BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 14-R

Rebuttal Testimony of
Courtney T. Mann

Topics Addressed:
Fixed Monthly Customer Charge
OPEB Surcredit
FPFTY Revenue Adjustments
Revenue Allocation

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Courtney T. Mann. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 14, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. I am addressing statements and recommendations by the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"), the Office of Consumer Advocate ("OCA"), and the Bureau of Investigation and Enforcement ("I&E") regarding the residential fixed monthly customer charge, $30 one-time bill credit to low-income customers, forfeited discounts and rent from gas property revenue adjustments, and allocation of the proposed revenue increase.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. No. Company witness Donald Koch provides an update to revenue requirement in National Fuel Statement No. 2-R. While this update impacts revenues at proposed rates,

bill impacts and certain elements of the originally proposed rate design, I am not sponsoring updated exhibits at this time.

III. FIXED MONTHLY CUSTOMER CHARGE

Q. Do you agree with CAUSE-PA's statement on page 4 and 5 of Mr. Geller's testimony that NFG's proposed increase to the residential fixed monthly charge is "massive"?

A. No. The Company does not agree with this subjective characterization. As explained in my direct testimony, the proposed increase of $5 from $14 to $19 to the residential customer charge is less than half of the amount recommended by the Allocated Cost of Service Study ("ACOSS"), as discussed in Sections III and IV of the rebuttal testimony of John D. Taylor. The Company has only increased this charge once in nearly 20 years. Additionally, the proposed fixed monthly charge is in line with other Pennsylvania gas utilities, including the $20.16 rate recently authorized by the Pennsylvania Public Utility Commission for Columbia Gas of Pennsylvania, Inc.

IV. OPEB SURCREDIT

Q. Does the Company agree with CAUSE-PA recommendation on page 69 of Mr. Geller's testimony to distribute the $30 one-time credit to low-income customers during a winter month (December – March)?

A. Yes. The Company agrees to distribute the one-time bill credit to low-income customers during the December 2026 billing cycle.

V. FPFTY REVENUE ADJUSTMENTS

Q. Does the Company agree with OCA's proposed adjustment to increase Forfeited Discounts by $25,000 in the fully projected future test year ("FPFTY"), as presented by Mr. Morgan?

A. No. First, the magnitude of OCA's adjustment is tied to its recommended revenue increase. As detailed by Company witness Donald Koch, there is a considerable gap between the revenue requirement proposed by the Company and OCA. Next, I do not agree with Mr. Morgan's use of a three-year average. Fiscal year 2024 late payment charges were unusually high and are not representative of expectations for the FPFTY. The Company's use of a trailing twelve-month weighted average is more appropriate. OCA's calculation divides actual late payment charges by sales revenues for each year to produce the average late payment charge factor used in its adjustment. This calculation improperly excludes transportation revenue, to which late payment charges are applied. If the Commission were to adopt OCA's proposed three-year average, the appropriate factor using total billed revenue would produce a 0.518% forfeited discount factor as opposed to the 0.611% presented by OCA. Ultimately, I recommend that the adjustment to late payment charges at proposed rates reflect the final revenue requirement approved by the Commission in this proceeding.

Q. Does the Company agree with OCA's adjustment to increase Rent From Gas Property by $12,000 in the FPFTY presented by Mr. Morgan?

A. No. The Company disagrees with Mr. Morgan's adjustment of $12,000 to Rent From Gas Property. There are no known or measurable changes to support an additional increase in

Rent From Gas Property. The Company reviewed the most recent intercompany rent amounts and determined that the ongoing monthly rent is $8,258, which on a full year basis yields $99,096. This amount is in line with what the Company presented in its direct case and demonstrates that Rent From Gas Property has remained relatively flat. Therefore, OCA's historical average growth factor to increase Rent From Gas Property would be inappropriate.

VI. REVENUE ALLOCATION

Q. Does the Company agree with I&E's recommended revenue allocation on page 12 of Mr. Cline's testimony?

A. No. The Company does not agree with I&E's recommended revenue allocation. Please refer to John Taylor's rebuttal testimony, National Fuel Statement No. 19-R, for the Company's response regarding revenue allocation.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes.

NATIONAL FUEL STATEMENT NO. 15

WANYA' D. BRUCE

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 15

Direct Testimony of
Wanya' D. Bruce

Topics Addressed: Tariff Revisions

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Wanya' D. Bruce. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed as a Rate Analyst in the Rates & Regulatory Affairs department of National Fuel Gas Distribution Corporation ("NFGDC").

Q. Please provide your educational background.

A. I graduated from D'Youville University in May 2020, with a Bachelor of Science degree in Business Management.

Q. Please provide your professional experience.

A. I began my employment at Trusted Nurse Staffing in October 2020 as a Recruiter/Operations Analyst. In August 2022, I was promoted to Team Lead and continued in that role until September 2023. I then joined Systems Personnel as an Operations Coordinator in September 2023. In September 2024, I began my career with NFGDC as a Rate Analyst.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. No.

Q. Please describe the purpose of your testimony.

A. I am testifying to proposed changes to the Company's tariff.

II. DESCRIPTION OF EXHIBITS

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. Yes, I am sponsoring National Fuel Exhibit F, which contains the Company's current and proposed tariffs. I am also sponsoring certain responses to the Commission's regulatory filing requirements that were prepared by me or under my direction. These regulations are indicated on the master list accompanying this filing.

Q. Please describe National Fuel Exhibit F.

A. National Fuel Exhibit F is composed of two sections pertaining to the Company's tariff. Section 1 provides the current tariff and Section 2 provides the proposed tariff associated with this rate case filing.

III. PROPOSED TARIFF CHANGES

Q. Provide a summary of the tariff changes being proposed in this case.

A. Administratively, the Company is revising various tariff pages to update the supplement number, issued and effective dates, and page numbers as made necessary by the rate changes and proposals discussed by the Company's witnesses. A complete list of tariff modifications can be found in the "List of Changes Made by the Supplement" section in

National Fuel Exhibit F – Proposed Supplement 294 to NFGDC Gas Tariff No. 9.

Notable proposed changes to the tariff supported by other Company witnesses include:

- Base rate updates necessary to implement the Company's proposed rate design discussed in the Direct Testimony of Courtney T. Mann (National Fuel Statement No. 14). Ms. Mann also supports the following items that result in tariff changes:
    - In accordance with the Company's current tariff (Page No. 175), the Distribution System Improvement Charge ("DSIC") rate has been reset to zero in the Company's proposed tariff, excluding any potential E-factor rate.
    - In accordance with the Company's current tariff (Page No. 157), the State Tax Adjustment Surcharge ("STAS") rate is to be recomputed whenever the Company makes effective an increase or decrease in base rates. The STAS has been reset to 0.00% at proposed rates.
    - The Company proposes updates to Rider G – Merchant Function Charge ("MFC") Rider (Page No. 168) to coincide with associated changes in its cost of service since its prior base rate case.
    - The Company has updated its tariff (Page No. 12) that establishes the factors for justified Company investment per dollar of additional annual revenue relating to the upgrade/extension of facilities.
- Operational procedure changes involving customer premise access as discussed in the Direct Testimony of Jason Scouten in National Fuel Statement No. 16.
- Implementation of an Energy Efficiency Program discussed in the Direct Testimony of Erik M. Solomon in National Fuel Statement No. 18. Costs associated with the

program are proposed to be recovered from residential customers through a new Rider D to the Company's tariff.

- Modifications to the Daily Metered Transportation aggregation program, as discussed in the Direct Testimony of Daniel J. Czechowicz in National Fuel Statement No. 20.

Q. Are there any other tariff changes that you'd like to discuss?

A. Yes. The Company's current tariff includes separate transportation rate designations - one for gas produced within the Commonwealth of Pennsylvania ("intrastate") and one for gas produced outside the Commonwealth ("interstate"). The intrastate and interstate rates are the same for each transportation rate schedule and have been since at least the Company's 2006 base rate case. The Company does not consider this intra/interstate designation in its rate design and has no intention of doing so in the future. In an effort to streamline the tariff, the proposed tariff consolidates the intrastate and interstate rates into a single rate for each transportation service class. The effect of this proposal can be seen on proposed tariff Page Nos. 100, 101, 111, and 112.

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

NATIONAL FUEL STATEMENT NO. 16

JASON C. SCOUTEN

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 16

Direct Testimony of
Jason Scouten

Topics Addressed:
System Overview
Safe and Reliable Service
System Integrity and Damage Prevention
Construction Execution
Operations Performance Metrics
Initiatives

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Jason Scouten. My business address is 225 Wayne Street, Erie, Pennsylvania 16507.

Q. By whom and in what capacity are you employed?

A. I am currently employed by National Fuel Gas Distribution Corporation ("NFGDC") as the Superintendent of NFGDC's Pennsylvania Division Operations department. NFGDC has two divisions: its Pennsylvania Division ("National Fuel" or the "Company"), which is a public utility regulated by the Pennsylvania Public Utility Commission ("PAPUC" or "Commission") and its New York Division ("National Fuel – NY"), which is a public utility regulated by the New York Public Service Commission ("NYPSC").

Q. Please provide your educational background.

A. I hold a Bachelor's degree in Construction Engineering and Surveying Technology from the University of Akron, as well as an Associate's degree from Penn State Behrend in Mechanical Engineering Technology.

Q. Please provide your professional experience.

A. I have a deep range of professional experience in the natural gas industry, amassed both in the field and from my education and learnings from trade and industry associations. Most pertinently, I note that I have a deep understanding and knowledge of NFGDC's operations, having started at the Company in 2005 as an Operations Supervisor.

Through the years, I have gained an increasing number of managerial and strategic opportunities as I have grown at the Company and held the title of Superintendent since 2022.

Q. What are your responsibilities as Superintendent of the Company? [1]

A. As Superintendent, I am responsible for the operation, maintenance, and enhancement of the Company's transmission and distribution systems located in its Pennsylvania service territory (the "Service Territory"). More specifically, through my oversight of Operations, I am charged with, among other things:

- The delivery of safe and reliable natural gas distribution service to the Company's customers.
- Leak detection, leak investigation, leak response, and leak repair activities, including all required leakage surveys and system inspections, testing and inspection of cathodic protection systems for steel facilities;
- Plant operations and system regulation;
- The day-to-day operations of the Company's physical natural gas distribution system ("Distribution System" or "System");[2]
- Field customer service to the Company customers including, among other things, odor complaints, meter turn-ons and turn offs, and all other customer interfacing field interactions;

[1] All references in my testimony to "Superintendent" or to "the Company's Operations"/ "Operations" shall refer to "Superintendent of the Company's Pennsylvania Division" and to "the Company's Pennsylvania Division Operations," respectively, unless the context indicates contrary.

[2] All references in my testimony to the Company's "Distribution System" or "System" (and related operations) shall refer to those located within the Company's Pennsylvania Division.

- Dispatch and emergency response; and
- Installation and replacement of natural gas mainline, service line, and other facilities, as necessary in connection with the operation of the Company's System.

Q. Have you previously testified in other proceedings before the Commission or any other state or federal agency?

A. Yes, I testified on behalf of National Fuel in Docket No. R-2022-3035730.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. The purpose of my testimony is to describe Operations' role in the safe and reliable operation of the System. My testimony addresses the characteristics of the Company's System and Service Territory and explains the operational and field-execution considerations that affect how the System is operated and maintained.

My testimony is intended to provide an understanding of the operational demands facing the Company and the resources required to meet applicable safety, reliability, and regulatory obligations. I will also discuss the operating performance of the Distribution System, as measured by various metrics and benchmarks and the initiatives and actions the Company has taken to increase the operating performance of its Distribution System.

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. I am sponsoring National Fuel Exhibit JCS-1.

III. DISTRIBUTION SYSTEM & SERVICE TERRITORY OVERVIEW

Q. Please describe the Company's Distribution System.

A. Currently, the Company serves approximately 213,000 customers (including residential, industrial and commercial customers). The Company owns and operates its Distribution System, which is spread throughout fourteen (14) counties and serves over 230 municipalities throughout northwestern Pennsylvania. More specifically, the Company's Distribution System consists of: (a) approximately 4,900 miles of distribution and transmission mains; (b) nearly 194,000 services that it owns, operates, and maintains; and (c) related facilities (collectively, "Facilities"). The Company's Distribution System has been built over many decades and includes a wide range of materials. A more detailed description of the system is provided in the Company's Long Term Infrastructure Improvement Plan ("LTIIP"), which was approved by the Commission in December 2022, as well as in the pending petition to modify the LTIIP.[3] As discussed in those filings, the System includes distribution and transmission mains constructed from different materials and installed over different time periods.

From an Operations perspective, these Facilities require ongoing inspection, maintenance, monitoring, and field support to ensure safe and reliable service. Operations personnel are responsible for executing these day-to-day maintenance activities, responding to system conditions and emergencies, and supporting construction and replacement work affecting these decisions.

As more fully noted in the Direct Testimony of Mark C. Schaefer in National Fuel Statement No. 9, consistent with its Distribution Integrity Management Program

[3] The Company's Commission-approved LTIIP and the pending Petition for Approval of a Major Modification to LTIIP (filed on December 11, 2025) is found at Docket No. 2022-3034957.

("DIMP") and LTIIP, the Company has developed specific programs to target the retirement and replacement of various types/vintages of Facilities. Operations personnel are responsible for implementing that work safely and efficiently in the field in accordance with applicable standards and regulatory requirements.

Q. Can you describe the nature of the Company's Service Territory?

A. The Company's Service Territory includes a mix of rural and urban areas with varying population densities, geographic characteristics, and infrastructure configurations. While the Distribution System serves several population centers (*e.g.*, Erie, Meadville, and Sharon), a significant portion of the service territory is rural in nature, with facilities extending across rural communities with less densely populated areas.

Q. How does the nature of the Company's Service Territory impact the Company's operations?

A. The varied nature of the Company's Service Territory affects how Operations activities are planned and executed. Differences in population density, access, distance, and local conditions influence field personnel deployment, response planning, and coordination of field work. Operations staffing and work practices are structured to address the differing conditions present across rural and urban portions of the Service Territory.

Q. What operational challenges does the Company face with respect to rural portions of its Service Territory?

In rural portions of the Service Territory, Operations personnel must account for longer travel distances, reduced access, more complicated terrain and environmental permitting conditions, and fewer cost-justified routing options for new or natural gas facilities approaching retirement. These factors can affect response times, logistics, the coordination of maintenance and construction activities.

Q. How does Operations respond to these challenges in the rural portions of its Service Territory?

A. Operations staffing and dispatch practices are designed to address challenges while ensuring safe and reliable service. Service territories are sized proportionally to customer density and work volumes, with travel distances also considered. Occasionally, these areas may experience strain during operational situations or an influx of work volumes such as heavy One Call volumes, requiring additional support. To mitigate this, neighboring service centers are strategically positioned to provide assistance and respond to customer needs and emergencies. Additionally, contractors can be dispatched as needed to support construction activities within the area.

Q. What operational challenges does the Company face with respect to urban portions of its Service Territory?

A. In urban areas, Operations activities are influenced by higher customer density, traffic congestion, municipal permitting coordination, and access limitations associated with buildings and infrastructure. Field work in urban settings often requires intricate

coordination with municipalities, contractors, and customers to safely perform maintenance and construction activities while minimizing disruption.

Q. How does the Company respond to these challenges in the urban portions of its Service Territory?

A. Operations staffing and dispatch practices are designed to address challenges inherent in urban portions of its Service Territory and maintain safe and reliable service. Urban areas typically have a more concentrated workforce but face unique challenges during emergency responses, which often impact a larger number of customers and the public. Additional measures such as business district patrolling and public building inspections are necessary to ensure safety. Project coordination in urban environments requires collaboration with multiple entities to protect employees, customers, and the public. These projects often demand increased resources for excavation and traffic control to maintain safety and minimize disruptions.

IV. OPERATIONS' ROLE IN PROVIDING SAFE & RELIABLE SERVICE

Q. Please describe how the Company's Operations are organized to support the operation and maintenance of the Company's Distribution System.

A. Operations is responsible for the day-to-day field execution associated with the Company's Distribution System. The department is led by a Superintendent, who reports directly to an executive. The Superintendent is supported by an Assistant Superintendent and several Operations Managers, who are geographically located throughout the Service Territory.

Operations Managers are assigned to one or more of thirteen (13) service centers located throughout the Service Territory. Each Operations Manager oversees operational activities within the geographic area served by his respective Servicenter, including supervision of field personnel and coordination of day-to-day work. Field personnel include both Company employees and contractors. Contractors may assist with tasks such as line locating or leak surveying when needed but primarily handle construction projects. This approach allows Company employees to remain flexible and shift into areas where and when they are most needed.

Q. Please describe the Company's service centers and their role in maintaining the Distribution System.

A. The Company's key Operations personnel and equipment are primarily located in the thirteen (13) service centers spread strategically throughout the Service Territory. These service centers serve as the primary operational hubs for field personnel, equipment, and materials used in the operation and maintenance of the Distribution System. As noted above, the location of each service center is determined based on geographic considerations, population density, System configuration, and operational needs within the surrounding service area. This structure allows Operations personnel to be positioned in reasonable proximity to customers, facilities, and system assets across both urban and rural portions of the service territory. By distributing service centers across the service territory in this manner, the Company deploys field personnel efficiently to address routine operational activities, respond to system conditions, and emergency response. Moreover, the geographic placement of service centers supports timely response to

customer service calls, leak reports and surveys, and other field conditions, while also facilitating effective coordination with local emergency responders and municipalities. Additionally, the Company maintains labor agreements where field personnel are assigned to "standby duty" during off-hours, which enables rapid emergency response on a continuous, 24-hour basis, each day.

Q. How many employees currently staff the Company's Operations?

A. As of September 2025, the Company's Operations is staffed by 268 employees. These employees perform a range of field, supervisory, and support functions associated with the operation and maintenance of the Company's Distribution System.

Q. How has Operations staffing changed in recent years?

A. Operations staffing levels have increased modestly over the past several years. Since 2021, Operations headcount has increased by approximately 6%. The increased headcount has been added incrementally over time rather than through significant year-over-year changes. Annual Operations headcount is shown below in Table 1.

Table 1: Operations Headcount by Fiscal Year

Fiscal Year	**2021**	**2022**	**2023**	**2024**	**2025**
Headcount at September 30th	253	263	262	264	268

Q. In addition to the Company employees, how does the Company utilize contractors within Operations?

A. In addition to its Operations employees, the Company utilizes contractors on a targeted basis to support specific operational and construction-related activities. Contractor resources are primarily engaged to manage project-based work, address temporary workload fluctuations, and perform specialized tasks that do not require permanent staffing. While contractors typically handle larger capital projects during seasonal periods when construction is most advantageous, they also provide support for smaller, time-sensitive projects that arise during high-demand periods, such as during the heating season. Contractors working on the Distribution System operate under the direction and oversight of the Company personnel and are subject to applicable qualifications, coordination, and oversight requirements.

Management evaluates the use of contractors as part of its overall workforce planning approach. Rather than expanding permanent headcount in response to short-term, seasonal or cyclical increases in work volume, the Company elects to strategically leverage contractors where appropriate to maintain operational flexibility and align resources with project demands. The Company has managed costs and maintained a balanced approach to operations. However, it is important to emphasize that contractor utilization does not replace the need for adequate Operations staffing. Sufficient staffing is essential to ensure effective oversight, coordination, high-quality customer service, and timely emergency response.

Q. What are the operational consequences if Operations staffing is not maintained at current levels?

A. First, reduced staffing would limit Operations' capacity to respond promptly to day-to-day operational demands across the Service Territory, including service work, inspections, construction support, emergency response and line locating activities. As workloads fluctuate or peak, fewer available personnel would increase response times and reduce scheduling flexibility, particularly in geographically dispersed or higher-demand areas.

Second, reduced staffing levels would increase the likelihood that certain inspection, maintenance, and integrity-related activities are deferred or rescheduled. While such work would continue to be prioritized and managed, sustained staffing constraints would place greater strain on planning and execution, increasing the risk of backlog development over time.

Third, staffing reductions would diminish Operations' ability to provide effective field oversight and coordination, including supervision of contractor activities, quality assurance, and interdepartmental coordination. This oversight function is critical to ensuring work is performed efficiently, consistently, and in accordance with applicable procedures and requirements.

Finally, taken together, these impacts would increase overall operational strain on Operations and reduce operational resilience. Maintaining current staffing levels allows Operations to balance routine workload demands with unplanned events, seasonal variability, and system complexity in a manner that supports reliable and effective operation of the Distribution System.

V. OPERATIONS' ROLE IN DISTRIBUTION SYSTEM INTEGRITY MANAGEMENT, LEAK RESPONSE AND EXCAVATION-RELATED RISK

Q. What is the Company's DIMP?

A. As explained in the Direct Testimony of Mark C. Schaefer in National Fuel Statement No. 9, the Company's DIMP is a federally required, risk-based framework that governs how the Company identifies, evaluates, and mitigates threats to the integrity of its natural gas distribution system. DIMP requires operators to continually assess integrity risks and to implement measures to reduce both the likelihood and consequences of system failures. Federal legislation, including the Protecting Our Infrastructure of Pipelines and Enhancing Safety Act of 2020 ("PIPES Act") and related implementing regulations from the Pipeline and Hazardous Materials Safety Administration ("PHMSA"), has expanded integrity management and leak-related obligations applicable to natural gas distribution operators, increasing the scope and intensity of required inspection, response, and documentation activities.

Q. From an Operations perspective, how does DIMP affect day-to-day execution and resource requirements?

A. From an Operations perspective, DIMP establishes non-discretionary execution obligations. These obligations drive leak detection and response activities, integrity-driven infrastructure replacement, the development and execution of the Company's damage prevention program, and the management of excavation-related integrity risk. Operations personnel are responsible for carrying out these requirements through daily field execution across the Service Territory.

A. Integrity Threats and Leaks

Q. What integrity threats are most significant to the Company's Distribution System under DIMP?

A. The most significant integrity threats to the Distribution System include system leaks, aging or higher-risk facilities, and third-party excavation activity. These threats are evaluated collectively under DIMP, recognizing that they often interact. For example, excavation activity may result in immediate damage or latent conditions that later manifest as leaks, increasing integrity risk if not promptly identified and addressed.

Q. How does leak detection, classification, and response support the Company's integrity objectives under DIMP?

A. Leak detection and response are core components of DIMP execution for which Operations is responsible. More specifically, Operations personnel perform required system surveys, investigate reported conditions, classify leaks, and complete repairs or replacements as necessary. Leak response activities include the investigation, classification, and prioritization of leaks in accordance with applicable federal and state requirements, including differentiated response timelines based on leak severity. These activities directly reduce integrity risk and prevent escalation of System conditions.

Q. How does leak response activity affect Operations workload, dispatch, and resource planning?

A. Leak response requires trained personnel, timely dispatch, field investigation, coordination with other departments, and follow-up work. These activities must be performed alongside routine maintenance, construction oversight, and emergency response obligations. As a result, leak management represents a significant and ongoing driver of Operations workload and staffing requirements.

Q. What do the Company's leak-related performance metrics demonstrate regarding the effectiveness of integrity execution?

A. The Company's leak performance has shown sustained improvement over time. In this regard, since 2005, the number of leaks on the Company's Distribution System have trended favorably dropping from 2,622 reported in 2005, compared to 915 reported in 2024 with hazardous leak reduced from 810 to 363 in the same time period. Additional information and trend information is listed in the Company Exhibit JCS-1, which I am sponsoring through this testimony. These trends demonstrate the effectiveness of enhanced leak response practices and integrity-driven infrastructure replacement in reducing leak incidence across the Distribution System.

B. <u>Infrastructure Replacement and Integrity Risk Reduction</u>

Q. How does infrastructure replacement under the LTIIP support the Company's DIMP objectives?

A. As more fully described in the Direct Testimony of Mark C. Schaefer (National Fuel Statement No. 9), the Company's LTIIP operationalizes DIMP by targeting the replacement of facilities with higher integrity risk based on factors such as material type,

age, operating conditions, and leak history. Replacement priorities are informed by DIMP evaluations and are intended to reduce future leak potential and overall integrity risk on a sustained basis.

Q. What responsibilities does execution of the LTIIP create for Operations?

A. Execution of the LTIIP increases operational workload through planning, permitting, construction, construction oversight, inspections, coordination with contractors, municipalities, and customers, leak follow-up, and post-construction verification. Replacement mileage targets through 2027 are reflected in Table 2, illustrating the scale of integrity-driven work requiring ongoing support from Operations staffing.

Table 2: Leak Prone Pipe Replacement Targets by Year

	Pre-LTIIP Years		LTIIP Years				
Year	**2021**	**2022**	**2023**	**2024**	**2025**	**2026**	**2027**
Miles of Main Replaced	43	41	48	52	53	54	57

C. Responding to Threats from Third Parties: Excavation Activity and the Company's Damage Prevention Program

Q. Why is third-party excavation activity treated as a significant integrity threat under the Company's DIMP?

A. Third-party excavation activity is one of the most significant external threats to distribution system integrity. Excavation can result in line strikes, near misses, or latent damage that may not be immediately apparent. Accordingly, excavation activity is evaluated and managed under DIMP as an ongoing integrity risk requiring active mitigation.

Q. What activities and operational functions are encompassed within the Company's damage prevention program?

A. The Company has developed a comprehensive damage prevention program designed to manage excavation-related integrity risk. Damage prevention activities include ticket processing and facility locating, field coordination and education with excavators, post-damage investigations, documentation and reporting, and supervisory oversight. These activities require significant field presence and coordination and must be performed regardless of whether excavation ultimately results in damage. The damage prevention program is an integral component of the Company's overall integrity management approach. Additionally, continuous improvement efforts such as the development and deployment of technology, such as GPS tools to, among other things, more accurately map pipeline facilities, identify areas where line locating is challenging, and continuously update the Company's GIS maps and records, are part of the Company's damage prevention efforts.

Q. What do the Company's damage prevention performance metrics demonstrate regarding its ability to reduce excavation-related damages over time?

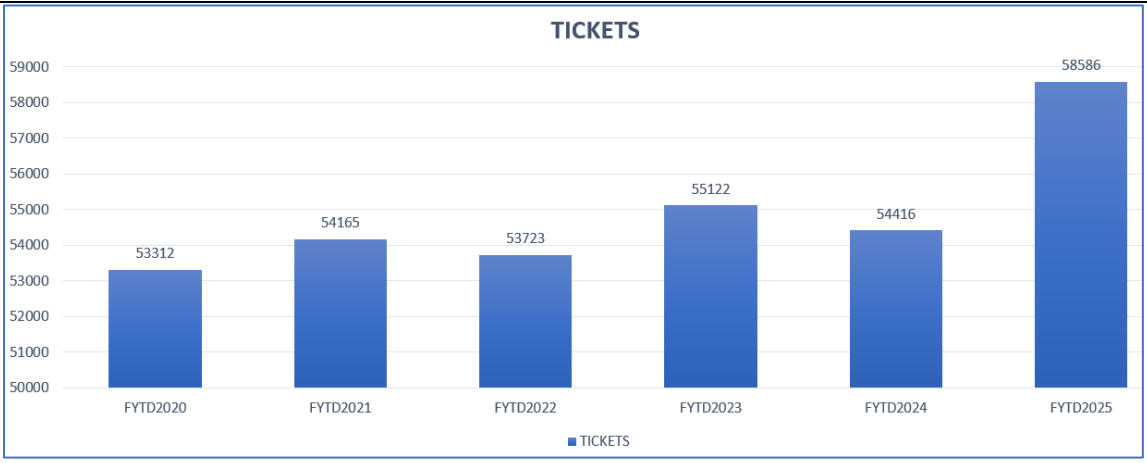
A. The Company's damage prevention performance has improved over time. In this regard, in calendar year 2024, the Company experienced 137 total number of excavation damages or 2.46 line hits per 1,000, compared with 208 excavation damages or 4.56 line hits per 1,000 in calendar year 2015. This translates to a 46% reduction in line hits over that time period. Based on information through September 30, 2025 (the close of the

Company's last fiscal year), Operations logged reduced line hits, compared to the prior year. These results demonstrate the effectiveness of the Company's damage prevention program and its ability to put ratepayer resources to work in reducing excavation-related integrity risk.

Q. What factors have increased excavation-related operational demands in recent years?

A. Operations has experienced increases in Pennsylvania One Call ticket volumes driven by elevated construction activity stemming from, among other things, widespread broadband and fiber deployment (due, in part, to availability of federal funding for same) as well as water and sewer infrastructure projects. These trends are show in Figure 1 below:

Figure 1: One Call Ticket Volumes Per Year



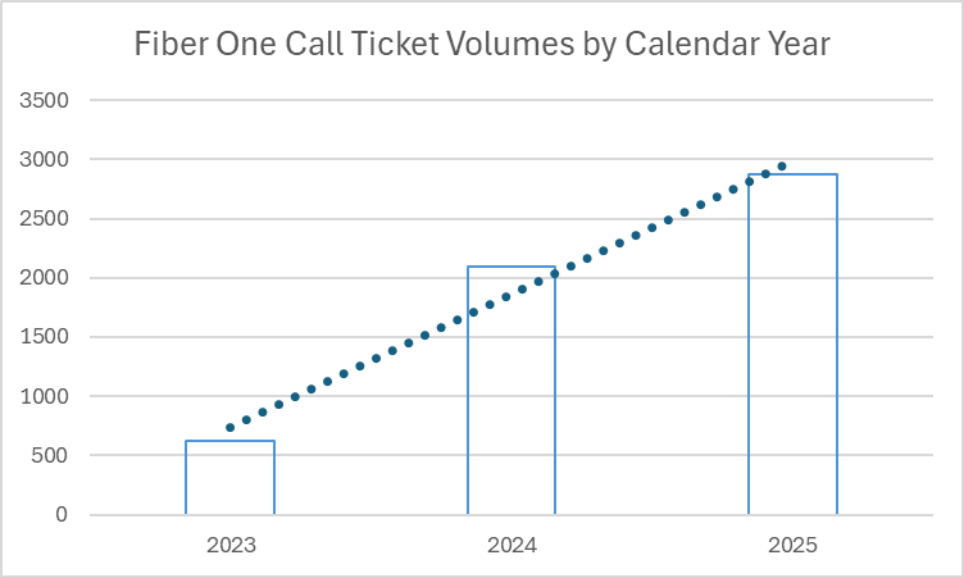
Note: Trends are expressed in terms of "Fiscal Year to Date," with the fiscal year measured from October 1 – September 30.

In sum, the increased ticket volume and coordination translate to higher demands for locating, coordination, and field oversight.

Q. How has increased broadband and fiber deployment affected excavation risk and Operations workload?

A. From the Company's experiences, broadband and fiber projects present several challenges, including that: (a) such projects are often scheduled for completion on an accelerated timeframe; (b) lack project design and coordination; (c) involve multiple excavation contractors and subcontractors; and (d) present additional challenges surrounding expired or inaccurate locate tickets from the project owner/excavators. These conditions increase excavation-related integrity risk and require additional Operations oversight and repeated line locating efforts, even when no damage ultimately occurs. Additionally, the number of projects has increased immensely in the Company's service territory. Figure 2 illustrates the increase in One Call ticket volumes from calendar years 2023 to 2025 for broadband expansion projects.

Figure 2: Fiber One Call Ticket Volumes by Calendar Year



Q. What are the operational consequences if these integrity-related activities described in this section of your testimony are not adequately supported?

A. If the integrity-related activities, such as those identified in this section, are not adequately supported, Operations would face delayed leak response, deferred integrity work, increased excavation-related risk, and reduced ability to oversee construction and contractor activity. Over time, these conditions would place additional strain on Operations personnel and increase compliance and reliability risk. Maintaining adequate staffing, tools, equipment, and technology is therefore necessary to sustain effective execution of the Company's integrity obligations.

VI. CONSTRUCTION

Q. What types of construction-related activities does the Company's Operations support and help execute or coordinate?

A. Operations supports and coordinates two general categories of construction-related activities affecting the Company's Distribution System: (1) capital construction activities, and (2) routine operations and maintenance ("O&M") construction work. Capital construction activities include integrity-driven system replacement projects, system upgrades, relocations, customer-related expansion work, and other larger-scale projects affecting distribution and transmission facilities. These activities are typically planned and scheduled through the Company's engineering and planning functions and implemented in the field with Operations support. Routine O&M construction work includes smaller-scale activities such as leak remediation, localized mainline and service work, inspections, regulator and meter station work, service installations, and other

system maintenance activities necessary to support safe and reliable operation of the Distribution System.

Q. How does Operations support and coordinate construction activities affecting the Distribution System?

A. Operations personnel support and coordinate construction activities by providing field-level oversight, coordination, and inspection throughout the duration of a project. This includes coordinating work sequencing, performing inspections and quality assurance reviews, overseeing contractor activities, managing traffic control and site coordination, and interfacing with customers, municipalities, and other stakeholders affected by construction activity. Operations also coordinates construction activities with ongoing system operations to minimize service impacts and ensure that work is performed in accordance with applicable Company procedures, operating standards, and regulatory requirements. Through these functions, Operations plays a central role in the effective execution of construction work affecting the Distribution System.

VII. OPERATIONAL PERFORMANCE

Q. Having described the Company's integrity obligations and how related work is executed in the field, how does the Company evaluate the operational performance of its Distribution System?

A. The Company evaluates the operational performance of its Distribution System using objective performance metrics that reflect emergency response capability, system reliability, and safety outcomes. These metrics are used to assess how effectively the

Operations executes its responsibilities and maintains safe and reliable service for customers and the public.

A. Emergency Response Performance

Q. How does the Company measure emergency response performance?

A. Emergency response performance is measured by tracking response times to reported emergency conditions, including gas odor calls and other events requiring immediate field response. These metrics are used to evaluate the Company's ability to respond promptly and effectively to system conditions across the Service Territory.

Q. How has the Company performed with respect to emergency response times?

A. The Company has consistently met its emergency response performance targets. Over the past three fiscal years (October 1 – September 30), from 2023 through 2025, the Company has responded to more than 19,000 emergency calls, answering 99.5% of them within 45 minutes. The Company achieved an average response time of under 20 minutes. These metrics demonstrate a high level of emergency readiness and field execution capability.

Q. What does this level of emergency response performance indicate about Operations execution?

A. This level of performance reflects effective dispatch practices, field coordination, and geographic deployment of Operations personnel and resources throughout the Service Territory. Maintaining this performance requires continuous readiness and coordination

across both urban and rural operating areas, strategic positioning of Company personnel and assets, and continued focus on overall emergency readiness and training.

B. System Reliability

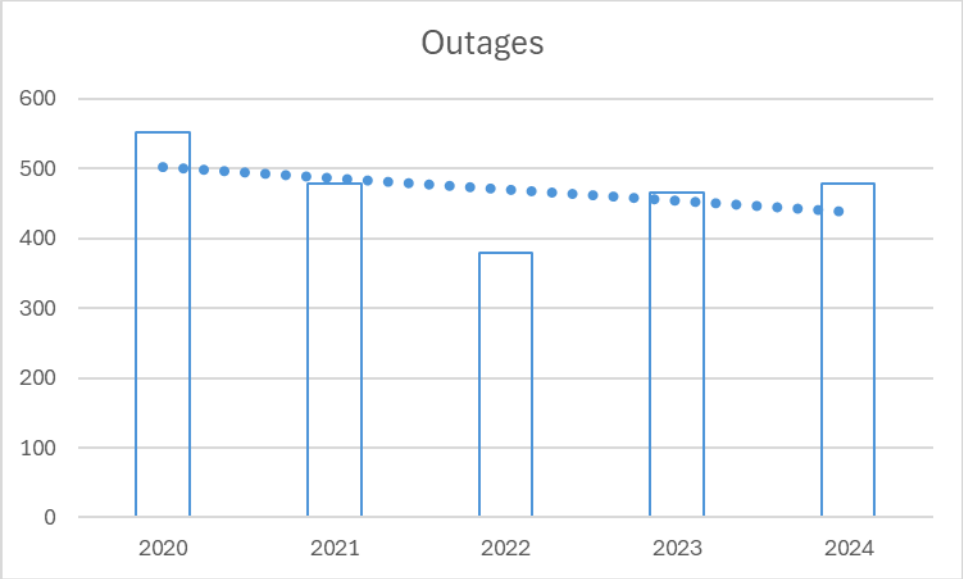
Q. How does the Company evaluate the reliability of its Distribution System?

A. System reliability is evaluated using performance metrics that track service interruptions, unplanned outages, and the continuity of gas service to customers. These metrics provide insight into how well the Distribution System performs under normal operating conditions and during unplanned events.

Q. Using these metrics, how reliable is the Company's Distribution System, when measured by number of outages?

A. The total number of customer outages in calendar years 2020-2024, respectively was 551, 479, 379, 465, and 478 with an average of 470 per year. The data suggests that the number of outages has trended downward during that time period. This information is depicted in Figure 3 on the following page.

Figure 3: Customer Outages by Calendar Year



Q. What do the Company's reliability metrics demonstrate?

A. The Company's reliability metrics demonstrate stable and reliable system performance over time. Service interruptions are infrequent, and when interruptions occur, they are addressed promptly through coordinated Operations response and restoration efforts.

Q. How do integrity-driven activities support system reliability?

A. Integrity-driven activities, including proactive maintenance, damage prevention efforts, leak response, and infrastructure replacement, reduce the likelihood of unplanned service interruptions and contribute to sustained system reliability. These activities support long-term performance by addressing system conditions before they escalate into outages.

C. Safety and Incident Trends

Q. How does the Company track safety-related operational outcomes?

A. The Company tracks safety-related operational outcomes using incident data and trend analysis, including OSHA-recordable incidents and other system-related events. These metrics are used to assess operational outcomes rather than individual programs or initiatives.

Q. What trends are observed with respect to OSHA-recordable incidents over time?

A. The Company has experienced a reduction in Occupational Safety and Health Administration ("OSHA") recordable injuries from fiscal year 2010 through fiscal year 2025, reflecting improved operational outcomes associated with integrity management, field execution, and operational controls. This decline is shown in Table 3 below, which lists the OSHA Total Recordable Incident Rate ("TRIR") as well as total injuries and hours worked in 2010 and 2025, respectively.

Table 3: OSHA Total Recordable Incident Rate

Fiscal Year Ended September 30	2010	2025
TRIR	5.57	3.25
Injuries	18	13
Hours Worked	646,595	799,351

Q. How should OSHA-recordable incident trends be interpreted in the context of Operations performance?

A. These trends demonstrate effective execution of operational responsibilities and sustained attention to system conditions. While individual incidents can still occur, the overall trend indicates improved safety outcomes consistent with the Company's integrity-driven approach to system operation.

As discussed below, the Company's tariff provision on safe access to customer premises is intended to strengthen employee safety, particularly given that dog bites remain a leading source of field related injuries. The provision requires customers to securely restrain pets, especially dogs, before employees perform meter reading, service work, inspections, or emergency response. This measure helps prevent injuries, reduces lost work time, and supports timely service delivery.

The tariff requirement reflects the Company's commitment to safety and risk mitigation. Combined with employee training and enhanced customer communication, it serves as a critical safeguard to minimize preventable incidents and maintain a safe working environment for field personnel

D. <u>Customer Service</u>

Q. How does the Company measure operational performance related to customer appointments?

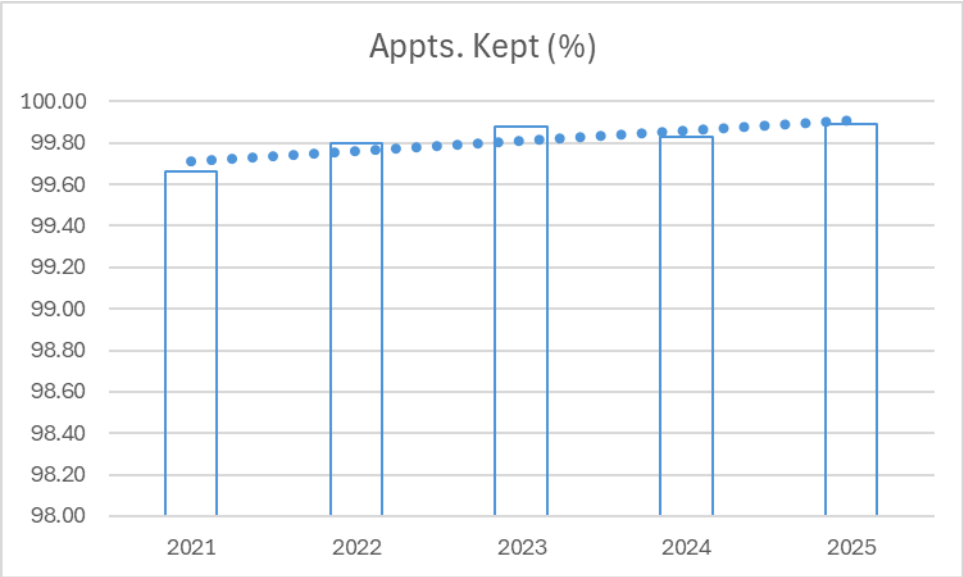
A. One of the key operational performance metrics tracked by the Company is "Appointments Kept," which measures the percentage of scheduled customer appointments completed as played by Operations personnel. This metric is driven by workforce planning, dispatching, and field execution within Operations.

Q. How has the Company performed with respect to this metric?

A. As shown in the Figure 4, the Company has consistently achieved appointment completion rates exceeding 99.8% over the past four fiscal years, improving to 99.89% in

Fiscal Year 2025, despite increased workload and expanded safety and compliance obligations.

Figure 4: Appointments Kept by Fiscal Year



Q. Why is this performance relevant to highlight in your testimony?

A. In addition to the fact that high appointment completion rates reduce the need for repeat visits, redispatches, and customer the need to redispatch Company personnel, thereby controlling Operations labor costs and inefficiencies, it also facilitates a favorable customer service experience for customers.

E. Role of Performance Metrics

Q. How are these operating performance metrics used by the Company?

A. Operating performance metrics are used by management to monitor system outcomes, identify areas requiring attention, and evaluate the effectiveness of field execution.

These metrics provide an objective basis for assessing Operations performance and ensuring continued focus on safe and reliable service.

Q. What do these operating performance results demonstrate regarding the prudence and effectiveness of the Company's management of its Distribution System?

A. These operating performance results demonstrate that the Company's management has effectively implemented integrity, operational, and emergency response obligations in a disciplined and consistent manner. Sustained achievement of emergency response standards, stable system reliability, and improving safety outcomes reflect prudent operational decision-making, effective deployment of resources, and ongoing management oversight. These outcomes are consistent with reasonable and responsible management of the Distribution System in the public interest.

VIII. OPERATIONAL TOOLS AND TARIFF PROVISIONS SUPPORTING EFFICIENT SYSTEM MANAGEMENT

Q. In addition to field operations and system execution, what tools and tariff provisions is the Company evaluating to support efficient and prudent management of its Distribution System?

A. In addition to its field operations and integrity management activities, the Company relies on and evaluates certain tariff provisions to support efficient and prudent management of the Distribution System, such as tariff provisions governing free access to its premises, as well as technology that may enhance operational visibility and system monitoring, such as advanced metering functionality. The Company evaluates such tools in light of system

characteristics, operational needs, cost considerations, and regulatory requirements to determine whether and when their use is appropriate.

Q. Why is access to customer premises important to the Operations' ability to perform its responsibilities?

A. Access to customer premises is necessary for Operations to perform required inspection, maintenance, leak response, repair, and emergency response activities affecting Company facilities. Timely access allows Operations personnel to evaluate system conditions, perform required work safely, and comply with applicable integrity and safety obligations.

Q. What challenges has the Company experienced with respect to access to premises?

A. In certain circumstances, Operations personnel encounter obstructed access, refusal of entry, or unsafe site conditions that delay or prevent the timely performance of required work. These situations can result in repeat visits, additional coordination, and delayed resolution of system conditions.

Q. How do such access limitations affect Operations efficiency and field execution?

A. Access limitations reduce operational efficiency by increasing the time and resources required to complete necessary work and by complicating scheduling and field deployment. Clear access authority supports more efficient execution of required activities and reduces avoidable operational delays.

Q. How does the Company propose to address access issues through the proposed amendment to Tariff Rule 8?

A. To address these matters, the Company is proposing to amend Rule 8 of its tariff (entitled "Access to Premises") to expressly clarify the conditions necessary to ensure that Company personnel have "free access" to customer meters and other Company-owned equipment located on customer premises. Complete text of the Company's proposed amendment to Tariff Rule 8 is found in National Fuel Exhibit F, which is sponsored by Wanya' D. Bruce in National Fuel Statement No. 15.

More specifically, the proposed amendment to Rule 8 adds language to make clear that "free access" includes not just physical denial of access to customer premises (e.g., meter behind locked door or customers not allowing Company personnel into their premises), but also means that Company personnel shall be free from unsafe or hazardous conditions when inspecting, repairing, removing, or reading its meters and facilities. The amendment to Rule 8 makes clear that, among other things, the presence of aggressive animals, significant insect or rodent infestation, the display or brandishing of firearms or weapons in a threatening manner, or the presence of excrement, debris, or other unsanitary conditions that may reasonably pose a threat to the safety or health of Company employees or agents.

Q. Why is clarification of access rights under Rule 8 appropriate at this time?

A. Clarification of access rights under Rule 8 would support Operations' ability to continue performing its responsibilities safely, efficiently, and consistently. Clear tariff language

helps ensure that required work can be performed without unnecessary delay while supporting prudent management of the Distribution System.

Q. Is the Company seeking recovery of costs or changes to rates through this tariff amendment?

A. No. The Company is not seeking recovery of additional costs or changes to rates. The requested clarification is intended solely to support effective and prudent execution of existing operational responsibilities.

Q. Are there any additional initiatives that you want to highlight at this time?

A. Yes, although very preliminary at this point but consistent with recommendations from the most recent Commission management audit, the Company is evaluating advanced and automated metering infrastructure ("AMI") technologies. The Company is working with an external consulting firm that specializes in metering systems to assess available technologies, potential operational impacts, and long-term planning considerations. This effort is focused on evaluation and planning to inform prudent future decision-making, rather than immediate system-wide deployment.

Q. Does this conclude your direct testimony at this time?

A. Yes.

National Fuel Leak Database and Distribution Corporation Annual DOT Reports

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 16-R

Rebuttal Testimony of
Jason Scouten

Topics Addressed:
System Overview
Safe and Reliable Service
System Integrity and Damage Prevention
Construction Execution
Operations Performance Metrics
Initiatives

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Jason Scouten. My business address is 225 Wayne Street, Erie, Pennsylvania 16507.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 16, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. I intend to provide my perspective in response to CAUSE-PA Statement No. 1 (Geller Direct) where Mr. Geller recommends the Public Utility Commission ("Commission") reject the new tariff language, OCA Statement No. 5 (Wise Direct) where Ms. Wise recommends the Company focus on increasing the completion rates of meter readings and addressing increases in customer outages, and I&E Statement No. 4 (Burket Direct) where Mr. Burket recommends the Company take positive steps to reduce restoration costs, break down replacement costs into multiple categories and track and analyze the independent costs, implement a pilot program using Smart Remote Methane Detection ("SRMD") in a geographic region, and consider using Advanced Metering Infrastructure ("AMI") technology and LoRaWAN or other communication network technology for the notification methodology in the proposed pilot. Mr. Burket additionally notes the New

York Division's experience with methane detector programs and pilots, and notes that the company is to file quarterly reports with the Commission at this docket, within 30 days of the end of each calendar quarter, beginning at the end of 2026 and ending at the end of 2031.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. No.

III. TARIFF RULE 8 LANGUAGE UPDATE

Q. Do you agree with Mr. Geller's recommendation to reject the new tariff language or his characterization of the proposed language as "subjective," as described in his testimony?

A. No. Mr. Geller's testimony mischaracterizes the effect of the proposed Rule 8 language as introducing subjectivity. The Company's proposal does the opposite. By defining specific, observable safety conditions, the proposed revisions replace ambiguity with clear, objective, and consistently enforceable standards that establish when access is required and when safety conditions justify delay or refusal of service.

In this regard, Mr. Geller's testimony reflects a fundamental misunderstanding of the practical and unavoidable conditions under which National Fuel employees perform their duties. National Fuel personnel routinely must enter customer properties to inspect customer-owned gas systems and appliances, which are frequently located in basements or enclosed areas. These environments are often beyond the Company's control and, in

many cases, present serious health and safety risks, including unsanitary conditions, sewage exposure, and accumulated refuse, mold, and infestations.

These hazards are not speculative, theoretical, or vague. They are real-life threats and hazards that National Fuel's field operations team encounters in customer premises. As noted in my initial testimony, the Company's goal in adding additional detail to Rule 8 is not to substantively expand the universe of conditions which constitute "non-access," but to provide clarity, direction, and guidance on the same. The Company's position, therefore, is that when safety standards and access requirements are framed in general or undefined terms, customers and landlords may not understand that these conditions constitute legitimate safety risks that can limit or delay service; in other words, it fosters ambiguity with respect to the customers who do not understand what "access" under the tariff requires. Beyond leaving ambiguity for the customers, it also places National Fuel employees in the untenable position of confronting hazardous environments without advance mitigation, preparation, or customer / landlord accountability.

For these reasons, contrary to the assertions made in Mr. Geller's testimony, adding specificity, as National Fuel proposes in its update to Rule 8 facilitates both customer knowledge and expectations as well as protects Company personnel. To be sure, clearly defined safety conditions provide:

- Clear, intelligible standards which govern the basic expectations governing the compact between utility and customer (therefore providing clear expectations and responsibilities to customers and landlords that unsafe conditions inside private property such as those enumerated in the revised text of Rule 8 constitute a barrier to inspection or service;

- Objective criteria that employees can rely upon, reducing the need for onsite judgment calls in unsafe environments; and
- Consistent enforcement, which minimizes conflict and reduces the likelihood of confrontational or prolonged exposure situations.

By explicitly identifying conditions such as excrement presence, excessive debris or rubbish, insect or rodent infestations, or other biohazards as safety risks, the Company reduces confusion and provides greater certainty and understanding to property owners of the longstanding expectation that they are to maintain accessible and sanitary conditions to Company-owned facilities/meters in connection with receiving service from the Company. This also decreases the number of instances in which employees are sent into hazardous settings only to refuse work after arrival due to scenarios that unnecessarily increase exposure and risk.

Accordingly, the request for greater specificity under Rule 8 is not an attempt to expand utility discretion, but rather a necessary clarification that improves predictability, transparency, and safety outcomes. Failure to define these risks not only undermines employee protection, but also takes agency away from customers, as they are left without a shared understanding of what conditions are unacceptable and why.

Greater specificity therefore supports, rather than contradicts, the Commission's commitment to worker safety and reasonable, customer-understood utility practices.

IV. FOCUS ON METER READING RATES

Q. Do you agree with Ms. Wise's assessment on improving Meter Reading rates?

A. No. As an initial matter, comparing National Fuel's "meter reading" performance to other utilities is not exactly a clean "apples-to-apples" comparison because the Company has maintained a model that emphasizes in-person meter reads (in part to promote meter access and inspection). More specifically, the Company conducts meter reading through scheduled in person visits, during which company personnel physically inspect each meter. Although these visits can present logistical challenges, in person meter reading remains an essential safety function. During each visit, employees inspect company facilities, assess the surrounding area for excavation activity or other hazards, and carry methane detection equipment while at the meter location.

The Company has evaluated the potential implementation of automated meter reading technologies. While such systems could reduce the already low percentage of meters not read within six months (less than 1%) and within twelve months (less than 0.2%), the associated costs to ratepayers would be substantial. Additionally, automated systems would significantly reduce the frequency of onsite visits, thereby diminishing the safety benefits provided by regular physical inspections.

In recent years, National Fuel has expanded its customer engagement efforts to improve access for meter reading. The Company routinely contacts customers to schedule appointments at times that accommodate customer availability. National Fuel has also increased the number of off-hour appointment options and reduced appointment windows to enhance convenience and improve compliance with scheduled meter reading

requirements. The Company attempts to read meters during evenings and weekends to accommodate customer appointments. Additionally, the Company has moved nearly 20% of its inside meters outside since 2021.

Q. Are the slight increases in outages (0.046%) that OCA witness Wise references a concern to the Company?

A. The Company has experienced small year-over-year increases in service outages over the past three years. The rise has been very slight, and it is important to note that it is not always tied to operational deficiencies. Severe weather events can play a role and naturally drive fluctuations in outage numbers. One clear example occurred in December 2024, when Erie County experienced an extreme lake-effect snow event that dropped up to six feet of snow in a very short period of time, effectively paralyzing the region. Conditions like these make it significantly harder for crews to access infrastructure, respond to leaks, and restore service, which in turn contributes to temporary increases in outage counts.

Another key factor is the Company's and the Public Utility Commission's increased emphasis on repairing leaks more quickly, particularly in situations like third-party line hits. In recent years, crews have been encouraged to shut off valves rather than excavating and squeezing off the main. While this approach can improve safety and reduces risk during active leak events, it also results in more customer outages when these incidents occur. The Company continues to focus on and does have improved results in damage prevention which improve overall third-party line hits.

In summary, the Company's system and employees are resilient and handle challenging weather events well when customers need heat the most.

V. RESTORATION COSTS

Q. Do you agree with Mr. Burket's assessment on reducing restoration costs?

A. Generally speaking, I agree with Mr. Burkett's assessment on reducing restoration costs, and I note that the Company currently follows all of Mr. Burket's recommendations.

For example, National Fuel actively participates in countywide utility coordination meetings, works directly with PennDOT and municipal public works departments, and routinely coordinates construction schedules to minimize conflicts, disruptions, and associated costs. In addition, National Fuel frequently secures private rights-of-way where it is feasible to avoid unnecessary disturbance to public sidewalks and roadways. This practice reduces restoration expenses and enhances safety for both the public and National Fuel employees and contractors during construction and on an ongoing basis for Operating and Maintenance activities.

Beyond these coordination efforts, National Fuel categorizes and tracks replacement costs, such as materials, labor, restoration, and permitting where applicable on an overall and project specific basis. The Company does analyze cost drivers, looks for potential efficiencies, and negotiates cost savings where appropriate. Additional factors that are key to the evaluation are pipeline risk reductions, environmental impacts and permitting, and future pipeline and employee safety.

Where feasible and safe, National Fuel also evaluates and employs trenchless construction methods, including pipe insertion and directional boring, to further reduce surface disruption, limit restoration requirements, and improve overall project efficiency.

VI. SMART REMOTE METHANE DETECTION

Q. Do you agree with I&E witness Burket's recommendations to pilot Smart Remote Methane Detection, invest in Advanced Metering Infrastructure Meter or LoRa WAN for communicating with and report quarterly to the Commission for years 2027 through 2031?

A. Not at this time. The Company does not dispute that methane detection technologies may provide an additional layer of risk mitigation, and, in this regard as Mr. Burket noted, the Company is currently operating a methane detector pilot program in New York. Given that this pilot is still underway and is intended to evaluate feasibility, operational requirements, costs, and potential risks, it is not clear that conducting a duplicative pilot in a separate jurisdiction would yield materially different or additional information.

Additionally, there is active legislation in Pennsylvania that would require property owners to install methane detection consistent with the National Fire Protection Association (NFPA) 715. House Bill 1522 was passed on April 15, 2026, and is now under consideration in the Senate as Senate Bill 1128. The current compliance date is January 1, 2027. If property owners will soon be required to install methane detection devices, it may not be reasonable or cost-effective for utilities to simultaneously invest in separate methane-detection installations that would serve the same purpose at additional cost to ratepayers.

Moreover, any utility funded pilot would reach only a very small portion of National Fuel's customer base, limiting its overall effectiveness and value. Implementing a broader program would require substantial investment in infrastructure, IT systems, and field hardware investments,making an expanded pilot unrealistic at this time.

Additionally, it is important to note that the investment required to install SRMD technology, AMI)meters, or LoRaWAN communication systems for National Fuel's Pennsylvania customers would be substantial. The capital costs associated with deploying these technologies would be roughly equivalent to the cost of replacing more than 150 miles of main and associated services, as well as relocating several hundred meters to exterior locations. This level of expenditure would represent a significant redirection of resources away from core system replacement and safety enhancement activities.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes.

NATIONAL FUEL STATEMENT NO. 17

MATTHEW W. STOOPS JR.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 17

Direct Testimony of Matthew W. Stoops Jr.

Topics Addressed: **Universal Service Programs**
Customer Initiatives

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Matthew W. Stoops Jr. My business address is 1100 State Street, Erie, PA 16501.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") as Consumer Business Senior Manager.

Q. Please provide your educational background.

A. I graduated from Gannon University in Erie, PA in 2010 with a Bachelor of Science Degree in Sports Management and Marketing.

Q. Please provide your professional experience.

A. I joined National Fuel in 2011 as a supervisor in the Consumer Business department which encompasses the call center, customer accounting, quality assurance, and administration of universal service programs. I have held various roles in the Consumer Business department. Over the last few years I have primarily focused on managing the training department, call monitoring, and employee engagement.

Q. Have you testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. No. I have not testified in any other proceedings.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your testimony.

A. The purpose of my testimony is to provide an overview of the NFGDC Pennsylvania Division's ("National Fuel" or "Company") Universal Service Programs, specifically the Customer Assistance Program ("CAP") and Low-Income Usage Reduction Program ("LIURP"). In addition, I will provide an overview of the recent customer initiatives.

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. No.

III. UNIVERSAL SERVICE PROGRAMS

Q. Please provide an overview of the Company's CAP.

A. CAP is National Fuel's customer assistance program for income-eligible customers, which National Fuel offers per the terms of its Universal Service and Energy Conservation Plan approved by the Commission. This program was adopted by National Fuel in April of 2024 and replaced the previous Low Income Residential Assistance ("LIRA") Program. CAP offers affordable monthly payments and the opportunity to have outstanding balances due at the time of enrollment forgiven. A participant's bills while enrolled in CAP could be reduced to 4% or 6% of their monthly income, based on verified income and household size. This percentage is commonly referred to as the customer's "energy burden." The participant will either pay a percentage of income amount or their average bill, whichever is less. The minimum CAP payment amount is $12. In addition to discounted bills, CAP includes pre-program arrearage forgiveness and

energy education activities. The goal of the program is to increase customer affordability by targeting a 4% energy burden for customers in the 0% to 50% range of the federal poverty income guidelines ("FPIG") and a 6% energy burden for customers in the 51% to 150% FPIG range. In September 2025, there were approximately 5,700 customers enrolled in CAP. That number increased to just over 6,200 customers by the end of December 2025.

Q. Is National Fuel doing anything to increase participation in CAP?

A. Yes. In January 2025, National Fuel developed and implemented an online application for CAP, which allows customers to submit their applications electronically. In addition, on July 30, 2024, National Fuel communicated to the PAPUC its election to participate in the Department of Human Services ("DHS") Low Income Home Energy Assistance Program ("LIHEAP") data sharing protocol. The Company has worked with DHS to receive income and household information for households that grant consent to share the information. This information is intended to allow customers to enroll or recertify in CAP without having to submit a new application or proof of income-eligibility. The Company expects these changes will help improve program enrollment.

Q. Is the Company planning any additional changes to its CAP?

A. No. However, in January of 2025 the Company took over the administrative work for CAP that was previously completed by a third-party vendor. The Company expects that this change will help sustain and improve program enrollment.

Q. How is CAP funded?

A. CAP is funded via Rider F – CAP Discount Charge. Rider F is updated quarterly and effective each February 1, May 1, August 1, and November 1 of the year. The charge is also updated whenever there is a change to the Residential Sales Service Rate Customer Charge (basic service charge), Distribution Charge (cost to deliver gas), Natural Gas Supply Charge (cost of gas), or Gas Adjustment Charge (adjustment for over/under collected purchased gas costs).

Q. Is National Fuel proposing any changes to how CAP costs are recovered?

A. No.

Q. Please explain National Fuel's LIURP.

A. LIURP is a weatherization program designed to assist income-eligible customers to reduce their energy usage, thus reducing their bills. Through LIURP, eligible customers receive energy audits and education, heating system safety checks, wall and/or attic insulation, and other energy conservation measures. In addition to being income-eligible for LIURP, customers need to have annual gas consumption greater than or equal to 1,300 Ccf. In an effort to provide additional assistance to customers and expand the LIURP eligibility, the Company obtained a temporary PAPUC approval in January 2020 for a new pilot program, Low Consumption LIURP ("LC-LIURP"). Per Order of the Commission entered on December 21, 2023 at Docket No. M-2021-3024935, the LC-LIURP pilot program was extended through the duration of the 2022-2026 Universal Service and Energy Conservation Plan. The goal of this program is to identify and assist

households with moderate consumption (annual consumption greater than or equal to 900 Ccf but less than 1,300 Ccf) in which the residence has a similar amount of square footage equal to the identified yearly consumption. The Company bids LIURP work out to community agencies and private contractors to obtain the lowest price. National Fuel is focused on continuously improving its Universal Service Programs by participating in outreach activities and various initiatives to encourage and increase participation for eligible customers.

Q. Provide an overview of LIURP expenditures.

A. As of December 2025, the Company has invoiced contractors for amounts exceeding $2 million, representing a significant increase compared to just over $1 million in 2024. While National Fuel views this growth in contractor spending as a positive development, the organization remains cautious when projecting expenditures for 2026. This is due to the unique circumstances in 2025, when a government shutdown resulted in additional work being redirected from community agencies to the Company, potentially inflating the current year's figures.

Q. How is the LIURP funded?

A. LIURP is funded through base rates. Consequently, National Fuel has taken care to ensure that LIURP carefully balances assisting eligible customers with the effect the costs associated with LIURP have on the rates paid by non-participating customers. The budget for LIURP was increased by $91,000 to $1,391,000 effective August 1, 2023

following the rate case settlement approved by the Commission on June 15, 2023 in Docket No. R-2022-3035730.

Q. Is the Company proposing any changes to LIURP?

A. No.

Q. Please provide an overview of the Neighbor for Neighbor Heat Fund.

A. The Neighbor for Neighbor Heat Fund ("Neighbor for Neighbor") is a community program designed to provide grant assistance for home-heating emergencies to qualifying Pennsylvanians within National Fuel's service territory. The program can provide assistance to prevent the disconnection of gas service, pay current or past-due energy bills (excluding electric utilities), or purchase home heating fuel of any kind. The program is administered by the Greater Erie Community Action Committee ("GECAC"), located in Erie, Pennsylvania. GECAC maintains client data, manages all incoming and outgoing funds for the program, and issues monthly financial and casework reporting. Recommendations and guidance are provided by an advisory committee, comprised of representatives from human services and community action agencies across National Fuel's service territory, based on community needs.

Q. How is Neighbor for Neighbor funded?

A. The program is funded by public donations, with National Fuel Gas Company shareholders providing an annual sum of $92,000 to be used within National Fuel's territory. Customers may add $1, $2 or $5 donations to their gas bill payment, designated

to the Neighbor for Neighbor Heat Fund. Donations can also be made directly to GECAC in support of this program.

Q. Explain the Neighbor for Neighbor application and grant process.

A. The fund works with a network of community agencies to screen applicants for grants. Each agency will fill out applications with their clients and submit them to GECAC for final approval and processing. Applicants can also be referred directly from National Fuel to the community agency. National Fuel's customer service agents will complete a warm referral to the appropriate agency. If an application is approved, the grant will be sent directly to the heating source vendor. The intake agency will contact the heating vendor to place a hold on the applicant's account to prevent the accumulation of additional fees or charges while their payment is being processed and to ensure there is no interruption of service. Grants for assistance are limited to one per twelve-month period, per household. Maximum grant allowance for National Fuel customers is $500. Non-customer applicants may be eligible to receive up to $300 in grant funding. Grants can cover alternative energy sources (excluding electric) and can also go toward other natural gas supplier's bills, as long as the applicant resides within National Fuel's service territory.

Q. Provide an overview of the spending for the Neighbor for Neighbor program.

A. National Fuel maintains records regarding the number of grants issued and the aggregate monetary value of such grants under the Neighbor for Neighbor program. These figures are compiled and reported in accordance with the Company's fiscal year, which spans

from October 1 through September 30. As of September 2025, the Neighbor for Neighbor program had issued a total of 655 grants, amounting to $255,094. For comparative purposes, during the fiscal year ending September 2024, the program awarded 349 grants, with a total disbursement of $128,119. These figures demonstrate the Company's ongoing commitment to helping eligible households through the Neighbor for Neighbor program.

Q. Provide an overview of the outreach efforts National Fuel engages in.

A. National Fuel has implemented a comprehensive outreach initiative aimed at improving community awareness of its programs and payment options to support customers in need. This initiative includes participation in numerous community-based events across its 14-county service territory, educational outreach sessions with state and local organizations, and various other channels such as correspondence, digital marketing, social media, and community partner events.

Q. How does the Company evaluate the effectiveness of its outreach efforts?

A. To assess the effectiveness of these outreach efforts, National Fuel has collaborated with its Universal Service Advisory Committee ("USAC") to obtain feedback on Universal Service Programs. Additionally, the Company tracks each outreach activity, including the date and approximate attendance, on an annual spreadsheet. These evaluation methods are designed to provide valuable insights into the impact of National Fuel's outreach activities, helping the Company to refine its strategies and ensure that its efforts make a

meaningful difference in reducing energy costs and burdens for the most vulnerable populations.

IV. CUSTOMER INITIATIVES

Q. Please explain any new initiatives that the Company has implemented or planned to improve customer experience.

A. The Company is currently upgrading its online customer portal and sees these improvements as a critical component necessary to support our customers' experience in the future.

Q. How does the customer portal project benefit customers?

A. The upgraded customer portal should enhance self-service functionality. The dynamic of how customers interact with utilities is continuing to change, and customers are increasingly looking for more convenient self-service methods. Investing in an improved customer portal is a strategic move for long-term efficiency. As we transition routine inquiries to self-service channels, we enhance the customer experience by offering alternatives to the traditional call center hours of operation. This also reduces the strain on call center resources. Over time, this leads to more streamlined operations, improved scalability, and higher customer satisfaction. A robust self-service portal allows our customer service team to focus on more complex customer needs, enhancing service quality. By adding features and streamlining processes, customers will be empowered to find answers independently and submit commonly utilized service requests at their convenience.

Q. Are there limitations to the existing customer portal?

A. The current portal that is being upgraded is hosted by our third-party payment vendor which has limitations on expanding functionality and self-service options specific to the utility industry. The new portal will also enable real-time synchronization of data and eliminate the need to exchange flat files with the current vendor. The new portal will support shorter timeframes between functionality releases, ensure timely implementation of customer feedback and provide shortened timeframes for responding to regulatory requirements.

Q. Does this conclude your direct testimony at this time?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 17-R

Rebuttal Testimony of Matthew W. Stoops Jr.

Topics Addressed:

Universal Service Programs and Low-Income Customers:
- **Identification of Low-Income Customers and Enrollment of Low-Income Customers in Assistance Programs**
- **Customer Assistance Program**
- **Low-Income Usage Reduction Program**
- **Neighbor for Neighbor Hardship Fund**

Other Issues:
- **Call Center Performance**
- **Payment Plans**
- **Payment Fees**
- **Outreach to One-Time Bill Credit Customers**

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Matthew W. Stoops Jr. My business address is 1100 State Street, Erie, PA 16501.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 17, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q. Please describe the purpose of your rebuttal testimony.

A. My rebuttal testimony responds to the direct testimony of other party witnesses. Specifically, I respond to portions of the direct testimony of Harry S. Geller, CAUSE-PA St. No. 1, submitted on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"), the direct testimony of LeeAnn Wise, OCA St. No. 5, submitted on the behalf of the Office of Consumer Advocate ("OCA"), and the direct testimony of Jennifer Warabak, PWPTF St. No. 1, submitted on behalf of the Pennsylvania Weatherization Providers Task Force ("PWPTF"). My testimony will focus on issues raised related to the Company's Universal Service Programs, low-income customers, call center performance, and payment fees.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes.

- National Fuel Exhibit MS-1R – Response to CAUSE-PA-6-04;
- National Fuel Exhibit MS-2R – Response to CAUSE-PA-5-01;
- National Fuel Exhibit MS-3R – Response to CAUSE-PA-I-06 (Revised);
- National Fuel Exhibit MS-4R – Response to CAUSE-PA-3-26;
- National Fuel Exhibit MS-5R – Response to CAUSE-PA-3-27;
- National Fuel Exhibit MS-6R – Response to CAUSE-PA-6-02;
- National Fuel Exhibit MS-7R – Response to CAUSE-PA-1-26 (Second Revised);
- National Fuel Exhibit MS-8R – Response to CAUSE-PA-2-07;
- National Fuel Exhibit MS-9R – Response to CAUSE-PA-2-14;
- National Fuel Exhibit MS-10R – Response to CAUSE-PA-2-10;
- National Fuel Exhibit MS-11R – Response to CAUSE-PA-2-08;
- National Fuel Exhibit MS-12R – Response to CAUSE-PA-2-21;
- National Fuel Exhibit MS-13R – Response to CAUSE-PA-1-02 and CAUSE-PA-4-19;
- National Fuel Exhibit MS-14R – 2024 PUC Customer Service Performance Report, Residential Payment Agreement Requests per Customer;
- National Fuel Exhibit MS-15R – Response to OCA-3-08;
- National Fuel Exhibit MS-16R – Response to CAUSE-PA-4-20; and
- National Fuel Exhibit MS-17R - Bill Insert Examples.

III. IMPACTS OF THE PROPOSED BASE RATE INCREASE ON LOW-INCOME CUSTOMERS

Q. Please summarize the concerns raised by CAUSE-PA witness Geller related to the general impact that he alleges the Company's proposed base rate increase will have on the Company's low-income customer population.

A. In his testimony, Mr. Geller claims that the Company's proposed rate increase will have a severe and detrimental impact on low-income families across its service territory. He also argues that it would be unjust and unreasonable to allow the Company any rate increase without the Company detailing the impact of its proposed rate increase on low-income customers. In addition, Mr. Geller claims that the Company's existing rates are already unaffordable, analyzing the demographics of National Fuel's service territory using a Self Sufficiency Standard instead of Federal Poverty Level ("FPL") data (CAUSE-PA St. 1 at 8-9), and citing energy burden statistics (CAUSE-PA St. 1 at 16-17).

Q. Do Mr. Geller's various concerns accurately depict the impact the Company's proposed base rate increase will have on low-income customers?

A. No. The Company believes that its Universal Service Programs are well designed and effectively assist the low-income population and will help alleviate the impact of a base rate increase. These programs include the Customer Assistance Program ("CAP"), the Low-Income Usage Reduction Program ("LIURP"), and the Neighbor for Neighbor Heat Fund. Additionally, there are external programs available, such as the Low-Income Home Energy Assistance Program ("LIHEAP"), which the Company actively promotes and which also provides bill assistance to low-income customers.

In addition, the Company disagrees with Mr. Geller's use of a Self Sufficiency standard instead of FPL data to measure the impacts of the rate increase. The FPL population and low-income household data is provided in the Pennsylvania Public Utility Commission's ("Commission") 2020-2024 American Community Survey 5-Year Estimates and is sourced from the United States Census Bureau. The Company uses this data to apply the same percentage of low-income households per county to the number of the Company's estimated low-income households per county. In many counties, the Company is not the service provider for the entire county. Furthermore, the demographics of the geographic area could impact this data. The FPL is used widely among other utilities and other programs throughout the state (e.g., Medicaid, Chip, SNAP, school lunch program, LIHEAP, and the Children's Health Insurance Program). The Commission also uses FPL guidelines for collection processes, security deposits, universal service eligibility, reporting and compliance. As such, the Company maintains that Mr. Geller's use of a Self Sufficiency Standard in analyzing impacts on low-income households is less reliable than FPL data, which is regularly used by assistance programs and government agencies to identify low-income customers.

IV. IDENTIFICATION OF LOW-INCOME CUSTOMERS AND ENROLLMENT OF LOW-INCOME CUSTOMERS IN ASSISTANCE PROGRAMS

Q. Do any of the other parties testify regarding the Company's performance in identifying low-income customers and enrolling low-income customers in its Universal Service Programs?

A. Yes. CAUSE-PA witness Mr. Geller addresses this issue in his direct testimony.

Q. Does the Company agree with these concerns?

A. No. I will address the various concerns raised by CAUSE-PA below.

Q. As an initial matter, please describe how National Fuel currently identifies its confirmed low-income customers.

A. The Company identifies low-income customers by collecting self-reported income information from customers through numerous points of contact, including when customers contact the Company to evaluate eligibility for assistance programs and/or payment arrangements, establish service when the customer has previous debt on another Company account, and during collections and reconnections. During these contacts, the Company also makes referrals to appropriate assistance programs if the customer's reported income information indicates they may be eligible. Additionally, the Company systematically identifies customers as low-income when it receives LIHEAP, CRISIS, or Supplemental payments from DHS for the customer. Lastly, all customers enrolled in the Company's CAP program are systematically identified as low-income.

Q. Does Mr. Geller recommend any changes to the Company's procedures for identifying low-income customers?

A. Yes. On pages 12-13 of CAUSE-PA Statement No. 1, Mr. Geller recommends that the Company (1) begin screening all new and moving customers for income level at the time service is established; (2) routinely screen customers for income information on all non-emergency calls and inquire about income updates if their income information is already noted in their account; and (3) when accounts are established and annually thereafter,

notify customers of the availability of low-income programs and request that customers voluntarily self-disclose any changes to income information; and (4) refer all customers identified as low-income through the screening process be referred for enrollment in the Company's Universal Service Programs. Mr. Geller states that customers should be able to opt out of this income screening after being informed that they may be eligible for a lower rate, debt forgiveness, or energy efficiency measures.

Q. Do you agree with these recommendations?

A. No. Screening all customers for their income level during all non-emergency calls would significantly increase call handle time, negatively impact customer service levels, require additional call center employee training, and ultimately require the hiring of additional call center employees to account for the increase in call handle time. Asking customers to provide income information on calls not related to collections may also be considered invasive and may offend callers, which could lead to a negative customer service experience. Further, although Mr. Geller's proposal includes an opt out provision, it does not limit the number of times the Company must screen a customer for income or updates to income in a given period, which means the Company could be required to screen all customers who do not opt out for their income or updated income, regardless of the date of their last contact.

In addition, CAUSE-PA's proposal would introduce additional administrative costs, because it would require the Company to implement system changes to track and identify which customers have received the required annual notification and produce the notification via some channel. A large portion of the customer population does not

engage with the Company until there is a need. Most customers, including lower income customers, are not payment troubled and historically have not responded to prior outreach. Indeed, only 3% of the Company's customers are identified as payment troubled.

As part of the Company's current procedures, customers are already asked for income information any time they contact the Company related to being unable to pay their bill, inquire about a termination notice or payment arrangement, request an extension for bill payment, and are referred to Universal Service Programs. As previously mentioned, the Company also identifies all customers receiving LIHEAP or CRISIS grants as low-income. The Company also already sends annual notifications to all customers through bill inserts (National Fuel Exhibit MS-17R), explaining payment options and the availability of bill assistance through Universal Services Programs. The Company is continuing to engage in outreach and increasing awareness of its Universal Service Programs; however, not all customers want to be referred to or participate in these programs, and increasing the number of confirmed low-income customers does not necessarily indicate improvement in program participation.

For those customers that have already provided income information in the past, income information is updated as needed through conversations with the customer, to assess their eligibility for a new payment arrangement, and to reverify income for continuing enrollment in CAP. This is accomplished through natural conversations that are responsive to customer needs and based on the individual customer's circumstances. By contrast, CAUSE-PA's proposal would require the Company to regularly ask all

customers to disclose income information and provide information about the availability of low-income programs, regardless of the reason the customer contacted the Company.

In summary, the Company's current processes are already sufficient to identify and screen customers experiencing financial hardship who proactively contact the Company, as income information is routinely obtained in relevant billing and assistance-related interactions and through ongoing outreach efforts. While the Company continues to enhance awareness and participation in Universal Service Programs, it recognizes that not all customers elect to engage in such programs. Nevertheless, the Company finds it reasonable to evaluate the feasibility of expanding income screening to all customer interactions, including service establishment, moves, and non-emergency calls. However, prior to implementation, any such evaluation must carefully assess the potential impacts on call handle time, required staffing levels to maintain call center performance standards, and an appropriate and measured timeline for implementation.

V. CUSTOMER ASSISTANCE PROGRAM (CAP) ENROLLMENT AND RECERTIFICATION

Q. Does any party raise concerns or propose modifications to the Company's existing CAP program?

A. Yes. CAUSE-PA witness Mr. Geller raises a number of issues regarding the Company's CAP program in his direct testimony, specifically concerning the program's enrollment and recertification methods.

Q. Is National Fuel already undertaking efforts to increase participation in CAP?

A. Yes. On July 30, 2024, National Fuel notified the Commission of its election to participate in the Department of Human Services ("DHS") LIHEAP data sharing protocol. Since that time, the Company has worked with DHS to receive income and household information for households that grant consent to share their information. This information is intended to allow customers to enroll or recertify in CAP without having to submit a new application or proof of income-eligibility. However, due to potential discrepancies with the data, the Company did not begin using the data from DHS until August 2025 (National Fuel Exhibit MS-1R). The Company is now using this data on an ongoing basis and expects these changes will help improve program enrollment. In addition, and as stated in my direct testimony, National Fuel Statement No. 17, in January 2025, National Fuel developed and implemented an online application for CAP, which allows customers to submit their applications electronically, and also took over the administrative work for CAP that was previously completed by a third-party vendor.

Q. Does Mr. Geller make recommendations regarding CAP enrollment?

A. Yes. Mr. Geller recommends specific benchmarking goals for CAP enrollment based on the percentage of estimated low-income customers in the Company's service territory. CAUSE-PA St. 1 at 5-9. Specifically, Mr. Geller recommends that the Company be required to increase its CAP enrollment by a minimum of 5% each year as a percentage of its estimated low-income customers, and for the Company to set forth a plan to

accomplish this goal through increased outreach, education, and implementation of his income screening proposal described above.

Q. Does the Company agree with this recommendation?

A. No. The Company disagrees with this recommendation. While the Company agrees that increased CAP enrollment would be a positive outcome, the Company cannot control or predict the levels of CAP enrollment and cannot compel customer participation on such a prescriptive timeline. There are many reasons that eligible customers may not choose to enroll in CAP. By enrolling in CAP, customers are under stricter collection processes. No payment arrangements or extensions are offered, and customers are subject to termination after one missed CAP payment. Customers must agree to be enrolled and understand what is expected as a participant of the program before enrollment. CAP customers are also required to provide income documentation to enroll and recertify to ensure that they are eligible to receive a discount and debt forgiveness, which helps control the burden on other customers.

In addition, Mr. Geller's benchmarking goals are not reasonable or achievable. In his testimony, Mr. Geller states that the Company's estimated low-income customer population is 57,542, which means his benchmarking goal would require the Company to increase its total CAP population by a *minimum* of 2,877 customers into CAP each year (i.e., 5% of 57,542). However, as of January 2026, 6,352 customers were enrolled in the Company's CAP. Mr. Geller's proposal would require the Company to increase its overall CAP enrollment from 6,352 to 9,229 in a single year, or by more than 45%. To meet this goal, the Company would also need to replace any customers that left CAP

during the year, either by defaulting, moving or stopping service, or voluntarily removing themselves from the program. This proposal is not feasible and improperly places the onus for CAP enrollment on the Company, which cannot control whether customers choose to sign up for or remain enrolled in the program. Moreover, the goal is improperly based on the population of estimated low-income customers, who by definition have not been confirmed as eligible for CAP. While the Company disagrees with the recommendation to benchmark CAP enrollment, any reasonable goal would use the Company's current and historic enrollment levels as a starting point, not an arbitrary percentage of the estimated low-income population. Importantly, Mr. Geller has not provided any evidence showing that increased outreach, education, or screening could achieve his benchmarking goal or address the inevitable budget increases and programmatic changes that would be necessary to achieve such a goal.

As such, and contrary to Mr. Geller's recommendation, the Company should be evaluated on its efforts and outreach to customers and not be required to meet unattainable obligations. The Company continues to educate customers about the benefits of CAP and other Universal Services Programs and is exploring options to improve outreach to customers who are at or below 150% of the FPL that include Universal Service Program education calls to customers with high balances, mailings that contain CAP program information and targeting of customers with no income recorded. Ultimately, however, if a customer chooses not to apply or recertify for CAP, it is outside of the Company's control.

Q. Please address CAUSE PA witness Mr. Geller's statements on page 27 of CAUSE-PA Statement No. 1, regarding the Company's enrollment statistics for CAP from 2025.

A. In 2025, the Company referred over 8,000 customers to its CAP program. Of those referrals, 2,385 returned the application and were enrolled during 2025 (National Fuel Exhibit MS-2R). The Company began processing data sharing files from DHS in August of 2025. Since that time, the Company has seen an increase month over month in CAP enrollments. Between July 2025 and January 2026, the Company increased its CAP enrollment by 698 customers (National Fuel Exhibit MS-3R). The Company expects that completed applications and enrollments will continue to increase as a result of the DHS data sharing program.

Q. Does Mr. Geller recommend that the Company take specific actions to improve its enrollment of low-income customers in CAP?

A. Yes. CAUSE-PA witness Mr. Geller makes several recommendations for improving CAP enrollment. CAUSE-PA St. 1 at 72.

Q. Please describe Mr. Geller's recommendations.

A. Mr. Geller recommends the following to improve CAP enrollment:

a) Improve the CAP recertification process to include an online recertification option, include a self-addressed stamped envelope with mailed CAP recertification forms, and expand recertification outreach to include email and text messages.

b) Require that National Fuel expand and improve its outreach to customers who have elected to share LIHEAP data with the Company but who are not enrolled in CAP to include mail, email, telephone call, and text message outreach and implement a more simplified enrollment process.

c) Require that National Fuel use the LIHEAP data it receives to recertify CAP eligibility for all CAP customers participating in LIHEAP data sharing regardless whether the customer is due to recertify eligibility.

d) Require that National Fuel establish benchmarking goals to increase CAP enrollment by a minimum of 5% of its estimated low income population each year.

e) Require that National Fuel track and report to its Universal Services Advisory Committee ("USAC") data regarding applications and recertifications.

f) Require that National Fuel track and report data regarding the total number of CAP accounts with arrears, the total dollar amount in debt for CAP customers, and the average amount of debt for CAP customers.

g) That the Commission commence an audit of National Fuel's collections and universal service program reporting to assess the need for additional corrective actions.

Q. Does the Company agree with Mr. Geller that additional outreach is needed for CAP recertification?

A. No, it does not. First, the Company has already implemented the majority of Mr. Geller's recommendations. The Company sends recertification information, which includes a

CAP application and a letter describing how to recertify online, to customers who are due for recertification, either by postal mail or email. If the information is mailed to the customer, the Company provides a self-addressed, stamped envelope to return the information. The Company emails the recertification information to customers that have consented to receive electronic communication from the Company. The Company's online customer portal, which is accessible through both desktop and mobile browsers, allows customers to complete a CAP application and upload any necessary documents for enrollment or recertification. Thus, the Company already sends recertification information to customers that are due for recertification based on their indicated preference, by postal mail or email, and already has an online recertification process. To the extent Mr. Geller is proposing that the Company reach out to recertifying customers using all recommended methods (email, mail, and text message), the Company agrees to begin sending customers recertification information by both mail and email when the customer consents to receiving electronic communications from the Company.

However, the Company does not currently have the ability to send text communications to these customers. This functionality would require system changes that would include identifying and selecting a platform to send text communications as well as identifying customers that consent to communications via text. This process requires time and resources that are outside the Company's proposal in this proceeding, and managerial decision-making of how such a change would be administered and implemented. As such, the Company does not agree with expanding outreach to text messages, as recommended by Mr. Geller.

Q. Please review and explain how the Company conducts outreach to customers who have elected to share LIHEAP (DHS) data with the Company, but who are not enrolled in CAP.

A. When the Company receives customer data from DHS, this data is used to automatically generate a CAP referral by mail if the customer is not enrolled in CAP. The customer is required to return a signed and dated simplified CAP agreement letter to complete enrollment (National Fuel Exhibit MS-4R). This can be returned by postal mail, email, fax, or completed online.

Q. Does the Company agree with Mr. Geller's recommendations to utilize additional means of outreach to customers who share LIHEAP (DHS) data with the Company?

A. No, the Company does not agree that it should be required to send additional outreach to these customers by mail, email, text, and phone.

Q. Why does the Company disagree with Mr. Geller's recommendation to utilize additional means of outreach to customers who share LIHEAP (DHS) data with the company?

A. As stated above, the Company automatically sends a customer who is not enrolled in CAP a referral by mail. This is an automated process created to reach as many customers as possible as soon as possible. As described above, the Company currently does not have the ability to send text communications to these customers. Mr. Geller's recommendation would require systemic changes to the Company's current outreach efforts and sending customers cumulative communications via postal mail, email and

phone call would add additional time to the referral process. However, the Company does see value in investigating outreach to these customers by phone and will explore this option as an additional method of outreach for customers that are not enrolled in CAP and opt to share LIHEAP (DHS) data with the Company.

Q. Mr. Geller recommends that the Company use the LIHEAP (DHS) data it receives to recertify a customer who is enrolled in CAP for all CAP customers regardless of whether the customer is due for recertification. Please explain the Company's current process for recertifying a CAP customer based on LIHEAP (DHS) data.

A. The Company reviews all customers who are currently due for recertification daily. This customer list is compared to the DHS data sharing file to see if these customers have agreed to share their data with the Company. If so, the Company sends a letter and program information advising the customer that they will continue to be on CAP (National Fuel Exhibit MS-5R).[1] This is a simplified process allowing the customer to continue to be on CAP without completing a full recertification.

Q. Does the Company agree with Mr. Geller's recommendations that the Company use the LIHEAP (DHS) data it receives to recertify a customer who is enrolled in CAP for all CAP customers regardless of whether the customer is due for recertification?

A. No. The Company strives to be as efficient as possible and to be conscious of completing work in a prioritized manner. The Company's recertification process is manual and

[1] The Company notes that although the original discovery response included as National Fuel Exhibit MS-5R indicates that the attachments, a sample simplified CAP application and recertification letter, are Confidential, these attachments have been redacted to remove all personally identifiable information and the versions attached to this testimony are not Confidential.

requires a manual review. Recertifying all customers enrolled in CAP who share their data through LIHEAP will be time consuming and not cost effective. The Company values simplifying this process for customers and has a process in place to do this when the customer's recertification is due. Adding time and resources to this process creates an inefficient review of the data shared by LIHEAP (DHS). In 2025, the Company began receiving large LIHEAP (DHS) data files in December. On average, these files included 683 CAP-enrolled customers. The December file was the largest, containing a total of 3,925 customers, of which 1,734 customers were enrolled in CAP (National Fuel Exhibit MS-6R).

Mr. Geller's recommendation would require the Company to recertify these customers outside of their normal recertification timeline, adding time and resources to the process. The Company's current method of recertification complies with its Universal Services and Conservation Plan and the Commission's regulations and orders, and the Company should not be required to implement an additional recertification process outside those guidelines.

Q. Does the Company agree with Mr. Geller's recommendation to require that the Company track and report to its USAC data regarding CAP applications and recertifications?

A. Yes. The Company currently holds regular meetings with USAC and reports current CAP participation numbers quarterly. Discussions are held regarding ways to increase enrollment, but the specific numbers are not currently shared beyond month end CAP enrollment numbers. The Company also discusses other topics surrounding its other

Universal Service Programs and outreach efforts. The requested information will take time to gather and report on during USAC meetings. However, the Company agrees to this recommendation and sees value in having discussions with USAC surrounding CAP applications and recertifications.

Q. Does the Company agree with Mr. Geller's recommendation to require that the Company track and report data regarding the total number of CAP accounts with arrears, the total dollar amount in debt for CAP customers, and the average amount of debt for CAP customers?

A. Since the Company is not currently required to report this information to the Public Utility Commission, it has not historically maintained this data. As a result, the information is only available on an ad hoc basis (National Fuel Exhibit MS-7R). The Company is currently evaluating both system enhancements and manual approaches to improve the structured reporting of this data. These changes require appropriate time to review and implementation. Accordingly, the Company anticipates implementing these enhancements by mid-2027.

Q. Please address CAUSE PA witness Geller's statements on page 37 and 38 of CAUSE-PA Statement No. 1 regarding the Company's CAP default percentage, CAP program costs on CAP credits, and arrearage management.

A. In regard to the Company's reported CAP default percentage listed in the Commission's 2024 Universal Service and Collections Report, the Company is required to report the CAP default rate, which is calculated by dividing the average monthly CAP participation

at each poverty level, by the total annual number of defaults for each poverty level. CAP customers are considered non-compliant (in default) when they fail to meet program requirements. This figure has been calculated the same way for each year from 2022 through 2024. The Company will be reviewing how to enhance this data collection going forward to see if any changes are needed.

The Company's reported 2024 spending for program costs for CAP credits (17%) and arrearage management (60%) are also accurate. Here, placing these figures in context of program changes explains the results pointed out by Mr. Geller. In April of 2024, the Company converted from its Low-Income Residential Assistance ("LIRA") program to CAP. At the time of conversion, the Company wrote off any balance a LIRA customer owed that was not originally part of their pre-program arrearage when they first enrolled in the program. This measure was to the benefit of the customer and contributed to the larger percentage of CAP spending for arrearage forgiveness in 2024. This transition from LIRA to CAP was approved by the Commission at Docket No. M-2021-3024935, in the Order entered on October 12, 2022. For comparison, the Company spent 14% in 2023 and 11% in 2022 on CAP arrearage forgiveness. In addition to the above benefit, customers were also given a "fresh start" in terms of program eligibility. This means that in-program LIRA arrears were not counted as CAP arrears, and all customers started CAP with a blank slate.

Q. Why does the Company disagree with Mr. Geller's recommendation to require an audit of the Company's collections and universal service program reporting to assess the need for additional corrective actions?

A. The Company disagrees with Mr. Geller's recommendation as the Company is already subject to comprehensive oversight and ongoing evaluation of its Universal Service Programs through established Commission-approved processes. In particular, the Company regularly files its Universal Service and Energy Conservation Plan ("USECP") with the Commission in accordance with applicable statutory and regulatory requirements.

The Company's most recent USECP was filed at Docket No. M-2021-3024935. That filing provides a detailed description of the Company's Universal Service Programs, including program structure and performance. Through this filing, the Commission and interested stakeholders are provided with transparency into the Company's efforts to administer and improve its Universal Service Programs.

In addition to internal review and Commission oversight, the USECP process includes an independent, third-party evaluation of the Company's Universal Service Programs. This evaluation is extensive and is designed to assess program effectiveness and compliance. The third-party evaluator provides feedback and recommendations, which the Company considers and uses to inform program enhancements and improvements.

Given this existing framework of regular USECP filings, Commission review, and independent third-party evaluation, the Company believes that an additional audit of its collections and Universal Service Program reporting would be duplicative and

unnecessary. The current processes already provide meaningful oversight and actionable feedback regarding the Company's Universal Service Programs.

In addition, Mr. Geller mischaracterizes the CAP data provided by the Company in discovery in support of his calls for an audit of the Company's collections and universal service program reporting. Many of CAUSE-PA's discovery requests asked for data aggregated and organized in a manner that the Company does not track or report in the normal course of business, and which the Company is not required to report to the Commission. However, the Company worked diligently to produce responsive data through multiple rounds of discovery, corrected any errors identified during this process through revised responses, and actively worked with CAUSE-PA to ensure it provided accurate and responsive data. CAUSE-PA's claims that Commission intervention is needed based on this process should be rejected.

VI. LOW-INCOME USAGE REDUCTION PROGRAM ("LIURP")

Q. Do any of the other parties raise concerns or propose modifications to the Company's LIURP?

A. Yes. CAUSE-PA witness Geller and PWPTF witness Warabak both recommend that LIURP funding be increased as a part of this proceeding. CAUSE St. 1 at 43; PWPFT St. 1 at 7. CAUSE-PA witness Mr. Geller also raises additional concerns regarding the Company's LIURP program. Specifically, Mr. Geller asserts that the Company's current LIURP program will take 206 years to serve the needs identified in its service territory. CAUSE-PA St. 1 at 41. He also recommends that the Company end its exclusion of mobile homes from participating in LIURP. CAUSE-PA St. 1 at 44. Finally, he

recommends the Company develop a written comprehensive plan to expend its full LIURP budget and expand the availability of LIURP to those in need. CAUSE-PA St. 1 at 43-44. Ms. Warabak also asks that the Company consider reducing its consumption threshold for its LIURP program. PWPTF Statement No. 1 at 6-7. I will address each of these issues below.

Q. Do you agree with Mr. Geller's and Ms. Warabak's recommendations to increase LIURP funding?

A. No. While the Company has seen an increase in spending of its LIURP budget, it does not agree that additional funding is necessary at this time. As stated in my direct testimony, National Fuel Gas Statement No. 17 at 5 and in National Fuel Exhibit MS-8R, this increase is attributed to many factors that include unique circumstances in 2025, when a government shutdown resulted in additional work being redirected from community agencies to the Company, increased outreach efforts to improve awareness of the program which included attending new events and locations across the service territory where more information was available to inform attendees about LIURP. The Company has also taken steps to find contractors who can handle additional and more consistent work. These efforts and circumstances combined have proven to be successful as the Company has seen an increase in LIURP spending and LIURP jobs completed (National Fuel Exhibit MS-9R). However, the Company has experienced a cancellation rate for customers not responding to outreach of planned weatherization projects of approximately 55%. The Company also notes that the budget for LIURP was recently increased by $91,000 to $1,391,000 effective August 1, 2023, following the rate case

settlement approved by the Commission on June 15, 2023, in Docket No. R-2022-3035730, and the Company already carries over dollars not spent from previous years. In 2025, the Company had carryover dollars of $1,450,879.24 (National Fuel Exhibit MS-10R). For these reasons, the Company does not agree to increase the LIURP funding.

Q. Please respond to CAUSE-PA witness Mr. Geller's statement on page 41 of CAUSE-PA Statement No. 1 that under the current LIURP program, it will take the Company 206 years to treat all income eligible households.

A. I disagree with the assumptions made in this statement. The source of data for this statement, the National Fuel Gas LIURP Evaluation Report by APPRISE, lists a percentage of households within the Company's service territory that are low-income customers (38,429) but does not account for homes that were already determined ineligible, refused services, had health and safety issues that prevent participation, or cannot otherwise be weatherized. This evaluation also does not account for the yearly consumption threshold of 1300 CCF for LIURP or 900 CCF for LC-LIURP (National Fuel Exhibit MS-11R), other weatherization programs available to serve customers in overlapping service territories, or federal programs available to customers such as the Pennsylvania Weatherization Assistance Program ("WAP"). These factors should be taken into account when evaluating how long it will take the Company to treat all income eligible households.

Q. Mr. Geller also recommends that the Company end its exclusion of mobile homes from participating in LIURP. CAUSE-PA St. How do you respond?

A. The Company does not include mobile homes in its LIURP weatherization services because such dwellings generally yield limited and insufficient energy consumption savings to support cost-effective weatherization. The Company's practice is in line with that of other gas utilities in Pennsylvania, including Columbia Gas of Pennsylvania, Inc. and Peoples Natural Gas Company. Mr. Geller's testimony does not consider the practical obstacles of weatherizing mobile homes, including issues with construction and the need for structural repairs. Adding insulation to these homes can also be less cost effective due to the limited space available to add the proper amount of insulation (ACEEE, Upgrading Manufactured Homes: Using Energy Efficiency to Improve Affordability and Health (Aug. 2023) at 7-8).

However, the Company does provide assistance to customers residing in mobile homes through its Emergency Repair and Replacement Program ("ERRP"). The ERRP program is designed to assist eligible customers with the emergency repair or replacement of natural gas heating and hot water heating equipment. Mobile homes are considered for eligibility under this program when emergency conditions exist.

In addition, the National Fuel Gas LIURP Evaluation Report prepared by APPRISE indicates that about 94 percent of households across all counties in the Company's service territory reside in single-family or multifamily homes (Table III-19, page 28). As a result, customers living in mobile homes represent a relatively small portion of households within the Company's service territory.

Given the limited participation of mobile homes and the comparatively low potential for cost-effective energy savings, expanding LIURP weatherization services to include mobile homes would not be a practical or cost-effective use of program resources. The Company therefore continues to address the needs of mobile home customers through its ERRP program.

Q. Why does the Company disagree with Mr. Geller's recommendation to require that the Company develop a written comprehensive plan to expend its full LIURP budget and expand the availability of usage reduction services to those in need.

A. As stated previously, the Company is already subject to an ongoing evaluation through its USECP. That filing provides a detailed description of the Company's Universal Service Programs, including its LIURP program. This filing lists a description of the program, eligibility requirements, needs assessment, budget information, and among other things, outreach efforts. Accordingly, the actions recommended by Mr. Geller are already addressed and completed through the Company's existing USECP process, and undertaking the comprehensive plan contemplated by Mr. Geller is not necessary.

Q. Please respond to PWPTF witness Warabak's statement on page 6 and 7 of PWPTF St. No. 1 that the Company consider reducing its consumption threshold for its LIURP program.

A. In regard to Ms. Warabak's statement, the Company evaluates lowering its consumption thresholds as part of the Company's LIURP program. In an effort to provide additional assistance to customers and expand the LIURP eligibility, the Company obtained

temporary Commission approval in January 2020 for a new pilot program, Low Consumption LIURP ("LC-LIURP"). Per the Order of the Commission entered on December 21, 2023 at Docket No. M-2021-3024935, the LC-LIURP pilot program was extended through the duration of the Company's 2022-2026 Universal Service and Energy Conservation Plan. The goal of this program is to identify and assist households with moderate consumption (annual consumption greater than or equal to 900 Ccf but less than 1,300 Ccf) in which the residence has a similar amount of square footage equal to the identified yearly consumption. With the Company's next USECP filing, the Company will either propose to make LC-LIURP a permanent part of its LIURP or discontinue LC-LIURP, providing justification for either.

VII. NEIGHBOR FOR NEIGHBOR ("NFN") HARDSHIP FUND

Q. Do any of the other parties raise concerns regarding the Company's NFN Hardship fund?

A. Yes.

Q. Please identify and summarize points made in that testimony.

A. CAUSE-PA witness Mr. Geller recommends that the Company's proposed changes to the NFN hardship fund be rejected and increasing the Company's annual contribution to the fund to $184,000. CAUSE-PA St. 1 at 48-50. Mr. Geller also asks the Commission to reject the Company's proposal outright, claiming that because it was raised in discovery, the proposed changes are not part of the record.

Q. Do you agree with these recommendations?

A. No, I do not agree. Initially, I will note that the NFN hardship fund issue was raised in response to a discovery request served by CAUSE-PA (*See* National Fuel Exhibit MS-13R) and appropriately reflects the Company's need to timely address program funding while ensuring that customers maintain access to this resource. The amount of NFN funds awarded to eligible customers in 2025 more than doubled compared to 2023 and 2024 (National Fuel Exhibit MS-12R). This increase can be attributed to many factors that include additional Company outreach about the fund, internal training to the call center staff, and the implementation of a warm referral process per order of the Commission entered on June 15, 2023 at Docket No. R-2022-3035730. These factors contributed to the NFN funding decreasing to a critical level. To avoid suspension of the program, the Company elected to release its annual shareholder contribution of $92,000 earlier than usual. The early release of the annual contribution was intended to address the immediate funding shortfall and maintain program availability.

The Company acknowledges the importance of ensuring that the NFN program is adequately funded to meet customer needs. However, the recommendation to increase the Company's shareholder contribution to $184,000 annually is not supported when the structure, purpose, and funding of the NFN program are considered in full. The recommendation that National Fuel "at minimum" double its contribution effectively establishes a funding expectation that exceeds the cited average contribution of other Pennsylvania utilities. Based on the Company's residential customer base of 196,629, the proposed contribution level would result in a per-customer funding level materially above the referenced benchmark ($0.94 per customer versus the $0.69 benchmark cited

by Mr. Geller in his testimony at page 50), rather than aligning with it. The Company does not believe that Mr. Geller's comparison supports the conclusion that its current funding level is insufficient or requires adjustment to the extent of his proposal.

As stated in the Company discovery response, National Fuel Exhibit MS-13R, the Company is evaluating the following changes to the NFN: (1) Making income a mandatory criterion; applicants need to meet both the income requirement (0-200% FPL) and one other specified/current requirement to qualify, (2) limiting the program to only National Fuel Gas customers, and (3) introducing flexibility in the hardship fund grant amounts awarded based on demand. The proposal to require that applicants meet both an income threshold (0–200% FPL) and one additional eligibility criterion is intended to ensure that the hardship fund remains a targeted, last-resort resource for customers facing hardship, consistent with the program's longstanding purpose. The proposed modification does not eliminate eligibility for low-income households; rather, it ensures that limited funds are directed to those experiencing both financial need and an additional qualifying hardship condition.

Additionally, limiting the program to National Fuel customers is intended to ensure that available hardship funds remain dedicated to individuals who have or have had a gas account with National Fuel and require last-resort assistance. This eligibility framework does not restrict access for any customer or applicant, as those terms are defined under 52 Pa. Code § 56.2. Here, the Company clarifies that it defines "non-customers" under this proposal as customers that do not receive their primary heating fuel from the Company and do not have an account with the Company. These "non-customers" use other fuel sources besides natural gas such as propane, fuel oil, or wood

pellets. These "non-customers" are not former National Fuel customers that have been terminated for more than 30 days, as suggested by Mr. Geller (CAUSE-PA St. No. 1, p. 49). The record should further demonstrate that non-customers have recently been utilizing more of the hardship funding. Specifically, such non-customer disbursements totaled $25,576.95 in 2025, representing a significant increase from $7,099.49 in 2023 and $7,016.34 in 2024 (National Fuel Exhibit MS-16R). Maintaining the program's focus on National Fuel customers is reasonable and necessary to preserve limited hardship funds for the population the program is designed to serve—those who rely on National Fuel's service. Moreover, non-customers are not left without assistance, as alternative resources, including the LIHEAP Crisis program, remain available to meet their needs.

Finally, introducing flexibility in the hardship fund grant amounts will allow the Company to continue operating the program and support customers consistently throughout the year. Specifically, the Company is evaluating modifying the hardship fund program guidelines to allow: (1) the maximum grant amount to be adjusted downward during periods of elevated demand or reduced fund balances; and/or (2) the program administrator to adjust grant amounts based on overall program demand and available funding, with the goal of assisting a greater number of eligible customers over the course of the program year. Under these modifications, the hardship fund would continue to provide meaningful assistance to eligible applicants, but individual awards could be adjusted to help prevent premature depletion of the fund and avoid temporary program suspensions.

At this time, the Company is not evaluating flexibility that would vary by factors such as customer income level, non-income eligibility criteria, or geographic location. Eligibility criteria and screening requirements would continue to apply uniformly across applicants.

Rather, the flexibility under consideration relates to program level conditions, such as overall demand for grants during a given period and the availability of program funds relative to projected need. Grant amounts would continue to be determined through the existing intake and review process based on an applicant's circumstances and documented need, but within adjusted program parameters intended to preserve the availability of assistance throughout the year. No formal written policy or procedure has been finalized or adopted that specifically governs flexibility to change hardship fund grant amounts based on demand.

These limited modifications are not intended to restrict access to assistance, but rather to preserve the viability of the hardship fund and ensure the continued availability of assistance to eligible customers throughout the program year.

Q. Please also respond to Mr. Geller's recommendation on page 8 of CAUSE-PA St. 1 that the Company increase voluntary contributions through fundraising.

A. The Company utilizes The Greater Erie Community Action Committee ("GECAC") as an independent third-party administrator to perform fundraising and certain administrative functions for its hardship fund. This structure is intentional and appropriate, as it preserves the independent and charitable nature of the fund. Assigning fundraising responsibilities to GECAC avoids any potential perception that the Company is self-

serving or directly soliciting contributions for its own benefit. At the same time, the Company maintains regular communication with GECAC regarding program operations, administration, and the overall status of the hardship fund. The Company also recognizes that contributions to the hardship fund are voluntary in nature, and neither the Company nor GECAC can control or compel the level of public participation or the amount of contributions received. This framework is already established and functioning as intended. Accordingly, there is no need to develop or implement additional processes or mechanisms related to fundraising or administration. Through this coordination, the Company ensures program effectiveness while reinforcing the critical importance of sustained funding to support vulnerable customers. Accordingly, it is neither reasonable nor appropriate to require the Company to conduct fundraising or solicit public donations for the hardship fund.

VIII. OTHER (NON-UNIVERSAL SERVICE RELATED) ISSUES

A. Call Center Performance

Q. Do any of the other parties compare National Fuel's call center performance to other Pennsylvania natural gas distribution companies ("NGDC")?

A. Yes. OCA witness LeeAnn Wise compares the Company's call center performance to that other NGDCs on pages 7 through 13 of her direct testimony (OCA St. 5) .

Q. Does the Company agree with OCA witness Wise's assessment?

A. No. The Company disagrees with OCA witness Wise's assessment of the Company's Customer Service Performance metrics. Ms. Wise underscores improvements the

Company has made but does not provide a review of the metrics where the Company excels, as presented by the Commission's Customer Service Performance and UCARE reports for 2024 and 2025.

For example, the Company has made improvements in its average calls answered within 30 seconds from 74% in 2022, 77% in 2023, and 91% in 2024. The positive increase from 2022 to 2025 was the largest increase seen by the Company's peers even as all NGDCs saw increased performance in this area during the same period. Moreover, in 2025 the Company's average calls answered within 30 seconds was the second highest of the NGDCs.

The Company's Annual Average Call Abandonment Rate between 2022 and 2024 was among the lowest of the Pennsylvania NGDCs that it was compared to from 2022 to 2024, averaging just 2% over this period and the lowest in 2024 at 1%.

In addition, Ms. Wise claims that the Company's busy out rate performance is "poor" by comparing it to the busy out rate of other Pennsylvania NGDCs. This is an unfair comparison, because most or all of the other NGDCs that the Company is being compared with have an Interactive Voice Response ("IVR") unit, which enables calls to be routed quickly to various options without receiving a busy signal, many of these options are self-help options. The Company does not have an IVR and, therefore, all incoming calls are answered by live customer service representatives ("CSRs"). The Company has received numerous compliments over the years from its customers stating that they like their calls answered by live CSRs as it leads to quicker resolution.

Finally, the Company acknowledges the small increase in customer complaints as they relate to payment arrangement disputes, however, these metrics do not take into

account the Company's low percentage of these complaints per customer and how they compare to the other NGDCs. Using the average number of residential customer counts from the 2024 Customer Service Performance Report, the Company has the second lowest number of Residential payment agreement requests per customer, indicating the Company's high level of performance. Please see National Fuel Exhibit MS-14R for the relevant excerpt from this report, showing the Company's performance.

Q. Please respond to Ms. Wise's statement on page 5 of OCA Statement No. 5 regarding the recommendation that the Company perform regular, thorough root cause analyses of complaint trends.

A. The Company already conducts an analysis of all customer complaints, referred to as "Justified Complaints." This analysis includes a review of all customer contacts on accounts associated with a complaint to ensure that Company policies and Commission regulations are followed. If it is determined that a Company policy or Commission regulation was not followed correctly, the Company reviews the contact and addresses the issue with all individuals involved. This may result in refresher training for the individual(s) on the specific topic(s) identified. If trends are identified, group refresher training may also be provided (National Fuel Exhibit MS-15R). Ms. Wise has not provided any evidence that this process is inadequate or out of compliance with the Commission's regulations or orders, or that her proposed root cause analysis would result in fewer customer complaints or greater customer satisfaction. As such, the Company maintains that its current system appropriately identifies and corrects systemic issues that may lead to customer complaints and a further root cause analysis is not necessary.

B. Payment Plans

Q. Please describe OCA witness Wise's recommendations related to the Company's payment plans.

A. OCA witness Wise recommends that the Company be required to conduct an analysis to track and determine whether a termination notice is avoided when a customer makes a payment or enters a payment plan, as a condition of any rate case ordered in this proceeding. OCA St. 5 at 13.

Q. Does the Company agree with OCA witness Wise's recommendation?

A. No. The Company disagrees with the recommendation that it be required to conduct an additional payment plan effectiveness analysis as a condition of any rate increase in this proceeding. The implication, that the Company lacks insight into how its payment arrangements and customer assistance options function to prevent service termination, does not accurately reflect National Fuel's existing processes or results.

First, the Company has developed and implemented comprehensive, formalized training for its call center employees that is specifically designed to ensure customers experiencing financial hardship are fully informed of all available options. This training outlines, in detail, the steps representatives must take when a customer indicates difficulty paying a bill or is facing potential termination. These options include payment arrangements, budget billing, extensions, referrals to assistance programs, and other tools intended to support continued service whenever possible. Call center representatives are trained to proactively discuss these options and work with customers to identify an appropriate solution based on individual circumstances.

Second, while the Company does not track termination avoidance in the narrow and prescriptive manner suggested in Ms. Wise's recommendation, the Company does monitor and evaluate broader customer payment behavior and outcomes, including trends related to customer indebtedness and enrollment in payment arrangements. As seen in the 2024 PUC Universal Service Programs and Collection Performance Report, the Company's percent of Total Dollars in Debt of customers on an arrangement rose from 38.6% in 2022, to 46.8% in 2024. These trends demonstrate that a growing percentage of customers carrying arrears are actively enrolled in payment arrangements, reflecting increased customer engagement with the tools the Company offers and the effectiveness of its frontline practices in connecting customers to those options (2024 PUC Universal Service Programs and Collection Performance Report, p. 24).

Importantly, the absence of a single data point—such as whether a specific termination notice was avoided following a payment or arrangement—does not indicate that current programs are ineffective or inadequately managed. Nor does it mean that additional reporting would enhance customer protections beyond those already achieved through existing policies, training, and oversight. The Company's approach prioritizes direct customer interaction, flexibility, and early intervention, all of which are essential elements of effective arrearage management but are not captured solely through a termination metric.

Finally, the recommended mandatory study and reporting requirement would impose additional administrative burden without a commensurate benefit to customers or regulators. The Company already evaluates its customer assistance framework holistically and continues to refine its practices consistent with regulatory requirements

and customer needs. Ms. Wise has not provided any data suggesting that undertaking the analysis would benefit either customers or the Company, and Ms. Wise has not provided any evidence that the Company's current practices to not comply with the Public Utility Code or the Commission's regulations or orders. As such, requiring an additional, narrowly defined analysis as a condition of rate relief is not warranted under these circumstances.

For these reasons, the Company submits that its existing training, customer engagement practices, and demonstrated increase in customer participation in payment arrangements appropriately support customers experiencing payment difficulties, and the recommendation should be rejected.

C. Payment Fees

Q. Do any of the parties address the Company's current options for fee free payments?

A. Yes. OCA witness LeeAnn Wise recommends that the Company transition to a fee-free payment system, which would allow customers to make electronic payments at no cost. OCA St. 5 at 16-17.

Q. Please respond to Ms. Wise's concerns and discuss the Company's current options for fee free payments.

A. Currently, customers have multiple options to make payments to the Company without incurring any fees. Customers may pay in person at one of the Company's two drop boxes located at 1100 State Street, Erie PA or 1 Relief Street, Oil City PA with no fee. Customers may also pay by mail to PO Box 371835, Pittsburgh, PA 15250-7835 without

a fee. Additionally, customers can sign up for AutoPay with ACH, which will automatically deduct their bill amount from their checking/savings account and not incur a fee. Lastly, customers can select One-Time-Pay with ACH using our third-party vendor's online payment portal without incurring a fee. It should also be noted that fees incurred using a third-party option (Online, By Phone, or Authorized Payment Center) are charged by the third-party at the time of payment and are not billed to the customer by the Company.

Q. Does the Company agree with OCA witness Wise's recommendation to transition to fee-free electronic payments and that those costs be absorbed by the Company and included in rate base?

A. Not at this time. As noted above, customers already have multiple options for fee-free payments, including electronic options. While the Company may evaluate the feasibility of moving toward fee-free payments in the future, it is not willing to commit to this transition as part of this case. Importantly, the Company did not propose moving to fee-free payment methods in this case and so did not include the costs of payment processing fees in its revenue requirement. While OCA has proposed an adjustment to operating expenses of $930,000 to reflect its recommendation, OCA provides no explanation as to how it arrived at this figure or data supporting that it reflects an accurate forecast of the cost to transition to and implement a fee-free payment structure. Indeed, the proposed adjustment is less than the total amount of processing fees paid by customers in 2025 (see OCA Exhibit LMW-3), even while Ms. Wise acknowledges that "[i]t is also likely that eliminating payment fees will encourage more customers to adopt online payment

methods" (OCA St. No. 5, p. 17). Absorbing payment process fees is a managerial decision that should be made by the Company and requires consideration of many factors, including negotiating a reasonable rate with the Company's third party vendor, performing any system changes required to implement the change, and anticipating any growth in adoption of online payments by customers if fees are eliminated.

D. One-Time Bill Credit

Q. Do any of the other parties have recommendations about the communication methods concerning the one-time bill credit (National Fuel Gas Statement No. 17 at 14)?

A. Yes. CAUSE-PA witness Mr. Geller suggests that the Company distribute the one-time bill credit during a winter heating month, between December and March, and that the Company conduct affirmative outreach by mail, email, telephone call, and text message to screen all customers that receive the credit for potential eligibility for CAP and/or other universal service programs. CAUSE-PA St. 1 at 69.

Q. How does the Company respond?

A. The Company agrees that customers receiving the one-time bill credit should be informed of the credit and agrees to distribute the bill credit in December 2026. To that end, the Company plans to notify customers receiving the credit through existing communication channels already in place. Customers will receive notice of the one-time bill credit directly on their utility bill, delivered using the customer's preferred billing method, including paper or electronic delivery. This approach utilizes established and effective

communication processes with which customers are familiar. The Company respectfully submits that layering a requirement for mandatory outreach to all affected customers through multiple channels, including separate mailings, electronic messages, and outbound phone calls, would introduce unnecessary significant administrative burdens and costs to a streamlined process meant to directly benefit customers. As described in detail above, customers who express interest in CAP or other assistance programs through existing customer interactions are already directed to the appropriate resources consistent with current practices, and the Company regularly refers customers to universal service programs. Accordingly, the Company believes its planned approach appropriately balances customer awareness, program access, and efficiency.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes.

R-2025-3059428

Question

Of the households indicated in response to CAUSE-PA 6-3, please indicate: a) The number of households recertified for CAP using LIHEAP data from DHS; b) The number of households removed from CAP for failure to recertify eligibility.

Response

Although the Company was receiving files from DHS beginning in August 2024, the Company at the request of DHS, did not begin using the data for CAP recertification or removal until August 2025 due to potential discrepancies with the data. Please see Attachment Cause-PA-6-04 for available data.

Year	Month	CAUSE-PA 6-4 (a) The number of households recertified for CAP using LIHEAP data from DHS	CAUSE-PA 6-4 (b) The number of households removed from CAP for failure to recertify eligibility

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

From January 2023 to date, disaggregated by month and year, as of the last day of the month/year, please indicate: a) How many customers applied for NFG's CAP? b) How many of the customers who applied for NFG's CAP were approved? c) How many of the customers who applied for NFG's CAP were rejected, disaggregated by the reason for rejection? Please provide this data in a live Excel spreadsheet.

Response

See Attachment Cause-PA-5-01 (1) for parts (a) and (b). Note that the Company transitioned from its Low Income Residential Assistance (LIRA) program to its Customer Assistance Program (CAP) in April 2024. This data is not available for that month.

See Attachment Cause-PA-5-01 (2) for part (c).

Please note that applications received in a particular month are not always rejected or accepted within that same month.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

From January 2023 to date, disaggregated by month and year, as of the last day of the month/year, how many of NFG's customers were/are enrolled in NFG's CAP? Please provide this information broken down by CAP enrollment type (i.e., percentage of income, average bill, minimum bill, etc.). Please provide this data in a live excel spreadsheet.

Response

The Company does not track CAP customers by enrollment type as described. This information is not captured at enrollment, but rather at monthly invoicing.

The Company would define this information as "CAP bill type" (i.e., percentage of income (PIP), average bill or minimum bill). See revised response Cause-PA-I-03 for this information.

See Attachment Cause-PA-I-06 for available data which includes total customers enrolled in CAP by month and year.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Does NFG provide a simplified CAP application for customers who are recipients of Low Income Home Energy Assistance Program (LIHEAP) grants? Please specifically explain this process and provide a copy of the current NFG CAP application, and any simplified CAP application provided to customers who are LIHEAP grant recipients.

Response

Provided a customer consents to data sharing when completing a LIHEAP application and has elected to have their LIHEAP basic cash grant sent to the Company. A file is sent to the Company from the Department of Human Services (DHS) of customers who consented to data sharing and who have their LIHEAP grant sent to the Company. When this file is received, a simplified application will automatically be sent to the customer.

When the customer receives this simplified application, they are only required to choose a “Yes” or “No” response if they are willing to participate in the Company’s CAP program, sign, and date the application. The customer will then be enrolled in CAP when the signed agreement is received.

See Attachment Cause-PA-3-26 (1) for the Company’s regular CAP application.

See Attachment Cause-PA-3-26 (2) for the Company’s simplified CAP application.

Important Information Regarding CAP:

National Fuel's Customer Assistance Program (CAP) is offered per National Fuel's Universal Service and Energy Conservation Plan (Plan) as approved by the Pennsylvania Public Utility Commission and National Fuel's Pennsylvania Tariff. The attached **CAP Features Sheet** summarizes key provisions of National Fuel's CAP.

In addition, if enrolled in CAP, I acknowledge and agree:

- My CAP payment will be no more than 4% or 6% of my verified monthly household income, subject to a minimum CAP payment of $12.00.
- My CAP payment will be my percentage of income amount or my average bill amount, whichever is less.
- All bills must be paid to receive the full benefit of the CAP program. If I do not pay my CAP bill, my gas service may be terminated. No extensions or payment arrangements will be offered.
- If my gas service is terminated, I must pay the notice amount plus a turn on charge for reconnection.
- I must promptly notify National Fuel if my household size or income changes.
- If I fail to respond when asked to update my household and income information, I will be removed from CAP.
- If I refuse energy conservation/weatherization services, I will be removed from CAP. If I rent, I will not be penalized if the landlord does not agree.
- National Fuel is my current gas supplier and must remain my gas supplier while I participate in CAP. If I choose to buy gas from another supplier, I will be removed from CAP.
- The service address must be my personal residence and gas service used at this address is for me and members of my household solely for residential purposes for heating, hot water, cooking and drying clothes.
- I have notified all adult household members of the terms and conditions of CAP and that they are listed on the application. They have been notified they are responsible for all gas bills as an occupant of the residence.

CAP Applicant's Acknowledgment and Signature:

I am interested in participating in Customer Assistance Programs with my other utilities and sharing my CAP eligibility information with them.

☐ **Yes** ☐ **No**

I have read and understand the contents of my CAP application and agree to the terms and conditions of CAP and certify that all statements/certifications made in this application are true, accurate, and correct. In addition, my signature also confirms that I have read, reviewed, and acknowledged the CAP Features Sheet. My signature on this form grants permission for disclosure and release of information to NATIONAL FUEL concerning employment, income, public benefits received, and agencies and banking institutions to verify this information. In addition, if I selected "yes" to the question concerning interest in programs with other utilities, I consent to the information provided in this CAP application to be shared with other utilities for purposes of determining eligibility for their Customer Assistance Programs.

PO BOX 371835
PITTSBURGH PA 15250-7835
National Fuel®

[redacted]

Account Number: [redacted]

[redacted]

January 06, 2026

Dear [redacted],

RE: Service Address: [redacted] Account Number: [redacted]

You may be eligible for National Fuel's Customer Assistance Program (CAP). This program offers affordable monthly payments and debt forgiveness on any outstanding balance at the time you are enrolled.

When you recently applied for LIHEAP, you gave permission to the Department of Human Services (DHS) to share your household and income information with your utilities for the purpose of enrolling in their Customer Assistance Programs and other utility assistance programs.

We have reviewed your gas account and found that you are eligible for CAP. This program is a percentage of income program. Your CAP payment will be no more than 4% or 6% of your household's verified monthly income, subject to a minimum CAP payment of $12. Your CAP payment amount will be your percentage of income amount or your average bill amount, whichever is lower.

At the time of your CAP enrollment, your existing account balance, if any, will be placed on hold. If you pay your bill each month, 1/24th of your pre-CAP balance will be eliminated and forgiven. While you are on the program, you will continue to receive debt forgiveness until the entire pre-CAP balance is forgiven.

If you would like to be enrolled in CAP, National Fuel must have written authorization. It is important that you sign and return the attached agreement by **January 16, 2026** so you can be enrolled in this valuable program. Please return your information in the enclosed envelope, fax to 814-871-8250 or email to CAP@natfuel.com.

Please review the enclosed CAP FEATURES and ENERGY EFFICIENCY TIPS. They provide important information about CAP and cost-saving energy tips to help reduce your usage.

If have any questions, please call 1-800-365-3234.

Sincerely,

National Fuel
Enclosures

CAP Agreement Notification

RE: Service Address [redacted] Account Number: [redacted]

I confirm and understand that:

- The Customer Assistance Program (CAP) is a percentage of income program.
- My monthly CAP amount will be no more than 4% or 6% of my verified monthly household income, subject to a minimum payment of $12.
- My CAP payment will be my percentage of income amount or my average bill amount, whichever is less.
- All bills must be paid to receive the full benefit of CAP. If I do not pay my CAP bill, my gas service may be terminated.
- If my gas service is terminated, I must pay the notice amount, my current bills if overdue, and a reconnection charge per the Company's Tariff.
- I must promptly notify National Fuel if my household size or income changes.
- If I fail to respond when asked to update my household and income information, I will be removed from CAP.
- If I refuse energy conservation/weatherization services, I may be removed from CAP. If I rent, I will not be penalized if the landlord does not agree.
- National Fuel is my current gas supplier and must remain my gas supplier while I participate in CAP. If I choose to buy gas from another supplier, I will be removed from CAP.
- The service address must be my personal residence and gas service used at this address is for me and members of my household solely for residential purposes for heating, hot water, cooking, and drying clothes.
- I have notified all adult household members of the terms and conditions of CAP and that they are listed on the application. They have been notified they are responsible for all gas bills from the date of their enrollment until cancellation of their CAP participation.

I am interested in participating in Customer Assistance Programs with my other utilities and sharing my CAP eligibility information with them.

_____Yes ____No

By my signature, I agree to each of the following:

1. I have read and understand the contents of my CAP agreement and/or CAP application and agree to the terms and conditions of CAP.
2. I have read, reviewed, and acknowledged the enclosed CAP Features Sheet.
3. I grant permission for the disclosure and release of information from any source, individual, or organization to National Fuel concerning employment, income, public benefits received, and agencies and banking institutions to verify this information.
4. If I selected "yes" to the question concerning interest in programs with other utilities, I consent to the information provided in this CAP application to be shared with other utilities for purposes of determining eligibility for their Customer Assistance Programs.
5. To the extent National Fuel has received my income and household information from the information provided to the Pennsylvania Department of Human Services as part of my LIHEAP Application, I acknowledge that I have authorized DHS to share this information with all public utilities (including National Fuel) for purposes of, among other things, enrollment into Universal Service Programs like CAP.
6. I agree that for purposes of this Application, my signature may take the form of a traditional "wet-ink" signature or an "electronic signature." As used here, the term "electronic signature" means any electronic sound, symbol, or process attached to or logically associated with a record and executed and adopted by a party with the intent to sign such record, including facsimile or a typed response made via email indicating agreement or assent.

   ___Yes _____No

Applicant's Acknowledgement: _____ Date _____

National Fuel CAP Features

Please Read and Keep

This information explains our Customer Assistance Program and the benefits to you as a participant.

What is CAP?

CAP provides a discount on your bill and debt forgiveness on your balance at the time of enrollment. It is a percentage of income program. As participant in CAP your bills will be reduced to 4 or 6 percent of your monthly income, based on your verified income and household size. You will either pay your percentage of income amount or your average bill, whichever is less. The minimum monthly bill amount will be $12.

How do I calculate my monthly bill?

Determine your percentage of income bill based on Federal Poverty Income Guidelines (FPIG)

- Households with a monthly income between 0 – 50% FPIG, will pay a bill of 4% of their monthly income.
- Households with a monthly income between 51 – 150% FPIG, will pay a bill of 6% of their monthly income.

Calculating your Percentage of Income Amount

(Monthly Income) x (Discount Percent) = Monthly Percentage of Income Amount

Examples:
4% Discount: $1500 x 0.04 = $60
6% Discount: $1500 x 0.06 = $90

Responsibility for Account

The gas account holder must sign the CAP application. All adult occupants are responsible for the gas utility bills at the residence where they benefited from the service.

Reward for Payment

At the time of your CAP enrollment, your account balance, if any, will be placed on hold. If you pay your bill each month, a portion of your pre-CAP balance will be eliminated and forgiven. This amount never has to be paid back. If you fall behind and miss debt forgiveness for a time period, but you then catch up your CAP payments, you will receive the debt forgiveness you missed. You will continue to receive debt forgiveness as you pay your CAP bills until the entire pre-CAP balance is forgiven. If you no longer participate in CAP, you remain responsible for any amounts that were not forgiven.

Late Payments

If you don't pay your bill while on CAP, you will be sent a termination notice. The notice amount must be paid in full or your service will be turned off. No extensions or payment arrangements will be offered. If your gas service is turned off for non-payment, you must do the following to have the gas service turned back on:

- Pay the termination notice amount (total of your missed CAP payments) plus any current bills if overdue.
- Pay a turn-on charge as defined by National Fuel's current tariff.

Identification, Proof of Income

All adults must provide satisfactory identification information and proof of income. Copies of income documents for the last 30 days or 12 months need to be provided, using whatever is more beneficial for acceptance into the CAP program. Participants of the program are required to provide household income information when requested by National Fuel. You must also notify National Fuel when any changes occur in your household size or income.

Energy Conservation

Energy saving tips will be provided that will help with usage and energy cost reduction. You may have an energy audit performed on your home. An audit can show you where you might be able to conserve energy and lower your gas bill. Our experts will check your furnace, water heater, insulation, weatherstripping and any other areas in your home where you may be able to reduce energy costs.

Weatherization

If you qualify for our weatherization program, you must agree to have your home weatherized. The Low Income Usage Reduction Program (LIURP) provides insulation and other energy saving improvements **at no cost to you.** If you are a renter, your landlord must agree to weatherization work for it to be performed. You will not be penalized if your landlord does not agree.

LIHEAP

You are required to apply for the Low-Income Home Energy Assistance Program (LIHEAP) through your county assistance office or online at **www.compass.state.pa.us**. LIHEAP is typically open from November through March. If approved and National Fuel is the utility you identified on your application, the grant will be applied to your current account balance.

- **LIHEAP Data Sharing Option:** You can easily be enrolled in CAP if you check the box on your LIHEAP application to allow the Department of Human Services (DHS) to share your household and income information with your utility.

Customer Choice

CAP eligibility is limited to those who purchase gas from National Fuel. National Fuel is unable to offer a discount on the gas you buy from another supplier.

To apply online scan the QR code or visit www.nationalfuel.com/applycap

Energy Efficiency Tips

Saving money and energy is easier than you think.

Help reduce emissions in the atmosphere and put a little more money in your pocket. Making these small, inexpensive adjustments can make a big difference!

Try these quick and easy ways to save:

- Set thermostats between 65° and 70° during the winter, and at 58° when away from the house for more than a few hours. By turning your thermostat back 10°-15° for eight straight hours, you can save about 5%-15% a year on your heating bill—a savings of as much as 1% for each degree.
- Turn down thermostats automatically without sacrificing comfort by installing a programmable thermostat.
- Change or clean furnace air filters once a month during the heating season. Furnaces consume less energy if they "breathe" more easily. Use the arrival of your natural gas bill as your reminder to change the filter.
- Warm air rises, so use registers to direct warm airflow across the floor.
- Close vents and doors in unused rooms. Close dampers on unused fireplaces.
- Set your water heater to 120° or the medium temperature setting. Drain a quart of water from the bottom of your water heating tank every three months to remove sediment that can hamper the efficiency of your unit. Water heating is a typical family's third-largest energy expense, accounting for about 14% of utility bills.
- Insulate water heaters with insulation blankets in accordance with manufacturer's guidelines.
- Install water-flow restrictors in shower heads and faucets.
- If radiators are located near cold walls, place a sheet of aluminum foil between the radiator and the wall to reflect heat back into the room.
- Run washing machines and clothes dryers with a full load.
- On sunny days, open curtains and blinds on windows that receive direct sunlight. Close them at night or on cloudy days to insulate against the cold air outside.

Keep the cold out and the costs down.

Air leaks contribute to significant energy loss. See estimates below. Reduce air leaks and cut as much as 10% from your monthly bill by using caulk or weather-stripping to seal leaks around:

- Floors, walls, ceilings (31% of energy loss)
- Ducts (15% of energy loss)
- Fireplace (14% of energy loss)
- Plumbing (13% of energy loss)
- Doors (11% of energy loss)
- Windows (10% of energy loss)
- Fans and vents (4% of energy loss)
- Electric outlets (2% of energy loss)

Income and usage eligible customers may qualify for weatherization.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to NFG St. No. 17 (Stoops) at 3:13-16. “The Company has worked with DHS to receive income and household information for households that grant consent to share the information. This information is intended to allow customers to enroll or recertify in CAP without having to submit a new application or proof of income-eligibility.” Please specifically describe how NFG utilizes LIHEAP data received from the Pennsylvania Department of Human Services (DHS) to conduct outreach, recertification, and/or enrollment for its universal service programs. Please also provide a copy of all current letters, written communications, and/or outreach materials NFG uses to conduct outreach to LIHEAP recipients for enrollment in universal service programs.

Response

The Company receives a file from the Department of Human Services (DHS) of customers who consent to data sharing and who have their LIHEAP grant sent to the Company. When this file is received, the Company will send a customer who is not currently enrolled in CAP a simplified application, letter, and program information. If a recertification is needed, the Company will send a letter and program information advising the customer that they will continue to be on CAP.

When the customer receives this simplified application for enrollment, they are only required to choose a “Yes” or “No” response if they are willing to participate in the Company’s CAP program, sign, and date the application. The customer will then be enrolled in CAP when the signed agreement is received. The customer does not have to take any action when being recertified.

See CONFIDENTIAL Attachment Cause-PA-3-27 (1) for the Company’s simplified CAP application.

See CONFIDENTIAL Attachment Cause-PA-3-27 (2) for the Company’s recertification letter due to data sharing.

Account Number: [redacted]

[redacted]

January 06, 2026

Dear [redacted]

RE: Service Address: [redacted] Account Number: [redacted]

You may be eligible for National Fuel's Customer Assistance Program (CAP). This program offers affordable monthly payments and debt forgiveness on any outstanding balance at the time you are enrolled.

When you recently applied for LIHEAP, you gave permission to the Department of Human Services (DHS) to share your household and income information with your utilities for the purpose of enrolling in their Customer Assistance Programs and other utility assistance programs.

We have reviewed your gas account and found that you are eligible for CAP. This program is a percentage of income program. Your CAP payment will be no more than 4% or 6% of your household's verified monthly income, subject to a minimum CAP payment of $12. Your CAP payment amount will be your percentage of income amount or your average bill amount, whichever is lower.

At the time of your CAP enrollment, your existing account balance, if any, will be placed on hold. If you pay your bill each month, 1/24th of your pre-CAP balance will be eliminated and forgiven. While you are on the program, you will continue to receive debt forgiveness until the entire pre-CAP balance is forgiven.

If you would like to be enrolled in CAP, National Fuel must have written authorization. It is important that you sign and return the attached agreement by **January 16, 2026** so you can be enrolled in this valuable program. Please return your information in the enclosed envelope, fax to 814-871-8250 or email to CAP@natfuel.com.

Please review the enclosed CAP FEATURES and ENERGY EFFICIENCY TIPS. They provide important information about CAP and cost-saving energy tips to help reduce your usage.

If have any questions, please call 1-800-365-3234.

Sincerely,

National Fuel

CAP Agreement Notification

RE: Service Address [redacted] Account Number: [redacted]

I confirm and understand that:

- The Customer Assistance Program (CAP) is a percentage of income program.
- My monthly CAP amount will be no more than 4% or 6% of my verified monthly household income, subject to a minimum payment of $12.
- My CAP payment will be my percentage of income amount or my average bill amount, whichever is less.
- All bills must be paid to receive the full benefit of CAP. If I do not pay my CAP bill, my gas service may be terminated.
- If my gas service is terminated, I must pay the notice amount, my current bills if overdue, and a reconnection charge per the Company's Tariff.
- I must promptly notify National Fuel if my household size or income changes.
- If I fail to respond when asked to update my household and income information, I will be removed from CAP.
- If I refuse energy conservation/weatherization services, I may be removed from CAP. If I rent, I will not be penalized if the landlord does not agree.
- National Fuel is my current gas supplier and must remain my gas supplier while I participate in CAP. If I choose to buy gas from another supplier, I will be removed from CAP.
- The service address must be my personal residence and gas service used at this address is for me and members of my household solely for residential purposes for heating, hot water, cooking, and drying clothes.
- I have notified all adult household members of the terms and conditions of CAP and that they are listed on the application. They have been notified they are responsible for all gas bills from the date of their enrollment until cancellation of their CAP participation.

I am interested in participating in Customer Assistance Programs with my other utilities and sharing my CAP eligibility information with them.

_____Yes ____No

By my signature, I agree to each of the following:

1. I have read and understand the contents of my CAP agreement and/or CAP application and agree to the terms and conditions of CAP.
2. I have read, reviewed, and acknowledged the enclosed CAP Features Sheet.
3. I grant permission for the disclosure and release of information from any source, individual, or organization to National Fuel concerning employment, income, public benefits received, and agencies and banking institutions to verify this information.
4. If I selected "yes" to the question concerning interest in programs with other utilities, I consent to the information provided in this CAP application to be shared with other utilities for purposes of determining eligibility for their Customer Assistance Programs.
5. To the extent National Fuel has received my income and household information from the information provided to the Pennsylvania Department of Human Services as part of my LIHEAP Application, I acknowledge that I have authorized DHS to share this information with all public utilities (including National Fuel) for purposes of, among other things, enrollment into Universal Service Programs like CAP.
6. I agree that for purposes of this Application, my signature may take the form of a traditional "wet-ink" signature or an "electronic signature." As used here, the term "electronic signature" means any electronic sound, symbol, or process attached to or logically associated with a record and executed and adopted by a party with the intent to sign such record, including facsimile or a typed response made via email indicating agreement or assent.

   ___Yes _____No

Applicant's Acknowledgement: _____ Date _____

National Fuel CAP Features

Please Read and Keep

This information explains our Customer Assistance Program and the benefits to you as a participant.

What is CAP?

CAP provides a discount on your bill and debt forgiveness on your balance at the time of enrollment. It is a percentage of income program. As participant in CAP your bills will be reduced to 4 or 6 percent of your monthly income, based on your verified income and household size. You will either pay your percentage of income amount or your average bill, whichever is less. The minimum monthly bill amount will be $12.

How do I calculate my monthly bill?

Determine your percentage of income bill based on Federal Poverty Income Guidelines (FPIG)

- Households with a monthly income between 0 – 50% FPIG, will pay a bill of 4% of their monthly income.
- Households with a monthly income between 51 – 150% FPIG, will pay a bill of 6% of their monthly income.

Calculating your Percentage of Income Amount

(Monthly Income) x (Discount Percent) = Monthly Percentage of Income Amount

Examples:
4% Discount: $1500 x 0.04 = $60
6% Discount: $1500 x 0.06 = $90

Responsibility for Account

The gas account holder must sign the CAP application. All adult occupants are responsible for the gas utility bills at the residence where they benefited from the service.

Reward for Payment

At the time of your CAP enrollment, your account balance, if any, will be placed on hold. If you pay your bill each month, a portion of your pre-CAP balance will be eliminated and forgiven. This amount never has to be paid back. If you fall behind and miss debt forgiveness for a time period, but you then catch up your CAP payments, you will receive the debt forgiveness you missed. You will continue to receive debt forgiveness as you pay your CAP bills until the entire pre-CAP balance is forgiven. If you no longer participate in CAP, you remain responsible for any amounts that were not forgiven.

Late Payments

If you don't pay your bill while on CAP, you will be sent a termination notice. The notice amount must be paid in full or your service will be turned off. No extensions or payment arrangements will be offered. If your gas service is turned off for non-payment, you must do the following to have the gas service turned back on:

- Pay the termination notice amount (total of your missed CAP payments) plus any current bills if overdue.
- Pay a turn-on charge as defined by National Fuel's current tariff.

Identification, Proof of Income

All adults must provide satisfactory identification information and proof of income. Copies of income documents for the last 30 days or 12 months need to be provided, using whatever is more beneficial for acceptance into the CAP program. Participants of the program are required to provide household income information when requested by National Fuel. You must also notify National Fuel when any changes occur in your household size or income.

Energy Conservation

Energy saving tips will be provided that will help with usage and energy cost reduction. You may have an energy audit performed on your home. An audit can show you where you might be able to conserve energy and lower your gas bill. Our experts will check your furnace, water heater, insulation, weatherstripping and any other areas in your home where you may be able to reduce energy costs.

Weatherization

If you qualify for our weatherization program, you must agree to have your home weatherized. The Low Income Usage Reduction Program (LIURP) provides insulation and other energy saving improvements **at no cost to you.** If you are a renter, your landlord must agree to weatherization work for it to be performed. You will not be penalized if your landlord does not agree.

LIHEAP

You are required to apply for the Low-Income Home Energy Assistance Program (LIHEAP) through your county assistance office or online at **www.compass.state.pa.us**. LIHEAP is typically open from November through March. If approved and National Fuel is the utility you identified on your application, the grant will be applied to your current account balance.

- **LIHEAP Data Sharing Option:** You can easily be enrolled in CAP if you check the box on your LIHEAP application to allow the Department of Human Services (DHS) to share your household and income information with your utility.

Customer Choice

CAP eligibility is limited to those who purchase gas from National Fuel. National Fuel is unable to offer a discount on the gas you buy from another supplier.

To apply online scan the QR code or visit www.nationalfuel.com/applycap

Energy Efficiency Tips

Saving money and energy is easier than you think.

Help reduce emissions in the atmosphere and put a little more money in your pocket. Making these small, inexpensive adjustments can make a big difference!

Try these quick and easy ways to save:

- Set thermostats between 65° and 70° during the winter, and at 58° when away from the house for more than a few hours. By turning your thermostat back 10°-15° for eight straight hours, you can save about 5%-15% a year on your heating bill—a savings of as much as 1% for each degree.
- Turn down thermostats automatically without sacrificing comfort by installing a programmable thermostat.
- Change or clean furnace air filters once a month during the heating season. Furnaces consume less energy if they "breathe" more easily. Use the arrival of your natural gas bill as your reminder to change the filter.
- Warm air rises, so use registers to direct warm airflow across the floor.
- Close vents and doors in unused rooms. Close dampers on unused fireplaces.
- Set your water heater to 120° or the medium temperature setting. Drain a quart of water from the bottom of your water heating tank every three months to remove sediment that can hamper the efficiency of your unit. Water heating is a typical family's third-largest energy expense, accounting for about 14% of utility bills.
- Insulate water heaters with insulation blankets in accordance with manufacturer's guidelines.
- Install water-flow restrictors in shower heads and faucets.
- If radiators are located near cold walls, place a sheet of aluminum foil between the radiator and the wall to reflect heat back into the room.
- Run washing machines and clothes dryers with a full load.
- On sunny days, open curtains and blinds on windows that receive direct sunlight. Close them at night or on cloudy days to insulate against the cold air outside.

Keep the cold out and the costs down.

Air leaks contribute to significant energy loss. See estimates below. Reduce air leaks and cut as much as 10% from your monthly bill by using caulk or weather-stripping to seal leaks around:

- Floors, walls, ceilings (31% of energy loss)
- Ducts (15% of energy loss)
- Fireplace (14% of energy loss)
- Plumbing (13% of energy loss)
- Doors (11% of energy loss)
- Windows (10% of energy loss)
- Fans and vents (4% of energy loss)
- Electric outlets (2% of energy loss)

Income and usage eligible customers may qualify for weatherization.

National Fuel®

Account Number: [redacted]

[redacted]

March 13, 2026

Dear [redacted]

RE: Service Address: [redacted] Account Number: [redacted]

You recently gave permission to the Department of Human Services (DHS) when you applied for LIHEAP to share your household and income information with your utilities for the purpose of enrolling or recertifying in their Customer Assistance Programs and other utility assistance programs.

We have reviewed your account and determined that you are eligible to continue on National Fuel's Customer Assistance Program (CAP).

Your payment is based on your household size and income that National Fuel has on file for CAP. You will pay your percentage of income amount or your average bill amount, whichever is less. The minimum CAP payment is $12.

You will be billed to CAP Tier 2 and will not pay more than 6% of your monthly income.

CAP Tier 1 – CAP payment is 4% of your household income (0-50% of the FPIG).
CAP Tier 2 – CAP payment is 6% of your household income (51-100% of the FPIG).
CAP Tier 3 – CAP payment is 6% of your household income (101 to 150% of the FPIG).

We have included a copy of the CAP Features and Energy Efficiency Tips. They explain the benefits of CAP, how to calculate your CAP amount, what you need to do to stay on the program and provide cost saving energy tips to help reduce your usage.

If your household income has changed since you applied for LIHEAP this year or if you have any questions, please contact us at 1-800-365-3234.

Sincerely,

National Fuel

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please refer to the September 2024 NFG LIURP Needs Assessment prepared by APPRISE and available on the Commission's website at https://www.puc.pa.gov/pcdocs/1853360.pdf. Please confirm that this is the most recent LIURP needs assessment completed for NFG and that there are no other LIURP needs assessments that have not yet been approved. If NFG has prepared and submitted a needs assessment that has not yet been approved, please provide a copy. Please also specifically describe any changes that NFG implemented as a result of the September 2024 LIURP needs assessment.

Response

The September 2024 LIURP Needs Assessment prepared by APPRISE is the most recent LIURP needs assessment completed by the Company and there are no assessments pending approval.

As a result of the 2024 LIURP Needs Assessment, the Company has increased its outreach efforts to improve awareness of the program. These steps include attending new events and locations across the service territory where more information was available at these events to inform attendees about LIURP. The Company has also taken steps to find contractors who can handle additional and more consistent work. These efforts have proven to be successful as the Company has seen an increase in LIURP spending and LIURP jobs completed as seen in response Cause-PA-II-14.

R-2025-3059428

Question

For January 2023 to date, disaggregated by month and year, as of the last day of the month/year, please indicate the average LIURP per job cost and total LIURP dollars spent, disaggregated by the following customer segments for NFG: a) All LIURP recipients; b) Homeowners; c) Tenants; d) Single family homes; e) Multifamily, single metered homes; and f) Multifamily, master metered homes. Please provide this data in a live Excel spreadsheet.

Response

See Attachment Cause-PA-II-14.xlsx.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Please indicate for each year from January 2022 to date disaggregated by year, as of the last day of the year, whether: a) NFG exhausted its LIURP budget; b) If such budget was not exhausted, the number of dollars not spent; c) If such budget was exhausted, the number of NFG customers who did not receive LIURP services despite having been found to be LIURP eligible. Please provide this data in a live Excel spreadsheet.

Response

See Attachment Cause-PA-II-10.xlsx. Note that the Company does not have the information in section (c) as this information is not tracked.

Section A	
Year	NFG exhausted its LIURP budget
2022	No
2023	No
2024	No
2025	No
2026	N/A

Section B	
Year	If such budget was not exhausted, the number of dollars not spent
2022	$2,088,596.46
2023	$2,367,861.62
2024	$2,311,157.99
2025	$1,450,879.24
2026	N/A

Section C	
Year	If such budget was exhausted, the number of NFG customers who did not receive LIURP services despite having been found to be LIURP eligible
2022	N/A
2023	N/A
2024	N/A
2025	N/A
2026	N/A

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Assuming that NFG treats an identical number of low income units as will be treated through LIURP in the current fiscal year, and assuming no unit will be retreated, please indicate the number of years it would take to treat 100% of the low income units identified in the above requested needs assessment(s).

Response

The 2024 LIURP Needs Assessment provided by APPRISE states that there are approximately 213,493 households in the Company's territory with gas bills, of which 18% are low-income customers (38,429). Using the best available data, the Company completed a total of 187 LIURP jobs in calendar year 2025. With this information, it would take the Company approximately 206 years to treat 100% of these eligible households in its service territory. However, not all low-income customers would meet the yearly consumption threshold level of 1300 CCF for LIURP or 900 CCF for LC-LIURP.

NATIONAL FUEL EXHIBIT MS-13R

Question

Is NFG proposing to implement any changes to its Universal Services and Energy Conservation Plan (USECP) Programs in the context of the present proceeding? If so, please specifically describe any proposed change to NFG's USECP Program(s) NFG proposes, including the timeline for implementing changes.

Response

The Company did not initially propose any changes to its USECP. However, given the current level of funding of the Neighbor for Neighbor program, the Company is evaluating certain changes that will facilitate its efforts to better support customers who are most in need of assistance. These proposed changes are as follows:

1. Making income a mandatory criterion; applicants need to meet both the income requirement (0-200%) and one other specified/current requirement to qualify.
2. Limiting the program to only National Fuel Gas customers.
3. Flexibility to change the grant amount based on demand.

Question

Please refer to NFG's response to CAUSE-PA I-2, indicating that NFG is evaluating for its hardship fund "Flexibility to change the grant amount based on demand." Please specifically explain: a) What specific flexibility NFG is evaluating related to changes to grant amounts based on demand; b) Whether and to what extent the flexibility would vary by any factor (e.g. customer income level, any non-income eligibility criteria, county). Please also provide a copy of all current or proposed written policies, procedures, or other documents which discuss NFG providing flexibility to change hardship fund grant amounts based on demand.

Response

a) The Company is evaluating the ability to introduce flexibility in the hardship fund grant amounts awarded based on demand. This flexibility will allow the Company to continue operating the program and support customers consistently throughout the year.

   Specifically, the Company is evaluating modifying the hardship fund program guidelines to allow:

   - The maximum grant amount to be adjusted downward during periods of elevated demand or reduced fund balances; and/or
   - The program administrator to adjust grant amounts based on overall program demand and available funding, with the goal of assisting a greater number of eligible customers over the course of the program year.

   Under these modifications, the hardship fund would continue to provide meaningful assistance to eligible applicants, but individual awards could be adjusted to help prevent premature depletion of the fund and avoid temporary program suspensions.

b) At this time, the Company is not evaluating flexibility that would vary by factors such as customer income level, non-income eligibility criteria, or geographic location.

   Eligibility criteria and screening requirements would continue to apply uniformly across applicants.

Rather, the flexibility under consideration relates to program level conditions, such as overall demand for grants during a given period and the availability of program funds relative to projected need.

Grant amounts would continue to be determined through the existing intake and review process based on an applicant's circumstances and documented need, but within adjusted program parameters intended to preserve the availability of assistance throughout the year.

No formal written policy or procedure has been finalized or adopted that specifically governs flexibility to change hardship fund grant amounts based on demand.

10 DAY SHUT-OFF NOTICE
AVISO DE SUSPENCION DE SERVICIO

Your Gas Service May Be Shut Off!
Because your bill is past due, we will shut-off the gas service to [redacted] at a time legally authorized on or after 8:00am on **April 01, 2026. We may act on this notice for up to 60 days.**

We will NOT shut off your gas service if you do ONE of the following:
o Call us at 1-800-365-3234 to arrange to pay your past due bill of $158.50.
o Pay the amount you owe on your payment plan. Call us at 1-800-365-3234 for this amount.
o Show us a paid receipt for the past due amount.
o **Call 1-800-365-3234 right away** if you dispute this bill or to **provide us with household income and occupant information.** You may be eligible for a payment agreement or special assistance programs.

If we shut off your gas service, you may have to pay all of the following before we can turn your service on:

Past Due Bill	$158.50
Security Deposit	$0.00
Turn-on Charge	$69.00
Total	**$227.50**

***To talk about your bill, please call our office at 1-800-365-3234.**

MEDICAL EMERGENCY NOTICE

Let us know if someone living in your home is seriously ill or has a diagnosed medical condition which requires the continuation of service to treat the medical condition. **WE WILL NOT SHUT OFF YOUR SERVICE** provided you:
(a.) Have a licensed physician, physician assistant, or nurse practitioner certify by phone or in writing that a serious illness or medical condition exists in the household that requires continuation of service to treat the medical condition; and
(b.) Make some equitable arrangement to pay the company your current bills for service.
(c.) Contact us by calling the following number:
1-800-365-3234
1 RELIEF ST OIL CITY, PA 16301

(d.) Have your licensed physician, physician assistant, or nurse practitioner send a letter to the utility within 7 days verifying the medical condition.

IMPORTANT TO KNOW
Before we shut off your utility service please read the back of this notice. You may be eligible for certain protections from shut off.

Atencion! Este es en mensaje muy importante. Si usted no lo entiende, favor de llama a 1-800-365-3234.

IMPORTANT TO KNOW - BEFORE WE SHUT OFF YOUR UTILITY SERVICE

- If you have questions or need more information, please call us today at 1-800-365-3234. After you talk with us, if you are not satisfied, you may file a complaint with the Public Utility Commission (PUC). The PUC may delay the shut off if you file the complaint before the shut off date. To contact them call 1-800-692-7380 or write to: Pennsylvania Public Utility Commission, PO BOX 3265 HARRISBURG, PA 17105-3265.
- **If we shut off your service during the winter months (between Dec. 1 - Mar. 31)** we will restore your service within 24 hours of your meeting all requirements/conditions to have service reconnected. Where street digging is required, it may take up to 7 days.
- If you currently have a valid Protection from Abuse order or a valid court order which provides clear evidence of domestic violence against you the service cannot be terminated during the winter without PUC permission. There are some additional protections available to you. **Call us immediately at 1-800-365-3234.** (You will be required to provide us with a copy of the order.)
- You may be eligible for a payment agreement or special assistance programs. **Call 1-800-365-3234 right away** to **provide us with household income and occupant information**. Documentation of your income may be required, such as pay stubs or tax documents.
- **If your landlord pays your utility bill: You have certain legal protections.** Please call us at 1-800-365-3234.
- If you have trouble understanding or speaking English or have a disability please call us at 1-800-365-3234 for free interpretation.
- If your service is shut off, you may be required to pay more than the amount listed on the front of this notice to have your service turned back on. You may have to pay any additional bills that have become past due.
- All adult occupants of the premise whose names are on the mortgage, deed, or lease are considered the 'customer' and are responsible for payment of this bill.
- If service is shut off, ANY adult occupant who has been living at the premise may have to pay all or portions of this bill to have service restored.
- If your service is shut off, you must contact us after your payment has been made to be sure you have met all conditions to have the service turned back on and to arrange access to your premises.
- After all conditions have been met to have the service turned back on, it may take up to seven days to have your service restored. Please contact us to discuss the details.

WINTER NOTICE PROVISIONS (between December 1 - March 31)

- **Contact us BEFORE the shut off date** to give us household income & occupant information to see if you qualify for any assistance programs.
- **If your income is at or below 250% of the federal poverty guidelines, we must first ask the PUC for permission to shut off your service.** Add together the monthly income of the adults in your household. If that number is the same or less than the amount listed in chart below for your household size, call us immediately at 1-800-365-3234. You may need to provide us with proof of your income.

Monthly Income at 250% of Federal Poverty 2026				
Household Size	1	2	3	4
Monthly Income	$3,325.00	$4,508.00	$5,691.00	$6,875.00

Add $1183.00 for each additional household member

Atencion ! Este es en mensaje muy importante. Si usted no lo entiende, favor de llama a 1-800-365-3234.

National Fuel®

30-DAY SHUT-OFF NOTICE TO TENANTS

Address [redacted] Date February 12, 2026

(Service Address) [redacted] Account Number [redacted]

WARNING: YOUR NATIONAL FUEL GAS SERVICE MAY BE SHUT OFF ON OR AFTER 03/14/2026 BECAUSE OF INSUFFICIENT PAYMENT.

TO STOP THE SHUTOFF OF YOUR UTILITY SERVICE YOU MUST DO ONE OF THE FOLLOWING THINGS:

1. You can join with the other tenants to pay the National Fuel bill for the last month or you can pay the total bill yourself. Either way, you do not have to pay a deposit or get credit granted in your name. You will not have to pay your landlord's other debts or the debts of prior tenants. The utility service will remain in the name of the landlord.
2. By law, you may deduct your payments to National Fuel from your rent, due now or in the future. We will tell your landlord how much you paid for that utility service.

ADDITIONAL INFORMATION

1. The bill which must be paid to continue service is $178.91
2. Your landlord cannot punish you if you pay the utility bill. Your landlord cannot raise your rent, cannot evict you and cannot take action against you in any other way for paying the utility bill and deducting it from your rent.
3. You have the right to dispute the accuracy of the bill and have certain other rights. If you would like further information regarding these rights, contact National Fuel at 1-800-365-3234.
4. You must make the payment directly to National Fuel. Please contact us at 1-800-365-3234 for instructions to submit payment. We may require you to provide some form of identification such as:
   - Driver's License
   - Photo Identification
   - Medical Assistance Identification
   - Food Stamp Identification
   - Any similar document from a local city, state or federal government agency that lists your name and address.

DO YOU HAVE ANY QUESTIONS?

If you have any questions about your utility service, please contact National Fuel at 1-800-365-3234, 7:00 a.m. to 6:00 p.m. weekdays. After you talk with us, if you are not satisfied, you may contact the Pennsylvania Public Utility Commission. You may do so by calling the Public Utility Commission at its toll free number, which is 1-800-692-7380, or writing: Pennsylvania Public Utility Commission, P.O. Box 3265, Harrisburg, PA 17105-3265. **YOU SHOULD CALL OR WRITE BEFORE THE SHUTOFF. TO AVOID SHUTOFF, WE MUST RECEIVE YOUR LETTER BEFORE THE SHUTOFF DATE**.

IF THERE IS A SERIOUS ILLNESS

5. Let us know if anyone living in your home is seriously ill. We will not shut off your service during this illness as long as you do all of the following three steps.
   1. Contact us immediately; and
   2. Have a doctor certify by telephone or in writing:
      - The name of the person who is seriously ill, and
      - What kind of illness it is , and
      - How long the person will be ill, and
      - The illness will be worse if you do not have service; and
   3. Make arrangements for paying, if necessary.

February 06, 2026

37 DAY SHUT-OFF NOTICE FOR LANDLORD RATEPAYER

Name: [redacted] Account: [redacted]
Address: [redacted] Past Due Amount: $281.07

Your Service May Be Shut Off
Because your bill is seriously past due, we will shut off the gas service to [redacted] on or after 8:00am on March 15, 2026.

We Will NOT Shut Off Your Service If You Do ONE Of The Following:
- Pay the past-due amount in full before March 15, 2026.
- Show us a paid receipt for the past due amount.
- Call the number below right away to make payment arrangements.

Your Tenants Will Be Notified
We will notify your tenants on or after February 13, 2026 that we will shut the service off. At that time, we will also inform them of their rights under Pennsylvania law.

Pennsylvania law states that you must give us the names and addresses of all tenants the shut-off will affect within seven (7) days of the date you receive this notice, unless you pay the total past-due amount or make satisfactory payment arrangements with us. You may have to pay a civil penalty of up to $500 for each day you do not give us this tenant information. Call us at 1-800-365-3234 or write to us at National Fuel, PO BOX 2081 ERIE, PA 16512.

If We Shut Off Your Tenants' Service...
If we shut off your tenants' service, you will have to pay the following before we can turn it back on:
- The Past Due Amount and a Turn-On Charge and a Security Deposit equal to two months of average billing.

We may not be able to restore your service until the close of the next business day.

To File A Complaint...
To talk about your bill, please call us at the number on the reverse Monday through Friday from 7:00am to 6:00pm.

AFTER you talk with us, if you are not satisfied, you have a legal right to file a complaint with the Public Utility Commission. You may do so by calling the Public Utility Commission toll-free at 1-800-692-7380 or by writing: Pennsylvania Public Utility Commission, PO BOX 3265 HARRISBURG, PA 17105-3265.

If you file a complaint within seven (7) days of the date on this notice, we will not notify your tenant(s) that we will shut their service off. Also, we will not shut the service off until the PUC settles your complaint.

If There is a Serious Illness...
Let us know if anyone living at this service address is seriously ill. We will not shut off your service during this illness as long as you do all of the following three steps:
(1) Contact us immediately; and
(2) Make arrangements for paying the past-due bill; and
(3) Have a doctor certify by telephone or in writing: (a) The name of the person who is seriously ill; and (b) What kind of illness it is; and (c) How long the person will be ill; and (d) The illness will be worse if you do not have service.

RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

From January 2023 to date, disaggregated by month and year (as of the last day of the month/year), please provide: a) The number of hardship fund grant applications NFG received from NFG non-customers; b) The number of non-customers who received a hardship fund grant; c) The number of hardship fund grants issued to NFG non-customers; d) The total dollar amount of NFG hardship fund grants issued to NFG non-customers. Please provide this data in a live Excel spreadsheet.

Response

See Attachment Cause-PA-4-20. Note that for section (a), the number of applications received is not tracked. Sections (b) and (c) would be the same number.

Year	Month	b) The number of non-customers who received a hardship fund grant; c) The number of hardship fund grants issued to NFG non-customers	d) The total dollar amount of NFG hardship fund grants issued to NFG non-customers

Smell gas? Leave fast!

Then call **1-800-444-3130.** Natural gas is efficient and economical. It's delivered to your home or business through a safe, underground pipeline system, but safety also depends on you.

While natural gas is naturally colorless and odorless, National Fuel adds a rotten egg smell so you will know if there is a leak.

If you smell gas:

DO

- Leave the premises immediately.
- Call National Fuel's emergency line – **1-800-444-3130** – from a different location.

DON'T

- Turn any electrical switch on or off.
- Light any matches.

For gas emergencies, call 1-800-444-3130, 24 hours a day, seven days a week.

National Fuel®

Please recycle

Go Paperless

The easiest way to receive your National Fuel invoice and help the environment is to enroll in paperless billing. With paperless billing, a notification is forwarded to your preferred e-mailed address registered through your online account, and an image of your bill, current balance and due date information, along with reminder notices, are provided. A confirmation e-mail that your payment has been processed is also provided for your records.

Register for paperless billing by creating a new account or logging into your existing National Fuel online account. Benefits of an online account include the ability to enroll in automatic payments, view payment history, sign up for budget billing, and submit meter reads.

Go paperless by scanning the QR code below or visiting **NationalFuel.com**.

Have a billing question?

If you have a billing question, problem or request, please call us Monday through Friday, 7 a.m. to 6 p.m.

Erie-area: 814-871-8200

All other areas: 1-800-365-3234

Or visit **NationalFuel.com** for more information.

Customers with hearing or speech difficulties are able to communicate with us on electronic display (TTY or teletypewriter) and can have a relay call placed to us by calling **711**.

For more information, including translation services, please call **1-800-365-3234**.

Para más información, incluyendo servicios de traducción, por favor llame al **1-800-365-3234**.

Struggling to Pay Your Winter Heating Bills?

We're here to help you weather any storm.

At National Fuel, we constantly strive to take care of our neighbors and the communities we serve. From energy affordability programs to payment plans and more, we're providing ways for eligible homes to maintain their energy needs throughout the winter:

Low Income Home Energy Assistance Program (LIHEAP) — This federal grant program helps income-eligible customers. You may be eligible to receive a one-time grant of up to $1,000. Funding is limited and will be distributed on a first-come, first-served basis.

***LIHEAP Data Sharing Option** — Easily enroll in National Fuel's Customer Assistance Program (CAP) by checking the box on your LIHEAP application to allow the Department of Human Services to share your household and income Information with your utility.

To see if you qualify, visit **LIHEAPhelps.com**.

Call or visit your local county assistance office to apply, and be sure to apply in the county where you live. You can also apply quickly and easily online at **www.compass.state.pa.us**.

To view LIHEAP income qualifications, visit LIHEAPhelps.com.

LIHEAP Crisis Grants — If you are without service or have received a shut-off notice, you may be eligible for a crisis grant of up to $1,000. I**f applying for a crisis grant, you will need a shut-off notice or a form from the utility to have service restored.**

Customer Assistance Program (CAP) — Affordable payments based on household size and income, plus your existing balance can be forgiven. To apply, visit **www.nationalfuel.com/applycap**.

Low-Income Usage Reduction Program (LIURP) — This program, mandated by the Pennsylvania Utility Commission, provides weatherization aid for customers who meet income/consumption requirements.

Neighbor for Neighbor — Provides a one-time grant up to $500 for those struggling with energy bills. Eligibility includes one of the following: disability, certified medical emergency, at least 55 years old, recently unemployed, veteran, experience a verifiable loss of income, or household income between 0-200% poverty level.

Customer Assistance Referral and Evaluation Service (CARES) — Payment arrangements and assistance referrals for customers facing hardships.

AutoPay Payment Plan — Automatically deduct your monthly payment from your checking or savings accounts on the bill due date. Never forget to pay your gas bill again!

Budget Plan — Plan ahead with a stabilized monthly bill for up to one year. This plan divides your estimated annual bill into either 10 or 12 payments.

Deferred Payment Arrangement — If you are unable to make your payment, please call us as soon as possible. You may be asked to provide income information. Based on that, a deferred payment arrangement may be made.

For more details about these programs, visit: **WeatherAnyStormPA.com**

Fueling Tomorrow Today | Winter 2026

Important Gas Safety Reminders

This winter, make sure your home isn't only warm, but is also safe!

Carbon Monoxide Safety

Carbon monoxide (CO) is an odorless, colorless and dangerous gas. It's released when appliances that use natural gas aren't working properly. Prevent carbon monoxide poisoning and learn the symptoms.

Following our CO Safety Checklist can keep your family safe.

- Have your chimney, appliances and heating equipment inspected and tested by a qualified professional annually.
- Install ventless heaters in accordance with manufacturer specifications and at least one CO detector in your home.
- Clear snow and ice from appliance exhaust and intake air vents.
- Keep vents and flues free of debris.

Follow these CO safety tips:

- Never rely on CO detectors as a substitute for maintaining appliances, heating equipment or chimneys.
- Never use a gas oven or stovetop for heating.
- Never use ventless heaters as a primary heating source.
- Never run gasoline engines (such as gas generators) or automobiles in an enclosed space.
- Never use a portable charcoal or propane grill indoors.

Know CO poisoning symptoms:

- Fatigue
- Coughing
- Headache
- Irregular breathing
- Dizziness
- Overall paleness
- Nausea
- Cherry red lips and ears

Keep CO Safety top of mind. If you suspect carbon monoxide poisoning, go outside immediately. Then call **9–1–1**.

To learn more about and download our CO Safety Checklist, visit **cosafety.info** or scan the QR code with a smartphone.

Pay Attention to Outdoor Gas Meters, Furnaces and Vents

Natural gas furnaces and fireplaces have a vent pipe or flue that sends exhaust and gaseous byproducts outside via a chimney or pipe. Furnace exhaust vents can become clogged by debris, ice or snow, causing the furnace to shut off or operate inefficiently. Blocked vents can also lead to buildup of carbon monoxide inside a residence.

Natural Gas Detectors

Like smoke and CO detectors, natural gas detectors are available and will sound an audible alarm or voice alert when a natural gas leak is detected. When gas is detected, leave the premises immediately and call National Fuel's emergency line, **1–800–444–3130**, or **9–1–1** from a safe distance, approximately 330 feet away (about the length of a football field). Natural gas detectors are available at home improvement stores and online.

Be Mindful of Wintery Conditions

Snow, ice and extreme cold temperatures can pose a variety of issues for heating systems. Ensure outdoor gas meter safety and proper service by:

- Keeping the meter and surrounding area free of snow and ice, including your gutters.
- Clearing paths to the meter.
- Informing those working, plowing or snow blowing of the meter location.
- Not letting children play on the meter.
- Exercising caution when removing icicles on the meter or area above it.
- Calling National Fuel, **1–800–365–3234**, if a meter becomes encased in ice.

Utility Scams

Customers are reminded that

- National Fuel employees **DO NOT** conduct door-to-door sales. Any salesperson wearing a hard hat, another article of clothing, or accessories commonly associated with utility employees is not likely a National Fuel employee.
- National Fuel employees **DO NOT** visit homes to view gas bills, sign agreements or discuss account matters unless related to collections.
- National Fuel employees **DO** visit homes for operational purposes, including meter reading, construction work and gas emergencies. Employees carry identification cards and will produce them without resistance if asked.

Helpful Tips to Lower Energy Usage

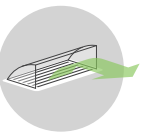
Energy Efficiency Tips

Making small and inexpensive adjustments in your home can help to reduce emissions in the atmosphere and put a little more money in your pocket.

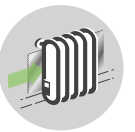
- **Reduce air leaks** — Use caulk or weather-stripping to seal leaks around floors, walls, ceilings, ducts, fireplaces, plumbing, doors, windows, fans, vents and outlets.

- **Lower the thermostat** — Turn back your thermostat by 10°-15°. Programmable thermostats allow you to automatically turn down the temperature.

- **Change or clean air filters** — Cleaning furnace air filters once a month during the heating season helps it to "breathe" more easily and consume less energy.



- **Control warm airflow** — As heat rises, use registers to direct warm airflow across the floor. Close vents and doors in unused rooms and dampers on unused fireplaces to keep warm air where you want it.

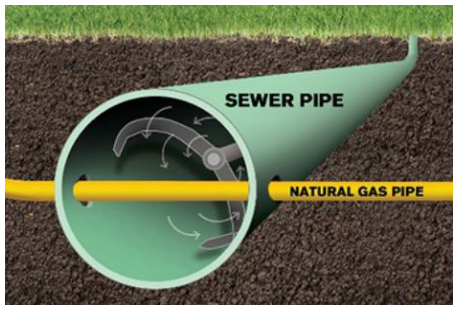


- **Reflect heat** — If radiators are located near cold walls, place a sheet of aluminum foil between the radiator and the wall to reflect heat into the room.

- **Use sunlight** — Open curtains and blinds to let in direct sunlight, but close them at night or on cloudy days.

Cross Bore Sewer Line Safety

A cross bore occurs when an underground utility is unintentionally installed through another existing utility or structure using trenchless construction technology. In rare cases, a natural gas line may be unknowingly installed through a sanitary or storm sewer and can be hazardous when the sewer line becomes blocked, requiring mechanical equipment to clear it.



Improper cross bores can lead to incidents resulting in property damage, injury and even death. National Fuel takes extensive measures to ensure that our trenchless construction practices are minimally invasive and safe.

If you suspect a cross bore blockage but are unable to visually verify one does not exist, follow these precautionary measures before you attempt to clear a sewer blockage beyond the outside wall of a building:

- Notify PA One Call at **8–1–1** for underground utility locations to determine if the blockage is in the vicinity of utility lines.
- If you suspect a sewer blockage was caused by a natural gas line, call National Fuel at **1–800–444–3130**.
- If you find a cable cross bored through the sewer, please call your local electric or telecommunications utility.

Make Sure You Know What's Below & Call Before You Dig!

Did you know that approximately 3 million miles of pipelines efficiently, safely and reliably deliver natural gas every day to around 77 million American homes and businesses? As warm weather brings on more time outdoors and home-improvement projects, it is important to know what's below ground before starting any digging projects, especially in the vicinity of pipeline markers.

Most pipelines are not visible, so pipeline markers serve a critical role in alerting that a pipeline is in the area. Pipeline markers indicate the pipeline's approximate location, product carried and the pipeline operator's contact information, but don't assume a pipeline isn't present when there is no marker.

Before picking up a shovel, make sure to have the underground utilities on your property marked. By calling **811** or visiting **pa1call.org**, you can request to have professional locators mark underground utilities for free.

In Pennsylvania, the law requires residents and contractors to call **811** at least three but no more than 10 business days in advance of the start of a project to allow local utilities to mark the approximate location of and prevent accidental damage to underground lines.

Safe digging is no accident, it's the law. Call **811** before:

- Planting or removing trees, flower beds or bushes.
- Installing fences, drainage, mailboxes, etc.
- Grading yards and removing dirt.
- Anchoring supports for decks and swing sets.

When you call **811**:

- Local utilities will send a professional to conduct a FREE site survey and mark the underground lines on your property.
- Once your underground lines have been marked, you will know the approximate location of your utility lines.
- Respect the marks and dig with care using hand tools near underground lines.
- Have an emergency plan.

If you damage a natural gas line, contact National Fuel immediately at **1-800-444-3130**. Even minor damage to a pipeline may cause a leak or failure, so please,

Fueling Tomorrow Today | Summer 2025

Summer Safety

Tips for a fun and safe summer!

Keep Your Dog Safe

We love dogs, but we don't love dog bites. Any dog can bite. It is not a dog's breed that determines whether it will bite, but rather the dog's individual history and behavior. Dogs bite for a variety of reasons, but most commonly as a situational reaction. Whether you're receiving scheduled service or we're on your property for a meter reading, please keep these tips in mind:

1. Make sure your dog is in a separate, enclosed area before answering the door.
2. If service is being done outside your home, keep your dog in the house even if you have invisible fencing.
3. Remember, for their safety, employees are instructed to never pet or interact with dogs while they are on the job.
4. Pay attention to your dog's body language. A tensed body, stiff tail, pulled-back ears and intense stare mean your dog is uncomfortable and may feel the need to bite.
5. If you believe your dog is going to attack, try to place something between the dog and the representative, like a purse or backpack.

Following these tips will help minimize dangerous situations — not only for the safety of our employees but for your dogs, too!

Natural Gas Generators

Having a standby natural gas generator can be very helpful when unexpected power outages occur at your home or business.

Manufacturers of these products do not recommend their use by customers to supply power to critical life support equipment (LSE). It is dangerous and potentially deadly to operate LSE with a home backup generator. Customers with LSE that lose electric service should immediately call 911 in an emergency, or call their electric utility to advise of loss of service and receive further instruction.

If you or someone you know uses LSE at home, be sure to contact your electric utility provider to enroll in their Life Support Equipment program. While enrollment doesn't guarantee uninterrupted electric service, those programs provide information and notifications to help customers using LSE stay informed, prepared and safe during an electrical outage.

Natural Gas Meter Safety

Damage to meters can cause hazardous natural gas leaks. Follow these important safety tips when working around natural gas meters:

- Maintain 2 feet of clearance when mowing or trimming around meters.
- Use hand tools to landscape within the 2-foot buffer zone.
- Do not hang or lean tools on or against meters.
- Use caution when trimming tree branches and shrubs near meters.
- Do not leave equipment parked in front of meters.
- Keep mulch or garden rocks at least 6 inches below the bottom of gas meters.
- Plant shrubbery away from gas meters to allow access in the event of an emergency.

Customer Meter Read Program

National Fuel is scheduled to read most meters every other month. The Company offers a program that advises customers when to submit meter reads on the opposite months to avoid estimated bills. Estimated bills are based on the amount of gas used at your service address for the same or similar time period from the previous year. When enrolled in the program, a document will be sent annually with the dates to submit meter reads in addition to automated reminder calls when a reading is due. Customers will be auto-enrolled into the program if we have not received a customer or Company read in approximately 4 months.

Enrollment in the program is easy and can be done with a quick call to **1-800-365-3234**.

You do not have to be enrolled in the Customer Meter Read Program to submit meter reads. Readings can be submitted by calling **1-888-634-7323**, emailing NFG_CustSVS@natfuel.com or at NationalFuel.com/meter-reading.

Excess Flow Valves

What are they and why you might be interested?

Excess flow valves are an optional device for National Fuel customers. Where conditions permit their use, National Fuel can install an Excess Flow Valve (EFV) on your natural gas service line (the underground line that runs from the main-line to the meter).

EFVs are designed to shut off the flow of natural gas automatically in the rare instance that the service line breaks or is damaged. These infrequent incidents are primarily caused by excavation damage.

A customer may request that National Fuel install an EFV on an existing gas service line on a mutually agreeable date, at a cost ranging from approximately $1,200 to $2,000 depending on the service size and the scope of the required installation work.

To install, National Fuel would need to excavate the service line at its connection to the gas mainline that runs down your street. Gas service will be turned off, the EFV installed, the excavation backfilled and your appliances relit. In some situations, we may need to replace your entire gas service at no additional cost.

An EFV must be sized to operate properly under your current natural gas usage conditions. Significant future usage increases or the installation of a natural gas emergency generator or pool heater may require the replacement of an EFV at an additional cost.

To learn more, search "EFV" on NationalFuel.com and complete the EFV form, or scan the QR code below.

Behind on your energy bills? We're here to help.

No matter why you fall behind, making progress is easier with a coach in your corner. If you or someone you know is struggling to pay bills, call a Catch-up Coach at **1-800-365-3234** or visit NationalFuel.com/CatchUp. Together, we'll find the support programs and payment options to get back on track, including:

Neighbor for Neighbor Heat Fund – Provides a one-time grant up to $500 for those struggling with energy bills. Eligibility includes one of the following: disability, certified medical emergency, at least 55 years old, recently unemployed, veteran, experience of verifiable loss of income, or household member between 0-200% poverty level.

Customer Assistance Program (CAP) – Affordable payments based on household size and income plus your existing balance can be forgiven. To apply, visit NationalFuel.com/applycap

Low-Income Usage-Reduction Program (LIURP) – Energy saving weatherization to homes for customers who meet income/consumption requirements.

Customer Assistance Referral and Evaluation Service (CARES) – Payment arrangements and assistance referrals for customers facing hardships.

Budget Plan – Stable monthly payments to know how much each heating bill will be.

Payment Arrangements – Extended payment terms for customers who are unable to pay their bill.

Scan the QR code to discover more ways that we can help you catch up.

Fueling Tomorrow Today | Summer 2025

IMPORTANT INFORMATION

National Fuel offers programs to assist customers with managing their gas bills and energy usage.

- **Low Income Residential Assistance Program (LIRA)** – Income eligible households can receive rate discounts between 10% and 80%, monthly debt forgiveness on existing pre-LIRA balances until completely forgiven, and educational resources on how to reduce energy burdens through energy conservation measures. Income information is required for all adult household members. Visit www.dollarenergy.org and select "MyApp" to apply.
- **Low Income Usage Reduction Program (LIURP)** – Home weatherization for customers who meet income and usage requirements. Includes an in home energy audit, cost saving tips and energy savings enhancements to the home, **at no cost**, to help reduce energy usage, in turn lowering energy bills.
- **Neighbor for Neighbor** – Helps customers meet basic energy needs. Eligibility includes any of the following: disabled, have a certified medical emergency, at least 55 years old, recently unemployed, veteran, verifiable loss of income within the last 30 days or household income between 0% and 200% of the federal poverty guidelines.
- **Customer Assistance Referral and Evaluation Services (CARES)** – Case management approach for customers facing hardships. Includes payment arrangements and program referrals.

For more information call, 1-800-365-3234

National Fuel®

Assistance Programs and Payment Options

- **Budget Plan** – Plan ahead with a stabilized monthly bill. This plan divides your estimated annual bill into 12 payments.
- **Payment Arrangements** – If you are unable to make your payment, we can set up extended payment plans for your account.
- **Low-Income Home Energy Assistance Program (LIHEAP)** – This federally funded program provides heating assistance to income eligible customers. Visit www.compass.state.pa.us to apply.
  - **LIHEAP CASH** – Qualifying households can receive a grant toward their utility bills.
  - **LIHEAP CRISIS** – For households experiencing a heating emergency. Funds available to assist with termination notices, restoration of service, and with broken heating equipment or leaking lines.
- **Emergency Rental Assistance Program (ERAP)** – A federally funded program that was created to help renters dealing with challenges related to the COVID-19 pandemic. Eligible tenant households may receive assistance with paying rent as well as utility and home energy bills. Visit www.compass.state.pa.us to apply.
- **Pennsylvania Home Owner Assistance Fund (PAHAF)** – A federally funded program to assist income eligible homeowners who experienced a financial hardship as a result of the COVID-19 pandemic for mortgage and housing related expenses, including utility bills. Visit www.pahaf.com to apply.

We're here to help.

Please call us today at **1-800-365-3234** to speak with one of our customer service representatives.

Atencion! Este es en mensaje muy importante. Si usted no lo entiende, favor de llama a **1-800-365-3234**.

For more information on these programs, scan the QR code or visit us online at www.nationalfuel.com.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 18

Direct Testimony of Erik M. Solomon

Topics Addressed: **Energy Efficiency Program**
Research, Development & Demonstration
Competitive Assessment

Dated: **January 28, 2026**

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Erik M. Solomon. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") as Senior Director of the Energy Services department.

Q. Please provide your educational background.

A. I graduated from the State University of New York at Buffalo in 1998 with a Bachelor of Science degree in Business Administration. In 2003, I earned a Master of Business Administration degree from St. Bonaventure University.

Q. Please provide your professional experience.

A. I began my career with National Fuel Gas Supply Corporation in June 1998 as a Transportation & Exchange Representative. Over the years, I have held a variety of roles with increasing responsibility. Early in my tenure, I joined NFGDC's Gas Supply Administration department, where I managed gas procurement, off-system sales, capacity release, and gas scheduling activities. In 2005, I transitioned to the Energy Services department as a General Energy Consultant, focusing on sales and customer service for large volume assigned accounts. My responsibilities included developing customer

relationships and supporting key account management. In 2020, I was promoted to Area Manager, overseeing sales, marketing, customer service, economic development, and research, development & demonstration ("RD&D") functions for NFGDC's New York Division ("National Fuel – NY"). Building on this experience, in 2023 I advanced to the role of Senior Director, where I now lead sales, marketing, customer service, economic development, and RD&D activities for National Fuel – NY and NFGDC's Pennsylvania Division ("National Fuel" or "Company").

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. Yes. I have testified on behalf of the Company in a Pennsylvania rate case at Docket No. R-2022-3035730 and before the New York Public Service Commission on behalf of National Fuel – NY in Case 23-G-0627.

II. PURPOSE OF TESTIMONY

Q What is the purpose of your testimony?

A. The purpose of my testimony is to present and support National Fuel's proposals and positions in this rate case, focusing on three core areas: the introduction of a comprehensive Energy Efficiency Program, the continuation and enhancement of RD&D initiatives, and the Company's strategic response to evolving competitive threats within the Pennsylvania marketplace.

Q. How is your testimony structured?

A. First, I will outline the rationale and expected benefits of launching a multi-year Energy Efficiency Program designed to deliver measurable energy savings, reduce customer bills, and support environmental sustainability. This program is modeled on successful approaches already approved for other Pennsylvania natural gas utilities and is structured to comply with PAPUC guidelines. It features targeted rebates and outreach strategies to ensure equitable access and participation across its residential customer segment.

Second, my testimony will detail the necessity of sustained investment in RD&D activities, which are critical for advancing innovative technologies, improving system reliability, and supporting long-term decarbonization goals. I will demonstrate how these initiatives, funded through both traditional and Delta Fund mechanisms, position National Fuel and its customers to benefit from ongoing industry innovation and the adoption of proven, cost-effective solutions.

Finally, I will provide an overview of the competitive environment in National Fuel's service territory, describing the nature and extent of bypass competition risk and explaining how the Company evaluates and responds to threats from both inter-fuel and intra-fuel competition. This includes a discussion of strategies for retaining at-risk customers, such as the use of negotiated rates, and the impact of these efforts on system throughput, revenues, and rate stability.

Throughout my testimony, I will provide evidence and analysis to demonstrate that the Company's activities and proposed programs are prudent, cost-effective, and aligned with regulatory best practices. My goal is to ensure that National Fuel continues to deliver

safe, reliable, and affordable natural gas service while advancing the interests of our customers and the communities we serve.

Q. Are you sponsoring any exhibits in this proceeding?

A. Yes, I am sponsoring the following exhibits:

- National Fuel Exhibit EMS-1 – Proposed Energy Efficiency Program
- National Fuel Exhibit EMS-2 – 2025 Delta Funds Report
- National Fuel HIGHLY CONFIDENTIAL Exhibit EMS-3 – Existing Bypass
- National Fuel HIGHLY CONFIDENTIAL Exhibit EMS-4 – Potential Bypass
- National Fuel HIGHLY CONFIDENTIAL Exhibit EMS-5 – List of Bypass Contracts

III. ENERGY EFFICIENCY PROGRAM

Q. Does the Company currently offer Energy Efficiency ("EE") programs to its customers?

A. No. However, National Fuel is proposing an EE program in this rate proceeding.

Q. Does the Company have any experience running an EE program?

A. Yes. National Fuel – NY has been running a comprehensive energy efficiency program for over 17 years. During the 17 years, the NY residential rebate program issued over 251,000 residential rebates and spent over $53.7 million on incentives.

Q. Please describe the proposed EE program.

A. National Fuel proposes implementing a comprehensive EE program over a five-year period beginning in October 2026. This program is designed to provide rebate incentives for residential customers to encourage the installation of high-efficiency natural gas appliances.

Q. Please describe the proposed EE program's rebates to residential customers.

A. The program includes the following measures for eligible customers:

1. Space Heating: Rebates for high-efficiency furnaces and boilers, which are among the largest contributors to natural gas consumption in buildings. For residential customers, rebates range from $150 to $700 depending on the equipment type and efficiency level (e.g., upgrading from 80% Annual Fuel Utilization Efficiency ("AFUE") to 95%+ AFUE).
2. Water Heating: Incentives for upgrading to high-efficiency water heaters, including tankless models. Rebates range from $50 to $300 for qualifying upgrades.
3. Clothes Dryers: Incentives for ENERGY STAR® certified natural gas clothes dryers. Rebates would be $100.

Q. What are the expected rebate costs for the EE Program?

A. See Table 1 on the following page.

Table 1: Energy Efficiency Program Projected Rebate Costs

Rebate Costs	FY27	FY28	FY29	FY30	FY31	Total
Space Heating	$289,455	$289,455	$289,455	$289,455	$289,455	$1,447,275
Water Heating	$161,922	$161,922	$161,922	$161,922	$161,922	$809,610
Clothes Dryers	$25,349	$25,349	$25,349	$25,349	$25,349	$126,745
Total	$476,726	$476,726	$476,726	$476,726	$476,726	$2,383,630

Q. Please describe the cost of the proposed EE program.

A. See Table 2 for the five-year projected costs.

Table 2: Energy Efficiency Program Annual Budgets

Budget Item	FY27	FY28	FY29	FY30	FY31	Total
Rebates	$476,726	$476,726	$476,726	$476,726	$476,726	$2,383,630
Administration	$100,000	$100,000	$100,000	$100,000	$100,000	$500,000
Evaluation, Measurement & Verification	$60,000	$60,000	$60,000	$60,000	$60,000	$300,000
Outreach/Marketing/ Trade Ally Co-op	$100,000	$85,000	$75,000	$50,000	$50,000	$360,000
Total	$736,726	$721,726	$711,726	$686,726	$686,726	$3,543,630

Q. How does National Fuel propose to recover the costs associated with the EE Program?

A. National Fuel proposes to recover the costs of the EE Program through a dedicated rider. This recovery mechanism will encompass all reasonable and prudently incurred costs directly associated with program administration, marketing, customer rebates, and evaluation activities. Furthermore, the program will be reconciled annually to ensure accurate cost recovery and compliance with approved budgets. Any annual overspend or underspend will be carried forward throughout the five-year program term.

Q. What are the expected participation goals for the EE Program?

A. The participation estimate presented in Table 3 was informed by National Fuel – NY's experience managing its Conservation Incentive Program. Drawing from those early pilot program stages, we anticipate preliminary participation targets of 0.5% of our eligible customer base annually, as the program will remain on the conservative side. Once the program matures and awareness among customers and contractors grows, participation may increase; however, for initial planning purposes, we are using 0.5% as the estimate across all equipment types and efficiency levels. Refer to the National Fuel Exhibit EMS-1 – Proposed Energy Efficiency Program, for more details.

Table 3: Energy Efficiency Program Participation

Category	FY27	FY28	FY29	FY30	FY31	Total
Space Heating	822	822	822	822	822	4,110
Water Heating	926	926	926	926	926	4,630
Clothes Dryers	253	253	253	253	253	1,265
Total	2,001	2,001	2,001	2,001	2,001	10,005

Q. What are the expected Mcf savings for the EE Program?

A. National Fuel utilized the standardized energy savings calculations and assumptions outlined in the New York State Technical Resource Manual at the measure level to estimate energy savings presented in Table 4.

Table 4: Energy Efficiency Program Energy Savings (Mcf)

Category	FY27	FY28	FY29	FY30	FY31	Total
Space Heating	8,629	8,629	8,629	8,629	8,629	43,145
Water Heating	2,592	2,592	2,592	2,592	2,592	12,960
Clothes Dryers	30	30	30	30	30	150
Total	11,251	11,251	11,251	11,251	11,251	56,255

Q. What are the expected savings for the participants in dollars for the EE Program?

A. National Fuel referenced the Rate Summary – October 2025, as published on the Company's public website under the Residential Sales Service table. The posted rate of $8.84 was applied to the Mcf savings to calculate the anticipated dollar savings seen in Table 5.

Table 5: Energy Efficiency Program Energy Savings ($)

Category	FY27	FY28	FY29	FY30	FY31	Total
Space Heating	76,280	76,280	76,280	76,280	76,280	381,400
Water Heating	22,911	22,911	22,911	22,911	22,911	114,555
Clothes Dryers	269	269	269	269	269	1,345
Total	99,460	99,460	99,460	99,460	99,460	497,300

Q. What cost-effectiveness methodology was used to evaluate the proposed EE program?

A. National Fuel evaluated the proposed EE Program using the Total Resource Cost ("TRC") test consistent with the PUC Order Adopted on November 7, 2024, at Docket No. M-2024-3048998.

Q. Please describe the TRC analysis conducted for the proposed EE program.

A. Pursuant to applicable state regulations, the TRC test is applied to determine whether the net present value ("NPV") of avoided monetary costs of supplying natural gas exceed the NPV of the monetary costs of implementing energy efficiency measures over their effective life, not to exceed 15 years.

Q. Please describe the benefits considered under the TRC analysis.

A. The analysis considered avoided supply costs, including reductions in natural gas procurement and delivery costs valued at marginal cost. Benefits were calculated using gross program savings, consistent with compliance methodology.

Q. Please describe the costs considered under the TRC analysis.

A. The analysis considered all program and participant costs, including equipment, installation, and administrative expenses, regardless of payer. Incremental measure costs were applied for services and equipment.

Q. Please describe the results of the TRC analysis.

A. The TRC analysis ensures that ratepayers receive greater benefits in reduced natural gas consumption, capacity, and other resource savings, than the total costs incurred to achieve those benefits, consistent with statutory objectives. The results are summarized in Table 6 below:

Table 6: TRC Analysis Results

Metric	Value
TRC Benefits	$3,923,073
TRC Costs	$3,842,601
Net Benefits	$ 80,472
TRC Ratio	1.02

Q. What are the additional benefits of the proposed EE program?

A. The proposed EE Program delivers a range of additional benefits listed below.

- Environmental Benefits: The EE Program reduces natural gas consumption, which directly lowers greenhouse gas emissions and other air pollutants.
- Societal Benefits: The program enhances comfort and safety in homes through improved heating systems, water heating, and clothes drying.
- Economic Development: By incentivizing equipment upgrades and energy-saving installations, the EE Program stimulates local economic activity. Contractors, suppliers, and service providers benefit from increased demand for energy-efficient products and services.
- Energy Equity: The EE program is designed to ensure equitable access to energy efficiency measures across diverse customer segments, including renters and underserved communities.

Q. How will underserved communities or low-income customers benefit from this EE program?

A. National Fuel believes the Company's proposed approach not only aligns with the cost recovery framework established under Act 129 for electric utilities but also represents a fair and practical solution to support low-income customers while advancing energy efficiency goals. Under this proposal, if a low-income customer is exempt from paying Rider D and chooses to participate in the EE Program, the associated costs would be equitably shared among the broader residential customer class—consistent with established regulatory precedent for socializing costs that deliver system-wide benefits.

Moreover, National Fuel intends to leverage its existing Emergency Heating Repair and

Replacement Program ("ERRP") to further assist self-identified low-income customers who report being without heat. By integrating ERRP with the EE Program, the Company can remove one of the most significant barriers to participation, the upfront cost of high-efficiency appliances, while ensuring vulnerable households maintain safe and reliable heating. This approach not only promotes equity and customer well-being but also accelerates the adoption of high-efficiency equipment, delivering long-term energy savings and environmental benefits for all customers.

Q. How will National Fuel evaluate the effectiveness of the EE program?

A. National Fuel will implement a robust Evaluation, Measurement & Verification ("EM&V") plan to assess the performance and cost-effectiveness of the EE Program.

Key components of the EM&V process include:

- Independent Third-Party Evaluation: National Fuel will engage qualified, independent evaluators to conduct annual assessments of program performance, including verification of energy savings, customer participation, and cost-effectiveness.
- Savings Verification: Evaluators will use industry-standard methodologies, including deemed savings values and site-specific measurement where applicable, to quantify Mcf savings resulting from installed measures.
- Process Evaluation: In addition to savings verification, evaluators will assess program design, delivery, and customer satisfaction to identify opportunities for improvement and ensure the program remains responsive to customer needs.

- Reporting and Transparency: EM&V results will be documented in annual reports submitted to the PUC, providing transparency into program outcomes and supporting regulatory oversight.
- Continuous Improvement: Findings from EM&V activities will inform program adjustments, including incentive levels, outreach strategies, and measure eligibility, to enhance effectiveness and ensure alignment with evolving market conditions.

Q. How will National Fuel engage stakeholders and promote participation in the EE program?

A. National Fuel will implement a comprehensive stakeholder engagement and outreach strategy to ensure broad awareness, equitable access, and strong participation in the EE program across its residential customer segments.

Key elements of the strategy include:

- Customer Outreach and Education: National Fuel will use a mix of communication channels, including bill inserts, email campaigns, social media, and its website, to educate customers about available rebates, eligibility requirements, and the benefits of energy-efficient upgrades.
- Community Partnerships: The Company will collaborate with local community organizations, housing agencies, and nonprofit groups to reach underserved populations, including low-income households. These partnerships will help facilitate program enrollment and provide additional support services.
- Trade Ally Network: National Fuel will establish and maintain a network of

contractors, HVAC professionals, and equipment suppliers who are trained to promote and install qualifying high-efficiency equipment. Trade allies will be provided with program materials, technical support, and streamlined rebate processing tools.

- Stakeholder Engagement: The Company will engage with key stakeholders, including municipal leaders, advocacy groups, and regulatory staff, through regular briefings, public meetings, and feedback sessions to ensure the program remains transparent, inclusive, and responsive to community needs.
- Multilingual and Accessible Materials: Outreach materials will be made available in multiple languages and accessible formats to ensure all customers can understand and participate in the program.

Q. How does the Company plan to coordinate marketing efforts for the proposed EE program with the Low-Income Usage Reduction Program ("LIURP") and other customer assistance programs, ensuring that the EE program complements and enhances LIURP rather than duplicating efforts?

A. National Fuel believes that it is essential to coordinate its energy efficiency initiatives with programs designed to assist low- to moderate-income customers. The Company views the proposed EE Program as part of a comprehensive, "all-of-the-above" strategy to deliver meaningful benefits to customers. To that end, National Fuel would consider co-marketing the EE Program alongside other applicable programs to ensure eligible customers are aware of all available resources. Further, National Fuel recognizes the importance of a holistic

approach to energy efficiency – one that includes weatherization and equipment replacement. Accordingly, the Company would refer any EE Program participant who meets eligibility requirements to LIURP and other relevant assistance programs. This coordinated approach helps maximize customer benefits, reduce duplication of efforts, and address common barriers to participation, such as the upfront cost of high-efficiency appliances.

Q. How does the proposed EE program align with the Statements of Policy as outlined by the Commission in the alternative rate making Docket No. M-2015-2518883?

A. Each rate consideration identified in the Statement of Policy is listed below along with the relevant effect the proposed EE program has on each rate consideration:

1. *Please explain how the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.*

   The Company is proposing to recover the cost of the EE program from the customer class that directly benefits from the program.

2. *Please explain how the proposed EE program impacts the fixed utility's capacity utilization.*

   National Fuel's EE program is intended to reduce the average usage per account over the life of the program.

3. *Please explain whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.*

   The calculation of the Rider D rate will be based on total forecasted residential usage.

4. *Please explain how the EE Program limits or eliminates interclass and intraclass cost shifting.*

The EE program does not have interclass and intraclass cost shifting because the costs and benefits are confined to the respective residential customer class, based on participation.

5. *Please explain how the EE Program limits or eliminates disincentives for the promotion of energy efficiency.*

The proposed EE program actively promotes energy efficiency by providing incentives for customers to purchase and install equipment with higher AFUE ratings.

6. *Please explain how the EE Program impacts customer incentives to employ efficiency measures and distributed energy resources.*

Customers will have an incentive to employ energy efficiency measures and distributed energy resources because a reduction in volumetric usage reduces their overall bill.

7. *Please explain how the EE Program impacts low-income customers and support consumer assistance programs.*

Customers served under the Company's Customer Assistance Program ("CAP") Rate Schedule receive bill discounts based on a percentage of income. The Company also maintains a LIURP weatherization program for low-income customers. Measures are installed to reduce energy usage and customer bills. The EE program supports these programs by providing additional opportunities for

customers that do not meet the criteria for LIURP (200% FPL and more than 1,300 ccf of usage per year) to apply for rebates and thereby reduce their usage and overall bill.

8. *Please explain how the EE Program impacts customer rate stability principles.*

Customers that use the program will see more stable bills from lower usage and exposure to gas cost fluctuations.

9. *Please explain how weather impacts utility revenue under the EE Program.*

The proposed EE Pilot is intended to reduce the average volumetric usage per customer. It does reduce the amount of weather-related variation in both customer bills and associated utility distribution revenues. To the extent that weather is warmer or colder than normal, weather will impact the amount of revenue recovered through the proposed Rider D.

10. *Please explain how the EE Program impacts the frequency of rate case filings and affects regulatory lag.*

The EE program is not anticipated to (nor is intended to) impact the frequency of rate cases or have an impact on regulatory lag.

11. *Please explain if the EE Program interacts with revenue sources, such as Section 1307(f) automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).*

The Company's proposed EE program does not interact with revenue sources such as Section 1307(f) automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).

12. Please explain whether the EE Program includes appropriate consumer protections.

As noted in Rider D, a reconciliation will be completed at the end of the 5-year program.

13. Please explain whether the EE Program is understandable to customers.

The Company's proposed EE program will be supported by a comprehensive marketing and outreach strategy tailored to residential customers, ensuring clarity and accessibility of program offerings.

14. Please explain how the EE Program will support improvements in utility reliability.

The EE program will lead to more efficient usage, which will provide lower peak requirements, reducing risk on system delivery.

IV. RESEARCH, DEVELOPMENT & DEMONSTRATION (RD&D)

Q. Does the Company currently administer an RD&D Program?

A. Yes. National Fuel administers two RD&D programs, the Traditional Program and the Delta Funds Program.

Q. Please explain the RD&D Program goals and objectives.

A. The RD&D programs are designed to identify, evaluate, and advance emerging natural gas technologies that create measurable value for National Fuel and its customers. By funding external initiatives and collaborating with industry partners, manufacturers, and energy authorities, the programs accelerate the introduction of innovative solutions into National Fuel's service territory and promote customer adoption through real-world demonstration projects at committed sites.

Q. Please explain the program's benefits to National Fuel's ratepayer.

A. The programs provide the following benefits:

- Access to a broader range of energy-efficient, low-emission natural gas solutions.
- Enhanced competitiveness with alternative energy sources.
- Reduced operating costs and improved seasonal utilization of gas facilities.
- Increased safety and efficiency in gas delivery.
- Support for long-term system reliability and readiness for future energy needs.

Q. What types of initiatives are supported by the programs?

A. The program's efforts include evaluating underrepresented technologies in residential, commercial, and industrial markets, as well as operational projects that improve infrastructure reliability, productivity, and safety. Funding is also allocated for technology assessments, technology transfer, and administrative activities, ensuring a comprehensive approach to innovation and continuous improvement.

Q. Please describe the RD&D collaboratives funded.

A. The Delta Fund program funds the following collaborative efforts that align with the program's goals and objectives:

- Utilization Technology Development: GTI Energy's research and development of natural gas utilization, including appliances, industrial processes, distributed generation, and vehicles.
- Emerging Technology Program: An initiative by GTI Energy to move technologies from development to commercialization.
- Operations Technology Development: GTI Energy's development and implementation of new technologies for gas operations and infrastructure.
- Low-Carbon Resources Initiative: Collaboration with Electric Power Research Institute and GTI Energy to accelerate low-carbon energy technologies. GTI Energy also works collaboratively with and leverages funding from national and state research organizations, such as National Renewable Energy Laboratory, Department of Energy, California Energy Commission, New York State Energy Research and Development Authority, and others.

Refer to the National Fuel Exhibit EMS-2 – 2025 Delta Funds Report, for more details.

Q. How is the cost recovered for these RD&D programs?

A. The Traditional Program is currently recovering $143,603 as an O&M expense, funded through base rates. The Delta Funds Program is funded annually through base rates at an assumed amount, $526,500, using deferred accounting.

Q. Does the Delta Fund have an account balance?

A. Yes, the current Delta Fund account balance is $995,083.

Q. Is the Company proposing to change the RD&D Program funding?

A. Yes, National Fuel is proposing to slightly increase the Traditional Program's annual allowance from $143,603 to $176,220. National Fuel is proposing to lower the Delta Fund Program's annual allowance to from $526,500 to $300,000.

Q. Why is the Company proposing these changes to the RD&D Program funding?

A. National Fuel's Delta Fund balance of $995,083, combined with a reduced annual collection of $300,000, will provide sufficient support for major research collaborations. In addition, the Company has identified emerging opportunities aligned with program objectives, including gas heat pumps, hybrid heating systems, natural gas vehicles, combined heat and power, and renewable natural gas integration. The existing Delta Fund balance, together with the Traditional RD&D allocation, ensures adequate resources to pursue these initiatives. By strategically deploying these funds, National Fuel can expand demonstration projects, accelerate innovation, and deliver measurable benefits to ratepayers while maintaining fiscal responsibility.

Q. What are some examples of RD&D projects which National Fuel anticipates in the current year?

A. Although actual expenditures during the historical test year ("HTY") were lower than anticipated, this variance reflects the timing of the actual disbursement of funds for projects, not a lack of overall need or commitment. Several major RD&D initiatives were delayed due to the complexity of contractual negotiations with technology providers, project participants, and EM&V consultants. These agreements were finalized subsequent to the end of the HTY, and the associated work is now underway. Some project examples are:

1. Hybrid Dual Fuel Hydronic Boiler – a demonstration consisting of an electric air-to-water heat pump and a hydronic high efficiency boiler, offering energy efficiencies greater than 120%. The Company, in collaboration with GTI Energy, installed one system in its service territory, with full monitoring to test the capabilities and performance of this product, over two winter heating seasons. Emissions reductions are expected to be around 40 - 50% with yearly costs remaining the same or slightly higher than a traditional boiler without jeopardizing customer heating performance reliability.
2. Digital Tools and Robotics for Enhanced Envelope Retrofits – uses robotic arms and digital tools with computer vision to automate the execution of exterior wall weatherization measures on large buildings. The Company anticipates that this technology will streamline air sealing, cut installation costs, improve quality control, and solve challenges with traditional, labor-intensive methods.
3. Hybrid Heating System Software Tool and Calculator – provides users with a cost and emission comparison of various residential hybrid or dual-fuel heat pump system configurations. With user-friendly input, it provides clear annual heating

cost and greenhouse gas emissions estimates for each configuration.

4. Gas Heat Pump ("GHP") demonstration project – the Company will assess adding GHP systems to existing hydronic heating systems (and possibly combi systems) common in the Northeast, such as baseboard fin tube, radiant floor, and radiator configurations. This approach offers comparative insights across hydronic and forced-air systems.

V. COMPETITIVE ASSESSMENT

Q. Please provide an overview of the competitive environment in National Fuel's service territory.

A. National Fuel operates in a dynamic marketplace shaped by inter-fuel competition (oil, electricity, propane, biofuels), intra-fuel competition (other natural gas providers constructing bypass infrastructure), and customer-level competition (inter-company and intra-company). These factors influence operations, infrastructure planning, and customer demand, and are central to National Fuel's planning and rate-setting processes.

Q. Please explain how customer-level competition affects the Company's throughput.

A. Throughput is closely tied to the production levels of industrial and manufacturing customers, which fluctuate with competitive market dynamics. When competitors gain market share or production shifts outside the territory, the decline in natural gas consumption and throughput can harm the local economy and ratepayers. Conversely, successful customer operations can lead to job creation and economic growth that increases or preserves natural gas consumption,

benefiting both National Fuel's ratepayers and the region.

Q. How does National Fuel respond to customer-level competition?

A. To address these challenges, National Fuel's Energy Services team collaborates with economic development organizations to retain and attract businesses, providing technical support and promoting the advantages of natural gas. The Company works across internal departments, including Government Affairs and Corporate Communications, to coordinate with economic development officials and develop competitive support packages for at-risk customers considering relocation or expansion. Natural gas utility service is often a critical component of these efforts.

Q. What is the nature and extent of intra-fuel bypass competition?

A. A bypass threat exists where natural gas is delivered directly to end-users without utilizing National Fuel's distribution system. The primary bypass threat that National Fuel faces involve situations where end users elect to receive natural gas service directly from interstate pipelines. This threat is significant, especially among large-volume customers near Marcellus and Utica shale formations.

Q. How does National Fuel respond to intra-fuel bypass competition?

A. National Fuel actively monitors bypass threats from large natural gas users and evaluates each case based on contract status, pipeline feasibility, and alternative supply economics. The Company conducts detailed analyses of factors such as customer location, pipeline

length and size, annual volume, margin, load factor, and facilities cost to determine the economics of bypass options. When a threat is legitimate, National Fuel quantifies the cost of the alternative and may offer negotiated discounts or flexible contract terms under its tariff to retain customers and preserve system throughput. These adjustments reflect competitive realities while ensuring fairness to all ratepayers. The Company also educates customers on service differences, emphasizing reliability and balancing provisions that impact pricing. HIGHLY CONFIDENTIAL National Fuel Exhibits EMS-3 and EMS-4 will provide a list of those customers with existing bypass facilities as well as several customers that are at risk of bypass.

Q. How many customers are currently on a negotiated rate due to risk of bypass?

A. There are currently 10 customers on a negotiated rate. Refer to HIGHLY CONFIDENTIAL National Fuel Exhibit EMS-5 – List of Bypass Contracts.

Q. What are the impacts of these negotiated rate customers on overall throughput and revenues?

A. The annual throughput for these 10 customers is 7.8 Bcf. The annual revenue is $2.4 million.

Q. How does offering a negotiated rate benefit National Fuel's customers?

A. Bypass reduces throughput on National Fuel's system, which can lead to higher per-unit costs for remaining customers as fixed costs are spread over a smaller base. The loss of

large-volume customers also impacts system planning, investment recovery, and long-term rate stability. National Fuel's proactive approach to monitoring, analyzing, and responding to bypass threats is essential to maintaining system integrity and protecting the interests of all ratepayers.

Q. Does this conclude your direct testimony at this time?

A. Yes, it does.

Re: National Fuel Gas Distribution Corporation
Delta Fund for Research and Development Projects Report

Dear Secretary Homsher;

Pursuant to R-00061493 Settlement paragraph 18 A.3, "Distribution will file with the Commission and serve upon other Parties on or before December 31 an annual report for the preceding twelve-month period ended September 30, setting forth revenues for the Delta Fund for research and development projects and expenditures for such projects. In addition, Distribution will describe in the annual report projects that have been funded". The enclosed report is submitted under this settlement agreement.

Very truly yours,

Erik M. Solomon
Senior Director
Energy Services Department

Encl.

Cc: Office of Special Assistants (E-Mail)
Office of Consumer Advocate (E-Mail)
Office of Small Business Advocate (E-Mail)

I. INTRODUCTION/BACKGROUND

The provisions of R-00061493 Settlement paragraph 18 A.3 were adopted on November 30, 2006, and effective January 1, 2007. Paragraph 18 A.3 states:

"3. The Joint Petitioners agree to $526,466 to fund the Delta research and development program pursuant to the Statement of Scott E. Swartzfager No. 14. The deferral treatment and review process outlined in R-00049656 will continue. The company will not expend these dollars on additional customer outreach for enhanced energy efficiency.

Distribution will be permitted to record a regulatory asset or liability for differences between the annual rate allowance and annual expenditures. However, Distribution will not be permitted to retroactively recover in a future proceeding any expenditures in excess of the annual rate allowance and any deferred balance from the previous year's Delta funding. Distribution will provide for review of research projects as described in its testimony. In order to implement this Settlement, the Joint Petitioners request that the Commission's Final Order in this proceeding include the following language to allow Distribution to qualify for deferred accounting under SFAS 71:

> "National Fuel Gas Distribution Corporation's accounting policies conform to the Statement of Financial Accounting Standards No. 71 'Accounting for the Effect of Certain Type of Regulations' which are in accordance with the accounting requirements and ratemaking practices of regulatory authorities. The application of these accounting policies allows the Company to defer expenses and income on the balance sheet as regulatory assets and liabilities when it is probable that those expenses and income will be allowed in the rate-setting process in a period different from the period in which they would have been reflected in the income statement by an unregulated Company.
>
> "Because research and development projects often require a commitment over multiple years and because the expenditures for such projects may not match on an annual basis revenue for funding of research and development projects, deferred accounting is appropriate and is approved. The regulatory deferral treatment sought for the Research and Development expenditures and rate relief requested in the case are in accordance with SFAS No. 71.
>
> "The Company will manage the costs of the Research and Development expenditures to match revenues deferred pursuant to this Order to eliminate any differences between deferred costs and deferred revenues at the end of a five-year period commencing on the day after the R-00049656 Order was entered."

Distribution will file with the Commission and serve upon other Parties on or before December 31 an annual report for the preceding twelve-month period ended September 30, setting

forth revenues for the Delta Fund for research and development projects and expenditures for such projects. In addition, Distribution will describe in the annual report projects that have been funded."

The provisions of R-00049656 Settlement paragraph 44 were adopted on March 23, 2005, and effective April 15, 2005. Paragraph 44 states:

"44. Distribution's proposal to fund the Delta research and development program pursuant to the Supplemental Statement of Ruth Friedrich-Alf No. 102 S2 is approved. Increased rates in this proceeding provide for recovery of $526,466 in Delta research funds. Distribution will be permitted to record a regulatory asset or liability for differences between the annual rate allowance and annual expenditures. However, Distribution will not be permitted to retroactively recover in a future proceeding any expenditures in excess of the annual rate allowance and any deferred balance from the previous year's Delta funding. Distribution will provide for review of research projects as described in its testimony. In order to implement this agreement, the Parties request that the Commission's Final Order in this proceeding include the following language to allow Distribution to qualify for deferred accounting under SFAS 71:

> 'National Fuel Gas Distribution Corporation's accounting policies conform to the Statement of Financial Accounting Standards No. 71 'Accounting for the Effect of Certain Type of Regulations' which are in accordance with the accounting requirements and ratemaking practices of regulatory authorities. The application of these accounting policies allows the Company to defer expenses and income on the balance sheet as regulatory assets and liabilities when it is probable that those expenses and income will be allowed in the rate-setting process in a period different from the period in which they would have been reflected in the income statement by an unregulated Company.
>
> 'Because research and development projects often require a commitment over multiple years and because the expenditures for such projects may not match on an annual basis revenue for funding of research and development projects, deferred accounting is appropriate and is approved. The regulatory deferral treatment sought for the Research and Development expenditures and rate relief requested in the case are in accordance with SFAS No. 71.
>
> 'The Company will manage the costs of the Research and Development expenditures to match revenues deferred pursuant to this Order to eliminate any differences between deferred costs and deferred revenues at the end of a five-year period commencing on the day after this Order is entered.'

Distribution will file with the Commission and serve upon other Parties on or before December 31 an annual report for the preceding twelve-month period ended September 30, setting forth

revenues for the Delta Fund for research and development projects and expenditures for such projects. In addition, Distribution will describe in the annual report projects that have been funded."

As presented in R-00049656 Statement No. 102 (page 15).

"On an annual basis coming off of September 30, a reconciliation of revenues and expenditures with a description of projects funded will be on file on or before December 31 with the Office of Trial Staff, Office of Consumer Advocate and the office of Small Business Advocate. At the fifth reconciliation, Distribution will file a five-year report."

As presented in R-00049656 Statement No. 102 S2 (page 7)

"Annual revenues …. will be deferred to offset the costs of the Research and Development expenditures (expenses) to both the Gas Technology Institute ("GTI") fund and local projects.

The Company will manage the cost of the Research and Development expenditures to match revenues deferred pursuant to this Order to eliminate any differences between deferred costs and deferred revenues at the end of a five-year period commencing on the day after this Order is entered."

It is under these guidelines and agreements that Distribution files the following report for the period ended September 30, 2025.

National Fuel Gas Distribution Corporation
Pennsylvania Division

II. Annual Filing of Delta Fund Revenues and Expenditures
For the period ended September 30, 2025

	Annual		Cumulative		
Year Ended	Expenditures	Revenues	Expenditures	Revenues	Balance
Sept. 2005	$92,300	$113,927	$92,300	$113,927	($21,627)
Sept. 2006	$376,800	$526,466	$469,100	$640,393	($171,293)
Sept. 2007	$596,800	$526,466	$1,065,900	$1,166,859	($100,959)
Sept. 2008	$526,493	$526,466	$1,592,393	$1,693,325	($100,932)
Sept. 2009	$376,368	$526,466	$1,968,761	$2,219,791	($251,030)
Sept. 2010	$455,911	$526,466	$2,424,672	$2,746,257	($321,585)
Sept. 2011	$721,800	$526,466	$3,146,472	$3,272,723	($126,251)
Sept. 2012	$280,300	$526,466	$3,426,772	$3,799,189	($372,417)
Sept. 2013	$626,800	$526,466	$4,053,572	$4,325,655	($272,083)
Sept. 2014	$278,891	$526,466	$4,332,463	$4,852,121	($519,658)
Sept. 2015	$276,800	$526,466	$4,609,263	$5,378,587	($769,325)
Sept. 2016	$458,404	$526,466	$5,067,667	$5,905,053	($837,386)
Sept. 2017	$500,530	$526,466	$5,568,197	$6,431,519	($863,322)
Sept. 2018	$362,547	$526,466	$5,930,744	$6,957,985	($1,027,241)
Sept. 2019	$445,438	$526,466	$6,376,182	$7,484,451	($1,108,269)
Sept. 2020	$452,883	$526,466	$6,829,065	$8,010,917	($1,181,852)
Sept. 2021	$468,422	$526,466	$7,297,487	$8,537,383	($1,239,896)
Sept. 2022	$865,588	$526,466	$8,163,075	$9,063,849	($900,774)
Sept. 2023	$517,264	$526,466	$8,680,339	$9,590,315	($909,976)
Sept. 2024	$587,533	$526,466	$9,267,872	$10,116,781	($848,909)
Sept. 2025	$380,292	$526,466	$9,648,164	$10,643,247	($995,083)

Note 1: Rates were effective April 15, 2005, therefore the report ended September 30, 2005, does not represent a 12 month period of revenue collection.

III. DESCRIPTION OF ACTUAL EXPENDITURES - PERIOD ENDED SEPTEMBER 2025

A. GTI Utilization Technology Development Program

$129,500 was submitted to Utilization Technology Development, NFP (UTD) for the April 1, 2025, through March 31, 2026, dues. $125,817.02 has been allocated to specific projects as listed below.

UTD Payments, Fees, Credits, Carryover	
Payments to UTD	129,500.00
Administration Fees	-12,950.00
Carryover of Unallocated Funds from Prior Year	3,220.30
Funds Available for Allocation	119,770.30
Large Commercial and Industrial Customers	

2.21.A.2 High Hydrogen Burner for Commercial and Industrial Applications - Phase 2	-3,700.00
2.22.D.2 High Performance Adjustable Port Burner - Phase 2	-3,330.00
2.22.E.2 Mitigating Methane Emissions from Large Comm. and Industrial End Use Eqpt. - Phase 2	-2,775.00
2.22.F.2 Tecogen Hybrid Gas/Electric Chiller Laboratory Evaluation - Phase 2: Field Validation	-1,850.00
2.23.A Decarbonizing Large Comm. and Industrial Eqpt. with Hydrogen	-2,682.50
2.23.A.2 Decarbonizing Large Comm. and Industrial Eqpt. with Hydrogen - Phase 2: Boiler Focus	-3,700.00
2.23.B Mobile Modular Resilient Gas-fired Power Generation	-555.00
2.24.C Lumiflex H2 High Efficiency, Fuel-Flexible, Ultra-Low NOx Regenerative Burner	-3,330.00
2.24.D Noble Thermodynamics Zero Emission CHP System	-1,665.00
2.24.E Fuel-flexible, Ultra-low NOx, Cross-cutting Omnivore Combustion System	-666.00
2.24.H Hydrogen-blending at Asphalt Plants - Field Tests	-2,960.00
2.24.I Carbon Capture Technologies for Large Commercial and Industrial Systems	-1,872.94
2.25.A Mainspring Clean, Fast, Dispatchable Onsite Power Generation with Heat Recovery	-2,590.00
2.25.B High Efficiency, High Temperature Industrial Energy Recovery Heat Exchanger	-2,960.00
2.25.C Modular FlexCHP with Integrated Absorption Chiller	-629.00
2.25.D Direct Carbon Conversion to Syngas through Bi-Reforming	-2,960.00
Food Preparation and Service Customers	
1.17.H.6 Residential Cooking Pollutants and IAQ - Phase 6	-2,590.00
1.17.H.7 Residential Cooking Pollutants and IAQ - Phase 7	-1,480.00
1.19.A.3 High Efficiency Smart Convection Oven - Phase 3	-740.00
1.20.K.2 Field Evaluation of Indoor Air Quality in Residential Kitchens - Phase 2	-955.71
1.20.K.3 Field Evaluation of IAQ in Residential Kitchens – Phase 3: Demand-Controlled Hood	-1,110.00
1.21.G.5 Technical Support to Address Gas Foodservice Technologies - Phase 5	-2,590.00
1.23.N.3 Next Generation Commercial and Residential Range Top Burner - Phase 3	-222.00
1.24.M Mitigating Methane Emissions from Kitchen Ranges and Rangetops	-1,480.00
1.25.M CFS Technology to Enhance Energy Efficiency, Carbon Reduction and Cooking Performance	-370.00
1.25.N Ventless System for Gas-Fired CFS Appliances	-1,480.00
Residential and Light Commercial Customers	
1.16.H.6 EnergyPlus Models for Advanced Fuel-Fired and Hybrid Systems - Phase 6: Hybrid Systems	-2,960.00
1.17.B.4 Thermoelectric Generator for Self-Powered Water Heater - Phase 4	-632.33
1.17.F.3 Thermolift Combined Heating/Cooling System Technical Support - Phase 3: Load-Based Testing	-3,700.00
1.18.C.3 Advanced Nozzle Burner for Commercial Water Heaters - Phase 3: Beta Prototype Refinement	-1,887.00
1.18.F.4 Mitigating Methane Emissions from ResCom End Use Equipment – Phase 4: H2 Impacts	-666.00
1.18.F.5 Mitigating Methane Emissions from ResCom End Use Equipment - Phase 5: Whole Building Analysis	-3,330.00
1.19.C.3 Integrated, Self-Powered, High-Efficiency Burner System - Phase 3	-1,850.00
1.20.I.2 Membrane-Based Ionic Liquid Absorption Heat Pump for Commercial HVAC - Phase 2: Field Demo	-2,220.00
1.21.B.5 Technical Support for ResCom Gas Equipment Testing, Perf, and Safety - Phase 5	-3,700.00
1.21.C.2 CleanO2 CarbinX Carbon Capture - Phase 2	-2,220.00

1.22.G.2 Safe Use of Hydrogen in Buildings - Phase 2	-2,163.02
1.22.H.2 Hybrid Fuel-Fired and Elec-Driven Rescom HVAC Systems – Phase 2: Prototype Furnace+EHP	-2,960.00
1.22.P.3 Emerging Distributed Methane Pyrolysis Technologies - Phase 3	-2,960.00
1.23.B Blue Frontier RTU AC system with Integrated mCHP - Laboratory Evaluation	-888.00

Adjustments and Miscellaneous Refunds	
Refund - 1.21.E Gas Engine Heat Pump Modeling, Testing and Implementation	714.47
Refund - 1.23.F Integrating Hybrid Fuel-fired and Elec-driven ResCom HVAC with PV in Generac Nanogrid	40.70
Board Designated Net Assets 2025	8,852.27
Funds Allocated to Projects	-125,817.02
Unallocated Funds	3,560.72

B. GTI Operations Technology Development Program

$184,500 was submitted to Operations Technology Development, NFP (OTD) for the 2025 membership fee. $205,493.19 has been allocated to specific projects as listed below.

Payments to OTD, Fees, Carryover	
Payments to OTD	184,500.00
Administration Fees	-13,837.50
Carryover of Unallocated Funds from Prior Year	45,235.97
Funds Available for Allocation	215,898.47
Allocations to Projects	
(1), (2) and (4) Historic Projects	
2.10.b.2 Refund In-Service Field Evaluation of Polyurea Coating Systems – Phase 2	308.97
(5) Construction/ Infrastructure Techniques	
5.16.d.3 REMS Phase 3: Development of Field-Ready Prototype	-5,511.02
5.17.g.3 Material-Supplier Quality Assurance Program Phase 3	-7,380.00
5.19.a PE Squeeze Tool Gap Stop Validation	-88.93
5.19.f.2 Purging Gas Pipes into Service without Venting Gas to Atmosphere - PHASE 2 of OTD 5.19.f	-738.00
5.20.a Refund Subsurface Multi-Utility Asset Location Detection	1,176.39
5.20.k.2 Refund LPWAN Network Roadmap	10.50
5.20.m.3 Product Performance and Validation Program Phase 3	-7,380.00
5.21.e Evaluation of the CoSMiC Eye Satellite Based Pipeline Right-of-Way Monitoring System	-135.05
5.21.e.2 Development and Evaluation of the CoSMiC Eye Satellite Based Pipeline Monitoring System Phase 2 -Pipeline Right-of-Way Monitoring for Class Location Designation	-838.37
5.21.j Hydrogen Blending Impact on Aldyl-A nad HDPE Pipes	-1,018.81
5.22.i Gas Engineer Training Program Development	-1,945.74
5.22.j.4 Testing of New Pietro Fiorentini Gas Service Regulators	-144.65
5.22.t Market Study of 100% H2 Compatible Distribution Equipment	-83.39
5.23.j Material Inspection and Testing Training Program	-1,401.09
5.23.n.2 Developing Acceptance Criteria for Mechanical Tapping Tee Anomalies – Phase 2	-32,281.97
5.24.f Product Standards for Plastic Tapping Tees	-1,800.72
5.24.h Hydrogen Blending Pilot Gas Quality Evaluation and System Modeling	-1,135.41
5.24.w Community Geothermal Systems Opportunities for LDCs to Consider	-6,663.03
5.24.z SUSTAIN H2 Storage	-18,450.00
5.25.i Evaluation of Overpipe	-3,690.00
5.25.m Inside Methane Detectors Pilots in Operations	-5,535.00
(6) Memberships/Other

9.24.a Natural Gas Ban Effects on Local Gas Distribution Companies	-8,823.90
Adjustments and Miscellaneous Refunds	
Board Designated Net Assets 2025	17,089.80
G&A Refund	0
Funds Allocated to Projects	-205,493.19
Unallocated Funds	27,495.08

C. SUMMARY OF ACTUAL EXPENDITURES PERIOD ENDED 2025

Utilization Technology Development (UTD) Program - GTI	$ 129,500
Operations Technology Development Program (OTD) - GTI	$ 184,500
Emerging Technology Program (ETP) - GTI	$ 11,100
North American Gas Heat Pump Collaborative – RI LLC	$ 9,250
Hybrid Heating and Cold Climate Heat Pump- Demos	$ 27,442
Dynamic Risk	$ 18,500
Total Pennsylvania Delta Funds Program Expenditures	**$ 380,292**

IV. PROJECTED EXPENDITURES - PERIOD ENDING SEPTEMBER 2026

Expenditures for National Fuel Gas Distribution Corporation's ("National Fuel") Pennsylvania Delta Funds RD&D Program are projected to be between $450,000 and $970,000 of which $526,466 is collected on an annual basis. The balance will be covered by unutilized funds from prior years. In 2025 the following planned charges are projected:

1. **Utilization Technology Development** (UTD) membership fees of approximately $129,500. Specific projects to be determined.

2. **Operations Technology Development** (OTD) membership fees of approximately $184,500. Specific projects to be determined.

3. **Emerging Technology Program** (ETP) membership fees of approximately $11,100.

4. **Local Opportunity Projects** spending estimate of approximately $350,000 (see below). Funds not used for the development of qualified local technology projects in National Fuel territory may be allocated to the national GTI programs described above.

    1) $250,000 – Gas Heat Pump Demonstration
    2) $75,000 - Ingevity School Bus Program
    3) $25,000 – Hybrid Tool - GTI ETP

SUMMARY OF PROJECTED EXPENDITURES - PERIOD ENDED 2026

Utilization Technology Development Program - GTI	$ 129,500	Planned
Operations Technology Development Program - GTI	$ 184,500	Planned
Emerging Technology Program – GTI	$ 11,100	Planned
Gas Heat Pump Demonstration	$ 250,000	Planned
Ingevity School Bus Program	$ 75,000	Potential
Hybrid Tool – GTI ETP	$ 25,000	Paid
Total Pennsylvania Delta Funds Program Expenditures	**$ 575,100**	**Planned**
Total Pennsylvania Delta Funds Program Expenditures	**$ 100,000**	**Potential/Paid**
Total Pennsylvania Delta Funds Program Expenditures	**$ 675,100**	**Planned, Potential/Paid**

V. STATUS UPDATE OF LOCAL OPPORTUNITY PROJECTS – 2025

Funding of gas industry research through GTI, as an example, returns many benefits, including ensuring continued improvement and availability of energy-efficient, low emissions and cost-effective gas technologies, while leveraging the funding resources of gas utilities across North America. The Local Opportunity Projects portion of this program intends to identify projects for direct local support offering equal, or better, benefits than GTI. This is challenging, but National Fuel endeavors to identify and develop these opportunities. Funds available through this portion of the program, beyond the minimum commitments to GTI, may be used for qualified local projects. Funds not used locally are sent to GTI to be allocated to suitable projects, as shown in the previous supported project listings.

Summaries for Local Opportunity Projects active or completed in 2025 are provided below.

1. **Hybrid Heating and Cold Climate Air Source Heat Pump Demonstrations**
   National Fuel successfully completed two demonstration projects in its Pennsylvania service territory.

   - **Hybrid Heating Demonstrations:** Twelve (12) hybrid systems were installed to evaluate operating costs and the impact on greenhouse gas (GHG) emissions associated with using an electric Air Source Heat Pump (ASHP) in combination with a high-efficiency natural gas furnace for heating and cooling, compared to a traditional gas furnace and central electric air conditioning.
   - **Cold Climate Air Source Heat Pump Demonstrations:** Two (2) cold climate air source heat pumps (ccASHP) were installed to study monthly energy cost and usage changes, cold climate equipment performance, and GHG emissions when utilizing a ccASHP as the sole energy source for heating and cooling.

   Both projects have been completed, and a comprehensive final report summarizing findings, performance data, and key insights on energy efficiency and emissions reduction has been prepared.

2. **Venancio Genesis Stove Study**

   National Fuel undertook a year-long study from 2024 to 2025 to assess the energy usage of the Venancio Genesis stove. This stove, produced by a Brazilian manufacturer, was marketed with claims of delivering a 33% reduction in energy consumption compared to other commercial stoves. The project's objective was to test these claims in real-world restaurant environments, with the broader goal of determining whether such technology could enhance profit margins and promote energy efficiency for commercial kitchens using natural gas. The study concluded that the Venancio Genesis stove did not deliver significant energy savings or operational advantages in actual restaurant settings.

3. **NGV Technology Demonstration.** National Fuel implemented a demonstration project involving four (4) Ford F-250 pickup trucks modified with Adsorbed Natural Gas (ANG) technology. ANG enables low-pressure fueling (900 psi vs. traditional 3,600 psi), allowing for convenient, private daily refueling using compact, low-cost devices installed at locations with natural gas access. This approach eliminates the need for expensive, high-pressure fast-fill stations. Funding for the vehicle modifications and fueling devices was shared between National Fuel and the Alternative Fuels Incentive Grant (AFIG), with fueling devices installed at Oil City, Sharon, and Erie Service Centers. The trucks are distributed as follows: one in Oil City, one in Sharon, and two in Erie. AFIG and Delta funds supported two trucks and fueling devices, while National Fuel's Operations group purchased the remaining two trucks.

Project Results:
Performance data from Q3 2022 through Q4 2024 demonstrates the environmental and economic benefits of ANG technology across Oil City and Erie:

- **Renewable Natural Gas (RNG) Usage:**
  - Oil City: 1,656 GGE (Q3 2022) to 141 GGE (Q4 2024)
  - Erie: 1,506 GGE (Q3 2022) to 170 GGE (Q4 2024)
  - Cumulative (All Vehicles): 3,162 GGE by Q4 2024
- **CO_2 Reduction:**
  - Oil City: 15.17 metric tons (Q3 2022) to 1.31 metric tons (Q4 2024)
  - Erie: 13.92 metric tons (Q3 2022) to 1.59 metric tons (Q4 2024)
  - Cumulative: 29.1 metric tons by Q4 2024
- **Fuel Cost Savings:**
  - Oil City: $3,870 (Q3 2022) to $292 (Q4 2024)
  - Erie: $3,428 (Q3 2022) to $358 (Q4 2024)
  - Cumulative: $7,298 by Q4 2024
- **Environmental Impact (Trees Planted Equivalent):**
  - Oil City: 252 (Q3 2022) to 22 (Q4 2024)
  - Erie: 231 (Q3 2022) to 26 (Q4 2024)
  - Cumulative: 483 trees by Q4 2024

Conclusion:
The NGV Technology Demonstration successfully showcased the operational feasibility and benefits of ANG-equipped vehicles. The project resulted in measurable reductions in greenhouse gas emissions, significant fuel cost savings, and a positive environmental impact equivalent to planting hundreds of trees. These results support the continued adoption of ANG technology for fleet vehicles and highlight its potential for broader implementation.

VI. PROSPECTIVE LOCAL OPPORTUNITY PROJECTS – 2026

1. **Hybrid Dual Fuel Hydronic Boiler** - a demonstration consisting of an electric air-to-water heat pump and a hydronic high efficiency boiler, offering energy efficiencies greater than 120%. The Company, in collaboration with GTI Energy, installed one system in our Pennsylvania service territory, with full monitoring to test the capabilities and performance of this product, over two winter heating seasons. Emissions reductions are expected to be around 40 - 50% with yearly costs remaining the same or slightly higher than a traditional boiler without jeopardizing customer heating performance reliability.

2. **Digital Tools and Robotics for Enhanced Envelope Retrofits** – uses robotic arms and digital tools with computer vision to automate the execution of exterior wall weatherization measures on large buildings. It anticipates that this technology will streamline air sealing, cut installation costs, improve quality control, and solve challenges with traditional, labor-intensive methods.

3. **Hybrid Heating System Software Tool and Calculator** – Provides users with a cost and emission comparison of various residential hybrid or dual-fuel heat pump system configurations. With user-friendly input, it provides clear annual heating cost and greenhouse gas emissions estimates for each configuration.

4. **Gas Heat Pump ("GHP") demonstration project** - will assess adding GHP systems to existing hydronic heating systems (and possibly combi systems) common in the Northeast, such as baseboard fin tube, radiant floor, and radiator configurations. This approach offers comparative insights across hydronic and forced-air systems.

Although actual expenditures in 2025 were lower than projected, this discrepancy is attributable to the timing of fund disbursement for various projects rather than a reduced need or commitment. Several significant research, development, and demonstration (RD&D) initiatives experienced delays due to the complexity of contractual negotiations involving technology providers, project participants, and EM&V consultants. These agreements were finalized after the conclusion of the fiscal year, and the corresponding work is now in progress. National Fuel remains committed to identifying and developing additional beneficial Local Opportunity Projects that may deliver direct value to Pennsylvania consumers, businesses, and industries.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 18-R

Rebuttal Testimony of Erik M. Solomon

Topics Addressed: **Energy Efficiency Pilot**

Dated: May 12, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Erik M. Solomon. My business address is 6363 Main Street, Williamsville, NY 14221.

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 18, on January 28, 2026.

II. PURPOSE OF TESTIMONY

Q What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to address the allegations and recommendations advanced by intervenors related to the Company's proposed Energy Efficiency ("EE") Pilot Program ("EE Pilot"), identify points of agreement and matters not in dispute, and demonstrate that no intervenor has presented evidence supporting denial or material modification of the Company's proposal. This testimony explains why the intervenors' concerns do not warrant changes to the proposal as filed.

III. EE PILOT

Q. Do the intervenors understand the Company's proposed EE Pilot?

A. Yes. Each intervenor demonstrates a clear and accurate understanding of the Company's proposed EE Pilot. No party disputes that the program is a voluntary, residential-only, five-

year pilot beginning in October 2026, offering rebates for high-efficiency natural gas space heating, water heating, and clothes drying equipment. No intervenor challenges the scope, duration, measures, budget, or basic mechanics of program delivery.

Q. Do any intervenors oppose the EE Pilot on prudence or program design grounds?

A. No. No intervenor asserts that the EE Pilot is imprudent, poorly designed, technically flawed, or inconsistent with Pennsylvania policy. To the contrary, intervenors, including the Bureau of Investigation and Enforcement ("I&E"), the Office of Consumer Advocate ("OCA"), and the Office of Small Business Advocate ("OSBA"), either explicitly support the EE Pilot or raise concerns unrelated to its technical feasibility, prudence or core program design.

Q. What are the nature of CAUSE-PA's objections to the Company's EE Pilot?

A. CAUSE-PA does not contend that the EE Pilot is imprudent, technically flawed, or unreasonable as proposed. Rather, CAUSE-PA's testimony reflects policy preferences for expanding the EE Pilot to include a targeted low-income direct install subprogram and related requirements. These recommendations would materially alter the scope and structure of the proposed, voluntary rebate-based pilot and represent requested program expansion, not correction of a defect in the Company's proposal.

Q. Please summarize CAUSE-PA's allegations regarding the Company's proposed EE Pilot.

A. CAUSE-PA alleges, as a matter of policy, that the Company's proposed residential EE Pilot is inequitable and less accessible to some low-income customers because it is structured as a rebate based program that does not eliminate all upfront costs. CAUSE-PA further objects to recovery of EE Pilot costs through a residential rider applicable to all residential customers, including confirmed low-income customers, and recommends that the Commission require the Company to add a targeted low-income EE subprogram, potentially serving customers at or below 200% of the Federal Poverty Level, with no-cost direct installation, income screening, expanded coordination, and enhanced outreach and reporting.

Q. Does CAUSE-PA dispute the technical feasibility, prudence, or projected savings of the EE Pilot?

A. No. CAUSE-PA does not dispute the technical feasibility of the EE Pilot, the reasonableness of the proposed budget, the measures included, or the projected gas savings. CAUSE-PA's objections are policy based and focus on equity and accessibility preferences rather than program imprudence or technical defects.

Q. How does the Company respond to CAUSE-PA's claim that a rebate based design renders the EE Pilot "inaccessible" to low-income customers?

A. CAUSE-PA does not quantify how many low-income customers would be unable to participate, does not present participation data from comparable rebate-based gas EE

programs, and does not distinguish between emergency replacement scenarios and planned replacement decisions. The claim of inaccessibility is therefore not supported by empirical evidence in this record. The Company designed rebate levels to support reasonable customer payback periods, not to reimburse 100 percent of incremental costs for every customer and every circumstance. That design choice is typical of pilot-stage EE programs and reflects the voluntary nature of participation.

Q. Did the Company propose the EE Pilot as a low-income exclusive or emergency repair program?

A. No. The Company did not propose the EE Pilot as a low-income exclusive program or as a replacement for existing emergency or hardship-driven assistance programs. The EE Pilot is a voluntary, residential-only pilot intended to complement, not duplicate, the Company's existing universal service and emergency repair and replacement offerings.

Q. CAUSE-PA argues that the Company did not conduct a standalone analysis of low-income customers' ability to participate. How should the Commission view this argument?

A. The absence of a standalone participation study does not establish that low-income customers cannot participate, nor does it justify requiring a material redesign of the EE Pilot as a condition of approval. Participation levels in a pilot are inherently uncertain prior to implementation. The appropriate regulatory response is to require tracking and reporting

during the pilot period, allowing the Commission to evaluate outcomes based on actual experience rather than speculation.

Q. How does the Company respond to CAUSE-PA's recommendation to require a new targeted low-income EE subprogram with no-cost direct installation for customers at or below 200% of the Federal Poverty Level?

A. These recommendations reflect a preference for program expansion rather than correction of a defect in the EE Pilot as proposed. A no-cost, direct install low-income EE subprogram is not a minor adjustment to a rebate-based pilot; it is a fundamentally different program model with distinct eligibility rules, delivery infrastructure, contractor management requirements, and budget implications.

CAUSE-PA does not identify any statute, regulation, or Commission order requiring that a voluntary gas EE pilot include such a subprogram as a condition of approval. To the contrary, the Commission recently confirmed this principle in its decision approving Columbia Gas of Pennsylvania's 2025 rate case. In that Order, the Commission expressly recognized that Columbia's Phase II Energy Efficiency Plan was voluntary, and held that there is no statutory or regulatory requirement for a natural gas distribution company to fund specific EE measures for households at or below 150% of the federal poverty guidelines. The Commission further declined to impose electric-specific statutory requirements on voluntary gas EE plans in the absence of legislative direction or regulatory mandate. CAUSE-PA's proposal seeks to impose new structural and substantive obligations on a voluntary pilot program without legal support and without demonstrating that the EE Pilot,

as proposed, is deficient or unreasonable. As such, the recommendation represents a policy preference for program expansion rather than a justified condition for approval.

Q. How does Pennsylvania regulatory practice treat emergency or no-cost replacements for low-income customers?

A. Pennsylvania practice demonstrates that emergency and hardship driven no-cost repairs and replacements are typically addressed through Low-Income Usage Reduction Program ("LIURP")-type structures, not through general EE rebate pilots. The Company's approach is consistent with this practice: customers reporting loss of heat are first evaluated for eligibility under emergency repair and replacement pathways; customers who do not qualify may then be directed to the EE Pilot as an alternative option.

Q. CAUSE-PA also recommends extensive coordination, income screening, and outreach requirements. Does the Company oppose coordination?

A. No. The Company supports coordination among energy efficiency, low-income assistance, and weatherization programs and has proposed an integrated, referral-based approach as part of the EE Pilot. As described in the Company's Direct Testimony, the EE Pilot is designed to coordinate with existing low-income programs, including the LIURP and other assistance programs, through bidirectional referrals. Customers who seek participation in the EE Pilot but appear income -eligible for LIURP or other assistance programs may be referred to those programs where deeper, no- cost weatherization services are available. Conversely, customers engaged through assistance or emergency programs who are not

LIURP-eligible may be directed to the EE Pilot to access rebate-based efficiency measures appropriate to their circumstances.

This coordination approach aligns with CAUSE-PA's recommendations, to avoid duplication of services, leverage existing program infrastructure, and ensure that low-income customers are connected to the most appropriate resources based on eligibility and need. It also allows the EE Pilot to complement, rather than replace or redesign, established low-income programs.

However, CAUSE-PA's proposed requirements would go well beyond coordination and effectively convert a voluntary, pilot stage EE program into a comprehensive universal service redesign. Mandating detailed income screening protocols, direct installation obligations, and expansive outreach and contractor requirements at the pilot stage is not necessary to ensure effective coordination, and it exceeds the scope of the Company's proposal.

The Company believes its proposed referral based coordination framework strikes the appropriate balance for a pilot program: it promotes alignment with LIURP and other efficiency and weatherization efforts, maintains clear program boundaries, and preserves flexibility to evaluate results before considering whether broader structural changes are warranted in the future.

Q. How does the Company respond to CAUSE-PA's claim that it is inequitable for low-income customers to pay the EE rider without guaranteed participation?

A. CAUSE-PA's claim assumes that customers receive no benefit unless they directly

participate. That assumption is not consistent with Commission practice recognizing that EE programs may deliver broader customer and system benefits. Moreover, Pennsylvania has approved EE plans and riders for other gas utilities without conditioning approval on guaranteed individual participation for every customer class. CAUSE-PA's objection is therefore a policy argument, not evidence that the proposed rider is unjust or unreasonable.

Q. What outcome does the Company request with respect to CAUSE-PA's allegations and recommendations?

A. The Company respectfully requests that the Commission approve the residential EE Pilot as proposed and decline to impose CAUSE-PA's requested program expansion requirements as conditions of approval. If the Commission determines that additional safeguards are appropriate, those objectives can be addressed through reporting, tracking, and evaluation during the pilot period, without converting a limited, voluntary EE Pilot into a fundamentally different low-income program.

Q. With respect to I&E's recommendation, what reporting requirements do I&E recommend for the Company's EE Pilot?

A. I&E recommends that National Fuel be required to file an annual EE Pilot report, due approximately three months after the end of each program year, containing information on program savings (both Mcf and cost), customer participation, program spending, cost-effectiveness, portfolio highlights, and program delivery updates. I&E further recommends that certain reporting elements be disaggregated for low-income customers and include

tracking of referrals from the EE Pilot to the Company's LIURP and the outcome of those referrals.

Q. Does the Company oppose I&E's recommendation for enhanced transparency and reporting?

A. No. The Company is supportive of reasonable reporting requirements that promote transparency, accountability, and Commission visibility into EE Pilot performance. National Fuel recognizes that reporting is an important tool to evaluate a pilot-stage program and to inform future Commission determinations regarding continuation, modification, or expansion of the EE Pilot.

Q. What considerations do the Company believe should guide the Commission's implementation of reporting requirements?

A. While supportive of reporting, the Company emphasizes that reporting requirements should be proportional to the scale and pilot nature of the program, avoid unnecessary duplication of data already available through other Commission filings, and remain focused on metrics that are actionable and meaningful. Excessive or overly granular reporting obligations risk diverting limited pilot stage administrative resources away from program delivery and customer engagement.

Q. How does the Company view I&E's recommendation for low-income tracking and referral reporting?

A. The Company agrees that tracking low-income participation and referrals is appropriate to evaluate coordination between the EE Pilot and existing universal service programs. I&E's recommendation appropriately focuses on coordination rather than duplication, and National Fuel supports reporting that helps the Commission understand how the EE Pilot interacts with LIURP and related assistance programs.

Q. Does the Company believe that I&E's reporting recommendations require redesigning of the EE Pilot?

A. No. Importantly, I&E does not recommend changes to the program's design, scope, incentives, or cost recovery structure. I&E expressly supports approval and implementation of the EE Pilot as proposed, subject to reasonable reporting safeguards. The Company agrees that reporting requirements can be implemented within the existing program framework without redesigning the Pilot.

Q. What is the Company's position regarding the frequency and scope of reporting?

A. National Fuel supports annual reporting consistent with I&E's recommendation, provided the reporting requirements remain clearly defined and limited to information necessary to evaluate pilot performance. The Company respectfully requests that the Commission avoid layering multiple overlapping reporting obligations or ad-hoc data requests that would impose undue administrative burden inconsistent with the Pilot's limited scale and duration.

Q. What outcome does the Company request regarding I&E's reporting recommendations?

A. The Company respectfully requests that the Commission adopt reasonable, annual reporting requirements consistent with I&E's recommendations, while ensuring that such requirements are not overly burdensome, duplicative, or inconsistent with the pilot-stage nature of the EE Pilot. This approach will preserve transparency and accountability while allowing National Fuel to focus resources on effective program implementation and customer participation.

Q. Why are OCA's National Regulatory Research Institute ("NRRI")-based objections addressed in this rebuttal testimony?

A. This rebuttal testimony addresses OCA's NRRI based objections because OCA asserts that the Company's proposed EE Pilot and related cost recovery mechanism allegedly fail NRRI evaluation criteria for approval of riders or pilot mechanisms. The Company responds to those assertions to clarify the non-binding nature of NRRI guidance and to explain why OCA's reliance on those criteria does not warrant denial or modification of the proposal.

Q. What are the "NRRI evaluation criteria" referenced by OCA?

A. The criteria cited by OCA originate from guidance and policy research published by the NRRI, an organization affiliated with the National Association of Regulatory Utility Commissioners. NRRI publications commonly discuss general considerations for evaluating

alternative cost recovery mechanisms, including whether the costs in question are material, volatile or unpredictable, and largely outside management control. These considerations are intended to inform regulatory analysis; they do not constitute binding standards or Commission rules.

Q. Are NRRI criteria binding on the Pennsylvania Public Utility Commission?

A. No. NRRI guidance does not establish legal requirements, mandatory tests, or enforceable standards. The Commission is not bound by NRRI criteria, and NRRI itself does not claim that its guidance limits Commission discretion. Rather, NRRI guidance is designed to support regulatory judgment, not replace it.

Q. How has the Commission historically evaluated riders and pilot mechanisms?

A. The Commission has consistently evaluated riders and pilot mechanisms on a case-specific basis, considering factors such as policy objectives, scope, duration, customer protections, and reporting requirements. The Commission's decisions demonstrate that no single analytical framework, including NRRI guidance, is dispositive. Instead, the Commission exercises broad ratemaking discretion based on the specific facts and objectives presented in each proceeding.

Q. Does NRRI guidance prohibit approval of pilot programs recovered through riders?

A. No. NRRI does not prohibit pilot-specific cost recovery mechanisms. In fact, NRRI publications recognize that commissions may approve pilots or alternative recovery

mechanisms where they advance legitimate regulatory or public policy goals, particularly when they are time-limited, transparent, and subject to evaluation or sunset provisions. OCA's characterization of NRRI guidance as a threshold requirement overstates NRRI's role.

Q. How does the Company's proposed EE Pilot align with these principles?

A. The EE Pilot is a limited duration, narrowly scoped program intended to evaluate energy efficiency approaches in Pennsylvania using experience drawn from other jurisdictions where National Fuel operates similar programs. The costs are clearly defined, modest in scale relative to the Company's overall revenue requirement, and subject to reporting and Commission review. These features are consistent with regulatory principles governing pilot programs.

Q. OCA argues that the EE Pilot costs are "within management control." How do you respond?

A. While the Company designs and administers the EE Pilot, that fact alone does not make the proposal unreasonable or unsuitable for a pilot recovery mechanism. The EE Pilot is not an ordinary discretionary operating expense; it is a program submitted for Commission approval precisely because it implicates customer affordability, usage behavior, and long-term system planning. Treating the EE Pilot exclusively as a base-rate expense would reduce transparency, dilute cost accountability, and delay meaningful Commission oversight during the pilot period.

Q. Does the absence of cost volatility or external drivers render the pilot unreasonable?

A. No. The Commission has approved pilot mechanisms and riders for reasons other than volatility alone, including the need for discrete cost tracking, enhanced transparency, and limited customer exposure while program effectiveness is evaluated. Volatility is one consideration among many, not a prerequisite for Commission approval.

Q. How does the proposed recovery mechanism protect customers?

A. The EE Pilot is time limited, subject to reporting and review, and does not commit customers to ongoing costs beyond the pilot period. These features preserve the Commission's ability to modify, expand, or terminate the program based on actual experience, ensuring that customers are not exposed to untested or open-ended financial commitments.

Q. Is the Company's proposed recovery mechanism consistent with how other Pennsylvania utilities recover energy efficiency costs?

A. Yes. The Company's proposed recovery mechanism is fully consistent with Pennsylvania regulatory practice.

All electric distribution companies subject to Act 129 recover the costs of their mandatory Energy Efficiency and Conservation Plans through Commission approved riders that track program costs and adjust rates accordingly. While natural gas distribution companies are not subject to Act 129, the Commission has approved the use of rider

mechanisms for voluntary natural gas energy efficiency programs as well.

Specifically, the Commission-approved voluntary energy efficiency programs of Columbia Gas of Pennsylvania, Inc. and UGI Utilities, Inc. – Gas Division recover program costs through dedicated energy efficiency riders. These riders allow program costs to be transparently tracked, periodically reviewed, and recovered separately from base rates, while preserving Commission oversight and minimizing financial risk to customers.

The Company's proposed recovery mechanism follows this same Commission-approved model by using a rider to recover pilot-related costs in a transparent and controllable manner. Consistent with Pennsylvania practice, this approach supports regulatory oversight, limits customer exposure, and ensures that recovery is aligned with actual program experience rather than embedded in base rates.

Q. In your view, do OCA's NRRI based arguments demonstrate that the EE Pilot is unjust or unreasonable?

A. No. OCA's reliance on NRRI evaluation criteria reflects one analytical perspective, but it does not demonstrate that the EE Pilot or its proposed recovery mechanism is unjust or unreasonable. At most, it highlights considerations the Commission may weigh alongside other policy, operational, and customer-focused factors. The Commission retains full discretion to approve pilot programs that serve legitimate regulatory objectives and include appropriate safeguards.

Q. What is your overall conclusion regarding the cost recovery mechanism?

A. The Company's proposed EE Pilot and associated recovery mechanism are reasonable, measured, and consistent with Pennsylvania regulatory practice. NRRI guidance does not prohibit approval of the proposal, nor does it override the Commission's discretion. For these reasons, the Commission should reject OCA's NRRI-based objections and approve the EE Pilot as proposed.

Q. What recommendation does OSBA make with respect to the Company's EE Pilot?

A. The OSBA supports approval of the Company's proposed residential EE Pilot but recommends that National Fuel expand the pilot to include a non-residential EE program, citing the Company's experience operating a non-residential EE program in New York.

Q. Does OSBA contend that the Company's proposed residential EE Pilot is unreasonable or incomplete absent a non-residential component?

A. No. OSBA does not argue that the residential EE Pilot is unjust, unreasonable, deficient, or incomplete without a non-residential component. OSBA does not recommend disallowance of program costs, does not challenge the design or scope of the residential pilot, and does not oppose the proposed cost recovery mechanism. OSBA's recommendation is prospective in nature and does not assert that inclusion of a non-residential program is required for approval of the EE Pilot in this proceeding.

Q. Why does the Company oppose expanding the EE Pilot to include non-residential customers in this docket?

A. The Company opposes expanding the EE Pilot to include non-residential customers at this time because doing so would materially alter the scope, objectives, and evaluation framework of the pilot proposal presented for Commission review. The EE Pilot in this case was intentionally designed as a targeted, residential-focused pilot, allowing the Commission to evaluate program performance, customer response, and administrative execution on a manageable and well-defined scale before considering broader expansion.

Q. Why is limiting the scope of the pilot important from a regulatory perspective?

A. Pilot programs are most effective when they are clearly scoped, limited in duration, and narrowly focused, enabling regulators and stakeholders to assess results without introducing additional complexity or confounding variables. Expanding the pilot to include non-residential customers would introduce materially different load profiles, decision-making processes, rebate structures, and participation dynamics, undermining the pilot's evaluative purpose and making it more difficult to draw meaningful conclusions from initial program results.

Q. Does the Company dispute that it has experience operating a non-residential EE program in New York?

A. No. The Company does not dispute that its New York operations include both residential and non-residential EE programs. However, the existence of programs in another

jurisdiction does not, by itself, establish that immediate expansion is appropriate in Pennsylvania, particularly in the context of an initial, limited scope EE Pilot proposed for Commission approval in this docket.

Q. Does the Company believe non-residential EE programs may be considered in the future?

A. Yes. The Company does not foreclose the possibility of proposing non-residential EE offerings in the future. However, such consideration should occur after the Commission has had the opportunity to evaluate the performance of the residential EE Pilot based on actual experience and results, and through a separate proposal that fully addresses program design, cost allocation, customer impacts, and administrative requirements specific to non-residential customers.

Q. What is the Company's overall position on OSBA's recommendation?

A. While the Company appreciates OSBA's support for the residential EE Pilot, it respectfully submits that expansion to non-residential customers is premature and unnecessary for purposes of this proceeding. The Commission can approve the residential EE Pilot as proposed without prejudicing future consideration of non-residential EE programs, preserving regulatory flexibility while ensuring disciplined, data-driven program development.

Q. As you conclude your rebuttal testimony, how do budget considerations reinforce the Company's position regarding the recommendations advanced by CAUSE-PA and OSBA?

A. As discussed earlier in this testimony in response to CAUSE-PA's request for a low-income direct install subprogram and OSBA's recommendation for nonresidential expansion, the Company's proposed budget was developed solely to support the scope, scale, and objectives of the residential, rebate-based EE Pilot as filed. The proposed budget does not include, and was not designed to accommodate, the additional program elements recommended by other parties.

Q. Would the Company's proposed EE Pilot budget be sufficient to implement the additional program elements recommended by CAUSE-PA or OSBA?

A. No. Both recommendations would materially expand the scope and cost structure of the EE Pilot. For example, a low-income direct install program would shift the program from providing partial rebates to covering the entire cost of equipment, installation, and program administration for each participating customer, along with income verification, contractor procurement and oversight, enhanced coordination, and quality control. As a result, the cost per participating customer would increase from a modest, incentive based contribution to a fully funded, turnkey service, representing a multiple fold increase in per-participant costs relative to the proposed rebate based pilot. Similarly, even a limited nonresidential EE offering could require higher incentives, site specific engineering reviews, additional staffing, and separate evaluation frameworks not reflected in the residential pilot budget.

Q. How should the Commission consider these recommendations from a budgetary perspective?

A. From a budgetary standpoint, the recommendations advanced by CAUSE-PA and OSBA are best understood as requests for new or expanded programs, not refinements to the EE Pilot proposal before the Commission. While the EE Pilot approval as filed does not preclude future consideration of such programs, those proposals should be evaluated separately with their own defined scope, budgets, and supporting analyses, rather than imposed on a limited, pilot-stage program designed and funded for a narrower and clearly defined purpose.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes, it does.

NATIONAL FUEL STATEMENT NO. 19

JOHN D. TAYLOR

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 19

Direct Testimony of
John D. Taylor

Topics Addressed: **Cost of Service Study**
Weather Normalization Adjustment

Dated: January 28, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is John D. Taylor and my business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, South Carolina 29926.

Q. On whose behalf are you appearing in this proceeding?

A. I am appearing on behalf of National Fuel Gas Distribution Corporation's ("NFGDC") Pennsylvania Division ("National Fuel" or the "Company").

Q. By whom are you employed and in what capacity?

A. I am employed by Atrium Economics, LLC ("Atrium") as a Managing Partner.

Q. Have you prepared an Exhibit describing your professional qualifications?

A. Yes. National Fuel Exhibit JDT-1 presents my professional qualifications.

Q. What was Atrium's assignment in this proceeding?

A. National Fuel requested Atrium to conduct a fully allocated Cost of Service Study ("ACOSS") to determine the embedded costs of serving the Company's gas distribution customers and support its rate design efforts. In this regard, I am sponsoring the ACOSS that allocates National Fuel's gas distribution costs to its rate classes. Additionally, Atrium supported the Company's proposal to convert the Weather Normalization Adjustment ("WNA") from a pilot to a permanent mechanism.

Q. Please summarize your testimony.

A. In my testimony I present National Fuel's ACOSS and discuss its results, as well as the revenue increase apportionment to National Fuel's rate classes, which are used to design rates by Company witness Courtney T. Mann (National Fuel Statement No. 14). My testimony consists of this introduction and summary section and the following additional sections:

- Purpose and Principles of Cost Allocation
- National Fuel's ACOSS
- Determination of National Fuel's Proposed Class Revenues

Additionally, I am supporting the Company's Weather Normalization Adjustment ("WNA") proposal.

Q. What exhibits are you sponsoring in this proceeding?

A. I am sponsoring National Fuel Exhibit D – Cost of Service Study ("Exhibit D"). I also am sponsoring the following Exhibits:

- National Fuel Exhibit JDT-1 – Resume
- National Fuel Exhibit JDT-2 – Proposed Revenue Targets by Class
- National Fuel Exhibit JDT-3 – WNA Mechanism Policy Factors

II. PURPOSE AND PRINCIPLES OF COST ALLOCATION

Q. What is the general purpose and use of an ACOSS in regulatory proceedings?

A. The purpose of an ACOSS is to allocate the gas distribution utility's overall fully projected future test year ("FPFTY") costs to the various classes of service in a manner

that reflects the relative costs of providing service to each class. An ACOSS represents an analysis of which customer or group of customers cause the utility to incur the costs to provide service. The requirement to develop the ACOSS results from the nature of utility costs. Utility costs are characterized by the existence of common costs. Common costs occur when the fixed costs of providing service to one or more rate classes, or the cost of providing multiple products to the same rate class, use the same facilities and the use by one rate class precludes the use by another rate class.

In addition, utility costs may be fixed or variable in nature. Fixed costs do not change with the level of gas throughput, while variable costs change directly with changes in gas throughput. Non-fuel-related utility costs are fixed in the short run and do not vary with changes in customers' loads. This includes the cost of distribution mains, service lines, meters, and regulators. While certain operating inputs like odorant may vary modestly with volumes, those costs are de minimis and do not alter the fundamentally fixed nature of distribution costs.

Finally, the ACOSS provides different contributions to the development of economically efficient rates and the cost responsibility by rate class. This is accomplished through analyzing costs and assigning each rate class its proportionate share of the utility's total revenues and costs within the test year. The results of these studies can be utilized to determine the relative cost of service for each rate class to help determine the individual class revenue responsibility and provide guidance with rate design. Using the cost information per unit of demand, customer, and commodity developed in the ACOSS to understand and quantify the allocated costs in each rate class is a useful step in the rate design process to guide the development of rates.

Q. Is the preparation of an ACOSS an exact science?

A. No. The fundamental purpose of an ACOSS is to aid in the design of rates to be charged by identifying all of the capital and operating costs incurred by a utility to provide service to all of its customers and then assigning or allocating those costs to individual rate classes based on how those rate classes cause the costs to be incurred. The allocation of costs using an ACOSS is a practical requirement of utility regulation since rates are based on the cost of service for the utility under a cost-based regulatory model. As a general matter, utilities must be allowed a reasonable opportunity to earn a return of and on the assets used to serve their customers, with such return on being reflective of a fair rate of return. This is the cost-of-service standard and equates to the revenue requirements for utility service. The opportunity for the utility to earn its allowed rate of return depends on the rates applied to customers producing revenues that equate to the level of the revenue requirement.

Q. Is there a guiding principle that supports the appropriate allocation of costs?

A. Yes, a fundamental foundational principle, cost causation, should be followed to produce accurate and reasonable results. Cost causation addresses the need to identify which customer or group of customers causes the utility to incur particular types of costs, so the analysis results in an appropriate allocation of the utility's total revenue requirement among the various rate classes. In other words, the costs assigned or allocated to particular customers should be those costs that the particular customers caused the utility to incur because of the characteristics of the customers' usage of utility service.

Q. How do you establish the cost and utility service relationships?

A. An important element in the selection and development of a reasonable ACOSS methodology is the establishment of relationships between customer requirements, load profiles, and usage characteristics on the one hand and the costs incurred by the company in serving those requirements on the other hand. To accomplish this, I reviewed National Fuel's expense and plant accounts, operational data, usage information, and conducted interviews with National Fuel employees. The details and data gathered provided information on the key factors that cause the costs to vary and supported studies of the relative costs of providing facilities and services for each rate class. From the results of those analyses, methods of direct assignment and common cost allocation methodologies can be chosen for the utility's plant and expense elements.

Q. What are the steps to performing an ACOSS?

A. A three-step analysis of the utility's total operating costs must be undertaken to establish each customer class's cost responsibility. The three steps that are the basis to conduct an ACOSS are (1) cost functionalization, (2) cost classification, and (3) cost allocation.

Q. Please describe cost functionalization.

A. The first step, cost functionalization, identifies and separates plant and expenses into specific categories based on the various characteristics of utility operation. National Fuel's primary functional cost categories associated with natural gas distribution services include gas supply, transmission, distribution, and customer. Indirect costs that support

these functions, such as general plant and administrative and general expenses, are allocated to functions using allocation factors related to plant and/or labor ratios, i.e., internal allocation factors.

Q. Please describe cost classification.

A. The second step, cost classification, further separates the functionalized plant and expenses according to the primary factors that determine the amount of costs incurred. These factors are: (1) the number of customers; (2) the need to meet the peak demand requirements that customers place on the gas distribution system; and (3) the amount of gas consumed by customers. These classification categories have been identified for purposes of the ACOSS as: (1) customer costs; (2) demand costs; and (3) commodity costs, respectively.

Q. Please describe the types of costs contained in the customer cost, demand cost, and commodity cost categories.

A. Customer-related costs are incurred to attach a customer to the gas distribution system, meter any gas usage, and maintain the customer's account. Customer costs are a function of the number of customers served by the utility and continue to be incurred whether or not the customer uses any gas. They may include capital costs associated with minimum size distribution mains, services, meters, regulators, customer service, and accounting expenses.

Demand or capacity related costs are associated with plant that is designed, installed, and operated to meet maximum hourly or daily gas flow requirements, such as

the utility's transmission and distribution mains, or more localized distribution facilities that are designed to satisfy individual customer maximum demands. Gas supply contracts also have a capacity related component of cost relative to National Fuel's requirements for serving daily peak demands and the winter peaking season.

Commodity related costs are those costs that vary with the throughput sold to, or transported for, customers. Costs related to gas supply are classified as commodity because they vary with the amount of gas volumes purchased by National Fuel for its customers.

Q. Please describe the cost allocation process.

A. The final step is the allocation of each functionalized and classified cost element to the individual rate class. Costs typically are allocated on customer, demand, commodity, or revenue allocation factors. From a cost-of-service perspective, the best approach is a direct assignment of costs where costs are incurred by a customer or class of customers and can be so identified. Where costs cannot be directly assigned, the development of allocation factors by rate class uses principles of both economics and engineering. This results in appropriate allocation factors for different elements of costs based on cost causation. For example, we know from the way customers are billed that each customer requires a meter. Meters differ in size and type depending on the customer's load characteristics. These meters have different costs based on size and type. Therefore, differences in the cost of meters are reflected by using a different average meter cost for each class of service.

Q. Are there factors that can influence the overall cost allocation framework utilized by a gas utility when performing an ACOSS?

A. Yes. First, the fundamental and underlying philosophy applicable to all cost studies pertains to the concept of cost causation for purposes of allocating costs to customer groups. Cost causation addresses the question – which customer or group of customers causes the utility to incur particular types of costs? To answer this question, it is necessary to establish a linkage between a utility's customers and the particular costs incurred by the utility in serving those customers. The factors that can influence the cost allocation used to perform an ACOSS include: (1) the physical configuration of the utility's gas system; (2) the availability of data within the utility; and (3) the state regulatory policies and requirements applicable to the utility.

Q. Why are these considerations relevant to conducting National Fuel's ACOSS?

A. It is important to understand these considerations because they influence the overall context within which a utility's cost study was conducted. In particular, they provide an indication of where efforts should be focused for purposes of conducting a more detailed analysis of the utility's gas system design and operations and understanding the regulatory environment in the state the utility operates in as it pertains to cost-of-service studies and gas ratemaking issues.

Q. How does the availability of data influence an ACOSS?

A. The structure of the utility's books and records can influence the cost study framework.

This structure relates to attributes such as the level of detail, segregation of data by operating unit or geographic region, and the types of load data available.

Q. How do state regulatory policies affect a utility's ACOSS?

A. State regulatory policies and requirements prescribe whether there are any historical precedents used to establish utility rates in the state. Specifically, state regulations and past precedents set forth the methodological preferences or guidelines for performing cost studies or designing rates, which can influence the proposed cost allocation method utilized by the utility.

III. NATIONAL FUEL'S ALLOCATED COST OF SERVICE STUDY

Q. Please describe the Atrium Model used in conducting the ACOSS filed in this proceeding.

A. National Fuel has selected the Atrium excel based model ("Atrium ACOSS Model") to conduct the ACOSS in this general base rate case. Atrium developed the Atrium ACOSS Model on a proprietary basis for its consulting engagements and has been used in multiple jurisdictions. This is the same model I sponsored in the last Company's base rate case at Docket No. R-2022-3035730.

Q. Please describe the process of performing National Fuel's ACOSS presented in this filing.

A. The detailed process description of National Fuel's ACOSS analysis is presented in Exhibit D, providing a full scope of the process including the development of allocation factors

that support various cost of service studies presented in this proceeding as discussed below.

Q. Please discuss the content of the ACOSS Exhibit D.

A. Exhibit D provides the information required under 52 Pa. Code § 53.53(a)(1) and, in particular, Exhibit A - Gas Utilities, by providing a cost-of-service study that fully distributes the Pennsylvania jurisdictional costs of providing retail distribution service to the various rate classes at both present and proposed rates. See 52 Pa. Code § 53.53(a)(1), Exhibit A. The studies contained in National Fuel Exhibit D are based on costs and operating conditions for the Fully Projected Future Test Year Ended October 31, 2027 ("FPFTY").

Exhibit D consists of three sections detailing the process of developing the ACOSS. Section I – Introduction includes an introduction, the general purpose and process of the ACOSS, as well as an overview of the excel-based fully functional ACOSS model presented in this proceeding. Section II – National Fuel's Cost of Service Procedures presents the ACOSS development process specific to the Company, including the Functionalization, Classification, and Allocation of costs. The Allocation section (Section II.3) describes all internal and external allocation factors and the allocation processes used in the ACOSS. The last section, Section III – National Fuel's Cost of Service Results depicts the results of the ACOSS.

Q. Please describe the schedules included in Exhibit D.

A. The following is the list of Schedules included in Exhibit D:

- Schedule 1 - Account Balances and Allocation Methods
- Schedule 2 - External Allocation Factors
- Schedule 3 - Internal Allocation Factors

- Schedule 4 - Comparison of Cost of Service with Revenues under Present and Proposed Rates
- Schedule 5 - Cost of Service and Rate of Return under Present and Proposed Rates
- Schedule 6 - Cost of Service Allocation Study Fully Projected Future Test Year
- Schedule 7 - Functionalized and Classified Rate Base and Revenue Requirement, and Unit Costs by Customer Class

Q. What was the source of the cost data analyzed in the Company's ACOSS?

A. All cost-of-service data was extracted from the Company's total cost of service (i.e., total revenue requirement) and schedules contained in this general rate case filing for the FPFTY ending October 31, 2027. Where more detailed information was required to perform various analyses related to certain plant and expense elements, the data were derived from the historical books and records of the Company and information provided by Company personnel.

Q. How are the National Fuel rate classes structured for purposes of conducting its ACOSS?

A. For National Fuel's ACOSS, I included nine rate classes:

- Residential Service
- Small Commercial & Public Authority Service < 250 Mcf ("SCPA-LL")
- Small Commercial & Public Authority Service > 250 Mcf ("SCPA-UL")
- Large Commercial & Public Authority Service ("LCPA")
- Small Volume Industrial Service ("SVIS")
- Intermediate Volume Industrial Service ("IVIS")
- Large Volume Industrial Service ("LVIS")
- Large Industrial Service ("LIS")
- Natural Gas Vehicle Service ("NGV")

Q. Do you propose any modification to the current customer classes?

A. No. I am not proposing any modifications to the existing customer classes. The current

class structure aligns with the Company's approved tariff schedules and is consistent with the configuration adopted in the Company's most recent general rate case, Docket No. R-2022-3035730 ("2022 Case").

Q. How are Distribution Mains classified and allocated in the ACOSS?

A. The ACOSS presented in Exhibit D was performed utilizing a peak allocation methodology with distribution mains classified as demand and customer related. The Company classified 61% of its investment in distribution mains as customer-related and 39% of the investment as demand-related. The customer-related portion of the distribution mains investment was then allocated to the rate classes based on the number of customers on National Fuel's system. The demand-related portion was allocated to the rate classes based on their respective contribution to the Company's peak day demand under system design and weather conditions, in other words, on a "design day" basis. Transmission mains are allocated to the customer classes based on the contribution to peak day demand. Peak demand represents estimated class peak day requirements. The peak day requirements are estimated based on regression analysis of monthly sales and heating degree days and analysis of winter period throughput to average throughput. Total throughput represents the total throughput for each class during the FPFTY.

Q. How are other plant related costs allocated in the ACOSS?

A. The ACOSS model also relies on special cost studies for meters, services, and regulators. The investments in service lines, meters, meter installation, and regulators are allocated considering customer weighing factors and the relative cost of the investment where

applicable. For a detailed explanation of the allocation factors development please refer to the narrative descriptions presented in Exhibit D with the allocation factors provided in Exhibit D Schedule 2. Miscellaneous Intangible Plant and General Plant accounts are allocated based on labor costs. All plant investment-related accumulated amortization and depreciation expenses follow the classification and allocation of the plant.

Q. Please explain the basis for the Company's choice of classification and allocation methods for Mains.

A. It is widely accepted that distribution mains are installed to meet both system peak period load requirements and to connect customers to the local distribution company's ("LDC") gas system. Therefore, to ensure that the rate classes that cause the Company to incur this plant investment or expense are charged with its cost, distribution mains should be allocated to the rate classes in proportion to their peak period load requirements and number of customers.

There are two cost factors that influence the level of distribution mains facilities installed by an LDC in expanding its gas distribution system. First, the size of the distribution main (i.e., the diameter of the main) is directly influenced by the sum of the peak period gas demands placed on the LDC's gas system by its customers. Secondly, the total installed footage of distribution mains is influenced by the need to expand the distribution system grid to connect new customers to the system. Therefore, to recognize that these two cost factors influence the level of investment in distribution mains, it is appropriate to allocate such investment based on both peak period demands and the number of customers served by the LDC.

Q. Is the method used by the Company to determine a customer cost component of distribution mains a generally accepted technique for determining customer costs?

A. Yes. The two most commonly used methods for determining the customer cost component of distribution mains facilities consist of the following: (1) the zero-intercept approach and (2) the most commonly installed, minimum-sized unit of plant investment. Under the zero-intercept approach, a customer cost component is developed through regression analyses to determine the unit cost associated with a zero-inch diameter distribution main. The method regresses unit costs associated with the various sized distribution mains installed on the LDC's gas system against the size (diameter) of the various distribution mains installed. The zero-intercept method seeks to identify that portion of plant representing the smallest size pipe required merely to connect any customer to the LDC's distribution system, regardless of the customer's peak or annual gas consumption.

Two of the more commonly accepted literary references relied upon when preparing embedded cost of service studies, Electric Utility Cost Allocation Manual, by John J. Doran et al, National Association of Regulatory Utility Commissioners, and Gas Rate Fundamentals, American Gas Association, both describe minimum system concepts and methods as an appropriate technique for determining the customer component of utility distribution facilities. The existence and utilization of a customer component of distribution facilities, specifically for distribution mains, is a fully supportable and commonly used approach in the gas industry.

For purposes of determining the customer component of distribution mains to be

used in National Fuel's ACOSS, the zero-intercept method was employed. Please refer to Exhibit D for the detailed study development process and results.

Q. With respect to National Fuel's specific experience, is there demonstrable evidence to support the use of a customer component of distribution mains?

A. Yes. In developing an appropriate cost allocation basis for distribution mains, the two methods of cost analysis mentioned in the previous response were conducted for the Company's investment in distribution mains, by size and material type of main installed. The zero-intercept method typically uses regression analysis to compare unit costs of the various sized distribution mains installed on National Fuel's gas system against the size (diameter) of the various distribution mains installed. This method seeks to identify that portion of plant representing the smallest size pipe required merely to connect any customer to the LDC's distribution system, regardless of its peak or annual consumption. This regression determines that regardless of the main's diameter, the average cost of a distribution main on National Fuel's gas system will be at least equal to a minimum cost per installed foot. This per foot cost component is exclusively related to the simple fact that National Fuel incurs this cost to install a main, regardless of its size. That is, the installation is unrelated to either peak gas flows or average gas flows, but relating to site prep, permitting, trenching, and recovering. These distinct costs are related more strongly to the process of extending the distribution mains to connect customers, which is a function of the length of distribution mains and not of the size or diameter of the mains.

Q. What method was utilized in National Fuel's 2022 Case to classify and allocate

distribution mains?

A. In the 2022 Case, National Fuel presented ACOSS results using both the customer demand method presented in this case and a peak and average method which allocates distribution mains using what is commonly referred to as the "Seaboard" method, which involves a 50% weighting of peak contribution by the class and 50% weighting of annual throughput.

Q. Can you please provide more details on the Seaboard method?

A. The "Seaboard" methodology of assigning utility cost to classes was developed in the early 1950s as part of the Federal Energy Regulatory Commission ("FERC") rate regulation process for interstate gas pipelines and is based on the premise that both peak and annual usage are of equal importance in determining the cost responsibility of each class. As used at the FERC, this methodology had more to do with rate design and the recovery of revenues than cost allocation and causation. It was developed when gas pipelines sold gas to all their customers including large commercial and industrial customers, when both capacity costs and commodity costs were recovered in the same rates before the advent of purchased gas adjustment mechanisms. With the deregulation of gas within the gas industry in the 1980s, these large customers were given the choice to buy their gas commodity from a producer or marketer and the LDC only provided the delivery of that gas on their distribution system. Other Commissions, including originally the Federal Power Commission, and later, the FERC, moved away from the 50/50 weighting of demand and commodity in favor of a 75 percent demand 25 percent commodity weighting known as the "United" method. FERC adopted the United method

in 1973. After United, in 1983 FERC departed from a percentage weighting for demand and commodity allocations to a Modified Fixed variable approach which allocated all fixed costs based on demand and all variable costs based on commodity.

Q. Has the Seaboard method been relied upon in PA in past gas LDC filings and been under review by the Pennsylvania Public Utility Commission's ("PAPUC" or the "Commission")?

A. Yes. While the PAPUC has recognized a customer component of gas utility infrastructure in recent history, the PAPUC has recently relied on allocating a portion of distribution mains on the annual usage rather than the cost causative basis of matching the allocation of costs with the occurrence of the costs. Given this history, for informational and comparison purposes, I also provide results of the ACOSS model that allocates Distribution Mains using Peak and Average ("P&A") methodology with no customer component.

Q. How are operation and maintenance ("O&M"), customer, and administrative and general ("A&G") expenses classified and allocated in the ACOSS?

A. A utility's O&M expenses generally are thought to support the utility's corresponding plant in service accounts. In general, O&M expenses are allocated based on the cost allocation methods used for the Company's corresponding plant accounts. The majority of customer accounts and services expenses were classified as customer-related costs and allocated based on the average number of distribution customers by class or relative weighting factors based on special studies. A&G expenses were allocated on an account-

by-account basis. Items related to labor costs, such as employee pensions and benefits, were allocated based on O&M labor costs. Items related to plant, such as maintenance of general plant and property taxes, were allocated based on plant. The detailed classification and allocation methods applied to these expense categories can be found on Schedule 1 of Exhibit D.

Q. How are all other cost categories allocated in the ACOSS?

A. Taxes other than income are allocated in a manner that reflected the specific cost associated with each tax expense category. Generally, taxes can be cost classified on the basis of the tax assessment method established for each tax category and can be grouped into the following categories: (1) labor; (2) plant; and (3) revenue. In the National Fuel ACOSS, all non-income taxes were assigned to one of the above stated categories and relevant allocation factors.

Current income taxes were allocated based on each class's net income before taxes. Income taxes for the total revenue requirement were allocated to each class based on the allocation of the required net income by rate class. Income taxes at proposed revenues by class were allocated to each class based on the proposed income prior to taxes for each class. The detailed classification and allocation methods are shown on Schedule 1 of Exhibit D.

Q. Does National Fuel's ACOSS include gas commodity costs?

A. Yes. The ACOSS does include gas commodity costs and gas commodity revenues which are both functionalized to the gas supply function with a net income of zero, since the gas

commodity costs match gas commodity revenues.

Q. Have you provided all workpapers and studies supporting the ACOSS?

A. Yes. All supporting workpapers, calculations, and documentation to the filed ACOSS model are provided in response to the Supplemental Data Requests – Cost of Service accompanying the Company's filing.

Q. Please summarize the results of National Fuel's ACOSS.

A. Table 1 below presents a summary of the results of the Company's ACOSS that can be reviewed in detail in Schedule 5 of Exhibit D. The ACOSS shows an overall revenue deficiency to the Company of $19.7 million.

Table 1 - Summary Results of the Company's ACOSS

Rate Classes	Current Revenues	Cost to Serve	Current Rate of Return	Deficiency /(Surplus)	Revenue to Cost Ratio	Parity Ratio
Residential	$ 97,367	$ 126,095	3.2%	$ 28,728	0.77	0.88
SCPA-LL	6,819	7,330	7.8%	511	0.93	1.06
SCPA-UL	6,989	7,287	8.7%	298	0.96	1.10
LCPA	13,908	8,972	22.5%	(4,936)	1.55	1.77
NGV	131	203	2.1%	72	0.65	0.74
SVIS	444	319	22.2%	(125)	1.39	1.59
IVIS	5,876	3,491	25.5%	(2,385)	1.68	1.93
LVIS	2,730	1,286	35.0%	(1,444)	2.12	2.43
LIS	2,470	1,416	25.8%	(1,054)	1.74	2.00
Total	$ 136,735	$ 156,400	6.3%	$ 19,665	0.87	1.00
Other Revenues	4,219	4,234		15		
Total System	$ 140,953	$ 160,634		$ 19,681		

Table 1 presents the revenue deficiency/excess for each rate class, the class rate of return on net rate base at current rates, the revenue to cost ratio, and the associated parity ratio. Regarding rate class revenue levels, the results show that all classes except Residential,

SCPA-LL, SCPA-UL and NGV are being charged rates that recover more than their indicated costs of service.

Q. How do the results of the customer demand method of allocating distribution mains compare to the Seaboard method of allocating distribution mains?

A. Table 2 below provides a comparison between the two methods. As is expected using the Seaboard method increases the allocation of costs to those classes with higher load factors and large volumes of annual throughput.

Table 2 – Comparison of Customer / Demand and Peak and Average

Rate Classes	Cost to Serve (Cust/Dem)	Cost to Serve (Peak and Average)	Difference
Residential	$ 126,095	$ 108,557	$ 17,538
SCPA-LL	7,330	$ 6,712	618
SCPA-UL	7,287	$ 8,956	(1,669)
LCPA	8,972	$ 15,817	(6,846)
NGV	203	$ 298	(95)
SVIS	319	$ 393	(75)
IVIS	3,491	$ 7,066	(3,574)
LVIS	1,286	$ 3,518	(2,232)
LIS	1,416	$ 5,081	(3,665)
Total	$ 156,400	$ 156,400	-
Other Revenues	4,234	4,234	-
Total System	$ 160,634	$ 160,634	-

IV. NATIONAL FUEL'S PROPOSED CLASS REVENUES

Q. Please describe the proposed approach to apportion National Fuel's proposed revenue increase to its rate classes.

A. The apportionment of revenues among rate classes consists of deriving a reasonable

balance between various criteria or guidelines that relate to the design of utility rates.[1] The various criteria that were considered in the process included: (1) cost of service; (2) class contribution to present revenue levels; and (3) customer impact considerations.

After discussions with the Company, the increase proposed in this case was allocated based on considerations of the current parity percentages shown above in Table 1 and the desire to move toward full parity over time while addressing issues of gradualism. National Fuel proposes to:

- For those classes with a revenue to cost parity ratio below 1.0 an increase of 1.1 times the system increase is proposed. This applies to the Residential class and NGV class.
- For those classes with a revenue to cost parity ratio above 1.0 but below 1.5 an increase of 0.9 times the system increase is proposed. This applies to the SCPA-LL and SCPA-UL classes.
- For all other classes with revenue to cost parity ratios above 1.5 an increase of 0.67 times the system increase is proposed. The 0.67 was set to recover the remaining requested increase. This applies to the LCPA, SVIS, IVIS, LVIS, and LIS classes.

The amounts of the existing rate subsidies and excesses among the Company's rate classes were generally reduced. From a class cost of service standpoint, this type of

[1] Revenue apportionment is part of the overall rate design process, which is guided by the principles broadly accepted in the recognized literature on utility ratemaking and regulatory policy. These principles include: (1) Cost of Service; (2) Efficiency; (3) Value of Service; (4) Stability/Gradualism; (5) Non-Discrimination; (6) Administrative Simplicity; and (7) Balanced Budget. These rate design principles draw heavily upon the "Attributes of a Sound Rate Structure" developed by James Bonbright in Principles of Public Utility Rates (Principles of Public Utility Rates, Second Edition, Page 111-113 James C. Bonbright, Albert L. Danielson, David R. Kamerschen, Public Utility Reports, Inc., 1988)

class movement, and reduction in class rate subsidies, is desirable to move class revenues and rates closer to the indicated cost of service for each rate class.

Q. What are the percentage changes in revenues by rate class resulting from the Company's proposed revenue apportionment?

A. Table 3 below summarizes the proposed distribution margin revenue change for each rate class and the percent change in distribution margin revenues resulting from the above-described process.

Table 3 - Proposed Class Revenue Apportionment

Rate Classes	Margin Revenues at Current Rates	Margin Revenues at Proposed Rates	Proposed Revenue Change	Percent Change	Increase Relative to System Increase
Residential	$ 97,367	$ 112,771	$ 15,404	15.82%	1.10
SCPA-LL	$ 6,819	$ 7,702	$ 883	12.94%	0.90
SCPA-UL	$ 6,989	$ 7,893	$ 905	12.94%	0.90
LCPA	$ 13,908	$ 15,249	$ 1,342	9.65%	0.67
NGV	$ 131	$ 152	$ 21	15.82%	1.10
SVIS	$ 444	$ 487	$ 43	9.65%	0.67
IVIS	$ 5,876	$ 6,443	$ 567	9.65%	0.67
LVIS	$ 2,730	$ 2,994	$ 263	9.65%	0.67
LIS	$ 2,470	$ 2,709	$ 238	9.65%	0.67
Total	$ 136,735	$ 156,400	$ 19,665	14.38%	1.00
Other Revenues	$ 4,219	$ 4,234	15	0.37%	
Total System	$ 140,953	$ 160,634	$ 19,681	13.96%	

Further, the Company's percentage changes of total revenues associated with its proposed revenue apportionment by rate class are summarized in Table 4 below.

Table 4 - Proposed Change in Total Revenues by Rate

Rate Classes	Revenues at Current Rates	Revenues at Proposed Rates	Proposed Revenue Change	Percent Change	Increase Relative to System Increase
Residential	$ 198,187	$ 213,591	$ 15,404	7.77%	1.03
SCPA-LL	$ 12,829	$ 13,712	$ 883	6.88%	0.91
SCPA-UL	$ 14,779	$ 15,683	$ 905	6.12%	0.81
LCPA	$ 20,517	$ 21,859	$ 1,342	6.54%	0.87
NGV	$ 529	$ 550	$ 21	3.92%	0.52
SVIS	$ 807	$ 850	$ 43	5.30%	0.70
IVIS	$ 8,051	$ 8,618	$ 567	7.04%	0.94
LVIS	$ 2,960	$ 3,223	$ 263	8.90%	1.18
LIS	$ 2,646	$ 2,884	$ 238	9.01%	1.20
Total	$ 261,305	$ 280,970	$ 19,665	7.53%	1.00
Other Revenues	$ 4,219	$ 4,234	$ 15	0.37%	
Total System	$ 265,524	$ 285,204	$ 19,681	7.41%	

Please refer to the Direct Testimony of Courtney T. Mann (National Fuel Statement No. 14), who sponsors the Company's proposed rate design.

V. WNA MECHANISM

Q. What is the Company proposal regarding WNA in this proceeding?

A. National Fuel is requesting the Commission to approve the current pilot WNA mechanism, which is scheduled to expire in October 2028, as a permanent program. The WNA pilot was part of the 2022 Case settlement agreement approved by the Commission on June 15, 2023.

Q. What is the WNA and what is its purpose?

A. The WNA is a ratemaking mechanism that adjusts the delivery portion of customer bills so that they reflect usage under normal weather conditions rather than actual temperatures experienced during the heating season. Its primary purpose is to moderate the bill

impacts of unusually warm or cold weather, providing customers with greater stability while aligning billed revenues more closely with the Commission-approved revenue requirement.

Q. Does the Commission support the WNA?

A. Yes. In its most recent Final Order in the Columbia Gas of Pennsylvania ("Columbia") case, issued in December 2025, the Commission explicitly approved the continuation of Columbia's WNA mechanism "to allow it a reasonable opportunity to earn up to its Commission-authorized revenue requirement."[2]

Q. Please explain National Fuel's current WNA mechanism.

A. National Fuel's WNA mechanism functions as follows:

i) It adjusts the usage in customer bills based on deviations from normal weather, as measured by Heating Degree Days ("HDDs"), by comparing actual HDDs ("AHDDs") to normal HDDs ("NHDDs") based on a 15-year weather history.

ii) It includes a 3% deadband, meaning no adjustment is made unless the weather deviates by more than ±3% from normal. This prevents minor weather variations from triggering bill changes and ensures that adjustments occur only when there are material deviations.

iii) It applies to all Pennsylvania Natural Gas Residential and Commercial/Public Authority customers served by National Fuel.

[2] Pa. PUC v. Columbia Gas of Pa., Inc., Docket No. R-2024-3067174, Final Order at 301 (Dec. 4, 2025).

iv) It applies during the heating season (October through May). By excluding non-heating season usage and focusing on the weather-sensitive portion of consumption, the mechanism is carefully targeted and limited in scope.

Q. Is the Company proposing any changes to how the WNA mechanism currently operates?

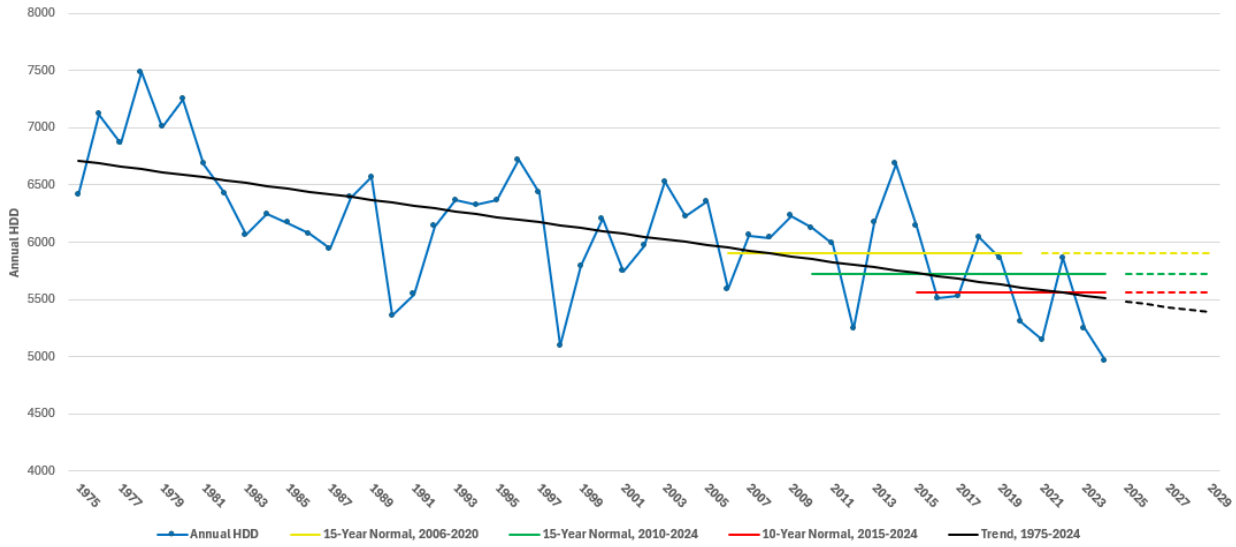
A. Yes. Company witness Cathryn E. Hilliard (National Fuel Statement No. 13) is proposing to establish NHDDs based on 10-year weather history.

Q. What is the significance of using 10-year weather history for establishing NHDDs.

A. Using a 10-year average reflects warmer recent weather. Therefore, the normalized billing determinants will be lower than those derived from the prior 15-year average that includes more cold years, as shown in Figure 1 below.[3] Assuming the warming trend continues, actual usage may be closer to, or even below, the 10-year baseline, triggering a smaller WNA surcharge or credit. However, no one (National Fuel included) can predict the number of HDDs in any given year with certainty; therefore, variations are still expected, and the WNA would still provide value to both customers and the Company.

[3] Based on National Oceanic and Atmospheric Administration (NOAA) data from the Erie, Pennsylvania station.

Figure 1 – Historic Annual HDD and Normalization Alternatives[4]



Q. Why is a WNA mechanism necessary for National Fuel's rate structure?

A. National Fuel's current rate design recovers significant fixed costs through volumetric charges. Weather-driven usage swings can cause under-recovery in warm winters and over-recovery in cold winters. The WNA stabilizes this to provide the Company a reasonable opportunity to recover its authorized revenue requirement while protecting customers from additional charges in colder than normal winters.

Q. Can you elaborate on the relationship between fixed costs and usage-based recovery in National Fuel's current rate design?

A. National Fuel's current rate design recovers a significant portion of its fixed costs, such

[4] Chart interpretation for grayscale / black-and-white printing:
• Annual HDD values are shown by the solid line with circular markers.
• The trend (1975–2024) is shown by a smooth solid line that slopes downward from left to right.
• The shorter horizontal reference lines near the right side of the chart are explained as follows:
- The highest horizontal line corresponds to the 15-year normal for 2006–2020.
- The middle horizontal line corresponds to the 15-year normal for 2010–2024.
- The lowest horizontal line corresponds to the 10-year normal for 2015–2024.

as infrastructure, maintenance, and administrative expenses, through volumetric charges based on customer usage. This means that when weather is warmer than normal and gas consumption declines, National Fuel under-recovers those fixed costs, even though they do not vary with usage. Conversely, colder-than-normal weather can lead to over-recovery. This mismatch creates volatility for both customers and the utility. The WNA mechanism helps address this by normalizing revenues to reflect normal weather conditions, ensuring that fixed costs are recovered more consistently with what was authorized by the Commission when it approved current rates.

Q. What portion of National Fuel's fixed costs is recovered through its current volumetric distribution charges?

A. As shown on National Fuel Exhibit E – Proof of Revenue, at current rates, approximately 63% of base rate distribution revenues for Residential is recovered through the volumetric distribution charge, leaving 37% recovered through fixed charges. For Rates SCPA, approximately 70% of base rate distribution revenue is recovered through the volumetric distribution charge, leaving 30% recovered through fixed charges. This clearly indicates that even though National Fuel's distribution costs are fixed, there is a risk of over- or under-recovery for the vast majority of costs, resulting in the need for the WNA.

Q. How does National Fuel's proposed WNA align with the factors the Commission may consider when evaluating this alternative ratemaking mechanism?

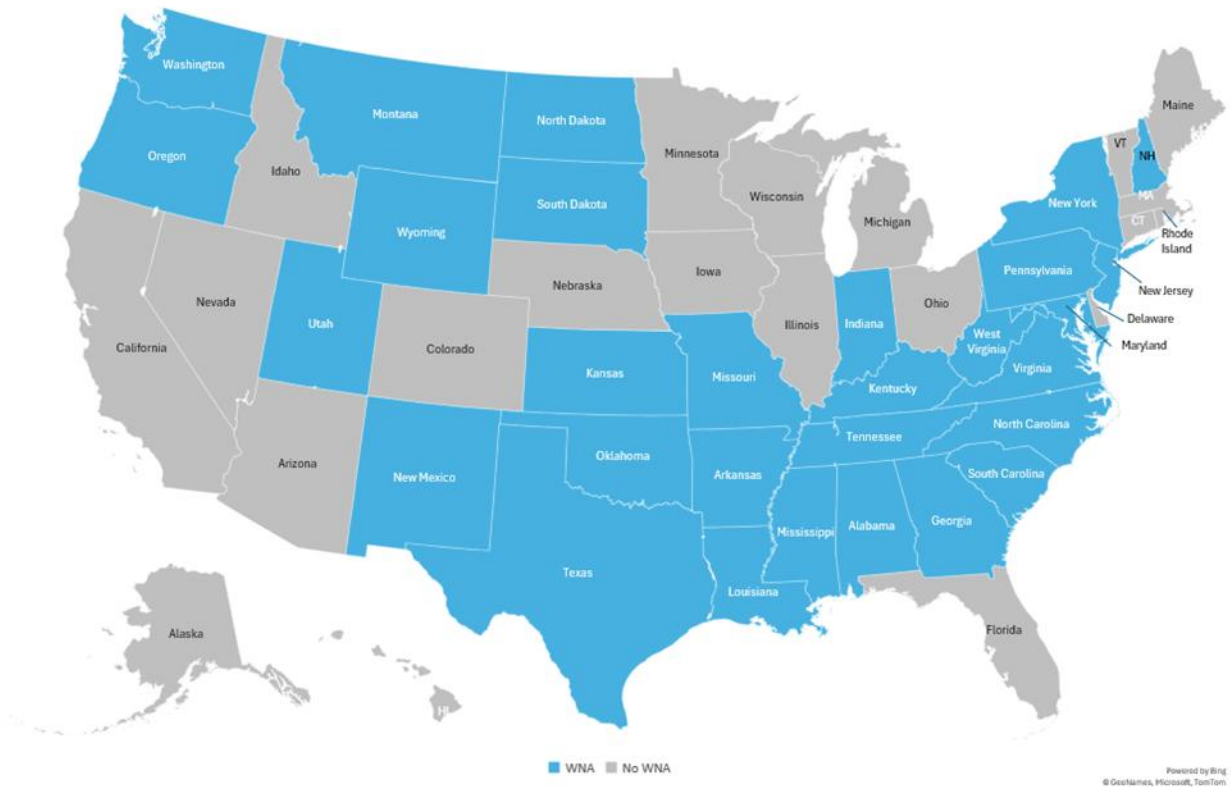
A. Exhibit JDT-3 details how National Fuel's proposed WNA aligns with each of the

fourteen items identified within the Statement of Policy as outlined by the Commission in the alternative rate making Docket No. M-2015-2518883. However, it is important to note that Statements of Policy language suggests that the Commission intends to consider these elements, but not all of them may be relevant or deemed required in order to determine whether a proposal is just and reasonable.

Q. Are WNAs common alternative ratemaking mechanisms in the utility industry?

A. Yes. WNA mechanisms are widely used across the United States to stabilize customer bills and utility revenues during abnormal weather conditions. The map below shows that 29 states with a total of 67 gas utilities have adopted similar mechanisms.

Figure 2 – WNA in the United States



VI. CONCLUSION

Q. Please summarize your primary conclusions.

A. The Company's proposed ACOSS method best reflects the cost causation of distribution mains by accounting for the fact that distribution mains are extended to new customers and are sized to meet peak demand requirements. As such, the Commission should rely on the Company's proposed ACOSS to guide revenue targets for each rate class. In addition, the revenue targets proposed by National Fuel reasonably balance the concepts of cost of service, current revenue contributions, and gradualism, while moving all classes closer to parity.

Q. Please summarize how implementing the proposed WNA mechanism results in fair and equitable ratemaking.

A. The Company's proposed WNA mechanism results in fair and equitable ratemaking due to the following:

- The WNA helps to break the link between the gas consumption of the Company's customers and its distribution revenue recovery, and better aligns the interests of National Fuel and its customers. The fixed costs embedded in National Fuel's volumetric rates for distribution service do not vary in the short-term with changes in temperature.
- The WNA addresses a factor beyond the Company's and customers' control, weather variability. This variability contributes to increased volatility in customers' bills, and increased volatility in the Company's recovery of costs.

- Customers receive greater stability in the non-gas portion of their utility bills, a benefit during the winter months when gas prices tend to be at their highest, and a particular benefit for low-income customers with high bills during the lengthy heating seasons in National Fuel's service areas.

For these reasons, I urge the Commission to approve the continuation of the Company's WNA a permanent ratemaking mechanism.

Q. Does this conclude your pre-filed direct testimony at this time?

A. Yes, it does.

John D. Taylor

MANAGING PARTNER

Mr. Taylor has experience with a wide range of costing, ratemaking, and regulatory activities for gas and electric utilities. He has testified numerous times on these and other issues for clients across North America. He has extensive experience with costing and pricing rates and services, regulatory planning and strategy development, revenue recovery and tracking mechanisms, merger and acquisitions analysis, new product and service development, affiliate transaction reviews, line extension policies, market assessments, litigation support, and organizational and operations reviews. He has testified on numerous occasions as an expert witness on costing and ratemaking related issues on behalf of utilities before federal, state, and provincial regulatory bodies and has extensive experience in evaluating and implementing innovative ratemaking approaches and rate design concepts.

He has also testified on return on equity, electric vehicle and battery storage programs, time-of-use rates, and the appropriate use of statistical analysis during audit testing. Mr. Taylor has led engagements relating to gas supply planning and the review of midstream transportation and storage capacity resources. He has worked as the market monitor for New England ISO's capacity market, supported the negotiation of PPAs, and supported feasibility and prudence studies of generation investments. He has also been involved in selling generating assets and distribution companies, supporting due diligence efforts, financial analyses, and regulatory approval processes.

Mr. Taylor received a master's degree in Economics from American University and holds a bachelor's degree in Environmental Economics from the University of North Carolina at Asheville.

EDUCATION

M.A., Economics, American University

B.A., Environmental Economics, University of North Carolina at Asheville

YEARS EXPERIENCE

- Pennsylvania Public Utility Commission
- Virginia State Corporation Commission
- Washington Utilities and Transportation Commission
- Public Service Commission of West Virginia

CANADA:

- Alberta Utilities Commission
- British Columbia Utilities Commission
- Ontario Energy Board

REPRESENTATIVE EXPERIENCE

RATE DESIGN AND REGULATORY PROCEEDINGS

Mr. Taylor has worked on dozens of electric and gas rate cases including the development of revenue requirements, class cost of service studies, and projects related to utility rate design issues. Specifically, he has:

- Lead expert and witness for class costs of service studies across North America and worked on dozens of other class cost of service and rate design projects for other lead witnesses.
- Developed WNA mechanism for a gas utility including back casting results and supporting expert witness testimony and exhibits.

- Developed revenue requirement model to comply with a new performance-based formula ratemaking process for a Midwest electric utility.
- Supported the development of time of use rates, demand rates, economic development rates, load retention rates, and line extension policies.
- Analyzed and summarized allocation methodology for a shared services company.
- Assessed the reasonableness of costs through various benchmarking efforts.
- Led the effort to collect and organize plant addition documentation for six Midwest utilities associated with the state commission's audit of rate base.
- Supported lead-lag analyses and testimonies.
- Analyzed customer usage profiles to support reclassification of rate classes for a gas utility.
- Helped conduct a marginal cost analysis to support rate design testimony.

LITIGATION SUPPORT AND EXPERT TESTIMONY

Mr. Taylor has testified in several cases on class cost of service studies and statistical audit methods. He has also supported numerous other expert testimonies. Specifically, he has:

- Filed testimony as an expert witness on allocated class cost of service studies for both electric and gas utilities.
- Filed testimony as an expert witness on the application of statistical analysis.
- Filed testimony before FERC on the rate of return for an Annual Transmission Revenue Requirement and participated in FERC settlement conferences.
- Part of two-person expert witness team that provided an expert report to the British Columbia Utilities Commission on the use of facilities for transportation balancing services for Fortis BC.
- Part of two-person expert witness team that provided an expert report on affiliate transactions and capitalized overhead allocations for Hydro One on three separate occasions.
- Sole expert for expert report on affiliate allocations for Alectra utilities, the second largest publicly owned electric utility in North America. This was conducted shortly after the merger of four distinct utilities.
- Sole expert for expert report on the allocation of overhead costs between transmission and distribution businesses for EPCOR.

TRANSACTION EXPERIENCE

Mr. Taylor has been involved with several generating asset transactions supporting both buy side and sell side analysis and due diligence. His work has included:

- Worked as buy side advisor for a large water utility in the mid-Atlantic region including supporting the review of revenue requirements, rates, and forecasts.
- Helped facilitate and manage processes for a nuclear plant auction by processing Q&A, collecting relevant documentation and managing the virtual data room for auction participants.
- Supported the auction process for steam and chilled water distribution and generation assets in the Midwest.
- Supported the development of a financial model to ascertain the net present value of several competing wholesale power purchase agreements and guided the client with a decision matrix for the qualitative aspects of the offers.
- Provided research on comparable transactions, previous mergers and acquisitions, and potential transaction opportunities for several clients.

FINANCIAL ANALYSIS AND MARKET RESEARCH

Other financial analysis and market research Mr. Taylor has conducted include:

- Estimated the rate impact and costs associated with moving California energy market to 100% renewable.
- Assessed the consequences of a divestiture on the cost-of-service model for a New England gas distribution company.
- Developed LNG market studies for two separate utilities and two separate competitive market participants.
- Modeling alternative mechanisms for the allocation of overhead costs to a nuclear plant.

NATIONAL FUEL EXHIBIT JDT-3

WNA MECHANISMS

WNA Mechanism Policy Factors

#	Statement of Policy	Company's Response
1	How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.	National Fuel Gas's WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while mitigating the variance between actual and projected distribution revenues due to weather. The Company recovers a significant portion of fixed costs through volumetric rates. These fixed costs do not vary with the amount of gas delivered to customers and are composed of fixed operation and maintenance expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary in the short-term with changes in temperature. In the absence of a rate design that affords the Company the opportunity to recover all fixed costs in a fixed monthly charge, the WNA mechanism better aligns distribution revenues with cost causation principles.
2	How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.	The WNA mechanism indirectly supports efficient capacity utilization by stabilizing the recovery of fixed distribution costs, which are incurred to maintain National Fuel Gas's infrastructure and capacity to serve customers regardless of fluctuations in gas usage. Since these fixed costs do not change with short-term usage variations, the WNA ensures that the Company can continue investing in the infrastructure necessary to meet peak demand and long-term capacity needs and be compensated for these investments. By supporting revenue stability, the WNA reduces under-recovery risks during periods of lower gas usage, ensuring that the revenues collected align with customers' continued reliance on the utility's fixed assets that provide peak service.
3	Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.	Customer specific usage factors corresponding to their individual demand is continually updated through the WNA formula and reflects the level of demand associated with the customer's anticipated consumption levels. In this proceeding, the Company is also proposing to set Normal Heating Degree Days using a 10-year average rather than a 15-year average, which more accurately captures recent warming trends. Using a more current weather baseline ensures that the WNA formula better aligns normalized usage

WNA Mechanism Policy Factors

#	Statement of Policy	Company's Response
		with customers' anticipated consumption levels under today's climate conditions.
4	How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.	National Fuel Gas's WNA is applied on a customer-specific basis and is designed to be revenue-neutral within each customer class, such that it does not create or exacerbate cross-subsidization either within or across classes.
5	How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.	The Company's WNA only addresses variations due to weather and does not affect customers' ability to pursue energy efficiency measures. Further, the Company continues and will continue to promote the use of energy efficiency measures to its customers as the WNA removes the financial disincentive for National Fuel Gas to promote energy efficiency.
6	How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.	Customers retain strong incentives to reduce usage because the commodity and other charges remain volumetric. The proposed WNA does not eliminate these price signals, so lower usage still results in lower bills.
7	How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.	Under the proposed WNA mechanism, customers who are currently enrolled to pay their bills based on a percentage of their household income see little to no impact to their bills under the WNA mechanism.
8	How the ratemaking mechanism and rate design impact customer rate stability principles.	The American Gas Association Gas Rate Fundamentals book (Pages 152 – 156) states: "The goal of stability recognizes historical relationships among customers in terms of the proportion of system costs each customer group bears. Stability leads to a policy of gradualism in rate changes if substantial increases (or decreases) are called for in the context of a single rate case. Changes in gas utility pricing policy should be imposed gradually so that customers can

WNA Mechanism Policy Factors

#	Statement of Policy	Company's Response
		adjust and any adverse impacts on the customers' operation are minimized." The WNA mechanism provides customers with more stable annual bills and directly mitigates volatility in their monthly costs. Customers would pay for the costs assigned to the volumetric base rate in the most recent rate case and customers would not pay more or less than that amount solely because the actual weather for the month the customers are billed is different than the weather used to determine the rate design of the volumetric base rate.
9	How weather impacts utility revenue under the ratemaking mechanism and rate design.	The Company's WNA adjusts customers' bills due to variations from normal weather during the heating season months (October through May), and it only mitigates the revenue effect of weather on the original rate design of the volumetric base rate. Without it, the Company is deprived of the opportunity to recover the Commission-approved distribution revenue requirement for the applicable classes during times when warmer than normal weather occurs. Moreover, the absence of a WNA places the Company in a position of receiving a higher amount of revenues from customers when the weather is colder than normal. The WNA avoids both scenarios by minimizing the impact of weather on the Company's revenues and customers' bills.
10	How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.	The WNA does not impact the Company's rate case frequency nor it effects regulatory lag.
11	If or how the ratemaking mechanism and rate design interact with other revenue sources (e.g., surcharges).	National Fuel Gas's WNA is solely focused on recovering costs that are part of the base revenue requirement and does not interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, restructuring riders, or system improvement charges under Section 1353.
12	Whether the alternative ratemaking mechanism and	National Fuel Gas's WNA includes several consumer protections to ensure fairness and transparency, as follows:

WNA Mechanism Policy Factors

#	Statement of Policy	Company's Response
	rate design include appropriate consumer protections.	a. No Over-Recovery of Revenue: The WNA mechanism results in an adjusted bill that reflects the revenues that would be recovered under normal weather, i.e., the same normal weather used to set rates. The Company does not recover additional distribution revenues due to colder than average temperatures that result in higher-than-normal usage from customers. This is ensured by limiting the mechanism to the heating season and having a deadband. b. No Cross-Subsidization: The WNA is customer-specific. c. Regulatory Oversight: The WNA is subject to Commission review and regulatory reporting requirements to ensure compliance with approved revenue stabilization objectives and to protect consumers from unintended rate impacts. d. Customer Transparency: National Fuel Gas provides clear bill disclosures and customer education regarding WNA adjustments, ensuring consumers understand how the mechanism works and how it impacts their bills.
13	Whether the alternative ratemaking mechanism and rate design are understandable to consumers.	The WNA is not a new concept to the regulated utility industry and similar versions have been successfully implemented by other Pennsylvania natural gas distribution companies. The WNA tariff provides detailed information to the customer of how the mechanism works and the adjustments are displayed separately on bills, ensuring full transparency. The Company has also made available Frequently Asked Questions (FAQs) on its website https://www.nationalfuel.com/utility/weather-normalization-adjustment-pa-home-biz/ Additionally, the Company sent customers a WNA reminder and plain language insert September 2025, ahead of the winter heating season.
14	How the ratemaking mechanism and rate design will support improvements in utility reliability.	The proposed WNA targets the revenue requirement that would have been already subject to scrutiny and approved by the Commission, meaning that its prudency and reasonableness would have been reviewed and deemed appropriate to support reliability driven

WNA Mechanism Policy Factors

		initiatives. The proposed WNA would help minimize the volatility of the recovery of these costs.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 19-R

Rebuttal Testimony of
John D. Taylor

Topics Addressed:
Cost of Service Study
Revenue Allocation
Rate Design – Customer Charge
Weather Normalization Adjustment

Dated: May 12, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is John D. Taylor and my business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, South Carolina 29926.

Q. On whose behalf are you appearing in this proceeding?

A. I am appearing on behalf of National Fuel Gas Distribution Corporation's ("NFGDC") Pennsylvania Division ("National Fuel" or the "Company")[1].

Q. By whom are you employed and in what capacity?

A. I am employed by Atrium Economics, LLC ("Atrium") as a Chief Executive Officer ("CEO").

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 19, on January 28, 2026.

Q. Please summarize your rebuttal testimony.

A. My rebuttal testimony responds to certain portions of the following direct testimony submitted by other parties. The areas addressed include the following – with reference to the direct testimony of the other parties addressed:

[1] Other parties use the term NFGDC to refer to National Fuel Gas Distribution Corporation's Pennsylvania Division. I have not altered instances when other parties' testimonies use this term but have relied on the term 'National Fuel' to reflect National Fuel Gas Distribution Corporation's Pennsylvania Division.

II. Revenue Allocation

- Office of Consumer Advocate ("OCA") Statement No. 1 - direct testimony of Michael Deupree ("OCA witness Deupree" or "Mr. Deupree");
- Bureau of Investigation and Enforcement ("I&E") Statement No. 3 - direct testimony of Ethan H. Cline ("I&E witness Cline" or "Mr. Cline"); and
- Office of Small Business Advocate ("OSBA") Statement No. 1 – direct testimony of Justin B. Farr ("OSBA witness Farr").

III. Allocated Cost of Service Study Methodology

- OCA witness Deupree; and
- I&E witness Cline.

IV. Rate Design – Customer Charge

- OCA witness Deupree;
- I&E witness Cline; and
- The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Statement No. 1 – direct testimony of Harry S. Geller ("CAUSE-PA witness Geller").
- The Pennsylvania Weatherization Providers' Task Force ("PWPTF") Statement No. 1 – direct testimony of Jennifer Warabak ("PWPTF witness Warabak").

V. Weather Normalization Adjustment

- OCA witness Deupree;
- I&E witness Cline; and
- CAUSE-PA witness Geller.

Q. What exhibits are you sponsoring with your rebuttal testimony?

A. I am sponsoring two rebuttal exhibits, listed below:

- Rebuttal Exhibit JDT-19-R-A – Peak & Average ACOSS Model; and
- Rebuttal Exhibit JDT-19-R-B – Customer Component of Distribution Survey.

Q. Please summarize your primary conclusions in this proceeding.

A. National Fuel requests that the Commission approve the Company's filed proposals because they reasonably reflect cost causation principles while appropriately considering customer impacts. Specifically:

i. The Company's revenue allocation approach appropriately uses the results of the Company's fully Allocated Cost of Service Study ("ACOSS") as the primary guide while applying gradualism to moderate customer bill impacts and moving class revenues toward cost-based parity in a measured manner.

ii. The Company's proposed increase in the Residential monthly customer charge from $14.00 to $19.00 is a measured step toward better alignment of fixed charges with customer-related costs and improves bill stability without eliminating meaningful volumetric price signals.

iii. Making the existing Weather Normalization Adjustment ("WNA") mechanism permanent will help reduce weather-driven volatility in both customer bills and the Company's recovery of Commission-authorized distribution revenues, and the use of a 10-year normal Heating Degree Day ("HDD") average reasonably reflects more recent weather patterns.

iv. The proposed modifications to the WNA presented by intervening parties should be denied as they reduce the effectiveness of the WNA and provide no value to customers.

II. REVENUE ALLOCATION

Q. Please summarize the Company's proposed revenue apportionment and the positions taken by the intervening parties on this issue.

A. As discussed in my Direct Testimony, the Company's proposed revenue apportionment allocates the requested base rate increase among customer classes using the results of the Company's ACOSS as the primary guide, while also considering gradualism and customer bill impacts. Under this approach, customer classes with revenue levels below their indicated cost of service are assigned somewhat above-average increases, while customer classes with revenues above their indicated cost levels are assigned below-average increases, thereby moving class revenues closer to cost-based parity in a measured and gradual manner.[2]

With respect to the intervening parties, OSBA witness Farr generally supports the Company's proposed revenue apportionment and the use of the Company's ACOSS as a reasonable basis to guide class revenue responsibility.[3] In contrast, OCA witness Deupree and I&E witness Cline recommend alternative revenue apportionment proposals that are based on their respective alternative ACOSS results. Because those witnesses advocate different methods for classifying and allocating certain distribution costs, particularly distribution mains, their proposed revenue allocations differ from the Company's proposal

[2] National Fuel Statement No. 19 at 20-23.
[3] OSBA Statement No. 1 at 17.

in the extent to which the requested increase is assigned among the customer classes.[4]

Q. Have you compared the revenue apportionment outcomes proposed by various parties?

A. Yes. As presented in **Table 1** below, I compared the percentage of total increase assigned to each class across the Company and other parties' proposals.

Table 1 - Comparison of Revenue Apportionment by Class Among Parties

Rate Classes	National Fuel	OCA	OSBA	I&E	Average OCA, OSBA, I&E
Residential Service	78.33%	71.00%	83.13%	66.36%	**73.50%**
Small Commercial & PA Service (LE 250)	4.49%	4.24%	4.15%	4.07%	**4.15%**
Small Commercial & PA Service (GT 250)	4.60%	5.88%	4.26%	7.12%	**5.75%**
Large Comm PA Service	6.82%	10.14%	4.57%	11.18%	**8.63%**
NGV	0.11%	0.11%	0.11%	0.13%	**0.12%**
SVIS	0.22%	0.28%	0.15%	0.00%	**0.14%**
IVIS	2.88%	4.29%	1.93%	5.85%	**4.02%**
LVIS	1.34%	1.99%	0.90%	2.75%	**1.88%**
LIS	1.21%	2.08%	0.81%	2.54%	**1.81%**
Total	100.00%	100.00%	100.00%	100.00%	**100.00%**

Q. What explains the differences in revenue apportionment among the parties?

A. The differences in revenue apportionment among the parties are driven by two primary factors. First, each party relies on its own cost-of-service study results, which reflect differing assumptions and methodologies. Second, and equally important, each party applies judgment in determining how to translate those results into revenue targets for each class.

[4] OCA Statement No. 1 at 6 and I&E Statement No. 3 at 11-13.

No party in this proceeding proposes to move rate classes fully to cost-of-service parity in a single step. Instead, each party applies gradualism to moderate rate impacts and determine how far to move each class toward cost-based rates. As a result, the final revenue apportionment reflects both the underlying ACOSS results and each party's judgment regarding rate impacts and policy considerations.

Q. How should the Commission consider these differences when evaluating the various proposals?

A. These differences demonstrate that revenue apportionment is not a mechanical outcome of any single cost-of-service study. Rather, it reflects a combination of analytical results and informed judgment applied by each party. The primary issue is how to reasonably apportion the approved revenue requirement among customer classes, balancing cost-of-service principles with gradualism and rate stability. As I described in my direct testimony, a cost of service study is a guide, providing directional insight into cost responsibility, but revenue allocation ultimately requires judgment, including consideration of gradualism, rate impacts, and policy objectives.

Q. Do you agree with the alternative revenue apportionment proposals presented by OCA witness Deupree and I&E witness Cline?

A. No. I do not agree with the alternative revenue apportionment proposals presented by OCA witness Deupree and I&E witness Cline because each proposal is premised on alternative ACOSS results that the Company does not support. Both OCA and I&E recommend changes to the Company's underlying cost allocation methodology, as discussed below in

this testimony, and those changes alter the resulting class revenue-to-cost relationships used to guide revenue apportionment.

Because revenue apportionment is inherently dependent upon the ACOSS used to measure class cost responsibility, alternative ACOSS assumptions will necessarily produce different allocations of the requested increase among customer classes. In contrast, the Company's proposed revenue apportionment is based on the ACOSS methodology sponsored in my Direct Testimony, which reasonably reflects cost causation and provides an appropriate basis for measured movement toward improved class revenue parity. Therefore, the Company continues to support its proposed revenue apportionment because it is based on a reasonable cost-of-service foundation and appropriately balances the ratemaking objectives of cost causation, gradualism, and customer impact.

III. ALLOCATED COST OF SERVICE STUDY METHODOLOGY

(1) Summary of Company and Other Parties' Positions

Q. Please summarize the fully ACOSS presented in your direct testimony.

A. My direct testimony presents the purpose and principles of cost allocation and National Fuel's preferred ACOSS using the customer demand method for allocating mains and a peak and average ("P&A") method, for informational and comparison purposes, which allocates distribution mains using what is historically referred to as the "Seaboard" method, which involves a 50% weighting of peak contribution by the class and 50% weighting of annual throughput. As compared to the customer demand method, the allocation of distribution mains using the Seaboard method reduces the revenue

requirement of the Residential class by $17.5 million representing a 13.9% decrease. There is also a corresponding increase in the commercial and industrial classes. As is expected, using the Seaboard method increases the allocation of costs to those classes with higher load factors and large volumes of annual throughput.[5]

Q. Please summarize the positions of OCA and I&E relating to the Company's cost allocation method for distribution mains.

A. Mr. Deupree and Mr. Cline take issue with the allocation of distribution mains in the Company's proposed ACOSS:

- Mr. Deupree asserts that the class cost of service study allocating distribution mains plant investment and related costs based on the system demand with customer component presented by National Fuel in this proceeding, determined from the zero-intercept study, is "...fundamentally flawed and provide little to no value in setting just and reasonable rates."[6] Mr. Deupree presents several arguments supporting the allocation of mains using P&A methodology.
- Mr. Cline also recommends adopting a P&A mains allocation methodology to replace the Company's customer-demand methodology.[7] He asserts the Company's "customer-demand allocation proposal is inconsistent with long-standing Commission precedent"[8] and that the Company "has not provided any reason to support its proposal"[9] reversing this precedent.

[5] NFGDC Statement No. 19 at page 20.
[6] OCA Statement No. 1 at 5.
[7] I&E Statement No. 3 at 10.
[8] *Id*. at 9.
[9] *Id*. at 10.

- In contrast, OSBA witness Farr states, "Overall, I find that National Fuel's cost allocation methods, as described by Mr. Taylor, align with cost causation principles. Accordingly, I do not recommend any changes to the Company's cost allocation methods in this case."[10]

Q. Please discuss the cost allocation concepts relied upon in conducting a gas utility's cost of service study and how those concepts relate to the various deficiencies in Mr. Deupree's cost allocation proposal.

A. It is a practical reality of utility regulation that common costs (e.g., the cost of distribution mains) be allocated among jurisdictions, classes of service, rate schedules, or customers within rate schedules. The development of allocation factors uses principles of both economics and engineering to develop allocation factors appropriate for different elements of costs. The result is a cost of service study which provides a reasonable basis for regulators to establish revenue requirements for each class of service and to guide rate design decisions. The key to a reasonable cost allocation is a thorough understanding of cost causation, a principle that I believe Mr. Deupree endorses but fails to follow fully.

(2) Zero-Intercept Method/Customer Demand Methodology

Q. Mr. Deupree recommends rejecting the Company's zero-intercept study/customer demand methodology and replacing it with the P&A method to classify distribution mains.[11] Do you agree with this recommendation?

[10] OSBA Statement No. 1 at 16
[11] OCA Statement No. 1 at 62.

A. No. I do not. Mr. Deupree's recommendation conflates cost recovery with cost causation. While annual throughput influences rate recovery, it does not drive the investment decisions that determine the design, size, or extent of distribution mains. Distribution mains are built to connect customers to the system and to provide sufficient capacity to meet coincident peak-day demand. Replacing the customer demand methodology with a P&A approach would move cost allocation away from these cost-causative factors. Indeed, Mr. Deupree agrees the key issue facing cost of service studies is "whether the selected methodology appropriately reflects cost causation—that is, whether it aligns the allocation of costs with the way the natural gas distribution system is actually designed, constructed, and operated to serve customers."[12] As noted above, Mr. Cline also recommends adopting a P&A mains allocation methodology to replace the Company's customer-demand methodology.

Q. Are there other recognized authorities that agree it is proper to allocate a portion of a gas utility's distribution mains on a customer basis?

A. Yes. In his widely utilized text, The Regulation of Public Utilities,[13] Dr. Charles F. Phillips, Jr. states that "customer costs vary with the number of customers. These costs include a portion of the distribution system, local connection facilities, metering equipment, billing and accounting. Customer costs, moreover, are independent of consumption." Gas Rate Fundamentals, published by the American Gas Association ("AGA"), states that customer-related costs are primarily distribution and customer accounting costs. In conjunction with its discussion of various utility cost components, it

[12] OCA Statement No. 1 at 47.
[13] The Regulation of Public Utilities, Charles F. Phillips, Jr., Public Utility Reports, 1984.

is further stated that "the closer a plant item (e.g., a meter and service line) is located to a customer, the more that particular item is related to the specific requirements of that customer. Thus, the customer component of distribution costs reflects the theoretical distribution system that would be needed to serve customers at nominal or minimum load conditions."[14] Additionally, in discussing the various functions and cost-causative components attributable to the operations of a gas distribution utility, it is stated that for distribution costs, the prime cost causation component is one that is customer-related.[15]

Q. On pages 56 and 57 of his direct testimony[16], Mr. Deupree presents selected statements from a recognized authority that he contends supports his conclusion that it is improper to allocate a portion of a gas utility's distribution mains on a customer basis. How do you respond?

A. The recognized authority cited by Mr. Deupree, Professor James Bonbright, makes other statements that strongly suggest the opposite view that the recognition of a customer component of distribution mains for a gas utility is appropriate.

In Principles of Public Utility Rates,[17] Professor Bonbright notes that the use of a two-part rate structure is based on the assumption that one part of the total cost of a utility's business is a function of the output or energy of the system, whereas another part is a function of plant capacity and hence of all costs related to this capacity. Professor Bonbright goes on to point out, however, that "this two-fold distinction overlooks the fact

[14] Gas Rate Fundamentals, American Gas Association Rate Committee, Fourth Edition 1987 at page 136.
[15] *Id*. at 137.
[16] OCA Statement No. 1 at 56-57.
[17] Principles of Public Utility Rates, Second Editions, James C. Bonbright, Albert L. Danielson, David R. Kamerschen, Public Utility Reports, Inc., 1988

that a material part of the operation and capital costs of a utility business is more directly and closely related to the number of customers than to energy consumption on the one hand or maximum kilowatt demand on the other hand." (Emphasis added).[18]

In addition, in this section dealing with the criteria of a sound rate structure, Professor Bonbright states that,

> "customer costs incurred to serve a customer are invariant with respect to consumption. They are the costs incurred to serve a customer even if the customer does not use the service at all. The most obvious examples of these customer costs are the expenses associated with local connection facilities, metering equipment and meter reading, billing and accounting, and a portion of the distribution system."[19] (emphasis added)

Finally, on page 492, Professor Bonbright states that "in actual practice the vast majority of utilities utilized some form of minimum system to classify costs, which is in line with FERC accounts."

Q. Mr. Deupree criticizes zero-intercept studies as relying on hypothetical constructs[20]. Is that criticism valid?

A. No. This mischaracterizes the methodology. A zero-intercept study does not assume a fictional system but instead uses observed relationships between pipe size and cost to distinguish customer-related investment from capacity-related investment. This approach is grounded in engineering principles and reflects how utilities actually design and build distribution systems.

[18] *Id*. at page 401.
[19] *Id*. at page 401.
[20] OCA Statement No. 1 at pages 52 and 54.

Q. Is allocating a portion of mains costs based on customer count inconsistent with cost causation?

A. No. The Company does not allocate mains costs solely on customer count. It uses a composite customer-demand approach that captures both customer-driven system expansion and demand-driven capacity requirements. Ignoring the customer-related component understates the costs associated with maintaining an integrated distribution grid.

Q. Through his recommendation of the P&A cost allocation method for distribution mains[21], Mr. Deupree argues that distribution mains serve customers throughout the year and therefore their costs should be allocated in part based on average usage. Why is this reasoning flawed?

A. Because system use is not the same as cost causation. Once sufficient mains capacity is installed to meet design-day conditions, additional gas flowing through those mains (throughput) during non-peak periods does not increase costs. The ability to serve customers throughout the year exists only because the system is designed to meet peak demand. Treating average throughput as a cost driver reverses this causal relationship. Annual throughput is a result of system design, system design is driven by the need to connect customers and serve their peak demand, as such annual throughput is not a driver of investment.

[21] *Id*. at page 62.

Q. How does the customer demand method better reflect cost causation for distribution mains than a P&A methodology?

A. The customer demand method recognizes the two factors that actually cause investment in distribution mains: the need to connect customers to an integrated system and the need to size that system to safely and reliably meet coincident peak-day demand. The customer demand method uses a customer component to reflect grid extension and a demand component to reflect capacity requirements. The P&A method collapses these distinct drivers into a usage proxy that does not correspond to how mains are engineered or constructed.

(3) Peak & Average Methodology

Q. Have other Commissions recently reviewed the appropriateness of the Seaboard method compared to the customer demand method?

A. Yes, the Public Service Commission of West Virginia has relied on the Seaboard method over the past several decades. However, in Dominion Energy West Virginia's 2020 rate case, they reviewed arguments relating to the appropriateness of using the Seaboard method as compared to the customer demand method. In their final order, they found the movement away from the Seaboard method appropriate.

> "The Commission finds that a movement away from the 2008 methodology [Seaboard] is appropriate. However, in the interest of moderation and to allow for future review of the effects of a shift in CCOSS methodology, we will not adopt Hope's alternative methodology [customer demand method] totally at this time. Instead, we will use, as an initial allocation, an average of the two methods."[22]

[22] Public Service Commission of West Virginia, Final Order for Dominion Energy West Virginia Case No. 20-0746-6-42T, (filed July 27, 2021), page 59

Q. Are there other insights relating to the appropriateness of the Seaboard method in allocating mains?

A. Yes. As stated in my direct testimony, the Seaboard method (and later the United method discussed below) was historically utilized by the FERC (and its predecessor, the Federal Power Commission ("FPC"). The FERC and FPC have made cost classification decisions, at various points in time, with less regard to cost causation principles and with primary emphasis on addressing the implications of a set of facts and conditions in energy markets on gas pipeline rate design. Rate design methods at FERC have changed and evolved over the years to achieve various policy objectives while satisfying the fundamental tenants of rate design theory.

Q. Does the FERC still rely on the Seaboard method for the allocation of costs?

A. No. In 1992, with the issuance of Order No. 636, the FERC adopted the Straight Fixed-Variable method (SFV). Under SFV, all fixed costs are classified to the demand component, and all variable costs are classified to the commodity component. The FERC reasoned that a change from a modified fixed variable or MFV method was necessary because each pipeline, depending on its capital structure, had different levels of fixed costs in the usage (commodity) rates, thus hindering gas-on-gas competition in the marketplace. The purpose of SFV was to promote the development of a competitive market for natural gas at the wellhead by eliminating transportation rate differentials. FERC Order No. 636-A, FERC indicated:

> "… the Commission believes that fixed costs in pipeline usage charges inhibit the sending of accurate price signals ″at the margin″ because the inclusion of those costs in the delivered price of day-to-day gas purchases does

not allow producers and consumers to see the marginal price of gas that over the long run is more likely to produce the Commission's goal of an efficient national gas market."[23]

The SFV method has endured to this day. In my opinion, Mr. Deupree is using the Seaboard method much as the FPC used the Seaboard method nearly 70 years ago; that is, to provide a rationale for his rate apportionment and rate design objectives.

Q. Mr. Deupree suggests that the P&A methodology better reflects differences in load factors across customer classes by resulting in a "more balanced allocation of costs."[24] Should load factor be a primary driver of distribution mains allocation?

A. No. Load factor is typically defined as a customer's (or class's) average usage over a period divided by its maximum (peak) demand during that same period. Load factor measures how customers use available capacity, not how much capacity they require. Customers with higher load factors often impose the same or lower peak capacity requirements than lower load-factor customers. Allocating distribution mains costs based on load factor penalizes efficient customers and violates cost causation principles. Indeed, Mr. Deupree concedes "(load factor) should not be the primary driver of cost allocation or rate design decisions."[25]

[23] Federal Energy Regulatory Commission, Docket Nos. RM91-11-001 and RM87-34-065, Order No. 636 (Apr. 9, 1992).
[24] OCA Statement No. 1 at 47-48.
[25] *Id*. at 49.

Q. Does the P&A method improperly merge cost allocation with rate design considerations?

A. Yes. P&A is frequently justified because it produces preferred rate outcomes rather than because it reflects cost causation. Whether residential rates should be mitigated is a rate design question. Cost allocation should first identify cost responsibility as accurately as possible, independent of rate impacts.

Q. Do Commission precedents approving the P&A method in prior cases establish that P&A is a cost-causative methodology or otherwise superior to alternative approaches?

A. No. Commission precedent reflects prior outcomes and does not, by itself, transform a methodology into a cost-causative allocator or establish that it is superior. While some commissions have accepted P&A, often for rate-impact or gradualism reasons, other jurisdictions have recognized minimum-system and zero-intercept techniques and have approved customer/demand-based classification of mains as more consistent with cost causation. Ultimately, cost allocation should document how costs are incurred; policy considerations and rate impacts are appropriately addressed separately through rate design.

Q. How do you respond to Mr. Cline's citation of the Commission's acceptance of the P&A approach in other rate cases[26]?

A. Mr. Cline cited the Commission by referring to the Columbia Gas Company of Pennsylvania, Inc. ("Columbia") rate case (Docket No. R-2025-3053499) and accepted P&A methodology. Mr. Cline is correct that the Commission has supported P&A before. It is also correct that other jurisdictions have also supported P&A and have no customer component of mains. However, others have agreed with National Fuel's approach of classifying mains to both customer and demand. Typically, when reading through the orders disallowing a customer component or approving the P&A method, it appears that the stated rationale is either premised upon the 'annual gas delivery function' as the reason for the utility's existence or confusion of cost allocation concepts with rate design (i.e., allowing the method of recovering costs to impact the method of allocating those costs). It is my opinion, and that of other experts and commissions, that cost allocation should be solely based on cost causation and not take into account the method of recovering those costs nor the impact on class rates; those are both issues of rate design. The desire to utilize cost causation with no concern for the resulting impact on class rates is well articulated by a past order in Connecticut which required Connecticut Natural Gas and Southern to classify mains into a demand and customer component.

> The Department believes that the results approval philosophy has two major limitations. First, it favors a select group of customers at the expense of others. Second, by commingling cost recovery and social policy it becomes difficult to distinguish between costs and policies. The Department believes strongly that a COSS should document costs as purely and accurately as

[26] I&E Statement No. 3 at 9-10.

possible, and that rate design is the proper venue for addressing social policies such as rate impact, gradualism and rate stability.[27]

The Connecticut Order also clarifies the rational for requiring the local gas distribution companies to classify mains into a demand and customer component.

> The investment an LDC makes in mains is clearly dependent upon 1) the number of customers served and 2) the maximum coincidental demand or combined demand of all customers on the peak day. Main extensions consist of two distinct cost activities. First, there is the cost associated with the trench required to reach customers. These costs consist of digging, laying a proper bed, back-filling, tamping, and asphalt patching. The second cost relates to the size of main installed where size is determined exclusively by the coincidental peak period demand of present and future users. Out of necessity, mains in New England must be sized to meet peak day demands as opposed to average period demand. Otherwise, the system will fail repeatedly and predictably throughout the winter.[28]

Q. Can you provide other examples of instances where utility regulators have authorized a customer component of gas distribution mains across the United States?

A. Yes. Atrium conducted research in the fall of 2025 for all states that have had utility commission orders rendered in fully litigated gas general rate cases. Referring to Rebuttal Exhibit JDT-19-R-B, the survey indicates that 44 state utility regulatory commissions (including the District of Columbia) rely upon the results of an embedded cost of service study for ratemaking purposes. Of those states, there are 26 states that utilize a minimum system, zero intercept, or other methods to classify the costs of distribution mains between customer-related and demand-related for gas utilities, along with some form of a coincident peak method for the demand component.

[27] State of Connecticut - Department of Public Utility Control, Docket No. 99-03-28, Final Decision dated August 9, 2000, pages 9-10.
[28] *Id*. at pages 9-10.

Q. What are the consequences of adopting the P&A methodology recommended by Mr. Deupree?[29]

A. P&A assigns higher costs to customers with higher annual usage even when they do not cause greater mains investment. Two customers with identical peak demands but different annual throughput impose the same system costs, yet P&A assigns them different cost responsibilities. This outcome is inconsistent with both engineering reality and economic cost causation.

Q. How do you respond to Mr. Deupree's summation of the Company's cost allocation proposal for distribution mains as "inconsistent with the allocation approach utilized in the Company's prior rate case that relied on a P&A cost allocation methodology?"[30]

A. The Company cost allocation proposal in this case is identical to its proposal in the last case, allocating distribution mains based on the customer demand methodology. A compromise allocation approach, agreed upon in settlement in the prior case, is non-precedential, and "does not reflect any agreement among the Joint Petitioners regarding the appropriate cost allocation methodology."[31] The Company holds the customer demand methodology to be the superior and appropriate cost allocation methodology.

[29] OCA Statement No. 1 at 62.
[30] OCA Statement No. 1 at 58.
[31] Docket No. R-2022-3035730, National Fuel, PA PUC, *Joint Petition for Approval of Settlement of Rate Proceeding*, (April 13, 2023), Pages 8-9

Q. Is your proposed allocation of distribution mains in this proceeding inconsistent with your recommended cost allocations in other Pennsylvania proceedings, as Mr. Deupree asserts[32]?

A. No. In my prior testimony, including testimony presented in Pennsylvania and in other jurisdictions, I explained that cost allocation methodologies are guided by cost causation, but are also influenced by factors such as regulatory precedent, data availability, and the specific characteristics of the utility's system. Here, the Company has provided a more developed basis for evaluating the drivers of distribution main costs, and the proposed customer-demand allocator reasonably reflects cost causation based on that record. The selection of a particular cost allocation methodology is driven by the specific facts and issues presented in each utility's rate case. Regulation evolves over time, as demonstrated by FERC no longer relying on the Seaboard method and by state Commissions evaluating the reasonableness of different allocation methods. Accordingly, an expert's support for an A&E allocator for distribution mains in a different docket does not make the Company's customer-demand based distribution mains allocator here unreasonable or "inconsistent." The appropriate ACOSS methods must be evaluated on a case-by-case basis in light of the record in each proceeding and the objective of aligning cost responsibility with how the distribution system is designed, constructed, and operated.

[32] OCA Statement No. 1 at 60.

IV. RATE DESIGN – CUSTOMER CHARGE

Q. Please summarize the Company's proposed increase to the residential basic service charge.

A. The Company proposes to increase the residential basic service charge from $14.00 per month to $19.00 per month as part of its overall rate design. While the Company's ACOSS indicates a residential monthly customer charge of approximately $27.00, the Company is not proposing to move immediately to that level. Instead, the proposed $5.00 increase represents a measured and moderated step toward better alignment between the fixed monthly charge and the customer-classified costs incurred to provide residential service.[33]

Q. Please summarize the positions taken by OCA, I&E, CAUSE-PA, and PWPTF regarding the Company's proposed increase to the residential basic service charge.

A. OCA, I&E, CAUSE-PA, and PWPTF each oppose the Company's proposed increase to the residential basic service charge, although they do so for somewhat different reasons.

OCA witness Deupree opposes the Company's proposed increase on the basis that he does not support the ACOSS methodologies underlying the Company's customer charge design and further contends that the current residential customer charge already recovers a substantial portion of customer-related costs. OCA alternatively recommends that any increase to the residential customer charge be limited to approximately the overall percentage increase assigned to the Residential class.[34]

Similarly, I&E witness Cline does not support the Company's proposed increase

[33] National Fuel Statement No. 14 at 18.
[34] OCA Statement No. 1 at 82-83.

because he rejects the ACOSS methodology used by the Company to develop customer-related costs and states that the Company did not provide a separate customer charge analysis based on his preferred Peak and Average ACOSS approach. I&E therefore recommends a more limited increase to the residential customer charge.[35]

CAUSE-PA and PWPTF oppose the proposed increase primarily on policy grounds. CAUSE-PA asserts that increasing the residential fixed monthly charge would disproportionately impact low-use and low-income customers by increasing the unavoidable portion of customer bills and reducing customers' ability to manage bills through lower consumption.[36] PWPTF raises similar concerns, arguing that an increase in the fixed monthly charge would discourage conservation and would be particularly burdensome to low-income customers absent additional universal service relief.[37]

Q. Do you agree with the criticisms raised by OCA witness Deupree and I&E witness Cline regarding the Company's proposed increase to the residential basic service charge?

A. No. I do not. Both OCA witness Deupree and I&E witness Cline suggest that because they disagree with the Company's ACOSS treatment of distribution mains, the Company's proposed residential customer charge is unsupported or should be materially reduced. That conclusion is misplaced.

The residential monthly customer charge benchmark of $27.17 reflected in the Company's ACOSS is derived from customer-classified costs and does not include

[35] I&E Statement No. 3 at 14-15.
[36] CAUSE-PA Statement No. 1 at 51.
[37] PWPTF Statement No. 1 at 4-6.

distribution mains investment. Although the Company's ACOSS uses a blended customer-demand allocator in assigning distribution mains costs to customer classes for purposes of determining overall class cost responsibility, distribution mains remain classified as 100% demand-related within the ACOSS model and are therefore excluded from the calculation of the residential customer unit cost used to inform the basic service charge.

As a result, modifying the distribution mains allocation methodology from the Company's filed ACOSS approach to a P&A approach does not change the residential customer-related unit cost. Indeed, as reflected in Schedule 7 of Exhibit D and Exhibit JDT-19-R-A, the residential monthly customer unit cost remains the same under both studies.

Q. How do you respond to OCA witness Deupree and I&E witness Cline's recommendation that the proposed monthly Residential customer charge be scaled back proportionately if the Commission approves a lower revenue requirement?[38]

A. I disagree with their recommendation. Rate design should be based on the cost to serve, not applied as a function of comparing National Fuel's revenue requirement request with what is authorized. Scaling back the customer charge merely to match a reduced revenue requirement would disconnect the rate design from cost causation principles and potentially result in an under-recovery of fixed costs. This shift would necessarily increase the portion of revenue recovered through volumetric charges, distorting price signals and potentially creating intra-class subsidies between low- and high-use customers. As noted by NARUC

[38] OCA Statement No. 1 at 83 and I&E Statement No. 3 at 16.

in its Gas Rate Design Manual, "Ideally, the customer charge should recover all customer costs."[39] The Company's proposed customer charge, which is below the $27 customer related unit cost identified in the ACOSS,[40] was developed to reflect these cost-based principles and should be evaluated independently of the total revenue level ultimately approved by the Commission.

Q. CAUSE-PA and PWPTF argue that increasing the residential customer charge will disproportionately harm low-use and low-income customers by increasing the unavoidable portion of bills. Do you agree?

A. No. That conclusion assumes that low-income and low-use customers are a uniform group and that affordability is determined solely by minimizing fixed charges. Low-income customers are not homogeneous in their usage patterns; while some use less than average, others use more due to numerous factors, similar to non-low-income customers, where usage levels vary. As a result, placing a greater share of fixed cost recovery in volumetric rates can actually impose greater burdens on certain low-income customers, particularly during the winter months when usage is least discretionary and bills are highest. A balanced rate design that includes a reasonable fixed charge helps mitigate these regressive impacts by moderating seasonal bill volatility and improving predictability.

[39] National Association of Regulatory Utility Commissioners (NARUC), *Gas Rate Design Manual*, June 1989, p.49.
[40] National Fuel Statement No. 14 at 18.

Q. How does recovering fixed costs through volumetric charges affect low-income customers differently than higher-income customers?

A. Recovering fixed distribution costs through volumetric charges concentrates cost recovery in periods of high usage, most notably during the winter heating season. Low-income customers often have limited financial flexibility and little ability to reduce essential usage during these periods. Unlike higher-income households, they may not be able to invest in energy efficiency or weatherization, and many renters cannot make such investments at all. Consequently, higher winter volumetric rates lead not to meaningful conservation, but to higher arrearages or reductions in essential energy use that negatively affect health and quality of life. This dynamic is regressive and does not promote affordability.

Q. CAUSE-PA and PWPTF contend that higher fixed charges discourage conservation by weakening price signals.[41] Is volumetric pricing an effective conservation signal for residential customers?

A. Not necessarily. For many residential customers, particularly low-income households, energy usage during the winter is largely inelastic. Space heating, hot water, and cooking are essential services, and customers often lack realistic alternatives or flexibility to significantly reduce usage. Rate designs that over-rely on volumetric recovery exacerbate winter bill spikes, when customers' ability to reduce usage is most constrained. By spreading recovery more evenly across months, a reasonable customer charge enhances

[41] CAUSE-PA Statement No. 1 at 51 and PWPTF Statement No. 1 at 4.

bill predictability and can improve customers' ability to plan and manage household budgets.

Moreover, under National Fuel's proposed $19 monthly residential customer charge, approximately 59% of residential distribution revenues would continue to be recovered through volumetric delivery charges. As a result, the majority of a residential customer's bill would remain usage-based. This indicates that customers retain meaningful opportunities to reduce their gas bills by employing energy efficiency measures, practicing conservation, and making behavioral adjustments. Assertions that an increased customer charge eliminates the incentive or ability to lower bills are not substantiated by the data.

Q. Does increasing the customer charge eliminate or meaningfully weaken conservation incentives for residential customers?

A. No. The Company's proposal maintains a meaningful volumetric rate component, ensuring that customers continue to receive a usage-based price signal. The proposed increase in the customer charge does not eliminate volumetric pricing; rather, it represents a measured rebalancing that reduces the over recovery of fixed costs through per-unit charges. This adjustment improves price transparency and accuracy while still preserving incentives for customers to manage discretionary usage where feasible.

V. WEATHER NORMALIZATION ADJUSTMENT

Q. Please summarize the Company's proposal regarding the WNA and describe the key components of the mechanism.

A. The Company proposes that the existing WNA, currently operating as a pilot approved in the Company's 2022 base rate case, be approved as a permanent ratemaking mechanism. The WNA adjusts the delivery portion of customer bills so that billed usage reflects consumption under normal weather conditions rather than actual temperatures experienced during the heating season, thereby moderating the effects of abnormal weather on both customer bills and the Company's recovery of Commission-approved distribution revenues.

The WNA operates by comparing actual HDD to normal HHD and adjusting billed usage for deviations outside a defined deadband. The mechanism includes a ±3 percent deadband to avoid adjustments for minor weather variations and applies only during the heating season, October through May. The WNA is customer-specific, revenue-neutral within each customer class, and applies to Residential and Commercial/Public Authority customers.

In this proceeding, the Company proposes one modification to the existing WNA: establishing normal HDD using a 10-year weather average rather than a 15-year average, in order to better reflect more recent weather patterns while retaining the stabilizing features of the mechanism.[42]

[42] National Fuel Statement No. 19 at 23-25.

Q. What are the parties' positions in this case regarding the WNA?

A. OCA witness Deupree recommends that the Commission discontinue the WNA altogether, finding that the pilot has operated as an asymmetric surcharge that has produced net customer charges rather than balanced surcharges and credits. OCA contends that the WNA is unnecessary given the Company's use of a fully projected future test year and DSIC, which already mitigate regulatory lag. Mr. Deupree also indicates that budget billing can "smooth customer bills without a WNA."[43] In the alternative, if the Commission elects to continue the WNA, OCA recommends that it remain a time-limited pilot, not a permanent mechanism, with additional protections including a 5% deadband and elimination of October and May from the WNA period.[44]

Similarly, CAUSE-PA opposes making the WNA permanent and recommends that the mechanism be terminated. CAUSE-PA argues that the WNA shifts weather-related risk from the Company to customers, undermines bill transparency, and exacerbates energy affordability and energy insecurity, particularly for low-income households. CAUSE-PA emphasizes that the WNA has resulted in net surcharges during its pilot period, and reduces customers' ability to manage bills through conservation or efficiency. Like OCA, CAUSE-PA asserts that the Company already has sufficient risk-mitigation tools and that continuation of the WNA is inconsistent with affordability and consumer-protection objectives.[45] If the WNA is permitted to continue, it should remain a pilot for no more than three years, exclude CAP customers, operate only from December through March, increase

[43] OCA Statement No. 1 at 30.
[44] OCA Statement No. 1 at 33-35, 38-39.
[45] CAUSE-PA Statement No. 1 at 55-56.

the deadband to 5%, and use a rolling 10-year historical average updated annually.[46]

I&E does not oppose continuation of the WNA in principle but recommends modifications to strengthen customer protections. Specifically, I&E supports the Company's proposal to calculate normal HDD using a 10-year weather average, finding it more reflective of recent weather trends and consistent with Commission precedent. However, I&E recommends excluding the shoulder month of May from the WNA period and increasing the deadband from 3% to 5%, relying on the Commission's reasoning in the recent Columbia Gas of Pennsylvania decision that a wider deadband better captures normal weather variation and places greater forecasting responsibility on the utility.[47]

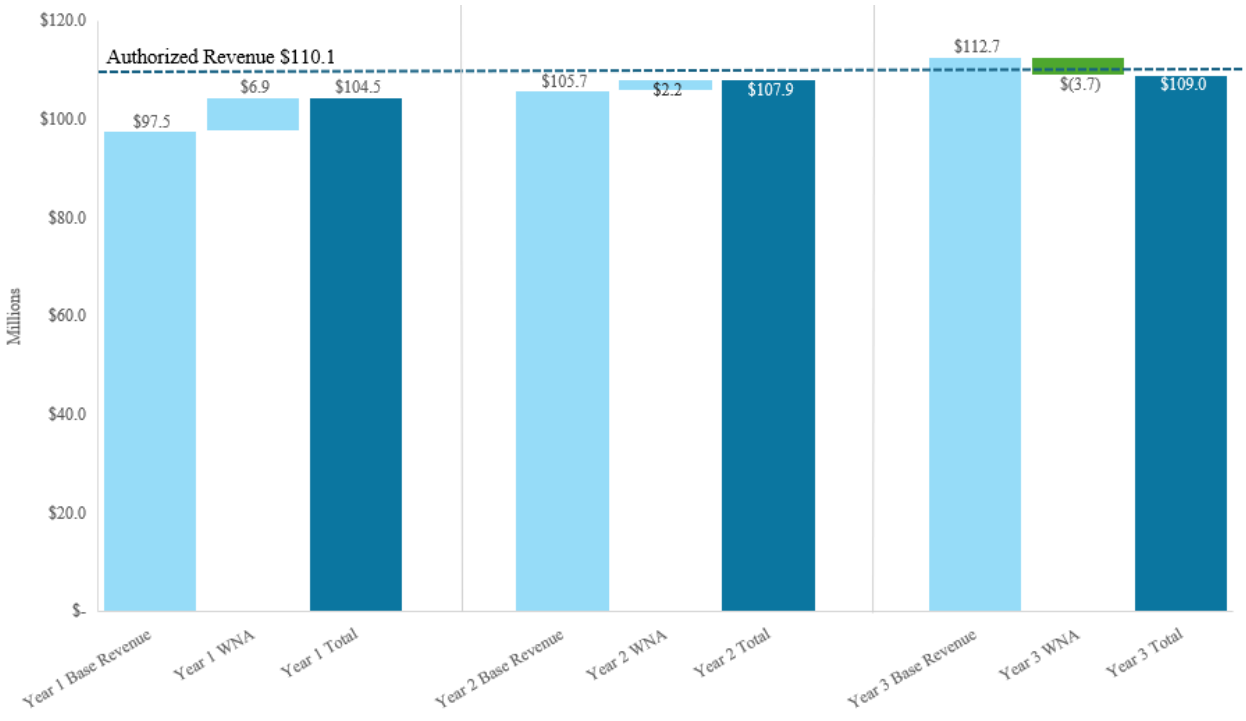
Q. How do you respond to Mr. Deupree's statement that the WNA is a "one-way surcharge mechanism"[48]?

A. I disagree with Mr. Deupree's characterization. The WNA is not a "one-way surcharge mechanism." If it were, customers would not receive credits in periods when actual weather is colder than normal in a manner that produces downward WNA adjustments. The most recent example is the 2025–2026 heating season, during which customers received approximately $2.6 million in net WNA credits. Further, the mechanism operates as intended: it provides the Company an opportunity to come closer to recovering its Commission-authorized distribution revenue requirement by reducing weather-driven volatility in margin recovery, not by guaranteeing revenue or enabling over-collection, while protecting customers from paying more during colder than normal periods when gas

[46] CAUSE-PA Statement No. 1 at 59-60.
[47] I&E Statement No. 3 at 6-7.
[48] OCA Statement No. 1 at 33.

usage increases. **Figure 1** below compares the Company's authorized distribution revenues to the combination of base-rate revenues and WNA adjustments for the twelve months ended July 31, 2024 ("Year 1"), the twelve months ended July 31, 2025 ("Year 2"), and the projected twelve months ending July 31, 2026 ("Year 3"). As shown, in each period total revenues recovered, inclusive of WNA adjustments, remain below the Company's authorized revenue level. Specifically, the Company recovered approximately 95 percent of authorized revenues in Year 1, approximately 98 percent in Year 2, and is projected to recover approximately 99 percent in Year 3. This demonstrates that the WNA does not guarantee or result in overcollection of revenues for the Company; rather, it reduces weather-related fluctuations.

Figure 1 - Comparison of Actual Revenue to Authorized Revenue



Q. Mr. Deupree asserts that the WNA is "not required to address regulatory lag concerns of the Company given the Company's use of a FPFTY and DSIC."[49] Do you agree?

A. No. First, the Company has not asserted that the WNA is needed to address regulatory lag, and framing the issue that way creates a straw-man argument that Mr. Deupree has advanced and then spent time rebutting. In fact, the entirety of Mr. Deupree's testimony on regulatory lag is a red herring – a distraction made to divert attention from the central issue – the WNA's purpose of addressing over dependance on volumetric recovery and increased risk to customers and the Company which is decreased with the WNA in place. Mr. Deupree's assertion reflects a conflation of revenue stabilization mechanisms and regulatory lag mitigation mechanisms, which serve distinct purposes. A WNA is designed to reduce weather-driven volatility in billed volumes and distribution margin recovery by normalizing usage to "normal" HDD conditions. By contrast, mechanisms such as a fully projected future test year ("FPFTY") and the Distribution System Improvement Charge ("DSIC") address timing issues, i.e., the lag between when costs are incurred (or investments are made) and when those costs are reflected in base rates.

Importantly, the WNA does not accelerate cost recovery, establish interim rates, or otherwise change when the Company may begin collecting particular costs from customers. Nor does it change the Company's Commission-authorized revenue requirement. Instead, it adjusts a weather-sensitive billing determinant so that revenues are less dependent on whether a given winter is warmer or colder than normal.

[49] OCA Statement No. 1 at 38.

For clarity, **Table 2** below summarizes the key distinctions between the WNA mechanism and commonly used regulatory lag mitigation mechanisms.

Table 2 – Comparison of WNA mechanism vs. Regulatory Lag Mitigation Mechanism

	WNA Mechanism	**Regulatory Lag Mitigation Mechanism**
Purpose	To normalize billed distribution revenues and/or volumes for abnormal weather so that billed amounts reflect normal HDD conditions.	To reduce the time lag between when a utility incurs or forecasts costs (or makes investments) and when those costs are reflected in customer rates.
Trigger	Deviations between Actual HDD and Normal HDD, typically during the heating season.	Differences between costs incurred or forecasted and the costs reflected in current base rates during the period between general rate cases.
What It Adjusts	A weather-related usage or billing determinant used in the distribution charge. WNA does not change the Commission approved or authorized revenue requirement.	Rate levels or the timing of cost recovery through riders or trackers, forecast or future test years, formula rate mechanisms, interim rates, among others.
Time Dimension	Operates within billing periods (e.g., monthly), based on observed weather conditions. Application may be constrained by a deadband and limited to specific months (such as the heating season).	Operates between rate cases (over months or years) and is tied to the regulatory process timeline.
Key Point	WNA addresses weather variability, not the timing of when costs are recognized or recovered in rates.	Regulatory lag mitigation addresses cost recovery timing, not weather driven consumption variability.

Accordingly, Mr. Deupree's attempt to characterize the WNA as a regulatory lag remedy is at best an error of his part and at worst a purposeful diversion. The WNA does not accelerate cost recovery or change the Company's authorized revenue requirement; it merely normalizes a weather-sensitive billing determinant.

Q. Mr. Deupree suggests that "budget billing" offers the same features as the WNA when it comes to normalizing billing.[50] How do you respond?

A. Budget billing and the WNA serve fundamentally different purposes. The WNA is an alternative ratemaking mechanism intended to stabilize distribution margin recovery and moderate customer bill impacts associated with deviations between actual and normal weather (an external factor outside the Company's and customers' control). By contrast, National Fuel's Budget Plan is a bill payment option that allows customers to pay levelized amounts based on prior usage, with periodic true-ups to reconcile the budgeted payments to the customer's actual billed usage.

Critically, because the Budget Plan trues up to actual usage, it does not "normalize" usage to normal weather conditions. For example, if weather is colder than normal, a Budget Plan customer will still ultimately pay for the higher actual usage through the next true-up. Under the WNA, however, that same customer could receive a credit for the portion of usage attributable to weather that was colder than normal, because the mechanism adjusts billed usage toward a normal-weather benchmark. In other words, the Budget Plan can smooth the timing of payments, but it does not change rate design, does not address weather-driven deviations from normal consumption, and therefore does not mitigate the corresponding bill and revenue volatility that the WNA is designed to address.

Q. Mr. Geller suggests that a warming trend means that, even as annual temperatures vary year by year, the WNA "will produce greater and greater revenue" for the

[50] OCA Statement No. 1 at 30.

Company for gas service that customers will not actually use or need."[51] How do you respond?

A. I disagree. Mr. Geller's statement conflates weather normalization with creating additional sales or increasing the Company's authorized revenue. The WNA does not charge customers for gas they do not use; rather, it adjusts the delivery billing determinant to reflect what usage would have been under normal weather conditions and it operates in both directions, producing either surcharges or credits depending on whether actual HDD are warmer or colder than normal.

To the extent long-term weather patterns change, that is precisely why the Company proposes to update the normal HDD baseline from a 15-year average to a more recent 10-year average. Using a more current normal better aligns the WNA benchmark with contemporary conditions and reduces the potential for systematic bias that could occur if an outdated "normal" were retained. In addition, the WNA does not accelerate cost recovery or change the Commission-authorized revenue requirement; it provides only an opportunity to reduce weather-related fluctuations in margin recovery around the level established in base rates. Accordingly, a generalized "warming trend" does not imply that the WNA will generate ever-increasing revenues, rather, the adjustment will continue to reflect differences between actual HDD and the applicable normal in each season.

[51] CAUSE-PA Statement No. 1 at 57.

Q. Mr. Geller contends that the WNA undermines bill transparency because "it charges customers not for their actual usage, but for hypothetical usage."[52] How do you respond?

A. I disagree with that characterization. First, customers' gas supply charges are still based on their actual metered usage. The WNA applies only to the delivery component and adjusts a weather-sensitive billing determinant using a defined, tariffed formula that compares actual HDD to the same "normal" HDD baseline used for ratemaking purposes, subject to a deadband. This adjustment does not create additional consumption or collect revenues unrelated to service provided. Second, while the WNA calculation is necessarily formula-based, it is no more "nuanced" than other tariffed riders that rely on objective inputs, and the result is transparent to customers because it is shown as a separate WNA line item on the bill. In fact, by explicitly quantifying the impact of weather that differs from normal, the WNA can make the source of bill variation clearer.

Q. Mr. Geller argues that the WNA exacerbates affordability and energy insecurity, particularly for low-income households.[53] Do you agree?

A. No. The WNA is designed to reduce weather-driven bill volatility, particularly in unusually cold periods when bills are highest and customers' ability to reduce essential heating usage is most constrained. By moderating abnormal weather impacts, the WNA can improve predictability and help reduce the risk of sudden bill spikes that contribute to arrearages.

[52] CAUSE-PA Statement No. 1 at 58.
[53] CAUSE-PA Statement No. 1 at 59.

To the extent the Commission determines that additional affordability protections are warranted for income-eligible customers, those protections are most appropriately implemented through targeted universal service programs (e.g., CAP) and other assistance mechanisms, not by eliminating a weather-normalization tool for the broader customer base.

Q. Mr. Geller asserts that the WNA reduces customers' ability to manage bills through conservation or efficiency.[54] How do you respond?

A. I disagree. The WNA does not replace volumetric delivery rates or remove the linkage between usage and a customer's bill. Customers still pay for the gas they use, and they continue to benefit from conservation and efficiency through lower base-rate volumetric charges and lower gas costs. The WNA simply adjusts for abnormal deviations from normal weather conditions so that a customer's bill is less dependent on whether a particular season is warmer or colder than normal. That design purpose is fundamentally different from, and does not preclude, conservation or efficiency efforts.

Q. What would be the impact of discontinuing or limiting the WNA as proposed by these parties?

A. Discontinuing or limiting the WNA, as proposed by OCA[55], CAUSE-PA[56] and I&E,[57]

[54] CAUSE-PA Statement No. 1 at 58.
[55]OCA Statement No. 1 at 38-39.
[56]CAUSE-PA Statement No. 1 at 59-60.
[57]I&E Statement No. 3 at 6-7.

would materially weaken the mechanism and reintroduce volatility into revenue recovery for both the Company and customers. The WNA serves as a two-sided buffer: it reduces the risk of under-recovery in mild winters and helps limit excessive charges in colder winters. In particular, when weather is unusually cold and customer bills are highest, the WNA helps moderate bill impacts; accordingly, modifications that reduce its effectiveness may harm customers. Likewise, exempting all confirmed low-income customers from the WNA would undermine the mechanism's fairness and consistency by creating intra-class cost shifts that require other customers to assume a disproportionate share of revenue stabilization. National Fuel already addresses low-income affordability through targeted programs, as discussed in the rebuttal testimony of Company witness Matthew Stoops, National Fuel Statement No. 17-R. Those programs are the appropriate means of supporting income-eligible customers.

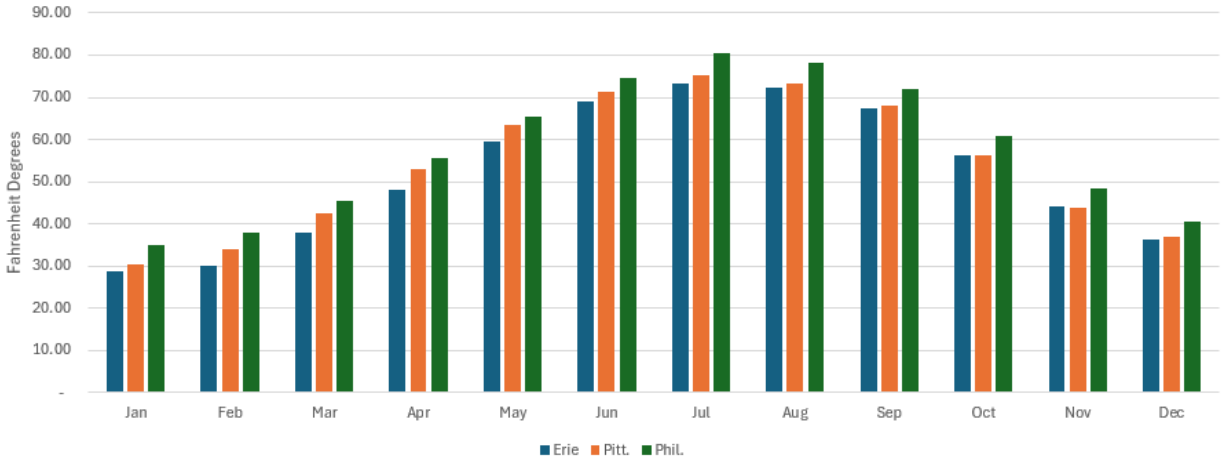
Q. Can you provide an example from the most recent WNA season that illustrates how the mechanism benefits customers?

A. Yes. During the most recent WNA season (October 2025 through March 2026), customers received approximately $2.6 million in net WNA credits. Absent the WNA, customers would not have received those credits. Moreover, if the WNA deadband were increased, customers would receive fewer credits (i.e. smaller bill offsets) because a greater portion of weather-related deviations would fall within the deadband and therefore would not be credited through the mechanism.

Q. Do you have specific concerns about removing certain months from the WNA application?

A. Yes. The Company's customers are concentrated in the northwest corner of Pennsylvania, where weather conditions, and corresponding HDD, tend to be more severe than in other specific areas of the Commonwealth. As a result, the so-called "shoulder" months (particularly October and May) in the Company's service territory can reflect meaningful space-heating requirements. Figure 2 supports this point by showing that the Company's service territory experiences lower average temperatures in October and May than other areas of Pennsylvania, specifically Philadelphia, indicating that heating needs can remain material during those months. Because the WNA is designed to moderate the impact of abnormal weather on both bills and revenue recovery during months when heating load is material, removing October and/or May would reduce customer protections in months when customers in northwest Pennsylvania can still face weather-driven bill volatility. In other words, applying a uniform, statewide view of "shoulder months" without recognizing regional temperature differences and specific service territories would not reflect the Company's operating realities and could unnecessarily narrow the WNA's effectiveness for the customers it is intended to protect.

Figure 2 – 2014-2025 Average Temperature



Q. Are there any issues with Mr. Geller's proposal "use a rolling ten-year historical average that is updated annually to calculate any WNA that is permitted to continue"[58]?

A. Yes. Applying a rolling ten-year average specifically for WNA calculations is not recommended unless the same rolling approach is also used to reset base-rate billing determinants at the same time, which creates unnecessary confusion and administrative burden. If base rates are set using a fixed ten-year normal (e.g., 2015–2024) while WNA calculations later transition to a different rolling ten-year period (e.g., 2016–2025), the WNA would compare actual weather to a baseline inconsistent with the rate-setting baseline. This misalignment could result in over- or under-correction relative to the assumptions embedded in customer rates, which is contrary to the WNA's objective of reconciling actual weather to the same normalized weather conditions used in establishing base rates. Maintaining a consistent HDD baseline for both functions aligns with the

[58] CAUSE-PA Statement No. 1 at 60.

overarching utility ratemaking "matching principle," which requires that the utility align revenue requirements and billing determinants within the same period and under the same assumptions when setting rates. Therefore, rather than using a rolling period or defining a fixed frequency for recalculation, the Company recommends recalculating the normal HDD ten-year average based on the most recently completed ten-year period that ended during the historic test year as used in the base rate case for setting rates. In this case, that would be the ten-year period ending December 31, 2024.

Q. What concluding remarks do you have about the connection between fixed charges and the WNA?

A. In summary, Pennsylvania rate design recovers a substantial portion of fixed distribution costs through volumetric charges. This can produce inefficient economic outcomes and increases the potential for over- or under-recovery relative to the Commission-authorized revenue requirement. Further, proposals to reduce the fixed customer charge increase reliance on volumetric recovery, which increases weather-driven revenue variability and, correspondingly, the need for a WNA to better align revenues with the approved revenue requirement. Even under the Company's proposed customer charge of $19, 58.7%, distribution cost recovery is still in volumetric charges, exposing customers to the risk of high bills during colder-than-normal periods, which the WNA directly mitigates.

Q. Does this conclude your rebuttal testimony at this time?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 19-RJ

Rejoinder Testimony of John D. Taylor

Topics Addressed:
- **Cost of Service Study**
- **Rate Design – Customer Charge**
- **Weather Normalization Adjustment**

Dated: June 1, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is John D. Taylor and my business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, South Carolina 29926.

Q. On whose behalf are you appearing in this proceeding?

A. I am appearing on behalf of National Fuel Gas Distribution Corporation's ("NFGDC") Pennsylvania Division ("National Fuel" or the "Company")[1].

Q. By whom are you employed and in what capacity?

A. I am employed by Atrium Economics, LLC ("Atrium") as a Chief Executive Officer ("CEO").

Q. Did you previously submit testimony in this proceeding on behalf of National Fuel Gas Distribution Corporation ("National Fuel" or the "Company")[2]?

A. Yes. I submitted my direct testimony, National Fuel Statement No. 19, on January 28, 2026, and surrebuttal testimony, National Fuel Gas Statement No. 19-R, on May 12, 2026

[1] Other parties use the term NFGDC to refer to National Fuel Gas Distribution Corporation's Pennsylvania Division. I have not altered instances when other parties' testimonies use this term but have relied on the term 'National Fuel' to reflect National Fuel Gas Distribution Corporation's Pennsylvania Division.

[2] Other parties use the term NFGDC to refer to National Fuel Gas Distribution Corporation's Pennsylvania Division. I have not altered instances when other parties' testimonies use this term but have relied on the term 'National Fuel' to reflect National Fuel Gas Distribution Corporation's Pennsylvania Division.

Q. Please describe the purpose of your rejoinder testimony.

A. My rejoinder testimony responds to certain portions of the following direct testimony submitted by other parties. The areas addressed include the following – with reference to the surrebuttal testimony of the other parties addressed:

II. Allocated Cost of Service Study Methodology

- Office of Consumer Advocate ("OCA") Statement No. 1SR - surrebuttal testimony of Michael Deupree ("OCA witness Deupree" or "Mr. Deupree"); and
- Bureau of Investigation and Enforcement ("I&E") Statement No. 3-SR - surrebuttal testimony of Ethan H. Cline ("I&E witness Cline" or "Mr. Cline").

III. Rate Design – Customer Charge

- OCA witness Deupree;
- I&E witness Cline; and
- The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Statement No. 1-SR – surrebuttal testimony of Harry S. Geller ("CAUSE-PA witness Geller").

IV. Weather Normalization Adjustment

- OCA witness Deupree;
- I&E witness Cline; and
- CAUSE-PA witness Geller.

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. No.

II. ALLOCATED COST OF SERVICE STUDY METHODOLOGY

Q. Have OCA witness Deupree and I&E witness Cline presented any new analysis that undermines the Company's allocation of distribution mains using a customer-demand methodology?

A. No. Their surrebuttal testimony does not provide new engineering or empirical evidence showing that annual throughput drives the design, sizing, or installation of distribution mains[3]. At this point, the dispute is not about whether mains must be sized to meet peak-day requirements; it is whether the record supports recognizing that mains investment also reflects the need to extend and maintain an integrated system to connect customers. Nothing in surrebuttal disproves that customer-related aspect of mains investment. Mr. Deupree continues to rely on a 1952 order from the Federal Power Commission[4], which is no longer relevant, since in 1973 the Federal Energy Regulatory Commission ("FERC") departed from this Seaboard method to the United method and then subsequently moved to a Modified Fixed variable approach in 1983, which allocated all fixed costs based on demand and all variable costs based on commodity.[5] This Commission should not rely on precedents from 1952 that have since been replaced.

[3] OCA Statement No. 1SR at 12-17 and I&E Statement No. 3-SR at 6-9.
[4] OCA St. 1SR, p. 12.
[5] National Fuel St. No 19 at 16 and National Fuel St. No 19-R at 15-16

Q. Does Mr. Deupree's continued criticism of the zero-intercept study[6] provide a better basis for classifying distribution mains costs?

A. No. Even if one sets aside his criticisms of the zero-intercept study, Mr. Deupree still does not offer a methodology that better distinguishes the portion of mains investment associated with connecting customers to the system from the portion associated with meeting peak-day capacity requirements. His proposed Peak and Average ("P&A") treatment instead assigns mains costs in part on annual throughput, which is a usage measure, not a direct measure of what causes the Company to extend or size distribution mains. For that reason, his surrebuttal does not rebut the Company's conclusion that a customer-demand classification better aligns mains costs with how they are incurred.

Q. Does Mr. Deupree's discussion of historical customer growth and annual mains investment[7] invalidate the recognition of a customer-related component of distribution mains?

A. No. Mr. Deupree's analysis examines whether changes in customer counts are correlated with changes in annual mains investment. However, the Company's customer-demand methodology does not assume that annual investment should move in lockstep with annual customer growth. Rather, it recognizes that the overall extent of the distribution network is fundamentally driven by the need to connect and serve customers. The relevant question is not whether year-to-year changes in customers explain year-to-year changes in investment, but whether a portion of the embedded distribution system exists

[6] OCA Statement No. 1SR at 12-13.
[7] OCA Statement No. 1SR at 14.

because customers must be connected to the network regardless of their usage. Deupree is effectively testing a marginal relationship (incremental customers versus incremental plant), while the zero-intercept/customer-demand approach is attempting to identify the embedded customer-related portion of the existing plant. The absence of a strong correlation between annual customer growth and annual distribution mains investment does not demonstrate that distribution mains lack a customer-related component. Rather, it reflects the fact that the existing distribution system was developed over time to connect and serve customers, while annual investment levels are influenced by a variety of additional factors.

Q. How do you respond to Mr. Cline's continued reliance on Commission precedent supporting the P&A methodology?

A. Mr. Cline primarily reiterates prior Commission decisions adopting the P&A methodology[8]. While precedent is an important consideration, the issue in this proceeding is whether the Company's proposed methodology reasonably reflects cost causation based on the facts and record before the Commission. His surrebuttal does not address that issue. Nor does he identify new evidence showing that annual throughput causes distribution mains investment. Accordingly, his reliance on prior Commission outcomes does not undermine the Company's record-based support for recognizing both customer-related and demand-related drivers of mains investment.

[8] I&E Statement No. 3-SR at 7.

III. RATE DESIGN – CUSTOMER CHARGE

Q. Please respond to OCA witness Deupree's testimony regarding the appropriate level of recovery of customer-related costs through the residential customer charge.

A. Mr. Deupree's analysis understates the appropriate level of customer-related cost recovery through the residential customer charge because it excludes legitimate customer-related overhead and administrative costs necessary to provide service.[9] Those are real, ongoing costs the Company incurs to connect, bill, serve, and support customers, and they are properly included in the Company's cost of service study under standard ratemaking principles. Although Mr. Deupree contends that the Company's proposal is internally inconsistent because it classifies a portion of main costs as customer-related while not proposing to recover those costs through the residential customer charge[10], that is not a contradiction. Instead, it reflects a conservative concession in the design of the proposed charge.

The Company is already foregoing recovery in the residential customer charge of costs that it identifies as customer-related, specifically the customer-related portion of mains. That treatment narrows, rather than expands, the level of customer-related cost recovery reflected in the proposed charge. If the Company had instead sought to include those costs in the proposed residential customer charge, intervenors presumably would object that the charge was set even higher. Mr. Deupree acknowledges that the current residential customer charge recovers only about 62 percent of the customer-related costs identified in his own analysis, which he calculates at $22.70 per customer per month[11].

[9] OCA Statement No. 1SR at 18.
[10] *Id.*
[11] *Id.* at 18-19.

That amount is materially higher than the current customer charge of $14.00, which he proposes to maintain. In my view, recovery at only 62 percent of customer-related costs does not reasonably reflect cost-causation principles, and Mr. Deupree's proposal is not supported by the *Lloyd* decision[12] because it would continue to recover customer-related costs well below the cost to serve without justification. Accordingly, I continue to support the Company's proposed $27.00 monthly residential customer charge as a more appropriate reflection of customer-related costs, regardless of any scale-back or the ultimate revenue requirement.

Q. Please respond to I&E witness Cline's assertion that the Company failed to provide a customer cost analysis based on the P&A Allocated Cost of Service ("ACOSS") and that the Company's proposed customer costs therefore are unsupported and should be limited to approximately their respective class increases.[13]

A. Mr. Cline's assertion is incorrect. The Company submitted the P&A ACOSS, including the customer cost analysis, as Exhibit JDT-19-R-A. Accordingly, Mr. Cline's claim that the Company's proposed customer costs are unsupported, and his recommendation to limit customer charges to approximately the respective class increases overlooks evidence already in the record.

[13] I&E Statement No. 3-SR at 14.

Q. How do you respond to CAUSE-PA witness Geller's continued opposition to the Company's proposed residential customer charge increase[14]?

A. Mr. Geller's surrebuttal continues to reflect a policy preference for recovering a larger portion of fixed distribution costs through volumetric rates[15]. As discussed in my rebuttal testimony, the Company's proposed customer charge is supported by cost causation principles and the Company's ACOSS[16]. Mr. Geller does not present new evidence undermining that analysis.

IV. WEATHER NORMALIZATION ADJUSTMENT

Q. Did you review the 2009 report cited by OCA witness Deupree[17], and does it support his characterization of the Company's proposed WNA?

A. Yes. I reviewed the report titled *Rate Impacts and Key Design Elements of Gas and Electric Utility Decoupling: A Comprehensive Review* by Pamela G. Lesh, which OCA witness Deupree cites. The report does not support witness Deupree's conclusion that the Company's proposed WNA is one-sided or operates primarily in the utility's benefit. To the contrary, the report states that decoupling adjustments "are both refunds to customers as well as charges and tend to be small."[18] This is clearly stated in the report's abstract – right up top in italicized letters. It further states that no consistent pattern of either rate increases or decreases emerges, and that the adjustments were "most often under 2

[16] NFGDC Statement No. 19-R at 21-22.
[17] OCA Statement No. 1SR at 5-6.
[18] Pamela G. Lesh, "Rate Impacts and Key Design Elements of Gas and Electric Utility Decoupling: A Comprehensive Review," The Electricity Journal, Vol. 22, Issue 8 (Oct. 2009), at 66.

percent," with "the majority under 1 percent."[19] Those conclusions are inconsistent with OCA's suggestion that such mechanisms operate asymmetrically or primarily to customers' detriment.

Q. Why is that report of limited applicability to the Company's proposed WNA?

A. The report has limited applicability for at least two reasons. First, it was published approximately 17 years ago and evaluated mechanisms that differ materially from the WNA structures currently used in Pennsylvania. Second, the report expressly notes that most of the mechanisms it reviewed did not adjust revenues for the effects of weather.[20] That limitation is significant because the Company's proposed WNA is specifically designed to normalize only for weather-related variation around the same weather assumptions used to establish base rates. Accordingly, the study does not provide a meaningful basis to assess the operation of a modern Pennsylvania WNA.

Q. How does the Company's proposed WNA differ from the broader decoupling mechanisms evaluated in the report?

A. The distinction is important. Many of the revenue decoupling mechanisms discussed in the report were designed to address broader revenue variation associated with changes in customer usage, including conservation, energy efficiency, economic conditions, and other non-weather factors.[21] The Company's proposed WNA does not do that. It is not a general revenue decoupling mechanism. Rather, it is narrowly designed to normalize only for

[19] *Id.*
[20] *Id.* at 67.
[21] *Id.*

weather-related deviations from the weather assumptions embedded in rates. For that reason, the historical operation of broader decoupling mechanisms does not establish that the Company's proposed WNA is one-sided or primarily beneficial to the utility. Like the mechanisms described in the report, the proposed WNA operates symmetrically and can produce either customer credits or surcharges depending on actual weather conditions.

Q. Please respond to OCA witness Deupree's continued claim that the WNA has functioned as an "asymmetric" mechanism because it has produced more surcharges than credits.[22]

A. Mr. Deupree's claim continues to confuse the design of the WNA with the weather outcomes observed during the review period. The WNA is symmetrical by design because it can produce either surcharges or credits depending on whether the actual weather is warmer or colder than the normal weather embedded in rates. The fact that the historical period experienced more warmer-than-normal conditions than colder-than-normal conditions does not make the mechanism asymmetric; it reflects the weather that occurred, not a one-sided feature of the mechanism. The Company does not control those weather outcomes.

What the Company can do, and has done, is improve the assumptions used in the mechanism so that the normal weather benchmark better reflects recent conditions. Specifically, the Company updated the weather normalization from a 15-year average to a more current 10-year average.[23] The expected result of using a more current normalization

[22] OCA Statement No. 1SR at 4-5.
[23] NFGDC Statement No. 19 at 25.

period is that the benchmark should better reflect recent weather conditions and, over time, support a more balanced pattern of customer surcharges and credits, depending on actual weather outcomes.

Q. OCA witness Deupree states that the Company's proposed WNA allows the Company to recover revenue declines from reduced use per customer between rate cases.[24] Do you agree?

A. No. That statement incorrectly characterizes the operation of the Company's proposed WNA. Mr. Deupree cites testimony regarding the selection of a 10-year weather normalization period, but that testimony does not support his claim that the WNA addresses regulatory lag. The cited testimony simply explains how normal weather is established for ratemaking purposes. The WNA does not allow the Company to recover declines in use per customer between rate cases. It adjusts only for deviations between actual weather and the normal weather assumptions used to establish base rates. If customer usage declines due to conservation, energy efficiency, fuel switching, appliance efficiency improvements, economic conditions, changes in occupancy, or other non-weather factors, the WNA provides no recovery mechanism for those lost revenues. Those impacts remain entirely outside the scope of the WNA. Accordingly, the proposed WNA does not insulate the Company from declining use per customer trends or changing customer usage patterns between rate cases.

[24] OCA Statement No. 1SR at 6.

Q. How would a utility recover declines in use per customer between rate cases, and how does that differ from the Company's proposed WNA?

A. Recovery of declining use per customer between rate cases would generally require either new base rates that reflect updated billing determinants or a revenue decoupling mechanism that adjusts revenues based on actual usage levels relative to authorized levels. The Company's proposed WNA does neither. It is a weather normalization mechanism, not a revenue decoupling mechanism. OCA witness Deupree therefore incorrectly equates weather normalization with revenue decoupling.

Q. Please respond to OCA witness Deupree's recommendation to increase the WNA deadband from 3% to 5% and to exclude May and October from the WNA period.[25]

A. I continue to disagree with these proposals. They rely heavily on the Commission's decision in the Columbia Gas proceeding[26] and focus primarily on limiting potential customer surcharges, while not fully accounting for the corresponding effect on customer credits and the overall effectiveness of the WNA.

While I do not dispute that a 5% deadband may have been found reasonable for Columbia Gas based on the record and WNA design presented in that proceeding, that does not mean a 5% deadband is the most appropriate outcome for National Fuel in this case. The relevant question here is not whether 5% can be reasonable in some circumstances, but whether increasing National Fuel's deadband from 3% to 5% is appropriate when evaluated together with the Company's full WNA proposal and the

[25] OCA Statement No. 1SR at 6-8.
[26] OCA Statement No. 1SR at 11.

evidentiary record in this proceeding. In other words, the deadband should not be evaluated in isolation. In this case, the Company has already proposed to update the weather normalization from a 15-year normal to a more current 10-year normal[27], which better reflects recent weather conditions and is expected to reduce the likelihood and magnitude of WNA surcharges or credits over time. Stated differently, the Company's proposal already narrows the circumstances in which the WNA will produce adjustments by improving the definition of normal weather.

Moreover, adding a larger 5% deadband on top of that change would unnecessarily weaken the WNA, leaving a wider range of meaningful weather-related usage variation outside the mechanism. That would reduce both surcharges in warmer-than-normal periods and credits in colder-than-normal periods. The most recent example is the colder-than-normal 2025–2026 winter season, during which a 5% deadband would have reduced the credits customers actually received.

I also disagree with Mr. Deupree's proposal to exclude May and October from the WNA period. Although those months account for a smaller share of annual heating degree days than the core winter months, they still involve heating requirements and weather-sensitive usage. The relevant question is not whether May and October are among the coldest months of the year, but whether deviations from normal weather during those months can affect residential heating usage. They can and they do.

[27] NFGDC Statement No. 19 at 25.

Q. Does I&E witness Cline propose similar limitations to the WNA[28]?

A. Yes. Mr. Cline recommends that May be excluded from the calculation of the WNA and that the deadband be increased to 5%. In addition to the points I made in response to Mr. Deupree, a deadband is not simply a meteorological judgment about what range of weather may be considered normal. It is also a ratemaking design choice that determines how much weather-related revenue and bill volatility remains outside the mechanism and therefore continues to be borne by customers and the Company. As the most recent heating season demonstrates, a larger deadband does not necessarily benefit customers.

Q. How do you respond to CAUSE-PA witness Geller's continued request to end the WNA?[29]

A. Mr. Geller's principal basis for recommending that the WNA be ended is his continued claim that the mechanism operates asymmetrically.[30] I have already addressed that claim earlier in this rejoinder testimony in response to OCA witness Deupree and I&E witness Cline. For the reasons explained there, I do not agree that the operation of the WNA during the review period provides a basis to terminate the WNA.

[28] I&E Statement No. 3-SR at 3.
[29] CAUSE-PA St. 1-SR at 21.
[30] *Id.*

Q. How do you respond to CAUSE-PA witness Geller's continued request to modify the WNA mechanism deadband and months of application?[31]

A. I address those same arguments in my responses to OCA witness Deupree and I&E witness Cline above. As discussed there, those proposed changes are not informative and do not provide a persuasive basis to modify the WNA.

Q. Please respond to OCA witness Deupree's recommendation that, if the Commission continues the WNA, the Company should expand weather normalization to include additional weather stations in DuBois, Pittsburgh, and Bradford, Pennsylvania.[32]

A. That recommendation is addressed by Company witness Cathryn E. Hilliard. However, it is helpful to note that witness Deupree's own Figure 1, which provides the heating degree days for all four weather stations, indicates there are still meaningful HDDs in October and May, and that the lowest level of HDDs, across all months, including October and May, exists in Pittsburgh, which is not within the Company's service territory.

Q. Does this conclude your rejoinder testimony at this time?

A. Yes.

NATIONAL FUEL STATEMENT NO. 20

DANIEL J. CZECHOWICZ

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059428

National Fuel Gas Distribution Corporation
Pennsylvania Division

Statement No. 20

Direct Testimony of
Daniel J. Czechowicz

Topics Addressed: Transportation Programs

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Daniel J. Czechowicz. My business address is 6363 Main Street, Williamsville, New York 14221.

Q. By whom and in what capacity are you employed?

A. I am employed by National Fuel Gas Distribution Corporation ("NFGDC") as a Director in the Gas Supply Administration ("GSA") department. My primary responsibilities include ensuring tariff compliance and managing all aspects of the NFGDC's transportation programs, for both the Pennsylvania Division ("National Fuel" or the "Company") and New York Division ("National Fuel – NY").

Q. Please provide your educational background.

A. I received an Associates of Science degree in Business Administration from Daemen College in 1997 and a Master of Business Administration degree from the University at Buffalo in 2013.

Q. Please provide your professional experience.

A. In 1998 I was hired by National Fuel Resources, Inc. (a former marketing subsidiary of National Fuel Gas Company), as a Transportation & Exchange Analyst. In 2005, I was promoted to Senior Energy Analyst, became an Assistant Manager of Energy Operations in 2008, and in 2016 I was promoted to Manager of Energy Operations. In 2018, I

transferred to NFGDC as a Manager in the GSA department. In 2022, I was promoted to Director in the GSA department.

Q. Have you previously testified in other proceedings before the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") or any other state or federal agency?

A. I testified before the New York Public Service Commission on behalf of National Fuel – NY in Case 23-G-0627.

II. PURPOSE OF TESTIMONY

Q. What is the purpose of your testimony?

A. My testimony will provide a description of three proposed changes to the Company's transportation programs. The first proposal is related to the Company's Daily Metered Transportation ("DMT") program. The Company proposes changing the DMT program from a stand-alone customer program to an aggregated program, which would eliminate the customer banking aspect of the current program. The second proposal is related to a telemetering program for customers in DMT service. The Company is proposing to convert existing customers using Plain Old Telephone Service ("POTS") to cellular service and assuming responsibility from its customers for providing meter related communication services. The final proposal is associated with changing the publication that is used for calculating the Monthly Market Index that is used in the transportation program for cashout pricing.

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. Yes. I am sponsoring National Fuel Exhibit DJC-1, Pro-Forma Tariff pages of DMT proposal.

III. DMT PROPOSAL

Q. Please explain your first proposal including the services provided in the Company's current transportation program.

A. Customers that choose to purchase their gas from third-party suppliers must enroll in the Company's transportation program. Subject to program eligibility criteria, customers may apply for Monthly Metered Natural Gas Service ("MMNGS"), Small Aggregation Transportation Supplier Service ("SATS") or DMT service.

Q. How many customers are currently enrolled in DMT service?

A. The Company has approximately 78 accounts enrolled across 12 market pools in DMT service.

Q. How are customers currently enrolled in DMT Service?

A. Suppliers enroll DMT customers in DMT market pools through the Transportation Scheduling System ("TSS").

Q. Can multiple customers be enrolled in a DMT market pool?

A. Yes, the Company currently operates DMT market pools that contain more than one DMT customer, however, daily delivery volumes are scheduled to each individual

customer using a "Gas Out" nomination to transport gas from the central delivery point to the customer's burner tip. Customer usage volumes are not aggregated in the market pool.

Q. Explain the current customer eligibility requirements for DMT service.

A. DMT service is available to all customers that elect transportation service and meet the qualifications specified in the Rate Schedule for DMT Service in the Company's tariff. Among those qualifications, customers are required to sign a DMT service agreement and have telemetering equipment in place which allows the Company to remotely collect daily meter readings.

Q. Why is it important for the Company to collect daily meter readings from DMT customers?

A. Collecting daily meter readings allows the Company to determine any daily imbalances resulting from differences between a customer's allocated daily deliveries and their actual daily usage.

Q. Explain how allocated deliveries might differ from actual usage and result in imbalances.

A. DMT customers communicate their gas requirements with their suppliers so that daily delivery volumes match the customer's expected daily consumption. On a given day, if a DMT customer's gas delivery exceeds their usage, the difference results in an "overdelivery". The Company will store the customer's overdelivery volume as "banked

gas" for later use by the customer. A customer's banked gas volume may include an accumulation of numerous overdeliveries. The DMT customer may use such banked gas as the first gas through the meter on the following day(s). Any accumulated banked gas remaining at the end of a month will be delivered first through the meter on the first day of the subsequent month. The customer is subject to overdelivery charges as specified in the Company's tariff. A customer "underdelivery" occurs when a customer's daily usage exceeds their banked gas volume and their daily delivery volume for that given day.

Q. Expand on underdeliveries and the 2% tolerance established in the Company's tariff.

A. In certain instances, the Company may sell gas to the customer to resolve the customer's underdelivery for the given day. When the customer underdelivery exceeds the 2% tolerance (2% of the customer's usage), the Company sells a quantity of gas to the customer that equals the amount of gas used by the customer above the two percent tolerance volume. Daily underdelivery volumes greater than 2% will be a sale of gas by the Company for that day and may not be recharacterized as transportation service under any circumstances. For underdeliveries within the two percent tolerance, the Company deducts the underdelivery quantity from the customer's banked balance gas volume, which may be offset by additional deliveries on subsequent days within the same month.

Q. What happens to the overdelivery and underdelivery volumes after the month has ended?

A. Any cumulative underdelivery volume remaining on the last day of the month will be cashed out as a tariff sale and will not be carried into the next month. Customers that have overdelivery volumes at the end of the month can carry the volumes to the following month.

Q. How does the customer banking process impact daily deliveries to the Company's system?

A. The customer banking process allows DMT customers to store overdelivery volumes for future use. Customers with accumulated banked volumes can currently use their banked volumes to meet their daily usage quantity and not deliver gas to the system on that day. This causes reduced deliveries from suppliers to the Company's system for DMT customers. Since actual deliveries often differ from actual customer usage on any given day, the Company must actively manage these daily imbalances to maintain reliability of the entire system.

Q. How does the Company currently manage the challenge of its system balancing obligation?

A. Related to marketer deliveries, the Company may issue an Operational Flow Order ("OFO") that limits customer imbalances. For example, during a Cold Weather OFO period, DMT customers shall not be permitted to use banked gas to cover daily underdeliveries in excess of the 2% tolerance. By limiting the access to DMT customer banked volumes, suppliers are required to make daily deliveries that more closely match the DMT customer's actual usage. The customer's metered usage in excess of 102% of

confirmed deliveries during an OFO period are deemed a sale of gas by the Company to the customer.

Q. Who is responsible for overdelivery and underdelivery imbalances and associated charges?

A. The Natural Gas Supplier ("NGS") or the operator of the DMT market pool must ensure the daily amount of gas delivered to the Company's system ("Gas In") closely matches the volume used by the DMT customer ("Gas Out"). However, each DMT customer is responsible for their own overdelivery and underdelivery imbalances, including associated volumes and costs, which are invoiced by the Company.

Q. What change is the Company proposing to the DMT program?

A. The Company is proposing an aggregation program to replace the existing standalone customer program. These changes will eliminate the customer banking aspect of the program and transition customers to an aggregated program. Customers will be required to arrange deliveries of gas to the Company's system by selecting a DMT "aggregator" or the customer can act as their own aggregator on the system.

Q. Do existing DMT customers purchase gas from suppliers that are aggregators on the Company's system?

A. Yes, all current DMT customers purchase their gas from NGSs that are familiar with the Company's existing MMNGS and SATS aggregation programs.

Q. Why is the Company proposing a change to DMT Service?

A. The Company is looking to enhance operational integrity of the system by requiring customers to match daily deliveries to the system to actual daily usage. Under the existing program, each customer account stands alone and daily imbalances swing off the customers banked volumes, impacting daily deliveries to the system.

Q. How would DMT customer imbalances be managed under an aggregated program?

A. Customers would be aggregated into daily market pools maintained by an aggregator or NGS. The aggregator or NGS will benefit from an aggregated pool program where multiple customers are grouped within a market pool. This will allow the aggregator or NGS to manage individual customer imbalances by offsetting aggregated imbalances within each market pool on a daily basis. By aggregating customers into market pools, aggregators would make daily deliveries based on the expected daily usage for all the customers enrolled in the pool. Aggregators would not nominate to individual customers using a Gas Out nomination and customer bank volumes will no longer be available for customer imbalances.

Q. Explain how aggregating DMT customers in market pools helps to maintain the integrity of the system.

A. Eliminating the individual customer banks ensures daily deliveries are made to match the customers' expected daily usage. Implementing an aggregated service program would make daily deliveries to the system to match the aggregated customer daily usage

enrolled in a pool that may contain numerous customers. The aggregator would be cashed out each day for any daily surplus or deficiency imbalance volumes.

Q. What would be the requirements to become a DMT aggregator?

A. An aggregator would enter into a DMT imbalance netting agreement with the Company to establish a market pool. The aggregator would agree to act as the imbalance holder, taking on primary responsibility previously held by the customer for managing balancing activities and imbalance charges for customers enrolled in the market pool.

Q. How would customers be enrolled in a DMT market pool?

A. Customers will still require telemetering and the DMT contract. Under the current program, marketers enroll customers into a market pool using TSS. In the proposed program, DMT customers would be enrolled by their aggregator into a market pool via an Electronic Data Interchange ("EDI") transaction through an EDI provider.

Q. Will the Company provide DMT aggregators telemetered usage for the customers enrolled in the market pool?

A. Yes, the Company uses telemetering interface software to collect and store hourly meter readings to calculate hourly consumption volume for each meter assigned to the customer. Customer meter readings would be collected three times per day - at 10:00 am, 1:00 pm, and 4:00 pm. The hourly readings and calculated consumptions would be made available to aggregators promptly via TSS.

Q. What would be the daily delivery requirements for aggregated DMT customers?

A. Each day the Company will determine whether the total daily usage and delivery quantity variances of each aggregation pool are within the specified tolerance range, rather than evaluating individual DMT customer's variance. During normal operations the aggregation pool daily deliveries should match daily usages within a tolerance range of plus or minus 10%. During an OFO period, the tolerance range could be reduced to as little as plus or minus 2%.

Q. How will daily surplus and deficiency imbalances volumes be determined?

A. Each day, the Company will cash out pool imbalances by calculating the daily imbalance percentage of each aggregator's market pool. The market pool imbalance percentage will be computed by summing the volume of gas delivered for all customers in the pool, adjusted for line losses, divided by the sum of the burner tip usages for all customers in the pool. A systemwide imbalance percentage will be similarly calculated for all DMT customers in all aggregators' market pools. The Company compares the systemwide DMT imbalance to each market pool and evaluates the applicability of a "No-Harm, No-Foul" rule.

Q. Please explain the "No-Harm, No-Foul" rule.

A. Based on the market pool circumstances, the Company would apply a "No-Harm, No-Foul" rule to resolve DMT pool daily imbalance. For example, if the systemwide DMT imbalance percentage is less than or equal to the applicable daily tolerance percentage, then the individual market pools are not subject to daily cash out. If the system's DMT

imbalance percentage is greater than the applicable daily tolerance percentage, then individual market pools are subject to daily cash out at the daily cash out index rate if their imbalance percentage exceeds the applicable daily tolerance. Individual market pool imbalances in excess of the applicable daily tolerance percentage, except during an OFO, are only subject to cash out if the overall system is out of tolerance for that day in the same direction. DMT market pools are not subject to cash out if they are opposite to the direction of overall system imbalance. During an OFO, any pool out of tolerance in the direction of the OFO is cashed out even if the system is within tolerance.

Q. Define daily surplus and daily deficiency imbalances and what happens when they exceed the tolerance limits.

A. A daily surplus imbalance is created when the volume of gas delivered to the Company for the customer's account during the day is greater than the total amount of gas consumed by the customer each day. If the aggregator's daily surplus imbalance exceeds 10% and the aggregator pools as a whole are above the initial surplus tolerance band the surplus volume above the daily tolerance band would be cashed-out to return the aggregator's market pool to the daily tolerance level.

A daily deficiency imbalance is created when the volume of gas delivered to the Company for the customer's account during the day is less than the total amount of gas consumed by the customer each day. If the aggregator's daily deficiency imbalance exceeds 10% and the aggregator pools as a whole are below the initial deficiency tolerance band, the deficiency volume below the daily tolerance band would be cashed-out to return the aggregator's market pool to the daily tolerance level.

Q. Explain how a DMT aggregator's surplus imbalance volume would be cashed out.

A. All daily surplus imbalance volumes are purchased by the Company. The price paid by the Company to aggregator is based on the published daily index price and daily imbalance's tolerance level. Surplus volumes above 10% and less than or equal to 15% would be cashed out at 90% of the index price. Surplus volumes above 15% and less than or equal to 20% would be cashed out at 85% of the index price. Surplus volumes in excess of 20% would be cashed out at 60% of the index price.

Q. Explain how a DMT aggregator's deficiency imbalance volume would be cashed out.

A. To resolve daily deficiency volumes, the Company sells the equivalent deficiency volumes to DMT Aggregators. The price charged by the Company is based on the published daily index price and daily imbalance's tolerance level. Daily deficiency imbalance volumes above the 10% daily tolerance level would be cashed out using a tiered calculation and daily cash out index price. Deficiency volumes above 10% and less than or equal to 15% would be cashed out at 110% of the index price. Deficiency volumes above 15% and less than or equal to 20% would be cashed out at 115% of the index price. Deficiency volumes in excess of 20% would be cashed out at 140% of the index price.

Daily imbalance surplus and deficiency volumes that fall within the daily tolerance range are not subject to the daily cash out. Such de-minimis imbalance volumes are accumulated into a net monthly imbalance volume for the Aggregator. If the net imbalance volume results in a deficiency, a month end deficiency imbalance is

created. If the net imbalance volume results in a surplus, a month end surplus imbalance is created and added to the imbalance holder's total aggregated monthly imbalance quantity. Imbalance holders may exchange a month end imbalance during the imbalance trading period or the imbalance will be cashed out pursuant to Rule 30 in the Company's tariff.

Q. How will the daily and monthly cashout rates be calculated?

A. The daily and monthly cashout rates will be determined using the Market Price of Natural Gas referenced in the Company's tariff under Rules and Regulations, page 35E.

Q. As customers transition from the current DMT program to an aggregated program, what will happen to the customer's remaining bank volume?

A. Existing DMT customers and marketers would be notified in advance of the changes to an aggregated DMT service. The Company would recommend customers reduce their bank volumes during the last month of existing DMT service. After the monthly volumes have been finalized, the Company would purchase the remaining bank volumes from the customer as per the guidelines in the Company's tariff (Page No. 117).

Q. What are the anticipated customer benefits of transitioning to the proposed aggregated service?

A. The Company believes the proposed aggregation program model will ease the DMT customers' individual challenge of minimizing their delivery and usage imbalances. Also, the customers will no longer be directly charged by the Company for overdelivery

and underdelivery volumes. The aggregator will be responsible for balancing the daily delivery volumes and aggregated usage for the customers enrolled in their DMT market pool. The aggregator will be cashed out for any daily and monthly imbalance volumes.

Q. Will the Company need to make modifications to existing business applications to facilitate the changes to an aggregated DMT service?

A. Yes, in order to implement the proposed changes to the DMT service program, changes will need to be made to the Company's billing system (SAP) and TSS. The Company anticipates it will take approximately 12 months to make system modifications and implement the changes to the DMT program after the proposal is approved.

Q. Has the Company included this DMT proposal in its proposed tariff presented in National Fuel Exhibit F?

A. No. Due to the lead time required for implementation, this proposal is not being added to the proposed tariff as part of this filing. Instead, I am sponsoring pro-forma tariff pages in National Fuel Exhibit DJC-1. If the DMT program changes are approved, the Company proposes that these pro-forma tariff pages be submitted as a tariff compliance filing once the system modifications have been implemented.

Q. Are there any other issues related to the Company's DMT aggregation pool proposal?

A. No.

IV. TELEMETERING PROPOSAL

Q. Please explain the Company's second proposal related to the telemetering program.

A. The Company is proposing a change to the telemetering program for all telemetered customers under DMT service by converting existing plain old telephone service ("POTS") sites to cellular service and assuming from its customers the responsibility for providing meter-related communication services.

Q. Is telemetering at a customer's location critical to customer billing accuracy?

A. Yes. Reliable and accurate customer consumption data through daily and on-demand meter reading is important to customers, their NGSs, and the Company. Real-time access to meter reading allows parties to review and evaluate hourly and daily consumption, project anticipated consumption, and plan for gas supply deliveries. This is especially important to large industrial customers whose consumption is driven by their process instead of space heating demands. Large industrial customers' production processes are less predictable and tend to fluctuate based on numerous customer-specific factors.

Q. Are DMT customers required to have telemetering capability at their locations?

A. Yes, DMT customers must have telemetering equipment installed to allow the Company to monitor the customer's daily usage. DMT customers are responsible to pay for the installation of telemetering equipment and maintain continuous POTS or cellular telephone service communication access to the telemetering equipment to facilitate timely remote meter reads.

Q. How many such meters exist?

A. Currently, there are approximately 137 active telemetered sites located at 78 DMT customer locations of which only 22 sites utilize cellular telemetering. The remaining 115 sites utilize POTS lines.

Q. Do the customer and the Company reliably receive meter readings through the telemetering equipment?

A. Generally, when the telemetering and communication equipment is operating properly, the customer and Company are able to receive meter readings at their discretion. However, equipment and communication equipment failures can occur that prevent customers and the Company from remotely obtaining daily or discretionary meter readings.

Q. Describe how the Company resolves a telemetering equipment failure.

A. Generally, a meter reading retrieval failure during daily telemetering poling will prompt an investigation by the Company to confirm a possible equipment problem. Depending on the circumstance, the customer or Company field personnel will be alerted of the failure and possible causes. Failures associated with Company equipment such as low battery power or modem failure can be resolved quickly by the Company whereas failures associated with the customer's equipment often result in coordination and repair delays.

Q. What are the typical customer communication equipment problems?

A. The problem is often related to a failure in the customer's communication equipment (POTS line or cellular device) which interrupts the Company's ability to retrieve meter readings.

Q. What is the expectation of the customer when their communication equipment fails?

A. The customer must resolve their communication equipment failure. In the interim, the customer is expected to visit its meter site, obtain a daily meter reading, and submit the reading to the Company each day.

Q. During these circumstances, are customers diligent with providing daily meter readings?

A. Not necessarily. Despite the Company's efforts to encourage customers to resolve the problem with their telecommunication provider, the customer often does not immediately address the telecommunication outage nor provide the Company with daily meter readings.

Q. What are the possible consequences of repair delays?

A. Telemetering POTS or cellular telephone service requires customer involvement and coordination with their third-party service provider that often results in repair delays, inaccurate meter readings, customer consumption discrepancies and billing adjustments. Lengthy delays can result in customer billing adjustment disputes.

Q. What is the Company's proposal to improve meter reading equipment reliability to reduce repair delays, customer consumption discrepancies and possible customer billing disputes?

A. The Company proposes to assume from its customers the responsibility for providing meter-related communication services to the existing 137 sites and future telemetered sites. The Company would convert existing POTS telemetered sites to cellular telemetered sites over the next five years. The Company is proposing to manage the communication system connected to the customer's telemetering device and believes cellular communication is superior to traditional POTS technology.

Q. Would customers still be responsible for the provision of connectivity to their meter data collection equipment?

A. No. The customer will not be required to provide a dedicated phone line or cellular service to the customer's meter location for the purpose of providing meter data to the Company on a real-time basis. The Company will develop a plan that will allow all DMT customers currently with cellular telemetering to terminate their cellular service and have that service replaced by Company subscribed cellular service. The Company will pay the monthly cellular service charge rather than the customer paying for their own cellular service. For those customers that provide a dedicated POTS line, the Company will coordinate with the customer for the abandonment of the POTS telemetering and replace it with cellular telemetering equipment and service at no cost to the customers. New customers requesting telemetering equipment will pay the Company for installing new telemetering equipment, as required in the Gas Transportation Operating Procedures

Manual, but will not be required to arrange or provide cellular communication services for the telemetering equipment.

Q. What is the projected annual cost to the Company for providing all current customers with cellular telemetering communication service?

A. The Company estimates the annual cost for the current 137 sites to equal $45,000 plus annual cellular service inflation.

Q. What is the capital cost to convert upgrading existing POTS telemetering equipment to cellular telemetered equipment?

A. The Company estimates the cost to upgrade the current 115 POTS sites to cellular telemetered equipment at approximately $525,000 over the next five years.

Q. Given the costs of this proposal, what are the anticipated benefits to the customer and the Company?

A. The Company's proposal to assume responsibilities and costs associated with customer telemetering will allow the Company to efficiently troubleshoot and resolve telemetering problems to minimize interruptions to remote anytime meter reading access by the customer and the Company. The Company believes this proposal will offer greater customer satisfaction by providing more reliable consumption information that will improve daily and monthly consumption accuracy and reduce billing disputes.

V. CASH-OUT PRICING PUBLICATION PROPOSAL

Q. Please describe the Company's third proposal, related to the cashout pricing publication used for the DMT, MMNGS, and SATS transportation programs.

A. The Company is proposing to change publication used to determine the Monthly Market Index, which is used in calculating the Market Price of Natural Gas for cashout calculations. Currently the Company's tariff references the SNL Natural Gas Index publication (Page No. 35E). The Company proposes to change to the Platts Gas Daily publication. The Market Index Point will remain Tennessee, Zone 4-200 Leg.

Q. What is the Benefit of changing to the Platts Gas Daily publication?

A. The Platts Gas Daily publication is widely recognized as the industry standard for referencing and tracking index prices at various market index locations.

Q. Are there any significant differences between the daily and monthly index prices published by SNL Natural Gas Index and Platts Gas Daily?

A. Both publications report comparable index pricing.

Q. Does this conclude your testimony at this time?

A. Yes it does.

SPECIAL PROVISIONS

1. A customer that has Bypass Facilities and that desires service under this rate schedule must enter into an Agreement for Service under Rate Schedule BP that specifies a volume of gas equal to, or greater than, the volume of gas specified in the Service Agreement under this rate schedule.

2. As used in this Rate schedule, the term "Bypass Facilities" does not include facilities that enable a customer to obtain "Self-Help" gas.

   "Self-Help" gas refers to gas produced by the customer from gas reserves and wells owned by the customer on a tract of land owned by the customer that is contiguous to the tract of land in which the customer's manufacturing plant facilities are located.

3. SB customers shall be subject to a surcharge equal to 25 percent of the retail rates of the applicable sales rate schedule to volumes purchased by transportation customers (in excess of volumes contracted for under Rate Schedule SB) during the billing month ending in December, January, February or March and a surcharge equal to 10 percent of the retail rates of the applicable sales rate schedule to volumes purchased by transportation customers (in excess of volumes contracted for under Rate Schedule SB) during the remaining billing months when overruns by transportation customers are authorized by Company. The rates for sales of gas shall include the Distribution Charges, Gas Adjustment Charge, and the Natural Gas Supply Charge under the sales rate schedule that applies to the customer and the applicable surcharge percentage set forth above. In months when the sum of the Natural Gas Supply Charge and the Gas Adjustment Charge is less than the MMI, the applicable sales rate shall be equal to the sum of the Distribution Charges, the MMI plus all transportation costs to the Company's City Gate, and the applicable surcharge percentage applied to this rate.

4. SB Transportation MMT customers shall be subject to a penalty of Charges for Daily City Gate Underdeliveries applicable to MMNGS Suppliers plus the higher of $25 per Dth or the DMI for that day plus all transportation costs to the Company's City Gate when Company has announced that overrun service is not available. (C)

(C)

Deleted: SB Transportation DMT customers shall be charged the higher of: (1) the rate determined in item 3 above or (2) the Charges for Daily City Gate Underdeliveries applicable to MMNGS Suppliers plus the higher of $25 per Dth or the DMI for that day plus all transportation costs to the Company's City Gate when Company has issued an OFO that includes a Restriction on Access to Daily Metered Imbalances or announced that overrun service is not available.

RATE SCHEDULE FOR DAILY METERED TRANSPORTATION SERVICE

DEFINITIONS

(1) Gas Service Customer - A Gas Service Customer is an entity that is attached to the Company's lines and uses gas in its operations or in its premises;
(2) DMT - Daily Metered Transportation
(3) DMT Service Customer - Any entity that has executed a DMT Service Agreement with the Company for transportation of gas by the Company.

AVAILABILITY OF SERVICE

If all of the qualifications (a) through (e) set forth below are met, any entity will be considered a DMT Service Customer under this Rate Schedule.

(a) The entity that will receive gas transported by the Company (1) has a volumetric requirement of at least 5,000 Mcf per year or (2) belongs to a buyer group of no more than ten customers whose combined usage is at least 5,000 Mcf per year, provided, however, that larger buyer groups shall be permitted upon the mutual agreement of the Company and the customers;

(b) DMT Service Customers that are Priority 1 customers must contract with the Company for Priority Standby Service to meet the entire needs of its facility.

(c) A DMT service agreement must be executed by the DMT Service Customer in the form prepared by the Company (the "Service Agreement");

(d) The DMT Service Customer has obtained, or has agreed to obtain, a supply of gas, of a quality acceptable to the Company, from any source of gas;

(e) The DMT Service Customer has made, or has caused to be made, arrangements by which such volumes of gas can be delivered, either directly or by displacement, on a firm or interruptible basis, into the Company's distribution system; and

(f) If facilities are required for furnishing of DMT service, in addition to facilities that are required for furnishing of gas service, to a Gas Service Customer, the DMT Service Customer shall have paid, in full, for any additional facilities required to be constructed for furnishing of DMT service, which payment shall not

DAILY IMBALANCE CHARGES

A Daily Surplus Imbalances

As used in this Rate Schedule, "surplus imbalances" shall mean the amount by which the volume of gas delivered, to the Company for the Customer's account during the day, after adjustment for line losses and after elimination of volumes purchased from the Customer by the Company, exceeds the total amount of transportation service volumes taken by the Customer from the Company during the day. Such surplus imbalance shall be computed each day. The rates set forth below shall be applied to the daily surplus imbalance volume occurring during each day of the billing month.

If on any day a DMT Customer's/NGS's imbalance exceeds 10% and the combined imbalance of all DMT Customers is above the initial surplus tolerance band, the DMT Customer's/NGS's surplus in excess of 10% will be purchased by the Company ("cashed-out") according to the following price schedule:

10% to 15% at 90% of Index
15% to 20% at 85% of Index
> than 20% at 60% of Index

B Daily Deficiency Imbalances

As used in this Rate Schedule, "deficiency imbalances" shall mean the amount by which the volume of gas delivered, to the Company for the Customer's account during the day after adjustment for line losses is less than the total amount of gas consumed by the Customer each day. The rates set forth below shall be applied to the daily deficiency volume occurring during each day of the billing month.

If on any day a DMT Customer's/NGS's deficiency exceeds 10% and the combined deficiency imbalance of all DMT Customers exceeds 10% below the initial deficiency tolerance band, the DMT Customer's/NGS's deficiency in excess of 10% will be cashed-out according to the following price schedule:

10% to 15% at 110% of Index
15% to 20% at 115% of Index
> than 20% at 140% of Index

Month End Imbalance Cash Out

At the end of the month, a DMT Customer's/NGS's Daily Surplus Imbalances and Daily Deficiency Imbalances that were not cashed-out will be summed into a net imbalance volume for the DMT Customer/Marketer. A Month End Deficiency Imbalance occurs when the net imbalance volume is a quantity less than zero (imbalance due to the Company) and a Month End Surplus Imbalance occurs when the net imbalance volume is a quantity greater than zero(imbalance due from the Company). A DMT Customer/NGS may exchange a month end Imbalance under its DMT Service Agreement as set forth in Rule 30. Month End Surplus Imbalances and Month End Deficiency Imbalances not resolved via Exchange of Net Imbalances will be cashed-out pursuant to Rule 30.

Index Price

The Index for the cash out of daily imbalances is the Daily Index set forth in Rule 29.

Formatted: Indent: Left: 1", First line: 0.5"

Formatted: Indent: Left: 0.5"

Formatted: Indent: Left: 0.5"

Deleted: As used in this Rate Schedule, "overdeliveries" shall mean the cumulative amount by which the volume of gas delivered to the Company for the Customer's account, since the commencement of transportation service by the Company for the Customer under any rate schedule, after adjustment for line losses and after elimination of volumes purchased from the Customer by the Company, exceeds the total amount of transportation service volumes taken by the Customer from the Company under any rate schedule since the commencement of transportation service for the Customer by the Company. Such cumulative overdelivery balance shall be computed each day, and the rates set forth below shall be applied to the maximum daily overdelivery volume occurring during the billing month.¶
¶
¶
If the DMT Service Customer in any billing month has overdeliveries in excess of two percent of the volume of gas transported for the customer in the billing month, the Customer shall be subject to additional charges each billing month. For a maximum daily overdelivery volume up to 37% of the volume of DMT service gas transported to the Customer by the Company in the billing month, the charge for overdeliveries shall be $0.6351 per Mcf in excess of two percent of the volume of gas transported for the customer in the billing month.¶
¶
¶
For overdeliveries equal to or more than 37% of the volume of DMT service gas transported to the Customer by the Company during the billing month, the charge for such excess overdeliveries shall be $0.7624 per Mcf.

The Company reserves the right to issue Operational Flow Orders as necessary to preserve the operational integrity of its system. Such OFOs may include, but shall not be limited to the following: a requirement to flow gas to the citygate, a reduction in Daily City Gate delivery tolerance and a requirement to flow gas to the Supplier's primary receipt points on NFGSC. (I)

The Company may also issue OFOs which apply to transportation Customers receiving daily metered service under SC 13 as follows:

a. Modifications of Daily Surplus or Deficiency Tiers

The Company may lower the percentage levels of the Daily Deficiency or Surplus tiers for SC 13 service during an OFO. The Company may change the first imbalance tiers for Daily Surplus or Deficiency Imbalances as circumstances warrant. The first imbalance tier for Daily Surplus or Deficiency Imbalances may be reduced to a range of 0-2% and the second tier will be correspondingly modified to a range of 2-15%.

b. Modifications of Daily Deficiency Rate during an OFO

When the Company declares a deficiency OFO for Deficiency Imbalances outside the first tier, the applicable charge shall be the higher of the rate under SC 11 or the rate produced by the index calculation at the applicable tier level. Electric generation transportation customers shall be charged $25 per Mcf additional to the otherwise applicable OFO rate.

c. Suspension of "No Harm, No-Foul" Rule

During an OFO, the "no harm, no-foul" rule shall not apply to Deficiency Imbalances from 0-2%.

Deleted: The Company may also issue Operational Flow Orders ("OFOs") which apply to transportation customers receiving service under this rate schedule as follows:¶
¶
A Restriction on Access to Daily Metered Imbalances ¶
¶
OFOs may be issued to customers receiving service under this rate schedule to assure that adequate supplies are delivered to the Company. During such period, DMT customers shall not be permitted to use banked gas to cover daily underdeliveries in excess of the 2% tolerance during the term of the OFO. Furthermore, in the event an OFO is issued, metered usage in excess of 102% of confirmed deliveries on behalf of the DMT customer to Distribution's city gate, less line loss, shall be deemed a sale of gas by the Company to the customer. All provisions related to the price for such sales, including charges under Rate SB-Standby Service, shall apply.¶

(I) Indicates Increase

Issued: Effective:

(I)

MAXIMUM DAILY QUANTITY

The "Maximum Daily Quantity" shall be the maximum volume of gas, expressed in Mcf, as set forth in a DMT Service Customer's Service Agreement, may be delivered into the Company's distribution system, during any twenty-four hour period, for transportation by the Company to such Customer as transportation service under this rate schedule. The Company, in its sole discretion and upon request of a DMT Service Customer, may agree to receive and to transport, during any twenty-four period, a volume in excess of the Maximum Daily Quantity as set forth in a transportation Service Customer's Service Agreement. During any hour of any twenty-four hour period, the Company shall not be required to receive and to transport more than 1/24 of the Maximum Daily Quantity as set forth in a Transportation Service Customer's Service Agreement.

Deleted: B. Waiver of Overdelivery Charges¶
¶
The Company may, in its discretion, waive DMT overdelivery charges during or following colder than normal periods and to waive undelivery premiums during or following warmer than normal periods

NATIONAL FUEL GAS
DISTRIBUTION CORPORATION

Pro-Forma Supplement No. to
Gas - Pa. P.U.C. No. 9

Canceling One-Hundred-Twelfth and One-Hundred-Thirteenth Revised Page No.117

E. In the event of interruption or curtailment of transportation service, pursuant to items C and D, above, and during such period of interruption or curtailment, the DMT Service Customer must sell to the Company all or a portion of the DMT Service Customer's supply of gas at the higher of (1) the Transportation Service Customer's cost of purchased gas at the point of delivery to the Company or (2) the Company's average cost of purchased gas per Mcf, as determined based upon the Company's Section 1307(f) Rate, which is $5.6451. (I)

F. If a Gas Service Customer receiving gas transported by the Company uses less than the amount of gas delivered into the Company's system for transportation to such Customer ("excess deliveries"), the Gas Service Customer receiving gas transported by the Company may use such gas during the banking/balancing period defined below, following which the Company shall have the right, but not the obligation, to purchase remaining excess deliveries of gas from the DMT service Customer at a rate equal to the lowest of (1) the cost at which it was acquired by the DMT Service Customer, including pipeline transportation charges, or (2) the Company's average commodity delivered cost of gas to National Fuel Gas Supply Corporation, or (3) the Company's average commodity cost of locally produced gas during the month when excess deliveries were received by the Company. The cost at which the DMT Service Customer acquired the gas will be determined from such Customer's contract with the supplier or by a sworn affidavit setting forth the Customer's cost of gas, including cost of delivery of such gas to the Company's system. Upon request by the Company, the DMT Service Customer will be required to furnish to the Company the DMT service Customer's choice of (1) a copy of this contract or (2) an affidavit. The banking/balancing period shall be the three billing months after the billing month in which the Company received excess deliveries in behalf of the Customer.

Deleted: G. "Underdeliveries" are volumes of gas taken from the Company by a Gas Service Customer in excess of the sum of (1) any excess deliveries of the customer at the beginning of the day and (2) the volume of gas delivered to the Company for the customer's account, after adjustment for line losses less volumes of volumes of gas determined to be sales by the Company to the customer. Cumulative underdeliveries, as determined each day, in excess of two percent of the volume of gas delivered by the Company to the customer that day, shall be a sale of gas by the Company to the customer under the applicable rate schedule plus applicable surcharges as set forth in Rate Schedule SB Special Provisions and shall not be recharacterized as transportation service under any circumstances. Cumulative underdeliveries of not more than two percent of the volume of gas delivered to a customer by the Company on any day may be offset by volumes of gas delivered to the Company for the customer's account, after adjustment for line losses, in excess of the volume of gas taken by the customer from the Company on subsequent days within the same billing month.

Gas - Pa. P.U.C. No. 9
Sixth Revised Page No. 118
Canceling Fifth Revised Page No. 118

H. Service under this rate schedule shall be available only to the extent that there is sufficient capacity for such service in those portions of the Company's system affected by providing of transportation service including but not limited to, that portion of the Company's system where gas is delivered to the Company and that portion of the Company's system where gas is delivered to the Customer. In determining the Company's ability to provide transportation service, sufficient capacity in the Company's system shall be assumed. If service shall not be supplied, based upon insufficient capacity, the burden shall be on the Company to prove such capacity limitation.

I. Where gas is received by the Company for transportation service pursuant to this Rate Schedule, title to such gas shall remain vested in the Transportation Service Customer for which such gas was received for transportation. The Company's furnishing transportation service for a Transportation Service Customer shall be complete upon delivery of gas received for transportation service, except as provided in E and F, above.

J. The Company shall not be liable, under any circumstances or in any respect, to a Gas Service Customer, Transportation Service Customer, a producer of gas or any other person or entity for damages arising either directly or indirectly from interruption, curtailment or termination of transportation service.

Deleted: K. Revenues produced by charges to DMT customers for overdeliveries of transportation gas to such customers shall be treated in accordance with Paragraph (b)(11) of Rider "A".

L. Customers who contract for transportation service under this Rate Schedule shall have the right thereafter to purchase gas from the Company only to the extent that they have contracted for firm service under Rate Schedule SB for Standby Service or under Rate Schedule PSB for Priority Standby Service. Purchases of gas from the Company by transportation service customers who have not contracted for service under Rate Schedule PSB shall be subject to both the charges under the applicable sales rate schedule and all provisions of the Rate Schedule SB, including the Special Provisions.

M. Customers who elect to schedule their own gas supplies via Company's internet accessible Transportation Scheduling System and/or wish to access and/or obtain each day meter readings of the volume of gas delivered to the Company for the Customer's account and the volume of gas from the Company used by the Customer each day shall execute a Data Security Agreement pursuant to Tariff Rule 33. CHARGES UNDER OTHER RATE SCHEDULES

The Gas Service Customer receiving gas transported by the Company under this rate schedule shall pay all charges under all other applicable rate schedules and riders, irrespective of whether such Customer, in any billing period, receives only gas transported by the Company, and such Customer shall pay rates under all other applicable rate schedules for any service furnished to the Customer in addition to transportation service under this Rate Schedule. The DMLMT Customer shall be charged the customer charge under Rate Schedule LIS. The Customer may receive service under Rate Schedule LIS if the Customer so requests and the Company has sufficient gas supply available, and other customers or the Company would not be harmed by the Company providing this service to the Customer.

Issued:

Effective:

Deleted: CHARGES FOR OVERDELIVERIES¶

Deleted: As used in this Rate Schedule, "overdeliveries" shall mean the cumulative amount by which the volume of gas delivered to the Company for the Customer's account, since the commencement of transportation service by the Company for the Customer under any rate schedule, after adjustment for line losses and after elimination of volumes purchased from the Customer by the Company, exceeds the total amount of transportation service volumes taken by the Customer from the Company under any rate schedule since the commencement of transportation service for the Customer by the Company. Such cumulative overdelivery balance shall be computed each day, and the rates set forth below shall be applied to the maximum daily overdelivery volume occurring during the billing month.¶
¶
¶
If the DMLMT Service Customer in any billing month has overdeliveries in excess of two percent of the volume of gas transported for the customer in the billing month, the Customer shall be subject to additional charges each billing month. For a maximum daily overdelivery volume up to 37% of the volume of DMLMT service gas transported to the Customer by the Company in the billing month, the charge for overdeliveries shall be $0.6351 per Mcf in excess of two percent of the volume of gas transported for the customer in the billing month.¶
¶
¶
For overdeliveries equal to or more than 37% of the volume of DMLMT service gas transported to the Customer by the Company during the billing month, the charge for such excess overdeliveries shall be $0.7624 per Mcf.¶
¶
The Company may reduce or eliminate the overdelivery charges and may modify the operational flow order's and daily delivery quantity ("DDQ") requirements of customers receiving service under this rate schedule in order to meet the competitive circumstances for alternative fuels or bypass situations as set forth in this Service Classification.

OPERATIONAL FLOW ORDERS

The Company may also issue OFOs which apply to transportation customers receiving service under this rate schedule as follows:

A

MAXIMUM DAILY QUANTITY

The "Maximum Daily Quantity" shall be the maximum volume of gas, expressed in Mcf, as set forth in a DMLMT Service Customer's Service Agreement, may be delivered into the Company's distribution system, during any twenty-four hour period, for transportation by the Company to such Customer as transportation service under this rate schedule. The Company, in its sole discretion and upon request of a DMLMT Service Customer, may agree to receive and to transport, during any twenty-four period, a volume in excess of the Maximum Daily Quantity as set forth in a transportation Service Customer's Service Agreement. During any hour of any twenty-four hour period, the Company shall not be required to receive and to transport more than 1/24 of the Maximum Daily Quantity as set forth in a Transportation Service Customer's Service Agreement.

BILLING

Monthly charges, for transportation service pursuant to this rate schedule, are subject to the Late Payment Charges set forth in Section 16 of the Rules and Regulations of this Tariff.

Deleted: Restriction on Access to Daily Metered Imbalances ¶
¶
OFOs may be issued to customers receiving service under this rate schedule to assure that adequate supplies are delivered to the Company. During such period, DMLMT customers shall not be permitted to use banked gas to cover daily underdeliveries in excess of the 2% tolerance during the term of the OFO. Furthermore, in the event an OFO is issued, metered usage in excess of 102% of confirmed deliveries on behalf of the DMLMT customer to Distribution's city gate, less line loss, shall be deemed a sale of gas by the Company to the customer. All provisions related to the price for such sales, including charges under Rate SB-Standby Service, shall apply.¶
¶
¶
B. Waiver of Overdelivery Charges¶
¶
The Company may, in its discretion, waive DMLMT overdelivery charges during or following colder than normal periods and to waive undelivery premiums during or following warmer than normal periods.

Deleted: F. If a Gas Service Customer receiving gas transported by the Company uses less than the amount of gas delivered into the Company's system for transportation to such Customer ("excess deliveries"), the Gas Service Customer receiving gas transported by the Company may use such gas during the banking/balancing period defined below, following which the Company shall have the right, but not the obligation, to purchase remaining excess deliveries of gas from the DMLMT Service Customer at a rate equal to the lowest of (1) the cost at which it was acquired by the DMLMT Service Customer, including pipeline transportation charges, or (2) the Company's average commodity delivered cost of gas to National Fuel Gas Supply Corporation, or (3) the Company's average commodity cost of locally-produced gas during the month when excess deliveries were received by the Company. The cost at which the DMLMT Service Customer acquired the gas will be determined from such Customer's contract with the supplier or by a sworn affidavit setting forth the Customer's cost of gas, including cost of delivery of such gas to the Company's system. Upon request by the Company, the DMLMT service Customer will be required to furnish to the Company the DMLMT Service Customer's choice of (1) a copy of this contract or (2) an affidavit. The banking/balancing period shall be the three billing months after the billing month in which the Company received excess deliveries in behalf of the Customer.

Deleted: G. "Underdeliveries" are volumes of gas taken from the Company by a Gas Service Customer in excess of the sum of (1) any excess deliveries of the customer at the beginning of the day and (2) the volume of gas delivered to the Company for the customer's account, after adjustment for line losses less volumes of gas determined to be sales by the Company to the customer. Cumulative underdeliveries, as determined each day, in excess of two percent of the volume of gas delivered by the Company to the customer that day, shall be a sale of gas by the Company to the customer under the applicable rate schedule plus applicable surcharges as set forth in Rate Schedule SB Special Provisions and shall not be recharacterized as transportation service under any circumstances. Cumulative underdeliveries of not more than two percent of the volume of gas delivered to a customer by the Company on any day may be offset by volumes of gas delivered to the Company for the customer's account, after adjustment for line losses, in excess of the volume of gas taken by the customer from the Company on subsequent days within the same billing month.

NATIONAL FUEL GAS
DISTRIBUTION CORPORATION

Pro-Forma Supplement No. to
Gas - Pa. P.U.C. No. 9
Fourth Revised Page No. 146H
Canceling Third Revised Page No. 146H

H. Service under this rate schedule shall be available only to the extent that there is sufficient capacity for such service in those portions of the Company's system affected by providing of transportation service including but not limited to, that portion of the Company's system where gas is delivered to the Company and that portion of the Company's system where gas is delivered to the Customer. In determining the Company's ability to provide transportation service, sufficient capacity in the Company's system shall be assumed. If service shall not be supplied, based upon insufficient capacity, the burden shall be on the Company to prove the capacity limitation.

I. Where gas is received by the Company for transportation service pursuant to this Rate Schedule, title to such gas shall remain vested in the Transportation Service Customer for which such gas was received for transportation. The Company's furnishing transportation service for a Transportation Service Customer shall be complete upon delivery of gas received for transportation service, except as provided in E and F, above.

J. The Company shall not be liable, under any circumstances or in any respect, to a Gas Service Customer, Transportation Service Customer, a producer of gas or any other person or entity for damages arising either directly or indirectly from interruption, curtailment or termination of transportation service.

Deleted: K. Revenues produced by charges to DMLMT customers for overdeliveries of transportation gas to such customers shall be treated in accordance with Paragraph (b)(11) of Rider "A".

L. Customers who contract for transportation service under this Rate Schedule shall have the right thereafter to purchase gas from the Company only to the extent that they have contracted for firm service under Rate Schedule SB for Standby Service. Purchases of gas from the Company by transportation service customers under this rate schedule shall be subject to both the charges under the applicable sales rate schedule and all provisions of the Rate Schedule SB, including the Special Provisions.

M. The Company may establish a BTU conversion factor in the DMLMT service agreement for volumes of gas to be received by the Customer at a factor different from the system average BTU conversion factor applied to other transportation customers.

N. Customers who elect to schedule their own gas supplies via Company's internet accessible Transportation Scheduling System and/or wish to access and/or obtain each day meter readings of the volume of gas delivered to the Company for the Customer's account and the volume of gas from the Company used by the Customer each day shall execute a Data Security Agreement pursuant to Tariff Rule 33.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christopher Keller. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. SUMMARIZE YOUR EDUCATION AND EMPLOYMENT HISTORY.

A. An outline of my education and employment history is attached as Appendix A.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to review the base rate filing of National

Fuel Gas Distribution Company (NFG or Company), and make recommended adjustments to NFG's proposed operating and maintenance (O&M) expenses, taxes, and cash working capital (CWC) for the fully projected future test year (FPFTY) ending October 31, 2027. I also present the overall I&E recommended revenue requirement based on my adjustments and the adjustments of the other I&E witnesses identified below.

Q. DOES YOUR DIRECT TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 1 contains schedules that support my direct testimony.

Q. PLEASE SUMMARIZE YOUR RECOMMENDED O&M ADJUSTMENTS.

A. The following table summarizes my recommended adjustments.

	Company Claim	I&E Adjustment	I&E Recommended Allowance
O&M Expenses:			
Rate Case Expense	$344,000	($137,600)	$206,400
Net Labor Expense	$40,592,056	($379,731)	$40,212,325
Payroll Taxes	$2,399,564	($22,670)	$2,376,894
Stock-Based Compensation	$1,429,959	($909,281)	$520,678
Membership Dues	$234,266	($21,968)	$212,298
Total O&M Expense Adjustments		($1,471,259)	
Rate Base Adjustments:			
Cash Working Capital	$6,754,827	($111,005)	$6,643,822
Total Rate Base Adjustments		($111,005)	

OVERALL I&E RECOMMENDED REVENUE REQUIREMENT

Q. WHAT TEST YEARS HAS NFG USED IN THIS PROCEEDING?

A. NFG used the year ended September 30, 2025 as the historic test year (HTY), the year ending September 30, 2026 as the future test year (FTY), and the year ending October 31, 2027 as the FPFTY in this proceeding.

Q. SUMMARIZE THE COMPANY'S OVERALL CLAIMED REVENUE REQUIREMENT.

A. The Company's base rate case filing was submitted on January 28, 2026, requesting an increase of $19,680,000 to claimed present rate revenues of $265,524,000 resulting in a total overall revenue requirement of $285,204,000.[1]

Q. WHAT IS I&E'S TOTAL RECOMMENDED REVENUE REQUIREMENT?

A. I&E's total recommended revenue requirement for the Company is $276,615,000. This recommended revenue requirement represents an increase of $11,091,000 to the present rate revenues of $265,524,000. This total recommended allowance incorporates my adjustments made in this direct testimony to O&M expenses, taxes, and cash working capital and those recommended adjustments made in the direct testimony of I&E witness Drew Breuning.[2]

RATE CASE EXPENSE

Q. BRIEFLY DESCRIBE THE NATURE AND TYPES OF EXPENDITURES TYPICALLY ALLOWED AS A PART OF A REGULATED UTILITY'S OVERALL RATE CASE EXPENSE.

A. The nature and types of individual expenditures that comprise a utility's allowable claim for rate case expense are those directly incurred to compile, present, and defend a utility's request for a base rate increase before the Commission. The actual expenditures and estimated costs typically found in an allowable rate case

expense claim include legal fees for outside counsel, fees to outside consultants, and the cost of printing, document assembly, and postage.

Q. HOW HAS THE COMMISSION TRADITIONALLY TREATED RATE CASE EXPENSE FOR RATEMAKING PURPOSES?

A. The Commission has historically stated that it considers prudently incurred rate case expense as an ongoing expense, occurring at irregular intervals, related to the rendering of utility service. The Commission has also cited the importance of considering the involved utility's history regarding the frequency of rate case filings as an essential element to determine the normalized level of rate case expense for ratemaking purposes.

Q. HOW IS THE FREQUENCY OF RATE CASE FILINGS DETERMINED?

A. The frequency is determined by calculating the average number of months between the utility's most recent rate case filings.

Q. WHAT IS THE COMPANY'S CLAIM FOR RATE CASE EXPENSE?

A. NFG's claim for rate case expense is $344,000.[3]

[3] NFG Book V, Exhibit A – FPFTY, Schedule D-6.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. NFG has estimated its total rate case expense amount to be $1,032,000 and is requesting a normalization period of three years.[4] This produces a normalized claim of $344,000 ($1,032,000 ÷ 3). The Company states that the three-year normalization period was used as it aligns with the time interval between the Company's late base rate case and this proceeding.[5]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No. I disagree with the Company's claimed three-year recovery period.

Q. WHAT IS YOUR RECOMMENDATION FOR RATE CASE EXPENSE?

A. I recommend that NFG's rate case expense be normalized over a period of five years or 60 months resulting in an annual expense of $206,400 [($1,032,000 ÷ 60 months) x 12 months], or a reduction of $137,600 ($344,000 - $206,400) to the Company's claim.

Q. WHY DO YOU DISAGREE WITH THE PROPOSED THREE-YEAR RECOVERY PERIOD?

A. I disagree with the claimed three-year recovery period because it is not supported by the Company's historic filing frequency. The proposed recovery period fails to

[4] NFG Book V, Exhibit A – FPFTY, Schedule D-6.
[5] NFG Statement No. 3, p. 16, lines 5-6.

properly rely upon NFG's historic filing frequency and is speculative in nature. As such, it should not be relied upon to determine the appropriate period to apply the normalization treatment.

Q. FURTHER EXPLAIN YOUR RECOMMENDED FIVE-YEAR NORMALIZATION PERIOD FOR RATE CASE EXPENSE.

A. In contrast to the Company's proposed three-year period, I recommend a five-year or 60-month normalization period, which is a reasonable interval given NFG's actual base rate filing history. The Company's three most recent base rate case filing dates and corresponding details for the current filing are as follows:[6]

Docket No.	Date Filed	Interval
R-2025-3059428	January 28, 2026	39 months
R-2022-3035730	October 28, 2022	197 months
R-00061493	May 31, 2006	20 months
R-00049656	September 15, 2004	

Using the Company's last three base rate case filing dates and the date of the current filing, an average interval is computed to be 85 months ((39 mo. + 197 mo. + 20 mo.) ÷ 3 intervals). As demonstrated above, NFG's requested 36-month recovery period is unsupported by the Company's historic filing record. In contrast, my recommended five years (60 months) normalization period is a

[6] NFG Book I, Responses to Section 53.53 – III-I-Operating Expenses, III-I.4.d.

reasonable interval to utilize in consideration of NFG's historic filing record. Although the 60 month normalization period is shorter than the Company's actual 85 month filing frequency, my recommendation is in the public interest as it is more realistic than NFG's proposed 36-month period and it moderates the impact of the rate case filing interval of 197 months used in calculating the Company's average historical filing frequency.

Q. EXPLAIN WHETHER OTHER UTILITIES HAVE BEEN GRANTED A NORMALIZATION PERIOD BASED ON SPECULATION OF FUTURE FILINGS. IF SO, WHAT WAS THE RESULT?

A. In 2012, the Commission granted PPL Electric Utilities Corporation (PPL) permission to normalize its rate case expense over a 24-month period based on PPL's representations regarding its expected timing of future base rate case filings.[7] That base rate case was filed on March 30, 2012; however, despite PPL's representations, PPL did not file its next rate case until March 31, 2015, which was 36 months after the 2012 rate case filing. It should be noted that I&E's recommended normalization period in the 2012 PPL proceeding was a 32-month interval based on PPL's historic filing frequency.[8] The I&E recommendation in that instance produced a much more accurate result than relying on PPL's stated future intention to file a rate case.

[7] *PA. PUC v. PPL Electric Utilities Corporation*, Docket No. R-2012-2290597, pp. 47-48 (Order Entered December 28, 2012).

[8] I&E Statement No. 2, pp. 13-14 at Docket No. R-2012-2290597.

Q. ARE THERE ANY COMMISSION DECISIONS THAT SUPPORT YOUR RECOMMENDATION FOR A RATE CASE FILING INTERVAL BASED ON HISTORICAL FILING FREQUENCY?

A. Yes. The following six cases are the most recent instances where the Commission used the company's historic average filing frequency.

First, in a base rate case filed by Emporium Water Company, the Commission adopted the I&E recommended historic filing frequency finding in favor of I&E's recommended five-year normalization period based on a historic average filing frequency that was rounded down from 64 months.[9]

Second, in a base rate case filed by the City of DuBois, the Commission agreed with I&E's recommendation to use a historic filing frequency finding in favor of I&E's recommended 64-month normalization period, which matched the actual historic filing frequency.[10]

Third, in a base rate case filed by Columbia Gas of Pennsylvania, Inc. (Columbia Gas), the Commission held that the normalization period should align with the historic data rather than the company's intent to file its next rate case.[11]

Fourth, in a base rate case filed by PECO Energy Company – Gas Division, the Commission granted I&E's recommended five-year normalization period

---

[9] *PA PUC v. Emporium Water Company*, Docket No. R-2014-2402324, p. 50 (Order Entered January 28, 2015).

[10] *PA PUC v. City of DuBois - Bureau of Water*, Docket No. R-2016-2554150, pp. 65-66 (Order Entered March 28, 2017); *PA PUC v. City of DuBois - Bureau of Water*, Docket No. R-2016-2554150, p. 13 (Order Entered May 18, 2017).

[11] *PA PUC v. Columbia Gas,* Docket No. R-2020-3018835, Opinion and Order, pp. 78-79 (Order Entered February 19, 2021).

rather than PECO's claim based on a three-year period because the Commission determined a normalization period based on actual historic filing frequency is more reliable than future speculation.[12]

Fifth, in a base rate case filed by Philadelphia Gas Works (PGW), the Commission agreed with I&E's recommended 53-month normalization period rather than PGW's claim based on a three-year period because the Commission determined a normalization period based on actual historic filing frequency and not based on PGW's future intention to file a rate case.[13]

Sixth, in a base rate case filed by Columbia Water Company, the Commission held that the normalization period should align with the historic filing frequency rather than that company's intent to file its next rate case and the intent to file a base rate case does not justify deviating from the Commission's practice of relying on historical filing frequency.[14]

Finally, in the most recent base rate case filed by Columbia Gas, the Commission based the normalization period on Columbia Gas' actual filing history and frequency of base rate case filings rather than Columbia Gas' anticipation to make annual filings for the foreseeable future.[15]

[14] *PA PUC v. Columbia Water Company*, Docket No. R-2023-3040258, Opinion and Order, p. 34 (Order Entered December 9, 2025).

[15] *PA PUC v. Columbia Gas,* Docket No. R-2025-3053499, Opinion and Order, p. 138 (Order Entered February 19, 2021).

NET LABOR EXPENSE

Q. WHAT IS INCLUDED IN NET LABOR EXPENSE?

A. NFG's net labor expense includes labor from the Company as well as labor from its subsidiaries, primarily NFG's New York Division (NFG NY) and National Fuel Gas Supply Corporation.[16]

Q. WHAT IS NFG'S CLAIM FOR NET LABOR EXPENSE?

A. In its filing, the Company's claim for net labor expense is $40,592,056.[17]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM FOR NET LABOR EXPENSE?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR NET LABOR EXPENSE?

A. I recommend an allowance of $40,212,325 for net labor expense, or a reduction of $379,731 ($40,592,056 - $40,212,325) to NFG's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation for net labor expense is based on the removal of the portion of the executive bonus that is attributable to achieving financial goals. In the

[16] NFG Statement No. 3, p. 5, lines 5-8.
[17] NFG Book III, Exhibit ATF-4, Schedule 1, p. 2.

Company's filing, the total executive bonus included in net labor expense consists of executive bonuses for labor in New York of $605,614 and National Fuel Gas Supply Corporation of $249,973,[18] for a total executive bonus of $855,587 ($605,614 + $249,973).

In the confidential response to I&E-RE-52,[19] **{BEGIN PROPRIETARY}**, [redacted] **{END PROPRIETARY}**

[18] NFG Book III, Exhibit ATF-4, Schedule 3.
[19] I&E Exhibit No. 1, Schedule 1.
[20] NFG Book II, Standard Data Request RR-27, p. 5.
[21] I&E Exhibit No. 1, Schedule 2, pp. 4-5.

Based on the responses above, a significant portion of the executive bonuses in NFG's net labor expense claim are based on achieving financial goals and targets that serve primarily to benefit shareholders. Therefore, the portion of the executive bonuses attributable to financial goals should not be funded by the ratepayers as financial goals do not assist in providing safe and reliable service to ratepayers. Therefore, I recommend disallowance of any portion of the executive bonuses attributable to financial performance. This results in a recommended allowance of $40,212,325 for net labor expense, or a reduction of $379,731 ($40,592,056 - $40,212,325) to NFG's claim for net labor expense.

PAYROLL TAXES

Q. WHAT ARE PAYROLL TAXES?

A. Payroll taxes represent taxes imposed on employers and employees that are usually calculated as a percentage of the salaries paid to staff. Payroll taxes generally fall into two categories: (1) deductions from an employee's wages, and (2) taxes paid by the employer based on the employee's wages. NFG has made a claim in this filing for its employer share of those payroll taxes.

Q. WHAT IS THE COMPANY'S CLAIM FOR PAYROLL TAX EXPENSE?

A. In its filing, NFG's claim for payroll tax expense is $2,399,564.[22]

[22] NFG Book V, Exhibit A – FPFTY, Schedule D-9, column 5, lines 4-6.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. NFG's claim consists of Social Security and Medicare taxes (together FICA), federal unemployment tax (FUTA), and state unemployment tax (SUTA).

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR PAYROLL TAXES?

A. I recommend an allowance of $2,376,894 for payroll taxes, or a reduction of $22,670 ($2,399,564 - $22,670) to the Company's distribution claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommended adjustment is based on recognition of the net labor expense reduction for my removal of the portion of executive bonuses related to financial goals and on the payroll tax rate applied to the Company's claim. My recommendation is calculated as follows:

FICA*	5.65%
FUTA*	0.03%
SUTA*	0.29%
Payroll Tax Rate	5.97%
I&E Net Labor Expense Adjustment from Above	$379,731
I&E Payroll Tax Recommended Adjustment	$22,670
*NFG Book V, Exhibit A – FPFTY, Schedule D-10, lines 3,6, 9	

STOCK-BASED COMPENSATION

Q. WHAT IS STOCK-BASED COMPENSATION?

A. The Company rewards stock-based compensation to certain employees in the form of restricted stock for supervisory staff and officers and performance shares for officers. NFG states that restricted stock is used as a retention tool to retain high-level salaried employees and officers through time-vested restricted stock. NFG also states that performance shares are stock-based compensation tied to long-term performance from total shareholder return, total return on capital, and emission reduction targets measured over a three-year period in comparison to peer companies.[23]

Q. WHAT IS THE COMPANY'S CLAIM FOR STOCK-BASED COMPENSATION?

A. The Company's stock-based compensation claim contains three parts, which are based on a three-year average amount for each.[24] The first is restricted stock for supervisory staff of $182,075. The second is restricted stock for officers of $290,746. The third is performance shares for officers of $957,138 for a total claim of $1,429,959 ($182,075 + $290,746 + $957,136).[25]

[23] NFG Statement No. 4, pp. 14-16.
[24] NFG Book III, Exhibit MPW-1, Schedule 2, p. 13.
[25] NFG Book III, Exhibit MPW-1, Schedule 2, p. 14.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. NFG states that offering restricted stock benefits aids in retention of non-executives as well as officers by providing time-vested restricted stock, which requires those employees to remain with NFG over the vesting period, over three equal annual installments. Performance shares are connected to long-term performance such as total shareholder returns, total return on capital, and emission reduction targets over a three-year period which is compared to peer companies.[26]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR STOCK-BASED COMPENSATION?

A. I recommend an allowance of $520,678 for stock-based compensation, or a reduction of $909,281 ($1,429,959 - $520,678) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. In NFG's response to I&E-RE-35-D, the Company states that the restricted stock are time vested stock where there is not any other goals to be met other than the passage of time and that the performance shares are based on financial results with

[26] NFG Statement No. 4, pp. 14-16.

the exception of emission reduction targets which account for approximately 5% of performance shares issued.[27]

Based on the responses above, it is clear that performance shares in NFG's stock-based compensation expense claim are almost entirely focused on achieving financial goals and targets that benefit shareholders. Therefore, 95% of performance shares that are based on financial goals should not be funded by ratepayers, as financial goals do not assist in providing safe and reliable service to ratepayers. Therefore, I recommend disallowance of 95% of NFG's claim for performance shares or $909,281 ($957,138 x 95%). This results in a recommended allowance of $520,678 for stock-based compensation, or a reduction of $909,281 ($1,429,959 - $520,678) to the Company's claim for stock-based compensation.

Q. HAS THE COMMISSION RECENTLY ADJUSTED A COMPANY'S CLAIM FOR INCENTIVE COMPENSATION BASED ON THE REMOVAL INCENTIVE COMPENSATION RELATED TO FINANCIAL GOALS?

A. Yes. In the most recent Columbia Gas base rate case proceeding, the Commission removed 70% of Columbia Gas' total incentive compensation claim that was related to financial goals finding that it was not necessary in providing safe and reliable service to ratepayers. The Commission stated:

[27] I&E Exhibit No. 1, Schedule 3.

We shall deny Columbia's Exception Nos. 3 and 4. We agree with the ALJs' recommendation to adopt the OCA's proposed downward adjustment of $1,798,165, to the Company's cash-based STI compensation expense claim of $2,568,807. As noted by the ALJs and the OCA, Columbia did not explain why 70% of the incentive compensation expense is necessary to provide adequate service to ratepayers, given that only 30% of this claimed expense is related to operational safety and customer experience. *See* OCA St. 2 at 18-19. Accordingly, we shall adopt the ALJs' recommendation to apply a downward adjustment of $1,798,165, [$2,568,807 x 70% = $1,798,165], to reflect a total allowance for cash-based STI compensation expense of $770,642. [$2,568,807 – $1,798,165 = $770,642].

We also agree with the ALJs and the OCA that Columbia failed to present credible evidence that the totality of its LTI compensation plan is reasonable, given that only 30% of the plan is related to safety, customer care, customer satisfaction, or other benefits to ratepayers. Accordingly, we shall adopt the ALJs' recommendation that only 30% of the Company's LTI compensation expense claim of $754,446, or $226,334, [$754,446 x 30% = $226,334], be allowed for ratemaking purposes, resulting in a downward adjustment of $528,112. [$754,446 – $528,112 = $226,334].[28]

MEMBERSHIP DUES

Q. WHAT IS INCLUDED IN MEMBERSHIP DUES?

A. The Company's claim for membership dues includes payments to industry organizations, civic and community organizations, trades, technical, and professional organizations, and other memberships.[29]

[28] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc*., Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Disposition of Incentive Compensation, p. 123.

[29] NFG Book II, SDR-RR-30 and NFG Book II, SDR-RR-31.

Q. WHAT IS THE COMPANY'S CLAIM FOR MEMBERSHIP DUES?

A. NFG's claim for membership dues is $234,266.[30]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim was based on its HTY amount for membership dues.[31]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR MEMBERSHIP DUES?

A. I recommend an allowance of $212,298 for membership dues, or a reduction of $21,968 ($234,266 - $212,298) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on disallowing membership dues for civic and community organizations and other membership dues where the Company has not provided adequate support that the membership is necessary to provide safe and reliable service to the Company's ratepayers.[32] My recommended allowance is based on the exclusion of the following membership dues for ratemaking purposes: Erie Downtown Development Corporation ($12,500), Pennsylvania

[30] NFG Book III, Exhibit ATF-1, Schedule 1.
[31] I&E Exhibit No. 1, Schedule 4.
[32] I&E Exhibit No. 1, Schedule 4, p. 3.

Northwest Development Corp. ($2,813), Edison Electric Institute ($1,842), Common Ground Alliance ($1,250), Erie Club ($1,185), Independent Oil & Gas Association of New York ($693), Pittsburgh Region Clean Cities ($500), Clarion County Economic Development ($500), Shenango Valley Chamber of Commerce of ($500), and Other of ($185). This results in a reduction to the Company's claim by $21,968, or a total recommended allowance of $212,298 ($234,266 - $21,968).

Q. HAS THE COMMISSION RECENTLY ADJUSTED A COMPANY'S CLAIM FOR MEMBERSHIP DUES BASED ON THE REMOVAL MEMBERSHIP DUES RELATED TO CIVIC AND COMMUNITY ORGANIZATIONS?

A. Yes. In the most recent Columbia Gas base rate case proceeding, the Commission removed membership dues that were related to chambers of commerce finding that it did not provide a direct benefit to ratepayers. The Commission stated:

> To the extent that Columbia argues that chamber of commerce fees represent a direct benefit to ratepayers, we find the OCA's argument and the testimony of the OCA's witness, Mr. Mugrace, to be more compelling. Specifically, Mr. Mugrace testified that in reviewing Columbia's breakdown of membership costs, such costs "reflect the business network advocacy groups, fraternal, social service clubs, and chambers of commerce that promote the Company in a particular territory or service area and do not reflect any benefits to customers." Mr. Mugrace further testified that chambers of commerce fees "relate to helping small businesses connect with potential customers and promoting economic power in the communities." Mr. Mugrace continued:
>
> > I note that in 66 Pa. C.S. Section 1316.1, recovery of these types of club dues, "no public utility may charge to its customers as a permissible operating expense for

> ratemaking purposes membership fees, dues or charges to fraternal, social or sports clubs or organization." Ratepayers should not pay for costs that appear to be related to contributions, pledges, sponsorships and donations and in accordance with the statute identified above. These types of costs mainly benefit Columbia as being good corporate citizens, advocacy on policy issues before various agencies and civic related initiatives.
>
> OCA St. 2 at 30-31. We concur with Mr. Mugrace's testimony. Indeed, absent evidence that there is any direct benefit to ratepayers, Columbia should not be permitted to recover costs for membership in such organizations. Accordingly, we shall deny, in part, Columbia's Exception No. 6 to the extent that we shall adopt the ALJs' recommendation that the Company not be permitted to recover chamber of commerce membership costs.[33]

Although the above referenced Commission order specifically addresses only membership dues related to chambers of commerce, the Commission also agreed with the Office of Consumer Advocate's testimony regarding the exclusion of membership dues in rates related to business network advocacy groups, fraternal, social service clubs, and chambers of commerce.

CASH WORKING CAPITAL

Q. WHAT IS A CASH WORKING CAPITAL (CWC) ALLOWANCE FOR RATEMAKING PURPOSES?

A. CWC includes the amount of funds necessary to operate a utility during the interim between the rendition of service, including the payment of related

[33] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc*., Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Disposition of Company Memberships, pp. 156-158.

expenses, and the utility's receipt of revenue in payment of services rendered.

Q. HOW DOES THE COMPANY CALCULATE ITS CWC CLAIM?

A. NFG calculates its CWC by using a lead/lag study. A lead/lag study measures the differences in time between: (1) the time services are rendered until payment of those services is received; and (2) the time between the point when a utility has incurred an expense and the actual payment of the expense. Stated differently, the lead/lag study measures how many days exist on average between the midpoint of the service period and the date the payment is made.

Q. DO YOU AGREE WITH THE COMPANY'S USE OF THE LEAD/LAG METHOD?

A. Yes.

Q. WHAT IS THE COMPANY'S CWC CLAIM?

A. The Company's claim for CWC is $6,754,827.[34]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. NFG's claim is based on an HTY lead/lag study, applying total revenues and total expenses for the FPFTY ending October 31, 2027.

[34] NFG Book V, Exhibit A – FPFTY, Schedule C-4, p. 1, line 5.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND?

A. I recommend an allowance of $6,643,822 or a decrease of $111,005 ($6,754,827 - $6,643,822) to the Company's claim.[35]

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on my adjustments to O&M expenses as discussed above and I&E's recommended cost of long-term debt ratio of 45%.[36]

Q. IS YOUR RECOMMENDED CWC ALLOWANCE A FINAL RECOMMENDATION?

A. No. All adjustments to NFG's claims for revenues, expenses, taxes, and rate base must be continually brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claim.

[35] I&E Exhibit No. 1, Schedule 5, p. 1.
[36] I&E Exhibit No. 2, Schedule 1.

Q. WHAT O&M ADJUSTMENTS DID YOU INCORPORATE WHEN DETERMINING A RECOMMENDED CWC ALLOWANCE?

A. All O&M adjustments that are cash-based expense claims should be included when determining the Company's CWC requirement. Therefore, I have included cash-based O&M recommendations when computing the overall recommended CWC allowance.

Q. SUMMARIZE WHERE EACH OF THE RECOMMENDED O&M EXPENSE ADJUSTMENTS ARE REFLECTED IN THE CWC COMPUTATIONS.

A. The Net Labor Expense adjustment of $379,731 is reflected in the Payroll (Net Labor) Lag Days calculation. The following recommended adjustments are reflected in the Other Expenses (less Uncollectibles) Lag Days calculation: rate case expense adjustment of $137,600, payroll taxes adjustment of $22,670, stock-based compensation adjustment of $909,281, and membership dues adjustment of $21,968 as discussed above, producing a total decrease of $1,091,519,[37] which is reflected in I&E Exhibit No. 1, Schedule 5, p. 2.

[37] I&E Exhibit No. 1, Schedule 5, p. 4.

ENERGY EFFICIENCY PILOT PROGRAM

Q. WHAT IS NFG'S PROPOSED ENERGY EFFICIENCY PILOT PROGRAM?

A. NFG is proposing an Energy Efficiency (EE) pilot program to be implemented over five years starting in October 2026.[38] The EE Pilot is modeled after other Pennsylvania natural gas utility Energy Efficiency and Conservation (EE&C) programs.[39] The program would offer equipment replacement rebate incentives for residential customers to encourage the installation of high efficiency space heating appliances such as furnaces and boilers, water heaters (including tankless water heaters), and clothes dryers.[40]

Q. WHY IS NFG PROPOSING AN EE PLAN?

A. Although not statutorily mandated for natural gas distribution companies (NGDCs), the Company voluntarily designed and proposed an EE Plan to encourage customers to install high efficiency natural gas appliances. According to the Company, these appliances are the largest consumers of natural gas in residential buildings as these types of appliances are the largest users of natural gas in residential buildings.[41]

[38] NFG Statement No. 18, p .5, lines 1-2.
[39] NFG Statement No. 18, p. 3, lines 2-7.
[40] NFG Statement No. 18, p. 5, lines 5-15.
[41] NFG Statement No. 18, p. 5, lines 2-8.

The Company opines the implementation of the EE Plan is projected to save 11,251 Mcf of natural gas annually for the first five years.[42] Additionally, the Company projects the EE Plan will save $99,460 annually or $497,300 over the life of the EE Plan.[43]

Q. WHAT IS THE ESTIMATED TOTAL SPENDING FOR THE PROPOSED EE PLAN?

A. NFG projects the EE Plan will cost $3,543,630 over five years based on the breakdown shown below:[44]

Budget Item	**2027**	**2028**	**2029**	**2030**	**2031**
Rebates	$476,726	$476,726	$476,726	$476,726	$476,726
Administration	$100,000	$100,000	$100,000	$100,000	$100,000
Evaluation, Measurement & Verification	$60,000	$60,000	$60,000	$60,000	$60,000
Outreach	$100,000	$85,000	$75,000	$50,000	$50,000
Total	**$736,726**	**$721,726**	**$711,726**	**$686,726**	**$686,726**

Q. HOW DOES NFG PROPOSE TO RECOVER THE EE PLAN COSTS?

A. The Company is proposing to recover the cost of the EE Pilot Program from residential customers, which is the rate class that will directly benefit from the program via Rider D.[45] The proposed initial EE Pilot charge is set at $0.0389/Mcf

[42] NFG Statement No. 18, p. 7, lines 10-13.
[43] NFG Statement No. 18, p. 8, lines 1-5.
[44] NFG Statement No. 18, p. 6, line 2.
[45] NFG Statement No. 18, p. 14.

for the residential customer class calculated by dividing the projected EE costs by the projected residential class usage (Mcf) and rounded to the fourth decimal. The net over or under collection of the EE Pilot charge will be reconciled at the end of the 5-year pilot.[46]

Q. DO YOU OPPOSE NFG'S PROPOSAL TO ESTABLISH AND IMPLEMENT AN EE PLAN IN THIS PROCEEDING?

A. No. However, I am recommending that the Company submit an annual report on the EE Pilot three months after the close of the program year. The annual report would include information from activity from the previous program year and progress towards the Company's goals for the remaining years of the EE Pilot. The information to be included in the annual report would also include, but not be limited to, savings (cost and Mcf), participation (by number of customers and type of rebate), spending, cost-effectiveness, highlights of portfolio and program activity, and updates to program delivery and design. Additionally, the annual report would include the above information broken down for low-income customers as well as the number of referrals made to LIURP and the number of referrals to LIURP that received LIURP services as a result of participating in the EE pilot.

[46] NFG Book VII, Exhibit F, Section 2 – Proposed Tariff, p. 160.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes. However, I reserve the right to supplement my testimony or to revise recommendations if additional issues or facts arise during this proceeding.

Question

Reference NFG Book III, NFG Statement No. 4, pp. 13-17, NFG Book III, NFG Exhibit MPW-1, pp. 13-16, and NFG Book III, NFG Exhibit ATF-1, Schedule 1 concerning incentive compensation: A. Provide a copy of all Company profit sharing, incentive compensation, and bonus pay plans. B. Include each plan's criteria for participant eligibility and each plan's established criteria/goals that are to be met for payout. 4 C. Provide a copy of the analysis provided by Korn Ferry Group. D. Identify the amounts expensed and the amounts capitalized by year for HTY 2025, 2026 YTD beginning October 1, 2025, FTY 2026 claim, and FPFTY 2027 claim for each type of compensation broken down by salaried, affiliated labor, hourly union, hourly non-union, and temporary. E. Breakdown of incentive compensation by financial results, safety results, and qualitative results by year for: HTY 2025, 2026 YTD beginning October 1, 2025, 2026 FTY claim, and FPFTY 2027 claim for each type of compensation and broken down by salaried, affiliated labor, hourly union, hourly nonunion, and temporary. F. For Parts D and E, if incentive compensation is not directly incurred by the Company, provide a detailed explanation and supporting documentation, including but not limited to, calculations used to determine incentive compensation allocated to the Company for all time periods above.

Response

A. Please refer to responses provided for Standard Data Request-Revenue Requirement Question No. RR-27 for officer bonus and equity plans (stock-based compensation), and National Fuel Exhibit VLH-1 for the Annual Cash Bonus Program (which is available to supervisors).
B. For the Annual Cash Bonus Program see National Fuel Exhibit VLH-1. For the AARCIP/EACIP officer short-term incentive cash bonus program goals/achievement please see attached CONFIDENTIAL Attachments I&E-RE-D-10 B a) and I&E-RE-D-10 B b). For stock-based compensation (otherwise known as long-term incentive compensation (LTI)), refer to RR-27 for the 2010 Equity Compensation Plan. LTI is expensed from the date of grant through the performance period, taking into account retirements and ultimately are vested at the end of the performance period. LTI is comprised of performance shares (based on National Fuel Gas Company achievement) and restricted stock (which

are time-vested). Performance shares for Relative Total Shareholder Return are based on the average closing stock price for the prior calendar month with reinvested dividends, relative to other companies that are part of National Fuel Gas Company's peer group. Performance shares for Relative Total Return on Capital are based on the average of the returns on capital for each twelve-month period corresponding to National Fuel Gas Company's fiscal years during the performance cycle, relative to its peer group. Performance shares for Methane Intensity and Greenhouse Gas Emissions are based on targeted rates of intensity of Scope 1 methane emissions and Scope 1 greenhouse gas emissions. Please see CONFIDENTIAL Attachments I&E-RE- D-10-B c), I&E-RE-D-10-B d), and I&E-RE-D-10-B e), for the achievement related to the most recent vested performance cycles. Certain information is redacted in these attachments where the Company is not seeking recovery for these amounts and/or to exclude individual names where a corresponding title is provided. Copies of the CONFIDENTIAL Attachments referenced in this response will only be provided to parties pursuant to the terms of a Stipulated Protective Agreement or Protective Order entered in this proceeding. Restricted Stock Units are time vested for both Officers and Non-officers and are not tied to goal achievements.

C. Please see attached PUBLIC REDACTED VERSION of the Korn Ferry Report (CONFIDENTIAL Attachment I&E-RE-D-10 C). Certain information is redacted in this attachment where the Company is not seeking recovery for these amounts and/or to exclude individual names where a corresponding title is provided. Copies of the CONFIDENTIAL Attachment I&E-RE-D-10 C will only be provided to parties pursuant to the terms of a Stipulated Protective Agreement or Protective Order entered in this proceeding.

D. The Annual Cash Bonus breakdowns are provided in the attached (Attachment I&E-RE-D-10-D&F). [BEGIN CONFIDENTIAL] The Company's officer bonus expense accrued for HTY 2025 was $919,188, while in the first quarter FTY 2026 $329,020 was accrued for officer bonus expense. Included in this accrual is NFG Other Bonus compensation related to HTY 2025 ($137,500) and one quarter of the projected FTY 2026 expense ($191,520). There is no capitalized rate recovery request related to such bonuses. The Company's officer LTI expense for HTY 2025 was $1,073,366 ($752,785 for performance shares and $320,581 for restricted stock) while non-officer restricted stock was $233,280 (note: there is no capitalized rate recovery requirement related to stock-based compensation).

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

For Q1 FTY 2026, the Company's officer LTI expense was $244,078 ($148,804 for performance shares and $95,274 for restricted stock). [END CONFIDENTIAL]

E. The Annual Cash Bonus Program amounts paid during the HTY 2025 were paid out at 91% of target (customer service satisfaction and system reliability 24%; operational safety and methane emissions reduction 25%; employee safety 17%; and diversity and inclusion 25%) The Annual Cash Bonus Program amounts paid during the HTY 2026 were paid out at 115% of target (customer service, satisfaction, and system reliability 23%; operational safety and methane emissions reductions 25%; employee safety 25%; diversity and inclusion 25%, and discretionary 17%). Please see CONFIDENTIAL Attachments I&E RE-D-10-B a) and b) for the goal achievement/criteria related to the most recent AARCIP and EACIP payouts and note that these will only be provided to parties pursuant to the terms of a Stipulated Protective Agreement or Protective Order entered in this proceeding.

F. For the breakdown of the Annual Cash Bonus Program amounts charged by affiliates please see attached (Attachment I&E-RE-D-10-D and F). For allocation of officer compensation from affiliates please see attached (Attachment I&E-RE-D-10 F a) and Attachment I&E-RE-D-10 F b)).

Question

Reference NFG Book II, SDR-RR-30 and SDR-RR-31 and NFG Book III, NFG Exhibit ATF-1, Schedule 1 concerning membership dues. Provide the following: 9 A. Similar breakdown to NFG Book II, SDR-RR-30 for TME September 30, 2023, September 30, 2024, HTY 2025, FTY 2026 claim, and FPFTY 2027 claim. B. Explanation for any increases by fiscal year from the HTY to the FPFTY claim. C. Explanation of the specific benefit to distribution ratepayers for each membership listed in NFG Book II, SDR-RR-30. D. Identify any portions of memberships attributable to lobbying not specifically identified in NFG Book II, SDR-RR-30. E. Detailed explanation and reconciliation for the difference in membership dues in NFG Book II, SDR-RR-30 of $245,477 and NFG Book III, NFG Exhibit ATF-1, Schedule 1 of $234,266.

Response

A. Please see attached file (I&E-RE-D-22.xlsx). The HTY expense amounts in this summary exclude all lobbying costs and were used as the basis for the FTY and FPFTY expense.

B. There are no increases from the HTY to the FPFTY claim.

C. The benefits of each membership are outlined in NFG Book II, SDR-RR-31.

D. The HTY expense amount included in attachment I&E-RE-D-22.xlsx excludes all lobbying costs. As the HTY was held constant for the FTY and FPFTY, no lobbying costs are included in the Company's filing.

E. The difference in membership dues between NFG Book II, SDR-RR-30 and NFG Exhibit ATF-1, Schedule 1 of $11,211 is attributable to 2 components. NFG Book II, SDR-RR-30 excluded credits related to corrections of previously charged expenses totaling $5,446. Additionally, the amount of membership dues in NFG Book II, SDR-RR-30 included all expenses charged to non-lobbying accounts, including the pre-paid account for the American Gas Association dues. A portion of this account is reclassed to a lobbying account each month, while the remainder is charged to an O&M expense account. This accounted for the remaining difference of $5,765 between NFG Book II, SDR-RR-30 and NFG Exhibit ATF-1, Schedule 1. The amount

INTRODUCTION 1

RESPONSE TO PWPTF WITNESS JENNIFER WARABAK..... 2

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christopher Keller. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME CHRISTOPHER KELLER WHO SUBMITTED THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 1 AND I&E EXHIBIT NO. 1?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to respond to the direct testimony of the Pennsylvania Weatherization Providers Task Force (PWPTF) witness Jennifer Warabak concerning her recommended increase to NFG's Low-Income Usage Reduction Program (LIURP) budget.[1]

[1] PWPTF Statement No. 1.

Q. DOES YOUR REBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 1-R contains a schedule that supports my rebuttal testimony.

RESPONSE TO PWPTF WITNESS JENNIFER WARABAK

Q. SUMMARIZE MS. WARABAK'S RECOMMEDNATION REGARDING NFG'S LIURP BUDGET.

A. Ms. Warabak recommends that the Company increase its LIURP budget by the percentage increase in rates for residential customers as a result of this proceeding. Ms. Warabak states that due to the likelihood of an increase in rates as a result of this proceeding that an increase in LIURP funding would help low-income customers deal with the increase in rates and help low-income customers conserve energy.[2]

Q. DO YOU AGREE WITH MS. WARABAK'S RECOMMENDATION?

A. No. While Ms. Warabak's recommendation is well-intentioned, it is inappropriate to consider an increase in the LIURP budget in the instant proceeding. As mentioned by Ms. Warabak, the Company has been unable to exhaust its existing budget in 2022, 2023, and 2024 with the Company having underspent its budget by almost $1,500,000 in 2025.[3] Additionally, Ms. Warabak has not shown that

[2] PWPTF Statement No. 1, pp. 5-7.
[3] I&E Exhibit No. 1-R, Schedule 1.

NFG would utilize the increased budgeted funds. Finally, Ms. Warabak does not provide adequate support for how NFG would complete the additional jobs and exhaust its existing LIURP budgeted funds. Ms. Warabak's argument is too speculative and not supported by any data or other evidence.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS REGARDING YOUR RECOMMENDATION TO DENY AN INCREASE IN LIURP FUNDING IN THIS PROCEEDING?

A. Yes. While my response to Ms. Warabak's recommendation explained above specifically relates to Ms. Warabak's failure to provide support for NFG's ability to utilize the additional funding, it is important to note that these LIURP program costs are directly funded by ratepayers who do not receive assistance from low-income programs. It is unreasonable to implement an increase to LIURP paid for by ratepayers, when the Company's ability to utilize these additional funds is not supported by past experience and is uncertain.

Q. DO YOU HAVE ANY FINAL COMMENTS ABOUT MS. WARABAK'S DIRECT TESTIMONY?

A. Yes. Due to the length, depth, and number of issues addressed in Ms. Warabak's direct testimony and the direct testimony of other parties, my lack of response to any topic or recommendation should not be interpreted as agreement with those recommendations.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes. However, I reserve the right to supplement my testimony or to revise recommendations if additional issues or facts arise during this proceeding.

Question

Please indicate for each year from January 2022 to date disaggregated by year, as of the last day of the year, whether: a) NFG exhausted its LIURP budget; b) If such budget was not exhausted, the number of dollars not spent; c) If such budget was exhausted, the number of NFG customers who did not receive LIURP services despite having been found to be LIURP eligible. Please provide this data in a live Excel spreadsheet.

Response

See Attachment Cause-PA-II-10. Note that the Company does not have the information in section (c) as this information is not tracked.

Section A

Year	NFG exhausted its LIURP budget
2022	No
2023	No
2024	No
2025	No

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Christopher Keller. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME CHRISTOPHER KELLER WHO SUBMITTED THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 1 AND I&E EXHIBIT NO. 1?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of National Fuel Gas Distribution Company (NFG or Company) witnesses Anthony T. Formato,[1] Michael P. Weidner,[2] Monika M. Duszenko,[3] and Erik M. Solomon.[4]

---

[1] NFG Statement No. 3-R.
[2] NFG Statement No. 5-R.
[3] NFG Statement No. 6-R.
[4] NFG Statement No. 18-R.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 1-SR contains a schedule that supports my surrebuttal testimony. In this surrebuttal testimony, I will also make references to my direct testimony[5] and its accompanying exhibit.[6]

SUMMARY OF I&E'S OVERALL UPDATED POSITION

Q. PLEASE SUMMARIZE THE COMPANY'S UPDATED OVERALL CLAIMED REVENUE REQUIREMENT.

A. In rebuttal testimony, the Company updated its requested increase presenting an increase of $18,475,000 to present rate revenues of $265,524,000, resulting in a total overall revenue requirement of $283,999,000.[7]

Q. PLEASE SUMMARIZE YOUR ADJUSTMENTS AS CONTAINED IN THIS SURREBUTTAL TESTIMONY.

A. The following table summarizes my recommended adjustments to NFG's updated position.

[5] I&E Statement No. 1.
[6] I&E Exhibit No. 1.
[7] NFG Exhibit A – FPFTY Rebuttal Update, Schedule A-1.

	Company Claim	I&E Adjustment	I&E Recommended Allowance
O&M Expenses:			
Rate Case Expense	$344,000	($137,600)	$206,400
Net Labor Expense	$40,592,056	($379,731)	$40,212,325
Payroll Taxes	$2,399,564	($22,670)	$2,376,894
Stock-Based Compensation	$1,429,959	($909,281)	$520,678
Membership Dues	$234,266	($21,968)	$212,298
Total O&M Expense Adjustments		($1,471,250)	
Rate Base Adjustments:			
Cash Working Capital	$6,715,156	($110,624)	$6,604,532
Total Rate Base Adjustments		($110,624)	

Q. WHAT IS I&E'S TOTAL UPDATED RECOMMENDED REVENUE REQUIREMENT?

A. I&E's updated total recommended revenue requirement for the Company is $276,603,000. This recommended revenue requirement represents an increase of $11,079,000 to the Company's updated claimed present rate revenues of $265,524,000. This total recommended increase incorporates adjustments made in this testimony and those made in the surrebuttal testimony of Drew Breuning.[8]

[8] I&E Statement No. 2-SR.

The following table summarizes the I&E surrebuttal position:

RATE CASE EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR RATE CASE EXPENSE.

A. In direct testimony, I recommended rate case expense be normalized over a period of 5 years or 60 months resulting in an annual expense of $206,400 [($1,032,000 ÷ 60 months) x 12 months], or a reduction of $137,600 ($344,000 - $206,400) to the Company's claim. I disagreed with the Company's claimed three-year normalization period because it was not supported by the Company's historic filing frequency, was speculative in nature, and noting the Commission has agreed

with I&E that the normalization period be based on actual historic filing frequency rather than future speculation.[9]

Using the Company's last three base rate case filing dates and the date of the current filing, an average interval was computed to be 85 months ((39 mo. + 197 mo. + 20 mo.) ÷ 3 intervals). The Company's requested 36-month recovery period was not supported by its historic filing record. In contrast, my recommended five years (60 months) normalization period was a reasonable interval to utilize in consideration of NFG's historic filing record. Although the 60-month normalization period was shorter than the Company's actual 85-month filing frequency, my recommendation was in the public interest as it was more realistic than NFG's proposed 36-month period and it moderated the impact of the rate case filing interval of 197 months used in calculating the Company's average historical filing frequency. Thus, I recommended that the claimed three-year recovery period be rejected as it would result in an unreasonable and unsupported increase in rates.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR RATE CASE EXPENSE?

A. Yes. Company witness Anthony T. Formato disagrees with my recommendation that rate case expense be normalized over a five-year or 60-month period.

[9] I&E Statement No. 1, pp. 4-10.

Q. PLEASE SUMMARIZE MR. FORMATO'S RESPONSE.

A. Mr. Formato asserts two of the rate cases used in my calculation are from more than twenty years ago and do not reflect the current business environment. Mr. Formato refers to the direct testimony of Rebecca E. Hillery[10] that the Company's current filing was due to continued inflationary pressures along with accelerated infrastructure replacement and system modernization capital investments where the Company will need to invest approximately $123.9 million in additional gas distribution plant in 2026 and 2027. Mr. Formato states that the average modernization related capital expenditures were $23.8 million from 2017 to 2021 and therefore, the interval between the 2006 base rate case and the 2022 base rate case of 16 years should not carry as much weight as the most recent interval of the base rate case in 2022 and this current proceeding. Finally, Mr. Formato states that the three-year interval is more indicative of the Company's current operating model and its investment plan and should be the basis of the Company's recovery for rate case expense.[11]

[10] NFG Statement No. 1.
[11] NFG Statement No. 3-R, pp. 9-10.

Q. DO YOU AGREE WITH MR. FORMATO'S RESPONSE THAT THE THREE-YEAR NORMALIZATION BASED ON THE COMPANY'S ACCELERATED INFRASTRUCTURE REPLACEMENT AND SYSTEM MODERNIZATION CAPITAL INVESTMENTS AND EXPECTED AND INCREASES IN O&M EXPENSES IS SUFFICIENT?

A. No. As stated in my direct testimony, the Commission has cited the importance of considering the involved utility's history regarding the frequency of rate case filings as an essential element in determining the normalized level of rate case expense for ratemaking purposes.[12] While the Commission allows utilities to normalize this expense, it is not appropriate to do so over a time period that is based on mere speculation of future filings or a simple statement that the Company plans to file another rate case within three years based on accelerated infrastructure replacement and system modernization capital investments and increases in O&M expenses.

Further, as noted above, my recommendation moderated the impact of the rate case filing interval of 197 months used in calculating the Company's average historical filing frequency. This should mitigate Mr. Formato's concern that the interval between the 2006 base rate case and the 2022 base rate case of 16 years should not carry as much weight as the most recent interval

[12] I&E Statement No. 1, p. 5.

Additionally, as stated in my direct testimony, the 2012 PPL Electric Utilities Corporation (PPL) base rate case[13] actually demonstrates that the use of historic filing frequency is more reliable as PPL was granted a 24-month normalization period, but it did not file its next base rate case until March 31, 2015[14] which was 36 months after the 2012 base rate case proceeding. In contrast, I&E's recommendation of 32-months based on historic filing frequency was more accurate.[15]

Q. DOES USING A HISTORIC FILING FREQUENCY CAPTURE CHANGES TO A COMPANY'S RATE CASE FILING INTERVAL?

A. Yes. Through the filing of more frequent or less frequent rate cases, a company's normalization period will naturally align with the current trend in filing history. Since changes in filing frequency are reflected in the historic normalization period, it is unnecessary to base a rate case expense claim on speculation as to when the next filing will occur. Additionally, I referenced seven cases in my direct testimony that support this methodology in determining a company's historic filing frequency.[16]

[13] *PA PUC v. PPL Electric Utilities Corporation*, Docket No. R-2012-2290597, pp. 47-48 (Order Entered December 28, 2012).
[14] *PA PUC v. PPL Electric Utilities Corporation*, Docket No. R-2015-2469275, p. 3 (Order Entered November 19, 2015).
[15] I&E Statement No. 1, p. 8.
[16] I&E Statement No. 1, pp. 9-10.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR RATE CASE EXPENSE?

A. No. I continue to recommend an allowance of $206,400 for rate case expense based on a five-year or 60-month normalization period as the Company's historic filing frequency does not support the claimed three-year normalization period.

NET LABOR EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR NET LABOR EXPENSE.

A. In direct testimony, I recommended an allowance of $40,212,325 for net labor expense, or a reduction of $379,731 ($40,592,056 - $40,212,325) to NFG's claim. My recommendation was based on the removal of the portion of the executive bonus that is attributable to achieving financial goals which serve to primarily benefit shareholders and should not be funded by ratepayers as financial goals do not assist in providing safe and reliable service to ratepayers.[17]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR NET LABOR EXPENSE?

A. Yes. Company witness Michael P. Weidner disagrees with my net labor expense recommendation.

[17] I&E Statement No. 1, pp. 11-13.

Q. SUMMARIZE MR. WEIDNER'S RESPONSE.

A. Mr. Weidner disagrees with my recommendation to remove the portion of executive bonuses attributable to achieving financial goals and targets. Mr. Weidner opines that goals related to achieving financial targets combined with goals that are related to providing safe and reliable service to ratepayers allow executives to manage the Company to provide the best results for ratepayers and are critical to maintain cost-effective access to capital. Mr. Weidner states that the Company's focus on cost savings and financial performance has allowed NFG to avoid filing a base rate case, which he points out was last filed in 2023 where the revenue requirement in the instant proceeding is less than the cost of inflation. Mr. Weidner asserts that incentive-based compensation ensures retention of key personnel, which benefits ratepayers. Mr. Weidner asserts that if there wasn't any form of incentive compensation, the Company would need to increase base salaries. Mr. Weidner also states that only executives have incentive compensation that is partially based on financial performance as it stresses the importance of cost containment thereby benefiting ratepayers. Finally, Mr. Weidner references a Korn Ferry Group report on the Company's compensation package for executives which includes base salary, short-term incentive compensation, and long-term incentive compensation and notes that it is at or below the median compared to other utility and general industry executives which

reinforces the need for incentive compensation consisting of goals related to providing safe and reliable service to ratepayers as well as financial goals.[18]

Q. WHAT IS YOUR RESPONSE TO MR. WEIDNER'S ASSERTIONS?

A. As stated in my direct testimony, the portion of executive bonuses attributable to financial goals serves to primarily benefit shareholders and not ratepayers.[19] Additionally, Mr. Weidner's claim that the achievement of financial goals benefits ratepayers is speculative and unsupported because there are no measurable or quantifiable benefits accruing directly to ratepayers specifically attributable to financial goals.

Therefore, the portion of executive bonuses attributable to financial goals should not be funded by ratepayers. Allowing this claim in rates would result in higher rates and revenues at the expense of ratepayers, while providing a benefit to the parent company and shareholders' financial goals. It is not obvious how the portion of executive bonuses attributable to financial goals directly relates to providing safe and reliable service to ratepayers. Therefore, all costs associated with executive bonuses related to financial goals should be paid for by shareholders, and not by ratepayers, as they are directly linked to the benefit of shareholders.

[18] NFG Statement No. 5-R, pp. 2-7.
[19] I&E Statement No. 1, pp. 10-11.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR NET LABOR EXPENSE?

A. No. I continue to recommend an allowance of $40,212,325 for net labor expense, or a reduction of $379,731 ($40,592,056 - $40,212,325) to NFG's claim based on the removal of the portion of the executive bonus that is attributable to achieving financial goals which serve to primarily benefit shareholders and should not be funded by ratepayers as financial goals do not assist in providing safe and reliable service to ratepayers.

PAYROLL TAXES

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR PAYROLL TAXES.

A. In direct testimony, I recommended an allowance of $2,376,894 for payroll taxes, or a reduction of $22,670 ($2,399,564 - $22,670) to the Company's claim. My recommendation was based on recognition of the net labor expense reduction for my removal of the portion of executive bonuses related to financial goals and on the payroll tax rate applied to the Company's claim.[20]

[20] I&E Statement No. 1, pp. 13-14.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR PAYROLL TAXES?

A. Yes. Company witness Michael P. Weidner disagrees with my payroll tax expense recommendation for the same reasons that he disagrees with my net labor expense recommendation.[21]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR PAYROLL TAXES?

A. No. I continue to recommend an allowance of $2,376,894 for payroll taxes, or a reduction of $22,670 ($2,399,564 - $22,670) to the Company's claim based on recognition of the net labor expense reduction for my removal of the portion of executive bonuses related to financial goals and on the payroll tax rate applied to the Company's claim as calculated in my direct testimony.[22]

STOCK BASED COMPENSATION

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR STOCK BASED COMPENSATION.

A. In direct testimony, I recommended an allowance of $520,678 for stock-based compensation, or a reduction of $909,281 ($1,429,959 - $520,678) to the Company's claim. My recommendation was based on the removal of 95% of the Company's claim for performance shares portion of the Company's claim for

[21] NFG Statement No. 5-R, pp. 2-3 and p. 6.
[22] I&E Statement No. 1, p. 14.

stock-based compensation as 95% of performance shares were based on financial goals which should not be funded by ratepayers as financial goals do not assist in providing safe and reliable service to ratepayers. I also referenced a recent Commission order where the Commission removed 70% of Columbia Gas of Pennsylvania, Inc.'s (Columbia Gas') total incentive compensation claim that was related to financial goals finding that it was not necessary in providing safe and reliable service to ratepayers.[23]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR STOCK-BASED COMPENSATION?

A. Yes. Company witness Michael P. Weidner disagrees with my stock-based compensation recommendation. Mr. Weidner asserts that if there was no form of stock-based compensation, the Company would need to increase base salaries. Mr. Weidner states that restricted stock is used to encourage retention of top performers and avoid costs associated with turnover. Mr. Weidner opines that these performance measures are achieved through cost containment, operational efficiency, and maintaining cost-effective access to capital that are accomplished through financial metrics which benefit ratepayers and should be included in rates.[24]

[23] I&E Statement No. 1, pp. 15-18.
[24] NFG Statement No. 5-R, pp. 7-11

Q. WHAT IS YOUR RESPONSE TO MR. WEIDNER'S ASSERTIONS?

A. As stated in my direct testimony, stock-based compensation being based on achieving financial goals and targets serve primarily to benefit shareholders and should not be funded by the ratepayers as financial goals do not assist in providing safe and reliable service to ratepayers and that the Commission has recently adjusted a company's incentive compensation claim to remove the amount attributable to financial goals.[25]

Mr. Weidner's claim that the achievement of financial goals or targets benefits ratepayers is speculative and unsupported because there are no measurable or quantifiable benefits accruing directly to ratepayers specifically attributable to performance shares.

Therefore, the performance shares in the Company's stock-based compensation claim should not be funded by ratepayers. Allowing this claim in rates would result in higher rates and revenues at the expense of ratepayers, while providing a benefit to the parent company and shareholders' financial goals. It is not obvious how the performance shares attributable to financial goals directly relates to providing safe and reliable service to ratepayers. Therefore, all costs associated with the performance shares that are related to financial goals should be paid for by shareholders, and not by ratepayers, as it is directly linked to the benefit of shareholders.

[25] I&E Statement No. 1, pp. 16-18.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR STOCK-BASED COMPENSATION?

A. No. I continue to recommend disallowance of 95% of the Company's claim for performance shares of $909,281 ($957,138 x 95%) that are based on achieving financial goals and targets that serve primarily to benefit shareholders. This results in a recommended allowance of $520,678 for stock-based compensation, or a reduction of $909,281 ($1,429,959 - $520,678) to the Company's claim.

MEMBERSHIP DUES

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR MEMBERSHIP DUES.

A. In direct testimony, I recommended an allowance of $212,298 for membership dues, or a reduction of $21,968 ($234,266 - $212,298) to the Company's claim. My recommendation was based on disallowing membership dues for civic and community organizations and other membership dues where the Company has not provided adequate support that the membership is necessary to provide safe and reliable service to the Company's ratepayers. My recommended allowance was based on the exclusion of the following membership dues for ratemaking purposes: Erie Downtown Development Corporation ($12,500), Pennsylvania Northwest Development Corp. ($2,813), Edison Electric Institute ($1,842), Common Ground Alliance ($1,250), Erie Club ($1,185), Independent Oil & Gas Association of New York ($693), Pittsburgh Region Clean Cities ($500), Clarion

County Economic Development ($500), Shenango Valley Chamber of Commerce of ($500), and Other of ($185).[26]

I also referenced a recent Commission order where the Commission removed membership dues that were related to chambers of commerce finding that it did not provide a direct benefit to ratepayers and noting that although the referenced Commission order specifically addressed only membership dues related to chambers of commerce, the Commission agreed with the Office of Consumer Advocate's testimony regarding the exclusion of membership dues in rates related to business network advocacy groups, fraternal, social service clubs, and chambers of commerce.[27]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR MEMBERSHIP DUES?

A. Yes. Company witness Anthony T. Formato responded to my membership dues recommendation. Mr. Formato disagrees with my recommendation as he asserts that the membership dues related to economic development and chambers of commerce assist in promoting strong, resilient communities with the Company's service territory and attract and retain new industrial and commercial customers, which allows fixed system costs to be spread over a larger usage base and would help in curbing the upward pressure on rates. Mr. Formato also asserts that participating in these organizations ensures energy infrastructure, safety, and

[26] I&E Statement No. 1, pp. 18-20.
[27] I&E Statement No. 1, pp. 20-21.

reliability considerations are incorporated into local growth planning which reduces long term system risks and costs. Finally, Mr. Formato states that participating in these organizations builds stronger communities, by supporting economic stability and affordable, reliable service over the long term, which benefits the Company, the ratepayers, and the community as a whole.[28]

Q. WHAT IS YOUR RESPONSE TO MR. FORMATO?

A. Mr. Formato did not provide data to support the claim that additional industrial and commercial customers would result in a reduction of costs passed along to residential customers. Additionally, the Company has not adequately supported his argument that memberships related to the various chambers of commerce, economic development corporations, and chambers of business and industry are necessary in providing safe and reliable service to its existing customers. Finally, as stated in my direct testimony, the Commission recently removed membership dues that were related to chambers of commerce finding that it did not provide a direct benefit to ratepayers and agreed with the Office of Consumer Advocate regarding the exclusion of membership dues in rates related to business network advocacy groups, fraternal, social service clubs, and chambers of commerce.[29]

[28] NFG Statement No. 3-R, pp. 8-9.
[29] I&E Statement No. 1, pp. 20-21.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR MEMBERSHIP DUES?

A. No. I continue to recommend an allowance of $212,298 for membership dues, or a reduction of $21,968 ($234,266 - $212,298) to the Company's claim based on disallowing membership dues for civic and community organizations and other membership dues where the Company has not provided adequate support that the membership is necessary to provide safe and reliable service to the Company's ratepayers.

CASH WORKING CAPITAL

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR CASH WORKING CAPITAL (CWC).

A. In direct testimony, I recommended an allowance of $6,643,822 or a decrease of $111,005 ($6,754,827 - $6,643,822) to the Company's claim. My recommendation was based on my adjustments to O&M expenses and I&E's recommended cost of long-term debt ratio of 45% in direct testimony.[30]

Q. DID THE COMPANY RESPOND TO YOUR CWC RECOMMENDATION?

A. Yes. Company witness Monika M. Duszenko disagrees with my O&M adjustments used to determine my cash working capital recommendation.[31]

[30] I&E Statement No. 1, pp. 21-24.
[31] NFG Statement No. 6-R, p. 4.

Q. DID THE COMPANY PROVIDE AN UPDATED CWC CLAIM?

A. Yes. The Company's updated claim for CWC is $6,715,156.[32]

Q. DO YOU HAVE AN UPDATE TO YOUR CWC RECOMMENDATION DUE TO THE I&E RECOMMENDED ADJUSTMENTS TO O&M EXPENSES?

A. Yes. As stated in direct testimony, all O&M expense adjustments that are cash-based expense claims are included when determining the Company's overall CWC requirement. Therefore, I have included cash-based O&M recommendations when computing the overall recommended CWC allowance. I have also included in my updated CWC recommendation I&E's recommended cost of long-term debt ratio of 45%.[33]

Q. SUMMARIZE WHERE EACH OF THE RECOMMENDED O&M EXPENSE ADJUSTMENTS ARE REFLECTED IN THE CWC COMPUTATIONS.

A. The Net Labor Expense adjustment of $379,731 is reflected in the Payroll (Net Labor) Lag Days calculation. The following recommended adjustments are reflected in the Other Expenses (less Uncollectibles and Prepaid Expenses) Lag Days calculation: rate case expense adjustment of $137,600, payroll taxes adjustment of $22,670, stock-based compensation adjustment of $909,281, and

[32] NFG Exhibit A – FPFTY Rebuttal Update, Schedule C-4, p. 1, line 5.
[33] I&E Exhibit No. 1-SR, Schedule 1.

membership dues adjustment of $21,968 as discussed above, producing a total decrease of $1,091,519,[34] which is reflected in I&E Exhibit No. 1-SR, Schedule 1, p. 2.

Summary of I&E-Updated Recommended CWC Allowance

Q. BASED ON THE ABOVE TESTIMONY, WHAT IS YOUR UPDATED RECOMMENDED ALLOWANCE FOR CWC?

A. Based on reflecting all of I&E's recommended adjustments as discussed above, my updated recommendation for CWC is an allowance of $6,604,532 or a decrease of $110,624 ($6,715,156 - $6,604,532) to the Company's updated claim.[35]

Q. IS YOUR UPDATED RECOMMENDATION FOR CWC A FINAL RECOMMENDED ALLOWANCE?

A. No. As stated in my direct testimony, all adjustments to the Company's claims must be continually brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claims.

[34] I&E Exhibit No. 1-SR, Schedule 1, p. 4.
[35] I&E Exhibit No. 1-SR, Schedule 1, p. 1.

ENERGY EFFICIENCY PILOT PROGRAM

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR THE COMPANY'S ENERGY EFFICIENCY (EE) PILOT PROGRAM.

A. In direct testimony, I did not oppose the Company's proposal to establish and implement an EE plan in this proceeding, however, I recommended that the Company submit an annual report on the EE Pilot three months after the close of the program year. The annual report would include information from activity from the previous program year and progress towards the Company's goals for the remaining years of the EE Pilot. The information to be included in the annual report would also include, but not be limited to, savings (cost and Mcf), participation (by number of customers and type of rebate), spending, cost-effectiveness, highlights of portfolio and program activity, and updates to program delivery and design. Additionally, the annual report would include the above information broken down for low-income customers as well as the number of referrals made to LIURP and the number of referrals to LIURP that received LIURP services as a result of participating in the EE pilot.[36]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION FOR THE COMPANY'S PROPOSED EE PLAN?

A. Yes. Company witness Erik M. Solomon responded to my recommendation.

[36] I&E Statement No. 2, pp. 28-32.

Q. SUMMARIZE MR. SOLOMON'S RESPONSE.

A. Mr. Solomon states that the Company supports reasonable reporting requirements as it promotes transparency, accountability, and Commission visibility into the program's performance. Mr. Solomon also states that the reporting requirements should be related to the scale and nature of the EE Pilot. Mr. Solomon states the Company agrees with my recommendations regarding the tracking of low-income tracking and referral reporting and annual reporting on the EE Pilot as long as the reporting requirements are clearly defined and limited to information needed to evaluate the EE Pilot's performance. Finally, Mr. Solomon states that the Commission should adopt the reporting requirements that are consistent with my recommendation if they are not overly burdensome, duplicative, or inconsistent with the purpose of the EE Pilot.[37]

Q. WHAT IS YOUR RESPONSE TO MR. SOLOMON?

A. I agree with Mr. Solomon that the annual reporting requirements should not be burdensome, duplicative, or inconsistent with the purpose of the EE Pilot as the purpose of the annual reporting is to evaluate the EE Pilot's performance. I believe that my recommendation would be useful in evaluating the EE Pilot's performance and assist in making potential adjustments to the EE Pilot in the future.

[37] NFG Statement No. 18, pp. 8-11.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes. However, I reserve the right to supplement my testimony or to revise recommendations if additional issues or facts arise during this proceeding.

OVERALL RATE OF RETURN RECOMMENDATION **54**

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Drew Breuning. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. SUMMARIZE YOUR EDUCATION AND EMPLOYMENT HISTORY.

A. An outline of my education and employment history is attached as Appendix A.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to review the base rate filing of National Fuel Gas Distribution Corporation (NFG or Company) and make recommendations regarding the Company's rate of return, including capital structure, cost of long-term debt, the cost of equity, and the overall fair rate of return for the fully projected future test year (FPFTY) ending October 31, 2027.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 2 contains schedules that support my direct testimony.

BACKGROUND

Q. WHAT IS THE GENERAL DEFINITION OF RATE OF RETURN IN THE CONTEXT OF A BASE RATE CASE?

A. Rate of return is one of the components of the revenue requirement formula. Rate of return is the amount of revenue an investment generates in the form of net income. It is typically expressed as a percentage of the amount of an asset base at a particular point in time, which in base rate proceedings, is the projected rate base balance at the end of the test year.

Q. WHAT IS THE REVENUE REQUIREMENT FORMULA?

A. The revenue requirement formula used in base rate cases is as follows:

RR = E + D + T + (RB x ROR)

Where:

RR	=	Revenue Requirement
E	=	Operating Expenses
D	=	Depreciation Expense
T	=	Taxes
RB	=	Rate Base
ROR	=	Overall Rate of Return

In the above formula, the rate of return is expressed as a percentage. The calculation of that percentage is independent of the determination of the appropriate rate base value for ratemaking purposes. As such, the appropriate total dollar return is dependent upon the proper computation of the rate of return and the proper valuation of the company's rate base.

Q. WHAT CONSTITUTES A FAIR AND REASONABLE OVERALL RATE OF RETURN?

A. A fair and reasonable overall rate of return is one that will allow the utility an *opportunity* to recover those costs prudently incurred by all classes of capital used to finance the rate base during the prospective period in which its rates will be in effect. The Commission has the authority to determine the fair revenue

requirement and rate of return, which the utility has the opportunity to earn, but is not guaranteed to earn.

The *Bluefield Water Works & Improvements Co. v. Public Service Comm. of West Virginia,* 262 U.S. 679, 692-93 (1923), and the *Federal Power Commission et al v. Hope Natural Gas Co.,* 320 U.S. 591, 603 (1944) cases set forth the principles that are generally accepted by regulators throughout the country as the appropriate criteria for measuring a fair rate of return:

1. A utility is entitled to a return similar to that being earned by other enterprises with corresponding risks and uncertainties, but not as high as those earned by highly profitable or speculative ventures.
2. A utility is entitled to a return level reasonably sufficient to assure financial soundness.
3. A utility is entitled to a return sufficient to maintain and support its credit and raise necessary capital.
4. A fair return can change (increase or decrease) along with economic conditions and capital markets.

Q. EXPLAIN HOW THE OVERALL RATE OF RETURN IS TRADITIONALLY CALCULATED IN BASE RATE PROCEEDINGS.

A. In base rate proceedings, the overall rate of return is traditionally calculated using the weighted average cost of capital method. To calculate the weighted average cost of capital, a company's capital structure must first be determined by

comparing the percentage of each capitalization component, which has financed rate base, to total capital. Next, the effective cost rate of each capital structure component must be determined. The historical component of the cost rate of debt can be computed accurately, and any future debt issuances are based on estimates. The cost rate of common equity is not fixed and is more difficult to measure. Because of this difficulty, a proxy group is used as discussed later in this testimony. Next, each capital structure component percentage is multiplied by its corresponding effective cost rate to determine the weighted capital component cost rate. The I&E table in the *"I&E Position"* section below demonstrates the interaction of each capital structure component and its corresponding effective cost rate. Finally, the sum of the weighted cost rates produces the overall rate of return. This overall rate of return is multiplied by the rate base to determine the return portion of a company's revenue requirement.

COMPANY'S RATE OF RETURN CLAIM

Q. WHO IS THE COMPANY'S RATE OF RETURN WITNESS?

A. Joshua C. Nowak, Vice President at Concentric Energy Advisors, Inc., is the primary witness addressing rate of return and cost of common equity for NFG (NFG Statement No. 10). Additionally, James C. Welch (NFG Statement No. 11) provides testimony regarding the Company's cost of long-term debt and analysis for the claimed capital structures. Finally, Rebecca E. Hillery, Managing Director

of Rates and Regulatory Affairs for NFG, provides testimony regarding the Company's "Management Performance" claims (NFG Statement No. 1).

Q. PLEASE SUMMARIZE THE COMPANY'S RATE OF RETURN CLAIMS.

A. Mr. Nowak recommends the following rate of return for the Company based on the FPFTY ending October 31, 2027:[1]

Company			
Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost**
National Fuel Gas Distribution Corporation			
Long-Term Debt	43.60%	5.58%	2.44%*
Common Equity	56.40%	11.25%	6.34%*
Total	100.00%		8.78%

*Rounding error. Correct figures are 2.43% and 6.35%.

I&E POSITION

Q. PLEASE SUMMARIZE YOUR RATE OF RETURN RECOMMENDATION.

A. I recommend the following rate of return for the Company:[2]

[1] NFG Statement No. 10, p. 55, line 18.
[2] I&E Exhibit No. 2, Schedule 1.

I&E			
Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost**
National Fuel Gas Distribution Corporation			
Long-Term Debt	45.00%	5.58%	2.51%
Common Equity	55.00%	9.81%	5.40%
Total	100.00%		7.91%

Q. HOW HAVE YOU CALCULATED YOUR RECOMMENDED RETURN ON EQUITY?

A. My recommended return on equity of 9.81% is based on the average of the following results:

DCF Result	10.47%
Average of I&E Calculated CAPM Result and Kroll CAPM Result	9.25%
National Average of Natural Gas Distribution Authorized ROEs from S&P Global	9.70%
Average*	**9.81%**

*(10.47% + 9.25% + 9.70%) / 3 = 9.81%

As explained in further detail below, my return on equity recommendation is calculated using the DCF method, the average of two variations of the CAPM method, and the recent national average authorized return on equity for rate cases involving natural gas distribution utilities.

PROXY GROUP

Q. WHAT IS A PROXY GROUP AS USED IN BASE RATE CASES?

A. A proxy group is a set of companies that have similar traits in comparison to the subject utility. This group of companies acts as a benchmark for determining the subject utility's rate of return in a base rate case.

Q. WHAT ARE THE REASONS FOR USING A PROXY GROUP?

A. A proxy group's cost of equity is used as a benchmark to satisfy the long-established guideline of utility regulation that seeks to provide the subject utility with the opportunity to earn a return similar to that of enterprises with corresponding risks and uncertainties.

A proxy group is typically employed since the use of data exclusively from one company may be less reliable. The lower reliability occurs because the data for one company may be subject to events that can cause short-term anomalies in the marketplace. The rate of return on common equity for a single company could become distorted in these circumstances and would therefore not be representative of similarly situated companies. A proxy group has the effect of smoothing out potential anomalies associated with a single company.

Q. WHAT CRITERIA DID YOU USE IN SELECTING YOUR UTILITY PROXY GROUP?

A. The criteria for my proxy group was designed to select companies that are representative of the Company. I applied the following criteria to Value Line's "Natural Gas Utility" company group:

1. Fifty percent or more of the company's revenues must be generated from the regulated gas utility industry.
2. The company's stock must be publicly traded.
3. Investment information for the company must be available from more than one source, which includes Value Line.
4. The company must not be currently involved in an announced merger or the target of an acquisition.
5. The company must have four consecutive years of historic earnings data.
6. The company must be operating in a state that has a deregulated natural gas utility market.

Q. WHAT CRITERIA DID MR. NOWAK USE IN SELECTING HIS NATURAL GAS PROXY GROUP COMPANIES?

A. Mr. Nowak determined his proxy group of seven natural gas companies by using the following criteria:[3]

1. The company must consistently pay quarterly cash dividends.

[3] NFG Statement No. 10, p. 24, line 14 through p. 25, line 7.

2. The company must have an investment-grade long-term issuer rating (BBB- or higher) from S&P.

3. The company must be consistently covered by more than one utility industry equity analyst.

4. The company must have positive earnings growth rates from at least two sources.

5. The company's regulated net operating income makes up more than 50 percent of the consolidated company's regulated net operating income, on average, over the three years ended 2024.

6. The company's regulated net operating income from regulated natural gas distribution makes up more than 60 percent of the consolidated company's regulated net operating income, on average, over the three years ended 2024.

7. The company must not be involved in merger activity or other transformative transaction.

Q. WHAT PROXY GROUP DID YOU USE IN YOUR ANALYSIS?

A. I include the following six companies in my proxy group:[4]

Atmos Energy Corporation	ATO
Chesapeake Utilities Corp.	CPK
New Jersey Resources Corporation	NJR
NiSource Inc.	NI
Northwest Natural Holding Company	NWN
ONE Gas, Inc.	OGS

Q. WHAT PROXY GROUP DID MR. NOWAK USE IN HIS ANALYSIS?

A. Mr. Nowak included the following seven companies in his proxy group:[5]

Atmos Energy Corporation	ATO
New Jersey Resources Corporation	NJR
NiSource Inc.	NI
Northwest Natural Holding Company	NWN
ONE Gas, Inc.	OGS
Southwest Gas Holdings, Inc.	SWX
Spire, Inc.	SR

Q. DO YOU AGREE WITH MR. NOWAK'S PROXY GROUP?

A. Not entirely. While we do have five companies that match, I include one company that Mr. Nowak does not, and Mr. Nowak includes two companies that I do not.

[4] I&E Exhibit No. 2, Schedule 2.
[5] NFG Statement No. 10, p. 25, line 12.

Q. PLEASE IDENTIFY THE COMPANIES MR. NOWAK HAS INCLUDED THAT YOU DO NOT AND EXPLAIN WHY YOU HAVE EXCLUDED THEM FROM YOUR PROXY GROUP.

A. I have excluded Southwest Gas Holdings, Inc. (SWX) and Spire, Inc. (SR) from my proxy group.

Q. MR. NOWAK HAS INCLUDED SOUTHWEST GAS HOLDINGS, INC. IN HIS PROXY GROUP AND YOU DID NOT. PLEASE EXPLAIN.

A. I have excluded SWX from my proxy group, as this company did not meet my first criterion that fifty percent or more of the company's revenues must be generated from the regulated gas utility industry. SWX generates only 48.42% of its revenue from its regulated gas utility. This is important because revenues represent the percentage of cash flow a company receives from each business line related to providing a good or service. If less than fifty percent of revenues come from the regulated gas sector, the company is not comparable to the subject utility and does not provide a similar level of regulated business. Therefore, I did not include SWX in my proxy group.

Q. MR. NOWAK HAS INCLUDED SPIRE, INC. IN HIS PROXY GROUP AND YOU DID NOT. PLEASE EXPLAIN.

A. I have excluded SR from my proxy group, as this company did not meet my fourth criterion that a company must not currently be involved in a significant merger or acquisition at the time of my analysis.

On July 29, 2025, Spire, Inc. announced that they would purchase Piedmont Natural Gas Co., Inc. for $2.5 billion, a deal which is expected to close in the first quarter of 2026.[6] A company's involvement in a major transaction such as this can artificially and temporarily impact its financial metrics, which could influence the results of the proxy group. Therefore, I did not include SR in my proxy group, and I do not agree with Mr. Nowak's assertion that SR's acquisition does not have a transformative effect on the company.

Mr. Nowak also opines that "Since the announcement in July 2025, there has been no meaningful change in SR's stock price performance relative to other utility companies".[7] However, from the announcement of the acquisition on July 29, 2025, until March 19, 2026, Spire, Inc.'s stock price has seen a significantly larger increase than the remainder of Mr. Nowak's proxy group. His proxy group without SR saw an average stock price increase of 16.36% over this span, while SR grew 25.64%.[8] In summary, SR's stock price grew 56.7% ((25.64% - 16.36%)

---

6 Spire Inc. to acquire Business of Piedmont Natural Gas Company, Inc. (MI Deal Key: 2161177; SPCIQ TRANSACTION ID: 1954963159) | Deal Profile https://www.capitaliq.spglobal.com/apisv3/spg-webplatform-core/mna/dealOverview?Id=2161177

7 NFG Statement No. 10, p. 26, lines 7-9.

8 I&E Exhibit No. 2, Schedule 3.

÷ 16.36%) more than did the average of the proxy group during the same period, which I believe to be a significant amount. Therefore, I maintain my position that SR is an inappropriate inclusion in Mr. Nowak's proxy group.

CAPITAL STRUCTURE

Q. WHAT IS A CAPITAL STRUCTURE?

A. A capital structure represents how a firm has financed its rate base with different sources of funds. The primary funding sources are long-term debt and common equity. A capital structure may also include preferred stock and/or short-term debt, which is not the case for the Company.

Q. WHAT IS THE CLAIMED CAPITAL STRUCTURE USED BY THE COMPANY?

A. The Company is proposing a forecasted capital structure which is summarized in the table below:[9]

Type of Capital	Ratio
Long-Term Debt	43.60%
Common Equity	56.40%
Total	**100.00%**

[9] NFG Statement No. 10, p. 54, lines 15-18.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIMED CAPITAL STRUCTURE?

A. Mr. Nowak relies on Mr. Welch's analysis, which explains that the claimed capital structure is based on the Company's current projected capital structure at the end of the FPFTY ending October 31, 2027.[10] Further, Mr. Nowak claims the common equity ratio claimed by the Company is appropriate and consistent with the range of common equity ratios maintained by the operating utility subsidiaries of his proxy group.[11]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S CAPITAL STRUCTURE?

A. I recommend using a capital structure of 55% common equity and 45% long-term debt.

Q. WHAT IS THE BASIS FOR YOUR CAPITAL STRUCTURE RECOMMENDATION?

A. It is my opinion that the Company's proposed capital structure is unreasonable for ratemaking purposes. The Company's proposed capital structure falls close to the highest end of the range of my proxy group's 2024 (most recent available) capital structures, where the most recent five-year average range contains individual

[10] NFG Statement No. 11, p. 5, lines 1-4.
[11] NFG Statement No. 10, p. 55, lines 1-10.

company capital structure ratios from 39.53% to 58.23% long-term debt and 36.62% to 60.47% equity, with an overall five-year average of 50.40% long-term debt and 48.70% common equity.[12] NFG's proposed equity percentage of 56.40% is considerably higher than the proxy group's average equity percentage of 48.70%.

Q. WHY HAVE YOU LIMITED THE EQUITY RATIO PORTION OF THE CAPITAL STRUCTURE IN YOUR ANALYSIS TO 55%?

A. I believe that limiting a company's capital structure from becoming too equity heavy is reasonable and necessary for a fair ratemaking process. Implementing a capital structure that is closer to 50% long-term debt and 50% common equity is commonly considered optimal when trying to balance the financial integrity of a utility and its impact on ratepayers. While it is not always possible to have a capital structure that is exactly 50/50, implementing a limit helps strike a balance between rewarding the company for carrying more equity while also reducing the costs that would be passed on to ratepayers. For that reason, it is my opinion that the Company's capital structure should not exceed 55% equity.

[12] I&E Exhibit No. 2, Schedule 4.

Q. HAS THE COMMISSION COMMENTED ON NFG'S CURRENT CAPITAL STRUCTURE?

A. Yes. Commissioner Barrow expressed particular concern regarding the financial impact on customers in relation to equity heavy capital structures. She states, "… I urge the parties to take a critical look at the Company's requested rate of return and return on equity (ROE) as well as the capital structure (common equity ratio and debt capital) to ensure reasonableness. Deviations in each of these items translate into millions of dollars charged to customers of all rate classes."[13]

Additionally, Commissioner Barrow previously commented on Columbia Gas' recently requested capital structure of 54.4% equity and 45.6% debt. The Office of Consumer Advocate and the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania argued in favor of a hypothetical 50/50 capital structure, citing their proxy group's average capital structure was 45% equity and 55% debt. Commissioner Barrow stated that the discrepancy between the proxy group and Columbia Gas' capital structure makes it necessary for an adjustment to the Company's capital structure, and that a 50/50 capital structure "is a better representation of the Company's **actual** financial risk and would have resulted in millions of dollars in reduced revenue requirement for the Company and resultant lower rates for Columbia Gas' customers."[14]

[13] I&E Exhibit No. 2, Schedule 5.
[14] I&E Exhibit No. 2, Schedule 6.

Q. WHAT IS THE RECENT NATIONAL AVERAGE AUTHORIZED CAPITAL STRUCTURE FOR GAS DISTRIBUTION UTILITIES ACROSS THE U.S.?

A. According to data gathered from S&P Global Market Intelligence, the average authorized equity ratio for natural gas distribution cases in the United States from January 2025 to March 2026 was 51.62%.[15]

Q. HAVE YOU CONSIDERED WHAT CAPITAL STRUCTURES ARE PROJECTED TO BE FOR THE NATURAL GAS UTILITY INDUSTRY IN THE NEAR FUTURE?

A. Yes. According to Value Line's 2027 estimates, the projected capital structures for my proxy group companies are as follows:

Value Line 2027 Capital Structure Projections

		Long-Term Debt Ratio	Common Equity Ratio
Atmos Energy Corp	ATO	40.00%	60.00%
Chesapeake Utilities	CPK	48.50%	51.50%
New Jersey Resources Corp	NJR	55.50%	44.50%
Nisource Inc	NI	55.00%	45.00%
Northwest Natural	NWN	55.00%	45.00%
ONE Gas Inc.	OGS	44.00%	56.00%
Average		49.67%	50.33%

These future projections are consistent with the proxy group's historical five-year average capital structure of 48.70% equity and 50.40% debt.

[15] I&E Exhibit No. 2, Schedule 7.

NFG's claimed capital structure of 56.40% equity and 43.60% debt is considerably more equity-heavy than the proxy group's five-year averages, Value Line's 2027 projections, and the recent national authorized capital structures for natural gas distribution utilities. This equity-heavy capital structure must be recognized when considering NFG's financial risk, as higher equity ratios generally correspond with lower financial risk as Mr. Nowak himself concedes. He agrees that all other things being equal, a company with a higher equity ratio faces less financial risk than a company with a lower equity ratio.[16]

For consideration when examining the Company's overall financial risk, the table below illustrates the cost savings to ratepayers if the Company were to employ an optimal 50% long-term debt and 50% common equity capital structure in its cost of capital while maintaining its claimed return on equity and rate base:

[16] I&E Exhibit No. 2, Schedule 8.

National Fuel Gas Distribution Corporation			
Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost**
AS FILED CAPITAL STRUCTURE			
Long-Term Debt	43.60%	5.58%	2.43%
Common Equity	56.40%	11.25%	6.35%
Total	100.00%		8.78%
50/50 OPTIMAL CAPITAL STRUCTURE			
Long-Term Debt	50.00%	5.58%	2.79%
Common Equity	50.00%	11.25%	5.63%
Total	100.00%		8.42%
Difference In The Overall Rate of Return (8.78% - 8.42% = 0.36%)			0.36%
Impact Prior to Gross Up (Claimed Rate Base* x Difference In The Overall Rate of Return) ($571,582,000 x .0036)			$2,057,695
Gross Revenue Conversion Factor**			1.3899
Total Impact To Ratepayers ($2,057,695 x 1.3899)			**$2,859,991**
*NFG Exhibit A, Schedule A-1, Line 9. **NFG Exhibit A, Schedule A-1, Line 25.			

In this example, if the Company were to employ a 50/50 capital structure and no change to the cost of debt or requested return on equity, the cost savings to ratepayers would be $2,859,991. While I understand that achieving and maintaining an exact 50/50 capital structure is not always feasible, this example is intended to demonstrate NFG's financial security as compared to its peers.

COST OF LONG-TERM DEBT

Q. WHAT IS THE COMPANY'S CLAIMED COST RATE OF LONG-TERM DEBT?

A. The Company's claimed long-term debt cost rate is 5.58% for the FPFTY.[17]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S COST RATE OF LONG-TERM DEBT?

A. I recommend using the Company's claimed long-term debt cost rate of 5.58% for the FPFTY.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION TO USE THE COMPANY'S COST RATES OF LONG-TERM DEBT?

A. I accept NFG's claimed debt cost because it falls within my proxy group's implied long-term debt cost range of 2.54% to 6.49%, with an average implied long-term debt cost of 4.69% for 2024.[18] The Company's cost rate of long-term debt is also below the Mergent Bond Record average yield of 5.76% for the period of February 2025 through January 2026 for A-rated public utility bonds.[19] I recommend that the Company's claimed cost rate of long-term debt be used since it is reasonable and falls within the metrics described above.

[17] NFG Statement No. 11, p. 8, lines 4-6.
[18] I&E Exhibit No. 2, Schedule 9.
[19] I&E Exhibit No. 2, Schedule 10.

COST OF COMMON EQUITY

Common Methods

Q. WHAT METHODS ARE COMMONLY PRESENTED BY UTILITIES IN DETERMINING THE COST OF COMMON EQUITY?

A. Four methods commonly presented to estimate the cost of common equity are the Discounted Cash Flow (DCF) Method, the Capital Asset Pricing Model (CAPM), the Risk Premium (RP) Method, and the Comparable Earnings (CE) Method.

Q. WHAT IS THE THEORETICAL BASIS FOR THE DCF METHOD?

A. The DCF method is the "dividend discount model" of financial theory, which maintains that the value (price) of any security or commodity is the discounted present value of all future cash flows. The DCF method assumes that investors evaluate stocks in the traditional economic framework, which maintains that the value of a financial asset is determined by its earning power, or its ability to generate future cash flows. The DCF method is also considered a forward-looking model to estimate the cost of common equity.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CAPM?

A. The CAPM describes the relationship between a stock's investment risk and its market rate of return. It identifies the rate of return investors expect so that it is comparable with returns of other stocks of similar risk. This method hypothesizes that the investor-required return on a company's stock is equal to the return on a

"risk free" asset plus an equity premium reflecting the company's investment risk. In the CAPM, two types of risk are associated with a stock: (1) firm-specific risk (unsystematic risk); and (2) market risk (systematic risk), which is measured by a firm's beta. The CAPM allows for investors to receive a return only for bearing systematic risk. Unsystematic risk is assumed to be diversified away, and therefore, does not earn a return.

Q. WHAT IS THE THEORETICAL BASIS FOR THE RP METHOD?

A. The theoretical basis for the RP method is a simplified version of the CAPM. The RP method's theory is that common stock is riskier than debt, thus, investors require a higher expected return on stocks than bonds. In the RP approach, the cost of equity is made up of the cost of debt and a risk premium. While the CAPM uses the market risk premium, it also directly measures the systematic risk of a company group through the use of beta. The RP method does not measure the specific risk of a company.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CE METHOD?

A. The CE method utilizes the concept of opportunity cost. This means that investors will likely dedicate their capital to the investment offering the highest return with similar risk to alternative investments. Unlike the DCF, CAPM, and the RP methods, the CE method is not market-based and relies upon historic accounting data. Similar to the RP method, the CE method does not measure the specific risk

of a company. The most problematic issue with the CE method is determining what constitutes comparable companies.

Q. WHAT METHODS DO YOU RECOMMEND USING TO DETERMINE AN APPROPRIATE COST OF COMMON EQUITY FOR THE COMPANY?

A. I recommend using a combination of methods to determine the appropriate cost of common equity. I have employed the DCF, two versions of the CAPM, and have incorporated the recent average national authorized return on equity for gas distribution companies. I have used the DCF and CAPM because they have the most wide-spread regulatory acceptance, and the Commission has more recently based its ROE decisions on a combination of the DCF and CAPM methods. Additionally, the average authorized returns for gas distribution utilities from across the nation in rate case decisions should be considered, as it aligns with the guidance derived from the *Hope* and *Bluefield* cases that the subject utility is entitled to a return similar to that being earned by comparable enterprises.

Q. PLEASE EXPLAIN WHY YOU CHOSE TO USE THE DCF IN YOUR ANALYSIS TO HELP DETERMINE YOUR RECOMMENDED RETURN ON EQUITY.

A. I have used the DCF for a variety of reasons. First, the DCF is appealing to investors as it is based upon the concept that the receipt of dividends in addition to the expected appreciation is the total return requirement determined by the

market.[20] Second, the use of a growth rate and expected dividend yield are also strengths of the DCF, as this recognizes the time value of money and is forward-looking. Third, the use of the utility's own, or in this case, the proxy group's stock prices and growth rates directly in the calculation makes the DCF industry and company specific. Finally, current inflationary and economic trends are most certainly reflected in a stock's price, which is used in determining the dividend yield, and by analysts who generate forecasted earnings growth rates. Therefore, the DCF contains the most up-to-date projected information of any model and is the superior method for determining the rate of return for the current economic market because it measures the cost of equity directly.

Q. PLEASE EXPLAIN WHY YOU CHOSE TO USE THE CAPM IN YOUR ANALYSIS TO HELP DETERMINE YOUR RECOMMENDED RETURN ON EQUITY.

A. I have included a CAPM analysis in my recommendation as it has been the Commission's recent desire to employ more than one ROE methodology. I chose to use both the CAPM and the DCF because they include inputs that allow the results to be specific to the utility industry. The CAPM is based on the performance of U.S. Treasury bonds and the performance of the market as measured through the S&P 500 and is company-specific only through the use of beta. Beta reflects a stock's volatility relative to the overall market, thereby

[20] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2020 Edition, p. 153.

incorporating an industry-specific aspect to the CAPM, but only as a measure of how reactive the industry is compared to the market as a whole. Although changes in the utility industry are more likely to be accurately reflected in the DCF, which uses the companies' actual prices, dividends, and growth rates, I have also included the results of my CAPM analysis because changes in the market, whether as a whole or specific to the utility industry, can affect the outcome of each method in different ways. Although I have provided an analysis and included the results of the CAPM in my recommendation, it does have several disadvantages that should be considered.

Q. EXPLAIN THE DISADVANTAGES OF THE CAPM.

A. The CAPM, and the RP method by virtue of its similarities to the CAPM, give results that indicate to an investor what the equity cost rate should be if current economic and regulatory conditions are the same as those present during the historical period in which the risk premiums were determined. This is because beta, which is the only company-specific variable in the CAPM model, measures the *historical* volatility of a stock compared to the *historical* overall market return. Reliance on historical values is especially problematic now given the recent events that have impacted economic conditions. Although the CAPM and RP results can be useful to investors in making rational buy and sell decisions within their portfolios, the DCF method is the superior method for determining the rate of return for the current economic market and measuring the cost of equity directly.

The CAPM, and similarly the RP method, are less reliable indicators because they measure the cost of equity indirectly and risk premiums vary depending on the debt and equity being compared. Additionally, regulators can never be certain that economic and regulatory conditions underlying the historical period during which the risk premiums were calculated are the same today or will be the same in the future.

Q. IS THERE ANY ACADEMIC EVIDENCE THAT QUESTIONS THE CREDIBILITY OF THE CAPM MODEL?

A. Yes. An article, "Market Place; A Study Shakes Confidence in the Volatile-Stock Theory," which appeared in the *New York Times* on February 18, 1992, summarized a CAPM study conducted by professors Eugene F. Fama and Kenneth R. French.[21] Their study examined the importance of beta, CAPM's risk factor, in explaining returns on common stock. In CAPM theory, a stock with a higher beta should have a higher expected return. However, they found that the model did not do well in predicting actual returns and suggested the use of more elaborate multi-factor models.

A more recent article, "The Capital Asset Pricing Model: Theory and Evidence," which appeared in the *Journal of Economic Perspectives,* states that "the attraction of the CAPM is that it offers powerful and intuitively pleasing

[21] Berg, Eric N. "Market Place; A Study Shakes Confidence in the Volatile-Stock Theory," *The New York Times*, February 18, 1992, *nytimes.com*, March 23, 2016.

predictions about how to measure risk and the relation between expected return and risk. Unfortunately, the empirical record of the model is poor - poor enough to invalidate the way it is used in applications."[22]

Q. PLEASE EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE RP METHOD FROM YOUR ANALYSIS.

A. The RP method is excluded because it is a simplified version of the CAPM and is subject to the same faults explained above. The RP method has a number of underlying assumptions and the most critical one, as well as the most disputed one, is the assumption that the equity risk premium is constant over the time.[23] More importantly, unlike the CAPM, the RP method does not recognize company-specific risk through beta.

Q. EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE CE METHOD IN YOUR ANALYSIS.

A. The CE method is excluded because the choice of which companies are comparable is highly subjective, and it is debatable whether historic accounting values are representative of the future. Moreover, its historical usage in this regulatory forum has been minimal.

SUMMARY OF THE COMPANY'S RESULTS

Q. WHAT ARE THE RESULTS OF THE COMPANY'S COST OF EQUITY ANALYSIS?

A. Mr. Nowak used the DCF, the CAPM, and the Bond Yield Plus Risk Premium (BYPRP) methods in analyzing the Company's cost of equity. Mr. Nowak applied these methods using his proxy group of regulated natural gas utilities. He then listed the median and mean results for each method, as well as the average of the median results and the average of the mean results. Finally, Mr. Nowak opines that the cost of equity should be increased by 25 basis points to recognize NFG's management performance. Ultimately, Mr. Nowak's models determined a cost of equity range of 10.30% to 11.30% and opined that a cost of equity of 11.25% is warranted.[24]

I&E RECOMMENDATION

Q. WHAT IS YOUR RECOMMENDED COST OF COMMON EQUITY FOR THE COMPANY?

A. Based upon my analysis, I recommend a cost of common equity of 9.81%.[25]

[24] NFG Statement No. 10, p. 3, line 8 through p. 4, line 10.
[25] I&E Exhibit No. 2, Schedule 1.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. As thoroughly explained above and discussed in further detail below, my recommendation is based on the use of the DCF, two versions of the CAPM, and the recent average national authorized return on equity for gas distribution companies.

Discounted Cash Flow

Q. PLEASE EXPLAIN YOUR DCF ANALYSIS.

A. My analysis employs the constant growth DCF model as portrayed in the following formula:

$$K = D_1/P_0 + g$$

Where:

K	=	Cost of equity
D_1	=	Dividend expected during the year
P_0	=	Current price of the stock
g	=	Expected growth rate

When a forecast of D_1 is not available, D_0 (the current dividend) must be adjusted by one half of the expected growth rate to account for changes in the dividend paid in period one. As forecasts for each company in my proxy group were available from Value Line, no dividends were adjusted for the purpose of my analysis.

Q. PLEASE EXPLAIN HOW YOU DEVELOPED THE DIVIDEND YIELDS USED IN YOUR DCF ANALYSIS.

A. A representative dividend yield must be calculated over a time frame that avoids the problems of both short-term anomalies and stale data series. For my DCF analysis, the dividend yield calculation places equal emphasis on the most recent spot and the 52-week average dividend yields. The following table summarizes my dividend yield computations for the proxy group:[26]

Proxy Group Dividend Yields	
Spot	3.07%
52-week Average	3.37%
Average	**3.22%**

Q. WHAT INFORMATION DID YOU RELY UPON TO DETERMINE YOUR EXPECTED GROWTH RATE?

A. I have used five-year earnings per share projected growth rate estimates from S&P, Zacks, and Value Line.

[26] I&E Exhibit No. 2, Schedule 11.

Q. WHAT WERE THE RESULTS OF YOUR FORECASTED EARNINGS GROWTH RATES?

A. The expected average growth rates for my proxy group ranged from 5.75% to 8.08% with an overall average of 7.25%.[27]

Q. WHAT IS THE RESULT OF YOUR DCF ANALYSIS BASED ON YOUR RECOMMENDED DIVIDEND YIELD AND GROWTH RATE?

A. The results of my DCF analysis are calculated as follows:[28]

K	=	D_1/P_0	+	g
10.47%	=	3.22%	+	7.25%

<u>Capital Asset Pricing Model</u>

Q. PLEASE EXPLAIN YOUR CAPM ANALYSIS.

A. My analysis employs the traditional CAPM as portrayed in the following formula:

$$K = R_f + \beta(R_m - R_f)$$

Where:

K = Cost of equity

R_f = Risk-free rate of return

[27] I&E Exhibit No. 2, Schedule 12.
[28] I&E Exhibit No. 2, Schedule 13.

R_m	=	Expected rate of return on the overall stock market
β	=	Beta measures the systematic risk of an asset
$R_m - R_f$	=	Equity Risk Premium (ERP)

Q. WHAT IS BETA AS EMPLOYED IN YOUR CAPM ANALYSIS?

A. Beta is a measure of the systematic risk of a stock in relation to the rest of the stock market. A stock's beta is estimated by calculating the linear regression of a stock's return against the return on the overall stock market. The beta of a stock with a price pattern identical to that of the overall stock market will equal one. A stock with a price movement that is greater than the overall stock market will have a beta that is greater than one and would be described as having more investment risk than the market. Conversely, a stock with a price movement that is less than the overall stock market will have a beta of less than one and would be described as having less investment risk than the overall stock market.

Q. HOW DID YOU DETERMINE BETA FOR YOUR CAPM ANALYSIS?

A. In estimating an equity cost rate for my proxy group companies, I used the average of the betas for the companies as provided in the Value Line Investment Survey. The average beta for my proxy group is 0.78.[29]

[29] I&E Exhibit No. 2, Schedule 14.

Q. WHAT RISK-FREE RATE OF RETURN HAVE YOU USED FOR YOUR CAPM ANALYSIS?

A. I used the risk-free rate of return (R_f) from the projected yield on 10-year Treasury Notes. While the yield on the short-term T-Bill is a more theoretically correct parameter to represent a risk-free rate of return, it can be extremely volatile. The volatility of short-term T-Bills is directly influenced by Federal Reserve policy. At the other extreme, the 30-year Treasury Bond exhibits more stability but is not risk-free. Long-term Treasury Bonds have substantial maturity risk associated with market risk and the risk of unexpected inflation. Long-term treasuries normally offer higher yields to compensate investors for these risks. As a result, I used the yield on the 10-year Treasury Note because it mitigates the shortcomings of the other two alternatives. Additionally, the Commission has historically agreed with I&E and recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return.[30]

The forecasted yield on the 10-year Treasury Note, as seen in Blue Chip Financial Forecasts, remains steady at 4.20% from the second quarter of 2026 to the second quarter of 2027, and it is forecasted to remain at 4.20% from 2027-

[30] *Pa. PUC v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 99; *Pa. PUC v. Aqua Pennsylvania, Inc.*, Docket Nos. R-2021-3027385 & R-2021-3027386, p. 154 (Order Entered May 16, 2022); *Pa. PUC v. Columbia Water Company*, Docket No. R-2023-3040258 (Order Entered January 18, 2024). *See generally* Disposition of Cost of Common Equity, pp. 107-108; *Pa. PUC v. Pennsylvania-American Water Company*, Docket Nos. R-2023-3043189 & R-2023-3043190 (Order Entered July 22, 2024). *See generally* Disposition of Capital Asset Pricing Model (CAPM), pp. 171-172.

2031. For my CAPM analysis, I used 4.20%, which is the average of all the yield forecasts I observed.[31]

Q. HOW DID YOU DETERMINE THE RETURN ON THE OVERALL STOCK MARKET IN YOUR CAPM ANALYSIS?

A. To arrive at a representative expected return on the overall stock market, I observed Value Line's 1700 stocks and the historical returns of the S&P 500. Value Line expects its universe of approximately 1700 stocks to have an average yearly return of 10.78% over the next three to five years based on a forecasted dividend yield of 2.00% and a yearly index appreciation of 40%. The S&P 500 Index has had an average return of 12.35% over the past 100 years (1926-2025).[32] I have averaged these two figures, which results in an estimated market return of 11.57%.[33]

Q. WHAT IS THE COST OF EQUITY RESULT FROM YOUR CALCULATED CAPM ANALYSIS?

A. The result of my analysis is as follows:[34]

K	=	R_f	+	$\beta (R_m - R_f)$
9.95%	=	4.20%	+	0.78 (11.57% - 4.20%)

[31] I&E Exhibit No. 2, Schedule 15.
[32] I&E Exhibit No. 2, Schedule 16.
[33] I&E Exhibit No. 2, Schedule 17.
[34] I&E Exhibit No. 2, Schedule 18.

Q. HAVE YOU PROVIDED AN ADDITIONAL CAPM ANALYSIS?

A. Yes. I have provided an additional CAPM analysis using Kroll's (formerly Duff & Phelps) recommended U.S. Equity Risk Premium (ERP) paired with Kroll's suggested use of the 20-year U.S. Treasury yield. Kroll is a trusted and publicly available source that bases their recommended ERP on current and forecasted economic and financial market conditions.

Q. WHAT IS KROLL'S CURRENT RECOMMENDED ERP?

A. As of January 30, 2026, Kroll recommends an ERP of 5.00%.[35]

Q. WHAT IS THE CURRENT 20-YEAR U.S. TREASURY YIELD?

A. As of February 25, 2026, the 20-Year U.S. Treasury yield was 4.65%.[36]

Q. WHAT IS THE COST OF EQUITY RESULT FROM YOUR CAPM ANALYSIS USING KROLL'S RECOMMENDED ERP AND THE SUGGESTED 20-YEAR U.S. TREASURY YIELD?

A. The result of my analysis is as follows:[37]

K	=	R_f	+	β (ERP)
8.55%	=	4.65%	+	0.78 (5.00%)

[35] I&E Exhibit No. 2, Schedule 19.
[36] I&E Exhibit No. 2, Schedule 20.
[37] I&E Exhibit No. 2, Schedule 18.

Q. WHAT IS THE RESULT OF YOUR CAPM ANALYSIS BASED ON THE AVERAGE OF YOUR CALCULATIONS AND USING KROLL'S RECOMMENDED ERP AND SUGGESTED 20-YEAR TREASURY YIELD?

A. The average of my CAPM analyses is 9.25% ((9.95% + 8.55%) ÷ 2).

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS REGARDING YOUR CAPM ANALYSIS?

A. Yes. As discussed earlier in my testimony, and as I&E has historically reasoned, the CAPM inputs are highly subjective, and other than beta, not company or industry specific. So, while I believe the DCF is the most reliable of the cost of equity models, I have provided a CAPM analysis as it does provide some value and it has been recent Commission precedent to rely on a combination of both the DCF and CAPM models.

<u>National Average Authorized ROE</u>

Q. WHAT IS THE RECENT NATIONAL AVERAGE AUTHORIZED ROE FOR GAS DISTRIBUTION UTILITIES ACROSS THE U.S.?

A. Data provided by S&P Global Market Intelligence shows the National average authorized ROE for gas distribution companies across the U.S. was 9.70% for cases decided in 2025 through March 11, 2026.[38]

[38] I&E Exhibit No. 2, Schedule 7.

Q. PLEASE EXPLAIN WHY YOU HAVE INCORPORATED RECENT NATIONAL AUTHORIZED EQUITY RETURNS FOR GAS UTILITIES INTO YOUR ROE ANALYSIS.

A. This information complies with the principle derived from the *Hope* and *Bluefield* cases, previously discussed in this testimony, that a utility is entitled to a return similar to that being earned by other enterprises with corresponding risks and uncertainties, but not as high as those earned by highly profitable or speculative ventures. Therefore, it is reasonable and logical to include in my recommendation the authorized returns of the Company's peers in recently completed rate cases across the country.

Notably, I&E Exhibit No. 2, Schedule 7, cited above, also illustrates the differences in the Company's requested ROE and equity ratio as compared to gas distribution utilities in rate proceedings across the U.S. My recommended ROE of 9.81% and equity ratio of 55% for the Company in this case are comparable, yet higher than the national average authorizations of 9.70% and 51.62% respectively.

CRITIQUE OF MR. NOWAK'S PROPOSED COST OF EQUITY

Q. DO YOU AGREE WITH MR. NOWAK'S 11.25% PROPOSED COST OF EQUITY?

A. No. I disagree with Mr. Nowak's proposed cost of equity analysis for several reasons. First, I disagree with the results of his DCF analysis. Second, I disagree

with the weight given to the results of his Bond Yield Plus Risk Premium (BYPRP) analysis in his recommendation. Third, I disagree with his reliance on the 30-year Treasury Bond for his risk-free rate in his CAPM analysis. Fourth, I disagree with Mr. Nowak's claims regarding the current capital market environment. Fifth, I disagree with his claim that NFG requires a higher authorized ROE due to their planned capital expenditures, their smaller comparative size, and customer concentration risk. Finally, I disagree with Mr. Nowak's assertion that NFG should be awarded an adjustment to the authorized ROE for management performance.

Mr. Nowak's DCF Analysis

Q. PLEASE EXPLAIN MR. NOWAK'S DCF ANALYSIS.

A. Mr. Nowak presents a constant growth DCF analysis, running analyses based on the average stock price from the previous 30, 90, and 180 trading days. He then creates a median, mean, mean low, and mean high results for each trading period.[39] The result of his constant growth DCF is a median of 10.70% and a mean of 11.58%.[40]

[39] NFG Statement No. 10, p. 33, ln. 1.
[40] NFG Statement No. 10, p. 4, ln. 1.

Q. DO YOU AGREE WITH MR. NOWAK'S DCF ANALYSIS?

A. No, I do not. Mr. Nowak's inclusion of SWX and SR in his proxy group has inflated the results of his DCF analysis. As shown in the table below, using Mr. Nowak's proxy group and the same projected growth rates he provided in Exhibit JCN-4, while excluding SWX and SR from the data yields a median growth rate of 7.20% and a mean growth rate of 6.99%. These results are considerably lower than his listed results, which include a median growth rate of 7.94% and a mean growth rate of 8.03%.

	Growth Rates			
	VL	S&P CIQ	Zacks	Average
ATO	8.50%	7.49%	8.00%	8.00%
NJR	6.50%	7.90%	N/A	7.20%
NI	8.00%	7.93%	7.90%	7.94%
NWN	6.50%	5.50%	N/A	6.00%
OGS	4.50%	6.66%	6.20%	5.79%
			Median	7.20%
			Mean	6.99%

Additionally, excluding SWX and SR while conducting a similar analysis of Mr. Nowak's proxy group dividend yields as shown in Exhibit JCN-4 yields the following results:

	30-day	90-day	180-day
ATO	2.28%	2.37%	2.47%
NJR	4.11%	4.08%	4.06%
NI	2.59%	2.64%	2.73%
NWN	4.16%	4.50%	4.62%
OGS	3.27%	3.42%	3.51%
Median	3.27%	3.42%	3.51%
Mean	3.28%	3.40%	3.48%
Average of Medians and Means			3.39%

Using the average of the median and mean growth rates of 7.09% ((7.20% + 6.99%) / 2) and the average of the medians and means of the 30, 90, and 180-day dividend yields (3.39%) yields a DCF result of 10.48% (7.09% + 3.39%). Had Mr. Nowak properly removed SWX and SR from his proxy group as discussed above, he would have arrived at a DCF result that is nearly identical to I&E's DCF result of 10.47%.

Bond Yield Plus Risk Premium Approach

Q. WHAT IS THE BOND YIELD PLUS RISK PREMIUM APPROACH?

A. The Bond Yield Plus Risk Premium approach is a method that relies on the theory that common stock is riskier than debt; thus, investors require a higher expected return on stocks than bonds to be properly compensated for the additional risk of holding equity as opposed to being a bondholder.

Q. DO YOU AGREE WITH MR. NOWAK'S USE OF THE BYPRP APPROACH?

A. No. Beyond my criticism of this method in the *"Common Methods"* section above, Mr. Nowak admits he is unaware of any instance in which it was relied upon by the Commission to estimate an authorized ROE.[41]

Risk-Free Rate used in the CAPM

Q. WHAT RISK-FREE RATE DOES MR. NOWAK USE IN HIS CAPM ANALYSIS?

A. Mr. Nowak used the following estimates for his expected risk-free rate: (1) the current 30-day average yield on 30-year Treasury bonds (4.66%), (2) the projected 30-year U.S. Treasury bond yield for the first quarter of 2026 through the first quarter of 2027 (4.60%), and (3) the projected 30-year Treasury yield for 2027-2031 (4.60%) in the calculation of his estimates.[42]

Q. DO YOU AGREE WITH MR. NOWAK'S USE OF THE 30-YEAR TREASURY BOND TO DETERMINE THE RISK-FREE RATE?

A. No. As discussed above, long-term Treasury Bonds have substantial maturity risk associated with the market risk and the risk of unexpected inflation and normally offer higher yields to compensate investors for these risks. Using the 10-year

[41] I&E Exhibit No. 2, Schedule 21.
[42] NFG Statement No. 10, p. 35, lines 1-10.

Treasury Note is more appropriate to balance the short-term volatility risk and the long-term inflation risk. Further, as noted above, the Commission has traditionally recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return.

Capital Market Environment

Q. WHAT ARE MR. NOWAK'S CLAIMS REGARDING THE CURRENT AND PROSPECTIVE CAPTAL MARKET?

A. Mr. Nowak opines that the current capital environment is being affected by (1) the interest rate environment, (2) current and long-term inflation pressures, and (3) economic uncertainty due to geopolitical events. He opines that trends such as higher than normal inflation and the Federal Reserve's monetary policy contribute to uncertainty in the capital market conditions, and that NFG requires an increased authorized ROE in order to combat these conditions.[43]

Q. PLEASE COMMENT ON CURRENT INFLATION AND INTEREST RATE CONCERNS.

A. First, while I cannot dispute the recent economic conditions with respect to increased interest rates and government bond yields, it is important to note that all companies, including regulated utilities, are impacted by high interest rates. The Federal Reserve has cut interest rates in September, October, and December of

[43] NFG Statement No. 10, p. 11-23.

2025, and is expecting to make one more cut in 2026.[44] If the Federal Reserve decides to make interest rate cuts in the next year as projected, it would likely positively impact long-term borrowing rates in the FPFTY, when the new rates will be in effect.

With respect to inflation, per the most recent monthly Blue Chip Financial Forecasts,[45] the 2026 and 2027 inflation rates by two measures are forecasted to decline from around 3% to 2.2%as shown in the table below:

	Q1 2026	**Q2 2026**	**Q3 2026**	**Q4 2026**	**Q1 2027**	**Q2 2027**
Consumer Price Index	2.8%	2.7%	2.6%	2.5%	2.5%	2.3%
PCE Price Index	3.0%	2.6%	2.5%	2.4%	2.4%	2.2%

Inflation has trended downward closer to normal rates since the high inflation periods associated with the COVID-19 pandemic, and as shown above, is projected to continue to decline. Lastly, it is important to note that unlike unregulated companies, public utilities may file rate cases to address unforeseen or increased expenses, increases in the costs of borrowing, and equity and/or revenue shortfalls due to changes in market conditions.

[44] Federal Reserve holds interest rates steady, citing elevated economic uncertainty - CBS News https://www.cbsnews.com/news/federal-reserve-fomc-march-18-interest-rate-decision (accessed April 2, 2026).

[45] Blue Chip Financial Forecasts Vol. 45, No. 3, February 27, 2026.

Q. PLEASE COMMENT ON MR. NOWAK'S GEOPOLITICAL EVENT CONCERNS.

A. NFG faces the same exposure to these issues as all the other companies in our respective proxy groups. Investors voluntarily buy and hold shares of stocks in gas utility companies, indicating they are aware of these risks and the returns. The cost of equity I present for NFG in this proceeding is adequately measured by my proxy group and adequately compensates investors for these risks.

Capital Expenditure Program

Q. WHAT IS MR. NOWAK'S CLAIM REGARDING ADDITIONAL RISK DUE TO THE COMPANY'S CAPITAL INVESTMENT PLANS?

A. Mr. Nowak claims that NFG plans to spend approximately $185 to $205 million on capital expenditures in 2026. He also claims that NFG requires a higher authorized ROE in order to support these expenditures, as a high level of expenditures could place pressure on NFG's credit ratings which would reduce the Company's ability to secure capital at favorable terms and would potentially deter equity investors.[46]

[46] NFG Statement No. 10, p. 41-43.

Q. WHAT IS YOUR RESPONSE TO MR. NOWAK'S CLAIM REGARDING THE COMPANY'S CAPITAL EXPENDITURES?

A. Every gas utility faces the same issues of upgrading or replacing its infrastructure. As distribution costs increase, NFG, like any other regulated natural gas utility, has the option to file a base rate case at any time to address revenue inadequacy due to maintaining, expanding, and modernizing infrastructure. Base rate cases allow a utility to recover its costs and provide it with the *opportunity* to earn a reasonable return on capital investments. Additionally, the Commission offers risk reducing mechanisms such as the Distribution System Improvement Charge (DSIC) and the FPFTY to help reduce any regulatory lag in recovery of infrastructure investment or other unforeseen expenditures. It should be noted that these mechanisms were not designed to eliminate the need for periodic base rate case filings, but only to mitigate regulatory lag and support increasing infrastructure replacement needs.

Size Effect

Q. PLEASE SUMMARIZE MR. NOWAK'S DISCUSSION REGARDING THE COMPANY'S SIZE.

A. It is important to note that Mr. Nowak has not added any basis points for a "size adjustment" to his calculated return on equity; rather he offers the discussion as a consideration in determining an appropriate return on equity. Mr. Nowak opines that smaller companies are less able to cope with significant events affecting sales,

revenues, or earnings, and that the loss of large customers can disproportionately affect NFG compared to the proxy group. Ultimately, he opines that NFG's smaller size increases its financial and business risks, although, again, he does not make an explicit adjustment to his requested ROE for size.[47]

Q. DO YOU AGREE WITH MR. NOWAK'S CONSIDERATION OF THE COMPANY'S SIZE?

A. No. Consideration of the Company's size in the calculation of the return on equity is unnecessary because any expense impact resulting from the lesser buying power of a smaller utility is reflected in the revenue requirement and the dollar-for-dollar recovery that applies to expenses. To apply an additional size adjustment to a smaller regulated utility would only duplicate the burden to ratepayers.

Q. IS THERE ACADEMIC EVIDENCE THAT SUPPORTS YOUR CONCLUSION THAT THE SIZE ADJUSTMENT FOR RISK IS NOT APPLICABLE TO UTILITY COMPANIES?

A. Yes. In the article "Utility Stocks and the Size Effect: An Empirical Analysis," Dr. Annie Wong concludes:

> The objective of this study is to examine if the size effect exists in the utility industry. After controlling for equity values, there is some weak evidence that firm size is a missing factor from the CAPM for the industrial but not for utility stocks. This implies that although the size phenomenon has been strongly

[47] NFG Statement No. 10, p. 44-47.

> documented for the industriales, the findings suggest that there is no need to adjust for the firm size in utility rate regulation.[48]

The Company has presented no evidence to support application of a non-utility study regarding a size adjustment for risk to a utility setting. Absent any credible article to refute Dr. Wong's findings, Mr. Nowak's discussion of a size adjustment as it could be applied to the Company should be disregarded. Furthermore, the Commission has rejected the application of a size adjustment to the cost of equity calculation.[49] Finally, when asked, Mr. Nowak indicated he was unaware of any "large customer" accounts that NFG has lost in the past three years.[50]

Customer Concentration Risk

Q. WHAT IS MR. NOWAK'S CLAIM REGARDING ADDITIONAL RISK DUE TO THE COMPANY'S CUSTOMER CONCENTRATION RISK?

A. Mr. Nowak claims that NFG faces risks related to economic changes that can influence consumer demand, and that the Company is exposed to increased risk due to the potential loss of revenue that comes with the loss of a customer. He also opines that economic downturn can reduce consumer demand for manufactured products, which in turn reduces industrial customers' demands for natural gas supplied by the Company.[51]

---

[48] Dr. Annie Wong, "Utility Stocks and the Size Effect: An Empirical Analysis," *Journal of Midwest Finance Association* 1993, pp. 95-101.

[49] *Pa. PUC v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 100.

[50] I&E Exhibit No. 2, Schedule 22.

[51] NFG Statement No. 10, p. 47-52.

Q. WHAT IS YOUR RESPONSE TO MR. NOWAK'S CLAIM REGARDING THE COMPANY'S CUSTOMER CONCENTRATION?

A. Every gas utility faces the same issues of changing economic and market conditions. As stated above, NFG, like any other regulated gas utility, has the option to file a base rate case at any time to address revenue inadequacy due to loss of customers or subsequent loss of revenues. Additionally, as previously mentioned, Mr. Nowak indicated he was unaware of the loss of any large customers in recent years.

Management Performance

Q. DISCUSS THE COMPANY'S CLAIMS SPECIFIC TO MANAGEMENT PERFORMANCE.

A. Mr. Nowak proposes that 25 basis points be added to the calculated cost of equity in recognition of the Company's management performance. He primarily relies upon the direct testimony of Company witness Rebecca E. Hillery, NFG's Managing Director of Rates and Regulatory Affairs, (NFG Statement No. 1) to support the consideration of additional basis points for NFG's "exemplary" management performance.[52]

[52] NFG Statement No. 10, p. 4, lines 6-10.

Q. WHAT INFORMATION DOES MS. HILLERY PROVIDE TO SUPPORT THE COMPANY'S MANAGEMENT PERFORMANCE CLAIMS?

A. Ms. Hillery argues that NFG should be authorized additional basis points to the determined return on common equity claiming that the Company has demonstrated excellence in several areas including safety, quality customer service, information technology, affordability and operational efficiencies, customer payment assistance, and community engagement.[53]

Q. DO YOU AGREE THAT THE COMPANY'S MANAGEMENT PERFORMANCE SHOULD BE CONSIDERED WHEN DETERMINING THE COMPANY'S RETURN ON EQUITY?

A. No. First, many of the topics presented by the Company witnesses fall within the categories of reliability, customer satisfaction, and safety that are required of every public utility company under 66 Pa C.S.A. §1501. Additionally, the Company passes capital expenditures to its ratepayers via base rates, or it can utilize the DSIC for capital expenditure recovery. Further, if the Company is effective at controlling operating and maintenance costs, those savings should flow through to ratepayers and/or investors. These savings would likely be offset by the addition of basis points for management performance, as ratepayers would have to fund the additional costs. This defeats the purpose of any cost cutting measures to benefit ratepayers.

[53] NFG Statement No. 1, p. 20, lines 7-16.

Q. ARE YOU AWARE OF ANY COMPANIES THAT HAVE RECEIVED ADDITIONAL BASIS POINTS IN RECOGNITION OF MANAGEMENT PERFORMANCE?

A. Yes. In its 2021 base rate case, Aqua was awarded an addition of 25 basis points by the Commission for its management performance efforts.[54] However, it is important to recognize that this addition was based specifically on Aqua rescuing troubled water and wastewater systems at the Commission's request. The Commission stated: [55]

> We specifically recognize Aqua's efforts and willingness to quickly provide emergency aid to various water and wastewater systems that needed substantial improvement. Aqua has often provided this emergency aid on short notice and at the request of the Commission or other parties to protect the public from egregious health and safety threats and to protect the Commonwealth's drinking water resources from catastrophic damage.

Q. DOES THE COMMISSION'S PAST ISSUANCE OF ADDITIONAL EQUITY POINTS TO RECOGNIZE MANAGEMENT PERFORMANCE MEAN THAT NFG SHOULD ALSO RECEIVE AN ADJUSTED RETURN ON EQUITY?

A. No. The issuance of equity points to recognize management performance should be done on a case-by-case basis. The situation in the Aqua proceeding as

[54] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 168-173 (Order entered May 16, 2022).

[55] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, p. 169 (Order entered May 16, 2022).

discussed above was very specific to Aqua rescuing troubled water and wastewater systems and preventing health and safety concerns regarding drinking water. This scenario does not apply to NFG.

Q. BASED ON THE COMPANY'S FILED RATE BASE AND CLAIMED CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 25 BASIS POINTS FOR THE CONSIDERATION OF MANAGEMENT PERFORMANCE TO THE COST OF EQUITY?

A. The example below illustrates the impact of 25 additional basis points for the consideration of management performance to the Company's claimed cost of equity:

National Fuel Gas Distribution Corporation	
Claimed Equity Percentage of Capital Structure	56.40%
Additional Basis Points to the Calculated Cost of Equity for "Management Effectiveness"	0.25%
Claimed Rate Base*	$571,582,000
Impact Prior to Gross Up (0.5640 x 0.0025 x $571,582,000)	$805,931
Gross Revenue Conversion Factor**	1.3899
Total Impact ($805,931 x 1.3899)	**$1,120,163**

*NFG Exhibit A, Schedule A-1, Line 9.
**NFG Exhibit A, Schedule A-1, Line 25.

In this example, an addition of 25 basis points to the cost of equity in consideration of management performance would force ratepayers to fund an unwarranted additional amount of $1,120,163 annually to cover the increase of the inflated rate of return along with the associated impact resulting from increases to income taxes, uncollectibles, and assessments.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE CONSIDERATION OF ADDITIONAL BASIS POINTS FOR THE COMPANY'S MANAGEMENT PERFORMANCE?

A. I am aware that under 66 Pa C.S.A. §523 the Commission has authority to *consider* a utility's performance, however, it is not mandatory that the Commission grant additional basis points to the ROE. Ultimately, as alluded to above, true strong management performance is earning a higher return through efficient use of resources and cost cutting measures. The greater net income resulting from cost savings and true efficiency in management and operations is available to be passed on to both ratepayers and shareholders. I do not believe that NFG or any utility should be gifted additional basis points for doing what they are required to do to provide adequate, efficient, safe, and reasonable service under 66 Pa C.S.A. §1501. For these reasons, I recommend that any addition of basis points to the cost of equity for management performance be disallowed.

OVERALL RATE OF RETURN RECOMMENDATION

Q. WHAT IS THE COMPANY'S PROPOSED COST OF EQUITY AND OVERALL RATE OF RETURN?

A. The Company recommends a cost of equity of 11.25% and an overall rate of return of 8.78%.[56]

Q. WHAT IS I&E'S RECOMMENDED COST OF EQUITY AND OVERALL RATE OF RETURN?

A. I&E Exhibit No. 2, Schedule 1, shows the calculation of an appropriate cost of equity for the Company to be 9.81% with an overall rate of return of 7.91%. The difference in NFG's requested ROE of 11.25% and I&E's recommended ROE of 9.81% is 1.44%, or 144 basis points.

Q. BASED ON THE COMPANY'S FILED RATE BASE AND CLAIMED CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 144 BASIS POINTS TO THE COST OF EQUITY?

A. The example below illustrates the impact of 144 additional basis points to the Company's cost of equity:

[56] NFG Statement No. 10, p. 55, lines 17-18.

National Fuel Gas Distribution Corporation	
Claimed Equity Percentage of Capital Structure	56.40%
Difference in Return on Equity between I&E's Recommendation and NFG's Requested ROE (11.25% - 9.81% = 1.44%)	1.44%
Claimed Rate Base*	$571,582,000
Impact Prior to Gross Up (0.5640 x 0.0144 x $571,582,000)	$4,642,160
Gross Revenue Conversion Factor**	1.3899
Total Impact ($571,582,000 x 1.3899)	**$6,452,139**

*NFG Exhibit A, Schedule A-1, Line 9.
**NFG Exhibit A, Schedule A-1, Line 25.

In this example, an addition of 144 basis points to the cost of equity would force ratepayers to fund an unwarranted additional amount of $6,452,139.

Q. DO YOU HAVE ANY FINAL COMMENTS REGARDING THE COMPANY'S PROPOSED RETURN ON EQUITY?

A. Yes. First, to reiterate, the data taken from S&P Global Market Intelligence, as cited above in the "*Capital Structure*" section, illustrates that the average authorized return on equity decided between January 2025 and March 2026 was 9.70%, and the average authorized equity percentage during that same span was

51.62%.[57] NFG's recommendations far exceed these averages, and the ROE recommended by I&E of 9.81% is still above the national average during the aforementioned span.

Second, when asked, Mr. Nowak indicated he was unaware if any natural gas distribution utilities in the contiguous United States were granted a Commission authorized return of 11.25% or higher cost of common equity in the past two years.[58]

Third, as cited above, the Commission has recently commented on the equity heavy capital structure of other utility companies, and specifically asked that NFG's capital structure be subject to a careful evaluation.

Finally, I believe it is important to consider the impact of what the Company's excessive return on equity request of 11.25% would have on rates. Any additional basis points beyond the I&E recommended ROE of 9.81% would be excessive and would put an enormous burden on ratepayers during these tough economic times.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes. However, omission of any specific topic does not constitute I&E's agreement. Further, I reserve the right to supplement my testimony or to revise recommendations if additional issues or facts arise during this proceeding.

[57] I&E Exhibit No. 2, Schedule 7.

OVERALL RATE OF RETURN **26**

INTRODUCTION OF WITNESS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Drew Breuning. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME DREW BREUNING WHO IS RESPONSIBLE FOR THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 2 AND THE SCHEDULES IN I&E EXHIBIT NO. 2?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of National Fuel Gas Distribution Corporation (NFG or Company) witness Joshua C.

Nowak regarding rate of return topics including the cost of common equity and the overall fair rate of return, which will be applied to the Company's rate base.[1]

The absence of any comments or responses to statements or topics addressed in NFG's rebuttal testimony concerning the cost of common equity or the overall rate of return does not imply my acceptance or support of their positions in this proceeding.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. No. However, I refer to my direct testimony[2] and schedules contained in the exhibit[3] supporting my direct testimony where necessary.

Q. WHAT WAS YOUR ORIGINAL OVERALL RATE OF RETURN RECOMMENDATION IN DIRECT TESTIMONY?

A. I recommended the following rate of return for the Company:[4]

I&E
Summary of Cost of Capital

Type of Capital	Ratio	Cost Rate	Weighted Cost
National Fuel Gas Distribution Corporation			
Long-Term Debt	45.00%	5.58%	2.51%
Common Equity	55.00%	9.81%	5.40%
Total	100.00%		7.91%

[1] NFG Statement No. 10-R.

[3] I&E Exhibit No. 2.
[4] I&E Statement No. 2, pp. 6-7 and I&E Exhibit No. 2, Schedule 1.

SUMMARY OF MR. NOWAK'S REBUTTAL TESTIMONY

Q. SUMMARIZE MR. NOWAK'S RESPONSE IN REBUTTAL TESTIMONY TO YOUR RATE OF RETURN RECOMMENDATIONS.

A. First, Mr. Nowak provides an updated analysis from what he employed in his direct testimony. Mr. Nowak disputes my recommendations regarding an overall fair rate of return. Then, he disagrees with my use of a hypothetical capital structure that limited the authorized equity ratio to 55%. Mr. Nowak also continues to utilize a different proxy group than I do, as a result of differences in our proxy group selection criteria. While he does not offer specific criticisms regarding my DCF analysis, he criticizes my application of the Capital Asset Pricing Model (CAPM), claiming that I have incorrectly relied on the 10-year Treasury Bond for my risk-free rate and inappropriately used a Kroll-based CAPM analysis in the calculation of my recommendation. Mr. Nowak also disagrees with my dismissal of the Risk Premium (RP) model. Finally, Mr. Nowak comments on my disagreement regarding several aspects of NFG's risk.

MR. NOWAK'S UPDATED ANALYSIS

Q. DID THE COMPANY UPDATE ITS RATE OF RETURN CLAIM?

A. Yes. Mr. Nowak provides an updated cost of equity analysis using market data as of March 31, 2026, because his original analysis was performed using data as of

November 28, 2025.[5] While the results produced by his updated analysis indicate a small increase to his average three-model ROE result, Mr. Nowak continues to recommend a "base" return on equity of 11.00% as he did in his direct testimony. However, Mr. Nowak has noted that NFG has removed their request for a 25-basis point upward adjustment to the requested ROE for management efficiency, citing customer affordability and inflationary pressures.[6]

NATIONAL AVERAGE AUTHORIZED ROEs

Q. SUMMARIZE MR. NOWAK'S CRITICISM OF YOUR USE OF NATIONAL AVERAGE AUTHORIZED ROEs IN DETERMINING YOUR RECOMMENED RETURN ON EQUITY FOR THE COMPANY.

A. While Mr. Nowak agrees that authorized returns can be valuable, he claims that the use of a national average authorized ROEs as part of my recommendation does not factor in changing economic and financial conditions over time. He also opines that my use of recent historical returns does not account for forward-looking capital market expectations, and that market conditions change over time.[7]

[5] NFG Statement No. 10-R, p. 11, line 7 through p. 12, line 3.
[6] NFG Statement No. 10-R, p. 5, ln. 18 through p. 6, ln. 3 and p. 22, lines 13-16.
[7] NFG Statement No. 10-R, pp. 9-10.

Q. WHAT IS YOUR RESPONSE TO MR. NOWAK'S CRITICISM REGARDING YOUR USE OF NATIONAL AVERAGE AUTHORIZED ROEs IN DETERMINING AN APPROPRIATE ROE IN THIS PROCEEDING.

A. While I agree with Mr. Nowak that historical returns aren't entirely predictive of required future returns, I continue to believe it is reasonable and logical to consider authorized returns of comparable companies in the natural gas distribution industry from across the nation. Additionally, I believe the current economic conditions are similar enough to the past approximate year and half, which is the period that encompasses the data I employed.[8] Finally, as stated in my direct testimony, this information complies with the principle derived from the *Hope* and *Bluefield* cases,[9] that a utility is entitled to a return similar to that being earned by other enterprises with corresponding risks and uncertainties, but not as high as those earned by highly profitable or speculative ventures.[10]

[10] I&E Statement No. 2, pp. 36-37.

CAPITAL STRUCTURE

Q. SUMMARIZE MR. NOWAK'S REBUTTAL TESTIMONY REGARDING NFG'S CAPITAL STRUCTURE.

A. Mr. Nowak opines that my hypothetical capital structure of 55% equity and 45% debt is inappropriate and should not be considered in this proceeding. He disagrees with my assertion that NFG's proposed capital structure is unreasonable for ratemaking purposes, stating that his proposed 56.4% equity ratio falls within the range of my proxy group's equity ratios. Additionally, Mr. Nowak opines that my use of Value Line's projected capital structures is flawed because those projections are also based on holding companies.[11]

Q. WHAT IS YOUR RESPONSE TO MR. NOWAK'S COMMENTS REGARDING NFG'S CAPITAL STRUCTURE?

A. As stated in my direct testimony, it is my opinion that NFG's actual capital structure of 56.4% common equity and 43.6% long-term debt is unreasonable for ratemaking purposes due to it being significantly higher than both my proxy group's average equity percentage of 48.70% and an optimal 50/50 capital structure.[12] Additionally, in Mr. Nowak's own rebuttal testimony, he states that my 55% equity recommendation is, "not, in itself, unreasonable."[13] Given this statement, in addition to Commissioner Barrow's comments outlined in my direct

[11] NFG Statement 10-R, pp. 12-21.
[12] I&E Exhibit No. 2, Schedule 4.
[13] NFG Statement 10-R, p. 16, line 7.

testimony[14] regarding consideration of the financial impact to customers in relation to equity heavy capital structures, as well as affordability concerns voiced by Governor Shapiro,[15] I continue to believe it is necessary to limit NFG's (or any regulated utility's) capital structure to 55% equity to balance the interests of all parties without overburdening ratepayers. I would also note that NFG is clearly aware of the current concerns regarding customer affordability, which they demonstrate by removing their 25-basis point adjustment to the requested ROE for management efficiency.[16] A reduction in the authorized equity percentage would greatly help customer affordability in these difficult economic times.

Q. PLEASE RESPOND TO MR. NOWAK'S CRITICISMS REGARDING THE USE OF PARENT AND HOLDING COMPANY VS. OPERATING COMPANY CAPITAL STRUCTURE DATA.

A. Information used to determine a fair return on equity from commonly used sources such as Zacks, S&P, Value Line, etc., are all based on the publicly traded parent/holding companies. In fact, Mr. Nowak himself uses data pulled from these sources.[17] These sources have historically been common practice to use by almost all parties who perform rate of return and return on equity analyses in base rate proceedings. The Commission generally relies upon I&E methodologies, as cited

[14] I&E Statement No. 2, pp. 15-16.
[15] I&E Exhibit No. 1-SR, Schedule 2, pp. 1-4.
[16] NFG Statement No. 10-R, pp. 5-6.
[17] National Fuel Exhibit JCN-2R.

at various points in my direct testimony as well as this surrebuttal testimony, which are crafted from data sourced from parent companies.

Further, several components involved in the recommendations of both myself and Mr. Nowak, such as the cost of long-term debt, stock price, projected dividends, and beta, are all sourced from the holding company level. It seems illogical to use financial data from holding companies for every other variable of the analysis, then use data from subsidiary/operating companies to determine an appropriate capital structure. For the reasons listed above, I stand by my decision to use data from the holding company level in the calculation of my recommended return on equity and capital structure.

Lastly, regarding Columbia Gas' recent requested equity ratio of 54.4%, which was adopted by the Commission, Commissioner Barrow stated, "I agree with the OCA that the discrepancy between Columbia Gas' capital structure and the proxy group necessitates an adjustment to the Company's capital structure since Columbia Gas' equity profile has less financial risk than the proxy group. A 50/50 capital structure in this case is equal to the proxy group's average capital structure."[18] Therefore, I respectfully disagree with Mr. Nowak's opinion that a hypothetical capital structure is not appropriate in this proceeding.

[18] I&E Exhibit No. 2, Schedule 6.

PROXY GROUP COMPOSITION

Q. SUMMARIZE MR. NOWAK'S REBUTTAL TESTIMONY REGARDING THE COMPOSITION OF OUR RESPECTIVE PROXY GROUPS.

A. Mr. Nowak opines that there are multiple flaws in my gas utility proxy group. First, he disagrees with my decision to screen my proxy group based on the percentage of revenue from gas distribution operations instead of using the percentage of net operating income. This decision led to the exclusion of Southwest Gas Holdings, Inc. ("Southwest Gas") from my proxy group. Next, Mr. Nowak disagrees with my exclusion of Spire, Inc. ("Spire") due to their recent involvement in a significant transaction. Finally, he claims that I should have excluded Chesapeake Utilities Corporation ("Chesapeake") from my proxy group, because it violates two of his screening criteria. Ultimately, Mr. Nowak opines that his proxy group is more risk comparable to NFG than my proxy group.[19]

Q. DO YOU AGREE WITH MR. NOWAK'S ASSERTION THAT THE PERCENTAGE OF OPERATING INCOME IS A MORE APPROPRIATE PROXY GROUP CRITERION THAN REGULATED NATURAL GAS DISTRIBUTION REVENUE?

A. No. Calculating the percentage of utility operating income that makes up the total operating income of a company is not always a reliable way of determining if a

[19] NFG Statement No. 10-R, pp. 33-37.

business is primarily a regulated utility. For example, operating income includes items such as depreciation, where it is possible for the regulated utility segment of a company to predominately have assets that are fully depreciated resulting in higher operating income. Although a utility may have assets that are significantly depreciated, it does not always indicate the level of business a company does. A parent company can have most of its utility assets depreciated but still do less business as a utility than it does in another business segment. Therefore, comparing the operating income of a gas utility segment to the total operating income of a company is not an appropriate criterion, so I believe SW is correctly excluded from my proxy group.

Q. DO YOU HAVE ANY FURTHER COMMENTS REGARDING MR. NOWAK'S CLAIM THAT NET OPERATING INCOME IS A MORE APPROPRIATE PROXY GROUP CRITERION?

A. Yes. Not only do I disagree with this as I explained above, but the Commission has historically used utility revenue, and not operating income, to determine a company's validity in a proxy group. Most recently, in the Columbia Gas of Pennsylvania, Inc. 2025 base rate proceeding, the Commission order states, "…the generation of revenue is the first step that drives the company's net income and cash flow… Therefore, a utility's revenue composition is a more appropriate measure than is the utility's operating income or net income for establishing a proxy group, because this measure represents the percentage of cash flow a

company receives from each business segment."[20] The Commission further supports I&E's methodology by stating, "Accordingly, we shall adopt the ALJs' recommendation to utilize I&E's Natural Gas Utility proxy group in setting the appropriate rate of return for Columbia in this proceeding."[21]

Q. ARE THERE MORE INSTANCES OF THE COMMISSION ACCEPTING I&E'S METHODOLOGY IN DETERMINING A PROXY GROUP?

A. Yes. There are four recent instances where the Commission has accepted I&E's methodology to use percentage of revenues in selecting a proxy group. First, in *Pennsylvania Public Utility Commission, et. al v. Columbia Gas of Pennsylvania, Inc*., at Docket R-2020-3018835 (Order Entered February 19, 2021), pp. 110-112, the Commission adopted the ALJ's recommendation to use I&E's proxy group based on I&E's reasoning to exclude two companies based on a percentage of revenues as it most closely resembles the company.

Second, in *Pennsylvania Public Utility Commission, et. al v. PECO Energy Company – Gas Division*, at Docket R-2020-3018929 (Order Entered June 22, 2021, Public Version), pp. 137-139, the Commission again adopted the ALJ's recommendation to use I&E's proxy group based on I&E's reasoning to exclude

[20] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Disposition of Proxy Groups, p. 204.

[21] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Disposition of Proxy Groups, p. 205.

two companies based on a percentage of revenues as it most closely resembles the company.

Third, in *Pennsylvania Public Utility Commission, et. al v Columbia Water Company,* at Docket No. R-2023-3040258 (Order Entered January 18, 2024), pp. 74-77, the Commission adopted the ALJ's recommendation to use I&E's proxy group based on I&E's reasoning stating that "In our view, comparing the net operating income of a water utility segment to the total net operating income of a company is not an appropriate criterion to use in this proceeding."

Fourth, in *Pennsylvania Public Utility Commission, et. al v. Pennsylvania-American Water Company*, Docket Nos. R-2023-3043189 and R-2023-3043190 (Order Entered July 22, 2024), pp. 149-153, the Commission adopted the ALJ's recommendation to use I&E's proxy group based on I&E's reasoning, which included percentage of utility revenue, citing Commission precedent and references the above Columbia Water Company case.

Q. WHAT IS YOUR RESPONSE TO MR. NOWAK'S COMMENTS REGARDING SPIRE'S RECENT TRANSACTION?

A. I maintain my position that Spire should not be included in Mr. Nowak's or my proxy group. As Mr. Nowak himself states, "... I recognize that Spire is involved in a significant transaction to acquire the Tennessee assets of Piedmont Natural

Gas from Duke…".[22] A transaction of such significance violates Mr. Nowak's proxy group screening criterion that a company "[i]s not involved in a merger or other transformative transaction."[23] Additionally, as shown in the exhibit accompanying my direct testimony, between the announcement of the transaction on July 29, 2025 and the formation of my direct testimony on March 19, 2026, the remainder of Mr. Nowak's proxy group's stock prices grew an average of 16.36%, while Spire's stock price rose 25.64%.[24] For these reasons, I have excluded it from my proxy group, and believe it to be an inappropriate inclusion in Mr. Nowak's proxy group.

Q. WHAT IS YOUR RESPONSE TO MR. NOWAK'S COMMENTS REGARDING YOUR EXCLUSION OF CHESAPEAKE UTILITIES, INC?

A. I continue to assert that Chesapeake is a valid inclusion in my proxy group. Mr. Nowak opines that it is not an appropriate inclusion due to its lack of credit ratings from S&P Global or Moody's, and that its regulated operating income from gas distribution operations is only slightly more than 50%. While this violates his proxy group criteria, I do not screen for investment grade credit ratings, and its fiscal year 2024 revenues show that 82.59% of Chesapeake's operating revenue is

[22] NFG Statement No. 10-R, p. 35, lines 12-13.
[23] NFG Statement No. 10, p. 25, line 7.
[24] I&E Exhibit No. 2, Schedule 3.

from gas distribution operations.[25] Chesapeake meets all of my proxy group criteria, and I believe it is still appropriate to include them in my proxy group.

DISCOUNTED CASH FLOW

Q. SUMMARIZE MR. NOWAK'S REBUTTAL TESTIMONY REGARDING YOUR DCF ANALYSIS.

A. Mr. Nowak agrees with my use of earnings growth rate projections in the calculation of my DCF result but disagrees with the way I calculated my dividend yield, although he does concede that our different methods of dividend yield calculation yield similar results. Also, he questions my change in methodology in the calculation of my recommendation from previous cases. Finally, Mr. Nowak asserts that my DCF result would be significantly higher if I had used his proxy group as my own.[26]

Q. WHAT IS YOUR RESPONSE TO MR. NOWAK'S CRITICISMS OF YOUR DCF ANALYSIS?

A. Regarding the change in my methodology from past cases, I have included the CAPM as part of my analysis due to the Commission's recent decisions to base the authorized ROE on a combination of the DCF and CAPM methods, as shown in my direct testimony.[27] I have also included the national average authorized ROE

[25] Response to NFG-I&E-I-4 – Breuning – Attachment B.
[26] NFG Statement 10-R, pp. 38-39.
[27] I&E Statement No. 2, p. 36, lines 3-6.

for gas distribution utilities because it reasonable and logical to include authorized returns from the Company's peers in accordance with the *Hope* and *Bluefield* cases.[28]

Mr. Nowak also states that my DCF result would increase by 79 basis points if I were to include Southwest Gas and Spire in my proxy group. He also states that a small increase would occur if I were to exclude Chesapeake from my proxy group. As I have thoroughly explained above, as well as in my direct testimony, the inclusion of Southwest Gas and Spire and the exclusion of Chesapeake from the proxy group is inappropriate, which would make any hypothetical analysis of DCF results involving these companies irrelevant.

CAPITAL ASSET PRICING MODEL

Q. SUMMARIZE MR. NOWAK'S REBUTTAL TESTIMONY REGARDING YOUR CAPM ANALYSIS.

A. First, Mr. Nowak disagrees with my use of the 10-year Treasury note as the risk-free rate and claims that the 30-year Treasury bond is the most appropriate risk-free rate to use in the calculation of the CAPM. Second, he disagrees with my use of a Kroll-based CAPM analysis as part of my CAPM recommendation. Finally, Mr. Nowak makes several upward adjustments to my CAPM analysis and recommends that the Commission give no weight to my Kroll-based CAPM

[28] I&E Statement No. 2, p. 36, ln. 18 through p. 37, ln. 3.

estimate, as he deems it too low to be acceptable for consideration in the calculation of a return of equity.[29]

RISK-FREE RATE

Q. WHAT IS MR. NOWAK'S RESPONSE TO YOUR USE OF THE YIELD ON THE 10-YEAR U.S. TREASURY NOTE?

A. Mr. Nowak claims his use of the yield on a 30-year U.S. Treasury Bond is more appropriate than my use of the yield on a 10-year Treasury Note because it better reflects the life of the underlying investment. He contends that since utility assets are long-duration investments, long-term Treasury bonds should be used as the risk-free rate.[30]

Q. IS THE LIFE OF THE INVESTMENT THE ONLY FACTOR THAT SHOULD BE CONSIDERED IN THE CHOICE OF A RISK-FREE RATE?

A. No. The risk-free rate is the return that can be earned without accepting any risk, and while the life of the investment can be considered in the choice of risk-free rates, the most important consideration is that the rate be as risk-free as possible. As explained in my direct testimony, I chose the 10-year Treasury Note as it mitigates the shortcomings of the short-term Treasury Bill and the 30-year Treasury Bond.[31] Although long-term Treasury Bonds have less risk of being

[29] NFG Statement No. 10-R, pp. 40-46.
[30] NFG Statement No. 10-R, pp. 43-44.
[31] I&E Statement No. 2, p. 32, line 21 through p. 33, line 6.

influenced by federal policies, they have substantial maturity risk associated with market risk. In addition, long-term Treasury Bonds bear the risk of unexpected inflation. As such, my choice of a 10-year Treasury Note is appropriate. Further, as also pointed out in my direct testimony, the Commission has agreed with I&E that the 10-year Treasury Note is the superior measure of the risk-free rate of return.[32]

Q. DOES THE PROJECTED RISK-FREE RATE NEED TO REPRESENT THE LONGEST PERIOD AVAILABLE?

A. No. The time period reflected in a projected risk-free rate should include the period in which rates will be in effect (the investment period), which is typically the Fully Projected Future Test Year (FPFTY), or the time determined by a company's rate case filing frequency. Ideally, all factors in determining an appropriate ROE, including the risk-free rate, will be reassessed during each base rate filing. Therefore, while an investor may hold a utility stock for 30 years or more, the Commission authorized return determined in the base rate filing is likely reassessed many times within that 30-year period.

As shown in the exhibit accompanying my direct testimony, the yield on the 10-year Treasury Note is expected to remain level at 4.20% from the second quarter of 2026 through the second quarter of 2027 and is forecasted to remain at

[32] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 99.

4.20% from 2027-2031. For my forecasted CAPM analysis, I continued to use 4.20%, which is the average of all the yields I observed.[33]

KROLL ERP

Q. WHAT IS MR. NOWAK'S RESPONSE TO YOUR USE OF THE KROLL ERP CAPM ANALYSIS?

A. Mr. Nowak criticizes the result of my Kroll-based CAPM analysis, stating that the result of 8.55% is lower than any authorized ROE for a gas distribution company since at least 1980. He also makes multiple adjustments to my forecasted CAPM analysis, calculating a range of results from 10.59% to 11.77%.[34]

Q. WHAT IS YOUR RESPONSE TO MR. NOWAK'S REBUTTAL TESTIMONY CONCERNING THE KROLL ERP?

A. While the Kroll-based result of 8.55% may be lower than previous authorized ROEs for gas distribution companies, I do not believe it is appropriate to ask the Commission to give it no consideration. By Mr. Nowak's logic, it would be inappropriate to give any weight to his adjustments to my forecasted CAPM analysis that produce a result with an upper range of 11.77%, as by his own admission, he is unaware of an authorized ROE in the contiguous United States of 11.25% or higher in the past two years.[35]

---

[33] I&E Exhibit No. 2, Schedule 15.
[34] NFG Statement No. 10-R, p. 47.
[35] Response to I&E-RR-D-3.

My inclusion of the Kroll ERP in my CAPM analysis is to provide more information to the Commission as they have recently expressed increasing interest in the CAPM model. Kroll is a trusted and publicly available source that bases their recommended ERP on current and forecasted economic and financial conditions.[36]

Mr. Nowak's opposition to my use of Kroll's ERP further demonstrates that the inputs to the CAPM are highly subjective and can lead to significantly different results. This is not the case with the DCF model.

Q. HAS THE COMMISSION COMMENTED ON THE USE OF THE KROLL ERP CAPM ANALYSIS?

A. Yes. The Commission's Columbia Gas of Pennsylvania, Inc. 2025 base rate proceeding order states, "…we are also persuaded to use informed judgment and to apply both I&E's traditional CAPM and its Kroll ERP CAPM analysis in setting the ROE for Columbia."[37] The Commission also notes that due to their belief that the results of I&E's traditional CAPM analysis were overstated, "...we will use the average of I&E's traditional CAPM ROE of 10.51% and I&E's Kroll ERP based CAPM ROE of 9.36%."[38]

---

[36] I&E Statement No. 2, p. 34, lines 14-16.

[37] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Disposition of Rate of Return on Common Equity, p. 234.

[38] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Disposition of Rate of Return on Common Equity, p. 235.

Additionally, using Kroll's methodology eliminates the potential bias of any involved parties, as I use Kroll's recommended input of the 20-year Treasury yield in my analysis.

Q. HAVE YOU CHANGED YOUR CAPM RETURN ON EQUITY RECOMMENDATION AS A RESULT OF MR. NOWAK'S REBUTTAL TESTIMONY?

A. No. I continue to recommend using my average CAPM result of 9.25%[39] in conjunction with my DCF result of 10.47% and the national average authorized ROE of 9.70%.

EXCLUSION OF THE RP METHOD

Q. SUMMARIZE MR. NOWAK'S REBUTTAL TESTIMONY REGARDING THE USE OF THE RISK PREMIUM METHOD.

A. Mr. Nowak's argues that his Risk Premium analysis is a useful and appropriate method that should be used by the Commission in this proceeding. Mr. Nowak goes on to state that the model is a reliable predictor of the equity risk premium at various levels of interest rates.[40]

[39] I&E Statement No. 2, p. 35, line 15.
[40] NFG Statement No. 10-R, pp. 47-52.

Q. PLEASE EXPLAIN WHY YOU HAVE EXCLUDED A RISK PREMIUM METHOD IN YOUR ROE ANALYSIS.

A. I have excluded a Risk Premium method from my ROE analysis because it is a simplified version of the CAPM, therefore it suffers from the same criticisms. Most importantly, unlike the CAPM, the Risk Premium method does not recognize company specific, or proxy group specific risk through a beta coefficient, which Mr. Nowak acknowledges in his rebuttal testimony.[41] Further, the Commission has historically dismissed the Risk Premium method in determining an appropriate return on equity in base rate proceedings, which Mr. Nowak also acknowledges.[42]

BUSINESS RISK

Q. SUMMARIZE MR. NOWAK'S REBUTTAL TESTIMONY REGARDING NFG'S BUSINESS RISK.

A. In his rebuttal testimony, Mr. Nowak again states the Company's intentions regarding planned capital expenditures in 2026. He also attempts to refute my assertion that the consideration of NFG's size is not necessary or warranted in this proceeding. Finally, Mr. Nowak continues to argue that NFG is riskier than his utility proxy group due to its smaller size and faces significant customer concentration risk.[43]

[41] NFG Statement No. 10-R, p. 48, lines 6-7.
[42] NFG Statement No. 10-R, p. 49, lines 17-18.
[43] NFG Statement No. 10-R, pp. 52-59.

CAPITAL EXPENDITURES

Q. SUMMARIZE MR. NOWAK'S REBUTTAL TESTIMONY REGARDING NFG'S CAPITAL EXPENDITURE PLANS.

A. As stated in his direct testimony, Mr. Nowak reiterates NFG's plan to spend an estimated $185 to $205 million on capital expenditures in 2026. He opines that the Company will need a higher authorized ROE in order to access capital to fund these plans on favorable terms.[44]

Q. WHAT IS YOUR RESPONSE TO MR. NOWAK'S CLAIMS REGARDING NFG'S CAPITAL EXPENDITURE PLANS?

A. As stated in my direct testimony, all regulated utilities, including NFG, have the option to file a base rate case at any time if there is a revenue inadequacy stemming from maintaining, expanding, and modernizing infrastructure.[45] Additionally, every gas utility in our respective proxy groups is exposed to similar risks regarding capital expenditures and maintaining and replacing infrastructure. Prospective investors are aware of these risks, which are factored into stock prices, as well as analyst's forecasted growth rates.

[44] NFG Statement No. 10-R, p. 53.
[45] I&E Statement No. 2, p. 44, lines 6-9.

SIZE EFFECT

Q. SUMMARIZE MR. NOWAK'S REBUTTAL TESTIMONY REGARDING NFG'S SMALLER RELATIVE SIZE.

A. Mr. Nowak presents additional literature in an attempt to support his claim that NFG is exposed to greater risk due to its smaller relative size when compared to his proxy group.[46]

Q. WHAT IS YOUR RESPONSE TO MR. NOWAK'S CLAIMS REGARDING NFG'S SIZE?

A. The difficulty in predicting the effect of size is demonstrated in the variance from year to year of the measurement of difference between the annual returns on the large and small-capitalization stocks of the NYSE/AMEX/NASDAQ in the Ibbotson *Stocks, Bonds, Bills & Inflation: 2015 Yearbook.* As stated on page 100 of the SBBI Yearbook,

> While the largest stocks actually declined in 2001, the smallest stocks rose more than 30%. A more extreme case occurred in the depression-recovery year of 1933, when the difference between the first and 10th decile returns was far more substantial. The divergence in the performance of small- and large- cap stocks is evident. In 30 of the 89 years since 1926, the difference between the total returns of the largest stocks (decile 1) and the smallest stocks (decile 10) has been greater than 25 percentage points.

[46] NFG Statement No. 10-R, pp. 54-57.

Page 109 states,

> In four of the last 10 years, large-capitalization stocks (deciles 1-2 of NYSE/AMEX/NASDAQ) have outperformed small-capitalization stocks (deciles 9-10). This has led some market observers to speculate that there is no size premium. But statistical evidence suggests that periods of underperformance should be expected.

Page 112 states,

> Because investors cannot predict when small-cap returns will be higher than large-cap returns, it has been argued that they do not expect higher rates of return for small stocks.

In my opinion, it is not appropriate to link the small size effect of non-regulated companies with the regulated utility industry because regulated utilities, small or large, have a market monopoly in the certificated service jurisdiction and are permitted to seek recovery of the full cost of service and a fair and reasonable rate of return on rate base. Furthermore, as I stated in direct testimony, any expense impact resulting from the lesser buying power of a smaller utility is reflected in the revenue requirement and the dollar-for-dollar recovery that applies to expenses.[47] To apply an additional size adjustment to a smaller regulated utility would only duplicate the burden to ratepayers.

Finally, given Mr. Nowak's lack of an explicit size adjustment to his recommended ROE, I believe that any argument made regarding NFG's size is irrelevant. I continue to recommend that the Commission give no weight to the

[47] I&E Statement No. 2, p. 47, lines 8-12.

notion that an adjustment to the authorized ROE to account for size is necessary in this proceeding.

CUSTOMER CONCENTRATION RISK

Q. SUMMARIZE MR. NOWAK'S REBUTTAL TESTIMONY REGARDING NFG'S CUSTOMER CONCENTRATION RISK.

A. Similar to his direct testimony, Mr. Nowak opines that NFG's smaller size increases the risk surrounding the Company regarding the loss of a large customer. He then adds that changing geopolitical events and economic uncertainty concerning the current conflict in the Middle East creates greater risk for NFG. Finally, he contends that my assertion that NFG can file a rate case at any time to address revenue inadequacies is not an applicable solution.[48]

Q. WHAT IS YOUR RESPONSE TO MR. NOWAK'S REBUTTAL TESTIMONY REGARDING NFG'S CUSTOMER CONCENTRATION RISK?

A. My position remains unchanged from my direct testimony. I continue to assert that mechanisms such as the FPFTY and the Distribution System Improvement Charge (DSIC) play a significant role in reducing a utilities regulatory lag and overall financial risk profile. These risk-reducing mechanisms should be

[48] NFG Statement No. 10-R, pp. 57-59.

considered in conjunction with the fact that regulated utilities have the opportunity to recover all prudent expenses through a base rate case. Additionally, given that Mr. Nowak is unaware of NFG's loss of any large customer in recent years,[49] paired with his lack of an explicit adjustment to his requested ROE for customer concentration risk, I recommend that the Commission give this argument no consideration.

OVERALL RATE OF RETURN

Q. PLEASE RESTATE I&E'S RECOMMENDED COST OF EQUITY AND OVERALL RATE OF RETURN.

A. As noted earlier in my rebuttal testimony, I calculate the appropriate cost of equity to be 9.81% for NFG, with an overall rate of return of 7.91%.

Q. DO YOU HAVE ANY FINAL COMMENTS REGARDING YOUR RETURN ON EQUITY AND OVERALL RATE OF RETURN ANALYSIS?

A. Yes. As stated above, there have been current concerns regarding utility bill affordability as addressed in various statements by Commissioner Barrow[50] and concerns raised by Governor Shapiro in a recently issued letter to Pennsylvania Utility Leaders regarding higher utility costs and enormous profits earned by utilities in 2024.[51] These concerns highlight the importance of ratepayers only

[49] NFG Statement No. 10-R, p. 57, lines 16-17.
[50] I&E Exhibit No. 2, Schedules 4 and 5.
[51] I&E Exhibit No. 1-SR, Schedule 2, pp. 1-4.

being required to pay rates to fund costs that are necessary for the safe and reliable provision of natural gas service. I believe that my recommendations allow the Company to earn a fair return while considering the cost to ratepayers. Given the current economic climate, it is important that ratepayers only be required to pay rates to fund costs that are absolutely necessary for the safe and reliable provision of natural gas service.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes. However, I reserve the right to supplement my testimony or to revise recommendations if additional issues or facts arise during this proceeding. Further, as stated above, the lack of response to any topic or recommendation should not be interpreted as agreement with the other parties' recommendations.

SCALE BACK OF RATES **16**

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ethan H. Cline. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation and Enforcement (I&E) as a Fixed Utility Valuation Engineer.

Q. WHAT IS YOUR EDUCATION AND PROFESSIONAL BACKGROUND?

A. My education and professional background are set forth in Appendix A, which is attached to my direct testimony.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. The I&E analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires the balancing of the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. My direct testimony relates to National Fuel Gas Distribution Corporation (NFG or Company) requested base rate revenue increase of $19,680,503.[1] My testimony specifically addresses Fully Projected Future Test Year (FPFTY) reporting, the Weather Normalization Adjustment (WNA), cost of service study, and scale back of rates.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 3 contains schedules that support my direct testimony.

Q. WHAT TEST YEAR DID THE COMPANY ELECT TO USE IN THIS PROCEEDING?

A. National Fuel elected to base its rates on a FPFTY ending October 31, 2027. The Company also addressed a historic test year (HTY) ended September 30, 2025 and future test year (FTY) ending September 30, 2026.[2]

[1] National Fuel Exhibit No. E, p. 1.
[2] National Fuel Statement No. 2, pp. 3-4.

FPFTY REPORTING REQUIREMENTS

Q. DID THE COMPANY PROVIDE A SCHEDULE SHOWING PLANT ADDITIONS AND RETIREMENTS THAT SUPPORT THE PROJECTED LEVEL OF TOTAL PLANT IN THE FPFTY?

A. Yes. The Company provided NFG Exhibit A - FPFTY, Schedule C-2 and NFG Exhibit A - FTY, Schedule C-2 showing account details for the plant additions and retirements totaling $884,662,000 for the FTY and $957,237,000 for the FPFTY.

Q. DO YOU HAVE ANY RECOMMENDATIONS REGARDING PLANT ADDITIONS THAT NFG PROJECTS TO BE IN SERVICE DURING THE FTY ENDING SEPTEMBER 30, 2026, AND THE FPFTY ENDING OCTOBER 31, 2027?

A. Yes. I recommend that the Company be required to provide I&E, the Office of Consumer Advocate, and any other interested parties with an update to NFG Exhibit A - FTY, Schedule C-2 no later than February 1, 2027, under this docket number, which should include actual capital expenditures, plant additions, and retirements by month for the twelve months ending September 30, 2026. And an additional update to NFG Exhibit A - FPFTY, Schedule C-2 should be required for actuals through October 31, 2027, no later than February 1, 2028.

Q. WHY DO YOU RECOMMEND THAT NFG BE REQUIRED TO PROVIDE THESE UPDATES?

A. There is value in determining how closely NFG's projected investments in future plant comport with the actual investments that are made by the end of the FTY and FPFTY. Determining the correlation between NFG's projected and actual results will help inform the Commission and the parties in NFG's future rate cases as to the validity of NFG's projections.

By using an FPFTY, NFG is requesting ratepayers pre-pay a return on its projected investment in future plant that is not in place and providing service at the time the new rates take effect but also are not subject to any guarantee of being completed and placed into service. While the FPFTY provides for such projections, there should be verification of those projections. Therefore, requiring the Company to share updates demonstrating that actual investments comport with FPFTY projections used in setting rates provides the Commission with actual data to gauge the accuracy of NFG's projected investments in future proceedings.

WEATHER NORMALIZATION ADJUSTMENT

Q. WHAT IS A WEATHER NORMALIZATION ADJUSTMENT?

A. The Company's Weather Normalization Adjustment (WNA) is a ratemaking mechanism that adjusts the delivery portion of customer bills so that they reflect

usage under normal weather conditions rather than actual temperatures experienced during the heating season.[3]

Q. DOES THE COMPANY HAVE AN EXISTING WNA?

A. Yes.

Q. HOW DOES THE COMPANY'S EXISTING WNA OPERATE?

A. NFG's existing WNA applies to all residential, commercial, and public authority customers. It adjusts usage in customer bills based on deviations from normal weather by comparing actual Heating Degree Days (HDDs) to normal HDDs based on a 15-year weather history during the heating season of October through May. The existing WNA includes a 3% deadband.[4]

Q. WHAT IS A DEADBAND?

A. A deadband applies to a WNA such that the adjustment is not triggered if Actual HDDs are within a certain threshold of the Normal HDDs. The deadband keeps the revenue and bill impacts of normal weather variations with the Company and the customers. The WNA is not designed to provide 100% weather-related revenue certainty.

[3] National Fuel Statement No. 19, pp. 23-24.
[4] National Fuel Statement No. 19, pp. 24-25.

Q. WHAT IS THE COMPANY PROPOSING REGARDING ITS WNA?

A. The Company is proposing to calculate its Normal HDDs based on ten years of National Oceanic and Atmospheric Administration (NOAA) weather data.

Q. DO YOU OPPOSE THE COMPANY'S PROPOSAL TO CALCULATE ITS NORMAL HDDS BASED ON TEN YEARS OF WEATHER DATA?

A. No. The Company's proposal to calculate its Normal HDDs based on ten years of weather data is reasonable because it more accurately reflects recent weather trends and is consistent with the Commission's Order in the recent Columbia Gas of Pennsylvania, Inc. (Columbia) base rate case.[5]

Q. ARE YOU RECOMMENDING ANY CHANGES TO THE WNA AS IT IS PROPOSED BY THE COMPANY?

A. Yes. I am recommending that the shoulder month of May be excluded from the calculation of the WNA and that the deadband be increased to 5%.

Q. WHY ARE YOU RECOMMENDING THE MONTH OF MAY BE EXCLUDED FROM THE MONTHS IN WHICH THE WNA IS APPLIED?

A. The month of May should be excluded from the calculation of the WNA because it is a shoulder month, outside of both the heating and summer periods, where

[5] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, pp. 301-02 (Order Entered December 4, 2025).

customers can expect to start experiencing a decrease in their heating bills. The Commission agreed with this position in the recent Columbia Order that the Company referred to in support of its proposal to calculate its Normal HDDs on a ten year basis.[6]

Q. WHY ARE YOU RECOMMENDING THE DEADBAND BE INCREASED FROM 3% TO 5%?

A. Similar to my recommendation to exclude the month of May from the calculation of the WNA, my recommendation to increase the deadband from 3% to 5% is supported by the recent Columbia Order, which stated "a 5% deadband adequately captures what could be considered normal weather fluctuations in Pennsylvania. It also places more of the burden for calculating and forecasting weather variations back onto the Company as a normal part of doing business."[7]

COST OF SERVICE

Q. WHAT IS AN ALLOCATED COST OF SERVICE (ACOS) STUDY (ACOSS)?

A. A utility provides service to a defined set of customer classes that are different in terms of demand and usage patterns. An ACOSS allocates or assigns a utility's revenue requirement based on those service differences. In other words, an

[6] National Fuel Statement No. 13, p. 8.

[7] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, pp. 301-02 (Order Entered December 4, 2025).

ACOSS is a formalized analysis of costs that attempts to assign to each customer or rate class its proportionate share of the Company's total cost of service (i.e., the Company's total revenue requirement). The results of such a study can be utilized to determine the relative cost of service for each class and help determine the individual class revenue requirements and, to the extent a particular class is above or below the system average rate of return, show the additional revenues each class receives or conversely the additional revenues that each class contributes to the Company's overall revenues. In addition to the relative provision of revenues, a relative rate of return is also provided, which shows how the rate of return for each class compares to the system average rate of return.

Q. WHAT ARE RATE OF RETURN AND RELATIVE RATE OF RETURN?

A. The rate of return is the Commission authorized return on rate base that is determined in a base rate proceeding. A relative rate of return indicates how the rate of return of each customer class compares to the system average rate of return. In general, a relative rate of return that provides revenue equal to its cost to serve would have a relative rate of return equal to 1.0. If a class of service has a relative rate of return below 1.0, the revenue received from that class does not cover the cost of providing service to that class. If a class of service has a relative rate of return above 1.0, the revenue received from that class exceeds the cost of providing service to that class.

Q. DID THE COMPANY PROVIDE AN ACOSSIN THIS PROCEEDING?

A. Yes. The Company performed two ACOSS in this case. The first, using the customer-demand method, is the ACOSS that the Company is proposing be used to allocate costs in this case where cost of mains are allocated as 61% customer-related and 39% as demand-related.[8] The second ACOSS performed by the Company was based on the Peak and Average method, with no customer component, was provided for informational and comparison purposes.[9]

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL TO ALLOCATE COSTS BASED ON THE CUSTOMER-DEMAND METHODOLOGY THAT INCLUDES A CUSTOMER-RELATED ALLOCATION OF THE COST OF MAINS?

A. No. The Company's customer-demand allocation proposal is inconsistent with long-standing Commission precedent that was reaffirmed in the recent Columbia Gas order. In it, the Commission stated the following:

> In light of the above, we remain of the opinion that although mains serve customers, it is the throughput that determines the type of main investment because it is the load that determines the main investment, not the number of customers served. As the Commission stated in *Columbia Gas 2021*, the existence of one customer, five customers, or ten customers does not determine the amount of mains investment. Mains investment is driven by the loads placed upon it, not by the number of customers served. *Columbia Gas 2021* at 217.

[8] National Fuel Statement No. 19, p. 12.
[9] National Fuel Statement No. 19, p. 17.

> Furthermore, distribution mains exist and are related to both annual demands and peak demands. Both annual and peak demands must be recognized in the allocation of distribution mains cost if the allocation is to be in accord with the principle of cost-causality. It is not reasonable to allocate distribution mains investment based solely on design peak day demands as in Columbia's Customer-Demand ACCOSS. The basic reason Columbia invests in its distribution system is to meet the annual demands for gas by customers. Additionally, a portion of the total cost of distribution service is related to installing a system with enough throughput capacity to meet design peak demands in excess of annual demands.
>
> For all these reasons, we find that the Peak & Average allocation methodology is the most appropriate allocation methodology to use in this proceeding because it is based on the premise of load-based investment.[10]

The Company has not provided any reason to support its proposal for the Commission to reverse its precedent and allow the cost of mains to be allocated based on number of customers.

Q. WHAT DO YOU RECOMMEND REGARDING THE ACOSS?

A. I recommend that the Commission allocate revenues and design rates based on the Peak and Average ACOSS provided by the Company.[11]

[10] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, pp. 254-5 (Order Entered December 4, 2025).

[11] The Peak and Average ACOSS was provided electronically in response to OCA-I-3 and summary page under present and proposed rates is attached as I&E Exhibit No. 3, Schedule 1.

REVENUE ALLOCATION

Q. ARE YOU RECOMMENDING AN ADJUSTMENT TO THE COMPANY'S PROPOSED REVENUE ALLOCATION?

A. Yes. The Company's proposed revenue allocation is based upon its customer-demand ACOSS. As I am recommending the Commission reject the proposed customer-demand ACOSS in favor of the Peak and Average ACOSS, I am also recommending the proposed allocation based on that model also be rejected in favor of an allocation based on the Peak and Average ACOSS.

Q. WHAT ARE THE REVENUES AND RELATIVE ROR BY CLASS UNDER PRESENT RATES BASED ON THE PEAK AND AVERAGE ACOSS?

A. The revenues and relative ROR by class under present rates based on the Peak and Average ACOSS are shown on the table below[12]:

Rate Class	Present Rate Revenue ($ in thousands)	Present Rate ROR (P&A)
Residential	$97,367	1.07
SCPA-LL	$6,819	1.65
SCPA-UL	$6,989	0.63
LCPA	$13,908	1.12
NGV	$131	(0.42)
SVIS	$444	2.18
IVIS	$5,876	0.95
LVIS	$2,730	0.75
LIS	$1,416	(0.30)

[12] I&E Exhibit No. 3, Schedule 1.

Q. WHAT REVENUE ALLOCATION ARE YOU RECOMMENDING?

A. The revenue allocation I am recommending, based on the Peak and Average ACOSS, is shown in the table below[13]:

I&E Recommended Revenue Allocation ($ in thousands)					
Rate Class	Current Revenues	Increase	Proposed Revenues	Percent Increase	Relative ROR under proposed rates
Residential	$97,367	$13,050	$110,417	13%	1.05
SCPA-LL	$6,819	$800	$7,619	12%	1.42
SCPA-UL	$6,989	$1,400	$8,389	20%	0.84
LCPA	$13,908	$2,199	$16,107	16%	1.05
NGV	$131	$26	$157	20%	(0.07)
SVIS	$444	$0	$444	0%	1.36
IVIS	$5,876	$1,150	$7,076	20%	1.00
LVIS	$2,730	$540	$3,270	20%	0.85
LIS	$1,416	$500	$2,970	20%	0.05
Total:	$136,735	$19,665	$156,400	14%	

Q. WHY DID YOU RECOMMEND THE REVENUE ALLOCATION SHOWN IN THE TABLE ABOVE?

A. My recommended revenue allocation, shown in the table above, is reasonable because it both moves each rate class towards a relative ROR of 1.0, based on the Peak and Average ACOSS, while adhering to the concept of gradualism by not

[13] I&E Exhibit No. 3, Schedule 2.

recommending an increase above 1.5x the system average increase, or approximately 20% (1.5 x 14%).

CUSTOMER COST ANALYSIS

Q. WHAT IS A CUSTOMER COST ANALYSIS AND HOW IS IT USED?

A. A customer cost analysis is part of a cost of service study that includes only customer costs. It is used as a guide in determining the appropriate customer charges for the various classes.

Q. DID THE COMPANY PROVIDE A CUSTOMER COST ANALYSIS IN ITS FILING?

A. No. The Company did not provide a separate customer cost analysis in its filing. The claimed unit cost per customer of $27.17 is based upon the customer classification in the customer-demand ACOSS.[14]

Q. IS THE $27.17 UNIT COST PER CUSTOMER REASONABLE?

A. No. As described above, the Commission has consistently determined that the Peak and Average ACOS method is preferred over the customer-demand ACOS method. Therefore, the Company's claimed unit cost per customer of $27.17 that

[14] National Fuel Exhibit D, Schedule 7, p. 3.

is based upon the customer-demand ACOSS is not reasonable and should be rejected.

Q. ARE YOU ABLE TO CREATE A CUSTOMER COST ANALYSIS BASED ON THE PEAK AND AVERAGE ACOS?

A. No. Based on the information provided by the Company, I am unable to perform a customer cost analysis based on the Peak and Average ACOS.

Q. WHAT IS THE COMPANY RECOMMENDING REGARDING THE BASIC SERVICE CHARGE FOR THE VARIOUS CLASSES?

A. The Company is recommending increasing the basic service charges for each customer class (except for the LCPA, SVIS, and IVIS) consistent with the results of its customer cost analysis.[15]

Q. WHAT DO YOU RECOMMEND REGARDING THE BASIC SERVICE CHARGES PROPOSED BY THE COMPANY?

A. As I described above, NFG did not provide a customer cost analysis based on the Peak and Average ACOSS. As such, the basic service charge increases proposed by the Company are unsupported. Therefore, I recommend the Commission limit the increase in basic service charges proposed by the Company to approximately

[15] National Fuel Statement No. 14, p. 17.

the as the same class percent increase unless and until they are supported by an appropriate customer cost analysis. As an example, the residential class customer charge would be no more than approximately 13%, or to $15.80, which is the increase to the residential class I have recommended based on the Peak and Average ACOSS.

Q. DO YOU HAVE ANY RECOMMENDATIONS IF THE COMPANY PROVIDES A PEAK AND AVERAGE CUSTOMER COST ANALYSIS OR THE COMMISSION REJECTS YOUR BASIC SERVICE CHARGE RECOMMENDATION?

A. Yes. If the Company provides support for its proposed basic service charges in the form of a customer cost analysis based on the Peak and Average ACOS methodology or the Commission does not agree with my above recommendation, I recommend that any basic service charge that receives an increase be included in the scale back of rates.

Q. WHY DO YOU RECOMMEND ANY BASIC SERVICE CHARGES THAT ARE PROPOSED AN INCREASE BE INCLUDED IN THE SCALE BACK OF RATES?

A. Basic service charges represent a portion of a customer's bill that does not change regardless of usage level. Setting the basic service charge must strike a balance between cost-based rates, gradualism, and customer conservation efforts.

Including the basic service charge in the scale back of rates represents movement towards cost-based rates while adhering to the concept of gradualism. It also reduces the impact to customer conservation that would occur if only the usage rates were included in the scale back of rates. Further, my recommendation is consistent with the Commission's decision in the recent Columbia Gas case in which it reduced Columbia's proposed customer charge and then included that reduced customer charge in the scale back of rates.[16]

SCALE BACK OF RATES

Q. WHAT DO YOU RECOMMEND IF THE COMMISSION GRANTS LESS THAN THE $19.7 MILLION REVENUE INCREASE REQUESTED BY THE COMPANY?

A. If the Commission grants less than the $19.7 million revenue increase requested by the Company, I recommend rates, including the customer charges that are proposed an increase, be scaled back proportionately based upon the cost of service study ultimately approved by the Commission.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes. However, I reserve the right to supplement my testimony or to revise recommendations if additional issues or facts arise during this proceeding.

[16] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, pp. 280-3 (Order Entered December 4, 2025).

ETHAN H. CLINE

PROFESSIONAL EXPERIENCE AND EDUCATION

EXPERIENCE:

03/2009 - Present
Bureau of Investigation and Enforcement, Pennsylvania Public Utility Commission - Harrisburg, Pennsylvania

Fixed Utility Valuation Engineer – Assists in the performance of studies and analyses of the engineering-related areas including valuation, depreciation, cost of service, quality and reliability of service as they apply to fixed utilities. Assists in reviewing, comparing and performing analyses in specific areas of valuation engineering and rate structure including valuation concepts, original cost, rate base, fixed capital costs, inventory processing, excess capacity, cost of service, and rate design.

06/2008 – 09/2008
Akens Engineering, Inc. - Shiremanstown, Pennsylvania

Civil Engineer – Responsible, primarily, for assisting engineers and surveyors in the planning and design of residential development projects

10/2007 – 05/2008
J. Michael Brill and Associates - Mechanicsburg, Pennsylvania

Design Technician – Responsible, primarily, for assisting engineers in the permit application process for commercial development projects.

01/2006 – 10/2007
CABE Associates, Inc. - Dover, Delaware

Civil Engineer – Responsible, primarily, for assisting engineers in performing technical reviews of the sewer and sanitary sewer systems of Sussex County, Delaware residential development projects.

EDUCATION:

Pennsylvania State University, State College, Pennsylvania
Bachelor of Science; Major in Civil Engineering, 2005

- Attended NARUC Rate School, Clearwater, FL
- Attended Society of Depreciation Professionals Annual Conference and Training

I&E Exhibit No. 3
Witness: Ethan H. Cline

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION

Docket No. R-2026-3059428

Exhibit to Accompany

the

Direct Testimony

of

Ethan H. Cline

Bureau of Investigation and Enforcement

Concerning:

Fully Projected Future Test Year Reporting Requirements
Weather Normalization Adjustment
Cost of Service Study
Scale Back of Rates

National Fuel Gas Distribution Corporation
Gas Class Cost of Service Study
Test Year Ending October 31, 2027
SCHEDULE 5 – COST OF SERVICE AND RATE OF RETURN UNDER PRESENT AND PROPOSED RATES
($ in thousands)

I&E Statement No. 3-SR
Witness: Ethan H. Cline

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION

Docket No. R-2026-3059428

Surrebuttal Testimony

of

Ethan H. Cline

Bureau of Investigation and Enforcement

Concerning:

Fully Projected Future Test Year Reporting Requirements
Weather Normalization Adjustment
Cost of Service Study
Scale Back of Rates

TABLE OF CONTENTS

FULLY PROJECTED FUTURE TEST YEAR (FPFTY) REPORTING REQUIREMENTS **2**

WEATHER NORMALIZATION ADJUSTMENT (WNA) **3**

COST OF SERVICE **6**

REVENUE ALLOCATION **11**

CUSTOMER COST ANALYSIS **14**

SCALE BACK OF RATES **15**

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ethan H. Cline. My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission in the Bureau of Investigation and Enforcement (I&E) as a Fixed Utility Valuation Engineer.

Q. ARE YOU THE SAME ETHAN H. CLINE THAT SUBMITTED I&E STATEMENT NO. 3 AND I&E EXHIBIT NO. 3?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony submitted by witnesses on behalf of National Fuel Gas Distribution Company (NFG or Company) by: Rebecca E. Hillery[1], Cathryn E. Hilliard[2], and John D. Taylor[3]. I will also respond to the rebuttal testimony submitted on behalf of the Office of Consumer Advocate (OCA) witness Michael Deupree[4] and Office of Small Business Advocate (OSBA) witness Justin B. Farr[5].

---

[1] NFG Statement No. 1-R.
[2] NFG Statement No. 13-R.
[3] NFG Statement No. 19-R.
[4] OCA Statement No. 1R.
[5] OSBA Statement No. 1-R.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. No.

FULLY PROJECTED FUTURE TEST YEAR (FPFTY) REPORTING REQUIREMENTS

Q. DID YOU HAVE ANY RECOMMENDATIONS REGARDING PLANT ADDITIONS THAT NFG PROJECTS TO BE IN SERVICE DURING THE FTY ENDING SEPTEMBER 30, 2026, AND THE FPFTY ENDING OCTOBER 31, 2027?

A. Yes. I recommended that the Company provide I&E and the OCA with an update to NFG Exhibit A – Revenue Requirement - FTY, Sch. C-2 no later than February 1, 2027, under this docket number, which should include actual capital expenditures, plant additions, and retirements by month for the twelve months ending September 30, 2026. An additional update to NFG Exhibit A – Revenue Requirement FPFTY, Sch. C-2 should be provided for actuals through October 31, 2027, no later than February 1, 2028.[6]

[6] I&E Statement No. 3, p. 3.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Yes. The Company stated that, if directed by the Commission or otherwise required in this proceeding, it will provide an update of actual plant balances for the FTY and FPFTY through October 31, 2027.[7]

WEATHER NORMALIZATION ADJUSTMENT (WNA)

Q. WHAT DID THE COMPANY PROPOSE REGARDING ITS WNA?

A. The Company proposed to calculate its Normal HDDs based on ten years of National Oceanic and Atmospheric Administration (NOAA) weather data.

Q. DID YOU OPPOSE THE COMPANY'S PROPOSAL TO CALCULATE ITS NORMAL HDDS BASED ON TEN YEARS OF WEATHER DATA?

A. No.[8]

Q. DID YOU RECOMMEND ANY CHANGES TO THE WNA AS IT IS PROPOSED BY THE COMPANY?

A. Yes. I recommended that the shoulder month of May be excluded from the calculation of the WNA and that the deadband be increased to 5%.[9]

[7] NFG Statemen No. 6-R, p. 5.
[8] I&E Statement No. 3, p. 6.
[9] I&E Statement No. 3, p. 6.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Yes. The Company opposed both of my recommendations regarding the WNA.

Q. WHY DID THE COMPANY OPPOSE YOUR RECOMMENDATION TO REMOVE THE SHOULDER MONTH OF MAY FROM THE WNA CALCULATION?

A. The Company claimed that due to a part of NFG's service territory's proximity to Lake Erie, its customers experience lower average temperatures in May than other areas of Pennsylvania and that can lead to increased weather-driven bill volatility.[10]

Q. WHAT IS THE HISTORY OF THE WNA IN THE MONTH OF MAY FOR NFG CUSTOMERS?

A. NFG witness Hillery provided a table reflecting the heating season by year which shows the WNA credit or surcharge by month for the 2023-2024, 2024-2025, and 2025-2026 (for the months available) heating seasons. This table shows that NFG customers were charged an additional $1,078,972 in the 2023-2024 heating season and, by contrast, only $48,505 in the 2024-2025 heating season, while data for the 2025-2026 heating season is not yet available. This data shows that May weather

[10] NFG Statement No. 1-R, p. 9 and NFG Statement No. 19-R, p. 39.

is highly variable from year to year and warrants the classification of a shoulder month and removal from the WNA calculation.

Q. WHY DID THE COMPANY OPPOSE YOUR RECOMMENDATION TO INCREASE THE DEADBAND FROM 3% TO 5%?

A. NFG witness Taylor claimed that limiting the WNA would materially weaken the mechanism and reintroduce volatility into revenue recovery for both the Company and customers. He further pointed to the $2.6 million net WNA credits from the most recent heating season (October 2025 through March 2026) as an example of a customer benefit of the WNA and claimed that increasing the deadband to 5% would have resulted in fewer credits returned to customers.[11]

Q. DO YOU AGREE THAT A SINGLE YEAR OF WNA CREDITS IS SUFFICIENT SUPPORT TO DENY A 5% DEADBAND?

A. No. First, a single year of data does nothing to support changing the Commission's determination, as I stated in my direct testimony, that a 5% deadband adequately captures what could be determined as normal weather fluctuations in Pennsylvania.[12] Furthermore, while the most recent heating season did result in a net credit to customers, the previous two heating seasons resulted in a net charge to customers of $6,920,194 (2023-2024) and $2,186,781 (2024-2025)

[11] NFG Statement No. 19-R, pp. 37-38.
[12] I&E Statement No. 3, p. 7.

which shows that the WNA is not the benefit to customers that NFG claims it to be.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. As discussed above, the Company has provided no meaningful support that would result in a change in my recommendation. Therefore, I continue to recommend that the shoulder month of May be removed from the WNA calculation and the deadband be increased from 3% to 5%.

COST OF SERVICE

Q. DID THE COMPANY PROVIDE AN ACOSS IN THIS PROCEEDING?

A. Yes. The Company performed two ACOSS in this case. The first, using the customer-demand method, is the ACOSS that the Company is proposing be used to allocate costs in this case where the cost of mains are allocated as 61% customer-related and 39% as demand-related. The second ACOSS performed by the Company was based on the Peak and Average method, with no customer component, was provided for informational and comparison purposes.[13]

[13] I&E Statement No. 3, p. 9.

Q. WHAT DID YOU RECOMMEND REGARDING THE ACOSS?

A. I recommended that the Commission allocate revenues and design rates based on the Peak and Average ACOSS provided by the Company. The basis for my recommendation is the long-standing Commission preference for the Peak and Average methodology for allocating natural gas costs.[14]

Q. DID THE PARTIES RESPOND TO YOUR RECOMMENDATION?

A. Yes. NFG witness Taylor disagreed with my recommendation based on his continued support for the customer-demand methodology.[15] OSBA witness Farr similarly disagreed with my recommendation due to a preference for the customer-demand methodology but proposed a hybrid methodology instead.[16] OCA witness Deupree agrees that the customer-demand methodology is flawed and should be rejected while supporting his own alternative ACOSS which is also based on the Peak and Average methodology.[17]

[14] I&E Statement No. 3, pp. 9-10.
[15] NFG Statement no. 19-R, pp. 6-7.
[16] OSBA Statement No. 1-R, pp. 1-2.
[17] OCA Statement No. 1R, pp. 10-11.

Q. DID NFG AGREE WITH YOUR POSITION THAT COMMISSION PRECEDENT IS IN SUPPORT OF THE PEAK AND AVERAGE ACOSS METHODOLOGY?

A. Yes. However, Mr. Taylor claimed that the use of Peak and Average ACOSS methodology is "utilizing cost causation with no concern for the resulting impact on class rates" then cited to a State of Connecticut – Department of Public Utility Control decision dated August 9, 2000 that supported the customer-demand ACOSS methodology.[18] The implication of Mr. Taylor's reference is that support of the Peak and Average Methodology by the Commission can only be because of some social policy and not cost causation principles. Mr. Taylor provided no background information as to why the Connecticut Commission used this language in its ruling. Without this important information, Mr. Taylor's supposition that the Commission only prefers the Peak and Average ACOSS due to social policy is without merit. As I stated in my direct testimony, the Commission determined that "the basic reason Columbia invests in its distribution system is to meet the annual demands for gas by customers."[19] NFG invests in its distribution system for the same reasons and, therefore, the Commission should maintain its precedent that the costs of the NFG system should be allocated using a Peak and Average Methodology.

[18] NFG Statement No. 19-R, pp. 18-19.
[19] I&E Statement No. 3, p. 10.

Q. DID THE COMPANY REFERENCE ANY OTHER JURISDICTIONS THAT REPORTEDLY SUPPORT THE CUSTOMER-DEMAND ACOSS METHODOLOGY?

A. Yes. Mr. Taylor indicated that there are 44 state utility regulatory commissions (including Washington D.C.) that rely upon the results of an embedded cost of service study for ratemaking purposes and that 26 of those 44 prefer the customer-demand methodology.[20]

Q. DOES THE EXISTENCE OF A NUMBER OF STATE UTILITY REGULATORY COMMISSIONS THAT PREFER A CUSTOMER-DEMAND ACOSS METHODOLOGY SUPERCEDE THE PENNSYLVANIA COMMISSION'S LONG-STANDING PRECEDENT?

A. No. The Pennsylvania Commission has long determined that the Peak and Average ACOSS is the methodology that leads to the most just and reasonable rates for Pennsylvania customers. The fact that other states may have other preferences has no bearing on this proceeding. However, as I am not a lawyer, this issue will be addressed more fully in the I&E briefs on this topic.

[20] NFG Statement No. 19-R, p. 19.

Q. WHAT IS THE OSBA RECOMMENDING REGARDING COST ALLOCATION?

A. In its direct testimony, the OSBA supported the Company's customer-demand ACOSS. In rebuttal testimony, after disagreeing with the Peak and Average ACOSS methodology, OSBA witness Farr recommended a hybrid ACOSS methodology which assigned 30.5% of the weight to customer-related costs and the remaining 69.5% determined using the Peak and Average method proposed by the OCA.[21]

Q. DO YOU AGREE WITH THE OSBA'S PROPOSED HYBRID METHODOLOGY?

A. No. Allocating any part of the cost of mains based on the number of customers is not reasonable and, therefore, the OSBA's proposed hybrid methodology should be rejected.

Q. DID THE OCA SUPPORT YOUR RECOMMENDED PEAK AND AVERAGE ACOSS?

A. No. While the OCA did agree with my support for the Peak and Average ACOSS, OCA witness Deupree continues to support the Peak and Average ACOSS that he

[21] OSBA Statement No. 1-R, pp. 1-2.

submitted with his direct testimony.[22] Mr. Deupree's main disagreement with my position is regarding allocation, which I will discuss further below.

Q. DO YOU OPPOSE MR. DEUPREE'S ALTERNATIVE PEAK AND AVERAGE ACOSS?

A. No. While I continue to recommend the Peak and Average ACOSS as I proposed in my direct testimony, I do not oppose the alternative ACOSS proposed by Mr. Deupree because it is also based on the Peak and Average ACOSS.

REVENUE ALLOCATION

Q. DID YOU RECOMMEND AN ADJUSTMENT TO THE COMPANY'S PROPOSED REVENUE ALLOCATION?

A. Yes. The Company's proposed revenue allocation is based upon its customer-demand ACOSS. As I recommended the Commission reject the proposed customer-demand ACOSS in favor of the Peak and Average ACOSS, I also recommended the proposed allocation based on that model be rejected in favor of an allocation based on the Peak and Average ACOSS.[23]

[22] OCA Statement No. 1R, p. 11.
[23] I&E Statement No. 3, p. 11.

Q. WHAT REVENUE ALLOCATION DID YOU RECOMMEND?

A. The revenue allocation I am recommending, based on the Peak and Average ACOSS, is shown in the table below[24]:

I&E Recommended Revenue Allocation Based on NFG As-Filed Increase ($ in thousands)					
Rate Class	Current Revenues	Increase	Proposed Revenues	Percent Increase	Relative ROR under proposed rates
Residential	$97,367	$13,050	$110,417	13%	1.05
SCPA-LL	$6,819	$800	$7,619	12%	1.42
SCPA-UL	$6,989	$1,400	$8,389	20%	0.84
LCPA	$13,908	$2,199	$16,107	16%	1.05
NGV	$131	$26	$157	20%	(0.07)
SVIS	$444	$0	$444	0%	1.36
IVIS	$5,876	$1,150	$7,076	20%	1.00
LVIS	$2,730	$540	$3,270	20%	0.85
LIS	$1,416	$500	$2,970	20%	0.05
Total:	$136,735	$19,665	$156,400	14%	

Q. DID ANY PARTIES DISAGREE WITH YOUR REVENUE ALLOCATIONS?

A. Yes. NFG and the OSBA did not specifically address my allocation, however their opposition can be inferred based on the underlying ACOSS methodology

[24] I&E Statement No. 3, p. 12.

choices as I discussed above. Also, the OCA disagreed with my allocation recommendation due to concerns regarding gradualism.

Q. WHAT IS THE BASIS FOR THE OCA'S CONCERNS REGARDING GRADUALISM?

A. OCA witness Deupree claimed that my allocation recommendation to limit the revenue allocations to 1.5 times the system average increase is inconsistent with the concept of gradualism and instead proposes capping the under-earning rate classes to no more than 1.15 times the system average increase.[25]

Q. IS A LIMIT OF 1.5 TIMES THE SYSTEM AVERAGE INCREASE INCONSISTENT WITH THE CONCEPT OF GRADUALISM?

A. No. In my experience, 1.5 times the system average increase has been considered consistent with the concept of gradualism.

Q. DO YOU OPPOSE THE OCA'S PROPOSAL REGARDING COST ALLOCATION?

A. No. Considering the OCA's cost allocation proposal, alongside my proposal, provides a reasonable range for customer class increases.

[25] OCA Statement No. 1R, pp. 10-11.

CUSTOMER COST ANALYSIS

Q. WHAT DID YOU RECOMMEND REGARDING THE BASIC SERVICE CHARGES PROPOSED BY THE COMPANY?

A. As I described in my direct testimony, NFG did not provide a customer cost analysis based on the Peak and Average ACOSS. As such, the basic service charge increases proposed by the Company are unsupported. Therefore, I recommended the Commission limit the increase in basic service charges proposed by the Company to approximately the same class percent increase unless and until they are supported by an appropriate customer cost analysis.[26]

Q. DID THE COMPANY PROVIDE A TRADITIONAL CUSTOMER COST ANALYSIS IN ITS REBUTTAL TESTIMONY?

A. No. However, Mr. Taylor claimed that the $27.17 reflected in the Company's ACOSS does not include distribution mains investment.[27]

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. Without a traditional customer cost analysis, the Company's proposed customer costs are unsupported and should be limited to approximately their respective class increases.

[26] I&E Statement No. 3, pp. 14-15.
[27] NFG Statement No. 19-R, pp. 23-24.

SCALE BACK OF RATES

Q. WHAT DID YOU RECOMMEND IF THE COMMISSION GRANTS LESS THAN THE $19.7 MILLION REVENUE INCREASE REQUESTED BY THE COMPANY?

A. If the Commission grants less than the $19.7 million revenue increase requested by the Company, I recommended the requested rates, including the proposed customer charges, be scaled back proportionately based upon the cost of service study ultimately approved by the Commission.[28]

Q. DID ANY PARTY DISAGREE WITH YOUR RECOMMENDATION?

A. Yes. NFG witness Taylor opposed my recommendation because "[s]caling back the customer charge merely to match a reduced revenue requirement would disconnect the rate design from cost causation principles and potentially results in an under-recovery of fixed costs." Mr. Taylor also cited NARUC's gas design manual's statement that "Ideally, the customer charge should recover all customer costs." [29]

[28] I&E Statement No. 3, p. 16.
[29] NFG Statement No. 19-R, pp. 24-25.

Q. PLEASE RESPOND TO MR. TAYLOR'S TESTIMONY REGARDING INCLUDING THE CUSTOMER CHARGE IN THE SCALE BACK OF RATES.

A. A delicate balance exists in rate design between the revenue stability and fixed cost recovery (the Company) and affordability and conservation efforts (customers). Even Mr. Taylor references the "ideal" world. In the real world, I believe that including the customer charge in the scale back of rates is an effective means of recognizing the interests of both the Company and customers. Therefore, I continue to recommend the customer charges that receive an increase be included in any scale back of rates.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes. However, I reserve the right to supplement my testimony or to revise recommendations if additional issues or facts arise during this proceeding.

I&E Statement No. 4
Witness: Jesse Burkett
NON-PROPRIETARY

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

National Fuel Gas Distribution Corp.

Docket No. R-2025-3059428

Direct Testimony

of

Jesse M. Burkett

Bureau of Investigation and Enforcement

Concerning:

PIPELINE REPLACEMENT
METHANE DETECTOR PILOT PROGRAM

TABLE OF CONTENTS

INTRODUCTION **1**

PIPELINE REPLACEMENT EFFORTS **9**

REPLACEMENT COSTS **12**

METHANE DETECTION **16**

INTRODUCTION

Q. PLEASE STATE YOUR NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Jesse M. Burkett. I am a Civil Engineer (General) in the Pipeline Safety Division of the Pennsylvania Public Utility Commission's (Commission) Bureau of Investigation and Enforcement (I&E). My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. WHAT IS YOUR EDUCATION AND EMPLOYMENT EXPERIENCE?

A. I attended Pennsylvania State University and earned a Bachelor of Science Degree in Applied Materials Engineering in 2021. I joined the Commonwealth of Pennsylvania Department of Transportation in June of 2021, conducting federal and state bridge safety inspections until my transition in July of 2022 to the Commission's Pipeline Safety Division. In addition to experience gained while on the job, I have also taken 41 courses required by the United States Pipeline and Hazardous Materials and Safety Administration (PHMSA) for inspector certification.

Q. WHAT ARE YOUR MAJOR DUTIES AS AN ENGINEER IN THE PIPELINE SAFETY DIVISION?

A. My major duties include the inspection of natural gas infrastructure, including pipeline operation, construction, and maintenance, to ensure compliance with the

Pipeline and Hazardous Materials Safety Administration's (PHMSA) federal safety regulations and the Commission's applicable regulations including Title 52, Chapter 59 of the Pennsylvania Code. On average, I conduct over 120 inspections per year.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to address National Fuel Gas Distribution Corporation's (NFG or Company) pipeline replacement and restoration activities in relation to system maintenance and improvements. In addition, my testimony will highlight the usefulness and safety benefits of methane detectors within structures and the ability of real-time smart reporting technology to simultaneously notify the customer and the emergency gas response officials to potentially hazardous situations.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 4 contains schedules that support my direct testimony.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. The I&E analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires the balancing of the

interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. DID ANY COMPANY WITNESSES PROVIDE DIRECT TESTIMONY ON NFG'S PIPELINE REPLACEMENT?

A. Yes, NFG witnesses Schaefer[1] and Scouten[2], each discuss the Company's plans for Pipeline Replacement and Integrity Management.

Q. HAVE YOU REVIEWED NFG'S PLAN TO REPLACE HIGH RISK PIPELINES?

A. Yes. Mr. Schaefer stated the Company has tried to replace Leak Prone Pipe (LPP) through its Systematic Replacement Program. The Company stated Pipeline replacement projects are prioritized using a probabilistic risk model to evaluate and rank risks associated with individual pipeline segments as well as maintaining a Pipeline Replacement and Systematic Modernization Program.[3] NFG conducts annual evaluations of its distribution system to identify and prioritize pipeline replacement projects using risk-based criteria. According to Mr. Schaefer, these criteria include leakage history, pipe material and vintage, operating environment, and relevant environmental conditions. Performance data is reviewed annually and used to evaluate whether replacement activities are achieving measurable risk

[1] NFG Statement No. 9.
[2] NFG Statement No. 16.
[3] NFG Statement No. 9. Start p. 7.

reduction. In addition, NFG's Active Corrosion Program identifies areas exhibiting active corrosion and subjects those areas to semiannual leak surveys until permanent mitigation through pipeline replacement is completed. NFG's Long Term Infrastructure Improvement Plan (LTIIP) and its success in addressing distribution infrastructure on an accelerated basis is also summarized in relation to the LPP costs.[4] The Company filed its latest LTIIP revision, under Docket No. R-2022-3035730 in December 2025. This was filed to address a large increase in LPP replacement between the 2022 filing and the end of fiscal year 2025.

Q. HAVE YOU REVIEWED NFG'S TESTIMONY ON OPERATIONAL STRUGGLES WITH INTEGRITY MANAGEMENT?

A. Yes. I reviewed Mr. Scouten's direct testimony as it relates to NFG's operational challenges, staffing, and Distribution Integrity Management Plan. According to his testimony, NFG's most significant integrity threats to the distribution system include system leaks, aging or higher-risk facilities, and third-party excavation activity. The Company indicated that third-party excavation activity is one of the most significant external threats to the integrity of the distribution system. Excavation can result in line strikes, near misses, or latent damage that may not be immediately apparent.[5] As part of the excavation damage risks, One-Call ticket

[4] NFG Statement No. 9. Start p. 3.
[5] NFG Statement No. 16. Start p. 13.

volumes increased significantly in 2025, which increased activity could result in increased excavation damage.

Additionally, fiber optics/broadband expansion projects since 2022 have significantly increased year over year, with many projects having accelerated timelines and encompassing very large areas of development. This has created additional excavation hazards with unknown third party and out-of-state contractors conducting the installation. NFG has made efforts, later highlighted, to attempt to reduce damages but not without an increase in operational expenses.

Q. WHAT FEDERAL AND STATE REGULATIONS CONTROL NFG'S PIPELINE REPLACEMENT?

A. NFG is mandated to implement a Distribution Integrity Management Program (DIMP) under Title 49, Subpart P §§ 192.1001-1015 of the Code of Federal Regulations. Additionally, utilities like NFG, which seek to continue a previously approved Distribution System Improvement Charge (DSIC) mechanism, are required to submit an LTIIP pursuant to 52 Pa Code §121.1 and §121.3.

Q. WHY MUST A NATURAL GAS DISTRIBUTION COMPANY COMPLY WITH THE DIMP REGULATIONS?

A. PHMSA created DIMP regulations to reduce the number of U.S. Department of

Transportation (U.S. DOT) Reportable Incidents.[6] DIMP is a performance based regulatory program required of gas distribution operators and is driven by risk management.

Q. WHY MUST A NATURAL GAS DISTRIBUTION COMPANY FILE AN LTIIP?

A. A natural gas distribution company must submit an LTIIP for Commission approval to be eligible to recover the reasonable and prudently incurred costs related to the repair, improvement, and replacement of eligible property through the DSIC. The LTIIP is intended to address the planned acceleration of the replacement of aging infrastructure by the utility and be sufficient to ensure and maintain adequate, efficient, safe, reliable, and reasonable service to customers.[7]

Q. WHAT ARE THE REQUIREMENTS OF A DIMP?

A. DIMP requires gas distribution pipeline operators to:

---

[6] Under 49 CFR § 191.3, a PHMSA Reportable Incident is defined as any of the following events:
(1) An event that involves a release of gas from a pipeline, gas from an underground natural gas storage facility (UNGSF), liquefied natural gas, liquefied petroleum gas, refrigerant gas, or gas from an LNG facility, and that results in one or more of the following consequences:
(i) A death, or personal injury necessitating in-patient hospitalization;
(ii) Estimated property damage of $122,000 or more, including loss to the operator and others, or both, but excluding the cost of gas lost. For adjustments for inflation observed in calendar year 2021 onwards, changes to the reporting threshold will be posted on PHMSA's website. These changes will be determined in accordance with the procedures in appendix A to part 191.
(iii) Unintentional estimated gas loss of three million cubic feet or more.
(2) An event that results in an emergency shutdown of an LNG facility or a UNGSF. Activation of an emergency shutdown system for reasons other than an actual emergency within the facility does not constitute an incident.
(3) An event that is significant in the judgment of the operator, even though it did not meet the criteria of paragraph (1) or (2) of this definition.

[7] *See* 52 Pa. Code § 121.1.

1. Demonstrate knowledge of the gas distribution system;
2. Identify threats;
3. Evaluate and rank risks;
4. Identify and implement measures to address risk;
5. Measure performance, monitor results, and evaluate effectiveness;
6. Evaluate and improve the DIMP; and
7. Report results.[8]

DIMP requirements include the identification of threats to pipeline facilities and the requirement for operators to create plans to mitigate and reduce the risks caused by those threats. NFG uses a risk-based prioritization process called the Pipeline Replacement and Systematic Modernization Program to select replacement pipelines. NFG conducts annual evaluations of its distribution system to identify and develop risk ratings for each segment of at-risk pipeline and then replaces the pipe based on the highest risk ranking.

Q. WHAT ARE THE REQUIREMENTS OF AN LTIIP?

A. The LTIIP must include the following elements:

1. Identification of types and age of eligible property owned and operated by the utility for which it is seeking DSIC recovery.

[8] *See* 49 CFR § 192.1007.

2. An initial schedule for planned repair and replacement of eligible property.

3. A general description of location of eligible property.

4. A reasonable estimate of quantity of eligible property to be improved or repaired.

5. Projected annual expenditures and means to finance the expenditures.

6. A description of the manner in which infrastructure replacement will be accelerated and how repair, improvement, or replacement will ensure and maintain adequate, efficient, safe, reliable, and reasonable service to customers.

7. A workforce management and training program designed to ensure that the utility will have access to a qualified workforce to perform work in a cost-effective, safe, and reliable manner.

8. A description of a utility's outreach and coordination activities with other utilities, Department of Transportation, and local governments regarding the planned maintenance/construction projects and roadways that may be impacted by the LTIIP.

The LTIIP must address only the specific property eligible for DSIC recovery.[9]

[9] *See* 52 Pa. Code § 121.3.

Q. WHAT ARE THE COMMON MITIGATION MEASURES FOR HIGH-RISK PIPELINE SEGMENTS?

A. The industry's common mitigation measure to reduce pipeline risk is to replace the highest risk pipelines first. As a company replaces the pipelines calculated to represent the highest risk, the total system risk should be reduced. If enough pipe is replaced in that asset group annually to overcome the increasing risks on other segments within that group, the overall risk of the asset group will be reduced.

Q. SHOULD PIPELINE REPLACEMENT MITIGATION MEASURES BE BASED ON THE DIMP?

A. Yes. Pipeline replacement, which includes high risk wrought iron and bare steel should be based on the DIMP. The LTIIP, on the other hand, is a forward-looking plan for the replacement of DSIC eligible assets. Overall, pipeline replacement should be risk based and thus driven by the DIMP.

<u>PIPELINE REPLACEMENT EFFORTS</u>

Q. IN YOUR OPINION, WHAT ARE NFG'S RISKIEST ASSETS THAT SHOULD BE PRIORITIZED FOR REPLACEMENT?

A. In my opinion, NFG's riskiest assets are bare steel pipe. Through the direct testimony of Mr. Schaefer, bare steel pipe has presented the highest volume of

leaks, especially hazardous (Grade 1) leaks.[10] In response to these numbers, NFG has focused on increased replacement efforts in its bare steel systems.

Q. WHAT IS THE COMPANY'S STATED TIME FRAME IN THE LTIIP FOR PIPELINE REPLACEMENT?

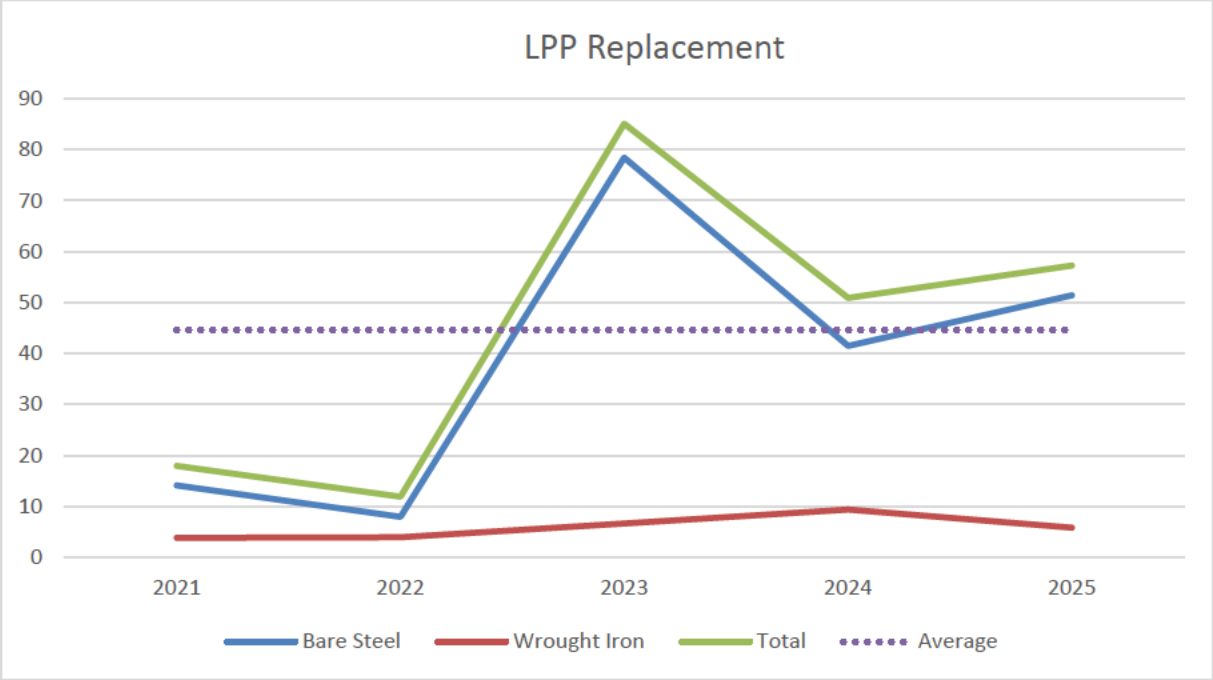
A. NFG's LTIIP states that the Company will replace all bare steel and wrought iron pipes in its system by 2039.[11] Prior to filing the LTIIP, the Company's bare steel and wrought iron replacement schedule was estimated to be complete by 2046.

Q. WHAT IS NFG's LPP PIPELINE REPLACEMENT SCHEDULE?

A. NFG reported that from calendar year end 2021 through 2025, the Company has eliminated approximately 223 miles of its leak prone bare steel and wrought iron pipelines. The graph and table below demonstrate the mileage of bare steel and wrought iron main that NFG retired over the last five years.[12]

	2021	2022	2023	2024	2025	Average
Retired Bare Steel	14.12	7.96	78.47	41.54	51.45	38.70
Retired Wrought Iron	3.84	3.95	6.66	9.39	5.86	5.94
Total	17.96	11.91	85.13	50.93	57.31	44.64

[10] Exhibit No. 4, Schedule No. 1, Interrogatories: I&E PS-2 and PS-3.
[11] NFG Statement No. 9, Start p. 13.
[12] Exhibit No. 4, Schedule No. 4, Interrogatory: I&E PS-22.
Note: The table represents numbers provided to the commission in interrogatory response and differ from some provided in the most recent LTIIP revision request.



Over those 5 years, they have replaced an average of 44.64 miles per year. At the end of 2024, the Company reported that there are 667.213 miles of bare steel[13] and 107.774 miles of wrought iron[14] remaining in its system. At this time, 2025 totals have not been provided. Based on reported mileages retired it can be extrapolated that the Company, at the end of 2025 calendar year had approximately 615.763 miles of bare steel and 101.914 miles of wrought iron remaining in its system. Based on the past average replacement schedule, NFG will replace all remaining bare steel and wrought iron mains in 17 years. This schedule appears to meet the targets of mileage replacement through 2027 but will not currently meet the LTIIP target of complete replacement by 2039.

[13] Exhibit No. 4, Schedule No. 3, Interrogatory: I&E PS-21.
[14] Exhibit No. 4, Schedule No. 4, Interrogatory: I&E PS-22.

Q. WHAT ARE NFG'S FORECASTED PIPELINE REPLACEMENT GOALS?

A. NFG's distribution pipeline replacement goals for 2026-2030 are stated to be 50 miles per year, which is an increase above the actual pipeline replacement rate of 46 miles in fiscal year 2025.[15] This includes a projected budget increase for cost per mile going from $580,000 in 2025 to $675,000 per mile by 2027.

REPLACEMENT COSTS

Q. WHAT IS INCLUDED IN NFG's PIPELINE REPLACEMENT COSTS?

A. NFG's capital costs include design/inspection, materials, construction/labor, pavement restoration, and permits but are not broken down on a per category cost basis. In response to Interrogatory, I&E PS-25, NFG provided a table that demonstrated cost per mile totals for pipeline replacement from 2021 to 2025.[16]

Q. ARE NFG'S PIPELINE REPLACEMENT COSTS INCREASING?

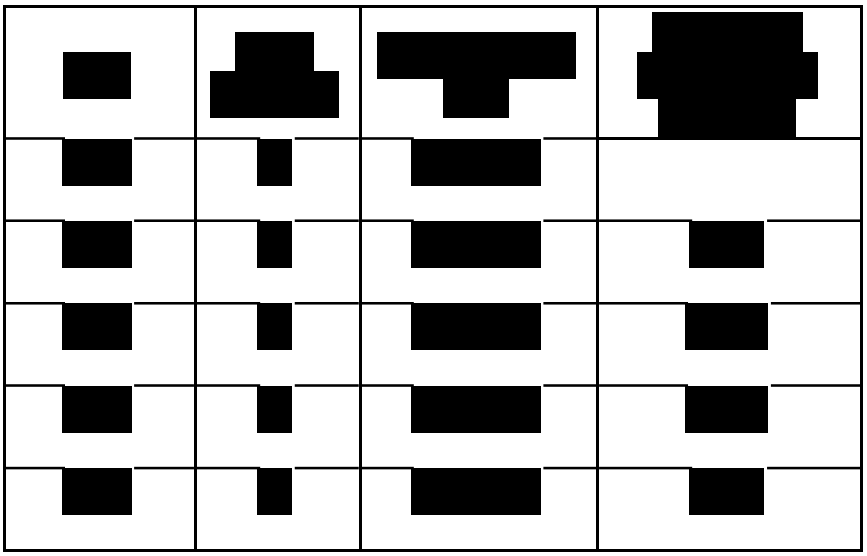
A. Yes. Performing an analysis on five years of cost data provided by the company in response to PS-26, the total pipeline replacement cost from 2021 to 2025 increased **[BEGIN CONFIDENTIAL]** [redacted]

[15] Exhibit No. 4, Schedule No. 5, Interrogatory: I&E PS-24.
[16] Exhibit No. 4, Schedule No. 6, Interrogatory: I&E PS-25.

[redacted]

[redacted]

[redacted]



[redacted]

[END CONFIDENTIAL]

Q. DOES THE TOTAL COST FOR PIPELINE REPLACEMENT INCLUDE THE COSTS ASSOCIATED WITH TRANSMISSION ASSETS?

A. No. The dollars represented above are for distribution lines operating at less than 124 psi only. The Company indicated that these costs do not include high pressure distribution steel or transmission line replacement costs, which are budgeted for a project-by-project basis.[18]

[17] Exhibit No. 4, Schedule No. 7, Interrogatory: I&E PS-26.
[18] Exhibit No. 4, Schedule No. 7, Interrogatory: I&E PS-26.

Q. HAS THE COMPANY COMMENTED ON THE INCREASING RESTORATION COSTS?

A. Yes. NFG indicated in response to I&E-PS-31 that it has worked on reducing municipal fees since 2021 and is continuing efforts to lower these restoration costs. NFG identified municipal fee structures that it believed were inconsistent with applicable law or otherwise unreasonable and engaged with the applicable municipality to resolve those issues through negotiation, settlement, or regulatory processes.[19]

Q. DO YOU HAVE ANY RECOMMENDATIONS REGARDING NFG's MAIN REPLACEMENT COSTS AND SPECIFICALLY RESTORATION COSTS?

A. Yes. I recommend that NFG continue to take positive steps to reduce restoration costs through efforts including, but not limited to, coordinating pipe replacement projects with other street projects and replacing pipe using trenchless construction techniques where technically and economically feasible. NFG should continue to work to negotiate with state, county, and local entities to reduce restoration requirements associated with pipeline replacement.

In addition, NFG should break-down replacement costs into multiple categories and track and analyze the independent costs on items such as materials,

[19] Exhibit No. 4, Schedule No. 9, Interrogatory: I&E PS-31.

labor, restoration, permitting, etc. to better identify and negotiate potential cost savings on a project-by-project basis.

Q. WHEN CAPITAL IS UTILIZED FOR MORE ANCILLARY SPENDING SUCH AS THRID-PARTY FIBER INFRASTRUCURE EXPANSION, DO THOSE ADDED COSTS REDUCE THE FUNDS AVAILABLE FOR PIPELINE REPLACEMENT?

A. Yes. Increasing expansion of third-party fiber installations throughout NFG's coverage area has continued to tax its personnel and resources as well as drive up overall locate costs. Since 2023 fiber-related One-Call tickets submitted to NFG have increased from 624 to 2870 per year.[20] This represents a 460% increase, often with large ticket coverage areas and multiple renewals of tickets throughout complex jobs. From 2023 to 2024 damage related to fiber installation increased from 1.6 hits per 1000 tickets, to 8.2 hits per 1000 tickets. From a fiscal standing, due to additional resources and personnel to reduce damages and complete locates on time, cost of locates related to fiber activity have increased from $28.69 per ticket in 2022 to $34.78 per ticket in 2025, an increase of 21%.[21]

[20] Exhibit No. 4, Schedule No. 8, Interrogatory: PS-29.
[21] Exhibit No. 4, Schedule No. 8, Interrogatory: PS-29.

Q. HAS THRID-PARTY FIBER TELECOMM INSTALLATION ACROSS THE COMMONWEALTH IMPACTED NFG'S RESOURCE AVAILABILITY FOR REPLACEMENT AND RESTORATION ACTIVITIES?

A. Yes. Since 2023 third-party fiber related One-Call tickets submitted to NFG have increased from 624 to 2870 per year. It is important to note that NFG has not missed a single fiber-related One-Call locate and continues to strive for this. Through extensive risk reduction efforts with installers, the number of fiber-related damages was reduced to 4.2 hits per 1000 tickets received in 2025 from 8.2 hits per 1000 tickets received in 2024, a 49% decrease. This was accomplished through continued efforts such as personnel on site, monitoring construction activities and recurring complex construction meetings with installers being required.[22]

METHANE DETECTION

Q. WHAT IS A METHANE DETECTOR AND WHAT IS ITS PURPOSE?

A. Methane detectors are devices designed to be placed within structures and are used to measure and initiate an alarm when methane level thresholds are reached within a structure or enclosed area in the proximity of the methane detection device.

[22] Exhibit No. 4, Schedule No. 8, Interrogatory: PS-29.

Q. HOW WOULD NFG AND ITS CUSTOMERS BENEFIT FROM THE INSTALLATION OF THE DIFFERENT TYPES OF METHANE DETECTORS?

A. If provided, NFG would deliver to its customers a safety tool that provides early warning alarms signaling a gas leak and identify potentially hazardous situations. An early warning audible alarm would provide additional time to safely evacuate and notify the emergency response officials. Smart Remote Methane Detector (SRMD) devices would use communication technology to simultaneously notify the customer and the emergency gas response officials, not only allowing additional time for safe egress by those hearing the alarm but also provide advanced notice to reduce response time of the emergency responders who can potentially assist with further evacuations or mitigate the issues triggering the alarm.

Q. DOES NFG HAVE ANY SYSTEMS THAT COULD ESPECIALLY BENEFIT FROM METHANE DETECTORS?

A. Yes, as highlighted above under "Pipeline Replacement Efforts" NFG has a substantial amount of bare steel and wrought iron pipe remaining in its system that are the subject of future replacement projects, including through an accelerated LTIIP plan. The bare steel and wrought iron replacement schedule within the LTIIP targets a 2039 complete replacement and extrapolated data indicates a 17-year timeline. During this period of replacement, the pipe still in the ground is

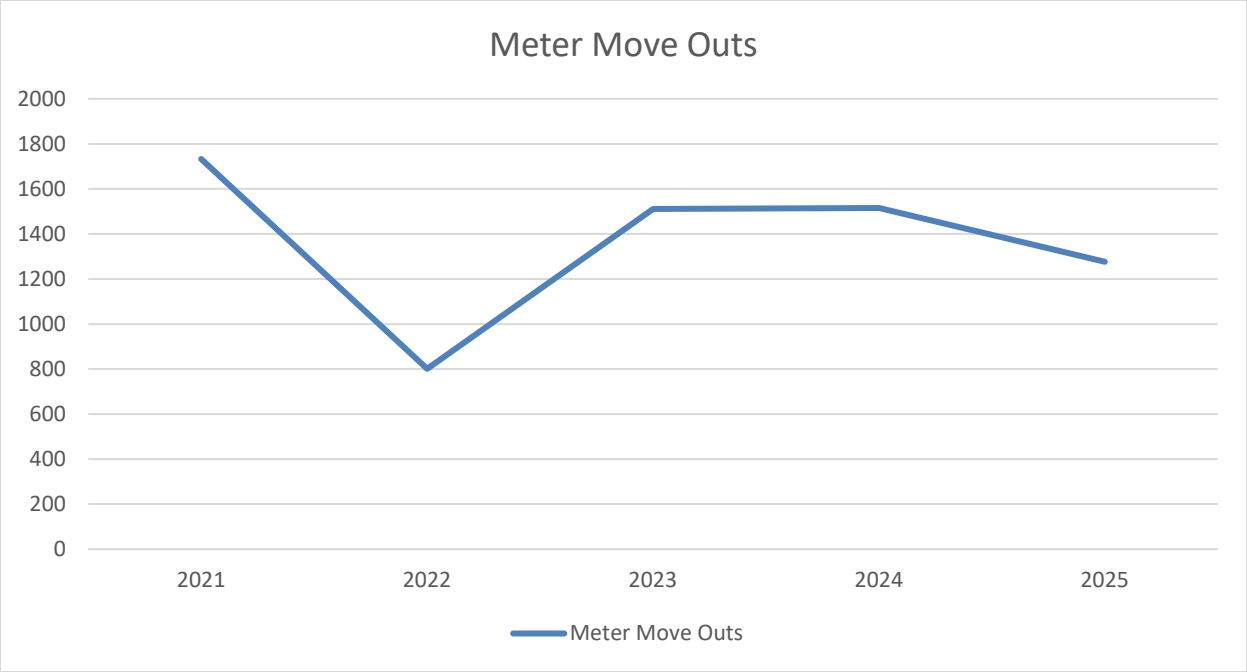
logically prone to a greater number of leaks, and structures in the areas served by these pipes could benefit from methane detectors.

Q. IN YOUR OPINION, WOULD A METHANE DETECTOR PROGRAM REDUCE THE POTENTIAL THREAT OF INSIDE METER SET LEAKS?

A. Yes, I believe a program to address methane detector distribution could assist in mitigating additional risks from inside meters still present in NFG's territory. Historically NFG has replaced inside meter sets during construction replacement projects as well as conducting meter move outs. In response to I&E Interrogatory PS-35, inside meter move outs have trended very similarly or slightly slower over the last 5 years.[23] Extrapolating the data, complete elimination of inside meters through meter move outs would be projected to occur in roughly 22 years. See the chart and table below on inside meter set elimination trends.

Year	Number of Inside Meters	Meter Move Outs
2021	37211	1733
2022	34411	801
2023	32858	1511
2024	31178	1515
2025	29488	1277

[23] Exhibit No. 4, Schedule No. 11, Interrogatory: PS-35.



NFG also stated that inside meter sets are not tracked by pressure, and it may be unknown how many sets are medium pressure with a regulator located inside the structures. Higher pressure gas entering homes for these inside meter sets presents an additional risk.

Q. ARE YOU AWARE OF ANY OTHER JURISDICTIONAL NATURAL GAS DISTRIBUTION COMPANIES THAT HAVE IMPLEMENTED A METHANE DETECTOR PROGRAM?

A. Yes. In January of 2025, the Commission required Philadelphia Gas Works (PGW) to initiate a pilot program for the audible alarm methane detectors in the city of Philadelphia. The details of the $800,000 pilot program are available at Docket Number R-2022-3033834.

In addition, in 2025, the Commission required UGI Utilities to initiate a pilot program for methane detectors in its distribution territory. The details of the pilot program can be viewed in Docket No. R-2024-3052716.

One example outside of Pennsylvania that is noteworthy is the State of New York Public Service Commission, in collaboration with GTI Energy, which has successfully instituted methane detector installations in New York City and other areas across the State as described below.

Q. PLEASE PROVIDE A BRIEF EXPLANATION OF THE METHANE DETECTOR PROGRAM IMPLEMENTED IN NEW YORK.

A. GTI Energy worked with the State of New York Public Service Commission and Con Edison Company of New York, Inc. to establish pilot programs and to develop a rollout for installations of the smart meter compatible detectors.[24] GTI Energy conducted research into both the Audible Residential Methane Detector units and the smart meter technology.

Q. WAS THE METHANE DETECTOR PROGRAM IN NEW YORK SUCCESSFUL AND DID IT PROVIDE POSITIVE IMPACTS FOR THE RESIDENTS OF NEW YORK CITY?

A. Yes, it has already provided a positive impact. Con Edison reported that its smart

[24] See GTI Energy Research and Technology Overview, Page 11 out of 48 https://www.puc.pa.gov/media/2068/gtienergy-research_technology_overview090822.pdf.

devices have alerted personnel and residents of potential hazards on several occasions already.[25] In my opinion, the implementation of these detector programs is a valuable tool for early warning and accelerated actions to reduce the impacts of infrastructure integrity concerns going forward.

Q. HOW COULD NFG AND ITS CUSTOMERS BENEFIT FROM A METHANE DETECTION SYSTEM SIMILAR TO THAT OF NEW YORK?

A. New York City's distribution systems have many of the same issues and concerns as urban areas in NFG's Pennsylvania operating territory. Specifically, the urban environments in New York and Pennsylvania contain vintage infrastructure, similar climates, and the population in select urban environments can be very dense as well. In my opinion, installation of SRMDs, or real-time methane detection devices have the potential to save lives across NFG's Pennsylvania service territory. As technology continues to evolve, the ability to remotely notify the operator of the presence of indoor gas readings is the next logical step for operators across Pennsylvania to drive down the probability of an explosion and the consequences, should an explosion occur.

[25] See GTI Energy Research and Technology Overview, Page 13 of 48 https://www.puc.pa.gov/media/2068/gtienergy-research_technology_overview090822.pdf.

Q. HAVE FEDERAL AGENCIES PROVIDED SUPPORT FOR THE INSTALLATIONS OF INDOOR METHANE DETECTORS?

A. Yes. Both PHMSA and the National Transportation and Safety Board (NTSB) have provided written support for the installation of indoor methane detectors or alarms. Dating back to 2012, PHMSA provided a statement in Advisory Bulletin 2012-05, largely regarding Pennsylvania incidents stemming from cast iron main failures, asking owners and operators of cast iron distribution pipelines and state pipeline safety representatives to consider, among other items, the installation of interior/home methane gas alarms.[26]

The NTSB has repeatedly encouraged the installation of these indoor methane detector devices in final pipeline investigation reports (PIR), This includes but is not limited to the recent NTSB reports on West Reading Chocolate Factory[27] and Atmos Energy Corporation[28] investigations.

Q. CAN SMART METHANE DETECTION TECHNOLOGY BE USED BY OTHER OPERATORS TO IMPROVE SAFETY?

A. Yes. These detectors and technology can be instituted and provide the same early detection and safety enhancements for any operator. These detectors can alert operators of any leak by any cause, including excavation damage, corrosion,

[26] See Federal Register, Vol. 77, No. 57 (March 23, 2012), https://www.govinfo.gov/content/pkg/FR-2012-03-23/pdf/2012-7080.pdf.
[27] See NTSB PIR-25-01 UGI Explosion and Fire.
[28] See NTSB PIR-26-01 Atmos Explosion and Fire.

ruptures, material failures, or any other cause where gas escapes from a pipeline or appurtenance and accumulates in a structure. The detectors will also detect gas from leaks on non-jurisdictional piping within proximity of the meter within the structure. Smart methane detectors can utilize AMI meter technology, or other wireless network technology such as LoRaWAN, to notify company officials or emergency responders of real-time methane readings. Industry research has established an alarm level at 10% LEL to be the acceptable standard for methane detection alarms.

Q. DO YOU HAVE A RECOMMENDATION REGARDING THE IMPLEMENTATION OF METHANE DETECTORS IN NFG'S SYSTEM?

A. Yes. NFG stated that they have not investigated the implementation of a residential methane detector program in Pennsylvania.[29] I recommend that NFG implement a pilot program utilizing SRMDs in a geographic region of NFG's choosing for the installation of 500 to 1000 SRMDs to allow NFG to study the effectiveness of the SRMDs and monitor the related expenses. Further, I recommend NFG consider using AMI technology and LoRaWAN or other communication network technology for the notification methodology utilized by these devices as part of its pilot program. The selection of the devices and technology for this pilot will depend on available technology either compatible

[29] Exhibit No. 4, Schedule No. 10, Interrogatory: PS-34.

with or separate from NFG's current technology. NFG should use a risk-based approach to maximize the benefits in determining the location and rollout of a Methane Detector program. This program can be implemented geographically in sections of NFG's service territory through a risk-based evaluation considering operational history and can include buildings or homes with inside meter sets and regulators, residences, businesses, and places of congregation. NFG has experience with Methane Detector Programs and Pilots in the state of New York.[30]

Finally, this recommendation is not being made in response to any single specific incident or directed at any single natural gas distribution company. Rather, this recommendation is being made in response to industry wide discussions regarding early warning safety enhancements for natural gas distribution systems. Accordingly, I&E's recommendation in this proceeding does not limit I&E's ability to make additional recommendations regarding the deployment of methane detectors in future Commission proceedings.

Q. DO YOU HAVE ANY FURTHER RECOMMENDATIONS REGARDING REPORTING REQUIREMENTS FOR THE METHANE DETECTOR PROGRAM?

A. Yes. I recommend that NFG file quarterly reports with the Commission through this docket number, within 30 days of the end of each calendar quarter, beginning

[30] Exhibit No. 4, Schedule No. 12.

with the calendar quarter that ends December 31, 2026, and ending with the calendar quarter that ends December 31, 2031, or when otherwise directed by the Commission. Each report shall include, separately for Remote Methane Detectors (RMDs) and SRMDs, no less than the following:

- The number of RMDs and SRMDs either funded and/or distributed in the subject calendar quarter;
- The total number of residences, businesses, and places of congregation where methane detectors are distributed under the program to date; and
- A detailed summary of expenses incurred, broken out in sufficient detail to identify:
    - The number of detectors installed;
    - The cost of the detectors and installation, broken down by detector, materials, and labor;
    - Any costs incurred for monitoring;
    - Any leaks detected by the installed monitors;
    - The resolution of that leak detection; and
    - Outreach and education component costs.

To capture the information consistently, NFG shall complete the Methane Detector Reporting Excel spreadsheet, which has been submitted alongside my

testimony,[31] provided to the Commission, each calendar quarter, beginning with the calendar quarter that ends December 31, 2026.

Q. ARE YOUR RECOMMENDATIONS STATED ABOVE COMPLETE AS OF THE WRITING OF YOUR DIRECT TESTIMONY?

A. Yes. Based on the information provided by NFG in discovery responses to date, my recommendations are complete at this time. However, I am still awaiting responses to several outstanding interrogatories. I reserve the right to supplement my discussion and recommendations after I receive those responses, which may be included in either rebuttal testimony or surrebuttal testimony.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

		Date Submitted:	

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2137-0629. Public reporting for this collection of information is estimated to be approximately 16 hours per response, including the time for reviewing instructions, gathering the data needed, and completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Information Collection Clearance Officer, PHMSA, Office of Pipeline Safety (PHP-30) 1200 New Jersey Avenue, SE, Washington, D.C. 20590.

Important: *Please read the separate instructions for completing this form before you begin. They clarify the information requested and provide specific examples. If you do not have a copy of the instructions, you can obtain one from the PHMSA Pipeline Safety Community Web Page at http://www.phmsa.dot.gov/pipeline/library/forms.*

Question

Reference Statement No. 9 – Direct Testimony of Mark Schaefer, page 4, Table 2 and Table 3. Provide a summary of annual capital expenditures related to modernization showing the budgeted total cost of pipeline replacement on a per mile basis including but not limited to the following costs: design/inspection, materials, construction/labor, pavement restoration and permits in each Servicenter over the last five calendar years.

Response

Please note that the Company does not budget based on costs broken down by Servicenter or by specific categories such as design/inspection, materials, construction/labor, pavement restoration and permits. In addition, the Company budgets on a fiscal year basis which spans from October 1st to September 30th.

Listed below is the budgeted cost per mile of pipeline replacement of distribution pipe for fiscal years 2021-2025. Please note this does not include HP Steel or Transmission pipeline replacement, which is budgeted on a per project basis.

Fiscal Year	Budgeted cost per mile
2021	$455,000
2022	$463,000
2023	$430,000
2024	$455,000
2025	$580,000

Exhibit No. 4, Schedule No. 7

Question

Reference Statement No. 9 – Direct Testimony of Mark Schaefer, page 4, Table 2 and Table 3. Provide a summary of annual capital expenditures related to modernization showing the actual total cost of pipeline replacement on a per mile basis including but not limited to the following costs: design/inspection, materials, construction/labor, pavement restoration and permits in each Servicenter over the last five calendar years.

Response

Please note that the company accounting system does not track costs broken down by the specific categories of design/inspection, materials, construction/labor, pavement restoration, and permits. Rather the company tracks costs by project type for both company and contractor crews. In addition, the company budgets on a fiscal year basis which spans from October 1st to September 30th.

In the attached confidential excel document, “I&E PS-26.xlsx”, is the actual cost per mile of pipeline replacement by Servicenter of distribution pipe for fiscal years 2021-2025. Please note this does not include HP Steel or Transmission pipeline replacement, which is budgeted on a per project basis.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

Question

Reference Statement No. 17 – Direct Testimony of Jason Scouten, page 18, Figure 2. Provide a summary for 2023-2025, related to fiber and communications work: A. One call volume received. B. Breakdown of % on time locates from these tickets. C. Number of hits annually related to fiber and communication work. D. A cost summary of the additional burden incurred from these

Response

Note: The Reference Document should be Statement No.16 - Direct Testimony of Jason Scouten

A. Total Fiber-Involved Tickets by Year
   - 2023: 624
   - 2024: 2,094
   - 2025: 2,870

   Note: This represents: 235% increase from 2023 → 2024, 37% increase from 2024 → 2025

B. Despite the increase in broadband fiber ticket volumes, NFG has responded to every broadband-related One Call notification either as “marked” or as an “ongoing project” response, accompanied by direct communication and coordination with project representatives. In all cases, field markings were completed prior to the start of excavation, ensuring that accurate facility information was available even when excavators and project owners failed to meet their own design and coordination obligations under the category of “complex projects” under the Pennsylvania One Call Law due to their size, duration, and phased nature of the excavation activities required.

C. DAMAGES by Fiber Contractors
   - 2023- 1 (1.6 Hits per 1000)
   - 2024- 17 (8.2 Hits per 1000)
   - 2025- 12 (4.2 Hits per 1000)

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
RESPONSE TO REQUEST FOR INFORMATION
R-2025-3059428

D. Table below reflects NFG's fiscal-year cost per locate and demonstrates the overall increase in locating-related expenses. While NFG's internal reporting structure does not allow for isolating costs attributable solely to broadband fiber activity, the upward trend is consistent with the operational burdens created by these projects.

In addition to standard locating costs, NFG has incurred significant expenses beyond what is typical for routine line-locating operations. These additional costs arise from increased management and supervisory oversight, direct inspection of excavation activities, expanded leak surveying prompted by unreported damages, repeated remarking of tickets due to construction delays and inadequate project design. Collectively, these impacts reflect the disproportionate strain broadband fiber construction has placed on NFG's damage-prevention and operational resources.

The increased consumption of operational resources has also had a direct impact on NFG's planned pipeline replacement and operational goals. Resources that would otherwise support long-term system improvement and risk-reduction initiatives have been diverted to address the recurring issues associated with broadband fiber construction. This diversion of personnel, time, and funding represents a material strain on NFG's operational capacity and undermines the efficiency of its operation.

Overall Cost per Locate per Fiscal Year		
FY 2022	28.69	**% increase**
FY 2023	33.08	15.3%
FY 2024	34.90	5.5%
FY 2025	34.78	-0.3%

Question

Provide details of efforts the company has taken to lower the restoration costs associated with facility replacement for each year since 2021.

Response

National Fuel Gas Distribution Corporation ("NFGDC" or the "Company") has taken a number of steps since 2021 to address and reduce municipal restoration and inspection costs associated with facility replacement projects. In several instances, the Company identified municipal fee structures that it believed were inconsistent with applicable law or otherwise unreasonable and engaged with the applicable municipality to resolve those issues through negotiation, settlement, or regulatory processes.

In certain cases, these efforts resulted in formal resolutions, including settlement agreements filed with the Pennsylvania Public Utility Commission. These actions not only addressed the specific municipal fee structures at issue but also helped clarify expectations regarding appropriate restoration and inspection charges applicable to the Company's work within municipal rights-of-way.

When the Company first began addressing these issues, there had been relatively little precedent among utilities challenging such practices. As a result, several of the earlier matters helped establish precedent, and clarify the Company's position with municipalities. Over time, this has reduced the need for similar actions in later years as municipal practices have adjusted accordingly.

See I&E PS 31 Exhibit 1 which summarizes the principal instances since 2021 where the Company addressed municipal restoration or inspection fee structures associated with facility replacement projects and the means by which those matters were resolved.

#	Municipality	Date of Resolution	NFGDC's Concern with Municipal Fee Structure	Means of Resolution	Historic Costs Directly Avoided through Resolution/ Explanation
1	**City of Erie, Erie County**	2/14/2022	Unlawful degradation fees; excessive "inspection fee."	Settlement Agreement, which was filed with PaPUC at Docket No. U-2022-3030421 before becoming effective.	$113,568 – this amount represents the calculated amount of degradation and inspection fees which were withheld from the City of Erie for projects requiring permits accruing from November 2019 through August 2021, when NFGDC filed a lawsuit challenging the City of Erie's unlawful fee structure. The basis for NFGDC's withholding of such fees was the illegality of same.

New York State Public Service Commission
Empire State Plaza
Agency Building 3
Albany, NY 12223-1350

RE: Case 23-G-0627 – Proceeding on Motion of the Commission as to the Rates, Charges, Rules and Regulations of National Fuel Gas Distribution Corporation for Gas Service Residential Methane Detector Program 2026 Annual Report

Dear Secretary Phillips:

On December 19, 2024, the New York State Public Service Commission ("Commission") issued its *Order Adopting Terms of Joint Proposal and Establishing Gas Rate Plan With Minor Modifications* in Case 23-G-0627 ("Order"). The Order authorized National Fuel Gas Distribution Corporation ("National Fuel" or "Company") to enhance its residential methane detector ("RMD") program ("RMD Program") by distributing more than 102,000 RMDs to low-income customers, customers whose accounts are classified as elderly, blind or disabled, and customers with inside gas meters. The Joint Proposal requires National Fuel to file, by March 31 of each calendar year in the Rate Plan, an annual report detailing (1) the number of RMDs installed during the calendar year and to date, (2) the associated costs of the RMDs installed for the calendar year and to date, (3) the Company's review of the effectiveness of the RMD Program during the calendar year, (4) and any modifications made to the RMD Program.

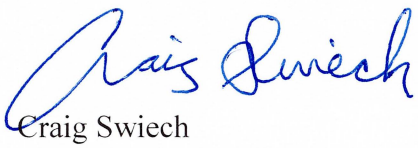
During calendar year 2025, the Company distributed 17,560 units at a total cost of $1,097,557. Since 2025 was the first year of the program, these figures also represent the program totals to date. The RMD Program was effectively administered in its first year of operation as National Fuel distributed approximately 500 more units than estimated in its rate case filing. The Company distributes RMDs through its workforce as well as through a third-party vendor. The unit costs of both distribution methods have been higher than expected, due primarily to the cost of the RMDs themselves. These unit costs are likely to continue to increase during the program's lifecycle. Additional details on budgeted and actual amounts for 2025 are presented in Attachment 1.

As for program modifications, on December 9, 2025, the Company filed a Petition for RMD Program Funding ("Petition") in Case 23-G-0627. As explained in the Petition, the intent of the Joint Proposal was to provide RMD Program funding of $5,956,080 over the three-year rate plan, allowing the Company to distribute 102,000 RMDs. It was later discovered that the

actual funding included in revenue requirement totaled only $2,931,821, leading to a shortfall of $3,024,259. The Company has proposed to use an available regulatory liability as a funding source. As of this filing, the Petition is pending before the Commission.

Please contact the undersigned if you have any questions related to this filing.

Respectfully submitted,



Craig Swiech
Vice President
(716) 857-7584
swiechc@natfuel.com

I&E Statement No. 4-SR
Witness: Jesse Burkett

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION

Docket No. R-2026-3059428

Surrebuttal Testimony

of

Jesse M. Burkett

Bureau of Investigation and Enforcement

Concerning:

Pipeline Replacement Efforts and Restoration Costs
Methane Detector Pilot Program

TABLE OF CONTENTS

INTRODUCTION **1**

PIPELINE REPLACEMENT EFFORTS AND RESTORATION COSTS **2**

METHANE DETECTION **4**

INTRODUCTION

Q. PLEASE STATE YOUR NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Jesse M. Burkett. I am a Civil Engineer (General) in the Pipeline Safety Division of the Pennsylvania Public Utility Commission's (Commission) Bureau of Investigation and Enforcement (I&E). My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. ARE YOU THE SAME JESSE BURKETT WHO IS RESPONSIBLE FOR THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 4 AND THE SCHEDULES IN I&E EXHIBIT NO. 4?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to address statements made by National Fuel Gas Corp.'s (NFG) witnesses Mark Shaeffer (NFG Statement No. 9-R) and Jason Scouten (NFG Statement No. 16-R) in their rebuttal testimonies, regarding the Company's pipeline replacement adequacy and adoption of a pilot program for a methane detection system in select regions of NFG's Pennsylvania service territory.

PIPELINE REPLACEMENT EFFORTS AND RESTORATION COSTS

Q. DO YOU AGREE WITH MR. SCHAEFERS STATEMENTS IN REGARD TO LONG-TERM INFRASTRUCTURE REPLACEMENT PLAN (LTIIP) TARGET REPLACEMENTS?

A. No, although the numbers used in his statement are correct for targets, they cannot be guaranteed and historic mileage replacements do not support the idea that targets will be met. NFG's LTIIP states that the Company will replace all bare steel and wrought iron pipes in its system by 2039. In Mark Schaefers rebuttal testimony, he stated that "I&E used the average replacement schedule from 2021 through 2025 of 44.64 miles per year to project that it will take 17 years to replace all remaining bare steel and wrought iron pipe." and created a chart to project LTIIP target replacements into the future instead of averages. The schedule of replacement targets includes 2 miles per year of vintage plastic pipe replacement. With those vintage plastic miles subtracted from the replacement mileage each year, bare steel and wrought iron will not in fact reach complete replacement by 2039.[1] My direct testimony used average replacement statistics for projection rather than LTIIP targets, since the LTIIP filings are only targets and not guaranteed. Looking at the historical replacement mileages, the 2021-2023

[1] NFG Statement No. 9-R, p.2-3.

replacement mileage varied widely between years[2] and at times did not meet LTIIP filings for those years (target of 40 miles in CY2022).[3]

Q. HAS THE COMPANY COMMENTED ON THE RECOMMENDATION TO TRACK INDIVIDUAL COSTS DURING RESTORATION TO BETTER REDUCE OVERALL COST?

A. Yes. Mr. Schafer stated "as part of the project planning phase, Engineering and Operations management, along with consideration of factors such as job location, schedule, complexity, etc., reviews each replacement project to determine the most economical contractor or company resource best fit to successfully complete the project. Blanket contracts are competitively bid and awarded to contractors by geographical region on a 3-year basis. The contracts include hundreds of bid items for mainline and service installation and removal including construction methods (i.e. trench, insertion, drill, etc.), size, length, material and restoration."[4] In addition, Mr. Scouten stated "National Fuel categorizes and tracks replacement costs, such as materials, labor, restoration, and permitting where applicable on an overall and project specific basis."[5] If these items are already received and reviewed, it is still I&E's position that tracking and comparing items individually over time could assist in reducing cost of pipeline replacement projects.

---

2 I&E Statement No. 4, p. 10.
3 Petition of National Fuel Gas Distribution Corporation for Approval of a Major Modification to its Existing Long-Term Infrastructure Improvement Plan, Docket No. P-2022-3034957 (NFG Filing Pet for LTIIP 1/1/23-12/31/27 p.17).
4 NFG Statement No. 9-R, p.5.
5 NFG Statement No. 16-R, p.7.

METHANE DETECTION

Q. DOES MR. SCOUTEN AGREE WITH YOUR METHANE DETECTOR PROGRAM RECOMMENDATIONS MADE IN DIRECT TESTIMONY?

A. Not really. Mr. Scouten took the position that NFG is not looking to begin a methane detector pilot program on Pennsylvania assets and cited both the New York program and the proposed Pennsylvania House Bill 1522 as reasons.[6] NFG does not dispute that methane detection technologies may provide an additional layer of risk mitigation.

Q. WHAT IS YOUR RESPONSE TO MR. SCOUTEN'S OPINION ON METHANE DETECTORS?

A. House Bill 1522 has only passed in the House and has not been voted on by the Senate. At this point in time, we cannot predict if this Senate Bill will reach fruition. If the Bill is passed, we cannot predict what may change in the Bill between now and implementation. Additionally, this Bill does not reference a smart methane detector program. I&E maintains that a pilot program of methane detectors, whether smart or simply audible, would benefit overall public safety, especially in those rural areas where response times may be slower. I maintain my recommendation from direct testimony that NFG should commit to implementing a pilot program in Pennsylvania and, based upon research and an analysis of real-world experiences from its peers as well as its own pilot program(s), determine the

[6] NFG Statement No. 16-R, p.8.

most efficient, reliable and cost-effective approach for the installation of methane detectors for NFG's Pennsylvania distribution customers. The pilot program in Pennsylvania is proposed to gather additional information as to the feasibility of large-scale implementation throughout the system. Pennsylvania distribution systems may vary in composition, risk, structure, geographic location and hazards in comparison to the current pilot program implemented in New York.

Q. HOW WOULD YOU ADDRESS MR. SCOUTENS CONCERN OVER SMART REMOTE METHANE DETECTOR (SRMD) IMPLEMENTATION COSTS?

A. SRMD's are only one possible type of methane detector to implement into the system. Other options such as an audible remote methane detector (ARMD) could be considered as an alternative or complementary tool to reduce overall costs.

Q. HAS YOUR RECOMMENDATION FOR PILOT PROGRAM IMPLEMENTATION AND REPORTING CHANGED?

A. No, I continue to recommend that NFG implement a program in accordance with the recommendations made in my direct testimony as well as use the reporting recommendations, including the use of the file(s) provided for reporting results to the commission.[7]

[7] I&E Statement No. 4, start p. 22.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. PLEASE STATE YOUR OCCUPATION AND CURRENT PLACE OF EMPLOYMENT?

A. I am a Senior Research Consultant with the Acadian Consulting Group ("ACG"), a research and consulting firm that specializes in the analysis of regulatory, economic, financial, accounting, statistical, and public policy issues associated with regulated and energy industries. ACG is a Louisiana-registered partnership, formed in 1995, and is located in Baton Rouge, Louisiana.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL QUALIFICATIONS.

A. I hold a Bachelor of Arts degree in Business Economics from Buena Vista University in Storm Lake, Iowa, and a Master of Arts degree in Economics from the University of Kansas in Lawrence, Kansas. I began my professional career with the Staff of the Kansas Corporation Commission in 2008 while in graduate school conducting analyses of topics related to energy and economy as a Research Assistant, eventually being promoted to a Research Analyst and later Senior Research Economist after graduation. I left the Kansas Corporation Commission to take a position with ACG in late 2011, where I have been promoted to positions of increasing responsibility since, including my current position which I started in mid-2021. Appendix A provides my professional resume, which includes a listing of my publications, presentations, pre-filed expert witness testimony, expert reports, and expert legislative testimony.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I have been retained by the Pennsylvania Office of Consumer Advocate ("OCA") to address matters related to the general rate case filed by National Fuel Gas Distribution Corporation ("NFG" or the "Company"). I specifically have been asked to provide an overview of this case from a public policy perspective, and review issues related to alternative regulation and the Company's proposed Allocated Class Cost of Service Study ("ACOSS") and associated rate design.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. Yes. I am sponsoring the following Exhibits MWD-1 through MWD-9.

- Exhibit MWD-1: Commission Alternative Regulation Consideration (§ 69.3302)
- Exhibit MWD-2: Survey of Approved Pennsylvania Natural Gas WNA Mechanisms
- Exhibit MWD-3: Summary of Results of Company's Proposed ACOSS
- Exhibit MWD-4: Correlation of Customers and Distribution Mains Additions
- Exhibit MWD-5: Summary of Results of ACOSS Using Seaboard Allocation
- Exhibit MWD-6: Summary of Results of Alternative ACOSS
- Exhibit MWD-7: Summary of Company's Proposed Revenue Allocation
- Exhibit MWD-8: Summary of Results of Alternative Revenue Allocation
- Exhibit MWD-9: Analysis of Customer-Related Costs

Q. PLEASE INTRODUCE OCA EXPERT WITNESSES AND SUMMARIZE THE TOPICS OF THEIR RESPECTIVE TESTIMONIES IN THIS PROCEEDING.

A. In addition to my testimony (OCA Statement 1), OCA is sponsoring the testimony of four additional expert witnesses in this proceeding. Mr. Lafayette Morgan (OCA Statement 2) addresses accounting issues, Ms. Maureen Reno (OCA Statement 3) addresses rate of return ("ROR") issues, Mr. Brian Andrews (OCA Statement 4) addresses depreciation expense issues, and Ms. LeeAnn Wise (OCA Statement 5) will address issues concerning customer service.

II. SUMMARY OF RECOMMENDATIONS

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

A. I recommend the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company. Average Pennsylvanians are struggling with lingering inflation concerns besides looking at potential additional concerns placed on them due to fallout from the conflict in the Persian Gulf. This while the Company has seen increasing stock prices for its shareholders and no obvious market distress. The Commission, in particular, should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company. I have been advised by counsel that the OCA will argue in their legal briefs that the Commission should not grant NFG any increase in this proceeding due to the substantial affordability concerns that consumers are facing.

Q. WHAT IS YOUR OVERALL RECOMMENDATION REGARDING REGULATORY LAG?

A. The Company has not demonstrated that the existing regulatory framework in Pennsylvania is failing to support timely and adequate cost recovery. Rather, the evidence suggests that regulatory lag is already being effectively managed. The Commission should reaffirm the value of regulatory lag as a structural feature of traditional ratemaking and recognize that further erosion of this principle is neither necessary nor justified in this case.

Q. WHAT IS YOUR POSITION ON THE CONTINUATION OF THE COMPANY'S WEATHER NORMALIZATION ADJUSTMENT?

A. I recommend that the Commission affirmatively discontinue NFG's current weather normalization adjustment ("WNA") mechanism. The mechanism has failed to produce balanced outcomes for ratepayers, functioning as an asymmetric surcharge on customers' bills for the two full years the mechanism has been in operation, even though the mechanism was designed as a pilot to symmetrically provide both surcharges and credits to customers. The WNA is also not required to address regulatory lag concerns of the Company given the Company's use of a fully projected future test year ("FPFTY") and distribution system investment charge ("DSIC").

Q. DO YOU HAVE ANY ALTERNATIVE PROPOSAL IF THE COMMISSION DECIDES TO CONTINUE THE WNA?

A. If the Commission decides to continue the WNA, I recommend that it be continued as a three-year pilot program rather than being adopted as a permanent mechanism. This will allow the Commission the opportunity to routinely reevaluate the WNA to ensure that the mechanism is not producing negative outcomes for ratepayers. I further recommend that the Commission increase the deadband from three percent to five percent and eliminate the months of October and

May from the WNA period. This would strengthen ratepayer protections and would furthermore make the Company's WNA pilot consistent with the recent WNA pilot the Commission approved for Columbia Gas of Pennsylvania (Columbia Gas).

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE PROPOSED ENERGY EFFICIENCY PROGRAM RIDER?

A. I recommend that the Commission reject the proposed Energy Efficiency ("EE") Program rider. The proposed rider fails to satisfy any of the three commonly held evaluation criteria for a sound cost tracker mechanism. Specifically, EE Program expenses are not substantial, not outside the control of the utility, and are neither unpredictable nor volatile. Therefore, the costs associated with the Company's proposed EE Program do not have the characteristics that are conducive for recovery through a cost tracker outside of base rates.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE CLASSIFICATION OF DISTRIBUTION MAINS INVESTMENT AND THE USE OF ZERO INTERCEPT STUDY IN ITS ALLOCATED COST OF SERVICE STUDY?

A. I recommend that the Commission reject the Company's proposed zero-intercept study ("ZIS") approach. ZIS and related minimum system study ("MSS") that are used to classify distribution mains investments are fundamentally flawed and provide little to no value in setting just and reasonable rates. In the alternative, I recommend that the Commission approve an alternative classification of distribution mains that incorporates a peak and average ("P&A") cost allocation method using weights based on the Company's test year system load factor. These recommendations better reflect cost causation principles and provide a more reasonable basis for allocating costs among customer classes.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED REVENUE APPORTIONMENT?

A. I recommend the Commission adopt a more reasonable revenue apportionment method based on my alternative allocated cost of service study ("ACOSS") results that also limits the rate increase compared to the Company's proposed revenue allocation method. First, I recommend that classes with current relative cost parity ratios below 0.95 receive a rate increase equal to 1.15 times the system average increase. Second, I recommend that classes with current relative cost parity ratios greater than 1.05 receive a rate increase equal to 0.85 times the system average increase. Finally, I recommend that the remaining rate increase be equally allocated to remaining rate classes with current relative cost parity ratios of between 0.95 and 1.05.

Q. WHAT ARE YOUR CUSTOMER CHARGE RECOMMENDATIONS AND CONCLUSIONS?

A. I recommend that the Commission reject the Company's proposed increase in residential and commercial customer charges. An analysis of customer-related costs finds that residential rate classes are currently recovering a majority of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers.

Q. DO YOU HAVE AN ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

A. Yes. I recommend that the Commission limit its increase in the Company's monthly customer charges to the percentage rate increase class revenue requirement. In the context of my proposed revenue apportionment this would be a 14.34 percent increase for residential customers at the Company's proposed overall requested rate increase. This would correspond to a roughly $2.00 increase in the monthly residential customer charge, or an increase from the current $14.00 per month to $16.00 per month. I further recommend that any increase in customer charges be subject to scalebacks to reflect changes in allocated class revenue increases pursuant to Commission Orders.

III. CURRENT MACROECONOMIC TRENDS AND CONDITIONS

Q. WHAT IS YOUR UNDERSTANDING OF THE PURPOSE OF THIS PROCEEDING?

A. The purpose of this case is to determine the "just and reasonable" rates for the Company under Chapter 13, and other provisions, of the Public Utility Code.

Q. WHAT ARE PUBLIC UTILITIES IN THE CONTEXT OF REGULATION?

A. Public utilities are considered in economics to be natural monopolies, specifically that the high capital cost associated with the establishment and operations of public utilities render having multiple competing services – as would be found in other industries – is economically inefficient and therefore not in the public interest. Regulation, therefore, is designed as a substitute for the disciplining forces that would be found in competitive markets that prevent an industry from using its unfettered monopolistic powers to set prices and conditions of service. However, regulators

cannot tip the scale so far in the favor of consumers that regulation becomes confiscatory to the public utility by preventing the utility from the opportunity to earn a reasonable rate of return on their investment that deprives the utility of sources of capital.

Q. AS A NON-LAWYER, HOW IS THE PHRASE "JUST AND REASONABLE" GENERALLY VIEWED IN THE CONTEXT OF REGULATION?

A. Regulators typically evaluate "just and reasonable" in the context of what is called a "zone of reasonableness." This inherently assumes that there is no one correct answer to the question of "just and reasonable," but instead requires regulators to balance the interest of several sectors of the public, including not only utility investors, but also the interests of the utility's customers (that itself is comprised of different classes of customers with different individual interests) and the public policy interests of local governments impacted by the utility's operations. Importantly, this framework of regulation implies that regulators must be cognizant of the larger macroeconomic conditions impacting the utility customers, and how this impacts customers' ability to afford utility service.

Q. HOW DOES THE CURRENT PROCEEDING COMPARE WITH THE COMPANY'S PREVIOUS RATE CASE?

A. On January 28, 2026, Company requested a base rate increase of $19.7 million in the current proceeding.[1] This represents the second such requested increase since 2022, when the Company was authorized an approximate $23 million increase in rates. In the context of this prior rate increase, ratepayers will see a total rate increase of more than 36.4 percent in three years, or an increase of more than 12.1 percent per year on average.

[1] Company filing, Application, page 1.

Q. IS THERE ANY EVIDENCE THAT NFG CUSTOMERS ARE FACING AFFORDABILITY PRESSURES?

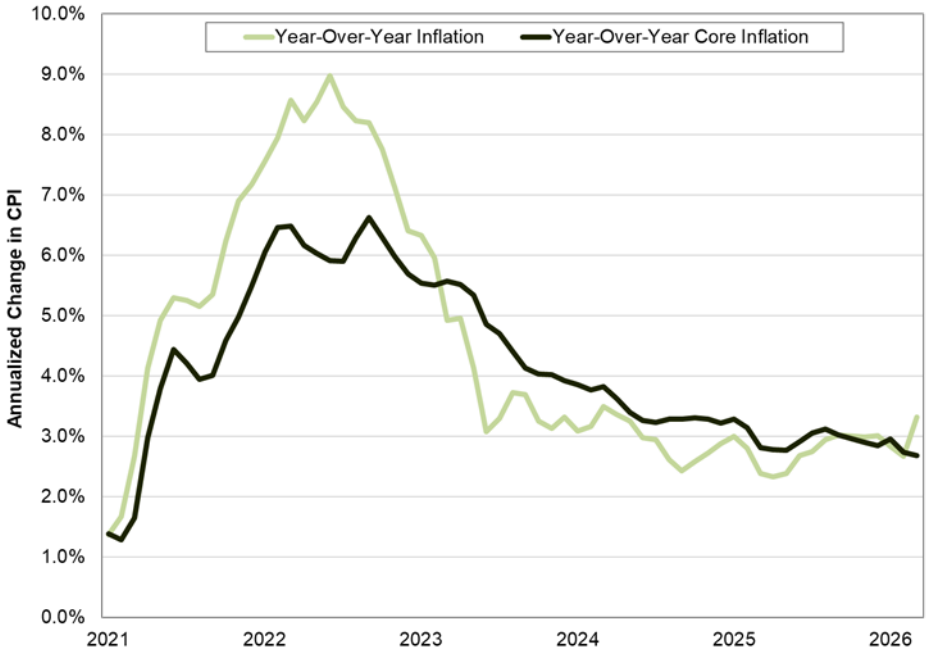
A. Yes. Both customer terminations and reconnections rose in 2025. Specifically, customer terminations increased by 16 percent, and reconnections increased by 20 percent. This indicates that customers are struggling to maintain natural gas service in the context of the Company's 2023 authorized rate increase and other macroeconomic pressures these customers are facing. These rate increases are contributing to broader affordability concerns being placed on consumers.

Q. WHAT DO YOU MEAN BY AFFORDABILITY CONCERNS?

A. By affordability concerns, I mean the increasing burden on residential customers when utility costs are added to already elevated household expenses. Utility rate increases do not occur in a vacuum. Consumers experience utility rate increases alongside the ongoing price increases of food, housing, transportation, and other necessities. These concerns are especially acute for low-income households who devote a larger portion of their income to these necessities. NFG appears to recognize this concern and adopted a Customer Assistance Program ("CAP") to reduce utility bills for participating low-income customers with high energy burdens, which itself replaced an earlier Low Income Residential Assistance ("LIRA") program.[2] It is for this reason that it is important to consider whether broader consumer prices remain elevated when establishing rate increases.

[2] Direct Testimony of Matthew W. Stoops, Company St. 17 at 2:15-21.

Figure 1: Monthly Growth in CPI

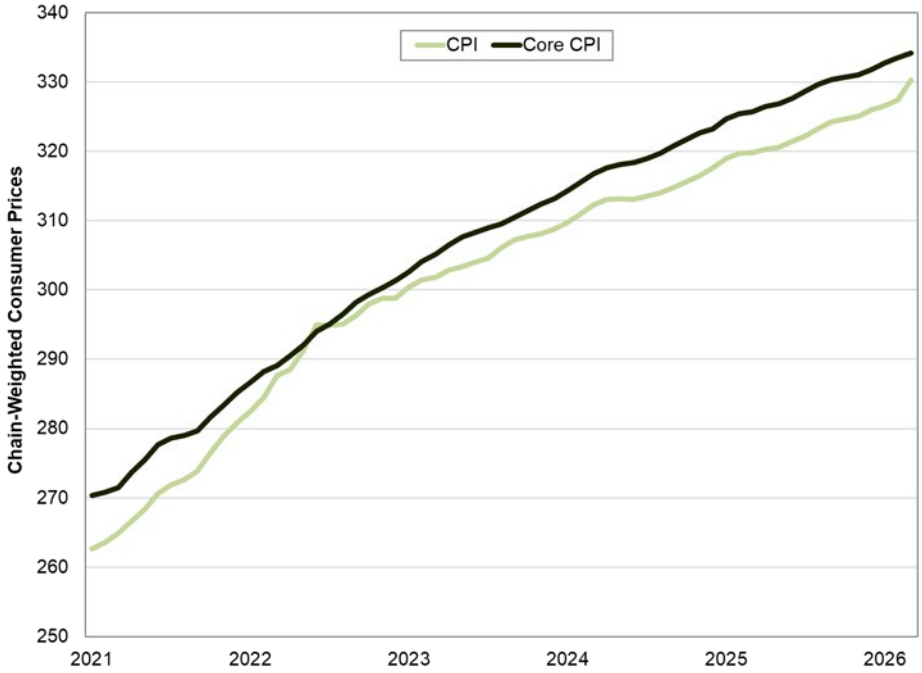


Source: Bureau of Labor Statistics

Q. IS THERE ANY EVIDENCE OF RISING PRICES IN CONSUMER PRODUCTS?

A. Yes. One commonly used measure of changes in the prices of goods and services is the Consumer Price Index ("CPI"), which is published by the U.S. Bureau of Labor Statistics ("BLS"). CPI measures changes over time in the prices consumers pay for a representative basket of goods and services, including food, energy, transportation, shelter, and other commodities. While the annualized growth in CPI has fallen from the highs that were seen in the immediate aftermath of the 2020 pandemic, it should be recognized that CPI is still elevated, reaching 3.3 percent in March 2026. This is well above the Federal Reserve's annual inflation target of 2.0 percent.

Figure 2: Consumer Price Index



Source: Bureau of Labor Statistics

Q. DOES THE MODERATING OF CPI GROWTH RATE FROM ITS HIGHS IMMEDIATELY FOLLOWING THE 2020 PANDEMIC MEAN THAT CONSUMER PRICES HAVE FALLEN?

A. No. It is important to recognize that CPI is reported monthly in terms of an annualized increase in consumer prices, meaning that a decline in the monthly 'headline' CPI does not mean that consumer prices have decreased, but rather that the rate of growth in consumer prices has slowed. Figure 2 shows that overall, consumer prices have been continually increasing since at least 2021, even while the rate of growth has somewhat stabilized. Over the period January 2021 to January 2026, overall consumer prices increased 24.3 percent, while "core" consumer prices – which remove volatile energy and food prices – increased nearly 23.1 percent.

Q. HAS THE FEDERAL RESERVE MADE ANY STATEMENTS REGARDING RECENT INFLATION?

A. Yes. Chairman Powell addressed this in a recent press conference on March 18, 2026. The Federal Reserve's preferred measure of inflation is the Personal Consumption Expenditures Price Index ("PCE"), a related, but generally broader, measure of consumer inflation similar to CPI that is produced by the U.S. Bureau of Economic Analysis ("BEA"). Specifically, CPI is limited to out-of-pocket spending on goods and services by urban households while PCE extends this "basket of goods" to include rural households and third-party expenses on the consumer's behalf, such as employer-provided health insurance, Medicare and Medicaid.[3] Chairman Powell stated that estimates indicate that over the twelve months ending in February 2026, PCE and Core PCE prices rose by 2.8 percent and 3.0 percent, respectively.[4]

Q. HAS THE FEDERAL RESERVE RELEASED ANY INFLATION PROJECTIONS FOR 2026?

A. Yes. In the same press conference referenced above, Chairman Powell stated that the median PCE projection for 2026 is 2.7 percent.[5] Total PCE inflation of 2.7 percent would be 70 basis points above the Federal Reserve's 2.0 percent longer-run inflation goal. This is important because the Federal Reserve's own outlook has inflation above target levels in 2026. This means that consumers are expected to continue dealing with increasing pressures on their cost of living.

---

[3] Inflation – Measuring the cost of living: The CPI versus the PCE price index," Cleveland Federal Reserve, Center for Inflation Research; note that changes in annual PCE inflation on average have been 0.39 percent than changes in annual CPI inflation.

[4] Board of Governors of the Federal Reserve System, Transcript of Chair Powell's Press Conference, Mar. 18, 2026, at 2.

[5] *Id.*

Q. ARE THERE ANY OTHER REPUTABLE INFLATION PROJECTIONS?

A. Yes. The Federal Reserve Bank of Philadelphia releases the Survey of Professional Forecasters, which includes inflation projections. In the First Quarter 2026 Survey, released on March 6, 2026, the forecasters project that CPI and core CPI will both rise 2.6 percent. [6] This is measured on a fourth-quarter-over-fourth-quarter basis. This suggests that professional forecasters also expect inflation to remain elevated enough to affect affordability.

Q. WHAT IS THE EFFECT OF THIS CONTINUOUSLY INFLATIONARY PROCESS?

A. This continuous inflationary process means that when prices rise at abnormally high levels, there must be compensatory periods of lower levels for inflation to return to its long-term average. For example, if the average annual inflation rate is two percent, then a year with three percent inflation would need to be followed by a year with approximately one percent inflation to return to the average trend. Even though present inflation is below the levels seen in 2022 and 2023, it is still above two percent, so there must be periods below this target to return to the long-term average. Until the economy experiences these off-setting low inflationary periods, consumers must bear the cumulative effects of the price level rising more quickly than its average trend.

Q. HAVE ENERGY-RELATED PRICES ALSO CONTRIBUTED TO AFFORDABILITY PRESSURE?

A. Yes. Pennsylvania consumers are currently experiencing financial pressure from all aspects of the energy market. Wholesale electricity prices in the PJM western hub, for example, increased 48.8 percent on average from 2024 to 2025. Likewise, Pennsylvania citygate natural gas prices increased 2.8 percent

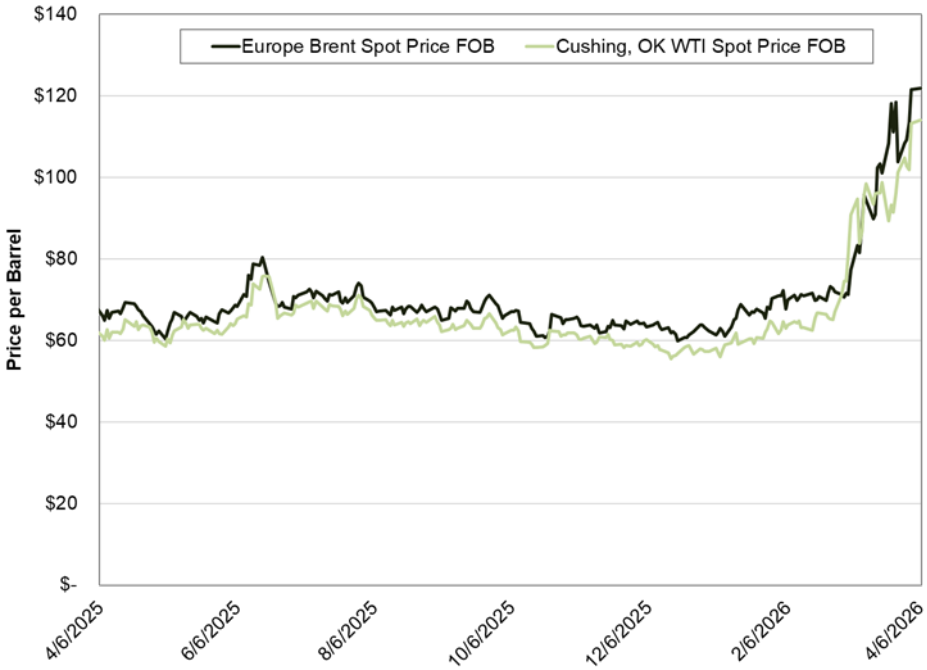
[6] Federal Reserve Bank of Philadelphia, Survey of Professional Forecasters, First Quarter 2026, released Mar. 6, 2026, at 4.

from December 2024 to December 2025 on the back of a nearly 41.9 percent increase in wholesale natural gas prices during the same period.

Q. HAVE ANY RECENT DEVELOPMENTS INCREASED MARKET UNCERTAINTY?

A. Yes. Recent geopolitical and macroeconomic developments have increased uncertainty in energy markets and prices in a way that is relevant to consumer affordability. The most notable of these is the geopolitical conflict in the Persian Gulf affecting energy prices. Currently it is unknown what the lasting impact of this conflict will have on global markets, as this will be heavily influenced by how long the conflict continues. However, initial impacts on international and domestic markets present a word of caution.

Figure 3: Crude Oil Prices



Source: S&P Global

Q. HOW HAS CONFLICT IN THE PERSIAN GULF AFFECTED MARKET UNCERTAINTY?

A. Yes, as shown in Figure 3 above, the conflict in the Persian Gulf has contributed to recent elevated crude oil prices in both international and domestic markets. International crude oil prices

measured at the Brent hub in the North Sea has increased by more than 78.9 percent since the beginning of the recent conflict. Likewise, domestic crude oil prices measured in terms of West Texas Intermediate ("WTI") have increased by nearly 70.3 percent since the beginning of the recent conflict. Both indexes are now trading in excess of $100 per barrel, well above the historic range of $60-$80 per barrel that is normally seen for these commodities.

Q. WHY ARE INCREASES IN CRUDE OIL PRICES IMPORTANT TO THE CONTEXT OF THE CURRENT RATE PROCEEDING?

A. The observed increase in crude oil prices shows how price shocks caused by the conflict in the Persian Gulf will likely filter through the larger macroeconomy. While the US does not purchase significant volumes of crude from the Persian Gulf anymore, the Persian Gulf is a major supplier of crude oil internationally, and crude oil is an international commodity. Therefore, domestic crude prices have already increased to reflect the knowledge that domestic supplies will be diverted in the international marketplace to take up the slack from constrained international supplies. Besides directly impacting Pennsylvanians through higher retail gasoline prices, higher crude prices will likely impact other aspects of the daily lives of Pennsylvanians already struggling under lingering inflation concerns. In fact, the Energy Information Administration recently found that domestic gasoline prices are now more closely tied to Brent Oil prices than WTI prices.[7]

Q. COULD INCREASED OIL PRICES AFFECT AFFORDABILITY CONCERNS FOR NFG CUSTOMERS?

A. Yes. First, the conflict in the Persian Gulf has restricted the flow of not only crude oil, but also Liquified Natural Gas ("LNG") supplies from the Persian Gulf to consumers in Asia. It is

[7] U.S. Energy Information Administration, "U.S. gasoline prices move with Brent rather than WTI crude oil," Today in Energy, dated Nov. 3, 2014.

likely that these consumers will turn to alternative supplies from the US as stored supplies dwindle. This will, in turn, place upward pressures on wholesale natural gas prices in the US as more natural gas is diverted to international supplies. Likewise, higher crude oil prices will lead to higher refined gasoline and diesel prices which themselves will lead to higher retail prices due to increased transportation costs. In the same Federal Reserve press conference discussed earlier, Chairman Powell stated that these elevated energy prices will push up overall inflation in the near term, but the scope and duration of these effects are uncertain.[8]

Q. IS THERE SIGNIFICANT UNCERTAINTY REGARDING HOW THE CURRENT CONFLICT WILL IMPACT THE ECONOMY?

A. Yes. As stated earlier, the ultimate impact of the recent conflict in the Persian Gulf is hard to predict because it is heavily determined by the ultimate length of the conflict, and how quickly international commodity markets can return to normal. Indeed, Chairman Powell when asked if he believed the oil shock would be temporary, replied, "So, and the thing I really want to emphasize is that nobody knows. The economics effect could be bigger, they could be smaller, they could be much smaller or much bigger. We just don't know."[9]

Q. ARE THERE ANY OTHER RELEVANT INDICATORS OF MARKET UNCERTAINTY?

A. Yes. The VIX index represents a market of financial derivatives of S&P 500 traded on the CME Group and is therefore a commonly used measure of expected near-term stock market volatility, as financial derivatives, such as options, become more valuable during periods of

[8] Board of Governors of the Federal Reserve System, Transcript of Chair Powell's Press Conference, Mar. 18, 2026, at 2.

[9] Board of Governors of the Federal Reserve System, Transcript of Chair Powell's Press Conference, Mar. 18, 2026, at 6.

uncertainty. The VIX index has seen a 50 percent increase in value since the start of the recent conflict in the Persian Gulf, indicating elevated concern regarding future stock market volatility. I have also reviewed the Federal Reserve Bank of Philadelphia's Survey of Professional Forecasters regarding growth and the likelihood of negative real GDP growth.

Q. WHAT DOES THE SURVEY OF PROFESSIONAL ECONOMISTS INDICATE?

A. The most recent survey presented a mixed picture. Forecasters increased their annual-average real GDP forecast for 2026 from 1.8 percent to 2.5 percent. However, they continued to assign a meaningful probability to a negative quarter of real GDP growth in 2026, with mean probabilities ranging from approximately 17.8 percent to 22.7 percent over the four quarters.[10] Assuming that each of these four probabilities is independent for illustrative purposes, this forecasts a 60.1 percent likelihood of a negative real GDP growth quarter in 2026. In my view, that does not establish that a recession is likely, but it does suggest that the outlook remains uncertain enough to support caution.

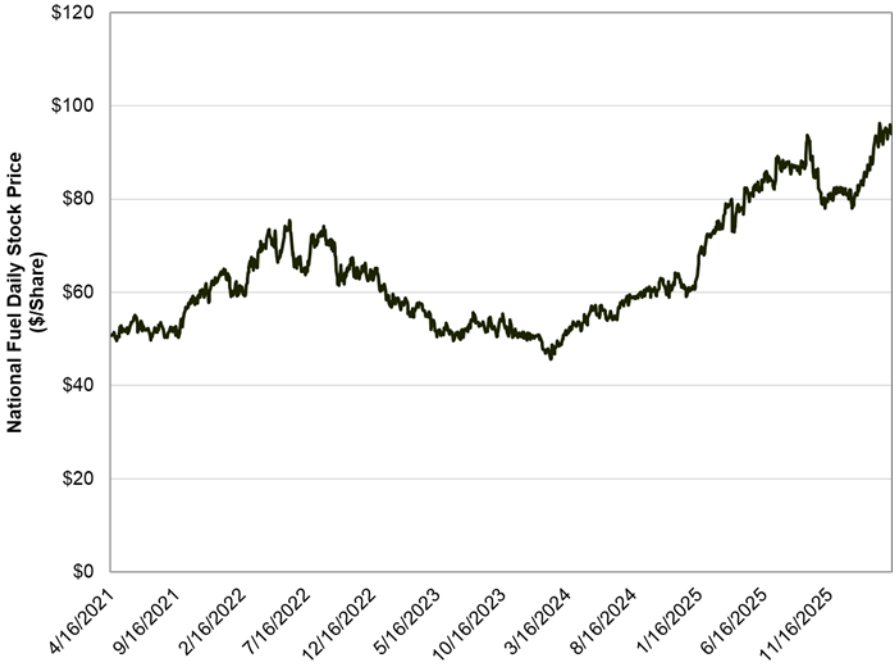
Q. HAVE TARIFFS ALSO AFFECTED AFFORDABILITY CONCERNS?

A. Although often lost in the current discussion regarding price concerns caused by the recent conflict in the Persian Gulf, it should be recognized that markets are also still dealing with uncertainty from recent tariffs placed on imports. Chairman Powell stated that of the Federal Reserve's 3.0 percent core inflation estimate, between .50 and .75 percentage points are due to

[10] Federal Reserve Bank of Philadelphia, Survey of Professional Forecasters, First Quarter 2026, at 1, 6.

tariffs.[11] Federal Reserve materials indicate that those effects developed gradually rather than as a single price spike, and that some of the tariff increases were passed through to consumers.[12]

Figure 4: National Fuel Stock Price



Source: S&P Global

Q. HAS THE CURRENT FINANCIAL UNCERTAINTY CAUSED FINANCIAL STRUGGLES FOR THE COMPANY?

A. No, it does not appear that the Company has been experiencing significant financial concerns due to the recent macroeconomic concerns. Indeed, National Fuel, the Company's parent entity, has seen its stock price trending upward for several years, and on March 13, 2026, National Fuel's stock price reached an all-time high of $96.30 per share. As of April 10, 2026, National

[11] Board of Governors of the Federal Reserve System, Transcript of Chair Powell's Press Conference, Mar. 18, 2026, at 4.

[12] Board of Governors of the Federal Reserve System, The Slow Climb: How Tariffs Gradually Raised Retail Prices in 2025, FEDS Notes, March 5, 2026.

Fuel's stock is trading near this record high at $93.95 per share. This indicates that the Company is not in a position of obvious market distress.

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

A. I recommend that the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company. Average Pennsylvanians are still struggling with lingering inflation concerns besides looking at potential additional concerns placed on them due to the current conflict in the Persian Gulf. This is while National Fuel has seen increasing stock prices for its shareholders and no obvious market distress. The Commission, in particular, should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company.

IV. REGULATORY LAG

Q. PLEASE DISCUSS THE COMPANY'S REVENUE STABILITY CONCERNS.

A. The Company's testimony reflects a focus on improving revenue stability and predictability under its current rate structure. The Company explains that weather-driven usage fluctuations can result in periods of under-recovery during warmer-than-normal conditions and over-recovery during colder-than-normal conditions.[13] To address this variability, the Company proposes to make its WNA mechanism permanent.[14] The Company also states that the primary purpose of the WNA is to moderate the bill impacts of weather variability and align billed revenues more closely with the Commission-approved revenue requirement.[15]

[13] Direct Testimony of John D. Taylor, Company St. 19 at 26:5-9.

[14] Direct Testimony of John D. Taylor, Company St. 19 at 23:7-10.

[15] Direct Testimony of John D. Taylor, Company St. 19 at 23:15 to 24:3.

Q. DOES THE COMPANY ALREADY HAVE MECHANISMS IN PLACE THAT REDUCE REGULATORY LAG?

A. Yes. The Company proposes to use a Fully Projected Future Test Year ("FPFTY") to better align revenues with projected costs in the current rate case,[16] and the Company's prior base rate case also utilized a FPFTY.[17] The Company also has also recently implemented a DSIC, which allows for interim recovery of qualifying capital investments between rate cases.[18] These tools provide the Company with multiple avenues to manage regulatory lag and ensure timely cost recovery. The proposed continuation of the WNA would further enhance this framework.

Q. DO CHANGES IN CUSTOMER USAGE NECESSARILY REFLECT REGULATORY LAG?

A. No. Declines in usage can result from a range of factors, including efficiency measures, economic conditions, or customer behavior. These changes are not inherently problematic and do not, by themselves, create regulatory lag. Moreover, if usage declines are accompanied by stable or declining costs, there may be no mismatch that requires correction.

Q. PLEASE DEFINE REGULATORY LAG.

A. Regulatory lag can be defined in several different ways. One definition holds that regulatory lag is the time period between when a utility's rates go into effect, following an evidentiary hearing process and its next rate case.[19] Another definition holds that regulatory lag can be represented as the period between when a utility investment is undertaken and the time it

---

[16] Direct Testimony of Rebecca E. Hillery, Company St. 1 at 5:24 to 6:2.

[17] *See* Direct Testimony of Rebecca E. Hillery, Company St. 1 at 14:2-4.

[19] Scott E. Atkinson and Clifford Nowell. (1994). "Explaining Regulatory Commission Behavior in the Electric Utility Industry." *Southern Economic Journal*. Vol. 60, No. 3: 634-643.

enters into rates.[20] Yet another definition holds that regulatory lag is the time period in which a utility's achieved rate of return differs from that allowed by regulators.[21] At the heart of all these definitions is one theme: the frequency and timing of rate cases can impact utility earnings, positively or negatively.

Q. IN UTILITY RATE REGULATION, WHICH PARTY CONTROLS REGULATORY LAG OR THE DURATION OF TIME BETWEEN RATE CASES?

A. Typically, utilities control the duration between rate cases. In most states, utilities have the statutory ability to request rate increases if they believe that their rates are not affording them the opportunity to earn a fair return on and of their investments and prudently incurred costs. While state utility commissions and other stakeholders can, in theory, request a utility be "brought in" for a rate case, my experience is, and research indicates, that this event rarely happens. For instance, research on the topic of regulatory lag conducted in the early 1980s by Ronald Braeutigam and James Quirk, surveyed state utility rate cases during the period 1948 to 1978 and found that over 350 of the 363 surveyed rate cases (96 percent) were brought by a regulated utility, with the smaller number attributable to regulators or consumer groups.[22] While this is an older, dated study, the results are likely to ring true even over the past two decades.

[22] Graeme Guthrie. (2006) "Regulating Infrastructure: The Impact on Risk and Investment." *Journal of Economic Literature*. 44 (December): 933.

Q. DOES A UTILITY'S ABILITY TO DETERMINE THE TIMING OF A RATE CASE SHIFT A CERTAIN DEGREE OF REGULATORY RISK ONTO RATEPAYERS?

A. Yes. When the timing of a rate case is left in the hands of the utility, it has the ability to effectively shift the risk of regulation and regulatory lag away from itself and onto ratepayers. The option to request higher rates by utilities, in effect, creates a price floor that buttresses a utility's value.[23] This price floor allows shareholders to retain benefits created by regulatory lag (*i.e.*, earning an actual rate of return that is higher than the authorized rate of return or over-earning), as well as the option to defend against challenges to those benefits through the timing of a rate case. Paul Joskow, writing as early as 1973, concluded in a frequently referenced regulatory article, that utility commissions tend to defend against rate increases, but are less aggressive in pursuing rate decreases when rates are stable or decreasing in real terms.[24] This outcome has often been thought to have occurred in the post-war period until about the late 1960s, and arguably throughout the 1990s.

Q. IS REGULATORY LAG UNFAIR OR CONFISCATORY TO UTILITIES?

A. No. The premise that regulatory lag is somehow unfair is simply antithetical to most of the research in utility regulation over the past 50 years. Regulatory lag has long been recognized as a key component of the overall regulatory compact given the discipline it can impose on utility operational and investment decisions. Regulation acts as a substitute for the disciplines of competition.[25] Regulatory lag prevents utility regulation from devolving into a "cost-plus"

[25] Charles F. Phillips, *The Regulation of Public Utilities: Theory and Practice*, (Arlington, VA: Public Utilities Reports, Inc., 1984), p. 154.

approach that simply passes through costs on a dollar-for-dollar basis to ratepayers and can lead to cost and investment inefficiencies. The cost-plus regulatory approach also shifts a considerable amount of performance-related risk away from utilities and onto ratepayers and leads to inefficient outcomes, which was recognized as early as the 1960s and has come to be known as the "Averch-Johnson" or "A-J" effect.

Q. HOW ARE THE CONCLUSIONS REGARDING REGULATORY LAG RELATED TO WHAT IS COMMONLY REFERRED TO AS THE "A-J EFFECT"?

A. In the early 1960s, a seminal article was published that dramatically influenced the theory and practice of utility regulation and economic thinking regarding the optimal regulation of natural monopolies. This article, authored by Professors Harvey Averch and Leland Johnson, and published in the *American Economic Review* in 1962, posited that rate of return regulation creates an incentive for regulated utilities to overcapitalize, resulting in an inefficient utilization of resources and higher-than-optimal rates.[26] This finding; however, was premised upon a model with a number of assumptions, one of which presumed there was no regulatory lag and that rates were set on a period-to-period basis. In other words, rates were set on a "cost-plus" regulatory approach.

Q. HOW IS REGULATORY LAG RELATED TO THIS RESEARCH?

A. Soon after its publication, Averch and Johnson's article was met with a flurry of scholarly research attempting to empirically verify the A-J effect, as well as examining the conditions under which the effect would, and would not, be sustained.[27] Rejoinders to the research noted that two

[26] H. Averch and L. Johnson. (1962) "Behavior of the Firm under Regulatory Constraint," *American Economic Review*. 52:1052-1069.

[27] These works are surveyed in Graeme Guthrie. (2006). "Regulating Infrastructure: The Impact on Risk and Investment." *Journal of Economic Literature*. 44 (December):925-972.

characteristics of the regulatory process tended to temper the likelihood and prevalence of the A-J effect: (1) the possibility of disallowances through the prudence review process[28] and (2) the positive efficiency incentives created by regulatory lag.[29] In fact, a series of articles published soon afterwards noted that regulatory lag typically creates incentives for utilities to seek efficiency opportunities between rate cases since the gains (profits) from those investments inure to shareholders instead of ratepayers.[30]

Q. HOW DID THE FINDINGS IDENTIFYING THE BENEFITS OF REGULATORY LAG ARISE?

A. One of the earliest works on the impact of regulatory lag was published in 1971 by William Baumol and Alvin Klevorick.[31] Their work was the first of what was to become a series of articles showing that regulatory lag actually diminished incentives for overcapitalization, since the earnings gained by avoiding these inefficient actions passed directly to shareholders. Soon after, Klevorick, writing separately from Baumol, built upon this model by explaining how multi-year regulatory lags, coupled with demand and cost uncertainty, created strong incentives for efficiency

to maintain profitability.[32] One of his additional findings at the time, however, was that these incentives might also discourage regulated firms from investing in research and development.

Q. HOW IS THIS DISCUSSION RELEVANT TO THE COMPANY'S CURRENT FILING?

A. The Company's filing focuses on concerns related to revenue variability and stability. However, as discussed above, regulatory lag can serve a beneficial regulatory function and does not, by itself, indicate a structural problem. NFG's ability to file rate cases at will, utilize a WNA, utilize FPFTYs (including allowing end-year rate base calculations as opposed to average rate base over the FPFTY), and recover infrastructure costs through the DSIC already provide mechanisms to reduce lag. As such, the insinuation that regulatory lag is a barrier to fair return is inconsistent with both its regulatory tools and academic literature.

Q. DOES REGULATORY LAG, WHILE ENCOURAGING EFFICIENCY, DISCOURAGE INNOVATION?

A. No. Interestingly, this notion is a myth that arises in the practice of public utility regulation but is debunked by several academic articles. Elizabeth Bailey, who also served as an economic researcher at Bell Laboratories, addressed this issue originally raised by Klevorick during this active period of regulatory scholarship in the 1960s and 1970s. Bailey found that regulatory lag helped to facilitate, not reduce, the incentives for cost-reducing innovations.[33] Bailey's work built upon earlier work that she did with Roger Coleman in 1971 that further supported the conclusions

[32] A.K. Klevorick. (1973). "The Behavior of a Firm Subject to Stochastic Regulatory Review," *Bell Journal of Economics and Management Science.* 4 (Spring): 82.

[33] Elizabeth E. Bailey. (1974). "Innovation and Regulation." *Journal of Public Economics*. 3: 285-295.

of Baumol and Klevorick, that regulatory lag induces profit-maximizing firms to adopt minimum-cost production alternatives.[34]

Q. ARE THERE ANY PARALLELS AMONG REGULATORY LAG, INNOVATION, RELIABILITY, AND SAFETY?

A. Yes. The Company links its increased capital investments for safety, reliability, and system modernization to concerns about revenue stability under its current rate design. At the same time, the Company proposes to use mechanisms such as the WNA to stabilize revenues and support recovery despite external factors like weather variability. Accordingly, while these concepts are related, the Company's existing mechanisms are designed to address the identified risks within the current ratemaking framework.[35] However, it should be recognized that the key benefits of regulatory lag are the weakening of the natural incentive for a utility to over-capitalize and the strengthening of the natural incentive for a utility to minimize production costs in order to increase shareholder profits.

Q. PLEASE EXPLAIN THE TERM "REGULATORY COMPACT."

A. The regulatory compact, as it is generally referred to in a regulatory policy context, allows utilities the opportunity to earn a fair rate of return of and on their investments as well as their prudently incurred costs. In return, utilities are expected to provide safe, adequate, efficient, and reasonable service and facilities at just and reasonable rates.

[35] *See* Direct Testimony of Rebecca Hillery, Company Statement 1 at 14:2-7 and 16:12-19.

Q. HAVE ANY STUDIES LOOKED AT THE IMPACT OF REGULATORY LAG FROM A BROAD INDUSTRY-WIDE PERSPECTIVE DURING THESE PAST PERIODS?

A. Yes, there have been a few studies that have examined regulatory lag during the inflationary period of the 1970s. The conclusions are mixed. Seth Norton, for instance, conducted empirical research examining 45 utilities over a period from 1945 to 1974. The period spans both the high-growth, high-productivity, low-cost periods for the industry prior to 1970 and the inflationary low-growth periods throughout the 1970s. According to Norton, there were no significant financial impediments or opportunities created by regulatory lag in any of these periods.[36]

Q. WILL THE COMPANY'S PROPOSALS SHIFT ANY RISKS AWAY FROM ITSELF AND ONTO RATEPAYERS?

A. Yes. The Company's proposals are designed to insulate the Company from fluctuations in usage and weather-related variability. By guaranteeing recovery of authorized revenues regardless of actual customer consumption, these mechanisms significantly reduce the Company's exposure to traditional business risks. As a result, the risk of revenue underperformance due to declining sales, conservation, economic conditions, or unseasonably warm weather is shifted entirely onto ratepayers. Importantly, the Company has not proposed any corresponding ratepayer protections such as earnings tests, revenue caps, or performance incentives. This asymmetric risk allocation leaves ratepayers exposed to upward rate adjustments without any assurance of offsetting benefits or improved utility performance.

[36] Seth W. Norton, (1987), "In Search of Regulatory Lag," *Quarterly Journal of Business and Economics*, Vol. 26 No. 4 (Autumn): 3-16.

Q. PLEASE EXPLAIN HOW REGULATORY RISK IS SHIFTED TO RATEPAYERS.

A. As I discussed above, utilities typically control the timing of rate case filings. Accordingly, utilities enjoy the ability to request higher rates, as well as the protection afforded by a price floor that allows shareholders to retain benefits (*i.e.*, over-earning) created by regulatory lag. Thus, in times of over-earning, risk is shifted to ratepayers because utilities are not likely to elect to file a rate case. In times where a utility is under-earning, risk also is shifted to ratepayers because the utility can file for a rate increase.

Q. DOES THE PRESENCE OF REGULATORY LAG CREATE ANY POLICY SUPPORT FOR THE COMPANY'S PROPOSALS?

A. No. The presence of regulatory lag in and of itself does not create policy justification for the Company's proposals. Regulatory lag can lead to both costs and benefits for a regulated utility. The Company's proposals are incorrectly premised upon a presumption that regulatory lag is bad and always will be bad. Regulatory lag creates opportunities for utilities to achieve gains as well as losses. The simple fact that regulatory lag creates "opportunities" and not guarantees, is one of the reasons why regulatory lag is considered efficiency enhancing. There is a long and rich history in the practice and theory of utility regulation supporting these efficiency-enhancing conclusions. Thus, there is no inherent nor *a priori* policy rationale supporting the Company's proposals. If anything, past thought and practice in utility regulation supports rejection of proposals of this nature on a policy basis.

Q. WHAT IS YOUR OVERALL RECOMMENDATION REGARDING REGULATORY LAG?

A. The Company has not demonstrated that the existing regulatory framework in Pennsylvania is failing to support timely and adequate cost recovery. Rather, the evidence suggests that

regulatory lag is already being effectively managed. The Commission should reaffirm the value of regulatory lag as a structural feature of traditional ratemaking and recognize that further erosion of this principle is neither necessary nor justified in this case.

V. WEATHER NORMALIZATION PROPOSAL

Q PLEASE DISCUSS NFG's WNA.

A. NFG's WNA is a pilot ratemaking mechanism that adjusts customer bills during the heating season (October through May) based on deviations from what the Company defines as "normal" weather.[37] Specifically, the mechanism applies a formula using the ratio of normal heating degree days ("NHDDs") to actual heating degree days ("AHDDs") and applies that ratio to each customer's heating-related usage to generate either a credit or a surcharge on the customer's bill.[38] A three-percent deadband is used to prevent minor weather variations from triggering bill changes.[39] The WNA is limited to weather-related usage changes and applies to Residential and Commercial/Public Authority customers.[40]

Q. WHY ARE WEATHER NORMALIZATION ADJUSTMENTS TYPICALLY USED BY GAS UTILITIES?

A. Weather normalization adjustments are generally used to reduce revenue volatility that results from fluctuations in weather which can lower customer gas usage and thus reduce a utility's recovery of fixed costs through volumetric rates. The intent is to provide more predictable revenues for the utility while smoothing customer bills. However, this goal must be balanced with

[37] *See,* Direct Testimony of John Taylor, Company Statement No. 19 at 23:13-15.

[38] *See,* Direct Testimony of John Taylor, Company Statement 19 at 24:13-15.

[39] *See,* Direct Testimony of John Taylor, Company Statement 19 at 24:16-19.

[40] *See,* Direct Testimony of John Taylor, Company Statement 19 at 24:20-21.

customer protections to ensure the mechanism does not systematically overcharge customers or remove all utility risk.

Q. CAN UTILITIES SMOOTH CUSTOMER BILLS WITHOUT A WNA?

A. Yes. Utilities typically offer normalized billing, also referred to as budget billing, to customers interested in establishing fixed monthly bills for purposes of budgeting by averaging expected annual utility charges over twelve equal monthly payments. Normalized billing also assists the utility by providing greater certainty regarding its monthly revenue streams from customers.

Q. WHAT IS THE COMPANY PROPOSING IN THIS CASE WITH RESPECT TO THE WNA?

A. The Company is proposing to convert its current WNA pilot program into a permanent, ongoing ratemaking mechanism.[41] However, the Company proposes no other changes to the WNA from its current pilot framework, save for changing the basis for calculating NHDDs from the current method based on a historic 15-year average to a 10-year average.[42]

Q. WHAT ARE THE PRACTICAL EFFECTS FOR RATEPAYERS ASSOCIATED WITH THE PROPOSED CHANGE IN WNA NORMALIZATION PERIODS?

A. In direct testimony NFG testified that assuming that a 10-year historical average will better reflect future weather conditions when compared to a 15-year historical average,[43] the proposed change in the Company's weather normalization should reduce future volumetric differences

[41] *See* Direct Testimony of John Taylor, Company Statement 19 at 23:7-10.

[42] *See* Direct Testimony of John Taylor, Company Statement 19 at 25:7-8.

[43] Direct Testimony of John Taylor, Company Statement No. 19 at 25:13-15.

between actual and normal usage due to weather conditions.[44] Theoretically, this should also reduce the volatility of future WNA surcharges and credits. The Commission accepted a similar proposed change to a 10-year normalization period recently for Columbia Gas, noting that normalization periods longer than 10-years appeared to result in a "historical bias" that diminished recent warming trends.[45]

Q. HAS THE COMMISSION ADOPTED A STATEMENT OF POLICY REGARDING ALTERNATIVE RATEMAKING MECHANISMS LIKE THE WNA?

A. Yes. In 52 Pa. Code § 69.3302(a) the Commission established 14 separate distribution rate considerations in determining just and reasonable alternative ratemaking distribution mechanisms and rate design. Exhibit MWD-1 presents these 14 considerations, along with the relevant effect of the WNA on each consideration. My review of the Commission's consideration criteria finds that the current WNA either does not impact the Commission's areas of concern or will potentially worsen those areas of concern.

Q. WHAT DID THE COMMISSION DECIDE REGARDING THE WNA IN THE COMPANY'S PRIOR RATE CASE?

A. In its Final Order, the Commission adopted a settlement that included implementation of the Company's WNA as a five-year pilot program.[46] The settlement also required the Company to include a three percent deadband and to comply with certain reporting requirements.[47] It further

[44] *Id.*

provides that the continuation of the WNA pilot may be challenged or modified in future general rate proceedings.[48]

Q. WHAT IS THE EFFECT OF THE COMPANY'S PROPOSAL IN THIS PROCEEDING TO MODIFY THE WNA PILOT INTO A PERMANENT RATEMAKING MECHANISM?

A. The Company's proposal would lock in place a relatively new pilot mechanism as a permanent ratemaking mechanism before it has been subject to meaningful evaluation. The WNA has consistently produced net surcharges for customers and operates without key safeguards such as reconciliation, earnings tests, or weather trend adjustments. By seeking to convert the WNA from a pilot into a permanent ratemaking mechanism, the Company is effectively attempting to shield itself from weather-driven sales risk indefinitely, while continuing to recover fixed costs through volumetric charges. This conversion would institutionalize an asymmetric mechanism that benefits the utility without demonstrating corresponding benefits to ratepayers.

Source: Company's Response to Data Request OCA-9-38.

[48] Pennsylvania Public Utility Commission, *Recommended Decision.* Docket No. R-2022-3035730 at ¶ 41.

Q. WHAT HAS BEEN THE ACTUAL IMPACT OF THE WNA ON RATEPAYERS?

A. The Company has filed annual WNA reports with the Commission that summarize the total dollar amount of WNA charges and credits issued to customers during each heating season.[49] Table 1 includes a summary of the over/under collections reported by the Company since the inception of the mechanism in October 2023. The monthly mechanism resulted in an overall surcharge each and every month of its first year of operations. Indeed, while customers did see overall credits during the months of January and February 2025, during the first two full heating seasons, 2023-2024 and 2024-2025, the WNA produced net surcharges across all residential customers of approximately $7.0 million and $2.2 million, respectively, resulting in approximately $9.2 million in total revenues collected from customers. Although certain months reflected bill credits, the WNA has produced substantial net surcharges to customers during its initial years of operation. While Table 1 currently indicates a level of credits for 2026, there may be an increase in surcharges due to more recent data, and I will continue to update my testimony as data becomes available. While the Company describes the WNA as a symmetrical mechanism benefiting both the Company and customers,[50] the results to date show that customers have experienced significant net surcharges during the majority of the pilot period.

Q. ARE ONE-WAY SURCHARGE MECHANISMS CONSISTENT WITH SOUND REGULATORY POLICY?

A. No. Regulatory policy disfavors mechanisms that allow utilities to recover lost revenues or costs from customers without also exposing the utility to comparable downside risk or performance standards. The WNA, as designed and applied by the Company, operates as a one-

[49] Pennsylvania Public Utility Commission, *Weather Normalization Reports.* Docket No. R-2022-3035730.

[50] *See* Direct Testimony of Rebecca Hillery, Company Statement 1 at 18:20-21.

way ratchet. This violates basic ratemaking principles of fairness and reciprocity between ratepayers and shareholders. This also violates the Commission's concern listed in its alternative regulation consideration criteria that alternative ratemaking mechanisms include appropriate consumer protections to balance shareholder concerns regarding revenue stability with ratepayer concerns regarding overall rate increases.

Q. ARE THERE OTHER CONCERNS REGARDING THE WNA?

A. Yes. There are several concerns regarding the level of ratepayer protections included in the Company's WNA. Specifically, the WNA includes a three percent deadband and applies during an October through May heating season, both of which differ from protections that have been approved by the Commission in other Pennsylvania WNA mechanisms, including the Commission's recent decision modifying the WNA pilot mechanism for Columbia Gas in Docket No. R-2025-3053499. Exhibit MWD-2 provides a survey of recent Pennsylvania natural gas rate cases involving major investor-owned utilities that address WNA mechanisms and their related provisions.

Q. DO YOU AGREE WITH THE COMPANY'S THREE PERCENT DEADBAND?

A. No. As part of the settlement in the Company's prior rate case, the Company included a three percent deadband in its WNA.[51] However, more recent Commission decisions approving WNA pilot mechanisms have included a larger deadband, such as the five percent deadband approved in the recent Columbia Gas general rate proceeding.[52] Indeed, in that proceeding, the Commission explicitly held that a five percent deadband "adequately captures what could be

[51] Pennsylvania Public Utility Commission, *Recommended Decision.* Docket No. R-2022-3035730 at ¶ 41.

[52] Pennsylvania Public Utility Commission, *Opinion and Order.* Docket No. R-2025-3053499 at 301.

considered normal weather fluctuations in Pennsylvania."[53] The Commission further explained that a larger deadband places more responsibility for calculating and forecasting weather variations on the utility as a normal part of doing business.[54] Consistent with this reasoning, increasing the Company's deadband from three percent to five percent would provide greater protection to ratepayers and better align with the Commission's recent determination on this issue.

Q. DO YOU AGREE WITH THE COMPANY'S CURRENT WNA HEATING PERIOD OF OCTOBER THROUGH MAY?

A. No. I disagree with the inclusion of the months of October and May in the Company's WNA heating season period. The Fall month of October and the Spring month of May are best represented as shoulder months between the winter heating season and the summer cooling season which often sees little heating or cooling requirements for customers and customers only see heating use during years with early and/or late winters. The inclusion of these shoulder months within the Company's WNA heating season exposes ratepayers to unnecessary variation in the WNA by shifting the weather risk during these shoulder periods from the Company onto ratepayers.

Q. HAVE YOU EXAMINED HISTORIC WEATHER VARIABILITY IN THE COMPANY'S SERVICE AREA DURING THE OCTOBER THROUGH MAY PERIOD?

A. Yes. Table 2 examines historical variation in monthly AHDD for the October through May period using weather data from the Erie, Pennsylvania weather station over the 15-year period October 2006 through May 2021. I have chosen weather data from Erie, Pennsylvania as this is consistent with the weather information that NFG uses to calculate its WNA surcharges and credits, although it is questionable if the city of Erie is representative of weather conditions for the Company's full service territory which serves customers as far south as Greene County, and as far east as Potter County in Pennsylvania. However, this analysis based on weather data from the Erie, Pennsylvania weather station finds that the coefficient of variation ("COV") for AHDD is greatest in the months of October and May.

Q. WHAT DO YOU MEAN BY THE COEFFICIENT OF VARIATION?

A. COV is mathematically the standard deviation of a data series divided by its mean and is a way to present the variance of different data series on a normalized basis as a percent of the average of the data series. For example, the COV of AHDD for the month of May is 26 percent, meaning

that the average expected variance in AHDD during the month of May is 26 percent of the expected NHDD based on historic averages. Likewise, the COV of AHDD for the month of October is 22 percent of expected NHDD based on historic averages. The COV for all other months is no greater than 20 percent. Therefore, the Commission should eliminate the months of October and May from the WNA period since these months have seen high variability in weather conditions.

Q. HAS THE COMMISSION EXPRESSED SIMILAR CONCERNS REGARDING THE INCLUSION OF NON-WINTER MONTHS WITHIN WNA MECHANISMS?

A. Yes. In its recent decision involving Columbia Gas, the Commission agreed that the month of May should be removed from the WNA calculation. Specifically, the Commission explained that "May is not a winter or traditional heating month in Pennsylvania but more appropriately a shoulder month when customers can expect to start seeing their heating bills decline."[55] The Commission also noted that retaining May "could result in customers seeing WNA bill increases as late as June."[56]

Q. HAVE ANY OTHER PENNSYLVANIA UTILITIES LIMITED THE WNA HEATING SEASON TO EXCLUDE THE MONTH OF MAY?

A. Yes. In a 2025 general rate proceeding involving UGI Utilities, Inc. – Gas Division ("UGI Gas"), the Commission approved a settlement that modified UGI Gas's WNA pilot so that it no longer applies to May bills and instead applies only to bills rendered during the heating season October through April.[57] As shown in Exhibit MWD-2, among the Pennsylvania utilities included

[55] Pennsylvania Public Utility Commission, *Opinion and Order.* Docket No. R-2025-3053499 at 301.

[56] Pennsylvania Public Utility Commission, *Opinion and Order.* Docket No. R-2025-3053499 at pp. 301-302.

[57] Pennsylvania Public Utility Commission, *Order*. Docket No. R-2024-3052716 ¶ 1. Pennsylvania Public Utility Commission, *Recommended Decision.* Docket No. R-2024-3052716 at Section V, ¶ 58(b).

in the survey, Peoples Natural Gas Company is the only utility with a WNA that continues to include the month of May in its heating season.

Q. WHAT IS YOUR POSITION ON THE CONTINUATION OF THE COMPANY'S WNA?

A. I recommend that the Commission affirmatively discontinue the current WNA mechanism. The mechanism has failed to produce balanced outcomes for ratepayers, functioning as an asymmetric surcharge on customers' bills for the two full years the mechanism has been in operation, even though the mechanism was designed to symmetrically provide both surcharges and credits to customers. The WNA is also not required to address regulatory lag concerns of the Company given the Company's use of a FPFTY and DSIC. NFG's WNA impacts affordability as it makes it more difficult to provide customers with predictable and understandable price signals related to usage and could impede customer conservation efforts. It also shifts weather-related risks away from NFG and onto its customers. Given the macroeconomic risks that are already shifted to customers beyond direct utility rates through increased prices due to tariffs, increased oil prices due to wars in the middle east, and rising utility rates, NFG's WNA goes directly against affordability concerns for ratepayers.[58] This is especially true given that, over the life of NFG's pilot WNA, NFG has collected a significant amount more from ratepayers through charges than it has given back to them through credits. As such, NFG's WNA represents a harm to ratepayers. As the company is able to shift risk away from itself through rate filings and shift future weather related risk to customers through a WNA (as well as infrastructure risks through the DSIC), NFG's ratepayers are made responsible for NFG's risk through additional surcharges and are only credited

[58] Indeed, NFG states that a reason for the current proposed rate increase is due to inflationary pressures impacting the U.S. economy, the same inflationary pressures NFG ratepayers are experiencing outside of utility rates. *See,* Direct testimony of Rebecca E. Hillery, Company St. 1, at 7:1-5.

when NFG's weather-related risk does not materialize, which has not been the case generally in this pilot program.

Q. DO YOU HAVE ANY ALTERNATIVE PROPOSAL IF THE COMMISSION DECIDES TO CONTINUE THE WNA?

A. If the Commission decides to continue the WNA, I recommend that it be continued as a three-year pilot program rather than being adopted as a permanent mechanism. This will allow the Commission the opportunity to routinely reevaluate the WNA to ensure that the mechanism is not producing negative outcomes for ratepayers. I further recommend that the Commission increase the deadband from three percent to five percent and eliminate the months of October and May from the WNA period. This would strengthen ratepayer protections and would furthermore make the Company's WNA pilot consistent with the recent WNA pilot the Commission approved for Columbia Gas.

VI. ENERGY EFFICIENCY PROGRAM

Q. PLEASE DISCUSS THE COMPANY'S PROPOSED ENERGY EFFICIENCY PROGRAM.

A. The Company proposes implementing a comprehensive Energy Efficiency ("EE") Program over a five-year period beginning in October 2026.[59] The program will provide rebate incentives for residential customers seeking to install high-efficiency natural gas space and water heating appliances, as well as ENERGY STAR® certified natural gas clothes dryers.[60]

[59] Direct Testimony of Erik M. Solomon, Company St. 18 at 5:1-2.

[60] Direct Testimony of Erik M. Solomon, Company St. 18 at 5:2-15.

Q. HOW DOES THE COMPANY PROPOSE TO FUND ITS PROPOSED EE PROGRAM?

A. The Company proposes to recover the costs associated with its EE Program through a dedicated rider.[61] This rider will encompass all reasonable and prudently incurred costs directly associated with program administration, marketing, customer rebates, and evaluation activities.[62] Annual overspend or underspend will be carried forward throughout the five-year program term.[63]

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED EE PROGRAM RIDER MECHANISM?

A. No. The Company provides no reason for the need for a dedicated rider to recover costs associated with its proposed EE Program. Indeed, the proposed rider fails to adhere to the three criteria that regulators typically refer to when evaluating proposed cost recovery mechanisms.

Q. HOW HAS REGULATORY PRACTICE TRADITIONALLY EVALUATED COST RECOVERY REQUESTS?

A. Regulators often use three separate criteria to evaluate cost recovery mechanism requests that include determining whether or not the costs included in the requested cost recovery mechanism are: (1) largely outside the control of a utility (2) unpredictable and volatile, and (3) substantial and recurring.[64] These criteria resulted from a popular research paper published by the National Regulatory Research Institute ("NRRI"), the research organization supporting the National Association of Regulatory Utility Commissioners ("NARUC"). It is important to note

[61] Direct Testimony of Erik M. Solomon at, Company St. 1 6:4.

[62] Direct Testimony of Erik M. Solomon, Company St. 18 at 6:5-7.

[63] Direct Testimony of Erik M. Solomon, Company St. 18at 6:8-9.

[64] Costello, Ken (September 2009), "How Should Regulators View Cost Trackers?" National Regulatory Research Institute at 5.

that the NRRI-recommended evaluation criteria are minimum criteria, as they pertain to the threshold issue regarding the characteristics of costs suitable for recovery via a tracker. Thus, in the event that the NRRI-recommended criteria are satisfied, the next step is to determine whether the tracker proposal contains flaws unrelated to the characteristics of the costs intended for recovery.

Q. ARE THE PROPOSED EE PROGRAM COSTS BEYOND THE CONTROL OF COMPANY MANAGEMENT?

A. No. The Company proposes to directly administer the proposed EE Program. The Company will provide rebates directly to participating residential customers and has provided estimated participation levels[65] and annual budgets.[66]

Table 3: Projected Energy Efficiency Program Costs

Budget Item	FY 2027	FY 2028	FY 2029	FY 2030	FY 2031	Average
Rebates	$ 476,726	$ 476,726	$ 476,726	$ 476,726	$ 476,726	$ 476,726
Administration	100,000	100,000	100,000	100,000	100,000	$ 100,000
Evaluation, Measurement and Verification	60,000	60,000	60,000	60,000	60,000	$ 60,000
Outreach/Marketing/Trade Ally Co-op	100,000	85,000	75,000	50,000	50,000	$ 72,000
Total	**$ 736,726**	**$ 721,726**	**$ 711,726**	**$ 686,726**	**$ 686,726**	**$ 708,726**
					St. Dev.	**$ 19,647**

Requested Net Income	$ 50,185,000	$ 50,185,000	$ 50,185,000	$ 50,185,000	$ 50,185,000	$ 50,185,000
Percent EE Program of Net Income	**1.47%**	**1.44%**	**1.42%**	**1.37%**	**1.37%**	**1.41%**

Source: Direct Testimony of Erik M. Solomon, Company St. 18 Table 2.

Q. HAVE YOU EXAMINED THE SCOPE OF THE COMPANY'S PROPOSED EE PROGRAM?

A. Yes. Table 3 compares projected EE Program expenses to the Company's projected net income. Through the proposed five-year period, the Company proposes to incur approximately $700,000 in annual EE Program expenses. This represents approximately 1.4 percent of the

[65] Direct Testimony of Erik M. Solomon, Company St. 18 at 7.

[66] Direct Testimony of Erik M. Solomon, Company St. 18 at 6.

Company's estimated annual income and does not represent substantial costs for the Company justifying a cost recovery mechanism.

Q. HAVE OTHER REGULATORS ADOPTED A MATERIALITY THRESHOLD BASED ON UTILITY NET INCOME?

A. Yes. The Montana Public Service Commission ("MPSC"), in adopting a deadband associated with a cost recovery mechanism, recognized five percent of a utility's net income as a threshold for extraordinary costs that materially impact a utility's finances.[67] The MPSC's decision itself was based on a similar materiality standard used by the Federal Energy Regulatory Commission ("FERC") for extraordinary expenses.[68] The Company's proposed EE Program expenses do not rise to this level of materiality.

Q. ARE THE COMPANY'S PROPOSED EE PROGRAM EXPENSES EXPECTED TO BE VOLATILE AND UNPREDICTABLE?

A. No. First, the Company provides five-year budgets of projected costs under its proposed EE Program, indicating that the Company does not anticipate annual expenses associated with the proposed EE Program to be unexpected.[69] Similarly, the year-to-year expenditures estimated for the Company's proposed EE Program are relatively flat and not anticipated to be significantly volatile. Indeed, Table 3 shows that projected expenses associated with the Company's proposed EE Program are remarkably stable, with a projected coefficient of variation ("COV") of 2.8 percent.

---

[67] In the Matter of the Montana Public Service Commission's Review of the Rates to Recover NorthWestern Energy's Electricity Supply Costs, Montana Public Service Commission Docket No. D2017.5.39, Order No. 7563c at ¶¶38, 47, and 49.

[68] In the Matter of the Montana Public Service Commission's Review of the Rates to Recover NorthWestern Energy's Electricity Supply Costs, Montana Public Service Commission Docket No. D2017.5.39, Order No. 7563c at ¶49

[69] Direct Testimony of Erik M. Solomon, Company St. 18 at 6.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE PROPOSED EE PROGRAM RIDER?

A. I recommend the Commission reject the proposed EE Program rider. The proposed rider fails to satisfy any of the three NRRI-recommended evaluation criteria. Specifically, EE Program expenses are not substantial, not outside the control of the utility, and are neither unpredictable nor volatile. Therefore, the costs associated with the Company's proposed EE Program do not have the characteristics that are conducive for recovery through a cost tracker outside of base rates.

VII. ALLOCATED COST OF SERVICE STUDY

A. Introduction

Q. WHAT IS THE PURPOSE OF AN ALLOCATED COST OF SERVICE STUDY?

A. An allocated cost of service study ("ACOSS") is a modeling approach that reconciles utility costs and revenues across different customer classes. The goal of an ACOSS is to evaluate the cost of providing service and revenue responsibility for each individual customer class. ACOSS results are used to estimate class-specific rates of return and can serve as a guidepost for class revenue responsibilities and ultimately rates.

Q. HOW IS AN ACOSS PREPARED?

A. An ACOSS utilizes a set of historic or projected cost information which is (1) "functionalized," (2) "classified," and (3) "allocated." The functionalization process simply categorizes costs based upon the functions they serve within a utility's overall operations (i.e., production, transmission, and distribution). In the specific case of a natural gas utility, a large share of a utility's investments and costs are associated with providing distribution services. The classification process characterizes costs by "type," including those that are (1) demand-related,

(2) commodity-related, or (3) customer-related. The last step of the process "allocates" each of these costs to a respective jurisdiction or customer class as appropriate.

Q. PLEASE EXPLAIN DEMAND-RELATED COSTS?

A. Demand-related costs are associated with meeting maximum gas flow requirements. Transmission and large distribution mains are designed, in part, to meet peak demand day requirements such that natural gas can be delivered to households, businesses, and industries under peak load conditions. Gas supply contracts can also have a capacity component that is demand-related. The most common demand allocation factors used in an ACOSS are those related to system peak day demands.

Q. HOW ARE COMMODITY-RELATED COSTS DEFINED?

A. Commodity-related costs are defined as those that tend to change with the amount of throughput (volume) sold or transported. The investment cost of natural gas mains, for instance, can be allocated, in part, on some measure of throughput. There are also a number of other expenses, such as fuel costs themselves, that are often allocated using some measure of throughput.

Q. WHAT ABOUT CUSTOMER-RELATED COSTS?

A. Customer-related costs are those associated with connecting customers to the distribution system, metering household or business usage, and performing a variety of other customer support functions.

Q. PLEASE EXPLAIN THE ALLOCATION PROCESS.

A. The allocation process is the final step in a cost of service study and involves assigning each functionalized and classified cost component to the appropriate customer classes. In the Company's ACOSS, costs are allocated using factors that reflect the underlying cost drivers, including customer counts, peak demand contributions, commodity usage, and, in some cases,

revenues. Where costs can be directly attributed to a specific customer class, they are directly assigned. For costs that cannot be directly assigned, allocation factors are developed using economic and engineering principles to ensure that costs are distributed in a manner consistent with cost causation. The goal of the allocation process is to ensure that each customer class is assigned its proportionate share of the Company's total costs, based on how that class contributes to the need for those costs.

Q. IS THIS A RELATIVELY SIMPLE PROCESS?

A. No. Some costs can be clearly identified and directly assigned to a function or category, while other costs are more ambiguous and difficult to assign. The primary challenge in conducting an ACOSS is the treatment of what are known as "joint and common" costs. Given their shared or integrated nature, these joint and common costs can often be difficult to compartmentalize. Therefore, unique allocation factors are utilized in an ACOSS to classify joint and common costs. The process of developing these cost allocation factors can become subjective and is often imbued with policy considerations.

Q. HOW DOES AN ACOSS RELATE TO ECONOMIC PRINCIPLES?

A. An ACOSS is also referred to as a "fully allocated cost study" since it allocates test year revenues, rate base, expenses, and depreciation to various jurisdictions and customer classes based upon a series of different allocation factors. The purpose of the ACOSS is to develop cost responsibility estimates for each customer class, which in turn, can be used to develop rates. An ACOSS is based upon a set of historic utility book costs that have accumulated over decades. Rates are, therefore, based upon historic average costs; whereas economic theory suggests that the most efficient form of pricing in perfectly competitive markets should be based upon marginal costs. However, regulated utilities do not operate in perfectly competitive markets and, by their

very nature, are natural monopolies. Thus, reaching the ideal pricing formula outlined in economic theory is impossible since the nature of natural monopolies makes pricing in the presence of declining average costs, coupled with the presence of joint and common costs, difficult.

Q. WHAT CONTROVERSIES ARISE IN THE ANALYSIS AND COMPARISON OF VARIOUS ACOSS METHODOLOGIES?

A. The ACOSS process is significantly different than the revenue requirement or cost of capital phase of a typical rate case. While those activities are focused on determining the total level of revenues to be recovered, the ACOSS determines how those revenues are allocated across customer classes and ultimately recovered through rates. The primary controversies in evaluating different ACOSS methodologies for a natural gas utility generally center on which cost drivers should be emphasized in allocating distribution system costs. In particular, there is often disagreement regarding whether costs should be allocated based on customer counts, peak demand contributions, annual throughput, or some combination of these factors. For gas utilities, these issues are especially important because the system is designed to meet winter peak demand requirements, while a significant portion of costs are recovered through volumetric charges that vary with usage. As a result, different methodologies can produce materially different outcomes depending on how they treat peak demand versus throughput. For example, methodologies that rely more heavily on customer and peak demand factors tend to allocate a greater share of costs to lower load-factor customers, such as residential and small commercial classes, which place relatively high demands on the system during peak periods. Conversely, methodologies that incorporate throughput or average usage, such as Seaboard-type approaches[70], tend to shift costs

[70] *See*, Atlantic Seaboard Corp., 11 F.P.C. 43 (1952); The Atlantic Seaboard, or Seaboard, cost allocation method allocates costs associated with distribution mains to customer classes based on a simple average of the customer classes' contribution to system peak day demands and annual throughput requirements.

toward higher load-factor customers, such as larger commercial and industrial classes. These differences can be significant, and they often drive the core disputes in a cost of service study. Ultimately, the key issue is whether the selected methodology appropriately reflects cost causation—that is, whether it aligns the allocation of costs with the way the natural gas distribution system is actually designed, constructed, and operated to serve customers.

Q. PLEASE EXPLAIN WHY METHODOLOGIES THAT ARE SKEWED TOWARD PEAK CONSIDERATIONS SHIFT COSTS TOWARD LOWER LOAD-FACTOR CUSTOMERS SUCH AS RESIDENTIAL AND SMALL COMMERCIAL CUSTOMERS.

A. A large portion of residential and small commercial natural gas usage is highly weather-sensitive, particularly during the winter heating season. These customers tend to have usage patterns that are concentrated during cold weather periods, when heating demand is highest. In contrast, larger commercial and industrial customers often use natural gas for process loads that are less dependent on weather and tend to be more consistent throughout the day and across seasons. As a result, their usage profiles are generally more stable and less "peaked" than those of residential and small commercial customers. Because of these differences, residential and small commercial customers typically exhibit lower load factors, meaning a greater share of their total usage occurs during peak periods. Larger customers, by comparison, tend to have higher load factors, with usage that is more evenly distributed over time. When a cost allocation methodology places significant weight on peak demand, it assigns more costs to those customer classes that contribute more heavily to system peak requirements. Since residential and small commercial customers drive a substantial portion of winter peak demand, methodologies that emphasize peak considerations will tend to allocate a greater share of costs to those classes. Conversely, methodologies that incorporate average usage or throughput, such as peak and average approaches,

tend to recognize the more consistent utilization of the system by higher load-factor customers and can result in a more balanced allocation of costs.

Q. PLEASE DEFINE WHAT IS MEANT BY A "LOAD FACTOR."

A. A load factor is defined as the ratio of the average gas usage over a given period to the maximum or peak demand experienced during that same period. It is typically expressed as a percentage. For natural gas, load factor can be calculated by dividing the total gas usage over a period (e.g., annual throughput) by the product of the peak day demand and the number of days in the period.

$$Annual\ Load\ Factor = \frac{Annual\ Throughput}{(Peak\ Day\ Demand * 365\ Days)}$$

A system or customer class with a high load factor is one that uses gas more consistently over time, with relatively smaller differences between average and peak usage. These customers tend to utilize the system more steadily. Conversely, a low load factor indicates that usage is more concentrated during peak periods—such as during cold weather—requiring the system to maintain sufficient capacity to meet those peaks, even if that capacity is not utilized for much of the year.

Q. IS IT PREFERABLE TO PROMOTE THE DEVELOPMENT OF HIGHER LOAD FACTORS?

A. Yes, generally speaking, a higher load factor can be indicative of more efficient utilization of the natural gas distribution system, all else equal. Customers with higher load factors tend to use the system more consistently over time, which can reduce the need for excess capacity that is only required during peak periods—particularly during the winter heating season when demand is highest. However, it is important to recognize that natural gas utilities inherently serve customers with different usage characteristics and load profiles. Residential and small commercial

customers, for example, tend to have more weather-sensitive usage patterns, while larger commercial and industrial customers often have more stable, process-driven loads. Additionally, gas utilities operate within a broader system that includes upstream supply, storage, and transportation arrangements, which can help manage variability in demand and mitigate some of the impacts of differing load characteristics across customer classes. While rate design should recognize and encourage efficient system utilization where appropriate, caution should be exercised in placing too much emphasis on promoting higher load factors. Overemphasizing this objective can result in shifting costs away from higher load-factor customers and onto lower load-factor customers, such as residential and small commercial classes, in a manner that may not fully reflect cost causation. Accordingly, while load factor is a relevant consideration, it should not be the primary driver of cost allocation or rate design decisions.

Q. WHAT IMPACT DOES COST ALLOCATION HAVE ON REVENUE RECOVERY?

A. Cost allocation can have a significant impact on revenue recovery because it directly affects the rates charged to different customer classes, and those rates, in turn, influence customer behavior. Higher-use customers, such as large commercial and industrial customers, are generally more price sensitive than residential and small commercial customers. This is due to the relative impact that rate increases can have on their overall operating costs and the margins of the goods or services they produce. In the natural gas context, these customers often have alternatives available, including fuel switching to other energy sources, modifying production processes, or in some cases reducing or relocating operations. As a result, they tend to be more responsive to changes in rates. By comparison, residential and small commercial customers typically have fewer practical alternatives and are therefore less able to adjust their usage in response to price changes,

particularly for essential uses such as space heating during the winter. Because of these differences in price elasticity, the way costs are allocated among customer classes can influence the stability and predictability of revenue recovery. Allocating a disproportionate share of costs to more price-sensitive customers may increase the risk of reduced usage or load migration, which can, in turn, impact the Company's ability to recover its authorized revenue requirement. Accordingly, while cost allocation should remain grounded in cost causation principles, it is also important to recognize how allocation decisions can affect customer behavior and, ultimately, revenue recovery.

Q. WHAT IS A POTENTIAL MANNER IN WHICH AN ACOSS CAN BE BIASED AGAINST LOWER LOAD-FACTOR CUSTOMERS?

A. Natural gas utilities, like electric utilities, are capital-intensive and require significant investment in infrastructure—such as distribution mains, services, and related facilities—to deliver service to customers. As a result, how those plant-related costs are allocated plays a critical role in determining the cost of service for each customer class. One potential source of bias arises when cost allocation methodologies over-emphasize certain cost drivers in a way that shifts costs away from higher load-factor, more price-sensitive customers and onto lower load-factor customers, such as residential and small commercial classes. For example, placing excessive weight on peak demand measures—particularly those that do not fully reflect system diversity—can result in allocating a disproportionate share of costs to customer classes that contribute heavily to winter peak demand. Additionally, over-reliance on minimum system or customer-related classifications for distribution plant can attribute a large share of infrastructure costs to the mere existence of customers, rather than to the demand they place on the system. This can result in cost shifts that disproportionately impact lower load-factor customers. In each of these cases, the

underlying issue is whether the selected methodology appropriately reflects cost causation. When it does not, the resulting cost allocation can create inequities among customer classes and bias outcomes against certain groups of customers.

B. Overview of the Company's ACOSS

Q. PLEASE DESCRIBE THE COMPANY'S ACOSS.

A. The Company's ACOSS follows a three step process where costs are first functionalized into specific categories based on the various characteristics of utility operations, specifically the utility functions of gas supply, transmission, distribution, and customer.[71] Second, these functionalized plant and expenses are classified into three primary factors driving associated costs, including customer-related costs, demand-related costs, and commodity-related costs.[72] Finally, these classified plant investment and expenses are directly assigned to individual customers or class of customers where possible, and where not possible are allocated based on allocation factors designed to reflect cost causation through principles of both economics and engineering.[73]

Q. HOW DOES THE COMPANY ALLOCATE MAJOR PLANT INVESTMENTS, SUCH AS DISTRIBUTION MAINS?

A. The Company argues that distribution mains are installed both to meet peak demand requirements and to connect customers to the system.[74] Consistent with this belief, the Company classifies and allocates distribution mains as both customer-related and demand-related,[75] determining the customer-related portion of distribution mains through the use of a zero-intercept

[71] Direct Testimony of John D. Taylor, Company St. 19 at 5:19-22.

[72] Direct Testimony of John D. Taylor, Company St. 19 at 6:6-12.

[73] Direct Testimony of John D. Taylor, Company St. 19 at 7:11-18.

[74] Direct Testimony of John D. Taylor, Company St. 19 at 13:9-23.

[75] Direct Testimony of John D. Taylor, Company St. 19 at 12:9-13; 13:15-19.

study.[76] Specifically, 61 percent of distribution mains investment is treated as customer-related and allocated based on the number of customers, while 39 percent is treated as demand-related and allocated based on each class's contribution to peak day demand.[77]

Q. HAVE YOU PREPARED A SUMMARY OF THE RESULTS OF THE COMPANY'S ACOSS?

A. Yes. A summary of the Company's ACOSS results is presented in Exhibit MWD-3. The Company finds that it will earn a system average rate of return under current rates during the FPFTY of approximately 6.30 percent. The Company also finds that class-based rates of return vary significantly across customer classes, ranging from 2.12 percent for the Natural Gas Vehicle ("NGV") class to 34.99 percent for the Large Volume Industrial Service ("LVIS") class. The Company specifically finds that its residential service class will earn a 3.17 percent return on rate base during the FPFTY under current rates, or approximately 0.50 on a relative rate of return ("RROR") basis.

Q. DO YOU DISAGREE WITH ANY OF THE ASSUMPTIONS OR ALLOCATION FACTORS INCORPORATED IN THE COMPANY'S PROPOSED ACOSS?

A. Yes. Specifically, I disagree with the Company's classification and allocation of costs associated with distribution mains. Specifically, I disagree with the Company's employment of a zero-intercept study ("ZIS") to classify a portion of costs associated with distribution mains as customer-related. ZIS are premised on a flawed hypothetical relationship between investments in distribution mains and customer growth that empirically does not exist. Likewise, I disagree with

[76] Direct Testimony of John D. Taylor, Company St. 19 at 14:22 to 15:1.

[77] Direct Testimony of John D. Taylor, Company St. 19 at 12:7-12.

the Company's demand cost allocation method which fails to recognize that distribution mains supply both peak and non-peak service and thus perform both a demand and commodity function.

C. Allocation of Distribution Mains

Q. PLEASE DISCUSS HOW THE COMPANY CLASSIFIES AND ALLOCATES ITS DISTRIBUTION MAINS COSTS.

A. The Company classifies distribution mains costs as both customer-related and demand-related, reflecting its view that these facilities are installed both to connect customers to the system and to meet peak demand requirements. Specifically, the Company classifies approximately 61 percent of distribution mains investment as customer-related and 39 percent as demand-related,[78] based on the results of a ZIS.[79] The customer-related portion is allocated to customer classes based on the number of customers served, while the demand-related portion is allocated based on each class's contribution to peak day demand under system design conditions.[80]

Q. PLEASE EXPLAIN THE THEORETIC BASIS FOR A ZIS.

A. ZIS are advocated by those holding the view that investments in distribution mains are made to serve a dual nature: one consisting of meeting system peak demand requirements, and another focused on customer interconnection or access that requires a customer-based allocation component. This customer-based allocation component, also called a minimum system component, is determined through either a ZIS or a related minimum system study ("MSS").

[78] Direct Testimony of John D. Taylor, Company St. 19 at 12:7-10.

[79] Direct Testimony of John D. Taylor, Company St. 19 at 14:22 to 15:1.

[80] Direct Testimony of John D. Taylor, Company St. 19 at 12:9-13.

Q. WHAT ARE ZIS AND MSS STUDIES?

A. ZIS and MSS studies are cost allocation methodologies that attempt to estimate separate customer-related versus load-related costs. A MSS does this by estimating the hypothetical minimum costs of deploying distribution mains that only provide customers with connection to the Company's natural gas distribution system, but not a system sufficient to serve the customer's actual natural gas demand requirements. Likewise, a ZIS utilizes regression analysis techniques to estimate the relationship between the natural gas demand requirements on a system and costs associated with installation of new distribution mains. Using these regression analyses, a ZIS then calculates a hypothetical minimum cost by calculating the costs of the distribution mains assets given a zero-demand requirement, or likewise the costs associated with installing a hypothetical zero-diameter distribution main.

Q. ARE THERE ANY SHORTCOMINGS TO USING MSS AND ZIS BASED STUDIES FOR CLASSIFICATION OF DISTRIBUTION MAINS?

A. Yes. Both MSS and ZIS studies are flawed in that they deal in hypotheticals that often do not exist in the real world and furthermore attempt to model an empirical relationship that does not exist. Specifically, one should recognize that a zero-diameter distribution main is completely a hypothetical construct that does not, and indeed could not, exist in the real world. This makes the results of MSS and ZIS analyses difficult, if not impossible, to verify. Likewise, it should be recognized that the argument that distribution system costs are related to the number of customers on a utility's system is not a new argument, and the academic literature in utility regulation has questioned for quite some time the use of both MSS and ZIS studies.

Q. HOW HAS THE ACADEMIC LITERATURE IN UTILITY REGULATION QUESTIONED THE USE OF MSS AND ZIS STUDIES?

A. Dr. James Bonbright, in his seminal work on public utility rates published decades ago in the 1970s, raised a number of questions about the use of MSS and ZIS methodologies in classifying costs. Although Dr. Bonbright's criticisms were specifically focused on the application of MSS and ZIS methodologies in the context of classifying costs for an electric distribution utility, his criticisms are equally applicable to a natural gas distribution utility. Bonbright's primary concern was the lack of empirical support in the academic literature for a causal relationship between distribution system costs and the number of customers. The true driving factors of utility distribution system costs are much more complicated and depend on a host of other factors, such as the size of a service territory and the population density within it. The incremental costs of constructing an appropriate distribution system to serve an additional customer within an urban area with existing nearby infrastructure are substantially less than the costs to extend an existing utility system by potentially miles to serve an additional customer located in a rural area, a fact inherently ignored by MSS and ZIS methodologies.

> …the annual costs of this phantom, minimum-sized distribution system are treated as customer costs and are deducted from the annual costs of the existing system, only the balance being included among those demand-related costs to be mentioned in the following section. Their [minimum distribution costs] inclusion among the customer costs is defended on the ground that, since they vary directly with the area of the distribution system (or else with the lengths of the distribution lines, depending on the type of distribution system), they therefore vary directly with the number of customers. Alternatively, they are calculated by the "zero-intercept" method whereby regression equations are run relating cost to various sizes of equipment and eventually solving for the cost of a zero-sized system (Sterzinger, 1981).
>
> What this last-named cost imputation overlooks, of course, is the very weak correlation between the area (or the mileage) of a distribution system and the number of customers served by this

> system. For it makes no allowance for the density factor (customers per linear mile or per square mile). Our casual empiricism is supported by a more systematic regression analysis in (Lessels, 1980) where no statistical association was found between distribution costs and number of customers. Thus, if the company's entire service area stays fixed, an increase in number of customers does not necessarily betoken any increase whatever in the costs of a minimum-sized distribution system.[81]

Q. WHAT WAS DR. BONBRIGHT'S CONCLUSION REGARDING THE USE OF ZIS STUDIES?

A. Dr. Bonbright found attempts to classify costs associated with a minimum-sized distribution system, whether determined through the use of a ZIS or MSS, as something other than demand-related as potentially of merit. However, he ultimately concluded that classifying these costs as customer-related, as the Company has done in the current proceeding, is "clearly indefensible,"[82] due to the lack of a relationship between changes in the number of customers on a utility system and its distribution costs.

> While, for the reason just suggested, **the inclusion of the costs of a minimum-sized distribution system among the customer-related costs seems to us clearly indefensible**, its exclusion from the demand-related costs stands on much firmer ground. For this exclusion of minimum-sized distribution system costs makes more plausible the assumption that the *remaining* cost of the secondary distribution system is a cost which varies continuously (and, perhaps, even more or less directly) with the maximum demand imposed on this system as measured by peak load.
>
> But if the hypothetical cost of a minimum-sized distribution system is properly excluded from the demand-related costs for the reason just given, while it is also denied a place among the customer costs for the reason stated previously, to which cost function does it then belong? **The only defensible answer, in our opinion, is that it belongs to none of them**. Instead, it should be recognized as a

[81] James C. Bonbright, et al. Principles of Public Utility Rates. 1988 Edition. Arlington, VA: Public Utilities Reports, Inc., p. 491.

[82] James C. Bonbright, et al. Principles of Public Utility Rates. 1988 Edition. Arlington, VA: Public Utilities Reports, Inc., p. 492.

> strictly unallocable portion of total costs. And this is the disposition that it would probably receive in an estimate of long-run marginal costs. But fully-distributed cost analysts dare not avail themselves of this solution, since they are the prisoners of their own assumption that "the sum of the parts equals the whole." They are therefore under impelling pressure to fudge their cost apportionments **by using the category of customer costs as a dumping ground for costs that they cannot plausibly impute to any of their other cost categories**.[83]

Q. HAVE YOU QUANTITATIVELY ASSESSED THE HISTORIC CORRELATION BETWEEN INCREASES IN COMPANY DISTRIBUTION MAINS INVESTMENT AND INCREASED NUMBER OF CUSTOMERS?

A. Yes. Exhibit MWD-4 examines trends between changes in average number of customers on the Company's system and the Company's net investment in distribution mains for the years 2014 through 2024. This analysis finds that annual net additions in the Company's distribution mains are not correlated with annual changes in the Company's customer counts, nor is the annual growth rate of the Company's booked distribution mains investment correlated with the annual growth rate of the Company's customers. Indeed, I find that, if anything, there is a **negative** relationship between changes in the Company's customer counts and distribution mains investments as the Company made significant investments in its distribution mains system during years when it had slower than average growth.

Q. IS THIS RESULT SURPRISING?

A. No. A significant portion of the Company's annual investment in distribution mains is associated with non-growth activities. For instance, the Company recovered $1.95 million from ratepayers in 2025 through the Company's DSIC after reconciliation.[84] Importantly, the DSIC is

---

[83] James C. Bonbright, *et al.* Principles of Public Utility Rates. 1988 Edition. Arlington, VA: Public Utilities Reports, Inc., pp. 491-492; *emphasis added.*

[84] DSIC 1307(e) reconciliation statement for the year ending December 31, 2025.

restricted by statue to costs "incurred to repair, improve or replace eligible property in order to ensure and maintain adequate, efficient, safe, reliable and reasonable service," and not growth related activities like interconnecting new customers to the Company's system. Overall, the premise that changes in the Company's customer count are a significant driver of distribution mains investment is outdated and unsupported by empirical evidence.

Q. DO YOU HAVE OTHER CONCERNS RELATED TO THE COMPANY'S COST ALLOCATION METHODOLOGY FOR COSTS ASSOCIATED WITH DISTRIBUTION MAINS?

A. Yes. In addition to relying on a flawed ZIS to estimate a portion of costs associated with the Company's distribution mains, the Company also proposes to allocate 100 percent of costs associated with its demand-related distribution mains investments based on the relative customer class contribution to system peak day demands. This is inconsistent with the allocation approach utilized in the Company's prior rate case that relied on a peak and average ("P&A") cost allocation methodology, also referred to as an average and peak, using "Seaboard" weightings to allocate costs related to distribution mains.

Q. PLEASE EXPLAIN THE P&A COST ALLOCATION METHODOLOGY.

A. P&A is a composite demand and commodity allocation factor similar to the Average and Excess ("A&E") cost allocation approach.[85] The P&A cost allocation methodology is based upon a two-component weighted average. The first component represents each rate class's share of a utility's system peak day demand, and the second represents each rate classes share of a utility's

[85] Gas Distribution Rate Design Manual (June 1989), National Association of Regulatory Utility Commissioners, pp. 27-28.

total annual throughput.[86] The exact weights used in a P&A cost allocation approach vary, including a straight 50-50 weighting of demand and commodity components, often referred to as the "Seaboard" method.

Q. PLEASE EXPLAIN THE SEABOARD COST ALLOCATION METHOD.

A. The *Atlantic Seaboard* method, (or "*Seaboard"* method), stems from a 1952 Federal Power Commission ("FPC," the predecessor agency to FERC) ruling establishing appropriate cost allocations for the Atlantic Seaboard natural gas pipeline.[87] In its ruling, the FPC explicitly addressed the fact that natural gas pipeline facilities are built to supply both peak and non-peak service, and thus perform both a demand and commodity function, and expressed particular concern that an over-assignment of pipeline costs (particularly transmission plant costs) to the demand or capacity function would result in an under-allocation of costs to large volume industrial customers on interruptible rates.[88]

> A natural-gas transmission facility performs both a capacity and a volumetric function. In this sense it is a joint facility, which thus presents the problem, always difficult, of allocating joint costs.
>
> … A pipeline would not normally be built to supply peak service, that is to say, service on the peak days only… pipelines are built to supply service not only on the few peak days but on all days throughout the year… Both capacity and annual use are important considerations in the conception of the project ... Both capacity and volume, therefore, are what are known as cost factors or incidences in respect to the capital outlay for a pipeline project. It follows that reasonably accurate results can be achieved only by allocating the

[86] Gas Distribution Rate Design Manual (June 1989), National Association of Regulatory Utility Commissioners, pp. 27-28.

[87] Re Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.

[88] *Id.*

> fixed expenses flowing from the capital outlay to both operating functions, viz., capacity and volume.[89]

Q. HAS THE COMPANY ESTIMATED THE RESULTS OF AN ALTERNATIVE ACOSS USING A P&A ALLOCATION WITH SEABOARD WEIGHTINGS?

A. Yes, and I have summarized these results in Exhibit MWD-5. Exhibit MWD-5 shows that an alternative ACOSS using P&A allocation of distribution mains with Seaboard weightings results in significantly different results when compared to the Company's proposed ACOSS. In particular, under this alternative, the residential service class will earn a 6.86 percent return on rate base during the FPFTY under current rates, or approximately 1.09 on a ROR basis. This is compared to the results of the Company's proposed ACOSS which finds that its residential service class will earn a 3.17 percent return on rate base during the FPFTY under current rates.

Q. IS THE COMPANY WITNESS' PROPOSED ALLOCATION OF DISTRIBUTION MAINS CONSISTENT WITH HIS RECOMMENDED COST ALLOCATIONS IN OTHER PROCEEDINGS IN PENNSYLVANIA?

A. No. The Commission should recognize that the Company's expert witness is also supporting the ACOSS for UGI Utilities' Gas Division ("UGI-Gas") in Docket No. R-2025-3059523.[90] In that proceeding, the Company's expert witness recommends use of an A&E cost allocation methodology to allocate costs associated with UGI-Gas' distribution gas mains.

---

[89] Conkling R.L. (2011), "Energy Pricing: Economics and Principles," pp. 96-97, citing Re Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.

[90] Docket No. R-2025-3059523, Statement No. 11, Direct Testimony of John D. Taylor.

Q. PLEASE DESCRIBE THE A&E COST ALLOCATION METHODOLOGY.

A. Conceptually, A&E cost allocation methods involve developing two components that are combined by the use of a weighted average.[91] The first component, referred to as the "average" component, represents each rate class's average hourly energy consumption throughout the test year, and is calculated by simply dividing annual energy consumption for each rate class by 365 days in the year. The second component, referred to as the "excess" component, represents each class's contribution to system peak demand in excess of the class's average daily consumption. These components are combined through the use of a weighted average based on overall system load factor. Specifically, the average component is weighted by the utility's overall system load factor, while the excess component is weighted by the inverse of the system load factor (*i.e.*, 1 minus the system load factor).

Q. IS A P&A METHODOLOGY CONCEPTUALLY SIMILAR TO AN A&E METHODOLOGY?

A. Yes. The P&A methodology is similar to the A&E methodology that can also be utilized for classifying distribution mains. Conceptually, both methods involve developing a volumetric and demand component that are then combined by use of a weighted average. In other words, both methodologies are intended to be hybrid energy and demand allocators.

Q. PLEASE EXPLAIN THE DIFFERENCE BETWEEN A P&A METHODOLOGY AND AN A&E METHODOLOGY.

A. Although the P&A and A&E methodologies are conceptually similar, in practice, an A&E methodology places greater weight on a rate class's demand contribution and less weight on a rate

[91] *See*, Electric Utility Cost Allocation Manual (January 1992), National Association of Regulatory Utility Commissioners ("NARUC") at 49-51.

class's annual energy usage than does a P&A methodology. This occurs because an A&E methodology values a class's peak demand, the "excess" component, relative to its average demand, thereby exaggerating the effect of a class's load factor on the relative classification of energy and peak demand elements.

D. ACOSS Recommendations

Q. WHAT ARE YOUR RECOMMENDATIONS REGARDING THE CLASSIFICATION OF DISTRIBUTION MAINS INVESTMENT AND THE USE OF ZIS?

A. I recommend the Commission reject the Company's proposed ZIS approach. ZIS and related MSS that are used to classify distribution mains investments are fundamentally flawed and provide little to no value in setting just and reasonable rates. In the alternative, I recommend that the Commission approve an alternative classification of distribution mains that incorporates a P&A cost allocation method using weights based on the Company's test year system load factor. These recommendations better reflect cost causation principles and provide a more reasonable basis for allocating costs among customer classes.

Q. HOW DOES YOUR PROPOSED COST ALLOCATION METHODOLOGY COMPARE TO THE EARLIER SEABOARD METHODOLOGY?

A. Conceptually, my proposed P&A cost allocation method is similar to the earlier discussed Seaboard method relied on to allocate costs associated with distribution mains. However, where the Seaboard method uses a 50-50 weighting of the demand and volumetric components, my proposal would base these weights on the Company's system load factor, or the ratio of peak day system requirements to average daily system requirements. This bases the weights of the two components in a P&A cost allocation method on empirical data specific to the Company's Pennsylvania operations. The Company's test year system load factor is 26.13 percent.

Q. HAVE YOU PREPARED AN ALTERNATIVE ACOSS INCORPORATING YOUR PROPOSED CHANGES TO THE COMPANY'S ACOSS?

A. Yes. Exhibit MWD-6 presents the results of my alternative ACOSS which utilizes a P&A approach to allocate distribution-related costs and removes the Company's reliance on the ZIS to classify distribution mains as customer-related. This alternative study shows that the Company will earn a 6.43 percent rate of return on rate base from the residential service class, or 1.02 on a RROR basis, during the FPFTY using current rates. This is compared to the results of the Company's proposed ACOSS which finds that its residential service class will earn a 3.17 percent return on rate base during the FPFTY under current rates.

VIII. REVENUE APPORTIONMENT

Q. PLEASE EXPLAIN THE PURPOSE OF THE REVENUE APPORTIONMENT PROCESS IN SETTING RATES.

A. The revenue distribution process allocates a utility's overall revenue deficiency across customer classes, which in turn, is used to establish a new set of retail rates. The revenue distribution process often uses the results from the ACOSS as its starting point, but not necessarily as its ending point. Class-specific revenue responsibilities are established by allocating the system-wide revenue deficiency to classes that are under-earning, relative to their estimated rate of return ("ROR"), and assigning, at least in theory, revenue decreases to those classes that are over-earning relative to their ACOSS-estimated class returns. The final class revenue responsibilities are then used, in conjunction with each class's billing determinants, to determine rates. In summary, the revenue distribution process can be viewed as the initial step taken in establishing rates.

Q. DOES THE REVENUE APPORTIONMENT PROCESS INCLUDE ANY POLICY CONSIDERATIONS?

A. Yes. Allocating the overall system-wide revenue deficiency entirely on a full cost of service basis can result in a very significant and adverse rate impact for certain under-earning classes. To avoid such a result, regulators often temper the revenue responsibilities assigned to various customer classes in order to meet a set of broad ratemaking policy goals.

Q. WHAT ARE THOSE BROADER RATEMAKING POLICY GOALS?

A. There are several generally accepted ratemaking principles used in utility regulation that include:

1) Rates should be fair, just, and reasonable, and not unduly discriminatory.
2) To the extent possible, gradualism should be used to protect customers from rate shock.
3) Rate continuity should be maintained.
4) Rates should be informed by costs, but class cost of service results need not be the only factor used in rate development.
5) Rates should be understandable to customers.

Q. HOW ARE THE ABOVE PRINCIPLES APPLIED IN DEVELOPING RATES FOR A REGULATED UTILITY?

A. It is important to consider all the principles I mentioned above. However, any principle's relative weight can change depending on the importance of certain policy goals. Rate design should strike a balance between policy goals and principles that result in rates that are fair, just, and reasonable. There is no pre-set or universally accepted formula for developing rates and, as a result, sound judgment is necessary to formulate a rate design that meets these objectives.

Q. WHAT ARE THE COMPANY'S RATE DESIGN GOALS?

A. The Company states that it attempts to balance various criteria that relate to the design of utility rates.[92] The Company identifies three factors guiding its rate design proposal in this proceeding: (1) cost of service, (2) class contributions to present revenues, and (3) customer impacts.[93]

Q. HAVE YOU EXAMINED THE COMPANY'S PROPOSED REVENUE ALLOCATION?

A. Yes. Exhibit MWD-7 summarizes the Company's proposed revenue allocation. The Company proposes three rate increases based on the results of its ACOSS to define a mitigated revenue allocation. First, the Company proposes to limit the maximum increase for any customer class below a cost-parity ratio of 1.0 to 110 percent (or 1.10 times) of the proposed system average increase.[94] Second, the Company proposes that classes with a cost parity ratio greater than 1.0 but less than 1.5 at current rates, will receive an increase equal to 90 percent (or 0.90 times) of the system average increase.[95] Finally, classes with cost parity ratios greater than 1.5 at current rates will receive an increase equal to 67 percent (or 0.67 times) of the system-wide average increase to recover the remaining requested increase.[96]

Q. WHAT DO YOU MEAN BY A COST PARITY RATIO?

A. Cost parity and relative cost parity ratios are a means to standardize class-specific rate of return estimated by an ACOSS, similar to the commonly cited relative rate of return ("RROR")

---

[92] Direct Testimony of John D. Taylor, Company St. 19 at 20:13 to 21:1.

[93] Direct Testimony of John D. Taylor, Company St. 19 at 21:2-3.

[94] Direct Testimony of John D. Taylor, Company St. 19 at 21:8-10.

[95] Direct Testimony of John D. Taylor, Company St. 19 at 21:11-13.

[96] Direct Testimony of John D. Taylor, Company St. 19 at 21:14-16.

metric. As part of the ACOSS process, a ratio of total assigned revenue to total assigned costs is calculated for each customer class and the utility system as a whole. A cost parity ratio standardizes these various class revenue-to-cost ratios against the overall utility system revenue-to-cost ratio. For instance, assume that residential class revenues cover 80 percent of residential class costs through the ACOSS, and further assume that, system-wide, utility revenues also cover 80 percent of utility costs. In this example, the residential class has a relative cost parity ratio of 1.0 as it covers the same percentage of utility costs as the utility as a whole covers (i.e., 80 percent divided by 80 percent equals 1.0). A relative cost parity ratio greater than 1.0 indicates that a particular class covers a greater percentage of utility costs than other classes, while a relative cost parity ratio less than 1.0 indicates that a particular class is covering a lesser percentage of utility costs than other classes.

Q. DO YOU AGREE THAT A RELATIVE COST PARITY RATIO LESS THAN 1.0 IS PROBLEMATIC OR INEQUITABLE?

A. Not necessarily. Consistent with the principles identified above, there may be policy reasons to support a result that does not lead to an inequitable cross-subsidization. For example, the presence and/or continuation of a relative cost parity ratio below 1.0 could be the result of a prior agreed-upon rate freeze that prevents class rates from increasing to correct the revenue deficiency (relative to cost of service). In this example, the presence of a relative cost parity ratio below 1.0 is simply a function of a prior policy decision, not necessarily the result of some arbitrary or intentionally designed inequity.

Q. HAVE OTHER COMMISSIONS RECOGNIZED LIMITATIONS ON RELATIVE COST PARITY RATIOS?

A. Yes. It should be recognized that ACOSS estimates are snapshots in time that may not fully reflect the relative cost of providing service after the conclusion of the rate case proceeding. To this end, the Washington Utilities and Transportation Commission ("WUTC") historically has applied an error range of +/- 0.05 to cost parity ratio estimates,[97] meaning that ACOSS results within the range of 0.95 to 1.05 are considered to be at full cost parity (i.e., 1.0 relative cost parity ratio).

Q. WHAT ARE THE CLASS RATE INCREASES UNDER THE COMPANY'S PROPOSED REVENUE DISTRIBUTION?

A. The Company proposes to increase base rates by 14.38 percent on a system-wide average basis. However, under the Company's proposed mitigated revenue distribution, residential and natural gas vehicle customers would all receive a base rate increase equal to 1.10 times this system-wide average rate increase, or 15.82 percent. This compared to large commercial and public authority service and all four industrial service rates which would receive a base rate increase equal to 0.67 times the system-wide average increase, or 9.65 percent.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED REVENUE APPORTIONMENT?

A. No. The Company's proposed revenue allocations suffer from two major deficiencies. First, the Company's proposal is based on the results of a faulty ACOSS that overstates the current rate of return the Company derives from its large commercial and industrial service customers

[97] *Washington Utilities and Transportation Commission v. Pacific Power & Light Company;* Washington Utilities and Transportation Commission Docket UE-152253, Order 12 at ¶225, F.N. 350.

while understating the rate of return the Company derives from its residential service customers. Second, the Company's proposed revenue apportionment process results in rate increases that are inconsistent with rate gradualism. Specifically, rate gradualism refers to the general understanding that sound rate design should prevent significant rate increases for any customer group that may cause rate shock.[98]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED REVENUE APPORTIONMENT?

A. I recommend the Commission adopt a more reasonable revenue apportionment method based on my alternative ACOSS results that also limits the rate increase compared to the Company's proposed revenue allocation method. First, I recommend that classes with current relative cost parity ratios below 0.95 receive a rate increase equal to 1.15 times the system average increase. Second, I recommend that classes with current relative cost parity ratios greater than 1.05 receive a rate increase equal to 0.85 times the system average increase. Finally, I recommend that the remaining rate increase be equally allocated to the remaining rate classes with current relative cost parity ratios of between 0.95 and 1.05.

Q. HAVE YOU PREPARED A SUMMARY OF THE EFFECTS OF YOUR PROPOSED REVENUE APPORTIONMENT?

A. Yes. Exhibit MWD-8 presents an illustrative summary of the effects of my proposed revenue apportionment under the Company's proposed system average rate increase of 14.38 percent. My proposed revenue apportionment would increase base rates for the residential class by 14.34 percent, compared to the Company's proposal which would increase such rates by 15.82

[98] *See,* "3.1 Just and Reasonable Rates and Affordability," The NARUC Desk Reference Manual, National Association of Regulatory Utility Commissioners,

percent, and would also increase base rates for the large commercial and public authority service class by 14.34 percent, compared to the Company's proposed increase of 9.65 percent.

IX. RATE DESIGN

Q. HOW ARE NATURAL GAS RATES TYPICALLY DESIGNED?

A. Natural gas utility rates are typically comprised of three elements. The first component is the fixed monthly customer charge or what is sometimes referred to as the basic service charge. The second is the energy-based component that is a volumetric rate applied toward a customer's monthly energy usage during a billing period, often measured in terms of therms or dekatherms (Dth). Finally, demand rates are surcharges that are assessed based upon a customer's maximum usage during a billing period. Some smaller use customer classes, such as residential and small general services classes, are not demand-metered and thus, only face customer and volumetric charges in what is commonly called a "two-part tariff." Larger, demand metered, customers face a "three-part tariff" which includes a customer, volumetric, and demand charge. A "multi-part tariff" is a term often used to generalize a set of rates that have various combinations of both fixed (customer charge) and variable charges (energy and/or demand charges).

Q. HOW SHOULD POLICY BALANCE COST ASSIGNMENTS BETWEEN FIXED CUSTOMER CHARGES AND VOLUMETRIC RATES?

A. Modern utility pricing theory is primarily concerned with the development of optimal tariff design, which over the years has become dominated by the two-part and three-part tariff form that is sometimes referred to more technically as a non-linear (or non-uniform) pricing approach. Once a class revenue requirement is established, the goal for regulators should be one that sets the most appropriate rates based upon various efficiency and equity considerations. Balancing the weight

of how costs are recovered between fixed rates, variable rates, block rates, and seasonal rates are all integrated parts of that process.

Q. WHAT IS THE APPROPRIATE ROLE OF COSTS IN SETTING RATES FOR A MULTI-PART TARIFF?

A. Costs can be instructive in establishing a baseline upon which prices may be set, but costs do not need to serve as the sole or exclusive basis for rates in order for them to be set optimally (i.e., fixed charges do not need to strictly equal fixed costs, variable rates need not strictly equal variable costs). Unfortunately, the "fixed charge-equals-fixed costs" philosophy gets repeated so often that it can drown out meaningful discussions about other equally important considerations in setting rates in imperfect markets. In fact, appropriate rate setting in the context of a multi-part tariff typically has more to do with consumer demand than it does with cost in a natural gas context given the capital-intensive nature of public utilities.

Q. DOES THE RATE DESIGN PROCESS HAVE ANY GOALS?

A. Yes. The development of utility rates, or "rate design" often has a few goals. For example, rates are sometimes designed to send certain price signals to consumers in order to influence their usage decisions.[99] Sometimes, rate design becomes a balancing act since rates must be designed to be both supply-eliciting (i.e., assist utilities in the financing of capital investments) and demand-inhibiting (i.e., inhibit the growth in demand that generates the need for capital investments).[100]

[99] Bonbright, James *et. al., Principles of Public Utility Rates,* Pub. Utils. R., Inc., Second Edition, at 96–97.

[100] *Id.*

Table 4: Summary of Company's Proposed Customer Charges

Rate Class	Current ---- $/month ----	Proposed	Increase
Residential	$ 14.00	$ 19.00	35.7%
Small Commercial (<250 Sales)	$ 27.00	$ 30.00	11.1%
Small Commercial (>250 Sales)	$ 37.00	$ 50.00	35.1%
Large Commercial Sales	$ 151.00	$ 151.00	0.0%

Source: Exhibit CTM-8

Q. PLEASE PROVIDE AN OVERVIEW OF THE COMPANY'S BASIC SERVICE CHARGE PROPOSAL.

A. The Company proposes to increase monthly basic service charges by up to 36 percent. This includes a residential service schedule with a basic service charge increase of 36 percent. This results in a proposed increase in basic charge of $5.00 per month, from the current $14.00 to a proposed $19.00 per month.[101]

Q. WHAT IS THE BASIS OF THE COMPANY'S PROPOSED RESIDENTIAL BASIC SERVICE CHARGE INCREASE?

A. The Company claims its proposed increase in residential basic service charge will help to continue to accelerate its infrastructure replacement and modernization investments to enhance safety and reliability and reduce emissions, as well as helping lower the burden of cost increases and inflationary pressures that the U.S. economy is currently facing.[102]

Q. HAVE YOU PREPARED AN ANALYSIS OF COSTS COMMONLY ASSOCIATED WITH BASIC SERVICE CHARGES?

A. Yes. Exhibit MWD-9 presents an analysis of current basic service charges with the Company's customer-related expenses. "Customer-related" expense accounts for natural gas

[101] National Fuel Exhibit CTM-8 at 1-2

[102] Direct Testimony of Rebecca E. Hillery, Company 1 at 6:19-23 and 7:1-5.

utilities are those typically allocated on the basis of customers and can include: removing and setting meters; maintenance of meters; meter reading expenses; customer records and collections; customer billing and accounts; and customer service and information expenses. These costs can also include the depreciation expense associated with service and meter plant accounts, as well as the carrying charges (at the Company's requested rate of return) on these plant accounts.

Q. HOW DO THE COMPANY'S CUSTOMER CHARGE REVENUES COMPARE WITH THE RESULTS OF YOUR ANALYSIS?

A. The Company's current customer charge revenue associated with the residential class is 61.7 percent of the class's customer-related cost responsibilities. Likewise, the Company's current customer charge revenue associated with the small commercial service class (250 Mcf or less) is 122.3 percent of the class's customer-related cost responsibilities.

Q. DO THESE RESULTS INDICATE ANY PRESSING NEED TO INCREASE MONTHLY CUSTOMER CHARGE RATES?

A. No. All NFG's residential and commercial service rate classes currently cover the majority of their customer-related costs through monthly customer charges. The lowest, the residential class, still recovers nearly 62 percent of its customer-related costs through its monthly customer charge.

Table 5: Survey of Regional Customer Charges

Company	State	Residential Customer Charge ($/month)	Commercial Customer Charge ($/month)
National Fuel Gas Distribution (Current)	**PA**	**$ 14.00**	**$ 27.00**
National Fuel Gas Distribution (Proposed)	**PA**	**$ 19.00**	**$ 30.00**
Delmarva Power and Light Company	DE	17.00	69.20
Washington Gas Light Company	DC	19.05	34.40
Baltimore Gas and Electric Company	MD	16.15	39.05

UGI Utilities, Inc.	PA	16.25	36.42
Peer Group Average		**$ 17.39**	**$ 37.99**

Source: Utility Tariffs.

Q. HAVE YOU COMPARED THE COMPANY'S CURRENT AND PROPOSED RESIDENTIAL CUSTOMER CHARGE WITH OTHER REGIONAL PEER UTILITIES?

A. Yes. The Company's proposed residential customer charge of $19.00 would be well above the mid-Atlantic regional average of $17.39 per month charged by other investor-owned natural gas utilities. Indeed, the Company's proposed residential customer charge of $19.00 per month would also exceed the average residential customer charge for Pennsylvania investor-owned natural gas utilities of $17.23 per month.

Q. ARE HIGHER BASIC SERVICE CHARGES CONSISTENT WITH THE PROMOTION OF ENERGY EFFICIENCY AND CONSERVATION?

A. No. The Company's proposal is inconsistent with the promotion of energy efficiency and conservation in Pennsylvania for the simple reason that it places more costs into the fixed component of rates than in the variable component. This reduces economic incentives for ratepayers to control monthly utility bills through energy efficiency and conservation efforts, because only the variable component of bills is avoidable.

Q. HAVE OTHER COMMISSIONS RECOGNIZED THE DETRIMENTAL EFFECT INCREASED FIXED CHARGES HAVE ON ENERGY EFFICIENCY?

A. Yes. In rejecting a request by Baltimore Gas and Electric to increase customer charges as part of a larger rate design proposal, the Maryland Public Service Commission (MPSC) recognized the need to allow customers the opportunity to control their monthly bills by reducing energy usage.

> Even though this issue was virtually uncontested by the parties, we find we must reject Staff's proposal to increase the fixed customer charge from $7.50 to $8.36. Based on the reasoning that ratepayers should be offered the opportunity to control their monthly bills to some degree by controlling their energy usage, we instead adopt the Company's proposal to achieve the entire revenue requirement increase through volumetric and demand charges. This approach also is consistent with and supports our EmPOWER Maryland goals.[103]

Q. CAN YOU POINT TO ANY OTHER REGULATORY EXAMPLES?

A. Yes. The Montana Public Service Commission ("MT PSC") addressed this issue in evaluating, and rejecting, a proposal by Energy West Montana to eliminate volumetric charges and

[103] Maryland Public Service Commission Case No. 9299*, In re of Baltimore Gas and Electric Company for Adjustment in its Electric and Gas Base Rates*, Order No. 85374 at 99 (Md. Pub. Serv. Comm'n, Feb. 22, 2013).

only have one fixed monthly customer charge (known as a "straight-fixed variable" or "SFV" rate design):

> The Commission agrees that most distribution costs are not avoidable, and that volumetric distribution charges may encourage conservation actions that, all other things being equal, reduce the utility's embedded cost recovery between rate cases and contribute to future rate increases.
> …
> The Commission agrees that an SFV rate design is a clean and administratively inexpensive way to decouple revenue from volume. An often-cited public policy justification for revenue decoupling is to remove the volume disincentive for cost-effective conservation investment by a gas distribution company, which through SFV and other decoupling methods is rendered indifferent to the volume of gas consumed. Yet, SFV rates decouple revenue at the cost of decreasing returns to conservation investment by customers. For this reason the net conservation benefit of revenue decoupling via SFV rates is not clear, and may be negative.[104]

Q. HAVE ANY REGULATORY RESEARCH INSTITUTES ADDRESSED THE ISSUE OF THE RELATIONSHIP BETWEEN HIGH CUSTOMER CHARGES AND ENERGY EFFICIENCY?

A. Yes. A research document presented for consideration by the membership of NARUC lists Straight-Fixed Variable (SFV) rate design as an alternative to delink utility revenue from sales. An SFV attaches all fixed-related costs to fixed charges while relegating only variable charges to volumetric rates. The NARUC research noted this type of rate design was problematic because of its effects on customer incentives to conserve energy:

> **Straight-Fixed Variable Rate Design.** This mechanism eliminates all variable distribution charges and costs are recovered through a fixed delivery services charge or an increase in the fixed customer charge alone. With this approach, it is assumed that a utility's

[104] In The Matter Of Energy West Montana, Application To Establish Increased Service Rates In Its Great Falls, Cascade, And West Yellowstone Service Areas, Montana Public Service Commission, Docket No. D2010.9.90, Order No, 7132c, at 29–30, rel. November 17, 2011.

> revenues would be unaffected by changes in sales levels if all its overhead or fixed costs are recovered in the fixed portion of customers' bills. This approach has been criticized for having the unintended effect of reducing customers' incentive to use less electricity or gas by eliminating their volumetric charges and billing a fixed monthly rate, regardless of how much customers consume.[105]

Q. HAS ANY NATIONAL PUBLIC POLICY ANALYSIS NOTED THE EFFICIENCY DISINCENTIVES ASSOCIATED WITH HIGHER CUSTOMER CHARGES?
