remaining allocation (69.5%) determined using the alternative Peak and Average method proposed by OCA. I also provide a revised class revenue allocation based on this hybrid approach.

Q. DO YOU CONTINUE TO SUPPORT THE REVENUE REQUIREMENT ADJUSTMENTS PROPOSED IN YOUR DIRECT TESTIMONY?

A. Yes, I continue to support my recommendations concerning adjustments to salaries & wages and stock-based compensation tied to financial performance and denying the 25-basis point Management Premium as explained in my direct testimony. I note that the "proxy" ROE presented in my direct testimony is in between OCA's recommended 9.74% (assuming 50/50 debt/equity split) and I&E's 9.81% (assuming 45/55 debt/equity split). I also continue to support my recommendation that National Fuel adopt a non-residential energy efficiency program.

CLASS COST OF SERVICE AND REVENUE ALLOCATION

Q. IN YOUR DIRECT TESTIMONY, YOU SUPPORTED THE CLASS COST OF SERVICE METHOD PROPOSED BY NATIONAL FUEL AS BEING CONSISTENT WITH THE PRINCIPLES OF COST CAUSATION. DID OTHER PARTIES DISAGREE WITH NATIONAL FUEL'S APPROACH?

A. Yes. I&E witness Mr. Ethan Cline and OCA witness Mr. Michael Deupree both disagree with the Company's classification and allocation of costs associated with distribution mains and instead favor the Peak and Average method. Mr. Cline supports the Seaboard variant of the Peak and Average method which utilizes a 50-50 weighting of the demand and volumetric components, while Mr. Deupree recommends a variant based on the Company's system load factor. Neither variant favored by these witnesses considers customer-related costs. Mr. Cline points to Commission precedent that was reaffirmed in the recent Columbia Gas order.[1] Mr. Deupree cites academic literature describing methodologies for classifying cost of an electric distribution utility in support of his position.[2]

Q. HOW DO YOU RESPOND TO THESE OBJECTIONS?

A. While I continue to believe that National Fuel's use of the zero-intercept method to allocate distribution mains reasonably reflects cost causation, I recognize that the Commission has not always supported this approach, as highlighted by Mr. Cline. Given the differing positions among the parties on this issue, I am offering a hybrid alternative proposal that is a "middle ground" for the Commission's consideration in this proceeding.

Q. PLEASE DESCRIBE THE HYBRID ALTERNATIVE APPROACH YOU ARE PROPOSING.

A. The zero-intercept approach proposed by National Fuel classifies 61% of its investment in distribution mains as customer-related and 39% of its investment as

[1] Direct Testimony of Ethan H. Cline, p. 9, line 13 – p. 10, line 23.
[2] Direct Testimony of Michael Deupree, p. 55, line 3 – p. 57, line 9.

demand-related.[3] In contrast, the Seaboard method advocated by I&E allocates distribution mains using a 50% weighting of peak contribution by class and a 50% weighting of annual throughput while the variant advocated by OCA weights annual throughput based on the test year system load factor of 26.13% and allocates the remaining 78.87% to peak demand.

The options being considered are significantly different from one another. National Fuel's proposal assigns substantial weight to customer-related costs based on the results of its zero-intercept analysis. By contrast, the Seaboard method supported by I&E and the alternative variant proposed by OCA assign *absolutely no weight* to customer-related costs in the classification and allocation of distribution mains. My proposed hybrid approach represents a middle ground between National Fuel's proposal and OCA's proposal by assigning 50% weight to the customer-related costs derived from the zero-intercept analysis (i.e., 50% × 61% = 30.5%), while allocating the remaining 69.5% using the OCA's alternative method. The results of this hybrid approach are summarized in Table JBF-1-R, below.

[3] Direct Testimony of John D. Taylor, p. 12, lines 7-11

SVIS	$444	1.44	$350	-$93	-21.05%	1.00
IVIS	$5,876	1.33	$5,007	-$869	-14.79%	1.00
LVIS	$2,730	1.39	$2,226	-$504	-18.46%	1.00
LIS	$2,470	0.95	$2,958	$488	19.74%	1.00
Total System	$136,735	1.00	$156,400	$19,665	14.38%	1.00

Q. WHY DO YOU BELIEVE THE HYBRID APPROACH YOU ARE PROPOSING IS REASONABLE FOR THE PURPOSES OF THIS CASE?

A. Distribution mains are constructed for the dual purpose of meeting design day demand and providing service access to customer premises. Although the Peak and Average method recognizes class cost responsibility based on design day demand, it fails to account for the fundamental reality that the gas distribution system exists to deliver service to customer locations regardless of their individual demand levels. Design day demand certainly affects the diameter of mains installed and, therefore, the incremental cost associated with providing greater delivery capacity. However, the existence and geographic extent of the distribution system itself are

driven by the number and dispersion of customers the utility must serve. This is a straightforward matter of cost causation.

National Fuel's proposed zero-intercept method attempts to distinguish, through regression analysis, the portion of distribution main investment attributable to serving customers independent of their peak day demand. Reasonable parties may disagree regarding the appropriate weighting assigned to the customer-related component. However, assigning a weighting of zero to customer-related costs is difficult to justify.

Assigning at least some portion of distribution main costs to the customer classification is necessary to preserve a reasonable connection to cost causation principles. Although my proposal reduces the customer-related weighting by half, and therefore understates the customer component reflected in the zero-intercept analysis, I offer it as a good-faith compromise intended to establish a reasonable middle ground for purposes of this proceeding.

Q. YOUR MIDDLE GROUND APPROACH INCORPORATES OCA'S PROPOSED PEAK AND AVERAGE METHOD FOR 69.5% OF THE WEIGHTING. AS A GENERAL PROPOSITION, DO YOU BELIEVE THE ALLOCATION PROPOSED BY OCA IS A REASONABLE VARIANT OF THE PEAK AND AVERAGE METHOD?

A. Yes. Generally, if the Peak and Average method is used, I believe it should adhere to the parameters articulated in the Gas Distribution Rate Design Manual ("NARUC Manual") published by the National Association of Regulatory Utility Commissioners. As prescribed in the NARUC Manual, in using the Peak and

Average method, the weighting assigned to the average, or throughput component, should be set equal to the system load factor.[4] This is because the throughput component is intended to allocate costs that are associated with base-load-type usage, and system load factor is a generally-accepted standard for measuring the portion of facilities associated with the provision of base load service. In the case of National Fuel, the system load factor is 26.13%,[5] which is significantly less than the 50% weighting assigned to throughput by the Seaboard method preferred by I&E.

Q. IN YOUR DIRECT TESTIMONY, YOU SUPPORTED THE REVENUE ALLOCATION PROPOSED BY NATIONAL FUEL. WHAT REVENUE ALLOCATION ARE YOU PROPOSING IN CONCERT WITH YOUR MIDDLE GROUND PROPOSAL ON COST ALLOCATION?

A. My revised revenue allocation (at National Fuel's requested revenue requirement) is presented in Table JBF-2-R, below. I recommend the following:

- Classes with a parity ratio modestly lower than 1.0 receive an increase that is 1.05 times the system average (excluding fuel)
- Classes with a parity ratio at or modestly above 1.0 would receive increases that are 95% of the system average (excluding fuel)
- Classes with a parity ratio significantly greater than 1.0 would receive increases that are 85% of the system average (excluding fuel)

[4] In its discussion of this method in the NARUC Manual (June 1989), pp. 27-28, it specifies that the system's load factor is used to determine the capacity costs associated with average use and apportioned to classes on an annual volumetric basis.

[5] Derived from Attachment OCA I-3_St19_Exhibit D_ACOSS Sch2 (Formula for System Load Factor = Total Weather Normalized Volumes / (Peak Design Day 62DD * 365) or 38,211,546 / (400,571 * 365) = 26.13%)

- Cap the maximum increase at 1.5 times the system average (excluding fuel)

The results of my recommended revenue apportionment are contained in Table JBF-2-R below:

Table JBF-2-R
OSBA Revised Recommended Revenue Apportionment
Based on OSBA Hybrid COSS
At National Fuel's Direct Requested Revenue Requirement ($000)

			OSBA Recommended Revenue Apportionment				
Rate Class	Current Margin Revenue	Current Parity Ratio	Total Margin Revenue	Margin Revenue $ Change	Margin Revenue % Change	Multiple of System Increase	Resulting Parity Ratio
Residential	$97,367	0.94	$112,070	$14,703	15.10%	1.05	0.95
SCPA-LL	$6,819	1.10	$7,646	$827	12.12%	0.84	1.08
SCPA-UL	$6,989	1.00	$7,944	$955	13.66%	0.95	0.99
LCPA	$13,908	1.33	$15,593	$1,686	12.12%	0.84	1.31
NGV	$131	0.63	$156	$25	18.70%	1.30	0.65
SVIS	$444	1.44	$498	$54	12.12%	0.84	1.41
IVIS	$5,876	1.33	$6,588	$712	12.12%	0.84	1.31
LVIS	$2,730	1.39	$3,061	$331	12.12%	0.84	1.37
LIS	$2,470	0.95	$2,843	$373	15.10%	1.05	0.96
Total System	$136,735	1.00	$156,400	$19,665	14.38%	1.00	1.00

Q. HOW SHOULD YOUR RECOMMENDED REVENUE ALLOCATION BE SCALED BACK IN CONJUNCTION WITH A LOWER OVERALL REVENUE REQUIREMENT AS PART OF A COMMISSION FINAL ORDER IN THIS CASE?

A. With a lower overall revenue requirement, each class's total margin revenue should be scaled back such that its total margin revenue remains in the same proportion to the total system margin revenue as shown in Table JBF-2-R above.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

PREPARED DIRECT TESTIMONY OF HARRY S. GELLER, ESQ.

I. INTRODUCTION

Q: Please state your name, occupation, and business address.

A: My name is Harry S. Geller. I am a retired attorney. I am the former Executive Director of the Pennsylvania Utility Law Project (PULP). I continue to serve as a consultant to legal aid programs and their clients. I maintain an office at 118 Locust St., Harrisburg, PA 17101 for the purpose of providing consulting services and assistance to low income individuals and the organizations which represent them in utility and energy matters.

Q: Briefly outline your education and professional background.

A: I received my B.A. degree from Harpur College, State University of New York at Binghamton in 1966, and a J.D. degree from Washington College of Law, American University in 1969. Upon graduation from law school, I worked at several organizations dedicated to serving low income households. Beginning 1988, I served as the Executive Director of PULP, a statewide legal aid project dedicated to protecting the rights of low income utility customers. At PULP, I represented low income individuals to resolve issues impacting their ability to maintain energy and utility services to their homes and supported organizations advocating for improved utility access and affordability. I also consulted and co-counseled on a wide variety of individual utility consumer cases, and participated in multiple task forces, work groups and advisory panels, including serving as Chair of the Department of Human Services' Low Income Home Energy Assistance Program (LIHEAP) Advisory Committee and the Pennsylvania Public Utility Commission's Consumer Advisory Committee. I frequently trained communities, legal aid staff, and advocacy groups across Pennsylvania on a range of utility and energy matters affecting Pennsylvania's low income population. I retired from PULP on June 30, 2015. Since that time, I

have continued to provide consulting services for PULP and its clients, as well as other organizations serving the low income community. In sum, I have over 50 years' experience working on behalf of households in poverty, including the past 38 years focusing specifically on utility and energy issues affecting low income consumers. My resume is attached as Appendix A.

Q: Please describe the focus of your work over the past fifty years, including relevant work experience on issues of low income families' ability to afford essential services such as utilities?

A: Through the entirety of my career, I have represented low income individuals and organizations serving low income populations in a wide variety of legal matters, including family law, public benefits, unemployment compensation, utility shut-offs, debtor/creditor, and housing-related disputes. Over the past 38 years, my focus has been to ensure that low income households can connect to, afford, and maintain utility and energy services.

In all these legal matters, I worked almost exclusively on behalf of individuals and households that subsist on incomes at or below 150% of the Federal Poverty Level (FPL). Through this work, I have had a close view of the daily lives of countless of our poorest citizens. I have spent thousands of hours assisting clients, combing through their budgets to see whether it is even possible to make ends meet. Over the years, I have consistently seen the near total absence of the ability of low income families to afford the most basic monthly necessities with the incomes they have, even assuming heroic self-control and conscientious budgeting and spending. Every month, my clients faced the stark reality of having to choose which bills they can forgo with the least drastic consequences.

Q: Have you served as an expert witness in any proceeding before the Pennsylvania Public Utility Commission?

A: Yes. I have served as an expert witness in many proceedings before the Pennsylvania Public Utility Commission (PUC or the Commission). A complete list of the PUC proceedings in which I testified as an expert witness in the past ten years is included in my resume, which is attached as Appendix A.

Q: For whom are you testifying in this proceeding?

A: I am testifying on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: What is the purpose of your testimony?

A: CAUSE-PA intervened in this proceeding to ensure that the proposed rate increase, rate design, and tariff changes, if approved by the PUC, will not further negatively affect and exacerbate energy insecurity for low income families in National Fuel Gas Distribution Corporation's (NFG or the Company) service territory, who are already struggling to connect to, maintain, and afford essential gas service necessary for heating, cooking, and maintaining a safe and healthy home.

Thus, the purpose of my testimony is to assess NFG's existing and proposed rates, tariff, rules, procedures, and programs to determine whether they are just, reasonable, and appropriately designed to ensure that low income Pennsylvanians within NFG's service territory are able to equitably access and maintain safe and affordable utility services.

II. RATE INCREASE PROPOSAL

Q: Please summarize NFG's requested rate increase as it applies to residential customers.

A: On January 28, 2026, NFG submitted a filing to the Commission requesting a rate increase of approximately $19.7 million per year, or 7.4% over existing revenues.[1] In addition to this rate increase, NFG proposes to recover approximately $0.7 million annually from residential ratepayers through a separate rider to fund its proposed Energy Efficiency pilot program (EE Pilot).[2] NFG also proposes to continue Rider I, scheduled to end in September 2026, which would give customers a one year surcredit totaling approximately $6.2 million to return ratepayer dollars that were previously collected to provide Other Post-Employment Benefits (OPEB) to employees.[3]

If the Commission were to approve this rate increase request in its entirety, the monthly bill for a residential customer using 80 Ccf of gas would increase from $83.49 to $88.44, or by 5.9%, but only until the OPEB surcredit ends one year after the rate increase would take effect.[4] After the OPEB surcredit ends, the monthly bill for the same residential customer using 80 Ccf of gas would increase further to $90.28 per month, or by 8.1% over existing rates.[5] Notwithstanding the short-term OPEB credit to return ratepayers' money to them, NFG's proposal should be understood as a proposal to increase the bill of a residential customer using 80 Ccf of gas by 8.1% – that is, by $6.79 per month or $81.48 per year.

NFG proposes to recover a major portion of its proposed revenue increase through a substantial increase in its fixed monthly residential service charge – from $14 per month to $19

[1] NFG St. 1 at 5:23-24; See also Rate Filing Cover Letter.
[2] NFG St. 1 at 6:1-6.
[3] NFG St. 14 at 13:19-20, 14:2-9; NFG St. 5 at 7:3-7.

[5] Affidavit of Donald Koch, Bill Inserts, at 1 (filed Mar. 24, 2026).

per month, or by 35.7%.[6] This massive proposed increase to the fixed monthly charge means that households using the least amount of gas will face the highest percentage increase in their monthly gas bills.[7] NFG also proposes to make its pilot Weather Normalization Adjustment (WNA) a permanent part of its rate structure.[8] As I will discuss, NFG's proposed rate design features, including its high fixed service charge and WNA, would impair the ability of NFG's low income customers to afford their monthly bills and undermine bill savings otherwise achievable through adopting energy efficiency and conservation measures.

Q: Do you support NFG's requested rate increase?

A: No. NFG's requested rate increase is neither just nor reasonable and is not in the public interest. NFG's current rates are already unaffordable for low income families – making access to continued service inaccessible to thousands of households, creating a cascade of consequences for those households and the surrounding communities that NFG serves.

As I will discuss in detail, it would be unjust, unreasonable, and contrary to the public interest to approve any rate increase in this matter, without first requiring adoption of substantial additional reforms to NFG's policies, procedures, and terms and conditions of services to address existing rate unaffordability for NFG's low income customers, and to fully remediate the increased unaffordability which would be created by NFG's proposal to substantially increase its rates.

Throughout my direct testimony, I offer recommendations for how NFG can adjust its policies, procedures, programs, rates, and services so that low income customers are better able to maintain access to gas service in their homes. These recommendations are critical to address

[6] NFG St. 14 at 17, Table 1.
[7] NFG St. 14 at 18:22-23. "Customers that use less gas each month will see slightly higher bill impacts than average-use or high-use customers."
[8] NFG St. 19 at 23:6-10.

energy insecurity at existing rates and become even more vital to mitigate additional financial harm for economically vulnerable consumers if the Commission allows NFG to increase its basic rates for gas service.

III. IMPACT OF RATE INCREASE ON LOW INCOME HOUSEHOLDS

a. NFG Low Income Customer Count

Q: What level of income qualifies a household as "low income"?

A: The Commission considers a "low income customer" to be any residential customer with income at or below 150% of the federal poverty level (FPL).[9] With some exceptions, most utility assistance programs – including NFG's Customer Assistance Program (CAP) and Pennsylvania LIHEAP – require households to have income that is not greater than 150% FPL to qualify for assistance.[10]

The FPL is a measure of poverty based exclusively on household size and income. It does not consider the relative difference in economic vulnerability based on the composition of the household (i.e. the age or health condition of household members) or variations in the cost of living based on geographic location. Table 1 provides a breakdown of the 2026 household income by FPL and household size:

[9] See 52 Pa. Code § 62.2 (Defining low-income customers for the purposes of NGDC Universal Service programs and reporting).
[10] See National Fuel Gas Distribution Corporation, 2022-2026 Universal Service and Energy Conservation Plan, Docket No. M-2021-3024935 at 23 (3rd Revised Plan Jan. 2, 2024) (hereinafter NFG USECP).

Table 1: 2026 Annual Income by Federal Poverty Level and Household Size[11]

Household/ Family Size	50%	100%	150%	200%	250%
1	$7,980	$15,960	$23,940	$31,920	$39,900
2	$10,820	$21,640	$32,460	$43,280	$54,100
3	$13,660	$27,320	$40,980	$54,640	$68,300
4	$16,500	$33,000	$49,500	$66,000	$82,500
5	$19,340	$38,680	$58,020	$77,360	$96,700

As a baseline, a family of four with household income at or below 150% FPL has a maximum gross annual income of $49,500 ($4,125 per month).[12] A household of four with income at or below 50% FPL has a maximum gross annual income of just $16,500 ($1,375).[13]

For illustrative purposes, a full-time (40 hours/week) worker making minimum wage ($7.25 per hour) has a gross annual income of $15,080, assuming no time off. This is substantially less than a household needs to meet their basic expenses in any of the counties that NFG serves.[14] This full-time minimum wage income level is relatively in line with the average $16,720 household income of NFG's 25,308 confirmed low income customers.[15] Notably, 14.7% of Erie County households, where a plurality of NFG's customers reside,[16] have income at or below 100% of the FPL, a markedly higher rate of households living below the poverty level than the 11.6% rate for

[14] Self-Sufficiency Standard, available at: http://www.selfsufficiencystandard.org/Pennsylvania.
[15] NFG Response to CAUSE-PA 1-19*; NFG Revised Response to CAUSE-PA 1-5, Attachment - Revised (NFG reports it serves 25,308 CLI customers as of January 2026). Attached hereto at Appendix B. *CAUSE-PA's discovery requests were served with Arabic numeration. In its responses to some sets of CAUSE-PA's discovery requests, NFG transposed Roman numeration for the original Arabic numeration. Herein I consistently use Arabic numeration to identify NFG's responses to CAUSE-PA's discovery requests.
[16] NFG Response to CAUSE-PA 1-10, Attachment, "Total Active Residential Accounts by County." Attached hereto at Appendix B .

Pennsylvania and the 10.6% rate across the United States.[17] 30% of Erie County households have income at or below 150% FPL.[18]

While the Commission uses FPL in its definition of "low income customer," this definition is not truly reflective of the income level necessary to be able to meet basic needs. To assess the actual level of economic hardship across a given region, poverty experts often utilize the Self Sufficiency Standard. This Standard is a benchmark used to assess how much income a household needs to live without assistance. It measures the income that a family must earn to meet their basic needs and consists of the combined cost of six (6) basic needs – housing, child care, food, health care, transportation, and taxes – without the help of public subsidies.[19] Unlike the FPL, which does not change based on geographic location or family composition, the Self-Sufficiency Standard accounts for the varied costs of the six basic needs in different geographic areas and for differently aged household members.[20]

Across the counties NFG serves, the average Self-Sufficiency Standard for a family with two adults and two school aged children is $76,166.50.[21] This is far above the maximum income ceiling to qualify for most energy assistance programs (150% FPL). In fact, a family of four at the maximum income that would qualify for NFG's CAP would need 154% of its current income – an additional $26,666.50 annually – simply to make ends meet each month without assistance.[22]

---

[18] NFG Response to CAUSE-PA 1-10, Attachment, "Estimate of the Number of National Fuel's Low Income Households." Attached hereto at Appendix B.
[19] See PathWays PA, Overlooked and Undercounted 2019 Brief: Struggling to Make Ends Meet in Pennsylvania, available at: http://www.selfsufficiencystandard.org/Pennsylvania.
[20] See PathWays PA, Overlooked and Undercounted 2019 Brief: Struggling to Make Ends Meet in Pennsylvania, available at: http://www.selfsufficiencystandard.org/Pennsylvania.
[21] See Sufficiency Standard – 2024 Pennsylvania Dataset, available at: https://selfsufficiencystandard.org/pennsylvania/.
[22] 150% of the FPL is $49,500 – this is the **maximum** income a household of four can have to qualify for NFG's CAP.

There is little to no chance that households at or below 150% of the poverty level can afford essential utility service without substantial levels of assistance.

Any increase in the cost of necessities, including the rates for basic gas service, will result in increased unaffordability for low income households living below the Self-Sufficiency Standard, and will ultimately result in a corresponding increase in uncollectible expenses and service terminations, requiring low income households to make unreasonable choices in terms of what essentials to forgo to make ends meet each and every month.

Q: How does NFG determine how many low income customers are in its service territory?

A: Like other large, regulated public utilities in Pennsylvania, NFG must track its low income customer population in two ways – estimated low income customers (ELI) and confirmed low income customers (CLI).[23] A utility's estimated low income customer count is derived from census data, scaled against residential customer counts in a given geographic area.[24] The Commission defines a "confirmed low income" customer as a residential customer for whom the utility "has obtained information that would reasonably place the customer in a low-income designation," including through receipt of LIHEAP funds or through self-certification.[25]

As of December 2025, NFG reports that it serves 57,542 ELI customers, representing 29.1% of the 197,608 residential customers it serves.[26] NFG's CLI count is limited to those customers that the Company has recorded as having income at or below 150% FPL, either through

[25] 52 Pa Code § 62.2; 2024 Universal Service and Collections Report at 2.
[26] NFG Response to CAUSE-PA 1-10, Attachment, "Estimate of the Number of National Fuel's Low Income Households."

verbal confirmation of household makeup and income or through a customer's receipt of a LIHEAP grant.[27] NFG reports that it has confirmed that 24,901 of its residential customers have low income, representing 12.6% of the residential customers it serves and just 43.3% of the residential customers in NFG's service territory who are estimated to have low income.[28]

By either measure, a substantial number of NFG's customers have income that is at or below 150% FPL. That said, I note that the ELI customer count presents a more holistic picture of the total number of households that are likely income eligible for rate assistance in NFG's service territory. The CLI count provides a limited and incomplete picture of NFG's low income customer population. For purposes of evaluating the impact and reasonableness of NFG's rates and terms and conditions of service – including the adequacy of its universal service programs – it is more accurate to use the census-based ELI customer count, rather than relying on a population subset– the number of CLI households that have already applied for energy assistance or otherwise provided income information to the Company.

Q: Do you have any concerns about NFG's identification and classification of its CLI customers?

A: Yes. I am concerned that NFG does not appear to have a procedure for proactively identifying and classifying its low income customers as CLI which has resulted in the Company undercounting its CLI customer population. As mentioned above, NFG has confirmed the low income status of fewer than half of its customers who are estimated to have low income.[29] NFG reports that it does not screen customers or applicants for low income status at the time they start

[27] NFG Response to CAUSE-PA 1-4; NFG Response to OCA IV-19. Both attached hereto at Appendix B.
[28] NFG Revised Response to CAUSE-PA 1-5, Attachment – Revised; NFG Response to CAUSE-PA 1-10, Attachment, "Estimate of the Number of National Fuel's Low Income Households"

or move service.[30] Instead, NFG only updates customer income information reactively – such as after a customer received a termination notice, contacted the Company in need of assistance with paying a past due bill, or when the Company received a LIHEAP grant on the customer's account.[31]

Without a more precise count of NFG's low income customer population, it is difficult for the Company to evaluate the true impact of its requested rate increase on its low income customer base and the appropriate actions needed to mitigate the proposed changes to its rates, programs, and associated terms and conditions of service. An inclusive and accurate count of low income customers is also essential to determining the adequacy and accessibility of NFG's universal service programs, inclusive of the policies and procedures regarding income-based consumer protections, such as the winter moratorium and the prohibition on security deposits.[32]

As I will discuss later in my testimony, NFG's assistance programs are reaching only a small percentage of *confirmed* low income customers – which necessarily means that it is reaching an even smaller percentage of the actual low income households within its service territory. It is imperative that increased efforts are made to routinely and proactively screen customers for low income status and connect these customers with assistance before payment difficulties occur. Improving identification of NFG's low income customers – and matching these customers with available assistance – is essential to providing just and reasonable rates and services, as well as ensuring that all consumers, including CAP-eligible consumers, can access the most advantageous available rate.[33] Proactive identification of low income customers so that these customers can be connected to available services and protections also serves as a critical collections and cost

[31] NFG Response to CAUSE-PA 5-16; NFG Response to CAUSE-PA 1-4. Attached hereto at Appendix B.
[32] 52 Pa. Code § § 56.32(e), 56.100; 66 Pa. C.S. § 2802 (defining universal service and energy conservation to include the programs, policies, and procedures that assist low income customers to maintain service to their home.)
[33] 66 Pa. C.S. § 1303.

containment tool – helping to reduce the accrual of unmanageable debts, reduce uncollectible expenses and other collections costs, and reduce the cost of the CAP arrearage management program.

Q: Do you have any recommendations for how NFG could improve its ability to identify and serve its low income customer base?

A: Yes. To help further improve identification of confirmed low income customers and enhance services to its low income customer base, I recommend that NFG begin screening all new and moving customers for income level at the time their service is established. For existing customers, NFG should routinely screen for income on any non-emergency calls, and/or should inquire whether there has been any update to the income information already noted in their account. When establishing an account, and once annually thereafter, all customers should be informed of the availability of low income programs and requested to voluntarily self-disclose any changes to their income information. All customers identified as low income through this process should be referred for enrollment in NFG's universal service programs. Consumers should be able to opt out of disclosing their income if they so choose but should first be informed that they may be eligible for a lower rate, debt forgiveness, or energy efficiency measures.

Improving the identification of low income customers and better matching them to critical rate assistance and usage reduction services is essential to improving NFG's ability to provide service at just and reasonable rates to low income households. This is particularly the case in light of the substantial increase in residential rates proposed by NFG in this case. It would also help improve the ability of NFG, the Commission, and stakeholders to assess NFG's customer service metrics – including its credit, collections, termination, reconnection, complaint, and universal

service data – to determine whether and to what extent its rates, policies, and programs are just and reasonable in appropriately serving the needs of its low income customers.

b. Impact of Proposed Rate Increase on Low Income Households

Q: How would NFG's proposed rate increase impact low income households?

A: If approved, NFG's proposed rate increase will have a severe and detrimental impact on low income families across its service territory. Low income families already struggle to make ends meet each month and are regularly forced to make untenable choices between affording utility services and other basic necessities – such as food, medicine, medical care, and housing. NFG's proposed rate increase would represent a substantial increase in a basic living expense that, if approved, will have a destabilizing impact on low income families.

To contextualize the impact of NFG's proposed rate increase on low income households, it is helpful to look at the relative energy burden of low income households compared to other Pennsylvanians. A household's energy burden is the percentage of household income required to pay for energy services.[34] According to formal Commission policy, to be considered affordable, a household's *combined* energy burden (electric and gas) should not exceed 6% of household income for those with incomes between 0-50% FPL, or 10% of household income for those with income between 51-150% FPL.[35] But across Pennsylvania, households with income at or below 150% FPL spend as much as 29% of their income on energy costs alone.[36] If a household's total housing costs – *including utility costs* – is more than 30% of a household's total income, the household is cost-

[34] 2019 Amendments to Policy Statement on Customer Assistance Program, 52 Pa. Code § 69.261-69.267, Final Policy Statement and Order, Docket No. M-2019-3012599, (Final Policy Statement entered Nov. 5, 2019) at 3.
[35] *Id*.; 2019 Amendments to Policy Statement on Customer Assistance Program, 52 Pa. Code § 69.261-69.267, Final Policy Statement and Order, Docket No. M-2019-3012599, (Final Policy Statement entered Nov. 5, 2019).
[36] See Fisher, Sheehan & Colton, The Home Energy Affordability Gap: Pennsylvania (April 2023).

burdened, according to the U.S. Department of Housing and Urban Development.[37] Pennsylvania households at or below 150% FPL reach the threshold of being cost-burdened *from their energy costs alone*.[38] By comparison, the Bureau of Consumer Services (BCS) estimates that the energy burden of Pennsylvania's residential customers as a whole (exclusive of those enrolled in a CAP) is roughly 4%.[39]

Energy insecurity resulting from high energy burdens impacts roughly 1 in 4 Pennsylvania households.[40] According to the United States Census Bureau's Household Pulse Survey, roughly 24.4% of Pennsylvania households were unable to afford their home energy bills in 2024, compared to 23% nationwide.[41] According to the Energy Information Administration (EIA) 2024 Residential Energy Consumption Survey (RECS), 32.9% of U.S. residents reported experiencing energy insecurity; 24.8% reported reducing or forgoing food or medicine to pay for energy costs; and 13.2% reported leaving their homes at unhealthy temperatures because they could not afford to pay for energy.[42] Energy insecurity is more pronounced for low income Black families. EIA's

J. Pub. Health (2013) available at: http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3673265/#bib20.

[40] US Census Bureau, Household Pulse Survey: Pennsylvania, Unable to Pay Energy Bill (Aug. 20 – Sept. 16, 2024), available at: https://www.census.gov/data-tools/demo/hhp/#/?measures=ENERGYBILL&s_state=00042. Energy insecurity is the inability to adequately meet home energy needs. There are three dimensions to energy insecurity: economic (disproportionately high energy costs (burden) as percentage of income); physical (housing deficiencies / inefficiencies); and coping (strategies to cope with economic and physical hardships associated with energy insecurity). See Columbia Univ. Ctr. on Global Energy Policy, Energy Insecurity in the United States, https://www.energypolicy.columbia.edu/publications/energy-insecurity-in-the-united-states/.

[42] United States Energy Information Administration, 2024 Residential Energy Consumptions Survey, Table HC11.1 Household energy insecurity, 2024 available at: https://www.eia.gov/consumption/residential/data/2024/hc/pdf/HC11.1_2024.pdf.

RECS data revealed that 55.1% of Black and African American households experience energy insecurity, compared to 29.4% of white households.[43] These disparities are driven in large part by inequities in housing quality and, in turn, home efficiency.

According to a recent study of the National Energy Assistance Directors Association and the Center for Energy Poverty and Climate, in February 2024, 51.9% of households with income under $50,000 reported at least one month where they reduced or went without food, medicine, and other basic needs in order to pay an energy bill.[44] In addition, 34% kept their home at a temperature that felt unsafe or unhealthy in order to save money on energy bills.[45] The data reviewed in the study found that, far and away, the greatest increase in energy insecurity was among households with children.[46]

NFG's proposed rate increase would substantially increase the portion of low income households' energy burdens attributable to their gas bills. The Table below uses data provided by NFG in response to discovery requests to analyze the bill burden impact for confirmed low income households, using 2025 average residential usage data. Using this same information, the last column shows the monthly percentage of income low income customers must allocate toward their gas bills at proposed rates.

Oct-25	2.7	$38.58	$44.28	2.77%	3.18%
Nov-25	7.6	$80.94	$90.51	5.81%	6.50%
Dec-25	15.1	$146.73	$161.38	10.53%	11.58%
2025 TOTAL	**101.4**	**$969.82**	**$1,185.58**	**5.80%**	**7.09%**

Importantly, NFG reports that it does not track data on the average customer bill for confirmed low income customers.[52] The above Table therefore uses the average residential customer bill amount at average usage and the average income for NFG's confirmed low income customers to calculate CLI energy burdens. NFG proposes to increase those burdens even more, without the data to demonstrate what bill impact CLI customers will actually experience. It would

[47] NFG Response to OCA IV-15, Attachment, Current, Line 10. Attached hereto at Appendix B.
[48] NFG Response to OCA IV-15, Attachment, Current, Line 51. Attached hereto at Appendix B.

[51] NFG Response to CAUSE-PA 1-19 (Average annual income of CLI customers is $16,720/year, $1393.33/month); NFG Response to OCA IV-15, Attachment, Proposed, Difference of Lines 53 and 29. Both attached hereto at Appendix B.
[52] NFG Response to CAUSE-PA 1-17.

be unjust and unreasonable to allow NFG any rate increase without requiring the Company to detail the impact its proposed rate increase would have on low income customers and to provide a meaningful plan to ameliorate the negative effects of such an increase.

As Table 2 depicts, the annual energy burdens carried by NFG's CLI customers are more than half of what the Commission considers to be an affordable energy burden – inclusive of both a consumer's gas and electric burdens. Importantly, the amount a low income household pays each month varies depending on their usage – just as it would for all residential customers. In February, when gas usage was highest,[53] low income households with average CLI income at average residential usage were charged as much as 11.7% of their income at current rates – exceeding what the Commission considers to be an affordable energy burden *for gas service alone*. At proposed rates, the average energy burden for these same households would increase over two full percentage points to 14%.

Q: In addition to the high energy burdens discussed above, is there other evidence that NFG's rates are not affordable for low income households?

A: Yes. NFG's low income customers carry a disproportionate amount of residential customer debt and are far more likely to have their service involuntarily terminated for nonpayment. If NFG's proposed rate increase is approved, these pronounced disparities will increase, as will the risk of consequences to the health and safety of low income customers and their households and the corresponding level of uncollectible expenses which are recovered from all ratepayers.

[53] NFG Revised Response to CAUSE-PA 1-16, Attachment– Revised. (In February 2025, the mean usage for residential customers was 187 Ccf and the mean usage for CLI customers was 191 Ccf). Attached hereto at Appendix B.

Confirmed low income customers who are not enrolled in CAP (non-CAP CLI customers) account for 9.6% of NFG's residential customers,[54] but experience disproportionate negative impacts as a result of the unaffordability of NFG's rates:

- 57.2% of NFG's payment troubled customers are non-CAP CLI customers;[55]
- 20.6% of NFG's non-CAP CLI customers are payment troubled;[56]
- 52% of the dollars in debt held by NFG's residential customers is held by non-CAP CLI customers;[57]
- Non-CAP CLI customers with debt to NFG carry on average $198.93 more in debt than do overall residential customers;[58]
- 49.7% of customers with active payment arrangements are non-CAP CLI customers;[59]
- Non-CAP CLI customers without an active payment arrangement carry 39.7% of residential dollars in debt not in a payment arrangement;[60]
- In 2025, 50.1% of uncollectible write-off expenses were for non-CAP CLI customers' debt.[61]

Critically, low income customers already have a markedly higher rate of termination compared to overall residential customers. In 2025, NFG terminated service to 7,711 households for non-payment.[62] Of those households, 3,344 were confirmed to have low income.[63] Confirmed low

[60] NFG Second Revised Response to CAUSE-PA 1-24, Attachment - Revised. Attached hereto at Appendix B.
[61] NFG Response to CAUSE-PA 1-18, Attachment. Attached hereto at Appendix B.
[62] NFG Revised Response to CAUSE-PA 1-13, Attachment – Revised. Attached hereto at Appendix B.
[63] NFG Revised Response to CAUSE-PA 1-13, Attachment – Revised. Attached hereto at Appendix B.

income households comprise 12.6% of NFG's residential customers but were 43.4% of those households whose service NFG terminated in 2025.[64]

These indicators demonstrate that NFG's low income consumers already have excessive energy burdens and struggle to pay for gas service, and will likely experience increased arrears, increased termination, and increased payment trouble if the proposed rate increase is approved without taking necessary measures to mitigate the impact of the increase on low income households.

Q: How does the involuntary termination of gas service impact a household?

A: Utility termination has severe, destabilizing impacts on low-income households. Involuntary loss of gas service has a deep and lasting impact on the health and well-being of an entire household – as well as the community. The loss of gas service can also have a significant impact on the ability of vulnerable populations to manage medical conditions and is particularly dangerous for certain groups – including seniors, families with young children, and individuals with a disability – each of whom are more likely than other residential households to experience poverty and income insecurity.[65] Furthermore, utility insecurity and resulting payment trouble is

[64] NFG Revised Response to CAUSE-PA 1-5, Attachment – Revised; NFG Revised Response to CAUSE-PA 1-8, Attachment – Revised; NFG Revised Response to CAUSE-PA 1-13, Attachment – Revised. All attached hereto at Appendix B. As of December 2025, NFG served 24,901 confirmed low income customers, 12.6% of the 197,241 residential customers it served.

[65] Charlie Harak, Olivia Wein, NCLC, Protecting Seriously Ill Consumers from Utility Disconnections: What States Can Do to Save Lives Now (Sept. 29 2022), at 5-6, available at: https://www.nclc.org/resources/report-protecting-seriously-ill-consumers-from-utility-disconnections-what-states-can-do-to-save-lives-now/.

increasingly recognized as a predictor of first-time homelessness.[66] Involuntary loss of gas service is often a contributing factor leading to family separation through the child welfare system.[67]

When a household is unable to use a primary heating system, they often resort to dangerous and/or high-usage/high-cost heating methods– such as electric space heaters, electric stoves, and/or portable generators – which increases the risk of carbon monoxide poisoning and house fires.[68] Heating equipment is a leading cause of fires in U.S. homes.[69] Space heaters are most often responsible for home heating equipment fires, accounting for more than two in five fires, as well as the vast majority of the deaths and injuries in home fires caused by heating equipment.[70] As of February 2026, NFG reported that at least 163 of its residential customers were *known* to be without a central heating source in the winter months, and at least 122 households were *known* to be using a potentially unsafe alternative heating source.[71] This is dangerous to the life and health of the individual family and the surrounding community, and is driven primarily by the inability of that family to afford the cost of service. Increasing the cost of service and the affordability gap, without concurrently providing strong mitigation to assure rates remain reasonably accessible to those in need, will exacerbate the health and safety consequences to Pennsylvania's most

economically vulnerable households, which are disproportionately single parents with young children, people of color, seniors, and people with a disability.

Q: Will the Low Income Home Energy Assistance Program (LIHEAP) mitigate the harm of the proposed rate increase on low income households?

A: No. LIHEAP is a federal program designed, in Pennsylvania, as a supplement to assist households to better afford energy services in winter, but the program only reaches an estimated 30% of eligible households and is not adequately funded to address existing unaffordability – let alone increased unaffordability because of increased rates. The program is subject to annual reauthorization and allocation of funding by the federal government, and it would be inappropriate to consider the availability of LIHEAP funding in evaluating the justness and reasonableness of NFG's rates.

Notably, despite severe, disproportionate, and rising levels of debt for low income households, LIHEAP grants received on behalf of NFG's low income customers declined precipitously from the 2022/2023 program year to the 2024/2025 program year, and continued federal funding for the program is uncertain.[72] In the 2025/2026 LIHEAP program year (as of April 11, 2026), the average LIHEAP Cash grant for gas heating customers was just $275.[73] For perspective, under NFG's proposed increase, the total bill for a residential customer using 80 Ccf of gas would be $81.48 per year. The proposed increase would thus subsume approximately 30% of the average 2025/2026 cash grant for gas consumers. NFG's total LIHEAP dollars have also steadily decreased in recent program years. For example, NFG's total LIHEAP dollars decreased

[72] NFG Response to CAUSE-PA 1-9, Attachment; National Energy Assistance Directors Assoc. (NEADA), President's FY 2027 Budget Eliminates Federal Funding For LIHEAP (April 3, 2026), available at: https://neada.org/wp-content/uploads/2026/04/PresidentBudget2027Response.pdf.
[73] See CAUSE-PA St. 1, Ex. Geller C-1 (Energy Assistance Summary (EASUM)): April 11, 2026.

from $9,521,950 in the 2022/2023 program year to $5,647,651 in the 2024/2025 program year.[74] NFG reports that, as of February 2025, it has only received $2,447,873 in total LIHEAP dollars.[75] The decline in LIHEAP grant awards received by NFG is a reflection of declining minimum and maximum grant award levels, which was in turn driven by declining federal funds.[76] Continued funding for future LIHEAP seasons is uncertain, and the current administration has proposed to cut the program in its entirety.[77] Even if the program is authorized to continue in future program years, LIHEAP has not eliminated the excessive arrears, service terminations, and energy burdens of NFG's low income customers – and its continuation will not mitigate the impact of the proposed rate increase.

Q: Will low income customers be able to offset the cost of the proposed rate increase through conservation and/or installation of energy efficiency measures?

A: No, not as proposed. As explained in detail below, NFG's proposed rate design, including its fixed residential charge proposal and proposal to make permanent its pilot WNA, will substantially erode the ability of low income customers to control energy costs through reduced usage or energy efficiency measures.

Q: Do you have any proposals that could help remediate the financial impact of NFG's proposed rate increase on low income consumers?

A: Yes. I have several recommendations to help mitigate the financial impact of NFG's proposed rate increase on low income households, which I will discuss in detail below. I recommend several reforms to NFG's universal service programs to improve enrollment and retention and to ensure that the programs are more widely available, adequately funded, and prudently designed to assist low income households to reasonably connect and maintain gas service to their homes.

IV. UNIVERSAL SERVICE PROGRAMS

Q: Please briefly describe NFG's universal service programs.

A: NFG is required by statute to maintain a portfolio of universal service programs designed to assist low income households to connect and maintain services in their homes. These programs are detailed in NFG's Universal Service and Energy Conservation Plan (USECP).[78] NFG's universal service programs include (1) NFG's CAP (formerly known as the Low Income Residential Assistance Program (LIRA)), (2) a Low Income Usage Reduction Program (LIURP), (3) a Hardship Fund (Neighbor for Neighbor Heat Fund or NFN), and (4) a Customer Assistance and Referral Evaluation Services (CARES).[79] As part of its LIURP, NFG offers a Low Consumption LIURP (LC-LIURP) and an Emergency Repair and Replacement Program (ERRP).[80]

[78] National Fuel Gas Distribution Corporation, Universal Service and Energy Conservation Plan (USECP), Docket No. M-2021-3024935, (revised January 2, 2024) (hereinafter 2022-2026 USECP).
[79] 2022-2026 USECP at 3.
[80] 2022-2026 USECP at 5-6.

In this Section, I will address NFG's CAP, LIURP, and NFN programs and provide recommendations for how NFG should improve each of these programs to better address the need for assistance for NFG's low income customers to remediate rate unaffordability at both existing and proposed rates.

Q: Why is it appropriate to address these programs in the context of reviewing NFG's proposal to increase rates for residential service?

A: NFG's universal service programs are designed to work in tandem to provide bill assistance, arrearage management, usage reduction, and crisis assistance – helping to ensure that, based on the rates within the Company's service area, consumers with limited economic means can reasonably afford to connect and maintain service to their home. The Commission ordinarily reviews these programs every five years. However, in the interim, when changes are proposed within a particular service territory that will affect low income customer households' ability to afford and maintain service, it is critical to examine the effect of those changes, whether a utility's universal service programming, rules, and policies require modification as a result of an intervening rate increase, and, if so, to make necessary changes prior to approval of the increase to remediate that impact. Importantly, although the Commission ordinarily reviews a utility's universal service programs every five years, the Commission granted NFG's request to extend its current 2022-2026 USECP through September 1, 2028.[81] As such, it is critical that, in order to avoid an extensive period of irreparable hardship, NFG's universal service programs be examined in the context of the current proceeding.

[81] Secretarial Letter, Re: NFG 2022-2026 USECP at Docket No. M-2021-3024935 Request for Extension of Time to File NFG's Next Third-Party Evaluation and USECP, Docket No. M-2021-3024935 (Dec. 11, 2024).

Assessing the adequacy of universal service programming to remediate rate unaffordability each time rates are proposed to increase is an essential element in determining the justness and reasonableness of the proposed increase, as well as the adequacy of the customer service which is provided to the low income customer base. Failures to provide such an examination *and* act to remediate the effects in the context of a rate case causes low income households to face unjust and unreasonable rates, resulting in increased involuntary termination rates for low income households and higher uncollectible expenses for other residential consumers.

Q: Has NFG proposed any changes to its universal service programs in this case?

A: In its initial filings, NFG did not propose any changes to its universal service programs.[82] In response to discovery, however, NFG reported that it is evaluating certain changes to its NFN hardship fund.[83] NFG reports that on account of the low level of available funding in its NFN, the Company is proposing (1) to make both income and a specified hardship mandatory criteria for eligibility, (2) limiting the program to only NFG customers, and (3) adding "flexibility to adjust the grant amount based on demand."[84] I will address these proposed changes later in this section of my testimony.

a. Customer Assistance Program (CAP)

Q: Please briefly describe NFG's Customer Assistance Program (CAP).

A: NFG's CAP provides reduced monthly rates and arrearage forgiveness to heating customers with income at or below 150% FPL.[85] CAP rates are calculated based on the applicable

[82] NFG St. 17 at 3:19; 6:5.
[83] NFG Response to CAUSE-PA 1-2. Attached hereto at Appendix B.
[84] NFG Response to CAUSE-PA 1-2. Attached hereto at Appendix B.
[85] 2022-2026 USECP at 23.

percentage of income (PIP) or average monthly bill amount, whichever is lower, with a minimum bill amount of $12.[86] PIP rates are set at 4% of household income for those households between 0-50% of FPL and 6% for those households between 51%-150% of FPL[87] Average monthly bill amounts are calculated per NFG's Balanced Billing Plan as described in the Company's tariff – that is, the bill amount is 1/12th of the customer's estimated annual bill.[88] NFG monitors CAP customers' energy burdens quarterly to ensure compliance with the 4% and 6% income percentage requirements.[89]

NFG transitioned its CAP to a PIP rate model in April 2024.[90] The transition to a PIP rate model is a substantial improvement in the design of NFG's CAP that helps ensure enrolled customers receive more affordable gas bills. However, NFG's effectiveness at protecting low income NFG households from unaffordability, at both existing and proposed rates, is undercut by the low enrollment of eligible households in its CAP program.

Q: Are customers who are enrolled in NFG's CAP protected from the financial impact of the rate increase?

A: That answer depends on the type of CAP rate the customer receives and, for some, when the rate is assigned. CAP customers with a PIP rate and/or minimum bill rate will not experience an impact to their monthly payment.[91] CAP customers with an average monthly bill rate, however, will experience an increase at the time of their annual budget bill adjustment, up to the amount of their applicable PIP rate. If a CAP customer's average monthly bill amount exceeds the PIP rate,

[86] 2022-2026 USECP at 22.
[87] 2022-2026 USECP at 21.
[88] 2022-2026 USECP at 22; Supplement No. 236 to National Fuel Gas Distribution Corporation Tariff Gas Pa. P.U.C. No. 9 at Second Revised Page No. 23.

[90] NFG St. 17 at 2:15-17.
[91] NFG Response to CAUSE-PA 1-1. Attached hereto at Appendix B.

their bill amount will be switched to the PIP rate with the next quarterly adjustment. Importantly, 42% of NFG's CAP enrollees receive average bills and will experience higher bills as a result of any approved rate increase.[92]

Q: How many of NFG's low income customers are enrolled in CAP?

A: CAP only reaches a small portion of the eligible population. As of December 2025, only 10.8% of the 57,542 NFG customers who are estimated to have low income were enrolled in CAP.[93] Only 25% of the 25,308 customers that the Company has confirmed to have low income are enrolled as of January 2026.[94] This means that between 75% to 89.2% of NFG's low income customers are not enrolled in CAP and will bear the full, unmitigated impact of any residential increase that the Commission allows to take effect.

Note that the current figures represent a backslide from NFG's CAP enrollment figures at the time of the Company's previous base rate case. In November 2022, NFG had enrolled 28.4% of its confirmed low income customers in CAP, or 11.2% of its estimated low income customer population.[95] As such, a smaller proportion of NFG's low income customers are enrolled in CAP today than the last time NFG requested a revenue increase. The Commission must require that NFG take action to correct course and ensure that its CAP reaches eligible households to protect them from unaffordability at existing and proposed rates.

[92] NFG Revised Response to CAUSE-PA 1-3, Attachment – Revised. Attached hereto at Appendix B. As of January 2026, 2,663 of the 6,341 NFG customers enrolled in CAP receive average bills.

[94] NFG Revised Response to CAUSE-PA 1-6, Attachment; NFG Revised Response to CAUSE-PA 1-5, Attachment – Revised. Both attached hereto at Appendix B.
[95] Direct Testimony of Harry S. Geller on Behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"), Docket No. R-2022-3035730 at 26:3-6, and Table 2.

Q: Do you have concerns about the number of NFG low income customers that are not enrolled in CAP?

A: Yes. CAP is a critically important affordability program that, as discussed above, helps to substantially reduce low income termination rates among its participants. CAP is specifically designated in the Natural Gas Choice Act as one of the Universal Service Programs intended to assist the low income population within a natural gas distribution company service territory to maintain service to their home.[96] NFG's CAP rates are its most affordable and advantageous. However, a significant majority of customers eligible for CAP assistance are not enrolled, effectively undercutting the intent of the Choice Act and limiting the ability of CAP to mitigate unaffordability for its low income customer population at proposed and present rates. In addition, non-response to recertification attempts is the single largest reason NFG customers are removed from the Company's CAP, responsible for more than half of all CAP removals.[97] In 2024, NFG's CAP default rate – the percentage of CAP customers who missed payments, made late payments, or failed to recertify – was 48.6% for all NFG CAP income tiers, more than double the industry averages of 17.6% for 0-50% FPL, 14.0% for 51-100% FPL, and 18.4% for 101-150% FPL.[98] Nearly half of NFG's CAP customers struggle to comply with the Company's program requirements to stay enrolled, including its process for recertification, indicating a clear need for improvements. The Commission should require NFG to take action to ensure its eligible customers

[96] 66 Pa.C.S. §§ 2202, 2203

[97] NFG Response to CAUSE-PA 1-11, Attachment; NFG Response to CAUSE-PA 1-12, Attachment. Both attached hereto at Appendix B. In 2025, 2,589 NFG CAP customers were removed from CAP, with 1,385 (53.5%) of those removed for non-response; 2022-2026 USECP at 63.

[98] Pa. PUC, Universal Service Programs & Collections Performance, 2024 Report (hereinafter 2024 Universal Service and Collections Report) at 59.

can enroll – and stay enrolled – in the Company's CAP to ensure customers can access service at the most affordable and advantageous rate.[99]

Q: Do you have any suggestions for how NFG can improve CAP enrollment?

A: Yes. To address the serious under-enrollment of NFG's CAP, I recommend that NFG be required to make several important reforms to (1) improve its CAP attrition rate by changing its recertification process to include alternative forms of communication; (2) improve how it utilizes data obtained through the Pennsylvania Department of Human Services (DHS) LIHEAP Data Sharing Program to conduct more effective outreach to customers who are potentially eligible for CAP and to automatically recertify CAP customers to eliminate duplicative and unnecessary barriers to remaining in the Program; (3) implement benchmarks related to CAP enrollment to provide measurable goals to improve Program enrollment and retention; and (4) regularly report application and recertification data to NFG's Universal Service Advisory Committee (USAC) so that stakeholders can monitor the Company's progress toward achieving those benchmarks. I will address each of these recommendations in turn.

Q: Please briefly describe NFG's CAP recertification process.

A: NFG requires recertification of CAP eligibility every two years, or for those who receive Social Security, Supplemental Security Income, or a pension, or who have received LIHEAP benefits since enrolling in CAP, every three years.[100] For customers reporting zero income, NFG requires recertification every six months.[101] When CAP customers are due to recertify, the Company mails a letter and an application to prove continued eligibility.[102] If no response is

[99] 66 Pa. C.S. § 1303.
[100] 2022-2026 USECP at 60.
[101] 2022-2026 USECP at 60.
[102] 2022-2026 USECP at 60.

received in 10 days, a second letter and application are mailed, and NFG attempts to contact the customer by telephone to explain the recertification process.[103] If NFG does not receive a response from the customer, it removes the customer from CAP, returning the customer to a full tariff bill.[104] NFG notifies customers that have been removed from CAP by mailing a program cancellation letter.[105]

Q: Do you have any concerns about NFG's CAP recertification process?

A: Yes. I am concerned that NFG's CAP recertification process appears to require that a CAP customer return an application to recertify and provide income documentation by mail – requiring additional time and resources to obtain physical copies of income verification documents, as well as the hassle of obtaining an envelope and stamp and the added time to get to the post office and mail in the recertification.[106] NFG implemented an online CAP application in January 2025 that enables customers to complete their application and provide supporting documentation online.[107] The Company's USECP describes the online CAP application process,[108] but there is no indication that NFG's online customer portal enables a customer to complete a recertification or provide supporting documentation for recertification online.[109] In addition, NFG's outreach to inform a customer that they are due to recertify their CAP eligibility appears to be limited to two mailed notifications and a single telephone call before a CAP household is removed from the program.[110] Further, NFG's procedure for notifying customers that they have been removed from CAP is simply to mail a letter. This is especially troublesome in light of the fact that the majority of

[104] 2022-2026 USECP at 60.
[105] 2022-2026 USECP at 60-61.
[106] 2022-2026 USECP at 60.
[107] NFG St. 17 at 3:9-10; 2022-2026 USECP at 33-34.
[108] 2022-2026 USECP at 33-34.
[109] 2022-2026 USECP at 60.
[110] 2022-2026 USECP at 60.

customers who are removed from CAP are removed for non-response to NFG's mailed recertification form, which suggests that mailed communication is not effective in reaching these households.

Q: Do you have any recommendations for how NFG could improve its CAP attrition rate?

A: Yes. First, I recommend that the Commission require NFG to reform its CAP recertification process to improve program attrition. To the extent the Company's online customer portal does not already allow recertification online, the Commission should require NFG to expand its online CAP application to support online CAP recertification including document uploading. The CAP application and recertification portal should be required to be accessible on both desktop and mobile browsers, as low income households are more likely to be reliant on mobile internet.[111] For mailed recertification outreach, NFG should be required to include a self-addressed stamped envelope to facilitate returning required information.

In addition, the Commission should require that NFG expand its efforts to contact customers who are due for recertification to include email and text message outreach, and all forms of outreach should contain information and links for how to complete the CAP recertification process online. Further, the Commission should require that NFG inform CAP customers of their removal from CAP by mail, email, text message, and telephone, and require that these notifications contain instructions on how to re-apply for CAP. Mailed notifications of CAP removal should include a new CAP application as well as information about how to apply or recertify online, and

[111] Colleen McClain and William Bishop, What we know about internet use, smartphone ownership and digital divides in the U.S., Pew Research (Jan. 8, 2026) Available at: https://www.pewresearch.org/short-reads/2026/01/08/internet-use-smartphone-ownership-digital-divides-in-u-s/.

email and text message notifications should contain links to the online CAP application, and telephone notifications should make a warm referral to complete a CAP application by phone.

As discussed below, NFG should also improve its utilization of LIHEAP data to expand CAP enrollment and improve CAP recertification.

Q: Can you explain the Pennsylvania Department of Human Services (DHS) LIHEAP Data Sharing Program and the current status of the program?

A: In October 2024, following years of collaborative policy development through the DHS LIHEAP Advisory Committee, DHS launched a LIHEAP Data Sharing Program. Through the program, if a LIHEAP recipient checks a box on their LIHEAP application providing their affirmative consent, DHS will share detailed income and household composition data for LIHEAP recipients with participating utilities. To participate, utilities must sign a data sharing agreement with DHS, which includes detailed data security parameters and affirmatively requires utilities to use the data for the limited purpose of enrolling or recertifying eligible households into the utilities' universal service programs.[112]

On June 13, 2024, in anticipation of DHS's launch of this new LIHEAP Data Sharing Program, the Commission issued an Order encouraging utilities to participate, suggesting ways that utilities could utilize the data, and establishing a process for utilities to follow to implement certain pre-approved data uses – such as streamlined outreach and enrollment and/or auto-recertification.[113] Specifically, the Order established a process by which utilities could file a letter

[112] See DHS Data Sharing Agreement Template.
[113] 2023 Review of All Jurisdictional Fixed Utilities' Universal Service Programs, M-2023-3038944, Order at 5 (June 13, 2024).

with the Commission outlining how the utility will use the shared data to streamline program outreach and enrollment and/or to implement auto-recertification.[114]

Q: Is NFG participating in the DHS Data Sharing Program?

A: Yes.[115]

Q: Did NFG develop a process for utilizing the data provided by DHS in response to the Commission's June 13, 2024 Order?

A: Yes. NFG reports that since August 2025, the Company has used data sharing files from DHS to conduct outreach to customers who received LIHEAP but are not enrolled in CAP.[116] NFG reports that it mails these customers simplified applications for CAP and an overview of the Program.[117] For CAP customers who agree to share data through the LIHEAP data sharing process, NFG reports that it will use data from DHS to automatically recertify CAP eligibility if a recertification is needed.[118]

NFG reports that since August 2025, it mailed simplified applications to 3,313 customers, 615 of whom NFG enrolled in CAP.[119] NFG also reports that, during the same period, it recertified CAP eligibility for 52 CAP customers using LIHEAP data received from DHS.[120]

[114] 2023 Review of All Jurisdictional Fixed Utilities' Universal Service Programs, M-2023-3038944, Order at 5 (June 13, 2024).
[115] NFG St. 13 at 3:10-13.
[116] NFG Response to CAUSE-PA 3-28; Response to CAUSE-PA 3-27. Both attached hereto at Appendix B.
[117] NFG Response to CAUSE-PA 3-27. Attached hereto at Appendix B.
[118] NFG Response to CAUSE-PA 3-27. Attached hereto at Appendix B.
[119] NFG Response to CAUSE-PA 3-28, Attachment. Attached hereto at Appendix B.
[120] NFG Response to CAUSE-PA 3-28, Attachment. Attached hereto at Appendix B.

Q: Do you have any concerns about NFG's procedures for using LIHEAP data for CAP enrollment and recertification?

A: Yes. I am concerned that NFG is not doing more to enroll customers it knows to be eligible in its CAP and to recertify those already enrolled. The data NFG receives from DHS through the LIHEAP data sharing program is incredibly useful in that it indicates both that these customers are income-eligible for CAP and that they have affirmatively expressed their desire to participate and the need for assistance to enroll in utility-run energy assistance programming. Despite the importance of this data, the Company's use of LIHEAP data for CAP enrollment and retention appears to be limited. For example, NFG reports that only about 19% of the customers to whom it mailed simplified applications enrolled in CAP as a result of the mail outreach. Further, while NFG indicates that it uses that data to recertify customers "if a recertification is needed[121]", only 52 customers have been recertified for CAP through this process since August 2025.[122]

Q: Do you have any recommendations to improve how NFG uses DHS LIHEAP data for CAP enrollment and recertification?

A: Yes. The Commission should direct NFG to improve how it utilizes the data it receives through the DHS LIHEAP data sharing program to enroll and recertify customers for CAP. First, a single letter to households already known to be categorically eligible for CAP is insufficient. NFG should expand and improve its outreach to customers who have elected to share LIHEAP data with the Company, but who are not enrolled in CAP. As an initial step to improve leveraged use of LIHEAP data, I recommend NFG model further outreach on the expanded CAP recertification outreach procedure I discussed above. At a minimum, NFG should contact LIHEAP

[121] NFG Response to CAUSE-PA 3-27. Attached hereto at Appendix B.
[122] NFG Response to CAUSE-PA 3-28, Attachment. Attached hereto at Appendix B.

recipients who agreed to participate in DHS data sharing by mail, email, text message, and phone call to provide a simplified process for enrollment. A customer's verbal authorization to enroll should be sufficient, and all outreach should include instructions on how to call NFG to provide verbal authorization for CAP enrollment. Mailed outreach should include a program overview and a pre-stamped postcard with a single checkbox to enroll. Email outreach should contain a program overview and link to authorize CAP enrollment with a single checkbox. Text message outreach should include a link to a program overview and allow CAP enrollment authorization by responding "yes." For telephone outreach, a customer's verbal authorization to enroll should be sufficient to enroll the customer in CAP. If no response is received in 10 days, the Company should repeat this outreach. These customers have affirmatively indicated that they would like assistance to enroll in their utility's energy assistance programs by opting into the LIHEAP data sharing process, so NFG must do more to explain CAP and simplify the enrollment process. NFG should work with its USAC to develop the language for its outreach communications to ensure the information is in plain language, includes clear information about the benefits of enrollment – as well as clear instructions on the simplified application process.

Second, NFG should use the LIHEAP data it receives to recertify CAP eligibility for all CAP customers participating in LIHEAP data sharing, not just those who are due for recertification. Whenever NFG receives a CAP customer's data through the LIHEAP data sharing program, NFG should treat the receipt of that data as a new recertification, restarting the three-year or six-month recertification period, regardless when the customer had been due for recertification. NFG should send a simple notice to the participant following the auto-recertification advising that they were automatically recertified for CAP and the date of their next

recertification date. This would extend the recertification period for thousands of households, helping to significantly reduce administrative costs and streamline procedures.

Q: Do you have other recommendations to improve NFG's CAP enrollment and recertification?

A: Yes. I recommend that NFG establish benchmarking goals for its CAP enrollment based on the percentage of its estimated low income customers. Specifically, NFG should strive to increase its CAP enrollment by a minimum of 5% each year as a percentage of its estimated low income customers and should set forth a plan to do so through increased outreach, education, and implementation of the screening process I recommended earlier in my testimony. I recommend measuring against the estimated low income customer count because that figure provides a more realistic estimate of NFG's low income population – and avoids the circuitous nature of reliance on confirmed low income customer counts to determine the reasonableness of service to NFG's low income customer population. As discussed, NFG's confirmed low income customer count is not adequately representative of NFG's low income customer base.

I believe that setting reasonable and verifiable benchmarks to improve CAP enrollment as a percentage of the estimated low income customer count will help ensure that the Company is reaching a greater percentage of its low income population - helping meet the increased need for rate assistance as a result of NFG's proposed rate increase and in turn reducing the disproportionately high rates of terminations and uncollectible expenses attributable to NFG's low income customer base.

In addition, the Commission should require NFG to report CAP application and recertification data to its USAC regularly. This data should include, at minimum, applications received, approved, and denied, including the reasons for denial, and the number of recertifications

issued, the number of recertifications resulting in continued CAP eligibility, and the number of recertifications resulting in CAP removal, including the reasons for removal. Providing this data at regular intervals will allow stakeholders to monitor NFG's progress toward its benchmark goals.

Q: Do you have any other concerns about NFG's CAP which you would like to address in the context of this testimony?

A: Yes. I have serious concerns about deficiencies in NFG's data tracking for its CAP customers. Throughout the preparation of this testimony, NFG provided incomplete and inaccurate information about its CLI and CAP customers that it corrected and backfilled through a series of revisions.[123] I provide my testimony based on the data NFG was able to provide, but I have serious concerns about the accuracy and completeness of the data provided. Even after multiple rounds of revisions to its discovery responses, NFG reports that it does not track and cannot report information regarding the total dollars in debt or average arrearage level for CAP customers.[124] NFG ultimately provided this data for the current billing cycle only and indicated that it could not provide this data for past periods.[125] Importantly, it appears that NFG is not reporting data regarding its CAP customers with accounts in arrears to the Commission as part of its annual Collection Reporting.[126]

Beyond this deficiency, there is clear evidence of issues with NFG's tracking and reporting in the Commission's Universal Service Programs and Collections Performance report. From 2022 through 2024, NFG reported having the exact same percentage of households defaulting on CAP

[123] See e.g. NFG Revised Response to CAUSE-PA 1-8, Attachment – Revised; NFG Second Revised Response to CAUSE-PA 1-26; et al. Attached hereto at Appendix B.
[124] NFG Second Revised Response to CAUSE-PA 1-26. Attached hereto at Appendix B.
[125] NFG Second Revised Response to CAUSE-PA 1-26, Attachment – Revised-2. Attached hereto at Appendix B.
[126] NFG Response to OCA IV-1, Attachment. Attached hereto at Appendix B.

in each CAP income tier, raising concerns about the accuracy of these customer counts.[127] What is more, in 2024, NFG reported spending just 17% of program costs on CAP credits and 60% on arrearage management, a massive departure from every other utility and common sense.[128]

Without accurate and complete data regarding arrearages for CAP customers, it is impossible for the Commission or any stakeholders to fully assess how well NFG's CAP is functioning to deliver affordable bills to customers enrolled in the Program. I recommend that the Commission order NFG to begin tracking and reporting data regarding the total number of CAP accounts with arrears, the total dollar amount in debt for CAP customers, and the average amount of debt for CAP customers. In addition, the Commission should commence an audit of NFG's collections and universal service program reporting to assess the need for additional corrective actions.

b. Low Income Usage Reduction Program (LIURP)

Q: Please briefly describe NFG's LIURP.

A: NFG's LIURP is a critical universal service program designed to work in tandem with CAP to help reduce high usage attributable to home energy inefficiencies that low income households cannot afford to address on their own.[129] The program achieves this purpose by conserving energy, reducing bills, improving payments, decreasing collections costs, reducing peak demand, and improving home health, safety, and comfort.[130]

NFG's LIURP is available to customers with income at or below 150% FPL, or up to 200% FPL for households with special needs, such as seniors, people with disabilities, or households

[127] 2024 Universal Service and Collections Report at 59.
[128] 2024 Universal Service and Collections Report at 69-70.
[129] 52 Pa. Code § 58.1; 2022-2026 USECP at 36.
[130] 52 Pa. Code § 58.1.

with young children.[131] To qualify for LIURP services, a household must have annual usage of at least 1,300 Ccf.[132] Since 2020, NFG has maintained a Low Consumption LIURP (LC-LIURP) pilot program, which expands LIURP services to households with usage of at least 900 Ccf, who would otherwise be excluded from LIURP eligibility.[133] The Commission approved extension of the LC-LIURP pilot through the duration of the Company's current USECP.[134] In addition, NFG operates an Emergency Repair and Replacement Program (ERRP) through its LIURP, which provides emergency repair and replacement of gas heating or hot water heating equipment for LIURP-eligible customers.[135]

Q: Is NFG proposing any changes or improvements to its LIURP in the context of the present proceeding?

A: No.[136]

Q: Is NFG's LIURP performing adequately to achieve its goals and objectives?

A: No. There is a significant unmet need for LIURP services among NFG's low income customers. Most low income households are unable to afford the costs of repairs and improvements necessary to stem high usage levels and resultant higher monthly bills. As a result, low income customers with high usage are often charged higher bills but do not have the resources to afford them, leading to disproportionate termination rates and higher arrearages.

NFG customer households receiving LIURP services see significant usage reductions of on average 18-20%.[137] This usage reduction translates into bill savings, improving affordability

[131] 2022-2026 USECP at 38.
[132] 2022-2026 USECP at 38.
[133] NFG St. 17 at 4:18-23; NFG USECP at 36.
[134] NFG St. 17 at 4:18-23.
[135] 2022-2026 USECP at 5.
[136] NFG St. 17 at 6:5.
[137] NFG USECP at 5.

and reducing energy burdens. For CAP customers participating in LIURP, the energy savings achieved result in reduced CAP credits, reducing the cost of the CAP program and thereby improving affordability for all residential ratepayers. For households who are able to participate in LIURP, the program provides meaningful usage reduction that could help mitigate the impact of any approved increase in NFG's volumetric rates. But as the program is currently designed, NFG's LIURP is simply inadequate to meet the need for energy efficiency services among the Company's low income customers, let alone to offset the increased rates NFG proposes in this case. Critical changes are necessary to promote the ability of NFG's LIURP to effectively reach the Company's low income customers.

According to the Company's 2024 LIURP Needs Assessment, 37,867 NFG customers are income eligible for LIURP services, and another 20,590 could be income eligible as special needs customers (i.e., seniors, people with disabilities, or households with young children).[138] Despite the potential for the Program to provide meaningful savings to low income households, NFG's LIURP serves relatively few households compared to identified need and consistently completes fewer jobs than the Company projected to complete in its USECP. The table below presents the number of LIURP and LC-LIURP jobs NFG projected to perform from 2023 to 2025 compared to the actual number of jobs completed.

[138] APPRISE, National Fuel Gas LIURP Evaluation Final Report, Sept. 2024 at 17.

Table 3: Projected and Actual LIURP Jobs Numbers, 2023-2025

Year	Projected LIURP and LC-LIURP Jobs[139]	Completed LIURP and LC-LIURP Jobs[140]
2023	112	78
2024	234	101
2025	226	187
TOTAL	**572**	**366**

As the above Table shows, NFG completed just 187 LIURP jobs in 2025.[141] At this pace, NFG reports that it would take the Company approximately 206 years to treat all 37,867 income eligible customers, not counting any special needs customers who are also eligible, with the caveat that not all customers would meet the 1,300 Ccf or 900 Ccf usage threshold for traditional LIURP or LC-LIURP.[142]

Further, NFG consistently underspends its LIURP budget. In testimony which I provided in NFG's previous rate case, I noted that the Company had failed to expend its LIURP budget in any year between 2018 through 2022.[143] The Company reports that it failed to fully expend its LIURP budget in each year from 2023 to 2025.[144] NFG budgets $1,391,000 annually for its LIURP,[145] but spent only $307,012 of that budget in 2023 and $804,649 in 2024.[146] NFG spent $1,353,436 of its LIURP budget in 2025, but credits the improvement in spending to "unique circumstances in 2025, when a government shutdown resulted in additional work being redirected

[139] 2022-2026 USECP at 41. The numbers provided in this table include only traditional LIURP and LC-LIURP jobs; ERRP jobs are excluded.
[140] NFG Response to CAUSE-PA 2-1, Attachment; NFG Response to CAUSE-PA 2-4, Attachment. Attached hereto at Appendix B. The numbers provided in this table include only traditional LIURP and LC-LIURP jobs; ERRP jobs are excluded.

[143] Direct Testimony of Harry S. Geller on Behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA), Docket No. R-2022-3035730 at 31:1-2.
[144] NFG Response to CAUSE-PA 2-10, Attachment. Attached hereto at Appendix B.
[145] 2022-2026 USECP at 40.
[146] NFG Response to CAUSE-PA 2-9, Attachment. Attached hereto at Appendix B.

from community agencies to the Company, potentially inflating the current year's figures," and indicates that the company "remains cautious when projecting expenditures for 2026."[147] In response to discovery, however, NFG indicated that it also credits the increase in LIURP spending and jobs performed in 2025 to expanded outreach efforts to raise awareness of the program and to steps the Company has taken to find contractors able to handle additional and more consistent work.[148]

NFG reports a notable uptick in LIURP applications that it received in 2025. NFG received 1,004 applications for LIURP in 2025, up from 404 in 2024 and 321 in 2023.[149] I am supportive of NFG's expanded efforts to conduct outreach and develop new referral streams for LIURP. However, these efforts alone are not sufficient as the significant need for LIURP services among NFG's low income customers continues to remain unmet. I recommend that NFG be required to implement meaningful reforms to its LIURP so that low income customers can better access Program services.

Q: Do you have other concerns about the design of NFG's LIURP?

A: Yes. The 2024 National Fuel Gas LIURP Evaluation Final Report indicates that the Company excludes mobile homes from LIURP eligibility.[150] However, the 2024 LIURP Evaluation indicates that 5,745 of NFG's customers who are income eligible for LIURP reside in mobile homes.[151] Energy efficiency retrofits can effectively lower energy usage and bills for residents of mobile homes while improving home comfort and safety.[152] As part of the 2024

[147] NFG St. 17 at 5:9-16.
[148] NFG Response to CAUSE-PA 2-7; NFG Response to CAUSE-PA 5-20. Both attached hereto at Appendix B.
[149] NFG Response to CAUSE-PA 2-15, Attachment. Attached hereto at Appendix B.
[150] APPRISE, National Fuel Gas LIURP Evaluation Final Report (Sep. 2024) at v,
[151] APPRISE, National Fuel Gas LIURP Evaluation Final Report, Sept. 2024 at 28-29.
[152] ACEEE, Upgrading Manufactured Homes: Using Energy Efficiency to Improve Affordability and Health (Aug. 2023) at 7.

LIURP Evaluation prepared by APPRISE, when NFG LIURP service providers were asked to offer suggestions to improve the Company's LIURP, one provider "stressed the inclusion of mobile homes," asserting that "there is a lot of potential with mobile homes," and indicated that the provider agency has experience delivering energy efficiency measures to mobile homes through other programs.[153] I am concerned that by excluding these types of homes, NFG needlessly and unfairly shrinks the pool of customers that could benefit from program services – leaving mobile homeowners, often in the most need of weatherization and efficiency services, without a path to reduce high usage.

Q: Do you have recommendations that would help NFG's LIURP reach a greater number of homes in need of service?

Yes. As discussed above, only a very small number of customers have been able to access LIURP services despite the vast unmet need for these services in NFG's service territory. However, the increase in the numbers of applications for LIURP and completed LIURP jobs in 2025 is an incremental step in the right direction. NFG should be directed to implement reforms which build on its existing efforts so that low income customers can access LIURP services.

First, the Commission should require NFG to develop a written comprehensive plan to expend its full LIURP budget and expand the availability of usage reduction services to those in need. NFG should include action steps designed to fully spend the existing budget that has been rolled over from prior years, as well as plans to ensure that NFG can fully spend its budget in each subsequent year. This plan should be informed by NFG's third-party evaluation, with input and recommendations from members of NFG's USAC. The plan should specifically address coordination with other energy efficiency programs available in NFG's service territory and should

[153] APPRISE, National Fuel Gas LIURP Evaluation Final Report, Sept. 2024 at 46.

include action steps designed to prioritize services to those most in need of usage reduction services (including high users with identified health and safety barriers) while opening the door to those not currently able to access assistance through the program. Additionally, the plan should specifically evaluate the expanded outreach efforts and referral streams NFG credits with driving increased applications in 2025, identify specific strategies that successfully generated increased applications for LIURP services and completed LIURP jobs, and develop specific action steps to continue and expand upon those strategies. I recommend that the Commission require NFG to file this written plan at its USECP docket within 90 days of the effective date of rates in this proceeding.

Additionally, the Commission should require that NFG end its exclusion of mobile homes from participating in its LIURP. The Company serves many potentially eligible customers who reside in these dwelling types,[154] and at least one NFG LIURP provider agency has indicated it has the technical capacity to provide services to mobile homes.[155] Expanding the pool of eligible households would enable these customers to access critical energy and bill savings and would help NFG to reach its LIURP jobs projections.

c. Neighbor for Neighbor (NFN) Hardship Fund

Q: Please briefly describe NFG's Neighbor for Neighbor Heat Fund.

A: The Neighbor for Neighbor Heat Fund (NFN) is NFG's hardship fund. NFN provides grants not only to its residential customers, but to any resident of its service area in need of assistance purchasing heating fuel or repairing or replacing heating equipment.[156] The maximum

[154] APPRISE, National Fuel Gas LIURP Evaluation Final Report, Sept. 2024 at 28-29.
[155] APPRISE, National Fuel Gas LIURP Evaluation Final Report, Sept. 2024 at 46.
[156] 2022-2026 USECP at 45.

NFN grant is $500 for customers and $300 for non-customers.[157] Households under 200% FPL or who meet other specified eligibility criteria (households with a member who is age 55 or older, has a disability, receives unemployment compensation, has a recent loss of income, is a veteran, or has a medical emergency) are eligible to receive a grant.[158] Per the Commission Order approving the Joint Petition for Settlement in NFG's 2022 base rate case, NFG contributes $92,000 of shareholder dollars to the fund annually.[159] NFG customers can also make voluntary contributions to the fund.[160]

Q: Is NFG proposing any changes to NFN in this case?

A: In the Company's initial filing, it did not propose any changes to NFN. But in response to discovery, NFG disclosed that it is evaluating certain changes to NFN on account of the program's current level of funding.[161] NFG proposes the following changes to NFN:

- Making both income AND a specified eligibility criterion necessary for hardship fund eligibility;
- Limiting NFN to only NFG customers; and
- Adding "flexibility to adjust the grant amount based on demand."[162]

[157] 2022-2026 USECP at 45.
[158] 2022-2026 USECP at 46-47.
[159] Pa. PUC v. NFG, Order, Docket Nos. R-2022-3035730, et al (Jun. 15, 2023); Pa. PUC v. NFG, Joint Petition for Approval of Settlement of Rate Proceeding, Docket No. R-202203035730 (Apr. 13, 2023) at ¶52; NFG Response to CAUSE-PA 2-22, Attachment. Attached hereto at Appendix B.
[160] 2022-2026 USECP at 45.
[161] NFG Response to CAUSE-PA 1-2. Attached hereto at Appendix B.
[162] NFG Response to CAUSE-PA 1-2. Attached hereto at Appendix B.

Q: Is the NFN being appropriately utilized to address low income household arrearages?

A: No. As discussed above, NFG's confirmed low income customers that are not enrolled in CAP comprise 9.6% of the Company's residential customers but hold 52% of residential dollars in debt and carry on average $198.93 more in debt than the average residential customer with debt.[163] As of January 2026, NFG reports that non-CAP confirmed low income customers carry a total of $4,107,714.03 in debt with an average debt burden of $614.56 each – though many individual customer debts exceed this level.[164] Further, NFG's low income customers also face terminations at disproportionate levels compared to residential customers as a whole, evidencing a substantial unmet need for emergency assistance to maintain gas service to their home. Confirmed low income customers were 43.4% of the residential customers whose service NFG terminated in 2025.[165]

If NFG's proposed rate increase is approved, the need for hardship fund assistance will grow as a result of the increased unaffordability of underlying rates. It is imperative that the Commission take steps to reform NFN to ensure it is adequately funded to meet the need for emergency assistance, at both existing and proposed rates.

Q: Do you have any other concerns about NFN?

A: Yes. I am concerned that NFG hardship funding is inadequate to meet the need for grant assistance amongst its low income customers. The level of NFG's available hardship funding has

[163] NFG Revised Response to CAUSE-PA 1-8, Attachment – Revised; NFG Revised Response to CAUSE-PA 1-26, Attachment - Revised. Both attached hereto at Appendix B.
[164] NFG Revised Response to CAUSE-PA 1-26, Attachment – Revised. Attached hereto at Appendix B.
[165] NFG Revised Response to CAUSE-PA 1-13, Attachment – Revised.

drastically declined over recent years with NFG reporting the following funding levels between 2023 and the end of 2025:[166]

- December 2023: $265,627.80
- December 2024: $250,376.67
- December 2025: $29,612.52

NFG reports that its hardship fund was depleted as of February 25, 2026.[167] To avoid suspending the program, NFG released its annual shareholder contribution of $92,000 early.[168] I am concerned, however, that the hardship fund will be depleted again soon, this time without another annual shareholder contribution available to rely on to avoid suspension of the Program. NFG's low income customers carry significant amounts of debt as a result of the underlying unaffordability of rates, with the total debt of confirmed low income customers (exclusive of CAP customers) totaling approximately $4,107,714 as of January 2026.[169]

I note that the amount of hardship fund grants distributed has increased over the past year, with total annual distributions more than doubling in 2025 over 2023 and 2024.[170] However, more must be done to bolster hardship funding to serve the unmet need for grant assistance amongst NFG's low income customers, particularly if NFG is permitted to increase its base rates. Additional funding for NFN is critical to ensure the program is able to meet the demonstrated need for emergency assistance.

[166] NFG Response to CAUSE-PA 2-21, Attachment. Attached hereto at Appendix B.
[167] NFG Response to CAUSE-PA 4-17. Attached hereto at Appendix B.
[168] NFG Response to CAUSE-PA 4-17. Attached hereto at Appendix B.
[169] NFG Revised Response to CAUSE-PA 1-26, Attachment - Revised. Attached hereto at Appendix B. This debt level excludes CAP debt because, as discussed, NFG does not appear to be able to track and report on certain debt levels carried by its CAP customers.
[170] NFG Response to CAUSE-PA 2-21, Attachment. Attached hereto at Appendix B.

Q: Do you have any concerns about NFG's proposed changes to NFN?

A: Yes. At the outset, I am concerned that NFG has not actually proposed these changes on the record, instead only revealing them in response to discovery. It is vital that any proposed change to a universal service program be made on the record in a Commission proceeding so that the parties of record have the ability to comment. Numerous unanswered questions about these proposals remain, and they must be evaluated more thoroughly after being proposed on the record. Solely for this reason, the Commission should not allow NFG's proposed changes to its hardship fund.

Notwithstanding these overarching concerns with NFG's proposals, I am concerned that NFG's approach to addressing the critically low level of available funding for NFN seems to be entirely reliant on restricting customer eligibility for emergency assistance. NFG's decision to release the annual shareholder contribution early to avoid suspending the program is only a temporary solution to a problem that is chronic and will recur without further intervention.

I am particularly concerned with NFG's proposal to require that households demonstrate both income eligibility and a specified eligibility criterion to receive hardship assistance. Low income households in NFG's service territory face substantial hardship affording their energy costs, including low income households that do not fit into one of NFG's listed criteria. NFG's proposal would require low income households to demonstrate a further hardship to qualify for emergency assistance and will result in many low income households being denied critical support through NFN. The increase in distributions from the hardship fund demonstrates the need for emergency assistance in NFG's service territory, and the solution to NFN's critically low level of funding must not be to restrict access to this vital resource to low income households.

I am also concerned about NFG's second proposal to eliminate eligibility for non-customer households. A non-customer may be a former NFG customer who has been terminated for more than 30 days and no longer fits the definition of "customer". For these households, an NFN grant is crucial to being able to reconnect and they should be grant eligible. NFN is a vital resource to assist these households with maintaining home heat, and eliminating access to the fund inevitably means that many of these households will be forced to go without. Grants to non-customers represented just 8% of dollars distributed through NFN in 2025.[171] These households are not creating the problem with NFN's funding level, and the solution should not be to eliminate their access to emergency assistance.

Finally, I am concerned that the flexibility to adjust grant amounts that NFG proposes will be operationalized to reduce grant assistance delivered to eligible households. NFG reports that this flexibility would allow the maximum grant amount to be reduced during periods of elevated demand or reduced fund balances.[172] Given that the NFN was just depleted and will likely be depleted again in the coming months, coupled with the precipitous rise in energy rates and corresponding rise in debts, I am seriously concerned that this flexibility to reduce grant amounts, without any plan to remediate the ongoing reduced fund balance, will result in permanently reduced NFN grant amounts to customers in need. NFG's hardship fund, as currently funded, is already inadequate to meet the need among its low income customers for emergency assistance. Further reducing grant funding will only exacerbate these issues.

[171] NFG Response to CAUSE-PA 4-20, Attachment; NFG Response to CAUSE-PA 2-21, Attachment. Both attached hereto at Appendix B.
[172] NFG Response to CAUSE-PA 4-19. Attached hereto at Appendix B.

Q: Do you have any recommendations regarding NFG's NFN Hardship Fund?

A; Yes. The Commission must require that NFG act to increase available funding for NFN. I recommend that the Commission require NFG to develop a plan to increase voluntary contributions to the hardship fund through fundraising. I also note that NFG's shareholder contribution to its hardship fund is below average compared to other Pennsylvania NGDCs. NFG contributes $0.47 per residential customer annually, compared to the average $0.69 per residential customer contributed by other Pennsylvania NGDCs.[173] I recommend that NFG, at minimum, double its contributions to the NFN fund, to a total public utility or shareholder contribution level of $184,000 annually. This increased level of NFN funding will help the program budget better meet the demonstrated existing need for emergency assistance in NFG's service territory and help to address the increased need that is sure to follow any potential rate increase.

I also recommend that the Commission reject the proposed changes to NFN that NFG disclosed through discovery. The Commission should not allow the Company to implement changes to a universal service program without requiring that the Company propose those changes on the record for all parties to evaluate.

V. PROPOSED RATE DESIGN

Q: Please briefly describe the aspects of NFG's residential rate design proposal that you intend to address.

A: NFG is proposing to maintain its current residential customer rate design of using a combination of volumetric usage rates and a fixed monthly charge.[174] Through this proceeding, NFG proposes to increase the volumetric usage charge for residential customers from 34.064¢ to

[173] 2024 Universal Service and Collections Report at 79, 80.
[174] NFG Exhibit F at 249.

38.233¢ per 100 cubic feet, an increase of 12.2%.[175] NFG also seeks to increase its fixed monthly residential customer charge from $14 to $19, an increase of $5 or 35.7%.[176] In addition, NFG proposes to make its Weather Normalization Adjustment (WNA) pilot into a permanent aspect of its rate design.

As I will discuss below, I am strongly opposed to NFG's proposal to substantially increase its fixed monthly charge for residential customers and to implement a permanent WNA, as each of these proposals would greatly exacerbate bill unaffordability for NFG's residential customers.

a. Fixed Customer Charge

Q: How would NFG's proposed increase to its fixed monthly residential charge impact low income households?

A: The level of increase to the fixed charge proposed by NFG will undermine the ability of consumers to control costs through energy efficiency, conservation, and consumption reduction, which is particularly problematic for low-income customers. These customers already struggle to pay for gas service and rely on offsetting high bills through careful conservation and usage reduction. When more of a customer's bill is tied to the fixed charge, less of it is dependent on their volumetric usage, and their ability to control costs by reducing usage is diminished. Increasing the fixed charge will prevent these vulnerable customers from being able to use conservation measures to mitigate the impact of the rate increase. Further, if the Commission allows NFG's WNA to continue in any form, the combination of the higher fixed charge and the WNA recovery would work together to doubly impair customers' ability to control costs through conservation and energy efficiency.

[175] NFG Exhibit F at 57, 249.
[176] NFG St. 14 at 17, Table 1.

Q: Would NFG's proposed increase to the fixed charge affect the Company's LIURP program and its proposed Energy Efficiency Pilot program?

A: Yes. NFG's proposal undermines the explicit goals of the Low Income Usage Reduction Program (LIURP). It will also reduce the benefits of NFG's proposed Energy Efficiency Pilot program (EE Pilot) by undermining the customer's ability to achieve bill savings through adoption of energy efficiency measures.

The Commission's LIURP regulations explicitly provide that the program is intended to help low income customers to reduce their *bills* – not just their usage – and, in turn, to "decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs."[177] By reducing the amount of bill savings that can be obtained through LIURP participation, the proposed increase to the fixed charge threatens the continued effectiveness of ratepayer investments intended to reduce energy consumption, delinquencies, collections, and uncollectible costs. The explicit goals of the Program will be more difficult to achieve as the fixed portion of the bill is increased.

LIURP is effective at achieving these goals and producing meaningful average bill savings. In 2024, the last year for which industry wide data is available, LIURP saved gas heating households an average of 13.8%, or $341.34 annually, on their gas bills.[178] NFG's LIURP reduces customer usage by approximately 18-20%.[179] The amount of bill savings that usage reduction results in depends on the portion of a customer's bill that is based on volumetric usage. The ability

[177] 52 Pa. Code § 58.1 ("The programs are intended to assist low income customers conserve energy and reduce residential energy bills. The reduction in energy bills should decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs.").

[178] 2024 Universal Service and Collections Report at 55.

[179] 2022-2026 USECP at 5.

to save money through energy efficiency is tied directly to a bill structure that bases costs on throughput. But as more residential customer costs are shifted to the fixed charge, the achievable bill savings – and the corresponding impact on bill payment behavior – will erode.

Given that low income households are disproportionately payment troubled,[180] and often lack the ability to reasonably control usage due to poor housing stock and older, less efficient appliances,[181] it is critical that they continue to have access to effective conservation tools capable of producing meaningful and lasting bill reductions. The ability to reduce bills through efficiency and conservation is even more critical for households with income above 150% FPL but less than 200% FPL who are ineligible for CAP or LIHEAP but are eligible for energy efficiency and conservation services through LIURP or the federal Weatherization Assistance Program (WAP) – both of which have income guidelines of up to 200% FPL. These households must retain the ability to reduce their monthly energy costs through adoption of comprehensive energy efficiency and conservation programming.

Likewise, customers who choose to take advantage of the company's proposed EE Pilot program will not experience the same level of bill savings from energy efficiency measures that they would experience if the full increase were placed on the volumetric charge. Thus, in addition to undermining the effectiveness of millions of dollars currently in LIURP investments, NFG's fixed charge proposal will also undermine the bill savings achievable through the millions of ratepayer dollars that the Company is proposing to invest in energy efficiency through its voluntary

[180] NFG Response to CAUSE-PA 1-8, Attachment; NFG Response to CAUSE-PA 1-21, Attachment. Both attached hereto at Appendix B.

[181] American Council for an Energy-Efficient Economy, Study: One in Four Low-Income Households Spend Over 15% of Income on Energy Bills (Sep. 11, 2024), available at: https://www.aceee.org/press-release/2024/09/study-one-four-low-income-households-spend-over-15-income-energy-bills; Nat'l Energy Assistance Directors' Ass'n (NEADA), Energy Hardship Report, at 16 (Aug. 2024), available at: https://neada.org/wp-content/uploads/2024/08/August-Summer-Hardship-Report-Final.pdf.

EE Pilot.[182] The rebates NFG proposes in its EE Pilot would not cover the full incremental cost of high efficiency equipment, so bill savings through usage reduction are necessary to make participation in the pilot financially viable for consumers.[183]

Q: Do you have any recommendations that could allow low income customers to mitigate the effect of the proposed rate increase through usage reduction measures?

A: Yes. NFG's fixed monthly customer charges should not be increased. To the extent any increase in the Company's residential distribution rate is approved, it should be applied to the volumetric charge. This would encourage usage reduction and conservation, protect the ability of low income households to lower their utility costs by reducing consumption, and preserve the effectiveness of LIURP at reducing customer bills and improving payment behavior.

b. Weather Normalization Adjustment (WNA) Proposal

Q: Please briefly describe NFG's WNA pilot.

A: Through the Commission Order approving the Joint Petition for Settlement in NFG's 2022 base rate case, NFG was authorized to implement a five-year WNA pilot.[184] The WNA is a bill adjustment that is applied to certain customer classes (including residential customers) from October through May[185] that attempts to break the link between the revenue collected through the volumetric rate and the effects of variation in temperature.[186] It works by using a concept called Heating Degree Days (HDD) to compare the actual weather conditions that occur with historical

[182] NFG St. 18 at 6: Table 2.
[183] NFG Response to CAUSE-PA 3-19. Attached hereto at Appendix B.
[184] Pa. PUC v. NFG, Order, Docket Nos. R-2022-3035730, et al (Jun. 15, 2023); Pa. PUC v. NFG, Joint Petition for Approval of Settlement of Rate Proceeding, Docket Nos. R-202203035730, et al (Apr. 13, 2023) at ¶41-43.
[185] Supplement No. 271 to Tariff Gas Pa. P.U.C. No. 9 at Eighth Revised Page No. 158; NFG St. 19 at 24:20-21, 25:1-3.
[186] NFG St. 19 at 29:15-16.

weather conditions, using a 15-year historical average to determine "normal" weather conditions.[187] The WNA is calculated by comparing Actual Heating Degree Days with Normal Heating Degree Days to determine the extent that weather conditions varied from historical weather conditions.[188] NFG's pilot WNA has a 3% deadband, which means that whenever temperatures deviate by more than 3% of normal weather, as determined by a 15-year weather history, NFG's WNA applies to bring customer bills more in line with what bill amounts would have been under normal weather conditions.[189] Under NFG's WNA, whenever temperatures are more than 3% warmer than normal, NFG customers are billed for the amount of gas they hypothetically *would have used* if weather had conformed to the normal pattern, not for the actual amount of gas they used.

Q: Please briefly describe NFG's proposals regarding its WNA in this case.

A: In this proceeding, NFG proposes to make its WNA pilot into a permanent feature of its rate design.[190] Besides making it permanent, the only other change NFG proposes to make to its WNA is to change the current 15-year historical weather average to a 10-year historical average based on weather recorded in Erie, Pennsylvania between 2015 and 2024.[191]

NFG points to the Commission's Order in Columbia Gas's 2025 base rate case, wherein the Commission directed Columbia to use a 10-year historical average for its WNA,[192] to support the Company's proposal to make its WNA permanent with a 10-year historical average.[193] But NFG overlooks the fact that in the same Order, the Commission refused Columbia's request to make its

[187] NFG St. 19 at 24:13-15.
[188] NFG St. 19 at 24:13-15.

[190] NFG St. 19 at 23:6-10.
:[191] NFG St. 19 at 25:5-8; NFG St. 13 at 7-11, 9:6-8.
[192] Pa. PUC v. Columbia Gas of Pennsylvania, Opinion and Order, Docket Nos. R-2025-3053499, et al, at 302 (Dec. 4, 2025).
[193] NFG St. 13 at 8:16-22.

WNA permanent, allowing it to continue only on a pilot basis and subject to the implementation of other consumer protections.[194] These included a 5% deadband and restricting Columbia's WNA to the months of November through April.[195] NFG proposes a permanent WNA with a 3% deadband running from October through May – more than half the year – flatly out of step with the WNA pilot authorized through Commission's Order in the Columbia rate case.[196]

As I will discuss, the Commission should not allow NFG to continue its WNA in any form, and certainly not with the design that NFG has imposed on customers through its pilot. In practice, NFG's WNA improperly shifts the risk of changing weather from NFG to its customers, and largely has resulted in higher charges for residential customers.

Q: What are your concerns about NFG's proposal to make its WNA permanent?

A: I have several concerns about NFG's WNA and its proposal to make it permanent. First, NFG purports that its WNA works in both directions, protecting the utility from reduced revenue due to warmer weather while also protecting consumers from higher bills due to colder weather.[197] In actuality, the WNA more often, and to a greater magnitude, works to the benefit of NFG. Even with the cold winter Pennsylvania experienced in 2025-2026, from the time when NFG's WNA pilot took effect in October 2023 through February 2026, the WNA has resulted in over $4.4 million in net additional customer charges for NFG's residential customers.[198] The WNA imposed

[195] Pa. PUC v. Columbia Gas of Pennsylvania, Opinion and Order, Docket Nos. R-2025-3053499, et al, at 301-302 (Dec. 4, 2025).
[196] NFG St. 19 at 24:16-19, 25:1-3.
[197] NFG St. 19 at 26:7-9.
[198] NFG Response to OCA IX-38, Attachment. Attached hereto at Appendix B. The WNA has resulted in a net total of $4,443,004.96 in additional residential customer charges from October 2023 through February 2026.

nearly $2.2. million in additional charges on residential customers' bills in the 2024-2025 season alone.[199]

Importantly, weather conditions are undergoing a persistent, long-term warming trend that results in fewer Heating Degree Days over time. The Pennsylvania Department of Environmental Protection (DEP) reports that temperatures are rising and will continue to rise steadily in Pennsylvania.[200] DEP reports that although temperatures will continue to vary year-by-year, Pennsylvania's average annual temperature has already risen by approximately 1.2 degrees Fahrenheit from 2000 to 2023 and projects that average annual temperatures will rise by another 6.7 degrees Fahrenheit by mid-century.[201] The Figure provided by NFG witness John D. Taylor depicts this warming trend: the data NFG provided shows that the number of Heating Degree Days has consistently trended downward from 1975 to present and shows that this warming trend is projected to continue.[202] This warming trend means that even as annual temperatures vary year by year, the WNA, if the Commission allows it to continue, will produce greater and greater revenue for NFG, *for gas service that customers will not actually use or need*. As discussed above, low income customers have no margin to spend more on energy costs, especially for the cost of gas they did not even use. Low income customers struggle to afford service and need to retain every ability to realize bill savings due to reduced usage, even reduced usage due to changing weather patterns. Even with variations in weather year over year, the WNA works to the net harm of consumers. The fact that it worked to benefit consumers this past winter does not negate the harm it caused in years prior, or the harm it will cause in future years.

[199] NFG Response to OCA IX-38, Attachment. Attached hereto at Appendix B. The WNA resulted in additional charges of $2,195,301.72 in additional residential customer charges from October 2024 through May 2026.

[201] Pa. Dep't of Environmental Protection, Pennsylvania Climate Impacts Assessment 2024 (Apr. 2025) at 12.
[202] NFG St. 19 at 26: Figure 1.

I am also concerned that NFG's WNA, by breaking the link between a customer's usage and their bill amount, discourages conservation and usage reduction, and undermines the goals of LIURP. As discussed above, the ability for usage reduction to result in bill savings depends on bill amounts being based on customer usage. While customers who participate in LIURP would still benefit from reduced supply costs, the WNA essentially takes back the savings these customers could have otherwise achieved in the volumetric portion of their distribution bill. The effect is that customers may become increasingly indifferent to whether they are charged for energy they use or charged for energy that they do not use but "should have used" under the WNA. This may create an incentive under the WNA to waste energy in warmer than normal months because customers are going to be charged for energy whether they use it or not.

Further, the WNA requires an overly complicated and nuanced calculation that is difficult for consumers to understand because it charges customers not for their actual usage, but for hypothetical usage. The WNA is confusing and impairs customers' ability to understand their charges, and therefore, to make changes to control their usage and bills. For low income customers, this exacerbates affordability challenges and undermines a critical tool for achieving bill savings.

Q: Do you agree with NFG Witness John D. Taylor's assertion that the Company's WNA proposal aligns with the fourteen factors that the Commission outlines in its alternative ratemaking Statement of Policy?

A: No. Mr. Taylor provided an exhibit, Exhibit JDT-3, in which he discusses the Company's WNA in relation to the fourteen factors that the Commission set out in its Statement of Policy for

alternative ratemaking mechanisms at Docket No. M-2015-2518883.[203] I respond to each of his assertions in turn in Exhibit Geller C-2.[204]

Q: What is your overall recommendation about NFG's proposal to make its WNA permanent?

A: I recommend that the Commission end NFG's WNA pilot and that it should not be made permanent. There should be no further collection of the WNA with the effective date of rates in this proceeding. NFG's WNA is designed to stabilize its revenue fluctuations caused by variations in weather, but it does so by undermining energy efficiency and disproportionately burdening low income customers, raising deep concerns about fairness and equity. While this mechanism protects NFG from revenue volatility, it transfers the financial risk of warmer weather onto customers who may have already reduced their consumption to manage tight household budgets. For low income households, which often face difficult choices between heating, food, and other essentials, these additional charges undermine their ability to plan for and manage utility expenses effectively. The WNA introduces a variable that makes it more challenging for vulnerable households to manage their limited resources effectively.

Q: If NFG is allowed to continue the WNA, should it be reformed?

A: Yes. My primary recommendation is that the Commission eliminate the WNA in its entirety. However, if the WNA is not eliminated it should be reformed as follows.

The WNA should remain a pilot for a limited period, no longer than three years, and should not be made permanent. Each of the recommendations I make below should be incorporated into any WNA pilot that is permitted to continue.

[203] NFG St. 19 at 27:23, 28:1-5; NFG Exhibit JDT-3; See Also Final Policy Statement Order, Fixed Utility Distribution Rates Policy Statement (Jul. 11, 2019) at Docket No. M-2015-2518883.
[204] See CAUSE-PA St. 1, Ex. Geller C-2.

All customers enrolled in NFG's CAP should be exempt from the WNA charge. CAP customers who are enrolled in NFG's PIP rate do not pay these charges directly because their bills are capped at their percentage of income bills; however, for CAP customers paying the average bill amount, the WNA unreasonably increases these customers' CAP bills. In addition, because CAP customers do not pay their full tariff bill, imposing the WNA on CAP customers' bills needlessly increases the costs of the CAP program paid for by other residential customers.

The months in which the WNA is operable should be limited to the period from December through March. These are the winter months recognized by the Commission, the General Assembly, and other state agencies to fulfill or advance other public policy purposes such as dissemination of LIHEAP assistance to households with income at or below 150% FPL and winter termination rules that prevent termination of heat-related service to households with income at or below 250% FPL. If these are the only months that economically vulnerable households must retain service because of the possibility of cold weather, it is unreasonable to allow NFG to assess a weather-related charge in the additional months of October, November, April, and May.

The deadband should be increased to 5% rather than the current 3%. This will prevent the WNA from applying when only minor deviations from the historical average temperature occur. This would also bring the WNA in alignment with the standards which were recently permitted to continue in the Columbia Gas 2025 rate proceeding and would produce fewer months where the WNA would produce charges or credits.

Additionally, NFG should be required to use a rolling ten-year historical average that is updated annually to calculate any WNA that is permitted to continue so that any WNA is calculated based on the most recent ten years of weather, rather than the fixed period from 2015 to 2024.

That said, I reiterate that my primary recommendation is that the Commission eliminate the WNA in its entirety.

VI. TARIFF RIDER PROPOSALS

Q: Please briefly describe NFG's tariff rider proposals that you intend to address in the context of this testimony.

A: NFG has put forth two tariff rider proposals that I will address in this Section of my testimony. First, NFG proposes an energy efficiency pilot program (EE Pilot), the costs for which it proposes to collect from residential customers through a new rider.[205] Second, NFG proposes to distribute a one-time $30 bill credit to the Company's CAP customers and customers with income at or below 250% FPL.[206]

a. Proposed Energy Efficiency Pilot Program (EE Pilot)

Q: Please briefly describe the Energy Efficiency Pilot Program that NFG proposes.

A: In this proceeding, NFG is proposing to implement a five-year energy efficiency pilot program (EE Pilot) that would provide rebates to residential customers for purchasing high-efficiency gas appliances.[207] The pilot would include rebates ranging from $150 to $700 for space heating equipment, $50 to $300 for water heating equipment, and $100 for gas clothes dryers.[208] NFG projects the total cost of the program to be $3,721,313 over five years.[209] The Company proposes to recover the costs for the program from a new rider, Rider D, which would recover an additional $0.7 million from residential customers annually, on top of the $19.7 million revenue

[205] NFG St. 1 at 6:5-6.
[206] NFG St. 14 at 14:6-7; NFG Response to CAUSE-PA 4-27. Attached hereto at Appendix B.

[208] NFG St. 18 at 5:5-15.
[209] NFG Response to CAUSE-PA 3-21. Attached hereto at Appendix B.

increase NFG requests in this case.[210] All residential customers, including CLI and CAP customers, would be charged this rider.[211]

Q: Does NFG's proposed EE Pilot include programming designed to reach low income customers?

A: No. As proposed, NFG's EE Pilot will be inaccessible to low income customers. The Company purports that the EE Pilot would be "a fair and practical solution to support low-income customers while advancing energy efficiency goals."[212] However, NFG does not address how low income customers – who most often lack the discretionary income to take advantage of rebate programs – could meaningfully participate in the EE Pilot. Reliance of the program on rebate incentives and the inelasticity of household income for those living in poverty means that low income customers would be unable to purchase high efficiency heating appliances such as furnaces and boilers, be eligible for rebates, or otherwise meaningfully participate or derive any comprehensive or quantifiable energy or bill savings through the proposed EE Pilot.

Importantly, the rebates NFG proposes to offer through its EE Pilot would not even cover the full incremental cost of purchasing high-efficiency equipment over baseline equipment.[213] It is unrealistic to expect that a low income customer facing a heating emergency who does not qualify for ERRP based on usage could bear even a portion of the incremental cost to purchase high-efficiency equipment eligible for EE Pilot rebates rather than baseline equipment to resolve a heating emergency. As discussed above, these customers are already forced to make impossible choices between paying for energy costs, food, medicine, and other essential expenses. NFG's low

[210] NFG St. 1 at 6:5-6.
[211] NFG Response to CAUSE-PA 3-17. Attached hereto at Appendix B.
[212] NFG St. 18 at 10:16-18.
[213] NFG Response to CAUSE-PA 3-19. Attached hereto at Appendix B.

income customers have no margin to bear any portion of the incremental cost of high-efficiency equipment, let alone to bear the full cost of high-efficiency equipment while waiting for a rebate, and are effectively locked out of participating in the EE Pilot. NFG reports that it has not conducted any analysis regarding the ability of low income households to participate in the EE Pilot.[214]

Nevertheless, despite being effectively foreclosed from realistically participating in the EE Pilot, low income customers, including CAP customers, would be charged NFG's Rider D to support the program through their monthly bills.[215] As proposed, the Company would be implementing an energy efficiency program that will not reach low income customers who are most burdened by higher rates and are least able to afford to adopt energy efficiency measures on their own. Low income customers, who already pay a disproportionate share of their incomes for energy costs, will receive no relief through the voluntary energy efficiency program presently proposed by the Company - but will still be required to pay the added cost of the Company's EE programs through rates. It is unjust and unreasonable to force financially struggling customers to pay for a program from which they are unable to meaningfully participate or derive any quantifiable benefit.

NFG's total lack of targeted low-income measures in its proposed EE Pilot program stands in stark contrast to the Commission's established requirements for the Electric Distribution Company (EDC) Act 129 energy efficiency portfolios. While NFG is a gas distribution company and, as such, is not subject to Act 129, the law does provide a rubric for how voluntary, ratepayer supported energy efficiency programming *should* be structured to ensure equitable access to efficiency services. Under Act 129, electric distribution companies (EDCs) are required to

[214] NFG Response to CAUSE-PA 3-20. Attached hereto at Appendix B.
[215] NFG Response to CAUSE-PA 3-17. Attached hereto at Appendix B.

implement Act 129 low income programs in addition to existing LIURP programs, which makes sense given that the eligibility criteria are different for the Act 129 low income programs and LIURP, which requires customers to meet a minimum usage threshold to participate. In contrast, the EDC's Act 129 low-income programs are intended to be broadly available to all income-eligible customers. This is an important distinction, because even low-income customers with average energy bills face enormous challenges with energy affordability. In the absence of specific and targeted Act 129 low-income programs, low income customers that do not meet the high usage threshold for LIURP would be unable to access any efficiency program support from the EDCs. Unfortunately, this is the exact scenario presented by NFG's energy efficiency program proposal, in which only high-use low-income customers will have access to efficiency support through NFG's LIURP program – while non-low income households with any usage level will have access to efficiency programs financed through rates because they can afford to pay the upfront cost of the measures and apply for the rebates.

Q: Do you have any other concerns about the proposed EE Pilot Program?

A: Yes. I am concerned that NFG's EE Pilot Program, if implemented, would not be appropriately coordinated with its existing Emergency Repair and Replacement Program (ERRP). As discussed above, NFG's ERRP is a component of its LIURP that provides LIURP-eligible customers with emergency repair and replacement of home heating and hot water equipment.[216]

NFG explained that the EE Pilot Program is "intended to complement and coordinate with" existing low income assistance programs administered by NFG and other programs.[217] NFG states that it "intends to leverage its existing Emergency Repair and Replacement Program ("ERRP") to

[216] 2022-2026 USECP at 5.
[217] NFG Response to CAUSE-PA 3-20. Attached hereto at Appendix B.

further assist self-identified low-income customers who report being without heat," and that by "integrating ERRP with the EE Program, the Company can remove one of the most significant barriers to participation, the upfront cost of high efficiency appliances, while ensuring vulnerable households maintain safe and reliable heating."[218] But in response to discovery, NFG clarified that customers reporting a loss of heating would first be evaluated for ERRP eligibility, through which they could get emergency heating equipment repairs and replacement, and that customers who are ineligible for ERRP would be referred to the EE pilot for a rebate.[219] That is, the EE Pilot rebate would not "stack" with ERRP to facilitate high-efficiency gas equipment replacements for ERRP-eligible low income customers facing heating emergencies. It is not apparent how ERRP would be integrated with the EE Program to assist low income customers in overcoming the high upfront cost of high efficiency appliances if only those customers ineligible for ERRP would be referred to the EE Program.

Q: Do you have recommendations for how NFG can adjust its EE Pilot Program so that it is accessible and provides meaningful assistance to low income customers?

A: Yes. I recommend the Commission require NFG to revise its proposed EE Pilot Program to include a targeted low income energy efficiency program designed to serve the unique needs and financial circumstances of customers whose annual household income is equal to or less than 200% of FPL. The Commission should require that NFG, in coordination with the USAC, develop a low income subprogram as part of its EE Pilot Program within 90 days of the effective date of rates in this proceeding and that the subprogram contain the minimum elements I recommend here.

The low income subprogram should be complimentary to NFG's LIURP, providing services to low income households that are otherwise ineligible for LIURP. Given that the

[218] NFG St. 18 at 10:22, 11:1-5.
[219] NFG Response to CAUSE-PA 3-22. Attached hereto at Appendix B.

inelasticity of low income household budgets makes it difficult or impossible for them to participate in rebate programs, the low income subprogram should provide participants with prescriptive efficiency measures and direct installation at no cost. In designing a low income customer program within its EE Pilot program, NFG should target low income customers who are ineligible for LIURP because they do not meet the minimum usage threshold. Low income programming within NFG's proposed EE Pilot should also specifically target measures to low income residential tenants, who are often unable to access comprehensive energy efficiency programming due to landlord noncooperation. Applicants who are income eligible for LIURP but are denied because they do not meet the minimum usage threshold should be provided a warm referral to the EE Pilot program administrator.

I also recommend that NFG be required to track certain data related to participation of low income customers in the proposed EE Pilot, if approved. I recommend that the Commission require NFG to track the number of low income customers that have participated in the proposed EE Pilot by FPL range, the average usage reduction and bill savings for participating low income households as a result of measures received through the program, and whether participating low income customers were referred to other universal service and energy conservation programs.

Q: Are there ways that NFG can better coordinate its proposed EE Pilot Program with its LIURP program and other available assistance programs?

A: Yes. As part of the development of the low income subprogram of the proposed EE Pilot Program as discussed above, NFG should be required to set forth a plan for integrating the low income EE subprogram, LIURP, and other energy efficiency and weatherization assistance programs available across NFG's service territory through customer referrals and enhanced coordination of service delivery. This should include but not be limited to appropriate referrals to

FirstEnergy's LIURP and Act 129 programs and the federal Weatherization Assistance Program. NFG should seek to enhance partnerships with program administrators to streamline service delivery to low income households through coordinated measure installation.

I further recommend that NFG be required to screen all applicants to the EE Pilot Program for household income as part of the application process. Low income customers seeking information about the EE Pilot program should first be screened for eligibility for NFG's LIURP and other universal service programs to ensure they are connected to the most advantageous assistance programs available. Consumers do not typically volunteer information about their household income unless prompted. While customers may wish to opt out of providing income information when asked, NFG should nevertheless request income information to first determine whether they are eligible for more extensive services through LIURP or NFG's other available universal service programs before vetting the household for services through the EE Pilot program. By implementing a basic screening and referral process, NFG can help ensure that low income customers are identified and referred to programs that will provide the most comprehensive benefits available to serve their needs.

Finally, I recommend that NFG develop outreach materials designed to co-market the EE Pilot Program, if approved, with other energy efficiency programming available across NFG's service territory. Again, this includes at minimum NFG's LIURP, as well as LIURP and Act 129 programs offered by FirstEnergy; and the federal Weatherization Assistance Program. These comarketing materials should be available in, at minimum, English and Spanish. I recommend that NFG be required to consult with its USAC to help ensure that the language and dissemination of these outreach materials reasonably inform customers about the availability and process for

applying for NFG's energy efficiency programs, including the proposed EE Pilot Program, and that these materials be finalized within 90 days of the effective date of rates in this proceeding.

b. Other Post-Employment Benefit (OPEB) Credit

Q: Please describe NFG's proposal regarding its plan to return revenue collected for Other Post-Employment Benefits (OPEB) to ratepayers.

A: NFG proposes to return approximately $7.2 million to ratepayers that it previously collected to fund Other Post-Employment Benefits, which it discontinued in 2003.[220] Through proceedings in 2021, the Commission approved NFG's petition to return $54 million of OPEB funds to customers through Rider I.[221] $7.2 million of that amount remains in NFG's possession, and the Company proposes to return it to customers through two mechanisms. First, it will provide a one-time $30 bill credit to CAP customers and customers with verified income at or below 250% FPL.[222] This credit is expected to total approximately $1.025 million.[223] NFG reports that the credit would be distributed only to those customers for whom the Company has recorded income information indicating that the household has income at or below 250% of the FPL.[224] After this one-time credit is distributed, the remaining funds would be returned to ratepayers through Rider I for one year.[225] In this section of my testimony, I address NFG's proposal to provide a one-time bill credit of $30 to CAP and verified low to moderate income customers.

Q: Do you have any recommendations regarding NFG's one-time bill credit proposal?

A: Yes. I am generally supportive of NFG's proposal to provide a one-time bill credit to CAP and low to moderate income customers. I note that NFG indicated in response to discovery that

[220] NFG St. 14 at 14:2-11; NFG St. 5 at 5:6-16.
[221] NFG St. 14 at 13:8-11.
[222] NFG St. 14 at 14:6-7; NFG Response to CAUSE-PA 4-27. Attached hereto at Appendix B.
[223] NFG St. 14 at 14:7.
[224] NFG Response to CAUSE-PA 4-27. Attached hereto at Appendix B.
[225] NFG St. 14 at 14:7-9.

for CAP customers receiving the credit, it would be applied to the ask-to-pay side of a customer's bill, would not be applied to pre-program arrearages, and that the credit would count as a payment toward CAP arrearage forgiveness.[226] I support these aspects of the proposal as they would help to maximize the credit's efficacy as rate relief for CAP customers. However, I believe that additional changes to this proposal are necessary to ensure that the credit is implemented in an appropriate manner.

The Commission should require that NFG conduct affirmative outreach by mail, email, telephone call, and text message to all customers receiving the one-time credit to screen for potential eligibility for CAP and/or NFG's other universal service programs. Mailed outreach should include a CAP application and an overview of the CAP program. Email and text message outreach should include links to NFG's online CAP application. For customers contacted by phone who express interest in CAP or other universal service programs, a warm referral should be made to the appropriate program coordinator.

Further, NFG should be required to distribute the one-time bill credit during a winter month, between December to March, when home heating costs are highest. NFG indicates that it intends to distribute the credit as soon as reasonably possible after a Commission order in this proceeding, with a goal to issue the credit in the November 2026 billing cycle.[227] Instead, NFG should be required to target posting the credit in a winter month – between December and March – to maximize the ability of the credit to provide relief to low income customers when the need for assistance is greatest.

[226] NFG Response to CAUSE-PA 4-28. Attached hereto at Appendix B.
[227] NFG Response to CAUSE-PA 4-26. Attached hereto at Appendix B.

VII. PROPOSED AMENDMENTS TO TARIFF RULE 8

Q: Please briefly NFG's Tariff Rule 8 and the changes it proposes to the rule.

A: NFG's Tariff Rule 8, "Access to Premises," provides that the Company's authorized agents shall have free access, at all reasonable times, to customer premises for the purpose of accessing gas equipment belonging to the Company, and piping and appliances belonging to the customer.[228] In this rate proceeding, NFG proposes to add language to Tariff Rule 8 that would expand the definition of "free access" to mean that Company personnel will not be subject to unsafe or hazardous conditions while on the premises, which it defines broadly to include the presence of insect or rodent infestation, excrement, debris, or other rubbish, or "any other circumstance that may reasonably pose a threat to the health or safety of Company employees or agents."[229]

Q: Do you have any concerns about the language NFG proposes to add to Tariff Rule 8?

A: Yes. It is necessary and imperative that NFG personnel can access gas equipment on customer premises, and the safety of NFG's employees is of paramount importance. However, I am concerned about the subjective nature of the language NFG proposes to add to its tariff.

Under its current and proposed tariff, NFG may refuse or terminate service for noncompliance with the tariff's rules, including Rule 8.[230] I am concerned that explicitly characterizing the subjective presence of pests, debris, "rubbish" or other health and safety issues as within the scope of denying free access to customer premises could result in customers having service refused or terminated based on the presence of both real or perceived health and safety issues that may not, in fact, pose any threat to the employee – but may instead be a subjective moral or cultural difference. NFG has already developed protocols for its employees to handle

[228] National Fuel Gas Distribution Corporation Tariff Pa. P.U.C. No. 9, Original Page No. 19.
[229] NFG St. 16 at 29:9-18.
[230] NFG Response to CAUSE-PA 4-9. Attached hereto at Appendix B.

these situations when encountered in the course of their work and does not permit its employees to enter customer premises if health and safety concerns are present. Specifically, NFG reports that it maintains a Safety Gatekeeper Program that enables NFG employees to report concerns about customer wellbeing or unsafe conditions encountered in the field.[231] NFG currently requires that health and safety issues present at customer premises, such as unsanitary conditions, pest infestations, or debris be remediated before employees are permitted to enter to perform work.[232] The Company reports that if an employee believes that a customer needs assistance, the employee can report their concern to their supervisor, who will determine whether referring the customer to resources or support services is warranted.[233]

It is not clear that the addition of this language to the tariff would provide any additional protection to employees beyond the protocols NFG has already implemented, but it comes at the risk of potentially subjecting customers to refusal or denial of service for conditions that they may not be able to remediate without assistance. In addition, the proposed language is highly subjective and would make it difficult for the Commission and interested stakeholders to evaluate whether NFG is performing service terminations in compliance with regulatory and statutory requirements. I recommend that the Commission not approve NFG's request to add this language to its tariff.

[231] NFG Response to CAUSE-PA 4-11. Attached hereto at Appendix B.
[232] NFG Response to CAUSE-PA 4-11. Attached hereto at Appendix B.
[233] NFG Response to CAUSE-PA 4-11. Attached hereto at Appendix B.

VIII. SUMMARY AND CONCLUSION

Q: Please summarize your recommendations.

A: I made several recommendations throughout my testimony to address current levels of unaffordability and to mitigate the financial impact of any approved rate increase on low income households. In summary, I recommend the Commission take the following actions:

Identification of Low Income Customers

- Require that NFG begin screening all new and moving customers for income level at the time their service is established and once annually thereafter, and routinely screen for income on any non-emergency calls.

CAP Enrollment

- Improve the CAP recertification process to include an online recertification option, include a self-addressed stamped envelope with mailed CAP recertification forms, and expand recertification outreach to include email and text messages.
- Require that NFG expand and improve its outreach to customers who have elected to share LIHEAP data with the Company but who are not enrolled in CAP to include mail, email, telephone call, and text message outreach and implement a more simplified enrollment process.
- Require that NFG use the LIHEAP data it receives to recertify CAP eligibility for all CAP customers participating in LIHEAP data sharing regardless whether the customer is due to recertify eligibility.
- Require that NFG establish benchmarking goals to increase CAP enrollment by a minimum of 5% of its estimated low income population each year.
- Require that NFG track and report to its USAC data regarding applications and recertifications.
- Require that NFG track and report data regarding the total number of CAP accounts with arrears, the total dollar amount in debt for CAP customers, and the average amount of debt for CAP customers
- Commence an audit of NFG's collections and universal service program reporting to assess the need for additional corrective actions.

LIURP Participation

- Require NFG to develop a written comprehensive plan to expend its full LIURP budget each year, including discussion of customer outreach and referral streams, to be filed at NFG's USECP docket within 90 days of the effective date of rates in this proceeding.
- Require that NFG expand LIURP eligibility to customers living in mobile homes.

NFN Hardship Fund

- Reject NFG's off-the-record proposals to restrict NFN eligibility and add flexibility to adjust grant amounts.

- Require NFG to develop a plan to increase voluntary contributions to the hardship fund through fundraising and its annual shareholder contribution to the fund.

Fixed Customer Charge

- Reject NFG's proposal to increase the fixed customer charge, and instead apply any approved rate increase to the volumetric charge.

WNA Proposal

- End the WNA pilot and reject the Company's proposal to make it permanent.
- If any WNA is allowed to continue, require that it be on a pilot basis, that all CAP customers be exempt from the WNA charge, that the operable months be reduced to the winter months of December through March, that the deadband be increased to 5%, and that NFG use a rolling 10-year historical weather average that is updated annually.

EE Pilot Proposal

- Require NFG to revise its EE Pilot Program to include a low income energy efficiency subprogram that provides no-cost EE measures and is targeted to low income customers who are ineligible for LIURP.
- Require that NFG track data related to low income customer participation in the EE Pilot.
- Require that NFG set forth a plan for integrating the EE Pilot Program, LIURP, and other available energy efficiency and weatherization assistance programs available across NFG's service territory through customer referrals.
- Require that NFG inquire as to the income status of all EE Pilot applicants.
- Require that NFG develop outreach materials designed to co-market the EE Pilot, if approved, with other energy efficiency programming available across NFG's service territory.

One-Time OPEB Refund Credit

- Require that NFG conduct affirmative outreach by mail, email, telephone call, and text message to all customers receiving the credit to screen for potential eligibility for CAP and/or NFG's other universal service programs.
- Require that NFG distribute the one-time bill credit during a winter month, between December to March.

Tariff Rule 8 Amendment

- Reject NFG's request to add the proposed language to Tariff Rule 8.

Q: Does this conclude your direct testimony?

A: Yes.

New York University Law School, courses in Urban Affairs and Poverty Law, as part of Volunteers in Service to America (VISTA) Program 1969-1971

EMPLOYMENT:
1988- 2015 Executive Director, Pennsylvania Utility Law Project (PULP), a project of the civil non-profit Pennsylvania Legal Aid Network. PULP is dedicated to providing technical support, information sharing, and representation to low-income individuals and organizations, assisting and advocating for the low income in utility and energy matters. Responsibilities include project oversight, case consultation, co-counseling, and participation on task forces, work groups and advisory panels, community education and training in utility and energy matters affecting the low income.

While at PULP, served in the following capacities:

- Chairman, Low-Income Home Energy Assistance Program (LIHEAP) Advisory Committee to the Secretary, Pennsylvania Department of Human Services
- Member, Pennsylvania Public Utility Commission, Consumer Advisory Council Coordinator, Pennsylvania Legal Services Utility/Energy Work Groups
- Member, Weatherization Policy Advisory Committee to the Department of Community and Economic Development
- Member, PECO Universal Service Advisory Committee and LIURP Subcommittee

1974-1987 Staff Attorney, Managing Attorney and ultimately, Executive Director of Legal Services, Incorporated (LSI), a civil legal services program serving Adams, Cumberland, Franklin and Fulton Counties. Through a restructuring with other legal services programs, LSI became part of what is now known as MidPenn Legal Services and Franklin County Legal Services.

1971-1972 Staff Attorney, New York City Legal Aid Society, Criminal Court and Supreme Court Branches, New York County.

1969-1971 Volunteer in Service to America (VISTA) assigned to the New York University Law School Project on Urban Affairs and Poverty Law.

BAR ADMISSIONS - Retired
New York State
Commonwealth of Pennsylvania
United States District Court, Middle District of Pennsylvania

Cases in which Harry S. Geller has participated as a witness before the Pennsylvania Public Utility Commission since July 1, 2015

Pennsylvania Public Utility Commission v. PA American Water Company, Docket Nos. R-2025-3057983 (Water); R-2025-3058051 (Wastewater)
Pennsylvania Public Utility Commission v. Columbia Gas of Pa., Docket No. R-2025-3053499
Pennsylvania Public Utility Commission v. UGI Utilities, Inc. - Gas Division, Docket No. R-2024-305276
Pennsylvania Public Utility Commission v. Aqua Pennsylvania Inc., Aqua Pennsylvania Wastewater, Inc., Docket Nos. R-2024-3047822; R-2024-3047824.
Pennsylvania Public Utility Commission v. FirstEnergy Pennsylvania Electric Company, Docket No. R-2024-3047068
Pennsylvania Public Utility Commission v. Duquesne Light Company, Docket No. R-2024-3046523
Petition of PPL Electric Utilities Corp. for Approval of DSP for Period of June 1, 2025 through May 31, 2029, Docket No. P-2024-3047290

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please identify the financial impact of the proposed increase on customers enrolled in NFG's Customer Assistance Program (CAP), by payment plan type and income tier. If you are unable to identify the financial impact, or assert that there will be no impact, please explain.

Response

CAP participants pay only up to their respective energy burdens of either 4% or 6%. Therefore, it is assumed that CAP participants would not experience a financial impact as a result of the Company's proposed base rate increase because they would only still be responsible to pay up to their energy burden percentage.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Is NFG proposing to implement any changes to its Universal Services and Energy Conservation Plan (USECP) Programs in the context of the present proceeding? If so, please specifically describe any proposed change to NFG's USECP Program(s) NFG proposes, including the timeline for implementing changes.

Response

The Company did not initially propose any changes to its USECP. However, given the current level of funding of the Neighbor for Neighbor program, the Company is evaluating certain changes that will facilitate its efforts to better support customers who are most in need of assistance. These proposed changes are as follows:

1. Making income a mandatory criterion; applicants need to meet both the income requirement (0-200%) and one other specified/current requirement to qualify.
2. Limiting the program to only National Fuel Gas customers.
3. Flexibility to change the grant amount based on demand.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

From January 2023 to date, disaggregated by month and year, as of the last day of the month/year, please identify the number of NFG CAP customers whose bills were calculated based on: a) Discounted Rate (disaggregated by discount rate tier, i.e., 10%, 20%, 30%, etc.) b) Percentage of income (disaggregated by income tier); c) Average monthly bill; d) Minimum bill; or e) Other (please specify). Please provide this data in a live excel spreadsheet.

Response

The Company converted from the Low-Income Residential Assistance (LIRA) program, which provided discounted rates, to the Customer Assistance Program (CAP), a percentage-of-income program, effective April 20, 2024.

The Company's CAP bills are categorized by billing type (Percentage of Income Plan (PIP), Average, or Minimum) and does not utilize any additional billing types that would classify as other under either the LIRA or CAP. This information will not align with CAP enrollment counts per month due to the Company's billing cycle and customer moves.

See revised Attachment Cause-PA-I-03.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

How does NFG define the term "confirmed low income customer" for the purposes of reporting pursuant to 52 Pa. Code § 62.5? Please provide any and all documents that contain the definition, including references to applicable tariff pages. If NFG uses a different definition or categorization criteria for "confirmed low income customer" for any purpose, please identify the alternative definition and/or criteria and explain why a different definition is used.

Response

The Company defines a confirmed low-income customer as a customer with recorded household income at or below 150 percent of the Federal Poverty Guidelines. In addition, customers who have not contacted the Company to update their income information, but who receive a LIHEAP grant are also designated as confirmed low-income customers.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

From January 2023 to date, disaggregated by month and year, as of the last day of the month/year, how many of NFG's customers were/are categorized as confirmed low income? If NFG uses multiple definitions of the term "confirmed low income", as identified in CAUSE-PA 1-4, please separately provide the data requested for each definition. Please provide this data in a live excel spreadsheet.

Response

See Attachment Cause-I-PA-05 Revised with an updated January 2026 number.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

From January 2023 to date, disaggregated by month and year, as of the last day of the month/year, how many of NFG's customers were/are enrolled in NFG's CAP? Please provide this information broken down by CAP enrollment type (i.e., percentage of income, average bill, minimum bill, etc.). Please provide this data in a live excel spreadsheet.

Response

The Company does not track CAP customers by enrollment type as described. This information is not captured at enrollment, but rather at monthly invoicing.

The Company would define this information as "CAP bill type" (i.e., percentage of income (PIP), average bill or minimum bill). See revised response Cause-PA-I-03 for this information.

See Attachment Cause-PA-I-06 for available data which includes total customers enrolled in CAP by month and year. There are no changes to this attachment.

Question

How many of NFG's confirmed low-income customers received a LIHEAP Cash and/or Crisis Grant for the following LIHEAP program years: (A) 2022-2023; (B) 2023-2024; (C) 2024-2025; and (D) 2025-2026? Please disaggregate by program year and type of grant received (Cash Only, Crisis Only, Both Cash and Crisis, Supplemental). Please also identify the total LIHEAP dollars received by NFG on behalf of LIHEAP recipients for each program year listed above. Please provide this data in a live excel spreadsheet.

Response

See Attachment Cause-PA-I-09.

	(A) 2022-2023	(B) 2023-2024	(C) 2024-2025	(D) 2025-2026*
Cash Only	14,412	13,078	12,372	8,788
Crisis Only	3,257	2,358	3,153	63
Both Cash and Crisis	2,534	1,889	2,510	105
Supplemental	14,180	0	8,693	0
Total LIHEAP Dollars	$9,521,950	$5,950,024	$5,647,651	$2,447,873

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

From January 2023 to date, disaggregated by month and year, as of the last day of the month/year, please provide the average customer bill amount for NFG customers at mean usage as indicated in response to CAUSE-PA 1-16, for each of the following customer segments: a) All residential NFG customers; b) Residential NFG customers, excluding confirmed low income customers and CAP customers; c) Confirmed low income NFG customers; d) Confirmed low income NFG customers, excluding CAP customers; e) NFG CAP customers. Please provide this data in a live excel spreadsheet.

Response

Please see Attachment Cause-PA-I-17 for requests a and e. Please refer to OCA-IV-15 for Residential Average Bill January 2024 through December 2025. For sections b., c., and d., the Company does not maintain data in the format requested.

PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

From 2022 to date, disaggregated by year, as of the last day of the year, please provide the total NFG accounts that were written off for non-payment and the associated write-offs (in dollars) for those accounts, disaggregated by the following customer segments: a) All residential NFG customers; b) Residential NFG customers, excluding confirmed low income customers and CAP customers; c) Confirmed low income NFG customers; d) Confirmed low income NFG customers, excluding CAP customers; e) NFG CAP customers. Please provide this data in a live excel spreadsheet.

Response

Refer to CAUSE-PA-I-18.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

From January 2023 to date, please provide the number of payment troubled customers, disaggregated by month and year (as of the last day of the month/year), and the following customer segments: a) All residential NFG customers; b) Residential NFG customers, excluding confirmed low income customers and CAP customers; c) Confirmed low income NFG customers; d) Confirmed low income NFG customers, excluding CAP customers; e) NFG CAP customers. Please provide this data in a live excel spreadsheet.

Response

See Attachment CAUSE-PA-I-21 for (a) All residential NFG customers and (d) Confirmed low income NFG customers, excluding CAP customers. The Company does track CAP payment troubled customers separately and is unable to provide the data for (b), (c), and (e).

Question

From January 2023 to date, disaggregated by month and year (as of the last day of the month/year), please provide the number of customers with an active payment arrangement and total debt associated with these accounts for each of the following customer segments: a) All residential NFG customers; b) Residential NFG customers, excluding confirmed low income customers and CAP customers; c) Confirmed low income NFG customers; d) Confirmed low income NFG customers, excluding CAP customers; e) NFG CAP customers. Please provide this data in a live excel spreadsheet.

Response

See Attachment Cause-PA-I-23 Revised for (a) All residential NFG customers and (d) Confirmed low income NFG customers, excluding CAP customers. There is no data to report for items (b), (c), and (e) as the Company does not offer payment arrangements to CAP customers. Updated data for January 2026 has been added.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

From January 2023 to date, disaggregated by month and year (as of the last day of the month/year), please provide the number of NFG customers in debt without an active payment arrangement and the total debt associated with these accounts for each of the following customer segments: a) All residential NFG customers; b) Residential NFG customers, excluding confirmed low income customers and CAP customers; c) Confirmed low income NFG customers; d) Confirmed low income NFG customers, excluding CAP customers; e) NFG CAP customers. Please provide this data in a live excel spreadsheet.

Response

Please see attachment Cause-PA-I-24 Revised for (a) All residential NFG customers and (d) Confirmed low income NFG customers, excluding CAP customers. There is no data to report for items (b), (c), and (e) as the Company does not track this information for CAP customers. Updated data for January 2026 has been added. There are no changes to attachment Cause-PA-I-24 Revised.

See second revised response Cause-PA-I-26 for CAP debt information.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

From January 2023 to date, disaggregated by month and year, as of the last day of the month/year, please provide the total dollars in debt and the average arrearage level for each of the following NFG customer segments: a) All residential NFG customers; b) Residential NFG customers, excluding confirmed low income customers and CAP customers; c) Confirmed low income NFG customers; d) Confirmed low income NFG customers, excluding CAP customers; e) NFG CAP customers. Please provide this data in a live excel spreadsheet

Response

See Attachment Cause-PA-I-26 Revised for (a) All residential NFG customers and (d) Confirmed low income NFG customers, excluding CAP customers. There is no data to report for items (b), (c), and (e) as the Company does not track this information for CAP customers. Updated data for January 2026 has been added.

Question

From January 2023 to date, disaggregated by month and year, as of the last day of the month/year, please provide the total dollars in debt and the average arrearage level for each of the following NFG customer segments: a) All residential NFG customers; b) Residential NFG customers, excluding confirmed low income customers and CAP customers; c) Confirmed low income NFG customers; d) Confirmed low income NFG customers, excluding CAP customers; e) NFG CAP customers. Please provide this data in a live excel spreadsheet

Response

See Attachment Cause-PA-I-26 Revised for (a) All residential NFG customers and (d) Confirmed low income NFG customers, excluding CAP customers. There is no data to report for items (b), (c), and (e) as the Company does not track this information for CAP customers. Updated data for January 2026 has been added.

See Attachment Cause-PA-I-26 (2) for available NFG CAP customer arrearages related to section (e). This separates the customers balance eligible for debt forgiveness from unpaid current bills. This data is not available for past periods and is only available for a current period, dated March 26th, 2026.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to the September 2024 NFG LIURP Needs Assessment prepared by APPRISE and available on the Commission's website at https://www.puc.pa.gov/pcdocs/1853360.pdf. Please confirm that this is the most recent LIURP needs assessment completed for NFG and that there are no other LIURP needs assessments that have not yet been approved. If NFG has prepared and submitted a needs assessment that has not yet been approved, please provide a copy. Please also specifically describe any changes that NFG implemented as a result of the September 2024 LIURP needs assessment.

Response

The September 2024 LIURP Needs Assessment prepared by APPRISE is the most recent LIURP needs assessment completed by the Company and there are no assessments pending approval.

As a result of the 2024 LIURP Needs Assessment, the Company has increased its outreach efforts to improve awareness of the program. These steps include attending new events and locations across the service territory where more information was available at these events to inform attendees about LIURP. The Company has also taken steps to find contractors who can handle additional and more consistent work. These efforts have proven to be successful as the Company has seen an increase in LIURP spending and LIURP jobs completed as seen in response Cause-PA-II-14.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Assuming that NFG treats an identical number of low income units as will be treated through LIURP in the current fiscal year, and assuming no unit will be retreated, please indicate the number of years it would take to treat 100% of the low income units identified in the above requested needs assessment(s).

Response

The 2024 LIURP Needs Assessment provided by APPRISE states that there are approximately 213,493 households in the Company's territory with gas bills, of which 18% are low-income customers (38,429). Using the best available data, the Company completed a total of 187 LIURP jobs in calendar year 2025. With this information, it would take the Company approximately 206 years to treat 100% of these eligible households in its service territory. However, not all low-income customers would meet the yearly consumption threshold level of 1300 CCF for LIURP or 900 CCF for LC-LIURP.

PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please indicate for each year from January 2023 to date, disaggregated by year, as of the last day of the year for NFG: a) The total amount of budgeted LIURP dollars; b) The total amount of LIURP dollars spent for service delivery (e.g. measures, installation, and weatherization services), including dollars spent for health and safety remediation and for incidental repairs; c) The total amount of LIURP dollars spent for program administration; d) Of the amount listed in part b, what is the total amount of LIURP dollars spent on the installation of measures and weatherization. e) Of the amount listed in part b, what is the total amount of LIURP dollars spent for health and safety remediation; f) Of the amount listed in part b, what is the total amount of LIURP dollars spent for incidental repairs. Please provide this data in a live excel spreadsheet.

Response

See Attachment Cause-PA-II-09.

Section A

Year	Budgeted LIURP Dollars
2023	$3,388,596.46
2024	$3,758,861.62
2025	$3,702,157.99
2026	$2,841,879.24

Section B

Year	Total amount of LIURP dollars spent for service delivery
2023	$551,132.18
2024	$765,770.30
2025	$1,289,646.41
2026 (YTD February)	$188,470.87

Section C

Year	The total amount of LIURP dollars spent for program administration
2023	$62,892.72
2024	$74,878.50
2025	$63,789.57
2026 (YTD February)	$6,707.79

Section D

Year	Of the amount listed in part b, what is the total amount of LIURP dollars spent on the installation of measures and weatherization
2023	$534,345.19
2024	$734,808.35
2025	$1,206,692.39
2026	$180,678.45

Section E

Year	Of the amount listed in part b, what is the total amount of LIURP dollars spent for health and safety remediation
2023	$16,786.99
2024	$30,961.95
2025	$82,954.02
2026	$7,792.42

Section F

Year	Of the amount listed in part b, what is the total amount of LIURP dollars spent for incidental repairs
2023	This is included in Section E
2024	This is included in Section E
2025	This is included in Section E
2026	This is included in Section E

Question

Please indicate for each year from January 2022 to date disaggregated by year, as of the last day of the year, whether: a) NFG exhausted its LIURP budget; b) If such budget was not exhausted, the number of dollars not spent; c) If such budget was exhausted, the number of NFG customers who did not receive LIURP services despite having been found to be LIURP eligible. Please provide this data in a live Excel spreadsheet.

Response

See Attachment Cause-PA-II-10. Note that the Company does not have the information in section (c) as this information is not tracked.

Section A	
Year	NFG exhausted its LIURP budget
2022	No
2023	No
2024	No
2025	No
2026	N/A

Section B	
Year	If such budget was not exhausted, the number of dollars not spent
2022	$2,088,596.46
2023	$2,367,861.62
2024	$2,311,157.99
2025	$1,450,879.24
2026	N/A

Section C	
Year	If such budget was exhausted, the number of NFG customers who did not receive LIURP services despite having been found to be LIURP eligible
2022	N/A
2023	N/A
2024	N/A
2025	N/A
2026	N/A

Question

For January 2023 to date, disaggregated by month and year, as of the last day of the month/year, please indicate the number of applicants for NFG LIURP services, disaggregated by the following customer segments: a) Homeowners; b) Tenants; c) Single family homes; d) Multifamily, single metered homes; and e) Multifamily, master metered homes. Please provide this data in a live Excel spreadsheet.

Response

See Attachment Cause-PA-II-15. Note that the Company does not track information for sections (c), (d), or (e).

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to NFG Statement No. 18 (Solomon) at 10:18-21. “Under this proposal, if a low-income customer is exempt from paying Rider D and chooses to participate in the EE Program, the associated costs would be equitably shared among the broader residential customer class—consistent with established regulatory precedent for socializing costs that deliver system-wide benefits.” Please specifically describe all circumstances under which a low income customer would be exempt from paying Rider D.

Response

The referenced statement was intended to address a hypothetical cost allocation principle and does not reflect the Company’s proposed Rider D design.

Under the Company’s proposal, there are no circumstances under which a low income customer would be exempt from paying Rider D. Rider D is a uniformly applicable, class based cost recovery mechanism that applies to all residential customers, including customers participating in the Company’s low income assistance programs. Rider D does not include exemptions, waivers, or exclusions based on income status, program participation, or customer classification within the residential class.

All residential customers, including those served under the Customer Assistance Program or Low Income Usage Reduction Program, continue to pay Rider D in the same manner as other residential customers. Participation in low income assistance or energy efficiency programs does not alter a customer’s obligation to pay Rider D.

Accordingly, the statement at page 10:18–21 does not describe an operative tariff provision or proposed exemption. Rather, it reflects a general regulatory concept that, if costs were ever to be incurred on behalf of customers not directly contributing through a rider, those costs would be allocated in a manner consistent with established ratemaking precedent. That circumstance does not arise under the Company’s proposal because all residential customers, including low income customers, contribute to Rider D.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to NFG St. No. 18 (Solomon) at 5:5-15. Would rebates provided through NFG's proposed energy efficiency program cover at least 100% of the incremental cost to purchase eligible equipment over baseline equipment? If not, please explain in detail why not.

Response

No. Rebates provided through the Company's proposed Energy Efficiency ("EE") Program would not cover at least 100 percent of the incremental cost to purchase eligible equipment over baseline equipment.

As reflected in the same worksheet used to respond to Cause PA18, the proposed rebates generally offset only a portion of the incremental installed cost associated with upgrading from baseline equipment to higher efficiency equipment for each eligible measure, including high efficiency furnaces and boilers, high efficiency water heaters, and ENERGY STAR® certified natural gas clothes dryers.

The Company intentionally designed rebate amounts at levels determined to be sufficient to provide customers with a reasonable payback period, rather than to fully reimburse the incremental cost of higher efficiency equipment. Requiring customers to retain some portion of the incremental cost promotes informed investment decisions, reflects expected energy savings over the useful life of the equipment, and helps manage overall program costs and participation levels consistent with the pilot nature of the program.

Accordingly, while the proposed rebates meaningfully reduce the upfront cost of eligible high efficiency equipment, they are not intended to cover 100 percent of incremental costs, but instead to support reasonable customer payback and sustained participation in the EE Pilot.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Has NFG analyzed the ability of low income customers to access the proposed energy efficiency program? If the answer is yes or in the affirmative, please describe this analysis and indicate when this analysis was conducted. Please also describe in detail the results of this analysis, and provide a copy of this analysis or other document(s) which describe this analysis.

Response

No. National Fuel Gas Distribution Corporation ("National Fuel" or the "Company") has not conducted a standalone analysis specifically evaluating the ability of low income ("LI") customers to access the proposed Energy Efficiency Pilot Program ("EE Pilot").

At this time, the Company does not have an estimate of the number of LI customers that may participate in the EE Pilot. The proposed effort is a pilot program, and participation levels are uncertain because the Company does not yet know how many LI customers will choose to enroll. Accordingly, any participation estimates would be speculative. National Fuel plans to incorporate a tracking mechanism into its application process to capture and monitor participation information.

As discussed in NFG Statement No. 18 (Solomon), the EE Pilot is not a low income exclusive program. Rather, it is intended to complement and coordinate with existing low income assistance initiatives administered by National Fuel, including the Customer Assistance Program ("CAP") and the Low Income Usage Reduction Program ("LIURP"), as well as other state or federally administered low income assistance programs.

The EE Pilot is designed to expand energy efficiency opportunities for customers who may not qualify for, or may not yet receive, more comprehensive services through existing low income programs, while avoiding duplication of those efforts.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

See NFG St. No. 18 (Solomon) at 8: 6-9. Please provide a copy the full Total Resource Cost (TRC) analysis performed by NFG, or by any third party on behalf of NFG, that analyzed the Company's proposed energy efficiency program. Please provide any and all workbooks used to perform the analysis in live Excel format.

Response

Refer to the attached workbooks which together comprise the TRC analysis conducted by our consultant. The external links have been removed, however the BCA Model FY27-FY31 workbook links to the BCA Model Assumptions FY27-FY31 workbook, so both need to be open at the same time for data to flow through to the results. If you want to change the name of the BCA Model Assumptions FY27-FY31 workbook, it will also need to be updated where it is referenced in formulas within the BCA Model FY27-FY31 workbook.

In preparation of this response, NFG found that the cost-benefit model had inadvertently used the $100,000 annual administrative value indicated Table 2 of National Fuel Statement No. 18 for the Outreach/Marketing/Trade Ally Co-op costs. This resulted in slightly overstated program costs in the cost effectiveness model because the model did not reflect the declining Outreach/Marketing/Trade Ally Co-op costs. Table 3 corrects that error.

Table 3. TRC Analysis Results - Corrected

Metric	Value
TRC Benefits	$3,932,053
TRC Costs	$3,721,313
Net Benefits	$210,741
TRC Ratio	1.06

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to NFG St. No. 18 (Solomon) at 10:22 – 11:1-5. Please explain in detail how NFG proposes to integrate its Emergency Heating Repair and Replacement Program ("ERRP") with its proposed energy efficiency program.

Response

As described in NFG Statement No. 18 (Solomon) at 10:22–11:1-5, National Fuel Gas Distribution Corporation ("National Fuel" or the "Company") proposes to integrate its Emergency Heating Repair and Replacement Program ("ERRP") with the proposed Energy Efficiency Pilot Program ("EE Pilot") in a coordinated manner to ensure customers experiencing heating system failure are directed to the most appropriate form of assistance.

Under this integrated approach, customers who report a loss of heat or a heating system failure are first evaluated for ERRP eligibility. If a customer qualifies for ERRP, the program addresses the emergency condition by providing repair or replacement of the heating equipment in full, consistent with ERRP's purpose of restoring safe and reliable heating service for vulnerable households.

If a customer does not qualify for ERRP, National Fuel would direct the customer to the EE Pilot as an alternative pathway for assistance. In these cases, the customer would be informed of the availability of EE rebates and provided with an application to help offset the cost of replacing worn out or inefficient equipment with higher efficiency equipment. This ensures that customers who fall outside ERRP eligibility criteria are still offered an opportunity to receive financial support when replacing failed or end of life heating equipment.

This coordination ensures that:

- ERRP remains the primary program for addressing true heating emergencies through full repair or replacement; and

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

- The EE Pilot serves as a complementary option for customers who are not ERRP eligible but are facing equipment replacement decisions, thereby supporting the installation of higher efficiency equipment where appropriate.

By integrating ERRP and the EE Pilot in this manner, National Fuel avoids duplicating assistance, preserves the emergency focus of ERRP, and provides a clear transition to EE rebates when emergency program eligibility is not met, consistent with the intent described in NFG Statement No. 18.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to NFG St. No. 17 (Stoops) at 3:13-16. “The Company has worked with DHS to receive income and household information for households that grant consent to share the information. This information is intended to allow customers to enroll or recertify in CAP without having to submit a new application or proof of income-eligibility.” Please specifically describe how NFG utilizes LIHEAP data received from the Pennsylvania Department of Human Services (DHS) to conduct outreach, recertification, and/or enrollment for its universal service programs. Please also provide a copy of all current letters, written communications, and/or outreach materials NFG uses to conduct outreach to LIHEAP recipients for enrollment in universal service programs.

Response

The Company receives a file from the Department of Human Services (DHS) of customers who consent to data sharing and who have their LIHEAP grant sent to the Company. When this file is received, the Company will send a customer who is not currently enrolled in CAP a simplified application, letter, and program information. If a recertification is needed, the Company will send a letter and program information advising the customer that they will continue to be on CAP.

When the customer receives this simplified application for enrollment, they are only required to choose a “Yes” or “No” response if they are willing to participate in the Company’s CAP program, sign, and date the application. The customer will then be enrolled in CAP when the signed agreement is received. The customer does not have to take any action when being recertified.

See CONFIDENTIAL Attachment Cause-PA-3-27 (1) for the Company’s simplified CAP application.

See CONFIDENTIAL Attachment Cause-PA-3-27 (2) for the Company’s recertification letter due to data sharing.

Question

If a customer is not compliant with the current NFG Tariff Rule 8, are they subject to refusal or termination of service under any rule or regulation, including pursuant to NFG Tariff Rule 11?

Response

The Company may terminate service for such reasons and on such notice as specified by the regulations of the Pennsylvania Public Utility Commission, the Pennsylvania Public Utility Code, or for other violation of these Rules and Regulations.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

When NFG's authorized agents discover health and safety issues, such as rodent or pest infestation or the presence of excrement, debris, or other rubbish, at a residential customer's premises that prohibit "free access" to NFG- or customer-owned equipment, what procedure does NFG follow to secure access? Please also specifically indicate whether NFG provides referrals to housing remediation providers, social services providers, or any other resource for assistance remediating health and safety issues. Please provide a copy of all current written policies, procedures, training materials, or other documents that describe such procedures.

Response

National Fuel Gas (NFG) maintains a Safety Gatekeeper Program designed to ensure that employees can report concerns about customer well-being or unsafe conditions encountered in the field. While NFG encourages employees to remain attentive to signs that a customer may need assistance, the safety of employees is always a top priority.

When health or safety issues, such as unsanitary conditions, pest infestations, or debris, prevent safe and free access to NFG or customer owned equipment, NFG will require that these issues be corrected before employees are permitted to enter or work on the premises. This ensures that all work can be performed in a safe environment and in accordance with company safety protocols.

If an employee believes that a customer may need help beyond simply addressing access issues, the employee is to report the concern to their supervisor, who can then determine whether a referral to appropriate resources or support services is warranted.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Below is NFG Gate Keeper Guidance:

At National Fuel, the safety of our employees, customers and community is our top priority. At this time of year, as our region prepares to enter the season of extremely cold temperatures and high levels of snow, it is especially important that we pay close attention to our neighbors and customers who may be in need of extra assistance.

Throughout our work across the Company, it's inevitable that we will encounter customers - whether it be a one-off occurrence or on a regular basis. It's imperative that we, as Safety Gatekeepers, are able to identify unusual or suspicious situations where customers and community members are in need of assistance.

Please watch and listen for possible warning signs that someone may require help, including:

- Un-shoveled driveways and walkways
- Snow covering home vents and exhausts
- Mail collecting in the mailbox or papers piling up on the porch
- Difficulty paying bills
- Declining condition of home
- Difficulty seeing, speaking, hearing or moving
- Unattended children or pets

Thank you for your active concern and for keeping these warning signs in mind as you interact with our customers. As you go about your everyday work activities, I encourage you to contact your supervisor if you believe someone requires assistance.

PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to NFG Response, Attachment CAUSE-PA II-21, indicating that as of January 2026, NFG's hardship fund had $16,852.65 of remaining available funds. As of the most recent date for which data is available, has NFG exhausted available funding in its hardship fund? If not, does NFG expect to exhaust available funding for its hardship fund during 2026? If yes, please indicate what in month of 2026 NFG expects that available hardship funding will be exhausted.

Response

The Company's hardship fund was depleted as of February 25, 2026, as a result of increased program demand.

To avoid suspension of the program, the Company elected to release its annual shareholder contribution of $92,000 earlier than usual. The early release of the annual contribution was intended to address the immediate funding shortfall and maintain program availability.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to NFG's response to CAUSE-PA I-2, indicating that NFG is evaluating for its hardship fund "Flexibility to change the grant amount based on demand." Please specifically explain: a) What specific flexibility NFG is evaluating related to changes to grant amounts based on demand; b) Whether and to what extent the flexibility would vary by any factor (e.g. customer income level, any non-income eligibility criteria, county). Please also provide a copy of all current or proposed written policies, procedures, or other documents which discuss NFG providing flexibility to change hardship fund grant amounts based on demand.

Response

a) The Company is evaluating the ability to introduce flexibility in the hardship fund grant amounts awarded based on demand. This flexibility will allow the Company to continue operating the program and support customers consistently throughout the year.

   Specifically, the Company is evaluating modifying the hardship fund program guidelines to allow:

   - The maximum grant amount to be adjusted downward during periods of elevated demand or reduced fund balances; and/or
   - The program administrator to adjust grant amounts based on overall program demand and available funding, with the goal of assisting a greater number of eligible customers over the course of the program year.

   Under these modifications, the hardship fund would continue to provide meaningful assistance to eligible applicants, but individual awards could be adjusted to help prevent premature depletion of the fund and avoid temporary program suspensions.

b) At this time, the Company is not evaluating flexibility that would vary by factors such as customer income level, non-income eligibility criteria, or geographic location.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Eligibility criteria and screening requirements would continue to apply uniformly across applicants.

Rather, the flexibility under consideration relates to program level conditions, such as overall demand for grants during a given period and the availability of program funds relative to projected need.

Grant amounts would continue to be determined through the existing intake and review process based on an applicant's circumstances and documented need, but within adjusted program parameters intended to preserve the availability of assistance throughout the year.

No formal written policy or procedure has been finalized or adopted that specifically governs flexibility to change hardship fund grant amounts based on demand.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to NFG St. 14 (Mann) at 14:6-7. Regarding the $30 one-time bill credit proposed to be provided to verified low income customers, please indicate when (month and year) NFG proposes to distribute the one-time credit to verified low income customers.

Response

NFG proposes to post the one-time bill credit as soon as reasonably possible following a Commission order in this proceeding, but no earlier than the start of the FPFTY. The Company's goal would be to issue the credit to active accounts as of the posting date during the November 2026 billing cycle.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to NFG St. 14 (Mann) at 14:6-7. Please indicate the following: a) How does NFG define “verified low income customer?” Does the definition differ at all from the Company’s definition of “confirmed low income customer?” If so, please specifically explain the difference. b) How does NFG propose to identify a customer as a “verified low income customer?” Does the process differ at all from the Company’s process for identifying a “confirmed low income customer?” If so, please specifically explain the difference.

Response

The intent of the statement made in NFG St. 14 (Mann) at 14:6-4 was to indicate the one-time bill credit of $30 would be provided to customers at level 1 (150%) and 2 (250%) of the Federal Poverty Level (FPL).

The Company would define a “confirmed low-income customer” as a customer with recorded household income at or below 150 percent of the Federal Poverty Guidelines. In addition, customers who have not contacted the Company to update their income information, but who receive a LIHEAP grant are also designated as “confirmed low-income customers”. The Company uses the terms verified and confirmed low-income customers interchangeably.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to NFG St. 14 (Mann) at 14:6-7. For “verified low income” customers who would receive the $30 one-time bill credit proposed to be provided to verified low income customers, please specifically explain the following: a) Will this credit be applied automatically to a customer’s account? To the extent that this response varies based on whether the customer is enrolled in CAP, please specifically explain. b) Would the credit be applied to a customer’s current charges or to arrears? c) For CAP customers, would the credit be applied to the customer’s bill on the ask-to-pay side of the bill, or the CAP credit side of the bill? d) For CAP customers, will the credit count as one of 24 required payments to receive arrearage forgiveness?

Response

a) Yes, the credit will be automatically applied to a customer's account.
b) For customers enrolled in CAP, the credit would apply to current charges unless there are outstanding past-due CAP bills; in that case, the credit would be applied to the oldest CAP invoice first. The credit would not apply to arrearage balance that is eligible for forgiveness. For customers not enrolled in CAP, the credit would apply to the oldest amount due first, then any remaining amount.
c) For CAP customers, the credit would be applied to the ask-to-pay side. It does not impact the calculation of a customer’s bill or their CAP credits.
d) For CAP customers, this one-time bill credit would count as a payment towards arrearage forgiveness. For example, if a customer’s bill totals $30 or less, the credit will cover this bill and the customer will receive arrearage forgiveness. If the bill exceeds $30, the customer will receive arrearage forgiveness once the remaining bill amount is paid.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to NFG St. 17 at 5:9-16, crediting the 2025 increase in LIURP contractor spending "to the unique circumstances in 2025, when a government shutdown resulted in additional work being redirected from community agencies to the Company, potentially inflating the current year's figures," and indicating that "the organization remains cautious when projecting expenditures for 2026." Please: a) Reconcile this statement with NFG's response to CAUSE-PA II-07, crediting the 2025 increase in LIURP jobs to increased outreach efforts and the Company taking steps to find contractors who can handle additional and more consistent work; b) Refer to NFG's 3rd Revised 2022-2026 Universal Service and Energy Conservation Plan at 41, projecting that NFG will perform 287 LIURP jobs in 2026 and 275 LIURP jobs in 2027. Please describe whether NFG's projected LIURP jobs for 2026 and/or 2027 have changed. If yes, please provide an updated number of LIURP jobs NFG projects to complete in 2026 and 2027, respectively.

Response

In response to section (a), the Company's statement in No. 17 at page 5: 9-16 and in response Cause-PA-II-07 are both accurate as multiple factors contributed to the increase in LIURP jobs seen in 2025.

In response to section (b), the Company's projected LIURP jobs listed in the 3rd revised 2022-2026 Universal Service and Energy Conservation Plan have not changed.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

In Excel format, with all formulae intact, by month for the most recent 24 months available, please provide for residential customers: a. The bill at mean usage at existing rates in sufficient detail to allow replication: b. The bill at mean usage at proposed rates in sufficient detail to allow replication.

Response

Please see Attachment OCA-IV-15.xlsx.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please provide a detailed written description of how the Company confirms a customer's income-eligibility for cold weather shutoff protections, including a detailed list of the information accepted to confirm the customer's income-eligibility.

Response

The Company will accept verbal confirmation of the household makeup and income to confirm income-eligibility for cold weather protections. Low-income status is also confirmed for LIHEAP recipients. In rare cases the Company requires proof of income. See response in OCA IV-18 for a detailed list of information accepted.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please provide the WNA revenues for each month since the inception of the mechanism, showing WNA charges and credits separately by customer class. Provide all workpapers and source documents supporting the Company's response in electronic form with all spreadsheet links and formulas intact and all source data used. To the extent the information requested is not available in the form requested, provide the information in the form that most closely matches what has been requested.

Response

Please see attachment OCA IX-38.xlsx for WNA revenue.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
1	How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.	National Fuel Gas's WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while mitigating the variance between actual and projected distribution revenues due to weather. The Company recovers a significant portion of fixed costs through volumetric rates. These fixed costs do not vary with the amount of gas delivered to customers and are composed of fixed operation and maintenance expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary in the short-term with changes in temperature. In the absence of a rate design that affords the Company the opportunity to recover all fixed costs in a fixed monthly charge, the WNA mechanism better aligns distribution revenues with cost causation principles.	The WNA distorts the connection because it is premised on the concept that although NFG is a weather responsive distribution business, customers should pay for the gas that they do not use, rather than what they use, undercuts established policy and programs to promote low income conservation and efficiency, and allows what is essentially guaranteed rate recovery regardless of the company's effectiveness at efficient management.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
2	How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.	The WNA mechanism indirectly supports efficient capacity utilization by stabilizing the recovery of fixed distribution costs, which are incurred to maintain National Fuel Gas's infrastructure and capacity to serve customers regardless of fluctuations in gas usage. Since these fixed costs do not change with short-term usage variations, the WNA ensures that the Company can continue investing in the infrastructure necessary to meet peak demand and long-term capacity needs and be compensated for these investments. By supporting revenue stability, the WNA reduces under-recovery risks during periods of lower gas usage, ensuring that the revenues collected align with customers' continued reliance on the utility's fixed assets that provide peak service.	The connection between the WNA support of fixed capacity utilization is distorted in that although capacity is based on maximum usage during cold weather months, it credits customer bills for greater usage during those months when the weather is colder than normal and reduces customers' bills during warmer months -- thus providing customers with a credit when they use more of the system's capacity.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
3	Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated c onsumption levels.	Customer specific usage factors corresponding to their individual demand is continually updated through the WNA formula and reflects the level of demand associated with the customer's anticipated consumption levels. In this proceeding, the Company is also proposing to set Normal Heating Degree Days using a 10-year average rather than a 15-year average, which more accurately captures recent warming trends. Using a more current weather baseline ensures that the WNA formula better aligns normalized usage with customers' anticipated consumption levels under today's climate conditions.	The WNA does not reflect the level of demand that is associated with customers' anticipated usage since it distorts the relationship by generating revenue when consumption is less than projected – and therefore demand is less than anticipated. Further, by essentially guaranteeing NFG a recovery of its authorized revenue requirement, the WNA provides revenue despite projections of revenue loss based on weather.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
4	How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.	National Fuel Gas's WNA is applied on a customer-specific basis and is designed to be revenue-neutral within each customer class, such that it does not create or exacerbate cross-subsidization either within or across classes.	The WNA will not likely lead to interclass or intraclass cost shifting.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
5	How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.	The Company's WNA only addresses variations due to weather and does not affect customers' ability to pursue energy efficiency measures. Further, the Company continues and will continue to promote the use of energy efficiency measures to its customers as the WNA removes the financial disincentive for National Fuel Gas to promote energy efficiency.	The WNA does not incent energy efficiency. Instead, it reduces incentives for customers to engage in efficiency or utilize consumption reduction measures. The WNA reduces the effectiveness of LIURP in reducing bills as well as the ability of non-LIURP-participating low income customers to reduce bills through conservation.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
6	How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.	Customers retain strong incentives to reduce usage because the commodity and other charges remain volumetric. The proposed WNA does not eliminate these price signals, so lower usage still results in lower bills.	As noted in 5, The WNA does not incent energy efficiency. Further, by reducing the potential savings due to energy efficiency on distribution, the WNA reduces the incentive for the application of efficiency measures.
7	How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance progr ams.	Under the proposed WNA mechanism, customers who are currently enrolled to pay their bills based on a percentage of their household income see little to no impact to their bills under the WNA mechanism.	As noted in detail in my direct testimony, low income customers are disproportionally affected, as compared to the general NFG residential population, by their inability to afford current NFG rates, let alone an increase in rates. Customers who are on the average bill will see an increase in their CAP bills as a result of WNA charges assessed when the weather is warmer than normal. By creating greater unaffordability, the WNA destabilizes a household's bill paying ability. Although CAP customers who pay a PIP amount will not see an increase in their bills, the costs of the CAP program will increase because of the WNA and that general residential customer increase, also borne by a significant number of non-CAP low income customers, is destabilizing.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
8	How the ratemaking mechanism and rate design impact customer rate stability principles.	The American Gas Association Gas Rate Fundamentals book (Pages 152 – 156) states: "The goal of stability recognizes historical relationships among customers in terms of the proportion of system costs each customer group bears. Stability leads to a policy of gradualism in rate changes if substantial increases (or decreases) are called for in the context of a single rate case. Changes in gas utility pricing policy should be imposed gradually so that customers can adjust and any adverse impacts on the customers' operation are minimized." The WNA mechanism provides customers with more stable annual bills and directly mitigates volatility in their monthly costs. Customers would pay for the costs assigned to the volumetric base rate in the most recent rate case and customers would not pay more or less than that amount solely because the actual weather for the month the customers are billed is different than the weather used to determine the rate design of the volumetric base rate.	As noted in Number 7 and in my direct testimony, low income customers cannot afford current rates, nor the increases that will occur under proposed rates. Unaffordability of rates is destabilizing to these households and there is no benefit for these households from a hypothetical concept of bill stability. Further, NFG is not guaranteed to receive its authorized rate of return. The WNA, although providing stability to NFG by assuring that it receives that level of return, provides the Company a level of security not shared by its low income customers, who experience involuntarily service termination disproportionally.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
9	How weather impacts utility revenue under the ratemaking mechanism and rate design.	The Company's WNA adjusts customers' bills due to variations from normal weather during the heating season months (October through May), and it only mitigates the revenue effect of weather on the original rate design of the volumetric base rate. Without it, the Company is deprived of the opportunity to recover the Commission approved distribution revenue requirement for the applicable classes during times when warmer than normal weather occurs. Moreover, the absence of a WNA places the Company in a position of receiving a higher amount of revenues from customers when the weather is colder than normal. The WNA avoids both scenarios by minimizing the impact of weather on the Company's revenues and customers' bills.	WNA shifts weather-related risk from the Company to its customers. This is unacceptable. NFG is is not guaranteed to receive its authorized rate of return and is far better able to bear the risk of under recovery than are its low income customers. Further, NFG is made whole when the weather is warmer than the historical average. The credits from months in which NFG provides credits do not match the increase in revenue NFG receives in warmer than normalized months.
10	How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.	The WNA does not impact the Company's rate case frequency nor it effects regulatory lag.	I agree.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
11	If or how the ratemaking mechanism and rate design interact with other revenue sources (e.g., surcharges).	National Fuel Gas's WNA is solely focused on recovering costs that are part of the base revenue requirement and does not interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, restructuring riders, or system improvement charges under Section 1353.	I agree that NFG's WNA will not interact with other surcharges.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
12	Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.	National Fuel Gas's WNA includes several consumer protections to ensure fairness and transparency, as follows:	The WNA is not fair in that it results in a benefit to the Company, but not the customer and diminishes the potential benefits available to low income customer through LIURP. Nor is it transparent. Its concept of paying for gas that is unused and its complicated formula needed to determine the WNA charge are not easily comprehended or understood.
		a. No Over-Recovery of Revenue: The WNA mechanism results in an adjusted bill that reflects the revenues that would be recovered under normal weather, i.e., the same normal weather used to set rates. The Company does not recover additional distribution revenues due to colder than average temperatures that result in higher-than-normal usage from customers. This is ensured by limiting the mechanism to the heating season and having a deadband.	Although the deadband purports to be a protection, it simply acts as a control mechanism to avoid the worst effects of the WNA. Further, it is ironic that there would be no need for such a control in the absence of the WNA. Finally, NFG's WNA is unreasonably designed in that it extends from October through May, which is far beyond the winter heating season.
		b. No Cross-Subsidization: The WNA is customer-specific.	I do not concur in the conclusion that this feature is a consumer protection. Since the WNA is designed to achieve an overall rate recovery for the entire class, it would seem to be fairer if it were not imposed on an individual customer, but on the entire class.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
		c. Regulatory Oversight: The WNA is subject to Commission review and regulatory reporting requirements to ensure compliance with approved revenue stabilization objectives and to protect consumers from unintended rate impacts.	There is no unique regulatory oversight or reporting asserted by NFG in regard to the WNA. These features are already inherent in the current regulatory structure. The WNA adds nothing with regard to these factors.
		d. Customer Transparency: National Fuel Gas provides clear bill disclosures and customer education regarding WNA adjustments, ensuring consumers understand how the mechanism works and how it impacts their bills.	As stated, the WNA is based on a complicated, difficult to understand, not transparent formula. The mere fact that NFG provides information regarding the WNA does not ensure that customers understand how the mechanism works or how it impacts their bills.

#	Statement of Policy	Company's Response (Exhibit JDT-3)	CAUSE-PA Response
13	Whether the alternative ratemaking mechanism and rate design are understandable to consumers.	The WNA is not a new concept to the regulated utility industry and similar versions have been successfully implemented by other Pennsylvania natural gas distribution companies. The WNA tariff provides detailed information to the customer of how the mechanism works and the adjustments are displayed separately on bills, ensuring full transparency. The Company has also made available Frequently Asked Questions (FAQs) on its website https://www.nationalfuel.com/utility/weather-normalization adjustment-pa-home-biz/ Additionally, the Company sent customers a WNA reminder and plain language insert September 2025, ahead of the winter heating season.	As noted above, I disagree that the WNA is understandable. Customers understand that they should pay for gas distribution service they use, but do not understand that they should pay for service they do not use. The WNA formula is complicated and not transparent, and it is not reasonable for customers to have to understand each of the complicated concepts used to calculate this charge.
14	How the ratemaking mechanism and rate design will support improvements in utility reliability.	The proposed WNA targets the revenue requirement that would have been already subject to scrutiny and approved by the Commission, meaning that its prudency and reasonableness would have been reviewed and deemed appropriate to support reliability driven initiatives. The proposed WNA would help minimize the volatility of the recovery of these costs.	There is insufficient, if any, information in the record to support this claim. It deserves careful scrutiny. There is no evidence that the NFG WNA is tied to the achievement of any reliability improvements or performance.

Appendix A: Cited Discovery Responses

PREPARED SURREBUTTAL TESTIMONY OF HARRY S. GELLER, ESQ.

Q. Please state your name, occupation, and business address.

A. My name is Harry S. Geller. I am a retired attorney. I am the former Executive Director of the Pennsylvania Utility Law Project (PULP). I continue to serve as a consultant to legal aid programs and their clients. I maintain an office at 118 Locust St., Harrisburg, PA 17101 for the purpose of providing consulting services and assistance to low income individuals and the organizations which represent them in utility and energy matters.

Q: Did you previously submit testimony in this proceeding?

A: Yes. I submitted direct testimony on behalf of the Coalition for Affordability Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA) pre-marked as CAUSE-PA Statement 1.

Q: What is the purpose of your surrebuttal testimony?

A: My surrebuttal testimony responds to the rebuttal testimonies of witnesses for National Fuel Gas Distribution Corporation (NFG or the Company) Rebecca E. Hillery,[1] Courtney T. Mann,[2] Jason Scouten,[3] Matthew W. Stoops, Jr.,[4] Eric M. Solomon,[5] and John D. Taylor.[6]

My surrebuttal testimony specifically addresses discrete issues raised by these witnesses and is not intended to address every issue raised or otherwise discussed in the direct or rebuttal testimonies submitted by expert witnesses in this proceeding. Absence of a response to any other

[6] NFG St. 19-R.

specific recommendation or position of any witness does not indicate my agreement. I stand on the evaluations, analyses, and recommendations contained in my direct testimony.

Q: Has your direct testimony, or the analysis and recommendations contained therein, changed based on the rebuttal testimony of other parties in this case?

A: No.

I. UNIVERSAL SERVICE PROGRAMS

Q: To aid in understanding your response to other parties' rebuttal testimony, please summarize the recommendations you made in direct testimony regarding the sufficiency of NFG's Universal Service Programs in light of NFG's requested rate increase.

A: In my direct testimony, I explained that rate affordability is a critical component to determining whether a utility's rate is just and reasonable.[7] To assess rate affordability, it is necessary to examine how low income customers will be impacted by any proposed rate increase, and to make the necessary changes to a utility's universal service programming, rules, and policies to help mitigate that impact and ensure all customers can reasonably afford to maintain safe service to their homes.[8] I further explained that low income customers already have disproportionately high energy burdens, even with assistance from NFG's current universal service programs, and that any increase in rates will result in increased unaffordability and, in turn, increased reliance on universal service programming.[9]

Data clearly shows that NFG's low income customers already struggle to reasonably afford to maintain service to their home, and any increase in rates will drive further disparate payment

[7] CAUSE-PA St. 1 at 25.
[8] Id. at 24-25.
[9] Id. at 13-17.

trouble and termination rates across NFG's low income customer base. As I explained in direct testimony, confirmed low income customers not enrolled in NFG's Customer Assistance Program (CAP) account for approximately 9.6% of residential customers, yet they account for more than half (57.2%) of all payment troubled customers.[10] Confirmed low income customers not enrolled in CAP also account for 52% of dollars in debt and carry on average $198.93 more in debt than do overall residential customers.[11] Critically, confirmed low income customers, inclusive of those enrolled in CAP, are 12.6% of NFG's residential customers but represented 52% of involuntary terminations in 2025.[12] Despite these marked disparities in payment trouble and termination rates, I explained that NFG's CAP reaches only a quarter (25%) of NFG's confirmed low income customers – and just 10.8% of NFG's estimated low income customer base.[13] These numbers together strongly indicate that NFG's rates are already unaffordable for a significant number of its low income customers.

With regard to universal services, in light of these disparate outcomes for low income households, I recommended several reforms to NFG's universal service programs to improve enrollment and retention and to ensure that the programs are more widely available, adequately funded, and effectively designed.[14] My recommendations included, *inter alia*, that the Commission require the Company to implement routine screening of its applicants and customers to determine eligibility for CAP and other universal service programs, to expand and improve upon how the Company uses Low Income Home Energy Assistance Program (LIHEAP) data that it receives from the Pennsylvania Department of Human Services (DHS) to enroll and retain customers in

[10] Id. at 18.
[11] CAUSE-PA St. 1 at 18.
[12] Id. at 18-19.
[13] Id. at 27.
[14] See Id. at 23-50.

CAP, to set benchmarking goals for improving CAP enrollment, and to track and report certain CAP data.[15] I recommended that the Company be required to expand eligibility for its Low Income Usage Reduction Program (LIURP) to customers residing in mobile homes.[16] I also recommended that the Commission reject the Company's proposals to restrict eligibility and reduce grant amounts for its Neighbor for Neighbor (NFN) hardship fund and that the Company take steps to increase funding for NFN.[17]

Q: Please summarize NFG's rebuttal testimony regarding the Company's Universal Service Programs to which you will respond.

A: In general, in their rebuttal, NFG witnesses fail to acknowledge responsibility for and commit to a course of action that is appropriate to the Company's obligation to administer accessible and appropriately funded universal service programs and their interrelated components to ensure low income households within its service territory are able to connect and maintain safe, stable service to their home. The specific NFG testimony which forms the basis of my conclusion and to which I respond is summarized below.

Mr. Stoops disagrees with my recommendation that NFG take proactive steps to identify and confirm the low income status of the Company's customers who have low income, stating that the income screening procedures I proposed would be time consuming and harm customer service levels.[18] He asserts that the Company's current reactive income screening procedures – limited to when NFG receives a LIHEAP grant on behalf of a customer or when a customer contacts NFG when they are unable to pay their bill, inquire about a termination notice or payment arrangement,

[15] CAUSE-PA St. 1 at 12-13, 34-38.
[16] Id. at 44.
[17] Id. at 50.
[18] NFG St. 17-R at 6.

or ask for an extension to pay their bill – are sufficient.[19] Regarding CAP, Mr. Stoops disagrees with my recommendation that NFG be required to implement specific, measurable benchmarking goals for improving the Company's CAP enrollment numbers, asserting that the onus for CAP enrollment should not be on the Company.[20] He states that there are many reasons eligible customers may decline to enroll in CAP and that whether an eligible customer chooses not to apply or recertify for CAP is outside NFG's control.[21] Mr. Stoops disagrees that NFG should be required to perform additional outreach to customers who share LIHEAP data with the Company and are not enrolled in CAP.[22] Mr. Stoops indicates that the Company is evaluating system enhancements to track data regarding CAP accounts with arrears and that the Company will review how to enhance collection of CAP default rate data – though he makes no specific commitment to when or how that review will occur or whether it will take any subsequent steps to improve this critical area of NFG's customer service.[23]

Regarding LIURP, Mr. Stoops asserts that the Company excludes low income customers who live in mobile homes from participating in LIURP because weatherization services in these homes generally yield limited energy consumption savings.[24] He states that mobile homes represent a relatively small portion of households in the Company's service territory, as 94% of NFG's residential customers live in single family or multifamily dwellings.[25] In addition, he notes that customers residing in mobile homes are eligible for services through NFG's Emergency Repair and Replacement Program (ERRP).[26]

[20] Id. at 10-11.
[21] Id.
[22] NFG St. 17-R at 15.
[23] Id. at 17-19.
[24] Id. at 24.
[25] Id.
[26] NFG St. 17-R at 24.

Regarding the NFN, Mr. Stoops disagrees that the NFN's current funding level is insufficient.[27] He asserts that the Company's proposal to require an applicant to the NFN prove both low income and a designated eligibility criterion to establish eligibility for a hardship grant would not eliminate eligibility for low income households.[28] Mr. Stoops also disagrees with the recommendation that NFG promote fundraising for its NFN because the program's fundraising and certain administrative functions are performed by a third-party administrator, the Greater Erie Community Action Committee (GECAC).[29]

Q: What is your response to Mr. Stoops's disagreement that NFG should take steps to improve its identification of low income customers?

A: I stand by my recommendations, which I believe are essential to improving customer service for NFG's low income customers. As I explained in direct testimony, NFG has confirmed the low income status of fewer than half of the customers in its service territory who are estimated to have low income.[30] This strongly indicates that NFG's current procedures for identifying and confirming the low income status of its low income customers are inadequate.

The income identification procedures that Mr. Stoops describes are entirely reactive and result in NFG screening customers for low income status and eligibility for universal service programs only *after* the customer is already experiencing payment trouble or has received a termination notice. Rather than waiting for customers to reach out after arrears have already piled up, my recommendations focus on prevention, enabling NFG to identify low income customers and connect them to universal service programs, such as CAP, before accumulating unmanageable arrears. Importantly, the determination of who is a qualifying low income household is not a once

[27] Id. at 28.
[28] Id.
[29] NFG St. 17-R at 30-31.
[30] CAUSE-PA St. 1 at 9-10.

and done process that is based on a static group of identified customers since household incomes and composition, among other factors, are subject to change. Identifying low income households requires proactive screening to capture these changes, and the procedures I recommend would help enable NFG to better match these customers to rate assistance and usage reduction services, essential to providing service at just and reasonable rates to low income customers.[31]

I note that in his rebuttal, Mr. Stoops mischaracterizes my recommendation to implement proactive screening procedures to identify low income customers. Screening customers and applicants for income at the time service starts, upon moving, or during non-emergency calls would not require asking every customer for their income information during these interactions or asking all customers whether they wish to opt of income screening procedures, as Mr. Stoops states.[32] Instead, the procedures I recommended in my direct testimony would require NFG to inform customers of the availability of low income assistance programs during these customer interactions and provide customers with the opportunity to voluntarily self-disclose their income to assess eligibility or choose to decline.[33]

Q: What is your response to Mr. Stoops's testimony that routine income screening during non-emergency calls is too time consuming and would negatively impact customer service levels?

A: I disagree that it would be too time consuming to offer customers the opportunity to provide income information during routine customer calls to determine if they are eligible for a lower, income-based rate. It would only take a few seconds to ask whether the customer would like to share their income information to potentially qualify for lower rates and, if the customer answers

[31] Id. at 12.
[32] NFG St. 17-R at 7-8.
[33] CAUSE-PA St. 1 at 12.

yes, to refer them to the CARES team to screen for eligibility for the Company's universal service programs. The bulk of the time taken for the income screening would take place after referral to the CARES team, where actual income information could be collected. The benefits of proactively identifying low income customers and screening them for universal service program eligibility before they run into payment trouble far outweigh the short time it takes to ask customers whether they would like to provide income information.

Mr. Stoops acknowledges that NFG finds it reasonable to evaluate the feasibility of expanding income screening to customer interactions including service establishment, moves, and non-emergency calls.[34] However, evaluating a recommendation to determine its feasibility is not the same as implementing one. This is especially so as NFG appears to be asserting that a process that would take any additional time is infeasible. I stand by my recommendation that the Commission should require NFG to implement this proactive approach to income screening to improve the Company's identification of low income customers and facilitate connecting them with the most advantageous rate available.[35]

Q: What is your response to Mr. Stoops's disagreement with your recommendation that NFG should adopt benchmarking goals for improving CAP enrollment?

A: I disagree with several of Mr. Stoops's assertions about the proposal to adopt benchmarking goals for improving CAP enrollment. Mr. Stoops asserts that there are many reasons an eligible customer might choose to decline to enroll in CAP and that it is out of the Company's control whether a customer chooses not to enroll or recertify eligibility.[36] He also asserts that such goals would improperly place the onus for CAP enrollment on the Company.[37]

[34] NFG St. 17-R at 8.
[35] CAUSE-PA St. 1 at 12.
[36] NFG St. 17-R at 10-11.
[37] Id.

At the outset, I noted in my direct testimony that the majority (75%) of NFG's confirmed low income customers are not enrolled in CAP, and will experience the full, unmitigated impact of the proposed rate increase.[38] Moreover, as I explained in my direct, reliance on confirmed low income counts is fundamentally flawed, as it includes only a small segment of the actual low income population – namely, those who have already been identified by the Company's reactive identification procedures.[39] Only 10.8% of NFG's estimated low income customer population is enrolled in CAP.[40]

I strongly take issue with the assertion that benchmarking goals would improperly shift the onus of CAP enrollment onto the Company. The failure of NFG to acknowledge its responsibility to achieve appropriate enrollment levels is precisely the reason benchmarking goals are essential. The goals I proposed are intended to guide the implementation of recommendations to improve the availability of CAP and would not impose any punitive measures on the Company. As I noted in my direct testimony, despite the Company's outreach efforts, NFG's current CAP enrollment figures represent a backslide from enrollment figures at the time of the Company's last rate case.[41] The Company has rejected reasonable goalposts to help guide a course correction.

Mr. Stoops's testimony is premised on the assumption that the Company is doing sufficient outreach and that, if low income customers wanted to enroll in CAP, they would. This position fails to acknowledge the Company's inadequate CAP enrollment levels or its responsibility to obtain appropriate enrollment levels of the low income households within its service territory. Further, it fails to recognize that many customers are unaware that they may qualify for more advantageous rates, or may not understand the distinctions regarding eligibility, benefits, or

[38] CAUSE-PA St. 1 at 26.
[39] Id. at 10.
[40] Id. at 27.
[41] CAUSE-PA St. 1 at 27.

enrollment methods among multiple programs which make up the patchwork of utility assistance programs in Pennsylvania.

I have spent over 30 years representing low income utility consumers. In my experience, it is rare for a low income consumer to turn down enrollment in CAP or other assistance programs if they are explained the benefits and do not face insurmountable barriers to enrolling. While there are certainly some individuals who may knowingly turn down assistance, it is wholly unreasonable to conclude that a full 75% of NFG's confirmed low income households have been informed about CAP, understand the benefits, and intentionally choose not to apply. To the contrary, in my experience, the vast majority of eligible households do not understand or are not adequately informed about the existence of rate assistance through CAP, or otherwise face a multitude of practical barriers to completing the enrollment process.

The benchmarking goals I proposed in my direct testimony are intended to guide the implementation of improvements to outreach and education – efforts that are squarely within the Company's control – to help overcome the present status of low CAP enrollment.

Q: What is your response to Mr. Stoops's disagreement that NFG should utilize additional means of outreach to customers who participate in DHS LIHEAP data sharing?

A: I reiterate that the data provided to NFG through DHS LIHEAP data sharing is of immense practical value because it indicates both that a customer is income eligible for CAP and that the customer is interested in help enrolling in rate assistance programming.[42] Only 19% of the customers who NFG contacted under its existing procedure for utilizing LIHEAP data for CAP outreach have successfully enrolled in CAP.[43] Mr. Stoops asserts that additional outreach would add time to the referral process, but a conversion rate of just 19% strongly indicates that more time

[42] Id. at 34.
[43] Id.

is necessary to appropriately utilize the data to assist customers with CAP enrollment. I acknowledge that the Company states it will explore adding telephone outreach for these customers.[44] But again, a commitment to potentially explore a solution is not the same as a commitment to implement a solution. NFG is proposing to raise rates in this case, not to explore the potential for raising rates at some future time. In turn, the need to improve access to CAP for eligible households requires action now – not at some future time. I stand by my recommendation that the Commission require NFG to implement additional outreach efforts to facilitate CAP enrollment for those participating in LIHEAP data sharing.

Q: What is your response to Mr. Stoops's rebuttal regarding the tracking and reporting of CAP arrearage and default data?

A: I acknowledge that the Company is evaluating system improvements to track and report data regarding CAP accounts with arrears and that the Company anticipates implementing changes by mid-2027.[45] I also acknowledge that the Company says it will review its tracking and reporting of its CAP default rate.[46] Accurate and complete information about the number of CAP customers with program arrears, the extent of those arrears, and the percentage of customers who default on CAP is critical for evaluating the Program's effectiveness at providing affordable energy burdens for customers. The Commission should require that NFG promptly implement these system improvements to ensure NFG's CAP can be appropriately evaluated.

[44] NFG. St. 17-R at 16.
[45] Id. at 18.
[46] Id. at 19.

Q: What is your response to Mr. Stoops's disagreement with your recommendation that LIURP eligibility be expanded to customers who reside in mobile homes?

A: I stand by my recommendation. Mr. Stoops asserts that there are practical obstacles to weatherizing mobile homes, including limited space and the need for structural repairs.[47] However, it is improper to exclude an entire category of dwelling type from LIURP services because they can be inconvenient to treat. NFG's LIURP includes funding both for remediating health and safety issues and for incidental repairs designed to overcome these barriers to delivering weatherization services.[48]

Mr. Stoops notes that customers who reside in mobile homes are eligible for the Company's Emergency Repair and Replacement Program (ERRP).[49] ERRP's emergency services, however, serve a different function than LIURP, which is intended to reduce customer's bills.[50] ERRP does not provide the same long-term usage and bill reductions as LIURP, which could help address rate unaffordability for customers residing in mobile homes at existing and proposed rates.

Mr. Stoops notes that mobile home residents represent a small portion of the Company's residential customers, highlighting that 94% of NFG's residential customers reside in single family or multifamily housing.[51] However, for purposes of assessing the adequacy of the program design of LIURP, which is available to customers up to 200% FPL, it is more important to look at the proportion of customers who are potentially eligible for LIURP services. NFG customers who reside in mobile homes represent a much larger proportion of the Company's customers who are at or below 200% FPL.[52] In some counties NFG serves, as much as 17% of customers at or below

[47] Id at 24.
[48] National Fuel Gas Distribution Corporation, Universal Service and Energy Conservation Plan (USECP), Docket No. M-2021-3024935, (revised January 2, 2024) (hereinafter 2022-2026 USECP) at 67.
[49] NFG St. 17-R at 24.
[50] 52 Pa. Code § 58.1.
[51] NFG St. 17-R at 24.
[52] APPRISE, National Fuel Gas LIURP Evaluation Final Report, Sept. 2024 at 28-29.

150% FPL and 12% of customers between 151%-200% FPL reside in mobile homes.[53] NFG's policy inappropriately excludes a large proportion of potentially eligible customers from receiving bill reductions through LIURP. The Commission should require that NFG end its exclusion of mobile home residents from receiving LIURP services.

Q: What is your response to Mr. Stoops's disagreement with your recommendation that the Commission reject the Company's proposed modifications to NFN and increase funding for the program?

A: NFG acknowledges that adequate funding for the NFN is critical to meeting customers' needs and that funding has decreased to a critical level.[54] The Company's proposed solution to addressing the funding crisis, however, places the entire burden on customers facing emergencies by restricting eligibility and reducing grants with no commitment from the Company to do anything to increase available funding. My recommendation that the Commission reject NFG's proposed restrictions to NFN eligibility remains unchanged, and I reiterate my recommendation that the Company act to increase contributions to the hardship fund.[55] Without increased contributions, there is a serious risk the NFN will be depleted again.

Mr. Stoops asserts that the proposal to require NFN applicants to both meet an income threshold and prove an additional eligibility criterion would not eliminate eligibility for low-income households.[56] The proposal, however, would have exactly that effect for many low income households. As I stated in my direct testimony, requiring both income eligibility and an additional eligibility criterion would exclude income-eligible households that are unable to demonstrate an

[53] Id.
[54] NFG St. 17-R at 27.
[55] CAUSE-PA St. 1 at
[56] NFG St. 17-R at 28.

additional specified hardship.[57] The Commission should affirm that income eligibility is sufficient to qualify for NFN and reject NFG's proposal.

Further, my concern that restricting eligibility to non-customers could result in the exclusion of former customers whose service has been disconnected for more than 30 days[58] has not been alleviated simply by Mr. Stoops' assertion that this will not happen. NFG should be required to make explicit that former customers are eligible for assistance through NFN to help with reconnection costs. Additionally, the flexibility to reduce grant amounts downward during periods of reduced fund balances that NFG proposes, without any solution to address the chronically low levels of funding in the NFN, will result in permanently reduced grant amounts for customers in need of emergency assistance. The most effective solution to prevent depletion of the fund is to increase available funding.

Mr. Stoops asserts that NFG cannot encourage fundraising for the NFN because the fund is administered by GECAC, a third party entity.[59] It is NFG, not GECAC, that has the obligation to ensure that the Company's universal service programs are appropriately funded and available to serve the needs of low income customers in its service territory.[60] NFG cannot disclaim its universal service obligations through the use of a third party to administer. I note here that counsel for CAUSE-PA will address the legal aspects of this issue through briefing. Nevertheless, as a matter of public policy, I believe the Company can and must do more to ensure adequate funding for NFN and not rely solely on cutting grants to customers in crisis to address NFN's critically low level of funding.

[60] 66 Pa. C.S. § 2203(8).

II. ENERGY EFFICIENCY PILOT PROGRAM

Q: Please summarize the recommendations you made in your direct testimony regarding NFG's proposed Energy Efficiency Pilot Program.

A: I recommended that the Commission require NFG to revise its proposed Energy Efficiency Pilot Program (EE Pilot) to include a targeted low income component to enable low income customers to realistically participate in the program, which they would be required to fund.[61] As I explained, low income customers have no margin in their budgets to carry any portion of the upfront cost of high efficiency equipment while waiting for a rebate and thus would be effectively foreclosed from participating in the EE Pilot as proposed.[62] I also recommended that the Company integrate the EE Pilot with other energy efficiency programs, such as NFG's LIURP, the LIURP and Act 129 programs available from FirstEnergy, and the federal Weatherization Assistance Program.[63]

Q: Please summarize the Company's response to your recommendations.

A: NFG witness Erik M. Solomon asserts that I did not contend that the EE Pilot is imprudent, technically flawed, or unreasonable as proposed.[64] Mr. Solomon describes my recommendation to include a dedicated low income subprogram within the EE Pilot as reflective of policy preference, rather than correction of a defect in the proposed pilot's design.[65] He asserts that no statute, regulation, or Commission order requires a voluntary gas EE pilot to include dedicated low income offerings.[66] He also asserts that it is unsubstantiated that rebate-based programs are inaccessible to low income consumers.[67] In addition, Mr. Solomon states that the recommendation to include low

[61] CAUSE-PA St. 1 at 65-66.
[62] Id. at 62-63.
[63] CAUSE-PA St. 1 at 66-67.
[64] NFG. St. 18-R at 2.
[65] Id.
[66] NFG St. 18-R at 5.
[67] Id. at 4.

income programming within the EE Pilot is best understood as a request for a new or expanded program and asserts that the pilot's budget was not designed to accommodate a low income subprogram.[68]

Q: What is your response to Mr. Solomon's disagreement with your recommendations regarding the EE Pilot?

A: Mr. Solomon mischaracterizes my direct testimony by asserting that I did not contend that the EE Pilot, as proposed, is imprudent, technically flawed, or unreasonable. As I stated in my direct testimony, "[i]t is unjust and unreasonable to force financially struggling customers to pay for a program from which they are unable to meaningfully participate or derive any quantifiable benefit."[69] I stand by my assessment that as proposed, NFG's EE Pilot is unjust and unreasonable because its design, which includes only partial rebates, is effectively inaccessible to low income consumers, but nevertheless low income consumers would be required to contribute to the pilot's costs.[70]

My recommendation to require NFG to include a dedicated low income subprogram within its EE pilot is based not on philosophy or policy but is grounded in the material reality that low income customers cannot afford to participate in rebate-based programs. Mr. Solomon points to Act 129 as a model to support the Company's decision to recover costs for the EE Pilot through a rider.[71] At the same time, however, he dismisses the need to include low income programming within the EE Pilot because no statute requires the Company to do so.[72] In this way, NFG borrows aspects of the Act 129 framework that benefit the Company, and disregards the requirements of

[68] Id. at 19-20.
[69] CAUSE-PA St. 1 at 63.
[70] See Id. at 62-64.
[71] NFG St. 18-R at 14.
[72] Id. at 5.

the Act 129 framework that are intended to safeguard low income consumers. As the Commission has recognized in the context of Act 129, targeted low income program requirements help "to ensure that low-income customers are able to access and participate in the EDCs' efficiency programs" and help "to ensure that low-income customers realize significant benefits from these programs."[73] Dedicated low income programming has been part of the Act 129 framework since its inception.[74] The Commission has recognized over and over again that such program requirements are necessary to ensure that low income consumers have equitable access to energy efficiency programs because market rate programs do not reach low income consumers. My direct testimony clearly highlighted that low income consumers do not have any margin in their budget to afford the upfront payments required to make participation in a rebate-only program feasible.

My recommendation to include dedicated low income program offerings as a component of the EE Pilot is not a proposal for a new program or to expand the pilot's budget. As a component of the EE Pilot, the low income subprogram I recommend would fit into the existing pilot's budget and should reflect a proportion of the overall pilot budget equivalent to the proportion of low income customers' usage. This would help ensure that the funding collected from low income customers to fund the program would be available to provide energy efficiency measures for low income customers.

In its rebuttal testimony, NFG has failed to adequately respond to my testimony that the upfront costs would make participation in the EE Pilot unrealistic for low income consumers. NFG has not substantiated that low income customers would be able to participate in the EE Pilot. The Company has taken no steps to design the pilot in a way that will be accessible to low income

[73] Implementation Order, Energy Efficiency and Conservation Program, Docket No. M-2025-3052826 (entered Jun. 18, 2025) at 68.
[74] Id. at 53.

consumers but intends to require that they contribute to cost recovery for the pilot. As proposed, the Company's EE Pilot would produce unjust and unreasonable results. I stand by my recommendation that the Commission require NFG to amend its EE Pilot proposal to include dedicated low income programming within the proposed program budget.

III. CUSTOMER CHARGE PROPOSAL

Q: Please summarize the recommendations you made regarding NFG's proposal to increase the fixed customer charge.

A: I recommended that the Commission authorize no increase to NFG's residential customer charge.[75] I explained that the Company's proposal undermines the ability of consumers to control their bills through energy efficiency and conservation efforts because when more of a customer's bill is locked into the fixed charge, less of it is dependent on volumetric usage, diminishing the ability to control costs through reduced usage.[76]

Q: Please summarize the Company's testimony regarding the customer charge to which you will respond.

A: NFG witness Courtney T. Mann disagrees with my assessment that NFG's proposed increase to the residential customer charge is "massive."[77] Ms. Mann asserts that the proposed charge would be in line with other Pennsylvania natural gas utilities, pointing specifically to the fixed charge the Commission recently authorized for Columbia Gas of Pennsylvania.[78] NFG witness John D. Taylor asserts that under NFG's proposed $19 monthly customer charge, approximately 59% of residential customer revenues would be collected through volumetric

[75] CAUSE-PA St. 1 at 54.

[77] NFG St. 14-R at 2.
[78] Id.

charges and that such a bill structure would provide customers with meaningful opportunities to reduce their gas bills through usage reduction and energy efficiency measures.[79]

Q: How do you respond to the Company's disagreement with your testimony regarding the customer charge?

A: I stand by my assessment that NFG's residential customer charge proposal is excessive and continue to recommend that the Commission authorize no increase to the charge.

NFG's proposal would lock the majority of its proposed rate increase into the customer charge, leaving just a small portion of the rate increase mitigable through usage reduction. As I discussed in my direct testimony, under NFG's proposed rate increase, after the one-year Other Post Employment Benefits (OPEB) refund rider expires a year after rates would take effect, the monthly bill for a residential customer using 80 Ccf of gas per month would increase by $6.79 over current rates to a total bill of $90.28 per month.[80] Of that $6.79 increase, 74% would be locked into the $5 hike to the customer charge, leaving just 26% of the rate increase recovered through volumetric charges – and therefore mitigable through usage reduction. The $19 customer charge NFG proposes would represent more than one-fifth (21%) of a customer's monthly bill at 80 Ccf per month.[81]

Ms. Mann asserts that NFG's proposed fixed charge would be in line with other Pennsylvania gas utilities and specifically highlights the fixed charge the Commission recently authorized for Columbia Gas.[82] In setting the customer charge for Columbia Gas, however, the Commission acknowledged that the ability for consumers to reduce their bills through efficiency and

[79] NFG St. 19-R at 27.

[81] [$19 ÷ $90.28 = 21%].
[82] NFG St. 14-R at 2.

conservation depends on a bill structure that bases cost recovery on volumetric usage.[83] The Commission rejected Columbia's request to increase the customer charge to an amount that would represent 20.7% of a customer's monthly bill, instead authorizing a customer charge representing 14.9% of a customer's monthly bill.[84] NFG's proposal to increase its customer charge to 21% of a customer's monthly bill is not in line with the proportion the Commission authorized for Columbia Gas. If NFG's proposed rate increase were approved in full, to match the 14.9% proportion the Commission found to be reasonable for Columbia Gas, NFG's fixed charge would in fact be *reduced* to $13.45 per month.[85]

NFG's proposal to recover the majority of its rate increase through the customer charge would severely restrict customers' ability to use energy efficiency and conservation to alleviate increased bills. I continue to recommend the Commission authorize no increase to NFG's customer charge.

IV. WEATHER NORMALIZATION ADJUSTMENT (WNA) PROPOSAL

Q: Please summarize your direct testimony regarding NFG's WNA proposal.

A: I recommended that the Commission end NFG's WNA pilot and not authorize it to become a permanent aspect of NFG's rate design.[86] I explained that although, in theory, the WNA is bi-directional, in practice, it more often and to a greater extent works to the benefit of NFG at the expense of customers.[87] I noted that Pennsylvania is experiencing a long-term warming trend that experts, including NFG witness John D. Taylor, project to continue.[88] I explained that this warming trend means that there will be fewer Heating Degree Days (HDD) over time, resulting in increasing

[85] [$13.45 ÷ $90.28 = 14.9%].
[86] CAUSE-PA St. 1 at 59.
[87] Id.
[88] CAUSE-PA St. 1 at 57.

WNA charges to customers if the WNA is allowed to continue.[89] I also discussed how the WNA undermines the goals of LIURP by reducing savings achievable through usage reduction on the volumetric portion of customers' bills.[90] In addition, I explained that the WNA is confusing to consumers because it is based on a complicated formula that charges customers based on hypothetical usage, subverting consumers' expectation that they will be billed based on the amount of gas they actually use.[91]

In my direct, I recommended that if NFG's WNA is allowed to continue, the Commission should require several reforms to its design. These included requiring that the WNA remain as a pilot no longer than three years, that CAP customers be exempt from the WNA, that operable months be limited to the Commission-recognized winter months of December through March, that the deadband be increased to 5%, and that the WNA be calculated based on a rolling ten-year average that is updated annually.[92] However, my primary recommendation remains that the Commission end NFG's WNA pilot.

Q: Please summarize the Company's rebuttal testimony regarding the WNA proposal to which you will respond.

A: NFG witness Rebecca E. Hillery asserted that the WNA is a symmetrical mechanism and that it is irrelevant whether temperatures are more often warmer than normal than they are colder than normal.[93] Ms. Hillery states that the 2025-2026 winter season was colder than normal and that the WNA provided a credit to customers in some months.[94] She asserts that the WNA has

[94] Id. at 8-9.

worked as designed and that it mitigates risk for customers and the Company equally.[95] In addition, Ms. Hillery asserts that affordability should be viewed through a long-term lens.[96]

NFG witness John D. Taylor asserts that the WNA is not a "one-way surcharge mechanism" because customers have received WNA credits in some months.[97] Mr. Taylor asserts that Pennsylvania's warming trend will not produce ever-increasing revenues for the Company, and that it does not accelerate cost recovery or change NFG's Commission-authorized revenue requirement.[98] Mr. Taylor disagrees that the WNA charges customers for hypothetical usage, asserting that the WNA does not create additional usage or collect revenues unrelated to service provided.[99] He disagrees that the WNA exacerbates energy unaffordability, and asserts that affordability protections are most appropriately delivered through universal service programs.[100] Mr. Taylor notes that in the 2025-2026 WNA season, from October 2025 through March 2026, the WNA resulted in approximately $2.6 million in net credits to customers.[101] In addition, he asserts that NFG's WNA should run from October through May because the Company's service territory experiences colder temperatures than other parts of the state and that using a rolling ten-year average for the WNA calculation would result in misalignment between the WNA and base-rate billing determinants.[102]

Q: What is your response to the Company's disagreement with your recommendations?

A: The WNA is not a symmetrical mechanism, and it does not protect consumers. I stand by the recommendations in my direct testimony. The Commission should end NFG's WNA.

Although the WNA may in theory be bi-directional, in actual practice, the WNA operates to shield the Company from the risk of weather volatility at the expense of consumers. Ms. Hillery asserts that it is irrelevant whether temperatures are more often warmer than normal than they are colder than normal, but in the context of the WNA, the historic warming trends we have had and are expected to experience over the long term are inherently relevant to assessing the impact the WNA has and will continue to have on customers in actual practice. Ms. Hillery and Mr. Taylor note that customers received WNA credits in some months of the 2025-2026 WNA season.[103] From October 2025 through February 2026, Residential Sales customers received net WNA credits totaling $2,909,408.39.[104] But in March and April 2026 alone, the WNA imposed charges on Residential Sales customers totaling $2,053,616.08, reducing net credits for the 2025-2026 WNA season so far to $855,792.31 – before inclusion of May, when temperatures exceeded 90 degrees for multiple days.[105] In my direct testimony, I noted that the WNA had extracted a net $4.4 million in additional charges from residential customers over the course of NFG's pilot through February 2026.[106] In the time since, that figure has only climbed further to nearly $6.5 million in total net charges imposed on Residential Sales customers through April 2026.[107]

Mr. Taylor asserts that affordability protections for income-eligible consumers are best addressed through universal service programs.[108] But as I have discussed at length and demonstrated with substantial data and evidence, NFG's universal service programs reach only a

[104] NFG Response to OCA IX-38, Attachment IX-38. Attached hereto at Appendix A.
[105] NFG Response to CAUSE-PA 8-1, Attachment 8-1. Attached hereto at Appendix A.
[106] CAUSE-PA St. 1 at 56. The WNA resulted in a net total of $4,443,004.96 in additional residential customer charges from October 2023 through February 2026.
[107] Id.; NFG Response to CAUSE-PA 8-1, Attachment 8-1. The WNA resulted in a net total of $2,053,616.08 in charges for Residential Sales customers in March and April 2026, for a total of $6,496,621.04 net charges since October 2023.
[108] NFG St. 19-R at 36-37.

small fraction of the low income customers within its service territory.[109] NFG's WNA applies broadly to all residential customers, contributing to rate unaffordability and exacerbating energy insecurity, effects felt most acutely by the approximately nine out of ten of the Company's estimated low income customers who are not enrolled in CAP. Consumer protections and the affordability of rates, inclusive of rate design choices and alternative ratemaking mechanisms like the WNA, are central to assessing justness and reasonableness.[110] NFG unreasonably rejects all recommendations set forth by CAUSE-PA, the OCA, and I&E to enhance consumer protections in the design of its WNA that could help mitigate its worst excesses.

Assessing the effects of the WNA in actual practice through a long-term lens of affordability undermines any assertion that the mechanism is bi-directional or serves to protect consumers. A narrow focus on a few months where the WNA produced credits misses the big picture of how the WNA actually affects affordability. Zooming out just slightly to examine the full 2025-2026 WNA season so far shows how the WNA takes back any short-term benefit it provides, and zooming out further to assess the full pilot period lays bare that the WNA has been an abject failure at protecting consumers and does not have bi-directional benefits in practice. The WNA exacerbates energy unaffordability. The Commission should end this failed experiment.

V. TARIFF RULE 8 PROPOSAL

Q: Please summarize your direct testimony regarding NFG's proposed amendments to Tariff Rule 8.

A: I recommended that the Commission reject NFG's proposal to add language specifying the presence of certain health and safety concerns at customers' premises as constituting denial of free

[109] See CAUSE-PA St. 1 at 23-45.
[110] 52 Pa. Code § 69.3302.

access to gas equipment.[111] I raised concerns that the language NFG proposes to include in its tariff could authorize NFG to terminate or refuse service to customers and applicants based on the Company's subjective assessment of health and safety issues at a customer's home that may be beyond the control of the customer.[112] I also noted that NFG already has protocols in place for responding to the presence of health and safety issues at a customer's home without the proposed tariff language.[113]

Q: Please summarize the Company's response to your recommendation.

A: NFG witness Jason Scouten asserts that the proposed tariff language would provide objective standards for determining when safety concerns justify delaying or refusing service to customers.[114] Mr. Scouten asserts that the proposed tariff language would not substantively expand the scope of health and safety concerns that constitute "non-access," and would provide greater clarity to customers and landlords about what conditions could delay service.[115]

Q: What is your response to Mr. Scouten's disagreement with your recommendation?

A: I stand by my original analysis of the proposed language and reiterate my concern that the language is not needed and could enable NFG to refuse or terminate service to customers based on subjective concerns without adequate safeguards or process. Simply stating that the proposals add objectivity does not make it so. As proposed, the new standard would infuse bias and subjectivity into decisions about the deprivation of service, allowing moral judgement to take the place of objective criteria. In addition, I recommend that the Commission require NFG to track and report terminations, delays, and denials of service based on the presence of health and safety conditions

and detail the steps taken through NFG's Safety Gatekeeper Program to help connect customers experiencing such conditions to remediation resources.

Q: Does this conclude your surrebuttal testimony?

A: Yes.

PENNSYLVANIA WEATHERIZATION PROVIDERS TASK FORCE

PWPTF Statement No. 1

Direct Testimony of Jennifer Warabak

In Re: National Fuel Gas Distribution Corporation

Docket Number: R-2025-3059428

Q. Please state your full name and business address.

A. Jennifer Warabak, 165 Amber Lane, PO Box 1127, Wilkes-Barre, Pennsylvania 18703-1127.

Q. By whom are you employed and in what capacity?

A. I am employed by the Commission on Economic Opportunity (CEO) as Executive Director. I am submitting this testimony on behalf of the Pennsylvania Weatherization Providers Task Force as a member of the Task Force.

Q. What are the interests of the Task Force in this rate case?

A. The Pennsylvania Weatherization Providers Task Force, Inc., is a Pennsylvania non-profit corporation and a statewide association of thirty-eight (38) non-profit organizations providing utility assistance and energy conservation services in each of the Commonwealth's sixty-seven counties. The Task Force, through its member agencies, several of which are Pennsylvania community-based organizations, administers universal service programs for several utility companies. The Task Force members serve low-income ratepayers, and it is part of our responsibility to our constituency to advocate for their interests in regulatory proceedings, and this proposed request will certainly have an impact upon those low-income ratepayers. In addition to the affordability of transmission and distribution rates, the Task Force is particularly interested in the adequacy and operation of a company's universal service program.

Q. What background and experience in energy issues qualify you to submit testimony in this case?

A. I was appointed as the Executive Director of the Commission on Economic Opportunity in October 2022. I have been employed at CEO for over 20 years and during my tenure I have been involved in numerous energy related programs that CEO operates. From 2004 to 2016, I was CEO's Energy Services Coordinator where I supervised CEO's energy programs. During that time, I managed eight hardship utility programs and managed the LIHEAP Crisis program for Luzerne County on behalf of the Pennsylvania Department of Human Services as well as other utility customer assistance programs for several utility companies. In 2016 I became CEO's Program and Planning Coordinator where I evaluated program effectiveness and recommended modifications and/or improvements across the spectrum of programs offered by CEO, in the areas of energy, housing, job training etc.

During my tenure in those positions, CEO's experience and the expertise of its staff in energy programs has been recognized on state and national levels. CEO's energy related programs have been acknowledged by receipt of a Superior Achievement Award from the United States Department of Energy. CEO has weatherized more than 27,000 homes under the U.S. Department of Energy Weatherization Assistance Program. CEO also serves as a subcontractor for universal programs operated by several Pennsylvania gas and electric utility companies. CEO is also the PA Department of Public Welfare's contracted operator of the crisis component of the Low-Income Home Energy Assistance Program (LIHEAP) in Luzerne and Wyoming Counties.

Q. Before addressing the specifics of your testimony, does the Task Force take a position on whether the Company's rate increase should be granted?

A. Our primary focus is on the funding and availability of universal service programs and opposing rate designs that discourage conservation. In this case, we oppose any rate increase unless it is accompanied by measures that would provide additional relief to the Company's customers, particularly low-income customers, from the effects of a rate increase.

Q. Please describe the areas of your testimony.

A. My testimony will address the Company's proposal to increase the fixed monthly charge for residential customers as well as proposals to help low-income customers deal with any resulting rate increase.

In its request for a rate increase the Company does not propose any increase in universal service funding that would help low-income customers deal with the proposed rate increase. Further, an increase in the fixed monthly charge, as requested by the Company, would negatively impact a customer's motive and ability to conserve energy. The company's proposal if granted would increase rates, discourage conservation and leave a customer with less ability to conserve energy and less ability to reduce their bills. Despite the impact of its proposal on residential customers, and in particular low-income customers, the Company's proposal offers nothing in the way of changes or increases in funding to its universal programs, programs that would help mitigate the negative impact of the Company's proposals especially considering these difficult economic times.

If the Company's request is approved in its entirety, the total monthly bill for an average

residential customer using 80 ccf of gas per month would increase from $83.49 to $88.44 per month, or 5.9%. Despite this requested increase in rates, the Company is not proposing any increased universal service assistance to help low-income customers deal with a rate increase.

Q. What rate design issue would you like to address?

A. In this case the Company is proposing to increase its fixed monthly charge from $14.00 to $19.00 an increase of over 35%. I am concerned about this proposal, and the Task Force opposes any increase to the fixed monthly customer charges.

Part of the proposed increase to residential customer's rates will be due to this increase in the fixed monthly customer charge. This increase in the monthly fixed charge concerns me, as it has the Commission, because it discourages conservation and impacts a customer's ability to save money through conservation. As the Company moves towards charging customers based upon the Company's fixed costs and away from a customer's consumption there is less incentive, and ability, to conserve. One of the only defenses a family, particularly a poor family, has against the sharp increases in energy costs is to conserve – lower the thermostat, seal air leaks, change filters regularly, add more insulation, get a more efficient heating unit, etc. The Company's proposal to increase fixed costs greatly impacts a customer's motive to conserve and the ability to lessen the impact of any rate increase. The combined effect of an increase in rates and an increase in fixed monthly charges, without any changes to universal service funding or other measures to help low-income customers, not only results in higher rates but also lessens

the ability of customers to deal with those increases. In particular, the negative impact would be particularly harsh on the Company's low-income customers.

Q. How does the effect of the Company's requests impact upon your testimony in this case?

A. I believe that should a rate increase be granted there should be relief offered in the form of increases to universal funding programs and other relief that would help low-income customers deal with any increase granted. For a typical residential customer, these requested increases are significant, but for a low-income customer, the effects can be dramatic, especially in this economic climate of inflation across many sectors. High utility costs are not the only challenge for a poor person. Our agencies have been helping low-income people for years and know firsthand that they face financial challenges on many fronts -- housing, energy costs, food and health care -- and a dramatic increase in any of those areas can have a devastating impact.

It is for these reasons that if an increase is granted it should be conditioned upon an increase in funding and relief to the Company's low-income customers.

Q. Should a request for a rate increase be granted what type of measures would you suggest be implemented for low-income customers?

A. As a result of this proceeding rates are likely to increase, a customer's ability to conserve will decrease (if the fixed monthly charge is increased) yet no additional relief is being provided to customers that would allow them to increase their conservation of energy and decrease their monthly bills. I would like to see an increase in funding that

would help low-income customers deal with an increase in ratesand in funding that would help low-income customers conserve energy.

Q. Turning now to universal service programs what issues would you like to address?

A. I want to address the Company's low-income usage reduction program (LIURP). Despite the expected increase that will likely result from this proceeding, the Company is not proposing any increase to LIURP funding.

As of January 2026, the Company has over 25,308 confirmed low-income customers. As of March of 2025, it has an estimated 57,542 low-income customers as of December 2025. Based on the Company's most recent needs assessment, the Company estimates that it would take over 200 years to provide LIURP services to the low-income units in its service territory.

Q. Do you have a recommendation regarding LIURP funding?

A. Yes. The Company has indicated that it has had issues with spending its LIURP budget. For each of the years, 2022, 2023 and 2024, the Company has had over $2M left unspent in its LIURP budget. The Company has improved on expending its LIURP budget. In 2025 it underspent by nearly $1.5M. The Company has indicated that it increased its outreach and was able to add additional LIURP subcontractors which increased its LIURP expenditures and the number of LIURP jobs completed in 2025.

I believe the Company should continue to improve its outreach and work to increase the number of LIURP contractors. The Company should also consider reducing the energy

consumption threshold requirement for its LIURP program.

Q. Do you believe that LIURP funding should be increased?

A. Yes, I do. I believe that annual LIURP funding should at the very least be increased commensurate with the percentage increase in rates for residential customers that result from this proceeding.

Q. Does this conclude your testimony?

A. Yes
