Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
Column 3 from Schedule 1, Column 12, Retirements for Each Year.
Column 4 = Column 3 Divided by Column 2.
Column 5 = 1.0000 Minus Column 4.
Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

Smoothing the Original Survivor Curve

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

PART III. SERVICE LIFE CONSIDERATIONS

PART III. SERVICE LIFE CONSIDERATIONS

Field Trips

In order to be familiar with the operation of the Company and observe representative portions of the plant, field trips have been conducted periodically. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during these field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

The following is a list of the locations visited during the most recent trips.

April 25, 2018

Erie Service Center
Erie District Regulating Station 1030
Erie District Regulating Station 36 (26th and Ash Streets)
VA Hospital Meter Set
Pittsburgh Avenue City Gate Station (ERE 64)
Owl Creek FTE 386 Station
Production Well Station MCE 2231
Production Well Station MCE 4468

February 6 and 7, 2013

Judgment

The survivor curve estimates were based on judgment which considered a number of factors. The primary factors were the statistical analyses of data; current Company policies and outlook as determined during the field trips and other discussions with management; current developments in the gas industry; and the survivor curve estimates from previous studies for the National Fuel Gas Distribution Corporation, its predecessor companies, and other gas companies.

For many plant accounts and subaccounts for which survivor curves were estimated, the statistical analyses resulted in good to excellent indications of the survivor patterns experienced. Generally, the statistical analyses were the primary bases for the estimates for the following accounts, although information external to the statistics contributed to the specific interpretations of those statistics in several cases.

328	Measuring and Regulating Station Structures
332	Field Lines
334	Measuring and Regulating Station Equipment
366.2	Measuring and Regulating Station Structures
366.3	Other Structures
367.1	Mains - Excl. Cathodic Protection
367.2/376.2	Mains - Cathodic Protection
369	Measuring and Regulating Station Equipment
	1980 and Prior
	1981 and Subsequent
375/390	Structures and Improvements - Service Centers
375/390	Structures and Improvements - Offices
375/390	Structures and Improvements - Small
376.1	Mains - Excl. Cathodic Protection
378	Measuring and Regulating Station Equipment
380	Services
381	Meters
382	Meter Installations
384	House Regulator Installations
385	Industrial Measuring and Regulating Station Equipment

Account 376.1, Mains - Excluding Cathodic Protection, is used to illustrate the manner in which the study was conducted for the groups in the preceding list. This account represents 44 percent of the total depreciable plant. Aged plant accounting data have been compiled for the years 1960 through 2022. These data have been coded according to account or property group, type of transaction, year in which the transaction took place, and year in which the gas plant was placed in service. The retirements, and other plant transactions, and plant additions were analyzed by the retirement rate method.

The 1960-2022 and 1993-2022 experience bands are most indicative of future expectations. Discussions with operating and managing personnel, as well as field observations related to reasons for retirement and the changing average service life, indicated that public authority requirements, leak detection programs and the use of plastic mains have become more significant in recent years. These factors are expected to continue into the future. The Iowa 70-L1.5 survivor curve is estimated to represent the future, inasmuch as it is a reasonable interpretation of the significant portion of the 1960-2022 and 1993-2022 experience, through age 107, and reflects the expectations of management.

For Account 375.3, a life span was estimated for each major structure. Each life span was estimated on the basis of type of construction, use, age, condition, and management's plans within the foreseeable future. Interim survivor curves were estimated for the major structures based primarily upon statistical analyses of the interim retirements that have been experienced by the Company's service centers and offices.

The historical analyses for Accounts 380, 382 and 384 were combined due to present Company policy to retire all three assets when replacing one of the property units. The estimate for cathodic protection equipment, anodes and rectifiers, is the 27-

S2.5 and is based on historical indications, discussions with management and estimates for such equipment in other gas companies. The survivor curve estimate for Account 325.4 was based on judgment incorporating the nature of the plant and estimates for the same account in other gas companies.

The estimate for the rights-of-way included in Accounts 365.2 and 374.2 were based on a review of the age and magnitude of experienced retirements and a consideration of the survivor curves estimated for Accounts 367.1, Mains - Excluding Cathodic Protection and Account 376.1, Mains - Excluding Cathodic Protection, with which the rights are associated. The rates of retirement have been small during the early portion of the life cycle and are of use only in defining the foreportion of the estimated survivor curve. The 80-R4 survivor curve is consistent between the estimated curve for the rights of way accounts.

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

Group Depreciation Procedures

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally, the items within a group do not have identical service lives, but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group.

In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

In the equal life group procedure, the property group is subdivided according to service life. That is, each equal life group includes that portion of the property which experiences the life of that specific group. The relative size of each equal life group is determined from the property's life dispersion curve. This procedure eliminates the need to base depreciation on average lives, inasmuch as each group is equivalent to a unit having a single life. The full costs of short-lived units are accrued during their lives, leaving no deferral of accruals required to be added to the annual costs associated with long-lived units. The calculated depreciation for the property group is the summation of the calculated depreciation based on the service life of each equal life group.

Remaining Life Annual Accruals

For the purpose of calculating remaining life accrual rates as of September 30, 2026, the estimated book depreciation reserve for each plant account is allocated among

vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation for the vintages calculated by the average service life procedure and for the vintages calculated by the equal life group procedure follow. The detailed calculations are set forth in the Results of Study section of the report.

Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future whole life depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account, based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{Average\ Remaining\ Life\ Expectancy}{Average\ Service\ Life}.$$

Equal Life Group Procedure

In the equal life group procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the composite remaining life for the surviving original cost of that vintage. The

composite remaining life is derived by compositing the individual equal life group remaining lives in accordance with the following equation:

$$Composite\ Remaining\ Life\ -\ \frac{(\frac{Book\ Cost}{Life}\ x\ Remaining\ Life)}{\frac{Book\ Cost}{Life}}$$

The book costs and lives of the several equal life groups which are summed in the foregoing equation are defined by the estimated future survivor curve.

Inasmuch as book cost divided by life equals the whole life annual accrual, the foregoing equation reduces to the following form:

$$Composite\ Remaining\ LIfe\ =\ \frac{\sum Whole\ Life\ Future\ Accruals}{\sum Whole\ Life\ Annual\ Accruals}$$

or

$$Composite\ Remaining\ Life\ =\ \frac{\sum Book\ Cost\ -\ Calc.\ Reserve}{\sum Whole\ Life\ Annual\ Accrual}.$$

The annual accrual rate for each account is equal to the sum of the remaining life annual accruals for all vintages divided by the account's total original cost. The account's "composite remaining life" is calculated by dividing the sum of the future book accruals for all vintages by the sum of the remaining life annual accruals for all vintages.

The calculated accrued depreciation in the equal life group procedure also represents that portion of depreciable cost which will not be allocated to expense through future accruals. However, the calculation is based at the equal life group level rather than the vintage group level, and does not require the use of averages. The equal life group accrued depreciation ratio is calculated as follows:

$$Ratio = \frac{Remaining\ Life}{Average\ Service\ Life}.$$

Inasmuch as service life minus remaining life equals age, when averages are not employed, the foregoing equation reduces to:

$$Ratio = \frac{Age}{Service\ Life}.$$

The table on the following page illustrates the procedure for calculating straight line equal life group accrued depreciation, using an Iowa 27-S2.5 survivor curve and a September 30, 2025 calculation date.

In the table, each equal life group is defined by the age interval shown in columns 1 and 2, which identify the ages at which the first and last retirement of each group occur. The group's designated life, shown in column 3, is the midpoint of the interval. In the calculation, the equal life groups of each vintage are arranged such that the midpoint of each one-year age interval coincides with the calculation date, e.g., September 30 in this case. This enables the calculation of annual accruals which are centered on, or as of, the same date as the calculation of accrued depreciation.

The retirement during each age interval, shown in column 4, is the size of each equal life group. It is derived from the Iowa 27-S2.5 survivor curve, and is the difference between the percents surviving (not shown) at the beginning and end of the age interval.

Each equal life group's whole life annual accrual, shown in column 5, equals the group's size (column 4) divided by its life (column 3), except that for the first age interval the annual accrual is set equal to the group's size.

Columns 6 through 10 show the derivation of the whole life annual factor and accrued factor for each vintage, based on the data developed in the first five columns. The year installed is shown in column 6. For all vintages other than 2025, the summation of annual accruals for each year installed, shown in column 7, is calculated by adding one-half of the group annual accrual (column 5) for that vintage's current age interval plus the group annual accruals for all succeeding age intervals. For example, the figure

4.41622974711 for 2024 equals one-half of 0.00027000000 plus all of the succeeding figures in column 5.

Only one-half of the annual accrual for the vintage's current age interval group is included in the summation because the equal life group for that interval has reached the year during which it is expected to be retired.

For vintage 2025, the summation of annual accruals (column 7) includes the entire group annual accrual (column 5) for that vintage's current age interval, in order to fully recoup the retirements which occur during that first age interval, 0 to 1. Thus, the first figure in column 7, for vintage 2025, equals the entire group annual accrual for the first equal group plus the accruals for all of the subsequent equal life groups.

The average percent surviving, derived from the Iowa 27-S2.5 survivor curve, is shown in column 8 for each age interval. The annual factor, shown in column 9, is the result of dividing the summation of annual accruals (column 7) by the average percent surviving (column 8).

The accrued depreciation factor, shown in column 10, equals the annual factor multiplied by the age of the group at September 30, 2025.

CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization, as defined in the Uniform System of Accounts, is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization periods and service lives used by other

utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is appropriate for certain General Plant accounts that represent numerous units of property, but a very small portion of depreciable gas plant in service. The accounts and their amortization periods are as follows:

	Account	Amortization Period, Years
391	Office Furniture and Equipment	
	Furniture	25
	Equipment	15
	Computers	5
394	Tools, Shop and Garage Equipment	25
397	Communication Equipment	10

For the purpose of calculating annual amortization amounts as of September 30, 2026, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve is allocated among vintages with an age less than the amortization period in proportion to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the future amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

AMORTIZATION OF NET SALVAGE

Experienced net salvage is incorporated in the results of the study, as was reported on the Company's books and records for the fiscal year 2022 through September 30, 2026. The data for the twelve months ending September 30, 2026 is based on estimated experience. Results of the calculations are shown in Table 4.

Net salvage experienced during the five-year period is presented in this manner to determine the amount of negative net salvage to be amortized for book purposes. In developing the amount to be amortized, the data for the accounts which experienced positive net salvage have been netted with those for accounts which experienced negative net salvage.

In order to be consistent with this manner of recognizing net salvage, no adjustments for salvage were made to the annual accruals and accrued depreciation calculated for each individual account. There were no exclusions from the 2022 through 2026 net salvage accrual.

PART V. RESULTS OF STUDY

PART V. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages V-4 through V-9 summarize the results of the depreciation study as of September 30, 2026. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of September 30, 2026, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book reserve to September 30, 2026. Table 3 sets forth the calculation of the depreciation accruals for the twelve months ended September 30, 2026. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2022 through 2026.

DESCRIPTION OF DETAILED TABULATIONS

Supporting statistical data for the estimates of average service lives and survivor curves, the annual depreciation calculations, and gross salvage and cost of removal for the years 2022-2026 are presented in three sections.

The section beginning on page VI-2 sets forth, for each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. A cumulative summary, by year installed, for gas plant and the supporting data for the original cost depreciation calculations are presented in the section beginning on page VII-2. The tabulations of experienced and estimated net salvage by year by account for the five-year period, 2022-2026, are presented in the section beginning on page VIII-2.

In the first section, the survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a

numeral followed by the type curve designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. In cases where only a segment of the estimated curve is used in the depreciation calculation, the numeral used for identification purposes is not a designation of the average life of the group. The titles of the charts indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which the retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The tables of the calculated annual depreciation related to original cost are presented in the second section and indicate the estimated average survivor curves used in the calculations. The tables set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life expectancy and the calculated annual accrual.

Detailed tabulations setting forth the cost of removal and gross salvage amounts, by plant account for each year, are presented beginning on page VIII-2. The total gross salvage and removal costs, by year, were used to calculate the five-year net salvage amortization presented in Table 4 on page V-9.

Williamsville, NY 14221-5887

Attention Brian M. Welsch
Vice President

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant as of September 30, 2025. Summaries of the original cost, annual accruals and the book depreciation reserve are presented in Tables 1 and 2, beginning on page I-3 of the attached report.

A description of the methods and procedures upon which the study was based is set forth in a companion report, "2026 Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant as of September 30, 2026".

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

JOHN J. SPANOS
President

DEPRECIATION STUDY

PART I. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

The results of the depreciation study are summarized in Table 1, which sets forth the calculated annual depreciation related to Gas Plant in Service as of September 30, 2025. Table 2 presents the experienced gross salvage and cost of removal associated with regular retirements during the five-year period, 2021-2025 and the annual amortization of net salvage.

DETAILED TABULATIONS OF DEPRECIATION CALCULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on II-7. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2021 through 2025, on pages III-2 and III-3.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED

1. RULES AND REGULATIONS

The customer's application for service, the Pennsylvania Public Utility Code and the rules and regulations promulgated by the Pennsylvania Public Utility Commission, as amended from time to time, and the rules and regulations contained herein are a part of the contract with each Customer, and each Customer agrees to be bound thereby.

2. APPLICATIONS FOR SERVICE

The Company may require any applicant for service to sign an application. Regardless of the manner in which an application is made, the acceptance of such application by the Company shall result in a contract service governed by Rule 1.

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES

A. Maximum Company Investment Level

The Company investment for upgrade/extension of facilities for a firm gas customer shall be limited to an amount determined as follows:

Maximum Company Investment = Additional Annual Revenues x Justified Company Investment per Dollar of Additional Annual Revenue

B. Determination of Additional Annual Revenues

The Additional Annual Revenues are calculated as follows:

(1) The Company will estimate the customer's projected firm annual volumes as follows:

(a) Residential

For guideline purposes, the Company shall use annual gas consumption figures for gas space heating and for various gas appliances as shown below (These figures are based on current insulation standards as well as 92% efficient furnaces): (C)

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES (Cont'd)

Gas Space Heating:
Single Family Home - [(square footage x .029) – 5.4] Mcf
Apartment/Condominium - [(square footage x .024) + 3.14] Mcf
Manufactured Home - [(square footage x .0267) + 6.98] Mcf

Gas Appliances:

Gas Water Heater – 20.4 Mcf
Gas Dryer – 3.6 Mcf
Gas Range – 7.6 Mcf
Other Gas Appliances – Determined by the Company on a case-by-case basis.

(b) Commercial or Public Authority: Industrial

The Company shall estimate projected firm annual volumes on a case-by-case basis.

(2) This annual volume is then distributed into 12 monthly amounts based on an average distribution in the appropriate revenue classification. (Alternatively, the customer's annual usage estimate may be distributed according to his own historic or projected monthly load profile pursuant to the Company's review and approval.)

(3) The appropriate rate schedule is applied to each monthly volume, and the results are added to produce annual gross revenues.

(4) For each monthly volume the costs shall be determined for the portion of monthly gross revenues for recovery of purchased gas costs pursuant to applicable provisions of Rider A to this tariff and the applicable rate schedule. (C)

The portion of monthly gross revenues for recovery of Purchased Gas Costs and Transition Costs for each month shall be added together to produce annual revenues for recovery of Purchased Gas Costs and Transition Costs.

(5) The amount calculated under item (4) above, shall be subtracted from the amount calculated under item (3) above.

(6) Additional annual revenues resulting from the upgrade/extension shall be determined by reducing the annual revenues for recovery of non-gas costs as calculated in (5) above, by the customer's currently generated annual revenues for recovery of non-gas costs, if any, as determined by the Company.

(C) Indicates Change
(D) Indicates Decrease
(I) Indicates Increase

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES (Cont'd)

C. Determination of Justified Company Investment Per Dollar of Additional Annual Revenue

(1) Residential

The Justified Company Investment Per Dollar of Additional Annual Revenue for residential customers is $6.93. (I)

(2) Commercial and Public Authority; Industrial

The Justified Company Investment Per Dollar of Additional Annual Revenue for commercial, public authority or industrial customers shall be selected from the table below based upon the projected term of use by the customer of the new or upgraded facilities.

Projected Term of Use of New/Upgraded Facilities (Years)	Justified Company Investment Per Dollar of Additional Annual Revenue
1	$ 0.63
2	1.21
3	1.76
4	2.27
5	2.74
6	3.18
7	3.59
8	3.97
9	4.32
10	4.65
Greater than 10	6.93

(I)

Because the term of use has a substantial effect on the determination of the Justified Company Investment Per Dollar of Additional Annual Revenue, the Company may require a letter of intent from commercial, public authority and industrial customers projecting the term of use of the new or upgraded extension of facilities being requested.

The Company reserves the right to require a guaranteed revenue contract if the customer projects a term of use of the new or upgraded facilities in excess of 10 years or if the customer does not demonstrate that the customer's term of use is reasonable.

(D) Indicates Decrease

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES (Cont'd)

Additionally, the Company reserves the right to require a guaranteed revenue contract from a commercial, public authority or industrial customer if any of the following conditions exist:

(1) The investment is for a dual fuel or partially dual fueled facility;

(2) The Company determines that a customer's financial status does not demonstrate that the customer will be able to pay bills for the projected term of use of the facilities; or

(3) The actual investment by the Company is greater than $50,000.

(3) Recomputation

The Company may recompute, modify, alter or amend the foregoing Justified Company Investment Per Dollar of Additional Annual Revenue amounts as the Company may deem necessary or convenient in the conduct of its business, provided, however, that such recomputation, modification, alteration or amendment shall not become effective unless and until included in this tariff. (C)

D. Application of Maximum Company Investment

The Maximum Company Investment as determined above shall be applied, first, to the installed meter cost, if any, and then will be applied towards any mainline and/or service line extension, service connection, and/or the upgrade of any of the Company's facilities to accommodate increased volumes of sales or transportation. However, if the Maximum Company Investment is less than the installed meter cost, Company will provide and install the meter at no cost to the Customer.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

4. UPGRADE/EXTENSION OF FACILITIES

A. Residential

Whenever the owner or occupant of any property eligible for service as a residential customer makes a written application for service to the Company, and the Company has authority to render service to said applicant, the Company shall extend its facilities so as to serve said property or new residential development, provided that the applicant shall first have executed an agreement to pay to the company the rate charged under the appropriate service classification and to contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Company's Maximum Investment (as calculated in Rule No. 3, above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

B. Commercial or Public Authority; Industrial

Whenever the owner or occupant of any property eligible for service as a Commercial or Public Authority customer, or as an Industrial customer, makes a written application for service to the Company, and the Company has authority to render service to said applicant, the Company shall extend its system so as to serve said property, provided said applicant shall first have executed an agreement to pay to the Company the rates charged under the appropriate service classification and to contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Company's Maximum Investment (as calculated in Rule No. 3, above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

The Company's Maximum Investment for Commercial or Public Authority and Industrial customers shall equal the Maximum Company Investment as calculated in Rule No. 3 above; provided, however, that, in the event that the Company reasonably believes that the Company's installation of facilities will be completed substantially in advance of date that the Customer's use will equal projected annual volumes used to calculate the Maximum Company Investment as calculated in Rule No. 3 above, the Company may discount the Maximum Company

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

Investment as calculated in Rule No. 3 above to present value based upon the Company's most recent Commission-approved fair rate of return. (C)

C. Developer/Builder - Residential

Whenever the Developer/Builder of a residential property eligible for service makes a written application for service to the Company, and the Company has authority to render service to the property to be developed, the Company shall extend its system to serve said property, provided that, if the cost to extend the facilities exceeds the Maximum Company Investment, as calculated below, the Developer/Builder shall have entered into an agreement to contribute to the cost of extending facilities. (C) (C) (C)

The Maximum Company Investment for extensions involving a Developer/Builder shall be calculated as follows:

(1) The Developer/Builder shall provide a reasonable schedule of unit completion within the property to be developed;

(2) The Maximum Company Investment shall be calculated (as provided in Section 3) separately based on the number of units scheduled to be completed:

(a) within twelve months from the date of the estimated completion of construction of the new facilities; and

(b) during each successive twelve month period following the date of the estimated completion of construction of the new facilities.

(3) For all units not scheduled for completion within twelve months from the estimated date of completion of the construction of the new facilities, the Maximum Company Investment, as calculated above, shall be discounted to present value at the projected date of the completion of Company installed facilities using the Company's most recent Commission-approved fair rate of return.

(4) The sum of the discounted Maximum Company Investment for units to be installed more than twelve months after construction of Company facilities and the Maximum Company Investment for units scheduled for completion within twelve months of the estimated date of completion of construction of Company facilities shall equal the total Maximum Company Investment for the extension.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

The Developer/Builder shall contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Maximum Company Investment (as calculated above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

In the event that the Developer/Builder does not achieve the projected annual completion rate, the Maximum Company Investment and the amount to be contributed will be recalculated, in the same manner stated above, based upon actual units completed. If the recalculated amount to be contributed is greater than the previously calculated amount to be contributed, the Developer/Builder will be required to pay such difference to the Company; provided, however, that no amount will be required to be paid if the recalculated amount to be contributed exceeds the Company's actual cost of construction less the recalculated Maximum Company Investment.

C1. Developer/Builder Commercial or Industrial

Whenever the Developer/Builder of a commercial or industrial property eligible for service makes a written application for service to the Company, and the Company has authority to render service to the property to be developed, the Company shall extend its system to serve said property, provided that, if the cost to extend the facilities exceeds the Maximum Company Investment, as calculated below, the Developer/Builder shall have entered into an agreement to contribute to the cost of extending facilities.

The Maximum Company Investment for extensions involving a Developer/Builder shall be calculated as follows:

(1) The Developer/Builder shall provide a reasonable schedule of customer attachments and projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the attaching customers;

(2) The Maximum Company Investment shall be calculated (as provided in Section 3) separately based on the historical and projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the attaching customers: (C)

(a) within twelve months from the date of the estimated completion of construction of the new facilities; and

(b) during each successive twelve month period following the date of the estimated completion of construction of the new facilities.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

(3) For all customer attachments not scheduled for completion within twelve months from the estimated date of completion of the construction of the new facilities, the Maximum Company Investment, as calculated above, shall be discounted to present value at the projected date of the completion of Company installed facilities using the Company's most recent Commission-approved fair rate of return. (C)

(4) The sum of the discounted Maximum Company Investment for customers to be attached more than twelve months after construction of Company facilities and the Maximum Company Investment for customer attachments scheduled for completion within twelve months of the estimated date of completion of construction of Company facilities shall equal the total Maximum Company Investment for the extension.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

The Developer/Builder shall contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Maximum Company Investment (as calculated above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

In the event that the Developer/Builder does not achieve the projected annual completion rate, the Maximum Company Investment and the amount to be contributed will be recalculated, in the same manner stated above, based upon actual additional annual revenues from volumes transported by or purchased from the Company and consumed by the attaching customers during the 60-month period following completion of the extension and the projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the customers attached as of the last day of such 60-month period. If the recalculated amount to be contributed is greater than the previously calculated amount to be contributed, the Developer/Builder will be required to pay such difference to the Company; provided, however, that no amount will be required to be paid if the recalculated amount to be contributed exceeds the Company's actual cost of construction less the recalculated Maximum Company Investment.

D. Upgrade

The Company's investment for the upgrade of facilities shall be subject to the formula described in Rule No. 3. An upgrade is required when the customer needs dictate increasing, decreasing or otherwise changing the current service line, main line or meter size for the increased, decreased or otherwise changed volume or pressure requirements or when the customer requests installation of an excess flow valve or natural gas related equipment or facilities not otherwise required by regulation and the Company has deemed such installation appropriate. (C)

E. Advance Payment and Construction

Construction of any extension or installation of excess flow valves or natural gas related equipment or facilities not otherwise required by regulation will not be undertaken until the amount of the applicant's contribution has been paid to the Company by the applicant. In the case of an excess flow valve or natural gas related equipment or facilities not otherwise required by regulation, the amount of the applicant's contribution will be determined based upon the Company's cost to install such equipment. The actual construction of the extension shall be scheduled at the Company's discretion. (C) (C)

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

F. Refunds of Customer Investment

Any customer attaching to a facility extended/upgraded within five (5) years of completion thereof will be required to contribute to the cost of the extension/upgrade in accordance with Rules 3 and 4. In the event a new customer attaches to an extension/upgrade of the Company's facilities paid for by a customer or a developer/builder, within five (5) years of the date of completion thereof, a pro rata refund will be made to customers or developer/builder who were charged for such extension. In the alternative, the customer or builder/developer and Distribution may mutually agree in writing that the refund, if any, shall equal the Company's Maximum Company Investment for the attaching customer less the Company's actual attachment cost of construction. An annual review of such extensions is made on the anniversary date of completion thereof, during said five (5) years, and any refunds due are made at that time except for extensions for a developer/builder of commercial or industrial property which shall be reviewed at the end of year five (5) and any refunds due will be made at that time. No refunds will be paid for attachments occurring more than five (5) years after the completion date and in no case will the aggregate amount of refunds to a customer or developer/builder exceed the amount which the customer or developer/builder paid for the mainline extension/upgrade. (C)

5. MAINTENANCE OF FACILITIES

After initial installation of facilities has been made, pursuant to Rule Nos. 3 and 4, above, all facilities including mains, customer service lines (i.e., the portion of the service line from the outlet of the Company's service stop cock to the inlet of the meter) and Company service lines (i.e. the portion of the service line from the gas main to and including the curb box and service stop cock), shall be maintained, replaced or renewed, as required, at the expense of the Company.

5A. SPECIAL UTILITY SERVICES

The provisions of Rules 3 and 4 do not apply to applications for special utility service. "Special utility service" shall include (a) a request for utility service when the applicant has an installed alternative fuel capability, including service from a natural gas well; (b) a request for utility service when the applicant is already receiving natural gas service from another Pennsylvania public utility; (c) a request for utility service from an applicant located in an area in which another natural gas utility is authorized to serve the applicant; (d) a request for utility service by an applicant who was the owner or ratepayer of record for the premises at the time the Company last provided service to the premises; (e) any request for service by an applicant who, in the Company's view, is unlikely to remain on the Company's system for a sufficient period of time to justify the extension. Applications for special utility service shall be resolved on a case-by-case basis through negotiations between the applicant and the company.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

6. METERS

Gas delivered to customers from services attached to distribution lines shall be measured by meters to be furnished, installed and owned by the Company.

If, at any time after the installation of a meter, conditions are changed so that its location becomes unsuitable, the Company shall have the right to move the meter to a suitable place at the expense of the customer or property owner.

The cost of changes in location of meters made at the request of the property owner shall be borne by the owner. The customer shall not tamper with the meter and shall permit no one except employees of the Company to connect or disconnect the meter.

The customer shall be responsible to the Company for any injury to, or loss of, any meter arising out of or caused by the customer's negligence or carelessness, or that of his servants, employees, members of his household, or any person upon his premises under or by his consent, or sufferance. The customer shall at once notify the Company of any injury to, or any cessation in registration of, the meter as soon as it comes to his knowledge.

The Company, in its sole discretion, may install, together with its meter, an automated meter reading device ("AMD"), which can communicate automatically data from the meter to the Company by use of the telephone system. Customer shall provide the Company a suitable location for installation of an AMD, and the customer shall permit the Company to connect the AMD to the customer's existing telephone inside wiring. The customer shall not be required to install or modify telephone inside wiring or to subscribe to public utility telephone service in order to receive service from the Company.

The Company shall provide at lease 72 hours' notice of the installation of an AMD at the customer's premises. The Company will not install an AMD at a customer's premises unless the AMD is designed to relinquish control of the customer's telephone line when the customer's telephone equipment is activated. If an AMD installed by the Company fails to relinquish control of a customer's telephone line when the customer's telephone equipment is activated, then such AMD will be replaced or repaired by the Company at the Company's expense. The Company will not install any AMD capable of transmitting voice communications unless specific permission is obtained from the Commission prior to installation.

If a Customer of the Company is billed by a telephone public utility specific charges for usage of telephone service (toll charges or local message unit charges) or charges for maintenance services that were caused by the Company's installation or use of AMD's, then the Company will reimburse the Customer for such charges.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

7. CUSTOMER'S PIPING AND EQUIPMENT

Prior to the installation of house piping by the customer in new or altered premises, inquiry shall be made of the Company to determine the requirements, sizes of pipe, quality and other specifications.

House lines, piping, connections and appliances are subject to inspection by the Company and no gas will be delivered unless all conditions are satisfactory.

The Company gives no warranty, expressed or implied, as to the adequacy or safety of any structure, equipment, piping, appliance or device owned, installed, leased or maintained by or for the customer or the owner of the premises served.

8. ACCESS TO PREMISES

The authorized agents of the Company shall, at all reasonable times, have free access to any premises supplied with gas or to which a service connection has been made, for the purpose of reading, inspecting, repairing or removing meters, piping, or other appliances therein belonging to the Company and of inspecting the piping and appliances belonging to the customer.

Every industrial customer shall permit the Company, during business hours and upon reasonable notice, to inspect the customer's facilities so that the Company may determine whether facilities have been installed which would enable the customer to obtain volumes of gas without using the Company's system ("Bypass Facilities"). If a customer refuses to permit the Company to inspect the customer's facilities, it shall be presumed that Bypass Facilities have been installed.

9. INTERRUPTION OF SERVICE

In accordance with the Public Utility Code, the Company will provide service which shall be reasonably continuous and without unreasonable interruptions or delay. The Company shall not be liable, in any amount, for damages, direct or consequential, where service meets requirements of the Public Utility Code. This limitation of liability, however, shall not apply to Company conduct which is found to be willful, wanton or reckless. If the Company shall know, in advance, of an expected interruption of service, the Company will take all reasonable steps, such as personal contact, phone contact or the use of mass media, to notify affected customers of the cause and expected duration of the interruption.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

10. LEAKS

The responsibility for detecting leaks or defects in piping between the Company's service connection and the point of consumption shall be upon the customer. The customer shall give immediate notice to the Company of inadequate, irregular or failing gas supply, leakage, abnormally high or low pressures, or any dangerous conditions.

Should any leak or defect be discovered in the mains, service connections, customer's service line, piping, or appliances, the Company shall have the right to shut off the supply of gas until satisfactory repairs have been made.

11. REFUSAL OR TERMINATION OF SERVICE

The Company may decline to serve an applicant (1) until he has complied with state and municipal regulations governing gas service and the approved Rules and Regulations of the Company contained in this Tariff and any supplement thereto, (2) if the Company does not have adequate facilities to render the service desired or if rendering such service would affect unfavorably service to other customers, (3) if in the Company's judgment, the applicant's installation of piping or gas equipment is regarded as hazardous or of such character that satisfactory service cannot be given, (4) if an extension of street main is required beyond length warranted by anticipated revenues, and the customer refuses to pay the charges required by Rule 3 of this Tariff, (5) until all amounts due for regulated service or amounts purchased from a Natural Gas Supplier (NGS) through the Company's Purchase of Receivables Program (POR) pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation) at a previous location have been paid or covered by a payment agreement (unless the amount owed is more than four years after the date of the final bill, in which case service cannot be refused), (6) or where the service proposed is from a gathering, production or transmission pipeline (see Rule 25). (C)

The Company may terminate service for nonpayment of a billing or billings for regulated services or NGS provided natural gas supply charges purchased through the Company's POR Program pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation), and such termination of service shall be in accordance with general regulations of the Pennsylvania Public Utility Commission applicable thereto and in accordance with the Pennsylvania Public Utility Code. (C)

The Company may not threaten termination of service for nonpayment of unregulated Natural Gas Supplier charges incurred by the customer from qualified Suppliers under Rate Schedule SATS if the Company did not purchase the receivables from the Supplier. (C)

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

The Company may terminate service for such reasons and on such notice as specified by the regulations of the Pennsylvania Public Utility Commission, the Pennsylvania Public Utility Code, or for other violation of these Rules and Regulations.

The Company may refuse to serve any applicant, or may terminate service to any customer who fails to pay a security deposit for regulated services or who fails to provide the Company with security in lieu of a deposit as provided for in this Tariff.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

12. RECONNECTION OF SERVICE

When the supply of gas to any customer is turned off due to the customer's failure to pay for regulated service or NGS provided natural gas supply charges purchased through the POR Program pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation), for any other infraction of these Rules and Regulations or at the customer's request, and if there has been no change in ownership or occupancy of the premises served, the supply of gas will not be turned on until the customer or applicant has paid a reconnection fee of $69.00. The Company will reconnect a residential customer or applicant's gas service in accordance with the general regulations of the Pennsylvania Public Utility Commission applicable thereto and in accordance with the Pennsylvania Public Utility Code. Company may determine liability for outstanding balance for residential gas service based upon the methods set forth in 52 Pa. Code §56.191 and Company records. (C) (C)

If the supply of gas was turned off due to a non-residential customer's failure to pay for regulated service or NGS provided natural gas supply charges purchased through the POR Program pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation) and if the former customer reapplies for service or if a court, district justice or administrative agency has determined that the applicant is legally obligated to pay for the service previously furnished, the supply of gas will not be turned on until the non-residential customer or applicant has paid all outstanding bills for service.

The reconnection of service cannot be denied for the nonpayment of Natural Gas Supplier charges billed to the customer for services rendered by Rate Schedule SATS Suppliers if the Company did not purchase the receivables from the Supplier.

13. DISCONTINUANCE NOTICE BY CUSTOMER

Any customer who is about to vacate any premise supplied with gas, or who for any reason wishes to have service discontinued, shall give at least seven days' notice to the utility specifying the date on which it is desired that service be discontinued. The customer who fails to give proper notice shall be liable for all gas which passes through the meter, until: the account is terminated; another party occupies the premises and agrees to assume responsibility for gas service; or, the customer notifies the Company or the Company learns that he has or will vacate the premises, in which case he shall be responsible for gas used for the period, not to exceed seven days, before the company is able to discontinue service.

14. GAS DELIVERED UNDER HIGH PRESSURE

The rates contained in this tariff are based upon gas delivered under conditions generally applicable to low pressure service (four ounce base). Bills for gas metered under high pressure will be computed upon the volume as indicated by the meter registration increased to the equivalent volume at standard pressure.

15. BILLING

Bills will be rendered and will be payable once each month. The Company may read any meter once each month but ordinarily it will read meters of domestic and commercial customers once each two months.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

15. BILLING (Cont'd)

As to any customer whose meter is read once each two months, the consumption for the first month of each bimonthly meter reading period shall be determined by calculation on the basis of the customer's previous usage adjusted for weather conditions; and the consumption for the second month of each bimonthly meter period shall be determined by subtracting the first month's calculated consumption from the total actual consumption for the bimonthly period as shown by the meter. The bill for each month shall be the result of applying to the consumption, determined as aforesaid, the applicable rates and charges contained in this tariff.

Under 52 Pa Code § 56.222 the Company requested and was granted a waiver from 52 Pa. Code § 56.12(2) (i) - (ii) by the Commission. In accordance with this waiver, the Company will only accept customer supplied readings by telephone or through the Company's Internet website when such readings are: (1) reasonable based on historical usage information; and, (2) received by the Company within the proper billing window 3 business days prior to the bill being rendered. Acceptable customer readings will be used to compute a bill that otherwise would have been determined by calculation.

If the meter reader in any month is unable to gain access to the premises for the purpose of reading the meter, a calculated bill will be rendered and adjustments, if any, will be made by the Company when the meter is read.

In those instances where the Company's agent or representative is unable to gain access to the customer's premises during the regular scheduled working hours to obtain a meter reading, the number of calculated readings shall be limited to six consecutive months, and the customer's service, thereafter, is subject to termination, after due notice.

The late payment date specified on the monthly bill is not less than fifteen days from date the bill is mailed except that, for service under, or billed in conjunction with, residential rate schedules, the late payment date is not less than twenty days from the date the bill is mailed.

At the time the Company receives a notice to transfer service from one customer to another, the Company will provide customers with the option to either have the Company read the meter or to have the disconnecting and reconnecting customer read the meter. The Company will read the meter if the two customer readings are significantly different. The Company will inform the customers that if they elect the customer meter reading and the customer fails to provide the Company with an acceptable reading in a timely manner, the Company may estimate the final meter reading.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

15. BILLING (Cont'd)

The Company will make reasonable efforts to obtain actual meter readings: (a) when the Company has insufficient data to estimate the Customer's usage; (b) when disconnect and reconnect orders are executed on different days; and (c) when the customer, at least seven days prior to the disconnect order date, specifically requests that the meter be read. The Company reserves the right to estimate a Customer's usage for a final bill whenever the Company is unable to gain access to its meter on the disconnect order date. The Company will accept meter readings from customers for final bills if the customer reading is provided in a timely manner and if, upon review, the Company finds the customer reading to be reasonable and consistent with prior usage levels. Notwithstanding the foregoing, the Company may not discontinue service unless in compliance with the Rules, Regulations or Orders of the Pennsylvania Public Utility Commission pertaining thereto and in effect at the time of such discontinuation.

16. PENALTY CHARGES

If the customer fails to pay his gas bill by the late payment date, a penalty will be charged. Payments received by mail will be considered paid on the date of the postmark.

Where a customer receives natural gas supply service from a qualified Supplier under Rate Schedule SATS but is not participating in the Company POR program, late payment charges will be applied to the Supplier charges only if the customer has agreed to pay Supplier late payment charges. Otherwise, late payment charges will be based on the distribution charges of the Company and natural gas supply charges of either the Company or Supplier. (C)

The penalty charged to all customers shall be 1.50% on the full unpaid and overdue balance.

17. BILLING PERIOD

Bills will be mailed monthly to residential customers for service furnished during the preceding meter-reading period at least twenty (20) days prior to the expiration of the late payment date as shown on the bill.

Bills will be mailed monthly to Commercial, Public Authority, Industrial and Large Industrial customers for service furnished during the preceding meter reading period at least fifteen (15) days prior to the expiration of the late payment date as shown on the bill.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

18. BALANCED BILLING PLAN

The company has available a budget payment plan for Residential, Commercial, and Public Authority customers. The budget payment plan is available for all qualifying Company regulated services and for services provided to the customer by qualified Suppliers under Rate Schedule SATS where the Company provides billing service for the Supplier. At the request of any Residential, Commercial or Public Authority customer who uses gas as the primary source for space heating and who satisfies the company's credit standards, monthly payments for such customers may be made as follows:

Monthly payments shall be based on an amount equivalent to 1/12th of the customer's estimated annual bill rounded to the next higher dollar amount.

If a debit balance has accrued as of the 12th cycle month of this plan, the customer may either incorporate it all in the 12th cycle month's payment or at the company's discretion, spread all or part of the debit in equal monthly installments over the next cycle year. If the credit balance is accrued, the customer shall have the option of either receiving a cash refund, having it applied against the current bill, or having it used to reduce the monthly installments in the next cycle year. Absent an indication from the customer of his preference, the debit or credit will be applied to the first monthly installment in the ensuing year.

19. SEASONAL SERVICE

Service to Residential, Commercial, Public Authority, and Industrial premises occupied seasonally will be supplied at the rates and minimum charges of the applicable rate schedule.

20. SUPPLYING OF GAS SUPPLIES TO OTHER CUSTOMERS

No branch, valve or fixture which would permit gas to be withdrawn without registering on the meter shall be connected to a customer service line (i.e., the portion of the service line from the outlet of the Company's service stop cock to the inlet of the meter).

No extension of facilities, including the customer service line and facilities connected thereto and extending into a customer's premises, may be used to provide gas service at any additional or different premises. As used herein, a premises is defined as a single building; or the several buildings of a housing development under one ownership within a single parcel of land not intersected by a public highway or city street; or the several buildings of a religious, charitable, educational, or benevolent corporation if used exclusively for such purposes, if situated on adjoining properties even if intersected by a public highway or city street; or an industrial plant if situated on adjoining properties even though intersected by a public highway or a city street.

21. CONJUNCTIVE BILLING

The Company’s rates are based upon gas supply through a single delivery point, as measured by one meter. Separate supply for the same customer at other points of delivery or through more than one meter shall be billed separately. However, the Company may, when engineering or operational conditions warrant, or to improve service, install two or more meters on the (C)

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

21. CONJUNCTIVE BILLING(Cont'd)
same premises to service a single customer, in which event the consumption registered by such meters may be consolidated and the rates under which service is taken applied to the total consumption. The term "same premises" means a single building; or the several buildings under one ownership within a single parcel of land not intersected by a public highway or city street; provided, however, that the Company, in its sole discretion, may permit conjunctive billing at premises not conforming to the above definition of “same premises” if it is reasonably necessary to do so to meet competition from another supplier of energy, including gas.

An established conjunctive billing arrangement shall be permitted to continue so long as the customer remains at the premises presently served. The conjunctive billing arrangement shall neither be expanded to the customer's newly-acquired premises, nor transferred in whole or in part to different premises, nor continued at the same premises for different customers, unless, in the Company’s sole discretion, it is reasonable to expand, transfer or continue the conjunctive billing arrangement.

22. ADJUSTMENT OF BILLS FOR METER ERROR

Charges to customers will be adjusted for fast, slow and nonregistering meters, as per Section 59.22 of the regulations of the Pennsylvania Public Utility Commission for Gas Service, 52 Pa. Code Paragraph 59.22.

23. METER TEST ON REQUEST OF CUSTOMER

Meters which are not due for periodic tests will be tested for accuracy as per Section 59.21 of the regulations of the Pennsylvania Public Utility Commission for Gas Service, 52 Pa. Code Paragraph 59.21, upon written request by the customer and payment to the Company of a deposit in the amount specified by said regulations.

24. RULES FOR SECURING DEPOSITS

The Company may require applicants or customers to provide deposits for services if the criteria specified herein or otherwise imposed by applicable law are met. The Company may not deny the customer regulated services based on the customer’s failure to provide deposits for unregulated services. (C)

Deposits for Applicants/Customers Seeking or Receiving Residential Service

a) Deposits may be required from Residential customers in accordance with the Pennsylvania Public utility Code and the Rules and Regulations of the Pennsylvania Public Utility Commission.

b) Deposits for Residential service will equal 1/6 of the annual bill for the premise where Residential service is requested or used (inclusive of Natural Gas Supplier (NGS)charges where the NGS specified by the customer participates in the Company’s purchase of receivables program) as determined by the company.

c) c) The company may require deposits from a Residential applicant or customer for any of the following conditions:

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

24. RULES FOR SECURING DEPOSITS (Cont'd)

i. The applicant previously received service from the Company and had service terminated for any of the following: (C)

A. Nonpayment of an undisputed delinquent account.

B. Failure to complete payment of a deposit, provide a guarantee or establish credit.

C. Failure to permit access to meters, service connections or other property of the Company for the purpose of replacement, maintenance, repair or meter reading.

D. Unauthorized use of service delivered on or about the affected dwelling.

E. Failure to comply with the material terms of a payment arrangement.

F. Fraud or material misrepresentation of identity for the purpose of obtaining service.

G. Tampering with meters, including bypassing a meter or removal of an AMR device or other Company equipment.

H. Violating tariff provisions on file with the Commission so as to endanger the safety of a person or the integrity of the delivery system of the Company.

ii. A Residential applicant or customer who is unable to establish creditworthiness to the satisfaction of the Company using a generally accepted credit scoring methodology, and which employs standards for using the methodology that falls within the range of general industry practice.

iii. An existing Residential customer may be required to pay a security deposit to re-establish credit if the customer's service has been terminated and the customer requests reconnection, after the Company provides notice of its intention to require a security deposit in accordance with prevailing Commission regulations.

a) The Company will not require a cash deposit from an applicant or customer who, based on household income, is confirmed to be eligible for a customer assistance program. An applicant or customer is confirmed to be eligible for the Company's Commission-approved CAP as specified in the Company's Commission-approved Universal Service and Energy Conservation Plan if the applicant or customer provides income documents or other information attesting to his or her eligibility for state

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

24. RULES FOR SECURING DEPOSITS (Cont'd)

benefits based on household income eligibility requirements that are consistent with those of the Company's Commission-approved CAP as specified in the Company's Commission-approved Universal Service and Energy Conservation Plan. Upon determining that a customer or applicant is not subject to a deposit, the Company will return the deposit with any applicable interest to the customer or applicant within 60-days of the determination. (C)

a) The Company may accept, in lieu of a cash deposit, a written third-party guaranty. The guarantor will be responsible for all missed payments owed to the Company.

b) Payment of deposits will be required in full within 90 days. Residential customers or applicants may elect to pay the required deposit in three installments by paying 50% upon determination the deposit is required or prior to and as a condition of service, with 25% billed 30 days after service is established and 25% billed 60 days after service is established. Payment of installments will not be due less than 21 days from the date of mailing or service on the customer of notification of the amount due. Failure to pay an installment by the due date will result, after notice, in termination of service.

c) Until returned or credited, interest will accrue on Residential deposits at the rate of interest as determined by the Secretary of Revenue for interest on the underpayment of tax under Section 806 of the Act of April 19, 1929 (P.L.343, No. 176), known as The Fiscal Code. Interest accrued on Residential deposits, together with the deposit will (i) first be applied to any outstanding balance for service and, (ii) after satisfying any outstanding balance or if no outstanding balance exists, will be refunded to the customer at the time the deposit is returned.

d) Deposits for Residential customers will be held until the customer establishes a timely payment history which shall be defined as when the customer has paid in full and on time for a period of 12 consecutive months. At the end of the deposit hold period, the Company will credit the deposit plus accrued interest to the customer's account. The credit will be first applied to any past due amount. If service is terminated or discontinued before the end of the deposit hold period, any outstanding balance will be deducted from the deposit before the remaining deposit balance is returned to the customer within 60 days.

Deposits for Applicants/Customers Seeking Temporary Service.

Deposits may be required from customers taking service for a period of less than thirty days in an amount equal to the estimated bill for such temporary period.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

24. RULES FOR SECURING DEPOSITS (Cont'd)

Deposits for Applicants/Customers Seeking Service Other than Residential Service (C)

Deposits may be required from Commercial or Industrial customers but shall not exceed the amount equal to the sum of amounts computed by applying the applicable sales rate schedule to the volumes of gas transported by or purchased from the Company, and consumed by the customer during the two, of the most recent twelve months of greatest usage by the Customer. In lieu of actual experience, the determination will be based on an estimate considering all

Security, in the form of a cash deposit, letter of credit, surety bond, or third-party guarantee, will be required from the applicants for Non-residential service unless: A) the premises to which gas service is to be supplied is a branch of, or additional facility operated by, financially responsible, enterprise which will be the ratepayer of record with respect to gas bills incurred at the premises; or, B) in the case of a premises not covered by "A" above, the Company determines, through relevant Company records covering past direct dealings with the applicant over a period of at least one year, that a deposit is not necessary. Security, in the form of a cash deposit, letter of credit, surety bond, or third-party guarantee, will be required from existing Non-residential customers where the Company determines that the customer's credit standing warrants concern as to its continuing ability to pay. In evaluating a customer's credit standing, the Company will take into account certain factors, including, but not limited to, the following: i) average monthly consumption; ii) average monthly bill; iii) payment history during the immediately preceding twelve month period; iv) customer's general credit standing as evaluated by any available applicable credit rating indices or rating services; v) customer's payment history and credit standing with other lenders or providers of utility and other services.

Interest will be paid on non-residential deposits at the rate of six percent (6%) per annum without deductions for any taxes thereon. Upon non-residential deposits held for more than a year, the Company shall pay to the patron, at the end of the calendar year, the interest accrued thereon.

25. CUSTOMERS SERVED THROUGH SERVICE CONNECTIONS ATTACHED TO FACILITIES OTHER THAN DISTRIBUTION SYSTEM LINES

Service from a line outside the Company's low pressure and medium pressure distribution systems will not be furnished unless such line is at that time being operated in a manner which will permit gas to be served to the applicant without interference with its operation. The furnishing of such service will be with the understanding that the use or manner of use of the Company's line from which gas is to be supplied is not permanent and that such service is subject to temporary or absolute change or discontinuance at the sole discretion of the Company which may at any time remove, repair or change the use or manner of operating said line after having first canceled the service contract by thirty days' written notice to the customer.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES (Cont'd)

25. CUSTOMERS SERVED THROUGH SERVICE CONNECTIONS ATTACHED TO FACILITIES OTHER THAN DISTRIBUTION SYSTEM LINES (Cont'd)

The customer assumes sole responsibility, financially and otherwise for obtaining alternative sources of fuel in the event that customer's service is interrupted or discontinued permanently or temporarily, as described in the preceding paragraph.

The Company has the right to cancel the service contract for any such reason or in accordance with any other published rule or regulation of the Company, and, during the term of the contract, the Company shall not be liable for any deficiency in the supply of gas caused by the use of compressing stations, breakage of lines or other causes or for any claim for damages on account of any matters set forth in this paragraph.

All materials used in connecting the meter and regulators from the outlet of the Company's service stop cock to the outlet of the meter, and including the box or structure housing the meter and regulators, shall be furnished and installed by the Company at the expense of the customer. The meter and regulators shall belong to the Company and will be installed as near to the Company's lines as is practicable.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

26. GAS EMERGENCY PLANS

A. Definitions

The following words and terms have the following meanings unless the text clearly indicates otherwise:

(1) Alternate fuel - Any fuel other than natural gas.

(2) Alternate fuel capability - The installed and operable ability to use any fuel other than natural gas on a time sensitive basis.

(3) Commercial use - Gas usage by customers engaged primarily in the sale of goods and services including consumption by office buildings, institutions and government agencies.

(4) Essential human needs - Gas usage in any building where persons normally dwell including residences, apartment houses, dormitories, hotels, hospitals and nursing homes.

(5) Firm service - Natural gas service offered to consumers under tariffs or contracts that anticipate no interruption.

(6) Industrial use - Gas usage by customers engaged primarily in a process which creates or changes raw or unfinished materials into another form or product including the generation of electric power.

(7) Interruptible service - Natural gas services that can be temporarily discontinued under term and conditions specified by tariff or contract.

(8) Plant protection use - Minimum usage of natural gas required to prevent physical harm to an industrial or commercial consumer's facility, or danger to personnel at the facility, when the protection cannot be afforded through the use of an alternate fuel. Plant protection use includes usage necessary for the protection of the material in process as would otherwise be destroyed, but does not include deliveries required to maintain production.

(9) Residential use - Gas usage in a residential dwelling or unit for space heating, air conditioning, cooking, water heating or other domestic purpose.

B. Natural Gas Emergency Planning

(1) The Company has filed a Natural Gas Emergency Plan ("Plan") with the Pennsylvania Public Utility Commission ("Commission") reflecting its unique operational characteristics and design criteria. The Plan contains simplified and understandable rules and regulations so that all of the Company's customers and all natural gas suppliers licensed to provide services to their customers can have a responsive action plan in place to protect themselves and their property in the event of a crisis. The Company's Natural Gas Emergency Plan can be located at the Company's website www.nationalfuelgas.com organized with other information for utility customers and natural gas suppliers. The Company shall file revisions to the Plan when and as appropriate, or as directed by the Commission. (C) (C)

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

26. GAS EMERGENCY PLANS (Cont'd)

(2) As part of the emergency planning process the Company shall attempt to make every reasonable effort to make contractual or informal arrangements with our transportation customers, sales customers and others to obtain supplies or, as an alternative, to implement usage reductions so that resorting to firm service reductions under Rule 26. C. Emergency Action can be avoided, or the severity of the supply or capacity disruption can be mitigated. The purpose of these arrangements is to provide a means to minimize the potential of supply shortfalls that threaten public health and safety, and not to make up for inadequate performance by individual parties.

(3) The Company's Natural Gas Emergency Plan includes provisions addressing:

(a) Emergency load shedding

(b) Voluntary usage reductions, for example, reducing space or water heating temperatures to levels specified by the Company.

(c) Mandatory usage reduction for certain customers consistent with Rule 26. C. Emergency Action.

(d) Issuance of periodic reports to the media concerning the existing natural gas emergency.

(e) Notice to affected customers and natural gas suppliers of the expected initiation of actions under Rule 26. C. Emergency Action.

(f) Customer and natural gas supplier delivery requirements that apply during the term of Rule 26. C. Emergency Action, regardless of customer specific usage reductions that arise or may arise from end-use curtailments.

(g) A procedure for focusing emergency measures to confined geographic or operational portions, segments or zones of the Company's system where a natural gas emergency exists.

(h) Procedures for establishing communications with electric system control area operators, if the Company provides gas service to electric generation stations.

(4) The Company's Natural Gas Emergency Plan specifies the procedures the Company shall use to provide notices to affected customers, their natural gas suppliers and natural gas distribution companies. After the Company determines the appropriate response, the Company shall issue notices to affected customers, their natural gas suppliers, and natural gas distribution companies as soon as reasonably possible.

C. Emergency Action

(1) An emergency exists whenever the aggregate demand of firm service customers on the Company's system or confined segment of the system exceeds or threatens to exceed the gas supply or capacity that is actually and lawfully available to the Company to meet the demands, and the actual or threatened excess creates an immediate threat to the Company's operating integrity with respect to Priority 1 customers as defined in Rule 26. A (4).

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

26. GAS EMERGENCY PLANS (Cont'd)

(2) If, in the sole judgment of the Company, there is sufficient time, the Company shall use reasonable business and operational efforts to: interrupt all interruptible services, issue operations flow orders, and call for voluntary usage reductions by all customers before taking action under subsection 3. The Company shall take these three actions sequentially to the extent feasible.

(3) In the event of an emergency as described in subsection 1, the Company may require each commercial and industrial retail and transportation customer that is not a Priority 1 customer under subsection 9 to reduce its consumption of gas.

(a) The reduction required shall be determined by the Company without regard to priorities of use, as necessary to minimize the potential threat to public health and safety.

(b) The minimum authorized usage may not be lower than the minimum usage of firm service for plant protection use.

(c) When all other service has been curtailed except for Priority 1 service and the Company continues to be unable to meet Priority 1 requirements, the Company shall utilize measures designed to minimize harm to customers if curtailments to plant protection use are found to be necessary.

(d) Consistent with the Company's responsibility to maintain system integrity at all times, the Company shall restore service as soon as practicable to any gas-fired electric generation facility that is deemed critical to electric system reliability by the electrical system's control area operator.

(4) Mandatory reduction under subsection 3 shall be for a period specified by the Company until further notice. The Company may change a customer's authorized usage, upon notice, at any time during an emergency.

(5) Mandatory reductions under subsection 3 shall be for a maximum duration of 5 business days unless extended by Commission order. As an alternative to extending mandatory reductions under subsection 3, the Commission may order the Company to initiate priority-based curtailments under subsection 6.

(6) In determining whether to order the Company to initiate priority-based curtailments, the Commission will examine whether the Company did the following:

(a) Interrupted all interruptible services.
(b) Issued operation flow orders.
(c) Called for voluntary usage reduction by all customers. (C)

(7) Upon issuance of a Commission order to initiate priority-based curtailments, the Company shall provide all affected customers the maximum notice possible, via telephone, text message, fax, electronic data interchange, or any other reasonable means of notification specifying the curtailment percentage of the customer's firm gas service and resulting allowances as may be the case. (C)

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

26. GAS EMERGENCY PLANS (Cont'd)

(8) Upon issuance of a Commission order to initiate priority-based curtailments, the available gas supplies to the Company shall be prorated, if practicable, among its customers according to the following priorities of use:

(a) Customers in a higher priority category shall not be curtailed until all customers falling into a lower priority category have been restricted to plant protection use levels, unless operational circumstances or physical limitations warrant a different result.

(b) Where only a partial restriction of a classification is required, implementation shall be prorata, to the extent practical under the circumstances as set forth in the Company's curtailment plan.

(9) Following are the priority categories, listed in descending order, pertaining to the curtailment of firm services:

(a) Priority 1. Service for essential human needs use.

(b) Priority 2. Firm services not included in essential human needs use.

(2.1) Plant protection gas

(2.2) All other consumption not contained in (2.1) above and Priority 1. Service for essential human needs use (excluding plant protection gas).

(2.3) Intermediate Volume Industrial Service (IVIS) / Commercial / Public Authority consuming > 12,000 Mcf per year (excluding plant protection gas).

(2.4) Large Volume Industrial Service (LVIS), all industrial accounts consuming greater than 50,000 Mcf per year (excluding plant protection gas).

(2.5) Large Industrial Service (LIS), all industrial accounts consuming greater than 200,000 Mcf per year (excluding plant protection gas).

D. Utility Liability

(1) The company may restrict or discontinue service in accordance with this section without hereby incurring any penalty or liability for any loss, injury or expense that may be sustained by the customer except when the restriction or discontinuation of service is a result of the Company's willful or wanton misconduct.

(2) Company liability for actions taken under Rule 26. C. Emergency Action, or to a regulation, policy statement, directive or order issued by the Commission or an emergency order issued by the Governor shall be governed by the following principles:

(a) If the Company appropriates natural gas during an emergency action, the Company shall compensate the applicable entity, whether the customer or the

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

26. GAS EMERGENCY PLANS (Cont'd)

customer's natural gas supplier, for the cost of the lost, firm gas service. The compensation, in the aggregate, shall equal but not exceed the greater of:

(i.) The city gate cost of the appropriated natural gas, including transportation charges up to the Company's city gate, or

(ii.) The reasonable cost actually paid by the customer for delivered substitute energy, as documented to the Company. The Company may provide compensation in kind only at the discretion of the affected customer or natural gas supplier.

(b) The Company may discontinue service, for the duration of an emergency, to a customer that continues to take gas in violation of the rules found in Rule 26. Gas Emergency Plans.

E. Penalties for Unauthorized Takes

If a customer exceeds its authorized consumption during a natural gas emergency, then the customer will pay a penalty, in addition to any and all other penalties or charges incurred during such emergencies, according to the following schedule:

Actual usage as a percentage of Emergency Authorized Consumption	Penalty
Greater than 103% but not in Excess of 110%	The higher of $10/MCF or 110% of the highest gas supply purchased by the Company during the month of usage.
Greater than 110%	The higher of $25/MCF or 125% of the highest gas supply purchased by the Company during the month of usage.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

27. FINANCIAL FITNESS REQUIREMENTS FOR NATURAL GAS SUPPLIERS (C)

Dun & Bradstreet reports will be utilized as the primary source of credit information to determine the creditworthiness of Natural Gas Supplier applicants for service. The following Dun & Bradstreet standards will be used: a credit risk rating of 1 through 5 and "uncoded", noted on the report (the continuum range is 1 to uncoded). The values for these rating are: (C)

"1" assets, liabilities and payment history indicate little or no risk to creditors.

"2" assets, liabilities and payment history indicate some risk to creditors.

"3" assets, liabilities and payment history indicate a moderate risk to creditors.

"4" assets, liabilities and payment history indicate a greater than moderate risk to creditors.

"5" assets, liabilities and payment history indicate a severe risk to creditors.

"Uncoded" indicates that there is insufficient historical credit data available to make a reliable credit assessment of the applicant (such as the applicant being in business less than 14 months, change of ownership, etc.)

Upon receipt of the properly completed Credit Application, the company will obtain various Dun & Bradstreet reports for initial review and assessment. The reports will include, but not be limited to: Payment Analysis Report, Business Information Report, Comprehensive Report and Credit Score

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

Report. In addition, other criteria will be taken into consideration in assessing the Company's potential risk exposure, such as: (1) established payment history of the applicant with the Company and (2) the ratio of anticipated projected enduser volumes to the supplier's unencumbered assets available for payment; and (3) historical reliability of deliveries (nominations vs. deliveries). (C)

"1" Rating: (C)

In general, if the reports indicate an overall rating of "1" no security deposit will be required at the time, subject to changes listed below. However, if anticipated projected enduser volumes indicate a substantial risk exposure over and above indicated current assets available for payment, a security deposit may be required.

"2" Rating: (C)

If the reports indicate an overall rating of "2" additional background investigations will be completed. These investigations will include but not be limited to: (1) an assessment of the applicant's payment history with the Company, (2) compilation of other creditors and trade creditor's reports, (3) request for financial statements, if necessary. Upon completion of a review of the additional information a determination will be made regarding the Company's risk exposure and a recommendation made to waive or request a security deposit.

"3-5" Rating: (C)

If the reports indicate an overall rating of "3-5" a security deposit will be required. No further investigations will be made unless extenuating circumstances exist and the applicant brings those situations to the attention of the reviewer.

"Uncoded": (C)

Any applicant with a rating of "uncoded" will automatically be designated as having a rating of "3-5" and be required to post a security deposit.

Changes affecting credit risk ratings:

All approved Suppliers and Aggregators will be periodically reviewed to determine if: (1) there is a change in their credit risk rating; (2) security needs to be required on a previously unsecured account; (3) the amount of security being held should be increased or decreased to meet projected future usage, based upon historical usage data.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

Changes indicating that a credit review may be necessary include, but are not limited to: (1) significant changes in Dun & Bradstreet credit reports; (2) credit related information obtained from reliable sources; (3) a change in the number of end-users; (4) a change from the established payment history; as well as any other information received regarding the financial standing of the Supplier or Aggregator. Security deposits will be refunded to the Supplier or Aggregator when it is determined that the Supplier or Aggregator meets the level of creditworthiness criteria that no longer requires a security deposit.

Determination of Security Deposits:

The amount of a security deposit will be determined under the following formula:

(1) For Natural Gas Suppliers during the winter period (C)

a. Using historical data, for (1) transportation service shall be the sum of the two highest months of consumption in the last twelve months. This volume will be multiplied by 60 and divided by the actual amount of billing days, and (2) the commodity volumes shall be determined by taking the highest consumption between November 1 through March 31. This volume will be multiplied by 10 and divided by the actual number of billing days. The consumption for each customer anticipated to be served by the applicant Natural Gas Supplier will be multiplied by (3) the (C) applicable transportation rate; and (4) the corresponding cost of gas.

b. The "corresponding cost of gas" shall be the Natural Gas Supply Charge.

Monthly reviews will be provided, based upon any changes which may affect the Company's risk exposure.

Other credit criteria for Natural Gas Suppliers is located in Rate (C) Schedules Monthly Metered Natural Gas Supplier Service and Small Aggregation Transportation Supplier Service Section I. Supplier Qualification Criteria.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

(2) For Natural Gas Suppliers during the summer period (C)

a. Using historical data, for (1) transportation service shall be the sum of the two highest months of consumption in the last twelve months. This volume will be multiplied by 60 and divided by the actual amount of billing days, and (2) the commodity volumes shall be determined by taking the highest consumption between April 1 through October 31. This volume will be multiplied by 10 and divided by the actual number of billing days. The consumption for each customer anticipated to be served by the applicant Natural Gas Supplier will be multiplied by (3) the (C) applicable transportation rate; and (4) the corresponding cost of gas.

b. The "corresponding cost of gas" shall be the Natural Gas Supply Charge.

Monthly reviews will be provided, based upon any changes which may affect the Company's risk exposure.

Other credit criteria for Natural Gas Suppliers is located in Rate (C) Schedules Monthly Metered Natural Gas Supplier Service and Small Aggregation Transportation Supplier Service Section I. Supplier Qualification Criteria.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

Payment of Security:

Payment of security deposits can be made by cash or acceptable form of security such as Letter of Credit. Interest will be paid on cash security deposits at the same rate paid on deposits for service to non-residential customers. Responsibility for and expenses incurred in the procurement of a Letter of Credit are subject to requirements and/or negotiations with the Applicant’s individual bank. In addition, the Company may in its sole discretion accept an agreement setting special operating standards (“Operational Default Agreement”) and/or an Escrow Account Agreement in exchange for reducing the level of security otherwise required. (C)

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

28. RULES FOR TRANSPORTATION SERVICE

The following terms and conditions shall apply to Transportation Service. (C)
Additional operating procedures, protocols and business practices for (C)
transportation service can be found in the Company's Operational Procedures Manual which is posted on the Company's web site.

A. GAS QUALITY

(a) All gas delivered by Customer into Company's facilities will:

(1) Have a total heat content of not less than nine hundred sixty seven British Thermal Units (967 BTU) per cubic foot and not more than one thousand on hundred British Thermal Units (1,100 BTU) per cubic foot, provided however, that Company shall have the option (but never the obligation) to accept Customers gas having a heat content outside of this range, when in Company's sole judgment, such different heat content does not prevent Customer's gas from being merchantable and fit for use by Company in its intended markets;

(2) Be commercially free from dust, hydrocarbon liquids, water, objectionable odors, or other gaseous, solid or liquid matter which might become separated from the gas in Company's facilities or interfere with the proper operation of the pipelines, regulators, meters or other equipment through which it flows; and Customer shall furnish, install, operate, maintain and keep in efficient operating condition, at Customer's own expense, such drips, separators, dehydrators, alcohol bottles, gas cleaners and any other devices or equipment as may be or become necessary to effect compliance with this requirement;

(3) Not contain more than twenty (20) grains of total sulfur (S), nor more than three-tenths (0.3) grain of hydrogen sulfide (H_2S) per one hundred (100) cubic feet;

(4) Not contain more than two-tenths of one percent (0.2 of 1%) by volume of oxygen (0_2), and Customer shall make every reasonable effort to keep the gas free of oxygen (0_2); (C)

(5) Not contain more than five percent (5%) by volume of a combined total of carbon dioxide ($C0_2$) and nitrogen (N_2) components; provided, however, that the total carbon dioxide ($C0_2$) content shall not exceed two percent (2%) by volume;

(6) Have a temperature of not more than one hundred twenty (120) degrees Fahrenheit; and

(7) Have been dehydrated by Customer for removal of water in a vapor state, and in no event contain more than seven (7) pounds of water vapor (H_20) per million cubic feet, except as permissible according to the NFG Water Vapor Content Chart contained in the Company's Operational Procedures Manual, as determined by Company. In no event shall Customer deliver to Company free or entrained water (H_20). (C)

C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

(b) In the event any of the above substances enter any of Company's facilities in quantities greater than the levels, if any, permitted above, with or without Company's knowledge, and/or cause, directly or indirectly, damage to any such facility, Company may, at Customer's expense, clean up and/or repair such facility. Further, in the event any of the above substances enter any facilities owned by retail customers of Company in quantities greater than the levels, if any, permitted above, with or without Company's knowledge, and/or cause, directly or indirectly, damage thereto, Customer shall indemnify Company against, hold it harmless from, and undertake the defense of Company with respect to any and all claims, losses, damages (including punitive damages, to the extent permitted by law), and injuries (property damage and personal injury, including death) arising therefrom and shall indemnify Company for any expenses, including attorney's fees and clean-up costs, incurred in partial or full satisfaction of any such claims, losses, damages and injuries.

(c) As to Customer's gas which does not meet the specifications stated herein, Company shall have the rights, on a continuing basis, and in addition to any other remedies provided herein, to:

(1) Continue to receive such gas; or

(2) Discontinue the flow of such gas, and, in the event Customer will not correct such deficiency within a time period acceptable to Company, to terminate the Service Agreement as to such gas; or

(3) Receive such gas and, at Customer's expense, treat or otherwise process the same so as to cause it to conform to the above quality specifications.

If the gas delivered fails to meet the 1,000 BTU standard specified in Paragraph (a)(1) above, Company shall also have the option to retain sufficient additional volumes of gas to compensate for such deficiency.

B. MEASUREMENT

(a) For all gas delivered by Customer to Company, the volumetric measurement base shall be one (1) cubic foot of gas at a pressure base of fourteen and seventy-three hundredths (14.73) pounds per square inch absolute and a temperature base of sixty (60) degrees Fahrenheit. The average absolute atmospheric (barometric) pressure shall be fourteen and four tenths (14.4) pounds per square inch. The flowing temperature shall be sixty (60) degrees Fahrenheit and may be adjusted to actual flowing conditions by Company if deemed necessary by Company. All said gas shall be measured by orifice or displacement type meter or any other approved measuring device of equal accuracy. Orifice meters shall be installed and operated, and gas volumes computed in accordance with Report No. 3 of the Gas Measurement Committee of the American Gas Association, including any revisions applying thereto.

(C) Indicates Change

(C)

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

(b) Customer shall install, or cause to be installed, at no expense to Company, measuring equipment necessary in Company's judgment to accomplish accurate measurement of the gas. Company shall operate and maintain said measuring equipment. The measuring equipment will be installed, operated and maintained in accordance with the specifications of the Gas Measurement Committee of the Natural Gas Department of the American Gas Association, as amended from time to time, or by any other mutually acceptable method commonly used in the industry. Such measuring equipment shall conform to the specifications provided by Company; shall be calibrated, as Company deems necessary, by Company; shall be inspected by Company; and must be approved by Company prior to any deliveries hereunder.

Customer recognizes that it may be necessary for Company's employees, agents, or representatives, to enter the property on which said measuring equipment is located to perform such functions upon said measuring equipment as may be necessary to effectuate the provisions of a Service Agreement, and Customer hereby expressly grants Company permission to perform such functions on said measuring equipment. Customer, to the extent it is within Customer's power to do so, will grant Company such easements as may be necessary for Company's employees to enter the property on which said measuring equipment is located. In the event that easements from other parties are necessary for Company's employees, agents or representatives to enter the property on which said measuring equipment is located, Customer will acquire such easements, and agrees that the Service Agreement will not become effective until and unless such easements are acquired.

(c) Company will read the meter(s) measuring the consumption at Customer's facility at the conclusion of each billing month. Upon the request of Company, the Customer shall read such meter(s) at reasonable intervals and provide such readings to Company. Measurement shall be governed by any applicable provisions of Company's tariff, and any applicable regulations of the Pennsylvania Public Utility Commission. The pressure base shall be fourteen and sixty-five hundredths (14.65) pounds per square inch absolute. No volumetric adjustments shall be made to compensate for the difference between this pressure base and the pressure base identified in Paragraph (a) above.

(d) Each party shall have constant access to the meters and access, upon reasonable notice and during business hours, to meter charts and records.

(e) Measurement of production gas at receipt meters shall be calculated following the recommendations of the ANSI/API 2530 ''Orifice Metering of Natural Gas and Other Related Hydrocarbon Fluids'' (A.G.A. Report No. 3) including the A.G.A. Manual for Determination of Supercompressibility Factors of Natural Gas or the A.G.A. Transmission Measurement Committee Report No. 8 ''Compressibility and Supercompressibility for Natural Gas and Other Hydrocarbon Gases'' or the ANSI B109.3 ''Standard for Rotary Meters'' and ''Measurement by Turbine Meters - Volumetric Flow Measurement'' (A.G.A. Report No. 7), as appropriate to the type of measurement installed at the receipt facility, including any revisions applying thereto. If the receipt facility gas flow characteristics are such that calculations cannot be performed consistent with the above-mentioned recommendations due to a decline in production or other operational matters, the Company shall have the right to turn off a meter until a replacement meter meeting the above specifications is installed. (C)

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

(f) Prior to September 30, 2013 a producer or operator of a receipt facility with gas flow characteristics such that calculations cannot be performed consistent with paragraph (e) above may request that the Company retrofit such facility with acceptable metering equipment. The Company shall not bear any facilities or installation cost, other than purchase of replacement metering, necessary to address the conditions that resulted in the meter turn off. Such request shall be made within 60 days of notification from the Company that it will be exercising its right to turn off the meter and does not restrain the Company's right to turn off a meter until a replacement meter meeting the above specifications in paragraph (e) above is installed. (C)

C. WARRANTY OF TITLE

Customer warrants the title to all gas delivered to Company from Customer or on behalf of Customer and shall indemnify and save harmless Company from all suits, actions, accounts, costs, losses and expenses (including attorney's fees) arising from or connected with the adverse claim of any person or persons to the gas received, transported or delivered. Customer assumes all responsibility for all royalties, licenses, taxes and charges to which the gas transported, or the transportation service, may be subject.

D. LIABILITY

(a) It is expressly agreed and understood that until gas is delivered to Company for transportation, Customer shall be deemed to be in exclusive possession and control thereof and shall be solely liable and responsible for, and shall indemnify, protect, save harmless and undertake the defense of Company, of and from all losses, claims (whether groundless or not), damages, injuries (including death), suits, actions, debts, accounts, liens, liabilities, costs and expenses including without limitation, legal fees and costs, which Company may sustain, incur, pay or lay out by reason of, arising from or occasioned by such possession and control.

(b) Customer acknowledges that Company has made no guarantees regarding the volumes of gas it will be able to receive from Customer or on behalf of Customer at the specified receipt points, and Company shall not be liable to Customer should actual receipts prove to be less than the levels expected by Customer, its supplier, or Company.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

E. MISCELLANEOUS PROVISIONS

(a) Customer or a party appointed by the customer to act on Customer's behalf shall provide Company with nominations setting forth, by source, the volume to be transported by Company following procedures set forth in the Company's Operational Procedures Manual.

(b) The Customer appoints the party(ies) identified in the NFGDC Customer Agency Agreement form as its agent(s) for purposes of making such nominations and determining the proper allocation of volumes among all affected customers. All allocation methods are subject to the prior approval of Company.

(c) Deliveries of gas by or on behalf of Customer to Company at point(s) of receipt hereunder shall be made against the line pressure existing in Company's pipeline from time to time at a maximum pressure designated by Company from time to time. Company shall not be obligated to decrease such line pressure, and Customer shall not compress the gas delivered to Company without the prior approval of Company, which shall not be unreasonably withheld.

(d) Company will retain a percentage of the total volumes received by Company for the account of Customer as a loss allowance.

29. MARKET PRICE OF NATURAL GAS

For use within rate schedules in this Tariff, the Monthly Market Index ("MMI") shall be equal to the MCF equivalent of the highest volume weighted average price during the month, at Tennessee Gas Pipeline's Zone 4 200 Line Trading Hub, referred in the SNL Natural Gas Index ("SNL") as "TGP Z 4 200L" which will serve as the Company's Market Index Point. The Daily Market Index ("DMI") shall be equal to the MCF equivalent of the volume weighted average price for the applicable date, at the Market Index Point.

Where transportation costs reflecting the cost of delivering gas to the Company's city gate are added to the MMI or the DMI to determine the market price of natural gas as applied by the Company under tariff rate schedules, such costs, unless explicitly stated otherwise, reflect the variable costs of using the associated pipeline capacity, e.g. commodity transportation rates, fuel retention and other variable usage surcharges, as applicable. (C)

Should a price for the Market Index Point be temporarily unavailable during any period, the Company may, at its discretion, select a substitute representative price in the interim. If the Market Index Point price becomes unavailable on a permanent basis, the Company will file to change this section and may, at its discretion, select a substitute representative price in the interim, subject to refund.

30. RULES FOR MONTH END IMBALANCE RESOLUTION

The Imbalance Holder is the Customer or Supplier responsible for imbalance resolution as described in Rate Schedules MMNGS or SATS, under which the Company provides service. For the purposes herein, Imbalance Holder's gas consumption and deliveries to the Company are equivalent to the gas consumption and deliveries to the Company of the MMT or SATC Customers, respectively, for which it bears imbalance responsibility.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

An Imbalance Holder's Month End Imbalance is the burner tip imbalance for which the Imbalance Holder bears imbalance responsibility, pursuant to terms of Rate Schedules MMNGS or SATS. Generally, an Imbalance Holder's total receipt volumes (gas delivered to the Company) are the sum of allocated transportation receipt volumes from city gate deliveries, local production pool receipts and local production excess volumes. This sum is reduced for shrinkage (allowance for losses incurred in the process of delivery) to determine total receipts. From this quantity, Total Monthly Consumption ("TMC"), as measured or estimated, is subtracted to determine the imbalance volume.

A Deficiency Imbalance (imbalance owed to the Company) occurs when the volume of gas delivered to the Company for the Imbalance Holder during the month after adjustment for line losses is less than the total amount of gas consumed by the Imbalance Holder.

a. Month End Imbalance Calculation Process

For the month during which the Company provided service, an Imbalance Holder's imbalances are summed across all eligible Service Classifications to determine an Initial System Imbalance Volume ("ISIV") and position. If the ISIV is greater than zero, then the Imbalance Holder has a Surplus Imbalance with an initial long position. If the ISIV is less than zero, then the Imbalance Holder has a Deficiency Imbalance with an initial short position. A measure of the Imbalance Holder's imbalance position is calculated by dividing its ISIV by its TMC and converting the quotient into a percentage.

b. Cash Out of Imbalances (C)

To resolve a Surplus Imbalance, the Company will purchase a volume of gas from the Imbalance Holder to reduce the imbalance volume to zero ("Cash Out Purchase"). To resolve a Deficiency Imbalance, the Company will sell a volume of gas to the Imbalance Holder to reduce the imbalance volume to zero ("Cash Out Sale"). The actual cash out volumes will be based upon ending imbalance volume following application of prior period adjustments and exchange of imbalances as described below.

The rate for cash out will be the Average Daily Market Index ("ADMI"), which is the average of each day's DMI, plus transportation costs reflecting the cost of delivering gas to the Company's city gate, during the month set forth in Rule 29. The cash out pricing tiers and applicable rates are as follows:

Tier	Transaction	Imbalance Position	Rate
Surplus Pricing Tier 3	Purchase	>20 % long	60 % of ADMI
Surplus Pricing Tier 2	Purchase	15% to 20 % long	85 % of ADMI
Surplus Pricing Tier 1	Purchase	5% to 15 % long	90 % of ADMI
Market Pricing Tier	Purchase or Sale	5 % long to 5% short	100% of ADMI
Deficiency Pricing Tier 1	Sale	5% to 15% short	110% of ADMI
Deficiency Pricing Tier 2	Sale	15% to 20% short	115% of ADMI
Deficiency Pricing Tier 3	Sale	>20% short	140% of ADMI

The Company will sum the ISIV and TMC for all Imbalance Holders into system totals. A System Imbalance Position ("SIP") will be computed by dividing the system total ISIV by the system total TMC and converting the quotient into a percentage. If the SIP is within the range 5% long to 5% short, then all Imbalance Holders will be assigned to the Market Pricing Tier.

(C) Indicates Change

Voluntarily Suspended to April 13, 2012

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

Based upon its initial system imbalance position, the Imbalance Holder will be assigned to an initial pricing tier. Before the start of imbalance trading, an Imbalance Holder's Pre-Trading System Imbalance Volume ("PSIV") will be calculated by applying prior period adjustments, if any, to its ISIV. The Imbalance Holder's pre-trading imbalance position is calculated by dividing its PSIV by its TMC and converting the quotient into a percentage. If the resulting imbalance percentage moves closer to zero, the Imbalance Holder will be assigned to a pre-trading pricing tier based upon the adjusted percentage. If the resulting imbalance percentage moves further from zero, the Imbalance Holder will be assigned to a pre-trading pricing tier equal to the initial pricing tier. If the direction of imbalance reverses (Surplus Imbalance to Deficiency Imbalance or Deficiency Imbalance to Surplus Imbalance), the pre-trading pricing tier assigned to the Imbalance Holder will be the Market Pricing Tier.

c. Exchange of Month End Imbalances

The Company will provide Imbalance Holders with the means to exchange Month End Imbalances. Trading sessions will be scheduled to begin on the 10th business day following the end of the month (approximately on the 15th of the month). Morning and afternoon trading sessions will be conducted over a three business day period. Notice of any delay or alteration of the trading schedule will be posted on the Company's web site. Upon request of the Imbalance Holder, the Company will provide other Imbalance Holders with information regarding the Imbalance Holder's imbalance status for the month. (C)

Each trade must improve an Imbalance Holder's imbalance position, i.e. the resulting imbalance volume must be closer to zero. In no event will the Company process trades that worsen an Imbalance Holder's imbalance volume. The Imbalance Holder's post-trading or Final System Imbalance Volume ("FSIV") will be calculated by adding the volumes from its trades to the PSIV.

d. Post-Trading Resolution and Application of Cash Out Tiers

An Imbalance Holder's post-trading imbalance position is calculated by dividing its FSIV by its TMC and converting the quotient into a percentage. The Imbalance Holder's post-trading imbalance position will be used to determine the post-trading imbalance tier for cash out, however, the post-trading imbalance tier will not be worse than the pre-trading imbalance tier.

If the volumetric range of the Imbalance Holder's Market Pricing Tier for a month is significantly smaller or otherwise inconsistent with that occurring during the normal course of business, the Company may override the post-trading imbalance tier calculation for that month and assign the Imbalance Holder to the Market Pricing Tier. Examples of such circumstances are:

- During the initial month in which an Imbalance Holder has an imbalance resulting from service under an eligible Service Classification as described above.
- During the final month in which an Imbalance Holder has an imbalance resulting from service under an eligible Service Classification as described above.

For customer pools where the Company assigns an ADDQ, if the Imbalance Holder's total receipt volumes are within 2% of the total monthly ADDQ for each pool, the Imbalance Holder will be assigned to the Market Pricing Tier. For MMT pools where the Company does not assign an ADDQ, the TMC for each pool will be substituted

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

for the ADDQ. Additionally, if an Imbalance Holder's FSIV is less than 1,000 Mcf, it will be assigned to the Market Pricing Tier. If the Imbalance Holder does not qualify for the Market Pricing Tier under either of these safe harbors, then the Imbalance Holder's FSIV will be used to determine imbalance pricing.

The Imbalance Holder will be cashed out at the tiers, beginning at the tiers furthest from the Market Pricing Tier until the imbalance volumes within all the tiers are reduced to zero. The Market Pricing Tier will be cashed out after all other tiers have been cashed out.

Cash Out Sales and Cash Out Purchases will be reflected on the next bill issued by the Company to the Imbalance Holder following the conclusion of trading sessions.

31. CHANGES OF RULES AND REGULATIONS

The Company reserves the right to modify, alter or amend the foregoing Rules and Regulations and to make such further and other rules and regulations as experience may suggest or the Company may deem necessary or convenient in the conduct of its business provided, however, that such modifications, alterations, or amendments shall not become effective unless and until included in this tariff.

32. RENEWABLE NATURAL GAS

Renewable Natural Gas or RNG is Pipeline compatible gaseous fuel derived from biogenic or other renewable sources that has lower lifecycle CO2e emissions than geological natural gas. Examples include pipeline compatible gas derived from wastewater treatment plants, landfill gas, anaerobic digestion gas, power to gas from renewable electricity or syngas.

The operating procedures applicable to RNG are provided in the Company's Operational Procedures Manual. Parties wishing to produce RNG for delivery into Distribution's system, i.e. RNG Operators, are required to execute an RNG Interconnect Agreement as a condition of access.

RNG produced and delivered into the Company's system must meet the Company's RNG Quality Standards, as specified in the RNG Interconnect Agreement, as well as the gas quality standards specified in Rule 28 of this tariff.

33. DATA SECURITY AGREEMENT

As a condition of access to customer information via publicly available Company business systems, including but not limited to web portals, the Company will require marketers, suppliers, and agents requesting such access to sign a Data Security Agreement and require that the parties carry and maintain Cybersecurity insurance in an amount no less than $2,000,000 per incident. A standard form Data Security Agreement will be provided in the Company's Operational Procedures Manual. (C)

Such requirement shall not apply to customers with usage less than 5,000 mcf per year that seek to access their own customer account information. Further, the Company may accept Cybersecurity insurance provided under another agreement, provided that such agreement is substantially identical in form and effect as the standard form Data Security Agreement.

(C) Indicates Change

RESIDENTIAL SERVICE RATE SCHEDULE

RESIDENTIAL CLASSIFICATION

This classification shall include gas supplied for residential purposes such as a private dwelling, apartment house with a single meter supplying four or less dwelling units, separately metered apartments of a multiple dwelling, accessory buildings to dwellings or apartment houses such as garages, except at residences receiving service under Rate Schedule LIRAS for Low Income Residential Assistance Service and other places of residence where gas is used for residential purposes.

Churches and missions (places of worship) shall be entitled to Service under the Residential service rate schedule.

AVAILABILITY OF SERVICE

Gas Service shall be available at one location, except as otherwise provided, for residential customers.

APPLICABILITY

Applicable in all areas served under this tariff.

MONTHLY RATE

Basic Service Charge

$14.00	per Month	

Distribution Charges

34.064¢	per 100 cubic feet		(D)

Gas Adjustment Charge

2.036¢	per 100 cubic feet	Purchased Gas Cost Component (Rider A)	(D)
0.037¢	per 100 cubic feet	Merchant Function Charge (Rider G)	(D)
2.073¢	Per 100 cubic feet	Total Gas Adjustment Charge	(D)

(D) Indicates Decrease (I) Indicates Increase

RESIDENTIAL SERVICE RATE SCHEDULE (cont.)

Natural Gas Supply Charge			
50.334¢	per 100 cubic feet	Purchased Gas Cost Component (Rider A)	(D)
0.907¢	per 100 cubic feet	Merchant Function Charge (Rider G)	(D)
1.149¢	per 100 cubic feet	Gas Procurement Charge (Rider H)	
52.390¢	per 100 cubic feet	Total Natural Gas Supply Charge	(D)

The Natural Gas Supply Charge shall include a Merchant Function Charge (Rider G) to recover uncollectible costs associated with purchase gas costs of 1.8032% and the Gas Procurement Charge (Rider H) to recover costs of procuring natural gas pursuant to 52 Pa. Code §62.223. The above non-purchased gas cost rates shall be subject to surcharges in accordance with the provisions of Rider B - State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge. Residential rate classes shall be subject to Rider F - CAP Discount Charge as set forth in this tariff.

RULES AND REGULATIONS

The rules and regulations set forth in this tariff shall govern, where applicable, the supply of gas service under this rate schedule.

(D) Indicates Decrease (I) Indicates Increase

RATE SCHEDULE CAP
FOR CUSTOMER ASSISTANCE PROGRAM SERVICE ("CAP") (C)

AVAILABILITY OF SERVICE

Service under this rate schedule shall be available on/after the effective date of this Tariff Supplement (the "CAP Implementation Date") to those meeting all of the following requirements: (C)

1. Must comply with the terms of CAP as specified in the Company's then-current Universal Service and Energy Conservation Plan ("Plan"). Must be residential heating customers of the Company;
2. Must have a gross household income equal to or less than 150% of the Federal Poverty Income Guidelines (FPIG);
3. All adult individuals residing in the household must agree to: (i) participate in CAP and provide their names and social security numbers or other acceptable forms of identification; and (ii) provide satisfactory verification to prove income, as specified hereinbelow under the heading "Responsibility of a CAP Customer"; and
4. Must agree to receive LIURP services if they meet the eligibility requirements.

RESPONSIBILITY OF A CAP CUSTOMER (C)

1. All household income must be verified at time of enrollment. Additionally, once enrolled, CAP participants must agree to have their income verified periodically (at intervals as specified in the Company's Plan) and advise the Company if their income or household size changes. For those reporting "zero" or "no" income, reverification may be made using the Commission's Standard CAP Reverification Form.
2. Payment of the "CAP Balance Due Amount" (defined in this Rate Schedule) are required to avoid termination of service.
3. No extensions or arrangements (to avoid termination of service) will be offered to CAP customers.
4. Must comply with the terms of CAP as specified in the Company's Plan.
5. The ratepayer must agree to apply annually for LIHEAP, if eligible and LIHEAP is available.

APPLICATION PROCESS

Prospective CAP customers must complete the application as specified in the Plan. Enrollment in CAP will occur upon the Company's review and verification that the individual(s) who have made application to participate in CAP meet the requirements specified herein and in the Plan. (C)

(C)

SPECIAL TRANSITION PROVISION – Consistent with the Company's Plan (approved by Order of the Commission on December 22, 2022 at Docket No. M-2021-3024935), all customers who were enrolled in National Fuel's former customer assistance program, known as the "Low-Income Residential Assistance" Program ("LIRA") on the date immediately prior to the CAP Implementation Date will automatically be enrolled in CAP (the "Carryover Customers").

(C) Indicates Change

MONTHLY RATE

For each monthly bill, the Company will determine the following for each customer receiving service under this rate schedule: (C)

(1) **PIP Amount:** Determined as follows:

Income Category	**PIP Amount (Amount of Monthly Gross Household Income**)**
0-50% FPL*	**4%**
51-150% FPL*	**6%**
*As used in the above table, "FPL" shall refer to the Federal Poverty Income Guidelines published annually in the *Federal Register* by the United States Department of Health and Human Services. **As used in the above table, "Monthly Gross Household Income" shall have the meaning ascribed to the term "Household income" in Section 1403 of the Public Utility Code (66 Pa.C.S. § 1403).	

(2) **Average Monthly Bill Amount:** Calculated as per the "Balanced Billing Plan" specified in Rule 18 of this Tariff.

Customers receiving service under this rate schedule will be required to pay the greater of (a) or (b) below as determined on monthly basis (the "**CAP Balance Due Amount**"):

(a) PIP Amount or Average Monthly Bill Amount (whichever results in a lesser amount for the Customer); or

(b) CAP Minimum Payment Amount of $12.00.

(C) Indicates Change

[RESERVED] (C)

(C) Indicates Change

Bills calculated to determine the Average Monthly Bill Amount shall include all generally applicable charges, surcharges and credits applicable to customers receiving service under the Residential service classification, as specified in this tariff. Provided, however, customers enrolled in CAP shall not receive a bill exceeding their CAP Balance Due Amount. (C)

REAPPLICATION FOR CAP AT A NEW ADDRESS (C)

When active CAP customers move to a new address, upon application for service at such new address, said customers will continue to receive service under this Rate Schedule at the new address. If occupants change, it will be necessary to verify the household members and income. If a ratepayer, or any adult members of the household, has an overdue balance from a previous account, that balance will be reflected on the first CAP bill at the new address. If a previous account was terminated for nonpayment, CAP payments must be caught up to establish service at the new address. A customer who moves to a new premise can continue arrearage forgiveness on the remaining balance that is eligible for forgiveness. (C)

ARREARAGE FORGIVENESS

Preprogram arrearages ("PPA") are eligible for debt forgiveness. Each time a CAP customer pays their CAP Balance Due Amount on time, one twenty-fourth of the amount is forgiven ("CAP PPA Balance Forgiveness"). If a CAP customer falls behind and pays their CAP Balance Due Amount due to a zero balance, they will receive the debt forgiveness that was previously missed. These arrearages will be shown on CAP customer's bills. (C)

SPECIAL TRANSITION PROVISION - Consistent with the Company's Plan (approved by Order of the Commission on December 22, 2022 at Docket No. M-2021-3024935), on the CAP Implementation Date, the Carryover Customers' in-program LIRA arrears will be re-classified as PPA, and such amount, together with the Carryover Customers' LIRA PPA shall be subject to forgiveness under the terms specified in the previous paragraph relating to CAP PPA Balance Forgiveness. Each payment made by Carryover Customers prior to the CAP Implementation Date (meeting terms specified in the Plan to receive PPA balance forgiveness) will qualify as one of the 24 required payments in order to receive their full CAP PPA Balance Forgiveness. (C)

When a CAP customer moves to a new address, the remaining arrearage forgiveness can be utilized at the new address. (C)

LIHEAP

All LIHEAP grants will be applied to the customers' CAP responsibility in accordance with applicable Department of Human Services vendor requirements.

(C) Indicates Change

TERMINATION PROCESS

During the period April 1 through November 30:

1. If a CAP customer fails to pay the "CAP Balance Due Amount,", the Company's collection process will begin. This process includes all required regulatory notification and procedural steps. The actual termination notices mailed to CAP customers will reflect the means for avoiding termination of service. (C)
2. To avoid termination of service, the CAP customer must pay the amount set forth in the termination notice prior to the scheduled termination date.
3. The delinquent CAP participant will not be granted a payment arrangement or an extension to avoid termination of service.
4. Medical Certificates will be honored for CAP customers.
5. Service will be terminated if the customer fails to pay the notice amount (and no certified medical condition exists).

Termination notices will not be sent from December 1 until the First cycle billing portion that produces a proposed termination date of April 1 or later. Any customer who has missed any payments over the winter months will be sent a notice for termination for the missed payments. The number of missed payments should not exceed 5 months except in extenuating circumstances such as a medical certification or a complaint to the Bureau of Consumer Services.

RECONNECTION PROCESS

A ratepayer whose service is reconnected due to the submission of a medical certificate will not be reinstated in the CAP program until all requirements are met equal to those that would apply for that same customer seeking reconnection without a medical certificate.

Generally, in order to have service reconnected, the CAP customer must: (C)

1. Pay a reconnection charge.
2. Pay the entire arrearage which accrued while a CAP participant (including the current bill if after the due date).
3. In the situation where his/her account had a preprogram arrearage, the account will be eligible for continued arrearage forgiveness opportunities if the CAP customer completely pays his/her CAP program arrears and if he/she has remaining forgiveness months remaining.
4. If a customer/applicant who was previously a CAP participant elects to have service reconnected/established and receive service under the residential rate schedule, he/she will be reconnected pursuant to applicable provisions of the Public Utility Code and applicable regulations of the Commission.

RECONNECTION PROCESS (Cont',)

All customers listed on the account are responsible for the balance accrued while a CAP participant. The terms for reconnection will apply to each adult resident as a ratepayer, unless the resident can demonstrate to the Company's satisfaction extenuating circumstances including, but not limited to, divorce, abandonment, or spousal abuse, where the spouse has established a separate residence. (C)

REVERIFICATION PROCESS

Active CAP accounts are reverified periodically to determine changes in income or household size that might affect program eligibility. (C)

The CAP reverification process will require participants to reverify their status every two years unless, one of the following situations apply: (C)

(1) The CAP customer's household situation changes or they report inexplicable increased consumption and/or have not received LIHEAP. As recommended by the Universal Service evaluation, such customers would be required to reverify their status upon request. (C)

(2) The CAP customer's household: (a) has as its primary source of income any of the following: Social Security, Supplemental Security Income, or pensions; or (b) received LIHEAP benefits in the time since CAP enrollment or the last CAP re-verification. For CAP customers in this scenario, the reverification period would be three (3) years. (C)

(3) The CAP Customer reports "zero income." For CAP Customers in this scenario, the customers would be required to reverify their income every six (6) months, using the "Zero Income Form" prescribed by the Commission. (C)

RULES AND REGULATIONS

The rules and regulations set forth in this tariff shall govern, where applicable, gas service under this rate schedule. Additionally, the provisions of the Plan shall also apply to gas service under this rate schedule.

C) Indicates Change

(C)

THIS PAGE INTENTIONALLY LEFT BLANK

COMMERCIAL AND PUBLIC AUTHORITY
SERVICE RATE SCHEDULE

COMMERCIAL CLASSIFICATION

A Commercial customer shall be defined as a customer using gas in wholesale or retail trade, agriculture, forestry, fisheries, transportation, communications, sanitary services, finance, insurance, real estate and services such as clubs, hotels, auto repair, etc.

A religious or nonprofit organization, whose support is primarily from private funds shall be classified as a Commercial customer. Churches and missions (places of worship) may choose to be classified as Commercial customers, and, upon, choosing to receive service as a Commercial customer, shall remain a Commercial customer for at least twelve months. (C) (C) (C)

The nature of the customer's primary business or economic activity at the location of service determines the customer classification.

PUBLIC AUTHORITY CLASSIFICATION

This classification shall include gas supplied to buildings, offices and institutions occupied or operated by governmental agencies whose financial support is entirely or primarily obtained from public funds.

AVAILABILITY OF SERVICE

Gas service shall be available at one location, except as otherwise provided, for any Commercial or Public Authority customers. Customers served under this rate schedule will be billed according to their annual consumption level as follows. Those customers with actual deliveries of 1,000,000 cubic feet (1,000 Mcf) or less during the twelve billing months of the calendar year preceding the next-succeeding Application Period, as defined in this rate schedule, shall be considered to be a "Small" Commercial or Public Authority customer. In addition, the Small Customer category shall be further subdivided by customers who use not more than 250,000 cubic feet per year and those whose usage is more than 250,000 cubic feet but not more than 1,000,000 cubic feet per year. Those customer with actual deliveries in excess of 1,000 Mcf during the twelve billing months of the calendar year preceding the next-succeeding Application Period, as defined in this rate schedule, shall be considered to be a "Large" Commercial or Public Authority customer. The actual deliveries of gas to the Customer shall include not only volumes of gas purchased from the Company by such Customer but also volumes of Customer-owned gas transported by the Company to such Customer.

(C) Indicates Change

COMMERCIAL AND PUBLIC AUTHORITY
SERVICE RATE SCHEDULE

AVAILABILITY OF SERVICE (Cont'd)

A proposed new Commercial or Public Authority Customer, at a premises not previously receiving any service from the Company, shall be considered a "Small" Commercial/Public Authority Customer unless both the Company and the Customer agree that the projected total volume of gas, including not only volumes of gas to be purchased from the Company by such Customer but also volumes of Customer-owned gas projected to be transported by the Company to such Customer, measured in thousand cubic feet (Mcf), will be not less than 1,000 Mcf during the succeeding twelve months. A proposed new Commercial or Public Authority Customer, at a premises previously receiving service from the Company shall be classified at the same rate as the previous Commercial or Public Authority Customer at the premises unless the Company and the Customer agree that the projected total volume of gas to be transported by or purchased from the Company and consumed by the Customer justifies a different rate classification. (C) (C)

(C) Indicates Change

COMMERCIAL AND PUBLIC AUTHORITY SERVICE RATE SCHEDULE (cont.)

0.171¢	per 100 cubic feet	Merchant Function Charge (Rider G)	(D)
1.149¢	per 100 cubic feet	Gas Procurement Charge (Rider H)	
51.654¢	per 100 cubic feet	Total Natural Gas Supply Charge	(D)

The Natural Gas Supply Charge shall include a Merchant Function Charge (Rider G) to recover uncollectible costs associated with purchase gas costs of 0.3398% and the Gas Procurement Charge (Rider H) to recover costs of procuring natural gas pursuant to 52 Pa. Code §62.223.

The above non-purchased gas cost rates shall be subject to surcharges in accordance with the provisions of Rider B - State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge as set forth in this tariff.

(D) Indicates Decrease (I) Indicates Increase

Commercial and Public Authority Service Rate Schedule (Cont'd)

For "Large" Commercial/Public Authority Customers:

Basic Service Charge

$151.00	per Month	

Distribution Charges

21.075¢	per 100 cubic feet		(D)

Gas Adjustment Charge

2.036¢	per 100 cubic feet	Purchased Gas Cost Component (Rider A)	(D)
0.007¢	per 100 cubic feet	Merchant Function Charge (Rider G)	(D)
2.043¢	per 100 cubic feet	Total Gas Adjustment Charge	(D)

Natural Gas Supply Charge

50.334¢	per 100 cubic feet	Purchased Gas Cost Component (Rider A)	(D)
0.171¢	per 100 cubic feet	Merchant Function Charge (Rider G)	(D)
1.149¢	per 100 cubic feet	Gas Procurement Charge (Rider H)	
51.654¢	per 100 cubic feet	Total Natural Gas Supply Charge	(D)

The Natural Gas Supply Charge shall include a Merchant Function Charge (Rider G) to recover uncollectible costs associated with purchase gas costs of 0.3398% and the Gas Procurement Charge (Rider H) to recover costs of procuring natural gas pursuant to 52 Pa. Code §62.223.

The above non-purchased gas cost rates shall be subject to surcharges in accordance with the provisions of Rider B - State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge as set forth in this tariff.

APPLICATION PERIOD

The Application Period shall be the twelve months beginning March 1 of each year.

RULES AND REGULATIONS

The Rules and Regulations set forth in this tariff shall govern, where applicable, the supply of gas service under this rate schedule.

(D) Indicates Decrease (I) Indicates Increase

RESERVED FOR FUTURE USE

COMMERCIAL RIDER BDS

BUSINESS DEVELOPMENT SERVICE RIDER

APPLICABILITY

Throughout the territory served under this tariff.

AVAILABILITY OF SERVICE

This Rider is available to Commercial customers with regard to sales service under the Commercial and Public Authority Rate Schedule. This rider is not available with regard to service under Rate Schedule CPA-LBS.

TERM

To become effective on the first day of the next billing cycle following qualification and acceptance by the Company and to continue during the qualification period for five (5) years.

QUALIFICATIONS

1. Facility

The following shall be considered a "qualifying facility":

A. For new customers:
(1) a newly-constructed facility; or

(2) an existing facility that has been purchased, or leased, and has been vacant for at least six (6) months.

B. For existing customers:

(1.) any combination of new employment or investment which is equal to at least 10 percent (10%) of the existing customer's historical level of employment at the time of application. For purposes of this subsection, an investment in plant facilities of $15,000 shall be considered equivalent to one new employee.

2. Gas Usage

A. New Customers

The gas consumed by an applicant, at a qualifying facility, shall be eligible for this rate, if it is demonstrated that the facility will have gas consumption in excess of 2,400 Mcf per year.

B. Existing Customers

Incremental gas consumed by an applicant, at a qualifying facility, shall be eligible for this rate provided that the incremental load is 20% of the applicant's prior year's normalized load or 2,400 Mcf per year, whichever is less. However, such incremental usage will not qualify unless the incremental load will be 1,200 Mcf per year. To determine qualifying gas usage, the incremental load will be measured against the gas consumed by the applicant, normalized over the most recent twelve-month period preceding the date of application for which data are available.

3. Classification

Applicants who qualify for one of the following classifications, pursuant to the Standard Industrial Classification Manual (1972 edition, as amended) will be eligible for this rider:

Wholesale Trade Division -
major groups 50 and 51

Finance, Insurance and Real Estate Division -
major groups 60, 61, 62, 63 and 67

4. Application

Applications for the rate must be received by the Company at least ninety (90) days, but not more than eighteen (18) months, prior to start-up of the qualifying facility.

RATES

New Commercial customers who qualify for service under this Rider will receive a reduction to the otherwise applicable commodity rate, as stated below, for all gas usage. Existing Commercial customers who qualify for service under this Rider will receive a reduction to the otherwise applicable commodity rate, as stated below for the qualifying portion of gas usage as determined in Qualifications Section 2.B, above. Customer charges and penalties, if any, under the Commercial and Public Authority Rate Schedule, are not subject to reduction.

A. Amount of the Reduction

For years one, two and three of the qualification period, there shall be a reduction of $0.02 per 100 cubic feet of qualifying consumption under the Commercial and Public Authority Rate Schedule.

For years four and five of the qualification period, there shall be a reduction of $0.01 per 100 cubic feet of qualifying consumption under the Commercial and Public Authority Rate Schedule.

OTHER PROVISIONS

Except as modified by the terms of this Rider, all provisions of the Commercial and Public Authority Rate Schedule apply to service to the customer.

Rate Schedule CPA-LBS

LOAD BALANCING SERVICE
FOR COMMERCIAL AND PUBLIC AUTHORITY CUSTOMERS

I. APPLICABILITY

Throughout the territory served under this tariff.

II. AVAILABILITY

Sales Service and Transportation Service under this rate schedule are available to Commercial and Public Authority customers that execute an agreement for one or more twelve month periods of service under this rate schedule for incremental load used in load balancing facilities, or where, in the judgment of the Company, existing load would be displaced by an alternate fuel or an alternate source of gas. For the purposes of this rate schedule, "incremental load" shall consist of the following: (C)

(1) Any volume of gas used at gas-consuming facilities constructed or installed after May 20, 1989, that will result in additional or expanded use of gas received from the Company; or

(2) Any volume of gas used at existing gas-consuming facilities of Customer at which the Customer has not used gas taken from the Company for at least twelve (12) consecutive months.

For the purposes of this rate schedule, "load balancing facilities" shall consist of any facilities of a Customer which use incremental load.

The Customer, in its sole discretion, must determine whether it will be more advantageous for the Customer to receive service for incremental load under this rate schedule or under the Commercial and Public Authority Service rate schedule.

The Customer's load balancing facilities shall be constructed in a manner satisfactory to the Company so that the Company will be able to meter the volume of gas used by the Customer in the load balancing facilities separately from gas used by the Customer in other facilities.

The Customer's load balancing facilities must be served by a discrete gas service supply system beyond the Company's meter. During business hours, the Company shall have the right to inspect Customer's facilities to determine whether Customer's facilities, including Customer's gas service supply system and load balancing facilities, meet the requirements of this rate schedule.

(C) Indicates Change

In order to qualify for Service under this rate schedule, Customers must execute an agreement for service under this rate schedule within one (1) year after either: (1) the date of the completion of the installation of new gas-consuming facilities; or (2) the date that the Customer begins taking gas from the Company at existing facilities of the Customer which have not used gas taken from the Company for at least twelve (12) consecutive months.

III. NATURE OF SERVICE

Sales Service provided under this rate schedule shall be firm service up to the level of the Customer's Gas BDU level established below, subject to the curtailment priorities of Rule 26. Sales Service in excess of the Customer's Gas BDU level will be provided only to the extent that the Company determines, from time to time, that available gas supply and available system capacity are sufficient to provide the level of service desired by the Customer without affecting adversely the reliability of service to the Company's existing customers receiving firm service.

Transportation Service provided under this rate schedule shall be firm Service up to the level of the Customer's Margin BDU level established below, subject to the curtailment priorities of Rule 26. Transportation Service in excess of the Customer's Margin BDU level will be provided only to the extent that the Company determines, from time to time, that available system capacity is sufficient to provide the level of service desired by the Customer without affecting adversely the reliability of service to the Company's existing customers receiving firm service.

IV. MONTHLY BILL

The monthly bill, for sales service under this rate schedule, shall be the sum of the Demand Charges, as computed in Section A hereinafter, and the Commodity Charges for sales and for transportation service, as computed in Section B hereinafter.

A. DEMAND CHARGES

The monthly Demand Charges shall be the sum of (1) the product of multiplying the rate per Gas Billing Demand Unit (Gas BDU), determined as provided below, by the number of the Customer's Gas BDUs, determined as provided below, and (2) the product of multiplying the rate per Margin Billing Demand Unit (Margin BDU), determined as provided below, by the number of Margin BDUs, determined as provided below.

1. Gas Demand Charge

a. Determination of Rate Per Gas BDU

The rate per Gas BDU shall be determined as follows:

1. The purchased gas demand costs applicable to the Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Volume Industrial and Large Industrial classes, the "DC", shall be obtained from Rider "A" - Section 1307(f) Purchased Gas Costs.

2. The number 12 shall be multiplied by the sum of (a) the volume of gas (expressed in Mcf) purchased from the Company by all Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Volume Industrial and Large Industrial customers, during the Company peak Sales Month and (b) the volume of service (expressed in Mcf) to all customers under the "Monthly Volume" provisions of Rate Schedule SB, during the Company Peak Sales Month.

   (a) "Company Peak Sales Month" is defined as the calendar month within which the Company experienced the System-Wide Peak Sales Day, such month being December, January or February preceding the Section 1307(f) Application Period for which the determination of the rate per Gas BDU is being made.

   (b) "System-Wide Peak Sales Day" is defined as the day of maximum gas purchased by the Company, including all volumes of gas purchased from the Company throughout its entire system in the states of Pennsylvania and New York.

3. The amount determined in Item 1 above shall be divided by the amount determined in Item 2 above to determine the amount included in the rate for recovery of purchased gas costs.

4. The rate per Gas BDU shall be the amount for purchased gas demand costs (Item 3).

   The current rate per Gas BDU is as follows:

Purchased Gas Demand Cost	$1.0863/BDU	(I)

Each time there is a change in the provision for recovery of purchased gas costs pursuant to Rider "A" of this tariff, a recomputation shall be made, under Items 1, 2 and 3, above, of the component to be included in the rate for purchased gas demand costs and the rate per Gas BDU shall be changed accordingly.

(D) Indicates Decrease (I) Indicates Increase

b. Determination of Customer's Gas BDUs

The Customer's Gas BDUs shall be determined as follows: The actual volumes of gas purchased by the Customer from the Company and used by the Customer in the separately-metered load balancing facilities during such Customer's Peak Billing Cycle, as defined hereinafter, shall be multiplied by a fraction. The numerator shall be the number 30. The denominator shall be the number of days of service for which such Customer was billed in such Customer's Peak Billing Cycle.

The Customer's Peak Billing Cycle shall be the single billing cycle of maximum delivery to the Customer's separately-metered load balancing facilities that ended during one of the months of December, January, February and March during the period beginning with the most recently-completed billing cycle ended in December and ending with the current billing cycle.

If the customer used no gas under this rate schedule during the most recently concluded billing cycles ended in December, January, February or March, then the level of Gas BDUs applicable to Customer shall be zero (0).

2. Margin Demand Charge

a. The rate per Margin BDU shall be $.5630 per Margin BDU. (I)

b. Determination of Customer's Margin BDUs

The Customer's Margin BDU shall be determined as follows: The actual deliveries of gas to the Customer by Company, including not only volumes of gas purchased by the Customer from the Company and used by the Customer in the separately-metered load balancing facilities but also volumes of Customer-owned gas transported to the Customer's load balancing facilities through the Company's facilities, during such Customer's Peak Billing Cycle, as defined hereinafter, shall be multiplied by a fraction. The numerator shall be the number 30. The denominator shall be the number of days of service for which such Customer was billed in such Customer's Peak Billing Cycle.

The Customer's Peak Billing Cycle shall be the single billing cycle of maximum delivery to the Customer's separately-metered load balancing facilities that ended during one of the months of December, January, February and March during the period beginning with the most recently-completed billing cycle ended in December and ending with the current billing cycle.

If the Customer used no gas under this rate schedule during the most recently concluded billing cycles ended in December, January, February or March, then the level of Margin BDUs applicable to Customer shall be zero (0).

(I) Indicates Increase.

B. COMMODITY CHARGES FOR SALES AND FOR TRANSPORTATION SERVICE

1. Commodity Charge for Sales Service

The monthly Commodity Charge for Sales Service shall be the product of multiplying the rate per Mcf, determined as provided below, by the volume of gas sold to the Customer by the Company during the applicable billing cycle.

The rate per Mcf shall be determined as follows and shall be $3.9236 per Mcf, subject to revision as provided below: (D)

The current components of the rate are as follows:

Purchased Gas Commodity Costs, set forth in Rider "A"	$3.3670/Mcf	(D)
Non Gas Costs	$0.5566/Mcf	

a. Determination of Rate per Mcf

The rate per Mcf shall be the sum of:

1. The net amount per Mcf for recovery of the commodity component of purchased gas costs and for recovery or refund of "E" factor amounts, the "PGCC", as determined in Rider "A" - Section 1307(f) Purchased Gas Costs of this tariff; plus

2. The amount of $0.5566 per Mcf for recovery of non-gas costs.

Each time there is a change in the provision for recovery of purchased gas costs pursuant to Rider "A" of this tariff, a recomputation shall be made of the commodity component of purchased gas costs (Item 1, above) and the rate per Mcf shall be changed accordingly. The component included in the rate for recovery of non-gas costs shall remain constant until changed in accordance with a procedure, other than a proceeding pursuant to Section 1307(f) of the Public Utility Code, 66 Pa.C.S. Section 1307(f).

2. Commodity Charge for Transportation Service

The monthly Commodity Charge for Transportation Service shall be the product of multiplying the rate per Mcf, determined as provided below, by the volume of gas transported by the Company to the Customer's load balancing facilities.

The rate per Mcf for transportation of gas under this rate schedule shall be $1.0466 per Mcf, which includes $0.5566 for recovery of non-gas costs and $0.4900 for recovery of purchased gas.

(D) Indicates Decrease (I) Indicates Increase

V. SURCHARGE

The non-purchased gas cost Demand Charges and the non-purchased gas cost Commodity Charge for Sales Service and the non-purchased gas cost Commodity Charge for Transportation Service shall be subject to surcharges in accordance with provisions of Rider B - State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge. (C)

VI. AMOUNTS TO BE INCLUDED IN OVER/UNDERCOLLECTION OF GAS COSTS

Purchased gas cost revenues billed under this rate schedule shall be included as revenues for recovery of gas costs for purposes of computing Factor "E" of Company's 1307(f) rate in accordance with procedures set forth in Rider "A" - Section 1307(f) Purchased Gas Costs.

VII. SPECIAL PROVISIONS

Monthly metered Special Provisions A through J contained in the Company's Rate Schedule for Transportation Service shall apply to transportation service under this rate schedule.

VIII. RULES AND REGULATIONS

The rules and regulations set forth in this tariff shall govern, where applicable, the supply of gas service under this rate schedule.

SVIS

SMALL VOLUME INDUSTRIAL SERVICE RATE SCHEDULE

INDUSTRIAL CLASSIFICATION

An Industrial customer shall be defined as a customer using gas primarily in a process which grades or changes raw material or unfinished material into another form or product including establishments in mining and manufacturing. The nature of the customer's primary business or economic activity at the location served determines the classification.

If a particular load to a manufacturing or processing plant represents gas used for plant cafeteria or a heating load, with or without processing load, whether or not separately metered, the account shall be classified as Industrial.

AVAILABILITY OF SERVICE

Gas service shall be available at one location, except as otherwise provided, for Industrial customers. All industrial customers shall receive service under this rate schedule except industrial customers eligible for service under Rate Schedule IVIS for Intermediate Volume Industrial Service, Rate Schedule LVIS for Large Volume Industrial Service or under Rate Schedule LIS for Large Industrial Service. Customers served under this rate schedule will be billed according to their annual consumption level as follows. Those customers with actual deliveries of 1,000,000 cubic feet (1,000 Mcf) or less during the twelve billing months of the calendar year preceding the next-succeeding Application Period, as defined in this rate schedule, shall be considered to be a SVIS customer. The actual deliveries of gas to the Customer shall include not only volumes of gas purchased from the Company by such Customer but also volumes of Customer-owned gas transported by the Company to such Customer.

A proposed new Industrial Customer who does not qualify for the IVIS, LVIS or LIS Rate Schedules, not previously receiving any service from the Company, shall be considered a SVIS Customer unless both the Company and the Customer agree that the projected total volume of gas, including not only volumes of gas to be purchased from the Company by such Industrial Customer but also volumes of Customer-owned gas projected to be transported by the Company to such Customer, measured in thousand cubic feet (Mcf), will be not less than 1,000 Mcf during the succeeding twelve months.

APPLICABILITY

Applicable in all areas served under this tariff.

RESERVED FOR FUTURE USE

INTERMEDIATE VOLUME INDUSTRIAL SERVICE RIDER BDS

BUSINESS DEVELOPMENT SERVICE RIDER

APPLICABILITY

Throughout the territory served under this tariff.

AVAILABILITY OF SERVICE

This Rider is available to Industrial customers with regard to sales service under the Intermediate Volume Industrial Service Rate Schedule. This rider is not available with regard to service under Rate Schedule IVI-LBS.

TERM

To become effective on the first day of the next billing cycle following qualification and acceptance by the Company and to continue during the qualification period for five (5) years.

QUALIFICATIONS

1. Facility

The following shall be considered a "qualifying facility":

A. For new customers:

1) a newly-constructed facility; or

2) an existing facility that has been purchased, or leased, and has been vacant for at least six (6) months.

B. For existing customers:

1) any combination of new employment or investment which is equal to at least ten percent (10%) of the existing customer's historical level of employment at the time of application. For purposes of this subsection, an investment in plant facilities of $15,000 shall be considered equivalent to one new employee.

2. Gas Usage

A. New Customers

The gas consumed by an applicant, at a qualifying facility, shall be eligible for this rate, if it is demonstrated that the facility will have gas consumption in excess of 2,400 Mcf per year.

B. Existing Customers

Incremental gas consumed by an applicant, at a qualifying facility, shall be eligible for this rate provided that the incremental load is 20% of the applicant's prior year's normalized load or 2,400 Mcf per year, whichever is less. However, such incremental gas usage will not qualify unless the incremental load totals at least 1,200 Mcf per year. To determine qualifying gas usage, the incremental load will be measured against the gas consumed by the applicant, normalized over the most recent twelve-month period preceding the date of application for which data are available.

3. Classification

Applicants who qualify for one of the following classifications, pursuant to the Standard Industrial Classification Manual (1972 edition, as amended) will be eligible for this rider:

Manufacturing Division - major groups 20 - 39

4. Application

Applications for the rate must be received by the Company at least ninety (90) days, but not more than eighteen (18) months, prior to start-up of the qualifying facility.

RATES

New Intermediate Volume Industrial Service customers who qualify for service under this Rider will receive a reduction to the otherwise applicable commodity rate, as stated below, for all gas usage. Existing Intermediate Volume Industrial Service customers who qualify for service under this Rider will receive a reduction to the otherwise applicable commodity rate, as stated below for the qualifying portion of gas usage as determined in Qualifications Section 2.B, above. Customer charges and penalties, if any, under the Intermediate Volume Industrial Service Rate Schedule, are not subject to reduction.

A. Amount of the Reduction

For years one, two and three of the qualification period, there shall be a reduction of $0.02 per 100 cubic feet of qualifying consumption under the Intermediate Volume Industrial Service Rate Schedule.

For years four and five of the qualification period, there shall be a reduction of $0.01 per 100 cubic feet of qualifying consumption under the Intermediate Volume Industrial Service Rate Schedule.

OTHER PROVISIONS

Except as modified by the terms of this Rider, all provisions of the Intermediate Volume Industrial Service Rate Schedule apply to service to the customer.

Rate Schedule IVI-LBS

LOAD BALANCING SERVICE
FOR INTERMEDIATE VOLUME INDUSTRIAL CUSTOMERS

I. APPLICABILITY

Throughout the territory served under this tariff.

II. AVAILABILITY

Sales Service and Transportation Service under this rate schedule are available to Intermediate Volume Industrial customers that execute an agreement for one or more twelve-month periods of service under this rate schedule for incremental load used in load balancing facilities, or where, in the judgment of the Company, existing load would be displaced by an alternate fuel or an alternate source of gas. For purposes of the rate schedule, "incremental load" shall consist of the following: (C)

(1) Any volume of gas used at gas-consuming facilities constructed or installed after May 20, 1989 that will result in additional or expanded use of gas received from the Company; or

(2) Any volume of gas used at existing gas-consuming facilities of Customer at which the Customer has not used gas taken from the Company for at least twelve (12) consecutive months.

For purposes of this rate schedule, "load balancing facilities" shall consist of any facilities of a Customer which use incremental load.

The Customer, in its sole discretion, must determine whether it will be more advantageous of the Customer to receive service for incremental load under this rate schedule or under the Intermediate Volume Industrial Service rate schedule.

The customer's load balancing facilities shall be constructed in a manner satisfactory to the Company so that the Company will be able to meter the volume of gas used by the Customer in the load balancing facilities separately from gas used by the Customer in other facilities.

The Customer's load balancing facilities must be served by a discrete gas service supply system beyond the Company's meter. During business hours, the Company shall have the right to inspect Customer's facilities to determine whether customer's facilities, including Customer's gas service supply system and load balancing facilities, meet the requirements of this rate schedule.

In order to qualify for Service under this rate schedule, Customers must execute an agreement for service under this rate schedule within one (1) year after either: (1) the date of the completion of the installation of new gas consuming facilities; or (2) the date that the Customer begins taking gas from the Company at existing facilities of the customer which have not used gas taken from the Company for at least twelve (12) consecutive months.

(C) Indicates Change

III. NATURE OF SERVICE

Sales Service provided under this rate schedule shall be firm service up to the level of the Customer's Gas BDU level established below, subject to the curtailment priorities of Rule 26. Sales Service in excess of the Customer's Gas BDU level will be provided only to the extent that the Company determines, from time to time, that available gas supplies are sufficient to provide the level of service desired by the Customer without affecting adversely the reliability of service to the Company's existing customers receiving firm service.

Transportation Service provided under this rate schedule shall be firm Service up to the level of the Customer's Margin BDU level established below, subject to the curtailment priorities of Rule 26. Transportation Service in excess of the Customer's Margin BDU level will be provided only to the extent that the Company determines, from time to time, that available gas supplies are sufficient to provide the level of service desired by the Customer without affecting adversely the reliability of service to the Company's existing customers receiving firm service.

IV. MONTHLY BILL

The monthly bill, for sales service under this rate schedule, shall be the sum of the Demand Charges, as computed in Section A hereinafter, and the Commodity Charges for sales and for transportation service, as computed in Section B hereinafter.

A. DEMAND CHARGES

The monthly Demand Charges shall be the sum of (1) the product of multiplying the rate per Gas Billing Demand Unit (Gas BDU), determined as provided below, by the number of the Customer's Gas BDUs, determined as provided below, and (2) the product of multiplying the rate per Margin Billing Demand Unit (Margin BDU) determined as provided below, by the number of Margin BDUs, determined as provided below.

1. Gas Demand Charge

a. Determination of Rate Per Gas BDU

The rate per Gas BDU shall be determined as follows:

1. The purchased gas demand costs applicable to the Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Volume Industrial and Large Industrial classes, the "DC", shall be obtained from Rider "A" - Section 1307(f) Purchased Gas Costs.

2. The number 12 shall be multiplied by the sum of (a) the volume of gas (expressed in Mcf) purchased from the Company by all Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Volume

Industrial and Large Industrial customers, during the Company peak Sales Month defined in Rate Schedule CPA-LBS and (b) the volumes of service (expressed in Mcf) to all customers under the "Monthly Volume" provisions of Rate Schedule SB, during the Company Peak Sales Month defined in Rate Schedule CPA-LBS.

3. The amount determined in Item 1 above shall be divided by the amount determined in Item 2 above to determine the amount included in the rate for recovery of purchased gas costs.

4. The rate per Gas BDU shall be the amount for purchased gas demand costs (Item 3).

The current rate per Gas BDU is as follows:

Purchased Gas Demand Cost	$1.0863/BDU	(I)

Each time there is a change in the provision for recovery of purchased gas costs pursuant to Rider "A" of this tariff, a recomputation shall be made, under Items 1, 2 and 3, above, of the component to be included in the rate for purchased gas demand costs and the rate per Gas BDU shall be changed accordingly.

b. Determination of Customer's Gas BDUs

The Customer's Gas BDUs shall be determined as follows: The actual volumes of gas purchased by the Customer from the Company and used by the Customer in the separately-metered load balancing facilities during such Customer's Peak billing Cycle, as defined hereinafter, shall be multiplied by a fraction. The numerator shall be the number 30. The denominator shall be the number of days of service for which such Customer was billed in such Customer's Peak Billing Cycle.

The Customer's Peak Billing Cycle shall be the single billing cycle of maximum delivery to the Customer's separately-metered load balancing facilities that ended during one of the months of December, January, February and March during the period beginning with the most recently-completed billing cycle ended in December and ending with the current billing cycle.

If the customer used no gas under this rate schedule during the most recently concluded billing cycles ended in December, January, February or March, then the level of Gas BDUs applicable to Customer shall be zero (0).

2. Margin Demand Charge

a. The rate per Margin BDU shall be $0.5122 per Margin BDU.

b. Determination of Customer's Margin BDUs

The Customer's Margin BDUs shall be determined as follows: The actual deliveries of gas to the Customer by Company, including not only volumes of gas purchased by the Customer from the Company and used by the Customer in the separately-metered load balancing facilities but also volumes of Customer-owned gas transported to the Customer's load balancing facilities through the Company's facilities, during such Customer's Peak billing Cycle, as defined hereinafter, shall be multiplied by a fraction. The numerator shall be the number 30. The denominator shall be the number of days of service for which such Customer was billed in such Customer's Peak Billing Cycle.

The Customer's Peak Billing Cycle shall be the single billing cycle of maximum delivery to the Customer's separately-metered load balancing facilities that ended during one of the months of December, January, February and March during the period beginning with the most recently-completed billing cycle ended in December and ending with the current billing cycle.

If the customer used no gas under this rate schedule during the most recently concluded billing cycles ended in December, January, February or March, then the level of Margin BDUs applicable to Customer shall be zero (0).

B. COMMODITY CHARGES FOR SALES AND FOR TRANSPORTATION SERVICE

1. Commodity Charge for Sales Service

The monthly Commodity Charge for Sales Service shall be the product of multiplying the rate per Mcf, determined as provided below, by the volume of gas sold to the Customer by the Company during the applicable billing cycle.

The rate per Mcf shall be determined as follows and shall be $3.7478 per Mcf, subject to revision as provided below: (D)

The current components of the rate are as follows:

Purchased Gas Commodity Costs, set forth in Rider "A"	$3.3670/Mcf	(D)
Non Gas Costs	$0.3808/Mcf	

a. Determination of Rate per Mcf

The rate per Mcf shall be the sum of:

1. The net amount per Mcf for recovery of the commodity component of purchased gas costs and for recovery or refund of "E" factor amounts, the "PGCC", as determined in Rider "A" - Section 1307(f) Purchased Gas Costs of this tariff; plus

(D) Indicates Decrease (I) Indicates Increase

2. The amount of $0.3808 per Mcf for recovery of non-gas costs.

Each time there is a change in the provision for recovery of purchased gas costs pursuant to Rider "A" of this tariff, a recomputation shall be made of the commodity component of purchased gas costs (Item 1, above) and the rate per Mcf shall be changed accordingly. The component included in the rate for recovery of non-gas costs shall remain constant until changed in accordance with a procedure, other than a proceeding pursuant to Section 1307(f) of the Public Utility Code, 66 Pa.C.S. Section 1307(f).

2. Commodity Charge for Transportation Service

The monthly Commodity Charge for Transportation Service shall be the product of multiplying the rate per Mcf, determined as provided below, by the volume of gas transported by the Company to the Customer's load balancing facilities.

The rate per Mcf for transportation of gas under this rate schedule shall be $0.8708 per Mcf, which includes $0.3808 for recovery of non-gas costs and $0.4900 for recovery of purchased gas. (I)

V. SURCHARGE

The non-purchased gas cost Demand Charges and the non-purchased gas cost Commodity Charge for Sales Service and the non-purchased gas cost Commodity Charge for Transportation Service shall be subject to surcharges in accordance with provisions of Rider B - State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge.

VI. AMOUNTS TO BE INCLUDED IN OVER/UNDERCOLLECTION OF GAS COSTS

Purchased gas cost revenues billed under this rate schedule shall be included as revenues for recovery of gas costs for purposes of computing Factor "E" of Company's 1307(f) rate in accordance with procedures set forth in Rider "A" - Section 1307(f) Purchased Gas Costs.

VII. SPECIAL PROVISIONS

Monthly metered Special Provisions A through J contained in the Company's Rate Schedule for Transportation Service shall apply to transportation service under this rate schedule.

VIII. RULES AND REGULATIONS

The rules and regulations set forth in this tariff shall govern, where applicable, the supply of gas service under this rate schedule.

RATE SCHEDULE LVIS

LARGE VOLUME INDUSTRIAL SERVICE

INDUSTRIAL CLASSIFICATION

An Industrial Customer is a customer using gas primarily in a process which grades or changes raw material or unfinished material into another form or product including establishments in mining and manufacturing. The nature of the customer's primary business or economic activity at the location served governs, irrespective of whether a particular load to a manufacturing or processing plant represents gas used for plant cafeteria or a heating load, with or without processing load, whether or not separately metered.

APPLICABILITY

Applicable in all areas served under this tariff. (C)

AVAILABILITY OF SERVICE

I. MANDATORY SERVICE

Service under this rate schedule is available to, and is mandatory for, Industrial Customers, except customers receiving service pursuant to Rate Schedule LIS - Large Industrial Service that meet any of the following criteria:

A. The total of the Company's actual deliveries of gas to the Industrial Customer, including not only volumes of gas purchased from the Company by such Industrial Customer but also volumes of Industrial Customer-owned gas transported by the Company to such Industrial Customer, measured in thousand cubic feet (Mcf), during the twelve billing months of the calendar year preceding the next-succeeding Application Period, as defined in this rate schedule, shall have been not less than 50,000 Mcf; or

B. A proposed new Industrial Customer, not previously receiving any service from the Company, for which the Company and the Industrial Customer agree that the projected total volume of gas, including not only volumes of gas to be purchased from the Company by such Industrial Customer but also volumes of Industrial Customer-owned gas projected to be transported by the Company to such Industrial Customer, measured in thousand cubic feet (Mcf), will be not less than 50,000 Mcf during the succeeding twelve months; or

(C) Indicates Change

LVIS
Large Volume Industrial Service (Cont'd)

C. An Industrial Customer, for which the Company estimates that the total volumes of gas purchased from the Company or transported by the Company during the next succeeding twelve months will be not less than 50,000 Mcf, if the Industrial Customer has used total volumes of gas in at least one billing month of not less than 4,167 Mcf, even if the Customer disagrees with the Company's estimate.

D. An Industrial Customer for which the Company estimates that total volumes of gas to be used by the customer during the next succeeding twelve months will not be less than 50,000 Mcf of gas per year whether the gas is purchased by the Industrial Customer from the Company, delivered by the Company to the Industrial Customer, or obtained by the customer from another source.

An Industrial Customer that meets the above criteria under this rate schedule at the beginning of an Application Period is required to continue to be subject to this rate schedule during all months of such Application Period. An Industrial Customer that meets the above criteria under this rate schedule during an Application Period is required to continue to be subject to this rate schedule during all or remaining months of such Application Period.

1.149¢	per 100 cubic feet	Gas Procurement Charge (Rider H)	
51.654¢	per 100 cubic feet	Total Natural Gas Supply Charge	(D)

The Natural Gas Supply Charge shall include a Merchant Function Charge (Rider G) to recover uncollectible costs associated with purchase gas costs of 0.3398% and the Gas Procurement Charge (Rider H) to recover costs of procuring natural gas pursuant to 52 Pa. Code §62.223.

The above non-purchased gas cost rates shall be subject to surcharges in accordance with provisions of Rider B - State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge.

RULES AND REGULATIONS

The Rules and Regulations set forth in this tariff shall govern, where applicable, the supply of gas service under this rate schedule.

APPLICABLE PERIOD

The Application Period shall be the twelve months beginning March 1 of each year.

LARGE VOLUME INDUSTRIAL SERVICE RIDER BDS

BUSINESS DEVELOPMENT SERVICE RIDER

APPLICABILITY

Throughout the territory served under this tariff.

AVAILABILITY OF SERVICE

This Rider is available to Industrial customers with regard to sales service under the Large Volume Industrial Service Rate Schedule. This Rider is not available with regard to service under Rate Schedule LVI-LBS.

TERM

To become effective on the first day of the next billing cycle following qualification and acceptance by the Company and to continue during the qualification period for five (5) years.

QUALIFICATIONS

1. Facility

The following shall be considered a "qualifying facility":

A. For new customers:

(1) a newly-constructed facility; or

(2) an existing facility that has been purchased, or leased, and has been vacant for at least six (6) months.

B. For existing customers:

(1) any combination of new employment or investment which is equal to at least ten percent 10% of the existing customer's historical level of employment at the time of application. For purposes of this subsection, an investment in plant facilities of $15,000 shall be considered equivalent to one new employee.

2. Gas Usage

A. New Customers

The gas consumed by an applicant, at a qualifying facility, shall be eligible for this rate, provided there is sufficient consumption to qualify for the Large Volume Industrial Service Rate Schedule.

B. Existing Customers

Incremental gas consumed by an applicant, at a qualifying facility, shall be eligible for this rate provided that the incremental load is greater than 12,000 Mcf per year and the total annual consumption is sufficient to qualify for the Large Volume Industrial Service Rate Schedule. To determine qualifying gas usage, the incremental load will be measured against the gas consumed by the applicant over the most recent twelve-month period preceding the date of application for which data are available.

3. Classification

Applicants who qualify for one of the following classifications, pursuant to the Standard Industrial Classification Manual (1972 edition, as amended) will be eligible for this rider:

Manufacturing Division - major groups 20 - 39

4. Application

Applications for the rate must be received by the Company at least ninety (90) days, but not more than eighteen (18) months, prior to start-up of the qualifying facility.

RATES

New Large Volume Industrial Service customers who qualify for service under this Rider will receive a reduction to the otherwise applicable commodity rate, as stated below, for all gas usage. Existing Large Volume Industrial Service customers who qualify for service under this Rider will receive a reduction to the otherwise applicable commodity rate, as stated below for the qualifying portion of gas usage as determined in Qualifications Section 2.B, above. Customer charges and penalties, if any, under the Large Volume Industrial Service Rate Schedule, are not subject to reduction.

A. Amount of the Reduction

For years one, two and three of the qualification period, there shall be a reduction of $0.02 per 100 cubic feet of qualifying consumption under the Large Volume Industrial Service Rate Schedule.

For years four and five of the qualification period, there shall be a reduction of $0.01 per 100 cubic feet of qualifying consumption under the Large Volume Industrial Service Rate Schedule.

OTHER PROVISIONS

Except as modified by the terms of this Rider, all provisions of the Large Volume Industrial Service Rate Schedule apply to service to the customer.

Rate Schedule LVI-LBS

LOAD BALANCING SERVICE
FOR LARGE VOLUME INDUSTRIAL CUSTOMERS

I. APPLICABILITY

Throughout the territory served under this tariff.

II. AVAILABILITY

Sales Service and Transportation Service under this rate schedule are available to Large Volume Industrial customers that execute an agreement for one or more twelve-month periods of service under this rate schedule for incremental load used load used in load balancing facilities, or where, in the judgment of the Company, existing load would be displaced by an alternate fuel or an alternate source of gas. For the purposes of this rate schedule, "incremental load" shall consist of the following: (C)

(1) Any volume of gas used at gas-consuming facilities constructed or installed after May 20, 1989, that will result in additional or expanded use of gas received from the Company; or

(2) Any volume of gas used at existing gas-consuming facilities of Customer at which the Customer has not used gas taken from the Company for at least twelve (12) consecutive months.

For purposes of this rate schedule, "load balancing facilities" shall consist of any facilities of a Customer which use incremental load.

The Customer, in its sole discretion, must determine whether it will be more advantageous for the Customer to receive service for incremental load under this rate schedule or under the Large Volume Industrial Service rate schedule.

The Customer's load balancing facilities shall be constructed in a manner satisfactory to the Company so that the Company will be able to meter the volume of gas used by the Customer in the load balancing facilities separately from gas used by the Customer in other facilities.

The Customer's load balancing facilities must be served by a discrete gas service supply system beyond the Company's meter. During business hours, the Company shall have the right to inspect Customer's facilities to determine whether Customer's facilities, including Customer's gas service supply system and load balancing facilities, meet the requirements of this rate schedule.

In order to qualify for service under this rate schedule, Customers must execute an agreement for service under this rate schedule within one (1) year after either: (1) the date of the completion of the installation of new gas-consuming facilities; or (2) the date that the Customer begins taking gas from the Company at existing facilities of the Customer which have not used gas taken from the Company for at least twelve (12) consecutive months.

Service under this rate schedule shall not be subject to Rate Schedule BP - Service for customers with Bypass facilities.

(C) Indicates Change

III. NATURE OF SERVICE

Sales Service provided under this rate schedule shall be firm service up to the level of the Customer's Gas BDU level established below, subject to the curtailment priorities of Rule 26. Sales Service in excess of the Customer's Gas BDU level will be provided only to the extent that the Company determines, from time to time, that available gas supply and available system capacity are sufficient to provide the level of service desired by the Customer without affecting adversely the reliability of service to the Company's existing customers receiving firm service.

Transportation Service provided under this rate schedule shall be firm Service up to the level of the Customer's Margin BDU level established below, subject to the curtailment priorities of Rule 26. Transportation Service in excess of the Customer's Margin BDU level will be provided only to the extent that the Company determines, from time to time, that available system capacity is sufficient to provide the level of service desired by the Customer without affecting adversely the reliability of service to the Company's existing customers receiving firm service.

IV. MONTHLY BILL

The monthly bill, for sales service under this rate schedule, shall be the sum of the Demand Charges, as computed in Section A hereinafter, and the Commodity Charges for sales and for transportation service, as computed in Section B hereinafter.

A. DEMAND CHARGES

The monthly Demand Charges shall be the sum of (1) the product of multiplying the rate per Gas Billing Demand Unit (Gas BDU), determined as provided below, by the number of the Customer's Gas BDUs, determined as provided below, and (2) the product of multiplying the rate per Margin Billing Demand Unit (Margin BDU) determined as provided below, by the number of Margin BDUs, determined as provided below.

1. Gas Demand Charge

a. Determination of Rate Per Gas BDU

The rate per Gas BDU shall be determined as follows:

1. The purchased gas demand costs applicable to the Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Volume Industrial and Large Industrial classes, the "DC" shall be obtained under Rider "A" - Section 1307(f) Purchased Gas Costs.

2. The number 12 shall be multiplied by the sum of (a) the volume of gas (expressed in Mcf) purchased from the Company by all Residential,

Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Volume Industrial and Large Industrial customers, during the Company Peak Sales Month defined in Rate Schedule CPA-LBS and (b) the volume of service (expressed in Mcf) to all customers under the "Monthly Volume" provisions of Rate Schedule SB, during the Company Peak Sales Month defined in Rate Schedule CPA-LBS.

3. The amount determined in Item 1 above shall be divided by the amount determined in Item 2 above to determine the amount included in the rate for recovery of purchased gas costs.

4. The rate per Gas BDU shall be the amount for purchased gas demand costs (Item 3).

The current rate per Gas BDU is as follows:

Purchased Gas Demand Cost	$1.0863/BDU	(I)

Each time there is a change in the provision for recovery of purchased gas costs pursuant to Rider "A" of this tariff, a recomputation shall be made, under Items 1, 2 and 3, above, of the component to be included in the rate for purchased gas demand costs and the rate per Gas BDU shall be changed accordingly.

b. Determination of Customer's Gas BDUs

The Customer's Gas BDUs shall be determined as follows: The actual volumes of gas purchased by the Customer from the Company and used by the Customer in the separately-metered qualifying load balancing facilities during such Customer's Peak billing Cycle, as defined hereinafter, shall be multiplied by a fraction. The numerator shall be the number 30. The denominator shall be the number of days of service for which such Customer was billed in such Customer's Peak Billing Cycle.

The Customer's Peak Billing Cycle shall be the single billing cycle of maximum delivery to the Customer's separately-metered qualifying load balancing facilities that ended during on of the months of December, January, February and March during the period beginning with the most recently-completed billing cycle and ending with the current billing cycle.

If the customer used no gas under this rate schedule during the most recently concluded billing cycles ended in December, January, February or March, then the level of Gas BDUs applicable to Customer shall be zero (0).

(D) Indicates Decrease (I) Indicates Increase

2. Margin Demand Charge

a. The rate per Margin BDU shall be $0.3182 per Margin BDU.

b. Determination of Customer's Margin BDUs

The Customer's Margin BDUs shall be determined as follows: The actual deliveries of gas to the Customer by Company, including not only volumes of gas purchased by the Customer from the Company and used by the Customer in the separately-metered load balancing facilities but also volumes of Customer-owned gas transported to the Customer's load balancing facilities through the Company's facilities, during such Customer's Peak billing Cycle, as defined hereinafter, shall be multiplied by a fraction. The numerator shall be the number 30. The denominator shall be the number of days of service for which such Customer was billed in such Customer's Peak Billing Cycle.

The Customer's Peak Billing Cycle shall be the single billing cycle of maximum delivery to the Customer's separately-metered load balancing facilities that ended during one of the months of December, January, February and March during the period beginning with the most recently-completed billing cycle ended in December and ending with the current billing cycle.

If the customer used no gas under this rate schedule during the most recently concluded billing cycles ended in December, January, February or March, then the level of Margin BDUs applicable to Customer shall be zero (0).

B. COMMODITY CHARGES FOR SALES AND FOR TRANSPORTATION SERVICE

1. Commodity Charge for Sales Service

The monthly Commodity Charge for Sales Service shall be the product of multiplying the rate per Mcf, determined as provided below, by the volume of gas sold to the Customer by the Company during the applicable billing cycle.

The rate per Mcf shall be determined as follows and shall be $3.6143 per Mcf, subject to revision as provided below: (D)

The current components of the rate are as follows:

Purchased Gas Commodity Costs, set forth in Rider "A"	$3.3670/Mcf	(D)
Non Gas Costs	$0.2473/Mcf	

a. Determination of Rate per Mcf

The rate per Mcf shall be the sum of:

1. The net amount per Mcf for recovery of the commodity component of purchased gas costs and for recovery or refund of "E" factor amounts, the "PGCC", as determined in Rider "A" - Section 1307(f) Purchased Gas Costs of this tariff; plus

2. The amount of $0.2473 per Mcf for recovery of non-gas costs.

Each time there is a change in the provision for recovery of purchased gas costs pursuant to Rider "A" of this tariff, a recomputation shall be made of the commodity component of purchased gas costs (Item 1, above) and the rate per Mcf shall be changed accordingly. The component included in the rate for recovery of non-gas costs shall remain constant until changed in accordance with a procedure, other than a proceeding pursuant to Section 1307(f) of the Public Utility Code, 66 Pa.C.S. Section 1307(f).

2. Commodity Charge for Transportation Service

The monthly Commodity Charge for Transportation Service shall be the product of multiplying the rate per Mcf, determined as provided below, by the volume of gas transported by the Company to the Customer's load balancing facilities.

The rate per Mcf for transportation of gas under this rate schedule shall be $0.7373 per Mcf, which includes $0.2473 for recovery of non-gas costs and $0.4900 for recovery of purchased gas. (I)

V. SURCHARGE

The non-purchased gas cost Demand Charges and the non-purchased gas cost Commodity Charge for Sales Service and the non-purchased gas cost Commodity Charge for Transportation Service shall be subject to surcharges in accordance with provisions of Rider B - State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge as set forth in this tariff.

VI. AMOUNTS TO BE INCLUDED IN OVER/UNDERCOLLECTION OF GAS COSTS

Purchased gas cost revenues billed under this rate schedule shall be included as revenues for recovery of gas costs for purposes of computing Factor "E" of Company's 1307(f) rate in accordance with procedures set forth in Rider "A" - Section 1307(f) Purchased Gas Costs.

VII. SPECIAL PROVISIONS

Monthly metered Special Provisions A through J contained in the Company's Rate Schedule for Transportation Service shall apply to transportation service under this rate schedule.

VIII. RULES AND REGULATIONS

The rules and regulations set forth in this tariff shall govern, where applicable, the supply of gas service under this rate schedule.

RATE SCHEDULE LIS

LARGE INDUSTRIAL SERVICE

INDUSTRIAL CLASSIFICATION

An Industrial Customer is a customer using gas primarily in a process which grades or changes raw material or unfinished material into another form or product including establishments in mining and manufacturing. The nature of the customer's primary business or economic activity at the location served governs, irrespective of whether a particular load to a manufacturing or processing plant represents gas used for plant cafeteria or a heating load, with or without processing load, whether or not separately metered.

APPLICABILITY

Applicable in all areas served under this tariff. (C)

AVAILABILITY OF SERVICE

I. MANDATORY SERVICE

Service under this rate schedule is available to, and is mandatory for, Industrial Customers that meet any of the following criteria:

A. The total of the Company's actual deliveries of gas to the Industrial Customer, including not only volumes of gas purchased from the Company by such Industrial Customer but also volumes of Customer-owned gas transported by the Company to such Industrial Customer, measured in thousand cubic feet (Mcf), during the twelve billing months of the calendar year preceding the next-succeeding Application Period, as defined in this rate schedule, shall have been not less than 200,000 Mcf; or

B. A proposed new Industrial Customer, not previously receiving any service from the Company, for which the Company and the Industrial Customer agree that the projected total volume of gas, including not only volumes of gas to be purchased from the Company by such Industrial Customer but also volumes of Customer-owned gas projected to be transported by the Company to such Industrial Customer, measured in thousand cubic feet (Mcf), will be not less than 200,000 Mcf during the succeeding twelve months; or

LOAD BALANCING SERVICE
FOR LARGE INDUSTRIAL CUSTOMERS

I. APPLICABILITY

Throughout the territory served under this tariff.

II. AVAILABILITY

Sales Service and Transportation Service under this rate schedule are available to Large Industrial customers that execute an agreement for one or more twelve-month periods of service under this rate schedule for incremental load used in load balancing facilities, or where, in the judgment of the Company, existing load would be displaced by an alternate fuel or an alternate source of gas. For the purposes of this rate schedule, "incremental load" shall consist of the following: (C)

(1) Any volume of gas used at gas-consuming facilities constructed or installed after May 20, 1989, that will result in additional or expanded use of gas received from the Company; or

(2) Any volume of gas used at existing gas-consuming facilities of Customer at which the Customer has not used gas taken from the Company for at least twelve (12) consecutive months.

For the purposes of this rate schedule, "load balancing facilities" shall consist of any facilities of a Customer which use incremental load.

The Customer, in its sole discretion, must determine whether it will be more advantageous for the Customer to receive service for incremental load under this rate schedule or under the Large Industrial Service rate schedule.

The Customer's load balancing facilities shall be constructed in a manner satisfactory to the Company so that the Company will be able to meter the volume of gas used by the Customer in the load balancing facilities separately from gas used by the Customer in other facilities.

The Customer's load balancing facilities must be served by a discrete gas service supply system beyond the Company's meter. During business hours, the Company shall have the right to inspect Customer's facilities to determine whether Customer's facilities, including Customer's gas service supply system and load balancing facilities, meet the requirements of this rate schedule.

In order to qualify for service under this rate schedule, Customers must execute an agreement for service under this rate schedule within one (1) year after either: (1) the date of the completion of the installation of new gas-consuming facilities; or (2) the date that the Customer begins taking gas from the Company at existing facilities of the Customer which have not used gas taken from the Company for at least twelve (12) consecutive months.

Service under this Rate Schedule shall not be subject to Rate Schedule BP - service for customers with bypass facilities.

(C) Indicates Change

III. NATURE OF SERVICE

Sales Service provided under this rate schedule shall be firm service up to the level of the Customer's Gas BDU level established below, subject to the curtailment priorities of Rule 26. Sales Service in excess of the Customer's Gas BDU level will be provided only to the extent that the Company determines, from time to time, that available gas supply and available system capacity are sufficient to provide the level of service desired by the Customer without affecting adversely the reliability of service to the Company's existing customers receiving firm service.

Transportation Service provided under this rate schedule shall be firm Service up to the level of the Customer's Margin BDU level established below, subject to the curtailment priorities of Rule 26. Transportation Service in excess of the Customer's Margin BDU level will be provided only to the extent that the Company determines, from time to time, that available gas system capacity is sufficient to provide the level of service desired by the Customer without affecting adversely the reliability of service to the Company's existing customers receiving firm service.

IV. MONTHLY BILL

The monthly bill, for sales service under this rate schedule, shall be the sum of the Demand Charges, as computed in Section A hereinafter, and the Commodity Charges for sales and for transportation service, as computed in Section B hereinafter.

A. DEMAND CHARGES

The monthly Demand Charges shall be the sum of (1) the product of multiplying the rate per Gas Billing Demand Unit (Gas BDU), determined as provided below, by the number of the Customer's Gas BDUs, determined as provided below, and (2) the product of multiplying the rate per Margin Billing Demand Unit (Margin BDU) determined as provided below, by the number of Margin BDUs, determined as provided below.

1. Gas Demand Charge

a. Determination of Rate Per Gas BDU

The rate per Gas BDU shall be determined as follows:

1. The purchased gas demand costs applicable to the Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Volume Industrial and Large Industrial classes, the "DC", shall be obtained under Rider "A" - Section 1307(f) Purchased Gas Costs.

2. The number 12 shall be multiplied by the sum of (a) the volume of gas (expressed in Mcf) purchased from the Company by all Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Volume Industrial and Large Industrial customers, during the Company Peak Sales Month defined in Rate Schedule CPA

LBS and (b) volume of service (expressed in Mcf) to all customers under the "Monthly Volume" provisions of Rate Schedule SB, during the Company Peak Sales Month defined in Rate Schedule CPA-LBS.

3. The amount determined in Item 1 above shall be divided by the amount determined in Item 2 above to determine the amount included in the rate for recovery of purchased gas costs.

4. The rate per Gas BDU shall be the amount for purchased gas demand costs (Item 3).

The current rate per Gas BDU is as follows:

Purchased Gas Demand Cost	$1.0863/BDU	(I)

Each time there is a change in the provision for recovery of purchased gas costs pursuant to Rider "A" of this tariff, a recomputation shall be made, under Items 1, 2 and 3, above, of the component to be included in the rate for purchased gas demand costs and the rate per Gas BDU shall be changed accordingly.

b. Determination of Customer's Gas BDUs

The Customer's Gas BDUs shall be determined as follows: The actual volumes of gas purchased by the Customer from the Company and used by the Customer in the separately-metered load balancing facilities during such Customer's Peak billing Cycle, as defined hereinafter, shall be multiplied by a fraction. The numerator shall be the number 30. The denominator shall be the number of days of service for which such Customer was billed in such Customer's Peak Billing Cycle.

The Customer's Peak Billing Cycle shall be the single billing cycle of maximum delivery to the Customer's separately-metered load balancing facilities that ended during one of the months of December, January, February and March during the period beginning with the most recently-completed billing cycle ended in December and ending with the current billing cycle.

If the customer used no gas under this rate schedule during the most recently concluded billing cycles ended in December, January, February or March, then the level of Gas BDUs applicable to Customer shall be zero (0).

2. Margin Demand Charge

a. The rate per Margin BDU shall be $0.2517 per Margin BDU.

b. Determination of Customer's Margin BDUs

The Customer's Margin BDUs shall be determined as follows: The actual deliveries of gas to the Customer by Company, including not only volumes of gas purchased by the Customer from the Company and used by the Customer in the separately-metered load balancing facilities but also volumes of Customer-owned gas transported to the Customer's load balancing facilities through the Company's facilities, during such Customer's Peak billing Cycle, as defined hereinafter, shall be multiplied by a fraction. The numerator shall be the number 30. The denominator shall be the number of days of service for which such Customer was billed in such Customer's Peak Billing Cycle.

The Customer's Peak Billing Cycle shall be the single billing cycle of maximum delivery to the Customer's separately-metered load balancing facilities that ended during one of the months of December, January, February and March during the period beginning with the most recently-completed billing cycle ended in December and ending with the current billing cycle.

If the customer used no gas under this rate schedule during the most recently concluded billing cycles ended in December, January, February or March, then the level of Margin BDUs applicable to Customer shall be zero (0).

B. COMMODITY CHARGES FOR SALES AND FOR TRANSPORTATION SERVICE

1. Commodity Charge for Sales Service

The monthly Commodity Charge for Sales Service shall be the product of multiplying the rate per Mcf, determined as provided below, by the volume of gas sold to the Customer by the Company during the applicable billing cycle.

The rate per Mcf shall be determined as follows and shall be $3.5594 per Mcf, subject to revision as provided below: (D)

The current components of the rate are as follows:

Purchased Gas Commodity Costs, set forth in Rider "A"	$3.3670/Mcf	(D)
Non Gas Costs	$0.1924/Mcf	

a. Determination of Rate per Mcf

The rate per Mcf shall be the sum of:

(D) Indicates Decrease (I) Indicates Increase

1. The net amount per Mcf for recovery of the commodity component of purchased gas costs and for recovery or refund of "E" factor amounts, the "PGCC", as determined in Rider "A" - Section 1307(f) Purchased Gas Costs of this tariff; plus

2. The amount of $.1924 per Mcf for recovery of non-gas costs.

Each time there is a change in the provision for recovery of purchased gas costs pursuant to Rider "A" of this tariff, a recomputation shall be made of the commodity component of purchased gas costs (Item 1, above) and the rate per Mcf shall be changed accordingly. The component included in the rate for recovery of non-gas costs shall remain constant until changed in accordance with a procedure, other than a proceeding pursuant to Section 1307(f) of the Public Utility Code, 66 Pa.C.S. Section 1307(f).

2. Commodity Charge for Transportation Service

The monthly Commodity Charge for Transportation Service shall be the product of multiplying the rate per Mcf, determined as provided below, by the volume of gas transported by the Company to the Customer's load balancing facilities.

The rate per Mcf for transportation of gas under this rate schedule shall be $0.6824 per Mcf, which includes $0.1924 for recovery of non-gas costs and $0.4900 for recovery of purchased gas. (I)

V. SURCHARGE

The non-purchased gas cost Demand Charges and the non-purchased gas cost Commodity Charge for Sales Service and the non-purchased gas cost Commodity Charge for Transportation Service shall be subject to surcharges in accordance with provisions of Rider B - State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge as set forth in this tariff.

VI. AMOUNTS TO BE INCLUDED IN OVER/UNDERCOLLECTION OF GAS COSTS

Purchased gas cost revenues billed under this rate schedule shall be included as revenues for recovery of gas costs for purposes of computing Factor "E" of Company's 1307(f) rate in accordance with procedures set forth in Rider "A" - Section 1307(f) Purchased Gas Costs.

VII. SPECIAL PROVISIONS

Monthly metered Special Provisions A through J contained in the Company's Rate Schedule for Transportation Service shall apply to transportation service under this rate schedule.

VIII. RULES AND REGULATIONS

The rules and regulations set forth in this tariff shall govern, where applicable, the supply of gas service under this rate schedule.

(D) Indicates Decrease (I) Indicates Increase

RATE SCHEDULE – NGV

NATURAL GAS VEHICLE SERVICE

I. APPLICABILITY

Throughout the territory served under this tariff.

II. AVAILABILITY

Sales Service under this rate schedule is available for use of natural gas by a customer directly in a natural gas motor vehicle ("NGV").

III. NATURE OF SERVICE

Service provided in this rate schedule shall be firm service subject to the curtailment priorities of Rule 26. For curtailment purposes, service under this rate schedule shall be defined as curtailment priority number (6), firm large noncritical commercial and industrial requirements other than requirement for boiler fuel use.

IV. RATE

Rates per 100 cu. Ft. shall be established by the Company on the first day of each calendar month for each of the categories set forth below to compete with alternative vehicle fuels. The rates shall not be less than the 100% load factor base cost of gas, plus the take-or-pay surcharge, plus the surcharge for Transition Cost, plus the incremental operating cost incurred by the Company for operating Company owned NGV compression equipment on a per Ccf basis, if any, plus $0.01 per cu. ft., plus the state tax adjustment surcharge, and not more than the tailblock rate of the Commercial and Public Authority Service Rate Schedule, including all applicable surcharges, plus the incremental operating cost incurred by the Company for operating Company owned NGV compression equipment on a per Ccf basis, if any.

The 100% load factor base cost of gas shall be $0.44533 per 100 cu. ft. (D)
(as calculated by adding the purchase gas components of the Load Balancing Service Rates).

Purchased Gas 100% Load Factor Demand Cost	$0.10863/Ccf	(I)
plus		
Purchased Gas Commodity Cost	$0.33670/Ccf	(D)
Equals		
100% Load Factor Base Cost of Gas	$0.44533/Ccf	(D)

The incremental operating cost for compression shall be $0.13436/Ccf.

(D) Indicates Decrease (I) Indicates Increase

Natural gas vehicle customers are classified into the following categories:

NGV(1) All natural gas vehicle customers utilizing Company owned filling facilities. A uniform rate shall be established each month within the parameters set forth above, for customers utilizing Company-owned filling facilities.

The minimum NGV(1) rate shall be:	$0.58869/Ccf	(D)
The current components of the minimum NGV(1) rate are as follows:		
100% load factor base cost of gas:	$0.44533/Ccf	(D)
Incremental operating cost of Company owned NGV compression equipment:	$0.13436/Ccf	
Transition Cost Surcharge	$0.00000/Ccf	
State Tax Adjustment Surcharge	$(0.00100)/Ccf	(I)
Minimum allowable Non-Gas cost	$0.01000/Ccf	
The maximum NGV(1) rate shall be:	$0.88058/Ccf	(D)
The current components of the maximum NGV(1) rate are as follows:		
Tailblock rate of the Commercial and Public Authority Service Rate schedule:	$0.74772/Ccf	(D)
Incremental operating cost of Company owned NGV compression equipment:	$0.13436/Ccf	
State Tax Adjustment Surcharge	$(0.00150)/Ccf	(I)

NGV(2) Natural gas vehicle customers utilizing customer owned filling facilities. A uniform rate will be established each month within the parameters set forth above, to customers utilizing customer owned filling facilities.

The minimum NGV(2) rate shall be:	$0.45456/Ccf	(D)
The current components of the minimum NGV(2) rate are as follows:		
100% load factor base cost of gas:	$0.44533/Ccf	(D)
Transition Cost Surcharge	$0.00000/Ccf	
State Tax Adjustment Surcharge	$(0.00077)/Ccf	(I)
Minimum allowable Non-Gas cost	$0.01000/Ccf	
The maximum NGV(2) rate shall be:	$0.74645/Ccf	(D)

(D) Indicates Decrease (I) Indicates Increase

The current components of the maximum NGV(2) rate are as follows:

Tailblock rate of the Commercial and Public Authority Service Rate schedule:	$0.74772/Ccf	(D)
State Tax Adjustment Surcharge	$(0.00127)/Ccf	(I)

V. SURCHARGE

All non-purchased gas cost charges under this rate schedule will be subject to surcharges in accordance with provisions of Rider B - State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge as set forth in this tariff.

VI. AMOUNTS TO BE INCLUDED IN OVER/UNDERCOLLECTION OF GAS COSTS

Purchased gas cost revenues billed under this rate schedule shall be included as revenues for recovery of gas costs for purposes of computing Factor "E" of Company's 1307(f) rate in accordance with procedures set forth in Rider "A" - section 1307(f) Purchased Gas Costs. Purchased gas cost revenues recovered under this rate schedule shall be the 100% load factor base cost of gas as defined above.

VII. RULES AND REGULATIONS

The rules and regulations set forth in this tariff shall govern, where applicable, the supply of gas service under this rate schedule.

(D) Indicates Decrease (I)Indicates Increase

RESERVED FOR FUTURE USE

RATE SCHEDULE BP

SERVICE FOR CUSTOMERS WITH BYPASS FACILITIES

PURPOSE

Bypass customers are required to make reasonable payments toward the recovery by the Company of its fixed costs of service in relation to their use of the Company's system during winter periods. Bypass customers are required to pay over a one-year period approximately the same amount that typical non-bypass customers using the same level of winter service would pay. These bypass customers are required to make these payments so that they pay their fair share of system costs in relationship to their usage, and so that other non-bypass customers are not burdened.

This rate schedule requires also that bypass customers operate in a manner that will not jeopardize service to other customers.

APPLICABILITY

Throughout the territory served under this tariff.

Service under this rate schedule is available to all customers served under Commercial and Public Authority ("C-PA") Service Rate Schedule, Small Volume Industrial Service ("SVIS") Rate Schedule, Intermediate Volume Industrial Service ("IVIS") Rate Schedule, Rate Schedule LVIS or Rate Schedule LIS that have installed facilities which would enable the Customer to receive volumes of gas purchased from or transported by an entity other than the Company, without using the Company's distribution system ("Bypass Facilities"); provided, however, that this Rate Schedule shall not apply to "Self-Help" gas.

"Self-Help" gas refers to gas produced by the customer from gas reserves and wells owned by the customer on a tract of land owned by the customer that is contiguous to the tract of land on which the customer's manufacturing plant is located.

SERVICE AGREEMENT

The Customer must execute a service agreement for one or more twelve-month contract terms terminating at the completion of the last billing cycle ending in November of each year. The Service Agreement shall specify the level of system service, during thirty-day periods, that the customer desires to have available on the Company's distribution system. Such level of service shall be specified in the form of a volume of gas, expressed in Mcf, that the Customer wishes to be able to have the right to purchase from the Company or transport through the Company's facilities during thirty-day periods. Such volume shall be subject to adjustment as explained in the Special Provisions section of this rate schedule.

METERING AND FLOW CONTROL EQUIPMENT

The Company may install at the premises of any customer under this rate schedule an automated meter reading device (AMD) and communications device, at customers expense, which will enable the Company to monitor and record each Bypass Customer's daily usage. In addition, if changes in levels of usage of gas from the Company by any Customer under this rate schedule would have the potential to adversely affect service to others customers, the Company may install flow control devices, at customers expense, to restrict the daily flow of gas to the Customer to approximately one-thirtieth (1/30) of the monthly Bypass nomination.

NATURE OF SERVICE

A nomination under this rate schedule shall permit the customer to use the Company's facilities on a firm basis subject to curtailment priorities of Rule 26 of this Tariff. The gas may be either customer-owned gas or Company-owned gas. If the gas is customer-owned, the customer must have contracted with the Company for transportation service under the rate schedule for Transportation Service. If the gas is Company-owned, the customer must have contracted with the Company for standby service under Rate Schedule SB. If the customer is categorized as a residential or firm critical commercial essential human needs customer, then the customer must contract with the Company under rate schedule PSB.

MONTHLY BILLS

The procedures set forth below require bypass customers to pay over a twelve-month period revenues for recovery of non-gas costs of service approximately equal to amounts paid by average non-bypass customers with similar peak month winter usage. The procedures below require a bypass customer to pay over a twelve-month period based on its peak winter monthly usage multiplied by an average monthly load factor for non-bypass customers. The applicable rate is applied to the resulting volume. The procedures also reduce volumes subject to this rate schedule to credit a bypass customer for actual throughput to which the Company's sales or transportation service rates are applied.

RATE

Customers under this rate schedule shall be subject to the applicable rate listed below to be applied to the Billing Volume, as defined below.

For customers receiving service under	Bypass rate	
Commercial/Public Authority Rate Schedule	$1.3286 per Mcf	(I)
Rate Schedule SVIS	$1.0440 per Mcf	(I)
Rate Schedule IVIS	$1.0471 per Mcf	(I)
Rate Schedule LVIS	$0.7559 per Mcf	(I)
Rate Schedule LIS	$0.2664 per Mcf	(I)

(I) Indicates Increase

MONTHLY VOLUME

The Monthly Volume shall be the volume of gas specified in the Service Agreement under this rate schedule or as adjusted under the Special Provisions section of this rate schedule, as adjusted for the number of days in the billing cycle. In order to adjust the volume of gas specified in the Service Agreement under this rate schedule or as adjusted under the Special Provisions section of this rate schedule for the number of days in a billing cycle, such volume of gas shall be multiplied by a fraction. The numerator of the fraction shall be the number of days in the billing cycle and the denominator shall be thirty (30).

APPLICATION TERM

In this rate schedule, the phrase "Application Term" shall be each twelve-month period terminating at the completion of the last billing cycle ending in November of each year.

BILLING VOLUME

For each billing month, if the volume of gas delivered to the customer from the Company, including both gas purchased by the customer from the Company and gas transported by the Company exceeded 50.00 percent of the Monthly Volume, as adjusted in the manner explained above for the number of days in the billing cycle, then the Billing Volume for service under this rate schedule shall be zero (0) Mcf.

For each billing cycle, if the volume of gas delivered to the customer by the Company, including both gas purchased by the customer from the Company and gas transported by the Company, was less than 50.00 percent of the Monthly Volume, as adjusted in the manner explained above for the number of days in the billing cycle and if the volume determined under item 1, below, is greater than or equal to the volume determined under item 2, below, then the Billing Volume for service under this Rate Schedule shall be zero (0) Mcf.

For each billing month, if the volume of gas delivered to the customer by the Company, including both gas purchased by the customer from the Company and gas transported by the Company, was less than 50.00 percent of the Monthly Volume, as adjusted in the manner explained above for the number of days in the billing cycle and if the volume determined under item 1, below, is less than the volume determined under item 2, below, then the Billing Volume for service under this rate schedule shall be the difference between the volume determined under item 1, below, and the volume determined under item 2, below.

1. The total volume of gas delivered to the customer by the Company, including both Company-owned gas sold to the customer and customer-owned gas transported by the Company, during the period commencing at the beginning of the current Application Term through the completion of the billing cycle for which the Billing Volume is being determined

BILLING VOLUME(Cont'd)

shall be added to the total Mcf volume billed to the customer under this rate schedule for service during the period commencing at the beginning of the current Application Term through the completion of the billing cycle immediately prior to the billing cycle for which the Billing Volume is being determined.

2. a. The Monthly Volume shall be multiplied by a fraction. The numerator of the fraction shall be 365 and the denominator shall be 30.

b. The product of item 2.a. shall be multiplied by 50.00 percent.

c. For each billing cycle during the Application Term, the product of item 2.b., above, shall be multiplied by a fraction. The numerator of the fraction shall be the number of billing cycles during the Application Term that have completed (including the billing cycle for which the Billing Volume is being determined) and the denominator shall be twelve (12).

SPECIAL CREDIT

If the sum of: (1) the total Mcf volume of gas delivered to the Customer by the Company, including both volumes of Company-owned gas sold to the Customer and Customer-owned gas transported by the Company, during an Application Term and (2) the Mcf volume of service under this rate schedule during such Application Term, exceeds the applicable volume determined below, then the Customer shall receive a credit. Such credit will be equal to the applicable rate for service under this rate schedule multiplied by the lesser of:

1. The Mcf volume of service to the Customer under this rate schedule during the Application Term or

2. The difference between:

a. the sum of: (1) the total Mcf volume of gas delivered to the Customer by the Company, including both volumes of Company-owned gas sold to the Customer and Customer-owned gas transported by the Company, during the Application Term and (2) the Mcf volume of service under this rate schedule during such Application Term and

b. the applicable volume computed as set forth below.

For Customers under this rate schedule, the applicable volume, for each Application Term shall be determined under items 1 and 2, below:

1. The volume of gas specified in the Service Agreement under this rate schedule or as adjusted under the Special Provisions section of this

SPECIAL CREDIT (Cont'd)

rate schedule as in effect at the end of the Application Term shall be multiplied by a fraction. The numerator of the fraction shall be 365 and the denominator shall be 30.

2. The product of item 1, above, shall be multiplied by the factor of 0.5000.

ANNUAL MAXIMUM BILL

The Annual Maximum Bill for recovery of non-gas costs of service applies to any customer which provides to the Company accurate and verifiable information concerning the volume of gas taken by the Customer through bypass facilities during a twelve-month Application Term. The Annual Maximum Bill for recovery of non-gas costs of service shall be the sum of: (1) the sum of all basic service charges and administrative rates applicable for service during the Application Term and (2) the product of Distribution's rate for transportation of Pennsylvania gas applicable to the customer multiplied times the total volume of gas used by the bypass customer, including both the volume of gas actually taken from the Company and the volume of bypass gas taken during the Application Term under Rate Schedule BP.

The Annual Bill shall apply only to the portion of rates for recovery of non-gas costs of service and shall not affect the portion of rates for sales of gas by the Company or rates under Rate Schedule SB (for Standby Service) or rates under Rate Schedule PSB (for Priority Standby Service) for recovery of purchased gas costs under Rider A of this tariff.

BILLING

The Company shall include the bill for service under this rate schedule together with the bill for service under all other rate schedules. For each billing cycle, payment for service under this rate schedule shall become due simultaneously with the payment for service under all other rate schedules.

SPECIAL PROVISIONS

1. If the sum of purchases by a Customer from the Company and transportation deliveries by the Company to a Customer, during any billing cycle that ends in any December, January, February or March, exceeds the level of service, expressed in Mcf, set forth in the Service Agreement, as adjusted for the number of days in such billing cycle, then the level of service that is

SPECIAL PROVISIONS (Cont'd)

set forth in the Service Agreement shall be adjusted to equal the volume of gas actually purchased from, and transported by, the Company during such billing cycle adjusted to a 30 day billing cycle by multiplying such volume by a fraction. The numerator of the fraction shall be thirty (30) and the denominator shall be the number of days in the billing cycle.

If the level of service specified in the Service Agreement is adjusted under this Special Provision, then the Service Agreement shall continue to be effective and the Service Agreement shall be interpreted to specify the level of service as adjusted under this Special Provision, unless such volume of gas and term of the Service Agreement are further adjusted in accordance with this Special Provision. Such level of service, as adjusted under this Special Provision, shall continue to be effective for the remainder of the Service Agreement.

2. If a Customer served under the Commercial/Public Authority Rate Schedule, Rate Schedule SVIS, Rate Schedule IVIS, Rate Schedule LVIS or Rate Schedule LIS, that has Bypass Facilities installed, declines to enter into a Service Agreement for service under this rate schedule but either purchases gas from the Company or transports gas through the Company's facilities, such purchase of gas from the Company or transportation of gas by the Company shall be deemed to be the execution by the Customer of a Service Agreement under this rate schedule with a term of one Application Term and the level of service under such Service Agreement shall be the volume of gas purchased or transported for the Customer from the Company during such billing cycle, adjusted to a 30 day billing cycle. In order to adjust the level of service to a 30 day billing cycle the volume of gas actually purchased from and transported by the Company during such billing cycle shall be multiplied by a fraction. The numerator of the fraction shall be thirty (30) and the denominator shall be the number of days in the billing cycle.

MAXIMUM SAFE OPERATING VOLUME

If substantial changes by the Customer in levels of usage of gas from the Company may adversely affect service to other customers and if the Company has not installed flow control devices at the Customer's premises, the Company may establish for that Customer a Maximum Safe Operating Volume ("MSOV"). The MSOV will be the maximum daily volume that the customer can take from the Company without jeopardizing service to other customers. The MSOV will be based upon an engineering study to be performed by the Company of the Company's facilities, the Customer's actual and potential load characteristics, other customers and their respective loads and the sources of supply in the vicinity of the Customer. Upon completion of the engineering study and determination of the applicable MSOV, the Company will inform the Customer of the MSOV applicable to it. Thereafter, the Customer may not use more than the MSOV of gas from the Company during any day without giving the Company at least one complete business days notice of its increased level of usage of gas from the Company. If the Customer uses in any day more than the applicable MSOV, the Customer shall pay to the Company, in addition to all other applicable charges, a penalty of $25 per Mcf of gas taken from the Company in excess of the MSOV.

DAY

As used in this Rate Schedule, the word "day" shall mean a consecutive twenty four hour period commencing at 10:00 a.m. on each calendar day. (C)

LIMITATION OF SERVICE

For any commercial, public authority, SVIS, IVIS, LVIS or LIS Customer that has installed Bypass Facilities, the Company maintains no duty to allow the Customer either to purchase gas from the Company or to transport gas through the Company's facilities in excess of the level of service, expressed in Mcf in the Service Agreement under this rate schedule, as adjusted in the manner set forth hereinabove under this rate schedule.

(C) Indicates Change

CONTRACT TERM

The initial term of the Service Agreement shall be for at least one Application Term. After the initial Application or any renewal thereof, the Service Agreement shall be renewed automatically for successive one-year Application Terms thereafter unless the Customer or the Company terminates the Service Agreement by written notice thereof to the other more than sixty (60) days prior to the end of a term. If the Service Agreement is renewed automatically pursuant to the provisions of this paragraph, then the volume of gas specified in the renewed Service Agreement shall be established at the volumetric level in effect, as adjusted in accordance with Special Provision 1 or 2 of this rate schedule, immediately prior to the effective date of the renewed Service Agreement. The Company may terminate a Service Agreement at an earlier date as provided by law or by any provision of this tariff.

In addition, a Service Agreement may be terminated at the request of a Customer for a new Service Agreement specifying a greater level of service, and such request will by honored by the Company, subject to the availability of sufficient capacity for such service in those portions of the Company's system so affected. A Customer may also request, upon sixty (60) days written notice to the Company prior to the end of a contract term, a new Service Agreement specifying a reduced level of service, and such request will be honored by the Company; provided that the requested reduced level of service is not less than the level of service, if any, for the Customer under Rate Schedule SB or Rate Schedule PSB.

Irrespective of the foregoing, any request by a Customer, for a reduction in the level of service under this rate schedule or for termination of service under this rate schedule effective at the end of any contract term, shall be deemed to have been denied and of no effect if, after such request, the term of the Service Agreement is continued under the Special Provisions of this rate schedule.

RULES AND REGULATIONS

The rules and regulations set forth in this tariff shall govern, where applicable, service under this rate schedule.

RATE SCHEDULE PSB

PRIORITY STANDBY SERVICE

APPLICABILITY

Throughout the territory served under this tariff.

AVAILABILITY OF SERVICE

Service under this rate schedule is available to all customers under the Residential, Commercial and Public Authority, and SVIS Rate Schedules which enter into a contract for service under this Rate Schedule. A customer will be permitted to enter into a contract, prepared by the Company, for service under this rate schedule, however, only if the Company projects that sufficient volumes of gas will be available to the Company during the period of the customer’s contract for Priority Standby Service.

Service under this rate schedule is mandatory for all customers categorized as Priority 1 under the curtailment priorities of Rule 26 who enter into contracts with the Company to receive Transportation Service and who do not have dual or alternate fuel equipment on site which is installed and operable with sufficient amounts of alternate fuel available on site during each winter period of each year commencing on December 1 and ending on March 31 of the following year. Service under this rate schedule is voluntary for all other customers.

NATURE OF SERVICE

Priority standby service shall permit the customer to purchase gas on a firm basis subject to curtailment priorities of Rule 26. The Company will take all reasonable steps to obtain or to maintain gas supplies sufficient to enable the Company to provide reasonably continuous service to each Customer receiving Priority Standby Service.

MONTHLY RATE

The monthly rate shall be $1.2745 per Mcf, which shall be applied to the total monthly volumes transported by the customer during the month. (I)

The rate shall equal the PGDC portion of the commodity rate applicable to the corresponding sales rate classification.

RATE SCHEDULE SB
STANDBY SERVICE

APPLICABILITY

Throughout the territory served under this tariff.

AVAILABILITY OF SERVICE

Service under this rate schedule is available to all customers under the Residential, Commercial & Public Authority, SVIS, IVIS, LVIS, and LIS Rate Schedules that meet the following criteria:

1. The customer has executed a service agreement for a term of at least one year. The Service Agreement shall specify the level of service during thirty-day periods that the customer desires to be able to purchase from the Company. Such level of service shall be specified in the form of a volume of gas, expressed in Mcf, that the Customer wishes to be able to purchase from the Company during thirty-day periods. Such volumes shall be subject to adjustment as explained in the Adjustment section of this rate schedule.

2. The customer either (a) receives volumes of gas transported by the Company or (b) is an LVIS or LIS Customer and has facilities which enable the customer to obtain volumes of gas without using the Company's distribution system ("Bypass Facilities"); and

3. The customer is not categorized as Priority 1 under the curtailment priorities of Rule 26.

In addition, irrespective of the foregoing, Special Provisions 3 through 5, below, shall apply to all transportation customers except those receiving service under Rate Schedule PSB.

NATURE OF SERVICE

Standby service shall permit the customer to purchase gas on a firm basis subject to curtailment priorities of Rule 26. The Company will take all reasonable steps to obtain or to maintain gas supplies sufficient to enable the Company to provide reasonably continuous service to each Customer receiving standby service at the level specified in the Service Agreement, as adjusted from time to time in accordance with the provisions of this rate schedule. Service under this Rate Schedule shall be available only if the Company projects that sufficient volumes of gas will be available to the Company during the period of the contract to provide the level of service desired by the Customer, without affecting adversely the reliability of service to the Company's existing customers receiving firm gas service.

ADJUSTMENT

For each billing cycle, the volume of gas specified in the Service Agreement shall be adjusted to reflect the number of days in such billing cycle by multiplying such volume, expressed in Mcf, by a fraction. The numerator of the fraction shall be the number of days in the billing cycle applicable to the Customer and the denominator shall be 30.

MONTHLY RATE

The monthly rate shall be $0.5980 per Mcf, which shall be applied to the Monthly Volume, as defined below. (I)

MONTHLY VOLUME

The Mcf volume of gas to which the Monthly Rate set forth above shall be applied, shall be determined for each billing cycle, as set forth below;

1. The volume of gas specified in the Service Agreement under this rate schedule shall be adjusted for each billing cycle by, multiplying such volume, expressed in Mcf, by a fraction. The numerator of the fraction shall be the number of days in the billing cycle applicable to the customer and the denominator shall be thirty (30).

2. If the volume determined under item 1, above, is greater than the sum of the Mcf volume of gas purchased by the customer under rate schedules other than load balancing rate schedules during the billing cycle, the Monthly Rate shall be applied to the difference between: (a) the volume determined under item 1, above, and (b) the Mcf volume of gas purchased by the customer under the rate schedules other than load balancing rate schedules during such billing cycle.

3. If the volume determined under item 1, above, is equal to or less than the Mcf volume of gas purchased by the customer under rate schedules other than load balancing rate schedules during the billing cycle, then the Monthly Volume shall be zero (0) Mcf.

SPECIAL PROVISIONS

1. A customer that has Bypass Facilities and that desires service under this rate schedule must enter into an Agreement for Service under Rate Schedule BP that specifies a volume of gas equal to, or greater than, the volume of gas specified in the Service Agreement under this rate schedule.

2. As used in this Rate schedule, the term “Bypass Facilities” does not include facilities that enable a customer to obtain “Self-Help” gas.

   “Self-Help” gas refers to gas produced by the customer from gas reserves and wells owned by the customer on a tract of land owned by the customer that is contiguous to the tract of land in which the customer’s manufacturing plant facilities are located.

3. SB customers shall be subject to a surcharge equal to 25 percent of the retail rates of the applicable sales rate schedule to volumes purchased by transportation customers (in excess of volumes contracted for under Rate Schedule SB) during the billing month ending in December, January, February or March and a surcharge equal to 10 percent of the retail rates of the applicable sales rate schedule to volumes purchased by transportation customers (in excess of volumes contracted for under Rate Schedule SB) during the remaining billing months when overruns by transportation customers are authorized by Company. The rates for sales of gas shall include the Distribution Charges, Gas Adjustment Charge, and the Natural Gas Supply Charge under the sales rate schedule that applies to the customer and the applicable surcharge percentage set forth above. In months when the sum of the Natural Gas Supply Charge and the Gas Adjustment Charge is less than the MMI, the applicable sales rate shall be equal to the sum of the Distribution Charges, the MMI plus all transportation costs to the Company’s City Gate, and the applicable surcharge percentage applied to this rate.

4. SB Transportation MMT customers shall be subject to a penalty of Charges for Daily City Gate Underdeliveries applicable to MMNGS Suppliers plus the higher of $25 per Dth or the DMI for that day plus all transportation costs to the Company’s City Gate when Company has announced that overrun service is not available. (C)

   SB Transportation DMT customers shall be charged the higher of: (1) the rate determined in item 3 above or (2) the Charges for Daily City Gate Underdeliveries applicable to MMNGS Suppliers plus the higher of $25 per Dth or the DMI for that day plus all transportation costs to the Company’s City Gate when Company has issued an OFO that includes a Restriction on Access to Daily Metered Imbalances or announced that overrun service is not available. (C)

(C) Indicates Change

5. Revenues for recovery of purchased gas costs and surcharges under items 3 and 4 above, shall be flowed through to sales customers under Rider "A" of this tariff.

LIMITATION OF SERVICE

For any customer that either (a) has contracted with the Company for transportation service, or (b) is a customer with installed Bypass Facilities, the Company maintains no duty to provide retail service to customer in excess of the level of service, expressed in Mcf in the Service Agreement under this schedule, as adjusted in the manner set forth hereinabove under this rate schedule.

CONTRACT TERM

The initial term of the Service Agreement shall be for at least one year. After the initial term, the Service Agreement shall be renewed automatically for successive one-year terms thereafter unless the customer or the Company terminates the Service Agreement by written notice thereof to the other more than sixty (60) days prior to the end of a term. If the Service Agreement is renewed automatically pursuant to the provisions of this paragraph, then the volume of gas specified in the renewed Service Agreement shall be established at the volumetric level in effect immediately prior to the effective date of the renewed Service Agreement. The Company may terminate a Service Agreement at an earlier date as provided by law or by any provision of this tariff.

In addition, a Service Agreement may be terminated at the request of a customer for a new Service Agreement specifying a greater level of service, and such request will be honored by the Company, subject to the Availability section of this rate schedule and subject to Special Provision 1 of this rate schedule. A customer may also request, upon sixty (60) days written notice to the Company prior to the end of a contract term, a new Service Agreement specifying a reduced level of service, and such request will be honored by the Company, subject to the Availability section of this rate schedule.

RATE SCHEDULE FOR MONTHLY METERED TRANSPORTATION SERVICE

DEFINITIONS

(1) Gas Service Customer - A Gas Service Customer is an entity that is attached to the Company's lines and uses gas in its operations or in its premises;
(2) MMT - Monthly Metered Transportation
(3) MMT Customer – A Gas Service Customer that receives transportation service from the Company under this rate schedule and receives gas supply from a Monthly Metered Natural Gas Supplier. (C) (C)
(4) MMNGS Supplier – Monthly Metered Natural Gas Supplier – A customer or Natural Gas Supplier that qualifies under the Monthly Metered Natural Gas Supplier Rate Schedule and is responsible for the delivery requirements and imbalance resolution of MMT Customers. (C)

AVAILABILITY OF SERVICE

If all of the qualifications (a) through (e) set forth below are met, any entity will be considered an MMT Customer under this Rate Schedule.

(a) The entity that will receive gas transported by the Company (1) has a volumetric requirement of at least 5,000 Mcf per year or (2) belongs to a buyer group of no more than ten customers whose combined usage is at least 5,000 Mcf per year, provided, however, that larger buyer groups shall be permitted upon the mutual agreement of the Company and the customers;

(b) An MMT customer consent to enrollment by an MMNGS supplier shall be accepted in lieu of a transportation service agreement. (C)

(c) The MMT Customer has obtained, or has agreed to obtain, a supply of gas from a qualified MMNGS Supplier; (C)

(d) The MMT Customer has made, or caused to be made, arrangements by which such volumes of gas can be delivered, either directly or by displacement, on a firm basis throughput the entire route from the point of production into the Company’s distribution system throughout the term of the transportation service agreement; and

(e) If facilities are required for furnishing of MMT service, in addition to facilities that are required for furnishing of gas service to a MMT Customer, the MMT Customer shall have paid, in full, for any additional facilities required to be constructed for furnishing of MMT service, which payment shall not

(C) Indicates Change

be subject to refund under any circumstances. If additional facilities are required for furnishing of gas service, customer's payment for additional facilities required for furnishing of gas service shall be governed by Tariff Rule No. 3, "Extension of Facilities", and Tariff Rule No. 5, "Service Lines."

CHARACTER OF SERVICE

Gas, of a quality acceptable to the Company, owned by a MMT Customer and delivered, either directly or by displacement, into the Company's distribution system by a qualified MMNGS Supplier, will be transported, by the Company, to the delivery point designated by the MMT Customer. Receipt of natural gas for the customer at the Company City Gate may be limited to the customer’s DDQ as established in Rate Schedule MMNGS. If the Customer meets the qualifications for service in the Availability section of this Rate Schedule, prior service under the superseded Rate Schedule for Transportation Service will be converted to service under this Rate Schedule unless the Company is notified by the Customer that it prefers service under the Rate Schedule for Daily Metered Transportation Service. (C)

(C)

(C) Indicates Change

RATE SCHEDULE FOR MONTHLY METERED TRANSPORTATION SCHEDULE (cont'd)

MONTHLY RATES

Commodity Rates

The commodity rates set forth below contain a component, presently $0.4900 per Mcf, for recovery of purchased gas costs. (I)

For transportation of gas to Residential Customers, the monthly rate for transportation of gas both within and outside the Commonwealth of Pennsylvania shall be:

$3.4511 Mcf (I)

For transportation of gas to Commercial and Public Authority Customers, the monthly rate for transportation of gas produced within the Commonwealth of Pennsylvania shall be:

$2.7894 per Mcf for Small Commercial/Public Authority using not more than 250 Mcf per year (I)
$2.5455 per Mcf for Small Commercial/Public Authority using greater than 250 Mcf but not more than 1,000 Mcf per year (I)
$2.1522 per Mcf for Large Commercial/Public Authority (I)

For transportation of gas to Commercial and Public Authority Customers, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$2.7894 per Mcf for Small Commercial/Public Authority using not more than 250 Mcf per year (I)
$2.5455 per Mcf for Small Commercial/Public Authority using greater than 250 Mcf but not more than 1,000 Mcf per year (I)
$2.1522 per Mcf for Large Commercial/Public Authority (I)

For transportation of gas to Small Volume Industrial Customers, the monthly rate for transportation of gas produced within the Commonwealth of Pennsylvania shall be:

$2.5622 per Mcf for SVIS Customers (I)

For transportation of gas to Small Volume Industrial Customers, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$2.5622 per Mcf for SVIS Customers (I)

RATE SCHEDULE FOR MONTHLY METERED TRANSPORTATION SCHEDULE (cont'd)

For transportation of gas to Intermediate Volume Industrial Customers, the monthly rate for transportation of gas produced within the Commonwealth of Pennsylvania shall be: (I)
$1.8247 per Mcf for IVIS Customers

For transportation of gas to Intermediate Volume Industrial Customers, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$1.8247 per Mcf for IVIS Customers (I)

For transportation of gas to Large Volume Industrial Customers and any entity that is not a Gas Service Customer, the monthly rate for transportation of gas produced within the Commonwealth of Pennsylvania shall be:

$1.5143 per Mcf (I)

For transportation of gas to Large Volume Industrial Customers and any entity that is not a Gas Service Customer, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$1.5143 per Mcf (I)

For transportation of gas to Large Industrial Customers, the monthly rate for transportation of gas produced within the Commonwealth of Pennsylvania shall be:

$1.8093 per Mcf (I)

For transportation of gas to Large Industrial Customers, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$1.8093 per Mcf (I)

Provided, however, that the Company, in its sole discretion, may reduce by contract the portion of the above rates applicable to the Customer that are for recovery of gas or the portion of the rate for recovery of non-gas costs of service if it is reasonably necessary to do so to meet competition from another supplier of energy including gas from another supplier of gas that has constructed, or could construct, facilities to deliver supplies of gas to a MMT Customer of the Company without use of the Company's facilities or another transportation of gas. The Company may also reduce or eliminate the compensation for line losses provided for in Special Provisions paragraph B of this rate schedule in order to meet the competitive circumstances for alternate fuels or bypass situations cited above excluding competition from other Pennsylvania local distribution companies. The Company will reduce the applicable rate only if:

(a) Either (1) the MMT Customer has facilities in place and operable to use an alternative fuel or obtain gas from an alternative supplier or (2) in the Company's judgment, such facilities would be constructed;

(D) Indicates Decrease (I) Indicates Increase

RATE SCHEDULE FOR MONTHLY METERED TRANSPORTATION SERVICE (cont.)

(b) Volumes of gas that would be transported by the Company would be displaced by an alternate fuel or an alternative source of gas unless the Company reduces its transportation rate;

(c) The Company will not reduce the rate for transportation service below the level necessary to transport gas; and

(d) In the Company's judgment the MMT Customer has taken all reasonable steps to minimize the cost of gas supplies delivered to the Company's system in order to help meet competition.

Where the above criteria are met, the Company may, in its discretion enter into an agreement setting either: (1) a fixed transportation rate or (2) the basis for determining the transportation rate, for the period of the Service Agreement, which will specify which portion of the rate is being reduced.

If an MMT Customer is a member of a buyer group, bills for each member of a buyer group will be determined individually. Volumes of transportation service in a billing period will be allocated among members of a buyer group pursuant to the Service Agreement.

Volumes delivered as transportation service pursuant to this rate schedule shall be subject to State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge (C)

Residential rates shall be subject to surcharges in accordance with Rider F - CAP Discount Charge as set forth in this tariff.

CHARGES FOR TRANSPORTATION BY OTHERS

If furnishing service, pursuant to this Rate Schedule, requires the use of a transportation service provided other than by the Company, any cost incurred by the Company, with regard thereto, shall be billed to MMT Customer by the Company.

CHARGES UNDER OTHER RATE SCHEDULES

The MMT Customer receiving gas transported by the Company under this Rate Schedule shall pay all charges under all other applicable rate schedules and riders, irrespective of whether such MMT Customer, in any billing period receives only gas transported by the Company, and such MMT Customer shall pay rates under all other applicable rate schedules for any service furnished to the MMT Customer in addition to transportation service under this Rate Schedule.

(C) Indicates Change

MAXIMUM DAILY QUANTITY

The "Maximum Daily Quantity" shall be the maximum volume of gas, (C)
expressed in Mcf, that is equal to a Customer’s Daily Delivery Quantity as (C)
determined pursuant to Rate Schedule MMNGS, Special Provision D.1 on Page No. 118C, may be delivered into the Company's distribution system, during any twenty-four hour period, for transportation by the Company to such Customer as transportation service under this rate schedule. The Company, in its sole discretion and upon request of a MMT Customer, may agree to receive and to transport, during any twenty-four hour period, a volume in excess of the (C)
Maximum Daily Quantity. During any hour of any twenty-four hour period, the Company shall not be required to receive and to transport more than 1/24 of the (C)
Maximum Daily Quantity.
(C)

(C) Indicates Change

(C)

RESERVED FOR FUTURE USE

(C) Indicates Change

BILLING

Monthly charges, for transportation service pursuant to this rate schedule, are subject to the Late Payment Charges set forth in Section 16 of the Rules and Regulations of this tariff.

SPECIAL PROVISIONS

A. The volume of gas delivered into the Company's distribution system, on any day in behalf of MMT Customers for transportation service pursuant to this Rate Schedule, shall be determined by meters and as provided in B, below.

B. To compensate for line losses, the volume of gas delivered into the Company's distribution system, shall be retained by the Company as set forth in Rate Schedule MMNGS Special Provision C, Page No 118B; provided however, that, where the only facilities involved in transporting gas to the MMT Customer are meters, meter installations, house regulators, house regulator installations and industrial measuring station equipment, no amount shall be deducted as compensation for line losses.

C. Service under this Rate Schedule may be interrupted during periods of supply shortages but only based upon the schedule of priority of curtailment set forth in section 26 of the Rules and Regulations of this tariff. (C)

D. Transportation service under this Rate Schedule may be interrupted or curtailed whenever, in the event of a sudden and unforeseen supply deficiency, the Company invokes emergency curtailment provisions under Tariff Rule 26. (C)

(C) Indicates Change

E. In the event of interruption or curtailment of transportation service, pursuant to items C and D, above, and during such period of interruption or curtailment, the MMT Customer must sell to the Company all or a portion of the MMT Customer's supply of gas at the higher of (1) the Transportation Service Customer's cost of purchased gas at the point of delivery to the Company or (2) the Company's average cost of purchased gas per Mcf, as determined based upon the Company's Section 1307(f) Rate, which is $5.4664. (D)

F. If for any reason (including the default of an MMNGS Supplier), the MMNGS Supplier fails to provide sufficient daily deliveries of natural gas supplies to meet the MMT Customers DDQ pursuant to the terms of MMNGS supply service, and/or MMT Customer's MMNGS Supplier does not provide complete compensation to the Company for services provided under Rate Schedule MMNGS, Special Provision D.3, the Company shall charge the MMT Customer for the deficient daily deliveries under the applicable gas sales rate schedule plus applicable surcharge as set forth in Rate Schedule SB Special Provisions.

G. Service under this rate schedule shall be available only to the extent that there is sufficient capacity for such service in those portions of the Company's system affected by providing of transportation service including but not limited to, that portion of the Company's system where gas is delivered to the Company and that portion of the Company's system where gas is delivered to the MMT Customer. In determining the Company's ability to provide transportation service, sufficient capacity in the Company's system shall be assumed. If service shall not be supplied, based upon insufficient capacity, the burden shall be on the Company to prove such capacity limitation. (C)

H. Where gas is received by the Company for transportation service pursuant to this Rate Schedule, title to such gas shall remain vested in the MMT Customer for which such gas was received for transportation. The Company's furnishing transportation service for a MMT Customer shall be complete upon delivery of gas received for transportation service, except as provided in E and F, above. (C)

I. The Company shall not be liable, under any circumstances or in any respect, to a Gas Service Customer, MMT Customer, Natural Gas Supplier, a producer of gas or any other person or entity for damages arising either directly or indirectly from interruption, curtailment or termination of transportation service. (C)

J. Revenue for recovery of purchased gas costs under Rider "A" shall include the product of the portions of the rates under this Rate Schedule for recovery of purchased gas costs times the volumes billed under such rates; provided, however, that any adjustment to rates under this Rate Schedule pursuant to Special Provision K., below, shall be eliminated from rates used to calculate revenues for recovery of purchased gas costs under this Rate Schedule. (C)

(C) Indicates Change

K. Rates under this Rate Schedule will be recomputed in, inter alia, each of the Company's annual proceeding under Section 1307(f) of the Public Utility Code.

L. Customers who elect transportation service under this Rate Schedule shall have the right thereafter to purchase gas from the Company only to the extent that they have contracted for firm service under Rate Schedule SB for Standby Service or under Rate Schedule PSB for Priority Standby Service. Purchases of gas from the Company by MMT Customers who have not contracted for service under Rate Schedule PSB shall be subject to both the charges under the applicable sales rate schedule and all provisions of the Rate Schedule SB, including the Special Provisions, for a period of 12 months to the extent such customers continue to purchase gas from the Company.

M. Customers who elect to schedule their own gas supplies via Company’s internet accessible Transportation Scheduling System and/or wish to access and/or obtain each day meter readings of the volume of gas delivered to the Company for the Customer's account and the volume of gas from the Company used by the Customer each day shall execute a Data Security Agreement pursuant to Tariff Rule 33. (C)

(C) Indicates Change

RATE SCHEDULE FOR DAILY METERED TRANSPORTATION SERVICE

DEFINITIONS

(1) Gas Service Customer - A Gas Service Customer is an entity that is attached to the Company's lines and uses gas in its operations or in its premises;
(2) DMT - Daily Metered Transportation
(3) DMT Service Customer - Any entity that has executed a DMT Service Agreement with the Company for transportation of gas by the Company.

AVAILABILITY OF SERVICE

If all of the qualifications (a) through (e) set forth below are met, any entity will be considered a DMT Service Customer under this Rate Schedule.

(a) The entity that will receive gas transported by the Company (1) has a volumetric requirement of at least 5,000 Mcf per year or (2) belongs to a buyer group of no more than ten customers whose combined usage is at least 5,000 Mcf per year, provided, however, that larger buyer groups shall be permitted upon the mutual agreement of the Company and the customers;

(b) A DMT service agreement must be executed by the DMT Service Customer in the form prepared by the Company (the "Service Agreement");

(c) The DMT Service Customer has obtained, or has agreed to obtain, a supply of gas, of a quality acceptable to the Company, from any source of gas;

(d) The DMT Service Customer has made, or has caused to be made, arrangements by which such volumes of gas can be delivered, either directly or by displacement, on a firm or interruptible basis, into the Company's distribution system; and

(e) If facilities are required for furnishing of DMT service, in addition to facilities that are required for furnishing of gas service, to a Gas Service Customer, the DMT Service Customer shall have paid, in full, for any additional facilities required to be constructed for furnishing of DMT service, which payment shall not

be subject to refund under any circumstances. As deemed necessary by the Company in its sole discretion, the DMT customer shall be required also to pay, in full, for costs of installing daily metering and communications equipment selected by the Company which will enable the Company to obtain each day meter readings of the volume of gas delivered to the Company or to another point or points acceptable to the Company for the Customer's account and the volume of gas from the Company used by the Customer each day. In addition, with regard to daily metering and communications equipment, the Customer shall pay an amount of money to provide for recovery of the present value of the carrying cost of income taxes on the payment for daily metering and communications equipment. Such carrying cost arises from the delay between federal and Pennsylvania income taxation and income tax deductions over the tax life of the equipment and a further amount equal to 72.67% of the carrying cost (based on present income tax rates). If additional facilities are required for furnishing of gas service, customer's payment for additional facilities required for furnishing of gas service shall be governed by Tariff Rule No. 3, "Extension of Facilities", and Tariff Rule No. 5, "Service Lines."

CHARACTER OF SERVICE

Gas, of a quality acceptable to the Company, owned by a DMT Service Customer and delivered, either directly or by displacement, into the Company's distribution system, will be transported, by the Company, to the delivery point designated by the DMT Service Customer.

TERM OF SERVICE AGREEMENT

If the requirements of this Rate Schedule are met, the Company shall offer to enter into a Service Agreement with an initial term of at least one year and successive one-year terms thereafter. The initial term of a Service Agreement may be for less than one year only with the mutual consent of both the DMT Service Customer and the Company. If the initial term of a Service Agreement is for less than one year, successive terms thereafter shall be equal in length to the initial term. Either the DMT Service Customer or the Company may terminate the Service Agreement at the end of a term upon written notice thereof to the other more than thirty (30) days prior to the end of a term; further provided, however, that the Company may terminate a Service Agreement at an earlier date as provided by law by provisions of this Tariff.

(C) Indicates Change

RATE SCEHDULE FOR DAILY METERED TRANSPORTATION SERVICE (cont'd)

MONTHLY RATES

Commodity Rates

For transportation of gas to Residential customers, the monthly rate for transportation of gas both within and outside the Commonwealth of Pennsylvania shall be:

(I)

$2.9611 per Mcf.

For transportation of gas to Commercial and Public Authority Customers, the monthly rate for transportation of gas produced within the Commonwealth of Pennsylvania shall be:

$2.2994 per Mcf	for Small Commercial/Public Authority using not more than 250 Mcf per year	(D)
$2.0555 per Mcf	for Small Commercial/Public Authority using greater than 250 Mcf but not more than 1,000 Mcf per year	(I)
$1.6622 per Mcf	for Large Commercial/Public Authority	(I)

For transportation of gas to Commercial and Public Authority Customers, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$2.2994 per Mcf	for Small Commercial/Public Authority using not more than 250 Mcf per Year	(D)
$2.0555 per Mcf	for Small Commercial/Public Authority using greater than 250 Mcf but not more than 1,000 Mcf per year	(I)
$1.6622 per Mcf	for Large Commercial/Public Authority	(I)

For transportation of gas to Small Volume Industrial Customers, the monthly rate for transportation of gas produced within the Commonwealth of Pennsylvania shall be:

$2.0722 per Mcf	for SVIS Customers.	(D)

For transportation of gas to Small Volume Industrial Customers, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$2.0722 per Mcf	for SVIS Customers.	(D)

For transportation of gas to Intermediate Volume Industrial Customers, the monthly rate for transportation of gas produced within the Commonwealth of Pennsylvania shall be:

$1.3347 per Mcf	for IVIS Customers.	(I)

RATE SCHEDULE FOR DAILY METERED TRANSPORTATION SERVICE (cont'd)

For transportation of gas to Intermediate Volume Industrial Customers, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$1.3347 per Mcf for IVIS Customers. (I)

For transportation of gas to Large Volume Industrial Customers and any entity that is not a Gas Service Customer, the monthly rate for transportation of gas produced within the Commonwealth of Pennsylvania shall be:

$1.0243 per Mcf. (I)

For transportation of gas to Large Volume Industrial Customers and any entity that is not a Gas Service Customer, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$1.0243 per Mcf. (I)

For transportation of gas to Large Industrial Customers, the monthly rate for transportation of gas produced within the Commonwealth of Pennsylvania shall be:

$0.5993 per Mcf. (I)

For transportation of gas to Large Industrial Customers, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$0.5993 per Mcf. (I)

Provided, however, that the Company, in its sole discretion, may reduce by contract the portion of the above rates applicable to the Customer that is for recovery of gas costs or the portion of the rate for recovery of non-gas costs of service if it is reasonably necessary to do so to meet competition from another supplier of energy including gas from another supplier of gas that has constructed, or could construct, facilities to deliver supplies of gas to a Gas Service Customer of the Company without use of the Company's facilities or another transporter of gas. The Company may also reduce or eliminate the compensation for line losses provided for in Special Provisions paragraph B of this rate schedule in order to meet the competitive circumstances for alternate fuels or bypass situations cited above excluding competition from other Pennsylvania local distribution companies. The Company will reduce the applicable rate only if:

(a) Either (1) the Customer has facilities in place and operable to use an alternative fuel or obtain gas from an alternative supplier or (2) in the Company's judgment, such facilities would be constructed;

RATE SCHEDULE FOR DAILY METERED TRANSPORTATION SERVICE (cont.)

(b) Volumes of gas that would be transported by the Company would be displaced by an alternate fuel or an alternative source of gas unless the Company reduces its transportation rate;

(c) The Company will not reduce the rate for transportation service below the level necessary to transport gas; and

(d) In the Company's judgment the DMT Service Customer has taken all reasonable steps to minimize the cost of gas supplies delivered to the Company's system in order to help meet competition.

Where the above criteria are met, the Company may, in its discretion enter into an agreement setting either: (1) a fixed transportation rate or (2) the basis for determining the transportation rate, for the period of the Service Agreement, which will specify which portion of the rate is being reduced.

If a Gas Service Customer is a member of a buyer group, bills for each member of a buyer group will be determined individually. Volumes of transportation service in a billing period will be allocated among members of a buyer group pursuant to the Service Agreement.

Volumes delivered as transportation service pursuant to this rate schedule shall be subject to State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge. (C)

Residential rates shall be subject to surcharges in accordance with Rider F - CAP Discount Charge as set forth in this tariff.

CHARGES FOR TRANSPORTATION BY OTHERS

If furnishing service, pursuant to this Rate Schedule, requires the use of a transportation service provided other than by the Company, any cost incurred by the Company, with regard thereto, shall be billed to DMT Service Customer by the Company.

CHARGES UNDER OTHER RATE SCHEDULES

The Gas Service Customer receiving gas transported by the Company under this rate schedule shall pay all charges under all other applicable rate schedules and riders, irrespective of whether such Customer, in any billing period, receives only gas transported by the Company, and such Customer shall pay rates under all other applicable rate schedules for any service furnished to the Customer in addition to transportation service under this Rate Schedule.

(C) Indicates Change

CHARGES FOR OVERDELIVERIES

As used in this Rate Schedule, "overdeliveries" shall mean the cumulative amount by which the volume of gas delivered to the Company for the Customer's account, since the commencement of transportation service by the Company for the Customer under any rate schedule, after adjustment for line losses and after elimination of volumes purchased from the Customer by the Company, exceeds the total amount of transportation service volumes taken by the Customer from the Company under any rate schedule since the commencement of transportation service for the Customer by the Company. Such cumulative overdelivery balance shall be computed each day, and the rates set forth below shall be applied to the maximum daily overdelivery volume occurring during the billing month. (I) (I)

If the DMT Service Customer in any billing month has overdeliveries in excess of two percent of the volume of gas transported for the customer in the billing month, the Customer shall be subject to additional charges each billing month. For a maximum daily overdelivery volume up to 37% of the volume of DMT service gas transported to the Customer by the Company in the billing month, the charge for overdeliveries shall be $0.6351 per Mcf in excess of two percent of the volume of gas transported for the customer in the billing month.

For overdeliveries equal to or more than 37% of the volume of DMT service gas transported to the Customer by the Company during the billing month, the charge for such excess overdeliveries shall be $0.7624 per Mcf.

OPERATIONAL FLOW ORDERS

The Company may also issue Operational Flow Orders (“OFOs”) which apply to transportation customers receiving service under this rate schedule as follows:

A Restriction on Access to Daily Metered Imbalances

OFOs may be issued to customers receiving service under this rate schedule to assure that adequate supplies are delivered to the Company. During such period, DMT customers shall not be permitted to use banked gas to cover daily underdeliveries in excess of the 2% tolerance during the term of the OFO. Furthermore, in the event an OFO is issued, metered usage in excess of 102% of confirmed deliveries on behalf of the DMT customer to Distribution’s city gate, less line loss, shall be deemed a sale of gas by the Company to the customer. All provisions related to the price for such sales, including charges under Rate SB-Standby Service, shall apply.

(I) Indicates Increase

B. Waiver of Overdelivery Charges

The Company may, in its discretion, waive DMT overdelivery charges during or following colder than normal periods and to waive undelivery premiums during or following warmer than normal periods.

MAXIMUM DAILY QUANTITY

The “Maximum Daily Quantity” shall be the maximum volume of gas, expressed in Mcf, as set forth in a DMT Service Customer’s Service Agreement, may be delivered into the Company’s distribution system, during any twenty-four hour period, for transportation by the Company to such Customer as transportation service under this rate schedule. The Company, in its sole discretion and upon request of a DMT Service Customer, may agree to receive and to transport, during any twenty-four period, a volume in excess of the Maximum Daily Quantity as set forth in a transportation Service Customer’s Service Agreement. During any hour of any twenty-four hour period, the Company shall not be required to receive and to transport more than 1/24 of the Maximum Daily Quantity as set forth in a Transportation Service Customer’s Service Agreement.

BILLING

Monthly charges, for transportation service pursuant to this rate schedule, are subject to the Late Payment Charges set forth in Section 16 of the Rules and Regulations of this Tariff.

SPECIAL PROVISIONS

A. The volume of gas delivered into the Company's distribution system, on any day in behalf of Transportation Service Customers for transportation service pursuant to this Rate Schedule, shall be determined by meters and as provided in B, below, at the delivery points specified in the service Agreement or to another point or points acceptable to the Company.

If any such point of delivery is also a point at which the Company buys or exchanges gas for the Company's own account through the same meter, the volume of gas delivered into the Company's distribution system, in behalf of Transportation Service Customers for transportation service, shall be deemed to be the volume scheduled by the Company and such Customers to be delivered in behalf of such Customers, at such point on such day, determined after the adjustment provided in B, below, but shall not be more than the total amount actually delivered, determined after the adjustment provided in B below, through such meter into the Company's distribution system at such point on such day.

B. To compensate for line losses, the volume of gas delivered into the Company's distribution system, shall be determined for purposes of this Rate Schedule, effective August 1, 2013 to be equal to 99.85% of the amount indicated by a meter at the point of delivery into the Company's distribution system; provided however, that, where the only Company facilities involved in transporting gas to the Gas Service Customer are meters, meter installations, house regulators, house regulator installations and industrial measuring and regulating station equipment, no amount shall be deducted as compensation for line losses. (C) (D)

C. Service under this Rate Schedule may be interrupted during periods of supply shortages but only based upon the schedule of priority of curtailment set forth in section 26 of the Rules and Regulations of this tariff.

D. Transportation service under this Rate Schedule may be interrupted or curtailed whenever, in the event of a sudden and unforeseen supply deficiency, the Company invokes emergency curtailment provisions under Tariff Rule 26.

(C) Indicates Change
(D) Indicates Decrease

E. In the event of interruption or curtailment of transportation service, pursuant to items C and D, above, and during such period of interruption or curtailment, the DMT Service Customer must sell to the Company all or a portion of the DMT Service Customer's supply of gas at the higher of (1) the Transportation Service Customer's cost of purchased gas at the point of delivery to the Company or (2) the Company's average cost of purchased gas per Mcf, as determined based upon the Company's Section 1307(f) Rate, which is $5.4664. (D)

F. If a Gas Service Customer receiving gas transported by the Company uses less than the amount of gas delivered into the Company's system for transportation to such Customer ("excess deliveries"), the Gas Service Customer receiving gas transported by the Company may use such gas during the banking/balancing period defined below, following which the Company shall have the right, but not the obligation, to purchase remaining excess deliveries of gas from the DMT service Customer at a rate equal to the lowest of (1) the cost at which it was acquired by the DMT Service Customer, including pipeline transportation charges, or (2) the Company's average commodity delivered cost of gas to National Fuel Gas Supply Corporation, or (3) the Company's average commodity cost of locally produced gas during the month when excess deliveries were received by the Company. The cost at which the DMT Service Customer acquired the gas will be determined from such Customer's contract with the supplier or by a sworn affidavit setting forth the Customer's cost of gas, including cost of delivery of such gas to the Company's system. Upon request by the Company, the DMT Service Customer will be required to furnish to the Company the DMT service Customer's choice of (1) a copy of this contract or (2) an affidavit. The banking/balancing period shall be the three billing months after the billing month in which the Company received excess deliveries in behalf of the Customer.

G. "Underdeliveries" are volumes of gas taken from the Company by a Gas Service Customer in excess of the sum of (1) any excess deliveries of the customer at the beginning of the day and (2) the volume of gas delivered to the Company for the customer's account, after adjustment for line losses less volumes of volumes of gas determined to be sales by the Company to the customer. Cumulative underdeliveries, as determined each day, in excess of two percent of the volume of gas delivered by the Company to the customer that day, shall be a sale of gas by the Company to the customer under the applicable rate schedule plus applicable surcharges as set forth in Rate Schedule SB Special Provisions and shall not be recharacterized as transportation service under any circumstances. Cumulative underdeliveries of not more than two percent of the volume of gas delivered to a customer by the Company on any day may be offset by volumes of gas delivered to the Company for the customer's account, after adjustment for line losses, in excess of the volume of gas taken by the customer from the Company on subsequent days within the same billing month.

H. Service under this rate schedule shall be available only to the extent that there is sufficient capacity for such service in those portions of the Company's system affected by providing of transportation service including but not limited to, that portion of the Company's system where gas is delivered to the Company and that portion of the Company's system where gas is delivered to the Customer. In determining the Company's ability to provide transportation service, sufficient capacity in the Company's system shall be assumed. If service shall not be supplied, based upon insufficient capacity, the burden shall be on the Company to prove such capacity limitation.

I. Where gas is received by the Company for transportation service pursuant to this Rate Schedule, title to such gas shall remain vested in the Transportation Service Customer for which such gas was received for transportation. The Company's furnishing transportation service for a Transportation Service Customer shall be complete upon delivery of gas received for transportation service, except as provided in E and F, above.

J. The Company shall not be liable, under any circumstances or in any respect, to a Gas Service Customer, Transportation Service Customer, a producer of gas or any other person or entity for damages arising either directly or indirectly from interruption, curtailment or termination of transportation service.

K. Revenues produced by charges to DMT customers for overdeliveries of transportation gas to such customers shall be treated in accordance with Paragraph (b)(11) of Rider "A".

L. Customers who contract for transportation service under this Rate Schedule shall have the right thereafter to purchase gas from the Company only to the extent that they have contracted for firm service under Rate Schedule SB for Standby Service or under Rate Schedule PSB for Priority Standby Service. Purchases of gas from the Company by transportation service customers who have not contracted for service under Rate Schedule PSB shall be subject to both the charges under the applicable sales rate schedule and all provisions of the Rate Schedule SB, including the Special Provisions.

M. Customers who elect to schedule their own gas supplies via Company's internet accessible Transportation Scheduling System and/or wish to access and/or obtain each day meter readings of the volume of gas delivered to the Company for the Customer's account and the volume of gas from the Company used by the Customer each day shall execute a Data Security Agreement pursuant to Tariff Rule 33. (C)

(C) Indicates Change

RATE SCHEDULE MMNGS
MONTHLY METERED NATURAL GAS SUPPLIER SERVICE

APPLICABLE TO USE FOR

Service hereunder is available to any licensed supplier ("MMNGS Supplier" or "Supplier") which has obtained the consent and appointment of MMT customer(s) whose volumes total at least 5,000 Mcf on an annual basis ("MMT Customer(s)" or "MMT Pool"), and agrees to assume the primary responsibility for the gas supply obligations for that group of MMT Customers.

CHARACTER OF SERVICE

Through the procedures and provisions of this Monthly Metered Natural Gas Supplier rate schedule qualified MMNGS Suppliers will contract for service with qualified MMT Customers and shall serve such MMT Customers for an established term lasting at least one month or one billing cycle.

The Company will bill the Supplier for aggregation services (including any purchases of Company gas) provided to the Supplier.

RATES AND CHARGES

A. Supplier Aggregation Charges

The MMNGS Supplier shall be billed the charges for services rendered for it as provided herein. A MMNGS Service Agreement will allow Suppliers under this service classification to aggregate supplies to serve individual qualified MMT Customers. When necessary to accommodate changes in customer supply and delivery requirements during the month, the Company will permit deliveries of interstate supplies into intrastate market pools. In order to accommodate such deliveries of interstate supplies into intrastate market pools, the MMNGS Supplier will be billed for the amount of interstate deliveries to intrastate pools at a rate of $0.000/Mcf. (D)

B. Administrative Charges

The Company will charge the MMNGS Supplier an administrative fee of $100.00 per month for each MMNGS Service Agreement executed with the Company. This charge shall be waived for individual MMT Customers that will be their own MMNGS supplier and have a single account in their MMT Pool.

C. Exchange Fee

The Company will charge the Supplier an exchange fee of $0.05 per Mcf for each Mcf transferred from and $0.05 per Mcf transferred to a MMT Pool.

D. Billing Service Charges

An MMNGS Supplier may elect to have the Company bill gas supply charges to the Supplier's MMT customers. The rate to be charged by the Company to the Supplier for Standard Billing Service shall be $0.20 for each bill rendered to an MMT Customer for the Supplier.

(D) Indicates Decrease

RATE SCHEDULE MMNGS
MONTHLY METERED NATURAL GAS SUPPLIER SERVICE (Cont.)

The Company shall provide the Supplier receiving standard Billing Service with meter reading information and other reports in the Company's standard electronic format on a basis corresponding to the MMT Customer's billing cycles. The Supplier shall provide the Company with all required Supplier billing and rate information necessary for customer billing as determined by the Company. The Supplier shall provide such billing information in the Company's required format. The Supplier shall provide its billing information no later than three business days before the last day of the month.

The Company will bill the MMT Customer for gas supplies sold by the Supplier to the Customer subject to the Supplier entering into a billing service contract with the Company. Payments made by the MMT Customer under the billing service will be applied first to amounts to past service due under an amortization agreement with the Company, next to current bills due to the Company, next to gas supply charges owed to the Supplier, next to charges for other non-regulated service charges, and lastly to any "neighbor for neighbor" contribution. The terms and charges for the Supplier billing services other than Standard Billing Services may be negotiated between the Company and the Supplier. The Company shall be under no obligation to provide the Supplier billing services other than Standard billing Services if mutually agreeable terms and charges cannot be negotiated.

SPECIAL PROVISIONS

A. Gas Quality

Gas delivered by the Supplier must satisfy the quality specifications included in the Rules for Transportation Service section of this tariff. For deliveries to the Company, such deliveries must be made at an appropriate Company facility located within the Territory, as described in this tariff, or at another point or points acceptable to the Company.

B. Allocation Priority

If any such point of delivery is also a point at which the Company buys or exchanges gas for the Company's own account though the same meter, the volume of gas delivered into the Company's distribution system, in behalf of MMT customers, shall be deemed in behalf of such MMT Customers, at such point on such day, determined after the adjustment provided in C, below, but shall not be more than the total amount actually delivered, determined after the adjustment provided in C below, through such meter into the Company's distribution system at such point on such day.

C. Allowance for Losses

As allowance for losses incurred in the process of delivery except as provided in Special Provision B under the MMT Rate schedule, Leaf No. 105, the Supplier shall provide the Company with a volume of gas equal to 0.15% of the amount delivered to the Company. (D)

(D) Indicates Decrease

RATE SCHEDULE MMNGS
MONTHLY METERED NATURAL GAS SUPPLIER SERVICE (Cont.)

D. City Gate Balancing

1. Determination of Daily Delivery Quantities and Aggregate Daily Delivery Quantities

The Company, based upon each MMT Customer's historical load profile and/or estimates of consumption as applied to any forecasted weather, shall determine a MMNGS Supplier's MMT Customer's projected weather normalized consumption for a given period; either monthly, weekly, or daily. Based upon this projected consumption, actual consumption readings as available and based on the system requirement to manage storage capacity retained by the Company to meet MMT Customer's daily balancing requirements, the Company will determine each MMT Customer's Daily Delivery Quantity (DDQ) and the Company will also determine the Supplier's MMT Pool's Aggregate Daily Delivery Quantity (ADDQ) by summing all DDQs of the MMT Customers in the Supplier's MMT Pool. The DDQs established under this rate schedule shall be calculated so as to minimize month end burner tip imbalances. In determining the DDQ of the customer group the maximum heating degree day ("HDD") amount utilized in the DDQ calculation shall be 52 HDDs. The DDQs and ADDQ so calculated will be used to determine the Supplier's daily delivery obligations at the Company City Gate. (C)

A MMNGS Supplier taking service under this rate schedule accepts the Company's calculation of the DDQ and/or ADDQ. The Company shall not be liable for the difference between the projected consumption and the consumption determination by the Company.

2. Delivery Requirements

Deliveries of natural gas at the City Gate under this rate schedule shall be made to meet the DDQs for all customers in a MMNGS Supplier's MMT Pool (the ADDQ) within a tolerance band described below. The Company will deliver to each individual MMT Customer its requirements.

With respect to Appalachian production sources connected directly to the Company's system, 100% of the historical average daily production for the month will be accepted as delivered to the system for meeting the DDQ delivery requirements of the MMNGS Supplier. While 100% of the historical daily average shall be made available, gas must be scheduled on a daily basis to be delivered to an MMT Pool in order for volumes to be allocated that day. In no event shall volumes that are not scheduled for delivery to MMNGS Pools be made available as a carryover for nominations to MMT pools on a subsequent day during the month.

To the extent the Supplier's City Gate deliveries differ from the ADDQ provided to the Supplier by the Company then a City Gate Imbalance shall occur ("Imbalance") and charges for such Imbalance will be incurred as described below.

The Company is not obligated to accept any quantities nominated by Supplier in excess of its MMT Pool's ADDQ.

(C) Indicates Change

RATE SCHEDULE MMNGS
MONTHLY METERED NATURAL GAS SUPPLIER SERVICE (Cont.)

3. City Gate Imbalance Charges

For City Gate deliveries by the MMNGS Supplier that differ from the applicable ADDQ, the Supplier will incur the following charges:

a. Charges for Daily City Gate Underdeliveries

i. For daily City Gate underdeliveries up to or equal to five (5) percent of the applicable ADDQ, there will be no charge.

ii. For Daily City Gate underdeliveries in excess of five (5) percent of the applicable ADDQ during the Summer Period (April through October), the charge for the gas supplied by the Company to make up for the underdeliveries shall be equal to the higher of $7.00 per Dth or 110% of the DMI for that day plus all transportation costs to the Company’s City Gate. (C)

iii. For Daily City Gate underdeliveries in excess of five (5) percent of the applicable ADDQ during the Winter Period (November through March), the charge for the gas supplied by the Company to make up for the underdeliveries shall be equal to the higher of $10.00 per Dth or 110% of the DMI for that day plus all transportation costs to the Company’s City Gate. (C)

iv. During OFO periods, the charges described in Section G herein shall apply in addition to those charges specified in this Section D.3.

b. Charges for Daily City Gate Overdeliveries

There shall be no charges for Daily City Gate overdeliveries of up to five (5) percent of the applicable ADDQ, however, any such overdeliveries in excess of five (5) percent of the applicable ADDQ may be rejected by the Company in its sole discretion.

E. MMNGS Burner Tip Imbalances

1. Aggregation of MMNGS Burner Tip Imbalance

For the MMT customers included in the MMNGS Supplier’s MMT Pool, the Company will net all the month end burner tip imbalances for which the Supplier is responsible pursuant to this rate schedule into a single monthly burner tip imbalance (“MMNGS Burner Tip Imbalance”).

(C) Indicates Charge

RATE SCHEDULE MMNGS
MONTHLY METERED NATURAL GAS SUPPLIER (Cont.)

2. Resolution of MMNGS Burner Tip Imbalances

The Company will resolve MMNGS Burner Tip Imbalances through either a rollover to subsequent months or a cash out pursuant to Rule 30. The default method of MMNGS Burner Tip Imbalance resolution will be the cash out. Should the Company determine that circumstances render resolution of imbalances via cash out operationally infeasible, the Company may, in discretion and upon reasonable notice, suspend the cash out and resolve imbalances through rollover. (C)

a. Rollover Procedure (C)

At the close of the billing month, the Company will calculate the MMNGS Burner Tip Imbalance, as described above, for each MMT Pool. The Company shall adjust the applicable ADDQ for the next following month that operating conditions permit, upward to reconcile a net deficiency in the billing month, or downward to reconcile a net surplus in the billing month.

b. Cash Out Procedure (C)

i. MMNGS Burner Tip Imbalances Resulting in Net Overdelivery

For MMNGS Burner Tip Imbalances which result in a net overdelivery of volumes of gas for a MMT Pool during the month, the Company shall resolve the imbalance pursuant to Rule 30. (C)

ii. MMNGS Burner Tip Imbalances Resulting in Net Underdelivery

For MMNGS Burner Tip Imbalances which result in a net underdelivery of volume of gas for a MMT Pool during the month, the Company shall resolve the imbalances pursuant to Rule 30. (C)

3. Exchange of Net Burner Tip Imbalances

A Supplier may exchange a Burner Tip Imbalance due the Company under its MMNGS Service Agreement with a Burner Tip Imbalance due from another Supplier under another MMNGS Service Agreement or a Supplier under a SATS Service Agreement. Exchange of imbalances shall be accomplished pursuant to Rule 30. (C)

RATE SCHEDULE MMNGS
MONTHLY METERED NATURAL GAS SUPPLIER SERVICE (Cont.)

F. System Maintenance Order (“SMO”)

1. Issuance of SMOs

The Company shall issue System Maintenance Orders from time to time which assure that gas is flowing to the City Gate where and when needed. Such SMOs shall include but not be limited to orders to deliver gas at any or all of the points obtained by Suppliers to deliver gas at particular primary points into National Fuel Gas Supply Corporation. Should MMNGS Suppliers fail to comply with such SMOs then the Company shall issue OFOs as described below.

2. Communication of SMOs

SMOs will be communicated to the Supplier through the Company’s website with four hours advanced notice. Such notice will be supplemented by the use of internet E-mail notification to a Supplier’s Internet address.

3. Access to Upstream Pipeline Information

To monitor compliance with SMOs, the Supplier shall be required to provide the Company with the permission to access nomination information. (C)

G. Operational Flow Order (“OFO”)

1. Issuance of OFOs

The Company reserves the right to issue Operational Flow Orders as necessary to preserve the operational integrity of its system. Such OFOs may include, but shall not be limited to the following: a requirement to flow gas to the citygate, a reduction in Daily City Gate delivery tolerance and a requirement to flow gas to the Supplier’s primary receipt points on NFGSC.

2. Charges for Violation of OFOs

In addition to all other charges due the Company, any gas not delivered by MMNGS Supplier in violation of any OFO issued under this Section G may be assessed a charge of the higher of $25 per Dth or the DMI for that day plus all transportation costs to the Company’s City Gate.

3. Communication of OFOs

OFOs will be communicated to the Supplier through the Company’s website with four hours advanced notice. Such notice will be supplemented by the use of internet E-mail notification to a Supplier’s Internet address.

4. Access to Upstream Pipeline Information

To monitor compliance with OFOs, the Supplier shall be required to provide the Company with the permission to access nomination information. (C)

RATE SCHEDULE MMNGS
MONTHLY METERED NATURAL GAS SUPPLIER SERVICE (Cont.)

H. Termination of Service for Failure to Deliver Daily Quantity

1. The Company shall have the right to terminate service under this rate schedule to any Supplier that fails for any three (3) days to deliver at least ninety-five (95) percent of the applicable ADDQ for the Supplier's MMNGS Pool, measured during a single thirty day period ("Terminated Supplier") or one day of zero delivery. The terminated Supplier, at the Company's option, may be prohibited from receiving service under this rate schedule for 6 months if the MMT Customer does not take service from another qualified MMNGS Supplier. Such Terminated Supplier's MMT Customers will be served by the Company pursuant to the terms of the Standby Rate Schedule.

2. Supplier's MMT customers may be notified by the Company as to the impending transfer to Company service, together with a statement that the transfer is the result of the Supplier's failure to perform as required. The Company shall recover the cost of such notice from the Supplier by drawing down the Supplier's security deposit or other security instrument.

I. Supplier Qualification Criteria

1. Pursuant to 52 Pa. Code Chapter 62, Company may request and adjust security from Supplier and service under this Rate Schedule is contingent upon the MMNGS Supplier meeting and maintaining the creditworthiness standards. (C)

Applicants for service hereunder will be required to complete a Credit Application for evaluation by the Company based on the criteria set forth in this tariff. The results of the creditworthiness checks performed by the Company will be communicated to the applicant within two weeks of the Company's receipt of the properly completed application.

2. The MMNGS Supplier's application shall include a description of the MMNGS Supplier's operational capability for meeting the requirements of its MMT Pool. The Company shall then make a determination as to whether this capability is sufficient.

(C) Indicates Change

RATE SCHEDULE MMNGS
MONTHLY METERED NATURAL GAS SUPPLIER SERVICE (Cont.)

3. MMNGS Suppliers shall include with their application payment of a non-refundable $500 fee. For natural gas suppliers serving MMT Customers on August 1, 2006, and all individual MMT Customers that will be their own MMNGS Supplier, the application fee shall be waived by the Company.

J. MMNGS Supplier Obligations

1. Suppliers may enroll customers for service commencing with the MMT Customer's meter reading in any month. Service to the MMT Customer shall begin at the start of the customer's billing cycle after enrollment confirmation has been provided by the Company.

2. Enrollments/drops shall occur electronically, however, each MMNGS Supplier will be obligated to keep on file either oral or written evidence of each customer's enrollment with that Supplier, which evidence shall be available for Company review at any time, upon 24 hours' notice. The Company will provide the MMT Customer with a letter confirming enrollment, if the Customer notifies the Company within 5 days (through October 25, 2018, thereafter as per 52 Pa. Code §59.93 - §59.94) of issuance of the confirmation letter that the Customer does not wish to be served by the MMNGS Supplier, the enrollment of the Customer will be rescinded. (C)

3. To the extent of MMNGS Supplier's MMT Customer at any time is not served any longer by that MMNGS Supplier and is then the responsibility of the Company, effective upon the transfer of that customer to the Company, the Company shall charge the customer for all Company provided natural gas under the terms of the Standby rate schedule.

4. MMNGS Suppliers agree to abide by any other specific requirements in the Company's Operational Procedures Manual.

(C) Indicates Change

RATE SCHEDULE MMNGS
MONTHLY METERED NATURAL GAS SUPPLIER SERVICE (Cont.)

K. MMNGS Service Agreement

The initial term of the MMNGS Service Agreement between the Company and the MMNGS Supplier shall be for an annual period and renewable annually for successive one-year terms unless canceled by default of any terms or conditions hereof, or by the Company or the Supplier on sixty (60) days written notice prior to the end of a term, or otherwise by mutual agreement.

L. Force Majeure

MMNGS Supplier will be excused from delivering the required daily quantity of supply on any given day for Force Majeure events which directly and substantially affect a MMNGS Supplier's natural gas deliveries to the Company and for which alternate supply arrangements cannot be obtained by MMNGS Supplier or, if the MMNGS Supplier is unsuccessful in obtaining alternate supplies, for which the Company cannot obtain supplies on behalf of the MMNGS Supplier. For supplies provided by the Company, the MMNGS Supplier shall be charged the higher of 125% of the Residential purchased gas cost (commodity and demand) identified in Rider A or the highest DMI during the month plus all transportation costs to the Company's City Gate for each day such alternate supplies are delivered on behalf of MMNGS Supplier. For purposes of this rate schedule, a Force Majeure event will be any failure of the final pipeline delivering gas to the Company or an upstream pipeline feeding such pipeline, with such failure having been classified as a Force Majeure event pursuant to the terms of that pipeline's Federal Energy Regulatory Commission approved tariff. A Force Majeure event that curtails the MMNGS Supplier's assigned firm transportation service on an upstream pipeline that ultimately feeds a downstream pipeline, which directly and substantially affects a MMNGS Supplier's natural gas deliveries to the Company, and for which no alternative supplies are available from the Company or other sources will excuse a MMNGS Supplier from performing pursuant to this rate schedule to the extent of such curtailment. If at such time the MMNGS Supplier is delivering gas to other customers on the same interstate pipeline system, the volume excused from performance on the Company's system will be no more than a proportionate amount of the affected deliveries curtailed by the Force Majeure event. The MMNGS supplier is responsible for supplying complete information and verifiable proof of all the particulars requested by the Company related to any such Force Majeure exclusion. (C)

(C) Indicates Change

RATE SCHEDULE MMNGS
MONTHLY METERED NATURAL GAS SUPPLIER SERVICE (Cont.)

In order to validate a claim of Force Majeure, the MMNGS Supplier must have a firm, non-interruptible service with the affected pipeline that is covered by the Force Majeure event and must be willing to present such agreements to the Company.

Volumes not delivered pursuant to this Special Provision must be made up by MMNGS Supplier as soon as possible at a delivery rate to be established by the Company. Any curtailed volumes which are not made-up within thirty (30) days will be sold to MMNGS Supplier at a rate of $10.00 per Mcf.

M. Title to Gas

Supplier warrants that, at the time of delivery of gas to the Company's City Gate, Supplier or Customer shall have good title to deliver all volumes made available.

N. Control and Possession

After Supplier delivers gas or causes gas to be delivered to the Company, the Company shall be deemed to be in control and possession of the gas until it is redelivered to the Customer at Customer's meter.

O. 24 Hour Availability

Supplier shall include on the MMNGS Service Agreement a phone number by which Supplier can be reached on a twenty-four (24) hour basis.

P. Data Security Agreement

(C)

Marketers, suppliers, and agents shall execute a Data Security Agreement pursuant to Tariff Rule 33.

(C) Indicates Change

RATE SCHEDULE SATC
SMALL AGGREGATION TRANSPORTATION CUSTOMER SERVICE

APPLICABLE TO USE FOR

Service hereunder is available on or after October 30, 2001 to any qualified customer ("SATC Customer" or "Customer") that has enrolled to receive gas supply service from a qualified supplier under the Company's Small Aggregation Transportation Supplier Service ("SATS Supplier" or "Supplier").

The Purchase of Receivable Program (Docket No. P-2009-2099182) will be implemented upon Commission Order and the completion of the necessary system changes.

CHARACTER OF SERVICE

Through the procedures and provisions of this Small aggregation Transportation rate schedule SATC Customers will contract for service with a SATS Supplier and be served by such Supplier for an established term ending at the SATC Customer's meter reading in April (April billing cycle). The enrollment period and service starting dates will be as specified in Rate Schedule SATS.

The Company will maintain a list of SATS Suppliers including appropriate contact information as provided by the SATS Supplier. This list will be made available to customers upon request.

There are two (2) billing options. The default option is utility consolidated billing under which the Company renders a single bill, including NGDC and NGS charges to the SATC customer, and remits payment to the Supplier. The Company will buy the SATC NGS receivable at a discount of those customer groups eligible for the POR program. Suppliers using consolidated billing for eligible POR customer groups must participate in the POR program. Suppliers participating in the POR program must use the consolidated billing option and enter into the Billing Services Agreement. The second option is the dual bill model, where the Company bills the SATC customer for regulated service only. The POR program is not available for Suppliers utilizing the dual billing option.

Customers shall not participate in both CAP and the Small Aggregation Transportation Customer Service program. (C)

RATE SCHEDULE SATC
SMALL AGGREGATION TRANSPORTATION CUSTOMER SERVICE (Cont'd)

RATES AND CHARGES

A. Customer Transportation Service Rates

The Company will provide transportation services to deliver gas supplies to the SATC Customer(s). The Customer shall be billed the charges for the transportation services rendered for it at the appropriate charges provided herein for which service the SATC Customer qualifies.

The SATC Customer shall pay the following transportation charges for the transportation of gas. The commodity rates set forth below contain a component, presently $0.04453 per Ccf, for the recovery of purchased gas demand costs and shall be adjusted pursuant to Rider A of the tariff. Such purchased gas costs collected though these rates shall be included as revenues for the recovery of purchased gas costs as specified in Rider A of this tariff. (D)

RESERVED FOR FUTURE USE

RATE SCHEDULE SATC
SMALL AGGREGATION TRANSPORTATION CUSTOMER SERVICE (Cont.)

(C)

SPECIAL PROVISIONS

A. Qualified Suppliers

Customers under this service classification may only receive service from qualified SATS Suppliers. Such qualified SATS Suppliers are required, among other things, to meet the Consumer Protections requirements of the SATS Rate Schedule.

B. Termination of SATS Supplier

If the SATS Supplier serving the SATC Customer is terminated the SATC Customer shall be served by the Company under the appropriate sales service rate schedule for all services provided after the termination of the Supplier. The Company is the Supplier of Last Resort ("SOLR"). As such, it will sell gas supplies to customers who have not chosen an alternative National Gas Supplier, choose to be supplied by the Company or whom Natural Gas Suppliers have declined to serve, provided that the customer has met all of the terms and conditions for receiving service set forth in this tariff.

C. Restriction of Customer Information Provided to Suppliers

The Company may not release customer information to a third party unless the customer has been notified of such intent and has been provided a method to restrict the release of private information. Customers may restrict the provision of information by returning a signed form, orally or electronically.

The customer may choose to restrict the release of customer information according to one of the following two restriction options:

1. Restrict the release of only the customer's historical billing data.

2. Restrict the release of all private customer information including name, billing address, service address, rate class, rate sub-class, account number and historical billing data.

Telephone numbers may not be released to third parties under any circumstances.

(C) Indicate Change

D. Customer Rights as to the Handling of Complaints

Inquires and complaints from any customer will be received and processed in a timely manner. Residential customer inquiries and complaints will be handled in conformance with Chapter 56 of the Commission's Rules. When a customer inquiry or complaint relates to services provided by an SATS Supplier, the Company will refer the customer to the SATS Supplier for a response. If a customer inquiry or complaint involves issues or services provided by both the Company and the customer's SATS Supplier, the Company will develop and then maintain a system of tracking and coordinating the response to the customer inquiry or complaint from both parties. If a customer is dissatisfied with the Company's response, or indicates dissatisfaction with the SATS Supplier response to the customer with respect to the NGS services, the Company will inform the customer of the right to file an informal appeal with the Bureau of Consumer Services at the Commission and provide the customer with the toll-free telephone number and mailing address of the Commission.

E. Billing in the Event of a SATS Supplier Default

In the event of a default or discontinuance by a SATS Supplier, the Company will charge the customer the rate agreed to by the SATS Supplier and the customer for the remainder of the billing period, provided that the Company either has available or is provided the agreed upon rate by the Supplier or the Commission, and the Company will recover any difference between its costs and the SATS Supplier rate charged to the customer solely from the SATS Supplier or its bond or other security.

F. Termination of Service due to Non-Payment (C)

In addition to any right to terminate service under the Pennsylvania Public Utility Code, Commission regulations or this tariff, the Company may also terminate service for nonpayment of a billing or billings for natural gas supply charges provided by a SATS Supplier when the receivable is purchased by the Company. Such termination of service shall be in accordance with general regulations of the Pennsylvania P.U.C. applicable thereto and in accordance with the Pennsylvania Utility Code. Such termination shall be applicable to the SATC Residential, SATC Small Commercial and Public Authority under 250 Mcf/year, SATC Small Commercial and Public Authority between 250 and 1,000 Mcf/year and the SATC Small Volume Industrial less than 1,000 Mcf/year classifications under the Purchase of Receivable Program.

SATC customers under the POR program may avoid termination if such customer pays the termination notice amount. The termination notice amount will be the lower of the past due charges actually billed or the past due charges that would have been due had the customer received service at Distribution's otherwise applicable sales rate during the time the customer accrued the unpaid balance("Lesser of Calculation").

Terminated residential SATC customers under the POR program may be reconnected if such residential customer pays the termination notice amount.

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE

APPLICABLE TO USE FOR

Service hereunder is available on or after October 30, 2001 to any supplier ("SATS Supplier" or "Supplier") which has obtained the consent and appointment of a group of at least 50 relevant customers or a group of relevant customers whose volumes total at least 5,000 Mcf on an annual basis ("SATC Customer(s)" or "SATC Customer Group"), and agrees to assume the primary responsibility for the gas supply obligations for that group of SATC Customers. (C)

CHARACTER OF SERVICE

Through the procedures and provisions of this Small Aggregation Transportation Supplier rate schedule qualified SATS Suppliers will contract for service with qualified SATC Customers and shall serve such SATC Customers for an established term ending at the conclusion of the SATC Customer's meter reading in April (April billing cycle).

The Company will bill the Supplier for aggregation services (including any purchases of Company gas) provided to the Supplier.

RATES AND CHARGES

A. Supplier Aggregation Charges

The SATS Supplier shall be billed the charges for the aggregation services rendered for it at the appropriate Supplier aggregation charges provided herein. A SATS Service Agreement will allow Suppliers under this service classification to aggregate supplies to serve individual qualified SATC residential customers and qualified SATC non-residential customers. (C)

(C) Indicates Change

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

1. Billing Service Charges

For a pilot period of three years, terminable by the Company at the end of the third year following 12 months prior notice to participating Suppliers, the Company will purchase amounts receivable for SATC customers with annual consumption less than 1,000 Mcf/year as described herein and further detailed in the billing agreement.

The rate to be charged by the Company to the Supplier for Standard Billing Service shall be $0.20 for each bill rendered to an SATC Customer for the Supplier.

The Company shall provide the Supplier receiving Standard Billing Service with meter reading information and other reports in the Company's standard electronic format on a basis corresponding to the SATC Customer's billing cycles. The Supplier shall provide the Company with all required Supplier billing and rate information necessary for customer billing as determined by the Company. The Supplier shall provide such billing information in the Company's required format. The Supplier shall provide Supplier billing information no later than three business days before the last day of the month.

The Company will bill the SATC Customer for gas supplies sold by the Supplier to the Customer subject to the Supplier entering into a billing service contract with the Company. For Consolidated billing service where the Company does not purchase the Supplier's receivable payments made by the Customer under the billing service will be applied first to amounts to past service due under an amortization agreement with the Company, next to current bills due to the Company, next to gas supply charges owed to the Supplier, next to charges for other non-regulated service charges, and lastly to any "neighbor for neighbor" contribution. The terms and charges for the Supplier billing services other than Standard Billing Services may be negotiated between the Company and the Supplier. The Company shall be under no obligation to provide the Supplier billing services other than Standard Billing Services if mutually agreeable terms and charges cannot be negotiated.

The Company will purchase the accounts receivable from POR Suppliers servicing SATC Residential, SATC Small Commercial and Public Authority customers less than 250 Mcf/year, SATC Small Commercial and Public Authority customers between 250 and 1,000 Mcf/year and SATC Small Volume Industrial customers less than 1,000 Mcf/year at a discount where the Company is providing a Utility Consolidated Bill to the customer. The residential (I)
discount is 1.8661% and the non-residential discount is 0.4027%. (D)

To the extent that a POR customer account has an unpaid balance on its final bill's late payment date or at the time the unpaid account balance is transferred to another active account, the Company will deduct from the payment to the POR SATS Supplier for the purchase of its receivable the unpaid billed amounts in excess of the amount that would have been due had the customer received service at Distribution's otherwise applicable sales rate during the time the customer received service from the SATS Supplier (pursuant to Rate Schedule SATC Section F "Lesser of Calculation").

(C) Indicates Change

SPECIAL PROVISION

A. Gas Quality

Gas delivered by the Supplier must satisfy the quality specification of the pipelines used to transport Supplier’s gas. For deliveries to the Company, such deliveries must be made at an appropriate Company facility located within the Territory, as described in this tariff, or at another point or points acceptable to the Company.

B. Allowance for Losses

As allowance for losses incurred in the process of delivery, the Supplier shall provide the Company with a volume of gas equal to 0.15% of the amount delivered to the Company. In addition, for deliveries into Company capacity retained pursuant to Sections C.3. and C.5., Suppliers shall provide incremental quantities of gas equal to the amount of retainage required to transport gas from the receipt point into such Company retained capacity to the entry point to the Company’s system (“City Gate”). (D)

(D) Indicates Decrease

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

C. Total Upstream Capacity Requirements for SATS Suppliers

SATS Suppliers shall be required to provide sufficient firm pipeline transportation and storage capacity to meet the estimated extreme day requirements of their SATC Customer groups as further described below. The SATS Suppliers' estimated extreme day requirements of their SATC Customer Group used for Supplier capacity allocations and requirements shall be based on a sixty-two (62) degree day extreme peak day calculation. The Company shall utilize peaking and temperature swing storage capacity retained by the Company and recovered through SATC rates to provide for any variances between actual and forecasted usage and for any peak delivery requirements for days colder than sixty-two (62) degree days.

Such sufficient pipeline transportation and storage capacity shall be provided through the following means:

1. Released ESS Storage Capacity and Associated EFT Capacity

a. Requirements To Be Met Through ESS Storage

52% of extreme peak day requirements shall be provided through the Company's ESS storage and associated EFT transportation capacity on NFGSC. Such NFGSC Storage and transmission capacity shall be released to SATS Suppliers at the maximum rate under the pipeline's FERC gas tariff. (D)

b. Initial Assignment of ESS Storage Capacity

In a month a SATS Supplier begins to serve SATC customers, it shall be provided with an initial assignment of storage capacity, based on the percentage set forth at C.1.a. above, to meet the Supplier's requirements for the upcoming winter period. Approximately fifteen days prior to the close of nominations for the month, the Company will calculate the quantity of storage capacity released to match the SATS Supplier's winter requirements based on the number of SATC Customers aggregated by the Supplier. If the initial assignment takes place in a month other than April, the Company will transfer storage gas to the Supplier pursuant to C.1.c below. The SATS Supplier shall be responsible for all taxes and pipeline fees associated with moving or transferring the storage gas to the Company.

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

c. Additional Assignments of ESS Storage Capacity

Approximately fifteen days prior to the close of nominations for each month, the Company will recalculate the quantity of storage capacity released to match the SATS Supplier's revised winter requirements based on the number of SATC Customers aggregated by the Supplier. If additional SATC Customers join a SATS Supplier's SATC Customer Group, the Company will release additional capacity as required, based on the percentage set forth at C.1.a. above. In addition, the SATS Supplier will be required to pay the Company for storage gas transferred and all taxes and pipeline fees associated with moving or transferring the storage gas to the Supplier. The storage gas transfer rate shall be the sum of (1) the higher of the Company's average cost of gas based upon the Company's Section 1307f rate, or the DMI for the first day of month in which gas is transferred plus all transportation costs to the Company's City Gate, plus (2) the demand Transfer Recovery Rate ("DTR Rate"). The DTR rate shall equal the per Mcf System Average Unrecovered Demand Charge revenue beginning in the month of April through the initial month that storage capacity is released to the Supplier. The System Average Unrecovered demand Charge Revenue shall equal the sum of the differences between the average demand charge revenues and the average fixed demand costs beginning the month of April through the initial month that storage capacity is released to the Supplier.

The DTR by month shall be as follows:

Capacity Transfer Month	DTR $/Mcf	
April	$0.00	
May	$0.00	
June	$0.00	
July	$0.00	
August	$0.00	
September	$0.00	
October	$0.01	
November	$0.70	(I)
December	$1.01	(I)
January	$0.83	(I)
February	$0.37	(I)
March	$0.00	

(D) Indicates Decrease (I) Indicates Increase

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

c. Additional Assignments of ESS Storage Capacity (Cont.)

All revenues received from such storage gas transfers shall be credited as revenues for the recovery of purchased gas costs as specified in Rider A of this tariff.

Storage gas shall be transferred with released capacity effective the first day of the month as follows:

Capacity Transfer Month	Volumes of Storage Gas Transferred as a Percentage of Released Capacity
April	0%
May	0%
June	12%
July	29%
August	46%
September	63%
October	80%
November	95%
December	86%
January	68%
February	45%
March	28%

(C)

If the monthly minimum storage inventory level (expressed as a percentage) applicable to the last day of a calendar month has been relaxed, the same percentage shall apply to the volumes of storage gas transferred as a percentage of released capacity effective the first day of the following month.

(C) Indicates Change

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

d. Return of ESS Storage Capacity

In a month when the quantity of storage capacity released to match the SATS Supplier's revised winter requirements decreases, the SATS Supplier shall return storage capacity to the Company. The Supplier may either (1) transfer the remaining storage gas to a third party, subject to applicable pipeline requirements and charges; (2) retain the storage gas in the Supplier's remaining storage capacity or (3) transfer the storage gas to the Company at the lesser of (a) 95% of the injection period weighted DMI for the first day of the month during the previous storage injection period (April through October), plus all transportation costs to the Company's City gate; or (b) 95% of the DMI for the first day of the month plus all transportation costs to the Company's City Gate. With respect to (a) above, a weighting factor shall be applied to the DMI plus all transportation costs to the Company's City gate for each month as follows: 6% for the months April and May, 17% for the months June through September and 20% to October. The SATS Supplier shall be responsible for all taxes and pipeline fees associated with moving or transferring the storage gas to the Company. (C) (C)

If a Supplier's SATS Agreement is canceled or terminated, the Company will recall ESS storage and associated EFT transmission capacity that has been released to the Supplier unless either: (1) the Company no longer requires the ESS storage and associated EFT transmission capacity to serve sales and SATC customers or (2) the Company can obtain or has obtained satisfactory substitute storage and related transmission capacity at a lower cost. The Company shall have the right but not the obligation to purchase the remaining storage gas at the lesser of (a) 95% of the injection period weighted DMI for the first day of the month during the previous injection period (April through October), plus all transportation costs to the Company's City Gate and a proportionate share of storage demand capacity charges on such volumes since April 1; or (b) 95% of the DMI for the first day of the month plus all transportation costs to the Company's City Gate and proportionate storage demand capacity charges on such volumes since April 1. With respect to (a) above, a weighting factor shall be applied to the DMI plus all transportation costs to the Company's City gate for each month as follows: 6% for the months April and May, 17% for the months June through September and 20% to October. The SATS Supplier shall be responsible for all taxes and pipeline fees associated with moving or transferring the storage gas to the Company. (C) (C)

e. Required ESS Storage Inventory Levels

Suppliers will be required to follow a schedule set out by the Company such that the particular storage levels are obtained throughout the year, to assure the Supplier's SATC customers' needs are met by the Supplier.

(C) Indicates Change

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

e. Required ESS Storage Inventory Levels (Cont.)

In addition to meeting the City Gate balancing requirements set forth below, Suppliers must meet a minimum storage inventory level of:

12% on May 31,
29% on June 30,
46% on July 31,
63% on August 31,
80% on September 30,
95% on October 31,
86% on November 30,
68% on December 31,
45% on January 31,
28% on February 28 (February 29 in a leap year)

(C)

Any deficiency more than 2% below the required monthly minimum storage inventory level will be automatically adjusted by the Company to meet the required level. The supplier will be charged per Mcf for such automatic adjustment at the higher of $7.00 per MCF or the DMI for that day plus all transportation costs to the Company's City Gate. For any deficiency within 2% of the required monthly minimum storage inventory level, the Supplier will be charged per Mcf for such adjustment at the DMI for that day plus all transportation costs to the Company's City Gate, unless the Company, subject to operating conditions, determines that such deficiencies need not be adjusted.

The Supplier shall be required to provide the Company with the permission necessary to allow the Company to obtain access to the supplier's storage balance information to provide assurance of compliance with the monthly storage inventory requirements.

The Company may elect to relax the monthly minimum storage inventory level applicable to all Suppliers by posting notice on its web site at least 5 business days prior to the last day of the first month to which a relaxed limit would apply.

(C)

(C) Indicates Change

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

2. Released Transmission Capacity Not Included in SATC Transportation Rates

48% of extreme peak day requirements is to be provided by the release of pipeline capacity upstream of NFGSC and the release of associated EFT transportation capacity on NFGSC which is not included in transportation rates. All such capacity shall be released to SATS Suppliers, and SATS Suppliers shall take such released capacity, at the maximum rate under the pipeline's FERC gas tariff. The actual pipeline capacity path upstream of NFGSC to be released to the Supplier by the Company shall be designated by the Company from its available capacity. The Company will attempt to accommodate a Supplier's request for particular capacity on a first-come first-serve basis. (I)

As an alternative to the above, the Company may designate an alternative capacity path(s) from its available capacity. The capacity release rate for the pipeline capacity path released to the Supplier shall be $7.6749/Dth which equals the weighted average demand cost of upstream capacity, however, capacity released on NFGSC will be released at the maximum rate under NFGSC's FERC gas tariff. The Company will post a listing of the alternative capacity path(s) designated, including the associated quantity of capacity, on its web site. (D)

For capacity termination notices, prior to the termination notice date of any capacity contract in this Section C.2., the Company will issue a request for proposals to qualified Suppliers under this tariff to determine if the Company should terminate, renew, or replace such contract, in whole or in part. The Company will terminate a proportionate share of the capacity contract if: (1) Suppliers demonstrate that they will provide comparable firm capacity to serve the Company's core customers, (2) the Suppliers agree to assign such comparable capacity at the contracted price to the Company upon Company request if such capacity is required to meet supply requirements of SATC Customers due to the termination of the SATS Supplier pursuant to Section H.1. or if the Supplier has reduced the level of delivery requirements from the previous periods requirements, and 3) the Commission approves such comparable capacity. Comparable capacity must have firm rights for at least the seven (7) winter months, and such capacity must have primary delivery rights into available primary receipt rights on NFGSC held by the Company. Comparable capacity must have firm capacity rights sufficient in volume and duration (with renewal rights) to serve the customers to be served by the SATS Supplier. The Company will post a listing of capacity contracts, including the associated quantity of capacity, that it determines to be of critical status on its web site.

(D) Indicates Decrease (I) Indicates Increase

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

If the Company terminates capacity included in this Section C.2., the requirement to take released capacity pursuant to this Section C.2. shall be adjusted downward for the Supplier that replaces the terminated capacity to reflect such termination. Corresponding changes will be made in Section C.4.

3. Capacity Upstream of NFGSC Included in Transportation Rates

0% of extreme peak day requirements is to be provided by a SATS Supplier's maximum daily delivery into allocated upstream pipeline receipt points which the Company has retained ("Company Retained Upstream Capacity") and the cost of which capacity is included in transportation rates. The actual pipeline point upstream of NFGSC to be made available to the Supplier by the Company shall be designated by the Company. The Company will respond to requests for particular capacity and receipt points on a first-come first-serve basis and will reallocate capacity each April.

4. SATS Supplier Provided Capacity

0% of the extreme peak day requirements is to be provided by a SATS Supplier's own firm capacity upstream of NFGSC. The percentage provided by SATS Supplier's own firm capacity upstream of NFGSC is subject to increases if the Company terminates capacity as specified in Section C.2. The Supplier shall assign such SATS Supplier capacity to the Company upon Company request if such capacity is required to meet supply requirements of SATC Customers due to the termination of the SATS Supplier pursuant to Section H.1 or if the Supplier has reduced the level of delivery requirements from the previous period requirements. The Company will release to the SATS supplier EFT capacity on NFGSC at the maximum rate under NFGSC's FERC gas tariff equivalent to the peak day requirements to be provided by the SATS Supplier's own firm capacity.

5. NFGSC Capacity Included in Transportation Rates

The Company will deliver all upstream pipeline deliveries associated with Special Provisions Sections C.3 above through the NFGSC EFT capacity retained by the Company and included in transportation rates.

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

D. City Gate Balancing

1. Determination of Daily Delivery Quantities and Aggregate Daily Delivery Quantities

The Company, based upon each SATC Customer's historical load profile and/or estimates of consumption as applied to any forecasted weather, shall determine a SATS Supplier's SATC Customer's projected weather normalized consumption for a given period; either monthly, weekly, or daily. Based upon this projected consumption, actual consumption readings as available and based on the system requirement to manage storage capacity retained by the Company to meet temperature swings, the Company will determine each SATC Customer's Daily Delivery Quantity (DDQ) and the Company will also determine the Supplier's SATC Customer Group's Aggregate Daily Delivery Quantities (ADDQ) by summing all DDQs of the SATC Customers in the Supplier's SATC Customer Group. The DDQs and ADDQ so calculated will be used to determine the Supplier's daily delivery obligations at the Company City Gate. Such ADDQ shall not exceed the capacity available to the SATS Supplier as determined under Special Provisions Sections C1, C2, C3 and C4. The DDQs and ADDQs shall also be used to determine the specific rates and charges as outlined in this rate schedule.

A SATS Supplier taking service under this rate schedule accepts the Company's calculation of the DDQ and/or ADDQ. The Company shall not be liable for the difference between the projected consumption and the consumption determination by the Company.

2. Delivery Requirements

Deliveries of natural gas at the City Gate under this rate schedule both from direct deliveries at the City Gate under Special Provisions Section C.1. and as a result of deliveries to upstream pipeline transfer points made under Special Provisions Sections C.2., C.3., and C.4. shall be made to meet the DDQs for all customers in a SATS Supplier's SATC Customer Group (the ADDQ) within a tolerance band described below. The Company will deliver to each individual SATC Customer the Customer's requirements.

With respect to Appalachian production sources connected directly to the Company's system, 100% of the historical average daily production for the month will be accepted as delivered to the system for meeting DDQ delivery requirements of the SATS Supplier provided that such nominations are prioritized higher than nominations for transportation service under other Rate Schedules. While 100% of the historical daily average shall be made available, gas must be scheduled on a daily basis to be delivered to a SATC Pool in order for volumes to be allocated that day. In no event shall volumes that are not scheduled for delivery to SATS pools be made available as a carryover for nominations to SATC pools on a subsequent day during the month. (C)

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

2. Delivery Requirements (cont'd)

To the extent the Supplier's City Gate deliveries differ from the ADDQ provided to the Supplier by the Company, then a City Gate Imbalance shall occur ("Imbalance") and charges for such Imbalance will be incurred as described below. The Company is not obligated to accept any quantities nominated by Supplier in excess of its SATC Customer Group's ADDQ.

3. City Gate Imbalance Charges

For City gate deliveries by the SATS Supplier that differ from the applicable ADDQ, the Supplier will incur the following charges:

A. Charges for Daily City Gate Underdeliveries

i. For Daily City Gate underdeliveries up to or equal to two (2) percent of the applicable ADDQ, there will be no charge.

ii. For Daily City Gate underdeliveries in excess of two (2) percent of the applicable ADDQ during the Summer Period (April through October), the charge for the gas supplied by the Company to make up for the underdeliveries shall be equal to the higher of $7.00 per Dth or 110% of the DMI for that day plus all transportation costs to the Company's City Gate.

iii. For daily City Gate underdeliveries in excess of two (2) percent of the applicable ADDQ during the Winter Period (November through March), the charge for the gas supplied by the Company to make up for the underdeliveries shall be equal to the higher of $10.00 per Dth or 110% of the DMI for that day plus all transportation costs to the Company's City Gate.

iv. During OFO periods, the charges described in Section G herein shall apply in addition to those charges specified in this Section D.3.

b. Charges for Daily City Gate Overdeliveries

There shall be no charges for Daily City Gate overdeliveries of up to two (2) percent of the applicable ADDQ, however, any such overdeliveries in excess of two (2) percent of the applicable ADDQ may be rejected by the Company in its sole discretion.

E. Burner Tip Imbalances

1. Aggregation of Customer Burner Tip Imbalance

For SATC customers included in the SATS Supplier's SATC Customer Group, the Company will net all the imbalances for which the Supplier is responsible pursuant to this rate schedule into a single monthly imbalance ("SATS Burner Tip Imbalance"). (C)

(C) Indicates Change

Voluntarily Suspended to April 13, 2012

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

2. Resolution of Burner Tip Imbalances

The Company will resolve SATS Burner Tip Imbalances through either a rollover to subsequent months or a cash out pursuant to Rule 30. The default method of Burner Tip imbalance resolution will be the cash out. Should the Company determine that circumstances render resolution of imbalances via cash out operationally infeasible, the Company may, in discretion and upon reasonable notice, suspend the cash out and resolve imbalances through rollover. (C)

a. Rollover Procedure (C)

At the close of the billing month, the Company will calculate the SATS Burner Tip Imbalance, as described above, for each SATC Customer Group. The Company shall adjust the applicable ADDQ for the next following month that operating conditions permit, upward to reconcile a net deficiency in the billing month, or downward to reconcile a net surplus in the billing month. (C)

b. Cash Out Procedure (C)

i. Burner Tip Imbalances Resulting in Net Overdelivery

For SATS Burner Tip Imbalances which result in a net overdelivery of volumes of gas for a SATC Customer Group during the month, the Company shall resolve the imbalance pursuant to Rule 30. (C) (C)

ii. Burner Tip Imbalances Resulting in Net Underdelivery

For SATS Burner Tip Imbalances which result in a net underdelivery of volumes of gas for a SATC Customer Group during the month, the Company shall resolve the imbalance pursuant to Rule 30. (C) (C)

iii. Exchange of Net Burner Tip Imbalances

A Supplier may exchange a SATS Burner Tip Imbalance due the Company under its SATS Service Agreement with a SATS Burner Tip Imbalance due from another Supplier under another SATS Service Agreement or a Supplier under a MMNGS Service Agreement. Exchange of imbalances shall be accomplished pursuant to Rule 30. (C)

(C) Indicates Change

Voluntarily Suspended to April 13, 2012

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

F. System Maintenance Order ("SMO") (C)

1. Issuance of SMOs

The Company shall issue System Maintenance Orders from time to time which assure that gas is flowing to the City Gate where and when needed. Such SMOs shall include but not be limited to orders to deliver gas at any or all of the points obtained by or allocated to Suppliers in Special Provisions Section C.3 above, to deliver gas at particular primary points into NFGSC, or into the particular primary points of the Company Retained Upstream Capacity, as well as orders to deliver additional gas to or from storage. Should SATS Suppliers fail to comply with such SMOs then the Company shall issue OFOs as described below.

Voluntarily Suspended to April 13, 2012

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

2. Communication of SMOs

SMOs will be communicated to the Supplier through the Company's website with four hours advanced notice. Such notice will be supplemented by the use of internet E-mail notification to a Supplier's Internet address.

3. Access to Upstream Pipeline Information (C)

To monitor compliance with SMOs, the Supplier shall provide the Company with permission to access nomination information. (C)

G. Operational Flow Order ("OFO")

1. Issuance of OFOs

The Company reserves the right to issue Operational Flow Orders as necessary to preserve the operational integrity of its system. Such OFOs may include, but shall not be limited to the following: a requirement to flow gas to or from storage on NFGSC, a reduction in Daily City gate delivery tolerance and a requirement to flow gas to the Supplier's primary receipt points on NFGSC.

2. Charges for Violation of OFOs

In addition to all other charges due the Company, any gas not delivered by SATS Supplier in violation of any OFO issued under this Section G may be assessed a charge of the higher of $25 per Dth or the DMI for that day plus all transportation costs to the Company's City Gate.

3. Communication of OFOs

OFOs will be communicated to the Supplier through the Company's website with four hours advanced notice. Such notice will be supplemented by the use of internet E-mail notification to a Supplier's Internet address.

4. Access to Upstream Pipeline Information (C)

To monitor compliance with OFOs, the Supplier shall provide the Company with permission to access nomination information. (C)

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

H. Termination of Service for Failure to Deliver Daily Quantity

1. The Company shall have the right to terminate service under this rate schedule to any Supplier that fails for any three (3) days to deliver at least ninety (90) percent of the applicable ADDQ for the Supplier's SATC Customer Group, measured during a single thirty day period ("Terminated Supplier"). The Terminated Supplier, at the Company's option, may be prohibited from receiving service under this rate schedule for the greater of 6 months or until such time as another Enrollment Period as defined in Section J.1. is established by the Company. Such Terminated Supplier's SATC Customers will be served by the Company with the obligation that the gas supplies in storage and the capacity reserved for those customers shall be transferred to the Company through sale and recall as follows:

Voluntarily Suspended to April 13, 2012

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

a. Upon notice by the Company to the Terminated Supplier, the Company at its option may recall the capacity that it has released to the Terminated Supplier; and or require release of the Supplier's capacity as provided under section C.4.

b. Inventory remaining in storage shall be sold to the Company at a price equal to the Company's lowest monthly weighted average commodity cost experienced over the last twelve months.

c. The Terminated Supplier shall be responsible for any and all fees and taxes associated with moving or transferring the storage inventory to the Company.

d. Any failure to comply with the provisions under Sections H.1.a., H.1.b., H.1.c., and C.4. will result in the permanent ineligibility to receive service under this Rate Schedule.

e. Supplier's SATC customers may be notified by the Company as to the impending transfer to Company service, together with a statement that the transfer is the result of the Supplier's failure to perform as required. The Company shall recover the cost of such notice from the Supplier by either, (1) adjusting the inventory sales price described in Section H.1.b., or (2) drawing down the Supplier's security deposit (or other security instrument.

I. Supplier Qualification Criteria

1. Pursuant to 52 Pa. Code Chapter 62, Company may request and adjust security from Supplier and service under this rate schedule is contingent upon the SATS Supplier meeting and maintaining the creditworthiness standards. (C)

Applicants for service hereunder will be required to complete a Credit application for evaluation by the Company based on the criteria set forth in this tariff. The results of the creditworthiness checks performed by the Company will be communicated to the applicant within two weeks of the Company's receipt of the properly completed application.

2. The SATS Supplier's application shall include a description of the SATS Supplier's operational capability for meeting the requirement of its SATC Customer Group. The company shall then make a determination as to whether this capability is sufficient.

3. SATS Suppliers shall also describe in the application the means by which they will handle marketing and billing for 50 or more customers. Alternatively, SATS Suppliers may identify a third party, including the Company, in the case of the NGS' use of POR billing, and describe how such party will handle such tasks. Suppliers or their third party representative included in the Company's Purchase of Receivable Program must abide by the Company's Marketing Standards. The Company shall then make a determination as to whether this capacity is sufficient.

Suppliers serving customers with annual consumption less than 1,000 Mcf/year participating in the Company's POR program will be required to use the Company's Utility Consolidated Billing System and enter into the Billing Services Agreement.

(C) Indicates Change

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

4. SATS Suppliers shall include with their application payment of a non-refundable $500 fee.

5. SATS Suppliers shall also include with their application a copy of their intended pro forma contract for their prospective SATC Customers (minus confidential pricing provisions) demonstrating inclusion of the provisions set out in Section K herein.

J. SATS Supplier Obligations

1. Suppliers may enroll customers for service commencing with the SATC Customer's meter reading in any month. Service to the SATC Customer shall begin at the start of the customer's billing cycle after enrollment confirmation has been provided by the Company.

2. Once qualified, SATS Suppliers will be obligated to notify the Company on a weekly basis during the Enrollment Period of those customers enrolled in the Suppliers' SATC Customer Groups.

3. When a customer requests to change its SATS Supplier, upon receiving direct oral confirmation or written authorization to change the SATS Supplier, the customer's new SATS Supplier shall notify the Company by the end of the next business day following completion of the application process.

4. Enrollment shall occur electronically, however, each SATS Supplier will be obligated to keep on file either oral or written evidence of each customer's enrollment with that Supplier, which evidence shall be available for Company review at any time, upon 24 hours' notice. The Company will provide the SATC Customer with a letter confirming enrollment, if the Customer notifies the Company within the time period prescribed by Order of the Commission or, in the same absence of same, as specified per 52 Pa. Code §59.93 - §59.94) of issuance of the confirmation letter that the Customer does not wish to be served by the SATS Supplier, the enrollment for the Customer will be rescinded. (C)

5. To the extent a SATS Supplier's SATC Customer at any time is not served any longer by that SATS Supplier and is then the responsibility of the Company, effective upon the transfer of that customer to the Company, the Company shall have the option to recall capacity released to the Supplier under Special Provisions Section C.1 and C.2 or require assignment of capacity under Special Provisions Section C.4.

6. Any customer may identify persons authorized to make changes to the customer's account. To accomplish this, the customer provides the Company with a signed document identifying by name those persons who have the authority to initiate a change of the customer's SATS Supplier. A document signed by the customer whose sole purpose is to obtain the customer's consent to change natural gas suppliers shall be accepted as valid and result in the initiation of the customer's request. Documents not considered as valid include, but are not limited to, canceled checks, signed entries into contests and documents used to claim prizes won in contests.

(C) Indicates Change

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

7. SATS Suppliers agree to abide by any other specific requirements in the Company's Aggregation Application as such is approved by the Public Utility Commission.

K. Consumer Protections

In addition to satisfying the criteria set out in Sections I and J above, SATS Suppliers seeking to obtain service hereunder to sell gas to customers must demonstrate to the Company that they will meet the following requirements:

1. Contracts between SATS Suppliers and residential SATC Customers will contain specific language advising customers that the following consumer protections (Sections K.2-5.) will be provided by the Supplier.

2. The SATS Supplier has established a dispute resolution process satisfactory to the Company. Questions or complaints received by the Company will be processed to determine the nature of the dispute, and then forwarded as appropriate to the SATS Supplier. The Company shall provide the Commission's Competition Hotline phone number to each SATC Customer who has submitted a question or complaint concerning the SATS Supplier.

3. Suppliers serving customers with annual consumption less than 1,000 Mcf/year participating in the Company's POR program will be required to use the company's Utility Consolidated Billing System and enter into the Billing Services Agreement. For SATS Suppliers not using the company's Utility Consolidated Billing System, the bills rendered by the SATS Supplier will be clear and in plain language and shall meet the billing information requirements of Chapter 56 of the Commission's regulations, including the requirement that bills contain a statement directing the customer to "register any question or complaint about the bill prior to the due date," with the Company telephone number where the customer may initiate the inquiry or complaint. The Supplier shall submit a sample bill to the Company. (C)

4. The SATS Supplier performing its own billing shall provide SATC Customers with minimum payment periods required by the Commission's regulations; i.e. residential customers shall have 20 days to pay and commercial customers shall have 15 days. If a customer fails to pay by the due date, the Supplier shall notify the SATC Customer by mail that failure to pay will result in transfer to the Company upon a minimum of 15 days, whereupon the Company has the ability to terminate service for non-payment in accordance with the Commission's regulations. (C) (C)

(C) Indicates Change

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

5. Procedures are in place to ensure residential SATC Customers receive adequate prior notice of termination of gas supply services. The procedures must provide that notifications be sent to the residential SATC Customer(s) and to the Company at least 15 days before discontinuation of supply service to allow residential SATC Customers the opportunity to pay the overdue bill. Customers will only be transferred from a Supplier to the Company upon the "Control Date" for such customer, as such is established by the Company. The Company will be allowed to terminate customers participating in the Company's POR program for non-payment of SATC supplies pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation). (C)

6. For SATS Suppliers exiting the program ("Exiting Suppliers") and who intend to no longer serve SATC Customers, in addition to those protections noted in Section K.5, such Exiting Suppliers shall provide written notice to its SATC Customers and the Company sixty (60) days before it exits. The notice shall include information regarding the SATC Customers' ability to choose another SATS Supplier or return to the Company's sales service, assurances service will be provided by the Company and information regarding payment of their first bill. (C)

7. SATS Suppliers will abide by the Company's Marketing Standards specifically involving marketing efforts that involve uninvited personal visits to customers' homes or places of business, also known as door-to-door sales. (C)

(C) Indicates Change

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

L. SATS Service Agreement

The initial term of the SATS Service Agreement between the Company and the SATS Supplier shall be for an annual period ending March 31 and renewable annually for successive one-year terms unless canceled by default of any terms or conditions hereof, or by the Company or the Supplier on sixty (60) days written notice prior to the end of a term, or otherwise by mutual agreement. A SATC Customer shall be obligated to contract with Suppliers for terms ending with the customer's April billing cycle. Notice for termination of such contracts shall be a matter to be determined by the SATS Supplier and SATC Customer.

M. Force Majeure

SATS Supplier will be excused from delivering the required daily quantity of supply on any given day for Force Majeure events which directly and substantially affect a SATS Supplier's natural gas deliveries to the Company and for which alternate supply arrangements cannot be obtained by SATS Supplier or, if the SATS Supplier is unsuccessful in obtaining alternate supplies, for which the Company cannot obtain supplies on behalf of the SATS Supplier. For supplies provided by the Company, the SATS Supplier shall be charged the higher of 125% of the Residential purchased gas cost (commodity and demand) identified in Rider A or the highest DMI during the month plus all transportation costs to the Company's City Gate for each day such (C)
alternate supplies are delivered on behalf of SATS Supplier. For purposes of this rate schedule, a Force Majeure event will be any failure of the final pipeline delivering gas to the Company or an upstream pipeline feeding such pipeline, with such failure having been classified as a Force Majeure event pursuant to the terms of that pipeline's Federal Energy Regulatory Commission approved tariff. A Force Majeure event that curtails the SATS Supplier's (C)
assigned firm transportation service on an upstream pipeline that ultimately feeds a downstream pipeline, which directly and substantially affects a SATS Supplier's natural gas deliveries to the Company, and for which no alternative supplies are available from the Company or other sources will excuse a SATS Supplier from performing pursuant to this rate schedule to the extent of such curtailment. If at such time the SATS Supplier is delivering gas to other customers on the same interstate pipeline system, the volume excused from performance on the Company's system will be no more than a proportionate amount of the affected deliveries curtailed by the Force Majeure event. The SATS supplier is responsible for supplying complete information and verifiable proof of all the particulars requested by the Company related to any such Force Majeure exclusion.

(C) Indicates Change

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

In order to validate a claim of Force Majeure, the SATS Supplier must have a firm, non-interruptible service with the affected pipeline that is covered by the Force Majeure event and must be willing to present such agreements to the Company.

Volumes not delivered pursuant to this Special Provision must be made up by SATS Supplier as soon as possible at a delivery rate to be established by the Company. Any curtailed volumes which are not made-up within thirty (30) days will be sold to SATS Supplier at a rate of $10.00 per Mcf.

N. Title to Gas

Supplier warrants that, at the time of delivery of gas to the Company's City Gate or at the receipt point in to the Company Retained Upstream Capacity pursuant to Special Provisions Section C.3., Supplier or Customer shall have good title to deliver all volumes made available.

O. Control and Possession

After Supplier delivers gas or causes gas to be delivered to the Company, the Company shall be deemed to be in control and possession of the gas until it is redelivered to the Customer at Customer's meter.

P. 24 Hour Availability

Supplier shall include on the SATS Service Agreement a phone number by which Supplier can be reached on a twenty-four (24) hour basis.

Q. Nominations of Supplies

For deliveries into Company Retained Upstream Pipeline Capacity pursuant to Section C.3., Supplier shall notify the Company through the Company's web site one hour in advance of the deadline the Company has to submit nominations to upstream transporters of any and all information required by upstream transporters to nominate, confirm and schedule gas on their facilities. (C)

R. Service Quality Guidelines

Suppliers shall adhere to the Public Utility Commission standards for credit determination, deposits, initiation and discontinuation of service as specified in the Public Utility Commission's Maintaining Service Quality Guidelines at Docket No. M-00991249F0003.

S. Customer Information Disclosure Guidelines

Suppliers shall adhere to the Public Utility Commission standards related to disclosure of terms of service, marketing, advertising and sales practices, and privacy of customer information as specified in the Public Utility Commission's Customer Information Disclosure Guidelines at Docket No. M-00991249F0005.

(C) Indicates Change

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

T. Billing in the Event of a SATS Supplier Default

In the event of a default or discontinuance by a SATS Supplier, the Company will charge the customer the rate agreed to by the SATS Supplier and the customer for the remainder of the billing period, provided that the Company either has available or is provided the agreed upon rate by the Supplier or the Commission, and the Company will recover any difference between its costs and the SATS Supplier rate charged to the customer solely from the SATS Supplier or its bond or other security.

U. Standards of Conduct

The Company and Suppliers shall comply with the following requirements.

1. The Company shall apply its tariffs in a nondiscriminatory manner to its affiliated Supplier and any nonaffiliated Supplier.

2. The Company shall not apply a tariff provision in any manner that would give its affiliated Supplier an unreasonable preference over other Suppliers with regard to matters such as scheduling, balancing, transportation, storage, curtailment, capacity release and assignment, or nondelivery, and all other services provided to its affiliated Supplier.

3. Mandatory tariff provisions shall not be waived by the Company for any Suppliers absent prior approval of the Commission.

4. If a tariff provision is not mandatory or provides for waivers, the Company shall grant the waivers without preference to its affiliated Supplier or non-affiliated Supplier.

5. The Company shall maintain a chronological log of tariff provisions for which it has granted waivers. Entries shall include the name of the party receiving the waiver, the date and time of the request, the specific tariff provision waived and the reason for the waiver. The chronological log shall be open for public inspection during normal business hours.

6. The Company shall process requests for distribution services promptly and in a nondiscriminatory fashion with respect to other requests received in the same or a similar period. The Company shall maintain a chronological log showing the processing of requests for transportation services. The chronological log shall be open for public inspection during normal business hours.

7. If the Company provides a distribution service discount, fee waiver or rebate to its favored customers, or to the favored customers of its affiliated Supplier, the Company shall offer the same distribution service discount, fee waiver or rebate to other similarly situated customers. Offers shall not be tied to any unrelated service, incentive or offer on behalf of either the Company or its affiliated Supplier. A chronological log shall be maintained showing the date, party, time and rationale for the action. The chronological log shall be open for public inspection during normal business hours.

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

8. Subject to customer privacy or confidentiality constraints, the Company shall not disclose, directly or indirectly, any customer proprietary information to its affiliated Supplier unless authorized by the customer. To the extent that the Company does disclose customer information without customer authorization, it shall contemporaneously provide this same information to other similarly situated Suppliers in a similar fashion so as not to selectively disclose, delay disclosure, or give itself or its affiliated Supplier any advantage related to the disclosure. A chronological log shall be maintained showing the date, time and rationale for the disclosure. The chronological log shall be open for public inspection during normal business hours.

9. The Company shall justly and reasonably allocate to its affiliated Supplier the costs or expenses for general administration or support services provided to its affiliated Supplier.

10. The Company shall not condition or tie the provision of any product, service or price agreement by the Company (including release of interstate pipeline capacity) to the provision of any product or service by its affiliated Supplier.

11. The Company shall not give its affiliated Supplier preference over a non-affiliated Supplier in the provision of goods and services including processing requests for information, complaints and responses to service interruptions. The Company shall provide comparable treatment in its provision of such goods and services without regard to a customer’s chosen Supplier.

12. The Company and its affiliated Supplier shall maintain separate books and records. Further, transactions between the Company and its affiliated Supplier shall not involve cross-subsidies. Any shared facilities shall be fully and transparently allocated between the Company function and the affiliated Supplier function. The Company accounts and records shall be maintained such that the costs incurred on behalf of an affiliated Supplier may be clearly identified.

13. The Company employees who have responsibility for operating the distribution system, including natural gas delivery or billing and metering, shall not be shared with an affiliated Supplier, and their offices shall be physically separated from the office(s) used by those working for the affiliated Supplier. Such the Company employees may transfer to an affiliated Supplier provided such transfer is not used as a means to circumvent these interim standards of conduct.

14. Neither the Company nor its affiliated Supplier shall directly or by implication, falsely and unfairly represent to any customer, Supplier or third party that an advantage may accrue to any party through use of the Company’s affiliates or subsidiary, such as:

a. That the Commission regulated services provided by the Company are of a superior quality when services is purchased from its affiliated Supplier; or

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

b. That the merchant services (for natural gas) are being provided by the Company when they are in fact being provided by an affiliated Supplier;

c. That the natural gas purchased from a non-affiliated Supplier may not be reliably delivered;

d. That natural gas must be purchased from an affiliated Supplier to receive Commission regulated services.

15. When the affiliated Supplier markets or communicates to the public using the Company name or logo, it shall include a legible disclaimer that states:

a. That the affiliated Supplier is not the same company as the Company;

b. That the prices of the affiliated Supplier are not regulated by the Commission; and

c. That a customer does not have to buy natural gas or other products from the affiliated Supplier in order to receive the same quality service from the Company.

When an affiliated Supplier advertises or communicates verbally through radio or television to the public using the Company name or logo, the affiliated Supplier shall include at the conclusion of any such communication a legible disclaimer that includes all of the disclaimers listed in this paragraph.

16. Except in competitive bid situations the Company shall not (a) jointly market or jointly package its Commission regulated services with the services of an affiliated Supplier or (b) offer or provide to its affiliated Supplier products or services, including bill inserts in the Company bills promoting an affiliated Supplier’s services or a link from the Company’s web-site, unless the Company offers or provides the products or service to all non-affiliated Suppliers on the same terms and conditions.

17. The Company shall not offer or sell natural gas commodity or capacity to its affiliated Supplier without simultaneously posting the offering electronically on a source generally available to the market or otherwise making a sufficient offer to the market. The Company shall maintain a chronological log of these public disseminations. The chronological log shall be open for public inspection during normal business hours.

18. The Company shall keep a chronological log of any complaints, excepting paragraph 9, regarding discriminatory treatment of Suppliers. This chronological log shall include the date and nature of the complaint and the resolution of the complaint. The chronological log shall be open for inspection during normal business hours.

19. Dispute Resolution Procedures (with the exception of paragraph 9, which are exclusively under the purview of the Commission):

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

a. Any dispute between a Supplier, and/or an affiliated Supplier, and a non-affiliated Supplier alleging a violation of any of these Standards of Conduct provisions, the Supplier must provide the Company and/or affiliated Supplier, as applicable, a written Notice of Dispute that includes the names of the parties and customer(s), if any, involved and a brief description of the matters in dispute.

b. Within five (5) days of the Company's and/or affiliated Supplier's receipt of a Notice of Dispute, a designated senior representative of each of the parties shall attempt to resolve the dispute on an informal basis.

c. In the event the designated representatives are unable to resolve the dispute by mutual agreement within thirty (30) days of said referral, the dispute shall be referred for mediation through the Commission's Office of Administrative Law Judge. A party may request mediation prior to that time if it appears that informal resolution is not productive.

d. If mediation is not successful, then the matter shall be converted to a formal proceeding before a Commission Administrative Law Judge.

e. Any Party may file a complaint concerning the dispute with the Commission under relevant provisions of the Public Utility Code.

f. Parties alleging violations of these standards may pursue their allegations through the Commission's established complaint procedures. A complainant bears the burden of proof consistent with 66 Pa. C.S. §332 (relating to Public Utility Code) in regard to the allegations and may impose penalties for such violations pursuant to 66 Pa.C.S.§ 3301.

V. Customer Dispute Procedures Relating to Unauthorized Changes of Suppliers.

1. When a customer contacts Company or a Supplier and alleges that his/her Supplier has been changed without consent, the party contacted shall:

a. Consider the matter a customer registered dispute.

b. Investigate and respond to the dispute consistent with the requirements found in §§56.151 and 56.152 (relating to utility company dispute procedures).

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

2. When the customer's dispute has been filed within the first two billing periods since the customer should reasonably have known of a change of Suppliers and the dispute investigation establishes that the change occurred without the customer's consent, the customer shall not be responsible for any Supplier charges rendered during that period. If the customer has made payments during this period, the Supplier responsible for initiating the change of supplier shall issue a complete refund within 30 days of the close of the dispute. The refund or credit provision applies only to the natural gas supply charges.

3. A customer who has had a Supplier changed without having consented to that change shall be switched back to the original Supplier for no additional fee. Any charges involved in the switch back to the prior Supplier shall be the responsibility of the Supplier that initiated the change without the customer's consent.

4. Should a customer file an informal complaint with the Commission alleging that the customer's Supplier was changed without the customer's consent, the Bureau of Consumer Services will issue an informal decision that includes a determination of customer liability for any Supplier bills or administrative charges that might otherwise apply, rendered since the change of the Supplier.

5. The provisions of this section do not apply in instances when the customer's service is discontinued by the Supplier and subsequently provided by the Company because no other Supplier is willing to provide service to the customer.

6. Company and Suppliers shall preserve all records relating to unauthorized change of Supplier disputes for a period of three years from the date the customers filed the dispute. These records shall be made available to the Commission or its staff upon request.

W. Data Security Agreement

Marketers, suppliers, and agents shall execute a Data Security Agreement pursuant to Tariff Rule 33. (C)

RATE SCHEDULE FOR DAILY METERED LARGE MANUFACTURING TRANSPORTATION SERVICE

DEFINITIONS

(1) Gas Service Customer - A Gas Service Customer is an entity that is attached to the Company's lines and uses gas in its operations or in its premises;
(2) DMLMT - Daily Metered Large Manufacturing Transportation
(3) DMLMT Service Customer - Any entity that has executed a DMLMT Service Agreement with the Company for transportation of gas by the Company.

AVAILABILITY OF SERVICE

If all of the qualifications (a) through (e) set forth below are met, any entity will be considered a DMLMT Service Customer under this Rate Schedule.

(a) The entity that will receive gas transported by the Company has a volumetric requirement of at least 2 Bcf per year

(b) A DMLMT service agreement must be executed by the DMLMT Service Customer in the form prepared by the Company (the "Service Agreement");

(c) The DMLMT Service Customer has obtained, or has agreed to obtain, a supply of gas, of a quality acceptable to the Company, from any source of gas;

(d) The DMLMT Service Customer has made, or has caused to be made, arrangements by which such volumes of gas can be delivered, either directly or by displacement, on a firm or interruptible basis, into the Company's distribution system; and

(e) If facilities are required for furnishing of DMLMT service, in addition to facilities that are required for furnishing of gas service, to a Gas Service Customer, the DMLMT Service Customer shall have paid, in full, for any additional facilities required to be constructed for furnishing of DMLMT service, which payment shall not

be subject to refund under any circumstances. As deemed necessary by the Company in its sole discretion, the DMLMT customer shall be required also to pay, in full, for costs of installing daily metering and communications equipment selected by the Company which will enable the Company to obtain each day meter readings of the volume of gas delivered to the Company or to another point or points acceptable to the Company for the Customer's account and the volume of gas from the Company used by the Customer each day. In addition, with regard to daily metering and communications equipment, the Customer shall pay an amount of money to provide for recovery of the present value of the carrying cost of income taxes on the payment for daily metering and communications equipment. Such carrying cost arises from the delay between federal and Pennsylvania income taxation and income tax deductions over the tax life of the equipment and a further amount equal to 72.67% of the carrying cost (based on present income tax rates). If additional facilities are required for furnishing of gas service, Customer's payment for additional facilities required for furnishing of gas service shall be governed by Tariff Rule No. 3, "Extension of Facilities", and Tariff Rule No. 5, "Service Lines."

CHARACTER OF SERVICE

Gas, of a quality acceptable to the Company, owned by a DMLMT Service Customer and delivered, either directly or by displacement, into the Company's distribution system, will be transported, by the Company, to the delivery point designated by the DMLMT Service Customer.

TERM OF SERVICE AGREEMENT

If the requirements of this Rate Schedule are met, the Company shall enter into a Service Agreement with the customer for a term that will be established in the Service Agreement. However, the Company may terminate a Service Agreement at an earlier date as provided by law or the provisions of this Tariff.

RATE SCHEDULE FOR DAILY METERED LARGE MANUFACTURING TRANSPORTATION SERVICE
(cont'd)

MONTHLY RATES

For transportation of gas to Large Industrial Manufacturing Customers, the monthly rate for transportation shall be:

$0.5993 per Mcf.

Provided, however, that the Company, in its sole discretion, may reduce by contract the portion of the above rates applicable to the Customer that is for recovery of gas costs or the portion of the rate for recovery of non-gas costs of service if it is reasonably necessary to do so to meet competition from another supplier of energy including gas from another supplier of gas that has constructed, or could construct, facilities to deliver supplies of gas to a Gas Service Customer of the Company without use of the Company's facilities or another transportation of gas. The Company will reduce the applicable rate only if:

(a) Either (1) the Customer has facilities in place and operable to use an alternative fuel or obtain gas from an alternative supplier or (2) in the Company's judgment, such facilities would be constructed;

(b) Volumes of gas that would be transported by the Company would be displaced by an alternate fuel or an alternative source of gas unless the Company reduces its transportation rate;

(c) The Company will not reduce the rate for transportation service below the level necessary to transport gas; and

(d) In the Company's judgment the DMLMT Service Customer has taken all reasonable steps to minimize the cost of gas supplies delivered to the Company's system in order to help meet competition.

Where the above criteria are met, the Company may, in its discretion enter into an agreement setting either: (1) a fixed transportation rate or (2) the basis for determining the transportation rate, for the period of the Service Agreement, which will specify which portion of the rate is being reduced.

Volumes delivered as transportation service pursuant to this rate schedule shall be subject to State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge (C)

CHARGES FOR TRANSPORTATION BY OTHERS

If furnishing service, pursuant to this Rate Schedule, requires the use of a transportation service provided other than by the Company, any cost incurred by the Company, with regard thereto, shall be billed to DMLMT Service Customer by the Company.

CHARGES UNDER OTHER RATE SCHEDULES

The Gas Service Customer receiving gas transported by the Company under this rate schedule shall pay all charges under all other applicable rate schedules and riders, irrespective of whether such Customer, in any billing period, receives only gas transported by the Company, and such Customer shall pay rates under all other applicable rate schedules for any service furnished to the Customer in addition to transportation service under this Rate Schedule. The DMLMT Customer shall be charged the customer charge under Rate Schedule LIS. The Customer may receive service under Rate Schedule LIS if the Customer so requests and the Company has sufficient gas supply available, and other customers or the Company would not be harmed by the Company providing this service to the Customer.

CHARGES FOR OVERDELIVERIES

As used in this Rate Schedule, "overdeliveries" shall mean the cumulative amount by which the volume of gas delivered to the Company for the Customer's account, since the commencement of transportation service by the Company for the Customer under any rate schedule, after adjustment for line losses and after elimination of volumes purchased from the Customer by the Company, exceeds the total amount of transportation service volumes taken by the Customer from the Company under any rate schedule since the commencement of transportation service for the Customer by the Company. Such cumulative overdelivery balance shall be computed each day, and the rates set forth below shall be applied to the maximum daily overdelivery volume occurring during the billing month.

If the DMLMT Service Customer in any billing month has overdeliveries in excess of two percent of the volume of gas transported for the customer in the billing month, the Customer shall be subject to additional charges each billing month. For a maximum daily overdelivery volume up to 37% of the volume of DMLMT service gas transported to the Customer by the Company in the billing month, the charge for overdeliveries shall be $0.6351 per Mcf in excess of two percent of the volume of gas transported for the customer in the billing month.

For overdeliveries equal to or more than 37% of the volume of DMLMT service gas transported to the Customer by the Company during the billing month, the charge for such excess overdeliveries shall be $0.7624 per Mcf.

The Company may reduce or eliminate the overdelivery charges and may modify the operational flow order’s and daily delivery quantity (“DDQ”) requirements of customers receiving service under this rate schedule in order to meet the competitive circumstances for alternative fuels or bypass situations as set forth in this Service Classification.

OPERATIONAL FLOW ORDERS

The Company may also issue OFOs which apply to transportation customers receiving service under this rate schedule as follows:

A Restriction on Access to Daily Metered Imbalances

OFOs may be issued to customers receiving service under this rate schedule to assure that adequate supplies are delivered to the Company. During such period, DMLMT customers shall not be permitted to use banked gas to cover daily underdeliveries in excess of the 2% tolerance during the term of the OFO. Furthermore, in the event an OFO is issued, metered usage in excess of 102% of confirmed deliveries on behalf of the DMLMT customer to Distribution's city gate, less line loss, shall be deemed a sale of gas by the Company to the customer. All provisions related to the price for such sales, including charges under Rate SB-Standby Service, shall apply.

B. Waiver of Overdelivery Charges

The Company may, in its discretion, waive DMLMT overdelivery charges during or following colder than normal periods and to waive undelivery premiums during or following warmer than normal periods.

MAXIMUM DAILY QUANTITY

The "Maximum Daily Quantity" shall be the maximum volume of gas, expressed in Mcf, as set forth in a DMLMT Service Customer's Service Agreement, may be delivered into the Company's distribution system, during any twenty-four hour period, for transportation by the Company to such Customer as transportation service under this rate schedule. The Company, in its sole discretion and upon request of a DMLMT Service Customer, may agree to receive and to transport, during any twenty-four period, a volume in excess of the Maximum Daily Quantity as set forth in a transportation Service Customer's Service Agreement. During any hour of any twenty-four hour period, the Company shall not be required to receive and to transport more than 1/24 of the Maximum Daily Quantity as set forth in a Transportation Service Customer's Service Agreement.

BILLING

Monthly charges, for transportation service pursuant to this rate schedule, are subject to the Late Payment Charges set forth in Section 16 of the Rules and Regulations of this Tariff.

SPECIAL PROVISIONS

A. The volume of gas delivered into the Company's distribution system, on any day in behalf of Transportation Service Customers for transportation service pursuant to this Rate Schedule, shall be determined by meters and as provided in B, below, at the delivery points specified in the Service Agreement or to another point or points acceptable to the Company.

If any such point of delivery is also a point at which the Company buys or exchanges gas for the Company's own account through the same meter, the volume of gas delivered into the Company's distribution system, in behalf of Transportation Service Customers for transportation service, shall be deemed to be the volume scheduled by the Company and such Customers to be delivered in behalf of such Customers, at such point on such day, determined after the adjustment provided in B, below, but shall not be more than the total amount actually delivered, determined after the adjustment provided in B below, through such meter into the Company's distribution system at such point on such day.

B. To compensate for line losses, the volume of gas delivered into the Company's distribution system, shall be determined for purposes of this Rate Schedule to be equal to the greater of 99.5% of the amount indicated by a meter at the point of delivery into the Company's distribution system or the rate as set forth in Rate Schedule DMT Special Provisions B, Page No.116; provided however, that, where the only Company facilities involved in transporting gas to the Gas Service Customer are meters, meter installations, house regulators, house regulator installations and industrial measuring and regulating station equipment, no amount shall be deducted as compensation for line losses. (C)

C. Service under this Rate Schedule may be interrupted during periods of supply shortages but only based upon the schedule of priority of curtailment set forth in section 26 of the Rules and Regulations of this tariff.

D. Transportation service under this Rate Schedule may be interrupted or curtailed whenever, in the event of a sudden and unforeseen supply deficiency, the Company invokes emergency curtailment provisions under Tariff Rule 26.

(C) Indicates Change

E. In the event of interruption or curtailment of transportation service, pursuant to items C and D, above, and during such period of interruption or curtailment, the DMLMT Service customer must sell to the Company all or a portion of the DMLMT Service Customer's supply of gas at the higher of (1) the Transportation Service Customer's cost of purchased gas at the point of delivery to the Company or (2) the Company's average cost of purchased gas per Mcf, as determined based upon the Company's Section 1307(f) Rate which is $5.4664. (D)

F. If a Gas Service Customer receiving gas transported by the Company uses less than the amount of gas delivered into the Company's system for transportation to such Customer ("excess deliveries"), the Gas Service Customer receiving gas transported by the Company may use such gas during the banking/balancing period defined below, following which the Company shall have the right, but not the obligation, to purchase remaining excess deliveries of gas from the DMLMT Service Customer at a rate equal to the lowest of (1) the cost at which it was acquired by the DMLMT Service Customer, including pipeline transportation charges, or (2) the Company's average commodity delivered cost of gas to National Fuel Gas Supply Corporation, or (3) the Company's average commodity cost of locally-produced gas during the month when excess deliveries were received by the Company. The cost at which the DMLMT Service Customer acquired the gas will be determined from such Customer's contract with the supplier or by a sworn affidavit setting forth the Customer's cost of gas, including cost of delivery of such gas to the Company's system. Upon request by the Company, the DMLMT service Customer will be required to furnish to the Company the DMLMT Service Customer's choice of (1) a copy of this contract or (2) an affidavit. The banking/balancing period shall be the three billing months after the billing month in which the Company received excess deliveries in behalf of the Customer.

G. "Underdeliveries" are volumes of gas taken from the Company by a Gas Service Customer in excess of the sum of (1) any excess deliveries of the customer at the beginning of the day and (2) the volume of gas delivered to the Company for the customer's account, after adjustment for line losses less volumes of gas determined to be sales by the Company to the customer. Cumulative underdeliveries, as determined each day, in excess of two percent of the volume of gas delivered by the Company to the customer that day, shall be a sale of gas by the Company to the customer under the applicable rate schedule plus applicable surcharges as set forth in Rate Schedule SB Special Provisions and shall not be recharacterized as transportation service under any circumstances. Cumulative underdeliveries of not more than two percent of the volume of gas delivered to a customer by the Company on any day may be offset by volumes of gas delivered to the Company for the customer's account, after adjustment for line losses, in excess of the volume of gas taken by the customer from the Company on subsequent days within the same billing month.

H. Service under this rate schedule shall be available only to the extent that there is sufficient capacity for such service in those portions of the Company's system affected by providing of transportation service including but not limited to, that portion of the Company's system where gas is delivered to the Company and that portion of the Company's system where gas is delivered to the Customer. In determining the Company's ability to provide transportation service, sufficient capacity in the Company's system shall be assumed. If service shall not be supplied, based upon insufficient capacity, the burden shall be on the Company to prove the capacity limitation.

I. Where gas is received by the Company for transportation service pursuant to this Rate Schedule, title to such gas shall remain vested in the Transportation Service Customer for which such gas was received for transportation. The Company's furnishing transportation service for a Transportation Service Customer shall be complete upon delivery of gas received for transportation service, except as provided in E and F, above.

J. The Company shall not be liable, under any circumstances or in any respect, to a Gas Service Customer, Transportation Service Customer, a producer of gas or any other person or entity for damages arising either directly or indirectly from interruption, curtailment or termination of transportation service.

K. Revenues produced by charges to DMLMT customers for overdeliveries of transportation gas to such customers shall be treated in accordance with Paragraph (b)(11) of Rider "A".

L. Customers who contract for transportation service under this Rate Schedule shall have the right thereafter to purchase gas from the Company only to the extent that they have contracted for firm service under Rate Schedule SB for Standby Service. Purchases of gas from the Company by transportation service customers under this rate schedule shall be subject to both the charges under the applicable sales rate schedule and all provisions of the Rate Schedule SB, including the Special Provisions.

M. The Company may establish a BTU conversion factor in the DMLMT service agreement for volumes of gas to be received by the Customer at a factor different from the system average BTU conversion factor applied to other transportation customers.

N. Customers who elect to schedule their own gas supplies via Company's internet accessible Transportation Scheduling System and/or wish to access and/or obtain each day meter readings of the volume of gas delivered to the Company for the Customer's account and the volume of gas from the Company used by the Customer each day shall execute a Data Security Agreement pursuant to Tariff Rule 33. (C)

(C) Indicates Change

RIDER A
SECTION 1307(F) PURCHASED GAS COSTS
PROVISION FOR RECOVERY OF PURCHASED GAS COSTS

Rates for each Mcf (1,000 cubic feet) of gas supplied under Residential, Low Income Residential Assistance Service, Commercial and Public Authority, Commercial and Public Authority Load Balancing Service ("LBS"), Small Volume Industrial, Intermediate Volume Industrial, Intermediate Volume Industrial LBS, Large Industrial, Large Industrial LBS, Large Volume Industrial, Large Volume Industrial LBS and Natural Gas Vehicle Service rate schedules of this tariff, shall include $3.3670 per Mcf for recovery of purchased gas commodity costs, calculated in the manner set forth below, pursuant to Section 1307(f) of the Public Utility Code. (D)

Rates for each Mcf (1,000 cubic feet) of gas supplied under Residential, Commercial and Public Authority, Small Volume Industrial Service, Intermediate Volume Industrial, Large Volume Industrial Service, Large Industrial Service and Standby Service rate schedules of this tariff, shall include $1.8700 per Mcf for recovery of purchased gas demand costs, calculated in the manner set forth below, pursuant to Section 1307(f) of the Public Utility Code. (I)

Rates for each Mcf (1,000 cubic feet) of gas transported under the Small Aggregation Transportation Customer Rate Schedule shall include $0.4453 per Mcf for the recovery of purchased gas demand costs. (D)

Such rates for gas service shall be increased or decreased, from time to time, as provided by Section 1307(f) of the Public Utility Code and the Commission's regulations, to reflect changes in the level of purchased gas costs.

The amounts per Mcf for recovery of purchased gas costs (commodity and demand) included in rates under each rate schedule of the tariff are as follows:

	Distribution		Gas Adjustment	Natural Gas	
	Total	Charges	Charge	Supply Charge	
Residential	$5.6823	$0.4453	$0.2036	$5.0334	(D)
Low Income Residential Assistance Service	$5.6823	$0.4453	$0.2036	$5.0334	(D)
Commercial/Public Authority	$5.6823	$0.4453	$0.2036	$5.0334	(D)
Small Volume Industrial	$5.6823	$0.4453	$0.2036	$5.0334	(D)
Intermediate Volume Industrial	$5.6823	$0.4453	$0.2036	$5.0334	(D)
Large Volume Industrial	$5.6823	$0.4453	$0.2036	$5.0334	(D)
Large Industrial	$5.6823	$0.4453	$0.2036	$5.0334	(D)
Standby	$0.5980				(D)
Priority Standby	$1.2745				(D)
Small Aggregation Transportation Customer Rate Schedule	$0.4453	$0.4453			(D)

(I) Indicates Decrease (I) Indicates Increase

RESERVED FOR FUTURE USE

RESERVED FOR FUTURE USE

COMPUTATION OF PURCHASED GAS COMMODITY COSTS PER MCF INCLUDED IN NATURAL GAS SUPPLY CHARGES

Purchased gas commodity costs, per Mcf, shall be computed to the nearest one-hundredth cent (0.01¢) in accordance with the formula set forth below:

$$PGCC = \frac{(CC)}{(S)}$$

Purchased gas commodity costs, so computed, shall be included in Natural Gas Supply Charge rates charged to customers for gas service under the Residential, Commercial and Public Authority, Commercial and Public Authority Load Balancing Service ("LBS"), Small Volume Industrial, Intermediate Volume Industrial, Intermediate Volume Industrial LBS, Large Industrial, Large Industrial LBS, Large Volume Industrial and Large Volume Industrial LBS Service rate schedules for an initial period determined by the Commission and for consecutive twelve month periods beginning August l of each year thereafter, unless such period is revised by the Commission. The amount of purchased gas commodity costs, per Mcf, will vary, if appropriate, based upon annual filings, by the Company, pursuant to Section l307(f) of the Public Utility Code and such supplemental filings as may be required or be appropriate under Section l307(f) or the Commission's regulations adopted pursuant thereto.

In computing purchased gas commodity costs, per Mcf, pursuant to the formula, above, the following definitions shall apply:

"PGCC" - purchased gas commodity costs determined to the nearest one-hundredth cent (0.01¢) to be included in rates for each Mcf of gas supplied under Residential, Low Income Residential Assistance Service, Commercial and Public Authority, Commercial and Public Authority Load Balancing Service ("LBS"), Small Volume Industrial, Intermediate Volume Industrial, Intermediate Volume Industrial LBS, Large Industrial, Large Industrial LBS, Large Volume Industrial, Large Volume Industrial LBS and Natural Gas Vehicle Service rate schedules of this tariff.

"CC" - the estimated current commodity cost of gas including all associated hedging costs and deferrals, shall be determined as follows: (a) for all type of purchased gas, project the commodity cost for each purchase (adjusted for net current gas stored) for the projected period when rates will be in effect plus (b) the arithmetical sum of (1) the projected book value of noncurrent gas at the beginning of the computation year minus (2) the projected book value of noncurrent gas at the end of the computation year. This factor shall include no amount for purchased gas demand or winter requirement charges of an interstate pipeline company.

(C) Indicates Change

"S" - projected Mcf of gas to be billed to customers under the commodity charges of the Residential, Commercial and Public Authority, Commercial and Public Authority Load Balancing Service ("LBS"), Small Volume Industrial, Intermediate Volume Industrial, Intermediate Volume Industrial LBS, Large Industrial, Large Industrial LBS, Large Volume Industrial and Large Volume Industrial LBS Service rate schedules of this tariff during the period when rates will be in effect.

COMPUTATION OF PURCHASED GAS DEMAND COSTS PER MCF OF GAS INCLUDED IN NATURAL GAS SUPPLY CHARGES UNDER THE RESIDENTIAL, COMMERCIAL AND PUBLIC AUTHORITY, SMALL VOLUME INDUSTRIAL, INTERMEDIATE VOLUME INDUSTRIAL, LARGE VOLUME INDUSTRIAL, LARGE INDUSTRIAL AND STANDBY SERVICE RATE SCHEDULES

Purchased gas demand costs, per Mcf, to be included in Natural Gas Supply Charge rates under Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Volume Industrial, Large Industrial and Standby rate schedules shall be computed to the nearest one-hundredth cent (0.01c), in accordance with the formula set forth below:

$$PGDC = \left(\frac{(DC)}{(S - (SBS))} \right)$$

Purchased gas demand costs, so computed, shall be included in the rates charged to customers for gas service, pursuant to the Residential, Commercial and Public Authority, Small Volume Industrial Service, Intermediate Volume Industrial Service, Large Volume Industrial Service, Large Industrial Service and Standby Service rate schedules, for an initial period determined by the Commission and for consecutive twelve-month periods beginning August 1 of each year thereafter unless such period is revised by the Commission. The amount of purchased gas demand costs, per Mcf, will vary, if appropriate, based upon annual filings, by the Company, pursuant to Section 1307(f) of the Public Utility Code and such supplemental filings as may be required or be appropriate under Section 1307(f) or the Commission's regulations adopted pursuant thereto.

In computing purchased gas demand costs, per Mcf, pursuant to the formula, above, the following definitions shall apply:

"PGDC" - purchased gas demand costs determined to the nearest one-hundredth cent (0.01c) to be included in rates for each Mcf of gas supplied under Residential, Commercial and Public Authority, Small Volume Industrial Service, Intermediate Volume Industrial Service, Large Volume Industrial Service, Large Industrial Service and Standby Service rate schedules of this tariff.

"DC" - the estimated current demand cost of gas, determined by projecting, for all types of purchased gas, the total demand and winter-requirement charges from any interstate pipeline company or any other source of gas supply purchased by the Company for the projected period when rates will be in effect less projected current purchased gas demand cost revenue recovered through Distribution charges.

"S" - projected Mcf to be billed to customers during the projected period under the Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Industrial and Large Volume Industrial Service rate schedules.

"SBS" - projected Mcf volume to be billed to customers during the projected period under the Standby Service rate schedule.

COMPUTATION OF PURCHASED GAS DEMAND COSTS PER MCF OF GAS INCLUDED IN THE DISTRIBUTION CHARGES UNDER THE SALES RATE SCHEDULES AND THE RATE SCHEDULE SMALL AGGREGATION TRANSPORTATION CUSTOMER SERVICE

Purchased gas demand costs transportation, per Mcf, to be included in Distribution Charges under the Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Industrial and Large Volume Industrial Service rate schedules and the Rate Schedule Small Aggregation Transportation Customer Service shall be computed to the nearest one-hundredth cent (0.01c), in accordance with the formula set forth below:

$$PGDCT = \frac{(DCT + DEDC)}{(S + SATCV) - (SBS)}$$

“PGDCT” - Purchased gas demand costs transportation, per Mcf, to be included in Distribution Charges under the Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Industrial and Large Volume Industrial Service rate schedules and the Rate Schedule Small Aggregation Transportation Customer Service.

"DCT" - the estimated current demand cost of gas, determined by projecting, for all types of demand purchased gas capacity costs included in the Distribution Charges for Sales Service Rate Schedules and the Small Aggregation Transportation Customer Service Rates, the total usage, demand and winter-requirement charges from any interstate pipeline company or any other source of gas supply purchased by the Company for the projected period when rates will be in effect.

"DEDC" - experienced net overcollection or undercollection of purchased gas demand costs included in the Distribution Charges. Such experienced net overcollection or undercollection shall be determined for the most recent period permitted under law which shall begin with the month following the last month which was included in the previous over-under collection calculation reflected in rates.

The annual filing date shall be the date specified by the Company's Section 1307(f) tariff filing and not the date established by the Commission for pre-filing of certain information pursuant to 52 Pa. Code Sections 53.64(b)(1) and 53.65.

Supplier demand refunds received for capacity associated with the SATS capacity release provisions will be included in the calculation of the "DEDC" with interest added at the annual rate of six percent (6%) calculated from the month received to the effective month such refund is refunded. All other Supplier demand refunds received will be included in the calculation of the “DE” with interest added at the annual rate of six percent (6%) calculated from the month received to the effective month such refund is refunded.

"S" - projected Mcf to be billed to customers during the projected period under the Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Industrial and Large Volume Industrial Service rate schedules.

“SATCV” - projected Mcf to be transported to customers during the projected period under the Small Aggregation and Transportation Rate Schedule.

"SBS" - projected Mcf volume to be billed to customers during the projected period under the Standby Service rate schedule.

COMPUTATION OF OVER AND UNDER COLLECTED PURCHASED GAS COSTS PER MCF OF GAS TO BE INCLUDED IN THE GAS ADJUSTMENT CHARGE UNDER THE RESIDENTIAL, COMMERCIAL AND PUBLIC AUTHORITY, SMALL VOLUME INDUSTRIAL, INTERMEDIATE VOLUME INDUSTRIAL, LARGE VOLUME INDUSTRIAL, LARGE INDUSTRIAL, AND STANDBY SERVICE RATE SCHEDULES

Over and under collected gas costs, per Mcf, to be included in the Gas Adjustment Charge included in rates under Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Volume Industrial, Large Industrial, Small Aggregation Transportation Customer, and Standby rate schedules shall be computed to the nearest one-hundredth cent (0.01c), in accordance with the formula set forth below:

$$GAC = \frac{(CE + DE)}{(S1)} \quad (C)$$

In computing the gas adjustment charge, per Mcf, pursuant to the formula above, the following definitions will apply:

“GAC” – gas adjustment charge determined to the nearest one- hundredth cent (0.01¢) to be included in rates for each Mcf of gas supplied under Residential, Low Income Residential Assistance Service, Commercial and Public Authority, Commercial and Public Authority Load Balancing Service ("LBS"), Small Volume Industrial, Intermediate Volume Industrial, Intermediate Volume Industrial LBS, Large Industrial, Large Industrial LBS, Large Volume Industrial, Large Volume Industrial LBS and Natural Gas Vehicle Service rate schedules of this tariff. (C)

"CE" - experienced net overcollection or undercollection of purchased gas commodity costs. For the initial filing, pursuant to l307(f) of the Public Utility Code, in order to achieve an orderly transition from Gas Cost Rate procedures to Section 1307(f) procedures, such experienced net overcollection or undercollection, to be reflected in rates effective September 1, 1985, shall be the net overcollection or undercollection arising under the Gas Cost Rate procedure. The amount of such net overcollection or undercollection shall include the historic net amount as of March 31, 1985 together with the projected net overcollection or undercollection for the five-month period ending August 31, 1985.

After the transition from the Gas Cost Rate procedures, established pursuant to the Commission's order of October 1, 1978 at M-78050055, (52 Pa P.U.C. 217) as amended, to procedures established pursuant to Section 1307(f) of the Public Utility Code, such experienced net overcollection or undercollection shall be determined for the most recent period permitted under law which shall begin with the month following the last month which was included in the previous over-under collection calculation reflected in rates.

(C) Indicates Change

The annual filing date shall be the date specified by the Company's Section 1307(f) tariff filing and not the date established by the Commission for pre-filing of certain information pursuant to 52 Pa. Code Sections 53.64(b)(1) and 53.65.

Supplier commodity refunds received will be included in the calculation of "CE" with interest added at the annual rate of six percent (6%) calculated from the month received to the effective month such refund is refunded. Supplier commodity refunds will be included in the next quarterly filing after refunds are received pursuant to Case R-2013-2341534.

Pipeline penalty credits will be included in the calculation of "CE" as a credit to purchased gas costs from the month they are received to the effective month "CE" is refunded or collected. (C)

"DE" - experienced net overcollection or undercollection of purchased gas demand costs. For the initial filing, pursuant to l307(f) of the Public Utility Code, in order to achieve an orderly transition from Gas Cost Rate procedures to Section 1307(f) procedures, such experienced net overcollection or under-collection, to be reflected in rates effective September 1, 1985, shall be the net overcollection or undercollection arising under the Gas Cost Rate procedure. The amount of such net overcollection or undercollection shall include the historic net amount as of March 31, 1985 together with the projected net overcollection or undercollection for the five-month period ending August 31, 1985.

After the transition from the Gas Cost Rate procedures, established pursuant to the Commission's order of October 1, 1978 at M-78050055, (52 Pa P.U.C. 217) as amended, to procedures established pursuant to Section 1307(f) of the Public Utility Code, such experienced net overcollection or undercollection shall be determined for the most recent period permitted under law which shall begin with the month following the last month which was included in the previous over-under collection calculation reflected in rates.

The annual filing date shall be the date specified by the Company's Section 1307(f) tariff filing and not the date established by the Commission for pre-filing of certain information pursuant to 52 Pa. Code Sections 53.64(b)(1) and 53.65.

Supplier demand refunds received will be included in the calculation of "DE" with interest added at the annual rate of six percent (6%) calculated from the month received to the effective month such refund is refunded. Supplier demand refunds will be included in the next quarterly filing after refunds are received pursuant to Case R-2013-2341534.

"S1" - projected Mcf of gas to be billed to customers under the natural gas supply charges of the Residential, Commercial and Public Authority, Commercial and Public Authority Load Balancing Service ("LBS"), Small Volume Industrial, Intermediate Volume Industrial, Intermediate Volume Industrial LBS, Large Industrial, Large Industrial LBS, Large Volume Industrial and Large Volume Industrial LBS Service rate schedules of this tariff during the period when rates will be in effect.

(C) Indicates Change

DETERMINATION OF OVER/UNDERCOLLECTION OF GAS COSTS

The Company shall determine separate commodity cost and demand cost over/undercollections. In computing the experienced over/undercollection of purchased gas demand and commodity costs for a period defined by the Commission, the following procedure shall be used:

(a) All experienced purchased gas costs, actually incurred by the Company to serve customers pursuant to all rate schedules of this tariff shall be included as costs of purchased gas and shall be identified as demand or commodity costs;

(b) The following amount shall be included as purchased gas commodity or purchased gas demand revenues for recovery of gas costs:

(1) An amount determined by multiplying commodity volumes billed under the Residential, Low Income Residential Assistance Service, Commercial and Public Authority, Commercial and Public Authority Load Balancing Service ("LBS"), Small Volume Industrial, Intermediate Volume Industrial, Intermediate Industrial LBS, Large Industrial, Large Industrial LBS, Large Volume Industrial, Large Volume Industrial LBS and Natural Gas Vehicle rate schedules, for the applicable over/undercollection period, times the PGCC component excluding E Factor; plus

(2) An amount determined by multiplying commodity volumes billed under the Residential, Commercial and Public Authority, Small Volume Industrial, Intermediate Volume Industrial, Large Volume Industrial and Large Industrial rate schedules for the applicable over/undercollection period, times the PGDC charge as determined under this rider; plus

(3) An amount determined by multiplying demand volumes billed under Rate Schedule SB to LVIS and LIS customers times the PGDC charge; plus

(4) An amount determined by multiplying gas billing demand units ("Gas BDU") billed under the Commercial and Public Authority Load Balancing Service ("LBS"), Intermediate Volume Industrial LBS, Large Industrial LBS and Large Volume Industrial LBS rate schedules, for the applicable over/undercollection period, times the Rate Per Gas BDU applicable to customers under the LBS rate schedules.

(5) An amount determined by multiplying commodity volumes billed under the rate schedule for Natural Gas Vehicle Service for the applicable over/under collection period, times the applicable rate applicable to customers under the new Rate Schedule.

(6) An amount equal to all actual purchased gas costs recovered under the rate schedule Monthly Metered Transportation Service. In computing revenues for recovery of purchased gas costs under this item (6), any adjustment to rates under Special Provision L. of the Rate Schedule for Monthly Metered Transportation Service will be eliminated from the calculation. (C)

(7) An amount determined by multiplying the volume expressed in Mcf of gas transported under any Load Balancing Service rate schedule times the portion of the Commodity Rate for recovery of purchased gas costs.

(8) An amount equal to seventy-five percent of the revenues before income taxes from off-system sales over the monthly average commodity cost of gas plus variable transportation costs to deliver the gas to the off-system customer. The monthly average commodity cost of gas shall be defined as the monthly average commodity cost of gas purchases for all supplies scheduled at the beginning of the month; provided, however, that, if an additional unscheduled purchase is made during the month specifically for an off-system sale, such purchase shall be considered to be the gas used to make the off-system sale and the commodity cost of such purchase will be assigned to off-system sales up to the volume of the purchase. Off-system sales for 30-day nonrefundable sales commencing on the first of the month shall be treated as specific purchase sales for determining the cost of gas assigned to the sale. Gas will not be withdrawn from storage to make off-system sales, and the prices charged for off-system sales will not reflect the price attributable to gas withdrawn from storage. Any remaining off-system sale not covered by such unscheduled purchase(s) shall be assigned a gas cost equal to the monthly average commodity cost of scheduled purchases. The Company shall retain the remaining 25%.

(C) Indicates Change

(9) An amount determined by multiplying volumes billed under the Small Aggregation Transportation Service rate schedule times the PGDCT charge recovered through rates under rate schedule Small Aggregation Transportation Customer Service.

(10) An amount equal to the revenues from Daily Metered Transportation customers produced by charges for overdeliveries of transportation gas to such customers.

(11) An amount equal to 75% of the revenues generated from the release of pipeline transmission and storage capacity other than releases for SATS customers. The Company shall retain the remaining 25%.

(12) An amount equal to 75% of the savings from gas storage fill contracts as established in Case R-0016789. The Company shall retain the remaining 25%.

(13) An amount equal to 75% of asset management arrangements under FERC Order 712 for capacity releases associated with identified capacity contracts. The Company shall retain the remaining 25%.

Interest shall be computed monthly at the appropriate rate provided for in Section 1307(f)(5) of the Public Utility Code from the month that the over or under-collection occurs to the effective month such over-under collection is refunded or recouped as appropriate.

QUARTERLY UPDATES

The Company’s rates for recovery of purchased gas costs will be subject to quarterly adjustments under procedures set forth in the Commission’s regulations at 52.Pa. Code § 53.64(i)(5). Such updates will reflect, in addition to data specified in the regulation, changes in the projected commodity cost of purchased gas based upon the NYMEX source of data and method used in projecting the commodity cost of purchased gas approved by the Commission in the Company’s most recent annual proceeding for recovery of purchased gas costs under Section 1307(f) of the Public Utility Code. In addition, the Company will calculate rates in the November, February and May quarterly filings using annual sales volumes to determine the purchased gas cost rates as ordered at Docket R-2017-2582461.

The Company’s rate for the recovery of purchased gas costs for Monthly Metered Transportation Service will be subject to a quarterly adjustment to reflect changes in the rates of National Fuel Gas Supply Corporation when final rates are approved by the Federal Energy Regulatory Commission. (C)

(C) Indicates Change

ADJUSTMENT OF "CE" and “DE” FACTOR AMOUNTS

Each 1307(f) rate shall also provide for refund or recovery of amounts necessary to adjust for over or underrecoveries of "CE" and “DE” factor amounts included in prior 1307(f) rates. In computing the amount to be included for over or undercollection of "CE" and “DE” factor amounts, the amount recovered for "CE" and “DE” factor amounts under the prior 1307(f) rate shall be determined by multiplying the commodity volumes billed under the Residential, Low Income Residential Assistance Service, Commercial and Public Authority, Commercial and Public Authority Load Balancing Service ("LBS"), Small Volume Industrial, Intermediate Volume Industrial, Intermediate Volume Industrial LBS, Large Industrial, Large Industrial LBS, Large Volume Industrial, Large Volume Industrial LBS, and Natural Gas Vehicle Service rate schedules during the applicable 1307(f) period times the portions of the PGCC and PGDC component that provide for recovery of "CE" and “DE” factor amounts, and adding to that product, the amount recovered from Small Aggregation Transportation Customer Service customers for “DE” factor amounts under the prior 1307(f) rate which shall be determined by multiplying the commodity volumes billed under the Small Aggregation Transportation Customer Service rate schedules during the applicable 1307(f) period times the PGDC component that provides for recovery of “DE” factor amounts under the Small Aggregation Transportation Customer Service. (C)

(C) Indicates change

RIDER B

STATE TAX ADJUSTMENT SURCHARGE

In addition to the charges provided in this tariff, a surcharge of (0.17)% will apply to all non-Purchased Gas Cost charges for service rendered on or after October 1, 2025. (D) (C)

The above surcharge will be recomputed using the same elements prescribed by the Commission.

a. Whenever any of the tax rates used in calculation of the surcharge are changed;

b. Whenever the utility makes effective an increase or decrease in base rates, exclusive of Purchased Gas Cost rates and applicable Rider rates.

c. On March 31, 1971, and each year thereafter.

The above recalculation will be submitted to the Commission within one (1) day after the occurrence of the event or date which occasions such recomputation; and, if the recomputed surcharge is less than the one in effect, the Company will, and if the recomputed surcharge is more than the one then in effect, the Company may submit with such recomputation a tariff or supplement to reflect such recomputed surcharge, the effective date of which shall be one (1) day after filing.

In Compliance with P-2017-2591001 Order entered October 5, 2017, the Company shall file its State Tax Adjustment Surcharge filings on one day’s notice.

RIDER C
WEATHER NORMALIZATION ADJUSTMENT

Applicability and Purpose:

A Weather Normalization Adjustment ("WNA") shall be applied to bills of customers served under Residential, CAP, and Commercial and Public Authority Rate Schedules, for any bills rendered during the heating season October through May. (C)

Calculation of Adjustment Amount:
The WNA will be applied to October through May billing cycles and shall be calculated on a customer account specific basis in accordance with the formula below:

WNBC = BLMC + [((NHDD +/- (NHDD x 3%)) / AHDD) x (AMC - BLMC)]
WNAC = WNBC - AMC
WNA = WNAC x Distribution Charge

(a) Weather Normalized Billing Ccfs("WNBC") will be calculated as the Base Load Monthly Ccfs ("BLMC") added to the product of the Normal Heating Degree Days ("NHDD"), adjusted for a 3% deadband as further discussed below, divided by the Actual Heating Degree Days ("AHDD") and the Actual Monthly Ccfs ("AMC") less the BLMC. Weather Normalized Billing Ccfs (WNBC) will only be calculated if the AMC exceeds the BLMC. WNA will not be applicable for the billing period if AMC is less than the BLMC.

(b) BLMC shall be established for each customer using the customer's actual consumption from the billing system, measured in Ccfs.

(c) AMC shall be measured for each customer and billing cycle and will be based on actual or estimated meter readings.

(d) NHDD shall be based upon the 15-year average (2006-2020) for the given day, as reported by the National Oceanic and Atmospheric Administration (NOAA) for the Erie International Airport weather station.

(e) AHDD shall be the actual experienced heating degree days during the billing cycle. AHDD shall be based upon experienced actual Gas Day temperatures as reported by the NOAA for the Erie International Airport weather station.

(f) AMC will be subtracted from the WNBC to compute the Weather Normalized Adjustment Ccfs ("WNAC").

(g) The WNAC shall then be multiplied by the applicable Rate Schedule Distribution Charge based on service rendered to compute the WNA amount that will be charged or credited to each customer.

(C) Indicates Change

RIDER C
WEATHER NORMALIZATION ADJUSTMENT (Cont.)

(h) A deadband of 3% shall apply. The WNA for a billing cycle will apply only if the AHDD for the billing cycle are lower than 97% or higher than 103% of the NHDD for the billing cycle.

(i) The WNA factor shall be calculated by first adjusting the NHDD for the billing cycle by the deadband percentage of 3%. The deadband percentage shall be multiplied by the NHDD and then added to NHDD for the billing period when the weather is colder than normal (i.e., AHDD>NHDD) or subtracted from NHDD for the billing period when the weather is warmer than normal (i.e., AHDD<NHDD).

(j) In the event a customer's bill needs to be canceled and rebilled at any time, the WNA will be recalculated using the most recently available data for the billing period. In some cases, updates in data used in the calculation, may result in a different WNA for the billing period.

(k) The WNA shall be subject to surcharges in accordance with the provisions of Rider B - State Tax Adjustment Surcharge as set forth in this tariff.

(l) The Company will file reports detailing weather normalization information with the Commission as outlined in the Final Order at the Company's Base Rate Proceeding at Docket No. R-2022-3035730.

(C) Indicates Change

RIDER E
CUSTOMER EDUCATION CHARGE

Effective April 1, 2000, a charge will be included in the rates subject to this Rider to provide for recovery of costs of providing consumer education to inform customers of the changes in the Natural Gas Utility Industry.

The charge will be designed to recover the following customer education costs ("CED costs"):

1. Costs associated with providing information necessary to assist customers in making appropriate choices as to their natural gas service; and

2. Costs associated with any and all consumer education programs as a result of restructuring under the Natural Gas Choice and Competition Act.

APPLICABILITY

In addition to the charges provided in this tariff, a charge calculated in the manner explained below shall be added to the otherwise applicable charge for each Mcf of sales and transportation volumes delivered by the Company to customers receiving service under the Residential, Commercial and Public Authority, SVIS, IVIS, and SATC rate schedules, or successor rate schedules.

CALCULATION OF RATE

A charge will be recalculated annually based upon deferred and annually projected CED costs.

Effective January 1, 2001, the rate will be calculated to produce a levelized rate reflecting all deferred CED costs, and any actual and expected CED costs for the period from January 1 through December 31 and continue annually thereafter, divided by the total projected volumes of Residential, Commercial and Public Authority, SVIS, IVIS, and SATC rate schedules, for each twelve (12) month period over which this charge will be in effect.

The charge to be included in rates shall be $0.0000/Mcf. (C)

Effective September 29, 2004 per M-00001326 Secretarial letter Issued June 21, 2004, the rate will be recalculated to remove the third year assessment for state-wide gas consumer education costs. The filling effective September 29, 2004 will not be a reconciled filing.

(I) Indicates Increase
(D) Indicates Decrease
(C) Indicates Change

ANNUAL RECONCILIATION

Commencing January 1, 2002, and annually thereafter, the levelized rate will be adjusted for over/undercollections for the prior twelve (12) month period by comparing projections of CED costs and revenues under this Rider to actual amounts experienced. The annual reconciliation filing to be effective January 1, 2002, and thereafter shall include a reconciliation of actual experienced expenses for the preceding twelve (12) month period ended December 31. All reconciliations shall be based upon actual amounts through October 31 and estimates for November and December. Estimates for November and December shall be reconciled in the following reconciliation period. The rate will be designed to recover or refund the applicable under or over recovery over the twelve (12) month period beginning January 1. Each annual reconciliation shall also provide for refund or recovery of amounts necessary to adjust for over or under recoveries of amounts also included in prior reconciliations. Annual reconciliations for the appropriate periods will be filed in accordance with 66 Pa.C.S. §1307(e) by January 30. (C)

1. Annual Filing

The annual reconciliation and projected annual CED costs shall be filed thirty (30) days prior to January 1 and the recalculated rate shall become effective for service on or after January 1 and annually thereafter. (C)

(C)Indicates Change

RIDER F
CAP DISCOUNT CHARGE

CURRENT CAP RATE DISCOUNT

Effective August 1, 2023, a charge will be included in the rates subject to this Rider to provide for recovery of costs of the projected CAP rate discounts, pre-program arrearage forgiveness, and program costs exclusive of company labor for the upcoming 12 months.

Such charge shall be updated quarterly and effective each February 1, May 1, August 1, and November 1 of the year. The charge will also be updated whenever there is a change to the Residential Sales Service Rate Customer Charge, Distribution Charge, Natural Gas Supply Charge, or Gas Adjustment Charge.

APPLICABILITY

In addition to the charges provided in this tariff, a charge calculated in the manner explained below shall be added to the otherwise applicable charge for each Mcf of sales and transportation volumes delivered by the Company to customers receiving service under the Residential Sales Service Rate Schedule and the Residential rates of the SATC, MMT, and DMT transportation rate schedules.

CALCULATION OF RATE

The charge will be recalculated as specified above.

The charge shall be equal to the total annual projected discounts, pre-program arrearage forgiveness, and program costs exclusive of company labor for CAP customers for the upcoming 12 month period divided by the annual normalized throughput volumes of the qualified rate classes. The total annual projected discounts for the CAP customers for the upcoming 12 month period shall equal the sum of the individual monthly total projected discounts for CAP customers for the upcoming 12 months ("CAP Discount"). The total monthly projected discounts, pre-program arrearage forgiveness, and program costs exclusive of company labor for CAP customers shall equal the residential bill for the average CAP customer consumption for the month multiplied by the average discount percentage for CAP service multiplied by the projected number of CAP customers for the month.

The currently effective charge for the current CAP Discount to be included in rates is $0.1223/Mcf. (D)

(D) Indicates Decrease (I) Indicates Increase

RIDER F
CAP DISCOUNT CHARGE (C)

CAP FUNDING RECONCILIATION CHARGE

A charge will be included in the rates subject to this Rider to provide for the full recovery of costs in conjunction with the Company's CAP Discounts, program costs, and forgiven pre-program arrearages. Annual reconciliations for the appropriate periods will be filed in accordance with 66 Pa.C.S. §1307(e) by October 30. (C)

Such charge shall be updated annually and effective each February 1 of the year.

CALCULATION OF RECONCILIATION COMPONENT OF RATE

The charge will have five components; the first associated with the CAP Discount), the second with the CAP program costs, the third with the CAP forgiven pre-program arrearages, the fourth with the incremental customer credit and a fifth with the adjustment for over/under recovery of the prior period charge. The charge will be recalculated as specified above. (C)

The charge associated with the CAP Discount will contain the following calculation: (C)

The annual reconciliation charge associated with the CAP Discounts will be based on the previous fiscal year (October through September) actual over/(under) collection determined by comparing discounts provided in bills to CAP customers as compared to discounts billed to Residential customers under this Rider. (C)

(C) Indicates Change

RIDER F (C)
CAP DISCOUNT CHARGE

CAP FUNDING RECONCILIATION CHARGE (con't.)

CALCULATION OF RECONCILIATION COMPONENT OF RATE (con't)

The charge associated with the CAP program costs will contain the following calculation: (C)

The annual reconciliation charge associated with the CAP program costs will be calculated based on the previous annual fiscal year costs (October through September) to administer the CAP program excluding company labor and benefits less the projected amount included in the rider for the previous fiscal year. (C)

The charge associated with the CAP forgiven pre-program arrearages will contain the following calculation: (C)

The annual reconciliation charge associated with the CAP forgiven pre-program arrearages will be based on the previous annual fiscal year pre-program forgiven arrearages (October through September) associated with the CAP program less the projected amount included in the rider for the previous fiscal year. (C)

(C) Indicates Change

RIDER F
CAP DISCOUNT CHARGE

CAP FUNDING RECONCILIATION CHARGE (con't)
CALCULATION OF RECONCILIATION COMPONENT OF RATE (con't)

The charge associated with the incremental customer credit will contain the following calculation:

Effective February 1, 2009, an annual credit of $35 per customer will be provided associated with the CAP incremental customers. The credit will be based on the average number of CAP customers billed during the previous fiscal period (October - September) less 9,702. The annual credit will continue until new base rates become effective as a result of a general rate proceeding. If the average number of CAP customers billed during the previous fiscal period is 9,702 or less, the credit will be $0.

The CAP Funding Reconciliation Charge will be the summation of the charges calculated above divided by the projected February 1 through January 31 volumes.

ADJUSTMENT FOR OVER / UNDER RECOVERY OF PRIOR PERIOD CHARGE

The filing to be effective every February 1 shall include a levelized rate for over/under collections for the prior (12) month period by comparing projected revenues under this Rider to actual revenue amounts experienced. The annual reconciliation shall be based upon actual revenues through December 31 and estimated revenues for January. Estimates for January shall be included in the following reconciliation period. The rate will be designed to recover or refund the applicable under or over recovery over the twelve (12) month period beginning February.

RIDER F CAP Discount Charge Component	$/Mcf	
Current CAP Discount	$0.1355	(D)
Cap Funding Reconciliation Charge	$(0.0053)	
Adjustment for Over/Under Recovery of Prior Period Charge	$(0.0079)	
Total RIDER F	$0.1223	(I)

The currently effective charge to be included in rates is $0.1223/Mcf. (I)

(D) Indicates Decrease (I) Indicates Increase

Rider G
Merchant Function Charge (MFC) Rider

Applicability:

The Merchant Function Charge (MFC) shall be added to the Natural Gas Supply Charge and Gas Adjustment Charge of Residential, CAP, Commercial and Public Authority, SVIS, IVIS, LVIS and LIS rate schedules.

Such charges shall be updated quarterly and effective each February 1, May 1, August 1, and November 1 of the year. The charge will also be updated whenever there is a change to the Sales Service Rate Customer Charge, Distribution Charge, Natural Gas Supply Charge or Gas Adjustment Charge.

Calculation of Rate:

For customers receiving service in the Residential classification, the MFC shall equal 1.8032% times the Natural Gas Supply Charge and the Gas Adjustment Clause as calculated for Rider A.

The current Residential MFC Charge is:

Natural Gas Supply Charge per Mcf	$0.0907	(D)
Gas Adjustment clause (E-Factor) per Mcf	$0.0037	(D)
Total Residential MFC per Mcf	$0.0944	(D)

For customers receiving service in the Non-Residential classifications, the MFC shall equal 0.3398% times the Natural Gas Supply Charge and Gas Adjustment Clause as calculated for Rider A.

The current Non-Residential MFC Charge is:

Natural Gas Supply Charge per Mcf	$0.0171	(D)
Gas Adjustment clause (E-Factor) per Mcf	$0.0007	(D)
Total Non-Residential MFC per Mcf	$0.0178	(D)

(D) Indicates Decrease (I) Indicates Increase

Rider H
Gas Procurement Charge (GPC)

APPLICABILITY

Effective June 1, 2013, the Gas Procurement Charge will be included in the Natural Gas Supply Charge of Residential, CAP, Commercial and Public Authority, SVIS, IVIS, LVIS and LIS rate schedules.

The charge is designed to recover the costs of procuring natural gas pursuant to 52 Pa. Code §62.223. The natural gas procurement costs included in the GPC charge will only be updated in a base rate case.

The GPC to be included in the Natural Gas Supply Charge shall be $0.1149 / Mcf and is not reconcilable.

Price To Compare Component	Residential (¢ per 100 cubic feet)	Non Residential (¢ per 100 cubic feet)	
Natural Gas Supply Charge			
Purchased Gas Cost Component (Rider A)	50.334	50.334	(D)
Merchant Function Charge associated with Natural Gas Supply Charge(Rider G)	0.907	0.171	(D)
Gas Procurement Charge (Rider H)	1.149	1.149	
Subtotal Natural Gas Supply Charge	52.390	51.654	(D)
Gas Adjustment Charge			
Purchased Gas Cost Component (Rider A)	2.036	2.036	(D)
Merchant Function Charge associated with Gas Adjustment Charge (Rider G)	0.037	0.007	(D)
Subtotal Gas Adjustment Charge	2.073	2.043	(D)
Total Price To Compare	54.463	53.697	(D)

(D) Indicates Decrease (I) Indicates Increase

TCJA TEMPORARY SURCHARGE

To implement the effects of the Tax Cuts and Jobs Act (TCJA), on March 15, 2018 the Pennsylvania Public Utility Commission (Commission) issued a Temporary Rates Order at Docket No. M-2018-2641242 directing the utility to file its current base rates and riders as temporary rates, pursuant to Section 1310(d) of the Public Utility Code. 66 Pa. C.S. § 1310(d). Subsequently, on May 17, 2018, the Commission entered Orders in the above case and at Docket No. R-2018-3000527 superseding the March 15, 2018 Temporary Rates Order directing the utility to establish temporary rates as follows:

A negative surcharge will apply as a credit to all customer bills at an equal percentage of non-gas revenue among the various customer classes, exclusive of STAS and automatic adjustment clause revenues, for bills rendered for intrastate service. The credit will be applied on a per Mcf basis, by service class, as indicated in the table below. The total credits provided to customers through this negative surcharge will be reconciled with actual differences in federal income tax expense of a pre- and post-TCJA basis and will remain in place until the Company files and the Commission approves new base rates for the utility pursuant to Section 1308(d) that include the effects of the TCJA tax rate changes. The Company's last Base Rate Case at Docket # R-2022-3035730 included the effects of the TCJA tax rate change. Interest on over or under collections shall be computed monthly at the residential mortgage lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.) from the month that the over or under collection occurs to the mid-point of the recovery period. Upon determination that the negative surcharge, if left unchanged, would result in a material over or under collection, the Company may file with the Commission, on at least 10 days' notice, for an interim revision of the TCJA Temporary Surcharge. The TCJA Temporary Surcharge will be filed with the Commission by September 1 of each year to become effective the following October 1, reflecting estimated TCJA savings for the fiscal year. (C)

Service Class	Total Rate $ / MCF	
Sales & SATC		
Residential (RSS & CAP)	$0.00000	(D)
Small Comm./Public Authority < 250	$0.00000	(D)
Small Comm./Public Authority > 250	$0.00000	(D)
Large Comm./Public Authority	$0.00000	(D)
Small Volume Industrial Service	$0.00000	(D)
Inter. Vol. Industrial Service	$0.00000	(D)
MMT & DMT		
Residential	$0.00000	(D)
Small Comm./Public Authority < 250	$0.00000	(D)
Small Comm./Public Authority > 250	$0.00000	(D)
Large Comm./Public Authority	$0.00000	(D)
Small Volume Industrial Service	$0.00000	(D)
Inter. Vol. Industrial Service	$0.00000	(D)
Large Volume Industrial Service	$0.00000	(D)
Large Industrial Service	$0.00000	(D)

RIDER I OPEB TEMPORARY SURCREDIT

Effective October 1, 2021, a one-time bill credit will be applied and a surcredit will be included in the rates subject to this Rider to provide for the pass back of funds collected previously for Other Post Retirement Benefits ("OPEB") expenses that have been deferred for the benefit of ratepayers as a regulatory liability in accordance with the settlement order in Docket # R-00061493.

$25,000,000 of the OPEB regulatory liability has been reserved to pass back to customers as a one-time bill credit. The bill credit will be applied to customers' bills for active accounts as of October 1, 2021 and in the following amounts per class:

Residential	$100
C/PA	$250
Industrial	$1,500

An additional $29,000,000 of the OPEB regulatory liability has been reserved to pass back via a surcredit over 5-years ($5,800,000 per year). The surcredit will apply as a credit to all customer bills at a set allocation percentage equal to the allocation percentage of the Company's base rate increase in Docket # R-00061493 among the various customer classes, exclusive of STAS and automatic adjustment clause revenues, for bills rendered for intrastate service on and after October 1, 2021. The surcredit will be applied on a per Mcf basis, by service class, as indicated in the table below. The surcredit will continue for a period of 5 years without reconciliation. Interest is not applicable to the OPEB balance. The OPEB Temporary Surcredit will be filed with the Commission by October 1 of each year and will be recalculated annually during the 5-year period.

Service Class	Refund Rate Effective 10/1/25	
Sales & SATC		
Residential (RSS & CAP)	($0.21239)	(I)
Small Comm./Public Authority < 250	($0.10550)	(I)
Small Comm./Public Authority > 250	($0.11762)	(I)
Large Comm./Public Authority	($0.09274)	(I)
Small Volume Industrial Service	($0.06196)	(D)
Intermediate Vol. Industrial Service	($0.13411)	(I)
MMT & DMT		
Residential	($0.10726)	(D)
Small Comm./Public Authority < 250	($0.07788)	(I)
Small Comm./Public Authority > 250	($0.10683)	(I)
Large Comm./Public Authority	($0.11836)	(I)
Small Volume Industrial Service	($0.02116)	(I)
Intermediate Vol. Industrial Service	($0.06070)	(I)
Large Volume Industrial Service	($0.07097)	(D)
Large Industrial Service	($0.01377)	(I)

A total of $54,000,000 held in a grantor trust will be used for the passback of funds described above. At the conclusion of the 5-year period, the Company will terminate the grantor trust. (C)

The Company is suspending regulatory accounting associated OPEB expense because such costs are $0 and base delivery rates have been reduced to eliminate the recovery of OPEB expenses. The $54,000,000 passed back to ratepayers through the one-time bill credit and surcredit mechanisms described above will reduce the regulatory liability due to ratepayers. The remaining regulatory liability balance due to ratepayers will be addressed in the next base rate proceeding.

Of the regulatory liability balance that is not attributed to ratepayers, the Company will immediately record any portion of the balance attributed to the O&M component of any SFAS 106 income that has accumulated since the last base rate proceeding as a reduction to OPEB expense. The remaining regulatory liability balance not attributed to ratepayers is to be transferred into an account separate from the regulatory liability due to ratepayers and be used to reduce the cost of labor charged to capital projects and affiliates over a period of 5 years. Any remaining portion of the regulatory liability after the expiration of the 5-year period will be addressed in the next base rate proceeding.

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a charge of 4.83% will apply consistent with the Commission Order dated December 5, 2024 at Docket No. P-2022-3034957, approving the DSIC. (I)

1. General Description

A. Purpose: To recover the reasonable and prudent costs incurred to repair, improve, or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide the Utility with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems.

The costs of extending facilities to serve new customers are not recoverable through the DSIC.

B. Eligible Property: The DSIC-eligible property will consist of the following:

- Piping (accounts 365, 367, 374, 376);
- Couplings (account 376);
- Gas services lines (account 380) and insulated and non-insulated fittings (account 378);
- Valves (account 376);
- Excess flow valves (account 376);
- Risers (account 376);
- Meter bars (account 382);
- Meters (account 381);
- Measuring and Regulator Stations (accounts 334,366, 369, 375, 378, 381, 384)
- Industrial and Farm Tap Measuring and Regulating Equipment (account 385)
- Unreimbursed costs related to highway relocation projects where a natural gas distribution company or city natural gas distribution operation must relocate its facilities; and
- Other related capitalized costs (misc accounts)

C. Effective Date: The DSIC will become effective January 1, 2026. (C)

2. Computation of the DSIC

A. Calculation: The initial DSIC, effective January 1, 2025 shall be calculated to recover the fixed costs of eligible plant additions that have not previously been reflected in the Utility's rates or rate base and will have been placed in service between October 1 to November 30, 2024.

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

Thereafter, the DSIC will be updated on a quarterly basis to reflect eligible plant additions placed in service during the three-month periods ending one month prior to the effective date of each DSIC update. Thus, changes in the DSIC rate will occur as follows:

Effective Date of Change	Date to which DSIC-Eligible Plant Additions Reflected
April 1	December 1 through February 28
July 1	March 1 through May 31
October 1	June 1 through August 31
January 1	September 1 through November 30

B. Determination of Fixed Costs: The fixed costs of eligible distribution system improvements projects will consist of depreciation and pre-tax return, calculated as follows:

1. Depreciation: The depreciation expense shall be calculated by applying the annual accrual rates employed in the Utility's most recent base rate case for the plant accounts in which each retirement unit of DSIC-eligible property is recorded to the original cost of DSIC- eligible property.

2. Pre-tax return: The pre-tax return shall be calculated using the statutory state and federal income tax rates, the Utility's actual capital structure and actual cost rates for long- term debt and preferred stock as of the last day for the three-month period ending one month prior to the effective date of the DSIC and subsequent updates. The cost of equity will be the equity return rate approved in the Utility's last fully litigated base rate proceeding for which a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years shall have elapsed between the entry of such a final order and the effective date of the DSIC, then the equity return rate used in the calculation will be the equity return rate calculated by the Commission in the most recent Quarterly Report on the Earnings of Jurisdictional Utilities released by the Commission.

C. Application of DSIC: The DSIC will be expressed as a percentage carried to two decimal places and will be applied to the total amount billed to each customer for distribution service under the otherwise applicable rates and charges, excluding amounts billed for the State Tax Adjustment Surcharge (STAS). To calculate the DSIC, one-fourth of the annual fixed costs associated with all property eligible for cost recovery under the DSIC will be divided by the projected revenue for distribution service (including all applicable clauses and riders) for the quarterly period during which the charge will be collected, exclusive of STAS.

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

D. Formula: The formula for calculation of the DSIC is as follows:

$$DSIC = \frac{(DSI * PTRR + STFT + Dep + e)}{PQR}$$

Where:

DSI = Original cost of eligible distribution system improvement projects net of accrued depreciation and associated accumulated deferred income taxes pertaining to property-related book/tax depreciation timing differences resulting from the use of accelerated depreciation per Internal Revenue Code, 26 U.S. Code § 168.

PTRR = Pre-tax return rate applicable to DSIC-eligible property.

STFT = (State Tax Flow Through) Pre-tax flow through calculated on book-tax timing differences between accelerated tax depreciation and book depreciation net of federal tax.

Dep = Depreciation expense related to DSIC-eligible property.

e = Amount calculated (+/-) under the annual reconciliation feature or Commission audit, as described below.

PQR Projected quarterly revenues for distribution service (including all applicable clauses and riders) including any revenue from existing customers plus netted revenue from any customers which will be gained or lost by the beginning of the applicable service period.

Revenues will be determined as one-fourth of projected annual revenue.

3. Quarterly Updates: Supporting data for each quarterly update will be filed with the Commission and served upon the Commission's Bureau of Investigation and Enforcement, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the update.

4. Customer Safeguards:

A. Cap: The DSIC is capped at 5.0% of the amount billed to customers for distribution service (including all applicable clauses and riders) as determined on an annualized basis.

B. Audit/Reconciliation: The DSIC is subject to audit at intervals determined by the Commission. Any cost determined by the Commission not to comply with any provision of 66 Pa C.S. §§ 1350, *et seq.*, shall be credited to customer accounts. The DSIC is subject to annual reconciliation based on a reconciliation period consisting of the twelve months ending December 31 of each year or the utility may elect to subject the DSIC to quarterly reconciliation but only upon request and approval by the Commission. The revenue received under the DSIC

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

for the reconciliation period will be compared to the Company's eligible costs for that period. The difference between revenue and costs will be recouped or refunded, as appropriate, in accordance with Section 1307(e), over a one-year period commencing on April 1 of each year, or in the next quarter if permitted by the Commission. If DSIC revenues exceed DSIC-eligible costs, such over-collections will be refunded with interest. Interest on over-collections and credits will be calculated at the residential mortgage lending specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.) and will be refunded in the same manner as an over-collection. The utility is not permitted to accrue interest on under collections.

C. New Base Rates: The DSIC will be reset at zero upon application of new base rates to customer billings that provide for prospective recovery of the annual costs that had previously been recovered under the DSIC. Thereafter, only the fixed costs of new eligible plant additions that have not previously been reflected in the Utility's rates or rate base will be reflected in the quarterly updates of the DSIC.

D. Customer Notice: Customers shall be notified of changes in the DSIC by including appropriate information on the first bill they receive following any change. An explanatory bill insert shall also be included with the first billing.

E. All Customer Classes: The DSIC shall be applied equally to all customer classes, except that the Company may reduce or eliminate the DSIC to any customer with competitive alternatives who are paying flexed or discounted rates and customers having negotiated contracts with the Company.

F. Earnings Reports: The DSIC will also be reset at zero if, in any quarter, data filed with the Commission in the Utility's then most recent Annual or Quarterly Earnings reports show that the Utility would earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the DSIC as described in the pre-tax return section. The utility shall file a tariff supplement implementing the reset to zero due to overearning on one- days' notice and such supplement shall be filed simultaneously with the filing of the most recent Annual or Quarterly Earnings reports indicating that the Utility has earned a rate of return that would exceed the allowable rate of return used to calculate its fixed costs.

G. Residual E-Factor Recovery Upon Reset to Zero: The utility shall file with the Commission interim rate revisions to resolve the residual over/under collection or E-factor amount after the DSIC rate has been reset to zero. The utility can collect or credit the residual over/under collection balance when the DSIC rate is reset to zero. The utility shall refund any overcollection to customers and is entitled to recover any under collections as set forth in Section 4.B. Once the utility determines the specific amount of the residual over or under collection amount after the DSIC rate is reset to zero, the utility shall file a tariff supplement with supporting data to address that residual amount. The tariff supplement shall be served upon the Commission's Bureau of Investigation and Enforcement, the Bureau of Audits, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the supplement.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
BUFFALO, NEW YORK

RATES, RULES AND REGULATIONS

GOVERNING THE FURNISHING

OF

NATURAL GAS SERVICE

IN
TERRITORY DESCRIBED HEREIN

Issued: January 28, 2026, 2025 Effective: March 29, 2026

M. D. Colpoys, PRESIDENT
BUFFALO, NEW YORK

This Supplement includes increases, decreases, and changes to existing rates.
See page 2-3A.

LIST OF CHANGES MADE BY THIS TARIFF

CHANGE:

1. Rules and Regulations – Access to Premises – Rule No.8 is being proposed.
   Page 19.

2. Rules and Regulations – Market Price of Natural Gas language updated.
   Page 35E.

3. Daily Metered Transportation – Service Agreement, and telecommunications responsibilities language updated.
   Pages 110 and 110A.

4. Monthly Metered Transportation and Daily Metered Transportation – language updated.
   Pages 100, 101, 111, and 112.

5. Energy Efficiency Program – implementation and addition of EE Program charge is being proposed.
   Page 160.

6. OPEB Temporary Surcredit (Rider I) – implementation of one-time low-income bill credit and one-year surcredit is being proposed and language updated.
   Page 171 and 171A.

7. Distribution System Improvement Charge (DSIC) – language updated.
   Page 172.

8. TCJA Surcredit removed – pages reserved for future use.
   Page 170.

DECREASE:

9. The Distribution System Improvement Charge ("DSIC") decreases.
   Page 172.

10. Rider B – The State Tax Adjustment Surcharge, decreased to 0.00% for all services.
    Page 157.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES (Cont'd)

Determination of Justified Company Investment Per Dollar of Additional Annual Revenue

(1) Residential

The Justified Company Investment Per Dollar of Additional Annual Revenue for residential customers is $7.54. (I)

(2) Commercial and Public Authority; Industrial

The Justified Company Investment Per Dollar of Additional Annual Revenue for commercial, public authority or industrial customers shall be selected from the table below based upon the projected term of use by the customer of the new or upgraded facilities.

Projected Term of Use of New/Upgraded Facilities (Years)	Justified Company Investment Per Dollar of Additional Annual Revenue
1	$ 0.68
2	1.32
3	1.91
4	2.46
5	2.98
6	3.46
7	3.90
8	4.32
9	4.70
10	5.06
Greater than 10	7.54

(I)

Because the term of use has a substantial effect on the determination of the Justified Company Investment Per Dollar of Additional Annual Revenue, the Company may require a letter of intent from commercial, public authority and industrial customers projecting the term of use of the new or upgraded extension of facilities being requested.

The Company reserves the right to require a guaranteed revenue contract if the customer projects a term of use of the new or upgraded facilities in excess of 10 years or if the customer does not demonstrate that the customer's term of use is reasonable.

(D) Indicates Decrease

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

7. CUSTOMER'S PIPING AND EQUIPMENT

Prior to the installation of house piping by the customer in new or altered premises, inquiry shall be made of the Company to determine the requirements, sizes of pipe, quality and other specifications.

House lines, piping, connections and appliances are subject to inspection by the Company and no gas will be delivered unless all conditions are satisfactory.

The Company gives no warranty, expressed or implied, as to the adequacy or safety of any structure, equipment, piping, appliance or device owned, installed, leased or maintained by or for the customer or the owner of the premises served.

8. ACCESS TO PREMISES

The authorized agents of the Company shall, at all reasonable times, have free access to any premises supplied with gas or to which a service connection has been made, for the purpose of reading, inspecting, repairing or removing meters, piping, or other appliances therein belonging to the Company and of inspecting the piping and appliances belonging to the customer.

In furtherance of the foregoing, for purposes of this Rule No. 8, "free access" shall also mean that Company personnel are not subject to unsafe or hazardous conditions while on the premises, including without limitation, the presence of aggressive or uncontrolled animals (e.g., dogs), insect or rodent infestation, the display, use, or brandishing of firearms or other weapons in a threatening or intimating manner, presence of excrement, debris, or other rubbish, or any other circumstance that may reasonably pose a threat to the health or safety of Company employees or agents. (C)

Every industrial customer shall permit the Company, during business hours and upon reasonable notice, to inspect the customer's facilities so that the Company may determine whether facilities have been installed which would enable the customer to obtain volumes of gas without using the Company's system ("Bypass Facilities"). If a customer refuses to permit the Company to inspect the customer's facilities, it shall be presumed that Bypass Facilities have been installed.

9. INTERRUPTION OF SERVICE

In accordance with the Public Utility Code, the Company will provide service which shall be reasonably continuous and without unreasonable interruptions or delay. The Company shall not be liable, in any amount, for damages, direct or consequential, where service meets requirements of the Public Utility Code. This limitation of liability, however, shall not apply to Company conduct which is found to be willful, wanton or reckless. If the Company shall know, in advance, of an expected interruption of service, the Company will take all reasonable steps, such as personal contact, phone contact or the use of mass media, to notify affected customers of the cause and expected duration of the interruption. (C)

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

E. MISCELLANEOUS PROVISIONS

(a) Customer or a party appointed by the customer to act on Customer's behalf shall provide Company with nominations setting forth, by source, the volume to be transported by Company following procedures set forth in the Company's Operational Procedures Manual.

(b) The Customer appoints the party(ies) identified in the NFGDC Customer Agency Agreement form as its agent(s) for purposes of making such nominations and determining the proper allocation of volumes among all affected customers. All allocation methods are subject to the prior approval of Company.

(c) Deliveries of gas by or on behalf of Customer to Company at point(s) of receipt hereunder shall be made against the line pressure existing in Company's pipeline from time to time at a maximum pressure designated by Company from time to time. Company shall not be obligated to decrease such line pressure, and Customer shall not compress the gas delivered to Company without the prior approval of Company, which shall not be unreasonably withheld.

(d) Company will retain a percentage of the total volumes received by Company for the account of Customer as a loss allowance.

29. MARKET PRICE OF NATURAL GAS

For use within rate schedules in this Tariff, the Monthly Market Index ("MMI") shall be equal to the MCF equivalent of the highest volume weighted average price during the month, at Tennessee Gas Pipeline's Zone 4 200 Line Trading Hub, referred in the Platts Gas Daily ("Gas Daily") as "Tennessee Zone 4 200 leg" which will serve as the Company's Market Index Point. The Daily Market Index ("DMI") shall be equal to the MCF equivalent of the volume weighted average price for the applicable date, at the Market Index Point. (C)

Where transportation costs reflecting the cost of delivering gas to the Company's city gate are added to the MMI or the DMI to determine the market price of natural gas as applied by the Company under tariff rate schedules, such costs, unless explicitly stated otherwise, reflect the variable costs of using the associated pipeline capacity, e.g. commodity transportation rates, fuel retention and other variable usage surcharges, as applicable.

Should a price for the Market Index Point be temporarily unavailable during any period, the Company may, at its discretion, select a substitute representative price in the interim. If the Market Index Point price becomes unavailable on a permanent basis, the Company will file to change this section and may, at its discretion, select a substitute representative price in the interim, subject to refund.

30. RULES FOR MONTH END IMBALANCE RESOLUTION

The Imbalance Holder is the Customer or Supplier responsible for imbalance resolution as described in Rate Schedules MMNGS or SATS, under which the Company provides service. For the purposes herein, Imbalance Holder's gas consumption and deliveries to the Company are equivalent to the gas consumption and deliveries to the Company of the MMT or SATC Customers, respectively, for which it bears imbalance responsibility.

(C) Indicates Change

RESIDENTIAL SERVICE RATE SCHEDULE

RESIDENTIAL CLASSIFICATION

This classification shall include gas supplied for residential purposes such as a private dwelling, apartment house with a single meter supplying four or less dwelling units, separately metered apartments of a multiple dwelling, accessory buildings to dwellings or apartment houses such as garages, except at residences receiving service under Rate Schedule CAP for Low Income Residential Assistance Service and other places of residence where gas is used for residential purposes.

Churches and missions (places of worship) shall be entitled to Service under the Residential service rate schedule.

AVAILABILITY OF SERVICE

Gas Service shall be available at one location, except as otherwise provided, for residential customers.

APPLICABILITY

Applicable in all areas served under this tariff.

GAS SHORTAGE CURTAILMENT

Service under this schedule to an LIS Industrial Customer is subject to curtailment and excess consumption penalty as set forth in Rule 26 of this tariff.

RULES AND REGULATIONS

The rules and regulations set forth in this tariff shall govern, where applicable, the supply of gas service under this rate schedule.

Natural gas vehicle customers are classified into the following categories:

NGV(1) All natural gas vehicle customers utilizing Company owned filling facilities. A uniform rate shall be established each month within the parameters set forth above, for customers utilizing Company-owned filling facilities.

The minimum NGV(1) rate shall be:	$0.58969/Ccf	(I)
The current components of the minimum NGV(1) rate are as follows:		
100% load factor base cost of gas:	$0.44533/Ccf	
Incremental operating cost of Company owned NGV compression equipment:	$0.13436/Ccf	
Transition Cost Surcharge	$0.00000/Ccf	
State Tax Adjustment Surcharge	$0.00000/Ccf	(I)
Minimum allowable Non-Gas cost	$0.01000/Ccf	
The maximum NGV(1) rate shall be:	$0.91388/Ccf	(I)
The current components of the maximum NGV(1) rate are as follows:		
Tailblock rate of the Commercial and Public Authority Service Rate schedule:	$0.77952/Ccf	(I)
Incremental operating cost of Company owned NGV compression equipment:	$0.13436/Ccf	
State Tax Adjustment Surcharge	$0.00000/Ccf	(I)

NGV(2) Natural gas vehicle customers utilizing customer owned filling facilities. A uniform rate will be established each month within the parameters set forth above, to customers utilizing customer owned filling facilities.

The minimum NGV(2) rate shall be:	$0.45533/Ccf	(I)
The current components of the minimum NGV(2) rate are as follows:		
100% load factor base cost of gas:	$0.44533/Ccf	
Transition Cost Surcharge	$0.00000/Ccf	
State Tax Adjustment Surcharge	$0.00000/Ccf	(I)
Minimum allowable Non-Gas cost	$0.01000/Ccf	
The maximum NGV(2) rate shall be:	$0.77952/Ccf	(I)

(D) Indicates Decrease (I) Indicates Increase

The current components of the maximum NGV(2) rate are as follows:

Tailblock rate of the Commercial and Public Authority Service Rate schedule:	$0.77952/Ccf	(I)
State Tax Adjustment Surcharge	$0.00000/Ccf	(I)

V. SURCHARGE

All non-purchased gas cost charges under this rate schedule will be subject to surcharges in accordance with provisions of Rider B - State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge as set forth in this tariff.

VI. AMOUNTS TO BE INCLUDED IN OVER/UNDERCOLLECTION OF GAS COSTS

Purchased gas cost revenues billed under this rate schedule shall be included as revenues for recovery of gas costs for purposes of computing Factor "E" of Company's 1307(f) rate in accordance with procedures set forth in Rider "A" - section 1307(f) Purchased Gas Costs. Purchased gas cost revenues recovered under this rate schedule shall be the 100% load factor base cost of gas as defined above.

VII. RULES AND REGULATIONS

The rules and regulations set forth in this tariff shall govern, where applicable, the supply of gas service under this rate schedule.

RATE SCHEDULE FOR MONTHLY METERED TRANSPORTATION SCHEDULE (cont'd)

MONTHLY RATES

Commodity Rates

The commodity rates set forth below contain a component, presently $0.4900 per Mcf, for recovery of purchased gas costs.

For transportation of gas to Residential Customers, the monthly rate for transportation of gas both within and outside the Commonwealth of Pennsylvania shall be:

$3.8680 (I)

For transportation of gas to Commercial and Public Authority Customers, the monthly rate for transportation of gas produced within or outside the Commonwealth of Pennsylvania shall be: (C)

$3.4137 per Mcf for Small Commercial/Public Authority using not more than 250 Mcf per year (I)
$2.7815 per Mcf for Small Commercial/Public Authority using greater than 250 Mcf but not more than 1,000 Mcf per year (I)
$2.4663 per Mcf for Large Commercial/Public Authority (I)

For transportation of gas to Small Volume Industrial Customers, the monthly rate for transportation of gas produced within or outside the Commonwealth of Pennsylvania shall be: (C)

$3.1603 per Mcf for SVIS Customers (I)

(D) Indicates Decrease (I) Indicates Increase

RATE SCHEDULE FOR MONTHLY METERED TRANSPORTATION SCHEDULE (cont'd)

For transportation of gas to Intermediate Volume Industrial Customers, the monthly rate for transportation of gas produced within or outside the Commonwealth of Pennsylvania shall be: (C)
$2.0698 per Mcf for IVIS Customers (I)

For transportation of gas to Large Volume Industrial Customers and any entity that is not a Gas Service Customer, the monthly rate for transportation of gas produced within or outside the Commonwealth of Pennsylvania shall be: (C)

$1.6346 per Mcf (I)

For transportation of gas to Large Industrial Customers, the monthly rate for transportation of gas produced within or outside the Commonwealth of Pennsylvania shall be: (C)

$1.1664 per Mcf (I)

Provided, however, that the Company, in its sole discretion, may reduce by contract the portion of the above rates applicable to the Customer that are for recovery of gas or the portion of the rate for recovery of non-gas costs of service if it is reasonably necessary to do so to meet competition from another supplier of energy including gas from another supplier of gas that has constructed, or could construct, facilities to deliver supplies of gas to a MMT Customer of the Company without use of the Company's facilities or another transportation of gas. The Company may also reduce or eliminate the compensation for line losses provided for in Special Provisions paragraph B of this rate schedule in order to meet the competitive circumstances for alternate fuels or bypass situations cited above excluding competition from other Pennsylvania local distribution companies. The Company will reduce the applicable rate only if:

(a) Either (1) the MMT Customer has facilities in place and operable to use an alternative fuel or obtain gas from an alternative supplier or (2) in the Company's judgment, such facilities would be constructed;

(D) Indicates Decrease (I) Indicates Increase

be subject to refund under any circumstances. As deemed necessary by the Company in its sole discretion, the DMT customer shall be required also to pay, in full, for costs of installing daily metering and communications equipment selected by the Company which will enable the Company to obtain each day meter readings of the volume of gas delivered to the Company or to another point or points acceptable to the Company for the Customer's account and the volume of gas from the Company used by the Customer each day. In addition, with regard to daily metering and communications equipment, the Customer shall pay an amount of money to provide for recovery of the present value of the carrying cost of income taxes on the payment for daily metering and communications equipment. Such carrying cost arises from the delay between federal and Pennsylvania income taxation and income tax deductions over the tax life of the equipment and a further amount equal to 72.67% of the carrying cost (based on present income tax rates). If additional facilities are required for furnishing of gas service, customer's payment for additional facilities required for furnishing of gas service shall be governed by Tariff Rule No. 3, "Extension of Facilities", and Tariff Rule No. 5, "Service Lines."

Existing customers that have telecommunication equipment installed are responsible for the operating costs associated with any third-party telecommunication or meter data collection services necessary for the Company to provide service until such telecommunication equipment needs to be replaced. The Company will be responsible for the operating costs associated with third-party telecommunication equipment for new customers or when a customer requires new telecommunication equipment.

CHARACTER OF SERVICE

Gas, of a quality acceptable to the Company, owned by a DMT Service Customer and delivered, either directly or by displacement, into the Company's distribution system, will be transported, by the Company, to the delivery point designated by the DMT Service Customer.

The Customer must have installed the necessary electronic equipment, acceptable to the Company on all of the meters for the Customer’s account, which allows the Company to monitor the Customer’s daily usage of gas. Existing customers that have telecommunication equipment installed are responsible for the operating costs associated with any third-party telecommunication or meter data collection services necessary for the Company to provide service until such telecommunication equipment needs to be replaced. The Company will be responsible for the operating costs associated with third-party telecommunication equipment for new customers or when a customer requires new telecommunication equipment.

(Continued)

Customer may designate a NGS (the "DMT Supplier" or "DMT Aggregator") to be responsible for all balancing requirements, supply nominations and additionally, to aggregate any imbalances hereunder with similarly situated customers. If the DMT Supplier is not the Customer hereunder, service under this schedule shall be contingent on the Company's receipt of the DMT Supplier's signed acknowledgement of the rules and regulations governing DMT service. (C)

TERM OF SERVICE AGREEMENT

If the requirements of this Rate Schedule are met, the Company shall offer to enter into a Service Agreement with an initial term of at least one year and successive one-year terms thereafter. The initial term of a Service Agreement may be for less than one year only with the mutual consent of both the DMT Service Customer and the Company. If the initial term of a Service Agreement is for less than one year, successive terms thereafter shall be equal in length to the initial term. Either the DMT Service Customer or the Company may terminate the Service Agreement at the end of a term upon written notice thereof to the other more than thirty (30) days prior to the end of a term; further provided, however, that the Company may terminate a Service Agreement at an earlier date as provided by law by provisions of this Tariff.

$0.20251	per 100 cubic feet	(I)

B. Miscellaneous Customer Surcharges

1. Residential rate classes shall be subject to surcharges in accordance with Rider F - CAP Discount Charge as set forth in this tariff.

2. The above non-purchased gas cost SATC rates shall be subject to surcharges in accordance with provisions of Rider B - State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge.

(D) Indicates Decrease (I) Indicates Increase

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

1. Billing Service Charges

For a pilot period of three years, terminable by the Company at the end of the third year following 12 months prior notice to participating Suppliers, the Company will purchase amounts receivable for SATC customers with annual consumption less than 1,000 Mcf/year as described herein and further detailed in the billing agreement.

The rate to be charged by the Company to the Supplier for Standard Billing Service shall be $0.20 for each bill rendered to an SATC Customer for the Supplier.

The Company shall provide the Supplier receiving Standard Billing Service with meter reading information and other reports in the Company's standard electronic format on a basis corresponding to the SATC Customer's billing cycles. The Supplier shall provide the Company with all required Supplier billing and rate information necessary for customer billing as determined by the Company. The Supplier shall provide such billing information in the Company's required format. The Supplier shall provide Supplier billing information no later than three business days before the last day of the month.

The Company will bill the SATC Customer for gas supplies sold by the Supplier to the Customer subject to the Supplier entering into a billing service contract with the Company. For Consolidated billing service where the Company does not purchase the Supplier's receivable payments made by the Customer under the billing service will be applied first to amounts to past service due under an amortization agreement with the Company, next to current bills due to the Company, next to gas supply charges owed to the Supplier, next to charges for other non-regulated service charges, and lastly to any "neighbor for neighbor" contribution. The terms and charges for the Supplier billing services other than Standard Billing Services may be negotiated between the Company and the Supplier. The Company shall be under no obligation to provide the Supplier billing services other than Standard Billing Services if mutually agreeable terms and charges cannot be negotiated.

The Company will purchase the accounts receivable from POR Suppliers servicing SATC Residential, SATC Small Commercial and Public Authority customers less than 250 Mcf/year, SATC Small Commercial and Public Authority customers between 250 and 1,000 Mcf/year and SATC Small Volume Industrial customers less than 1,000 Mcf/year at a discount where the Company is providing a Utility Consolidated Bill to the customer. The residential discount is 1.8806% and the non-residential discount is 0.4766%. (I)

To the extent that a POR customer account has an unpaid balance on its final bill's late payment date or at the time the unpaid account balance is transferred to another active account, the Company will deduct from the payment to the POR SATS Supplier for the purchase of its receivable the unpaid billed amounts in excess of the amount that would have been due had the customer received service at Distribution's otherwise applicable sales rate during the time the customer received service from the SATS Supplier (pursuant to Rate Schedule SATC Section F "Lesser of Calculation").

(C) Indicates Change

RATE SCHEDULE FOR DAILY METERED LARGE MANUFACTURING TRANSPORTATION SERVICE
(cont'd)

MONTHLY RATES

For transportation of gas to Large Industrial Manufacturing Customers, the monthly rate for transportation shall be:

$0.6764 per Mcf. (I)

Provided, however, that the Company, in its sole discretion, may reduce by contract the portion of the above rates applicable to the Customer that is for recovery of gas costs or the portion of the rate for recovery of non-gas costs of service if it is reasonably necessary to do so to meet competition from another supplier of energy including gas from another supplier of gas that has constructed, or could construct, facilities to deliver supplies of gas to a Gas Service Customer of the Company without use of the Company's facilities or another transportation of gas. The Company will reduce the applicable rate only if:

(a) Either (1) the Customer has facilities in place and operable to use an alternative fuel or obtain gas from an alternative supplier or (2) in the Company's judgment, such facilities would be constructed;

(b) Volumes of gas that would be transported by the Company would be displaced by an alternate fuel or an alternative source of gas unless the Company reduces its transportation rate;

(c) The Company will not reduce the rate for transportation service below the level necessary to transport gas; and

(d) In the Company's judgment the DMLMT Service Customer has taken all reasonable steps to minimize the cost of gas supplies delivered to the Company's system in order to help meet competition.

Where the above criteria are met, the Company may, in its discretion enter into an agreement setting either: (1) a fixed transportation rate or (2) the basis for determining the transportation rate, for the period of the Service Agreement, which will specify which portion of the rate is being reduced.

Volumes delivered as transportation service pursuant to this rate schedule shall be subject to State Tax Adjustment Surcharge and DSIC – Distribution System Improvement Charge

CHARGES FOR TRANSPORTATION BY OTHERS

If furnishing service, pursuant to this Rate Schedule, requires the use of a transportation service provided other than by the Company, any cost incurred by the Company, with regard thereto, shall be billed to DMLMT Service Customer by the Company.

RIDER B

STATE TAX ADJUSTMENT SURCHARGE

In addition to the charges provided in this tariff, a surcharge of (0.00)% will apply to all non-Purchased Gas Cost charges for service rendered on or after March 29, 2026. (D)

The above surcharge will be recomputed using the same elements prescribed by the Commission.

a. Whenever any of the tax rates used in calculation of the surcharge are changed;

b. Whenever the utility makes effective an increase or decrease in base rates, exclusive of Purchased Gas Cost rates and applicable Rider rates.

c. On March 31, 1971, and each year thereafter.

The above recalculation will be submitted to the Commission within one (1) day after the occurrence of the event or date which occasions such recomputation; and, if the recomputed surcharge is less than the one in effect, the Company will, and if the recomputed surcharge is more than the one then in effect, the Company may submit with such recomputation a tariff or supplement to reflect such recomputed surcharge, the effective date of which shall be one (1) day after filing.

In Compliance with P-2017-2591001 Order entered October 5, 2017, the Company shall file its State Tax Adjustment Surcharge filings on one day’s notice.

RIDER C
WEATHER NORMALIZATION ADJUSTMENT

Applicability and Purpose:

A Weather Normalization Adjustment ("WNA") shall be applied to bills of customers served under Residential, CAP, and Commercial and Public Authority Rate Schedules, for any bills rendered during the heating season October through May.

Calculation of Adjustment Amount:
The WNA will be applied to October through May billing cycles and shall be calculated on a customer account specific basis in accordance with the formula below:

WNBC = BLMC + [((NHDD +/- (NHDD x 3%)) / AHDD) x (AMC - BLMC)]
WNAC = WNBC - AMC
WNA = WNAC x Distribution Charge

(a) Weather Normalized Billing Ccfs("WNBC") will be calculated as the Base Load Monthly Ccfs ("BLMC") added to the product of the Normal Heating Degree Days ("NHDD"), adjusted for a 3% deadband as further discussed below, divided by the Actual Heating Degree Days ("AHDD") and the Actual Monthly Ccfs ("AMC") less the BLMC. Weather Normalized Billing Ccfs (WNBC) will only be calculated if the AMC exceeds the BLMC. WNA will not be applicable for the billing period if AMC is less than the BLMC.

(b) BLMC shall be established for each customer using the customer's actual consumption from the billing system, measured in Ccfs.

(c) AMC shall be measured for each customer and billing cycle and will be based on actual or estimated meter readings.

(d) NHDD shall be based upon the 10-year average (2015-2024) for the given day, as reported by the National Oceanic and Atmospheric Administration (NOAA) for the Erie International Airport weather station.

(e) AHDD shall be the actual experienced heating degree days during the billing cycle. AHDD shall be based upon experienced actual Gas Day temperatures as reported by the NOAA for the Erie International Airport weather station.

(f) AMC will be subtracted from the WNBC to compute the Weather Normalized Adjustment Ccfs ("WNAC").

(g) The WNAC shall then be multiplied by the applicable Rate Schedule Distribution Charge based on service rendered to compute the WNA amount that will be charged or credited to each customer.

(C) Indicates Change

RIDER D
ENERGY EFFICIENCY program COST RECOVERY

Program Description

National Fuel's Energy Efficiency Program ("EE Program") is an equipment replacement program to encourage customers to install high efficiency equipment by offering rebate incentives. The eligible market for these rebates includes all existing residential customers, as well as existing homes converting from an alternate fuel source, who are replacing eligible equipment. This Energy Efficiency Cost Recovery Program ("Program") shall recover costs related to the Company's EE Program.

EE Program Charge

The EE Program Charge will be added to the delivery rates of the Residential customer class served under the Residential Service, Low-Income Residential Assistance, Monthly Metered Transportation, Daily Metered Transportation, and Small Aggregation Transportation Customer Service (SATC) Rate Schedules as follows:

EE Program Charge: $0.0389/Mcf

Determination of EE Program Charge

The EE Program Charge shall be determined as follows:

1. Costs to be recovered shall include Company incurred costs to implement its Commission approved EE Program during each plan year (January 1 – December 31), including all costs incurred to develop and administer the EE Program.

2. The EE Program Charge shall be calculated in accordance with the formula below and shall be rounded to the fourth decimal:

   EE Program Charge = Projected EE Costs / Projected Residential Class Usage (Mcf)

3. Net over or under collection of the EE Program Charge will result from the difference between the EE Program revenues received and the EE Program costs incurred. This reconciliation will be completed at the end of the 5-year program.

(C) Indicates Change

Rider G
Merchant Function Charge (MFC) Rider

Applicability:

The Merchant Function Charge (MFC) shall be added to the Natural Gas Supply Charge and Gas Adjustment Charge of Residential, CAP, Commercial and Public Authority, SVIS, IVIS, LVIS and LIS rate schedules.

Such charges shall be updated quarterly and effective each February 1, May 1, August 1, and November 1 of the year. The charge will also be updated whenever there is a change to the Sales Service Rate Customer Charge, Distribution Charge, Natural Gas Supply Charge or Gas Adjustment Charge.

Calculation of Rate:

For customers receiving service in the Residential classification, the MFC shall equal 1.8177% times the Natural Gas Supply Charge and the Gas Adjustment Clause as calculated for Rider A. (I)

The current Residential MFC Charge is:

Natural Gas Supply Charge per Mcf	$0.0915	(I)
Gas Adjustment clause (E-Factor) per Mcf	$0.0037	
Total Residential MFC per Mcf	$0.0952	(I)

For customers receiving service in the Non-Residential classifications, the MFC shall equal 0.4137% times the Natural Gas Supply Charge and Gas Adjustment Clause as calculated for Rider A. (I)

The current Non-Residential MFC Charge is:

Natural Gas Supply Charge per Mcf	$0.0209	(I)
Gas Adjustment clause (E-Factor) per Mcf	$0.0008	(I)
Total Non-Residential MFC per Mcf	$0.0217	(I)

(D) Indicates Decrease (I) Indicates Increase

Rider H
Gas Procurement Charge (GPC)

APPLICABILITY

Effective June 1, 2013, the Gas Procurement Charge will be included in the Natural Gas Supply Charge of Residential, CAP, Commercial and Public Authority, SVIS, IVIS, LVIS and LIS rate schedules.

The charge is designed to recover the costs of procuring natural gas pursuant to 52 Pa. Code §62.223. The natural gas procurement costs included in the GPC charge will only be updated in a base rate case.

The GPC to be included in the Natural Gas Supply Charge shall be $0.1149 / Mcf and is not reconcilable.

Price To Compare Component	Residential (¢ per 100 cubic feet)	Non Residential (¢ per 100 cubic feet)

RESERVED FOR FUTURE USE

RIDER I OPEB TEMPORARY SURCREDIT

Effective November 1, 2026, a one-time bill credit will be applied to confirmed low-income customers and a surcredit will be included in the rates subject to this Rider to provide for the pass back of funds collected previously for Other Post Retirement Benefits ("OPEB") expenses that have been deferred for the benefit of ratepayers as a regulatory liability in accordance with the settlement order in Docket # R-00061493. (C)

$1,000,000 of the OPEB regulatory liability has been reserved to pass back to confirmed low income customers as a one-time bill credit. The bill credit will be applied to customers' bills for active accounts as of November 1, 2026 and in the following amounts per class:

Low Income Residential $30

An additional $6,159,000 of the OPEB regulatory liability has been reserved to pass back via a surcredit over 1-year.The surcredit will apply as a credit to all customer bills at a set allocation percentage equal to the allocation percentage of the Company's base rate increase in Docket # R-00061493 among the various customer classes, exclusive of STAS and automatic adjustment clause revenues, for bills rendered for intrastate service on and after November 1, 2026. The surcredit will be applied on a per Mcf basis, by service class, as indicated in the table below. The surcredit will continue for a period of 1 year without reconciliation. Interest is not applicable to the OPEB balance. (C)

Service Class	Refund Rate Effective 11/1/26	
Sales & SATC

Large Industrial Service	($0.04715)	(I)

RESERVED FOR FUTURE USE

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a charge of 0.00% will apply consistent with the Commission Order dated December 5, 2024 at Docket No. P-2022-3034957, approving the DSIC. (D)

1. General Description

A. Purpose: To recover the reasonable and prudent costs incurred to repair, improve, or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide the Utility with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems.

The costs of extending facilities to serve new customers are not recoverable through the DSIC.

B. Eligible Property: The DSIC-eligible property will consist of the following:

- Piping (accounts 365, 367, 374, 376);
- Couplings (account 376);
- Gas services lines (account 380) and insulated and non-insulated fittings (account 378);
- Valves (account 376);
- Excess flow valves (account 376);
- Risers (account 376);
- Meter bars (account 382);
- Meters (account 381);
- Measuring and Regulator Stations (accounts 334,366, 369, 375, 378, 381, 384)
- Industrial and Farm Tap Measuring and Regulating Equipment (account 385)
- Unreimbursed costs related to highway relocation projects where a natural gas distribution company or city natural gas distribution operation must relocate its facilities; and
- Other related capitalized costs (accounts 392, 396, and other misc accounts) (C)

C. Effective Date: The DSIC will become effective January 1, 2026. (C)

2. Computation of the DSIC

A. Calculation: The initial DSIC, effective January 1, 2025 shall be calculated to recover the fixed costs of eligible plant additions that have not previously been reflected in the Utility's rates or rate base and will have been placed in service between October 1 to November 30, 2024.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES (Cont'd)

~~C.~~ Determination of Justified Company Investment Per Dollar of Additional Annual Revenue

(1) Residential

The Justified Company Investment Per Dollar of Additional Annual Revenue for residential customers is $7.546~~.93~~. (I)

(2) Commercial and Public Authority; Industrial

The Justified Company Investment Per Dollar of Additional Annual Revenue for commercial, public authority or industrial customers shall be selected from the table below based upon the projected term of use by the customer of the new or upgraded facilities.

Projected Term of Use of New/Upgraded Facilities (Years)	Justified Company Investment Per Dollar of Additional Annual Revenue
1	$ 0.6863
2	1.3221
3	1.9176
4	2.4627
5	2.9874
6	3.4618
7	3.903~~.59~~
8	4.323~~.97~~
9	4.704~~.32~~
10	5.064~~.65~~
Greater than 10	~~6~~7.54~~.93~~

(I)

Because the term of use has a substantial effect on the determination of the Justified Company Investment Per Dollar of Additional Annual Revenue, the Company may require a letter of intent from commercial, public authority and industrial customers projecting the term of use of the new or upgraded extension of facilities being requested.

The Company reserves the right to require a guaranteed revenue contract if the customer projects a term of use of the new or upgraded facilities in excess of 10 years or if the customer does not demonstrate that the customer's term of use is reasonable.

(D) Indicates Decrease

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

7. CUSTOMER'S PIPING AND EQUIPMENT

Prior to the installation of house piping by the customer in new or altered premises, inquiry shall be made of the Company to determine the requirements, sizes of pipe, quality and other specifications.

House lines, piping, connections and appliances are subject to inspection by the Company and no gas will be delivered unless all conditions are satisfactory.

The Company gives no warranty, expressed or implied, as to the adequacy or safety of any structure, equipment, piping, appliance or device owned, installed, leased or maintained by or for the customer or the owner of the premises served.

8. ACCESS TO PREMISES

The authorized agents of the Company shall, at all reasonable times, have free access to any premises supplied with gas or to which a service connection has been made, for the purpose of reading, inspecting, repairing or removing meters, piping, or other appliances therein belonging to the Company and of inspecting the piping and appliances belonging to the customer.

In furtherance of the foregoing, for purposes of this Rule No. 8, "free access" shall also mean that Company personnel are not subject to unsafe or hazardous conditions while on the premises, including without limitation, the presence of aggressive or uncontrolled animals (e.g., dogs), insect or rodent infestation, the display, use, or brandishing of firearms or other weapons in a threatening or intimating manner, presence of excrement, debris, or other rubbish, or any other circumstance that may reasonably pose a threat to the health or safety of Company employees or agents. (C)

Formatted: Font: Courier New, 10 pt

Every industrial customer shall permit the Company, during business hours and upon reasonable notice, to inspect the customer's facilities so that the Company may determine whether facilities have been installed which would enable the customer to obtain volumes of gas without using the Company's system ("Bypass Facilities"). If a customer refuses to permit the Company to inspect the customer's facilities, it shall be presumed that Bypass Facilities have been installed.

9. INTERRUPTION OF SERVICE

In accordance with the Public Utility Code, the Company will provide service which shall be reasonably continuous and without unreasonable interruptions or delay. The Company shall not be liable, in any amount, for damages, direct or consequential, where service meets requirements of the Public Utility Code. This limitation of liability, however, shall not apply to Company conduct which is found to be willful, wanton or reckless. If the Company shall know, in advance, of an expected interruption of service, the Company will take all reasonable steps, such as personal contact, phone contact or the use of mass media, to notify affected customers of the cause and expected duration of the interruption.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

E. MISCELLANEOUS PROVISIONS

(a) Customer or a party appointed by the customer to act on Customer's behalf shall provide Company with nominations setting forth, by source, the volume to be transported by Company following procedures set forth in the Company's Operational Procedures Manual.

(b) The Customer appoints the party(ies) identified in the NFGDC Customer Agency Agreement form as its agent(s) for purposes of making such nominations and determining the proper allocation of volumes among all affected customers. All allocation methods are subject to the prior approval of Company.

(c) Deliveries of gas by or on behalf of Customer to Company at point(s) of receipt hereunder shall be made against the line pressure existing in Company's pipeline from time to time at a maximum pressure designated by Company from time to time. Company shall not be obligated to decrease such line pressure, and Customer shall not compress the gas delivered to Company without the prior approval of Company, which shall not be unreasonably withheld.

(d) Company will retain a percentage of the total volumes received by Company for the account of Customer as a loss allowance.

29. MARKET PRICE OF NATURAL GAS

For use within rate schedules in this Tariff, the Monthly Market Index ("MMI") shall be equal to the MCF equivalent of the highest volume weighted average price during the month, at Tennessee Gas Pipeline's Zone 4 200 Line Trading Hub, referred in the ~~SNL Natural Gas Index~~Platts Gas Daily ("~~SNL~~Gas Daily") as "~~TGP~~Tennessee Zone 4 200 leg~~L~~" which will serve as the Company's Market Index Point. The Daily Market Index ("DMI") shall be equal to the MCF equivalent of the volume weighted average price for the applicable date, at the Market Index Point. (C)

Where transportation costs reflecting the cost of delivering gas to the Company's city gate are added to the MMI or the DMI to determine the market price of natural gas as applied by the Company under tariff rate schedules, such costs, unless explicitly stated otherwise, reflect the variable costs of using the associated pipeline capacity, e.g. commodity transportation rates, fuel retention and other variable usage surcharges, as applicable. ~~(C)~~

Should a price for the Market Index Point be temporarily unavailable during any period, the Company may, at its discretion, select a substitute representative price in the interim. If the Market Index Point price becomes unavailable on a permanent basis, the Company will file to change this section and may, at its discretion, select a substitute representative price in the interim, subject to refund.

30. RULES FOR MONTH END IMBALANCE RESOLUTION

The Imbalance Holder is the Customer or Supplier responsible for imbalance resolution as described in Rate Schedules MMNGS or SATS, under which the Company provides service. For the purposes herein, Imbalance Holder's gas consumption and deliveries to the Company are equivalent to the gas consumption and deliveries to the Company of the MMT or SATC Customers, respectively, for which it bears imbalance responsibility.

Provided, however, that the Company, in its sole discretion, may reduce by contract the portion of the above rates applicable to the Customer that are for recovery of gas or the portion of the rate for recovery of non-gas costs of service if it is reasonably necessary to do so to meet competition from another supplier of energy including gas from another supplier of gas that has constructed, or could construct, facilities to deliver supplies of gas to a MMT Customer of the Company without use of the Company's facilities or another transportation of gas. The Company may also reduce or eliminate the compensation for line losses provided for in Special Provisions paragraph B of this rate schedule in order to meet the competitive circumstances for alternate fuels or bypass situations cited above excluding competition from other Pennsylvania local distribution companies. The Company will reduce the applicable rate only if:

(a) Either (1) the MMT Customer has facilities in place and operable to use an alternative fuel or obtain gas from an alternative supplier or (2) in the Company's judgment, such facilities would be constructed;

(D) Indicates Decrease (I) Indicates Increase

~~TERM OF SERVICE AGREEMENT~~

be subject to refund under any circumstances. As deemed necessary by the Company in its sole discretion, the DMT customer shall be required also to pay, in full, for costs of installing daily metering and communications equipment selected by the Company which will enable the Company to obtain each day meter readings of the volume of gas delivered to the Company or to another point or points acceptable to the Company for the Customer's account and the volume of gas from the Company used by the Customer each day. In addition, with regard to daily metering and communications equipment, the Customer shall pay an amount of money to provide for recovery of the present value of the carrying cost of income taxes on the payment for daily metering and communications equipment. Such carrying cost arises from the delay between federal and Pennsylvania income taxation and income tax deductions over the tax life of the equipment and a further amount equal to 72.67% of the carrying cost (based on present income tax rates). If additional facilities are required for furnishing of gas service, customer's payment for additional facilities required for furnishing of gas service shall be governed by Tariff Rule No. 3, "Extension of Facilities", and Tariff Rule No. 5, "Service Lines."

Existing customers that have telecommunication equipment installed are responsible for the operating costs associated with any third-party telecommunication or meter data collection services necessary for the Company to provide service until such telecommunication equipment needs to be replaced. The Company will be responsible for the operating costs associated with third-party telecommunication equipment for new customers or when a customer requires new telecommunication equipment. (C)

Formatted: Indent: Left: 0", First line: 0"

CHARACTER OF SERVICE

Gas, of a quality acceptable to the Company, owned by a DMT Service Customer and delivered, either directly or by displacement, into the Company's distribution system, will be transported, by the Company, to the delivery point designated by the DMT Service Customer.

The Customer must have installed the necessary electronic equipment, acceptable to the Company on all of the meters for the Customer's account, which allows the Company to monitor the Customer's daily usage of gas. Existing customers that have telecommunication equipment installed are responsible for the operating costs associated with any third-party telecommunication or meter data collection services necessary for the Company to provide service until such telecommunication equipment needs to be replaced. The Company will be responsible for the operating costs associated with third-party telecommunication equipment for new customers or when a customer requires new telecommunication equipment. (C)

~~If the requirements of this Rate Schedule are met, the Company shall offer to enter into a Service Agreement with an initial term of at least one year and successive one-year terms thereafter. The initial term of a Service Agreement may be for less than one year only with the mutual consent of both the DMT Service Customer and the Company. If the initial term of a Service Agreement is for less than one year, successive terms thereafter shall be equal in length to the initial term. Either the DMT Service Customer or the Company may terminate the Service Agreement at the end of a term upon written notice thereof to the other more than thirty (30) days prior to the end of a term; further provided, however, that the Company may terminate a Service Agreement at an earlier date as provided by law by provisions of this Tariff.~~

~~(C) Indicates Change~~

(Continued)

Customer may designate a NGS (the "DMT Supplier" or "DMT Aggregator") to be responsible for all balancing requirements, supply nominations and additionally, to aggregate any imbalances hereunder with similarly situated customers. If the DMT Supplier is not the Customer hereunder, service under this schedule shall be contingent on the Company's receipt of the DMT Supplier's signed acknowledgement of the rules and regulations governing DMT service. (C)

TERM OF SERVICE AGREEMENT

If the requirements of this Rate Schedule are met, the Company shall offer to enter into a Service Agreement with an initial term of at least one year and successive one-year terms thereafter. The initial term of a Service Agreement may be for less than one year only with the mutual consent of both the DMT Service Customer and the Company. If the initial term of a Service Agreement is for less than one year, successive terms thereafter shall be equal in length to the initial term. Either the DMT Service Customer or the Company may terminate the Service Agreement at the end of a term upon written notice thereof to the other more than thirty (30) days prior to the end of a term; further provided, however, that the Company may terminate a Service Agreement at an earlier date as provided by law by provisions of this Tariff.

RATE SCHEDULE FOR DAILY METERED TRANSPORTATION SERVICE (cont'd)

For transportation of gas to Intermediate Volume Industrial Customers, the monthly rate for transportation of gas produced within or outside the Commonwealth of Pennsylvania shall be: (C)

$1.57981.3347 per Mcf for IVIS Customers. (I)

For transportation of gas to Large Volume Industrial Customers and any entity that is not a Gas Service Customer, the monthly rate for transportation of gas produced within or outside the Commonwealth of Pennsylvania shall be: (C)

$1.14461.0243 per Mcf. (I)

For transportation of gas to Large Volume Industrial Customers and any entity that is not a Gas Service Customer, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$ 1.0243 per Mcf. (I)

For transportation of gas to Large Industrial Customers, the monthly rate for transportation of gas produced within the Commonwealth of Pennsylvania shall be:

$0.67640.5993 per Mcf. (I)

For transportation of gas to Large Industrial Customers, the monthly rate for transportation of gas produced outside the Commonwealth of Pennsylvania shall be:

$0.5993 per Mcf. (I)

Provided, however, that the Company, in its sole discretion, may reduce by contract the portion of the above rates applicable to the Customer that is for recovery of gas costs or the portion of the rate for recovery of non-gas costs of service if it is reasonably necessary to do so to meet competition from another supplier of energy including gas from another supplier of gas that has constructed, or could construct, facilities to deliver supplies of gas to a Gas Service Customer of the Company without use of the Company's facilities or another transporter of gas. The Company may also reduce or eliminate the compensation for line losses provided for in Special Provisions paragraph B of this rate schedule in order to meet the competitive circumstances for alternate fuels or bypass situations cited above excluding competition from other Pennsylvania local distribution companies. The Company will reduce the applicable rate only if:

(a) Either (1) the Customer has facilities in place and operable to use an alternative fuel or obtain gas from an alternative supplier or (2) in the Company's judgment, such facilities would be constructed;

Commented [DK1]: Need increase for the basic service charge lines

RATE SCHEDULE SATS
SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

1. Billing Service Charges

For a pilot period of three years, terminable by the Company at the end of the third year following 12 months prior notice to participating Suppliers, the Company will purchase amounts receivable for SATC customers with annual consumption less than 1,000 Mcf/year as described herein and further detailed in the billing agreement.

The rate to be charged by the Company to the Supplier for Standard Billing Service shall be $0.20 for each bill rendered to an SATC Customer for the Supplier.

The Company shall provide the Supplier receiving Standard Billing Service with meter reading information and other reports in the Company's standard electronic format on a basis corresponding to the SATC Customer's billing cycles. The Supplier shall provide the Company with all required Supplier billing and rate information necessary for customer billing as determined by the Company. The Supplier shall provide such billing information in the Company's required format. The Supplier shall provide Supplier billing information no later than three business days before the last day of the month.

The Company will bill the SATC Customer for gas supplies sold by the Supplier to the Customer subject to the Supplier entering into a billing service contract with the Company. For Consolidated billing service where the Company does not purchase the Supplier's receivable payments made by the Customer under the billing service will be applied first to amounts to past service due under an amortization agreement with the Company, next to current bills due to the Company, next to gas supply charges owed to the Supplier, next to charges for other non-regulated service charges, and lastly to any "neighbor for neighbor" contribution. The terms and charges for the Supplier billing services other than Standard Billing Services may be negotiated between the Company and the Supplier. The Company shall be under no obligation to provide the Supplier billing services other than Standard Billing Services if mutually agreeable terms and charges cannot be negotiated.

The Company will purchase the accounts receivable from POR Suppliers servicing SATC Residential, SATC Small Commercial and Public Authority customers less than 250 Mcf/year, SATC Small Commercial and Public Authority customers between 250 and 1,000 Mcf/year and SATC Small Volume Industrial customers less than 1,000 Mcf/year at a discount where the Company is providing a Utility Consolidated Bill to the customer. The residential discount is 1.8806661% and the non-residential discount is 0.47664027%. (I) (ID)

To the extent that a POR customer account has an unpaid balance on its final bill's late payment date or at the time the unpaid account balance is transferred to another active account, the Company will deduct from the payment to the POR SATS Supplier for the purchase of its receivable the unpaid billed amounts in excess of the amount that would have been due had the customer received service at Distribution's otherwise applicable sales rate during the time the customer received service from the SATS Supplier (pursuant to Rate Schedule SATC Section F "Lesser of Calculation").

(C) Indicates Change

RATE SCHEDULE FOR DAILY METERED LARGE MANUFACTURING TRANSPORTATION SERVICE
(cont'd)

MONTHLY RATES

For transportation of gas to Large Industrial Manufacturing Customers, the monthly rate for transportation shall be:

$0.67645993 per Mcf. (I)

Provided, however, that the Company, in its sole discretion, may reduce by contract the portion of the above rates applicable to the Customer that is for recovery of gas costs or the portion of the rate for recovery of non-gas costs of service if it is reasonably necessary to do so to meet competition from another supplier of energy including gas from another supplier of gas that has constructed, or could construct, facilities to deliver supplies of gas to a Gas Service Customer of the Company without use of the Company's facilities or another transportation of gas. The Company will reduce the applicable rate only if:

(a) Either (1) the Customer has facilities in place and operable to use an alternative fuel or obtain gas from an alternative supplier or (2) in the Company's judgment, such facilities would be constructed;

(b) Volumes of gas that would be transported by the Company would be displaced by an alternate fuel or an alternative source of gas unless the Company reduces its transportation rate;

(c) The Company will not reduce the rate for transportation service below the level necessary to transport gas; and

(d) In the Company's judgment the DMLMT Service Customer has taken all reasonable steps to minimize the cost of gas supplies delivered to the Company's system in order to help meet competition.

Where the above criteria are met, the Company may, in its discretion enter into an agreement setting either: (1) a fixed transportation rate or (2) the basis for determining the transportation rate, for the period of the Service Agreement, which will specify which portion of the rate is being reduced.

Volumes delivered as transportation service pursuant to this rate schedule shall be subject to State Tax Adjustment Surcharge and DSIC - Distribution System Improvement Charge (C)

CHARGES FOR TRANSPORTATION BY OTHERS

If furnishing service, pursuant to this Rate Schedule, requires the use of a transportation service provided other than by the Company, any cost incurred by the Company, with regard thereto, shall be billed to DMLMT Service Customer by the Company.

RIDER B

STATE TAX ADJUSTMENT SURCHARGE

In addition to the charges provided in this tariff, a surcharge of (0.0017)% will apply to all non-Purchased Gas Cost charges for service rendered on or after March 29, 2026October 1, 2025. (D) (C)

The above surcharge will be recomputed using the same elements prescribed by the Commission.

a. Whenever any of the tax rates used in calculation of the surcharge are changed;

b. Whenever the utility makes effective an increase or decrease in base rates, exclusive of Purchased Gas Cost rates and applicable Rider rates.

c. On March 31, 1971, and each year thereafter.

The above recalculation will be submitted to the Commission within one (1) day after the occurrence of the event or date which occasions such recomputation; and, if the recomputed surcharge is less than the one in effect, the Company will, and if the recomputed surcharge is more than the one then in effect, the Company may submit with such recomputation a tariff or supplement to reflect such recomputed surcharge, the effective date of which shall be one (1) day after filing.

In Compliance with P-2017-2591001 Order entered October 5, 2017, the Company shall file its State Tax Adjustment Surcharge filings on one day's notice.

RIDER C
WEATHER NORMALIZATION ADJUSTMENT

Applicability and Purpose:

A Weather Normalization Adjustment ("WNA") shall be applied to bills of customers served under Residential, CAP, and Commercial and Public Authority Rate Schedules, for any bills rendered during the heating season October through May. ~~(C)~~

Calculation of Adjustment Amount:
The WNA will be applied to October through May billing cycles and shall be calculated on a customer account specific basis in accordance with the formula below:

WNBC = BLMC + [((NHDD +/- (NHDD x 3%)) / AHDD) x (AMC - BLMC)]
WNAC = WNBC - AMC
WNA = WNAC x Distribution Charge

(a) Weather Normalized Billing Ccfs("WNBC") will be calculated as the Base Load Monthly Ccfs ("BLMC") added to the product of the Normal Heating Degree Days ("NHDD"), adjusted for a 3% deadband as further discussed below, divided by the Actual Heating Degree Days ("AHDD") and the Actual Monthly Ccfs ("AMC") less the BLMC. Weather Normalized Billing Ccfs (WNBC) will only be calculated if the AMC exceeds the BLMC. WNA will not be applicable for the billing period if AMC is less than the BLMC.

(b) BLMC shall be established for each customer using the customer's actual consumption from the billing system, measured in Ccfs.

(c) AMC shall be measured for each customer and billing cycle and will be based on actual or estimated meter readings.

(d) NHDD shall be based upon the 10~~5~~-year average (2015~~06~~-2024~~20~~) for the given day, as reported by the National Oceanic and Atmospheric Administration (NOAA) for the Erie International Airport weather station.

(e) AHDD shall be the actual experienced heating degree days during the billing cycle. AHDD shall be based upon experienced actual Gas Day temperatures as reported by the NOAA for the Erie International Airport weather station.

(f) AMC will be subtracted from the WNBC to compute the Weather Normalized Adjustment Ccfs ("WNAC").

(g) The WNAC shall then be multiplied by the applicable Rate Schedule Distribution Charge based on service rendered to compute the WNA amount that will be charged or credited to each customer.

(C) Indicates Change

RIDER D
ENERGY EFFICIENCY ProgramCOST RECOVERY

Program Description

National Fuel's Energy Efficiency Program ("EE Program") is an equipment replacement program to encourage customers to install high efficiency equipment by offering rebate incentives. The eligible market for these rebates includes all existing residential customers, as well as existing homes converting from an alternate fuel source, who are replacing eligible equipment. This Energy Efficiency Cost Recovery Program ("Program") shall recover costs related to the Company's EE Program. (C)

EE Program Charge

The EE Program Charge will be added to the delivery rates of the Residential customer class served under the Residential Service, Low-Income Residential Assistance, Monthly Metered Transportation, Daily Metered Transportation, and Small Aggregation Transportation Customer Service (SATC) Rate Schedules as follows: (C)

EE Program Charge: $0.0389/Mcf (C)

Formatted: Not Highlight

Determination of EE Program Charge

The EE Program Charge shall be determined as follows:

1. Costs to be recovered shall include Company incurred costs to implement its Commission approved EE Program during each plan year (January 1 – December 31), including all costs incurred to develop and administer the EE Program. (C)

2. The EE Program Charge shall be calculated in accordance with the formula below and shall be rounded to the fourth decimal: (C)

   EE Program Charge = Projected EE Costs / Projected Residential Class Usage (Mcf)

3. Net over or under collection of the EE Program Charge will result from the difference between the EE Program revenues received and the EE Program costs incurred. This reconciliation will be completed at the end of the 5-year program. (C)

Rider G
Merchant Function Charge (MFC) Rider

Applicability:

The Merchant Function Charge (MFC) shall be added to the Natural Gas Supply Charge and Gas Adjustment Charge of Residential, CAP, Commercial and Public Authority, SVIS, IVIS, LVIS and LIS rate schedules.

Such charges shall be updated quarterly and effective each February 1, May 1, August 1, and November 1 of the year. The charge will also be updated whenever there is a change to the Sales Service Rate Customer Charge, Distribution Charge, Natural Gas Supply Charge or Gas Adjustment Charge.

Calculation of Rate:

For customers receiving service in the Residential classification, the MFC shall equal 1.81771.8032% times the Natural Gas Supply Charge and the Gas Adjustment Clause as calculated for Rider A. (I)

The current Residential MFC Charge is:

Natural Gas Supply Charge per Mcf	$0.091507	(ID)
Gas Adjustment clause (E-Factor) per Mcf	$0.0037	(D)
Total Residential MFC per Mcf	$0.095244	(DI)

For customers receiving service in the Non-Residential classifications, the MFC shall equal 0.413733398% times the Natural Gas Supply Charge and Gas Adjustment Clause as calculated for Rider A. (I)

The current Non-Residential MFC Charge is:

Natural Gas Supply Charge per Mcf	$0.0209 0171	(ID)
Gas Adjustment clause (E-Factor) per Mcf	$0.00087	(ID)
Total Non-Residential MFC per Mcf	$0.0217 0178	(ID)

(D) Indicates Decrease (I) Indicates Increase

Rider H
Gas Procurement Charge (GPC)

APPLICABILITY

Effective June 1, 2013, the Gas Procurement Charge will be included in the Natural Gas Supply Charge of Residential, CAP, Commercial and Public Authority, SVIS, IVIS, LVIS and LIS rate schedules.

The charge is designed to recover the costs of procuring natural gas pursuant to 52 Pa. Code §62.223. The natural gas procurement costs included in the GPC charge will only be updated in a base rate case.

The GPC to be included in the Natural Gas Supply Charge shall be $0.1149 / Mcf and is not reconcilable.

~~TCJA TEMPORARY SURCHARGE~~

~~To implement the effects of the Tax Cuts and Jobs Act (TCJA), on March 15, 2018 the Pennsylvania Public Utility Commission (Commission) issued a Temporary Rates Order at Docket No. M-2018-2641242 directing the utility to file its current base rates and riders as temporary rates, pursuant to Section 1310(d) of the Public Utility Code. 66 Pa. C.S. § 1310(d). Subsequently, on May 17, 2018, the Commission entered Orders in the above case and at Docket No. R-2018-3000527 superseding the March 15, 2018 Temporary Rates Order directing the utility to establish temporary rates as follows:~~

~~A negative surcharge will apply as a credit to all customer bills at an equal percentage of non-gas revenue among the various customer classes, exclusive of STAS and automatic adjustment clause revenues, for bills rendered for intrastate service. The credit will be applied on a per Mcf basis, by service class, as indicated in the table below. The total credits provided to customers through this negative surcharge will be reconciled with actual differences in federal income tax expense of a pre- and post-TCJA basis and will remain in place until the Company files and the Commission approves new base rates for the utility pursuant to Section 1308(d) that include the effects of the TCJA tax rate changes. The Company's last Base Rate Case at Docket # R-2022-3035730 included the effects of the TCJA tax rate change. Interest on over or under collections shall be computed monthly at the residential mortgage lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.) from the month that the over or under collection occurs to the mid-point of the recovery period. Upon determination that the negative surcharge, if left unchanged, would result in a material over or under collection, the Company may file with the Commission, on at least 10 days' notice, for an interim revision of the TCJA Temporary Surcharge. The TCJA Temporary Surcharge will be filed with the Commission by September 1 of each year to become effective the following October 1, reflecting estimated TCJA savings for the fiscal year.~~

RIDER I OPEB TEMPORARY SURCREDIT

Effective NovemberOctober 1, 20261, a one-time bill credit will be applied to confirmed low-income customers and a surcredit will be included in the rates subject to this Rider to provide for the pass back of funds collected previously for Other Post Retirement Benefits ("OPEB") expenses that have been deferred for the benefit of ratepayers as a regulatory liability in accordance with the settlement order in Docket # R-00061493. (C)

$125,000,000 of the OPEB regulatory liability has been reserved to pass back to confirmed low income customers as a one-time bill credit. The bill credit will be applied to customers' bills for active accounts as of NovemberOctober 1, 20261 and in the following amounts per class: (C)

Low Income Residential $30100
C/PA $250
Industrial $1,500

An additional $6,159,00029,000,000 of the OPEB regulatory liability has been reserved to pass back via a surcredit over 15-year.s ($5,800,000 per year). The surcredit will apply as a credit to all customer bills at a set allocation percentage equal to the allocation percentage of the Company's base rate increase in Docket # R-00061493 among the various customer classes, exclusive of STAS and automatic adjustment clause revenues, for bills rendered for intrastate service on and after NovemberOctober 1, 20261. The surcredit will be applied on a per Mcf basis, by service class, as indicated in the table below. The surcredit will continue for a period of 15 years without reconciliation. Interest is not applicable to the OPEB balance. The OPEB Temporary Surcredit will be filed with the Commission by October 1 of each year and will be recalculated annually during the 5-year period. (C)

		(D)

~~A total of $54,000,000 held in a grantor trust will be used for the passback of funds described above. At the conclusion of the 5-year period, the Company will terminate the grantor trust.~~

~~The Company is suspending regulatory accounting associated OPEB expense because such costs are $0 and base delivery rates have been reduced to eliminate the recovery of OPEB expenses. The $54,000,000 passed back to ratepayers through the one-time bill credit and surcredit mechanisms described above will reduce the regulatory liability due to ratepayers. The remaining regulatory liability balance due to ratepayers will be addressed in the next base rate proceeding.~~

~~Of the regulatory liability balance that is not attributed to ratepayers, the Company will immediately record any portion of the balance attributed to the O&M component of any SFAS 106 income that has accumulated since the last base rate proceeding as a reduction to OPEB expense. The remaining regulatory liability balance not attributed to ratepayers is to be transferred into an account separate from the regulatory liability due to ratepayers and be used to reduce the cost of labor charged to capital projects and affiliates over a period of 5 years. Any remaining portion of the regulatory liability after the expiration of the 5-year period will be addressed in the next base rate proceeding.~~

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a charge of 0.004.83% will apply consistent with the Commission Order dated December 5, 2024 at Docket No. P-2022-3034957, approving the DSIC. (DI)

1. General Description

A. Purpose: To recover the reasonable and prudent costs incurred to repair, improve, or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide the Utility with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems.

The costs of extending facilities to serve new customers are not recoverable through the DSIC.

B. Eligible Property: The DSIC-eligible property will consist of the following:

- Piping (accounts 365, 367, 374, 376);
- Couplings (account 376);
- Gas services lines (account 380) and insulated and non-insulated fittings (account 378);
- Valves (account 376);
- Excess flow valves (account 376);
- Risers (account 376);
- Meter bars (account 382);
- Meters (account 381);
- Measuring and Regulator Stations (accounts 334,366, 369, 375, 378, 381, 384)
- Industrial and Farm Tap Measuring and Regulating Equipment (account 385)
- Unreimbursed costs related to highway relocation projects where a natural gas distribution company or city natural gas distribution operation must relocate its facilities; and
- Other related capitalized costs (accounts 392, 396, and other misc accounts) (C)

Formatted: Indent: Left: -0.1"

C. Effective Date: The DSIC will become effective January 1, 2026. (C)

2. Computation of the DSIC

A. Calculation: The initial DSIC, effective January 1, 2025 shall be calculated to recover the fixed costs of eligible plant additions that have not previously been reflected in the Utility's rates or rate base and will have been placed in service between October 1 to November 30, 2024.

NATIONAL FUEL STATEMENT NO. 1

REBECCA E. HILLERY

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 1

Direct Testimony of
Rebecca E. Hillery

Topics Addressed:
Rate Filing Overview
Key Drivers of Rate Relief
Other Key Proposals
Management Effectiveness and Performance
Introduction of Witnesses

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Rebecca E. Hillery. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") as the Managing Director of Rates and Regulatory Affairs.

Q. Please briefly describe your responsibilities in that capacity.

A. As Managing Director, I am responsible for managing all aspects of the Rates and Regulatory Affairs department. This includes sales and revenue forecasting, tariff administration and compliance, Pennsylvania Section 1307(f) purchased gas cost filings, base rate case filings, and a broad range of regulatory reporting and compliance activities for NFGDC's Pennsylvania ("National Fuel" or "Company") and New York ("National Fuel – NY") divisions.

Q. Please provide your educational background.

A. I received a Bachelor of Science in Business Administration from the State University of New York at Buffalo in May 2004 with a concentration in Accounting.

Q. Please provide your professional experience.

A. I began my professional career with Ernst & Young, LLP in McLean, VA in September 2004 as an Assurance Associate. I joined NFGDC in June 2006 as a Financial Auditor in the Audit Services department. I advanced within Audit Services over the course of nine years to Manager of Financial Audits. I then transferred internally within National Fuel to an unregulated subsidiary where I served as Accounting and Risk Manager from April 2015 through August 2019. In August 2019, I transferred back to NFGDC where I served as Chief Auditor for National Fuel Gas Company and all its subsidiaries until September 2025 when I became the Managing Director of the Rates and Regulatory Affairs department. I have been a Certified Public Accountant in New York State since 2007.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. I have not previously testified in any proceedings before the PAPUC or any other state or federal agency.

Q. Please provide a brief overview of NFGDC's utility business operations.

A. NFGDC owns and operates local natural gas distribution systems serving approximately 214,000 customers and 543,000 customers in its northwest Pennsylvania and western New York service territories, respectively. National Fuel maintains headquarters and a customer service call center in Erie, Pennsylvania, and operates approximately 4,900

miles of main and transmission natural gas pipelines and 13 service centers across northwest Pennsylvania. For the fiscal year ended September 30, 2025, the Company's total normalized throughput was approximately 45.5 billion cubic feet (Bcf), with residential, commercial & public authority, and industrial customer classes making up 41%, 21% and 38%, respectively, of the annual load. Nearly all its 195,000 residential customers use natural gas for space heating purposes.

Q. Discuss NFGDC's relationship with its parent, National Fuel Gas Company, and affiliated subsidiaries.

A. NFGDC is a wholly owned subsidiary of National Fuel Gas Company ("NFG"). NFG is a publicly traded holding company headquartered in Williamsville, New York, that owns and operates businesses across the natural gas value chain from the well-head to the customer's burner tip. The following is a summary of each affiliated company owned by NFG and a brief description of their relationship with National Fuel.

- National Fuel Gas Supply Corporation ("NFG Supply") and Empire Pipeline, Inc. ("Empire") own and operate interstate natural gas pipeline and storage assets in Pennsylvania and New York that are regulated by the Federal Energy Regulatory Commission ("FERC"). National Fuel is a customer of NFG Supply and Empire, contracting for firm transportation and storage services that deliver Appalachian natural gas supplies at direct interconnects with the Company's system.
- National Fuel Gas Midstream Company, LLC ("NFG Midstream") builds and operates natural gas gathering and processing assets for Seneca and third-party

Appalachian producers in Pennsylvania. National Fuel does not have a customer relationship with NFG Midstream.

- Seneca Resources Company, LLC ("Seneca") holds the rights to 1.2 million net acres in Pennsylvania, where it develops and produces approximately 1.2 billion cubic feet per day of natural gas in Appalachia. National Fuel does not contract with Seneca to purchase any of its gas production.

Q. Have there been any changes to NFGDC's service territory since the last rate case?

A. There have not been any material changes to NFGDC's service territory since the last rate case. NFGDC filed a Joint Application with North East Heat & Light Company ("NEHL") on October 7, 2025 (Docket No. A-2025-3057864) requesting approval for NFGDC to acquire certain natural gas distribution facilities and rights from NEHL in the Borough of North East, Erie County, Pennsylvania and North East Township, Erie County, Pennsylvania. The Joint Application remains pending before the Commission.

Q. Please describe the Joint Application with NEHL and its impact on this proceeding.

A. As described further in the Joint Application, the proposed transaction will be carried out pursuant to an Asset Purchase Agreement. The proposed transaction, if approved, is anticipated to close during the Future Test Year ("FTY"). The Company will not be recovering any acquisition premium related to the proposed transaction and is not seeking rate recovery for any of the transactional or transitional costs. Furthermore, while NFGDC intends to move NEHL customers to the Company's Commission-approved tariff (Tariff – Gas – Pa.P.U.C No. 9) ("Tariff"), the Company has proposed to add a

temporary tariff Rate Schedule for former NEHL customers for delivery rate purposes as further described in the Joint Application. The Company has not included any costs related to NEHL in this proceeding and is not seeking to change NEHL's current delivery rates in this rate proceeding.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. My testimony addresses several items. First, I present an overview of the rate filing, including a summary of why the Company is seeking rate relief, a review of customer bill impacts, and an explanation for why the Company's proposed rate increase is just and reasonable. Second, I present in further detail the key drivers of the Company's need for rate relief at this time. Third, I provide an overview of certain key proposals that will be discussed in the case. Next, I discuss and present evidence of National Fuel's outstanding management performance and propose how it should be recognized in this case. Finally, I introduce the witnesses who are providing direct testimony on behalf of the Company in this rate filing.

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. No.

III. OVERVIEW OF RATE FILING

Q. Please summarize the relief that National Fuel is requesting through this rate filing.

A. National Fuel is seeking an increase in its annual base delivery revenues of $19.7 million, or 7.4% on a total revenue basis. The base rate increase requested in this filing utilizes a

fully projected future test year ending October 31, 2027 ("FPFTY"). The Company is also proposing, among other things, to make permanent the Weather Normalization Adjustment ("WNA") mechanism that was successfully implemented as a pilot program following the last rate case to protect ratepayers and the Company from volatility in weather, and a new energy efficiency pilot program to benefit customers that would recover an additional $0.7 million from residential customers annually in a separate rider.

Q. When was the last time National Fuel sought a base rate increase?

A. National Fuel's last base rate filing was in 2022, with new rates effective August 1, 2023.

Q. Is National Fuel choosing to voluntarily comply with the order associated with Docket L-2012-2317273 with regard to rate case data filing requirements?

A. Yes. Docket L-2012-2317273 establishes filing requirements, data standards, and evaluation procedures for utilities that choose to base general rate increase requests on a FPFTY. Utilities have until May 30, 2026 to comply with this order, however National Fuel has chosen to voluntarily comply in conjunction with this rate filing.

Q. Why is National Fuel seeking a rate increase at this time?

A. For many years, National Fuel has successfully operated a safe and reliable system, provided high-quality customer service, and earned a reasonable rate of return. In recent years, the Company has experienced the effects of significant cost inflation that is driving continued increases in labor expenses and other operating costs. Additionally, the Company is continuing to accelerate its infrastructure replacement and system

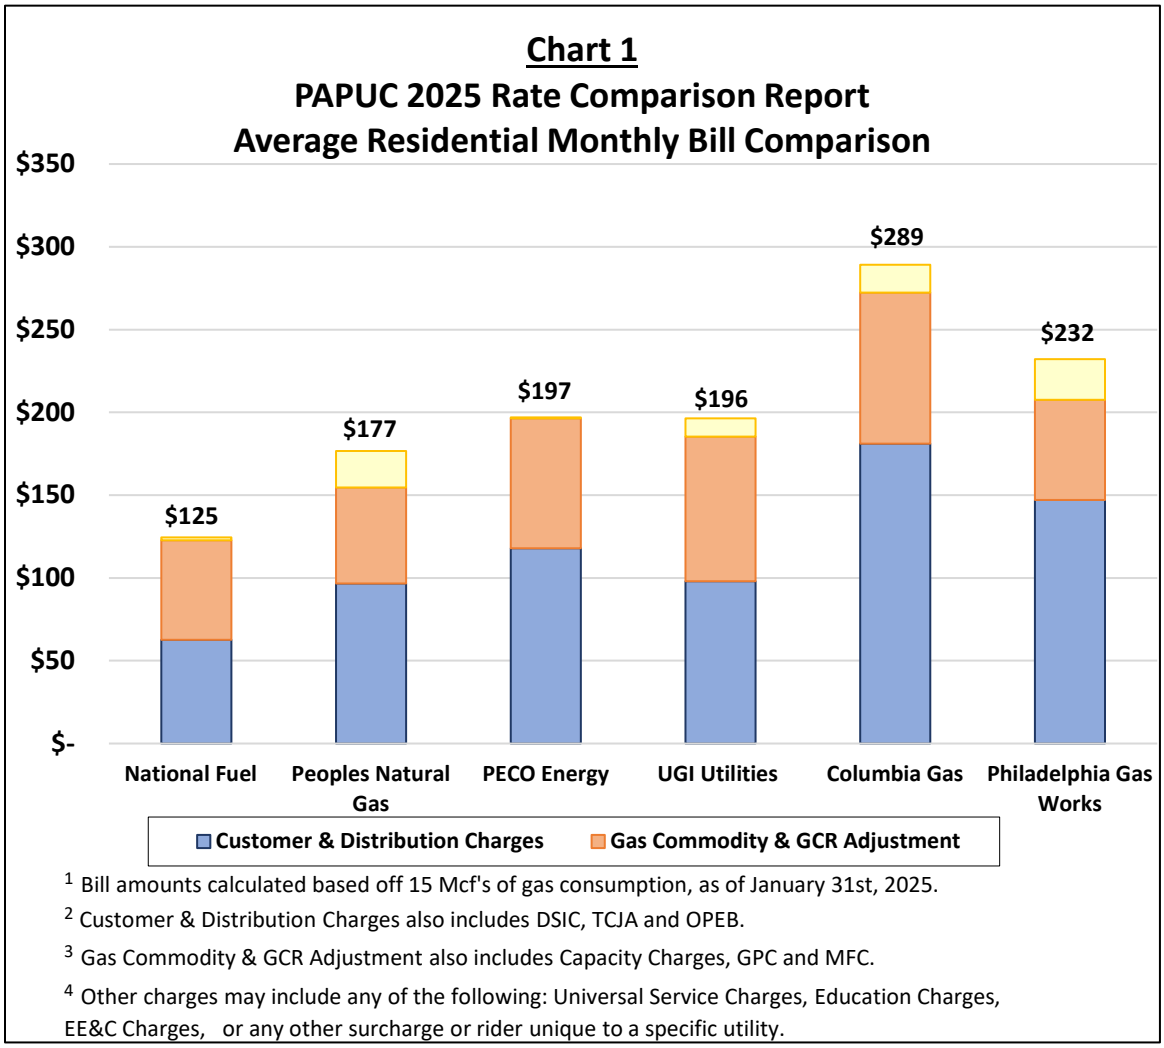
modernization investments to enhance safety and reliability and reduce emissions. As a result of these cost increases and the inflationary pressures impacting the U.S. economy, along with declines in customer usage due to warming weather trends, National Fuel's current rates do not provide it with a reasonable opportunity to earn a fair rate of return on its investments in rate base.

Q. Explain why National Fuel's current rates are insufficient to support its current and planned operations.

A. As reflected in National Fuel Exhibit A (FPFTY) Schedule A-1, the Company's operations are projected to produce an overall return on rate base of 6.30%, and a return on common equity of 6.87%, during the FPFTY. As explained by National Fuel witness Mr. Josh Nowak (National Fuel Statement No. 10), these levels of returns are not adequate based on an analysis of applicable financial market data and the risks confronted by the Company and are well below the rates of return generally afforded to public utilities. Unless National Fuel receives the requested rate relief, the Company's returns will continue to erode and jeopardize its ability to attract the capital needed to make the reasonable and necessary investments in gas infrastructure and the human resources that are necessary to maintain and enhance the provision of safe and reliable natural gas service to its customers.

Q. How do National Fuel's current rates compare to other gas utilities in Pennsylvania?

A. A comparison of residential heating bills in Chart 1 below from the PAPUC 2025 Rate Comparison Report issued in April 2025 illustrates that National Fuel has the lowest total monthly bills and the lowest customer and distribution charges in the Commonwealth amongst large gas utilities.



On a total bill basis, National Fuel's average monthly bill for residential heating customers using 15 Mcf per month was $124.56, which is $78.11 lower than the group average of $202.67. This favorable variance compared to the group has widened since the Company's last rate case filed in 2022. Specifically, in its 2022 rate case, National Fuel

was $56.98 lower than the group average compared to the current favorable variance of $78.11 stated above. Looking at just the delivery charge portion of the bill (customer and distribution charges, including impact of OPEB surcredits), the average National Fuel residential heating customer using 15 Mcf per month currently pays just $62.61 per month, which is $54.63 lower than the group average of $117.24 and $34.10 lower than the next lowest gas utility.

The PAPUC 2025 Rate Comparison Report also found that National Fuel's small commercial, medium commercial, large commercial, and industrial customers pay an average of 30-43% less for their natural gas bills than customers served by other large gas utilities in the Commonwealth.

Q. Has National Fuel evaluated the impact of its proposed rate increase on average customer bills?

A. Yes. As presented in Table 1 below, the Company has evaluated the impact of its proposed rate increase on the average monthly bill of residential heating and commercial heating customers. The residential heating customer impact includes the proposed energy efficiency pilot program rider and reactivation of Rider I related to OPEB surcredits. At current rates, the Company's proposed new rates will increase residential customer bills by 5.9%.

Table 1 - AVERAGE MONTHLY BILL IMPACT

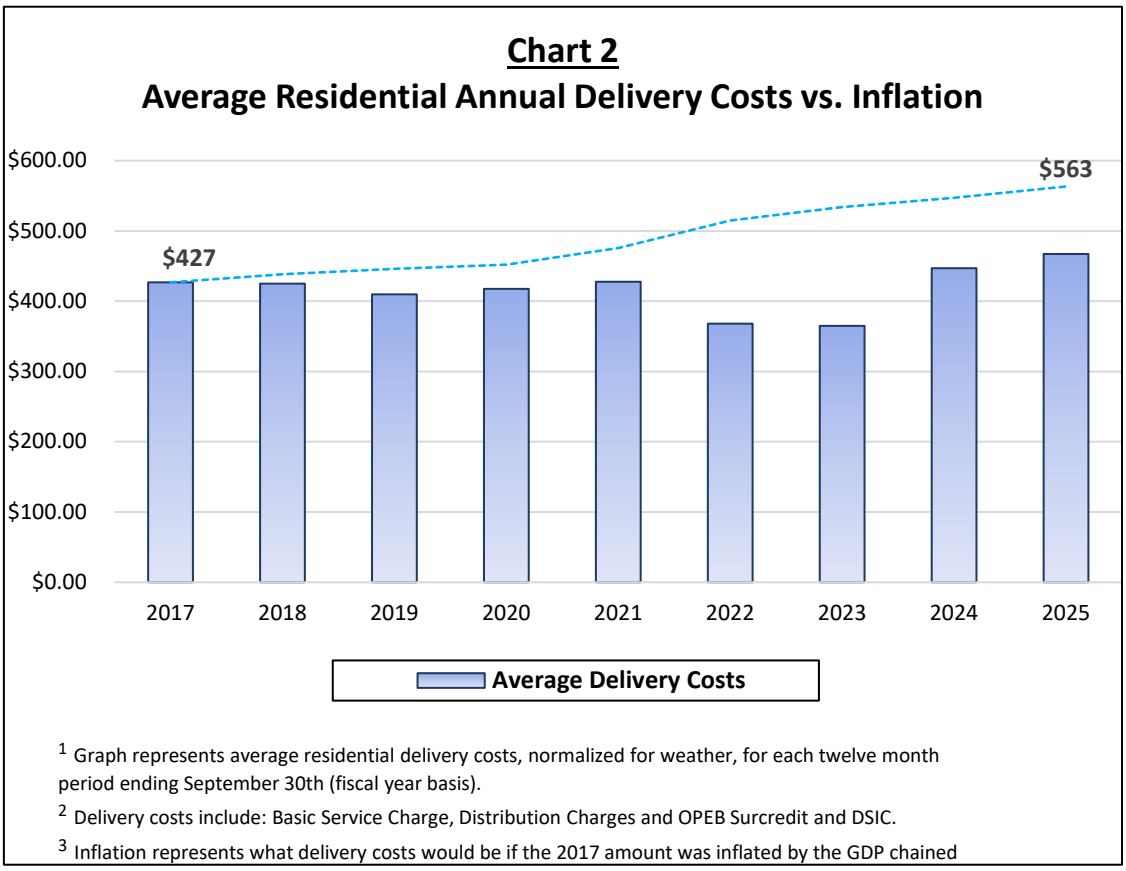
Customer Class	Average Usage per Month	Current Rates	Proposed Rates	($) Increase	(%) Increase
Residential	80 ccf	$83.49	$88.44	$4.95	5.9%
Commercial / Public Authority					
SCPA < 250	103 ccf	$101.91	$107.85	$5.95	5.8%
SCPA > 250	412 ccf	$276.57	$288.37	$11.80	4.3%
LCPA	340 Mcf	$1,113.90	$1,143.80	$29.89	2.7%

Q. Why are the projected customer bill increases fair and reasonable?

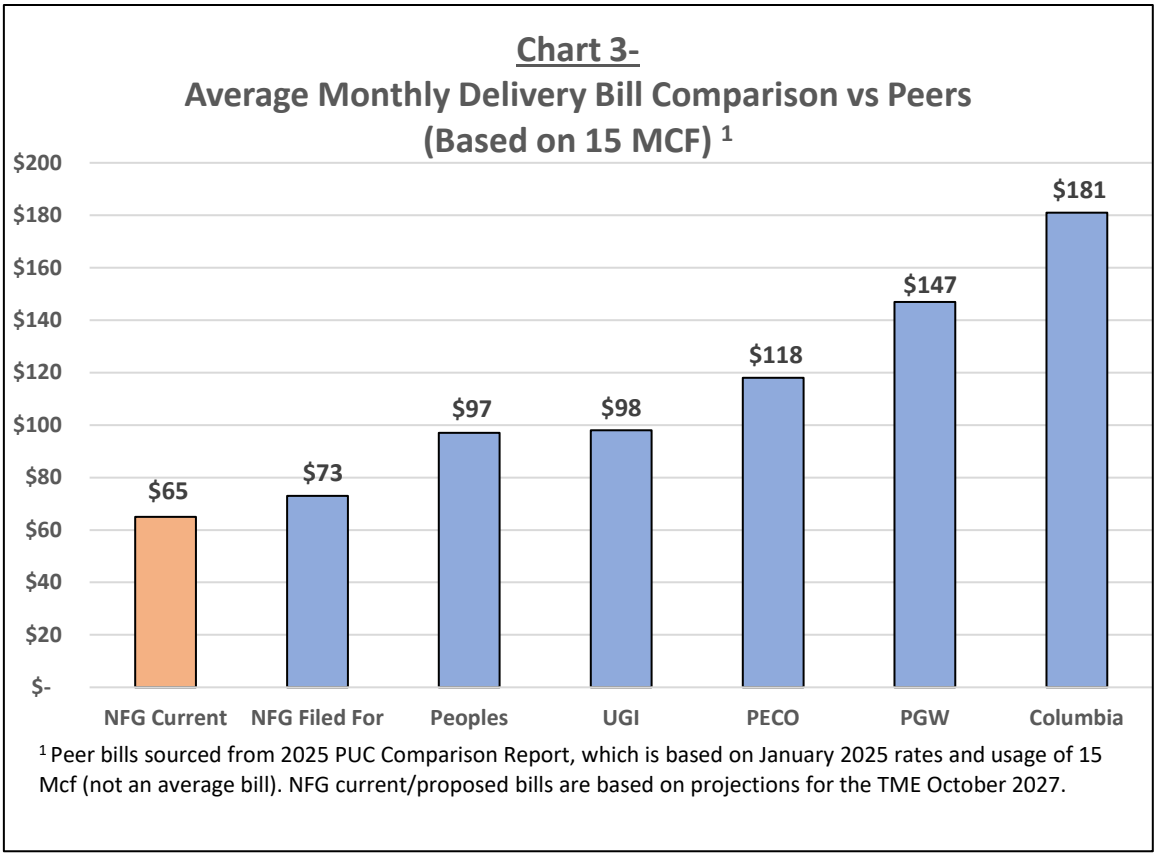
A. The average customer bill impacts set forth in Table 1 above are fair and reasonable for several reasons.

- First, the increase in delivery rates support the Company's ability to provide safe and reliable gas distribution service for its customers, including critical investments to replace aging gas infrastructure and modernize the Company's facilities. The additional revenues are also necessary to address inflationary pressures on the Company's operating expenses and lower customer usage trends, both of which have been outside of the Company's control.
- Second, this is only the second requested increase to delivery rates that National Fuel has had since 2007. As demonstrated in Chart 2 below, the Company's average annual delivery charges normalized for weather have increased marginally from $427 per customer in 2017 to $467 per customer in 2025. Had the Company's delivery rates kept pace with inflation since 2017, as measured by

the U.S. Bureau of Labor Statistics' Consumer Price Index ("CPI"), the average residential customer would be paying $563 annually.



- Third, even with this increase, we anticipate that National Fuel's residential heating customers will continue to have the lowest average total bill and lowest average delivery charges in the Commonwealth, as demonstrated in Chart 3 below.



- Finally, National Fuel continues to demonstrate exceptional management performance and diligence in mitigating rate increases for customers. Specifically, as discussed further below, National Fuel continues to be a leader in customer service and emergency response within the state. Additionally, management also continues to be prudent in its spending and operation of the business which can be seen through no requested rate recovery for Defined Benefit Pension and Other Post Employment Benefit costs (refer to Mr. Michael P. Weidner's Direct Testimony No. 5), reduced rate recovery requested for Research, Development & Demonstration ("RD&D") initiatives (refer to Mr. Erik M. Solomon's Direct Testimony No. 18), prudent management of O&M expenses as discussed later in my testimony, and the benefit customers receive from the repairs deduction that

has a meaningful impact on income tax expense and revenue requirement in this case (refer to Ms. Erica L. Forcucci's Direct Testimony No. 12).

IV. RATE RELIEF DRIVERS

Q. What are the key drivers of the Company's need for rate relief?

A. The Company's need for rate relief is largely being driven by the following three items:

- Increasing investment in rate base, which is expected to grow as the Company accelerates its leak-prone pipeline replacement and system modernization activities to ensure and enhance the safety of its distribution system.
- Increasing levels of operating costs, which are principally being influenced by broader macroeconomic trends. More specifically, higher employee wages and compensation are necessary to stay competitive with the current labor market, additional information technology and cybersecurity costs are required to ensure digital security and reliability, and continued inflation on materials and services are driving overall costs higher.
- Declining levels of residential and commercial customer usage for heating due to warming weather trends.

I address each of these key drivers in greater detail below.

1. Investment in Rate Base

Q. How does the Company's current investment in net plant compare to the net plant that was included in the last rate case?

A. The investment in net plant in-service for the FPFTY ended October 31, 2027 is projected to be $637 million. When the Company last requested a rate increase for the FPFTY ended July 31, 2024, the Company's investment in net plant was approximately $496 million. The $141 million increase in net plant has largely been the result of continued investments necessary to enhance and maintain the safety and reliability of the Company's distribution system, which include the replacement of aging gas plant infrastructure. Since 2016, the Company's Systematic Replacement Program has eliminated over 371 miles of leak-prone bare steel and wrought iron pipeline and 7,337 base steel services. The Company's distribution system does not have any cast iron pipe. At its current pace of replacing approximately 57 miles per year, National Fuel plans to target retirement of all leak-prone pipe by 2039.

Q Does the Company utilize the Distribution System Improvement Charge ("DSIC") as a way to manage the recovery of incremental investments in plant in-service between rate cases?

A. Yes. The Company implemented the DSIC on January 1, 2025 and has calculated an appropriate and allowable surcharge to customers in accordance with the tariff.

Q. Why isn't the DSIC providing enough return to avoid the need to file this rate case and request for additional recovery?

A. The DSIC is currently capped at 5% of distribution revenues. National Fuel projects that this cap will be met during the first calendar quarter of 2026. As such, the Company will not be able to earn a return on incremental plant investments placed in-service after the

DSIC cap it exceeded. As discussed in the direct testimony of Mark C. Shaefer (National Fuel Statement No. 9), the Company has seen a significant increase in the cost of Leak Prone Pipe ("LPP") replacements and filed an Amended Long-Term Infrastructure Improvement Plan ("LTIPP") in December 2025.

2. Operating Cost Inflation

Q. Present and discuss the trends in the Company's levels of operating expenses since its last rate case in 2022.

A. Like most businesses today, National Fuel has been impacted generally by the inflationary pressures that continue to challenge our economy. Despite these challenges, management has been successful in holding several categories of costs relatively steady for the last three years, noting both increases and decreases in operating expenses, as discussed in the Direct Testimony and exhibits of Company Witness Mr. Anthony Formato (National Fuel Statement No. 3). When considering the net impact of operating expenses since the last rate case, the biggest item impacting the increase in operating expenses is net labor.

Q. Why is net labor the biggest driver of the increase in operating expenses since the last rate case in 2022?

A. National Fuel's net labor expenses have been impacted in two ways. First, the Company continues to manage employee retention through competitive wages and benefits to ensure that qualified and trained employees are not lost to other employers. The net labor expenses are higher as a result of annual merit increases, forecasted variable pay

incentives and a small increase in headcount from the HTY ended September 30, 2025. Second, net labor has increased due to the results of recent negotiations and ratification of collective bargaining agreements impacting approximately half of National Fuel's workforce. As discussed further in the Direct Testimony of Company witness Ms. Valerie L. Hawthorn Wagner (National Fuel Statement No. 4), the resulting contract will include an average increase of 13% to hourly labor rates in the FTY and an additional 3% in the FPFTY. These changes, along with a persistently tight and competitive labor market, have placed upward pressure on salaried and non-union employee wages.

2. Weather Impacts on Usage

Q. How has customer usage changed since the Company's last rate case in 2022?

A. The Company's residential and commercial usage has been significantly impacted by a trend of warmer winters in the Company's service territory. As noted in Table 4 below, the actual heating degree days reported by the National Oceanic and Atmospheric Administration ("NOAA") for Erie, PA over the last four fiscal years have been warmer than the normal heating degree days for the 15 years calculated from 2010 – 2024. National Fuel used a 15-year heating degree day average during its last rate case in 2022. The trend of warmer winters and extreme volatility in heating degree days from year to year has had a significant impact on the Company's throughput and revenues.

TABLE 4 - NOAA HEATING DEGREE DAYS - ERIE, PA

TME	Heating Degree Days	Colder / (Warmer) than 2010-2024 Avg. [1]
2010-2024 Avg.	5,654	Normal [2]
Sep 2022	5,318	(6%)
Sep 2023	5,537	(2%)
Sep 2024	4,816	(15%)
Sep 2025	5,585	(1%)
FPFTY [3]	5,485	(3%)

(1) Percentages represent difference between actual experienced HDD vs. normal HDD based on a 15-year average.

(2) Normal weather established based on 15-year average normal HDD from 2010-2024.

(3) Twelve months ended July 31st, 2024. HDD are based on 10-year average (2015 - 2024).

Q. How does the Company address the impact of warmer and volatile weather trends on customer usage in this rate filing?

A. The Company proposes taking two steps to consider and mitigate the adverse impact of warmer weather trends on customer usage:

- First, the Company modified its volumetric forecasting approach to use a 10-year average of heating degree days data published by NOAA as observed at the Erie, Pennsylvania International Airport from 2015 to 2024. Prior to the last rate case, the Company had used a 30-year average for forecasting purposes. However, as recent winters have trended significantly warmer than normal, the Company moved to a 15-year average of annual heating degree days in the last rate case in

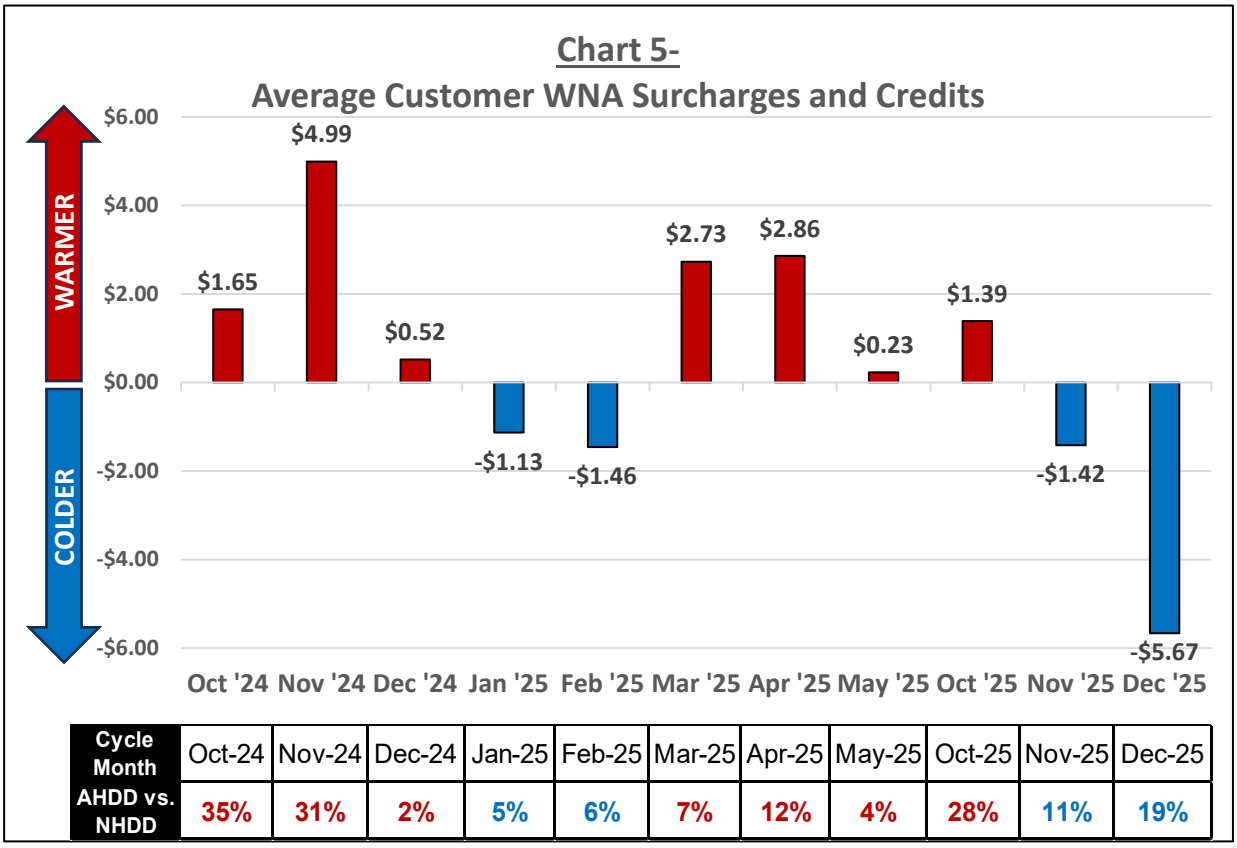
2022 and believes that further update to a 10-year average is more indicative of a normal winter in the Company's service territory. This is consistent with Columbia Gas of Pennsylvania's recent rate case (R-2025-3053499) where the Commission adopted a 10-year HDD average for WNA purposes. Company witness Cathryn E. Hilliard provides additional details in her direct testimony (National Fuel Statement No. 13).

- Second, the Company is proposing to make the Weather Normalization Adjustment ("WNA") mechanism permanent to help insulate the Company's delivery revenues when actual weather is warmer than normal and protect customers from higher bills when actual weather is colder than normal. Company witness Mr. John D. Taylor will testify in his direct testimony (National Fuel Statement No. 19) to the details of the Company's WNA mechanism, benefits to ratepayers, and why the mechanism is fair and reasonable for the Company.

Q. What has been the experience with the current pilot WNA mechanism implemented in the last rate case?

A. In the last rate case, a pilot WNA mechanism was approved that provides for a surcharge or credit to customer bills, outside of a 3% deadband, from October to May to address volatility in weather as discussed above. The pilot program has worked as designed since implementation with no significant customer issues. The WNA is a symmetrical mechanism, benefiting both the Company and customers. Chart 5 below shows historical surcharges or credits on average per customer account from October 2024 through December 2025, demonstrating that the WNA mechanism is working as intended to

reduce volatility for customers and provide predictability for the Company to earn authorized revenues without being impacted by weather factors outside the Company's control.



Cycle Month	Oct-24	Nov-24	Dec-24	Jan-25	Feb-25	Mar-25	Apr-25	May-25	Oct-25	Nov-25	Dec-25
AHDD vs. NHDD	35%	31%	2%	5%	6%	7%	12%	4%	28%	11%	19%

Normal heating degree days ("NHDD") are based on NOAA 2006-2020 set. Values shown represent the average for that month's billing controls. Billed WNA is based on the degree days for the customer-specific billing periods.

MANAGEMENT EFFECTIVENESS AND PERFORMANCE

Q. Why is the Company's record on management effectiveness and performance relevant to this rate filing?

A. As I will demonstrate in my testimony to follow, National Fuel continues to have an exceptional record on management effectiveness and performance that provides significant value to our customers in the provision of safe, reliable, and affordable natural gas utility service, and supports why the Company's proposed rate increase is just and reasonable.

Q. Identify the key areas where National Fuel's management effectiveness and performance record excels and provides added value for customers.

A. I will discuss the following key areas related to National Fuel's management effectiveness and performance:

- Safety Culture
- Quality Customer Service
- Information Technology and Cybersecurity
- Affordability and Operational Efficiencies
- Universal Services and Customer Payment Assistance
- Community Engagement and Impact on Local Economies

NFG's 2024 Corporate Responsibility report provides additional data and disclosure related to the topics identified above. The report is publicly available on National Fuel's website at https://www.nationalfuel.com/corporate/our-guiding-principles/

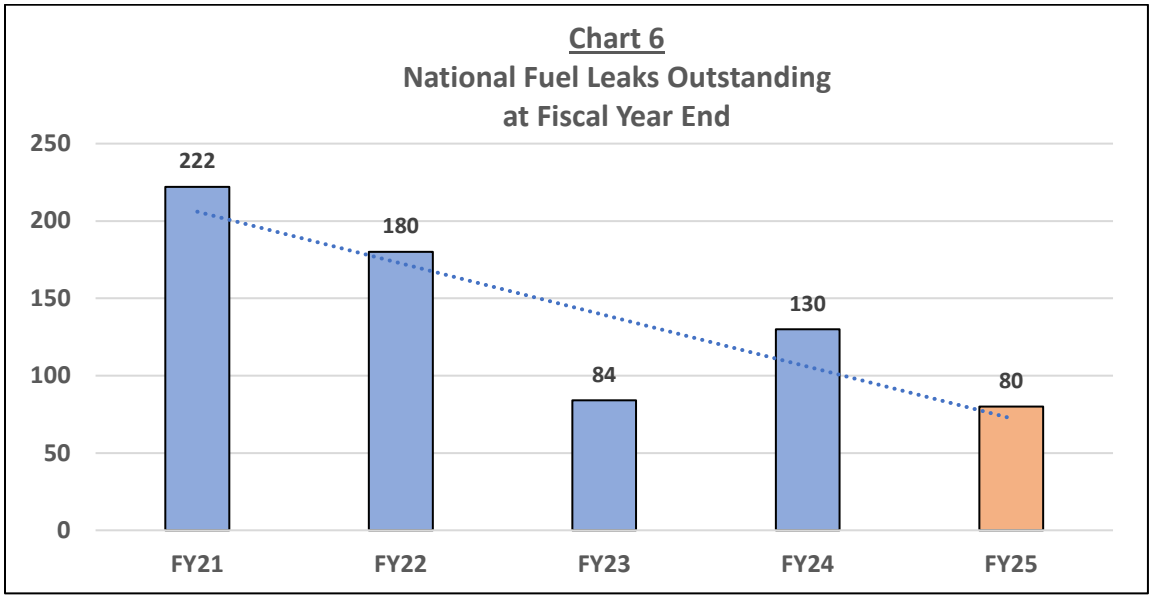
Q. Discuss the initiatives and performance related to National Fuel's <u>Safety Culture</u>.

A. National Fuel's highest priority is safety. We value all of our customers, employees, contractors and communities, and work diligently to establish a culture of safety that is

embraced throughout the entire organization. To that end, National Fuel has a long-standing culture of safety that encourages continuous improvement of our safety performance, with demonstrated success in the following areas:

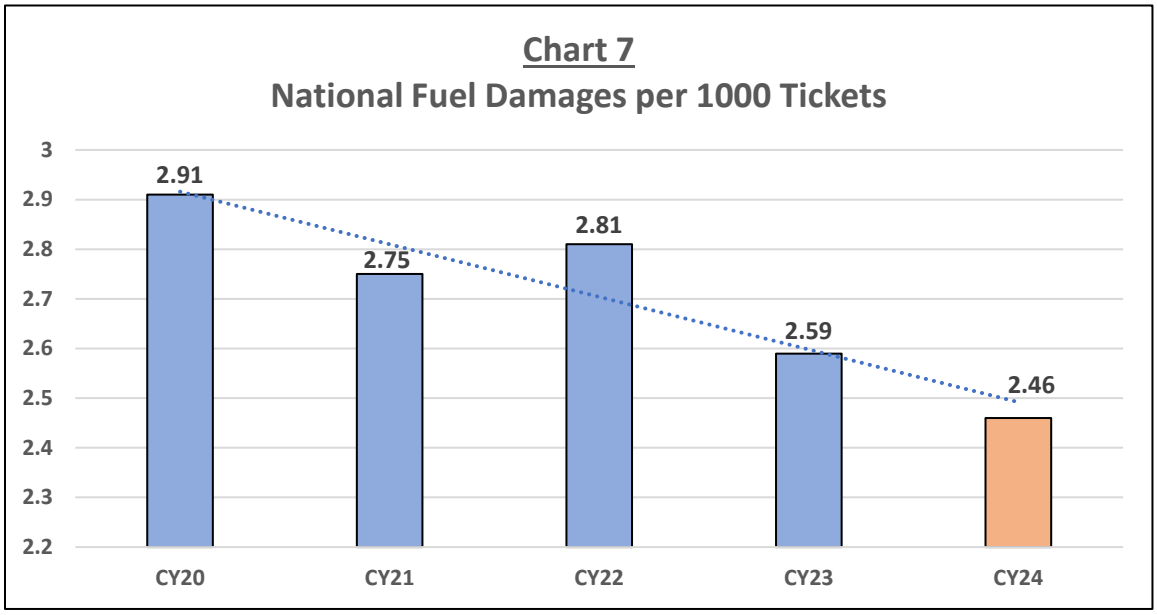
Gas System Integrity: As noted previously in my testimony, the Company has accelerated its pipeline replacement program so that all remaining bare steel and wrought-iron mains and transmission lines will be removed by 2039.

The Company continues to be focused on finding and repairing leaks on its system. The number of outstanding leaks at year end and the number of leaks discovered during the year continues to trend lower. As shown in Chart 6 below, the number of leaks outstanding at the end of FY25 was reduced by more than 50% over the last 5 years. Leaks outstanding have been reduced by more than 80% over the last 10 years.



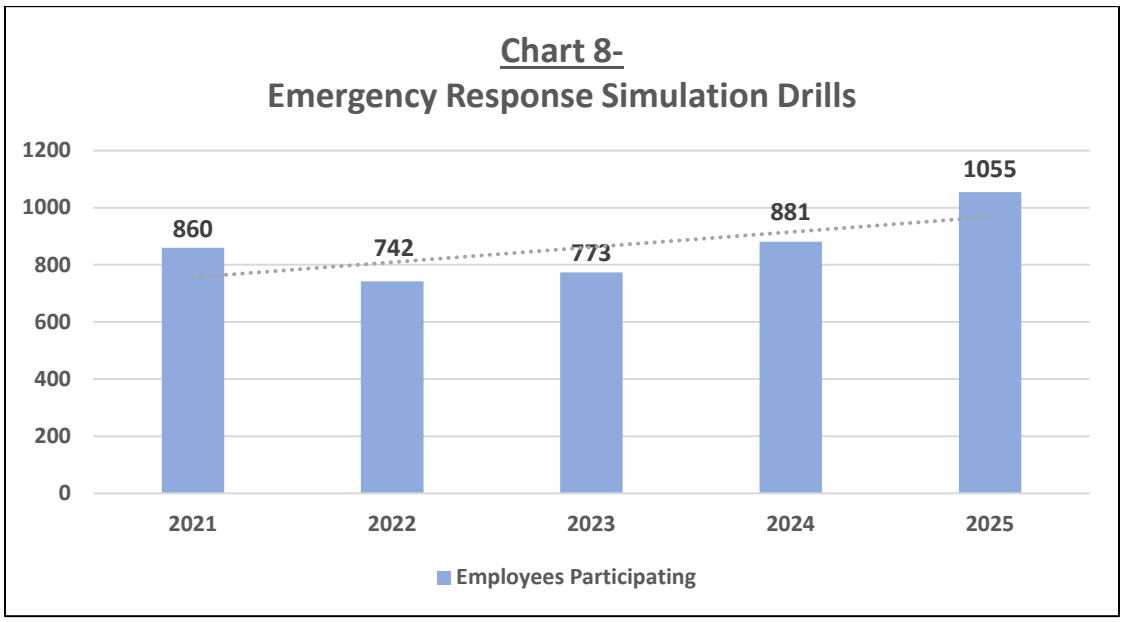
Damage prevention continues to be a top priority for National Fuel. The Company dedicates significant resources to educate and train contractors, customers, and the public

on the importance of damage prevention and safe excavation practices and ensure that the Company's facilities are properly marked before excavation begins. The Company utilizes pipeline safety mailers, social media, billboards, television, and radio advertising to spread awareness on damage prevention which continues to yield exceptional results. As shown in Chart 7 below, the Company's damages continue to trend lower and as of the end of calendar year 2024, the Company experienced a 28% decrease in excavation damages over the last five years.

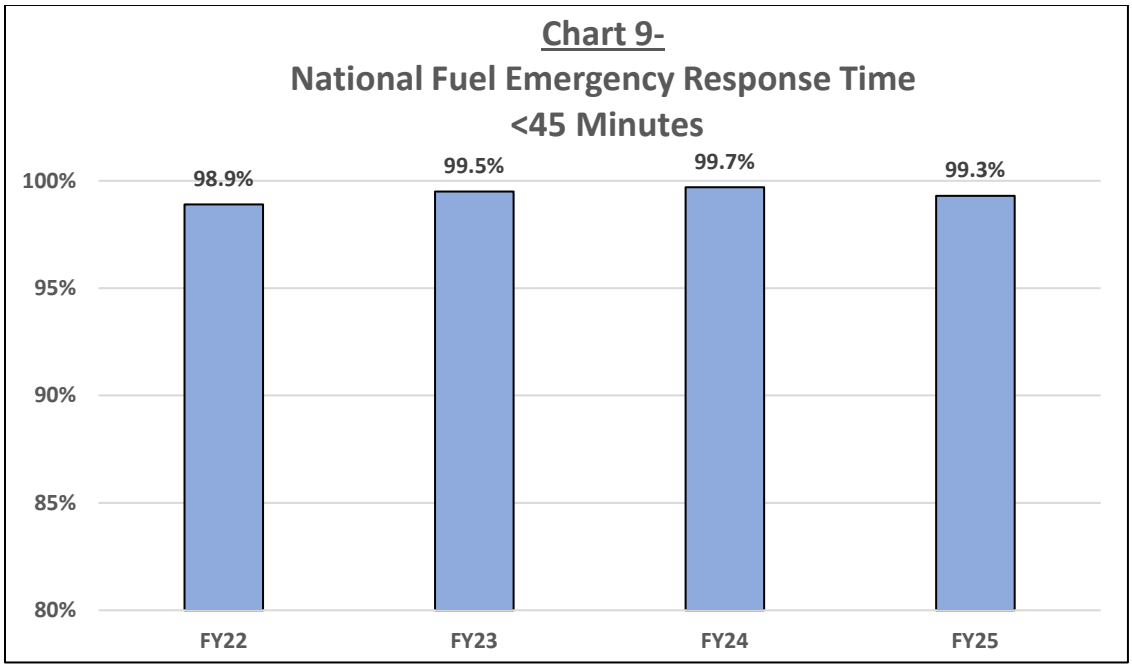


Customer Safety: National Fuel continues to educate and build awareness with its customers, so they know what to do if they smell gas in their homes. We also work with local first responders to provide appropriate gas emergency training. In calendar year 2025, the Company held more than 25 meetings with over 900 participants including local emergency responders. Additionally, the Company held 60 emergency response simulation drills with more than 1,000 participants. As shown in Chart 8 below, this is an

increase of more than 20% over five years, which demonstrates the Company's continued commitment to safety.



When emergencies occur, the Company places a high priority on having a rapid response and conducting a thorough investigation once we arrive onsite. As shown in Chart 9 below, the Company's average emergency response time is less than 45 minutes more than 99% of the time, which is exceptional given the rural nature of National Fuel's service territory.



Employee Safety: Safety programs and management practices ensure that a safety culture is prioritized throughout the Company. National Fuel continues to enhance and expand upon long standing safety training and education initiatives. The Company's safety focus has yielded tremendous results. In 2025, NFG's consolidated operations reported the lowest Occupational Safety and Health Administration 'Days Away, Restricted or Transferred' Rate in its history. In addition, the Company has successfully implemented a Safety Improvement Team ("SIT") whose primary job is to proactively identify potential areas of continuous safety improvement. Through the efforts of the SIT, the Company holds Safety Days which are hands-on training days that bring Operations employees together to reinforce our commitment to safety. These sessions focus on essential safety topics such as personal protective equipment, emergency response procedures, damage prevention, trenching and shoring practices, and overall hazard awareness. The SIT has also facilitated increased involvement in safety leadership

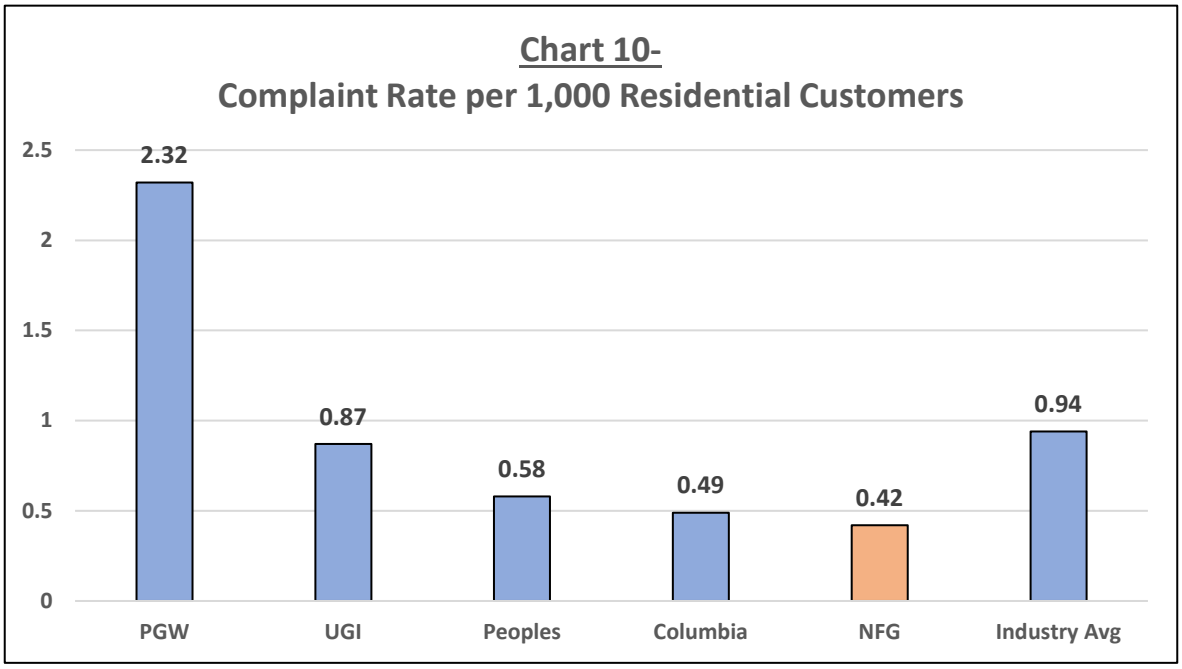
meetings to include all levels within the organization, including hourly employees. This has led to a meaningful enhancement of safety culture throughout the Company and quality recommendations for continuous improvement.

Company witness Mr. Jason Scouten's direct testimony (National Fuel Statement No. 16) provides additional detail on National Fuel's safety culture and our efforts to continuously improve our safety performance across the Company.

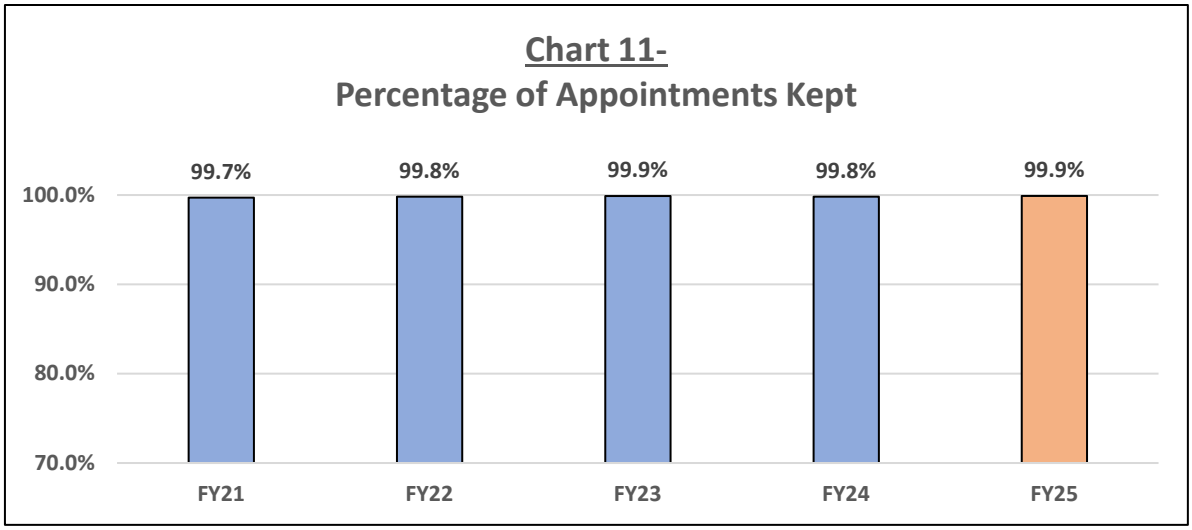
Q. Discuss the initiatives and management's performance related to National Fuel's <u>Quality Customer Service</u>.

A. National Fuel strives to deliver the quality service that our customers expect and deserve. As a result of this customer-driven approach, National Fuel continues to achieve high levels of customer satisfaction. We rate consistently with our natural gas utility peers in Pennsylvania but at significantly lower cost, as discussed further in my testimony below. Information published in the Commission's 2024 Customer Service Performance Report and Evaluation (the "Report") in December 2025 supports the quality of National Fuel's customer service. In the Report, National Fuel scored at or above the Pennsylvania state average for natural gas distribution companies in many of the report's satisfaction survey categories, including lowest in call abandonment, satisfaction with representative's handling of the contact and ease of reaching the Company, and second only to one other utility in answering customer calls within 30 seconds. This is particularly impressive since the Company does not employ an automated voice system to handle customer calls. The Report also highlights National Fuel's low complaint rate compared to our peers. As

shown in Chart 10 below, National Fuel's Residential Consumer Complaint Rate per 1,000 residential customers is the lowest among companies rated and is significantly better than the industry average:



The Company also demonstrates strong customer service by acknowledging that customers' time and schedules are important. As shown in Chart 11 below, the Company has consistently maintained over 99% of appointments kept for the last five years. This strong performance is attributed, in part, to improved appointment windows for customers of four-hour time frames instead of eight hours, continued evaluation of improved customer communication channels and effective management of our workforce in a manner that ensures appointments are kept.



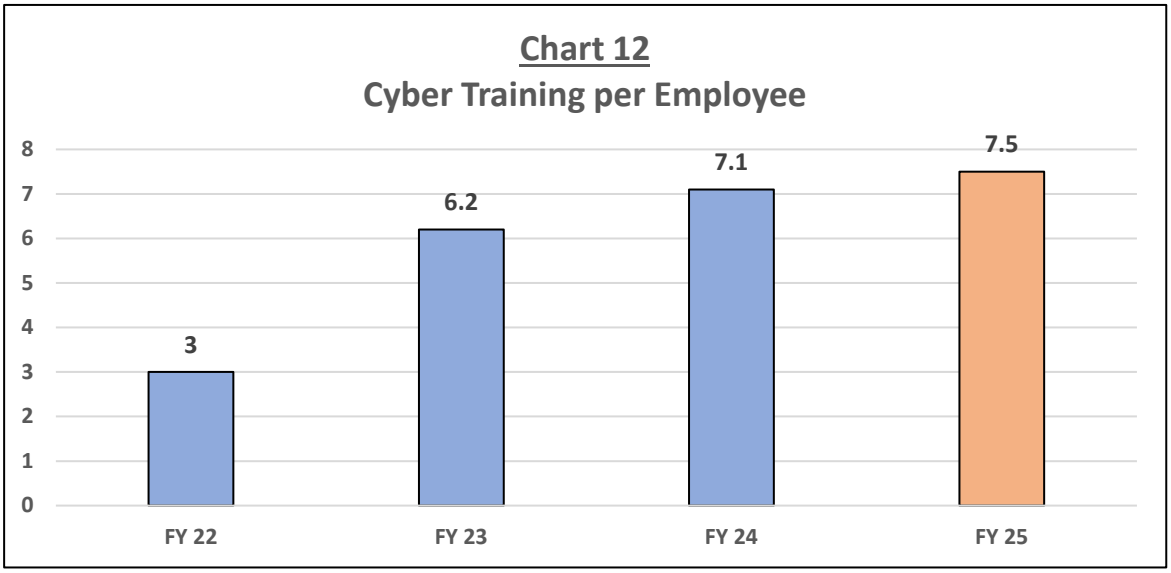
Q. Discuss the initiatives and management's performance related to National Fuel's Information Technology and Cybersecurity.

A. Strong information security is critical to the Company's success and impacts our ability to provide safe and reliable service and protect customer data. National Fuel has made significant enhancements to continue to strengthen the Company's cybersecurity posture. These include, among other things, increasing the number of applications with single sign-on ("SSO") capabilities, increasing the nature and frequency of cyber trainings for employees, aggressively managing our patch management practices for applications and actively addressing system vulnerabilities, and improved response times for Security Information and Event Management ("SIEM") alerts. I will discuss each of these in detail below. The metrics provided are on a company-wide basis based on the nature of the Information Technology department and how cybersecurity is managed.

National Fuel has significantly expanded its use of SSO applications since 2022, increasing the total number to 85% of enterprise applications in calendar year 2025. This

growth reflects a strategic shift toward stronger security, streamlined access, and improved user experience across the organization. Aside from access to applications, the Company has also improved the way employees access the Company's network through enhancements to multi-factor authentication and facial recognition capabilities. Another important area of cybersecurity that the Company has seen strong performance and results is in our management of system vulnerabilities and SIEM alerts. Compared to the rest of the natural gas industry, National Fuel has notably fewer vulnerabilities. In a recent review completed by the Transportation Security Administration of cybersecurity practices at the top 100 gas companies throughout the country, National Fuel Gas Company ranked among the top 10%. In 2025 the Company put a Command Center in place to further enhance both physical and cyber security monitoring and response. The Command Center is designed to reinforce efforts already in place to provide safe and reliable service and protect customer data.

All cybersecurity practices are enhanced or supported by regular training of employees. Management has shown excellent progress in increasing the frequency of trainings that employees take and ensuring that employees hear from information technology leaders during live training sessions and company-wide meetings. Trainings have evolved in the last five years to include quarterly training and phishing tests with remedial training as necessary, approximately eight targeted educational awareness sessions per year on a variety of topics, and focused engagement during Cyber Security Awareness month. As shown in Chart 12 below, employee training and engagement related to cybersecurity has more than doubled in the last four years.



Q. Discuss the initiatives and management's performance related to National Fuel's Affordability and Operational Efficiencies.

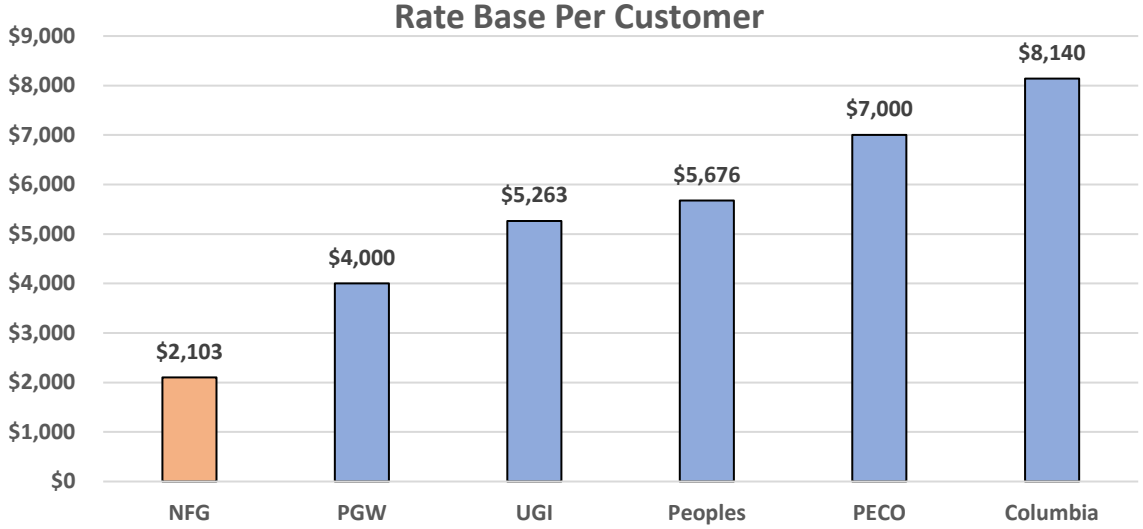
A. As I presented earlier in my testimony, National Fuel currently has the lowest total bills and delivery rates in the Commonwealth amongst large natural gas utilities. National Fuel's customers have benefited from consistently low delivery rates for more than a decade while benefiting from access to the competitively priced natural gas supplies produced in Pennsylvania. Even with the proposed rate increase, the Company anticipates that it will continue to lead its Pennsylvania natural gas peers in affordability.

National Fuel's focus on cost control, productivity, and ability to optimize operational efficiencies is a major driver of the Company's ability to keep its delivery rates low. As Company witness Ms. Valerie Hawthorn Wagner presents in her direct testimony (National Fuel Statement No. 4), the Company is able to efficiently utilize

shared back-office departments, such as Accounting and Finance, Human Resources, Purchasing and Procurement, and Engineering, with employees that provide services and spread costs across multiple affiliated companies. The Company can also deploy and utilize field employees more efficiently, leveraging its overlapping operational footprint with NFG Supply to share resources to meet day-to-day needs of maintaining our infrastructure and serving our customers.

As a result of the synergies created by NFG's integrated structure, the Company is able to operate the business at a much lower cost than if it was a standalone utility. As demonstrated in Chart 14 below, National Fuel has the lowest rate base per customer in the Commonwealth.

Chart 13-
Rate Base Per Customer

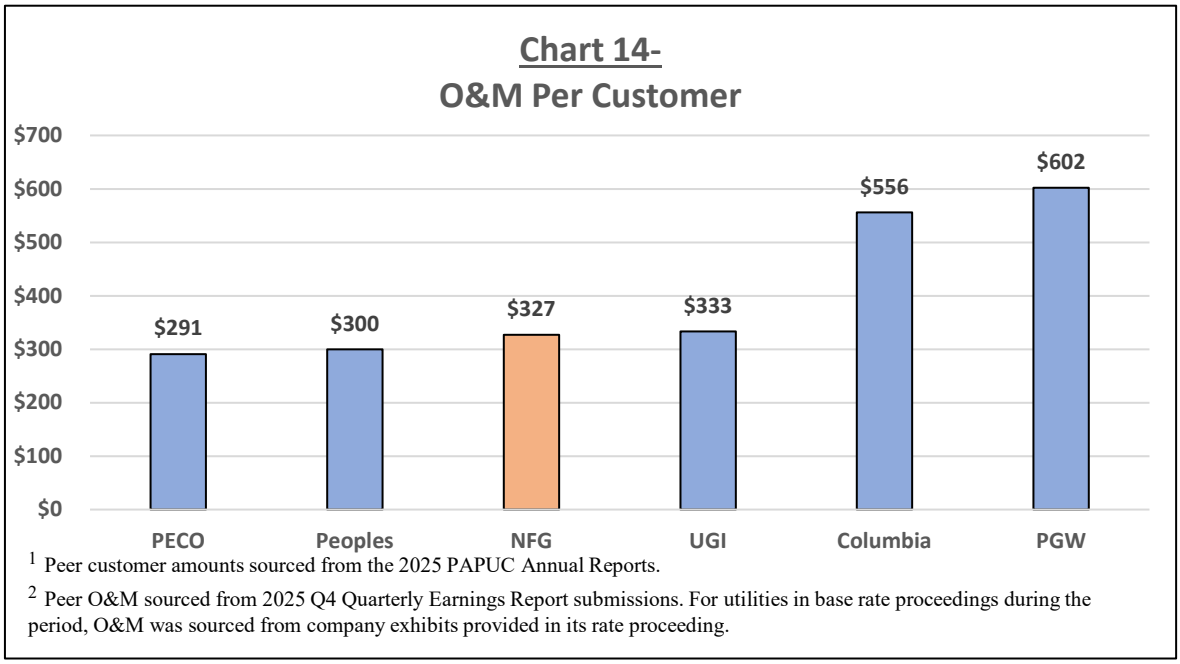


[1] Peer customer amounts sourced from the 2025 PAPUC Annual Reports.

[2] Peer rate base sourced from 2025 Q4 Quarterly Earnings Report submissions. For utilities in base rate proceedings during the period, rate base was sourced from company exhibits provided in its rate proceeding.

National Fuel also ranks favorably among its gas utility peers in Pennsylvania for O&M expense per customer as shown in Chart 15 below. National Fuel falls in line with

PECO, Peoples and UGI, but, importantly, has significantly fewer customers than each of those utilities. Many O&M expenses are fixed and would benefit from economies of scale if National Fuel served more customers, which would further lower our O&M expenses per customer.



[1] Peer customer amounts sourced from the 2025 PAPUC Annual Reports.

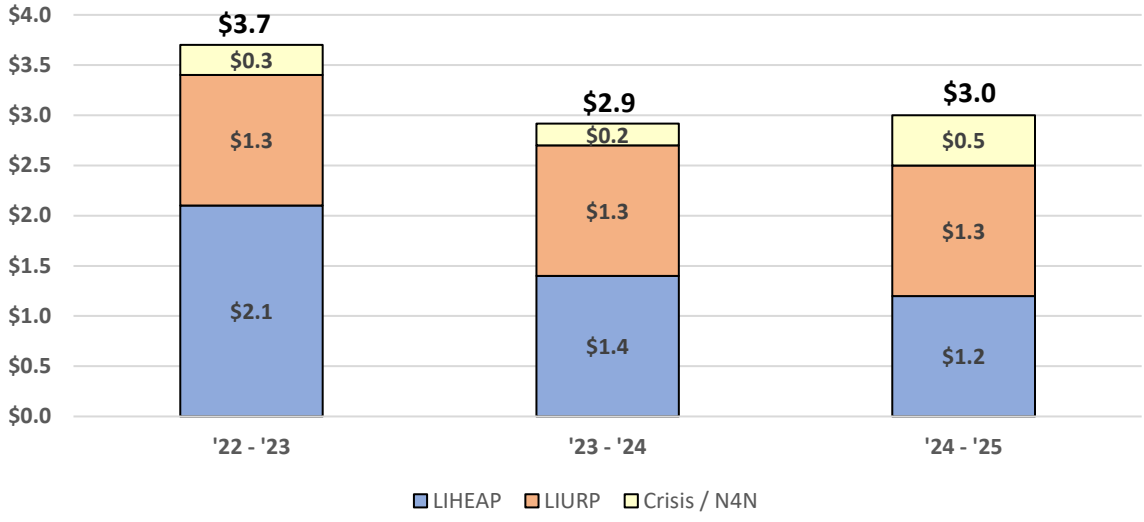
[2] Peer O&M sourced from 2025 Q4 Quarterly Earnings Report submissions. For utilities in base rate proceedings during the period, O&M was sourced from company exhibits provided in its rate proceeding.

Q. Discuss the initiatives and management's performance related to National Fuel's <u>Customer Assistance Programs</u>.

A. National Fuel continues to be attentive to meeting the needs of its low-income customers through its customer assistance programs. In 2024, National Fuel voluntarily converted its legacy low income discount based program (Low Income Residential Assistance Program) to the current Customer Assistance Program (CAP) to better meet the needs of customers. Additionally, National Fuel successfully petitioned the Commission to

approve a modification to the existing Low Income Usage Reduction Program (LIURP) through the Low Consumption-LIURP (LC-LIURP) pilot program to expand eligibility to customers based on 200% of Federal Poverty Income Guidelines and lowered consumption thresholds from 1300 ccf to 900 ccf. In his direct testimony (National Fuel Statement No. 17), Company witness Mr. Matthew W. Stoops Jr. further explains the Company's CAP, LIURP, Neighbor for Neighbor program, as well as the Company's diligent efforts to connect its low-income and payment troubled customers with all available forms of assistance (e.g., LIHEAP). Lastly, Company witness Courtney T. Mann (National Fuel Statement No. 14) provides an overview of the Company's proposal for Rider I that would reinstate that refund of OPEB funds (also discussed above) and proposes a one-time bill credit of $30 totaling $1.025 million to CAP, Level 1 and Level 2 customers. Chart 16 below shows the Company's consistent efforts in meeting the needs of low-income customers.

Chart 15-
NFGDC PA LIHEAP and Other Assistance Programs



Q. Discuss the initiatives and management's performance related to National Fuel's Community Engagement and Impact on Local Economies.

A. In 2025, NFG, the National Fuel Gas Company Foundation ("Foundation"), and our employees supported the communities where we live and work by donating more than $1.7 million. The Foundation's Employee Charitable Giving program aligns a large portion of National Fuel's charitable support with the wishes and generosity of our employees. Through this gift program, the Foundation matches employee donations dollar-for-dollar up to $750 a year to employee-chosen nonprofits. In addition, the Company's "Faces of Fuel" volunteer program provides opportunities for employees to volunteer and participate in philanthropic efforts in our local communities. In 2025, employees donated more than 4,000 hours by participating in volunteer events.

In addition to philanthropic endeavors, National Fuel, and NFG as a whole continue to have a significant impact on the local economies of the communities we serve. We contribute to the regional economy through employee wages, payments to local vendors, taxes, royalties and capital investment.

National Fuel remains committed to hiring and developing qualified individuals who can enhance and contribute to the diversity of our workforce and reflect the communities that we serve. In support of this effort, over the last two years the Company has provided several trainings related to mitigating bias, harassment and discrimination, and customer respect. The Company also collaborates with colleges and universities in its Pennsylvania service territory for diverse candidate referrals and works alongside and supports organizations that promote diversity. These include, but are not limited to,

Booker T. Washington Center, Multicultural Community Resource Center, Charter School of Excellence, Erie VA Medical Center, and Veterans Leadership Program.

Q. How does the Company propose that its exceptional management effectiveness and performance record be considered in this rate filing.

A. As my testimony demonstrates above, National Fuel is a leader and sets the bar in many of the areas and metrics that indicate exceptional management effectiveness and performance. National Fuel's management effectiveness and performance provides significant value to its customers and the communities we serve, namely through the provision of safe and reliable natural gas service with quality customer care at the most affordable rates in the Commonwealth. As a result, the Company is requesting in this rate filing that an additional 25 basis points be included in the recommended rate of return on common equity to reflect the value of National Fuel's management effectiveness and performance record. Mr. Joshua C. Nowak, the Company's rate of return expert, includes and provides further discussion on the 25-basis point adjustment in his direct testimony (National Fuel Statement No. 10).

INTRODUCTION OF COMPANY WITNESSES

Q. Please identify and introduce the other witnesses providing direct testimony on behalf of National Fuel in this proceeding and the subject matter of their testimony.

A. In addition to my testimony, the following witnesses are providing testimony in support of the Company's rate request:

Donald N. Koch (National Fuel Statement No. 2) is a Lead Rate Analyst in National Fuel's Rates and Regulatory Affairs department. Mr. Koch will present the Company's revenue requirement model supporting the Company's proposed rate increase (National Fuel Exhibit A (Fully Projected)). Mr. Koch also sponsors the revenue requirement models for the HTY and FTY periods.

Anthony T. Formato (National Fuel Statement No. 3) is a Director of Finance at National Fuel. Mr. Formato will provide testimony related to the O&M expense projections included in the Company's proposed revenue requirement, with the exception of employee benefits. Mr. Formato will explain in his testimony the inflationary pressures that the Company has experienced with labor and other operating costs, which is expected to persist through the FPFTY. Mr. Formato will also explain the Company's O&M and capital budgeting processes.

Valerie L. Hawthorn Wagner (National Fuel Statement No. 4) is the Managing Director of Human Resources for National Fuel. Ms. Hawthorn's testimony will discuss National Fuel's staffing and compensation programs, including ongoing programs designed to address employee recruitment and retention challenges, and to remain competitive with the current job market. Ms. Hawthorn will note that these initiatives, which are critical to maintain a safe system and quality customer service, have and are projected to result in higher labor costs for the Company.

Michael P. Weidner (National Fuel Statement No. 5) is the Senior Director of Human Resources for National Fuel. Mr. Weidner's testimony will discuss the nature and costs of the Company's employee benefits package, including costs relating to retirement and medical benefits anticipated in the FPFTY.

Monika M. Duszenko (National Fuel Statement No. 6) is a Rate Analyst II in National Fuel's Rates and Regulatory Affairs department. Ms. Duszenko's testimony will discuss and sponsor the schedules supporting the Company's projected net plant balances and rate base for the HTY, FTY, and FPFTY. Ms. Duszenko will also support the Company's cash working capital requirement included in rate base employing a lead-lag study on the Company's revenues and expenses.

Michael Maggioli (National Fuel Statement No. 7) is a Lead Accountant in National Fuel's Accounting department. Mr. Maggioli's testimony will discuss the Company's accounting process and sponsor exhibits and requirements that support the financial results for the HTY.

John J. Spanos (National Fuel Statement No. 8) is President of the firm of Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming"). Mr. Spanos developed and supports National Fuel's claim for annual depreciation expense, the accumulated depreciation reserve, and the recovery of negative net salvage. His studies are presented in National Fuel Exhibit C (HTY), National Fuel Exhibit C (FTY), and National Fuel Exhibit C (FPFTY).

Mark C. Schaefer (National Fuel Statement No. 9) is a Senior Director in National Fuel's Engineering department. Mr. Schaefer's testimony supports the Company's capital budget and the projected capital additions to utility plant during the FTY and FPFTY periods. Mr. Schaefer will discuss the Company's LPP Systematic Replacement Program and plans to accelerate its replacement activities over the next 5 years. Finally, Mr. Schaefer will outline the Company's efforts to reduce leaks across the system, which has resulted in gas safety and environmental benefits.

Josh Nowak (National Fuel Statement No. 10) is a Vice President with Concentric Energy Advisors. Mr. Nowak presents expert testimony supporting the Company's claimed capital structure, cost of common equity and overall rate of return, as well as supplementing Mr. Welch's testimony on cost of debt in National Fuel Statement No. 11. Schedules and workpapers supporting Mr. Nowak's findings are presented in National Fuel Exhibit B (Rate of Return).

James C. Welch (National Fuel Statement No. 11) is a Vice President in National Fuel's Finance department. Mr. Welch's testimony discusses the Company's approach to financing, reviews the financial information provided to Mr. Nowak that supports the Company's claimed capital structure, and presents information that supports the Company's claimed cost of debt.

Erica L. Forcucci (National Fuel Statement No. 12) is the Managing Director of National Fuel's Tax department. Ms. Forcucci's testimony supports the Company's claims for federal and state income tax expense and the accumulated deferred income taxes included as an offset to rate base in the HTY, FTY and FPFTY periods. Ms. Forcucci's testimony also explains the tax adjustments included in the aforementioned periods.

Cathryn E. Hilliard (National Fuel Statement No. 13) is a Lead Utility Analyst in National Fuel's Rates and Regulatory Affairs department. Ms. Hilliard's testimony discusses the Company's volumetric demand forecasting process and provides schedules that support the Company's customer count and retail and transportation throughput forecast for the FTY and FPFTY periods.

Courtney T. Mann (National Fuel Statement No. 14) is a Rate Analyst in National Fuel's Rates and Regulatory Affairs department. Ms. Mann's testimony and exhibits support the development of the revenue forecast at current and proposed rates for the FTY and FPFTY periods, as well as the normalized revenues at current and proposed rates for the HTY period. Ms. Mann's testimony also addresses the Company's proposed rate design.

Wanya' D. Bruce (National Fuel Statement No. 15) is a Rate Analyst in the Company's Rates and Regulatory Affairs department. Mr. Bruce's testimony explains and supports significant revisions to the Company's tariff.

Jason Scouten (National Fuel Statement No. 16) is the Superintendent of National Fuel's Pennsylvania Operations department. Mr. Scouten's testimony will provide an overview of National Fuel's natural gas distribution system in Pennsylvania, discuss the Company's operations and construction activities, and support the Company's numerous programs and initiatives aimed at promoting and enhancing customer and employee safety, damage prevention, emergency response, leak management and service reliability.

Matthew W. Stoops Jr. (National Fuel Statement No. 17) is a Senior Manager in National Fuel's Consumer Business department. Mr. Stoops' testimony will discuss the Company's customer assistance activities and initiatives, including those related to Universal Services Programs.

Erik M. Solomon (National Fuel Statement No. 18) is the Senior Director of National Fuel's Energy Services department. Mr. Solomon's testimony supports the Company's proposals to implement the EE pilot program. Mr. Solomon will also discuss the Company's competitive position, including by-pass threats, and the Company's research, development and demonstration activities.

John D. Taylor (National Fuel Statement No. 19) is the Managing Partner of Atrium Economics LLC. Mr. Taylor's testimony supports the development and provides the results of the cost of service study that allocates the Company's gas distribution costs to

its rate classes. Additionally, Mr. Taylor's testimony supports the Company's proposal to convert the WNA pilot to a permanent mechanism.

Daniel C. Czechowicz (National Fuel Statement No. 20) is a Director in the Gas Supply Administration department. Mr. Czechowicz's testimony supports proposed changes to the Company's transportation programs.

Q. Does this conclude your direct testimony at this time?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 1-R

Rebuttal Testimony of
Rebecca E. Hillery

Topics Addressed: **Overview of National Fuel's Rebuttal Case**
Management Performance
Affordability

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Rebecca E. Hillery. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 1, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. My rebuttal testimony provides an overview of the Company's rebuttal case, responds generally to recommendations and positions offered in direct testimony by the Bureau of Investigation and Enforcement ("I&E"), Office of Consumer Advocate ("OCA"), Office of Small Business Advocate ("OSBA"), Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"), and Pennsylvania Weatherization Providers Task Force ("PWPTF"). My testimony also responds specifically to certain portions of direct testimony offered by OCA witness Michael Deupree (OCA Statement No. 1), CAUSE-PA witness Harry S. Geller, Esq (CAUSE-PA Statement No. 1), and PWPTF witness Jennifer Warabak (PWPTF Statement No. 1), which recommend material changes to the Company's proposed rate increase.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. No.

III. OVERVIEW OF NATIONAL FUEL'S REBUTTAL CASE

Q. Please provide an overview of the Company's rebuttal case.

A. The Company's rebuttal testimony provides a response to each of the individual issues raised by opposing parties. Unless otherwise noted, the Company submits that the adjustments and recommendations proposed by the opposing parties should be rejected because they are unreasonable, depart from established ratemaking practices, and/or are contrary to long-standing Pennsylvania Public Utility Commission ("Commission") practice. In some limited instances, the Company has agreed with an opposing party's position and has reflected the impact in its revised revenue requirement.

Q. Please describe the positions taken by opposing parties in response to National Fuel's proposed revenue increase.

A. I&E, OCA and OSBA are all recommending a significant decrease in the revenue requirement initially proposed by the Company. The Company proposed and supported a revenue requirement of $19.7 million in its initial direct testimony. I&E is recommending that the revenue requirement should be $11.1 million. OCA has recommended a revised revenue requirement between $4.1 million and $4.5 million. Finally, OSBA did not recommend a revised revenue requirement but did propose several different adjustments that would result in a revenue requirement of $10.9 million.

Q. Are the revenue requirement amounts proposed by I&E, OCA and OSBA reasonable?

A. No. The revenue requirements proposed by I&E, OCA and OSBA would fail to adequately cover the Company's rising cost of providing safe and reliable service and not allow the Company an opportunity to earn a fair and reasonable rate of return. As discussed in the Company's modified Long-Term Infrastructure Improvement Plan ("LTIIP") filed on December 11, 2025 at Docket No. P-2022-3034957, and approved by the Commission on March 26, 2026, the Company is committed to certain Leak Prone Pipe ("LPP") replacements throughout the lifetime of its LTIIP. The Company has met its mileage targets each year with less than 4% variance. The cost of LPP replacement has increased significantly for reasons outside of the Company's control including, but not limited to, increased restoration costs, material costs, contractor costs, permitting costs, and overall inflationary increases from the COVID pandemic. Additionally, the Company continues to manage inflationary pressures and challenges in attracting and retaining talent at all levels of the organization, which has led to increasing labor, benefits and other costs to operate the business. The limited rate increases proposed by I&E, OCA and OSBA would impact the Company's ability to make necessary investments in gas infrastructure, human resources, systems, and other initiatives necessary to provide safe and reliable service and strong customer service experience throughout its service territory.

Q. How did I&E, OCA and OSBA arrive at their lower revenue requirement recommendations?

A. The revenue requirement adjustments offered by the intervening parties are driven by the following: unreasonable adjustments to the return on equity (I&E, OCA, and OSBA); improper adjustments to the Company's capital structure (OCA and I&E); inappropriate exclusion of certain Operations & Maintenance ("O&M") expenses, including costs related to compensation programs that drive proven affordability and reliability benefits for ratepayers (OCA, I&E and OSBA); and an unjustified proposal to reduce depreciation expense by changing a method that the Company has used consistently for several decades, among many other adjustments. Many of the recommendations presented by the intervening parties are unfounded and deviate significantly from the standard ratemaking principles and practices that have historically been applied by the Commission. All the recommendations presented by the intervening parties are fully addressed by the Company's witnesses in their rebuttal testimony.

Q. What is the Company's updated revenue requirement offered in connection with its rebuttal case?

A. As outlined by Company witness Donald N. Koch (National Fuel Statement No. 2-R), the Company's updated revenue requirement increase is $18,475,00, exclusive of the Energy Efficiency Rider and OPEB surcredit revenues. This represents a reduction of $1,205,000 from the Company's originally filed revenue requirement increase of $19,680,000.

Q. What are the drivers of the decrease in the Company's requested revenue requirement?

A. The primary driver of the $1.2 million decrease in the Company's revenue requirement is a reduction in the requested rate of return. The Company has voluntarily dropped its request for a 25 basis point management efficiency adjustment to the return on equity ("ROE"). The Company also made minor adjustments to working capital items that reduced rate base and had a modest impact on revenue requirement.

Q. Why is the Company no longer pursuing the management efficiency adjustment?

A. While the Company continues to support the applicability of a management efficiency adjustment given its strong and demonstrated track record of providing safe and reliable service at the lowest rates in the Commonwealth, the Company recognizes the importance of customer affordability in the current economic environment. As such, the Company has voluntarily chosen to forgo its request for the adjustment to the ROE in this proceeding.

Q. Is the Company's updated revenue requirement reasonable?

A. Yes. The Company's updated revenue requirement is reasonable and represents the financial support necessary to continue providing safe and reliable service at rates that are affordable and sustainable. The rate design to recover the updated revenue requirement accurately reflects the Company's cost of service, enables the Company to make the necessary investments in its system and operations in a cost-effective manner, and provides an opportunity to earn a fair rate of return.

Q. How has the Company demonstrated that the updated revenue requirement, and the system investments that it supports, are necessary and produce tangible benefits for ratepayers?

A. As supported throughout the Company's initial direct testimony and reinforced in rebuttal testimony, the Company's requested rate increase is necessary to support the continued investment and execution of its LTIIP, which was reauthorized by the Commission on March 26, 2026. National Fuel's LTIIP is a measured plan to accelerate pipeline replacement and system modernization at a pace that appropriately balances safety risks, system reliability, and ratepayer affordability. In conjunction with the PUC's approval in March, Chairman Stephen M. DeFrank issued a statement acknowledging National Fuel's performance and emphasizing the importance of the LTIIP in driving value for ratepayers. Chairman DeFrank's statement noted,

> "I find NFG's performance in meeting pipeline replacement targets, despite increased costs, to be commendable and worthy of recognition.
>
> "Unfortunately, increased costs are now beginning to impact NFG's ability meet replacement goals… Given these facts, approval of NFG's Petition is necessary to ensure leak prone pipe replacement is not compromised"

Q. Are there any positions offered by opposing parties that you wish to address in your overview of the Company's rebuttal testimony?

A. Yes. The opposing parties had somewhat differing positions on the Company's proposal to make the Weather Normalization Adjustment ("WNA") pilot a permanent mechanism. The proposals regarding the WNA included recommendations to increase the deadband

from 3% to 5%, limit the months that it can be applied to, and discontinue the mechanism altogether. Opposing parties proposed to disallow certain compensation costs, including stock based and executive incentive compensation. Opposing parties also express multiple concerns related to affordability and general macroeconomic trends that I will discuss below. Last, OCA witness Mr. Michael Deupree (OCA Statement No. 1) made a statement about macroeconomic concerns and National Fuel Gas Company's ("Parent Company") stock price that I'd like to address.

Q. Respond to the opposing parties' positions on the WNA.

A. The WNA is a symmetrical mechanism, which balances weather-driven financial risk equally for both ratepayers and the Company, and is designed to recover or refund revenues that are lost or gained due to actual weather deviating from the normal historical average. The Company's fixed and volumetric delivery rates, which are designed to recover the cost of service authorized by the Commission, are based on an assumption of what is defined as normal weather, or a baseline of expected customer usage under normal weather conditions. When actual weather is warmer than normal, customers' actual usage is less than that baseline, resulting in lower volumetric delivery charges for customers (i.e., lower bills) and lower revenues for the Company. When actual weather is colder than normal, customers' actual usage increases above the baseline, resulting in higher volumetric delivery charges for customers (i.e., higher bills) and higher revenues for the Company. Opposing parties' claims that the WNA is not symmetrical because months with surcharges have exceeded months with refunds do not understand the mechanism and completely ignore the other side of the WNA equation, specifically that

customers benefit from lower volumetric charges when weather is warmer than normal and are harmed by higher volumetric charges when weather is colder than normal. Whether or not weather is more often warmer than normal than it is colder than normal is irrelevant. In any scenario where weather deviates from the conditions on which delivery rates were designed and the baseline of revenues were authorized, the WNA is effectively designed to hold both ratepayers and the Company harmless, equally.

Given the effectiveness and symmetrical nature of the WNA design, recommendations from opposing parties to expand the deadband to 5%, if adopted, would increase the risk on both ratepayers and the Company unnecessarily. In a colder-than-normal winter like the season that just ended, increasing the deadband to 5% would have a negative impact on customers because it would result in less surcredits for customers to offset the impact of higher-than-normal usage in their monthly bills. Table 1 below has been updated through April 2026 and demonstrates the value to the customer in a colder-than-normal season like the winter of 2025-2026. The positive amounts represent recoveries by the Company, and the negative amounts demonstrate reductions to customer bills.

Table 1: Heating Season by year

	2023-2024	2024-2025	2025-2026
OCT	$ 112,758	$ 347,315	$ 291,162
NOV	179,872	1,051,095	(298,215)
DEC	314,620	109,846	(1,198,284)
JAN	1,010,020	(240,353)	(464,332)
FEB	1,237,993	(310,213)	(2,015,891)
MAR	2,361,861	580,910	1,129,912
APR	702,191	608,196	1,381,702 *
MAY	1,078,972	48,505	Not Available
Adjustments	(78,094)	(8,520)	
Total by Season	$ 6,920,194	$ 2,186,781	$ (1,173,946)

*Estimated

Additionally, opposing parties' recommendations to remove certain months from the WNA also increase risk on ratepayers and the Company unnecessarily. National Fuel's service territory in northwest Pennsylvania, along the shores of Lake Erie, experiences longer winters and colder autumn and spring seasons than other utilities in the Commonwealth. As a result, the Company sees material heating demand from residential and small commercial customers starting in October and extending through May. As such, the WNA period of October to May is appropriate for National Fuel and its customers.

To conclude, the Company reaffirms that its WNA mechanism has worked as designed since its implementation as a pilot following the 2022 case and continues to produce tangible benefits for ratepayers and the Company in a way that mitigates risk equally. The Company remains opposed to the positions of parties that seek to change the design or application of the WNA. Further discussion of the WNA appears in the rebuttal testimony of Company witness John D. Taylor (National Fuel Statement No. 19-R).

Q. Please respond to the opposing parties' position to disallow certain compensation costs.

A. Opposing parties are seeking to disallow certain compensation expenses, including costs relating to executive incentive and stock-based compensation programs, because they assert such costs only benefit shareholders. As discussed extensively in the rebuttal testimony of Company witness Mike Weidner (Statement No. 5-R), the Company's inventive and stock-based compensation programs play a critical role in enhancing the Company's ability to provide safe, reliable and affordable service. The programs are part of a full compensation approach designed to attract a skilled work force in a competitive labor market, increase retention of key management personnel, encourage development of talent and institutional knowledge, and incentivize responsible financial management over the long-term. An experienced and properly incentivized workforce and management team drives tangible reliability and affordability benefits for ratepayers, as evidenced by the Company's strong track record as the low-cost natural gas utility provider in Pennsylvania.

Q. Please address Mr. Deupree's statement about the Parent Company's stock price.

A. It is not appropriate to compare the increase requested in this case to the Parent Company's stock price for several reasons. First, jurisdictional ratemaking must be based on utility-specific risk. The Commission sets a return for the utility, not for the Parent Company or its shareholders. Second, the stock price reflects consolidated operations (regulated and non-regulated), different jurisdictions and different risk profiles. The Parent Company's stock price is materially influenced by perceived risk and performance

of non-Pennsylvania and non-regulated operations. Last, Mr. Deupree's statement is contrary to longstanding ratemaking principles and precedents, which require the Commission to set prospective rates based on known and measurable utility costs and risks.

IV. AFFORDABILITY

Q. Please provide an overview of the affordability concerns in the case.

A. Several of the other parties had concerns about affordability and how National Fuel's increase would impact customers. Specifically, CAUSE-PA and PWPTF stated concerns about the rate increase and its impact on low-income customers. OCA (OCA Statement No. 1) stated concerns about general inflationary pressures, particularly on low-income households, and the conflict in the Persian Gulf.

Q. How does National Fuel view the issue of affordability in the context of this rate proceeding?

A. While current events and the timing and extent of the Company's proposed increase in this proceeding are important, affordability should also be evaluated through a long-term lens. True and lasting affordability occurs when customers receive safe, reliable service at the lowest reasonable cost over time and through economic cycles, supported by a utility that operates efficiently, invests prudently, and manages its finances responsibly. A narrow focus that inappropriately seeks to minimize near-term impacts, without regard to

long-term system conditions, financial sustainability, and management performance, ultimately undermines affordability rather than protects it.

Q. What is National Fuel's long-term approach to affordability?

A. Achieving real and durable affordability for ratepayers does not happen by accident. National Fuel's long-term approach to affordability is focused on the following:

- A culture of cost control and operational excellence that is deeply embedded in the organization and continuously reinforced by executive leadership and management;
- Disciplined, risk-based capital deployment and efficient investment in the distribution system that is aligned with the Company's Commission- approved LTIIP; and
- Prudent financial management that enhances financial stability and allows the Company to maintain strong credit and access to capital at a reasonable cost.

Q. How has National Fuel's long-term performance validated the effectiveness of its long-term approach to affordability?

National Fuel's proven track record of being a low-cost utility provider reflects a consistent focus over many decades on disciplined management. The durable, positive impacts on energy affordability, which drive significant value for our ratepayers and the local economy in northwest Pennsylvania, are evident in several ways.

- **Lowest gas delivery rates and total bills in Pennsylvania:** As discussed in my direct testimony (National Fuel Statement No. 1), National Fuel residential

customers currently pay the lowest total average bill and total average delivery rates in the Commonwealth. This was reaffirmed in the Commission's 2026 Rate Comparison report issued on April 15, 2026. The results of this report are consistent with last year's report referenced in my direct testimony. And even after implementation of the requested rate increase, National Fuel will continue to have the lowest delivery rates and average bills in the Commonwealth.

OBJ

- **Lowest rate base per customer in Pennsylvania:** Also discussed in my direct testimony, the amount of rate base that National Fuel has invested per customer to build out and modernize its 5,000-mile distribution system is the lowest in the Commonwealth, approximately 50% to 75% lower than every other Pennsylvania peer gas utility. This drives enormous affordability benefits for National Fuel ratepayers as it results in significantly lower revenue requirements needed for the return on and of the capital invested in rate base relative to other gas utilities. These benefits accrue directly to ratepayers and compound over time.
- **A history of infrequent rate cases:** The Company has come to the PUC only three times over the last 20 years requesting a base delivery rate increase. As a result, when viewed over near-, medium- and longer-term time horizons, the compound annual growth rate of the average residential delivery rate and total bill that would result from the Company's proposed rate increase is at or well below the general rate of inflation. The avoidance of frequent rate increases also provides ratepayers with greater stability and certainty in their monthly energy

costs over long stretches of time, attributes that are critical factors for affordability.

- **Stewardship of long-term ratepayer obligations, including post-retirement benefits:** National Fuel has responsibly managed its employee pension and other post-retirement benefits ("OPEB") costs and prudently invested the funds provided by ratepayers over many decades to fund these long-term obligations. As a result, the Company no longer requires ratepayer funding, which has reduced revenue requirements, and has been able to return funds previously collected from ratepayers to mitigate rate increases and provide bill relief. For example, since 2021, National Fuel has refunded $50 million back to ratepayers and was able to reduce its rates annually by $7.7 million to reflect the elimination of OPEB costs.

Q. How affordable is natural gas service relative to other energy alternatives available to customers?

A. Natural gas remains one of the most affordable energy sources available to consumers in northwest Pennsylvania, particularly when compared to electricity for space and water heating. Over the past two decades, natural gas has demonstrated a durable cost-competitive advantage due to abundant supply, efficient production, and stable delivery rates. Maintaining access to this low-cost energy source provides substantial ongoing value to ratepayers, especially low- and moderate-income households.

Q. Why is continued investment in the natural gas system critical to maintaining that affordability advantage?

A. The affordability of natural gas depends on a delivery system that is safe, reliable and capable of meeting customer demand under all conditions. The Company's proposed revenue requirement supports the level of investment necessary to ensure that ratepayers can continue to rely on natural gas as a dependable, low-cost energy option. Underinvestment in the delivery system increases risk and ultimately raises long-term costs for ratepayers.

Q. How do the Company's requested ROE and capital structure support sustainable affordability and drive value for ratepayers?

A. The requested return on equity and capital structure, which are further supported in the rebuttal testimonies of Josh Nowak (Statement No. 10-R) and Jim Welch (Statement 11-R), are reasonable and designed to support National Fuel's ability to continue operating as a low-cost provider while making the necessary investments in the system to enhance safety and reliability. They reflect market-based standards and Commission precedent and allow the Company to access capital at the lowest reasonable overall cost. The recommendations from I&E, OCA and OSBA to reduce the return on equity and equity ratio to inappropriate levels may produce short-term rate suppression in this instance but would ultimately impair the Company's ability to attract capital and increase costs over the long-term by raising financial risk and increasing the cost of capital.

Q. Are there any additional measures the Company is taking to address affordability in its updated revenue requirement?

A. Yes. As noted above, the Company is reducing the ROE requested in the case by removing the 25 basis points originally requested to recognize management's exceptional performance in safety, quality customer service, and affordability and operational efficiencies, among others. While the Company maintains this additional ROE is fair and reasonable, the Company has agreed to reduce the revenue requirement by $1.2 million to address affordability concerns.

Additionally, the Company reaffirms its proposal to implement a one-time bill credit of $30 for verified low-income customers and reinstate the Rider I OPEB Surcredit for all customers which would refund a total of $7.2 million in the FPFTY. This would offset a significant portion, approximately 39%, of the updated revenue requirement. In CAUSE-PA's direct testimony, Mr. Geller, notes that the surcredit being proposed in this case is to return ratepayer dollars that were previously collected. While it is true that this is a return of ratepayer dollars, it is important to note that this was made possible through prudent management of medical costs, the OPEB obligation and the assets set aside for that obligation, as well as key actions taken by management to enable the availability of grantor trust assets.

National Fuel remains committed to its prudent management of its business as discussed above and recognizes the concerns in today's market. However, the increases sought in this case are primarily driven by investments in the rate base and human capital necessary to sustain the Company's ability to operate in a safe and reliable manner for its customers.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 1-SR

Surrebuttal Testimony of Rebecca E. Hillery

Topics Addressed: **Affordability**

Dated: May 27, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Rebecca E. Hillery. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted direct testimony, National Fuel Statement No. 1, on January 28, 2026, and rebuttal testimony, National Fuel Gas Statement No. 1-R, on May 12, 2026.

Q. Please describe the purpose of your surrebuttal testimony.

A. My surrebuttal testimony responds to the statements made by Office of Consumer Advocate ("OCA") witness Michael Deupree regarding energy affordability and energy burden levels.

Q. Are you sponsoring any exhibits with your surrebuttal testimony?

A. No.

Q. Does the Company's surrebuttal testimony address all topics and issues raised by the opposing parties in rebuttal testimony?

A. No. My testimony is the only surrebuttal testimony submitted on behalf of the Company. The Company did not readdress any topic or issue that was already addressed in rebuttal testimony. The Company's silence on any particular topic or issue raised in rebuttal

testimony by the opposing parties does not mean that the Company agrees with the position of the opposing parties. The Company refers the opposing parties to the applicable rebuttal testimony for the Company's response and position on those topics and issues.

Q. Please summarize OCA witness Deupree's rebuttal testimony regarding affordability and energy burdens.

A. Mr. Deupree restated his position from direct testimony that I responded to in rebuttal (National Fuel Statement No. 1-R) and further discusses definitions for energy affordability and energy burdens. He references the Commission-established maximum energy burden of 6% for natural gas heating customers relative to the Federal Poverty Income Guidelines ("FPIG") and compares the proposed rate increase to those guidelines.

Q. Please respond to this testimony.

A. I disagree with the conclusions that OCA witness Deupree draws from the data presented in Figure 1 on page 4 of his rebuttal testimony. Mr. Deupree's data shows that under the Company's proposed rates, households with income levels at 100% of the FPIG will remain below the 6% energy burden he cites as an "unaffordable" threshold. These customers are also eligible for enrollment in the Company's Customer Assistance Program ("CAP"), which is available to customers with household incomes at or below 150% of the FPIG. For customers enrolled in CAP at 100% of the FPIG, maximum monthly payments are capped at 6% of their household income. Mr. Deupree also does not consider the impact of CAP for those customers at 50% of the FPIG. Maximum

monthly payments for customers enrolled in CAP with income levels at or below 50% of the FPIG are capped at 4% of their household income. The availability of CAP for these customers is a significant factor that should be considered when determining the overall affordability of the Company's proposed rates. As discussed in the testimony of Company witness Matthew W. Stoops, Jr. (National Fuel Statement No. 17 and 17-R), the Company has multiple methods in place to identify low-income customers who may be eligible for CAP and has made improvements to streamline the enrollment process and increase enrollments. In addition, the Company's planned OPEB credit will directly benefit low-income customers. Finally, as detailed in my direct and rebuttal testimony, National Fuel has demonstrated its ongoing commitment to affordability and, under the Company's proposed rates, National Fuel will continue to have the lowest gas delivery rates and total bills in Pennsylvania.

Q. Does this conclude your surrebuttal testimony at this time?

A. Yes.

NATIONAL FUEL STATEMENT NO. 2

DONALD N. KOCH

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 2

Direct Testimony of
Donald N. Koch

Topics Addressed: **Revenue Requirement**
Operating Revenues and Expenses

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Donald N. Koch. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") as a Lead Rate Analyst in the Rates and Regulatory Affairs department. NFGDC is comprised of a Pennsylvania Division ("National Fuel" or "Company") and a New York Division ("National Fuel – NY").

Q. Please provide your educational background.

A. I received a Bachelor of Science degree in Business Administration from SUNY Geneseo in May 2004. I received a Master of Business Administration degree with a specialization in Accounting/Finance from St. Bonaventure University in December 2009.

Q. Please provide your professional experience.

A. Prior to joining NFGDC, I worked in banking for 11 years at M&T Bank specializing in various compliance and financial roles. In June 2015, I was hired by the Company as a Rate Analyst II in the Rates and Regulatory Affairs department. In February 2020, I was promoted to the position of Rate Analyst III. In February 2023, I was promoted to my current position of Lead Rate Analyst.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. Yes, I have testified before this Commission on behalf of NFGDC in numerous Section 1307(f) Purchased Gas Cost ("PGC") proceedings. I testified in the Company's last base rate case proceeding (Docket No. R-2022-3035730). I also have testified in the Other Post Employment Benefit ("OPEB") refund case (Docket No. R-2021-3027406), the Distribution System Improvement Charge Petition ("DSIC") (Docket No. P-2022-3034957), and the Joint Application for acquisition of North East Heat & Light Company ("NEHL Acquisition") (Docket No. A -2025-3057864). I have testified before the New York State Public Service Commission ("NYPSC") on behalf of National Fuel – NY in a base rate case proceeding (Docket 16-G-0257). My testimony in that case before the NYPSC covered net plant and rate base.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. The purpose of my testimony is to present the Company's proposed revenue requirement based on the twelve months (ending October 31, 2027) of operating costs and revenues, as adjusted. First, I provide an overview of the Company's primary accounting exhibits for the historic test year ended September 30, 2025 ("HTY"), the future test year ending September 30, 2026 ("FTY"), and the fully projected future test year ending October 31,

2027 ("FPFTY"). Second, I describe the Company's ratemaking presentation for the FPFTY and certain *pro forma* adjustments.

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. I am sponsoring National Fuel Exhibit A (FPFTY), National Fuel Exhibit A (FTY), and National Fuel Exhibit A (HTY). National Fuel Exhibit A is further supported by additional Company witnesses, which include:

- Anthony T. Formato (National Fuel Statement No. 3), addressing operating and maintenance ("O&M") expenses;
- Monika M. Duszenko (National Fuel Statement No. 6), addressing the Company's rate base;
- Joshua C. Nowak (National Fuel Statement No. 10), addressing fair rate of return;
- Erica L. Forcucci (National Fuel Statement No. 12), addressing taxes; and
- Courtney T. Mann (National Fuel Statement No. 14), addressing operating revenues.

III. OVERVIEW OF PRIMARY ACCOUNTING EXHIBIT

Q. Please describe the primary accounting exhibits used to support National Fuel's claims in this proceeding.

A. National Fuel Exhibit A (FPFTY) demonstrates the Company's revenue requirement for the FPFTY ending October 31, 2027. National Fuel Exhibit A includes primary accounting exhibits, rate base claims, O&M expenses, taxes and *pro forma* adjustments. National Fuel Exhibit A (FTY) provides the same information for the FTY ending September 30, 2026. National Fuel Exhibit A (HTY) provides the per book information

for the HTY ending September 30, 2025, with ratemaking and certain *pro forma* adjustments.

Q. Please further describe the primary accounting exhibits used to support National Fuel's claims in this proceeding.

A. National Fuel Exhibit A for all test periods is separated into several sections. Section A provides the income statement, or measure of value at present rates and at proposed rates, which includes the proposed revenue requirement. Section B includes basic accounting exhibits, rate of return, and cost of debt exhibits. Section C includes exhibits that provide net plant in service, rate base, and various exhibits utilized by the Company in its lead lag study. Section D details *pro forma* revenue and expense adjustments, including rate making tax calculations. National Fuel Exhibit A is intended to aid in compliance with all Commission filing requirement regulations.

Q. How was the data sourced for the National Fuel Exhibit A primary accounting exhibits?

A. The HTY per book data was sourced from the books and records of the Company. Annualizations or ratemaking adjustments were then applied to the per book data. For the projected periods of the FTY and FPFTY, Company witnesses prepared various analyses and projections based upon Company budgets, ratemaking adjustments, and other Company specific practices. Please refer to the Index of Direct Testimony for a listing of specific Company witnesses and areas of expertise covered. Descriptions and further detail can be found in the direct testimony of each witness.

IV. REVENUE REQUIREMENT FOR THE FPFTY

Q. How was the revenue requirement for the FPFTY established?

A. The summary level revenue requirement is presented on Schedule A-1, column 4 within National Fuel Exhibit A (FPFTY). Lines 1 – 9 summarize total rate base. Lines 10 – 19 summarize operating revenues. Finally, lines 21 – 28 present the requested revenue increase.

Q. What is the overall requested revenue increase?

A. Revenue requirement is the total allowable revenues – the sum of current revenues and the increase. The overall requested revenue increase is $19.7 million. This amount represents a 14.1% increase to delivery revenues and a 7.4% increase to total revenues.

Q. How were revenues at present rates determined?

A. Please refer to the Direct Testimony of Courtney T. Mann, National Fuel Statement No. 14 for a discussion of revenue forecast and calculations. Revenue calculations were prepared by or under the supervision of Ms. Mann.

Q. Please describe the O&M expense claims presented.

A. O&M expense projections were prepared by or under the supervision of Anthony Formato. Please refer to the direct testimony of Anthony Formato, National Fuel Statement No. 3 for a discussion of O&M expense projections and calculations.

Q. Does the Company budget O&M expense by Federal Energy Regulatory Commission ("FERC") account?

A. No. The Company does not budget O&M expenses by FERC account. The Company's O&M expenses are presented by budget item, or cost element.

Q. Did the Company present O&M expense by FERC account in National Fuel Exhibit A?

A. Yes. The Company presented O&M expense in National Fuel Exhibit A by FERC account for all three test periods. The Company used historic data as a basis for allocation to FERC accounts for the FTY and FPFTY periods by developing a percentage of each FERC account contained in each cost element. That percentage was then applied to the projected amount for each cost element to derive a FERC account balance.

Q. How were the Company's rate base items determined?

A. Please refer to the Direct Testimony of Monika M. Duszenko, National Fuel Statement No. 6, for a complete discussion on rate base projections and calculations. Rate base projections were prepared by or under the supervision of Ms. Duszenko.

Q. Please summarize the adjustments shown in Schedule D of National Fuel Exhibit A.

A. Schedule D of National Fuel Exhibit A consists of the following schedules:

- Schedule D-1: Summary of Revenues and Expenses with proposed revenue increase;
- Schedule D-2: Summary of Pro Forma Revenues and Expenses with proposed revenue increase;

- Schedule D-3: Summary of Pro Forma Adjustments;
- Schedule D-4: N/A to FPFTY;
- Schedule D-5: Revenue Summary;
- Schedule D-6: Rate Case Expense;
- Schedule D-7: Uncollectible Expense;
- Schedule D-8: Depreciation Expense;
- Schedule D-9: OTAX Summary;
- Schedule D-10: Payroll Tax Adjustment;
- Schedule D-11: Income Tax Calculation;
- Schedule D-12: Tax Depreciation;
- Schedule D-13: Gross Revenue Conversion Factor; and
- Schedule D-14: Regulatory Asset/Liability 3 Year Amortization Adjustment.

Q. Please summarize the amortization adjustments on Schedule D-14.

A. Schedule D-14 contains two regulatory deferral accounts that the Company is proposing to amortize over three years. The first is an amortization of a regulatory liability account relating to Medicare subsidy in the amount of $921,648, or the three-year amount of $307,216. Please refer to the Direct Testimony of Erica L Forcucci, National Fuel Statement No. 12, for more details. The second adjustment is an amortization of a regulatory asset account of the Tax Cuts and Jobs Act ("TCJA") surcredit in the amount of $242,147, or the three-year amount of $80,716. The Company over-refunded the TCJA surcredit to customers and has this regulatory asset remaining on its books.

Q. Have any of the potential impacts relating to the potential acquisition of NEHL been reflected in National Fuel Exhibit A (FPFTY)?

A. No. Due to the pending status of the proposed acquisition and the de minimis impact, no adjustments have been made to National Fuel Exhibit A (FPFTY) for any potential NEHL impacts at this time. Please refer to the Direct Testimony of Rebecca E. Hillery, National Fuel Statement No. 1, for a more in-depth discussion of the potential NEHL Acquisition.

Q. Does this conclude your direct testimony at this time?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 2-R

Rebuttal Testimony of
Donald N. Koch

Topics Addressed: **Revenue Requirement**

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Donald N. Koch. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 2, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. My rebuttal testimony provides an updated overall revenue requirement based upon adjustments made by the Company and limited adjustments presented by other statutory parties in direct testimony. I will also address certain adjustments and positions taken by other statutory parties in their direct testimony.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes. I am sponsoring National Fuel Exhibit A - FPFTY Rebuttal Update.

III. OVERALL REVENUE REQUIREMENT

Q. Please provide an overview of the other parties' revenue requirement adjustments.

A. I&E recommended a revenue requirement increase of $11,091,000, which represents a decrease of $8,589,000 from the Company's originally filed revenue requirement increase of $19,680,000.

OCA provided two recommended revenue requirement increases. The first recommendation utilized an alternative capital structure and return on equity ("ROE") and produced a revenue requirement increase of $4,069,000, which represents a decrease of $15,611,000 from the Company's originally filed revenue requirement increase of $19,680,000. The second recommendation utilized the Company's capital structure but an alternative ROE and produced a revenue requirement increase of $4,533,000, which represents a decrease of $15,147,000 from the Company's originally filed revenue requirement increase of $19,680,000.

OSBA did not recommend a specific revenue requirement amount. However, based upon the adjustments presented by OSBA witness Mr. Farr, the revenue requirement adjustments totaled $8,800,000 which would result in a revenue requirement increase of $10,880,000, compared to the Company's originally filed revenue requirement increase of $19,680,000.

Q. Does the Company agree with any of the revenue requirements proposed by the other parties?

A. No. As explained throughout this testimony and other rebuttal testimony provided by Company witnesses, the Company believes that a majority of adjustments proposed by the opposing parties are not reasonable and, therefore, should be rejected unless noted.

Q. Did the Company make any adjustments to its overall revenue requirement for rebuttal?

A. Yes. The Company did make several adjustments to its overall revenue requirement, which include adjustments to:

Rate Base – Includes adjustments to reduce Cash Working Capital, Customer Advances and CIAC amounts. Please refer to National Fuel Statement No. 6R - Rebuttal Testimony of Monika M. Duszenko for more detailed information regarding adjustments to rate base.

ROE – The ROE in the revenue requirement is now reflective of 11%, reduced from 11.25% due to the removal of the management performance adder. Please refer to National Fuel Statement No. 1R – Rebuttal Testimony of Rebecca E. Hillery and National Fuel Statement No. 10R – Rebuttal Testimony of Joshua C. Nowak for more detailed information regarding adjustments to ROE.

Q. Based upon the updates, what is the Company's overall revenue requirement?

A. The Company's updated revenue requirement increase is $18,475,000, exclusive of Energy Efficiency Pilot Program Rider and OPEB surcredit revenues, as reflected in National Fuel Exhibit A – FPFTY Rebuttal update. This represents a reduction of

$1,205,000 from the Company's originally filed revenue requirement increase of $19,680,000.

IV. CONCLUSION

Q. What is your overall recommendation regarding overall revenue requirement?

A. As outlined above, the Company has carefully reviewed the revenue requirement adjustments proposed by I&E, OCA, and OSBA. While each party has provided a rationale for their recommended changes, the Company maintains its position that the original revenue requirement filing accurately reflects its needs and obligations, except where noted. The Company respectfully requests that the Commission consider the evidence and arguments presented in support of its revenue requirement increase, and that any opposing adjustments be denied.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes.

NATIONAL FUEL STATEMENT NO. 3

ANTHONY T. FORMATO

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 3

Direct Testimony of Anthony T. Formato

Topics Addressed: O&M Expense & Budget Process (Capital & O&M)

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Anthony T. Formato. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") as a Director of Finance. NFGDC is a wholly owned subsidiary of National Fuel Gas Company ("NFG").

Q. Please provide your educational background.

A. I received an undergraduate degree in Finance and Business Management from Canisius University in 2008. Additionally, I received a Master of Business Administration degree from the University at Buffalo in 2013.

Q. Please provide your professional experience.

A. I started my professional career with NFGDC in 2008 in the Finance department as a member of the Cash Management team, which provides the day-to-day treasury functions for NFG. From 2012-2013, I worked in the Internal Audit department as a Staff Auditor where I was responsible for controls testing as well as operational audits. I then moved over to become an Office Manager in Operations in 2014 at our Mineral Springs service center in Buffalo, NY, where I was responsible for the New York dispatch function, off-hours emergency calls & the New York Operations clerical staff. In 2017, I moved back

to the Finance department as an analyst and have held various positions within Finance since 2017, including my present role as a Finance Director with responsibility for the O&M and Capital Budgets as well as the Accounts Payable function.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. Yes, I have previously testified before the PAPUC in Docket No. R-2022-3035730 and the New York Public Service Commission (Case 23-G-0627).

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. I am providing testimony to support the revenue requirement proposed by NFGDC's Pennsylvania Division ("National Fuel" or the "Company") in this proceeding. My testimony is specific to operations and maintenance ("O&M") expense, with the exception of employee benefits, which are covered in the Direct Testimony of Michael Weidner (National Fuel Statement No. 5). Additionally, I will explain the Company's current O&M and capital budgeting process and detail the adjustments made to O&M expense for the historic test year ended September 30, 2025 ("HTY"), future test year ending September 30, 2026 ("FTY"), and the fully projected future test year ending October 31, 2027 ("FPFTY").

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. I am sponsoring National Fuel Exhibits ATF-1 through ATF-4, as well as a series of Regulation Filing Requirements and standard data requests.

III. BUDGET PROCESS

Q. Please explain National Fuel's O&M budget process.

A. O&M Budgets are prepared based on the Company's fiscal year ("FY") of October 1st through September 30th using a zero-based budgeting approach. Each department reviews its business needs for the upcoming year across each of the major budget items (cost elements) to determine exact needs. These budgets are developed in the spring, presented to the senior management team in the summer, and then finalized before the start of the next FY in October. Between the budget presentations and the start of the FY, senior management and department staff hold subsequent discussions to review new initiatives and spending trends. The senior management team then communicates any requested modifications to the proposed budgets, such that departments can make any necessary revisions and finalize their budget in advance of the start of the FY. Once the FY begins, monthly review of budget to actuals is performed. On a quarterly basis, departments are required to submit any expected known and measurable changes to the budgeted amounts for the remainder of the fiscal year.

Q. How is the budget information used in the requested revenue increase?

A. The actuals from the HTY (FY 2025) were the starting point for the O&M forecast used for both the FTY and the FPFTY. The approved Company budget for FY 2026 was used

as a reference for known and measurable adjustments that were made for the FTY and FPFTY figures.

Q. Please explain National Fuel's Capital budget process.

A. Each May, the Finance department solicits updated 5-year capital projections from department managers across the organization, such as Engineering, Operations, Information Technology ("IT"), Land, Fleet Management, and Corrosion. Spending is budgeted and tracked by Federal Energy Regulatory Commission ("FERC") plant account and activity type. Allocations by plant account and activity type are guided by regulatory requirements, system integrity and reliability, historical spending, expected new business, public improvement projects and corporate objectives. The Finance department aggregates this data and prepares an initial consolidated forecast that is reviewed with Engineering, Operations and Finance senior management. Modifications are made throughout the summer to the five-year forecast, and a preliminary one-year capital budget is signed off on by the Company president before the start of the fiscal year on October 1st. A final budget is then prepared, approximately one month later, which incorporates any final modifications such as spill-over spending from the prior fiscal year. On a monthly basis, actual additions are tracked relative to the approved budget and reviewed with Engineering and Finance senior management.

Q. How is the capital budget information used in this proceeding?

A. The five-year capital forecast shown in ROR-014, is the basis for the Company's plant additions used to calculate the FTY and FPFTY rate base values.

IV. O&M METHODOLOGY & ADJUSTMENTS

A. Labor Expense

Q. Explain the methodology used to develop the labor forecast presented in National Fuel Exhibit ATF-4.

A. Schedule 1 of the exhibit presents a summary of the Company's labor forecast, which is made up of labor from the Company (detailed on Schedule 2), as well as borrowed labor from affiliated companies, primarily NFGDC's New York Division ("National Fuel – NY") and National Fuel Gas Supply Corporation. Affiliated labor details are found in Schedule 3. The Company utilizes several shared services departments which charge expenses to each NFG subsidiary in accordance with the Company's accounting policies. Procedures are in place to direct charge subsidiaries where appropriate and utilize a Commission sanctioned allocation methodology to distribute shared common expenses to each subsidiary. This shared service approach allows the Company to operate with a lower overall headcount, thus reducing the cost burden to ratepayers. For each component of Company labor, current wages were annualized to normalize the HTY amount. In the case of union employees, contractual increases for the FTY and FPFTY were used. Refer to National Fuel Statement No. 4 (the Direct Testimony of Valerie L. Hawthorn Wagner) for further details on the union contracts. For supervisory and executive employees, a 4.75% annual increase was utilized, while a 4% annual increase was used for the Company's "excluded" and non-union hourly positions. Additionally, Ms. Hawthorn Wagner discusses one-time salary adjustments that were made in the amounts of $145,000 for salaried employees and $526,000 for the Company's non-union hourly staff. These adjustments are effective in January 2026. These increases are

supported by the Direct Testimony of Valerie Hawthorn Wagner (National Fuel Statement No. 4), which describes the Company's commitment to retaining and rewarding existing employees in the current labor market. In addition to annual increases, this figure is also designed to capture promotions which will occur throughout the FTY & FPFTY. Non-executive labor from affiliated companies was normalized using an average of the most recent nine months of FY25.

Q. What is the O&M percentage used in National Fuel Exhibit ATF-4?

A. An O&M percentage of 73.14% is used for the applicable Company labor on National Fuel Exhibit ATF-4, Schedule 2 (PAD Labor). The O&M percentage represents the amount of Company labor that stays with the home Company and is not charged out to an affiliated subsidiary or capitalized. This percentage is a three-year average based on the Company's most recent three fiscal years (FY 2023 through FY 2025). There is no O&M percentage used on the labor forecast for the borrowed labor from National Fuel – NY or the borrowed labor from other subsidiaries, as the starting point for these forecasts is already a net O&M figure.

Q. Is there incremental headcount assumed in the labor forecast for the FTY or FPFTY?

A. National Fuel Exhibit ATF-4, Schedule 5 lists the 23 new positions the Company plans to onboard over the FTY and FPFTY time periods as well as the Company's share of the labor expense for each role. There are no incremental positions assumed for the labor borrowed from affiliated companies except for three incremental Information Technology

("IT") positions which are included in the FTY and FPFTY. The Company's share of these three positions is shown in the IT line rather than in Labor due to the way IT expenses are recorded and then allocated to the various subsidiaries.

Q. Are there any retirements included in the labor forecast for the FTY or FPFTY?

A. As shown in RR-21, six retirements are forecasted. While it is assumed for the FTY and FPFTY that all six of these positions are filled, a downward adjustment to labor is shown in National Fuel Exhibit ATF-4, Schedule 2 to account for the fact that the replacements will be hired at a lower starting salary.

Q. How does the labor forecast address natural attrition and employment lag?

A. The Company addresses this topic in RR-21 by utilizing a three-year average headcount relative to budgeted headcount to calculate labor savings, which are then worked into the labor exhibit (National Fuel Exhibit ATF-4, Schedule 2) as savings on the "Forecasted Headcount Differential" line.

Q. What is included in the "Payroll not subject to wage increases" line shown on National Fuel Exhibit ATF-4, Schedule 2?

A. This line item includes components of payroll such as shift differential, meter reader and damage prevention incentives, tuition reimbursement, healthcare opt-outs, lump sum payouts, and car allowances. The value for this line item was held constant from the HTY for the FTY and FPFTY labor forecast.

Q. What does the "Variable Pay" line shown on National Fuel Exhibit ATF-4, Schedule 2 represent?

A. This line item represents the net O&M portion applicable to the Company of the Annual Cash Bonus Program referred to in the Direct Testimony of Valerie Hawthorn Wagner (National Fuel Statement No. 4). It includes the net O&M portion for the Company's employees as well as the applicable borrowed amounts from National Fuel – NY and other subsidiaries. The figure is based on 100% achievement and assumes wage growth of 4.75%, consistent with the Company's increase for salaried employees.

B. <u>Uncollectibles</u>

Q. Please explain the Company's write-off process.

A. The Company will write off an account typically three months after the due date of the final bill, which is generated once a customer's account is terminated for non-payment (collections). This represents a change from the Company's prior cases as the duration was shortened from twelve months to three months starting in January 2025. This change was made to better align the timing between recovery of uncollectible expense from customers and the actual write-offs themselves. The residential collection season runs each year from April to November, during which time field service representatives attempt to obtain payment or terminate service for non-payment. There is also a small amount of non-collection related write-offs, for matters such as bankruptcies and customer disputes that do not follow the 3-month cycle and are written off sooner.

Q. Historically, what approach has been utilized to determine the Uncollectibles Expense for a given year?

A. Historically, the Company has used an annual average write-off factor from the prior three years. This factor would be applied to the current year revenue forecast to arrive at the estimated Uncollectible Expense for the year.

Q. Please explain the methodology used to calculate the Uncollectibles Expense for the FTY and the FPFTY.

A. The Company has not been through a full year under the new shortened write-off timeline. As shown in National Fuel ATF-2, Schedule 5, the Company is using a three-year average write-off factor of write-offs from FY 2022 through FY 2024 compared to gross revenue from FY 2021 through FY 2023. This dynamic of staggering the write-offs to the revenue by one year is consistent with prior filings as it aligns with the prior 12-month write-off timeline. Per book write-offs and revenue for each of these time periods were adjusted for the impact of the OPEB bill credits that were in-place during these time periods which had the impact of lowering customer bills and subsequently resulting in lower write-offs. Revenues were adjusted by the amounts of the bill credits and per book write-offs were adjusted to simulate what write-offs would have been if the bill credits were not in place. To do so, the OPEB bill impact was multiplied by 1.56% which represents the Company's write-off factor in their prior rate proceeding. Finally, a management adjustment of 0.02% was applied to the write-off factor to account for the impact of higher projected write-offs as a result of increased customer bills. This adjusted three-year average of 1.55% is then multiplied by forecasted revenue to arrive at

the uncollectible expense for the FTY & FPFTY. This figure is further reduced to back out the three-year average of the Customer Assistance Program ("CAP") arrearage forgiveness portion. The 1.55% is consistent with the Company's prior case which utilized a 1.56% write-off factor.

C. <u>Other Adjustments</u>

Q. Explain the methodology used to develop the Outside Services adjustment that is shown in National Fuel Exhibit ATF-2, Schedule 1.

A. The starting point for this line item was HTY actuals. The forecast for the FTY was derived by adjusting out the amount of expense in the HTY associated with the CAP (as shown on National Fuel Exhibit ATF-2, Schedule 11), which the Company has brought in-house and is no longer using contracted labor for. Additional adjustments were made to increase mowing and close interval survey costs to levels above HTY amounts due to higher planned activity and to normalize restoration costs using a three-year average.

Q. Explain the methodology used to develop the Office Employee Expense adjustment that is shown in National Fuel Exhibit ATF-2, Schedule 2.

A. Embedded in the HTY actuals, which were the starting point for this calculation, was only one quarter's worth of Oracle Database Management System and Exadata licensing. As such, an adjustment was made to reflect a full year of the Company's applicable share of these costs. Additionally, the HTY amount was increased by 3.67%, which represents

the compound annual growth rate from FY 2023 to FY 2025 for this line item. This same 3.67% rate was also used to project the FPFTY expense.

Q. Explain the methodology used to develop the Research & Development adjustment that is shown in National Fuel Exhibit ATF-2, Schedule 3.

A. The Company develops a new research and development plan each year. As such, an adjustment was made as shown on the schedule to incorporate the full-year planned activity for the FTY and an adjustment was made for the difference between the HTY amount and the planned costs for the FTY. Further details on the Company's Research, Development and Demonstration program are contained in National Fuel Statement No. 18 (the Direct Testimony of Erik M. Solomon).

Q. Explain the methodology used to develop the Other Expense adjustment that is shown in National Fuel Exhibit ATF-2, Schedule 4.

A. As shown in National Fuel Exhibit ATF-1, Schedule 1, the starting point for this line item was the normalized HTY value of $809,203. This value was then adjusted to incorporate a three-year average (FY 2023 through FY 2025) of the Company's line hit collections. This adjustment was made due to the variability that exists in receiving reimbursements of line hit damages from external parties.

Q. Explain the methodology used to develop the Injuries & Damages adjustment that is shown in National Fuel Exhibit ATF-2, Schedule 6.

A. Due to the unpredictable nature of the expense associated with injuries and damages, a three-year average (FY 2023 through FY 2025) of actual expense was used to calculate the FTY expense for this line item.

Q. Explain the methodology used to develop the Postage adjustment that is shown in National Fuel Exhibit ATF-2, Schedule 7 & ATF-3, Schedule 2.

A. As shown in National Fuel Exhibit ATF-1, Schedule 1, the starting point for the FTY postage expense is the normalized HTY amount. At the beginning of calendar year 2023, the postage rate for a 1 oz. stamp was $0.60. As of the end of calendar year 2025, the same stamp is now $0.78. This increase represents a 3-year compound annual growth rate of 9.14%. The USPS continues to publicize continued future increases in postage rates and as such the Company used the 9.14% historical trend to project the FTY postage expense (ATF-2, Schedule 7) and FPFTY postage expense (ATF-3, Schedule 2).

Q. Explain the Company's current IT program.

A. The Company operates a centralized IT program that provides shared services across subsidiaries, with capabilities spanning program and project management, application development, infrastructure, end-user computing, quality assurance, service management and access management under a defined organizational structure. The program's priorities emphasize operational resilience, technology optimization, customer experience/self-service, strategic growth and innovation. The program is anchored by

initiatives such as software-defined wide area network deployment, phone system upgrades, Windows server lifecycle remediation and continued Enterprise Resource Planning software transformation and collaboration platform rollouts, all managed through a structured agile methodology.

Q. Explain the methodology used to develop the IT adjustment that is shown in National Fuel Exhibit ATF-2, Schedule 7 & ATF-3, Schedule 8 & ATF-3, Schedule 3.

A. The IT line represents the Company's share of internal IT labor/benefits and other expenses incurred in the operation of the IT department including software, software maintenance, database storage, hardware, consulting services and telecommunications. IT charges are accumulated in clearing accounts and are distributed monthly to the appropriate business unit. As such, the HTY value for this line item was adjusted for the Company's share of projected higher expense in three main buckets:

1) New Applications/Incremental Licensing – includes costs associated with net new products such as Perplexity and a Security Information and Event Management (SEIM) solution as well as incremental licensing for data backup solutions and Kloudgin (dispatch software). This will include incremental groups of employees utilizing the dispatch technology as well as the rollout of the mobile platform.
2) 3 New Hires – Company's share of planned new hires in the IT department:
    1. Application Architect
    2. Senior Application Architect
    3. Senior UX Designer

3) Annual wage increases for IT employees – consistent with the 4.75% annual increase in the labor schedule for Salaried employees

The Company's share of these three adjustments was added to the HTY value to arrive at the FTY amount. As shown in National Fuel Exhibit ATF-3, Schedule 3, the same annual labor increase (4.75%) shown above in number 3 was used as the basis for the adjustment for the FPFTY.

Q. Explain the Company's current cybersecurity program including the newly created security command center.

A. NFG maintains a comprehensive Information Security Program aligned with the National Institute of Standards and Technology's Cybersecurity Framework and the Transportation Security Administration Security Directive. This alignment ensures that the program meets industry standards and regulatory requirements for critical infrastructure protection. The program's mission is to safeguard the confidentiality, integrity, and availability of both IT and Operational Technology systems across the organization. The cybersecurity program is built on a risk-based approach that utilizes regular assessments to guide investment decisions and monitor the effectiveness of controls. It employs a layered defense strategy that combines administrative, technical, and physical safeguards to prevent unauthorized access and reduce exposure to cyber threats. To ensure resilience, the program includes a robust incident response framework supported by immutable backups, annual disaster recovery testing, and a business continuity plan designed to include ransomware scenarios. In recent years, NFG has strengthened its cybersecurity posture by enhancing the vulnerability management

program, deploying a data security platform to protect sensitive information across on-premises, cloud, and software as a service environments, and formalizing third-party risk governance throughout the vendor lifecycle. The Company also established a 24x7 command center for continuous monitoring, significantly improving detection and response capabilities for both physical and cybersecurity threats, while also tracking system uptime and availability to enable immediate action when issues arise.

Q. Explain the methodology used to develop the Command Center/Cyber adjustment that is shown in National Fuel Exhibit ATF-2, Schedule 9 & ATF-3, Schedule 4.

A. This line item represents the Company's share of NFG's consolidated cybersecurity and security command center. It is inclusive of both labor related costs as well as third-party subscriptions and licenses. NFG began staffing for the security command center in the HTY, so an adjustment was made to account for the Company's share of a full year of labor and benefit expense. As this line also includes the Company's share of labor and benefit expense associated with cybersecurity, an additional adjustment was made to increase the HTY amount of labor and benefits by 4.75%, consistent with the Company's annual increase for salaried employees. These two adjustments are shown on National Fuel Exhibit ATF-2, Schedule 9 and are the basis for the FTY adjustment. The FPFTY adjustment is shown on National Fuel Exhibit ATF-3, Schedule 4 and incorporates that same 4.75% annual increase on the labor and benefit base established in the FTY for the Company's share of cybersecurity and security command center personnel.

Q. How are rate case expenses presented in the O&M exhibits?

A. Projected total rate case O&M expense is shown in National Fuel Exhibit ATF-2, Schedule 10. These costs are normalized over three years such that one-third of the projected rate case expense is included in the O&M projection for the FTY and the FPFTY. A three-year period was chosen as it aligns with the time between the Company's prior case and this case.

Q. Explain why vehicle depreciation costs were removed from the Transportation line item.

A. These costs are being excluded from O&M as they are being shown in this case as depreciation expense. This cost represents the depreciation expense associated with the Company's transportation and construction equipment.

Q. Explain why CAP related costs were removed from O&M.

A. As stated in the Direct Testimony of Donald Koch (National Fuel Statement No. 2), the Company recovers CAP related costs through Rider F rather than as part of base rates. As such, CAP related components were removed from O&M, the largest of which being uncollectible expense, as shown in National Fuel Exhibit ATF-2, Schedule 11.

Q. Explain the methodology used to develop the Advertising adjustment that is shown in National Fuel Exhibit ATF-2, Schedule 12.

A. An adjustment of $26,000 was made to reflect program costs for the FTY that are projected to be in excess of the HTY amounts. The same FTY total advertising amount of $787,275 was also used for the FPFTY.

Q. Explain the remaining FTY and FPFTY adjustments shown in National Fuel Exhibit ATF-1, Schedule 1.

A. In addition to the specific adjustments mentioned in the above testimony, the compound annual growth rate from FY 2023 to FY 2025 was applied to the following line items:

- Rents: 5.35%
- Transportation: 6.58%
- Regulatory Assessment: 14.08%
- Other Insurance: 9.83%
- UNICAP: 11.21%

For the Materials line item, the HTY amount was increased by 5.28% to arrive at the FTY amount. The FTY amount was further increased by 5.28% for the FPFTY. The 5.28% represents the year over year change in this line item which is being impacted by tariffs and inflationary pressures. Additionally, as mentioned in National Fuel Statement No. 20 (the Direct Testimony of Daniel J. Czechowicz), the HTY utilities amount was increased by $45,000 for the FTY to account for additional telemetering expenses. Finally, as mentioned in National Fuel Statement No. 18 (the Direct Testimony of Erik M. Solomon), the Company is proposing to lower the Delta Fund allowance to $300,000 for the FPFTY. This line item is shown as GTI on National Fuel Exhibit ATF-1, Schedule 1.

Q. Does this conclude your direct testimony at this time?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 3-R

Rebuttal Testimony of Anthony T. Formato

Topics Addressed: O&M Expense

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Anthony T. Formato. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 3, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. My rebuttal testimony addresses certain portions of direct testimony submitted by the Bureau of Investigation and Enforcement ("I&E"), the Pennsylvania Office of Consumer Advocate ("OCA"), and the Pennsylvania Office of Small Business Advocate ("OSBA"), specifically: I&E Statement No. 1, the direct testimony of Christopher Keller, OCA Statement No. 2, the direct testimony of Lafayette K. Morgan, Jr., and OSBA Statement No. 1, the direct testimony of Justin B. Farr. For the purposes of this testimony, the aforementioned statements of I&E, OCA, and OSBA will be referred to as "other parties."

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. No.

III. HEADCOUNT

Q. Have any other parties proposed an adjustment to the Company's proposed headcount?

A. Yes, OSBA proposes a downward adjustment to headcount of 9.67 full time employees ("FTE"), based on the difference between the projected headcount for the fully projected future test year ("FPFTY") and the average headcount for the Twelve Months Ending ("TME") January 31, 2026. This headcount reduction translates to a $525,364 decrease to the overall revenue requirement. OSBA argues that ratepayers should not be required to pay rates based on a headcount in excess of the Company's most recent actual expense. As support for their downward adjustment, OSBA argues that the Company has consistently reported actual headcounts below its budgeted staffing levels.

Q. Do you agree with this adjustment?

A. No. There are two inconsistencies in the rationale provided by OSBA for its adjustment. First, OSBA relies on the fact that the Company's actual headcount has been below the budgeted headcount in recent years. This is not something that the Company disputes, as routine turnover and recruitment lag lends itself to headcounts below planned levels. However, the Company's filed position already reflects a downward adjustment for 9 FTEs for this exact reason. Additionally, the OSBA's argument that ratepayers should only pay for rates based on current employee counts goes against the construct of a

forward-looking test period. As described in my direct testimony, the Company's labor forecast was based on actual headcount as of September 30, 2025 (436 employees), with forecasted additions by the end of the FPFTY of 23, for a total headcount of 459 employees. This headcount was determined using the approved Company headcount of 453 for the future test year ("FTY"), which was established in the Company's fiscal year ("FY") 2026 Operations & Maintenance Budget, plus six additional positions for the FPFTY. These six incremental positions are detailed below:

1. Consumer Business Manager (Salaried): Additional Supervisor for day-to-day Call Center management functions as Company has now assumed responsibility for the Customer Assistance Program ("CAP") program administration and is no longer outsourcing this function.
2. Call Center Representative (Non-Union Hourly): Additional representative needed to backfill for hourly employee focused on CAP program matters.
3. Call Center Representative (Non-Union Hourly): Additional representative needed to backfill for hourly employee focused on CAP program matters.
4. Gas Mechanic (Union Hourly): Additional crew member (1 of 2) to support the Company's internal share of growing Leak Prone Pipe ("LPP") mileage.
5. Gas Mechanic (Union Hourly): Additional crew member (2 of 2) to support the Company's internal share of growing LPP mileage.
6. General Fitter (Union Hourly): The General Fitter performs skilled field work associated with the construction, maintenance, installation, and repair of natural gas distribution facilities.

As shown in direct testimony Exhibit ATF-1, Schedule 4, a vacancy adjustment of nine employees was factored into the revenue requirement such that the Company was only seeking recovery for 450 employees in the FPFTY. As evidenced by the current headcount as of April 27, 2026, of 451 employees, the Company is already at a total headcount in excess of the filed headcount for the FPFTY. For these reasons, the Commission should reject OSBA's headcount adjustment and base the revenue requirement on a headcount of 450 employees .

IV. CHARGE OFF CUSTOMER ACCOUNTS/RECEIVABLE ("A/R") EXPENSE

Q. Have any other parties proposed an adjustment related to Uncollectible or Charge Off Customer A/R expense?

A. Yes, OCA advocates for the removal of $147,000 of Charge Off Customer A/R expense contained in the Company's Other Expense line item. This reduction is based on OCA's belief that this expense is contained within the Company's uncollectible factor.

Q. Do you agree with OCA's adjustment?

A. No. The Charge Off Customer A/R expense is a separate and distinct type of write-off, which is directly expensed to the Other Expense line item. Examples of charge offs include resolutions to non-registering meters, switched meters, shared meters, management decisions to resolve bill disputes, and usage on NFG Temp accounts. NFG Temp is an account that is used to cover usage between when a customer moves out of a premise and when gas is shut off. To be clear, there is zero crossover between these

charge offs which hit Other Expense on the Company's financials and the financial write-offs for non-payment, which are recovered through Uncollectible expense.

V. COMPOUND ANNUAL GROWTH RATES ("CAGR")

Q. Have any other parties proposed an adjustment related to Office Employee Expenses?

A. Yes, OCA states that the Company's filed approach of using the compound annual growth rate from FY 2023 to FY 2025 of 3.67% should be disallowed as it is not consistent with zero-based budgeting. As such, OCA proposes a downward adjustment of $64,000.

Q. Do you agree with OCA's adjustment?

A. No. The Office Employee Expenses line item is primarily made up of software, office equipment and employee training/travel expenses, which are all subject to inflationary price increases. The Company will not be able to negotiate terms which would allow for flat prices for two years, which is what OCA is suggesting by not allowing for inflationary growth on this line item between the historic test year ("HTY") and the FPFTY. A formal O&M budget for FY 2027, which would closely align to the FPFTY has yet to be developed and approved. This budget will be developed utilizing a zero-based budgeting approach. In the absence of a formal budget and given the nature of the expenses included in this line item, recent price increases (CAGR of 3.67%) were utilized to develop the forecasted expense for the FPFTY.

Q. Have any other parties proposed an adjustment related to Postage Expense?

A. Yes, OCA disagrees with the three-year CAGR utilized by the Company to project postage expense for the FPFTY stating that the growth in postage rates from 2023-2025 (the time period used for CAGR), was during a time of frequent postage increases and will not be the norm moving forward. Instead of annual 9% growth rates, OCA advocates for a 4.8% to the HTY value. OCA ties the 4.8% to the USPS announced increase of a first-class stamp that is slated for July 2026. As a result, OCA suggests a $175,000 reduction to postage expense.

Q. Do you agree with OCA's adjustment?

A. No. While neither OCA nor the Company can predict future postage rates, it is clear that postage rates continue to rise. By July of 2026, a first-class stamp, which was $0.60 at the start of January 2023, will be $0.82. Even with these increases, the USPS is still facing significant financial challenges and continues to warn of additional increases beyond July of 2026. As such, the Company feels that OCA's adjustment stops short and does not include likely increases in January and July of 2027.

VI. LINE HIT COLLECTIONS – OTHER EXPENSE

Q. Have any other parties proposed an adjustment related to line hit collections?

A. Yes, OCA proposed to move away from the Company's three-year average approach with respect to line hit collections. OCA's proposal to simply use the HTY value rather than a three-year average (FY23-FY25) results in a reduction of $156,000 to the Other Expense line item as collections were higher in the HTY as compared to the other two

years used in the three-year average calculation. OCA's claim is based on the belief that a period that exhibits high line hit collections, like the HTY, would also have higher repair expenses in that year such that the higher expense and higher collections act as a natural offset.

Q. Do you agree with OCA's adjustment?

A. No. First and foremost, line hit collections have significant lag such that the recovery from third parties routinely crosses over fiscal years from the incidents themselves. Once an incident occurs, costs are aggregated and then billed to the responsible party. The Company's Risk department will then work with the responsible party and often insurance providers to resolve the financial liability generated by the repair activity. Lag and crossover between years further supports the Company's proposal to use a three-year average to normalize activity. Additionally, the primary cost that is being recovered in a line-hit scenario is internal Company labor spent on making the situation safe and performing the necessary re-lights. OCA's claim is that in a year with higher recoveries, such as the HTY, the Company would experience an uptick in repair costs. However, since the primary cost is labor, this argument falls apart as the Company's forecast for internal labor was based on the annualization of September 2025 labor expense and does not have any element of a bump related to higher line hit repair expense. As such, the Company disputes OCA's proposal and stands behind the three-year normalization of line hit collections.

VII. DUES & MEMBERSHIPS

Q. Have any other parties proposed an adjustment related to Dues & Membership expense?

A. Yes, Both OCA and I&E propose adjustments to the Company's Dues & Memberships expense claim for organizations that in their determination have little benefit to ratepayers (not necessary to provide safe and reliable service). Specifically, OCA recommends a decrease of $17,000 related to specific Economic Development organizations. I&E recommends a decrease of $21,968 of membership dues for civic and community organizations that it claims are not necessary for safe and reliable service.

Q. Do you agree with these adjustments?

A. No. While both OCA and I&E challenge these expenses on the validity of their benefit to ratepayers, it is important to consider the overall impact these funds and the associated organizations have on ratepayers and the communities they reside in. The Company's limited support of chambers of commerce and economic development agencies is intended to directly benefit customers by promoting strong, resilient communities within its service territory. Economic growth helps retain and attract commercial and industrial use of natural gas, allowing fixed system costs to be spread over greater usage and helping to moderate upward pressure on rates. Participation in these organizations ensures energy infrastructure, safety, and reliability considerations are incorporated into local growth planning, thereby reducing long term system risks and costs. Building stronger communities, by supporting economic stability and affordable, reliable service

over the long term, benefits everyone, from the utility, to small and large businesses, to the residents who live and work in these communities.

VIII. RATE CASE EXPENSE

Q. Have any other parties proposed an adjustment related to Rate Case Expense?

A. Yes, I&E proposed changing the recovery period for rate case expense from the Company's proposed three-year period to a five-year recovery period. This change would reduce the Company's claim by $137,600. I&E bases its five-year proposal on the Company's recent rate case filings, shown below:

Docket No.	Date Filed	Interval
R-2025-3059428	January 28, 2026	39 months
R-2022-3035730	October 28, 2022	197 months
R-00061493	May 31, 2006	20 months
R-00049656	September 15, 2004	

Using the Company's last three filings and the timing of this proceeding, I&E calculates an average interval of 85 months and states that the Company's past filing cadence is far closer to their proposed 5-year interval than the Company's proposed 3-year.

Q. Do you agree with I&E's adjustment?

A. No. Two of the four data points utilized by I&E in its calculation are from over 20 years ago and are not indicative of the current business landscape. As described in National Fuel Statement No. 1, the direct testimony of Rebecca E. Hillery, the Company's filing was based on continued inflationary pressures on labor and other operating expenses coupled with accelerated infrastructure replacement and system modernization capital

investments. National Fuel Statement No. 9, the direct testimony of Mark C. Schaefer, highlights the Company's current Amended Long Term Infrastructure Improvement Plan and clearly illustrates the higher capital expenses that have been realized in recent years as well as the plan to continue to spend at accelerated levels, see below:

Table 1: Actual & Projected Annual Capital Expenditures Related to Modernization

Fiscal Year	CapEx ($MM)	Actual / Budget
2023	$37.2	Actual
2024	$48.5	Actual
2025	$43.8	Actual
2026	$57.4	Budget
2027	$66.5	Budget
Total	$253.4	

As a point of comparison, average modernization related capital expense from FY 2017 – FY 2021 was $23.8 MM. While the 16-year gap between the 2006 and 2022 filing is a data point, it is not one that should carry as much weight as the roughly three years between the October 2022 filing and the Company's January 2026 filing. This three-year gap is indicative of the Company's current operating model and increased investment plan and should be the basis for supporting the Company's three-year recovery of rate case expense.

IX. INSURANCE SETTLEMENT PROCEEDS

Q. Have any other parties proposed an adjustment related to Insurance Settlement Proceeds?

A. Yes, OCA recommends that a regulatory liability in the amount of $936,314 as of September 30, 2025, be refunded to ratepayers over a three-year period ($312,000/year).

OCA states that the liability, which today is being used to shield ratepayers from environmental expenses, should be passed back as these funds relate to an insurance settlement whose premiums were funded by ratepayers.

Q. Do you agree with OCA's proposal?

A. No. OCA's proposal has two fundamental flaws. The balance in this account continues to be reduced, as the company is actively processing environmental expenses against it. As of April 27, 2026, the balance in the account was down to $847,444. Additionally, if a three-year pass-back was established, a normalizing adjustment would be needed to re-establish the O&M expense that ratepayers were shielded from because of this account. In the HTY, environmental expense would have been $144,486 higher if not for this regulatory liability account. The Company proposes to continue with its historic practice of using these proceeds to offset new environmental expenses. If a decision is made to accept OCA's proposal, both the current balance of the account and the normalizing adjustment for the HTY shielded expense need to be considered.

X. SUMMARY

Q. Please summarize your rebuttal testimony.

A. As stated above, the Company disputes the O&M related adjustments proposed by OCA, OSBA, and I&E, including OCA's proposal to include customer payment transaction costs in O&M expense, which is discussed in National Fuel Statement No. 17-R, the rebuttal testimony of Matthew W. Stoops. As such, the Company is making no changes to the O&M expense it filed in its January 2026 original filing.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes.

NATIONAL FUEL STATEMENT NO. 4

VALERIE L. HAWTHORN

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 4

Direct Testimony of
Valerie L. Hawthorn Wagner

Topics Addressed: Labor Market, Employee Retention and Total Rewards

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Valerie L. Hawthorn Wagner. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") as the Managing Director of Human Resources.

Q. Please provide your educational background.

A. I possess a Master of Business Administration degree and a Bachelor of Science in Business Administration degree, both from the State University of New York at Buffalo.

Q. Please provide your professional experience.

A. I began my employment with NFGDC in January 2005, as an Intern in the Human Resources department. Upon completion of this internship, I joined the Human Resources department in a full-time capacity as an HR Specialist in July 2005, focusing on recruitment and employment. Over the last twenty years, I've assumed roles of increasing responsibility in the Human Resources department, including becoming the Manager of Employment in 2013. Since February 2022, I have held the role of Managing Director (General Manager) of Human Resources. In my current capacity, I am responsible for the employment, benefits and payroll functions for active employees and retirees of NFGDC and affiliates.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. Yes, I have provided testimony before the Commission in the Company's last base rate proceeding at Docket No. R-2022-3035730 and before the New York Public Service Commission at Case 16-G-0257 and Case 23-G-0627.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. The purpose of my testimony is to discuss the labor market, retention and total rewards related to NFGDC's Pennsylvania Division ("National Fuel" or "Company").

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. Yes, CONFIDENTIAL National Fuel Exhibit VLH-1 (Annual Cash Bonus Program).

III. EMPLOYEE RECRUITMENT AND RETENTION

Q. What is the current employee count for National Fuel?

A. As of September 30, 2025, National Fuel employed 436 employees. These employees are geographically spread among 17 different locations within our northwestern Pennsylvania service territory.

Q. Are there any additional employees who contribute to National Fuel's operations?

A. National Fuel receives loaned labor from its affiliates when economically efficient and feasible to do so. For example, I provide Human Resources services to National Fuel even though I am an employee of NFGDC New York Division ("National Fuel – NY") and am located at corporate headquarters in Williamsville, NY. This allows National Fuel to benefit from the purchasing power of a larger corporate entity when negotiating benefit plan costs and also provides operating efficiencies with respect to recruitment, payroll and employee relations. This model of loaned labor eliminates the need for duplicate functions to be performed by separate administrative support functions like Human Resources, Information Technology, Accounting and Finance. This model also includes executive employees who have responsibilities across our corporate footprint, even if they are not physically located in NFGDC's Pennsylvania Division's geographic territory. National Fuel derives operational synergies provided by shared service departments and executives that National Fuel – NY and other subsidiaries provide. Controls are in place surrounding direct charging to and from these other subsidiaries.

Q. How do you define your employee population?

A. National Fuel employs two groups of Fair Labor Standards Act ("FLSA") non-exempt employees: those who are members of a collective bargaining unit ("union hourly") and those who are not affiliated with a collective bargaining unit ("non-union hourly"). Approximately 48% of the employees (over 66% of the FLSA non-exempt workforce) within National Fuel are represented by a bargaining unit. Those employees are represented by either the International Brotherhood of Electrical Workers, Local 2154-P,

also known as "IBEW" or the National Conference of Fireman and Oiler's, Chapter 22, also known as "F&O". Additionally, National Fuel employs two groups of FLSA exempt employees: salaried, non-executives ("salaried") and salaried executives ("executives"). As described in the prior section of my testimony, National Fuel derives the benefit of loaned executive labor (portions of labor allocated or direct charged) and operational synergies from executives located at National Fuel – NY and other subsidiaries. See table below for NFGDC's Pennsylvania Division employee counts.

Employee Type	Employee Count (9/30/2025)	Employee Count - FPFTY (10/31/2027)
Union Hourly	210	215
Non-Union Hourly	104	112
Salaried	122	123
Executive	0	0
TOTAL	436	450

Q. What assumptions are incorporated into the employee counts for the fully projected future test year?

A. Employee counts for the fully projected future test year ("FPFTY") ending October 31, 2027 take into account historic vacancy rates and have therefore been adjusted accordingly to 450 employees.

Q. What is the average length of service for your employee population?

A. Across all employee categories, the average length of service for employees at National Fuel is 8.75 years. See the table below for average length of service within each employee group. While overall, these averages have remained relatively stable, the Company experienced modest increases in length of service averages for the union hourly

and salaried employee groups compared to data provided in the Company's last rate filing.

Employee Type	Average Years of Service (as of 9/30/25)
Hourly	7.06
Non-Union Hourly	8.65
Salaried	11.76
Executive	N/A
TOTAL	8.75

Q. Are there different benefit offerings for these various employee groups?

A. Yes. Benefit offerings for the various employee groups are established based on the negotiation of labor contracts (where applicable) along with the Company's need to remain cost efficient yet competitive in the labor market. Certain benefit programs have also evolved over the years, most notably the elimination in 2003 of the defined benefit pension plan for new hires. As of September 30, 2025, only 4% of employees at National Fuel were eligible for the defined benefit pension plan.

Q. Does National Fuel hire often?

A. Yes. As average years of service at National Fuel have decreased over time, recruiting new hires to National Fuel is an important part of the Human Resources department's responsibilities. We must attract and retain talent through a competitive total rewards package which includes compensation and benefits, and a desirable work environment. Attracting and retaining qualified employees remains critical to National Fuel's continued ability to provide safe, efficient and cost-effective service to ratepayers. As of September 30, 2025, National Fuel had 18 open positions actively being recruited for or with known incumbents scheduled to start.

Q. What, if any, attraction challenges does National Fuel face?

A. Providing a competitive compensation and benefits package and ensuring this package meets the desires and demands of the labor market continues to be an ongoing area of emphasis for National Fuel. A competitive total rewards package is critical to attracting and retaining the most qualified individuals. The elimination in 2003 of the defined benefit pension plan for new hires has required National Fuel to continuously evaluate the competitiveness of the overall total rewards offered to various employee groups to be sure benefits offered are comparable to other companies. National Fuel competes for talent against companies within the energy industry as well as outside of the energy industry and offering competitive compensation and benefits at the start and throughout an employee's career is required to engage and retain top talent. Stability is no longer the primary driver for job seekers, and the attraction of working for a traditional utility company has seemed to evolve with time. Therefore, Human Resources must design, continually reassess, and offer competitive total rewards packages. These packages must be designed to incent individuals to consider National Fuel as an employer and ensure that we offer total rewards comparable to other companies. Continuing to provide a competitive total rewards package throughout an individual's employment with National Fuel is equally critical. These total rewards are designed to aid in the retention of top talent and to ensure stability within our workforce, continued transfer of knowledge and the opportunity for individuals to grow their expertise within the organization. Retention and workforce stability remains a critical focus for National Fuel since the average length of service across our workforce is 8.75 years, which is down from the average 11.80

years of service on September 30, 2015. Additionally, the changing nature and prevalence of remote work opportunities means National Fuel is competing for prospective talent beyond just local competitors.

Q. Has National Fuel experienced a change to employee complement?

A. National Fuel's headcount has evolved for a variety of reasons. First, there is a time lag that occurs when replacing individuals who terminate from National Fuel. A retiree who possessed many years of experience is not easily replaced with someone from the external labor market, and finding a suitable replacement often requires extensive recruiting time. But, since an overwhelming majority of employees are not in the defined benefit pension plan, lengthy notice periods prior to termination are no longer customary. Continuity of operations and succession planning challenges increase when employee departures are only predicated by a few weeks' advance notice. Because of this, the recruitment lag to replace someone generally surpasses the amount of transition time that occurs before someone departs National Fuel. Secondly, managing through the learning curve for new employees can contribute to the need for increased headcount. As new employees are building efficiency and other employees have to devote time to teaching and training, more resources may be required to perform work previously done by those with more experience and efficiency. Attrition can also lead to needing to have more employees trained in various areas so there are no gaps in the coverage needed to be provided. While cross training remains desirable for various reasons, it is equally important to retain individuals already trained to perform the work that needs to be done. The time it takes to identify, hire and adequately train a new hire to be productive places

additional strain on our remaining workforce. Therefore, we must continue to place emphasis on rewarding and retaining our existing workforce.

Q. How have these recruitment needs impacted employment costs at National Fuel?

A. The recruitment process has evolved alongside the complexity of the job market. This complexity introduces additional costs at various points throughout the process including advertising, screening/interviewing, potential agency placement fees, increased salary expectations and training costs. Specifically, scarce talent requires recruiters to spend additional time finding qualified applicants, as well as ensuring that the screening pool includes enough candidates to ensure viable options remain through the completion of the pre-employment process. Additionally, it is common for jobs to be reposted due to the scarcity of qualified talent mentioned above, which generally results in additional time and cost conducting interviews during the screening process. Additional costs are also incurred when advertising for job postings on various recruiting sites and through staffing agencies who charge a placement fee upon placement of a successful candidate. Starting salary expectations have continued to increase, both for inexperienced and experienced talent. There are additional costs associated with the training time incurred by managers in order to ensure new employees understand how to perform their function upon initial onboarding, as well as to regularly monitor and train new employees as they progress in their new role. As discussed in a previous question, there is also a cost element associated with the time spent by current employees and supervisors to cover open positions created when individuals exit the organization.

Q. How does National Fuel monitor employee engagement?

A. All employees are encouraged to share their feedback regarding job satisfaction informally with their managers or with the Human Resources department directly. There are also numerous formal channels in which feedback from salaried employees can be communicated. Those include annual performance appraisals, annual career conversations with executives, new hire evaluations sent by the Human Resources department at 6, 12, and 18 months of service, and through employee engagement surveys that are conducted periodically.

Q. How is National Fuel addressing retention as a measure of engagement?

A. National Fuel must offer a competitive total rewards package in order to retain our current workforce. If we fail to remain competitive in these areas, we will be unable to effectively manage attrition, which creates additional pressure on the current workforce and decreases the total amount of experience that exists within our remaining workforce. If we fail to maintain a market-competitive total rewards package, like those being offered by competitors, employees will resign, making it very difficult to manage replacement rates and the workload burden that inevitably falls to the staff that remains. It is critical to invest in the employees we have and be able to attract quality individuals to the vacancies currently available so that we can prevent burnout for employees, provide a productive work environment that encourages retention and ensure ratepayers are receiving safe, reliable and efficient service from an experienced workforce.

Q. What terms of compensation and benefits resulted from collective bargaining?

A. Negotiations with "F&O" recently took place for the employees represented by that collective bargaining unit. The resulting contract, which will go into effect May 1, 2026, included an average increase of 10% to hourly labor rates in the future test year and 10% to hourly labor rates in the fully projected future test year when all job categories are combined. Additionally, negotiations resulted in an updated 401(k) matching schedule, prescription drug coverage enhancements, the availability of a vision plan and longevity rewards. The terms of this labor contract are in effect through April 30, 2030. Negotiations with "2154" recently took place for the employees represented by that collective bargaining unit. The resulting contract, which will go into effect April 13, 2026, included an initial average increase of 13% to hourly labor rates in the future test year when all job categories are combined and an average increase of 3% to hourly labor rates in the fully projected future test year. Additionally, negotiations resulted in an updated 401(k) matching schedule, prescription drug coverage enhancements, the availability of a vision plan and longevity rewards. The terms of this labor contract are in effect through April 12, 2030.

Q. What other considerations result from collective bargaining?

A. Following the conclusion of negotiations and the ratification of bargaining agreements, the Company evaluates any corresponding impacts to other employees in the workforce. Specifically, the salaries of individuals managing the bargaining unit members are evaluated for compression issues, given the newly negotiated pay rates. It is critical to maintain an appropriate delta between pay rates for work performed at the hourly level

and salaries for those managing the hourly workforce. Not only does this distinction in salary ensure roles with increasing responsibility are appropriately compensated, it also preserves an important incentive for hourly employees who may want to be considered for promotional opportunities into salaried positions.

Q. Were there resulting financial impacts from this evaluation of pay rate compression?

A. Following the final ratification and activation of the collective bargaining agreements, the Company expects there will be a need to adjust the salaries of various salaried employees. There is expected to be approximately $145,000 of financial impact resulting from base salary adjustments within the salaried workforce.

Q. What rewards are used to remain competitive for non-union hourly talent?

A. Approximately 24% of National Fuel's employee complement is comprised of individuals performing administrative roles, in a non-union hourly capacity. These individuals staff the customer response center (i.e., call center) as well as provide administrative support services throughout various departments within National Fuel. The Company must provide competitive wages and benefits in order to attract and retain these critical employees and in order to remain on par with the wages and benefits offered by organized labor. In January 2026, a market-based wage adjustment for 94 non-union hourly employees, at an annual cost of approximately $526,000, went into effect. The Human Resources Department considered the differential in wage rates for administrative employees covered by a collective bargaining agreement in a different

jurisdiction in order to identify a more appropriate wage rate for the non-union hourly employee group. Following this market adjustment, all non-union hourly employees remained eligible for a January 2026 merit-based increase, from the 3.5% annual salary budget that had been established for this employee group. In response to increasing labor market demands for increased employee flexibility, a significant complement of non-union hourly employees are provided with the opportunity to work a hybrid or fully remote work schedule.

Q. What rewards are used to remain competitive for salaried (non-executive) talent?

A. National Fuel must offer compensation and benefits comparable to competitors in order to remain competitive in the labor market and to promote attraction and retention. A 4.75% annual salary budget was approved for 2026 merit and promotion increases. This projection is consistent with salary budget survey responses that are reported by individual organizations and consolidated by compensation specialists like WorldatWork and Willis Towers Watson. National Fuel evaluates the data provided by multiple external resources in order to develop salary budget recommendations that are both reasonable and market competitive. In 2022, "National Fuel – NY" engaged the services of an external consultant, Willis Towers Watson, to provide benchmarking data for salaried positions across National Fuel's affiliates. The confidential results provided by the external consultant in conjunction with further analysis conducted by the Human Resources department, resulted in numerous market adjustments for salaried employees at that time. Since then, National Fuel has strived to maintain market competitive pay by continuing to utilize external salary survey data to establish new hire salary offers,

evaluate existing salaries, age salary structures and recommend appropriate salary increase budgets.

Q. When did National Fuel implement an incentive-based compensation program?

A. Effective October 1, 2022, National Fuel established an Annual Cash Bonus Program. This Annual Cash Bonus Program is intended to provide greater incentive to the Company's salaried employees to work toward the achievement of the Company's business goals and objectives and enable the Company to attract, retain and motivate valuable employees. National Fuel's Annual Cash Bonus Program is described in CONFIDENTIAL National Fuel Exhibit VLH-1. Following an initial bonus payment in October 2022 to National Fuel's salaried employees as a first step towards this Annual Cash Bonus Program, the first full-year Annual Cash Bonus payment was made following the conclusion of the Company's 2023 fiscal year which on ended September 30, 2023.

Q. What impact does this incentive-based compensation program have in the Future Test Year ("FTY")?

A. As noted in National Fuel Exhibit ATF-4 Schedule 2 (pg. 2), the full-year expense for the Annual Cash Bonus Program projected to be incurred and recorded in the Company's FTY ended September 30, 2026 is $1,571,255.

Q. What is the expected cost of incentive-based compensation in the FPFTY?

A. Incentive-based compensation will be paid only if certain shared organizational goals are

achieved during each fiscal year. Shortly following the start of the fiscal year, specific goals are defined and are focused on metrics that provide customer benefits. The goals established for the program include customer service/satisfaction rates, operational safety measures, methane emissions reductions, employee safety (injury) rates and human capital/inclusion initiatives. In order to calculate the bonus payment, employee base salaries will be multiplied by the eligibility percentage for their grade level (level of experience or responsibility) in the organization and then multiplied by the goal achievement level. As noted in National Fuel Exhibit ATF-4 Schedule 2 (pg. 3), the projected O&M expense for National Fuel for the FPFTY is $1,645,889.

Q. What other benefits or rewards are utilized in the attraction or retention of salaried employees?

A. In addition to base salaries, stock-based compensation, in the form of time-vested restricted stock, is provided as a retention tool to select non-executive employees. These shares vest over three equal annual installments as service is provided to National Fuel. This benefit is included as part of the overall compensation package to retain high-caliber salaried employees while encouraging their investment in National Fuel, as it motivates recipients to remain employees throughout the vesting period. Given the increasing operational complexities and regulatory requirements experienced by utilities and energy companies, and the expanded efforts to modernize pipeline and distribution systems, a competitive compensation package encouraging retention and longevity, including time-vested restricted stock, is critical to the continued success of National Fuel and aligns with the interests of all stakeholders (including ratepayers, local communities,

employees, retirees, and shareholders). Finally, in response to significant employee demand and to address the needs of the labor market, National Fuel allows for hybrid work schedules, where possible. National Fuel must continue to adapt to the needs and demands of employees in order to remain competitive on both attraction and retention.

Q. What rewards are used to remain competitive for executive talent?

A. Given the increasing operational complexities and regulatory requirements experienced by utilities and energy companies and the expanded efforts to modernize pipeline and distribution systems, it is critical for National Fuel to remain competitive in its total rewards package provided to executives in order to retain quality and experience among the executive workforce for the benefit of all its stakeholders (including ratepayers, the local communities, employees, retirees, and shareholders). To that end, National Fuel's named executive pay practices are subject to an extensive review and approval process as outlined in National Fuel Gas Company's ("NFG") proxy statement. For officers not identified in the proxy, the review and approval process is similarly extensive. To assist in the effort, NFG's Compensation Committee retains the services of Korn Ferry Group, a nationally recognized firm that performs compensation analyses and reviews for companies in the energy and other business sectors. Key findings of the most recent national compensation data indicate that total compensation (base salary, annual and long-term incentives) for National Fuel's executives is at or below the median when compared with nationwide utility and general industry executives. Long-term incentives are provided via stock-based compensation. Incorporated into the projections for the FPFTY are performance shares linked to long-term performance from total shareholder

return, total return on capital and emission reduction targets as measured over a three-year period in comparison to peer companies. Another form of long-term incentive is the award of time vested restricted stock, which vest over three equal annual installments as service is provided to National Fuel. These forms of stock-based compensation encourage long-term perspective and performance from the management of National Fuel and encourage significant, personal investment. The financial success, as measured by long-term total shareholder return and long-term total return on capital of NFG (including National Fuel) is achieved through continued focus and commitment on numerous factors, which include efficiently investing in rate base, prudently operating the business, and providing safe, reliable, and affordable service to its customers. As a result, the utilization of performance shares to reward this focus and commitment is appropriate as it aligns with the interests of the ratepayers. Since time vested restricted stock vests in equal installments over a three-year period, it encourages recipients to remain employees over the vesting period and the utilization of time vested restricted stock is appropriate as it aligns with the interests of the ratepayers. The amounts related to these long-term incentive stock-based compensation awards are disclosed at National Fuel Exhibit MPW-1 Schedule 2, Pages 13 and 14.

Q. Does this conclude your direct testimony at this time?

A. Yes.

NATIONAL FUEL EXHIBIT VLH-1

CONFIDENTIAL

NO PUBLIC VERSION

NATIONAL FUEL STATEMENT NO. 5

MICHAEL P. WEIDNER

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 5

Direct Testimony of Michael P. Weidner

Topics Addressed: Benefits Including Retirement

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Michael P. Weidner. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") in the position of Senior Director within the Human Resources department.

Q. Please provide your educational background.

A. I graduated from St. Bonaventure University, in May 1998 with a Master of Business Administration Degree and Bachelor of Business Administration Degree, concentrating in Accounting and Finance.

Q. Please provide your professional experience.

A. In September 1998, I joined Ernst & Young, LLP as a Staff Accountant and I was promoted to Senior Accountant in 2000. I have been a Certified Public Accountant since December 1999. I began my employment with NFGDC in October 2000 in the Audit Services department. In July 2005, I transferred to the Financial Accounting department where I became Manager in September 2013. In February 2018, I was promoted to my current position.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. Yes, I have testified before the PAPUC (NFGDC Supplement No. 228 to Tariff Gas – Pa.P.U.C. No. 9 – Docket Nos. R-2021-3027406 and C-2021-3028654 (collectively the "2021 OPEB Dockets"), as well as Docket No. R-2022-3035730 (the "2022 Rate Case"). I have also testified before the New York Public Service Commission in Cases 16-G-0257 and 23-G-0627.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. The purpose of my testimony is to discuss the costs related to the employee benefits package for NFGDC's Pennsylvania Division ("National Fuel" or the "Company").

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. I am sponsoring National Fuel Exhibit MPW-1, Schedules 1 and 2. I am also responding to various Standard Data Requests.

III. EMPLOYEE BENEFITS EXPENSE

Q. Please describe National Fuel Exhibit MPW-1 Schedule 1 (Benefits) and Schedule 2 (Benefits) - Pages 1-16.

A. The exhibit and schedules show the adjustment to National Fuel's operation and maintenance ("O&M") expense for employee benefits. National Fuel Exhibit MPW-1,

Schedule 1 summarizes these adjustments. I will describe the adjustments in further detail.

A. Retirement Benefits

Q. Are there any retirement related benefits in the exhibits?

A. Yes, NFGDC's parent company National Fuel Gas Company ("NFG") has Annuity benefits (otherwise known as Defined Benefit Pensions) and Other Post-Employment Benefits ("OPEBs"), which were closed to new participants in 2003. NFG also has Tax Deferred Savings Plans (i.e., 401(k)), and contributions to Retirement Savings Accounts ("RSA"), which are accounts set up within the Tax Deferred Savings Plans ("TDSP") for those employees that were hired after Defined Benefit Pensions were no longer offered to new entrants. See Table 1 below for the number of the Company's participants in the Defined Benefit Pensions, TDSPs, RSAs, and OPEBs.

Table 1: Retirement Benefit Participants (2025)

Normalized Participants	Annuity	TDSPs	RSAs	OPEBs
Eligible Active Participants	23	436	417	23
Inactive Participants	499	75	48	335
Total	522	511	465	358

NFG and the Company have made strides in minimizing retirement-related costs, resulting in lower O&M expense for employee benefits. Specifically, NFG (including the Company) has prudently managed the assets set aside for Defined Benefit Pensions and OPEBs and has taken steps to control costs. These steps have led to the Company not requesting any rate recovery for Defined Benefit Pension or OPEB costs in this rate case.

Q. Are any applicable costs associated with these retirement benefits included in any exhibits?

A. Yes, these costs are covered in National Fuel Exhibit MPW-1 (Benefits) Schedule 2 - Pages 5-6 (401(k)), Pages 9-10, and Pages 11-12 (RSA), but as noted above there is no requested rate recovery.

Q. Please explain the adjustment to National Fuel Exhibit MPW-1, Schedule 2 (Benefits) - Pages 9 - 10.

A. This section adjusts the Company's O&M expense for the cost of the Defined Benefit Pensions (i.e., annuity benefits), which are based on the level of contributions made during the fiscal year. For the historic test year ended September 30, 2025 ("HTY"), the normalized defined benefit pension expense was zero. This was based on the fiscal year allocation contributions and a 73.14% factor (see Direct Testimony of Anthony Formato, National Fuel Statement No. 3) used to determine the amounts to be expensed (herein referred to as "Factor A"). Even though there were contributions within the prior three years, calculating a forward-looking rate request for annuity benefits based on historic contributions would be inappropriate. As a result, based on the projected level of contributions, the forecasted expense during the fully projected future test year ending October 31, 2027 ("FPFTY") is expected to remain zero.

Q. What OPEBs do NFG and the Company currently provide?

A. OPEBs refer to benefits provided to retirees other than pensions. The Company currently provides medical coverage for substantially all employees hired prior to January 1, 2003,

and to a few union employees hired prior to November 1, 2003. The Company also provides prescription drug coverage and life insurance benefits.

Q. Aside from prudent asset management, have NFG and the Company taken any steps to control future OPEB costs?

A. Yes. In January 2003, NFG and the Company implemented a change to the eligibility criteria for OPEBs, whereby non-union employees hired after on or after January 1, 2003, and union employees hired on or after November 1, 2003 are no longer eligible for any retiree medical, prescription drug or life insurance benefits. These actions were purely a cost savings measure. As a result of this cost savings measure and prudent management of the assets set-aside for OPEBs, the Company was in a position to reduce rate recovery of OPEBs to zero in conjunction with its filing in the 2021 OPEB Dockets and continue zero rate recovery in the 2022 Rate Case. In addition, in the 2021 OPEB Dockets, the Company set forth a plan to pass back $54.0 million to ratepayers from 2021-2026 using grantor trust assets, which would further reduce its regulatory liability, which is discussed later in my testimony.

Q. What is the Company's requested OPEB recovery?

A. Consistent with its filing in the 2021 OPEB Dockets and with the settlement in the 2022 Rate Case, National Fuel is continuing to request no OPEB recovery. Additionally, the Company has $6.7 million of funds remaining in the Grantor Trust, which is discussed further below. For accounting and financial reporting purposes, National Fuel records OPEB expense or income in accordance with Accounting Standards Codification No. 715

(formerly known as Statement of Financial Accounting Standards No. 106 "SFAS 106") as determined by its actuary, which is consistent with the Company's historical practice. For the HTY, the net SFAS 106 income was $1,558,903. As the Company is continuing to set its OPEB rate recovery at zero, an adjustment of $1,558,903 million was made to accomplish this.

Q. Does the Company have a remaining OPEB regulatory liability?

A. After the completion of the aforementioned scheduled pass back of grantor trust assets referenced in the 2021 OPEB Dockets, the remaining OPEB regulatory liability will be $44.8 million.

Q. Does the Company have funds set aside to cover this liability?

A. The Company has Voluntary Employees' Beneficiary Association ("VEBA") trusts and a 401(h) account. As of September 30, 2025, the end of the Company's most recently audited fiscal year, the value of the assets in the VEBA trust and 401(h) account in excess of OPEB liability owed to the retirees was $46.9 million, which exceeds the regulatory liability of $44.8 million. This balance is expected to remain after the scheduled pass back of grantor trust assets. However, interest rates (used to calculate the OPEB liability) and investment performance (which would impact the value of the VEBA trust and 401(h) account) will change resulting in subsequent changes to amount of the excess assets. Unlike the aforementioned grantor trust assets, these assets can currently only be used to pay benefits to retirees and related administrative costs, so they are not available to ratepayers to cover the regulatory liability.

Q. Is the Company proposing to address the remaining regulatory liability at this time?

A. The Company is proposing to utilize the remaining grantor trust assets to provide a one-year surcredit of $6,700,000 to the ratepayers during the FPFTY as a continued measure to mitigate rate increases and promote affordability for ratepayers. This proposal and its impact on customers is discussed further in the Direct Testimony of Courtney T. Mann in National Fuel Statement No. 14.

Q. Outside of prudent management of assets set aside for Defined Benefit Pensions, have NFG and the Company taken any steps to control future Pension costs?

A. As discussed above, NFG and the Company closed participation in Defined Benefit Pensions to new participants in 2003. Employees who were already eligible for Defined Benefit Pensions continue to accrue pension benefits, while employees hired after that were offered employer contributions in a RSA, which was set up as an additional benefit within the 401(k) plans. Employees eligible for the Defined Benefit Pensions do not have this RSA benefit within the 401(k) plans. Eligible RSA employees who have provided less than six years of service are given an employer contribution equal to 3% of their base salary or wages to the RSA, while employees who have more service are given an employer contribution of 4% of their base salary and wages to the RSA.

Q. Please explain the adjustment to National Fuel Exhibit MPW-1, Schedule 2 (Benefits) - Pages 11 - 12.

A. This section adjusts the Company's O&M expense for the cost of the RSA benefit. I calculated the Company's weighted average RSA contribution percentage and multiplied it by the compensation subject to RSA across the different labor groups. The increase in compensation and incremental headcount is then projected across these labor classifications out to the FPFTY, and the current weighted average RSA contribution percentage is applied to calculate the projected RSA Company contribution of $1,383,497. Given that RSA contribution levels are based on the compensation levels to which the RSA contribution percentage would be applied, it would be inappropriate to use historical RSA expense (for example, a three-year average) to establish the requested rate recovery. The $1,383,497 projected contribution was multiplied by Factor A to calculate the amount charged to O&M expense of $1,011,890. This amount is $261,839 greater than the expense recorded on the general ledger for HTY, and $197,468 greater than the normalized September 2025 expense. I further note that Pages 11-12 of this exhibit provide a breakdown of the compensation subject to employer RSA contribution along with the RSA contributions across the union, non-union and salaried employee labor groups and across the projection periods.

Q. Please explain the adjustment to 401(k) expense on National Fuel Exhibit MPW-1, Schedule 2 (Benefits) - Pages 5 - 6.

A. This section adjusts the Company's O&M expense for the FPFTY for the cost of the 401(k) Plan. The projected 401(k) expense was determined using the participants who are currently contributing to the 401(k), since only those would receive the employer match, across all labor classifications to determine the compensation subject to 401(k)

employer match and the weighted average employer match percentage. The increase in compensation is then projected across these labor classifications through the FPFTY, the estimated impact of incremental employees, and the current weighted average employer match percentage is applied to calculate the projected 401(k) employee match of $1,504,740. Given that 401(k) employer match levels are based on the compensation levels to which the match percentages are applied, it would be inappropriate to use historical 401(k) expense (for example, a three-year average) to establish the requested rate recovery. This $1,504,740 of projected 401(k) employer match was multiplied by Factor A to calculate the amount charged O&M expense of $1,100,567 for the FPFTY. This amount is $202,097 greater than the expense recorded on the general ledger for the HTY, and $219,584 greater than the normalized September 30, 2025 expense. I further note that pages 5 - 6 of this exhibit provide a breakdown of the compensation subject to employer matching contribution along with the matching contributions across the union, non-union and salaried employee labor groups and across the projection periods.

B. <u>Non-Retirement Benefits</u>

Q. Are there any non-retirement related benefits in any of your exhibits?

A. Yes, the Company offers Group Life Insurance, Hospitalization (i.e., medical and prescription drug coverage), Dental, Stock-Based Compensation, and other miscellaneous benefits. These costs are covered in National Fuel Exhibit MPW-1, Schedule 2 (Benefits) - Pages 1-2 (Group Life), Pages 3-4 (Hospitalization), Pages 7-8 (Dental), and Pages 13-14 (Stock-Based Compensation). In addition, as the Company borrows time from other affiliated subsidiaries, their benefits are charged to the Company in proportion to the time borrowed, which is discussed in National Fuel Exhibit MPW-1, Schedule 2 (Benefits) -

Page 15-16. It should be noted that since Stock-Based Compensation is an integral part of employee retention (including executives), the Company's claim for this expense is discussed in the Direct Testimony of Valerie Hawthorn Wagner (National Fuel Statement No. 4).

Q. Please explain the adjustment to Group Life Insurance on National Fuel Exhibit MPW-1, Schedule 2 (Benefits) - Pages 1 - 2.

A. The Company provides Term Life Insurance and Accident, Dismemberment and Disability ("AD&D") Insurance for its management and union employees. The Term Life Insurance rate is $0.72 per $1,000. This rate is effective through December 31, 2027. Salaried employees' coverage is two times their salary and hourly non-supplemental employees' coverage is $50,000 per person. Supplemental hourly employees' coverage is $25,000 per person. The AD&D insurance rate is $0.02 per $1,000 and is based on the same calculation described above. However, not everyone who receives term insurance receives AD&D. National Fuel also carries a blanket travel plan for which the premium is $110 per month.

During the HTY the total gross monthly and annual costs of these three plans are $2,838 per month or $34,056 annually. After reflecting the projected number of participant employees for the FPFTY, the annual costs are projected to be $35,352 during the FPFTY. Multiplying the total gross annual amount of the three plans by Factor A, results in $25,856 of O&M expense for the plans during the FPFTY. The Officer Life Insurance O&M expense of $26,532 during the FPFTY is then added for a total Group Life Insurance amount to O&M expense of $52,388 during the FPFTY. This amount is

$662 lower than the expense recorded on the general ledger for the HTY, and $948 greater than the normalized expense as of September 30, 2025. Given that the Company entered into new Term Life and AD&D rates in January 2025, it is appropriate to use these forward-looking projections rather than historical expense amounts (for example, a three-year average).

Q. Please explain the adjustment to Hospitalization expense on National Fuel Exhibit MPW-1, Schedule 2 (Benefits) - Pages 3 - 4.

A. This adjustment is for hospitalization expense. Hospitalization expense includes three components: (1) health insurance, (2) a Company provided wellness program, and (3) prescription drug coverage. I will discuss each of these components in turn.

Q. Please explain how you adjusted the Company's claim for Hospitalization expense for the cost of health insurance.

A. To adjust the cost of the self-insurance of health benefits for the FPFTY, I started with the cost of claims not including administrative fees paid per employee per month for the HTY (i.e., $1,304.84). With healthcare costs, in the absence of significant changes in population which might dramatically alter the per employee healthcare spending (for example, the population getting significantly younger or older), starting with the most recent year (i.e., the HTY) is the most appropriate starting point to use in predicting the increase in claims paid from the FPFTY. Then, based on the actual level of increases experienced from the HTY versus the 12 months ended September 30, 2024, I increased the level of claims paid for the HTY by 10.90% to reach an FTY amount of $1,447.07 per

employee per month. I then applied this annualized 10.90% (plus the 0.91% to take account the link month of October 2026) increase to the FTY amount to produce an expected level of claims paid per employee per month of $1,619.41 for the FPFTY. I then added an administrative cost of $69.97 per employee per month from Highmark BCBS to produce a total cost of $1,689.38 per employee per month. This amount was then multiplied by the number of participating active employees projected for the FPFTY to calculate the monthly amount of $653,789. This amount is multiplied by 12 for a total of $7,845,465 during the FPFTY.

Q. Please explain how you adjusted the Company's claim for Hospitalization expense for the costs of the Wellness Program.

A. The Company's wellness program had an actual expense $4,476 during the HTY, which assumed would be the expense for the FPFTY.

Q. Please explain how you adjusted the Company's claim for Hospitalization expense for the costs of prescription drug coverage.

A. The Caremark CVS Carved-Out Pharmacy Prescription Drug Benefit rate per employee was increased similar to the health insurance rate per employee. I started with the actual level of claims paid without administration fees per employee for the HTY (i.e., $216.13). This amount will be a good predictor of the increase in claims paid for the FPFTY. Then, based on the actual level of increases (or in this case decreases) experienced from the HTY versus the 12 months ended September 30, 2024, I decreased the level of claims paid for the HTY by 12.94% to reach an FTY amount of $188.16 per

employee per month. I then applied this 12.94% decrease (plus a 1.08% decrease to account for the link month of October 2026) to the FTY amount to produce an expected level of claims paid per employee per month of $162.04 for the FPFTY. I then added $4.12 per employee per month of administrative costs from Caremark CVS to produce a total cost of $166.16 per employee per month during the FPFTY. This was then multiplied by the number of participating employees projected for the FPFTY to calculate the monthly amount of $36,388. This amount is multiplied by 12 for a total of $436,656 during the FPFTY.

Q. What is the total annual cost of the Company's health insurance, wellness program, and prescription drug coverage benefits?

A. The total projected annual cost for these health care programs is $8,286,897. The total projected annualized supervisory and weekly contributions towards Hospitalization were subtracted to arrive at a total cost of $6,528,710. This was multiplied by Factor A to calculate the amount to be charged to O&M expense of $4,775,099 for the FPFTY. This amount is $903,189 greater than the expense recorded on the general ledger for the HTY, and $914,283 greater than the normalized HTY.

Q. Is the methodology used to calculate Hospitalization expense, including the Company's wellness program and prescription drug coverage benefits, for the FPFTY consistent with the Company's prior rate cases with the PAPUC?

A. Yes, it is the same methodology used in previous rate cases with the PAPUC, and it recognizes the impact of inflationary healthcare trends that organizations across the

United States experience. Using current healthcare costs and applying recent trend data (as opposed to historical averages) are better predictors of future costs. As such, the Company's methodology for calculating Hospitalization expense is appropriate.

Q. Please explain the adjustment on National Fuel Exhibit MPW-1, Schedule 2 (Benefits) - Page 7 - 8.

A. This part of the exhibit shows the calculation of the adjustment of the Dental Expense Benefit provided by the Company. The calculation starts with actual gross amount of dental benefits expense incurred during the HTY and the previous two years of $222,772. Unlike other benefits, dental expense is not influenced by compensation levels of the participants or healthcare inflationary trends, and as a result the use of a three-year historical average for establishing a rate recovery is appropriate. I decreased the $222,772 by the annualized level of employee contributions of $47,236 (which was calculated using the average employee contributions from the HTY and previous two years), which produced net dental costs of $175,536 during the HTY. I then multiplied this amount by Factor A to determine the amount of the O&M expense associated with the Dental Expense Benefit of $128,387 for the FTY and FPFTY. This amount is $19,241 lower than the expense recorded on the general ledger for the HTY.

Q. Please explain the adjustment to National Fuel Exhibit MPW-1, Schedule 2 (Benefits) - Pages 13 - 14.

A. This part of the exhibit calculates the adjustment for stock-based compensation to be the amount being claimed for the FPFTY. The use of historical data (i.e., three-year

averages) for calculating requested rate recovery for stock-based compensation is deemed to be appropriate given that these benefits are not impacted by factors that would impact other benefits such as compensation levels impacting RSA expense/401(k) expense or healthcare inflationary trends impacting Hospitalized expenses. The historical stock-based compensation expenses recorded to O&M expense from the HTY and the two previous years were used to calculate the average of $1,429,959, which was used for the FTY and FPFTY. This amount is $123,312 higher than the amount recorded for the HTY and normalized HTY.

Q. Please explain the adjustment to National Fuel Exhibit MPW-1, Schedule 2 (Benefits) - Pages 15 - 16.

A. This part of the exhibit calculates the adjustment for benefit charges associated with labor charged from NFGDC's New York Division ("National Fuel – NY") and other NFG subsidiaries to the amount being claimed for the FPFTY. For benefit charges associated with labor charged from National Fuel – NY, I used the per book HTY number of $778,446 instead of a three-year average. I used the HTY number as the basis for benefit charges from National Fuel – NY because the NY employee benefits costs recently changed in accordance with a settlement with the New York Public Service Commission in Case 23-G-0627. Due to the settlement, National Fuel – NY's employee benefit costs were updated effective October 2024, which affects the costs charged to PA division for loaned labor. As a result, it is appropriate to use the HTY for requested rate recovery in this case, but not a three-average of the HTY and previous two years. With regards to the benefits associated with labor charged from other subsidiaries, it is appropriate to use a

three-year average since there was no recent rate case in those jurisdictions that would cause the HTY to be any more predictive than the three-year average. As such, I calculated an average of these expenses from the HTY and the two previous years of $409,014 and used this average for the FTY and FPFTY. This amount is $24,381 lower than benefit charges recorded from other subsidiaries, for the HTY.

Q. Does this conclude your direct testimony at this time?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 5-R

Rebuttal Testimony of Michael P. Weidner

Topics Addressed: **Executive Cash Bonus and Stock Based Compensation**

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Michael P. Weidner. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 5, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. The purpose of my rebuttal testimony is to respond to arguments made by certain of the other parties regarding incentive compensation, including stock-based compensation and executive cash bonus incentive compensation. My testimony responds to certain positions of direct testimony submitted by the Bureau of Investigation and Enforcement ("I&E"), I&E Statement No. 1, the direct testimony of Christopher Keller, the Office of Consumer Advocate ("OCA"), OCA Statement No. 2, the direct testimony of Lafayette K. Morgan, and the Office of Small Business Advocate ("OSBA"), OSBA Statement No. 1, the direct testimony of Justin B. Farr regarding incentive compensation issues as well as any related payroll tax impact.

Q. Can you provide a summary of the rate recovery that I&E, OCA, OSBA propose to disallow?

A. Yes, please see the table below, which summarizes the other parties' recommended disallowances.

Summary of Cost Elements Addressed in Statement No. 5-R, Which Intervenors Proposed to Disallow		
Cost Element	**Intervenor**	**Amount Proposed to be Disallowed**
Executive Cash Bonus Incentive Compensation (part of Net Labor Expense)	I&E	$379,731 (with a $22,670 impact to payroll taxes)
Stock Based Compensation (part of Employee Benefits Expense)	OCA	$1,430,000 ($1,429,959 unrounded)
Stock Based Compensation (part of Employee Benefits Expense)	I&E	$909,281
Stock Based Compensation (part of Employee Benefits Expense)	OSBA	$1,382,102

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. No.

III. EXECUTIVE CASH BONUS AND STOCK BASED COMPENSATION

Q. Do you agree with the adjustment proposed by I&E witness Mr. Keller, to disallow the portion of the executive cash bonus incentive compensation attributable to financial performance metrics/goals ($379,731) along with the related payroll taxes ($22,679)?

A. No. I&E's primary argument for denying this portion of incentive compensation is that it only benefits shareholders. Providing a comprehensive incentive compensation program that balances and promotes a set of complementary goals is necessary in today's competitive workforce environment and provides significant benefits for ratepayers.

Q. How does the Company's incentive compensation program benefit ratepayers?

A. Ratepayers benefit from the Company's continued efforts to provide safe, consistent, and high-quality service all while operating at a reduced cost structure. Having executive goals linked to a combination of financial performance as well as safety, reliability, customer service, emissions reduction and diversity and inclusion initiatives incentivizes Company leaders to manage a business that can produce the best results for ratepayers. Having a combination of these goals, working in tandem, provides a synergy that directly benefits ratepayers. The Company also must be able to access capital (equity, short-term debt, and long-term debt) at reasonable costs in order to invest in/maintain infrastructure and hire and retain a talented, high-quality workforce needed to safely and effectively operate that infrastructure. Goals that incentivize strong financial performance are critical to maintaining this cost-effective access to capital, which benefits ratepayers through a lower revenue requirement and lower rates.

Q. Can you provide an example of how National Fuel's focus on financial performance has benefited ratepayers?

A. Yes. A reasonable way to evaluate if the practice of incentivizing financial performance is benefiting ratepayers would be to compare the Company's rate increases to the general

rate of inflation. As I will demonstrate below, the Company's focus on achieving savings through cost containment and capital efficiency has allowed the Company to keep its requested increase in delivery base rates in line with, if not below, general inflation.

Q. What was the effective date of the Company's current base delivery rates?

A. August 1, 2023.

Q. What is the accumulated Consumer Price Index since then?

A. Using data from the U.S. Bureau of Labor Statistics[1], an item that cost $100.00 in August 2023 would cost $107.55 in March 2026 (7.55% cumulative increase).

Q. Is the proposed increase in the overall revenue requirement since the last rate case less than the rate of inflation? What is the percentage increase in the overall revenue requirement from the last rate case?

A. Yes. The Company is requesting a $18,475,000 increase in its updated rebuttal position to its present rate revenues of $265,524,000, which represents an increase of 7.0%. Further, sound financial management has allowed the Company to avoid the need for a base delivery rate increase since 2023, as such, ratepayers have not been subject to increases in the interim periods.

[1] Available at: https://www.bls.gov/data/inflation_calculator.htm

Q. Are there additional reasons that all executive incentive based compensation is important to a Company's success and can lead to cost containment that benefits ratepayers?

A. Yes. Executive performance measures are also designed to ensure retention of key talent in the organization, which directly benefits the ratepayers. Offering competitive compensation packages is critical to retain employees, reinforce continuity of operations and help prevent attrition and the costs associated with turnover that are inevitably borne by the ratepayers. In the absence of incentive compensation arrangements, the Company would be required to offer increased base salaries in order to attract and retain employees. While an approach such as increasing base salaries might be easier to obtain rate recovery, such a compensation arrangement would not benefit the ratepayer since it would not directly incentivize cost containment along with safety, reliability, customer service, emissions reduction and diversity and inclusion initiatives. Therefore, the utilization of compensation packages that jointly incentivize financial performance and safe, reliable and quality service is a cost-effective, results-based approach, which benefits ratepayers. It is reasonable and appropriate for ratepayers to bear the cost of these incentive compensation programs, just like they bear the other costs of the Company from which they benefit.

Q. Given the importance of retaining key talent and incentivizing performance in its entirety as discussed above, should the compensation package be evaluated as a whole for rate-recovery, as opposed to attempting to separately evaluate incentive

compensation based on compensation attributable to financial related performance incentives, non-financial related performance incentives, and retention?

A. Yes, the compensation package should be evaluated as a whole and rate recovery should be provided in full for the reasons stated above, because the Company has demonstrated the ratepayer benefits from all performance and retention incentives. As such, the Company should be allowed to recover the full amount attributable to the Company's executive cash bonus incentive compensation of $855,587, including both the $379,731 attributable to financial performance goals and the $475,856 related to non-financial performance goals.

Q. Given the position noted above, do you agree with I&E's recommendation made in direct testimony to disallow $379,731 (along with the related impact to payroll taxes of $22,670) of rate recovery related to executive cash bonus incentive compensation attributable to financial performance related goals?

A. No, the Company proposes that the $379,731 (along with the related impact to payroll taxes of $22,670) be included in rate recovery.

Q. How does the Company ensure its executive compensation programs are appropriate and reasonable?

A. As discussed in the direct testimony of Valerie L. Hawthorn (Statement No. 4), National Fuel Gas Company ("NFG"), the Company's parent, retains the services of Korn Ferry, a nationally recognized firm that performs compensation analyses and reviews for companies in the energy and other business sectors. The analysis performed by Korn

Ferry helps evaluate the competitiveness of NFG's executive compensation packages. If the executive compensation package is not competitive, National Fuel runs the risk of turnover at the leadership level, which would be detrimental to overall business continuity. As discussed in Valerie Hawthorn's testimony, Korn Ferry's key findings from the most recent national compensation data indicates that National Fuel's total compensation package for executives, which includes base salary, short-term incentive compensation (cash bonus) and long-term incentive compensation (stock-based compensation in the form of performance shares and restricted stock) is at or below the median when compared with nationwide utility and general industry executives. Korn Ferry's findings further demonstrate that National Fuel's current executive compensation structure (including a goal structure that combines both financial and non-financial measures), is reasonable, as it rates at or below median when compared with nationwide utility and general industry executives. This finding further reinforces the appropriateness of National Fuel's executive goal structure comprised of a combination of financial and non-financial measures and demonstrates this goal structure is cost effective.

Q. What other tools are utilized to remain competitive and encourage retention of key employees?

A. Stock-based compensation is also utilized. As discussed above, stock-based compensation is part of the overall executive compensation package. In the event stock-based compensation was to be curtailed or eliminated, then base salary would need to be increased in order for the executive compensation package to remain competitive.

Q. Is stock-based compensation only awarded to executives?

A. No, select non-executive salaried employees also receive stock-based compensation in the form of restricted stock.

Q. What is the purpose of awarding restricted stock units to employees?

A. Restricted stock is utilized to encourage retention of top performers and control for (or avoid) costs associated with turnover. These shares of restricted stock vest over three equal annual installments as service is provided to National Fuel. Given the increasing operational complexities and regulatory requirements experienced by utilities and energy companies and the expanded efforts to modernize pipeline and distribution systems, a competitive compensation package encouraging retention and longevity, including time-vested restricted stock, is critical to the continued success of National Fuel and is in ratepayers' best interests.

Q. What is the dollar amount of requested rate recovery attributable to executive restricted stock?

A. The Company has included $290,746 of executive restricted stock cost in rate recovery.

Q. What is the dollar amount of requested rate recovery attributable to non-executive restricted stock?

A. The Company has included $182,075 of non-executive restricted stock cost in rate recovery.

Q. Do the award and vesting of restricted stock grants to non-executive employees and executives rely on specific achievement of certain goals or performance conditions (financial or otherwise) in the normal course?

A. No, these awards are made to provide an incentive for recipients to provide service to National Fuel for the requisite time and are necessary to retain employees. Employee retention is a critical issue for the Company, as was explained in Ms. Hawthorn's Direct Testimony (National Fuel Statement No. 4).

Q. In OCA witness Morgan argues that stock-based compensation is solely for the benefit of shareholders, and therefore the entire rate recovery request should be disallowed. OSBA witness Farr also argues that stock-based compensation is largely financial related and therefore should be disallowed (except for anything specifically tied to Environmental, Social, and Governance goals). Do you agree with these arguments?

A. No. First, as discussed above, the $290,746 and $182,075 attributable to restricted stock for executives and non-executive supervisors, respectively, are based on continued service provided by its recipients over the requisite time. The importance of these incentives has been previously discussed. Second, performance shares (including those attached to financial related goals) are not only beneficial for the shareholder, but also ratepayers.

Q. What is the dollar amount of requested rate recovery attributable to executive performance shares, and are financial related goals/performance conditions attached?

A. The Company has included $957,138 of executive performance share cost in rate recovery. Key to achieving these performance conditions has been cost containment, operational efficiency, and maintaining access to cost-effective capital, all of which benefit ratepayers.

Q. How do the performance conditions underpinning the executive performance shares promote affordability for ratepayers?

A. The affordability of delivery rates is achieved with the disciplined management of utility costs and finances over the long term. Sustainable affordability requires a culture of cost containment and a commitment to capital efficiency that is set and continuously reinforced by executive leadership. The long-term nature and terms of the performance conditions align with ratepayer interests making the performance shares a critical tool in achieving sustainable affordability of delivery rates for ratepayers.

Q. Do performance shares also have a retention element to them?

A. Yes, there is a retention element to performance shares. Unless otherwise determined by NFG's Compensation Committee, the performance cycle for each performance share grant is three years. It should be noted that there were no awards granted with performance cycles of less than three years during the historical test year, future test year, or fully projected future test year. The Equity Plan provides that in the event that an

executive's employment terminates by reason other than retirement, death, disability, or divestiture by NFG of a subsidiary, any unvested performance shares will be forfeited. As a result, the Equity Plan incentivizes executives not to terminate prior to retirement.

Q. Do you agree with the adjustments proposed by OCA witness Morgan, I&E witness Keller, and OSBA witness Farr to remove the $1,429,959 ($182,075 non-executive restricted stock + $290,746 executive restricted stock + $957,138 executive performance shares) related to stock-based compensation?

A. No. Ratepayers benefit from the retention of employees (including executives), cost containment, operational efficiency, and cost-effective access to capital that is accomplished through financial related goals/performance conditions. Stock-based compensation incentivizes both, and, as such, should be included in rate recovery in its entirety. The Company should be permitted to recover the entire $1,429,959.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes.

NATIONAL FUEL STATEMENT NO. 6

MONIKA M. DUSZENKO

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 6

Direct Testimony of
Monika M. Duszenko

Topics Addressed:
Rate Base
Working Capital
Lead/ Lag Study
Net Plant

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Monika M. Duszenko. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed as a Rate Analyst II in the Rates & Regulatory Affairs department of National Fuel Gas Distribution Corporation ("NFGDC"). In this role, I am responsible for regulatory matters related to NFGDC's Pennsylvania Division ("National Fuel" or the "Company") as well as NFGDC's New York Division ("National Fuel – NY").

Q. Please summarize your educational background and work experience.

A. In 2018, I earned a Bachelor of Science in Business Administration with a concentration in Finance from the State University of New York at Buffalo. Following graduation, I joined Citigroup as a Foreign Exchange Analyst, where I worked from 2018 to 2021. In December 2021, I began my tenure with NFGDC as a Rate Analyst I and was promoted to Rate Analyst II in January 2024.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. Yes, I testified before the New York Public Service Commission ("NYPSC") on behalf of National Fuel – NY in Case 23-G-0627.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. I will address the development of working capital, lead/lag study, actual and projected plant balances, and rate base for the historic test year ended September 30, 2025 ("HTY"), future test year ending September 30, 2026 ("FTY"), and fully projected future test year ending October 31, 2027 ("FPFTY").

Q. Are you sponsoring any exhibits in this proceeding?

Yes, I am sponsoring Exhibit A, Schedules C1, C-2, C-4, C-5, C-7, and C-8 for the HTY, FTY, and the FPFTY.

III. ACCOUNTING AND HISTORIC COSTS

Q. Do the continuing property records of the Company reflect the original cost value of property?

A. Yes. NFGDC's plant in service, retirements, additions, and any book adjustments were recorded per Generally Accepted Accounting Principles ("GAAP") and Uniform System of Accounts requirements by original cost value. These are recorded by division – New York and Pennsylvania.

Q. What process does the Company follow to ensure that property reflected in its plant accounts is in service?

A. Once a capital project is completed, National Fuel's capital project manager in the engineering department documents both the in-service date and the asset retirement units

that were either installed or removed as a part of this project. The engineering department will place the project in-service in the Company's financial software, using the provided information. Once the project is in-service,the identified retirement units are permitted by the software to be unitized from the project by an authorized user within the Company's Accounting or Engineering departments. The unitization process automatically generates the accounting entries to move the costs on the project to the appropriate National Fuel plant property accounts. These entries are subject to review by authorized individuals and further review by internal and external auditors.

IV. FULLY PROJECTED FUTURE TEST YEAR RATE BASE

Q. With reference to National Fuel's Exhibit A (FPFTY), Schedule C-1, please discuss how the Company's specific rate base items are determined.

A. National Fuel's rate base calculation is presented in Exhibit A, Schedule C-1. This schedule summarizes the rate base values for each test year. Column 1 shows the schedule reference information for each component in rate base. Columns 3 and 5 show the amounts of each rate base component, which is comprised of utility plant less accumulated depreciation, plus working capital, gas inventory, materials and supplies, less accumulated deferred income taxes and customer deposits. National Fuel's total Rate Base is $571.6 million for the FPFTY.

A. Utility Plant in Service

Q. Please describe the adjustments to total plant included on Exhibit A (HTY), Schedule C-2.

A. On page 3 of Schedule C-2, $10.3 million was added to the Company's plant in service to account for construction completed not classified ("CCNC"). CCNC includes projects that have been completed and are in service, but for bookkeeping purposes, had not been transferred to "in service" by the end of the HTY. An additional $2.4 million was also added to plant in service for projects that were unitized at the end of the HTY, but costs were distributed to assets at the beginning of the FTY. The total of the two adjustments equals $12.7 million and is shown in Schedule C-2, Page 3, Column 3.

Q. Please describe what is represented in Exhibit A, Schedule C-2.

A. The Company's claim for utility plant in service is represented in Exhibit A, Schedule C-2. The total amount of plant is reflected on page 3, column 5, $957.2 million for FPFTY. Utility plant allows the Company to provide gas service in a safe and reliable manner to its customers.

Q. Where are plant in service additions shown in the Company's exhibits?

A. Plant in service additions during the FPFTY are shown in Exhibit A, Schedule C-2, Page 2 and 3. To calculate additions, the Company calculated a historic capital spending allocation that was determined by calculating the average capital expenditures by month for fiscal years ("FY") 2023, 2024, and 2025. Then, each month's allocation was applied to capital budget expenditures by plant category for each of the future test years.

Q. Where are plant retirements shown?

A. Retirements are in Exhibit A (FPFTY), Schedule C-2, pages 2 and 3. To calculate retirements, the total amount of additions and retirements were determined for FY 2023, 2024, and 2025. Next, a percentage was calculated to determine the relationship of retirements to additions as a percentage for each fiscal year. The relationship percentage was then applied to the capital budget forecast to determine the retirements that will occur in each respective fiscal year. Additionally, a monthly spread was calculated to determine the percentage of retirements that occur per month, based on the distribution of retirements in the 2025 fiscal year. This monthly spread was subsequently applied to the amount determined for retirements.

Q. Are there any Distribution System Improvement Charge ("DSIC")-eligible additions in the plant balances?

A. Per the Company's Modified Long-Term Infrastructure Improvement Plan ("LTIIP") Filing[1], $43.8 million has been included in the HTY and $57.4 million has been included in the FTY. These amounts will be collected through the DSIC rate until the reset of the DSIC in the FPFTY.

Q. Please explain how National Fuel determined its rate base value for utility plant in service.

A. The Company's claim for utility plant in service is the total sum of the closing plant balances as of September 30, 2025. For the FTY ending September 30, 2026, additions

[1] PAPUC Docket P-2022-3034957, filed 12/11/2025

projected from the 2026 capital budget less projected plant retirements are added to the pro-forma balance from September 30, 2025 to determine the utility plant in service. The same is done for the FPFTY for the year ending October 31, 2027. National Fuel uses an allocation methodology to project monthly additions for plant in service for the future test years. Monthly historic spending allocations are calculated and then applied to the capital budget to determine monthly spending for the future test years. The Direct Testimony of Anthony T. Formato (National Fuel Statement No. 3) discusses the capital budget process.

B. <u>Accumulated Depreciation</u>

Q. Please describe the Company's accumulated depreciation claim.

A. Please refer to the Company's Exhibit A, Schedule C-3, the tables included in the depreciation study sponsored by John Spanos from Gannett Fleming, and the direct testimony of John Spanos, National Fuel Statement No. 8. Schedule C-3 shows accumulated provision for depreciation by FERC account. This amount is reduced from the total rate base. The FPFTY is for $320.6 million and is shown on page 1 in schedule C-3.

C. <u>Cash Working Capital</u>

Q. Please explain how the Company determined its rate base value for cash working capital ("CWC").

A. CWC is the capital requirement calculated between (1) the lag in the receipt of revenue for rendering service and (2) the lag in the payment of cash expenses incurred to provide

such service to National Fuel's customers. The CWC is summarized in Exhibit A, Schedule C-1 and Schedule C-4, Page 1. The elements of the working capital claim are listed, along with their corresponding references.

Q. Please describe the revenue lag calculations shown on Exhibit A (HTY), Schedule C-4, page 3.

A. To determine the revenue lag, the Company recorded the gross accounts receivable balances by month for the 13 months ended September 30, 2025. The Company then used this amount to come up with an average accounts receivable balance for this time period. In addition, all sales per month were recorded for the twelve months ("TME") ended September 2025. The accounts receivable turnover ratio was determined by dividing total sales for each period by the average accounts receivable balance, resulting in a 12.61 rate, equivalent to a 28.95 collection lag day factor. To this, the meter read lag factor of 3 days was added, which represents the lag between the meter read and bills being sent out. The service lag was also calculated and represents the time from the mid-point of the service period until the meter reading date. By summing up the collection lag day factor, service lag factor and the meter read lag factor, it resulted in 47.16 revenue lag days for TME September 2025.

Q. Is there a change in revenue lag methodology from National Fuel's last base rate case (Docket No. R-2022-3035730)?

A. In the previous base rate case, infrequent occurrences such as the Covid-19 pandemic impacted revenue lag; therefore, an average of three prior year time periods provided a

more accurate depiction of regular business operation revenue lag. For this HTY, the Company used a one-year period as operation revenues have returned to normal. Additionally in the prior rate case, uncollectible expenses were removed from the accounts receivable balances to mitigate any impacts from the Covid-19 pandemic. No adjustments have been made to the revenue lag in this proceeding.

Q. What is shown in Exhibit A (HTY), Schedule C-4, Pages 4 - 8?

A. These exhibits show the expense lag calculations for payroll (net labor), purchased gas costs ("PGC") and all other operations and maintenance ("O&M") expenses. Also included are calculations for interest payments, tax payments and prepaid expenses. All of these components are used in the working capital calculations, which are summarized in total on Exhibit A, Schedule C-4, Page 1.

Q. How was the mid-point of the service period calculated?

A. The mid-point of service for other O&M expenses and gas purchases is the difference between the date of payment and invoice date.

Q. How are the payroll expense lag days for the CWC claim calculated?

A. National Fuel's employees are paid weekly or bi-monthly, depending on the pay group (i.e., supervisory, hourly, clerical, etc.). The payroll lag is calculated by subtracting the mid-point of the pay period from the pay date. The weighted averages are then calculated by pay group and added together. The lag days are calculated by diving the weighted

average by the total amount of net labor costs. Payroll lag is 10.32 days and is found on Schedule C-4, Column 5, Line 5 (HTY).

Q. How were the lag days associated with the PGC shown on Exhibit A (HTY), Schedule C-4, Page 5, Column 5, Line 74 calculated?

A. The supplier and pipeline invoices were gathered for the HTY. The day's lag in Column 3 was calculated by subtracting the mid-point from the date the invoices were paid. The weighted average was then calculated by multiplying the amount of the invoices by the calculated day's lag. All weighted averages and total amount of invoices paid were totaled. The weighted average final day's lag was calculated by taking the sum of all weighted averages in Column 5 and dividing it by the total of gas purchased in Column 4, Line 73. The final day's lag was 39.83 days.

Q. How were the other O&M expense lag days, shown on Exhibit A (HTY), Schedule C-4, Page 4, Column 5, Line 21 calculated?

A. The O&M expenses are shown per month for the HTY in Column 2. Each month's lag days was calculated by subtracting the mid-point from the date invoices were paid, shown in Column 3. The weighted average was calculated by multiplying the amount of the invoices by that month's lag days, shown in Column 4. The sum of the weighted averages divided by the total amount of invoices paid equals the O&M expense lag days. The O&M expense lag days is 41.01 days, shown in Column 5, Line 21. Please also refer to the Direct Testimony of Anthony T. Formato, National Fuel Statement No. 3, for a detailed discussion of the Company's claimed O&M expenses.

Q. Please explain how the interest payment amounts included on Exhibit A, Schedule C-4 were determined.

A. The rate base for each test year, multiplied by the long-term debt ratio, multiplied by the embedded cost of long-term debt will give the total interest expense. This is shown in Page 6, Column 4, Line 4. The daily amount is then calculated on Line 5. The difference between the revenue lag days and the days to mid-point of the interest payments made is shown on Line 8. The total interest for working capital is the lag days multiplied by the daily interest, shown on page 3 of Schedule C-4, Column 4, Line 9 (FTY and FPFTY) and page 6 of Schedule C-4, Column 4, Line 9 (HTY).

Q. How was the tax payment lag for the working capital requirement shown on Exhibit A, Schedule C-4 determined?

A. The taxes that were used in the tax payment lag calculations were federal income, Pennsylvania property, and Public Utility Realty Tax Act ("PURTA") taxes and are shown in Exhibit A, Schedule C-4. The anticipated taxes for the FPFTY are also shown in Schedule C-4, Page 4. Each tax type was calculated separately for their lag calculation. The result of each tax type is shown in this schedule on Column 10.

Q. How was the working capital allowance for prepaid expenses, shown on Exhibit A (FPFTY) Schedule C-4 derived?

A. In the HTY, the Company recorded actual balances for prepaid expenses. For the FTY and FPFTY, a 13-month average of the actual prepaid balances for insurance, PAPUC Assessment and Information Technology was inflated using the inflation rates in National

Fuel Exhibit ATF-1. Please see the Direct Testimony of Anthony T. Formato (National Fuel Statement No. 3) for additional information on O&M methodology. The Company's claim for prepaid expenses is shown in Schedule C-4, Page 5 (FPFTY).

Q. What is the total amount of the Company's working capital claim?

A. The total working capital for the FPFTY is $6.8 million. This amount is represented on the summary page on Schedule C-4, Page 1 in Exhibit A.

D. <u>Gas Storage Inventory</u>

Q. Please explain how the rate base value for Gas Storage Inventory was determined.

A. The Company's gas storage inventory is included in the rate base claim the same as materials and supplies since gas storage inventory is considered a physical asset. National Fuel acquires gas for storage throughout the year, primarily used during the winter heating season when demand increases significantly. The storage inventory consists of gas volumes stored underground. The Company pays for storage inventory monthly. To determine the appropriate inventory levels, the Company uses a forecast to calculate injections and withdrawals based on most recent gas cost updates. The Company's gas inventory amount is shown in Exhibit A, Schedule C-5 for each test year. The calculation of the inventory amount is a modified 12-month average. Specifically, half of the first and last months' balances are averaged with the balances of the remaining middle months. The Company provided monthly balances for all available months and used the last known historical for the respective months in the FTY and FPFTY. The FPFTY modified average gas inventory balance is $5.7 million.

E. Accumulated Deferred Income Taxes

Q. Please explain how the Rate Base value for Accumulated Deferred Income Taxes ("ADIT") was calculated.

A. The Company's claim for ADIT is set forth in Exhibit A, Schedule C-6 (FPFTY). A detailed explanation of the calculation is provided in the direct testimony of Erica L. Forcucci (National Fuel Statement No. 12).

F. Customer Deposits

Q. Please explain how the Company calculated the rate base value for customer deposits, shown in Exhibit A, Schedule C-7.

A. National Fuel's claim for customer deposits is used to offset the need to provide further capital. The actual balances for customer deposits were recorded and provided on Schedule C-7. In the FTY and the FPFTY, the Company used the last known historical values for the respective months. The Company's claim for customer deposits for the FPFTY is $5.2 million.

G. Materials and Supplies Inventory

Q. What is the rate base claim for materials and supplies inventory?

A. The actual book balances for materials and supplies were recorded for the HTY and for any known balance in the FTY. For the FTY and FPFTY, the Company used the last historical values for the respective months. The average monthly balance as of October 31, 2027 is projected to be $1.6 million, shown on Exhibit A (FPFTY), Schedule C-8.

Q. Does this conclude your direct testimony at this time?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 6-R

Rebuttal Testimony of
Monika M. Duszenko

Topics Addressed:
Rate Base
Working Capital
Lead/ Lag Study
Net Plant

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Monika M. Duszenko. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 6, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. My rebuttal testimony addresses the Pennsylvania Office of Consumer Advocate's ("OCA") recommendations regarding cash working capital and related rate base adjustments presented in OCA Statement No. 2 (direct testimony of Lafayette K. Morgan, Jr.). I also address the Bureau of Investigation and Enforcement's ("I&E") recommendations regarding certain rate base adjustments presented in I&E Statement Nos. 1 and 3 (direct testimonies of Christopher Keller and Ethan H. Cline).

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes. I am sponsoring Exhibit A (Rebuttal Update), Schedules C-1, C-4, and C-9 for the fully projected future test year ("FPFTY").

III. RATE BASE

Q. Have other parties proposed any recommendations to rate base?

A. Yes. OCA recommends reducing rate base by a thirteen month average amount for contributions in aid of construction ("CIAC") and customer advances for construction, as discussed in OCA Statement No. 2 at pages 10–11 and shown on Exhibit LKM-5A.

Q. Do you agree with the adjustment made by OCA?

A. The Company supports reflecting CIAC and customer advances as reductions to rate base. In my direct testimony, I used historic test year balances in developing FPFTY amounts. Consistent with that approach, the Company recommends using the 13-month average balance ending September 30, 2025, which results in $22,968 for CIAC and $60,373 for customer advances for construction. These amounts are reflected in Exhibit A (Rebuttal Update), Schedule C-1.

Q. Did OCA have any additional adjustments to rate base?

A. Yes. OCA also proposes a rate base change intended to reflect alternative rate of return ("ROR") recommendations presented in OCA Statement No. 3 (direct testimony of Maureen L. Reno). This proposal affects the long-term debt ratio used in the interest payment calculation. The Company's position on the appropriate long-term debt ratio is addressed in National Fuel Statement No. 10-R (rebuttal testimony of Joshua C. Nowak), and Exhibit A (Rebuttal Update) reflects the Company's corresponding calculations.

Q. Are there other proposals in the record that affect rate base through related inputs (e.g., O&M expense levels or accumulated depreciation)?

A. Yes. OCA proposes changes to certain O&M expenses that flow through the cash working capital calculation. The Company's response to the O&M expense issue is provided in National Fuel Statement No. 3-R (rebuttal testimony of Anthony Formato). In addition, there are recommendations to change accumulated depreciation, which would affect net plant in service. The Company's response on depreciation-related issues is provided in National Fuel Statement No. 8-R (rebuttal testimony of John J. Spanos).

Q. Did OCA have any additional adjustments to cash working capital?

A. Yes. In OCA Statement No. 2 (direct testimony of Lafayette K. Morgan, Jr.), OCA recommends excluding prepaid expenses from the Company's cash working capital allowance, which would reduce rate base by $1,080,000.

Q. Do you agree with OCA's recommendation to remove prepaid expenses in OCA Statement No. 2, pages 9 and 10?

A. No. The Company's cash working capital calculation reflects the methodology previously approved by the Commission in the Company's prior rate proceeding. Under that approach, prepaid expenses are a component of working capital because they represent cash outlays made in advance of the period in which the related costs are recognized in expense. Accordingly, the Company does not agree with OCA's removal of prepaid expenses from cash working capital.

Q. Are there any adjustments to make to cash working capital?

A. Yes, to ensure the Company's cash working capital reflects a consistent application of the lead/lag methodology and avoids any double counting, the Company will make an adjustment to remove prepaid expenses from the O&M expenses total which calculates the expense lag days. In the lead lag study on the Company's Exhibit A Schedule C-4, the expense lag days in relation to "Other O&M expenses" of 41.01 days used data that removed prepaid expenses from the calculation, but the corresponding working capital in column 2 included prepaid expenses. In Exhibit A (Rebuttal Update), Schedule C-4 at page 2, the Company will remove the prepaid expenses of $2,732,664 from "Other Expenses", so that the O&M expenses and payment days align methodologies. This adjustment confirms that prepaid expenses are reflected once in the cash working capital calculation.

Q. Did any other parties make recommendations to rate base?

A. Yes, I&E provided recommendations to reduce cash working capital in I&E Statement No. 1(direct testimony of Christopher Keller) at pages 22-24 to reduce cash working capital lead by $111,005, based on their adjustments to O&M expenses and I&E's recommended cost of long-term debt ratio.

Q. Do you agree with I&E's recommendation to change cash working capital?

A. No, as explained in the Company's Statement No. 3-R, the rebuttal testimony of Anthony Formato, I&E's proposed expense adjustments are not appropriate and therefore there is no basis to reduce the cash working capital.

Q. Did I&E make any additional recommendations?

A. Yes, in I&E Statement No. 3 (the direct testimony of Ethan H. Cline), I&E recommended that the Company provide an update to Exhibit A – FTY, Schedule C-2 by February 1, 2027 to include actual capital expenditures, plant additions, and retirements by month for the 12 months ending September 30, 2026, and then again for actuals through October 31, 2027 by February 1, 2028, to evaluate the validity of the Company's projections.

Q. Do you agree with I&E's recommendation for this filing requirement?

A. If directed by the Commission or otherwise required in this proceeding, the Company will provide an update of actual plant balances for the FTY and FPFTY through October 31, 2027.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes.

NATIONAL FUEL STATEMENT NO. 7

MICHAEL J. MAGGIOLI

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 7

Direct Testimony of
Michael J. Maggioli

Topics Addressed: Balance Sheet and Historic O&M Expense

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Michael J. Maggioli. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") as a Lead Accountant in the Accounting department.

Q. Please provide your educational background.

A. I graduated from Canisius University in 2013 with a Bachelor of Science in Professional Accounting. I became a Certified Public Accountant in New York on December 16, 2015.

Q. Please provide your professional experience.

A. My full educational background and work experience are set forth in the attached National Fuel Exhibit MJM-1.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. No.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. I am providing testimony on behalf of NFGDC's Pennsylvania Division ("National Fuel" or the "Company") in support of its rate case accounting methodology.

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. Yes, I am sponsoring National Fuel Exhibit MJM-1.

Q. Would additional explanation be helpful concerning any of these exhibits?

A. Concerning the balance sheet exhibits, it should be noted that the balances presented reflect the combined financial position of NFGDC's New York and Pennsylvania jurisdictions. Wherever possible, we have reported the results of National Fuel only. Each exhibit lists the source and scope of the information it presents.

III. ACCOUNTING PROCESS AND HISTORIC COSTS

Q. How are the accounting records of National Fuel maintained?

A. The accounting records of National Fuel are kept in accordance with generally accepted accounting principles and the Federal Energy Regulatory Commission's Uniform System of Accounts as required under the provisions of 52 Pa. Code §59.42.

Q. Are the books and records of National Fuel subject to audit?

A. Yes, the books and records of National Fuel are audited by its internal auditors. In addition, National Fuel's books and records are included in consolidated audits of

National Fuel Gas Company performed by its external auditor, PriceWaterhouseCoopers. The Company's books and records are further subject to audit by the PAPUC.

Q. Does this conclude your direct testimony at this time?

A. Yes.

NATIONAL FUEL STATEMENT NO. 8

JOHN J. SPANOS

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 8

Direct Testimony of
John J. Spanos

Topics Addressed: Depreciation

Dated: January 28, 2026

Q. Please state your name and address.

A. John J. Spanos. My business address is 300 Sterling Parkway, Mechanicsburg, Pennsylvania, 17050 (formerly 207 Senate Avenue, Camp Hill, Pennsylvania, 17011).

Q. With what firm are you associated and in what capacity?

A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC (Gannett Fleming) as President.

Q. How long have you been associated with Gannett Fleming?

A. I have been associated with the firm since June 1986.

Q. What is your educational background?

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College of Pennsylvania.

Q. Are you a member of any professional societies?

A. Yes. I am a member and past President of the Society of Depreciation Professionals. I am also a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

Q. Have you taken the certification examination for depreciation professionals?

A. Yes, I passed the certification examination of the Society of Depreciation Professionals in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.

Q. Will you outline your experience in the field of depreciation?

A. I have over 39 years of depreciation experience, which includes expert testimony in more than 500 cases before approximately 47 regulatory commissions, including this Commission. These cases have included depreciation studies in the electric, gas, water, wastewater, and pipeline industries. In addition to cases where I have submitted testimony, I have also supervised over 900 other depreciation or valuation assignments. Please refer to Appendix A for my qualifications statement, which includes further information with respect to my work history, case experience, and leadership in the Society of Depreciation Professionals.

Q. What is the purpose of your testimony?

A. My testimony is in support of the depreciation studies conducted under my direction and supervision for the gas plant of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company").

Q. Have you prepared exhibits presenting the results of your studies?

A. Yes. National Fuel Exhibit C - Historic presents the results of the depreciation study as of September 30, 2025. National Fuel Exhibit C - Future presents the results of the depreciation study as of September 30, 2026. National Fuel Exhibit C – Fully Projected

presents the results of the depreciation study as of October 31, 2027. In addition, I am responsible for the responses to the following filing requirements pertaining to depreciation under Section 53.53(a)(1) of the Commission's regulations: III.D.17 and III.K.1 through III.K.9.

Q. Please describe Exhibit Nos. C-Historic, C-Future and C-Fully Projected.

A. Exhibit No. C-Historic, titled "2025 Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant as of September 30, 2025," includes the results of the depreciation study as related to the original cost as of September 30, 2025. The report also includes the detailed depreciation calculations. Exhibit No. C-Future, titled "2026 Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant as of September 30, 2026," includes the results of the depreciation study as related to the estimated original cost as of September 30, 2026. The report also includes explanatory text, statistics related to the estimation of service life, and the detailed depreciation calculations. Exhibit No. C-Fully Projected, titled "2027 Depreciation Study – Calculated Annual Depreciation Accruals Related to Gas Plant as of October 31, 2027," includes the results of the depreciation study as related to the estimated original cost as of October 31, 2027.

Q. What were the purposes of your depreciation studies?

A. The purposes of the depreciation studies were to estimate the annual depreciation accruals related to gas plant in service for ratemaking purposes and, using Commission-

approved procedures, to estimate the Company's book reserve at September 30, 2026 and October 31, 2027.

Q. Is the Company's claim for annual depreciation in the current proceeding based on the same methods of depreciation as were used in its most recent Annual Depreciation Report including service life study filed in May 2023?

A. Yes, it is. For most plant accounts, the current claim for annual depreciation is based on the straight-line remaining life method of depreciation, which has been used for over thirty years. For Accounts 391.1, 391.2, 391.3, 394 and 397, the claim is based on the straight-line remaining life method of amortization. The accounts have a large number of units, but small asset values representing slightly less than 3 percent of the depreciable plant. The assets represent items located in office buildings, service centers, garages, and warehouses. Given the difficulty in maintaining accounting records for these numerous assets and high cost for periodic inventories, retirements are recorded when a vintage is fully amortized, rather than as the units are removed from service. All units are retired when the age of the vintage reaches the amortization period. The annual amortization is based on amortization accounting which distributes the unrecovered cost of fixed capital assets over the remaining amortization period selected for each account.

Q. What group procedure is being used in this proceeding for depreciable accounts?

A. The average service life procedure is used in the current proceeding for plant installed prior to 1982 and the equal life group procedure for 1982 and subsequent vintages. This

calculation has been used in the same manner as the Company's most recent annual depreciation reports.

Q. Is the Company's claim for accrued depreciation in the current proceeding made on the same basis as has been used for over thirty years?

A. Yes. The current claim for accrued depreciation is the book reserve brought forward from the book reserve approved by the Commission in the last proceeding.

Q. How was the book reserve used in the calculation of annual depreciation?

A. The book reserve by account was allocated to vintages to determine original cost less accrued depreciation by vintage. The total annual accrual is the sum of the results of dividing the original costs less accrued depreciation by the vintage composite remaining lives.

Q. How was the book reserve as of September 30, 2026, estimated?

A. The book reserve as of September 30, 2026, by account, was projected by adding estimated accruals, gross salvage, and the amortization of net salvage, and subtracting estimated retirements and cost of removal from the book reserve as of September 30, 2025. Annual accruals were estimated using the annual accruals calculated as of September 30, 2025. For most accounts, gross salvage and cost of removal were estimated by (1) expressing actual gross salvage and cost of removal as a percent of retirements by account, for the most recent five-year period, and (2) applying those percents to the projected retirements by account. For the purpose of calculating the

annual accruals, the projected book reserve by account was allocated to vintages based on calculated accrued depreciation as of September 30, 2026.

Q. Was the book reserve as of October 31, 2027, estimated using the same methodology?

A. Yes.

Q. Has a service life study of the Company's gas utility property been performed?

A. Yes. The most recent service life study was performed as of September 2022. The service life study is the basis for the service lives I used to calculate annual accruals. Service life studies are required in Pennsylvania every five years as the next one will be performed in 2028 for data through September 30, 2027.

Q. Briefly outline the procedure used in performing the service life study.

A. The service life study consisted of assembling and compiling historical data from the records related to the gas utility plant of the Company; statistically analyzing such data to obtain historical trends of survivor characteristics; obtaining supplementary information from management and operating personnel concerning Company practices and plans as they relate to plant operations; and interpreting the above data to form judgments of service life characteristics.

Iowa type survivor curves were used to describe the estimated survivor characteristics of the mass property groups. Individual service lives were used for major individual units of plant, such as distribution buildings, housing offices, and shops. The

life span concept was recognized by coordinating the lives of associated plant installed in subsequent years with the probable retirement date defined by the life estimated for the major unit.

Q. What statistical data were employed in the historical analyses performed for the purpose of estimating service life characteristics?

A. The data consisted of the entries made to record retirements and other transactions related to the gas plant during the period 1960-2022. These entries were classified by depreciable group, type of transaction, the year in which the transaction took place, and the year in which the plant was installed. Types of transactions included in the data were plant additions, retirements, transfers, and balances. In the presentation of service life statistics, only the significant exposure points that were utilized in determining survivor curves were plotted. This process is utilized to show my judgment in service life determinations.

Q. What was the source of this data?

A. They were assembled from Company records related to its gas plant in service.

Q. Were the methods used in the service life study the same as those used in other depreciation studies for gas utility plant presented before this Commission?

A. Yes. The methods are the same ones that have been presented previously for National Fuel Gas Distribution Corporation and for other gas companies before the Pennsylvania

Public Utility Commission and that have been accepted by the Commission in its past orders concerning gas utilities.

Q. What approach did you use to estimate the lives of significant structures such as office buildings and service centers?

A. I used the life span technique to estimate the lives of significant structures. In this technique, the survivor characteristics of the structures are described by the use of interim survivor curves and estimated probable retirement dates. The interim survivor curve describes the rate of retirement related to the replacement of elements of the structure such as plumbing, heating, doors, windows, roofs, etc. that occur during the life of the facility. The probable retirement date provides the rate of final retirement for each year of installation for the structure by truncating the interim survivor curve for each installation year at its attained age at the date of probable retirement. The use of interim survivor curves truncated at the date of probable retirement provides a consistent method for estimating the lives of the several years of installation inasmuch as concurrent retirement of all years of installation will occur when the structure is retired.

Q. Has your firm used this approach in other proceedings before this Commission?

A. Yes, we have used the life span technique on many occasions before the Pennsylvania Public Utility Commission.

Q. What are the bases for the probable retirement years that you have estimated for each structure?

A. The bases for the estimates of probable retirement years are life spans for each structure that are based on judgment and incorporate consideration of the age, use, size, nature of construction, management outlook and typical life spans experienced and used by other gas utilities for similar structures. Most of the life spans result in probable retirement dates that are many years in the future. As a result, the retirement of these structures is not yet subject to specific management plans. Such plans would be premature. At the appropriate time, studies of the economics of rehabilitation and continued use or retirement of the structure will be analyzed, and the results incorporated in the estimation of the structure's life span.

Q. Are the factors considered in your estimates of service life presented in Exhibit No. C-Future?

A. Yes. A discussion of the factors considered in the estimation of service lives is presented by account on pages III-2 through III-7 of Exhibit No. C-Future.

Q. Were there any material changes to life characteristics as a result of this rate proceeding?

A. No. There was no material change in the life estimate for plant accounts or subaccounts in this rate proceeding. All life estimates were based on the recent annual depreciation report and the service life study that was conducted.

Q. Please outline the contents of Exhibit No. C-Future.

A. Exhibit No. C-Future is presented in eight parts. Part I, Introduction, sets forth the scope and basis of the study. Part II, Estimation of Survivor Curves, includes a description of the Iowa Curves and the formulation of the retirement rate method. Part III, Service Life Considerations, and Part IV, Calculation of Annual and Accrued Depreciation, include a description of the judgment utilized for life parameters and the explanation of depreciation procedures.

Part V, Results of Study, presents a description of the results and summaries of the depreciation calculations. Part VI, Service Life Statistics, presents the graphs and tables which relate to the service life study. Part VII, Detailed Depreciation Calculations, sets forth the detailed depreciation calculations by account. Part VIII, Experienced and Estimated Net Salvage, presents the cost of removal and gross salvage by account for the years 2022 through 2026.

Table 1, pages V-4 and V-5, presents the estimated survivor curve, the original cost as of September 30, 2026, and the book reserve and calculated annual depreciation for each account or subaccount of gas plant. Table 2 on page V-6 presents the bringforward to September 30, 2026, of the book depreciation reserve as of September 30, 2025. Table 3 on page V-7 sets forth the calculation of the annual accruals used in the bringforward. Table 4, page V-8, presents the experienced and estimated net salvage during the five-year period, 2022 through 2026.

The section beginning on page VI-1 presents the results of the retirement rate analyses prepared as the historical bases for the service life estimates. The section beginning on page VII-1 presents the depreciation calculations related to original cost. The tabulation on pages VII-3 through VII-5 presents the cumulative depreciated original

cost by year installed. The tabulations on pages VII-7 through VII-60 present the calculation of annual depreciation by vintage by account for each depreciable group of utility plant.

Q. Please outline the contents of Exhibit No. C-Fully Projected.

A. Exhibit No. C-Fully Projected includes a description of the results, summaries of the depreciation calculations, and the detailed depreciation calculations as of October 31, 2027. The descriptions and explanations presented in Exhibit No. C-Future are also applicable to the depreciation calculations presented in Exhibit No. C-Fully Projected. The graphs and tables related to service life presented in Exhibit No. C-Future also support the service life estimates used in Exhibit No. C-Fully Projected inasmuch as the estimates are the same for both test years. The summary tables and detailed depreciation calculations as of October 31, 2027 are organized and presented in the same manner as those as of September 30, 2026.

Q. Please outline the contents of Exhibit No. C-Historic.

A. Exhibit No. C-Historic includes a description of the results, summaries of the depreciation calculations, and the detailed depreciation calculations as of September 30, 2025. The descriptions and explanations presented in Exhibit No. C-Future are also applicable to the depreciation calculations presented in Exhibit No. C-Historic. The graphs and tables related to service life presented in Exhibit No. C-Future also support the service life estimates used in Exhibit No. C-Historic, inasmuch as the estimates are the same for both test years. The summary tables and detailed depreciation calculations

as of September 30, 2025, are organized and presented in the same manner as those as of September 30, 2026.

Q. Please use an example to illustrate the manner in which the study is presented in Exhibit Nos. C-Historic, C-Future and C-Fully Projected.

A. I will use Account 376.1, Mains – Excluding Cathodic Protection, as my example, inasmuch as it is the largest depreciable group and represents 45 percent of the original cost of depreciable gas plant as of September 30, 2026.

The retirement rate method was used to analyze the survivor characteristics of this group. The life tables for the 1960-2022 and 1993-2022 experience bands are presented on pages VI-48 through VI-55 of Exhibit No. C-Future. The life tables, or original survivor curve, are plotted along with the estimated smooth survivor curve, the 70-L1.5, on page VI-47.

The calculations of the annual depreciation related to the original cost as of September 30, 2025, of gas plant are presented by type main on pages II-38 through II-40 of Exhibit No. C-Historic. The calculation is based on the 70-L1.5 survivor curve, the attained age, and the allocated book reserve. The calculations as of September 30, 2026, are presented by type main on pages VII-37 through VII-39 of Exhibit No. C-Future and are based in part on the bringforward of the book reserve. Also, the calculations as of October 31, 2027 are presented by type main on pages II-36 through II-38 of Exhibit No. C-Fully Projected and are based in part on the bringforward of the book reserve. The tabulations in Exhibit Nos. C-Historic, C-Future and C-Fully Projected set forth the installation year, the original cost, calculated accrued depreciation, allocated book

reserve, future accruals, remaining life, and annual accrual. The totals are brought forward to Table 1 on page I-3 in Exhibit No. C-Historic, page V-4 in Exhibit No. C-Future and on page I-3 in Exhibit No. C-Fully Projected.

Q. In what manner is net salvage incorporated in the depreciation calculations?

A. As stated on page IV-9 of Exhibit No. C-Future, no adjustment for net salvage was made to the calculated annual depreciation amounts. The total calculated annual depreciation set forth on page I-5 of Exhibit No. C-Historic, page V-8 of Exhibit No. C-Future and on page I-7 of Exhibit No. C-Fully Projected should include an addition for the amortization of negative net salvage in accordance with the practice of this Commission. The amortization is based on experience during the period 2021 through 2025 for the calculation as of September 30, 2025, and on experience during the period 2022 through September 30, 2025, plus estimates for the twelve months ended September 30, 2026 for the calculation as of September 30, 2026.

The amortization for the October 31, 2027 calculation is based on experience during the period 2023 through September 30, 2025, plus estimates for the period October 2025 through September 2027. The amounts of the five-year amortizations are calculated in Table 2 on page I-5 of Exhibit No. C-Historic, in Table 4 on page V-9 of Exhibit No. C-Future and in Table 8 on page I-8 of Exhibit No. C-Fully Projected.

Q. Have you provided a monthly bringforward to October 31, 2027, of the plant and book depreciation reserve as of September 30, 2026?

A. Yes, Exhibit Nos. JJS-01 and JJS-02 at the end of this testimony provide the monthly detail of the plant in service, book depreciation reserve, and the calculated depreciation. These exhibits agree with the fully projected future test year plant and reserve balances as shown on Exhibit No. C-Fully Projected, Table 1 on pages I-3 and I-4.

Q. Does this complete your testimony at this time?

A. Yes, it does.

Appendix A

JOHN SPANOS

DEPRECIATION EXPERIENCE

Q. Please state your name.

A. My name is John J. Spanos.

Q. What is your educational background?

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College.

Q. Do you belong to any professional societies?

A. Yes. I am a member and past President of the Society of Depreciation Professionals and a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

Q. Do you hold any special certification as a depreciation expert?

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.

Q. Please outline your experience in the field of depreciation.

A. In June 1986, I was employed by Gannett Fleming Valuation and Rate Consultants, Inc. as a Depreciation Analyst. During the period from June 1986 through December 1995, I helped prepare numerous depreciation and original cost studies for utility companies in various industries. I helped perform depreciation studies for the following telephone companies: United Telephone of Pennsylvania, United Telephone of New Jersey, and Anchorage Telephone Utility. I helped perform depreciation studies for the following companies in

the railroad industry: Union Pacific Railroad, Burlington Northern Railroad, and Wisconsin Central Transportation Corporation.

I helped perform depreciation studies for the following organizations in the electric utility industry: Chugach Electric Association, The Cincinnati Gas and Electric Company (CG&E), The Union Light, Heat and Power Company (ULH&P), Northwest Territories Power Corporation, and the City of Calgary - Electric System.

I helped perform depreciation studies for the following pipeline companies: TransCanada Pipelines Limited, Trans Mountain Pipe Line Company Ltd., Interprovincial Pipe Line Inc., Nova Gas Transmission Limited and Lakehead Pipeline Company.

I helped perform depreciation studies for the following gas utility companies: Columbia Gas of Pennsylvania, Columbia Gas of Maryland, The Peoples Natural Gas Company, T. W. Phillips Gas & Oil Company, CG&E, ULH&P, Lawrenceburg Gas Company and Penn Fuel Gas, Inc.

I helped perform depreciation studies for the following water utility companies: Indiana-American Water Company, Consumers Pennsylvania Water Company and The York Water Company; and depreciation and original cost studies for Philadelphia Suburban Water Company and Pennsylvania-American Water Company.

In each of the above studies, I assembled and analyzed historical and simulated data, performed field reviews, developed preliminary estimates of service life and net salvage, calculated annual depreciation, and prepared reports for submission to state public utility commissions or federal regulatory agencies. I performed these studies under the general direction of William M. Stout, P.E.

In January 1996, I was assigned to the position of Supervisor of Depreciation Studies. In July 1999, I was promoted to the position of Manager, Depreciation and

Valuation Studies. In December 2000, I was promoted to the position as Vice-President of Gannett Fleming Valuation and Rate Consultants, Inc., in April 2012, I was promoted to the position as Senior Vice President of the Valuation and Rate Division of Gannett Fleming Inc. (now doing business as Gannett Fleming Valuation and Rate Consultants, LLC) and in January of 2019, I was promoted to my present position of President of Gannett Fleming Valuation and Rate Consultants, LLC. In my current position I am responsible for conducting all depreciation, valuation and original cost studies, including the preparation of final exhibits and responses to data requests for submission to the appropriate regulatory bodies.

Since January 1996, I have conducted depreciation studies similar to those previously listed including assignments for Pennsylvania-American Water Company; Aqua Pennsylvania; Kentucky-American Water Company; Virginia-American Water Company; Indiana-American Water Company; Iowa-American Water Company; New Jersey-American Water Company; Hampton Water Works Company; Omaha Public Power District; Enbridge Pipe Line Company; Inc.; Columbia Gas of Virginia, Inc.; Virginia Natural Gas Company National Fuel Gas Distribution Corporation - New York and Pennsylvania Divisions; The City of Bethlehem - Bureau of Water; The City of Coatesville Authority; The City of Lancaster - Bureau of Water; Peoples Energy Corporation; The York Water Company; Public Service Company of Colorado; Enbridge Pipelines; Enbridge Gas Distribution, Inc.; Reliant Energy-HLP; Massachusetts-American Water Company; St. Louis County Water Company; Missouri-American Water Company; Chugach Electric Association; Alliant Energy; Oklahoma Gas & Electric Company; Nevada Power Company; Dominion Virginia Power; NUI-Virginia Gas Companies; Pacific Gas & Electric Company; PSI Energy; NUI - Elizabethtown Gas Company; Cinergy Corporation – CG&E; Cinergy

Corporation – ULH&P; Columbia Gas of Kentucky; South Carolina Electric & Gas Company; Idaho Power Company; El Paso Electric Company; Aqua North Carolina; Aqua Ohio; Aqua Texas, Inc.; Aqua Illinois, Inc.; Ameren Missouri; Central Hudson Gas & Electric; Centennial Pipeline Company; CenterPoint Energy-Arkansas; CenterPoint Energy – Oklahoma; CenterPoint Energy – Entex; CenterPoint Energy - Louisiana; NSTAR – Boston Edison Company; Westar Energy, Inc.; United Water Pennsylvania; PPL Electric Utilities; PPL Gas Utilities; Wisconsin Power & Light Company; TransAlaska Pipeline; Avista Corporation; Northwest Natural Gas; Allegheny Energy Supply, Inc.; Public Service Company of North Carolina; South Jersey Gas Company; Duquesne Light Company; MidAmerican Energy Company; Laclede Gas; Duke Energy Company; E.ON U.S. Services Inc.; Elkton Gas Services; Anchorage Water and Wastewater Utility; Kansas City Power and Light; Duke Energy North Carolina; Duke Energy South Carolina; Monongahela Power Company; Potomac Edison Company; Duke Energy Ohio Gas; Duke Energy Kentucky; Duke Energy Indiana; Duke Energy Progress; Northern Indiana Public Service Company; Tennessee- American Water Company; Columbia Gas of Maryland; Maryland-American Water Company; Bonneville Power Administration; NSTAR Electric and Gas Company; EPCOR Distribution, Inc.; B. C. Gas Utility, Ltd; Entergy Arkansas; Entergy Texas; Entergy Mississippi; Entergy Louisiana; Entergy Gulf States Louisiana; the Borough of Hanover; Louisville Gas and Electric Company; Kentucky Utilities Company; Madison Gas and Electric; Central Maine Power; PEPCO; PacifiCorp; Minnesota Energy Resource Group; Jersey Central Power & Light Company; Cheyenne Light, Fuel and Power Company; United Water Arkansas; Central Vermont Public Service Corporation; Green Mountain Power; Portland General Electric Company; Atlantic City Electric; Nicor Gas Company; Black Hills Power; Black Hills Colorado Gas; Black Hills Energy Arkansas, Inc.; Black Hills Kansas

Gas; Black Hills Service Company; Black Hills Utility Holdings; Public Service Company of Oklahoma; City of Dubois; Peoples Gas Light and Coke Company; North Shore Gas Company; Connecticut Light and Power; New York State Electric and Gas Corporation; Rochester Gas and Electric Corporation; Greater Missouri Operations; Tennessee Valley Authority; Omaha Public Power District; Indianapolis Power & Light Company; Vermont Gas Systems, Inc.; Metropolitan Edison; Pennsylvania Electric; West Penn Power; Pennsylvania Power; PHI Service Company - Delmarva Power and Light; Atmos Energy Corporation; Citizens Energy Group; PSE&G Company; Berkshire Gas Company; Alabama Gas Corporation; Mid-Atlantic Interstate Transmission, LLC; SUEZ Water; WEC Energy Group; Rocky Mountain Natural Gas, LLC; Illinois-American Water Company; Northern Illinois Gas Company; Public Service of New Hampshire; FirstEnergy Service Corporation; Northeast Ohio Natural Gas Corporation; Blue Granite Water Company; Spire Missouri, Inc.; Dominion Energy South Carolina, Inc.; South FirstEnergy Operating Companies; Dayton Power and Light Company; Liberty Utilities; East Kentucky Power Cooperative; Bangor Natural Gas; Hanover Borough Municipal Water Works; West Virginia American Water Company; Evergy Metro; Evergy Missouri West; Granite State Electric; Bluegrass Water; The Borough of Ambler; Newtown Artesian Water Company and Connecticut Water Company.

My additional duties include determining final life and salvage estimates, conducting field reviews, presenting recommended depreciation rates to management for its consideration and supporting such rates before regulatory bodies.

Q. Have you submitted testimony to any state utility commission on the subject of utility plant depreciation?

A. Yes. I have submitted testimony to the Pennsylvania Public Utility Commission; the

Commonwealth of Kentucky Public Service Commission; the Public Utilities Commission of Ohio; the Nevada Public Utility Commission; the Public Utilities Board of New Jersey; the Missouri Public Service Commission; the Massachusetts Department of Telecommunications and Energy; the Alberta Energy & Utility Board; the Idaho Public Utility Commission; the Louisiana Public Service Commission; the State Corporation Commission of Kansas; the Oklahoma Corporate Commission; the Public Service Commission of South Carolina; Railroad Commission of Texas – Gas Services Division; the New York Public Service Commission; Illinois Commerce Commission; the Indiana Utility Regulatory Commission; the California Public Utilities Commission; the Federal Energy Regulatory Commission ("FERC"); the Arkansas Public Service Commission; the Public Utility Commission of Texas; Maryland Public Service Commission; Washington Utilities and Transportation Commission; The Tennessee Regulatory Commission; the Regulatory Commission of Alaska; Minnesota Public Utility Commission; Utah Public Service Commission; District of Columbia Public Service Commission; the Mississippi Public Service Commission; Delaware Public Service Commission; Virginia State Corporation Commission; Colorado Public Utility Commission; Oregon Public Utility Commission; South Dakota Public Utilities Commission; Wisconsin Public Service Commission; Wyoming Public Service Commission; the Public Service Commission of West Virginia; Maine Public Utility Commission; Iowa Utility Board; Connecticut Public Utilities Regulatory Authority; New Mexico Public Regulation Commission; Commonwealth of Massachusetts Department of Public Utilities; Rhode Island Public Utilities Commission and the North Carolina Utilities Commission.

Q. Have you had any additional education relating to utility plant depreciation?

A. Yes. I have completed the following courses conducted by Depreciation Programs, Inc.:

"Techniques of Life Analysis," "Techniques of Salvage and Depreciation Analysis," "Forecasting Life and Salvage," "Modeling and Life Analysis Using Simulation," and "Managing a Depreciation Study." I have also completed the "Introduction to Public Utility Accounting" program conducted by the American Gas Association.

Q. Does this conclude your qualification statement?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 8-R

Rebuttal Testimony of John J. Spanos

Topics Addressed: **Depreciation**

Dated: May 12, 2026

I. INTRODUCTION

Q. Please state your name and address.

A. John J. Spanos. My business address is 300 Sterling Parkway, Mechanicsburg, Pennsylvania, 17050 (formerly 207 Senate Avenue, Camp Hill, Pennsylvania, 17011).

Q. With what firm are you associated and in what capacity?

A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC (Gannett Fleming), a subsidiary of GFT Infrastructure, Inc., as President.

Q. How long have you been associated with Gannett Fleming?

A. I have been associated with the firm since June 1986.

Q. Have you previously filed testimony in this matter?

A. Yes, I previously submitted National Fuel Gas Statement No. 8 in January 2026.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to the depreciation-related testimony of Brian C. Andrews on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). Mr. Andrews has proposed the use of the Average Life Group ("ALG") procedure to calculate depreciation expense and depreciation annual accrual rates in an effort to "mitigate rate increases associated with National Fuel's accelerated investment to updated its infrastructure."[1]

Q. Please summarize your rebuttal testimony.

A. Mr. Andrews has proposed a reduction in depreciation expense of $4.67 million based on an issue that the Commission has already clearly addressed and decided

[1] OCA Statement 4, p. 3, lines 14-15

consistently for almost 40 years. The issue relates to the depreciation procedure that National Fuel Gas Distribution Corporation ("National Fuel" or "Company") has been utilizing for developing depreciation rates and expense for 40 years. National Fuel uses the Equal Life Group ("ELG") procedure instead of the Average Life Group ("ALG") procedure. The Average Life Group procedure is most commonly identified in Pennsylvania as the Average Service Life ("ASL") procedure. The use of the ELG procedure was established with the Pennsylvania Public Utility Commission ("PUC") during the 1980s and has been used by most utilities within the Commonwealth of Pennsylvania to calculate depreciation expense and annual depreciation accrual rates since that time spanning a period of approximately 40 years.

In my testimony, I will address the following topics. First, I will explain Mr. Andrews' lack of understanding of how depreciation expense and annual depreciation accrual rates are calculated within the confines of a rate case in the State of Pennsylvania. Second, I will explain the impact of proposing such an excessive reduction of depreciation expense to the Company without any change in operation or practice. Third, I will address how Mr. Andrews' proposed depreciation rates and his perspective on his justification of those rates are completely misinformed. Mr. Andrews clearly ignores all of the components of how depreciation rates are established in Pennsylvania and quite disturbingly is selective on following the proper concepts of depreciation. Fourth, I will explain why the recent decisions regarding ELG in other state jurisdictions that Mr. Andrews uses to support his ALG proposal are not applicable in this case. And

lastly, I will show that the Company's proposed composite annual depreciation accrual rate of 2.45% calculated as of October 31, 2027 is consistent with the range of composite annual depreciation accrual rates of other gas distribution utilities within the United States regardless of the depreciation procedure utilized.

II. EQUAL LIFE GROUP VS AVERAGE LIFE GROUP

Q. What is the equal life group procedure?

A. For the ELG procedure, a group of property (e.g., a vintage within a property account) is subdivided into groups having equal service lives. The size of these "equal life groups" is based on the estimated survivor characteristics of the account. Depreciation can then be calculated for each equal life group based on the straight line method, meaning that an equal amount of the group's service value is recorded as depreciation expense in each year of service. The total depreciation for an account is then the summation of the calculated depreciation for each equal life group. Based on the survivor curve estimate for an account, the ELG procedure mathematically estimates the life for each unit in the account, and then depreciates each unit over its expected life. The procedure is also known as the Unit Summation Procedure.

Q. How does the ELG procedure differ from the ASL (also referred to as ALG) procedure?

While the ELG procedure calculates depreciation for each equal life group, the ASL (or ALG) procedure depreciates every asset within an account over the average life of the entire account. Using equal life groups, rather than an average life, as the basis for depreciation provides a more precise calculation that better matches

recovery with consumption of assets by depreciating assets that have shorter lives than the average over their shorter lives (and the longer-lived assets over their longer lives) as opposed to depreciating all assets over the average life for the group.

Q. Is ELG supported by depreciation authorities?

A. Yes. ELG is discussed and supported in authoritative depreciation texts and academic literature. For example, Robley Winfrey, who developed the Iowa survivor curves at Iowa State University and is regarded as a pioneer of utility depreciation practices, referred to the ELG procedure as "the only mathematically correct procedure."[2]

Depreciation Systems by Wolf and Fitch, also supports the appropriateness of ELG stating, "Application of the equal life group procedure is generally considered to better match the consumption of capital with service provided than does application of the average life procedure."[3]

Q. Please explain how depreciation is determined using the ELG procedure.

A. A simple two-unit example will demonstrate how the ELG procedure more appropriately matches cost recovery to consumption than the ASL procedure. In this example, each unit costs $1,000. Unit A will be in service for 5 years, and unit B will be in service for 15 years. There is no net salvage for these units.

[2] Robley Winfrey, Depreciation of Group Properties, Bulletin 155 (Ames, IA: Iowa State University Press, 1942, reprinted 1969); p. 71

[3] Frank K. Wolf and W. Chester Fitch, *Depreciation Systems* (Ames, IA: Iowa State University Press, 1994); p.75

For the ASL procedure, the average service life for the two units is 10 years ([5+15]/2), so the annual depreciation rate is 10% (1/10) throughout the lives of both units. For the first five years, the total annual depreciation amount is $200 ($2,000 x 10%). At the end of year 5, the total annual accruals for the account is $1,000 ($200 x 5). Unit A is then retired, which results in a reduction in the plant in service and accumulated depreciation of $1,000, consistent with established plant retirement procedure. At the start of year 6, Unit B remains in service with an accumulated depreciation balance of $0. At this point, one-third of Unit B's service life has expired, and its full original cost must still be recovered.

For the remaining 10 years, $100 ($1,000 x 10%) of annual expense is accumulated in depreciation, for a total of $1,000 when Unit B is retired. Thus, at the time of Unit B's retirement, the Company will have fully recovered the total depreciable cost of both units. However, at the end of year five, only one unit remained in service with two-thirds of its life expectancy left but with 100% of that unit's original investment still to be recovered. As a result, the ASL procedure is ineffective in matching cost recovery to the actual consumption of the asset. This is a characteristic deficiency of the ASL procedure.

When depreciation is determined using the ELG procedure, the pattern of cost recovery better matches actual consumption. Using the same two-unit example, the annual depreciation expense under the ELG procedure is calculated by summing the annual expense for each equal life group. In this case, there are two equal life groups – one for Unit A, which has a life of 5 years, and one for Unit B, which has a life of 15 years. The annual depreciation rate for Unit A is 20% (1/5)

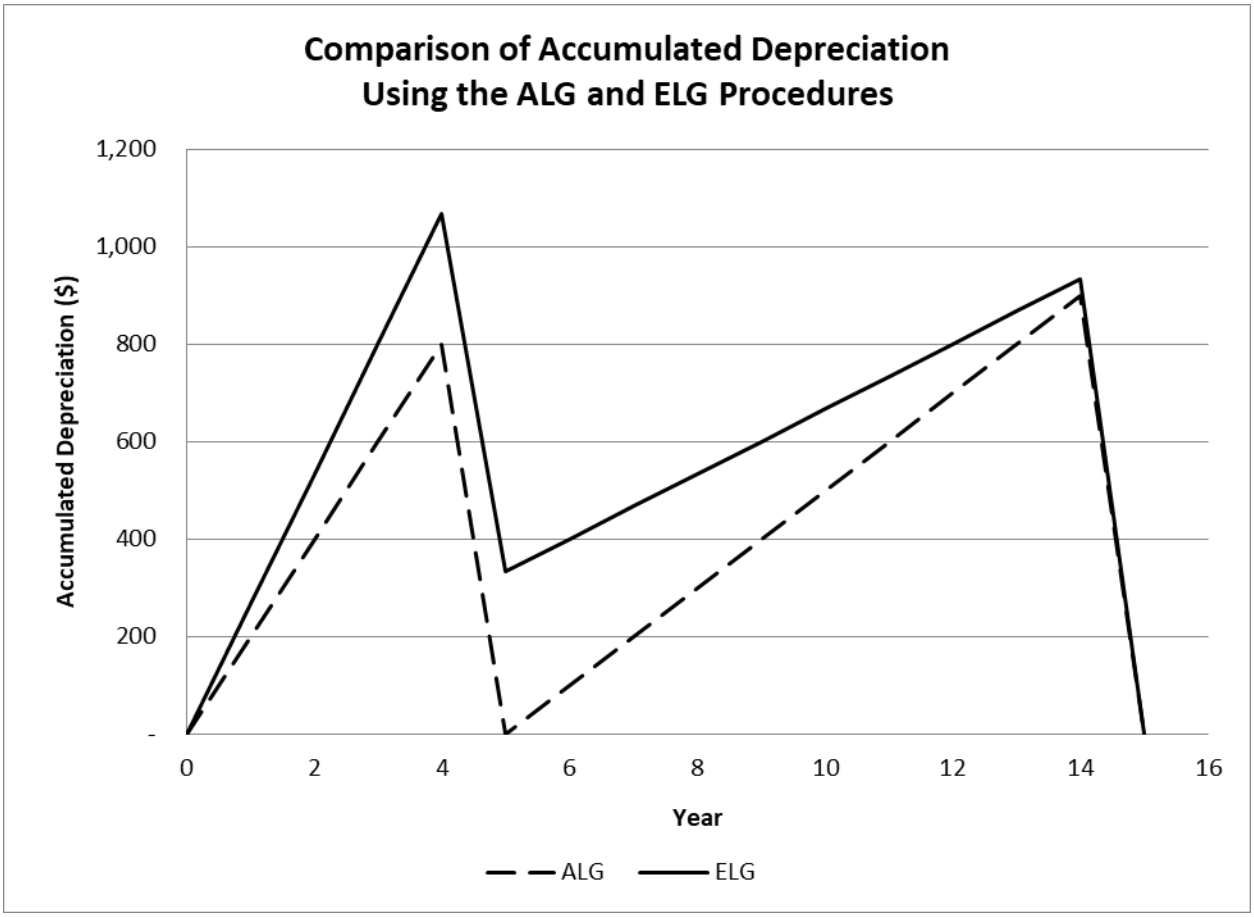
and for Unit B is 6.67% (1/15). Thus, the annual accruals for years 1 through 5 will be $200 ($1,000 x 20%) for the first equal life group (Unit A) summed with $66.67 ($1,000 x 6.67%) for the second (Unit B), or $266.67. At the end of year 5, when Unit A is retired, the total accruals would be $1,333.33 ($266.67 x 5). The retirement of Unit A results in a reduction of $1,000 in accumulated depreciation, and at the start of year 6, the $1,000 original cost of Unit B remains with $333.33 in accumulated depreciation. Thus, with one-third of Unit B's life consumed, accumulated depreciation is exactly one-third of the original cost for this unit.

In the years 6 through 15, the annual depreciation expense is $66.67 for a total of $666.67 over the 10-year period. After the retirement of Unit B, the accumulated depreciation is $0 ($1,000 of accruals less the $1,000 retirement of Unit B), and the full recovery of both units has been obtained.

As this example shows, the ELG procedure better matches the cost recovery of both units with their actual service lives. Figure 1 below provides a graph of the accumulated depreciation for both procedures. The end of year 5 provides the best illustration of the difference between the two procedures. Under the ELG procedure, Unit A is fully recovered when retired at the end of year 5; Unit B is one-third through its service life and has had one-third of its cost recovered. This contrasts with the ASL procedure, in which accumulated depreciation is $0 at the end of year 5, even though the only unit remaining in service has consumed one-third of its service life. Clearly, the ELG procedure provides a better match regarding the consumption of the service value for the two units. Additionally, rate

base under ELG at the end of year 5 is $667 (=$1,000-$333) versus $1,000 (=$1,000 - $0) under ASL.

Figure 1. Comparison of Accumulated Depreciation Using the ALG and ELG Procedures



Q. You have provided a simple two-unit example demonstrating how ELG works. Do the same principles apply to larger property groups with many units?

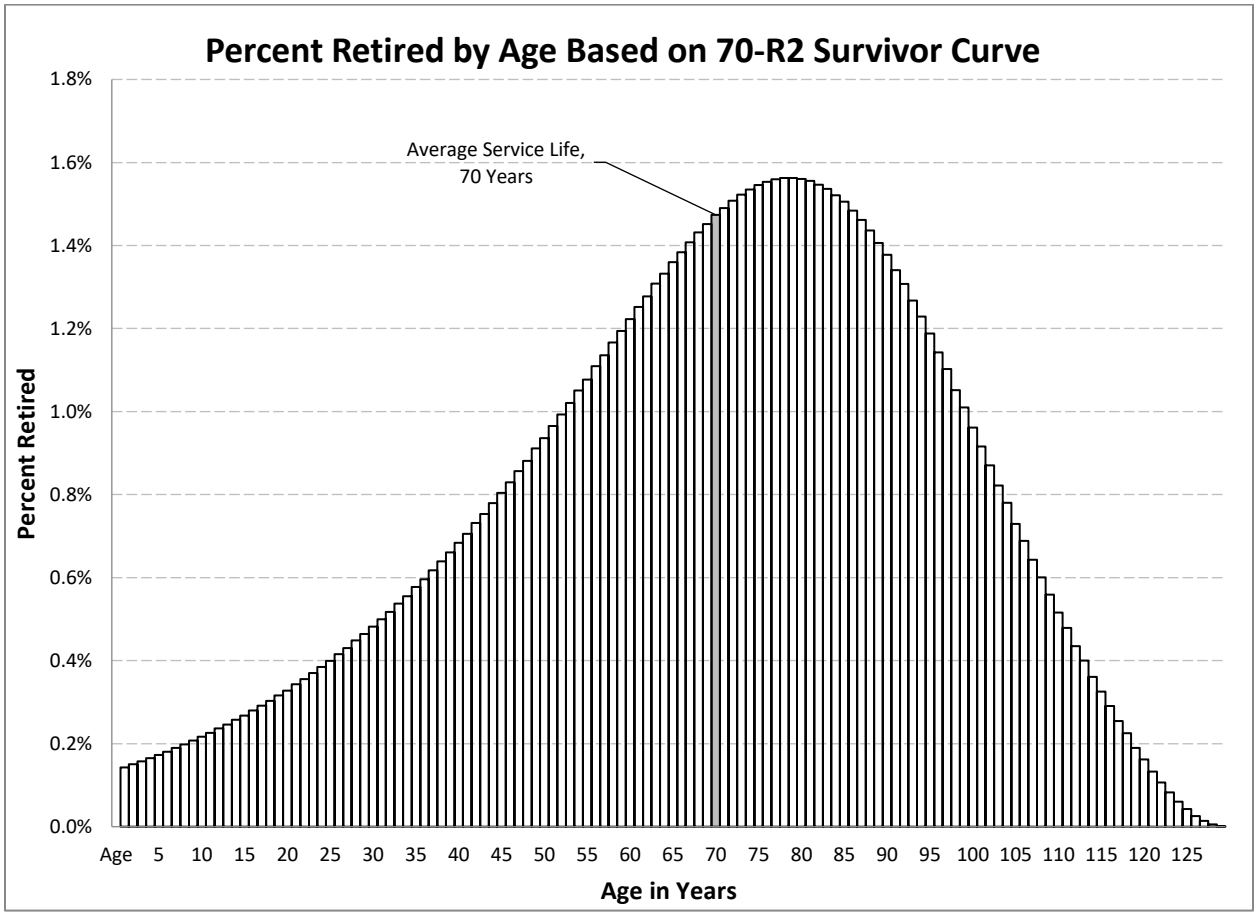
A. Yes. The same principles apply when the ELG procedure is applied to a large group of property with many units, as is typical of utility property. The survivor curve estimated for each property account can be used to divide an account into equal life groups. The survivor curve allows for the calculation of the percentage of the

property account that is in each equal life group, which allows for the calculation of ELG annual depreciation accruals for the entire property group. Under the ASL procedure, the depreciation expense for all property in the account is calculated based on the average service life for the entire group.

The ELG procedure recognizes the reality of dispersion. Specifically, it recognizes that in actual utility operations only a very small percentage of the account will be retired at the average service life. Figure 2 below is a chart of the frequency curve for the 70-R2 survivor curve. The frequency curve shows the percentage of property in this account that will be retired at each age, based on the estimated survivor curve. This percentage is also the size of each equal life group.

The shaded bar in Figure 2 represents the percentage of property that will have a life of 70 years. In other words, this shows the percentage of property that is expected to be in service for the average service life. Only 1.47% of the assets will be in service for exactly 70 years. In contrast, a majority, 98.53%, of the assets will have a service life different than 70 years.

Figure 2. Percent Retired by Age Based on 70-R2 Survivor Curve



The ELG procedure recognizes this dispersion and allocates costs for each equal life group over the expected life for that group. The service lives indicated by the 70-R2 survivor curves range from 1 year to 130 years. As a result, the ELG procedure allocates cost in a manner that approximates the result of each asset being depreciated over its actual life. Conversely, the ASL procedure depreciates every unit of property within an account over the same life, that is, the average life. As Figure 2 shows, this average life will be incorrect most of the time – in this example, the average life will be the wrong life for 98.53% of the individual assets.

Just as in the case for the two-unit example provided above, the ELG

procedure better matches capital recovery with the actual lives forecast by the estimated survivor curve.

III. PENNSYLVANIA PRECEDENT

Q. Is the ELG procedure supported by other depreciation authorities?

A. Yes. ELG is discussed and supported in authoritative depreciation texts and academic literature. As noted previously, Robley Winfrey, who developed the Iowa survivor curves that are universally used in estimating service lives based on historical retirement data, referred to the ELG procedure as "the only mathematically correct procedure." [4]

Q. Has the ELG procedure been previously adopted in Pennsylvania?

A. Yes. ELG is the predominant method used in Pennsylvania for many years. Most Pennsylvania gas, electric and water utilities have used the ELG procedure since the 1980s. ELG was adopted for National Fuel in the 1980s related to vintages from the previous rate case and has been used for depreciation since this approval.[5] Generally, every five years beginning in the mid-1980s, the Company has filed a service life study report with the Commission for approval based on Commission regulations. In 2023, National Fuel submitted its most recent five-year service life study report to the Commission and all depreciation parameters and methods, including the use of the ELG procedure, were approved. Additionally, National Fuel submits annual depreciation reports to the Commission each year updating

[4] Robley Winfrey, Depreciation of Group Properties, Bulletin 155 (Ames, IA: Iowa State University Press, 1942, reprinted 1969); p. 71

[5] ELG was adopted for many Pennsylvania utilities on a go-forward basis. For this reason, vintages of plant subsequent to the adoption of ELG use ELG while older vintages use ASL. For National Fuel, vintages 1982 and subsequent use ELG and vintages 1981 and prior use ASL

the Company's depreciation accrual rates for book purposes as well as identifying the underlying depreciation parameters and calculation methods and procedures used to determine depreciation expense. Under the Commission's regulation 52 Pa. Code §73.9(c), once such depreciation reports are filed and accepted "*[i]n subsequent ratemaking proceedings, the most recent annual depreciation report or service life study approved or deemed approved for accounting purposes only under this chapter, constitutes a rebuttable presumption as to the reasonableness of the accrued depreciation claimed for ratemaking purposes, and the burden of proving the unreasonableness of the accrued depreciation shall be on the challenging party*."

Q. Are the Company's current depreciation rates based on the ELG procedure?

A. Yes. The Company's most recent annual depreciation report was filed on March 31, 2026 and most recent service life study was filed in May 2023. All have been approved for accounting purposes using the ELG procedure. The ELG procedure was also adopted in the most recent rate case, Docket No. R-2022-3035730 for the appropriate vintages.

Q. Since the use of ELG is the predominant and longstanding practice in Pennsylvania, has Mr. Andrews provided evidentiary support for his recommendation that the Company should deviate from this practice?

A. No. None of Mr. Andrews' arguments support overturning longstanding precedent despite having the burden of doing so under 52 Pa. Code §73.9(c). He appears to

disagree with ELG simply because it can produce higher depreciation rates, but he provides no evidence for why lower depreciation rates are more appropriate.

Mr. Andrews has not supported his claim that the Company's approved depreciation rates or calculation procedures, which are based on longstanding precedent, are unreasonable. Further, Mr. Andrews ignores the issue of precedent, in effect only arguing that his proposal should be adopted because it results in lower depreciation expense and a short-term reduction in rates for current customers. He does not consider the other associated components of developing rates or why National Fuel should have considerably lower rates than other gas companies.

However, as I will explain, Mr. Andrews is incorrect that the longstanding use of ELG costs customers more than ASL. In fact, the opposite is true. Current customers benefit from the continued use of ELG, because rate base is lower than had ASL been used for this time. The more precise recovery through ELG benefits customers over time, because shorter-lived assets are correctly recovered over their useful lives, resulting in a lower rate base and lower return on rate base that exceeds the higher annual depreciation expense. Further, the alleged benefit proposed by Mr. Andrews, of lower short-term rates, is the result of the *change* in procedure, not from the procedure itself. Over time, the ASL depreciation rates will result in a higher rate base and higher overall cost to customers.

Q. Has the commission issued a recent ruling regarding the ELG vs. ALG?

A. Yes. In December of 2025, the Commission issued its Opinion and Order addressing ELG vs. ALG in Docket No. R-2025-3053499.

Q. Please provide the excerpt from the opinion and order in Docket No. R-2025-3053499 addressing the ELG vs. ALG issue.

A. In Docket No. R-2025-3053499, the Commission's Opinion and Order addressing ELG vs. ALG is reflected below.

> Based on our review of the record, the ALJs' Recommended Decision, the Exceptions to the Recommended Decision, and Replies thereto, we agree with the ALJs that the Company presented evidence outweighing the evidence presented by the OCA on this issue. Therefore, we find that the ALJs properly recommended that the Commission reject the OCA's proposal to adopt the ASL procedure in this proceeding. Accordingly, we shall deny the OCA's Exception No. 1.[6]

Q. WAS OCA WITNESS ANDREWS ALSO THE OCA WITNESS RELATED TO DEPRECIATION IN DOCKET NO. R-2025-3053499?

A. No, however, he was involved in Docket No. R-2024-3046519, which was the prior case for Columbia Gas which also used the ELG procedure. He is clearly aware of not only the precedent in Pennsylvania but also the many components of determining depreciation rates in this state jurisdiction which he ignores.

Q. Has OCA Witness Andrews offered any support for his ALG proposal in the instant case that was not provided in other cases recently in Pennsylvania?

A. No, he has not. In fact, his positions in this case clearly show he does not consider any of the factors that would properly recover depreciation expense under the guidance in this jurisdiction.

[6] Pa. PUC v. Columbia Gas of Pennsylvania, Inc., Docket No. R-2025-3053499 (Opinion and Order entered Dec. 9, 2025), p. 111.

IV. DEPRECIATION AND RATE BASE

Q. How does Mr. Andrews discuss the impact of ELG on customer rates?

A. Mr. Andrews states on page 23, lines 7 and 8 of his testimony "Utilities typically only update their depreciation expense recovered from customers in the context of a base rate case, which is often not an annual occurrence. When depreciation rates for new assets are proposed using the ELG procedure, the rates put forward for approval would be analogous to the year 1 depreciation rate in this example. Therefore, if the ELG method were approved in a depreciation study, given this example and left in place for 10 years, the effective depreciation rate would be 34.38% every year. To be just to consumers and to produce reasonable rates, ELG depreciation rates should be updated each year and the corresponding depreciation expense adjusted in base rates; however, the ELG depreciation rates are not properly implemented and create intergenerational inequities, significantly overcharging customers in base rates based on the higher depreciation rates in earlier years."

Q. Has National Fuel filed a recent rate case?

A. Yes. Including the instant rate case, National Fuel filed a rate case most recently in 2023.

Q. Is National Fuel required by Pennsylvania regulations to update its depreciation expense and annual depreciation accrual rates each year by filing an Annual Depreciation Report?

A. Yes.

Q. Do National Fuel's proposed ELG depreciation rates produce just and reasonable rates?"

A. Absolutely yes.

Q. Do depreciation rates based on the ELG procedure produce the most appropriate match of recovery of the assets within an account by the utilization of the assets in an account based on the survivor curve?

A. Absolutely yes.

Q. Please explain this concept further.

A. Depreciation impacts customer rates in two ways. Depreciation expense is a direct component of the revenue requirement; however, accumulated depreciation[7] is also a *reduction* to rate base. A higher level of accumulated depreciation results in a lower rate base, a lower return on rate base and, therefore, lower customer rates when compared to a lower level of accumulated depreciation.

The implication of Mr. Andrews' testimony is that a utility has an incentive for higher depreciation expense because it results in higher customer rates, and thus more cash flow for the Company. However, in the long term, his description of the rate impact is fundamentally incorrect. Higher depreciation expense will, over time, result in higher accumulated depreciation. Because average depreciation rates for a utility are typically in the 2% to 3% range and the return on rate base is higher (typically 7% to 8% or more), higher depreciation expense tends to produce lower customer rates over time. Mr. Andrews's suggestion that a

[7] Accumulated depreciation is the depreciation expense recorded to date, less recorded retirements and cost of removal, plus recorded gross salvage.

utility has an incentive to have higher rates for depreciation expense is simply incorrect and does not create an intergenerational inequity.

The longstanding use of ELG depreciation rates for Pennsylvania utilities has resulted in a lower rate base than if ASL had been used. Customers today pay lower customer rates than if ASL had been used during the years since ELG's adoption. As a result, it has been in customers' interest, not only to use ELG but also to use it consistently.

Over time ASL will result in higher customer rates than ELG. It is correct to assume that if the Company were to switch from ELG to ASL there would be a *short*-term benefit to current customers. However, this is not because ASL is in customers' best interest in the long term, but only because current customers would benefit from both lower ASL depreciation rates and from the lower rate base that exists due to the longstanding use of ELG.

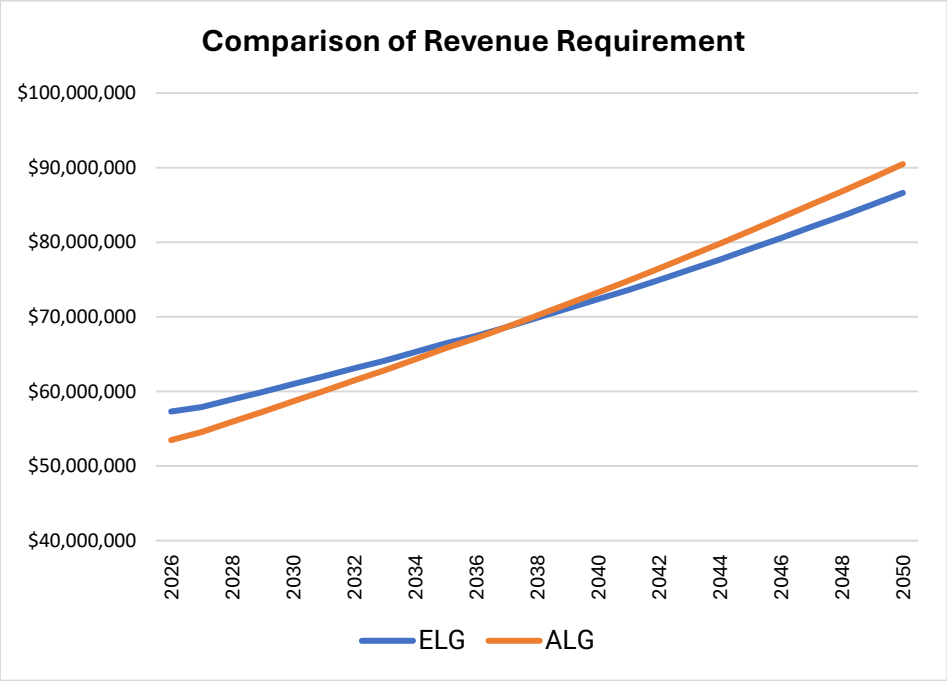
Mr. Andrews' proposal is therefore not a recommendation that is in the long-term interest of lower customer rates. It is instead a short-term subsidy only to current customers who benefit from ELG depreciation rates that were paid by a previous generation of customers. The costs of a higher rate base will be paid for by future customers who will have to pay higher overall customer rates. Adopting ALG would serve as an intergenerational subsidy to current customers at the expense of other generations of customers.

Q. Can you illustrate this concept?

A. Yes, this concept is illustrated in Exhibit No. JJS-R1, which forecasts plant and reserve balances for National Fuel through 2050 under two scenarios: one

adopting the ALG procedure and the other maintaining the currently-approved ELG procedure for vintages 1982 and newer. Figure 3 below shows a high-level estimate of the Company's revenue requirement for the period 2025 through 2050 under each of these scenarios. This demonstrates that while ELG leads to higher depreciation expenses in the short term, it results in lower revenue requirements over the long term. The ELG approach is more beneficial to customers as it provides more stable and lower rates over time.

Figure 3. Comparison of Revenue Requirement



V. INTERGENERATIONAL EQUITY

Q. Please explain the concept of "intergenerational equity."

A. Intergenerational equity is a ratemaking principle in which customers receiving the benefit from the use of an asset (e.g., from gas utility property used to provide gas service) are the same customers who pay for the cost of that asset - no more,

no less. There are two related concepts when considering intergenerational equity as it pertains to depreciation. The first is the inequity that results when customers pay for assets from which they receive no service. For example, if an asset is retired before becoming fully depreciated, then customers subsequent to the retirement will have to pay for an asset from which they are not receiving service. This is less equitable, as one generation of customers bears the cost of an asset from which they receive no service. Depreciation rates should be designed to avoid such an outcome. However, in real-world operations, circumstances can change such that assets are retired earlier than expected. This results in a situation that is different than designing depreciation rates to include intergenerational inequity, which should be avoided.

The second concept is related to the distribution of depreciation charges over the life of an asset. For example, if depreciation expense is higher in the earlier years of an asset's life and lower in later years (or vice versa), this also is less equitable because one generation of customers pays a higher share than the next.

In my professional opinion, the first concept related to intergenerational equity can be more detrimental to customers than the second. That is, there is greater inequity resulting from a customer paying for an asset from which they received no service than the inequity resulting from one generation paying a somewhat different share of the same asset than another generation.

Q. How does the ELG procedure calculate depreciation expense?

A. The ELG procedure calculates depreciation expense for assets with like lives within a depreciable group in accordance with the Iowa Survivor Curve proposed for the

account and summing that depreciation expense for each similar life group of assets to develop an annual depreciation accrual rate applicable to the depreciable group. This procedure is designed to more appropriately match the recovery of the assets' costs to the period of time over which they are providing service to rate payers.

Q. How does the ALG procedure calculate depreciation expense?

A. The ALG procedure calculates depreciation expense by applying the same average service life from the proposed Iowa Survivor Curve to all assets within a depreciable group rather than grouping assets within a depreciable group by like lives. The ALG procedure operates with the assumption that some of the assets within a depreciable group will retire prior to the average service life applied to the depreciable group and other assets will survive longer than the average service life applied to the depreciable group. Continuing, the ALG procedure assumes the over-recovery of the assets surviving longer than the average service life will offset the amount of the under-recovery of the assets retiring prior to reaching the average service life of the depreciable group.

Q. Does the use of ELG vs. ALG or vice versa impact the total amount of asset cost to be recovered?

A. No. Both procedures are designed to recover the total service value of an asset over the asset's service life.

Q. Has Mr. Andrews claimed that the ELG procedure produces intergenerational inequity?

A. Yes.[8]

Q. Why does Mr. Andrews make that claim?

A. Given the precise nature of the calculation process utilized in the ELG procedure, the level of depreciation expense associated with assets that are younger than the proposed average service life is higher than depreciation expense using the ALG procedure. Conversely, as the assets mature and the lives grow longer, the level of depreciation expense associated with assets that are older than the proposed average service life is lower than depreciation expense using the ALG procedure. Mr. Andrews' claim focuses on the higher level of depreciation expense calculated for younger assets while disregarding the associated lower level of depreciation expense calculated associated with the older, more mature assets within the depreciable group. Mr. Andrews' claim misrepresents this more accurate allocation of depreciation expense as intergenerational inequity.

Q. Does the use of the ELG procedure produce Intergenerational Inequity?

A. No, quite the opposite. The very nature of the ELG procedure more precisely calculates depreciation expense for assets with like lives within a depreciable group and sums that expense to develop an annual depreciation accrual rate applicable to the depreciable group. As a result, it more appropriately matches the recovery

[8] Andrews, pp. 24-25, lines 4-11 and 1-2

of the asset's cost to the period of time over which it is providing service to rate payers.

In contrast, there is a stronger argument that the ASL procedure results in intergenerational inequity. Because depreciation expense on shorter-lived assets occurs over the average service life, recovery for these assets is deferred. ELG produces a more equitable recovery by recovering these costs over the actual, shorter, service lives.

Q. Does the use of the ELG procedure require the calculation of annual depreciation rates to be updated more frequently than the ALG procedure to prevent intergenerational inequity?

A. No. Regardless of the procedure selected, the calculation of depreciation expense and annual depreciation accrual rates should be updated regularly to prevent intergenerational inequity and the inherent variable of plant activity.

Q. How frequently does Pennsylvania regulation require the calculation of depreciation rates?

A. Pennsylvania regulation requires utilities operating within the state to calculate and file updated depreciation rates annually. This annual requirement alleviates concern for the development of generational inequity.[9]

[9] Bulletin 155, p. 71

VI. ALL FACTORS FOR DETERMING DEPRECIATION RATES

Q. Has Mr. Andrews considered all the key components for determining depreciation rates?

A. Absolutely not. He clearly ignores all the key factors of developing a depreciation rate in order to emphasize only one factor, which is completely improper.

Q. Please explain all of the factors that affect the development of a depreciation rate.

A. Depreciation rates are determined on many factors or key components that each affect the depreciation rate that should be used to properly recover the full service value of all assets by account. Additionally, this should be done in a systematic and rational manner. The first two key components are the service life and net salvage percentage. The service life estimate is represented by the survivor curve. The net salvage component is typically a percentage of cost of removal minus gross salvage that are applied to the accrual rate in order to recover the full service value over the life of the asset. Pennsylvania is unique to all other states in that the net salvage component is a five year amortization of the incurred costs after the asset is retired. Thus, a deferral. Second, is the depreciation procedure and method. Procedures are ALG vs ELG and the method is either remaining life or whole life. The next component to focus on is the plant to reserve ratio at the test year dates. Finally, the age of the surviving plant at the test year dates. Each of these factors has an impact on the depreciation rate, it is not just the depreciation procedure. Additionally, you must consider all of these factors when comparing to other utilities within the same state as well as those in other state jurisdictions.

Q. Has Mr. Andrews considered all of these factors in developing his testimony?

A. Disturbingly not. He clearly ignores the special handling of the net salvage recovery deferral in Pennsylvania. He does not consider the remaining life versus whole life component nor does he consider how close the theoretical reserve to book reserve variance is, which clearly shows the recovery of many years has been fair and reasonable based on the factors in place and the expected plant investment that has taken place over the past and forecasted into the future.

Q. Is Mr. Andrews selective in which depreciation factors he wants to follow when conducting his depreciation calculations?

A. Yes. He attempts to compare the depreciation procedure across other jurisdictions but none of the other factors when considering how depreciation rates are determined within each jurisdiction.

Q. Mr. Andrews continually discusses ELG as an accelerated procedure and in a high investment period depreciation rates would be getting higher?

A. However, he does not address that fact that from the historic test year to the fully projected future test year using the ELG procedure the composite rate goes down.

Q. Has Mr. Andrews provided decisions regarding ELG procedure from other jurisdictions to support his proposed use of the ALG procedure?

A. Yes. Mr. Andrews cites decisions from Indiana and Kentucky to support his proposal of the ALG procedure in this case.

Q. Why are the Indiana and Kentucky decisions not applicable to the instant case?

A. Both the decisions referenced by Mr. Andrews were cases involving electric utilities with an asset base including electric generation, transmission and distribution assets which are significantly different assets involving significantly different costs associated with them and more importantly assets that are being recovered over much shorter remaining lives than originally planned.

Q. Was the Indiana decision referenced in Mr. Andrews' direct testimony based on a "higher than average investment cycle"?

A. Yes. I have provided an excerpt from the Indiana decision referenced by Mr. Andrews below citing to both "a changed landscape" and "a higher than average investment cycle" as the basis of the Indiana Utility Regulatory Commission decision.

> While we have determined in the past that the ELG methodology was appropriate and acknowledge the weight given to precedent in many prior decisions, we always evaluate each case as it comes before us and do not need to approve the same methodology based on prior decisions, especially in light of a changed landscape. The use of ELG in a higher than average investment cycle has the effect of unnecessarily increasing the near term depreciation expense as compared to the use of ALG.[10]

Q. Does "a changed landscape" exist for National Fuel?

A. No. National Fuel is operating within the same "landscape" that has existed for many rate cases. The ELG procedure has been proposed and approved in each of those rate cases.

[10] Final Order, Cause No. 45253, p. 90

Q. Is National Fuel experiencing "a higher than average investment cycle"?

A. Yes, but not to the same degree as was discussed in the Indiana case. The increased investment relates to the continuation of projects that have been in place for quite some time, however, the cost of materials is much higher. The majority of the work being done in recent years for National Fuel is the replacement of low pressure pipe to intermediate pressure pipe that is affecting many gas utilities in the mid-Atlantic and northeast regions. I would not consider National Fuel's service territory to be a high growth area that is really the driver for the higher than average investment cycle that is referenced in Mr. Andrews testimony. Given the level of retirement dollars have not increased much in the past few years and with what was forecasted it is clear the increase is due to the replacement of the older pipe. Once again, if Mr. Andrews studied the details of the data he would see that the plant investment plan that National Fuel is following is consistent with others in the area. None of this is the result of the ELG procedure.

Q. Is the Company's proposed 2.45% composite depreciation rate calculated using the ELG procedure as of October 31, 2027 reasonable and consistent with comparable gas distribution utilities in the United States?

A. Yes. In fact, in reviewing the composite depreciation rate utilized by various other gas distribution utilities one can see the average exceeds 2.45%. The attached Exhibit No. JJS-R2 sets forth composite depreciation rates of comparable gas distribution utilities from recent rate cases.

Q. Is the proposed 1.96% composite depreciation rate calculated by Mr. Andrews using the ALG procedure as of October 31, 2027 reasonable and consistent with other gas distribution utilities in the United States?

A. No, the 1.96% composite depreciation rate proposed by Mr. Andrews is unreasonably low and inconsistent with other gas distribution utilities in the industry. In fact, Mr. Andrews recognizes it is low in his testimony on page 36, but he justifies it by saying net salvage in Pennsylvania is the cause. This statement just emphasizes Mr. Andrews' disregard for all the components of developing a fair rate of utilities in Pennsylvania. Including a net salvage accrual like other jurisdictions would significantly increase the annual depreciation rate. Additionally, the Company has been properly conducting annual depreciation updates per regulations which confirm a consistent recovery pattern for the asset utilization.

Q. Can you further comment on how the 1.96% composite depreciation rate suggested by Mr. Andrews is not reasonable?

A. Yes. Mr. Andrews twice in his testimony (pages 17 and 30) attempts to compare National Fuel's results in this case with the National Fuel New York property. He attempts to say Pennsylvania should follow the New York depreciation procedures because Pennsylvania has accelerated rates, however, when comparing the National Fuel Pennsylvania Division composite rate of 2.45% that I calculate or the 1.96% composite rate that he calculates he does not justify why National Fuel New York has a higher composite rate which is over 3.0%. Mr. Andrews clearly ignores

all the important factors that determine a depreciation rate along with fair and reasonable recovery for National Fuel in this case.

Q. Does this complete your Prepared Rebuttal Testimony?

A. Yes, it does.

NATIONAL FUEL STATEMENT NO. 9

MARK C. SCHAEFER

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 9

Direct Testimony of Mark C. Schaefer

Topics Addressed: **Capital Budget**
Leak Prone Pipe Replacement Program

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Mark C. Schaefer. My business address is 1100 State Street, Erie Pennsylvania 16501.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation, ("NFGDC") as an Assistant General Manager with responsibility in the Engineering Services department.

Q. Please provide your educational background.

A. In 1995, I graduated from Oregon State University with a Bachelor of Science degree in Civil Engineering.

Q. Please provide your professional experience.

A. I began my career in 1996 working as an Engineering Technician for the City of Hillsboro Engineering Services Department in Hillsboro, Oregon. From 1999 through 2003, I worked for WRG Design, a civil engineering consulting firm in Portland, Oregon as a Project Engineer/Project Manager responsible for designing civil engineering related private and public infrastructure improvement projects. In December 2003, I began my career in the gas industry with Northwest Natural, a local natural gas distribution company based in Portland, Oregon, where I was employed as a Project Engineer/Project Manager designing and coordinating multiple gas distribution and transmission capital pipeline and facility improvement projects until December of 2013. In December 2013, I

relocated to Erie, Pennsylvania and began employment as a Senior Engineer in the Engineering Services department of NFGDC's Pennsylvania Division ("National Fuel" or "Company"), supervising the Pennsylvania district engineering group. In summer 2018, my role expanded to include supervision of both the Pennsylvania and New York district engineering groups within our Engineering Services department. In February 2021, I was promoted to Assistant General Manager. I am also a registered Professional Engineer in the Commonwealth of Pennsylvania.

Q. What are your responsibilities in your current position?

A. I currently supervise and manage our Measurement, Regulation and Odorization ("MRO") group and our Technical Materials groups as well as support our Technical Training and Engineering Development Programs. In addition, I am also responsible for tracking and supporting our annual NFGDC Capital Budget and leak prone pipe ("LPP") Replacement Program.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. Yes. I provided direct testimony on behalf of National Fuel under Docket No. R-2022-3035730 for the Company's last base rate case. I have also testified before the New York Public Service Commission in Case 23-G-0627.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. I will provide testimony in support of the Company's capital budget and proposed accelerated LPP Replacement Program.

III. CAPITAL BUDGET

Q. Please explain the Company's capital plant additions related to distribution and transmission plant.

A. The Company has increased its capital expenditures related to distribution and transmission plant since 2023, with an actual spend from 2023 to 2025 of $129.5 million for replacement of mains, services and measurement and regulation stations. As referenced in Table 13 of the Company's December 11th, 2025, Amended Long Term Infrastructure Improvement Plan ("LTIIP") filing the Company plans to continue to increase spending in 2026 and 2027, with a planned total spending of approximately $253.4 million over the 5-year period as seen in Table 1 below.

Table 1: Actual & Projected Annual Capital Expenditures Related to Modernization

Fiscal Year	CapEx ($MM)	Actual / Budget
2023	$37.2	Actual
2024	$48.5	Actual
2025	$43.8	Actual
2026	$57.4	Budget
2027	$66.5	Budget
Total	$253.4	

This is an increase of approximately 113% in this area over the actual total spending from 2017 to 2021 of $118.9 million as seen in Table 2 below.

Table 2: Capital Expenditures Related to Modernization (2017-2021)

Fiscal Year	Capital Expenditures	
	Budget ($MM)	Actual ($MM)
2017	$20.0	$19.8
2018	$22.2	$20.5
2019	$24.1	$25.2
2020	$26.4	$24.8
2021	$25.7	$28.7
Total	$118.4	$118.9

Q. How does the Company's actual capital spending compare to the budget?

A. As seen in Table 2 above, from 2017 to 2021, the Company achieved its budget targets within 0.5% and from 2022 to 2025, the Company achieved its budget targets within 1.5% as seen in Table 3 below.

Table 3: Annual Capital Expenditures Related to Modernization (2022-2025)

Fiscal Year	Capital Expenditures	
	Budget ($MM)	Actual ($MM)
2022	$25.3	$21.7
2023	$33.8	$37.2
2024	$44.0	$48.5
2025	$46.0	$43.8
Total	$149.1	$151.2

Q. Why did the Company file an Amended LTIIP in December 2025?

A. As seen in Table 4 below, the Company is projecting an increase in the five-year total estimated cost of the LTIIP of 30% from the existing LTIIP projection. This increase is due to higher LPP replacement costs. The Commission's regulations require a utility to

file for a major modification to its LTIIP if the total estimated cost of the LTIIP increase by more than 20%.

Table 4: Amended LTIIP Expenditure Projections (2023-2027)

Year	LTIIP ($MM)	Amended LTIIP ($MM)	Increase ($MM)	Percentage Increase
2023	$34.1	$37.2	$3.1	9%
2024	$37.9	$48.5	$10.6	28%
2025	$38.7	$43.8	$5.1	13%
2026	$39.1	$57.4	$18.3	47%
2027	$45.8	$66.5	$20.7	45%
Total	$195.6	$253.3	$57.7	30%

Q. What are the reasons for the increased LPP replacement costs?

A. The increase in costs is primarily attributed to increases in the average cost per LPP replacement mile for many reasons, including by not limited to increases in restoration costs, material costs, contractor costs, permitting costs and overall inflationary increases from the COVID pandemic.

Q. How much has the average cost per LPP replacement mile increased?

A. As described in the Amended LTIIP, the average cost per mile has increased over 30% for Distribution LPP from an average cost per LPP mile between 2019 and 2022 of $460,000 to a cost per LPP mile of $627,000 in 2024 as seen in Figure 1 below. In addition, the average cost per diameter-inch mile for transmission and high-pressure steel pipeline replacements have increased by over 70% from an average cost per diameter-inch mile between 2019 and 2021 of approximately $170,000 to a cost per diameter-inch mile of approximately $295,000 in 2024 as seen in Figure 2 below.

Figure 1: Distribution Costs per LPP mile (2019-2024)

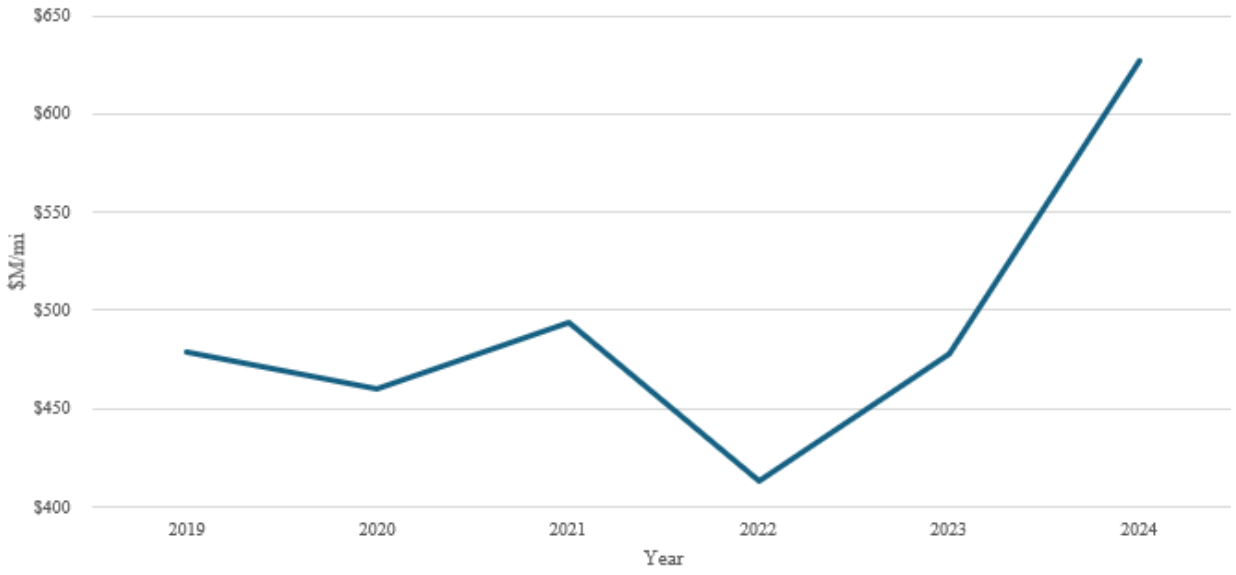

Figure 2: Transmission & HP Steel Distribution Steel Replacement Costs (2019-2024)

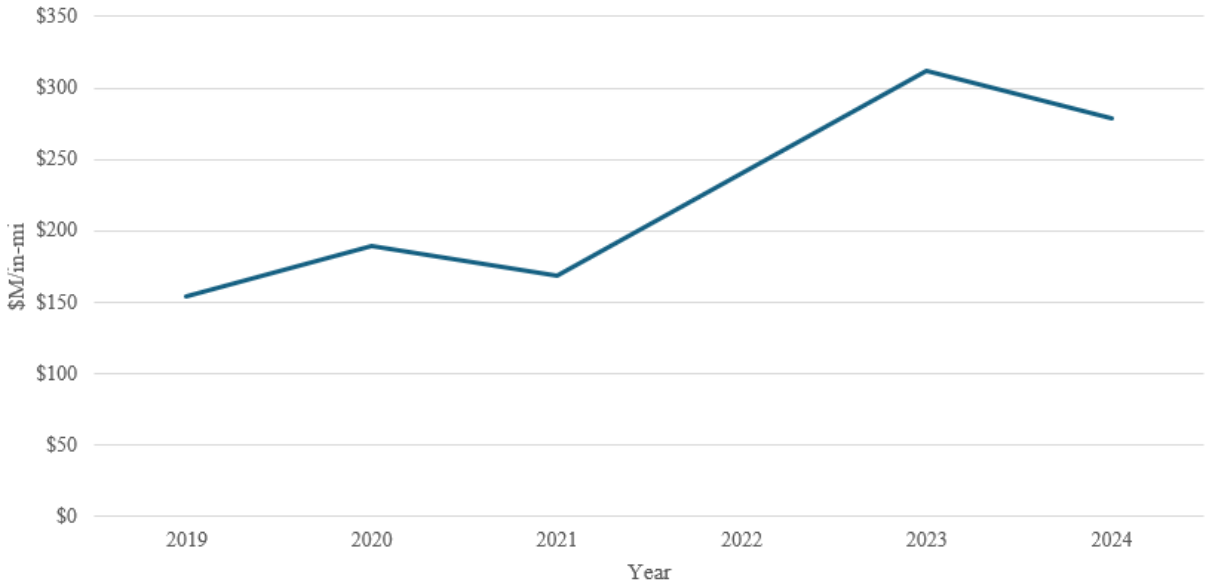

Q. What types of pipe material are included in the Company's LPP Replacement Program?

A. The Company has included bare steel, wrought iron and historic plastics that have exhibited or may be prone to leakage, in its LPP Replacement Program.

Q. Please describe The Company's LPP Replacement Program

A. The Company has made significant progress in the effort to replace LPP through our Systematic Replacement Program. This annual program prioritizes pipeline replacements on a system-wide basis using a comprehensive planning process through our Geographic Information System ("GIS") and our Distribution Probabilistic Risk Model. The Systematic Replacement Program is designed to identify and prioritize LPP replacement projects to reduce risk, control leak rates on LPP and increase the overall system reliability of our distribution system. As seen in Table 5 below, from calendar year end 2016 through 2024, the Company has eliminated 371 miles or 31% of its leak prone bare steel and wrought iron pipelines and 7,337 or 34% of its bare steel services.

Table 5: Bare Steel and Wrought Iron Mileage & Bare Steel Services (2016-2024)

Bare Steel & Wrought Iron Mileage & Bare Steel Services (2016-2024)		
Year	CY End Mainline Miles	CY End Bare Steel Services

2024	812	14,115

Based on PHMSA annual DOT reporting

[2] Adjusted for 41.594 miles corrected during 2018 records review; Pipe classified as bare but identified as coated.

Q. Please describe how the Company identifies LPP projects under its Systematic Replacement Program.

A. The Systematic Replacement process begins each fall, at the conclusion of the annual leak survey cycle. The Company utilizes GIS to perform a geographic leak analysis to identify areas of concentrated leakage. Our Engineering and Operations management then review areas of higher priority during our semi-annual planning meetings at each operating location. Public safety is of primary importance when considering pipeline replacement projects. During the planning process we utilize our Distribution Probabilistic Risk Model along with reviewing areas of system reliability concerns, active corrosion, and customer interruptions as well as potential conflicts with proposed highway and municipal public improvement projects through the Company's municipal outreach program. The result of the Systematic Replacement review includes three types of projects including smaller scope projects typically completed by Company construction crews, mid-sized projects completed by our contractor blanket construction crews and larger individual projects that are also competitively bid to a pool of qualified contractors.

Q. Please describe the Company's municipal outreach program.

A. Each spring the Company's highway utility coordinator mails out letters to municipalities within the Company's service territory requesting information on upcoming highway and municipal infrastructure improvement projects planned within the jurisdiction. The requested information includes copies of construction designs, anticipated scopes, and estimated start dates. The goal is to identify conflicts and coordinate LPP and other gas

facilities replacement projects with municipal projects to optimize efficiencies by relocating our facilities in advance of construction. When projects do not involve a direct conflict, the Company may be able to avoid future pavement cuts by replacing LPP prior to repaving. This outreach also provides an opportunity for the Company to review public improvement designs, identify conflicts, and attempt to coordinate with the municipality to potentially avoid or minimize relocating non leak prone pipe facilities through design changes.

IV. SYSTEM RELIABILITY AND SAFETY

Q. How does the Company incorporate elements of its Distribution Integrity Management Program ("DIMP") Plan and Transmission Integrity Management Plan ("TIMP") into its pipeline replacement and facility program?

A. Many DIMP and TIMP elements and programs are considered during pipeline replacement project planning, including the Company's Systematic Replacement Program discussed above. Both DIMP and TIMP Plans at the Company have System Reliability Reporting ("SRR") programs, which are used to identify operational problems on pipelines and metering and regulation stations. They are used specifically to evaluate threats to facilities in the categories of natural force damage (primarily washouts and exposures), equipment failure, other outside force damage, incorrect operation, and other causes. When an abnormal operating condition is discovered, an SRR is issued and tracked until the condition is remediated, often resulting in replacement of the facility. System Reliability Reports are tracked as part of the Company's DIMP performance measure process and are discussed at yearly spring and fall meetings with appropriate

Company personnel. Additionally, Engineering investigates plastic system leaks and reports of visually unacceptable fusions or non-pullout resistant couplings through its plastic system integrity program. This program includes accelerated actions that are prescribed based on the likelihood and potential consequences of a future leak. Remediation of fusion leaks and visually unacceptable fusions or non-pullout resistant couplings includes a review of as-built records to determine the number and possible locations of fusions on the project. Aerial photography is reviewed to determine the proximity of buildings. Based on the records review and the number of fusions on the job, additional fusion or coupling inspections or removal of known remaining fusions or couplings may be directed. Based on inspection results, replacement may be required.

Q. What existing plastic pipeline materials are within the Company's operating system?

The Company's existing plastic pipeline is comprised of a combination of Medium-Density Polyethylene ("MDPE"), High-Density Polyethylene ("HDPE") and unknown vintages. Table 6 below lists pipeline vintage as of October 1st, 2025.

Table 6: Plastic Pipeline by Vintage as of October 1st, 2025

Vintage	Miles
Aldyl A - MDPE 2306 & MDPE 2406	251.7
Orange MDPE 2306	119.0
Black HDPE 3306	0.2
Driscopipe 6500 - MDPE 2406	2.4
Yellow MDPE 2406	808.3
Black HDPE 3408/4710	565.0
Unknown	1,543.9
Total	3,290.4

Q. What efforts has the Company made to identify and categorize its unknown plastic pipe?

A. The Company categorizes and replaces its unknown plastic pipeline through thorough record reviews as well as opportunistically throughout the course of its construction operations. This two-pronged approach has reduced the overall mileage of unknown plastic by over 250 miles between 2022 and 2025, from 1,803 in 2021 to under 1,550 in 2025. The Company recognizes there is additional risk associated with unknown vintage plastic. As such, plastic with an unknown vintage in Company records is defaulted in the Company's Distribution asset risk model to the most conservative grade considering the install year.

Q. Has the Company identified any issues with specific material types of vintage plastic pipe?

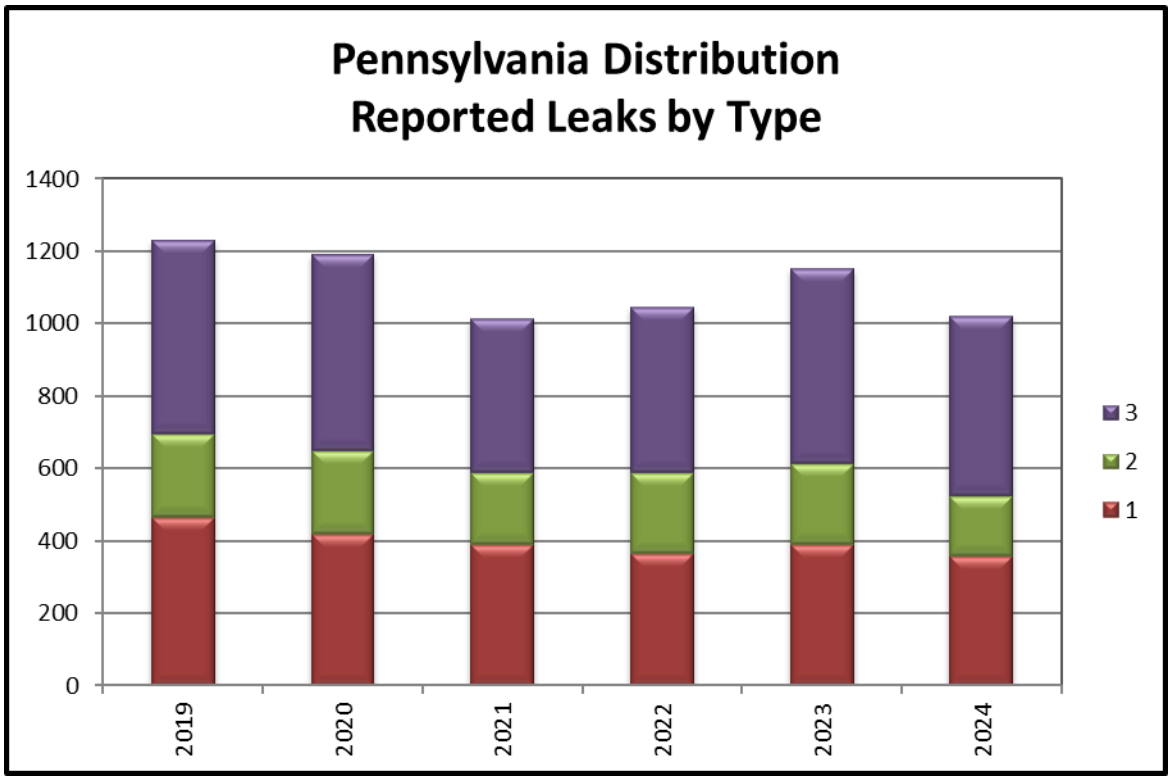
A. The Company tracks the risk of specific vintage plastic pipe materials through its DIMP and plastic system integrity program as described above. The primary issues discovered through these programs have been fusion issues attributed to rocky soil, backfill and operator installation. These issues are on a job-by-job basis and have not historically been associated with specific vintage plastic pipe materials.

Q. Please describe the Company's efforts to reduce system leaks.

A. Public safety is of primary importance for the Company. As part of its DIMP, the Company regularly evaluates and tracks system leak trends to determine if additional mitigation measures should be considered. The Company classifies leaks as Type 1,

Type 2 and Type 3 as described in its September 2, 2022, LTIIP filing and in its December 11, 2025, Amended LTIIP filing. Type 1 leaks are hazardous leaks that require an immediate response to protect life and property. As seen in Figure 3 below, Type 1 leaks have decreased by 23% between 2019 and 2024. In addition, Type 2 and Type 3 leaks have decreased by 28% and 7%, respectively between 2019 and 2024. This reduction in reported leaks can be attributed to the Company's pipeline modernization and systematic replacement program efforts during this period.

Figure 3: Distribution Reported Leaks by Type



Q. Please discuss the Company's historical, current, and proposed accelerated main replacement program.

A. As stated previously, from calendar year end 2016 through 2024, the Company has replaced 371 miles or 31% of its LPP bare steel and wrought iron and 7,337 or 34% of its

bare steel services. This included an acceleration under the Company's approved LTIIP from 2022-2024 of 50.5 miles and 972 services on an average annual basis compared to 45 miles and 899 services on an average annual basis from 2016-2022. In 2025 the Company replaced 52 miles of LPP, exceeding the Amended LTIIP mileage of 51 miles and resulting in approximately 764 miles of bare steel and wrought iron pipe remaining in the system. As seen in Table 7 below, to further enhance safety, reduce risk, and increase the overall reliability of its distribution system, the Company plans to continue to accelerate its LPP replacement program in 2026 and 2027.

Table 7: LPP Replacement (2023-2027)

Year	Type	Initial LTIIP Mileage	Actual Mileage	Amended LTIIP Mileage
2023	Distribution < 124 psig	44	45.9	
	Transmission & High Pressure > 124 psig	4	3.8	
	Total	**48**	**49.7**	
2024	Distribution < 124 psig	45	44.9	
	Transmission & High Pressure > 124 psig	7	7.8	
	Total	**52**	**52.7**	
2025	Distribution < 124 psig	46		46
	Transmission & High Pressure > 124 psig	7		5
	Total	**53**		**51**
2026	Distribution < 124 psig	47		50
	Transmission & High Pressure > 124 psig	7		4
	Total	**54**		**54**
2027	Distribution < 124 psig	50		50
	Transmission & High Pressure > 124 psig	7		7
	Total	**57**		**57**
LTIIP Total LPP Mileage		**264**	**264.4**	

As part of this acceleration, the Company plans to increase both distribution and transmission / high pressure leak prone pipe replacement to target retirement of all bare steel and wrought iron pipe by 2039. The Company defines transmission / high pressure main as pipe operating with a maximum operating pressure greater than 124 pounds per

square inch gage ("psig"). This pipe consists of approximately 11% of the Company's LPP and is planned to be replaced with cathodic protected coated steel pipe.

V. ENVIRONMENTAL

Q. Please discuss environmental management at the Company.

A. The Company is committed to environmental compliance and stewardship at all levels. The Company has a dedicated environmental management group within its Engineering Services department who work closely with our Project Engineering and Construction Management groups to assure all required environmental permitting, proper design and construction best management practices are followed through on our projects to assure environmental compliance. At the Company we consider environmental management to be the responsibility of all project team members including our engineers, construction and operations management and contractors. The Company prides itself on its history of environmental compliance and long-standing relationships and trust built with the environmental regulatory agencies we work with.

Q. Please describe the Company's Methane Emissions Reduction Program.

A. The Company has developed its Methane Emissions Reduction Program ("MERP") to help reduce methane emissions associated with the normal operation and maintenance of pipeline facilities. The MERP is used to determine the appropriate best management practice(s) ("BMP") to apply to pipeline and/or station shutdowns to reduce methane emissions. This program is incorporated into the engineering design process to allow adequate time for planning and collaboration with applicable parties to select and execute

practicable methods for minimizing methane releases. MERP targets medium and high-pressure pipeline blowdowns with volumes ≥ 5,000 Standard Cubic Feet ("SCF") (corrected volume) for application of BMP's. Where appropriate, BMP's may be considered for medium and high-pressure pipeline blowdowns for pipeline volumes between 1,000 and 4,999 SCF (corrected volume), however, portable compression equipment or portable flares should not be considered for these projects due to the greenhouse gas emissions associated with powering and transporting this equipment. BMPs included in the MERP are as follows:

- Pipeline pressure draw down into an adjacent lower pressure system through existing regulator stations.
- Pipeline pressure draw down into an adjacent lower pressure system through a temporary regulator and relief valve setup.
- Use of portable compression equipment.
- Use of portable flaring equipment where appropriate considering safety and customer relations.
- Minimizing pipeline segment blowdown length using existing valves and/or installation of controllable fittings, and squeeze-off of plastic pipe.
- Use of hot taps vs. shutdown and cutting in tees.
- Coordinating shutdowns for multiple projects/tasks.

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 9-R

Rebuttal Testimony of Mark C. Schaefer

Topics Addressed: **Capital Budget**
Leak Prone Pipe Replacement Program

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Mark C. Schaefer. My business address is 1100 State Street, Erie Pennsylvania 16501.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 9, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. The purpose of my testimony is to address the Bureau of Investigation & Enforcement's ("I&E") testimony regarding National Fuel's pipeline replacement. Specifically, I will address I&E's testimony regarding National Fuel's Long Term Infrastructure Improvement Plan ("LTIIP") pertaining to the Company's leak prone pipe ("LPP") replacement schedule and costs.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. No.

III. LTIIP AND LPP REPLACEMENT ISSUE

Q. Please comment on I&E's concern that National Fuel will not meet the target of replacing all wrought iron and bare steel main by 2039[1].

A. Based on the remaining bare steel and wrought iron in the Company's system at the end of 2025, I&E used the average replacement schedule from 2021 through 2025 of 44.64 miles per year to project that it will take 17 years to replace all remaining bare steel and wrought iron pipe. I note that I&E's assumption is not accurate. Per the Company's amended LTIIP filing, and referenced in my testimony in Table 7, page 13, the proposed LPP replacement mileage for 2026 is 54 miles and the proposed replacement for 2027 is 57 miles. For 2028 and beyond, the Company plans to maintain the proposed replacement rate of 57 miles per year. This mileage includes both distribution and transmission/high pressure for bare steel and wrought iron pipe, as well as plastic pipe, as part of the Company's LPP Replacement Program. Since the Company defines transmission/high pressure main as pipe operating with a maximum operating pressure greater than 124 pounds per square inch gage ("psig"), this mileage includes bare steel reported on both the Gas Distribution System ("Gas Distribution") and Natural and Other Gas Transmission and Gathering Systems ("Gas Transmission") Annual DOT reports. At the end of the calendar year in 2025, the Company had a total of 749.91 miles of bare steel and wrought iron as reported on the Gas Distribution and Gas Transmission reports, including 615.761 miles of bare steel and 101.909 miles of wrought iron for Gas Distribution and 32.24 miles of bare steel for Gas Transmission. As seen in Table 1 below, by replacing 57 miles of LPP per year for 2028 and beyond, the Company will

[1] &E Statement No. 4, p. 10-11.

meet the targeted replacement mileages by 2039. Please note that this includes an average of 2 miles of plastic LPP replacement per year.

Table 1: Annual LPP Replacement (2026-2039)

Bare Steel and Wrought Iron Mileage

2025 DOT Gas Distribution Report	717.67
2025 DOT Gas Transmission Report	32.24
2025 Remaining Total	**749.91**

Year	*LPP Target	Calendar Year End LPP Remaining
2026	54	697.91
2027	57	642.91
2028	57	587.91
2029	57	532.91
2030	57	477.91
2031	57	422.91
2032	57	367.91
2033	57	312.91
2034	57	257.91
2035	57	202.91
2036	57	147.91
2037	57	92.91
2038	57	37.91
2039	57	-17.09

*Includes 2 miles per year of vintage plastic

Q. In testimony, I&E recommends that the Company break down replacement cost into multiple categories and track and analyze the independent costs on items such as materials, labor, restoration and permitting to better identify and negotiate

potential cost savings on a project-by-project basis[2]. Do you agree with I&E's recommendation?

A. No, because, as I will explain, the Company is already tracking and analyzing replacement costs, as well as examining areas for potential cost savings.

Q. How does the Company track and analyze replacement costs?

A. Most pipeline replacement is completed with contractor crews, both bid and blanket on a unit price basis. The unit price for each bid item includes all restoration, material, labor, and equipment to complete the specific construction task. Since those costs are rolled into the unit price for each bid item, a breakdown of those costs is not available. However, as part of the project planning phase, Engineering and Operations management, along with consideration of factors such as job location, schedule, complexity, etc., reviews each replacement project to determine the most economical contractor or company resource best fit to successfully complete the project. Blanket contracts are competitively bid and awarded to contractors by geographical region on a 3-year basis. The contracts include hundreds of bid items for mainline and service installation and removal including construction methods (i.e. trench, insertion, drill, etc.), size, length, material and restoration. The breakdown of each bid item allows the contractor to better refine their estimate and invoice based on the best fit application for each construction task. In addition, many projects are competitively bid on a per project basis to obtain the best value possible. The project planning phase includes measures to reduce and control costs by gathering and reviewing as-built information for existing gas and other utilities,

[2] I&E Statement No. 4, p. 14-15

designing one-call and mark out of existing utilities, conducting a field review of the proposed project to determine the best method for construction, minimizing impact to environmental and other natural resources, coordinating landowner issues, and minimizing or avoiding other potential conflicts. After a bid project is complete, a post investment analysis ("PIA") is submitted by the project engineer. The PIA includes a breakdown and comparison of the estimated versus actual costs as well as a comparison of the estimated versus actual construction schedule, including an explanation for any major variances. These variances are summarized and reviewed with Engineering and Operations management on a semi-annual basis to identify potential cost savings and improvements for future project planning.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes, it does.

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND OCCUPATION.

A. My name is Joshua C. Nowak. I am employed by Concentric Energy Advisors, Inc. ("Concentric") as a Vice President. Concentric is a management consulting and economic advisory firm, focused on the North American energy and water industries. Based in Marlborough, Massachusetts, and Washington, D.C., Concentric specializes in regulatory and litigation support, financial advisory services, energy market strategies, market assessments, energy commodity contracting and procurement, economic feasibility studies, and capital market analyses. My business address is 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts 01752.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING?

A. I am submitting this direct testimony to the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on behalf of National Fuel Gas Distribution Corporation ("NFGDC" or the "Company").

Q. PLEASE DESCRIBE YOUR EXPERIENCE IN THE ENERGY AND UTILITY INDUSTRIES AND YOUR EDUCATIONAL AND PROFESSIONAL QUALIFICATIONS.

A. I hold a Bachelor's degree in Economics from Boston College and have more than 15 years of experience in providing economic, financial, and strategic advisory services. As a consultant, I primarily advise clients in regulated utility industries and have provided testimony regarding financial matters before multiple regulatory

agencies. I have advised numerous energy and utility clients on a wide range of financial and economic issues with primary concentrations in valuation and utility rate matters. Many of these assignments have included the determination of the cost of capital for valuation and ratemaking purposes. I have provided testimony before the Federal Energy Regulatory Commission ("FERC"), the Canada Energy Regulator ("CER"), as well as state and provincial jurisdictions in the U.S. and Canada. Prior to joining Concentric in 2018, I was employed by National Grid USA where I was responsible for regulatory filings related to the cost of capital across the company's multiple U.S. operating companies and service territories. A summary of my professional and educational background is presented in Exhibit JCN-1.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my direct testimony is to present evidence and provide a recommendation for the fair rate of return on equity ("ROE") for NFGDC, as well as assess the reasonableness of the Company's proposed capital structure.

Q. ARE YOU SPONSORING ANY EXHIBITS IN THIS PROCEEDING?

A. Yes. My analyses and recommendations are supported by the data presented in Exhibits JCN-2 through JCN-10, which have been prepared by me or under my direction. Exhibits JCN-2 through JCN-10 are presented in National Fuel Exhibit B. I sponsor the following Exhibits:

- JCN-1 – Summary of Professional Background and Experience
- JCN-2 – Comprehensive Summary of ROE Results
- JCN-3 – Proxy Group Screening Analysis

- JCN-4 – Constant Growth Discounted Cash Flow ("DCF") Analysis
- JCN-5 – Market Risk Premium ("MRP")
- JCN-6 – Capital Asset Pricing Model ("CAPM") Analysis
- JCN-7 – Bond Yield Plus Risk Premium Analysis
- JCN-8 – Comparative Size Analysis
- JCN-9 – Regulatory Framework Comparison
- JCN-10 – Proxy Group Capital Structure Analysis

II. SUMMARY OF TESTIMONY

Q. WHAT IS YOUR CONCLUSION REGARDING THE APPROPRIATE RATE OF RETURN FOR NFGDC?

A. I have estimated NFGDC's ROE based on the results of the DCF model, the CAPM, and the Bond Yield Plus Risk Premium ("Risk Premium") model, and have analyzed the general economic and capital market environment and the influence such conditions exert over the results. I also have analyzed the Company's business and regulatory risk profile that must be considered in determining where the Company's cost of equity falls within the range of analytical results. I recommend that the Commission authorize an overall rate of return of 11.25 percent for NFGDC. A summary of the results of my DCF, CAPM, and Risk Premium analyses are shown below in Figure 1.

FIGURE 1: SUMMARY OF RESULTS

	Median	Mean
DCF Result	10.70%	11.58%
CAPM Result	11.13%	11.19%
Risk Premium	10.40%	10.40%
Average	**10.92%**	**11.06%**

Based on the results of the DCF, CAPM, and Risk Premium analyses, I consider an ROE range of 10.30 percent to 11.30 percent to be reasonable. From within that range, and considering the Company's risk profile, I recommend a base ROE of 11.00 percent. In addition, I recommend a 25-basis point premium to recognize the Company's exceptional performance and efficiency, as summarized in the direct testimony of Rebecca E. Hillery, National Fuel Statement No. 1. The Commission's practice has been to recognize management performance through a rate of return incentive. My overall ROE recommendation is 11.25 percent.

Q. PLEASE PROVIDE A BRIEF OVERVIEW OF THE ANALYSES THAT YOU CONDUCTED TO SUPPORT YOUR ROE RECOMMENDATION.

A. As mentioned, my ROE recommendation is based on the range of results produced from the DCF, CAPM, and Risk Premium methodologies. Analysts and academics understand that ROE models are tools to be used in the ROE estimation process, and that strict adherence to any single approach, or the specific results of any single approach, may lead to flawed conclusions. No model can exactly pinpoint the correct cost of equity, but each is designed to provide a unique estimate of the return

required to attract equity investment. Therefore, my analysis considers the range of results produced by these three different models. The DCF analysis estimates the cost of equity based on market data on dividend yields and analysts' projected earnings per share growth rates from reputable third-party sources. The CAPM analysis is based on both current and forecasted interest rates and a forward-looking market risk premium. The Risk Premium approach calculates the risk premium as the spread between authorized ROEs for natural gas utilities and Treasury bond yields. My ROE recommendation is ultimately based on the range of results produced by these three methodologies.

My recommendation is also informed by the general economic and capital market environment, and the influence capital market conditions exert over the results of the DCF, CAPM, and Risk Premium models. In addition, I consider the Company's business and regulatory risks in relation to a set of proxy companies to assist in the determination of the appropriate ROE and capital structure from within the range of my analytical results.

Q. HOW IS THE REMAINDER OF YOUR DIRECT TESTIMONY ORGANIZED?

A. The remainder of my Direct Testimony is organized as follows:

- Section III provides background on the regulatory principles that guide the determination of ROE.
- Section IV presents a review of current and prospective economic and capital market conditions and the implications on the cost of capital for utilities.

- Section V describes the criteria and approach for the selection of a proxy group of comparable companies.
- Section VI provides a description of the data and methodologies used to estimate the cost of equity, as well as the results of the various ROE estimation models and concludes with my recommendation and an assessment of its reasonableness under the *Hope* test.
- Section VII discusses NFGDC's regulatory and business risks, relative to the proxy group.
- Section VIII provides the overall rate of return, including NFGDC's capital structure and cost rates.
- Finally, Section IX summarizes my results, conclusions, and recommendation.

III. REGULATORY PRINCIPLES

Q. PLEASE DESCRIBE THE GUIDING PRINCIPLES USED IN ESTABLISHING THE COST OF CAPITAL FOR A REGULATED UTILITY.

A. The foundations of public utility regulation require that utilities receive a fair rate of return sufficient to attract needed capital to maintain important infrastructure for customers at reasonable rates. The basic tenets of this regulatory doctrine originate from several bellwether decisions by the United States Supreme Court, notably *Bluefield Waterworks and Improvement Company v. Public Service Commission of West Virginia*, 262 U.S. 679 (1923) ("*Bluefield*"), and *Federal Power Commission*

v. Hope Natural Gas Company, 320 U.S. 591 (1944) ("*Hope*"). In *Bluefield*, the Court stated:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties…
>
> The return should be reasonably sufficient to assure investor confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.

Later, in *Hope*, the Court established a standard for the ROE that remains the guiding principle for ratemaking in regulatory proceedings to this day:

> [T]he return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.

Q. PLEASE EXPLAIN HOW THESE PRINCIPLES APPLY IN THE CONTEXT OF THE REGULATED RATE OF RETURN.

A. Regulated utilities rely primarily on common stock and long-term debt to finance their operations, including permanent property, plant, and equipment. The allowed rate of return for a regulated utility is based on its weighted average cost of capital, where the costs of the individual sources of capital (i.e., debt and equity) are typically weighted by their respective book values. Since the ROE, which represents the cost of raising and retaining equity capital, is not directly observable, it is estimated by using one or more analytical techniques that use market data to quantify investor requirements for equity returns. However, investors rely on a multi-faceted approach to determine their required returns. As such, the ROE cannot be estimated through quantitative metrics and models alone. To properly estimate the ROE, the financial, regulatory, and economic context must also be considered.

The DCF, CAPM, and Risk Premium approaches, while fundamental to the ROE determination, are still only models. To determine a fair and reasonable ROE in line with the *Hope* and *Bluefield* standards, model results must be applied with informed judgment, with consideration of economic and capital market conditions and the relative risk of NFGDC compared to the companies with reasonably similar risk.

Based on these widely recognized standards, the Commission's order in this case should provide NFGDC with the opportunity to earn a return on equity that is:

- Adequate to allow the Company to attract the capital that is necessary to provide safe and reliable service (the "capital attraction standard");
- Sufficient to ensure the Company's ability to maintain its financial integrity (the "financial integrity standard"); and
- At a level that is comparable to returns required on investments of similar risk (the "comparability standard").

Importantly, a fair return must satisfy all three of these standards. The allowed ROE should enable the Company to finance its operations and capital expenditures on reasonable terms and provide it with the ability to raise capital under a full range of capital market circumstances to serve its customers.

Q. IS NFGDC'S ABILITY TO ATTRACT EQUITY CAPITAL AFFECTED BY ROES THAT ARE AUTHORIZED FOR OTHER UTILITIES?

A. Yes, it is. NFGDC competes with other investments of similar risk for equity capital from the market. Since investors have a finite pool of capital to allocate among investments, the ROE awarded to each utility provides investors with signals regarding regulatory support for financial integrity, dividends, growth, and fair compensation for business and financial risk. A company's cost of equity is defined by, and equal to, the opportunity cost of investing in that company. In other words, if higher returns are available from other investments of comparable risk, investors will direct their capital to those investments. If NFGDC's authorized ROE is set below the ROEs authorized for other utilities of comparable risk, the Company may face challenges in attracting capital on reasonable terms, leading to a decline in service quality and adversely affecting its customers.

Q. WHAT ARE YOUR CONCLUSIONS REGARDING REGULATORY PRINCIPLES?

A. The ratemaking process is premised on the principle that, in order for investors and companies to commit the capital needed to provide safe and reliable utility services, the utility must have the opportunity to recover invested capital and the market-required return on that capital. Because utility operations are capital intensive, regulatory decisions should enable the utility to attract capital on reasonable terms regardless of market conditions. Investors carefully monitor the current and expected financial condition of utility companies, as well as the regulatory environment in which they operate. In that respect, the regulatory environment is one of the most important factors considered by both debt and equity investors in their assessments of risk. It is therefore essential that the ROE authorized in this proceeding take into consideration the current and expected capital market conditions in which NFGDC operates, as well as investors' required returns commensurate with the risks they undertake. A fair and reasonable authorized ROE is required to not only support the Company's continued capital investment with capital raised on reasonable terms, but also to maintain confidence in Pennsylvania's regulatory environment among credit rating agencies and investors.

IV. ECONOMIC AND CAPITAL MARKET CONDITIONS

Q. WHY IS IT IMPORTANT TO CONSIDER THE EFFECTS OF CURRENT AND EXPECTED ECONOMIC AND FINANCIAL MARKET CONDITIONS WHEN SETTING THE APPROPRIATE ROE?

A. Because utilities are obligated to serve customers safely and reliably regardless of economic conditions, they must maintain consistent access to capital across all market environments. The authorized ROE for a public utility should allow the utility to attract investor capital at a reasonable cost under current and foreseeable economic and financial conditions as underscored by the *Hope* and *Bluefield* decisions discussed previously. The standard ROE estimation tools, such as the DCF, CAPM, and Risk Premium models, incorporate specific economic and financial data. However, these inputs reflect only a subset of the various economic and market forces that determine a utility's required return. It is also important to consider the appropriateness and reasonableness of the inputs in light of expected economic conditions. If investors do not expect current market conditions to continue in the future, it is possible that the ROE estimation models will not provide an accurate estimate of investors' forward-looking required return. Therefore, an assessment of current and projected market conditions is integral to any ROE recommendation.

Q. WHAT ARE THE KEY FACTORS AFFECTING THE COST OF EQUITY FOR REGULATED UTILITIES IN THE CURRENT AND PROSPECTIVE CAPITAL MARKETS?

A. The cost of equity for regulated utility companies is currently affected by several

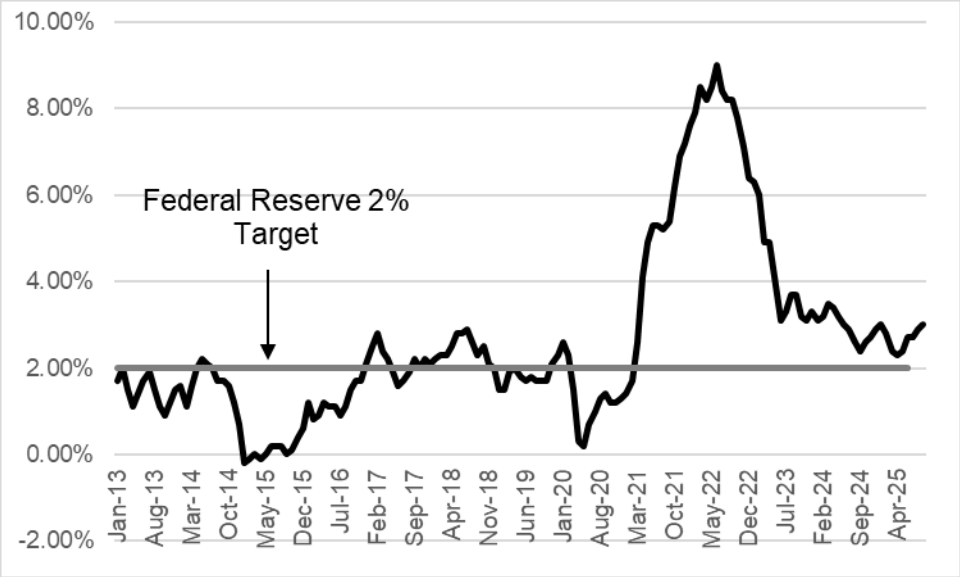
key factors including (1) the interest rate environment and central bank monetary policy; (2) inflationary pressure and the longer-term outlook for inflation; and (3) uncertainty in the economic environment resulting from geopolitical events. As discussed below, although the Federal Reserve reduced the Federal Funds rate six times in the last two years as inflation stabilized and moved closer to the central bank's two percent target, interest rates and inflation are expected to elevated relative to the exceptionally low interest-rate conditions that prevailed in the early 2020s. Despite the 175 basis point reduction in the Federal Funds rate since September 2024, long-term interest rates have not declined and are not expected to change substantially in the coming years. Further, geopolitical events and U.S. foreign trade policy present significant uncertainties with respect to the near-term economic and capital market environment in which NFGDC will be raising capital. As artificial intelligence workloads have grown substantially requiring infrastructure expansions, including data center development, there are several industries offering comparatively attractive returns. NFGDC and other utilities must compete for equity capital with other industries. Therefore a reasonable return is necessary to attract capital in an increasingly competitive capital market environment.

Q. HOW HAVE ECONOMIC AND FINANCIAL CONDITIONS CHANGED IN RECENT MONTHS?

A. At the end of 2024, financial markets were optimistic that the Federal Reserve was close to attaining a "soft landing" by taming inflation without a consequential rise in unemployment. Over the past few months, however, federal policy uncertainty

has climbed sharply, and financial market volatility has increased. Since the announcement of the Administration's tariff policies in early April, data have shown a vulnerable and slowing economy with consumer and business sentiment declining and growing anticipation of higher inflation.[1]

FIGURE 2: U.S. CONSUMER PRICE INDEX ("CPI"), Y-O-Y CHANGE (2014-2025)[2]



As the University of Michigan's Surveys of Consumers Director Joanne Hsu explains regarding consumer sentiment on inflation for December 2025:

> After four months of sharp increases to start 2025, long-run expectations fell for three consecutive months through July, followed by three more months of small increases. Long-run expectations softened over the past two months. The December preliminary reading is well below peaks in monthly readings from June 2022 and April 2025, but above most 2024 readings as well as

1 See, e.g., Blue Chip Financial Forecasts, Vol. 44, No. 5, May 1, 2025, at 1.

2 U.S. Bureau of Labor Statistics. Data as of October 30, 2025 was not available as of January 6, 2026. Bureau of Labor Statistics reported a year-over-year change of 2.70 percent for November 2025.

readings from 2020 and earlier. Expectations exhibit substantial uncertainty, though less than in mid-2025.[3]

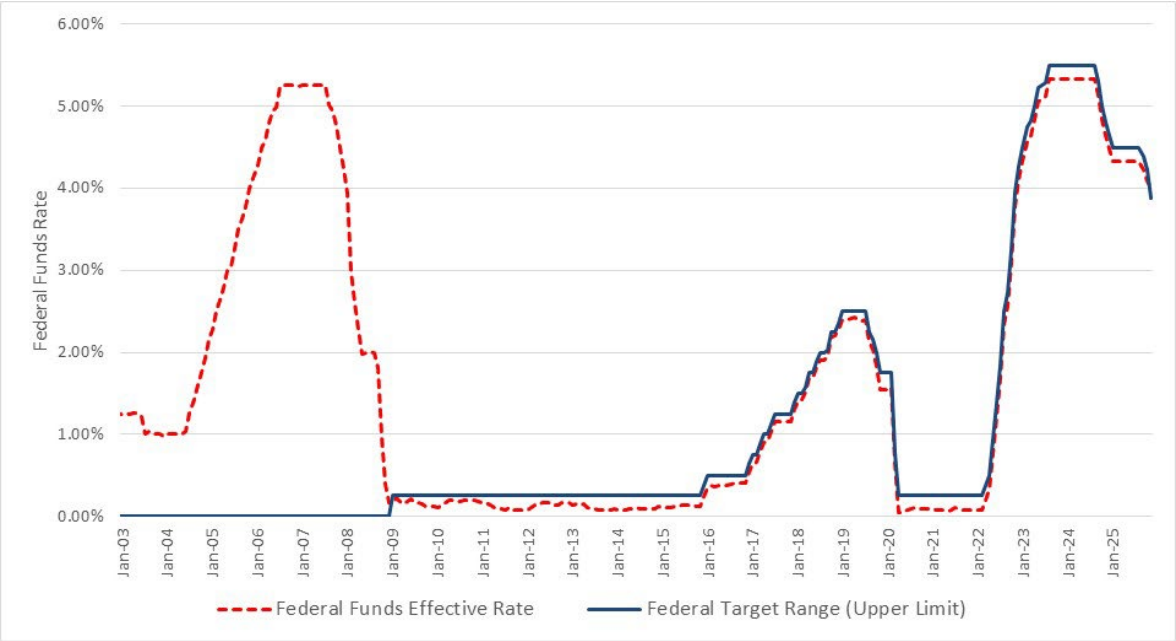
Q. PLEASE DESCRIBE THE FEDERAL RESERVE'S RECENT MONETARY POLICY ACTIONS.

A. As shown in Figure 3, the Federal Open Market Committee ("FOMC") has cut rates by 25 basis points three times since April 2025, ending 2025 with the Federal Funds target range of 3.50 to 3.75 percent. In doing so, the FOMC noted the downside risks to employment on one hand but that "[i]nflation has moved up since earlier in the year and remains somewhat elevated."[4] The FOMC has been increasingly divided on the outlook and future rate actions, causing short-term rate expectations to become more volatile.

3 University of Michigan Surveys of Consumers, "December 2025 (P) Update: Current versus Pre-Pandemic Long-Run Inflation Expectations", December 5, 2025. Accessed January 6, 2026, https://www.sca.isr.umich.edu/files/px5web202512p.pdf.

4 Federal Reserve FOMC Press Release, December 10, 2025, https://www.federalreserve.gov/monetarypolicy/files/monetary20251210a1.pdf

FIGURE 3: FOMC FEDERAL FUNDS RATES

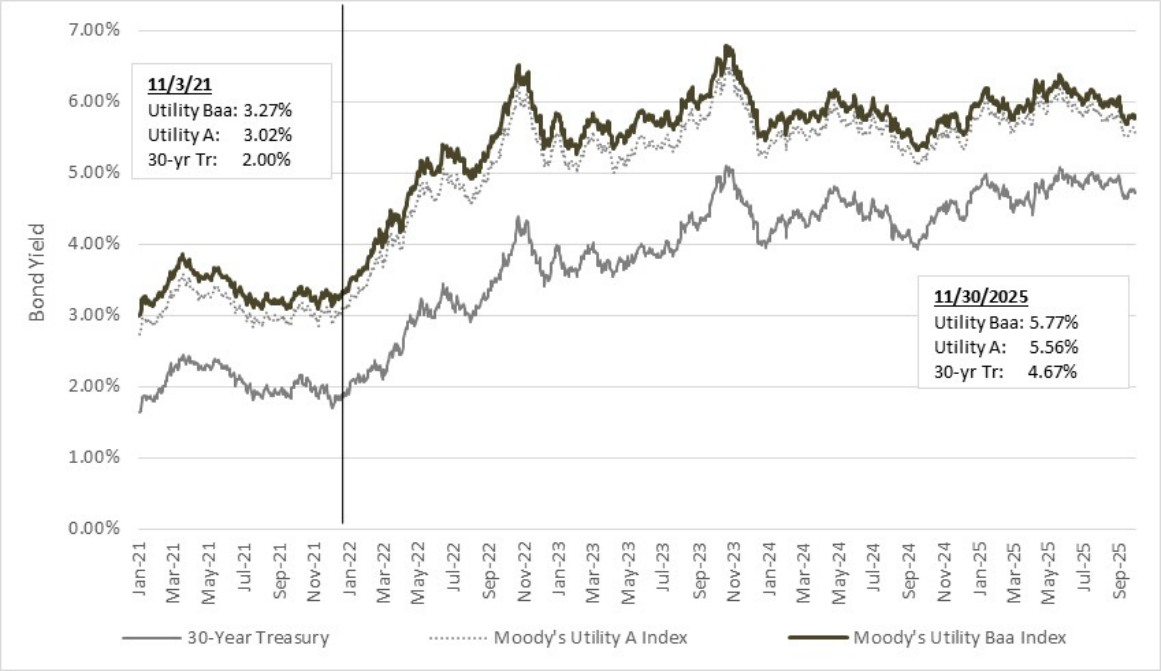


The Fed's recent policy actions follow a period of substantial monetary tightening in 2022 and 2023 in response to the rapid economic rebound following the COVID-19 lockdowns. During this time, the Federal Reserve tightened monetary policy at the fastest pace since the 1980s by increasing the Federal Funds rate by 525 basis points over the course of 11 consecutive Federal Open Market Committee ("FOMC") meetings between March 2022 and July 2023, as shown in the figure above. Although the pace of inflation has subsided from its peak reached in 2022, inflation remains above the Federal Reserve's 2.0 percent target, ticking up to 3.00 percent as of September 30, 2025.

Q. HOW DID GOVERNMENT AND UTILITY BOND YIELDS RESPOND TO THE FEDERAL RESERVE'S MONETARY POLICY TIGHTENING?

A. As the U.S. economy improved in 2021 and the Federal Reserve moved aggressively to tighten monetary policy to fight stubbornly higher inflation, prevailing interest rates have risen to their highest levels since 2010. As shown in Figure 4 below, the 30-year Treasury yield has increased 267 basis points since November 3, 2021 when the Federal Reserve signaled it would begin tapering its asset purchases. Utility bond yields have increased by nearly 250 basis points over the same period.

FIGURE 2: 30-YEAR TREASURY BOND AND UTILITY BOND YIELDS (2021-2025)[5]



Q. PLEASE EXPLAIN HOW HIGHER BOND YIELDS AFFECT THE ROE ESTIMATES.

A. The 30-Year Treasury bond yield is a direct input to both the CAPM and the Risk Premium models because the term of the security aligns with the long life of gas

5 Sources: Federal Reserve Bank of St. Louis, FRED Economic Database; Bloomberg Professional.

utility assets. As yields increase, the cost of capital generally increases, and the ROE estimates from those two models also increase, although not on a one-to-one basis. Further, while interest rates are not a direct input to the DCF model, dividend yields on utility stocks must compete with yields on Treasury bonds. As interest rates on government bonds increase, utilities must offer a higher dividend yield to attract and retain investors, signaling an increase in the cost of equity for utilities. All else equal, higher dividend yields produce higher ROE estimates in the DCF model.

Q. HOW HAVE CAPITAL MARKETS RESPONDED TO THE FEDERAL RESERVE'S POLICY ACTIONS?

A. The Federal Reserve's rate since 2024 have had little effect on long-term government and utility bond yields. Long-term bond yields are less sensitive to the Federal Reserve's monetary policy, and as such have not declined as much as short-term yields, even as the Fed has reduced the Federal Funds rate. As noted by Charles Schwab, "intermediate- and long-term interest rates will continue to respond to expectations about economic growth and inflation."[6] As shown in Figure 5 below, since the end of June 2024 (prior to the Fed's rate cuts), the 1-year and 2-year Treasury yields declined by 148 and 124 basis points, respectively, whereas the 30-year Treasury yields actually *increased* by 16 basis points.

6 Charles Schwab, "Fed Cuts Rates for the Third Time This Year," December 10, 2025. Accessible at: https://www.schwab.com/learn/story/fomc-meeting

FIGURE 5: U.S. TREASURY YIELDS (JUNE 2024 VS. NOVEMBER 2025)[7]

	1-Year Treasury	2-year Treasury	30-Year Treasury
June 28, 2024	5.09%	4.71%	4.51%
November 28, 2025	3.61%	3.47%	4.67%
Change	-1.48%	-1.24%	+0.16%

Therefore, current long-term yields have not declined commensurate with reductions in the Federal Funds rate but have stayed relatively flat or increased. Since the equity value of utility investments is based on long-lived assets and the models used to estimate the just and reasonable ROE accordingly rely primarily on long-term yields, ROE model results are typically influenced more by the changes in longer-term yields rather than short-term yields.

Q. HOW HAVE CAPITAL MARKETS RESPONDED TO THE FEDERAL RESERVE'S MONETARY POLICY?

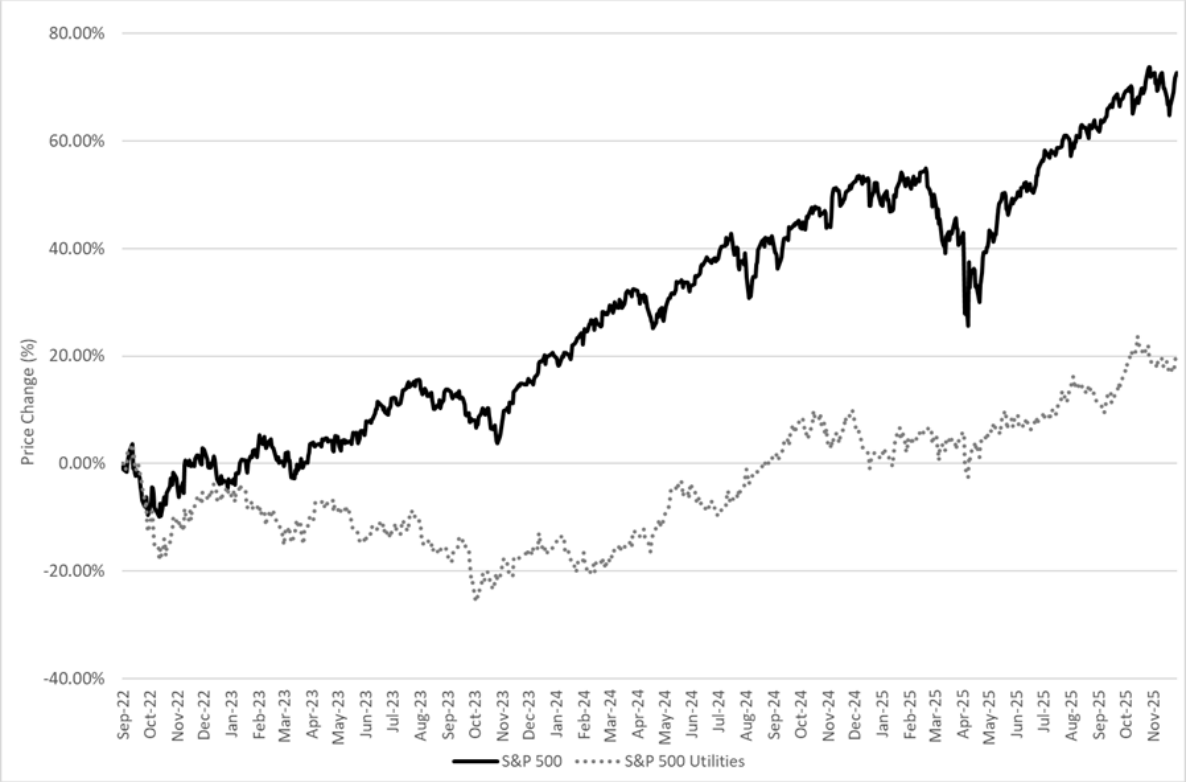
A. While the S&P 500 closed at record highs on the first trading day of 2022, by mid-June of that year, the S&P 500 was down more than 21 percent, at that time wiping out all of 2021's gains.

Although the S&P 500 has steadily gained ground since that time, the utility sector has fared far worse. From September 2022, at the peak of core inflation,

7 Source: Spot yields reported by Federal Reserve Board of Governors, H15 Selected Interest Rates. https://www.federalreserve.gov/datadownload/Choose.aspx?rel=H15

through November 2025, on a total return basis (which includes dividends), the S&P 500 Index increased over 72 percent, but the S&P 500 Utilities Index increased by approximately 20 percent, as shown in Figure 6. As a practical matter, there are several industries offering attractive returns for equity investments as data center expansions have fueled economic growth. As such, utilities must maintain reasonable returns to attract capital in an increasingly competitive environment.

FIGURE 6: S&P 500 AND S&P 500 UTILITIES INDICES PERFORMANCE
(SEPTEMBER 1, 2022 – NOVEMBER 28, 2025)



Q. PLEASE DISCUSS RECENT CHANGES IN U.S. TRADE POLICY.

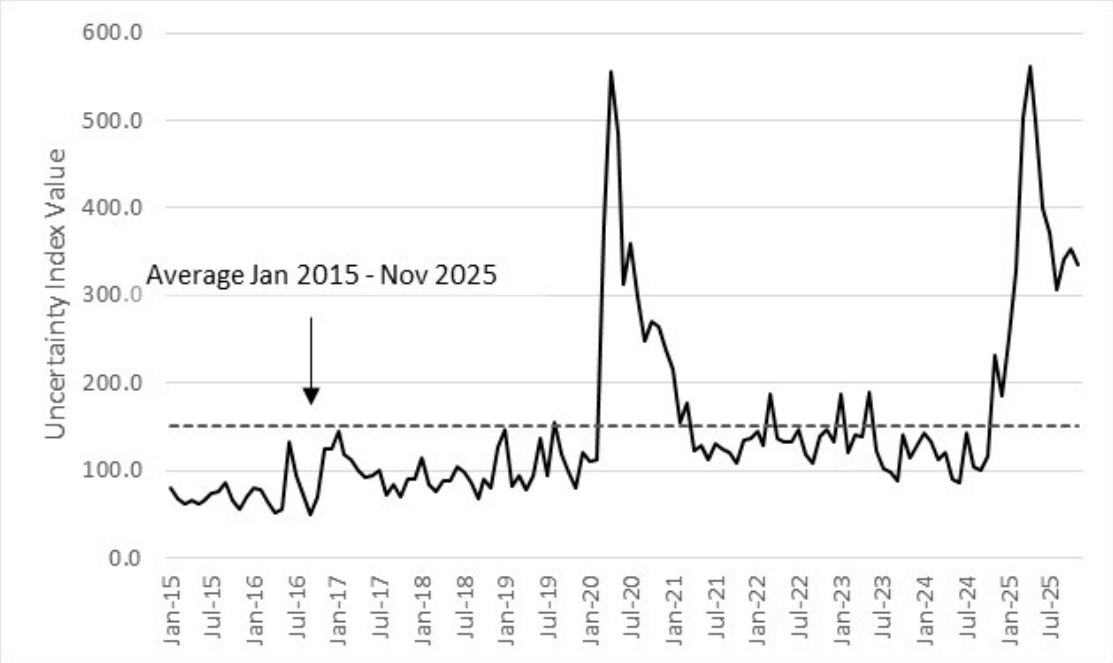
A. During the first half of 2025, the Trump administration had announced, implemented, or delayed implementation of tariffs on numerous U.S. trade partners. A highlight of this is when, on April 2, 2025, President Trump announced the

administration would impose a 10 percent base tariff on all imports from nearly every country plus an additional "reciprocal" tariff customized for each of approximately 60 countries.[8] These reciprocal tariffs were subsequently paused, but significant uncertainty remains around the future course of U.S. trade policy and how it will affect the economy.

This created significant policy and market uncertainty; as can be seen in Figure 7 below, the Federal Reserve Bank of St. Louis' Economic Policy Uncertainty Index (the "Index") spiked to levels not seen since the COVID-19 pandemic. The Index has recently retreated from its peak levels in mid-2025 (to 335.88 as of November 30, 2025), but remains significantly above the average level since 2015 (151.02) and the levels in October 2022 and June 2023 (139.83 and 122.39, respectively) that correspond with the filing and Commission Order in NFGDC's last rate case. Ongoing trade negotiations and temporary agreements between the U.S. and other countries indicate that there is still significant uncertainty related to international trade and the economy. As a general premise, uncertainty increases risk causing investors to require a higher return, which increases the cost of equity, all else equal.

8 https://www.whitehouse.gov/presidential-actions/2025/04/regulating-imports-with-a-reciprocal-tariff-to-rectify-trade-practices-that-contribute-to-large-and-persistent-annual-united-states-goods-trade-deficits/·

FIGURE 3: ECONOMIC POLICY UNCERTAINTY INDEX JANUARY 1, 2015 – NOVEMBER 30, 2025[9]



Q. PLEASE EXPLAIN WHY ELEVATED INTEREST RATES ARE IMPORTANT TO THE ROE ANALYSIS.

A. In general, as interest rates on government bonds increase, the cost of capital also must increase, as utilities—competing with interest rates on government bonds—must offer higher dividend yields to attract and retain investors. As utility dividend yields increase, however, the utility stock price declines (and, therefore, the cost of equity increases). The reason for this is that the stock price inherently reflects a company's future cash flows, thus, future dividends are factored into the share price. After an ex-dividend date (i.e., the date on which a dividend is paid), the stock price often declines to reflect the dividend paid (i.e., distributing a proportion of profits to shareholders). As interest rates remain elevated, utilities must continue

9 Federal Reserve Bank of St. Louis, https://fred.stlouisfed.org/series/USEPUINDXD

to pay high dividends to keep investors, which suggests that the stock price of these companies would decline (and the cost of equity increase) in response to interest rates. In general, all else equal, higher dividend yields produce higher ROE estimates in DCF models. Additionally, as interest rates are a direct input to both the CAPM and the Risk Premium models, higher interest rates produce higher ROE estimates in these models.

Q. HAVE YOU FACTORED THESE CIRCUMSTANCES INTO YOUR COST OF EQUITY ESTIMATES FOR NFGDC, AND, IF SO, WHAT CONCLUSIONS DO YOU DRAW?

A. Yes. I have relied on the most recent market data and forecasts available to me in my analysis and ROE recommendation. Long-term interest rates have increased substantially since the historical lows of 2020 and are expected to remain elevated as the Federal Reserve continues to contend with inflation and rising unemployment. As interest rates increase, the cost of capital generally increases. Interest rates are direct inputs to the CAPM and risk premium analyses and indirectly affect the DCF models, as increasing interest rates influence increases in dividend yields (and decreases in utility stock prices, which suggest an increase in the cost of equity).

Q. WHAT IS YOUR CONCLUSION REGARDING HOW MARKET CONDITIONS AFFECT THE COST OF EQUITY FOR UTILITIES SUCH AS NFGDC?

A. My primary conclusion is that the cost of capital for both debt and equity has increased for utilities, including NFGDC. This increase is reflected in the results of

the models used to estimate the cost of equity. Although the Federal Reserve has cut the level of short-term interest rates, yields on long-term government and utility bond yields increased sharply in 2022 and have remained elevated. Further, inflation has remained stubbornly above the Fed's target level of 2.0 percent, and tariffs could cause inflation to increase again as companies pass through these duties to end-use customers. It is important to recognize that there has been a fundamental change in economic and capital market conditions, and the cost of equity capital for utilities has increased. These factors underscore the importance of using multiple models when determining NFGDC's cost of equity to gain a comprehensive perspective of the effect of fluid and evolving market conditions on the cost of equity.

V. PROXY GROUP SELECTION

Q. WHY IS IT NECESSARY TO SELECT A PROXY GROUP TO ESTIMATE THE COST OF EQUITY FOR NFGDC?

A. Since the ROE is a market-based concept and NFGDC is not publicly traded, it is necessary to establish a group of companies that is both publicly traded and comparable to the Company. Even if NFGDC were a publicly traded entity, it is possible that transitory events could bias the Company's market value in one way or another in a given period. A significant benefit of using a proxy group is the ability to mitigate the effects of short-term events that may be associated with any one company. The proxy companies used in my ROE analyses possess a set of business and operating characteristics similar to the Company's natural gas utility operations, and thus provide a reasonable basis for estimating the Company's ROE.

Q. PLEASE PROVIDE A SUMMARY PROFILE OF NFGDC.

A. The Company is a wholly-owned subsidiary of National Fuel Gas Company ("NFG") and provides natural gas distribution service to approximately 756,000 customers, with 213,000 customers in Pennsylvania and 543,000 customers in New York.[10] The Company does not have stand-alone credit ratings. However, its parent company, NFG, has long-term issuer ratings from Moody's of Baa3 (Outlook: Stable), S&P of BBB- (Outlook: Stable), and Fitch Ratings ("Fitch") of BBB (Outlook: Stable).[11]

Q. PLEASE DESCRIBE THE SPECIFIC SCREENING CRITERIA YOU HAVE UTILIZED TO SELECT THE PROXY GROUP.

A. I began with the nine investor-owned domestic natural gas distribution companies covered by Value Line and then screened companies according to the following criteria:

1. Consistently pays quarterly cash dividends;
2. Maintains an investment grade long-term issuer rating (BBB- or higher) from S&P;
3. Is covered by more than one equity analyst;
4. Has positive earnings growth rates published by at least two of the following sources: Value Line, S&P Capital IQ, and Zacks Investment Research ("Zacks");

10 National Fuel Investor Presentation, Fiscal 2025 – 4th Quarter and Full year Update, November 5, 2025.

11 S&P Capital IQ Pro, Fitch Ratings.

5. Regulated net operating income makes up more than 50 percent of the consolidated company's net operating income (based on a 3-year average from 2022-2024);
6. Regulated net operating income from regulated natural gas distribution makes up more than 60 percent of the consolidated company's regulated net operating income (based on a 3-year average from 2022-2024); and
7. Is not involved in a merger or other transformative transaction.

Q. WHAT IS THE COMPOSITION OF YOUR RESULTING PROXY GROUP?

A. Based on the screening criteria discussed above, and financial information through fiscal year 2024, I arrived at a proxy group consisting of the 7 companies shown in Figure 8. The results of my screening process are shown in Exhibit JCN-3.

FIGURE 8: PROXY GROUP

Company	Ticker
Atmos Energy Corporation	ATO
New Jersey Resources Corporation	NJR
NiSource Inc.	NI
Northwest Natural Holding Co.	NWN
ONE Gas Inc.	OGS
Southwest Gas Holdings, Inc.	SWX
Spire, Inc.	SR

Q. IS IT APPROPRIATE TO INCLUDE SPIRE, INC. IN YOUR PROXY GROUP, DESPITE ITS RECENT TRANSACTION?

A. Yes, it is. Spire, Inc. ("Spire") announced that it is acquiring the Piedmont Gas Tennessee business from Duke Energy.[12] However, considering that the acquisition is not anticipated to have a transformative effect on the company, Spire will continue to be a predominantly natural gas utility company. In fact, the transaction will expand Spire's natural gas utility operations. Further, the purpose of this screen is to eliminate the impact of extraordinary price changes, such as those often caused by merger and acquisition activity. Since the announcement in July 2025, there has been no meaningful change in Spire's stock price performance relative to other utility companies. Further, Exhibit JCN-2 presents the model results both including and excluding Spire from the proxy group and the mean results are substantially similar.

Q. DO YOUR SCREENING CRITERIA RESULT IN A GROUP OF COMPANIES THAT INVESTORS WOULD VIEW AS COMPARABLE TO NFGDC'S OPERATIONS?

A. Yes. While no proxy group will be identical in risk to NFGDC, I believe this group of natural gas utilities is reasonably comparable to the financial and operational characteristics of NFGDC. The proxy group screening criterion requiring an investment grade credit rating ensures that the proxy group companies, like NFGDC, are in sound financial condition. Additionally, I have screened based on the percent of net operating income derived from regulated operations to

12 Spire, Inc. "Spire to acquire Tennessee Piedmont Natural Gas business from Duke Energy." July 29, 2025. Available here: https://investors.spireenergy.com/news/news-details/2025/Spire-to-acquire-Tennessee-Piedmont-Natural-Gas-business-from-Duke-Energy/default.aspx

differentiate between utilities that are protected by regulation and those with substantial unregulated operations or market-related risks. Finally, the screening criterion of percentage contribution of the natural gas utility segment to regulated consolidated financial results ensures that proxy companies are focused on natural gas utility operations, since this proceeding is limited to determining the appropriate ROE for the stand-alone gas distribution operations of NFGDC. These screens collectively reflect key risk factors that investors consider in making investments in natural gas utilities. The results of the screening criterion on each potential proxy company are presented in Exhibit JCN-3.

Q. WHAT IS YOUR CONCLUSION WITH REGARD TO THE PROXY GROUP FOR NFGDC?

A. I conclude that my group of seven natural gas utilities adequately reflects the broad set of risks that investors consider when investing in a natural gas distribution company such as NFGDC's natural gas utility operations.

VI. DETERMINATION OF THE APPROPRIATE COST OF EQUITY

Q. WHAT MODELS DID YOU USE IN YOUR ROE ANALYSES?

A. I have considered the results of several ROE estimation models, including the Constant Growth DCF model, the CAPM, the Bond Yield Plus Risk Premium approaches. Consistent with the practice of many analysts, when estimating the cost of equity, I gather and evaluate as much relevant data (both quantitative and qualitative) as can be reasonably obtained.

A. Constant Growth DCF Model

Q. PLEASE DESCRIBE THE DCF APPROACH.

A. The DCF approach is based on the theory that a stock's current price represents the present value of all expected future cash flows, which for purposes of the model, are assumed to be equal to all expected future dividends. Thus, the return required by investors is implied by the per share price of a company's common stock. In its most general form, the DCF model is expressed as follows:

$$P_0 = \frac{D_1}{(1+k)} + \frac{D_2}{(1+k)^2} + ... + \frac{D_\infty}{(1+k)^\infty} \qquad [1]$$

Where P_0 represents the current stock price, $D_1 \ldots D_\infty$ are all expected future dividends, and k is the discount rate, or required ROE. Equation [1] is a standard present value calculation, which can be simplified and rearranged, to the Constant Growth form of the DCF model, expressed as the sum of the expected dividend yield and long-term growth rate:

$$k = \frac{D(1+g)}{P_0} + g \qquad [2]$$

Where "k" equals the required return, "D" is the current dividend, "g" is the expected growth rate, and "P_0" represents the current stock price. Stated in this manner, the cost of common equity is equal to the expected dividend yield plus the dividend growth rate.

Q. WHAT ARE THE ASSUMPTIONS UNDERLYING THE CONSTANT GROWTH DCF MODEL?

A. The Constant Growth DCF model is based on the following assumptions: (1) a constant average growth rate for earnings and dividends; (2) a stable dividend payout ratio; (3) a constant price-to-earnings multiple; and (4) a discount rate greater than the expected growth rate.

Q. PLEASE SUMMARIZE YOUR APPLICATION OF THE CONSTANT GROWTH DCF MODEL.

A. I calculated DCF results for each of the proxy group companies using the following inputs:

- Average stock prices for the historical period, over 30, 90, and 180 trading days through November 28, 2025;
- Annualized dividend per share as of November 28, 2025; and
- Company-specific earnings growth forecasts for the term *g*.

My application of the Constant Growth DCF model is provided in Exhibit JCN-4.

Q. WHY DID YOU USE AVERAGING PERIODS OF 30, 90, AND 180 TRADING DAYS?

A. It is important to use an average of recent trading days to calculate the term *P* in the DCF model to ensure that the calculated ROE is not skewed by anomalous events that may affect stock prices on any given trading day. At the same time, it is important to reflect the conditions that have defined the financial markets over the recent past. In my view, consideration of those three averaging periods reasonably balances these interests.

Q. DID YOU ADJUST THE DIVIDEND YIELD TO ACCOUNT FOR PERIODIC GROWTH IN DIVIDENDS?

A. Yes, I did. Utility companies tend to increase their quarterly dividends at different times throughout the year, so it is reasonable to assume that such increases will be evenly distributed over calendar quarters. Given that assumption, it is reasonable to apply one-half of the expected annual dividend growth rate for the purposes of calculating this component of the DCF model. This adjustment ensures that the expected dividend yield is representative of the coming 12-month period. Accordingly, the DCF estimates reflect one-half of the expected growth in the dividend yield.[13]

13 The expected dividend yield is calculated as $d_1 = d_0 (1 + ½ g)$.

Q. WHAT SOURCES OF GROWTH HAVE YOU USED IN YOUR DCF ANALYSIS?

A. I have used the consensus analyst five-year growth estimates in earnings per share ("EPS") from S&P Capital IQ and Zacks, as well as EPS growth rate estimates published by Value Line.

Q. WHY DID YOU FOCUS ON EPS GROWTH?

A. The Constant Growth DCF model assumes that dividends grow at a constant rate in perpetuity. Accordingly, in order to reduce the long-term growth rate to a single measure, one must assume a constant payout ratio, and that earnings per share, dividends per share, and book value per share all grow at the same constant rate. Over the long term, however, dividend growth can only be sustained by earnings growth. As noted by Brigham and Houston in their text, *Fundamentals of Financial Management*: "Growth in dividends occurs primarily as a result of growth in *earnings per share* (EPS)."[14] It is therefore important to focus on measures of long-term earnings growth from credible sources as an appropriate measure of long-term growth in the DCF model.

Q. IS YOUR USE OF EPS GROWTH RATES IN LINE WITH THE COMMISSION'S APPROACH?

A. Yes, it is. In its determination of the "Current DCF", which ultimately factors into the Commission's Market Based Returns on Common Equity,[15] the Bureau of

14 Eugene F. Brigham and Joel F. Houston, Fundamentals of Financial Management (Concise Fourth Edition, Thomson South-Western), at 317 (emphasis added).

15 See for example, Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended June 30, 2025, Docket No. M-2025-3057215 (October 23, 2025).

Technical Utility Services employs the 5-year earnings growth rates from the same sources (i.e., Value Line, Zacks, and S&P) to the dividends per share of each of the companies in its barometer, or proxy, group as I employ in my Constant Growth DCF.

Q. ARE OTHER SOURCES OF DIVIDEND GROWTH AVAILABLE TO INVESTORS?

A. Yes, although that does not mean that investors incorporate such estimates into their investment decisions. Academic studies suggest that investors base their investment decisions on analysts' expectations of growth in earnings.[16] I am not aware of any similar findings regarding non-earnings-based growth estimates. In addition, the only forward-looking growth rates that are available on a consensus basis are analysts' EPS growth rates. The fact that earnings growth projections are the only widely accepted estimates of growth provides further support that earnings growth is the most meaningful measure of growth among the investment community.

Q. WHAT ARE THE RESULTS OF YOUR CONSTANT GROWTH DCF ANALYSIS?

A. The results of my Constant Growth DCF analysis are provided in Exhibit JCN-4 and summarized in Figure 9.

16 *See*, e.g., Harris and Marston, *Estimating Shareholder Risk Premia Using Analysts Growth Forecasts*, Financial Management, Summer 1992, at 65; and Vander Weide and Carleton, *Investor Growth Expectations: Analysts vs. History*, The Journal of Portfolio Management, Spring 1988, at 81. Please note that while the original study was published in 1988, it was updated in 2004 under the direction of Dr. Vander Weide. The results of that updated study are consistent with Vander Weide and Carleton's original conclusions.

FIGURE 9: CONSTANT GROWTH DCF RESULTS

	Mean Low	Median	Mean	Mean High
30-day average	10.51%	10.64%	11.46%	12.21%
90-day average	10.65%	10.68%	11.60%	12.35%
180-day average	10.74%	10.79%	11.69%	12.45%

Q. HOW DID YOU CALCULATE THE MEAN HIGH, MEAN LOW, AND OVERALL MEAN DCF RESULTS?

A. I calculated the Mean High DCF result using the maximum growth rate (i.e., the maximum of the S&P Capital IQ, Value Line, and Zacks EPS growth rates) in combination with the expected dividend yield for each of the proxy group companies. I used a similar method to calculate the Mean Low DCF results, using the minimum growth rate for each company. The Mean results reflect the average growth rate from each source for each company in combination with the expected dividend yield.

B. CAPM Analysis

Q. PLEASE BRIEFLY DESCRIBE THE GENERAL FORM OF THE CAPITAL ASSET PRICING MODEL.

A. The CAPM is a risk premium approach that estimates the cost of equity for a given security as a function of a risk-free return plus a risk premium (to compensate investors for the non-diversifiable or "systematic" risk of that security).[17] As shown

17 Systematic risks are fundamental market risks that reflect aggregate economic measures and therefore cannot be mitigated through diversification. Unsystematic risks reflect company-specific risks that can be mitigated and ultimately eliminated through investments in a portfolio of companies and/or market sectors.

in Equation [3], the CAPM is defined by four components, each of which must theoretically be a forward-looking estimate:

$$K_e = r_f + \beta(r_m - r_f) \qquad [3]$$

Where:

K_e = the required ROE for a given security;

r_f = the risk-free rate of return;

β = the Beta of an individual security; and

r_m = the required return for the market as a whole.

The term $(r_m - r_f)$ represents the Market Risk Premium (MRP). According to the theory underlying the CAPM, since unsystematic risk can be diversified away, investors should be concerned only with systematic or non-diversifiable risk. Non-diversifiable risk is measured by Beta, which is defined as:

$$\beta = \frac{Covariance(r_e, r_m)}{Variance(r_m)} \qquad [4]$$

Where:

r_e = the rate of return for the individual security or portfolio.

The variance of the market return, noted in Equation [4], is a measure of the uncertainty of the general market, and the covariance between the return on a specific security and the market reflects the extent to which the return on that security will respond to a given change in the market return. Thus, Beta represents the risk that the selected security will not be effective in diversifying systematic market risks.

Q. WHAT RISK-FREE RATE DID YOU USE IN YOUR CAPM ANALYSIS?

A. I considered three estimates of the expected risk-free rate: (1) the current 30-day average yield on 30-year U.S. Treasury bonds (i.e., 4.66 percent);[18] (2) the projected 30-year U.S. Treasury bond yield for Q1 2026 through Q1 2027 (i.e., 4.60 percent);[19] and (3) the projected 30-year U.S. Treasury bond yield for 2027 through 2031 (i.e., 4.60 percent).[20] It is important to consider both current and projected bond yields. Using the 5-year forecast of bond yields helps alleviate any short-term market factors affecting the risk-free rate, or "r_f" in the CAPM formula. It is also important to recognize that NFGDC is financing long-lived assets, and the cost of capital should be forward looking to reflect that perspective.

Q. WHAT MEASURES OF BETA DID YOU USE IN YOUR CAPM ANALYSIS?

A. As shown in Exhibit JCN-6, I utilized two measures of Beta for the proxy group companies: (1) the reported Beta coefficients from Bloomberg (which are calculated using ten years of weekly data against the S&P 500 Index); and (2) the reported Beta coefficients from Value Line (which are calculated using five years of weekly data against the New York Stock Exchange Composite Index).

Q. WHAT MARKET RISK PREMIUM DID YOU USE IN YOUR CAPM ANALYSIS?

A. Consistent with the approach adopted by FERC, I used the Constant Growth DCF model to estimate the market capitalization-weighted total market return for the

18 Bloomberg Professional, as of November 28, 2025.

19 Blue Chip Financial Forecasts, Vol. 44, No. 12, December 1, 2025, at 2.

20 Blue Chip Financial Forecasts, Vol. 44, No. 12, December 1, 2025, at 14.

S&P 500 Index, using projected earnings growth rates and dividend yields. As shown in Exhibit JCN-5, to calculate the Constant Growth DCF estimate for each company in the S&P 500, I relied on dividend yields as of November 28, 2025, as reported by S&P Capital IQ, and projected EPS growth rates from Value Line. In my initial analysis, I included all companies in the S&P 500. When investors purchase the S&P 500 Index or a mutual fund or exchange traded fund that mirrors the S&P Index, their total return is based on the returns for all 500 companies in the S&P Index. As such, this methodology provides the best indication as to the expected return for the overall market using the S&P 500 as a proxy. Applying this methodology suggests an expected market return of 15.09 percent. However, I applied FERC's more conservative convention to consider only a subset of S&P 500 companies with growth rates that are between 0 percent and 20 percent. This methodology suggests an expected market return of 11.62 percent.

Q. WHAT ARE THE RESULTS OF YOUR CAPM ANALYSES?

A. The results of my CAPM analysis are provided in Exhibit JCN-6 and summarized in Figure 10.

FIGURE 10: PROXY GROUP AVERAGE CAPM RESULTS

	CAPM Result
Value Line Beta Coefficients	
Current Risk-Free Rate	11.30%
2026-27 Projected Risk-Free Rate	11.29%
2027-31 Projected Risk-Free Rate	11.29%
Bloomberg Beta Coefficients	
Current Risk-Free Rate	11.09%
2026-27 Projected Risk-Free Rate	11.07%
2027-31 Projected Risk-Free Rate	11.07%

C. Risk Premium Analysis

Q. PLEASE DESCRIBE THE RISK PREMIUM APPROACH THAT YOU USED.

A. In general terms, this approach recognizes that equity is riskier than debt because equity investors bear the residual risk associated with ownership. Equity investors, therefore, require a greater return (i.e., a premium) than would a bondholder. The Risk Premium approach estimates the cost of equity as the sum of the Equity Risk Premium and the yield on a particular class of bonds.

$$\text{ROE} = RP + Y \qquad [5]$$

Where:

RP = Risk Premium (difference between allowed ROE and the 30-Year Treasury Yield); and
Y = Applicable bond yield.

Since the equity risk premium is not directly observable, it is typically estimated using a variety of approaches, some of which incorporate *ex-ante*, or forward-looking, estimates of the cost of equity and others that consider historical,

or *ex-post*, estimates. For my Risk Premium analysis, I have relied on authorized returns from a large sample of natural gas utility companies.

Q. WHAT DID YOUR RISK PREMIUM ANALYSIS INDICATE?

A. To estimate the relationship between risk premia and interest rates, I conducted a regression analysis using the following equation:

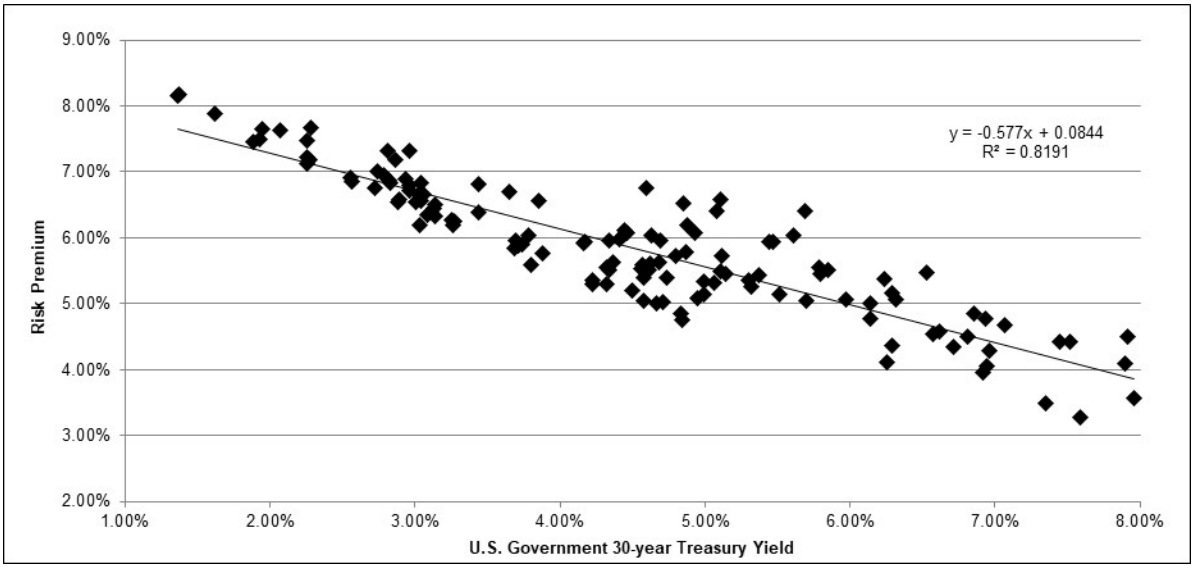
$$RP = a + (b \times Y) \qquad [6]$$

where:

RP = Risk Premium (difference between allowed ROEs and the 30-Year Treasury Yield);
a = Intercept ter*m;*
b = Slope term; and
Y = 30-Year Treasury Yield.

Data regarding allowed ROEs were derived from 863 natural gas utility company rate cases from January 1, 1992, through November 28, 2025, as reported by Regulatory Research Associates.

FIGURE 11: RISK PREMIUM RESULTS



As illustrated by Figure 11 above, the risk premium varies with the level of bond yield, and generally increases as the bond yields decrease, and vice versa. In order to apply this relationship to current and expected bond yields, I consider three estimates of the 30-year Treasury yield, including the current 30-day average, a near-term Blue Chip consensus forecast for Q1 2026 – Q1 2027, and a Blue Chip consensus forecast for 2027–2031. Based on the regression coefficients in Exhibit JCN-7, which allow for the estimation of the risk premium at varying bond yields, the results of my Risk Premium analysis are shown in Figure 12 below.

FIGURE 12: RISK PREMIUM RESULTS USING 30-YEAR TREASURY YIELD

	30-Day Average Yield on 30-Year Treasury Bond	Q1 2026–Q1 2027 Forecast for Yield on 30-Year Treasury Bond[21]	2027-2031 Forecast for Yield 30-Year Treasury Bond[22]
Yield	4.66%	4.60%	4.60%
Risk Premium	5.76%	5.79%	5.79%
Resulting ROE	10.41%	10.39%	10.39%

D. Evaluating Model Results

Q. PLEASE EXPLAIN HOW YOU CONSIDERED THE RESULTS OF THE DCF, CAPM, AND RISK PREMIUM ANALYSES TO ARRIVE AT YOUR ROE RECOMMENDATION.

A. As shown in Figure 13, I have considered the results of the DCF, CAPM, and Risk Premium analyses. For the DCF result, I included the average of the 30-day, 90-day, and 180-day analyses. For the CAPM result, I relied on the average of current

21 Blue Chip Financial Forecasts, Vol. 44, No. 12, December 1, 2025, at 2.
22 Blue Chip Financial Forecasts, Vol. 44, No. 12, December 1, 2025, at 14.

and projected Treasury yields, the average of Value Line and Bloomberg Betas coefficients, and the MRP derived from a subset of the S&P 500 companies. For the Risk Premium analysis, I relied on the average of current and projected Treasury yields.

FIGURE 13: BASE ROE RESULTS

	Average	Median
DCF Result	11.58%	10.70%
CAPM Result	11.19%	11.13%
Risk Premium	10.40%	10.40%
Average	**11.06%**	**10.92%**

As discussed in the next Section of my testimony, these estimates serve as a base prior to consideration of the relative business and financial risks of NFGDC as compared to the proxy companies.

VII. BUSINESS RISKS AND OTHER CONSIDERATIONS

Q. ARE THERE FACTORS SPECIFIC TO THE COMPANY'S RISK PROFILE THAT YOU HAVE ALSO CONSIDERED IN DEVELOPING YOUR ROE RECOMMENDATION?

A. Notwithstanding the care taken to establish a risk-comparable group of proxy companies and to consider the results of multiple analytical approaches, market expectations with respect to future risks and growth opportunities will vary from company to company. Therefore, the Company's business risks must also be taken

into consideration when determining where the Company's cost of equity falls within the range of results. As discussed in more detail below, I considered the Company's (1) capital expenditure plan; (2) significantly smaller size compared to the proxy companies; (3) customer concentration risk; and (4) regulatory risk relative to the proxy group companies.

A. Capital Expenditure Program

Q. PLEASE DISCUSS NFGDC'S CAPITAL EXPENDITURE PROGRAM.

A. The Company's long-standing focus on distribution system safety and reliability drives its capital expenditure program. As indicated in the Company's recent earnings presentation, NFGDC plans to spend between $185 and $205 million on total capital expenditures in 2026. In 2025, the Company spent approximately 78 percent (or $147.7 million) of total capital expenditures on safety and reliability improvements.[23] These expenditures include utility main pipeline replacement, modernization of its gas system, and emissions reductions.

As with any utility facing capital expenditure requirements, the Company's risk profile is affected in two significant and related ways: (1) an elevated level of capital investment increases the risk of under-recovery or delayed recovery of the invested capital; and (2) an inadequate return would put downward pressure on key credit metrics. The Company's capital spending program will put significant pressure on the Company's need to raise capital, and the terms will have lasting impacts for the Company's customers.

23 National Fuel Investor Presentation, Fiscal 2025 – 4th Quarter and Full year Update, November 5, 2025.

Q. DO CREDIT RATING AGENCIES RECOGNIZE THE RISKS ASSOCIATED WITH ELEVATED LEVELS OF CAPITAL EXPENDITURES?

A. Yes. From a credit perspective, the additional pressure on cash flows associated with higher levels of capital expenditures exerts corresponding pressure on credit metrics and, therefore, credit ratings. Moody's explains the implications of large capital expenditure programs on utilities' credit profiles and notes that "[h]igh capital expenditures were a key driver of most of [Moody's] negative rating actions" in 2024:[24]

> Credit pressure is emerging most acutely for companies with large, complex or multiyear projects or for those that are experiencing a delay in the recovery of investment costs. Unlike exogenous events of recent years – such as severe storms, commodity price spikes and the COVID-19 pandemic, which we viewed as temporary events – capital spending and related financings are core long-term financial policy issues. As such, we are not regarding them as temporary and believe they will likely continue to lead to negative rating actions if not sufficiently mitigated.[25]

S&P explains the importance of regulatory support for large capital projects:

> When applicable, a jurisdiction's willingness to support large capital projects with cash during construction is an important aspect of our analysis. This is especially true when the project represents a major addition to rate base and entails long lead times and technological risks that make it susceptible to construction delays. Broad support for all capital spending is the most credit-sustaining. Support for only specific types of capital spending, such as specific environmental projects or system integrity plans, is less so, but still favorable for creditors. Allowance of a cash return on construction work-in-progress or similar ratemaking methods historically were extraordinary measures for use in unusual circumstances, but when construction costs are rising, cash flow support could be crucial to

24 Moody's Ratings, Electric and Gas Utilities – US Sector In-Depth, "High capital spending will weigh on credit quality without supportive company actions," at 3 (October 21, 2024).

25 *Id*., at 2.

> maintain credit quality through the spending program. Even more favorable are those jurisdictions that present an opportunity for a higher return on capital projects as an incentive to investors.[26]

The utility's ability to recover its full cost of operations and business, including the costs to maintain and improve its system, is a critical factor in the assessment of its financial strength and creditworthiness. For investors, these considerations factor into the overall perception of risk and consequently, the return required to compensate for this risk. To provide continuous safe and reliable service, maintaining access to capital markets on favorable terms is critical for utilities and their customers, especially during periods of significant capital investment.

Q. WHAT IS YOUR CONCLUSION REGARDING HOW NFGDC'S PROJECTED CAPITAL EXPENDITURE PROGRAM AFFECTS THE COMPANY'S RISK PROFILE AND COST OF EQUITY?

A. My primary conclusion is that NFGDC's capital expenditure program is a testament to the Company's commitment to improving its infrastructure in order to provide reliable and safe operations to its customers. The Company's capital spending program places pressure on internal cash flows and credit metrics, and will require the company to maintain access to capital markets on favorable terms and conditions. For these reasons, it is important that the authorized ROE be set at a level that allows NFGDC to continue to attract both debt and equity under favorable terms regardless of the economic and financial market conditions.

26 S&P Global Ratings, "Assessing U.S. Investor-Owned Utility Regulatory Environments," August 10, 2016, at 7.

B. Small Size Risk

Q. HOW DOES THE COMPANY'S SMALL SIZE AFFECT ITS RISK PROFILE AND COST OF EQUITY?

A. The small size of NFGDC relative to the proxy group companies is an important risk factor in determining the Company's cost of equity. Smaller companies generally are thought to be riskier than larger companies, and thus investors require a higher return for investment in smaller firms. That higher return requirement is known as the "size premium." Academic literature recognizes that smaller companies tend to be rewarded with higher total returns than larger companies, even after the relative illiquidity of smaller company stock is taken into account. Exhibit JCN-8 shows NFGDC's implied market capitalization relative to the proxy group companies. By applying the proxy group median market-to-book ratio of 1.61 to NFGDC's historical test year book equity balance of $768 million, the Company's implied market capitalization is $1.24 billion, or 23.92 percent of the proxy group median market capitalization of $5.17 billion.

NFGDC's small size relative to the proxy group companies indicates that the Company's earnings and cash flows may be disproportionately affected by circumstances such as the loss of large customers as well as general macroeconomic conditions in the service territory. Similarly, capital expenditures for non-revenue producing investments such as system maintenance and replacements will put proportionately greater pressure on the Company's cost of service. Taken together, these risks affect the return required by investors for smaller companies. While I recognize that as a wholly-owned subsidiary of National Fuel Gas NFGDC may

have some protection from such external shocks, on a stand-alone basis the Company is relatively small as compared to the proxy group companies used for the ROE analysis. This small size magnifies the effect of other business and financial risks on the Company.

Q. WHY IS IT IMPORTANT TO CONSIDER THE RISK ASSOCIATED WITH NFGDC'S SMALL SIZE EVEN THOUGH IT IS A SUBSIDIARY OF A LARGER ENTITY?

A. The widely accepted "stand-alone" regulatory principle treats each utility subsidiary as its own company. Parent entities (whether publicly or privately owned) like other investors, have capital constraints and must look at the attractiveness of the expected risk-adjusted return of each investment alternative in their capital budgeting process. The opportunity cost concept applies regardless of the source of the funding. When funding is provided by a parent entity, the return still must be sufficient to provide an incentive to allocate equity capital to the subsidiary or business unit rather than other internal or external investment opportunities. That is, the regulated subsidiary competes for capital with the parent company's affiliates, and with other similarly situated utility companies. In that regard, investors value corporate entities on a sum-of-the-parts basis and expect each division within the parent company to provide an appropriate risk-adjusted return. It therefore is important that the authorized ROE reflects the risks and prospects of the utility's operations and supports the utility's financial integrity from a stand-alone perspective. From that perspective, the fact that NFGDC is a

subsidiary of National Fuel Gas is not relevant to the consideration of the risk associated with NFGDC's small size.

Q. DO CREDIT RATING AGENCIES CONSIDER SMALL SIZE AS A DISTINGUISHING RISK FACTOR?

A. Yes. Moody's, for example, considers the size and diversity of utility operations to be a distinguishing factor that makes some utilities riskier than others. In discussing its rating methodology for regulated electric and gas utilities, Moody's states:

> In assessing market position, we consider the economic diversity of the utility's service territory and the diversity of its regulatory regimes, as well as the size and scale of a utility's operations. We also consider the diversity of utility operations (e.g., regulated electric, gas, water, steam) where there are material operations in more than one area.
>
> Economic diversity is typically a function of the population, size and breadth of the territory and the businesses that drive its gross domestic product (GDP) and employment. For the size of the territory, we typically consider the number of customers and the volume of generation and/or throughput. For breadth, we consider the number of sizable metropolitan areas served, the economic diversity and vitality in those metropolitan areas, and any concentration in a particular area or industry. In our assessment, we may consider various information sources. We also consider the mix of the utility's sales volumes among customer types, as well as the track record of volume sales and any notable payment patterns during economic cycles. For diversity of regulatory regimes, we typically look at the number of regulators and the percentages of revenues and utility assets that are under the purview of each. Issuers regulated in multiple jurisdictions typically receive the highest scores in the Market Position sub-factor. Where there is only one regulator, we make a differentiation of regimes perceived as having lower or higher volatility. Size of the utility is also considered, since a larger utility can better absorb the impact of temporary, or one-time, adverse events.[27]

27 Moody's Investor Service, Rating Methodology, Regulated Electric and Gas Utilities, August 6, 2024, at 12.

NFGDC's smaller size increases its financial and business risks relative to the proxy group companies. While I did not make a specific adjustment to the ROE recommendation to account for this increased risk, it is an important consideration in setting the ROE within the recommended range to compensate investors for this increased risk.

Q. WHAT IS YOUR CONCLUSION REGARDING HOW THE COMPANY'S SMALL SIZE AFFECTS THE COMPANY'S RETURN ON EQUITY?

A. My conclusion is that NFGDC is comparatively smaller than the proxy group companies and the smaller size represents an incremental risk. While I have not made a specific adjustment to reflect the Company's small size, the risk associated with small size indicates that NFGDC's cost of equity is higher than the midpoint of the range of proxy group results.

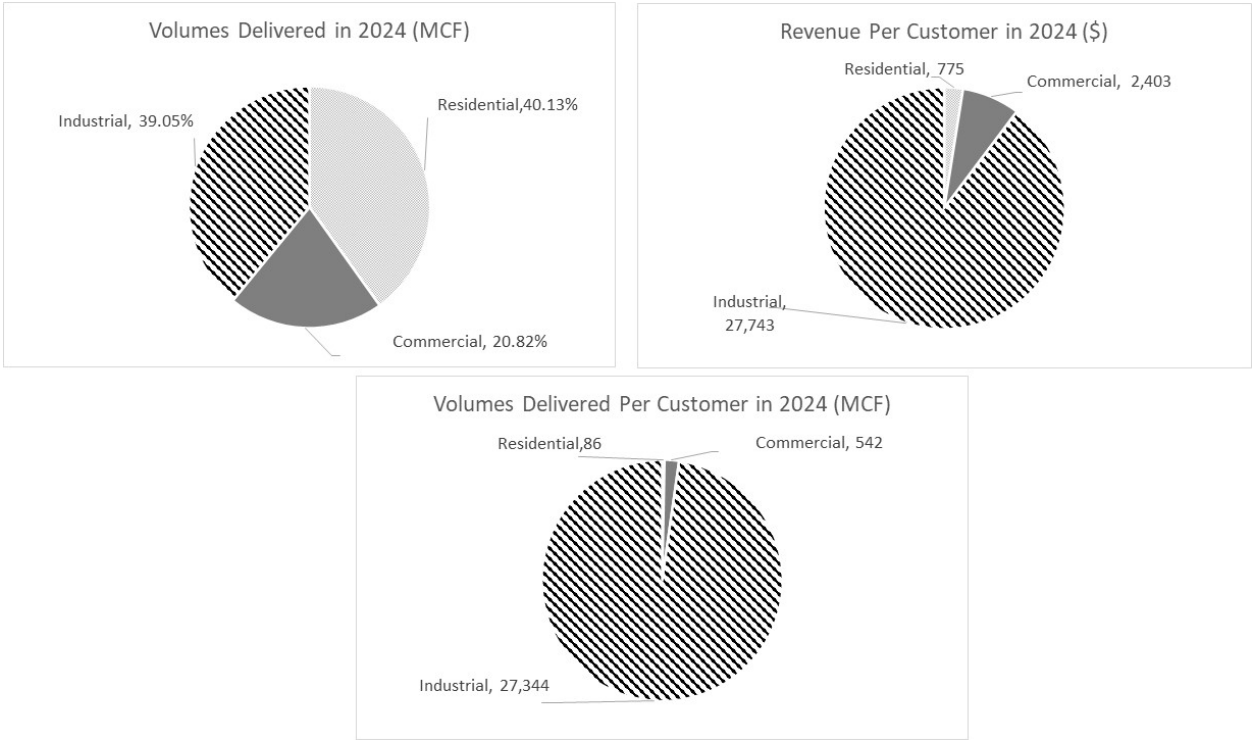
C. Customer Concentration Risk

Q. DOES NFGDC FACE ADDITIONAL BUSINESS RISKS RELATED TO ITS NATURAL GAS OPERATIONS?

A. Yes, it does. As a natural gas distribution company, NFGDC faces risks related to evolving customer trends, competition from alternative energy sources, and federal and state regulatory requirements. Moreover, NFGDC's position as a supplier for residential, industrial, and commercial customers exposes the Company's operations to macroeconomic and local economic conditions that influence the demand for its product. Particularly, the Company's customer concentration risk is highly pronounced in serving the industrial and manufacturing customers in Pennsylvania. Manufacturing has consistently been one of the largest contributors

to Pennsylvania's state Gross Domestic Product ("GDP"), although its overall contribution has declined since the early 2000s.[28] As shown in Figure 14, from the Company's perspective, approximately 40 percent of the Company's 2024 total volumes in Pennsylvania were derived from industrial customers.[29] Industrial sales are also of significance to the Company's financial viability as industrial customers represent the highest volume and revenue *per* customer. In other words, the loss of industrial customers presents elevated risk to the Company's financial health and investors' perception of business risk, especially for a small sized utility, as discussed in the prior section.

FIGURE 14: CUSTOMER CONCENTRATION[30]



28 Bureau of Economic Analysis, Series SAGDP2 (2010-2024).

29 Source: Gas Annual Report submitted to Pennsylvania Public Utility Commission for National Fuel Gas Distribution Corp, for the year ended December 31, 2024.

30 *Id.*

Q. WHY DOES CUSTOMER CONCENTRATION INCREASE BUSINESS RISK?

A. Customer concentration exposes the Company to increased business risk due to loss of large volumes and revenues associated with the loss of any single customer. This risk is especially pronounced during periods of high economic and business uncertainty such as the current dynamic with respect to inflation, interest rates, and global geopolitical tensions. If a large industrial customer goes out of business or significantly reduces its gas demand, a significant portion of the Company's revenues will be lost. Furthermore, since the Company's distribution revenue recovers fixed costs, which the Company continues to bear regardless of the volumes delivered, NFGDC will not be able to recover those costs and consequently underearn. These risks are highlighted by Dhaliwal, Judd, Serfling, and Shaikh:

> Depending on a major customer for a large portion of sales can be risky for a supplier for two primary reasons. First, a supplier faces the risk of losing substantial future sales if a major customer becomes financially distressed or declares bankruptcy, switches to a different supplier, or decides to develop products internally. Consistent with this notion, Hertzel et al. (2008) and Kolay et al. (2015) document negative supplier abnormal stock returns to the announcement that a major customer declares bankruptcy. Further, a customer's weak financial condition or actions could signal inherent problems about the supplier's viability to its remaining customers and lead to compounding losses in sales. Second, a supplier faces the risk of losing anticipated cash flows from being unable to collect outstanding receivables if the customer goes bankrupt. This assertion is consistent with the finding that suppliers offering customers more trade credit experience larger negative abnormal stock returns around the announcement of a customer

filing for Chapter 11 bankruptcy (Jorion and Zhang, 2009; Kolay et al., 2015.[31]

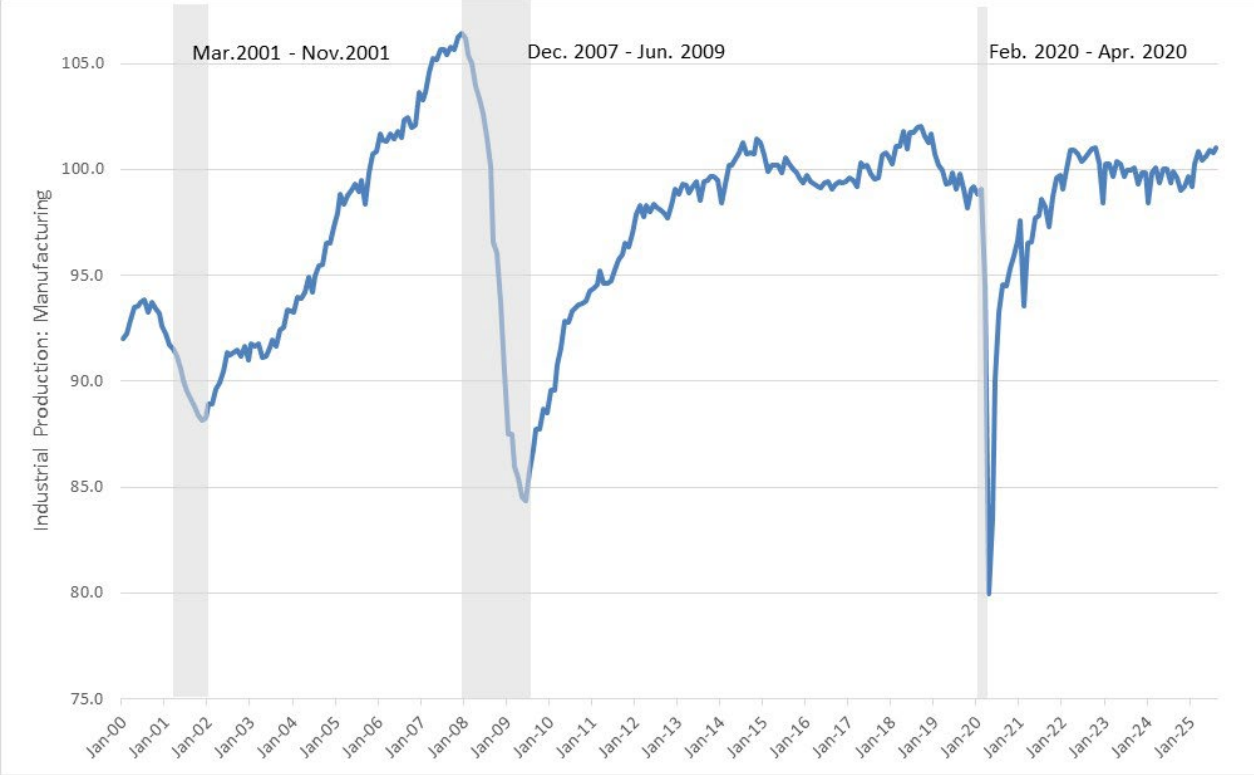
This, in turn, will reduce investor confidence in the Company's financial viability, may impact its credit ratings, and further increase capital costs.

Q. HOW WOULD INDUSTRIAL NATURAL GAS DEMAND BE IMPACTED BY AN ECONOMIC DOWNTURN?

A. Chemical and steel manufacturing, the primary industrial customers served by NFGDC, are closely aligned with the general demand of consumer and durable products, such as cars, appliances, buildings, and other machinery. When the economy slows, or there is growing consumer uncertainty, the demand for manufacturing these products eventually slows. This slowdown in manufacturing further extends into the demand for natural gas supply by manufacturing plants. This is evident in the declines in the industrial segment during each of the recessions in recent years, as shown in Figure 15 below:

31 Dan S. Dhaliwal, J. Scott Judd, Matthew A. Serfling, and Sarah Shaikh, *Customer Concentration Risk and the Cost of Equity Capital*, SSRN Electronic Journal (2016): 1-2. Web.

FIGURE 15: U.S. INDUSTRIAL PRODUCTION IN MANUFACTURING ACROSS ECONOMIC CYCLES[32]



As evident in the figure above, industrial production in manufacturing declined significantly during economic downturns (i.e., March 2001 – November 2011; December 2007 – June 2009; and February 2020 – April 2020). These downturns directly impacted energy demand, as evidenced by the U.S. Energy Information Administration's ("EIA") Short-Term Energy Outlook in January 2010:

> EIA estimates that total natural gas consumption fell by 1.5 percent in 2009, primarily because of the economic downturn. Despite low natural gas prices throughout most of 2009, which contributed to a significant increase in natural gas-fired electric power generation, declines in industrial, residential, and commercial sector

32 Source: FRED St. Louis, Industrial Production: Manufacturing (IPMAN).

consumption drove the year-over-year decline in total consumption.[33]

Given economic volatility and uncertainty coupled with the Company's significantly small size, NFGDC's customer concentration exposes the Company to significant risk related to natural gas demand, particularly industrial customers that comprise a significant portion of the Company's total volumes and revenues.

D. Regulatory Framework and Relative Risk

Q. PLEASE EXPLAIN HOW CREDIT RATING AGENCIES CONSIDER THE REGULATORY FRAMEWORK IN ESTABLISHING A COMPANY'S CREDIT RATING.

A. Moody's, S&P, and Fitch all consider the overall regulatory framework in establishing credit ratings. As shown Figure 16, Moody's establishes credit ratings based on four key factors:

FIGURE 16: MOODY'S RATING FACTORS

Factor	Weighting
Regulatory Framework	25%
Ability to Recover Costs and Earn Returns	25%
Diversification	10%
Financial Strength	40%
Total	100%

Two of these factors (*i.e.*, regulatory framework and the ability to recover costs and earn returns) are based on the regulatory environment; thus, half of

33 U.S. Energy Information Administration, Short-Term Energy Outlook, January 12, 2010 Release.

Moody's overall assessment of business and financial risk for regulated utilities is based on the regulatory environment.[34] Similarly, S&P has identified the regulatory environment as an important factor, stating, "we believe the fundamental regulatory environment in the jurisdictions in which a utility operates often influence credit quality the most."[35] Fitch emphasized the importance of the regulatory environment as follows:

> A benign and supportive regulatory environment could support a rating uplift, all other conditions being equal, even when credit metrics are not in line with those of the relative rating level. Conversely, an extended period of adverse or penalizing regulatory actions could lead to lower ratings given regulatory constructs often tend to be sticky and could take a long time to turn around.[36]

Q. HOW DOES NFGDC'S REGULATORY FRAMEWORK COMPARE TO ITS PEER UTILITIES?

A. I have undertaken a review of regulatory mechanisms designed to mitigate certain business risks, and they support treating the results from the proxy group I selected as representative of the business risk of a prudently managed regulated gas utility like NFGDC. The results of my analysis are presented in Exhibit JCN-9. Specifically, I examined the following elements of cost-recovery that affect the regulatory risk of the Company and the proxy group companies: (1) test year convention; (2) rate base convention; (3) revenue decoupling; and (4) capital cost recovery.

34 Moody's Investor Service, Rating Methodology, Regulated Electric and Gas Utilities, August 6, 2024, at 2.

35 Standard & Poor's, *Assessing U.S. Utility Regulatory Environments*, March 11, 2010, at 2.

36 Fitch Ratings, *U.S. Utilities, Power and Gas Ratings Navigator Companion Special Report*, February 9, 2015, at 3.

Similar to 41.67 percent of the proxy group companies, NFGDC has a forecasted rate base convention. In addition, NFGDC has a year-end rate base convention, which is similar to 58.33 percent of the proxy group companies. While 90.91 percent and 70.83 percent of the proxy group companies have revenue decoupling and capital cost recovery mechanisms, NFGDC has only a partial revenue decoupling mechanism and a capped capital cost recovery mechanism. Specifically, its weather normalization, which was effective starting October 2023, is subject to a 3 percent deadband, and the Distribution System Improvement Charge ("DSIC"), initiated on January 1, 2025, is limited to 5 percent of billed distribution revenues. My conclusion is that while NFGDC has somewhat elevated regulatory risk due to the limitations on its partial revenue decoupling and capital cost recovery mechanisms, I do not make a specific adjustment to the ROE recommendation.

VIII. CAPITAL STRUCTURE

Q. WHAT IS NFGDC'S PROPOSED CAPITAL STRUCTURE?

A. As summarized in the direct testimony of James C. Welch, National Fuel Statement No. 11, the Company capital structure at the end of the FPFTY is projected to be comprised of 56.4 percent common equity and 43.6 percent long-term debt. The Company is proposing to use this capital structure in this proceeding.

Q. HOW HAVE YOU ASSESSED THE REASONABLENESS OF NFGDC'S PROPOSED CAPITAL STRUCTURE WITH RESPECT TO THE PROXY GROUP?

A. The proxy group has been selected to reflect comparable companies in terms of business and financial risks. Therefore, it is appropriate to compare the financial capital structures operating utilities of the proxy group companies to the financial capital structure proposed by the Company in order to assess whether the Company's capital structure is reasonable and consistent with industry standards for companies with commensurate risk. I calculated the weighted average capital structures for each of the proxy group operating companies for the period 2022 to 2024. Exhibit JCN-10 shows that the Company's proposed common equity ratio of 56.4 percent is within the range of actual common equity ratios of 46.51 percent to 60.16 percent for the operating companies held by the proxy group over this period.

Q. BASED ON THE INFORMATION YOU HAVE PRESENTED, WHAT IS THE FAIR RATE OF RETURN THAT SHOULD BE ALLOWED THE COMPANY?

A. As shown in Figure 17 below, based on the components discussed above, along with my ROE recommendation of 11.25 percent, the Company should be allowed an overall ROR of 8.78 percent.

FIGURE 17: OVERALL RATE OF RETURN

	Ratio	Cost	Weighted Cost Rate
Debt	43.6%	5.58%	2.44%
Common Equity	56.4%	11.25%	6.34%
TOTAL	100.0%		8.78%

IX. CONCLUSION

Q. WHAT IS YOUR CONCLUSION REGARDING A FAIR ROE FOR NFGDC?

A. Based on the quantitative analyses provided in my Direct Testimony, I have established a range of ROE results shown previously in Figure 1 (also see Exhibit JCN-2). I consider an ROE range of 10.30 percent to 11.30 to be reasonable. From within that range, and considering the Company's risk profile and the management's exceptional efficiency, I recommend an ROE of 11.25. My ROE recommendation considers an 11.00 percent base ROE as well as a 25-basis point management efficiency premium.

Q. WHAT IS YOUR RECOMMENDATION WITH REGARD TO NFGDC'S OVERALL RATE OF RETURN, INCLUDING ITS CAPITAL STRUCTURE IN THIS PROCEEDING?

A. I recommend that the Commission authorize an overall rate of return of 8.78 percent for NFGDC based on a capital structure consisting of 56.40 percent equity and 43.6 percent long-term debt.

Q. DOES THIS CONCLUDE YOUR PRE-FILED DIRECT TESTIMONY?

A. Yes, it does.

NATIONAL FUEL EXHIBIT JCN-1

CONCENTRIC ENERGY ADVISORS

JOSHUA C. NOWAK
VICE PRESIDENT

Mr. Nowak is a financial and economic consultant with more than fifteen years of experience in the energy industry. He has provided expert testimony on regulatory issues in several proceedings before the Federal Energy Regulatory Commission (FERC), the Canada Energy Regulator (CER), and regulatory commissions in Alaska, California, Connecticut, Kentucky, Minnesota, New Brunswick, New Hampshire, New Jersey, New York, North Dakota, Ohio, South Dakota, and Texas. Mr. Nowak specializes in providing rate case services on economic conditions and financial market matters related to the cost of capital. He is also experienced in providing strategic direction on financing activities including bond offerings, credit rating analysis, and investor relations. Previously, Josh was the Director of Regulatory Strategy & Integrated Analytics at National Grid where he was responsible for issues related to the cost of capital across its federal and state jurisdictional operating companies. He holds a Bachelor's Degree in Economics and History from Boston College.

REPRESENTATIVE EXPERIENCE

Expert Testimony and Litigation Support

Mr. Nowak's work includes regulatory project management, research, and analysis for expert witness testimony. His work has included:

- Expert testimony on cost of capital, financial markets, return on equity, capital structure, and debt financing issues
- Regulatory strategy in return on equity proceedings, including coordination across several utilities in joint-party proceedings
- Extensive support for expert testimony in cost of capital and return on equity proceedings through research, financial analysis, and testimony development
- Expert testimony, sponsoring lead-lag studies, in support of utility cash working capital requirements
- Project management of expert testimony assignments, including all phases of the regulatory schedule
- Performing analysis to support expert testimony regarding affiliate expenses and allocations

Policy Analysis

Mr. Nowak has contributed to projects related to policy review including:

- A review of natural gas capacity options and a cost-benefit analysis for state regulators seeking to reduce energy costs for ratepayers
- Analysis of the economic and environmental benefits of changes to natural gas ratemaking/expansion policy

Management and Operations Consulting

Mr. Nowak has taken a lead analytical role in developing benchmarking analyses and process reviews. Specifically, he has:

- Developed benchmarking analyses, in support of expert testimony, comparing electric and gas utilities' cost and operational efficiency, taking into account a situational assessment of exogenous factors
- Performed a process review of a gas utility's expansion projects, including an evaluation of policies, procedures, and financial models
- Supported analysis for a report of the reasonableness of a shared service company's administrative and general costs

Financial Analysis

Other financial analysis Mr. Nowak has conducted include:

- Extensive analysis on issues related to utilities' cost of capital
- Developing dispatch models to estimate revenues for merchant powerplants
- Estimating damages for breach of contract in fuel delivery commitment
- Researching strategic investment opportunities for merchant generators
- A report on the profitability of various generation technologies in a deregulated energy market
- Reviewing internal financial models used by utility clients
- Supporting utility asset appraisals, including research and analysis for income approach, cost approach, and sales comparison approach

Other Experience

In his previous work, Mr. Nowak contributed to the evaluation of regulatory policy for government clients. His experience included performing policy analysis, including economic impact assessments, for federal regulations.

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND OCCUPATION.

A. My name is Joshua C. Nowak. I am employed by Concentric Energy Advisors, Inc. ("Concentric") as Vice President. My business address is 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts 01752.

Q. DID YOU PREVIOUSLY FILE TESTIMONY IN THIS PROCEEDING?

A. Yes. I submitted Direct Testimony on behalf of National Fuel Gas Distribution Corporation ("NFGDC" or the "Company") on January 28, 2026.

Q. ARE YOU SPONSORING ANY EXHIBITS IN THIS PROCEEDING?

A. Yes. My analyses and recommendations are supported by the data presented in Rebuttal Exhibits JCN-1R through JCN-7R, which have been prepared by me or under my direction. I sponsor the following Exhibits:

- JCN-1R – Comprehensive Summary of ROE Results
- JCN-2R – Constant Growth Discounted Cash Flow ("DCF") Analysis
- JCN-3R – Market Risk Premium ("MRP")
- JCN-4R – Capital Asset Pricing Model ("CAPM") Analysis
- JCN-5R – Bond Yield Plus Risk Premium Analysis
- JCN-6R – Mr. Breuning's Corrected CAPM Analysis
- JCN-7R – Mr. Breuning's Adjusted DCF Analysis

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of this Rebuttal testimony is to respond to the Direct Testimony of Drew Breuning on behalf of the Bureau of Investigation and Enforcement ("I&E"), Maureen L. Reno on behalf of the Commonwealth of Pennsylvania Office of Consumer Advocate ("OCA"), and Justin B. Farr on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"), (collectively "Intervenor Witnesses") as their testimonies relate to the appropriate return on equity ("ROE") or "cost of equity" and capital structure for NFGDC. I also address the Direct Testimony of LeeAnn Wise on behalf of OCA as it relates to the Company's proposed management efficiency adder. In addition, I have updated my cost of capital analysis, incorporating changes in market data and forecasts through the end of March 2026.

Q. HOW IS THE REMAINDER OF YOUR REBUTTAL TESTIMONY ORGANIZED?

A. The remainder of this Rebuttal Testimony is organized as follows: Section II provides a summary of my testimony and discussion of the Intervenor Witnesses' approaches and results. Section III presents the results of my updated ROE analyses based on market data through March 31, 2026. Section IV responds to the Intervenor Witnesses' capital structure recommendations. Section V discusses the Company's proposed management efficiency ROE adder. Section VI discusses economic and capital market conditions and how those conditions are affecting the various models used to estimate the cost of equity for NFGDC. In Sections VII and VIII, I respond to Mr. Breuning's and Ms. Reno's testimonies, respectively, and discuss the proper application of the

various cost of capital models and appropriate inputs to the ROE analyses. Finally, in Section IX, I summarize my key conclusions and recommendations.[1]

II. EXECUTIVE SUMMARY

Q. WHAT ARE YOUR KEY CONCLUSIONS REGARDING THE INTERVENOR WITNESSES' RECOMMENDATIONS ON NFGDC'S COST OF CAPITAL?

A. The key points in my rebuttal testimony are as follows:

1. While Mr. Breuning, Ms. Reno and I agree that the DCF and CAPM approaches are reasonable methods to estimate the cost of equity, Mr. Breuning and Ms. Reno's analytical approaches contain flaws and inconsistencies that, when corrected, produce more reasonable estimates. In Sections VII and VIII, I discuss these areas of disagreement in detail. For example, if Mr. Breuning were to limit his analyses to the DCF and CAPM approaches, along with the application of appropriate inputs, his average CAPM ROE would increase by approximately 190 basis points to a midpoint of 11.18 percent, and his DCF results would increase by approximately 80 basis points to an average of 11.26 percent.

2. Mr. Breuning misplaces the use of benchmarks, such as the national average authorized ROEs for natural gas distribution companies, without any consideration of prevailing capital market conditions, as an analytical methodology to arrive at his ROE recommendation. This represents a departure

[1] The fact that I may not have responded to any particular argument or statement made by the Intervenor Witnesses does not indicate my agreement with that argument or statement.

from his recent testimony in the case of PPL Electric (Docket No. R-2025-3057164), where Mr. Breuning's ROE recommendation was based on the results of his Constant Growth DCF model. Setting aside the theoretical deficiencies of Mr. Breuning's approach, Mr. Breuning, Ms. Reno, and Mr. Farr cite the national average and median authorized ROEs for natural gas distribution companies, but do not provide adequate rationale aligning NFGDC's risk profile to the "average" of all utilities. Authorized ROEs provide valuable information regarding comparable returns to other similarly-situated companies, but must be viewed in the context of the capital market conditions in which they were approved.

3. Several key factors affect the cost of equity for regulated utility companies in current and prospective capital markets, including the interest rate environment and central bank monetary policy, as well as the increasing inflationary pressures amid an increasingly uncertain geopolitical landscape. While Ms. Reno acknowledges that "investors are growing concerned about this persistent inflation particularly since the latest indicators have not fully reflected international oil supply shocks,"[2] Mr. Breuning disagrees on my assessment of the macroeconomic environment and asserts that the Federal Reserve's potential rate cuts in 2026 would "positively impact long-term borrowing rates in the [Company's] FPFTY."[3] As Ms. Reno succinctly states in her Direct Testimony, "[y]ields on short-term Treasury bonds have decreased from

2 Direct Testimony of Maureen L. Reno, at 12.

3 Direct Testimony of Drew Breuning, at 44.

elevated levels in 2023/2024 in response to the FOMC's recent actions. Yields on long-term Treasury bonds and corporate bonds have remained near peak levels."[4] As I discuss in Section VI, Mr. Breuning's assessment is categorically incorrect and his conclusions are inappropriate. More importantly, these challenging macroeconomic circumstances reinforce the importance of considering the results of multiple models, as I have with the CAPM, DCF, and Risk Premium approaches, rather than Mr. Breuning's and Mr. Farr's reliance on static historical average authorized ROEs from prior years when capital markets conditions were considerably different from those we can observe today.

4. Mr. Bruening and Ms. Reno propose hypothetical capital structures based on unfounded assertions that the Company's requested equity ratio is "unreasonable."[5] As discussed further in Section IV, the Company's requested equity ratio is consistent with the range of the proxy group operating company equity ratios and therefore does not comport with any regulatory finding of unreasonableness. Furthermore, Mr. Breuning and Ms. Reno fail to offer adequate evidence to substantiate the use of a hypothetical capital structure.

5. Based on my updated DCF, CAPM, and Risk Premium analyses and considering the Company's risk profile, I continue to recommend a base ROE of 11.00 percent. The Company has withdrawn its request for an additional 25-basis point management efficiency fee due to consideration of the upward

4 Direct Testimony of Maureen L. Reno, at 13.

5 Direct Testimony of Drew Breuning, at 15; Direct Testimony of Maureen L. Reno at 4.

pressures associated with inflation and the impact on customers' bills. In addition, I continue to support NFGDC's requested capital structure of 56.40 percent equity and 43.60 percent debt.

Q. PLEASE SUMMARIZE THE INTERVENOR WITNESSES' COST OF CAPITAL RECOMMENDATIONS.

A. Mr. Breuning's ROE methodologies result in cost of equity estimates that range from 9.25 percent to 10.47 percent. Mr. Breuning recommends an imputed capital structure comprising of 55.00 percent equity and 45.00 percent debt. Mr. Breuning recommends an authorized ROE of 9.81 percent based on the average results of his DCF and CAPM analyses, and the average authorized ROEs for gas distribution companies nationwide from January 2025 through March 11, 2026. Ms. Reno conducts three variations of the DCF analysis resulting in an ROE range of 8.88 percent to 10.61 percent, and her recommended ROE is the midpoint of these results, 9.74 percent. Ms. Reno also employs the CAPM approach as a "check on the reasonableness of [her] DCF results."[6] Ms. Reno's recommended ROE of 9.74 percent is premised on the Commission's adoption of her proposed hypothetical equity ratio of 50.00 percent. Ms. Reno also provides an alternative ROE recommendation of 9.21 percent if the Commission were to grant the Company its actual equity ratio of 56.40 percent.[7] With respect to the Company's cost of debt, both Mr. Breuning and Ms. Reno accept the Company's requested cost of debt of 5.58 percent.[8]

---

6 Direct Testimony of Maureen L. Reno, at 7.

7 Direct Testimony of Maureen L. Reno, at 8.

8 Direct Testimony of Drew Breuning, at 21; Direct Testimony Maureen L. Reno, at 7-8.

Q. PLEASE DESCRIBE THE LEGAL STANDARDS THAT MUST BE MET TO ESTABLISH THE AUTHORIZED ROE FOR A REGULATED PUBLIC UTILITY SUCH AS NFGDC.

A. As discussed in my Direct Testimony, the standards for a just and reasonable return established by the United States Supreme Court in the *Hope* and *Bluefield* cases are:

1. Financial Integrity: the return must be adequate to ensure the company's financial soundness and support credit quality;
2. Capital Attraction: the return must be sufficient to enable the company to attract capital on reasonable terms and conditions; and
3. Comparable Return: the return must be comparable to those available to investors in firms with commensurate risk.

Q. MR. BREUNING AND MS. RENO DISCUSS COMMISSIONER BARROW'S COMMENTARY REGARDING THE FINANCIAL IMPACT ON CUSTOMERS OF THE OUTCOME OF THIS RATE CASE.[9] WHAT IS YOUR RESPONSE?

A. Commissioner Barrow's commentary underscores two significant considerations in this proceeding: ensuring that the Company's requested ROE and capital structure comport with the standards established in *Hope* and *Bluefield*, and the impact of the outcome of this proceeding on customers' bills. The ROE and capital structure established in this proceeding must meet the standards discussed above and reflect the Company's actual financial risk and maintain its creditworthiness. I also acknowledge

9 Direct Testimony of Drew Breuning at 17; Direct Testimony of Maureen L. Reno, at 5-6.

that the impact on customers' bills is a significant factor in the Commission's decision in this proceeding. As discussed further in Section V of my testimony, in recognition of the inflationary pressures and impact on customer bills, the Company has taken a meaningful step by withdrawing its request for the 25-basis point management efficiency adder.

Q. ARE THERE OTHER STATEMENTS ISSUED BY THE COMMISSION THAT ARE IMPORTANT TO CONSIDER IN RELATION TO THE OUTCOME OF THIS CASE?

A. Yes, on March 26, 2026, Chairman DeFrank issued a statement regarding NFGDC's petition relating to its Long-Term Infrastructure Improvement Plan ("LTIIP"). Chairman DeFrank not only acknowledged NFGDC consistently meeting its LTIIP mileage replacement targets for leak prone pipe, but regarded the achievement as noteworthy given the price increases the Company experienced from 2023 to 2024. Chairman DeFrank found the Company's "performance in meeting pipeline replacement targets, despite increased costs, to be commendable and worth of recognition." [10] Chairman DeFrank also recognized that increased costs will affect NFGDC's ability to meet pipeline replacement goals going forward. In that regard, it is also important to consider the effect of I&E's and OCA's recommendations on the Company's cash flow. I&E's 9.81 percent ROE recommendation and 55.00 percent equity ratio recommendation would decrease the Company's rate request by more than 35 percent and reduce its cash flow by at least $7 million. OCA's 9.74 percent ROE

10 Pennsylvania, Public Utility Commission, Statement of Chairman Stephen M. DeFrank, Docket No. P-2022-3034957, issued March 26, 2026.

recommendation and 50.00 percent equity ratio recommendation would decrease the Company's rate request by nearly 50 percent and reduce its cash flow by at least $9.5 million. As discussed in my Direct Testimony, an inadequate return will put additional downward pressure on key credit metrics that are already constrained by its capital expenditure program. Decreasing the Company's cash flow by $7 to 9.5 million, will compound the cost pressures recognized by Chairman DeFrank on NFGDC's ability to meet pipeline replacement goals going forward.

Q. PLEASE EXPLAIN WHY MR. FARR'S AND MR. BREUNING'S RELIANCE ON AUTHORIZED ROES TO DETERMINE NFGDC'S ROE IN THIS PROCEEDING IS INAPPROPRIATE.

A. Mr. Breuning[11] and Mr. Farr[12] employ an unconventional, non-analytical approach in their ROE recommendations by relying on the median and average authorized ROEs as a "proxy ROE"[13] to set an inherently forward-looking estimate of investors' required ROEs. While authorized returns can provide valuable information, there are several issues with Mr. Breuning's and Mr. Farr's approaches. First, by relying on the average of nationwide or proxy group companies' authorized ROEs without reference to prevailing macroeconomic conditions or observable market benchmarks, such as those inherent in analytical approaches (*i.e.,* DCF, CAPM, and Risk Premium models), Mr. Farr and Mr. Breuning implicitly disconnect authorized ROEs from broader capital market-based indicators. This approach presumes that regulatory commissions

11 Direct Testimony of Drew Breuning, at 37-38.

12 Direct Testimony of Justin B. Farr, at 4 and Exhibit JBF-5, page 3.

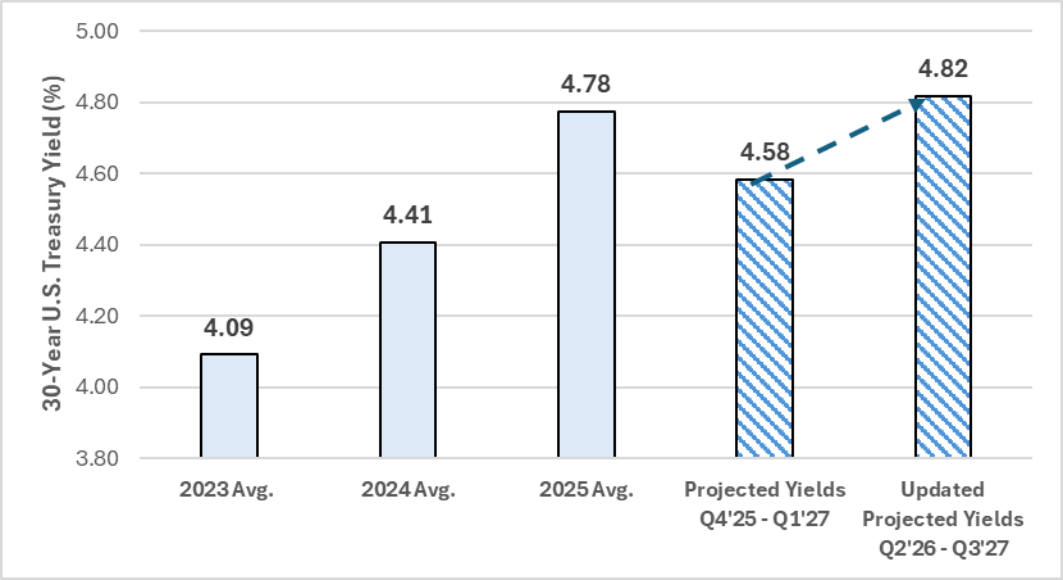
13 Direct Testimony of Justin B. Farr, at 4.

authorize ROEs independently of changing economic and financial conditions over time, an assumption that is inconsistent with both regulatory practice and investor behavior. Notably, Mr. Breuning does not identify the use of the national authorized average as a "commonly presented" methodology for determining the cost of common equity.[14] The 9.70 percent national average ROE for natural gas distribution companies cited by Mr. Breuning is 77 basis points below the 10.47 percent ROE implied by his own DCF analysis, highlighting a clear disconnect between the benchmark he relies upon and his market-implied analytical results.

Second, Mr. Farr and Mr. Breuning fail to consider forward-looking capital market expectations that investors incorporate when evaluating prospective investments. This omission is particularly problematic given that the ROE established in this proceeding is intended to recover the Company's cost of capital throughout the future rate term. As illustrated in Figure 1 below, market conditions can, and do, change meaningfully over time. For example, since the preparation of my Direct Testimony, increased market volatility and heightened geopolitical uncertainty have placed upward pressure on expected U.S. 30-year Treasury yields.

14 Direct Testimony of Drew Breuning, at 22.

FIGURE 1: AVERAGE AND PROJECTED U.S. 30-YEAR TREASURY YIELDS



It is therefore important to consider not only the historical relationship among relevant capital market indicators, such as the U.S. 30-Year Treasury, but also the trajectory of investor expectations of future returns.

III. UPDATED ROE ANALYSES

Q. PLEASE DESCRIBE THE DATA APPLIED IN YOUR UPDATED ROE ANALYSES.

A. In my Direct Testimony, filed in January 2026, I used market data updated through November 28, 2025. For this Rebuttal Testimony, I have updated the results of the financial models used to estimate the cost of equity for NFGDC in my Direct Testimony to include market data through March 31, 2026. I rely on the same proxy group of gas utilities. The results of my updated analyses are shown in Figure 2 below and Exhibits JCN-1R through JCN-5R. I included all of the companies in my original proxy group, demonstrating results both including and excluding Spire, Inc. The

average three-model ROE result increased by seven basis points since I filed my Direct Testimony in January.

FIGURE 2: SUMMARY OF RESULTS, ALL PROXY COMPANIES

	Median	Mean
DCF Result	10.65%	11.37%
CAPM Result	11.47%	11.58%
Risk Premium	10.44%	10.44%
Average	**10.89%**	**11.13%**

IV. RESPONSE TO INTERVENOR WITNESSES' CAPITAL STRUCTURE RECOMMENDATIONS

Q. PLEASE SUMMARIZE THE CAPITAL STRUCTURE RECOMMENDATIONS PROPOSED BY MR. BREUNING AND MS. RENO.

A. Mr. Breuning categorizes the Company's requested equity ratio of 56.40 percent as "unreasonable."[15] For this reason, Mr. Breuning recommends that the Commission impute a hypothetical capital structure of 55.00 percent common equity and 45.00 percent debt[16] by reference to an "optimal" capital structure consisting of 50.00 percent common equity and 50.00 percent debt.[17] Ms. Reno's recommendation of a hypothetical capital structure comprised of 50.00 percent common equity and 50.00

15 Direct Testimony of Drew Breuning, at 15.

16 Direct Testimony of Drew Breuning, at 15.

17 Direct Testimony of Drew Breuning, at 16.

percent debt[18] rests on an inappropriate comparison to capital structures of the proxy group holding companies.[19] Moreover, while she references average authorized equity ratios, which are by definition at the operating company-level and contrary to her assessment of the holding company capital structures, she offers no substantiated rationale for concluding that NFGDC's equity ratio should be below the average authorized equity ratios in her comparison years from 2023 through 2025. As explained in further detail below, the capital structure recommendations by Mr. Breuning and Ms. Reno are inappropriate and based on flawed analyses.

Q. WHAT ARE THE REGULATORY GUIDELINES FOR DETERMINING THE REASONABLENESS OF A UTILITY'S CAPITAL STRUCTURE FOR RATEMAKING PURPOSES?

A. In a 2020 publication titled *A Cost of Capital and Capital Markets Primer for Utility Regulators,* the National Association of Regulatory Utility Commissioners ("NARUC") states that actual capital structure ratios should be used unless they "greatly diverge" from sound industry practice:

> A utility management must be permitted latitude, discretion, and flexibility in managing capital structure ratios. Since there is no practical methodology to pinpoint theoretically optimal capital structure ratios, targeted ratios can only be broadly conceptualized. Appropriate ratios may shift over time as capital market conditions or business risk characteristics change. Additionally, the timing of upcoming issuances and maturities may influence the capital structure ratios because both the size and frequency of issuances are affected by the relative cost-effectiveness of various issuance increments.
>
> Given these practical considerations, capital structure ratios cannot be deemed to be inappropriate unless the ratios greatly diverge from sound

18 Direct Testimony of Maureen L. Reno, at 6,7.

19 Direct Testimony of Maureen L. Reno, at 24, and OCA Ex. MLR-1, Schedule MLR-4.

> industry practice and cause a lack of financial flexibility that may lead to higher overall costs.
>
> ***
>
> As increasing financial leverage shifts the weight from common equity to lower cost debt, it also increases both the cost of debt and the cost of common equity. In practice, these offsetting impacts cancel each other out over a wide range of capital structure ratios.[20]

Further, James C. Bonbright explains in his seminal text Principles of Public Utility Rates that a hypothetical capital structure should be used only when actual capital structures are "clearly unsound" or "extravagantly conservative," reasoning that using hypothetical capital structures "substitutes an estimate of what the capital cost would be under non-existing conditions for what it actually is or will soon be under prevailing conditions."[21]

Q. MR. BREUNING ASSESSES THE COMPANY'S PROPOSED CAPITAL STRUCTURE AS "UNREASONABLE" FOR RATEMAKING PURPOSES.[22] DO YOU AGREE?

A. No, I do not. Mr. Breuning's conclusion is based on a comparison of the proxy group average equity ratios for the last 5-year period. In his discussion, Mr. Breuning calculates the five-year average capital structure of his proxy group, ranging from 36.62 percent to 60.47 percent equity, and notes that the Company's requested equity ratio "falls close to the highest end of the range."[23] While the term "close" is inherently

---

20 NARUC, *A Cost of Capital and Capital Markets Primer for Utility Regulators* (April 2020), at 11 .

21 James C. Bonbright, Principles of Public Utility Rates, at 243-44 (1960). Republished with permission by the Regulatory Assistance Project.

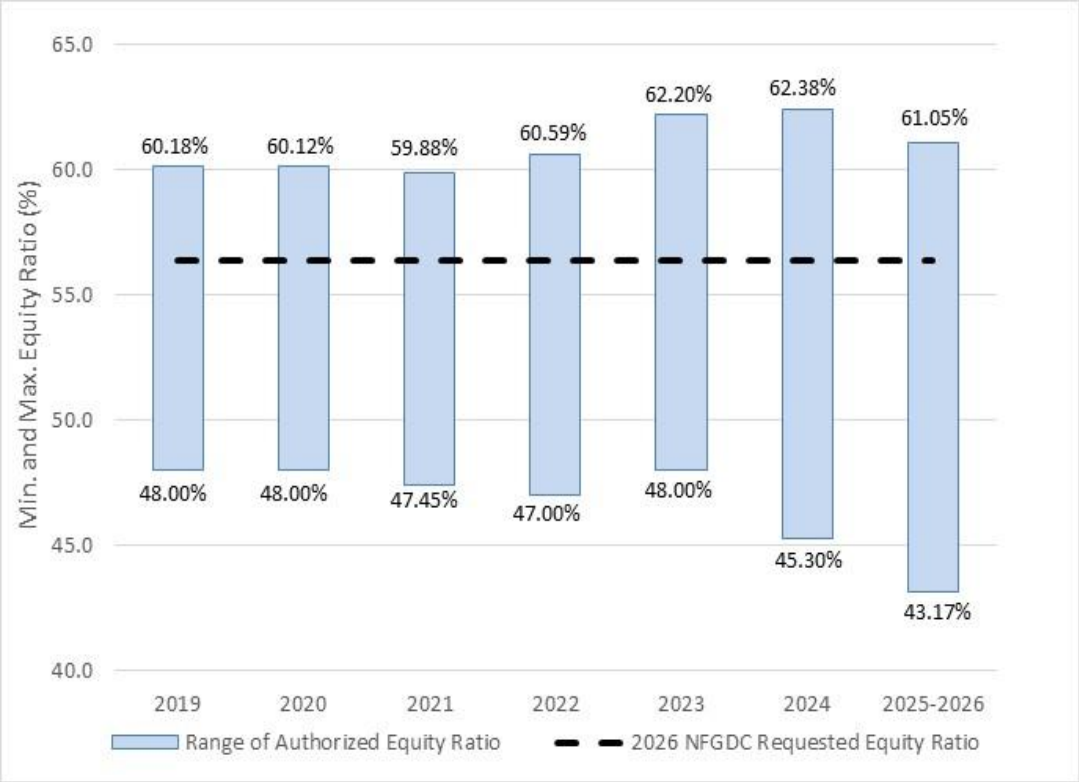
22 Direct Testimony of Drew Breuning, at 15.

23 Direct Testimony of Drew Breuning, at 15.

subjective, it is noteworthy that the Company's requested equity ratio of 56.40 percent is approximately *400* basis points below what Mr. Breuning characterizes as the upper end of his range. Moreover, as discussed above, Mr. Breuning's own analysis does not support his conclusion that the Company's proposed capital structure is "unreasonable." To the contrary, the requested 56.40 percent equity ratio falls squarely within the range he presents.

Further, as shown in Figure 3 below, the Company's requested equity ratio of 56.40 percent falls well within the range of authorized equity ratios for natural gas distribution companies over the past seven years.

FIGURE 3: RANGE OF AUTHORIZED EQUITY RATIOS FOR NATURAL GAS DISTRIBUTION COMPANIES (2019 - 2026) [24]



Although Mr. Breuning's recommendation of a 55.00 percent equity ratio is grounded in an assessment that I do not find persuasive or agree with, the equity ratio he ultimately proposes is not, in itself, unreasonable. However, it does not represent NFGDC's actual capital structure.

Q. HAS THE COMMISSION PREVIOUSLY INDICATED ITS PREFERENCE TO USE A UTILITY'S ACTUAL CAPITAL STRUCTURE?

A. Yes, it has. In a decision for PECO Energy Company ("PECO"), the Commission adopted PECO's actual capital structure despite Intervenor testimonies proposing the

24 Source: RRA. Excludes equity ratios authorized in states that permit non-investor supplied capital in the capital structures (*i.e.,* Indiana, Florida, Arkansas, and Michigan).

use of hypothetical capital structures. In its decision, the Commission noted that "we reaffirmed in *Columbia Gas* that the legal standard in Pennsylvania for deciding whether to use a party's proposed hypothetical capital structure in setting rates, *i.e.,* if a utility's actual capital structure is within the range of a similarly situated proxy group of companies, rates are set based on the utility's actual capital structure."[25] In the PECO decision, the Commission further reaffirmed the standard established in a 2012 Order for PPL Electric Utilities Corporation ("PPL"):

> Absent a finding by the Commission that a utility's actual capital structure is atypical or too heavily weighted on either the debt or equity side, we would not normally exercise our discretion with regard to implementing a hypothetical capital structure.[26]

Q. DO YOU AGREE WITH MR. BREUNING'S AND MS. RENO'S APPROACHES TO EVALUATING THE COMPANY'S CAPITAL STRUCTURE BASED ON PROXY GROUP HOLDING COMPANIES?[27]

A. No, I do not. Mr. Breuning's and Ms. Reno's analyses based on the *Value Line* projected capital structures do not provide an apples-to-apples assessment. Because capital at the parent holding company level may finance multiple, diverse utilities, or even unregulated operations, comparisons to the parent company capital structure lead to flawed and misleading conclusions. The Commission has previously addressed the

25 *PECO Energy Company- Gas Division,* Docket No. R-2020-3018929 *et al.*, Opinion and Order, at 144. [Citations Omitted.]

26 *PECO Energy Company- Gas Division,* Docket No. R-2020-3018929 *et al.*, Opinion and Order, at 144-145, citing *Pa. PUC. v. PPL Electric Utilities Corporation*, Docket No. R-2012-2290597 et al at 68.

27 Direct Testimony of Drew Breuning, at 18; Direct Testimony of Maureen L. Reno, at 24, and OCA Ex. MLR-1, Schedule MLR-4.

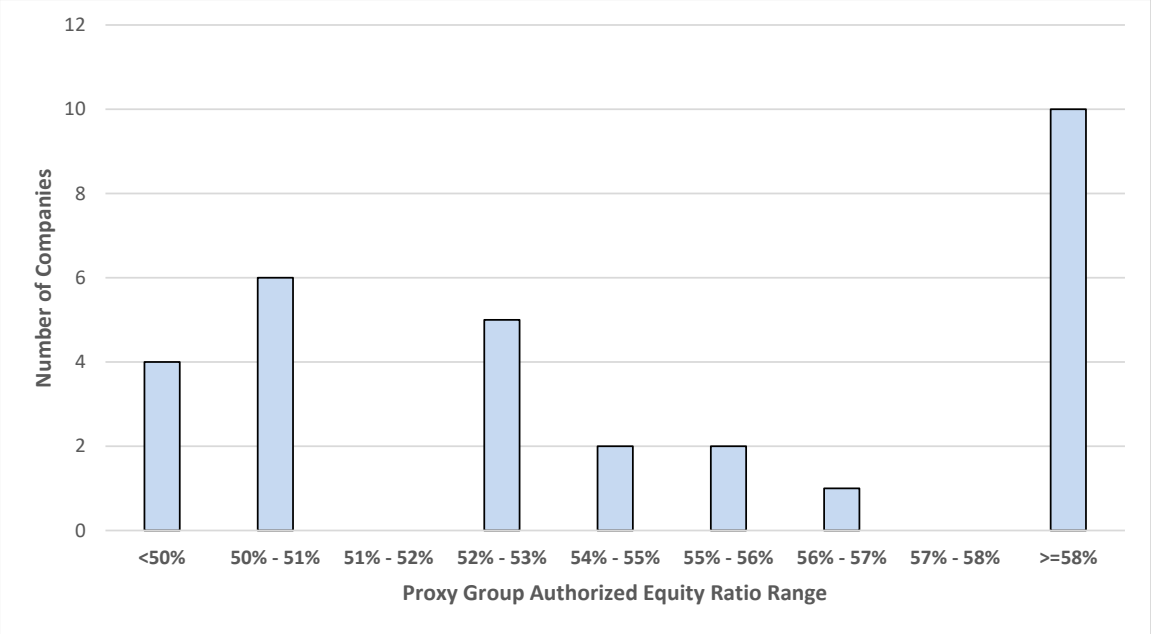
relevance of holding company capital structures when evaluating operating company capital structures:

> We note that because Exelon is a holding company, its capital structure reflects the financial risk associated with the ownership of multiple utilities, a large generation company, and significant unregulated competitive businesses. For this reason, we find that it is not appropriate to compare an operating utility's capital structure to the capital structure of its parent holding company that holds these diverse utility and non-utility operations.[28]

Since capital structure information is available for the regulated operating utilities of the proxy companies and supports the operations at the operating company level, it is more appropriate to consider the capital structures of the utility regulated operating companies as the benchmark for the Company's proposal. My analysis calculating the weighted average capital structures for each of the proxy group operating companies for the period 2022 to 2024 demonstrates that the Company's proposed common equity ratio of 56.40 percent is well within the range of actual common equity ratios of 46.51 percent to 60.16 percent (*see,* Exhibit JCN-10). To supplement this analysis, I assessed the distribution of authorized equity ratios for operating companies in my proxy group.

28 *PECO Energy Company- Gas Division,* Docket No. R-2020-3018929, Opinion and Order, at 147. [Citations Omitted.]

FIGURE 4: PROXY GROUP EQUITY RATIOS



As illustrated in Figure 4 above, a substantial number of operating companies in the proxy group have been authorized common equity ratios in excess of 56.00 percent.

Q. WHAT IS YOUR RESPONSE TO MS. RENO'S CONCERN REGARDING DOUBLE LEVERAGE?[29]

A. Ms. Reno asserts that the Commission should be "aware that the Parent, NFG, would benefit from double leveraging, in which a parent company issues debt and then infuses that debt into the regulated subsidiary as common equity."[30] Ms. Reno's concern regarding double leverage is unfounded and runs counter to the stand-alone regulatory principle, which treats each utility subsidiary as its own company. The cost of equity

29 Direct Testimony of Maureen L. Reno, at 25.

30 Direct Testimony of Maureen L. Reno, at 24-25.

of the subject utility, such as NFGDC, is estimated based on a determination of the subject company's standalone risk profile by reference to a proxy group of firms of comparable risk. According to financial principles, the cost of capital is based on the *use of funds*, not on the *source of funds*. Further, it is not feasible to directly trace one source of financing (*e.g.*, parent company borrowed funds) to a specific use of funds (*e.g.*, subsidiary equity). Professor James Bonbright, a widely recognized regulatory theorist and economist, discusses the impracticability of streaming the sources of funds to their eventual uses:

> Rate base is defined as the: (1) net plant in service; (2) property held for future use; (3) working capital; and (4) construction work in progress (CWIP) – no AFUDC. The capital structure simply represents the funds used to finance the rate base. The sources, not the uses, of funds (debt, equity, deferred taxes, and other capital structure components) are not easily traceable.[31]

Ms. Reno proposes an imputed capital structure consisting of 50.00 percent equity and 50.00 percent debt based, in part, on concerns regarding double leverage. However, setting aside the inapplicability of double leverage to the determination of NFGDC's capital structure, Ms. Reno's proposal is unsupported, as it adopts an equity ratio below NFGDC's parent company's (National Fuel Gas Company's ("NFG")) 53.90 percent equity ratio in the Historic Test Year without any compelling justification. Moreover, Ms. Reno erroneously compares NFGDC's FPFTY equity ratio of 56.40 percent to the NFG's Historic Test Year equity ratios. Using comparable forecasted equity ratios to ensure an apples-to-apples assessment, NFGDC's proposed 56.40 percent equity ratio is 610 basis points *below* NFG's projected 62.50 percent

31 Bonbright, Danielsen, & Kamerschen, Principles of Public Utility Rates, Second Edition, Public Utilities Reports, Inc., at 237.

equity ratio.[32] The fact that NFG's projected equity ratio is higher than its subsidiaries further dispels Ms. Reno's concerns of double leverage.

V. CONSIDERATION OF MANAGEMENT EFFICIENCY ROE ADDER

Q. PLEASE SUMMARIZE THE INTERVENOR WITNESSES' POSITIONS REGARDING THE PROPOSED MANAGEMENT EFFICIENCY ROE ADDER.

A. The Intervenor Witnesses argue against the Company's proposed management efficiency adders. Ms. Reno states that the "proposed adder is unsupported by the record, duplicative of elements already embedded in the ROE, and is inconsistent with established ratemaking principles."[33] Although, as Ms. Reno acknowledges, "there is no adjustment in Mr. Nowak's analysis that isolates customer satisfaction metrics, safety performance, reliability statistics, or other operational indicators for proxy group companies."[34] Mr. Breuning argues that "true strong management performance is earning a higher return through efficient use of resources and cost cutting measures," and that no utility should be "gifted" additional return for "doing what they are required to do."[35] Ms. Wise asserts that NFGDC has not provided documented evidence of the superior management performance and customer service to warrant the management

35 Direct Testimony of Drew Breuning, at 53.

efficiency adder.[36] Finally, Mr. Farr contends that the proposed management efficiency adder has not been adequately benchmarked or quantified.[37] Notably, Mr. Farr asserts that while NFGDC's relatively low customer bills, operational efficiencies, and customer service performance are positive outcomes, they do not demonstrate that the Company faces greater financial risk that would warrant a higher ROE.[38]

Q. WHAT IS YOUR RESPONSE TO THE INTERVENORS' POSITIONS REGARDING THE COMPANY'S PROPOSED MANAGEMENT EFFICIENCY ROE ADDER?

A. I disagree with the Intervenor Witnesses' categorization of the Company's request and support the Company's request based on its demonstration of performance in the key areas discussed in Company Witness Rebecca E. Hillery's Direct Testimony. As acknowledged by Mr. Farr, the Company has demonstrated positive outcomes amid a challenging operating environment. While the Company continues to support the applicability of a management efficiency adder, NFGDC recognizes the importance of customer affordability amid ongoing inflationary pressures and has therefore chosen to forgo the request for an adder in the instant proceeding.

36 Direct Testimony of LeeAnn Wise, at 5.

37 Direct Testimony of Justin B. Farr, at 10-11.

38 Direct Testimony of Justin B. Farr, at 11.

VI. ECONOMIC AND CAPITAL MARKET CONDITIONS

Q. HOW HAVE THE ECONOMIC AND FINANCIAL MARKET CONDITIONS CHANGED SINCE YOU PREPARED YOUR DIRECT TESTIMONY?

A. Since I filed my Direct Testimony in January 2026, the U.S. economy has remained in a tenuous phase of the business cycle, shaped by heightened geopolitical tensions and persistently elevated inflation and interest rates. Although the Federal Reserve has been navigating a shifting economic backdrop with respect to inflation and unemployment rates, rapidly evolving external events create additional volatility and uncertainty as to future monetary policy. In late February, a major combined U.S.-Israel military operation, "Operation Epic Fury," targeted Iranian military and nuclear infrastructure in the Middle East. These events, along with increased trade tensions with China over Taiwan in late 2025 and uncertain domestic financial policy have increased economic volatility and uncertainty, particularly for energy companies. The war in the Middle East has created the largest supply disruption in the history of the global oil market[39] along with a significant impact on global product markets. While the International Energy Agency ("IEA") member countries agreed to release emergency reserves to the market to mitigate the negative impact on economies from the supply disruptions, the ongoing conflict in the Middle East will continue to strain global supply. Vanguard, one of the largest American asset managers, notes that "the scale and persistence of energy disruptions raise noteworthy risks for growth, inflation, and central bank

39 IEA, Oil Market Report – March 2026. Accessible at https://www.iea.org/reports/oil-market-report-march-2026

decision-making" in which "sustained energy price shocks could push inflation higher, tighten financial conditions, and complicate policy trade-offs."[40]

Furthermore, OCA Witness Reno agrees that investor concern over this persistent inflation is growing, and notably, the full magnitude of these disruptions has yet to be captured in current indicators.[41] Reno cites a report from *Value Line Investment Survey,* stating that investors are increasingly concerned about persistent inflation particularly since the latest indicators have not fully reflected the international oil supply shocks caused by U.S. military operations in Iran.[42]

Following the Federal rate cuts in 2025, the Federal Reserve maintained the target range of 3.50 to 3.75 percent in its March 2026 meeting, but noted that "uncertainty about the economic outlook remains elevated" and "the implications of developments in the Middle East for the U.S. economy are uncertain."[43] Investors expect the continued conflict in the Middle East and high oil prices to challenge the Federal Reserve's future actions. While the Federal Reserve's dual mandate (*i.e.*, inflation and unemployment) falls under pressure, "we would expect the Fed to have a bias toward inaction, although already elevated inflation will keep policymakers vigilant to potential changes in inflation expectations."[44] S&P Global also notes that financing costs could become overly burdensome:

44 Vanguard, "The potential impact of high oil prices on economies," March 10, 2026.

> The looming higher inflation has the Treasury bond's break-even inflation rate drifting up. Persistent or higher inflation—along with increased downside risk to growth—could complicate the Federal Reserve's policy making. Coupled with investor sentiment that is increasingly prone to sudden shifts, the cost of debt service and/or refinancing could stay elevated or increase at a time when demand for capital to fund AI-related initiatives could crowd out other borrowers.[45]

The declining sentiment has extended to consumers as Joanna Hsu notes in her final results for April 2026:

> Consumer sentiment ticked down 3.5 index points this month, now comparable to the trough seen in June 2022. Decreases in sentiment were seen across political party, income, age, and education. Expected business conditions declined for both short and long time horizons, nearly matching year-ago readings when the reciprocal tariff regime was implemented. After the two-week cease-fire was announced and gas prices softened a touch, sentiment recovered a modest portion of its early-month losses. The Iran conflict appears to influence consumer views primarily through shocks to gasoline and potentially other prices. In contrast, military and diplomatic developments that do not lift supply constraints or lower energy prices are unlikely to buoy consumers.[46]

These events and increased tensions have heightened market expectations of near-term volatility, as measured by the CBOE Volatility Index ("VIX"). As seen below in Figure 5, the VIX increased from an index level of 16.35 on January 28, 2026, when my Direct Testimony was filed, to 25.25 as of March 31, 2026.

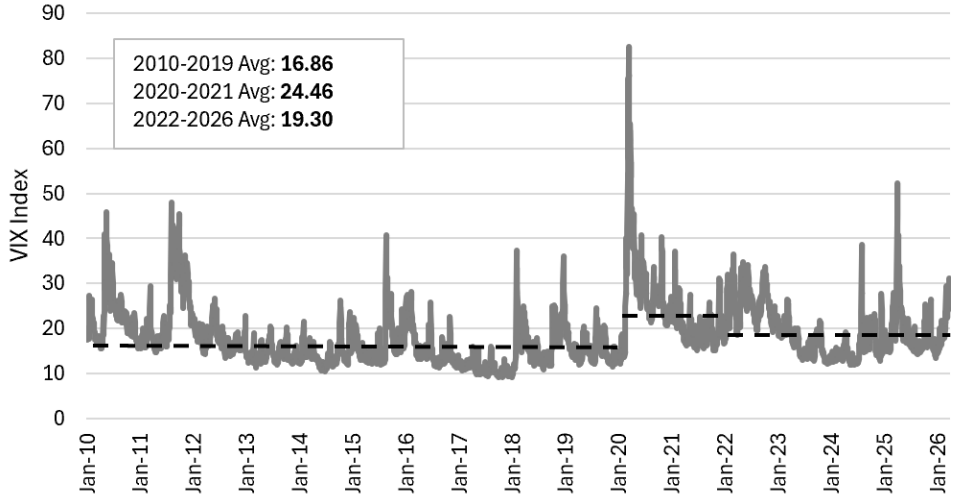
FIGURE 5: CBOE VIX – JANUARY 1, 2010 – MARCH 31, 2026[47]



Q. WITNESS RENO ASSERTS THAT "RECENT STOCK MARKET VOLATILITY HAS BEEN ACCOMPANIED BY INDEXES FALLING BY MID-SINGLE DIGITS".[48] HAVE UTILITY STOCK PRICES ALSO BEEN MORE VOLATILE IN RECENT MONTHS?

A. Yes, they have. The Coefficient of Variation is a measure of volatility defined as the ratio of the standard deviation to the mean over a given period. I calculated the Coefficient of Variation in the market price for the proxy group and the S&P 500 Utilities Index over a rolling 30-day period[49] to assess the trend in utilities' stock price volatility. As Figure 6 below shows, the Coefficient of Variation spiked sharply in late 2022 and, after a period of relative moderation, has resumed an upward trend beginning in late 2024 and continuing through early 2026, with recent levels approaching those last seen during the late 2022 spike.

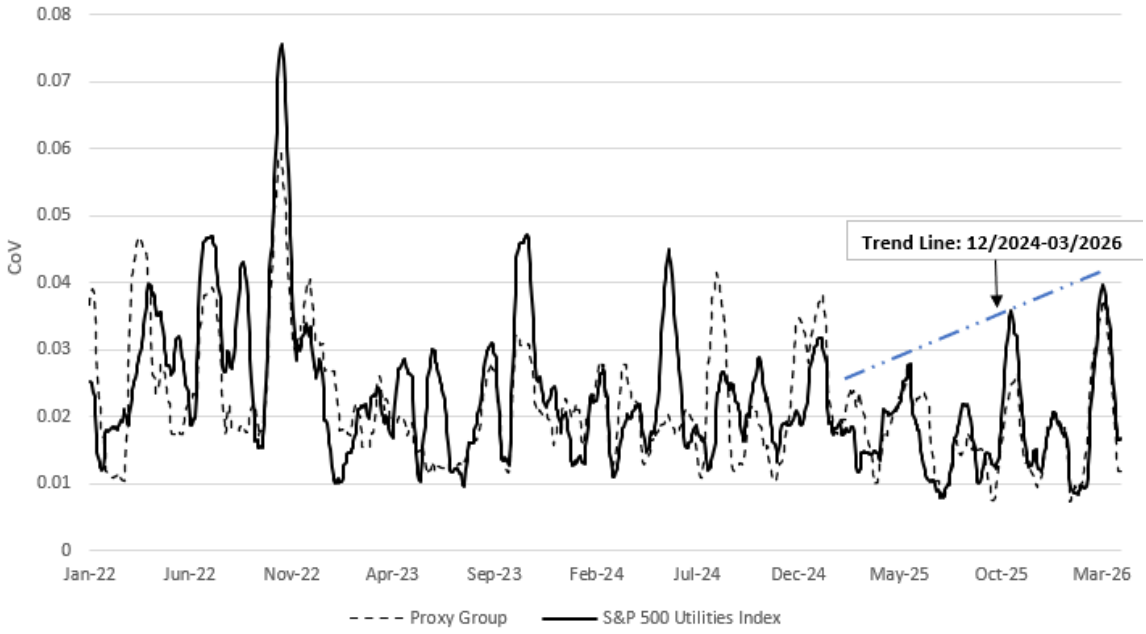
48 Direct Testimony of Maureen L. Reno, at 13.

49 A 30-day period is consistent with the VIX's measurement of expected volatility over the coming 30 days.

FIGURE 6: UTILITY STOCK PRICE VOLATILITY (2022-2026)[50]



Q. WHAT ARE THE EXPECTATIONS FOR LONG-TERM INTEREST RATES?

A. Despite the additional Federal rate cuts at the end of 2025, long-term interest rates have not changed much and are not expected to change significantly in the medium term. The change in the Federal Funds rate is primarily affecting only short-term interest rates, as can be seen in Figure 7 below. Figure 7 includes the yield as of September 30, 2025, November 28, 2025, and March 31, 2026 for 3-month, 6-month, 1-year, 2-year, 5-year, 10-year, and 30-year Treasury securities. The figure also includes projections from *Blue Chip Financial Forecasts* ("Blue Chip"), illustrating the expectation for near-term yields to decline over the next year and long-term yields to rise or remain near the current elevated levels.

50 Source: S&P Capital IQ

FIGURE 7: CURRENT AND PROJECTED INTEREST RATES

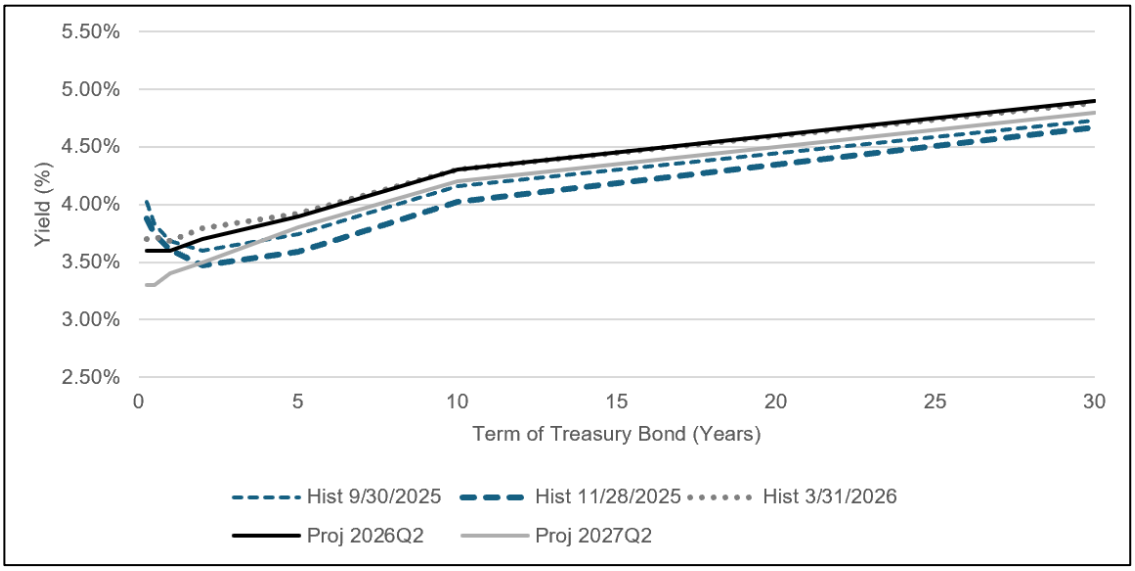


Figure 2 on page 16 of Ms. Reno's testimony further demonstrates how the Treasury security yield curve has reversed course since the Company's last rate case. While the yield of long-term treasury securities was expected to decline in the Company's last rate case, it is now expected to increase.

Mr. Breuning contends that projected Federal Reserve rate cuts "would likely positively impact long-term borrowing rates" during the FPFTY.[51] However, as Figure 7 demonstrates, this has not been the case. The 30-year Treasury yield that is applied in the ROE models and used as a benchmark for long-term debt – is less sensitive to the Federal Reserve's monetary policy. As shown in the figure above, and Figure 1 on page 14 of Ms. Reno's testimony, there has been a clear bifurcation in the path of short- and long-term yields. While the 3-month Treasury yields and Federal Funds rate have declined since 2024, the 30-Year Treasury and Moody's Aaa- and Baa-rated yields

51 Direct Testimony of Drew Breuning, at 44.

have continued to increase. Since long-term yields are most relevant in estimating the cost of equity, and the models used to estimate the just and reasonable ROE rely primarily on long-term yields, the market movement of short-term yields does not influence the ROE model results as the longer-term yields do. As such, even though the Federal Reserve has cut the Federal Funds Rate by 25 basis points in each of September, October, and December 2025 (75 basis points total),[52] this has had minimal impact on the long-term borrowing costs most relevant to the cost of equity for a regulated utility such as NFGDC.

Q. IS INFLATION EXPECTED TO REMAIN SOMEWHAT ELEVATED?

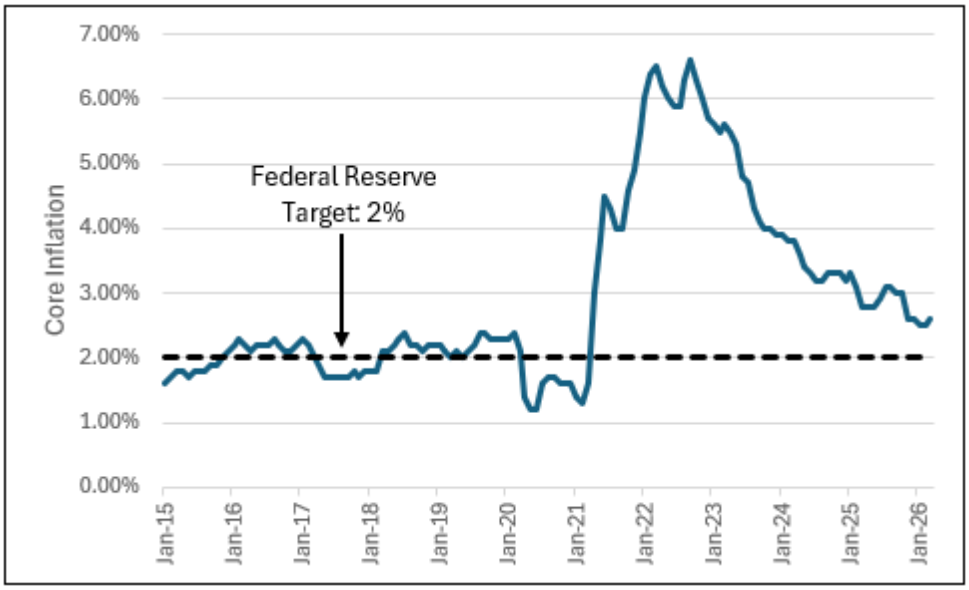
A. Even though the pace of inflation has slowed, U.S. consumers continue to expect inflation to remain elevated. The University of Michigan Surveys of Consumers final results for March 2026 indicates that year-ahead inflation expectations rose to 3.8 percent from 3.4 percent in February, marking the largest one-month increase since April 2025 and the highest reading since 2024, while long-run inflation expectations "inched" down to 3.2 percent.[53] Furthermore, the final results for April 2026 indicates that year-ahead inflation expectations increased further to 4.7 percent, the largest one-month rise since April 2025 and above levels observed throughout 2024, while long-run inflation expectations rose to 3.5 percent, the highest reading since October

52 Federal Reserve issues FOMC statement, December 10, 2025. Accessible at https://www.federalreserve.gov/newsevents/pressreleases/monetary20251210a.htm

53 University of Michigan, Survey of Consumers, Final Results for March 2026.

2025.[54] (*See, also,* Figure 8 below.) Furthermore, the Federal Reserve notes that "the implications of developments in the Middle East for the U.S. economy are uncertain."[55]

FIGURE 8: YEAR-OVER-YEAR CORE INFLATION (2015-2026)[56]



Concerns of inflation and higher costs arising from the increased geopolitical tensions in Iran were further confirmed by the March 2026 CPI data. The Consumer Price Index rose 0.9 percent in March, after rising just 0.3 percent in February, pushing the annual inflation rate to 3.3 percent, with energy prices surging 10.9 percent, led by a 21.2 percent increase in gasoline prices that accounted for nearly three-quarters of the monthly increase.[57]

56 Source: U.S. Bureau of Labor Statistics.

57 U.S. Bureau of Labor Statistics, Consumer Price Index Summary, March 2026 (released April 10, 2026). https://www.bls.gov/news.release/cpi.nr0.htm

As stated above, OCA Witness Reno independently corroborates this concern. Notably, Mr. Breuning does not dispute the existence of these geopolitical risks. He acknowledges that NFGDC "faces the same exposure to these issues as all the other companies in our respective proxy groups."[58] If all proxy group companies face the same elevated geopolitical and inflationary risks, then the proxy group's market data already reflects those risks, supporting, rather than diminishing, the case for an authorized ROE that reflects current elevated market conditions.

Q. WHAT ARE YOUR CONCLUSIONS REGARDING THE CHANGES IN CAPITAL MARKET CONDITIONS SINCE YOUR PREVIOUS ASSESSMENT?

A. The economic and geopolitical tensions present at the time I filed my Direct Testimony in January 2026 have continued to intensify and are expected to become an increasingly important factor in the Federal Reserve's monetary policy decisions. While there continue to be significant unknowns regarding how long the conflict in the Middle East may last and to what extent the U.S. economy will be impacted, investors will continue to be influenced by the rising uncertainty and consequent elevated risk.

58 Direct Testimony of Drew Breuning., at 45.

VII. RESPONSE TO I&E WITNESS BREUNING'S RECOMMENDATION ON THE COST OF CAPITAL

Q. PLEASE SUMMARIZE MR. BREUNING'S ROE AND CAPITAL STRUCTURE ANALYSIS AND RECOMMENDATION.

A. Mr. Breuning recommends an authorized ROE of 9.81 percent for NFGDC, based on the average results of his DCF and CAPM models and the average authorized ROEs for gas distribution utilities nationwide from January 2025 through March 11, 2026. Mr. Breuning's DCF estimate is 10.47 percent; he presents two CAPM analyses with an average estimate of 9.25 percent; and he reports the average authorized ROE for gas distributors as 9.70 percent. In addition, Mr. Breuning recommends an imputed capital structure for NFGDC which includes a common equity ratio of 55.00 percent.

Q. ARE THERE ANY AREAS IN WHICH YOU AND MR. BREUNING AGREE?

A. Yes. Mr. Breuning and I both consider Constant Growth DCF and CAPM analyses to estimate the ROE for NFGDC, and we agree on certain inputs to those models such as analysts' forecast earnings per share ("EPS") growth rates in the DCF model and *Value Line* Beta coefficients in the CAPM. I also present the results of a Bond Yield Plus Risk Premium analysis, while Mr. Breuning observes that the Commission has not historically relied on the Risk Premium model, although he does use the average authorized returns for gas distributors in other jurisdictions as his third "model" to estimate the return for NFGDC.

Q. WHAT ARE THE PRINCIPAL AREAS OF DISAGREEMENT BETWEEN YOU AND MR. BREUNING?

A. There are several areas where Mr. Breuning and I disagree, including: (1) the composition of a risk comparable proxy group for NFGDC; (2) the application of the DCF model; (3) certain inputs and assumptions used in the CAPM analysis; (4) the usefulness and relevance of the Risk Premium model; and (5) the relative business risk of NFGDC compared to the proxy group companies. I address each of these points below.

A. Proxy Group Composition

Q. PLEASE EXPLAIN WHY YOU DISAGREE WITH THE PROXY GROUP SELECTED BY MR. BREUNING.

A. Mr. Breuning develops a proxy group of six gas distribution utilities based on his six screening criteria which consist of: (1) 50 percent or more of the company's revenue must be generated from the regulated gas utility industry; (2) the company's stock must be publicly traded; (3) investment information for the company must be available from more than one source, which includes *Value Line*; (4) the company must not be currently involved in a merger or the target of an acquisition; (5) the company must have four consecutive years of historic earnings data; and (6) the company must be operating in a state that has a deregulated natural gas utility market.[59] While Mr. Breuning and I selected many of the same gas distribution companies for inclusion in the NFGDC proxy group, I continue to believe that Southwest Gas Holdings, Inc.

59 Direct Testimony of Drew Breuning, at 9.

("Southwest Gas") and Spire, Inc. ("Spire") should be included in the proxy group for NFGDC, and I disagree with Mr. Breuning's inclusion of Chesapeake Utilities Corporation.

Q. WHY DID MR. BREUNING EXCLUDE SOUTHWEST GAS AND SPIRE FROM THE PROXY GROUP FOR NFGDC?

A. Mr. Breuning explains that he excluded Southwest Gas because the company derives less than 50 percent of its revenues from gas distribution, and he excluded Spire because it is engaged in the purchase of the Tennessee assets of Piedmont Natural Gas from Duke Energy Corporation.[60]

Q. PLEASE EXPLAIN WHY YOU DISAGREE WITH THE EXCLUSION OF SOUTHWEST GAS.

A. Mr. Breuning excluded Southwest Gas from his proxy group because he screened companies based on the percentage of revenues derived from gas distribution operations rather than the percentage of net operating income. However, net operating income better reflects the contribution of each business segment to a given company's earnings, which is the factor that equity investors are most focused on as they establish their return requirements and make investment decisions. Since regulated gas utilities collect the cost of purchased gas through rates on a pass-through basis without margin, regulated revenue can fluctuate materially from year-to-year with changes in weather and the cost of purchased gas, without affecting the corporation's earnings or financial position. In contrast, net operating income, which excludes pass-through commodity

60 Direct Testimony of Drew Breuning, at 12-13.

.

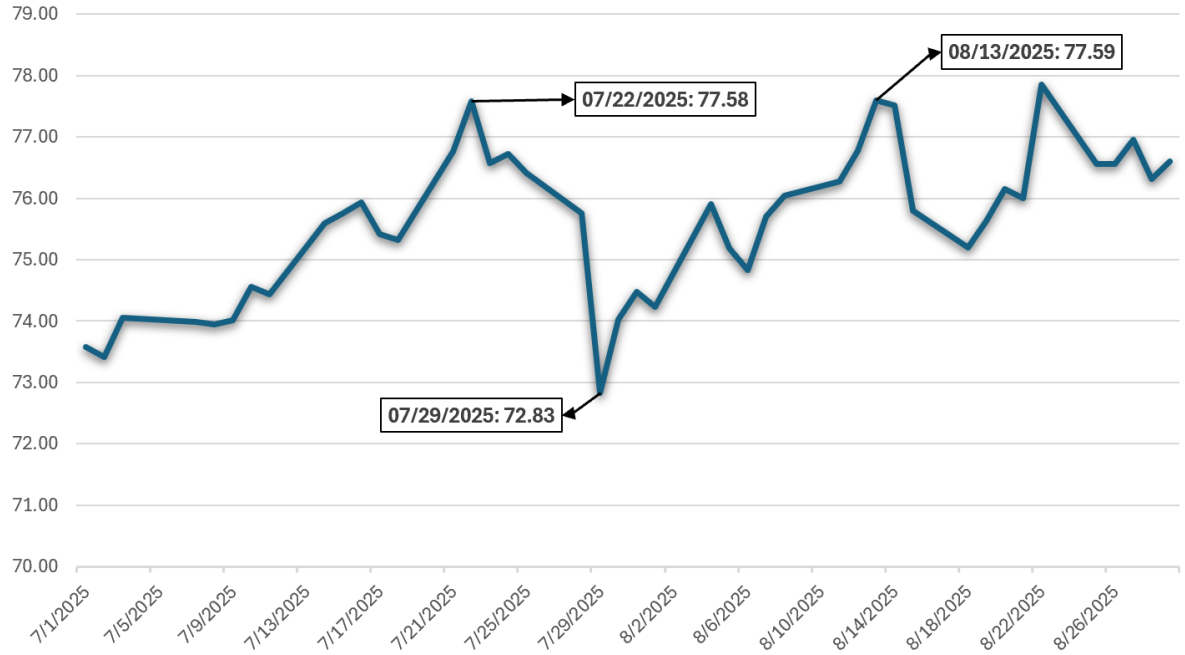
costs, more closely represents the effect of each business segment on the corporation's overall earnings, and therefore its risk profile. For that reason, the percentage of net operating income from regulated gas distribution operations is more representative of the risks faced by NFGDC and its investors than is the percentage of regulated revenue that Mr. Breuning uses to screen his proxy group. Southwest Gas derived slightly more than 80 percent of its operating income from gas distribution service in 2024, and approximately 80 percent of the company's assets were dedicated to gas distribution service in 2024. On that basis, it is appropriate to include Southwest Gas in the proxy group for NFGDC.

Q. PLEASE EXPLAIN WHY YOU DISAGREE WITH THE EXCLUSION OF SPIRE FROM THE PROXY GROUP.

A. Although I recognize that Spire is involved in a significant transaction to acquire the Tennessee assets of Piedmont Natural Gas from Duke, I do not agree with Mr. Breuning that the transaction had a material effect on Spire's stock price.[61] As discussed in my Direct Testimony, Spire's share price changed by a similar percentage to the other proxy group companies from the time the acquisition was announced to the time when the analysis in my Direct Testimony was performed. In addition, the share price of Spire was not affected by the acquisition announcement. As shown in Figure 9 below, Spire traded at $77.58 per share on July 22, 2025, one week before the acquisition was announced, then dropped to $72.83 per share on July 29, 2025, before increasing back to $77.59 per share on August 13, 2025.

61 Direct Testimony of Drew Breuning, at 13-14.

FIGURE 9: SPIRE STOCK PRICE – PRE AND POST ACQUISITION[62]



Mr. Breuning contends that Spire's stock price increased by more than the proxy group average during the analytical period. However, a higher share price would cause a decrease in the dividend yield for Spire, meaning that Spire's DCF model results would be lower, not higher, than they would have been absent the transaction, making the results conservative if affected by the transaction. I note that Ms. Reno agrees with the inclusion of Spire in the proxy group.[63]

62 Source: S&P Capital IQ

63 Direct Testimony of Maureen L. Reno, at 28.

Q. WHY DO YOU DISAGREE WITH MR. BREUNING'S DECISION TO INCLUDE CHESAPEAKE UTILITIES IN THE PROXY GROUP FOR NFGDC?

A. I excluded Chesapeake from the proxy group because it did not pass two of my stated screening criteria: 1) it does not have a credit rating from S&P Global Ratings or Moody's Ratings, and 2) it derives only slightly more than 50 percent of its regulated operating income from gas distribution operations. Mr. Breuning does not screen for an investment grade credit rating, so he did not exclude Chesapeake on that basis, and his revenue screen is set at 50 percent, which causes him to include Chesapeake in his group. However, I note that Chesapeake derives a significant portion of its revenues and net operating income from electric utility operations, natural gas transmission, and unregulated energy products and services. For these reasons, I do not view Chesapeake as a good proxy for NFGDC's gas distribution business in Pennsylvania.

Q. WHAT IS YOUR CONCLUSION REGARDING THE COMPOSITION OF THE PROXY GROUP FOR NFGDC?

A. My conclusion is that my proxy group, which includes Southwest Gas and Spire and excludes Chesapeake, is more risk comparable to NFGDC than Mr. Breuning's proxy group. Differences in the composition of Mr. Breuning's proxy group and mine have a significant effect on the differences in our respective ROE results and recommendations. I will discuss those effects on the model results in the following sections on the DCF and CAPM.

B. Application of the DCF Model

Q. PLEASE SUMMARIZE MR. BREUNING'S DCF ANALYSIS.

A. Mr. Breuning performs a Constant Growth DCF analysis to estimate the ROE for NFGDC in this proceeding. Mr. Breuning relies on analysts' projected EPS growth rates. He performs two dividend yield calculations, one based on average stock prices over the last 52 weeks, and the other based on spot stock prices. Mr. Breuning's DCF model provides an ROE estimate of 10.47 percent.[64] In his December 2025 testimony in the PPL Electric rate case (Docket No. R-2025-3057164), Mr. Breuning relied primarily on the results of his DCF model, observing that "while the Commission has more recently based some of its ROE decisions on a combination of the DCF and CAPM methods, I still recommend primary reliance on the DCF method due to the shortcomings associated with the CAPM method."[65] In this proceeding Mr. Breuning, however, averages the results of his DCF model with the results of his CAPM analysis and the average authorized ROEs for gas distributors nationwide since January 2025 to arrive at his recommendation for NFGDC.

Q. DO YOU HAVE ANY COMMENTS ON MR. BREUNING'S DCF ANALYSIS?

A. While I agree with the analysts' *earnings* growth rate projections that Mr. Breuning uses in his DCF model, I do not agree with the way in which he calculates the dividend yield. However, despite my concern with Mr. Breuning's use of spot stock price and 52-week average stock prices, our resulting dividend yields are similar. In addition, it

64 Direct Testimony of Drew Breuning, at 7.

65 PPL Electric Utilities Corporation, Docket No. R-2025-3057164, Direct Testimony of Drew Breuning, at 23.

is not clear why Mr. Breuning did not base his ROE recommendation for NFGDC primarily on the results of his DCF model. This is a departure from his recent testimony in the case of PPL Electric (Docket No. R-2025-3057164), where Mr. Breuning recommended a 10.32 percent authorized ROE based on the results of his Constant Growth DCF model, while also presenting a CAPM analysis similar to the one he presents in this proceeding.

Q. PLEASE SUMMARIZE THE EFFECT OF PROXY GROUP COMPOSITION ON MR. BREUNING'S AND YOUR RESPECTIVE DCF MODEL RESULTS.

A. As shown in Exhibit JCN-2R, Southwest Gas (at 14.06 percent) and Spire (at 13.21 percent) have the highest DCF results of the seven gas distribution companies in my proxy group. By excluding those two companies, Mr. Breuning effectively reduces his DCF estimate for NFGDC even though both companies are relevant comparators for NFGDC in terms of business and financial risk. If Mr. Breuning had included Southwest Gas and Spire in his proxy group, his DCF results would increase by 79 basis points from 10.47 percent to 11.26 percent. By comparison, the mean results of my updated DCF model range from 11.20 percent to 11.51 percent, depending on the averaging period. Chesapeake Utilities has a DCF estimate of 10.34 percent. If Mr. Breuning had excluded Chesapeake from this proxy group, the mean results of his DCF analyses would increase by three basis points from 10.47 percent to 10.50 percent.

C. Application of the CAPM Model

Q. PLEASE SUMMARIZE MR. BREUNING'S CAPM-BASED ROE ESTIMATES.

A. Mr. Breuning's CAPM analysis uses a projected yield on the 10-year Treasury bond from *Blue Chip* for his estimate of the risk-free rate and *Value Line* Beta coefficients. To determine the equity risk premium ("ERP"),[66] Mr. Breuning first determines the overall market return by averaging a forward-looking *Value Line* median return estimate and the average return of the S&P 500 over the past 100 years. He also provides a second CAPM-based ROE estimate, relying on Kroll's recommended ERP and the 20-Year U.S. Treasury Bond yield. As shown in I&E Exhibit No, Schedule 18, Mr. Breuning estimates a 9.95 percent ROE using a forecasted market return and an 8.55 percent ROE using Kroll's recommended ERP. The average of these two CAPM estimates is 9.25 percent.

At the outset, and as discussed in detail in my response to Ms. Reno, I recommend that the Commission not give any weight to Mr. Breuning's CAPM estimate based on Kroll's recommended ERP, as it is below any authorized ROE for a gas distribution utility since at least 1980 and would not provide NFGDC a reasonable opportunity to earn a comparable return as required by the *Hope* and *Bluefield* standards.

Q. MR. BREUNING DISCUSSES SEVERAL "DISADVANTAGES" ASSOCIATED WITH THE USE OF THE CAPM METHOD IN

66 In the context of the CAPM, the ERP and MRP are synonymous.

DETERMINING THE ROE.[67] PLEASE COMMENT ON HIS CONCERNS WITH THE CAPM.

A. According to Mr. Breuning, the CAPM – and the Risk Premium method by association – possess several "disadvantages" that suggest these models "are less reliable indicators" than the DCF model, which according to Mr. Breuning is "the superior method for determining the rate of return for the current economic market and measuring the cost of equity directly."[68] More specifically, Mr. Breuning voices concerns with Beta coefficients, the company-specific component of the CAPM, as he believes its reliance on historical data is "problematic" given the nature of current economic conditions.

While I agree that Beta coefficients are derived from historical market data, other variables, such as a projected risk-free rate and a forward-looking estimate of the market return, help capture the expected impact of current and future economic conditions. In fact, Mr. Breuning himself uses a projected risk-free rate in his CAPM analysis.[69] Furthermore, my use of 10-year historical Beta coefficients in the CAPM offers a long-term perspective on market conditions, recognizing that the economic and regulatory landscape changes over time. Further, the use of adjusted Beta coefficients like those calculated by *Value Line* and Bloomberg can be interpreted as being forward looking because they correct for the tendency of Beta coefficients to move toward the market average of 1.0 over time. For these reasons, I disagree with Mr. Breuning's conceptual concerns with the CAPM.

67 Direct Testimony of Drew Breuning, at 26-27.

68 *Id*., at 26-27.

69 Direct Testimony of Drew Breuning, at 34-35.

Q. MR. BREUNING HAS PREVIOUSLY DISAGREED WITH THE COMMISSION'S RECENT USE OF THE CAPM METHOD.[70] IN THIS PROCEEDING, HIS ROE RECOMMENDATION IS BASED ON THE AVERAGE OF HIS DCF AND CAPM RESULTS, ALONG WITH THE AVERAGE AUTHORIZED ROES FOR GAS DISTRIBUTORS. PLEASE COMMENT.

A. In his testimony for PPL Electric, Mr. Breuning referred to several recent decisions from the Commission in which the CAPM results were averaged with the DCF results to establish an authorized ROE for a regulated water utility. For example, in the 2024 base rate case order for Columbia Water Company, the Commission ultimately relied on the average of the I&E Witness' CAPM and DCF results to determine the ROE for Columbia Water Company.[71] In a subsequent rate case for Pennsylvania-American Water Company, the Commission recognized continued capital market conditions (*i.e.*, elevated inflation) while determining to employ both the DCF and CAPM models in setting the ROE for Pennsylvania-American Water Company.[72] While I do not disagree with the use of multiple approaches to estimate the cost of equity for a regulated utility such as NFGDC, Mr. Breuning does not explain why he has changed his approach. In particular, he relied solely on the results of his Constant Growth DCF model as recently as January 2026 in his PPL Electric testimony, while Mr. Breuning now averages his CAPM results and the average authorized ROEs for gas distributors

70 *See*, *for example*, the Direct Testimony of Drew Breuning in Docket No. R-2025-3057164.

72 *Pa. PUC v. Pennsylvania-American Water Company,* Docket Nos. R-2023-30433189 & R-2023-3043190, p. 194 (Order Entered July 22, 2024).

nationwide with his DCF model results to arrive at his ROE recommendation for NFGDC.

1. Risk-Free Rate of Return

Q. MR. BREUNING USES THE PROJECTED YIELD ON 10-YEAR TREASURY BONDS TO ESTIMATE THE RISK-FREE RATE, AS HE BELIEVES IT BALANCES THE SHORT-TERM VOLATILITY OF T-BILLS AND THE "SUBSTANTIAL MATURITY RISK" ASSOCIATED WITH LONG-TERM TREASURY BONDS.[73] WHAT IS YOUR RESPONSE?

A. I respectfully disagree with Mr. Breuning's use of 10-year Treasury bonds as the risk-free rate for the CAPM and his concerns surrounding the use of 30-Year Treasury bonds. In determining the security most relevant to the application of the CAPM, it is important to select the term that best matches the life of the underlying investment. As Morningstar explains:

> The traditional thinking regarding the time horizon of the chosen Treasury security is that it should match the time horizon of whatever is being valued… Note that the horizon is a function of the investment, not the investor. If an investor plans to hold stock in a company for only five years, the yield on a five-year Treasury note would not be appropriate, since the company will continue to exist beyond those five years.[74]

Since utility assets are long-duration investments, it is appropriate to use yields on long-term Treasury bonds as the risk-free rate component of the CAPM. Therefore, the 30-year Treasury bond is the most appropriate security for that purpose.

---

73 Direct Testimony of Drew Breuning, at 34.

74 Morningstar Inc., Ibbotson SBBI 2013 Valuation Yearbook, at 44.

Q. IN DISCUSSING HIS CHOICE OF THE RISK-FREE RATE, MR. BREUNING CLAIMS THAT "THE 30-YEAR TREASURY BOND EXHIBITS MORE STABILITY BUT IS NOT RISK-FREE."[75] WHAT IS YOUR RESPONSE?

A. I agree with Mr. Breuning that 30-year Treasury bond "exhibits more stability." As Dr. Roger Morin notes, "On grounds of stability and consistency, the yields on long-term Treasury bonds match more closely with expected common stock returns."[76] However, I do not agree with Mr. Breuning that 30-year Treasury bonds are "not risk-free" because his assertion incorrectly comingles two types of risk: default risk and interest rate risk. Because long-term Treasury bonds are backed by the U.S. government, they are essentially free of default risk. Furthermore, as Dr. Morin goes on to explain, "While long-term Treasury bonds are potentially subject to interest rate risk, and are not theoretically 'risk-free,' this is only true if the bonds are sold prior to maturity. A substantial fraction of bond market participants, usually institutional investors with long-term liabilities (pension funds, insurance companies), in fact, hold bonds until they mature, and therefore are not subject to interest rate risk."[77] Given that investments in any government security will have some theoretical level of interest rate risk, as rates can change over time, it is important to consider the practical level of risk for such investments. Thus, given that the 30-year Treasury bond is a stable security free of default risk, has minimal real interest rate risk, and aligns with the life of the underlying investment in utility assets, as described above, it serves as an appropriate security for the risk-free rate component of the CAPM.

77 *Id.* [Citation omitted.]

2. Market Risk Premium

Q. PLEASE SUMMARIZE MR. BREUNING'S APPROACH TO DETERMINING THE MARKET RISK PREMIUM.

A. As previously mentioned, Mr. Breuning takes two approaches in determining the market risk premium. First, he averages a forward-looking and historical estimate of the market return, from which he subtracts his estimate of the risk-free rate of 4.20 percent to arrive at an estimated MRP. To conduct the forward-looking market return approach, Mr. Breuning relies on the February 27, 2026 edition of the *Value Line Investment Survey*, covering roughly 1,700 companies in the *Value Line* universe. From this report, he combines a 2.00 percent median forecasted dividend yield for all dividend-paying companies with a growth rate of 8.78 percent, derived from a median estimated three-to-five year stock price appreciation potential of 40 percent for all companies. Mr. Breuning averages this expected market return of 10.78 percent with the average annual return of the S&P 500 over the last 100 years, 12.35 percent, to arrive at his market return estimate of 11.57 percent.[78] Additionally, Mr. Breuning provides a second market risk premium estimate based on Kroll's recommended market risk premium of 5.00 percent,[79] which I oppose, as discussed in my response to Ms. Reno.

78 Direct Testimony of Drew Breuning, at 35.

79 Direct Testimony of Drew Breuning, at 36.

Q. DO YOU AGREE WITH HOW MR. BREUNING CALCULATES HIS FORWARD-LOOKING MARKET RISK RETURN USING *VALUE LINE* DATA?[80]

A. No, I do not. As a preliminary matter, Mr. Breuning is not correct when he notes that "Value Line expects its universe of approximately 1700 stocks to have an *average* yearly return of 10.78% over the next three to five years based on a forecasted dividend yield of 2.00% and a yearly index appreciation of 40%."[81] As *Value Line's* Summary & Index report clearly states, the 2.00 percent and 40 percent are "The *Median* of Estimated Dividend Yields (next 12 months) of all dividend paying stocks" and "The *Median* Estimated Three-To-Five Year Price Appreciation Potential of all stocks in the VL Universe," respectively.[82] When an investor invests in the overall market (which is being approximated here by the *Value Line* universe of stocks), they receive the *weighted average* market return, not the *median* market return. If Mr. Breuning were to use the market capitalization weighted average, his expected market return using *Value Line* data for the companies in the S&P 500 Index would be 15.23 percent (for all dividend paying companies) and 12.20 percent (based on the FERC exclusions for outlier growth rates), as shown in my updated ROE analysis, Exhibit JCN-3R.

82 The Value Line Investment Survey, Part 1 Summary & Index, January 16, 2026, at 1. [Emphasis added.]

3. CAPM Adjustments and Conclusion

Q. IF REASONABLE ADJUSTMENTS ARE MADE TO MR. BREUNING'S CAPM ANALYSIS, HOW DOES IT AFFECT THE RESULTS OF HIS ANALYSIS?

A. As I explained previously, I recommend the Commission not give any weight to Mr. Breuning's Kroll-based CAPM ROE estimate of 8.55 percent because it is lower than any authorized ROE for a gas distribution company since at least 1980. Accordingly, I do not make any adjustments to that estimate. Modest adjustments can be made to Mr. Breuning's "forecasted CAPM analysis" to produce more reasonable results. Specifically, with reasonable adjustments to Mr. Breuning's risk-free rate and forward-looking market return, the results of his CAPM analysis range from 10.59 percent to 11.77 percent. Please see Exhibit JCN-6R for the specific calculations.

D. Relevance of the Bond Yield Plus Risk Premium Analysis

Q. PLEASE SUMMARIZE MR. BREUNING'S CONCERNS WITH THE RISK PREMIUM MODEL.

A. Mr. Breuning describes the Risk Premium approach as a "simplified version of the CAPM," he states that the "RP method does not measure the specific risk of a company," and he claims that it assumes that "the equity risk premium is constant over time."[83] He also states the following about risk premium based models more generally: "The CAPM, and similarly the RP method, are less reliable indicators because they

83 Direct Testimony of Drew Breuning, at 23 and 28.

measure the cost of equity indirectly and risk premiums vary depending on the debt and equity being compared."[84]

Q. HOW DO YOU RESPOND TO MR. BREUNING'S CONCERNS?

A. The Risk Premium analysis provides another useful perspective on investors' required return for NFGDC. I do not agree with Mr. Breuning that the Bond Yield Plus Risk Premium analysis is duplicative of the CAPM method, but I do agree that the Risk Premium model does not measure the specific risk of a company. While both models use a risk-free rate to anchor the return estimate, the CAPM analysis applies an industry specific Beta coefficient to the total market return to estimate the risk premium required by investors in gas distribution utilities such as NFGDC, whereas the Risk Premium model is based on the assumption that there is an inverse relationship between Treasury bond yields and the ERP, as shown by hundreds of authorized ROEs set by utility regulators across the country since 1992. However, the ERP is not assumed to be constant over time. Rather, my Risk Premium model is based on a regression equation where the ERP varies with the level of interest rates on Treasury bonds.

Q. PLEASE ELABORATE ON HOW YOUR RISK PREMIUM MODEL DIFFERS FROM THE STATIC APPROACH DESCRIBED BY MR. BREUNING.

A. As discussed in my Direct Testimony, there is a well-established inverse relationship between equity risk premiums and prevailing risk-free rates. In fact, academic studies

84 *Id*, at 27.

have consistently shown that the two are inversely related.[85] Consistent with such studies, my Risk Premium analysis, shown in Exhibit JCN-7, is supported by a statistically significant regression equation that evaluates the relationship between bond yields and allowed ROEs for natural gas utilities. More specifically, the regression equation has an adjusted R^2 of approximately 0.82, meaning that 82 percent of variability in the risk premium is explained by changes in interest rates. This demonstrates that the regression equation can be reliably used to predict the risk premium at different levels of interest rates and the Risk Premium analysis is an appropriate model for determining a reasonable ROE for NFGDC. Furthermore, as shown in Exhibit JCN-7 of my Direct Testimony, when Treasury bond yields were last near current levels in the fourth quarter of 2006 and the first quarter of 2007, the average authorized ROE for gas distribution utilities nationwide ranged from 10.14 percent to 10.52 percent.

Q. MR. BREUNING ALSO ASSERTS THAT YOU ARE AWARE THAT THE COMMISSION HAS NOT RELIED ON THE RISK PREMIUM MODEL IN PRIOR DECISIONS. WHAT IS YOUR RESPONSE?

A. I recognize that the Commission has not relied on the results of the Risk Premium model to establish the authorized ROE for regulated utilities in recent years. However, to the extent the Commission were to consider average authorized ROEs as a relevant

85 *See, e.g.*, Robert S. Harris and Felicia C. Marston, *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Financial Management, (Summer 1992), at 63-70; Eugene F. Brigham, Dilip K. Shome, and Steve R. Vinson, *The Risk Premium Approach to Measuring a Utility's Cost of Equity*, Financial Management, (Spring 1985), at 33-45; and Farris M. Maddox, Donna T. Pippert, and Rodney N. Sullivan, *An Empirical Study of Ex Ante Risk Premiums for the Electric Utility Industry*, Financial Management, (Autumn 1995), at 89-95.

benchmark, the Risk Premium approach provides additional context for the prevailing capital market conditions at the time ROEs were determined. Further, other state regulators have placed weight on the results of the Risk Premium model in setting authorized returns for utilities under their jurisdiction. These include the following states: California, Florida, Georgia, North Carolina, Virginia, West Virginia, and Wisconsin. In my view, the Risk Premium model provides another relevant perspective on investors' return requirements for gas distributors and should be used by the Commission to inform its decision on the authorized ROE for NFGDC in this proceeding.

Q. DESPITE MR. BREUNING'S CRITICISM OF THE RISK PREMIUM APPROACH, HIS THIRD "MODEL" IS BASED ON THE NATIONAL AVERAGE AUTHORIZED ROE FOR GAS DISTRIBUTION COMPANIES. WHAT IS YOUR RESPONSE?

A. A prevailing principle in setting just and reasonable rates is that the return must be comparable to returns available to investors in companies with a similar risk level. Through that lens, authorized ROEs for natural gas utilities are a relevant benchmark that investors consider. For example, investment bank UBS refers to the relationship between 10-year Treasury bonds and authorized returns for regulated utilities, noting that current authorized ROEs are lower than what is indicated by that regression equation.[86] I agree with Mr. Breuning that authorized returns in other jurisdictions are relevant data that investors consider in setting their return requirements for gas

86 UBS Global Research and Evidence Lab, 2024 Outlook: A Year for Resolutions and Resolve, December 12, 2023, at 10.

distribution companies like NFGDC. However, the Risk Premium model that I have applied reflects the inverse relationship between interest rates and the ERP, while Mr. Breuning's third "model" is not really a model at all, but simply an average of recent authorized ROEs. It is not clear why Mr. Breuning criticizes my Risk Premium approach when it is based on the same authorized ROE data that he believes is reasonable as an estimate of the authorized ROE for NFGDC.

Q. WHAT IS YOUR CONCLUSION REGARDING THE RISK PREMIUM ANALYSIS?

A. The Risk Premium analysis is based on authorized returns for gas utilities spanning more than three decades of varying capital markets and economic cycles, and depends on a statistically significant relationship between allowed ROEs and interest rates that is consistent with academic studies. In addition, the Risk Premium approach provides stability to the CAPM and DCF results, which can vary widely based on market conditions and user-specified inputs and assumptions. As such, I continue to consider the results of the Risk Premium analysis in developing my ROE recommendation.

Q. WITH REASONABLE ADJUSTMENTS, DOES MR. BREUNING'S ROE ANALYSES PRODUCE AN ROE ESTIMATE FOR NFGDC THAT IS SIMILAR TO YOUR ANALYSIS AND RECOMMENDATION?

A. Yes. As discussed above, and as summarized in Figure 10, reasonable adjustments can be made to Mr. Breuning's DCF and CAPM analyses that result in an ROE estimate for NFGDC that is generally consistent with my analyses. Specifically, I have added the results for Southwest Gas and Spire to Mr. Breuning's DCF analysis, adjusted his CAPM inputs for the risk-free rate and the forward-looking market risk premium, and

discarded the results of his CAPM analysis using Kroll's projected ERP and the national average authorized ROEs for gas distribution companies. With these adjustments, the average results for Mr. Breuning's ROE analyses range from 10.93 percent to 11.52 percent, which overlaps my analyses and recommendation. See Exhibits JCN-6R and JCN-7R for more details.

FIGURE 10: SUMMARY OF ADJUSTED ROE RESULTS – BREUNING

Model	As Filed	As Adjusted
Constant Growth DCF	10.47%	11.26%
CAPM – Forward ERP	9.95%	10.59% - 11.77%
CAPM – Kroll ERP	8.55%	N/A
Average Authorized ROEs for gas LDCs	9.70%	N/A
Average	9.81%	10.93% - 11.52%

E. Other Considerations

Q. PLEASE SUMMARIZE MR. BREUNING'S TESTIMONY REGARDING THE BUSINESS RISK OF NFGDC AND THE IMPLICATIONS FOR THE COMPANY'S AUTHORIZED ROE IN THIS PROCEEDING.

A. Mr. Breuning concludes that NFGDC does not have greater than average business risk due to the Company's elevated capital expenditure program, smaller size relative to the proxy group, and customer concentration risk.[87] I will respond to each of these points

87 Direct Testimony of Drew Breuning, at 46-49.

in this section, starting with the effect of NFGDC's projected capital expenditures on its risk profile.

Q. MR. BREUNING CHALLENGES THE NOTION THAT NFG'S ELEVATED CAPITAL SPENDING PROGRAM SUPPORTS A HIGHER AUTHORIZED ROE FOR THE COMPANY.[88] WHAT IS YOUR RESPONSE?

A. Mr. Breuning asserts that all gas distribution companies are facing the issues of upgrading or replacing aging infrastructure, that NFGDC has the opportunity to file a rate case at any time to address revenue inadequacy, and that the Commission offers risk reducing mechanisms such as the Distribution System Improvement Charge ("DSIC") and the FPFTY to help reduce regulatory lag in recovery of infrastructure investments or other unforeseen expenditures. As explained below, Mr. Breuning's position does not compare the Company to its peers on these points.

As discussed in my Direct Testimony, NFGDC is planning to spend approximately $185 to $205 million on capital expenditures in 2026.[89] The Company will require continued access to external debt and equity capital on favorable terms and conditions to fund its capital program. Credit rating agencies such as Moody's Ratings and S&P Global Ratings have commented on the risk associated with heightened capital program as one of its key credit challenges for regulated utilities, as described in my Direct Testimony.[90]

88 *Id*., at 46.

89 Direct Testimony of Joshua C. Nowak, at 41.

90 *Id.*, at 42-43.

Q. MR. BREUNING DISAGREES WITH YOUR POSITION THAT NFGDC'S SMALLER SIZE RELATIVE TO THE PROXY GROUP COMPANIES IS A RISK FACTOR THAT WOULD CAUSE EQUITY INVESTORS TO REQUIRE A HIGHER RETURN. WHAT IS YOUR RESPONSE?

A. Although Mr. Breuning acknowledges that I did not recommend a small size adjustment for NFGDC, he argues against the small size effect, noting that any expense impact due to the lesser buying power of a smaller utility is reflected in the revenue requirement and the dollar-for-dollar recovery that applies to expenses. According to Mr. Breuning, a size premium for a smaller utility would only duplicate the burden on ratepayers. Mr. Breuning also observes that the Commission has rejected the application of a size adjustment to the cost of equity. As support for his position, he cites an article by Dr. Annie Wong that he claims demonstrates that the small size effect does not apply to utilities.[91]

In response to Mr. Breuning's testimony regarding academic literature, as discussed in my Direct Testimony, academic literature recognizes that smaller companies tend to be rewarded with higher total returns than larger companies, even after the relative illiquidity of smaller company is taken into account.[92] For example, a 2011 article by Chrétien and Coggins found that the small size effect was observed for the regulated utility industry specifically.

Morningstar, the original publisher of the size study that is now published by Kroll, explains that investors in small stocks do not always earn returns that are higher

91 Direct Testimony of Drew Breuning, at 46-48.

92 Direct Testimony of Joshua C. Nowak, at 44.

than returns earned from large stocks – and that is precisely why small stocks are riskier, *by definition*.

> Because investors cannot predict when small-cap returns will be higher than large-cap returns, it has been argued that they do not expect higher rates of return for small stocks. As was illustrated earlier in this chapter, even over periods of many years, investors in small stocks do not always earn returns that are higher than those of investors in large stocks. **By simple definition, one cannot expect risky companies to always outperform less-risky companies; otherwise they would not be risky. Over the long-term, however, investors do expect small stocks to outperform large stocks**.[93]

In the 2023 SBBI Yearbook, Kroll further explains that the risk/return profile must be assessed over long term periods, not short-term periods (emphasis in original).

> The increased risk faced by investors in small stocks is quite real. It is important to note, however, that the risk/return profile is over the *long-term*. The long-term expected return for any asset class can be quite different from short-term expected returns. Investors in small-cap stocks should expect losses and periods of underperformance relative to large-cap stocks. While this might lead some market observers to speculate that there is no size premium, statistical evidence suggests that periods of smaller stocks' underperformance should be expected. The evidence also suggests that the longer small-cap companies are given to "race" against large-cap companies, the greater the chance that small-cap companies outpace their larger counterparts.[94]

Q. HAVE OTHER COMMISSIONS ACKNOWLEDGED THE NEED FOR A SMALL SIZE PREMIUM?

A. Yes, they have. For example, the FERC acknowledges the increased risk associated with a company's smaller size and incorporates Kroll's size premia adjustments in the CAPM analysis. In its determination in Docket Nos. EL14-12-003 and EL15-45-000, FERC stated that "size premium adjustments improve the accuracy of the CAPM

---

93 Morningstar, Inc., 2015 Ibbotson Stocks, Bonds, Bills, and Inflation Classic Yearbook, at 112. [Emphasis added.]

94 Kroll 2023 SBBI Yearbook, at 147. [Emphasis added.]

results and cause it to better correspond to the cost of capital estimates employed by investors."[95] FERC has found that "sufficient amount of academic literature exists to indicate that many investors rely on the size premia."[96] Specifically, FERC was not persuaded by the Annie Wong article that Mr. Breuning cites, stating:

> We also agree with the Presiding Judge that the financial literature arguing against the continued existence of the size premium or its applicability to utilities is unavailing. **Specifically, we do not find persuasive the article cited by Professor Annie Wong that utilities are less risky than industrial stocks and feature betas that do not decrease with firm size.** Even if true, which the MISO TOs aver is not the case, the argument in favor of a size premium adjustment is that there are differences in risk and required returns between small and large companies that are not captured in the betas. Consequently, lack of substantial variance in the betas between large and small companies is not indicative that they feature differences in risk and corresponding returns that are the basis for the size premium adjustment. The subsequent endorsement of this phenomenon, by Dr. Morin, lends credence to the view that Professor Wong's conclusions are no longer state of the art. Furthermore, an article reconsiders Professor Wong's evidence and concludes that "new information…indicates that there is a small firm effect in the utility sector." A more recent article published in *Business Valuation Review* found that "none of the academic papers throughout the last three decades have qualified the [size premium] as a statistical error." Finally, a 2019 National Association of Certified Valuators and Analysts publication supports the use of the size premium adjustment to the CAPM. We thus find that, based on the evidence of this dynamic and that many investors consider it when evaluating companies, it is appropriate to include it in CAPM determinations.[97]

FERC recently reaffirmed this determination in Opinion No. 594:

> We also find there to be insufficient reason to conclude that the utility industry is unique in such a way as to render the size adjustment inapplicable, as certain intervenors suggest. The size premium adjustment is supported by a robust data set. Although the variations in the risk profiles of firms in any industry inevitably vary to some degree, we do not see sufficient evidence in the record to conclude that factors specific to the utility industry insulate smaller utilities from risks such

95 169 FERC ¶ 61,129 at 149, paragraph 297.

96 *Id*. at 149, paragraph 299.

97 *Id*. at 150, paragraph 301 (citations omitted). [Emphasis added.]

that the CAPM betas sufficiently account for any increased risks and corresponding returns demanded by investors.[98]

Although I have not made a specific adjustment to reflect the Company's small size, it is apparent that the risks associated with NFGDC's small size relative to the proxy group is an important factor in determining the Company's cost of equity and remains an important consideration by investors and regulators.

Q. MR. BREUNING ASSERTS THAT NFGDC DOES NOT FACE HIGHER RISK DUE TO CUSTOMER CONCENTRATION. DO YOU AGREE?

A. Mr. Breuning claims that every gas utility faces the same issues of changing economic and market conditions, and that NFGDC has the option to file a base rate case at any time to address revenue inadequacy due to loss of customers or subsequent loss of revenues. [99]

Mr. Breuning overlooks the evidence presented in my Direct Testimony regarding NFGDC's customer concentration risk and the effect on the Company of potentially losing a large customer.[100] While I am not aware of NFGDC experiencing the loss of a large customer in recent years, that does not change the fact that this remains an important risk for the Company and its investors. While I agree with Mr. Breuning that other gas utilities face risks related to changing economic and market conditions, those risks are more acute for NFGDC due to the fact that approximately 40 percent of the Company's sales volumes in 2024 were derived from industrial

98 194 FERC ¶ 61,208, Paragraph 257.

99 Direct Testimony of Drew Breuning, at 49.

100 Direct Testimony of Joshua C. Nowak, at 48-52.

customers and the Company's smaller size, which magnifies the risk around customer concentration. These risks have, in fact, increased since my Direct Testimony filed in January 2026. As previously discussed, the ongoing conflict in the Middle East has increased the instability and uncertainty of economic conditions around the world. As Fitch Ratings notes, "an adverse war scenario points to the potential for broad demand weakness across sectors, largely due to second-order effects on the global economy. Consumer-oriented sectors and those more vulnerable to fuel prices and interest rates face the greatest exposure."[101] Accordingly, the impact of these challenging conditions is twofold: not only does NFGDC face direct exposure to heightened economic and geopolitical uncertainty, but the Company also faces indirect risk through its industrial customers, who may curtail operations or reduce consumption in response to slowing demand. Similarly, in S&P's recent commentary regarding the credit effects of the Middle East Conflict, the agency noted, "Agribusiness, chemicals, metals and mining, oil and gas, and transportation are key U.S. corporate sectors feeling the direct effects from the war. However, prolonged supply chain disruptions that push up input prices and drag down demand could have meaningful impacts on a boarder set of factors."[102] S&P updated its commentary on April 30, 2026, stating:

> As oil shortages persist, second and third order effects are becoming more pronounced, weighing on manufacturing activity, transportation, consumer confidence, and public finances. These dynamics are inherently nonlinear: Prolonged disruption, even without military

101 FitchRatings, "Prolonged Iran War Raises Demand Risks for US Corporates," March 30, 2026.

102 S&P Global Ratings, "Credit Conditions North America: U.S. Macro And Credit Effects Of The Middle East Conflict," March 13, 2026.

> escalation, materially increases the risk that a transitory shock evolves into a more persistent drag on growth and credit conditions.[103]

In addition, Mr. Breuning's purported solution of NFGDC filing a base rate case to address revenue deficiencies is an after-the-fact solution that does not protect the Company against the loss of earnings and cash flows until new rates are approved and go into effect. NFGDC cannot get those lost earnings and cash flows back, even if higher rates are approved going forward. That is a risk that debt and equity investors cannot ignore.

VIII. RESPONSE TO OCA WITNESS RENO'S RECOMMENDATION ON THE COST OF CAPITAL

Q. PLEASE SUMMARIZE MS. RENO'S COST OF CAPITAL RECOMMENDATIONS.

A. Ms. Reno conducts three variations of the Constant Growth DCF model to arrive at an ROE recommendation of 9.74 percent, the midpoint of her ROE range of 8.88 percent to 10.61 percent. Ms. Reno's ROE recommendation of 9.74 percent is contingent with a proposed hypothetical equity ratio of 50.00 percent. Ms. Reno also conducts three variations of the CAPM as a "check on the reasonableness" of her DCF results; her CAPM results yield a midpoint of 8.99 percent. Ms. Reno also proposes an alternative ROE recommendation of 9.21 percent if the Commission adopts the Company's requested equity ratio of 56.40 percent.

[103] S&P Global Ratings, "Special Update: Time Compounds The Credit Implications Of The War," April 30, 2026.

Q. WHAT ARE THE PRINCIPLE DIFFERENCES BETWEEN YOUR AND MS. RENO'S ANALYSES?

A. While Ms. Reno and I both employ the DCF and CAPM methodologies, along with the same proxy group, there are three key areas in which I disagree with Ms. Reno's ROE analyses: (1) reliance on dividend per share ("DPS"), book value per share ("BVPS") growth rates, and the sustainable growth method in the DCF analyses; (2) market risk premium inputs in the CAPM approach; and (3) assessment of Ms. Reno's alternative ROE based on her flawed application of the Hamada model.

A. Application of the DCF Model

Q. PLEASE SUMMARIZE MS. RENO'S APPLICATION OF THE DCF APPROACH.

A. Ms. Reno develops three DCF-based ROE estimates ranging from 8.88 percent to 10.61 percent. Ms. Reno derives the dividend yield in her DCF model as the annual dividend per share over the next 12 months, divided by the stock price average for the 30- and 90-calendar day average of closing stock prices as of February 27, 2026.[104] In her first set of growth rates in the DCF model, Ms. Reno employs the EPS growth rates published by *Value Line*, S&P, and Zacks.[105] The average expected earnings growth rate in her first set is 7.92 percent, with median DCF results of 10.48 percent and 10.61 percent.[106] In her second DCF approach, Ms. Reno "refines" her calculation by averaging the *Value Line* dividends per share ("DPS"), and book value per share

104 Direct Testimony of Maureen L. Reno, at 43.

105 *Id*., at 44.

106 *Id*., at 44.

("BVPS") estimates with the EPS growth rates, weighted equally.[107] Ms. Reno's second set of growth rates produce an average growth rate of 5.45 percent, with median DCF results of 8.88 percent and 9.03 percent, based on the 30- and 90-day average stock price, respectively.[108] Ms. Reno derives her third and final DCF estimate employing the sustainable growth method to estimate the dividend growth rate. Ms. Reno relies on *Value Line's* retention ratios ("*b*") and five-year horizon ROEs ("*r*") to calculate the expected internal growth component ("*br"*), and the external financing growth rate ("*sv*") using *Value Line's* data to derive the market-to-book ratio and expected growth in the number of outstanding shares.[109] Ms. Reno's sustainable growth DCF produces an average sustainable growth rate of 6.87 percent and 6.67 percent, and median ROE estimates of 9.87 percent and 10.03 percent, based on the 30- and 90-day average stock prices, respectively.[110]

Q. ARE THERE AREAS OF THE DCF ANALYSIS WITH WHICH YOU AND MS. RENO AGREE?

A. Yes. As mentioned above, Ms. Reno and I employ the same proxy group in our analysis. Notably, Ms. Reno presents her results with the inclusion of Spire, Inc. Additionally, Ms. Reno and I both calculate the expected dividend yield by applying one half of the expected growth rate to the current dividend yield.[111] Ms. Reno and I

107 *Id.*
108 *Id.*, at 45.
109 *Id.,* at 47.
110 *Id.*, at 48-49.
111 *Id.*, at 44.

also both rely on EPS growth rates from *Value Line*, S&P, and Zacks in the Constant Growth DCF models.

Q. DO YOU AGREE WITH MS. RENO THAT YOU SHOULD HAVE CONSIDERED ADDITIONAL GROWTH RATES SUCH AS *VALUE LINE'S* DIVIDEND GROWTH AND BOOK VALUE GROWTH RATE PROJECTIONS IN YOUR DCF ANALYSIS?[112]

A. No, I do not. As explained in my Direct Testimony, projected earnings growth is superior to other growth rate estimates. First, growth in dividends occurs primarily as a result of growth in earnings.[113] Further, several academic studies indicate that investors base their investment decisions on analysts' expectations of growth in earnings,[114] and that analysts' consensus earnings forecasts are better at predicting the valuation of common stocks.[115] I am not aware of any similar findings regarding dividend- or book value-based growth estimates. Lastly there are no sources of which I am aware that publish consensus estimates of projected dividend growth; *Value Line's* estimates are not considered to reflect a consensus of a variety of analysts' projections, as are those published by S&P Capital IQ and Zacks. As Ms. Reno concedes, "The S&P MI and Zacks websites report results incorporating forward-looking surveys of

112 *Id*., at 46, 49.

114 *Id*.

115 *See, e.g*., Andreas C. Christofi, Petros C. Christofi, Marcus Lori and Donald M. Moliver, *Evaluating Common Stocks Using Value Line's Projected Cash Flows and Implied Growth Rate*, Journal of Investing (Spring 1999); Robert S. Harris and Felicia C. Marston, *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Financial Management at 21 (Summer 1992); James H. Vander Weide and Willard T. Carleton, *Investor Growth Expectations: Analysts vs. History*, The Journal of Portfolio Management (Spring 1988); Robert S. Harris, *Using Analysts' Growth Forecasts to Estimate Shareholder Required Rate of Return*, Financial Management (Spring 1986).

securities analysts' EPS projections. *Value Line*, in contrast, … is not a survey."[116] Furthermore, my reliance on EPS growth rate projections is in line with the approach adopted by I&E Witness Mr. Breuning.[117] If there were a demand for consensus dividend growth projections from the financial community, there would likely be several widely available sources publishing dividend growth rate projections. Because that is not the case, it supports the position that earnings growth is the most meaningful measure of growth among the investment community.[118]

Ms. Reno's Constant Growth DCF results derived using her combined dividend, earnings, and book value growth assumptions produce ROE estimates that fall 12 to 27 basis points below the lowest authorized ROE for natural gas distribution companies since at least 2024.[119] Thus, these estimates fail to satisfy the *Hope* and *Bluefield* comparable return standard. Accordingly, Ms. Reno's reliance on these growth assumptions, and her recommendation that I adopt them in my own analysis, should be disregarded.

Q. DO YOU AGREE WITH MS. RENO'S APPLICATION OF THE CONSTANT GROWTH DCF MODEL USING SUSTAINABLE GROWTH RATES?

A. No, I do not. In her sustainable growth DCF approach, Ms. Reno relies on *Value Line's* projected ROE for the proxy group companies.[120] The average projected ROE of the

116 Direct Testimony of Maureen L. Reno, at 44.

117 Direct Testimony of Drew Breuning, at 31.

118 Direct Testimony of Joshua C. Nowak, at 32.

119 Source: Regulatory Research Associate. The lowest ROE authorized for natural gas distribution companies since 2024, excluding limited-issue riders, was 9.15 percent for Connecticut Natural Gas Company and The Southern Connecticut Gas Companies, authorized in November 2024.

120 Direct Testimony of Maureen L. Reno, at 47, and Schedule MLR-6a through MLR-6f.

proxy group, 10.35 percent, is approximately 30 to 50 basis points higher than the results of Ms. Reno's sustainable growth DCF approach, (*i.e.,* 9.87 percent and 10.03 percent using the 30- and 90-day average stock periods, respectively). This significant deviation demonstrates the fact that investors are expecting to earn higher returns on equity from the proxy group than what is derived from the sustainable growth DCF model.

Moreover, the sustainable growth rate calculation assumes that future earnings will increase as the retention ratio increases. However, this relationship may not hold for a given company based on management decisions associated with the dividend payout rate. This conclusion is supported by two articles published in the Financial Analysts Journal that discussed the theory that high dividend payouts (*i.e.,* low retention ratios) are associated with low future earnings growth.[121] Each of those articles cited a 2003 study by Arnott and Asness[122] that found, over the course of 130 years of data, future earnings growth is associated with high, rather than low payout ratios.[123] Specifically, Arnott and Asness concluded:

> Unlike optimistic new-paradigm advocates, we found that low payout ratios (high retention rates) historically precede low earnings growth. This relationship is statistically strong and robust. We found that the empirical facts conform to a world in which managers possess private information that causes them to pay out a large share of earnings when they are optimistic that dividend cuts will not be necessary and to pay out a small share when they are pessimistic, perhaps so that they can be

121 Ping Zhou, William Ruland, *Dividend Payout and Future Earnings Growth*, Financial Analysts Journal, Vol. 62, No. 3, 2006. *See* also Owain ap Gwilym, James Seaton, Karina Suddason, Stephen Thomas, *International Evidence on the Payout Ratio, Earnings, Dividends and Returns*, Financial Analysts Journal, Vol. 62, No. 1, 2006.

122 Robert Arnott, Clifford Asness, *Surprise! Higher Dividends = Higher Earnings Growth*, Financial Analysts Journal, Vol. 59, No. 1, January/February 2003.

123 Since the payout ratio is the inverse of the retention ratio, the authors found that future earnings growth is negatively related to the retention ratio.

> confident of maintaining the dividend payouts. Alternatively, the facts also fit a world in which low payout ratios lead to, or come with, inefficient empire building and the funding of less than-ideal projects and investments, leading to poor subsequent growth, whereas high payout ratios lead to more carefully chosen projects. The empire-building story also fits the initial macroeconomic evidence quite well. At this point, these explanations are conjectures; more work on discriminating among competing stories is appropriate.[124]

Given that these studies found that there is a negative relationship between earnings growth and retention ratios, the theory underlying Ms. Reno's sustainable growth rates in the DCF model does not hold and these results should be dismissed.

In addition, the sustainable growth model requires the analyst to estimate four separate variables rather than relying on a single estimate of projected growth. The result is that the potential for bias and error increases as the analyst must assess and estimate four inputs rather than one. As Dr. Roger Morin explains:

> There are three problems in the practical application of the sustainable growth method. The first is that it may be even more difficult to estimate what b, r, s, and v, investors have in mind than it is to estimate what g they envisage. It would appear far more economical and expeditious to use available growth forecasts and obtain g directly instead of relying on four individual forecasts of the determinants of such growth. It seems only logical that the measurement and forecasting errors inherent in using four different variables to predict growth far exceed the forecasting error inherent in a direct forecast of growth itself.[125]

Further, Dr. Morin notes that the empirical financial literature demonstrates that the retention growth methodology is not strongly correlated to measures of stock value, such as stock prices and price/earnings ratios. Dr. Morin concludes that the retention growth method is the "weakest" of the three common measures of growth applied in

---

125 Roger A. Morin, Ph.D., New Regulatory Finance, Public Utility Reports, Inc., at 306 (2006).

the DCF model "on both conceptual and empirical grounds."[126] In conclusion, the sustainable growth rates that Ms. Reno employs in her DCF model should not be given any weight.

B. Application of the CAPM Model

Q. PLEASE SUMMARIZE MS. RENO'S CAPM ANALYSIS AND RESULTS.

A. Ms. Reno calculates three estimates of the CAPM ROE. In two of her CAPM analyses, Mr. Reno applies the 30-day average of 30-year Treasury yields as of February 27, 2026 (*i.e.,* 4.76 percent). For her third CAPM ROE, Ms. Reno applies Kroll's Normalized Risk-Free Rate of 3.50 percent.[127] Across the three CAPM approaches, Ms. Reno varies the market risk premium using Kroll estimates (*i.e.,* historical large Stock ERP, supply-side ERP, and Kroll's Normalizes Rate). Finally, Ms. Reno relies on *Value Line* Beta coefficients for the proxy group companies for all three CAPM estimates. These methods result in CAPM estimates ranging from 7.43 percent to 10.55 percent, with a midpoint of 8.99 percent. Ultimately, Ms. Reno does not incorporate her CAPM ROE estimates but rather employs these results to "check on the reasonableness" of her DCF results.[128]

126 *Id*., at 307.

127 Direct Testimony of Maureen L. Reno, at 51.

128 *Id*., at 7, 50.

Q. DO YOU HAVE ANY HIGH-LEVEL PERSPECTIVES ON MS. RENO'S CAPM ANALYSIS?

A. Yes, I do. Mr. Reno does not appear to consider whether any of her estimates are too low. If Ms. Reno believes her estimates should be assessed for reasonableness, she should also acknowledge where her results are unreasonably low. In particular, Ms. Reno's CAPM estimates as low as 7.43 percent are well below any returns authorized for natural gas utilities for at least the past 46 years.

Q. ARE THERE AREAS OF THE CAPM ANALYSIS WITH WHICH YOU AND MS. RENO AGREE?

A. Yes, there are. First, Ms. Reno and I agree that the 30-year Treasury bond yield is appropriate to use as the risk-free rate.[129] Second, Ms. Reno and I both rely on *Value Line* Beta coefficients.[130]

Q. WHAT MARKET RISK PREMIUM ESTIMATES DOES MS. RENO USE IN HER CAPM ANALYSIS?

A. Ms. Reno applies three Kroll market risk premium estimates in her analysis: (1) Kroll's historic arithmetic average of real market returns over the period 1926 to 2025 (*i.e.,* 7.37 percent); (2) Kroll's supply-side market risk premium (*i.e.,* 6.31 percent); and (3) Kroll's Recommended U.S. ERP of 5.00 percent.

129 *Id*., at 51.

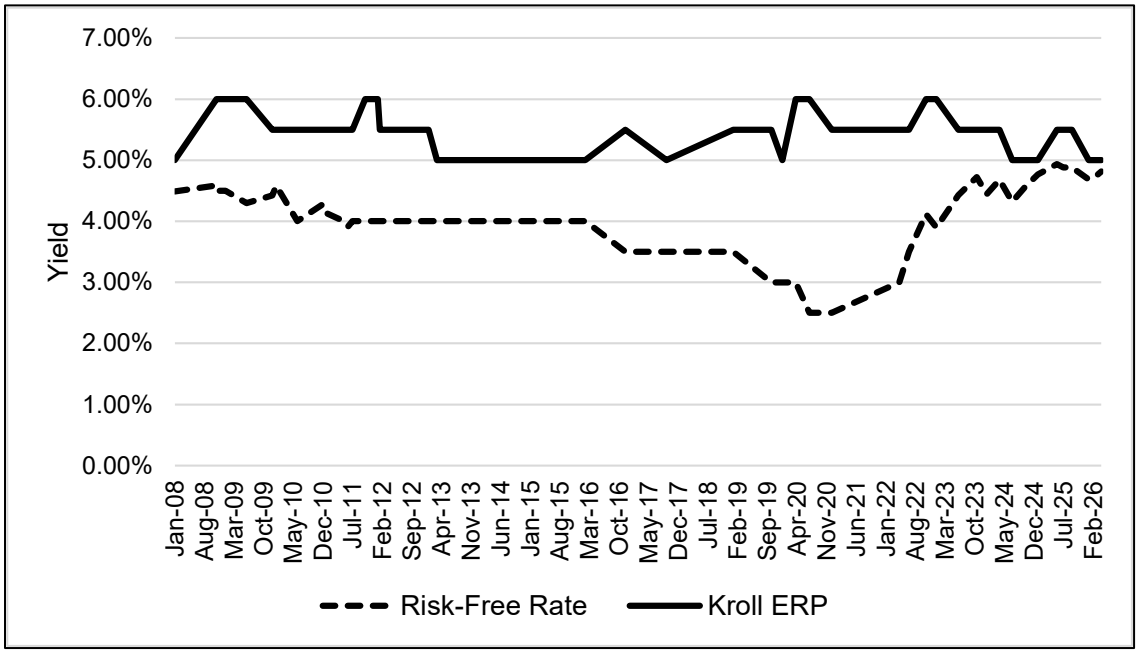
130 *Id*., at 54.

Q. WHAT IS YOUR CONCERN WITH THE USE OF KROLL MARKET RISK PREMIUM ESTIMATES MS. RENO CONSIDERS?

A. First, Ms. Reno's reliance on Kroll's recommended market risk premium estimate of 5.00 percent is a concern as it is not clear that Kroll develops its market risk premium in relation to its risk-free rate. The market risk premium is calculated as the difference between the expected market return and risk-free rate; therefore, it is a function of the expected market return and risk-free rate at a point in time. Consequently, the market risk premium and risk-free rate are not independent of each other, they are interrelated. In fact, academic studies have shown that the two are inversely related.[131] As the risk-free rate decreases, the market risk premium increases and vice versa. However, as shown in Figure 11 below, there is no clear relationship between Kroll's recommended ERP and risk-free rate. Whereas academic studies indicate that the two lines should move in opposite directions, Figure 11Figure 11 shows they do not.

131 *See, e.g.*, Robert S. Harris and Felicia C. Marston, *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Financial Management, (Summer 1992), at 63-70.

FIGURE 11: KROLL RECOMMENDED EQUITY RISK PREMIUM AND RISK-FREE RATE (2008 -2026) [132]



The conclusion that there is no clear relationship between Kroll's variables is supported by statistical analysis. To assess whether there is a relationship, I performed a linear regression in which Kroll's recommended ERP was the dependent variable and the recommended risk-free rate was the independent variable. The R^2 was 0.02 percent, which means that Kroll's risk-free rate explains only 0.02 percent of the change in the ERP. This runs counter to the fundamental principle that the market risk premium is a function of the risk-free rate, as noted earlier. Moreover, the slope coefficient was not statistically significant, which means there is little confidence in the statistical results. This is not to suggest that Kroll is not a valid or credible source of data. Rather, it

132 Sources: Kroll Cost of Capital Navigator, Federal Reserve Bank of St. Louis FRED Economic Data.

suggests that the usefulness of Kroll's ERP recommendation at the current time is questionable given that it runs counter to academic and financial theory.

Q. DO YOU HAVE CONCERNS REGARDING MS. RENO'S REFERENCE TO KROLL'S "SUPPLY-SIDE" OR LONG-TERM HISTORICAL MARKET RISK PREMIUMS?[133]

A. Yes, I do. Ms. Reno's reliance on Kroll's "supply-side" or long-term historical market risk premiums relies on volatile historical data that does not accurately reflect forward-looking investor expectations, especially in volatile or evolving interest rate conditions. As discussed throughout my Direct and Rebuttal testimonies, estimating the cost of equity is inherently forward-looking and therefore requires the use of appropriate, forward-looking inputs.

Q. WHAT IS YOUR RESPONSE TO MS. RENO'S POSITION THAT YOUR FORWARD-LOOKING MARKET RISK PREMIUM IS INFLATED?[134]

A. I disagree. Ms. Reno's primary concern is the use of EPS growth rates in the calculation of the market risk premium. First, since the cost of equity is forward looking, the growth rates should also be forward looking. Second, my approach is widely used in utility regulatory proceedings and is consistent with the approach adopted by FERC, as I noted in my Direct Testimony.[135] Further, the S&P 500 is a widely referenced measure of market returns representative of the broader diversified equity market and is appropriate for the determination of investor expectations for equity returns. More

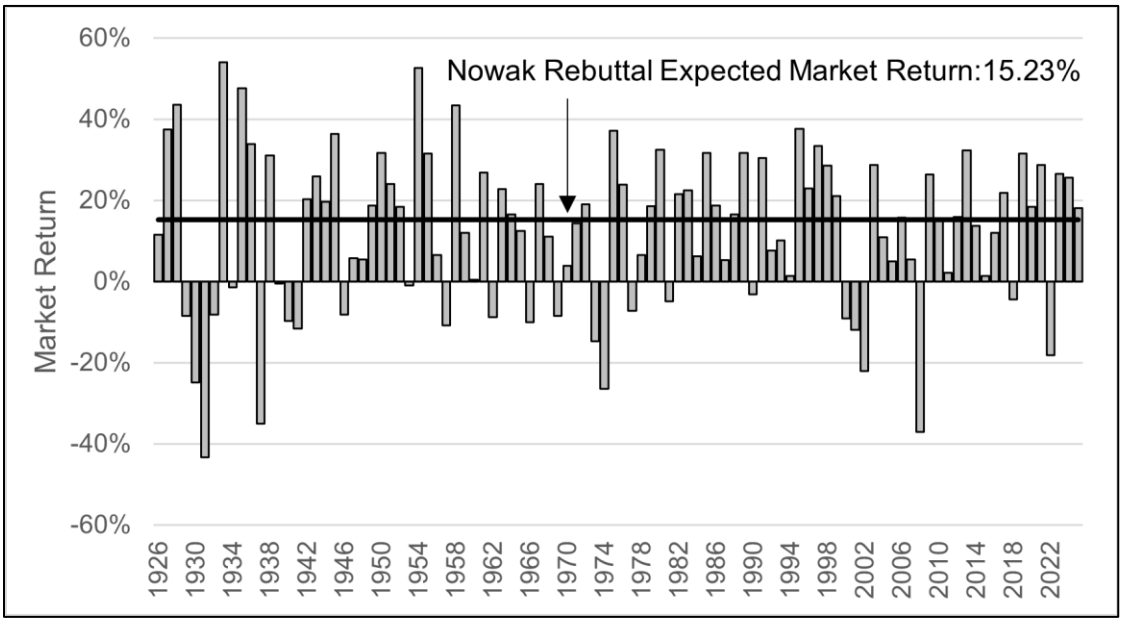
133 Direct Testimony of Maureen L. Reno, at 52.

134 Direct Testimony of Maureen L. Reno, at 55.

135 Direct Testimony of Joshua C. Nowak, at 35.

importantly, for consistency, the market index employed should closely correspond to the market index used to derive Beta coefficients, which is either the NYSE index in the case of *Value Line* or S&P 500 index in the case of Bloomberg.[136] Additionally, my forward-looking market return estimates, which are calculated based on (1) the S&P 500 Index expected market return, using *Value Line* EPS growth estimates; and (2) FERC's more conservative convention to consider only a subset of growth estimates between 0 percent and 20 percent, produce results of 15.23 percent and 12.20 percent, respectively. These estimates are highly consistent with actual returns over the last 100 years. As shown in Figure 12 Figure 12 below, since 1926, a forward-looking market return estimate of 15.23 percent or higher has occurred quite frequently.[137] In fact, a market return of at least 15.23 percent (*see,* Exhibit JCN-4R) has occurred in 50 of the last 100 years. From that perspective, my "ex ante" market return is not overstated.

FIGURE 12: ANNUAL TOTAL RETURN ON LARGE COMPANY STOCKS 1926-2026



136 Roger A. Morin, PhD., New Regulatory Finance, Public Utilities Reports, Inc. (2006) at 159-160.

137 Source: Kroll, 2023 SBBI Yearbook, at Appendix A-1 and Cost of Capital Navigator.

C. Relevance of the Bond Yield Plus Risk Premium Analysis

Q. HAS MS. RENO PRESENTED A BOND YIELD PLUS RISK PREMIUM ANALYSIS?

A. No, she has not. According to Ms. Reno, the Bond Yield Plus Risk Premium approach assumes a "simplistic inverse relationship without any regard to differences in investment risk," and does not incorporate "changes in the market's perception of investment risk of debt and equity securities."[138] Ms. Reno also asserts that the use of nominal interest rates in the Risk Premium analysis ignores the effect of inflation on risk premiums. Lastly, Ms. Reno argues that authorized ROEs reflect company-specific factors considered by commissions such as capital structure, credit ratings, and the individual performance of the utilities in the study.[139]

Q. WHY IS IT IMPORTANT FOR THE COMMISSION TO CONSIDER THE RISK PREMIUM RESULTS?

A. It is a widely accepted principle in regulatory finance, that the estimation of a just and reasonable return on equity requires the application of multiple methodologies, such that weaknesses in one methodology might be offset by the strengths of another. As I&E Witness Mr. Breuning notes, the Risk Premium method is one of the four methods commonly presented to estimate the cost of equity.[140] No methodology is perfect and when one places exclusive reliance on one methodology, the risk of estimation error

138 Direct Testimony of Maureen L. Reno, at 56.

139 *Id, at 57*

140 Direct Testimony of Drew Breuning, at 22.

increases. Dr. Morin, in New Regulatory Finance, provides the following explanation for the importance of using multiple methods for estimating the required equity return for a regulated utility.

> [T]here are no specific rules of infallible models for determining a fair rate of return. It is dangerous and inappropriate to rely on only one methodology in determining the cost of equity. The results from only one method are likely to contain a high degree of measurement error. The regulator's hands should not be bound to one methodology of estimating equity costs, nor should the regulator ignore relevant evidence and back itself into a corner. For instance, by relying solely on the DCF model at a time when the fundamental assumptions underlying the DCF model are tenuous, a regulatory body greatly limits its flexibility and increases the risk of authorizing unreasonable rates of return. The same is true for any one specific model.
>
> ********
>
> When measuring equity costs, which essentially deals with the measurement of investor expectations, no one single methodology provides a foolproof panacea. Each methodology requires the exercise of considerable judgment on the reasonableness of the assumption underlying the methodology and on the reasonableness of the proxies used to validate the theory. It follows that more than one methodology should be employed in arriving at a judgment on the cost of equity and that these methodologies should be applied across a series of comparable risk companies.[141]

The Bond Yield Plus Risk Premium analysis provides another perspective on investors' required return. As shown in my Bond Yield Plus Risk Premium analysis, there is a well-established inverse relationship between equity risk premiums and prevailing risk-free rates. Equity investors tend to require higher risk premiums during periods of lower interest rates. Thus, the current interest rate environment caused by the Federal Reserve's monetary policy intervention is not a reliable long-term indicator

141 Roger A. Morin, PhD., New Regulatory Finance, Public Utilities Reports, Inc. (2006) at 28.

of investment risk or the cost of capital in equity markets. Ms. Reno fails to recognize this inverse relationship between interest rates and the ERP in her analysis.

Q. HAVE OTHER STATE REGULATORY AGENCIES GIVEN WEIGHT TO THE RISK PREMIUM MODEL IN ESTABLISHING THE ALLOWED ROE FOR REGULATED UTILITIES UNDER THEIR JURISDICTION?

A. Yes. As discussed in my response to Mr. Breuning, several other state regulatory agencies have used the Risk Premium methodology to establish the authorized ROE for regulated electric and gas utilities. The Indiana Utility Regulatory Commission ("IURC"), for example, uses the midpoint of a range derived using several methodologies, including the Risk Premium analysis. The IURC states that "the use of multiple methods is desirable because no single method will produce the most reasonable results under all conditions and circumstances."[142] Similarly, the Maryland Public Service Commission states:

> Witnesses for BGE, Staff and OPC provided similar analytical methods for evaluating a just and reasonable ROE for the Company. For example, all the parties employed the DCF analysis and ECAPM methodology. Additionally, BGE used the utility risk premium analysis. Staff used a combination of the CAPM and ECAPM methodology and Build-Up method. OPC used additionally the two-step DCF analysis and risk premium analysis. We find all of these analytical tools helpful and will not rely on anyone to the exclusion of the others in making our decision.[143]

142 Indiana Utility Regulatory Commission, Docket No. Ca-44576, Indianapolis Power and Light, March 16, 2016, at 41.

143 Maryland Public Service Commission, Docket No. C-9326, Baltimore Gas and Electric Company, December 13, 2013, at 76.

In summary, the Risk Premium analysis, based on authorized returns for electric and gas utilities spanning three decades of varying capital markets and economic cycles, has been accepted in many states. I have observed over time that the Risk Premium approach provides stability relative to CAPM and DCF results, which can vary widely based on transitory market conditions and disagreement over specified assumptions.

Q. CAN REFINEMENTS TO THE INPUTS USED IN MS. RENO'S ROE METHODOLOGIES YIELD MORE REASONABLE ROE RESULTS?

A. Yes. Restricting Ms. Reno's DCF analyses to appropriate reliance on EPS growth rates and limiting her CAPM to results based on Kroll's long-term historical arithmetic ERP of 7.37 percent, although I generally do not support the use of historical inputs in CAPM, results in an average ROE estimate of 10.55 percent. In summary, these refinements increase the midpoint of her ROE results by approximately 80 basis points relative to her primary recommended ROE of 9.74 percent.

D. Other Considerations

Q. DO YOU AGREE WITH MS. RENO'S APPLICATION OF THE HAMADA MODEL IN IN DEVELOPING HER ALTERNATIVE ROE OF 9.21 PERCENT?[144]

A. No, I do not. Ms. Reno's application of the Hamada model to derive her "alternative" ROE is flawed based on her inputs and implementation, and does not satisfy the standards established in *Hope* and *Bluefield*. Ms. Reno's input of 50.00 percent as the

144 Direct Testimony of Maureen L. Reno, at 63-65.

"Proxy Equity Ratio" is fundamentally incorrect. As the name suggests, the "Proxy Equity Ratio" should be reflective of the market value of the equity ratio of the *proxy group*, not Ms. Reno's recommended equity ratio for NFGDC. Although the average *Value Line* equity ratios for the proxy group *holding companies* are not materially different from Ms. Reno's proposed hypothetical equity ratio, her approach is conceptually flawed. As discussed above, her inputs for the market risk premium are also flawed given her reliance on the average of Kroll's long-term historical, supply-side, and Normalized ERP, which are incompatible with the use of the current risk-free rate in the CAPM approach. Finally, while giving no weight to her CAPM in her primary ROE recommendation, Ms. Reno relies solely on the CAPM approach to derive her "alternative" ROE of 9.21 percent. Accordingly, her "alternative" ROE lacks a valid analytical foundation and should be disregarded.

Q. MS. RENO DISAGREES WITH YOUR "SIZE RISK ADJUSTMENT" AND ASSERTS THAT THE APPROPRIATE SIZE COMPARISON SHOULD BE BASED ON THE COMPANY'S PARENT, NFG.[145] HOW DO YOU RESPOND?

A. First, as Ms. Reno acknowledges, I "did not make a specific adjustment to reflect the Company's size."[146] While my recommended ROE is somewhat above the midpoint of my ROE recommended range, it considers the overall Company-specific risks, including the Company's capital expenditure program, customer concentration risk, and regulatory framework in addition to the Company's small size.[147] Further, Ms.

145 *Id.*, at 59.

146 *Id.*, at 57.

147 Direct Testimony of Joshua C. Nowak, at 40-54.

Reno's assertion that "the more appropriate analysis would be to compare the market capitalization of the parent company with the proxy group median"[148] is misguided. The rates set for NFGDC in this proceeding will apply to the Company on a stand-alone basis; therefore, its cost of equity – and the authorized ROE – must reflect its stand-alone risk profile as if it were a publicly traded entity. In other words, the authorized ROE must reflect the risks and prospects of the utility's operations and support the utility's integrity from a stand-alone perspective. While Ms. Reno contends that "[a]lthough NFGD acquires financing through its parent company, NFG, which has a lower credit rating than the proxy group, NFGD's lower debt ratio relative to the proxy group reduces its financial risk,"[149] she does not consistently apply this logic in her analysis. Simply, NFGDC's ownership structure, and therefore its source of capital, has no bearing on its cost of equity.

Q. IS THERE ADDITIONAL SUPPORT OF THE APPLICATION OF THE SIZE PREMIUM TO REGULATED UTILITIES?

A. Yes. In addition to my discussion in response to Mr. Breuning, it is important to note that Kroll's decile size study, which is derived from the CRSP database, includes all publicly traded companies on the New York Stock Exchange ("NYSE"), NYSE American ("NYSE MKT," a market for small capitalization stocks), and the NASDAQ, and thus includes electric and natural gas utility companies.[150] As such, contrary to Ms. Reno's assertion that I have failed to "acknowledge that smaller companies reflected

148 Direct Testimony of Maureen L. Reno, at 59.

149 *Id.*, at 35.

150 Kroll CRSP Deciles Size Study Methodology, Cost of Capital Navigator, pages 1-2.

in the SBBI database tend to be engaged in riskier businesses… which is not the case for… natural gas utility companies,"[151] utility companies are explicitly included in the CRSP universe used to construct Kroll's decile size groups.

Q. HOW DO YOU RESPOND TO MS. RENO'S CRITICISM REGARDING THE "DEMAND-RELATED RISK" THAT NFGDC FACES?[152]

A. Ms. Reno's criticism is unduly narrow in scope and fails to account for the full range of risks NFGDC may face during an economic downturn, particularly given the Company's substantial exposure to industrial customers. Although NFGDC's partial revenue decoupling mechanism is a constructive regulatory feature, common to approximately 91 percent of the proxy group operating companies, it does not fully insulate the Company from the need to recover fixed costs over a potentially smaller customer base. This dynamic increases the risk of unrecovered costs, and can place additional financial strain on the Company as reduced cash flows coincide with higher financing costs resulting from inflation and increases in interest rates.

Q. HOW DO YOU RESPOND TO MS. RENO'S CRITICISM REGARDING THE REGULATORY RISK THAT NFGDC FACES?

A. As described in my Direct Testimony, a utility's regulatory risk is a significant factor for investors to consider. Accordingly, investors assess the regulatory framework holistically across the regulatory mechanisms available to utilities facing similar risk. While a fully forecasted test year and weather normalization regulatory mechanisms

151 Direct Testimony of Maureen L. Reno, at 58-59.

152 *Id.*, at 33.

are constructive mechanisms for the Company, NFGDC has somewhat elevated regulatory risk due to limitations on its partial revenue decoupling and capital cost recovery mechanisms relative to its proxy group companies (*see,* Exhibit JCN-9). Notably, I do not make a specific adjustment to the ROE recommendation to account for NFGDC's regulatory risk.

IX. CONCLUSION

Q. WHAT IS YOUR CONCLUSION REGARDING A FAIR ROE FOR NFGDC?

A. Correcting Mr. Breuning and Ms. Reno's analyses to incorporate the appropriate inputs leads to ROE estimates that are consistent with those found in my analyses. Specifically, Mr. Breuning's average ROE results would increase by approximately 140 basis points to 11.22 percent, and Ms. Reno's average ROE results would increase by 81 basis points to 10.55 percent. These results are highly consistent with my updated range of analytical results, and are within my recommended ROE range. Similarly, my updated DCF, CAPM, and Bond Yield Risk Premium analyses continue to support the recommended ROE range of 10.30 percent to 11.30 percent. From within that range, and considering the Company's risk profile, I continue to recommend a base ROE of 11.00 percent. As previously discussed, the Company has withdrawn its request for an additional 25 basis point management efficiency fee due to consideration of the upward pressures associated with inflation and the impact on customers' bills.

Q. WHAT IS YOUR RECOMMENDATION WITH REGARD TO THE CAPITAL STRUCTURE FOR NFGDC?

A. I disagree with the use of a hypothetical capital structure and continue to support NFGDC's capital structure of 56.40 percent common equity and 43.60 percent long-term debt. These capital structures are within the range of the proxy group book and authorized equity ratios, and reflect the appropriate capital structure to support the Company's operations.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes, it does.

NATIONAL FUEL EXHIBIT JCN-1R

NATIONAL FUEL STATEMENT NO. 11

JAMES C. WELCH

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 11

Direct Testimony of James C. Welch

Topics Addressed: Financial Data, Capital Structure and Cost of Debt

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is James C. Welch. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") as Treasurer and Vice President of Finance.

Q. Please provide your educational background.

A. I graduated from the State University of New York at Buffalo in 2000 with a Bachelor of Science degree in Physical Therapy and in 2002 with a Master of Business Administration ("MBA") degree with concentrations in Finance and Marketing.

Q. Please provide your professional experience.

A. In June 2002 I began my employment with NFGDC in the MBA Associate rotational program. I joined the Rates & Regulatory Affairs department in April 2004, as a Rate Analyst II. From 2006 to 2025, I worked for a number of subsidiaries within National Fuel Gas Company ("NFG") in various financial, commercial and operational roles with increasing levels of responsibility. As of April 2025, I transferred to my current role.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. Yes, I testified before the PAPUC on behalf of NFGDC's Pennsylvania Division ("National Fuel" or the "Company") in Docket No. R-00049656.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. My testimony supports the financial information that was provided to Company witness Josh Nowak for preparation of his testimony (National Fuel Statement No. 10) concerning the fair rate of return and recommended capital structure for NFGDC. My testimony also supports the cost of debt used by Mr. Nowak.

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. I am sponsoring the following the filing requirements 53.53 III-D-9, 53.53 III-E.1 through E.17, E-21 through E-36, 53.53 III-G-1, G-6 and G-7. I am also sponsoring standard data requests, ROR-1 through ROR-13, ROR-15 through ROR-20, ROR-22 through ROR-23.

III. CORPORATE STRUCTURE

Q. Please provide an overview of National Fuel Gas Company and its subsidiaries.

A. National Fuel Gas Company ("NFG" or "Parent") is a holding company that owns directly or indirectly all the outstanding securities of its subsidiaries. Across its three

major business segments, NFG operates an integrated natural gas company in New York and Pennsylvania that spans the natural gas value chain from wellhead to burner tip. The common geographic footprint of NFG's subsidiaries enables it to share management, labor, facilities and support services to cost-effectively develop, gather, transport and store, and ultimately distribute natural gas to end-users.

Q. How do NFG and its subsidiaries raise capital?

A. NFG raises long-term debt, short-term debt, and common equity from external sources and provides capital to its subsidiaries through intercompany debt agreements and capital contributions.

Q. Does NFGDC raise capital from external sources?

A. No, NFG provides all short-term and long-term debt, as well as common equity.

Q. Does the PAPUC approve NFGDC's short-term and long-term financing strategy?

A. Yes, the PAPUC grants the authority for NFGDC to issue promissory notes to NFG, most recently in 2023 (Docket No. S-2023-3041669). The PAPUC also approved NFG's Money Pool Agreement – to which NFGDC is a party – most recently in 2018 (Docket No. G-2009-2092081).

IV. CAPITAL STRUCTURE

Q. How does NFGDC determine an appropriate capital structure?

A. Over the long term, NFGDC targets a capital structure that optimizes debt and equity relative to the risk of operations and is within the range of capital structures used by other similar utilities.

Q. Is it appropriate to use NFGDC's capital structure for purposes of this proceeding?

A. Yes. NFGDC's capital structure represents the optimal mix of debt and equity given its specific utility risk profile. I further note that NFGDC's common equity ratio is within the range of the proxy group identified by Company witness Josh Nowak.

Q. Mr. Josh Nowak has presented direct testimony (Statement No. 10) concerning the fair rate of return and capital structure in this proceeding. In preparation of that testimony Mr. Nowak relied, to a certain degree, on financial information provided to him by the Company. Was the financial information provided to him by the Company prepared by you or under your supervision?

A. Yes, the information provided to Mr. Nowak for preparation of his testimony was prepared under my supervision.

Q. What is the proposed capital structure for this filing?

A. As stated in Mr. Nowak's testimony, the proposed capital structure consists of 56.4% common equity and 43.6% long-term debt.

Q. How was the proposed capital structure determined?

A. The proposed capital structure reflects NFGDC's long-term debt and common equity, as currently projected at the end of the fully projected future test year ending October 31, 2027 ("FPFTY"). As Mr. Nowak provides in his testimony, the common equity percentage is consistent with other precedent rate filings.

Q. Prior to the HTY, was there any material changes to NFGDC's capital structure?

A. No, NFGDC's capital structure has remained relatively consistent over the past several years. As NFGDC's debt has increased, infusions of common equity commensurate with that increase has occurred, and would be considered in the future. As an example, in August 2025, NFGDC received an equity infusion of $50 million from NFG, which brought the equity component of the capital structure up to 56.1%. NFGDC's capital structure is included in table III-E.1 for reference.

V. SHORT-TERM DEBT

Q. Please describe National Fuel's and NFGDC's available sources of short-term borrowings.

A. NFG has established both uncommitted and committed lines of credit that are available to its subsidiaries, including NFGDC, via its Money Pool Agreement. These facilities have been established for general corporate purposes and are used as needed, on a temporary basis. NFG currently has arrangements to borrow up to $1.0 billion from committed credit facilities, that consists of an unsecured revolving credit facility with a February 2029 maturity date. This level of short-term liquidity is adequate to meet the needs of all of NFG's subsidiaries. In addition, the $1 billion credit facility backstops a $500 million

commercial paper program, which alongside its investment grade credit rating, provides NFG access to the commercial paper market. Commercial paper typically represents a more cost-effective borrowing option to meet fluctuating interim capital needs when compared to the credit facility. The Parent's uncommitted and committed lines of credit provide adequate liquidity to cost effectively manage the cash needs of NFG and NFGDC in all market conditions.

Q. How does NFGDC typically utilize short-term debt financing?

A. NFGDC uses short-term debt for two purposes. First, to support its working capital needs, which are driven primarily by purchases of gas for customers. Second, to finance its capital spending program in the near-term. Over time, as NFGDC builds up a large enough balance of short-term debt that is used to fund its capital program, it looks to term out that more permanent investment with a long-term debt issuance and/or common equity such that the permanent financing mix is generally in line with its target long-term capital structure.

Q. What was NFGDC's average short-term debt balance during the HTY?

A. NFGDC's short-term debt averaged $180 million during the twelve months ended September 30, 2025.

Q. What is the expected short-term debt average balance during the FTY and what is driving the change from the HTY?

A. The average short-term debt balance during the FTY is expected to be $191 million. Although the majority of NFGDC's capital program is funded out of cash flows generated by NFGDC, there continues to be a need to use short term debt funded via the Money Pool as a near-term funding mechanism to finance these investments.

Q. What short-term debt balance will be outstanding at the end of the FPFTY?

A. NFGDC expects to have $47 million of short-term debt outstanding at the end of the FPFTY. Given the continued short-term borrowings during the HTY and the FTY, NFGDC expects to permanently finance the portion of its short-term debt related to capital investments using a combination of long-term debt and equity contributions. Short term debt balances is being used to finance Construction Work in Progress. Construction Work in Progress is not included in rate base so the short term debt balance at the end of the FPFTY has been excluded from NFGDC's capital structure.

Q. Given that there is no short-term debt included in the proposed capital structure, how are the costs associated with maintaining adequate access to short-term liquidity sources accounted for?

A. To account for the costs of maintaining sufficient liquidity, all upfront and ongoing expenses are incorporated into the cost of long-term debt, which is further discussed in the next section.

VI. LONG-TERM DEBT

Q. What cost rate for long-term debt is most appropriate for use in your cost of capital determination?

A. Given the utilization of NFGDC's capital structure, it is appropriate to use the cost of debt that represents the debt allocated to NFGDC. Using this methodology, the proposed long-term debt cost rate at the end of the FPFTY is 5.58% as shown on page 4 of the Company's response to 53.53.III-E-6.

Q. How is long-term debt allocated to NFGDC?

A. NFG allocates new debt issuances down to one or more of its subsidiaries based on anticipated needs at the time of the new issuance and to ensure capital structures for each of its subsidiaries align with the risk profiles of those businesses over the long term. For issuances that NFG allocates funds to NFGDC, NFGDC in turn issues a promissory note, as approved by the Commission, to NFG that is tied to a specific debt issuance at NFG.

Q. For purposes of the intercompany promissory notes, how is the cost of long-term debt determined?

A. The cost of debt reflects the coupon on that issuance, any premium or discount to par, and any costs related to issuing new securities (e.g. Securities and Exchange Commission registration costs, underwriting expenses, legal costs, rating agency fees, etc.). This is all reflected in an interest rate such that NFG is made whole over the life of the issuance.

Q. Are there any additional costs that are included in the cost rate for long-term debt?

A. Yes, there are costs associated with maintaining access to liquidity, via the previously discussed short-term liquidity facilities, that need to be recovered. Given that there is no short-term debt proposed in the capital structure at the end of the FPFTY, but there are ongoing costs allocated to NFGDC to maintain access to these liquidity facilities, it is necessary to recover these costs. As a result, the Company proposes recovering these costs through the cost of long-term debt, which is embedded in the 5.58% stated above. Included in these costs are amortized upfront transaction costs, and ongoing annual expenses related to NFGDC's share of the committed credit facility. Those are just and reasonable costs to maintain an adequate amount of liquidity to preserve financial strength. This methodology is consistent with how the Company recovered these costs in its last base rate proceeding.

Q. Are there any new issuances anticipated between now and the end of the FPFTY?

A. Yes. NFG anticipates issuing a new $500 million 10-year note in October 2026 and a new $300 million 10-year note in September 2027. NFGDC will be allocated $125 million and $275 million of the new issuances, respectively. The proceeds are intended to pay down existing long-term debt borrowings and short-term debt on the balance sheet.

Q. How much long-term debt can NFGDC issue under its currently approved financing authority (Docket No. S-2023-3041669)?

A. NFGDC was granted the ability to issue up to $300 million of new promissory notes under its existing authority. It issued a $175 million promissory note in February 2025 and has $125 million remaining through December 31, 2026. This remaining authority

aligns with the expected proceeds it will receive from a new issuance October 2026. The additional $275 million promissory note to be issued by NFGDC in September 2027 occurs beyond the current authorization. The Company will seek authorization from the Commission prior to issuance.

Q. How has the cost rate of the projected new issuance been determined?

A. I am assuming NFG issues new 10-year notes. This was done to prevent the potential of carrying a higher than historical coupon for longer term debt for an extended period of time. The coupon rate of 5.50% is based upon an average of the recent historical yields published in the November 2025 issue of the Mergent Bond Record, representing the average Moody's Public Utility Baa credit rating, adjusted for a 10-year tenor. The effective cost rate includes projected transaction related costs similar to precedent NFG long-term debt issuances.

Q. Does this conclude your direct testimony at this time?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 11-R

Rebuttal Testimony of James C. Welch

Topics Addressed: Capital Structure

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is James C. Welch. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 11, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. The purpose of my rebuttal testimony is to respond to direct testimony provided by Witness Mr. Drew Breuning, Investigation & Enforcement ("I&E") and by OCA Witness Maureen L. Reno.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. No, not at this time.

III. CAPITAL STRUCTURE

Q. Please provide the capital structure proposed by I&E Witness Breuning.

A. I&E Witness Brening is proposing a capital structure of 55% common equity and 45% long term debt.

Q. Please describe the modifications and reasoning for the capital structure proposed by Witness Breuning in his testimony, and other relevant commentary to be rebutted.

A. Witness Breuning proposes (1) the use of a hypothetical capital structure based on a proxy group, and (2) changes to the proposed proxy group provided by the Company.

Q. Please provide the capital structure proposed by OCA Witness Reno.

A. Witness Reno is proposing a hypothetical capital structure of 50% common equity and 50% long term debt.

Q. Do you agree with the use of a hypothetical capital structure as proposed by I&E Witness Breuning and OCA Witness Roth?

A. No. The Commission has consistently held that if a utility's actual capital structure is within the range of a similarly situated proxy group of companies, then rates should be set based on the utility's actual capital structure. As the Commission has determined: "Absent a finding by the Commission that a utility's actual capital structure is atypical or too heavily weighed on either the debt or equity side, we would not normally exercise our discretion with regard to implementing a hypothetical capital structure." *Pa. PUC, et al. v. Columbia Gas of Pa., Inc.*, Docket Nos. R-2020-3018835, *et al.* (Order entered Feb. 19, 2021),at 116-17 (quoting *Pa. PUC. v. PPL Electric Utilities Corp.*, Docket Nos. R-2012-2290597, *et al*. (Order entered Dec. 28, 2012) ("*2012 PPL Order*") at 68); *see also Pa. PUC, et al. v. PECO Energy Co. – Gas Division*, Docket Nos. R-2020-3018929, *et al.* (Order entered June 22, 2021), at 144-45 (also quoting *2012 PPL*

Order at 68). The Commission recently confirmed this approach in its Order entered in Columbia Gas of Pennsylvania, Inc.'s ("Columbia Gas") 2025 rate case, stating:

> We find it appropriate to reinforce our finding, which we have outlined in several recent base rate proceedings before this Commission, that the use of an actual capital structure represents the Company's decision, in which it has full discretion, on how to capitalize its rate base. This actual capitalization forms the basis upon which the Company attracts capital.

Pa. PUC, et al. v. Columbia Gas, Docket Nos. R-2025-3053499 (Order entered Dec. 9, 2025), at 210-211 (internal quotations omitted).

Q. Does the current the capital structure proposed by the Company and by I&E meet this standard, and fall within the range of a reasonable peer proxy group?

A. Yes. The capital structure proposed by the Company falls within the range of acceptable capital structures for peer proxy groups, whether using the proxy group constructed by National Fuel witness Nowak in direct testimony, or the proxy group identified by I&E witness Breuning in direct testimony.

Q. In previous cases filed by the Company and presided over by the Pennsylvania Public Utility Commission, has I&E recommended the use of the actual capital structure provided by the Company or similarly situated utilities?

A. Yes. In Docket No. R-2022-3035730, the Company's most recent rate case, I&E supported the use of the Company's claimed capital structure. The I&E witness in that case noted in Statement No. 3, page 12, lines 13-15, "I recommend using the Company's claimed capital structure as it falls within the range of my proxy group's 2021 (most recent available) capital structure."

Q. Do you agree with the changes to the proxy group proposed by Witness Breuning?

A. No. National Fuel witness Nowak responds to the proposed modifications to the proxy group on pages 33 through 37 of his rebuttal testimony (National Fuel St. No. 10-R).

Q. Does the Company use double leverage as alleged by OCA Witness Reno?

A. No, the Company does not use double leverage. At no point has National Fuel's parent company, National Fuel Gas Company ("NFG"), issued debt and infused it as equity to the Company.

Q. Why does OCA Witness Reno introduce the concept of double-leverage in this proceeding?

A. It is unclear why this point is raised, and its introduction into the record is not relevant or instructive in this case given the fact that the Company has not utilized double leverage at any point.

Q. Is the practice of NFG issuing debt, and linking any debt issuance to a National Fuel promissory note consistent with prior practice and review, and approved by the Commission?

A. National Fuel relies on NFG as a source of capital through its public offerings of debt securities. This approach is governed and accepted by the Commission through the Credit and Security Agreement between the parties, which the Commission has noted,

"appears to be reasonable and consistent with the public interest under Section 2102(b) of the Public Utility Code."

Q. Do you agree with OCA witness Reno's reference to National Fuel's historic test year ("HTY") capital structure as an argument to determine a hypothetical capital structure for the forward-looking business, and the comparison to NFG capital structure?

A. No. To remain consistent with the collective rate proceeding, including the company revenue requirement calculations, the projected capital structure at the end of the fully projected future test year ("FPFTY") should be used. Further, comparing NFG's HTY equity ratio at January 31, 2025, to the Company's equity ratio at October 31, 2027, the end of the FPFTY, is illogical and lacks any basis for consideration.

Q. Do you agree with the argument that National Fuel's equity ratio exceeds that of NFG and should support the use of a hypothetical capital structure?

A. No. As provided in the initial filing requirement response III-E.31, NFG has a projected equity ratio of 62.5% at the FPFTY, far greater than the Company's projected equity ratio of 56.4% proposed in this proceeding.

Q. Do I&E witness Breuning and OCA witness Reno discuss the appropriate long-term debt cost rate for the FPFTY as part of this case?

A. Yes.

Q. Do I&E witness Breuning and OCA witness Reno agree with the Company's long-term debt cost rate for the FTFPY?

A. The parties agree that the long-term debt cost rate of 5.58% proposed by National Fuel for the FPFTY is appropriate and reasonable.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes.

NATIONAL FUEL STATEMENT NO. 12

ERICA L. FORCUCCI

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 12

Direct Testimony of
Erica L. Forcucci

Topics Addressed: Income Taxes

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Erica L. Forcucci. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") as Managing Director, Tax department.

Q. Please provide your educational background.

A. I graduated from the State University of New York at Oswego in 1999 with a Bachelor of Science degree in Accounting, with a minor in Economics. In 2000, I graduated from the State University of New York at Oswego with a Master of Business Administration degree. I was certified by New York State as a Public Accountant in 2002.

Q. Please provide your professional experience.

A. From 2000-2007, I worked for the public accounting firms KPMG, LLP and Ernst & Young, LLP and from 2008-2009, I worked for Sanderson and Company, LLC and Mark IV Industries. In 2010, I became Corporate Tax Manager at Cobham Management Services Inc. and was promoted in 2016 to Director of Tax at Cobham Management Services Inc., transferring in the same position to Cobham Advanced Electronic Solutions, Inc. in 2020. In 2023, I was hired by NFGDC as Managing Director of the Tax department.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. No.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. I am presenting testimony in support of NFGDC's Pennsylvania Division's ("National Fuel" or the "Company") federal and state income tax claims. I will explain the tax adjustments made to the results of the historic test year ended September 30, 2025 ("HTY") and future test year ending September 30, 2026 ("FTY"). I will also explain the Company's *pro forma* tax adjustments to its principal accounting exhibits for the fully projected future test year ending October 31, 2027 ("FPFTY").

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. Yes. I am sponsoring National Fuel Exhibits EF-1, EF-2, and EF-3. Together with other Company witnesses, I am sponsoring portions of Exhibit A (Fully Projected), Exhibit A (Future) and Exhibit A (Historic) that pertain to tax-related issues. I am also sponsoring certain responses to the Commission's filing requirements and standard data requests.

III. TAX ADJUSTMENTS

Q. Please provide an overview of National Fuel's principal accounting exhibits relative to its proposed tax adjustments.

A. As explained in the Direct Testimony of Donald N. Koch (National Fuel Statement No. 2), National Fuel's principal accounting exhibit is Exhibit A (Fully Projected), which includes a presentation for the FPFTY ending October 31, 2027. Section D of this exhibit presents necessary adjustments to budgeted levels of expense items and revenues. The *pro forma* adjustments related to income taxes are summarized in Schedules D-11 and D-12. These adjustments are used to derive National Fuel's *pro forma* income at present and proposed rates as set forth in Schedule A-1 of the same exhibit.

Exhibit A (Historic) and Exhibit A (Future) follow the same format but reflect data for the HTY ended September 30, 2025 and FTY ending September 30, 2026, respectively. This information is provided to comply with the Commission's filing requirements and provides a basis for comparing National Fuel's FPFTY claims with actual book results from the HTY and adjusted FTY results.

IV. TAXES OTHER THAN INCOME TAXES

Q. How was the provision for taxes-other-than-income taxes ("TOTI") determined for the FPFTY?

A. TOTI consists of the Pennsylvania Utility Realty Tax, Pennsylvania and Local Property taxes, Social Security taxes, Federal Unemployment tax, and State Unemployment tax. TOTI amounts were based on the plan year budget, as adjusted for reasonably known and measurable changes to various payroll taxes as supported by the Direct Testimony of Donald N. Koch (National Fuel Statement No. 2). These adjustments are shown on Exhibit A (Fully Projected), Schedule D-10. The net adjustment is brought forward to Schedule D-3, page 2.

V. INCOME TAXES

Q. Please describe the Company's claim for income taxes.

A. Income tax expense for the FPFTY at present and proposed rates is set forth in Exhibit A (Fully Projected), Schedule D-11. Income taxes are calculated using the procedures normally followed by the Commission, including the use of debt interest synchronization, the normalization method for accelerated depreciation used in the calculation of federal income taxes, and the flow-through of accelerated depreciation benefits for state tax purposes. The Company continues to flow through the annual repairs tax deduction for federal and state tax purposes. The fully adjusted claim for the FPFTY income tax expense is shown on Exhibit A (Fully Projected), Schedule D-1, Lines 19 and 20.

Q. Please explain how the Company's claim for current income tax was calculated.

A. Schedule D-11 shows the calculation of *pro forma* income taxes for the FPFTY at present and proposed rates. Line 1 shows revenue at present and proposed rates, while Line 2 shows operating expenses at present and proposed rates from Schedule D-1. Line 3 reflects operating income before debt interest deduction and is calculated by netting Line 1 from Line 2. Debt interest expense is synchronized using the rate base claim from Schedule C-1, with the cost of debt and the debt component of the Company's capital structure recommended in the direct testimony of Josh Nowak (National Fuel Statement No. 10) and shown on Schedule B-7. The resulting interest expense on Line 6 is subtracted from net income before debt interest to calculate base taxable income on Line 7.

In accordance with established Commission practice, Lines 8 through 10 of Schedule D-11 reduce the base taxable income, for state tax purposes, by the total difference between accelerated tax depreciation shown on Line 8 and the *pro forma* book depreciation shown on Line 9. Line 11 includes a further reduction to state taxable income from other state income tax adjustments as detailed on National Fuel Exhibit EF-2, which is explained below. The statutory state corporate net income tax rate (7.49%, in FPFTY further explained below) was then applied to determine the *pro forma* state income tax expense shown on Line 13. Lines 14 through 19 show the federal current income tax expense calculation at current and proposed rates, while Line 20 sums the state and federal current tax expense amounts before application of deferred income taxes.

Q. Please explain how the Company's claim for deferred income taxes was calculated.

A. Total federal temporary differences are shown on Line 25 of Schedule D-11. These include differences between accelerated tax depreciation and book depreciation adjusted for book flow through depreciation, shown on Line 22, as well as other deferred adjustments on Line 24, which are detailed on National Fuel Exhibit EF-2 and explained below. The statutory federal corporate income tax rate (21%) is applied to the total federal temporary differences to determine the deferred federal income tax benefit on Line 27. As state tax consequences are flowed through, there are no state deferred income taxes, except for the 2009 repairs and maintenance Section 481(a) amortization as agreed upon in Docket No. R-2022-3035730 ("2022 Rate Case") on Line 28.

Other tax adjustments are shown on Lines 31 through 34. These include amortizations for the federal benefit of 2009 repairs and maintenance Section 481(a)

amortization, Average Rate Assumption Method ("ARAM") and unprotected deficient income taxes. These adjustments are explained in testimony below.

Q. Please explain what is represented on National Fuel Exhibit EF-2 Other Income Tax Adjustments.

A. National Fuel Exhibit EF-2 details other income tax adjustments which flow into both the current and deferred income tax calculations on Schedule D-11. Other state and federal adjustments to current income tax expense total $36.1 million as shown on Lines 5 and 10, respectively, of Exhibit EF-2. These adjustments include the permanent differences resulting from the current year repair and maintenance deduction, the non-deductible portion of meals and entertainment, and other temporary differences resulting from contributions in aid of construction ("CIAC") and uniform capitalization ("UNICAP") rules per Internal Revenue Code ("IRC") Section 263A. Other adjustments to the federal deferred calculation represent the deferred impact of the temporary differences for CIAC and UNICAP.

Q. How does the Company plan to account for the deferred tax asset and related regulatory liability established for the Medicare subsidy?

A. The Medicare Prescription Drug Improvement and Modernization Act of 2003 established a tax-free subsidy for a portion of an employer's annual prescription drug costs. The Patient Protection and Affordable Care Act of 2010 eliminated the "tax-free" nature of these subsidies for tax years beginning after December 31, 2012. During this period, the Company received the tax benefit of the tax-free subsidies and recorded a

deferred tax asset and regulatory liability to preserve this benefit for the ratepayers, as detailed on National Fuel Exhibit EF-3.

Q. How was the deferred tax asset handled in the 2022 Rate Case?

A. The total amount of the deferred tax asset was $624,618. The Company proposed to pass back the deferred tax asset to ratepayers over a 3-year straight-line amortization period. The Company amortized $416,412 of the deferred tax asset by the completion of the historic test year ended September 30, 2025. The remaining $208,206 will be amortized and passed back to ratepayers in fiscal year 2026.

Q. How does the Company propose to address the remaining regulatory liability?

A. The amortization of the regulatory liability established for the Medicare subsidy of $921,649 was not included in the revenue requirement calculation in the 2022 Rate Case. The Company proposes to amortize the full regulatory liability balance over three years, which results in an increase to the revenue requirement of $307,216 annually over the three-year period.

Q. What is the total FPFTY income tax expense for National Fuel?

A. The *pro forma* tax expense at present and proposed rates is shown on Schedule D-11 at Line 35 is $2.2 million.

Q. Does the Company have any income tax loss carryovers that affect the HTY, FTY, or FPFTY?

A. No. For ratemaking purposes, income tax expense is calculated using the standalone methodology required by PAPUC. This approach excludes certain book-to-tax differences from the taxable income calculation. While the Company's separate Pennsylvania tax return may reflect a net operating loss ("NOL") due to book-to-tax differences, the ratemaking calculation results in taxable income for the HTY, FTY, and FPFTY. Therefore, no NOL carryovers are generated or applied in determining income tax expense for this proceeding.

VI. ACCUMULATED DEFERRED INCOME TAXES

Q. How are Accumulated Deferred Income Taxes ("ADIT") calculated?

A. Schedule C-6 of Exhibit A (FPFTY) shows the ending balance for federal ADIT as of October 31, 2027. This amount is deducted from rate base. The total shown on Line 1 reflects the difference in income tax expense for book and tax purposes attributable to the difference between accelerated tax depreciation and straight-line book depreciation on FPFTY plant balances, net of basis differences associated with CIAC and UNICAP rules per IRC Section 263A. As state tax consequences are flowed through, there is no associated state ADIT balance.

Q. What is the amount of the ADIT offset to rate base?

A. As shown on Line 4 of Schedule C-6 and on Line 6 of Schedule A-1, the ADIT offset is $73.9 million, which includes the amount related to excess ADIT discussed further in Section F.

Q. Would a net operating loss carryforward be included in a utility's ADIT?

A. No, a NOL carryforward is not includable in ADIT, as deferred tax assets (if applicable) are not recorded in Account 282 (Accumulated Deferred Income Taxes – Plant Related). Since only items from Account 282 are included in ADIT for the purpose of rate base, NOLs do not affect the Company's rate base calculation.

Q. Has the Company's ADIT rate base deduction been calculated in compliance with the normalization requirements of the IRC?

A. Yes. The Company's calculation accurately reflects the proration methodology of the ADIT rate base component in accordance with Treasury Regulation 1.167(l)-1(h)(6)(ii). The proration methodology is a specific method promulgated by the Internal Revenue Service ("IRS") for calculating ADIT, for any rate filing that includes a future test period, which must be followed for ratemaking purposes to comply with IRS normalization requirements. Compliance with the normalization rules is necessary for a company to claim accelerated depreciation for tax filing purposes. Accelerated tax depreciation, versus straight-line depreciation, provides a cash-flow benefit for a company. The Company receives a cash-flow benefit from accelerated tax depreciation (via a reduction in current income taxes payable) and ratepayers receive a benefit via a rate base reduction resulting from netting ADIT against rate base. The methodology is designed to account for the period of time the Company has received the ADIT and provide the appropriate limit on the amount of ADIT that can be excluded from rate base as determined by the IRS. See National Fuel Exhibit EF-1, Page 2 for the calculation of the pro-rata adjustment.

VII. CONSOLIDATED TAX ADJUSTMENT

Q. Does the Company's proposed revenue requirement reflect a federal consolidated tax adjustment?

A. No. The Company's revenue requirement is established based on its stand-alone federal income tax attributes. It is my understanding that Act 40 of 2016, which added 66 Pa. C.S § 1301.1 to the Public Utility Code, eliminates the need to show a consolidated tax adjustment for ratemaking purposes. There are no consolidated tax savings adjustments due to the Company being in a taxable loss prior to the ratemaking adjustments.

VIII. IRS UPDATE

Q. Is the Company currently under audit by the IRS?

A. The Company is in the IRS Compliance Assurance Process ("CAP") Program. The Company is in the Bridge Plus phase of the CAP program. The CAP program is intended for taxpayers with a low risk of non-compliance who are cooperative and transparent with few, if any, material issues that require resolution. To participate in the Bridge Plus phase, the taxpayer must submit a documentation package no later than four months after the end of the fiscal year. The IRS conducts a risk assessment review, and a draft tax return must be submitted to the IRS 30 days before filing the final return. If the filed return is consistent with the documentation package, and no issues were found, the taxpayer will be issued a full acceptance letter and a No Change Letter one month after filing the return.

Q. Please explain the Company's accounting treatment of the Repairs Tax Method and changes related to Revenue Procedure 2023-15.

A. The Company treats certain expenditures that are capitalized for book purposes as deductible for tax repair purposes. For linear property, the Company follows the guidance detailed in Revenue Procedure 2023-15. For non-linear property, the Company deducts the costs of repairs incurred in connection with the repair and maintenance of their network assets pursuant to Internal Revenue Code Section 162. On April 14, 2023, the IRS released Revenue Procedure 2023-15, providing a "natural gas transmission and distribution property safe harbor method of accounting" ("NGSH Method") that taxpayers may use to determine whether expenses to repair, maintain, replace, or improve natural gas transmission and distribution property must be capitalized or be allowable as deductions for repairs. The revenue procedure is effective for taxable years ending after May 1, 2023. Adopting the NGSH Method requires a change in accounting method, and the new guidance provides detailed implementation procedures. For the Company's fiscal year 2023 tax return, an application for change in method of accounting was filed to adopt Revenue Procedure 2023-15 for linear property only. The fiscal year 2023 application for the change in accounting method and corresponding Section 481(a) adjustment was reviewed and accepted by the IRS as part of the CAP program. In conformity with the Revenue Procedure 2023-15, the Company notified the PAPUC in August 2024 of the change in the method of accounting and provided the related IRS Form 3115 at that time. The Company has since followed Revenue Procedure 2023-15 in determining linear property tax repairs.

Q. What effect or benefit does the Repairs Tax Method have for ratepayers?

A. When comparing the repairs deduction ($37.7 million) to the repairs deduction included in the previous PA rate case ($6.8 million), and based on the lower taxable income, excluding the impact of other tax effects, it is estimated that rate payers are saving approximately $10 million in tax expense from the reduction in taxable income due to the increase in repairs deductions.

Q. Does the Company have any unresolved tax issues related to any IRS audits?

A. No. The issue discussed in the 2022 Rate Case has been resolved due to the release of Revenue Procedure 2023-15 as discussed above.

IX. EXCESS ACCUMULATED DEFERRED INCOME TAXES

Q. Has the Company reflected the amortization of Excess Accumulated Deferred Income Taxes ("excess ADIT"), as a result of the TCJA, as part of its income tax calculation?

A. Yes, the Company has calculated the amount of the excess ADIT that will be amortized and flowed back to ratepayers in its FPFTY. This amount of amortization of protected excess ADIT is included in the overall federal deferred tax expense calculated on Schedule D-11. The FPFTY amortization is $1.0 million, calculated using the ARAM as required by tax normalization rules. The Company utilizes the PowerTax software to calculate and maintain the ADIT balances on the ARAM. The Company has calculated the amount of the deficient unprotected ADIT that will be amortized and recovered from the ratepayers over a ten-year period (FY 2018-2027) on a straight-line basis. The

amortization will conclude on September 30, 2027. The amortization for unprotected deficient ADIT is $0.9 million and is included in the overall federal deferred tax expense calculated on Schedule D-11. Both amounts were previously documented and explained in Docket Nos. M-2018-2641242 and R-2018-3000527.

X. PENNSYLVANIA CORPORATE TAX RATE DECREASE

Q. How does the Company plan to account for the Pennsylvania corporate tax rate decrease?

A. On July 8, 2022, House Bill 1342 was signed into law in Pennsylvania. The law reduced the corporate income tax rate from 9.99% to 8.99% initially and reduces the rate by 0.5% annually until it reaches 4.99% each calendar year, with the new rate effective for tax year beginning on or after January 1 each year. The tax rate will gradually decrease each year through fiscal year 2032. Since the Company is a fiscal year taxpayer, its tax year begins on October 1 and runs through September 30. For the Company's HTY and FTY, 8.49% and 7.99% are used, respectively. Since the FPFTY includes the Company's fiscal 2027 tax year, the tax rate of 7.49% has been utilized on Schedule D-11.

XI. POWERTAX UPGRADE

Q. Why is National Fuel transitioning from PowerTax software to the cloud-based Tax Fixed Assets platform, and how are the associated costs reflected in the O&M forecast in FFPTY?

A. National Fuel currently utilizes PowerTax for tax depreciation and deferred tax calculations. PowerTax standard support will end on December 31, 2025 and will reach

end-of-life by December 31, 2027. To ensure continuity, National Fuel will be upgrading the software to the software provider's cloud-based solution Tax Fixed Assets during fiscal year 2026. The associated implementation and Software-as-a-Service (SaaS) fees have been incorporated into the Operations and Maintenance (O&M) forecast. Please refer to the Direct Testimony of Anthony T. Formato (National Fuel Statement No. 3) for additional information.

Q. Does this conclude your direct testimony at this time?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 12-R

Rebuttal Testimony of
Erica L. Forcucci

Topics Addressed: Income Taxes

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Erica L. Forcucci. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 12, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. To respond to Lafayette K. Morgan Jr.'s OCA Statement No. 2 regarding state income tax expense for the fully projected future test year ending October 31, 2027 ("FPFTY").

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes. I am sponsoring Exhibit EF-1R which includes applicable tax rates for taxable years beginning on or after the dates reflected in the Exhibit and a copy of the Secretarial Letter Regarding Corporate Net Income Tax ("CNIT") and State Tax Adjustment Surcharge Dated December 8, 2025.

III. CORPORATE STATE INCOME TAX

Q. What issue are you addressing related to OCA Statement No. 2?

A. Mr. Morgan asserts that, for purposes of determining the revenue requirement, the Company should utilize a Pennsylvania Corporate Income Tax rate of 6.99% for the FPFTY. This assertion is based on the premise that the Pennsylvania state tax rate for National Fuel decreases from 7.49% to 6.99% on January 1, 2027 as a result of the reduction in tax rate outlined in House Bill 1342. However, this premise does not accurately reflect the implementation of House Bill 1342. Mr. Morgan recommends that the Company adjust the revenue requirement to account for the difference in Pennsylvania corporate income tax rates.

Q. Why does Mr. Morgan's position not properly reflect the applicable tax rate?

A. As referenced in the Direct Testimony Statement No.12, Section X, on July 8, 2022, House Bill 1342 was signed into law in Pennsylvania. The law reduced the corporate income tax rate from 9.99% to 8.99% initially and reduces the rate by 0.5% annually until it reaches 4.99%, with the new rate effective for a tax year beginning on or after January 1 each year. The tax rate will gradually decrease each year through fiscal year 2032. Since the Company is a fiscal year taxpayer, its tax year begins on October 1 and runs through September 30.

See Exhibit EF-1R for the applicable tax rates for taxable years ***beginning on or after*** the dates reflected in the Exhibit. The FPFTY of November 1, 2026, through October 31, 2027 falls within Tax Year 2026, as the fiscal year begins after January 1, 2026. Accordingly, the Company is subject to the 7.49% tax rate for this period. To be clear, National Fuel is required to and will pay the 7.49% rate from October 1, 2026

through September 30, 2027. The 6.99% rate does not become effective for National Fuel until October 1, 2027. See Exhibit EF-1R for Secretarial Letter Regarding Corporate Net Income Tax and State Tax Adjustment Surcharge dated December 8, 2025 reflecting the "step down" in CNIT to 7.49% effective for the fiscal year beginning on or after January 1, 2026.

Q. Does Mr. Morgan's statement support this interpretation?

A. Yes. OCA Statement No. 2 states: "The Company used the ***2026 tax rate of 7.49%***". Mr. Morgan acknowledges that the Pennsylvania corporate income tax rate for Tax Year 2026 is 7.49%. As National Fuel is a fiscal year taxpayer and the FPFTY falls within Tax Year 2026, the tax rate of 7.49% is applicable for National Fuel's FPFTY.

IV. UNCONTESTED TAX ISSUE

Q. Are there any other issues that you wish to note.

A. Yes. In my Direct Testimony, I explained that the amortization of the regulatory liability established for the Medicare subsidy of $921,649 was not included in the revenue requirement calculation in the 2022 Rate Case. The Company proposes to amortize the full regulatory liability balance over three years, which results in a decrease to the revenue requirement of $307,216 annually over the three-year period. No party submitted testimony with respect to this item related to the Company's proposed treatment. Therefore, the Company requests that this methodology be approved.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes.

NATIONAL FUEL EXHIBIT EF-1R

Pennsylvania Corporate Net Income Tax Rates

72 Pa. Stat. § 7402(b), *as amended by* 2022 Pa. H.B. 1342

Taxable Year	Tax Rate
January 1, 2023, through December 31, 2023	8.99%
January 1, 2024, through December 31, 2024	8.49%
January 1, 2025, through December 31, 2025	7.99%
January 1, 2026, through December 31, 2026	7.49%
January 1, 2027, through December 31, 2027	6.99%
January 1, 2028, through December 31, 2028	6.49%
January 1, 2029, through December 31, 2029	5.99%
January 1, 2030, through December 31, 2030	5.49%
January 1, 2031, and each taxable year thereafter	4.99%

P.O. Box 3265
Harrisburg, PA 17120-3265

RE: National Fuel Gas Distribution Corporation's ("**National Fuel**" or "**Company**") Response to Secretarial Letter dated December 4, 2025 (the "**Secretarial Letter**") Regarding Corporate Net Income Tax ("**CNIT**") and State Tax Adjustment Surcharge ("**STAS**")
Docket No. M-2025-3059055

Dear Secretary Homsher:

In response to the Secretarial Letter, National Fuel hereby reports that its tax year runs annually from October 1 through the following September 30 ("**Fiscal Year**"). Since the "step-down" in CNIT to 7.49% is effective at the beginning of the calendar year *or fiscal year* beginning on or after January 1, 2026, the 7.49% CNIT step-down will not result in a modification to National Fuel's STAS Rider B until October 1, 2026.

Based on past discussion with Commission Staff, the Company: (a) was requested to provide this information via the instant filing with the Commission; and (b) directed to provide the supporting information specified in the Secretarial Letters at least ten (10) days prior to the start of its Fiscal Year beginning on October 1, 2026.[1]

Copies of this filing are being provided to the statutory parties and Commission Staff as indicated below. Should you have any questions or concerns, please do not hesitate to contact me at (814) 871-8177.

Very truly yours,

Dominick A. Sisinni

cc: Allison Kaster, Bureau of Investigation and Enforcement – (akaster@pa.gov)

NATIONAL FUEL STATEMENT NO. 13

CATHRYN E. HILLIARD

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 13

Direct Testimony of
Cathryn E. Hilliard

Topics Addressed: Test Year Sales Volumes and Accounts

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Cathryn E. Hilliard. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") as a Lead Utility Analyst in the Rates and Regulatory Affairs department. In this role, I oversee demand forecasting for NFGDC's Pennsylvania Division ("National Fuel" or the "Company").

Q. Please provide your educational background.

A. I received a Bachelor of Arts degree in Psychology and Political Science from the State University of New York ("SUNY") at Buffalo in May 2012. I received a Master of Business Administration degree from SUNY Buffalo in May 2014.

Q. Please provide your professional experience.

A. In May 2014, I began my employment with National Fuel in the MBA Associate rotational program, working six-month cycles in the Rates and Regulatory Affairs, Finance, Energy Services, and Engineering departments. Upon completion of this program, I joined the Energy Services department in June 2016, as an Energy Consultant, and was promoted in February 2020 to Senior Energy Consultant. In 2022, I was promoted to Director of Energy Transition Development in the Finance department. I

joined the Rates and Regulatory Affairs department in February 2025, as Lead Utility Analyst to oversee the market planning team.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. No, I have not.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. I will address the development of National Fuel's sales and account forecast for the historic test year ended September 30, 2025 ("HTY"), future test year ending September 30, 2026 ("FTY"), and fully projected future test year ending October 31, 2027 ("FPFTY").

Q. Are any other witnesses providing testimony on the areas you identified above?

A. Yes. The Direct Testimony of Courtney T. Mann (National Fuel Statement No. 14) discusses the Company's revenue forecast, which utilizes the sales and account forecast.

Q. Are you sponsoring any exhibits in this proceeding?

A. Yes, I am sponsoring the following exhibits: National Fuel Exhibit CEH-1 (10 Year Normal Heating Degree Days), National Fuel Exhibit CEH-2 (Peak Day Results & Methodology), National Fuel Exhibit CEH-3 (Forecast Methodology), National Fuel

Exhibit CEH-4 (FTY & FPFTY Accounts), National Fuel Exhibit CEH-5 (Erie, Pennsylvania Annual Heating Degree Days), and National Fuel Exhibit CEH-6 (Heating Degree Day Comparison). Each of these exhibits are described later in my testimony.

III. SALES AND ACCOUNT FORECASTING PROCESS

Q. Please provide a general overview of the Company's throughput forecast.

A. Each year, for system planning purposes, the Company prepares a five-year forecast ("Master Estimate") of natural gas consumption for its sales and transportation customers. The Company has based the forecast of sales and transportation volumes and the number of customers used in this proceeding on its most recently completed Master Estimate. The Company's Master Estimate segments its market into residential, commercial, public authority and industrial categories. The Master Estimate provides monthly sales and transportation volumes and the number of customers on a fiscal year (12 months ended September) time frame. The commercial, industrial, and public authority categories are further segregated into small and large volume categories using a throughput limit of 25,000 Mcf per year. Further detail on the forecast process, including sources of data, methodology, dependent, and independent variables used in the forecast are detailed in National Fuel Exhibit CEH-3.

Q. Please describe the residential, small commercial, small industrial, and public authority sales forecast.

A. The Company sales forecast for residential, commercial, industrial, and public authority customers under the 25,000 Mcf/year threshold is the product of separate econometric

forecasts for usage per account and the number of accounts. The results of the volumetric FTY and FPFTY forecasts are detailed in SDR-COS-18 and the results of the account FTY and FPFTY forecasts are detailed in National Fuel Exhibit CEH-4.

Q. Why have you chosen econometric modeling to forecast use-per-account?

A. The word "econometric" means measuring economic relationships. The technique of econometric modeling incorporates hypotheses from economic theory and statistical tests of those hypotheses. The economic theory of consumer behavior, for example, postulates that the price of natural gas, weather, and historical usage trends independent of weather (e.g., consumer preference) are major determinants of household natural gas usage.

Q. Please explain why separate forecasts are specified for use-per-account and the number of accounts.

A. Each of these components of total consumption is influenced by different factors, which require independent and dependent variables to be applied and analyzed separately. Total consumption for a customer class is the summation of the products of average use-per-account and the number-of-accounts for each summarized tariff service class. The greater structure afforded by separate analyses of use-per-account and number-of-accounts is desirable for both model specification and forecast validation purposes. This is true for the residential, commercial, industrial, and public authority customer categories under the 25,000 Mcf per year threshold. Large volume customers' (accounts consuming greater than 25,000 Mcf per year) usage per account and number of accounts

are forecasted separately within the Large Volume Forecast process detailed below in this testimony.

Q. Why were industrial accounts in the greater-than-25,000 Mcf per year category forecasted individually, as opposed to an econometric derivation?

A. The lack of homogeneity in this group renders it unsuitable for econometric forecasting. These larger accounts have different natural gas requirements, applications, and alternate fuel-burning capabilities. Consequently, an individual customer forecast approach has been, and continues to be, the most appropriate.

Q. Did the Company always use 25,000 Mcf/year as the segmentation threshold between large and small volume customers?

A. No. In Docket No. R-2022-3035730 (the "2022 Rate Case"), the Company used a segmentation threshold of 50,000 Mcf per year to differentiate between large and small volume customers.

Q. Why did the Company reduce the segmentation threshold between large and small volume customers from 50,000 Mcf/year to 25,000 Mcf/year since the 2022 Rate Case?

A. Based on the volumetric variability seen within customer accounts utilizing 25,000 – 50,000 Mcf /year and given that customers in these segments utilize gas for a wide variety of purposes other than just space heating, these customers were included within the large volume category starting in 2023.

Q. Which customer service classes are included within the large volume customer segments that are individually forecasted?

A. The large volume industrial category consists of Intermediate Volume Industrial Service ("IVIS") customers consuming between 25,000 and 50,000 Mcf per year, Large Volume Industrial Service ("LVIS"), industrial customers consuming between 50,000 and 200,000 Mcf per year, Large Industrial Service ("LIS"), which consists of industrial customers consuming over 200,000 Mcf per year, and Daily Metered Large Manufacturing Transportation Service ("DMLMTS"), which consists of customers consuming greater than 2,000,000 Mcf per year. The large volume commercial category consists of customers consuming at least 25,000 Mcf per year, and NGV customers. The large volume public authority category consists of large public authority customers consuming at least 25,000 Mcf per year.

Q. How was the Large Volume Forecast prepared for accounts consuming greater-than-25,000 Mcf per year?

A. The large volume customers are forecasted based on individual customer account historical usage and feedback. Each customer was contacted by the Company's appropriate major account representative of the Energy Services department, who is the primary liaison between the Company and the customer and is the individual most familiar with each customer's energy decisions. The customers were asked to estimate their monthly and annual usage, paying particular attention to any events that may alter their estimated future consumption levels. The results of these forecasts are then assessed

by the Company's Rates and Regulatory Affairs and Energy Services departments. If contact with a large volume customer is unable to be established, monthly historical usage is analyzed to determine their projected annual throughput.

Q. What level of annual heating degree days ("HDD") were used to develop the projected sales volumes?

A. The level of HDDs used to project weather impacted customers in this proceeding is 5,485. Normal HDDs ("NHDD") values utilize a 10-year average based on the period 2015-2024 as published by the National Oceanic and Atmospheric Administration ("NOAA"), for the first-order National Weather Service Office located at the Erie, Pennsylvania International Airport. National Fuel Exhibit CEH-1 details the forecasted HDD on a monthly and daily basis.

Q. Is the use of average temperature data as provided by NOAA for the Erie, Pennsylvania station (ERIE INTL AP, PA US USW00014860) consistent with the methodology used for calculating NHDD in previous National Fuel base rate cases?

A. Yes. National Fuel has consistently used the NHDD averages as provided by NOAA in previous base rate cases.

Q. Why is National Fuel utilizing a 10-year average of NOAA Summary of Daily Normals 2015-2024, for the Erie, Pennsylvania Station ("10-Year NOAA HDD Set") for normalization in this forecast?

A. The Company made this adjustment in normalization to more accurately reflect the recently experienced weather trends relevant to forecasting monthly billed sales for rate setting purposes. Further, the Company completed a review of the actual heating degree days experienced at the Erie, Pennsylvania station per month from January 2006 through September 2025. This review, as detailed in National Fuel Exhibit CEH-5, showed that HDDs have decreased relative to time. This indicates an annual warming trend in the Company's service territory. Additionally, the Company also conducted a comparison of actual heating degree days versus both the historical NOAA 10-year HDD average (2015-2024) and NOAA 15-year HDD average (2006-2020). The results of this comparison can be found in National Fuel Exhibit CEH-6, which demonstrates the standard deviation of the difference between actual experienced HDDs and the 10- or 15-year degree day sets. The results of this comparison show that in the more recent years the standard deviation for the 10-year degree day set is less than that of the 15-year set. Thus, the 10-year set more accurately captures the current weather trends.

Q. Has the Commission relied upon a 10-year HDD average in any other circumstances?

A. Yes. In Columbia Gas of Pennsylvania's ("Columbia") last base rate proceeding (Docket No. R-2025-3053499) the Commission directed Columbia to use a 10-year average HDD for its Weather Normalization Adjustment. Therein, the Commission noted that the 20-year average HDD appears to result in "historical bias" that diminishes the effect of recent warming trends. In addition, Valley Energy, Inc. (Docket No. R-2022-3032300), has utilized a 10-year normal heating degree day average during its rate case. The

Company believes that a 10-year NHDD average is appropriate for the sales forecast based on industry trends and recent weather patterns.

Q. Does using the 10-Year NOAA HDD Set for normalization in this forecast impact anything beyond the demand forecast?

A. Yes. The 10-Year NOAA HDD Set is also being applied to the calculation of the Weather Normalization Adjustment. This is detailed in the Direct Testimony of John D. Taylor, National Fuel Statement No. 19.

Q. Why did National Fuel utilize a multi-year regression period for the residential, small commercial, small industrial, and small public authority forecasts?

A. Consistent with the approach in the Company's previous rate cases, multi-year regression periods were utilized because it provided a larger sample size of data to smooth out short-term variations and capture underlying long-term usage per account trends. Historically, this method has provided more accurate usage per customer during periods where rates are in effect.

Q. Would you please summarize the volumetric results of your forecast?

A. The Company's volumetric forecast is shown on SDR-RR-07 and SDR-COS-18. These data requests detail the projected volumetric usage by Revenue Class Type and by Service Class Type for the FTY and the FPFTY. In addition, the accounts and Mcf per account forecast regression methodology is detailed in National Fuel Exhibit CEH-3 and the results detailed in SDR-RR-11.

Q. Please explain SDR-COS-18.

A. National Fuel Exhibit SDR-COS-18 pages 2 and 3 summarize by month and in total the projected sales and transportation volumes for the FTY and the FPFTY. National Fuel Exhibit CEH-4 summarizes by month and in total the projected number of sales and transportation accounts for the FTY and the FPFTY.

Q. Please explain National Fuel Exhibit CEH-4.

National Fuel Exhibit CEH-4 summarizes by month and in total the projected number of sales and transportation accounts for the FTY and the FPFTY. For purposes of the forecasting process, the Company interprets the historical customer counts as the customer monthly cycle bills plus 50% of the final and 50% of the initial bills issued to customers.

Q. How were normalized sales determined for the FTY?

A. The actual historic usage per customer and customer accounts serve as the starting point for the development of the normalized FTY sales, as shown in SDR-COS 18. All the adjustments made in the development of the FPFTY sales forecast were also made in the development of the FTY sales forecast.

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

NATIONAL FUEL EXHIBIT CEH-2

Distribution PGC Statement No. 6

TESTIMONY OF
SHANNON L. PUTNAM
ON BEHALF OF
NATIONAL FUEL GAS DISTRIBUTION CORPORATION

PENNSYLVANIA PUBLIC UTILITY COMMISSION
v.
NATIONAL FUEL GAS DISTRIBUTION CORPORATION
(PURCHASED GAS COSTS -- 66 PA.C.S. SECTION 1307(f)),
DOCKET NO. R-2026-3059551

DIRECT TESTIMONY OF Shannon L. Putnam
PGC R-2026-3059551

Q. Please state your name and business address.

A. My name is Shannon Putnam, and my business address is 6363 Main Street, Williamsville, New York 14221.

Q. By whom are you employed and in what capacity?

A. I am employed by National Fuel Gas Distribution Corporation ("Distribution" or the "Company") as a Compliance and Project Analyst in the Rates and Regulatory Affairs Department.

Q. Please state briefly your educational and professional experience.

A. In 2020, I received a bachelor's degree in economics from Allegheny College. For 3 years prior to working at the Company, I worked for GEICO in their Management Development Program. I have worked for the Company within Rates & Regulatory Affairs department as a Utility Analyst since 2023.

Q. Have you previously testified before the Pennsylvania Public Utility Commission ("Commission")?

A. Yes. I have previously testified before the Commission in the Company's last 1307(f) proceeding

DIRECT TESTIMONY OF Shannon L. Putnam
PGC R-2026-3059551

under docket number R-2025-3052742.

Q. Have you previously testified before any other regulatory commissions?

A. No. I have not previously testified before any other regulatory commissions.

Q. What is the subject of your testimony?

A. I am testifying regarding PGC Exhibit Nos. 7-A, 10, 11, 14, 15, 16, 22, 25, 26-A, 27.

Q. Were these exhibits prepared by you or prepared under your supervision and direction?

A. Yes, they were.

Q. Is the content of these exhibits true and correct to the best of your knowledge, information, and belief?

A. Yes, it is.

Q. Please explain PGC Exhibit No. 7-A.

A. PGC Exhibit No. 7-A is Distribution's work product for the filing requirement at 52 Pa. Code §53.64 (c)(5), which requires that a list and update of any gas supply and demand projections be provided to the Commission for any purpose. Page 2 of PGC Exhibit No. 7-A provides a copy of Distribution's Form-IRP-

DIRECT TESTIMONY OF Shannon L. Putnam
PGC R-2026-3059551

GAS-1A: Annual Gas Demand Requirements, which has been filed pursuant to 52 Pa. Code §59.81-84.

Q. Please explain PGC Exhibit No. 10.

A. PGC Exhibit No. 10 explains that Distribution maintains transportation agreements with its Daily Metered Transportation customers and Natural Gas Suppliers that provide Monthly Metered Transportation service to customers.

Q. Please explain PGC Exhibit No. 11.

A. PGC Exhibit No. 11 provides monthly transportation volumes by service classification (within the Daily Metered Transportation and Monthly Metered Transportation categories), average customer counts for the past twelve months ending November 2025, and a summary of current rates for transportation service. Daily Metered Transportation volumes, and customer counts by service class for Commercial, Industrial, and Public Authority, are provided on page 2. Page 3 provides Monthly Metered Transportation volumes, and customer counts by service class for Residential and Commercial. Page 4

provides Monthly Metered Transportation volumes, and customer counts by service class for Industrial and Public Authority. Pages 5 and 6 provide a summary of current transportation rates, extracted from Distribution's tariff.

Q. When did the portions of rates set forth in PGC Exhibit No. 11, that provide for recovery of purchased gas costs, become effective?

A. The portion of rates that provide for recovery of purchased gas costs, as provided in PGC Exhibit No. 11, became effective on November 1, 2025, in compliance with the Commission's Order issued on June 5, 2025. This Order was from Distribution's most recent annual gas cost proceeding, under Section 1307(f) of the Public Utility Code, at Docket No. R-2025-3052742. Under the procedure for quarterly updates of purchased gas costs, transportation rates may be adjusted quarterly (i.e., November, February, May, and August). The most recent filing was submitted on October 31, 2025, at Docket No. R-2025-3052742, with an

effective date of November 1, 2025.

Q. Briefly describe Distribution's system-wide choice plan.

A. Under the Natural Gas Choice and Competition Act ("Act"), each natural gas utility in the Commonwealth of Pennsylvania was required to submit a restructuring plan to the Commission by November 1, 1999. Distribution's system-wide choice plan under the Act was filed on October 1, 1999, at docket R-00994785. Even before then, Distribution offered choice to almost all customers, under a prior plan that became effective on March 4, 1999. Since then, Distribution's customers (except for one group described below), have been allowed to choose their own natural gas supplier for natural gas service. That gas supply is transported through natural gas delivery service that is provided by the Company. Only customers who elect to participate in the Customer Assistance Program ("CAP") program are not eligible to select a supplier other than Distribution. Effective July 15, 2010, Distribution

instituted a Purchase of Receivables ("POR") program for qualified natural gas suppliers on the Company's system.

The September 30, 2025, report filed with the Commission regarding the number and percentage of customers using alternative suppliers (i.e., NGDC Customer Switching Statistics) explains that 9.7% of residential customers, 27.0% of commercial customers, and 69.6% of industrial customers chose an alternative supplier. The percentage of load from alternative suppliers is 10.6% for the residential class, 76.6% for the commercial class, and 99.4% for the industrial class. In total, for the month of September 2025, 77.0% of the load is supplied by alternative suppliers.

Q. Please explain PGC Exhibit No. 14.

A. PGC Exhibit No. 14 is a schedule showing, for the most recent five years (i.e., November 2020 – October 2021 through November 2024 through October 2025), consecutive three-day peak throughput data (retail sales and end-user transportation service),

by customer class (residential, commercial, industrial, and public authority) for Distribution's Pennsylvania Division. It also shows the high, low, and average temperature for each consecutive three days. January 20, 2025 – January 22, 2025, is the most recent consecutive three-day peak. January 21, 2025, is the most recent peak day within that three-day period specified in PGC Exhibit No. 14.

Q. Please explain PGC Exhibit No. 15.

A. PGC Exhibit No. 15 identifies and supports Distribution's projected design peak day requirements for the twelve months ending September 30, 2027. Page 3 shows the projected peak day requirement. Data based on 74 heating degree days is provided because this level of degree days was used for peak day planning purposes, as further described in PGC Exhibit No. 24. Pages 4 through 12 establish the base case design peak day. For the heat sensitive classes (both retail sales and transportation service) such as residential, commercial, and public authority, Distribution utilizes a method of

extracting a base load volume and computing a daily heating volume for 74 heating degree days. The daily base load volume is added to the daily heating volume to determine the base case peak day sales. Gas usage of customers in the industrial classes, Small Volume Industrial Service ("SVIS"), Intermediate Volume Industrial Service ("IVIS"), Large Volume Industrial Service ("LVIS"), Large Industrial Service ("LIS"), and Daily Metered Large Manufacturing Transportation Service ("DMLMTS"), is computed based on an operating schedule. For the SVIS and IVIS classes, Distribution utilizes an operating schedule of 21 working days in a month to calculate peak day sales. For the LVIS, LIS and DMLMTS classes, Distribution utilizes customer operating schedules, as shown on Pages 11 and 12, to calculate peak day sales. Pages 13 and 15 show the residential model variables, pages 13 and 15 show the commercial model variables, pages 14, and 16 show the industrial model variables, and pages 14 and 16 show the public authority model variables used in the econometric models for each of the respective

revenue classes. Page 17 provides the number of extreme degree days based on a National Oceanic and Atmospheric Administration ("NOAA") calendar day (12am – 12am), including the mean temperature, for the most recent heating seasons over the previous 30 years.

Q. Please explain PGC Exhibit No. 16.

A. PGC Exhibit No. 16 reflects Distribution's gas requirements to provide reliable and uninterrupted service to its priority one customers (residential and firm critical commercial and public authority essential human needs customers) during peak periods. These requirements are calculated on both historic and projected bases.

Q. Please explain PGC Exhibit No. 22.

A. PGC Exhibit No. 22 is composed of four pages. Page 2 provides the historic levels of retail sales volumes in Mcf for Distribution's Pennsylvania Division for the twelve months ended November 30, 2025. Page 3 of PGC Exhibit No. 22 provides the projected levels of retail sales volumes in Mcf for Distribution's

DIRECT TESTIMONY OF Shannon L. Putnam
PGC R-2026-3059551

Pennsylvania Division for the eight months ending July 31, 2026. Page 4 provides the projected levels of retail sales volumes in Mcf for the Company's Pennsylvania Division for the twelve months ending July 31, 2027. The projected retail sales volume of 21,436,362 Mcf, provided on page 4 of PGC Exhibit No. 22, is the projected sales volume that is used as Factor "S" in the computation of purchased gas costs in PGC Exhibit 21.

Q. Please explain the methodology employed to project the levels of sales volumes contained in PGC Exhibit No. 22.

A. Distribution's forecasting methodology continues to be based on an econometric forecast as was presented in its most recent base rate proceeding, docket at R-2022-3035730, which was approved by a Commission issued Order on June 15,2023.

The residential, commercial and public authority classes have econometric models run for usage per account and number of accounts. Regressions for usage per account are run for each service class

within the revenue classes and have historical periods between five and seven years. Variables for these regressions can include monthly degree days, gas price, actual historical monthly usage and date. Account regressions are also run for each service class and can include variables of date and historical monthly accounts. Account regressions are run with historical periods between six and fifteen years.

The methodology for the company's large volume industrial customers also remains largely unchanged from R-2022-3035730. The only change being the expansion of the group to any customer with over 25,000 Mcf of yearly usage.

Q. Please explain PGC Exhibit No. 25.

A. PGC Exhibit No. 25 provides Distribution's NYMEX price for December 2025 through January 2028. This wellhead price projection is based on the New York Mercantile Exchange ("NYMEX") projection of natural gas prices at Henry Hub.

Q. Please explain PGC Exhibit No. 26-A.

DIRECT TESTIMONY OF Shannon L. Putnam
PGC R-2026-3059551

A. PGC Exhibit No. 26-A, page 2, provides Distribution's estimate of the 2026 design peak day requirements based on 74 heating degree days. The term "design peak day" refers to the practice that is standard in the natural gas industry under which pipeline capacity planning, storage capacity planning, and natural gas supply planning are based on customers' requirements on the coldest winter day reasonably expected to be experienced. An explanation of Distribution's design peak day requirements, including the requirements of transportation service customers, is provided in PGC Exhibit No. 15.

Q. Why were 74 heating degree days used in the calculation of design peak day requirements?

A. After a review of the coldest days experienced during several winter heating seasons across various portions of the Company's service territory, as well as a review of what design peak days other local distribution companies ("LDCs") prepare for, Distribution determined that the most appropriate

level of degree days for peak day planning in its service territory was 74 heating degree days. Distribution has had multiple days in the past 30 years where the territory has come within a few degrees of 74 heating degree days, based on a typical gas day (10am – 10am). In Distribution's 2000 1307(f) proceeding, the Commission concluded that this was a reasonable level of heating degree days to use for system planning purposes.

> "Upon our careful review of the recommendation of the ALJ and the position of the Parties, we find that the ALJ's recommendation of approval of NFGD's proposal to use 74 heating degree days for purposes of both planning the necessary levels of pipeline and storage capacity on interstate pipeline companies and for allocating costs of capacity among classes of customers is reasonable." (Opinion and Order, R-994898, Adopted: August 17, 2000, pg. 17.)

Q. Please explain PGC Exhibit No. 27.

A. PGC Exhibit No. 27 shows historical levels of Unaccounted for Gas (UFG).

The Company considers multiples of twelve-month periods ending in August to be the proper periods in which to measure UFG. Twelve-month periods ending

in August represent periods in which receipts and deliveries are least affected by weather, thus providing the most representative UFG information. Page 2 shows the Company's actual, historical level of UFG for the sixty months ended August 2021, 2022, 2023, 2024 and 2025. Page 3 provides the monthly UFG levels for September 2020 – August 2025. The Gas Received Total (Column 4) includes Gas Received From Production Facilities (Column 1), Gas Received From Interstate Pipelines (Column 2), and Gas Received From Other Sources (Column 3). The Gas Delivered Total (Column 7) includes Gas Delivered To Customers (Column 5) and Gas Delivered To Interstate Pipeline (Column 6). The Adjustments Total (Column 10) includes Located & Repaired Breaks in Mains/Services (Column 8) and Company Use (Column 9). Distribution UFG (Column 11) is calculated as follows: Gas Received Total (Column 4) less Gas Delivered Total (Column 7) less Adjustments Total (Column 10). The twelve-month percent of UFG shown in Column 13 equals the sum of twelve months of

Column 11 divided by the sum of twelve months of Column 4.

Q. How has the Company addressed UFG?

A. It is important to note that the actual volume of gas that is physically "unaccounted-for" is not substantial. Most UFG is the difference between gas metered going into the system and gas metered at customer premises. Meters measuring gas going into the system and meters measuring gas at customer premises have error tolerances. The Company continually strives to improve the measurement of UFG. For example, temperature compensated meters have been installed during meter change outs. Temperature compensated meters record gas usage more accurately than non-temperature compensated meters. Most UFG remedies provide only for better "accounting" of the differential between receipts and deliveries. This type of activity, although "reducing" UFG, does not change the amount of gas being brought into the system. Leak repair is a UFG element that reduces gas purchases without changing

gas deliveries. Leak repair physically reduces UFG. Consequently, field priorities require the repair of all higher volume leaks, regardless of leak safety classification. Finally, UFG due to leakage has been added as a factor with significant weighting in the Company's pipeline replacement evaluation program ("PREP").

Q. What is the current retainage rate charged to transportation customers?

A. As indicated in the Company's tariff, to compensate for line losses, the volume of gas delivered into the Company's distribution system for daily and monthly metered transportation service shall be determined to be equal to 99.85 percent of the amount indicated by a meter at the point of delivery into the Company's distribution system or a 0.15 percent retainage rate. The retainage rate of 0.15 percent includes 0.13 percent for UFG and 0.02 percent for Company use.

Q. Is the Company proposing any changes to the retainage rate in this proceeding?

A. No, the Company is proposing to keep the currently effective retainage rate of 0.15 percent in place for all customer classes.

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

Verification

I, *Shannon L. Putnam*, Utility Analyst, of the Rates and Regulatory Affairs Department of National Fuel Gas Distribution Corporation state that the facts set forth in the foregoing Purchased Gas Cost Filing under Section 1307(f) of the Public Utility Code and 52 Pa. Code §§ 53.64 and 53.65 Docketed at R-2026-3059551 including:

Distribution PGC Statement No. 6 - Direct Testimony of Shannon L. Putnam
Exhibit Nos. 7-A, 10, 11, 14, 15, 16, 22, 25, 26-A, and 27

are true and correct to the best of my knowledge, information and belief, and that I expect to be able to prove the same at a hearing held in this matter. This statement is made subject to the penalties of 18 Pa. C.S. § 4904 relating to unsworn falsifications to authorities.

Shannon L. Putnam

Shannon L. Putnam

This 30th day of January, 2026

NATIONAL FUEL EXHIBIT CEH-3

National Fuel Gas Distribution Corporation - Pennsylvania Division
2026 Long-Range Requirements
Fiscal Years 2026 – 2030

Profile

The Pennsylvania Division of National Fuel Gas Distribution Corporation (National Fuel or the Company), is a gas only public utility, which provides service in counties located in Western Pennsylvania. The service area covers the counties of Armstrong, Butler, Erie, Crawford, Mercer, Venango, Clarion, Forest, Warren, McKean, Elk, Jefferson, Clearfield, and Cameron County including but not limited to the cities and townships of Erie, Clarion, Franklin, Meadville, Mercer, Millcreek, Oil City, Smethport, and Warren.

Forecast Methodology

For forecasting purposes, the Company segments its market into the following classes: residential, commercial, industrial, and public authority. The commercial, industrial, and public authority classes are further segmented into small and large volume categories using a throughput threshold of 25,000 Mcf/year. The residential classes are segmented into two categories: 1) a typical residential home, and 2) a non-typical residential home like those used as a small business.

The residential and the small volume categories for commercial, industrial, and public authority classes are segregated into two forecasts: usage per account and number of accounts. To establish the appropriate length of historical data for each forecast (usage per account, number of accounts), regression analyses are performed across all revenue classes (residential, commercial, industrial, and public authority). These are conducted for historical periods ranging from 5 to 15 years, in one-year increments. For each combination of forecast type and revenue class, the timeframe associated with the highest R-squared value is selected as the historical period for the forecast.

The usage per account forecast is determined using econometric models, which describe average annual usage as a function of one or more econometric variables. When a usage per account forecast does not produce a statistically significant result in the regression – defined as producing an R Square of at least 0.97 – an average of past monthly values is used instead. The forecasted number of accounts is determined using the Forecast.ETS function, which describe the number of accounts as a function of time and seasonality. When a forecasting group has less than 25 accounts, the forecasted number of accounts is held steady at the last reported figure. Projected throughput for each of the classes is the product of monthly usage per account and the number of accounts.

The large volume commercial, large volume industrial, and large volume public authority classes (greater than 25,000 Mcf/year) consist of 97 customers for the 2026 rate case estimate. The largest customers within this group are contacted by the appropriate major account representatives of the Company's Energy Services Department ("Energy Services") to determine their monthly and annual usage, on a throughput basis, over a six-year horizon. The large volume customers are asked to estimate their monthly and annual usage, paying particular attention to any events that may alter their estimated future consumption levels. Customers with usage over 25,000 Mcf/year who do not respond to the request or are not contacted have their monthly usage forecasted based on their

historical consumptions and the Company's last communications with the customer. The large volume forecasting process includes an assessment of significant load changes, which is based on input and data provided to the Company's Rates and Regulatory Affairs Department, by both the Company's Engineering Services and Energy Services Departments.

A summarization of the aforementioned forecast methodology by customer category is shown below:

Residential – Typical Residential Home

Segregated between usage/account and number of accounts. Usage/account is based upon a regression analysis for the whole revenue class for a 7-year time period (January 2018 – December 2024). The regression output is then allocated to each summarized tariff service class based on the spread of the most recently completed fiscal year. Number of accounts is based upon the Forecast.ETS function for a time period of 14 years (January 2011 – December 2024) and is then allocated through the same process as usage/account. Data includes both retail and transportation (throughput and accounts) in order to maintain an intact data stream.

Usage Per Account

Dependent Variable: **Residential Gas Throughput (Mcf/Account)**

Independent Variables:
Constant (intercept of the regression), **Monthly Degree Days** (Actuals), **Monthly Real Residential Gas Price** (lagged 12 periods), and **Historical Monthly Gas Usage** (Actuals).

Number of Accounts

Dependent Variable: **Residential Number of Accounts**

Independent Variables:
Constant (intercept of the regression), **Trend (Linear with Seasonality and Exponential Smoothing), and Historical Monthly Accounts**

Residential – Non-Typical Residential

Segregated between usage/account and number of accounts. Usage/account is based upon a regression analysis by summarized tariff class for 6 years (January 2019 - December 2024). Number of accounts is based upon the Forecast.ETS function for 15 years (January 2010 – December 2024). Data includes both retail and transportation (throughput and accounts) in order to maintain an intact data stream.

Usage Per Account

Dependent Variable: **Residential Gas Throughput (Mcf/Account)**

Independent Variables:
Constant (intercept of the regression), **Monthly Degree Days** (actuals), **Historical Monthly Gas Usage** (actuals)**, and Trend** (Linear with Seasonality and Exponential Smoothing).

Number of Accounts

Dependent Variable: **Residential Number of Accounts**

Independent Variables:
Constant (intercept of the regression), **Trend (Linear with Seasonality and Exponential Smoothing), and Historical Monthly Accounts**

Commercial (Customers <25,000 Mcf/year)

Segregated between usage/account and number of accounts. Usage/account is based upon regression analyses by summarized tariff class for the 6 years (January 2019 – December 2024), with the exception of Commercial Res MMT, which was reduced to a 5-year average due to volatility of data prior to 2020. Number of accounts is based upon the Forecast.ETS function for 8 years (January 2017 – December 2024). Data includes both retail and transportation (throughput and accounts) in order to maintain an intact data stream.

Usage Per Account

Dependent Variable**: Commercial Gas Throughput (Mcf/Account)**

Independent Variables:
Constant (intercept of the regression), **Monthly Degree Days** (actuals), **Historical Monthly Gas Usage** (actuals), **Trend** (Linear with Seasonality and Exponential Smoothing).

Number of Accounts

Dependent Variable: **Commercial Number of Accounts**

Independent Variables:
Constant (intercept of the regression), **Trend (Linear with Seasonality and Exponential Smoothing), and Historical Monthly Accounts**

Industrial (Customers <25,000 Mcf/year)

Segregated between usage/account and number of accounts. Usage/account is based upon regression analyses by summarized tariff class for the periods of 8 years (January 2017 – December 2024). Number of accounts is based upon the Forecast.ETS function for 3 years (January 2022 – December 2024). Data includes both retail and transportation (throughput and accounts) in order to maintain an intact data stream.

Usage Per Account

Dependent Variable: **Small Industrial Gas Throughput (Mcf/Account)**

Independent Variables:
Constant (intercept of the regression), **Trend** (Linear with Seasonality and Exponential Smoothing)**, and Historical Monthly Accounts**

Number of Accounts

Dependent Variable: **Small Industrial Number of Accounts**

Independent Variables:
Constant (intercept of the regression), **Trend** (Linear with Seasonality and Exponential Smoothing)**, and Historical Monthly Accounts**

Public Authority (Customers <25,000 Mcf/year)

Segregated between usage/account and number of accounts. Usage/account is based upon a regression analysis by summarized tariff class for the period of 6 years (January 2019 - December 2024). Number of accounts is based upon the Forecast.ETS function for 3 years (January 2022 – December 2024). Data includes both retail and transportation (throughput) in order to maintain an intact data stream.

Usage Per Account

Dependent Variable: **Public Authority Gas Throughput (Mcf/Account)**

Independent Variables:
Constant (intercept of the regression), **Monthly Degree Days** (Actuals), **Monthly Real Public Authority Gas Price** (lagged 12 periods), **Heating Season** (binary variable) and **Historical Monthly Gas Usage** (Actuals).

Number of Accounts

Dependent Variable: **Public Authority Number of Accounts**

Independent Variables:
Constant (intercept of the regression), **Trend (Linear with Seasonality and Exponential Smoothing), and Historical Monthly Accounts**

Large Volume Commercial Customers (>25,000 Mcf/year)

The large volume commercial customers consist of 18 customers who are forecasted through a joint effort between the Energy Services Department account representatives, the Rates and Regulatory Affairs' Market Planning group, and the individual customers via usage surveys and historical consumption data.

Large Volume Industrial Customers (>25,000 Mcf/year)

The large volume industrial customers consist of 76 customers who are forecasted through a joint effort between the Energy Services Department account representatives, the Rates and Regulatory Affairs' Market Planning group, and the individual customers via usage surveys and historical consumption data.

Large Volume Public Authority Customers (>25,000 Mcf/year)

The large volume public authority customers consist of 3 customers who are forecasted through a joint effort between the Energy Services Department account representatives, the Rates and Regulatory Affairs' Market Planning group, and the individual customers via usage surveys and historical consumption data.

Company Use

Actual volumes, based on the twelve months ended September 2024.

Unaccounted For (retail and transportation service)

0.15% of total throughput – LAUF target in National Fuel's System Performance Adjustment Mechanism (SPAM).

Capacity Planning Peak Day Requirements

For Residential, Commercial, and Public Authority customers, Peak Day consumption is forecasted by first calculating the average single-day heat load for January and then extrapolating it to the required heating degree days (HDDs).

The January heat load is determined by subtracting the base load – defined as the average monthly consumption of the two lowest-use months, which is typically July and August – from January's total consumption. This adjusted figure is then divided by the forecasted number of January HDDs to establish the January heat per degree day factor. To estimate the Peak Day heat load, the factor is multiplied by the peak HDDs, which is set at 74. Finally, the single-day base load estimate is added back to the heat load to arrive at the total Peak Day consumption requirement.

For Industrial customers, consumption is not considered heat-sensitive, so the methodology differs. Peak Day consumption is calculated by dividing January's total consumption by the average number of operational days in the month. Customers operating seven days per week use 31 as the divisor, while those operating five days per week use 21. This approach ensures that Industrial forecasted consumption remains consistent and does not increase during a Peak Day.

The Company's method for forecasting Peak Day usage is detailed in 1307(f) (Docket No. R-2026-3059551), within the direct testimony of Shannon Putnam, detailed in Exhibit CEH-2.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 13-R

Rebuttal Testimony of Cathryn E. Hilliard

Topics Addressed: Test Year Sales Volumes and Accounts

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Cathryn E. Hilliard. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 13, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. The purpose of this rebuttal is to respond to the statement in the Office of Consumer Advocate ("OCA") Statement No. 1, the direct testimony of Michael Deupree, that it is "questionable" whether using Average Heating Degree Days ("AHDDs") for Erie, Pennsylvania is representative of weather conditions across the Company's entire Pennsylvania service territory for purposes of the Weather Normalization Adjustment. This rebuttal will also address the recommendation in Michael Deupree's testimony that October and May should be excluded from the WNA period.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes. I am sponsoring National Fuel Exhibit CEH – 1R, which addresses the former assertion by evaluating the representativeness of the Erie, Pennsylvania heating degree

days ("HDDs") using customer data and a weighted analysis of NOAA HDDs, and National Fuel Exhibit CEH – 2R, which is a regression analysis assessing the statistical significance of HDDs on heat load per account for May and October for impacted service classes.

III. WEATHER NORMALIZATION ADJUSTMENT

Q. Do you agree with Mr. Deupree that the Erie, Pennsylvania NOAA weather station may not be representative of weather conditions for the Company's full Pennsylvania service territory?

A. No, I do not. For purposes of the Company's Weather Normalization Adjustment ("WNA"), the relevant question is not whether a single weather station exactly replicates weather conditions in every portion of a geographically diverse service territory. Instead, the appropriate question is whether the selected station provides a reasonable and objective proxy for the aggregate weather conditions experienced by customers, such that the WNA fairly normalizes revenues for weather driven sales volatility, avoids systematic over-recovery or under-recovery, and can be administered consistently and transparently over time.

It is important to note that while the Company's Pennsylvania service territory spans a wide geographic area, customers are not evenly distributed across it. As shown in National Fuel Exhibit CEH-1R, Table 1, the Erie Service Center alone represents approximately 35 percent of total residential customers in the Company's Pennsylvania service territory. This makes it the single largest concentration of customers within the

Company's Pennsylvania operations. No other individual service center represents a comparable share.

To directly test the OCA's claim regarding representativeness, the Company used this mapping to compare Erie, PA to a customer-weighted average HDD index. The first step of this involved mapping customer groups to the closest NOAA weather stations. As shown in National Fuel Exhibit CEH – 1R, Table 2, when customers are grouped based on the weather stations used in the analysis, the Erie station represents approximately 44 percent of total residential customers. Other stations represent substantially smaller portions of the customer base. This result is important because a station associated with the largest share of customers will, by definition, have the greatest influence on the customer-weighted experience of weather. Accordingly, Erie HDDs are inherently aligned with the weather exposure of a significant portion of the Company's customers. Furthermore, nearly 60 percent of residential customers are represented by the Erie and Youngstown stations, both of which have very similar HDD profiles as shown in National Fuel Exhibit CEH – 1R, Table 3.

As National Fuel Exhibit CEH – 1R, Table 4 shows, over the years analyzed, annual customer-weighted HDD totals differ from Erie HDD totals by only a few percentage points. These results demonstrate that Erie HDDs are consistent with the broader customer experience.

In addition to representativeness, it is important to consider whether a weather station is reliable and administrable, particularly when it directly affects customer charges.

As shown in National Fuel Exhibit CEH-1R, Table 5, the Erie NOAA station provides a complete, uninterrupted record across the period reviewed, with no missing months of data. By contrast, several alternative stations included in the multi-station analysis contain missing data, indicated by missing monthly observations.

National Fuel Exhibit CEH-1R, Table 5 identifies numerous missing months of data among the smaller stations, including substantial gaps at certain locations. Many of these missing observations occur during the October through May WNA period, when heating degree days directly influence WNA adjustments. Stations with incomplete data introduce additional uncertainty and require assumptions or estimation methods to fill gaps. Such practices reduce transparency, complicate administration, and increase the potential for disputes, all of which can undermine affordability and customer confidence. The Erie station's complete data record avoids these issues and supports consistent and replicable WNA calculations.

In summary, the Company's customer-weighted analysis shows that Erie, PA HDDs are a reasonable proxy for service-territory weather exposure for WNA purposes, and the Erie, PA station's complete data record further supports its use as a stable and administrable index. The opposing statement that Erie is "questionable" as representative is not supported by a quantitative representativeness test and does not account for the practical requirements of the WNA administration.

Q. Do you agree with Mr. Deupree that October and May should be removed from the WNA period?

A. No, I believe these months should still be included in the WNA period. To determine whether October and May should be included in the WNA period, a regression analysis was completed to assess the statistical significance of heating degree days on heat load per account for May and October for the impacted service classes, as shown in National Fuel Exhibit CEH-2R. The P-value, or "Probability Value," is a number which describes how likely it is that the data occurred by random chance; a number less than 0.05 indicates the results are unlikely due to chance and are therefore statistically significant. The P-value for HDDs is statistically significant for the combined service classes for both May and October, with a P-value of less than 0.05. Furthermore, the P-values for 3 of the 4 revenue classes (Residential, Commercial, Public Authority) are also statistically significant. The only revenue class with a P-value greater than 0.05 is Industrial, which contains only 1 service class (Retail - Industrial - Res E), and only has a single customer.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 13-RJ

Rejoinder Testimony of
Cathryn E. Hilliard

Topics Addressed: Weather Stations

Dated: June 1, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Cathryn E. Hilliard. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 13, on January 28, 2026 and rebuttal testimony, National Fuel Statement No 13-R, on May 12, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rejoinder testimony.

A. The purpose of this rejoinder is to respond to the statements in the surrebuttal testimony of Michael Deupree, Office of Consumer Advocate ("OCA") Statement No. 1-SR, recommending the Company recalculate the heating degree days ("HDDs") used in the weather normalization adjustment ("WNA") to include three new separate weather stations, DuBois, Pittsburgh, and Bradford, Pennsylvania, in addition to the weather station in Erie that has been used in this and many past rate cases.

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. Yes. I am sponsoring National Fuel Exhibit CEH – 1RJ, which presents a geographic depiction of the Company's Pennsylvania service territory, including the locations of nearby NOAA weather stations and population density. The exhibit illustrates the

relationship between customer concentration and Mr. Deupree's selected weather stations and provides context for evaluating the representativeness of the Erie weather station, as well as the relevance of alternative locations referenced in the proceeding. The Company's Pennsylvania service territory is outlined by color-coded boundaries that represent the area each service center is responsible for. Within the Company's service territory, the population density is shown through color shading, with green representing less populated areas and increasing intensity of red representing higher population concentrations. Service center locations are identified by labeled markers, and NOAA weather stations are shown as point locations across the territory.

III. WEATHER NORMALIZATION ADJUSTMENT

Q. Mr. Deupree recommends using multiple weather stations for the WNA. Do you agree with that recommendation?

A. No, I do not. The Company's WNA is designed to operate in conjunction with its demand forecast, which is based on normal HDDs from the first-order National Weather Service Office located at the Erie, Pennsylvania International Airport. Incorporating multiple stations into the WNA, while maintaining a forecast developed from a single station, would create inconsistency between the forecasting methodology and the reconciliation mechanism.

Q. Why is that inconsistency important?

A. The WNA is intended to compare actual weather conditions to the weather assumptions embedded in the Company's forecast. The forecast is developed using Erie normal

HDDs, and is incorporated into the Company's model that forms the basis for establishing base rates in this proceeding. As a result, the WNA operates as a reconciliation mechanism against the weather assumptions embedded in those approved base rates, and must use the same reference point to ensure that the comparison is internally consistent. Introducing additional stations into the WNA would break that alignment and could introduce distortions rather than improve accuracy. Mr. Deupree's proposal fails to account for this inconsistency.

Q. Does Mr. Deupree demonstrate that a multi-station approach would materially improve outcomes for customers?

A. No. Mr. Deupree does not quantify how the use of multiple stations would change WNA calculations or demonstrate that it would produce more accurate or representative outcomes for customers. Instead, Mr. Deupree simply produced a chart showing ten-year average HDDs for four locations in Pennsylvania, one of which is not within the Company's service territory. Without any analysis of this data, there is no basis to conclude that moving to a multi-station approach would provide any measurable benefit.

Q. Does Mr. Deupree's use of other weather stations provide a reliable basis to challenge Erie's representativeness?

A. No. Mr. Deupree includes Pittsburgh in his comparison, which, as shown in National Fuel Exhibit CEH – 1RJ, is not within the Company's service territory. Pittsburgh also has much lower HDDs than all the other weather stations located throughout the Company's service territory, with a ten-year average (2014-2025) of 5,114 HDDs. As

such, Pittsburgh weather conditions are not relevant to evaluating whether Erie is representative of the Company's customer base. Two additional weather stations were chosen in Mr. Deupree's testimony, DuBois and Bradford. While Bradford has 6,677 HDDs, 22% more than Erie, it represents only 2.7% of customers in the Company's Pennsylvania service territory. DuBois has 5,963 HHDs, or 9% more than Erie, and represents only 5.6% of the customers in the Company's Pennsylvania service territory. Together, the two weather stations only account for approximately 16,000 customers.

Q. Is data availability a potential issue when using multiple weather stations?

A. Yes. Data availability and reliability are important considerations for a tariff mechanism such as the WNA. As shown in National Fuel Exhibit CEH-1R, several of the alternative weather stations have missing HDD data for certain months, whereas the Erie station provides a complete and continuous data record over the period analyzed. The presence of missing data reduces reliability and accuracy. This is particularly important if missing data occurs during the WNA period of October through May, when actual HDDs directly affect WNA calculations. In those instances, additional assumptions or data substitution methods would be required, which would reduce transparency and introduce further complexity. By contrast, the Erie-based approach avoids these issues by relying on a complete, consistent, and readily verifiable data set.

Q. What is the appropriate conclusion regarding Erie's representativeness for WNA purposes?

A. When evaluated using a customer-weighted framework and considering actual WNA outcomes, Erie provides a reasonable and appropriate proxy for system-wide weather conditions. As shown in National Fuel Exhibit CEH – 1RJ, the Company's service territory, and the majority of the population, is concentrated in northwestern Pennsylvania in proximity to Lake Erie. In addition, Mr. Deupree's testimony does not demonstrate that use of Erie results in any material bias or inequitable outcomes for customers. The current Erie-based approach provides a consistent, transparent, and administrable framework that aligns with the Company's forecasting methodology.

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

NATIONAL FUEL STATEMENT NO. 14

COURTNEY T. MANN

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 14

Direct Testimony of
Courtney T. Mann

Topics Addressed:
Fully Projected Future Test Year Revenues
Future Test Year Revenues
Historic Test Year Revenues
Tariff Rider Proposals
Rate Design and Bill Impacts

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Courtney T. Mann. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed as a Rate Analyst in the Rates & Regulatory Affairs department of National Fuel Gas Distribution Corporation ("NFGDC").

Q. Please provide your educational background and professional experience.

A. In 2024, I earned a Bachelor of Science degree in Business Administration with a concentration in Finance from the State University of New York at Buffalo. In January 2024, I began employment with NFGDC as a Rate Analyst, which is my current position.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. No.

Q. Please describe the purpose of your testimony.

A. I will address the development of revenue for NFGDC's Pennsylvania Division ("National Fuel" or the "Company") for the fully projected future test year ending October 31, 2027 ("FPFTY"), the future test year ending September 30, 2026 ("FTY"),

and for the historic test year ended September 30, 2025 ("HTY"). I will also address the Company's proposed rate design.

Q. Are any other witnesses providing testimony on the areas you identified above?

A. Yes. Company witness Cathryn E. Hilliard is providing testimony on the demand forecast methodology in National Fuel Statement No. 13. The demand forecast provides the customer counts and usage that serve as the basis for my revenue projections. Company witness John D. Taylor of Atrium Economics (National Fuel Statement No. 19) is sponsoring National Fuel Exhibit D – Cost of Service Study, which influences elements of the proposed rate design presented in my exhibits.

II. DESCRIPTION OF EXHIBITS

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. Yes, I am sponsoring the following Exhibits:

- National Fuel Exhibit E (Proof of Revenue)
- National Fuel Exhibit CTM-1 (FPFTY at Current Rates)
- National Fuel Exhibit CTM-2 (FPFTY at Proposed Rates)
- National Fuel Exhibit CTM-3 (FTY at Current Rates)
- National Fuel Exhibit CTM-4 (FTY at Proposed Rates)
- National Fuel Exhibit CTM-5 (HTY at Current Rates)
- National Fuel Exhibit CTM-6 (Normalized HTY at Current Rates)
- National Fuel Exhibit CTM-7 (Normalized HTY at Proposed Rates)
- National Fuel Exhibit CTM-8 (Rate Design)
- National Fuel Exhibit CTM-9 (Bill Impacts)
- National Fuel Exhibit CTM-10 (Company Justified Investment)

Each of these exhibits contains several schedules, which are described later in this section of testimony. I am also sponsoring certain responses to the Commission's standard filing requirements, as indicated on the master list accompanying this filing, which were prepared by me or under my direction.

Q. Please describe National Fuel Exhibit E.

A. Exhibit E is National Fuel's Proof of Revenue. It summarizes revenue by service class at current and proposed rates. The total difference (proposed revenues less current revenues) ties to the Company's revenue requirement shown in National Fuel Exhibit A (FPFTY). Page 1 of Exhibit E shows total revenues including revenues for purchased gas costs ("PGC"). Page 2 of Exhibit E excludes revenue for PGC and is therefore presenting delivery revenues only.

Q. Please describe National Fuel Exhibit CTM-1.

A. Exhibit CTM-1 consists of five schedules supporting FPFTY revenues at current rates. The schedules are as follows:

- Schedule 1 – Summary of Revenues
- Schedule 2 – Summary of Revenues by Service Class
- Schedule 3 – Billed Delivery Revenues by Rate Type
- Schedule 4 – Detailed Billed Revenue Workpapers
- Schedule 5 – Late Payment Charge Workpapers

The schedules are progressively more detailed. Schedule 1 summarizes revenue by Federal Energy Regulatory Commission ("FERC") account and includes columns for total revenue, gas cost, and delivery revenue. Schedule 2 supports Schedule 1 and

provides more granularity by service class. Schedule 3 provides a breakdown of billed delivery revenues by rate type, with the total supporting the delivery revenue column of Schedule 2. Schedule 4 is a detailed workpaper showing a price out of revenues at current rates, including customer counts, usage, and the revenues produced by multiplication of applicable units by current rates. Schedule 5 supports the Company's late payment charge revenue forecast included in Other Operating Revenues.

Q. Do National Fuel Exhibits CTM-2 through CTM-7 follow a similar format?

A. Yes, the subsequent exhibits have a nearly identical structure to National Fuel Exhibit CTM-1. The difference is the period to which the exhibit applies and whether it is presented at current or proposed rates. These variables are indicated in the listing of exhibits provided at the beginning of Section II of this testimony. For example, National Fuel Exhibit CTM-2 is identical to CTM-1 in terms of structure, consisting of five schedules supporting FPFTY revenues. However, it shows revenues at proposed rates instead of at current rates. The exhibits applicable to the HTY (National Fuel Exhibits CTM-5 through CTM-7) do not include Schedule 5 for late payment charges.

Q. Please provide a brief overview of National Fuel Exhibits CTM-8 and CTM-9.

A. National Fuel Exhibit CTM-8 presents the Company's rate design proposals, which are laid out in detail in Section VI of this testimony. National Fuel Exhibit CTM-9 provides a series of bill impact analyses. These schedules demonstrate the impacts of the Company's rate design on customers in each service class with varying levels of usage.

III. FORECASTED TEST YEAR REVENUE

Q. Please explain the process for developing the Company's forecasted FPFTY and FTY revenues.

A. The Company prepares an annual five-year econometric and revenue forecast. The forecast is developed on a revenue month basis and includes detail for all billed revenue line items by service class, including delivery revenues, gas costs and taxes. The revenue forecast relies on customer and usage projections provided by Market Planning, a subgroup within NFGDC's Rates & Regulatory Affairs department. The Direct Testimony of Cathryn E. Hilliard (National Fuel Statement No. 13) provides a thorough overview of Market Planning's forecasting methodology. The FPFTY and FTY exhibits at current and proposed rates are built around the monthly information contained in National Fuel's annual forecast.

Q. Describe "current rates" in the context of your testimony and exhibits.

A. Current rates refer to rates that have been previously approved by the PAPUC. Generally, these will be the rates in effect at the time the forecast was prepared.

Q. Describe "proposed rates" in the context of your testimony and exhibits.

A. Proposed rates refer to rates that the Company has filed for in this proceeding. These rates are supported by testimony and exhibits around revenue requirement, cost of service, and rate design. The rates used in my revenue exhibits at proposed rates are sourced from National Fuel Exhibit CTM-8 and are discussed later in this testimony.

Q. Is the process of forecasting revenues at proposed rates different than forecasting revenues at current rates?

A. No. The process and exhibits are identical. The current and proposed exhibits for the FPFTY and FTY use the same customer and usage forecasts. The only difference is the rates that are applied.

Q. How does the Company forecast revenue for basic service charges?

A. For each month in the forecast period, the projected number of customers in each service class is multiplied by the applicable basic service charge.

Q. Please describe distribution charges.

A. Distribution charges are the volumetric component of rate design, dependent on customer usage. These charges have a single rate that applies to all usage. For example, customers served under the Residential Service Rate Schedule currently pay a single rate per 100 cubic foot ("Ccf") of gas usage.

Q. How does the Company forecast revenue for distribution charges at current and proposed rates?

A. For each month in the forecast period at current and proposed rates, the total projected usage by service class is multiplied by the current or proposed distribution charge, respectively.

Q. How does the Company calculate forecasted revenues for the various riders in its tariff?

A. The methodology varies by rider. Most of the riders are volumetric rates, meaning the rate is charged on a dollar per Ccf basis. These rates are simply multiplied by the total usage for each applicable service class to produce forecasted revenues. This applies to Rider A – Purchased Gas Costs, Rider E – Customer Education, Rider F – Customer Assistance Program ("CAP") Discount Charge, Rider G – Merchant Function Charge ("MFC"), Rider H – Gas Procurement Charge ("GPC"), and Rider I – Other-Post Employment Benefits ("OPEB") Surcredit.

Q. How is the revenue forecasted for other riders?

A. The rate for the Distribution System Improvement Charge ("DSIC") is a percentage that applies to billed delivery charges, excluding Rider B – the State Tax Adjustment Surcharge ("STAS"). In the detailed revenue price-out schedules in my exhibits, the total base non-gas cost revenue for each service class is multiplied by a DSIC percentage. Similarly, the STAS is a percentage that is applied to all billed delivery charges, inclusive of DSIC. Since the current STAS rate is negative, Rider B reduces the customer's bill and the Company's revenues at current rates.

Q. Are the billed revenues from these riders considered base delivery revenues for the purpose of calculating revenue requirement?

A. Rider B, Rider E, Rider G, Rider H, and the DSIC are considered base delivery revenue and therefore impact the calculation of revenue requirement. The STAS and DSIC

percentages will be reset to zero as part of National Fuel's proposed rate design, as discussed later in this testimony. Rider A, Rider F, and Rider I are included in gas cost revenue in the forecast and do not factor into the calculation of revenue requirement. Rider A includes a PGC Distribution Charge (not to be confused with the base delivery rate discussed on page 6 of this testimony), Natural Gas Supply Charge ("NGS"), and Gas Adjustment Charge ("GAC"). Rider F and Rider I are not technically gas costs; however, they are categorized as such because they have offsetting funding sources and should affect the determination of base delivery rates.

Q. Are revenues for CAP customers inclusive of CAP discounts expected to be provided in the FTY and FPFTY?

A. No. Revenues for CAP customers are forecasted at undiscounted tariff rates. Since CAP is funded through a rider, this methodology has no bearing on delivery revenues used in calculating revenue requirement. Residential rate design treats all residential customers alike, whether they're CAP participants who receive discounts or non-participants who fund those discounts through Rider F.

Q. How are customers with negotiated rate contracts reflected in the forecast?

A. The Company has negotiated rate contracts with several large industrial customers that are bypass threats. As discussed in the Direct Testimony of Erik M. Solomon in National Fuel Statement No. 18, many customers in the Company's service territory have an opportunity to bypass National Fuel by connecting directly to an interstate pipeline, local producer, or gathering system at a lower cost. To retain these customers, the Company

negotiates a competitive delivery rate that is lower than the tariff rate for the applicable service class. This group of customers is forecasted separately from customers receiving tariff rates. Each negotiated customer's usage is multiplied by the projected negotiated rate, which may increase annually due to inflation escalators specified in the contract. The exhibit rolls up the total usage for all negotiated customers within a service class and multiplies that usage by the weighted average negotiated rate for that service class. All of the Company's customers that are currently on negotiated rate contracts are served under Large Industrial Service.

Q. What is the Company including in its forecast of Other Operating Revenues?

A. Other Operating Revenues are comprised of late payment charges ("LPCs"), rent from gas property, and other gas revenues. LPCs are included in FERC account 487 (forfeited discounts) and account for most of the forecasted Other Operating Revenues. Rent from gas property includes rents received for the use by others of land, buildings, and other property devoted to gas operations by the utility. Other gas revenues include any revenues derived from gas operations not includible in any other revenue accounts – primarily capacity release revenues and marketer billing charges.

Q. How did the Company forecast LPC revenue?

A. LPC revenue for the FPFTY and FTY was forecasted by applying a percentage to total forecasted revenues by month. The percentage applied varies by month, since the forecast is comprised of monthly data and LPCs fluctuate throughout the year. Customers are more likely to pay bills late during the winter heating season. The

percentages utilized in the forecast are based on a trend analysis comprised of three years of historical data.

Q. How did the Company forecast rent from gas property and other gas revenues?

A. Revenues for these categories were assumed to remain at the same level as reported for the HTY in National Fuel Exhibit CTM-5, except for capacity release revenues which have been removed from the FTY and FPFTY.

Q. Why is it appropriate to remove capacity release revenues from the FTY and FPFTY?

A. Under its tariff, the Company is to retain 25% of revenues generated from capacity releases, while the other 75% is refunded to customers through purchased gas cost rates. This sharing arrangement incentivizes the Company to optimize its use of pipeline capacity. These revenues should be treated as below the line for ratemaking purposes.

IV. HISTORIC TEST YEAR REVENUE

Q. Describe the Company's process for developing HTY revenues.

A. HTY revenues are based on actual billed revenue as reported by the Company's SAP billing system. SAP reports provide detailed billed revenue and usage data by service class and billing line item. On a monthly basis, this data is reconciled to the Company's financial statements. Actual revenues for the HTY (i.e., those seen in National Fuel Exhibit CTM-5, before normalization) are not based on a price out of units multiplied by rates. Additionally, rates are not presented in the detailed revenue workpapers provided

in Schedule 4 of National Fuel Exhibit CTM-5. In practice, multiplying the effective rates for a given month by customer counts and volumes reported by SAP would not yield the exact billed revenue. This is primarily due to prorated bills and prior period bill adjustments.

Q. What is a prorated bill?

A. If the length of a customer's billing period is between 26 to 35 days, the customer will be billed the full tariff rate. If the billing period is shorter than 26 days or longer than 35 days, the bill will be prorated. The most common reason for a prorated bill is a residential customer moving out of their residence during the billing period. If a customer moved out 15 days into their bill cycle, the current basic service charge of $14 would be prorated: $14 x (15 days / (365 days / 12 months)) = $6.90

Longer bill periods are sometimes the result of holidays that extend the typical meter reading and/or billing schedules. Due to the wide variety of prorated billing charges, the number of customers cannot simply be multiplied by the tariff rate to produce an accurate revenue amount.

Q. How do prior period bill adjustments factor into HTY revenues?

A. Prior period bill adjustments are typically the result of estimated meter reads and can span several months. The reported usage for the revenue month is the net of the current month's usage and any prior period adjustments. The reported revenues will include the net of current charges and any adjustments, each billed at the appropriate rates in effect for the prior period.

Q. How does weather impact the HTY revenues in National Fuel Exhibit CTM-5?

A. The exhibit shows actual usage and revenue, which can be influenced by weather. Warmer weather results in lower gas usage, which leads to lower revenue. National Fuel Exhibit CTM-5 also includes Weather Normalization Adjustment revenue for the HTY, which partially offsets the impacts of weather on revenues.

Q. National Fuel Exhibits CTM-6 and CTM-7 present normalized HTY revenues. Explain the normalization methodology.

A. Since the HTY revenues presented in National Fuel Exhibit CTM-5 are impacted by weather, they are not necessarily comparable to the FTY and FPFTY revenues based on forecasted normalized usage. To develop HTY exhibits that are comparable, the Company utilized an application to perform load normalization calculations by service class. The application contains a database of historical customer billing information. It calculates base and heating loads by month for each applicable service class and determines a heating degree day factor based on the heating load per actual degree day. It then applies that factor to normal heating degree days ("NHDDs") for the month to establish a normalized heating load. NHDDs are based on a 10-year average (2015-2024) as reported by the National Oceanic and Atmospheric Administration. The normalized heating load is added to the base load to determine normalized usage per account. The normalized usage per account is multiplied by the number of customers to produce normalized usage by month for the service class. The resulting normalized usage was then flowed through the Company's revenue price-out.

Q. Were all customer revenues adjusted for usage at normal weather?

A. No, industrial customers are not considered weather sensitive. Only usage for residential, commercial, and public authority customers has been normalized for weather.

V. TARIFF RIDER PROPOSALS

A. Rider I (OPEB Surcredit) Proposal

Q. Provide an overview of the Company's Rider I.

A. Rider I was established in Docket Nos. R-2021-3027406 and C-2021-3028654 (collectively the "2021 OPEB Dockets"). In those proceedings, the Commission approved the Company's petition to refund $54 million of OPEB funds in its grantor trust through 2026.

Q. How were funds returned to customers?

A. The funds were passed back to customers through a combination of a one-time bill credit followed by a volumetric surcredit over five years. $25 million was earmarked for the one-time credit and the remainder was to be passed back through Rider I. The Company has a regulatory liability on its books of $0.484 million related to the one-time bill credits, as the full $25 million set aside for those credits was not necessary based on customer counts at the time of the credit's issuance. As it stands, the volumetric surcredit via Rider I will end September 30, 2026, prior to the start of the FPFTY.

Q. What is the Company proposing in this proceeding?

A. As discussed in Direct Testimony of Michael P. Weidner in National Fuel Statement No. 5, the Company has an additional $6.7 million of available funds in the grantor trust. Including the previously mentioned regulatory liability of $0.484 million, the Company is proposing to provide rate relief to customers totaling approximately $7.2 million during the FPFTY. First, a one-time bill credit of $30 would be provided to verified low-income customers. This is expected to total around $1.025 million. The remainder, approximately $6.2 million, would be passed back to customers during the FPFTY using the existing Rider I. The amount to be refunded through Rider I has been allocated to the Company's service classes using the same allocation from the settlement reached in the 2021 OPEB Dockets.

Q. How does this proposal impact proposed customer bills in the FPFTY?

A. Revenues at current rates were based on Rider I ending prior to the start of the FPFTY. Revenues at proposed rates reflect the Company's proposal to re-activate the OPEB Surcredit. The effect of this proposal is shown in National Fuel Exhibit E, Schedule 3. Note that the Rider I proposal does not impact the proof of revenue shown on National Fuel Exhibit E, Schedule 2, which ties to the Company's FPFTY revenue requirement presented in National Fuel Exhibit A. Since the proposed surcredit is funded by the grantor trust, there is no revenue requirement impact. The $30 bill credit to verified low income customers is not reflected in the bill impact analyses provided in my exhibits.

B. Energy Efficiency Rider Proposal

Q. Is the Company proposing a new pilot program related to energy efficiency ("EE")?

A. Yes. The proposal is discussed in the Direct Testimony of Erik M. Solomon in National Fuel Statement No. 18.

Q. How does the Company propose to recover the costs associated with the EE pilot program?

A. National Fuel proposes creating a new rider through which it will collect funding for the EE pilot program from residential customers. The rider would be added to the Company's tariff as Rider D – Energy Efficiency Pilot Program.

Q. Have you calculated bill impacts for the proposed EE rider?

A. Yes, the average residential customer's annual program cost would result in a bill increase of $3.72 or less than 1% of the average delivery bill.

VI. BASE RATE DESIGN & CUSTOMER BILL IMPACTS

Q. Please provide an overview of how the Company developed its proposed rate design.

A. The Company's proposed rate design was developed in conjunction with Company witness John D. Taylor's Allocated Cost of Service Study ("ACOSS"). The ACOSS is presented in National Fuel Exhibit D. As discussed in Mr. Taylor's testimony (National Fuel Statement No. 19), the proposed revenue increases were allocated to the Company's service classes based on current rates of return for each class and the desire to gradually move toward full parity. Full parity means the revenues collected from individual service

classes are aligned with the cost of service associated with that service class. After allocating the revenue increase, the rate design process consists of setting the basic service charge, resetting riders, and allocating the remaining increase to the volumetric distribution charge.

Q. Have you provided an exhibit that summarizes the change in revenue by rate class?

A. Yes. National Fuel Exhibit E – Proof of Revenue shows a comparison of present and proposed revenues for each rate class. Page 1 of the exhibit presents total revenues including PGC revenues, while page 2 excludes PGC revenues and shows only base delivery revenues. Both pages include the total change in revenue and the percentage change in revenue by rate class, as well as allocation of the total rate increase by rate class.

Q. Have you prepared a summary of current and proposed rates?

A. Yes. National Fuel Exhibit CTM-8 supports the Company's rate design and includes a summary of current and proposed rates by rate class.

Q. Provide an overview of proposed changes to basic service charges.

A. As shown in Table 1 on the following page, the Company proposes to increase the basic service charge for Residential, SCPA-LL, SCPA-UL, LVIS, and LIS service classes. The Company is not proposing changes to the basic service charges for LCPA, SVIS, and IVIS service classes.

Table 1: Summary of Basic Service Charges

Service Class	ACOSS Customer Charge	Current Basic Service Charge	Proposed Basic Service Charge	% Change
Residential	$27.15	$14.00	$19.00	35.7%
SCPA-LL	$30.38	$27.00	$30.00	11.1%
SCPA-UL	$70.53	$37.00	$50.00	35.1%
LCPA	$100.65	$151.00	$151.00	0.0%
SVIS	$76.99	$82.00	$82.00	0.0%
IVIS	$213.39	$252.00	$252.00	0.0%
LVIS	$1,406.51	$1,023.00	$1,400.00	36.9%
LIS	$1,750.80	$1,165.00	$1,700.00	45.9%

Q. Will the proposed fixed customer charges recover all of the Company's fixed distribution costs?

A. No. The ACOSS categorizes the Company's distribution costs as customer-related, demand-related, and energy-related. Customer-related costs are incurred to serve each customer regardless of usage and are appropriately recovered, in part, through a fixed monthly customer charge. Demand-related costs reflect the infrastructure and capacity required to safely and reliability meet customers' peak-day requirements. These costs are driven by system design needs rather than by monthly consumption levels and do not vary with short-term changes in customer usage. Under current rates, the Company recovers the majority of fixed customer and demand-related costs through volumetric charges. As a result, a significant portion of costs that are fixed or capacity-driven are recovered through rates that vary with customer usage (and weather). This creates a misalignment between cost incurrence and revenue recovery. For example, while most of the Company's distribution costs are fixed, only 40% of residential delivery revenue will be recovered through a fixed monthly charge under the proposed rate design. This

still leaves the Company subject to considerably volatility with respect to cost recovery because the remaining costs are recovered through volumetric rates which can be substantially affected by weather.

Q. Are you proposing to collect demand-related costs through the residential fixed monthly charge?

A. No. While it would not be inappropriate for fixed demand-related costs to be recovered through a fixed rate, the residential basic service charge increases in the proposed rate design are based only on the ACOSS's customer-related costs.

Q. Why is the Company's proposed increase to the residential basic service charge appropriate?

A. While the ACOSS supports a monthly charge of $27, the Company's proposed movement from $14 to $19 per month represents less than half of the difference between current rates and full ACOSS alignment. If approved, this would be just the second increase to the basic service charge in nearly 20 years. The Company recognizes that the Commission has recently expressed concerns regarding fixed customer charge increases. A $19 monthly charge would be within the range of outcomes approved by the Commission for National Fuel's peers.

Q. Does this proposed increase affect all residential customers equally?

A. No. Customers that use less gas each month will see slightly higher bill impacts than average-use or high-use customers. In performing its rate design, the Company kept in

mind the range of bill impacts that its proposals would have on customers with different usage patterns. In winter months, the number of high-usage customers that would benefit from a higher basic service charge heavily outnumber the low-usage customers would see slightly higher bill impacts. Additionally, low-income customers tend to be higher-use customers.

Q. Why is the Company proposing to increase the basic service charge for SCPA-LL, SCPA-UL, LVIS, and LIS service classes and not LCPA, SVIS, and IVIS?

A. The Company proposes increasing the basic service charge for SCPA-LL, SCPA-UL, LVIS, and LIS service classes to better align with the ACOSS. The Company does not propose to increase the basic service charge for LCPA, SVIS, and IVIS service classes because their current basic service charge exceeds the ACOSS.

Q. Is the Company proposing to modify or reset any current rate mechanisms or riders?

A. Yes. National Fuel's tariff requires the Company to reset Rider B and the DSIC rate when filing for new base rates. Additionally, the Company is proposing an update to the MFC uncollectible percentage included in the calculation of Rider G. These changes are reflected in Exhibit F – Proposed Tariff, as discussed in the Direct Testimony of Wanya' D. Bruce in National Fuel Statement No. 15.

Q. Please explain the Rider B reset.

A. The goal of the STAS is to pass on the effects of any changes in state tax rates to customers, compared to when base rates were last established. For example, the recent step down in the corporate tax rate has been flowed through the STAS as a negative percentage applied to the delivery portion of the bill, compensating customers for the fact that National Fuel is experiencing lower state income tax expense than when base rates were set in the Company's 2022 Rate Case. The Company's tariff requires that the STAS is recomputed whenever the utility makes effective an increase or decrease in base rates, exclusive of PGC rates and applicable rider rates. Since the lower state income tax rate has been reflected in the Company's FPFTY revenue requirement in this filing, the STAS is reset to zero in the proposed rate design presented in National Fuel Exhibit CTM-8, Schedule 1.

Q. Explain the DSIC reset.

A. The DSIC allows the Company to accelerate the replacement of aging infrastructure by providing recovery between rate cases of prudently incurred costs incurred to repair, improve, or replace certain types of property. National Fuel's tariff requires that the DSIC be reset at zero when new base rates become effective. At that point, the costs previously recovered through the DSIC will have been rolled into the Company's rate base used to calculate revenue requirement and to set the new base rates. In National Fuel Exhibit CTM-8, Schedule 1, the DSIC revenue that's included in revenues at current rates is set to zero when calculating revenue at proposed rates. This action shifts the cost recovery from a surcharge into base delivery rates.

Q. What is the Company proposing to change in Rider G?

A. Rider G recovers MFC uncollectible expenses, or the amount of PGC revenue that the Company expects it will not collect from customers due to non-payment. Residential and non-residential rates are individually calculated by multiplying a percentage by the Rider A NGS and GAC rates. The Company is proposing to update the residential and non-residential percentages. The calculation for the proposed percentages is shown in National Fuel Exhibit CTM-8, Schedule 3.

Q. Explain how changes to volumetric rates were determined for each service class.

A. Each class started with a targeted delivery revenue amount. After accounting for revenue impacts from changes to basic service charges and riders, the remaining balance for each service class was allocated to the volumetric distribution charge. The balance was divided by the forecasted usage to determine the necessary change in the unit rate to meet the targeted delivery revenue. These calculations are shown for each service class on National Fuel Exhibit CTM-8, Schedule 1.

Q. Have you prepared bill impact analyses that demonstrate the effect of the proposed rate design?

A. Yes. Refer to National Fuel Exhibit E for a high-level summary of impacts by service class. National Fuel Exhibit CTM-9 provides a detailed bill impact analysis, including bill impact tables for a range of usage levels by service class. The bill impact tables include the number of cycle bills by usage for the most recent January and July billing months.

Q. Are you sponsoring any other exhibits?

A. Yes, I have prepared National Fuel Exhibit CTM-10. This exhibit supports updated factors presented in the Company's proposed tariff (see National Fuel Exhibit F) for determination of Company investment for upgrade/extension of facilities. The calculation produces justified Company investment per dollar of additional annual revenue. National Fuel's tariff permits modifications to these factors as deemed necessary and/or convenient by the Company. These factors are based primarily on outputs from National Fuel Exhibit A. I recommend that these factors be updated later in this proceeding, as part of a tariff compliance filing, to reflect the outcome determined by the Commission.

Q. Does this conclude your direct testimony at this time?

A. Yes.
