I.	INTRODUCTION	1
II.	RESPONSE TO OCA	2
III.	RESPONSE TO OSBA	6
IV.	CONCLUSIONS	8

I. INTRODUCTION

Q. Would you please state your name, affiliation, and business address?

A. My name is James A. Heidell. My current position is Partner at PA Consulting Group, Inc. ("PA Consulting"). My business address is 2420 17th Street, Suite 220, Denver, CO 80202.

Q. Have you submitted prior testimony in this proceeding?

A. Yes, I submitted written direct testimony in this proceeding on behalf of Sunrise Airport Road LLC, Sunrise Forrester Road LLC, Sunrise Franklin Road LLC, Sunrise Harlansburg Road LLC, Sunrise Hendersonville Road LLC, Sunrise McCurdy Road LLC, Sunrise Perry Highway LLC, Sunrise Sandy Lake Greenville Road LLC, Sunrise Sandy Lake Polk Road LLC, and Sunrise Springfield Church Road LLC (collectively, the "Customer-Generator Coalition" or "CGC") on April 29, 2026.[1]

Q. Is the rebuttal testimony and analysis you are proffering prepared by you or under your direction?

A. Yes.

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to address certain elements of the direct testimony filed by the Pennsylvania Office of Consumer Advocate ("OCA"), the Office of Small Business Advocate ("OBSA"). Specifically, I address:

[1] *See* CGC St. No. 1.

- The OCA's unsupported contention that large customer-generators present a "switching" risk that wholesale suppliers consider when making default service bids.
- The OCA's unsupported contention that wholesale suppliers incorporate a risk premium associated with Network Integration Transmission Service ("NITS") into their bids for default supply thereby adversely impacting the price-to-compare ("PTC").
- The OCA and OSBA's unsupported contention that wholesale suppliers incorporate a volumetric risk premium into their fixed price, full requirements ("FPFR") bids because of net-metered generation.
- The OCA and OSBA's flawed rationales for upending existing rate classifications.

Q. Are you sponsoring any Exhibits with your rebuttal testimony?

A. Yes. I am sponsoring four Exhibits, Nos. JAH-1R – JAH-4R.

II. RESPONSE TO OCA

Q. Have you reviewed OCA's pre-filed direct testimony?

A. Yes. I reviewed the written direct testimony of both OCA witnesses, Mr. Serhan Ogur and Ms. Barbara Alexander. For the purposes of my rebuttal testimony, I will focus on Mr. Ogur's testimony related to FirstEnergy Pennsylvania Electric Company's ("FirstEnergy" or "FE PA") Maximum Registered Peak Load ("MRPL") proposal.

Q. What are your concerns regarding Mr. Ogur's characterization(s) of FirstEnergy's MRPL proposal?

A. Mr. Ogur makes several claims related to FirstEnergy's MRPL proposal that are unsupported or incorrect. First, he claims that "large customer-generators would entail higher switching risk for the [fixed-price, full requirements ("FPFR")] suppliers…"[2] and, as a result of that high switching risk, wholesale default service suppliers would "either build larger risk premiums into their FPFR contract bids or shy away from participating in the FPFR auctions."[3] As a result, Mr. Ogur asserts that net-metering customer-generators will receive an "inflated" PTC.[4] This is wrong because there is no evidence or economic rationale to assume that customer-generators have any propensity to switch into or out of default service, nor do these customers have noticeable load.

Second, Mr. Ogur argues that, because of purported volumetric risk associated with net-metering customer-generators, FPFR suppliers will build larger risk premiums into their default supply bids, or opt to not bid in the FPFR auctions at all.[5] This conclusion is wholly unsupported and premised on no credible evidence.

Third, Mr. Ogur argues that moving large net-metering customer-generators to service under the HP Rider would achieve rate classifications "tied to [the customer's] own load characteristics." But FirstEnergy's MRPL proposal does not assign customer-generators based upon their load on the electric grid.

Q. What is "switching risk?".

A. Switching risk involves customers changing suppliers either between default and competitive supply or between competitive suppliers. Switching risk occurs in competitive electricity market states including Pennsylvania. For example, if a default service bidder believes it must bid to provide 500MW, and then a large 100MW customer

[2] OCA St. No. 1, p. 38, lines 20-21.
[3] OCA St. No. 1, p. 38, lines 21-23.
[4] OCA St. No. 1, p. 39, lines 2-5.
[5] OCA St. No. 1, p. 40, lines 2-9.

decides to enroll in a competitive supply option, then the default supplier is obligated to serve that 100MW delta. The inverse can also happen, where a supplier underbids the total load because of a large customer or subset of customers returning to default service from competitive supply. Therefore, default service bidders may evaluate the volumetric risk associated with switching and could incorporate that risk into their default bids, though I am unaware of any substantive evidence of that occurring in this case.

Q. Please respond to Mr. Ogur's assertion that large net-metering customer-generators present switching risk that may affect default supply bids.

A. This assertion by Mr. Ogur is unsupported and illogical. Given that large net-metering customer-generators typically have little or no load,[6] the alleged switching from default service to competitive supply (or vice versa) has no – or negligible – effect on a default supplier's load obligation. Therefore, low or no-load net-metering customer-generators would not create switching risk. Furthermore, Mr. Ogur has not presented any evidence regarding the shopping trends of large net-metering customer-generators. Moreover, FirstEnergy has acknowledged that it does not use the excess energy from net-metered customer-generators as supply to serve default service load.[7] Simply put, the basis for Mr. Ogur's risk premium argument – switching – is incorrect and irrelevant.

Q. Does Mr. Ogur present any basis for his conclusions related to switching risk?

A. No. Mr. Ogur's switching concerns do not appear to be premised on any information provided by FirstEnergy, a net-metering customer-generator party to this case, or any independent qualitative analyses.[8] Rather, he projects an entire rate class's competitive

[6] *See* FirstEnergy St. No. 1, p. 17, lines 5-8 ("net metering customer generators have little to no onsite electric load…")
[7] *See* FirstEnergy St. No. 1, p. 17, lines 11-12; *See* also OCA St. No. 1, pp. 37-38, lines 23, 1-4.
[8] *See* OCA response to CGC Set I, No. 2 (CGC Exhibit No. JAH-1R).

electricity shopping trends onto a small subset of that rate class which has little to no-load at all. A single, or a few customers with little load, cannot create a meaningful switching risk.

Q. More generally, does Mr. Ogur's provide any basis for his statement that inclusion of customer-generators will increase wholesale default supply bidders' risk premiums?

A. No. Mr. Ogur has not completed any independent analysis, and he is relying on unsupported assumptions.[9] I also note that, to the extent that he is concerned about volumetric uncertainty, FirstEnergy could mitigate the alleged uncertainty by releasing information to bidders in the FPFR about the MW of existing customer-generator projects along with the status of proposed customer-generator projects in the approval queue.

Q. Do you agree with Mr. Ogur's characterization that customer-generators receive an inflated PTC rate for their exported electricity?

A. No. First, I am unaware of any evidence in this proceeding that quantifiably supports FirstEnergy's and OCA's contentions that wholesale default service suppliers are building additional risk premiums into their bids because of net-metered generation. Second, as described in my Direct Testimony, customer-generators provide several other elements of value beyond the nodal Locational Marginal Price ("LMP") and, potentially, beyond the PTC.[10] The Joint Solar Advocates' ("JSA") witness, Mr. Thomas S. Michelman, identifies a number of elements of value related to net-metering generation,

[9] *See* CGC Exhibit No. JAH-1R.

[10] In my preparation of this testimony, I reviewed an article that highlights certain benefits to a landowner that a member company of CGC works with. That article can be found at: https://www.recordargusnews.com/news/solar-farm-helps-local-family-keep-farming/article_f2a35581-438e-43da-beb4-bdb6ba991e1f.html

including the reduction of PJM demand charges, as well as the benefits I testified to.[11] Furthermore, as Walmart noted, customer-generators provide needed energy and capacity in PJM.[12] The OCA does not acknowledge any of these benefits, and has not provided any basis for its failure to do so.

Q. Do you agree with Mr. Ogur's assertion that rate classifications should be "tied to [customers'] own load characteristics?"[13]

Yes, it should be based upon customer load. But FirstEnergy's MRPL proposal does the opposite. There is no evidence to support Mr. Ogur's contention that the load characteristics of customer-generators are similar to industrial load customers. On the contrary, under FirstEnergy's MRPL proposal, the classification of the appropriate load schedule for a customer-generator is untethered from the load withdrawn from the grid.

Q. Do you agree with Mr. Ogur's assertion that including Network Integration Transmission Service ("NITS") in default service bids increases the risk premium?

A. No, I do not agree with Mr. Ogur because neither the OCA, nor FirstEnergy, has presented any evidence of the same. Once again, the OCA is drawing conclusions without any evidence or independent analysis to back up its assertions.

III. RESPONSE TO OSBA

Q. Have you reviewed OBSA's pre-filed direct testimony?

A. Yes. I reviewed the written direct testimony of Mr. Maksim Malukoff and will respond to his testimony on FirstEnergy's MRPL proposal here.

[11] *See generally* JSA St. No. 1, pp. 41-55.
[12] Walmart St. No. 1, p. 7, lines 14 - 19.
[13] OCA St. No. 1, p. 40, lines 16-17.

Q. What are your concerns regarding Mr. Malukoff's support of FirstEnergy's MRPL proposal?

A. My two primary concerns are:

- The incorrect characterization that customer-generators are being subsidized and would be fairly compensated under the HP Rider.[14]
- Using propensity to shop as a definition for defining a class of customer versus energy consumption.[15]

Q. Why are you concerned about Mr. Malukoff's characterization that customer-generators are being subsidized by other customers taking service under the PTC Rider?

A. Mr. Malukoff indicates that he has relied upon the Company's testimony and has not completed any independent analysis.[16] My direct testimony critiques FirstEnergy's analysis and Mr. Malukoff agreeing with the Company does not change my assessment of the Company's testimony. Mr. Malukoff also indicates that he has not completed any studies or analysis to support his belief that customer generators will be fairly compensated under the MRPL proposal.[17] Yet, Mr. Malukoff also acknowledges that it is policy in Pennsylvania to "encourage the adoption of renewable distributed generation."[18] Drastically reducing compensation for renewable distributed generation is not encouraging continued development. Moreover, FirstEnergy has acknowledged that it has received almost $11 million from customer-generators during the interconnection

[14] OSBA St. No. 1, p. 9-10, lines 12-14; lines 3-5.
[15] OSBA St. No. 1, pp. 9-10.
[16] *See* OSBA Response to JSA ROG Set I, No. 2 (CGC Exhibit No. JAH-2R).
[17] *See* OSBA Response to JSA ROG Set I, No. 4 (CGC Exhibit No. JAH-3R).
[18] OSBA St. No. 1, p. 7, lines 3-4.

and construction process.[19] These monies were presumably expended by customer-generators (or prospective customer-generators) under the existing PTC scheme.

Q. What are your concerns regarding the OSBA's use of customers' propensity to shop as an appropriate way to base a rate classification?

A. The propensity to shop is a customer choice and not a characteristic of the electric energy and capacity that the customer purchases. As I previously noted in my response to Mr. Ogur's testimony on behalf of the OCA, there is no evidence that customer-generators have a propensity to shop for alternative electricity suppliers. Furthermore, as customer-generators are not large consumers of power – which FirstEnergy concedes[20] – they do not share the characteristics of the industrial load class.

IV. CONCLUSIONS

Q. Would you please summarize your conclusions?

A. Yes. My conclusions are as follows:

i. Neither OCA nor OBSA have provided any independent evidence that customer-generators create a risk premium that suppliers reflect in their bids to serve default load. Both Mr. Ogur and Mr. Malukoff repeat the conclusions of others.

ii. Neither OCA nor OBSA have provided any analysis that supports a conclusion that customer-generators create any shopping risk that somehow gets reflected in a supplier risk premium.

[19] FirstEnergy response to CGC Set I, No. 6 (CGC Exhibit No. JAH-4R).
[20] *See* fn. 6, *supra*.

iii. Neither OCA nor OBSA have provided any analysis to support a conclusion that the load of customer-generators is similar to industrial customers on default supply to justify putting customer-generators in the industrial class.

iv. Neither OCA nor OBSA have presented any evidence that customer-generators are being subsidized based upon the value they provide to the electric grid or the state.

Q. Does this conclude your Rebuttal Testimony?

A. Yes, however, I reserve the right to supplement and/or amend it throughout the course of this proceeding.

CGC Exhibit No. JAH-1R

2. Please reference OCA St. No. 1, p. 40. Has the OCA conducted any studies or analyses related to FPFR suppliers building in alleged "risk premiums" to their bids as a result of net-metering customer-generators? If yes, please provide all documentation and data related to those studies or analyses.

Response:

Dr. Ogur's assertions related to FPFR suppliers building additional risk premiums into their bids as a result of net-metering customer-generators are based on Dr. Ogur's qualitative reasoning and analysis as presented in Section VII of his Direct Testimony. Dr. Ogur has not conducted additional quantitative analyses.

CGC Exhibit No. JAH-2R

Witness: Maksim Malukoff

The Office of Small Business Advocate ("OSBA")
Responses to Joint Solar Advocates' ("JSA")
Interrogatories
Propounded on Office of Small Business Advocate ("OSBA")
Docket No. P-2026-3060298

SET I

JSA ROG TO OSBA-I-1 Refer to OSBA Statement No. 1 at 9:5-9. Identify, describe, and explain and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or prepared that independently confirm FirstEnergy's estimate that potential costs to PTC Rider customers range from $81 million to $750 million between 2026 and 2029. Provide all Documents you have used, relied upon, and/or consulted that support your answer.

OSBA RESPONSE: Mr. Malukoff independently reviewed FirstEnergy's testimony, workpapers, and discovery responses. See FE PA Statement No. 1, FE PA Exhibit DMY-6, FE PA Exhibit DMY-7, FE PA Response to OSBA Set 1, No. 4 and associated attachments, FE PA Responses to CGC Set 1, FE PA Responses to CGC Set 2, FE PA Responses to JSA ROG Set 1, and FE PA Responses to JSA ROG Set 2. Bases on this review, he relies on FirstEnergy's estimate that potential costs to PTC Rider customers range from $81 million to $750 million between 2026 and 2029.

JSA ROG TO OSBA-I-2 Refer to OSBA Statement No. 1 at 9:12-14. Identify, describe, and explain and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or prepared that support the assertion "the Company's current classification results in small business default service customers disproportionately subsidizing customer-generators that, based on their size and output, should be classified as Industrial customers under the HP Rider." Provide all Documents you have used, relied upon, and/or consulted that support your answer.

OSBA RESPONSE: See response to JSA ROG: I-1. Mr. Malukoff's statement in the referenced lines is based on his review of the Company's testimony and discovery responses and his understanding of how default service procurement and compensation for excess net-metered generation function under Pennsylvania's regulatory framework.

Under the Company's existing tariff, small business customers in the Commercial default service class are subsidizing customer-generators with Maximum Registered Peak Load ("MRPL") above 100 kW. Mr. Malukoff agrees with the Company's revised definition of MRPL and the Company's proposal to classify Commercial and Industrial Customers based on MRPL because customer-generators with MRPL above 100 kW, by virtue of their size and output, should be classified as Industrial customers taking service under the HP Rider.

JSA ROG TO OSBA-I-3 Refer to OSBA Statement No. 1 at 9:12 in which Witness Malukoff states that he agrees with FirstEnergy's proposal to classify Commercial and Industrial Customers based on MRPL. Identify, describe, and explain and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or prepared in connection with his support of FirstEnergy's proposed changes to its definition of Maximum Registered Peak Load. Provide all Documents you have used, relied upon, and/or consulted that support your answer.

OSBA RESPONSE: See responses to JSA ROG: I-1 and JSA ROG: I-2. Mr. Malukoff's direct testimony also cites to Commission precedent in recent PPL Electric and UGI Utilities, Inc. ("UGI") proceedings. Attachment JSA-OSBA-I-3 includes the Administrative Law Judge Recommended Decision in the PPL Electric proceeding, the Commission Order for the UGI proceeding, and the Commonwealth Court of Pennsylvania's Opinion upholding the Commission's Order in the UGI proceeding.

JSA ROG TO OSBA-I-4 Refer to OSBA Statement No. 1 at 10:3-6. Identify, describe, and explain, and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or prepared that address the totality of the costs and benefits of excess generation provided by customer-generators on FirstEnergy's system over the last three years and/or prospectively and why "[r]eclassifying large customer-generators under the HP Rider would offer these customers fair compensation." Provide all Documents you have used, relied upon, and/or consulted that support your answer.

OSBA RESPONSE: Mr. Malukoff believes that customer-generators would receive fair compensation under the HP Rider because excess generation will be paid based on real-time pricing that varies with the hourly generation needs of customers. Mr. Malukoff does not have

CGC Exhibit No. JAH-3R

Under the Company's existing tariff, small business customers in the Commercial default service class are subsidizing customer-generators with Maximum Registered Peak Load ("MRPL") above 100 kW. Mr. Malukoff agrees with the Company's revised definition of MRPL and the Company's proposal to classify Commercial and Industrial Customers based on MRPL because customer-generators with MRPL above 100 kW, by virtue of their size and output, should be classified as Industrial customers taking service under the HP Rider.

JSA ROG TO OSBA-I-3 Refer to OSBA Statement No. 1 at 9:12 in which Witness Malukoff states that he agrees with FirstEnergy's proposal to classify Commercial and Industrial Customers based on MRPL. Identify, describe, and explain and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or prepared in connection with his support of FirstEnergy's proposed changes to its definition of Maximum Registered Peak Load. Provide all Documents you have used, relied upon, and/or consulted that support your answer.

OSBA RESPONSE: See responses to JSA ROG: I-1 and JSA ROG: I-2. Mr. Malukoff's direct testimony also cites to Commission precedent in recent PPL Electric and UGI Utilities, Inc. ("UGI") proceedings. Attachment JSA-OSBA-I-3 includes the Administrative Law Judge Recommended Decision in the PPL Electric proceeding, the Commission Order for the UGI proceeding, and the Commonwealth Court of Pennsylvania's Opinion upholding the Commission's Order in the UGI proceeding.

JSA ROG TO OSBA-I-4 Refer to OSBA Statement No. 1 at 10:3-6. Identify, describe, and explain, and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or prepared that address the totality of the costs and benefits of excess generation provided by customer-generators on FirstEnergy's system over the last three years and/or prospectively and why "[r]eclassifying large customer-generators under the HP Rider would offer these customers fair compensation." Provide all Documents you have used, relied upon, and/or consulted that support your answer.

OSBA RESPONSE: Mr. Malukoff believes that customer-generators would receive fair compensation under the HP Rider because excess generation will be paid based on real-time pricing that varies with the hourly generation needs of customers. Mr. Malukoff does not have

additional studies, analyses, reports, and data responsive to this request.

JSA ROG TO OSBA-I-5 Refer to OSBA Statement No. 1 at 10:3-4 in which Witness Malukoff states that "I acknowledge that customer-generators should be fairly compensated for the energy they supply to the Company's distribution system." Please define or further explain what "fair compensation" would be for net metered customer generators. Please state whether "fair compensation" would constitute the value that net metered customer-generators provide to all FE Pennsylvania customers, all FE Pennsylvania customers in the same rate district, all FE Pennsylvania customers in the same rate district and default service customer class, or some other value. Provide all documents you have used, relied upon, and/or consulted that support your answer.

OSBA RESPONSE: Mr. Malukoff believes that "fair compensation" involves a balance of paying customer-generators for their output while ensuring the costs of compensating customer-generators are appropriately distributed among rate classes. This is a default service proceeding, and FE PA's obligation is to ensure adequate and reliable supply to customers at the least cost. What constitutes "fair compensation" cannot be considered in isolation of the Company's core obligation to all of its default service customers, not just customer-generators impacted by the proposed MRPL change. Mr. Malukoff does not opine on whether "fair compensation" would constitute the value that net-metered customer-generators provide to all FE Pennsylvania customers, all FE Pennsylvania customers in the same rate district, all FE Pennsylvania customers in the same rate district and default service customer class, or some other value.

JSA ROG TO OSBA-I-6 Refer to OSBA Statement No. 1 at 4:15-18 in which Witness Malukoff states: "[T]he fact that smaller Commercial customers are less likely than Industrial customers to shop supports the Company's proposal to move large net-metering customer-generators into the Industrial default service class." Identify, describe, and explain, and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or prepared that support the assertion that Industrial default service class customers (those on the HP Rider and thus not taking service from an EGS) have the ability and are more likely to shop and thus not take default service. Please state whether Witness Malukoff has analyzed whether or not Industrial default service customers have the same ability to shop as Industrial customers taking service from

Petition of FirstEnergy Pennsylvania Electric Company for Approval of Default Service Program for the Period from June 1, 2027 to May 31, 2031	: : : :	Docket No. P-2026-3060298

VERIFICATION

I, James A. Heidell, holding the position of Partner with PA Consulting, Inc., verify that the facts set forth in CGC Statement No. 1-R, and CGC Exhibit Nos. JAH-1R, JAH-2R, JAH-3R, and JAH-4R are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that false statements herein are made subject to the penalties of 18 Pa. C.S. §4904, relating to unsworn falsifications to authorities.

Date: May 28, 2026

CGC Statement No. 1-SR

BEFORE THE

PENNSYLVANIA PUBLIC UTILITY COMMISSION

PETITION OF FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY FOR APPROVAL OF ITS DEFAULT SERVICE PROGRAM FOR THE PERIOD ROM JUNE 1, 2027, TO MAY 31, 2031

DOCKET NO. P-2026-3060298

Surrebuttal Testimony of

James A. Heidell

Petition of FirstEnergy Pennsylvania Electric Company for Approval of Default Service Program for the Period from June 1, 2027 to May 31, 2031	: : : :	Docket No. P-2026-3060298

SUNRISE AIRPORT ROAD LLC, SUNRISE FORRESTER ROAD LLC, SUNRISE FRANKLIN ROAD LLC, SUNRISE HARLANSBURG ROAD LLC, SUNRISE HENDERSONVILLE ROAD LLC, SUNRISE MCCURDY ROAD LLC, SUNRISE PERRY HIGHWAY LLC, SUNRISE SANDY LAKE GREENVILLE ROAD LLC, SUNRISE SANDY LAKE POLK ROAD LLC, AND SUNRISE SPRINGFIELD CHURCH ROAD LLC'S ERRATA TO CGC STATEMENT NO. 1-SR

Errata to CGC Statement No. 1-SR

p. 7:

Table 1.

	Operational Facilities	Current PTC Price	25 Yr CAGR	Corrected
Met-Ed	15	$ 0.1293	23.6%	0.9%
Penelec	3	$ 0.1216	0.9%	0.1%
Penn Power	11	$ 0.1373	0.1%	23.6%
West Penn	11	$ 0.1099	0.7%	0.7%
Combined	40	$ 0.1207	2.0%	2.0%

Q. What conclusions did you draw from Table 1?

A. With the exception of the ~~Met-Ed~~ Penn Power rate district, the average annual rate increase is less than 1%. Table 1 highlights the issue of FirstEnergy not evaluating alternative approaches for recovering the difference between the PTC and LMP rates. Collectively spreading the delta across all the commercial classes results in a 2% CAGR and spreading it over all customer classes would decrease that percentage significantly. But FirstEnergy has

failed to evaluate either of these routes.[1] I am also advised by Counsel that FirstEnergy appears to be contemplating full consolidation of its rate districts at some point in the future.[2]

[1] *See* CGC Exhibit No. JAH-3SR.

[2] *See Joint Petition for Approval of Settlement of All Issues*, Docket Nos. A-2023-3038771, *et al*., Settlement ¶ 33 (filed by FirstEnergy on August 30, 2023) ("[t]he Joint Applicants commit to filing four cost of service models, one for each Rate District with PSU as part of the West Penn Rate District, as well as a consolidated FE PA cost of service model, in the next rate case after the Proposed Consolidation is approved, and in each of the subsequent rate cases until full rate consolidation is achieved.")

I. INTRODUCTION

Q. Would you please state your name, affiliation, and business address?

A. My name is James A. Heidell. My current position is Partner at PA Consulting Group, Inc. ("PA Consulting"). My business address is 2420 17th Street, Suite 220, Denver, CO 80202.

Q. Have you submitted prior testimony in this proceeding?

A. Yes, I submitted written direct and rebuttal testimony in this proceeding on behalf of Sunrise Airport Road LLC, Sunrise Forrester Road LLC, Sunrise Franklin Road LLC, Sunrise Harlansburg Road LLC, Sunrise Hendersonville Road LLC, Sunrise McCurdy Road LLC, Sunrise Perry Highway LLC, Sunrise Sandy Lake Greenville Road LLC, Sunrise Sandy Lake Polk Road LLC, and Sunrise Springfield Church Road LLC (collectively, the "Customer-Generator Coalition" or "CGC") on April 29, 2026, and May 28, 2026, respectively.[1]

Q. Is the Surrebuttal Testimony and analysis you are proffering now prepared by you or under your direction?

A. Yes.

Q. What is the purpose of your Surrebuttal Testimony?

A. The purpose of my surrebuttal testimony is to address certain elements of the rebuttal testimony presented by David Young and Gregory Hussing on behalf of FirstEnergy Pennsylvania Electric Company ("FirstEnergy" or the "Company"), by Serhan Ogur on

[1] *See* CGC St. Nos. 1, 1-R.

behalf of the Office of Consumer Advocate ("OCA"), and by Maksim Malukoff on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA").

Q. Are you sponsoring any Exhibits with your Surrebuttal Testimony?

A. Yes. I am sponsoring six (6) Surrebuttal Exhibits, Nos. JAH-1SR – JAH-6SR.

II. RESPONSE TO FIRSTENERGY WITNESS DAVID YOUNG

Q. Have you reviewed the rebuttal testimony submitted by Mr. David M. Young?

A. Yes. I will respond to Mr. Young's rebuttal testimony that addresses FirstEnergy's Maximum Registered Peak Load ("MRPL") proposal.

Q. Have you reviewed Revised Exhibit DMY-7?

A. Yes. I appreciate that Mr. Young has corrected his omission of excluding the offsetting benefits associated with the value of exported energy at the Locational Marginal Price ("LMP") rate. However, I disagree that his assumptions are reliable regarding the number of new customer-generator projects that will be energized.[2] While Mr. Young notes that FirstEnergy has 1,555 applications in the interconnection queue that are between one and three MW, which includes 786 applications received in 2025 for solar facilities larger than 1 MW, he fails to identify how many projects have paid to move from the initial application phase to the study phase, or even further in the process.[3] Mr. Young notes that, of the 786 applications received in 2025, 42 have been cancelled, none have been energized, only 92 have paid an interconnection study fee, and none have made any payments towards facilities' upgrades.[4] In short, there has been little substantive

[2] FirstEnergy St. No. 1-R, p. 21, lines 14-16.
[3] *See* FirstEnergy response to CGC Set I, No. 3 (CGC Exhibit No. JAH-1SR).
[4] *See* FirstEnergy response to CGC Set VII, No. 4(a)-(c) (CGC Exhibit No. JAH-2SR).

movement to bring these projects to operation. As a result, Mr. Young's projections remain speculative and likely inaccurate.

Q. Have you reviewed Mr. Young's rebuttal testimony regarding risk premiums allegedly created by customer-generators in the wholesale bidding process?

A. Yes. Mr. Young contends that the assignment of no-load customer-generators over 100 kW to the HP Rider will mitigate risk premiums incorporated in default service rates for commercial customers.[5]

Q. Has Mr. Young presented any evidence of what that risk premium is?

A. No. Mr. Young refers to Dr. Powers's testimony that, theoretically, there could be a risk premium associated with net-metered customer-generation. However, FirstEnergy has not provided any evidence of an actual risk premium or quantified what that premium is. The Company identifies several potential components that could make up a risk premium. Dr. Powers backs into a calculation of what he believes is the total risk premium historically but, critically, he derived his calculation based upon assumptions and not based on any evidence from wholesale bidders. Furthermore, there continues to be an absence of evidence or even an assertion of what portion of the calculated total risk premium is attributable to customer-generation.

Q. Would you please summarize your understanding of Mr. Young's rationale for only a two-year extension of the current classification applicable to >100 kW customer-generators?

[5] *See* FirstEnergy St. No. 1-R, p. 17, lines 12-16.

A. Yes. Mr. Young highlights three arguments for limiting reclassification of existing customer-generators to two years:

- The two-year exemption coincides with the implementation of the next default service program,
- Extension beyond two years undermines the cost equity for non-customer-generators, and
- Solar developers operate in a competitive market and are not guaranteed a return on their investment.[6]

Q. Why is Mr. Young's rationale for only a two-year exemption from reclassification due to program service dates not compelling?

A. Mr. Young provides no rationale for why mechanically existing customer-generators need to be reclassified as of the next default service program start date, or why legacy customer-generators need to be reclassified to ease the logistics of managing default service.

Q. Why is Mr. Young's rationale for only a two-year exemption from reclassification due to "cost equity" issues not compelling?

A. The Company continues to avoid evaluating the full range of benefits provided by customer-generators and has not considered alternatives to how differences between the PTC rate and the market value of energy are recovered from customers. FirstEnergy also has failed to acknowledge the capacity benefits and other benefits provided by solar customer-generators. Moreover, he also provides no detail regarding how customer-

[6] FirstEnergy St. No. 1-R, p. 23, lines 5-13.

generators would undermine "cost equity," a term used for the first time in his rebuttal testimony.

Q. Why is Mr. Young's rationale for only a two-year exemption from reclassification due to assumptions about rate of return not compelling?

A. Mr. Young states that "[s]olar developers operate in a competitive, unregulated market, and they are not guaranteed a return on their investments."[7] I have not suggested that the CGC's members, or any customer-generator for that matter, are guaranteed a rate of return. The CGC's members invested in their projects with an understanding of the current regulatory treatment and evaluated the risks around these treatments. Presumably, FirstEnergy has made investments with certain expectations on how the return on its investment will be treated. I anticipate that FirstEnergy would not be silent if a proposal was made to adversely change the regulatory paradigm for recovering FirstEnergy's historical distribution investments. In short, the CGC's members did not make investments in merchant solar generation projects and Mr. Young has put forth a false comparison.

Q. Please summarize your understanding of Mr. Young's rationale for FirstEnergy's MRPL proposal on the basis of fairness.

A. Mr. Young states FirstEnergy's MRPL proposal "ensures that the costs associated with compensation for excess generation are allocated fairly."[8] Mr. Young has given no rationale for this contention, it appears to be only his unsupported perspective as opposed to presenting a standard to be evaluated.

[7] FirstEnergy St. No. 1-R, p. 23, lines 11-12.
[8] FirstEnergy St. No. 1-R, p. 17, lines 5-7.

Q. Do you find Mr. Young's arguments related to fairness compelling?

A. No. Mr. Young has not specified the criteria for his conclusion(s). It is important to recognize that "fairness" is not an economic construct; it is a judgement that different parties render based upon their own perceptions and interests. As Mr. Young also refers to his estimates of the true-up expense that will be recovered from the commercial class, I assume his perception of "fair" has to do with the recovery of his estimated expense. However, the recovery mechanism being assumed is only one option and the Company has indicated that it did not consider allocating costs across other classes or evaluated other recovery approaches.[9]

Q. Have you reviewed Mr. Young's estimates of the cumulative twenty-five-year rate impacts of not implementing the Company's MRPL proposal?

A. Yes. I reviewed Table 3 of Mr. Young's rebuttal testimony. I primarily focused on his calculations for "Operational Facilities Only."[10] My understanding of that analysis is that it reflects Mr. Young's estimates of continuing the current treatment for forty projects across the four FirstEnergy rate districts.

Q. What is your assessment of Mr. Young's analysis of continuing the current compensation regime for operational net-metering facilities?

A. First, Mr. Young's analysis is overly simplified in that it assumes no change in the LMP rate. Moreover, Mr. Young continues to ignore the range of benefits provided by customer-generators, while failing to consider the potential savings from customer-generators offsetting peak transmission demand. Despite those shortcomings, with

[9] *See* FirstEnergy response to CGC Set VII, No. 2 (CGC Exhibit No. JAH-3SR).
[10] *See* FirstEnergy Exhibit No. DMY-18.

regards to calculated increases, I reviewed it from the perspective of the compound average annual increase (referred to below as "CAGR") over a twenty-five-year period for each rate district and collectively. Those results are shown in Table 1.

Table 1.

	Operational Facilities	Current PTC Price	25 Yr CAGR	Corrected
Met-Ed	15	$ 0.1293	23.6%	0.9%
Penelec	3	$ 0.1216	0.9%	0.1%
Penn Power	11	$ 0.1373	0.1%	23.6%
West Penn	11	$ 0.1099	0.7%	0.7%
Combined	40	$ 0.1207	2.0%	2.0%

Q. What conclusions did you draw from Table 1?

A. With the exception of the Penn Power rate district, the average annual rate increase is less than 1%. Table 1 highlights the issue of FirstEnergy not evaluating alternative approaches for recovering the difference between the PTC and LMP rates. Collectively spreading the delta across all the commercial classes results in a 2% CAGR and spreading it over all customer classes would decrease that percentage significantly. But FirstEnergy has failed to evaluate either of these routes.[11] I am also advised by Counsel that FirstEnergy appears to be contemplating full consolidation of its rate districts at some point in the future.[12]

Q. Mr. Young states that the issue here is not whether solar energy can produce certain social benefits to Pennsylvania. Please respond.

[11] *See* CGC Exhibit No. JAH-3SR.

[12] *See Joint Petition for Approval of Settlement of All Issues*, Docket Nos. A-2023-3038771, *et al*., Settlement ¶ 33 (filed by FirstEnergy on August 30, 2023) ("[t]he Joint Applicants commit to filing four cost of service models, one for each Rate District with PSU as part of the West Penn Rate District, as well as a consolidated FE PA cost of service model, in the next rate case after the Proposed Consolidation is approved, and in each of the subsequent rate cases until full rate consolidation is achieved.")

A. Mr. Young states "the issue here is not whether solar energy can produce certain societal benefits to Pennsylvania. The question is whether the customers of FE PA's small commercial class should continue to subsidize large customer-generators under the PTC Rider."[13] This approach is unsupported by the record and is a myopic position without substance. The apparent fact that Mr. Young does not want to consider the range of benefits provided to FirstEnergy, to its customers, and to Pennsylvania, generally, while also ignoring alternative recovery mechanisms does not mean that the contribution of net-metered customer-generators should not be considered and evaluated. The fact that FirstEnergy failed to evaluate these benefits is not evidence that they do not exist. Indeed, Mr. Young does not appear to dispute the benefits I noted in my direct testimony.

Q. What is your response to Mr. Young's position that the MRPL proposal, if approved, will reduce compensation earned by customer-generators?

A. I am not an attorney so I will not comment on the issue of whether there is a legal basis for determining what compensation scheme customer-generators are entitled to. My point is that customer-generators made investment decisions regarding construction of solar projects (typically from 1 MW – 3 MW)[14] in Pennsylvania based upon an understanding that the projects would be compensated under the PTC Rider. Those investments provide non-carbon emitting generation that furthers decarbonization goals, provide needed energy and capacity, and provide the slew of other benefits I have discussed throughout this proceeding. On that basis, I concluded that it is reasonable for customer-generators to expect continued compensation under the PTC Rider.

[13] FirstEnergy St. No. 1-R, p. 20, lines 10-13.
[14] FirstEnergy St. No. 1-R, p. 17, lines 8-9.

Q. What is your response to Mr. Young's statement that his Exhibit DMY-7 does not include a compound annual PTC growth rate as you noted in your direct testimony?[15]

A. I agree with Mr. Young that, upon further examination, the increase in the PTC rate in FirstEnergy Exhibit No. DMY-7 is not a function of the underlying bids of wholesale power providers to serve the energy and capacity requirements of default service customers.

III. RESPONSE TO FIRSTENERGY WITNESS GREGORY HUSSING

Q. What is your understanding of Mr. Hussing's argument regarding the capacity value of customer-generators underlying his opposition to a negative Peak Load Contribution ("PLC")?

A. My understanding is that Mr. Hussing argues that there is no certainty of the peak load reduction and that the PJM market does not provide compensation for PLC.[16]

Q. If customer-generators inject power into the distribution network during the five coincident peak (5CP) hours, does that reduce FirstEnergy's peak demand?

A. Yes. The load serving entity's 5CP demand is measured at the transmission load withdrawal point. Customer-generators injecting power into the distribution system during the 5CP hours will reduce the measured demand at the load withdrawal point.

Q. What is your response to Mr. Hussing's concern that there is no certainty that customer-generators will reduce the 5CP?

[15] FirstEnergy St. No. 1-R, p. 22, lines 10-11.
[16] FirstEnergy St. No. 6-R, pp. 4-5, lines 15-18, 3-5.

A. It is important to distinguish between certainty and reasonable probability as well as acknowledge that metering can be used to fine-tune the capacity credit. I note that PJM calculates an Effective Load Carrying Capability ("ELCC") for assessing the capacity contribution of different types of solar projects and the ELCC is regularly updated.[17] As FirstEnergy is supportive of classifying customer-generators on nameplate capacity, the Company could also start with the ELCC to evaluate to the 5CP capacity contribution.

IV. RESPONSE TO OCA WITNESS SERHAN OGUR

Q. Have you reviewed OCA's rebuttal testimony prepared by Serhan Ogur?

A. Yes. I will address Dr. Ogur's rebuttal testimony related to FirstEnergy's MRPL proposal.

Q. What does Dr. Ogur state regarding your conclusion in direct testimony that the MRPL proposal will reduce compensation to customer-generators?

A. Dr. Ogur states "Mr. Heidell's claim is speculative and unsubstantiated in light of the fact that the PTC Rider and the HP Rider include the same cost components".[18]

Q. Is your conclusion speculative and unsubstantiated?

A. No, it is neither speculative nor unsubstantiated. FirstEnergy provided the template for calculating the price under the HP Rider for December 1, 2023 – May 31, 2024, and also provided the corresponding PTC rates. The Company also provided an assumption for the average LMP rate in FirstEnergy Exhibit No. DMY-7. Based upon that information the relative rates are shown in Table 2.

[17] Tracking solar has an ELCC of 11% in 2026/2027 and is reduced to 8% in the next year. 2025-pjm-elcc-rrs.pdf.
[18] OCA St. No. 1-R, p. 21, lines 5-6.

Table 2.

	Penelec	Penn Power	West Penn	Met-Ed
PTC Rate ($/kWh)	0.11405	0.12726	0.10536	0.11574
HP Hourly Pricing Charge	0.06451	0.05223	0.08115	0.10183
Reduction ($/kWh)	0.04954	0.07503	0.02421	0.01391
Percent Reduction	43%	59%	23%	12%

In addition, I note that the Company has confirmed that the LMP price, a component of the HP Rider, can decline below zero.[19] However, there are no hours where the PTC rate will be below zero. Therefore, moving customer-generators to service under the HP Rider will almost certainly reduce the compensation for excess generation as compared to the current paradigm.

Q. Have you reviewed Dr. Ogur's discussion of risk premiums associated with customer-generators in his rebuttal testimony?

A. Yes. First, he has mischaracterized my testimony. He states, "I disagree with Mr. Heidell that the risk premium should be deemed nonexistent simply because it is hard to quantify."[20] I have not suggested that risk premiums are wholly non-existent. Rather, neither Dr. Ogur, nor the Company, has quantified those alleged risk premiums as applied to customer-generation. In fact, Dr. Powers calculates the total risk premium and notes that it is made up of many components which evidently include hedging, switching risk, transmission costs, load variability, market conditions, and consumer behavior.[21] While Dr. Powers estimated seven-year average risk premiums ranging from $0.00646 $/kWh to $0.01024 $/kWh, he admits that he cannot identify the portion of those premiums that

[19] FirstEnergy response to CGC Set 1, No. 16 (CGC Exhibit No. JAH-4SR).
[20] OCA St. No. 1-R, p. 21, lines 20-22.
[21] FirstEnergy St. No. 3-R, p. 8, lines 14-16.

is allegedly associated with customer-generation.[22] Dr. Powers states that "...isolating the contribution of any one factor, such as net-metered excess generation is inherently difficult and cannot be done without additional data or assumptions."[23]

Q. Did Dr. Ogur provide any evidence of a risk premium associated with customer-generators in his rebuttal testimony?

A. No. While Dr. Ogur rejects my assertion that he has not calculated a risk premium, he continues to hypothesize that there is a risk premium without any evidence or any quantification of what the alleged premium is. Moreover, to the extent that Dr. Ogur's risk premium analysis is based on the assumption that large net-metering customer-generators shop for competitive supply, there is no evidence to support that assumption.

Q. Did you review Dr. Ogur's rationale for supporting the Company's MRPL proposal?

A. Yes, Dr. Ogur identified two reasons why he supports FirstEnergy's MRPL proposal:

- "First, because the more sophisticated, large customer-generators would entail higher switching risk for the FPFR suppliers, the FPFR suppliers would either build larger risk premiums into their FPFR contract bids or shy away from participating in the FPFR auctions".[24]
- "Second, even the large customer-generators that stay on default service would constitute volumetric risk for FPFR suppliers because of the uncertainty surrounding the level and profile of on-site generation (e.g., outages, in-service dates of on-site generators that are in FE PA's distribution interconnection queue."[25]

[22] FirstEnergy St. No. 3-R, p. 15, line 3.
[23] FirstEnergy St. No. 3-R, p. 8, lines 16-18.
[24] OCA St. No. 1-R, p. 17, lines 9-12.
[25] OCA St. No. 1-R, p. 17, lines 13-17.

Q. Has Dr. Ogur provided any evidence that large customer-generators create a switching risk?

A. No, he has not provided any evidence of customer-generator-created switching risk. I am also not aware of any evidence provided by FirstEnergy that customer-generators are switching from default service to third-party suppliers, or from competitive suppliers back to default service.

Q. Please respond to Dr. Ogur's contentions related to volumetric risk.

A. The issue of volumetric risk and any potential risk premium has already been discussed. For clarity, I will summarize my position on risk premiums: no party in this proceeding has provided any evidence that there is a customer-generation-caused risk premium or, for that matter, what the magnitude of that alleged risk premium is. Moreover, Dr. Ogur points to potential outages and in-service dates of customer-generators as contributors to volumetric risk. But Dr. Ogur has not conducted any analysis as to the frequency of customer-generator outages[26] and, as I have discussed previously, FirstEnergy's projections of net-metering customer-generation are likely overstated. Absent this evidence, one cannot definitively conclude that customer-generation contributes to increased risk premiums.

Q. Did Dr. Ogur address the issue of compensating customer-generators for the range of benefits they provide?

[26] OCA response to CGC Set II, No. 4 (CGC Exhibit No. JAH-5SR).

A. Yes, his response was that the issue is irrelevant because the HP Rider and the PTC Rider address the same benefits.[27]

Q. Do you agree with Dr. Ogur that compensation to customer-generators for the benefits they provide is irrelevant?

A. No, the fact that Dr. Ogur chooses to ignore the issue because those benefits are not currently explicitly incorporated in Company's Tariff does not make it irrelevant. The fundamental issue is determining the appropriate compensation for customer-generators. Dr. Ogur repeatedly refers to "subsidization of large customer generators" but apparently does not consider evaluating the benefits provided by customer-generators as relevant and drawing conclusions about subsidization. Moreover, while Dr. Ogur points to the Commission's approval of UGI Utilities, Inc. – Electric Division's ("UGI") supply peak load impact ("SPLI") proposal as purported support for FirstEnergy's MRPL proposal, he continues to fail to conduct any of his own analysis to support his reliance on others.[28]

V. RESPONSE TO OSBA WITNESS MAKSIM MALUKOFF

Q. Have you reviewed OSBA's rebuttal testimony?

A. Yes. I will respond to Mr. Malukoff's contradictory position that customer-generators should be subject to the MRPL and be moved to the HP rider based upon customer load. Specifically, he states that "[d]efault service classification should be based primarily on the load characteristics (peak demand and supply) of customers and how best to secure default service for similar customers, rather than on a priori judgments about the price at which customer-generators should be compensated for their generation. By virtue of their

[27] *See* OCA St. No. 1-R, p. 22, lines 9-20.
[28] OCA Response to CGC Set II, No. 9 (CGC Exhibit No. JAH-6SR).

size and output, customer-generators with MRPL above 100 kW should be classified under the HP Rider."[29]

Q. Why is the statement contradictory?

A. Customer-generators create very little load on the system as noted by Mr. Young in his rebuttal testimony.[30] Therefore, to the extent that "load characteristics" govern customer classification, Mr. Malukoff's argument is illogical. Load is different than supply.

Q. Does this conclude your Surrebuttal Testimony?

A. Yes, however, I reserve the right to supplement and/or amend it throughout the course of this proceeding.

CGC Set 1, No. 003

Please reference FirstEnergy St. No. 1, p. 17, lines 8-10. Please identify the number of customer generator net-metering customer-generators currently in the interconnection queue who would be shifted from the PTC Rider to the HP Rider under the Company's Maximum Registered Peak Load ("MRPL") proposal?

RESPONSE:

FE PA currently has 1,555 applications within the net metering interconnection queue with a generator nameplate rating between 1 megawatt ("MW") and 3MW.

FE PA cannot provide a definitive answer to the question as customer load profiles and/or operation of generation may change over time, which would impact the customer's peak demand or MRPL. Approximately 1,493 of the 1,555 applications identified are anticipated to have a high likelihood of transitioning from price-to-compare to hourly pricing rates, based on the information provided in the application (e.g., nameplate capacity of generation, estimated annual energy consumption and equipment ratings).

Has FirstEnergy considered recovering "cash-out" payments delivered to large net-metering customer-generators from all rate classes universally?

a. If yes, please fully explain that consideration process and provide any documents, analyses, or source documents relied upon in the answer.

b. If no, please explain fully why not.

RESPONSE:

No, FE PA has not considered recovering "cash-out" payments from all rate classes universally. This approach would result in inequitable cost shifting to residential customers in a different default service rate class as the customer-generators receiving the cash out payments.

CGC Exhibit No. JAH-4SR

CGC-OCA-II-4 Please reference OCA St. No. 1-R, p. 17, lines 16-17. Has the OCA performed any analysis as to the frequency of "outages" for solar photovoltaic net-metering installations?

a. If yes, please fully explain and provide any studies, analyses, or source documents relied upon in the answer.
b. If no, please fully explain why not.

Response:

Dr. Ogur has not performed any analysis as to the frequency of outages for solar photovoltaic net-metering installations. Dr. Ogur's assertion in the referenced section of his rebuttal testimony is based on the fact that all generators experience planned and unplanned outages, and that wholesale suppliers of default service contracts would also recognize this fact.

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state for the record your name, position, and business address.

A. My name is Thomas S. Michelman. I am the Vice President & Senior Director, Distributed Energy Resources Practice Lead for Sustainable Energy Advantage, LLC ("SEA"). My business address is 161 Worcester Road, Suite 503, Framingham, MA 01701.

Q. Please describe your experience and qualifications.

A. I have been working in the energy industry since 1993, when I joined Xenergy, Inc. ("Xenergy") as an energy efficiency analyst. Beginning in 1996, much of my work efforts at Xenergy were focused on analyzing electric industry restructuring and competitive retail choice. In 2003, I co-founded Boreal Renewable Energy Development ("Boreal") which was focused on wind and solar development at commercial, industrial, and institutional sites. I joined SEA, a clean energy consulting firm focused on the tracking and analysis of northeast clean energy markets (*i.e.,* ISO-NE, NYISO, and PJM). At SEA, I am now Vice President & Senior Director.

In regard to my education, I have a B.A. in Mathematical Methods in Social Sciences/Political Sciences from Northwestern University and an M.S. in Resource Economics from the University of Rhode Island My resume is attached as Exhibit TM-1.

Q. Please describe more specifically your experience with issues applicable to net metering and other distributed energy resources.

A. I have significant experience with issues related to net metering and other distributed energy resources ("DERs"). Since 1993, my professional area of focus has been exclusively in the DER sector. As mentioned above, beginning in 1996, I focused much of my work at Xenergy on analysis of electric industry restructuring and competitive retail

choice issues. At Xenergy, I led and/or was a major contributor to analyzing the frequently evolving and growing retail electric choice markets, including markets in the Commonwealth of Pennsylvania[1].

During my time working at Boreal, DER issues and net metering opportunities and constraints were almost always an important consideration about whether a renewable project was viable, and I therefore gained substantial in-practice expertise in those matters. For example, I provided expert testimony on the proposed NSTAR distributed generation ("DG") standby rates (Massachusetts Department of Telecommunications and Energy ("DTE") Docket No. 03-121) and their effect on the economics of DG wind turbine installations for the Conservation Law Foundation and Solar Energy Business Association of New England. The Massachusetts DTE approved a settlement to which NSTAR was a signatory that exempted renewable installations from standby rates. In addition, I was a lead participant in crafting a consensus for Massachusetts' innovative "virtual" net metering legislation (supporting wind and solar photovoltaic ("PV") projects) which was incorporated into the Green Communities Act signed into law in July 2008. Subsequently, beginning in 2008, I was involved in many hearings and technical sessions creating regulations and utility net metering tariffs. To support clients, I developed substantial expertise on net metering and the important underlying utility rate drivers.

I joined SEA in 2013 to lead SEA's analysis of the growing DER solar markets. I conducted dozen, if not hundreds, of different types of DER-focused analyses. My clients have included clean energy developers and their financers, industry trade groups, government agencies, large consumers of electricity, and at least one regulated electric

[1] At Xenergy, I was recognized by colleagues for my detailed knowledge of Pennsylvania's electric restructuring market and was considered to be the "go-to" resource on all matters related to electric restructuring in Pennsylvania.

utility. Specifically related to net metering, I led the practice of analyzing and forecasting DER compensation rates, which for most DER markets (similar to DER net metering compensation in Pennsylvania) is based on derivatives of retail rates. My SEA colleagues and I pride ourselves on conducting detailed, "bottom-up" analyses and forecasts drawing the connections (and disconnections) between the wholesale markets, regulatory filings, external market drivers, and the applicable DER compensation rates. I have led the analysis and forecasts of DER compensation rates for the Connecticut, Delaware, Washington D.C., Illinois, Massachusetts, Maryland, New Jersey, New Mexico, New Hampshire, Rhode Island, Vermont, and Pennsylvania markets. The Pennsylvania DER markets included PECO, PPL, and the First Energy territories of Met-Ed, Penelec, and West Penn Power.

For my work in regulatory and policy issues, some key highlights of my work include managing the analysis for the Massachusetts Department of Energy Resources' ("MA DOER") policy alternatives for a successor program to its Solar Energy Renewable Energy Certificates II program. I led the analysis as a key participant and co-contributor for the Massachusetts Net Metering and Solar Task Force Report jointly for the MA DOER and the Massachusetts Department of Public Utilities. More recently, for the Maine Public Utilities Commission, I served as expert witness in Docket No. 2024-00149 in the Maine Commission's Investigation into Allocation of Benefits of Distributed Generation under Net Energy Billing, which was a benefit-cost analysis of Maine's net metering program.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of the Coalition for Community Solar Access and the Solar Energy Industries Association, jointly called the "Joint Solar Advocates" or "JSA.".

Q. Have you previously submitted testimony before the Pennsylvania Public Utilities Commission?

A. No.

Q. What states have you submitted testimony to the authority having jurisdiction over public utilities?

A. Maine and Massachusetts.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to provide recommendations for improvements to FirstEnergy Pennsylvania Electric Company's ("FE") proposed Default Service Plan VII ("DSP VII" or "DSP") regarding its treatment of net-metered customer-generators.

My testimony will:

- Explain the important benefits that net-metered customer-generators provide to FE and its ratepayers that FE failed to recognize in its Petition of FirstEnergy Pennsylvania Electric Company for Approval of Its Default Service Program for the Period June 1, 2027 to May 31, 2031 ("Petition"). FE failed to recognize the energy, capacity, and transmission costs that net-metered excess generation allows FE, its suppliers, and ultimately its customers to avoid. As a result, FE inaccurately overestimated the impact of net-metering customer-generators on the Commercial Price-to-Compare ("PTC") Rider rates.
- Discuss and analyze the consequences of FE's proposal to shift net-metered customer-generators from the Commercial default service class to the Industrial default service class that could be avoided with improvements to the FE's proposed DSP VII.

- Recommend improvements to the DSP VII so that the benefits to FE customers from net-metered excess generation can be fully recognized.

I also discuss FE's proposed DSP VII and testimony in detail and explain and correct misconceptions using industry specific concepts and terminology, which I have included in Appendix A attached to my testimony.

My specific recommendations are:

1. The Commission should require FE to modify how it calculates customer peak loads used to determine generation capacity and transmission cost allocation by: (1) allowing customers to register "negative loads" as a result of the excess generation they produce; and (2) apply the cost savings of those negative loads to reduce the allocation of the relevant costs to the default service class in which the customer-generator is assigned.
2. The Commission should approve my proposal for establishing legacy rights under the Commercial PTC Rider for all net-metered customer-generators that are operational or provide a completed copy of their Certificate of Completion[2] to FE on or before June 1, 2027.
3. The Commission should approve my proposal for establishing legacy rights under the Commercial PTC Rider, at a reduced rate, for all net-metered customer-generators that meet certain project development maturity milestones on or before June 1, 2027.

II. DEFINING THE PROBLEM REGARDING NET-METERED CUSTOMER-GENERATORS THAT FE SEEKS TO ADDRESS

Q. Please outline the basic "problem" that FE's proposal seeks to address.

[2] A Certificate of Completion, as defined in 52 Pa. Code § 75.22, is a certificate in a form approved by the Commission containing information about the interconnection equipment to be used, its installation, and local inspections.

A. FE states in its Petition there has been an increase in 1 to 3-megawatt ("MW") solar projects applying for interconnection with the intent of becoming net-metered customer-generators.[3] FE claims that the growth of net-metered customer-generators served by the Commercial PTC Rider will cause upward pressure on Commercial PTC Rider rates. FE asserts that these rate increases are primarily due to the following:

- Net metering cash-out payments to customer-generators will increase as more projects come online, with those net-metering expenses recovered from the Commercial default service class; and,
- Excess generation from net-metered projects decreases the load provided by default service suppliers, thereby increasing the risk premiums included in bids to supply the Commercial default service class.[4]

FE proposes to shift net-metered customer-generators from the Commercial default service class to the Industrial default service class due to its claim of future rate increases. FE proposes moving both new and legacy net-metered projects to the Industrial Hourly Pricing Rider ("HP Rider") by changing the eligibility criteria for assigning a customer's default service class from peak load consumption alone to a consideration of both peak load and the Maximum Registered Peak Load ("MRPL"). As a result of that proposed change, net-metered excess generation from large customer-generators would be compensated based on the HP Rider rate and the costs to pay for the net-metered excess generation would be recovered in the HP Rider. The HP Rider rates are calculated using real-time pricing based on the hourly generation needs of customers. FE proposes that the reclassification of certain net-metered projects based on the MRPL would occur in 2027

[3] FE PA Statement No. 1, 17:8-10.
[4] *Id*. at 17:15-18:2.

for new net-metered projects and in 2029 for net-metered projects that are operational on or before June 1, 2027.[5]

Q. Does FE attempt to quantify the impact of net-metered customer-generators due to the growth of net metering expenses included in Commercial PTC Rider rates?

A. Yes, the impact is quantified in FE PA Exhibit DMY-7 ("Exhibit DMY-7"), "Analysis of Net Metering Cash Out Expense Impact on Price to Compare Default Service Rate Rider." The exhibit purports to show that for the time period of June 1, 2024 to May 31, 2025, the true-up expense recovered from Commercial PTC Rider customers totaled just over $4.4 million. The exhibit also purports to show that "if as little as 10% of the proposed projects in the current applications come online by 2029, the true-up expense in 2029 will be approximately $81 million."[6]

Q. Do you believe that FE's calculations in Exhibit DMY-7 are accurate?

A. No. FE's analysis is deficient because it fails to account for the cost reduction benefits accrued to Commercial default service customers on the PTC Rider that result from the growth in net-metered excess generation.

Q. What quantifiable benefits did FE fail to include in its analysis provided in Exhibit DMY-7?

A. FE failed to include the benefits of net-metered excess generation in reducing default service suppliers' cost to serve the Commercial default service class through the competitive bidding process and through credits incorporated into the calculation of the "E-PTC" component in the PTC Rider rate setting reconciliation process. These major benefits result from default service suppliers procuring less energy, and, if the JSA's

[5] FE PA Statement No. 1, 19:19-22.
[6] *Id.* at 18:18-20.

recommendations discussed later in my testimony are incorporated, procuring less capacity and transmission services as well. While the benefits are real, the manner in which they are reflected in the PTC Rider varies by each reduced cost component.

Q. Can you provide additional information to further explain the benefits of net-metered excess generation?

A. The below Table 1 provides a summary of the cost components from which a default service provider's (and more generally a load serving entity's) cost obligations are determined by FE Rate District.

Table 1: Summary of Major FE Cost Components for Generation Supply

FE Rate District	Energy Component	Capacity Component	Transmission Component
Met-Ed[7]	Met-Ed class load	Met-Ed Zone	Met-Ed utility Zone within MAIT[8]
Penelec[9]	Penelec class load	Penelec Zone	Penelec utility Zone within MAIT
Penn Power[10]	Penn Power class load	ATSI	Penn Power utility Zone within ATSI[11]
West Penn Power[12]	West Penn Power class load	APS	West Penn Power utility Zone within APS[13]

As will be discussed in detail later in my testimony, the sharing of a capacity or transmission component across a PJM zone allows some benefits provided by Pennsylvania net metering customer-generators to accrue to ratepayers outside of the

[7] *See* Met-Ed's ME Supplier Energy Obligation manual and ME Supplier Capacity Manual.
[8] Mid-Atlantic Interstate Transmission, LLC (MAIT) includes transmission facilities that serve Met-Ed, Penelec, and the MAIT Transmission Zone.
[9] *See* PN Supplier Energy Obligation manual and PN Supplier Capacity Manual.
[10] *See* Penn Power's Supplier Energy Obligation and Supplier Capacity Manual.
[11] American Transmission Systems, Inc. (ATSI) and AMP Transmission, LLC both serve the ATSI Transmission Zone. The ATSI Transmission Zone includes Ohio Edison, Cleveland Electric Illuminating Company, Cleveland Public Power, Toledo Edison (all in Ohio) and Penn Power.

[13] The Allegheny Power System (APS) Zone includes Monongahela Power Company (West Virginia), The Potomac Edison Company (Maryland and Virginia), and West Penn Power (Pennsylvania).

Commonwealth of Pennsylvania, an issue that can be mitigated by allowing customer-assigned peak loads to be negative.

III. BENEFITS OF NET-METERED EXCESS GENERATION IN REDUCING THE DEFAULT SERVICE SUPPLIER'S COST TO SERVE

A. Net-metered Excess Generation Reduces Energy Costs

Q. Does net-metered excess generation lower the net energy component of the Commercial PTC Rider rate and provide benefits to Commercial PTC Rider customers?

A. It does so through the following Steps:

Step 1. Net-metered generation lowers the PJM Settled Load for the default service customer class to which it is classified.

Step 2. This lowers the default service supplier's wholesale load obligation for the customer class.

Step 3. This then lowers FE's payments to the default service supplier for the customer class (*i.e.*, "Payments to Winning Bidders").

Step 4. This lower payment shows up in the computation of the Over/Under Collections, as shown in Line 3 of Figure 1 below.[14] All other things being equal, the lower payments to default service suppliers as winning bidders result in an over collection of revenue from Commercial PTC Rider customers (the "Ending Cumulative (Over)/Under Collection" shown in Line 17 of Figure 1 below).[15]

Figure 1 – Met-Ed Commercial PTC Rider Rate Example - Statement of Revenues and Expenses for the Six Month Period Ended March 31, 2024

[14] *See*, for example, Exhibit TM-2 (FE PA Response to CGC Interrogatory Set 1, No. 22, Attachment B) at 14. At the most granular level, *see* Line No. 3 "Payment to Winning Bidders.

15	**PTC_{Default} Rate**				**$ 0.10594**

(A) Computations pursuant to the terms of the Company's "Price to Compare Default Service Rate Rider"
(B) Adders subject to semi-annual updates

Q. Please provide further information about Step Nos. 1, 2, 3 that you listed above.

A. These linkages are clear and straightforward, as documented in the Supplier Master Agreement published on FirstEnergy's Pennsylvania Default Service Program website and are consistent with FE's testimony and responses to interrogatories.[18]

[18] *See*, for example, Exhibit TM-3 (FE PA Response to CGC Interrogatory Set 1, No. 020).

Q. Please provide additional explanation about Step No. 4. Specifically, if "Payments to Winning Bidders" decrease, why would the "Revenues applied to Current, net of GRT" not also decrease?

A. The values in "Revenues applied to Current, net of GRT"[19] (Line 1 of Figure 1 above) are based on the aggregated metered load of Commercial PTC Rider customers while the "Payment to Winning Bidders" (Line 3 of Figure 1) is based on metered load net of production from net-metered customer-generators.

Q. Would the aggregated metered load also decrease with additional net-metered excess generation?

A. No. The aggregated metered load does not decrease with additional net-metered generation because the net-metered production is accounted for implicitly as "Net Metering Costs (Credits)" (Line 4 of Figure 1). As an example, assume that there are two commercial customers on the PTC Rider. The first is a typical customer consuming 10,000 kWh in a month; the second is a net-metered customer-generator that produces 7,000 kWh per month and consumes 500 kWh per month in station load at its net-metered generation facility.[20] The net load at the wholesale level by which the "Payment to Winning Bidders" is calculated equals 3,500 kWh (10,000 + 500 – 7,000) because the 6,500 kWh that is exported from the net-metered customer-generator serves part of the 10,000 kWh in consumption from the non-generating customer. In contrast, the two PTC Rider customers pay the PTC rate for 10,500 kWh (10,000 + 500) because that is what is registered by their retail meters, which do not distinguish between whether the energy supplied came from a net-metered customer-generator or the bulk power grid.

[19] Exhibit TM-2 (FE PA Response to CGC Interrogatory Set 1, No. 22, Attachment B) at 14. *See,* Line No. 1.
[20] For simplicity's sake in this example, I did not assume any line losses in this example.

Q. Please refer to Exhibit DMY-7 (FE's customer-generator cost impact analysis), and please explain what is included and what is excluded in the calculation of net-metered customer-generators' impact on Commercial PTC Rider rates?

A. FE's Exhibit DMY-7 includes the costs of providing credits to net-metered customer-generators but excludes the benefits of the reduced energy supply costs that will result from their output. "Net Metering Costs (Credits)" are included in the calculation of the impact of net-metered customer-generators on PTC Rider rates, but the benefits of decreases in costs found in "Payment to Winning Bidders"[21] are not included in the calculation of the PTC Rate or the Estimated Net Metering Expense line items for the years 2026 through 2029. As Exhibit DMY-7 is supposed to be an "Analysis of Net Metering Cash Out Expense Impact on Price to Compare Default Service Rate Rider," FE should recalculate it to properly account for the impact of energy benefits derived from net-metered excess generation on Commercial PTC Rider rates, along with the reduction in capacity and transmission costs. FE's failure to do so results in a substantial overstating of the cost of net-metered customer-generators.

Q. Does this mean that the ratepayers that are bearing the costs of paying for net-metered energy generation (customers in the customer-generator's default service class) are also directly yielding the energy benefit from a utility accounting perspective?

A. Yes, that is correct. Of the three value streams I will discuss later in my testimony (energy, capacity, and transmission), the energy benefit is the only one that is currently being

[21] Exhibit TM-2 (FE PA Response to CGC Interrogatory Set 1, No. 22, Attachment B) at 14. See, Line No. 3.

distributed solely to the customers that are bearing the costs associated with compensating customer-generators.

B. Net-metered Excess Generation Reduces FE's Capacity Obligation

Q. What drives the capacity costs in FE's service territory?

A. At a high level, capacity costs are determined by the PJM capacity auction. The capacity auction incorporates forecasts of future demand and how much capacity will be required to meet that demand as part of a demand curve. Capacity costs, set by auction clearing prices, are then allocated based on customer demand during times of PJM system peak load, or the five coincident peak ("5CP") hours.

Q. What are the PJM 5CP hours and how are they determined?

A. The PJM 5CP hours are the five highest weekday one-hour peak load periods on the PJM system between June 1 and September 30 of every year. The 5CP hours are typically spread across multiple days during that period, as PJM excludes consecutive hours so that a single heat event over the course of one day does not dominate all five hours.

Q. Historically, when were the most common occurrences for the 5CP hours?

A. Between 2021 and 2025, all the PJM 5CP hours fell within the hours of 2:00 PM and 6:00 PM eastern daylight time ("EDT"), with the most common peak hour occurring between 5:00 PM and 6:00 PM EDT in July.

Table 2: Historical PJM 5CP Hours, 2021-2025[22]

Year	Peak 1	Peak 2	Peak 3	Peak 4	Peak 5
2021	Tues Jun 29 4-5 PM	Tues Jul 6 4-5 PM	Thurs Aug 12 4-5 PM	Tues Aug 24 5-6 PM	Thurs Aug 26 3-4 PM
2022	Weds Jul 20 5-6 PM	Thurs Jul 21 4-5 PM	Fri Jul 22 5-6 PM	Weds Aug 3 5-6 PM	Mon Aug 8 3-4 PM
2023	Weds Jul 5 5-6 PM	Thurs Jul 27 5-6 PM	Fri Jul 28 5-6 PM	Tues Sept 5 4-5 PM	Weds Sept 6 4-5 PM
2024	Fri Jun 21 5-6 PM	Mon Jul 15 5-6 PM	Tues Jul 16 5-6 PM	Aug 1 5-6 PM	Aug 28 5-6 PM
2025	Mon Jun 23 5-6 PM	Tues Jun 24 5-6 PM	Weds Jun 25 2-3 PM	Mon Jul 28 5-6 PM	Tues Jul 29 5-6 PM

Q. How does FirstEnergy assign capacity costs to its customers?

A. The process of taking costs from the PJM capacity auction and ultimately assigning those costs to individual customers involves the following steps:

Step 1. PJM Sets a Capacity Obligation and Solicits Capacity Bids. To determine how much generation capacity is needed to serve peak load, PJM forecasts system peak demand. From there, PJM targets an installed reserve margin ("IRM")—currently set around 20%—that is sufficient to meet the 1-in-10 loss of load reliability standard. This capacity obligation is procured through PJM's annual capacity auction, called the Base Residual Auction ("BRA"), which results in a $/MW-day clearing price. In the latest BRA, which was conducted in December 2025 for the 2027/28 delivery year, prices across all zones cleared at the $333.44/MW-day price cap. The auction procured 6,516.6 MW less than the

[22] https://www.pjm.com/-/media/DotCom/planning/res-adeq/load-forecast/summer-2025-peaks-and-5cps.pdf , https://www.pjm.com/-/media/DotCom/planning/res-adeq/load-forecast/summer-2024-peaks-and-5cps.pdf , https://www.pjm.com/-/media/DotCom/planning/res-adeq/load-forecast/summer-2023-peaks-and-5cps.pdf , https://www.pjm.com/-/media/DotCom/planning/res-adeq/load-forecast/summer-2022-peaks-and-5cps.pdf , https://www.pjm.com/-/media/DotCom/planning/res-adeq/load-forecast/summer-2021-peaks-and-5cps.pdf

regional transmission organization ("RTO") reliability requirement, resulting in a 14.4% IRM, 5.6% below the target 20% reliability requirement.[23]

Step 2. FirstEnergy's Share of PJM Capacity Costs is Based on Customer Contribution to Peak Demand. PJM allocates system-wide capacity costs from the BRA to load serving entities ("LSEs") based on the percentage that overall customer demand represents relative to overall system demand during the 5CP hours.[24] Penelec, Met-Ed, West Penn Power, and Penn Power (*i.e.*, FE's Pennsylvania electric distribution companies), with their default service suppliers, each function as an LSE within PJM. For an example of how overall PJM costs are allocated to LSEs, in Summer 2025, the Met-Ed region had a weather normalized peak load of 2,940 MW relative to a PJM system-wide weather normalized peak load of 153,870 MW, representing 1.91% of the PJM peak. Met-Ed customers are thus collectively responsible for 1.91% of BRA costs.[25]

Step 3. Individual Customers are Allocated Capacity Costs Based on Their Actual or Imputed Contribution to Class Peak Load. Customer meters are used to measure each individual customer's demand during peak load hours, if they have a 15-minute interval meter, or peak load is imputed for other customers via rate class or customer class load profiles. Customers are then assigned an individual peak load contribution ("PLC") to determine their allocation of FE's overall capacity costs. The new PLCs for each customer are then effective from June 1 to the

[23] https://www.pjm.com/-/media/DotCom/markets-ops/rpm/rpm-auction-info/2027-2028/2027-2028-bra-report.pdf
[24] https://agreements.pjm.com/oatt/4946
[25] https://www.pjm.com/-/media/DotCom/planning/res-adeq/load-forecast/summer-2025-peaks-and-5cps.pdf

following May 31. For example, summer peaks in 2025 determine the PLCs assigned to each customer that are used from June 1, 2026 through May 31, 2027.

Step 4. FE then Allocates its Share of PJM Costs to Default Service Customer Classes by Aggregate PLC. For each default service class, FE calculates the contribution of each of its customer classes to overall peak load by calculating a class aggregate PLC. This metric is used to allocate FE's share of PJM capacity costs to each customer class. As an example, if Penelec's Commercial default service customer class represented 18% of Penelec's total peak load based on the 5CP hours, then the Penelec Commercial default service class would be allocated 18% of Penelec's share of overall capacity costs.[26]

Step 5. FE then Allocates the Customer Class Capacity Costs to Each Default Service Supplier. Each default service customer class is served by a different array of default service suppliers acting as load serving entities. Continuing with the example above if a default service supplier was serving 50% of Penelec's Commercial default service customer class, then that default service supplier would be liable for 9% (50% of 18%) of Penelec's capacity costs.

Q. How does net-metered excess generation from the Commercial default service customers lower the generation capacity obligation cost component of the PTC Rider rate?

[26] Note, these default service aggregate PLC metrics can and do change daily as FE customers move to and from default service. For this testimony it is easier to consider a simplified case where the aggregate PLC metric is stable for each PJM reliability year.

A. Net-metered excess generation produced during PJM's 5CP hours lowers the overall peak load and thus overall capacity cost obligations of the PJM capacity zone in which the customer-generator is located.

Q. How does the generation profile of a net-metered customer-generator align with the historical PJM 5CP hours shown in Table 3?

A. As discussed previously, the PJM 5CP hours occur between June 1 and September 30 each year. Over the past five years, the PJM 5CP hours have clustered between 2:00 PM and 6:00 PM EDT, with the most frequent occurring 5:00 PM to 6:00 PM EDT in July. Using capacity factor estimates from the System Advisory Model ("SAM") published by the National Laboratory of the Rockies, I produced an average capacity factor for a representative single-axis tracker ("SAT") project across the historical PJM 5CP hours combined with historical weather data.[27]

Table 3: Average Capacity Factor of SAT Solar PV Facility During Historical PJM 5CPs

	Avg 5CP	Peak 1	Peak 2	Peak 3	Peak 4	Peak 5
2021	58%	67%	66%	58%	37%	64%
2022	56%	64%	47%	57%	47%	64%
2023	49%	38%	64%	17%	64%	60%
2024	34%	9%	54%	46%	37%	26%

As shown in Table 3, solar production generally aligns with system peaks, producing an average capacity factor during 5CP hours of between 34% and 58% historically. Since this analysis uses historical weather years, the impact of variable weather (*e.g.*, cloudy days) is reflected in the results.

[27] Results end in 2024 given that weather data for 2025 was not available.

Q. Do net-metered customer-generators that produce during the 5CP hours receive a negative PLC?

A. No. Under FE's current practice, they do not. The minimum load that FE will assign a customer during an hour is zero MW, thus the lowest PLC a net-metered customer-generator can be assigned is a zero value PLC.

Q. Are negative PLCs prohibited by FERC or PJM?

A. No. In fact, FERC has explicitly approved the use of negative PLCs for another utility in the PJM. Commonwealth Edison ("ComEd") in Illinois has implemented a wholesale tariff allowing for a negative customer-level PLC for allocation of generation capacity costs and a negative Network Service Peak Load ("NSPL"), which are used in the allocation of transmission costs.[28] Allowing negative PLCs and negative NSPLs for net-metered customer-generators in FE's service territory is one of the key recommendations that I will discuss later in my testimony.

Q. If FE does not currently allow negative PLCs, how is the benefit of lower peak load from customer-generators accounted for? For example, if a net-metered customer-generator in Met-Ed territory produced excess generation during the 5CP hours during the summer of 2025, how would it impact Met-Ed customers starting June 1, 2026?

A. Regardless of whether FE explicitly measures and credits the customer-generator or the customer-generator's class for the reduced capacity benefit, the Met-Ed zone's peak load is reduced by all net-metered generation located on the distribution system as a function of basic physics. Whether an individual customer is assigned a negative PLC or a zero PLC

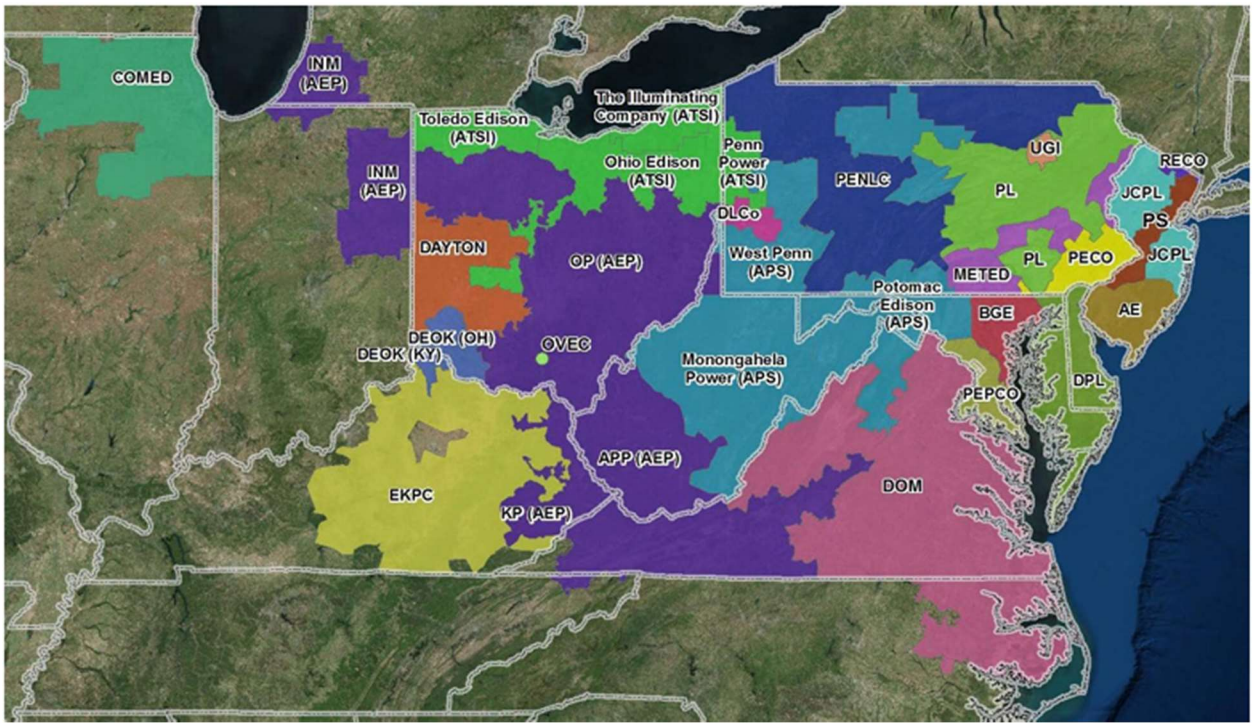
[28] Exhibit TM-4, ComEd PJM Open Access Transmission Tariff (Attachment M-2).

to account for that benefit does not impact the fact that the zonal coincident peak is lower due to the production from net-metered customers-generators. The PLC is simply an accounting construct at the customer and class levels to assign each customer and default service class its share of the zonal capacity obligation. As described above, each capacity zone (*e.g.*, Met-Ed, Penelec, ATSI for Penn Power, and APS for West Penn Power) is assigned a share of PJM system peak (zonal obligation) based on the capacity zone's 5CP usage.

Q. What is the connection between net-metered customer-generation coincident with the 5CP hours and a lower capacity obligation cost component of the various PTC Rider rates for FE customers?

A. The chain of actions which result in solar net-metered production coincident with the 5CP hours reducing the Commercial PTC Rider rate are as follows:

1. Net-metered excess generation coincident with the PJM 5CP hours reduces peak-hour load aggregate demand for the capacity zone of the net metering customer-generator (*e.g.*, during summer 2025).
2. That lowers the PLCs assigned to all retail customers in the capacity zone for the following delivery year (*e.g.*, June 2026-May 2027, which corresponds to the 2026-2027 delivery year).
3. That lowers future capacity procurement requirements (*e.g.*, for the 2026-2027 delivery year).
4. Which then in turn lowers default service supplier bid costs (*e.g.*, for the 2026-2027 delivery year).
5. Which then lowers the PTC Rider rate (*e.g.*, for the 2026-2027 delivery year).



Q. Is it correct that, in the absence of FE allowing a customer to register a negative PLC, the peak load reduction benefit from net-metered excess generation during the 5CPs accrues to all retail customers in the PJM zone?

A. Yes. Unless FE explicitly credits the reduction in peak load to an individual customer or customer class, the benefit shows up in reduced zonal peak load, which reduces that zone's share of overall PJM capacity obligations.

Q. What are the PJM load zones associated with the FE Rate Districts?

A. Met-Ed and Penelec have their own stand-alone PJM load zones located entirely within the Commonwealth of Pennsylvania. Penn Power is part of the larger ATSI PJM load zone, which includes parts of Ohio. West Penn Power is part of the larger APS load zone, which includes parts of Maryland, Virginia, and West Virginia.

Figure 4: PJM Load Zones[29]

[29] https://www.pjm.com/-/media/DotCom/library/reports-notices/load-forecast/2025-load-report.pdf

Q. What does this mean for electric distribution companies ("EDCs"), like Met-Ed and Penelec, that are also their own stand-alone PJM load zone?

A. It means that as currently constructed, the peak load reduction from net-metered customer-generator production during the 5CP hours accrues fully to ratepayers within the EDC.

Q. What does this mean for EDCs like West Penn Power and Penn Power that are part of a larger PJM zone that spans more than one state?

A. It means that as currently constructed, the peak load reduction benefit from net-metered customer-generator production during the 5CP hours accrues to all ratepayers within that broader PJM zone. In other words, the peak load reduction benefit from customer-generators in West Penn Power territory is currently being shared with customers in Maryland, Virginia, and West Virginia, and the peak load reduction benefit from customer-generators in Penn Power territory is currently being shared with customers in Ohio.

Q. Please provide more explanation on this point. Is it your testimony that in the absence of FE allowing the crediting of negative PLCs to a customer, the benefit of peak load reduction from Pennsylvania-based customer-generators is currently being shared with customers in Ohio, Maryland, Virginia, and West Virginia in the form of lower PJM capacity obligations?

A. For Penn Power and West Penn Power, that is correct. Most of those ATSI and APS capacity zone customers and loads are outside of Pennsylvania. That means the benefits created by Pennsylvania net-metered excess generation coincident with the 5CP hours in the form of lower capacity costs are shared primarily with non-Pennsylvania ratepayers. For Penelec and Met-Ed, since they have stand-alone PJM zones, the benefit is socialized across all their default service and shopping customers, all of whom are in Pennsylvania.

Q. Is it appropriate for customers in non-Pennsylvania load zones to benefit from reduced PJM capacity obligations stemming from Pennsylvania-based net-metered customer-generators?

A. No. It is inconsistent to have Pennsylvania ratepayers pay for the costs associated with compensating customer-generators while at the same time socializing the benefits associated with customer-generators across all ratepayers, including those in other states, particularly when there is an alternative in which all the benefits would accrue only to Pennsylvania ratepayers. From a cost allocation perspective, the ratepayers that bear the cost associated with compensating customer-generators should also be the ones to which FE allocates the benefits. It does not make sense to concentrate the costs of compensating net-metered customer-generators among a smaller group while socializing the monetary benefits across a larger group, especially when there is an appropriate solution that has already been implemented by another utility in PJM territory.

Q. Is the solution to have FE explicitly allocate the peak load reduction benefit at the EDC level (as is effectively being done currently in Penelec and Met-Ed due to their status as stand-alone PJM zones) instead of at the zonal level?

A. No. Even if FE could make such an allocation, which I am doubtful they currently could, that does not fully address the discrepancy between the customers to whom costs are allocated and the customers to whom benefits are allocated. Even in Penelec and Met-Ed, with stand-alone PJM load zones, the benefits associated with the peak load reduction from customer-generators are shared among all customers, including all default service customers and all customers that have opted out of default service and have chosen a third-

party retail electric provider, also known as an electric generation supplier ("EGS") in Pennsylvania electric industry terminology.

Q. Which customers bear the costs associated with compensating customer-generators?

A. The costs associated with compensating customer-generators are borne by the customer class to which the customer-generator is classified. For customer-generators taking service under the Commercial PTC Rider, net-metering expenses are borne by ratepayers in the Commercial default service class. For customer-generators served under the HP Rider, the cost is borne by ratepayers in the Industrial default service class.

Q. Is there a straight-forward solution to stop socializing the benefits of reduced PJM capacity obligations from customer-generators to ratepayers outside of Pennsylvania, or to ratepayers that have third-party retail electric providers and do not bear the costs associated with compensating customer-generators?

A. Yes, there is an appropriate solution. If FE would allow PLCs to be negative for customer-generators, as implemented in ComEd's PJM Open Access Transmission Tariff (Attachment M-2), then the benefits of the negative PLCs, namely the lower PJM capacity obligation, would accrue to the applicable FE customer class that bears the costs of compensating net metering customer-generators. This would align with the general principle that the customers bearing the costs associated with customer-generators should be the ones to receive the benefits. As most FE net-metered customer-generators are or have applied to take service on the Commercial PTC Rider, then all those benefits would accrue to the Commercial default service class of the applicable FE Rate District by ultimately decreasing the PTC Rider rate. For net-metered customer-generators on the HP Rider, the benefits would accrue to the Industrial default service class.

Q. Would allowing for customer-level negative PLCs only benefit the default service customer-generators that can generate negative PLCs?

A. No. Default service customer-generators are already being compensated for capacity value under the PTC Rider and HP Rider tariffs. Allowing their customer-level PLCs to be negative will not impact their excess generation payout. This is purely a question of how the benefits of the peak load reduction are accounted for. As described earlier in my testimony, for customers taking default service, customer-level PLCs are added together to determine a PLC for the entire default service customer class, which helps determine that class's share of PJM capacity obligations for the following reliability year.[30] Negative default service customer-generator PLCs would be added together with the PLCs of other default service customers in the same class, leading to an overall reduction in that class's PJM peak load, and thus an overall reduction in that default service class's share of PJM capacity obligations.

Q. What is FE's reason for not allocating the benefit of the peak load reduction and reduced capacity obligation costs to the class that is bearing the costs of compensating customer-generators?

A. My understanding of FE's position on this issue comes from its response to a discovery question seeking information about how FE allocates the benefits of PJM 5CP load reduction from customer-generators.[31] When asked to explain how the benefit would be allocated, FE responded: "FE PA commercial customers currently on the PTC rate do not

[30] In practice each customer is assigned a PLC for each reliability year. That PLC follows the customer to whatever LSE they are served by (either a default service or a competitive electric generation supplier). Thus, the discussion here is simplified by assuming no switching from default service to an electric generation supplier or vice versa.

[31] Exhibit TM-5 (FE PA Response to JSA ROG Interrogatory Set 2, No. 9).

receive a benefit from excess generation from customer-generators."[32] When asked to elaborate on how other customer classes benefit from a reduction in PJM-related capacity charges, FE responded: "Not applicable."[33] This is in keeping with FE's position that customer-generators provide zero benefit in exchange for their compensation, which is not supported by the physics of how the grid operates, as I have explained in my testimony. Even if FE disagrees with the rate or process through which customer-generators are compensated, it is simply a reality of physics and accounting constructs that customer-generators provide real benefits to the grid in the form of avoided energy, capacity, and transmission costs.

Q. What is the implication for FE customers of FE's position that customer-generators provide zero benefits in exchange for their compensation?

A. FE's position—that zero benefits accrue to customers from customer-generators—means that the benefits of reduced PJM capacity obligations is defaulting to being shared across all customers within the customer-generator's PJM load zone, which includes non-Pennsylvania ratepayers as well as Pennsylvania ratepayers that have chosen to opt out of default service and shop for their electricity. In other words, FE's refusal to acknowledge the benefits of 5CP peak load reductions from customer-generators is leading to the concentration of costs for compensating customer-generators within the default service class of customer-generators but socializing the benefits across a much larger group of customers. In my opinion, this result is inconsistent with the objective of least-cost

[32] *Id*.
[33] *Id*.

procurement for default service supply that is required by the Electricity Generation Customer Choice and Competition Act.[34]

Q. What is your recommendation to the Commission regarding the use of negative PLCs for customer-generators for the purpose of generation capacity?

A. I recommend that the Commission direct FE to allow negative PLCs in compliance with cost-based ratemaking and to achieve least-cost default supply procurement.

Q. Has the Commission approved the use of negative PLCs for customer-generators in other Pennsylvania electric utility service territories?

A. Yes. In approving the settlement agreement in UGI Utilities, Inc. – Electric Division's ("UGI") default service plan for the period June 1, 2025 through May 31, 2029 in Docket No. P-2024-3049343, the Commission approved new language in UGI's Rider B Generation Supply Service Surcharge that permits customer-generators to have a negative PLC.[35]

Q. Would it be necessary for FE to seek FERC approval to modify its PJM Open Access Transmission Tariff (Attachment M-2) to effectuate this recommendation?

A. I am not expressing a legal opinion, but I see nothing in FE's PJM Open Access Transmission Tariff ("Attachment M-2")[36] that precludes a customer from having a negative PLC. However, if tariff changes are required, as with all changes of tariffs, the authority having jurisdiction (in this case FERC) would have to approve those changes.

[34] 66 Pa. C.S. Section 2801-2812.

[35] Docket No. P-2024-3049343, Joint Petition for Approval of Non-Unanimous Settlement, Appendix A (ProForma Tariff Supplement) at 41. ("Any expense/credit line items added by PJM related to these services shall be allocated by dividing the total charges by the total net GSR-2 PLC and NSPL values in order to determine the per unit of PLC rate and per unit of NSPL rates that will be assessed. Customer-generators may have PLC and NSPL negative values related to PLC and NSPL hours indicating net generation to which rates shall be assessed.")

[36] Exhibit TM-6, FirstEnergy Zone PJM Open Access Transmission Tariff (Attachment M-2).

C. Net-metered Excess Generation Reduces FE's Transmission Obligation

Q. Please explain what drives transmission costs in FE's service territory?

A. Transmission costs in FE's service territory are driven by PJM's Network Integration Transmission Service ("NITS"), which is the mechanism through which transmission owners recover the cost of building, operating, and maintaining the regional high-voltage transmission grid. Like PJM capacity costs, NITS costs are assigned based on each customer's contribution to peak transmission demand, measured by its NSPL.

Q. How is NSPL calculated, and how does it differ from the PLC used to allocate capacity costs?

A. NSPL and PLC share the same fundamental logic. Both measure a customer's contribution to peak demand and use that measurement to allocate system costs. But, for FE, they differ in three important ways: the peak hours used, the treatment of demand response events, and the timing of when new values take effect.

Q. Please elaborate on how the calculation of NSPLs differs from the calculation of PLCs with respect to peak hours used?

A. For capacity costs, as described earlier, a customer's PLC is based on its load during PJM's highest system-wide peak hours (the 5CPs) occurring between June 1 and September 30. Those PLC values take effect June 1 of the following year and remain in effect until May 31. For transmission costs, FE's Attachment M-2 specifies that a retail customer's NSPL is calculated using the five highest peak hours during whichever season -- summer (June 1 through September 30) or winter (December 1 through March 31) -- contains the applicable Transmission Zone peak as reported by PJM. The customer's average load during those

five hours, grossed up for losses and scaled to match the Transmission Zone peak target, via a reconciliation factor, becomes that customer's NSPL.[37]

Q. Please elaborate on how the calculation of NSPLs differs from the calculation of PLCs with respect to the treatment of demand response?

A. For PLCs, load reductions from PJM demand response events are added back to produce an "unrestricted" peak load, ensuring that voluntary demand response curtailments do not affect a customer's capacity cost obligation. For NSPLs, FE's Attachment M-2 explicitly states that no such "add-back" applies.[38] This means that a customer that curtails load during a demand response event in an NSPL peak hour receives the full benefit of that curtailment in its NSPL calculation. As I will discuss, this makes the current exclusion of net-metered generation from the NSPL calculation more anomalous: the framework already recognizes and rewards load reductions from demand response in the NSPL calculation, but provides no parallel recognition for load reductions from customer generation.

Q. Please elaborate on how the calculation of NSPLs differs from the calculation of PLCs with respect to timing?

A. While PLC values take effect June 1 and remain in effect through May 31, NSPL values typically reset January 1 of the following calendar year. This means that a customer's transmission cost obligation can shift at a different point in the year than their capacity cost obligation.

Q. How does FE allocate NITS costs to its customers?

[37] Exhibit TM-6, FirstEnergy Zone PJM Open Access Transmission Tariff (Attachment M-2) at 5-6.
[38] *Id*. at 6.

A. The allocation of NITS costs from the transmission zone level down to individual customers follows a structure parallel to the capacity cost allocation described earlier:

1. The Transmission Zone's NITS Rate is Established. Each FE transmission zone files an Annual Transmission Revenue Requirement ("ATRR") with FERC, reflecting the total annual cost of transmission infrastructure serving that zone. That revenue requirement, divided by the zone's single highest annual peak load, produces the zonal NITS rate expressed in $/MW-year.
2. Each Customer's NSPL is Calculated from Metered Data. On a customer-by-customer basis, FE calculates each retail customer's NSPL by identifying the five peak hours during the applicable seasonal peak period, measuring the customer's average metered load during those hours, grossing up for losses, and applying an NSPL Daily Scaling Factor to ensure the sum of all customer NSPLs matches the Transmission Zone target reported by PJM.
3. Individual Customer NSPLs Determine Each Customer's Share of Class Transmission Costs. Each retail customer's NSPL determines its proportional share of its customer class's total NITS cost obligation, flowing through to the applicable PTC Rider or HP Rider rates in the same manner as capacity costs.

Q. Do net-metered customer-generators that produce during the peak transmission hours used to calculate NSPL receive a negative NSPL?

A. No. Under FE's current practices, as with PLCs, the minimum NSPL assigned to any customer is zero. A net-metered customer-generator that is a net supplier to the grid during a NSPL peak hour is treated identically to a customer drawing no load at all, receiving no recognition for the transmission cost reduction its generation provides to other customers

in the zone. This is particularly anomalous given that, as noted above, FE's own Attachment M-2 already recognizes demand response load reductions in the NSPL framework. Net-metered generation that reduces net load during a peak hour has the same physical effect on the transmission system as demand response curtailment, but the two are treated differently for NSPL purposes under FE's current practices.

Q. Has the Commission approved the use of negative NSPLs for customer-generators in other Pennsylvania electric utility service territories?

A. Yes. In approving the settlement agreement in UGI's default service plan for the period June 1, 2025 through May 31, 2029 in Docket No. P-2024-3049343, the Commission approved new language in UGI's Rider B Generation Supply Service Surcharge that permits customer-generators to have a negative NSPL.[39]

Q. Are negative NSPLs prohibited by FERC or PJM?

A. No. As with negative PLCs, FERC has explicitly approved the use of negative NSPLs for another PJM utility. ComEd in Illinois has implemented a tariff under which load attributable to net-metered and community solar projects may reflect both consumption and generation in the NSPL calculation, and therefore can result in a positive or negative value for any individual customer. Importantly, ComEd's FERC-approved tariff specifies that in no instance can an LSE's total transmission costs be allowed to go negative — meaning the negative NSPL benefit is bounded at the LSE level. Individual customer NSPLs may go negative, reducing that customer class's aggregate share of zone

[39] Docket No. P-2024-3049343, *Joint Petition for Approval of Non-Unanimous Settlement*, Appendix A (ProForma Tariff Supplement) at 41. ("Any expense/credit line items added by PJM related to these services shall be allocated by dividing the total charges by the total net GSR-2 PLC and NSPL values in order to determine the per unit of PLC rate and per unit of NSPL rates that will be assessed. Customer-generators may have PLC and NSPL negative values related to PLC and NSPL hours indicating net generation to which rates shall be assessed.")

transmission costs, but the zone itself cannot receive a net credit.[40] The same structure would apply to FE if it adopted negative NSPLs for net-metered customer-generators.

Q. What is the connection between net-metered customer-generator production coincident with the NSPL peak hours and a lower transmission cost component of the PTC Rider rate?

A. The chain of actions is directly analogous to the capacity cost chain described earlier:

1. Net-metered excess generation coincident with the NSPL peak hours reduces aggregate net load for the applicable FE transmission zone.
2. That lowers the NSPLs assigned to all retail customers in the zone for the following calendar year.
3. That lowers the zone's total NITS cost obligation for the following year.
4. Which lowers default service supplier bid costs for the following year, or in the case if FE's proposal was approved for DSP VII, FE's cost for acquisition costs would decrease.
5. Which lowers the PTC Rider or HP Rider rate for the following year.

Q. Does the same cross-state subsidy concern raised in the capacity cost section apply to transmission costs for Penn Power and West Penn Power customers?

A. Yes, and for the same structural reason. Because Penn Power's transmission load sits within the ATSI zone and West Penn Power's sits within the APS zone, both of which span multiple states, the NSPL-based transmission cost reduction benefit from Pennsylvania-based net-metered customer-generators is currently socialized across all customers in those broader multi-state zones. Pennsylvania default service ratepayers bear the cost of

[40] Exhibit TM-4, ComEd PJM Open Access Transmission Tariff (Attachment M-2) at 3.

compensating those customer-generators, while the transmission cost reduction benefit is shared with customers in Ohio, Maryland, Virginia, and West Virginia. For Met-Ed and Penelec, which are stand-alone transmission zones, the benefit is at least socialized entirely within Pennsylvania, but it is still spread across all customers in the zone, including shopping customers who do not bear the costs of compensating customer-generators. Allowing negative NSPLs at the customer class level -- precisely as ComEd has implemented -- would return that benefit to the Pennsylvania default service customer class that bears the associated costs, consistent with the principle that costs and benefits should be allocated to the same group of ratepayers.

Q. Historically, when have FE's transmission zone peaks typically occurred?

A. The following table shows the PJM Network Service Peak Loads for the four FE Pennsylvania transmission zones for the 2024, 2025, and 2026 NSPL years, reflecting zonal transmission peaks that occurred in calendar years 2023, 2024, and 2025, respectively.

Table 4: PJM Network Service Peak Loads for 2024[41], 2025[42], and 2026[43]

Transmission Zone	Year	Zonal Peak (MW)	Date	Hour (EPT)
APS	2026	9,791.6	1/22/2025	7-8 AM
	2025	8,937.6	1/22/2024	7-8 AM
	2024	9,302.9	12/23/22	5-6 PM
ATSI	2026	12,658.7	6/24/2025	3-4 PM
	2025	12,508.3	6/20/2024	2-3 PM

[41] PJM Network Service Peak Loads (NSPL) for 2024. Available at: https://www.pjm.com/-/media/DotCom/markets-ops/settlements/network-service-peak-loads-2024.pdf
[42] PJM Network Service Peak Loads (NSPL) for 2025. Available at: https://www.pjm.com/-/media/DotCom/markets-ops/settlements/network-service-peak-loads-2025.pdf
[43] PJM Network Service Peak Loads (NSPL) for 2026. Available at: https://www.pjm.com/-/media/DotCom/markets-ops/settlements/network-service-peak-loads-2026.pdf

	2024	11,963.0	9/5/2023	4-5 PM
Met-Ed	2026	2,999.9	6/24/2025	6-7 PM
	2025	3,066.9	7/16/2024	3-4 PM
	2024	2,890.1	9/6/2023	5-6 PM
Penelec	2026	2,908.6	1/22/2025	8-9 AM
	2025	2,953.2	7/10/2024	2-3 PM
	2024	2,762.8	9/6/2023	5-6 PM

The data reveal meaningful variation in when transmission zone peaks occur across the four FE zones. Met-Ed and ATSI (which includes Penn Power) have shown a consistent pattern of summer peaks, with Met-Ed peaking in September 2023, July 2024, and June 2025 across the three years shown, and ATSI peaking in September 2023, June 2024, and June 2025. By contrast, Penelec has shown a mix of winter and summer peaks, with peaks in September 2023, July 2024, and January 2025. APS (which includes West Penn Power) has produced consistent winter peaks – December 2022, January 2024, and January 2025. This variability stands in contrast to the PJM capacity 5CP hours, which by definition always occur during the summer months of June through September.

Q. What does the variability in FE's transmission zone peak timing mean for solar PV customer-generators' ability to reduce transmission costs?

A. For zones where transmission peaks have consistently occurred during summer afternoon hours, most notably ATSI (Penn Power) and Met-Ed, the alignment with solar PV generation, and thus the ability to reduce transmission cost obligations, is quite strong. As shown in Table 3, presented earlier in this testimony, a representative single-axis tracker facility in central Pennsylvania generates at 34–58% of rated capacity during the 2:00 PM to 6:00 PM EDT window that has captured most of the ATSI and Met-Ed transmission

peaks in recent years. For zones where transmission peaks have occurred during winter morning hours, most notably APS (West Penn Power), which peaked between 7:00 AM and 8:00 AM in January in both 2024 and 2025, the alignment with solar PV generation is low. Solar generation is low during winter morning hours, meaning that solar PV net-metered customer-generators in West Penn Power territory would provide less reduction in the transmission zone peak that drives NSPL calculations for years in which transmission peaks occur in the winter.

Q. Does the lower correlation of transmission zone peaks with solar PV generation impact your recommendation to allow the generation of negative NSPLs?

A. No. The policy case for allowing negative NSPLs rests on a principle that applies regardless of generation type: customers whose generation reduces net load during transmission peak hours should have that contribution reflected in their NSPL. Solar PV is simply one technology among many. The negative NSPL and negative PLC frameworks are technology-neutral by design, crediting any generation that measurably reduces net load during the relevant peak hour, regardless of fuel source. A dairy digester, a combined heat and power facility, or a wind installation that happens to generate during a winter morning peak hour would provide the same measurable transmission benefit that the current framework fails to recognize. For solar PV customer-generators specifically, the zone-by-zone picture is mixed. As the transmission peak data above show, Met-Ed and ATSI (Penn Power) have consistently peaked during summer afternoon hours – precisely the window during which solar PV generation is strongest. Customer-generators in those zones are likely to generate meaningful negative NSPL values under the proposed reform. For APS (West Penn Power), which has peaked during winter mornings in recent years, solar PV

generation would be low at the time of the zone peak, and the practical fiscal impact of the reform would be more modest for that zone. Penelec falls somewhere in between, having alternated between summer and winter peaks across the three years shown, meaning that solar PV customer-generators may or may not contribute depending on the year. Ultimately, this variability is an argument *for* the reform, not against it. Rather than requiring regulators to predict in advance which technologies and which zones will align with transmission peaks, a negative NSPL framework allows each customer-generator's actual metered output during the relevant peak hour to speak for itself. Zones and technologies that align will naturally generate negative NSPLs; those that do not align will not generate negative NSPLs. The framework is self-correcting by design.

Q. How would the allowance of generating negative NSPLs impact FE customers?

A. Similar to PLCs, the benefit of allowing NSPLs to be negative is to permit the benefits of negative NSPLs to accrue to the applicable default service customer class from which a net-metered customer-generator takes service. As most FE net-metered customer-generators are on or have applied to be on the Commercial PTC Rider, most of the benefits would accrue to the Commercial default service class of the applicable FE Rate District by ultimately decreasing the Commercial PTC Rider rate. For customer-generators under the HP Rider tariff, their negative NSPLs would ultimately reduce the HP Rider class's rate.

Q. What is FE's reasoning for not allocating the benefit of the peak load reduction and reduced transmission obligation costs to the class that is bearing the costs of compensating customer-generators?

A. My understanding of FE's position comes from its response to a discovery question about how FE allocates the benefits of transmission peak load reduction from customer-

generators. When asked how the benefits of a decrease in transmission peak load are allocated among its ratepayers, FE replied: "Not applicable."[44] When asked to explain how a reduction in transmission peak load from net-metered customer-generator production could impact other customers, FE stated:

> Transmission costs are an allocation of costs by class of service and depend on the load contributions of responsible entities at the coincident peak. While excess generation at the coincident peak could theoretically affect load share, any actual reduction or reallocation is dependent upon the actions of other entities, including customers. Furthermore, peak load contribution is only one factor in the calculation of retail transmission costs. Thus, any excess generation from net metered customers does not necessarily result in any increase or decrease in transmission costs for retail customers and wholesale default suppliers.[45]

Q. What is your interpretation of FE's response to this question about the benefits of customer-generator peak load reductions and how they are allocated?

A. FE's response does not directly address how the benefits of transmission peak load reduction from customer-generators are allocated among its ratepayers. When asked that specific question, FE responded, "Not applicable," which is the same response it provided when asked the parallel question about capacity cost benefits. Given the detailed NSPL allocation framework that I have already explained, I do not find FE's characterization to be accurate. FE further states that because peak load contribution is "only one factor" in the calculation of retail transmission costs, excess generation from net-metered customer-generators "does not necessarily result in any increase or decrease in transmission costs." Notably, unlike FE's response to the parallel capacity cost question (to which FE stated that customer-generators provide no benefit to other customers), its transmission response stops short of that categorical denial, acknowledging instead that excess generation "could

[44] Exhibit TM-7, FE PA Response to JSA ROG Interrogatory Set 4, No. 1.
[45] *Id*.

theoretically affect load share." This implicit acknowledgment that a transmission benefit exists, even if qualified, is itself significant. Regardless, a lower aggregate NSPL for a PJM zone does directly reduce that zone's share of NITS costs, which in turn reduces the applicable PTC Rider or HP Rider rate. The fact that NSPL is one component among several does not mean changes in NSPL have no transmission cost impact.

Q. What is the implication for FE customers due to FE's failure to account for the transmission cost reduction benefits provided by net-metered customer-generators?

A. The practical consequence is the same as in the capacity cost context: the benefits of reduced transmission peak load from net-metered customer-generators are socialized across a broad group of ratepayers, including non-Pennsylvania ratepayers in the ATSI and APS zones, while the costs of compensating those customer-generators remain concentrated within the default service customer class.

Q. Do you believe that the Commission should direct FE to correct this problem?

A. Yes. FE's practice results in a problematic cost-benefit allocation asymmetry that the Commission should direct FE to correct.

Q. What is your recommendation to the Commission regarding the use of negative NSPLs for customer-generators for the purpose of transmission cost allocation?

A. The Commission should direct FE to allow negative NSPLs for net-metered customer-generators for the same reason it should direct FE to allow negative PLCs. Doing so would (1) align transmission cost allocation with the physical reality that net-metered excess generation reduces peak transmission demand, (2) correct the current anomaly by which demand response reductions are recognized in the NSPL framework but equivalent generation reductions are not, and (3) ensure that the transmission cost reduction benefits

created by Pennsylvania net-metered customer-generators accrue to the Pennsylvania default service customer class that bears the costs of compensating those generators, rather than being socialized across a broader group of ratepayers that does not share those costs.

Q. Would it be necessary for FE to seek FERC approval to modify its Attachment M-2 to effectuate this recommendation?

A. As I stated regarding my negative PLC recommendation, I am not expressing a legal opinion, but I have found nothing in FE's Attachment M-2 that would preclude a customer from having a negative NSPL.

Q. You have provided thorough explanations of how net-metered customer-generators could decrease the rate impacts that were put forth in Exhibit DMY-7. Are you able to provide alternative estimates of the Commercial PTC Rider impacts with and without the allowance of negative PLCs and negative NSPLs?

A. Yes. Before turning to that quantification in Section V, I will address the full range of value that net-metered customer-generators provide to the grid — including benefits that flow to the compensating customer class specifically, and others that are more broadly shared.

IV. FE'S ESTIMATE OF IMPACT OF NET-METERING PROJECTS DOES NOT CONSIDER ADDITIONAL SOCIALIZED BENEFITS

A. Value of Solar Overview Discussion and Analysis

Q. Please describe the relevance of an assessment of the value of net-metered excess generation to the issues addressed in your testimony.

A. When considering an appropriate compensation rate for net-metered excess generation, the value associated with such generation provides a useful benchmark to evaluate the reasonableness of such compensation. Specifically, given that FE proposes to move certain net-metered customer-generators from the PTC Rider to the HP Rider, such a proposal begs

the question: does the value associated with such generation justify compensation at a level more similar to the PTC Rider rate or the HP Rider rate?

Q. Please outline your general approach for developing an assessment of the value of net-metered excess generation.

A. For the analysis presented in this testimony, I assessed the value of net-metered excess generation from a FE ratepayer perspective. As such, only benefits that result in dollar savings for FE customers, either directly or indirectly, were quantified. Notably, this includes benefits that flow to customer classes outside the customer-generator's class. To estimate such benefits, I leveraged publicly available studies, PJM-reported data, and third-party data when necessary to assemble its best estimate of $/kWh benefits over the 2023/2024, 2024/2025, and 2025/2026 delivery years.

Q. What other perspectives are typically explored when conducting a value of solar analysis?

A. The value of solar analysis can be conducted from a range of perspectives. Most typically, in addition to a ratepayer perspective, analysis is conducted from the perspective of the control area (*i.e.*, PJM) as a whole, or from the perspective of society at large.

Q. What were the results of your value of solar analysis?

A. The results of my analysis are provided below in Table 5. Importantly, this analysis represents the FE ratepayer perspective, meaning that only benefits that flow to the ratepayers of the FE Rate District in question are included. As discussed throughout this testimony, under FE's proposed approach, certain benefits may be realized by customers outside of the customer-generator's class.

Table 5: Total FE Ratepayer Value of Solar in $/MWh by Delivery Year

Delivery Year	Penelec	Met-Ed	West Penn Power	Penn Power
2023/2024	$57.60	$58.75	$47.10	$70.10
2024/2025	$68.13	$73.29	$55.52	$78.89
2025/2026	$111.68	$117.96	$102.73	$121.24

Q. How would a value of solar analysis from a PJM or societal perspective change the results, and what is the implication for the purposes of your testimony?

A. Generally, the ratepayer perspective adopted in this analysis is the most restrictive in terms of the benefits quantified and applied. For instance, a PJM perspective may include benefits that accrue to customers of other utilities, including out-of-state ratepayers, resulting from the price suppressive effects of incremental solar generation on wholesale energy and capacity prices. In addition, a societal perspective would generally include benefits associated with environmental and human health impacts of avoided fossil generation. Thus, the results presented in this analysis are intended to represent a subset of total potential benefits that are both monetizable and accrue to FE customers.

Q. Are you including the value of alternative energy credits ("AECs") in your value of solar analysis?

A. No. While the production of AECs could provide value to FE ratepayers, I assume they do not, because the net-metered customer-generators are assigned the AECs and therefore monetize the AECs for their own benefit and not to the benefit of ratepayers.

Q. What components of the value of net-metered excess generation did you quantify in the analysis presented in this testimony?

A. I quantified benefits associated with energy, capacity, transmission, and demand reduction induced price effects ("DRIPE"). DRIPE benefits were applicable to both energy and

capacity. For capacity and transmission benefits, I separately quantified benefits associated with solar generation's ability to reduce the share of fixed costs borne by FE customers (*i.e.*, FE's slice of the cost "pie") in addition to benefits associated with solar generation reducing total capacity and transmission expenses borne by all relevant PJM utilities (*i.e.*, the size of the cost "pie"). This results in the following benefit categories:

1. Energy
2. Capacity (Reduced Share of Costs + Reduced Total Costs)
3. DRIPE (Energy + Capacity)
4. Transmission (Reduced Share of Costs + Reduced Total Costs)

Q. Please provide an overview of each value component and its relevant attributes.

A. A high-level overview of each value component and to whom each component's value accrues is provided below in Table 6. In all cases in which potential benefits accrue to parties other than FE customers, I only included the portion of benefits attributed to FE customers in the results presented.

Table 6: Summary of Benefit Components – As Proposed by First Energy

Value Component	Units	Component Value Provided	To Whom Component Value is Provided	How Value is Included in DSP Rate	What portion of value flows through to DSP of FE C-G's customer class (vs. socialized over all of PJM)?
Energy	kWh	Avoided energy sales	DSP of C-G's customer class	Hourly LMP	Full value flows through
Capacity - Share of Costs (*i.e.*, reduction of FE's slice of pie)	kW	Decrease in PLC based on PJM 5CP Metric	All customers in the same FE District applicable capacity zone	Embedded in HP Cap-AEPS-Other Purchases	Still primarily socialized, though a larger fraction of the aggregate PLC reduction goes to DSP of C-G's customer class relative to benefits socialized PJM-wide
Tx - Share of Costs (*i.e.*, reduction of FE's slice of pie)	kW	Decrease in NSPL based on Tx Zone hybrid 1CP/5CP metric	All customers in the FE Utility District TX zone via Reconciliation Factor	Currently embedded in HP Cap-AEPS-Other Purchases, proposed as a separate component line item	Still primarily socialized, though an even larger fraction of the aggregate NSPL reduction goes to DSP of C-G's customer class relative to benefits socialized PJM-wide
Capacity - Total Cost Reduction (*i.e.*, reduction of size of pie)	kW	Decrease in capacity obligation for subsequent reliability years	All PJM customers	Embedded in HP Cap-AEPS-Other Purchases	Socialized
Tx - Total Cost Reduction (*i.e.*, reduction of size of pie)	kW	Decrease (theoretically) in relevant ATRR	All customers of PJM Tx zone	Currently embedded in HP Cap-AEPS-Other Purchases, proposed as a separate component line item	Socialized
DRIPE - Energy	kWh	Increased low-cost supply results in a decrease in energy price	All PJM customers	Hourly LMP	Socialized
DRIPE - Capacity	kW	Increased low-cost supply results in a decrease in capacity price	All PJM customers	Embedded in HP Cap-AEPS-Other purchases	Socialized

Q. For the energy benefit component, please describe in greater detail the component value provided and to whom the value is provided.

A. I have confirmed that FE does not monetize excess generation received from net-metered customer-generators; instead, FE treats this energy as a load reducer.[46] As such, the energy benefit component represents the value associated with avoided energy purchases due to the net negative contribution from customer-generators. As discussed above, such energy is assigned to the default service supplier of the customer-generator's class, and thus the value accrues to the same default service customers to which net-metering expenses accrue.

Q. For the capacity benefit components, please describe in greater detail the component value provided and to whom the value is provided.

A. I quantified two "pie" related benefits associated with capacity.

First, utilities are assigned capacity obligations based on their peak load contribution during PJM's 5CPs. As such, solar generation acting as a load reducer occurring coincident with PJM's 5CP would reduce the **share** of PJM-wide capacity expenses borne by the utility serving a customer-generator. This process is explained in detail earlier in my testimony. Notably, this benefit would not change the total costs region-wide but rather would shift costs away from the utility in question. Such benefits would accrue to all customers in the same capacity zone.

Second, while the capacity rights of net-metering customers are not monetized via bidding into the PJM forward **capacity** market, the capacity of projects still provides benefits to ratepayers in PJM more broadly because of how peak load reductions impact

[46] *See*, Exhibit TM-8 (FE Response to JSA ROG Interrogatory Set 2, No. 4) and FE PA Statement No. 1 at 17:12-14, which states "… excess energy from intermittent net-metered customer-generators is recognized financially as an aggregate reduction of the load served by winning bidders in the Company's default service auctions."

the development of inputs to PJM's forecasted capacity requirements. It ultimately lowers the quantity of MW of unforced capacity that PJM sets to be procured (*i.e.*, the quantity of capacity demanded or the capacity demanded "size of pie"). Specifically, solar generation during PJM's 5CP hours acts as a load reducer and would be reflected in data informing planning assumptions and thus reduce the total costs associated with capacity region wide. Such benefits would accrue to all customers within the PJM region, but I have only quantified the portion of benefits that would be realized by customers in the relevant FE Rate District due to reduced demand for capacity PJM-wide.

Q. For the transmission benefit components, please describe in greater detail the component value provided and to whom the value is provided.

A. Similar to the capacity benefits, I have quantified two "pie" related benefits associated with transmission.

First, solar generation acting as a load reducer occurring coincident with the seasonal zonal 5CP can reduce the NSPL applicable to the transmission zone. As a result, net-metered excess generation contributions to lowering the NSPL can result in reduced share of transmission charges (*e.g.*, NITS costs) for the customers in the applicable FE Rate District.

Second, solar generation acting as a load reducer occurring coincident with the seasonal zonal 5CP can defer transmission investments to the extent that peak load growth absent the load reduction effect of solar would have required additional system investments. The costs associated with such future buildout (*i.e.*, future "size of the pie" increases) is reflected in Transmission Enhancement Charges, which recover costs associated with system expansion. Such benefits (or, avoided Transmission Enhancement

Charges) would flow to all customers of a transmission zone, given that the cost of any buildout would also be allocated across such customers.

Q. For the DRIPE benefit components, please describe in greater detail the component value provided and to whom the value is provided.

A. The energy and capacity DRIPE benefit components quantify the price impact of the reduction in wholesale demand caused by generation within the distribution network. Specifically, solar acting as a load reducer can reduce demand for energy and capacity in wholesale markets, thereby resulting in a lower clearing price as compared to a scenario in which such solar generation did not reduce demand. In other words, in both cases, the reduction in demand drives the marginal unit to be lower in the supply curve, resulting in cheaper clearing prices. This benefit component is unique in that it describes a monetized benefit, but one that is not directly measurable given that it is the product of an indirect market impact.

The benefit of this price suppression is realized through the resulting reduced energy and capacity prices. Given this, the benefits are socialized to all PJM customers. However, for the purposes of our analysis, I quantify only the benefits that accrue to the FE Rate District in question.

Q. Are there other components that were not quantified that represent potential value to FE customers under a ratepayer perspective?

A. Yes. I identified two additional benefits that are likely non-zero but are difficult to quantify. As such, I have not quantified such benefits but include discussions of them below for the purpose of building the record. These are: (1) avoided distribution investments, and (2) benefits from interconnection upgrades funded by customer-generators.

Q. Please describe the avoided distribution investment and explain why it was not quantified.

A. Similar to avoided transmission investments, solar interconnected to the distribution system has the potential to reduce peak load experienced by distribution infrastructure. Such peak load reductions will defer certain capacity-related distribution investments, producing an avoided cost benefit. However, the quantification of such benefits can be difficult, given that the impact of solar on the distribution system is location- and context-specific. Given this, it is difficult to derive a utility- or state-wide average for modeling, especially given a lack of identified third-party studies on this topic. As such, I determined that, although this benefit is likely non-zero, it is most appropriate to note it at a conceptual level but not quantify in dollar terms.

Q. Please describe the benefits from interconnection upgrades funded by customer-generators and why they were not quantified.

A. Customer-generators interconnecting to the distribution system are often required to fund system modifications necessary to facilitate their interconnection. These upgrades are often sized to allow for sufficient hosting capacity headroom for the project in question. It is possible that the upgrades funded by customer-generators also will deliver shared benefits to FE ratepayers more broadly. For example, a net-metered project may have to fund an upgrade of the local distribution circuit to enable its output to be moved to the nearest distribution substation. This upgrade may increase the capacity of that circuit to serve other new loads from that upgraded circuit and provide a new source of local generation to serve load growth from that distribution substation. In addition, upgrades funded by customer-generators could result in the early replacement of infrastructure relied on by ratepayers,

thereby creating value by deferring ratepayer-funded replacements of such infrastructure. Finally, infrastructure that is upgraded at the customer-generator's expense may provide the opportunity to use enhanced control and remote sensing equipment which provides reliability benefits.

These benefits were not quantified because, similar to avoided distribution investments, they are context- and location-specific. In addition, the interconnection of distributed generation could also pose reliability costs that would need to be accounted for. Given this, I determined that, although this benefit is likely positive, it is most appropriate to note it at a conceptual level but not quantify it in dollar terms.

B. Value of Solar Methods

Q. How did you quantify the benefit categories discussed above?

A. First, I started with the conceptual understanding discussed above of FE's accounting practices, PJM cost allocation practices, and net-metered customer-generators' impact on metrics relevant to such practices. Next, I assembled relevant market and solar PV performance data, including publicly available studies, PJM-reported data, and supplemental third-party data when necessary. Such data was leveraged to produce high-level estimates of the value of solar in $/kWh terms for the 2023/2024, 2024/2025, and 2025/2026 delivery years. A detailed description of my methods for each benefit component is provided below.

Q. What did you use for PV performance data?

A. I utilized production outputs from the SAM published by the National Laboratory of the Rockies. A single location of State College, Pennsylvania was used because it approximates the geographic center of Pennsylvania and is thus expected to represent a

rough average of irradiance experienced by solar projects for all FE Rate Districts. SAM produces production estimates specific to a historical weather year, in addition to a typical meteorological year ("TMY"). Both types of output were used for varying benefit components, as described below. I adopted SAM model defaults for a majority of solar PV system configuration inputs, but revised SAM inputs to model a single-axis tracking facility, as opposed to the fixed-axis default. Hourly production outputs were transformed to adjust for daylight saving time as SAM's default results are presented in standard time.

Q. For benefit components that relate to peak load reductions, how did you quantify such reductions?

A. Peak load reductions are a function of the assumed hourly PV production profile and hourly load. For all benefits relating to peak load reductions (namely, capacity and transmission-related benefits), I utilized actual historical hourly load as provided by the PJM Data Miner, combined with PV production data based on actual historical weather years from 2021-2024 to determine the solar capacity factor (*e.g.*, coincidence factor) at relevant peak hours. PV production based on historical weather years were used to ensure that the same weather informing load curves was reflected in PV production curves.

Depending on the benefit component in question, the 1CP, representing the single annual peak, or the 5CP, representing the average coincidence over the top five peak hours, was utilized. For 5CP calculations, I only applied one peak per day (*e.g.*, excluding consecutive peaks from a single weather event), consistent with the practices reflected in PJM's reporting of historical peaks.[47] In addition, certain benefit components required an assessment of peak load from the RTO perspective or the zonal perspective. Such specifics

[47] For example, *see*: https://www.pjm.com/-/media/DotCom/planning/res-adeq/load-forecast/summer-2024-peaks-and-5cps.pdf.

are discussed below. In all cases, the weather-year-specific coincidence factors calculated from 2021-2024 were averaged to produce a single representative value for the benefit and/or zone in question.

Q. How did you calculate the avoided energy benefit component?

A. To calculate the avoided energy benefit component, I calculated the weighted average Locational Marginal Prices ("LMPs") applicable to each FE Rate District's zone over each delivery year. LMPs were weighted based on the TMY production curve from SAM, reflecting the impact of solar PV's daily and seasonal variation on avoided energy value. The resulting prices were then grossed up to reflect distribution-level line losses specific to each utility, reflecting that if such energy had not been avoided at the distribution level, additional kWh would need to be generated from transmission-connected generators to meet the same customer load. Transmission line-losses were not included in the gross up, given that the price impacts of transmission line losses are already included in LMPs. For the 2025/2026 delivery year, which has not closed at the time of the analysis, I utilized a forecast of hourly LMPs provided by Standard and Poors to fill out the delivery year. Given this, for the 2025/2026 delivery year, the values reported represent a blend of actual and forecasted prices.

Q. How did you calculate the capacity benefit associated with reduced share of capacity costs?

A. First, I collected historical capacity prices for each delivery year assessed. Zone-specific capacity prices were used in any years in which constraints produced differential pricing to the RTO.[48] Next, I calculated the PJM 5CP, as discussed above, resulting in a factor of

[48] In certain years, FE's various zones were constrained and thus resulted in capacity clearing prices higher than the overall RTO clearing price.

49%. This was then used to calculate a solar-specific $/MW-year benefit, reflecting solar's partial contribution to reducing the PJM 5CP. This value was then grossed up to account for utility-specific transmission and distribution line losses and then converted to a $/MWh value based on the assumed DC capacity factor of 17.5%. The assumed capacity factor was the average capacity factor resulting from SAM outputs for the weather years assessed (2021-2024).

Q. How did you calculate the capacity benefit associated with avoided capacity costs via reduced capacity requirements?

A. The process to calculate the capacity benefit associated with avoided capacity costs via reduced capacity requirements (*e.g.*, reducing the size of the cost "pie" that is allocated to all PJM utilities) is a similar process to the calculation of the benefit associated with the reduced share of capacity costs (*e.g.*, reducing the size of the slice of the cost "pie" assessed to a given utility). This is because capacity planning is expected to continue to rely on metrics such as the PJM 5CP when determining the capacity requirements in the region, and historical capacity prices are a strong proxy for the dollar value benefits of reductions to such requirements. Crucially, the primary difference in calculating this benefit is that it accrues to all utilities in PJM. As such, I de-rated this component to reflect only the share of benefits that would accrue to the FE Rate District in question. To do so, I utilized each utility's share of the total PJM Zonal 5CP as a proxy for how such allocations would occur. In addition, this benefit was grossed up to account for the planning reserve margin.

Q. How did you calculate the transmission benefit associated with the reduced share of transmission costs?

A. First, I compiled NITS rates, as reported by FE, from 2021-2026. Next, I calculated the seasonal zonal 5CP (that is, the zonal 5CP occurring during the season in which the 1CP is occurring). This coincidence factor was then used to de-rate the $/MW-yr NITS rates to reflect the share of solar PV production in relevant hours that contributes to reduced transmission cost allocations for the relevant FE transmission zone. This value was then grossed up to account for utility-specific transmission and distribution line losses,[49] converted to delivery year, and then converted to a $/MWh value based on the assumed DC capacity factor of 17.5% referenced above.

Q. How did you calculate the transmission benefit associated with avoided transmission costs via reduced transmission requirements?

A. First, we compiled Transmission Enhancement Charges specific to each zone from 2021 through 2025, as reported by PJM.[50] These values (in $/MWh) were then translated to PV-specific $/MWh values using an identical process to the one described above, applicable to the reduced share of transmission costs benefit component. Finally, the resulting value was de-rated to reflect only the share of benefits flowing to the FE Rate District in question, given that benefits accrue to all customers in the relevant transmission zone.

Q. For both Energy and Capacity DRIPE benefit components, please describe the primary source on which you based its modeled results.

[49] Transmission losses are included in LMP prices for energy, so there is no separate transmission loss adjustment for energy. However, a loss adjustment is appropriate for the avoided capacity components.
[50] Available at: https://www.pjm.com/markets-and-operations/billing-settlements-and-credit.

A. I used the report entitled *Pennsylvania Demand Reduction Induced Price Effects Study* ("DRIPE Study") submitted to the Pennsylvania Public Utility Commission in May 2024 by the PA Act 129 Statewide Evaluator and prepared by Demand Side Analytics.[51]

Q. Based on the DRIPE study referenced above, explain how you calculated the Energy DRIPE benefit components.

A. I utilized the published Energy DRIPE Year 1 values for Planning Year 18 (delivery year 2026/2027) for each FE Rate District. I converted the published Energy DRIPE Year 1 values for 2026/2027 to historical years by indexing such values to historical zonal energy prices, as compared to forecasted zonal energy prices provided by Standard and Poors.

Q. What additional adjustments were made to the Energy DRIPE values reported in the DRIPE study?

A. Given that the values reported in the study represented the DRIPE values accruing to all of Pennsylvania, I de-rated such values based on each FE Rate District's share of total Pennsylvania load.[52] This adjustment was intended to approximate the energy DRIPE benefits that would apply to the specific FE Rate District in question, consistent with the ratepayer perspective of this value of solar analysis.

Q. Please describe what information you utilized from the primary source to determine the Capacity DRIPE benefit components.

[51] Exhibit TM-9. PA Act 129 (PA HB 2200, passed in 2008) amended several existing sections of the PA Public Utility Code with the overall goal of reducing energy consumption and demand by imposing new requirements on EDCs. As part of the implementation of Act 129, the Commission contracted with a Statewide Evaluator to monitor and verify data collection, quality assurance, and the results of each EDC's Energy Efficiency and Conservation Plan. The goal of the study was to present a methodology for quantifying two key Act 129 avoided cost components (1) Energy DRIPE for the EDC service territories and (2) Capacity DRIPE for the load zones of each of the Pennsylvania EDCs.

[52] Utility load was calculated using 2023 EIA Form 861 Data. Accessible at: https://www.eia.gov/electricity/data/eia861/.

A. I utilized the data and description of methodology on page 5 of the DRIPE study to calculate the associated Capacity DRIPE for each delivery year. Specifically, the report provides the specific formula, supporting market data, and PJM auction results necessary to calculate the associated Capacity DRIPE for a given delivery year.

Q. Please describe how you calculated the Capacity DRIPE benefit components.

A. The DRIPE Study suggests Capacity DRIPE for a given delivery year is equal to the cleared MW for that delivery year and zone multiplied by the supply curve slope. For the 2025/2026 calculation of capacity DRIPE, a supply curve slope value was not provided in the DRIPE Study so I inferred a supply curve slope value by transforming the 2024/2025 slope value by the ratio of the respective market clearing prices.

V. CORRECTION OF THE QUANTIFICATION OF NET METERING IMPACTS ON PTC RATES

Q. Does FE's cost impact analysis, as provided in Exhibit DMY-7, account for the various benefits customer-generators provide, as discussed in this testimony?

A. No. Exhibit DMY-7 analysis assumes that customer-generators represent a pure cost to ratepayers that provide zero benefits in exchange for the compensation provided. On the capacity and transmission side, this is at least analytically consistent with FE's position that these projects do not provide a clear capacity or transmission benefit to ratepayers; but FE ignores the fact that reduced PLC and NSPL values from customer-generator production are already flowing to ratepayers within the applicable PJM load zone in the form of lower capacity and transmission cost obligations. On the energy side, the fact that FE's analysis ignores the benefits customer-generators provide in the form of avoided energy costs is not analytically consistent. As discussed in Section III, FE's own accounting practices already recognize the avoided energy benefit from customer-generators by

crediting it back to the customer-generator's default service customer class through the reconciliation charge, resulting in lower Commercial PTC Rider rates for default service customers. It is difficult to reconcile FE's omission of this same benefit from their cost impact analysis with their own implicit treatment of the energy benefit in their billing practices.

Q. At a high level, how should we view FE's presentation of a cost impact analysis that assigns zero benefits to customer-generators?

A. FE is entitled to disagree with the method or rate at which customer-generators are compensated—that is a legitimate policy debate. But disagreement with the compensation rate does not justify omitting the benefits side of the ledger entirely. A cost impact analysis that accounts for costs while systematically excluding benefits will overstate the net cost of customer-generators to ratepayers. The Commission should not rely on FE's incomplete analysis as the basis for decisions affecting default service customers.

Q. Based on the energy, capacity, and transmission benefits that you have discussed above, please present your re-calculation of the impacts of net metered customer-generation on FE's Commercial PTC Rider rates.

A. I have attached to this testimony as Exhibit TM-10 my re-calculation of Exhibit DMY-7.

Q. Which of the benefits discussed in Section III did you include in Exhibit TM-10?

A. I have included the full energy benefits, capacity share-of-costs benefits, and transmission share-of-costs benefits.

Q. Please explain why you focused specifically on these three benefits?

A. I included the full energy benefits, capacity share-of-costs benefits, and transmission share-of-costs benefits because they represent benefits that are directly monetizable given known

accounting practices and provide value in the near term. Given these reasons, these three categories of benefits were in line with my assessment of Exhibit DMY-7 as a short-term snapshot of impacts on Commercial PTC Rider rates and net metering expenses. Further, including energy was an obvious choice as FE is already including the benefit, it just wasn't accounted for in Exhibit DMY-7. The capacity share-of-costs benefits, and transmission share-of-costs benefits are easy to conceptualize, and align with Exhibit DMY-7 as FE is focusing on Commercial PTC Rider customers taking on 100% of the share of net metering expenses without realizing any fraction of the share of benefits that should accrue to Commercial PTC Rider customers.

Q. Why did you exclude the other value of solar benefit stack components in your corrections to Exhibit DMY-7?

A. The reasons vary depending on the component. For capacity total-cost-reduction and particularly transmission total-cost-reduction the benefits materialize in the longer term when the relative decrease in the need for additional infrastructure and resources is realized. That is, it is unknown when and how deferred transmission investments would be realized. Regardless, such benefits probably do not have an immediate impact on investment decisions, while Exhibit DMY-7 was focused on the immediate feedback loop that would impact Commercial PTC Rider rates in the short-term. I did not include energy DRIPE and capacity DRIPE benefits because of the complexity of accounting for the change in DRIPE values over time as derived from the DRIPE Study. That is, the DRIPE Study estimates the impact of demand reduction on price to change over the first four years after physical operation of the project or measure, and then assumes the DRIPE benefits to dissipate to zero. Accounting for this would introduce complexity given the need to track

each cohort of projects and estimate different levels of DRIPE impact by cohort vintage. Further, as the DRIPE benefits are transitory, I did not want to mislead the reader or distract the analysis with benefits from net metering projects where the benefits will ramp down after 2029; the Exhibit DMY-7 analysis timeframe.

Q. Does the exclusion of DRIPE and total-cost-reduction benefits make your estimate of the total benefits offsetting net metering expenses in Exhibit TM-10 conservative?

A. Yes.

Q. How does the methodology used to develop Exhibit TM-10 compare to Exhibit DMY-7?

A. Exhibit TM-10 presents an identical structure to Exhibit DMY-7, with the exception that I have included the aforementioned benefits from net=metered customer-generators as an offset to net metering expenses in the calculation of the net metering true-up expenses. Given this, Exhibit TM-# reflects a more accurate account of the resulting Commercial PTC Rider rates over the four-year horizon displayed because it includes benefits that will be implicitly monetized in Commercial PTC Rider rates as a result of such projects.

Q. How did you account for the impacts of negative PLC and negative NSPL in Exhibit TM-10?

A. Given that Exhibit DMY-7 relates to net metering impacts on customer class expenses, the issue of whether a customer can register a negative PLC and negative NSPL has significant impacts on the resulting net cost and true-up expense calculated. Given this, I present two sets of results that capture the offsetting benefits of net-metered projects to the Commercial default service class based on whether a customer-generator is permitted to register a negative PLC and negative NSPL or not.

Q. How do the results of Exhibit TM-10 compare to those shown in Exhibit DMY-7?

A. When the benefits of expected net-metered excess generation are fully considered, the upward rate pressure of additional net metering customer-generators on Commercial PTC Rider rates is far less than what FE claims in Exhibit DMY-7. As shown below in Table 7, when using the Exhibit DMY-7 construct to make an apples-to-apples comparison, I calculate that the impact over the 2026-2029 period will be between 11% and 55% of FE's estimated impact shown in Exhibit DMY-7, depending on if negative PLCs and negative NSPLs are allowed.

Table 7: Calculated Net Metering Expense Across all FE Rate Districts (Exhibit DMY-7 Mid-Case Installation Assumptions, $/kWh)

Source	Includes Offsetting Benefits?	Includes Negative PLC/NSPL?	2026	2027	2028	2029
FE DMY-7	No	No	$0.123	$0.128	$0.149	$0.200
Exhibit TM-10	Yes	No	$0.068	$0.071	$0.082	$0.110
Exhibit TM-10	Yes	Yes	$0.014	$0.015	$0.018	$0.024

Q. What should we conclude from the fact that your results show significantly lower cost impacts from net metering expenses when the projects benefits are netted against its costs, particularly when your proposed negative PLC and NSPL reforms are incorporated?

A. First, it is not surprising that an analysis that accounts only for the costs associated with a product and none of the benefits shows a shockingly high-cost impact number. This analysis assumes that customer-generators are being compensated in exchange for providing exactly zero value to the grid, when, as discussed extensively in this testimony, this is simply not true. Secondly, accounting for the benefits side of the ledger -- even

conservatively, as I have done here -- meaningfully reduces the cost impact associated with customer-generators on the Commercial PTC Rider. And most importantly, this analysis shows that when my proposed PLC and NSPL reforms are accounted for, the cost impact to default service customers is almost neutral. While I have not completed an analysis and forecast of the MW growth of net metering customer-generators in the FE Rate Districts, assuming the Exhibit DMY-7 mid-case growth rate assumption are correct, my analysis also highlights that not allowing for negative PLCs and NSPLs will cost FE default service customers $7.7 million in 2026, rising to $108.9 million in 2029. These are real monetary benefits that, absent action from the Commission directing FE to change its practices, will be shared among customers in Ohio, Maryland, Virginia, and West Virginia. These monetary benefits should instead be allocated to the default service customers that are paying for the customer-generators' services by implementing my negative PLC/NSPL framework.

VI. ESTABLISHING LEGACY RIGHTS UNDER THE COMMERCIAL PTC RIDER

Q. Please explain the concept of legacy rights.

A. As used in my testimony, the concept of legacy rights refers to the provision of certain protections or exemptions in a utility electric tariff or other authority that allows a customer to continue receiving utility service under the pre-existing terms of a tariff following a material change to the rate schedule. In this context, material changes could include the addition or modification of rules applicable to a certain rate schedule or the closure of a rate schedule or rate option. Legacy rights are synonymous with the concept of "grandfathering" of projects or facilities. In general, legacy rights are based upon principles

of fairness and regulatory gradualism, as well as the recognition of investment-backed expectations made by customers given the information then available.

Q. Please explain why it is important to establish appropriate legacy rights in this proceeding.

A. Legacy rights provisions will determine how operational and in-development net-metered projects are classified and treated under the Commercial PTC Rider and Industrial HP Rider if the Commission approves the MRPL proposal described in FE Witness Young's direct testimony. As applied to this proceeding, legacy rights would allow certain qualifying net-metered projects to remain on the Commercial PTC Rider as they would in the absence of the MRPL proposal, rather than be shifted to the Industrial HP Rider rate. FE recognizes the importance of legacy rights as FE in fact proposed an (inadequate) legacy rights framework as part of its showing. Specifically, Witness Young proposed that net-metered projects that are operational and generating electricity by June 1, 2027 would not be subject to reclassification from the Commercial PTC Rider to the Industrial HP Rider based on MRPL for a two-year period ending June 1, 2029.[53]

Q. Please comment on FE Witness Young's proposed legacy rights framework.

A. FE's proposed legacy status framework does not provide reasonable protections to net-metered projects that are either operational or have made significant progress towards achieving operational status. Further, FE's proposed short, two-year transition period does not accomplish regulatory gradualism.

In light of the deficiencies of FE's proposed legacy rights, I am proposing an alternate legacy rights framework that recognizes the significant investments incurred by

[53] FE PA Statement No. 1 at 19:18-22.

project owners at different stages of project development while also considering the true-up expenses recovered from the Commercial PTC Rider customers. My legacy rights proposal would ultimately accomplish FE's plan to transition net-metered customer-generators to the Industrial default service class, but it would provide a more reasonable transition period than proposed by FE. As I will describe later in my testimony, my recommendation establishes legacy rights for two tiers of net-metered projects: (1) operational or near-operational projects, and (2) mature pre-construction projects.

A. Justification and Objectives for Legacy Rights

Q. Please explain why it is appropriate for a legacy rights framework to be established in this proceeding.

A. The projects that would be impacted by FE's revised MRPL framework, which primarily consist of solar PV generators, require significant upfront capital investment incurred by project owners and involve extended development timelines. Throughout the development of a project, an owner incurs significant pre-installation costs associated with site control, interconnection studies, and the construction of grid system upgrades needed to accommodate safe interconnection of the project. These types of pre-construction costs can be in the hundreds of thousands of dollars.

At each step of the development process, project owners must consider the potential financial benefits of their investment decisions against the upfront costs of developing that project. At each decision point, the project owner must rely on the information available and known to them at that time, which includes the rules and terms by which a customer rate schedule is determined and the associated compensation provided to a net-metered project under a specific rate schedule. Altering the rules and terms of a customer rate

schedule, and therefore the compensation for net-metered excess generation, without appropriate and gradual rate transition protections risks undermining prior investment decisions that help achieve the goals of the AEPS Act with respect to alternative energy development and would likely discourage future project development in the Commonwealth.

Q. Are there any other considerations with respect to legacy rights beyond the financial impacts to net-metered project owners?

A. Yes. A key issue in this proceeding is the potential upward pressure on the Commercial PTC Rider rate over time due to an increase in the number of net-metered projects within the Commercial default service class. In prior sections of my testimony, I demonstrate how the cost savings benefits of net-metered excess generation can and should be realized to mitigate that impact, particularly when the negative PLC and negative NSPL cost allocation metrics that I have recommended are adopted and implemented. I recognize that the Commercial default service class is limited in its ability to absorb additional net-metered excess generation due to the size of its load requirements, and I also recognize that a legacy rights framework must be fair to all customer groups and insulate them against rate shocks. My proposal will ensure fair treatment to the Commercial default service class and balance the interests of both net-metered project owners and Commercial default service customers.

Q. How does your legacy rights framework balance the interests of project owners and Commercial default service customers?

A. The framework outlined below distinguishes two tiers of legacy rights based on project maturity levels, which has a direct correlation with the amount of investment a project

developer has incurred for a project, and applies a reduced compensation level for Transitional Projects to mitigate any upward pressure on the Commercial PTC Rider rate.

Q. What are the primary objectives of your legacy rights framework?

A. As previously stated, the JSA's legacy rights framework is intended to appropriately balance the interests of both project owners and Commercial default service customers, as reflected in the following objectives:

1. Provide a reasonable level of protection for both Commercial default service customers and owners of net-metered projects that achieves a reasonable and equitable outcome for both groups.
2. Minimize future risk and uncertainties related to default service procurement.
3. Ensure that the qualification thresholds applicable to Operational and Transitional Projects (as defined below) are transparent and practicable to mitigate any future disputes and administrative requirements incurred by FE.

B. Joint Solar Advocates' Legacy Rights Proposal

Q. Please summarize the JSA's proposed legacy rights framework.

A. The JSA's legacy rights framework bifurcates projects into two tiers based upon their status as operational or in-development. For each tier, the framework provides for (1) qualification or eligibility criteria and (2) a defined legacy rights duration that is applicable to all net-metered projects in FirstEnergy's service territory, regardless of the specific FE Rate District in which that project is located.

The first tier of the legacy rights framework applies to projects that are either currently operational or provide a completed copy of their Certificate of Completion[54] to FE on or before June 1, 2027 ("Operational Projects"). Operational Projects would maintain their classification on the Commercial PTC Rider and be compensated at the full value of the PTC Rider rate for their excess generation for a 25-year period.

The second tier of the framework applies to pre-construction, non-yet operational projects that demonstrate the achievement of certain project development maturity thresholds by June 1, 2027 ("Transitional Projects"). Transitional Projects would also maintain their classification on the Commercial PTC Rider but would receive a reduced level of compensation equal to 90% of the PTC Rider rate for their excess generation for a 15-year period. In order to qualify as a Transitional Project, the project owner must demonstrate achievement each of the following milestones:

1. Submitted an interconnection application to FE on or before the date in which the instant default service plan was filed (*i.e.*, February 3, 2026).
2. Executed an interconnection agreement with FE by June 1, 2027 (*i.e.*, the date by which FE's Default Service Plan VII is proposed to begin).
3. Received net metering approval (if applicable) from the Commission as required by 52 Pa. Code §75.13(a)(5).
4. Signed a Construction Services Agreement (if applicable) by June 1, 2027, which is a document provided by FE that generally outlines the responsibilities for designing,

[54] A Certificate of Completion, as defined in 52 Pa. Code § 75.22, is a certificate in a form approved by the Commission containing information about the interconnection equipment to be used, its installation and local inspections.

constructing, and paying for any electric system upgrades required to interconnect the project.

5. Paid an initial deposit equal to 10% of the interconnection payment per the terms of the Construction Services Agreement (if applicable) or requested from FE for an invoice to pay the initial 10% interconnection payment, by June 1, 2027. In the event that a project owner requests an interconnection deposit invoice from FE, FE should be required to provide such an invoice within 60 days of the project owner's request.

All other net-metered projects that do not meet the eligibility requirements for treatment as an Operational or Transitional Project would be subject to any revised MRPL metric approved by the Commission in this proceeding and, depending on their specific circumstances, placed on the Industrial HP Rider.

Q. Please elaborate on the rationale underlying the JSA's legacy rights framework for Operational Projects?

A. The legacy rights treatment for Operational Projects aligns with FE's proposal that those projects which become operational on or before the start of the Default Service Plan VII (*i.e.*, June 1, 2027) should be allowed to maintain their current classification as a Commercial default service customer. However, the 25-year legacy status period included in the JSA's framework is more aligned with the operational lifetime of a solar generation asset than the two-year legacy status period proposed by FE. Further, FE's rationale for providing an overly restrictive two-year legacy period (because two years is the "mid-point of the DSP VII term"[55]) is inconsistent with any operational or financing realities of solar PV net-metered projects.

[55] Exhibit TM-11 (FE PA Revised Response to JSA ROG Interrogatory Set 2, No. 12).

That is, this proposed treatment for Operational Projects also recognizes that these projects have made complete or nearly complete investments, upwards of millions of dollars, including payments to FE for system upgrades that are necessary to safely interconnect the projects to the electric grid. Due to the extended timeline associated with these types of assets, project owners incurred these investments well before the MRPL proposal was made in this proceeding, meaning that an owner could not have reasonably known that the terms and compensation associated with the Commercial default service rate was at risk of being upended. These types of projects deserve legacy status protection under the basic rate principle of fairness, as commonly recognized in other state jurisdictions.

Q. Please elaborate on the rationale underlying the JSA's legacy rights framework for Transitional Projects?

A. The milestones and associated timing for determining the eligibility of Transitional Projects are intended to ensure that the most mature net-metering projects, which have made significant investments albeit lower than those by Operational Projects, are afforded legacy treatment as Commercial default service customers for a reduced number of years. By ensuring that legacy status is provided to those projects that meet the milestones before the start of the Default Service Plan VII (*i.e.*, June 1, 2027), the framework attempts to appropriately mitigate the amount of net metering expenses assigned to the Commercial default service class. Additionally, by reducing the compensation to these projects by 10% below the Commercial PTC Rider rate, the framework reduces the net metering expenses for Commercial default service customers. If combined with my recommendation for FE to allow for negative PLCs and negative NSPLs, the Transitional Projects are likely to

provide greater benefits (as quantified in lower Commercial PTC Rider rates) to default service customers from just the combination of avoided wholesale energy LMP benefits, reduced share of capacity costs assigned to the default service customer class, and reduced share of transmission costs assigned to the default service customer class than would have occurred in the absence of any Transitional Projects.

VII. CONCLUSION

Q. Please summarize your recommendations.

A. I recommend that the Commission adopt my proposed approach for addressing issues associated with excess generation from customer-generators assigned to the Commercial default service class, which consists of the following proposals:

1. The Commission should require FE to modify how it calculates customer peak loads used to determine generation capacity and transmission cost allocation by: (1) allowing customers to register "negative loads" as a result of the excess generation they produce, and (2) apply the cost savings of those negative loads to reduce the allocation of the relevant costs to the default service class in which the customer-generator is assigned.
2. The Commission should adopt my proposal for establishing legacy rights under the Commercial PTC Rider for all net-metered customer-generators that are operational or provide a completed copy of their Certificate of Completion to FE on or before June 1, 2027.
3. The Commission should adopt my proposal for establishing legacy rights under the Commercial PTC Rider, at a reduced rate, for all net-metered customer-generators that meet certain project development maturity milestones on or before June 1, 2027.

Q. Does this conclude your testimony?

A. Yes. However, I reserve the right to submit such additional testimony as may be necessary or appropriate.

APPENDIX A
DEFINED TERMS USED IN TESTIMONY

Capacity Zone
A PJM-defined area used to allocate capacity obligations (*e.g.*, Met-Ed, Penelec, ATSI, APS).

Default Service
Electric generation supply provided by the Electric Distribution Company to customers who do not choose a competitive supplier.

Electric Generation Supplier
A competitive Electric Generation Supplier that provides generation services (*e.g.*, energy, capacity, transmission, ancillary services) to a FE customer, in lieu of the customer taking default service via the HP or PTC Riders.

HP Rider
Industrial Hourly Pricing Rider customers which large (currently => 100 kW in peak demand) default service customers are assigned. The HP Rider rate is a fixed rate for each three month period plus the variable 15-minute load weighted load weighted price based on the applicable FE zonal locational marginal price (LMP).

Maximum Registered Peak Load
A customer's net demand contribution impact to FE's default service procurement activity, as determined upon the net power flow from or into FE's distribution or transmission system. As related to customer-generators, the Maximum Registered Peak Load is inclusive of the nameplate capacity of the generation system.

Net-Metering Customer-Generator
A retail customer operating an eligible net-metered generation facility under Pennsylvania law. In my testimony, unless otherwise stated specifically, I am referring to a FE retail customer with no native load, apart from the station load required to operate the net-metered generation facility.

Network Service Peak Load (NSPL)
A retail customer's contribution to transmission zone peak demand used to allocate Network Integration Transmission Service costs.

Price-to-Compare (PTC)
The EDC's default service rate, reflecting the blended cost of procured supply.

Commercial PTC Rider
Price to Compare Rider for which customers (currently with a peak demand of < 100 kW) are eligible to receive, unless the customer elects to receive default service under the Industrial Hourly Pricing Rider. The Commercial PTC Rider rate is a fixed $/kWh rate for a six-month period.

Peak Load Contribution (PLC)

A retail customer's contribution to system peak demand, based on the PJM five coincident peak (5CP) hours.

Transmission (NITS) Component
The zone used to allocate transmission costs (*e.g.*, MAIT, ATSI, Allegheny/APS).

SELECT PROFESSIONAL EXPERIENCE

Vice President & Senior Director, DER Practice Lead & Management Team Member (2024 – Present)
Senior Director, DER Practice Lead & Management Team Member (2013 - 2024)
Sustainable Energy Advantage, LLC, Framingham, MA

- Manages deep dive analyses of DER renewable markets including CA, CT, DC, DE, HI, IL, MA, MD, ME, NJ, NH, NM, NY, PA, RI, VA & VT as well as market entry / opportunity assessments covering all the US markets. Highlighted analyses include variable revenue forecasting (e.g., variable community solar credit rates) at the utility / rate class level, analyses of DER rules, regulations, and revenue of renewables paired w/storage, community solar opportunities, community choice aggregation support, total addressable market assessments, and interconnection queue forecasting.
- Managed SEA's Massachusetts Solar Market Study, the most comprehensive study of the supply and demand drivers and ultimately SREC I and SREC II price forecasts and SMART program analysis. Provides similar market fundamentals supply, demand price forecasting analyses on a custom basis for the NJ, MD and DC SREC markets. Provides expert witness analyses, reports and testimony in various SREC related disputes.
- Public policy consulting highlights include analyses for state energy offices and commissions, most prominently, in co-managing 2024 MA SMART 2.0 study, and ME PUC study (Docket 2024-00149) on benefits-costs of solar for the legislature. Previous highlights include managing / prominent roles in ME Governor's Energy Office NEB 2.0 study, Massachusetts Post-1600 MW solar study, MA Net Metering and Solar Task Force and the 2019 New Jersey SREC Successor Program Study. Key participant for MA Solar Market Barriers Study and MA Solar Technical Potential at State owned facilities and has provided supporting work for NYSERDA and RI OER. For the government of Panama, managed a review of the status, options, and repercussions for modifying DG incentives, market design, and facilitating infrastructure (e.g., smart meter deployment).
- End-user consulting highlights include creating a cutting-edge shared savings RFP process that successfully elicited a very favorable off-take PPA for a 3rd party owned behind-the-meter solar w/ storage system for two net-zero schools, leading evaluation of proposals for a RI town landfill solar lease. Provided contractual due diligence, savings analyses, review support to various municipalities offtake agreements. Provided support to eight different universities and colleges on procurement of renewable energy projects and RECs to support their environmental goals.

Co-Founder and Principal (2003 – 2013)
Boreal Renewable Energy Development, Arlington, MA

- As Principal and co-founder of Boreal Renewable Energy Development managed dozens of wind turbine and solar projects from fatal flaw analysis through, feasibility study, then design and construction for commercial, industrial, municipal, and institutional clients with over 10 MWs installed. Provided general renewable consulting services including a nationwide DOE study which characterized status and quantified market potential, availability, and economics of mid-sized wind turbines.
- Managed or supported Boreal's role as Owner's Representatives, and included: economic payback analysis, wind and solar PV resource modeling, project costs estimation, estimate of revenue generation accounting for retail, wholesale, and REC market structure. Management as Owner's Representative included vetting product manufacturers and their specific products, creating procurement equipment and construction RFPs, recommending equipment, and managing portions of design and construction. Ensured timetables, budget, permitting, interconnection, commissioning, optimum net metering configuration, etc. were completed most favorably. Post-operation ensured manufacturer lived up to its warranty and maintenance obligations, and managed REC marketing and sales.

Senior Analyst/Senior Consultant (1993 – 2003)
KEMA-Xenergy, Burlington, MA

- Specialized in retail energy, price responsive load, energy efficiency program evaluation, demand side management, and renewable energy. Responsibilities included project manager and key developer of retail energy consulting practice.

COMMITTEES & MEMBERSHIPS

Northeast Energy & Commerce Association (Co-Chair Renewable Energy Committee 2016-2019). Arlington Town Meeting Elected Representative (2015-2021). President: Friends of the Bruce Freeman Rail Trail.

Re: FirstEnergy Pennsylvania Electric Company Tariff Electric Pa. P.U.C. No. 1 – Rate Changes in Compliance with FirstEnergy Pennsylvania Electric Company's Default Service Plan, Docket Nos. P-2021-3030012, P-2021-3030013, P-2021-3030014 and P-2021-3030021

Dear Secretary Chiavetta:

Transmitted herewith for filing with the Pennsylvania Public Utility Commission ("Commission") is an original copy of Supplement No. 4 to FirstEnergy Pennsylvania Electric Company's ("FE PA" or the "Company") Tariff Electric Pa. P.U.C. No. 1, which bears an issue date of April 19, 2024. The tariff changes contained in Supplement No. 4 are proposed to be effective with service rendered on or after June 1, 2024.

The purpose of Tariff Supplement No. 4 is to reflect default service rate changes for the Residential Customer Class, Commercial Customer Class and Industrial Customer Class served under the Price to Compare Default Service Rate Rider or the Hourly Pricing Default Service Rider. These rate changes are consistent with the Commission's Order entered August 4, 2022, at Docket Nos. P-2021-3030012 for the Met-Ed Rate District; P-2021-3030013 for the Penelec Rate District; P-2021-3030014 for the Penn Power Rate District and P-2021-3030021 for the West Penn Rate District.

As support for the rate changes, the following schedules accompany this tariff filing:

- Schedule 1 provides supporting details for the changes to the Residential Class's default service rates stated in the tariff's Price to Compare Default Service Rate Rider.
- Schedule 2 provides supporting details for the changes to the Commercial Class's default service rates stated in the tariff's Price to Compare Default Service Rate Rider.
- Schedule 3 provides supporting details for the changes to the Industrial Class's default service rates stated in the tariff's Hourly Pricing Default Service Rider.

If you have any questions regarding the enclosed documents, please contact me.

Sincerely,

Joanne M. Savage

Electric Service Tariff

Effective in

The Territory as Defined on
Page Nos. 6 - 20 of this Tariff

Issued: April 19, 2024 **Effective: June 1, 2024**

By: Wade Smith, President
Reading, Pennsylvania

NOTICE

Supplement No. 4 makes changes to Price to Compare Default Service Rate Rider and Hourly Pricing Default Service Rider.
See Fourth Revised Page No.2

LIST OF MODIFICATIONS

CHANGES:

Price to Compare Default Service Rate Rider – Price to Compare Default Service Rate Rider rates have been changed and decreased. (See Second Revised Page 203).

Hourly Pricing Default Service Rider – Hourly Pricing Default Service Rider rates has been decreased. (See First Revised Page 209)

Hourly Pricing Default Service Rider – Hourly Pricing Default Service Rider rates have been changed and decreased. (See First Revised Page 210)

PRICE TO COMPARE DEFAULT SERVICE RATE RIDER

A Price to Compare Default Service Rate ("$PTC_{Default}$") shall be applied to each kWh of Default Service that the Company delivers to Customers under this rider as determined to the nearest one-thousandth of a cent per kWh. The $PTC_{Default}$ rate shall be billed to Customers receiving Default Service from the Company under this rider. The rates shall be calculated according to the provisions of this rider.

For service rendered June 1, 2024 through November 30, 2024 the $PTC_{Default}$ rates billed by Customer Class are as follows: (C)

Met-Ed		
Customer Class	Residential	Commercial
Rate Schedule	RS, GS-V	GS-S, GS-M (PTC), MS, Borderline Service, Street Lighting Service, LED Street Lighting Service, Ornamental Street Lighting and Outdoor Lighting Service
Charge	$0.10404 (D) per kWh	$0.10594 (D) per kWh

Penelec		
Customer Class	Residential	Commercial
Rate Schedule	RS, GS-V	GS-S, GS-M (PTC), H, Borderline Service, Street Lighting Service, Ornamental Street Lighting, LED Street Lighting Service and Outdoor Lighting Service
Charge	$0.09744 (D) per kWh	$0.10238 (D) per kWh

Penn Power		
Customer Class	Residential	Commercial
Rate Schedule	RS, GS-V	GS-S, GS-M (PTC), PNP, PLS, SV, SVD, SM and LED
Charge	$0.10389 (D) per kWh	$0.11796 (D) per kWh

West Penn		
Customer Class	Residential	Commercial
Rate Schedule	RS, GS-V	GS-S, GS-M (PTC), 51-58, 71 and 72
Charge	$0.08787 (D) per kWh	$0.09193 (D) per kWh

(C) Change
(D) Decrease

HOURLY PRICING DEFAULT SERVICE RIDER (continued)

Penelec			
Rate Schedule	GS-S, GS-M, GS-L	GP	TP
HP Loss Multipliers	1.0573	1.0234	1.0035

Penn Power			
Rate Schedule	GS-S, GS-M, GS-L	GP	TP
HP Loss Multipliers	1.0515	1.0171	1.0007

West Penn			
Rate Schedule	GS-S, GS-M	GS-L	GP, TP, 44, 46
HP Loss Multipliers	1.0899	1.0678	1.0356

PSU	
Rate Schedule	GP
HP Loss Multipliers	1.0356

These HP Loss Multipliers exclude transmission losses.

HP Cap-AEPS-Other Charge:

This represents the costs paid by the Company to the Supplier for Capacity, AEPS costs, and any other costs incurred by the Supplier multiplied by the HP Loss Multipliers.

Rate District	Met-Ed	Penelec	Penn Power	West Penn	PSU
Charge	$0.02978 (D) per kWh	$0.02903 (D) per kWh	$0.02824 (D) per kWh	$0.01502 (D) per kWh	$0.001502 (D) per kWh

HP Administrative Charge:

This represents the administrative costs incurred by the Company associated with providing Hourly Pricing Service.

Rate District	Met-Ed	Penelec	Penn Power	West Penn	PSU
Charge	$0.00006 per kWh	$0.00006 per kWh	$0.00006 per kWh	$0.00006 per kWh	$0.00006 per kWh

HP Uncollectibles Charge:

This represents the default service-related uncollectible accounts expense associated with Hourly Pricing Default Service. This charge is subject to annual adjustment on June 1 of each year.

Rate District	Met-Ed	Penelec	Penn Power	West Penn	PSU
Charge	$0.00016 per kWh	$0.00100 per kWh	$0.00002 per kWh	$0.00012 per kWh	$0.00012 per kWh

(D) Decrease

HOURLY PRICING DEFAULT SERVICE RIDER (continued)

HP Reconciliation Charge:

The HP Reconciliation Charge Rate ("EHP") shall be applied to each kWh of Default Service that the Company delivers to Customers under this rider as determined to the nearest one- thousandth of a cent per kWh. The E_{HP} rate shall be included as a non-bypassable component billed to Customers receiving Default Service from the Company under this rider. The rate shall be calculated according to the provisions of this rider.

For service rendered June 1, 2024 through November 30, 2024, the E_{HP} rate is as follows: (C)

Rate District	Met-Ed	Penelec	Penn Power	West Penn	PSU
Charge	$0.02244 (D) per kWh	$(0.02500) (D) per kWh	$(0.02960) (D) per kWh	$0.00928 (D) per kWh	$0.00928 (D) per kWh

The E_{HP} rate will be calculated semi-annually for the six-month period ending March 31st to be effective for the six-month period beginning June 1st and for the six-month period ending September 30th to be effective for the six-month period beginning December 1st. The E_{HP} rate shall be calculated in accordance with the formula set forth below:

$$E_{HP} = [(DS_{HPExp1} + DS_{HPExp2}) - PTC_{HPRev} + DS_{HPInt}] / DS_{HPSales}$$

Where:

E_{HP} = The rate determined to the nearest one-thousandth of a cent per kWh to be applied to each kWh of Default Service delivered to Customers under this rider.

DS_{HPExp1} = An allocated portion of the incremental start-up costs incurred by the Company through May 31st, 2023 in connection with the Company's Default Service Supply Plan to provide Default Service amortized over the forty-eight (48) month period ending May 31st, 2027 including but not limited to:

- Incremental start-up administrative costs including metering and billing costs incurred and other costs as necessary to provide service to Default Service Customers
- Other start-up costs incurred to develop and implement the competitive bid process for the Default Service Supply Plan including legal, customer notice, and consultant fees

Interest shall be computed monthly for the over or under collection at the prime rate of interest for commercial banking, not to exceed the legal rate of interest, in effect on the last day of the month that the over and under collection occurs, as reported in the *Wall Street Journal*, to the effective month that the over collection is refunded or the under collection is collected and included in the determination of the monthly amortized amount.

(C) Change
(D) Decrease

CGC Set 1, No. 020

Please reference FirstEnergy St. No. 1, p. 17, lines 11-12, in which FirstEnergy does not use excess energy from net-metered customer generators as supply. Please explain how the physical excess energy from net-metered customer-generators is used by FirstEnergy after it is received from the customer-generator.

RESPONSE:

Excess energy from intermittent net-metered customer generators is recognized financially, not physically, as aggregate load reduction. Customers are measured on an hourly basis as either a load where FE PA delivered power to the customer or as an injection where the Company receives energy onto the distribution system from the customer. When a customer has produced energy from a net-metered project for a given hour, the resulting load reduction is credited to that customer at full retail rate by their respective retail supplier. Further, that load reduction is submitted to PJM Interconnection, LLC under the account of the load serving entity ("LSE") with the obligation to recognize the load reduction and credit is given to the LSE valued at the locational marginal price. The Company does not track who actually consumes physical excess energy from net metered customer-generators.

EXHIBIT “TM-4”

ATTACHMENT M-2 (ComEd)

Determination of Capacity Peak Load Contributions, Network Service Peak Load Contributions, Daily Peak Load Obligation , Daily Network Service Peak Load Obligation, and Hourly Load Obligations

I. CAPACITY AND NETWORK SERVICE PEAK LOAD CONTRIBUTIONS

Section 1 PURPOSE

The purpose of Part I. is to describe the methodology used to determine capacity and network service peak load contributions for electric power and energy attributable to customers located in the ComEd Zone.

Section 2 DEFINITIONS

The following definitions are for use in this Attachment M-2. Capitalized terms used and not defined in this Attachment M-2 but defined in other provisions of the PJM OATT have the meaning given them under those provisions. Capitalized terms used in this Attachment M-2 that are not defined in it or elsewhere in the PJM OATT have the meanings customarily attributed to such terms by the electric utility industry in PJM.

a) **Average ComEd Coincident Peak Load:** the average of the sum of the (i) five (5) ComEd Zonal Loads established during the PJM Five Peaks in a summer and (ii) the corresponding Load Drop Estimates for such PJM Five Peaks.

b) **Average ComEd Peak Load:** the average of the five (5) ComEd Zonal Loads established during the ComEd Five Peaks in a summer.

c) **Average Customer Coincident Peak Load:** the average of the sum of the (i) five (5) customer loads established during the PJM Five Peaks in a summer and (ii) the corresponding Load Drop Estimates for such customer, with such sum adjusted to include applicable distribution and transmission system losses.

d) **Average Customer Peak Load:** the average of the five (5) loads established by the customer during the ComEd Five Peaks in a summer, with such loads adjusted to include applicable distribution and transmission system losses.

e) **ComEd Five Peaks:** the five hours occurring on different calendar days in a summer during which the electric system served by ComEd experiences its five highest daily summer demands.

f) **ComEd Weather Normalized Peak Load:** the expected ComEd Zonal Load at the time of the PJM system peak load in a summer under normal weather conditions as determined by PJM.

g) **ComEd Peak Load:** the highest ComEd Zonal Load established for PJM network service in a summer.

h) **ComEd Zonal Load:** the demand for electricity placed upon the interconnected electricity system operated by PJM that is attributable to customers located in the ComEd Zone.

i) **Load Drop Estimate:** the kilowatt (kW) value attributable to curtailed demand as determined by PJM.

j) **PJM Five Peaks:** the five hours occurring on different calendar days in a summer during which the electric system served by PJM experiences its five highest daily summer demands.

k) **Summer:** the period beginning June 1 and extending through September 30 in a calendar year.

Section 3 DETERMINATION OF THE CAPACITY PEAK LOAD CONTRIBUTION

If a customer's Average Customer Coincident Peak Load for Year Y is greater than or equal to such customer's Average Customer Peak Load for Year Y, then such customer's capacity peak load contribution (CPLC) for year Y+1 is equal to such customer's Average Customer Coincident Peak Load for Year Y.

If a customer's Average Customer Coincident Peak Load for Year Y is less than such customer's Average Customer Peak Load for Year Y, then such customer's CPLC for year Y+1 is determined in accordance with the following equation:

$$CPLC_{Y+1} = ACustCPL_Y + \left(ComEdNPL_Y - AComEdCPL_Y\right) \times \frac{ACustPL_Y - ACustCPL_Y}{\sum_{5Pc}\left(ACustPL_Y - ACustCPL_Y\right)}$$

Where:

$CPLC_{Y+1}$ = Capacity Peak Load Contribution for the customer, in kW, applicable for the period beginning with June in Year Y+1 and extending through May in Year Y+2.

$ACustCPL_Y$ = Average Customer Coincident Peak Load for the customer for Year Y, in kW.

$ACustPL_Y$ = Average Customer Peak Load for the customer for Year Y, in kW.

$ComEdNPL_Y$ = ComEd Weather Normalized Peak Load for Year Y, in kW.

$AComEdCPL_Y$ = Average ComEd Coincident Peak Load for Year Y, in kW.

$\sum_{5Pc}$ = Summation over all customers for which the Average Customer

Coincident Peak Load for Year Y is less than the Average Customer Peak Load for Year Y.

Notwithstanding the previous provisions describing the determination of the $CPLC_{Y+1}$, for certain situations ComEd determines a customer's $CPLC_{Y+1}$ to be equal to (i) the average $CPLC_{Y+1}$ attributable to the delivery class applicable to such customer or (ii) the average $CPLC_{Y+1}$ attributable to the delivery class applicable to such customer scaled to reflect the amount of electricity delivered to such customer. Delivery classes are as described in the General Terms and Conditions of ComEd's Schedule of Rates filed with the Illinois Commerce Commission (Ill. C.C. No. 10). For purposes of this Attachment M-2 (ComEd), load attributable to net metering and community supply projects may reflect both consumption and generation in the CPLC, and therefore can result in a positive or negative value for any such individual customer's calculation.

Section 4 DETERMINATION OF THE NETWORK SERVICE PEAK LOAD CONTRIBUTION

A customer's Network Service Peak Load Contribution (NSPLC) for Year Y+1 is determined in accordance with the following equation:

$$NSPLC_{Y+1} = ACustPL_Y \times \frac{ComEdPL_Y}{\sum_{Ac} ACustPL_Y}$$

Where:

$NSPLC_{Y+1}$ = Network Service Peak Load Contribution for the customer, in kW, applicable for the period beginning with January in Year Y+1 and extending through December in Year Y+1.

$ComEdPL_Y$ = ComEd Peak Load for Year Y, in kW.

$\sum_{Ac}$ = Summation over all customers.

Notwithstanding the previous provisions describing the determination of the $NSPLC_{Y+1}$, for certain situations ComEd determines a customer's $NSPLC_{Y+1}$ to be equal to (i) the average $NSPLC_{Y+1}$ attributable to the delivery class applicable to such customer or (ii) the average $NSPLC_{Y+1}$ attributable to the delivery class applicable to such customer scaled to reflect the amount of electricity delivered to such customer. For purposes of this Attachment M-2 (ComEd), load attributable to net metering and community supply projects may reflect both consumption and generation in the NSPLC, and therefore can result in a positive or negative value for any such individual customer's calculation.

II. DAILY CAPACITY PEAK LOAD OBLIGATION AND DAILY NETWORK

SERVICE PEAK LOAD OBLIGATION

Section 1 PURPOSE

The purpose of Part II is to describe the methodology used to calculate the Daily Capacity Peak Load Obligation (DCPLO) and Daily Network Service Peak Load Obligation (DNSPLO) for Load Serving Entities (LSEs) in the ComEd Zone.

Section 2 DETERMINATION OF THE DAILY CAPACITY PEAK LOAD OBLIGATION

The Daily Capacity Peak Load Obligation (DCPLO) for a LSE in the ComEd Zone taking service under Attachment F to the PJM Tariff, but not ComEd as the EDC for the ComEd Zone, ("Attachment F LSEs in the ComEd Zone") is determined in accordance with the following equation:

$$DCPLO_{LSE} = \sum_{LSEc} CPLC$$

The DCPLO for all other LSEs in the ComEd Zone, including ComEd as the EDC for the ComEd Zone, ("Attachment F-1 LSEs in the ComEd Zone") is determined in accordance with the following equation:

:

$$DCPLO_{LSE} = \sum_{LSEc} CPLC + \left(ComEdNPL_Y - \sum_{Ac} CPLC\right) \times \frac{\sum_{LSEc} CPLC}{\left(\sum_{Ac} CPLC - \sum_{Am} CPLC\right)}$$

Where:

$DCPLO_{LSE}$ = Daily Capacity Peak Load Obligation for a LSE

CPLC = Capacity Peak Load Contribution for a customer

$ComEdNPL_Y$ = ComEd Weather Normalized Peak Load for Year Y, in kW

$\sum_{Ac}$ = Summation over all customers

$\sum_{LSEc}$ = Summation over all customers of a LSE

$\sum_{Am}$ = Summation over all Wholesale Municipalities

Section 3 DETERMINATION OF DAILY NETWORK SERVICE PEAK LOAD OBLIGATION

The Daily Network Service Peak Load Obligation (DNSPLO) for Attachment F LSEs in

the ComEd Zone is determined in accordance with the following equation:

$$DNSPLO_{LSE} = \sum_{LSEc} NSPLC$$

The DNSPLO for Attachment F-1 LSEs in the ComEd Zone, is determined in accordance with the following equation:
:

$$DNSPLO_{LSE} = \sum_{LSEc} NSPLC + \left(ComEdPL_Y - \sum_{Ac} NSPLC\right) \times \frac{\sum_{LSEc} NSPLC}{\left(\sum_{Ac} NSPLC - \sum_{Am} NSPLC\right)}$$

Where:

$DNSPLO_{LSE}$	=	Daily Network Service Peak Load Obligation for a LSE
NSPLC	=	Network Service Peak Load Contribution for a customer
ComEd PL_Y	=	ComEd Peak Load for Year Y, in kW
$\sum_{Ac}$	=	Summation over all customers
$\sum_{LSEc}$	=	Summation over all customers of a LSE
$\sum_{Am}$	=	Summation over all Wholesale Municipalities

III. FINAL HOURLY LOAD OBLIGATIONS

Section 1 PURPOSE

The purpose of Part III is to describe the methodology used to calculate the Final Hourly Load Obligation for Load Serving Entities (LSEs) in the ComEd Zone.

Section 2 DETERMINING FINAL HOURLY LOAD OBLIGATION

ComEd, on a monthly basis, will perform a load reconciliation to determine the difference between the Scheduled Hourly Load Obligation and the Final Hourly Load Obligation for LSEs in the ComEd Zone. The results of the reconciliation will be reported to PJM Interconnection, LLC ("PJM") for billing and settlement purposes.

Hourly Loads for customers shall be determined using customer meter data, adjusted for applicable distribution and transmission losses. In the event customer meter data is not available, customer Hourly Loads may be estimated.

The Final Hourly Load Obligation (FHLO) for an Attachment F LSEs in the ComEd Zone is determined in accordance with the following equation:

$$FHLO_{LSE} = \sum_{LSEc} HL$$

The FHLO for an Attachment F-1 LSE in the ComEd Zone, is determined in accordance with the following equation:
:

$$FHLO_{LSE} = \sum_{LSEc} HL + \left(ZL - \sum_{Ac} HL\right) \times \frac{\sum_{LSEc} HL}{\left(\sum_{Ac} HL - \sum_{Am} HL\right)}$$

Where:

$FHLO_{LSE}$ = Final Hourly Load Obligation for a LSE

HL = Hourly Load for a customer, adjusted to include applicable distribution and transmission losses

ZL = ComEd Zone Load

$\sum_{Ac}$ = Summation over all customers

$\sum_{LSEc}$ = Summation over all customers of a LSE

$\sum_{Am}$ = Summation over all Wholesale Municipalities

If adjustments are made to the Hourly Load of an Attachment F-1 LSE in the ComEd Zone after the load reconciliation, ComEd may calculate the financial value of the adjustment and report that value to PJM. ComEd will also allocate the equal and opposite financial value to all Attachment F-1 LSEs in the ComEd Zone, on a load-ratio-share basis, and report the adjustments to PJM. PJM will include any adjustments in the next monthly billing statement issued by PJM to the affected LSE(s).

IV. Administrative Provisions for Retail Electric Service

The terms and conditions included in this Attachment M-2, Section IV are available only for such service in the ComEd Zone, and are not available under this RTO Tariff for any transmission service outside of the ComEd Zone. The rates, terms and conditions of the Transmission Provider's Open Access Transmission Tariff apply to the Illinois Retail Access Program except as amended below.

A Retail Electric Supplier (RES) is any Alternative Retail Supplier (ARES) under Section 16-102 of the Illinois Public Utilities Act, 220 ILCS 5/16-102 or any Illinois Electric Utility as defined in Section 16-102 of the Illinois Public Utilities Act, 220 ILCS 5/16-102 and, by reference, Section 3-105 of the Illinois Public Utilities Act, 220 ILCS

5/3-105 (or any agent of any such electric utility to the extent the electric utility provides tariff services to retail customers through that agent) A utility that is not an Illinois Electric Utility as defined above is not a RES unless it qualifies as an ARES, in accordance with Illinois law, rules and regulations.

RES De-certification: In the event that the State of Illinois de-certifies a Transmission Customer who is not a retail customer under Section 1.11(ii) of the PJM Tariff, then Transmission Provider may immediately terminate Transmission Service to the de-certified Transmission Customer for the load of the retail customers supplied by such Transmission Customer, provided that Transmission Owner's retail service tariffs subject to the jurisdiction of the State of Illinois provide for continuation of service to affected retail customers as described in Section 1.11(ii) of the PJM Tariff by another supplier that is a Transmission Customer.

In the event of a de-certification, and/or upon receipt of notification from PJM that a RES is in default under PJM Tariff Section 7.3, ComEd, as EDC of the ComEd zone, will immediately assume wholesale supply obligations consistent with the terms of the ICC-approved rate schedules.

Term of Network Integration Transmission Service: The minimum term for Network Integration Transmission Service is one year or for any shorter period necessary to accommodate retail access under Illinois law.

Commencement of Service: Service under a Service Agreement for Point-to-Point Transmission Service or under a Network Service Agreement shall not commence until customer qualifies as a Transmission Customer under Transmission Provider's OATT.

EXHIBIT “TM-5”

Petition of FirstEnergy Pennsylvania	**:**	
Electric Company for Approval of a	**:**	**Docket No. P-2026-3060298**
Default Service Plan for the Period	**:**	
June 1, 2027 to May 31, 2031	**:**	

JSA Set 2, No. 9

The prefiled direct testimony of David M. Young (identified as FE PA Statement No. 1) states:

"On an annual basis, the Company will compensate customer- generators for excess energy during the preceding year at the 'full retail value for all energy produced' consistent with Section 5 of the AEPS Act (73 P.S. § 1648.5)." (18:5-6.)

With respect to this testimony:

a. *Identify*, describe, and explain the quantifiable benefits that net excess generation from customer-generators provide to/for *FirstEnergy* customers? Provide all documents utilized and/or relied upon in your response.

b. If a net metered customer-generator taking service on the *PTC Rider* or *HP Rider* provides net excess generation to the *FirstEnergy* distribution and/or transmission system during any of the 5 Coincident Peaks that PJM Interconnection uses to assign capacity costs, would that reduce PJM-related capacity costs for *FirstEnergy* wholesale energy suppliers and/or customers? Please fully explain and provide all *Documents* utilized and/or relied upon in your answer.

c. If the answer to the above question is yes or in the affirmative, identify, provide, and explain in detail which of FirstEnergy's customer classes benefit from those reduced PJM-related capacity charges. Provide a detailed, qualitative description of how output from customer-generators during PJM's 5 Coincident Peak hours could reduce capacity cost obligations for customers. If so, would those benefits be solely ascribed to the Default Service customer class of the net-metered customer-generator for the specific FirstEnergy utility region, or would they be further socialized to a broader segment of FirstEnergy's customers (and if so, to what segment)? Please include in this discussion the interaction of the excess generation on the DSP supplier contracts, any time lags between when the output is produced and when PJM cost allocation is impacted, and how growth in customer-generators is factored into PJM load forecasts, among other relevant matters. Provide all Documents utilized and/or relied upon

in your answer.

RESPONSE:

a) FE PA commercial customers currently on the PTC rate do not receive a benefit from excess generation from customer-generators. Since the PTC Rider rate is generally greater than the amount of the credit received from PJM, the more customer generators that come online, the greater the true-up expense. This will continue to increase the PTC Rider rate for commercial default service customers, creating a feedback loop where customer-generators drive up the PTC rate while being reimbursed at the PTC.
b) The net metered customer-generator has the ability to affect its own capacity costs but will not affect the 5 coincident peaks as it relates to other customers. The capacity costs related to other customers is based on that customer's individual load contribution.
c) Not applicable.

EXHIBIT “TM-6”

ATTACHMENT M-2 (FirstEnergy Zones)
FirstEnergy Procedure for Determining a Load Serving Entity's Peak Load Contribution (PLC) and Network Service Peak Load (NSPL)

PURPOSE

The purpose of this Attachment M-2 is to establish the procedures and methodologies under which FirstEnergy will determine the PLC and NSPL, as defined/specified in the PJM Open Access Transmission Tariff, the PJM Operating Agreement, Reliability Assurance Agreement or other relevant PJM documents (the "PJM Documents") each PJM Planning Year for each retail and wholesale Load Serving Entity ("LSE") serving load in the following FirstEnergy Electric Distribution Companies ("EDCs") Zones (the "FirstEnergy Zones"): Ohio Edison Company, The Toledo Edison Company, The Cleveland Electric Illuminating Company (together, "ATSI Ohio"), FirstEnergy Pennsylvania Electric Company ("FE PA") operating in the separate ATSI, Penelec, MetEd, and Allegheny Power PJM transmission zones, Jersey Central Power & Light Company ("JCP&L"), Monongahela Power Company ("Mon Power") and The Potomac Edison Company ("Potomac Edison MD" and "Potomac Edison WV"). Attachment M-2 is not intended to supersede or replace any contractual arrangement(s) between FirstEnergy (or its affiliated FirstEnergy EDC) and the applicable LSE that otherwise governs the calculations. Such contractual arrangement(s) shall prevail unless silent on a particular issue or calculation.

Questions concerning the methodologies described in this Attachment M-2 may be submitted by visiting the Supplier Support section of the FirstEnergy corporate website located here: https://www.firstenergycorp.com/supplierservices.

SECTION I: TERMS

Transmission Zone – The areas within PJM as set forth in Attachment J of the PJM Open Access Transmission Tariff for American Transmission Systems, Incorporated, Allegheny Power, Jersey Central Power & Light Company, Metropolitan Edison Company and Pennsylvania Electric Company.

Losses - The following loss factors shall apply for each FirstEnergy Zone. Loss factors will be applied according to location (FirstEnergy Zone) and service voltage of each meter point. For wholesale LSEs, all of the loss factors specified herein shall apply, unless otherwise established by contract and filed with FERC. For retail LSEs, the Transmission Load loss factors specified herein shall apply, however for lower service voltages, the loss factors specified in state-approved retail tariffs shall apply.

Service Voltage	ATSI Ohio	FE PA (Penn Power, ATSI Zone)	FE PA (MetEd Zone)	FE PA (Penelec Zone)	JCP&L

Primary Source			1.03070	1.03378
Primary Load	1.06383	1.07542	1.07691	1.06071
Secondary Load	1.09434	1.09513	1.09705	1.09033

Transmission Load - For Mon Power, Potomac Edison MD, Potomac Edison WV and FE PA (West Penn Power, Allegheny Power Zone), 138 kV and above. For FE PA (Penelec and MetEd Zones) and JCP&L, 34.5 kV and above. For ATSI Ohio and FE PA (Penn Power, ATSI Zone), 69 kV and above.

Substransmission Source - For Potomac Edison WV, For ATSI Ohio and FE PA (Penn Power, ATSI Zone), service at source of subtransmission bus.

Subtransmission w/Tran Charge - For FE PA (West Penn Power, Allegheny Power Zone), service on low side of subtransmission to primary transformer.

Subtransmission Load - For Mon Power, Potomac Edison MD, Potomac Edison WV and FE PA (West Penn Power, Allegheny Power Zone), 23 kV to 69 kV. For ATSI Ohio and Penn Power, 23 kV to 34.5 kV.

Primary Source - For Mon Power and Potomac Edison WV, service at source of primary bus.

Primary Load - For Mon Power, Potomac Edison MD, Potomac Edison WV, FE PA (West Penn Power, Allegheny Power Zone; and Penn Power, ATSI Zone) and ATSI Ohio, 1 kV to 15 kV. For FE PA (Penelec and MetEd Zones) and JCP&L, 1 kV to 34.5 KV.

Secondary Load - For all FirstEnergy EDC Zones, below 1 kV.

SECTION II: WHOLESALE

Under the PJM Documents, the FirstEnergy EDCs are required to determine the PLC and NSPL for each wholesale LSE operating in their respective FirstEnergy Zones.

This Attachment M-2 supplements and clarifies the procedures and methodologies under which FirstEnergy will determine the PLC and NSPL for all wholesale LSEs with load located in one or more FirstEnergy Zone. Unless specified otherwise, this Attachment M-2 does not amend or replace any existing contracts or agreements between FirstEnergy and any wholesale LSE.

The PLC and NSPL values for each FirstEnergy Zone in which the wholesale LSE serves load will be calculated separately and will be based on the hourly reading obtained from billing quality metering and related equipment ("Meters") owned by FirstEnergy or the wholesale LSE located at or near the interconnection point between the FirstEnergy distribution or transmission system, and the wholesale LSE system. Furthermore, all calculations in this Attachment M-2 will be done consistent with the requirements of the PJM Documents.

PLC Calculation

The calculation of PLC for each wholesale LSE, with load located in any of the FirstEnergy Zones, is as follows:

1. Determine the wholesale LSE's load contribution to the total FirstEnergy Zone load at the time of the high 5 peak hours for the PJM region ("High 5 Hours") as determined by PJM. This load is grossed up for contractual or otherwise mutually agreed upon losses, as specified herein or as otherwise filed with FERC.

   If a PJM Demand Response Event ("DR Event") occurred within the applicable FirstEnergy Zone in which the wholesale LSE serves load during one or more of the High 5 Hours, then add back the PJM-determined load reduction to each of the corresponding wholesale LSE's loads for those DR Events affecting the High 5 Hours.

   The result is the wholesale LSE's unrestricted PJM High 5 loads.

2. Average the wholesale LSE's 5 unrestricted PJM High 5 loads.

3. Multiply the wholesale LSE's average unrestricted PJM High 5 load by the ratio of (a) the appropriate FirstEnergy Zone's weather-normalized peak to (b) the average of the FirstEnergy unrestricted loads during the PJM High 5 Hours.

Note: PJM determines the weather-normalized peak for each Transmission Zone. Where a Transmission Zone comprises more than one FirstEnergy Zone, each FirstEnergy Zone's weather-normalized peak is determined on a load ratio share basis (including PJM add-backs, if any) using the High 5 Hours. This ensures that the weather normalization ratio is the same value for each FirstEnergy Zone in those cases where a Transmission Zone comprises more than one FirstEnergy Zone.

4. This determines the wholesale LSE's PLC for that FirstEnergy Zone, which is posted to the wholesale LSE's PJM RPM account.

5. Numeric Example:

FirstEnergy Zone load during PJM High 5 Hour 1: 1,000 MW
FirstEnergy Zone load during PJM High 5 Hour 2: 1,100 MW
FirstEnergy Zone load during PJM High 5 Hour 3: 850 MW
FirstEnergy Zone load during PJM High 5 Hour 4: 1,250 MW
FirstEnergy Zone load during PJM High 5 Hour 5: 1,175 MW

Step 1: Determine/compute wholesale LSE's load during the High 5 Hours from Meters (grossed up for contractual or otherwise mutually agreed upon losses, as specified herein or as otherwise filed with FERC):

Wholesale LSE's load during PJM High 5 Hour 1: 85 MW
Wholesale LSE's load during PJM High 5 Hour 2: 86 MW
Wholesale LSE's load during PJM High 5 Hour 3: 70 MW
Wholesale LSE's load during PJM High 5 Hour 4: 98 MW
Wholesale LSE's load during PJM High 5 Hour 5: 90 MW

Step 2: Perform add-backs for High 5 DR Events, if any.

Wholesale LSE's PJM-determined add-back during PJM High 5 Hour 4: 5 MW
Wholesale LSE's unrestricted load during PJM High 5 Hour 4: 98 + 5 = 103 MW

Step 3: Calculate wholesale LSE's average unrestricted load

(85 + 86 + 70 + 103 + 90) / 5 = 86.8 MW

Step 4: Determine FirstEnergy Zone weather normalization ratio

Note: Any FirstEnergy or other LSE add-backs would also be included in determining the unrestricted FirstEnergy Zone loads.

Unrestricted FirstEnergy Zone load during PJM High 5 Hour 1: 1,000 MW
Unrestricted FirstEnergy Zone load during PJM High 5 Hour 2: 1,100 MW
Unrestricted FirstEnergy Zone load during PJM High 5 Hour 3: 850 MW
Unrestricted FirstEnergy Zone load during PJM High 5 Hour 4: 1,255 MW
Unrestricted FirstEnergy Zone load during PJM High 5 Hour 5: 1,175 MW

FirstEnergy Zone weather-normalized peak load: 950 MW

950 / ((1000 + 1100 + 850 + 1255 + 1175) / 5) = 0.883

Step 5: Determine PLC for wholesale LSE for that FirstEnergy Zone:

0.883 * 86.8 = 76.6 MW

NSPL Calculation

The NSPL calculation for a wholesale LSE is simply the wholesale LSE's metered load at the time of the Transmission Zone peak as determined by PJM and as grossed up for contractual or otherwise mutually agreed upon losses, as specified herein or as otherwise filed with FERC.

Numeric Example:

Transmission Zone peak occurred on August 1, 201X, during Hour Ending 1700.

Wholesale LSE's load on August 1, 201X, during Hour Ending 1700 (including contractual or otherwise mutually agreed upon losses, as specified herein or as otherwise filed with FERC): 90 MW

Wholesale LSE's NSPL = 90 MW

Note: Unlike the calculation of PLC, add-backs are not considered in determining the wholesale LSE's NSPL.

SECTION III: RETAIL

The PLC and NSPL for an LSE providing service to retail customers receiving distribution service from a FirstEnergy EDC shall be determined in accordance with the following:

1. On a customer-by-customer basis, PLCs will be determined based on the customer load during the High 5 Hours.

    a. Where interval meters are utilized for retail customer billing, load values for the High 5 Hours will be determined using customer-specific interval meter data.
    b. Where interval meters are not utilized for retail customer billing, load values for the High 5 Hours will be determined from profiled data.
    c. All data will be grossed up for applicable distribution and transmission losses.
    d. If a DR Event occurred in the FirstEnergy Zone in which the retail LSE serves load during one or more of the High 5 Hours, then the PJM-determined load reduction for each customer will be added back to the customer's load value for the corresponding hour.
    e. PLCs will be scaled by the Daily Scaling Factor ("DSF") before submittal to PJM.

2. On a customer-by-customer basis, NSPLs will be determined by:

a. selecting the hours in which the 5 peak loads occurred during the season in which the respective Transmission Zone peak, as reported by PJM, occurred (i.e., Summer season from June 1 to September 30, or Winter season from December 1 to March 31);
b. determining the average load values of each retail load customer during these 5 peak hours;
c. grossing up all data for transmission and, as applicable, distribution losses; and
d. scaling that average load value to the Transmission Zone peak as reported by PJM.

In lieu of a PLC DSF, a separate and distinct NSPL daily scaling factor is determined for each Transmission Zone and applied to each NSPL to ensure that the sum of all NSPL values reported to PJM matches the respective Transmission Zone target. For NSPL, there is no add-back for DR Events.

FirstEnergy does not determine PLCs and NSPLs for the retail consumers of wholesale LSEs like municipal electric utilities and electric cooperatives.

Additional implementation details related to the determination of the PLC and NSPL for each retail customer will be provided in the manual titled "Supplier Capacity Manual" under the "Supplier Registration" tab of the Supplier Support section of the FirstEnergy corporate website located here: https://www.firstenergycorp.com/supplierservices. The Manual may reflect differences based on the state utility commission requirements applicable to each FirstEnergy Zone, to the extent such requirements are not inconsistent with the requirements stated in this Attachment M-2.

JSA ROG Set 4, No. 1

Please refer to the Direct Testimony of David M. Young (FE PA Statement No. 1) at 18:5-6, which states: "On an annual basis, the Company will compensate customer generators for excess energy during the preceding year at the 'full retail value for all energy produced' consistent with Section 5 of the AEPS Act (73 P.S. § 1648.5)." Please also refer to FE PA Exhibit DMY-6 at page 2, which defines the Network Service Peak Load as: "Network Service Peak Load (kW NSPL) - A Customer's one (1) coincident peak kW Network Service Peak Load in effect from time to time, as calculated by the Company in accordance with PJM rules and requirements."

a. Please explain in detail how the NSPL is calculated by FE PA and any time lags between when the coincident system peak occurs and the period when the kW NSPL is assigned to a Customer.

b. If a net metered customer-generator taking service on the PTC Rider or HP Rider provides net excess generation to the FE PA distribution and/or transmission systems during the one coincident peak that FE PA uses to assign transmission costs, how would that change transmission costs for FE PA wholesale energy suppliers and/or customers? Would it decrease transmission costs for some FE PA wholesale energy suppliers and/or customers and have no impact on other FE PA wholesale energy suppliers and/or customers, or would it decrease transmission costs for some FE PA wholesale energy suppliers and/or customers and correspondingly increase it on other FE PA wholesale energy suppliers and/or customers (if FE PA is setting retail transmission rates in order to recover its Annual Transmission Revenue Requirement), or would something else occur? Please fully explain and provide all documents utilized and/or relied upon in your answer, including describing any time lags between when the net metered customer-generator provided net excess generation during the one coincident peak and when the rate impact occurs.

c. If the answer to the above question states that there is a rate impact on individual customers or individual customer groups, please identify, provide, and explain in detail which of FE PA's customer classes benefit or are adversely impacted by the changes in the assigned NSPL and/or FE PA retail transmission rates. Provide a detailed, qualitative description of how net excess generation from net metered customer-generators during the one (1) coincident peak could change the cost obligations for FE PA customers. If so, would those benefits of a lower NSPL be solely ascribed to the Default Service customer class of the net metered customer-generator for the specific FE PA utility region, or would the lower NSPL be further socialized to a broader segment of FE PA's customers (and if so, to what segments and/or regions)

Conversely, if some FE PA customers benefit from a lower NSPL caused by a net metered customer-generator taking service on the PTC Rider or HP Rider, would other customers be adversely impacted? Please include in this discussion the interaction of the excess generation on the DSP supplier contracts, PTC Rider or HP Rider rates, Network Integration Transmission Service rates, any time lags between when the output is produced and when transmission cost allocation is impacted, and how growth in customer-generators is factored into transmission rates, and if the proposed transition to FE procuring transmission services versus the status quo of the DSP procuring transmission services is expected to have any impact on the answers provided, among other relevant matters. Please provide all documents utilized and/or relied upon in your answer.

RESPONSE:

a) See the following link on PJM's website for how the NSPL is calculated, OATT, ATTACHMENT M-2 (FirstEnergy Zones) Energy Procedure Manual For Determining Supplier Peak Load Share

b) Transmission costs are an allocation of costs by class of service and depend on the load contributions of responsible entities at the coincident peak. While excess generation at the coincident peak could theoretically affect load share, any actual reduction or reallocation is dependent upon the actions of other entities, including customers. Furthermore, peak load contribution is only one factor in the calculation of retail transmission costs. Thus, any excess generation from net metered customers does not necessarily result in any increase or decrease in transmission costs for retail customers and wholesale default suppliers.

c) Not applicable.

JSA Set 2, No. 4

The prefiled direct testimony of David M. Young (identified as FE PA Statement No. 1) states:

"Instead, excess energy from intermittent net-metered customer generators is recognized financially as an aggregate reduction of the load served by winning bidders in the Company's default service auctions. That load reduction is submitted to PJM and credited to the applicable Rate District at the LMP." (17:12-15.)

With respect to this testimony:

a. *Identify*, describe, and explain the mechanism by which excess energy from net- metered customer-generators is "recognized financially as an aggregate reduction of the load served by winning bidders in the Company's default service auctions." Please fully explain and provide all *Documents* that support, are utilized, and/or relied upon in your response.
b. *Identify*, describe, and explain how *FirstEnergy* recovers the difference between what it pays for excess generation at the PTC Rider rate and what is "recognized financially as an aggregate reduction of the load served by winning bidders in the Company's default service auctions." Please fully explain and provide all *Documents* that support, are utilized, and/or relied upon in your response.
c. *Identify*, describe, and explain the mechanism by which load reduction due to excess energy from net-metered customer-generators is "submitted to PJM and credited to the applicable Rate District at the LMP." Please fully explain and provide all *Documents* utilized and/or relied upon in your response.
d. *Identify*, describe, and explain whether *FirstEnergy* is required by any of its default service supply agreements to pay suppliers fixed or unavoidable charges when the aggregate demand for default service supply is reduced in

aggregate by net-metered customer generators utilized by default service customers. Provide all *Documents* that support, are utilized, and/or relied upon in your answer.

e. *Identify*, describe, and explain how *FirstEnergy* determines how many kW and kWh its default supply customers consume in a billing period. Explain in detail and provide all *Documents* that support, are utilized, and/or relied upon in your response.

f. *Identify*, describe, and explain any reconciliation process that *FirstEnergy* uses to address the differences of metered customer loads and other measured loads as compared to the load that default service providers are responsible for, and how line losses are handled. Explain in detail and provide all *Documents* that support, are utilized, and/or relied upon in your answer.

g. *Identify*, describe, and explain the contract settlement point for *FirstEnergy's* existing default supply contracts. Explain in detail and provide all *Documents* that support, are utilized, and/or relied upon in your response.

h. *Identify*, describe, and explain whether the settlement point varies by default supply procurement provider or by *PTC Rider / HP Rider* customer groups. Explain in detail and provide all *Documents* that support, are utilized, and/or relied upon in your response.

RESPONSE:

a) The net metering mechanism is part of a financial netting paradigm rather than a physical load netting paradigm. Customers are measured on an hourly basis as either a load where FE PA has delivered power to the customer or as injection where FE PA receives energy onto the distribution system from the customer. When a customer has produced energy from a net meter project for a given hour, the resulting load reduction is credited to the customer at full retail rate by their respective retail supplier. Further, that load reduction is submitted to PJM under the account of the load serving entity ("LSE") with the obligation to recognize the load reduction and credit is given to the LSE valued at the locational marginal price ("LMP").

b) Depending on the customer, the differences are recovered through the PTC or HP riders since both the load reduction credits from PJM and the payments to customers with excess generation run through either the PTC or HP Riders.

c) Load reduction credits for all non-shopping load is aggregated together into one hourly schedule for a monthly period and submitted to PJM. This schedule is created by pulling metered data for all customers from FE PA's settlements system.

d) FE PA is not required to pay unavoidable charges when net demand is reduced.

e) Default customer usage is read by the meters and collected by FE PA billing systems which allows for monthly billing to occur.

f) There is no reconciliation required as the default service suppliers are invoiced by the Company based on the metered loads for default service customers.

g) Supplier hourly load submitted to PJM is extracted from FE PA's settlement system for the calendar month. This supplier volume is compared to the supplier's PJM in schedules to ensure accuracy. The volume is derated for losses and multiplied by their fixed contract price to get to the monthly dollar amount. All three default service customer classes follow this process. However, the industrial class can also include a variable component in their payment. In this case, the hourly load is multiplied by the settled verified LMPs for the residual aggregate in the zone.

h) Industrial class default service suppliers are paid LMP plus a $4 adder for each hour, which we are proposing to eliminate in the current default service proceeding. Each of the Company's Rate Districts has different LMPs but each default service supplier within each Rate District would receive the same hourly price.

1 Section 1 Executive Summary

This report details the processes used to estimate Demand Reduction Induced Price Effects (DRIPE) values for avoided generation capacity and avoided electric energy purchases in Pennsylvania. This report also sets forth recommended values for inclusion in the 2026 TRC Test Tentative Order for use in cost-effectiveness testing in a potential Phase V of Act 129.

1.1 Background

Wholesale electricity price suppression, or DRIPE, captures the value of changes in wholesale electricity prices caused by a shift in the demand curve in a marketplace. This study considers two types of DRIPE, electric capacity DRIPE and electric energy DRIPE. Figure 1 shows a conceptual overview of capacity DRIPE and how it differs from the base avoided cost of generation capacity. Energy DRIPE derives its value in an analogous way in the energy market. Reduced demand causes a shift in the demand curve to the left, lowering the clearing price and capacity quantity. The value of the avoided demand comes in two parts. The first is from the avoided purchases, which is the price, p_1, multiplied by the change in quantity, $q_1 - q_2$. This is simply accounted for by the avoided cost of generation capacity.

Figure 1: Conceptual Overview of Capacity DRIPE

The second value component of lowered demand is DRIPE, which comes from the decrease in prices, due to market forces when demand is lowered, of all the remaining purchases that are still required. The equation for the value of DRIPE is shown in Equation 1. Where p_1 is the price of energy or capacity without any energy efficiency (EE) or demand response (DR) measures and p_2 is the price of energy or capacity with lowered demand. The quantity, q_2, is the new market clearing point reflective of the reduced demand. Since the Commonwealth still requires significant

energy and generation after EE and DR (i.e. q_2 is large), even a small drop in price can have a substantial economic impact.

Equation 1: Example DRIPE Equation

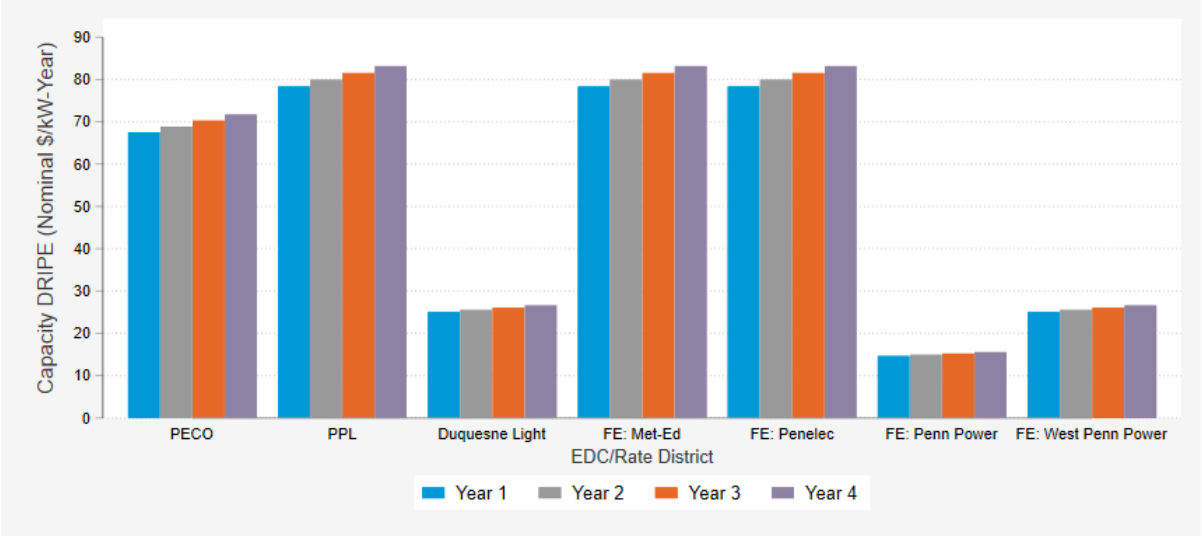
$$DRIPE = (p_1 - p_2) * q_2$$

This study focuses on DRIPE for two key Act 129 avoided cost components. Both effects are real avoided costs of supplying electricity so they can be considered benefits in an Act 129 Total Resource Cost (TRC) Test Order.

- The first is capacity DRIPE for the load zones of each of the Pennsylvania (PA) EDC/Rate Districts. Reduced demand for capacity allows for all the remaining required generation capacity to be procured at a lower clearing price.
- The second is electric energy DRIPE for the service territories of the PA EDC/Rate Districts. Lowered demand for energy shifts the marginal price of the energy procured via wholesale markets downward making each unit of energy still procured slightly cheaper.

Capacity DRIPE was considered for inclusion in the TRC Test in PA in the past. The 2013 Demand Response Study[2] explored the value of capacity DRIPE, called "Wholesale Price Suppression". Addendum I of the study details the methods used to estimate the value of capacity DRIPE for each PJM load zone and estimates the change in Phase I TRC ratios if capacity DRIPE were considered a TRC benefit. The study estimated that, in a single year, the overall value of capacity DRIPE to be over 635 million dollars in the load zones that the PA EDC/Rate Districts operate, but, because PJM load zones cross state lines, a large portion of that value would not be captured by PA ratepayers. Only 17% of the load in those zones is attributed to PA EDC/Rate Districts, so the value of capacity DRIPE to PA ratepayers was estimated to be closer to 110 million dollars per year. Ultimately the Commission directed the SWE not to include this benefit stream in the Phase III market potential study[3]. At the time, there was concern over the complexity of undertaking a more in-depth study as well as the number of assumptions required about future market conditions.

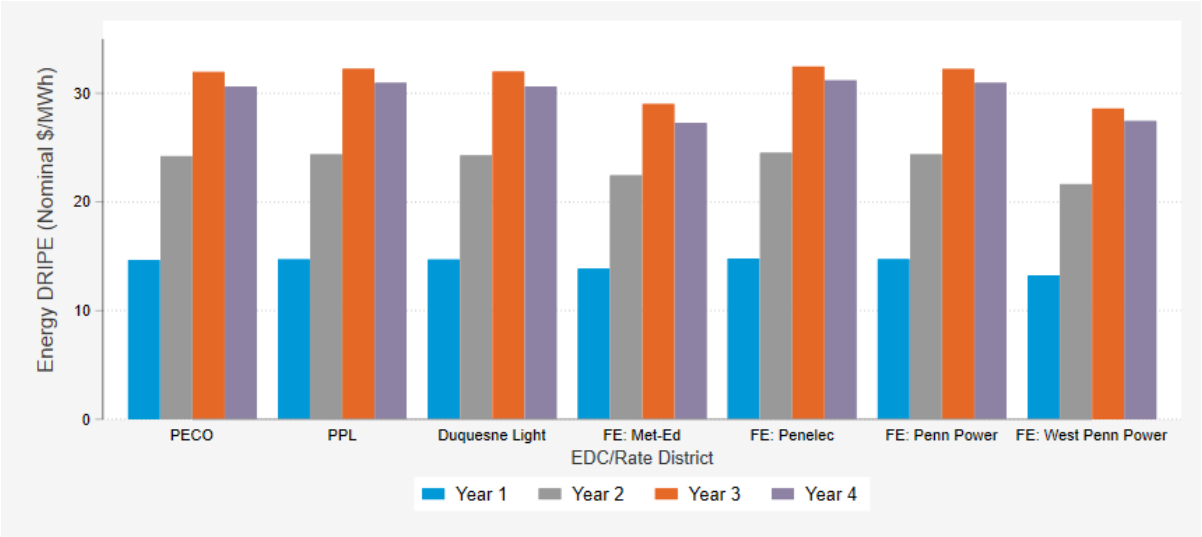
1.2 Summary of Results



This section summarizes the recommended DRIPE values for both generation capacity and electric energy DRIPE. Section 4 presents the full set of recommended DRIPE values. The DRIPE values are all calculated at the system level and presented in nominal dollars assuming a 2% inflation rate. Both capacity and energy DRIPE benefits are assumed to last for four years. After four years, markets are assumed to reach new equilibriums and DRIPE benefits go to zero.

[2] Act 129 SWE Demand Response Study Final Report - Amended November 1, 2013. Dated November 1, 2013. Released with the Commission's Peak Demand Cost Effectiveness Determination Tentative Order at Docket Nos. M-2012-2289411 and M-2008-2069887. Entered on Nov 14, 2013. See https://www.puc.pa.gov/pcdocs/1256728.docx

[3] Final Order on the Act 129 SWE to Perform a Demand Response Potential Study. From the Public Meeting of February 20, 2014 at Docket Nos. M-2012-2289411 and M-2008-2069887. Entered on February 20, 2014. See https://www.puc.pa.gov/pcdocs/1269801.doc



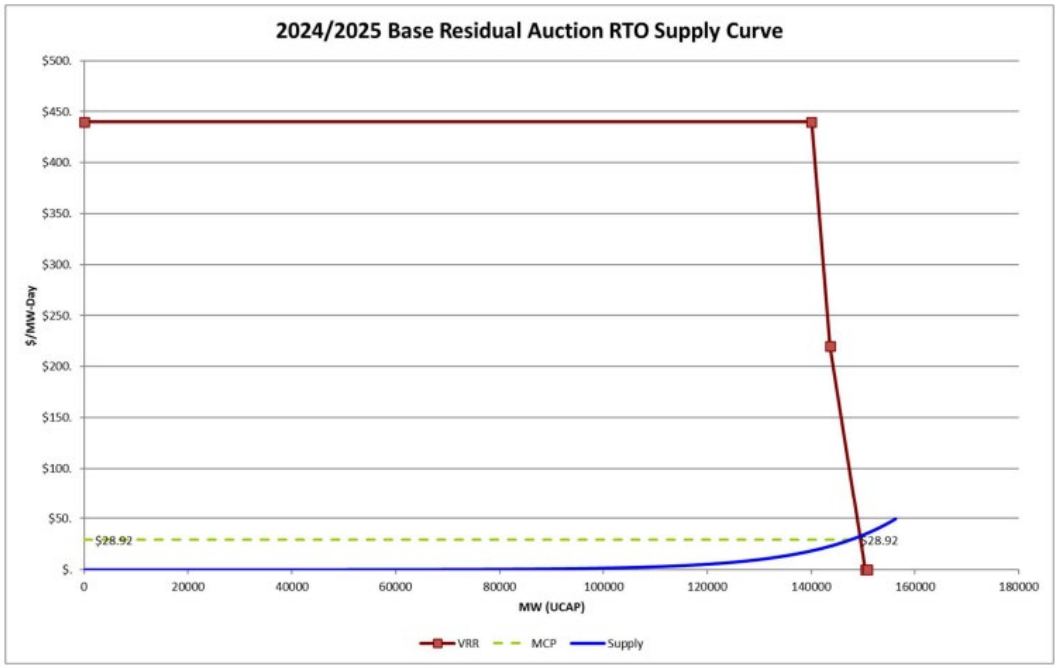
The capacity DRIPE estimates for each EDC/Rate District for the first program year (PY) of Phase V of Act 129 (PY18), shown in Figure 2, are all the same in subsequent years on a real dollar basis and only vary on a nominal basis. Since the Base Residual Auctions (BRAs) for generation capacity for Phase V program years have not yet taken place; the SWE team used the average of the estimated values of generation capacity DRIPE from the three most recent completed BRAs (2022/2023, 2023/2024, and 2024/2025) as a proxy.

Figure 2: Capacity DRIPE Estimates for PY18 (2026-2027)

The energy DRIPE estimates for each EDC/Rate District also rely on past relationships between zonal energy prices and systems load to estimate future DRIPE benefits. Figure 3 shows the energy DRIPE estimates for the first program year of Phase V.

Figure 3: Energy DRIPE Estimates for PY18 (2026-2027)

The SWE believes that these estimates of DRIPE benefits are reasonable and should be included in Phase V TRC testing.



2 Section 2 Electric Capacity DRIPE

2.1 Methodology and Estimation

Each year, the PJM conducts a Base Residual Auction (BRA) to secure adequate power supply resources for projected energy demand by load zone within the PJM territory.[4] Through the BRA, a Market Clearing Price (MCP) for each load zone is determined for the expected supply conditions, called the base scenario, as well as for scenarios with theoretically altered supply and demand conditions. PJM develops these theoretically altered supply conditions by either removing the lowest cost bids or adding in zero cost bids and re-solving for the resource clearing points in each load zone. This set of hypothetical scenarios along with the actual results of the auction are called the BRA scenario analysis.

Figure 4 below shows an example of the Variable Resource Requirement (VRR) curve, also known as the demand curve, and a smoothed supply curve for the 2024/2025 BRA for the full PJM RTO. The point where the VRR curve and the smoothed supply curve meet is the MCP. The points of the VRR curve are published before each BRA and the portion that intersects the supply curve is linear, so the demand curve does not need to be estimated. The supply curve points, however, are not published outright and therefore the slope of the supply curve must be estimated using the MCPs from the BRA scenario analysis described above.

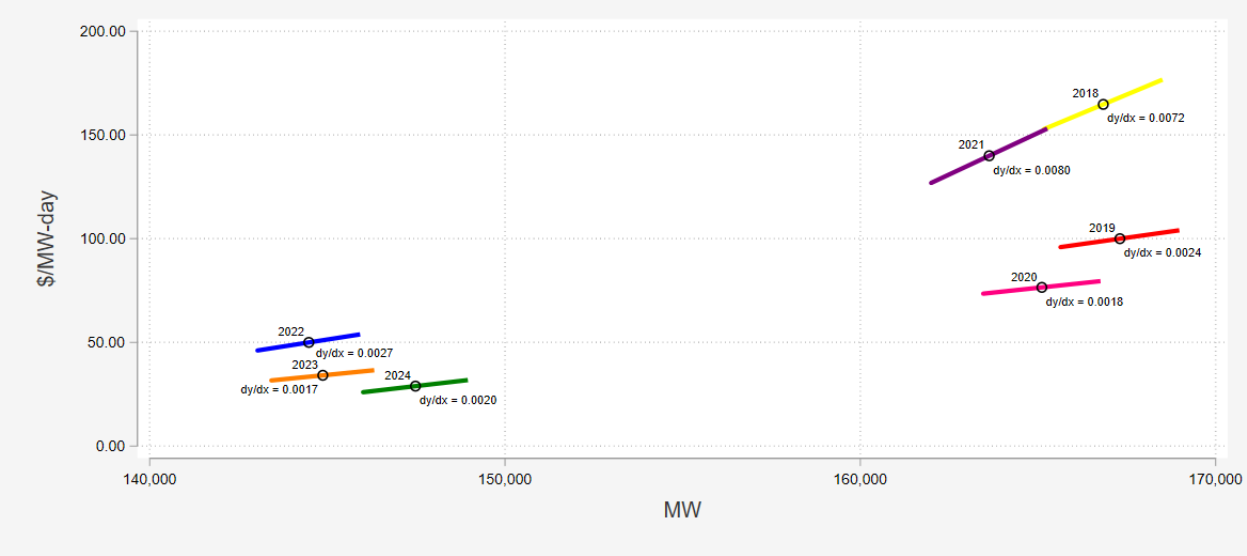


Figure 4: Example VRR and Supply Curves

[4] PJM is a regional transmission organization (RTO) that coordinates the movement of wholesale electricity in all or parts of 13 states and the District of Columbia. See https://www.pjm.com/about-pjm

To estimate the value of capacity DRIPE, the MCP values from the base scenario and the theoretical supply curve shifted scenarios can be used to approximate the supply curve slope. The three most recent BRAs which have been completed as of the time of writing this report are 2022/2023, 2023/2024, and 2024/2025. These recent auctions can be used to estimate capacity DRIPE in subsequent years. Figure 5 below shows the supply curve slope estimates for these recent BRAs as well as the auctions from 2018 – 2021. Over time, MCPs have dropped and the slopes of the supply curves for the RTO have become flatter, meaning that any capacity DRIPE will be decreased.

Figure 5: BRA PJM RTO 2018 – 2024 Supply Slope Estimates

The approximated supply curve slope along with the slope of the VRR curve of a given year can inform estimates of the price change associated with a 1 MW change in demand. This value can then be multiplied by the base scenario clearing quantity of MWs to estimate the capacity DRIPE value of an avoided MW of capacity. Equation 1 shows the calculation. The slopes in Figure 5 are equal to $p_1 - p_2$ for a given auction year, meaning all that is required to estimate capacity DRIPE is to multiply the slope by the clearing quantity. The estimate for 2018 would be 0.0072 multiplied by 166,836, which equals $1,201 per MW-day saved.

Figure 5 shows two distinct clusters of results approximately 20,000 MW apart on the x-axis. After the 2021/2022 auction, there was a significant change in the clearing quantity required for PJM. This is due to allocating some of the load, which previously cleared in the PJM market, through Fixed Resource Requirement (FRR) alternative[5]. FRR resources are an alternative way for load serving entities to serve customer's needs from outside of the PJM marketplace. Table 1 shows the internal PJM capacity and amount of capacity allocated through FRR in the PJM RTO by auction year. The portion of PJM load served by FRR resources has increased since the 2021/2022 auction. This means that there are fewer resources clearing within the competitive PJM market through auctions. Since capacity DRIPE derives a portion of its value from the

[5] See Fixed Resource Requirements Fact Sheet. https://pjm.com/-/media/about-pjm/newsroom/fact-sheets/securing-resources-through-fixed-resource-requirement-fact-sheet.ashx

quantity of capacity required in the market, capacity requirements being met by FRR resources, which are outside of the market, lowers the value of the capacity DRIPE.

Table 1: Internal PJM Capacity Available and FRR Commitments in Each Auction Year (2017/2018 – 2023/2024)[6]

	PJM RTO						
Auction Supply (MW)	2017/2018	2018/2019	2019/2020	2020/2021	2021/2022	2022/2023	2023/2024
Internal PJM Capacity	202,477.4	203,300.6	207,579.6	207,555.1	211,625.2	207,339.8	204,006.6
FRR Commitments	15,776.1	15,793.0	15,385.3	13,931.6	13,657.4	33,297.1	33,500.7

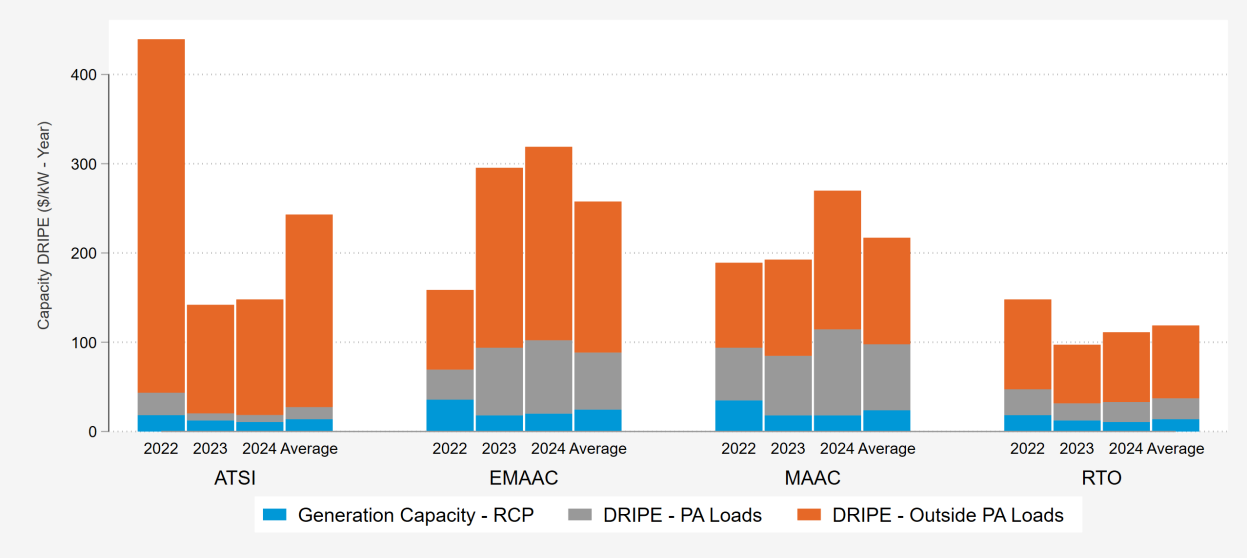
The SWE then calculated capacity DRIPE for each of the four load zones that had a separate clearing price in the last three BRAs. Appendix A of this report includes a mapping table of load zone to EDC/Rate District for reference. We use the average of the three most recent BRAs as a proxy for future values. Table 2 shows the results in $/kW-year as those are the units typically used in the Act 129 TRC Test for avoided capacity costs. The conversion from $/MW-day to $/kW-year is simply a multiplication by 0.365 (365 days divided by 1,000 kW per MW). The values are displayed in nominal 2026/2027 dollars, which is the start of a potential Phase V (PY18), when these values can be used in TRC tests. Because each EDC/Rate District does not represent all the load for its load zone, PA ratepayers may not experience all the DRIPE benefits for each load zone.

Table 2 includes one row to show the DRIPE value of each load zone overall as well as one that covers only the PA loads. The columns represent the last three BRAs, which correspond to Act 129 PY14, PY15, and PY16. The APS load zone, which contains West Penn Power, does not publish a VRR curve before the BRAs so it is not included in our estimates, and the RTO DRIPE estimate is used in its place.

[6]See 2023/2024 BRA Auction Report. Page 18. https://www.pjm.com/-/media/markets-ops/rpm/rpm-auction-info/2023-2024/2023-2024-base-residual-auction-report.ashx

Table 2: Capacity DRIPE Impact Estimates by Load Zone (2026/2027 Nominal $/kW-Year ICAP Incremental Reduction, Gen Level)

Load Zone	Affected Load	2022/2023	2023/2024	2024/2025	3-Year Average
RTO	All	$140.37	$89.95	$104.57	**$111.63**
	PA	$31.43	$20.34	$23.35	**$25.04**
MAAC	All	$166.71	$185.22	$261.93	**$204.62**
	PA	$63.78	$70.91	$100.39	**$78.36**
EMAAC	All	$132.94	$294.42	$310.95	**$246.10**
	PA	$36.49	$80.52	$85.59	**$67.54**
ATSI	All	$455.84	$137.33	$142.92	**$245.37**
	PA	$27.26	$8.37	$8.31	**$14.65**



2.2 Discussion and Sensitivity Analysis

The estimated capacity DRIPE values per load zone in Table 2 range from $8 to $455 per kW-year. This large range of estimated DRIPE values comes from two sources, both seen in Equation 1. First is q_2, which is the quantity of the unforced capacity (UCAP) requirement for an individual load zone. The UCAP requirement for each load zone varies in size. In all cases, PA load is only a portion of the load in its zone. That is why the PA DRIPE estimates are lower than the estimates for the overall respective load zones. When deciding on whether to include capacity DRIPE as a benefit, which load to include must be considered. The 2021 TRC Test Final Order[7] states, "The purpose of using a TRC test to evaluate EE&C programs is to track the relationship between the benefits to the Commonwealth and the costs incurred to obtain those benefits." This means that only the benefit to the Commonwealth is considered in the current cost-effectiveness test.

If the Commission elected to use the Societal Cost Test rather than the TRC Test, then the benefits to all society should be considered. Figure 6 shows the capacity DRIPE values for each load zone along with the MCP for each of the three most recent BRA years and the three-year average. The gray portion of each bar is the portion that is attributable to the Commonwealth. The MCP value of capacity itself has decreased over time and, in many zones, is less than the value of the DRIPE. As discussed above, our interpretation of PA indicates that only the capacity DRIPE benefits to the Commonwealth's ratepayers should be used in the cost effectiveness tests. Benefits to Maryland, Ohio, New Jersey, and Delaware ratepayers are excluded from the results.

[7] Pennsylvania Public Utility Commission, 2021 TRC Test Final Order. From the Public Meeting of December 19, 2019, at Docket No. M-2019-3006868 (2021 TRC Test Order). Entered December 19, 2019. https://www.puc.pa.gov/pcdocs/1648126.docx

Figure 6: DRIPE Makeup by Load Zone

The second portion of the DRIPE equation comes from the change in price, $p_1 - p_2$. Load zones that are more constrained will typically change prices more quickly than ones that are less constrained. The resource clearing price for a constrained zone comes from a segment of the supply curve that is steeper, meaning that the avoided marginal demand would have been very expensive. Avoiding any extra demand in the constrained zones will be much more valuable than in less constrained zones. The 2022/2023 DRIPE estimates for the ATSI load zone in Table 2 demonstrate this best. Because generation in ATSI was so constrained in that year, avoiding any amount of demand would have lowered the price of the required capacity substantially and therefore been extremely valuable.

Table 3 shows the average capacity DRIPE values that will be used in the current EmPOWER Maryland cycle (2024/2026) by EDC for benchmarking. EmPOWER Maryland uses multiple cost-effectiveness tests each year to assess its programs. The Utility Cost Test only includes capacity DRIPE for Maryland loads, while the Societal Cost Test includes the DRIPE benefits to load outside of Maryland. In Baltimore Gas and Electric's case, these numbers are the same as they serve an entire load zone that cleared separately. For the other EDCs, there is a substantial difference in the value of capacity DRIPE for only Maryland and all loads.

Table 3: EmPOWER Maryland Capacity DRIPE Comparison

EDC	Maryland Load ($/kW-year)	All Load ($/kW-year)
Baltimore Gas & Electric	$127	$127
Pepco	$18	$88
Delmarva Power & Light	$118	$171
Potomac Edison	$10	$99

The effects of capacity DRIPE are assumed to last for four years. After this period, the generation capacity markets are expected to take the new levels of demand into account for the auctions that dictate the MCP in the following years. The lowered prices due to demand reductions may cause some generation sources to retire or leave the market, shifting the supply curve and eventually

eliminating the price effects from demand reduction. The four-year life of capacity DRIPE is in line with cost-effectiveness tests in other states like Maryland.

To give context to the magnitude of capacity DRIPE values estimated in this report, the SWE team conducted a sensitivity analysis on the impact of including capacity DRIPE on PY13 non-residential EE programs. Table 4 shows the results using the average DRIPE values from Table 2.

Table 4: Cost-Effectiveness Sensitivity Analysis – Non-Residential EE Programs – Capacity DRIPE

EDC/Rate District	TRC ratio w/o DRIPE	TRC ratio w/ PA DRIPE	TRC ratio w/ Full DRIPE
PECO	0.88	0.91	0.99
PPL	2.31	2.37	2.46
Duquesne Light	2.49	2.52	2.62
FE: Met-Ed	1.34	1.37	1.44
FE: Penelec	1.41	1.47	1.59
FE: Penn Power	1.04	1.04	1.08
FE: West Penn Power	1.21	1.22	1.25

In each case, the inclusion of capacity DRIPE as a benefit caused a modest increase in the TRC ratio of the non-residential EE programs for each EDC/Rate District. In the case of PECO, if the full value of capacity DRIPE for the EMAAC load zone was included, the non-residential program would have gone from not being considered cost-effective by the TRC Test to being nearly cost-effective. While this sensitivity analysis shows the effect of DRIPE on an EE focused program, a DR program, which gets almost all its benefits from avoided capacity, would be more sensitive to its inclusion.

The SWE team shared the preliminary results of this report with TUS staff in Q4 of 2023. Using feedback from TUS staff, the SWE team recommends including the four-year capacity DRIPE values that only take PA loads into account in TRC tests during Phase V. Section 4 contains tables with the recommended capacity DRIPE values.

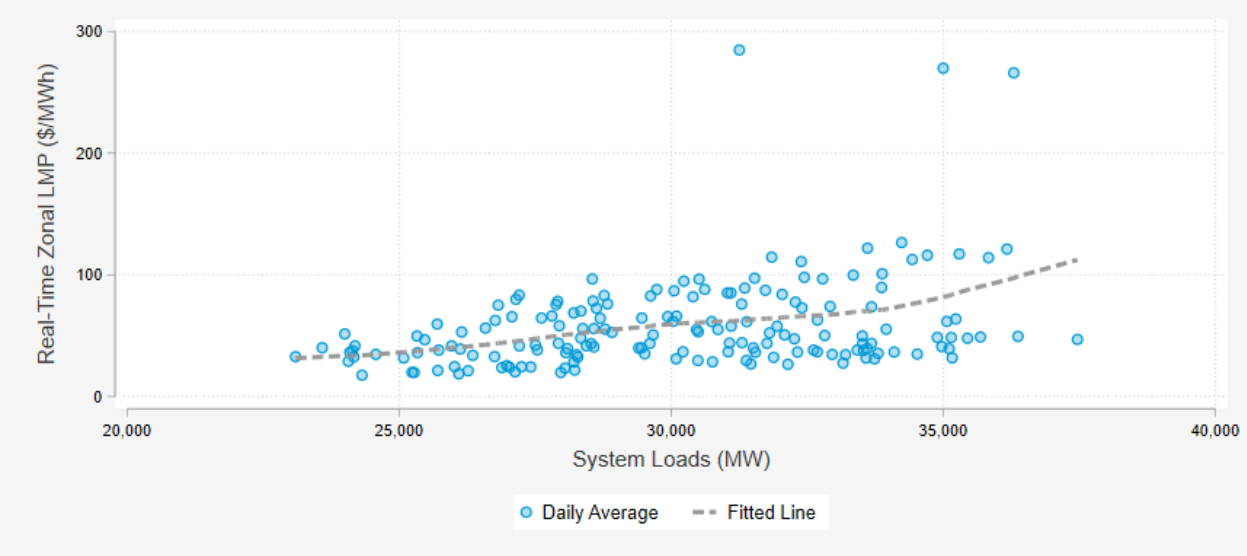
3 Section 3 Electric Energy DRIPE

3.1 Methodology and Estimation

Electric energy DRIPE and capacity DRIPE derive their benefits from the same underlying market clearing mechanics. For every avoided MWh purchase, all other purchased energy becomes slightly cheaper. The same principles of supply and demand dictate this relationship for energy. Figure 1 in Section 1 depicts the process by which DRIPE benefits occur for capacity DRIPE but can be applied to electric energy DRIPE as well.

The following steps describe the data and methods used to estimate electric energy DRIPE values.

1) To estimate energy DRIPE, first, the relationship between zonal electricity prices and PA system load must be estimated. This relationship is called the elasticity of price with respect to demand. The basic equation for elasticity is shown in Equation 2.



Equation 2: Elasticity Equation

$$Elasticity = \frac{\%\ change\ in\ price}{\%\ change\ in\ quantity}$$

The SWE estimated the elasticity of each load zone using real-time locational marginal prices (LMPs) as well as real-time system loads. The SWE team chose to use real-time hourly loads and real-time LMPs as they represent the system loads and prices experienced by the system, rather than using day-ahead estimations. The SWE team retrieved the zonal real-time LMPs and the real-time loads for each PA EDC/Rate District zone from 2021 – 2023 through Data Miner 2[8]. Figure 7 below shows an example of the summer daily average real-time LMPs for the PECO zone versus statewide loads. Real-time LMP values tend to increase as system loads increase.

[8] See Data Miner 2. https://dataminer2.pjm.com/list

Figure 7: 2021 – 2023 Summer Daily Average Zonal Real-Time LMPs vs. Zonal Loads: PECO

Equation 3 shows the model specification used to estimate the relationship between zonal prices and system loads. The model also includes natural gas prices as an explanatory variable. Since natural gas fuels a substantial portion of the energy generated in PA, its commodity price can have a large effect on zonal electric energy prices. The model uses the Henry Hub Natural Gas Spot Price[9] for this purpose. The specification for this model allows for a non-linear relationship between system loads and zonal LMPs. The SWE team considered several models to describe the relationship between system loads and real-time LMPs and settled on a cubic function, which was used to estimate electric energy DRIPE in New England.[10] This type of regression model can capture the steeper increases in prices when loads are higher. The generation sources on the margins at higher system loads tend to be much more expensive than further down the supply curve. Therefore, increases to system load tend to increase prices at a faster rate.

Equation 3: Regression Specification Relating Hourly Zonal Electric Energy Prices to System Demand

$$LMP_{Zone} = \beta_0 + \beta_1 Load_{System} + \beta_2 Load_{System}^2 + \beta_3 Load_{System}^3 + \beta_4 Henry\ Hub\ Spot\ Price_{Natural\ Gas}$$

The next step in estimating the elasticity of price with respect to demand is to calculate the equation for the slope of price relative to system demand. The equation for this slope is shown in Equation 4. This equation for slope can be calculated by taking the derivative of Equation 3 with respect to system loads. This equation is used to calculate the instantaneous slope of price for a zone given a level of system demand.

[9] See Henry Hub Natural Gas Price. https://www.eia.gov/dnav/ng/hist/rngwhhdm.htm
[10] See Avoided Energy Supply Components in New England: 2024 Report. https://www.synapse-energy.com/sites/default/files/AESC%202024.pdf (page 232)

Equation 4: Slope of Price with Respect to System Demand

$$Slope\ of\ Price = \beta_1 + 2 * \beta_2 Load_{System} + 3 * \beta_3 Load^2_{System}$$

Using Equation 4, the SWE team calculated the slopes of price relative to system demand for each observation in the 2021-2023 dataset. The final step to calculate the elasticity of price with respect to quantity for each zone in each hour of the sample is shown in Equation 5.

Equation 5: Calculation of Elasticity

$$Elasticity = \frac{Slope\ of\ price\ relative\ to\ system\ demand_{zone}}{Hourly\ Real - Time\ LMP_{zone}} \times Hourly\ Load_{system}$$

The SWE team then took a simple average of the hourly elasticities in the sample to get to a single elasticity value for each load zone. This elasticity represents the percentage change in zonal energy prices per 1% change in system loads. Table 5 shows the estimated elasticity for each PA EDC/Rate District.

Table 5: Estimated Elasticity by EDC/Rate District

EDC/Rate District	Elasticity
PECO	1.81
PPL	2.07
Duquesne Light	1.82
FE: Met-Ed	2.51
FE: Penelec	1.79
FE: Penn Power	1.79
FE: West Penn Power	1.89

2) Along with the elasticity estimates, the SWE team needed information on future prices and sales to estimate electric energy DRIPE. PJM produces a forecast of net energy by load zone in each year, which the SWE team used as estimates for future sales.[11] The SWE team also needed to make assumptions about the percentage of the load in any given year that transacts through the PJM market. At any given time, a portion of future energy sales are already under contract and will therefore not benefit from energy DRIPE. The portion of energy sales under contract that does not benefit from energy DRIPE is typically referred to as hedged load. The SWE team did not have visibility into the percentage of sales that are hedged in any given year in the PJM marketplace, so instead the SWE team used the assumptions made in the Avoided Energy Supply Components in New England: 2024 Report[12] as a proxy for hedged loads in a similar marketplace. Table 6 shows the

[11] See PJM 2024 Load Forecast Report Data. https://www.pjm.com/-/media/library/reports-notices/load-forecast/2024-load-report-data.ashx
[12] See Avoided Energy Supply Components in New England: 2024 Report. https://www.synapse-energy.com/sites/default/files/AESC%202024.pdf (page 239)

hedged load assumptions used by year. Since measures can be installed in any year of the upcoming phase, Year 1 would correspond to the year of measure installation.

Table 6: Hedged Load Assumptions

Year	Non-Hedged Load
Year 1	38%
Year 2	59%
Year 3	74%
Year 4	68%

The SWE team also needed estimates of the future price of energy in each zone to calculate the final electric energy DRIPE benefits. The avoided energy costs from each EDC/Rate Districts' Phase IV EE&C Plan were used for this purpose.

3) Finally, using the elasticity for each zone along with estimates of future energy costs and PJM estimates of future zonal load for 2027 – 2031, the SWE team estimated the electric energy DRIPE value on a $/MWh basis for each zone. Table 7 shows the electric energy DRIPE estimate for each EDC/Rate District service territory for measures installed in PY18 (June 1, 2026, to May 31, 2027). Electric energy DRIPE values increase over the first three years for each EDC/Rate District as the amount of hedged energy decreases. This means that in each subsequent year, more energy can benefit from the lowered prices, and therefore the overall benefit increases. In the final year though, the benefit decreases as the market starts to move towards equilibrium and suppliers respond to the overall lower prices. The energy DRIPE estimates for Penn Power and West Penn Power use the ATSI and AP zones respectively as they do not have their own Locational Deliverability Area. The estimates of energy DRIPE shown in Table 7 include cross-zone benefits to the other PA EDC/Rate Districts. This means that the price benefits for all PA ratepayers are considered.

Table 7: Energy DRIPE Estimates PY18 (Nominal $/MWh)

EDC/Rate District	Year 1	Year 2	Year 3	Year 4
PECO	$14.65	$24.23	$31.97	$30.62
PPL	$14.72	$24.39	$32.25	$30.98
Duquesne Light	$14.69	$24.28	$32.00	$30.64
FE: Met-Ed	$13.86	$22.45	$29.02	$27.27
FE: Penelec	$14.79	$24.53	$32.47	$31.20
FE: Penn Power	$14.73	$24.38	$32.24	$30.98
FE: West Penn Power	$13.25	$21.65	$28.61	$27.47

3.2 Discussion and Sensitivity Analysis

Electric energy DRIPE benefits are assumed to last for four years just like the analogous capacity DRIPE benefits. The Avoided Energy Supply Components New England: 2024 Report calculates energy DRIPE over a ten-year horizon with the value gradually declining over time due to market

equilibrium changes. On the other hand, the Maryland EmPOWER program assumes that electric energy DRIPE benefits only last for four years. The SWE team chose to follow the more conservative approach to assume four years of benefits given the uncertainty associated with estimating the effects of these broad market dynamics.

To put the estimates of electric energy DRIPE in Table 7 into context, Table 8 shows the same sensitivity analysis performed for capacity DRIPE on the Non-Residential EE programs performed for electric energy DRIPE.

Table 8: Cost-Effectiveness Sensitivity Analysis – Non-Residential EE Programs – Electric Energy DRIPE

EDC/Rate District	TRC ratio w/o DRIPE	TRC ratio w/ DRIPE
PECO	0.88	1.06
PPL	2.31	2.63
Duquesne Light	2.49	2.93
FE: Met-Ed	1.34	1.55
FE: Penelec	1.41	1.65
FE: Penn Power	1.04	1.15
FE: West Penn Power	1.21	1.41

In each case, the TRC ratio increases with the inclusion of the electric energy DRIPE. The overall impact of electric energy DRIPE on each EDC/Rate District's TRC ratio is higher than the inclusion of capacity DRIPE.

Both energy and capacity DRIPE represent real benefits to the PA EDC/Rate Districts from avoided energy and demand. Their inclusion in any cost-effectiveness tests provides a clearer picture of program impacts and cost-effectiveness. The SWE team recommends that the electric energy DRIPE values should be included in TRC tests during Phase V. Section 4 contains tables with the recommended electric energy DRIPE values.

4 Section 4 Recommended DRIPE Values

This section details the recommended DRIPE values for both generation capacity and electric energy DRIPE. The DRIPE values are all calculated at the system level and presented in nominal dollars assuming a 2% inflation rate. For use in cost-effectiveness tests, any savings numbers calculated at the meter level should be scaled up for line losses.

There are limitations to the values shown below. For example, the capacity DRIPE estimates are all the same each year on a real dollar basis and only vary on a nominal basis. This is because the BRAs for generation capacity for Phase V years have not taken place as of the writing of this report; as a result, the SWE team used the average of the estimated values of generation capacity DRIPE from the three most recently completed BRA auctions (2022/2023, 2023/2024, and 2024/2025) as a proxy. The auctions for future years of capacity will have taken place by the time Phase V starts, but not before the publication of the 2026 TRC Test Tentative Order for Phase V. The electric energy DRIPE estimates for each EDC/Rate District also rely on past relationships between zonal energy prices and systems loads to hold several years into the future. Despite these limitations, the SWE believes that these estimates of DRIPE benefits are reasonable and should be included in Phase V TRC tests.

Electric Company for Approval of a	**:**	**Docket No. P-2026-3060298**
Default Service Plan for the Period	**:**	
June 1, 2027 to May 31, 2031	**:**	

JSA Set 2, No. 12

The prefiled direct testimony of David M. Young (identified as FE PA Statement No. 1) states:

"FE PA proposes to make this change effective June 1, 2027, for new net metering customer generation coming online after June 1, 2027. However, existing net metering customer generation online prior to the start of DSP VII will be exempt from the annual reclassification until June 1, 2029." (19:19-22.)

With respect to this testimony:

a. *Identify*, describe, and explain how many customer-generators *FirstEnergy* expects to be online by June 1, 2027. Provide all *Documents* utilized and/or relied upon in your answer.
b. *Identify*, describe, and explain why *FirstEnergy* determined that the exemption period from the annual reclassification for customer generators that come online by June 1, 2027 should be two years and not some other interval? Provide all *Documents* utilized and/or relied upon in your answer.
c. Has *FirstEnergy* conducted any studies or analyses of the net metering expenses associated with customer-generators that will be exempt from the annual reclassification until June 1, 2029? If yes, please provide all *Documents* related to the same.

RESPONSE:

a. See FE PA Response to Interrogatory JSA Set 2, No 12, Attachment A, for data on the maturity of current applications in the Company's interconnection queue that was used to provide the estimated request.

FE PA cannot project with precision how many customer-generators will be online by June 1, 2027 because many variables outside the Company's control, including market conditions, construction delays, and financing, impact the in-service date for a net metering project. Refer to FE PA Response to JSA Interrogatory Set 1, No. 12, Attachment A, for information regarding the maturity of current applications in the Company's interconnection queue.

b. The Company selected a two-year period for its proposed exemption as opposed to a longer period because it is the mid-point of the DSP VII term and ensures that the reclassification of non-residential default service customers will be implemented before the beginning of FE PA's next default service program on June 1, 2031.

c. FE PA has not conducted any studies or analyses of the net metering expenses associated with customer-generators that will be exempt from the annual reclassification until June 1, 2029.

REBUTTAL TESTIMONY OF THOMAS S. MICHELMAN

ON BEHALF OF

THE COALITION FOR COMMUNITY SOLAR ACCESS AND SOLAR ENERGY INDUSTRIES ASSOCIATION
"Joint Solar Advocates"

Date Served: May 28, 2026

Date Submitted for the Record: May 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. PLEASE STATE FOR THE RECORD YOUR NAME, POSITION, AND BUSINESS ADDRESS.

A. My name is Thomas S. Michelman. I am the Vice President & Senior Director, Distributed Energy Resources Practice Lead for Sustainable Energy Advantage, LLC. My business address is 161 Worcester Road, Suite 503, Framingham, MA 01701.

Q. ARE YOU THE SAME THOMAS MICHELMAN WHO FILED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. I submitted my direct testimony that is marked as "Joint Solar Advocates Statement No. 1." My experience and qualifications are set forth in that statement.

Q. ON WHOSE BEHALF ARE YOU FILING REBUTTAL TESTIMONY?

A. I am filing rebuttal testimony on behalf of the Coalition for Community Access and the Solar Energy Industries Association, jointly called the Joint Solar Advocates ("JSA"), in this proceeding.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. In my rebuttal testimony, I discuss the direct testimony of Maskim Malukoff on behalf of the Office of Small Business Advocate ("OSBA") and the direct testimony of Serhan Ogur on behalf of the Office of Consumer Advocate ("OCA"). Specifically, I discuss these witnesses' support for the Maximum Registered Peak Load ("MRPL") proposal by FirstEnergy Pennsylvania Electric Company ("FE") as it relates to FE's treatment of net-metered customer-generators in its proposed Default Service Plan VII.

Q. ARE THE POSITIONS OF THESE TWO WITNESSES ON THIS MATTER SIMILAR?

A. Yes. Both witnesses support FE's MRPL proposal, but as demonstrated by OCA's and OSBA's responses to discovery, these witnesses generally did not perform any independent verification of FE's analysis and rationale purportedly supporting its MRPL proposal.

Q. DO YOU AGREE WITH MR. MALUKOFF AND DR. OGUR'S SUPPORT OF FE'S MRPL PROPOSAL?

A. No. I believe that the Pennsylvania Public Utility Commission ("Commission") should not rely upon Mr. Malukoff's and Dr. Ogur's support of FE's MRPL proposal for the reasons that I explain in my rebuttal testimony.

Q. DID YOU ADDRESS THE SPECIFIC ISSUES RELATED TO FE'S MRPL PROPOSAL IN YOUR DIRECT TESTIMONY?

A. Yes. Unlike OCA and OSBA, I performed an in-depth analysis of FE's MRPL proposal and explained that analysis in detail in my direct testimony. As I discussed in my direct testimony, I found both FE's justification and analytical support for the MRPL proposal deficient.[1]

Q. YOU STATED THAT YOU PERFORMED AN IN-DEPTH ANALYSIS OF FE'S MRPL PROPOSAL. WERE YOU ABLE TO DETERMINE WHETHER THE WITNESSES FOR OCA AND OSBA DID THE SAME AND PERFORMED AN INDEPENDENT ANALYSIS OF THE PROPOSAL?

A. In contrast to my detailed analysis, Mr. Malukoff's and Dr. Ogur's testimony on this issue were insufficient as they performed only minimal analyses to support FE's proposal. Because they did not independently verify the underlying rationale that serves as the basis of FE's MRPL proposal, I believe that each witness failed to fully investigate FE's proposal.

Q. DO YOU HAVE CONCERNS ABOUT MR. MALUKOFF'S AND DR. OGUR'S TESTIMONY IN ADDITION TO THEIR FAILURE TO VERIFY FE'S RATIONALE FOR THE MRPL PROPOSAL?

A. Yes.

[1] Direct Testimony and Exhibits of Thomas S. Michelman on behalf of the Coalition for Community Solar Access and the Solar Energy Industries Association, JSA Statement No. 1 (April 29, 2026) ("Michelman Direct"), pp. 9-60.

Q. BEFORE YOU RESPOND SPECIFICALLY TO YOUR CONCERNS ABOUT MR. MALUKOFF'S AND DR. OGUR'S TESTIMONY, DO YOU HAVE ANY OVERARCHING OBSERVATIONS ABOUT THEIR SUPPORT OF FE'S MPRL PROPOSAL?

A. Yes. Both Mr. Malukoff and Dr. Ogur are testifying on behalf of Pennsylvania's statutory consumer advocates. The OCA is directed by statute to represent the interests of consumers before the Commission, while the OSBA is authorized and directed to represent the interest of small business consumers of utility services in Pennsylvania under the provisions of the Small Business Advocate Act. Given these directives, I was surprised by the fact that neither witness, in his support of FE's MRPL proposal, discussed, or even considered, the cost reduction benefits that currently accrue or should accrue to commercial default service customers on the PTC Rider as a result of net-metered excess generation.

Q. WHY DID THIS OMISSION SURPRISE YOU?

A. In today's regulatory environment, both in Pennsylvania and across the nation, the issue of rate affordability is of paramount importance. The OCA and OSBA should be considering and advocating for every opportunity to reduce ratepayers' electric costs. However, both the OCA and OSBA witnesses, without doing any independent investigation into the matter, incorrectly assumed that net-metered customer generators on the Commercial PTC Rider are and will be a significant cost burden to other commercial default service customers without any contravening benefits. But the analysis presented in my direct testimony proves the opposite of OCA's and OSBA's assumption. Had the OCA and OSBA witnesses performed in-depth analyses, they should have recognized that net-metered excess generation significantly lowers the net energy component of the Commercial PTC Rider rate and provides benefits to Commercial PTC Rider customers in the

Q. BEFORE YOU RESPOND SPECIFICALLY TO YOUR CONCERNS ABOUT MR. MALUKOFF'S AND DR. OGUR'S TESTIMONY, DO YOU HAVE ANY OVERARCHING OBSERVATIONS ABOUT THEIR SUPPORT OF FE'S MPRL PROPOSAL?

A. Yes. Both Mr. Malukoff and Dr. Ogur are testifying on behalf of Pennsylvania's statutory consumer advocates. The OCA is directed by statute to represent the interests of consumers before the Commission, while the OSBA is authorized and directed to represent the interest of small business consumers of utility services in Pennsylvania under the provisions of the Small Business Advocate Act. Given these directives, I was surprised by the fact that neither witness, in his support of FE's MRPL proposal, discussed, or even considered, the cost reduction benefits that currently accrue or should accrue to commercial default service customers on the PTC Rider as a result of net-metered excess generation.

Q. WHY DID THIS OMISSION SURPRISE YOU?

Q. DO YOU HAVE CONCERNS ABOUT MR. MALUKOFF'S AND DR. OGUR'S TESTIMONY IN ADDITION TO THEIR FAILURE TO VERIFY FE'S RATIONALE FOR THE MRPL PROPOSAL?

A. Yes.

[1] Direct Testimony and Exhibits of Thomas S. Michelman on behalf of the Coalition for Community Solar Access and the Solar Energy Industries Association, JSA Statement No. 1 (April 29, 2026) ("Michelman Direct"), pp. 9-60.

Q. BEFORE YOU RESPOND SPECIFICALLY TO YOUR CONCERNS ABOUT MR. MALUKOFF'S AND DR. OGUR'S TESTIMONY, DO YOU HAVE ANY OVERARCHING OBSERVATIONS ABOUT THEIR SUPPORT OF FE'S MPRL PROPOSAL?

A. Yes. Both Mr. Malukoff and Dr. Ogur are testifying on behalf of Pennsylvania's statutory consumer advocates. The OCA is directed by statute to represent the interests of consumers before the Commission, while the OSBA is authorized and directed to represent the interest of small business consumers of utility services in Pennsylvania under the provisions of the Small Business Advocate Act. Given these directives, I was surprised by the fact that neither witness, in his support of FE's MRPL proposal, discussed, or even considered, the cost reduction benefits that currently accrue or should accrue to commercial default service customers on the PTC Rider as a result of net-metered excess generation.

Q. WHY DID THIS OMISSION SURPRISE YOU?

A. In today's regulatory environment, both in Pennsylvania and across the nation, the issue of rate affordability is of paramount importance. The OCA and OSBA should be considering and advocating for every opportunity to reduce ratepayers' electric costs. However, both the OCA and OSBA witnesses, without doing any independent investigation into the matter, incorrectly assumed that net-metered customer generators on the Commercial PTC Rider are and will be a significant cost burden to other commercial default service customers without any contravening benefits. But the analysis presented in my direct testimony proves the opposite of OCA's and OSBA's assumption. Had the OCA and OSBA witnesses performed in-depth analyses, they should have recognized that net-metered excess generation significantly lowers the net energy component of the Commercial PTC Rider rate and provides benefits to Commercial PTC Rider customers in the

form of reduced capacity and transmission obligations. The OCA and OSBA witnesses failed to account for any of the benefits of net-metered excess generation.

Q. DO ANY RECOMMENDATIONS IN YOUR DIRECT TESTIMONY HELP KEEP RATES AFFORDABLE?

A. Yes. I recommended that FE should modify how it calculates customer peak loads used to determine generation capacity and transmission cost allocation by: (1) allowing customers to register "negative loads" as a result of the excess generation they produce, and (2) apply the cost savings of those negative loads to reduce the allocation of the relevant costs to the default service class in which the customer-generator is assigned.[2]

Q. PLEASE EXPLAIN HOW YOUR RECOMMENDATIONS WILL HELP MAKE RATES MORE AFFORDABLE.

A. In my direct testimony, I explained that FE's current practice for determining customer peak loads results in the capacity and transmission cost reduction benefits from net-metered excess generation to accrue to customers not only outside of the Commercial default service class from which net-metering costs are recovered, but in some cases to customers outside of Pennsylvania.[3] FE's practice results in a misalignment of costs and benefits. To remedy this problem, I recommended a modification to FE's current practice for determining customer peak loads that is already used by other utilities in the PJM region and approved by the Commission.[4] Specifically, by allowing customer-generators to register "negative loads" as a result of the excess generation they produce, the cost savings of those negative loads can be used to reduce the allocation of the relevant capacity and transmission costs to the default service class in which the customer-generator is assigned. As most FE net-metered customer-generators are taking service, or have applied for service, on the

---

3 Michelman Direct at 22-23 and 33-34.

4 *Id*. at 20:7-13; 28-7-13; 32:6-33:2.

Commercial PTC Rider, all those benefits would accrue to the Commercial default service class of the applicable FE Rate District by ultimately *decreasing* the PTC Rider as compared to what it would have been without incorporating negative loads. For net-metered customer-generators on the HP Rider, the benefits would accrue to the Industrial default service class.[5] In short, by overlooking the potential benefits which can be afforded by customer-generators, Mr. Malukoff and Dr. Ogur missed a very viable means for reducing rates as compared to the status quo for the customer groups that the OCA and OSBA are tasked with representing.

II. REBUTTAL OF OSBA WITNESS MALUKOFF

Q. WHAT IS YOUR OPINION OF MR. MALUKOFF'S TESTIMONY RELATED TO THE MRPL PROPOSAL?

A. For FE's MRLP proposal, the totality of Mr. Malukoff's testimony is comprised of (1) a recitation of FE's proposal to change the current net-metering construct in its service territory by categorizing default service customers between the PTC Rider and HP Rider rate categories based on MRPL, (2) a recitation of FE's support for that proposal as expressed in FE PA Statement No. 1 at17-19, and (3) agreement with the same.[6] Mr. Malukoff's testimony is devoid of any evidence that he conducted an independent assessment of FE's support for its MRPL proposal to test its validity.

Q. DID YOU CONFIRM THAT MR. MALUKOFF DID NOT BASE HIS SUPPORT FOR FE'S PROPOSAL ON AN INDEPENDENT ANALYSIS?

A. Yes. In discovery, the JSA asked Mr. Malukoff to "[i]dentify, describe, and explain and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or

---

5 *Id*. at 25:9-23 and 37:11-18.

6 Direct Testimony and Exhibit of Maksim Malukoff on behalf of Pennsylvania Office of Small Business Advocate, OSBA Statement No. 1 (April 29, 2026) ("Malukoff Direct"), pp. 7-10.

prepared in connection with his support of FirstEnergy's proposed changes to its definition of Maximum Registered Peak Load." Mr. Malukoff's response cited to his review of FE's testimony, supporting exhibits and responses to certain data requests, and Commission and Court decisions addressing the MRPL issue for UGI Utilities, Inc. ("UGI Utilities") and PPL Electric Utilities Corporation.[7] None of the information cited by Mr. Malukoff in any way constitutes an independent analysis or verification of the impact of the MRPL proposal in FE's service territory.

Q. DID YOU REVIEW MR. MALUKOFF'S DEFINITIVE STATEMENT THAT FE'S "[C]URRENT CLASSIFICATION RESULTS IN SMALL BUSINESS DEFAULT SERVICE CUSTOMERS DISPROPORTIONATELY SUBSIDIZING CUSTOMER-GENERATORS THAT, BASED ON THEIR SIZE AND OUTPUT SHOULD BE CLASSIFIED AS INDUSTRIAL CUSTOMERS UNDER THE HP RIDER."

A. YES.

Q. DID MR. MALUKOFF PERFORM ANY INDEPENDENT ANALYSIS TO SUPPORT HIS CONCLUSION THAT SMALL BUSINESS DEFAULT SERVICE CUSTOMERS WERE "DISPROPORTIONALLY SUBSIDIZING" CUSTOMER GENERATORS?

A. No. Again, in response to discovery, Mr. Malukoff stated that his conclusion was based on FE's testimony and responses to data requests as well as "his understanding of how default service procurement and compensation for excess net-metered generation function under Pennsylvania's regulatory framework."[8] But with respect to his understanding of the compensation for net-metered excess generation, he specifically stated that he "relie[d] on FirstEnergy's estimate of the

[7] Exhibit TM-12 (OSBA Response to JSA ROG I-3).

[8] Exhibit TM-12 (OSBA Response to JSA ROG: I-2).

potential costs to PTC Rider customers" and had not done any independent analysis to verify such costs.[9]

Q. ARE THERE OTHER INSTANCES IN WHICH MR. MALUKOFF MAKES FACTUAL STATEMENTS WITHOUT INDEPENDENTLY VERIFYING THEM WITH APPROPRIATE INDEPENDENT ANALYSES?

A. Yes. In his testimony, Mr. Malukoff attested that "[r]eclassifying large customer-generators under the HP Rider would offer these customers fair compensation,"[10] but he admitted that he did not undertake any cost benefit analysis to determine if in fact it is "fair." Instead, he simply assumed that because excess generation will be paid based on real-time pricing, such compensation is fair.[11]

III. REBUTTAL OF OCA WITNESS OGUR

Q. WHAT IS DR. OGUR'S PRIMARY BASIS FOR SUPPORTING FE'S MRPL PROPOSAL?

A. Dr. Ogur's primary basis for supporting FE's MPRL proposal is rooted in the assertion that FE's MRPL proposal would avoid the risks associated with reduced load for commercial default service customers on the PTC Rider.

Q. DOES DR. OGUR EXPAND ON THIS ASSERTION?

A Yes. In Dr. Ogur's direct testimony, he stated that he agrees with FE witness Young that customer-generators entail higher switching risk for the Fixed Price Full Requirements ("FPFR") suppliers and therefore these suppliers would either build larger risk premiums into their FPFR contract bids or "shy away" from participating in the FPFR auctions which would have the "likely effect" of

10 Malukoff Direct at 10:5-6.

11 Exhibit TM-12 (OSBA Response to JSA ROG: I-4).

higher PTC rates and/or more volatile rates for small commercial customers due to the inclusion of customer-generators in the Commercial procurement group.[12]

Q. WHAT ANALYSIS DID DR. OGUR UNDERTAKE IN SUPPORT OF THE ASSERTION THAT THE SWITCHING RISK OF CUSTOMER-GENERATORS WILL HAVE THE LIKELY EFFECT OF HIGHER PTC RATES AND MORE VOLATILE RATES FOR SMALL COMMERCIAL CUSTOMERS?

A. To understand Dr. Ogur's assertion, the JSA propounded discovery to OCA requesting that Dr. Ogur "identify, describe, explain and provide all studies, analyses, reports, data that he conducted, reviewed, and/or prepared to support his assertions." In response, Dr. Ogur provided a more detailed explanation of the correlation between switching risk and the potential for higher PTC rates[13] but provided no information that he had performed an independent analysis of whether there is an actual impact on the rates of customers on the Commercial PTC Rider in FE's service territory due to this switching risk.

Q. WHAT DID DR. OGUR CITE TO AS SUPPORT FOR HIS ASSERTION THAT THE SWITCHING RISK OF CUSTOMER-GENERATORS WILL HAVE THE LIKELY EFFECT OF HIGHER PTC RATES AND MORE VOLATILE RATES FOR SMALL COMMERCIAL CUSTOMERS?

A. Dr. Ogur only cited to statements made by the Commission in its order on UGI Utilities' default service plan[14] and the general assessment presented in his testimony that larger customer size is

---

[12] Direct Testimony of Serhan Ogur on behalf of the Pennsylvania Consumer Advocate, OCA Statement No. 1 (April 29, 2026) ("Ogur Direct") pp. 38:15-23.

[13] Exhibit TM-13(OCA Response to JSA ROG: I-2) ("Higher switching risk is associated with larger risk premiums being built into FPFR contract bids and/or lower wholesale supplier participation in FPFR auctions because higher switching risk leads to greater uncertainty about the magnitude of the load to be served by FPFR suppliers").

[14] Opinion and Order, Petition of UGI Utilities, Inc – Electric Division for Approval of a Default Service Plan for the period of June 1, 2025 through May 31, 2029 (P-2024-3049343) (Feb. 20, 2025).

associated with the propensity to shop.[15]

Q. LOOKING FIRST AT DR. OGUR'S RELIANCE ON THE COMMISSION'S ORDER IN UGI UTILITIES' DEFAULT SERVICE PLAN, WILL THE COMMISSION MAKE ITS DECISION IN THIS CASE BASED ON FINDINGS IT MADE WITH RESPECT TO UGI UTILITIES' DEFAULT SERVICE PLAN?

A. While I am not at attorney, it is my understanding that the Commission's decision in this matter will not be based on findings in the UGI Utilities' order since the record in this proceeding will not be same as the record in the UGI Utilities' proceeding. It is my understanding that the Commission will make its decision in this proceeding based on the evidence presented in this proceeding. Also, it is important to recognize that the Commission's statements in the UGI Utilities'order cited by Dr. Ogur do not pertain to the impact of the switching risk on the Commercial PTC Rider. Instead, those statements address a different issue—the export compensation provided to net metered customer-generators on the PTC Rider.[16]

Q. DOES THE ASSESSMENT PRESENTED IN DR. OGUR'S TESTIMONY REGARDING THE ASSOCIATION OF CUSTOMER SIZE WITH A HIGHER LIKELIHOOD OF SWITCHING ILLUSTRATE THE IMPACT OF SUCH SWITCHING ON THE CUSTOMERS REMAINING ON THE PTC RIDER?

A. No. While the data presented in Dr. Ogur's testimony indicates that a high percentage of medium and large non-residential customers have switched to electric generation suppliers, Dr. Ogur provided no testimony on the *actual* impact of this switching on the Commercial PTC Rider rate.

Q. DID DR. OGUR IDENTIFY ANOTHER RISK WHICH HE CLAIMS COULD RESULT IN HIGHER RATES FOR COMMERCIAL PTC RIDER CUSTOMERS?

A. Yes. Dr. Ogur asserted that customer-generators that stay on default service constitute volumetric

---

15 Exhibit TM-13 (OCA Response to JSA ROG: I-1).

16 *See id.*

risk for FPFR suppliers because of the uncertainty surrounding the level and profile of on-site generation. He asserted that the volumetric risk is similar to the switching risk. He claimed that this volumetric risk would prompt the FPFR suppliers to either build larger risk premiums into their FPFR contract bids or "shy away" from participating in the FPFR auctions, resulting in higher PTC rates and/or more volatile rates for small commercial customers.[17]

Q. DOES DR. OGUR PROVIDE ANY DATA IN SUPPORT OF HIS ASSERTION THAT THIS VOLUMETRIC RISK WILL RESULT IN HIGHER PTC RATES AND/OR MORE VOLATILE RATES FOR SMALL COMMERCIAL CUSTOMERS?

A. No. Again, Dr. Ogur relies on statements made by the Commission in its order in UGI Utilities' default service plan and the assessment presented in his testimony that larger customer size is associated with the propensity to shop.[18] With respect to the former, as I previously stated, it is my understanding that the Commission will make its findings and conclusions based upon the record in this proceeding and not on findings based on evidence presented in a different proceeding. With respect to the latter, I believe that Dr. Ogur's assertion (that larger customer size correlates with the propensity to shop) has no bearing on the assessment of risk associated with customers that do not shop but stay on the default rate.

Q. DID DR. OGUR PROVIDE ANY OTHER RATIONALE FOR HIS SUPPORT OF FE'S PROPOSED CHANGES TO ITS DEFINITION OF MRPL?

A. Yes. In response to a data request, Dr. Ogur highlighted a portion of his direct testimony pertaining to retail shopping rules in which he alleged that shopping commercial customers across four of

---

17 Ogur Direct at 40:2-9.

18 Exhibit TM-13, (OCA Response to JSA ROG: I-3).

FE's Rate Districts as a whole paid electric generators 12 percent less than they would have paid for default service in the 49-month period from January 2022 through January 2026, while industrial customers paid 29 percent less by the same measure.[19]

Q. DOES DR. OGUR EXPLAIN HOW THIS DATA SUPPORTS HIS TESTIMONY THAT THE SWITCHING RISK OR VOLUMETRIC RISK ASSOCIATED WITH CUSTOMER-GENERATORS IS ASSOCIATED WITH LARGER RISK PREMIUMS BEING BUILT INTO FPFR CONTRACTS?

A. No. I assume that Dr. Ogur intended to imply that the lower electric generation supplier rates are a direct result of a risk or volumetric premium being built into the FPFR contracts and thus the PTC Rider. But not only did he fail to make that statement, but he also failed to provide any evidence that any such assertion would be accurate.

Q. DOES THIS CONCLUDE YOUR TESTIMONY

A. Yes. However, I reserve the right to file such additional testimony as may be necessary or appropriate.

[19] Exhibit TM-13, (OCA Response to JSA ROG: I-4).

Witness: Maksim Malukoff

The Office of Small Business Advocate ("OSBA")
Responses to Joint Solar Advocates' ("JSA")
Interrogatories
Propounded on Office of Small Business Advocate ("OSBA")
Docket No. P-2026-3060298

SET I

JSA ROG TO OSBA-I-1 Refer to OSBA Statement No. 1 at 9:5-9. Identify, describe, and explain and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or prepared that independently confirm FirstEnergy's estimate that potential costs to PTC Rider customers range from $81 million to $750 million between 2026 and 2029. Provide all Documents you have used, relied upon, and/or consulted that support your answer.

OSBA RESPONSE: Mr. Malukoff independently reviewed FirstEnergy's testimony, workpapers, and discovery responses. See FE PA Statement No. 1, FE PA Exhibit DMY-6, FE PA Exhibit DMY-7, FE PA Response to OSBA Set 1, No. 4 and associated attachments, FE PA Responses to CGC Set 1, FE PA Responses to CGC Set 2, FE PA Responses to JSA ROG Set 1, and FE PA Responses to JSA ROG Set 2. Bases on this review, he relies on FirstEnergy's estimate that potential costs to PTC Rider customers range from $81 million to $750 million between 2026 and 2029.

JSA ROG TO OSBA-I-2 Refer to OSBA Statement No. 1 at 9:12-14. Identify, describe, and explain and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or prepared that support the assertion "the Company's current classification results in small business default service customers disproportionately subsidizing customer-generators that, based on their size and output, should be classified as Industrial customers under the HP Rider." Provide all Documents you have used, relied upon, and/or consulted that support your answer.

OSBA RESPONSE: See response to JSA ROG: I-1. Mr. Malukoff's statement in the referenced lines is based on his review of the Company's testimony and discovery responses and his understanding of how default service procurement and compensation for excess net-metered generation function under Pennsylvania's regulatory framework.

Under the Company's existing tariff, small business customers in the Commercial default service class are subsidizing customer-generators with Maximum Registered Peak Load ("MRPL") above 100 kW. Mr. Malukoff agrees with the Company's revised definition of MRPL and the Company's proposal to classify Commercial and Industrial Customers based on MRPL because customer-generators with MRPL above 100 kW, by virtue of their size and output, should be classified as Industrial customers taking service under the HP Rider.

JSA ROG TO OSBA-I-3 Refer to OSBA Statement No. 1 at 9:12 in which Witness Malukoff states that he agrees with FirstEnergy's proposal to classify Commercial and Industrial Customers based on MRPL. Identify, describe, and explain and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or prepared in connection with his support of FirstEnergy's proposed changes to its definition of Maximum Registered Peak Load. Provide all Documents you have used, relied upon, and/or consulted that support your answer.

OSBA RESPONSE: See responses to JSA ROG: I-1 and JSA ROG: I-2. Mr. Malukoff's direct testimony also cites to Commission precedent in recent PPL Electric and UGI Utilities, Inc. ("UGI") proceedings. Attachment JSA-OSBA-I-3 includes the Administrative Law Judge Recommended Decision in the PPL Electric proceeding, the Commission Order for the UGI proceeding, and the Commonwealth Court of Pennsylvania's Opinion upholding the Commission's Order in the UGI proceeding.

JSA ROG TO OSBA-I-4 Refer to OSBA Statement No. 1 at 10:3-6. Identify, describe, and explain, and provide all studies, analyses, reports, and data that Witness Malukoff has conducted, reviewed, and/or prepared that address the totality of the costs and benefits of excess generation provided by customer-generators on FirstEnergy's system over the last three years and/or prospectively and why "[r]eclassifying large customer-generators under the HP Rider would offer these customers fair compensation." Provide all Documents you have used, relied upon, and/or consulted that support your answer.

OSBA RESPONSE: Mr. Malukoff believes that customer-generators would receive fair compensation under the HP Rider because excess generation will be paid based on real-time pricing that varies with the hourly generation needs of customers. Mr. Malukoff does not have

additional studies, analyses, reports, and data responsive to this request.

TM-13

Petition of FirstEnergy for Approval of Its Default Service Program
for the Period June 1, 2027 to May 31, 2031
Docket No. P-2026-3060298

JSA Interrogatories to
The Office of Consumer Advocate
Set I

JSA ROG: I-1. Refer to OCA Statement No. 1 at 38:20-39:2. Identify, describe, explain and provide all studies, analyses, reports, data that Witness Ogur has conducted, reviewed, and/or prepared to support the assertion that "more sophisticated, large customer-generators would entail higher-switching risk for the [Fixed Price Full Requirements ("FPFR")] suppliers, the FPFR suppliers would either build larger risk premiums into their FPFR contract bids or shy away from participating in the FPFR auctions. This would have the likely effect of higher PTCs and/or more volatile rates for small commercial customers due to the inclusion of large customer-generators in the small commercial procurement group." Provide all Documents you have used, relied upon, and/or consulted that support your answer.

Response: Dr. Ogur's cited assertion relied on the following:

- Opinion and Order, Petition of UGI Utilities, Inc – Electric Division for Approval of a Default Service Plan for the period of June 1, 2025 through May 31, 2029 (P-2024-3049343), February 20, 2025. Specifically:
    - "In addition, contrary to Penn Renewables' claims, we conclude that UGI's [supply peak load impact] proposal avoids rate discrimination against residential and small commercial customers because, without it, these customers will pay higher default service rates caused by and for the benefit of large customer-generators." (p.54)
    - "In addition, including customers with large on-site generators attached to their loads in the same default service procurement and rate group as residential customers would also result in unreasonable subsidization by the residential customers." (p. 60)
- OCA Statement No. 1, pp. 39-40, where Dr. Ogur summarized his observations as "larger customer size (and thus higher sophistication) is associated with higher propensity to shop."
- In addition, Dr. Ogur's opinions and testimony are based not only on the specific materials reviewed in this matter, but also on his professional experience, as highlighted in his Direct Testimony and provided in greater detail in Exhibit SO-1, including his curriculum vitae.

Set I

JSA ROG: I-3. Refer to OCA Statement No. 1 at 40:2-9. Identify, describe, explain and provide all studies, analyses, reports, data that Witness Ogur has conducted, reviewed, and/or prepared to support the assertion that "even the large customer-generators that stay on default service constitute volumetric risk for FPFR suppliers because of the uncertainty surrounding the level and profile of on-site generation (*e.g.*, outages, in-service dates of on-site generators that are in FE PA's distribution interconnection queue) . . . [and] this volumetric risk would prompt the FPFR suppliers to either build larger risk premiums into their FPFR contract bids or shy away from participating in the FPFR auctions, resulting in higher PTCs and/or more volatile rates for small commercial customers." Provide all Documents you have used, relied upon, and/or consulted that support your answer.

Response: Dr. Ogur's cited assertion relied on the following:

- Opinion and Order, Petition of UGI Utilities, Inc – Electric Division for Approval of a Default Service Plan for the period of June 1, 2025 through May 31, 2029 (P-2024-3049343), February 20, 2025. Specifically:
    - "In addition, contrary to Penn Renewables' claims, we conclude that UGI's [supply peak load impact] proposal avoids rate discrimination against residential and small commercial customers because, without it, these customers will pay higher default service rates caused by and for the benefit of large customer-generators." (p.54)
    - "In addition, including customers with large on-site generators attached to their loads in the same default service procurement and rate group as residential customers would also result in unreasonable subsidization by the residential customers." (p. 60)
- OCA Statement No. 1, pp. 39-40, where Dr. Ogur summarized his observations as "larger customer size (and thus higher sophistication) is associated with higher propensity to shop."

Volumetric risk is tied either to switching risk (which is not the subject of this interrogatory) or to uncertainty associated with the net usage level and profile (after accounting for behind the meter generation) of a given customer. When faced with load level uncertainty, an FPFR supplier needs to determine its level of hedging. Hedging an amount close to the lower end of its perceived range of

load level would expose the FPFR supplier to incurring a loss if default service load comes in higher and market price to serve the unhedged load is also higher than the FPFR auction clearing price. Hedging an amount close to the higher end of its perceived range of load level would also expose the FPFR supplier to incurring a loss if default service load comes in lower and market price to liquidate the over-hedged amount is also lower than the hedge purchase price. As load uncertainty increases and the range of load level as perceived by FPFR suppliers widens, potential losses from under-hedging and over-hedging increase, and so do the risk premiums.

Capacity peak load contribution, or PLC, (measured in kilowatts) risk is associated with the uncertainty of total PLC (and associated PJM capacity costs) for which an FPFR supplier is responsible, particularly in connection with the total amount of energy requirements (measured in kilowatt-hours) in an FPFR contract. Customer capacity obligations in FE PA's Rate Districts are determined based on five PJM systemwide peak load hours (also known as Five Coincident Peaks, or 5CP) as explained in OCA Statement No. 1, p. 29. Uncertainty about online dates, generator outages, and generation levels of customer-generators, and thus impact (or lack thereof) of behind the meter generation on customer PLC, creates PLC uncertainty and risk (i.e., capacity cost responsibility relative to total energy requirements) for FPFR suppliers, which in turn would result in larger risk premiums.

In addition, Dr. Ogur's opinions and testimony are based not only on the specific materials reviewed in this matter, but also on his professional experience, as highlighted in his Direct Testimony and provided in greater detail in Exhibit SO-1, including his curriculum vitae.

Petition of FirstEnergy for Approval of Its Default Service Program
for the Period June 1, 2027 to May 31, 2031
Docket No. P-2026-3060298

JSA Interrogatories to
The Office of Consumer Advocate
Set I

JSA ROG: I-4. Refer to OCA Statement No. 1 at 40:13-17. Identify, describe, explain and provide all studies, analyses, reports, data that Witness Ogur has conducted, reviewed, and/or prepared in connection with his support of FirstEnergy's proposed changes to its definition of Maximum Registered Peak Load. Provide all Documents you have used, relied upon, and/or consulted that support your answer.

Response: Dr. Ogur relied on the following in connection with his support of FirstEnergy's proposed changes to its definition of Maximum Registered Peak Load:

- Opinion and Order, Petition of UGI Utilities, Inc – Electric Division for Approval of a Default Service Plan for the period of June 1, 2025 through May 31, 2029 (P-2024-3049343), February 20, 2025. Specifically:
  - "In addition, contrary to Penn Renewables' claims, we conclude that UGI's [supply peak load impact] proposal avoids rate discrimination against residential and small commercial customers because, without it, these customers will pay higher default service rates caused by and for the benefit of large customer-generators." (p.54)
  - "In addition, including customers with large on-site generators attached to their loads in the same default service procurement and rate group as residential customers would also result in unreasonable subsidization by the residential customers." (p. 60)
- OCA Statement No. 1, p. 42, lines 15-19, where Dr. Ogur observed: "Shopping commercial customers across four Rate Districts as a whole paid to EGSs 12 percent less than they would have paid for default service in the 49-month period from January 2022 through January 2026, while industrial customers paid 29 percent less."
- OCA Statement No. 1, pp. 39-40, where Dr. Ogur summarized his observations as "larger customer size (and thus higher sophistication) is associated with higher propensity to shop."

In addition, Dr. Ogur's opinions and testimony are based not only on the specific materials reviewed in this matter, but also on his professional experience, as highlighted in his Direct Testimony and provided in greater detail in Exhibit SO-1, including his curriculum vitae.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of FirstEnergy Pennsylvania Electric Company for Approval of Its Default Service Program for the Period June 1, 2027 to May 31, 2031	: : : :	Docket No. P-2026-3060298

SURREBUTTAL TESTIMONY OF THOMAS S. MICHELMAN

ON BEHALF OF

THE COALITION FOR COMMUNITY SOLAR ACCESS AND SOLAR ENERGY INDUSTRIES ASSOCIATION
"Joint Solar Advocates"

Statement No. 1-S

Date Served: June 11, 2026

Date Submitted for the Record: June 11, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state for the record your name, position, and business address.

A. My name is Thomas S. Michelman. I am the Vice President & Senior Director, Distributed Energy Resources Practice Lead for Sustainable Energy Advantage, LLC. My business address is 161 Worcester Road, Suite 503, Framingham, MA 01701.

Q. Are you the same Thomas Michelman who filed direct and rebuttal testimony in this proceeding?

A. Yes. I submitted my direct testimony that is marked as "Joint Solar Advocates Statement No. 1," and I also submitted rebuttal testimony. My experience and qualifications are set forth in my direct testimony.

Q. On whose behalf are you filing surrebuttal testimony?

A. I am filing rebuttal testimony on behalf of the Coalition for Community Solar Access and the Solar Energy Industries Association, jointly called the Joint Solar Advocates ("JSA"), in this proceeding.

Q. What is the purpose of your surrebuttal testimony?

A. My surrebuttal will respond to the Rebuttal Testimony of David M. Young[1] and the Rebuttal Testimony of Gregory F. Hussing[2] on behalf of First Energy Pennsylvania Electric Company ("FE") regarding their support for FE's Maximum Registered Peak Load ("MRPL") proposal.

[1] Rebuttal Testimony of David M. Young on behalf of First Energy Pennsylvania Electric Company, FE PA Statement No. 1-R, May 28, 2026 ("Young Rebuttal").

[2] Rebuttal Testimony of David Young on behalf of First Energy Pennsylvania Electric Company, FE PA Statement No. 6-R, May 28, 2026 ("Hussing Rebuttal").

Q. Please summarize your areas of disagreement with the testimonies of Mr. Young and Mr. Hussing.

A. In sum, my primary areas of disagreement with the testimonies of Mr. Young and Mr. Hussing consist of the following:

- Mr. Young's estimate of the impact of net metering expenses on the Commercial PTC Rider rate.
- Mr. Young's characterization of my customer generator legacy rights proposal as undermining cost equity and causing non-customer generators to continue to bear disproportionate costs.
- Mr. Young's assessment of the impact of my legacy rights proposal on the rates of default service customers, especially in the Penn Power district.
- Mr. Hussing's characterization of my proposal to allow customer generators to register negative Peak Load Contributions ("PLC") and negative Network Service Peak Load ("NSPL") as providing an additional subsidy to customer generators.
- Mr. Hussing's criticism of my proposal to allow customer generators to register negative PLC on the basis that there is no certainty that the customer-generator will be providing excess generation at the future peak or a penalty if the customer generator fails to do so.
- Mr. Hussing's assertion that failure to provide for the registering of negative PLC and negative NSPL does not result in the benefit of those peak load reductions from Pennsylvania-based customer-generators being shared with customers in other states.

II. SURREBUTTAL OF FE WITNESS YOUNG

Q. Has FE proposed any modifications to its MRPL proposal in its rebuttal testimony?

A. No. In rebuttal testimony, FE, and in particular Mr. Young, continues to advocate for FE's MRPL proposal and the two-year exemption period for customer-generators that would be reclassified from the Commercial Price-to-Compare ("PTC") Rider to the Hourly Pricing ("HP") Rider.[3] As he did in prior testimony, Mr. Young mentions the potential cost shift to the small commercial default service customers associated with the cash-out payments to customer-generators if FE's MRPL proposal is not implemented. Specifically, he claims that "the true-up expense as of May, 31 2025 (*sic*) for the commercial PTC Rider class is $4.6 million and is projected to increase to between $60 million and $544 million by 2029."[4]

Q. Do you agree with Mr. Young's calculation of the purported impact of net metering expenses to commercial PTC rider rates?

A. No. First, as I noted in my direct testimony, Mr. Young's original Exhibit DMY-7 analysis assumed that customer-generators represent a pure cost to ratepayers, providing zero benefits in exchange for the compensation paid for excess generation. In short, Exhibit DMY-7 failed to account for any of the avoided energy, capacity and transmission costs resulting from net-metered excess generation. I calculated such values in my direct testimony and presented such in Exhibit TM-10. Mr. Young apparently agreed with me with respect to the need to account for the benefits that customer-generators provide in the

[3] Young Rebuttal at 23:5-13.
[4] *Id.* at 17:3-5.

form of avoided energy costs, as Exhibit DMY-7 Revised now reflects that load reduction benefit.[5]

Q. Have you reviewed Exhibit DMY-7 Revised?

A. Yes, I have.

Q. Do you agree with the representation in Exhibit DMY-7 of the avoided energy costs attributable to customer-generators?

A. No. The avoided energy costs provided by customer-generators in Exhibit DMY-7 Revised, reflected in the exhibit as "Less: Load Reduction Credit (2025 avg DA LMP)," is apparently based on a straight average of the day-ahead locational marginal prices, which includes nighttime hours when solar projects do not generate energy and when energy prices are typically lower than daytime hours. Instead, FE should have used actual load reduction credit values per a reconciliation process. If such data were not available, FE should have used a production-weighted estimate, as I used in Exhibit TM-10 and FE used in Exhibit DMY-18.

Q. With that adjustment to Exhibit DMY-7 Revised, do you agree with FE's estimated net metering expenses represented under any of the modeled scenarios?

A. No. FE refuses to acknowledge that its current practice of setting an artificial floor on the PLC and NSPL of net-metered customer-generators at 0 kW causes the capacity and transmission benefits (*i.e.*, avoided costs) resulting from excess-generation to be improperly allocated. FE's artificial floor on customer load results in avoided capacity and transmission costs being assigned to all customers within a given Rate District, irrespective of whether they take default service or not. By allowing customers to register negative load,

[5] *Id*. at 21:5-7 and Exhibit DMY-7 Revised.

the benefits of avoided capacity and transmission costs derived from net-metered excess generation within the Commercial default service class are properly assigned to Commercial default service customers. Accounting for these benefits significantly reduces FE's estimated net-metering expenses depicted on Exhibit DMY-7 Revised, for reasons explained in my direct testimony.[6]

Q. Does Mr. Young address your testimony regarding avoided transmission and capacity costs?

A. No. That portion of my testimony is addressed by FE witness Hussing and will be responded to later in my surrebuttal testimony.

Q. Do you have any other comments about Exhibit DMY-7 Revised?

A. I have an overall observation regarding the project cancellations rates used in that exhibit. In response to the Customer-Generator Coalition's testimony questioning the rates of cancellation assumed in Exhibit DMY-7, Mr. Young noted that "during 2025, FE PA received 786 applications for solar facilities larger than 1 MW, and only 42 of those applications were cancelled, translating to a cancellation rate of about 5% – well below the 'high' scenario in FE PA Exhibit DMY-7 assuming 75% of projects come online by 2029."[7] Mr. Young's insinuation that 95% of the projects that applied for interconnection in 2025 will actually come online is insupportable and should not be used as evidence of the potential impact of customer-generators on the PTC Rider rate. The fact is that any project that submitted an interconnection application in 2025 is at the beginning of the development process and its ultimate operational viability will be influenced by multiple

[6] Direct Testimony and Exhibits of Thomas S. Michelman on behalf of the Coalition for Community Solar Access and the Solar Energy Industries Association, JSA Statement No. 1 (April 29, 2026) at 58:18-59:8. ("Michelman Direct")

[7] Young Rebuttal at 22:3-6.

factors that have yet to occur, such as financing, supply chain disruption, permitting and siting issues, and market changes. To obtain a more realistic estimate of the cancellation rate for customer generators in FE's service territory, one would need to look back for a more appropriate period of time, such as five years. For example, Customer-Generator Coalition Witness Heidell calculated that "35% of the total MW submitted for review in the last four years have been cancelled."[8]

Q. Do you have any other concerns regarding Mr. Young's assessment of your value of solar analysis?

A. Yes. Mr. Young, citing to my direct testimony, states that "while Mr. Michelman takes additional steps to quantify the benefits in his value of solar analysis … the benefits that he calculates accrue to 'FE customers' or the 'FE Rate District', including shopping customers – not the FE PA default service commercial customer class paying for those benefits."[9] Mr. Young's statement is misleading.

Q. In what way is Mr. Young's statement misleading?

A. I was very clear in my testimony that I assessed the value of net-metered excess generation from a FE ratepayer perspective. That means *all* FE ratepayers, including FE PA default service commercial customers.[10] There is nothing in my testimony that indicates otherwise. What makes Mr. Young's statement misleading is that he ignores my recommendation that FE be directed to allow customer-generators to register negative loads is intended to ensure that the value and benefits of net-metered excess generation being socialized outside of the

---

8 Direct Testimony and Exhibits of James A. Heidell on behalf of the Customer-Generator Coalition, CGC Statement No. 1 (April 29, 2026) at 19:3-4.

9 *Id*. at 20:21-21:4 citing JSA Statement No. 1 at 41.

10 Michelman Direct at 41:5-8 ("For the analysis presented in this testimony, I assessed the value of net-metered excess generation from a FE ratepayer perspective … this includes benefits that flow to customer classes outside the customer-generator's class.").

customer-generators' default service class under the current paradigm is properly allocated back to that default service class.

Q. Besides your value of solar analysis, did Mr. Young discuss any other aspect of your testimony?

A. Yes. Mr. Young addresses my legacy rights proposal for customer-generators that would allow such generators to take service under the PTC Rider rate for either 25 or 15 years, depending on certain project maturity criteria, rather than the two-year legacy period offered by FE.[11] Mr. Young attests that extending the legacy rights period, as I have proposed, would "undermine the cost equity and non-customer generators will continue to bear disproportionate costs."[12]

Q. How do you respond to Mr. Young's assessment of the impact of your legacy rights proposal?

A. I disagree. My legacy rights proposal, made in conjunction with my proposal that FE modify the manner in which it calculates customer peak loads used to determine PJM generation capacity and transmission cost allocation, appropriately balances the interests of customer-generators and non-customer generators in the PTC Rider rate class. In particular, my recommendation that Transitional Project legacy status be provided at only 90% of the PTC Rider rate is intended to align the compensation paid to customer-generators for excess generation with the value that net-metered systems provide to FE and its customers, as I presented in Table 5 of my direct testimony.

Q. How do these two proposals balance the interests of these two groups of customers?

---

[11] Michelman Direct at 64:16 – 66:11.

[12] Young Rebuttal at 23:8-11.

A. I explained this interplay in my direct testimony.[13] To summarize my previous testimony, my legacy rights proposal recognizes the plain fact that these customer-generators have expended significant amounts of investment in upfront project development costs. These project owners relied on the information available and known to them at that time those investment decisions were made, which included the rules and terms by which a customer's default service rate schedule is determined and the associated compensation provided to a net-metered project. Significantly, my proposal that FE modify the manner in which it calculates customer peak loads used to determine generation capacity and transmission cost allocation will promote the interests of non-customer generators. This recommendation promotes non-customer generator interests through a process which (1) allows customer-generators to register "negative loads" from the excess generation they produce, and as result, (2) allows FE to apply the cost savings of those negative loads to reduce the allocation of the relevant costs to the default service class in which the customer-generator is assigned. This will reduce the rates of the PTC Rider rate class as compared to what those rates would be without allowing for customers to register negative loads, and also, as a result, reduce the cash out payments to customer-generators. In other words, the PTC Rider rate class as a whole, including non-customer generators, should experience an overall rate decrease, thereby taking cost equity squarely into account.

Q. In his testimony Mr. Young provides an example of the impact of your legacy proposal on certain default service customers. Can you please comment?

A. Yes. Mr. Young focuses on the impact of the element of my legacy rights proposal which would allow operational projects to maintain service under the PTC Rider for 25 years. In

[13] Michelman Direct at 63:8-19.

this regard, he highlights the Penn Power District and the impact of my proposal on its PTC Rider rate in that district. Specifically, he notes that there are currently 11 operational projects in Penn Power's service area with a total nameplate capacity of 30.72 MW, which based on their interconnection applications are expected to collectively produce 5.5 million kWh of electricity annually. He then calculates, keeping all other factors of the current PTC rate the same as they are today, Penn Power's PTC for the commercial class and states that the rate would increase by 23,660% to $32.62/kWh in the 25th year as compared to the $0.1373/kWh it is today.[14] He reflects this analysis in Exhibit DMY-18.

Q. What are your observations with respect to the commercial sales assumptions used in Exhibit DMY-18 as compared to Exhibit DMY-7 Revised?

A. Exhibit DMY-18 utilizes materially different assumptions for commercial sales load growth, the wholesale value of energy produced by net metered customer-generators, the assumed net metered customer-generator capacity factor (*i.e.,* the ratio of the average electrical energy a solar system produces over a period of time compared to the theoretical maximum energy it could produce if it produced at full nameplate capacity for the same period of time) and load growth rate than what FE presented in Exhibits DMY-7 and DMY-7 Revised. This makes an "apples to apples" comparison between the results of these two analyses impossible.

Q. Can you provide more detail on the differences in the assumptions used in Exhibit DMY-7 Revised and Exhibit DMY-18?

A. Yes. First, Exhibit DMY-18 claims to use the *actual* 2025 commercial sales instead of the *projected* 2025 commercial sales used in Exhibit DMY-7 Revised. As shown below in

[14] Young Rebuttal at 23:17-24:9.

Table 1, the Annual 2025 Commercial Sales data used in Exhibit DMY-18 is lower across all four Rate Districts as compared to the data inputted for the same field in Exhibit DMY-7 Revised.

Table 1: Comparison of Annual 2025 Commercial Sales Data Inputs in Exhibit DMY-7 Revised and Exhibit DMY-18

	Annual 2025 Commercial Sales (kWh)		
	Exhibit DMY-7 Revised	**Exhibit DMY-18**	**Difference**
Met-Ed	766,386,828	642,838,027	-123,548,801
Penelec	851,651,095	700,261,034	-151,390,061
Penn Power	230,968,103	195,131,827	-35,836,276
West Penn Power	1,092,620,386	877,397,690	-215,222,696

Second, for the wholesale value of avoided energy for net metered projects, Exhibit DMY-7 Revised (line item "Less: Load Reduction Credit (2025 avg DA LMP)") has different values for the four different rate districts than DMY-18 (line item "Sale of Excess Gen. ($/kWh - Exhibit TM-10)"). Third, Exhibit DMY-7 uses a 17% capacity factor while DMY-18 uses a 21% capacity factor. And finally, FE utilized different Load Growth Rate inputs in its rate impact analyses. Exhibit DMY-18 uses a 1% Load Growth Rate, while Exhibit DMY-7 Revised does not include load growth

Q. What other observations do you have with respect to the analysis presented in Exhibit DMY-18?

A. First, the resulting PTC Rider rate impact shown on that exhibit continues to omit the benefits that net-metered customer-generators provide in terms of avoided capacity and transmission cost obligations. Without the proper recognition of these benefits (*i.e.*,

reduced costs) to the PTC Rider rate class, the resulting rate impact values reflect an overestimate of the PTC Rider rate. Second, the varying commercial sales, load growth factors, value of wholesale energy, and capacity factors used by FE demonstrate how FE's use of different modeling assumptions across its analyses prevents stakeholders and decisionmakers from being able to easily compare the various rate impact analyses presented by parties to this proceeding.

Q. Does Exhibit DMY-18 accurately reflect the 25-year increase in the PTC Rider due to net-metering true-up expenses for legacy Operational and Transitional Projects as recommended in your prior testimony?

A. No. The PTC Rider rate values shown in Table 3 of Mr. Young's surrebuttal testimony and Exhibit DMY-18 are overestimated because the calculations failed to account for an important aspect of my prior recommendations: allowing customers to register negative loads results in the proper allocation of capacity and transmission benefits to PTC Rider customers. Instead, the calculations in Exhibit DMY-18 only include the avoided energy costs, and omit the avoided capacity and transmission costs that could accrue to the PTC Rider customer class with the use of negative load.

III. SURREBUTTAL OF FE WITNESS HUSSING

Q. Does Mr. Hussing address your direct testimony regarding the impact of net-metered generation on energy supply costs?

A. Yes. Mr. Hussing makes two observations. First, he mischaracterizes a simple example I provided regarding the impact of net-metered excess generation on aggregated metered load.[15] Mr. Hussing states that "[e]xcess generation does not 'serve' a single customer but

[15] Hussing Rebuttal at 3:14-19.

is an aggregate load reduction mechanism."[16] In a general sense Mr. Hussing is correct, but for the simple example of just two customers on the distribution system that I provided, the net-metered excess generation does physically get consumed by the other customer, and thus actually does "serve" the other customer.

Q. What is the second observation which Mr. Hussing makes regarding the impact of net-metered excess generation on energy supply costs?

A. Mr. Hussing addresses the manner in which the load reduction credit which FE receives from net-metered excess generation is reflected in energy supply costs paid by Commercial PTC Rider customers. Specifically, he notes that such credit is reflected in the calculation of "Net Metering Costs (Credits)," not "Payment to Winning Bidders" as indicated in my direct testimony.[17]

Q. Do you agree with Mr. Hussing?

A. Yes, the load reduction credit should be reflected in Net Metering Costs (Credits), rather than the "Payment to Winning Bidders" line as shown in Figure 1 included in my direct testimony.

Q. What impact does this change have on your assessment of FE's failure to reflect this credit in the determination of energy supply costs paid by the commercial PTC rider customers?

A. None. The change just recategorizes the benefits from one sub-category ("Payment to Winning Bidders") to another sub-category ("Net Metering Costs (Credits)"), and in aggregate makes no difference, which Mr. Hussing seemingly agrees with.

---

16 *Id*. at 3: 14-15.
17 *Id.* at 4:1-5.

Q. Mr. Hussing defends the omission of any benefits in the form of avoided capacity and transmission costs by stating that "[t]o the extent customer-generators have provided a benefit, that benefit is realized through load aggregation and the value of that generation is reflected in credits." Do you agree with his assertion?

A. My understanding of Mr. Hussing's testimony on this point is that all benefits of net-metered customer-generators are already incorporated into PTC Rider rates. There are quite a few problems with his statement. First, I went to great lengths in my direct testimony to document and show how solar net generation has historically been coincident with capacity and transmission peaks, thus providing avoided capacity and transmission benefits. Mr. Hussing has failed to provide any quantitative evidence to the contrary. Second, as noted in my testimony, the benefits of avoided capacity and transmission in terms of reducing PTC Rider rates are delayed. Specifically, I stated: "For example, summer peaks in 2025 determine the PLCs assigned to each customer that are used from June 1, 2026 through May 31, 2027."[18] That means for projects installed in 2025, the benefits could not be fully realized until June 2027 and maybe later given FE's default service plan's layered procurement framework. Third and related to the second point, net-metered customer-generation has been growing, as can be seen in FE PA Response to OSBA Interrogatory Set 1, No. 4 Attachment C Witness: David Young, which I have appended with additional calculations as Exhibit TM-14. Importantly, for the net-metered customer-generator capacity installed and under the commercial customer class for the entire FE territory, only 30% had been installed prior to 2025, so that means 70% or more of the avoided capacity benefits were *not* reflected in 2025 PTC Rider rates which are the basis of the calculations

[18] Michelman Direct at 18:1-2.

in Exhibit DMY-7 Revised, and Exhibit DMY-18. Thus, the additional avoided capacity and transmission benefits that were not included in Exhibit DMY-7 Revised and Exhibit DMY-18 should be included in any quantification of the impacts of net-metered customer-generators on PTC Rider rates. In other words, they should be incorporated into the rate impact calculations as I showed in Exhibit TM-10 and should not be dismissed out-of-hand as Mr. Hussing has asserted.

Q. You mentioned earlier in this testimony that Mr. Hussing addresses your proposal for FE to recognize the avoided capacity and transmission costs of net-metered excess generation by allowing such generators to register negative loads. What is your overall impression of Mr. Hussing's testimony on this matter?

A. Mr. Hussing does not appear to understand the basics of my proposal as he repeatedly asserts that allowing customers to register negative load would create additional subsidies for customer-generators,[19] which is the exact opposite of what it would do. In fact, Mr. Hussing's perspective was made crystal clear through his response to a JSA data request. When asked to describe and explain in detail the purported "other subsidies for customer-generators" that will be introduced as a result of the use of negative load," Mr. Hussing's response was that the reference to other subsidies "refers to the reduced capacity costs of the class that would arise from customer generators receiving a negative peak load contribution ("PLC"), which then would be borne by other customers or customer classes."[20] The fact is that by allowing customer-generators to register negative PLCs, FE can reduce the share of PJM capacity obligations borne by the default service class and thus lower default service class capacity costs and the capacity component of the PTC

[19] *See Id.* at 5:10-11; 6: 1-2; 7:11-12: 9:3-5.
[20] Exhibit TM-15 (FE response to JSA No. V-1).

Rider rate. Similarly, by allowing customer-generators to register negative NSPLs, the customer class's aggregate share of zone transmission costs will be lower and thus the transmission component of the PTC Rider rate will be lower. In other words, the customer-generators will be the source of lower capacity and transmission costs for all customers on the PTC rider rate. That also means the lower PTC rider rate of negative PLCs and negative NSPLs will result in a lower compensation rate to net metered customer-generators. There is simply no additional subsidy being created for customer-generators on the PTC rider rate.

Q. Does Mr. Hussing have any specific criticisms of your proposal that customer-generators be able to register negative PLCs?

A. Yes. Mr. Hussing criticizes my proposal for relying on the average capacity factors of solar generation during the historical PJM 5 critical peak ("CP") hours as a basis for determining a dollar per megawatt year benefit for negative PLCs as he asserts that there is "no certainty that the customer-generator will be providing excess generation at the future peak."[21] He also faults me for not proposing that customer-generators pay penalties if they do not perform.[22]

Q. How do you respond to Mr. Hussing's criticism regarding the use of average capacity factors as a basis for determining the value of negative PLCs?

A. The purpose of using average capacity factors in my prior analysis was simply to provide an estimate of the total value in terms of capacity and transmission costs that FE avoids as a result of net-metered excess generation. FE takes no issue with the use of those same average capacity factors that were used in the calculation of avoided energy costs that have

[21] *Id.* at 5:15-17.
[22] *Id.* at 5:18-20.

been incorporated into Exhibit DMY-7 Revised. Regardless, to the extent that a customer is able to register a negative PLC, that value is entirely dependent on the interval-metered data at that customer's premises and more importantly does not directly impact the compensation a customer receives for its capacity benefits.

Q. How do you respond to the implication in Mr. Hussing's testimony that if customer-generators are allowed to register negative PLCs, then they should pay penalties if they don't perform as anticipated during the 5 CPs?

A. Failing to deliver excess generation can only occur if there is a dispatchability obligation (*e.g.*, a demand response resource), which does not exist for net-metered customer-generators. All the capacity and transmission benefits provided by net-metered excess generation derive from lowering aggregate peak coincident load on a passive non-dispatchable basis. If there is no dispatchability obligation there can be no penalty for failure to perform.

Q, In your direct testimony, you made the assertion that currently the benefit of peak load reduction from Pennsylvania-based customer-generators is being shared with customers in other states in the form of lower PJM capacity obligations. Mr. Hussing challenges that point asserting that "in PJM zones where there are multiple utilities, FE and its affiliates provide PJM load grouped by utility and load serving entity."[23] Do you agree with Mr. Hussing that the benefits of peak load reductions from Pennsylvania customer-generators are not in fact being shared out of state?

A. I have been unable to verify the accuracy of Mr. Hussing's assertion. In response to a data request asking Mr. Hussing to explain the basis for his assertion and provide all documents

[23] *Id*. at 6:16-17.

on which he relied, he provided no documentation, but stated: "As such, there is little linkage from peak reductions between different utilities in the same zone since the PLCs and NSPLs for each utility and associated LSEs are calculated separately."[24] This statement implies there is some linkage from peak reductions between different utilities in the same zone, and therefore some benefits from FE customer-generators are being shared out of state, as I testified. But as Mr. Hussing did not provide any documentation to back up his statement, I cannot ascertain the degree.

Q. Mr. Hussing disregards the testimony you provided regarding the use of negative PLCs by both UGI Utilities. Inc. ("UGI") and Commonwealth Edison ("ComEd"), asserting they are not applicable to the case at hand. Can you please respond?

A. With respect to UGI, Mr. Hussing relies on the fact that the use of negative PLCs was approved as part of a settlement. Mr. Hussing acknowledges that the Commission approved the settlement but states that the Commission did not address specific issues related to negative PLCs.[25] However, Mr. Hussing's understanding of the disposition of this issue in the UGI DSP proceeding is not entirely accurate. The settlement did not include references to the use of negative PLCs or NSPLs because UGI conceded to allowing for such mechanisms in testimony. Specifically, the Rejoinder Testimony of Tracy A. Hazenstab states that UGI "reviewed this [negative PLC and NSPL] issue and agrees to revise its GSR-2 rate formula to credit customer generators for their respective PLC and NSPL offsets."[26] UGI updated its tariff sheet for Rider B Generation Supply Service Surcharge

[24] Exhibit TM-15 (FE response to JSA No. V-2(b)).
[25] Hussing Rebuttal at 7:6-9.
[26] Docket Nos. P-2024-3049343/G-2024-3049351, Rejoinder Testimony of Tracy A. Hazenstab at 12:16-20.

to specify that "[c]ustomer-generators may have PLC and NSPL negative values related to PLC and NSPL hours indicating net generation to which rates shall be assessed."[27]

Regardless, I fail to see the relevance of how the use of negative loads in UGI's service territory originated. While I am not a lawyer, it is my understanding that the Commission has an obligation to approve just and reasonable rate structures whether through settlement or as the result of litigation. If the Commission believed that the negative PLC and negative NSPL construct was detrimental to UGI's ratepayers, it would not have been approved.

Q. How does Mr. Hussing attempt to distinguish ComEd's use of negative PLCs from their potential use by FE?

A. He asserts that the comparison of a negative PLC for FE to a negative PLC available in the ComEd service territory is not an "apples to apples" comparison because FE procures default service supply, but the Illinois Power Agency ("IPA"), not the local utility, procures default service supply in ComEd's service territory.

Q. Does that distinction make a difference?

A. While it is true that the IPA procures default service supply in Illinois on behalf of ComEd customers, this approach is a distinction without a difference. Default service is a cost pass-through mechanism in both Illinois and Pennsylvania where customers and suppliers, rather than the procuring entity, bear the market risk. That is, neither FE nor the IPA are exposed to market risk. Wholesale bidders to supply default service certainly bear a risk, since they commit to serving load at a fixed price that might understate their actual costs during a future period. Customers bear a risk from the standpoint of receiving a fixed price

[27] *Id.* at Exhibit TAH-3RJ.

for future supply that might be higher than actual market prices and have reconciliation costs (and benefits) ultimately passed through to them. But regardless of fluctuations in customer load or market prices, both FE and the IPA recover their costs.

Q. Turning to the element of your proposal that customer-generators should be able to register negative NSPLs, does Mr. Hussing have any specific criticisms?

A. In large part, Mr. Hussing's testimony on negative NSPLs is a reference back to his testimony on negative PLCs. Thus, he states that he disagrees that negative NSPLs are appropriate "for the same reasons I have provided as to why negative PLCs should not be used."[28] Mr. Hussing, however, does try to further qualify FE's response to a data request in which FE acknowledged that a transmission benefit (*i.e.*, a reduction in overall transmission allocation costs in PJM) exists as a result of net-metered excess generation. Specifically, he qualifies this acknowledgement by asserting that any reduction in cost "is dependent upon the actions of other entities" and "would be very dependent on location, timing, and other factors."[29] His implicit conclusion is that such reduction in costs is unreliable and should not be taken into account.

Q. How do you respond to Mr. Hussing's characterization of the unreliability of transmission cost reductions resulting from excess customer generation?

A. As I previously stated in my direct testimony, both the negative NSPL and negative PLC frameworks are technology-neutral by design and provide credit for any resources that *measurably* reduce net load during the relevant peak hours. Simply because the transmission cost reductions associated with net-metered customer-generators are not perfectly predictable does not mean that a transmission benefit does not exist nor does it

[28] Hussing Rebuttal at 8:12-13.
[29] *Id*. at 8:21-9:2.

negate the principle that benefits derived from a customer-generator should be allocated to the customer class from which net-metered cash out expenses are recovered. To be clear, negative NSPLs are only generated when a resource performs during the peak period that determines transmission costs allocations, meaning that the transmission benefit only accrues to customers if customer-generators are exporting energy during that time.

Q. Does this conclude your testimony?

A. Yes. However, I reserve the right to submit such additional testimony as may be necessary or appropriate.

Electric Company for Approval of a	**:**	**Docket No. P-2026-3060298**
Default Service Plan for the Period	**:**	
June 1, 2027 to May 31, 2031	**:**	

JSA Set 5, No. 1

Refer to FE PA Statement No. 6-R (Hussing Rebuttal Testimony) at 6:1-2, which states: "In short, Mr. Michelman's proposal for a negative PLC is essentially to modify FE PA's methodology and introduce other subsidies for customer-generators." Identify, describe, and explain in detail the purported "other subsidies for customer-generators" that will be introduced as a result of the use of negative load? Provide all Documents that support your response in their native format.

RESPONSE:

Mr. Hussing's statement referring to "other subsidies for customer-generators" refers to the reduced capacity costs of the class that would arise from customer generators receiving a negative peak load contribution ("PLC"), which then would be borne by other customers or customer classes.

Petition of FirstEnergy Pennsylvania	**:**	
Electric Company for Approval of a	**:**	**Docket No. P-2026-3060298**
Default Service Plan for the Period	**:**	
June 1, 2027 to May 31, 2031	**:**	

JSA Set 5, No. 2

Refer to FE PA Statement No. 6-R (Hussing Rebuttal Testimony) at 6:12-17, which states: "Mr. Michelman's argument does not cure the problems with using a negative PLC. While FE PA customers in one particular rate district might have a lower overall capacity cost if customer-generators receive a negative PLC in comparison to the customers of other utilities in terms of other utilities in the PJM zone, the costs are still shifted to other customers within the rate district. In any event, his assumptions are incorrect; in PJM zones where there are multiple utilities, FE PA and its affiliates provide PJM load grouped by utility and load-serving entity."

(a) Identify, describe, and explain in detail the purported "problems with using a negative PLC"? Provide all Documents that support your response in their native format.

(b) Identify, describe, and explain in detail the basis for Mr. Hussing's assertion that FE PA provides "PJM load grouped by utility and load-serving entity" for PJM zones with multiple utilities. As part of your response, please specifically identify whether PJM load is grouped by utility and load-serving entity for the purposes of determining (a) energy obligations, (b) capacity obligations, and (c) transmission obligations. Provide all Documents that support your response in their native format.

RESPONSE:

a) See FE PA Statement No. 6-R at pages 5:7 – 6:10.
b) See FE PA Revised Response to CGC Interrogatory Set 1, No. 20 with regard to settlement of energy obligations of FE PA and default service suppliers. With respect to PJM capacity and transmission obligations, PJM establishes targets for a future delivery year that may be higher (or lower) than aggregate metered values of PLCs and NSPLs. FE PA provides PLCs and NSPLs aggregated for the applicable rate district and load-serving entities ("LSE"). In a single rate district that is corresponding with a PJM zone, negative PLCs for customer-generators would simply shift costs to other FE PA customers. In zones with multiple utilities, the process is the same, but each utility and associated LSE values are representative of the portion of the PJM forecasted targets by utility and LSE grouping. As such, there is little linkage from peak reductions between different utilities in the same zone since the PLCs and NSPLs for each utility and associated LSEs are calculated separately.

Exhibit SWC-1: Witness Qualifications Statement

Introduction

Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND OCCUPATION.

A. My name is Steve W. Chriss. My business address is 814 Respect Drive, Bentonville, AR 72716. I am employed by Walmart Inc. ("Walmart") as Group Director, Utility Partnerships.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS DOCKET?

A. I am testifying on behalf of Walmart.

Q. PLEASE DESCRIBE YOUR EDUCATION AND EXPERIENCE.

A. In 2001, I completed a Master of Science in Agricultural Economics at Louisiana State University. From 2001 to 2003, I was an Analyst and later a Senior Analyst at the Houston office of Econ One Research, Inc., a Los Angeles-based consulting firm. My duties included research and analysis on domestic and international energy and regulatory issues. From 2003 to 2007, I was an Economist and later a Senior Utility Analyst at the Public Utility Commission of Oregon in Salem, Oregon. My duties included appearing as a witness for PUC Staff in electric, natural gas, and telecommunications dockets. I joined the energy department at Walmart in July 2007 as Manager, State Rate Proceedings. I was promoted to Senior Manager, Energy Regulatory Analysis, in June 2011. I was promoted to Director, Energy and Strategy Analysis in October 2016 and the position was re-titled in October 2018. I was promoted to Senior Director, Utility Partnerships in July 2023 and promoted to my current position in March 2026. My Witness Qualifications Statement is attached as Exhibit SWC-1.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION")?

A. Yes. I testified in Docket Nos. P-2011-2256365, R-2014-2428742, R-2014-2428743, R-2014-2428744, R-2014-2428745, R-2016-2537349, R-2016-2537352, R-2016-2537355, and R-2016-2537359.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY BEFORE OTHER STATE REGULATORY COMMISSIONS?

A. Yes. I have submitted testimony in over 300 proceedings before 43 other utility regulatory commissions. I have also submitted testimony before legislative committees in six states. My testimony has addressed topics including, but not limited to, cost of service and rate design, return on equity ("ROE"), revenue requirements, ratemaking policy, net metering, community solar, large customer renewable programs, qualifying facility rates, telecommunications deregulation, resource certification, energy efficiency/demand side management, fuel cost adjustment mechanisms, electric vehicle ("EV") tariffs, decoupling, and the collection of cash earnings on construction work in progress.

Q. ARE YOU SPONSORING EXHIBITS IN YOUR TESTIMONY?

A. Yes. I am sponsoring the exhibit listed in the Table of Contents.

Q. PLEASE BRIEFLY DESCRIBE WALMART'S OPERATIONS IN PENNSYLVANIA.

A. As shown on Walmart's website, Walmart operates 159 retail units in Pennsylvania. Walmart employs over 59,000 associates in Pennsylvania. In fiscal year ending 2025,

Walmart purchased $17.5 billion worth of goods and services from Pennsylvania-based suppliers, supporting over 131,000 supplier jobs.[1]

Q. PLEASE BRIEFLY DESCRIBE WALMART'S OPERATIONS WITHIN THE SERVICE TERRITORY OF FIRSTENERGY PENNSYLVANIA ("FE PA" OR "COMPANY").

A. Walmart is a large customer of FE PA with 83 retail units and five supply chain and related facilities that take service from the Company, pursuant to the Company's General Service Large Demand Rates.

Purpose of Testimony and Summary of Recommendations

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to respond to the Company's Application filed in this docket on February 3, 2026, along with supporting testimony, and to provide recommendations to assist the Commission in its thorough and careful consideration of the Company's proposed changes to non-residential Price to Compare ("PTC") assignment based on maximum registered peak loads ("MRPL").

Q. PLEASE SUMMARIZE WALMART'S RECOMMENDATION TO THE COMMISSION.

A. Walmart's recommendation to the Commission is as follows:

1) Walmart believes an outcome for customer-generators similar to the settled outcome in the PPL Electric Utilities Corporation ("PPL") rate case is a reasonable

[1] https://corporate.walmart.com/about/location-facts/united-states/pennsylvania

solution to Walmart's concerns with FE PA's MRPL proposal. Walmart recommends that the Commission structure customer grandfathering and net excess generation compensation in a manner similar to the PPL settlement, adjusted for where FE PA's circumstances differ from PPL's.

Q. DOES THE FACT THAT YOU MAY NOT ADDRESS AN ISSUE OR POSITION INDICATE WALMART'S SUPPORT?

A. No. The fact that an issue is not addressed herein or in related filings should not be construed as an endorsement of, agreement with, or consent to any filed position.

Maximum Registered Peak Load

Q. WHAT IS YOUR UNDERSTANDING OF HOW THE COMMISSION DEFINES MRPL?

A. My understanding is that the Commission defines MRPL as "The highest level of demand for a particular customer, based on the PJM Interconnection, LLC, 'Peak Load Contribution Standard,' or its equivalent, and as may be further defined by the EDC tariff in a particular service territory." *See* 52 Pa. Code §54.182.

Q. IS FE PA SEEKING TO DEFINE MRPL IN THIS DOCKET?

A. Yes. FE PA is proposing to define MRPL as a customer's net demand contribution impact to the Company's default service activity, as determined by the net power flow from or into the distribution system. *See* FE PA Statement No. 1, Direct Testimony of David M. Young ("Young Direct"), p. 16, lines 17-20.

Q. WHY DOES THE COMPANY PROPOSE THIS DEFINITION?

A. The Company proposes the change of definition as part of the proposed criteria to determine if a non-residential default service customer is served under the PTC Default Service Rate Rider ("PTC Rider") or the Hourly Pricing Default Service Rider ("HP Rider"). *Id.* at lines 6-11.

Q. WHAT IS THE COMPANY'S CURRENT DEMAND CRITERION DELINEATING SERVICE UNDER THE PTC RIDER OR THE HP RIDER?

A. The Company currently sets the delineation point at or above 100 kW of load for all non-residential default service customers. Customers with demand of 100 kW or more are classified as industrial customers and receive hourly-priced default service under the HP Rider, whereas customers below 100 kW are classified as commercial and receive service under the PTC Rider. *Id.* at 15, lines 12-18.

Q. WHAT IS THE COMPANY'S PROPOSED CHANGE?

A. The Company proposes to add MRPL – whether as load or as production – as a qualifier to HP Rider eligibility. As such, the Company proposes that, regardless of load size, if a default service customer-generator has an MRPL of 100 kW or above, that customer will receive service under the HP Rider. *Id.* at 16, lines 6-11. The Company also proposes, through this change, to recover all net excess generation costs through the HP Rider rate. *Id.* at 19, lines 2-5.

Q. WHAT EFFECTIVE DATE DOES THE COMPANY PROPOSE FOR THIS CHANGE?

A. The Company proposes an effective date of June 1, 2027, for new net metering customer generation coming online after that date. For existing net metering customer

generation, the Company proposes an effective date of June 1, 2029. Young Direct at 19, lines 19-22.

Q. WHY DOES THE COMPANY PROPOSE THIS CHANGE?

A. The Company proposes this change due to concerns stemming the use of the PTC Rider for net metering customer-generators who have loads under 100 kW and MRPL at or above 100 kW due to the size of on-site generation. *Id.* at 17, lines 3-8. Per the Company, this practice increases risk premiums included in fixed-price full requirements products from default service suppliers for PTC Rider customers and also creates cross-subsidies between PTC Rider customers and generators because the cost of net excess generation is recovered solely from PTC Rider customers. *Id.* at 17, line 11 to p. 18, line 2.

Walmart's Response

Q. ARE THE COMPANY'S PROPOSED CHANGES A CONCERN FOR WALMART?

A. Yes. Walmart has long had aggressive and significant company-wide renewable energy goals, and on September 21, 2020, Walmart announced new targets as a part of its sustainability goals, including: (1) to be supplied 100 percent by renewable energy by 2035 and (2) zero carbon emissions in its operations, including its transportation fleet vehicles, without the use of offsets, by 2040. Walmart has also set a goal to transition to zero emission buildings by deploying low-impact refrigerants for cooling

and electric equipment for heating by 2040.[2] Additionally, on January 9, 2024, Walmart announced a goal to bring 10 GW of new clean energy projects online by the end of 2030, including 1 GW of new onsite solar plus storage, and enabling 2 GW of new community solar projects.[3]

In support of these goals, Walmart actively evaluates onsite solar opportunities across the United States. These analyses rely on a clear, stable understanding of the value of each kilowatt-hour of onsite generation. In Pennsylvania, the benchmark has historically been the PTC Rider. The proposed shift to the HP Rider would fundamentally change this value proposition and could significantly impact customer-generators' ability to develop positive-value solar projects in FE PA's territory.

Q. DOES PENNSYLVANIA HAVE AN OVER-SUPPLY OF GENERATION THAT WOULD JUSTIFY DISINCENTIVIZING ONSITE SOLAR DEVELOPMENT PROJECTS IN FE PA'S TERRITORY?

A. No. There is no evidence suggesting that Pennsylvania has an over-supply of generation that would justify disincentivizing onsite solar development in FE PA's territory. To the contrary, market and monitor reports show tightening trends and localized risks – not broad oversupply. Monitoring Analytics and PJM Interconnection, LLC ("PJM"), analyses have documented tightening fundamentals, price signals of scarcity in recent capacity auctions, and scenarios where local

[2] https://corporate.walmart.com/news/2020/09/21/walmart-sets-goal-to-become-a-regenerative-company
[3] *Walmart Keynote at CES 2024* (Jan. 9, 2024) https://tech.walmart.com/content/dam/walmart-global-tech/documents/Walmart%20CES%20Keynote%20Script%20Transcript_1.9.24.pdf

constraints or retirements could cause shortfalls – especially if demand grows faster than expected.

Q. WOULD ONSITE SOLAR PROJECTS THAT ARE CURRENTLY IN VARIOUS PHASES OF DEVELOPMENT BE NEGATIVELY IMPACTED BY THE COMPANY'S PROPOSAL?

A. Yes. Changing the classification of customer-generators from the PTC Rider to the HP Rider without robust transition protections would retroactively alter the economics of those investments. Approving such an abrupt and sharp reclassification would create stranded value for customers who acted reasonably under the current rules.

Q. IS THE COMMISSION CURRENTLY CONSIDERING THIS ISSUE IN ANOTHER DOCKET?

A. Yes, in Docket No. R-2025-3057164, the PPL rate case.

Q. HAVE PARTIES IN THE PPL RATE CASE, INCLUDING WALMART, RESOLVED THIS ISSUE THROUGH SETTLEMENT?

A. Yes. The provisions of the MRPL settlement in the PPL rate case are as follows:

- Grandfathers the following customer-generators into existing default service rate through December 31, 2026, at which time they will become subject to the default service rate classifications in effect as of January 1, 2037:
  - Customer-generators who submitted an interconnection application on or before September 30, 2025, and whose generating facilities either receive permission to operate or provide the utility a certificate of completion on or before December 31, 2026; and

- Customer-generators who submitted an interconnection application on or before September 30, 2025, up to a defined cap of 140 MW, based on the date of their signed original Notification of Customer Intent.

- Defines customer-generator compensation for GSC-2 (PPL equivalent of HP Rider) and the structure will remain in place until December 31, 2041. The compensation structure includes the cost of energy based on PJM locational marginal prices, the default supplier's hourly pricing adder, capacity value, an "e-factor" to adjust for net over- or under-collection of Rate GSC-2 rate components, administrative charges, and transmission cost.
- PPL default service customer determination will include MRPL as proposed by PPL. *See* Notice of Proposed Joint Petition for Approval of Non-Unanimous Settlement of All Issues at 25-29*, Pa. P.U.C. v. PPL Electric Utilities Corporation, et al.*, Docket Nos. R-2025-3057164, *et al.* (filed Mar. 13, 2026).

Q. HAS THIS SETTLEMENT BEEN APPROVED BY THE COMMISSION AT THE TIME OF SUBMISSION OF THIS TESTIMONY?

A. No; however, the Recommended Decision filed on April 17, 2026, recommends approval of the MRPL provision. *See* Recommended Decision at 225, *Pa. P.U.C., et al. v. PPL Electric Utilities Corporation*, Docket Nos. R-2025-3057164, *et al.* (issued Apr. 17, 2026).

Q. DOES WALMART SUPPORT A SIMILAR OUTCOME IN THIS DOCKET?

A. Yes. Walmart believes an outcome similar to the settled outcome in the PPL rate case is a reasonable solution to the concerns stated above with FE PA's MRPL proposal. Walmart recommends that the Commission structure customer grandfathering and net

excess generation compensation in a manner similar to the PPL settlement, adjusted for where FE PA's circumstances differ from PPL's.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes.

TESTIMONY BEFORE REGULATORY COMMISSIONS

2026

Rhode Island Docket No. 25-45-GE: In Re: The Narragansett Electric Company D/B/A Rhode Island Energy Application for Approval of a Change in Electric and Gas Base Distribution Rates.

South Carolina Docket No. 2025-325-E: In Re: Application of Dominion Energy South Carolina, Inc. for Authority to Adjust and Increase its Retail Electric Rates and Charges.

South Carolina Docket No. 2025-230-E: In Re: Joint Application of Duke Energy Carolinas, LLC, and Duke Energy Progress, LLC, to Engage in a Business Combination, Address Regulatory Conditions and Code of Conduct, and Request for Accounting Order.

Texas Docket No. 58819: Application of Southwestern Electric Power Company for Authority to Change Rates.

2025

South Carolina Docket No. 2025-154-E: In Re: Application of Duke Energy Progress, LLC for Increase in Electric Rates, Adjustments in Electric Rate Schedules and Tariffs, and Request for an Accounting Order.

Puerto Rico Case No. NEPR-AP-2023-0003: In Re: Puerto Rico Electric Power Authority Rate Review.

Virginia Case No. PUR-2025-00058: Application of Virginia Electric and Power Company for a 2025 Biennial Review of the Rates, Terms, and Conditions for the Provision of Generation, Distribution, and Transmission Services Pursuant to § 56-585.1 A of the Code of Virginia (adopted testimony of Lisa Perry).

Florida Docket No. 20250011-EI: In re: Petition for rate increase by Florida Power & Light Company.

Georgia Docket 44280: In re: Georgia Power Company's 2022 Rate Case (in response to the Joint Petition of Georgia Power Company and the Public Interest Advocacy Staff for approval of their Stipulation to Extend the Alternative Rate Plan).

Louisiana Docket No. U-37425: Application of Entergy Louisiana, LLC for Approval of Generation and Transmission Resources Proposed in Connection with Service to a Significant Customer Project in North Louisiana, Including Proposed Rider, and Request for Timely Treatment.

2024

North Dakota Case No. PU-23-324: In the Matter of the Application of Otter Tail Power Company for Authority to Increase Rates for Electric Utility Service in North Dakota.

Virginia Case No. PUR-2024-00024: Application of Appalachian Power Company for a 2024 Biennial Review of its Base Rates, Terms and Conditions Pursuant to §56-585.8 of the Code of Virginia (adopted testimony of Lisa Perry).

Louisiana Docket No. S-37074: Application of Southwestern Electric Power Company for Approval of Revised Renewable Energy Credit (REC) Tariff Submitted in Accordance with Order U-35736.

Arkansas Docket No. 24-032-TF: In the Matter of the Application of Southwestern Electric Power Company for a Proposed Revision to Rate Schedule No. 51, Renewable Energy Credit (REC) Rider.

Nevada Docket No. 24-02026: In the Matter of the Application of Sierra Pacific Power Company D/B/A NV Energy, Filed Pursuant to NRS 704.110(3) and NRS 704.110(4), Addressing General Rates Charged to All Classes of Electric Customers.

Florida Docket No. 20240025-EI: In Re: Petition for Rate Increase of Duke Energy Florida, LLC.

Florida Docket No. 20240026-EI: In Re: Petition for Rate Increase by Tampa Electric Company.

Florida Docket No. 20240012-EG: Commission Review of Numeric Conservation Goals (Florida Power & Light Company).

Florida Docket No. 20240013-EG: Commission Review of Numeric Conservation Goals (Duke Energy Florida, LLC).

Florida Docket No. 20240014-EG: Commission Review of Numeric Conservation Goals (Tampa Electric Company).

Florida Docket No. 20240015-EG: Commission Review of Numeric Conservation Goals (Florida Public Utilities Company).

Florida Docket No. 20240016-EG: Commission Review of Numeric Conservation Goals (JEA).

Florida Docket No. 20240017-EG: Commission Review of Numeric Conservation Goals (Orlando Utilities Commission).

California Application No. 23-05-010: Application of Southern California Edison Company (U338E) for Authority to Increase Its Authorized Revenues for Electric Service in 2025, Among Other Things, and to Reflect that Increase in Rates.

California Application No. 21-06-021: Application of Pacific Gas and Electric Company for Authority, Among Other Things, to Increase Rates and Charges for Electric and Gas Service Effective on January 1, 2023 and Establish a New Balancing Account for Electric Distribution Capacity Additions and New Electric Distribution Extension Work Activities.

2023
Ohio Case No. 22-0704-EL-UNS: In the Matter of the Application of Ohio Edison Company, the Cleveland Electric Illuminating Company, and the Toledo Edison Company for Approval of Phase Two of their Distributed Grid Modernization Plan.

Indiana Cause No. 45911: Petition of Indianapolis Power & Light Company d/b/a AES Indiana for Authority to Increase Rates and Charges for Electric Utility Service, and for Approval of Related Relief, Including (1) Revised Depreciation Rates, (2) Accounting Relief, Including Deferrals and Amortizations, (3) Inclusion of Capital Investments, (4) Rate Adjustment Mechanism Proposals, Including New Economic Development Rider, (5) Remote Disconnect/Reconnect Process, and (6) New Schedules of Rates, Rules, and Regulations for Service.

Nevada Docket No. 23-06007: Application of Nevada Power Company d/b/a NV Energy for Authority to Adjust its Annual Revenue Requirement for General Rates Charged to All Classes of Electric Customers and for Relief Properly Related Thereto.

Kansas Docket No. 23-EKCE-775-RTS: In the Matter of the Application of Evergy Kansas Metro, Inc., Evergy Kansas South, Inc. and Evergy Kansas Central, Inc. to make Certain Changes in their Charges for Electric Service Pursuant to K.S.A. 66-117.

North Carolina Docket No. E-7, Sub 1276: In the Matter of Application of Duke Energy Carolinas, LLC for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina and Performance-Based Regulation.

Virginia Case No. PUR-2023-00002: Application of Appalachian Power Company for a 2023 Triennial Review of its Base Rates, Terms, and Conditions Pursuant to §56-585.1 of the Code of Virginia.

New Mexico Case No. 22-00270-UT: In the Matter of the Application of Public Service Company of New Mexico for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 595.

Arizona Docket No. E-01345A-22-0144: In the Matter of the Application of Arizona Public Service Company for a Hearing to Determine the Fair Value of the Utility Property of the Company for Ratemaking Purposes, to Fix a Just and Reasonable Rate of Return Thereon, to Approve Rate Schedules to Develop Such Return.

Oregon Docket UE 416: In the Matter of Portland General Electric Company, Request for a General Rate Revision; and 2024 Annual Power Cost Update.

Arizona Docket No. E-04204A-22-0251: In the Matter of the Application of UNS Electric, Inc. for the Establishment of Just and Reasonable Rates and Charges Designed to Realize a Reasonable Rate of Return on the Fair Value of the Properties of UNS Electric, Inc. Devoted to its Operations Throughout the State of Arizona and for Related Approvals.

Ohio Case No. 23-23-EL-SSO: In the Matter of the Application of Ohio Power Company for Authority to Establish a Standard Service Offer Pursuant to Section 4928.143, Revised Code, in the Form of an Electric Security Plan.

North Carolina Docket No. E-2, Sub 1300: In the Matter of Application of Duke Energy Progress, LLC for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina and Performance-Based Regulation.

Kentucky Case No. 2022-00372: In the Matter of Electronic Application of Duke Energy Kentucky, Inc. for (1) An Adjustment of Electric Rates; (2) Approval of New Tariffs; (3) Approval of Accounting Practices to Establish Regulatory Assets and Liabilities; and (4) All Other Required Approvals and Relief.

Missouri Docket No. ER-2022-0337: In the Matter of Union Electric Company d/b/a Ameren Missouri's Tariffs to Adjust its Revenues for Electric Service.

New Mexico Case No. 22-00286-UT: In the Matter of Southwestern Public Service Company's Application for: (1) Revision of its Retail Rates Under Advice Notice No. 312; (2) Authority to Abandon the Plant X Unit 1, Plant X Unit 2, and Cunningham Unit 1 Generating Stations and Amend the Abandonment Date of the Tolk Generating Station; and (3) Other Associated Relief.

Arizona Docket No. E-01933A-22-0107: In the Matter of the Application of Tucson Electric Power Company for the Establishment of Just and Reasonable Rates and Charges Designed to Realize a Reasonable Rate of Return on the Fair Value of the Properties of Tucson Electric Power Company Devoted to its Operations Throughout the State of Arizona and for Related Approvals.

New Mexico Case No. 22-00058-UT: In the Matter of the Public Service Company of New Mexico's Application for Authorization to Implement Grid Modernization Components that Include Advanced Metering Infrastructure and Application to Recover the Associated Costs Through a Rider, Issuance of Related Accounting Orders, and Other Associated Relief.

2022
Maine Docket No. 2022-00255: Versant Power Request for Approval of Rate Change Pursuant to 35-A M.R.S. § 307.

Maine Docket No. 2022-00152: Central Maine Power Company Request for Approval of Distribution Rate Increase and Rate Design Changes Pursuant to 35-A M.R.S. § 307.

Georgia Docket No. 44280: In Re: Georgia Power's 2022 Rate Case.

Minnesota Docket No. E-002/GR-21-630: In the Matter of the Application of Northern States Power Company for Authority to Increase Rates for Electric Service in Minnesota.

Nevada Docket No. 22-06014: In the Matter of the Application by Sierra Pacific Power Company d/b/a NV Energy, Filed Pursuant to NRS 704.110(3) and NRS 704.110(4), Addressing its Annual Revenue Requirement for General Rates Charged to All Classes of Electric Customers.

Colorado Proceeding No. 22AL-0130E: In the Matter of Advice No. 1881-Electric of Public Service Company of a Resiliency Service Program Tariff in its Colorado PUC No. 8-Electric Tariff Effective April 24, 2022.

Texas Docket No. 53601: Application of Oncor Electric Delivery Company for Authority to Change Rates.

Washington Docket No. UE-220066: Puget Sound Energy 2022 General Rate Case.

Washington Docket No. UG-220067: Puget Sound Energy 2022 Natural Gas General Rate Case.

Idaho Case No. IPC-E-21-40: In the Matter of Idaho Power Company's Application to Expand Optional Customer Clean Energy Offerings Through the Clean Energy Your Way Program.

Georgia Docket No. 44160: Georgia Power's 2022 Integrated Resource Plan.

Georgia Docket No. 44161: Application for the Certification, Decertification, and Amended Demand Side Management Plan.

2021
Missouri Case No. ER-2021-0312: In the Matter of the Request of The Empire District Electric Company d/b/a Liberty for Authority to File Tariffs Increasing Rates for Electric Service Provided to Customers in its Missouri Service Area.

Indiana Cause No. 45576: Petition of Indiana Michigan Power Company, an Indiana Corporation, for Authority to Increase its Rates and Charges for Electric Utility Service through a Phase In Rate Adjustment; and for Approval of Related Relief Including: (1) Revised Depreciation Rates; (2) Accounting Relief; (3) Inclusion of Capital Investment; (4) Rate Adjustment Mechanism Proposals; (5) Customer Programs; (6) Waiver to Declination of Jurisdiction with Respect to Certain Rules; and (7) New Schedules of Rates, Rules, and Regulations.

Oregon Docket No. UE 394: In the Matter of Portland General Electric Company, Request for a General Rate Revision.

Missouri File No. ER-2021-0240: In the Matter of Union Electric Company d/b/a Ameren Missouri's Tariffs to Adjust its Revenues for Electric Service.

Florida Docket No. 20210015-EI: In re: Petition for Rate Increase by Florida Power & Light Company.

California Docket No. R-20-08-020: Order Instituting Rulemaking to Revisit Net Energy Metering Tariffs Pursuant to Decision 16-01-044, and to Address Other Issues Related to Net Energy Metering.

New Mexico Case No. 20-00238-UT: In the Matter of Southwestern Public Service Company's Application For: (1) Revision of its Retail Rates Under Advice Notice No. 292; (2) Authorization and Approval to Abandon its Plant X Unit 3 Generating Station; and (3) Other Associated Relief.

North Dakota Case No. PU-20-441: In the Matter of the Application of Northern States Power Company for Authority to Increase Rates for Electric Service in North Dakota.

New Mexico Case No. 20-00222-UT: In the Matter of the Joint Application of Avangrid, Inc., Avangrid Networks, Inc., NM Green Holdings, Inc., Public Service Company of New Mexico and PNM Resources, Inc. For Approval of the Merger of NM Green Holdings, Inc. with PNM Resources, Inc.; Approval of a General Diversification Plan; and All Other Authorizations and Approvals Requires to Consummate and Implement this Transaction.

2020

Arizona Docket No. E-01345A-19-0236: In the Matter of the Application of Arizona Public Service Company for a Hearing to Determine the Fair Value of Ratemaking Purposes, to Fix a Just and Reasonable Return Thereon and to Approve Rate Schedules Designed to Develop Such Return.

Florida Docket No. 20200176-EI: In re: Petition by Duke Energy Florida, LLC for a Limited Proceeding to Approve Clean Energy Connection Program and Tariff and Stipulation.

Florida Docket No. 20200092-EI: In re: Storm Protection Plan Cost Recovery Clause.

Nevada Docket No. 20-05003: Application of Nevada Power Company d/b/a NV Energy Filed Under Advice Letter No. 504 to Establish Customer Price Stability Tariff Schedule No. CPST (the "Program") to Assist Certain Qualifying Customers During the COVID-19 Pandemic and Economic Downturn, and to Address Certain Customer Requests for Price Stability and Potential Cost Savings in Meeting Customer Specific Business Needs and Sustainability Objectives.

Nevada Docket No. 20-05004: Application of Sierra Pacific Power Company d/b/a NV Energy Filed Under Advice Letter No. 629-E to Establish Customer Price Stability Tariff Schedule No. CPST (the "Program") to Assist Certain Qualifying Customers During the COVID-19 Pandemic and Economic Downturn, and to Address Certain Customer Requests for Price Stability and Potential Cost Savings in Meeting Customer Specific Business Needs and Sustainability Objectives.

Utah Docket No. 20-035-04: Application of Rocky Mountain Power for the Authority to Increase its Retail Electric Utility Rates in Utah and for Approval of its Proposed Electric Service Schedules and Electric Service Regulations.

Wyoming Docket No. 20000-578-ER-20: In the Matter of the Application of Rocky Mountain Power for Authority to Increase its Retail Electric Service Rates by Approximately $7.1 Million Per Year or 1.1 Percent, to Revise the Energy Cost Adjustment Mechanism, and to Discontinue Operations at Cholla Unit 4.

Virginia Case No. PUR-2020-00015: Application of Appalachian Power Company for a 2020 Triennial Review of the Rates, Terms and Conditions for the Provision of Generation, Distribution and Transmission Services Pursuant to §56-585.1 A of the Code of Virginia.

Oregon Docket No. UE 374: In the Matter of PacifiCorp d/b/a Pacific Power Request for a General Rate Revision.

Florida Docket No. 20200067-EI: In re: Review of 2020-2029 Storm Protection Plan pursuant to Rule 25-6.030, F.A.C., Tampa Electric Company.

Florida Docket No. 20200069-EI: In re: Review of 2020-2029 Storm Protection Plan pursuant to Rule 25-6.030, F.A.C., Duke Energy Florida, LLC.

Florida Docket No. 20200070-EI: In re: Review of 2020-2029 Storm Protection Plan pursuant to Rule 25-6.030, F.A.C., Gulf Power Company.

Florida Docket No. 20200071-EI: In re: Review of 2020-2029 Storm Protection Plan pursuant to Rule 25-6.030, F.A.C., Florida Power & Light Company.

North Carolina Docket No. E-2, Sub 1219: Application of Duke Energy Progress, LLC for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina.
Missouri Case No. ER-2019-0374: In the Matter of the Empire District Electric Company's Request for Authority to File Tariffs Increasing Rates for Electric Service Provided to Customers in its Missouri Service Area.

South Carolina Public Service Commission Docket No. 2013-59-E: Application of Duke Energy Carolinas, LLC, for Authority to Adjust and Increase Its Electric Rates and Charges.

Public Utility Commission of Oregon Docket No. UE 262: In the Matter of PORTLAND GENERAL ELECTRIC COMPANY, Request for a General Rate Revision.

New Jersey Board of Public Utilities Docket No. ER12111052: In the Matter of the Verified Petition of Jersey Central Power & Light Company For Review and Approval of Increases in and Other Adjustments to Its Rates and Charges For Electric Service, and For Approval of Other Proposed Tariff Revisions in Connection Therewith; and for Approval of an Accelerated Reliability Enhancement Program ("2012 Base Rate Filing")

North Carolina Utilities Commission Docket No. E-7, Sub 1026: In the Matter of the Application of Duke Energy Carolinas, LLC for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina.

Public Utility Commission of Oregon Docket No. UE 264: PACIFICORP, dba PACIFIC POWER, 2014 Transition Adjustment Mechanism.

Public Utilities Commission of California Docket No. 12-12-002: Application of Pacific Gas and Electric Company for 2013 Rate Design Window Proceeding.

Public Utilities Commission of Ohio Docket Nos. 12-426-EL-SSO, 12-427-EL-ATA, 12-428-EL-AAM, 12-429-EL-WVR, and 12-672-EL-RDR: In the Matter of the Application of the Dayton Power and Light Company Approval of its Market Offer.

Minnesota Public Utilities Commission Docket No. E-002/GR-12-961: In the Matter of the Application of Northern States Power Company for Authority to Increase Rates for Electric Service in Minnesota.

North Carolina Utilities Commission Docket E-2, Sub 1023: In the Matter of Application of Progress Energy Carolinas, Inc. For Adjustment of Rates and Charges Applicable to Electric Service in North Carolina.

2012
Public Utility Commission of Texas Docket No. 40443: Application of Southwestern Electric Power Company for Authority to Change Rates and Reconcile Fuel Costs.

South Carolina Public Service Commission Docket No. 2012-218-E: Application of South Carolina Electric & Gas Company for Increases and Adjustments in Electric Rate Schedules and Tariffs and Request for Mid-Period Reduction in Base Rates for Fuel.

Kansas Corporation Commission Docket No. 12-KCPE-764-RTS: In the Matter of the Application of Kansas City Power & Light Company to Make Certain Changes in its Charges for Electric Service.

Kansas Corporation Commission Docket No. 12-GIMX-337-GIV: In the Matter of a General Investigation of Energy-Efficiency Policies for Utility Sponsored Energy Efficiency Programs.

Florida Public Service Commission Docket No. 120015-EI: In Re: Petition for Rate Increase by Florida Power & Light Company.

California Public Utilities Commission Docket No. A.11-10-002: Application of San Diego Gas & Electric Company (U 902 E) for Authority to Update Marginal Costs, Cost Allocation, and Electric Rate Design.

Utah Public Service Commission Docket No. 11-035-200: In the Matter of the Application of Rocky Mountain Power for Authority to Increase its Retail Electric Utility Service Rates in Utah and for Approval of its Proposed Electric Service Schedules and Electric Service Regulations.

Virginia State Corporation Commission Case No. PUE-2012-00051: Application of Appalachian Power Company to Revise its Fuel Factor Pursuant to § 56-249.6 of the Code of Virginia.

Public Utilities Commission of Ohio Case Nos. 11-346-EL-SSO, 11-348-EL-SSO, 11-349-EL-AAM, and 11-350-EL-AAM: In the Matter of the Application of Columbus Southern Power Company and Ohio Power Company for Authority to Establish a Standard Service Offer Pursuant to Section 4928.143, Revised Code, in the Form on an Electric Security Plan and In the Matter of the Application of Columbus Southern Power Company and Ohio Power Company for Approval of Certain Accounting Authority.

New Jersey Board of Public Utilities Docket No. ER11080469: In the Matter of the Petition of Atlantic City Electric for Approval of Amendments to Its Tariff to Provide for an Increase in Rates and Charges for Electric Service Pursuant to N.J.S.A. 48:2-21 and N.J.S.A. 48:2-21.1 and For Other Appropriate Relief.

Public Utility Commission of Texas Docket No. 39896: Application of Entergy Texas, Inc. for Authority to Change Rates and Reconcile Fuel Costs.

Missouri Public Service Commission Case No. EO-2012-0009:In the Matter of KCP&L Greater Missouri Operations Notice of Intent to File an Application for Authority to Establish a Demand-Side Programs Investment Mechanism.

Colorado Public Utilities Commission Docket No. 11AL-947E: In the Matter of Advice Letter No. 1597-Electric Filed by Public Service Company of Colorado to Revise its Colorado PUC No. 7-Electric Tariff to Implement a General Rate Schedule Adjustment and Other Changes Effective December 23, 2011.

Illinois Commerce Commission Docket No. 11-0721: Commonwealth Edison Company Tariffs and Charges Submitted Pursuant to Section 16-108.5 of the Public Utilities Act.

Public Utility Commission of Texas Docket No. 38951: Application of Entergy Texas, Inc. for Approval of Competitive Generation Service tariff (Issues Severed from Docket No. 37744).

California Public Utilities Commission Docket No. A.11-06-007: Southern California Edison's General Rate Case, Phase 2.

2011

Arizona Corporation Commission Docket No. E-01345A-11-0224: In the Matter of Arizona Public Service Company for a Hearing to Determine the Fair Value of Utility Property of the Company for Ratemaking Purposes, to Fix and Just and Reasonable Rate of Return Thereon, to Approve Rate Schedules Designed to Develop Such Return.

Oklahoma Corporation Commission Cause No. PUD 201100087: In the Matter of the Application of Oklahoma Gas and Electric Company for an Order of the Commission Authorizing Applicant to Modify its Rates, Charges, and Tariffs for Retail Electric Service in Oklahoma.

South Carolina Public Service Commission Docket No. 2011-271-E: Application of Duke Energy Carolinas, LLC for Authority to Adjust and Increase its Electric Rates and Charges.

Pennsylvania Public Utility Commission Docket No. P-2011-2256365: Petition of PPL Electric Utilities Corporation for Approval to Implement Reconciliation Rider for Default Supply Service.

North Carolina Utilities Commission Docket No. E-7, Sub 989: In the Matter of Application of Duke Energy Carolinas, LLC for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina.

Florida Public Service Commission Docket No. 110138: In Re: Petition for Increase in Rates by Gulf Power Company.

Public Utilities Commission of Nevada Docket No. 11-06006: In the Matter of the Application of Nevada Power Company, filed pursuant to NRS 704.110(3) for authority to increase its annual revenue requirement for general rates charged to all classes of customers to recover the costs of constructing the Harry Allen Combined Cycle plant and other generating, transmission, and distribution plant additions, to reflect changes in the cost of capital, depreciation rates and cost of service, and for relief properly related thereto.

North Carolina Utilities Commission Docket Nos. E-2, Sub 998 and E-7, Sub 986: In the Matter of the Application of Duke Energy Corporation and Progress Energy, Inc., to Engage in a Business Combination Transaction and to Address Regulatory Conditions and Codes of Conduct.

Public Utilities Commission of Ohio Case Nos. 11-346-EL-SSO, 11-348-EL-SSO, 11-349-EL-AAM, and 11-350-EL-AAM: In the Matter of the Application of Columbus Southern Power Company and Ohio Power Company for Authority to Establish a Standard Service Offer Pursuant to Section 4928.143, Revised Code, in the Form on an Electric Security Plan and In the Matter of the Application of Columbus Southern Power Company and Ohio Power Company for Approval of Certain Accounting Authority.

Virginia State Corporation Commission Case No. PUE-2011-00037: In the Matter of Appalachian Power Company for a 2011 Biennial Review of the Rates, Terms, and Conditions for the Provision of Generation, Distribution, and Transmission Services Pursuant to § 56-585.1 A of the Code of Virginia.

Illinois Commerce Commission Docket No. 11-0279 and 11-0282 (cons.): Ameren Illinois Company Proposed General Increase in Electric Delivery Service and Ameren Illinois Company Proposed General Increase in Gas Delivery Service.

Virginia State Corporation Commission Case No. PUE-2011-00045: Application of Virginia Electric and Power Company to Revise its Fuel Factor Pursuant to § 56-249.6 of the Code of Virginia.

Utah Public Service Commission Docket No. 10-035-124: In the Matter of the Application of Rocky Mountain Power for Authority to Increase its Retail Electric Utility Service Rates in Utah and for Approval of its Proposed Electric Service Schedules and Electric Service Regulations.

Maryland Public Utilities Commission Case No. 9249: In the Matter of the Application of Delmarva Power & Light for an Increase in its Retail Rates for the Distribution of Electric Energy.

Minnesota Public Utilities Commission Docket No. E002/GR-10-971: In the Matter of the Application of Northern States Power Company d/b/a Xcel Energy for Authority to Increase Rates for Electric Service in Minnesota.

Michigan Public Service Commission Case No. U-16472: In the Matter of the Detroit Edison Company for Authority to Increase its Rates, Amend its Rate Schedules and Rules Governing the Distribution and Supply of Electric Energy, and for Miscellaneous Accounting Authority.

2010

Public Utilities Commission of Ohio Docket No. 10-2586-EL-SSO: In the Matter of the Application of Duke Energy Ohio for Approval of a Market Rate Offer to Conduct a Competitive Bidding Process for Standard Service Offer Electric Generation Supply, Accounting Modifications, and Tariffs for Generation Service.

Colorado Public Utilities Commission Docket No. 10A-554EG: In the Matter of the Application of Public Service Company of Colorado for Approval of a Number of Strategic Issues Relating to its DSM Plan, Including Long-Term Electric Energy Savings Goals, and Incentives.

Public Service Commission of West Virginia Case No. 10-0699-E-42T: Appalachian Power Company and Wheeling Power Company Rule 42T Application to Increase Electric Rates.

Oklahoma Corporation Commission Cause No. PUD 201000050: Application of Public Service Company of Oklahoma, an Oklahoma Corporation, for an Adjustment in its Rates and Charges and Terms and Conditions of Service for Electric Service in the State of Oklahoma.

Georgia Public Service Commission Docket No. 31958-U: In Re: Georgia Power Company's 2010 Rate Case.

Washington Utilities and Transportation Commission Docket No. UE-100749: 2010 Pacific Power & Light Company General Rate Case.

Colorado Public Utilities Commission Docket No. 10M-254E: In the Matter of Commission Consideration of Black Hills Energy's Plan in Compliance with House Bill 10-1365, "Clean Air-Clean Jobs Act."

Colorado Public Utilities Commission Docket No. 10M-245E: In the Matter of Commission Consideration of Public Service Company of Colorado Plan in Compliance with House Bill 10-1365, "Clean Air-Clean Jobs Act."

Public Service Commission of Utah Docket No. 09-035-15 *Phase II*: In the Matter of the Application of Rocky Mountain Power for Approval of its Proposed Energy Cost Adjustment Mechanism.

Public Utility Commission of Oregon Docket No. UE 217: In the Matter of PACIFICORP, dba PACIFIC POWER Request for a General Rate Revision.

Mississippi Public Service Commission Docket No. 2010-AD-57: In Re: Proposal of the Mississippi Public Service Commission to Possibly Amend Certain Rules of Practice and Procedure.

Indiana Utility Regulatory Commission Cause No. 43374: Verified Petition of Duke Energy Indiana, Inc. Requesting the Indiana Utility Regulatory Commission to Approve an Alternative Regulatory Plan Pursuant to Ind. Code § 8-1-2.5-1, *ET SEQ*., for the Offering of Energy Efficiency Conservation, Demand Response, and Demand-Side Management Programs and Associated Rate Treatment Including Incentives Pursuant to a Revised Standard Contract Rider No. 66 in Accordance with Ind. Code §§ 8-1-2.5-1 *ET SEQ*. and 8-1-2-42 (a); Authority to Defer Program Costs Associated with its Energy Efficiency Portfolio of Programs; Authority to Implement New and Enhanced Energy Efficiency Programs, Including the Powershare® Program in its Energy Efficiency Portfolio of Programs; and Approval of a Modification of the Fuel Adjustment Clause Earnings and Expense Tests.

Public Utility Commission of Texas Docket No. 37744: Application of Entergy Texas, Inc. for Authority to Change Rates and to Reconcile Fuel Costs.

South Carolina Public Service Commission Docket No. 2009-489-E: Application of South Carolina Electric & Gas Company for Adjustments and Increases in Electric Rate Schedules and Tariffs.

Kentucky Public Service Commission Case No. 2009-00459: In the Matter of General Adjustments in Electric Rates of Kentucky Power Company.

Virginia State Corporation Commission Case No. PUE-2009-00125: For acquisition of natural gas facilities Pursuant to § 56-265.4:5 B of the Virginia Code.

Arkansas Public Service Commission Docket No. 10-010-U: In the Matter of a Notice of Inquiry Into Energy Efficiency.

Connecticut Department of Public Utility Control Docket No. 09-12-05: Application of the Connecticut Light and Power Company to Amend its Rate Schedules.

Arkansas Public Service Commission Docket No. 09-084-U: In the Matter of the Application of Entergy Arkansas, Inc. For Approval of Changes in Rates for Retail Electric Service.

Missouri Public Service Commission Docket No. ER-2010-0036: In the Matter of Union Electric Company d/b/a AmerenUE for Authority to File Tariffs Increasing Rates for Electric Service Provided to Customers in the Company's Missouri Service Area.

Public Service Commission of Delaware Docket No. 09-414: In the Matter of the Application of Delmarva Power & Light Company for an Increase in Electric Base Rates and Miscellaneous Tariff Charges.

2009
Virginia State Corporation Commission Case No. PUE-2009-00030: In the Matter of Appalachian Power Company for a Statutory Review of the Rates, Terms, and Conditions for the Provision of Generation, Distribution, and Transmission Services Pursuant to § 56-585.1 A of the Code of Virginia.

Public Service Commission of Utah Docket No. 09-035-15 *Phase I*: In the Matter of the Application of Rocky Mountain Power for Approval of its Proposed Energy Cost Adjustment Mechanism.

Public Service Commission of Utah Docket No. 09-035-23: In the Matter of the Application of Rocky Mountain Power for Authority To Increase its Retail Electric Utility Service Rates in Utah and for Approval of Its Proposed Electric Service Schedules and Electric Service Regulations.

Colorado Public Utilities Commission Docket No. 09AL-299E: Re: The Tariff Sheets Filed by Public Service Company of Colorado with Advice Letter No. 1535 – Electric.

Arkansas Public Service Commission Docket No. 09-008-U: In the Matter of the Application of Southwestern Electric Power Company for Approval of a General Change in Rates and Tariffs.

Oklahoma Corporation Commission Docket No. PUD 200800398: In the Matter of the Application of Oklahoma Gas and Electric Company for an Order of the Commission Authorizing Applicant to Modify its Rates, Charges, and Tariffs for Retail Electric Service in Oklahoma.

Public Utilities Commission of Nevada Docket No. 08-12002: In the Matter of the Application by Nevada Power Company d/b/a NV Energy, filed pursuant to NRS §704.110(3) and NRS §704.110(4) for authority to increase its annual revenue requirement for general rates charged to all classes of customers, begin to recover the costs of acquiring the Bighorn Power Plant, constructing the Clark Peakers, Environmental Retrofits and other generating, transmission and distribution plant additions, to reflect changes in cost of service and for relief properly related thereto.

New Mexico Public Regulation Commission Case No. 08-00024-UT: In the Matter of a Rulemaking to Revise NMPRC Rule 17.7.2 NMAC to Implement the Efficient Use of Energy Act.

Indiana Utility Regulatory Commission Cause No. 43580: Investigation by the Indiana Utility Regulatory Commission, of Smart Grid Investments and Smart Grid Information Issues Contained in 111(d) of the Public Utility Regulatory Policies Act of 1978 (16 U.S.C. § 2621(d)), as Amended by the Energy Independence and Security Act of 2007.

Louisiana Public Service Commission Docket No. U-30192 *Phase II (February 2009)*: Ex Parte, Application of Entergy Louisiana, LLC for Approval to Repower Little Gypsy Unit 3 Electric Generating Facility and for Authority to Commence Construction and for Certain Cost Protection and Cost Recovery.

South Carolina Public Service Commission Docket No. 2008-251-E: In the Matter of Progress Energy Carolinas, Inc.'s Application For the Establishment of Procedures to Encourage Investment in Energy Efficient Technologies; Energy Conservation Programs; And Incentives and Cost Recovery for Such Programs.

2008
Colorado Public Utilities Commission Docket No. 08A-366EG: In the Matter of the Application of Public Service Company of Colorado for approval of its electric and natural gas demand-side management (DSM) plan for calendar years 2009 and 2010 and to change its electric and gas DSM cost adjustment rates effective January 1, 2009, and for related waivers and authorizations.

Public Service Commission of Utah Docket No. 07-035-93: In the Matter of the Application of Rocky Mountain Power for Authority to Increase its Retail Electric Utility Service Rates in Utah and for Approval of its Proposed Electric Service Schedules and Electric Service Regulations, Consisting of a General Rate Increase of Approximately $161.2 Million Per Year, and for Approval of a New Large Load Surcharge.

Indiana Utility Regulatory Commission Cause No. 43374: Petition of Duke Energy Indiana, Inc. Requesting the Indiana Utility Regulatory Commission Approve an Alternative Regulatory Plan for the Offering of Energy Efficiency, Conservation, Demand Response, and Demand-Side Management.

Public Utilities Commission of Nevada Docket No. 07-12001: In the Matter of the Application of Sierra Pacific Power Company for authority to increase its general rates charged to all classes of electric customers to reflect an increase in annual revenue requirement and for relief properly related thereto.

Louisiana Public Service Commission Docket No. U-30192 *Phase II*: Ex Parte, Application of Entergy Louisiana, LLC for Approval to Repower Little Gypsy Unit 3 Electric Generating Facility and for Authority to Commence Construction and for Certain Cost Protection and Cost Recovery.

Colorado Public Utilities Commission Docket No. 07A-420E: In the Matter of the Application of Public Service Company of Colorado For Authority to Implement and Enhanced Demand Side Management Cost Adjustment Mechanism to Include Current Cost Recovery and Incentives.

2007
Louisiana Public Service Commission Docket No. U-30192: Ex Parte, Application of Entergy Louisiana, LLC for Approval to Repower Little Gypsy Unit 3 Electric Generating Facility and for Authority to Commence Construction and for Certain Cost Protection and Cost Recovery.

Public Utility Commission of Oregon Docket No. UG 173: In the Matter of PUBLIC UTILITY COMMISSION OF OREGON Staff Request to Open an Investigation into the Earnings of Cascade Natural Gas.

2006
Public Utility Commission of Oregon Docket No. UE 180/UE 181/UE 184: In the Matter of PORTLAND GENERAL ELECTRIC COMPANY Request for a General Rate Revision.

Public Utility Commission of Oregon Docket No. UE 179: In the Matter of PACIFICORP, dba PACIFIC POWER AND LIGHT COMPANY Request for a general rate increase in the company's Oregon annual revenues.

Public Utility Commission of Oregon Docket No. UM 1129 *Phase II*: Investigation Related to Electric Utility Purchases From Qualifying Facilities.

2005
Public Utility Commission of Oregon Docket No. UM 1129 *Phase I Compliance*: Investigation Related to Electric Utility Purchases From Qualifying Facilities.

Public Utility Commission of Oregon Docket No. UX 29: In the Matter of QWEST CORPORATION Petition to Exempt from Regulation Qwest's Switched Business Services.

2004
Public Utility Commission of Oregon Docket No. UM 1129 *Phase I*: Investigation Related to Electric Utility Purchases From Qualifying Facilities.

TESTIMONY BEFORE LEGISLATIVE BODIES
2025
Regarding Ohio SB 303: Written testimony submitted to the Ohio House Energy Committee, September 30, 2025.

2024
Regarding Missouri HB 2574: Written testimony submitted to the Missouri House Committee on Utilities, April 3, 2024.

Regarding Wisconsin AB 258: Testimony before the Wisconsin Assembly Committee on Energy and Utilities, February 14, 2024.

2023
Regarding Oklahoma IS-23-032, Discussion of Performance Based Rates and Right of First Refusal of Electric Companies, October 23, 2023.

2020
Regarding Missouri Senate Joint Resolution 34: Written testimony submitted to the Missouri Senate Transportation, Infrastructure and Public Safety Committee, January 30, 2020.

2019
Regarding North Carolina Senate Bill 559: Written testimony submitted to the North Carolina Committee on Agriculture/Environment/Natural Resources, April 17, 2019.

Regarding Missouri Senate Joint Resolution 25: Written testimony submitted to the Missouri Senate Committee on Judiciary, March 28, 2019.

Regarding South Carolina House Bill 3659: Written testimony submitted to the South Carolina Senate Committee on Judiciary, March 14, 2019.

Regarding Kansas Senate Bill 69: Written testimony submitted to the Kansas Committee on Utilities, February 19, 2019.

2018
Regarding Missouri Senate Bill 564: Testimony before the Missouri Senate Committee on Commerce, Consumer Protection, Energy and the Environment, January 10, 2018.

2017
Regarding Missouri Senate Bill 190: Testimony before the Missouri Senate Committee on Commerce, Consumer Protection, Energy and the Environment, January 25, 2017.

2016
Regarding Missouri House Bill 1726: Testimony before the Missouri House Energy and Environment Committee, April 26, 2016.

2014
Regarding Kansas House Bill 2460: Testimony Before the Kansas House Standing Committee on Utilities and Telecommunications, February 12, 2014.

2012
Regarding Missouri House Bill 1488: Testimony Before the Missouri House Committee on Utilities, February 7, 2012.

2011
Regarding Missouri Senate Bills 50, 321, 359, and 406: Testimony Before the Missouri Senate Veterans' Affairs, Emerging Issues, Pensions, and Urban Affairs Committee, March 9, 2011.

AFFIDAVITS
2015
Supreme Court of Illinois, Docket No. 118129, Commonwealth Edison Company et al., respondents, v. Illinois Commerce Commission et al. (Illinois Competitive Energy Association et al., petitioners). Leave to appeal, Appellate Court, First District.

2011
Colorado Public Utilities Commission Docket No. 11M-951E: In the Matter of the Petition of Public Service Company of Colorado Pursuant to C.R.S. § 40-6-111(1)(d) for Interim Rate Relief Effective on or before January 21, 2012.

ENERGY INDUSTRY PUBLICATIONS AND PRESENTATIONS
Moderator, Building Infrastructure for a Growing Grid: Challenges and Opportunities, Edison Electric Institute National Key Accounts Workshop, Chicago, Illinois, March 24, 2025.

Panelist, Navigating the (Load) Curves of Transportation Electrification, NRECA PowerXchange, Atlanta, Georgia, March 11, 2025.

Panelist, Does My Power Purchase Agreement Need Sleeves?, NARUC Winter Policy Summit, Washington, D.C., February 23, 2025.

Panelist, Decarbonize Utilities Through Customer Action, CEBA Connect: 2024 Spring Summit, Denver, Colorado, May 24, 2024.

Panelist, Procuring Clean Energy Through Utility Green Tariff Programs, VERGE, San Jose, California, October 25, 2023.

Presenter, Walmart Energy Transformation, Edison Electric Institute National Key Accounts Workshop, Columbus, Ohio, October 9, 2023.

Presenter, Energy Transformation, The Energy Council 2023 Annual Meeting, Little Rock, Arkansas, September 15, 2023.

Presenter, Walmart's Energy and Transportation Transformation, Louisiana Clean Fuels Summit, Baton Rouge, Louisiana, April 19, 2023.

Panelist, How Federal Funding is Changing the EV Charging Landscape for Corporate Customers, Edison Electric Institute National Key Accounts Workshop, Miami, Florida, March 22, 2023.

Panelist, Green Tariffs: Benefits and Opportunities for Energy Customers and Utilities, VERGE, San Jose, California, October 26, 2022.

Panelist, Leveraging Electric Company Partnerships to Support Corporate Customer Business Strategies, Edison Electric Institute National Key Accounts Workshop, Indianapolis, Indiana, October 24, 2022.

Speaker, Supporting Walmart's Regenerative Journey, Edison Electric Institute National Key Accounts Workshop, New Orleans, Louisiana, March 21, 2022.

Speaker, Walmart and the Co-ops: The Value of Partnership, Texas Electric Cooperatives 22nd Annual Directors Conference, January 11, 2022.

Speaker, Walmart and the Co-ops: The Value of Partnership, Texas Electric Cooperatives Managers Conference, December 2, 2021.

Panelist, Industry Priorities for Building Renewable Infrastructure, ACORE Grid Forum, November 3, 2021.

Panelist, Achieving a 100% Carbon Free Energy Economy, Edison Electric Institute National Key Accounts Workshop, Long Beach, California, October 25, 2021.

Exhibit SWC-1: Witness Qualifications Statement

Introduction

Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND OCCUPATION.

A. My name is Steve W. Chriss. My business address is 814 Respect Drive, Bentonville, AR 72716. I am employed by Walmart Inc. ("Walmart") as Group Director, Utility Partnerships.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS DOCKET?

A. I am testifying on behalf of Walmart.

Q. PLEASE DESCRIBE YOUR EDUCATION AND EXPERIENCE.

A. In 2001, I completed a Master of Science in Agricultural Economics at Louisiana State University. From 2001 to 2003, I was an Analyst and later a Senior Analyst at the Houston office of Econ One Research, Inc., a Los Angeles-based consulting firm. My duties included research and analysis on domestic and international energy and regulatory issues. From 2003 to 2007, I was an Economist and later a Senior Utility Analyst at the Public Utility Commission of Oregon in Salem, Oregon. My duties included appearing as a witness for PUC Staff in electric, natural gas, and telecommunications dockets. I joined the energy department at Walmart in July 2007 as Manager, State Rate Proceedings. I was promoted to Senior Manager, Energy Regulatory Analysis, in June 2011. I was promoted to Director, Energy and Strategy Analysis in October 2016 and the position was re-titled in October 2018. I was promoted to Senior Director, Utility Partnerships in July 2023 and promoted to my current position in March 2026. My Witness Qualifications Statement is attached as Exhibit SWC-1.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION")?

A. Yes. I testified in Docket Nos. P-2011-2256365, R-2014-2428742, R-2014-2428743, R-2014-2428744, R-2014-2428745, R-2016-2537349, R-2016-2537352, R-2016-2537355, and R-2016-2537359.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY BEFORE OTHER STATE REGULATORY COMMISSIONS?

A. Yes. I have submitted testimony in over 300 proceedings before 43 other utility regulatory commissions. I have also submitted testimony before legislative committees in six states. My testimony has addressed topics including, but not limited to, cost of service and rate design, return on equity ("ROE"), revenue requirements, ratemaking policy, net metering, community solar, large customer renewable programs, qualifying facility rates, telecommunications deregulation, resource certification, energy efficiency/demand side management, fuel cost adjustment mechanisms, electric vehicle ("EV") tariffs, decoupling, and the collection of cash earnings on construction work in progress.

Q. ARE YOU SPONSORING EXHIBITS IN YOUR TESTIMONY?

A. Yes. I am sponsoring the exhibit listed in the Table of Contents.

Q. PLEASE BRIEFLY DESCRIBE WALMART'S OPERATIONS IN PENNSYLVANIA.

A. As shown on Walmart's website, Walmart operates 159 retail units in Pennsylvania. Walmart employs over 59,000 associates in Pennsylvania. In fiscal year ending 2025,

Walmart purchased $17.5 billion worth of goods and services from Pennsylvania-based suppliers, supporting over 131,000 supplier jobs.[1]

Q. PLEASE BRIEFLY DESCRIBE WALMART'S OPERATIONS WITHIN THE SERVICE TERRITORY OF FIRSTENERGY PENNSYLVANIA ("FE PA" OR "COMPANY").

A. Walmart is a large customer of FE PA with 83 retail units and five supply chain and related facilities that take service from the Company, pursuant to the Company's General Service Large Demand Rates.

Purpose of Testimony and Summary of Recommendations

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to respond to the Company's Application filed in this docket on February 3, 2026, along with supporting testimony, and to provide recommendations to assist the Commission in its thorough and careful consideration of the Company's proposed changes to non-residential Price to Compare ("PTC") assignment based on maximum registered peak loads ("MRPL").

Q. PLEASE SUMMARIZE WALMART'S RECOMMENDATION TO THE COMMISSION.

A. Walmart's recommendation to the Commission is as follows:

1) Walmart believes an outcome for customer-generators similar to the settled outcome in the PPL Electric Utilities Corporation ("PPL") rate case is a reasonable

[1] https://corporate.walmart.com/about/location-facts/united-states/pennsylvania

solution to Walmart's concerns with FE PA's MRPL proposal. Walmart recommends that the Commission structure customer grandfathering and net excess generation compensation in a manner similar to the PPL settlement, adjusted for where FE PA's circumstances differ from PPL's.

Q. DOES THE FACT THAT YOU MAY NOT ADDRESS AN ISSUE OR POSITION INDICATE WALMART'S SUPPORT?

A. No. The fact that an issue is not addressed herein or in related filings should not be construed as an endorsement of, agreement with, or consent to any filed position.

Maximum Registered Peak Load

Q. WHAT IS YOUR UNDERSTANDING OF HOW THE COMMISSION DEFINES MRPL?

A. My understanding is that the Commission defines MRPL as "The highest level of demand for a particular customer, based on the PJM Interconnection, LLC, 'Peak Load Contribution Standard,' or its equivalent, and as may be further defined by the EDC tariff in a particular service territory." *See* 52 Pa. Code §54.182.

Q. IS FE PA SEEKING TO DEFINE MRPL IN THIS DOCKET?

A. Yes. FE PA is proposing to define MRPL as a customer's net demand contribution impact to the Company's default service activity, as determined by the net power flow from or into the distribution system. *See* FE PA Statement No. 1, Direct Testimony of David M. Young ("Young Direct"), p. 16, lines 17-20.

Q. WHY DOES THE COMPANY PROPOSE THIS DEFINITION?

A. The Company proposes the change of definition as part of the proposed criteria to determine if a non-residential default service customer is served under the PTC Default Service Rate Rider ("PTC Rider") or the Hourly Pricing Default Service Rider ("HP Rider"). *Id.* at lines 6-11.

Q. WHAT IS THE COMPANY'S CURRENT DEMAND CRITERION DELINEATING SERVICE UNDER THE PTC RIDER OR THE HP RIDER?

A. The Company currently sets the delineation point at or above 100 kW of load for all non-residential default service customers. Customers with demand of 100 kW or more are classified as industrial customers and receive hourly-priced default service under the HP Rider, whereas customers below 100 kW are classified as commercial and receive service under the PTC Rider. *Id.* at 15, lines 12-18.

Q. WHAT IS THE COMPANY'S PROPOSED CHANGE?

A. The Company proposes to add MRPL – whether as load or as production – as a qualifier to HP Rider eligibility. As such, the Company proposes that, regardless of load size, if a default service customer-generator has an MRPL of 100 kW or above, that customer will receive service under the HP Rider. *Id.* at 16, lines 6-11. The Company also proposes, through this change, to recover all net excess generation costs through the HP Rider rate. *Id.* at 19, lines 2-5.

Q. WHAT EFFECTIVE DATE DOES THE COMPANY PROPOSE FOR THIS CHANGE?

A. The Company proposes an effective date of June 1, 2027, for new net metering customer generation coming online after that date. For existing net metering customer

generation, the Company proposes an effective date of June 1, 2029. Young Direct at 19, lines 19-22.

Q. WHY DOES THE COMPANY PROPOSE THIS CHANGE?

A. The Company proposes this change due to concerns stemming the use of the PTC Rider for net metering customer-generators who have loads under 100 kW and MRPL at or above 100 kW due to the size of on-site generation. *Id.* at 17, lines 3-8. Per the Company, this practice increases risk premiums included in fixed-price full requirements products from default service suppliers for PTC Rider customers and also creates cross-subsidies between PTC Rider customers and generators because the cost of net excess generation is recovered solely from PTC Rider customers. *Id.* at 17, line 11 to p. 18, line 2.

Walmart's Response

Q. ARE THE COMPANY'S PROPOSED CHANGES A CONCERN FOR WALMART?

A. Yes. Walmart has long had aggressive and significant company-wide renewable energy goals, and on September 21, 2020, Walmart announced new targets as a part of its sustainability goals, including: (1) to be supplied 100 percent by renewable energy by 2035 and (2) zero carbon emissions in its operations, including its transportation fleet vehicles, without the use of offsets, by 2040. Walmart has also set a goal to transition to zero emission buildings by deploying low-impact refrigerants for cooling

and electric equipment for heating by 2040.[2] Additionally, on January 9, 2024, Walmart announced a goal to bring 10 GW of new clean energy projects online by the end of 2030, including 1 GW of new onsite solar plus storage, and enabling 2 GW of new community solar projects.[3]

In support of these goals, Walmart actively evaluates onsite solar opportunities across the United States. These analyses rely on a clear, stable understanding of the value of each kilowatt-hour of onsite generation. In Pennsylvania, the benchmark has historically been the PTC Rider. The proposed shift to the HP Rider would fundamentally change this value proposition and could significantly impact customer-generators' ability to develop positive-value solar projects in FE PA's territory.

Q. DOES PENNSYLVANIA HAVE AN OVER-SUPPLY OF GENERATION THAT WOULD JUSTIFY DISINCENTIVIZING ONSITE SOLAR DEVELOPMENT PROJECTS IN FE PA'S TERRITORY?

A. No. There is no evidence suggesting that Pennsylvania has an over-supply of generation that would justify disincentivizing onsite solar development in FE PA's territory. To the contrary, market and monitor reports show tightening trends and localized risks – not broad oversupply. Monitoring Analytics and PJM Interconnection, LLC ("PJM"), analyses have documented tightening fundamentals, price signals of scarcity in recent capacity auctions, and scenarios where local

[2] https://corporate.walmart.com/news/2020/09/21/walmart-sets-goal-to-become-a-regenerative-company
[3] *Walmart Keynote at CES 2024* (Jan. 9, 2024) https://tech.walmart.com/content/dam/walmart-global-tech/documents/Walmart%20CES%20Keynote%20Script%20Transcript_1.9.24.pdf

constraints or retirements could cause shortfalls – especially if demand grows faster than expected.

Q. WOULD ONSITE SOLAR PROJECTS THAT ARE CURRENTLY IN VARIOUS PHASES OF DEVELOPMENT BE NEGATIVELY IMPACTED BY THE COMPANY'S PROPOSAL?

A. Yes. Changing the classification of customer-generators from the PTC Rider to the HP Rider without robust transition protections would retroactively alter the economics of those investments. Approving such an abrupt and sharp reclassification would create stranded value for customers who acted reasonably under the current rules.

Q. IS THE COMMISSION CURRENTLY CONSIDERING THIS ISSUE IN ANOTHER DOCKET?

A. Yes, in Docket No. R-2025-3057164, the PPL rate case.

Q. HAVE PARTIES IN THE PPL RATE CASE, INCLUDING WALMART, RESOLVED THIS ISSUE THROUGH SETTLEMENT?

A. Yes. The provisions of the MRPL settlement in the PPL rate case are as follows:

- Grandfathers the following customer-generators into existing default service rate through December 31, 2026, at which time they will become subject to the default service rate classifications in effect as of January 1, 2037:
  - Customer-generators who submitted an interconnection application on or before September 30, 2025, and whose generating facilities either receive permission to operate or provide the utility a certificate of completion on or before December 31, 2026; and

- Customer-generators who submitted an interconnection application on or before September 30, 2025, up to a defined cap of 140 MW, based on the date of their signed original Notification of Customer Intent.

- Defines customer-generator compensation for GSC-2 (PPL equivalent of HP Rider) and the structure will remain in place until December 31, 2041. The compensation structure includes the cost of energy based on PJM locational marginal prices, the default supplier's hourly pricing adder, capacity value, an "e-factor" to adjust for net over- or under-collection of Rate GSC-2 rate components, administrative charges, and transmission cost.
- PPL default service customer determination will include MRPL as proposed by PPL. *See* Notice of Proposed Joint Petition for Approval of Non-Unanimous Settlement of All Issues at 25-29*, Pa. P.U.C. v. PPL Electric Utilities Corporation, et al.*, Docket Nos. R-2025-3057164, *et al.* (filed Mar. 13, 2026).

Q. HAS THIS SETTLEMENT BEEN APPROVED BY THE COMMISSION AT THE TIME OF SUBMISSION OF THIS TESTIMONY?

A. No; however, the Recommended Decision filed on April 17, 2026, recommends approval of the MRPL provision. *See* Recommended Decision at 225, *Pa. P.U.C., et al. v. PPL Electric Utilities Corporation*, Docket Nos. R-2025-3057164, *et al.* (issued Apr. 17, 2026).

Q. DOES WALMART SUPPORT A SIMILAR OUTCOME IN THIS DOCKET?

A. Yes. Walmart believes an outcome similar to the settled outcome in the PPL rate case is a reasonable solution to the concerns stated above with FE PA's MRPL proposal. Walmart recommends that the Commission structure customer grandfathering and net

excess generation compensation in a manner similar to the PPL settlement, adjusted for where FE PA's circumstances differ from PPL's.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes.

TESTIMONY BEFORE REGULATORY COMMISSIONS

2026

Rhode Island Docket No. 25-45-GE: In Re: The Narragansett Electric Company D/B/A Rhode Island Energy Application for Approval of a Change in Electric and Gas Base Distribution Rates.

South Carolina Docket No. 2025-325-E: In Re: Application of Dominion Energy South Carolina, Inc. for Authority to Adjust and Increase its Retail Electric Rates and Charges.

South Carolina Docket No. 2025-230-E: In Re: Joint Application of Duke Energy Carolinas, LLC, and Duke Energy Progress, LLC, to Engage in a Business Combination, Address Regulatory Conditions and Code of Conduct, and Request for Accounting Order.

Texas Docket No. 58819: Application of Southwestern Electric Power Company for Authority to Change Rates.

2025

South Carolina Docket No. 2025-154-E: In Re: Application of Duke Energy Progress, LLC for Increase in Electric Rates, Adjustments in Electric Rate Schedules and Tariffs, and Request for an Accounting Order.

Puerto Rico Case No. NEPR-AP-2023-0003: In Re: Puerto Rico Electric Power Authority Rate Review.

Virginia Case No. PUR-2025-00058: Application of Virginia Electric and Power Company for a 2025 Biennial Review of the Rates, Terms, and Conditions for the Provision of Generation, Distribution, and Transmission Services Pursuant to § 56-585.1 A of the Code of Virginia (adopted testimony of Lisa Perry).

Florida Docket No. 20250011-EI: In re: Petition for rate increase by Florida Power & Light Company.

Georgia Docket 44280: In re: Georgia Power Company's 2022 Rate Case (in response to the Joint Petition of Georgia Power Company and the Public Interest Advocacy Staff for approval of their Stipulation to Extend the Alternative Rate Plan).

Louisiana Docket No. U-37425: Application of Entergy Louisiana, LLC for Approval of Generation and Transmission Resources Proposed in Connection with Service to a Significant Customer Project in North Louisiana, Including Proposed Rider, and Request for Timely Treatment.

2024

North Dakota Case No. PU-23-324: In the Matter of the Application of Otter Tail Power Company for Authority to Increase Rates for Electric Utility Service in North Dakota.

Virginia Case No. PUR-2024-00024: Application of Appalachian Power Company for a 2024 Biennial Review of its Base Rates, Terms and Conditions Pursuant to §56-585.8 of the Code of Virginia (adopted testimony of Lisa Perry).

Louisiana Docket No. S-37074: Application of Southwestern Electric Power Company for Approval of Revised Renewable Energy Credit (REC) Tariff Submitted in Accordance with Order U-35736.

Arkansas Docket No. 24-032-TF: In the Matter of the Application of Southwestern Electric Power Company for a Proposed Revision to Rate Schedule No. 51, Renewable Energy Credit (REC) Rider.

Nevada Docket No. 24-02026: In the Matter of the Application of Sierra Pacific Power Company D/B/A NV Energy, Filed Pursuant to NRS 704.110(3) and NRS 704.110(4), Addressing General Rates Charged to All Classes of Electric Customers.

Florida Docket No. 20240025-EI: In Re: Petition for Rate Increase of Duke Energy Florida, LLC.

Florida Docket No. 20240026-EI: In Re: Petition for Rate Increase by Tampa Electric Company.

Florida Docket No. 20240012-EG: Commission Review of Numeric Conservation Goals (Florida Power & Light Company).

Florida Docket No. 20240013-EG: Commission Review of Numeric Conservation Goals (Duke Energy Florida, LLC).

Florida Docket No. 20240014-EG: Commission Review of Numeric Conservation Goals (Tampa Electric Company).

Florida Docket No. 20240015-EG: Commission Review of Numeric Conservation Goals (Florida Public Utilities Company).

Florida Docket No. 20240016-EG: Commission Review of Numeric Conservation Goals (JEA).

Florida Docket No. 20240017-EG: Commission Review of Numeric Conservation Goals (Orlando Utilities Commission).

California Application No. 23-05-010: Application of Southern California Edison Company (U338E) for Authority to Increase Its Authorized Revenues for Electric Service in 2025, Among Other Things, and to Reflect that Increase in Rates.

California Application No. 21-06-021: Application of Pacific Gas and Electric Company for Authority, Among Other Things, to Increase Rates and Charges for Electric and Gas Service Effective on January 1, 2023 and Establish a New Balancing Account for Electric Distribution Capacity Additions and New Electric Distribution Extension Work Activities.

2023
Ohio Case No. 22-0704-EL-UNS: In the Matter of the Application of Ohio Edison Company, the Cleveland Electric Illuminating Company, and the Toledo Edison Company for Approval of Phase Two of their Distributed Grid Modernization Plan.

Indiana Cause No. 45911: Petition of Indianapolis Power & Light Company d/b/a AES Indiana for Authority to Increase Rates and Charges for Electric Utility Service, and for Approval of Related Relief, Including (1) Revised Depreciation Rates, (2) Accounting Relief, Including Deferrals and Amortizations, (3) Inclusion of Capital Investments, (4) Rate Adjustment Mechanism Proposals, Including New Economic Development Rider, (5) Remote Disconnect/Reconnect Process, and (6) New Schedules of Rates, Rules, and Regulations for Service.

Nevada Docket No. 23-06007: Application of Nevada Power Company d/b/a NV Energy for Authority to Adjust its Annual Revenue Requirement for General Rates Charged to All Classes of Electric Customers and for Relief Properly Related Thereto.

Kansas Docket No. 23-EKCE-775-RTS: In the Matter of the Application of Evergy Kansas Metro, Inc., Evergy Kansas South, Inc. and Evergy Kansas Central, Inc. to make Certain Changes in their Charges for Electric Service Pursuant to K.S.A. 66-117.

North Carolina Docket No. E-7, Sub 1276: In the Matter of Application of Duke Energy Carolinas, LLC for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina and Performance-Based Regulation.

Virginia Case No. PUR-2023-00002: Application of Appalachian Power Company for a 2023 Triennial Review of its Base Rates, Terms, and Conditions Pursuant to §56-585.1 of the Code of Virginia.

New Mexico Case No. 22-00270-UT: In the Matter of the Application of Public Service Company of New Mexico for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 595.

Arizona Docket No. E-01345A-22-0144: In the Matter of the Application of Arizona Public Service Company for a Hearing to Determine the Fair Value of the Utility Property of the Company for Ratemaking Purposes, to Fix a Just and Reasonable Rate of Return Thereon, to Approve Rate Schedules to Develop Such Return.

Oregon Docket UE 416: In the Matter of Portland General Electric Company, Request for a General Rate Revision; and 2024 Annual Power Cost Update.

Arizona Docket No. E-04204A-22-0251: In the Matter of the Application of UNS Electric, Inc. for the Establishment of Just and Reasonable Rates and Charges Designed to Realize a Reasonable Rate of Return on the Fair Value of the Properties of UNS Electric, Inc. Devoted to its Operations Throughout the State of Arizona and for Related Approvals.

Ohio Case No. 23-23-EL-SSO: In the Matter of the Application of Ohio Power Company for Authority to Establish a Standard Service Offer Pursuant to Section 4928.143, Revised Code, in the Form of an Electric Security Plan.

North Carolina Docket No. E-2, Sub 1300: In the Matter of Application of Duke Energy Progress, LLC for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina and Performance-Based Regulation.

Kentucky Case No. 2022-00372: In the Matter of Electronic Application of Duke Energy Kentucky, Inc. for (1) An Adjustment of Electric Rates; (2) Approval of New Tariffs; (3) Approval of Accounting Practices to Establish Regulatory Assets and Liabilities; and (4) All Other Required Approvals and Relief.

Missouri Docket No. ER-2022-0337: In the Matter of Union Electric Company d/b/a Ameren Missouri's Tariffs to Adjust its Revenues for Electric Service.

New Mexico Case No. 22-00286-UT: In the Matter of Southwestern Public Service Company's Application for: (1) Revision of its Retail Rates Under Advice Notice No. 312; (2) Authority to Abandon the Plant X Unit 1, Plant X Unit 2, and Cunningham Unit 1 Generating Stations and Amend the Abandonment Date of the Tolk Generating Station; and (3) Other Associated Relief.

Arizona Docket No. E-01933A-22-0107: In the Matter of the Application of Tucson Electric Power Company for the Establishment of Just and Reasonable Rates and Charges Designed to Realize a Reasonable Rate of Return on the Fair Value of the Properties of Tucson Electric Power Company Devoted to its Operations Throughout the State of Arizona and for Related Approvals.

New Mexico Case No. 22-00058-UT: In the Matter of the Public Service Company of New Mexico's Application for Authorization to Implement Grid Modernization Components that Include Advanced Metering Infrastructure and Application to Recover the Associated Costs Through a Rider, Issuance of Related Accounting Orders, and Other Associated Relief.

2022
Maine Docket No. 2022-00255: Versant Power Request for Approval of Rate Change Pursuant to 35-A M.R.S. § 307.

Maine Docket No. 2022-00152: Central Maine Power Company Request for Approval of Distribution Rate Increase and Rate Design Changes Pursuant to 35-A M.R.S. § 307.

Georgia Docket No. 44280: In Re: Georgia Power's 2022 Rate Case.

Minnesota Docket No. E-002/GR-21-630: In the Matter of the Application of Northern States Power Company for Authority to Increase Rates for Electric Service in Minnesota.

Nevada Docket No. 22-06014: In the Matter of the Application by Sierra Pacific Power Company d/b/a NV Energy, Filed Pursuant to NRS 704.110(3) and NRS 704.110(4), Addressing its Annual Revenue Requirement for General Rates Charged to All Classes of Electric Customers.

Colorado Proceeding No. 22AL-0130E: In the Matter of Advice No. 1881-Electric of Public Service Company of a Resiliency Service Program Tariff in its Colorado PUC No. 8-Electric Tariff Effective April 24, 2022.

Texas Docket No. 53601: Application of Oncor Electric Delivery Company for Authority to Change Rates.

Washington Docket No. UE-220066: Puget Sound Energy 2022 General Rate Case.

Washington Docket No. UG-220067: Puget Sound Energy 2022 Natural Gas General Rate Case.

Idaho Case No. IPC-E-21-40: In the Matter of Idaho Power Company's Application to Expand Optional Customer Clean Energy Offerings Through the Clean Energy Your Way Program.

Georgia Docket No. 44160: Georgia Power's 2022 Integrated Resource Plan.

Georgia Docket No. 44161: Application for the Certification, Decertification, and Amended Demand Side Management Plan.

2021
Missouri Case No. ER-2021-0312: In the Matter of the Request of The Empire District Electric Company d/b/a Liberty for Authority to File Tariffs Increasing Rates for Electric Service Provided to Customers in its Missouri Service Area.

Indiana Cause No. 45576: Petition of Indiana Michigan Power Company, an Indiana Corporation, for Authority to Increase its Rates and Charges for Electric Utility Service through a Phase In Rate Adjustment; and for Approval of Related Relief Including: (1) Revised Depreciation Rates; (2) Accounting Relief; (3) Inclusion of Capital Investment; (4) Rate Adjustment Mechanism Proposals; (5) Customer Programs; (6) Waiver to Declination of Jurisdiction with Respect to Certain Rules; and (7) New Schedules of Rates, Rules, and Regulations.

Panelist, Renewable Energy Options for Large Utility Customers, NARUC Center for Partnership & Innovation Webinar Series, January 16, 2020.

Panelist, Pathways to Integrating Customer Clean Energy Demand in Utility Planning, REBA: Market Innovation webinar, January 13, 2020.

Panelist, Should Full Electrification of Energy Systems be Our Goal? If it's No Longer Business as Usual, What Does That Mean for Consumers?, National Association of State Utility Consumer Advocates 2019 Annual Meeting, San Antonio, Texas, November 18, 2019.

Panelist, Fleet Electrification, Federal Utility Partnership Working Group Seminar, Washington, DC, November 8, 2019.

Panelist, Tackling the Challenges of Extreme Weather, Edison Electric Institute Fall National Key Accounts Workshop, Las Vegas, Nevada, October 8, 2019.

Panelist, Fleet Electrification: Tackling the Challenges and Seizing the Opportunities for Electric Trucks, Powering the People 2019, Washington, D.C., September 24, 2019.

Panelist, From the Consumer Perspective, Mid-American Regulatory Conference 2019 Annual Meeting, Des Moines, Iowa, August 13, 2019.

Panelist, Redefining Resiliency: Emerging Technologies Benefiting Customers and the Grid, EPRI 2019 Summer Seminar, Chicago, Illinois, August 12, 2019.

Panelist, Energy Policies for Economic Growth, 2019 Energy Policy Summit, NCSL Legislative Summit, Nashville, Tennessee, August 5, 2019.

Panelist, Gateway to Energy Empowerment for Customers, Illumination Energy Summit, Columbus, Ohio, May 15, 2019.

Panelist, Advancing Clean Energy Solutions Through Stakeholder Collaborations, 2019 State Energy Conference of North Carolina, Raleigh, North Carolina, May 1, 2019.

Panelist, Fleet Electrification: Getting Ready for the Transition, Edison Electric Institute Spring National Key Accounts Workshop, Seattle, Washington, April 8, 2019.

Panelist, Where the Fleet Meets the Pavement, Which Way to Electrification of the U.S. Transportation System?, Washington, D.C., April 4, 2019.

Panelist, Improving Renewable Energy Offerings: What Have We Learned?, Advanced Energy Economy Webinar, March 26, 2019.

Speaker, National Governors Association Southeast Regional Transportation Electrification Workshop, Nashville, Tennessee, March 11, 2019.

Speaker, Walmart Spotlight: A Day in the Life of a National Energy Manager, Touchstone Energy Cooperatives Net Conference 2019, San Diego, California, February 12, 2019.

Panelist, National Accounts: The Struggle is Real, American Public Power Association Customer Connections Conference, Orlando, Florida, November 6, 2018.

Panelist, Getting in Front of Customers Getting Behind the Meter Solutions, American Public Power Association Customer Connections Conference, Orlando, Florida, November 6, 2018.

Panelist, Sustainable Fleets: The Road Ahead for Electrifying Fleet Operations, EEI National Key Accounts 2018 Fall Workshop, San Antonio, Texas, October 23, 2018.

Panelist, Meeting Corporate Clean Energy Requirements in Virginia, Renewable Energy Buyers Alliance Summit, Oakland, California, October 15, 2018.

Panelist, What Are the Anticipated Impacts on Pricing and Reliability in the Changing Markets?, Southwest Energy Conference, Phoenix, Arizona, September 21, 2018.

Speaker, Walmart's Project Gigaton – Driving Renewable Energy Sourcing in the Supply Chain, Smart Energy Decisions Webcast Series, July 11, 2018.

Panelist, Customizing Energy Solutions, Edison Electric Institute Annual Convention, San Diego, California, June 7, 2018.

Powering Ohio Report Release, Columbus, Ohio, May 29, 2018.

Panelist, The Past, Present, and Future of Renewable Energy: What Role Will PURPA, Mandates, and Collaboration Play as Renewables Become a Larger Part of Our Energy Mix?, 36th National Regulatory Conference, Williamsburg, Virginia, May 17, 2018.

Panelist, Sustainability Milestone Deep Dive Session, Walmart Global Sustainability Leaders Summit, Bentonville, Arkansas, April 18, 2018.

Panelist, The Customer's Voice, Tennessee Valley Authority Distribution Marketplace Forum, Murfreesboro, Tennessee, April 3, 2018.

Panelist, Getting to Yes with Large Customers to Meet Sustainability Goals, The Edison Foundation Institute for Electric Innovation Powering the People, March 7, 2018.

Panelist, The Corporate Quest for Renewables, 2018 NARUC Winter Policy Summit, Washington, D.C., February 13, 2018.

Panelist, Solar and Renewables, Touchstone Energy Cooperatives NET Conference 2018, St. Petersburg, Florida, February 6, 2018.

Panelist, Missouri Public Service Commission November 20, 2017 Workshop in File No. EW-2017-0245.

Panelist, Energy and Climate Change, 2017-18 Arkansas Law Review Symposium: Environmental Sustainability and Private Governance, Fayetteville, Arkansas, October 27, 2017.

Panelist, Customer – Electric Company – Regulator Panel, Edison Electric Institute Fall National Key Accounts Workshop, National Harbor, Maryland, October 12, 2017.

Panelist, What Do C&I Buyers Want, Solar Power International, Las Vegas, Nevada, September 12, 2017.

Panelist, Partnerships for a Sustainable Future, American Public Power Association National Conference, Orlando, Florida, June 20, 2017.

Panelist, Corporate Renewable Energy Buyers in the Southeast, SEARUC 2017, Greensboro, Georgia, June 12, 2017.

Panelist, Transitioning Away from Traditional Utilities, Utah Association of Energy Users Annual Conference, Salt Lake City, Utah, May 18, 2017.

Panelist, Regulatory Approaches for Integrating and Facilitating DERs, New Mexico State University Center for Public Utilities Advisory Council Current Issues 2017, Santa Fe, New Mexico, April 25, 2017.

Presenter, Advancing Renewables in the Midwest, Columbia, Missouri, April 24, 2017.

Panelist, Leveraging New Energy Technologies to Improve Service and Reliability, Edison Electric Institute Spring National Key Accounts Workshop, Phoenix, Arizona, April 11, 2017.

Panelist, Private Sector Demand for Renewable Power, Vanderbilt Law School, Nashville, Tennessee, April 4, 2017.

Panelist, Expanding Solar Market Opportunities, 2017 Solar Power Colorado, Denver, Colorado, March 15, 2017.

Panelist, Renewables: Are Business Models Keeping Up?, Touchstone Energy Cooperatives NET Conference 2017, San Diego, California, January 30, 2017.

Panelist, The Business Case for Clean Energy, Minnesota Conservative Energy Forum, St. Paul, Minnesota, October 26, 2016.

Panelist, M-RETS Stakeholder Summit, Minneapolis, Minnesota, October 5, 2016.

Panelist, 40th Governor's Conference on Energy & the Environment, Kentucky Energy and Environment Cabinet, Lexington, Kentucky, September 21, 2016.

Panelist, Trends in Customer Expectations, Wisconsin Public Utility Institute, Madison, Wisconsin, September 6, 2016.

Panelist, The Governor's Utah Energy Development Summit 2015, May 21, 2015.

Mock Trial Expert Witness, The Energy Bar Association State Commission Practice and Regulation Committee and Young Lawyers Committee and Environment, Energy and Natural Resources Section of the D.C. Bar, Mastering Your First (or Next) State Public Utility Commission Hearing, February 13, 2014.

Panelist, Customer Panel, Virginia State Bar 29th National Regulatory Conference, Williamsburg, Virginia, May 19, 2011.

Chriss, S. (2006). "Regulatory Incentives and Natural Gas Purchasing – Lessons from the Oregon Natural Gas Procurement Study." Presented at the 19th Annual Western Conference, Center for Research in Regulated Industries Advanced Workshop in Regulation and Competition, Monterey, California, June 29, 2006.

Chriss, S. (2005). "Public Utility Commission of Oregon Natural Gas Procurement Study." Public Utility Commission of Oregon, Salem, OR. Report published in June, 2005. Presented to the Public Utility Commission of Oregon at a special public meeting on August 1, 2005.

Chriss, S. and M. Radler (2003). "Report from Houston: Conference on Energy Deregulation and Restructuring." USAEE Dialogue, Vol. 11, No. 1, March, 2003.

Chriss, S., M. Dwyer, and B. Pulliam (2002). "Impacts of Lifting the Ban on ANS Exports on West Coast Crude Oil Prices: A Reconsideration of the Evidence." Presented at the 22nd USAEE/IAEE North American Conference, Vancouver, BC, Canada, October 6-8, 2002.

Contributed to chapter on power marketing: "Power System Operations and Electricity Markets," Fred I. Denny and David E. Dismukes, authors. Published by CRC Press, June 2002.

Contributed to "Moving to the Front Lines: The Economic Impact of the Independent Power Plant Development in Louisiana," David E. Dismukes, author. Published by the Louisiana State University Center for Energy Studies, October 2001.
